**Multi-Diversified labels the difference between the purchase price of \$400,000 and the fair value of \$350,000 as goodwill.** Goodwill is viewed as one or a group of unidentifiable values (intangible assets), the cost of which "is measured by the difference between the cost of the group of assets or enterprise acquired and the sum of the assigned costs of individual tangible and identifiable intangible assets acquired less liabilities assumed."<sup>8</sup> This procedure for valuation is called a **master valuation approach**. It assumes goodwill covers all the values that cannot be specifically identified with any identifiable tangible or intangible asset. Illustration 12-5 (on the next page) shows this approach.

<sup>8</sup>The FASB expressed concern about measuring goodwill as a residual, but noted that there is no real measurement alternative since goodwill is not separable from the company as a whole. [6]

**ILLUSTRATION 12-5**

Determination of  
Goodwill—Master  
Valuation Approach

Assigned to purchase price of \$400,000	→ Cash	\$ 25,000
	→ Receivables	35,000
	→ Inventories	122,000
	→ Property, plant, and equipment, net	205,000
	→ Patents	18,000
	→ Liabilities	(55,000)
	Fair market value of net identifiable assets	\$350,000
	Purchase price	<u>400,000</u>
	Value assigned to goodwill	<u>\$ 50,000</u>

Multi-Diversified records this transaction as follows.

Cash	25,000	
Receivables	35,000	
Inventories	122,000	
Property, Plant, and Equipment	205,000	
Patents	18,000	
Goodwill	50,000	
Liabilities		55,000
Cash		400,000

Companies often identify goodwill on the balance sheet as the **excess of cost over the fair value** of the net assets acquired.

**Goodwill Write-off**

Companies that recognize goodwill in a business combination **consider it to have an indefinite life and therefore should not amortize it**. Although goodwill may decrease in value over time, predicting the actual life of goodwill and an appropriate pattern of amortization is extremely difficult. In addition, investors find the amortization charge of little use in evaluating financial performance.

Furthermore, the investment community wants to know the amount invested in goodwill, which often is the largest intangible asset on a company's balance sheet. Therefore, **companies adjust its carrying value only when goodwill is impaired**. This approach significantly impacts the income statements of some companies.

Some believe that goodwill's value eventually disappears. Therefore, they argue, companies should charge goodwill to expense over the periods affected, to better match expense with revenues. Others note that the accounting treatment for purchased goodwill and goodwill created internally should be consistent. They point out that companies immediately expense goodwill created internally and should follow the same treatment for purchased goodwill. Though these arguments may have some merit, non-amortization of goodwill combined with an adequate impairment test should provide the most useful financial information to the investment community. We discuss the accounting for goodwill impairments later in the chapter.

**Bargain Purchase**

In a few cases, the purchaser in a business combination pays *less than* the fair value of the identifiable net assets. Such a situation is referred to as a **bargain purchase**. A bargain purchase results from a market imperfection: That is, the seller would have been better off to sell the assets individually than in total. However, situations do occur (e.g., a forced liquidation or distressed sale due to the death of a company founder) in which the purchase price is less than the value of the net identifiable assets. **This excess amount is recorded as a gain by the purchaser.**

The FASB notes that an economic gain is inherent in a bargain purchase. The purchaser is better off by the amount by which the fair value of what is acquired exceeds the amount paid. Some expressed concern that some companies may attempt inappropriate gain recognition by making an intentional error in measurement of the assets or

liabilities. As a result, the FASB requires companies to disclose the nature of this gain transaction. Such disclosure will help users to better evaluate the quality of the earnings reported.<sup>9</sup>

## IMPAIRMENT OF INTANGIBLE ASSETS

In some cases, the carrying amount of a long-lived asset (property, plant, and equipment or intangible assets) is not recoverable. Therefore, a company needs a write-off. As discussed in Chapter 11, this write-off is referred to as an **impairment**.

**Objective 7**

Explain the accounting issues related to intangible-asset impairments.

### Impairment of Limited-Life Intangibles

The rules that apply to **impairments of property, plant, and equipment also apply to limited-life intangibles**. As discussed in Chapter 11, a company should review property, plant, and equipment for impairment at certain points—whenever events or changes in circumstances indicate that the carrying amount of the assets may not be recoverable. In performing this **recoverability test**, the company estimates the future cash flows expected from use of the assets and its eventual disposal. If the sum of the expected future net cash flows (undiscounted) is less than the carrying amount of the asset, the company would measure and recognize an impairment loss. [8]

The company then uses the **fair value test**. This test measures the impairment loss by comparing the asset’s fair value with its carrying amount. The impairment loss is the carrying amount of the asset less the fair value of the impaired asset. As with other impairments, the loss on the limited-life intangible is reported as part of income from continuing operations. The entry generally appears in the “Other expenses and losses” section.

To illustrate, assume that Lerch, Inc. has a patent on how to extract oil from shale rock. Unfortunately, several recent non-shale oil discoveries adversely affected the demand for shale-oil technology. Thus, the patent has provided little income to date. As a result, Lerch performs a recoverability test. It finds that the expected net future cash flows from this patent are \$35 million. Lerch’s patent has a carrying amount of \$60 million. Because the expected future net cash flows of \$35 million are less than the carrying amount of \$60 million, Lerch must determine an impairment loss.

Discounting the expected net future cash flows at its market rate of interest, Lerch determines the fair value of its patent to be \$20 million. Illustration 12-6 shows the impairment loss computation (based on fair value).

Carrying amount of patent	\$60,000,000
Fair value (based on present value computation)	<u>20,000,000</u>
<b>Loss on impairment</b>	<b><u>\$40,000,000</u></b>

**ILLUSTRATION 12-6**  
Computation of Loss on Impairment of Patent

Lerch records this loss as follows:

Loss on Impairment	40,000,000	
Patents		40,000,000

After recognizing the impairment, the reduced carrying amount of the patents is its new cost basis. Lerch should amortize the patent’s new cost over its remaining useful life or legal life, whichever is shorter. Even if shale-oil prices increase in subsequent periods and the value of the patent increases, Lerch **may not recognize restoration of the previously recognized impairment loss**.

**Underlying Concepts**

The basic attributes of intangibles, their uncertainty as to future benefits, and their uniqueness have discouraged valuation in excess of cost.

<sup>9</sup>A recent standard dropped the requirement that this gain be reported as an extraordinary item. [7] This change is consistent with convergence in international accounting standards. Note that IASB standards do not permit extraordinary item reporting.

## Impairment of Indefinite-Life Intangibles Other Than Goodwill

Companies should test indefinite-life intangibles other than goodwill for impairment at least annually. The impairment test for an indefinite-life asset other than goodwill is a **fair value test**. This test compares the fair value of the intangible asset with the asset's carrying amount. If the fair value is less than the carrying amount, the company recognizes an impairment. Companies use this one-step test because many indefinite-life assets easily meet the recoverability test (because cash flows may extend many years into the future). **Thus, companies do not use the recoverability test.**

To illustrate, assume that Arcon Radio purchased a broadcast license for \$2,000,000. The license is renewable every 10 years if the company provides appropriate service and does not violate Federal Communications Commission (FCC) rules. Arcon Radio has renewed the license with the FCC twice, at a minimal cost. Because it expects cash flows to last indefinitely, Arcon reports the license as an indefinite-life intangible asset. Recently the FCC decided to auction these licenses to the highest bidder instead of renewing them. Arcon Radio expects cash flows for the remaining two years of its existing license. It performs an impairment test and determines that the fair value of the intangible asset is \$1,500,000. Arcon therefore reports an impairment loss of \$500,000, computed as follows.

**ILLUSTRATION 12-7**  
Computation of Loss on  
Impairment of Broadcast  
License

Carrying amount of broadcast license	\$2,000,000
Fair value of broadcast license	<u>1,500,000</u>
<b>Loss on impairment</b>	<b><u>\$ 500,000</u></b>

Arcon Radio now reports the license at \$1,500,000, its fair value. Even if the value of the license increases in the remaining two years, Arcon may not restore the previously recognized impairment loss.

## Impairment of Goodwill

**The impairment rule for goodwill is a two-step process.** First, a company compares the fair value of the reporting unit to its carrying amount, including goodwill. If the fair value of the reporting unit exceeds the carrying amount, goodwill is not impaired. The company does not have to do anything else.

To illustrate, assume that Kohlbuy Corporation has three divisions. It purchased one division, Pritt Products, four years ago for \$2 million. Unfortunately, Pritt experienced operating losses over the last three quarters. Kohlbuy management is now reviewing the division for purposes of recognizing an impairment. Illustration 12-8 lists the Pritt Division's net assets, including the associated goodwill of \$900,000 from the purchase.

**ILLUSTRATION 12-8**  
Net Assets of Pritt  
Division, Including  
Goodwill

Cash	\$ 200,000
Receivables	300,000
Inventory	700,000
Property, plant, and equipment (net)	800,000
Goodwill	900,000
Less: Accounts and notes payable	<u>(500,000)</u>
<b>Net assets</b>	<b><u>\$2,400,000</u></b>

Kohlbuy determines that the fair value of Pritt Division is \$2,800,000. **Because the fair value of the division exceeds the carrying amount of the net assets, Kohlbuy does not recognize any impairment.**

However, if the fair value of Pritt Division were less than the carrying amount of the net assets, then Kohlbuy would perform a second step to determine possible

impairment. In the second step, Kohlbuy determines the fair value of the goodwill (implied value of goodwill) and compares it to its carrying amount. To illustrate, assume that the fair value of the Pritt Division is \$1,900,000 instead of \$2,800,000. Illustration 12-9 computes the implied value of the goodwill in this case.<sup>10</sup>

Fair value of Pritt Division	\$1,900,000
Net identifiable assets (excluding goodwill) (\$2,400,000 – \$900,000)	<u>1,500,000</u>
<b>Implied value of goodwill</b>	<b><u>\$ 400,000</u></b>

**ILLUSTRATION 12-9**  
Determination of Implied Value of Goodwill

Kohlbuy then compares the implied value of the goodwill to the recorded goodwill to measure the impairment, as shown in Illustration 12-10.

Carrying amount of goodwill	\$900,000
Implied value of goodwill	<u>400,000</u>
<b>Loss on impairment</b>	<b><u>\$500,000</u></b>

**ILLUSTRATION 12-10**  
Measurement of Goodwill Impairment

### Impairment Summary

Illustration 12-11 summarizes the impairment tests for various intangible assets.

Type of Intangible Asset	Impairment Test
Limited life	Recoverability test, then fair value test
Indefinite life other than goodwill	Fair value test
Goodwill	Fair value test on reporting unit, then fair value test on implied goodwill

**ILLUSTRATION 12-11**  
Summary of Intangible Asset Impairment Tests

## WHAT? ME IMPAIRED?

Goodwill impairment issues have grabbed their share of business headlines. For example, **Hewlett-Packard (H-P)** received a fair amount of criticism for its failure to take impairment charges on goodwill arising from its merger with **Compaq**. H-P’s chief financial officer acknowledged the issue, but played down its significance: “There’s no question that if profitability doesn’t improve, there will be an impairment charge.”

Another example is **Lee Enterprises Inc.**, owner of several major newspapers. Upon its acquisition of **Pulitzer Inc.** for \$1.46 billion, Lee recorded additional goodwill; at the end of fiscal year 2007, it showed \$1.6 billion of goodwill and other intangible assets. With things not going well in the newspaper business, some are waiting for “the other shoe to drop.” The intangibles make up nearly 75 percent of Lee’s total assets and Lee’s book value (assets minus liabilities) and are about twice the company’s current market value. Although no impairment had been recorded, the market seems to expect one is coming.

Lee’s CFO indicates they will continue to evaluate these assets, and H-P’s CFO makes the case that a goodwill impairment is no big deal. What do *you* think? Is an impairment charge just a book-keeping entry, or can it provide some new information about the merits of H-P’s merger with Compaq or Lee’s acquisition of Pulitzer?

*Source:* Carol J. Loomis, “Why Carly’s Big Bet Is Failing,” *Fortune* (February 7, 2005), p. 50; and J. Weil, “Pulitzer’s Owner Takes Prize of Frothy Numbers,” *www.bloomberg.com* (January 9, 2008).

**What do the numbers mean?**

<sup>10</sup>Illustration 12-9 assumes that the carrying amount equals the fair value of net identifiable assets (excluding goodwill). If different, companies use the fair value of the net identifiable assets (excluding goodwill) to determine the implied goodwill.

## RESEARCH AND DEVELOPMENT COSTS

**Objective 8**

Identify the conceptual issues related to research and development costs.

**Research and development (R&D) costs** are not in themselves intangible assets. However, we present the accounting for R&D costs here because R&D activities frequently result in the development of patents or copyrights (such as a new product, process, idea, formula, composition, or literary work) that may provide future value.

As indicated in the opening story, many companies spend considerable sums on research and development. Illustration 12-12 shows the outlays for R&D made by selected U.S. companies.

**ILLUSTRATION 12-12**

R&D Outlays, as a Percentage of Sales and Profits

Company	R&D Expense (\$ million)	R&D/Sales	R&D/Net Income
<b>Caterpillar</b>	\$1,347.0	3.24%	38.08%
<b>Deere</b>	816.8	3.39	44.84
<b>Dell</b>	498.0	0.87	19.28
<b>General Mills</b>	191.0	1.54	16.70
<b>Hewlett-Packard</b>	3,611.0	3.46	49.71
<b>Johnson &amp; Johnson</b>	7,125.0	13.36	64.46
<b>Kellogg</b>	190.6	1.75	18.98
<b>Merck</b>	4,782.9	21.13	107.87
<b>Procter &amp; Gamble</b>	2,112.0	2.76	20.43

**INTERNATIONAL INSIGHT**

International accounting standards require the capitalization of appropriate development expenditures. This conflicts with U.S. GAAP.

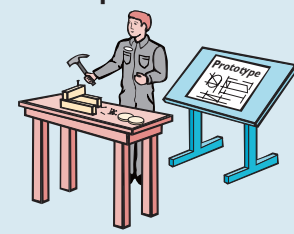

Two difficulties arise in accounting for R&D expenditures: (1) identifying the costs associated with particular activities, projects, or achievements, and (2) determining the magnitude of the future benefits and length of time over which such benefits may be realized. Because of these latter uncertainties, the FASB has simplified the accounting practice in this area. **Companies must expense all research and development costs when incurred. [9]**

### Identifying R&D Activities

Illustration 12-13 shows the definitions for **research activities** and **development activities**. These definitions differentiate research and development costs from other similar costs. **[10]**

**ILLUSTRATION 12-13**

Research Activities versus Development Activities

Research Activities	Development Activities
 <p>Planned search or critical investigation aimed at discovery of new knowledge.</p>	 <p>Translation of research findings or other knowledge into a plan or design for a new product or process or for a significant improvement to an existing product or process whether intended for sale or use.</p>
<p><b>Examples</b></p> <p>Laboratory research aimed at discovery of new knowledge; searching for applications of new research findings.</p>	<p><b>Examples</b></p> <p>Conceptual formulation and design of possible product or process alternatives; construction of prototypes and operation of pilot plants.</p>

R&D activities do not include routine or periodic alterations to existing products, production lines, manufacturing processes, and other ongoing operations, even though these alterations may represent improvements. For example, routine ongoing efforts to refine, enrich, or improve the qualities of an existing product are not considered R&D activities.

## Accounting for R&D Activities

The costs associated with R&D activities and the accounting treatments accorded them are as follows.

### Objective 9

Describe the accounting for research and development and similar costs.

1. **Materials, Equipment, and Facilities.** Expense the entire costs, **unless the items have alternative future uses** (in other R&D projects or otherwise). If there are alternative future uses, carry the items as inventory and allocate as consumed, or capitalize and depreciate as used.
2. **Personnel.** Expense as incurred salaries, wages, and other related costs of personnel engaged in R&D.
3. **Purchased Intangibles.** Recognize and measure at fair value. After initial recognition, account for in accordance with their nature (as either limited-life or indefinite-life intangibles).<sup>11</sup>
4. **Contract Services.** Expense the costs of services performed by others in connection with the R&D as incurred.
5. **Indirect Costs.** Include a reasonable allocation of indirect costs in R&D costs, except for general and administrative cost, which must be clearly related in order to be included in R&D. [12]

Consistent with item 1 above, if a company owns a research facility that conducts R&D activities and that has alternative future uses (in other R&D projects or otherwise), it should capitalize the facility as an operational asset. The company accounts for depreciation and other costs related to such research facilities as R&D expenses.<sup>12</sup>

To illustrate, assume that Next Century Incorporated develops, produces, and markets laser machines for medical, industrial, and defense uses.<sup>13</sup> Illustration 12-14 (on the next page) lists the types of expenditures related to its laser-machine activities, along with the recommended accounting treatment.

<sup>11</sup>If R&D-related intangibles (often referred to as *in-process R&D*) are also acquired in a business combination, they are also recognized and measured at fair value. After initial recognition, these intangible assets are accounted for in accordance with their nature (as either limited-life or indefinite-life intangibles.) [11]

<sup>12</sup>Companies in the extractive industries can use the following accounting treatment for the unique costs of research, exploration, and development activities and for those costs that are similar to but not classified as R&D costs: (1) expense as incurred, (2) capitalize and either depreciate or amortize over an appropriate period of time, or (3) accumulate as part of inventoriable costs. Choice of the appropriate accounting treatment for such costs is based on the degree of certainty of future benefits and the principle of matching revenues and expenses.

<sup>13</sup>Sometimes companies conduct R&D activities for other companies under a contractual arrangement. In this case, the contract usually specifies that the company performing the R&D work be reimbursed for all direct costs and certain specific indirect costs, plus a profit element. Because reimbursement is expected, the company doing the R&D work records the R&D costs as a receivable. The company for whom the work has been performed reports these costs as R&D and expenses them as incurred. For a more complete discussion of how an enterprise should account for funding of its R&D by others, see [13].

**ILLUSTRATION 12-14**

Sample R&D Expenditures and Their Accounting Treatment

<b>Next Century Incorporated</b>	
Type of Expenditure	Accounting Treatment
1. Construction of long-range research facility for use in current and future projects (three-story, 400,000-square-foot building).	Capitalize and depreciate as R&D expense.
2. Acquisition of R&D equipment for use on current project only.	Expense immediately as R&D.
3. Acquisition of machinery for use on current and future R&D projects.	Capitalize and depreciate as R&D expense.
4. Purchase of materials for use on current and future R&D projects.	Inventory and allocate to R&D projects; expense as consumed.
5. Salaries of research staff designing new laser bone scanner.	Expense immediately as R&D.
6. Research costs incurred under contract with New Horizon, Inc., and billable monthly.	Record as a receivable (reimbursable expenses).
7. Material, labor, and overhead costs of prototype laser scanner.	Expense immediately as R&D.
8. Costs of testing prototype and design modifications.	Expense immediately as R&D.
9. Legal fees to obtain patent on new laser scanner.	Capitalize as patent and amortize to overhead as part of cost of goods manufactured.
10. Executive salaries.	Expense as operating expense (general and administrative).
11. Cost of marketing research to promote new laser scanner.	Expense as operating expense (selling).
12. Engineering costs incurred to advance the laser scanner to full production stage.	Expense immediately as R&D.
13. Costs of successfully defending patent on laser scanner.	Capitalize as patent and amortize to overhead as part of cost of goods manufactured.
14. Commissions to sales staff marketing new laser scanner.	Expense as operating expense (selling).

### Costs Similar to R&D Costs

Many costs have characteristics similar to research and development costs. Examples are:

1. Start-up costs for a new operation.
2. Initial operating losses.
3. Advertising costs.
4. Computer software costs.

For the most part, these costs are expensed as incurred, similar to the accounting for R&D costs. We briefly explain these costs in the following sections.

#### Start-Up Costs

**Start-up costs** are incurred for one-time activities to start a new operation. Examples include opening a new plant, introducing a new product or service, or conducting business in a new territory. Start-up costs include **organizational costs**, such as legal and state fees incurred to organize a new business entity.

The accounting for start-up costs is straightforward: **Expense start-up costs as incurred.** The profession recognizes that companies incur start-up costs with the expectation of future revenues or increased efficiencies. However, to determine the amount and timing of future benefits is so difficult that a conservative approach—expensing these costs as incurred—is required. [14]

To illustrate examples of start-up costs, assume that U.S.-based Hilo Beverage Company decides to construct a new plant in Brazil. This represents Hilo's first entry into the Brazilian market. Hilo plans to introduce the company's major U.S. brands into Brazil, on a locally produced basis. The following costs might be involved:

1. Travel-related costs; costs related to employee salaries; and costs related to feasibility studies, accounting, tax, and government affairs.
2. Training of local employees related to product, maintenance, computer systems, finance, and operations.
3. Recruiting, organizing, and training related to establishing a distribution network.

Hilo Beverage should expense all these start-up costs as incurred.

Start-up activities commonly occur at the same time as activities involving the acquisition of assets. For example, as it is incurring start-up costs for the new plant, Hilo probably is also buying or building property, plant, equipment, and inventory. Hilo should not immediately expense the costs of these tangible assets. Instead, it should report them on the balance sheet using appropriate GAAP reporting guidelines.

### Initial Operating Losses

Some contend that companies should be allowed to capitalize initial operating losses incurred in the start-up of a business. They argue that such operating losses are an unavoidable cost of starting a business.

For example, assume that Hilo lost money in its first year of operations and wishes to capitalize this loss. Hilo's CEO argues that as the company becomes profitable, it will offset these losses in future periods. What do *you* think? We believe that this approach is unsound, since losses have no future service potential and therefore cannot be considered an asset.

GAAP requires that operating losses during the early years **should not be capitalized**. In short, **the accounting and reporting standards should be no different for an enterprise trying to establish a new business than they are for other enterprises.** [15]<sup>14</sup>

### Advertising Costs

Over the years, **PepsiCo** has hired various pop stars, such as Justin Timberlake and Beyoncé, to advertise its products. How should it report such advertising costs related to its star spokespeople? Pepsi could expense the costs in various ways:

1. When they have completed their singing assignments.
2. The first time the advertising runs.
3. Over the estimated useful life of the advertising.
4. In an appropriate fashion to each of the three periods identified above.
5. Over the period revenues are expected to result.

**For the most part, Pepsi must expense advertising costs as incurred or the first time the advertising takes place.** Whichever of these two approaches is followed, the results are essentially the same. On the other hand, companies record as assets any tangible assets used in advertising, such as billboards or blimps. The rationale is that such assets do have alternative future uses. Again the profession has taken a conservative

<sup>14</sup>A company is considered to be in the developing stages when it is directing its efforts toward establishing a new business and either the company has not started the principal operations or it has earned no significant revenue.

### What do the numbers mean?

#### BRANDED

For many companies, developing a strong brand image is as important as developing the products they sell. Now more than ever, companies see the power of a strong brand, enhanced by significant and effective advertising investments.

As the following chart indicates, the value of brand investments is substantial. **Coca-Cola** heads the list with an estimated brand value of about \$65 billion.

The World's 10 Most Valuable Brands  
(in billions)

1	<b>Coca-Cola</b>	\$65.3	6	<b>Toyota</b>	\$32.0
2	<b>Microsoft</b>	58.7	7	<b>Intel</b>	31.0
3	<b>IBM</b>	57.0	8	<b>McDonald's</b>	29.4
4	<b>GE</b>	51.6	9	<b>Disney</b>	29.2
5	<b>Nokia</b>	33.7	10	<b>Mercedes-Benz</b>	23.6

Source: 2007 data, from Interbrand Corp., J. P. Morgan Chase, Citigroup, and Morgan Stanley.

Occasionally you may find the value of a brand included in a company's financial statements under goodwill. But generally you will not find the estimated values of brands recorded in companies' balance sheets. The reason? The subjectivity that goes into estimating a brand's value. In some cases, analysts base an estimate of brand value on opinion polls or on some multiple of ad spending. For example, in estimating the brand values shown above, **Interbrand Corp.** estimates the percentage of the overall future revenues the brand will generate and then discounts the net cash flows, to arrive at a present value. Some analysts believe that information on brand values is relevant. Others voice valid concerns about the reliability of brand value estimates due to subjectivity in the estimates for revenues, costs, and the risk component of the discount rate.

Source: Adapted from David Kiley, "Best Global Brands," *BusinessWeek* (August 6, 2007), p. 59.

approach to recording advertising costs because defining and measuring the future benefits can be so difficult. [16]<sup>15</sup>

#### Computer Software Costs

A special problem arises in distinguishing R&D costs from selling and administrative activities. The FASB's intent was that companies exclude from the definition of R&D activities the acquisition, development, or improvement of a product or process **for use in their selling or administrative activities**. For example, the costs of software incurred by an airline in improving its computerized reservation system, or the costs incurred in developing a company's management information system **are not** research and development costs.

Accounting for computer software costs is a specialized and complex accounting topic that we discuss and illustrate in Appendix 12A (pages 614–617).

#### Conceptual Questions

The requirement that companies expense immediately all R&D costs (as well as start-up costs) incurred internally is a conservative, practical solution. It ensures consistency in practice and uniformity among companies. But the practice of immediately writing off expenditures made in the expectation of benefiting future periods is conceptually incorrect.

<sup>15</sup>There are some exceptions for immediate expensing of advertising costs when they relate to direct-response advertising, but that subject is beyond the scope of this book.

Proponents of immediate expensing contend that from an income statement standpoint, long-run application of this standard frequently makes little difference. They argue that because of the ongoing nature of most companies' R&D activities, the amount of R&D cost charged to expense each accounting period is about the same, whether there is immediate expensing or capitalization and subsequent amortization.

Others criticize this practice. They believe that the balance sheet should report an intangible asset related to expenditures that have future benefit. To preclude capitalization of all R&D expenditures removes from the balance sheet what may be a company's most valuable asset. This standard represents one of the many trade-offs made among relevance, reliability, and cost-benefit considerations.<sup>16</sup>

### Underlying Concepts

The requirement that companies expense all R&D costs as incurred is an example of the conflict between relevance and reliability. Here, this requirement leans strongly in support of reliability, as well as conservatism, consistency, and comparability. No attempt is made to match costs and revenues.

## PRESENTATION OF INTANGIBLES AND RELATED ITEMS

### Presentation of Intangible Assets

The reporting of intangible assets is similar to the reporting of property, plant, and equipment. However, contra accounts are not normally shown for intangibles on the balance sheet. As Illustration 12-15 (on page 610) shows, on the balance sheet companies should report as a separate item all intangible assets other than goodwill. If goodwill is present, companies should report it separately. The FASB concluded that since goodwill and other intangible assets differ significantly from other types of assets, such disclosure benefits users of the balance sheet.

On the income statement, companies should present amortization expense and impairment losses for intangible assets other than goodwill separately and as part of continuing operations. Again, see Illustration 12-15. Goodwill impairment losses should also be presented as a separate line item in the continuing operations section, unless the goodwill impairment is associated with a discontinued operation.

The notes to the financial statements should include information about acquired intangible assets, including the aggregate amortization expense for each of the succeeding five years. If separate accumulated amortization accounts are not used, accumulated amortization should be disclosed in the notes. The notes should include information about changes in the carrying amount of goodwill during the period.

### Objective 10

Indicate the presentation of intangible assets and related items.

### Presentation of Research and Development Costs

Companies should disclose in the financial statements (generally in the notes) the total R&D costs charged to expense each period for which they present an income statement. **Merck & Co., Inc.**, a global research pharmaceutical company, reported both

Additional Disclosures of  
Intangibles and R&D Costs

<sup>16</sup>Research findings indicate that capitalizing R&D costs may be helpful to investors. For example, one study showed a significant relationship between R&D outlays and subsequent benefits in the form of increased productivity, earnings, and shareholder value for R&D-intensive companies. Baruch Lev and Theodore Sougiannis, "The Capitalization, Amortization, and Value-Relevance of R&D," *Journal of Accounting and Economics* (February 1996).

Another study found that there was a significant decline in earnings usefulness for companies that were forced to switch from capitalizing to expensing R&D costs, and that the decline appears to persist over time. Martha L. Loudder and Bruce K. Behn, "Alternative Income Determination Rules and Earnings Usefulness: The Case of R&D Costs," *Contemporary Accounting Research* (Fall 1995).

For year ended 12/31/14			60
For year ended 12/31/15			50
<b>Note D: Goodwill</b>			
The changes in the carrying amount of goodwill for the year ended December 31, 2010, are as follows:			
	<u>Technology Segment</u>	<u>Communications Segment</u>	<u>Total</u>
(\$000s)			
Balance as of			
January 1, 2010	\$1,413	\$904	\$2,317
Goodwill acquired			
during year	189	115	304
Impairment losses	—	(46)	(46)
Balance as of			
December 31, 2010	<u>\$1,602</u>	<u>\$973</u>	<u>\$2,575</u>
<p>The Communications segment is tested for impairment in the third quarter, after the annual forecasting process. Due to an increase in competition in the Texas and Louisiana cable industry, operating profits and cash flows were lower than expected in the fourth quarter of 2009 and the first and second quarters of 2010. Based on that trend, the earnings forecast for the next 5 years was revised. In September 2010, a goodwill impairment loss of \$46 was recognized in the Communications reporting unit. The fair value of that reporting unit was estimated using the expected present value of future cash flows.</p>			

internal and acquired research and development in its recent income statement, as shown in Illustration 12-16.

Merck's R&D Disclosure

You will want to read the **CONVERGENCE CORNER** on page 612

For discussion of how international convergence efforts relate to the accounting for intangible assets.

# CONVERGENCE CORNER

## INTANGIBLE ASSETS

There are some significant differences between iGAAP and U.S. GAAP in the accounting for both intangible assets and impairments. iGAAP related to intangible assets is presented in *IAS 38* (“Intangible Assets”). iGAAP related to impairments is found in *IAS 36* (“Impairment of Assets”).

### RELEVANT FACTS

- As in U.S. GAAP, under iGAAP the costs associated with research and development are segregated into the two components. Costs in the research phase are always expensed under both iGAAP and U.S. GAAP. Under iGAAP, however, costs in the development phase are capitalized once technological feasibility is achieved.
- iGAAP permits some capitalization of internally generated intangible assets (e.g., brand value), if it is probable there will be a future benefit and the amount can be reliably measured. U.S. GAAP requires expensing of all costs associated with internally generated intangibles.
- iGAAP requires an impairment test at each reporting date for long-lived assets and intangibles and records an impairment if the asset’s carrying amount exceeds its recoverable amount. The recoverable amount is the higher of the asset’s fair value less costs to sell and its value in use. *Value in use* is the future cash flows to be derived from the particular assets, discounted to present value. Under U.S. GAAP, impairment loss is measured as the excess of the carrying amount over the asset’s fair value.
- iGAAP allows reversal of impairment losses when there has been a change in economic conditions or in the expected use of the asset. Under U.S. GAAP, impairment losses cannot be reversed for assets to be held and used; the impairment loss results in a new cost basis for the asset. iGAAP and U.S. GAAP are similar in the accounting for impairments of assets held for disposal.
- With issuance of a recent converged statement on business combinations (*IFRS 3* and *SFAS No. 141—Revised*), iGAAP and U.S. GAAP are very similar for intangibles acquired in a business combination. That is, companies recognize an intangible asset separately from goodwill if the intangible represents contractual or legal rights or is capable of being separated or divided and sold, transferred, licensed, rented, or exchanged. In addition, under both U.S. GAAP and iGAAP, companies recognize acquired *in-process research and development* (IPR&D) as a separate intangible asset if it meets the definition of an intangible asset and its fair value can be measured reliably.

### ABOUT THE NUMBERS

To illustrate the effect of differences in the accounting for brands, consider the following disclosure by **GlaxoSmithKline plc** in a recent annual report.

Notes to the Financial Statements	
<b>Intangible assets (in part):</b>	
The following table sets out the iGAAP to U.S. GAAP adjustments required to the iGAAP income statement for amortisation of brands:	
<u>Income Statement</u>	
	(£ million)
Amortisation charge under iGAAP	139
Amortisation charge under US GAAP	1,454
iGAAP to U.S. GAAP adjustment	<u>1,315</u>

Thus, GlaxoSmithKline would report lower-income by £1.3 billion if it accounted for its brands under U.S. GAAP.

### ON THE HORIZON

The IASB and FASB have identified a project that would consider expanded recognition of internally generated intangible assets. As indicated, iGAAP permits more recognition of intangibles compared to U.S. GAAP. Thus, it will be challenging to develop converged standards for intangible assets, given the long-standing prohibition on capitalizing internally generated intangible assets and research and development in U.S. GAAP. Learn more about the timeline for the intangible asset project at the IASB website: <http://www.iasb.org/current+Projects/IASB+Projects/IASB+Work+Plan.htm>.

## SUMMARY OF LEARNING OBJECTIVES

- 1** Describe the characteristics of intangible assets. Intangible assets have two main characteristics: (1) They lack physical existence, and (2) they are not financial instruments. In most cases, intangible assets provide services over a period of years and so are normally classified as long-term assets.
- 2** Identify the costs to include in the initial valuation of intangible assets. Intangibles are recorded at cost. Cost includes all acquisition costs and expenditures needed to make the intangible asset ready for its intended use. If intangibles are acquired in exchange for stock or other assets, the cost of the intangible is the fair value of the consideration given or the fair value of the intangible received, whichever is more clearly evident. When a company makes a “basket purchase” of several intangibles or a combination of intangibles and tangibles, it should allocate the cost on the basis of fair values.
- 3** Explain the procedure for amortizing intangible assets. Intangibles have either a limited useful life or an indefinite useful life. Companies amortize limited-life intangibles. They do not amortize indefinite-life intangibles. Limited-life intangibles should be amortized by systematic charges to expense over their useful life. The useful life should reflect the period over which these assets will contribute to cash flows. The amount to report for amortization expense should reflect the pattern in which a company consumes or uses up the asset, if it can reliably determine that pattern. Otherwise, use a straight-line approach.
- 4** Describe the types of intangible assets. Major types of intangibles are: (1) *marketing-related intangibles*, used in the marketing or promotion of products or services; (2) *customer-related intangibles*, resulting from interactions with outside parties; (3) *artistic-related intangibles*, giving ownership rights to such items as plays and literary works; (4) *contract-related intangibles*, representing the value of rights that arise from contractual arrangements; (5) *technology-related intangibles*, relating to innovations or technological advances; and (6) *goodwill*, arising from business combinations.
- 5** Explain the conceptual issues related to goodwill. Unlike receivables, inventories, and patents that a company can sell or exchange individually in the marketplace, goodwill can be identified only with the company as a whole. Goodwill is a “going concern” valuation and is recorded only when an entire business is purchased. A company should not capitalize goodwill generated internally. The future benefits of goodwill may have no relationship to the costs incurred in the development of that goodwill. Goodwill may exist even in the absence of specific costs to develop it.
- 6** Describe the accounting procedures for recording goodwill. To record goodwill, a company compares the fair value of the net tangible and identifiable intangible assets with the purchase price of the acquired business. The difference is considered goodwill. Goodwill is the residual. Goodwill is often identified on the balance sheet as the excess of cost over the fair value of the net assets acquired.
- 7** Explain the accounting issues related to intangible-asset impairments. Impairment occurs when the carrying amount of the intangible asset is not recoverable. Companies use a recoverability test and a fair value test to determine impairments for limited-life intangibles. They use only a fair value test for indefinite-life intangibles. Goodwill impairments require a two-step process: First, test the fair value of the reporting unit, then do the fair value test on implied goodwill.
- 8** Identify the conceptual issues related to research and development costs. R&D costs are not in themselves intangible assets, but R&D activities frequently result in the development of something a company patents or copyrights. The difficulties in accounting

for R&D expenditures are: (1) identifying the costs associated with particular activities, projects, or achievements, and (2) determining the magnitude of the future benefits and length of time over which a company may realize such benefits. Because of these latter uncertainties, companies are required to expense all research and development costs when incurred.

**•9 Describe the accounting for research and development and similar costs.** Illustration 12-14 shows the costs associated with R&D activities and the accounting treatment accorded them. Many costs have characteristics similar to R&D costs. Examples are start-up costs, initial operating losses, and advertising costs. For the most part, these costs are expensed as incurred, similar to the accounting for R&D costs.

**•10 Indicate the presentation of intangible assets and related items.** On the balance sheet, companies should report all intangible assets other than goodwill as a separate item. Contra accounts are not normally shown. If goodwill is present, it too should be reported as a separate item. On the income statement, companies should report amortization expense and impairment losses in Continuing operations. The notes to the financial statements have additional detailed information. Financial statements must disclose the total R&D costs charged to expense each period for which an income statement is presented.

## APPENDIX 12A

## ACCOUNTING FOR COMPUTER SOFTWARE COSTS

### Objective 11

Understand the accounting treatment for computer software costs.

Our economy is changing from a focus on manufacturing processes (tangible outputs) to a focus on information flow (intangible outputs). As a result, the accounting for computer software products becomes increasingly important.<sup>17</sup> This appendix discusses the basic issues involved in accounting for computer software.

## DIVERSITY IN PRACTICE

Companies can either **purchase** computer software or **create** it. They may purchase or create software for **external use** (such as spreadsheet applications like Excel or Lotus 1-2-3) or for **internal use** (e.g., to establish a better internal accounting system).

How should companies account for the costs of developing software? Should they expense such costs immediately, or capitalize and amortize them in the future? At one time, some companies expensed all software costs, and others capitalized such costs. Still others differentiated such costs on the basis of whether the software was purchased or created, or whether it was used for external or internal purposes.

Another major question is whether the costs involved in developing software are research and development costs. If they are actually R&D costs, then companies should expense them as incurred. If they are not R&D costs, then a strong case can be made for capitalization. As one financial executive of a software company, who argues for capitalization, noted, “The key distinction between our spending and R&D is recoverability. We know we are developing something we can sell.”

<sup>17</sup>A major contributing factor was IBM’s decision in 1969 to “unbundle” its hardware and software—to state the cost of the hardware and software separately. Previously, computer companies provided most application software free with the hardware. This unbundling led to the creation of a whole new industry, the software industry, whose members began selling software to hardware users.

## THE PROFESSION'S POSITION

In an attempt to resolve the issue of how to account for software (at least for companies that sell computer software), the FASB issued the following rules. [17]

1. Until a company has established **technological feasibility** for a software product, it should charge to R&D expense the costs incurred in creating the product.
2. Technological feasibility is established when the company has completed a detailed program design or a working model.

In short, the FASB has taken a conservative position in regard to computer software costs. For example, a company like **Microsoft** must expense all costs until it has completed the activities (planning, designing, coding, and testing) necessary to establish that it can produce the product to meet its design specifications. From that point on, Microsoft should capitalize subsequently incurred costs and amortize them to current and future periods.

Two additional points: First, **if Microsoft purchases software and it has alternative future uses, then it may be capitalized**. Second, **this standard applies only to the development of software that is to be sold, leased, or otherwise marketed to third parties** (i.e., for external use).

The profession has also indicated how to account for software to be used internally. Activities performed during the preliminary project stage of development (e.g., conceptual formulation and evaluation of alternatives) are similar to R&D costs. Companies should expense such costs immediately. Once the software is at the application development stage (e.g., at the coding or installation stages), its future economic benefits become probable. At that point, companies must capitalize the software costs. Finally, subsequent to the application development stage, costs related to training and application maintenance should be expensed as incurred. [18]

## ACCOUNTING FOR CAPITALIZED SOFTWARE COSTS

If companies are to capitalize software costs, then they must establish a proper amortization pattern for such costs. As a basis for amortization, **one of two amounts is used**: (1) the ratio of current revenues to current and anticipated revenues (**the percent-of-revenue approach**), or (2) the straight-line method over the remaining useful life of the asset (**straight-line approach**). A company must use whichever of these amounts is **greater**. This rule can result in the use of the percent-of-revenue method one year and the straight-line method in another.<sup>18</sup>

To illustrate, assume that **AT&T** has capitalized software costs of \$10 million, and current (first-year) revenues from sales of this product of \$4 million. AT&T anticipates earning \$16 million in additional future revenues from this product; it estimates that the product has an economic life of four years. Under the two approaches, the calculations are as follows for the first year's amortization:

**Percent-of-revenue approach:**

$$\frac{\$4,000}{\$20,000,000} \times \$10,000,000 = \$2,000,000$$

**Straight-line approach:**

$$\$10,000,000 \div 4 \text{ years} = \$2,500,000$$

Thus AT&T uses the straight-line approach because it results in the **greater amortization charge**.

<sup>18</sup>Because there are no revenues associated with software developed for internal use, amortization of these internal use capitalized costs is based on the straight-line approach.

## REPORTING SOFTWARE COSTS

How reliable is software as an asset? Because of this concern, the FASB indicated that companies should value capitalized software costs at the **lower of unamortized cost (book value) or net realizable value**. If net realizable value is lower, then companies should write down the capitalized software costs to this value. Once companies have written down the costs, **they may not write them back up**.

In addition to the regular disclosures for R&D costs, companies should report in the financial statements the following information relating to software.

1. Unamortized software costs.
2. The total amount charged to expense and the amounts, if any, written down to net realizable value.

Again, these accounting and reporting requirements apply only to software **developed for external purposes**.

Illustration 12A-1 presents an example of software development cost disclosure, taken from the annual report of **Analogic Corporation**.

**ILLUSTRATION 12A-1**  
Disclosure of Software

Total assets	<u>\$459,141</u>	<u>\$488,645</u>

#### Significant accounting policies (in part):

##### Note (f) Research and development and capitalized software development costs:

Research and product development costs are expensed as incurred and include primarily engineering salaries, stock based compensation, overhead and materials used in connection with research and product development projects.

Software development costs incurred subsequent to establishing technological feasibility through general release of the software products are capitalized in accordance with GAAP. Technological feasibility is demonstrated by the completion of a detailed program design. Capitalized costs are amortized on a straight-line basis over the economic lives of the related products, generally three years. Amortization expense was \$739, \$1,157 and \$857 in fiscal years 2007, 2006 and 2005 respectively and is included in product cost of sales. The unamortized balance of capitalized software was \$2,319 and \$2,670 at July 31, 2007 and 2006 respectively.

## SETTING STANDARDS FOR SOFTWARE ACCOUNTING

"It's unreasonable to expense all software costs, and it's unreasonable to capitalize all software costs," said **IBM's** director of financial reporting. "If you subscribe to those two statements, then it follows that there is somewhere in between where development ends and capitalization begins. Now you have to define that point."<sup>19</sup> The FASB defined that point as **technological feasibility**, which is established upon completion of a detailed program design or a working model.

The difficulty of applying this criterion to software is that "there is no such thing as a real, specific, baseline design. But you could make it look like you have one as early or as late as you like," says Osman Eralp of **Hambrecht & Quist**.<sup>20</sup> That is, if a

<sup>19</sup>"When Does Life Begin?" *Forbes* (June 16, 1986), pp. 72–74.

<sup>20</sup>Ibid.

company wishes to capitalize, it draws up a detailed program design quickly. If it wants to expense lots of development costs, it simply holds off writing a detailed program design. And, once capitalized, the costs are amortized over the useful life specified by the developer. Because of either constant redesign or supersession, software's useful life is generally quite short (two to four years).

As another example, some companies "manage by the numbers." That is, they are very careful to identify projects that are worthwhile and capitalize the computer software costs associated with them. They believe that good projects must be capitalized and amortized in the future; otherwise, the concept of properly matching expense and revenues is abused.

In contrast, other companies choose not to manage by the numbers. They simply expense all development costs. Companies that expense all these costs have no use for a standard that requires capitalization. In their view, it would mean only that they would need a more complex, more expensive cost accounting system, which would provide little if any benefit.

Financial analysts have reacted almost uniformly against any capitalization of software costs. They believe such costs should be expensed because of the rapid obsolescence of software and the potential for abuse that may result from capitalizing costs inappropriately. As Donald Kirk, a former chairman of the FASB, stated, "The Board is now faced with the problem of balancing what it thought was good theory with the costs for some companies of implementing a new accounting system with the concerns of users about the potential for abuse of the standard."<sup>21</sup>

The accounting for software development costs has been addressed in the authoritative literature. However, some of the issues debated may arise again, if accounting standard-setters propose expanded capitalization of development costs beyond those related to software. Such a debate is likely if the FASB converges to iGAAP, which permits expanded capitalization of development costs compared to U.S. GAAP.

## SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 12A

### KEY TERMS

technological feasibility,  
615

**LO 11 Understand the accounting treatment for computer software costs.** Costs incurred in creating a software product should be charged to R&D expense when incurred until technological feasibility has been established for the product. Subsequent costs should be capitalized and amortized to current and future periods. Software that a company purchases for sale or lease to third parties and has alternative future uses may be capitalized and amortized using the greater of the percent-of-revenue approach or the straight-line approach.

### Exercises

Access the FASB Codification at <http://asc.fasb.org/home> to prepare responses to the following exercises. Provide Codification references for your responses.

**CE12-1** Access the Codification glossary (“Master Glossary”) to answer the following.

- What is the definition provided for an intangible asset?
- What is the definition of goodwill?
- What is the definition of research and development (R&D)?
- What is a development stage entity?

**CE12-2** Your friend Harry does not understand the concept of an indefinite-life intangible asset. He wonders, “Does this mean the life is infinite?” What does the authoritative literature say about indefinite-life intangible assets?

**CE12-3** What guidance does the Codification provide concerning the disclosure of research and development (R&D) costs?

**CE12-4** What is the nature of the authoritative guidance for advertising costs for entertainment companies?

**An additional Codification case can be found in the Using Your Judgment section, on page 634.**

**Be sure to check the companion website for a Review and Analysis Exercise, with solution.**

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

## QUESTIONS

1. What are the two main characteristics of intangible assets?
2. If intangibles are acquired for stock, how is the cost of the intangible determined?
3. Intangibles have either a limited useful life or an indefinite useful life. How should these two different types of intangibles be amortized?
4. Why does the accounting profession make a distinction between internally created intangibles and purchased intangibles?
5. In 2010 Ghostbusters Corp. spent \$420,000 for “goodwill” visits by sales personnel to key customers. The purpose of these visits was to build a solid, friendly relationship for the future and to gain insight into the problems and needs of the companies served. How should this expenditure be reported?
6. What are factors to be considered in estimating the useful life of an intangible asset?
7. What should be the pattern of amortization for a limited-life intangible?
8. **Columbia Sportswear Company** acquired a trademark that is helpful in distinguishing one of its new products. The trademark is renewable every 10 years at minimal cost. All evidence indicates that this trademark product will generate cash flows for an indefinite period of time. How should this trademark be amortized?
9. McNabb Company spent \$190,000 developing a new process, \$45,000 in legal fees to obtain a patent, and \$91,000 to market the process that was patented, all in the year 2010. How should these costs be accounted for in 2010?
10. Izzy Inc. purchased a patent for \$350,000 which has an estimated useful life of 10 years. Its pattern of use or consumption cannot be reliably determined. Prepare the entry to record the amortization of the patent in its first year of use.
11. Explain the difference between artistic-related intangible assets and contract-related intangible assets.
12. What is goodwill? What is negative goodwill?
13. Under what circumstances is it appropriate to record goodwill in the accounts? How should goodwill, properly recorded on the books, be written off in order to conform with generally accepted accounting principles?
14. In examining financial statements, financial analysts often write off goodwill immediately. Comment on this procedure.
15. Braxton Inc. is considering the write-off of a limited life intangible because of its lack of profitability. Explain to the management of Braxton how to determine whether a write-off is permitted.
16. Last year Zeno Company recorded an impairment on an intangible asset held for use. Recent appraisals indicate that the asset has increased in value. Should Zeno record this recovery in value?
17. Explain how losses on impaired intangible assets should be reported in income.
18. Simon Company determines that its goodwill is impaired. It finds that its implied goodwill is \$360,000 and its recorded goodwill is \$400,000. The fair value of its identifiable assets is \$1,450,000. What is the amount of goodwill impaired?
19. What is the nature of research and development costs?
20. Research and development activities may include (a) personnel costs, (b) materials and equipment costs, and (c) indirect costs. What is the recommended accounting treatment for these three types of R&D costs?
21. Which of the following activities should be expensed currently as R&D costs?
  - (a) Testing in search for or evaluation of product or process alternatives.
  - (b) Engineering follow-through in an early phase of commercial production.
  - (c) Legal work in connection with patent applications or litigation, and the sale or licensing of patents.
22. Indicate the proper accounting for the following items.
  - (a) Organization costs.
  - (b) Advertising costs.
  - (c) Operating losses.
23. In 2009, Austin Powers Corporation developed a new product that will be marketed in 2010. In connection with the development of this product, the following costs were incurred in 2009: research and development costs \$400,000; materials and supplies consumed \$60,000; and compensation paid to research consultants \$125,000. It is anticipated that these costs will be recovered in 2012. What is the amount of research and development costs that Austin Powers should record in 2009 as a charge to expense?
24. Recently, a group of university students decided to incorporate for the purposes of selling a process to recycle the waste product from manufacturing cheese. Some of the initial costs involved were legal fees and office expenses

incurred in starting the business, state incorporation fees, and stamp taxes. One student wishes to charge these costs against revenue in the current period. Another wishes to defer these costs and amortize them in the future. Which student is correct?

**25.** An intangible asset with an estimated useful life of 30 years was acquired on January 1, 2000, for \$540,000. On January 1, 2010, a review was made of intangible assets and their expected service lives, and it was determined that this asset had an estimated useful life of 30 more years from the date of the review. What is the amount of amortization for this intangible in 2010?

**26.** Where can authoritative iGAAP guidance related to intangible assets be found?

**27.** Briefly describe some of the similarities and differences between U.S. GAAP and iGAAP with respect to the accounting for intangible assets.

**28.** Sophia Co., a cellular phone company based in Italy, prepares its financial statements in accordance with iGAAP. In 2010, it reported average assets of €12,500 and net income €1,125. Included in net income is amortization expense of €120. Under U.S. GAAP, Sophia's amortization expense would have been €325. Briefly discuss how analysis of Sophia's 2010 return on total assets (and comparisons to a company using U.S. GAAP) would be affected by differences in intangible asset amortization between iGAAP and U.S. GAAP.

**29.** Briefly discuss the convergence efforts that are underway in the area of intangible assets.

**\*30.** An article in the financial press stated, "More than half of software maker **Comserve's** net worth is in a pile of tapes and ring-bound books. That raises some accountants' eyebrows." What is the profession's position regarding the incurrence of costs for computer software that will be sold?

**\*31.** Garfunkel, Inc. has incurred \$6 million in developing a computer software product for sale to third parties. Of the \$6 million costs incurred, \$4.5 million is capitalized. The product produced from this development work has generated \$2 million of revenue in 2010 and is anticipated to generate another \$8 million in future years. The estimated useful life of the project is 4 years. How much of the capitalized costs should be amortized in 2010?

**\*32.** In 2010, EZ-Learn Software developed a software package for assisting calculus instruction in business colleges, at a cost of \$2,000,000. Although there are tens of thousands of calculus students in the market, college instructors seem to change their minds frequently on the use of teaching aids. Not one package has yet been ordered or delivered. Prepare an argument to advocate expensing the development cost in the current year. Offer an argument for capitalizing the development cost over its estimated useful life. Which stakeholders are harmed or benefited by either approach?

## BRIEF EXERCISES

**•2 •3** **BE12-1** Celine Dion Corporation purchases a patent from Salmon Company on January 1, 2010, for \$54,000. The patent has a remaining legal life of 16 years. Celine Dion feels the patent will be useful for 10 years. Prepare Celine Dion's journal entries to record the purchase of the patent and 2010 amortization.

**•2 •3** **BE12-2** Use the information provided in BE12-1. Assume that at January 1, 2012, the carrying amount of the patent on Celine Dion's books is \$43,200. In January, Celine Dion spends \$24,000 successfully defending a patent suit. Celine Dion still feels the patent will be useful until the end of 2019. Prepare the journal entries to record the \$24,000 expenditure and 2012 amortization.

**•2 •3** **BE12-3** Larry Byrd, Inc., spent \$68,000 in attorney fees while developing the trade name of its new product, the Mean Bean Machine. Prepare the journal entries to record the \$68,000 expenditure and the first year's amortization, using an 8-year life.

**•2 •3** **BE12-4** Gershwin Corporation obtained a franchise from Sonic Hedgehog Inc. for a cash payment of \$120,000 on April 1, 2010. The franchise grants Gershwin the right to sell certain products and services for a period of 8 years. Prepare Gershwin's April 1 journal entry and December 31 adjusting entry.

**•6** **BE12-5** On September 1, 2010, Winans Corporation acquired Aumont Enterprises for a cash payment of \$700,000. At the time of purchase, Aumont's balance sheet showed assets of \$620,000, liabilities of \$200,000, and owners' equity of \$420,000. The fair value of Aumont's assets is estimated to be \$800,000. Compute the amount of goodwill acquired by Winans.

**•7** **BE12-6** Kenoly Corporation owns a patent that has a carrying amount of \$300,000. Kenoly expects future net cash flows from this patent to total \$210,000. The fair value of the patent is \$110,000. Prepare Kenoly's journal entry, if necessary, to record the loss on impairment.

- 7 BE12-7** Waters Corporation purchased Johnson Company 3 years ago and at that time recorded goodwill of \$400,000. The Johnson Division's net assets, including the goodwill, have a carrying amount of \$800,000. The fair value of the division is estimated to be \$1,000,000. Prepare Waters's journal entry, if necessary, to record impairment of the goodwill.
- 7 BE12-8** Use the information provided in BE12-7. Assume that the fair value of the division is estimated to be \$750,000 and the implied goodwill is \$350,000. Prepare Waters's journal entry, if necessary, to record impairment of the goodwill.
- 9 BE12-9** Capriati Corporation commenced operations in early 2010. The corporation incurred \$60,000 of costs such as fees to underwriters, legal fees, state fees, and promotional expenditures during its formation. Prepare journal entries to record the \$60,000 expenditure and 2010 amortization, if any.
- 9 BE12-10** Treasure Land Corporation incurred the following costs in 2010.

Cost of laboratory research aimed at discovery of new knowledge	\$120,000
Cost of testing in search for product alternatives	100,000
Cost of engineering activity required to advance the design of a product to the manufacturing stage	<u>210,000</u>
	<u>\$430,000</u>

Prepare the necessary 2010 journal entry or entries for Treasure Land.

- 9 BE12-11** Indicate whether the following items are capitalized or expensed in the current year.
- Purchase cost of a patent from a competitor.
  - Research and development costs.
  - Organizational costs.
  - Costs incurred internally to create goodwill.
- 3 •9 BE12-12** Nieland Industries had one patent recorded on its books as of January 1, 2010. This patent had a book value of \$288,000 and a remaining useful life of 8 years. During 2010, Nieland incurred research and development costs of \$96,000 and brought a patent infringement suit against a competitor. On December 1, 2010, Nieland received the good news that its patent was valid and that its competitor could not use the process Nieland had patented. The company incurred \$85,000 to defend this patent. At what amount should patent(s) be reported on the December 31, 2010, balance sheet, assuming monthly amortization of patents?
- 3 •10 BE12-13** Sinise Industries acquired two copyrights during 2010. One copyright related to a textbook that was developed internally at a cost of \$9,900. This textbook is estimated to have a useful life of 3 years from September 1, 2010, the date it was published. The second copyright (a history research textbook) was purchased from University Press on December 1, 2010, for \$24,000. This textbook has an indefinite useful life. How should these two copyrights be reported on Sinise's balance sheet as of December 31, 2010?
- 11 \*BE12-14** Karen Austin Corporation has capitalized software costs of \$800,000, and sales of this product the first year totaled \$420,000. Karen Austin anticipates earning \$980,000 in additional future revenues from this product, which is estimated to have an economic life of 4 years. Compute the amount of software cost amortization for the first year.

## EXERCISES

- 1 •4 E12-1 (Classification Issues—Intangibles)** Presented below and on the next page is a list of items that could be included in the intangible assets section of the balance sheet.
- Investment in a subsidiary company.
  - Timberland.
  - Cost of engineering activity required to advance the design of a product to the manufacturing stage.
  - Lease prepayment (6 months' rent paid in advance).
  - Cost of equipment obtained.
  - Cost of searching for applications of new research findings.
  - Costs incurred in the formation of a corporation.

8. Operating losses incurred in the start-up of a business.
9. Training costs incurred in start-up of new operation.
10. Purchase cost of a franchise.
11. Goodwill generated internally.
12. Cost of testing in search for product alternatives.
13. Goodwill acquired in the purchase of a business.
14. Cost of developing a patent.
15. Cost of purchasing a patent from an inventor.
16. Legal costs incurred in securing a patent.
17. Unrecovered costs of a successful legal suit to protect the patent.
18. Cost of conceptual formulation of possible product alternatives.
19. Cost of purchasing a copyright.
20. Research and development costs.
21. Long-term receivables.
22. Cost of developing a trademark.
23. Cost of purchasing a trademark.

#### Instructions

- (a) Indicate which items on the list above would generally be reported as intangible assets in the balance sheet.
- (b) Indicate how, if at all, the items not reportable as intangible assets would be reported in the financial statements.

**E12-2 (Classification Issues—Intangibles)** Presented below is selected account information related to Matt Perry Inc. as of December 21, 2010. All these accounts have debit balances.

Cable television franchises	Film contract rights
Music copyrights	Customer lists
Research and development costs	Prepaid expenses
Goodwill	Covenants not to compete
Cash	Brand names
Discount on notes payable	Notes receivable
Accounts receivable	Investments in affiliated companies
Property, plant, and equipment	Organization costs
Internet domain name	Land

#### Instructions

Identify which items should be classified as an intangible asset. For those items not classified as an intangible asset, indicate where they would be reported in the financial statements.

**E12-3 (Classification Issues—Intangible Asset)** Langrova Inc. has the following amounts included in its general ledger at December 31, 2010.

Organization costs	\$24,000
Trademarks	20,000
Discount on bonds payable	35,000
Deposits with advertising agency for ads to promote goodwill of company	10,000
Excess of cost over fair value of net identifiable assets of acquired subsidiary	75,000
Cost of equipment acquired for research and development projects; the equipment has an alternative future use	90,000
Costs of developing a secret formula for a product that is expected to be marketed for at least 20 years	70,000

#### Instructions

- (a) On the basis of the information above, compute the total amount to be reported by Langrova for intangible assets on its balance sheet at December 31, 2010. Equipment has alternative future use.
- (b) If an item is not to be included in intangible assets, explain its proper treatment for reporting purposes.

**E12-4 (Intangible Amortization)** Presented below is selected information for Palmiero Company.

1. Palmiero purchased a patent from Vania Co. for \$1,500,000 on January 1, 2008. The patent is being amortized over its remaining legal life of 10 years, expiring on January 1, 2018. During 2010, Palmiero determined that the economic benefits of the patent would not last longer than 6 years

- from the date of acquisition. What amount should be reported in the balance sheet for the patent, net of accumulated amortization, at December 31, 2010?
- Palmiero bought a franchise from Dougherty Co. on January 1, 2009, for \$350,000. The carrying amount of the franchise on Dougherty's books on January 1, 2009, was \$500,000. The franchise agreement had an estimated useful life of 30 years. Because Palmiero must enter a competitive bidding at the end of 2018, it is unlikely that the franchise will be retained beyond 2018. What amount should be amortized for the year ended December 31, 2010?
  - On January 1, 2008, Palmiero incurred organization costs of \$275,000. What amount of organization expense should be reported in 2010?
  - Palmiero purchased the license for distribution of a popular consumer product on January 1, 2010, for \$150,000. It is expected that this product will generate cash flows for an indefinite period of time. The license has an initial term of 5 years but by paying a nominal fee, Palmiero can renew the license indefinitely for successive 5-year terms. What amount should be amortized for the year ended December 31, 2010?

**Instructions**

Answer the questions asked about each of the factual situations.

**E12-5 (Correct Intangible Asset Account)** As the recently appointed auditor for Hillary Corporation, you have been asked to examine selected accounts before the 6-month financial statements of June 30, 2010, are prepared. The controller for Hillary Corporation mentions that only one account is kept for Intangible Assets.

Intangible Assets				
		Debit	Credit	Balance
Jan. 4	Research and development costs	940,000		940,000
Jan. 5	Legal costs to obtain patent	75,000		1,015,000
Jan. 31	Payment of 7 months' rent on property leased by Hillary	91,000		1,106,000
Feb. 11	Premium on common stock		250,000	856,000
March 31	Unamortized bond discount on bonds due March 31, 2030	84,000		940,000
April 30	Promotional expenses related to start-up of business	207,000		1,147,000
June 30	Operating losses for first 6 months	141,000		1,288,000

**Instructions**

Prepare the entry or entries necessary to correct this account. Assume that the patent has a useful life of 12 years.

**E12-6 (Recording and Amortization of Intangibles)** Powerglide Company, organized in 2009, has set up a single account for all intangible assets. The following summary discloses the debit entries that have been recorded during 2010.

1/2/10	Purchased patent (8-year life)	\$ 380,000
4/1/10	Goodwill (indefinite life)	360,000
7/1/10	Purchased franchise with 10-year life; expiration date 7/1/20	450,000
8/1/10	Payment of copyright (5-year life)	156,000
9/1/10	Research and development costs	215,000
		\$1,561,000

**Instructions**

Prepare the necessary entries to clear the Intangible Assets account and to set up separate accounts for distinct types of intangibles. Make the entries as of December 31, 2010, recording any necessary amortization and reflecting all balances accurately as of that date. (Use straight-line amortization.)

**E12-7 (Accounting for Trade Name)** In early January 2009, Reymont Corporation applied for a trade name, incurring legal costs of \$18,000. In January of 2010, Reymont incurred \$7,800 of legal fees in a successful defense of its trade name.

**Instructions**

- Compute 2009 amortization, 12/31/09 book value, 2010 amortization, and 12/31/10 book value if the company amortizes the trade name over 10 years.
- Compute the 2010 amortization and the 12/31/10 book value, assuming that at the beginning of 2010, Reymont determines that the trade name will provide no future benefits beyond December 31, 2013.

- (c) Ignoring the response for part (b), compute the 2011 amortization and the 12/31/11 book value, assuming that at the beginning of 2011, based on new market research, Reymont determines that the fair value of the trade name is \$16,000. Estimated total future cash flows from the trade name is \$17,000 on January 3, 2011.

**9** **E12-8 (Accounting for Organization Costs)** Fontenot Corporation was organized in 2009 and began operations at the beginning of 2010. The company is involved in interior design consulting services. The following costs were incurred prior to the start of operations.

Attorney's fees in connection with organization of the company	\$17,000
Purchase of drafting and design equipment	10,000
Costs of meetings of incorporators to discuss organizational activities	7,000
State filing fees to incorporate	1,000
	<u>\$35,000</u>

### Instructions

- (a) Compute the total amount of organization costs incurred by Fontenot.  
 (b) Prepare the journal entry to record organization costs for 2010.

**2 3 8** **E12-9 (Accounting for Patents, Franchises, and R&D)** Devon Harris Company has provided information on intangible assets as follows.

A patent was purchased from Bradtke Company for \$2,500,000 on January 1, 2009. Harris estimated the remaining useful life of the patent to be 10 years. The patent was carried in Bradtke's accounting records at a net book value of \$2,000,000 when Bradtke sold it to Harris.

During 2010, a franchise was purchased from Greene Company for \$580,000. In addition, 5% of revenue from the franchise must be paid to Greene. Revenue from the franchise for 2010 was \$2,500,000. Harris estimates the useful life of the franchise to be 10 years and takes a full year's amortization in the year of purchase.

Harris incurred research and development costs in 2010 as follows.

Materials and equipment	\$142,000
Personnel	189,000
Indirect costs	102,000
	<u>\$433,000</u>

Harris estimates that these costs will be recouped by December 31, 2013. The materials and equipment purchased have no alternative uses.

On January 1, 2010, because of recent events in the field, Harris estimates that the remaining life of the patent purchased on January 1, 2009, is only 5 years from January 1, 2010.

### Instructions

- (a) Prepare a schedule showing the intangibles section of Harris's balance sheet at December 31, 2010. Show supporting computations in good form.  
 (b) Prepare a schedule showing the income statement effect for the year ended December 31, 2010, as a result of the facts above. Show supporting computations in good form.

(AICPA adapted)

**2 3** **E12-10 (Accounting for Patents)** During 2007, Thompson Corporation spent \$170,000 in research and development costs. As a result, a new product called the New Age Piano was patented. The patent was obtained on October 1, 2007, and had a legal life of 20 years and a useful life of 10 years. Legal costs of \$24,000 related to the patent were incurred as of October 1, 2007.

### Instructions

- (a) Prepare all journal entries required in 2007 and 2008 as a result of the transactions above.  
 (b) On June 1, 2009, Thompson spent \$12,400 to successfully prosecute a patent infringement suit. As a result, the estimate of useful life was extended to 12 years from June 1, 2009. Prepare all journal entries required in 2009 and 2010.  
 (c) In 2011, Thompson determined that a competitor's product would make the New Age Piano obsolete and the patent worthless by December 31, 2012. Prepare all journal entries required in 2011 and 2012.

- E12-11 (Accounting for Patents)** Reddy Industries has the following patents on its December 31, 2009, balance sheet.

Patent Item	Initial Cost	Date Acquired	Useful Life at Date Acquired
Patent A	\$40,800	3/1/06	17 years
Patent B	\$15,000	7/1/07	10 years
Patent C	\$14,400	9/1/08	4 years

The following events occurred during the year ended December 31, 2010.

- Research and development costs of \$245,700 were incurred during the year.
- Patent D was purchased on July 1 for \$28,500. This patent has a useful life of 9½ years.
- As a result of reduced demands for certain products protected by Patent B, a possible impairment of Patent B's value may have occurred at December 31, 2010. The controller for Reddy estimates the expected future cash flows from Patent B will be as follows.

Year	Expected Future Cash Flows
2011	\$2,000
2012	2,000
2013	2,000

The proper discount rate to be used for these flows is 8%. (Assume that the cash flows occur at the end of the year.)

#### Instructions

- Compute the total carrying amount of Reddy's patents on its December 31, 2009, balance sheet.
- Compute the total carrying amount of Reddy's patents on its December 31, 2010, balance sheet.

- E12-12 (Accounting for Goodwill)** Fred Graf, owner of Graf Interiors, is negotiating for the purchase of Terrell Galleries. The balance sheet of Terrell is given in an abbreviated form below.

<b>TERRELL GALLERIES</b>			
<b>BALANCE SHEET</b>			
<b>AS OF DECEMBER 31, 2010</b>			
<b>Assets</b>		<b>Liabilities and Stockholders' Equity</b>	
Cash	\$100,000	Accounts payable	\$ 50,000
Land	70,000	Long-term notes payable	<u>300,000</u>
Building (net)	200,000	Total liabilities	350,000
Equipment (net)	175,000	Common stock	\$200,000
Copyright (net)	<u>30,000</u>	Retained earnings	<u>25,000</u>
Total assets	<u>\$575,000</u>	Total liabilities and stockholders' equity	<u>\$575,000</u>

Graf and Terrell agree that:

- Land is undervalued by \$50,000.
- Equipment is overvalued by \$5,000.

Terrell agrees to sell the gallery to Graf for \$380,000.

#### Instructions

Prepare the entry to record the purchase of Terrell Galleries on Graf's books.

- E12-13 (Accounting for Goodwill)** On July 1, 2010, Brandon Corporation purchased Mills Company by paying \$250,000 cash and issuing a \$150,000 note payable. At July 1, 2010, the balance sheet of Mills Company was as follows.

Cash	\$ 50,000	Accounts payable	\$200,000
Receivables	90,000	Stockholders' equity	<u>235,000</u>
Inventory	100,000		<u>\$435,000</u>
Land	40,000		
Buildings (net)	75,000		
Equipment (net)	70,000		
Trademarks	<u>10,000</u>		
	<u>\$435,000</u>		

The recorded amounts all approximate current values except for land (fair value of \$80,000), inventory (fair value of \$125,000), and trademarks (fair value of \$15,000).

**Instructions**

- Prepare the July 1 entry for Brandon Corporation to record the purchase.
- Prepare the December 31 entry for Brandon Corporation to record amortization of intangibles. The trademark has an estimated useful life of 4 years with a residual value of \$3,000.

**7** **E12-14 (Copyright Impairment)** Presented below is information related to copyrights owned by Botticelli Company at December 31, 2010.

Cost	\$8,600,000
Carrying amount	4,300,000
Expected future net cash flows	4,000,000
Fair value	3,400,000

Assume that Botticelli Company will continue to use this copyright in the future. As of December 31, 2010, the copyright is estimated to have a remaining useful life of 10 years.

**Instructions**

- Prepare the journal entry (if any) to record the impairment of the asset at December 31, 2010. The company does not use accumulated amortization accounts.
- Prepare the journal entry to record amortization expense for 2011 related to the copyrights.
- The fair value of the copyright at December 31, 2011, is \$3,400,000. Prepare the journal entry (if any) necessary to record the increase in fair value.

**6** **7** **E12-15 (Goodwill Impairment)** Presented below is net asset information related to the Mischa Division of Santana, Inc.

MISCHA DIVISION NET ASSETS AS OF DECEMBER 31, 2010 (IN MILLIONS)	
Cash	\$ 60
Receivables	200
Property, plant, and equipment (net)	2,600
Goodwill	200
Less: Notes payable	(2,700)
Net assets	\$ 360

The purpose of the Mischa division is to develop a nuclear-powered aircraft. If successful, traveling delays associated with refueling could be substantially reduced. Many other benefits would also occur. To date, management has not had much success and is deciding whether a write-down at this time is appropriate. Management estimated its future net cash flows from the project to be \$400 million. Management has also received an offer to purchase the division for \$335 million. All identifiable assets' and liabilities' book and fair value amounts are the same.

**Instructions**

- Prepare the journal entry (if any) to record the impairment at December 31, 2010.
- At December 31, 2011, it is estimated that the division's fair value increased to \$345 million. Prepare the journal entry (if any) to record this increase in fair value.

**9** **E12-16 (Accounting for R&D Costs)** Margaret Avery Company from time to time embarks on a research program when a special project seems to offer possibilities. In 2009 the company expends \$325,000 on a research project, but by the end of 2009 it is impossible to determine whether any benefit will be derived from it.

**Instructions**

- What account should be charged for the \$325,000, and how should it be shown in the financial statements?
- The project is completed in 2010, and a successful patent is obtained. The R&D costs to complete the project are \$130,000. The administrative and legal expenses incurred in obtaining patent number 472-1001-84 in 2010 total \$24,000. The patent has an expected useful life of 5 years. Record these costs in journal entry form. Also, record patent amortization (full year) in 2010.
- In 2011, the company successfully defends the patent in extended litigation at a cost of \$47,200, thereby extending the patent life to December 31, 2018. What is the proper way to account for this cost? Also, record patent amortization (full year) in 2011.
- Additional engineering and consulting costs incurred in 2011 required to advance the design of a product to the manufacturing stage total \$60,000. These costs enhance the design of the product considerably. Discuss the proper accounting treatment for this cost.

**•9** **E12-17 (Accounting for R&D Costs)** Martinez Company incurred the following costs during 2010 in connection with its research and development activities.

Cost of equipment acquired that will have alternative uses in future R&D projects over the next 5 years (uses straight-line depreciation)	\$330,000
Materials consumed in R&D projects	59,000
Consulting fees paid to outsiders for R&D projects	100,000
Personnel costs of persons involved in R&D projects	128,000
Indirect costs reasonably allocable to R&D projects	50,000
Materials purchased for future R&D projects	34,000

**Instructions**

Compute the amount to be reported as research and development expense by Martinez on its income statement for 2010. Assume equipment is purchased at the beginning of the year.

**•11** **\*E12-18 (Accounting for Computer Software Costs)** Majoli Inc. has capitalized computer software costs of \$3,900,000 on its new “Trenton” software package. Revenues from 2010 (first year) sales are \$2,000,000. Additional future revenues from “Trenton” for the remainder of its economic life, through 2014, are estimated to be \$10,000,000.

**Instructions**

- (a) What method or methods of amortization are to be applied in the write-off of capitalized computer software costs?
- (b) Compute the amount of amortization for 2010 for “Trenton.”

**•11** **\*E12-19 (Accounting for Computer Software Costs)** During 2010, Botosan Enterprises Inc. spent \$5,000,000 developing its new “Dover” software package. Of this amount, \$2,600,000 was spent before technological feasibility was established for the product, which is to be marketed to third parties. The package was completed at December 31, 2010. Botosan expects a useful life of 8 years for this product with total revenues of \$16,000,000. During the first year (2011), Botosan realizes revenues of \$3,200,000.

**Instructions**

- (a) Prepare journal entries required in 2010 for the foregoing facts.
- (b) Prepare the entry to record amortization at December 31, 2011.
- (c) At what amount should the computer software costs be reported in the December 31, 2011, balance sheet? Could the net realizable value of this asset affect your answer?
- (d) What disclosures are required in the December 31, 2011, financial statements for the computer software costs?
- (e) How would your answers for (a), (b), and (c) be different if the computer software was developed for internal use?

See the book’s companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), for a set of B Exercises.

**PROBLEMS**

**•2 •3** **P12-1 (Correct Intangible Asset Account)** Reichenbach Co., organized in 2009, has set up a single account for all intangible assets. The following summary discloses the debit entries that have been recorded during 2009 and 2010.

<b>Intangible Assets</b>		
7/1/09	8-year franchise; expiration date 6/30/17	\$ 48,000
10/1/09	Advance payment on laboratory space (2-year lease)	24,000
12/31/09	Net loss for 2009 including state incorporation fee, \$1,000, and related legal fees of organizing, \$5,000 (all fees incurred in 2009)	16,000
1/2/10	Patent purchased (10-year life)	84,000
3/1/10	Cost of developing a secret formula (indefinite life)	75,000
4/1/10	Goodwill purchased (indefinite life)	278,400
6/1/10	Legal fee for successful defense of patent purchased above	12,650
9/1/10	Research and development costs	160,000

**Instructions**

Prepare the necessary entries to clear the Intangible Assets account and to set up separate accounts for distinct types of intangibles. Make the entries as of December 31, 2010, recording any necessary amortization and reflecting all balances accurately as of that date. (Ignore income tax effects.)

**2** **3**

**P12-2 (Accounting for Patents)** Fields Laboratories holds a valuable patent (No. 758-6002-1A) on a precipitator that prevents certain types of air pollution. Fields does not manufacture or sell the products and processes it develops. Instead, it conducts research and develops products and processes which it patents, and then assigns the patents to manufacturers on a royalty basis. Occasionally it sells a patent. The history of Fields patent number 758-6002-1A is as follows.

Date	Activity	Cost
2001–2002	Research conducted to develop precipitator	\$384,000
Jan. 2003	Design and construction of a prototype	87,600
March 2003	Testing of models	42,000
Jan. 2004	Fees paid engineers and lawyers to prepare patent application; patent granted June 30, 2004	59,500
Nov. 2005	Engineering activity necessary to advance the design of the precipitator to the manufacturing stage	81,500
Dec. 2006	Legal fees paid to successfully defend precipitator patent	42,000
April 2007	Research aimed at modifying the design of the patented precipitator	43,000
July 2011	Legal fees paid in unsuccessful patent infringement suit against a competitor	34,000

Fields assumed a useful life of 17 years when it received the initial precipitator patent. On January 1, 2009, it revised its useful life estimate downward to 5 remaining years. Amortization is computed for a full year if the cost is incurred prior to July 1, and no amortization for the year if the cost is incurred after June 30. The company's year ends December 31.

**Instructions**

Compute the carrying value of patent No. 758-6002-1A on each of the following dates:

- December 31, 2004.
- December 31, 2008.
- December 31, 2011.

**2** **3**

**P12-3 (Accounting for Franchise, Patents, and Trade Name)** Information concerning Sandro Corporation's intangible assets is as follows.

- On January 1, 2010, Sandro signed an agreement to operate as a franchisee of Hsian Copy Service, Inc. for an initial franchise fee of \$75,000. Of this amount, \$15,000 was paid when the agreement was signed, and the balance is payable in 4 annual payments of \$15,000 each, beginning January 1, 2011. The agreement provides that the down payment is not refundable and no future services are required of the franchisor. The present value at January 1, 2010, of the 4 annual payments discounted at 14% (the implicit rate for a loan of this type) is \$43,700. The agreement also provides that 5% of the revenue from the franchise must be paid to the franchisor annually. Sandro's revenue from the franchise for 2010 was \$900,000. Sandro estimates the useful life of the franchise to be 10 years. (*Hint:* You may want to refer to Appendix 18A to determine the proper accounting treatment for the franchise fee and payments.)
- Sandro incurred \$65,000 of experimental and development costs in its laboratory to develop a patent that was granted on January 2, 2010. Legal fees and other costs associated with registration of the patent totaled \$17,600. Sandro estimates that the useful life of the patent will be 8 years.
- A trademark was purchased from Shanghai Company for \$36,000 on July 1, 2007. Expenditures for successful litigation in defense of the trademark totaling \$10,200 were paid on July 1, 2010. Sandro estimates that the useful life of the trademark will be 20 years from the date of acquisition.

**Instructions**

- Prepare a schedule showing the intangible assets section of Sandro's balance sheet at December 31, 2010. Show supporting computations in good form.
- Prepare a schedule showing all expenses resulting from the transactions that would appear on Sandro's income statement for the year ended December 31, 2010. Show supporting computations in good form.

(AICPA adapted)

**P12-4 (Accounting for R&D Costs)** During 2008, Robin Wright Tool Company purchased a building site for its proposed research and development laboratory at a cost of \$60,000. Construction of the building was started in 2008. The building was completed on December 31, 2009, at a cost of \$320,000 and was placed in service on January 2, 2010. The estimated useful life of the building for depreciation purposes was 20 years. The straight-line method of depreciation was to be employed, and there was no estimated salvage value.

Management estimates that about 50% of the projects of the research and development group will result in long-term benefits (i.e., at least 10 years) to the corporation. The remaining projects either benefit the current period or are abandoned before completion. A summary of the number of projects and the direct costs incurred in conjunction with the research and development activities for 2010 appears below.

	Number of Projects	Salaries and Employee Benefits	Other Expenses (excluding Building Depreciation Charges)
Completed projects with long-term benefits	15	\$ 90,000	\$50,000
Abandoned projects or projects that benefit the current period	10	65,000	15,000
Projects in process—results indeterminate	5	40,000	12,000
Total	<u>30</u>	<u>\$195,000</u>	<u>\$77,000</u>

Upon recommendation of the research and development group, Robin Wright Tool Company acquired a patent for manufacturing rights at a cost of \$88,000. The patent was acquired on April 1, 2009, and has an economic life of 10 years.

#### Instructions

If generally accepted accounting principles were followed, how would the items above relating to research and development activities be reported on the following financial statements?

- The company's income statement for 2010.
- The company's balance sheet as of December 31, 2010.

Be sure to give account titles and amounts, and briefly justify your presentation.

(CMA adapted)

**P12-5 (Goodwill, Impairment)** On July 31, 2010, Mexico Company paid \$3,000,000 to acquire all of the common stock of Conchita Incorporated, which became a division of Mexico. Conchita reported the following balance sheet at the time of the acquisition.

Current assets	\$ 800,000	Current liabilities	\$ 600,000
Noncurrent assets	<u>2,700,000</u>	Long-term liabilities	500,000
Total assets	<u>\$3,500,000</u>	Stockholders' equity	<u>2,400,000</u>
		Total liabilities and stockholders' equity	<u>\$3,500,000</u>

It was determined at the date of the purchase that the fair value of the identifiable net assets of Conchita was \$2,750,000. Over the next 6 months of operations, the newly purchased division experienced operating losses. In addition, it now appears that it will generate substantial losses for the foreseeable future. At December 31, 2010, Conchita reports the following balance sheet information.

Current assets	\$ 450,000
Noncurrent assets (including goodwill recognized in purchase)	2,400,000
Current liabilities	(700,000)
Long-term liabilities	<u>(500,000)</u>
Net assets	<u>\$1,650,000</u>

It is determined that the fair value of the Conchita Division is \$1,850,000. The recorded amount for Conchita's net assets (excluding goodwill) is the same as fair value, except for property, plant, and equipment, which has a fair value \$150,000 above the carrying value.

#### Instructions

- Compute the amount of goodwill recognized, if any, on July 31, 2010.
- Determine the impairment loss, if any, to be recorded on December 31, 2010.
- Assume that fair value of the Conchita Division is \$1,600,000 instead of \$1,850,000. Determine the impairment loss, if any, to be recorded on December 31, 2010.
- Prepare the journal entry to record the impairment loss, if any, and indicate where the loss would be reported in the income statement.

**2** **3** **6**  
**7** **10**

**P12-6 (Comprehensive Intangible Assets)** Montana Matt's Golf Inc. was formed on July 1, 2009, when Matt Magilke purchased the Old Master Golf Company. Old Master provides video golf instruction at kiosks in shopping malls. Magilke plans to integrate the instruction business into his golf equipment and accessory stores. Magilke paid \$770,000 cash for Old Master. At the time Old Master's balance sheet reported assets of \$650,000 and liabilities of \$200,000 (thus owners' equity was \$450,000). The fair value of Old Master's assets is estimated to be \$800,000. Included in the assets is the Old Master trade name with a fair value of \$10,000 and a copyright on some instructional books with a fair value of \$24,000. The trade name has a remaining life of 5 years and can be renewed at nominal cost indefinitely. The copyright has a remaining life of 40 years.

#### Instructions

- Prepare the intangible assets section of Montana Matt's Golf Inc. at December 31, 2009. How much amortization expense is included in Montana Matt's income for the year ended December 31, 2009? Show all supporting computations.
- Prepare the journal entry to record amortization expense for 2010. Prepare the intangible assets section of Montana Matt's Golf Inc. at December 31, 2010. (No impairments are required to be recorded in 2010.)
- At the end of 2011, is evaluating the results of the instructional business. Due to fierce competition from online and television (e.g., the Golf Channel), the Old Master reporting unit has been losing money. Its book value is now \$500,000. The fair value of the Old Master reporting unit is \$420,000. The implied value of goodwill is \$90,000. Magilke has collected the following information related to the company's intangible assets.

Intangible Asset	Expected Cash Flows (undiscounted)	Fair Values
Trade name	\$ 9,000	\$ 3,000
Copyright	30,000	25,000

Prepare the journal entries required, if any, to record impairments on Montana Matt's intangible assets. (Assume that any amortization for 2011 has been recorded.) Show supporting computations.

### CONCEPTS FOR ANALYSIS

 **CA12-1 (Accounting for Pollution Expenditure)** Counting Crows Company operates several plants at which limestone is processed into quicklime and hydrated lime. The Eagle Ridge plant, where most of the equipment was installed many years ago, continually deposits a dusty white substance over the surrounding countryside. Citing the unsanitary condition of the neighboring community of Scales Mound, the pollution of the Galena River, and the high incidence of lung disease among workers at Eagle Ridge, the state's Pollution Control Agency has ordered the installation of air pollution control equipment. Also, the Agency has assessed a substantial penalty, which will be used to clean up Scales Mound.

After considering the costs involved (which could not have been reasonably estimated prior to the Agency's action), Counting Crows Company decides to comply with the Agency's orders, the alternative being to cease operations at Eagle Ridge at the end of the current fiscal year. The officers of Counting Crows agree that the air pollution control equipment should be capitalized and depreciated over its useful life, but they disagree over the period(s) to which the penalty should be charged.

#### Instructions

Discuss the conceptual merits and reporting requirements of accounting for the penalty in each of the following ways.

- As a charge to the current period.
- As a correction of prior periods.
- As a capitalizable item to be amortized over future periods.

(AICPA adapted)

**CA12-2 (Accounting for Pre-Opening Costs)** After securing lease commitments from several major stores, Auer Shopping Center, Inc. was organized and built a shopping center in a growing suburb.

The shopping center would have opened on schedule on January 1, 2010, if it had not been struck by a severe tornado in December. Instead, it opened for business on October 1, 2010. All of the additional construction costs that were incurred as a result of the tornado were covered by insurance.

In July 2009, in anticipation of the scheduled January opening, a permanent staff had been hired to promote the shopping center, obtain tenants for the uncommitted space, and manage the property.

A summary of some of the costs incurred in 2009 and the first nine months of 2010 follows.

	2009	January 1, 2010 through September 30, 2010
Interest on mortgage bonds	\$720,000	\$540,000
Cost of obtaining tenants	300,000	360,000
Promotional advertising	540,000	557,000

The promotional advertising campaign was designed to familiarize shoppers with the center. Had it been known in time that the center would not open until October 2010, the 2009 expenditure for promotional advertising would not have been made. The advertising had to be repeated in 2010.

All of the tenants who had leased space in the shopping center at the time of the tornado accepted the October occupancy date on condition that the monthly rental charges for the first 9 months of 2010 be canceled.

**Instructions**

Explain how each of the costs for 2009 and the first 9 months of 2010 should be treated in the accounts of the shopping center corporation. Give the reasons for each treatment.

(AICPA adapted)

**CA12-3 (Accounting for Patents)** On June 30, 2010, your client, Ferry Company, was granted two patents covering plastic cartons that it had been producing and marketing profitably for the past 3 years. One patent covers the manufacturing process, and the other covers the related products.

Ferry executives tell you that these patents represent the most significant breakthrough in the industry in the past 30 years. The products have been marketed under the registered trademarks Evertight, Duratainer, and Sealrite. Licenses under the patents have already been granted by your client to other manufacturers in the United States and abroad and are producing substantial royalties.

On July 1, Ferry commenced patent infringement actions against several companies whose names you recognize as those of substantial and prominent competitors. Ferry’s management is optimistic that these suits will result in a permanent injunction against the manufacture and sale of the infringing products as well as collection of damages for loss of profits caused by the alleged infringement.

The financial vice-president has suggested that the patents be recorded at the discounted value of expected net royalty receipts.

**Instructions**

- (a) What is the meaning of “discounted value of expected net receipts”? Explain.
- (b) How would such a value be calculated for net royalty receipts?
- (c) What basis of valuation for Ferry’s patents would be generally accepted in accounting? Give supporting reasons for this basis.
- (d) Assuming no practical problems of implementation, and ignoring generally accepted accounting principles, what is the preferable basis of valuation for patents? Explain.
- (e) What would be the preferable theoretical basis of amortization? Explain.
- (f) What recognition, if any, should be made of the infringement litigation in the financial statements for the year ending September 30, 2010? Discuss.

(AICPA adapted)

**CA12-4 (Accounting for Research and Development Costs)** Cuevas Co. is in the process of developing a revolutionary new product. A new division of the company was formed to develop, manufacture, and market this new product. As of year-end (December 31, 2010), the new product has not been manufactured for resale. However, a prototype unit was built and is in operation.

Throughout 2010 the new division incurred certain costs. These costs include design and engineering studies, prototype manufacturing costs, administrative expenses (including salaries of administrative personnel), and market research costs. In addition, approximately \$900,000 in equipment (with an estimated useful life of 10 years) was purchased for use in developing and manufacturing the new product. Approximately \$315,000 of this equipment was built specifically for the design development of the new product. The remaining \$585,000 of equipment was used to manufacture the pre-production prototype and will be used to manufacture the new product once it is in commercial production.

**Instructions**

- (a) How are “research” and “development” defined in the authoritative literature (GAAP)?
- (b) Briefly indicate the practical and conceptual reasons for the conclusion reached by the Financial Accounting Standards Board on accounting and reporting practices for research and development costs.
- (c) In accordance with GAAP, how should the various costs of Cuevas described above be recorded on the financial statements for the year ended December 31, 2010?

(AICPA adapted)

**CA12-5 (Accounting for Research and Development Costs)** Czeslaw Corporation’s research and development department has an idea for a project it believes will culminate in a new product that would be very profitable for the company. Because the project will be very expensive, the department requests approval from the company’s controller, Jeff Reid.

Reid recognizes that corporate profits have been down lately and is hesitant to approve a project that will incur significant expenses that cannot be capitalized due to the requirements of the authoritative literature. He knows that if they hire an outside firm that does the work and obtains a patent for the process, Czeslaw Corporation can purchase the patent from the outside firm and record the expenditure as an asset. Reid knows that the company’s own R&D department is first-rate, and he is confident they can do the work well.

**Instructions**

Answer the following questions.

- (a) Who are the stakeholders in this situation?
- (b) What are the ethical issues involved?
- (c) What should Reid do?

## USING YOUR JUDGMENT

### FINANCIAL REPORTING

#### Financial Reporting Problem

#### The Procter & Gamble Company (P&G)

The financial statements of P&G are presented in Appendix 5B or can be accessed at the book’s companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso).

**Instructions**

Refer to P&G’s financial statements and the accompanying notes to answer the following questions.

- (a) Does P&G report any intangible assets, especially goodwill, in its 2007 financial statements and accompanying notes?
- (b) How much research and development (R&D) cost was expensed by P&G in 2007 and 2006? What percentage of sales revenue and net income did P&G spend on R&D in 2007 and 2006?

#### Comparative Analysis Case

#### The Coca-Cola Company and PepsiCo, Inc.

**Instructions**

Go to the book’s companion website and use information found there to answer the following questions related to **The Coca-Cola Company** and **PepsiCo, Inc.**

- (a) (1) What amounts for intangible assets were reported in their respective balance sheets by Coca-Cola and PepsiCo?
- (2) What percentage of total assets is each of these reported amounts?
- (3) What was the change in the amount of intangibles from 2006 to 2007 for Coca-Cola and PepsiCo?

- (b) (1) On what basis and over what periods of time did Coca-Cola and PepsiCo amortize their intangible assets?
- (2) What were the amounts of accumulated amortization reported by Coca-Cola and PepsiCo at the end of 2007 and 2006?
- (3) What was the composition of the identifiable and unidentifiable intangible assets reported by Coca-Cola and PepsiCo at the end of 2007?

## Financial Statement Analysis Cases

### Johnson & Johnson Case 1: Merck and Johnson & Johnson

**Merck & Co., Inc.** and **Johnson & Johnson** are two leading producers of health care products. Each has considerable assets, and each expends considerable funds each year toward the development of new products. The development of a new health care product is often very expensive, and risky. New products frequently must undergo considerable testing before approval for distribution to the public. For example, it took Johnson & Johnson 4 years and \$200 million to develop its 1-DAY ACUVUE contact lenses. Below are some basic data compiled from the financial statements of these two companies.

(all dollars in millions)	Johnson & Johnson	Merck
Total assets	\$53,317	\$42,573
Total revenue	47,348	22,939
Net income	8,509	5,813
Research and development expense	5,203	4,010
Intangible assets	11,842	2,765

### Instructions

- (a) What kinds of intangible assets might a health care products company have? Does the composition of these intangibles matter to investors—that is, would it be perceived differently if all of Merck's intangibles were goodwill, than if all of its intangibles were patents?
- (b) Suppose the president of Merck has come to you for advice. He has noted that by eliminating research and development expenditures the company could have reported \$1.3 billion more in net income. He is frustrated because much of the research never results in a product, or the products take years to develop. He says shareholders are eager for higher returns, so he is considering eliminating research and development expenditures for at least a couple of years. What would you advise?
- (c) The notes to Merck's financial statements note that Merck has goodwill of \$1.1 billion. Where does recorded goodwill come from? Is it necessarily a good thing to have a lot of goodwill on your books?

### Case 2: Analysis of Goodwill

As a new intern for the local branch office of a national brokerage firm, you are excited to get an assignment that allows you to use your accounting expertise. Your supervisor provides you the spreadsheet below, which contains data for the most recent quarter for three companies that the firm has been recommending to its clients as "buys." Each of the companies' returns on assets has outperformed their industry cohorts in the past, but given recent challenges in their markets, there is concern that the companies may experience operating challenges and lower earnings. (All numbers in millions, except return on assets.)

	A	B	C	D	E
1	Company	Market Value of Company	Book Value (Net Assets)	Carrying Value of Goodwill	Return on Assets
2	Sprint Nextel	\$36,361	\$51,271	\$30,718	3.5%
3	Washington Mutual	11,742	23,941	9,062	2.4%
4	E* Trade Financial	1,639	4,104	2,035	5.6%
5					

### Instructions

- (a) The market value for each of these companies is lower than the corresponding book value. What implications does this have for each company's future prospects?

- (b) To date, none of these companies has recorded goodwill impairments. Your supervisor suspects that they will need to record impairments in the near future, but he is unsure about the goodwill impairment rules. Is it likely that these companies will recognize impairments? Explain.
- (c) Using the data on the previous page, estimate the amount of goodwill impairment for each company and prepare the journal entry to record the impairment. For each company, you may assume that the book value less the carrying value of the goodwill approximates the fair value of the companies' net assets.
- (d) Discuss the effects of your entries in part (c) on your evaluation of these companies based on the return on assets ratio.

## International Reporting Case

### Bayer, Glaxo SmithKline, and Merck

Presented below are data and accounting policy notes for the goodwill of three international drug companies. **Bayer**, a German company, prepares its statements in accordance with International Financial Reporting Standards (iGAAP); **Glaxo SmithKline** follows United Kingdom (U.K.) rules; and **Merck**, a U.S. company, prepares its financial statements in accordance with U.S. GAAP.

Related Information	Bayer (€ millions)	Glaxo SmithKline (£ millions)	Merck (\$ millions)
Research and development expense	2,107	2,839	4,010
Amortization expense	0	12	0
Net income	603	4,302	5,813
Accumulated goodwill amortization	0	84	0
Stockholders' equity	12,268	10,091	17,288

Both U.S. GAAP and iGAAP do not allow amortization of goodwill. Under U.K. standards, goodwill is amortized over useful lives not to exceed 20 years.

#### Instructions

- (a) Compute the return on equity for each of these companies, and use this analysis to briefly discuss the relative profitability of the three companies.
- (b) Assume that each of the companies uses the maximum allowable amortization period for goodwill (if any). Discuss how these companies' goodwill amortization policies affect your ability to compare their amortization expense and income.
- (c) Some analysts believe that the only valid way to compare companies that follow different goodwill accounting practices is to treat all goodwill as an asset and record expense only if the goodwill is impaired.<sup>22</sup> Using the data above, make these adjustments as appropriate, and compare the profitability of the three drug companies, comparing this information to your analysis in (a).
- (d) iGAAP requires that development costs must be capitalized if technical and commercial feasibility of the resulting product has been established. Assume that Bayer recorded € 1 million of development costs in the year reported above. Discuss briefly how this accounting affects your ability to compare the financial results of Bayer and Merck.

## BRIDGE TO THE PROFESSION

### Professional Research: FASB Codification

King Company is contemplating the purchase of a smaller company, which is a distributor of King's products. Top management of King is convinced that the acquisition will result in significant synergies in its selling and distribution functions. The financial management group (of which you are a part) has been asked to prepare some analysis of the effects of the acquisition on the combined company's financial statements. This is the first acquisition for King, and some of the senior staff insist that based on their recollection of goodwill accounting, any goodwill recorded on the acquisition will result in a "drag" on future earnings for goodwill amortization. Other younger members on the staff argue that goodwill accounting has changed. Your supervisor asks you to research this issue.

<sup>22</sup>Trevor Harris, *Apples to Apples: Accounting for Value in World Markets* (New York: Morgan Stanley Dean Witter, February 1998).

### Instructions

Access the FASB Codification at <http://asc.fasb.org/home> to conduct research using the Codification Research System to prepare responses to the following items. Provide Codification references for your responses.

- Identify the accounting literature that addresses goodwill and other intangible assets.
- Define goodwill.
- Is goodwill subject to amortization? Explain.
- When goodwill is recognized by a subsidiary, should it be tested for impairment at the consolidated level or the subsidiary level? Discuss.

### Professional Simulation

Go to the book's companion website, at [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), to find an interactive problem that simulates the computerized CPA exam. The professional simulation for this chapter asks you to address questions related to the accounting for intangible assets.

**Remember to check the book's companion website to find additional resources for this chapter.**

## CHAPTER 13

# CURRENT LIABILITIES AND CONTINGENCIES

### LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Describe the nature, type, and valuation of current liabilities.
- 2 Explain the classification issues of short-term debt expected to be refinanced.
- 3 Identify types of employee-related liabilities.
- 4 Identify the criteria used to account for and disclose gain and loss contingencies.
- 5 Explain the accounting for different types of loss contingencies.
- 6 Indicate how to present and analyze liabilities and contingencies.

### Now You SEE IT, Now You DON'T

A look at the liabilities side of the balance sheet of the German company **Beru AG Corporation**, dated March 31, 2003, shows how international standards

are changing the reporting of financial information. Here is how one liability was shown on this date:

Anticipated losses arising from pending transactions      3,285,000 euros

Do you believe a liability should be reported for such transactions? *Anticipated losses* means the losses have not yet occurred; *pending transactions* mean that the condition that might cause the loss has also not occurred. So where is the liability? To whom does the company owe something? Where is the obligation?

U.S. GAAP provides guidance on this subject. A company can accrue a liability for a contingency only if an obligation has arisen from a past event, if payment is probable, and if the company can reasonably estimate the obligation. In short, under U.S. GAAP, companies cannot accrue anticipated future losses today.

German accounting rules are more permissive. They permit companies to report liabilities for possible future events. In essence, the establishment of this general-purpose "liability" provides a buffer for Beru if losses do materialize. If you take a more skeptical view, you might say the accounting rules let Beru smooth its income by charging expenses in good years and reducing expenses in bad years.

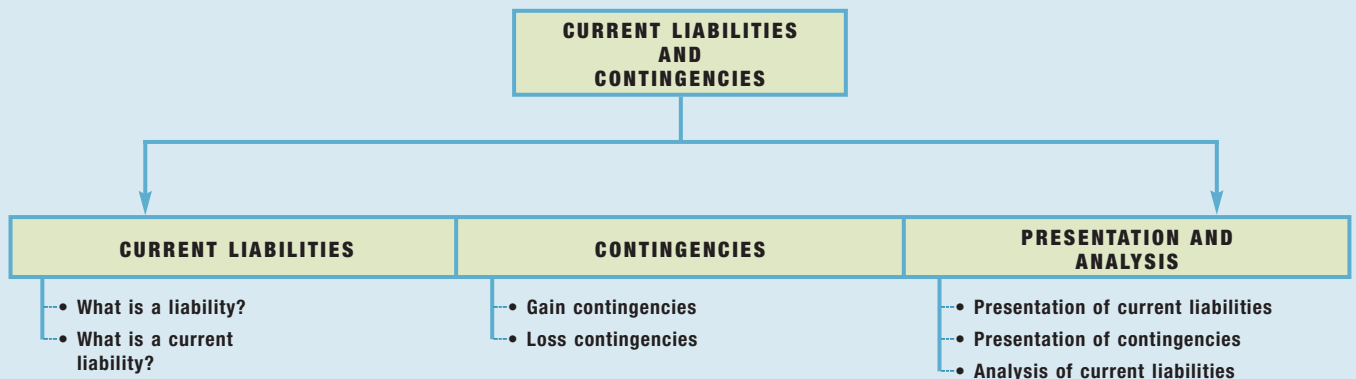

The story has a happy ending, from a U.S. accounting point of view. As we indicated earlier in the text, European companies switched to International Financial Reporting Standards (IFRS) in 2005. Because IFRS are similar to U.S. GAAP, liabilities like “Anticipated losses from pending transactions” disappear. So when we look at Beru’s 2005 financial statements, we find a note stating that the company has reported as liabilities only obligations arising from past transactions that can be reasonably estimated.

Standard-setters continue to work on the financial reporting of certain “contingent” liabilities, such as those related to pending lawsuits and other possible losses for which a company might be liable. As you will learn in this chapter, under current GAAP such loss contingencies are not recognized unless the amount of the liability is estimable and probable. However, disclosures of unrecognized loss contingencies have been criticized, and the FASB has proposed enhanced disclosures for recognized loss contingencies, as well as contingencies that are not recognized because they do not meet the GAAP recognition criteria (see [http://www.fasb.org/project/accounting\\_for\\_contingencies.shtml](http://www.fasb.org/project/accounting_for_contingencies.shtml) for additional information on the proposed rule).

Specifically, the FASB is proposing expanded disclosure about the nature of the contingencies, more quantitative and qualitative background on the contingencies, and, maybe most welcome of all, required tabular presentation of the changes in the contingencies, including explanation of the changes. Note that these disclosures are similar to those required in iGAAP. What’s not to like about these enhanced disclosures? Well quite a bit, according to early responses by some companies and the legal profession. These parties are concerned that the information in these enhanced disclosures could be used against them in a lawsuit, and they are voicing strong opposition to the proposed rules. We do not know the end of this liability story. However, the controversy over the proposed rules illustrates the challenges of developing accounting rules for liabilities that meet the needs of investors while avoiding harm to the companies reporting the information.

## PREVIEW OF CHAPTER 13

As our opening story indicates, the convergence of U.S. GAAP with IFRS should lead to improved reporting of liabilities. In this chapter we explain the basic issues related to accounting and reporting for current and contingent liabilities. The content and organization of the chapter are as follows.

## SECTION 1 • CURRENT LIABILITIES

## WHAT IS A LIABILITY?

The question, “What is a liability?” is not easy to answer. For example, is preferred stock a liability or an ownership claim? The first reaction is to say that preferred stock is in fact an ownership claim, and companies should report it as part of stockholders’ equity. In fact, preferred stock has many elements of debt as well.<sup>1</sup> The issuer (and in some cases the holder) often has the right to call the stock within a specific period of time—making it similar to a repayment of principal. The dividend on the preferred stock is in many cases almost guaranteed (the cumulative provision)—making it look like interest. As a result, preferred stock is but one of many financial instruments that are difficult to classify.<sup>2</sup>

To help resolve some of these controversies, the FASB, as part of its conceptual framework study, defined **liabilities** as “probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or provide services to other entities in the future as a result of past transactions or events.”<sup>3</sup> In other words, a liability has three essential characteristics:

1. It is a present obligation that entails settlement by probable future transfer or use of cash, goods, or services.
2. It is an unavoidable obligation.
3. The transaction or other event creating the obligation has already occurred.

Because liabilities involve future disbursements of assets or services, one of their most important features is the date on which they are payable. A company must satisfy currently maturing obligations in the ordinary course of business to continue operating. Liabilities with a more distant due date do not, as a rule, represent a claim on the company’s current resources. They are therefore in a slightly different category. This feature gives rise to the basic division of liabilities into (1) current liabilities and (2) long-term debt.

## WHAT IS A CURRENT LIABILITY?

**Objective • 1**

Describe the nature, type, and valuation of current liabilities.

Recall that current assets are cash or other assets that companies reasonably expect to convert into cash, sell, or consume in operations within a single operating cycle or within a year (if completing more than one cycle each year). **Current liabilities** are “obligations whose liquidation is reasonably expected to require use of existing resources properly classified as current assets, or the creation of other current liabilities.” [2] This definition has gained wide acceptance because it recognizes operating cycles of varying lengths in different industries. This definition also considers the important relationship between current assets and current liabilities. [3]

<sup>1</sup>This illustration is not just a theoretical exercise. In practice, a number of preferred stock issues have all the characteristics of a debt instrument, except that they are called and legally classified as preferred stock. In some cases, the IRS has even permitted companies to treat the dividend payments as interest expense for tax purposes.

<sup>2</sup>The FASB has issued a standard to address the accounting for some of these securities [1] and is working on a broader project to address the accounting for securities with debt and equity features. See <http://www.fasb.org/project/liabeq.shtml>.

<sup>3</sup>“Elements of Financial Statements of Business Enterprises,” *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, 1980).

**Underlying Concepts**

To determine the appropriate classification of specific financial instruments, companies need proper definitions of assets, liabilities, and equities. They often use the conceptual framework definitions as the basis for resolving controversial classification issues.

See the FASB Codification section (page 667).

The **operating cycle** is the period of time elapsing between the acquisition of goods and services involved in the manufacturing process and the final cash realization resulting from sales and subsequent collections. Industries that manufacture products requiring an aging process, and certain capital-intensive industries, have an operating cycle of considerably more than one year. On the other hand, most retail and service establishments have several operating cycles within a year.

Here are some typical current liabilities:

- |  |   |

|--|---|

### Accounts Payable

Accounts payable, or **trade accounts payable**, are balances owed to others for goods, supplies, or services purchased on open account. Accounts payable arise because of the time lag between the receipt of services or acquisition of title to assets and the payment for them. The terms of the sale (e.g., 2/10, n/30 or 1/10, E.O.M.) usually state this period of extended credit, commonly 30 to 60 days.

Most companies record liabilities for purchases of goods upon receipt of the goods. If title has passed to the purchaser before receipt of the goods, the company should record the transaction at the time of title passage. A company must pay special attention to transactions occurring near the end of one accounting period and at the beginning of the next. It needs to ascertain that the record of goods received (the inventory) agrees with the liability (accounts payable), and that it records both in the proper period.

Measuring the amount of an account payable poses no particular difficulty. The invoice received from the creditor specifies the due date and the exact outlay in money that is necessary to settle the account. The only calculation that may be necessary concerns the amount of cash discount. See Chapter 8 for illustrations of entries related to accounts payable and purchase discounts.

### Notes Payable

**Notes payable** are written promises to pay a certain sum of money on a specified future date. They may arise from purchases, financing, or other transactions. Some industries require notes (often referred to as **trade notes payable**) as part of the sales/purchases transaction in lieu of the normal extension of open account credit. Notes payable to banks or loan companies generally arise from cash loans. Companies classify notes as short-term or long-term, depending on the payment due date. Notes may also be interest-bearing or zero-interest-bearing.

#### Interest-Bearing Note Issued

Assume that Castle National Bank agrees to lend \$100,000 on March 1, 2010, to Landscape Co. if Landscape signs a \$100,000, 6 percent, four-month note. Landscape records the cash received on March 1 as follows:

<b>March 1</b>	
Cash	100,000
Notes Payable	100,000
(To record issuance of 6%, 4-month note to Castle National Bank)	

If Landscape prepares financial statements semiannually, it makes the following adjusting entry to recognize interest expense and interest payable of \$2,000 ( $\$100,000 \times 6\% \times 4/12$ ) at June 30:

June 30		
Interest Expense	2,000	
Interest Payable		2,000
(To accrue interest for 4 months on Castle National Bank note)		

If Landscape prepares financial statements monthly, its adjusting entry at the end of each month is \$500 ( $\$100,000 \times 6\% \times 1/12$ ).

At maturity (July 1), Landscape must pay the face value of the note (\$100,000) plus \$2,000 interest ( $\$100,000 \times 6\% \times 4/12$ ). Landscape records payment of the note and accrued interest as follows.

July 1		
Notes Payable	100,000	
Interest Payable	2,000	
Cash		102,000
(To record payment of Castle National Bank interest-bearing note and accrued interest at maturity)		

### Zero-Interest-Bearing Note Issued

A company may issue a zero-interest-bearing note instead of an interest-bearing note. A zero-interest-bearing note does not explicitly state an interest rate on the face of the note. **Interest is still charged**, however. At maturity the borrower must pay back an amount greater than the cash received at the issuance date. In other words, the borrower receives in cash the present value of the note. The present value equals the face value of the note at maturity minus the interest or discount charged by the lender for the term of the note. In essence, the bank takes its fee “up front” rather than on the date the note matures.

To illustrate, assume that Landscape issues a \$102,000, four-month, zero-interest-bearing note to Castle National Bank. The present value of the note is \$100,000.<sup>4</sup> Landscape records this transaction as follows.

March 1		
Cash	100,000	
Discount on Notes Payable	2,000	
Notes Payable		102,000
(To record issuance of 4-month, zero-interest-bearing note to Castle National Bank)		

Landscape credits the Notes Payable account for the face value of the note, which is \$2,000 more than the actual cash received. It debits the difference between the cash received and the face value of the note to Discount on Notes Payable. **Discount on Notes Payable is a contra account to Notes Payable, and therefore is subtracted from Notes Payable on the balance sheet.** Illustration 13-1 shows the balance sheet presentation on March 1.

**ILLUSTRATION 13-1**  
Balance Sheet Presentation of Discount

Current liabilities		
Notes payable	\$102,000	
Less: Discount on notes payable	2,000	\$100,000

The amount of the discount, \$2,000 in this case, represents the cost of borrowing \$100,000 for 4 months. Accordingly, Landscape charges the discount to interest expense

<sup>4</sup>The bank discount rate used in this example to find the present value is 5.96 percent.

over the life of the note. That is, the Discount on Notes Payable balance **represents interest expense chargeable to future periods**. Thus, Landscape should not debit Interest Expense for \$2,000 at the time of obtaining the loan. We discuss additional accounting issues related to notes payable in Chapter 14.

## Current Maturities of Long-Term Debt

**PepsiCo** reports as part of its current liabilities the portion of bonds, mortgage notes, and other long-term indebtedness that matures within the next fiscal year. It categorizes this amount as **current maturities of long-term debt**. Companies, like PepsiCo, exclude long-term debts maturing currently as current liabilities if they are to be:

1. retired by assets accumulated for this purpose that properly have not been shown as current assets,
2. refinanced, or retired from the proceeds of a new debt issue, or
3. converted into capital stock.

In these situations, the use of current assets or the creation of other current liabilities does not occur. Therefore, classification as a current liability is inappropriate. A company should disclose the plan for liquidation of such a debt either parenthetically or by a note to the financial statements. When only a part of a long-term debt is to be paid within the next 12 months, as in the case of serial bonds that it retires through a series of annual installments, **the company reports the maturing portion of long-term debt as a current liability**, and the remaining portion as a long-term debt.

However, a company should classify as current any liability that is **due on demand** (callable by the creditor) or will be due on demand within a year (or operating cycle, if longer). Liabilities often become callable by the creditor when there is a violation of the debt agreement. For example, most debt agreements specify a given level of equity to debt be maintained, or specify that working capital be of a minimum amount. If the company violates an agreement, it must classify the debt as current because it is a reasonable expectation that existing working capital will be used to satisfy the debt. Only if a company can show that it is **probable** that it will cure (satisfy) the violation within the grace period specified in the agreements can it classify the debt as noncurrent. [4]

## Short-Term Obligations Expected to Be Refinanced

Short-term obligations are debts scheduled to mature within one year after the date of a company's balance sheet or within its operating cycle, whichever is longer. Some **short-term obligations** are **expected to be refinanced** on a long-term basis. These short-term obligations will not require the use of working capital during the next year (or operating cycle).<sup>5</sup>

At one time, the accounting profession generally supported the exclusion of short-term obligations from current liabilities if they were "expected to be refinanced." But the profession provided no specific guidelines, so companies determined whether a short-term obligation was "expected to be refinanced" based solely on management's **intent** to refinance on a long-term basis. Classification was not clear-cut. For example, a company might obtain a five-year bank loan but handle the actual financing with 90-day notes, which it must keep turning over (renewing). In this case, is the loan a long-term debt or a current liability? Another example was the **Penn Central Railroad**

### Objective•2

Explain the classification issues of short-term debt expected to be refinanced.

<sup>5</sup>Refinancing a short-term obligation on a long-term basis means either replacing it with a long-term obligation or equity securities, or renewing, extending, or replacing it with short-term obligations for an uninterrupted period extending beyond one year (or the operating cycle, if longer) from the date of the enterprise's balance sheet.

before it went bankrupt. The railroad was deep into short-term debt but classified it as long-term debt. Why? Because the railroad believed it had commitments from lenders to keep refinancing the short-term debt. When those commitments suddenly disappeared, it was “good-bye Pennsy.” As the Greek philosopher Epictetus once said, “Some things in this world are not and yet appear to be.”

**Refinancing Criteria**

To resolve these classification problems, the accounting profession has developed authoritative criteria for determining the circumstances under which short-term obligations may be properly excluded from current liabilities. A company is required to exclude a short-term obligation from current liabilities if **both** of the following conditions are met:

1. It must **intend to refinance** the obligation on a long-term basis.
2. It must **demonstrate an ability** to consummate the refinancing. [5]

**Intention** to refinance on a long-term basis means that the company intends to refinance the short-term obligation so that it will not require the use of working capital during the ensuing fiscal year (or operating cycle, if longer).

The company demonstrates the **ability** to consummate the refinancing by:

- (a) **Actually refinancing** the short-term obligation by issuing a long-term obligation or equity securities after the date of the balance sheet but before it is issued; or
- (b) Entering into a **financing agreement** that clearly permits the company to refinance the debt on a long-term basis on terms that are readily determinable.

If an actual refinancing occurs, the portion of the short-term obligation to be excluded from current liabilities may not exceed the proceeds from the new obligation or equity securities used to retire the short-term obligation. For example, **Montavon Winery** had \$3,000,000 of short-term debt. Subsequent to the balance sheet date, but before issuing the balance sheet, the company issued 100,000 shares of common stock, intending to use the proceeds to liquidate the short-term debt at its maturity. If Montavon’s net proceeds from the sale of the 100,000 shares total \$2,000,000, it can exclude from current liabilities only \$2,000,000 of the short-term debt.

An additional question is whether a company should exclude from current liabilities a short-term obligation if it is paid off after the balance sheet date and replaced by long-term debt before the balance sheet is issued. To illustrate, Marquardt Company pays off short-term debt of \$40,000 on January 17, 2011, and issues long-term debt of \$100,000 on February 3, 2011. Marquardt’s financial statements, dated December 31, 2010, are to be issued March 1, 2011. Should Marquardt exclude the \$40,000 short-term debt from current liabilities? No—here’s why: Repayment of the short-term obligation required the use of **existing** current assets **before** the company obtained funds through long-term financing. Therefore, Marquardt must include the short-term obligations in current liabilities at the balance sheet date (see graphical presentation below).

**ILLUSTRATION 13-2**  
Short-Term Debt Paid Off after Balance Sheet Date and Later Replaced by Long-Term Debt

## WHAT ABOUT THAT SHORT-TERM DEBT?

The evaluation of credit quality involves more than simply assessing a company's ability to repay loans. Credit analysts also evaluate debt management strategies. Analysts and investors will reward what they view as prudent management decisions with lower debt service costs and a higher stock price. The wrong decisions can bring higher debt costs and lower stock prices.

**General Electric Capital Corp.**, a subsidiary of **General Electric**, experienced the negative effects of market scrutiny of its debt management policies. Analysts complained that GE had been slow to refinance its mountains of short-term debt. GE had issued these current obligations, with maturities of 270 days or less, when interest rates were low. However, in light of expectations that the Fed would raise interest rates, analysts began to worry about the higher interest costs GE would pay when it refinanced these loans. Some analysts recommended that it was time to reduce dependence on short-term credit. The reasoning goes that a shift to more dependable long-term debt, thereby locking in slightly higher rates for the long-term, is the better way to go.

Thus, scrutiny of GE debt strategies led to analysts' concerns about GE's earnings prospects. Investors took the analysis to heart, and GE experienced a 2-day 6 percent drop in its stock price.

*Source:* Adapted from Steven Vames, "Credit Quality, Stock Investing Seem to Go Hand in Hand," *Wall Street Journal* (April 1, 2002), p. R4.

*What do the numbers mean?*

## Dividends Payable

A **cash dividend payable** is an amount owed by a corporation to its stockholders as a result of board of directors' authorization. At the date of declaration the corporation assumes a liability that places the stockholders in the position of creditors in the amount of dividends declared. Because companies always pay cash dividends within one year of declaration (generally within three months), they classify them as current liabilities.

On the other hand, companies do not recognize accumulated but undeclared dividends on cumulative preferred stock as a liability. Why? Because **preferred dividends in arrears** are not an obligation until the board of directors authorizes the payment. Nevertheless, companies should disclose the amount of cumulative dividends unpaid in a note, or show it parenthetically in the capital stock section.

Dividends payable in the form of additional shares of stock are not recognized as a liability. Such **stock dividends** (as we discuss in Chapter 15) do not require future outlays of assets or services. Companies generally report such undistributed stock dividends in the stockholders' equity section because they represent retained earnings in the process of transfer to paid-in capital.

## Customer Advances and Deposits

Current liabilities may include **returnable cash deposits** received from customers and employees. Companies may receive deposits from customers to guarantee performance of a contract or service or as guarantees to cover payment of expected future obligations. For example, a company like **Alltel Corp.** often requires a deposit on equipment that customers use to connect to the Internet or to access its other services. Alltel also may receive deposits from customers as guarantees for possible damage to property. Additionally, some companies require their employees to make deposits for the return of keys or other company property.

### Underlying Concepts

Preferred dividends in arrears do represent a probable future economic sacrifice, but the expected sacrifice does not result from a past transaction or past event. The sacrifice will result from a future event (declaration by the board of directors). Note disclosure improves the predictive value of the financial statements.

The classification of these items as current or noncurrent liabilities depends on the time between the date of the deposit and the termination of the relationship that required the deposit.

### Unearned Revenues

A magazine publisher, such as **Golf Digest**, receives payment when a customer subscribes to its magazines. An airline company, such as **American Airlines**, sells tickets for future flights. And software companies, like **Microsoft**, issue coupons that allow customers to upgrade to the next version of their software. How do these companies account for **unearned revenues** that they receive before delivering goods or rendering services?

1. Upon receipt of the advance, debit Cash, and credit a current liability account identifying the source of the unearned revenue.
2. Upon earning the revenue, debit the unearned revenue account, and credit an earned revenue account.

To illustrate, assume that Allstate University sells 10,000 season football tickets at \$50 each for its five-game home schedule. Allstate University records the sales of season tickets as follows:

<b>August 6</b>		
Cash	500,000	
Unearned Football Ticket Revenue		500,000
(To record sale of 10,000 season tickets)		

After each game, Allstate University makes the following entry.

<b>September 7</b>		
Unearned Football Ticket Revenue	100,000	
Football Ticket Revenue		100,000
(To record football ticket revenues earned)		

Unearned Football Ticket Revenue is, therefore, unearned revenue. Allstate University reports it as a current liability in the balance sheet. As revenue is earned, a transfer from unearned revenue to earned revenue occurs. Unearned revenue is material for some companies: In the airline industry, tickets sold for future flights represent almost 50 percent of total current liabilities.

Illustration 13-3 shows specific unearned and earned revenue accounts used in selected types of businesses.

**ILLUSTRATION 13-3**  
Unearned and Earned Revenue Accounts

Type of Business	Account Title	
	Unearned Revenue	Earned Revenue
Airline	Unearned Passenger Ticket Revenue	Passenger Revenue
Magazine publisher	Unearned Subscription Revenue	Subscription Revenue
Hotel	Unearned Rental Revenue	Rental Revenue
Auto dealer	Unearned Warranty Revenue	Warranty Revenue
Retailers	Unearned Gift Card Revenue	Sales Revenue

The balance sheet should report obligations for any commitments that are redeemable in goods and services. The income statement should report revenues earned during the period.

## MICROSOFT'S LIABILITIES—GOOD OR BAD?

What do the numbers mean?

Users of financial statements generally examine current liabilities to assess a company's liquidity and overall financial flexibility. Companies must pay many current liabilities, such as accounts payable, wages payable, and taxes payable, sooner rather than later. A substantial increase in these liabilities should raise a red flag about a company's financial position.

This is not the case for all current liabilities. For example, **Microsoft** has a current liability entitled "Unearned revenue" that has increased substantially year after year. Unearned revenue is a liability that arises from sales of Microsoft products such as *Windows* and *Office*. Microsoft also has provided coupons for upgrades to its programs to bolster sales of its Xbox consoles. At the time of a sale, customers pay not only for the current version of the software but also for future upgrades. Microsoft recognizes sales revenue from the current version of the software and records as a liability (unearned revenue) the value of future upgrades to the software that it "owes" to customers.

Market analysts read such an increase in unearned revenue as a positive signal about Microsoft's sales and profitability. When Microsoft's sales are growing, its unearned revenue account increases. Thus, an *increase* in a liability is good news about Microsoft sales. At the same time, a decline in unearned revenue is bad news. As one analyst noted, a slowdown or reversal of the growth in Microsoft's unearned revenues indicates slowing sales, which is bad news for investors. Thus, increases in current liabilities can sometimes be viewed as good signs instead of bad.

*Source:* Adapted from David Bank, "Some Fans Cool to Microsoft, Citing Drop in Old Indicator," *Wall Street Journal* (October 28, 1999); and Bloomberg News, "Microsoft Profit Hit by Deferred Sales; Forecast Raised," *The Globe and Mail* (January 26, 2007), p. B8.

### Sales Taxes Payable

Retailers like **Wal-Mart**, **Circuit City**, and **GAP** must collect sales taxes from customers on transfers of tangible personal property and on certain services and then must remit these taxes to the proper governmental authority. GAP, for example, sets up a liability to provide for taxes collected from customers but not yet remitted to the tax authority. The Sales Taxes Payable account should reflect the liability for sales taxes due various governments.

The entry below illustrates use of the Sales Taxes Payable account on a sale of \$3,000 when a 4 percent sales tax is in effect.

Cash or Accounts Receivable	3,120	
Sales		3,000
Sales Taxes Payable		120

Sometimes the sales tax collections credited to the liability account are not equal to the liability as computed by the governmental formula. In such a case, GAP makes an adjustment of the liability account by recognizing a gain or a loss on sales tax collections.

Many companies do not segregate the sales tax and the amount of the sale at the time of sale. Instead, the company credits both amounts in total in the Sales account. Then, to reflect correctly the actual amount of sales and the liability for sales taxes, the company would debit the Sales account for the amount of the sales taxes due the government on these sales, and would credit the Sales Taxes Payable account for the same amount.

To illustrate, assume that the Sales account balance of \$150,000 includes sales taxes of 4 percent. Thus, the amount recorded in the Sales account is comprised of the sales amount plus sales tax of 4 percent of the sales amount. Sales therefore are \$144,230.77 ( $\$150,000 \div 1.04$ ) and the sales tax liability is \$5,769.23 ( $\$144,230.77 \times 0.04$ ; or  $\$150,000 - \$144,230.77$ ). The following entry would record the amount due the taxing unit.

Sales	5,769.23	
Sales Taxes Payable		5,769.23

Expanded Discussion of  
Property Taxes Payable

## Income Taxes Payable

Any federal or state income tax varies in proportion to the amount of annual income. Using the best information and advice available, a business must prepare an income tax return and compute the income tax payable resulting from the operations of the current period. Corporations should classify as a current liability the taxes payable on net income, as computed per the tax return.<sup>6</sup> Unlike a corporation, proprietorships and partnerships are not taxable entities. Because the individual proprietor and the members of a partnership are subject to personal income taxes on their share of the business's taxable income, income tax liabilities do not appear on the financial statements of proprietorships and partnerships.

Most corporations must make periodic tax payments throughout the year in an authorized bank depository or a Federal Reserve Bank. These payments are based upon estimates of the total annual tax liability. As the estimated total tax liability changes, the periodic contributions also change. If in a later year the taxing authority assesses an additional tax on the income of an earlier year, the company should credit Income Taxes Payable and charge the related debit to current operations.

Differences between taxable income under the tax laws and accounting income under generally accepted accounting principles sometimes occur. Because of these differences, the amount of income tax payable to the government in any given year may differ substantially from income tax expense as reported on the financial statements. Chapter 19 is devoted solely to income tax matters and presents an extensive discussion of this complex topic.

### Objective-3

Identify types of employee-related liabilities.

## Employee-Related Liabilities

Companies also report as a current liability amounts owed to employees for salaries or wages at the end of an accounting period. In addition, they often also report as current liabilities the following items related to employee compensation.

1. Payroll deductions.
2. Compensated absences.
3. Bonuses.

### Payroll Deductions

The most common types of payroll deductions are taxes, insurance premiums, employee savings, and union dues. **To the extent that a company has not remitted the amounts deducted to the proper authority at the end of the accounting period, it should recognize them as current liabilities.**

**Social Security Taxes.** Since January 1, 1937, Social Security legislation has provided federal **Old Age, Survivor, and Disability Insurance (O.A.S.D.I.)** benefits for certain individuals and their families. Funds for these payments come from taxes levied on both the employer and the employee. Employers collect the employee's share of this tax by deducting it from the employee's gross pay, and remit it to the government along with their share. The government taxes both the employer and the employee at the same rate, currently 6.2 percent based on the employee's gross pay up to a \$102,000 annual limit. The O.A.S.D.I. tax is usually referred to as **F.I.C.A.** (the Federal Insurance Contribution Act).

In 1965 Congress passed the first federal health insurance program for the aged—popularly known as **Medicare**. This two-part program alleviates the high cost of medical care for those over age 65. A separate Hospital Insurance tax, paid by both the employee

<sup>6</sup>Corporate taxes are based on a progressive tax rate structure. Companies with taxable income of \$50,000 or less are taxed at a 15 percent rate; higher levels of income are taxed at rates ranging up to 39 percent.

Expanded Discussion of  
Bonus Computations

and the employer at the rate of 1.45 percent on the employee’s total compensation, finances the Basic Plan, which provides hospital and other institutional services. The Voluntary Plan covers the major part of doctors’ bills and other medical and health services. Monthly payments from all who enroll, plus matching funds from the federal government, finance this plan.

The combination of the O.A.S.D.I. tax (F.I.C.A.) and the federal Hospital Insurance Tax is commonly referred to as the **Social Security tax**. The combined rate for these taxes, 7.65 percent on an employee’s wages to \$102,000 and 1.45 percent in excess of \$102,000, changes intermittently by acts of Congress. **Companies should report the amount of unremitted employee and employer Social Security tax on gross wages paid as a current liability.**

**Unemployment Taxes.** Another payroll tax levied by the federal government in cooperation with state governments provides a system of unemployment insurance. All employers who meet the following criteria are subject to the **Federal Unemployment Tax Act (F.U.T.A.)**: (1) those who paid wages of \$1,500 or more during any calendar quarter in the year or preceding year, or (2) those who employed at least one individual on at least one day in each of 20 weeks during the current or preceding calendar year.

Only employers pay the unemployment tax. The rate of this tax is 6.2 percent on the first \$7,000 of compensation paid to each employee during the calendar year. The employer receives a tax credit not to exceed 5.4 percent for contributions paid to a state plan for unemployment compensation. Thus, if an employer is subject to a state unemployment tax of 5.4 percent or more, it pays only 0.8 percent tax to the federal government.

State unemployment compensation laws differ both from the federal law and among various states. Therefore, employers must refer to the unemployment tax laws in each state in which they pay wages and salaries. The normal state tax may range from 3 percent to 7 percent or higher. However, all states provide for some form of **merit rating**, which reduces the state contribution rate. Employers who display by their benefit and contribution experience that they provide steady employment may receive this reduction—if the size of the state fund is adequate. In order not to penalize an employer who has earned a reduction in the state contribution rate, federal law allows a credit of 5.4 percent, even when the effective state contribution rate is less than 5.4 percent.

To illustrate, Appliance Repair Co. has a taxable payroll of \$100,000. It is subject to a federal rate of 6.2 percent and a state contribution rate of 5.7 percent. However, its stable employment experience reduces the company’s state rate to 1 percent. Appliance Repair computes its federal and state unemployment taxes as shown in Illustration 13-4.

State unemployment tax payment (1% × \$100,000)	\$1,000
Federal unemployment tax [(6.2% – 5.4%) × \$100,000]	800
<b>Total federal and state unemployment tax</b>	<b><u>\$1,800</u></b>

**ILLUSTRATION 13-4**  
Computation of  
Unemployment Taxes

Companies pay federal unemployment tax quarterly, and file a tax form annually. Companies also generally pay state contributions quarterly as well. Because both the federal and the state unemployment taxes accrue on earned compensation, companies should record the amount of accrued but unpaid employer contributions as **an operating expense and as a current liability when preparing financial statements at year-end.**

**Income Tax Withholding.** Federal and some state income tax laws require employers to withhold from each employee’s pay the applicable income tax due on those wages. The

employer computes the amount of income tax to withhold according to a government-prescribed formula or withholding tax table. That amount depends on the length of the pay period and each employee’s taxable wages, marital status, and claimed dependents. If the income tax withheld plus the employee and the employer Social Security taxes exceeds specified amounts per month, the employer must make remittances to the government during the month. Illustration 13-5 summarizes payroll deductions and liabilities.

**ILLUSTRATION 13-5**  
Summary of Payroll  
Liabilities

Item	Who Pays	
Income tax withholding	Employee	} Employer reports these amounts as liabilities until remitted.
FICA taxes—employee share		
Union dues		
-----		
FICA taxes—employer share	Employer	
Federal unemployment		
State unemployment		

**Payroll Deductions Example.** Assume a weekly payroll of \$10,000 entirely subject to F.I.C.A. and Medicare (7.65%), federal (0.8%) and state (4%) unemployment taxes, with income tax withholding of \$1,320 and union dues of \$88 deducted. The company records the wages and salaries paid and the **employee payroll deductions** as follows:

Wages and Salaries Expense	10,000
Withholding Taxes Payable	1,320
F.I.C.A. Taxes Payable	765
Union Dues Payable	88
Cash	7,827

It records the **employer payroll taxes** as follows:

Payroll Tax Expense	1,245
F.I.C.A. Taxes Payable	765
Federal Unemployment Tax Payable	80
State Unemployment Tax Payable	400

The employer must remit to the government its share of F.I.C.A. tax along with the amount of F.I.C.A. tax deducted from each employee’s gross compensation. It should record all unremitted employer F.I.C.A. taxes as payroll tax expense and payroll tax payable.<sup>7</sup>

**Underlying Concepts**

When these four conditions exist, all elements in the definition of a liability exist. In addition, the matching concept requires that the company report the expense for the services in the same period as the revenue was generated.

**Compensated Absences**

**Compensated absences** are paid absences from employment—such as vacation, illness, and holidays. Companies should accrue a liability for the cost of compensation for future absences if **all of the following conditions** exist. [6]

- (a) The employer’s obligation relating to employees’ rights to receive compensation for future absences is attributable to employees’ services **already rendered**.
- (b) The obligation relates to the rights that **vest or accumulate**.
- (c) Payment of the compensation is **probable**.
- (d) The amount can be **reasonably estimated**. [7]<sup>8</sup>

<sup>7</sup>A manufacturing company allocates all of the payroll costs (wages, payroll taxes, and fringe benefits) to appropriate cost accounts such as Direct Labor, Indirect Labor, Sales Salaries, Administrative Salaries, and the like. This abbreviated and somewhat simplified discussion of payroll costs and deductions is not indicative of the volume of records and clerical work that may be involved in maintaining a sound and accurate payroll system.

<sup>8</sup>Companies provide **postemployment benefits** to past or inactive employees **after employment but prior to retirement**. Examples include salary continuation, supplemental unemployment benefits, severance pay, job training, and continuation of health and life insurance coverage.

Illustration 13-6 shows an example of an accrual for compensated absences, in an excerpt from the balance sheet of **Clarcor Inc.**

**Clarcor Inc.**

Current liabilities	
Accounts payable	\$ 6,308
Accrued salaries, wages and commissions	2,278
<b>Compensated absences</b>	<b>2,271</b>
Accrued pension liabilities	1,023
Other accrued liabilities	4,572
	<u>\$16,452</u>

**ILLUSTRATION 13-6**  
Balance Sheet  
Presentation of Accrual  
for Compensated  
Absences

If an employer meets conditions (a), (b), and (c) but does not accrue a liability because of a failure to meet condition (d), it should disclose that fact. Illustration 13-7 shows an example of such a disclosure, in a note from the financial statements of **Gotham Utility Company**.

**Gotham Utility Company**

Employees of the Company are entitled to paid vacation, personal, and sick days off, depending on job status, length of service, and other factors. Due to numerous differing union contracts and other agreements with nonunion employees, it is impractical to estimate the amount of compensation for future absences, and, accordingly, no liability has been reported in the accompanying financial statements. The Company's policy is to recognize the cost of compensated absences when actually paid to employees; compensated absence payments to employees totaled \$2,786,000.

**ILLUSTRATION 13-7**  
Disclosure of Policy for  
Compensated Absences

The following considerations are relevant to the accounting for compensated absences.

**Vested rights** exist when an employer has an obligation to make payment to an employee even after terminating his or her employment. Thus, vested rights are not contingent on an employee's future service. **Accumulated rights** are those that employees can carry forward to future periods if not used in the period in which earned. For example, assume that you earn four days of vacation pay as of December 31, the end of your employer's fiscal year. Company policy is that you will be paid for this vacation time even if you terminate employment. In this situation, your four days of vacation pay are vested, and your employer must accrue the amount.

Now assume that your vacation days are not vested, but that you can carry the four days over into later periods. Although the rights are not vested, they are accumulated rights for which the employer must make an accrual. However, the amount of the accrual is adjusted to allow for estimated forfeitures due to turnover.

A modification of the general rules relates to the issue of **sick pay**. If sick pay benefits vest, a company must accrue them. If sick pay benefits accumulate but do not vest, a company may choose whether to accrue them. Why this distinction? Companies may administer compensation designated as sick pay in one of two ways. In some companies, employees receive sick pay only if illness causes their absence. Therefore, these companies may or may not accrue a liability because its payment depends on future employee illness. Other companies allow employees to accumulate unused sick pay and take compensated time off from work even when not ill. For this type of sick pay, a company must accrue a liability because the company will pay it, regardless of whether employees become ill.

**Companies should recognize the expense and related liability for compensated absences in the year earned by employees.** For example, if new employees receive rights to two weeks' paid vacation at the beginning of their second year of employment, a company considers the vacation pay to be earned during the first year of employment.

What rate should a company use to accrue the compensated absence cost—the current rate or an estimated future rate? GAAP is silent on this subject. Therefore, companies will likely use the current rather than future rate. The future rate is less certain and raises time value of money issues. To illustrate, assume that Amutron Inc. began operations on January 1, 2010. The company employs 10 individuals and pays each \$480 per week. Employees earned 20 unused vacation weeks in 2010. In 2011, the employees used the vacation weeks, but now they each earn \$540 per week. Amutron accrues the accumulated vacation pay on December 31, 2010, as follows.

Wages Expense	9,600
Vacation Wages Payable ( $\$480 \times 20$ )	9,600

At December 31, 2010, the company reports on its balance sheet a liability of \$9,600. In 2011, it records the payment of vacation pay as follows.

Vacation Wages Payable	9,600
Wages Expense	1,200
Cash ( $\$540 \times 20$ )	10,800

In 2011 the use of the vacation weeks extinguishes the liability. Note that Amutron records the difference between the amount of cash paid and the reduction in the liability account as an adjustment to Wages Expense in the period when paid. This difference arises because it accrues the liability account at the rates of pay in effect during the period when employees *earned* the compensated time. The cash paid, however, depends on the rates in effect during the period when employees *used* the compensated time. If Amutron used the future rates of pay to compute the accrual in 2010, then the cash paid in 2011 would equal the liability.<sup>9</sup>

### Bonus Agreements

Many companies give a **bonus** to certain or all employees in addition to their regular salaries or wages. Frequently the bonus amount depends on the company's yearly profit. For example, employees at **Ford Motor Company** share in the success of the company's operations on the basis of a complicated formula using net income as its primary basis for computation. A company may consider **bonus payments to employees** as additional wages and should include them as a deduction in determining the net income for the year.

To illustrate the entries for an employee bonus, assume that Palmer Inc. shows income for the year 2010 of \$100,000. It will pay out bonuses of \$10,700 in January 2011. Palmer makes an adjusting entry dated December 31, 2010, to record the bonuses as follows.

Employees' Bonus Expense	10,700
Profit-Sharing Bonus Payable	10,700

In January 2011, when Palmer pays the bonus, it makes this journal entry:

Profit-Sharing Bonus Payable	10,700
Cash	10,700

Palmer should show the expense account in the income statement as an operating expense. **The liability, Profit-Sharing Bonus Payable, is usually payable within a**

<sup>9</sup>Some companies have obligations for benefits paid to employees after they retire. The accounting and reporting standards for postretirement benefit payments are complex. These standards relate to two different types of **postretirement benefits**: (1) pensions, and (2) postretirement health care and life insurance benefits. We discuss these issues extensively in Chapter 20.

#### INTERNATIONAL INSIGHT

In Japan, companies do not treat bonuses to members of the board of directors and to the Commercial Code auditors as expenses. Instead, they consider such bonuses to be a distribution of profits and charge them against retained earnings.

**short period of time. Companies should include it as a current liability in the balance sheet.** Similar to bonus agreements are contractual agreements for **conditional expenses**. Examples would be agreements covering rents or royalty payments conditional on the amount of revenues earned or the quantity of product produced or extracted. Conditional expenses based on revenues or units produced are usually less difficult to compute than bonus arrangements.

For example, assume that a lease calls for a fixed rent payment of \$500 per month and 1 percent of all sales over \$300,000 per year. The company's annual rent obligation would amount to \$6,000 plus \$0.01 of each dollar of revenue over \$300,000. Or, a royalty agreement may give to a patent owner \$1 for every ton of product resulting from the patented process, or give to a mineral rights owner \$0.50 on every barrel of oil extracted. As the company produces or extracts each additional unit of product, it creates an additional obligation, usually a current liability.

## SECTION 2 • CONTINGENCIES

Companies often are involved in situations where uncertainty exists about whether an obligation to transfer cash or other assets has arisen and/or the amount that will be required to settle the obligation. For example:

- **Merck** may be a defendant in a lawsuit, and any payment is contingent upon the outcome of a settlement or an administrative or court proceeding.
- **Ford Motor Co.** provides a warranty for a car it sells, and any payments are contingent on the number of cars that qualify for benefits under the warranty.
- **Briggs & Stratton** acts as a guarantor on a loan for another entity, and any payment is contingent on whether the other entity defaults.

Broadly, these situations are called contingencies. A **contingency** is “an existing condition, situation, or set of circumstances involving uncertainty as to possible gain (**gain contingency**) or loss (**loss contingency**) to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur.” [8]<sup>10</sup>

### GAIN CONTINGENCIES

**Gain contingencies** are claims or rights to receive assets (or have a liability reduced) whose existence is uncertain but which may become valid eventually. The typical gain contingencies are:

1. Possible receipts of monies from gifts, donations, bonuses, and so on.
2. Possible refunds from the government in tax disputes.
3. Pending court cases with a probable favorable outcome.
4. Tax loss carryforwards (discussed in Chapter 19).

Companies follow a conservative policy in this area. Except for tax loss carryforwards, they do not record gain contingencies. A company discloses gain contingencies in the notes only when a high probability exists for realizing them. As a result, it

**Objective 4**  
Identify the criteria used to account for and disclose gain and loss contingencies.

<sup>10</sup>According to *Accounting Trends and Techniques—2007*, the most common gain contingencies are related to operating loss carryforwards and other tax credits and to tax credit carryforwards. The most common loss contingencies are related to litigation, environmental, and insurance losses.

is unusual to find information about contingent gains in the financial statements and the accompanying notes. Illustration 13-8 presents an example of a gain contingency disclosure.

**ILLUSTRATION 13-8**  
Disclosure of Gain  
Contingency

### **BMC Industries, Inc.**

**Note 13: Legal Matters.** In the first quarter, a U.S. District Court in Miami, Florida, awarded the Company a \$5.1 million judgment against Barth Industries (Barth) of Cleveland, Ohio and its parent, Nesco Holdings, Inc. (Nesco). The judgment relates to an agreement under which Barth and Nesco were to help automate the plastic lens production plant in Fort Lauderdale, Florida. The Company has not recorded any income relating to this judgment because Barth and Nesco have filed an appeal.

## LOSS CONTINGENCIES

**Loss contingencies** involve possible losses. A liability incurred as a result of a loss contingency is by definition a contingent liability. **Contingent liabilities** depend on the occurrence of one or more future events to confirm either the amount payable, the payee, the date payable, or its existence. That is, these factors depend on a contingency.

### Likelihood of Loss

When a loss contingency exists, the likelihood that the future event or events will confirm the incurrence of a liability can range from probable to remote. The FASB uses the terms **probable**, **reasonably possible**, and **remote** to identify three areas within that range and assigns the following meanings.

**Probable.** The future event or events are likely to occur.

**Reasonably possible.** The chance of the future event or events occurring is more than remote but less than likely.

**Remote.** The chance of the future event or events occurring is slight.

Companies should accrue an estimated loss from a loss contingency by a charge to expense and a liability recorded only if **both** of the following conditions are met.<sup>11</sup>

1. Information available prior to the issuance of the financial statements indicates that it is **probable that a liability has been incurred** at the date of the financial statements.
2. The amount of the loss can be **reasonably estimated**.

To record a liability, a company does not need to know the exact payee nor the exact date payable. **What a company must know is whether it is probable that it incurred a liability.**

To meet the second criterion, a company needs to be able to reasonably determine an amount for the liability. To determine a reasonable estimate of the liability, a company may use its own experience, experience of other companies in the industry, engineering or research studies, legal advice, or educated guesses by qualified personnel.

<sup>11</sup>We discuss loss contingencies that result in the incurrence of a liability in this chapter. We discuss loss contingencies that result in the impairment of an asset (e.g., collectibility of receivables or threat of expropriation of assets) in other sections of this textbook.

Illustration 13-9 shows an accrual recorded for a loss contingency, from the annual report of **Quaker State Oil Refining Company**.

### Quaker State Oil Refining Company

**Note 5: Contingencies.** During the period from November 13 to December 23, a change in an additive component purchased from one of its suppliers caused certain oil refined and shipped to fail to meet the Company's low-temperature performance requirements. The Company has recalled this product and has arranged for reimbursement to its customers and the ultimate consumers of all costs associated with the product. Estimated cost of the recall program, net of estimated third party reimbursement, in the amount of \$3,500,000 has been charged to current operations.

**ILLUSTRATION 13-9**  
Disclosure of Accrual for  
Loss Contingency

Use of the terms probable, reasonably possible, and remote to classify contingencies involves judgment and subjectivity. Illustration 13-10 lists examples of loss contingencies and the general accounting treatment accorded them.

#### Usually Accrued

##### Loss Related to:

1. Collectibility of receivables
2. Obligations related to product warranties and product defects
3. Premiums offered to customers

#### Not Accrued

##### Loss Related to:

4. Risk of loss or damage of enterprise property by fire, explosion, or other hazards
5. General or unspecified business risks
6. Risk of loss from catastrophes assumed by property and casualty insurance companies, including reinsurance companies

#### May Be Accrued\*

##### Loss Related to:

7. Threat of expropriation of assets
8. Pending or threatened litigation
9. Actual or possible claims and assessments\*\*
10. Guarantees of indebtedness of others
11. Obligations of commercial banks under "standby letters of credit"
12. Agreements to repurchase receivables (or the related property) that have been sold

\*Should be accrued when both criteria—probable and reasonably estimable—are met.

\*\*Estimated amounts of losses incurred prior to the balance sheet date but settled subsequently should be accrued as of the balance sheet date.

**ILLUSTRATION 13-10**  
Accounting Treatment of  
Loss Contingencies

Practicing accountants express concern over the diversity that now exists in the interpretation of "probable," "reasonably possible," and "remote." Current practice relies heavily on the exact language used in responses received from lawyers (such language is necessarily biased and protective rather than predictive). As a result, accruals and disclosures of contingencies vary considerably in practice. Some of the more common loss contingencies are:<sup>12</sup>

1. Litigation, claims, and assessments.
2. Guarantee and warranty costs.
3. Premiums and coupons.
4. Environmental liabilities.

<sup>12</sup>*Accounting Trends and Techniques—2007* reports that of the 600 companies surveyed, companies report loss contingencies for the following: litigation, 476; environmental, 263; insurance, 152; governmental investigation, 138; possible tax assessments, 117; and others, 70.

As discussed in the opening story, companies do not record or report in the notes to the financial statements general risk contingencies inherent in business operations (e.g., the possibility of war, strike, uninsurable catastrophes, or a business recession).

## Litigation, Claims, and Assessments

Companies must consider the following factors, among others, in determining whether to record a liability with respect to **pending or threatened litigation** and actual or possible **claims** and **assessments**.

### Objective 5

Explain the accounting for different types of loss contingencies.

1. The **time period** in which the underlying cause of action occurred.
2. The **probability** of an unfavorable outcome.
3. The ability to make a **reasonable estimate** of the amount of loss.

To report a loss and a liability in the financial statements, **the cause for litigation must have occurred on or before the date of the financial statements**. It does not matter that the company became aware of the existence or possibility of the lawsuit or claims after the date of the financial statements but before issuing them. To evaluate the probability of an unfavorable outcome, a company considers the following: the nature of the litigation; the progress of the case; the opinion of legal counsel; its own and others' experience in similar cases; and any management response to the lawsuit.

Companies can seldom predict the outcome of pending litigation, however, with any assurance. And, even if evidence available at the balance sheet date does not favor the company, it is hardly reasonable to expect the company to publish in its financial statements a dollar estimate of the probable negative outcome. Such specific disclosures might weaken the company's position in the dispute and encourage the plaintiff to intensify its efforts. A typical example of the wording of such a disclosure is the note to the financial statements of **Apple Computer, Inc.**, relating to its litigation concerning repetitive stress injuries, as shown in Illustration 13-11.

ILLUSTRATION 13-11  
Disclosure of Litigation

### Apple Computer, Inc.

**“Repetitive Stress Injury” Litigation.** The Company is named in numerous lawsuits (fewer than 100) alleging that the plaintiff incurred so-called “repetitive stress injury” to the upper extremities as a result of using keyboards and/or mouse input devices sold by the Company. On October 4, in a trial of one of these cases (*Dorsey v. Apple*) in the United States District Court for the Eastern District of New York, the jury rendered a verdict in favor of the Company, and final judgment in favor of the Company has been entered. The other cases are in various stages of pretrial activity. These suits are similar to those filed against other major suppliers of personal computers. Ultimate resolution of the litigation against the Company may depend on progress in resolving this type of litigation in the industry overall.

With respect to **unfiled suits** and **unasserted claims and assessments**, a company must determine (1) the degree of **probability** that a suit may be filed or a claim or assessment may be asserted, and (2) the **probability** of an unfavorable outcome. For example, assume that the Federal Trade Commission investigates the Nawtee Company for restraint of trade, and institutes enforcement proceedings. Private claims of triple damages for redress often follow such proceedings. In this case, Nawtee must determine the probability of the claims being asserted **and** the probability of triple damages being awarded. If both are probable, if the loss is reasonably estimable, and if the cause

for action is dated on or before the date of the financial statements, then Nawtee should accrue the liability.<sup>13</sup>

## Guarantee and Warranty Costs

A **warranty (product guarantee)** is a promise made by a seller to a buyer to make good on a deficiency of quantity, quality, or performance in a product. Manufacturers commonly use it as a sales promotion technique. Automakers, for instance, “hyped” their sales by extending their new-car warranty to seven years or 100,000 miles. For a specified period of time following the date of sale to the consumer, the manufacturer may promise to bear all or part of the cost of replacing defective parts, to perform any necessary repairs or servicing without charge, to refund the purchase price, or even to “double your money back.”

Warranties and guarantees entail future costs. These additional costs, sometimes called “after costs” or “post-sale costs,” frequently are significant. Although the future cost is indefinite as to amount, due date, and even customer, a liability is probable in most cases. Companies should recognize this liability in the accounts if they can reasonably estimate it. The estimated amount of the liability includes all the costs that the company will incur after sale and delivery and that are incident to the correction of defects or deficiencies required under the warranty provisions. Warranty costs are a classic example of a loss contingency.

Companies use two basic methods of accounting for warranty costs: (1) the cash-basis method and (2) the accrual method.

### Cash Basis

Under the **cash-basis method**, companies expense warranty costs as incurred. In other words, a **seller or manufacturer charges warranty costs to the period in which it complies with the warranty**. The company does not record a liability for future costs arising from warranties, nor does it charge the period of sale. Companies frequently justify use of this method, the only one recognized for income tax purposes, on the basis of expediency when warranty costs are immaterial or when the warranty period is relatively short. A company must use the cash-basis method when it does not accrue a warranty liability in the year of sale either because:

1. it is not probable that a liability has been incurred, or
2. it cannot reasonably estimate the amount of the liability.

### Accrual Basis

If it is probable that customers will make warranty claims and a company can reasonably estimate the costs involved, the company must use the accrual method. Under the **accrual method**, companies charge warranty costs to operating expense **in the year of sale**. The accrual method is the generally accepted method. Companies should use it whenever the warranty is an integral and inseparable part of the sale and is viewed as a loss contingency. We refer to this approach as the **expense warranty approach**.

*Example of Expense Warranty Approach.* To illustrate the expense warranty method, assume that Denson Machinery Company begins production on a new machine in July 2010, and sells 100 units at \$5,000 each by its year-end, December 31, 2010. Each machine

<sup>13</sup>Companies need not disclose contingencies involving an unasserted claim or assessment when no claimant has come forward unless (1) it is considered probable that a claim will be asserted, and (2) there is a reasonable possibility that the outcome will be unfavorable. The FASB has started a project to require disclosures that are sufficient to enable users of financial statements to assess the likelihood, timing, and amount of future cash flows associated with loss contingencies. See [http://www.fasb.org/project/accounting\\_for\\_contingencies.shtml](http://www.fasb.org/project/accounting_for_contingencies.shtml).

is under warranty for one year. Denson estimates, based on past experience with a similar machine, that the warranty cost will average \$200 per unit. Further, as a result of parts replacements and services rendered in compliance with machinery warranties, it incurs \$4,000 in warranty costs in 2010 and \$16,000 in 2011.

1. Sale of 100 machines at \$5,000 each, July through December 2010:

Cash or Accounts Receivable	500,000	
Sales		500,000

2. Recognition of warranty expense, July through December 2010:

Warranty Expense	4,000	
Cash, Inventory, Accrued Payroll (Warranty costs incurred)		4,000
Warranty Expense	16,000	
Liability under Warranties (To accrue estimated warranty costs)		16,000

The December 31, 2010, balance sheet reports “Estimated liability under warranties” as a current liability of \$16,000, and the income statement for 2010 reports “Warranty expense” of \$20,000.

3. Recognition of warranty costs incurred in 2011 (on 2010 machinery sales):

Liability under Warranties	16,000	
Cash, Inventory, Accrued Payroll (Warranty costs incurred)		16,000

If Denson Machinery applies the cash-basis method, it reports \$4,000 as warranty expense in 2010 and \$16,000 as warranty expense in 2011. It records all of the sale price as revenue in 2010. In many instances, application of the cash-basis method fails to match the warranty costs relating to the products sold during a given period with the revenues derived from such products. As such, **it violates the expense recognition principle**. Where ongoing warranty policies exist year after year, the differences between the cash and the expense warranty bases probably would not be so great.

**Sales Warranty Approach.** A warranty is sometimes **sold separately from the product**. For example, when you purchase a television set or DVD player, you are entitled to the manufacturer’s warranty. You also will undoubtedly be offered an extended warranty on the product at an additional cost.<sup>14</sup>

In this case, the seller should recognize separately the sale of the television or DVD player, with the manufacturer’s warranty and the sale of the extended warranty. **[9]** This approach is referred to as the **sales warranty approach**. **Companies defer revenue on the sale of the extended warranty** and generally recognize it on a straight-line basis over the life of the contract. The seller of the warranty defers revenue because it has an obligation to perform services over the life of the contract. The seller should only defer and amortize costs that vary with and are directly related to the sale of the contracts (mainly commissions). It expenses those costs, such as employees’ salaries, advertising, and general and administrative expenses, that it would have incurred even if it did not sell a contract.

To illustrate, assume you purchase a new automobile from Hanlin Auto for \$20,000. In addition to the regular warranty on the auto (the manufacturer will pay

<sup>14</sup>A company separately prices a contract if the customer has the option to purchase the services provided under the contract for an expressly stated amount separate from the price of the product. An extended warranty or product maintenance contract usually meets these conditions.

for all repairs for the first 36,000 miles or three years, whichever comes first), you purchase at a cost of \$600 an extended warranty that protects you for an additional three years or 36,000 miles. Hanlin Auto records the sale of the automobile (with the regular warranty) and the sale of the extended warranty on January 2, 2010, as follows:

Cash	20,600	
Sales		20,000
Unearned Warranty Revenue		600

It recognizes revenue at the end of the fourth year (using straight-line amortization) as follows.

Unearned Warranty Revenue	200	
Warranty Revenue		200

Because the extended warranty contract only starts after the regular warranty expires, Hanlin Auto defers revenue recognition until the fourth year. If it incurs the costs of performing services under the extended warranty contract on other than a straight-line basis (as historical evidence might indicate), Hanlin Auto should recognize revenue over the contract period in proportion to the costs it expected to incur in performing services under the contract. [10]<sup>15</sup>

## Premiums and Coupons

Numerous companies offer premiums (either on a limited or continuing basis) to customers in return for boxtops, certificates, coupons, labels, or wrappers. The **premium** may be silverware, dishes, a small appliance, a toy, or free transportation. Also, **printed coupons** that can be redeemed for a cash discount on items purchased are extremely popular. A more recent marketing innovation is the **cash rebate**, which the buyer can obtain by returning the store receipt, a rebate coupon, and Universal Product Code (UPC label) or “bar code” to the manufacturer.<sup>16</sup>

Companies offer premiums, coupon offers, and rebates to stimulate sales. Thus companies should charge the **costs of premiums and coupons to expense in the period of the sale** that benefits from the plan. The period that benefits is not necessarily the period in which the company offered the premium. At the end of the accounting period many premium offers may be outstanding and must be redeemed when presented in subsequent periods. In order to reflect the existing current liability and to match costs with revenues, the company estimates the number of outstanding premium offers that customers will present for redemption. The company then charges the cost of premium offers to Premium Expense. It credits the outstanding obligations to an account titled Liability for Premiums or Premium Liability.

The following example illustrates the accounting treatment for a premium offer. Fluffy Cakemix Company offered its customers a large nonbreakable mixing bowl in exchange for 25 cents and 10 boxtops. The mixing bowl costs Fluffy Cakemix Company 75 cents, and the company estimates that customers will redeem 60 percent of the boxtops. The premium offer began in June 2010 and resulted in the transactions journalized

### Underlying Concepts

Warranties and coupons are loss contingencies that satisfy the conditions necessary for a liability. Regarding the income statement, the *expense recognition principle* requires that companies report the related expense in the period in which the sale occurs.

<sup>15</sup>The FASB recently issued additional disclosure requirements for warranties. A company must disclose its accounting policy and the method used to determine its warranty liability, and must present a tabular reconciliation of the changes in the product warranty liability. [11]

<sup>16</sup>Nearly 40 percent of cash rebates never get redeemed, and some customers complain about how difficult the rebate process is. See B. Grow, “The Great Rebate Runaround,” *BusinessWeek* (December 5, 2005), pp. 34–37. Approximately 4 percent of coupons are redeemed. Redeemed coupons eventually make their way to the corporate headquarters of the stores that accept them. From there they are shipped to clearinghouses operated by **A. C. Nielsen Company** (of TV-rating fame) that count them and report back to the manufacturers who, in turn, reimburse the stores.

below. Fluffy Cakemix Company records purchase of 20,000 mixing bowls at 75 cents as follows.

Inventory of Premium Mixing Bowls	15,000	
Cash		15,000

The entry to record sales of 300,000 boxes of cake mix at 80 cents would be:

Cash	240,000	
Sales		240,000

Fluffy records the actual redemption of 60,000 boxtops, the receipt of 25 cents per 10 boxtops, and the delivery of the mixing bowls as follows.

Cash [(60,000 ÷ 10) × \$0.25]	1,500	
Premium Expense	3,000	
Inventory of Premium Mixing Bowls		4,500

Computation:  $(60,000 \div 10) \times \$0.75 = \$4,500$

Finally, Fluffy makes an end-of-period adjusting entry for estimated liability for outstanding premium offers (boxtops) as follows.

Premium Expense	6,000	
Liability for Premiums		6,000

Computation:

Total boxtops sold in 2010	<u>300,000</u>
Total estimated redemptions (60%)	180,000
Boxtops redeemed in 2010	<u>60,000</u>
Estimated future redemptions	<u>120,000</u>

Cost of estimated claims outstanding  
 $(120,000 \div 10) \times (\$0.75 - \$0.25) = \$6,000$

The December 31, 2010, balance sheet of Fluffy Cakemix Company reports an “Inventory of premium mixing bowls” of \$10,500 as a current asset and “Liability for premiums” of \$6,000 as a current liability. The 2010 income statement reports a \$9,000 “Premium expense” among the selling expenses.

### FREQUENT FLYERS

Numerous companies offer premiums to customers in the form of a promise of future goods or services as an incentive for purchases today. Premium plans that have widespread adoption are the frequent-flyer programs used by all major airlines. On the basis of mileage accumulated, frequent-flyer members receive discounted or free airline tickets. Airline customers can earn miles toward free travel by making long-distance phone calls, staying in hotels, and charging gasoline and groceries on a credit card. Those free tickets represent an enormous potential liability because people using them may displace paying passengers.

When airlines first started offering frequent-flyer bonuses, everyone assumed that they could accommodate the free-ticket holders with otherwise-empty seats. That made the additional cost of the program so minimal that airlines didn’t accrue it or report the small liability. But, as more and more paying passengers have been crowded off flights by frequent-flyer awardees, the loss of revenues has grown enormously. For example, **United Airlines** at one time reported a liability of \$1.4 billion for advance ticket sales, some of which pertains to free frequent-flyer tickets.

Although the profession has studied the accounting for this transaction, no authoritative guidelines have been issued.

**What do the numbers mean?**

### Environmental Liabilities

Estimates to clean up existing toxic waste sites total upward of \$752 billion over a 30-year period. In addition, cost estimates of cleaning up our air and preventing future

deterioration of the environment run even higher. Consider some average environmental costs per company for various industries:

	<u>Amount in Dollars</u>	<u>Percentage of Revenues</u>
High-tech companies	\$2 million	6.1%
Utilities	\$340 million	6.1%
Steel and metals	\$50 million	2.9%
Oil companies	\$430 million	1.9%

These costs are likely to only grow, considering “Superfund legislation.” This federal legislation provides the Environmental Protection Agency (EPA) with the power to clean up waste sites and charge the clean-up costs to parties the EPA deems responsible for contaminating the site. These potentially responsible parties can have a significant liability.

In many industries, the construction and operation of long-lived assets involves obligations for the retirement of those assets. When a mining company opens up a strip mine, it may also commit to restore the land once it completes mining. Similarly, when an oil company erects an offshore drilling platform, it may be legally obligated to dismantle and remove the platform at the end of its useful life.

### Accounting Recognition of Asset Retirement Obligations

A company must recognize an **asset retirement obligation (ARO)** when it has an existing legal obligation associated with the retirement of a long-lived asset and when it can reasonably estimate the amount of the liability. Companies should record the ARO at fair value. **[12]**

**Obligating Events.** Examples of existing legal obligations, which require recognition of a liability include, but are not limited to:

- decommissioning nuclear facilities,
- dismantling, restoring, and reclamation of oil and gas properties,
- certain closure, reclamation, and removal costs of mining facilities,
- closure and post-closure costs of landfills.

In order to capture the benefits of these long-lived assets, **the company is generally legally obligated for the costs associated with retirement of the asset, whether the company hires another party to perform the retirement activities or performs the activities with its own workforce and equipment.** AROs give rise to various recognition patterns. For example, the obligation may arise at the outset of the asset’s use (e.g., erection of an oil-rig), or it may build over time (e.g., a landfill that expands over time).

**Measurement.** A company initially measures an ARO at fair value, which is defined as the amount that the company would pay in an active market to settle the ARO. While active markets do not exist for many AROs, companies should estimate fair value based on the best information available. Such information could include market prices of similar liabilities, if available. Alternatively, companies may use present value techniques to estimate fair value.

**Recognition and Allocation.** To record an ARO in the financial statements, a company includes the cost associated with the ARO in the carrying amount of the related long-lived asset, and records a liability for the same amount. It records an asset retirement cost as part of the related asset because these costs are tied to operating the asset and are necessary to prepare the asset for its intended use. Therefore, the specific asset (e.g., mine, drilling platform, nuclear power plant) should be increased because the future economic benefit comes from the use of this productive asset. **Companies should not record the capitalized asset retirement costs in a separate account because there is no future economic benefit that can be associated with these costs alone.**

In subsequent periods, companies allocate the cost of the ARO to expense over the period of the related asset's useful life. Companies may use the straight-line method for this allocation, as well as other systematic and rational allocations.

**Example of ARO Accounting Provisions.** To illustrate the accounting for AROs, assume that on January 1, 2010, Wildcat Oil Company erected an oil platform in the Gulf of Mexico. Wildcat is legally required to dismantle and remove the platform at the end of its useful life, estimated to be five years. Wildcat estimates that dismantling and removal will cost \$1,000,000. Based on a 10 percent discount rate, the fair value of the asset retirement obligation is estimated to be \$620,920 ( $\$1,000,000 \times .62092$ ). Wildcat records this ARO as follows.

**January 1, 2010**

Drilling Platform	620,920	
Asset Retirement Obligation		620,920

During the life of the asset, Wildcat allocates the asset retirement cost to expense. Using the straight-line method, Wildcat makes the following entries to record this expense.

**December 31, 2010, 2011, 2012, 2013, 2014**

Depreciation Expense ( $\$620,920 \div 5$ )	124,184	
Accumulated Depreciation		124,184

In addition, Wildcat must accrue interest expense each period. Wildcat records interest expense and the related increase in the asset retirement obligation on December 31, 2010, as follows.

**December 31, 2010**

Interest Expense ( $\$620,920 \times 10\%$ )	62,092	
Asset Retirement Obligation		62,092

On January 10, 2015, Wildcat contracts with Rig Reclaimers, Inc. to dismantle the platform at a contract price of \$995,000. Wildcat makes the following journal entry to record settlement of the ARO.

**January 10, 2015**

Asset Retirement Obligation	1,000,000	
Gain on Settlement of ARO		5,000
Cash		995,000

Companies need to provide more extensive disclosure regarding environmental liabilities. In addition, companies should record more of these liabilities. The SEC believes that companies should not delay recognition of a liability due to significant uncertainty. The SEC argues that if the liability is within a range, and no amount within the range is the best estimate, then management should recognize the minimum amount of the range. That treatment is in accordance with GAAP. The SEC also believes that companies should report environmental liabilities in the balance sheet independent of recoveries from third parties. Thus, companies may not net possible insurance recoveries against liabilities but must show them separately. Because there is much litigation regarding recovery of insurance proceeds, these "assets" appear to be gain contingencies. Therefore, companies should not report these on the balance sheet.<sup>17</sup>

<sup>17</sup>As we indicated earlier, the FASB requires that, when some amount within the range appears at the time to be a better estimate than any other amount within the range, a company accrues that amount. When no amount within the range is a better estimate than any other amount, the company accrues the dollar amount at the low end of the range and discloses the dollar amount at the high end of the range. Unfortunately, in many cases, zero may arguably be the low point of the range, resulting in no liability being recognized. [13], [14]

## MORE DISCLOSURE, PLEASE

On November 19, 2001, **Enron** filed its third-quarter financial statements and reported on its balance sheet debt of approximately \$13 billion. Yet on the same day, at a meeting to discuss its liquidity crisis, Enron informed its bankers that its debt was approximately \$38 billion. Company officers described the difference of \$25 billion as being either off-balance-sheet or on the balance sheet other than debt.

As a result of the Enron bankruptcy and other financial reporting scandals, Congress passed the Sarbanes-Oxley Act of 2002. One of its provisions mandates that the Securities and Exchange Commission conduct a study to determine the extent of off-balance-sheet transactions occurring in U.S. businesses.

Table 1 below indicates the extent of disclosure and recognition of contingent liabilities. The study classified contingent liabilities into three categories (1) litigation contingent liabilities, (2) environmental liabilities, and (3) guarantees. The statistics provided relate to reports filed by 10,100 companies listed on the U.S. stock exchanges in 2005.

**Table 1**

Type of Contingency	Companies Disclosing	Companies Recording
Litigation contingent liabilities	46.3%	5.1%
Environmental contingent liabilities	10.2%	5.1%
Guarantees	35.4%	10.2%

As Table 1 indicates, approximately 46 percent of companies disclosed litigation contingent liabilities, but only 5.1 percent recorded any liability related to these contingencies. On the other hand, 35 percent of the companies disclosed guarantees but a third of these companies (10.2 percent) recorded a liability for these contingencies.

Table 2 below shows the dollar amounts of the contingent liabilities companies disclosed and recorded.

**Table 2**

Type of Contingency	Companies Disclosing (\$ millions)	Companies Recording (\$ millions)
Litigation contingent liabilities	\$52,354	\$11,814
Environmental contingent liabilities	\$23,414	\$18,723
Guarantees	\$46,535,399	\$123,949

Table 2 indicates that companies disclosed litigation contingent liabilities of approximately \$52 billion, but recorded only \$11.8 billion as liabilities. Incredibly, companies disclosed more than \$46 trillion of guarantees, a small fraction of which (just \$124 billion) they recorded as liabilities.

The results of this study suggest that the FASB must continue to address the issue of contingencies to ensure that companies provide relevant and reliable information for these types of financial events.

*Source:* "Report and Recommendations Pursuant to Section 401(c) of the Sarbanes-Oxley Act of 2002 on Arrangements with Off-Balance Sheet Implications, Special Purpose Entities, and Transparency of Filings by Issuers," United States Securities and Exchange Commission, Office of Chief Accountant, Office of Economic Analyses, Division of Corporation Finance (June 2005).

**What do the numbers mean?**

## Self-Insurance

As discussed earlier, contingencies are not recorded for general risks (e.g., losses that might arise due to poor expected economic conditions). Similarly, companies do not record contingencies for more specific future risks such as allowances for repairs. The reason: These items do not meet the definition of a liability because they do not arise from a past transaction but instead relate to future events.

Some companies take out insurance policies against the potential losses from fire, flood, storm, and accident. Other companies do not. The reasons: Some risks

### Underlying Concepts

Even if companies can estimate the amount of losses with a high degree of certainty, the losses are not liabilities because they result from a future event and not from a past event.

are not insurable, the insurance rates are prohibitive (e.g., earthquakes and riots), or they make a business decision to self-insure. Self-insurance is another item that is not recognized as a contingency.

Despite its name, **self-insurance** is **not insurance, but risk assumption**. Any company that assumes its own risks puts itself in the position of incurring expenses or losses as they occur. There is little theoretical justification for the establishment of a liability based on a hypothetical charge to insurance expense. This is “as if” accounting. The conditions for accrual stated in GAAP are not satisfied prior to the occurrence of the event. Until that time there is no diminution in the value of the property. And unlike an insurance company, which has contractual obligations to reimburse policyholders for losses, a company can have no such obligation to itself and, hence, no liability either before or after the occurrence of damage. [15]<sup>18</sup>

The note shown in Illustration 13-12 from the annual report of **Adolph Coors Company** is typical of the self-insurance disclosure.

**ILLUSTRATION 13-12**  
Disclosure of Self-Insurance

### Adolph Coors Company

#### Notes to Financial Statements

**Note 4: Commitments and Contingencies.** It is generally the policy of the Company to act as a self-insurer for certain insurable risks consisting primarily of physical loss to corporate property, business interruption resulting from such loss, employee health insurance programs, and workers' compensation. Losses and claims are accrued as incurred.

Exposure to **risks of loss resulting from uninsured past injury to others**, however, is an existing condition involving uncertainty about the amount and timing of losses that may develop. In such a case, a contingency exists. A company with a fleet of vehicles for example, would have to accrue uninsured losses resulting from injury to others or damage to the property of others that took place prior to the date of the financial statements (if the experience of the company or other information enables it to make a reasonable estimate of the liability). However, it should not establish a liability for **expected future injury** to others or damage to the property of others, even if it can reasonably estimate the amount of losses.

## SECTION 3 • PRESENTATION AND ANALYSIS

### PRESENTATION OF CURRENT LIABILITIES

#### Objective-6

Indicate how to present and analyze liabilities and contingencies.

In practice, current liabilities are usually recorded and reported in financial statements at their full maturity value. Because of the short time periods involved, frequently less than one year, the difference between the present value of a current liability and the maturity value is usually not large. The profession accepts as immaterial any slight overstatement of liabilities that results from carrying current liabilities at maturity value. [16]<sup>19</sup>

<sup>18</sup>A commentary in *Forbes* (June 15, 1974), p. 42, stated its position on this matter quite succinctly: “The simple and unquestionable fact of life is this: Business is cyclical and full of unexpected surprises. Is it the role of accounting to disguise this unpleasant fact and create a fairyland of smoothly rising earnings? Or, should accounting reflect reality, warts and all—floods, expropriations and all manner of rude shocks?”

<sup>19</sup>GAAP specifically exempts from present value measurements those payables arising from transactions with suppliers in the normal course of business that do not exceed approximately one year.

The current liabilities accounts are commonly presented as the first classification in the liabilities and stockholders' equity section of the balance sheet. Within the current liabilities section, companies may list the accounts in order of maturity, in descending order of amount, or in order of liquidation preference. Illustration 13-13 presents an excerpt of **Best Buy Company's** financial statements that is representative of the reports of large corporations.

### Best Buy Co.

<b>Total current liabilities</b>	<b>\$6,301</b>	<b>\$6,056</b>

**ILLUSTRATION 13-13**  
Balance Sheet Presentation  
of Current Liabilities

*Additional Disclosures  
of Current Liabilities*

Detail and supplemental information concerning current liabilities should be sufficient to meet the requirement of full disclosure. Companies should clearly identify secured liabilities, as well as indicate the related assets pledged as collateral. If the due date of any liability can be extended, a company should disclose the details. Companies should not offset current liabilities against assets that it will apply to their liquidation. Finally, current maturities of long-term debt are classified as current liabilities.

**A major exception exists when a company will pay a currently maturing obligation from assets classified as long-term.** For example, if a company will retire a bond payable using a bond sinking fund that is classified as a long-term asset, it should report the bonds payable in the long-term liabilities section. Presentation of this debt in the current liabilities section would distort the working capital position of the enterprise.

If a company excludes a short-term obligation from current liabilities because of refinancing, it should include the following in the note to the financial statements:

1. A general description of the financing agreement.
2. The terms of any new obligation incurred or to be incurred.
3. The terms of any equity security issued or to be issued.

When a company expects to refinance on a long-term basis by issuing equity securities, it is not appropriate to include the short-term obligation in stockholders' equity. At the date of the balance sheet, the obligation is a liability and not stockholders' equity. Illustration 13-14 (on page 664) shows the disclosure requirements for an actual refinancing situation.

**ILLUSTRATION 13-14**Actual Refinancing of  
Short-Term Debt

	<u>December 31, 2010</u>
Current liabilities	
Accounts payable	\$ 3,600,000
Accrued payables	2,500,000
Income taxes payable	1,100,000
Current portion of long-term debt	<u>1,000,000</u>
Total current liabilities	\$ 8,200,000
Long-term debt	
Notes payable refinanced in January 2011 (Note 1)	\$ 2,000,000
11% bonds due serially through 2021	<u>15,000,000</u>
Total long-term debt	\$17,000,000

**Note 1:** On January 19, 2011, the Company issued 50,000 shares of common stock and received proceeds totaling \$2,385,000, of which \$2,000,000 was used to liquidate notes payable that matured on February 1, 2011. Accordingly, such notes payable have been classified as long-term debt at December 31, 2010.

Additional Disclosures  
of Contingencies**PRESENTATION OF CONTINGENCIES**

A company records a loss contingency and a liability if the loss is both probable and estimable. But, if the loss is **either probable or estimable but not both**, and if there is at least a **reasonable possibility** that a company may have incurred a liability, it must disclose the following in the notes.

1. The nature of the contingency.
2. An estimate of the possible loss or range of loss or a statement that an estimate cannot be made.

Illustration 13-15 presents an extensive litigation disclosure note from the financial statements of **Raymark Corporation**. The note indicates that Raymark charged actual losses to operations and that a further liability may exist, but that the company cannot currently estimate this liability.

**ILLUSTRATION 13-15**Disclosure of Loss  
Contingency through  
Litigation**Raymark Corporation**

**Note I: Litigation.** Raymark is a defendant or co-defendant in a substantial number of lawsuits alleging wrongful injury and/or death from exposure to asbestos fibers in the air. The following table summarizes the activity in these lawsuits:

Claims	
Pending at beginning of year	8,719
Received during year	4,494
Settled or otherwise disposed of	<u>(1,445)</u>
Pending at end of year	11,768
Average indemnification cost	\$3,364
Average cost per case, including defense costs	\$6,499
Trial activity	
Verdicts for the Company	23
Total trials	36

The following table presents the cost of defending asbestos litigation, together with related insurance and workers' compensation expenses.

Included in operating profit	\$ 1,872,000
Nonoperating expense	<u>9,077,000</u>
Total	<u>\$10,949,000</u>

The Company is seeking to reasonably determine its liability. However, it is not possible to predict which theory of insurance will apply, the number of lawsuits still to be filed, the cost of settling and defending the existing and unfiled cases, or the ultimate impact of these lawsuits on the Company's consolidated financial statements.

Companies should disclose certain other contingent liabilities, even though the possibility of loss may be remote, as follows.

1. Guarantees of indebtedness of others.
2. Obligations of commercial banks under “stand-by letters of credit.”
3. Guarantees to repurchase receivables (or any related property) that have been sold or assigned.

Disclosure should include the nature and amount of the guarantee and, if estimable, the amount that the company can recover from outside parties.<sup>20</sup> **Cities Service Company** disclosed its guarantees of others’ indebtedness in the following note.

**INTERNATIONAL  
INSIGHT**

U.S. GAAP provides more guidance on the content of disclosures about contingencies than does IGAAP.

**Cities Service Company**

**Note 10: Contingent Liabilities.** The Company and certain subsidiaries have guaranteed debt obligations of approximately \$62 million of companies in which substantial stock investments are held. Also, under long-term agreements with certain pipeline companies in which stock interests are held, the Company and its subsidiaries have agreed to provide minimum revenue for product shipments. The Company has guaranteed mortgage debt (\$80 million) incurred by a 50 percent owned tanker affiliate for construction of tankers which are under long-term charter contracts to the Company and others. It is not anticipated that any loss will result from any of the above described agreements.

**ILLUSTRATION 13-16**  
Disclosure of Guarantees  
of Indebtedness

## ANALYSIS OF CURRENT LIABILITIES

The distinction between current liabilities and long-term debt is important. It provides information about the liquidity of the company. Liquidity regarding a liability is the expected time to elapse before its payment. In other words, a liability soon to be paid is a current liability. A liquid company is better able to withstand a financial downturn. Also, it has a better chance of taking advantage of investment opportunities that develop.

Analysts use certain basic ratios such as net cash flow provided by operating activities to current liabilities, and the turnover ratios for receivables and inventory, to assess liquidity. Two other ratios used to examine liquidity are the current ratio and the acid-test ratio.

### Current Ratio

The **current ratio** is the ratio of total current assets to total current liabilities. Illustration 13-17 shows its formula.

$$\text{Current ratio} = \frac{\text{Current assets}}{\text{Current liabilities}}$$

**ILLUSTRATION 13-17**  
Formula for Current Ratio

The ratio is frequently expressed as a coverage of so many times. Sometimes it is called the **working capital ratio** because working capital is the excess of current assets over current liabilities.

<sup>20</sup>As discussed earlier (footnote 15), the FASB recently issued additional disclosure and recognition requirements for guarantees. The interpretation responds to confusion about the reporting of guarantees used in certain transactions. The new rules expand existing disclosure requirements for most guarantees, including loan guarantees such as standby letters of credit. It also will result in companies recognizing more liabilities at fair value for the obligations assumed under a guarantee. [17]

A satisfactory current ratio does not disclose that a portion of the current assets may be tied up in slow-moving inventories. With inventories, especially raw materials and work in process, there is a question of how long it will take to transform them into the finished product and what ultimately will be realized in the sale of the merchandise. Eliminating the inventories, along with any prepaid expenses, from the amount of current assets might provide better information for short-term creditors. Therefore, some analysts use the acid-test ratio in place of the current ratio.

### Acid-Test Ratio

Many analysts favor an **acid-test** or **quick ratio** that relates total current liabilities to cash, marketable securities, and receivables. Illustration 13-18 shows the formula for this ratio. As you can see, the acid-test ratio does not include inventories.

**ILLUSTRATION 13-18**  
Formula for Acid-Test Ratio

$$\text{Acid-test ratio} = \frac{\text{Cash} + \text{Short-term investments} + \text{Net receivables}}{\text{Current liabilities}}$$

To illustrate the computation of these two ratios, we use the information for **Best Buy Co.** in Illustration 13-13 (on page 663). Illustration 13-19 shows the computation of the current and acid-test ratios for Best Buy.

**ILLUSTRATION 13-19**  
Computation of Current and Acid-Test Ratios for Best Buy Co.

$$\begin{aligned} \text{Current ratio} &= \frac{\text{Current assets}}{\text{Current liabilities}} = \frac{\$9,081}{\$6,301} = 1.44 \text{ times} \\ \text{Acid-test ratio} &= \frac{\text{Cash} + \text{Short-term investments} + \text{Net receivables}}{\text{Current liabilities}} = \frac{\$4,341}{\$6,301} = 0.69 \text{ times} \end{aligned}$$

From this information, it appears that Best Buy’s current position is adequate. However, the acid-test ratio is well below 1. A comparison to another retailer, **Circuit City**, whose current ratio is 1.68 and whose acid-test ratio is 0.65, indicates that Best Buy is carrying less inventory than its industry counterparts.

## SUMMARY OF LEARNING OBJECTIVES

- LO 1 Describe the nature, type, and valuation of current liabilities.** Current liabilities are obligations whose liquidation a company reasonably expects to require the use of current assets or the creation of other current liabilities. Theoretically, liabilities should be measured by the present value of the future outlay of cash required to liquidate them. In practice, companies usually record and report current liabilities at their full maturity value.  
There are several types of current liabilities, such as: (1) accounts payable, (2) notes payable, (3) current maturities of long-term debt, (4) dividends payable, (5) customer advances and deposits, (6) unearned revenues, (7) taxes payable, and (8) employee-related liabilities.
- LO 2 Explain the classification issues of short-term debt expected to be refinanced.** A short-term obligation is excluded from current liabilities if both of the following conditions are met: (1) the company must intend to refinance the obligation on a long-term basis, and (2) it must demonstrate an ability to consummate the refinancing.

**3** **Identify types of employee-related liabilities.** The employee-related liabilities are: (1) payroll deductions, (2) compensated absences, and (3) bonus agreements.

**4** **Identify the criteria used to account for and disclose gain and loss contingencies.** Gain contingencies are not recorded. Instead, they are disclosed in the notes only when the probabilities are high that a gain contingency will occur. A company should accrue an estimated loss from a loss contingency by charging expense and recording a liability only if *both* of the following conditions are met: (1) Information available prior to the issuance of the financial statements indicates that it is probable that a liability has been incurred at the date of the financial statements, and (2) the amount of the loss can be reasonably estimated.

**5** **Explain the accounting for different types of loss contingencies.** The following factors must be considered in determining whether to record a liability with respect to pending or threatened litigation and actual or possible claims and assessments: (1) the time period in which the underlying cause for action occurred; (2) the probability of an unfavorable outcome; and (3) the ability to reasonably estimate the amount of loss.

If it is probable that customers will make claims under warranties relating to goods or services that have been sold and it can reasonably estimate the costs involved, the company uses the accrual method. It charges warranty costs under the accrual basis to operating expense in the year of sale.

Premiums, coupon offers, and rebates are made to stimulate sales. Companies should charge their costs to expense in the period of the sale that benefits from the premium plan.

A company must recognize asset retirement obligations when it has an existing legal obligation related to the retirement of a long-lived asset and it can reasonably estimate the amount.

**6** **Indicate how to present and analyze liabilities and contingencies.** The current liability accounts are usually presented as the first classification in the liabilities and stockholders' equity section of the balance sheet. Within the current liabilities section, companies may list the accounts in order of maturity, in descending order of amount, or in order of liquidation preference. Detail and supplemental information concerning current liabilities should be sufficient to meet the requirement of full disclosure. If the loss is either probable or estimable but not both, and if there is at least a reasonable possibility that a company may have incurred a liability, it should disclose in the notes both the nature of the contingency and an estimate of the possible loss. Two ratios used to analyze liquidity are the current and acid-test ratios.

### Exercises

Access the FASB Codification at <http://asc.fasb.org/home> to prepare responses to the following exercises. Provide Codification references for your responses.

CE13-1 Access the glossary (“Master Glossary”) to answer the following.

- What is an asset retirement obligation?
- What is the definition of “current liabilities”?
- What does it mean if something is “reasonably possible”?
- What is a warranty?

CE13-2 What must an entity disclose about its asset retirement obligations?

CE13-3 What are three examples of estimates that are used in accounting that are not contingencies? Can you explain why they are not considered contingencies?

CE13-4 Under what conditions must an employer accrue a liability for employees’ compensation for future absences?

An additional Codification case can be found in the Using Your Judgment section, on page 687.

Be sure to check the companion website for a Review and Analysis Exercise, with solution.

## QUESTIONS

1. Distinguish between a current liability and a long-term debt.
2. Assume that your friend Will Morris, who is a music major, asks you to define and discuss the nature of a liability. Assist him by preparing a definition of a liability and by explaining to him what you believe are the elements or factors inherent in the concept of a liability.
3. Why is the liabilities section of the balance sheet of primary significance to bankers?
4. How are current liabilities related by definition to current assets? How are current liabilities related to a company's operating cycle?
5. Leon Wight, a newly hired loan analyst, is examining the current liabilities of a corporate loan applicant. He observes that unearned revenues have declined in the current year compared to the prior year. Is this a positive indicator about the client's liquidity? Explain.
6. How is present value related to the concept of a liability?
7. What is the nature of a "discount" on notes payable?
8. How should a debt callable by the creditor be reported in the debtor's financial statements?
9. Under what conditions should a short-term obligation be excluded from current liabilities?
10. What evidence is necessary to demonstrate the ability to consummate the refinancing of short-term debt?
11. Discuss the accounting treatment or disclosure that should be accorded a declared but unpaid cash dividend; an accumulated but undeclared dividend on cumulative preferred stock; a stock dividend distributable.
12. How does unearned revenue arise? Why can it be classified properly as a current liability? Give several examples of business activities that result in unearned revenues.
13. What are compensated absences?
14. Under what conditions must an employer accrue a liability for the cost of compensated absences?
15. Under what conditions is an employer required to accrue a liability for sick pay? Under what conditions is an employer permitted but not required to accrue a liability for sick pay?
16. Faith Battle operates a health food store, and she has been the only employee. Her business is growing, and she is considering hiring some additional staff to help her in the store. Explain to her the various payroll deductions that she will have to account for, including their potential impact on her financial statements, if she hires additional staff.
17. Define (a) a contingency and (b) a contingent liability.
18. Under what conditions should a contingent liability be recorded?
19. Distinguish between a current liability and a contingent liability. Give two examples of each type.
20. How are the terms "probable," "reasonably possible," and "remote" related to contingent liabilities?
21. Contrast the cash-basis method and the accrual method of accounting for warranty costs.
22. Grant Company has had a record-breaking year in terms of growth in sales and profitability. However, market research indicates that it will experience operating losses in two of its major businesses next year. The controller has proposed that the company record a provision for these future losses this year, since it can afford to take the charge and still show good results. Advise the controller on the appropriateness of this charge.
23. How does the expense warranty approach differ from the sales warranty approach?
24. Southeast Airlines Inc. awards members of its Flightline program a second ticket at half price, valid for 2 years anywhere on its flight system, when a full-price ticket is purchased. How would you account for the full-fare and half-fare tickets?
25. Pacific Airlines Co. awards members of its Frequent Fliers Club one free round-trip ticket, anywhere on its flight system, for every 50,000 miles flown on its planes. How would you account for the free ticket award?
26. When must a company recognize an asset retirement obligation?
27. Should a liability be recorded for risk of loss due to lack of insurance coverage? Discuss.
28. What factors must be considered in determining whether or not to record a liability for pending litigation? For threatened litigation?
29. Within the current liabilities section, how do you believe the accounts should be listed? Defend your position.
30. How does the acid-test ratio differ from the current ratio? How are they similar?
31. When should liabilities for each of the following items be recorded on the books of an ordinary business corporation?
  - (a) Acquisition of goods by purchase on credit.
  - (b) Officers' salaries.
  - (c) Special bonus to employees.
  - (d) Dividends.
  - (e) Purchase commitments.

## BRIEF EXERCISES

- 1** **BE13-1** Roley Corporation uses a periodic inventory system and the gross method of accounting for purchase discounts. On July 1, Roley purchased \$60,000 of inventory, terms 2/10, n/30, FOB shipping point. Roley paid freight costs of \$1,200. On July 3, Roley returned damaged goods and received credit of \$6,000. On July 10, Roley paid for the goods. Prepare all necessary journal entries for Roley.
- 1** **BE13-2** Upland Company borrowed \$40,000 on November 1, 2010, by signing a \$40,000, 9%, 3-month note. Prepare Upland's November 1, 2010, entry; the December 31, 2010, annual adjusting entry; and the February 1, 2011, entry.
- 1** **BE13-3** Takemoto Corporation borrowed \$60,000 on November 1, 2010, by signing a \$61,350, 3-month, zero-interest-bearing note. Prepare Takemoto's November 1, 2010, entry; the December 31, 2010, annual adjusting entry; and the February 1, 2011, entry.
- 1 •2** **BE13-4** At December 31, 2010, Burr Corporation owes \$500,000 on a note payable due February 15, 2011. (a) If Burr refinances the obligation by issuing a long-term note on February 14 and using the proceeds to pay off the note due February 15, how much of the \$500,000 should be reported as a current liability at December 31, 2010? (b) If Burr pays off the note on February 15, 2011, and then borrows \$1,000,000 on a long-term basis on March 1, how much of the \$500,000 should be reported as a current liability at December 31, 2010, the end of the fiscal year?
- 1** **BE13-5** Sport Pro Magazine sold 12,000 annual subscriptions on August 1, 2010, for \$18 each. Prepare Sport Pro's August 1, 2010, journal entry and the December 31, 2010, annual adjusting entry.
- 1** **BE13-6** Dillons Corporation made credit sales of \$30,000 which are subject to 6% sales tax. The corporation also made cash sales which totaled \$20,670 including the 6% sales tax. (a) Prepare the entry to record Dillons' credit sales. (b) Prepare the entry to record Dillons' cash sales.
- 3** **BE13-7** Lexington Corporation's weekly payroll of \$24,000 included F.I.C.A. taxes withheld of \$1,836, federal taxes withheld of \$2,990, state taxes withheld of \$920, and insurance premiums withheld of \$250. Prepare the journal entry to record Lexington's payroll.
- 3** **BE13-8** Kasten Inc. provides paid vacations to its employees. At December 31, 2010, 30 employees have each earned 2 weeks of vacation time. The employees' average salary is \$500 per week. Prepare Kasten's December 31, 2010, adjusting entry.
- 3** **BE13-9** Mayaguez Corporation provides its officers with bonuses based on net income. For 2010, the bonuses total \$350,000 and are paid on February 15, 2011. Prepare Mayaguez's December 31, 2010, adjusting entry and the February 15, 2011, entry.
- 4 •5** **BE13-10** Scorcese Inc. is involved in a lawsuit at December 31, 2010. (a) Prepare the December 31 entry assuming it is probable that Scorcese will be liable for \$900,000 as a result of this suit. (b) Prepare the December 31 entry, if any, assuming it is *not* probable that Scorcese will be liable for any payment as a result of this suit.
- 4 •5** **BE13-11** Buchanan Company recently was sued by a competitor for patent infringement. Attorneys have determined that it is probable that Buchanan will lose the case and that a reasonable estimate of damages to be paid by Buchanan is \$300,000. In light of this case, Buchanan is considering establishing a \$100,000 self-insurance allowance. What entry(ies), if any, should Buchanan record to recognize this loss contingency?
- 4 •5** **BE13-12** Calaf's Drillers erects and places into service an off-shore oil platform on January 1, 2011, at a cost of \$10,000,000. Calaf is legally required to dismantle and remove the platform at the end of its useful life in 10 years. Calaf estimates it will cost \$1,000,000 to dismantle and remove the platform at the end of its useful life in 10 years. (The fair value at January 1, 2011, of the dismantle and removal costs is \$450,000.) Prepare the entry to record the asset retirement obligation.
- 4 •5** **BE13-13** Strep Factory provides a 2-year warranty with one of its products which was first sold in 2010. In that year, Strep spent \$70,000 servicing warranty claims. At year-end, Strep estimates that an additional \$400,000 will be spent in the future to service warranty claims related to 2010 sales. Prepare Strep's journal entry to record the \$70,000 expenditure, and the December 31 adjusting entry.
- 4 •5** **BE13-14** Leppard Corporation sells DVD players. The corporation also offers its customers a 2-year warranty contract. During 2010, Leppard sold 20,000 warranty contracts at \$99 each. The corporation spent \$180,000 servicing warranties during 2010, and it estimates that an additional \$900,000 will be spent in

the future to service the warranties. Prepare Leppard's journal entries for (a) the sale of contracts, (b) the cost of servicing the warranties, and (c) the recognition of warranty revenue.

- 4 •5** **BE13-15** Wynn Company offers a set of building blocks to customers who send in 3 UPC codes from Wynn cereal, along with 50¢. The blocks sets cost Wynn \$1.10 each to purchase and 60¢ each to mail to customers. During 2010, Wynn sold 1,200,000 boxes of cereal. The company expects 30% of the UPC codes to be sent in. During 2010, 120,000 UPC codes were redeemed. Prepare Wynn's December 31, 2010, adjusting entry.

## EXERCISES

- 1** **E13-1 (Balance Sheet Classification of Various Liabilities)** How would each of the following items be reported on the balance sheet?

- |  |   |
|--|---|
| (a) Accrued vacation pay.  | (j) Premium offers outstanding.   |
| (b) Estimated taxes payable.   | (k) Discount on notes payable.  |
| (c) Service warranties on appliance sales.                                 | (l) Employee payroll deductions unremitted.                               |
| (d) Bank overdraft.  | (m) Current maturities of long-term debts to be paid from current assets. |
| (e) Personal injury claim pending.   | (n) Cash dividends declared but unpaid.                                   |
| (f) Unpaid bonus to officers.  | (o) Dividends in arrears on preferred stock.                              |
| (g) Deposit received from customer to guarantee performance of a contract. | (p) Loans from officers.  |
| (h) Sales taxes payable.   |   |
| (i) Gift certificates sold to customers but not yet redeemed.              |   |

- 1** **E13-2 (Accounts and Notes Payable)** The following are selected 2010 transactions of Darby Corporation.

- Sept. 1 Purchased inventory from Orion Company on account for \$50,000. Darby records purchases gross and uses a periodic inventory system.  
 Oct. 1 Issued a \$50,000, 12-month, 8% note to Orion in payment of account.  
 Oct. 1 Borrowed \$75,000 from the Shore Bank by signing a 12-month, zero-interest-bearing \$81,000 note.

### Instructions

- (a) Prepare journal entries for the selected transactions above.  
 (b) Prepare adjusting entries at December 31.  
 (c) Compute the total net liability to be reported on the December 31 balance sheet for:  
 (1) the interest-bearing note.  
 (2) the zero-interest-bearing note.

- 2** **E13-3 (Refinancing of Short-Term Debt)** On December 31, 2010, Alexander Company had \$1,200,000 of short-term debt in the form of notes payable due February 2, 2011. On January 21, 2011, the company issued 25,000 shares of its common stock for \$36 per share, receiving \$900,000 proceeds after brokerage fees and other costs of issuance. On February 2, 2011, the proceeds from the stock sale, supplemented by an additional \$300,000 cash, are used to liquidate the \$1,200,000 debt. The December 31, 2010, balance sheet is issued on February 23, 2011.

### Instructions

Show how the \$1,200,000 of short-term debt should be presented on the December 31, 2010, balance sheet, including note disclosure.

- 2** **E13-4 (Refinancing of Short-Term Debt)** On December 31, 2010, Santana Company has \$7,000,000 of short-term debt in the form of notes payable to Golden State Bank due in 2011. On January 28, 2011, Santana enters into a refinancing agreement with Golden that will permit it to borrow up to 60% of the gross amount of its accounts receivable. Receivables are expected to range between a low of \$5,000,000 in May to a high of \$8,000,000 in October during the year 2011. The interest cost of the maturing short-term debt is 15%, and the new agreement calls for a fluctuating interest rate at 1% above the prime rate on notes due in 2015. Santana's December 31, 2010, balance sheet is issued on February 15, 2011.

### Instructions

Prepare a partial balance sheet for Santana at December 31, 2010, showing how its \$7,000,000 of short-term debt should be presented, including footnote disclosure.

**E13-5 (Compensated Absences)** Matthewson Company began operations on January 2, 2010. It employs 9 individuals who work 8-hour days and are paid hourly. Each employee earns 10 paid vacation days and 6 paid sick days annually. Vacation days may be taken after January 15 of the year following the year in which they are earned. Sick days may be taken as soon as they are earned; unused sick days accumulate. Additional information is as follows.

Actual Hourly Wage Rate		Vacation Days Used by Each Employee		Sick Days Used by Each Employee	
2010	2011	2010	2011	2010	2011
\$12	\$13	0	9	4	5

Matthewson Company has chosen to accrue the cost of compensated absences at rates of pay in effect during the period when earned and to accrue sick pay when earned.

**Instructions**

- (a) Prepare journal entries to record transactions related to compensated absences during 2010 and 2011.
- (b) Compute the amounts of any liability for compensated absences that should be reported on the balance sheet at December 31, 2010 and 2011.

**E13-6 (Compensated Absences)** Assume the facts in the preceding exercise, except that Matthewson Company has chosen not to accrue paid sick leave until used, and has chosen to accrue vacation time at expected future rates of pay without discounting. The company used the following projected rates to accrue vacation time.

Year in Which Vacation Time Was Earned	Projected Future Pay Rates Used to Accrue Vacation Pay
2010	\$12.90
2011	13.70

**Instructions**

- (a) Prepare journal entries to record transactions related to compensated absences during 2010 and 2011.
- (b) Compute the amounts of any liability for compensated absences that should be reported on the balance sheet at December 31, 2010, and 2011.

**E13-7 (Adjusting Entry for Sales Tax)** During the month of June, Danielle’s Boutique had cash sales of \$265,000 and credit sales of \$153,700, both of which include the 6% sales tax that must be remitted to the state by July 15.

**Instructions**

Prepare the adjusting entry that should be recorded to fairly present the June 30 financial statements.

**E13-8 (Payroll Tax Entries)** The payroll of Delaney Company for September 2010 is as follows. Total payroll was \$480,000, of which \$140,000 is exempt from Social Security tax because it represented amounts paid in excess of \$102,000 to certain employees. The amount paid to employees in excess of \$7,000 was \$410,000. Income taxes in the amount of \$80,000 were withheld, as was \$9,000 in union dues. The state unemployment tax is 3.5%, but Delaney Company is allowed a credit of 2.3% by the state for its unemployment experience. Also, assume that the current F.I.C.A. tax is 7.65% on an employee’s wages to \$102,000 and 1.45% in excess of \$102,000. No employee for Delaney makes more than \$125,000. The federal unemployment tax rate is 0.8% after state credit.

**Instructions**

Prepare the necessary journal entries if the wages and salaries paid and the employer payroll taxes are recorded separately.

**E13-9 (Payroll Tax Entries)** Allison Hardware Company’s payroll for November 2010 is summarized below.

Payroll	Wages Due	Amount Subject to Payroll Taxes		
		F.I.C.A.	Unemployment Tax	
			Federal	State
Factory	\$140,000	\$140,000	\$40,000	\$40,000
Sales	32,000	32,000	4,000	4,000
Administrative	36,000	36,000	—	—
<b>Total</b>	<b>\$208,000</b>	<b>\$208,000</b>	<b>\$44,000</b>	<b>\$44,000</b>

At this point in the year some employees have already received wages in excess of those to which payroll taxes apply. Assume that the state unemployment tax is 2.5%. The F.I.C.A. rate is 7.65% on an employee's wages to \$102,000 and 1.45% in excess of \$102,000. Of the \$208,000 wages subject to F.I.C.A. tax, \$20,000 of the sales wages is in excess of \$102,000. Federal unemployment tax rate is 0.8% after credits. Income tax withheld amounts to \$16,000 for factory, \$7,000 for sales, and \$6,000 for administrative.

#### Instructions

- Prepare a schedule showing the employer's total cost of wages for November by function.
- Prepare the journal entries to record the factory, sales, and administrative payrolls including the employer's payroll taxes.

**•5** **E13-10 (Warranties)** Winslow Company sold 150 color laser copiers in 2010 for \$4,000 apiece, together with a one-year warranty. Maintenance on each copier during the warranty period averages \$300.

#### Instructions

- Prepare entries to record the sale of the copiers and the related warranty costs, assuming that the accrual method is used. Actual warranty costs incurred in 2010 were \$17,000.
- On the basis of the data above, prepare the appropriate entries, assuming that the cash-basis method is used.

**•5** **E13-11 (Warranties)** Selzer Equipment Company sold 500 Rollomatics during 2010 at \$6,000 each. During 2010, Selzer spent \$30,000 servicing the 2-year warranties that accompany the Rollomatic. All applicable transactions are on a cash basis.

#### Instructions

- Prepare 2010 entries for Selzer using the expense warranty approach. Assume that Selzer estimates the total cost of servicing the warranties will be \$120,000 for 2 years.
- Prepare 2010 entries for Selzer assuming that the warranties are not an integral part of the sale. Assume that of the sales total, \$160,000 relates to sales of warranty contracts. Selzer estimates the total cost of servicing the warranties will be \$120,000 for 2 years. Estimate revenues earned on the basis of costs incurred and estimated costs.

**•5** **E13-12 (Premium Entries)** Moleski Company includes 1 coupon in each box of soap powder that it packs, and 10 coupons are redeemable for a premium (a kitchen utensil). In 2010, Moleski Company purchased 8,800 premiums at 90 cents each and sold 120,000 boxes of soap powder at \$3.30 per box; 44,000 coupons were presented for redemption in 2010. It is estimated that 60% of the coupons will eventually be presented for redemption.

#### Instructions

Prepare all the entries that would be made relative to sales of soap powder and to the premium plan in 2010.

**•4 •5** **E13-13 (Contingencies)** Presented below are three independent situations. Answer the question at the end of each situation.

- During 2010, Maverick Inc. became involved in a tax dispute with the IRS. Maverick's attorneys have indicated that they believe it is probable that Maverick will lose this dispute. They also believe that Maverick will have to pay the IRS between \$800,000 and \$1,400,000. After the 2010 financial statements were issued, the case was settled with the IRS for \$1,200,000. What amount, if any, should be reported as a liability for this contingency as of December 31, 2010?
- On October 1, 2010, Holmgren Chemical was identified as a potentially responsible party by the Environmental Protection Agency. Holmgren's management along with its counsel have concluded that it is probable that Holmgren will be responsible for damages, and a reasonable estimate of these damages is \$6,000,000. Holmgren's insurance policy of \$9,000,000 has a deductible clause of \$500,000. How should Holmgren Chemical report this information in its financial statements at December 31, 2010?
- Shinobi Inc. had a manufacturing plant in Darfur, which was destroyed in the civil war. It is not certain who will compensate Shinobi for this destruction, but Shinobi has been assured by governmental officials that it will receive a definite amount for this plant. The amount of the compensation will be less than the fair value of the plant, but more than its book value. How should the contingency be reported in the financial statements of Shinobi Inc.?

- 5** **E13-14 (Asset Retirement Obligation)** Bassinger Company purchases an oil tanker depot on January 1, 2010, at a cost of \$600,000. Bassinger expects to operate the depot for 10 years, at which time it is legally required to dismantle the depot and remove the underground storage tanks. It is estimated that it will cost \$70,000 to dismantle the depot and remove the tanks at the end of the depot's useful life.

#### Instructions

- Prepare the journal entries to record the depot and the asset retirement obligation for the depot on January 1, 2010. Based on an effective interest rate of 6%, the fair value of the asset retirement obligation on January 1, 2010, is \$39,087.
- Prepare any journal entries required for the depot and the asset retirement obligation at December 31, 2010. Bassinger uses straight-line depreciation; the estimated residual value for the depot is zero.
- On December 31, 2019, Bassinger pays a demolition firm to dismantle the depot and remove the tanks at a price of \$80,000. Prepare the journal entry for the settlement of the asset retirement obligation.

- 5** **E13-15 (Premiums)** Presented below are three independent situations.

- Marquart Stamp Company records stamp service revenue and provides for the cost of redemptions in the year stamps are sold to licensees. Marquart's past experience indicates that only 80% of the stamps sold to licensees will be redeemed. Marquart's liability for stamp redemptions was \$13,000,000 at December 31, 2009. Additional information for 2010 is as follows.

Stamp service revenue from stamps sold to licensees	\$9,500,000
Cost of redemptions (stamps sold prior to 1/1/10)	6,000,000

If all the stamps sold in 2010 were presented for redemption in 2011, the redemption cost would be \$5,200,000. What amount should Marquart report as a liability for stamp redemptions at December 31, 2010?

- In packages of its products, Wiseman Inc. includes coupons that may be presented at retail stores to obtain discounts on other Wiseman products. Retailers are reimbursed for the face amount of coupons redeemed plus 10% of that amount for handling costs. Wiseman honors requests for coupon redemption by retailers up to 3 months after the consumer expiration date. Wiseman estimates that 60% of all coupons issued will ultimately be redeemed. Information relating to coupons issued by Wiseman during 2010 is as follows.

Consumer expiration date	12/31/10
Total face amount of coupons issued	\$850,000
Total payments to retailers as of 12/31/10	330,000

What amount should Wiseman report as a liability for unredeemed coupons at December 31, 2010?

- Newell Company sold 600,000 boxes of pie mix under a new sales promotional program. Each box contains one coupon, which submitted with \$4.00, entitles the customer to a baking pan. Newell pays \$6.00 per pan and \$0.50 for handling and shipping. Newell estimates that 70% of the coupons will be redeemed, even though only 250,000 coupons had been processed during 2010. What amount should Newell report as a liability for unredeemed coupons at December 31, 2010?

(AICPA adapted)

- 6** **E13-16 (Financial Statement Impact of Liability Transactions)** Presented below is a list of possible transactions.

- Purchased inventory for \$80,000 on account (assume perpetual system is used).
- Issued an \$80,000 note payable in payment on account (see item 1 above).
- Recorded accrued interest on the note from item 2 above.
- Borrowed \$100,000 from the bank by signing a 6-month, \$112,000, zero-interest-bearing note.
- Recognized 4 months' interest expense on the note from item 4 above.
- Recorded cash sales of \$75,260, which includes 6% sales tax.
- Recorded wage expense of \$35,000. The cash paid was \$25,000; the difference was due to various amounts withheld.
- Recorded employer's payroll taxes.
- Accrued accumulated vacation pay.
- Recorded an asset retirement obligation.
- Recorded bonuses due to employees.
- Recorded sales of product and related warranties (assume sales warranty approach).

13. Accrued warranty expense (assume expense warranty approach).
14. Paid warranty costs that were accrued in item 13 above.
15. Recorded a contingent loss on a lawsuit that the company will probably lose.
16. Paid warranty costs under contracts from item 12.
17. Recognized warranty revenue (see item 12).
18. Recorded estimated liability for premium claims outstanding.

### Instructions

Set up a table using the format shown below and analyze the effect of the 18 transactions on the financial statement categories indicated.

#	Assets	Liabilities	Owners' Equity	Net Income
1				

Use the following code:

I: Increase      D: Decrease      NE: No net effect

- 6** E13-17 (Ratio Computations and Discussion) Costner Company has been operating for several years, and on December 31, 2010, presented the following balance sheet.

COSTNER COMPANY BALANCE SHEET DECEMBER 31, 2010			
Cash	\$ 40,000	Accounts payable	\$ 70,000
Receivables	75,000	Mortgage payable	140,000
Inventories	95,000	Common stock (\$1 par)	160,000
Plant assets (net)	<u>220,000</u>	Retained earnings	<u>60,000</u>
	<u>\$430,000</u>		<u>\$430,000</u>

The net income for 2010 was \$25,000. Assume that total assets are the same in 2009 and 2010.

### Instructions

Compute each of the following ratios. For each of the four indicate the manner in which it is computed and its significance as a tool in the analysis of the financial soundness of the company.

- (a) Current ratio.
- (b) Acid-test ratio.
- (c) Debt to total assets.
- (d) Rate of return on assets.

- 6** E13-18 (Ratio Computations and Analysis) Vogue Company's condensed financial statements provide the following information.

VOGUE COMPANY BALANCE SHEET		
	Dec. 31, 2010	Dec. 31, 2009
Cash	\$ 52,000	\$ 60,000
Accounts receivable (net)	158,000	80,000
Short-term investments	80,000	40,000
Inventories	440,000	360,000
Prepaid expenses	<u>3,000</u>	<u>7,000</u>
Total current assets	\$ 733,000	\$ 547,000
Property, plant, and equipment (net)	<u>897,000</u>	<u>853,000</u>
Total assets	<u>\$1,630,000</u>	<u>\$1,400,000</u>
Current liabilities	240,000	160,000
Bonds payable	400,000	400,000
Common stockholders' equity	<u>990,000</u>	<u>840,000</u>
Total liabilities and stockholders' equity	<u>\$1,630,000</u>	<u>\$1,400,000</u>

<b>INCOME STATEMENT</b>	
<b>FOR THE YEAR ENDED 2010</b>	
Sales	\$1,640,000
Cost of goods sold	<u>(800,000)</u>
Gross profit	840,000
Selling and administrative expense	(480,000)
Interest expense	<u>(40,000)</u>
Net income	<u>\$ 320,000</u>

**Instructions**

- (a) Determine the following for 2010.
- (1) Current ratio at December 31.
  - (2) Acid-test ratio at December 31.
  - (3) Accounts receivable turnover.
  - (4) Inventory turnover.
  - (5) Rate of return on assets.
  - (6) Profit margin on sales.
- (b) Prepare a brief evaluation of the financial condition of Vogue Company and of the adequacy of its profits.

**E13-19 (Ratio Computations and Effect of Transactions)** Presented below is information related to Leland Inc.

<b>LELAND INC.</b>				
<b>BALANCE SHEET</b>				
<b>DECEMBER 31, 2010</b>				
Cash		\$ 45,000	Notes payable (short-term)	\$ 50,000
Receivables	\$110,000		Accounts payable	32,000
Less: Allowance	<u>15,000</u>	95,000	Accrued liabilities	5,000
Inventories		170,000	Capital stock (par \$5)	260,000
Prepaid insurance		8,000	Retained earnings	141,000
Land		20,000		
Equipment (net)		<u>150,000</u>		
		<u>\$488,000</u>		<u>\$488,000</u>

<b>LELAND INC.</b>		
<b>INCOME STATEMENT</b>		
<b>FOR THE YEAR ENDED DECEMBER 31, 2010</b>		
Sales		\$1,400,000
Cost of goods sold		
Inventory, Jan. 1, 2010	\$200,000	
Purchases	<u>790,000</u>	
Cost of goods available for sale	990,000	
Inventory, Dec. 31, 2010	<u>(170,000)</u>	
Cost of goods sold		<u>820,000</u>
Gross profit on sales		580,000
Operating expenses		<u>370,000</u>
Net income		<u>\$ 210,000</u>

**Instructions**

- (a) Compute the following ratios or relationships of Leland Inc. Assume that the ending account balances are representative unless the information provided indicates differently.
- (1) Current ratio.
  - (2) Inventory turnover.
  - (3) Receivables turnover.

- (4) Earnings per share.
  - (5) Profit margin on sales.
  - (6) Rate of return on assets on December 31, 2010.
- (b) Indicate for each of the following transactions whether the transaction would improve, weaken, or have no effect on the current ratio of Leland Inc. at December 31, 2010.
- (1) Write off an uncollectible account receivable, \$2,200.
  - (2) Repurchase capital stock for cash.
  - (3) Pay \$40,000 on notes payable (short-term).
  - (4) Collect \$23,000 on accounts receivable.
  - (5) Buy equipment on account.
  - (6) Give an existing creditor a short-term note in settlement of account.

See the book's companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), for a set of B Exercises.

## PROBLEMS

•1

**P13-1 (Current Liability Entries and Adjustments)** Described below are certain transactions of Edwardson Corporation. The company uses the periodic inventory system.

1. On February 2, the corporation purchased goods from Martin Company for \$70,000 subject to cash discount terms of 2/10, n/30. Purchases and accounts payable are recorded by the corporation at net amounts after cash discounts. The invoice was paid on February 26.
2. On April 1, the corporation bought a truck for \$50,000 from General Motors Company, paying \$4,000 in cash and signing a one-year, 12% note for the balance of the purchase price.
3. On May 1, the corporation borrowed \$83,000 from Chicago National Bank by signing a \$92,000 zero-interest-bearing note due one year from May 1.
4. On August 1, the board of directors declared a \$300,000 cash dividend that was payable on September 10 to stockholders of record on August 31.

### Instructions

- (a) Make all the journal entries necessary to record the transactions above using appropriate dates.
- (b) Edwardson Corporation's year-end is December 31. Assuming that no adjusting entries relative to the transactions above have been recorded, prepare any adjusting journal entries concerning interest that are necessary to present fair financial statements at December 31. Assume straight-line amortization of discounts.

•1 •5

**P13-2 (Liability Entries and Adjustments)** Listed below are selected transactions of Schultz Department Store for the current year ending December 31.

1. On December 5, the store received \$500 from the Jackson Players as a deposit to be returned after certain furniture to be used in stage production was returned on January 15.
2. During December, cash sales totaled \$798,000, which includes the 5% sales tax that must be remitted to the state by the fifteenth day of the following month.
3. On December 10, the store purchased for cash three delivery trucks for \$120,000. The trucks were purchased in a state that applies a 5% sales tax.
4. The store determined it will cost \$100,000 to restore the area surrounding one of its store parking lots, when the store is closed in 2 years. Schultz estimates the fair value of the obligation at December 31 is \$84,000.

### Instructions

Prepare all the journal entries necessary to record the transactions noted above as they occurred and any adjusting journal entries relative to the transactions that would be required to present fair financial statements at December 31. Date each entry. For simplicity, assume that adjusting entries are recorded only once a year on December 31.

**P13-3 (Payroll Tax Entries)** Cedarville Company pays its office employee payroll weekly. Below is a partial list of employees and their payroll data for August. Because August is their vacation period, vacation pay is also listed.

Employee	Earnings to July 31	Weekly Pay	Vacation Pay to Be Received in August
Mark Hamill	\$4,200	\$200	—
Karen Robbins	3,500	150	\$300
Brent Kirk	2,700	110	220
Alec Guinness	7,400	250	—
Ken Sprouse	8,000	330	660

Assume that the federal income tax withheld is 10% of wages. Union dues withheld are 2% of wages. Vacations are taken the second and third weeks of August by Robbins, Kirk, and Sprouse. The state unemployment tax rate is 2.5% and the federal is 0.8%, both on a \$7,000 maximum. The F.I.C.A. rate is 7.65% on employee and employer on a maximum of \$102,000 per employee. In addition, a 1.45% rate is charged both employer and employee for an employee’s wages in excess of \$102,000.

**Instructions**

Make the journal entries necessary for each of the four August payrolls. The entries for the payroll and for the company’s liability are made separately. Also make the entry to record the monthly payment of accrued payroll liabilities.

**P13-4 (Payroll Tax Entries)** Below is a payroll sheet for Otis Import Company for the month of September 2010. The company is allowed a 1% unemployment compensation rate by the state; the federal unemployment tax rate is 0.8% and the maximum for both is \$7,000. Assume a 10% federal income tax rate for all employees and a 7.65% F.I.C.A. tax on employee and employer on a maximum of \$102,000. In addition, 1.45% is charged both employer and employee for an employee’s wages in excess of \$102,000 per employee.

Name	Earnings to Aug. 31	September Earnings	Income Tax Withholding	F.I.C.A.	State U.C.	Federal U.C.
B.D. Williams	\$ 6,800	\$ 800				
D. Raye	6,500	700				
K. Baker	7,600	1,100				
F. Lopez	13,600	1,900				
A. Daniels	105,000	13,000				
B. Kingston	112,000	16,000				

**Instructions**

- (a) Complete the payroll sheet and make the necessary entry to record the payment of the payroll.
- (b) Make the entry to record the payroll tax expenses of Otis Import Company.
- (c) Make the entry to record the payment of the payroll liabilities created. Assume that the company pays all payroll liabilities at the end of each month.

**P13-5 (Warranties, Accrual, and Cash Basis)** Brooks Corporation sells computers under a 2-year warranty contract that requires the corporation to replace defective parts and to provide the necessary repair labor. During 2010 the corporation sells for cash 400 computers at a unit price of \$2,500. On the basis of past experience, the 2-year warranty costs are estimated to be \$155 for parts and \$185 for labor per unit. (For simplicity, assume that all sales occurred on December 31, 2010.) The warranty is not sold separately from the computer.

**Instructions**

- (a) Record any necessary journal entries in 2010, applying the cash-basis method.
- (b) Record any necessary journal entries in 2010, applying the expense warranty accrual method.
- (c) What liability relative to these transactions would appear on the December 31, 2010, balance sheet and how would it be classified if the cash-basis method is applied?
- (d) What liability relative to these transactions would appear on the December 31, 2010, balance sheet and how would it be classified if the expense warranty accrual method is applied?

In 2011 the actual warranty costs to Brooks Corporation were \$21,400 for parts and \$39,900 for labor.

- (e) Record any necessary journal entries in 2011, applying the cash-basis method.
- (f) Record any necessary journal entries in 2011, applying the expense warranty accrual method.

- 5** **P13-6 (Extended Warranties)** Dos Passos Company sells televisions at an average price of \$900 and also offers to each customer a separate 3-year warranty contract for \$90 that requires the company to perform periodic services and to replace defective parts. During 2010, the company sold 300 televisions and 270 warranty contracts for cash. It estimates the 3-year warranty costs as \$20 for parts and \$40 for labor and accounts for warranties separately. Assume sales occurred on December 31, 2010, income is recognized on the warranties, and straight-line recognition of warranty revenues occurs.

#### Instructions

- Record any necessary journal entries in 2010.
- What liability relative to these transactions would appear on the December 31, 2010, balance sheet and how would it be classified?

In 2011, Dos Passos Company incurred actual costs relative to 2010 television warranty sales of \$2,000 for parts and \$4,000 for labor.

- Record any necessary journal entries in 2011 relative to 2010 television warranties.
- What amounts relative to the 2010 television warranties would appear on the December 31, 2011, balance sheet and how would they be classified?

- 4 •5** **P13-7 (Warranties, Accrual, and Cash Basis)** Alvarado Company sells a machine for \$7,400 under a 12-month warranty agreement that requires the company to replace all defective parts and to provide the repair labor at no cost to the customers. With sales being made evenly throughout the year, the company sells 600 machines in 2010 (warranty expense is incurred half in 2010 and half in 2011). As a result of product testing, the company estimates that the warranty cost is \$390 per machine (\$170 parts and \$220 labor).

#### Instructions

Assuming that actual warranty costs are incurred exactly as estimated, what journal entries would be made relative to the following facts?

- Under application of the expense warranty accrual method for:
  - Sale of machinery in 2010.
  - Warranty costs incurred in 2010.
  - Warranty expense charged against 2010 revenues.
  - Warranty costs incurred in 2011.
- Under application of the cash-basis method for:
  - Sale of machinery in 2010.
  - Warranty costs incurred in 2010.
  - Warranty expense charged against 2010 revenues.
  - Warranty costs incurred in 2011.
- What amount, if any, is disclosed in the balance sheet as a liability for future warranty costs as of December 31, 2010, under each method?
- Which method best reflects the income in 2010 and 2011 of Alvarado Company? Why?

- 5** **P13-8 (Premium Entries)** To stimulate the sales of its Alladin breakfast cereal, Loptien Company places 1 coupon in each box. Five coupons are redeemable for a premium consisting of a children's hand puppet. In 2011, the company purchases 40,000 puppets at \$1.50 each and sells 480,000 boxes of Alladin at \$3.75 a box. From its experience with other similar premium offers, the company estimates that 40% of the coupons issued will be mailed back for redemption. During 2011, 115,000 coupons are presented for redemption.

#### Instructions

Prepare the journal entries that should be recorded in 2011 relative to the premium plan.

- 5 •6** **P13-9 (Premium Entries and Financial Statement Presentation)** Sycamore Candy Company offers a CD single as a premium for every five candy bar wrappers presented by customers together with \$2.50. The candy bars are sold by the company to distributors for 30 cents each. The purchase price of each CD to the company is \$2.25; in addition it costs 50 cents to mail each CD. The results of the premium plan for the years 2010 and 2011 are as follows. (All purchases and sales are for cash.)

	2010	2011
CDs purchased	250,000	330,000
Candy bars sold	2,895,400	2,743,600
Wrappers redeemed	1,200,000	1,500,000
2010 wrappers expected to be redeemed in 2011	290,000	
2011 wrappers expected to be redeemed in 2012		350,000

**Instructions**

- (a) Prepare the journal entries that should be made in 2010 and 2011 to record the transactions related to the premium plan of the Sycamore Candy Company.
- (b) Indicate the account names, amounts, and classifications of the items related to the premium plan that would appear on the balance sheet and the income statement at the end of 2010 and 2011.

**4 5**

**P13-10 (Loss Contingencies: Entries and Essay)** On November 24, 2010, 26 passengers on Windsor Airlines Flight No. 901 were injured upon landing when the plane skidded off the runway. Personal injury suits for damages totaling \$9,000,000 were filed on January 11, 2011, against the airline by 18 injured passengers. The airline carries no insurance. Legal counsel has studied each suit and advised Windsor that it can reasonably expect to pay 60% of the damages claimed. The financial statements for the year ended December 31, 2010, were issued February 27, 2011.

**Instructions**

- (a) Prepare any disclosures and journal entries required by the airline in preparation of the December 31, 2010, financial statements.
- (b) Ignoring the Nov. 24, 2010, accident, what liability due to the risk of loss from lack of insurance coverage should Windsor Airlines record or disclose? During the past decade the company has experienced at least one accident per year and incurred average damages of \$3,200,000. Discuss fully.

**4 5**

**P13-11 (Loss Contingencies: Entries and Essays)** Polska Corporation, in preparation of its December 31, 2010, financial statements, is attempting to determine the proper accounting treatment for each of the following situations.

1. As a result of uninsured accidents during the year, personal injury suits for \$350,000 and \$60,000 have been filed against the company. It is the judgment of Polska’s legal counsel that an unfavorable outcome is unlikely in the \$60,000 case but that an unfavorable verdict approximating \$250,000 will probably result in the \$350,000 case.
2. Polska Corporation owns a subsidiary in a foreign country that has a book value of \$5,725,000 and an estimated fair value of \$9,500,000. The foreign government has communicated to Polska its intention to expropriate the assets and business of all foreign investors. On the basis of settlements other firms have received from this same country, Polska expects to receive 40% of the fair value of its properties as final settlement.
3. Polska’s chemical product division consisting of five plants is uninsurable because of the special risk of injury to employees and losses due to fire and explosion. The year 2010 is considered one of the safest (luckiest) in the division’s history because no loss due to injury or casualty was suffered. Having suffered an average of three casualties a year during the rest of the past decade (ranging from \$60,000 to \$700,000), management is certain that next year the company will probably not be so fortunate.

**Instructions**

- (a) Prepare the journal entries that should be recorded as of December 31, 2010, to recognize each of the situations above.
- (b) Indicate what should be reported relative to each situation in the financial statements and accompanying notes. Explain why.

**5**

**P13-12 (Warranties and Premiums)** Garison Music Emporium carries a wide variety of musical instruments, sound reproduction equipment, recorded music, and sheet music. Garison uses two sales promotion techniques—warranties and premiums—to attract customers.

Musical instruments and sound equipment are sold with a one-year warranty for replacement of parts and labor. The estimated warranty cost, based on past experience, is 2% of sales.

The premium is offered on the recorded and sheet music. Customers receive a coupon for each dollar spent on recorded music or sheet music. Customers may exchange 200 coupons and \$20 for a CD player. Garison pays \$32 for each CD player and estimates that 60% of the coupons given to customers will be redeemed.

Garison’s total sales for 2010 were \$7,200,000—\$5,700,000 from musical instruments and sound reproduction equipment and \$1,500,000 from recorded music and sheet music. Replacement parts and labor for warranty work totaled \$164,000 during 2010. A total of 6,500 CD players used in the premium program were purchased during the year and there were 1,200,000 coupons redeemed in 2010.

The accrual method is used by Garison to account for the warranty and premium costs for financial reporting purposes. The balances in the accounts related to warranties and premiums on January 1, 2010, were as shown below.

Inventory of Premium CD Players	\$37,600
Estimated Premium Claims Outstanding	44,800
Estimated Liability from Warranties	136,000

**Instructions**

Garison Music Emporium is preparing its financial statements for the year ended December 31, 2010. Determine the amounts that will be shown on the 2010 financial statements for the following.

- (1) Warranty Expense.
- (2) Estimated Liability from Warranties.
- (3) Premium Expense.
- (4) Inventory of Premium CD Players.
- (5) Estimated Premium Claims Outstanding.

(CMA adapted)

**P13-13 (Liability Errors)** You are the independent auditor engaged to audit Millay Corporation’s December 31, 2010, financial statements. Millay manufactures household appliances. During the course of your audit, you discovered the following contingent liabilities.

1. Millay began production of a new dishwasher in June 2010 and, by December 31, 2010, sold 120,000 to various retailers for \$500 each. Each dishwasher is under a one-year warranty. The company estimates that its warranty expense per dishwasher will amount to \$25. At year-end, the company had already paid out \$1,000,000 in warranty expenses. Millay’s income statement shows warranty expenses of \$1,000,000 for 2010. Millay accounts for warranty costs on the accrual basis.
2. In response to your attorney’s letter, Morgan Sondgeroth, Esq., has informed you that Millay has been cited for dumping toxic waste into the Kishwaukee River. Clean-up costs and fines amount to \$2,750,000. Although the case is still being contested, Sondgeroth is certain that Millay will most probably have to pay the fine and clean-up costs. No disclosure of this situation was found in the financial statements.
3. Millay is the defendant in a patent infringement lawsuit by Megan Drabek over Millay’s use of a hydraulic compressor in several of its products. Sondgeroth claims that, if the suit goes against Millay, the loss may be as much as \$5,000,000; however, Sondgeroth believes the loss of this suit to be only reasonably possible. Again, no mention of this suit is made in the financial statements.

As presented, these contingencies are not reported in accordance with GAAP, which may create problems in issuing a favorable audit report. You feel the need to note these problems in the work papers.

**Instructions**

Heading each page with the name of the company, balance sheet date, and a brief description of the problem, write a brief narrative for each of the above issues in the form of a **memorandum** to be incorporated in the audit work papers. Explain what led to the discovery of each problem, what the problem really is, and what you advised your client to do (along with any appropriate journal entries) in order to bring these contingencies in accordance with GAAP.

**P13-14 (Warranty and Coupon Computation)** Schmitt Company must make computations and adjusting entries for the following independent situations at December 31, 2011.

1. Its line of amplifiers carries a 3-year warranty against defects. On the basis of past experience the estimated warranty costs related to dollar sales are: first year after sale—2% of sales; second year after sale—3% of sales; and third year after sale—5% of sales. Sales and actual warranty expenditures for the first 3 years of business were:

	Sales	Warranty Expenditures
2009	\$ 800,000	\$ 6,500
2010	1,100,000	17,200
2011	1,200,000	62,000

**Instructions**

Compute the amount that Schmitt Company should report as a liability in its December 31, 2011, balance sheet. Assume that all sales are made evenly throughout each year with warranty expenses also evenly spaced relative to the rates above.

2. With some of its products, Schmitt Company includes coupons that are redeemable in merchandise. The coupons have no expiration date and, in the company’s experience, 40% of them are redeemed. The liability for unredeemed coupons at December 31, 2010, was \$9,000. During 2011, coupons worth \$30,000 were issued, and merchandise worth \$8,000 was distributed in exchange for coupons redeemed.

**Instructions**

Compute the amount of the liability that should appear on the December 31, 2011, balance sheet.

(AICPA adapted)

## CONCEPTS FOR ANALYSIS

**CA13-1 (Nature of Liabilities)** Presented below is the current liabilities section of Micro Corporation.

	(\$000)	
	2011	2010
Current Liabilities		
Notes payable	\$ 68,713	\$ 7,700
Accounts payable	179,496	101,379
Compensation to employees	60,312	31,649
Accrued liabilities	158,198	77,621
Income taxes payable	10,486	26,491
Current maturities of long-term debt	16,592	6,649
Total current liabilities	\$493,797	\$251,489

### Instructions

Answer the following questions.

- (a) What are the essential characteristics that make an item a liability?
- (b) How does one distinguish between a current liability and a long-term liability?
- (c) What are accrued liabilities? Give three examples of accrued liabilities that Micro might have.
- (d) What is the theoretically correct way to value liabilities? How are current liabilities usually valued?
- (e) Why are notes payable reported first in the current liabilities section?
- (f) What might be the items that comprise Micro's liability for "Compensation to employees"?

**CA13-2 (Current versus Noncurrent Classification)** Rodriguez Corporation includes the following items in its liabilities at December 31, 2010.

1. Notes payable, \$25,000,000, due June 30, 2011.
2. Deposits from customers on equipment ordered by them from Rodriguez, \$6,250,000.
3. Salaries payable, \$3,750,000, due January 14, 2011.

### Instructions

Indicate in what circumstances, if any, each of the three liabilities above would be excluded from current liabilities.

 **CA13-3 (Refinancing of Short-Term Debt)** Dumars Corporation reports in the current liability section of its balance sheet at December 31, 2010 (its year-end), short-term obligations of \$15,000,000, which includes the current portion of 12% long-term debt in the amount of \$10,000,000 (matures in March 2011). Management has stated its intention to refinance the 12% debt whereby no portion of it will mature during 2011. The date of issuance of the financial statements is March 25, 2011.

### Instructions

- (a) Is management's intent enough to support long-term classification of the obligation in this situation?
- (b) Assume that Dumars Corporation issues \$13,000,000 of 10-year debentures to the public in January 2011 and that management intends to use the proceeds to liquidate the \$10,000,000 debt maturing in March 2011. Furthermore, assume that the debt maturing in March 2011 is paid from these proceeds prior to the issuance of the financial statements. Will this have any impact on the balance sheet classification at December 31, 2010? Explain your answer.
- (c) Assume that Dumars Corporation issues common stock to the public in January and that management intends to entirely liquidate the \$10,000,000 debt maturing in March 2011 with the proceeds of this equity securities issue. In light of these events, should the \$10,000,000 debt maturing in March 2011 be included in current liabilities at December 31, 2010?
- (d) Assume that Dumars Corporation, on February 15, 2011, entered into a financing agreement with a commercial bank that permits Dumars Corporation to borrow at any time through 2012 up to \$15,000,000 at the bank's prime rate of interest. Borrowings under the financing agreement mature three years after the date of the loan. The agreement is not cancelable except for violation of a provision with which compliance is objectively determinable. No violation of any provision exists at the date of issuance of the financial statements. Assume further that the current portion of long-term debt does not mature until August 2011. In addition, management intends to refinance

the \$10,000,000 obligation under the terms of the financial agreement with the bank, which is expected to be financially capable of honoring the agreement.

- (1) Given these facts, should the \$10,000,000 be classified as current on the balance sheet at December 31, 2010?
- (2) Is disclosure of the refinancing method required?

**CA13-4 (Refinancing of Short-Term Debt)** Andretti Inc. issued \$10,000,000 of short-term commercial paper during the year 2010 to finance construction of a plant. At December 31, 2010, the corporation's year-end, Andretti intends to refinance the commercial paper by issuing long-term debt. However, because the corporation temporarily has excess cash, in January 2011 it liquidates \$3,000,000 of the commercial paper as the paper matures. In February 2011, Andretti completes an \$18,000,000 long-term debt offering. Later during the month of February, it issues its December 31, 2010, financial statements. The proceeds of the long-term debt offering are to be used to replenish \$3,000,000 in working capital, to pay \$7,000,000 of commercial paper as it matures in March 2011, and to pay \$8,000,000 of construction costs expected to be incurred later that year to complete the plant.

#### Instructions

- (a) How should the \$10,000,000 of commercial paper be classified on the December 31, 2010, January 31, 2011, and February 28, 2011, balance sheets? Give support for your answer and also consider the cash element.
- (b) What would your answer be if, instead of a refinancing at the date of issuance of the financial statements, a financing agreement existed at that date?

**CA13-5 (Loss Contingencies)** On February 1, 2011, one of the huge storage tanks of Viking Manufacturing Company exploded. Windows in houses and other buildings within a one-mile radius of the explosion were severely damaged, and a number of people were injured. As of February 15, 2011 (when the December 31, 2010, financial statements were completed and sent to the publisher for printing and public distribution), no suits had been filed or claims asserted against the company as a consequence of the explosion. The company fully anticipates that suits will be filed and claims asserted for injuries and damages. Because the casualty was uninsured and the company considered at fault, Viking Manufacturing will have to cover the damages from its own resources.

#### Instructions

Discuss fully the accounting treatment and disclosures that should be accorded the casualty and related contingent losses in the financial statements dated December 31, 2010.

**CA13-6 (Loss Contingency)** Presented below is a note disclosure for Matsui Corporation.

**Litigation and Environmental:** The Company has been notified, or is a named or a potentially responsible party in a number of governmental (federal, state and local) and private actions associated with environmental matters, such as those relating to hazardous wastes, including certain sites which are on the United States EPA National Priorities List ("Superfund"). These actions seek clean-up costs, penalties and/or damages for personal injury or to property or natural resources.

In 2010, the Company recorded a pre-tax charge of \$56,229,000, included in the "Other expense (income)—net" caption of the Company's consolidated income statements, as an additional provision for environmental matters. These expenditures are expected to take place over the next several years and are indicative of the Company's commitment to improve and maintain the environment in which it operates. At December 31, 2010, environmental accruals amounted to \$69,931,000, of which \$61,535,000 are considered noncurrent and are included in the "Deferred credits and other liabilities" caption of the Company's consolidated balance sheets.

While it is impossible at this time to determine with certainty the ultimate outcome of environmental matters, it is management's opinion, based in part on the advice of independent counsel (after taking into account accruals and insurance coverage applicable to such actions) that when the costs are finally determined they will not have a material adverse effect on the financial position of the Company.

#### Instructions

Answer the following questions.

- (a) What conditions must exist before a loss contingency can be recorded in the accounts?
- (b) Suppose that Matsui Corporation could not reasonably estimate the amount of the loss, although it could establish with a high degree of probability the minimum and maximum loss possible. How should this information be reported in the financial statements?
- (c) If the amount of the loss is uncertain, how would the loss contingency be reported in the financial statements?

**CA13-7 (Warranties and Loss Contingencies)** The following two independent situations involve loss contingencies.

**Part 1**

Benson Company sells two products, Grey and Yellow. Each carries a one-year warranty.

1. Product Grey—Product warranty costs, based on past experience, will normally be 1% of sales.
2. Product Yellow—Product warranty costs cannot be reasonably estimated because this is a new product line. However, the chief engineer believes that product warranty costs are likely to be incurred.

**Instructions**

How should Benson report the estimated product warranty costs for each of the two types of merchandise above? Discuss the rationale for your answer. Do not discuss disclosures that should be made in Benson's financial statements or notes.

**Part 2**

Constantine Company is being sued for \$4,000,000 for an injury caused to a child as a result of alleged negligence while the child was visiting the Constantine Company plant in March 2010. The suit was filed in July 2010. Constantine's lawyer states that it is probable that Constantine will lose the suit and be found liable for a judgment costing anywhere from \$400,000 to \$2,000,000. However, the lawyer states that the most probable judgment is \$1,000,000.

**Instructions**

How should Constantine report the suit in its 2010 financial statements? Discuss the rationale for your answer. Include in your answer disclosures, if any, that should be made in Constantine's financial statements or notes.

(AICPA adapted)

**CA13-8 (Warranties)** The Dotson Company, owner of Bleacher Mall, charges Rich Clothing Store a rental fee of \$600 per month plus 5% of yearly profits over \$500,000. Matt Rich, the owner of the store, directs his accountant, Ron Hamilton, to increase the estimate of bad debt expense and warranty costs in order to keep profits at \$475,000.

**Instructions**

Answer the following questions.

- (a) Should Hamilton follow his boss's directive?
- (b) Who is harmed if the estimates are increased?
- (c) Is Matt Rich's directive ethical?

## USING YOUR JUDGMENT

### FINANCIAL REPORTING

#### Financial Reporting Problem

#### The Procter & Gamble Company (P&G)

The financial statements of P&G are presented in Appendix 5B or can be accessed at the book's companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso).

**Instructions**

Refer to these financial statements and the accompanying notes to answer the following questions.

- (a) What was P&G's 2007 short-term debt and related weighted-average interest rate on this debt?
- (b) What was P&G's 2007 working capital, acid-test ratio, and current ratio? Comment on P&G's liquidity.
- (c) What types of commitments and contingencies has P&G's reported in its financial statements? What is management's reaction to these contingencies?

## Comparative Analysis Case

### The Coca-Cola Company and PepsiCo, Inc.

#### Instructions

Go to the book's companion website and use information found there to answer the following questions related to **The Coca-Cola Company** and **PepsiCo, Inc.**

- How much working capital do each of these companies have at the end of 2007?
- Compute both company's (a) current cash debt coverage ratio, (b) cash debt coverage ratio, (c) current ratio, (d) acid-test ratio, (e) receivable turnover ratio and (f) inventory turnover ratio for 2007. Comment on each company's overall liquidity.
- In PepsiCo's financial statements, it reports in the long-term debt section "short-term borrowings, reclassified." How can short-term borrowings be classified as long-term debt?
- What types of loss or gain contingencies do these two companies have at the end of 2007?

## Financial Statement Analysis Cases

### Case 1 Northland Cranberries

Despite being a publicly traded company only since 1987, **Northland Cranberries** of Wisconsin Rapids, Wisconsin, is one of the world's largest cranberry growers. Despite its short life as a publicly traded corporation, it has engaged in an aggressive growth strategy. As a consequence, the company has taken on significant amounts of both short-term and long-term debt. The following information is taken from recent annual reports of the company.

Northland Cranberries		
	Current Year	Prior Year
Current assets	\$ 6,745,759	\$ 5,598,054
Total assets	107,744,751	83,074,339
Current liabilities	10,168,685	4,484,687
Total liabilities	73,118,204	49,948,787
Stockholders' equity	34,626,547	33,125,552
Net sales	21,783,966	18,051,355
Cost of goods sold	13,057,275	8,751,220
Interest expense	3,654,006	2,393,792
Income tax expense	1,051,000	1,917,000
Net income	1,581,707	2,942,954

#### Instructions

- Evaluate the company's liquidity by calculating and analyzing working capital and the current ratio.
- The following discussion of the company's liquidity was provided by the company in the Management Discussion and Analysis section of the company's annual report. Comment on whether you agree with management's statements, and what might be done to remedy the situation.

The lower comparative current ratio in the current year was due to \$3 million of short-term borrowing then outstanding which was incurred to fund the Yellow River Marsh acquisitions last year. As a result of the extreme seasonality of its business, the company does not believe that its current ratio or its underlying stated working capital at the current, fiscal year-end is a meaningful indication of the Company's liquidity. As of March 31 of each fiscal year, the Company has historically carried no significant amounts of inventories and by such date all of the Company's accounts receivable from its crop sold for processing under the supply agreements have been paid in cash, with the resulting cash received from such payments used to reduce indebtedness. The Company utilizes its revolving bank credit facility, together with cash generated from operations, to fund its working capital requirements throughout its growing season.

**Case 2 Mohican Company**

Presented below is the current liabilities section and related note of Mohican Company.

	(dollars in thousands)	
	Current Year	Prior Year
Current liabilities		
Current portion of long-term debt	\$ 15,000	\$ 10,000
Short-term debt	2,668	405
Accounts payable	29,495	42,427
Accrued warranty	16,843	16,741
Accrued marketing programs	17,512	16,585
Other accrued liabilities	35,653	33,290
Accrued and deferred income taxes	16,206	17,348
Total current liabilities	\$133,377	\$136,796

**Notes to Consolidated Financial Statements****Note 1 (in part): Summary of Significant Accounting Policies and Related Data**

**Accrued Warranty** The company provides an accrual for future warranty costs based upon the relationship of prior years' sales to actual warranty costs.

**Instructions**

Answer the following questions.

- What is the difference between the cash basis and the accrual basis of accounting for warranty costs?
- Under what circumstance, if any, would it be appropriate for Mohican Company to recognize deferred revenue on warranty contracts?
- If Mohican Company recognized deferred revenue on warranty contracts, how would it recognize this revenue in subsequent periods?

**Case 3 BOP Clothing Co.**

As discussed in the chapter, an important consideration in evaluating current liabilities is a company's operating cycle. The operating cycle is the average time required to go from cash to cash in generating revenue. To determine the length of the operating cycle, analysts use two measures: the average days to sell inventory (*inventory days*) and the average days to collect receivables (*receivable days*). The inventory-days computation measures the average number of days it takes to move an item from raw materials or purchase to final sale (from the day it comes in the company's door to the point it is converted to cash or an account receivable). The receivable-days computation measures the average number of days it takes to collect an account.

Most businesses must then determine how to finance the period of time when the liquid assets are tied up in inventory and accounts receivable. To determine how much to finance, companies first determine accounts payable days—how long it takes to pay creditors. Accounts payable days measures the number of days it takes to pay a supplier invoice. Consider the following operating cycle worksheet for BOP Clothing Co.

	2009	2010
Cash	\$ 45,000	\$ 30,000
Accounts receivable	250,000	325,000
Inventory	830,000	800,000
Accounts payable	720,000	775,000
Purchases	1,100,000	1,425,000
Cost of goods sold	1,145,000	1,455,000
Sales	1,750,000	1,950,000
<b>Operating Cycle</b>		
Inventory days <sup>1</sup>	264.6	200.7
Receivable days <sup>2</sup>	52.1	60.8
Operating cycle	316.7	261.5
Less: Accounts payable days <sup>3</sup>	238.9	198.5
Days to be financed	77.8	63.0
Working capital	\$ 405,000	\$ 380,000
Current ratio	1.56	1.49
Acid-test ratio	0.41	0.46

<sup>1</sup>Inventory days = (Inventory × 365) ÷ Cost of goods sold

<sup>2</sup>Receivable days = (Accounts receivable × 365) ÷ Sales

<sup>3</sup>Accounts payable days = (Accounts payable × 365) ÷ Purchases

Purchases = Cost of goods sold + Ending inventory – Beginning inventory.

The ratios above assume that other current assets and liabilities are negligible.

These data indicate that BOP has reduced its overall operating cycle (to 261.5 days) as well as the number of days to be financed with sources of funds other than accounts payable (from 78 to 63 days). Most businesses cannot finance the operating cycle with accounts payable financing alone, so working capital financing, usually short-term interest-bearing loans, is needed to cover the shortfall. In this case, BOP would need to borrow less money to finance its operating cycle in 2010 than in 2009.

### Instructions

- Use the BOP analysis to briefly discuss how the operating cycle data relate to the amount of working capital and the current and acid-test ratios.
- Select two other real companies that are in the same industry and complete the operating cycle worksheet on the previous page, along with the working capital and ratio analysis. Briefly summarize and interpret the results. To simplify the analysis, you may use ending balances to compute turnover ratios.

[Adapted from Operating Cycle Worksheet at [www.entrepreneur.com](http://www.entrepreneur.com)]

## BRIDGE TO THE PROFESSION

### Professional Research: FASB Codification

Pleasant Co. manufactures specialty bike accessories. The company is known for product quality, and it has offered one of the best warranties in the industry on its higher-priced products—a lifetime guarantee, performing all the warranty work in its own shops. The warranty on these products is included in the sales price.

Due to the recent introduction and growth in sales of some products targeted to the low-price market, Pleasant is considering partnering with another company to do the warranty work on this line of products, if customers purchase a service contract at the time of original product purchase. Pleasant has called you to advise the company on the accounting for this new warranty arrangement.

### Instructions

Access the FASB Codification at <http://asc.fasb.org/home> to conduct research using the Codification Research System to prepare responses to the following items. Provide Codification references for your responses.

- Identify the accounting literature that addresses the accounting for the type of separately priced warranty that Pleasant is considering.
- When are warranty contracts considered separately priced?
- What are incremental direct acquisition costs and how should they be treated?

### Professional Simulation

Go to the book's companion website, at [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), to find an interactive problem that simulates the computerized CPA exam. The professional simulation for this chapter asks you to address questions related to the accounting for current liabilities.

**Remember to check the book's companion website to find additional resources for this chapter.**

## CHAPTER 14

# LONG-TERM LIABILITIES

### LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Describe the formal procedures associated with issuing long-term debt.
- 2 Identify various types of bond issues.
- 3 Describe the accounting valuation for bonds at date of issuance.
- 4 Apply the methods of bond discount and premium amortization.
- 5 Describe the accounting for the extinguishment of debt.
- 6 Explain the accounting for long-term notes payable.
- 7 Explain the reporting of off-balance-sheet financing arrangements.
- 8 Indicate how to present and analyze long-term debt.

### YOUR DEBT IS KILLING MY STOCK

Traditionally, investors in the stock and bond markets operate in their own separate worlds. However, in recent volatile markets, even quiet murmurs in the bond market have been amplified into movements (usually negative) in stock prices. At one extreme, these gyrations heralded the demise of a company well before the investors could sniff out the problem.

The swift decline of **Enron** in late 2001 provided the ultimate lesson: A company with no credit is no company at all. As one analyst remarked, “You can no longer have an opinion on a company’s stock without having an appreciation for its credit rating.” Other energy companies, such as **Calpine**, **NRG Energy**, and **AES Corp.**, also felt the effect of Enron’s troubles as lenders tightened or closed down the credit supply and raised interest rates on already-high levels of debt. The result? Stock prices took a hit.

Another debt feature that can impact shareholders are bond covenants, which provide bond investors various protections while at the same time constraining management. Such covenants may limit the payment of dividends or preclude the issuance of new debt. In some cases, covenants constrain the company from pursuing certain risky projects or prevent it from selling off assets. Why do companies offer these concessions? It is primarily because

bond investors demand higher rates of return unless they are protected from the risk that the company will reward shareholders at the bondholders' expense.

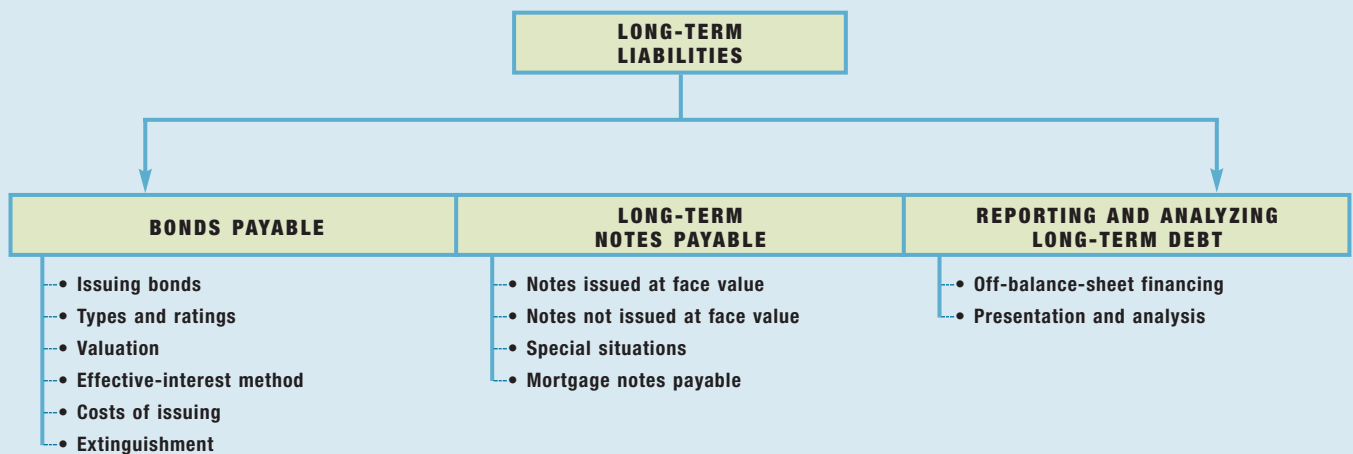

A good example is **Laboratory Corp. of America**. It included a covenant in a recent bond issue offering to buy the bonds back at a premium (referred to as a *call provision*) if there is a change in control leading to a lowering of the debt rating. Laboratory Corp. apparently felt offering the concession was worth it, since the company needed the proceeds from the debt issue to fund its growth.

Other industries are not immune from the negative shareholder effects of credit problems. For example, analysts at **TheStreet.com** compiled a list of companies with high debt levels and low ability to cover interest costs. Among them is **Goodyear Tire and Rubber**, which reported debt six times greater than its equity. Goodyear is a classic example of how swift and crippling a heavy debt-load can be. Not too long ago, Goodyear had a good credit rating and was paying a good dividend. But with mounting operating losses, Goodyear's debt became a huge burden, its debt rating fell to junk-status, the company cut its dividend, and its stock price dropped 80%. This was yet another example of stock prices taking a hit due to concerns about credit quality. Thus, even if your investment tastes are in stocks, keep an eye on the liabilities.

R4; Herb Greenberg, "The Hidden Dangers of Debt," Fortune (July 21, 2003), p. 153; and Christine Richard, "Holders of Corporate Bonds Seek Protection From Risk," Wall Street Journal (December 17-18, 2005), p. B4.*

## PREVIEW OF CHAPTER 14

As our opening story indicates, investors pay considerable attention to a company's liabilities. The stock market severely punishes companies with high debt levels and the related impact of higher interest costs on income performance. In this chapter we explain the accounting issues related to long-term debt. The content and organization of the chapter are as follows.

## SECTION 1 • BONDS PAYABLE

**Long-term debt** consists of probable future sacrifices of economic benefits arising from present obligations that are not payable within a year or the operating cycle of the company, whichever is longer. Bonds payable, long-term notes payable, mortgages payable, pension liabilities, and lease liabilities are examples of long-term liabilities.

A corporation, per its bylaws, usually requires approval by the board of directors and the stockholders before bonds or notes can be issued. The same holds true for other types of long-term debt arrangements.

### Objective 1

Describe the formal procedures associated with issuing long-term debt.

Generally, long-term debt has various **covenants** or **restrictions** that protect both lenders and borrowers. The indenture or agreement often includes the amounts authorized to be issued, interest rate, due date(s), call provisions, property pledged as security, sinking fund requirements, working capital and dividend restrictions, and limitations concerning the assumption of additional debt. Companies should describe these features in the body of the financial statements or the notes if important for a complete understanding of the financial position and the results of operations.

Although it would seem that these covenants provide adequate protection to the long-term debtholder, many bondholders suffer considerable losses when companies add more debt to the capital structure. Consider what can happen to bondholders in leveraged buyouts (LBOs), which are usually led by management. In an LBO of **RJR Nabisco**, for example, solidly rated 9% percent bonds due in 2016 plunged 20 percent in value when management announced the leveraged buyout. Such a loss in value occurs because the additional debt added to the capital structure increases the likelihood of default. Although covenants protect bondholders, they can still suffer losses when debt levels get too high.

## ISSUING BONDS

A bond arises from a contract known as a **bond indenture**. A bond represents a promise to pay: (1) a sum of money at a designated maturity date, plus (2) periodic interest at a specified rate on the maturity amount (face value). Individual bonds are evidenced by a paper certificate and typically have a \$1,000 face value. Companies usually make bond interest payments semiannually, although the interest rate is generally expressed as an annual rate. The main purpose of bonds is to borrow for the long term when the amount of capital needed is too large for one lender to supply. By issuing bonds in \$100, \$1,000, or \$10,000 denominations, a company can divide a large amount of long-term indebtedness into many small investing units, thus enabling more than one lender to participate in the loan.

A company may sell an entire bond issue to an investment bank which acts as a selling agent in the process of marketing the bonds. In such arrangements, investment banks may either underwrite the entire issue by guaranteeing a certain sum to the company, thus taking the risk of selling the bonds for whatever price they can get (firm underwriting). Or they may sell the bond issue for a commission on the proceeds of the sale (best-efforts underwriting). Alternatively, the issuing company may sell the bonds directly to a large institution, financial or otherwise, without the aid of an underwriter (private placement).

## TYPES AND RATINGS OF BONDS

Presented on the next page, we define some of the more common types of bonds found in practice.

## TYPES OF BONDS

**SECURED AND UNSECURED BONDS.** Secured bonds are backed by a pledge of some sort of collateral. Mortgage bonds are secured by a claim on real estate. Collateral trust bonds are secured by stocks and bonds of other corporations. Bonds not backed by collateral are **unsecured**. A **debenture bond** is unsecured. A “junk bond” is unsecured and also very risky, and therefore pays a high interest rate. Companies often use these bonds to finance leveraged buyouts.

**TERM, SERIAL BONDS, AND CALLABLE BONDS.** Bond issues that mature on a single date are called **term bonds**; issues that mature in installments are called **serial bonds**. Serially maturing bonds are frequently used by school or sanitary districts, municipalities, or other local taxing bodies that receive money through a special levy. **Callable bonds** give the issuer the right to call and retire the bonds prior to maturity.

**CONVERTIBLE, COMMODITY-BACKED, AND DEEP-DISCOUNT BONDS.** If bonds are convertible into other securities of the corporation for a specified time after issuance, they are **convertible bonds**.

Two types of bonds have been developed in an attempt to attract capital in a tight money market—commodity-backed bonds and deep-discount bonds. **Commodity-backed bonds** (also called **asset-linked bonds**) are redeemable in measures of a commodity, such as barrels of oil, tons of coal, or ounces of rare metal. To illustrate, **Sunshine Mining**, a silver-mining company, sold two issues of bonds redeemable with either \$1,000 in cash or 50 ounces of silver, whichever is greater at maturity, and that have a stated interest rate of 8½ percent. The accounting problem is one of projecting the maturity value, especially since silver has fluctuated between \$4 and \$40 an ounce since issuance.

**JCPenney Company** sold the first publicly marketed long-term debt securities in the United States that do not bear interest. These **deep-discount bonds**, also referred to as **zero-interest debenture bonds**, are sold at a discount that provides the buyer’s total interest payoff at maturity.

**REGISTERED AND BEARER (COUPON) BONDS.** Bonds issued in the name of the owner are **registered bonds** and require surrender of the certificate and issuance of a new certificate to complete a sale. A **bearer** or **coupon bond**, however, is not recorded in the name of the owner and may be transferred from one owner to another by mere delivery.

**INCOME AND REVENUE BONDS.** **Income bonds** pay no interest unless the issuing company is profitable. **Revenue bonds**, so called because the interest on them is paid from specified revenue sources, are most frequently issued by airports, school districts, counties, toll-road authorities, and governmental bodies.

### Objective • 2

Identify various types of bond issues.

## ALL ABOUT BONDS

How do investors monitor their bond investments? One way is to review the bond listings found in the newspaper or online. Corporate bond listings show the coupon (interest) rate, maturity date, and last price. However, because corporate bonds are more actively held by large institutional investors, the listings also indicate the current yield and the volume traded. Corporate bond listings would look like those below.

Issuer	Coupon Maturity	Price: High/Low	Yield: High/Low	Volume (\$, 000)
<b>BellSouth Corp.</b>	6.000 11/15/2034	102.190 95.370	5.839 6.357	23,125
<b>General Motors Corp.</b>	8.375 07/15/2033	96.426 86.781	8.721 9.779	923,072

*What do the numbers mean?*

**What do the numbers mean?**  
(continued)

The companies issuing the bonds are listed in the first column, in this case, a telecommunications company, **BellSouth Corp.**, and the automaker **General Motors Corp.** Immediately after the names is a column with the interest rate paid by the bond as a percentage of its par value, with its maturity date below. The BellSouth bonds, for example, pay 6 percent and mature on November 15, 2034. The General Motors bonds pay 8.375 percent, quite a bit more.

The BellSouth bonds have a current yield of 6.3 percent based on the closing low price of 95.370 per \$1,000. The high/low prices are based on trading in a five-day period, in which the volume traded on the exchange amounted to \$23,125 million. The General Motors bonds, at the high price of 96.426, yield 8.721 percent. The GM bonds had volume of nearly \$1 billion dollars.

Also, as indicated in the chapter, interest rates and the bond's term to maturity have a real effect on bond prices. For example, an increase in interest rates will lead to a decline in bond values. Similarly, a decrease in interest rates will lead to a rise in bond values. The data reported below, based on three different bond funds, demonstrate these relationships between interest rate changes and bond values.

Bond Price Changes in Response to Interest Rate Changes	1% Interest Rate Increase	1% Interest Rate Decrease
Short-term fund (2–5 years)	–2.5%	+2.5%
Intermediate-term fund (5 years)	–5%	+5%
Long-term fund (10 years)	–10%	+10%

Data source: The Vanguard Group.

Another factor that affects bond prices is the call feature, which decreases the value of the bond. Investors must be rewarded for the risk that the issuer will call the bond if interest rates decline, which would force the investor to reinvest at lower rates.

## VALUATION OF BONDS PAYABLE—DISCOUNT AND PREMIUM

### Objective 3

Describe the accounting valuation for bonds at date of issuance.

The issuance and marketing of bonds to the public does not happen overnight. It usually takes weeks or even months. First, the issuing company must arrange for underwriters that will help market and sell the bonds. Then it must obtain the Securities and Exchange Commission's approval of the bond issue, undergo audits, and issue a prospectus (a document which describes the features of the bond and related financial information). Finally, the company must generally have the bond certificates printed. Frequently the issuing company establishes the terms of a bond indenture well in advance of the sale of the bonds. Between the time the company sets these terms and the time it issues the bonds, the market conditions and the financial position of the issuing corporation may change significantly. Such changes affect the marketability of the bonds and thus their selling price.

The selling price of a bond issue is set by the supply and demand of buyers and sellers, relative risk, market conditions, and the state of the economy. The investment community values a bond at the **present value of its expected future cash flows**, which consist of (1) interest and (2) principal. The rate used to compute the present value of these cash flows is the interest rate that provides an acceptable return on an investment commensurate with the issuer's risk characteristics.

The interest rate written in the terms of the bond indenture (and often printed on the bond certificate) is known as the **stated, coupon, or nominal rate**. The issuer of the bonds sets this rate. The stated rate is expressed as a percentage of the **face value** of the bonds (also called the **par value, principal amount, or maturity value**).

If the rate employed by the investment community (buyers) differs from the stated rate, the present value of the bonds computed by the buyers (and the current

### INTERNATIONAL INSIGHT

Both IGAAP and U.S. GAAP permit valuation of long-term debt and other liabilities at fair value with gains and losses on changes in fair value recorded in income (referred to as the "fair value option") in certain situations.

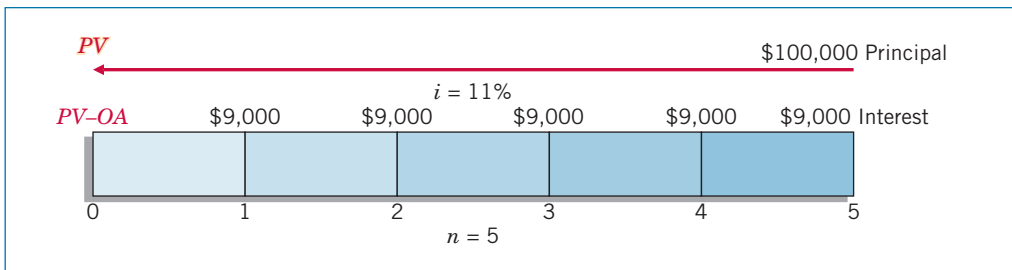

purchase price) will differ from the face value of the bonds. The difference between the face value and the present value of the bonds determines the actual price that buyers pay for the bonds. This difference is either a discount or premium.<sup>1</sup>

- If the bonds sell for less than face value, they sell at a **discount**.
- If the bonds sell for more than face value, they sell at a **premium**.

The rate of interest actually earned by the bondholders is called the **effective yield** or **market rate**. If bonds sell at a discount, the effective yield exceeds the stated rate. Conversely, if bonds sell at a premium, the effective yield is lower than the stated rate. Several variables affect the bond’s price while it is outstanding, most notably the market rate of interest. There is an inverse relationship between the market interest rate and the price of the bond.

Here we consider an example to illustrate the computation of the **present value of a bond issue**. Assume that ServiceMaster issues \$100,000 in bonds, due in five years with 9 percent interest payable annually at year-end. At the time of issue, the market rate for such bonds is 11 percent. The time diagram in Illustration 14-1 depicts both the interest and the principal cash flows.

**ILLUSTRATION 14-1**  
Time Diagram for Bond Cash Flows

The actual principal and interest cash flows are discounted at an 11 percent rate for five periods as shown in Illustration 14-2.

Present value of the principal:	
\$100,000 × .59345 (Table 6-2)	\$59,345.00
Present value of the interest payments:	
\$9,000 × 3.69590 (Table 6-4)	<u>33,263.10</u>
<b>Present value (selling price) of the bonds</b>	<b><u>\$92,608.10</u></b>

**ILLUSTRATION 14-2**  
Present Value Computation of Bond Selling at a Discount

By paying \$92,608.10 at the date of issue, investors realize an effective rate or yield of 11 percent over the five-year term of the bonds. These bonds would sell at a discount of \$7,391.90 (\$100,000 – \$92,608.10). The price at which the bonds sell is typically stated as a percentage of the face or par value of the bonds. For example, the ServiceMaster bonds sold for 92.6 (92.6% of par). If ServiceMaster had received \$102,000, then the bonds sold for 102 (102% of par).

When bonds sell at less than face value, it means that investors demand a rate of interest **higher** than the stated rate. Usually this occurs because the investors can earn a greater rate on alternative investments of equal risk. They cannot change the stated rate, so they refuse to pay face value for the bonds. Thus, by changing the amount invested, they alter the effective rate of return. The investors receive interest at the stated rate computed on the face value, but they actually earn at **an effective rate that exceeds the stated rate because they paid less than face value for the bonds**. (Later in the chapter, in Illustrations 14-6 and 14-7, we show an illustration for a bond that sells at a premium.)

<sup>1</sup>It is generally the case that the stated rate of interest on bonds is set in rather precise decimals (such as 10.875 percent). Companies usually attempt to align the stated rate as closely as possible with the market or effective rate at the time of issue.

### What do the numbers mean?

#### HOW'S MY RATING?

Two major publication companies, **Moody's Investors Service** and **Standard & Poor's Corporation**, issue quality ratings on every public debt issue. The following table summarizes the ratings issued by Standard & Poor's, along with historical default rates on bonds with different ratings. As expected, bonds receiving the highest quality rating of AAA have the lowest historical default rates. Bonds rated below BBB, which are considered below investment grade ("junk bonds"), experience default rates ranging from 20 to 50 percent.

Original rating	AAA	AA	A	BBB	BB	B	CCC
Default rate	0.52%	1.31	2.32	6.64	19.52	35.76	54.38

Data source: Standard & Poor's Corp.

Debt ratings reflect credit quality. The market closely monitors these ratings when determining the required yield and pricing of bonds at issuance and in periods after issuance, especially if a bond's rating is upgraded or downgraded. Data on recent downgrades suggest that the number of "fallen angels" (downgraded debt) is on the rise.

Source: Standard & Poor's Global Fixed Income Research (February 6, 2007).

As recently as 1999, the number and amount of upgrades exceeded downgrades. However, following a decline in 2003, the number of fallen angels increased from 2004–2006, and 2007 is estimated to come in at record levels. It is not surprising, then, that bond investors and companies who issue bonds keep a close watch on debt ratings—both when bonds are issued and while the bonds are outstanding.

Timmons, "The Credit Raters: How They Work and How They Might Work Better," *Business Week* (April 8, 2002), pp. 38–40; Standard and Poors, *Global Fixed Income Research*, "Fallen Angel Activity" (February 6, 2007); and S. Scholtes, "Bondholders Seek Stability," *Financial Times* (December 19, 2007), p. 38.

### Bonds Issued at Par on Interest Date

When a company issues bonds on an interest payment date at par (face value), it accrues no interest. No premium or discount exists. The company simply records the cash proceeds and the face value of the bonds. To illustrate, if Buchanan Company issues at par 10-year term bonds with a par value of \$800,000, dated January 1, 2010, and bearing

interest at an annual rate of 10 percent payable semiannually on January 1 and July 1, it records the following entry:

Cash	800,000	
Bonds Payable		800,000

Buchanan records the first semiannual interest payment of \$40,000 ( $\$800,000 \times .10 \times 1/2$ ) on July 1, 2010, as follows.

Bond Interest Expense	40,000	
Cash		40,000

It records accrued interest expense at December 31, 2010 (year-end) as follows.

Bond Interest Expense	40,000	
Bond Interest Payable		40,000

## Bonds Issued at Discount or Premium on Interest Date

If Buchanan Company issues the \$800,000 of bonds on January 1, 2010, at 97 (meaning 97 percent of par), it records the issuance as follows.

Cash ( $\$800,000 \times .97$ )	776,000	
Discount on Bonds Payable	24,000	
Bonds Payable		800,000

### Objective 4

Apply the methods of bond discount and premium amortization.

Recall from our earlier discussion that because of its relation to interest, **companies amortize the discount and charge it to interest expense over the period of time that the bonds are outstanding.**

The **straight-line method** amortizes a constant amount each interest period (in this case 20 interest periods).<sup>2</sup> For example, using the bond discount of \$24,000, Buchanan amortizes \$1,200 to interest expense each period for 20 periods ( $\$24,000 \div 20$ ).

Buchanan records the first semiannual interest payment of \$40,000 ( $\$800,000 \times 10\% \times 1/2$ ) and the bond discount on July 1, 2010 as follows:

Bond Interest Expense	41,200	
Discount on Bonds Payable		1,200
Cash		40,000

At December 31, 2010, Buchanan makes the following adjusting entry:

Bond Interest Expense	41,200	
Discount on Bonds Payable		1,200
Bond Interest Payable		40,000

At the end of the first year, 2010, the balance in the Discount on Bonds Payable account is \$21,600 ( $\$24,000 - \$1,200 - \$1,200$ ). Over the term of the bonds, the balance in the Discount on Bonds Payable will decrease by the same amount until it has zero balance at the maturity date of the bonds.

If instead of issuing the bonds on January 1, 2010, Buchanan dates and sells the bonds on October 1, 2010, and if the fiscal year of the corporation ends on December 31, the discount amortized during 2010 would be only  $3/12$  of  $1/10$  of \$24,000, or \$600. Buchanan must also record three months of accrued interest on December 31.

Premium on Bonds Payable is accounted for in a manner similar to that for Discount on Bonds Payable. If Buchanan dates and sells 10-year bonds with a par value of \$800,000 on January 1, 2010, at 103, it records the issuance as follows.

Cash ( $\$800,000 \times 1.03$ )	824,000	
Premium on Bonds Payable		24,000
Bonds Payable		800,000

<sup>2</sup>The effective-interest method is preferred for amortization of discount or premium. To keep these initial illustrations simple, we have chosen to use the straight-line method.

With the bond premium of \$24,000, Buchanan amortizes \$1,200 to interest expense each period for 20 periods ( $\$24,000 \div 20$ ).

Buchanan records the first semiannual interest payment of \$40,000 ( $\$800,000 \times 10\% \times \frac{1}{2}$ ) and the bond premium on July 1, 2010 as follows:

Bond Interest Expense	38,800	
Premium on Bonds Payable	1,200	
Cash		40,000

At December 31, 2010, Buchanan makes the following adjusting entry:

Bond Interest Expense	38,800	
Premium on Bonds Payable	1,200	
Bond Interest Payable		40,000

**Amortization of a discount increases bond interest expense. Amortization of a premium decreases bond interest expense.** Later in the chapter we discuss amortization of a discount or premium under the effective-interest method.

The issuer may call some bonds at a stated price after a certain date. This call feature gives the issuing corporation the opportunity to reduce its bonded indebtedness or take advantage of lower interest rates. **Whether callable or not, a company must amortize any premium or discount over the bond's life to maturity because early redemption (call of the bond) is not a certainty.**

### Bonds Issued Between Interest Dates

Companies usually make bond interest payments semiannually, on dates specified in the bond indenture. When companies issue bonds on other than the interest payment dates, **buyers of the bonds will pay the seller the interest accrued from the last interest payment date to the date of issue.** The purchasers of the bonds, in effect, pay the bond issuer in advance for that portion of the full six-months' interest payment to which they are not entitled because they have not held the bonds for that period. **Then, on the next semiannual interest payment date, purchasers will receive the full six-months' interest payment.**

To illustrate, assume that on March 1, 2010, Taft Corporation issues 10-year bonds, dated January 1, 2010, with a par value of \$800,000. These bonds have an annual interest rate of 6 percent, payable semiannually on January 1 and July 1. Because Taft issues the bonds between interest dates, it records the bond issuance at **par plus accrued interest** as follows.

Cash	808,000	
Bonds Payable		800,000
Bond Interest Expense ( $\$800,000 \times .06 \times 2/12$ )		8,000
(Interest Payable might be credited instead)		

The purchaser advances two months' interest. On July 1, 2010, four months after the date of purchase, Taft pays the purchaser six months' interest. Taft makes the following entry on July 1, 2010.

Bond Interest Expense	24,000	
Cash		24,000

The Bond Interest Expense account now contains a debit balance of \$16,000, which represents the proper amount of interest expense—four months at 6 percent on \$800,000.

The illustration above was simplified by having the January 1, 2010, bonds issued on March 1, 2010, **at par**. If, however, Taft issued the 6 percent bonds at 102, its March 1 entry would be:

Cash [ $(\$800,000 \times 1.02) + (\$800,000 \times .06 \times 2/12)$ ]	824,000	
Bonds Payable		800,000
Premium on Bonds Payable ( $\$800,000 \times .02$ )		16,000
Bond Interest Expense		8,000

Taft would amortize the premium **from the date of sale** (March 1, 2010), not from the date of the bonds (January 1, 2010).

## EFFECTIVE-INTEREST METHOD

The preferred procedure for amortization of a discount or premium is the **effective-interest method** (also called **present value amortization**). Under the effective-interest method, companies:

1. Compute bond interest expense first by multiplying the **carrying value** (book value) of the bonds at the beginning of the period by the effective interest rate.<sup>3</sup>
2. Determine the bond discount or premium amortization next by comparing the bond interest expense with the interest (cash) to be paid.

Illustration 14-3 depicts graphically the computation of the amortization.

**ILLUSTRATION 14-3**  
Bond Discount and  
Premium Amortization  
Computation

The effective-interest method produces a periodic interest expense equal to a **constant percentage of the carrying value of the bonds**. Since the percentage is the effective rate of interest incurred by the borrower at the time of issuance, the effective-interest method matches expenses with revenues better than the straight-line method.

Both the effective-interest and straight-line methods result in the **same total amount of interest expense over the term of the bonds**. However, when the annual amounts are materially different, generally accepted accounting principles require use of the effective-interest method. [1]

See the FASB Codification section (page 723).

### Bonds Issued at a Discount

To illustrate amortization of a discount under the effective-interest method, Evermaster Corporation issued \$100,000 of 8 percent term bonds on January 1, 2010, due on January 1, 2015, with interest payable each July 1 and January 1. Because the investors required an effective-interest rate of 10 percent, they paid \$92,278 for the \$100,000 of bonds, creating a \$7,722 discount. Evermaster computes the \$7,722 discount as follows.<sup>4</sup>

Maturity value of bonds payable	\$100,000
Present value of \$100,000 due in 5 years at 10%, interest payable semiannually (Table 6-2); $FV(PVF_{10,5\%})$ ; $(\$100,000 \times .61391)$	\$61,391
Present value of \$4,000 interest payable semiannually for 5 years at 10% annually (Table 6-4); $R(PVF-OA_{10,5\%})$ ; $(\$4,000 \times 7.72173)$	<u>30,887</u>
Proceeds from sale of bonds	<u>92,278</u>
<b>Discount on bonds payable</b>	<b><u>\$ 7,722</u></b>

**ILLUSTRATION 14-4**  
Computation of Discount  
on Bonds Payable

<sup>3</sup>The **carrying value** is the face amount minus any unamortized discount or plus any unamortized premium. The term *carrying value* is synonymous with *book value*.

<sup>4</sup>Because companies pay interest semiannually, the interest rate used is 5% (10% × ½). The number of periods is 10 (5 years × 2).

The five-year amortization schedule appears in Illustration 14-5.

**ILLUSTRATION 14-5**  
Bond Discount  
Amortization Schedule

Calculator Solution for Present Value of Bonds:

Inputs	Answer
<b>N</b> 10	
<b>I/YR</b> 5	
<b>PV</b> ?	92,278
<b>PMT</b> -4,000	
<b>FV</b> -100,000	

SCHEDULE OF BOND DISCOUNT AMORTIZATION				
EFFECTIVE-INTEREST METHOD—SEMIANNUAL INTEREST PAYMENTS				
5-YEAR, 8% BONDS SOLD TO YIELD 10%				
Date	Cash Paid	Interest Expense	Discount Amortized	Carrying Amount of Bonds
1/1/10				\$ 92,278
7/1/10	\$ 4,000 <sup>a</sup>	\$ 4,614 <sup>b</sup>	\$ 614 <sup>c</sup>	92,892 <sup>d</sup>
1/1/11	4,000	4,645	645	93,537
7/1/11	4,000	4,677	677	94,214
1/1/12	4,000	4,711	711	94,925
7/1/12	4,000	4,746	746	95,671
1/1/13	4,000	4,783	783	96,454
7/1/13	4,000	4,823	823	97,277
1/1/14	4,000	4,864	864	98,141
7/1/14	4,000	4,907	907	99,048
1/1/15	4,000	4,952	952	100,000
	<u>\$40,000</u>	<u>\$47,722</u>	<u>\$7,722</u>	

<sup>a</sup>\$4,000 = \$100,000 × .08 × 6/12      <sup>c</sup>\$614 = \$4,614 - \$4,000  
<sup>b</sup>\$4,614 = \$92,278 × .10 × 6/12      <sup>d</sup>\$92,892 = \$92,278 + \$614

Evermaster records the issuance of its bonds at a discount on January 1, 2010, as follows:

Cash	92,278	
Discount on Bonds Payable	7,722	
Bonds Payable		100,000

It records the first interest payment on July 1, 2010, and amortization of the discount as follows:

Bond Interest Expense	4,614	
Discount on Bonds Payable		614
Cash		4,000

Evermaster records the interest expense accrued at December 31, 2010 (year-end) and amortization of the discount as follows:

Bond Interest Expense	4,645	
Bond Interest Payable		4,000
Discount on Bonds Payable		645

**Bonds Issued at a Premium**

Now assume that for the bond issue described above, investors are willing to accept an effective interest rate of 6 percent. In that case, they would pay \$108,530 or a premium of \$8,530, computed as follows.

**ILLUSTRATION 14-6**  
Computation of Premium  
on Bonds Payable

Maturity value of bonds payable		\$100,000
Present value of \$100,000 due in 5 years at 6%, interest payable semiannually (Table 6-2); $FV(PVF_{10,3\%})$ ; $(\$100,000 \times .74409)$	\$74,409	
Present value of \$4,000 interest payable semiannually for 5 years at 6% annually (Table 6-4); $R(PVF-OA_{10,3\%})$ ; $(\$4,000 \times 8.53020)$	<u>34,121</u>	
Proceeds from sale of bonds		<u>108,530</u>
Premium on bonds payable		<u>\$ 8,530</u>

The five-year amortization schedule appears in Illustration 14-7.

1/1/13	4,000	3,137	863	103,717
7/1/13	4,000	3,112	888	102,829
1/1/14	4,000	3,085	915	101,914
7/1/14	4,000	3,057	943	100,971
1/1/15	4,000	3,029	971	100,000
	<u>\$40,000</u>	<u>\$31,470</u>	<u>\$8,530</u>	

<sup>a</sup>\$4,000 = \$100,000 × .08 × 6/12      <sup>c</sup>\$744 = \$4,000 – \$3,256  
<sup>b</sup>\$3,256 = \$108,530 × .06 × 6/12      <sup>d</sup>\$107,786 = \$108,530 – \$744

**ILLUSTRATION 14-7**  
Bond Premium Amortization Schedule

Calculator Solution for Present Value of Bonds:

	Inputs	Answer
N	10	
I/YR	3	
PV	?	108,530
PMT	-4,000	
FV	-100,000	

Evermaster records the issuance of its bonds at a premium on January 1, 2010, as follows:

Cash	108,530	
Premium on Bonds Payable		8,530
Bonds Payable		100,000

Evermaster records the first interest payment on July 1, 2010, and amortization of the premium as follows:

Bond Interest Expense	3,256	
Premium on Bonds Payable		744
Cash		4,000

Evermaster should amortize the discount or premium as an adjustment to interest expense over the life of the bond in such a way as to result in a **constant rate of interest** when applied to the carrying amount of debt outstanding at the beginning of any given period.

### Accruing Interest

In our previous examples, the interest payment dates and the date the financial statements were issued were the same. For example, when Evermaster sold bonds at a premium (page 698), the two interest payment dates coincided with the financial reporting dates. However, what happens if Evermaster wishes to report financial statements at the end of February 2010? In this case, the company **prorates** the premium by the appropriate number of months, to arrive at the proper interest expense, as follows.

Interest accrual (\$4,000 × $\frac{1}{2}$ )	\$1,333.33
Premium amortized (\$744 × $\frac{1}{2}$ )	(248.00)
<b>Interest expense (Jan.–Feb.)</b>	<b><u>\$1,085.33</u></b>

**ILLUSTRATION 14-8**  
Computation of Interest Expense

Evermaster records this accrual as follows.

Bond Interest Expense	1,085.33	
Premium on Bonds Payable	248.00	
Bond Interest Payable		1,333.33

If the company prepares financial statements six months later, it follows the same procedure. That is, the premium amortized would be as follows.

**ILLUSTRATION 14-9**  
Computation of Premium  
Amortization

Premium amortized (March–June) ( $\$744 \times \%$ )	\$496.00
Premium amortized (July–August) ( $\$766 \times \%$ )	255.33
Premium amortized (March–August 2004)	<u>\$751.33</u>

The interest-accrual computation is much simpler if the company uses the straight-line method. For example, the total premium is \$8,530, which Evermaster allocates evenly over the five-year period. Thus, premium amortization per month is \$142.17 ( $\$8,530 \div 60$  months).

### Classification of Discount and Premium

Discount on bonds payable is **not an asset**. It does not provide any future economic benefit. In return for the use of borrowed funds, a company must pay interest. A bond discount means that the company borrowed less than the face or maturity value of the bond. It therefore faces an actual (effective) interest rate higher than the stated (nominal) rate. Conceptually, discount on bonds payable is a liability valuation account. That is, it reduces the face or maturity amount of the related liability.<sup>5</sup> This account is referred to as a **contra account**.

Similarly, premium on bonds payable has no existence apart from the related debt. The lower interest cost results because the proceeds of borrowing exceed the face or maturity amount of the debt. Conceptually, premium on bonds payable is a *liability* valuation account. It adds to the face or maturity amount of the related liability.<sup>6</sup> This account is referred to as an **adjunct account**. As a result, **companies report bond discounts and bond premiums as a direct deduction from or addition to the face amount of the bond**.

## COSTS OF ISSUING BONDS

The issuance of bonds involves engraving and printing costs, legal and accounting fees, commissions, promotion costs, and other similar charges. Companies are required to charge these costs to an asset account, often referred to as Unamortized Bond Issue Costs. Companies then allocate these Unamortized Bond Issue Costs over the life of the debt, in a manner similar to that used for discount on bonds. [2]

We disagree with this approach. Unamortized bond issue cost in our view is an expense (or a reduction of the related liability).

Apparently the FASB also disagrees with the current GAAP treatment and notes in *Concepts Statement No. 6* that debt issue cost is not considered an asset because it provides no future economic benefit. The cost of issuing bonds, in effect, reduces the proceeds of the bonds issued and increases the effective interest rate. Companies may thus account for it the same as the unamortized discount.

There is an obvious difference between GAAP and *Concepts Statement No. 6*'s view of debt issue costs. However, until an issued standard supersedes existing GAAP, **un-amortized bond issue costs are treated as a deferred charge and amortized over the life of the debt**.

<sup>5</sup>"Elements of Financial Statements of Business Enterprises," *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, 1980).

<sup>6</sup>Ibid., par. 238.

To illustrate the accounting for costs of issuing bonds, assume that Microchip Corporation sold \$20,000,000 of 10-year debenture bonds for \$20,795,000 on January 1, 2010 (also the date of the bonds). Costs of issuing the bonds were \$245,000. Microchip records the issuance of the bonds and amortization of the bond issue costs as follows.

January 1, 2010		
Cash	20,550,000	
Unamortized Bond Issue Costs	245,000	
Premium on Bonds Payable		795,000
Bonds Payable		20,000,000
(To record issuance of bonds)		
December 31, 2010		
Bond Issue Expense	24,500	
Unamortized Bond Issue Costs		24,500
(To amortize one year of bond issue costs—straight-line method)		

Microchip continues to amortize the bond issue costs in the same way over the life of the bonds. Although the effective-interest method is preferred, in practice companies may use the straight-line method to amortize bond issue costs because it is easier and the results are not materially different.

## EXTINGUISHMENT OF DEBT

How do companies record the payment of debt—often referred to as **extinguishment of debt**? If a company holds the bonds (or any other form of debt security) to maturity, the answer is straightforward: The company does not compute any gains or losses. It will have fully amortized any premium or discount and any issue costs at the date the bonds mature. As a result, the carrying amount will equal the maturity (face) value of the bond. As the maturity or face value will also equal the bond's market value at that time, no gain or loss exists.

In some cases, a company extinguishes debt before its maturity date.<sup>7</sup> The amount paid on extinguishment or redemption before maturity, including any call premium and expense of reacquisition, is called the **reacquisition price**. On any specified date, the **net carrying amount** of the bonds is the amount payable at maturity, adjusted for unamortized premium or discount, and cost of issuance. Any excess of the net carrying amount over the reacquisition price is a **gain from extinguishment**. The excess of the reacquisition price over the net carrying amount is a **loss from extinguishment**. At the time of reacquisition, **the unamortized premium or discount, and any costs of issue applicable to the bonds, must be amortized up to the reacquisition date.**

To illustrate, assume that on January 1, 2003, General Bell Corp. issued 97 bonds with a par value of \$800,000, due in 20 years. It incurred bond issue costs totaling \$16,000. Eight years after the issue date, General Bell calls the entire issue at 101 and cancels it.<sup>8</sup> At that time, the unamortized discount balance is \$14,400, and the unamortized

### Objective 5

Describe the accounting for the extinguishment of debt.

<sup>7</sup>Some companies have attempted to extinguish debt through an in-substance defeasance.

**In-substance defeasance** is an arrangement whereby a company provides for the future repayment of a long-term debt issue by placing purchased securities in an irrevocable trust. The company pledges the principal and interest of the securities in the trust to pay off the principal and interest of its own debt securities as they mature. However, it is not legally released from its primary obligation for the debt that is still outstanding. In some cases, debt holders are not even aware of the transaction and continue to look to the company for repayment. This practice is not considered an extinguishment of debt, and therefore the company does not record a gain or loss.

<sup>8</sup>The issuer of callable bonds must generally exercise the call on an interest date. Therefore, the amortization of any discount or premium will be up to date, and there will be no accrued interest. However, early extinguishments through purchases of bonds in the open market are more likely to be on other than an interest date. If the purchase is not made on an interest date, the discount or premium must be amortized, and the interest payable must be accrued from the last interest date to the date of purchase.

issue cost balance is \$9,600. Illustration 14-10 indicates how General Bell computes the loss on redemption (extinguishment).

**ILLUSTRATION 14-10**  
Computation of Loss on Redemption of Bonds

Reacquisition price (\$800,000 × 1.01)		\$808,000
Net carrying amount of bonds redeemed:		
Face value	\$800,000	
Unamortized discount (\$24,000* × 12/20)	(14,400)	
Unamortized issue costs (\$16,000 × 12/20)		
(both amortized using straight-line basis)	<u>(9,600)</u>	<u>776,000</u>
<b>Loss on redemption</b>		<b>\$ 32,000</b>
*[\$800,000 × (1 - .97)]		

General Bell records the reacquisition and cancellation of the bonds as follows:

Bonds Payable	800,000	
Loss on Redemption of Bonds	32,000	
Discount on Bonds Payable		14,400
Unamortized Bond Issue Costs		9,600
Cash		808,000

Note that it is often advantageous for the issuer to acquire the **entire** outstanding bond issue and replace it with a new bond issue bearing a lower rate of interest. The replacement of an existing issuance with a new one is called **refunding**. Whether the early redemption or other extinguishment of outstanding bonds is a nonrefunding or a refunding situation, a company should recognize the difference (gain or loss) between the reacquisition price and the net carrying amount of the redeemed bonds in income of the period of redemption.<sup>9</sup>

**DEAD-WEIGHT DEBT**

**What do the numbers mean?**

As the opening story in the chapter indicated, high debt levels translate into high interest costs, which are a drag on profitability. The chart below shows that the ratio of interest payments to earnings has been on an upward trend. This is bad news for companies that have a lot of debt on their balance sheet.

<sup>9</sup>Companies at one time reported gains and losses on extinguishment of debt as extraordinary items. In response to concerns that such gains or losses are neither unusual nor infrequent, the FASB eliminated extraordinary item treatment for extinguishment of debt. [3]

However, in a low interest rate environment, as experienced at least through 2008, companies with debt-laden balance sheets benefit when interest rates fall. **Exelon Corp.**, a Chicago-based energy company, is a good example. Exelon has been refinancing its long-term debt by retiring bonds with 6.5 percent rates in exchange for newly issued bonds with rates ranging from 3.7 percent to 5.9 percent. This refinancing saved Exelon approximately \$30 million dollars in annual interest costs. Exelon was able to get out of its higher cost debt when the getting was good. Other debt-laden companies might not fare so well if interest rates rise before they can refinance.

**What do the numbers mean?**  
(continued)

## SECTION 2 • LONG-TERM NOTES PAYABLE

The difference between current notes payable and **long-term notes payable** is the maturity date. As discussed in Chapter 13, short-term notes payable are those that companies expect to pay within a year or the operating cycle—whichever is longer. Long-term notes are similar in substance to bonds in that both have fixed maturity dates and carry either a stated or implicit interest rate. However, notes do not trade as readily as bonds in the organized public securities markets. Noncorporate and small corporate enterprises issue notes as their long-term instruments. Larger corporations issue both long-term notes and bonds.

### Objective 6

Explain the accounting for long-term notes payable.

Accounting for notes and bonds is quite similar. **Like a bond, a note is valued at the present value of its future interest and principal cash flows. The company amortizes any discount or premium over the life of the note,** just as it would the discount or premium on a bond.<sup>10</sup> Companies compute the present value of an **interest-bearing note**, record its issuance, and amortize any discount or premium and accrual of interest in the same way that they do for bonds (as shown on pages 692–700 of this chapter).

As you might expect, accounting for long-term notes payable parallels accounting for long-term notes receivable as was presented in Chapter 7.

### NOTES ISSUED AT FACE VALUE

In Chapter 7, we discussed the recognition of a \$10,000, three-year note Scandinavian Imports issued at face value to Bigelow Corp. In this transaction, the stated rate and the effective rate were both 10 percent. The time diagram and present value computation on page 332 of Chapter 7 (see Illustration 7-9) for Bigelow Corp. would be the same for the issuer of the note, Scandinavian Imports, in recognizing a note payable. Because the present value of the note and its face value are the same, \$10,000, Scandinavian would recognize no premium or discount. It records the issuance of the note as follows.

Cash	10,000	
Notes Payable		10,000

<sup>10</sup>All payables that represent commitments to pay money at a determinable future date are subject to present value measurement techniques, except for the following specifically excluded types:

1. Normal accounts payable due within one year.
2. Security deposits, retainages, advances, or progress payments.
3. Transactions between parent and subsidiary.
4. Obligations payable at some indeterminable future date. [4]

Scandinavian Imports would recognize the interest incurred each year as follows.

Interest Expense	1,000	
Cash		1,000

## NOTES NOT ISSUED AT FACE VALUE

### Zero-Interest-Bearing Notes

If a company issues a zero-interest-bearing (non-interest-bearing) note<sup>11</sup> solely for cash, it measures the note’s present value by the cash received. The implicit interest rate is the **rate that equates the cash received with the amounts to be paid in the future**. The issuing company records the difference between the face amount and the present value (cash received) as a **discount** and **amortizes that amount to interest expense over the life of the note**.

An example of such a transaction is Beneficial Corporation’s offering of \$150 million of zero-coupon notes (deep-discount bonds) having an eight-year life. With a face value of \$1,000 each, these notes sold for \$327—a deep discount of \$673 each. The present value of each note is the cash proceeds of \$327. We can calculate the interest rate by determining the rate that equates the amount the investor currently pays with the amount to be received in the future. Thus, Beneficial amortizes the discount over the eight-year life of the notes using an effective interest rate of 15 percent.<sup>12</sup>

To illustrate the entries and the amortization schedule, assume that Turtle Cove Company issued the three-year, \$10,000, zero-interest-bearing note to Jeremiah Company illustrated on page 333 of Chapter 7 (notes receivable). The implicit rate that equated the total cash to be paid (\$10,000 at maturity) to the present value of the future cash flows (\$7,721.80 cash proceeds at date of issuance) was 9 percent. (The present value of \$1 for 3 periods at 9 percent is \$0.77218.) Illustration 14-11 shows the time diagram for the single cash flow.

**Calculator Solution for Effective Interest on Note:**

Inputs	Answer
N	8
I/YR	15
PV	-327
PMT	0
FV	1,000

**ILLUSTRATION 14-11**  
Time Diagram for Zero-Interest Note

Turtle Cove records issuance of the note as follows.

Cash	7,721.80	
Discount on Notes Payable	2,278.20	
Notes Payable		10,000.00

Turtle Cove amortizes the discount and recognizes interest expense annually using the **effective-interest method**. Illustration 14-12 (on page 705) shows the three-year discount amortization and interest expense schedule. (This schedule is similar to the note receivable schedule of Jeremiah Company in Illustration 7-11.)

<sup>11</sup>Although we use the term “note” throughout this discussion, the basic principles and methodology apply equally to other long-term debt instruments.

<sup>12</sup> $\$327 = \$1,000(PVF_{8,i})$

$$PVF_{8,i} = \frac{\$327}{\$1,000} = .327$$

.327 = 15% (in Table 6-2 locate .32690).

**SCHEDULE OF NOTE DISCOUNT AMORTIZATION**  
**EFFECTIVE-INTEREST METHOD**  
**0% NOTE DISCOUNTED AT 9%**

	Cash Paid	Interest Expense	Discount Amortized	Carrying Amount of Note
Date of issue				\$ 7,721.80
End of year 1	\$—	\$ 694.96 <sup>a</sup>	\$ 694.96 <sup>b</sup>	8,416.76 <sup>c</sup>
End of year 2	—	757.51	757.51	9,174.27
End of year 3	—	825.73 <sup>d</sup>	825.73	10,000.00
	<u>\$—</u>	<u>\$2,278.20</u>	<u>\$2,278.20</u>	

<sup>a</sup>\$7,721.80 × .09 = \$694.96<sup>c</sup>\$7,721.80 + \$694.96 = \$8,416.76<sup>b</sup>\$694.96 - 0 = \$694.96<sup>d</sup>5¢ adjustment to compensate for rounding

**ILLUSTRATION 14-12**  
Schedule of Note Discount  
Amortization

Turtle Cove records interest expense at the end of the first year using the effective-interest method as follows.

Interest Expense (\$7,721.80 × 9%)	694.96	
Discount on Notes Payable		694.96

The total amount of the discount, \$2,278.20 in this case, represents the expense that Turtle Cove Company will incur on the note over the three years.

### Interest-Bearing Notes

The zero-interest-bearing note above is an example of the extreme difference between the stated rate and the effective rate. In many cases, the difference between these rates is not so great.

Consider the example from Chapter 7 where Marie Co. issued for cash a \$10,000, three-year note bearing interest at 10 percent to Morgan Corp. The market rate of interest for a note of similar risk is 12 percent. Illustration 7-12 (page 334) shows the time diagram depicting the cash flows and the computation of the present value of this note. In this case, because the effective rate of interest (12%) is greater than the stated rate (10%), the present value of the note is less than the face value. That is, the note is exchanged at a **discount**. Marie Co. records the issuance of the note as follows.

Cash	9,520	
Discount on Notes Payable	480	
Notes Payable		10,000

Marie Co. then amortizes the discount and recognizes interest expense annually using the **effective-interest method**. Illustration 14-13 shows the three-year discount amortization and interest expense schedule.

**SCHEDULE OF NOTE DISCOUNT AMORTIZATION**  
**EFFECTIVE-INTEREST METHOD**  
**10% NOTE DISCOUNTED AT 12%**

	Cash Paid	Interest Expense	Discount Amortized	Carrying Amount of Note
Date of issue				\$ 9,520
End of year 1	\$1,000 <sup>a</sup>	\$1,142 <sup>b</sup>	\$142 <sup>c</sup>	9,662 <sup>d</sup>
End of year 2	1,000	1,159	159	9,821
End of year 3	1,000	1,179	179	10,000
	<u>\$3,000</u>	<u>\$3,480</u>	<u>\$480</u>	

<sup>a</sup>\$10,000 × 10% = \$1,000<sup>c</sup>\$1,142 - \$1,000 = \$142<sup>b</sup>\$9,520 × 12% = \$1,142<sup>d</sup>\$9,520 + \$142 = \$9,662

**ILLUSTRATION 14-13**  
Schedule of Note Discount  
Amortization

Marie Co. records payment of the annual interest and amortization of the discount for the first year as follows (amounts per amortization schedule).

Interest Expense	1,142	
Discount on Notes Payable		142
Cash		1,000

When the present value exceeds the face value, Marie Co. exchanges the note at a premium. It does so by recording the premium as a credit and amortizing it using the effective-interest method over the life of the note as annual reductions in the amount of interest expense recognized.

## SPECIAL NOTES PAYABLE SITUATIONS

### Notes Issued for Property, Goods, or Services

Sometimes, companies may receive property, goods, or services in exchange for a note payable. When exchanging the debt instrument for property, goods, or services in a bargained transaction entered into at arm's length, the stated interest rate is presumed to be fair unless:

1. No interest rate is stated, or
2. The stated interest rate is unreasonable, or
3. The stated face amount of the debt instrument is materially different from the current cash sales price for the same or similar items or from the current fair value of the debt instrument.

In these circumstances the company measures the present value of the debt instrument by the fair value of the property, goods, or services or by an amount that reasonably approximates the fair value of the note. [5] If there is **no stated rate of interest, the amount of interest is the difference between the face amount of the note and the fair value of the property.**

For example, assume that Scenic Development Company sells land having a cash sale price of \$200,000 to Health Spa, Inc. In exchange for the land, Health Spa gives a five-year, \$293,866, zero-interest-bearing note. The \$200,000 cash sale price represents the present value of the \$293,866 note discounted at 8 percent for five years. Should both parties record the transaction on the sale date at the face amount of the note, which is \$293,866? No—if they did, Health Spa's Land account and Scenic's sales would be overstated by \$93,866 (the interest for five years at an effective rate of 8 percent). Similarly, interest revenue to Scenic and interest expense to Health Spa for the five-year period would be understated by \$93,866.

Because the difference between the cash sale price of \$200,000 and the \$293,866 face amount of the note represents interest at an effective rate of 8 percent, the companies' transaction is recorded at the exchange date as follows.

**ILLUSTRATION 14-14**  
Entries for Noncash Note Transactions

Health Spa, Inc. (Buyer)		Scenic Development Company (Seller)	
Land	200,000	Notes Receivable	293,866
Discount on Notes Payable	93,866	Discount on Notes Rec.	93,866
Notes Payable	293,866	Sales	200,000

During the five-year life of the note, Health Spa amortizes annually a portion of the discount of \$93,866 as a charge to interest expense. Scenic Development records interest revenue totaling \$93,866 over the five-year period by also amortizing the discount. The effective-interest method is required, unless the results obtained from using another method are not materially different from those that result from the effective-interest method.

### Choice of Interest Rate

In note transactions, the effective or market interest rate is either evident or determinable by other factors involved in the exchange, such as the fair value of what is given or received. But, if a company cannot determine the fair value of the property, goods, services, or other rights, and if the note has no ready market, the problem of determining the present value of the note is more difficult. To estimate the present value of a note under such circumstances, a company must approximate an applicable interest rate that may differ from the stated interest rate. This process of interest-rate approximation is called **imputation**, and the resulting interest rate is called an **imputed interest rate**.

The prevailing rates for similar instruments of issuers with similar credit ratings affect the choice of a rate. Other factors such as restrictive covenants, collateral, payment schedule, and the existing prime interest rate also play a part. Companies determine the imputed interest rate when they issue a note; any subsequent changes in prevailing interest rates are ignored.

To illustrate, assume that on December 31, 2010, Wunderlich Company issued a promissory note to Brown Interiors Company for architectural services. The note has a face value of \$550,000, a due date of December 31, 2015, and bears a stated interest rate of 2 percent, payable at the end of each year. Wunderlich cannot readily determine the fair value of the architectural services, nor is the note readily marketable. On the basis of Wunderlich’s credit rating, the absence of collateral, the prime interest rate at that date, and the prevailing interest on Wunderlich’s other outstanding debt, the company imputes an 8 percent interest rate as appropriate in this circumstance. Illustration 14-15 shows the time diagram depicting both cash flows.

**ILLUSTRATION 14-15**  
Time Diagram for Interest-Bearing Note

The present value of the note and the imputed fair value of the architectural services are determined as follows.

Face value of the note		\$550,000
Present value of \$550,000 due in 5 years at 8% interest payable annually (Table 6-2); $FV(PVF_{5,8\%})$ ; $(\$550,000 \times .68058)$	\$374,319	
Present value of \$11,000 interest payable annually for 5 years at 8%; $R(PVF-OA_{5,8\%})$ ; $(\$11,000 \times 3.99271)$	<u>43,920</u>	
Present value of the note		<u>418,239</u>
Discount on notes payable		<u><u>\$131,761</u></u>

**ILLUSTRATION 14-16**  
Computation of Imputed Fair Value and Note Discount

Wunderlich records issuance of the note in payment for the architectural services as follows.

December 31, 2010	
Building (or Construction in Process)	418,239
Discount on Notes Payable	131,761
Notes Payable	550,000

The five-year amortization schedule appears below.

**ILLUSTRATION 14-17**  
Schedule of Discount  
Amortization Using  
Imputed Interest Rate

	<u>\$55,000</u>	<u>\$186,761</u>	<u>\$131,761</u>	
	<sup>a</sup> \$550,000 × 2% = \$11,000	<sup>d</sup> \$418,239 + \$22,459 = \$440,698		
	<sup>b</sup> \$418,239 × 8% = \$33,459	<sup>e</sup> \$3 adjustment to compensate for rounding.		
	<sup>c</sup> \$33,459 – \$11,000 = \$22,459			

Wunderlich records payment of the first year's interest and amortization of the discount as follows.

December 31, 2011		
Interest Expense	33,459	
Discount on Notes Payable		22,459
Cash		11,000

## MORTGAGE NOTES PAYABLE

The most common form of long-term notes payable is a mortgage note payable. A **mortgage note payable** is a promissory note secured by a document called a mortgage that pledges title to property as security for the loan. Individuals, proprietorships, and partnerships use mortgage notes payable more frequently than do corporations. (Corporations usually find that bond issues offer advantages in obtaining large loans.)

The borrower usually receives cash for the face amount of the mortgage note. In that case, the face amount of the note is the true liability, and no discount or premium is involved. When the lender assesses "points," however, the total amount received by the borrower is less than the face amount of the note.<sup>13</sup> Points raise the effective interest rate above the rate specified in the note. A **point** is 1 percent of the face of the note.

For example, assume that Harrick Co. borrows \$1,000,000, signing a 20-year mortgage note with a stated interest rate of 10.75 percent as part of the financing for a new plant. If Associated Savings demands 4 points to close the financing, Harrick will receive 4 percent less than \$1,000,000—or \$960,000—but it will be obligated to repay the entire \$1,000,000 at the rate of \$10,150 per month. Because Harrick received only \$960,000, and must repay \$1,000,000, its effective interest rate is increased to approximately 11.3 percent on the money actually borrowed.

On the balance sheet, Harrick should report the mortgage note payable as a liability using a title such as "Mortgage Notes Payable" or "Notes Payable—Secured," with a brief disclosure of the property pledged in notes to the financial statements.

Mortgages may be payable in full at maturity or in installments over the life of the loan. If payable at maturity, Harrick classifies its mortgage payable as a long-term liability on the balance sheet until such time as the approaching maturity date

<sup>13</sup>Points, in mortgage financing, are analogous to the original issue discount of bonds.

warrants showing it as a current liability. If it is payable in installments, Harrick shows the current installments due as current liabilities, with the remainder as a long-term liability.

Lenders have partially replaced the traditional **fixed-rate mortgage** with alternative mortgage arrangements. Most lenders offer **variable-rate mortgages** (also called *floating-rate* or *adjustable-rate* mortgages) featuring interest rates tied to changes in the fluctuating market rate. Generally the variable-rate lenders adjust the interest rate at either one- or three-year intervals, pegging the adjustments to changes in the prime rate or the U.S. Treasury bond rate.

## SECTION 3 • REPORTING AND ANALYZING LONG-TERM DEBT

Reporting of long-term debt is one of the most controversial areas in financial reporting. Because long-term debt has a significant impact on the cash flows of the company, reporting requirements must be substantive and informative. One problem is that the definition of a liability established in *Concepts Statement No. 6* and the recognition criteria established in *Concepts Statement No. 5* are sufficiently imprecise that some continue to argue that certain obligations need not be reported as debt.

### OFF-BALANCE-SHEET FINANCING

What do **Krispy Kreme**, **Cisco**, **Enron**, and **Adelphia Communications** have in common? They all have been accused of using off-balance-sheet financing to minimize the reporting of debt on their balance sheets. **Off-balance-sheet financing** is an attempt to borrow monies in such a way to prevent recording the obligations. It has become an issue of extreme importance. Many allege that Enron, in one of the largest corporate failures on record, hid a considerable amount of its debt off the balance sheet. As a result, any company that uses off-balance-sheet financing today risks investors dumping their stock. Consequently (as discussed in the opening story), their share price will suffer. Nevertheless, a considerable amount of off-balance-sheet financing continues to exist. As one writer noted, “The basic drives of humans are few: to get enough food, to find shelter, and to keep debt off the balance sheet.”

#### Objective • 7

Explain the reporting of off-balance-sheet financing arrangements.

### Different Forms

Off-balance-sheet financing can take many different forms:

1. **Non-Consolidated Subsidiary:** Under GAAP, a parent company does not have to consolidate a subsidiary company that is less than 50 percent owned. In such cases, the parent therefore does not report the assets and liabilities of the subsidiary. All the parent reports on its balance sheet is the investment in the subsidiary. As a result, users of the financial statements may not understand that the subsidiary has considerable debt for which the parent may ultimately be liable if the subsidiary runs into financial difficulty.
2. **Special Purpose Entity (SPE):** A company creates a **special purpose entity** to perform a special project. To illustrate, assume that Clarke Company decides to build a new factory. However, management does not want to report the plant or the borrowing used to fund the construction on its balance sheet. It therefore creates

an SPE, the purpose of which is to build the plant. (This arrangement is called a **project financing arrangement**.) The SPE finances and builds the plant. In return, Clarke guarantees that it or some outside party will purchase all the products produced by the plant. (Some refer to this as a **take-or-pay contract**.) As a result, Clarke might not report the asset or liability on its books. The accounting rules in this area are complex; we discuss the accounting for SPEs in Appendix 17B.

3. **Operating Leases:** Another way that companies keep debt off the balance sheet is by leasing. Instead of owning the assets, companies lease them. Again, by meeting certain conditions, the company has to report only rent expense each period and to provide note disclosure of the transaction. Note that SPEs often use leases to accomplish off-balance-sheet treatment. We discuss accounting for lease transactions extensively in Chapter 21.

## Rationale

Why do companies engage in off-balance-sheet financing? A major reason is that many believe that **removing debt enhances the quality of the balance sheet** and permits credit to be obtained more readily and at less cost.

Second, loan covenants often limit the amount of debt a company may have. As a result, the company uses off-balance-sheet financing, because **these types of commitments might not be considered in computing the debt limitation**.

Third, some argue that the asset side of the balance sheet is severely understated. For example, companies that use LIFO costing for inventories and depreciate assets on an accelerated basis will often have carrying amounts for inventories and property, plant, and equipment that are much lower than their fair values. As an offset to these lower values, some believe that part of the debt does not have to be reported. In other words, **if companies report assets at fair values**, less pressure would undoubtedly exist for off-balance-sheet financing arrangements.

Whether the arguments above have merit is debatable. The general idea of “out of sight, out of mind” may not be true in accounting. Many users of financial statements indicate that they factor these off-balance-sheet financing arrangements into their computations when assessing debt to equity relationships. Similarly, many loan covenants also attempt to account for these complex arrangements. Nevertheless, many companies still believe that benefits will accrue if they omit certain obligations from the balance sheet.

As a response to off-balance-sheet financing arrangements, the FASB has increased disclosure (note) requirements. This response is consistent with an “efficient markets” philosophy: the important question is not whether the presentation is off-balance-sheet or not, but whether the items are disclosed at all. In addition, the SEC, in response to the Sarbanes-Oxley Act of 2002, now requires companies to provide related information in their management discussion and analysis sections. Specifically, companies must disclose (1) all contractual obligations in a tabular format and (2) contingent liabilities and commitments in either a textual or tabular format.<sup>14</sup>

We believe that recording more obligations on the balance sheet will enhance financial reporting. Given the problems with companies such as **Enron**, **Dynegy**, **Williams Company**, **Adelphia Communications**, and **Calpine**, and the Sarbanes-Oxley requirements, we expect that less off-balance-sheet financing will occur in the future.

<sup>14</sup>It is unlikely that the FASB will be able to stop all types of off-balance-sheet transactions. Financial engineering is the Holy Grail of Wall Street. Developing new financial instruments and arrangements to sell and market to customers is not only profitable, but also adds to the prestige of the investment firms that create them. Thus, new financial products will continue to appear that will test the ability of the FASB to develop appropriate accounting standards for them.

**OBLIGATED**

The off-balance-sheet world is slowly but surely becoming more on-balance-sheet. New interpretations on guarantees (discussed in Chapter 13) and variable interest entities (discussed in Appendix 17B) are doing their part to increase the amount of debt reported on corporate balance sheets.

In addition, the SEC recently issued a rule that requires companies to disclose off-balance-sheet arrangements and contractual obligations that currently have, or are reasonably likely to have, a material future effect on the companies' financial condition. Companies now must include a tabular disclosure (following a prescribed format) in the management discussion and analysis section of the annual report. Presented below is **Best Buy's** tabular disclosure of its contractual obligations.

*What do the numbers mean?*

**Best Buy Co.  
Contractual Obligations**

The following table presents information regarding our contractual obligations by fiscal year (\$ in millions):

Contractual Obligations	Total	Payments due by period			
		Less than 1 year	1–3 years	3–5 years	More than 5 years
Short-term debt obligations	\$ 41	\$ 41	\$ 0	\$ 0	\$ 0
Long-term debt obligations	414	2	9	403	0
Capital lease obligations	24	3	6	2	13
Financing lease obligations	171	14	30	33	94
Interest payments	208	25	38	33	112
Operating lease obligations	6,668	741	1,387	1,224	3,316
Purchase obligations	2,198	1,113	775	291	19
Deferred compensation	75	—	—	—	—
<b>Total</b>	<b>\$9,799</b>	<b>\$1,939</b>	<b>\$2,245</b>	<b>\$1,986</b>	<b>\$3,554</b>

Note: For additional information refer to Note 5, Debt; Note 8, Leases; and Note 12, Contingencies and Commitments, in the Notes to Consolidated Financial Statements.

**INTERNATIONAL INSIGHT**

There is no comparable institution to the SEC in international securities markets. As a result, many international companies (those not registered with the SEC) are not required to provide disclosures such as those related to contractual obligations.

**Enron's** abuse of off-balance-sheet financing to hide debt was shocking and inappropriate. One silver lining in the Enron debacle however is that the standard-setting bodies in the accounting profession are now providing increased guidance on companies' reporting of contractual obligations. We believe the new SEC rule which requires companies to report their obligations over a period of time will be extremely useful to the investment community.

## PRESENTATION AND ANALYSIS OF LONG-TERM DEBT

### Presentation of Long-Term Debt

Companies that have large amounts and numerous issues of long-term debt frequently report only one amount in the balance sheet, supported with comments and schedules in the accompanying notes. Long-term debt that **matures within one year** should be reported as a current liability, unless using noncurrent assets to accomplish retirement. If the company plans to refinance debt, convert it into stock, or retire it from a bond retirement fund, it should continue to report the debt as noncurrent. However, the company should disclose the method it will use in its liquidation. [6], [7]

**Objective 8**

Indicate how to present and analyze long-term debt.

Note disclosures generally indicate the nature of the liabilities, maturity dates, interest rates, call provisions, conversion privileges, restrictions imposed by the creditors, and assets designated or pledged as security. Companies should show any assets pledged as security for the debt in the assets section of the balance sheet. The fair value

of the long-term debt should also be disclosed if it is practical to estimate fair value. Finally, companies must disclose future payments for sinking fund requirements and maturity amounts of long-term debt during each of the next five years. These disclosures aid financial statement users in evaluating the amounts and timing of future cash flows. Illustration 14-18 shows an example of the type of information provided for **Best Buy Co.** Note that if the company has any off-balance-sheet financing, it must provide extensive note disclosure. [8]

**ILLUSTRATION 14-18**

Long-Term Debt Disclosure

**Best Buy Co.**

(dollars in millions)

	Mar. 3, 2007	Feb. 25, 2006
Total current assets	\$9,081	\$7,985
Current liabilities		
Accounts payable	\$3,934	\$3,234
Unredeemed gift card liabilities	496	469
Accrued compensation and related expenses	332	354
Accrued liabilities	990	878
Accrued income taxes	489	703
Short-term debt	41	—
Current portion of long-term debt	19	418
Total current liabilities	6,301	6,056
Long-term liabilities	443	373
Long-term debt	590	178
<b>5. Debt (in part)</b>	<b>Mar. 3,</b>	<b>Feb. 25,</b>
	<b>2007</b>	<b>2006</b>
Convertible subordinated debentures, unsecured, due 2022, interest rate 2.25%	\$402	\$402
Financing lease obligations, due 2009 to 2023, interest rates ranging from 3.0% to 6.5%	171	157
Capital lease obligations, due 2008 to 2026, interest rates ranging from 1.8% to 8.0%	24	27
Other debt, due 2010, interest rate 8.8%	12	10
Total debt	609	596
Less: Current portion	(19)	(418)
Total long-term debt	<u>\$590</u>	<u>\$178</u>

Certain debt is secured by property and equipment with a net book value of \$80 and \$41 at March 3, 2007, and February 25, 2006, respectively.

At March 3, 2007, the future maturities of long-term debt, including capitalized leases, consisted of the following:

Fiscal Year	
2008	\$ 19
2009	18
2010	27
2011	18
2012	420
Thereafter	107
	<u>\$609</u>

The fair value of debt approximated \$683 and \$693 at March 3, 2007, and February 25, 2006, respectively, based on the ask prices quoted from external sources, compared with carrying values of \$650 and \$596, respectively.

## Analysis of Long-Term Debt

Long-term creditors and stockholders are interested in a company's long-run solvency, particularly its ability to pay interest as it comes due and to repay the face value of the debt at maturity. Debt to total assets and times interest earned are two ratios that provide information about debt-paying ability and long-run solvency.

### Debt to Total Assets Ratio

The **debt to total assets ratio** measures the percentage of the total assets provided by creditors. To compute it, divide total debt (both current and long-term liabilities) by total assets, as Illustration 14-19 shows.

$$\text{Debt to total assets} = \frac{\text{Total debt}}{\text{Total assets}}$$

**ILLUSTRATION 14-19**  
Computation of Debt to Total Assets Ratio

The higher the percentage of debt to total assets, the greater the risk that the company may be unable to meet its maturing obligations.

### Times Interest Earned Ratio

The **times interest earned ratio** indicates the company's ability to meet interest payments as they come due. As shown in Illustration 14-20, it is computed by dividing income before interest expense and income taxes by interest expense.

$$\text{Times interest earned} = \frac{\text{Income before income taxes and interest expense}}{\text{Interest expense}}$$

**ILLUSTRATION 14-20**  
Computation of Times Interest Earned Ratio

To illustrate these ratios, we use data from **Best Buy's** 2007 annual report. Best Buy has total liabilities of \$7,369 million, total assets of \$13,570 million, interest expense of \$31 million, income taxes of \$752 million, and net income of \$1,377 million. We compute Best Buy's debt to total assets and times interest earned ratios as shown in Illustration 14-21.

$$\begin{aligned} \text{Debt to total assets} &= \frac{\$7,369}{\$13,570} = 54.3\% \\ \text{Times interest earned} &= \frac{(\$1,377 + \$752 + \$31)}{\$31} = 70 \text{ times} \end{aligned}$$

**ILLUSTRATION 14-21**  
Computation of Long-Term Debt Ratios for Best Buy

Even though Best Buy has a relatively high debt to total assets percentage of 54.3 percent, its interest coverage of 70 times indicates it can easily meet its interest payments as they come due.

You will want to read the **CONVERGENCE CORNER** on page 714

For discussion of how international convergence efforts relate to liabilities.

# CONVERGENCE CORNER

## LIABILITIES

iGAAP and U.S. GAAP have similar definitions for liabilities. iGAAP related to reporting and recognition of liabilities is found in *IAS 1* (“Presentation of Financial Statements”) and *IAS 37* (“Provisions, Contingent Liabilities, and Contingent Assets”).

### RELEVANT FACTS

- Similar to U.S. practice, iGAAP requires that companies present current and noncurrent liabilities on the face of the balance sheet, with current liabilities generally presented in order of liquidity.
- Under iGAAP, the measurement of a provision related to a contingency is based on the best estimate of the expenditure required to settle the obligation. If a range of estimates is predicted and no amount in the range is more likely than any other amount in the range, the “mid-point” of the range is used to measure the liability. In U.S. GAAP, the minimum amount in a range is used.
- Both GAAPs prohibit the recognition of liabilities for future losses. However, iGAAP permits recognition of a restructuring liability, once a company has committed to a restructuring plan. U.S. GAAP has additional criteria (i.e., related to communicating the plan to employees) before a restructuring liability can be established.
- iGAAP and U.S. GAAP are similar in the treatment of asset retirement obligations (AROs). However, the recognition criteria for an ARO are more stringent under U.S. GAAP: The ARO is not recognized unless there is a present legal obligation and the fair value of the obligation can be reasonably estimated.
- iGAAP and U.S. GAAP are similar in their treatment of contingencies. However, the criteria for recognizing contingent assets are less stringent in the U.S. Under U.S. GAAP, contingent assets for insurance recoveries are recognized if probable; iGAAP requires the recovery be “virtually certain” before recognition of an asset is permitted.

### ABOUT THE NUMBERS

As indicated, iGAAP and U.S. GAAP differ as the criteria to be used in recording restructuring liabilities. The following disclosure by **Nestlé Group** in its 2006 annual report reflects application of iGAAP to a restructuring situation.

Notes to the Financial Statements	
<b>23 provisions (in part)</b> (in millions of CHF)	
	<u>Restructuring</u>
At 1 January, 2006	950
Provisions made in the period	437
Amounts used	(326)
Unused amounts reversed	(34)
Modification—translation, consolidation	<u>7</u>
At 31 December, 2006	<u>1,034</u>
<b>Restructuring</b>	
Restructuring provisions arise from a number of projects across the Group. These include plans to optimise industrial manufacturing capacities by closing inefficient production facilities and reorganising others, mainly in Europe. . . . Restructuring provisions are expected to result in future cash outflows when implementing the plans (usually over the following two to three years) and are consequently not discounted.	

As indicated in the chapter, the establishment of restructuring liabilities for future costs can be used as a “cookie jar” to manage net income. That is, companies can set up a liability and related expense charge in one period to reduce income and then reduce the liability in future periods to increase net income. For example, when Nestlé makes the following entry for the unused amounts reversed in 2006, it is able to increase its income by 34 million CHF.

Restructuring Liability	34
Gain from Reversal of Restructuring Liability	34

We are not implying that Nestlé is using its reserve in inappropriate ways. Our point is that less-stringent iGAAP rules for establishing restructuring liabilities could be used as an earnings management tool.

### ON THE HORIZON

As indicated in the Convergence Corner for Chapter 2, the IASB and FASB are working on a conceptual framework project, part of which will examine the definition of a liability. In addition, this project will address the difference in measurements used between iGAAP and U.S. GAAP for contingent liabilities. Also, in its project on business combinations, the IASB is considering changing its definition of a contingent asset to converge with U.S. GAAP.

## SUMMARY OF LEARNING OBJECTIVES

**1** Describe the formal procedures associated with issuing long-term debt. Incurring long-term debt is often a formal procedure. The bylaws of corporations usually require approval by the board of directors and the stockholders before corporations can issue bonds or can make other long-term debt arrangements. Generally, long-term debt has various covenants or restrictions. The covenants and other terms of the agreement between the borrower and the lender are stated in the bond indenture or note agreement.

**2** Identify various types of bond issues. Various types of bond issues are: (1) Secured and unsecured bonds. (2) Term, serial, and callable bonds. (3) Convertible, commodity-backed, and deep-discount bonds. (4) Registered and bearer (coupon) bonds. (5) Income and revenue bonds. The variety in the types of bonds results from attempts to attract capital from different investors and risk takers and to satisfy the cash flow needs of the issuers.

**3** Describe the accounting valuation for bonds at date of issuance. The investment community values a bond at the present value of its future cash flows, which consist of interest and principal. The rate used to compute the present value of these cash flows is the interest rate that provides an acceptable return on an investment commensurate with the issuer's risk characteristics. The interest rate written in the terms of the bond indenture and ordinarily appearing on the bond certificate is the stated, coupon, or nominal rate. The issuer of the bonds sets the rate and expresses it as a percentage of the face value (also called the par value, principal amount, or maturity value) of the bonds. If the rate employed by the buyers differs from the stated rate, the present value of the bonds computed by the buyers will differ from the face value of the bonds. The difference between the face value and the present value of the bonds is either a discount or premium.

**4** Apply the methods of bond discount and premium amortization. The discount (premium) is amortized and charged (credited) to interest expense over the life of the bonds. Amortization of a discount increases bond interest expense, and amortization of a premium decreases bond interest expense. The profession's preferred procedure for amortization of a discount or premium is the effective-interest method. Under the effective-interest method, (1) bond interest expense is computed by multiplying the carrying value of the bonds at the beginning of the period by the effective-interest rate; then, (2) the bond discount or premium amortization is determined by comparing the bond interest expense with the interest to be paid.

**5** Describe the accounting for the extinguishment of debt. At the time of reacquisition of long-term debt, the unamortized premium or discount and any costs of issue applicable to the debt must be amortized up to the reacquisition date. The reacquisition price is the amount paid on extinguishment or redemption before maturity, including any call premium and expense of reacquisition. On any specified date, the net carrying amount of the debt is the amount payable at maturity, adjusted for unamortized premium or discount and issue costs. Any excess of the net carrying amount over the reacquisition price is a gain from extinguishment. The excess of the reacquisition price over the net carrying amount is a loss from extinguishment. Gains and losses on extinguishments are recognized currently in income.

**6** Explain the accounting for long-term notes payable. Accounting procedures for notes and bonds are similar. Like a bond, a note is valued at the present value of its expected future interest and principal cash flows, with any discount or premium being similarly amortized over the life of the note. Whenever the face amount of the note does not reasonably represent the present value of the consideration in the exchange,

## KEY TERMS

bearer (coupon) bonds, 691  
bond discount, 693  
bond indenture, 690  
bond premium, 693  
callable bonds, 691  
carrying value, 697

term bonds, 691  
times interest earned ratio, 713  
zero-interest debenture bonds, 691

a company must evaluate the entire arrangement in order to properly record the exchange and the subsequent interest.

**7** Explain the reporting of off-balance-sheet financing arrangements. Off-balance-sheet financing is an attempt to borrow funds in such a way to prevent recording obligations. Examples of off-balance-sheet arrangements are (1) non-consolidated subsidiaries, (2) special purpose entities, and (3) operating leases.

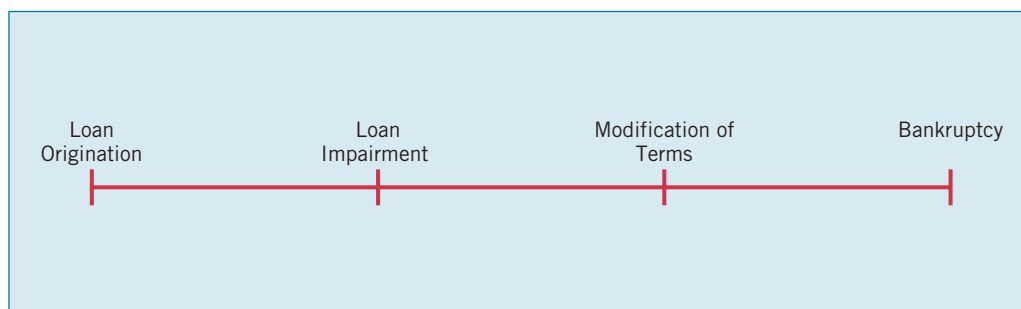

**8** Indicate how to present and analyze long-term debt. Companies that have large amounts and numerous issues of long-term debt frequently report only one amount in the balance sheet and support this with comments and schedules in the accompanying notes. Any assets pledged as security for the debt should be shown in the assets section of the balance sheet. Long-term debt that matures within one year should be reported as a current liability, unless retirement is to be accomplished with other than current assets. If a company plans to refinance the debt, convert it into stock, or retire it from a bond retirement fund, it should continue to report it as noncurrent, accompanied with a note explaining the method it will use in the debt's liquidation. Disclosure is required of future payments for sinking fund requirements and maturity amounts of long-term debt during each of the next five years. Debt to total assets and times interest earned are two ratios that provide information about debt-paying ability and long-run solvency.

## APPENDIX 14A

## TROUBLED-DEBT RESTRUCTURINGS

Practically every day, the *Wall Street Journal* runs a story about some company in financial difficulty. Notable recent examples are **Delphi**, **Northwest Airlines**, and **United Airlines**. In most troubled-debt situations, the creditor usually first recognizes a loss on impairment. Subsequently, the creditor either modifies the terms of the loan or the debtor settles the loan on terms unfavorable to the creditor. In unusual cases, the creditor forces the debtor into bankruptcy in order to ensure the highest possible collection on the loan. Illustration 14A-1 shows this continuum.

**ILLUSTRATION 14A-1**  
Usual Progression in  
Troubled-Debt Situations

To illustrate, consider the case of **Huffy Corp.**, a name that adorned the first bicycle of many American children. Before its bankruptcy, Huffy's creditors likely recognized a loss on impairment. Subsequently, the creditors either modified the terms of the loan or settled it on terms unfavorable to the creditor. Finally, the creditors forced Huffy into bankruptcy, and the suppliers received a 30 percent equity stake in Huffy. These terms helped ensure the highest possible collection on the Huffy loan.

We discussed the accounting for loan impairments in Appendix 7B. The purpose of this appendix is to explain how creditors and debtors report information in financial statements related to troubled-debt restructurings.

A **troubled-debt restructuring** occurs when a creditor “for economic or legal reasons related to the debtor’s financial difficulties grants a concession to the debtor that it would not otherwise consider.” [9] Thus a troubled-debt restructuring does not apply to modifications of a debt obligation that reflect general economic conditions leading to a reduced interest rate. Nor does it apply to the refunding of an old debt with new debt having an effective interest rate approximately equal to that of similar debt issued by nontroubled debtors.

A troubled-debt restructuring involves one of two basic types of transactions:

1. Settlement of debt at less than its carrying amount.
2. Continuation of debt with a modification of terms.

### Objective 9

Describe the accounting for a debt restructuring.

## SETTLEMENT OF DEBT

In addition to using cash, settling a debt obligation can involve either a transfer of non-cash assets (real estate, receivables, or other assets) or the issuance of the debtor’s stock. In these situations, **the creditor should account for the noncash assets or equity interest received at their fair value.**

The debtor must determine the excess of the carrying amount of the payable over the fair value of the assets or equity transferred (gain). Likewise, the creditor must determine the excess of the receivable over the fair value of those same assets or equity interests transferred (loss). The debtor recognizes a gain equal to the amount of the excess. The creditor normally charges the excess (loss) against Allowance for Doubtful Accounts. In addition, the debtor recognizes a gain or loss on disposition of assets to the extent that the fair value of those assets differs from their carrying amount (book value).

### Transfer of Assets

Assume that American City Bank loaned \$20,000,000 to Union Mortgage Company. Union Mortgage, in turn, invested these monies in residential apartment buildings. However, because of low occupancy rates, it cannot meet its loan obligations. American City Bank agrees to accept from Union Mortgage real estate with a fair value of \$16,000,000 in full settlement of the \$20,000,000 loan obligation. The real estate has a carrying value of \$21,000,000 on the books of Union Mortgage. American City Bank (creditor) records this transaction as follows.

Real Estate	16,000,000	
Allowance for Doubtful Accounts	4,000,000	
Note Receivable from Union Mortgage		20,000,000

The bank records the real estate at fair value. Further, it makes a charge to the Allowance for Doubtful Accounts to reflect the bad debt write-off.

Union Mortgage (debtor) records this transaction as follows.

Note Payable to American City Bank	20,000,000	
Loss on Disposition of Real Estate	5,000,000	
Real Estate		21,000,000
Gain on Restructuring of Debt		4,000,000

Union Mortgage has a loss on the disposition of real estate in the amount of \$5,000,000 (the difference between the \$21,000,000 book value and the \$16,000,000 fair value). It should show this as an ordinary loss on the income statement. In addition, it has a gain on restructuring of debt of \$4,000,000 (the difference between the \$20,000,000 carrying amount of the note payable and the \$16,000,000 fair value of the real estate).

## Granting of Equity Interest

Assume that American City Bank agrees to accept from Union Mortgage 320,000 shares of common stock (\$10 par) that has a fair value of \$16,000,000, in full settlement of the \$20,000,000 loan obligation. American City Bank (creditor) records this transaction as follows.

Investment	16,000,000	
Allowance for Doubtful Accounts	4,000,000	
Note Receivable from Union Mortgage		20,000,000

It records the stock as an investment at the fair value at the date of restructure.

Union Mortgage (debtor) records this transaction as follows.

Note Payable to American City Bank	20,000,000	
Common Stock		3,200,000
Additional Paid-in Capital		12,800,000
Gain on Restructuring of Debt		4,000,000

It records the stock issued in the normal manner. It records the difference between the par value and the fair value of the stock as additional paid-in capital.

---

## MODIFICATION OF TERMS

In some cases, a debtor's serious short-run cash flow problems will lead it to request one or a combination of the following modifications:

1. Reduction of the stated interest rate.
2. Extension of the maturity date of the face amount of the debt.
3. Reduction of the face amount of the debt.
4. Reduction or deferral of any accrued interest.

The creditor's loss is based on expected cash flows discounted at the historical effective rate of the loan. **[10]** The debtor calculates its gain based on **undiscounted amounts**. As a consequence, **the gain recorded by the debtor will not equal the loss recorded by the creditor under many circumstances.**<sup>15</sup>

Two examples demonstrate the accounting for a troubled-debt restructuring by debtors and creditors:

1. The debtor does not record a gain.
2. The debtor does record a gain.

In both instances the creditor has a loss.

### Example 1—No Gain for Debtor

This example demonstrates a restructuring in which the debtor records no gain.<sup>16</sup> On December 31, 2009, Morgan National Bank enters into a debt restructuring agreement

<sup>15</sup>In response to concerns expressed about this nonsymmetric treatment, the FASB stated that it did not address debtor accounting because expansion of the scope of the statement would delay its issuance. By basing the debtor calculation on undiscounted amounts, the amount of gain (if any) recognized by the debtor is reduced at the time the modification of terms occurs. If fair value were used, the gain recognized would be greater. The result of this approach is to spread the unrecognized gain over the life of the new agreement. We believe that this accounting is inappropriate and hopefully will change as more fair value measurements are introduced into the financial statements.

<sup>16</sup>Note that the examples given for restructuring assume the creditor made no previous entries for impairment. In actuality it is likely that the creditor would have already made an entry when the loan initially became impaired. Restructuring would, therefore, simply require an adjustment of the initial estimated bad debt by the creditor. Recall, however, that the debtor makes no entry upon impairment.

with Resorts Development Company, which is experiencing financial difficulties. The bank restructures a \$10,500,000 loan receivable issued at par (interest paid to date) by:

1. Reducing the principal obligation from \$10,500,000 to \$9,000,000;
2. Extending the maturity date from December 31, 2009, to December 31, 2013; and
3. Reducing the interest rate from 12% to 8%.

**Debtor Calculations**

The total future cash flow, after restructuring of \$11,880,000 (\$9,000,000 of principal plus \$2,880,000 of interest payments<sup>17</sup>), exceeds the total pre-restructuring carrying amount of the debt of \$10,500,000. Consequently, **the debtor records no gain nor makes any adjustment** to the carrying amount of the payable. As a result, Resorts Development (debtor) makes no entry at the date of restructuring.

The debtor must compute a new effective interest rate in order to record interest expense in future periods. The new effective interest rate equates the present value of the future cash flows specified by the new terms with the pre-restructuring carrying amount of the debt. In this case, Resorts Development computes the new rate by relating the pre-restructure carrying amount (\$10,500,000) to the total future cash flow (\$11,880,000). The rate necessary to discount the total future cash flow (\$11,880,000), to a present value equal to the remaining balance (\$10,500,000), is 3.46613%.<sup>18</sup>

On the basis of the effective rate of 3.46613%, the debtor prepares the schedule shown in Illustration 14A-2.

RESORTS DEVELOPMENT CO. (DEBTOR)				
Date	Cash Paid (8%)	Interest Expense (3.46613%)	Reduction of Carrying Amount	Carrying Amount of Note
12/31/09				\$10,500,000
12/31/10	\$ 720,000 <sup>a</sup>	\$ 363,944 <sup>b</sup>	\$ 356,056 <sup>c</sup>	10,143,944
12/31/11	720,000	351,602	368,398	9,775,546
12/31/12	720,000	338,833	381,167	9,394,379
12/31/13	720,000	325,621	394,379	9,000,000
	<u>\$2,880,000</u>	<u>\$1,380,000</u>	<u>\$1,500,000</u>	

<sup>a</sup>\$720,000 = \$9,000,000 × .08  
<sup>b</sup>\$363,944 = \$10,500,000 × 3.46613%  
<sup>c</sup>\$356,056 = \$720,000 – \$363,944

**ILLUSTRATION 14A-2**  
Schedule Showing Reduction of Carrying Amount of Note

Calculator Solution for Interest Rate

	Inputs	Answer
N	4	
I/YR	?	3.466
PV	10,500,000	
PMT	-720,000	
FV	-9,000,000	

Thus, on December 31, 2010 (date of first interest payment after restructure), the debtor makes the following entry.

December 31, 2010		
Notes Payable	356,056	
Interest Expense	363,944	
Cash		720,000

<sup>17</sup>Total interest payments are: \$9,000,000 × .08 × 4 years = \$2,880,000.

<sup>18</sup>An accurate interest rate *i* can be found by using the formulas given at the tops of Tables 6-2 and 6-4 to set up the following equation.

$$\$10,500,000 = \frac{1}{(1+i)^4} \times \$9,000,000 + \frac{1 - \frac{1}{(1+i)^4}}{i} \times \$720,000$$

(from Table 6-2)                      (from Table 6-4)

Solving algebraically for *i*, we find that *i* = 3.46613%.

The debtor makes a similar entry (except for different amounts for debits to Notes Payable and Interest Expense) each year until maturity. At maturity, Resorts Development makes the following entry.

<b>December 31, 2013</b>			
	Notes Payable	9,000,000	
	Cash		9,000,000

**Creditor Calculations**

Morgan National Bank (creditor) must calculate its loss based on the expected future cash flows discounted at the historical effective rate of the loan. It calculates this loss as shown in Illustration 14A-3.

**ILLUSTRATION 14A-3**  
Computation of Loss to Creditor on Restructuring

Pre-restructure carrying amount	\$10,500,000
Present value of restructured cash flows:	
Present value of \$9,000,000 due in 4 years at 12%, interest payable annually (Table 6-2); $FV(PVF_{4,12\%})$ ; $(\$9,000,000 \times .63552)$	\$5,719,680
Present value of \$720,000 interest payable annually for 4 years at 12% (Table 6-4); $R(PVF-OA_{4,12\%})$ ; $(\$720,000 \times 3.03735)$	<u>2,186,892</u>
Present value of restructured cash flows	<u>7,906,572</u>
<b>Loss on restructuring</b>	<b><u>\$ 2,593,428</u></b>

As a result, Morgan National Bank records bad debt expense as follows (assuming no establishment of an allowance balance from recognition of an impairment).

Bad Debt Expense	2,593,428	
Allowance for Doubtful Accounts		2,593,428

In subsequent periods, Morgan National Bank reports interest revenue based on the historical effective rate. Illustration 14A-4 provides the following interest and amortization information.

**ILLUSTRATION 14A-4**  
Schedule of Interest and Amortization after Debt Restructuring

<b>MORGAN NATIONAL BANK (CREDITOR)</b>				
Date	Cash Received (8%)	Interest Revenue (12%)	Increase of Carrying Amount	Carrying Amount of Note
12/31/09				\$7,906,572
12/31/10	\$ 720,000 <sup>a</sup>	\$ 948,789 <sup>b</sup>	\$ 228,789 <sup>c</sup>	8,135,361
12/31/11	720,000	976,243	256,243	8,391,604
12/31/12	720,000	1,006,992	286,992	8,678,596
12/31/13	720,000	1,041,404 <sup>d</sup>	321,404 <sup>d</sup>	9,000,000
Total	<u>\$2,880,000</u>	<u>\$3,973,428</u>	<u>\$1,093,428</u>	

<sup>a</sup>\$720,000 = \$9,000,000 × .08  
<sup>b</sup>\$948,789 = \$7,906,572 × .12  
<sup>c</sup>\$228,789 = \$948,789 – \$720,000  
<sup>d</sup>\$28 adjustment to compensate for rounding.

On December 31, 2010, Morgan National Bank makes the following entry.

<b>December 31, 2010</b>			
	Cash	720,000	
	Allowance for Doubtful Accounts	228,789	
	Interest Revenue		948,789

The creditor makes a similar entry (except for different amounts debited to Allowance for Doubtful Accounts and credited to Interest Revenue) each year until maturity. At maturity, the company makes the following entry.

<b>December 31, 2013</b>		
Cash	9,000,000	
Allowance for Doubtful Accounts	1,500,000	
Notes Receivable		10,500,000

### Example 2—Gain for Debtor

If the pre-restructure carrying amount exceeds the total future cash flows as a result of a modification of the terms, the debtor records a gain. To illustrate, assume the facts in the previous example except that Morgan National Bank reduces the principal to \$7,000,000 (and extends the maturity date to December 31, 2013, and reduces the interest from 12% to 8%). The total future cash flow is now \$9,240,000 (\$7,000,000 of principal plus \$2,240,000 of interest<sup>19</sup>), which is \$1,260,000 (\$10,500,000 – \$9,240,000) less than the pre-restructure carrying amount of \$10,500,000.

Under these circumstances, Resorts Development (debtor) reduces the carrying amount of its payable \$1,260,000 and records a gain of \$1,260,000. On the other hand, Morgan National Bank (creditor) debits its Bad Debt Expense for \$4,350,444. Illustration 14A-5 shows this computation.

Pre-restructure carrying amount		\$10,500,000
Present value of restructured cash flows:		
Present value of \$7,000,000 due in 4 years at 12%, interest payable annually (Table 6-2); $FV(PVF_{4,12\%})$ ; $(\$7,000,000 \times .63552)$	\$4,448,640	
Present value of \$560,000 interest payable annually for 4 years at 12% (Table 6-4); $R(PVF-OA_{4,12\%})$ ; $(\$560,000 \times 3.03735)$	1,700,916	6,149,556
<b>Creditor's loss on restructuring</b>		<b><u>\$ 4,350,444</u></b>

**ILLUSTRATION 14A-5**  
Computation of Loss to Creditor on Restructuring

Illustration 14A-6 shows the entries to record the gain and loss on the debtor's and creditor's books at the date of restructure, December 31, 2009.

<b>December 31, 2009 (date of restructure)</b>			
<b>Resorts Development Co. (Debtor)</b>		<b>Morgan National Bank (Creditor)</b>	
Notes Payable	1,260,000	Bad Debt Expense	4,350,444
Gain on Restructuring of Debt	1,260,000	Allowance for Doubtful Accounts	4,350,444

**ILLUSTRATION 14A-6**  
Debtor and Creditor Entries to Record Gain and Loss on Note

For Resorts Development (debtor), because the new carrying value of the note (\$10,500,000 – \$1,260,000 = \$9,240,000) equals the sum of the undiscounted cash flows (\$9,240,000), the imputed interest rate is 0 percent. Consequently, all of the future cash flows reduce the principal balance, and the company recognizes no interest expense.

Morgan National reports the interest revenue in the same fashion as the previous example—that is, using the historical effective interest rate applied toward the newly discounted value of the note. Illustration 14A-7 (on page 722) shows interest computations.

<sup>19</sup>Total interest payments are:  $\$7,000,000 \times .08 \times 4 \text{ years} = \$2,240,000$ .

**ILLUSTRATION 14A-7**

Schedule of Interest and Amortization after Debt Restructuring

<b>MORGAN NATIONAL BANK (CREDITOR)</b>				
Date	Cash Received (8%)	Interest Revenue (12%)	Increase in Carrying Amount	Carrying Amount of Note
12/31/09				\$6,149,556
12/31/10	\$ 560,000 <sup>a</sup>	\$ 737,947 <sup>b</sup>	\$177,947 <sup>c</sup>	6,327,503
12/31/11	560,000	759,300	199,300	6,526,803
12/31/12	560,000	783,216	223,216	6,750,019
12/31/13	560,000	809,981 <sup>d</sup>	249,981 <sup>d</sup>	7,000,000
Total	<u>\$2,240,000</u>	<u>\$3,090,444</u>	<u>\$850,444</u>	

<sup>a</sup>\$560,000 = \$7,000,000 × .08  
<sup>b</sup>\$737,947 = \$6,149,556 × .12  
<sup>c</sup>\$177,947 = \$737,947 – \$560,000  
<sup>d</sup>\$21 adjustment to compensate for rounding.

The journal entries in Illustration 14A-8 demonstrate the accounting by debtor and creditor for periodic interest payments and final principal payment.

<b>Resorts Development Co. (Debtor)</b>		<b>Morgan National Bank (Creditor)</b>		
<b>December 31, 2010 (date of first interest payment following restructure)</b>				
Notes Payable	560,000	Cash	560,000	
Cash	560,000	Allowance for Doubtful Accounts	177,947	
		Interest Revenue		737,947
<b>December 31, 2011, 2012, and 2013 (dates of 2nd, 3rd, and last interest payments)</b>				
(Debit and credit same accounts as 12/31/10 using applicable amounts from appropriate amortization schedules.)				
<b>December 31, 2013 (date of principal payment)</b>				
Notes Payable	7,000,000	Cash	7,000,000	
Cash	7,000,000	Allowance for Doubtful Accounts	3,500,000	
		Notes Receivable		10,500,000

**ILLUSTRATION 14A-8**

Debtor and Creditor Entries to Record Periodic Interest and Final Principal Payments

**CONCLUDING REMARKS**

The accounting for troubled debt is complex because the accounting standards allow for use of different measurement standards to determine the loss or gain reported. In addition, the assets and liabilities reported are sometimes not stated at cost or fair value, but at amounts adjusted for certain events but not others. This cumbersome accounting demonstrates the need for adoption of a comprehensive fair-value model for financial instruments that is consistent with finance concepts for pricing these financial instruments.

**KEY TERM**

troubled-debt restructuring, 717

**SUMMARY OF LEARNING OBJECTIVE**

**LO 9 Describe the accounting for a debt restructuring.** There are two types of debt settlements: (1) transfer of noncash assets, and (2) granting of equity interest. Creditors and debtors record losses and gains on settlements based on fair values. For accounting purposes there are also two types of restructurings with continuation of debt with modified terms: (1) the carrying amount of debt is less than the future cash flows, and (2) the carrying amount of debt exceeds the total future cash flows. Creditors record losses on these restructurings based on the expected future cash flows discounted at the historical effective interest rate. The debtor determines its gain based on undiscounted cash flows.

### Exercises

Access the FASB Codification at <http://asc.fasb.org/home> to prepare responses to the following exercises. Provide Codification references for your responses.

**CE14-1** Access the glossary (Master Glossary) to answer the following.

- (a) What does the term “callable obligation” mean?
- (b) What is an imputed interest rate?
- (c) What is a long-term obligation?
- (d) What is the definition of “effective interest rate”?

**CE14-2** What guidance does the Codification provide on the disclosure of long-term obligations?

**CE14-3** Describe how a company would classify debt that includes covenants. What conditions must exist in order to depart from the normal rule?

**CE14-4** A company proposes to include in its SEC registration statement a balance sheet showing its subordinate debt as a portion of stockholders’ equity. Will the SEC allow this? Why or why not?

**An additional Codification case can be found in the Using Your Judgment section, on page 739.**

**Be sure to check the companion website for a Review and Analysis Exercise, with solution.**

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

## QUESTIONS

1. (a) From what sources might a corporation obtain funds through long-term debt? (b) What is a bond indenture? What does it contain? (c) What is a mortgage?
2. **Potlatch Corporation** has issued various types of bonds such as term bonds, income bonds, and debentures. Differentiate between term bonds, mortgage bonds, collateral trust bonds, debenture bonds, income bonds, callable bonds, registered bonds, bearer or coupon bonds, convertible bonds, commodity-backed bonds, and deep discount bonds.
3. Distinguish between the following interest rates for bonds payable:
 

(a) yield rate	(d) market rate
(b) nominal rate	(e) effective rate
(c) stated rate	
4. Distinguish between the following values relative to bonds payable:
 

(a) maturity value	(c) market value
(b) face value	(d) par value
5. Under what conditions of bond issuance does a discount on bonds payable arise? Under what conditions of bond issuance does a premium on bonds payable arise?
6. How should discount on bonds payable be reported on the financial statements? Premium on bonds payable?
7. What are the two methods of amortizing discount and premium on bonds payable? Explain each.
8. Zopf Company sells its bonds at a premium and applies the effective-interest method in amortizing the premium. Will the annual interest expense increase or decrease over the life of the bonds? Explain.
9. **Briggs and Stratton** recently reported unamortized debt issue costs of \$5.1 million. How should the costs of issuing these bonds be accounted for and classified in the financial statements?
10. Will the amortization of Discount on Bonds Payable increase or decrease Bond Interest Expense? Explain.
11. What is the “call” feature of a bond issue? How does the call feature affect the amortization of bond premium or discount?
12. Why would a company wish to reduce its bond indebtedness before its bonds reach maturity? Indicate how this can be done and the correct accounting treatment for such a transaction.
13. How are gains and losses from extinguishment of a debt classified in the income statement? What disclosures are required of such transactions?
14. What is done to record properly a transaction involving the issuance of a non-interest-bearing long-term note in exchange for property?
15. How is the present value of a non-interest-bearing note computed?
16. When is the stated interest rate of a debt instrument presumed to be fair?
17. What are the considerations in imputing an appropriate interest rate?
18. Differentiate between a fixed-rate mortgage and a variable-rate mortgage.
19. What disclosures are required relative to long-term debt and sinking fund requirements?
20. What is off-balance-sheet financing? Why might a company be interested in using off-balance-sheet financing?
21. What are some forms of off-balance-sheet financing?
22. Explain how a non-consolidated subsidiary can be a form of off-balance-sheet financing.
23. Where can authoritative iGAAP guidance related to liabilities be found? 
24. Briefly describe some of the similarities and differences between U.S. GAAP and iGAAP with respect to the accounting for liabilities. 
25. Hong Kong Trading Co. (which uses iGAAP) is in the midst of a multi-year operational restructuring. It reported the following information in its 2010 annual report (amounts in \$, in millions): Restructuring provision balance at 1 January 2010, \$135; provisions made in the period, \$275; and unused amounts reversed, \$22. Respond to the following: (a) What is the balance for the Restructuring Provision at 31 December 2010? (b) How did the reversal of unused amounts affect net income? (c) Briefly discuss how the accounting for the restructuring provision can be used for earnings management. 
26. Briefly discuss how accounting convergence efforts addressing liabilities are related to the IASB/FASB conceptual framework project. 
- \*27. What are the types of situations that result in troubled debt?
- \*28. What are the general rules for measuring gain or loss by both creditor and debtor in a troubled-debt restructuring involving a settlement?
- \*29. (a) In a troubled-debt situation, why might the creditor grant concessions to the debtor?  
(b) What type of concessions might a creditor grant the debtor in a troubled-debt situation?

- \*30. What are the general rules for measuring and recognizing gain or loss by both the debtor and the creditor in a troubled-debt restructuring involving a modification of terms?
- \*31. What is meant by “accounting symmetry” between the entries recorded by the debtor and creditor in a troubled-debt restructuring involving a modification of terms?
- \*32. Under what circumstances would a transaction be recorded as a troubled-debt restructuring by only one of the two parties to the transaction?

**BRIEF EXERCISES**

- 3** BE14-1 Whiteside Corporation issues \$500,000 of 9% bonds, due in 10 years, with interest payable semiannually. At the time of issue, the market rate for such bonds is 10%. Compute the issue price of the bonds.
- 3 •4** BE14-2 The Colson Company issued \$300,000 of 10% bonds on January 1, 2011. The bonds are due January 1, 2016, with interest payable each July 1 and January 1. The bonds are issued at face value. Prepare Colson’s journal entries for (a) the January issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry.
- 3 •4** BE14-3 Assume the bonds in BE14-2 were issued at 98. Prepare the journal entries for (a) January 1, (b) July 1, and (c) December 31. Assume The Colson Company records straight-line amortization semiannually.
- 3 •4** BE14-4 Assume the bonds in BE14-2 were issued at 103. Prepare the journal entries for (a) January 1, (b) July 1, and (c) December 31. Assume The Colson Company records straight-line amortization semiannually.
- 3 •4** BE14-5 Devers Corporation issued \$400,000 of 6% bonds on May 1, 2011. The bonds were dated January 1, 2011, and mature January 1, 2013, with interest payable July 1 and January 1. The bonds were issued at face value plus accrued interest. Prepare Devers’s journal entries for (a) the May 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry.
- 3 •4** BE14-6 On January 1, 2011, JWS Corporation issued \$600,000 of 7% bonds, due in 10 years. The bonds were issued for \$559,224, and pay interest each July 1 and January 1. JWS uses the effective-interest method. Prepare the company’s journal entries for (a) the January 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry. Assume an effective interest rate of 8%.
- 3 •4** BE14-7 Assume the bonds in BE14-6 were issued for \$644,636 and the effective interest rate is 6%. Prepare the company’s journal entries for (a) the January 1 issuance, (b) the July 1 interest payment, and (c) the December 31 adjusting entry.
- 3 •4** BE14-8 Teton Corporation issued \$600,000 of 7% bonds on November 1, 2011, for \$644,636. The bonds were dated November 1, 2011, and mature in 10 years, with interest payable each May 1 and November 1. Teton uses the effective-interest method with an effective rate of 6%. Prepare Teton’s December 31, 2011, adjusting entry.
- 8** BE14-9 At December 31, 2011, Hyasaki Corporation has the following account balances:
 

Bonds payable, due January 1, 2019	\$2,000,000
Discount on bonds payable	88,000
Bond interest payable	80,000

Show how the above accounts should be presented on the December 31, 2011, balance sheet, including the proper classifications.
- 4** BE14-10 Wasserman Corporation issued 10-year bonds on January 1, 2011. Costs associated with the bond issuance were \$160,000. Wasserman uses the straight-line method to amortize bond issue costs. Prepare the December 31, 2011, entry to record 2011 bond issue cost amortization.
- 5** BE14-11 On January 1, 2011, Henderson Corporation retired \$500,000 of bonds at 99. At the time of retirement, the unamortized premium was \$15,000 and unamortized bond issue costs were \$5,250. Prepare the corporation’s journal entry to record the reacquisition of the bonds.
- 6** BE14-12 Coldwell, Inc. issued a \$100,000, 4-year, 10% note at face value to Flint Hills Bank on January 1, 2011, and received \$100,000 cash. The note requires annual interest payments each December 31. Prepare Coldwell’s journal entries to record (a) the issuance of the note and (b) the December 31 interest payment.

- 6 BE14-13** Samson Corporation issued a 4-year, \$75,000, zero-interest-bearing note to Brown Company on January 1, 2011, and received cash of \$47,664. The implicit interest rate is 12%. Prepare Samson's journal entries for (a) the January 1 issuance and (b) the December 31 recognition of interest.
- 6 BE14-14** McCormick Corporation issued a 4-year, \$40,000, 5% note to Greenbush Company on January 1, 2011, and received a computer that normally sells for \$31,495. The note requires annual interest payments each December 31. The market rate of interest for a note of similar risk is 12%. Prepare McCormick's journal entries for (a) the January 1 issuance and (b) the December 31 interest.
- 6 BE14-15** Shlee Corporation issued a 4-year, \$60,000, zero-interest-bearing note to Garcia Company on January 1, 2011, and received cash of \$60,000. In addition, Shlee agreed to sell merchandise to Garcia at an amount less than regular selling price over the 4-year period. The market rate of interest for similar notes is 12%. Prepare Shlee Corporation's January 1 journal entry.

## EXERCISES

- 2 E14-1 (Classification of Liabilities)** Presented below are various account balances.
- Bank loans payable of a winery, due March 10, 2014. (The product requires aging for 5 years before sale.)
  - Unamortized premium on bonds payable, of which \$3,000 will be amortized during the next year.
  - Serial bonds payable, \$1,000,000, of which \$250,000 are due each July 31.
  - Amounts withheld from employees' wages for income taxes.
  - Notes payable due January 15, 2013.
  - Credit balances in customers' accounts arising from returns and allowances after collection in full of account.
  - Bonds payable of \$2,000,000 maturing June 30, 2012.
  - Overdraft of \$1,000 in a bank account. (No other balances are carried at this bank.)
  - Deposits made by customers who have ordered goods.

### Instructions

Indicate whether each of the items above should be classified on December 31, 2011, as a current liability, a long-term liability, or under some other classification. Consider each one independently from all others; that is, do not assume that all of them relate to one particular business. If the classification of some of the items is doubtful, explain why in each case.

- 2 E14-2 (Classification)** The following items are found in the financial statements.
- Discount on bonds payable
  - Interest expense (credit balance)
  - Unamortized bond issue costs
  - Gain on repurchase of debt
  - Mortgage payable (payable in equal amounts over next 3 years)
  - Debenture bonds payable (maturing in 5 years)
  - Premium on bonds payable
  - Notes payable (due in 4 years)
  - Income bonds payable (due in 3 years)

### Instructions

Indicate how each of these items should be classified in the financial statements.

- 3 •4 E14-3 (Entries for Bond Transactions)** Presented below are two independent situations.
- On January 1, 2010, Divac Company issued \$300,000 of 9%, 10-year bonds at par. Interest is payable quarterly on April 1, July 1, October 1, and January 1.
  - On June 1, 2010, Verbitsky Company issued \$200,000 of 12%, 10-year bonds dated January 1 at par plus accrued interest. Interest is payable semiannually on July 1 and January 1.

### Instructions

For each of these two independent situations, prepare journal entries to record the following.

- The issuance of the bonds.
- The payment of interest on July 1.
- The accrual of interest on December 31.

**•3 •4**

**E14-4 (Entries for Bond Transactions—Straight-Line)** Foreman Company issued \$800,000 of 10%, 20-year bonds on January 1, 2011, at 102. Interest is payable semiannually on July 1 and January 1. Foreman Company uses the straight-line method of amortization for bond premium or discount.

**Instructions**

Prepare the journal entries to record the following.

- (a) The issuance of the bonds.
- (b) The payment of interest and the related amortization on July 1, 2011.
- (c) The accrual of interest and the related amortization on December 31, 2011.

**•3 •4**

**E14-5 (Entries for Bond Transactions—Effective-Interest)** Assume the same information as in E14-4, except that Foreman Company uses the effective-interest method of amortization for bond premium or discount. Assume an effective yield of 9.7705%.

**Instructions**

Prepare the journal entries to record the following. (Round to the nearest dollar.)

- (a) The issuance of the bonds.
- (b) The payment of interest and related amortization on July 1, 2011.
- (c) The accrual of interest and the related amortization on December 31, 2011.

**•3 •4**

**E14-6 (Amortization Schedules—Straight-Line)** Spencer Company sells 10% bonds having a maturity value of \$3,000,000 for \$2,783,724. The bonds are dated January 1, 2010, and mature January 1, 2015. Interest is payable annually on January 1.

**Instructions**

Set up a schedule of interest expense and discount amortization under the straight-line method.

**•3 •4**

**E14-7 (Amortization Schedule—Effective-Interest)** Assume the same information as E14-6.

**Instructions**

Set up a schedule of interest expense and discount amortization under the effective-interest method. (*Hint:* The effective interest rate must be computed.)

**•3 •4**

**E14-8 (Determine Proper Amounts in Account Balances)** Presented below are three independent situations.

- (a) Chinook Corporation incurred the following costs in connection with the issuance of bonds: (1) printing and engraving costs, \$15,000; (2) legal fees, \$49,000, and (3) commissions paid to underwriter, \$60,000. What amount should be reported as Unamortized Bond Issue Costs, and where should this amount be reported on the balance sheet?
- (b) McEntire Co. sold \$2,500,000 of 10%, 10-year bonds at 104 on January 1, 2010. The bonds were dated January 1, 2010, and pay interest on July 1 and January 1. If McEntire uses the straight-line method to amortize bond premium or discount, determine the amount of interest expense to be reported on July 1, 2010, and December 31, 2010.
- (c) Cheriell Inc. issued \$600,000 of 9%, 10-year bonds on June 30, 2010, for \$562,500. This price provided a yield of 10% on the bonds. Interest is payable semiannually on December 31 and June 30. If Cheriell uses the effective-interest method, determine the amount of interest expense to record if financial statements are issued on October 31, 2010.

**•3 •4**

**E14-9 (Entries and Questions for Bond Transactions)** On June 30, 2010, Mackes Company issued \$5,000,000 face value of 13%, 20-year bonds at \$5,376,150, a yield of 12%. Mackes uses the effective-interest method to amortize bond premium or discount. The bonds pay semiannual interest on June 30 and December 31.

**Instructions**

- (a) Prepare the journal entries to record the following transactions.
  - (1) The issuance of the bonds on June 30, 2010.
  - (2) The payment of interest and the amortization of the premium on December 31, 2010.
  - (3) The payment of interest and the amortization of the premium on June 30, 2011.
  - (4) The payment of interest and the amortization of the premium on December 31, 2011.
- (b) Show the proper balance sheet presentation for the liability for bonds payable on the December 31, 2011, balance sheet.

- (c) Provide the answers to the following questions.
- (1) What amount of interest expense is reported for 2011?
  - (2) Will the bond interest expense reported in 2011 be the same as, greater than, or less than the amount that would be reported if the straight-line method of amortization were used?
  - (3) Determine the total cost of borrowing over the life of the bond.
  - (4) Will the total bond interest expense for the life of the bond be greater than, the same as, or less than the total interest expense if the straight-line method of amortization were used?

**•3 •4** **E14-10 (Entries for Bond Transactions)** On January 1, 2010, Osborn Company sold 12% bonds having a maturity value of \$800,000 for \$860,651.79, which provides the bondholders with a 10% yield. The bonds are dated January 1, 2010, and mature January 1, 2015, with interest payable December 31 of each year. Osborn Company allocates interest and unamortized discount or premium on the effective interest basis.

#### Instructions

- (a) Prepare the journal entry at the date of the bond issuance.
- (b) Prepare a schedule of interest expense and bond amortization for 2010–2012.
- (c) Prepare the journal entry to record the interest payment and the amortization for 2010.
- (d) Prepare the journal entry to record the interest payment and the amortization for 2012.

**•3** **E14-11 (Information Related to Various Bond Issues)** Pawnee Inc. has issued three types of debt on January 1, 2010, the start of the company's fiscal year.

- (a) \$10 million, 10-year, 13% unsecured bonds, interest payable quarterly. Bonds were priced to yield 12%.
- (b) \$25 million par of 10-year, zero-coupon bonds at a price to yield 12% per year.
- (c) \$15 million, 10-year, 10% mortgage bonds, interest payable annually to yield 12%.

#### Instructions

Prepare a schedule that identifies the following items for each bond: (1) maturity value, (2) number of interest periods over life of bond, (3) stated rate per each interest period, (4) effective interest rate per each interest period, (5) payment amount per period, and (6) present value of bonds at date of issue.

**•3 •4 •5** **E14-12 (Entry for Retirement of Bond; Bond Issue Costs)** On January 2, 2005, Prebish Corporation issued \$1,500,000 of 10% bonds at 97 due December 31, 2014. Legal and other costs of \$24,000 were incurred in connection with the issue. Interest on the bonds is payable annually each December 31. The \$24,000 issue costs are being deferred and amortized on a straight-line basis over the 10-year term of the bonds. The discount on the bonds is also being amortized on a straight-line basis over the 10 years. (Straight-line is not materially different in effect from the preferable "interest method".)

The bonds are callable at 101 (i.e., at 101% of face amount), and on January 2, 2010, Prebish called \$1,000,000 face amount of the bonds and retired them.

#### Instructions

Ignoring income taxes, compute the amount of loss, if any, to be recognized by Prebish as a result of retiring the \$1,000,000 of bonds in 2010 and prepare the journal entry to record the retirement.

(AICPA adapted)

**•3 •4 •5** **E14-13 (Entries for Retirement and Issuance of Bonds)** Robinson, Inc. had outstanding \$5,000,000 of 11% bonds (interest payable July 31 and January 31) due in 10 years. On July 1, it issued \$7,000,000 of 10%, 15-year bonds (interest payable July 1 and January 1) at 98. A portion of the proceeds was used to call the 11% bonds at 102 on August 1. Unamortized bond discount and issue cost applicable to the 11% bonds were \$120,000 and \$30,000, respectively.

#### Instructions

Prepare the journal entries necessary to record issue of the new bonds and the refunding of the bonds.

**•3 •4 •5** **E14-14 (Entries for Retirement and Issuance of Bonds)** On June 30, 2002, Mendenhal Company issued 12% bonds with a par value of \$600,000 due in 20 years. They were issued at 98 and were callable at 104 at any date after June 30, 2010. Because of lower interest rates and a significant change in the company's credit rating, it was decided to call the entire issue on June 30, 2011, and to issue new bonds. New 10% bonds were sold in the amount of \$800,000 at 102; they mature in 20 years. Mendenhal Company uses straight-line amortization. Interest payment dates are December 31 and June 30.

#### Instructions

- (a) Prepare journal entries to record the retirement of the old issue and the sale of the new issue on June 30, 2011.
- (b) Prepare the entry required on December 31, 2011, to record the payment of the first 6 months' interest and the amortization of premium on the bonds.

- 3 4 5** **E14-15 (Entries for Retirement and Issuance of Bonds)** Friedman Company had bonds outstanding with a maturity value of \$500,000. On April 30, 2011, when these bonds had an unamortized discount of \$10,000, they were called in at 104. To pay for these bonds, Friedman had issued other bonds a month earlier bearing a lower interest rate. The newly issued bonds had a life of 10 years. The new bonds were issued at 103 (face value \$500,000). Issue costs related to the new bonds were \$3,000.

**Instructions**

Ignoring interest, compute the gain or loss and record this refunding transaction.

(AICPA adapted)

- 6** **E14-16 (Entries for Zero-Interest-Bearing Notes)** On January 1, 2011, McLean Company makes the two following acquisitions.

1. Purchases land having a fair market value of \$300,000 by issuing a 5-year, zero-interest-bearing promissory note in the face amount of \$505,518.
2. Purchases equipment by issuing a 6%, 8-year promissory note having a maturity value of \$400,000 (interest payable annually).

The company has to pay 11% interest for funds from its bank.

**Instructions**

- (a) Record the two journal entries that should be recorded by McLean Company for the two purchases on January 1, 2011.
- (b) Record the interest at the end of the first year on both notes using the effective-interest method.

- 6** **E14-17 (Imputation of Interest)** Presented below are two independent situations:

- (a) On January 1, 2011, Spartan Inc. purchased land that had an assessed value of \$390,000 at the time of purchase. A \$600,000, zero-interest-bearing note due January 1, 2014, was given in exchange. There was no established exchange price for the land, nor a ready market value for the note. The interest rate charged on a note of this type is 12%. Determine at what amount the land should be recorded at January 1, 2011, and the interest expense to be reported in 2011 related to this transaction.
- (b) On January 1, 2011, Geimer Furniture Co. borrowed \$4,000,000 (face value) from Aurora Co., a major customer, through a zero-interest-bearing note due in 4 years. Because the note was zero-interest-bearing, Geimer Furniture agreed to sell furniture to this customer at lower than market price. A 10% rate of interest is normally charged on this type of loan. Prepare the journal entry to record this transaction and determine the amount of interest expense to report for 2011.

- 6** **E14-18 (Imputation of Interest with Right)** On January 1, 2010, Durdil Co. borrowed and received \$500,000 from a major customer evidenced by a zero-interest-bearing note due in 3 years. As consideration for the zero-interest-bearing feature, Durdil agrees to supply the customer's inventory needs for the loan period at lower than the market price. The appropriate rate at which to impute interest is 8%.

**Instructions**

- (a) Prepare the journal entry to record the initial transaction on January 1, 2010. (Round all computations to the nearest dollar.)
- (b) Prepare the journal entry to record any adjusting entries needed at December 31, 2010. Assume that the sales of Durdil's product to this customer occur evenly over the 3-year period.

- 8** **E14-19 (Long-Term Debt Disclosure)** At December 31, 2010, Redmond Company has outstanding three long-term debt issues. The first is a \$2,000,000 note payable which matures June 30, 2013. The second is a \$6,000,000 bond issue which matures September 30, 2014. The third is a \$12,500,000 sinking fund debenture with annual sinking fund payments of \$2,500,000 in each of the years 2012 through 2016.

**Instructions**

Prepare the required note disclosure for the long-term debt at December 31, 2010.

- 9** **\*E14-20 (Settlement of Debt)** Strickland Company owes \$200,000 plus \$18,000 of accrued interest to Moran State Bank. The debt is a 10-year, 10% note. During 2010, Strickland's business deteriorated due to a faltering regional economy. On December 31, 2010, Moran State Bank agrees to accept an old machine and cancel the entire debt. The machine has a cost of \$390,000, accumulated depreciation of \$221,000, and a fair market value of \$180,000.

**Instructions**

- (a) Prepare journal entries for Strickland Company and Moran State Bank to record this debt settlement.
- (b) How should Strickland report the gain or loss on the disposition of machine and on restructuring of debt in its 2010 income statement?

- (c) Assume that, instead of transferring the machine, Strickland decides to grant 15,000 shares of its common stock (\$10 par) which has a fair value of \$180,000 in full settlement of the loan obligation. If Moran State Bank treats Strickland's stock as a trading investment, prepare the entries to record the transaction for both parties.

**9** \*E14-21 (Term Modification without Gain—Debtor's Entries) On December 31, 2010, the American Bank enters into a debt restructuring agreement with Barkley Company, which is now experiencing financial trouble. The bank agrees to restructure a 12%, issued at par, \$3,000,000 note receivable by the following modifications:

1. Reducing the principal obligation from \$3,000,000 to \$2,400,000.
2. Extending the maturity date from December 31, 2010, to January 1, 2014.
3. Reducing the interest rate from 12% to 10%.

Barkley pays interest at the end of each year. On January 1, 2014, Barkley Company pays \$2,400,000 in cash to Firststar Bank.

#### Instructions

- (a) Will the gain recorded by Barkley be equal to the loss recorded by American Bank under the debt restructuring?
- (b) Can Barkley Company record a gain under the term modification mentioned above? Explain.
- (c) Assuming that the interest rate Barkley should use to compute interest expense in future periods is 1.4276%, prepare the interest payment schedule of the note for Barkley Company after the debt restructuring.
- (d) Prepare the interest payment entry for Barkley Company on December 31, 2012.
- (e) What entry should Barkley make on January 1, 2014?

**9** \*E14-22 (Term Modification without Gain—Creditor's Entries) Using the same information as in E14-21 above, answer the following questions related to American Bank (creditor).

#### Instructions

- (a) What interest rate should American Bank use to calculate the loss on the debt restructuring?
- (b) Compute the loss that American Bank will suffer from the debt restructuring. Prepare the journal entry to record the loss.
- (c) Prepare the interest receipt schedule for American Bank after the debt restructuring.
- (d) Prepare the interest receipt entry for American Bank on December 31, 2012.
- (e) What entry should American Bank make on January 1, 2014?

**9** \*E14-23 (Term Modification with Gain—Debtor's Entries) Use the same information as in E14-21 above except that American Bank reduced the principal to \$1,900,000 rather than \$2,400,000. On January 1, 2014, Barkley pays \$1,900,000 in cash to American Bank for the principal.

#### Instructions

- (a) Can Barkley Company record a gain under this term modification? If yes, compute the gain for Barkley Company.
- (b) Prepare the journal entries to record the gain on Barkley's books.
- (c) What interest rate should Barkley use to compute its interest expense in future periods? Will your answer be the same as in E14-21 above? Why or why not?
- (d) Prepare the interest payment schedule of the note for Barkley Company after the debt restructuring.
- (e) Prepare the interest payment entries for Barkley Company on December 31, of 2011, 2012, and 2013.
- (f) What entry should Barkley make on January 1, 2014?

**9** \*E14-24 (Term Modification with Gain—Creditor's Entries) Using the same information as in E14-21 and E14-23 above, answer the following questions related to American Bank (creditor).

#### Instructions

- (a) Compute the loss American Bank will suffer under this new term modification. Prepare the journal entry to record the loss on American's books.
- (b) Prepare the interest receipt schedule for American Bank after the debt restructuring.
- (c) Prepare the interest receipt entry for American Bank on December 31, 2011, 2012, and 2013.
- (d) What entry should American Bank make on January 1, 2014?

**9** \*E14-25 (Debtor/Creditor Entries for Settlement of Troubled Debt) Gottlieb Co. owes \$199,800 to Ceballos Inc. The debt is a 10-year, 11% note. Because Gottlieb Co. is in financial trouble, Ceballos Inc. agrees to accept some property and cancel the entire debt. The property has a book value of \$90,000 and a fair market value of \$140,000.

**Instructions**

- (a) Prepare the journal entry on Gottlieb’s books for debt restructure.
- (b) Prepare the journal entry on Ceballos’s books for debt restructure.

**9** \*E14-26 (Debtor/Creditor Entries for Modification of Troubled Debt) Vargo Corp. owes \$270,000 to First Trust. The debt is a 10-year, 12% note due December 31, 2010. Because Vargo Corp. is in financial trouble, First Trust agrees to extend the maturity date to December 31, 2012, reduce the principal to \$220,000, and reduce the interest rate to 5%, payable annually on December 31.

**Instructions**

- (a) Prepare the journal entries on Vargo’s books on December 31, 2010, 2011, 2012.
- (b) Prepare the journal entries on First Trust’s books on December 31, 2010, 2011, 2012.

See the book’s companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), for a set of B Exercises.

**PROBLEMS**

**3 4** P14-1 (Analysis of Amortization Schedule and Interest Entries) The following amortization and interest schedule reflects the issuance of 10-year bonds by Capulet Corporation on January 1, 2004, and the subsequent interest payments and charges. The company’s year-end is December 31, and financial statements are prepared once yearly.

Amortization Schedule				
Year	Cash	Interest	Amount Unamortized	Book Value
1/1/2004			\$5,651	\$ 94,349
2004	\$11,000	\$11,322	5,329	94,671
2005	11,000	11,361	4,968	95,032
2006	11,000	11,404	4,564	95,436
2007	11,000	11,452	4,112	95,888
2008	11,000	11,507	3,605	96,395
2009	11,000	11,567	3,038	96,962
2010	11,000	11,635	2,403	97,597
2011	11,000	11,712	1,691	98,309
2012	11,000	11,797	894	99,106
2013	11,000	11,894		100,000

**Instructions**

- (a) Indicate whether the bonds were issued at a premium or a discount and how you can determine this fact from the schedule.
- (b) Indicate whether the amortization schedule is based on the straight-line method or the effective-interest method and how you can determine which method is used.
- (c) Determine the stated interest rate and the effective interest rate.
- (d) On the basis of the schedule above, prepare the journal entry to record the issuance of the bonds on January 1, 2004.
- (e) On the basis of the schedule above, prepare the journal entry or entries to reflect the bond transactions and accruals for 2004. (Interest is paid January 1.)
- (f) On the basis of the schedule above, prepare the journal entry or entries to reflect the bond transactions and accruals for 2011. Capulet Corporation does not use reversing entries.

**3 4 5** P14-2 (Issuance and Retirement of Bonds) Venezuela Co. is building a new hockey arena at a cost of \$2,500,000. It received a downpayment of \$500,000 from local businesses to support the project, and now needs to borrow \$2,000,000 to complete the project. It therefore decides to issue \$2,000,000 of 10.5%, 10-year bonds. These bonds were issued on January 1, 2009, and pay interest annually on each January 1. The bonds yield 10%. Venezuela paid \$50,000 in bond issue costs related to the bond sale.

**Instructions**

- Prepare the journal entry to record the issuance of the bonds and the related bond issue costs incurred on January 1, 2009.
- Prepare a bond amortization schedule up to and including January 1, 2013, using the effective-interest method.
- Assume that on July 1, 2012, Venezuela Co. retires half of the bonds at a cost of \$1,065,000 plus accrued interest. Prepare the journal entry to record this retirement.

**3** **4**

**P14-3 (Negative Amortization)** Good-Deal Inc. developed a new sales gimmick to help sell its inventory of new automobiles. Because many new car buyers need financing, Good-Deal offered a low down payment and low car payments for the first year after purchase. It believes that this promotion will bring in some new buyers.

On January 1, 2010, a customer purchased a new \$33,000 automobile, making a downpayment of \$1,000. The customer signed a note indicating that the annual rate of interest would be 8% and that quarterly payments would be made over 3 years. For the first year, Good-Deal required a \$400 quarterly payment to be made on April 1, July 1, October 1, and January 1, 2011. After this one-year period, the customer was required to make regular quarterly payments that would pay off the loan as of January 1, 2013.

**Instructions**

- Prepare a note amortization schedule for the first year.
- Indicate the amount the customer owes on the contract at the end of the first year.
- Compute the amount of the new quarterly payments.
- Prepare a note amortization schedule for these new payments for the next 2 years.
- What do you think of the new sales promotion used by Good-Deal?

**3** **4** **5**  
**8**

**P14-4 (Issuance and Retirement of Bonds; Income Statement Presentation)** Holiday Company issued its 9%, 25-year mortgage bonds in the principal amount of \$3,000,000 on January 2, 1996, at a discount of \$150,000, which it proceeded to amortize by charges to expense over the life of the issue on a straight-line basis. The indenture securing the issue provided that the bonds could be called for redemption in total but not in part at any time before maturity at 104% of the principal amount, but it did not provide for any sinking fund.

On December 18, 2010, the company issued its 11%, 20-year debenture bonds in the principal amount of \$4,000,000 at 102, and the proceeds were used to redeem the 9%, 25-year mortgage bonds on January 2, 2011. The indenture securing the new issue did not provide for any sinking fund or for retirement before maturity.

**Instructions**

- Prepare journal entries to record the issuance of the 11% bonds and the retirement of the 9% bonds.
- Indicate the income statement treatment of the gain or loss from retirement and the note disclosure required.

**3** **4** **5**

**P14-5 (Comprehensive Bond Problem)** In each of the following independent cases the company closes its books on December 31.

- Sanford Co. sells \$500,000 of 10% bonds on March 1, 2010. The bonds pay interest on September 1 and March 1. The due date of the bonds is September 1, 2013. The bonds yield 12%. Give entries through December 31, 2011.
- Titania Co. sells \$400,000 of 12% bonds on June 1, 2010. The bonds pay interest on December 1 and June 1. The due date of the bonds is June 1, 2014. The bonds yield 10%. On October 1, 2011, Titania buys back \$120,000 worth of bonds for \$126,000 (includes accrued interest). Give entries through December 1, 2012.

**Instructions**

(Round to the nearest dollar.)

For the two cases prepare all of the relevant journal entries from the time of sale until the date indicated. Use the effective-interest method for discount and premium amortization (construct amortization tables where applicable). Amortize premium or discount on interest dates and at year-end. (Assume that no reversing entries were made.)

**3** **4** **5**

**P14-6 (Issuance of Bonds between Interest Dates, Straight-Line, Retirement)** Presented below are selected transactions on the books of Simonson Corporation.

May 1, 2010 Bonds payable with a par value of \$900,000, which are dated January 1, 2010, are sold at 106 plus accrued interest. They are coupon bonds, bear interest at 12% (payable annually at January 1), and mature January 1, 2020. (Use interest expense account for accrued interest.)

- Dec. 31      Adjusting entries are made to record the accrued interest on the bonds, and the amortization of the proper amount of premium. (Use straight-line amortization.)
- Jan. 1, 2011      Interest on the bonds is paid.
- April 1      Bonds of par value of \$360,000 are called at 102 plus accrued interest, and retired. (Bond premium is to be amortized only at the end of each year.)
- Dec. 31      Adjusting entries are made to record the accrued interest on the bonds, and the proper amount of premium amortized.

**Instructions**

Prepare journal entries for the transactions above.

**•3 •4 •5**

**P14-7 (Entries for Life Cycle of Bonds)** On April 1, 2010, Seminole Company sold 15,000 of its 11%, 15-year, \$1,000 face value bonds at 97. Interest payment dates are April 1 and October 1, and the company uses the straight-line method of bond discount amortization. On March 1, 2011, Seminole took advantage of favorable prices of its stock to extinguish 6,000 of the bonds by issuing 200,000 shares of its \$10 par value common stock. At this time, the accrued interest was paid in cash. The company's stock was selling for \$31 per share on March 1, 2011.

**Instructions**

Prepare the journal entries needed on the books of Seminole Company to record the following.

- April 1, 2010: issuance of the bonds.
- October 1, 2010: payment of semiannual interest.
- December 31, 2010: accrual of interest expense.
- March 1, 2011: extinguishment of 6,000 bonds. (No reversing entries made.)

**•6**

**P14-8 (Entries for Zero-Interest-Bearing Note)** On December 31, 2010, Fital Company acquired a computer from Plato Corporation by issuing a \$600,000 zero-interest-bearing note, payable in full on December 31, 2014. Fital Company's credit rating permits it to borrow funds from its several lines of credit at 10%. The computer is expected to have a 5-year life and a \$70,000 salvage value.

**Instructions**

- Prepare the journal entry for the purchase on December 31, 2010.
- Prepare any necessary adjusting entries relative to depreciation (use straight-line) and amortization (use effective-interest method) on December 31, 2011.
- Prepare any necessary adjusting entries relative to depreciation and amortization on December 31, 2012.

**•6**

**P14-9 (Entries for Zero-Interest-Bearing Note; Payable in Installments)** Sabonis Cosmetics Co. purchased machinery on December 31, 2009, paying \$50,000 down and agreeing to pay the balance in four equal installments of \$40,000 payable each December 31. An assumed interest of 8% is implicit in the purchase price.

**Instructions**

Prepare the journal entries that would be recorded for the purchase and for the payments and interest on the following dates.

- December 31, 2009.
- December 31, 2010.
- December 31, 2011.
- December 31, 2012.
- December 31, 2013.

**•3 •4 •5  
•8**

**P14-10 (Comprehensive Problem: Issuance, Classification, Reporting)** Presented below are four independent situations.

- On March 1, 2011, Wilke Co. issued at 103 plus accrued interest \$4,000,000, 9% bonds. The bonds are dated January 1, 2011, and pay interest semiannually on July 1 and January 1. In addition, Wilke Co. incurred \$27,000 of bond issuance costs. Compute the net amount of cash received by Wilke Co. as a result of the issuance of these bonds.
- On January 1, 2010, Langley Co. issued 9% bonds with a face value of \$700,000 for \$656,992 to yield 10%. The bonds are dated January 1, 2010, and pay interest annually. What amount is reported for interest expense in 2010 related to these bonds, assuming that Langley used the effective-interest method for amortizing bond premium and discount?

- (c) Tweedie Building Co. has a number of long-term bonds outstanding at December 31, 2010. These long-term bonds have the following sinking fund requirements and maturities for the next 6 years.

	Sinking Fund	Maturities
2011	\$300,000	\$100,000
2012	100,000	250,000
2013	100,000	100,000
2014	200,000	—
2015	200,000	150,000
2016	200,000	100,000

Indicate how this information should be reported in the financial statements at December 31, 2010.

- (d) In the long-term debt structure of Beckford Inc., the following three bonds were reported: mortgage bonds payable \$10,000,000; collateral trust bonds \$5,000,000; bonds maturing in installments, secured by plant equipment \$4,000,000. Determine the total amount, if any, of debenture bonds outstanding.

 **P14-11 (Effective-Interest Method)** Samantha Cordelia, an intermediate accounting student, is having difficulty amortizing bond premiums and discounts using the effective-interest method. Furthermore, she cannot understand why GAAP requires that this method be used instead of the straight-line method. She has come to you with the following problem, looking for help.

On June 30, 2010, Hobart Company issued \$2,000,000 face value of 11%, 20-year bonds at \$2,171,600, a yield of 10%. Hobart Company uses the effective-interest method to amortize bond premiums or discounts. The bonds pay semiannual interest on June 30 and December 31. Compute the amortization schedule for four periods.

#### Instructions

Using the data above for illustrative purposes, write a short memo (1–1.5 pages double-spaced) to Samantha, explaining what the effective-interest method is, why it is preferable, and how it is computed. (Do not forget to include an amortization schedule, referring to it whenever necessary.)

 **\*P14-12 (Debtor/Creditor Entries for Continuation of Troubled Debt)** Daniel Perkins is the sole shareholder of Perkins Inc., which is currently under protection of the U.S. bankruptcy court. As a “debtor in possession,” he has negotiated the following revised loan agreement with United Bank. Perkins Inc.’s \$600,000, 12%, 10-year note was refinanced with a \$600,000, 5%, 10-year note.

#### Instructions

- What is the accounting nature of this transaction?
- Prepare the journal entry to record this refinancing:
  - On the books of Perkins Inc.
  - On the books of United Bank.
- Discuss whether generally accepted accounting principles provide the proper information useful to managers and investors in this situation.

 **\*P14-13 (Restructure of Note under Different Circumstances)** Halvor Corporation is having financial difficulty and therefore has asked Frontenac National Bank to restructure its \$5 million note outstanding. The present note has 3 years remaining and pays a current rate of interest of 10%. The present market rate for a loan of this nature is 12%. The note was issued at its face value.

#### Instructions

Presented below are four independent situations. Prepare the journal entry that Halvor and Frontenac National Bank would make for each of these restructurings.

- Frontenac National Bank agrees to take an equity interest in Halvor by accepting common stock valued at \$3,700,000 in exchange for relinquishing its claim on this note. The common stock has a par value of \$1,700,000.
- Frontenac National Bank agrees to accept land in exchange for relinquishing its claim on this note. The land has a book value of \$3,250,000 and a fair value of \$4,000,000.
- Frontenac National Bank agrees to modify the terms of the note, indicating that Halvor does not have to pay any interest on the note over the 3-year period.
- Frontenac National Bank agrees to reduce the principal balance due to \$4,166,667 and require interest only in the second and third year at a rate of 10%.

**\*P14-14 (Debtor/Creditor Entries for Continuation of Troubled Debt with New Effective Interest)**

Crocker Corp. owes D. Yaeger Corp. a 10-year, 10% note in the amount of \$330,000 plus \$33,000 of accrued interest. The note is due today, December 31, 2010. Because Crocker Corp. is in financial trouble, D. Yaeger Corp. agrees to forgive the accrued interest, \$30,000 of the principal, and to extend the maturity date to December 31, 2013. Interest at 10% of revised principal will continue to be due on 12/31 each year.

Assume the following present value factors for 3 periods.

	<u>2¼%</u>	<u>2⅜%</u>	<u>2½%</u>	<u>2⅝%</u>	<u>2¾%</u>	<u>3%</u>
Single sum	.93543	.93201	.92859	.92521	.92184	.91514
Ordinary annuity of 1	2.86989	2.86295	2.85602	2.84913	2.84226	2.82861

**Instructions**

- (a) Compute the new effective interest rate for Crocker Corp. following restructure. (*Hint:* Find the interest rate that establishes approximately \$363,000 as the present value of the total future cash flows.)
- (b) Prepare a schedule of debt reduction and interest expense for the years 2010 through 2013.
- (c) Compute the gain or loss for D. Yaeger Corp. and prepare a schedule of receivable reduction and interest revenue for the years 2010 through 2013.
- (d) Prepare all the necessary journal entries on the books of Crocker Corp. for the years 2010, 2011, and 2012.
- (e) Prepare all the necessary journal entries on the books of D. Yaeger Corp. for the years 2010, 2011, and 2012.

**CONCEPTS FOR ANALYSIS**

**CA14-1 (Bond Theory: Balance Sheet Presentations, Interest Rate, Premium)** On January 1, 2011, Nichols Company issued for \$1,085,800 its 20-year, 11% bonds that have a maturity value of \$1,000,000 and pay interest semiannually on January 1 and July 1. Bond issue costs were not material in amount. Below are three presentations of the long-term liability section of the balance sheet that might be used for these bonds at the issue date.

1. Bonds payable (maturing January 1, 2031)	\$1,000,000
Unamortized premium on bonds payable	<u>85,800</u>
Total bond liability	<u>\$1,085,800</u>
2. Bonds payable—principal (face value \$1,000,000 maturing January 1, 2031)	\$ 142,050 <sup>a</sup>
Bonds payable—interest (semiannual payment \$55,000)	<u>943,750<sup>b</sup></u>
Total bond liability	<u>\$1,085,800</u>
3. Bonds payable—principal (maturing January 1, 2031)	\$1,000,000
Bonds payable—interest (\$55,000 per period for 40 periods)	<u>2,200,000</u>
Total bond liability	<u>\$3,200,000</u>

<sup>a</sup>The present value of \$1,000,000 due at the end of 40 (6-month) periods at the yield rate of 5% per period.

<sup>b</sup>The present value of \$55,000 per period for 40 (6-month) periods at the yield rate of 5% per period.

**Instructions**

- (a) Discuss the conceptual merit(s) of each of the date-of-issue balance sheet presentations shown above for these bonds.
- (b) Explain why investors would pay \$1,085,800 for bonds that have a maturity value of only \$1,000,000.
- (c) Assuming that a discount rate is needed to compute the carrying value of the obligations arising from a bond issue at any date during the life of the bonds, discuss the conceptual merit(s) of using for this purpose:
  - (1) The coupon or nominal rate.
  - (2) The effective or yield rate at date of issue.
- (d) If the obligations arising from these bonds are to be carried at their present value computed by means of the current market rate of interest, how would the bond valuation at dates subsequent to the date of issue be affected by an increase or a decrease in the market rate of interest?

(AICPA adapted)

 **CA14-2 (Various Long-Term Liability Conceptual Issues)** Schrempf Company has completed a number of transactions during 2010. In January the company purchased under contract a machine at a total price of \$1,200,000, payable over 5 years with installments of \$240,000 per year. The seller has considered the transaction as an installment sale with the title transferring to Schrempf at the time of the final payment.

On March 1, 2010, Schrempf issued \$10 million of general revenue bonds priced at 99 with a coupon of 10% payable July 1 and January 1 of each of the next 10 years. The July 1 interest was paid and on December 30 the company transferred \$1,000,000 to the trustee, Flagstad Company, for payment of the January 1, 2011, interest.

As the accountant for Schrempf Company, you have prepared the balance sheet as of December 31, 2010, and have presented it to the president of the company. You are asked the following questions about it.

1. Why has depreciation been charged on equipment being purchased under contract? Title has not passed to the company as yet and, therefore, they are not our assets. Why should the company not show on the left side of the balance sheet only the amount paid to date instead of showing the full contract price on the left side and the unpaid portion on the right side? After all, the seller considers the transaction an installment sale.
2. What is bond discount? As a debit balance, why is it not classified among the assets?
3. Bond interest is shown as a current liability. Did we not pay our trustee, Flagstad Company, the full amount of interest due this period?

#### Instructions

Outline your answers to these questions by writing a brief paragraph that will justify your treatment.

**CA14-3 (Bond Theory: Price, Presentation, and Retirement)** On March 1, 2011, Sealy Company sold its 5-year, \$1,000 face value, 9% bonds dated March 1, 2011, at an effective annual interest rate (yield) of 11%. Interest is payable semiannually, and the first interest payment date is September 1, 2011. Sealy uses the effective-interest method of amortization. Bond issue costs were incurred in preparing and selling the bond issue. The bonds can be called by Sealy at 101 at any time on or after March 1, 2012.

#### Instructions

- (a) (1) How would the selling price of the bond be determined?  
(2) Specify how all items related to the bonds would be presented in a balance sheet prepared immediately after the bond issue was sold.
- (b) What items related to the bond issue would be included in Sealy's 2011 income statement, and how would each be determined?
- (c) Would the amount of bond discount amortization using the effective-interest method of amortization be lower in the second or third year of the life of the bond issue? Why?
- (d) Assuming that the bonds were called in and retired on March 1, 2012, how should Sealy report the retirement of the bonds on the 2012 income statement?

(AICPA adapted)

 **CA14-4 (Bond Theory: Amortization and Gain or Loss Recognition)**

**Part I.** The appropriate method of amortizing a premium or discount on issuance of bonds is the effective-interest method.

#### Instructions

- (a) What is the effective-interest method of amortization and how is it different from and similar to the straight-line method of amortization?
- (b) How is amortization computed using the effective-interest method, and why and how do amounts obtained using the effective-interest method differ from amounts computed under the straight-line method?

**Part II.** Gains or losses from the early extinguishment of debt that is refunded can theoretically be accounted for in three ways:

1. Amortized over remaining life of old debt.
2. Amortized over the life of the new debt issue.
3. Recognized in the period of extinguishment.

**Instructions**

- (a) Develop supporting arguments for each of the three theoretical methods of accounting for gains and losses from the early extinguishment of debt.
- (b) Which of the methods above is generally accepted and how should the appropriate amount of gain or loss be shown in a company's financial statements?

(AICPA adapted)

**CA14-5 (Off-Balance-Sheet Financing)** Matt Ryan Corporation is interested in building its own soda can manufacturing plant adjacent to its existing plant in Partyville, Kansas. The objective would be to ensure a steady supply of cans at a stable price and to minimize transportation costs. However, the company has been experiencing some financial problems and has been reluctant to borrow any additional cash to fund the project. The company is not concerned with the cash flow problems of making payments, but rather with the impact of adding additional long-term debt to its balance sheet.

The president of Ryan, Andy Newlin, approached the president of the Aluminum Can Company (ACC), their major supplier, to see if some agreement could be reached. ACC was anxious to work out an arrangement, since it seemed inevitable that Ryan would begin their own can production. The Aluminum Can Company could not afford to lose the account.

After some discussion a two-part plan was worked out. First, ACC was to construct the plant on Ryan's land adjacent to the existing plant. Second, Ryan would sign a 20-year purchase agreement. Under the purchase agreement, Ryan would express its intention to buy all of its cans from ACC, paying a unit price which at normal capacity would cover labor and material, an operating management fee, and the debt service requirements on the plant. The expected unit price, if transportation costs are taken into consideration, is lower than current market. If Ryan did not take enough production in any one year and if the excess cans could not be sold at a high enough price on the open market, Ryan agrees to make up any cash shortfall so that ACC could make the payments on its debt. The bank will be willing to make a 20-year loan for the plant, taking the plant and the purchase agreement as collateral. At the end of 20 years the plant is to become the property of Ryan.

**Instructions**

- (a) What are project financing arrangements using special purpose entities?
- (b) What are take-or-pay contracts?
- (c) Should Ryan record the plant as an asset together with the related obligation?
- (d) If not, should Ryan record an asset relating to the future commitment?
- (e) What is meant by off-balance-sheet financing?

**CA14-6 (Bond Issue)** Donald Lennon is the president, founder, and majority owner of Wichita Medical Corporation, an emerging medical technology products company. Wichita is in dire need of additional capital to keep operating and to bring several promising products to final development, testing, and production. Donald, as owner of 51% of the outstanding stock, manages the company's operations. He places heavy emphasis on research and development and long-term growth. The other principal stockholder is Nina Friendly who, as a nonemployee investor, owns 40% of the stock. Nina would like to deemphasize the R & D functions and emphasize the marketing function to maximize short-run sales and profits from existing products. She believes this strategy would raise the market price of Wichita's stock.

All of Donald's personal capital and borrowing power is tied up in his 51% stock ownership. He knows that any offering of additional shares of stock will dilute his controlling interest because he won't be able to participate in such an issuance. But, Nina has money and would likely buy enough shares to gain control of Wichita. She then would dictate the company's future direction, even if it meant replacing Donald as president and CEO.

The company already has considerable debt. Raising additional debt will be costly, will adversely affect Wichita's credit rating, and will increase the company's reported losses due to the growth in interest expense. Nina and the other minority stockholders express opposition to the assumption of additional debt, fearing the company will be pushed to the brink of bankruptcy. Wanting to maintain his control and to preserve the direction of "his" company, Donald is doing everything to avoid a stock issuance and is contemplating a large issuance of bonds, even if it means the bonds are issued with a high effective-interest rate.

**Instructions**

- (a) Who are the stakeholders in this situation?
- (b) What are the ethical issues in this case?
- (c) What would you do if you were Donald?

## USING YOUR JUDGMENT

### Financial Reporting Problem

#### **The Procter & Gamble Company (P&G)**

The financial statements of **P&G** are presented in Appendix 5B or can be accessed at the book's companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso).

#### Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- (a) What cash outflow obligations related to the repayment of long-term debt does P&G have over the next 5 years?
- (b) P&G indicates that it believes that it has the ability to meet business requirements in the foreseeable future. Prepare an assessment of its liquidity, solvency, and financial flexibility using ratio analysis.

### Comparative Analysis Case

#### **The Coca-Cola Company and PepsiCo, Inc.**

*The Coca-Cola Company*

#### Instructions

Go to the book's companion website and use information found there to answer the following questions related to **The Coca-Cola Company** and **PepsiCo, Inc.**

- (a) Compute the debt to total assets ratio and the times interest earned ratio for these two companies. Comment on the quality of these two ratios for both Coca-Cola and PepsiCo.
- (b) What is the difference between the fair value and the historical cost (carrying amount) of each company's debt at year-end 2007? Why might a difference exist in these two amounts?
- (c) Both companies have debt issued in foreign countries. Speculate as to why these companies may use foreign debt to finance their operations. What risks are involved in this strategy, and how might they adjust for this risk?

### Financial Statement Analysis Cases

#### **Case 1 Commonwealth Edison Co.**

The following article appeared in the *Wall Street Journal*.

#### **Bond Markets**

*Giant Commonwealth Edison Issue Hits Resale Market With \$70 Million Left Over*

NEW YORK—**Commonwealth Edison Co.**'s slow-selling new 9¼% bonds were tossed onto the resale market at a reduced price with about \$70 million still available from the \$200 million offered Thursday, dealers said.

The Chicago utility's bonds, rated double-A by Moody's and double-A-minus by Standard & Poor's, originally had been priced at 99.803, to yield 9.3% in 5 years. They were marked down yesterday the equivalent of about \$5.50 for each \$1,000 face amount, to about 99.25, where their yield jumped to 9.45%.

#### Instructions

- (a) How will the development above affect the accounting for Commonwealth Edison's bond issue?
- (b) Provide several possible explanations for the markdown and the slow sale of Commonwealth Edison's bonds.

#### **Case 2 PepsiCo, Inc.**

**PepsiCo, Inc.** based in Purchase, New York, is a leading company in the beverage industry.

Assume that the following events occurred relating to PepsiCo's long-term debt in a recent year.

1. The company decided on February 1 to refinance \$500 million in short-term 7.4% debt to make it long-term 6%.
2. \$780 million of long-term zero-coupon bonds with an effective interest rate of 10.1% matured July 1 and were paid.
3. On October 1, the company issued \$250 million in Australian dollar 6.3% bonds at 102 and \$95 million in Italian lira 11.4% bonds at 99.

**PEPSICO**

4. The company holds \$100 million in perpetual foreign interest payment bonds that were issued in 1989, and presently have a rate of interest of 5.3%. These bonds are called perpetual because they have no stated due date. Instead, at the end of every 10-year period after the bond's issuance, the bondholders and PepsiCo have the option of redeeming the bonds. If either party desires to redeem the bonds, the bonds must be redeemed. If the bonds are not redeemed, a new interest rate is set, based on the then-prevailing interest rate for 10-year bonds. The company does not intend to cause redemption of the bonds, but will reclassify this debt to current next year, since the bondholders could decide to redeem the bonds.

### Instructions

- Consider event 1. What are some of the reasons the company may have decided to refinance this short-term debt, besides lowering the interest rate?
- What do you think are the benefits to the investor in purchasing zero-coupon bonds, such as those described in event 2? What journal entry would be required to record the payment of these bonds? If financial statements are prepared each December 31, in which year would the bonds have been included in short-term liabilities?
- Make the journal entry to record the bond issue described in event 3. Note that the bonds were issued on the same day, yet one was issued at a premium and the other at a discount. What are some of the reasons that this may have happened?
- What are the benefits to PepsiCo in having perpetual bonds as described in event 4? Suppose that in the current year the bonds are not redeemed and the interest rate is adjusted to 6% from 7.5%. Make all necessary journal entries to record the renewal of the bonds and the change in rate.

## BRIDGE TO THE PROFESSION

### Professional Research: FASB Codification

Wie Company has been operating for just 2 years, producing specialty golf equipment for women golfers. To date, the company has been able to finance its successful operations with investments from its principal owner, Michelle Wie, and cash flows from operations. However, current expansion plans will require some borrowing to expand the company's production line.

As part of the expansion plan, Wie will acquire some used equipment by signing a zero-interest-bearing note. The note has a maturity value of \$50,000 and matures in 5 years. A reliable fair value measure for the equipment is not available, given the age and specialty nature of the equipment. As a result, Wie's accounting staff is unable to determine an established exchange price for recording the equipment (nor the interest rate to be used to record interest expense on the long-term note). They have asked you to conduct some accounting research on this topic.

### Instructions

Access the FASB Codification at <http://asc.fasb.org/home> to conduct research using the Codification Research System to prepare responses to the following items. Provide Codification references for your responses.

- Identify the authoritative literature that provides guidance on the zero-interest-bearing note. Use some of the examples to explain how the standard applies in this setting.
- How is present value determined when an established exchange price is not determinable and a note has no ready market? What is the resulting interest rate often called?
- Where should a discount or premium appear in the financial statements? What about issue costs?

### Professional Simulation

Go to the book's companion website, at [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), to find an interactive problem that simulates the computerized CPA exam. The professional simulation for this chapter asks you to address questions related to the accounting for long-term liabilities.

**Remember to check the book's companion website to find additional resources for this chapter.**

## CHAPTER 15

# STOCKHOLDERS' EQUITY

### LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Discuss the characteristics of the corporate form of organization.
- 2 Identify the key components of stockholders' equity.
- 3 Explain the accounting procedures for issuing shares of stock.
- 4 Describe the accounting for treasury stock.
- 5 Explain the accounting for and reporting of preferred stock.
- 6 Describe the policies used in distributing dividends.
- 7 Identify the various forms of dividend distributions.
- 8 Explain the accounting for small and large stock dividends, and for stock splits.
- 9 Indicate how to present and analyze stockholders' equity.

### It's a GLOBAL MARKET

As mentioned earlier, we are moving rapidly toward one set of global financial reporting standards and one "common language" for financial information. This change will probably lead to more consolidation of our capital markets. To understand how quickly the global financial world is changing, let's examine a few trends occurring on stock exchanges around the world.

In 2007 the New York Stock Exchange (NYSE) merged with Paris-based Eurotext, creating the world's first transatlantic stock exchange. NYSE Eurotext is the world's largest exchange group, with 4,000 listed issuers representing over \$29 trillion in market value. Similarly, NASDAQ, the world's largest electronic stock market, merged with OMX, the Nordic stock market operator. This electronic exchange will operate in 29 countries, on six continents, and will have 4,000 listed issuers, with a market value of approximately \$5.5 trillion.

Another reason behind the strong impetus for international financial reporting standards can be found in recent initial public offerings (IPOs). The emerging markets are driving the global IPO market. As shown in the following table, in the first three months of 2008, only one of the ten top IPOs occurred on the NYSE.

### Top 10 IPOs by amount of capital raised, January–March 2008

Ranking	Issue Date	Issuer Name	Domicile Nation	Industry Description	Proceeds (US\$m)	Primary Exchange
1	3/18/08	<b>Visa Inc</b>	United States	Financials	19,650	NYSE
2	3/10/08	<b>China Railway Construction Corp</b>	China	Industrials	5,709	Shanghai, HKEx
3	1/21/08	<b>Reliance Power Ltd</b>	India	Energy and power	2,964	Bombay
4	2/22/08	<b>Mobile Telecommunications Company Saudi Arabia</b>	Saudi Arabia	Telecommunications	1,867	Riyadh
5	1/5/08	<b>Rabigh Refining &amp; Petrochemical Company</b>	Saudi Arabia	Materials	1,228	Riyadh
6	3/26/08	<b>Want Want China Holdings</b>	China	Consumer staples	1,046	Hong Kong
7	2/21/08	<b>Seven Bank Ltd</b>	Japan	Financials	486	JASDAQ
8	3/14/08	<b>TGK-7 (Volzhskaya TGK)</b>	Russia	Energy and power	464	RTS
9	2/25/08	<b>Rural Electrification Corp</b>	India	Energy and power	417	Bombay
10	3/7/08	<b>Honghua Group Ltd</b>	China	Energy and power	409	Hong Kong

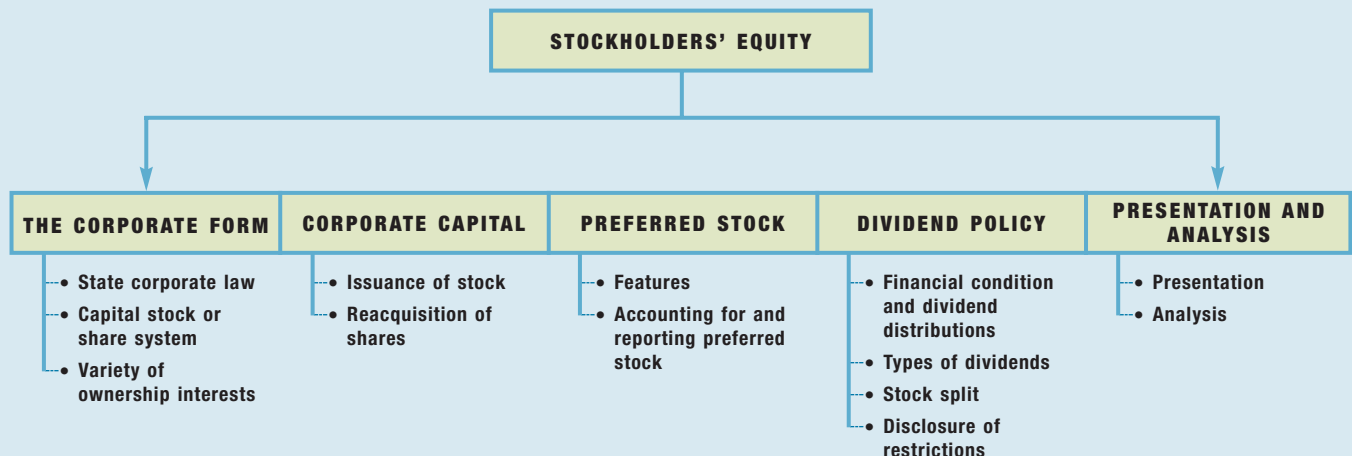

As another example, Brazil, Russia, India, and China—often referred to as the *BRIC countries*—generated 41 percent of total IPO proceeds in 2007, compared with just 14 percent for the BRIC countries in 2004.

Finally, consider the international sales of some of the largest U.S. corporations: **General Electric** now has approximately 50 percent of its sales overseas, **Boeing** in a recent year sold more planes overseas than in the United States, and **Ford Motor Company**'s sales would be much less except for success in the European market.

Source: Ernst and Young, *Growth During Economic Uncertainty: Global IPO Trends Report* (2008).

## PREVIEW OF CHAPTER 15

As our opening story indicates, the growth of global equity capital markets indicates that investors around the world need useful information. In this chapter we explain the accounting issues related to the stockholders' equity of a corporation. The content and organization of the chapter are as follows.

## THE CORPORATE FORM OF ORGANIZATION

### Objective 1

Discuss the characteristics of the corporate form of organization.

Of the three **primary forms of business organization**—the proprietorship, the partnership, and the corporation—the corporate form dominates. The corporation is by far the leader in terms of the aggregate amount of resources controlled, goods and services produced, and people employed. All of the “Fortune 500” largest industrial firms are corporations. Although the corporate form has a number of advantages (as well as disadvantages) over the other two forms, its principal advantage is its facility for attracting and accumulating large amounts of capital.

The special characteristics of the corporate form that affect accounting include:

1. Influence of state corporate law.
2. Use of the capital stock or share system.
3. Development of a variety of ownership interests.

### State Corporate Law

Anyone who wishes to establish a corporation must submit **articles of incorporation** to the state in which incorporation is desired. After fulfilling requirements, the state issues a corporation charter, thereby recognizing the company as a legal entity subject to state law. Regardless of the number of states in which a corporation has operating divisions, it is incorporated in only one state.

It is to the company's advantage to incorporate in a state whose laws favor the corporate form of business organization. **General Motors**, for example, is incorporated in Delaware; **U.S. Steel** is a New Jersey corporation. Some corporations have increasingly been incorporating in states with laws favorable to existing management. For example, to thwart possible unfriendly takeovers, at one time, **Gulf Oil** changed its state of incorporation to Delaware. There, the board of directors alone, without a vote of the shareholders, may approve certain tactics against takeovers.

Each state has its own business incorporation act. The accounting for stockholders' equity follows the provisions of these acts. In many cases states have adopted the principles contained in the Model Business Corporate Act prepared by the American Bar Association. State laws are complex and vary both in their provisions and in their definitions of certain terms. Some laws fail to define technical terms. As a result, terms often mean one thing in one state and another thing in a different state. These problems may be further compounded because legal authorities often interpret the effects and restrictions of the laws differently.

### Capital Stock or Share System

Stockholders' equity in a corporation generally consists of a large number of units or shares. Within a given class of stock each share exactly equals every other share. The number of shares possessed determines each owner's interest. If a company has one class of stock divided into 1,000 shares, a person who owns 500 shares controls one-half of the ownership interest. One holding 10 shares has a one-hundredth interest.

Each share of stock has certain rights and privileges. Only by special contract can a company restrict these rights and privileges at the time it issues the shares. Owners must examine the articles of incorporation, stock certificates, and the provisions of the state law to ascertain such restrictions on or variations from the standard rights and privileges. In the absence of restrictive provisions, each share carries the following rights:

1. To share proportionately in profits and losses.
2. To share proportionately in management (the right to vote for directors).

#### INTERNATIONAL INSIGHT

In the United States, stockholders are treated equally as far as access to financial information. That is not always the case in other countries. For example, in Mexico, foreign investors as well as minority investors often have difficulty obtaining financial data. These restrictions are rooted in the habits of companies that, for many years, were tightly controlled by a few stockholders and managers.

3. To share proportionately in corporate assets upon liquidation.
4. To share proportionately in any new issues of stock of the same class—called the **preemptive right**.<sup>1</sup>

The first three rights are self-explanatory. The last right is used to protect each stockholder's proportional interest in the company. **The preemptive right protects an existing stockholder from involuntary dilution of ownership interest.** Without this right, stockholders might find their interest reduced by the issuance of additional stock without their knowledge, and at prices unfavorable to them. However, many corporations have eliminated the preemptive right. Why? Because this right makes it inconvenient for corporations to issue large amounts of additional stock, as they frequently do in acquiring other companies.

The share system easily allows one individual to transfer an interest in a company to another investor. For example, individuals owning shares in **Circuit City** may sell them to others at any time and at any price without obtaining the consent of the company or other stockholders. Each share is personal property of the owner, who may dispose of it at will. Circuit City simply maintains a list or subsidiary ledger of stockholders as a guide to dividend payments, issuance of stock rights, voting proxies, and the like. Because owners freely and frequently transfer shares, Circuit City must revise the subsidiary ledger of stockholders periodically, generally in advance of every dividend payment or stockholders' meeting.

In addition, the major stock exchanges require ownership controls that the typical corporation finds uneconomic to provide. Thus, corporations often use **registrars and transfer agents** who specialize in providing services for recording and transferring stock. The Uniform Stock Transfer Act and the Uniform Commercial Code govern the negotiability of stock certificates.

## Variety of Ownership Interests

In every corporation one class of stock must represent the basic ownership interest. That class is called common stock. **Common stock** is the residual corporate interest that bears the ultimate risks of loss and receives the benefits of success. It is guaranteed neither dividends nor assets upon dissolution. But common stockholders generally control the management of the corporation and tend to profit most if the company is successful. In the event that a corporation has only one authorized issue of capital stock, that issue is by definition common stock, whether so designated in the charter or not.

In an effort to broaden investor appeal, corporations may offer two or more classes of stock, each with different rights or privileges. In the preceding section we pointed out that each share of stock of a given issue has the same four inherent rights as other shares of the same issue. By special stock contracts between the corporation and its stockholders, however, the stockholder may sacrifice certain of these rights in return for other special rights or privileges. Thus special classes of stock, usually called **preferred stock**, are created. In return for any special preference, the preferred stockholder always sacrifices some of the inherent rights of common stock ownership.

A common type of preference is to give the preferred stockholders a prior claim on earnings. The corporation thus assures them a dividend, usually at a stated rate, before it distributes any amount to the common stockholders. In return for this preference the preferred stockholders may sacrifice their right to a voice in management or their right to share in profits beyond the stated rate.

### INTERNATIONAL INSIGHT

The U.S. and British systems of corporate governance and finance depend to a large extent on equity financing and the widely dispersed ownership of shares traded in highly liquid markets. The German and Japanese systems have relied more on debt financing, interlocking stock ownership, banker/directors, and worker/shareholder rights.

<sup>1</sup>This privilege is referred to as a **stock right** or **warrant**. The warrants issued in these situations are of short duration, unlike the warrants issued with other securities.

### What do the numbers mean?

## A CLASS (B) ACT

Some companies grant preferences to different shareholders by issuing different classes of common stock. Recent stock bids put the spotlight on dual-class stock structures. For example, ownership of Dow Jones & Co., publisher of the *Wall Street Journal*, was controlled by family members who owned Class B shares, which carry super voting powers. The same is true for the Ford family's control of Ford Motor Co. Class B shares are often criticized for protecting owners' interest at the expense of shareholder return. These shares often can determine if a takeover deal gets done, or not. Here are some notable companies with two-tiered shares.

Company	Votes Controlled by Class B Shareholders	Company	Votes Controlled by Class B Shareholders
<b>Ford</b>	40%	<b>Estée Lauder</b>	88%
<b>New York Times</b>	70%	<b>Polo Ralph Lauren</b>	88%
<b>Meredith</b>	71%	<b>Martha Stewart Living</b>	91%
<b>Cablevision Systems</b>	73%	<b>1-800-Flowers</b>	93%
<b>Google</b>	78%		

Data: Bloomberg Financial Markets, *BusinessWeek*, company documents.

For most retail investors, voting rights are not that important. But for family-controlled companies, issuing newer classes of lower or non-voting stock effectively creates currency for acquisitions, increases liquidity, or puts a public value on the company without diluting the family's voting control. Thus, investors must carefully compare the apparent bargain prices for some classes of stock—they may end up as second-class citizens with no voting rights.

Source: Adapted from Andy Serwer, "Dual-Listed Companies Aren't Fair or Balanced," *Fortune* (September 20, 2004), p. 83; and Alex Halperin, "A Class (B) Act," *BusinessWeek* (May 28, 2007), p. 12.

## CORPORATE CAPITAL

Owner's equity in a corporation is defined as stockholders' equity, shareholders' equity, or corporate capital. The following three categories normally appear as part of stockholders' equity:

### Objective 2

Identify the key components of stockholders' equity.

1. Capital stock.
2. Additional paid-in capital.
3. Retained earnings.

The first two categories, capital stock and additional paid-in capital, constitute contributed (paid-in) capital. **Retained earnings** represents the earned capital of the company. **Contributed capital (paid-in capital)** is the total amount paid in on capital stock—the amount provided by stockholders to the corporation for use in the business. Contributed capital includes items such as the par value of all outstanding stock and premiums less discounts on issuance. **Earned capital** is the capital that develops from profitable operations. It consists of all undistributed income that remains invested in the company.

Stockholders' equity is the difference between the assets and the liabilities of the company. That is, the owners' or stockholders' interest in a company like **Walt Disney Co.** is a **residual interest**.<sup>2</sup> **Stockholders' (owners') equity** represents the cumulative net

<sup>2</sup>"Elements of Financial Statements," *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, 1985), par. 60.

contributions by stockholders plus retained earnings. As a residual interest, stockholders' equity has no existence apart from the assets and liabilities of Disney—stockholders' equity equals net assets. Stockholders' equity is not a claim to specific assets but a claim against a portion of the total assets. Its amount is not specified or fixed; it depends on Disney's profitability. Stockholders' equity grows if it is profitable. It shrinks, or may disappear entirely, if Disney loses money.

## Issuance of Stock

In issuing stock, companies follow these procedures: First, the state must authorize the stock, generally in a certificate of incorporation or charter. Next, the corporation offers shares for sale, entering into contracts to sell stock. Then, after receiving amounts for the stock, the corporation issues shares. The corporation generally makes no entry in the general ledger accounts when it receives its stock authorization from the state of incorporation.

### Objective 3

Explain the accounting procedures for issuing shares of stock.

We discuss the accounting problems involved in the issuance of stock under the following topics.

1. Accounting for par value stock.
2. Accounting for no-par stock.
3. Accounting for stock issued in combination with other securities (lump-sum sales).
4. Accounting for stock issued in noncash transactions.
5. Accounting for costs of issuing stock.

### Par Value Stock

The par value of a stock has no relationship to its fair value. At present, the par value associated with most capital stock issuances is very low. For example, **PepsiCo's** par value is  $1\frac{2}{3}\text{¢}$ , **Kellogg's** is \$0.25, and **Hershey's** is \$1. Such values contrast dramatically with the situation in the early 1900s, when practically all stock issued had a par value of \$100. Low par values help companies avoid the contingent liability associated with stock sold below par.<sup>3</sup>

To show the required information for issuance of par value stock, corporations maintain accounts for each class of stock as follows.

1. **Preferred Stock or Common Stock.** Together, these two stock accounts reflect the par value of the corporation's issued shares. The company credits these accounts when it originally issues the shares. It makes no additional entries in these accounts unless it issues additional shares or retires them.
2. **Additional Paid-in Capital (also called Paid-in Capital in Excess of Par).** The **Additional Paid-in Capital** account indicates any excess over par value paid in by stockholders in return for the shares issued to them. Once paid in, the excess over par becomes a part of the corporation's additional paid-in capital. The individual stockholder has no greater claim on the excess paid in than all other holders of the same class of shares.

### No-Par Stock

Many states permit the issuance of capital stock without par value, called **no-par stock**. The reasons for issuance of no-par stock are twofold: First, issuance of no-par stock **avoids the contingent liability** (see footnote 3) that might occur if the corporation

<sup>3</sup>Companies rarely, if ever, issue stock at a value below par value. If issuing stock below par, the company records the discount as a debit to Additional Paid-in Capital. In addition, the corporation may call on the original purchaser or the current holder of the shares issued below par to pay in the amount of the discount to prevent creditors from sustaining a loss upon liquidation of the corporation.

issued par value stock at a discount. Second, some confusion exists over the relationship (or rather the absence of a relationship) between the par value and fair value. If shares have no par value, **the questionable treatment of using par value as a basis for fair value never arises**. This is particularly advantageous whenever issuing stock for property items such as tangible or intangible fixed assets.

A major disadvantage of no-par stock is that some states levy a high tax on these issues. In addition, in some states the total issue price for no-par stock may be considered legal capital, which could reduce the flexibility in paying dividends.

Corporations sell no-par shares, like par value shares, for whatever price they will bring. However, unlike par value shares, corporations issue them without a premium or a discount. The exact amount received represents the credit to common or preferred stock. For example, Video Electronics Corporation is organized with authorized common stock of 10,000 shares without par value. Video Electronics makes only a memorandum entry for the authorization, inasmuch as no amount is involved. If Video Electronics then issues 500 shares for cash at \$10 per share, it makes the following entry:

Cash	5,000	
Common Stock—No-Par Value		5,000

If it issues another 500 shares for \$11 per share, Video Electronics makes this entry:

Cash	5,500	
Common Stock—No-Par Value		5,500

**True no-par stock should be carried in the accounts at issue price without any additional paid-in capital or discount reported.** But some states require that no-par stock have a **stated value**. The stated value is a minimum value below which a company cannot issue it. Thus, instead of being no-par stock, such stated-value stock becomes, in effect, stock with a very low par value. It thus is open to all the criticism and abuses that first encouraged the development of no-par stock.<sup>4</sup>

If no-par stock has a stated value of \$5 per share but sells for \$11, all such amounts in excess of \$5 are recorded as additional paid-in capital, which in many states is fully or partially available for dividends. Thus, no-par value stock, with a low stated value, permits a new corporation to commence its operations with additional paid-in capital that may exceed its stated capital. For example, if a company issued 1,000 of the shares with a \$5 stated value at \$15 per share for cash, it makes the following entry.

Cash	15,000	
Common Stock		5,000
Paid-in Capital in Excess of Stated Value		10,000

Most corporations account for no-par stock with a stated value as if it were par value stock with par equal to the stated value.

### Stock Issued with Other Securities (Lump-Sum Sales)

Generally, corporations sell classes of stock separately from one another. The reason to do so is to track the proceeds relative to each class, as well as relative to each lot. Occasionally, a corporation issues two or more classes of securities for a single payment or lump sum, in the acquisition of another company. The accounting problem in such **lump-sum sales** is how to allocate the proceeds among the several classes of securities. Companies use one of two methods of allocation: (1) the proportional method and (2) the incremental method.

**Proportional Method.** If the fair value or other sound basis for determining relative value is available for each class of security, **the company allocates the lump sum received among the classes of securities on a proportional basis**. For instance, assume a company issues 1,000 shares of \$10 stated value common stock having a fair value

<sup>4</sup>*Accounting Trends and Techniques—2007* indicates that its 600 surveyed companies reported 655 issues of outstanding common stock, 579 par value issues, and 55 no-par issues; 8 of the no-par issues were shown at their stated (assigned) values.

of \$20 a share, and 1,000 shares of \$10 par value preferred stock having a fair value of \$12 a share, for a lump sum of \$30,000. Illustration 15-1 shows how the company allocates the \$30,000 to the two classes of stock.

Fair value of common (1,000 × \$20) =	\$20,000
Fair value of preferred (1,000 × \$12) =	<u>12,000</u>
Aggregate fair value	<u>\$32,000</u>
Allocated to common:	$\frac{\$20,000}{\$32,000} \times \$30,000 = \$18,750$
Allocated to preferred:	$\frac{\$12,000}{\$32,000} \times \$30,000 = \underline{11,250}$
Total allocation	<u>\$30,000</u>

**ILLUSTRATION 15-1**  
Allocation in Lump-Sum  
Securities Issuance—  
Proportional Method

**Incremental Method.** In instances where a company cannot determine the fair value of all classes of securities, it may use the incremental method. It uses the fair value of the securities as a basis for those classes that it knows, and allocates the remainder of the lump sum to the class for which it does not know the fair value. For instance, if a company issues 1,000 shares of \$10 stated value common stock having a fair value of \$20, and 1,000 shares of \$10 par value preferred stock having no established fair value, for a lump sum of \$30,000, it allocates the \$30,000 to the two classes as shown in Illustration 15-2.

Lump-sum receipt	\$30,000
Allocated to common (1,000 × \$20)	<u>20,000</u>
Balance allocated to preferred	<u>\$10,000</u>

**ILLUSTRATION 15-2**  
Allocation in Lump-Sum  
Securities Issuance—  
Incremental Method

**If a company cannot determine fair value for any of the classes of stock involved in a lump-sum exchange, it may need to use other approaches.** It may rely on an expert's appraisal. Or, if the company knows that one or more of the classes of securities issued will have a determinable fair value in the near future, it may use a best estimate basis with the intent to adjust later, upon establishment of the future fair value.

### Stock Issued in Noncash Transactions

Accounting for the issuance of shares of stock for property or services involves an issue of valuation. **The general rule is: Companies should record stock issued for services or property other than cash at either the fair value of the stock issued or the fair value of the noncash consideration received, whichever is more clearly determinable.**

If a company can readily determine both, and the transaction results from an arm's-length exchange, there will probably be little difference in their fair values. In such cases the basis for valuing the exchange should not matter.

If a company cannot readily determine either the fair value of the stock it issues or the property or services it receives, it should employ an appropriate valuation technique. Depending on available data, the valuation may be based on market transactions involving comparable assets or the use of discounted expected future cash flows. Companies should avoid the use of the book, par, or stated values as a basis of valuation for these transactions.

A company may exchange unissued stock or treasury stock (issued shares that it has reacquired but not retired) for property or services. If it uses treasury shares, the

cost of the treasury shares should not be considered the decisive factor in establishing the fair value of the property or services. Instead, it should use the fair value of the treasury stock, if known, to value the property or services. Otherwise, if it does not know the fair value of the treasury stock, it should use the fair value of the property or services received, if determinable.

The following series of transactions illustrates the procedure for recording the issuance of 10,000 shares of \$10 par value common stock for a patent for Marlowe Company, in various circumstances.

1. Marlowe cannot readily determine the fair value of the patent, but it knows the fair value of the stock is \$140,000.

Patent	140,000	
Common Stock (10,000 shares × \$10 per share)		100,000
Paid-in Capital in Excess of Par		40,000

2. Marlowe cannot readily determine the fair value of the stock, but it determines the fair value of the patent is \$150,000.

Patent	150,000	
Common Stock (10,000 shares × \$10 per share)		100,000
Paid-in Capital in Excess of Par		50,000

3. Marlowe cannot readily determine the fair value of the stock nor the fair value of the patent. An independent consultant values the patent at \$125,000 based on discounted expected cash flows.

Patent	125,000	
Common Stock (10,000 shares × \$10 share)		100,000
Paid-in Capital in Excess of Par		25,000

In corporate law, the board of directors has the power to set the value of non-cash transactions. However, boards sometimes abuse this power. The issuance of stock for property or services has resulted in cases of overstated corporate capital through intentional overvaluation of the property or services received. The overvaluation of the stockholders' equity resulting from inflated asset values creates **watered stock**. The corporation should eliminate the "water" by simply writing down the overvalued assets.

If, as a result of the issuance of stock for property or services, a corporation undervalues the recorded assets, it creates **secret reserves**. An understated corporate structure (secret reserve) may also result from other methods: excessive depreciation or amortization charges, expensing capital expenditures, excessive write-downs of inventories or receivables, or any other understatement of assets or overstatement of liabilities. An example of a liability overstatement is an excessive provision for estimated product warranties that ultimately results in an understatement of owners' equity, thereby creating a secret reserve.

### Costs of Issuing Stock

When a company like **Walgreens** issues stock, it should report direct costs incurred to sell stock, such as underwriting costs, accounting and legal fees, printing costs, and taxes, as a reduction of the amounts paid in. Walgreens therefore debits issue costs to Additional Paid-in Capital because they are unrelated to corporate operations. In effect, **issue costs are a cost of financing**. As such, issue costs should reduce the proceeds received from the sale of the stock.

Walgreens should expense management salaries and other indirect costs related to the stock issue because it is difficult to establish a relationship between these costs and the sale proceeds. In addition, Walgreens expenses recurring costs, primarily registrar and transfer agents' fees, as incurred.

## THE CASE OF THE DISAPPEARING RECEIVABLE

Sometimes companies issue stock but may not receive cash in return. As a result, a company records a receivable.

Controversy existed regarding the presentation of this receivable on the balance sheet. Some argued that the company should report the receivable as an asset similar to other receivables. Others argued that the company should report the receivable as a deduction from stockholders' equity (similar to the treatment of treasury stock). The SEC settled this issue: It requires companies to use the contra-equity approach because the risk of collection in this type of transaction is often very high.

This accounting issue surfaced in **Enron's** accounting. Starting in early 2000, Enron issued shares of its common stock to four "special-purpose entities," in exchange for which it received a note receivable. Enron then increased its assets (by recording a receivable) and stockholders' equity, a move the company now calls an accounting error. As a result of this accounting treatment, Enron overstated assets and stockholders' equity by \$172 million in its 2000 audited financial statements and by \$828 million in its unaudited 2001 statements. This \$1 billion overstatement was 8.5 percent of Enron's previously reported stockholders' equity at that time.

As Lynn Turner, former chief accountant of the SEC, noted, "It is a basic accounting principle that you don't record equity until you get cash, and a note doesn't count as cash." Situations like this led investors, creditors, and suppliers to lose faith in the credibility of Enron, which eventually caused its bankruptcy.

Source: Adapted from Jonathan Weil, "Basic Accounting Tripped Up Enron—Financial Statements Didn't Add Up—Auditors Overlook a Simple Rule," *Wall Street Journal* (November 11, 2001), p. C1.

*What do the numbers mean?*

## Reacquisition of Shares

Companies often buy back their own shares. In fact, share buybacks now exceed dividends as a form of distribution to stockholders.<sup>5</sup> For example, oil producer **ConocoPhillips**, health-care-products giant **Johnson & Johnson**, and discount retailer **Wal-Mart Stores** recently announced ambitious buyback plans. Illustration 15-3 indicates that buybacks are increasing and that \$118 billion was spent in the first quarter of 2007, more than any previous quarter.

### Objective 4

Describe the accounting for treasury stock.

**ILLUSTRATION 15-3**  
Stock Buybacks on the Rise

Source: P. McKay and J. Lahart, "Boom in Buybacks Lifts Stocks to Record Heights," *Wall Street Journal* (July 18, 2007), p. A1.

<sup>5</sup>At the beginning of the 1990s the situation was just the opposite. That is, share buybacks were less than half the level of dividends. Companies are extremely reluctant to reduce or eliminate their dividends, because they believe that the market negatively views this action.

Corporations purchase their outstanding stock for several reasons:

1. *To provide tax-efficient distributions of excess cash to shareholders.* Capital gain rates on sales of stock to the company by the stockholders have been approximately half the ordinary tax rate for many investors. This advantage has been somewhat diminished by recent changes in the tax law related to dividends.
2. *To increase earnings per share and return on equity.* Reducing both shares outstanding and stockholders' equity often enhances certain performance ratios. However, strategies to hype performance measures might increase performance in the short-run, but these tactics add no real long-term value.
3. *To provide stock for employee stock compensation contracts or to meet potential merger needs.* **Honeywell Inc.** reported that it would use part of its purchase of one million common shares for employee stock option contracts. Other companies acquire shares to have them available for business acquisitions.
4. *To thwart takeover attempts or to reduce the number of stockholders.* By reducing the number of shares held by the public, existing owners and managements bar "outsiders" from gaining control or significant influence. When Ted Turner attempted to acquire **CBS**, CBS started a substantial buyback of its stock. Companies may also use stock purchases to eliminate dissident stockholders.
5. *To make a market in the stock.* As one company executive noted, "Our company is trying to establish a floor for the stock." Purchasing stock in the marketplace creates a demand. This may stabilize the stock price or, in fact, increase it.

Some publicly held corporations have chosen to "go private," that is, to eliminate public (outside) ownership entirely by purchasing all of their outstanding stock. Companies often accomplish such a procedure through a **leveraged buyout (LBO)**, in which the company borrows money to finance the stock repurchases.

After reacquiring shares, a company may either retire them or hold them in the treasury for reissue. If not retired, such shares are referred to as **treasury stock (treasury shares)**. Technically, treasury stock is a corporation's own stock, reacquired after having been issued and fully paid.

**Treasury stock is not an asset.** When a company purchases treasury stock, a reduction occurs in both assets and stockholders' equity. It is inappropriate to imply that a corporation can own a part of itself. A corporation may sell treasury stock to obtain funds, but that does not make treasury stock a balance sheet asset. When a corporation buys back some of its own outstanding stock, it has not acquired an asset; it reduces net assets.

The possession of treasury stock does not give the corporation the right to vote, to exercise preemptive rights as a stockholder, to receive cash dividends, or to receive assets upon corporate liquidation. **Treasury stock is essentially the same as unissued capital stock.** No one advocates classifying unissued capital stock as an asset in the balance sheet.<sup>6</sup>

#### Underlying Concepts

As we indicated in Chapter 2, an asset should have probable future economic benefits. Treasury stock simply reduces common stock outstanding.

#### SIGNALS TO BUY?

Market analysts sometimes look to stock buybacks as a buy signal for a stock. That strategy is not that surprising if you look at the performance of companies that did buybacks. For example, in one study, buyback companies outperformed similar companies without buybacks by an average of 23 percent. In a recent three-year period, companies followed by **Buybackletter.com** were up 16.4 percent, while the S&P 500 Stock Index was up just 7.1 percent in that period. Why the premium? Well, the conventional wisdom is that companies who buy back shares believe their shares are undervalued. Thus, analysts view the buyback announcement as an important piece of inside information about future company prospects.

#### What do the numbers mean?

<sup>6</sup>The possible justification for classifying these shares as assets is that the company will use them to liquidate a specific liability that appears on the balance sheet. *Accounting Trends and Techniques—2007* reported that out of 600 companies surveyed, 408 disclosed treasury stock, but none classified it as an asset.

On the other hand, buybacks can actually hurt businesses and their shareholders over the long-run. Whether the buyback is a good thing appears to depend a lot on why the company did the buyback and what the repurchased shares were used for. One study found that companies often increased their buybacks when earnings growth slowed. This allowed the companies to prop up earnings per share (based on fewer shares outstanding). Furthermore, many buybacks do not actually result in a net reduction in shares outstanding. For example, companies, such as **Microsoft** and **Broadcom**, bought back shares to meet share demands for stock option exercises, resulting in higher net shares outstanding when it reissued the repurchased shares to the option holders upon exercise. In this case the buyback actually indicated a further dilution in the share ownership in the buyback company.

This does not mean you should never trust a buyback signal. But if the buyback is intended to manage the company's earnings or if the buyback results in dilution, take a closer look.

Source: Adapted from Ann Tergesen, "When Buybacks Are Signals to Buy," *Business Week Online* (October 1, 2001); and Rachel Beck, "Stock Buybacks Not Always Good for the Company, Shareholders," *Naples [FL] Daily News* (March 7, 2004). p. 11.

**What do the numbers mean?**  
(continued)

### Purchase of Treasury Stock

Companies use two general methods of handling treasury stock in the accounts: the cost method and the par value method. Both methods are generally acceptable. The cost method enjoys more widespread use.<sup>7</sup>

- The **cost method** results in debiting the Treasury Stock account for the reacquisition cost and in reporting this account as a deduction from the total paid-in capital **and** retained earnings on the balance sheet.
- The **par** or **stated value method** records all transactions in treasury shares at their par value and reports the treasury stock as a deduction from capital stock only.

No matter which method a company uses, most states consider the cost of the treasury shares acquired as a restriction on retained earnings.

Companies generally use the cost method to account for treasury stock. This method derives its name from the fact that a company maintains the Treasury Stock account at the cost of the shares purchased.<sup>8</sup> Under the cost method, the company debits the Treasury Stock account for the cost of the shares acquired. Upon reissuance of the shares, it credits the account for this same cost. The original price received for the stock does not affect the entries to record the acquisition and reissuance of the treasury stock.

To illustrate, assume that Pacific Company issued 100,000 shares of \$1 par value common stock at a price of \$10 per share. In addition, it has retained earnings of \$300,000. Illustration 15-4 shows the stockholders' equity section on December 31, 2009, before purchase of treasury stock.

Discussion of Using Par or Stated Value for Treasury Stock Transactions

Stockholders' equity	
Paid-in capital	
Common stock, \$1 par value, 100,000 shares issued and outstanding	\$ 100,000
Additional paid-in capital	900,000
Total paid-in capital	1,000,000
Retained earnings	300,000
<b>Total stockholders' equity</b>	<b><u>\$1,300,000</u></b>

**ILLUSTRATION 15-4**  
Stockholders' Equity with No Treasury Stock

<sup>7</sup>*Accounting Trends and Techniques—2007* indicates that of its selected list of 600 companies, 389 carried common stock in treasury at cost and only 14 at par or stated value; 3 companies carried preferred stock in treasury at cost and none at par or stated value.

<sup>8</sup>If making numerous acquisitions of blocks of treasury shares at different prices, a company may use inventory costing methods—such as specific identification, average, or FIFO—to identify the cost at date of reissuance.

On January 20, 2010, Pacific acquires 10,000 shares of its stock at \$11 per share. Pacific records the reacquisition as follows:

**January 20, 2010**

Treasury Stock	110,000	
Cash		110,000

Note that Pacific debited Treasury Stock for the cost of the shares purchased. The original paid-in capital account, Common Stock, is not affected because the number of issued shares does not change. The same is true for the Additional Paid-in Capital account. Pacific deducts treasury stock from total paid-in capital and retained earnings in the stockholders' equity section.

Illustration 15-5 shows the stockholders' equity section for Pacific after purchase of the treasury stock.

**ILLUSTRATION 15-5**  
Stockholders' Equity with  
Treasury Stock

Stockholders' equity	
Paid-in capital	
Common stock, \$1 par value, 100,000 shares issued and 90,000 outstanding	\$ 100,000
Additional paid-in capital	900,000
Total paid-in capital	1,000,000
Retained earnings	300,000
Total paid-in capital and retained earnings	1,300,000
Less: Cost of treasury stock (10,000 shares)	110,000
Total stockholders' equity	\$1,190,000

Pacific subtracts the cost of the treasury stock from the total of common stock, additional paid-in capital, and retained earnings. It therefore reduces stockholders' equity. Many states require a corporation to restrict retained earnings for the cost of treasury stock purchased. The restriction keeps intact the corporation's legal capital that it temporarily holds as treasury stock. When the corporation sells the treasury stock, it lifts the restriction.

Pacific discloses both the number of shares issued (100,000) and the number in the treasury (10,000). The difference is the number of shares of stock outstanding (90,000). The term **outstanding stock** means the number of shares of issued stock that stockholders own.

**Sale of Treasury Stock**

Companies usually reissue or retire treasury stock. When selling treasury shares, the accounting for the sale depends on the price. If the selling price of the treasury stock equals its cost, the company records the sale of the shares by debiting Cash and crediting Treasury Stock. In cases where the selling price of the treasury stock is not equal to cost, then accounting for treasury stock sold **above cost** differs from the accounting for treasury stock sold **below cost**. However, the sale of treasury stock either above or below cost increases both total assets and stockholders' equity.

*Sale of Treasury Stock above Cost.* When the selling price of shares of treasury stock exceeds its cost, a company credits the difference to Paid-in Capital from Treasury Stock. To illustrate, assume that Pacific acquired 10,000 shares of its treasury stock at \$11 per share. It now sells 1,000 shares at \$15 per share on March 10. Pacific records the entry as follows.

**March 10, 2010**

Cash	15,000	
Treasury Stock		11,000
Paid-in Capital from Treasury Stock		4,000

There are two reasons why Pacific does not credit \$4,000 to Gain on Sale of Treasury Stock: (1) Gains on sales occur when selling **assets**; treasury stock is not an asset. (2) A gain or loss should not be recognized from stock transactions with its own stockholders. Thus, Pacific should not include paid-in capital arising from the sale of treasury stock in the measurement of net income. Instead, it lists paid-in capital from treasury stock separately on the balance sheet, as a part of paid-in capital.

**Sale of Treasury Stock below Cost.** When a corporation sells treasury stock below its cost, it usually debits the excess of the cost over selling price to Paid-in Capital from Treasury Stock. Thus, if Pacific sells an additional 1,000 shares of treasury stock on March 21 at \$8 per share, it records the sale as follows.

<b>March 21, 2010</b>			
Cash		8,000	
Paid-in Capital from Treasury Stock		3,000	
Treasury Stock			11,000

We can make several observations based on the two sale entries (sale above cost and sale below cost): (1) Pacific credits Treasury Stock at cost in each entry. (2) Pacific uses Paid-in Capital from Treasury Stock for the difference between the cost and the resale price of the shares. (3) Neither entry affects the original paid-in capital account, Common Stock.

After eliminating the credit balance in Paid-in Capital from Treasury Stock, the corporation debits any additional excess of cost over selling price to Retained Earnings. To illustrate, assume that Pacific sells an additional 1,000 shares at \$8 per share on April 10. Illustration 15-6 shows the balance in the Paid-in Capital from Treasury Stock account (before the April 10 purchase).

<b>Paid-in Capital from Treasury Stock</b>			
Mar. 21	3,000	Mar. 10	4,000
		Balance	1,000

**ILLUSTRATION 15-6**  
Treasury Stock  
Transactions in Paid-in  
Capital Account

In this case, Pacific debits \$1,000 of the excess to Paid-in Capital from Treasury Stock. It debits the remainder to Retained Earnings. The entry is:

<b>April 10, 2010</b>			
Cash		8,000	
Paid-in Capital from Treasury Stock		1,000	
Retained Earnings		2,000	
Treasury Stock			11,000

### Retiring Treasury Stock

The board of directors may approve the retirement of treasury shares. This decision results in cancellation of the treasury stock and a reduction in the number of shares of issued stock. Retired treasury shares have the status of authorized and unissued shares. The accounting effects are similar to the sale of treasury stock except that corporations debit the **paid-in capital accounts applicable to the retired shares** instead of cash. For example, if a corporation originally sells the shares at par, it debits Common Stock for the par value per share. If it originally sells the shares at \$3 above par value, it also debits Paid-in Capital in Excess of Par Value for \$3 per share at retirement.

## PREFERRED STOCK

As noted earlier, **preferred stock** is a special class of shares that possesses certain preferences or features not possessed by the common stock.<sup>9</sup> The following features are those most often associated with preferred stock issues.

### Objective 5

Explain the accounting for and reporting of preferred stock.

1. Preference as to dividends.
2. Preference as to assets in the event of liquidation.
3. Convertible into common stock.
4. Callable at the option of the corporation.
5. Nonvoting.

The features that distinguish preferred from common stock may be of a more restrictive and negative nature than preferences. For example, the preferred stock may be nonvoting, noncumulative, and nonparticipating.

Companies usually issue preferred stock with a par value, expressing the dividend preference as a **percentage of the par value**. Thus, holders of 8 percent preferred stock with a \$100 par value are entitled to an annual dividend of \$8 per share. This stock is commonly referred to as 8 percent preferred stock. In the case of no-par preferred stock, a corporation expresses a dividend preference as a **specific dollar amount** per share, for example, \$7 per share. This stock is commonly referred to as \$7 preferred stock.

A preference as to dividends does not assure the payment of dividends. It merely assures that the corporation must pay the stated dividend rate or amount applicable to the preferred stock before paying any dividends on the common stock.

A company often issues preferred stock (instead of debt) because of a high debt-to-equity ratio. In other instances, it issues preferred stock through private placements with other corporations at a lower-than-market dividend rate because the acquiring corporation receives largely tax-free dividends (owing to the IRS's 70 percent or 80 percent dividends received deduction).

### Features of Preferred Stock

A corporation may attach whatever preferences or restrictions, in whatever combination it desires, to a preferred stock issue, as long as it does not specifically violate its state incorporation law. Also, it may issue more than one class of preferred stock. We discuss the most common features attributed to preferred stock below.

#### Cumulative Preferred Stock

**Cumulative preferred stock** requires that if a corporation fails to pay a dividend in any year, it must make it up in a later year before paying any dividends to common stockholders. If the directors fail to declare a dividend at the normal date for dividend action, the dividend is said to have been "passed." Any passed dividend on cumulative preferred stock constitutes a **dividend in arrears**. Because no liability exists until the board of directors declares a dividend, a corporation does not record a dividend in arrears as a liability but discloses it in a note to the financial statements. A corporation seldom issues noncumulative preferred stock because a passed dividend is lost forever to the preferred stockholder. As a result, this stock issue would be less marketable.

#### Participating Preferred Stock

Holders of **participating preferred stock** share ratably with the common stockholders in any profit distributions beyond the prescribed rate. That is, 5 percent preferred stock,

<sup>9</sup>*Accounting Trends and Techniques—2007* reports that of its 600 surveyed companies, 70 had one class of preferred stock, and 8 had two or more classes. Of these companies, just 49 had preferred stock outstanding.

if fully participating, will receive not only its 5 percent return, but also dividends at the same rates as those paid to common stockholders if paying amounts in excess of 5 percent of par or stated value to common stockholders. Note that participating preferred stock may be only partially participating. Although seldom used, examples of companies that have issued participating preferred stock are **LTV Corporation**, **Southern California Edison**, and **Allied Products Corporation**.

### Convertible Preferred Stock

**Convertible preferred stock** allows stockholders, at their option, to exchange preferred shares for common stock at a predetermined ratio. The convertible preferred stockholder not only enjoys a preferred claim on dividends but also has the option of converting into a common stockholder with unlimited participation in earnings.

### Callable Preferred Stock

**Callable preferred stock** permits the corporation at its option to call or redeem the outstanding preferred shares at specified future dates and at stipulated prices. Many preferred issues are callable. The corporation usually sets the call or redemption price slightly above the original issuance price and commonly states it in terms related to the par value. The callable feature permits the corporation to use the capital obtained through the issuance of such stock until the need has passed or it is no longer advantageous.

The existence of a call price or prices tends to set a ceiling on the market value of the preferred shares unless they are convertible into common stock. When a corporation redeems preferred stock, it must pay any dividends in arrears.

### Redeemable Preferred Stock

Recently, more and more issuances of preferred stock have features that make the security more like debt (legal obligation to pay) than an equity instrument. For example, **redeemable preferred stock** has a mandatory redemption period or a redemption feature that the issuer cannot control.

Previously, public companies were not permitted to report these debt-like preferred stock issues in equity, but they were not required to report them as a liability either. There were concerns about classification of these debt-like securities, which may have been reported as equity or in the “mezzanine” section of balance sheets between debt and equity. There also was diversity in practice as to how dividends on these securities were reported. The FASB now requires debt-like securities, like redeemable preferred stock, to be classified as liabilities and be measured and accounted for similar to liabilities. **[1]**

See the FASB Codification section (page 774).

## Accounting for and Reporting Preferred Stock

The accounting for preferred stock at issuance is similar to that for common stock. A corporation allocates proceeds between the par value of the preferred stock and additional paid-in capital. To illustrate, assume that Bishop Co. issues 10,000 shares of \$10 par value preferred stock for \$12 cash per share. Bishop records the issuance as follows:

Cash	120,000	
Preferred Stock		100,000
Paid-in Capital in Excess of Par		20,000

Thus, Bishop maintains separate accounts for these different classes of shares.

In contrast to convertible bonds (recorded as a liability on the date of issue) corporations consider convertible preferred stock as a part of stockholders' equity. In addition, when exercising convertible preferred stocks, there is no theoretical justification for recognition of a gain or loss. A company recognizes no gain or loss when dealing with stockholders in their capacity as business owners. Instead, the company **employs the book value method**: debit Preferred Stock, along with any related Additional Paid-in Capital; credit Common Stock and Additional Paid-in Capital (if an excess exists).

Preferred stock generally has no maturity date. Therefore, no legal obligation exists to pay the preferred stockholder. As a result, companies classify preferred stock as part of stockholders' equity. Companies generally report preferred stock at par value as the first item in the stockholders' equity section. They report any excess over par value as part of additional paid-in capital. They also consider dividends on preferred stock as a distribution of income and not an expense. Companies must disclose the pertinent rights of the preferred stock outstanding. [2]

## DIVIDEND POLICY

### Objective 6

Describe the policies used in distributing dividends.

Dividend payouts can be important signals to the market. The practice of paying dividends declined sharply in the 1980s and 1990s as companies focused on growth and plowed profits back into the business. A resurgence in dividend payouts is due in large part to the dividend tax cut of 2003, which reduced the rate of tax on dividends to 15 percent (quite a bit lower than the ordinary income rate charged in the past). In addition, investors who were burned by accounting scandals in recent years began demanding higher payouts in the form of dividends. Why? A dividend check provides proof that at least some portion of a company's profits is genuine.<sup>10</sup>

Determining the proper amount of dividends to pay is a difficult financial management decision. Companies that are paying dividends are extremely reluctant to reduce or eliminate their dividend. They fear that the securities market might negatively view this action. As a consequence, companies that have been paying cash dividends will make every effort to continue to do so. In addition, the type of shareholder the company has (taxable or nontaxable, retail investor or institutional investor) plays a large role in determining dividend policy.

**Very few companies pay dividends in amounts equal to their legally available retained earnings.** The major reasons are as follows.

1. To maintain agreements (bond covenants) with specific creditors, to retain all or a portion of the earnings, in the form of assets, to build up additional protection against possible loss.
2. To meet state corporation requirements, that earnings equivalent to the cost of treasury shares purchased be restricted against dividend declarations.
3. To retain assets that would otherwise be paid out as dividends, to finance growth or expansion. This is sometimes called internal financing, reinvesting earnings, or "plowing" the profits back into the business.
4. To smooth out dividend payments from year to year by accumulating earnings in good years and using such accumulated earnings as a basis for dividends in bad years.
5. To build up a cushion or buffer against possible losses or errors in the calculation of profits.

The reasons above are self-explanatory except for the second. The laws of some states require that the corporation restrict its legal capital from distribution to stockholders, to protect against loss for creditors.<sup>11</sup> The applicable state law determines the legality of a dividend.

<sup>10</sup>Jeff Opdyke, "Tax Cut, Shareholder Pressure Stoke Surge in Dividends," *Wall Street Journal Online* (January 18, 2005). From January 1972 through July 2007, stocks paying dividends had an average price increase of 10.2 percent a year, versus 2.4 percent for nondividend-paying stocks, as indicated in a recent study (A. Blackman, "How Well Do You Know . . . Dividends?" *Wall Street Journal* (September 10, 2007), p. R5).

<sup>11</sup>If the corporation buys its own outstanding stock, it reduces its legal capital and distributes assets to stockholders. If permitted, the corporation could, by purchasing treasury stock at any price desired, return to the stockholders their investments and leave creditors with little or no protection against loss.

## Financial Condition and Dividend Distributions

Effective management of a company requires attention to more than the legality of dividend distributions. Management must also consider economic conditions, most importantly, liquidity. Assume an extreme situation as shown in Illustration 15-7.

BALANCE SHEET			
Plant assets	\$500,000	Capital stock	\$400,000
	<u>\$500,000</u>	Retained earnings	<u>100,000</u>
			<u>\$500,000</u>

**ILLUSTRATION 15-7**  
Balance Sheet, Showing a  
Lack of Liquidity

The depicted company has a retained earnings credit balance. Unless restricted, it can declare a dividend of \$100,000. But because all its assets are plant assets used in operations, payment of a cash dividend of \$100,000 would require the sale of plant assets or borrowing.

Even if a balance sheet shows current assets, as in Illustration 15-8, the question remains as to whether the company needs those cash assets for other purposes.

BALANCE SHEET				
Cash	\$100,000	Current liabilities		\$ 60,000
Plant assets	<u>460,000</u>	Capital stock	\$400,000	
		Retained earnings	<u>100,000</u>	<u>500,000</u>
	<u>\$560,000</u>			<u>\$560,000</u>

**ILLUSTRATION 15-8**  
Balance Sheet, Showing  
Cash but Minimal  
Working Capital

The existence of current liabilities strongly implies that the company needs some of the cash to meet current debts as they mature. In addition, day-by-day cash requirements for payrolls and other expenditures not included in current liabilities also require cash.

Thus, before declaring a dividend, management must consider **availability of funds to pay the dividend**. A company should not pay a dividend unless both the present and future financial position warrant the distribution.

The SEC encourages companies to disclose their dividend policy in their annual report, especially those that (1) have earnings but fail to pay dividends, or (2) do not expect to pay dividends in the foreseeable future. In addition, the SEC encourages companies that consistently pay dividends to indicate whether they intend to continue this practice in the future.

## Types of Dividends

Companies generally base dividend distributions either on accumulated profits (that is, retained earnings) or on some other capital item such as additional paid-in capital. Dividends are of the following types.

1. Cash dividends.
2. Property dividends.
3. Liquidating dividends.
4. Stock dividends.

### Objective 7

Identify the various forms of dividend distributions.

Although commonly paid in cash, companies occasionally pay dividends in stock or some other asset.<sup>12</sup> **All dividends, except for stock dividends, reduce the total stockholders' equity in the corporation.** When declaring a stock dividend, the corporation does not pay out assets or incur a liability. It issues additional shares of stock to each stockholder and nothing more.

The natural expectation of any stockholder who receives a dividend is that the corporation has operated successfully. As a result, he or she is receiving a share of its profits. A company should disclose a **liquidating dividend**—that is, a dividend not based on retained earnings—to the stockholders so that they will not misunderstand its source.

### Cash Dividends

The board of directors votes on the declaration of **cash dividends**. Upon approval of the resolution, the board declares a dividend. Before paying it, however, the company must prepare a current list of stockholders. For this reason there is usually a time lag between declaration and payment. For example, the board of directors might approve a resolution at the January 10 (**date of declaration**) meeting, and declare it payable February 5 (**date of payment**) to all stockholders of record January 25 (**date of record**).<sup>13</sup> In this example, the period from January 10 to January 25 gives time for the company to complete and register any transfers in process. The time from January 25 to February 5 provides an opportunity for the transfer agent or accounting department, depending on who does this work, to prepare a list of stockholders as of January 25 and to prepare and mail dividend checks.

**A declared cash dividend is a liability. Because payment is generally required very soon, it is usually a current liability.** Companies use the following entries to record the declaration and payment of an ordinary dividend payable in cash. For example, Roadway Freight Corp. on June 10 declared a cash dividend of 50 cents a share on 1.8 million shares payable July 16 to all stockholders of record June 24.

<b>At date of declaration (June 10)</b>		
Retained Earnings (Cash Dividends Declared)	900,000	
Dividends Payable		900,000
<b>At date of record (June 24)</b>		
No entry		
<b>At date of payment (July 16)</b>		
Dividends Payable	900,000	
Cash		900,000

To set up a ledger account that shows the amount of dividends declared during the year, Roadway Freight might debit Cash Dividends Declared instead of Retained Earnings at the time of declaration. It then closes this account to Retained Earnings at year-end.

A company may declare dividends either as a certain percent of par, such as a 6 percent dividend on preferred stock, or as an amount per share, such as 60 cents per share on no-par common stock. In the first case, the rate multiplied by the par value

<sup>12</sup>*Accounting Trends and Techniques—2007* reported that of its 600 surveyed companies, 339 paid a cash dividend on common stock, 47 paid a cash dividend on preferred stock, 3 issued stock dividends, and 3 issued or paid dividends in kind. Some companies declare more than one type of dividend in a given year.

<sup>13</sup>Theoretically, the ex-dividend date is the day after the date of record. However, to allow time for transfer of the shares, the stock exchanges generally advance the ex-dividend date two to four days. Therefore, the party who owns the stock on the day prior to the expressed ex-dividend date receives the dividends. The party who buys the stock on and after the ex-dividend date does not receive the dividend. Between the declaration date and the ex-dividend date, the market price of the stock includes the dividend.

of outstanding shares equals the total dividend. In the second, the dividend equals the amount per share multiplied by the number of shares outstanding. **Companies do not declare or pay cash dividends on treasury stock.**

Dividend policies vary among corporations. Some companies, such as **Bank of America**, **Clorox Co.**, and **Tootsie Roll Industries**, take pride in a long, unbroken string of quarterly dividend payments. They would lower or pass the dividend only if forced to do so by a sustained decline in earnings or a critical shortage of cash.

“Growth” companies, on the other hand, pay little or no cash dividends because their policy is to expand as rapidly as internal and external financing permit. For example, **Questcor Pharmaceuticals Inc.** has never paid cash dividends to its common stockholders. These investors hope that the price of their shares will appreciate in value. The investors will then realize a profit when they sell their shares. Many companies focus more on increasing share price, stock repurchase programs, and corporate earnings than on dividend payout.

### Property Dividends

Dividends payable in assets of the corporation other than cash are called **property dividends** or **dividends in kind**. Property dividends may be merchandise, real estate, or investments, or whatever form the board of directors designates. **Ranchers Exploration and Development Corp.** reported one year that it would pay a fourth-quarter dividend in gold bars instead of cash. Because of the obvious difficulties of divisibility of units and delivery to stockholders, the usual property dividend is in the form of securities of other companies that the distributing corporation holds as an investment.

For example, after ruling that **DuPont’s** 23 percent stock interest in **General Motors** violated antitrust laws, the Supreme Court ordered DuPont to divest itself of the GM stock within 10 years. The stock represented 63 million shares of GM’s 281 million shares then outstanding. DuPont could not sell the shares in one block of 63 million. Further, it could not sell 6 million shares annually for the next 10 years without severely depressing the value of the GM stock. DuPont solved its problem by declaring a property dividend and distributing the GM shares as a dividend to its own stockholders.

When declaring a property dividend, the corporation should **restate at fair value the property it will distribute, recognizing any gain or loss** as the difference between the property’s fair value and carrying value at date of declaration. The corporation may then record the declared dividend as a debit to Retained Earnings (or Property Dividends Declared) and a credit to Property Dividends Payable, at an amount equal to the fair value of the distributed property. Upon distribution of the dividend, the corporation debits Property Dividends Payable and credits the account containing the distributed asset (restated at fair value).

For example, Trendler, Inc. transferred to stockholders some of its investments in securities costing \$1,250,000 by declaring a property dividend on December 28, 2009, to be distributed on January 30, 2010, to stockholders of record on January 15, 2010. At the date of declaration the securities have a market value of \$2,000,000. Trendler makes the following entries.

<b>At date of declaration (December 28, 2009)</b>		
Investments in Securities	750,000	
Gain on Appreciation of Securities		750,000
Retained Earnings (Property Dividends Declared)	2,000,000	
Property Dividends Payable		2,000,000
<b>At date of distribution (January 30, 2010)</b>		
Property Dividends Payable	2,000,000	
Investments in Securities		2,000,000

### Liquidating Dividends

Some corporations use paid-in capital as a basis for dividends. Without proper disclosure of this fact, stockholders may erroneously believe the corporation has been operating at a profit. To avoid this type of deception, intentional or unintentional, a clear statement of the source of every dividend should accompany the dividend check.

Dividends based on other than retained earnings are sometimes described as **liquidating dividends**. This term implies that such dividends are a return of the stockholder's investment rather than of profits. In other words, **any dividend not based on earnings reduces corporate paid-in capital and to that extent, it is a liquidating dividend**. Companies in the extractive industries may pay dividends equal to the total of accumulated income and depletion. The portion of these dividends in excess of accumulated income represents a return of part of the stockholder's investment.

For example, McChesney Mines Inc. issued a "dividend" to its common stockholders of \$1,200,000. The cash dividend announcement noted that stockholders should consider \$900,000 as income and the remainder a return of capital. McChesney Mines records the dividend as follows:

At date of declaration		
Retained Earnings	900,000	
Paid-in Capital in Excess of Par	300,000	
Dividends Payable		1,200,000
At date of payment		
Dividends Payable	1,200,000	
Cash		1,200,000

In some cases, management simply decides to cease business and declares a liquidating dividend. In these cases, liquidation may take place over a number of years to ensure an orderly and fair sale of assets. For example, when **Overseas National Airways** dissolved, it agreed to pay a liquidating dividend to its stockholders over a period of years equivalent to \$8.60 per share. Each liquidating dividend payment in such cases reduces paid-in capital.

### Stock Dividends

If management wishes to "capitalize" part of the earnings (i.e., reclassify amounts from earned to contributed capital), and thus retain earnings in the business on a permanent basis, it may issue a stock dividend. In this case, **the company distributes no assets**. Each stockholder maintains exactly the same proportionate interest in the corporation and the same total book value after the company issues the stock dividend. Of course, the book value per share is lower because each stockholder holds more shares.

#### Underlying Concepts

By requiring fair value, the intent was to punish companies that used stock dividends. This approach violates the neutrality concept (that is, that standards-setting should be even-handed).

A **stock dividend** therefore is the issuance by a corporation of its own stock to its stockholders on a pro rata basis, without receiving any consideration. In recording a stock dividend, some believe that the company should transfer the **par value of the stock issued** as a dividend from retained earnings to capital stock. Others believe that it should transfer the **fair value of the stock issued**—its market value at the declaration date—from retained earnings to capital stock and additional paid-in capital.

The fair value position was adopted, at least in part, in order to influence the stock dividend policies of corporations. Evidently in 1941 both the New York Stock Exchange and many in the accounting profession regarded periodic stock dividends as objectionable. They believed that the term dividend when used with a distribution of additional stock was misleading because investors' net assets did not increase as a result of this "dividend." As a result, these groups decided to make it more difficult for corporations to sustain a series of such stock dividends out of their

accumulated earnings, by requiring the use of fair market value when it substantially exceeded book value.<sup>14</sup>

When the stock dividend is less than 20–25 percent of the common shares outstanding at the time of the dividend declaration, the company is therefore required to transfer the **fair value** of the stock issued from retained earnings. Stock dividends of less than 20–25 percent are often referred to as **small (ordinary) stock dividends**. This method of handling stock dividends is justified on the grounds that “many recipients of stock dividends look upon them as distributions of corporate earnings and usually in an amount equivalent to the fair value of the additional shares received.” [3] We consider this argument unconvincing. It is generally agreed that stock dividends are not income to the recipients. Therefore, sound accounting should not recommend procedures simply because some recipients think they are income.<sup>15</sup>

To illustrate a small stock dividend, assume that Vine Corporation has outstanding 1,000 shares of \$100 par value capital stock and retained earnings of \$50,000. If Vine declares a 10 percent stock dividend, it issues 100 additional shares to current stockholders. If the fair value of the stock at the time of the stock dividend is \$130 per share, the entry is:

**At date of declaration**

Retained Earnings (Stock Dividend Declared)	13,000	
Common Stock Dividend Distributable		10,000
Paid-in Capital in Excess of Par		3,000

Note that the stock dividend does not affect any asset or liability. The entry merely reflects a reclassification of stockholders’ equity. If Vine prepares a balance sheet between the dates of declaration and distribution, it should show the common stock dividend distributable in the stockholders’ equity section as an addition to capital stock (whereas it shows cash or property dividends payable as current liabilities).

When issuing the stock, the entry is:

**At date of distribution**

Common Stock Dividend Distributable	10,000	
Common Stock		10,000

No matter what the fair value is at the time of the stock dividend, each stockholder retains the same proportionate interest in the corporation.

Some state statutes specifically prohibit the issuance of stock dividends on treasury stock. In those states that permit treasury shares to participate in the distribution accompanying a stock dividend or stock split, the planned use of the treasury shares influences corporate practice. For example, if a corporation issues treasury shares in connection with employee stock options, the treasury shares may participate in the distribution because the corporation usually adjusts the number of shares under option for any stock dividends or splits. But no useful purpose is served by issuing additional shares to the treasury stock without a specific purpose, since they are essentially equivalent to authorized but unissued shares.

To continue with our example of the effect of the small stock dividend, note in Illustration 15-9 (on page 762) that the stock dividend does not change the total stockholders’ equity. Also note that it does not change the proportion of the total shares outstanding held by each stockholder.

**Objective 8**

Explain the accounting for small and large stock dividends, and for stock splits.

<sup>14</sup>This was perhaps the earliest instance of “economic consequences” affecting an accounting pronouncement. The Committee on Accounting Procedure described its action as required by “proper accounting and corporate policy.” See Stephen A. Zeff, “The Rise of ‘Economic Consequences,’” *The Journal of Accountancy* (December 1978), pp. 53–66.

<sup>15</sup>One study concluded that *small* stock dividends do not always produce significant amounts of extra value on the date after issuance (ex date) and that *large* stock dividends almost always fail to generate extra value on the ex-dividend date. Taylor W. Foster III and Don Vickrey, “The Information Content of Stock Dividend Announcements,” *The Accounting Review*, Vol. LIII, No. 2 (April 1978), pp. 360–370.

**ILLUSTRATION 15-9**Effects of a Small (10%)  
Stock Dividend

<u>Before dividend</u>	
Capital stock, 1,000 shares of \$100 par	\$100,000
Retained earnings	50,000
Total stockholders' equity	<u>\$150,000</u>
Stockholders' interests:	
A. 400 shares, 40% interest, book value	\$ 60,000
B. 500 shares, 50% interest, book value	75,000
C. 100 shares, 10% interest, book value	15,000
	<u>\$150,000</u>
<u>After declaration but before distribution of 10% stock dividend</u>	
If fair value (\$130) is used as basis for entry:	
Capital stock, 1,000 shares at \$100 par	\$100,000
Common stock distributable, 100 shares at \$100 par	10,000
Paid-in capital in excess of par	3,000
Retained earnings (\$50,000 – \$13,000)	37,000
Total stockholders' equity	<u>\$150,000</u>
<u>After declaration and distribution of 10% stock dividend</u>	
If fair value (\$130) is used as basis for entry:	
Capital stock, 1,100 shares at \$100 par	\$110,000
Paid-in capital in excess of par	3,000
Retained earnings (\$50,000 – \$13,000)	37,000
Total stockholders' equity	<u>\$150,000</u>
Stockholders' interest:	
A. 440 shares, 40% interest, book value	\$ 60,000
B. 550 shares, 50% interest, book value	75,000
C. 110 shares, 10% interest, book value	15,000
	<u>\$150,000</u>

**Stock Split**

If a company has undistributed earnings over several years, and accumulates a sizable balance in retained earnings, the market value of its outstanding shares likely increases. Stock issued at prices less than \$50 a share can easily attain a market price in excess of \$200 a share. The higher the market price of a stock, however, the less readily some investors can purchase it.

The managements of many corporations believe that better public relations depend on wider ownership of the corporation stock. They therefore target a market price sufficiently low to be within range of the majority of potential investors. To reduce the market value of shares, they use the common device of a **stock split**. For example, after its stock price increased by 25-fold, **Qualcomm Inc.** split its stock 4-for-1. Qualcomm's stock had risen above \$500 per share, raising concerns that Qualcomm could not meet an analyst target of \$1,000 per share. The split reduced the analysts' target to \$250, which it could better meet with wider distribution of shares at lower trading prices.

From an accounting standpoint, Qualcomm **records no entry for a stock split**. However, it enters a memorandum note to indicate the changed par value of the shares and the increased number of shares. Illustration 15-10 shows the lack of change in stockholders' equity for a 2-for-1 stock split on 1,000 shares of \$100 par value stock with the par being halved upon issuance of the additional shares.

**ILLUSTRATION 15-10**

Effects of a Stock Split

<u>Stockholders' Equity before 2-for-1 Split</u>		<u>Stockholders' Equity after 2-for-1 Split</u>	
Common stock, 1,000 shares at \$100 par	\$100,000	Common stock, 2,000 shares at \$50 par	\$100,000
Retained earnings	50,000	Retained earnings	50,000
	<u>\$150,000</u>		<u>\$150,000</u>

## SPLITSVILLE

Stock splits were all the rage in the booming stock market of the 1990s. Of major companies on the **New York Stock Exchange**, fewer than 80 companies split shares in 1990. By 1998, with stock prices soaring, over 200 companies split shares. Although the split does not increase a stockholder's proportionate ownership of the company, studies show that split shares usually outperform those that don't split, as well as the market as a whole, for several years after the split. In addition, the splits help the company keep the shares in more attractive price ranges.

What about when the market "turns south"? A number of companies who split their shares in the boom markets of the 1990s have since seen their share prices decline to a point considered too low. For example, since **Ameritrade's** 12-for-1 split in 1999, its stock price declined over 74 percent, so that it was trading around \$6 per share in March 2002. **Lucent** traded at less than \$5 a share following a 4-for-1 split. For some investors, these low-priced stocks are unattractive because some brokerage commissions rely on the number of shares traded, not the dollar amount. Others are concerned that low-priced shares are easier for would-be scamsters to manipulate. And if a company's per share price falls below \$1 for 30 consecutive days, it is a violation of stock exchange listing requirements.

Some companies are considering reverse stock splits in which, say, 5 shares are consolidated into one. Thus, a stock previously trading at \$5 per share would be part of an unsplit share trading at \$25. Unsplitting might thus avoid some of the negative consequences of a low trading price. The downside to this strategy is that analysts might view reverse splits as additional bad news about the direction of the stock price. For example, **Webvan**, a failed Internet grocer, did a 1-for-25 reverse split just before it entered bankruptcy.

Source: Adapted from David Henry, "Stocks: The Case for Unsplitting," *BusinessWeek Online* (April 1, 2002).

*What do the numbers mean?*

### Stock Split and Stock Dividend Differentiated

From a legal standpoint, a stock split differs from a stock dividend. How? A stock split increases the number of shares outstanding and decreases the par or stated value per share. **A stock dividend, although it increases the number of shares outstanding, does not decrease the par value; thus it increases the total par value of outstanding shares.**

The reasons for issuing a stock dividend are numerous and varied. Stock dividends can be primarily a publicity gesture, **because many consider stock dividends as dividends.** Another reason is that the corporation may simply wish to retain profits in the business by capitalizing a part of retained earnings. In such a situation, it makes a transfer on declaration of a stock dividend from earned capital to contributed capital.

A corporation may also use a stock dividend, like a stock split, to increase the marketability of the stock, although marketability is often a secondary consideration. If the stock dividend is large, it has the same effect on market price as a stock split. **Whenever corporations issue additional shares for the purpose of reducing the unit market price, then the distribution more closely resembles a stock split than a stock dividend. This effect usually results only if the number of shares issued is more than 20–25 percent of the number of shares previously outstanding. [4]** A stock dividend of more than 20–25 percent of the number of shares previously outstanding is called a **large stock dividend.**<sup>16</sup> Such a distribution should not be called a stock dividend but instead "a split-up effected in the form of a dividend" or "stock split."

Also, since a split-up effected in the form of a dividend does not alter the par value per share, companies generally are required to transfer the par value amount from retained earnings. In other words, companies transfer from retained earnings to capital stock **the par value of the stock issued**, as opposed to a transfer of the market price

<sup>16</sup>The SEC has added more precision to the 20–25 percent rule. Specifically, the SEC indicates that companies should consider distributions of 25 percent or more as a "split-up effected in the form of a dividend." Companies should account for distributions of less than 25 percent as a stock dividend. The SEC more precisely defined GAAP here. As a result, public companies follow the SEC rule.

of the shares issued as in the case of a small stock dividend.<sup>17</sup> For example, **Brown Group, Inc.** at one time authorized a 2-for-1 split, effected in the form of a stock dividend. As a result of this authorization, it distributed approximately 10.5 million shares, and transferred more than \$39 million representing the par value of the shares issued from Retained Earnings to the Common Stock account.

To illustrate a large stock dividend (stock split-up effected in the form of a dividend), Rockland Steel, Inc. declared a 30 percent stock dividend on November 20, payable December 29 to stockholders of record December 12. At the date of declaration, 1,000,000 shares, par value \$10, are outstanding and with a fair value of \$200 per share. The entries are:

<b>At date of declaration (November 20)</b>			
Retained Earnings		3,000,000	
Common Stock Dividend Distributable			3,000,000
Computation: 1,000,000 shares      300,000 Additional shares			
	<u>× 30%</u>	<u>× \$10 Par value</u>	
	<u>300,000</u>	<u>\$3,000,000</u>	
<b>At date of distribution (December 29)</b>			
Common Stock Dividend Distributable		3,000,000	
Common Stock			3,000,000

Illustration 15-11 summarizes and compares the effects in the balance sheet and related items of various types of dividends and stock splits.

## Disclosure of Restrictions on Retained Earnings

Many corporations restrict retained earnings or dividends, without any formal journal entries. Such restrictions are **best disclosed by note**. Parenthetical notations are sometimes used, but restrictions imposed by bond indentures and loan agreements commonly require an extended explanation. Notes provide a medium for more complete explanations and free the financial statements from abbreviated notations. The note disclosure should reveal the source of the restriction, pertinent provisions, and the amount of retained earnings subject to restriction, or the amount not restricted.

Restrictions may be based on the retention of a certain retained earnings balance, the ability to maintain certain working capital requirements, additional borrowing, and

<sup>17</sup>Often, a company records a split-up effected in the form of a dividend as a debit to Paid-in Capital instead of Retained Earnings to indicate that this transaction should affect only paid-in capital accounts. No reduction of retained earnings is required except as indicated by legal requirements. For homework purposes, assume that the debit is to Retained Earnings. See, for example, Taylor W. Foster III and Edmund Scribner, "Accounting for Stock Dividends and Stock Splits: Corrections to Textbook Coverage," *Issues in Accounting Education* (February 1998).

other considerations. The example from the annual report of **Alberto-Culver Company** in Illustration 15-12 shows a note disclosing potential restrictions on retained earnings and dividends.

**Alberto-Culver Company**

**Note 3 (in part):** The \$200 million revolving credit facility, the term note, and the receivables agreement impose restrictions on such items as total debt, working capital, dividend payments, treasury stock purchases, and interest expense. At year-end, the company was in compliance with these arrangements, and \$220 million of consolidated retained earnings was not restricted as to the payment of dividends.

**ILLUSTRATION 15-12**

## PRESENTATION AND ANALYSIS OF STOCKHOLDERS' EQUITY

### Presentation

#### Balance Sheet

Illustration 15-13 shows a comprehensive stockholders' equity section from the balance sheet of Frost Company that includes most of the equity items we discussed in this chapter.

**Objective 9**  
Indicate how to present and analyze stockholders' equity.

FROST COMPANY STOCKHOLDERS' EQUITY DECEMBER 31, 2010		
<u>Capital stock</u>		
Preferred stock, \$100 par value, 7% cumulative, 100,000 shares authorized, 30,000 shares issued and outstanding		\$ 3,000,000
Common stock, no par, stated value \$10 per share, 500,000 shares authorized, 400,000 shares issued		4,000,000
Common stock dividend distributable, 20,000 shares		<u>200,000</u>
Total capital stock		7,200,000
<u>Additional paid-in capital<sup>18</sup></u>		
Excess over par—preferred	\$150,000	
Excess over stated value—common	<u>840,000</u>	990,000
Total paid-in capital		8,190,000
<u>Retained earnings</u>		
		4,360,000
Total paid-in capital and retained earnings		12,550,000
Less: Cost of treasury stock (2,000 shares, common)		(190,000)
Accumulated other comprehensive loss <sup>19</sup>		<u>(360,000)</u>
Total stockholders' equity		<u>\$12,000,000</u>

**ILLUSTRATION 15-13**  
Comprehensive Stockholders' Equity Presentation

<sup>18</sup>Accounting Trends and Techniques—2007 reports that of its 600 surveyed companies, 549 had additional paid-in capital; 339 used the caption "Additional paid-in capital"; 101 used "Capital in excess of par or stated value" as the caption; 80 used "Paid-in capital" or "Additional capital"; and 29 used other captions.

<sup>19</sup>Companies may include a number of items in the "Accumulated other comprehensive loss." Among these items are "Foreign currency translation adjustments" (covered in advanced accounting), "Unrealized holding gains and losses for available-for-sale securities" (covered in Chapter 17), "Guarantees of employee stock option plan (ESOP) debt," "Unearned or deferred compensation related to employee stock award plans," and others.

Accounting Trends and Techniques—2007 reports that of its 600 surveyed companies reporting other items in the equity section, 485 reported cumulative translation adjustments, 444 reported defined-benefit postretirement plan adjustments, 321 reported changes in the fair value of derivatives, and 263 reported unrealized losses/gains on certain investments. A number of companies had more than one item.

Frost should disclose the pertinent rights and privileges of the various securities outstanding. For example, companies must disclose all of the following: dividend and liquidation preferences, participation rights, call prices and dates, conversion or exercise prices and pertinent dates, sinking fund requirements, unusual voting rights, and significant terms of contracts to issue additional shares. Liquidation preferences should be disclosed in the equity section of the balance sheet, rather than in the notes to the financial statements, to emphasize the possible effect of this restriction on future cash flows. [5]

### Statement of Stockholders' Equity

The **statement of stockholders' equity** is frequently presented in the following basic format.

1. Balance at the beginning of the period.
2. Additions.
3. Deductions.
4. Balance at the end of the period.

Companies must disclose changes in the separate accounts comprising stockholders' equity, to make the financial statements sufficiently informative.<sup>20</sup> Such changes may be disclosed in separate statements or in the basic financial statements or notes thereto.<sup>21</sup>

A **columnar format** for the presentation of changes in stockholders' equity items in published annual reports is gaining in popularity. An example is **Kellogg Company's** statement of stockholders' equity, shown in Illustration 15-14.

Reporting of Stockholders' Equity in Eastman-Kodak's Annual Report

### Kellogg Company and Subsidiaries

#### Consolidated Statement of Shareholders' Equity

(millions)	Common Stock		Capital in Excess of Par Value	Retained Earnings	Treasury Stock		Accumulated Other Comprehensive Income/(loss)	Total Shareholders' Equity	Total Comprehensive Income

Stock options exercised and other			27	(43)	(4)	205		189	
Balance, December 29, 2007	<u>419</u>	<u>\$105</u>	<u>\$388</u>	<u>\$4,217</u>	<u>29</u>	<u>\$(1,357)</u>	<u>\$(827)</u>	<u>\$2,526</u>	<u>\$1,322</u>

#### ILLUSTRATION 15-14

Columnar Format for Statement of Stockholders' Equity

<sup>20</sup>If a company has other comprehensive income, and computes total comprehensive income only in the statement of stockholders' equity, it must display the statement of stockholders' equity with the same prominence as other financial statements. [6]

<sup>21</sup>*Accounting Trends and Techniques—2007* reports that of the 600 companies surveyed, 588 presented statements of stockholders' equity, 3 presented separate statements of retained earnings only, 3 presented combined statements of income and retained earnings, and 6 presented changes in equity items in the notes only.

## Analysis

Analysts use stockholders' equity ratios to evaluate a company's profitability and long-term solvency. We discuss and illustrate the following three ratios below.

1. Rate of return on common stock equity.
2. Payout ratio.
3. Book value per share.

### Rate of Return on Common Stock Equity

The **rate of return on common stock equity** measures profitability from the common stockholders' viewpoint. This ratio shows how many dollars of net income the company earned for each dollar invested by the owners. Return on equity (ROE) also helps investors judge the worthiness of a stock when the overall market is not doing well. For example, **Best Buy** shares dropped nearly 40 percent, along with the broader market in 2001–2002. But a review of its return on equity during this period and since shows a steady return of 20 to 22 percent while the overall market ROE declined from 16 percent to 8 percent. More importantly, Best Buy and other stocks, such as **3M** and **Procter & Gamble**, recovered their lost market value, while other stocks with less robust ROEs stayed in the doldrums.

Return on equity equals net income less preferred dividends, divided by average common stockholders' equity. For example, assume that Gerber's Inc. had net income of \$360,000, declared and paid preferred dividends of \$54,000, and average common stockholders' equity of \$2,550,000. Illustration 15-15 shows how to compute Gerber's ratio.

$$\begin{aligned}
 \text{Rate of Return on} & & & \text{Net income} - \text{Preferred dividends} \\
 \text{Common Stock Equity} & = & & \text{Average common stockholders' equity} \\
 & = & & \frac{\$360,000 - \$54,000}{\$2,550,000} \\
 & = & & 12\%
 \end{aligned}$$

**ILLUSTRATION 15-15**  
Computation of Rate of Return on Common Stock Equity

As shown in Illustration 15-15, when preferred stock is present, income available to common stockholders equals net income less preferred dividends. Similarly, the amount of common stock equity used in this ratio equals total stockholders' equity less the par value of preferred stock.

A company can improve its return on common stock equity through the prudent use of debt or preferred stock financing. **Trading on the equity** describes the practice of using borrowed money or issuing preferred stock in hopes of obtaining a higher rate of return on the money used. Shareholders win if return on the assets is higher than the cost of financing these assets. When this happens, the rate of return on common stock equity will exceed the rate of return on total assets. In short, the company is "trading on the equity at a gain." In this situation, the money obtained from bondholders or preferred stockholders earns enough to pay the interest or preferred dividends and leaves a profit for the common stockholders. On the other hand, if the cost of the financing is higher than the rate earned on the assets, the company is trading on equity at a loss and stockholders lose.

### Payout Ratio

Another ratio of interest to investors, the **payout ratio**, is the ratio of cash dividends to net income. If preferred stock is outstanding, this ratio equals cash dividends paid to

common stockholders, divided by net income available to common stockholders. For example, assume that Troy Co. has cash dividends of \$100,000 and net income of \$500,000, and no preferred stock outstanding. Illustration 15-16 shows the payout ratio computation.

**ILLUSTRATION 15-16**  
Computation of Payout Ratio

$$\begin{aligned} \text{Payout Ratio} &= \frac{\text{Cash dividends}}{\text{Net income} - \text{Preferred dividends}} \\ &= \frac{\$100,000}{\$500,000} \\ &= 20\% \end{aligned}$$

Recently, the payout ratio has plummeted. In 1982, more than half of earnings were converted to dividends. In the second quarter of 2007, just 29 percent of the earnings of the S&P 500 was distributed via dividends.<sup>22</sup>

### Book Value per Share

A much-used basis for evaluating net worth is found in the book value or equity value per share of stock. **Book value per share** of stock is the amount each share would receive if the company were liquidated **on the basis of amounts reported on the balance sheet**. However, the figure loses much of its relevance if the valuations on the balance sheet fail to approximate fair value of the assets. Book value per share equals common stockholders' equity divided by outstanding common shares. Assume that Chen Corporation's common stockholders' equity is \$1,000,000 and it has 100,000 shares of common stock outstanding. Illustration 15-17 shows its book value per share computation.

**ILLUSTRATION 15-17**  
Computation of Book Value Per Share

$$\begin{aligned} \text{Book Value Per Share} &= \frac{\text{Common stockholders' equity}}{\text{Outstanding shares}} \\ &= \frac{\$1,000,000}{100,000} \\ &= \$10 \text{ per share} \end{aligned}$$

You will want to read the **CONVERGENCE CORNER** on page 769

For discussion of how international convergence efforts relate to stockholders' equity.

<sup>22</sup>Andrew Blackman, "How Well Do You Know . . . Dividends?" *Wall Street Journal* (September 10, 2007), p. R5.

# CONVERGENCE CORNER

## STOCKHOLDERS' EQUITY

The primary iGAAP reporting standards related to stockholders' equity are *IAS 1* ("Presentation of Financial Statements"), *IAS 32* ("Financial Instruments: Presentation"), and *IAS 39* ("Financial Instruments: Recognition and Measurement"). The accounting for transactions related to stockholders' equity, such as issuance of shares, purchase of treasury stock, and declaration and payment of dividends, are similar under both iGAAP and U.S. GAAP. Major differences relate to terminology used, introduction of items such as revaluation surplus, and presentation of stockholders' equity information.

### RELEVANT FACTS

- Many countries have different investor groups than the United States. For example, in Germany, financial institutions like banks are not only the major creditors but often are the largest stockholders as well. In the United States and the United Kingdom, many companies rely on substantial investment from private investors.
- The accounting for treasury stock retirements differs between iGAAP and U.S. GAAP. Under U.S. GAAP a company has three options: (1) charge the excess of the cost of treasury stock over par value to retained earnings, (2) allocate the difference between paid-in capital and retained earnings, or (3) charge the entire amount to paid-in capital. Under iGAAP, the excess may have to be charged to paid-in capital, depending on the original transaction related to the issuance of the stock.
- A major difference between iGAAP and U.S. GAAP relates to the account Revaluation Surplus. Revaluation surplus arises under iGAAP because companies are permitted to revalue their property, plant, and equipment to fair value under certain circumstances. This account is part of general reserves under iGAAP and is not considered contributed capital.
- Both iGAAP and U.S. GAAP consider the statement of stockholders' equity a primary financial statement. However, under iGAAP a company has the option of preparing a statement of stockholders' equity similar to U.S. GAAP or preparing a statement of recognized income and expense (SoRIE). The SoRIE reports the items that were charged directly to equity such as revaluation surplus and then adds the net income for the period to arrive at total recognized income and expense. In this situation, additional note disclosure is required to provide reconciliations of other equity items.

### ABOUT THE NUMBERS

While there are many similarities in the accounting for stockholders' equity between U.S. GAAP and iGAAP, the following disclosure for **Mallorca Ltd.** highlights some of the key differences.

#### Note 22: Share Capital and reserves (in part)

##### Reserves

The plant maintenance reserve of €140 000 was established to inform those with a financial interest in the company that it had a major claim on future funds in relation to the need to maintain the plant in accordance with Spanish government regulations. The asset revaluation surplus of €95 000 has arisen as the company uses the revaluation model to measure its landholdings.

Retained earnings accumulates the annual profit or loss of the entity, other than gains or losses taken directly to equity, and the balance at reporting date represents the undistributed profits of the entity.

As noted, included in Mallorca's stockholders' equity is an asset revaluation surplus, which is not permitted in U.S. GAAP. Also some gains and losses are recorded directly in equity. As discussed in Chapter 4, iGAAP companies may report such gains and losses in a Statement of Recognized Income and Expense, instead of preparing a traditional statement of stockholders' equity.

### ON THE HORIZON

As indicated in earlier discussions, the IASB and the FASB are currently working on a project related to financial statement presentation. An important part of this study is to determine whether certain line items, subtotals, and totals should be clearly defined and required to be displayed in the financial statements. For example, it is likely that the statement of stockholders' equity and its presentation will be examined closely. The statement of recognized income and expense now permitted under iGAAP will probably be eliminated. In addition, the options of how to present other comprehensive income under U.S. GAAP will change in any converged standard. Also, the FASB has been working on a standard that will likely converge to iGAAP in the area of hybrid financial instruments.

 treasury stock, 750

## SUMMARY OF LEARNING OBJECTIVES

**LO 1 Discuss the characteristics of the corporate form of organization.** Among the specific characteristics of the corporate form that affect accounting are the: (1) influence of state corporate law, (2) use of the capital stock or share system, and (3) development of a variety of ownership interests. In the absence of restrictive provisions, each share of stock carries the right to share proportionately in: (1) profits and losses; (2) management (the right to vote for directors); (3) corporate assets upon liquidation; (4) any new issues of stock of the same class (called the preemptive right).

**LO 2 Identify the key components of stockholders' equity.** Stockholders' or owners' equity is classified into two categories: contributed capital and earned capital. Contributed capital (paid-in capital) describes the total amount paid in on capital stock. Put another way, it is the amount that stockholders advance to the corporation for use in the business. Contributed capital includes items such as the par value of all outstanding capital stock and premiums less any discounts on issuance. Earned capital is the capital that develops if the business operates profitably; it consists of all undistributed income that remains invested in the company.

**LO 3 Explain the accounting procedures for issuing shares of stock.** Accounts are kept for the following different types of stock: *Par value stock*: (a) preferred stock or common stock; (b) paid-in capital in excess of par or additional paid-in capital; and (c) discount on stock. *No-par stock*: common stock or common stock and additional paid-in capital, if stated value used. Stock issued in combination with other securities (lump-sum sales): The two methods of allocation available are (a) the proportional method; and (b) the incremental method. Stock issued in noncash transactions: When issuing stock for services or property other than cash, the company should record the property or services at either the fair value of the stock issued, or the fair value of the noncash consideration received, whichever is more clearly determinable.

**LO 4 Describe the accounting for treasury stock.** The cost method is generally used in accounting for treasury stock. This method derives its name from the fact that a company maintains the Treasury Stock account at the cost of the shares purchased. Under the cost method, a company debits the Treasury Stock account for the cost of the shares acquired and credits it for this same cost upon reissuance. The price received for the stock when originally issued does not affect the entries to record the acquisition and reissuance of the treasury stock.

**LO 5 Explain the accounting for and reporting of preferred stock.** Preferred stock is a special class of shares that possesses certain preferences or features not possessed by the common stock. The features that are most often associated with preferred stock issues are: (1) preference as to dividends; (2) preference as to assets in the event of liquidation; (3) convertible into common stock; (4) callable at the option of the corporation; (5) non-voting. At issuance, the accounting for preferred stock is similar to that for common stock. When convertible preferred stock is converted, a company uses the book value method: It debits Preferred Stock, along with any related Additional Paid-in Capital, and credits Common Stock and Additional Paid-in Capital (if an excess exists).

**LO 6 Describe the policies used in distributing dividends.** The state incorporation laws normally provide information concerning the legal restrictions related to the payment of dividends. Corporations rarely pay dividends in an amount equal to the legal limit. This is due, in part, to the fact that companies use assets represented by undistributed earnings to finance future operations of the business. If a company is considering declaring a dividend, it must ask two preliminary questions: (1) Is the condition of the corporation such that the dividend is **legally permissible**? (2) Is the condition of the corporation such that a dividend is **economically sound**?

**7** Identify the various forms of dividend distributions. Dividends are of the following types: (1) cash dividends, (2) property dividends, (3) liquidating dividends (dividends based on other than retained earnings), (4) stock dividends (the issuance by a corporation of its own stock to its stockholders on a pro rata basis, but without receiving consideration).

**8** Explain the accounting for small and large stock dividends, and for stock splits. Generally accepted accounting principles require that the accounting for small stock dividends (less than 20 or 25 percent) rely on the fair value of the stock issued. When declaring a stock dividend, a company debits Retained Earnings at the fair value of the stock it distributes. The entry includes a credit to Common Stock Dividend Distributable at par value times the number of shares, with any excess credited to Paid-in Capital in Excess of Par. If the number of shares issued exceeds 20 or 25 percent of the shares outstanding (large stock dividend), it debits Retained Earnings at par value and credits Common Stock Distributable—there is no additional paid-in capital.

A stock dividend is a capitalization of retained earnings that reduces retained earnings and increases certain contributed capital accounts. The par value per share and total stockholders' equity remain unchanged with a stock dividend, and all stockholders retain their same proportionate share of ownership. A stock split results in an increase or decrease in the number of shares outstanding, with a corresponding decrease or increase in the par or stated value per share. No accounting entry is required for a stock split.

**9** Indicate how to present and analyze stockholders' equity. The stockholders' equity section of a balance sheet includes capital stock, additional paid-in capital, and retained earnings. A company might also present additional items such as treasury stock and accumulated other comprehensive income. Companies often provide a statement of stockholders' equity. Common ratios that use stockholders' equity amounts are: rate of return on common stock equity, payout ratio, and book value per share.

Expanded Discussion of Quasi-Reorganization

APPENDIX 15A

DIVIDEND PREFERENCES AND BOOK VALUE PER SHARE

DIVIDEND PREFERENCES

Illustrations 15A-1 to 15A-4 indicate the effects of various dividend preferences on dividend distributions to common and preferred stockholders. Assume that in 2010, Mason Company is to distribute \$50,000 as cash dividends, its outstanding common stock has a par value of \$400,000, and its 6 percent preferred stock has a par value of \$100,000. Mason would distribute dividends to each class, employing the assumptions given, as follows:

**Objective 10**

Explain the different types of preferred stock dividends and their effect on book value per share.

- 1. If the preferred stock is noncumulative and nonparticipating:

	Preferred	Common	Total
6% of \$100,000	\$6,000		\$ 6,000
The remainder to common		\$44,000	44,000
Totals	\$6,000	\$44,000	\$50,000

**ILLUSTRATION 15A-1**

Dividend Distribution, Noncumulative and Nonparticipating Preferred

2. If the preferred stock is cumulative and nonparticipating, and Mason Company did not pay dividends on the preferred stock in the preceding two years:

**ILLUSTRATION 15A-2**  
Dividend Distribution,  
Cumulative and  
Nonparticipating  
Preferred, with Dividends  
in Arrears

	Preferred	Common	Total
Dividends in arrears, 6% of \$100,000 for 2 years	\$12,000		\$12,000
Current year's dividend, 6% of \$100,000	6,000		6,000
The remainder to common		\$32,000	32,000
<b>Totals</b>	<u>\$18,000</u>	<u>\$32,000</u>	<u>\$50,000</u>

3. If the preferred stock is noncumulative and is fully participating:<sup>23</sup>

**ILLUSTRATION 15A-3**  
Dividend Distribution,  
Noncumulative and Fully  
Participating Preferred

	Preferred	Common	Total
Current year's dividend, 6%	\$ 6,000	\$24,000	\$30,000
Participating dividend of 4%	4,000	16,000	20,000
<b>Totals</b>	<u>\$10,000</u>	<u>\$40,000</u>	<u>\$50,000</u>
The participating dividend was determined as follows:			
Current year's dividend:			
Preferred, 6% of \$100,000 = \$ 6,000			
Common, 6% of \$400,000 = 24,000		\$30,000	
Amount available for participation (\$50,000 – \$30,000)		\$20,000	
Par value of stock that is to participate (\$100,000 + \$400,000)		\$500,000	
Rate of participation (\$20,000 ÷ \$500,000)		4%	
Participating dividend:			
Preferred, 4% of \$100,000	\$ 4,000		
Common, 4% of \$400,000		16,000	
		<u>\$20,000</u>	

4. If the preferred stock is cumulative and is fully participating, and Mason Company did not pay dividends on the preferred stock in the preceding two years:

**ILLUSTRATION 15A-4**  
Dividend Distribution,  
Cumulative and Fully  
Participating Preferred,  
with Dividends in Arrears

	Preferred	Common	Total
Dividends in arrears, 6% of \$100,000 for 2 years	\$12,000		\$12,000
Current year's dividend, 6%	6,000	\$24,000	30,000
Participating dividend, 1.6% (\$8,000 ÷ \$500,000)	1,600	6,400	8,000
<b>Totals</b>	<u>\$19,600</u>	<u>\$30,400</u>	<u>\$50,000</u>

## BOOK VALUE PER SHARE

Book value per share in its simplest form is computed as net assets divided by outstanding shares at the end of the year. The computation of book value per share becomes more complicated if a company has preferred stock in its capital structure. For

<sup>23</sup>When preferred stock is participating, there may be different agreements as to how the participation feature is to be executed. However, in the absence of any specific agreement the following procedure is recommended:

- After the preferred stock is assigned its current year's dividend, the common stock will receive a "like" percentage of par value outstanding. In example (3), this amounts to 6 percent of \$400,000.
- In example (3), shown in Illustration 15A-3, the remainder of the declared dividend is \$20,000. We divide this amount by total par value (\$500,000) to find the rate of participation to be applied to each class of stock. In this case, the rate of participation is 4% (\$20,000 ÷ \$500,000), which we then multiply by the par value of each class of stock to determine the amount of participation.

example, if preferred dividends are in arrears, if the preferred stock is participating, or if preferred stock has a redemption or liquidating value higher than its carrying amount, the company must allocate retained earnings between the preferred and common stockholders in computing book value.

To illustrate, assume that the following situation exists.

Stockholders' equity	Preferred	Common
Preferred stock, 5%	\$300,000	
Common stock		\$400,000
Excess of issue price over par of common stock		37,500
Retained earnings		162,582
Totals	\$300,000	\$600,082
Shares outstanding		4,000
Book value per share		\$150.02

**ILLUSTRATION 15A-5**  
Computation of Book Value per Share—No Dividends in Arrears

The situation in Illustration 15A-5 assumes that no preferred dividends are in arrears and that the preferred is not participating. Now assume that the same facts exist except that the 5 percent preferred is cumulative, participating up to 8 percent, and that dividends for three years before the current year are in arrears. Illustration 15A-6 shows how to compute the book value of the common stock, assuming that no action has yet been taken concerning dividends for the current year.

Stockholders' equity	Preferred	Common
Preferred stock, 5%	\$300,000	
Common stock		\$400,000
Excess of issue price over par of common stock		37,500
Retained earnings:		
Dividends in arrears (3 years at 5% a year)	45,000	
Current year requirement at 5%	15,000	20,000
Participating—additional 3%	9,000	12,000
Remainder to common		61,582
Totals	\$369,000	\$531,082
Shares outstanding		4,000
Book value per share		\$132.77

**ILLUSTRATION 15A-6**  
Computation of Book Value per Share—with Dividends in Arrears

In connection with the book value computation, the analyst must know how to handle the following items: the number of authorized and unissued shares; the number of treasury shares on hand; any commitments with respect to the issuance of unissued shares or the reissuance of treasury shares; and the relative rights and privileges of the various types of stock authorized. As an example, if the liquidating value of the preferred stock is higher than its carrying amount, the liquidating amount should be used in the book value computation.

## SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 15A

**10** Explain the different types of preferred stock dividends and their effect on book value per share. The dividend preferences of preferred stock affect the dividends paid to stockholders. Preferred stock can be (1) cumulative or noncumulative, and (2) fully participating, partially participating, or nonparticipating. If preferred dividends

are in arrears, if the preferred stock is participating, or if preferred stock has a redemption or liquidation value higher than its carrying amount, allocate retained earnings between preferred and common stockholders in computing book value per share.

### Exercises

Access the FASB Codification at <http://asc.fasb.org/home> to prepare responses to the following exercises. Provide Codification references for your responses.

**CE15-1** Access the glossary ("Master Glossary") to answer the following.

- (a) What is a "convertible security"?
- (b) What is a "stock dividend"?
- (c) What is a "stock split"?
- (d) What are "participation rights"?

**CE15-2** At what percentage point can the issuance of additional shares still qualify as a stock dividend, as opposed to a stock split?

**CE15-3** A company plans to issue shares and wants to know the SEC's stance on the accounting treatment for the costs of issuing stock. Can these costs be deferred, or must they be expensed immediately?

**CE15-4** If a company chooses to purchase its own shares and then either (1) retires the repurchased shares and issues additional shares, or (2) resells the repurchased shares, can a gain or loss be recognized by the company? Why or why not?

**An additional Codification case can be found in the Using Your Judgment section, on page 792.**

**Be sure to check the companion website for a Review and Analysis Exercise, with solution.**

*Note:* All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

## QUESTIONS

1. In the absence of restrictive provisions, what are the basic rights of stockholders of a corporation?
2. Why is a preemptive right important?
3. Distinguish between common and preferred stock.
4. Why is the distinction between paid-in capital and retained earnings important?
5. Explain each of the following terms: authorized capital stock, unissued capital stock, issued capital stock, outstanding capital stock, and treasury stock.
6. What is meant by par value, and what is its significance to stockholders?
7. Describe the accounting for the issuance for cash of no-par value common stock at a price in excess of the stated value of the common stock.
8. Explain the difference between the proportional method and the incremental method of allocating the proceeds of lump-sum sales of capital stock.
9. What are the different bases for stock valuation when assets other than cash are received for issued shares of stock?
10. Explain how underwriting costs and accounting and legal fees associated with the issuance of stock should be recorded.
11. For what reasons might a corporation purchase its own stock?
12. Discuss the propriety of showing:
  - (a) Treasury stock as an asset.
  - (b) "Gain" or "loss" on sale of treasury stock as additions to or deductions from income.
  - (c) Dividends received on treasury stock as income.
13. What features or rights may alter the character of preferred stock?
14. Dagwood Inc. recently noted that its 4% preferred stock and 4% participating preferred stock, which are both cumulative, have priority as to dividends up to 4% of their par value. Its participating preferred stock participates equally with the common stock in any dividends in excess of 4%. What is meant by the term participating? Cumulative?
15. Where in the financial statements is preferred stock normally reported?
16. List possible sources of additional paid-in capital.
17. Satchel Inc. purchases 10,000 shares of its own previously issued \$10 par common stock for \$290,000. Assuming the shares are held in the treasury with intent to reissue, what effect does this transaction have on (a) net income, (b) total assets, (c) total paid-in capital, and (d) total stockholders' equity?
18. Indicate how each of the following accounts should be classified in the stockholders' equity section.
  - (a) Common Stock
  - (b) Retained Earnings
  - (c) Paid-in Capital in Excess of Par Value
  - (d) Treasury Stock
  - (e) Paid-in Capital from Treasury Stock
  - (f) Paid-in Capital in Excess of Stated Value
  - (g) Preferred Stock
19. What factors influence the dividend policy of a company?
20. What are the principal considerations of a board of directors in making decisions involving dividend declarations? Discuss briefly.
21. Dividends are sometimes said to have been paid "out of retained earnings." What is the error, if any, in that statement?
22. Distinguish among: cash dividends, property dividends, liquidating dividends, and stock dividends.
23. Describe the accounting entry for a stock dividend, if any. Describe the accounting entry for a stock split, if any.
24. Stock splits and stock dividends may be used by a corporation to change the number of shares of its stock outstanding.
  - (a) What is meant by a stock split effected in the form of a dividend?
  - (b) From an accounting viewpoint, explain how the stock split effected in the form of a dividend differs from an ordinary stock dividend.
  - (c) How should a stock dividend that has been declared but not yet issued be classified in a statement of financial position? Why?
25. The following comment appeared in the notes of Colorado Corporation's annual report: "Such distributions, representing proceeds from the sale of Sarazan, Inc. were paid in the form of partial liquidating dividends and were in lieu of a portion of the Company's ordinary cash dividends." How would a partial liquidating dividend be accounted for in the financial records?
26. This comment appeared in the annual report of MacCloud Inc.: "The Company could pay cash or property dividends

on the Class A common stock without paying cash or property dividends on the Class B common stock. But if the Company pays any cash or property dividends on the Class B common stock, it would be required to pay at least the same dividend on the Class A common stock." How is a property dividend accounted for in the financial records?

- 27. For what reasons might a company restrict a portion of its retained earnings?
- 28. How are restrictions of retained earnings reported?
-  29. Where can authoritative iGAAP guidance related to stockholders' equity be found?
-  30. Briefly describe some of the similarities and differences between U.S. GAAP and iGAAP with respect to the accounting for stockholders' equity.
-  31. Briefly discuss the implications of the financial statement presentation project for the reporting of stockholders' equity.

\*32. McNabb Corp. had \$100,000 of 7%, \$20 par value preferred stock and 12,000 shares of \$25 par value common stock outstanding throughout 2011.

- (a) Assuming that total dividends declared in 2011 were \$64,000, and that the preferred stock is not cumulative but is fully participating, common stockholders should receive 2011 dividends of what amount?
- (b) Assuming that total dividends declared in 2011 were \$64,000, and that the preferred stock is fully participating and cumulative with preferred dividends in arrears for 2010, preferred stockholders should receive 2011 dividends totaling what amount?
- (c) Assuming that total dividends declared in 2011 were \$30,000, that the preferred stock is cumulative, non-participating and was issued on January 1, 2010, and that \$5,000 of preferred dividends were declared and paid in 2010, the common stockholders should receive 2011 dividends totaling what amount?

**BRIEF EXERCISES**

-  **BE15-1** Buttercup Corporation issued 300 shares of \$10 par value common stock for \$4,500. Prepare Buttercup's journal entry.
-  **BE15-2** Swarten Corporation issued 600 shares of no-par common stock for \$8,200. Prepare Swarten's journal entry if (a) the stock has no stated value, and (b) the stock has a stated value of \$2 per share.
-  **BE15-3** Wilco Corporation has the following account balances at December 31, 2010.

Common stock, \$5 par value	\$ 510,000
Treasury stock	90,000
Retained earnings	2,340,000
Paid-in capital in excess of par	1,320,000

Prepare Wilco's December 31, 2010, stockholders' equity section.

-  **BE15-4** Ravonette Corporation issued 300 shares of \$10 par value common stock and 100 shares of \$50 par value preferred stock for a lump sum of \$13,500. The common stock has a market value of \$20 per share, and the preferred stock has a market value of \$90 per share. Prepare the journal entry to record the issuance.
-  **BE15-5** On February 1, 2010, Buffalo Corporation issued 3,000 shares of its \$5 par value common stock for land worth \$31,000. Prepare the February 1, 2010, journal entry.
-  **BE15-6** Moonwalker Corporation issued 2,000 shares of its \$10 par value common stock for \$60,000. Moonwalker also incurred \$1,500 of costs associated with issuing the stock. Prepare Moonwalker's journal entry to record the issuance of the company's stock.
-  **BE15-7** Sprinkle Inc. has outstanding 10,000 shares of \$10 par value common stock. On July 1, 2010, Sprinkle reacquired 100 shares at \$87 per share. On September 1, Sprinkle reissued 60 shares at \$90 per share. On November 1, Sprinkle reissued 40 shares at \$83 per share. Prepare Sprinkle's journal entries to record these transactions using the cost method.
-  **BE15-8** Arantxa Corporation has outstanding 20,000 shares of \$5 par value common stock. On August 1, 2010, Arantxa reacquired 200 shares at \$80 per share. On November 1, Arantxa reissued the 200 shares at \$70 per share. Arantxa had no previous treasury stock transactions. Prepare Arantxa's journal entries to record these transactions using the cost method.
-  **BE15-9** Hinges Corporation issued 500 shares of \$100 par value preferred stock for \$61,500. Prepare Hinges's journal entry.

- 6** **BE15-10** Woolford Inc. declared a cash dividend of \$1.00 per share on its 2 million outstanding shares. The dividend was declared on August 1, payable on September 9 to all stockholders of record on August 15. Prepare all journal entries necessary on those three dates.
- 6 •7** **BE15-11** Cole Inc. owns shares of Marlin Corporation stock classified as available-for-sale securities. At December 31, 2010, the available-for-sale securities were carried in Cole's accounting records at their cost of \$875,000, which equals their market value. On September 21, 2011, when the market value of the securities was \$1,200,000, Cole declared a property dividend whereby the Marlin securities are to be distributed on October 23, 2011, to stockholders of record on October 8, 2011. Prepare all journal entries necessary on those three dates.
- 6 •7** **BE15-12** Graves Mining Company declared, on April 20, a dividend of \$500,000 payable on June 1. Of this amount, \$125,000 is a return of capital. Prepare the April 20 and June 1 entries for Graves.
- 8** **BE15-13** Green Day Corporation has outstanding 400,000 shares of \$10 par value common stock. The corporation declares a 5% stock dividend when the fair value of the stock is \$65 per share. Prepare the journal entries for Green Day Corporation for both the date of declaration and the date of distribution.
- 8** **BE15-14** Use the information from BE15-13, but assume Green Day Corporation declared a 100% stock dividend rather than a 5% stock dividend. Prepare the journal entries for both the date of declaration and the date of distribution.
- 10** **\*BE15-15** Nottebart Corporation has outstanding 10,000 shares of \$100 par value, 6% preferred stock and 60,000 shares of \$10 par value common stock. The preferred stock was issued in January 2010, and no dividends were declared in 2010 or 2011. In 2012, Nottebart declares a cash dividend of \$300,000. How will the dividend be shared by common and preferred stockholders if the preferred is (a) noncumulative and (b) cumulative?

## EXERCISES

- 3** **E15-1 (Recording the Issuances of Common Stock)** During its first year of operations, Sitwell Corporation had the following transactions pertaining to its common stock.

Jan. 10 Issued 80,000 shares for cash at \$6 per share.  
 Mar. 1 Issued 5,000 shares to attorneys in payment of a bill for \$35,000 for services rendered in helping the company to incorporate.  
 July 1 Issued 30,000 shares for cash at \$8 per share.  
 Sept. 1 Issued 60,000 shares for cash at \$10 per share.

### Instructions

- (a) Prepare the journal entries for these transactions, assuming that the common stock has a par value of \$3 per share.  
 (b) Prepare the journal entries for these transactions, assuming that the common stock is no par with a stated value of \$2 per share.

- 3** **E15-2 (Recording the Issuance of Common and Preferred Stock)** Abernathy Corporation was organized on January 1, 2010. It is authorized to issue 10,000 shares of 8%, \$50 par value preferred stock, and 500,000 shares of no par common stock with a stated value of \$2 per share. The following stock transactions were completed during the first year.

Jan. 10 Issued 80,000 shares of common stock for cash at \$5 per share.  
 Mar. 1 Issued 5,000 shares of preferred stock for cash at \$108 per share.  
 Apr. 1 Issued 24,000 shares of common stock for land. The asking price of the land was \$90,000; the fair market value of the land was \$80,000.  
 May 1 Issued 80,000 shares of common stock for cash at \$7 per share.  
 Aug. 1 Issued 10,000 shares of common stock to attorneys in payment of their bill of \$50,000 for services rendered in helping the company organize.  
 Sept. 1 Issued 10,000 shares of common stock for cash at \$9 per share.  
 Nov. 1 Issued 1,000 shares of preferred stock for cash at \$112 per share.

### Instructions

Prepare the journal entries to record the above transactions.

- 3** **E15-3 (Stock Issued for Land)** Twenty-five thousand shares reacquired by Pierce Corporation for \$48 per share were exchanged for undeveloped land that has an appraised value of \$1,700,000. At the time of the exchange the common stock was trading at \$60 per share on an organized exchange.

**Instructions**

- (a) Prepare the journal entry to record the acquisition of land assuming that the purchase of the stock was originally recorded using the cost method.
- (b) Briefly identify the possible alternatives (including those that are totally unacceptable) for quantifying the cost of the land and briefly support your choice.

**E15-4 (Lump-Sum Sale of Stock with Bonds)** Fogelberg Corporation is a regional company which is an SEC registrant. The corporation's securities are thinly traded on NASDAQ (National Association of Securities Dealers Quotes). Fogelberg has issued 10,000 units. Each unit consists of a \$500 par, 12% subordinated debenture and 10 shares of \$5 par common stock. The investment banker has retained 400 units as the underwriting fee. The other 9,600 units were sold to outside investors for cash at \$850 per unit. Prior to this sale the 2-week ask price of common stock was \$40 per share. Twelve percent is a reasonable market yield for the debentures, and therefore the par value of the bonds is equal to the fair value.

**Instructions**

- (a) Prepare the journal entry to record Fogelberg's transaction, under the following conditions.
  - (1) Employing the incremental method.
  - (2) Employing the proportional method, assuming the recent price quote on the common stock reflects fair value.
- (b) Briefly explain which method is, in your opinion, the better method.

**E15-5 (Lump-Sum Sales of Stock with Preferred Stock)** Hartman Inc. issues 500 shares of \$10 par value common stock and 100 shares of \$100 par value preferred stock for a lump sum of \$100,000.

**Instructions**

- (a) Prepare the journal entry for the issuance when the market value of the common shares is \$168 each and market value of the preferred is \$210 each. (Round to nearest dollar.)
- (b) Prepare the journal entry for the issuance when only the market value of the common stock is known and it is \$170 per share.

**E15-6 (Stock Issuances and Repurchase)** Loxley Corporation is authorized to issue 50,000 shares of \$10 par value common stock. During 2010, Loxley took part in the following selected transactions.

1. Issued 5,000 shares of stock at \$45 per share, less costs related to the issuance of the stock totaling \$7,000.
2. Issued 1,000 shares of stock for land appraised at \$50,000. The stock was actively traded on a national stock exchange at approximately \$46 per share on the date of issuance.
3. Purchased 500 shares of treasury stock at \$44 per share. The treasury shares purchased were issued in 2006 at \$40 per share.

**Instructions**

- (a) Prepare the journal entry to record item 1.
- (b) Prepare the journal entry to record item 2.
- (c) Prepare the journal entry to record item 3 using the cost method.

**E15-7 (Effect of Treasury Stock Transactions on Financials)** Sanborn Company has outstanding 40,000 shares of \$5 par common stock which had been issued at \$30 per share. Sanborn then entered into the following transactions.

1. Purchased 5,000 treasury shares at \$45 per share.
2. Resold 500 of the treasury shares at \$40 per share.
3. Resold 2,000 of the treasury shares at \$49 per share.

**Instructions**

Use the following code to indicate the effect each of the three transactions has on the financial statement categories listed in the table below, assuming Sanborn Company uses the cost method: I = Increase; D = Decrease; NE = No effect.

#	Assets	Liabilities	Stockholders' Equity	Paid-in Capital	Retained Earnings	Net Income
1						
2						
3						

•3 •5 •10

**E15-8 (Preferred Stock Entries and Dividends)** Weisberg Corporation has 10,000 shares of \$100 par value, 6%, preferred stock and 50,000 shares of \$10 par value common stock outstanding at December 31, 2010.

#### Instructions

Answer the questions in each of the following independent situations.

- If the preferred stock is cumulative and dividends were last paid on the preferred stock on December 31, 2007, what are the dividends in arrears that should be reported on the December 31, 2010, balance sheet? How should these dividends be reported?
- If the preferred stock is convertible into seven shares of \$10 par value common stock and 3,000 shares are converted, what entry is required for the conversion assuming the preferred stock was issued at par value?
- If the preferred stock was issued at \$107 per share, how should the preferred stock be reported in the stockholders' equity section?

•3 •4

**E15-9 (Correcting Entries for Equity Transactions)** Davison Inc. recently hired a new accountant with extensive experience in accounting for partnerships. Because of the pressure of the new job, the accountant was unable to review what he had learned earlier about corporation accounting. During the first month, he made the following entries for the corporation's capital stock.

May 2	Cash	192,000	
	Capital Stock		192,000
	(Issued 12,000 shares of \$10 par value common stock at \$16 per share)		
10	Cash	600,000	
	Capital Stock		600,000
	(Issued 10,000 shares of \$30 par value preferred stock at \$60 per share)		
15	Capital Stock	14,000	
	Cash		14,000
	(Purchased 1,000 shares of common stock for the treasury at \$14 per share)		
31	Cash	8,500	
	Capital Stock		5,000
	Gain on Sale of Stock		3,500
	(Sold 500 shares of treasury stock at \$17 per share)		

#### Instructions

On the basis of the explanation for each entry, prepare the entries that should have been made for the capital stock transactions.

•3 •4

**E15-10 (Analysis of Equity Data and Equity Section Preparation)** For a recent 2-year period, the balance sheet of Franklin Company showed the following stockholders' equity data at December 31 in millions.

	2011	2010
Additional paid-in capital	\$ 891	\$ 817
Common stock—par	545	540
Retained earnings	7,167	5,226
Treasury stock	<u>1,428</u>	<u>918</u>
Total stockholders' equity	<u>\$7,175</u>	<u>\$5,665</u>
Common stock shares issued	218	216
Common stock shares authorized	500	500
Treasury stock shares	34	27

#### Instructions

- Answer the following questions.
  - What is the par value of the common stock?
  - What is the cost per share of treasury stock at December 31, 2011, and at December 31, 2010?
- Prepare the stockholders' equity section at December 31, 2011.

**7** **8** **E15-11 (Equity Items on the Balance Sheet)** The following are selected transactions that may affect stockholders' equity.

1. Recorded accrued interest earned on a note receivable.
2. Declared and distributed a stock split.
3. Declared a cash dividend.
4. Recorded a retained earnings restriction.
5. Recorded the expiration of insurance coverage that was previously recorded as prepaid insurance.
6. Paid the cash dividend declared in item 3 above.
7. Recorded accrued interest expense on a note payable.
8. Declared a stock dividend.
9. Distributed the stock dividend declared in item 8.

**Instructions**

In the following table, indicate the effect each of the nine transactions has on the financial statement elements listed. Use the following code:

I = Increase      D = Decrease      NE = No effect

Item	Assets	Liabilities	Stockholders' Equity	Paid-in Capital	Retained Earnings	Net Income

**7** **E15-12 (Cash Dividend and Liquidating Dividend)** Addison Corporation has ten million shares of common stock issued and outstanding. On June 1 the board of directors voted a 60 cents per share cash dividend to stockholders of record as of June 14, payable June 30.

**Instructions**

- (a) Prepare the journal entry for each of the dates above assuming the dividend represents a distribution of earnings.
- (b) How would the entry differ if the dividend were a liquidating dividend?

**8** **E15-13 (Stock Split and Stock Dividend)** The common stock of Warner Inc. is currently selling at \$110 per share. The directors wish to reduce the share price and increase share volume prior to a new issue. The per share par value is \$10; book value is \$70 per share. Five million shares are issued and outstanding.

**Instructions**

Prepare the necessary journal entries assuming the following.

- (a) The board votes a 2-for-1 stock split.
- (b) The board votes a 100% stock dividend.
- (c) Briefly discuss the accounting and securities market differences between these two methods of increasing the number of shares outstanding.

**8** **E15-14 (Entries for Stock Dividends and Stock Splits)** The stockholders' equity accounts of Lawrence Company have the following balances on December 31, 2010.

Common stock, \$10 par, 200,000 shares issued and outstanding	\$2,000,000
Paid-in capital in excess of par	1,200,000
Retained earnings	5,600,000

Shares of Lawrence Company stock are currently selling on the Midwest Stock Exchange at \$37.

**Instructions**

Prepare the appropriate journal entries for each of the following cases.

- (a) A stock dividend of 5% is declared and issued.
- (b) A stock dividend of 100% is declared and issued.
- (c) A 2-for-1 stock split is declared and issued.

**E15-15 (Dividend Entries)** The following data were taken from the balance sheet accounts of Wickham Corporation on December 31, 2010.

Current assets	\$540,000
Investments	624,000
Common stock (par value \$10)	600,000
Paid-in capital in excess of par	150,000
Retained earnings	840,000

**Instructions**

Prepare the required journal entries for the following unrelated items.

- (a) A 5% stock dividend is declared and distributed at a time when the market value of the shares is \$39 per share.
- (b) The par value of the capital stock is reduced to \$2 with a 5-for-1 stock split.
- (c) A dividend is declared January 5, 2011, and paid January 25, 2011, in bonds held as an investment. The bonds have a book value of \$90,000 and a fair value of \$125,000.

**E15-16 (Computation of Retained Earnings)** The following information has been taken from the ledger accounts of Sampras Corporation.

Total income since incorporation	\$287,000
Total cash dividends paid	60,000
Total value of stock dividends distributed	40,000
Gains on treasury stock transactions	18,000
Unamortized discount on bonds payable	32,000

**Instructions**

Determine the current balance of retained earnings.

**E15-17 (Stockholders' Equity Section)** Teller Corporation's post-closing trial balance at December 31, 2010, was as follows.

<b>TELLER CORPORATION</b>		
<b>POST-CLOSING TRIAL BALANCE</b>		
<b>DECEMBER 31, 2010</b>		
	Dr.	Cr.
Accounts payable		\$ 310,000
Accounts receivable	\$ 480,000	
Accumulated depreciation—building and equipment		185,000
Additional paid-in capital—common		
In excess of par value		1,000,000
From sale of treasury stock		160,000
Allowance for doubtful accounts		30,000
Bonds payable		700,000
Building and equipment	1,450,000	
Cash	190,000	
Common stock (\$1 par value)		200,000
Dividends payable on preferred stock—cash		4,000
Inventories	560,000	
Land	400,000	
Preferred stock (\$50 par value)		500,000
Prepaid expenses	40,000	
Retained earnings		201,000
Treasury stock—common at cost	170,000	
Totals	<u>\$3,290,000</u>	<u>\$3,290,000</u>

At December 31, 2010, Teller had the following number of common and preferred shares.

	Common	Preferred
Authorized	600,000	60,000
Issued	200,000	10,000
Outstanding	190,000	10,000

The dividends on preferred stock are \$4 cumulative. In addition, the preferred stock has a preference in liquidation of \$50 per share.

**Instructions**

Prepare the stockholders' equity section of Teller's balance sheet at December 31, 2010.

(AICPA adapted)

**4** **7** **8**

**E15-18 (Dividends and Stockholders' Equity Section)** Elizabeth Company reported the following amounts in the stockholders' equity section of its December 31, 2010, balance sheet.

Preferred stock, 8%, \$100 par (10,000 shares authorized, 2,000 shares issued)	\$200,000
Common stock, \$5 par (100,000 shares authorized, 20,000 shares issued)	100,000
Additional paid-in capital	125,000
Retained earnings	450,000
Total	<u>\$875,000</u>

During 2011, Elizabeth took part in the following transactions concerning stockholders' equity.

1. Paid the annual 2010 \$8 per share dividend on preferred stock and a \$2 per share dividend on common stock. These dividends had been declared on December 31, 2010.
2. Purchased 2,700 shares of its own outstanding common stock for \$40 per share. Elizabeth uses the cost method.
3. Reissued 700 treasury shares for land valued at \$30,000.
4. Issued 500 shares of preferred stock at \$105 per share.
5. Declared a 10% stock dividend on the outstanding common stock when the stock is selling for \$45 per share.
6. Issued the stock dividend.
7. Declared the annual 2011 \$8 per share dividend on preferred stock and the \$2 per share dividend on common stock. These dividends are payable in 2012.

**Instructions**

- (a) Prepare journal entries to record the transactions described above.
- (b) Prepare the December 31, 2011, stockholders' equity section. Assume 2011 net income was \$330,000.

**9**

**E15-19 (Comparison of Alternative Forms of Financing)** Shown below is the liabilities and stockholders' equity section of the balance sheet for Ingalls Company and Wilder Company. Each has assets totaling \$4,200,000.

Ingalls Co.		Wilder Co.	
Current liabilities	\$ 300,000	Current liabilities	\$ 600,000
Long-term debt, 10%	1,200,000	Common stock (\$20 par)	2,900,000
Common stock (\$20 par)	2,000,000	Retained earnings (Cash dividends, \$328,000)	700,000
Retained earnings (Cash dividends, \$220,000)	<u>700,000</u>		
	<u>\$4,200,000</u>		<u>\$4,200,000</u>

For the year each company has earned the same income before interest and taxes.

	Ingalls Co.	Wilder Co.
Income before interest and taxes	\$1,200,000	\$1,200,000
Interest expense	<u>120,000</u>	<u>-0-</u>
	1,080,000	1,200,000
Income taxes (40%)	<u>432,000</u>	<u>480,000</u>
Net income	<u>\$ 648,000</u>	<u>\$ 720,000</u>

At year-end, the market price of Ingalls's stock was \$101 per share, and Wilder's was \$63.50. Assume balance sheet amounts are representative for the entire year.

**Instructions**

- (a) Which company is more profitable in terms of return on total assets?
- (b) Which company is more profitable in terms of return on stockholders' equity?
- (c) Which company has the greater net income per share of stock? Neither company issued or reacquired shares during the year.
- (d) From the point of view of net income, is it advantageous to the stockholders of Ingalls Co. to have the long-term debt outstanding? Why?
- (e) What is the book value per share for each company?

**E15-20 (Trading on the Equity Analysis)** Presented below is information from the annual report of Potter Plastics, Inc.

Operating income	\$ 532,150
Bond interest expense	135,000
	397,150
Income taxes	183,432
Net income	\$ 213,718
Bonds payable	\$1,500,000
Common stock	875,000
Retained earnings	575,000

**Instructions**

- (a) Compute the return on common stock equity and the rate of interest paid on bonds. (Assume balances for debt and equity accounts approximate averages for the year.)
- (b) Is Potter Plastics, Inc. trading on the equity successfully? Explain.

**E15-21 (Preferred Dividends)** The outstanding capital stock of Pennington Corporation consists of 2,000 shares of \$100 par value, 6% preferred, and 5,000 shares of \$50 par value common.

**Instructions**

Assuming that the company has retained earnings of \$70,000, all of which is to be paid out in dividends, and that preferred dividends were not paid during the 2 years preceding the current year, determine how much each class of stock should receive under each of the following conditions.

- (a) The preferred stock is noncumulative and nonparticipating.
- (b) The preferred stock is cumulative and nonparticipating.
- (c) The preferred stock is cumulative and participating. (Round dividend rate percentages to four decimal places.)

**E15-22 (Preferred Dividends)** Martinez Company’s ledger shows the following balances on December 31, 2010.

5% Preferred stock—\$10 par value, outstanding 20,000 shares	\$ 200,000
Common stock—\$100 par value, outstanding 30,000 shares	3,000,000
Retained earnings	630,000

**Instructions**

Assuming that the directors decide to declare total dividends in the amount of \$266,000, determine how much each class of stock should receive under each of the conditions stated below. One year’s dividends are in arrears on the preferred stock.

- (a) The preferred stock is cumulative and fully participating.
- (b) The preferred stock is noncumulative and nonparticipating.
- (c) The preferred stock is noncumulative and is participating in distributions in excess of a 7% dividend rate on the common stock.

**E15-23 (Preferred Stock Dividends)** Hagar Company has outstanding 2,500 shares of \$100 par, 6% preferred stock and 15,000 shares of \$10 par value common. The schedule below shows the amount of dividends paid out over the last 4 years.

**Instructions**

Allocate the dividends to each type of stock under assumptions (a) and (b). Express your answers in per-share amounts using the format shown below.

Year	Paid-out	Assumptions			
		(a)		(b)	
		Preferred, noncumulative, and nonparticipating		Preferred, cumulative, and fully participating	
		Preferred	Common	Preferred	Common
2009	\$12,000				
2010	\$26,000				
2011	\$52,000				
2012	\$76,000				

**10** \*E15-24 (Computation of Book Value per Share) Johnstone Inc. began operations in January 2009 and reported the following results for each of its 3 years of operations.

2009	\$260,000 net loss	2010	\$40,000 net loss	2011	\$700,000 net income
------	--------------------	------	-------------------	------	----------------------

At December 31, 2011, Johnstone Inc. capital accounts were as follows.

6% cumulative preferred stock, par value \$100; authorized, issued, and outstanding 5,000 shares	\$500,000
Common stock, par value \$1.00; authorized 1,000,000 shares; issued and outstanding 750,000 shares	\$750,000

Johnstone Inc. has never paid a cash or stock dividend. There has been no change in the capital accounts since Johnstone began operations. The state law permits dividends only from retained earnings.

**Instructions**

- (a) Compute the book value of the common stock at December 31, 2011.
- (b) Compute the book value of the common stock at December 31, 2011, assuming that the preferred stock has a liquidating value of \$106 per share.

See the book's companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), for a set of B Exercises.

**PROBLEMS**

**3 4 9** P15-1 (Equity Transactions and Statement Preparation) On January 5, 2010, Phelps Corporation received a charter granting the right to issue 5,000 shares of \$100 par value, 8% cumulative and nonparticipating preferred stock, and 50,000 shares of \$10 par value common stock. It then completed these transactions.

- Jan. 11 Issued 20,000 shares of common stock at \$16 per share.
- Feb. 1 Issued to Sanchez Corp. 4,000 shares of preferred stock for the following assets: machinery with a fair market value of \$50,000; a factory building with a fair market value of \$160,000; and land with an appraised value of \$270,000.
- July 29 Purchased 1,800 shares of common stock at \$17 per share. (Use cost method.)
- Aug. 10 Sold the 1,800 treasury shares at \$14 per share.
- Dec. 31 Declared a \$0.25 per share cash dividend on the common stock and declared the preferred dividend.
- Dec. 31 Closed the Income Summary account. There was a \$175,700 net income.

**Instructions**

- (a) Record the journal entries for the transactions listed above.
- (b) Prepare the stockholders' equity section of Phelps Corporation's balance sheet as of December 31, 2010.

**4 9** P15-2 (Treasury Stock Transactions and Presentation) Clemson Company had the following stockholders' equity as of January 1, 2010.

Common stock, \$5 par value, 20,000 shares issued	\$100,000
Paid-in capital in excess of par	300,000
Retained earnings	320,000
Total stockholders' equity	<u>\$720,000</u>

During 2010, the following transactions occurred.

- Feb. 1 Clemson repurchased 2,000 shares of treasury stock at a price of \$19 per share.
- Mar. 1 800 shares of treasury stock repurchased above were reissued at \$17 per share.
- Mar. 18 500 shares of treasury stock repurchased above were reissued at \$14 per share.
- Apr. 22 600 shares of treasury stock repurchased above were reissued at \$20 per share.

**Instructions**

- (a) Prepare the journal entries to record the treasury stock transactions in 2010, assuming Clemson uses the cost method.
- (b) Prepare the stockholders' equity section as of April 30, 2010. Net income for the first 4 months of 2010 was \$130,000.

**•3 •4 •7**  
**•8**

**P15-3 (Equity Transactions and Statement Preparation)** Hatch Company has two classes of capital stock outstanding: 8%, \$20 par preferred and \$5 par common. At December 31, 2010, the following accounts were included in stockholders' equity.

Preferred Stock, 150,000 shares	\$ 3,000,000
Common Stock, 2,000,000 shares	10,000,000
Paid-in Capital in Excess of Par—Preferred	200,000
Paid-in Capital in Excess of Par—Common	27,000,000
Retained Earnings	4,500,000

The following transactions affected stockholders' equity during 2011.

- Jan. 1 30,000 shares of preferred stock issued at \$22 per share.  
 Feb. 1 50,000 shares of common stock issued at \$20 per share.  
 June 1 2-for-1 stock split (par value reduced to \$2.50).  
 July 1 30,000 shares of common treasury stock purchased at \$10 per share. Hatch uses the cost method.  
 Sept. 15 10,000 shares of treasury stock reissued at \$11 per share.  
 Dec. 31 The preferred dividend is declared, and a common dividend of 50¢ per share is declared.  
 Dec. 31 Net income is \$2,100,000.

**Instructions**

Prepare the stockholders' equity section for Hatch Company at December 31, 2010. Show all supporting computations.

**•3 •5**

**P15-4 (Stock Transactions—Lump Sum)** Seles Corporation's charter authorized issuance of 100,000 shares of \$10 par value common stock and 50,000 shares of \$50 preferred stock. The following transactions involving the issuance of shares of stock were completed. Each transaction is independent of the others.

1. Issued a \$10,000, 9% bond payable at par and gave as a bonus one share of preferred stock, which at that time was selling for \$106 a share.
2. Issued 500 shares of common stock for machinery. The machinery had been appraised at \$7,100; the seller's book value was \$6,200. The most recent market price of the common stock is \$16 a share.
3. Issued 375 shares of common and 100 shares of preferred for a lump sum amounting to \$10,800. The common had been selling at \$14 and the preferred at \$65.
4. Issued 200 shares of common and 50 shares of preferred for furniture and fixtures. The common had a fair market value of \$16 per share; the furniture and fixtures have a fair value of \$6,500.

**Instructions**

Record the transactions listed above in journal entry form.

**•4**

**P15-5 (Treasury Stock—Cost Method)** Before Gordon Corporation engages in the treasury stock transactions listed below, its general ledger reflects, among others, the following account balances (par value of its stock is \$30 per share).

<u>Paid-in Capital in Excess of Par</u>	<u>Common Stock</u>	<u>Retained Earnings</u>
\$99,000	\$270,000	\$80,000

**Instructions**

Record the treasury stock transactions (given below) under the cost method of handling treasury stock; use the FIFO method for purchase-sale purposes.

- (a) Bought 380 shares of treasury stock at \$40 per share.
- (b) Bought 300 shares of treasury stock at \$45 per share.
- (c) Sold 350 shares of treasury stock at \$42 per share.
- (d) Sold 110 shares of treasury stock at \$38 per share.

4 7 9

**P15-6 (Treasury Stock—Cost Method—Equity Section Preparation)** Washington Company has the following stockholders' equity accounts at December 31, 2010.

Common Stock—\$100 par value, authorized 8,000 shares	\$480,000
Retained Earnings	294,000

**Instructions**

- (a) Prepare entries in journal form to record the following transactions, which took place during 2011.
  - (1) 280 shares of outstanding stock were purchased at \$97 per share. (These are to be accounted for using the cost method.)
  - (2) A \$20 per share cash dividend was declared.
  - (3) The dividend declared in No. 2 above was paid.
  - (4) The treasury shares purchased in No. 1 above were resold at \$102 per share.
  - (5) 500 shares of outstanding stock were purchased at \$105 per share.
  - (6) 350 of the shares purchased in No. 5 above were resold at \$96 per share.
- (b) Prepare the stockholders' equity section of Washington Company's balance sheet after giving effect to these transactions, assuming that the net income for 2011 was \$94,000. State law requires restriction of retained earnings for the amount of treasury stock.

4 7

**P15-7 (Cash Dividend Entries)** The books of Conchita Corporation carried the following account balances as of December 31, 2010.

Cash	\$ 195,000
Preferred stock, 6% cumulative, nonparticipating, \$50 par	300,000
Common stock, no par value, 300,000 shares issued	1,500,000
Paid-in capital in excess of par (preferred)	150,000
Treasury stock (common 2,800 shares at cost)	33,600
Retained earnings	105,000

The company decided not to pay any dividends in 2010.

The board of directors, at their annual meeting on December 21, 2011, declared the following: "The current year dividends shall be 6% on the preferred and \$.30 per share on the common. The dividends in arrears shall be paid by issuing 1,500 shares of treasury stock." At the date of declaration, the preferred is selling at \$80 per share, and the common at \$12 per share. Net income for 2011 is estimated at \$77,000.

**Instructions**

- (a) Prepare the journal entries required for the dividend declaration and payment, assuming that they occur simultaneously.
- (b) Could Conchita Corporation give the preferred stockholders 2 years' dividends and common stockholders a 30 cents per share dividend, all in cash?

7 8

**P15-8 (Dividends and Splits)** Myers Company provides you with the following condensed balance sheet information.

Assets		Liabilities and Stockholders' Equity	
Current assets	\$ 40,000	Current and long-term liabilities	\$100,000
Investments in ABC stock (10,000 shares at cost)	60,000	Stockholders' equity	
Equipment (net)	250,000	Common stock (\$5 par)	\$ 20,000
Intangibles	60,000	Paid-in capital in excess of par	110,000
Total assets	<u>\$410,000</u>	Retained earnings	<u>180,000</u>
		Total liabilities and stockholders' equity	<u>310,000</u>
			<u>\$410,000</u>

**Instructions**

For each transaction below, indicate the dollar impact (if any) on the following five items: (1) total assets, (2) common stock, (3) paid-in capital in excess of par, (4) retained earnings, and (5) stockholders' equity. (Each situation is independent.)

- (a) Myers declares and pays a \$.50 per share cash dividend.
- (b) Myers declares and issues a 10% stock dividend when the market price of the stock is \$14 per share.

- (c) Myers declares and issues a 30% stock dividend when the market price of the stock is \$15 per share.
- (d) Myers declares and distributes a property dividend. Myers gives one share of ABC stock for every two shares of Myers Company stock held. ABC is selling for \$10 per share on the date the property dividend is declared.
- (e) Myers declares a 2-for-1 stock split and issues new shares.

**3** **4** **7**  
**9**

**P15-9 (Stockholders' Equity Section of Balance Sheet)** The following is a summary of all relevant transactions of Vicario Corporation since it was organized in 2010.

In 2010, 15,000 shares were authorized and 7,000 shares of common stock (\$50 par value) were issued at a price of \$57. In 2011, 1,000 shares were issued as a stock dividend when the stock was selling for \$60. Three hundred shares of common stock were bought in 2012 at a cost of \$64 per share. These 300 shares are still in the company treasury.

In 2011, 10,000 preferred shares were authorized and the company issued 5,000 of them (\$100 par value) at \$113. Some of the preferred stock was reacquired by the company and later reissued for \$4,700 more than it cost the company.

The corporation has earned a total of \$610,000 in net income after income taxes and paid out a total of \$312,600 in cash dividends since incorporation.

#### Instructions

Prepare the stockholders' equity section of the balance sheet in proper form for Vicario Corporation as of December 31, 2012. Account for treasury stock using the cost method.

**8**

**P15-10 (Stock Dividends and Stock Split)** Oregon Inc. \$10 par common stock is selling for \$110 per share. Four million shares are currently issued and outstanding. The board of directors wishes to stimulate interest in Oregon common stock before a forthcoming stock issue but does not wish to distribute capital at this time. The board also believes that too many adjustments to the stockholders' equity section, especially retained earnings, might discourage potential investors.

The board has considered three options for stimulating interest in the stock:

1. A 20% stock dividend.
2. A 100% stock dividend.
3. A 2-for-1 stock split.

#### Instructions

Acting as financial advisor to the board, you have been asked to report briefly on each option and, considering the board's wishes, make a recommendation. Discuss the effects of each of the foregoing options.

**7** **8** **9**

**P15-11 (Stock and Cash Dividends)** Earnhart Corporation has outstanding 3,000,000 shares of common stock of a par value of \$10 each. The balance in its retained earnings account at January 1, 2010, was \$24,000,000, and it then had Additional Paid-in Capital of \$5,000,000. During 2010, the company's net income was \$4,700,000. A cash dividend of \$0.60 a share was declared on May 5, 2010, and was paid June 30, 2010, and a 6% stock dividend was declared on November 30, 2010, and distributed to stockholders of record at the close of business on December 31, 2010. You have been asked to advise on the proper accounting treatment of the stock dividend.

The existing stock of the company is quoted on a national stock exchange. The market price of the stock has been as follows.

October 31, 2010	\$31
November 30, 2010	\$34
December 31, 2010	\$38

#### Instructions

- (a) Prepare the journal entry to record the declaration and payment of the cash dividend.
- (b) Prepare the journal entry to record the declaration and distribution of the stock dividend.
- (c) Prepare the stockholders' equity section (including schedules of retained earnings and additional paid-in capital) of the balance sheet of Earnhart Corporation for the year 2010 on the basis of the foregoing information. Draft a note to the financial statements setting forth the basis of the accounting for the stock dividend, and add separately appropriate comments or explanations regarding the basis chosen.

**3** **4** **7**  
**8** **9**

**P15-12 (Analysis and Classification of Equity Transactions)** Penn Company was formed on July 1, 2008. It was authorized to issue 300,000 shares of \$10 par value common stock and 100,000 shares of 8% \$25 par value, cumulative and nonparticipating preferred stock. Penn Company has a July 1–June 30 fiscal year.

The following information relates to the stockholders' equity accounts of Penn Company.

### Common Stock

Prior to the 2010–11 fiscal year, Penn Company had 110,000 shares of outstanding common stock issued as follows.

- 85,000 shares were issued for cash on July 1, 2008, at \$31 per share.
- On July 24, 2008, 5,000 shares were exchanged for a plot of land which cost the seller \$70,000 in 2002 and had an estimated fair value of \$220,000 on July 24, 2008.
- 20,000 shares were issued on March 1, 2009, for \$42 per share.

During the 2010–11 fiscal year, the following transactions regarding common stock took place.

November 30, 2010	Penn purchased 2,000 shares of its own stock on the open market at \$39 per share. Penn uses the cost method for treasury stock.
December 15, 2010	Penn declared a 5% stock dividend for stockholders of record on January 15, 2011, to be issued on January 31, 2011. Penn was having a liquidity problem and could not afford a cash dividend at the time. Penn's common stock was selling at \$52 per share on December 15, 2010.
June 20, 2011	Penn sold 500 shares of its own common stock that it had purchased on November 30, 2010, for \$21,000.

### Preferred Stock

Penn issued 40,000 shares of preferred stock at \$44 per share on July 1, 2009.

### Cash Dividends

Penn has followed a schedule of declaring cash dividends in December and June, with payment being made to stockholders of record in the following month. The cash dividends which have been declared since inception of the company through June 30, 2011, are shown below.

Declaration Date	Common Stock	Preferred Stock
12/15/09	\$0.30 per share	\$1.00 per share
6/15/10	\$0.30 per share	\$1.00 per share
12/15/10	—	\$1.00 per share

No cash dividends were declared during June 2011 due to the company's liquidity problems.

### Retained Earnings

As of June 30, 2010, Penn's retained earnings account had a balance of \$690,000. For the fiscal year ending June 30, 2011, Penn reported net income of \$40,000.

### Instructions

Prepare the stockholders' equity section of the balance sheet, including appropriate notes, for Penn Company as of June 30, 2011, as it should appear in its annual report to the shareholders.

(CMA adapted)

## CONCEPTS FOR ANALYSIS

**CA15-1 (Preemptive Rights and Dilution of Ownership)** Wallace Computer Company is a small, closely held corporation. Eighty percent of the stock is held by Derek Wallace, president. Of the remainder, 10% is held by members of his family and 10% by Kathy Baker, a former officer who is now retired. The balance sheet of the company at June 30, 2010, was substantially as shown below.

Assets		Liabilities and Stockholders' Equity	
Cash	\$ 22,000	Current liabilities	\$ 50,000
Other	450,000	Capital stock	250,000
	<u>\$472,000</u>	Retained earnings	172,000
			<u>\$472,000</u>

Additional authorized capital stock of \$300,000 par value had never been issued. To strengthen the cash position of the company, Wallace issued capital stock with a par value of \$100,000 to himself at par for cash. At the next stockholders' meeting, Baker objected and claimed that her interests had been injured.

**Instructions**

- (a) Which stockholder's right was ignored in the issue of shares to Derek Wallace?
- (b) How may the damage to Baker's interests be repaired most simply?
- (c) If Derek Wallace offered Baker a personal cash settlement and they agreed to employ you as an impartial arbitrator to determine the amount, what settlement would you propose? Present your calculations with sufficient explanation to satisfy both parties.

**CA15-2 (Issuance of Stock for Land)** Martin Corporation is planning to issue 3,000 shares of its own \$10 par value common stock for two acres of land to be used as a building site.

**Instructions**

- (a) What general rule should be applied to determine the amount at which the land should be recorded?
- (b) Under what circumstances should this transaction be recorded at the fair value of the land?
- (c) Under what circumstances should this transaction be recorded at the fair value of the stock issued?
- (d) Assume Martin intentionally records this transaction at an amount greater than the fair value of the land and the stock. Discuss this situation.

**CA15-3 (Conceptual Issues—Equity)** Statements of Financial Accounting Concepts set forth financial accounting and reporting objectives and fundamentals that will be used by the Financial Accounting Standards Board in developing standards. *Concepts Statement No. 6* defines various elements of financial statements.

**Instructions**

Answer the following questions based on *SFAC No. 6*.

- (a) Define and discuss the term "equity."
- (b) What transactions or events change owners' equity?
- (c) Define "investments by owners" and provide examples of this type of transaction. What financial statement element other than equity is typically affected by owner investments?
- (d) Define "distributions to owners" and provide examples of this type of transaction. What financial statement element other than equity is typically affected by distributions?
- (e) What are examples of changes within owners' equity that do not change the total amount of owners' equity?

**CA15-4 (Stock Dividends and Splits)** The directors of Merchant Corporation are considering the issuance of a stock dividend. They have asked you to discuss the proposed action by answering the following questions.

**Instructions**

- (a) What is a stock dividend? How is a stock dividend distinguished from a stock split (1) from a legal standpoint, and (2) from an accounting standpoint?
- (b) For what reasons does a corporation usually declare a stock dividend? A stock split?
- (c) Discuss the amount, if any, of retained earnings to be capitalized in connection with a stock dividend.

(AICPA adapted)

**CA15-5 (Stock Dividends)** Kulikowski Inc., a client, is considering the authorization of a 10% common stock dividend to common stockholders. The financial vice president of Kulikowski wishes to discuss the accounting implications of such an authorization with you before the next meeting of the board of directors.

**Instructions**

- (a) The first topic the vice president wishes to discuss is the nature of the stock dividend to the recipient. Discuss the case against considering the stock dividend as income to the recipient.
- (b) The other topic for discussion is the propriety of issuing the stock dividend to all "stockholders of record" or to "stockholders of record exclusive of shares held in the name of the corporation as treasury stock." Discuss the case against issuing stock dividends on treasury shares.

(AICPA adapted)

**CA15-6 (Stock Dividend, Cash Dividend, and Treasury Stock)** Mask Company has 30,000 shares of \$10 par value common stock authorized and 20,000 shares issued and outstanding. On August 15, 2010, Mask purchased 1,000 shares of treasury stock for \$18 per share. Mask uses the cost method to account for treasury stock. On September 14, 2010, Mask sold 500 shares of the treasury stock for \$20 per share.

In October 2010, Mask declared and distributed 1,950 shares as a stock dividend from unissued shares when the market value of the common stock was \$21 per share.

On December 20, 2010, Mask declared a \$1 per share cash dividend, payable on January 10, 2011, to shareholders of record on December 31, 2010.

#### Instructions

- How should Mask account for the purchase and sale of the treasury stock, and how should the treasury stock be presented in the balance sheet at December 31, 2010?
- How should Mask account for the stock dividend, and how would it affect the stockholders' equity at December 31, 2010? Why?
- How should Mask account for the cash dividend, and how would it affect the balance sheet at December 31, 2010? Why?

(AICPA adapted)

**CA15-7 (Treasury Stock)** Lois Kenseth, president of Sycamore Corporation, is concerned about several large stockholders who have been very vocal lately in their criticisms of her leadership. She thinks they might mount a campaign to have her removed as the corporation's CEO. She decides that buying them out by purchasing their shares could eliminate them as opponents, and she is confident they would accept a "good" offer. Kenseth knows the corporation's cash position is decent, so it has the cash to complete the transaction. She also knows the purchase of these shares will increase earnings per share, which should make other investors quite happy. (Earnings per share is calculated by dividing net income available for the common shareholders by the weighted average number of shares outstanding. Therefore, if the number of shares outstanding is decreased by purchasing treasury shares, earnings per share increases.)

#### Instructions

Answer the following questions.

- Who are the stakeholders in this situation?
- What are the ethical issues involved?
- Should Kenseth authorize the transaction?

## USING YOUR JUDGMENT

### FINANCIAL REPORTING

#### Financial Reporting Problem

#### The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix 5B or can be accessed at the book's companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso).

#### Instructions

Refer to these financial statements and the accompanying notes to answer the following questions.

- What is the par or stated value of P&G's preferred stock?
- What is the par or stated value of P&G's common stock?
- What percentage of P&G's authorized common stock was issued at June 30, 2007?
- How many shares of common stock were outstanding at June 30, 2007, and June 30, 2006?
- What was the dollar amount effect of the cash dividends on P&G's stockholders' equity?
- What is P&G's rate of return on common stock equity for 2007 and 2006?
- What is P&G's payout ratio for 2007 and 2006?
- What was the market price range (high/low) of P&G's common stock during the quarter ended June 30, 2007?

## Comparative Analysis Case

### The Coca-Cola Company and PepsiCo, Inc.

#### Instructions

Go to the book's companion website and use information found there to answer the following questions related to **The Coca-Cola Company** and **PepsiCo, Inc.**

- What is the par or stated value of Coca-Cola's and PepsiCo's common or capital stock?
- What percentage of authorized shares was issued by Coca-Cola at December 31, 2007, and by PepsiCo at December 29, 2007?
- How many shares are held as treasury stock by Coca-Cola at December 31, 2007, and by PepsiCo at December 29, 2007?
- How many Coca-Cola common shares are outstanding at December 31, 2007? How many PepsiCo shares of capital stock are outstanding at December 29, 2007?
- What amounts of cash dividends per share were declared by Coca-Cola and PepsiCo in 2007? What were the dollar amount effects of the cash dividends on each company's stockholders' equity?
- What are Coca-Cola's and PepsiCo's rate of return on common/capital stock equity for 2007 and 2006? Which company gets the higher return on the equity of its shareholders?
- What are Coca-Cola's and PepsiCo's payout ratios for 2007?
- What was the market price range (high/low) for Coca-Cola's common stock and PepsiCo's capital stock during the fourth quarter of 2007? Which company's (Coca-Cola's or PepsiCo's) stock price increased more (%) during 2007?

## Financial Statement Analysis Case

### Case 1 Kellogg Company

**Kellogg Company** is the world's leading producer of ready-to-eat cereal products. In recent years the company has taken numerous steps aimed at improving its profitability and earnings per share. Presented below are some basic facts for Kellogg Corporation.

(all dollars in millions)	2007	2006
Net sales	\$11,776	\$10,907
Net earnings	1,103	1,004
Total assets	11,397	10,714
Total liabilities	8,871	8,645
Common stock, \$0.25 par value	105	105
Capital in excess of par value	388	292
Retained earnings	4,217	3,630
Treasury stock, at cost	1,357	912
Number of shares outstanding (in millions)	419	419

#### Instructions

- What are some of the reasons that management purchases its own stock?
- Explain how earnings per share might be affected by treasury stock transactions.
- Calculate the ratio of debt to total assets for 2006 and 2007, and discuss the implications of the change.

### Case 2 Wiebold, Incorporated

The following note related to stockholders' equity was reported in **Wiebold, Inc.**'s annual report.

On February 1, the Board of Directors declared a 3-for-2 stock split, distributed on February 22 to shareholders of record on February 10. Accordingly, all numbers of common shares, except unissued shares and treasury shares, and all per share data have been restated to reflect this stock split.

On the basis of amounts declared and paid, the annualized quarterly dividends per share were \$0.80 in the current year and \$0.75 in the prior year.

#### Instructions

- What is the significance of the date of record and the date of distribution?
- Why might Wiebold have declared a 3-for-2 for stock split?
- What impact does Wiebold's stock split have on (1) total stockholders' equity, (2) total par value, (3) outstanding shares, and (4) book value per share?

## BRIDGE TO THE PROFESSION

### Professional Research: FASB Codification

Recall from Chapter 13 that Hincapie Co. (a specialty bike-accessory manufacturer) is expecting growth in sales of some products targeted to the low-price market. Hincapie is contemplating a preferred stock issue to help finance this expansion in operations. The company is leaning toward participating preferred stock because ownership will not be diluted, but the investors will get an extra dividend if the company does well. The company management wants to be certain that its reporting of this transaction is transparent to its current shareholders and wants you to research the disclosure requirements related to its capital structure.

#### Instructions

Access the FASB Codification at <http://asc.fasb.org/home> to conduct research using the Codification Research System to prepare responses to the following items. Provide Codification references for your responses.

- (a) Identify the authoritative literature that addresses disclosure of information about capital structure.
- (b) Find definitions of the following:
  - (1) Securities.
  - (2) Participation rights.
  - (3) Preferred stock.
- (c) What information about securities must companies disclose? Discuss how Hincapie should report the proposed preferred stock issue.

### Professional Simulation

Go to the book's companion website, at [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), to find an interactive problem that simulates the computerized CPA exam. The professional simulation for this chapter asks you to address questions related to the accounting for stockholders' equity.

**Remember to check the book's companion website to find additional resources for this chapter.**

## CHAPTER 16

# DILUTIVE SECURITIES AND EARNINGS PER SHARE

### LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Describe the accounting for the issuance, conversion, and retirement of convertible securities.
- 2 Explain the accounting for convertible preferred stock.
- 3 Contrast the accounting for stock warrants and for stock warrants issued with other securities.
- 4 Describe the accounting for stock compensation plans under generally accepted accounting principles.
- 5 Discuss the controversy involving stock compensation plans.
- 6 Compute earnings per share in a simple capital structure.
- 7 Compute earnings per share in a complex capital structure.

### KICKING THE HABIT

Some habits die hard. Take stock options—called by some “the crack cocaine of incentives.” Stock options are a form of compensation that gives key employees the choice to purchase stock at a given (usually lower-than-market) price. For many years, U.S. businesses were hooked on these products.

Why? The combination of a hot stock market and favorable accounting treatment made stock options the incentive of choice. They were compensation with no expense to the companies that granted them, and they were popular with key employees, so companies granted them with abandon. However, the accounting rules that took effect in 2006 required *expensing* the fair value of stock options. This new treatment has made it easier for companies to kick this habit.

As shown in the chart on the left, a review of option use for the companies in the S&P 500 indicates a decline in the use of option-based compensation. Fewer companies are granting stock options, following implementation of stock-option expensing. As a spokesperson at **Progress Energy** commented, “Once you begin expensing options, the attractiveness significantly drops.”

Fewer Option-Crazy Firms

In the 1990s, executives with huge option stockpiles had an almost irresistible incentive to do whatever it took to increase the stock price and cash in their options. By reining in options, many companies are taking the first steps toward curbing both out-of-control executive pay and the era of corporate corruption that it spawned.

Some of the ways that companies are curbing option grants include replacing options with shares of restricted stock. As indicated in the table on the right, which shows the fair value by industry sector of restricted stock and option grants, restricted stock is now the plan of choice. Even if the financial sector is excluded, the value of restricted stock exceeds the value of stock-

option grants. And in the information technology area (where in the past, stock options were heavily favored), the fair value of restricted stock plans exceeds that for stock options. Some companies are simply reducing option grants, without offering a replacement, while others, like **Microsoft** and **Yahoo**, have switched to restricted-stock plans completely.

Is this a good trend? Most believe it is; the requirement to expense stock-based compensation similar to other forms of compensation has changed the focus of compensation plans to rewarding talent and performance without breaking the bank. The positive impact on corporate behavior, while hard to measure, should benefit investors in years to come.

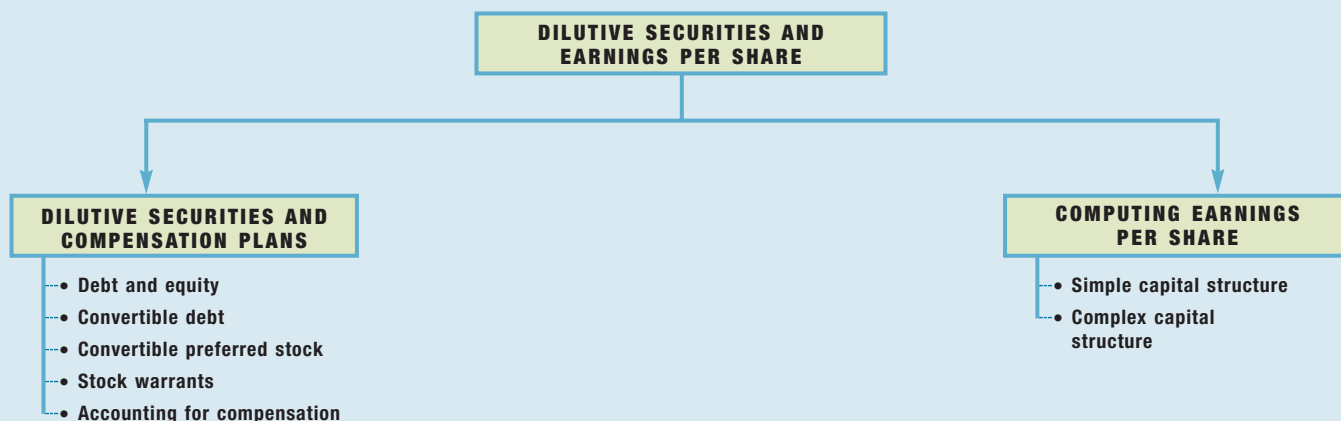

Sources: Adapted from: Louis Lavelle, "Kicking the Stock-Options Habit," *BusinessWeekOnline* (February 16, 2005). Graphs from Jack T. Ciesielski, "S&P 500 Stock Compensation: Who Needs Options?" *The Analyst's Accounting Observer* (July 30, 2008).

**S&P 500: FAIR VALUES OF GRANTS BY INDUSTRY SECTOR**  
Options vs. Restricted Stock (\$ billions)

(\$ in billions)	2007	
	Restricted Stock	Options
Financials	\$23.8	\$3.0
Energy	2.5	1.0
Consumer discretionary	3.8	2.7
Industrials	2.5	1.7
Utilities	0.4	0.1
Telecom	0.5	0.2
Info tech	8.5	8.3
Materials	0.5	0.6
Consumer staples	1.8	2.3
Health care	3.0	4.3
Total	<u>\$47.3</u>	<u>\$24.2</u>
Total non-financials	<u>\$23.5</u>	<u>\$21.2</u>

## PREVIEW OF CHAPTER 16

As the opening story indicates, companies are rethinking the use of various forms of stock-based compensation. The purpose of this chapter is to discuss the proper accounting for stock-based compensation. In addition, the chapter examines issues related to other types of financial instruments, such as convertible securities, warrants, and contingent shares, including their effects on reporting earnings per share. The content and organization of the chapter are as follows.

## SECTION 1 • DILUTIVE SECURITIES AND COMPENSATION PLANS

### DEBT AND EQUITY

Many of the controversies related to the accounting for financial instruments such as stock options, convertible securities, and preferred stock relate to whether companies should report these instruments as a liability or as equity. For example, companies should classify nonredeemable common shares as equity because the issuer has no **obligation** to pay dividends or repurchase the stock. Declaration of dividends is at the issuer's discretion, as is the decision to repurchase the stock. Similarly, preferred stock that is not redeemable does not require the issuer to pay dividends or repurchase the stock. Thus, nonredeemable common or preferred stock lacks an important characteristic of a liability—an obligation to pay the holder of the common or preferred stock at some point in the future.

However the classification is not as clear-cut for other financial instruments. For example, in Chapter 15 we discussed the accounting for mandatorily redeemable preferred stock. Companies originally classified this security as part of equity. The SEC then prohibited equity classification, and most companies classified these securities between debt and equity on the balance sheet in a separate section often referred to as the “mezzanine section.” The FASB now requires companies to report these types of securities as a liability.<sup>1</sup> [1]

In this chapter, we discuss securities that have characteristics of *both* debt and equity. For example, a convertible bond has both debt and equity characteristics. Should a company classify this security as debt, as equity, or as part debt and part equity? In addition, how should a company compute earnings per share if it has convertible bonds and other convertible securities in its capital structure? Convertible securities as well as options, warrants, and other securities are often called **dilutive securities** because upon exercise they may reduce (dilute) earnings per share.

 See the FASB Codification section (page 835).

### ACCOUNTING FOR CONVERTIBLE DEBT

**Convertible bonds** can be changed into other corporate securities during some specified period of time after issuance. A convertible bond combines the benefits of a bond with the privilege of exchanging it for stock at the holder's option. Investors who purchase it desire the security of a bond holding (guaranteed interest and principal) plus the added option of conversion if the value of the stock appreciates significantly.

Corporations issue convertibles for two main reasons. One is to raise equity capital without giving up more ownership control than necessary. To illustrate, assume a company wants to raise \$1 million; its common stock is selling at \$45 a share. To raise the \$1 million, the company would have to sell 22,222 shares

#### Objective • 1

Describe the accounting for the issuance, conversion, and retirement of convertible securities.

<sup>1</sup>The FASB continues to deliberate the accounting for financial instruments with characteristics of both debt and equity. In a “Preliminary Views” document, “*Financial Instruments with Characteristics of Equity*” (November 30, 2007), the Board proposed a definition of equity that is far more restrictive than current practice. Under the proposed “basic ownership approach,” only common stock is classified as equity. All other instruments (such as preferred stock, options, and convertible debt) are classified as liabilities. Instruments classified as liabilities are measured at fair value and changes are reported in income. The Board has proposed the basic ownership approach because it requires a narrow definition of equity. A narrow definition provides fewer opportunities to structure instruments and arrangements to achieve a desired accounting treatment. (See <http://www.fasb.org/project/liabeq.shtml>.)

(ignoring issue costs). By selling 1,000 bonds at \$1,000 par, each convertible into 20 shares of common stock, the company could raise \$1 million by committing only 20,000 shares of its common stock.

A second reason to issue convertibles is to obtain debt financing at cheaper rates. Many companies could issue debt only at high interest rates unless they attach a convertible covenant. The conversion privilege entices the investor to accept a lower interest rate than would normally be the case on a straight debt issue. For example, **Amazon.com** at one time issued convertible bonds that pay interest at an effective yield of 4.75 percent. This rate was much lower than Amazon.com would have had to pay by issuing straight debt. For this lower interest rate, the investor receives the right to buy Amazon.com's common stock at a fixed price until the bond's maturity.<sup>2</sup>

As indicated earlier, the accounting for convertible debt involves reporting issues at the time of (1) issuance, (2) conversion, and (3) retirement.

## At Time of Issuance

The method for recording convertible bonds **at the date of issue follows the method used to record straight debt issues**. None of the proceeds are recorded as equity. Companies amortize to its maturity date any discount or premium that results from the issuance of convertible bonds. Why this treatment? Because it is difficult to predict when, if at all, conversion will occur. However, the accounting for convertible debt as a straight debt issue is controversial; we discuss it more fully later in the chapter.

## At Time of Conversion

If converting bonds into other securities, a company uses the **book value method** to record the conversion. The book value method records the securities exchanged for the bond at the carrying amount (book value) of the bond.

To illustrate, assume that Hilton, Inc. has a \$1,000 bond that is convertible into 10 shares of common stock (par value \$10). At the time of conversion, the unamortized premium is \$50. Hilton records the conversion of the bonds as follows.

Bonds Payable	1,000	
Premium on Bonds Payable	50	
Common Stock		100
Paid-in Capital in Excess of Par		950

Support for the book value approach is based on the argument that an agreement was established at the date of the issuance either to pay a stated amount of cash at maturity or to issue a stated number of shares of equity securities. Therefore, when the debtholder converts the debt to equity in accordance with the preexisting contract terms, the issuing company recognizes no gain or loss upon conversion.

## Induced Conversions

Sometimes the issuer wishes to encourage prompt conversion of its convertible debt to equity securities in order to reduce interest costs or to improve its debt to equity ratio. Thus, the issuer may offer some form of additional consideration (such as cash or

<sup>2</sup>As with any investment, a buyer has to be careful. For example, **Wherehouse Entertainment Inc.**, which had 6<sup>1</sup>/<sub>4</sub> percent convertibles outstanding, was taken private in a leveraged buyout. As a result, the convertible was suddenly as risky as a junk bond of a highly leveraged company with a coupon of only 6<sup>1</sup>/<sub>4</sub> percent. As one holder of the convertibles noted, "What's even worse is that the company will be so loaded down with debt that it probably won't have enough cash flow to make its interest payments. And the convertible debt we hold is subordinated to the rest of Wherehouse's debt." These types of situations have made convertibles less attractive and have led to the introduction of takeover protection covenants in some convertible bond offerings. Or, sometimes convertibles are permitted to be called at par, and therefore the conversion premium may be lost.

common stock), called a “sweetener,” to **induce conversion**. The issuing company reports the sweetener as an expense of the current period. Its amount is the fair value of the additional securities or other consideration given.

Assume that Helloid, Inc. has outstanding \$1,000,000 par value convertible debentures convertible into 100,000 shares of \$1 par value common stock. Helloid wishes to reduce its annual interest cost. To do so, Helloid agrees to pay the holders of its convertible debentures an additional \$80,000 if they will convert. Assuming conversion occurs, Helloid makes the following entry.

Debt Conversion Expense	80,000	
Bonds Payable	1,000,000	
Common Stock		100,000
Paid-in Capital in Excess of Par		900,000
Cash		80,000

Helloid records the additional \$80,000 as **an expense of the current period** and not as a reduction of equity.

Some argue that the cost of a conversion inducement is a cost of obtaining equity capital. As a result, they contend, companies should recognize the cost of conversion as a cost of (a reduction of) the equity capital acquired, and not as an expense. However, the FASB indicated that when an issuer makes an additional payment to encourage conversion, the payment is for a service (bondholders converting at a given time) and should be reported as an expense. The issuing company does not report this expense as an extraordinary item. [2]

## Retirement of Convertible Debt

As indicated earlier, the method for recording the **issuance** of convertible bonds follows that used in recording straight debt issues. Specifically this means that issuing companies should not attribute any portion of the proceeds to the conversion feature, nor should it credit a paid-in capital account.

Although some raise theoretical objections to this approach, to be consistent, companies need to recognize a gain or loss on **retiring convertible debt in the same way that they recognize a gain or loss on retiring nonconvertible debt**. For this reason, companies should report differences between the cash acquisition price of debt and its carrying amount **in current income as a gain or loss**.

---

## CONVERTIBLE PREFERRED STOCK

### Objective 2

Explain the accounting for convertible preferred stock.

**Convertible preferred stock** includes an option for the holder to convert preferred shares into a fixed number of common shares. The major difference between accounting for a convertible bond and convertible preferred stock at the date of issue is their classification: Convertible bonds are considered liabilities, whereas convertible preferreds (unless mandatory redemption exists) are considered part of stockholders' equity.

In addition, when stockholders exercise convertible preferred stock, there is no theoretical justification for recognizing a gain or loss. A company does not recognize a gain or loss when it deals with stockholders in their capacity as business owners. Therefore, companies do not recognize a gain or loss when stockholders exercise convertible preferred stock.

In accounting for the exercise of convertible preferred stock, a company uses the **book value method**: It debits Preferred Stock, along with any related Paid-in Capital in Excess of Par, and it credits Common Stock and Paid-in Capital in Excess of Par (if an excess exists). The treatment differs when the par value of the common stock issued **exceeds** the book value of the preferred stock. In that case, the company usually debits Retained Earnings for the difference.

To illustrate, assume Host Enterprises issued 1,000 shares of common stock (par value \$2) upon conversion of 1,000 shares of preferred stock (par value \$1) that was originally issued for a \$200 premium. The entry would be:

Convertible Preferred Stock	1,000	
Paid-in Capital in Excess of Par	200	
Retained Earnings	800	
Common Stock		2,000

The rationale for the debit to Retained Earnings is that Host has offered the preferred stockholders an **additional return** to facilitate their conversion to common stock. In this example, Host charges the additional return to retained earnings. Many states, however, require that this charge simply reduce additional paid-in capital from other sources.

**HOW LOW CAN YOU GO?**

Financial engineers are always looking for the next innovation in security design to meet the needs of both issuers and investors. Consider the convertible bonds issued by **STMicroelectronics (STM)**. STM's 10-year bonds have a zero coupon and are convertible into STM common stock at an exercise price of \$33.43. When issued, the bonds sold at an effective yield of  $-0.05$  percent. That's right—a negative yield.

How could this happen? When STM issued the bonds, investors thought the options to convert were so valuable that they were willing to take zero interest payments and invest an amount *in excess of* the maturity value of the bonds. In essence, the investors are paying interest to STM, and STM records interest revenue. Why would investors do this? If the stock price rises, as many thought it would for STM and many tech companies at this time, these bond investors could convert and get a big gain in the stock.

Investors did get some additional protection in the deal: They can redeem the \$1,000 bonds after three years and receive \$975 (and after five and seven years, for lower amounts), if it looks like the bonds will never convert. In the end, STM has issued bonds with a significant equity component. And because the entire bond issue is classified as debt, STM records negative interest expense.

*What do the numbers mean?*

**STOCK WARRANTS**

**Warrants** are certificates entitling the holder to acquire shares of stock at a certain price within a stated period. This option is similar to the conversion privilege: Warrants, if exercised, become common stock and usually have a dilutive effect (reduce earnings per share) similar to that of the conversion of convertible securities. However, a substantial difference between convertible securities and stock warrants is that upon exercise of the warrants, the holder has to pay a certain amount of money to obtain the shares.

**Objective 3**  
 Contrast the accounting for stock warrants and for stock warrants issued with other securities.

The issuance of warrants or options to buy additional shares normally arises under three situations:

1. When issuing different types of securities, such as bonds or preferred stock, companies often include warrants **to make the security more attractive**—by providing an "equity kicker."
2. Upon the issuance of additional common stock, existing stockholders have a **pre-emptive right to purchase common stock** first. Companies may issue warrants to evidence that right.
3. Companies give warrants, often referred to as *stock options*, **to executives and employees** as a form of **compensation**.

The problems in accounting for stock warrants are complex and present many difficulties—some of which remain unresolved. The following sections address the accounting for stock warrants in the three situations listed on the previous page.

### Stock Warrants Issued with Other Securities

Warrants issued with other securities are basically long-term options to buy common stock at a fixed price. Generally the life of warrants is five years, occasionally 10 years; very occasionally, a company may offer perpetual warrants.

A warrant works like this: **Tenneco, Inc.** offered a unit comprising one share of stock and one detachable warrant. As its name implies, the **detachable stock warrant** can be detached (separated) from the stock and traded as a separate security. The Tenneco warrant in this example is exercisable at \$24.25 per share and good for five years. The unit (share of stock plus detachable warrant) sold for 22.75 (\$22.75). Since the price of the common stock the day before the sale was 19.88 (\$19.88), the difference suggests a price of 2.87 (\$2.87) for the warrant.

The investor pays for the warrant in order to receive the right to buy the stock, at a fixed price of \$24.25, sometime in the future. It would not be profitable at present for the purchaser to exercise the warrant and buy the stock, because the price of the stock was much below the exercise price.<sup>3</sup> But if, for example, the price of the stock rises to \$30, the investor gains \$2.88 ( $\$30 - \$24.25 - \$2.87$ ) on an investment of \$2.87, a 100 percent increase! If the price never rises, the investor loses the full \$2.87 per warrant.<sup>4</sup>

A company should allocate the proceeds from the sale of debt with detachable stock warrants **between the two securities**.<sup>5</sup> The profession takes the position that two separable instruments are involved, that is, (1) a bond and (2) a warrant giving the holder the right to purchase common stock at a certain price. Companies can trade detachable warrants separately from the debt. This allows the determination of a market value. The two methods of allocation available are:

1. The proportional method.
2. The incremental method.

#### Proportional Method

At one time **AT&T** issued bonds with detachable five-year warrants to buy one share of common stock (par value \$5) at \$25. At the time, a share of AT&T stock was selling for approximately \$50. These warrants enabled AT&T to price its bond offering at par with an  $8\frac{3}{4}$  percent yield (quite a bit lower than prevailing rates at that time). To account for the proceeds from this offering, AT&T would place a value on the two securities: (1) the value of the bonds without the warrants, and (2) the value of the warrants. The **proportional method** then allocates the proceeds using the proportion of the two amounts, based on fair values.

For example, assume that AT&T's bonds (par \$1,000) sold for 99 without the warrants soon after their issue. The market value of the warrants at that time was \$30.

<sup>3</sup>Later in this discussion we will show that the value of the warrant is normally determined on the basis of a relative market-value approach because of the difficulty of imputing a warrant value in any other manner.

<sup>4</sup>From the illustration, it is apparent that buying warrants can be an "all or nothing" proposition.

<sup>5</sup>A detachable warrant means that the warrant can sell separately from the bond. GAAP makes a distinction between detachable and nondetachable warrants because companies must sell nondetachable warrants with the security as a complete package. Thus, no allocation is permitted. [3]

(Prior to sale the warrants will not have a market value.) The allocation relies on an estimate of market value, generally as established by an investment banker, or on the relative market value of the bonds and the warrants soon after the company issues and trades them. The price paid for 10,000, \$1,000 bonds with the warrants attached was par, or \$10,000,000. Illustration 16-1 shows the proportional allocation of the bond proceeds between the bonds and warrants.

Fair market value of bonds (without warrants) ( $\$10,000,000 \times .99$ )	\$ 9,900,000
Fair market value of warrants ( $10,000 \times \$30$ )	300,000
Aggregate fair market value	<u>\$10,200,000</u>
Allocated to bonds:	$\frac{\$9,900,000}{\$10,200,000} \times \$10,000,000 = \$ 9,705,882$
Allocated to warrants:	$\frac{\$300,000}{\$10,200,000} \times \$10,000,000 = \underline{294,118}$
Total allocation	<u>\$10,000,000</u>

**ILLUSTRATION 16-1**  
Proportional Allocation of Proceeds between Bonds and Warrants

In this situation the bonds sell at a discount. AT&T records the sale as follows.

Cash	9,705,882	
Discount on Bonds Payable	294,118	
Bonds Payable		10,000,000

In addition, AT&T sells warrants that it credits to paid-in capital. It makes the following entry.

Cash	294,118	
Paid-in Capital—Stock Warrants		294,118

AT&T may combine the entries if desired. Here, we show them separately, to indicate that the purchaser of the bond is buying not only a bond, but also a possible future claim on common stock.

Assuming investors exercise all 10,000 warrants (one warrant per one share of stock), AT&T makes the following entry.

Cash ( $10,000 \times \$25$ )	250,000	
Paid-in Capital—Stock Warrants	294,118	
Common Stock ( $10,000 \times \$5$ )		50,000
Paid-in Capital in Excess of Par		494,118

What if investors fail to exercise the warrants? In that case, AT&T debits Paid-in Capital—Stock Warrants for \$294,118, and credits Paid-in Capital from Expired Warrants for a like amount. The additional paid-in capital reverts to the former stockholders.

**Incremental Method**

In instances where a company cannot determine the fair value of either the warrants or the bonds, it applies the **incremental method** used in lump-sum security purchases (as explained in Chapter 15, page 747). That is, the company uses the security for which it *can* determine the fair value. It allocates the remainder of the purchase price to the security for which it does not know the fair value.

For example, assume that the market price of the AT&T warrants is \$300,000, but the company cannot determine the market price of the bonds without the warrants. Illustration 16-2 (on page 802) shows the amount allocated to the warrants and the stock in this case.

**ILLUSTRATION 16-2**

Incremental Allocation of Proceeds between Bonds and Warrants

Lump-sum receipt	\$10,000,000
Allocated to the warrants	<u>300,000</u>
Balance allocated to bonds	<u>\$ 9,700,000</u>

**Conceptual Questions**

The question arises whether the allocation of value to the warrants is consistent with the handling of convertible debt, in which companies allocate no value to the conversion privilege. The FASB stated that the features of a convertible security are **inseparable** in the sense that choices are mutually exclusive: The holder either converts the bonds or redeems them for cash, but cannot do both. No basis, therefore, exists for recognizing the conversion value in the accounts.

The Board, however, indicated that the issuance of bonds with **detachable warrants** involves *two* securities, one a debt security, which will remain outstanding until maturity, and the other a warrant to purchase common stock. At the time of issuance, separable instruments exist. The existence of two instruments therefore justifies separate treatment. **Nondetachable warrants**, however, **do not require an allocation of the proceeds between the bonds and the warrants**. Similar to the accounting for convertible bonds, companies record the entire proceeds from nondetachable warrants as debt.

Many argue that the conversion feature of a convertible bond is not significantly different in nature from the call represented by a warrant. The question is whether, although the legal forms differ, sufficient similarities of substance exist to support the same accounting treatment. Some contend that inseparability *per se* is an insufficient basis for restricting allocation between identifiable components of a transaction. Examples of allocation between assets of value in a single transaction *do* exist, such as allocation of values in basket purchases and separation of principal and interest in capitalizing long-term leases. Critics of the current accounting for convertibles say that to deny recognition of value to the conversion feature merely looks to the form of the instrument and does not deal with the substance of the transaction.

In its current exposure draft on this subject, the FASB indicates that companies should separate the debt and equity components of securities such as convertible debt or bonds issued with nondetachable warrants. We agree with this position. In both situations (convertible debt and debt issued with warrants), the investor has made a payment to the company for an equity feature—the right to acquire an equity instrument in the future. The only real distinction between them is that the additional payment made when the equity instrument is formally acquired takes different forms. The warrant holder pays additional cash to the issuing company; the convertible debt holder pays for stock by forgoing the receipt of interest from conversion date until maturity date and by forgoing the receipt of the maturity value itself. Thus, the difference is one of method or form of payment only, rather than one of substance. However, until the profession officially reverses its stand in regard to accounting for convertible debt, companies will continue to report convertible debt and bonds issued with nondetachable warrants solely as debt.<sup>6</sup>

<sup>6</sup>A recent FASB Staff Position requires that convertible debt that can be settled in cash should account for the liability and equity components separately. [4] That approach is consistent with the FASB exposure draft. [Proposed Statement of Financial Accounting Standards Accounting for Financial Instruments with Characteristics of Liabilities, Equity, or Both; Summary (FASB, Norwalk, Conn.: October 2000).] Academic research indicates that estimates of the debt and equity components of convertible bonds are subject to considerable measurement error. See Mary Barth, Wayne Landsman, and Richard Rendleman, Jr., "Option Pricing-Based Bond Value Estimates and a Fundamental Components Approach to Account for Corporate Debt," *The Accounting Review* (January 1998). This and other challenges explain in part the extended time needed to develop new standards in this area.

**Underlying Concepts**

Reporting a convertible bond solely as debt is not representationally faithful. However, the cost-benefit constraint is used to justify the failure to allocate between debt and equity.

**INTERNATIONAL INSIGHT**

International accounting standards require that the issuer of convertible debt record the liability and equity components separately.

## Rights to Subscribe to Additional Shares

If the directors of a corporation decide to issue new shares of stock, the old stockholders generally have the right (**preemptive privilege**) to purchase newly issued shares in proportion to their holdings. This privilege, referred to as a **stock right**, saves existing stockholders from suffering a dilution of voting rights without their consent. Also, it may allow them to purchase stock somewhat below its market value. Unlike the warrants issued with other securities, the warrants issued for stock rights are of short duration.

The certificate representing the stock right states the number of shares the holder of the right may purchase. Each share of stock owned ordinarily gives the owner one stock right. The certificate also states the price at which the new shares may be purchased. The price is normally less than the current market value of such shares, which gives the rights a value in themselves. From the time they are issued until they expire, holders of stock rights may purchase and sell them like any other security.

**Companies make only a memorandum entry when they issue rights to existing stockholders.** This entry indicates the number of rights issued to existing stockholders in order to ensure that the company has additional unissued stock registered for issuance in case the rights are exercised. Companies make no formal entry at this time because they have not yet issued stock nor received cash.

If holders exercise the stock rights, a cash payment of some type usually is involved. If the company receives cash equal to the par value, it makes an entry crediting Common Stock at par value. If the company receives cash in excess of par value, it credits Paid-in Capital in Excess of Par. If it receives cash less than par value, a debit to Paid-in Capital in Excess of Par is appropriate.

## Stock Compensation Plans

The third form of warrant arises in stock compensation plans to pay and motivate employees. This warrant is a **stock option**, which gives key employees the option to purchase common stock at a given price over an extended period of time.

A consensus of opinion is that effective compensation programs are ones that do the following: (1) base compensation on employee and company performance, (2) motivate employees to high levels of performance, (3) help retain executives and allow for recruitment of new talent, (4) maximize the employee's after-tax benefit and minimize the employer's after-tax cost, and (5) use performance criteria over which the employee has control. Straight cash-compensation plans (salary and perhaps a bonus), though important, are oriented to the short run. Many companies recognize that they need a longer-term compensation plan in addition to the cash component.

Long-term compensation plans attempt to develop company loyalty among key employees by giving them "a piece of the action"—that is, an equity interest. These plans, generally referred to as **stock-based compensation plans**, come in many forms. Essentially, they provide the employee with the opportunity to receive stock if the performance of the company (by whatever measure) is satisfactory. Typical performance measures focus on long-term improvements that are readily measurable and that benefit the company as a whole, such as increases in earnings per share, revenues, stock price, or market share.

As indicated in our opening story, companies are changing the way they use stock-based compensation. Illustration 16-3 (on page 804) indicates that option expense is on the decline and that another form of stock-based compensation, **restricted stock**, is on the rise. The major reasons for this change are two-fold. Critics often cited the indiscriminate use of stock options as a reason why company executives manipulated accounting numbers in an attempt to achieve higher share price. As a result, many responsible companies decided to cut back on the issuance of options, both to avoid such accounting manipulations and to head off investor doubts. In addition, GAAP now results in companies recording a higher expense when stock options are granted.

**ILLUSTRATION 16-3**

Stock-Option  
Compensation Expense

The data reported in Illustration 16-4 reinforce the point that the design of compensation plans is changing. The study documents recent compensation trends of 68 CEOs of companies in the S&P 500.

**ILLUSTRATION 16-4**

Compensation Elements

	Current Year	% Change from Prior Year
Total direct compensation	\$7,247,903	8.8%
Salary	908,269	4.1
Bonus	975,000	32.6
Value of stock options	3,217,811	(18.7)
Restricted stock	2,679,435	34.0
Long-term incentive payouts	773,719	72.1

Sources: Compustat, First Call, UBS, Equilar, Inc.

Illustration 16-4 shows that cash compensation is increasing. Long-term incentives also are increasing, but the compensation mix is changing. For example, the use of restricted stock jumped 34 percent, but the use of options decreased approximately 19 percent. Yet, stock options remains an important means of compensating these CEOs. As Illustrations 16-3 and 16-4 indicate, stock-based compensation is still a considerable incentive element of employee compensation.

**The Major Reporting Issue**

Suppose that, as an employee for Hurdle Inc., you receive options to purchase 10,000 shares of the firm’s common stock as part of your compensation. The date you receive the options is referred to as the **grant date**. The options are good for 10 years. The market price and the exercise price for the stock are both \$20 at the grant date. **What is the value of the compensation you just received?**

Some believe that what you have received has no value. They reason that because the difference between the market price and the exercise price is zero, no compensation results. Others argue these options do have value: If the stock price goes above \$20 any time in the next 10 years and you exercise the options, you may earn substantial compensation. For example, if at the end of the fourth year, the market price of the stock

is \$30 and you exercise your options, you earn \$100,000 [10,000 options × (\$30 – \$20)], ignoring income taxes.

The question for Hurdle is how to report the granting of these options. One approach measures compensation cost by the excess of the market price of the stock over its exercise price at the grant date. This approach is referred to as the **intrinsic-value method**. It measures what the holder would receive today if the option was immediately exercised. That intrinsic value **is the difference between the market price of the stock and the exercise price of the options at the grant date**. Using the intrinsic-value method, Hurdle would not recognize any compensation expense related to your options because at the grant date the market price equaled the exercise price. (In the preceding paragraph, those who answered that the options had no value were looking at the question from the intrinsic-value approach.)

The second way to look at the question of how to report the granting of these options bases the cost of employee stock options on the **fair value** of the stock options granted. Under this **fair value method**, companies use acceptable option-pricing models to value the options at the date of grant. These models take into account the many factors that determine an option's underlying value.<sup>7</sup>

The FASB guidelines now require that companies recognize compensation cost using the fair value method. [5] The FASB position is that companies should base the accounting for the cost of employee services on the fair value of compensation paid. This amount is presumed to be a measure of the value of the services received. We will discuss more about the politics of GAAP in this area later (see “Debate over Stock-Option Accounting,” page 809). Let's first describe the procedures involved.

## ACCOUNTING FOR STOCK COMPENSATION

### Stock-Option Plans

Stock-option plans involve two main accounting issues:

1. How to determine compensation expense.
2. Over what periods to allocate compensation expense.

#### Objective 4

Describe the accounting for stock compensation plans under generally accepted accounting principles.

### Determining Expense

**Under the fair value method**, companies compute total compensation expense based on the fair value of the options expected to vest on the date they grant the options to the employee(s) (i.e., the **grant date**).<sup>8</sup> Public companies estimate fair value by using an option-pricing model, with some adjustments for the unique factors of employee stock options. No adjustments occur after the grant date in response to subsequent changes in the stock price—either up or down.

### Allocating Compensation Expense

In general, a company recognizes compensation expense in the periods in which its employees perform the service—the **service period**. Unless otherwise specified, the service period is the vesting period—the time between the grant date and the vesting date. Thus, the company determines total compensation cost at the grant date and allocates it to the periods benefited by its employees' services.

<sup>7</sup>These factors include the volatility of the underlying stock, the expected life of the options, the risk-free rate during the option life, and expected dividends during the option life.

<sup>8</sup>“To vest” means “to earn the rights to.” An employee's award becomes vested at the date that the employee's right to receive or retain shares of stock or cash under the award is no longer contingent on remaining in the service of the employer.

**Stock Compensation Example**

An example will help show the accounting for a stock-option plan. Assume that on November 1, 2009, the stockholders of Chen Company approve a plan that grants the company's five executives options to purchase 2,000 shares each of the company's \$1 par value common stock. The company grants the options on January 1, 2010. The executives may exercise the options at any time within the next 10 years. The option price per share is \$60, and the market price of the stock at the date of grant is \$70 per share.

Under the fair value method, the company computes total compensation expense by applying an acceptable fair value option-pricing model (such as the Black-Scholes option-pricing model). To keep this illustration simple, we assume that the fair value option-pricing model determines Chen's total compensation expense to be \$220,000.

**Basic Entries.** Under the fair value method, a company recognizes the value of the options as an expense in the periods in which the employee performs services. In the case of Chen Company, assume that the expected period of benefit is two years, starting with the grant date. Chen would record the transactions related to this option contract as follows.

**At date of grant (January 1, 2010)**

No entry.

**To record compensation expense for 2010 (December 31, 2010)**

Compensation Expense	110,000	
Paid-in Capital—Stock Options ( $\$220,000 \div 2$ )		110,000

**To record compensation expense for 2011 (December 31, 2011)**

Compensation Expense	110,000	
Paid-in Capital—Stock Options		110,000

As indicated, Chen allocates compensation expense evenly over the two-year service period.

**Exercise.** If Chen's executives exercise 2,000 of the 10,000 options (20 percent of the options) on June 1, 2013 (three years and five months after date of grant), the company records the following journal entry.

**June 1, 2013**

Cash ( $2,000 \times \$60$ )	120,000	
Paid-in Capital—Stock Options ( $20\% \times \$220,000$ )	44,000	
Common Stock ( $2,000 \times \$1.00$ )		2,000
Paid-in Capital in Excess of Par		162,000

**Expiration.** If Chen's executives fail to exercise the remaining stock options before their expiration date, the company transfers the balance in the Paid-in Capital—Stock Options account to a more properly titled paid-in capital account, such as Paid-in Capital from Expired Stock Options. Chen records this transaction at the date of expiration as follows.

**January 1, 2020 (expiration date)**

Paid-in Capital—Stock Options	176,000	
Paid-in Capital—Expired Stock Options ( $80\% \times \$220,000$ )		176,000

**Adjustment.** An unexercised stock option does not nullify the need to record the costs of services received from executives and attributable to the stock option plan. Under GAAP, a company therefore does not adjust compensation expense upon expiration of the options.

However, if an employee forfeits a stock option because **the employee fails to satisfy a service requirement** (e.g., leaves employment), the company should adjust the estimate of compensation expense recorded in the current period (as a change in

estimate). A company records this change in estimate by debiting Paid-in Capital—Stock Options and crediting Compensation Expense for the amount of cumulative compensation expense recorded to date (thus decreasing compensation expense in the period of forfeiture.)

## Restricted Stock

As indicated earlier, many companies are also using restricted stock (or replacing options altogether) to compensate employees. **Restricted-stock plans** transfer shares of stock to employees, subject to an agreement that the shares cannot be sold, transferred, or pledged until vesting occurs. These shares are subject to forfeiture if the conditions for vesting are not met.<sup>9</sup>

Major advantages of restricted-stock plans are:

1. Restricted stock never becomes completely worthless. In contrast, if the stock price does not exceed the exercise price for a stock option, the options are worthless. The restricted stock, however, still has value.
2. Restricted stock generally results in less dilution to existing stockholders. Restricted-stock awards are usually one-half to one-third the size of stock options. For example, if a company issues stock options on 1,000 shares, an equivalent restricted-stock offering might be 333 to 500 shares. The reason for the difference is that at the end of the vesting period, the restricted stock will have value, whereas the stock options may not. As a result, fewer shares are involved in restricted-stock plans, and therefore less dilution results if the stock price rises.
3. Restricted stock better aligns the employee incentives with the companies' incentives. The holder of restricted stock is essentially a stockholder and should be more interested in the long-term objectives of the company. In contrast, the recipients of stock options often have a short-run focus which leads to taking risks to hype the stock price for short-term gain to the detriment of the long-term.

The accounting for restricted stock follows the same general principles as accounting for stock options at the date of grant. That is, the company determines the fair value of the restricted stock at the date of grant (usually the fair value of a share of stock) and then expenses that amount over the service period. Subsequent changes in the fair value of the stock are ignored for purposes of computing compensation expense.

### Restricted Stock Example

Assume that on January 1, 2010, Ogden Company issues 1,000 shares of restricted stock to its CEO, Christie DeGeorge. Ogden's stock has a fair value of \$20 per share on January 1, 2010. Additional information is as follows.

1. The service period related to the restricted stock is five years.
2. Vesting occurs if DeGeorge stays with the company for a five-year period.
3. The par value of the stock is \$1 per share.

Ogden makes the following entry on the grant date (January 1, 2010).

Unearned Compensation	20,000	
Common Stock (1,000 × \$1)		1,000
Paid-in Capital in Excess of Par (1,000 × \$19)		19,000

<sup>9</sup>Most companies base vesting on future service for a period of generally three to five years. Vesting may also be conditioned on some performance target such as revenue, net income, cash flows, or some combination of these three factors. The employee also collects dividends on the restricted stock, and these dividends generally must be repaid if forfeiture occurs.

The credits to Common Stock and Paid-in Capital in Excess of Par indicate that Ogden has issued shares of stock. The debit to Unearned Compensation (often referred to as Deferred Compensation Expense) identifies the total compensation expense the company will recognize over the five-year period. **Unearned Compensation represents the cost of services yet to be performed, which is not an asset.** Consequently, the company reports Unearned Compensation in stockholders' equity in the balance sheet, as a contra-equity account (similar to the reporting of treasury stock at cost).

At December 31, 2010, Ogden records compensation expense of \$4,000 (1,000 shares  $\times$  \$20  $\times$  20%) as follows:

Compensation Expense	4,000	
Unearned Compensation		4,000

Ogden records compensation expense of \$4,000 for each of the next four years (2011, 2012, 2013, and 2014).

What happens if DeGeorge leaves the company before the five years has elapsed? In this situation, DeGeorge forfeits her rights to the stock, and Ogden reverses the compensation expense already recorded.

For example, assume that DeGeorge leaves on February 3, 2012 (before any expense has been recorded during 2012). The entry to record this forfeiture is as follows:

Common Stock	1,000	
Paid-in Capital in Excess of Par	19,000	
Compensation Expense (\$4,000 $\times$ 2)		8,000
Unearned Compensation		12,000

In this situation, Ogden reverses the compensation expense of \$8,000 recorded through 2011. In addition, the company debits Common Stock and Paid-in Capital in Excess of Par, reflecting DeGeorge's forfeiture. It credits the balance of Unearned Compensation since none remains when DeGeorge leaves Ogden.

This accounting is similar to accounting for stock options when employees do not fulfill vesting requirements. Recall that once compensation expense is recorded for stock options, it is not reversed. The only exception is if the employee does not fulfill the vesting requirement, by leaving the company early.

In Ogden's restricted-stock plan, vesting never occurred because DeGeorge left the company before she met the service requirement. Because DeGeorge was never vested, she had to forfeit her shares. Therefore, the company must reverse compensation expense recorded to date.<sup>10</sup>

## Employee Stock-Purchase Plans

**Employee stock-purchase plans** (ESPPs) generally permit all employees to purchase stock at a discounted price for a short period of time. The company often uses such plans to secure equity capital or to induce widespread ownership of its common stock among employees. These plans are considered compensatory unless they satisfy **all three** conditions presented below.

1. Substantially all full-time employees may participate on an equitable basis.
2. The discount from market is small. That is, the discount does not exceed the per share amount of costs avoided by not having to raise cash in a public offering. If the amount of the discount is 5 percent or less, no compensation needs to be recorded.
3. The plan offers no substantive option feature.

For example, Masthead Company's stock-purchase plan allowed employees who met minimal employment qualifications to purchase its stock at a 5 percent reduction

<sup>10</sup>There are numerous variations on restricted-stock plans, including restricted-stock units (for which the shares are issued at the end of the vesting period) and restricted-stock plans with performance targets, such as EPS or stock price growth.

from market price for a short period of time. The reduction from market price is not considered compensatory. Why? Because the per share amount of the costs avoided by not having to raise the cash in a public offering equals 5 percent.

Companies that offer their employees a compensatory ESPP should record the compensation expense over the service life of the employees. It will be difficult for some companies to claim that their ESPPs are non-compensatory (and therefore not record compensation expense) unless they change their discount policy which in the past often was 15 percent. If they change their discount policy to 5 percent, participation in these plans will undoubtedly be lower. As a result, it is likely that some companies will end up dropping these plans.

## Disclosure of Compensation Plans

Companies must fully disclose the status of their compensation plans at the end of the periods presented. To meet these objectives, companies must make extensive disclosures. Specifically, a company with one or more share-based payment arrangements must disclose information that enables users of the financial statements to understand:

1. The nature and terms of such arrangements that existed during the period and the potential effects of those arrangements on shareholders.
2. The effect on the income statement of compensation cost arising from share-based payment arrangements.
3. The method of estimating the fair value of the goods or services received, or the fair value of the equity instruments granted (or offered to grant), during the period.
4. The cash flow effects resulting from share-based payment arrangements.

Illustration 16-5 (on page 810) presents the type of information disclosed for compensation plans.

## Debate over Stock-Option Accounting

The FASB faced considerable opposition when it proposed the fair value method for accounting for stock options. This is not surprising, given that the fair value method results in greater compensation costs relative to the intrinsic-value model. One study documented that, on average, companies in the Standard & Poor's 500 stock index overstated earnings in a recent year by 10 percent through the use of the intrinsic-value method. (See the "What Do the Numbers Mean" box on page 811.) Nevertheless, some companies, such as **Coca-Cola**, **General Electric**, **Wachovia**, **Bank One**, and **The Washington Post**, decided to use the fair value method. As the CFO of Coca-Cola stated, "There is no doubt that stock options are compensation. If they weren't, none of us would want them."

Yet many in corporate America resisted the fair value method. Many small high-technology companies have been especially vocal in their opposition, arguing that only through offering stock options can they attract top professional management. They contend that recognizing large amounts of compensation expense under these plans places them at a competitive disadvantage against larger companies that can withstand higher compensation charges. As one high-tech executive stated, "If your goal is to attack fat-cat executive compensation in multi-billion dollar firms, then please do so! But not at the expense of the people who are 'running lean and mean,' trying to build businesses and creating jobs in the process."

The stock-option saga is a classic example of the difficulty the FASB faces in issuing new accounting guidance. Many powerful interests aligned against the Board. Even some who initially appeared to support the Board's actions later reversed themselves. These efforts undermine the authority of the FASB at a time when it is essential that we restore faith in our financial reporting system.

### Objective 5

Discuss the controversy involving stock compensation plans.

### Underlying Concepts

The stock-option controversy involves economic-consequence issues. The FASB believes companies should follow the neutrality concept. Others disagree, noting that factors other than accounting theory should be considered.

**ILLUSTRATION 16-5**Stock-Option Plan  
Disclosure**Stock-Option Plan**

The Company has a share-based compensation plan. The compensation cost that has been charged against income for the plan was \$29.4 million, and \$28.7 million for 2010 and 2009, respectively.

The Company's 2010 Employee Share-Option Plan (the Plan), which is shareholder-approved, permits the grant of share options and shares to its employees for up to 8 million shares of common stock. The Company believes that such awards better align the interests of its employees with those of its shareholders. Option awards are generally granted with an exercise price equal to the market price of the Company's stock at the date of grant; those option awards generally vest based on 5 years of continuous service and have 10-year contractual terms. Share awards generally vest over five years. Certain option and share awards provide for accelerated vesting if there is a change in control (as defined by the Plan).

The fair value of each option award is estimated on the date of grant using an option valuation model based on the assumptions noted in the following table.

	2010	2009
Expected volatility	25%–40%	24%–38%
Weighted-average volatility	33%	30%
Expected dividends	1.5%	1.5%
Expected term (in years)	5.3–7.8	5.5–8.0
Risk-free rate	6.3%–11.2%	6.0%–10.0%

A summary of option activity under the Plan as of December 31, 2010, and changes during the year then ended are presented below.

Options	Shares (000)	Weighted- Average Exercise Price	Weighted- Average Remaining Contractual Term	Aggregate Intrinsic Value (\$000)
Outstanding at January 1, 2010	4,660	42		
Granted	950	60		
Exercised	(800)	36		
Forfeited or expired	(80)	59		
Outstanding at December 31, 2010	<u>4,730</u>	<u>47</u>	<u>6.5</u>	<u>85,140</u>
Exercisable at December 31, 2010	<u>3,159</u>	<u>41</u>	<u>4.0</u>	<u>75,816</u>

The weighted-average grant-date fair value of options granted during the years 2010 and 2009 was \$19.57 and \$17.46, respectively. The total intrinsic value of options exercised during the years ended December 31, 2010 and 2009, was \$25.2 million, and \$20.9 million, respectively.

As of December 31, 2010, there was \$25.9 million of total unrecognized compensation cost related to nonvested share-based compensation arrangements granted under the Plan. That cost is expected to be recognized over a weighted-average period of 4.9 years. The total fair value of shares vested during the years ended December 31, 2010 and 2009, was \$22.8 million and \$21 million, respectively.

**Restricted-Stock Awards**

The Company also has a restricted-stock plan. The Plan is intended to retain and motivate the Company's Chief Executive Officer over the term of the award and to bring his total compensation package closer to median levels for Chief Executive Officers of comparable companies. The fair value of grants during the year was \$1,889,000, or \$35.68 per share, equivalent to 92% of the market value of a share of the Company's Common Stock on the date the award was granted.

Restricted-stock activity for the year ended 2010 is as follows.

	Shares	Price
Outstanding at December 31, 2009	57,990	—
Granted	149,000	\$12.68
Vested	(19,330)	—
Forfeited	—	—
Outstanding at December 31, 2010	<u>187,660</u>	

Transparent financial reporting—including recognition of stock-based expense—should not be criticized because companies will report lower income. We may not like what the financial statements say, but we are always better off when the statements are representationally faithful to the underlying economic substance of transactions.

By leaving stock-based compensation expense out of income, reported income is biased. Biased reporting not only raises concerns about the credibility of companies'

reports, but also of financial reporting in general. Even good companies get tainted by the biased reporting of a few “bad apples.” If we write standards to achieve some social, economic, or public policy goal, financial reporting loses its credibility.

### A LITTLE HONESTY GOES A LONG WAY

Before the change to required expensing of stock options, companies could choose whether to expense stock-based compensation or simply disclose the estimated costs in the notes to the financial statements. You might think investors would punish companies that decided to expense stock options. After all, most of corporate America has been battling for years to avoid having to expense them, worried that accounting for those perks would destroy earnings. And indeed, **Merrill Lynch** estimated that if all S&P 500 companies were to expense options, reported profits would fall by as much as 10 percent.

Yet, as a small but growing band of big-name companies voluntarily made the switch to expensing, investors for the most part showered them with love. With a few exceptions, the stock prices of the “expensers,” from **Cinergy** to **The Washington Post**, outpaced the market after they announced the change.

*What do the numbers mean?*

Company	Estimated EPS		% change since announcement
	Without options	With options expensed	Company stock price
<b>Cinergy</b>	\$ 2.80	\$ 2.77	22.4%
<b>The Washington Post</b>	20.48	20.10	16.4
<b>Computer Associates</b>	-0.46	-0.62	11.1
<b>Fannie Mae</b>	6.15	6.02	6.7
<b>Bank One</b>	2.77	2.61	2.6
<b>General Motors</b>	5.84	5.45	2.6
<b>Procter &amp; Gamble</b>	3.57	3.35	-2.3
<b>Coca-Cola</b>	1.79	1.70	-6.2
<b>General Electric</b>	1.65	1.61	-6.2
<b>Amazon.com</b>	0.04	-0.99	-11.4

Data sources: Merrill Lynch; company reports.

Given the market’s general positive reaction to the transparent reporting of stock options, it is puzzling why some companies continued to fight implementation of the expensing rule.

## SECTION 2 • COMPUTING EARNINGS PER SHARE

Companies commonly report per share amounts for the effects of other items, such as a gain or loss on extraordinary items. The financial press also frequently reports earnings per share data. Further, stockholders and potential investors widely use this data in evaluating the profitability of a company. **Earnings per share** indicates the income earned by each share of common stock. Thus, **companies report earnings per share only for common stock**. For example, if Oscar Co. has net income of \$300,000 and a weighted average of 100,000 shares of common stock outstanding for the year, earnings per share is \$3 ( $\$300,000 \div 100,000$ ). Because of the importance of earnings per share information, most companies must report this information on the face of the income statement.<sup>11</sup> [6] The exception, due to cost-benefit considerations,

<sup>11</sup>For an article on the usefulness of reported EPS data and the application of the qualitative characteristics of accounting information to EPS data, see Lola W. Dudley, “A Critical Look at EPS,” *Journal of Accountancy* (August 1985), pp. 102–111.

is nonpublic companies.<sup>12</sup> Generally, companies report earnings per share information below net income in the income statement. Illustration 16-6 shows Oscar Co.'s income statement presentation of earnings per share.

**ILLUSTRATION 16-6**  
Income Statement  
Presentation of EPS

Net income	<u>\$300,000</u>
Earnings per share	<u>\$3.00</u>

When the income statement contains intermediate components of income, companies should disclose earnings per share for each component. The presentation in Illustration 16-7 is representative.

**ILLUSTRATION 16-7**  
Income Statement  
Presentation of EPS  
Components

Earnings per share:	
Income from continuing operations	\$4.00
Loss from discontinued operations, net of tax	<u>0.60</u>
Income before extraordinary item	3.40
Extraordinary gain, net of tax	<u>1.00</u>
Net income	<u>\$4.40</u>

These disclosures enable the user of the financial statements to recognize the effects on EPS of income from continuing operations, as distinguished from income or loss from irregular items.<sup>13</sup>

## EARNINGS PER SHARE—SIMPLE CAPITAL STRUCTURE

### Objective 6

Compute earnings per share in a simple capital structure.

A corporation's capital structure is **simple** if it consists only of common stock or includes no **potential common stock** that upon conversion or exercise could dilute earnings per common share. A capital structure is **complex** if it includes securities that could have a dilutive effect on earnings per common share.

The computation of earnings per share for a simple capital structure involves two items (other than net income)—(1) preferred stock dividends and (2) weighted-average number of shares outstanding.

### Preferred Stock Dividends

As we indicated earlier, earnings per share relates to earnings per common share. When a company has both common and preferred stock outstanding, **it subtracts the current-year preferred stock dividend from net income to arrive at income available to common stockholders**. Illustration 16-8 shows the formula for computing earnings per share.

**ILLUSTRATION 16-8**  
Formula for Computing  
Earnings per Share

$$\text{Earnings per Share} = \frac{\text{Net Income} - \text{Preferred Dividends}}{\text{Weighted-Average Number of Shares Outstanding}}$$

<sup>12</sup>A nonpublic enterprise is an enterprise (1) whose debt or equity securities are not traded in a public market on a foreign or domestic stock exchange or in the over-the-counter market (including securities quoted locally or regionally), or (2) that is not required to file financial statements with the SEC. An enterprise is not considered a nonpublic enterprise when its financial statements are issued in preparation for the sale of any class of securities in a public market.

<sup>13</sup>Companies should present, either on the face of the income statement or in the notes to the financial statements, per share amounts for discontinued operations and extraordinary items.

In reporting earnings per share information, a company must calculate income available to common stockholders. To do so, the company subtracts dividends on preferred stock from each of the intermediate components of income (income from continuing operations and income before extraordinary items) and finally from net income. If a company declares dividends on preferred stock and a net loss occurs, **the company adds the preferred dividend to the loss** for purposes of computing the loss per share.

If the preferred stock is cumulative and the company declares no dividend in the current year, it subtracts (or adds) **an amount equal to the dividend that it should have declared for the current year only** from net income (or to the loss). The company should have included dividends in arrears for previous years in the previous years' computations.

**INTERNATIONAL INSIGHT**

The FASB and the IASB are working together on a project to improve EPS accounting by simplifying the computational guidance and thereby increasing the comparability of EPS data on an international basis.

### Weighted-Average Number of Shares Outstanding

In all computations of earnings per share, the **weighted-average number of shares outstanding** during the period constitutes the basis for the per share amounts reported. Shares issued or purchased during the period affect the amount outstanding. Companies must **weight the shares by the fraction of the period they are outstanding**. The rationale for this approach is to find the equivalent number of whole shares outstanding for the year.

To illustrate, assume that Franks Inc. has changes in its common stock shares outstanding for the period as shown in Illustration 16-9.

Date	Share Changes	Shares Outstanding
January 1	Beginning balance	90,000
April 1	Issued 30,000 shares for cash	<u>30,000</u>
		120,000
July 1	Purchased 39,000 shares	<u>39,000</u>
		81,000
November 1	Issued 60,000 shares for cash	<u>60,000</u>
December 31	Ending balance	<u><u>141,000</u></u>

**ILLUSTRATION 16-9**  
Shares Outstanding, Ending Balance—Franks Inc.

Franks computes the weighted-average number of shares outstanding as follows.

Dates Outstanding	(A) Shares Outstanding	(B) Fraction of Year	(C) Weighted Shares (A × B)
Jan. 1–Apr. 1	90,000	3/12	22,500
Apr. 1–July 1	120,000	3/12	30,000
July 1–Nov. 1	81,000	4/12	27,000
Nov. 1–Dec. 31	141,000	2/12	<u>23,500</u>
	<b>Weighted-average number of shares outstanding</b>		<u><u>103,000</u></u>

**ILLUSTRATION 16-10**  
Weighted-Average Number of Shares Outstanding

As Illustration 16-10 shows, 90,000 shares were outstanding for three months, which translates to 22,500 whole shares for the entire year. Because Franks issued additional shares on April 1, it must weight these shares for the time outstanding. When the company purchased 39,000 shares on July 1, it reduced the shares outstanding. Therefore, from July 1 to November 1, only 81,000 shares were outstanding, which is equivalent to 27,000 shares. The issuance of 60,000 shares increases shares outstanding for the last

two months of the year. Franks then makes a new computation to determine the proper weighted shares outstanding.

### Stock Dividends and Stock Splits

When **stock dividends** or **stock splits** occur, companies need to restate the shares outstanding before the stock dividend or split, in order to compute the weighted-average number of shares. For example, assume that Vijay Corporation had 100,000 shares outstanding on January 1 and issued a 25 percent stock dividend on June 30. For purposes of computing a weighted-average for the current year, it assumes the additional 25,000 shares outstanding as a result of the stock dividend to be **outstanding since the beginning of the year**. Thus, the weighted-average for the year for Vijay is 125,000 shares.

Companies restate the issuance of a stock dividend or stock split, but not the issuance or repurchase of stock for cash. Why? Because stock splits and stock dividends do not increase or decrease the net assets of the company. The company merely issues additional shares of stock. Because of the added shares, it must restate the weighted-average shares. Restating allows valid comparisons of earnings per share between periods before and after the stock split or stock dividend. Conversely, the issuance or purchase of stock for cash **changes the amount of net assets**. As a result, the company either earns more or less in the future as a result of this change in net assets. Stated another way, **a stock dividend or split does not change the shareholders' total investment**—it only increases (unless it is a reverse stock split) the number of common shares representing this investment.

To illustrate how a stock dividend affects the computation of the weighted-average number of shares outstanding, assume that Sabrina Company has the following changes in its common stock shares during the year.

**ILLUSTRATION 16-11**  
Shares Outstanding,  
Ending Balance—Sabrina  
Company

Date	Share Changes	Shares Outstanding
January 1	Beginning balance	100,000
March 1	Issued 20,000 shares for cash	<u>20,000</u>
		120,000
June 1	60,000 additional shares (50% stock dividend)	<u>60,000</u>
		180,000
November 1	Issued 30,000 shares for cash	<u>30,000</u>
December 31	Ending balance	<u><u>210,000</u></u>

Sabrina computes the weighted-average number of shares outstanding as follows.

**ILLUSTRATION 16-12**  
Weighted-Average  
Number of Shares  
Outstanding—Stock Issue  
and Stock Dividend

Dates Outstanding	(A) Shares Outstanding	(B) Restatement	(C) Fraction of Year	(D) Weighted Shares (A × B × C)
Jan. 1–Mar. 1	100,000	1.50	2/12	25,000
Mar. 1–June 1	120,000	1.50	3/12	45,000
June 1–Nov. 1	180,000		5/12	75,000
Nov. 1–Dec. 31	210,000		2/12	<u>35,000</u>
				<u><u>180,000</u></u>

Sabrina must restate the shares outstanding prior to the stock dividend. The company adjusts the shares outstanding from January 1 to June 1 for the stock dividend,

so that it now states these shares on the same basis as shares issued subsequent to the stock dividend. Sabrina does not restate shares issued after the stock dividend because they are on the new basis. The stock dividend simply restates existing shares. **The same type of treatment applies to a stock split.**

If a stock dividend or stock split occurs after the end of the year, but before issuing the financial statements, a company must restate the weighted-average number of shares outstanding for the year (and any other years presented in comparative form). For example, assume that Hendricks Company computes its weighted-average number of shares as 100,000 for the year ended December 31, 2010. On January 15, 2011, before issuing the financial statements, the company splits its stock 3 for 1. In this case, the weighted-average number of shares used in computing earnings per share for 2010 is now 300,000 shares. If providing earnings per share information for 2009 as comparative information, Hendricks must also adjust it for the stock split.

### Comprehensive Example

Let's study a comprehensive illustration for a simple capital structure. Darin Corporation has income before extraordinary item of \$580,000 and an extraordinary gain, net of tax, of \$240,000. In addition, it has declared preferred dividends of \$1 per share on 100,000 shares of preferred stock outstanding. Darin also has the following changes in its common stock shares outstanding during 2010.

Dates	Share Changes	Shares Outstanding
January 1	Beginning balance	180,000
May 1	Purchased 30,000 treasury shares	<u>30,000</u>
		150,000
July 1	300,000 additional shares (3-for-1 stock split)	<u>300,000</u>
		450,000
December 31	Issued 50,000 shares for cash	<u>50,000</u>
<b>December 31</b>	<b>Ending balance</b>	<b><u>500,000</u></b>

**ILLUSTRATION 16-13**

Shares Outstanding,  
Ending Balance—  
Darin Corp.

To compute the earnings per share information, Darin determines the weighted-average number of shares outstanding as follows.

Dates Outstanding	(A) Shares Outstanding	(B) Restatement	(C) Fraction of Year	(D) Weighted Shares (A × B × C)
Jan. 1–May 1	180,000	3	4/12	180,000
May 1–July 1	150,000	3	2/12	75,000
July 1–Dec. 31	450,000		6/12	<u>225,000</u>
	<b>Weighted-average number of shares outstanding</b>			<b><u>480,000</u></b>

**ILLUSTRATION 16-14**

Weighted-Average  
Number of Shares  
Outstanding

In computing the weighted-average number of shares, the company ignores the shares sold on December 31, 2010, because they have not been outstanding during the year. Darin then divides the weighted-average number of shares into income before extraordinary item and net income to determine earnings per share. It subtracts its preferred dividends of \$100,000 from income before extraordinary item (\$580,000) to arrive at income before extraordinary item available to common stockholders of \$480,000 (\$580,000 – \$100,000).

Deducting the preferred dividends from the income before extraordinary item also reduces net income without affecting the amount of the extraordinary item. The final amount is referred to as **income available to common stockholders**, as shown in Illustration 16-15.

**ILLUSTRATION 16-15**

Computation of Income Available to Common Stockholders

	(A) Income Information	(B) Weighted Shares	(C) Earnings per Share (A ÷ B)
Income before extraordinary item available to common stockholders	\$480,000*	480,000	\$1.00
Extraordinary gain (net of tax)	<u>240,000</u>	<u>480,000</u>	<u>0.50</u>
<b>Income available to common stockholders</b>	<b><u>\$720,000</u></b>	<b><u>480,000</u></b>	<b><u>\$1.50</u></b>
*\$580,000 – \$100,000			

Darin must disclose the per share amount for the extraordinary item (net of tax) either on the face of the income statement or in the notes to the financial statements. Illustration 16-16 shows the income and per share information reported on the face of Darin's income statement.

**ILLUSTRATION 16-16**

Earnings per Share, with Extraordinary Item

Income before extraordinary item	\$580,000
Extraordinary gain, net of tax	<u>240,000</u>
Net income	<u>\$820,000</u>
<b>Earnings per share:</b>	
Income before extraordinary item	\$1.00
Extraordinary item, net of tax	<u>0.50</u>
Net income	<u>\$1.50</u>

## EARNINGS PER SHARE—COMPLEX CAPITAL STRUCTURE

**Objective 7**

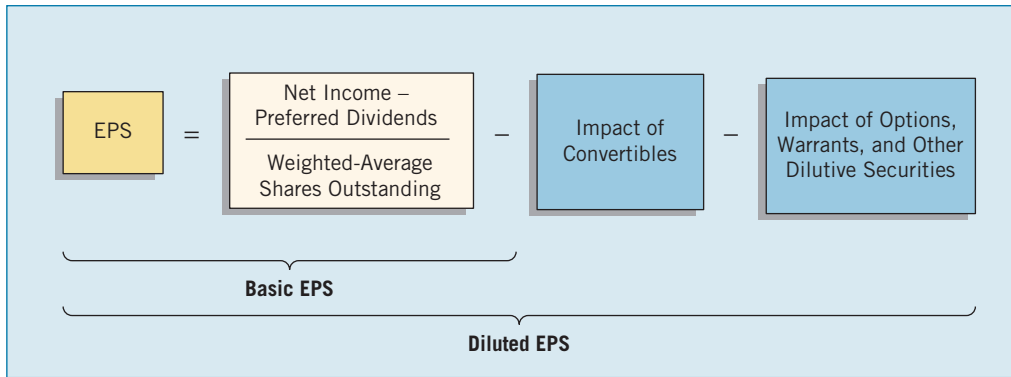

Compute earnings per share in a complex capital structure.

The EPS discussion to this point applies to **basic EPS** for a simple capital structure. One problem with a **basic EPS** computation is that it fails to recognize the potential impact of a corporation's dilutive securities. As discussed at the beginning of the chapter, **dilutive securities** are securities that can be converted to common stock.<sup>14</sup> Upon conversion or exercise by the holder, the dilutive securities reduce (dilute) earnings per share. This adverse effect on EPS can be significant and, more importantly, *unexpected* unless financial statements call attention to their potential dilutive effect.

As indicated earlier, a complex capital structure exists when a corporation has convertible securities, options, warrants, or other rights that upon conversion or exercise could dilute earnings per share. When a company has a complex capital structure, **it generally reports both basic and diluted earnings per share.**

Computing **diluted EPS** is similar to computing basic EPS. The difference is that diluted EPS includes the effect of all potential dilutive common shares that were outstanding during the period. The formula in Illustration 16-17 (on page 817) shows the relationship between basic EPS and diluted EPS.

<sup>14</sup>Issuance of these types of securities is typical in mergers and compensation plans.

**ILLUSTRATION 16-17**  
Relation between Basic and Diluted EPS

Some securities are antidilutive. **Antidilutive securities** are securities that upon conversion or exercise **increase** earnings per share (or reduce the loss per share). Companies with complex capital structures will not report diluted EPS if the securities in their capital structure are antidilutive. The purpose of presenting both basic and diluted EPS is to inform financial statement users of situations that will likely occur (basic EPS) and also to provide “worst case” dilutive situations (dilutive EPS). If the securities are antidilutive, the likelihood of conversion or exercise is considered remote. Thus, companies that have only antidilutive securities must report only the basic EPS number. We illustrated the computation of basic EPS in the prior section. In the following sections, we address the effects of convertible and other dilutive securities on EPS calculations.

**INTERNATIONAL INSIGHT**

The provisions in U.S. GAAP are substantially the same as those in *International Accounting Standard No. 33*, “Earnings per Share,” issued by the IASB.

## Diluted EPS—Convertible Securities

At conversion, companies exchange convertible securities for common stock. Companies measure the dilutive effects of potential conversion on EPS using the **if-converted method**. This method for a convertible bond assumes: (1) the conversion of the convertible securities at the beginning of the period (or at the time of issuance of the security, if issued during the period), and (2) the elimination of related interest, net of tax. Thus the additional shares assumed issued increase the **denominator**—the weighted-average number of shares outstanding. The amount of interest expense, net of tax associated with those potential common shares, increases the **numerator**—net income.

### Comprehensive Example—If-Converted Method

As an example, Mayfield Corporation has net income of \$210,000 for the year and a weighted-average number of common shares outstanding during the period of 100,000 shares. The basic earnings per share is therefore \$2.10 ( $\$210,000 \div 100,000$ ). The company has two convertible debenture bond issues outstanding. One is a 6 percent issue sold at 100 (total \$1,000,000) in a prior year and convertible into 20,000 common shares. The other is a 10 percent issue sold at 100 (total \$1,000,000) on April 1 of the current year and convertible into 32,000 common shares. The tax rate is 40 percent.

As Illustration 16-18 (on page 818) shows, to determine the numerator for diluted earnings per share, Mayfield adds back the interest on the if-converted securities, less the related tax effect. Because the if-converted method assumes conversion as of the beginning of the year, Mayfield assumes that it pays no interest on the convertibles during the year. The interest on the 6 percent convertibles is \$60,000 for the year ( $\$1,000,000 \times 6\%$ ). The increased tax expense is \$24,000 ( $\$60,000 \times 0.40$ ). The interest added back net of taxes is \$36,000 [ $\$60,000 - \$24,000$ , or simply  $\$60,000 \times (1 - 0.40)$ ].

**ILLUSTRATION 16-18**  
Computation of Adjusted  
Net Income

Net income for the year	\$210,000
Add: Adjustment for interest (net of tax)	
6% debentures ( $\$60,000 \times [1 - .40]$ )	36,000
10% debentures ( $\$100,000 \times 9/12 \times [1 - .40]$ )	<u>45,000</u>
<b>Adjusted net income</b>	<b><u><u>\$291,000</u></u></b>

Continuing with the information in Illustration 16-18, because Mayfield issues 10 percent convertibles subsequent to the beginning of the year, it weights the shares. In other words, it considers these shares to have been outstanding from April 1 to the end of the year. As a result, the interest adjustment to the numerator for these bonds reflects the interest for only nine months. Thus the interest added back on the 10 percent convertible is \$45,000 [ $\$1,000,000 \times 10\% \times 9/12 \text{ year} \times (1 - 0.4)$ ]. The final item in Illustration 16-18 shows the adjusted net income. This amount becomes the numerator for Mayfield's computation of diluted earnings per share.

Mayfield then calculates the weighted-average number of shares outstanding, as shown in Illustration 16-19. This number of shares becomes the denominator for Mayfield's computation of diluted earnings per share.

**ILLUSTRATION 16-19**  
Computation of Weighted-  
Average Number of  
Shares

Weighted-average number of shares outstanding	100,000
Add: Shares assumed to be issued:	
6% debentures (as of beginning of year)	20,000
10% debentures (as of date of issue, April 1; $9/12 \times 32,000$ )	<u>24,000</u>
<b>Weighted-average number of shares adjusted for dilutive securities</b>	<b><u><u>144,000</u></u></b>

In its income statement, Mayfield reports basic and diluted earnings per share.<sup>15</sup> Illustration 16-20 shows this dual presentation.

**ILLUSTRATION 16-20**  
Earnings per Share  
Disclosure

Net income for the year	<u>\$210,000</u>
<i>Earnings per Share (Note X)</i>	
Basic earnings per share ( $\$210,000 \div 100,000$ )	<u>\$2.10</u>
Diluted earnings per share ( $\$291,000 \div 144,000$ )	<u><u>\$2.02</u></u>

### Other Factors

The example above assumed that Mayfield sold its bonds at the face amount. If it instead sold the bonds at a premium or discount, the company must adjust the interest expense each period to account for this occurrence. Therefore, the interest expense reported on the income statement is the amount of interest expense, net of tax, added back to net income. (It is not the interest paid in cash during the period.)

In addition, the conversion rate on a dilutive security may change during the period in which the security is outstanding. For the diluted EPS computation in such a situation, the **company uses the most dilutive conversion rate available**. For example, assume that a company issued a convertible bond on January 1, 2009, with a conversion rate of 10 common shares for each bond starting January 1, 2011. Beginning January 1, 2014, the conversion rate is 12 common shares for each bond, and beginning

<sup>15</sup>Conversion of bonds is dilutive because EPS with conversion (\$2.02) is less than basic EPS (\$2.10). See Appendix 16B for a comprehensive evaluation of antidilution with multiple securities.

January 1, 2018, it is 15 common shares for each bond. In computing diluted EPS in 2009, the company uses the conversion rate of 15 shares to one bond.

A final issue relates to preferred stock. For example, assume that Mayfield's 6 percent convertible debentures were instead 6 percent convertible *preferred stock*. In that case, Mayfield considers the convertible preferred as potential common shares. Thus, it includes them in its diluted EPS calculations as shares outstanding. The company does not subtract preferred dividends from net income in computing the numerator. Why not? Because for purposes of computing EPS, it assumes conversion of the convertible preferreds to outstanding common stock. The company uses net income as the numerator—it computes **no tax effect** because preferred dividends generally are not tax-deductible.

## Diluted EPS—Options and Warrants

A company includes in diluted earnings per share stock options and warrants outstanding (whether or not presently exercisable), unless they are antidilutive. Companies use the **treasury-stock method** to include options and warrants and their equivalents in EPS computations.

The treasury-stock method assumes that the options or warrants are exercised at the beginning of the year (or date of issue if later), and that the company uses those proceeds to purchase common stock for the treasury. If the exercise price is lower than the market price of the stock, then the proceeds from exercise are insufficient to buy back all the shares. The company then adds the incremental shares remaining to the weighted-average number of shares outstanding for purposes of computing diluted earnings per share.

For example, if the exercise price of a warrant is \$5 and the fair market value of the stock is \$15, the treasury-stock method increases the shares outstanding. Exercise of the warrant results in one additional share outstanding, but the \$5 received for the one share issued is insufficient to purchase one share in the market at \$15. The company needs to exercise three warrants (and issue three additional shares) to produce enough money (\$15) to acquire one share in the market. Thus, a net increase of two shares outstanding results.

To see this computation using larger numbers, assume 1,500 options outstanding at an exercise price of \$30 for a common share and a common stock market price per share of \$50. Through application of the treasury-stock method, the company would have 600 incremental shares outstanding, computed as shown in Illustration 16-21.<sup>16</sup>

Proceeds from exercise of 1,500 options (1,500 × \$30)	\$45,000
Shares issued upon exercise of options	1,500
Treasury shares purchasable with proceeds (\$45,000 ÷ \$50)	900
<b>Incremental shares outstanding (potential common shares)</b>	<b>600</b>

**ILLUSTRATION 16-21**  
Computation of  
Incremental Shares

Thus, if the exercise price of the option or warrant is **lower** than the market price of the stock, dilution occurs. An exercise price of the option or warrant **higher** than the market price of the stock reduces common shares. In this case, the options or warrants are **antidilutive** because their assumed exercise leads to an increase in earnings per share.

<sup>16</sup>The incremental number of shares may be more simply computed:

$$\frac{\text{Market price} - \text{Option price}}{\text{Market price}} \times \text{Number of options} = \text{Number of shares}$$

$$\frac{\$50 - \$30}{\$50} \times 1,500 \text{ options} = 600 \text{ shares}$$

For both options and warrants, exercise is assumed only if the average market price of the stock exceeds the exercise price during the reported period.<sup>17</sup> As a practical matter, a simple average of the weekly or monthly prices is adequate, so long as the prices do not fluctuate significantly.

### Comprehensive Example—Treasury-Stock Method

To illustrate application of the treasury-stock method, assume that Kubitz Industries, Inc. has net income for the period of \$220,000. The average number of shares outstanding for the period was 100,000 shares. Hence, basic EPS—ignoring all dilutive securities—is \$2.20. The average number of shares related to options outstanding (although not exercisable at this time), at an option price of \$20 per share, is 5,000 shares. The average market price of the common stock during the year was \$28. Illustration 16-22 shows the computation of EPS using the treasury-stock method.

#### ILLUSTRATION 16-22

Computation of Earnings per Share—Treasury-Stock Method

	Basic Earnings per Share	Diluted Earnings per Share
Average number of shares related to options outstanding:		5,000
Option price per share		× \$20
Proceeds upon exercise of options		\$100,000
Average market price of common stock		\$28
Treasury shares that could be repurchased with proceeds (\$100,000 ÷ \$28)		<u>3,571</u>
Excess of shares under option over the treasury shares that could be repurchased (5,000 – 3,571)—potential common incremental shares		1,429
Average number of common shares outstanding	<u>100,000</u>	<u>100,000</u>
Total average number of common shares outstanding and potential common shares	<u>100,000 (A)</u>	<u>101,429 (C)</u>
Net income for the year	<u>\$220,000 (B)</u>	<u>\$220,000 (D)</u>
Earnings per share	<u>\$2.20 (B ÷ A)</u>	<u>\$2.17 (D ÷ C)</u>

### Contingent Issue Agreement

In business combinations, the acquirer may promise to issue additional shares—referred to as **contingent shares**—under certain conditions. Sometimes the company issues these contingent shares as a result of the mere **passage of time** or upon the attainment of a **certain earnings or market price level**. If this passage of time occurs during the current year, or if the company meets the earnings or market price **by the end of the year**, the company considers the contingent shares as outstanding for the computation of diluted earnings per share.<sup>18</sup>

For example, assume that Watts Corporation purchased Cardoza Company and agreed to give Cardoza's stockholders 20,000 additional shares in 2013 if Cardoza's net income in 2012 is \$90,000. In 2011 Cardoza's net income is \$100,000. Because Cardoza has already attained the 2012 stipulated earnings of \$90,000, in computing diluted earnings per share for 2011, Watts would include the 20,000 contingent shares in the shares-outstanding computation.

<sup>17</sup>Options and warrants have essentially the same assumptions and computational problems, although the warrants may allow or require the tendering of some other security, such as debt, in lieu of cash upon exercise. In such situations, the accounting becomes quite complex and is beyond the scope of this book.

<sup>18</sup>In addition to contingent issuances of stock, other situations that might lead to dilution are the issuance of participating securities and two-class common shares. The reporting of these types of securities in EPS computations is beyond the scope of this book.

## Antidilution Revisited

In computing diluted EPS, a company must consider the aggregate of all dilutive securities. But first it must determine which potentially dilutive securities are in fact individually dilutive and which are antidilutive. **A company should exclude any security that is antidilutive**, nor can the company use such a security to offset dilutive securities.

Recall that including antidilutive securities in earnings per share computations increases earnings per share (or reduces net loss per share). With options or warrants, whenever the exercise price exceeds the market price, the security is antidilutive. Convertible debt is antidilutive if the addition to income of the interest (net of tax) causes a greater percentage increase in income (numerator) than conversion of the bonds causes a percentage increase in common and potentially dilutive shares (denominator). In other words, convertible debt is antidilutive if conversion of the security causes common stock earnings to increase by a greater amount per additional common share than earnings per share was before the conversion.

To illustrate, assume that Martin Corporation has a 6 percent, \$1,000,000 debt issue that is convertible into 10,000 common shares. Net income for the year is \$210,000, the weighted-average number of common shares outstanding is 100,000 shares, and the tax rate is 40 percent. In this case, assumed conversion of the debt into common stock at the beginning of the year requires the following adjustments of net income and the weighted-average number of shares outstanding.

Net income for the year	\$210,000	Average number of shares outstanding	100,000
Add: Adjustment for interest (net of tax) on 6% debentures		Add: Shares issued upon assumed conversion of debt	10,000
\$60,000 × (1 - .40)	36,000	Average number of common and potential common shares	110,000
Adjusted net income	<u>\$246,000</u>		
		Basic EPS = \$210,000 ÷ 100,000 = \$2.10	
		Diluted EPS = \$246,000 ÷ 110,000 = \$2.24 = <b>Antidilutive</b>	

**ILLUSTRATION 16-23**  
Test for Antidilution

As a shortcut, Martin can also identify the convertible debt as antidilutive by comparing the EPS resulting from conversion, \$3.60 (\$36,000 additional earnings × 10,000 additional shares), with EPS before inclusion of the convertible debt, \$2.10.

Companies should ignore antidilutive securities in all calculations and in computing diluted earnings per share. This approach is reasonable. The profession's intent was to inform the investor of the possible dilution that might occur in reported earnings per share and not to be concerned with securities that, if converted or exercised, would result in an increase in earnings per share. Appendix 16B to this chapter provides an extended example of how companies consider antidilution in a complex situation with multiple securities.

## EPS Presentation and Disclosure

A company with a complex capital structure would present its EPS information as follows.

Earnings per common share	
Basic earnings per share	<u>\$3.30</u>
Diluted earnings per share	<u>\$2.70</u>

**ILLUSTRATION 16-24**  
EPS Presentation—  
Complex Capital Structure

When the earnings of a period include irregular items, a company should show per share amounts (where applicable) for the following: income from continuing operations, income before extraordinary items, and net income. Companies that report a discontinued operation or an extraordinary item should present per share amounts for

those line items either on the face of the income statement or in the notes to the financial statements. Illustration 16-25 shows a presentation reporting extraordinary items.

**ILLUSTRATION 16-25**  
EPS Presentation, with  
Extraordinary Item

<b>Basic earnings per share</b>		
Income before extraordinary item		\$3.80
Extraordinary item		<u>0.80</u>
Net income		<u>\$3.00</u>
<b>Diluted earnings per share</b>		
Income before extraordinary item		\$3.35
Extraordinary item		<u>0.65</u>
Net income		<u>\$2.70</u>

A company must show earnings per share amounts for all periods presented. Also, the company should restate all prior period earnings per share amounts presented for stock dividends and stock splits. If it reports diluted EPS data for at least one period, the company should report such data for all periods presented, even if it is the same as basic EPS. When a company restates results of operations of a prior period as a result of an error or a change in accounting principle, it should also restate the earnings per share data shown for the prior periods. Complex capital structures and dual presentation of earnings per share require the following additional disclosures in note form.

1. Description of pertinent rights and privileges of the various securities outstanding.
2. A reconciliation of the numerators and denominators of the basic and diluted per share computations, including individual income and share amount effects of all securities that affect EPS.
3. The effect given preferred dividends in determining income available to common stockholders in computing basic EPS.
4. Securities that could potentially dilute basic EPS in the future that were excluded in the computation because they would be antidilutive.
5. Effect of conversions subsequent to year-end, but before issuing statements.

Illustration 16-26 presents the reconciliation and the related disclosure to meet the requirements of this standard.<sup>19</sup> [7]

**ILLUSTRATION 16-26**  
Reconciliation for Basic  
and Diluted EPS

	For the Year Ended 2010		
	Income (Numerator)	Shares (Denominator)	Per Share Amount
Income before extraordinary item	\$7,500,000		
Less: Preferred stock dividends	<u>(45,000)</u>		
<b>Basic EPS</b>			
Income available to common stockholders	7,455,000	3,991,666	<u>\$1.87</u>
Warrants		30,768	
Convertible preferred stock	45,000	308,333	
4% convertible bonds (net of tax)	<u>60,000</u>	<u>50,000</u>	
<b>Diluted EPS</b>			
Income available to common stockholders + assumed conversions	<u>\$7,560,000</u>	<u>4,380,767</u>	<u>\$1.73</u>

Stock options to purchase 1,000,000 shares of common stock at \$85 per share were outstanding during the second half of 2010 but were not included in the computation of diluted EPS because the options' exercise price was greater than the average market price of the common shares. The options were still outstanding at the end of year 2010 and expire on June 30, 2020.

<sup>19</sup>Note that GAAP has specific disclosure requirements regarding stock-based compensation plans and earning per share disclosures as well.

## PRO FORMA EPS CONFUSION

Many companies are reporting pro forma EPS numbers along with U.S. GAAP-based EPS numbers in the financial information provided to investors. Pro forma earnings generally exceed GAAP earnings because the pro forma numbers exclude such items as restructuring charges, impairments of assets, R&D expenditures, and stock compensation expense. Here are some examples.

*What do the numbers mean?*

Company	U.S. GAAP EPS	Pro Forma EPS
<b>Adapttec</b>	\$ (0.62)	\$ 0.05
<b>Corning</b>	(0.24)	0.09
<b>General Motors</b>	(0.41)	0.85
<b>Honeywell International</b>	(0.38)	0.44
<b>International Paper</b>	(0.57)	0.14
<b>Qualcomm</b>	(0.06)	0.20
<b>Broadcom</b>	(6.36)	(0.13)
<b>Lucent Technologies</b>	(2.16)	(0.27)

Source: Company press releases.

The SEC has expressed concern that pro forma earnings may be misleading. For example, the SEC cited **Trump Hotels & Casino Resorts (DJT)** for abuses related to a recent third-quarter pro forma EPS release. It noted that the firm misrepresented its operating results by excluding a material, one-time \$81.4 million charge in its pro forma EPS statement and including an undisclosed nonrecurring gain of \$17.2 million. The gain enabled DJT to post a profit in the quarter. The SEC emphasized that DJT's pro forma EPS statement deviated from conservative U.S. GAAP reporting. Therefore, it was "fraudulent" because it created a "false and misleading impression" that DJT had actually (1) recorded a profit in the third quarter and (2) exceeded consensus earnings expectations by enhancing its operating fundamentals.

As discussed in Chapter 4, SEC Regulation G now requires companies to provide a clear reconciliation between pro forma and GAAP information. And this applies to EPS measures as well. This reconciliation will be especially important, given the expected spike in pro forma reporting by companies adding back employee stock-option expense.

## Summary of EPS Computation

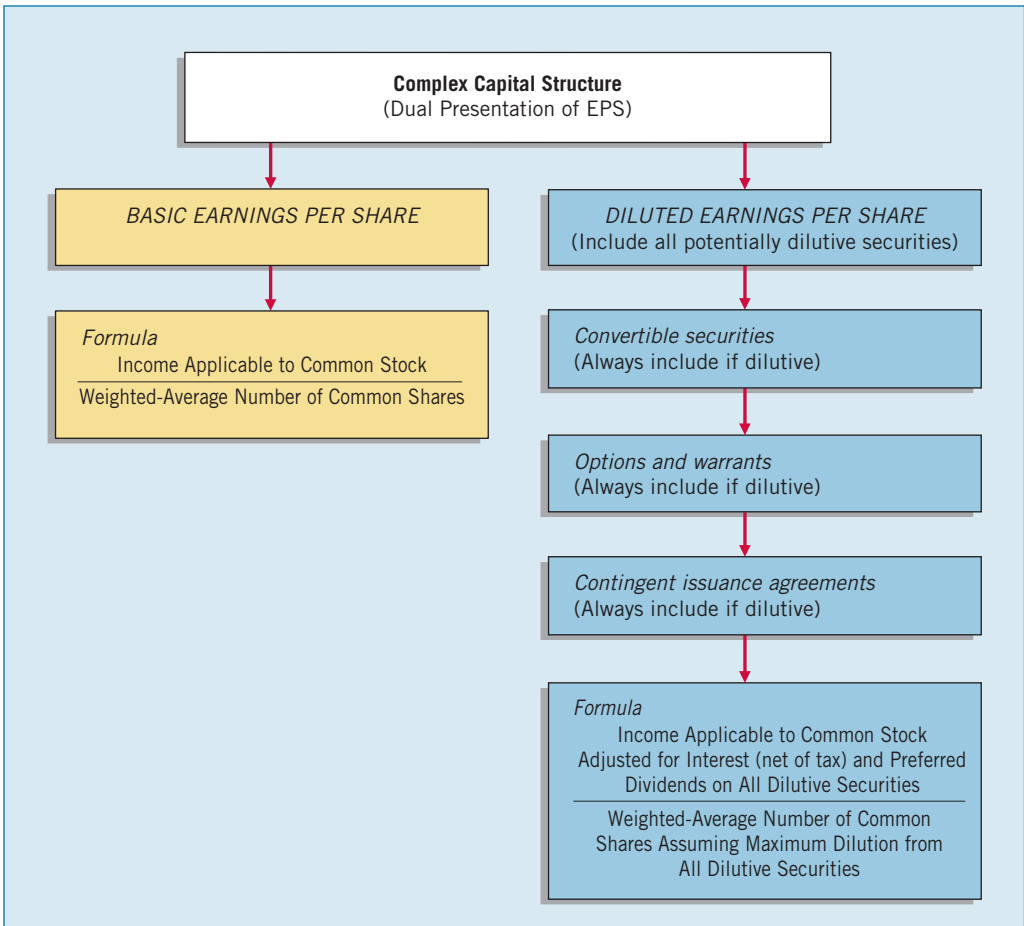

As you can see, computation of earnings per share is a complex issue. It is a controversial area because many securities, although technically not common stock, have many of its basic characteristics. Indeed, some companies have issued these other securities rather than common stock in order to avoid an adverse dilutive effect on earnings per share. Illustrations 16-27 and 16-28 (on page 824) display the elementary points of calculating earnings per share in a simple capital structure and in a complex capital structure.

For discussion of how international convergence efforts relate to dilutive securities and earnings per share.

# CONVERGENCE CORNER

## DILUTIVE SECURITIES AND EARNINGS PER SHARE

The primary iGAAP reporting standards related to financial instruments, including dilutive securities, is *IAS 39*, “Financial Instruments: Recognition and Measurement.” The accounting for various forms of stock-based compensation under iGAAP is found in *IFRS 2*, “Share-Based Payment.” This standard was recently amended, resulting in significant convergence between iGAAP and U.S. GAAP in this area. The iGAAP standard addressing accounting and reporting for earnings per share computations is *IAS 33*, “Earnings per Share.”

### RELEVANT FACTS

- A significant difference between iGAAP and U.S. GAAP is the accounting for securities with characteristics of debt and equity, such as convertible debt. Under U.S. GAAP, all of the proceeds of convertible debt are recorded as long-term debt. Under iGAAP, convertible bonds are “bifurcated”—separated into the equity component (the value of the conversion option) of the bond issue and the debt component.
- Both iGAAP and U.S. GAAP follow the same model for recognizing stock-based compensation: The fair value of shares and options awarded to employees is recognized over the period to which the employees’ services relate.
- Although the calculation of basic and diluted earnings per share is similar between iGAAP and U.S. GAAP, the Boards are working to resolve the few minor differences in EPS reporting. One proposal in the FASB project concerns contracts that can be settled in either cash or shares. iGAAP requires that share settlement must be used, while U.S. GAAP gives companies a choice. The FASB project proposes adopting the iGAAP approach, thus converging U.S. GAAP and iGAAP in this regard.
- Other EPS differences relate to (1) the treasury-stock method and how the proceeds from extinguishment of a liability should be accounted for, and (2) how to compute the weighted-average of contingently issuable shares.

### ABOUT THE NUMBERS

As indicated, a significant difference in iGAAP and U.S. GAAP is the accounting for convertible debt. To illustrate, assume **Amazon.com** issued, at par, \$10 million of 10-year convertible bonds with a coupon rate of 4.75%. Amazon makes the following entry to record the issuance under U.S. GAAP.

Cash	10,000,000	
Bonds Payable		10,000,000

Under iGAAP, Amazon must “bifurcate” (split out) the equity component—the value of the conversion option—of the bond issue. The equity component can be estimated using option-pricing models. Assume that Amazon estimates the value of the equity option embedded in the bond to be \$1,575,000. Under iGAAP, the convertible bond issue is recorded as follows.

Cash	10,000,000	
Discount on Bonds Payable	1,575,000	
Bonds Payable		10,000,000
Paid-in Capital—Convertible Bonds		1,575,000

Thus, iGAAP records separately the bond issue’s debt and equity components. Many believe this provides a more faithful representation of the impact of the bond issue. However, there are concerns about reliability of the models used to estimate the equity component of the bond.

### ON THE HORIZON

The FASB has been working on a standard that will likely converge to iGAAP in the accounting for convertible debt. Similar to the FASB, the IASB is examining the classification of hybrid securities; the IASB is seeking comment on a discussion document similar to the FASB Preliminary Views document, “*Financial Instruments with Characteristics of Equity*.” It is hoped that the Boards will develop a converged standard in this area. While U.S. GAAP and iGAAP are similar as to the presentation of EPS, the Boards have been working together to resolve remaining differences related to earnings per share computations.

## SUMMARY OF LEARNING OBJECTIVES

**LO 1 Describe the accounting for the issuance, conversion, and retirement of convertible securities.** The method for recording convertible bonds at the date of issuance follows that used to record straight debt issues. Companies amortize any discount or premium that results from the issuance of convertible bonds, assuming the bonds will be held to maturity. If companies convert bonds into other securities, the principal accounting problem is to determine the amount at which to record the securities exchanged for the bonds. The book value method is considered GAAP. The retirement of convertible debt is considered a debt retirement, and the difference between the carrying amount of the retired convertible debt and the cash paid should result in a gain or loss.

**LO 2 Explain the accounting for convertible preferred stock.** When convertible preferred stock is converted, a company uses the book value method: It debits Preferred Stock, along with any related Paid-in Capital in Excess of Par, and credits Common Stock and Paid-in Capital in Excess of Par (if an excess exists).

**LO 3 Contrast the accounting for stock warrants and for stock warrants issued with other securities.** *Stock warrants:* Companies should allocate the proceeds from the sale of debt with detachable warrants between the two securities. Warrants that are detachable can be traded separately from the debt, and therefore companies can determine their market value. Two methods of allocation are available: the proportional method and the incremental method. Nondetachable warrants do not require an allocation of the proceeds between the bonds and the warrants; companies record the entire proceeds as debt. *Stock rights:* No entry is required when a company issues rights to existing stockholders. The company needs only to make a memorandum entry to indicate the number of rights issued to existing stockholders and to ensure that the company has additional unissued stock registered for issuance in case the stockholders exercise the rights.

**LO 4 Describe the accounting for stock compensation plans under generally accepted accounting principles.** Companies must use the fair value approach to account for stock-based compensation. Under this approach, a company computes total compensation expense based on the fair value of the options that it expects to vest on the grant date. Companies recognize compensation expense in the periods in which the employee performs the services. Restricted-stock plans follow the same general accounting principles as those for stock options. Companies estimate total compensation cost at the grant date based on the fair value of the restricted stock; they expense that cost over the service period. If vesting does not occur, companies reverse the compensation expense.

**LO 5 Discuss the controversy involving stock compensation plans.** When first proposed, there was considerable opposition to the recognition provisions contained in the fair value approach. The reason: that approach could result in substantial, previously unrecognized compensation expense. Corporate America, particularly the high-technology sector, vocally opposed the proposed standard. They believed that the standard would place them at a competitive disadvantage with larger companies that can withstand higher compensation charges. Offsetting such opposition is the need for greater transparency in financial reporting, on which our capital markets depend.

**LO 6 Compute earnings per share in a simple capital structure.** When a company has both common and preferred stock outstanding, it subtracts the current-year preferred stock dividend from net income to arrive at income available to common stockholders. The formula for computing earnings per share is net income less preferred stock dividends, divided by the weighted-average number of shares outstanding.

**LO 7 Compute earnings per share in a complex capital structure.** A complex capital structure requires a dual presentation of earnings per share, each with equal prominence on

the face of the income statement. These two presentations are referred to as basic earnings per share and diluted earnings per share. Basic earnings per share relies on the number of weighted-average common shares outstanding (i.e., equivalent to EPS for a simple capital structure). Diluted earnings per share indicates the dilution of earnings per share that will occur if all potential issuances of common stock that would reduce earnings per share takes place. Companies with complex capital structures should exclude antidilutive securities when computing earnings per share.

## APPENDIX 16A

## ACCOUNTING FOR STOCK-APPRECIATION RIGHTS

A major disadvantage of many stock-option plans is that an executive must pay income tax on the difference between the market price of the stock and the option price at the **date of exercise**. This feature of stock-option plans (those referred to as **nonqualified**) can be a financial hardship for an executive who wishes to keep the stock (rather than sell it immediately) because he or she would have to pay not only income tax but the option price as well. In another type of plan (an **incentive plan**), the executive pays no taxes at exercise but may need to borrow to finance the exercise price, which leads to related interest cost.

### Objective 8

Explain the accounting for stock-appreciation rights plans.

One solution to this problem was the creation of **stock-appreciation rights (SARs)**. In this type of plan, the company gives an executive the right to receive compensation equal to the share appreciation. **Share appreciation** is the excess of the market price of the stock at the date of exercise over a pre-established price. The company may pay the share appreciation in cash, shares, or a combination of both.

The major advantage of SARs is that the executive often does not have to make a cash outlay at the date of exercise, but receives a payment for the share appreciation. Unlike shares acquired under a stock-option plan, the company does not issue the shares that constitute the basis for computing the appreciation in a SARs plan. Rather, the company simply awards the executive cash or stock having a market value equivalent to the appreciation. The accounting for stock-appreciation rights depends on whether the company classifies the rights as equity or as a liability.

### SARS—SHARE-BASED EQUITY AWARDS

Companies classify SARs as **equity awards** if at the date of exercise, the holder receives shares of stock from the company upon exercise. In essence, SARs are essentially equivalent to a stock option. The major difference relates to the form of payment. With the stock option, the holder pays the exercise price and then receives the stock. In an equity SAR, the holder receives shares in an amount equal to the **share-price appreciation** (the difference between the market price and the pre-established price). The accounting for SARs when they are equity awards follows the accounting used for stock options. At the date of grant, the company determines a fair value for the SAR and then allocates this amount to compensation expense over the service period of the employees.

### SARS—SHARE-BASED LIABILITY AWARDS

Companies classify SARs as liability awards if at the date of exercise, the holder receives a cash payment. In this case the holder is not receiving additional shares of stock but a cash payment equal to the amount of share-price appreciation. The company's compensation expense therefore changes as the value of the liability changes.

A company uses the following approach to record share-based liability awards:

1. Measure the fair value of the award at the grant date and accrue compensation over the service period.

2. Remeasure the fair value each reporting period, until the award is settled; adjust the compensation cost each period for changes in fair value pro-rated for the portion of the service period completed.
3. Once the service period is completed, determine compensation expense each subsequent period by reporting the full change in market price as an adjustment to compensation expense.

For liability awards, the company estimates the fair value of the SARs, using an option-pricing model. The company then allocates this total estimated compensation cost over the service period, recording expense (or a decrease in expense if fair value declines) in each period. At the end of each period, total compensation expense reported to date should equal the percentage of the total service period that has elapsed, multiplied by the total estimated compensation cost.

For example, assume that the service period is 40 percent complete, and total estimated compensation is \$100,000. The company reports cumulative compensation expense to date of \$40,000 ( $\$100,000 \times .40$ ).

The method of allocating compensation expense is called the **percentage approach**. In this method, in the first year of, say, a four-year plan, the company charges one-fourth of the estimated cost to date. In the second year, it charges off two-fourths, or 50 percent, of the estimated cost to date, less the amount already recognized in the first year. In the third year, it charges off three-fourths of the estimated cost to date, less the amount recognized previously. In the fourth year it charges off the remaining compensation expense.

A special problem arises when the exercise date is later than the service period. In the previous example, if the stock-appreciation rights were not exercised at the end of four years, in the fifth year the company would have to account for the difference in the market price and the pre-established price. In this case, the company adjusts compensation expense whenever a change in the market price of the stock **occurs in subsequent reporting periods, until the rights expire or are exercised, whichever comes first**.

Increases or decreases in the fair value of the SAR between the date of grant and the exercise date, therefore, result in a change in the measure of compensation. Some periods will have credits to compensation expense if the fair value decreases from one period to the next. The credit to compensation expense, however, cannot exceed previously recognized compensation expense. In other words, **cumulative compensation expense cannot be negative**.

## STOCK-APPRECIATION RIGHTS EXAMPLE

Assume that American Hotels, Inc. establishes a stock-appreciation rights plan on January 1, 2010. The plan entitles executives to receive cash at the date of exercise for the difference between the market price of the stock and the pre-established price of \$10 on 10,000 SARs. The fair value of the SARs on December 31, 2010, is \$3, and the service period runs for two years (2010–2011). Illustration 16A-1

Date	Fair Value	Cumulative Compensation Recognizable <sup>a</sup>	Percentage Accrued <sup>b</sup>	Cumulative Compensation Accrued to Date	Expense 2010	Expense 2011	Expense 2012
12/31/10	\$3	\$30,000	50%	\$ 15,000	\$15,000		
				55,000		\$55,000	
12/31/11	7	70,000	100%	70,000			
				(20,000)			
12/31/12	5	50,000	100%	\$ 50,000			\$(20,000)

<sup>a</sup>Cumulative compensation for unexercised SARs to be allocated to periods of service.

<sup>b</sup>The percentage accrued is based upon a two-year service period (2010–2011)

indicates the amount of compensation expense to be recorded each period, assuming that the executives hold the SARs for three years, at which time they exercise the rights.

In 2010 American Hotels records compensation expense of \$15,000 because 50 percent of the \$30,000 total compensation cost estimated at December 31, 2010, is allocable to 2010. In 2011 the fair value increased to \$7 per right (\$70,000 total). The company recorded additional compensation expense of \$55,000 (\$70,000 minus \$15,000).

The executives held the SARs through 2012, during which time the fair value declined to \$5 (and the obligation to the executives equals \$50,000). American Hotels recognizes the decrease by recording a \$20,000 credit to compensation expense and a debit to Liability under Stock-Appreciation Plan. Note that after the service period ends, since the rights are still outstanding, the company adjusts the rights to market at December 31, 2012. Any such credit to compensation expense cannot exceed previous charges to expense attributable to that plan.

As the company records the compensation expense each period, the corresponding credit is to a liability account, because the company will pay the stock appreciation in cash. American Hotels records compensation expense in the first year as follows.

Compensation Expense	15,000	
Liability under Stock-Appreciation Plan		15,000

The company would credit the liability account for \$55,000 again in 2011. In 2012, when it records negative compensation expense, American would debit the account for \$20,000. The entry to record the negative compensation expense is as follows.

Liability under Stock-Appreciation Plan	20,000	
Compensation Expense		20,000

At December 31, 2012, the executives receive \$50,000 (which equals the market price of the shares less the pre-established price). American would remove the liability with the following entry.

Liability under Stock-Appreciation Plan	50,000	
Cash		50,000

Compensation expense can increase or decrease substantially from one period to the next. The reason is that compensation expense is remeasured each year, which can lead to large swings in compensation expense.

## SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 16A

**8 Explain the accounting for stock-appreciation rights plans.** The accounting for stock-appreciation rights depends on whether the rights are classified as equity- or liability-based. If equity-based, the accounting is similar to that used for stock options. If liability-based, companies remeasure compensation expense each period and allocate it over the service period using the percentage approach.

### KEY TERMS

percentage approach, 828  
share appreciation, 827  
stock-appreciation rights (SARs), 827

## APPENDIX 16B

## COMPREHENSIVE EARNINGS PER SHARE EXAMPLE

**Objective 9**

Compute earnings per share in a complex situation.

This appendix illustrates the method of computing dilution when many securities are involved. We present the following section of the balance sheet of Webster Corporation for analysis. Assumptions related to the capital structure follow the balance sheet.

**ILLUSTRATION 16B-1**

Balance Sheet for Comprehensive Illustration

<b>WEBSTER CORPORATION</b>	
<b>BALANCE SHEET (PARTIAL)</b>	
<b>AT DECEMBER 31, 2010</b>	
Long-term debt	
Notes payable, 14%	\$ 1,000,000
8% convertible bonds payable	2,500,000
10% convertible bonds payable	<u>2,500,000</u>
Total long-term debt	<u>\$ 6,000,000</u>
Stockholders' equity	
10% cumulative, convertible preferred stock, par value \$100; 100,000 shares authorized, 25,000 shares issued and outstanding	\$ 2,500,000
Common stock, par value \$1, 5,000,000 shares authorized, 500,000 shares issued and outstanding	500,000
Additional paid-in capital	2,000,000
Retained earnings	<u>9,000,000</u>
Total stockholders' equity	<u>\$14,000,000</u>

<b>Notes and Assumptions</b>	
<b>December 31, 2010</b>	
1.	Options were granted in July 2008 to purchase 50,000 shares of common stock at \$20 per share. The average market price of Webster's common stock during 2010 was \$30 per share. All options are still outstanding at the end of 2010.
2.	Both the 8 percent and 10 percent convertible bonds were issued in 2009 at face value. Each convertible bond is convertible into 40 shares of common stock. (Each bond has a face value of \$1,000.)
3.	The 10 percent cumulative, convertible preferred stock was issued at the beginning of 2010 at par. Each share of preferred is convertible into four shares of common stock.
4.	The average income tax rate is 40 percent.
5.	The 500,000 shares of common stock were outstanding during the entire year.
6.	Preferred dividends were not declared in 2010.
7.	Net income was \$1,750,000 in 2010.
8.	No bonds or preferred stock were converted during 2010.

The computation of basic earnings per share for 2010 starts with the amount based upon the weighted-average of common shares outstanding, as shown in Illustration 16B-2.

**ILLUSTRATION 16B-2**

Computation of Earnings per Share—Simple Capital Structure

Net income	\$1,750,000
Less: 10% cumulative, convertible preferred stock dividend requirements	<u>250,000</u>
Income applicable to common stockholders	<u>\$1,500,000</u>
Weighted-average number of common shares outstanding	<u>500,000</u>
<b>Earnings per common share</b>	<u><b>\$3.00</b></u>

Note the following points concerning this calculation.

1. When preferred stock is cumulative, the company subtracts the preferred dividend to arrive at income applicable to common stock, whether the dividend is declared or not.
2. The company must compute earnings per share of \$3 as a starting point, because it is the per share amount that is subject to reduction due to the existence of convertible securities and options.

## DILUTED EARNINGS PER SHARE

The steps for computing diluted earnings per share are:

1. Determine, for each dilutive security, the per share effect assuming exercise/conversion.
2. Rank the results from step 1 from smallest to largest earnings effect per share. That is, rank the results from most dilutive to least dilutive.
3. Beginning with the earnings per share based upon the weighted-average of common shares outstanding (\$3), recalculate earnings per share by adding the smallest per share effects from step 2. If the results from this recalculation are less than \$3, proceed to the next smallest per share effect and recalculate earnings per share. Continue this process so long as each recalculated earnings per share is smaller than the previous amount. The process will end either because there are no more securities to test or a particular security maintains or increases earnings per share (is antidilutive).

We'll now apply the three steps to Webster Corporation. (Note that net income and income available to common stockholders are not the same if preferred dividends are declared or cumulative.) Webster Corporation has four securities that could reduce EPS: options, 8 percent convertible bonds, 10 percent convertible bonds, and the convertible preferred stock.

The first step in the computation of diluted earnings per share is to determine a per share effect for each potentially dilutive security. Illustrations 16B-3 through 16B-6 illustrate these computations.

Number of shares under option	50,000
Option price per share	× \$20
Proceeds upon assumed exercise of options	<u>\$1,000,000</u>
Average 2010 market price of common	<u>\$30</u>
Treasury shares that could be acquired with proceeds (\$1,000,000 ÷ \$30)	<u>33,333</u>
Excess of shares under option over treasury shares that could be repurchased (50,000 – 33,333)	<u>16,667</u>
Per share effect:	
Incremental Numerator Effect	None
Incremental Denominator Effect	$\frac{\text{None}}{16,667 \text{ shares}} =$
	<u>\$0</u>

**ILLUSTRATION 16B-3**  
Per Share Effect of Options (Treasury-Stock Method), Diluted Earnings per Share

Interest expense for year (8% × \$2,500,000)	\$200,000
Income tax reduction due to interest (40% × \$200,000)	<u>80,000</u>
Interest expense avoided (net of tax)	<u>\$120,000</u>
Number of common shares issued assuming conversion of bonds (2,500 bonds × 40 shares)	<u>100,000</u>
Per share effect:	
Incremental Numerator Effect	\$120,000
Incremental Denominator Effect	$\frac{\$120,000}{100,000 \text{ shares}} =$
	<u>\$1.20</u>

**ILLUSTRATION 16B-4**  
Per Share Effect of 8% Bonds (If-Converted Method), Diluted Earnings per Share

**ILLUSTRATION 16B-5**

Per Share Effect of 10% Bonds (If-Converted Method), Diluted Earnings per Share

Interest expense for year (10% × \$2,500,000)	\$250,000
Income tax reduction due to interest (40% × \$250,000)	<u>100,000</u>
Interest expense avoided (net of tax)	<u>\$150,000</u>
Number of common shares issued assuming conversion of bonds (2,500 bonds × 40 shares)	<u>100,000</u>
Per share effect:	
$\frac{\text{Incremental Numerator Effect}}{\text{Incremental Denominator Effect}} = \frac{\$150,000}{100,000 \text{ shares}} =$	<u>\$1.50</u>

**ILLUSTRATION 16B-6**

Per Share Effect of 10% Convertible Preferred (If-Converted Method), Diluted Earnings per Share

Dividend requirement on cumulative preferred (25,000 shares × \$10)	\$250,000
Income tax effect (dividends not a tax deduction)	<u>none</u>
Dividend requirement avoided	<u>\$250,000</u>
Number of common shares issued assuming conversion of preferred (4 × 25,000 shares)	<u>100,000</u>
Per share effect:	
$\frac{\text{Incremental Numerator Effect}}{\text{Incremental Denominator Effect}} = \frac{\$250,000}{100,000 \text{ shares}} =$	<u>\$2.50</u>

Illustration 16B-7 shows the ranking of all four potentially dilutive securities.

**ILLUSTRATION 16B-7**

Ranking of per Share Effects (Smallest to Largest), Diluted Earnings per Share

	Effect per Share
1. Options	\$ 0
2. 8% convertible bonds	1.20
3. 10% convertible bonds	1.50
4. 10% convertible preferred	2.50

The next step is to determine earnings per share giving effect to the ranking in Illustration 16B-7. Starting with the earnings per share of \$3 computed previously, add the incremental effects of the options to the original calculation, as follows.

**ILLUSTRATION 16B-8**

Recomputation of EPS Using Incremental Effect of Options

Options	
Income applicable to common stockholders	\$1,500,000
Add: Incremental numerator effect of options	<u>none</u>
Total	<u>\$1,500,000</u>
Weighted-average number of common shares outstanding	500,000
Add: Incremental denominator effect of options (Illustration 16B-3)	<u>16,667</u>
Total	<u>516,667</u>
Recomputed earnings per share (\$1,500,000 ÷ 516,667 shares)	<u>\$2.90</u>

Since the recomputed earnings per share is reduced (from \$3 to \$2.90), the effect of the options is dilutive. Again, we could have anticipated this effect because the average market price (\$30) exceeded the option price (\$20).

Assuming that Webster converts the 8 percent bonds, recomputed earnings per share is as shown on page 833.

<b>8% Convertible Bonds</b>	
Numerator from previous calculation	\$1,500,000
Add: Interest expense avoided (net of tax)	<u>120,000</u>
Total	<u>\$1,620,000</u>
Denominator from previous calculation (shares)	516,667
Add: Number of common shares assumed issued upon conversion of bonds	<u>100,000</u>
Total	<u>616,667</u>
Recomputed earnings per share ( $\$1,620,000 \div 616,667$ shares)	<u><u>\$2.63</u></u>

**ILLUSTRATION 16B-9**  
 Recomputation of EPS  
 Using Incremental Effect  
 of 8% Convertible Bonds

Since the recomputed earnings per share is reduced (from \$2.90 to \$2.63), the effect of the 8 percent bonds is dilutive.

Next, assuming Webster converts the 10 percent bonds, the company recomputes earnings per share as shown in Illustration 16B-10.

<b>10% Convertible Bonds</b>	
Numerator from previous calculation	\$1,620,000
Add: Interest expense avoided (net of tax)	<u>150,000</u>
Total	<u>\$1,770,000</u>
Denominator from previous calculation (shares)	616,667
Add: Number of common shares assumed issued upon conversion of bonds	<u>100,000</u>
Total	<u>716,667</u>
Recomputed earnings per share ( $\$1,770,000 \div 716,667$ shares)	<u><u>\$2.47</u></u>

**ILLUSTRATION 16B-10**  
 Recomputation of EPS  
 Using Incremental Effect  
 of 10% Convertible Bonds

Since the recomputed earnings per share is reduced (from \$2.63 to \$2.47), the effect of the 10 percent convertible bonds is dilutive.

The final step is the recomputation that includes the 10 percent preferred stock. This is shown in Illustration 16B-11.

<b>10% Convertible Preferred</b>	
Numerator from previous calculation	\$1,770,000
Add: Dividend requirement avoided	<u>250,000</u>
Total	<u>\$2,020,000</u>
Denominator from previous calculation (shares)	716,667
Add: Number of common shares assumed issued upon conversion of preferred	<u>100,000</u>
Total	<u>816,667</u>
Recomputed earnings per share ( $\$2,020,000 \div 816,667$ shares)	<u><u>\$2.47</u></u>

**ILLUSTRATION 16B-11**  
 Recomputation of EPS  
 Using Incremental Effect  
 of 10% Convertible  
 Preferred

Since the recomputed earnings per share is not reduced, the effect of the 10 percent convertible preferred is not dilutive. Diluted earnings per share is \$2.47. The per share effects of the preferred are not used in the computation.

Finally, Illustration 16B-12 shows Webster Corporation's disclosure of earnings per share on its income statement.

Net income	<u>\$1,750,000</u>
Basic earnings per common share (Note X)	<u>\$3.00</u>
Diluted earnings per common share	<u><u>\$2.47</u></u>

**ILLUSTRATION 16B-12**  
 Income Statement  
 Presentation, EPS

A company uses income from continuing operations (adjusted for preferred dividends) to determine whether potential common stock is dilutive or antidilutive. Some refer to this measure as the **control number**. To illustrate, assume that Barton Company provides the following information.

**ILLUSTRATION 16B-13**  
Barton Company Data

Income from continuing operations	\$2,400,000
Loss from discontinued operations	3,600,000
Net loss	<u>\$1,200,000</u>
Weighted-average shares of common stock outstanding	1,000,000
Potential common stock	200,000

Barton reports basic and diluted earnings per share as follows.

**ILLUSTRATION 16B-14**  
Basic and Diluted EPS

Basic earnings per share	
Income from continuing operations	\$2.40
Loss from discontinued operations	3.60
Net loss	<u>\$1.20</u>
Diluted earnings per share	
Income from continuing operations	\$2.00
Loss from discontinued operations	3.00
Net loss	<u>\$1.00</u>

As Illustration 16B-14 shows, basic earnings per share from continuing operations is higher than the diluted earnings per share from continuing operations. The reason: The diluted earnings per share from continuing operations includes an additional 200,000 shares of potential common stock in its denominator.<sup>20</sup>

Companies use income from continuing operations as the control number because many of them show income from continuing operations (or a similar line item above net income if it appears on the income statement), but report a final net loss due to a loss on discontinued operations. If a company uses final net loss as the control number, basic and diluted earnings per share would be the same because the potential common shares are antidilutive.<sup>21</sup>

*EPS Illustration with  
Multiple Dilutive  
Securities*

## KEY TERMS

control number, 834

## SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 16B

**LO 9 Compute earnings per share in a complex situation.** For diluted EPS, make the following computations: (1) For each potentially dilutive security, determine the per share effect assuming exercise/conversion. (2) Rank the results from most dilutive to least dilutive. (3) Recalculate EPS starting with the most dilutive, and continue adding securities until EPS does not change or becomes larger.

<sup>20</sup>A company that does not report a discontinued operation but reports an extraordinary item should use that line item (for example, income before extraordinary items) as the control number.

<sup>21</sup>If a company reports a loss from continuing operations, basic and diluted earnings per share will be the same because potential common stock will be antidilutive, even if the company reports final net income. The FASB believes that comparability of EPS information will be improved by using income from continuing operations as the control number.

### Exercises

Access the FASB Codification at <http://asc.fasb.org/home> to prepare responses to the following exercises. Provide Codification references for your responses.

**CE16-1** Access the glossary (“Master Glossary”) to answer the following.

- (a) What is the definition of “basic earnings per share”?
- (b) What is “dilution”?
- (c) What is a “warrant”?
- (d) What is a “grant date”?

**CE16-2** For how many periods must a company present EPS data?

**CE16-3** For each period that an income statement is presented, what must a company disclose about its EPS?

**CE16-4** If a company’s outstanding shares are increased through a stock dividend or a stock split, how would that alter the presentation of its EPS data?

**An additional Codification case can be found in the Using Your Judgment section, on page 854.**

**Be sure to check the companion website for a Review and Analysis Exercise, with solution.**

*Note:* All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

## QUESTIONS

1. What is meant by a dilutive security?
2. Briefly explain why corporations issue convertible securities.
3. Discuss the similarities and the differences between convertible debt and debt issued with stock warrants.
4. Bridgewater Corp. offered holders of its 1,000 convertible bonds a premium of \$160 per bond to induce conversion into shares of its common stock. Upon conversion of all the bonds, Bridgewater Corp. recorded the \$160,000 premium as a reduction of paid-in capital.

Comment on Bridgewater's treatment of the \$160,000 "sweetener."

5. Explain how the conversion feature of convertible debt has a value (a) to the issuer and (b) to the purchaser.
6. What are the arguments for giving separate accounting recognition to the conversion feature of debentures?
7. Four years after issue, debentures with a face value of \$1,000,000 and book value of \$960,000 are tendered for conversion into 80,000 shares of common stock immediately after an interest payment date. At that time the market price of the debentures is 104, and the common stock is selling at \$14 per share (par value \$10). The company records the conversion as follows.

Bonds Payable	1,000,000	
Discount on Bonds Payable		40,000
Common Stock		800,000
Paid-in Capital in Excess of Par		160,000

Discuss the propriety of this accounting treatment.

8. On July 1, 2010, Roberts Corporation issued \$3,000,000 of 9% bonds payable in 20 years. The bonds include detachable warrants giving the bondholder the right to purchase for \$30 one share of \$1 par value common stock at any time during the next 10 years. The bonds were sold for \$3,000,000. The value of the warrants at the time of issuance was \$100,000. Prepare the journal entry to record this transaction.
9. What are stock rights? How does the issuing company account for them?
10. Briefly explain the accounting requirements for stock compensation plans under GAAP.
11. Cordero Corporation has an employee stock-purchase plan which permits all full-time employees to purchase 10 shares of common stock on the third anniversary of their employment and an additional 15 shares on each subsequent anniversary date. The purchase price is set at the market price on the date purchased and no commission is charged. Discuss whether this plan would be considered compensatory.
12. What date or event does the profession believe should be used in determining the value of a stock option? What arguments support this position?
13. Over what period of time should compensation cost be allocated?
14. How is compensation expense computed using the fair value approach?
15. What are the advantages of using restricted stock to compensate employees?
16. At December 31, 2010, Reid Company had 600,000 shares of common stock issued and outstanding, 400,000 of which had been issued and outstanding throughout the year and 200,000 of which were issued on October 1, 2010. Net income for 2010 was \$2,000,000, and dividends declared on preferred stock were \$400,000. Compute Reid's earnings per common share. (Round to the nearest penny.)
17. What effect do stock dividends or stock splits have on the computation of the weighted-average number of shares outstanding?
18. Define the following terms.
  - (a) Basic earnings per share.
  - (b) Potentially dilutive security.
  - (c) Diluted earnings per share.
  - (d) Complex capital structure.
  - (e) Potential common stock.
19. What are the computational guidelines for determining whether a convertible security is to be reported as part of diluted earnings per share?
20. Discuss why options and warrants may be considered potentially dilutive common shares for the computation of diluted earnings per share.
21. Explain how convertible securities are determined to be potentially dilutive common shares and how those convertible securities that are not considered to be potentially dilutive common shares enter into the determination of earnings per share data.
22. Explain the treasury-stock method as it applies to options and warrants in computing dilutive earnings per share data.
23. Earnings per share can affect market prices of common stock. Can market prices affect earnings per share? Explain.
24. What is meant by the term antidilution? Give an example.
25. What type of earnings per share presentation is required in a complex capital structure?
26. Where can authoritative iGAAP be found related to dilutive securities, stock-based compensation, and earnings per share? 
27. Briefly describe some of the similarities and differences between U.S. GAAP and iGAAP with respect to the accounting for dilutive securities, stock-based compensation, and earnings per share. 
28. Norman Co., a fast-growing golf equipment company, uses U.S. GAAP. It is considering the issuance of convertible bonds. The bonds mature in 10 years, have a face value of \$400,000, and pay interest annually at a rate of 4%. The estimated fair value of the equity portion of the bond issue is \$35,000. Greg Shark is curious as to the difference in accounting for these bonds if the company were to use iGAAP. (a) Prepare the entry to record issuance of the bonds at par under U.S. GAAP. (b) Repeat the requirement for part (a), assuming application of iGAAP to the bond issuance. (c) Which approach provides the better accounting? Explain. 
29. Briefly discuss the convergence efforts that are under way by the IASB and FASB in the area of dilutive securities and earnings per share. 
- \*30. How is antidilution determined when multiple securities are involved?

## BRIEF EXERCISES

- 1 **BE16-1** Archer Inc. issued \$4,000,000 par value, 7% convertible bonds at 99 for cash. If the bonds had not included the conversion feature, they would have sold for 95. Prepare the journal entry to record the issuance of the bonds.
- 1 **BE16-2** Petrenko Corporation has outstanding 2,000 \$1,000 bonds, each convertible into 50 shares of \$10 par value common stock. The bonds are converted on December 31, 2010, when the unamortized discount is \$30,000 and the market price of the stock is \$21 per share. Record the conversion using the book value approach.
- 2 **BE16-3** Pechstein Corporation issued 2,000 shares of \$10 par value common stock upon conversion of 1,000 shares of \$50 par value preferred stock. The preferred stock was originally issued at \$60 per share. The common stock is trading at \$26 per share at the time of conversion. Record the conversion of the preferred stock.
- 3 **BE16-4** Eisler Corporation issued 2,000 \$1,000 bonds at 101. Each bond was issued with one detachable stock warrant. After issuance, the bonds were selling in the market at 98, and the warrants had a market value of \$40. Use the proportional method to record the issuance of the bonds and warrants.
- 3 **BE16-5** McIntyre Corporation issued 2,000 \$1,000 bonds at 101. Each bond was issued with one detachable stock warrant. After issuance, the bonds were selling separately at 98. The market price of the warrants without the bonds cannot be determined. Use the incremental method to record the issuance of the bonds and warrants.
- 4 **BE16-6** On January 1, 2010, Barwood Corporation granted 5,000 options to executives. Each option entitles the holder to purchase one share of Barwood's \$5 par value common stock at \$50 per share at any time during the next 5 years. The market price of the stock is \$65 per share on the date of grant. The fair value of the options at the grant date is \$150,000. The period of benefit is 2 years. Prepare Barwood's journal entries for January 1, 2010, and December 31, 2010 and 2011.
- 4 **BE16-7** Refer to the data for Barwood Corporation in BE16-6. Repeat the requirements assuming that instead of options, Barwood granted 2,000 shares of restricted stock.
- 4 **BE16-8** On January 1, 2010 (the date of grant), Lutz Corporation issues 2,000 shares of restricted stock to its executives. The fair value of these shares is \$75,000, and their par value is \$10,000. The stock is forfeited if the executives do not complete 3 years of employment with the company. Prepare the journal entry (if any) on January 1, 2010, and on December 31, 2010, assuming the service period is 3 years.
- 6 **BE16-9** Kalin Corporation had 2010 net income of \$1,000,000. During 2010, Kalin paid a dividend of \$2 per share on 100,000 shares of preferred stock. During 2010, Kalin had outstanding 250,000 shares of common stock. Compute Kalin's 2010 earnings per share.
- 6 **BE16-10** Douglas Corporation had 120,000 shares of stock outstanding on January 1, 2010. On May 1, 2010, Douglas issued 60,000 shares. On July 1, Douglas purchased 10,000 treasury shares, which were reissued on October 1. Compute Douglas's weighted-average number of shares outstanding for 2010.
- 6 **BE16-11** Tomba Corporation had 300,000 shares of common stock outstanding on January 1, 2010. On May 1, Tomba issued 30,000 shares. (a) Compute the weighted-average number of shares outstanding if the 30,000 shares were issued for cash. (b) Compute the weighted-average number of shares outstanding if the 30,000 shares were issued in a stock dividend.
- 7 **BE16-12** Rockland Corporation earned net income of \$300,000 in 2010 and had 100,000 shares of common stock outstanding throughout the year. Also outstanding all year was \$800,000 of 10% bonds, which are convertible into 16,000 shares of common. Rockland's tax rate is 40 percent. Compute Rockland's 2010 diluted earnings per share.
- 7 **BE16-13** DiCenta Corporation reported net income of \$270,000 in 2010 and had 50,000 shares of common stock outstanding throughout the year. Also outstanding all year were 5,000 shares of cumulative preferred stock, each convertible into 2 shares of common. The preferred stock pays an annual dividend of \$5 per share. DiCenta's tax rate is 40%. Compute DiCenta's 2010 diluted earnings per share.
- 7 **BE16-14** Bedard Corporation reported net income of \$300,000 in 2010 and had 200,000 shares of common stock outstanding throughout the year. Also outstanding all year were 45,000 options to purchase common stock at \$10 per share. The average market price of the stock during the year was \$15. Compute diluted earnings per share.

- 6 BE16-15** The 2010 income statement of Wasmeier Corporation showed net income of \$480,000 and an extraordinary loss of \$120,000. Wasmeier had 100,000 shares of common stock outstanding all year. Prepare Wasmeier's income statement presentation of earnings per share.
- 8 \*BE16-16** Ferraro, Inc. established a stock-appreciation rights (SAR) program on January 1, 2010, which entitles executives to receive cash at the date of exercise for the difference between the market price of the stock and the pre-established price of \$20 on 5,000 SARs. The required service period is 2 years. The fair value of the SARs are determined to be \$4 on December 31, 2010, and \$9 on December 31, 2011. Compute Ferraro's compensation expense for 2010 and 2011.

## EXERCISES

- 3 E16-1 (Issuance and Conversion of Bonds)** For each of the unrelated transactions described below, present the entry(ies) required to record each transaction.

1. Coyle Corp. issued \$10,000,000 par value 10% convertible bonds at 99. If the bonds had not been convertible, the company's investment banker estimates they would have been sold at 95. Expenses of issuing the bonds were \$70,000.
2. Lambert Company issued \$10,000,000 par value 10% bonds at 98. One detachable stock warrant was issued with each \$100 par value bond. At the time of issuance, the warrants were selling for \$4.
3. Sepracor, Inc. called its convertible debt in 2010. Assume the following related to the transaction: The 11%, \$10,000,000 par value bonds were converted into 1,000,000 shares of \$1 par value common stock on July 1, 2010. On July 1, there was \$55,000 of unamortized discount applicable to the bonds, and the company paid an additional \$75,000 to the bondholders to induce conversion of all the bonds. The company records the conversion using the book value method.

- 1 E16-2 (Conversion of Bonds)** Schuss Inc. issued \$3,000,000 of 10%, 10-year convertible bonds on June 1, 2010, at 98 plus accrued interest. The bonds were dated April 1, 2010, with interest payable April 1 and October 1. Bond discount is amortized semiannually on a straight-line basis.

On April 1, 2011, \$1,000,000 of these bonds were converted into 30,000 shares of \$20 par value common stock. Accrued interest was paid in cash at the time of conversion.

### Instructions

- (a) Prepare the entry to record the interest expense at October 1, 2010. Assume that accrued interest payable was credited when the bonds were issued. (Round to nearest dollar.)
- (b) Prepare the entry(ies) to record the conversion on April 1, 2011. (The book value method is used.) Assume that the entry to record amortization of the bond discount and interest payment has been made.

- 1 E16-3 (Conversion of Bonds)** Gabel Company has bonds payable outstanding in the amount of \$400,000, and the Premium on Bonds Payable account has a balance of \$6,000. Each \$1,000 bond is convertible into 20 shares of preferred stock of par value of \$50 per share. All bonds are converted into preferred stock.

### Instructions

Assuming that the book value method was used, what entry would be made?

- 1 E16-4 (Conversion of Bonds)** On January 1, 2010, when its \$30 par value common stock was selling for \$80 per share, Bartz Corp. issued \$10,000,000 of 8% convertible debentures due in 20 years. The conversion option allowed the holder of each \$1,000 bond to convert the bond into five shares of the corporation's common stock. The debentures were issued for \$10,600,000. The present value of the bond payments at the time of issuance was \$8,500,000, and the corporation believes the difference between the present value and the amount paid is attributable to the conversion feature. On January 1, 2011, the corporation's \$30 par value common stock was split 2 for 1, and the conversion rate for the bonds was adjusted accordingly. On January 1, 2012, when the corporation's \$15 par value common stock was selling for \$135 per share, holders of 20% of the convertible debentures exercised their conversion options. The corporation uses the straight-line method for amortizing any bond discounts or premiums.

**Instructions**

- (a) Prepare the entry to record the original issuance of the convertible debentures.
- (b) Prepare the entry to record the exercise of the conversion option, using the book value method. Show supporting computations in good form.

**E16-5 (Conversion of Bonds)** The December 31, 2010, balance sheet of Osygus Corp. is as follows.

10% callable, convertible bonds payable (semiannual interest dates April 30 and October 31; convertible into 6 shares of \$25 par value common stock per \$1,000 of bond principal; maturity date April 30, 2016)	\$600,000	
Discount on bonds payable	<u>10,240</u>	\$589,760

On March 5, 2011, Osygus Corp. called all of the bonds as of April 30 for the principal plus interest through April 30. By April 30 all bondholders had exercised their conversion to common stock as of the interest payment date. Consequently, on April 30, Osygus Corp. paid the semiannual interest and issued shares of common stock for the bonds. The discount is amortized on a straight-line basis. Osygus uses the book value method.

**Instructions**

Prepare the entry(ies) to record the interest expense and conversion on April 30, 2011. Reversing entries were made on January 1, 2011.

**E16-6 (Conversion of Bonds)** On January 1, 2009, Trillini Corporation issued \$3,000,000 of 10-year, 8% convertible debentures at 102. Interest is to be paid semiannually on June 30 and December 31. Each \$1,000 debenture can be converted into eight shares of Trillini Corporation \$100 par value common stock after December 31, 2010.

On January 1, 2011, \$600,000 of debentures are converted into common stock, which is then selling at \$110. An additional \$600,000 of debentures are converted on March 31, 2011. The market price of the common stock is then \$115. Accrued interest at March 31 will be paid on the next interest date.

Bond premium is amortized on a straight-line basis.

**Instructions**

Make the necessary journal entries for:

- (a) December 31, 2010.
- (b) January 1, 2011.
- (c) March 31, 2011.
- (d) June 30, 2011.

Record the conversions using the book value method.

**E16-7 (Issuance of Bonds with Warrants)** Prior Inc. has decided to raise additional capital by issuing \$175,000 face value of bonds with a coupon rate of 10%. In discussions with investment bankers, it was determined that to help the sale of the bonds, detachable stock warrants should be issued at the rate of one warrant for each \$100 bond sold. The value of the bonds without the warrants is considered to be \$136,000, and the value of the warrants in the market is \$24,000. The bonds sold in the market at issuance for \$150,000.

**Instructions**

- (a) What entry should be made at the time of the issuance of the bonds and warrants?
- (b) If the warrants were nondetachable, would the entries be different? Discuss.

**E16-8 (Issuance of Bonds with Detachable Warrants)** On September 1, 2010, Jacob Company sold at 104 (plus accrued interest) 3,000 of its 8%, 10-year, \$1,000 face value, nonconvertible bonds with detachable stock warrants. Each bond carried two detachable warrants. Each warrant was for one share of common stock at a specified option price of \$15 per share. Shortly after issuance, the warrants were quoted on the market for \$3 each. No market value can be determined for the Jacob Company bonds. Interest is payable on December 1 and June 1. Bond issue costs of \$30,000 were incurred.

**Instructions**

Prepare in general journal format the entry to record the issuance of the bonds.

(AICPA adapted)

**E16-9 (Issuance of Bonds with Stock Warrants)** On May 1, 2010, Barkley Company issued 3,000 \$1,000 bonds at 102. Each bond was issued with one detachable stock warrant. Shortly after issuance, the bonds were selling at 98, but the market value of the warrants cannot be determined.

**Instructions**

- (a) Prepare the entry to record the issuance of the bonds and warrants.
- (b) Assume the same facts as part (a), except that the warrants had a fair value of \$20. Prepare the entry to record the issuance of the bonds and warrants.

**4** **E16-10 (Issuance and Exercise of Stock Options)** On November 1, 2009, Olympic Company adopted a stock-option plan that granted options to key executives to purchase 40,000 shares of the company's \$10 par value common stock. The options were granted on January 2, 2010, and were exercisable 2 years after the date of grant if the grantee was still an employee of the company. The options expired 6 years from date of grant. The option price was set at \$40, and the fair value option-pricing model determines the total compensation expense to be \$600,000.

All of the options were exercised during the year 2012: 30,000 on January 3 when the market price was \$67, and 10,000 on May 1 when the market price was \$77 a share.

**Instructions**

Prepare journal entries relating to the stock-option plan for the years 2010, 2011, and 2012. Assume that the employee performs services equally in 2010 and 2011.

**4** **E16-11 (Issuance, Exercise, and Termination of Stock Options)** On January 1, 2010, Magilla Inc. granted stock options to officers and key employees for the purchase of 20,000 shares of the company's \$10 par common stock at \$25 per share. The options were exercisable within a 5-year period beginning January 1, 2012, by grantees still in the employ of the company, and expiring December 31, 2016. The service period for this award is 2 years. Assume that the fair value option-pricing model determines total compensation expense to be \$400,000.

On April 1, 2011, 3,000 options were terminated when the employees resigned from the company. The market value of the common stock was \$35 per share on this date.

On March 31, 2012, 12,000 options were exercised when the market value of the common stock was \$40 per share.

**Instructions**

Prepare journal entries to record issuance of the stock options, termination of the stock options, exercise of the stock options, and charges to compensation expense, for the years ended December 31, 2010, 2011, and 2012.

**4** **E16-12 (Issuance, Exercise, and Termination of Stock Options)** On January 1, 2009, Scooby Corporation granted 10,000 options to key executives. Each option allows the executive to purchase one share of Scooby's \$5 par value common stock at a price of \$20 per share. The options were exercisable within a 2-year period beginning January 1, 2011, if the grantee is still employed by the company at the time of the exercise. On the grant date, Scooby's stock was trading at \$25 per share, and a fair value option-pricing model determines total compensation to be \$450,000.

On May 1, 2011, 9,000 options were exercised when the market price of Scooby's stock was \$30 per share. The remaining options lapsed in 2013 because executives decided not to exercise their options.

**Instructions**

Prepare the necessary journal entries related to the stock-option plan for the years 2009 through 2013.

**4** **E16-13 (Accounting for Restricted Stock)** Derrick Company issues 4,000 shares of restricted stock to its CFO, Dane Yaping, on January 1, 2010. The stock has a fair value of \$120,000 on this date. The service period related to this restricted stock is 4 years. Vesting occurs if Yaping stays with the company for 4 years. The par value of the stock is \$5. At December 31, 2011, the fair value of the stock is \$145,000.

**Instructions**

- (a) Prepare the journal entries to record the restricted stock on January 1, 2010 (the date of grant) and December 31, 2011.
- (b) On March 4, 2012, Yaping leaves the company. Prepare the journal entry (if any) to account for this forfeiture.

**8** **E16-14 (Accounting for Restricted Stock)** Tweedie Company issues 10,000 shares of restricted stock to its CFO, Mary Tokar, on January 1, 2010. The stock has a fair value of \$500,000 on this date. The service period related to this restricted stock is 5 years. Vesting occurs if Tokar stays with the company for 5 years. The par value of the stock is \$10. At December 31, 2010, the fair value of the stock is \$450,000.

**Instructions**

- (a) Prepare the journal entries to record the restricted stock on January 1, 2010 (the date of grant) and December 31, 2011.
- (b) On July 25, 2014, Tokar leaves the company. Prepare the journal entry (if any) to account for this forfeiture.

**E16-15 (Weighted-Average Number of Shares)** Gogean Inc. uses a calendar year for financial reporting. The company is authorized to issue 9,000,000 shares of \$10 par common stock. At no time has Gogean issued any potentially dilutive securities. Listed below is a summary of Gogean's common stock activities.

1. Number of common shares issued and outstanding at December 31, 2009	2,400,000
2. Shares issued as a result of a 10% stock dividend on September 30, 2010	240,000
3. Shares issued for cash on March 31, 2011	<u>2,000,000</u>
Number of common shares issued and outstanding at December 31, 2011	<u>4,640,000</u>
4. A 2-for-1 stock split of Gogean's common stock took place on March 31, 2012.	

#### Instructions

- Compute the weighted-average number of common shares used in computing earnings per common share for 2010 on the 2011 comparative income statement.
- Compute the weighted-average number of common shares used in computing earnings per common share for 2011 on the 2011 comparative income statement.
- Compute the weighted-average number of common shares to be used in computing earnings per common share for 2011 on the 2012 comparative income statement.
- Compute the weighted-average number of common shares to be used in computing earnings per common share for 2012 on the 2012 comparative income statement.

(CMA adapted)

**E16-16 (EPS: Simple Capital Structure)** On January 1, 2010, Chang Corp. had 480,000 shares of common stock outstanding. During 2010, it had the following transactions that affected the common stock account.

February 1	Issued 120,000 shares
March 1	Issued a 20% stock dividend
May 1	Acquired 100,000 shares of treasury stock
June 1	Issued a 3-for-1 stock split
October 1	Reissued 60,000 shares of treasury stock

#### Instructions

- Determine the weighted-average number of shares outstanding as of December 31, 2010.
- Assume that Chang Corp. earned net income of \$3,256,000 during 2010. In addition, it had 100,000 shares of 9%, \$100 par nonconvertible, noncumulative preferred stock outstanding for the entire year. Because of liquidity considerations, however, the company did not declare and pay a preferred dividend in 2010. Compute earnings per share for 2010, using the weighted-average number of shares determined in part (a).
- Assume the same facts as in part (b), except that the preferred stock was cumulative. Compute earnings per share for 2010.
- Assume the same facts as in part (b), except that net income included an extraordinary gain of \$864,000 and a loss from discontinued operations of \$432,000. Both items are net of applicable income taxes. Compute earnings per share for 2010.

**E16-17 (EPS: Simple Capital Structure)** Ott Company had 210,000 shares of common stock outstanding on December 31, 2010. During the year 2011 the company issued 8,000 shares on May 1 and retired 14,000 shares on October 31. For the year 2011 Ott Company reported net income of \$229,690 after a casualty loss of \$40,600 (net of tax).

#### Instructions

What earnings per share data should be reported at the bottom of its income statement, assuming that the casualty loss is extraordinary?

**E16-18 (EPS: Simple Capital Structure)** Kendall Inc. presented the following data.

Net income	\$2,200,000
Preferred stock: 50,000 shares outstanding, \$100 par, 8% cumulative, not convertible	5,000,000
Common stock: Shares outstanding 1/1	600,000
Issued for cash, 5/1	300,000
Acquired treasury stock for cash, 8/1	150,000
2-for-1 stock split, 10/1	

#### Instructions

Compute earnings per share.

- E16-19 (EPS: Simple Capital Structure)** A portion of the statement of income and retained earnings of Pierson Inc. for the current year follows.

Income before extraordinary item		\$15,000,000
Extraordinary loss, net of applicable income tax (Note 1)		<u>1,340,000</u>
Net income		13,660,000
Retained earnings at the beginning of the year		<u>83,250,000</u>
		96,910,000
Dividends declared:		
On preferred stock—\$6.00 per share	\$ 300,000	
On common stock—\$1.75 per share	<u>14,875,000</u>	<u>15,175,000</u>
Retained earnings at the end of the year		<u>\$81,735,000</u>

**Note 1.** During the year, Pierson Inc. suffered a major casualty loss of \$1,340,000 after applicable income tax reduction of \$1,200,000.

At the end of the current year, Pierson Inc. has outstanding 8,000,000 shares of \$10 par common stock and 50,000 shares of 6% preferred.

On April 1 of the current year, Pierson Inc. issued 1,000,000 shares of common stock for \$32 per share to help finance the casualty.

#### Instructions

Compute the earnings per share on common stock for the current year as it should be reported to stockholders.

- E16-20 (EPS: Simple Capital Structure)** On January 1, 2010, Bailey Industries had stock outstanding as follows.

6% Cumulative preferred stock, \$100 par value, issued and outstanding 10,000 shares	\$1,000,000
Common stock, \$10 par value, issued and outstanding 200,000 shares	2,000,000

To acquire the net assets of three smaller companies, Bailey authorized the issuance of an additional 170,000 common shares. The acquisitions took place as shown below.

<u>Date of Acquisition</u>	<u>Shares Issued</u>
Company A April 1, 2010	60,000
Company B July 1, 2010	80,000
Company C October 1, 2010	30,000

On May 14, 2010, Bailey realized a \$90,000 (before taxes) insurance gain on the expropriation of investments originally purchased in 2000.

On December 31, 2010, Bailey recorded net income of \$300,000 before tax and exclusive of the gain.

#### Instructions

Assuming a 40% tax rate, compute the earnings per share data that should appear on the financial statements of Bailey Industries as of December 31, 2010. Assume that the expropriation is extraordinary.

- E16-21 (EPS: Simple Capital Structure)** At January 1, 2010, Cameron Company's outstanding shares included the following.

280,000 shares of \$50 par value, 7% cumulative preferred stock
800,000 shares of \$1 par value common stock

Net income for 2010 was \$2,830,000. No cash dividends were declared or paid during 2010. On February 15, 2011, however, all preferred dividends in arrears were paid, together with a 5% stock dividend on common shares. There were no dividends in arrears prior to 2010.

On April 1, 2010, 450,000 shares of common stock were sold for \$10 per share, and on October 1, 2010, 110,000 shares of common stock were purchased for \$20 per share and held as treasury stock.

#### Instructions

Compute earnings per share for 2010. Assume that financial statements for 2010 were issued in March 2011.

- 7** **E16-22 (EPS with Convertible Bonds, Various Situations)** In 2010 Buraka Enterprises issued, at par, 75 \$1,000, 8% bonds, each convertible into 100 shares of common stock. Buraka had revenues of \$17,500 and expenses other than interest and taxes of \$8,400 for 2011. (Assume that the tax rate is 40%.) Throughout 2011, 2,000 shares of common stock were outstanding; none of the bonds was converted or redeemed.

#### Instructions

- Compute diluted earnings per share for 2011.
- Assume the same facts as those assumed for part (a), except that the 75 bonds were issued on September 1, 2011 (rather than in 2010), and none have been converted or redeemed.
- Assume the same facts as assumed for part (a), except that 25 of the 75 bonds were actually converted on July 1, 2011.

- 7** **E16-23 (EPS with Convertible Bonds)** On June 1, 2009, Bluhm Company and Amanar Company merged to form Davenport Inc. A total of 800,000 shares were issued to complete the merger. The new corporation reports on a calendar-year basis.

On April 1, 2011, the company issued an additional 600,000 shares of stock for cash. All 1,400,000 shares were outstanding on December 31, 2011.

Davenport Inc. also issued \$600,000 of 20-year, 8% convertible bonds at par on July 1, 2011. Each \$1,000 bond converts to 40 shares of common at any interest date. None of the bonds have been converted to date.

Davenport Inc. is preparing its annual report for the fiscal year ending December 31, 2011. The annual report will show earnings per share figures based upon a reported after-tax net income of \$1,540,000. (The tax rate is 40%.)

#### Instructions

Determine the following for 2011.

- The number of shares to be used for calculating:
  - Basic earnings per share.
  - Diluted earnings per share.
- The earnings figures to be used for calculating:
  - Basic earnings per share.
  - Diluted earnings per share.

(CMA adapted)

- 2 7** **E16-24 (EPS with Convertible Bonds and Preferred Stock)** The Ottey Corporation issued 10-year, \$4,000,000 par, 7% callable convertible subordinated debentures on January 2, 2010. The bonds have a par value of \$1,000, with interest payable annually. The current conversion ratio is 14:1, and in 2 years it will increase to 18:1. At the date of issue, the bonds were sold at 98. Bond discount is amortized on a straight-line basis. Ottey's effective tax was 35%. Net income in 2010 was \$7,500,000, and the company had 2,000,000 shares outstanding during the entire year.

#### Instructions

- Prepare a schedule to compute both basic and diluted earnings per share.
- Discuss how the schedule would differ if the security was convertible preferred stock.

- 2 7** **E16-25 (EPS with Convertible Bonds and Preferred Stock)** On January 1, 2010, Lindsey Company issued 10-year, \$3,000,000 face value, 6% bonds, at par. Each \$1,000 bond is convertible into 15 shares of Lindsey common stock. Lindsey's net income in 2011 was \$240,000, and its tax rate was 40%. The company had 100,000 shares of common stock outstanding throughout 2010. None of the bonds were converted in 2010.

#### Instructions

- Compute diluted earnings per share for 2010.
- Compute diluted earnings per share for 2010, assuming the same facts as above, except that \$1,000,000 of 6% convertible preferred stock was issued instead of the bonds. Each \$100 preferred share is convertible into 5 shares of Lindsey common stock.

- 7** **E16-26 (EPS with Options, Various Situations)** Zambrano Company's net income for 2010 is \$40,000. The only potentially dilutive securities outstanding were 1,000 options issued during 2009, each exercisable for one share at \$8. None has been exercised, and 10,000 shares of common were outstanding during 2010. The average market price of Zambrano's stock during 2010 was \$20.

**Instructions**

- (a) Compute diluted earnings per share. (Round to the nearest cent.)
- (b) Assume the same facts as those assumed for part (a), except that the 1,000 options were issued on October 1, 2010 (rather than in 2009). The average market price during the last 3 months of 2010 was \$20.

- 7** **E16-27 (EPS with Contingent Issuance Agreement)** Brooks Inc. recently purchased Donovan Corp., a large midwestern home painting corporation. One of the terms of the merger was that if Donovan's income for 2011 was \$110,000 or more, 10,000 additional shares would be issued to Donovan's stockholders in 2012. Donovan's income for 2010 was \$125,000.

**Instructions**

- (a) Would the contingent shares have to be considered in Brooks's 2010 earnings per share computations?
- (b) Assume the same facts, except that the 10,000 shares are contingent on Donovan's achieving a net income of \$130,000 in 2011. Would the contingent shares have to be considered in Brooks's earnings per share computations for 2010?

- 7** **E16-28 (EPS with Warrants)** Werth Corporation earned \$260,000 during a period when it had an average of 100,000 shares of common stock outstanding. The common stock sold at an average market price of \$15 per share during the period. Also outstanding were 30,000 warrants that could be exercised to purchase one share of common stock for \$10 for each warrant exercised.

**Instructions**

- (a) Are the warrants dilutive?
- (b) Compute basic earnings per share.
- (c) Compute diluted earnings per share.

- 8** **\*E16-29 (Stock-Appreciation Rights)** On December 31, 2007, Flessel Company issues 120,000 stock-appreciation rights to its officers entitling them to receive cash for the difference between the market price of its stock and a pre-established price of \$10. The fair value of the SARs is estimated to be \$4 per SAR on December 31, 2008; \$1 on December 31, 2009; \$11 on December 31, 2010; and \$9 on December 31, 2011. The service period is 4 years, and the exercise period is 7 years.

**Instructions**

- (a) Prepare a schedule that shows the amount of compensation expense allocable to each year affected by the stock-appreciation rights plan.
- (b) Prepare the entry at December 31, 2011, to record compensation expense, if any, in 2011.
- (c) Prepare the entry on December 31, 2011, assuming that all 120,000 SARs are exercised.

- 8** **\*E16-30 (Stock-Appreciation Rights)** Derrick Company establishes a stock-appreciation rights program that entitles its new president Dan Scott to receive cash for the difference between the market price of the stock and a pre-established price of \$30 (also market price) on December 31, 2008, on 40,000 SARs. The date of grant is December 31, 2008, and the required employment (service) period is 4 years. President Scott exercises all of the SARs in 2014. The fair value of the SARs is estimated to be \$6 per SAR on December 31, 2009; \$9 on December 31, 2010; \$15 on December 31, 2011; \$8 on December 31, 2012; and \$18 on December 31, 2013.

**Instructions**

- (a) Prepare a 5-year (2009–2013) schedule of compensation expense pertaining to the 40,000 SARs granted to president Scott.
- (b) Prepare the journal entry for compensation expense in 2009, 2012, and 2013 relative to the 40,000 SARs.

See the book's companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), for a set of B Exercises.

## PROBLEMS

•1 •3 •4

**P16-1 (Entries for Various Dilutive Securities)** The stockholders' equity section of Martino Inc. at the beginning of the current year appears below.

Common stock, \$10 par value, authorized 1,000,000 shares, 300,000 shares issued and outstanding	\$3,000,000
Paid-in capital in excess of par	600,000
Retained earnings	570,000

During the current year the following transactions occurred.

1. The company issued to the stockholders 100,000 rights. Ten rights are needed to buy one share of stock at \$32. The rights were void after 30 days. The market price of the stock at this time was \$34 per share.
2. The company sold to the public a \$200,000, 10% bond issue at 104. The company also issued with each \$100 bond one detachable stock purchase warrant, which provided for the purchase of common stock at \$30 per share. Shortly after issuance, similar bonds without warrants were selling at 96 and the warrants at \$8.
3. All but 5,000 of the rights issued in (1) were exercised in 30 days.
4. At the end of the year, 80% of the warrants in (2) had been exercised, and the remaining were outstanding and in good standing.
5. During the current year, the company granted stock options for 10,000 shares of common stock to company executives. The company using a fair value option-pricing model determines that each option is worth \$10. The option price is \$30. The options were to expire at year-end and were considered compensation for the current year.
6. All but 1,000 shares related to the stock-option plan were exercised by year-end. The expiration resulted because one of the executives failed to fulfill an obligation related to the employment contract.

### Instructions

- (a) Prepare general journal entries for the current year to record the transactions listed above.
- (b) Prepare the stockholders' equity section of the balance sheet at the end of the current year. Assume that retained earnings at the end of the current year is \$750,000.

•1

**P16-2 (Entries for Conversion, Amortization, and Interest of Bonds)** Volker Inc. issued \$2,500,000 of convertible 10-year bonds on July 1, 2010. The bonds provide for 12% interest payable semiannually on January 1 and July 1. The discount in connection with the issue was \$54,000, which is being amortized monthly on a straight-line basis.

The bonds are convertible after one year into 8 shares of Volker Inc.'s \$100 par value common stock for each \$1,000 of bonds.

On August 1, 2011, \$250,000 of bonds were turned in for conversion into common stock. Interest has been accrued monthly and paid as due. At the time of conversion any accrued interest on bonds being converted is paid in cash.

### Instructions

**(Round to nearest dollar)**

Prepare the journal entries to record the conversion, amortization, and interest in connection with the bonds as of the following dates.

- (a) August 1, 2011. (Assume the book value method is used.)
- (b) August 31, 2011.
- (c) December 31, 2011, including closing entries for end-of-year.

(AICPA adapted)

•4

**P16-3 (Stock-Option Plan)** Berg Company adopted a stock-option plan on November 30, 2009, that provided that 70,000 shares of \$5 par value stock be designated as available for the granting of options to officers of the corporation at a price of \$9 a share. The market value was \$12 a share on November 30, 2009.

On January 2, 2010, options to purchase 28,000 shares were granted to president Tom Winter—15,000 for services to be rendered in 2010 and 13,000 for services to be rendered in 2011. Also on that date, options to purchase 14,000 shares were granted to vice president Michelle Bennett—7,000 for services to be rendered in 2010 and 7,000 for services to be rendered in 2011. The market value of the stock was \$14 a share on January 2, 2010. The options were exercisable for a period of one year following the year in which the services were rendered. The fair value of the options on the grant date was \$4 per option.

In 2011 neither the president nor the vice president exercised their options because the market price of the stock was below the exercise price. The market value of the stock was \$8 a share on December 31, 2011, when the options for 2010 services lapsed.

On December 31, 2012, both president Winter and vice president Bennett exercised their options for 13,000 and 7,000 shares, respectively, when the market price was \$16 a share.

#### Instructions

Prepare the necessary journal entries in 2009 when the stock-option plan was adopted, in 2010 when options were granted, in 2011 when options lapsed, and in 2012 when options were exercised.

- 4** **P16-4 (Stock-Based Compensation)** Assume that **Amazon** has a stock-option plan for top management. Each stock option represents the right to purchase a share of Amazon \$1 par value common stock in the future at a price equal to the fair value of the stock at the date of the grant. Amazon has 5,000 stock options outstanding, which were granted at the beginning of 2010. The following data relate to the option grant.

Exercise price for options	\$40
Market price at grant date (January 1, 2010)	\$40
Fair value of options at grant date (January 1, 2010)	\$6
Service period	5 years

#### Instructions

- Prepare the journal entry(ies) for the first year of the stock-option plan.
- Prepare the journal entry(ies) for the first year of the plan assuming that, rather than options, 700 shares of restricted stock were granted at the beginning of 2010.
- Now assume that the market price of Amazon stock on the grant date was \$45 per share. Repeat the requirements for (a) and (b).
- Amazon would like to implement an employee stock-purchase plan for rank-and-file employees, but it would like to avoid recording expense related to this plan. Which of the following provisions must be in place for the plan to avoid recording compensation expense?
  - Substantially all employees may participate.
  - The discount from market is small (less than 5%).
  - The plan offers no substantive option feature.
  - There is no preferred stock outstanding.

- 7** **P16-5 (EPS with Complex Capital Structure)** Amy Dyken, controller at Fitzgerald Pharmaceutical Industries, a public company, is currently preparing the calculation for basic and diluted earnings per share and the related disclosure for Fitzgerald's financial statements. Below is selected financial information for the fiscal year ended June 30, 2010.

**FITZGERALD PHARMACEUTICAL INDUSTRIES**  
**SELECTED BALANCE SHEET**  
**INFORMATION**  
**JUNE 30, 2010**

Long-term debt	
Notes payable, 10%	\$ 1,000,000
8% convertible bonds payable	5,000,000
10% bonds payable	6,000,000
Total long-term debt	<u>\$12,000,000</u>
Shareholders' equity	
Preferred stock, 6% cumulative, \$50 par value, 100,000 shares authorized, 25,000 shares issued and outstanding	\$ 1,250,000
Common stock, \$1 par, 10,000,000 shares authorized, 1,000,000 shares issued and outstanding	1,000,000
Additional paid-in capital	4,000,000
Retained earnings	6,000,000
Total shareholders' equity	<u>\$12,250,000</u>

The following transactions have also occurred at Yaeger.

- Options were granted on July 1, 2009, to purchase 200,000 shares at \$15 per share. Although no options were exercised during fiscal year 2010, the average price per common share during fiscal year 2010 was \$20 per share.
- Each bond was issued at face value. The 8% convertible bonds will convert into common stock at 50 shares per \$1,000 bond. It is exercisable after 5 years and was issued in 2008.

3. The preferred stock was issued in 2008.
4. There are no preferred dividends in arrears; however, preferred dividends were not declared in fiscal year 2010.
5. The 1,000,000 shares of common stock were outstanding for the entire 2010 fiscal year.
6. Net income for fiscal year 2010 was \$1,500,000, and the average income tax rate is 40%.

#### Instructions

For the fiscal year ended June 30, 2010, calculate the following for Fitzgerald Pharmaceutical Industries.

- (a) Basic earnings per share.
- (b) Diluted earnings per share.

**6** **P16-6 (Basic EPS: Two-Year Presentation)** Melton Corporation is preparing the comparative financial statements for the annual report to its shareholders for fiscal years ended May 31, 2010, and May 31, 2011. The income from operations for each year was \$1,800,000 and \$2,500,000, respectively. In both years, the company incurred a 10% interest expense on \$2,400,000 of debt, an obligation that requires interest-only payments for 5 years. The company experienced a loss of \$600,000 from a fire in its Scotland facility in February 2011, which was determined to be an extraordinary loss. The company uses a 40% effective tax rate for income taxes.

The capital structure of Melton Corporation on June 1, 2009, consisted of 1 million shares of common stock outstanding and 20,000 shares of \$50 par value, 6%, cumulative preferred stock. There were no preferred dividends in arrears, and the company had not issued any convertible securities, options, or warrants.

On October 1, 2009, Melton sold an additional 500,000 shares of the common stock at \$20 per share. Melton distributed a 20% stock dividend on the common shares outstanding on January 1, 2010. On December 1, 2010, Melton was able to sell an additional 800,000 shares of the common stock at \$22 per share. These were the only common stock transactions that occurred during the two fiscal years.

#### Instructions

- (a) Identify whether the capital structure at Melton Corporation is a simple or complex capital structure, and explain why.
- (b) Determine the weighted-average number of shares that Melton Corporation would use in calculating earnings per share for the fiscal year ended
  - (1) May 31, 2010.
  - (2) May 31, 2011.
- (c) Prepare, in good form, a comparative income statement, beginning with income from operations, for Melton Corporation for the fiscal years ended May 31, 2010, and May 31, 2011. This statement will be included in Melton's annual report and should display the appropriate earnings per share presentations.

(CMA adapted)

**7** **P16-7 (Computation of Basic and Diluted EPS)** Charles Austin of the controller's office of Thompson Corporation was given the assignment of determining the basic and diluted earnings per share values for the year ending December 31, 2011. Austin has compiled the information listed below.

1. The company is authorized to issue 8,000,000 shares of \$10 par value common stock. As of December 31, 2010, 2,000,000 shares had been issued and were outstanding.
2. The per share market prices of the common stock on selected dates were as follows.

	<u>Price per Share</u>
July 1, 2010	\$20.00
January 1, 2011	21.00
April 1, 2011	25.00
July 1, 2011	11.00
August 1, 2011	10.50
November 1, 2011	9.00
December 31, 2011	10.00

3. A total of 700,000 shares of an authorized 1,200,000 shares of convertible preferred stock had been issued on July 1, 2010. The stock was issued at its par value of \$25, and it has a cumulative dividend of \$3 per share. The stock is convertible into common stock at the rate of one share of convertible preferred for one share of common. The rate of conversion is to be automatically adjusted for stock splits and stock dividends. Dividends are paid quarterly on September 30, December 31, March 31, and June 30.

4. Thompson Corporation is subject to a 40% income tax rate.
5. The after-tax net income for the year ended December 31, 2011 was \$11,550,000.

The following specific activities took place during 2011.

1. January 1—A 5% common stock dividend was issued. The dividend had been declared on December 1, 2010, to all stockholders of record on December 29, 2010.
2. April 1—A total of 400,000 shares of the \$3 convertible preferred stock was converted into common stock. The company issued new common stock and retired the preferred stock. This was the only conversion of the preferred stock during 2011.
3. July 1—A 2-for-1 split of the common stock became effective on this date. The board of directors had authorized the split on June 1.
4. August 1—A total of 300,000 shares of common stock were issued to acquire a factory building.
5. November 1—A total of 24,000 shares of common stock were purchased on the open market at \$9 per share. These shares were to be held as treasury stock and were still in the treasury as of December 31, 2011.
6. Common stock cash dividends—Cash dividends to common stockholders were declared and paid as follows.
  - April 15—\$0.30 per share
  - October 15—\$0.20 per share
7. Preferred stock cash dividends—Cash dividends to preferred stockholders were declared and paid as scheduled.

#### Instructions

- (a) Determine the number of shares used to compute basic earnings per share for the year ended December 31, 2011.
- (b) Determine the number of shares used to compute diluted earnings per share for the year ended December 31, 2011.
- (c) Compute the adjusted net income to be used as the numerator in the basic earnings per share calculation for the year ended December 31, 2011.

**7** **P16-8 (Computation of Basic and Diluted EPS)** The information below pertains to Barkley Company for 2010.

Net income for the year	\$1,200,000
8% convertible bonds issued at par (\$1,000 per bond). Each bond is convertible into 30 shares of common stock.	2,000,000
6% convertible, cumulative preferred stock, \$100 par value. Each share is convertible into 3 shares of common stock.	4,000,000
Common stock, \$10 par value	6,000,000
Tax rate for 2010	40%
Average market price of common stock	\$25 per share

There were no changes during 2010 in the number of common shares, preferred shares, or convertible bonds outstanding. There is no treasury stock. The company also has common stock options (granted in a prior year) to purchase 75,000 shares of common stock at \$20 per share.

#### Instructions

- (a) Compute basic earnings per share for 2010.
- (b) Compute diluted earnings per share for 2010.

**6** **P16-9 (EPS with Stock Dividend and Extraordinary Items)** Agassi Corporation is preparing the comparative financial statements to be included in the annual report to stockholders. Agassi employs a fiscal year ending May 31.

Income from operations before income taxes for Agassi was \$1,400,000 and \$660,000, respectively, for fiscal years ended May 31, 2011 and 2010. Agassi experienced an extraordinary loss of \$400,000 because of an earthquake on March 3, 2011. A 40% combined income tax rate pertains to any and all of Agassi Corporation's profits, gains, and losses.

Agassi's capital structure consists of preferred stock and common stock. The company has not issued any convertible securities or warrants and there are no outstanding stock options.

Agassi issued 40,000 shares of \$100 par value, 6% cumulative preferred stock in 2007. All of this stock is outstanding, and no preferred dividends are in arrears.

There were 1,000,000 shares of \$1 par common stock outstanding on June 1, 2009. On September 1, 2009, Agassi sold an additional 400,000 shares of the common stock at \$17 per share. Agassi distributed a 20% stock dividend on the common shares outstanding on December 1, 2010. These were the only common stock transactions during the past 2 fiscal years.

**Instructions**

- (a) Determine the weighted-average number of common shares that would be used in computing earnings per share on the current comparative income statement for:
  - (1) The year ended May 31, 2010.
  - (2) The year ended May 31, 2011.
- (b) Starting with income from operations before income taxes, prepare a comparative income statement for the years ended May 31, 2011 and 2010. The statement will be part of Agassi Corporation's annual report to stockholders and should include appropriate earnings per share presentation.
- (c) The capital structure of a corporation is the result of its past financing decisions. Furthermore, the earnings per share data presented on a corporation's financial statements is dependent upon the capital structure.
  - (1) Explain why Agassi Corporation is considered to have a simple capital structure.
  - (2) Describe how earnings per share data would be presented for a corporation that has a complex capital structure.

(CMA adapted)

.....

**CONCEPTS FOR ANALYSIS**

.....

**CA16-1 (Warrants Issued with Bonds and Convertible Bonds)** Incurring long-term debt with an arrangement whereby lenders receive an option to buy common stock during all or a portion of the time the debt is outstanding is a frequent corporate financing practice. In some situations the result is achieved through the issuance of convertible bonds; in others, the debt instruments and the warrants to buy stock are separate.

**Instructions**

- (a)
  - (1) Describe the differences that exist in current accounting for original proceeds of the issuance of convertible bonds and of debt instruments with separate warrants to purchase common stock.
  - (2) Discuss the underlying rationale for the differences described in (a)1 above.
  - (3) Summarize the arguments that have been presented in favor of accounting for convertible bonds in the same manner as accounting for debt with separate warrants.
- (b) At the start of the year Huish Company issued \$18,000,000 of 12% bonds along with warrants to buy 1,200,000 shares of its \$10 par value common stock at \$18 per share. The bonds mature over the next 10 years, starting one year from date of issuance, with annual maturities of \$1,800,000. At the time, Huish had 9,600,000 shares of common stock outstanding, and the market price was \$23 per share. The company received \$20,040,000 for the bonds and the warrants. For Huish Company, 12% was a relatively low borrowing rate. If offered alone, at this time, the bonds would have been issued at a 22% discount. Prepare the journal entry (or entries) for the issuance of the bonds and warrants for the cash consideration received.

(AICPA adapted)

**CA16-2 (Ethical Issues—Compensation Plan)** The executive officers of Rouse Corporation have a performance-based compensation plan. The performance criteria of this plan is linked to growth in earnings per share. When annual EPS growth is 12%, the Rouse executives earn 100% of the shares; if growth is 16%, they earn 125%. If EPS growth is lower than 8%, the executives receive no additional compensation.

In 2010, Gail Devers, the controller of Rouse, reviews year-end estimates of bad debt expense and warranty expense. She calculates the EPS growth at 15%. Kurt Adkins, a member of the executive group, remarks over lunch one day that the estimate of bad debt expense might be decreased, increasing EPS growth to 16.1%. Devers is not sure she should do this because she believes that the current estimate of bad debts is sound. On the other hand, she recognizes that a great deal of subjectivity is involved in the computation.

**Instructions**

Answer the following questions.

- (a) What, if any, is the ethical dilemma for Devers?
- (b) Should Devers's knowledge of the compensation plan be a factor that influences her estimate?
- (c) How should Devers respond to Adkins's request?

 **CA16-3 (Stock Warrants—Various Types)** For various reasons a corporation may issue warrants to purchase shares of its common stock at specified prices that, depending on the circumstances, may be less than, equal to, or greater than the current market price. For example, warrants may be issued:

1. To existing stockholders on a pro rata basis.
2. To certain key employees under an incentive stock-option plan.
3. To purchasers of the corporation's bonds.

#### Instructions

For each of the three examples of how stock warrants are used:

- (a) Explain why they are used.
- (b) Discuss the significance of the price (or prices) at which the warrants are issued (or granted) in relation to (1) the current market price of the company's stock, and (2) the length of time over which they can be exercised.
- (c) Describe the information that should be disclosed in financial statements, or notes thereto, that are prepared when stock warrants are outstanding in the hands of the three groups listed above. (AICPA adapted)

 **CA16-4 (Stock Compensation Plans)** The following two items appeared on the Internet concerning the GAAP requirement to expense stock options.

WASHINGTON, D.C.—February 17, 2005 Congressman David Dreier (R-CA), Chairman of the House Rules Committee, and Congresswoman Anna Eshoo (D-CA) reintroduced legislation today that will preserve broad-based employee stock option plans and give investors critical information they need to understand how employee stock options impact the value of their shares.

"Last year, the U.S. House of Representatives overwhelmingly voted for legislation that would have ensured the continued ability of innovative companies to offer stock options to rank-and-file employees," Dreier stated. "Both the Financial Accounting Standards Board (FASB) and the Securities and Exchange Commission (SEC) continue to ignore our calls to address legitimate concerns about the impact of FASB's new standard on workers' ability to have an ownership stake in the New Economy, and its failure to address the real need of shareholders: accurate and meaningful information about a company's use of stock options."

"In December 2004, FASB issued a stock option expensing standard that will render a huge blow to the 21st century economy," Dreier said. "Their action and the SEC's apparent lack of concern for protecting shareholders, requires us to once again take a firm stand on the side of investors and economic growth. Giving investors the ability to understand how stock options impact the value of their shares is critical. And equally important is preserving the ability of companies to use this innovative tool to attract talented employees."

"Here We Go Again!" by Jack Ciesielski (2/21/2005, <http://www.accountingobserver.com/blog/2005/02/here-we-go-again>) On February 17, Congressman David Dreier (R-CA), and Congresswoman Anna Eshoo (D-CA), officially entered Silicon Valley's bid to gum up the launch of honest reporting of stock option compensation: They co-sponsored a bill to "preserve broad-based employee stock option plans and give investors critical information they need to understand how employee stock options impact the value of their shares." You know what "critical information" they mean: stuff like the stock compensation for the top five officers in a company, with a rigged value set as close to zero as possible. Investors *crave* this kind of information. Other ways the good Congresspersons want to "help" investors: The bill "also requires the SEC to study the effectiveness of those disclosures over three years, during which time, no new accounting standard related to the treatment of stock options could be recognized. Finally, the bill requires the Secretary of Commerce to conduct a study and report to Congress on the impact of broad-based employee stock option plans on expanding employee corporate ownership, skilled worker recruitment and retention, research and innovation, economic growth, and international competitiveness."

It's the old "four corners" basketball strategy: stall, stall, stall. In the meantime, hope for regime change at your opponent, the FASB.

#### Instructions

- (a) What are the major recommendations of the stock-based compensation pronouncement?
- (b) How do the provisions of GAAP in this area differ from the bill introduced by members of Congress (Dreier and Eshoo), which would require expensing for options issued to only the top five officers

in a company? Which approach do you think would result in more useful information? (Focus on comparability.)

- (c) The bill in Congress urges the FASB to develop a rule that preserves “the ability of companies to use this innovative tool to attract talented employees.” Write a response to these Congress-people explaining the importance of neutrality in financial accounting and reporting.

**CA16-5 (EPS: Preferred Dividends, Options, and Convertible Debt)** “Earnings per share” (EPS) is the most featured, single financial statistic about modern corporations. Daily published quotations of stock prices have recently been expanded to include for many securities a “times earnings” figure that is based on EPS. Stock analysts often focus their discussions on the EPS of the corporations they study.

#### Instructions

- (a) Explain how dividends or dividend requirements on any class of preferred stock that may be outstanding affect the computation of EPS.
- (b) One of the technical procedures applicable in EPS computations is the “treasury-stock method.” Briefly describe the circumstances under which it might be appropriate to apply the treasury-stock method.
- (c) Convertible debentures are considered potentially dilutive common shares. Explain how convertible debentures are handled for purposes of EPS computations.

(AICPA adapted)

**CA16-6 (EPS Concepts and Effect of Transactions on EPS)** Chorkina Corporation, a new audit client of yours, has not reported earnings per share data in its annual reports to stockholders in the past. The treasurer, Beth Botsford, requested that you furnish information about the reporting of earnings per share data in the current year’s annual report in accordance with generally accepted accounting principles.

#### Instructions

- (a) Define the term “earnings per share” as it applies to a corporation with a capitalization structure composed of only one class of common stock. Explain how earnings per share should be computed and how the information should be disclosed in the corporation’s financial statements.
- (b) Discuss the treatment, if any, that should be given to each of the following items in computing earnings per share of common stock for financial statement reporting.
  - (1) Outstanding preferred stock issued at a premium with a par value liquidation right.
  - (2) The exercise at a price below market value but above book value of a common stock option issued during the current fiscal year to officers of the corporation.
  - (3) The replacement of a machine immediately prior to the close of the current fiscal year at a cost 20% above the original cost of the replaced machine. The new machine will perform the same function as the old machine that was sold for its book value.
  - (4) The declaration of current dividends on cumulative preferred stock.
  - (5) The acquisition of some of the corporation’s outstanding common stock during the current fiscal year. The stock was classified as treasury stock.
  - (6) A 2-for-1 stock split of common stock during the current fiscal year.
  - (7) A provision created out of retained earnings for a contingent liability from a possible lawsuit.

 **CA16-7 (EPS, Antidilution)** Brad Dolan, a stockholder of Rhode Corporation, has asked you, the firm’s accountant, to explain why his stock warrants were not included in diluted EPS. In order to explain this situation, you must briefly explain what dilutive securities are, why they are included in the EPS calculation, and why some securities are antidilutive and thus not included in this calculation.

#### Instructions

Write Mr. Dolan a 1–1.5 page letter explaining why the warrants are not included in the calculation. Use the following data to help you explain this situation.

Rhode Corporation earned \$228,000 during the period, when it had an average of 100,000 shares of common stock outstanding. The common stock sold at an average market price of \$25 per share during the period. Also outstanding were 30,000 warrants that could be exercised to purchase one share of common stock at \$30 per warrant.

## USING YOUR JUDGMENT

### FINANCIAL REPORTING

#### Financial Reporting Problem

#### The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix 5B or can be accessed at the book's companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso).

#### Instructions

Refer to P&G's financial statements and accompanying notes to answer the following questions.

- (a) Under P&G's stock-based compensation plan, stock options are granted annually to key managers and directors.
  - (1) How many options were granted during 2007 under the plan?
  - (2) How many options were exercisable at June 30, 2007?
  - (3) How many options were exercised in 2007, and what was the average price of those exercised?
  - (4) How many years from the grant date do the options expire?
  - (5) To what accounts are the proceeds from these option exercises credited?
  - (6) What was the number of outstanding options at June 30, 2007, and at what average exercise price?
- (b) What number of diluted weighted-average common shares outstanding was used by P&G in computing earnings per share for 2007, 2006, and 2005? What was P&G's diluted earnings per share in 2007, 2006, and 2005?
- (c) What other stock-based compensation plans does P&G have?

#### Comparative Analysis Case

#### The Coca-Cola Company and PepsiCo, Inc.

*The Coca-Cola Company*

#### Instructions

Go to the book's companion website and use information found there to answer the following questions related to **The Coca-Cola Company** and **PepsiCo, Inc.**

- (a) What employee stock-option compensation plans are offered by Coca-Cola and PepsiCo?
- (b) How many options are outstanding at year-end 2007 for both Coca-Cola and PepsiCo?
- (c) How many options were granted by Coca-Cola and PepsiCo to officers and employees during 2007?
- (d) How many options were exercised during 2007?
- (e) What was the average exercise price for Coca-Cola and PepsiCo employees during 2007?
- (f) What are the weighted-average number of shares used by Coca-Cola and PepsiCo in 2007, 2006, and 2005 to compute diluted earnings per share?
- (g) What was the diluted net income per share for Coca-Cola and PepsiCo for 2007, 2006, and 2005?

#### Financial Statement Analysis Case

#### Kellogg Company

**Kellogg Company** in its 2004 Annual Report in Note 1—Accounting Policies made the comment on page 853 about its accounting for employee stock options and other stock-based compensation. This was the annual report issued the year before the FASB mandated expensing stock options.

**Stock compensation (in part)** The Company currently uses the intrinsic value method prescribed by *Accounting Principles Board Opinion (APB) No. 25*, "Accounting for Stock Issued to Employees," to account for its employee stock options and other stock-based compensation. Under this method, because the exercise price of the Company's employee stock options equals the market price of the underlying stock on the date of the grant, no compensation expense is recognized. The following table presents the pro forma results for the current and prior years, as if the Company had used the alternate fair value method of accounting for stock-based compensation, prescribed by *SFAS No. 123*, "Accounting for Stock-Based Compensation" (as amended by *SFAS No. 148*).

Stock-based compensation expense, net of tax:

<i>(millions, except per share data)</i>	2004	2003	2002
As reported	\$11.4	\$12.5	\$10.7
Pro forma	\$41.8	\$42.1	\$52.8
Net earnings:			
As reported	\$890.6	\$787.1	\$720.9
Pro forma	\$860.2	\$757.5	\$678.8
Basic net earnings per share:			
As reported	\$2.16	\$1.93	\$1.77
Pro forma	\$2.09	\$1.86	\$1.66
Diluted net earnings per share:			
As reported	\$2.14	\$1.92	\$1.75
Pro forma	\$2.07	\$1.85	\$1.65

Under this pro forma method, the fair value of each option grant (net of estimated unvested forfeitures) was estimated at the date of grant using an option-pricing model and was recognized over the vesting period, generally two years. Refer to Note 8 for further information on the Company's stock compensation programs. In December 2004, the FASB issued *SFAS No. 123(Revised)*, "Share-Based Payment," which generally requires public companies to measure the cost of employee services received in exchange for an award of equity instruments based on the grant-date fair value and to recognize this cost over the requisite service period. The Company plans to adopt *SFAS No. 123(Revised)*, as of the beginning of its 2005 fiscal third quarter and is currently considering retrospective restatement to the beginning of its 2005 fiscal year. Once this standard is adopted, management believes full-year fiscal 2005 net earnings per share will be reduced by approximately \$.08.

### Instructions

- Briefly discuss how Kellogg's financial statements will be affected by the adoption of the new standard.
- Some companies argued that the recognition provisions of the standard are not needed, because the computation of earnings per share takes into account dilutive securities such as stock options. Do you agree? Explain, using the Kellogg disclosure provided above.

### International Reporting Case

**Sepracor, Inc.**, a U.S. drug company, reported the following information. The company prepares its financial statements in accordance with U.S. GAAP.

	<u>2007</u> (,000)
Current liabilities	\$ 554,114
Convertible subordinated debt	648,020
Total liabilities	1,228,313
Stockholders' equity	176,413
Net income	58,333

Analysts attempting to compare Sepracor to international drug companies may face a challenge due to differences in accounting for convertible debt under iGAAP. Under *IAS 32*, "Financial Instruments," convertible bonds, at issuance, must be classified separately into their debt and equity components based on estimated fair value.

**Instructions**

- (a) Compute the following ratios for Sepracor, Inc. (Assume that year-end balances approximate annual averages.)
  - (1) Return on assets.
  - (2) Return on stockholders' equity.
  - (3) Debt to assets ratio.
- (b) Briefly discuss the operating performance and financial position of Sepracor. Industry averages for these ratios in 2007 were: ROA 3.5%; return on equity 16%; and debt to assets 75%. Based on this analysis would you make an investment in the company's 5% convertible bonds? Explain.
- (c) Assume you want to compare Sepracor to an international company, like **Bayer** (which prepares its financial statements in accordance with iGAAP). Assuming that the fair value of the equity component of Sepracor's convertible bonds is \$150,000, how would you adjust the analysis above to make valid comparisons between Sepracor and Bayer?

**BRIDGE TO THE PROFESSION****Professional Research: FASB Codification**

Richardson Company is contemplating the establishment of a share-based compensation plan to provide long-run incentives for its top management. However, members of the compensation committee of the board of directors have voiced some concerns about adopting these plans, based on news accounts related to a recent accounting standard in this area. They would like you to conduct some research on this recent standard so they can be better informed about the accounting for these plans.

**Instructions**

Access the FASB Codification at <http://asc.fasb.org/home> to conduct research using the Codification Research System to prepare responses to the following items. Provide Codification references for your responses.

- (a) Identify the authoritative literature that addresses the accounting for share-based payment compensation plans.
- (b) Briefly discuss the objectives for the accounting for stock compensation. What is the role of fair value measurement?
- (c) The Richardson Company board is also considering an employee share-purchase plan, but the Board does not want to record expense related to the plan. What criteria must be met to avoid recording expense on an employee stock-purchase plan?

**Professional Simulation**

Go to the book's companion website, at [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), to find an interactive problem that simulates the computerized CPA exam. The professional simulation for this chapter asks you to address questions related to the accounting for stock options and EPS computations.

**Remember to check the book's companion website to find additional resources for this chapter.**

## CHAPTER 17

# INVESTMENTS

### LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Identify the three categories of debt securities and describe the accounting and reporting treatment for each category.
- 2 Understand the procedures for discount and premium amortization on bond investments.
- 3 Identify the categories of equity securities and describe the accounting and reporting treatment for each category.
- 4 Explain the equity method of accounting and compare it to the fair value method for equity securities.
- 5 Describe the accounting for the fair value option.
- 6 Discuss the accounting for impairments of debt and equity investments.
- 7 Explain why companies report reclassification adjustments.
- 8 Describe the accounting for transfer of investment securities between categories.

#### WHO'S IN CONTROL HERE?

**The Coca-Cola Company (Coke)** owns 36 percent of the shares of **Coca-Cola Enterprises** (a U.S. bottling business); **PepsiCo Inc.** owns 46 percent of **The Pepsi Bottling Group (PBG)** and 41 percent of **PepsiAmericas**. These bottling businesses are very important to Coca-Cola and PepsiCo because they are the primary distributors of Coke and Pepsi products. In return, these companies depend on Coca-Cola and PepsiCo to provide significant marketing and distribution development support. Indeed, it can be said that Coca-Cola and PepsiCo control the bottling companies, who would not exist without their support.

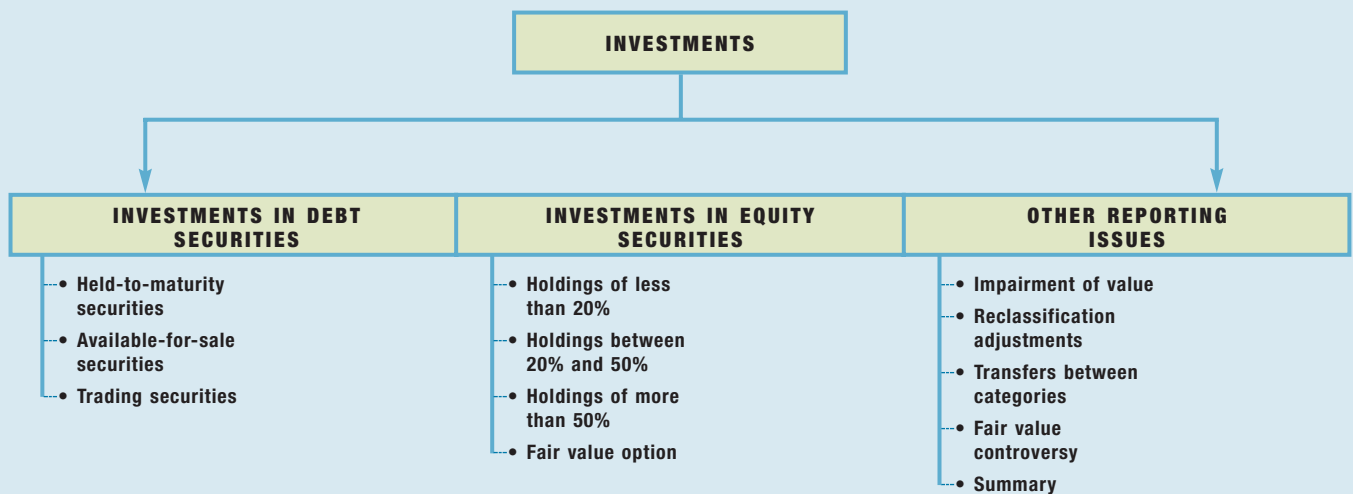

However, because The Coca-Cola Company and PepsiCo own less than 50 percent of the shares in these companies, they do not prepare consolidated financial statements. Instead, Coca-Cola and PepsiCo account for these investments using the *equity method*. Under the equity method, for example, Coca-Cola reports a single income item for its profits from the bottlers, and only the net amount of its investment in the balance sheet.

Equity-method accounting gives Coca-Cola and PepsiCo pristine balance sheets and income statements, by separating the assets and liabilities and the profit margins of these bottlers from its beverage-making business. What's more, the International Accounting Standards Board (IASB) has issued *IAS No. 28*, which requires that companies use the equity method. Previously, many international companies were permitted to use either the equity method or proportional consolidation for investments similar to Coke's and Pepsi's. It is good news that both U.S. and international companies are following the same rules. (On the negative side, however, some of these companies should be consolidated but are not.)

A final point: In response to a recent FASB pronouncement, companies are now starting to consolidate more of their 20 to 50 percent-owned investments. Consolidation of entities, such as the Coke and Pepsi bottlers, may be required if the risks and rewards of those investments accrue primarily to Coke and Pepsi. [1] In fact, Coke has consolidated some of its bottling companies, which should result in the reporting of more complete information on these affiliated companies.

## PREVIEW OF CHAPTER 17

As our opening story indicates, U.S. and international standard-setters are studying the measurement, recognition, and disclosure for certain investments. In this chapter we address the accounting for debt and equity investments. Appendices to this chapter discuss the accounting for derivative instruments, variable-interest entities, and fair value disclosures. The content and organization of this chapter are as follows.

## INVESTMENT ACCOUNTING APPROACHES

Companies have different motivations for investing in securities issued by other companies.<sup>1</sup> **One motivation is to earn a high rate of return.** For example, companies like **Coca-Cola** and **PepsiCo** can receive interest revenue from a debt investment or dividend revenue from an equity investment. In addition, they can realize capital gains on both types of securities. **Another motivation for investing (in equity securities) is to secure certain operating or financing arrangements with another company.** As in the opening story, **Coca-Cola** and **PepsiCo** are able to exercise some control over bottler companies based on their significant (but not controlling) equity investments.

To provide useful information, companies account for investments based on the type of security (debt or equity) and their intent with respect to the investment. As indicated in Illustration 17-1, we organize our study of investments by type of security. Within each section, we explain how the accounting for investments in debt and equity securities varies according to management intent.

**ILLUSTRATION 17-1**  
Summary of Investment  
Accounting Approaches

Types of Security	Management Intent	Valuation Approach
Debt (Section 1)	No plans to sell	Amortized cost
	Plan to sell	Fair value
Equity (Section 2)	Plan to sell	Fair value
	Exercise some control	Equity method

## SECTION 1 • INVESTMENTS IN DEBT SECURITIES

**Debt securities** represent a creditor relationship with another entity. Debt securities include U.S. government securities, municipal securities, corporate bonds, convertible debt, and commercial paper. Trade accounts receivable and loans receivable are not debt securities because they do not meet the definition of a security.

Companies group investments in debt securities into three separate categories for accounting and reporting purposes:

**Objective • 1**  
Identify the three categories of debt securities and describe the accounting and reporting treatment for each category.

- **Held-to-maturity:** Debt securities that the company has the positive intent and ability to hold to maturity.
- **Trading:** Debt securities bought and held primarily for sale in the near term to generate income on short-term price differences.
- **Available-for-sale:** Debt securities not classified as held-to-maturity or trading securities.

Illustration 17-2 (on page 859) identifies these categories, along with the accounting and reporting treatments required for each.

<sup>1</sup>A **security** is a share, participation, or other interest in property or in an enterprise of the issuer or an obligation of the issuer that has the following three characteristics: (a) It either is represented by an instrument issued in bearer or registered form or, if not represented by an instrument, is registered in books maintained to record transfers by or on behalf of the issuer. (b) It is of a type commonly traded on securities exchanges or markets or, when represented by an instrument, is commonly recognized in any area in which it is issued or dealt in as a medium for investment. (c) It either is one of a class or series or by its terms is divisible into a class or series of shares, participations, interests, or obligations. [2]

Category	Valuation	Unrealized Holding Gains or Losses	Other Income Effects
Held-to-maturity	Amortized cost	Not recognized	Interest when earned; gains and losses from sale.
Trading securities	Fair value	Recognized in net income	Interest when earned; gains and losses from sale.
Available-for-sale	Fair value	Recognized as other comprehensive income and as separate component of stockholders' equity	Interest when earned; gains and losses from sale.

**ILLUSTRATION 17-2**  
Accounting for Debt Securities by Category

**Amortized cost** is the acquisition cost adjusted for the amortization of discount or premium, if appropriate. **Fair value** is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. [3]

**Underlying Concepts**

Companies report some debt securities at fair value not only because the information is relevant but also because it is reliable.

## HELD-TO-MATURITY SECURITIES

Only debt securities can be classified as held-to-maturity. By definition, equity securities have no maturity date. A company like Starbucks should classify a debt security as **held-to-maturity** only if it has **both (1) the positive intent and (2) the ability to hold those securities to maturity**. It should not classify a debt security as held-to-maturity if it intends to hold the security for an indefinite period of time. Likewise, if Starbucks anticipates that a sale may be necessary due to changes in interest rates, foreign currency risk, liquidity needs, or other asset-liability management reasons, it should not classify the security as held-to-maturity.<sup>2</sup>

Companies account for held-to-maturity securities at **amortized cost**, not fair value. If management intends to hold certain investment securities to maturity and has no plans to sell them, fair values (selling prices) are not relevant for measuring and evaluating the cash flows associated with these securities. Finally, because companies do not adjust held-to-maturity securities to fair value, these securities do not increase the volatility of either reported earnings or reported capital as do trading securities and available-for-sale securities.

To illustrate the accounting for held-to-maturity debt securities, assume that Robinson Company purchased \$100,000 of 8 percent bonds of Evermaster Corporation on January 1, 2009, at a discount, paying \$92,278. The bonds mature January 1,

**Objective 2**

Understand the procedures for discount and premium amortization on bond investments.

	Inputs	Answer
N	10	
I	5	
PV	?	-92,278
PMT	4,000	
FV	100,000	

<sup>2</sup>The FASB defines situations where, even though a company sells a security before maturity, it has constructively held the security to maturity, and thus does not violate the held-to-maturity requirement. These include selling a security close enough to maturity (such as three months) so that interest rate risk is no longer an important pricing factor.

However, companies must be extremely careful with debt securities held to maturity. If a company prematurely sells a debt security in this category, the sale may "taint" the entire held-to-maturity portfolio. That is, a management's statement regarding "intent" is no longer credible. Therefore the company may have to reclassify the securities. This could lead to unfortunate consequences. An interesting by-product of this situation is that companies that wish to retire their debt securities early are finding it difficult to do so. The holder will not sell because the securities are classified as held-to-maturity.

2014 and yield 10%; interest is payable each July 1 and January 1. Robinson records the investment as follows:

**January 1, 2009**

Held-to-Maturity Securities	92,278	
Cash		92,278

Robinson uses a Held-to-Maturity Securities account to indicate the type of debt security purchased.

As indicated in Chapter 14, companies must amortize premium or discount using the **effective-interest method** unless some other method—such as the straight-line method—yields a similar result. They apply the effective-interest method to bond investments in a way similar to that for bonds payable. To compute interest revenue, companies compute the effective-interest rate or yield at the time of investment and apply that rate to the beginning carrying amount (book value) for each interest period. The investment carrying amount is increased by the amortized discount or decreased by the amortized premium in each period.

Illustration 17-3 shows the effect of the discount amortization on the interest revenue that Robinson records each period for its investment in Evermaster bonds.

**Underlying Concepts**

The use of some simpler method that yields results similar to the effective-interest method is an application of the materiality concept.

**ILLUSTRATION 17-3**  
Schedule of Interest Revenue and Bond Discount Amortization—Effective-Interest Method

8% BONDS PURCHASED TO YIELD 10%				
Date	Cash Received	Interest Revenue	Bond Discount Amortization	Carrying Amount of Bonds
1/1/09				\$ 92,278
7/1/09	\$ 4,000 <sup>a</sup>	\$ 4,614 <sup>b</sup>	\$ 614 <sup>c</sup>	92,892 <sup>d</sup>
1/1/10	4,000	4,645	645	93,537
7/1/10	4,000	4,677	677	94,214
1/1/11	4,000	4,711	711	94,925
7/1/11	4,000	4,746	746	95,671
1/1/12	4,000	4,783	783	96,454
7/1/12	4,000	4,823	823	97,277
1/1/13	4,000	4,864	864	98,141
7/1/13	4,000	4,907	907	99,048
1/1/14	4,000	4,952	952	100,000
	\$40,000	\$47,722	\$7,722	

<sup>a</sup>\$4,000 = \$100,000 × .08 × ½  
<sup>b</sup>\$4,614 = \$92,278 × .10 × ½  
<sup>c</sup>\$614 = \$4,614 – \$4,000  
<sup>d</sup>\$92,892 = \$92,278 + \$614

Robinson records the receipt of the first semiannual interest payment on July 1, 2009 (using the data in Illustration 17-3), as follows:

**July 1, 2009**

Cash	4,000	
Held-to-Maturity Securities	614	
Interest Revenue		4,614

Because Robinson is on a calendar-year basis, it accrues interest and amortizes the discount at December 31, 2009, as follows.

**December 31, 2009**

Interest Receivable	4,000	
Held-to-Maturity Securities	645	
Interest Revenue		4,645

Again, Illustration 17-3 shows the interest and amortization amounts.

Robinson reports its investment in Evermaster bonds in its December 31, 2009, financial statements, as follows.

<b>Balance Sheet</b>	
Current assets	
Interest receivable	\$ 4,000
Long-term investments	
Held-to-maturity securities, at amortized cost	\$93,537
<b>Income Statement</b>	
Other revenues and gains	
Interest revenue	\$ 9,259

**ILLUSTRATION 17-4**  
Reporting of Held-to-Maturity Securities

Sometimes a company sells a held-to-maturity debt security so close to its maturity date that a change in the market interest rate would not significantly affect the security's fair value. Such a sale may be considered a sale at maturity and would not call into question the company's original intent to hold the investment to maturity. Let's assume, as an example, that Robinson Company sells its investment in Evermaster bonds on November 1, 2013, at 99¾ plus accrued interest. The discount amortization from July 1, 2013, to November 1, 2013, is \$635 ( $\frac{1}{4} \times \$952$ ). Robinson records this discount amortization as follows.

<b>November 1, 2013</b>	
Held-to-Maturity Securities	635
Interest Revenue	635

Illustration 17-5 shows the computation of the realized gain on the sale.

Selling price of bonds (exclusive of accrued interest)	\$99,750
Less: Book value of bonds on November 1, 2013:	
Amortized cost, July 1, 2013	\$99,048
Add: Discount amortized for the period July 1, 2013, to November 1, 2013	635
	99,683
<b>Gain on sale of bonds</b>	<b>\$ 67</b>

**ILLUSTRATION 17-5**  
Computation of Gain on Sale of Bonds

Robinson records the sale of the bonds as:

<b>November 1, 2013</b>	
Cash	102,417
Interest Revenue ( $\frac{4}{6} \times \$4,000$ )	2,667
Held-to-Maturity Securities	99,683
Gain on Sale of Securities	67

The credit to Interest Revenue represents accrued interest for four months, for which the purchaser pays cash. The debit to Cash represents the selling price of the bonds plus accrued interest (\$99,750 + \$2,667). The credit to Held-to-Maturity Securities represents the book value of the bonds on the date of sale. The credit to Gain on Sale of Securities represents the excess of the selling price over the book value of the bonds.

## AVAILABLE-FOR-SALE SECURITIES

Companies, like **Amazon.com**, report **available-for-sale** securities at fair value. It records the unrealized gains and losses related to changes in the fair value of available-for-sale debt securities in an unrealized holding gain or loss account. Amazon adds (subtracts) this amount to other comprehensive income for the period. Other comprehensive income is then added to (subtracted from) accumulated other comprehensive income, which is shown as a separate component of

### Underlying Concepts

Recognizing unrealized gains and losses is an application of the concept of comprehensive income.

**Calculator Solution for Bond Price**

	Inputs	Answer
N	10	
I	4	
PV	?	-108,111
PMT	5,000	
FV	100,000	

stockholders' equity until realized. Thus, **companies report available-for-sale securities at fair value on the balance sheet, but do not report changes in fair value as part of net income until after selling the security.** This approach reduces the volatility of net income.

### Example: Single Security

To illustrate the accounting for available-for-sale securities, assume that Graff Corporation purchases \$100,000, 10 percent, five-year bonds on January 1, 2009, with interest payable on July 1 and January 1. The bonds sell for \$108,111, which results in a bond premium of \$8,111 and an effective interest rate of 8 percent.

Graff records the purchase of the bonds as follows.<sup>3</sup>

**January 1, 2009**

Available-for-Sale Securities	108,111	
Cash		108,111

Illustration 17-6 discloses the effect of the premium amortization on the interest revenue Graff records each period using the effective-interest method.

**ILLUSTRATION 17-6**  
Schedule of Interest Revenue and Bond Premium Amortization—Effective-Interest Method

10% BONDS PURCHASED TO YIELD 8%				
Date	Cash Received	Interest Revenue	Bond Premium Amortization	Carrying Amount of Bonds
1/1/09				<b>\$108,111</b>
7/1/09	\$ 5,000 <sup>a</sup>	\$ 4,324 <sup>b</sup>	\$ 676 <sup>c</sup>	107,435 <sup>d</sup>
1/1/10	5,000	4,297	703	106,732
7/1/10	5,000	4,269	731	106,001
1/1/11	5,000	4,240	760	105,241
7/1/11	5,000	4,210	790	104,451
1/1/12	5,000	4,178	822	103,629
7/1/12	5,000	4,145	855	102,774
1/1/13	5,000	4,111	889	101,885
7/1/13	5,000	4,075	925	100,960
1/1/14	5,000	4,040	960	100,000
	<u>\$50,000</u>	<u>\$41,889</u>	<u>\$8,111</u>	

<sup>a</sup>\$5,000 = \$100,000 × .10 × ½  
<sup>b</sup>\$4,324 = \$108,111 × .08 × ½  
<sup>c</sup>\$676 = \$5,000 - \$4,324  
<sup>d</sup>\$107,435 = \$108,111 - \$676

The entry to record interest revenue on July 1, 2009, is as follows.

**July 1, 2009**

Cash	5,000	
Available-for-Sale Securities		676
Interest Revenue		4,324

At December 31, 2009, Graff makes the following entry to recognize interest revenue.

**December 31, 2009**

Interest Receivable	5,000	
Available-for-Sale Securities		703
Interest Revenue		4,297

As a result, Graff reports revenue for 2009 of \$8,621 (\$4,324 + \$4,297).

<sup>3</sup>Companies generally record investments acquired at par, at a discount, or at a premium in the accounts at cost, including brokerage and other fees but excluding the accrued interest. They generally do not record investments at maturity value. The use of a separate discount or premium account as a valuation account is acceptable procedure for investments, but in practice companies do not widely use it.

To apply the fair value method to these debt securities, assume that at year-end the fair value of the bonds is \$105,000 and that the carrying amount of the investments is \$106,732. Comparing this fair value with the carrying amount (amortized cost) of the bonds at December 31, 2009, Graff recognizes an unrealized holding loss of \$1,732 (\$106,732 – \$105,000). It reports this loss as other comprehensive income. Graff makes the following entry.

<b>December 31, 2009</b>		
Unrealized Holding Gain or Loss—Equity	1,732	
Securities Fair Value Adjustment (Available-for-Sale)		1,732

Graff uses a valuation account instead of crediting the Available-for-Sale Securities account. The use of the **Securities Fair Value Adjustment (Available-for-Sale) account** enables the company to maintain a record of its amortized cost. Because the adjustment account has a credit balance in this case, Graff subtracts it from the balance of the Available-for-Sale Securities account to determine fair value. Graff reports this fair value amount on the balance sheet. At each reporting date, Graff reports the bonds at fair value with an adjustment to the Unrealized Holding Gain or Loss—Equity account.

### Example: Portfolio of Securities

To illustrate the accounting for a portfolio of securities, assume that Webb Corporation has two debt securities classified as available-for-sale. Illustration 17-7 identifies the amortized cost, fair value, and the amount of the unrealized gain or loss.

<b>AVAILABLE-FOR-SALE DEBT SECURITY PORTFOLIO</b>			
<b>DECEMBER 31, 2010</b>			
Investments	Amortized Cost	Fair Value	Unrealized Gain (Loss)
Watson Corporation 8% bonds	\$ 93,537	\$103,600	\$ 10,063
Anacomp Corporation 10% bonds	<u>200,000</u>	<u>180,400</u>	<u>(19,600)</u>
Total of portfolio	<u>\$293,537</u>	<u>\$284,000</u>	(9,537)

Securities fair value adjustment—Cr.			<u style="color: red;">\$ (9,537)</u>

**ILLUSTRATION 17-7**  
Computation of Securities Fair Value Adjustment—Available-for-Sale Securities (2010)

The fair value of Webb’s available-for-sale portfolio totals \$284,000. The gross unrealized gains are \$10,063, and the gross unrealized losses are \$19,600, resulting in a net unrealized loss of \$9,537. That is, the fair value of available-for-sale securities is \$9,537 lower than its amortized cost. Webb makes an adjusting entry to a valuation allowance to record the decrease in value and to record the loss as follows.

<b>December 31, 2010</b>		
Unrealized Holding Gain or Loss—Equity	9,537	
Securities Fair Value Adjustment (Available-for-Sale)		9,537

Webb reports the unrealized holding loss of \$9,537 as other comprehensive income and a reduction of stockholders’ equity. Recall that companies exclude from net income any unrealized holding gains and losses related to available-for-sale securities.

### Sale of Available-for-Sale Securities

If a company sells bonds carried as investments in available-for-sale securities before the maturity date, it must make entries to remove from the Available-for-Sale Securities account the amortized cost of bonds sold. To illustrate, assume that Webb Corporation sold the Watson bonds (from Illustration 17-7) on July 1, 2011, for \$90,000, at which time it had an amortized cost of \$94,214. Illustration 17-8 (on page 864) shows the computation of the realized loss.

**ILLUSTRATION 17-8**

Computation of Loss on Sale of Bonds

Amortized cost (Watson bonds)	\$94,214
Less: Selling price of bonds	<u>90,000</u>
<b>Loss on sale of bonds</b>	<b><u>\$ 4,214</u></b>

Webb records the sale of the Watson bonds as follows.

July 1, 2011		
Cash	90,000	
Loss on Sale of Securities	4,214	
Available-for-Sale Securities		94,214

Webb reports this realized loss in the "Other expenses and losses" section of the income statement. Assuming no other purchases and sales of bonds in 2011, Webb on December 31, 2011, prepares the information shown in Illustration 17-9.

**ILLUSTRATION 17-9**

Computation of Securities Fair Value Adjustment—Available-for-Sale (2011)

AVAILABLE-FOR-SALE DEBT SECURITY PORTFOLIO DECEMBER 31, 2011			
Investments	Amortized Cost	Fair Value	Unrealized Gain (Loss)
Anacomp Corporation 10% bonds (total portfolio)	<u>\$200,000</u>	<u>\$195,000</u>	\$(5,000)
Previous securities fair value adjustment balance—Cr.			<u>(9,537)</u>
<b>Securities fair value adjustment—Dr.</b>			<b><u>\$ 4,537</u></b>

Webb has an unrealized holding loss of \$5,000. However, the Securities Fair Value Adjustment account already has a credit balance of \$9,537. To reduce the adjustment account balance to \$5,000, Webb debits it for \$4,537, as follows.

December 31, 2011		
Securities Fair Value Adjustment (Available-for-Sale)	4,537	
Unrealized Holding Gain or Loss—Equity		4,537

## Financial Statement Presentation

Webb's December 31, 2011, balance sheet and the 2011 income statement include the following items and amounts (the Anacomp bonds are long-term investments but are not intended to be held to maturity).

**ILLUSTRATION 17-10**

Reporting of Available-for-Sale Securities

Balance Sheet	
Current assets	
Interest receivable	\$ xxx
Investments	
Available-for-sale securities, at fair value	\$195,000
Stockholders' equity	
Accumulated other comprehensive loss	\$ 5,000
Income Statement	
Other revenues and gains	
Interest revenue	\$ xxx
Other expenses and losses	
Loss on sale of securities	\$ 4,214

Some favor including the unrealized holding gain or loss in net income rather than showing it as other comprehensive income.<sup>4</sup> However, some companies, particularly financial institutions, note that recognizing gains and losses on assets, but not liabilities, introduces substantial volatility in net income. They argue that hedges often exist between assets and liabilities so that gains in assets are offset by losses in liabilities, and vice versa. In short, to recognize gains and losses only on the asset side is unfair and not representative of the economic activities of the company.

This argument convinced the FASB. As a result, companies **do not include in net income** these unrealized gains and losses. [4] However, even this approach solves only some of the problems, because **volatility of capital** still results. This is of concern to financial institutions because regulators restrict financial institutions' operations based on their level of capital. In addition, companies can still manage their net income by engaging in **gains trading** (i.e., selling the winners and holding the losers).

### WHAT IS FAIR VALUE?

In the fall of 2000, Wall Street brokerage firm **Morgan Stanley** told investors that rumor of big losses in its bond portfolio were "greatly exaggerated." As it turns out, Morgan Stanley also was exaggerating.

As a result, the SEC accused Morgan Stanley of violating securities laws by overstating the value of certain bonds by \$75 million. The overvaluations stemmed more from wishful thinking than reality, in violation of generally accepted accounting principles, the SEC said. "In effect, Morgan Stanley valued its positions at the price at which it thought a willing buyer and seller should enter into an exchange, rather than at a price at which a willing buyer and a willing seller would enter into a current exchange," the SEC wrote.

Especially egregious, stated one accounting expert, were the SEC's findings that Morgan Stanley in some instances used its own more optimistic assumptions as a substitute for external pricing sources. "What that is saying is: 'Fair value is what you want the value to be. Pick a number . . .' That's especially troublesome."

As indicated in the text, the FASB is assessing what is fair and what isn't when it comes to assigning valuations. Concerns over the issue caught fire after the collapses of **Enron Corp.** and other energy traders that abused the wide discretion given them under fair value accounting. Investors recently have expressed similar worries about some financial companies, which use internal—and subjectively designed—mathematical models to come up with valuations when market quotes aren't available.

*What do the numbers mean?*

## TRADING SECURITIES

Companies hold **trading securities** with the intention of selling them in a short period of time. "Trading" in this context means frequent buying and selling. Companies thus use trading securities to generate profits from short-term differences in price. Companies generally hold these securities for less than three months, some for merely days or hours.

**Companies report trading securities at fair value, with unrealized holding gains and losses reported as part of net income.** Similar to held-to-maturity or available-for-sale investments, they are required to amortize any discount or premium. A **holding gain or loss** is the net change in the fair value of a security from one period to another, exclusive of dividend or interest revenue recognized but not received. In short, the FASB says to adjust the trading securities to fair value, at each reporting date. In addition, companies report the change in value as part of net income, not other comprehensive income.

<sup>4</sup>In Chapter 4, we discussed the reporting of other comprehensive income and the concept of comprehensive income.

To illustrate, assume that on December 31, 2010, Western Publishing Corporation determined its trading securities portfolio to be as shown in Illustration 17-11. (Assume that 2010 is the first year that Western Publishing held trading securities.) At the date of acquisition, Western Publishing recorded these trading securities at cost, including brokerage commissions and taxes, in the account entitled Trading Securities. This is the first valuation of this recently purchased portfolio.

**ILLUSTRATION 17-11**  
Computation of Securities  
Fair Value Adjustment—  
Trading Securities  
Portfolio (2010)

TRADING DEBT SECURITY PORTFOLIO DECEMBER 31, 2010			
Investments	Cost	Fair Value	Unrealized Gain (Loss)
<b>Burlington Northern</b> 10% bonds	\$ 43,860	\$ 51,500	\$ 7,640
<b>GM Corporation</b> 11% bonds	184,230	175,200	(9,030)
<b>Time Warner</b> 8% bonds	86,360	91,500	5,140
Total of portfolio	<u>\$314,450</u>	<u>\$318,200</u>	3,750
Previous securities fair value adjustment balance			<u>-0-</u>
Securities fair value adjustment—Dr.			<u>\$3,750</u>

**INTERNATIONAL  
INSIGHT**

iGAAP provides for classification as trading, available-for-sale, or held-to-maturity for all types of financial assets. U.S. GAAP applies these classifications only to securities.

The total cost of Western Publishing's trading portfolio is \$314,450. The gross unrealized gains are \$12,780 (\$7,640 + \$5,140), and the gross unrealized losses are \$9,030, resulting in a net unrealized gain of \$3,750. The fair value of trading securities is \$3,750 greater than its cost.

At December 31, Western Publishing makes an adjusting entry to a valuation allowance, referred to as Securities Fair Value Adjustment (Trading), to record the increase in value and to record the unrealized holding gain.

December 31, 2010	
Securities Fair Value Adjustment (Trading)	3,750
Unrealized Holding Gain or Loss—Income	3,750

Because the Securities Fair Value Adjustment account balance is a debit, Western Publishing adds it to the cost of the Trading Securities account to arrive at a fair value for the trading securities. Western Publishing reports this fair value amount on the balance sheet.

When securities are actively traded, the FASB believes that the investments should be reported at fair value on the balance sheet. In addition, changes in fair value (unrealized gains and losses) should be reported in income. Such reporting on trading securities provides more relevant information to existing and prospective stockholders.

## SECTION 2 • INVESTMENTS IN EQUITY SECURITIES

**Equity securities** represent ownership interests such as common, preferred, or other capital stock. They also include rights to acquire or dispose of ownership interests at an agreed-upon or determinable price, such as in warrants, rights, and call or put options.

Companies do not treat convertible debt securities as equity securities. Nor do they treat as equity securities redeemable preferred stock (which must be redeemed for common stock). The cost of equity securities includes the purchase price of the security plus broker's commissions and other fees incidental to the purchase.

The degree to which one corporation (**investor**) acquires an interest in the common stock of another corporation (**investee**) generally determines the accounting treatment for the investment subsequent to acquisition. The classification of

**Objective 3**

Identify the categories of equity securities and describe the accounting and reporting treatment for each category.

such investments depends on the percentage of the investee voting stock that is held by the investor:

1. Holdings of less than 20 percent (**fair value method**)—investor has passive interest.
2. Holdings between 20 percent and 50 percent (**equity method**)—investor has significant influence.
3. Holdings of more than 50 percent (**consolidated statements**)—investor has controlling interest.

Illustration 17-12 lists these levels of interest or influence and the corresponding valuation and reporting method that companies must apply to the investment.

Percentage of Ownership	0%	←————→ 20%	←————→ 50%	←————→ 100%
Level of Influence	Little or None		Significant	Control
Valuation Method	Fair Value Method		Equity Method	Consolidation

**ILLUSTRATION 17-12**  
Levels of Influence Determine Accounting Methods

The accounting and reporting for equity securities therefore depend on the level of influence and the type of security involved, as shown in Illustration 17-13.

Category	Valuation	Unrealized Holding Gains or Losses	Other Income Effects
<b>Holdings less than 20%</b>			
1. Available-for-sale	Fair value	Recognized in “Other comprehensive income” and as separate component of stockholders’ equity	Dividends declared; gains and losses from sale.
2. Trading	Fair value	Recognized in net income	Dividends declared; gains and losses from sale.
<b>Holdings between 20% and 50%</b>			
	Equity	Not recognized	Proportionate share of investee’s net income.
<b>Holdings more than 50%</b>			
	Consolidation	Not recognized	Not applicable.

**ILLUSTRATION 17-13**  
Accounting and Reporting for Equity Securities by Category

## HOLDINGS OF LESS THAN 20%

When an investor has an interest of less than 20 percent, it is presumed that the investor has little or no influence over the investee. In such cases, if market prices are available subsequent to acquisition, the company values and reports the investment using the **fair value method**.<sup>5</sup> The fair value method requires that companies classify equity securities at acquisition as **available-for-sale securities** or **trading securities**. Because equity securities have no maturity date, companies cannot classify them as held-to-maturity.

<sup>5</sup>If an equity investment is not publicly traded, a company values the investment and reports it at cost in periods subsequent to acquisition. This approach is often referred to as the **cost method**. Companies recognize dividends when received. They value the portfolio and report it at acquisition cost. Companies only recognize gains or losses after selling the securities.

## Available-for-Sale Securities

Upon acquisition, companies record available-for-sale securities at cost.<sup>6</sup> To illustrate, assume that on November 3, 2010 Republic Corporation purchased common stock of three companies, each investment representing less than a 20 percent interest.

	Cost
<b>Northwest Industries, Inc.</b>	\$259,700
<b>Campbell Soup Co.</b>	317,500
<b>St. Regis Pulp Co.</b>	141,350
Total cost	<u>\$718,550</u>

Republic records these investments as follows.

November 3, 2010		
Available-for-Sale Securities	718,550	
Cash		718,550

On December 6, 2010, Republic receives a cash dividend of \$4,200 on its investment in the common stock of Campbell Soup Co. It records the cash dividend as follows.

December 6, 2010		
Cash	4,200	
Dividend Revenue		4,200

All three of the investee companies reported net income for the year, but only Campbell Soup declared and paid a dividend to Republic. But, recall that when an investor owns less than 20 percent of the common stock of another corporation, it is presumed that the investor has relatively little influence on the investee. As a result, **net income earned by the investee is not a proper basis for recognizing income from the investment by the investor.** Why? Because the increased net assets resulting from profitable operations may be permanently retained for use in the investee's business. Therefore, **the investor earns net income only when the investee declares cash dividends.**

At December 31, 2010, Republic's available-for-sale equity security portfolio has the cost and fair value shown in Illustration 17-14.

**ILLUSTRATION 17-14**  
Computation of Securities  
Fair Value Adjustment—  
Available-for-Sale Equity  
Security Portfolio (2010)

AVAILABLE-FOR-SALE EQUITY SECURITY PORTFOLIO			
DECEMBER 31, 2010			
Investments	Cost	Fair Value	Unrealized Gain (Loss)
<b>Northwest Industries, Inc.</b>	\$259,700	\$275,000	\$ 15,300
<b>Campbell Soup Co.</b>	317,500	304,000	(13,500)
<b>St. Regis Pulp Co.</b>	141,350	104,000	(37,350)
Total of portfolio	<u>\$718,550</u>	<u>\$683,000</u>	(35,550)
Previous securities fair value adjustment balance			-0-
Securities fair value adjustment—Cr.			<u><u>\$(35,550)</u></u>

<sup>6</sup>Companies should record equity securities acquired in **exchange for noncash consideration** (property or services) at (1) the fair value of the consideration given, or (2) the fair value of the security received, whichever is more clearly determinable. Accounting for numerous purchases of securities requires the preservation of information regarding the cost of individual purchases, as well as the dates of purchases and sales. If **specific identification** is not possible, companies may use an **average cost** for multiple purchases of the same class of security. The **first-in, first-out method (FIFO)** of assigning costs to investments at the time of sale is also acceptable and normally employed.

For Republic’s available-for-sale equity securities portfolio, the gross unrealized gains are \$15,300, and the gross unrealized losses are \$50,850 (\$13,500 + \$37,350), resulting in a net unrealized loss of \$35,550. The fair value of the available-for-sale securities portfolio is below cost by \$35,550.

As with available-for-sale **debt** securities, Republic records the net unrealized gains and losses related to changes in the fair value of available-for-sale **equity** securities in an Unrealized Holding Gain or Loss—Equity account. Republic reports this amount as a **part of other comprehensive income and as a component of other accumulated comprehensive income (reported in stockholders’ equity) until realized**. In this case, Republic prepares an adjusting entry debiting the Unrealized Holding Gain or Loss—Equity account and crediting the Securities Fair Value Adjustment account to record the decrease in fair value and to record the loss as follows.

**December 31, 2010**

Unrealized Holding Gain or Loss—Equity	35,550	
Securities Fair Value Adjustment (Available-for-Sale)		35,550

On January 23, 2011, Republic sold all of its Northwest Industries, Inc. common stock receiving net proceeds of \$287,220. Illustration 17-15 shows the computation of the realized gain on the sale.

Net proceeds from sale	\$287,220
Cost of <b>Northwest</b> shares	<u>259,700</u>
<b>Gain on sale of stock</b>	<u><b>\$ 27,520</b></u>

**ILLUSTRATION 17-15**  
Computation of Gain on Sale of Stock

Republic records the sale as follows.

**January 23, 2011**

Cash	287,220	
Available-for-Sale Securities		259,700
Gain on Sale of Stock		27,520

In addition, assume that on February 10, 2011, Republic purchased 20,000 shares of Continental Trucking at a market price of \$12.75 per share plus brokerage commissions of \$1,850 (total cost, \$256,850).

Illustration 17-16 lists Republic’s portfolio of available-for-sale securities, as of December 31, 2011.

AVAILABLE-FOR-SALE EQUITY SECURITY PORTFOLIO			
DECEMBER 31, 2011			
Investments	Cost	Fair Value	Unrealized Gain (Loss)
<b>Continental Trucking</b>	\$256,850	\$278,350	\$21,500
<b>Campbell Soup Co.</b>	317,500	362,550	45,050
<b>St. Regis Pulp Co.</b>	<u>141,350</u>	<u>139,050</u>	<u>(2,300)</u>
Total of portfolio	<u>\$715,700</u>	<u>\$779,950</u>	64,250
Previous securities fair value adjustment balance—Cr.			<u>(35,550)</u>
<b>Securities fair value adjustment—Dr.</b>			<u><b>\$99,800</b></u>

**ILLUSTRATION 17-16**  
Computation of Securities Fair Value Adjustment—Available-for-Sale Equity Security Portfolio (2011)

At December 31, 2011, the fair value of Republic’s available-for-sale equity securities portfolio exceeds cost by \$64,250 (unrealized gain). The Securities Fair Value Adjustment account had a credit balance of \$35,550 at December 31, 2011. To adjust its December 31, 2011, available-for-sale portfolio to fair value, the company debits the

Securities Fair Value Adjustment account for \$99,800 (\$35,550 + \$64,250). Republic records this adjustment as follows.

December 31, 2011		
Securities Fair Value Adjustment (Available-for-Sale)	99,800	
Unrealized Holding Gain or Loss—Equity		99,800

## Trading Securities

The accounting entries to record trading equity securities are the same as for available-for-sale equity securities, except for recording the unrealized holding gain or loss. For trading equity securities, companies **report the unrealized holding gain or loss as part of net income**. Thus, the account titled Unrealized Holding Gain or Loss—Income is used.

---

## HOLDINGS BETWEEN 20% AND 50%

An investor corporation may hold an interest of less than 50 percent in an investee corporation and thus not possess legal control. However, as shown in our opening story about **Coca-Cola**, an investment in voting stock of less than 50 percent can still give Coke (the investor) the ability to exercise significant influence over the operating and financial policies of its bottlers. [5] **Significant influence** may be indicated in several ways. Examples include representation on the board of directors, participation in policy-making processes, material intercompany transactions, interchange of managerial personnel, or technological dependency.

Another important consideration is the extent of ownership by an investor in relation to the concentration of other shareholdings. To achieve a reasonable degree of uniformity in application of the “significant influence” criterion, the profession concluded that an investment (direct or indirect) of 20 percent or more of the voting stock of an investee should lead to a presumption that in the absence of evidence to the contrary, an investor has the ability to exercise significant influence over an investee.<sup>7</sup>

In instances of “significant influence” (generally an investment of 20 percent or more), the investor must account for the investment using the **equity method**.

## Equity Method

### Objective 4

Explain the equity method of accounting and compare it to the fair value method for equity securities.

Under the **equity method**, the investor and the investee acknowledge a substantive economic relationship. The company originally records the investment at the cost of the shares acquired but subsequently adjusts the amount each period for changes in the investee’s net assets. That is, **the investor’s proportionate share of the earnings (losses) of the investee periodically increases (decreases) the investment’s carrying amount. All dividends received by the investor from the investee also decrease the investment’s carrying amount.** The equity method recognizes that investee’s earnings increase investee’s net assets, and that investee’s losses and dividends decrease these net assets.

<sup>7</sup>Cases in which an investment of 20 percent or more might not enable an investor to exercise significant influence include:

- (1) The investee opposes the investor’s acquisition of its stock.
- (2) The investor and investee sign an agreement under which the investor surrenders significant shareholder rights.
- (3) The investor’s ownership share does not result in “significant influence” because majority ownership of the investee is concentrated among a small group of shareholders who operate the investee without regard to the views of the investor.
- (4) The investor tries and fails to obtain representation on the investee’s board of directors. [6]

To illustrate the equity method and compare it with the fair value method, assume that Maxi Company purchases a 20 percent interest in Mini Company. To apply the fair value method in this example, assume that Maxi does not have the ability to exercise significant influence, and classifies the securities as available-for-sale. Where this example applies the equity method, assume that the 20 percent interest permits Maxi to exercise significant influence. Illustration 17-17 shows the entries.

**ILLUSTRATION 17-17**  
Comparison of Fair Value Method and Equity Method

ENTRIES BY MAXI COMPANY			
Fair Value Method		Equity Method	
<b>On January 2, 2010, Maxi Company acquired 48,000 shares (20% of Mini Company common stock) at a cost of \$10 a share.</b>			
Available-for-Sale-Securities	480,000	Investment in Mini Stock	480,000
Cash	480,000	Cash	480,000
<b>For the year 2010, Mini Company reported net income of \$200,000; Maxi Company's share is 20%, or \$40,000.</b>			
No entry		Investment in Mini Stock	40,000
		Revenue from Investment	40,000
<b>At December 31, 2010, the 48,000 shares of Mini Company have a fair value (market price) of \$12 a share, or \$576,000.</b>			
Securities Fair Value Adjustment (Available-for-Sale)	96,000	No entry	
Unrealized Holding Gain or Loss—Equity	96,000		
<b>On January 28, 2011, Mini Company announced and paid a cash dividend of \$100,000; Maxi Company received 20%, or \$20,000.</b>			
Cash	20,000	Cash	20,000
Dividend Revenue	20,000	Investment in Mini Stock	20,000
<b>For the year 2011, Mini reported a net loss of \$50,000; Maxi Company's share is 20%, or \$10,000.</b>			
No entry		Loss on Investment	10,000
		Investment in Mini Stock	10,000
<b>At December 31, 2011, the Mini Company 48,000 shares have a fair value (market price) of \$11 a share, or \$528,000.</b>			
Unrealized Holding Gain or Loss—Equity	48,000	No entry	
Securities Fair Value Adjustment (Available-for-Sale)	48,000		

Note that under the fair value method, Maxi reports as revenue only the cash dividends received from Mini. **The earning of net income by Mini (the investee) is not considered a proper basis for recognition of income from the investment by Maxi (the investor).** Why? Mini may permanently retain in the business any increased net assets resulting from its profitable operation. Therefore, Maxi only earns revenue when it receives dividends from Mini.

Under the equity method, Maxi reports as revenue its share of the net income reported by Mini. Maxi records the cash dividends received from Mini as a decrease in the investment carrying value. As a result, Maxi records its share of the net income of Mini in the year when it is earned. With significant influence, Maxi can ensure that Mini will pay dividends, if desired, on any net asset increases resulting from net income. To wait until receiving a dividend ignores the fact that Maxi is better off if the investee has earned income.

Using dividends as a basis for recognizing income poses an additional problem. For example, assume that the investee reports a net loss. However, the investor exerts influence to force a dividend payment from the investee. In this case, the investor reports income, even though the investee is experiencing a loss. **In other words, using dividends as a basis for recognizing income fails to report properly the economics of the situation.**

**INTERNATIONAL INSIGHT**

iGAAP permits companies to measure significant-influence investments using the equity, cost, or fair value methods.

For some companies, equity accounting can be a real pain to the bottom line. For example, **Amazon.com**, the pioneer of Internet retailing, at one time struggled to turn a profit. Furthermore, some of Amazon's equity investments had resulted in Amazon's earnings performance going from bad to worse. In a recent year, Amazon.com disclosed equity stakes in such companies as **Altera International**, **Basis Technology**, **Drugstore.com**, and **Eziba.com**. These equity investees reported losses that made Amazon's already bad bottom line even worse, accounting for up to 22 percent of its reported loss in one year alone.

### Investee Losses Exceed Carrying Amount

If an investor's share of the investee's losses exceeds the carrying amount of the investment, should the investor recognize additional losses? Ordinarily, the investor should discontinue applying the equity method and not recognize additional losses.

If the investor's potential loss is not limited to the amount of its original investment (by guarantee of the investee's obligations or other commitment to provide further financial support), or if imminent return to profitable operations by the investee appears to be assured, the investor should recognize additional losses. [7]

#### Underlying Concepts

Revenue to be recognized should be earned and realized or realizable. A low level of ownership indicates that a company should defer the income from an investee until cash is received.

## HOLDINGS OF MORE THAN 50%

When one corporation acquires a voting interest of more than 50 percent in another corporation, it is said to have a **controlling interest**. In such a relationship, the investor corporation is referred to as the **parent** and the investee corporation as the **subsidiary**. Companies present the investment in the common stock of the subsidiary as a long-term investment on the separate financial statements of the parent.

When the parent treats the subsidiary as an investment, the parent generally prepares **consolidated financial statements**. Consolidated financial statements treat the parent and subsidiary corporations as a single economic entity. (Advanced accounting courses extensively discuss the subject of when and how to prepare consolidated financial statements.) Whether or not consolidated financial statements are prepared, the parent company generally accounts for the investment in the subsidiary **using the equity method** as explained in the previous section of this chapter.

#### INTERNATIONAL INSIGHT

In contrast to U.S. firms, financial statements of non-U.S. companies often include both consolidated (group) statements and parent company financial statements.

#### What do the numbers mean?

### CONSOLIDATE THIS!

Presently the rules for consolidation seem very straightforward: If a company owns more than 50 percent of another company, it generally should be consolidated. If it owns less than 50 percent, it is generally not consolidated. However the FASB recognizes the artificiality of the present test. Determination of who really has control often relies on factors other than stock ownership.

In fact, specific guidelines force consolidation even though stock ownership is not above 50 percent in certain limited situations. For example, **Enron's** failure to consolidate three special purpose entities (SPEs) that it effectively controlled led to an overstatement of income of \$569 million and overstatement of equity of \$1.2 billion. In each of Enron's three SPEs, the GAAP guidelines would have led to consolidation. That is, the following factors indicate that consolidation should have occurred: the majority owner of the special purpose entity (SPE) made only a modest investment; the activities of the SPE primarily benefited Enron; and the substantive risks and rewards related to the assets or debt of the SPE rested directly or indirectly with Enron.

The FASB has issued new guidelines related to SPEs, given all the reporting problems that have surfaced related to SPEs at Enron and other companies. We discuss these new rules in Appendix 17B.

## FAIR VALUE OPTION

As indicated in earlier chapters, companies have the option to report most financial instruments at fair value, with all gains and losses related to changes in fair value reported in the income statement. This option is applied on an instrument-by-instrument basis. The fair value option is generally available only at the time a company first purchases the financial asset or incurs a financial liability. If a company chooses to use the fair value option, it must measure this instrument at fair value until the company no longer has ownership.

For example, assume that **Abbott Laboratories** purchased debt securities in 2010 that it classified as held-to-maturity. Abbott does not choose to report this security using the fair value option. In 2011, Abbott buys another held-to-maturity debt security. Abbott decides to report this security using the fair value option. Once it chooses the fair value option for the security bought in 2011, the decision is irrevocable (may not be changed). In addition, Abbott does not have the option to value the held-to-maturity security purchased in 2010 at fair value in 2011 or in subsequent periods.

Many support the use of the fair value option as a step closer to total fair value reporting for financial instruments. They believe this treatment leads to an improvement in financial reporting. Others argue that the fair value option is confusing. A company can choose from period to period whether to use the fair value option for any new investment in a financial instrument. By permitting an instrument-by-instrument approach, companies are able to report some financial instruments at fair value but not others. To illustrate the accounting issues related to the fair value option, we discuss three different situations.

### Objective 5

Describe the accounting for the fair value option.

### Available-for-Sale Securities

Available-for-sale securities are presently reported at fair value, and any unrealized gains and losses are recorded as part of other comprehensive income. Assume that Hardy Company purchases stock in Fielder Company during 2010 that it classifies as available-for-sale. At December 31, 2010, the cost of this security is \$100,000; its fair value at December 31, 2010, is \$125,000. If Hardy chooses the fair value option to account for the Fielder Company stock, it makes the following entry at December 31, 2010.

Investment in Fielder Stock	25,000	
Unrealized Holding Gain or Loss—Income		25,000

In this situation, Hardy uses an account titled Investment in Fielder Stock to record the change in fair value at December 31. It does not use a Securities Fair Value Adjustment account because the accounting for a fair value option is on an investment-by-investment basis rather than on a portfolio basis. Because Hardy selected the fair value option, the unrealized gain or loss is recorded as part of net income. Hardy must continue to use the fair value method to record this investment until it no longer has ownership of the security.

### Equity Method of Accounting

Companies may also use the fair value option for investments that otherwise follow the equity method of accounting. To illustrate, assume that Durham Company holds a 28 percent stake in Suppan Inc. Durham purchased the investment in 2010 for \$930,000. At December 31, 2010, the fair value of the investment is \$900,000. Durham elects to report the investment in Suppan using the fair value option. The entry to record this investment is as follows.

Unrealized Holding Gain or Loss—Income	30,000	
Investment in Suppan Stock		30,000

In contrast to equity method accounting, if the fair value option is chosen, Durham does not have to report its pro rata share of the income or loss from Suppan. In addition, any dividend payments are credited to Dividend Revenue and therefore do not reduce the Investment in Suppan Stock account.

One major advantage of using the fair value option for this type of investment is that it addresses confusion about the equity method of accounting. In other words, what exactly does the one-line consolidation related to the equity method of accounting on the balance sheet tell investors? Many believe it does not provide information about liquidity or solvency, nor does it provide an indication of the worth of the company.

### Financial Liabilities

One of the more controversial aspects of the fair value option relates to valuation of a company's own liabilities. Companies may apply the fair value option to their own debt instruments. As a result, changes in the fair value of the debt instrument are included as part of earnings in any given period.

To illustrate, Edmonds Company has issued \$500,000 of 6% bonds at face value on May 1, 2010. Edmonds chooses the fair value option for these bonds. At December 31, 2010, the value of the bonds is now \$480,000 because interest rates in the market have increased to 8 percent. The value of the debt securities falls because the bond is paying less than market rate for similar securities. Under the fair value option, Edmonds makes the following entry.

Bonds Payable	20,000	
Unrealized Holding Gain or Loss—Income		20,000

As the journal entry indicates, the value of the bonds declined. This decline leads to a reduction in the bond liability and a resulting unrealized holding gain, which is reported as part of net income. The value of Edmonds' debt declined because interest rates increased. In addition, if the creditworthiness of Edmonds Company declines, the value of its debt also declines. That is, Edmonds issued debt at rates reflecting higher creditworthiness. If its creditworthiness declines, its bond investors are receiving a lower rate relative to investors with similar-risk investments. If Edmonds is using the fair value option in this case, it records an unrealized holding gain due to its worsening credit position.

Some question how Edmonds can record a gain when its creditworthiness is becoming worse. As one writer noted, "It seems counter-intuitive." However, the FASB notes that the debtholders' loss is the stockholders' gain. That is, the stockholders' claims on the assets of the company increase when the value of the debtholders declines. In addition, the worsening credit position may indicate that the assets of the company are declining in value as well. Thus, the company may be reporting losses on the asset side which will be offsetting gains on the liability side.

## SECTION 3 • OTHER REPORTING ISSUES

We have identified the basic issues involved in accounting for investments in debt and equity securities. In addition, the following issues relate to both of these types of securities.

1. Impairment of value.
2. Reclassification adjustments.
3. Transfers between categories.
4. Fair value controversy.

## IMPAIRMENT OF VALUE

A company should evaluate every investment, at each reporting date, to determine if it has suffered **impairment**—a loss in value that is other than temporary. For example, if an investee experiences a bankruptcy or a significant liquidity crisis, the investor may suffer a permanent loss. **If the decline is judged to be other than temporary, a company writes down the cost basis of the individual security to a new cost basis.** The company accounts for the write-down as a realized loss. Therefore, it includes the amount in net income.

**For debt securities,** a company uses the impairment test to determine whether “it is probable that the investor will be unable to collect all amounts due according to the contractual terms.”

**For equity securities,** the guideline is less precise. Any time realizable value is lower than the carrying amount of the investment, a company must consider an impairment. Factors involved include the length of time and the extent to which the fair value has been less than cost; the financial condition and near-term prospects of the issuer; and the intent and ability of the investor company to retain its investment to allow for any anticipated recovery in fair value.

To illustrate an impairment, assume that Strickler Company holds available-for-sale bond securities with a par value and amortized cost of \$1 million. The fair value of these securities is \$800,000. Strickler has previously reported an unrealized loss on these securities of \$200,000 as part of other comprehensive income. In evaluating the securities, Strickler now determines that it probably will not collect all amounts due. In this case, it reports the unrealized loss of \$200,000 as a loss on impairment of \$200,000. Strickler includes this amount in income, with the bonds stated at their new cost basis. It records this impairment as follows.

Loss on Impairment	200,000	
Available-for-Sale Securities		200,000

The new cost basis of the investment in debt securities is \$800,000. Strickler includes subsequent increases and decreases in the fair value of impaired available-for-sale securities as other comprehensive income.<sup>8</sup>

Companies base impairment for debt and equity securities on a fair value test. This test differs slightly from the impairment test for loans that we discuss in Appendix 7B. The FASB rejected the discounted cash flow alternative for securities because of the availability of market price information.

An example of the criteria used by **Caterpillar** to assess impairment is provided in Illustration 17-18.

**Objective 6**

Discuss the accounting for impairments of debt and equity investments.

**Caterpillar, Inc.**

**Notes to Financial Statements**

**Note 1. Impairment of available-for-sale securities**

Available-for-sale securities are reviewed monthly to identify market values below cost of 20% or more. If a decline for a debt security is in excess of 20% for six months, the investment is evaluated to determine if the decline is due to general declines in the marketplace or if the investment has been impaired and should be written down to market value. . . . After the six-month period, debt securities with declines from cost in excess of 20% are evaluated monthly for impairment. For equity securities, if a decline from cost of 20% or more continues for a 12-month period, an other than temporary impairment is recognized without continued analysis.

**ILLUSTRATION 17-18**  
Disclosure of Impairment Assessment Criteria

<sup>8</sup>Companies may not amortize any discount related to the debt securities after recording the impairment. The new cost basis of impaired held-to-maturity securities does not change unless additional impairment occurs.

## RECLASSIFICATION ADJUSTMENTS

### Objective 7

Explain why companies report reclassification adjustments.

As we indicated in Chapter 4, companies report changes in unrealized holding gains and losses related to available-for-sale securities as part of other comprehensive income. Companies may display the components of other comprehensive income in one of three ways: (1) in a combined statement of income and comprehensive income, (2) in a separate statement of comprehensive income that begins with net income, or (3) in a statement of stockholders' equity.

The reporting of changes in unrealized gains or losses in comprehensive income is straightforward unless a company sells securities during the year. In that case, double counting results when the company reports realized gains or losses as part of net income but also shows the amounts as part of other comprehensive income in the current period or in previous periods.

To ensure that gains and losses are not counted twice when a sale occurs, a **reclassification adjustment** is necessary. To illustrate, assume that Open Company has the following two available-for-sale securities in its portfolio at the end of 2009 (its first year of operations).

**ILLUSTRATION 17-19**  
Available-for-Sale Security Portfolio (2009)

Investments	Cost	Fair Value	Unrealized Holding Gain (Loss)
Lehman Inc. common stocks	\$ 80,000	\$105,000	\$25,000
Woods Co. common stocks	120,000	135,000	15,000
Total of portfolio	<u>\$200,000</u>	<u>\$240,000</u>	<u>40,000</u>
Previous securities fair value adjustment balance			-0-
Securities fair value adjustment—Dr.			<u>\$40,000</u>

If Open Company reports net income in 2009 of \$350,000, it presents a statement of comprehensive income as follows.

**ILLUSTRATION 17-20**  
Statement of Comprehensive Income (2009)

OPEN COMPANY STATEMENT OF COMPREHENSIVE INCOME FOR THE YEAR ENDED DECEMBER 31, 2009	
Net income	\$350,000
Other comprehensive income	
Holding gains arising during period	<u>40,000</u>
Comprehensive income	<u>\$390,000</u>

During 2010, Open Company sold the Lehman Inc. common stock for \$105,000 and realized a gain on the sale of \$25,000 (\$105,000 – \$80,000). At the end of 2010, the fair value of the Woods Co. common stock increased an additional \$20,000, to \$155,000. Illustration 17-21 shows the computation of the change in the securities fair value adjustment account.

**ILLUSTRATION 17-21**  
Available-for-Sale Security Portfolio (2010)

Investments	Cost	Fair Value	Unrealized Holding Gain (Loss)
Woods Co. common stocks	<u>\$120,000</u>	<u>\$155,000</u>	\$35,000
Previous securities fair value adjustment balance—Dr.			(40,000)
Securities fair value adjustment—Cr.			<u>\$ (5,000)</u>

Illustration 17-21 indicates that Open should report an unrealized holding loss of \$5,000 in comprehensive income in 2010. In addition, Open realized a gain of \$25,000 on the sale of the Lehman common stock. **Comprehensive income includes both realized and unrealized components.** Therefore, Open recognizes a total holding gain (loss) in 2010 of \$20,000, computed as follows.

Unrealized holding gain (loss)	\$ (5,000)
Realized holding gain	<u>25,000</u>
<b>Total holding gain recognized</b>	<b><u>\$20,000</u></b>

**ILLUSTRATION 17-22**  
Computation of Total Holding Gain (Loss)

Open reports net income of \$720,000 in 2010, which includes the realized gain on sale of the Lehman securities. Illustration 17-23 shows a statement of comprehensive income for 2010, indicating how Open reported the components of holding gains (losses).

<b>OPEN COMPANY</b>		
<b>STATEMENT OF COMPREHENSIVE INCOME</b>		
<b>FOR THE YEAR ENDED DECEMBER 31, 2010</b>		
Net income (includes \$25,000 realized gain on Lehman shares)		\$720,000
Other comprehensive income		
Total holding gains arising during period		
[\$(5,000) + \$25,000]	\$20,000	
<b>Less: Reclassification adjustment for gains included in net income</b>	<u>25,000</u>	<u>(5,000)</u>
Comprehensive income		<u>\$715,000</u>

**ILLUSTRATION 17-23**  
Statement of Comprehensive Income (2010)

In 2009, Open included the unrealized gain on the Lehman Co. common stock in comprehensive income. In 2010, Open sold the stock. It reported the realized gain in net income, which increased comprehensive income again. To avoid double counting this gain, Open makes a reclassification adjustment to eliminate the realized gain from the computation of comprehensive income in 2010.

A company may display reclassification adjustments on the face of the financial statement in which it reports comprehensive income. Or it may disclose these reclassification adjustments in the notes to the financial statements.

### Comprehensive Example

To illustrate the reporting of investment securities and related gain or loss on available-for-sale securities, assume that on January 1, 2010, Hinges Co. had cash and common stock of \$50,000.<sup>9</sup> At that date the company had no other asset, liability, or equity balance. On January 2, Hinges purchased for cash \$50,000 of equity securities classified as available-for-sale. On June 30, Hinges sold part of the available-for-sale security portfolio, realizing a gain as shown in Illustration 17-24.

Fair value of securities sold	\$22,000
Less: Cost of securities sold	<u>20,000</u>
<b>Realized gain</b>	<b><u>\$ 2,000</u></b>

**ILLUSTRATION 17-24**  
Computation of Realized Gain

<sup>9</sup>We adapted this example from Dennis R. Beresford, L. Todd Johnson, and Cheri L. Reither, "Is a Second Income Statement Needed?" *Journal of Accountancy* (April 1996), p. 71.

Hinges did not purchase or sell any other securities during 2010. It received \$3,000 in dividends during the year. At December 31, 2010, the remaining portfolio is as shown in Illustration 17-25.

**ILLUSTRATION 17-25**

Computation of  
Unrealized Gain

Fair value of portfolio	\$34,000
Less: Cost of portfolio	<u>30,000</u>
<b>Unrealized gain</b>	<b><u>\$ 4,000</u></b>

Illustration 17-26 shows the company's income statement for 2010.

**ILLUSTRATION 17-26**

Income Statement

<b>HINGES CO.</b>	
<b>INCOME STATEMENT</b>	
<b>FOR THE YEAR ENDED DECEMBER 31, 2010</b>	
Dividend revenue	\$3,000
Realized gains on investment in securities	<u>2,000</u>
<b>Net income</b>	<b><u>\$5,000</u></b>

The company reports its change in the unrealized holding gain in a statement of comprehensive income as follows.

**ILLUSTRATION 17-27**

Statement of  
Comprehensive Income

<b>HINGES CO.</b>		
<b>STATEMENT OF COMPREHENSIVE INCOME</b>		
<b>FOR THE YEAR ENDED DECEMBER 31, 2010</b>		
Net income		\$5,000
Other comprehensive income:		
Holding gains arising during the period (\$4,000 + \$2,000)	\$6,000	
Less: Reclassification adjustment for gains included in net income	<u>2,000</u>	<u>4,000</u>
Comprehensive income		<b><u>\$9,000</u></b>

Its statement of stockholders' equity appears in Illustration 17-28.

**ILLUSTRATION 17-28**

Statement of Stockholders'  
Equity

<b>HINGES CO.</b>				
<b>STATEMENT OF STOCKHOLDERS' EQUITY</b>				
<b>FOR THE YEAR ENDED DECEMBER 31, 2010</b>				
	Common Stock	Retained Earnings	Accumulated Other Comprehensive Income	Total
Beginning balance	\$50,000	\$-0-	\$-0-	\$50,000
Add: Net income		5,000		5,000
<b>Other comprehensive     income</b>			<u>4,000</u>	<u>4,000</u>
Ending balance	<u>\$50,000</u>	<u>\$5,000</u>	<u>\$4,000</u>	<u>\$59,000</u>

The comparative balance sheet is shown on the next page in Illustration 17-29.

HINGES CO. COMPARATIVE BALANCE SHEET		
	1/1/10	12/31/10
Assets		
Cash	\$50,000	\$25,000
Available-for-sale securities		34,000
Total assets	<u>\$50,000</u>	<u>\$59,000</u>
Stockholders' equity		
Common stock	\$50,000	\$50,000
Retained earnings		5,000
Accumulated other comprehensive income		4,000
Total stockholders' equity	<u>\$50,000</u>	<u>\$59,000</u>

**ILLUSTRATION 17-29**  
Comparative Balance Sheet

This example indicates how an unrealized gain or loss on available-for-sale securities affects all the financial statements. Note that a company must disclose the components that comprise accumulated other comprehensive income.

## TRANSFERS BETWEEN CATEGORIES

Companies account for transfers between any of the categories at fair value. Thus, if a company transfers available-for-sale securities to held-to-maturity investments, it records the new investment (held-to-maturity) at the date of transfer at **fair value** in the new category. Similarly, if it transfers held-to-maturity investments to available-for-sale investments, it records the new investments (available-for-sale) at **fair value**. This **fair value** rule assures that a company cannot omit recognition of fair value simply by transferring securities to the held-to-maturity category. Illustration 17-30 summarizes the accounting treatment for transfers.

**Objective 8**

Describe the accounting for transfer of investment securities between categories.

Type of Transfer	Measurement Basis	Impact of Transfer on Stockholders' Equity*	Impact of Transfer on Net Income*
Transfer from trading to available-for-sale	Security transferred at fair value at the date of transfer, which is the new cost basis of the security.	The unrealized gain or loss at the date of transfer increases or decreases stockholders' equity.	The unrealized gain or loss at the date of transfer is recognized in income.
Transfer from available-for-sale to trading	Security transferred at fair value at the date of transfer, which is the new cost basis of the security.	The unrealized gain or loss at the date of transfer increases or decreases stockholders' equity.	The unrealized gain or loss at the date of transfer is recognized in income.
Transfer from held-to-maturity to available-for-sale**	Security transferred at fair value at the date of transfer.	The separate component of stockholders' equity is increased or decreased by the unrealized gain or loss at the date of transfer.	None
Transfer from available-for-sale to held-to-maturity	Security transferred at fair value at the date of transfer.	The unrealized gain or loss at the date of transfer carried as a separate component of stockholders' equity is amortized over the remaining life of the security.	None

**ILLUSTRATION 17-30**  
Accounting for Transfers

Examples of the Entries for Recording Transfers Between Categories

\*Assumes that adjusting entries to report changes in fair value for the current period are not yet recorded.

\*\*According to GAAP, these types of transfers should be rare.

---

## FAIR VALUE CONTROVERSY

The reporting of investment securities is controversial. Some believe that all securities should be reported at fair value; others believe they all should be stated at amortized cost. Others favor the present approach. In this section we look at some of the major unresolved issues.

### Measurement Based on Intent

Companies classify debt securities as held-to-maturity, available-for-sale, or trading. As a result, companies can report three identical debt securities in three different ways in the financial statements. Some argue such treatment is confusing. Furthermore, the held-to-maturity category relies solely on intent, a subjective evaluation. What is not subjective is the fair value of the debt instrument. In other words, the three classifications are subjective, resulting in arbitrary classifications.

### Gains Trading

Companies can classify certain debt securities as held-to-maturity and therefore report them at amortized cost. Companies can classify other debt and equity securities as available-for-sale and report them at fair value with the unrealized gain or loss reported as other comprehensive income. In either case, a company can become involved in “gains trading” (also referred to as “cherry picking,” “snacking,” or “sell the best and keep the rest”). In **gains trading**, companies sell their “winners,” reporting the gains in income, and hold on to the losers.

### Liabilities Not Fairly Valued

Many argue that if companies report investment securities at fair value, they also should report liabilities at fair value. Why? By recognizing changes in value on only one side of the balance sheet (the asset side), a high degree of volatility can occur in the income and stockholders’ equity amounts. Further, financial institutions are involved in asset and liability management (not just asset management). Viewing only one side may lead managers to make uneconomic decisions as a result of the accounting.

### Fair Values—Final Comment

Both the IASB and the FASB believe that fair value information for financial assets and financial liabilities provides more useful and relevant information than a cost-based system. The Boards take this position because fair value reflects the current cash equivalent of the financial instrument rather than the cost of a past transaction. As a consequence, only fair value provides an understanding of the current worth of the investment.

Companies must report fair values for some types of financial instruments. In addition, they have the option to record fair values for any of their financial instruments. How many companies will choose this fair value option? We are hopeful that many companies will select this option; we believe that the information provided by fair value reporting for financial instruments is useful and more understandable to financial statement users.

---

## SUMMARY OF REPORTING TREATMENT OF SECURITIES

Illustration 17-31 summarizes the major debt and equity securities and their reporting treatment.

Category*	Balance Sheet	Income Statement
Trading (debt and equity securities)	Investments shown at fair value. Current assets.	Interest and dividends are recognized as revenue. Unrealized holding gains and losses are included in net income.
Available-for-sale (debt and equity securities)	Investments shown at fair value. Current or long-term assets. Unrealized holding gains and losses are a separate component of stockholders' equity.	Interest and dividends are recognized as revenue. Unrealized holding gains and losses are <b>not</b> included in net income but in other comprehensive income.
Held-to-maturity (debt securities)	Investments shown at amortized cost. Current or long-term assets.	Interest is recognized as revenue.
Equity method and/or consolidation (equity securities)	Investments originally are carried at cost, are periodically adjusted by the investor's share of the investee's earnings or losses, and are decreased by all dividends received from the investee. Classified as long-term.	Revenue is recognized to the extent of the investee's earnings or losses reported subsequent to the date of investment.

\*Companies have the option to report financial instruments at fair value with all gains and losses related to changes in fair value reported in the income statement. If a company chooses to use the fair option for some of its financial instruments, these assets or liabilities should be reported separately from other financial instruments that used a different valuation basis. To accomplish separate reporting, a company may either (a) report separate line items for the fair value and non-fair value amounts or (b) report the total fair value and non-fair value amounts in one line and parenthetically report the fair value amount in that line also.<sup>10</sup>

**ILLUSTRATION 17-31**  
Summary of Treatment of Major Debt and Equity Securities

Discussion of Special Issues Related to Investments

**MORE DISCLOSURE, PLEASE**

As indicated in the last two sections, the level of disclosure for investment securities is extensive. How to account for investment securities is a particularly sensitive area, given the large amounts of equity investments involved. And presently companies report investments in equity securities at cost, equity, fair value, and full consolidation, depending on the circumstances. As a recent SEC study noted, "there are so many different accounting treatments for investments that it raises the question of whether they are all needed."

Presented below is an estimate of the percentage of companies on the major exchanges that have investments in the equity of other entities.

Investments in the Equity of Other Companies	
Categorized by Accounting Treatment	Percent of Companies
Presenting consolidated financial statements	91.1%
Reporting equity method investments	23.5
Reporting cost method investments*	17.4
Reporting available-for-sale investments	37.4
Reporting trading investments	6.2

\*If the equity investments are not publicly traded, the company often accounts for the investment under the cost method. Changes in value are therefore not recognized unless there is impairment.

As the table indicates, many companies have equity investments of some type. These investments can be substantial. For example, based on the table above, the total amount of equity-method investments appearing on company balance sheets is approximately \$403 billion, and the amount shown in the income statements in any one year for all companies is approximately \$38 billion.

Source: "Report and Recommendations Pursuant to Section 401(c) of the Sarbanes-Oxley Act of 2002 on Arrangements with Off-Balance Sheet Implications, Special Purpose Entities, and Transparency of Filings by Issuers," United States Securities and Exchange Commission—Office of Chief Accountant, Office of Economic Analyses, Division of Corporation Finance (June 2005), pp. 36–39.

**What do the numbers mean?**

You will want to read the **CONVERGENCE CORNER** on page 882

For discussion of how international convergence efforts relate to the accounting for investments.

<sup>10</sup>Not surprisingly, the disclosure requirements for investments and other financial assets and liabilities are extensive. We provide an expanded discussion with examples of these disclosure requirements in Appendix 17C.

# CONVERGENCE CORNER

## INVESTMENTS

The accounting for investment securities is discussed in IAS 27 (“Consolidated and Separate Financial Statements”), IAS 28 (“Accounting for Investments in Associates”), and IAS 39 (“Financial Instruments: Recognition and Measurement”). The accounting and reporting under iGAAP and U.S. GAAP are for the most part very similar, although the criteria used to determine the accounting is often different.

### RELEVANT FACTS

- The accounting for trading, available-for-sale, and held-to-maturity securities is essentially the same between iGAAP and U.S. GAAP.
- Gains and losses related to available-for-sale securities are reported in other comprehensive income under U.S. GAAP. Under iGAAP, these gains and losses are reported directly in equity.
- Both iGAAP and U.S. GAAP use the same test to determine whether the equity method of accounting should be used—that is, significant influence with a general guide of over 20 percent ownership. iGAAP uses the term *associate investment* rather than *equity investment* to describe its investment under the equity method.
- Reclassifications of securities from one category to another generally follow the same accounting under the two GAAP systems. Reclassification in and out of trading securities is prohibited under iGAAP. It is not prohibited under U.S. GAAP, but this type of reclassification should be rare.
- Under iGAAP, both the investor and an associate company should follow the same accounting policies. As a result, in order to prepare financial information, adjustments are made to the associate’s policies to conform to the investor’s books.
- The basis for consolidation under iGAAP is control. Under U.S. GAAP, a bipolar approach is used, which is a risk-and-reward model (often referred to as a *variable-entity approach*) and a voting-interest approach. However, under both systems, for consolidation to occur, the investor company must generally own 50 percent of another company.
- iGAAP and U.S. GAAP are similar in the accounting for the fair value option. That is, the selection to use the fair value method must be made at initial recognition, the selection is irrevocable, and gains and losses related to fair value changes are reported as part of income. The differences relate to disclosures and scope exceptions.
- U.S. GAAP does not permit the reversal of an impairment charge related to available-for-sale debt and equity investments. iGAAP follows the same approach for available-for-sale equity investments but permits reversal for available-for-sale debt securities and held-to-maturity securities.

### ABOUT THE NUMBERS

The following example illustrates the accounting for investment impairments under iGAAP. Belerus Company has an available-for-sale investment in the 8 percent, 10-year bonds of Wimbledon Company. The investment has a carrying value of 2,300,000 euros at December 31, 2010. Early in January 2011, Belerus learns that Wimbledon has lost a major customer. As a result, Belerus determines that this investment is impaired and now has a fair value of 1,500,000 euros. Belerus makes the following entry to record the impairment.

Loss on Impairment (€2,300,000 – €1,500,000)	800,000	
Available-for-Sale Investment		800,000

Early in 2012, Wimbledon secures several new customers, and its prospects have improved considerably. Belerus determines the fair value of its investment is now 2,000,000 euros and makes the following entry under iGAAP.

Available-for-Sale Impairment (€2,000,000 – €1,500,000)	500,000	
Recovery of Loss on Investment		500,000

Under U.S. GAAP, Belerus is prohibited from recording the recovery in value of the impaired investment. That is, once an investment is impaired, the impaired value becomes the new basis for the investment.

### ON THE HORIZON

As indicated earlier, both the FASB and IASB have indicated that they believe that all financial instruments should be reported at fair value and that changes in fair value should be reported as part of net income. It seems likely as more companies choose the fair value option for financial instruments, we will eventually arrive at fair value measurement for all financial instruments.

## SUMMARY OF LEARNING OBJECTIVES

- 1** Identify the three categories of debt securities and describe the accounting and reporting treatment for each category. (1) Carry and report *held-to-maturity debt securities* at amortized cost. (2) Value *trading debt securities* for reporting purposes at fair value, with unrealized holding gains or losses included in net income. (3) Value *available-for-sale debt securities* for reporting purposes at fair value, with unrealized holding gains or losses reported as other comprehensive income and as a separate component of stockholders' equity.
- 2** Understand the procedures for discount and premium amortization on bond investments. Similar to bonds payable, companies should amortize discount or premium on bond investments using the effective-interest method. They apply the effective interest rate or yield to the beginning carrying value of the investment for each interest period in order to compute interest revenue.
- 3** Identify the categories of equity securities and describe the accounting and reporting treatment for each category. The degree to which one corporation (investor) acquires an interest in the common stock of another corporation (investee) generally determines the accounting treatment for the investment. Long-term investments by one corporation in the common stock of another can be classified according to the percentage of the voting stock of the investee held by the investor.
- 4** Explain the equity method of accounting and compare it to the fair value method for equity securities. Under the equity method the investor and the investee acknowledge a substantive economic relationship. The company originally records the investment at cost but subsequently adjusts the amount each period for changes in the net assets of the investee. That is, the investor's proportionate share of the earnings (losses) of the investee periodically increases (decreases) the investment's carrying amount. All dividends received by the investor from the investee decrease the investment's carrying amount. Under the fair value method a company reports the equity investment at fair value each reporting period irrespective of the investee's earnings or dividends paid to it. A company applies the equity method to investment holdings between 20 percent and 50 percent of ownership. It applies the fair value method to holdings below 20 percent.
- 5** Describe the accounting for the fair value option. Companies have the option to report most financial instruments at fair value, with all gains and losses related to changes in fair value reported in the income statement. This option is applied on an instrument-by-instrument basis. The fair value option is generally available only at the time a company first purchases the financial asset or incurs a financial liability. If a company chooses to use the fair value option, it must measure this instrument at fair value until the company no longer has ownership.
- 6** Discuss the accounting for impairments of debt and equity investments. Impairments of debt and equity securities are losses in value that are determined to be other than temporary, are based on a fair value test, and are charged to income.
- 7** Explain why companies report reclassification adjustments. A company needs a reclassification adjustment when it reports realized gains or losses as part of net income but also shows the amounts as part of other comprehensive income in the current or in previous periods. Companies should report unrealized holding gains or losses related to available-for-sale securities in other comprehensive income and the aggregate balance as accumulated comprehensive income on the balance sheet.
- 8** Describe the accounting for transfer of investment securities between categories. Transfers of securities between categories of investments should be accounted for at fair value, with unrealized holding gains or losses treated in accordance with the nature of the transfer.

Until the early 1970s, most financial managers worked in a cozy, if unthrilling, world. Since then, constant change caused by volatile markets, new technology, and deregulation has increased the risks to businesses. In response, the financial community developed products to manage these risks.

These products—called **derivative financial instruments** or simply, **derivatives**—are useful for managing risk. Companies use the fair values or cash flows of these instruments to offset the changes in fair values or cash flows of the at-risk assets. The development of powerful computing and communication technology has aided the growth in derivative use. This technology provides new ways to analyze information about markets as well as the power to process high volumes of payments.

## DEFINING DERIVATIVES

In order to understand derivatives, consider the following examples.

*Example 1—Forward Contract.* Assume that a company like **Dell** believes that the price of **Google**'s stock will increase substantially in the next 3 months. Unfortunately, it does not have the cash resources to purchase the stock today. Dell therefore enters into a contract with a broker for delivery of 10,000 shares of Google stock in 3 months at the price of \$110 per share.

Dell has entered into a **forward contract**, a type of derivative. As a result of the contract, Dell **has received the right** to receive 10,000 shares of Google stock in 3 months. Further, it **has an obligation** to pay \$110 per share at that time. What is the benefit of this derivative contract? Dell can buy Google stock today and take delivery in 3 months. If the price goes up, as it expects, Dell profits. If the price goes down, Dell loses.

*Example 2—Option Contract.* Now suppose that Dell needs 2 weeks to decide whether to purchase Google stock. It therefore enters into a different type of contract, one that gives it the right to purchase Google stock at its current price any time within the next 2 weeks. As part of the contract, the broker charges \$3,000 for holding the contract open for 2 weeks at a set price.

Dell has now entered into an **option contract**, another type of derivative. As a result of this contract, it **has received the right, but not the obligation** to purchase this stock. If the price of the Google stock increases in the next 2 weeks, Dell exercises its option. In this case, the cost of the stock is the price of the stock stated in the contract, plus the cost of the option contract. If the price does not increase, Dell does not exercise the contract, but still incurs the cost for the option.

The forward contract and the option contract both involve a future delivery of stock. The value of the contract relies on the underlying asset—the Google stock. Thus, these financial instruments are known as derivatives because they **derive their value from** values of other assets (e.g., stocks, bonds, or commodities). Or, put another way, their value relates to a market-determined indicator (e.g., stock price, interest rates, or the Standard and Poor's 500 stock composite index).

In this appendix, we discuss the accounting for three different types of derivatives:

1. Financial forwards or financial futures.
2. Options.
3. Swaps.

## WHO USES DERIVATIVES, AND WHY?

Whether to protect for changes in interest rates, the weather, stock prices, oil prices, or foreign currencies, derivative contracts help to smooth the fluctuations caused by various types of risks. A company that wants to ensure against certain types of business risks often uses derivative contracts to achieve this objective.<sup>11</sup>

### Objective•9

Explain who uses derivatives and why.

### Producers and Consumers

To illustrate, assume that Heartland Ag is a large producer of potatoes for the consumer market. The present price for potatoes is excellent. Unfortunately, Heartland needs two months to harvest its potatoes and deliver them to the market. Because Heartland expects the price of potatoes to drop in the coming months, it signs a forward contract. It agrees to sell its potatoes today at the current market price for delivery in 2 months.

Who would buy this contract? Suppose on the other side of the contract is **McDonald's Corporation**. McDonald's wants to have potatoes (for French fries) in 2 months and believes that prices will increase. McDonald's is therefore agreeable to accepting delivery in 2 months at current prices. It knows that it will need potatoes in 2 months, and that it can make an acceptable profit at this price level.

In this situation, if the price of potatoes increases before delivery, Heartland loses and McDonald's wins. Conversely, if the price decreases, Heartland wins and McDonald's loses. However, the objective is not to gamble on the outcome. Regardless of which way the price moves, both Heartland and McDonald's have received a price at which they obtain an acceptable profit. In this case, although Heartland is a **producer** and McDonald's is a **consumer**, both companies are **hedgers**. They both **hedge their positions** to ensure an acceptable financial result.

Commodity prices are volatile. They depend on weather, crop production, and general economic conditions. For the producer and the consumer to plan effectively, it makes good sense to lock in specific future revenues or costs in order to run their businesses successfully.

### Speculators and Arbitrageurs

In some cases, instead of McDonald's taking a position in the forward contract, a speculator may purchase the contract from Heartland. The **speculator** bets that the price of potatoes will rise, thereby increasing the value of the forward contract. The speculator, who may be in the market for only a few hours, will then sell the forward contract to another speculator or to a company like McDonald's.

**Arbitrageurs** also use derivatives. These market players attempt to exploit inefficiencies in markets. They seek to lock in profits by simultaneously entering into transactions in two or more markets. For example, an arbitrageur might trade in a futures contract. At the same time, the arbitrageur will also trade in the commodity underlying the futures contract, hoping to achieve small price gains on the difference between the two. Markets rely on speculators and arbitrageurs to keep the market liquid on a daily basis.

In these illustrations, we explained why Heartland (the producer) and McDonald's (the consumer) would become involved in a derivative contract. Consider other types of situations that companies face.

1. Airlines, like **Delta**, **Southwest**, and **United**, are affected by changes in the price of jet fuel.
2. Financial institutions, such as **Citigroup**, **Bankers Trust**, and **M&I Bank**, are involved in borrowing and lending funds that are affected by changes in interest rates.
3. Multinational corporations, like **Cisco Systems**, **Coca-Cola**, and **General Electric**, are subject to changes in foreign exchange rates.

<sup>11</sup>Derivatives are traded on many exchanges throughout the world. In addition, many derivative contracts (primarily interest rate swaps) are privately negotiated.

In fact, most corporations are involved in some form of derivatives transactions. Companies give these reasons (in their annual reports) as to why they use derivatives:

1. **ExxonMobil** uses derivatives to hedge its exposure to fluctuations in interest rates, foreign currency exchange rates, and hydrocarbon prices.
2. **Caterpillar** uses derivatives to manage foreign currency exchange rates, interest rates, and commodity price exposure.
3. **Johnson & Johnson** uses derivatives to manage the impact of interest rate and foreign exchange rate changes on earnings and cash flows.

Many corporations use derivatives extensively and successfully. However, derivatives can be dangerous. All parties involved must understand the risks and rewards associated with these contracts.<sup>12</sup>

## BASIC PRINCIPLES IN ACCOUNTING FOR DERIVATIVES

### Objective-10

Understand the basic guidelines for accounting for derivatives.

The FASB concluded that derivatives such as forwards and options are assets and liabilities. It also concluded that companies should report them in the balance sheet **at fair value**.<sup>13</sup> The Board believes that fair value will provide statement users the best information about derivatives. Relying on some other basis of valuation for derivatives, such as historical cost, does not make sense. Why? Because many derivatives have a historical cost of zero. Furthermore, the markets for derivatives, and the assets upon which derivatives' values rely, are well developed. As a result, the Board believes that companies can determine reliable fair value amounts for derivatives.<sup>14</sup>

On the income statement, a company should recognize any unrealized gain or loss in income, if it uses the derivative for speculation purposes. If using the derivative for hedging purposes, the accounting for any gain or loss depends on the type of hedge used. We discuss the accounting for hedged transactions later in the appendix.

In summary, companies follow these guidelines in accounting for derivatives.

1. Recognize derivatives in the financial statements as assets and liabilities.
2. Report derivatives at fair value.
3. Recognize gains and losses resulting from speculation in derivatives immediately in income.
4. Report gains and losses resulting from hedge transactions differently, depending on the type of hedge.

<sup>12</sup>There are some well-publicized examples of companies that have suffered considerable losses using derivatives. For example, companies such as **Fannie Mae** (U.S.), **Enron** (U.S.), **Showa Shell Sekiyu** (Japan), **Metallgesellschaft** (Germany), **Procter & Gamble** (U.S.), and **Air Products & Chemicals** (U.S.) incurred significant losses from investments in derivative instruments.

<sup>13</sup>GAAP covers accounting and reporting for all derivative instruments, whether financial or not. In this appendix we focus on derivative financial instruments because of their widespread use in practice. [8]

<sup>14</sup>As discussed in earlier chapters, fair value is defined as "the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date." Fair value is therefore a market-based measure. The FASB has also developed a fair value hierarchy, which indicates the priority of valuation techniques to use to determine fair value. *Level 1* fair value measures are based on observable inputs that reflect quoted prices for identical assets or liabilities in active markets. *Level 2* measures are based on inputs other than quoted prices included in Level 1 but that can be corroborated with observable data. *Level 3* fair values are based on unobservable inputs (for example, a company's own data or assumptions). Thus, Level 1 is the most reliable because it is based on quoted prices, like a closing stock price in the *Wall Street Journal*. Level 2 is the next most reliable and would rely on evaluating similar assets or liabilities in active markets. For Level 3 (the least reliable), much judgment is needed, based on the best information available, to arrive at a relevant and reliable fair value measurement. [9]

## Example of Derivative Financial Instrument—Speculation

### Objective 11

Describe the accounting for derivative financial instruments.

To illustrate the measurement and reporting of a derivative for speculative purposes, we examine a derivative whose value depends on the market price of Laredo Inc. common stock. A company can realize a gain from the increase in the value of the Laredo shares with the use of a derivative, such as a call option.<sup>15</sup> A **call option** gives the holder the right, but not the obligation, to buy shares at a preset price. This price is often referred to as the **strike price** or the **exercise price**.

For example, assume a company enters into a call option contract with Baird Investment Co., which gives it the option to purchase Laredo stock at \$100 per share.<sup>16</sup> If the price of Laredo stock increases above \$100, the company can exercise this option and purchase the shares for \$100 per share. If Laredo's stock never increases above \$100 per share, the call option is worthless.

**Accounting Entries.** To illustrate the accounting for a call option, assume that the company purchases a call option contract on January 2, 2010, when Laredo shares are trading at \$100 per share. The contract gives it the option to purchase 1,000 shares (referred to as the **notional amount**) of Laredo stock at an option price of \$100 per share. The option expires on April 30, 2010. The company purchases the call option for \$400 and makes the following entry.

January 2, 2010	
Call Option	400
Cash	400

This payment is referred to as the **option premium**. It is generally much less than the cost of purchasing the shares directly. The option premium consists of two amounts: (1) intrinsic value and (2) time value. Illustration 17A-1 shows the formula to compute the option premium.

$$\text{Option Premium} = \text{Intrinsic Value} + \text{Time Value}$$

**ILLUSTRATION 17A-1**  
Option Premium Formula

**Intrinsic value** is the difference between the market price and the preset strike price at any point in time. It represents the amount realized by the option holder, if exercising the option immediately. On January 2, 2010, the intrinsic value is zero because the market price equals the preset strike price.

**Time value** refers to the option's value over and above its intrinsic value. Time value reflects the possibility that the option has a fair value greater than zero. How? Because there is some expectation that the price of Laredo shares will increase above the strike price during the option term. As indicated, the time value for the option is \$400.<sup>17</sup>

<sup>15</sup>Investors can use a different type of option contract—a **put option**—to realize a gain if anticipating a decline in the Laredo stock value. A put option gives the holder the option to sell shares at a preset price. Thus, a put option increases in value when the underlying asset decreases in value.

<sup>16</sup>Baird Investment Co. is referred to as the **counterparty**. Counterparties frequently are investment bankers or other companies that hold inventories of financial instruments.

<sup>17</sup>This cost is estimated using option-pricing models, such as the Black-Scholes model. The volatility of the underlying stock, the expected life of the option, the risk-free rate of interest, and expected dividends on the underlying stock during the option term affect the Black-Scholes fair value estimate.

The following additional data are available with respect to the call option.

Date	Market Price of Laredo Shares	Time Value of Call Option
March 31, 2010	\$120 per share	\$100
April 16, 2010	\$115 per share	\$60

As indicated, on March 31, 2010, the price of Laredo shares increases to \$120 per share. The intrinsic value of the call option contract is now \$20,000. That is, the company can exercise the call option and purchase 1,000 shares from Baird Investment for \$100 per share. It can then sell the shares in the market for \$120 per share. This gives the company a gain of \$20,000 (\$120,000 – \$100,000) on the option contract.<sup>18</sup> It records the increase in the intrinsic value of the option as follows.

**March 31, 2010**

Call Option	20,000	
Unrealized Holding Gain or Loss—Income		20,000

A market appraisal indicates that the time value of the option at March 31, 2010, is \$100.<sup>19</sup> The company records this change in value of the option as follows.

**March 31, 2010**

Unrealized Holding Gain or Loss—Income	300	
Call Option (\$400 – \$100)		300

At March 31, 2010, the company reports the call option in its balance sheet at fair value of \$20,100.<sup>20</sup> The unrealized holding gain increases net income for the period. The loss on the time value of the option decreases net income.

On April 16, 2010, the company settles the option before it expires. To properly record the settlement, it updates the value of the option for the decrease in the intrinsic value of \$5,000  $(\$20 - \$15) \times 1,000$  as follows.

**April 16, 2010**

Unrealized Holding Gain or Loss—Income	5,000	
Call Option		5,000

The decrease in the time value of the option of \$40 (\$100 – \$60) is recorded as follows.

**April 16, 2010**

Unrealized Holding Gain or Loss—Income	40	
Call Option		40

Thus, at the time of the settlement, the call option's carrying value is as follows.

Call Option			
January 2, 2010	400	March 31, 2010	300
March 31, 2010	20,000	April 16, 2010	5,000
		April 16, 2010	40
Balance, April 16, 2010	15,060		

<sup>18</sup>In practice, investors generally do not have to actually buy and sell the Laredo shares to settle the option and realize the gain. This is referred to as the **net settlement** feature of option contracts.

<sup>19</sup>The decline in value reflects both the decreased likelihood that the Laredo shares will continue to increase in value over the option period and the shorter time to maturity of the option contract.

<sup>20</sup>As indicated earlier, the total value of the option at any point in time equals the intrinsic value plus the time value.

The company records the settlement of the option contract with Baird as follows.

<b>April 16, 2010</b>		
Cash		15,000
Loss on Settlement of Call Option		60
Call Option		15,060

Illustration 17A-2 summarizes the effects of the call option contract on net income.

Date	Transaction	Income (Loss) Effect
March 31, 2010	Net increase in value of call option (\$20,000 – \$300)	\$19,700
April 16, 2010	Decrease in value of call option (\$5,000 + \$40)	(5,040)
April 16, 2010	Settle call option	(60)
	Total net income	<u>\$14,600</u>

**ILLUSTRATION 17A-2**  
Effect on Income—  
Derivative Financial  
Instrument

The accounting summarized in Illustration 17A-2 is in accord with GAAP. That is, because the call option meets the definition of an asset, the company records it in the balance sheet on March 31, 2010. Furthermore, it reports the call option at fair value, with any gains or losses reported in income.

### Differences between Traditional and Derivative Financial Instruments

How does a traditional financial instrument differ from a derivative one? A derivative financial instrument has the following three basic characteristics. [10]

- The instrument has (1) one or more underlyings and (2) an identified payment provision.** An **underlying** is a specified interest rate, security price, commodity price, index of prices or rates, or other market-related variable. The interaction of the underlying, with the face amount or the number of units specified in the derivative contract (the notional amounts), determines payment. For example, the value of the call option increased in value when the value of the Laredo stock increased. In this case, the underlying is the stock price. To arrive at the payment provision, multiply the change in the stock price by the number of shares (notional amount).
- The instrument requires little or no investment at the inception of the contract.** To illustrate, the company paid a small premium to purchase the call option—an amount much less than if purchasing the Laredo shares as a direct investment.
- The instrument requires or permits net settlement.** As indicated in the call option example, the company could realize a profit on the call option without taking possession of the shares. This **net settlement** feature reduces the transaction costs associated with derivatives.

Illustration 17A-3 summarizes the differences between traditional and derivative financial instruments. Here, we use a trading security for the traditional financial instrument and a call option as an example of a derivative one.

Feature	Traditional Financial Instrument (Trading Security)	Derivative Financial Instrument (Call Option)
Payment provision	Stock price times the number of shares.	Change in stock price (underlying) times number of shares (notional amount).
Initial investment	Investor pays full cost.	Initial investment is much less than full cost.
Settlement	Deliver stock to receive cash.	Receive cash equivalent, based on changes in stock price times the number of shares.

**ILLUSTRATION 17A-3**  
Features of Traditional  
and Derivative Financial  
Instruments

## DERIVATIVES USED FOR HEDGING

Flexibility in use, and the low-cost features of derivatives relative to traditional financial instruments, explain the popularity of derivatives. An additional use for derivatives is in risk management. For example, companies such as **Coca-Cola**, **ExxonMobil**, and **General Electric** borrow and lend substantial amounts in credit markets. In doing so, they are exposed to significant **interest rate risk**. That is, they face substantial risk that the fair values or cash flows of interest-sensitive assets or liabilities will change if interest rates increase or decrease. These same companies also have significant international operations. As such, they are also exposed to **exchange rate risk**—the risk that changes in foreign currency exchange rates will negatively impact the profitability of their international businesses.

Companies can use derivatives to offset the negative impacts of changes in interest rates or foreign currency exchange rates. This use of derivatives is referred to as **hedging**.

GAAP established accounting and reporting standards for derivative financial instruments used in hedging activities. The FASB allows special accounting for two types of hedges—fair value and cash flow hedges.<sup>21</sup>

### RISKY BUSINESS

As shown in the graph below, use of derivatives has grown steadily in the past several years. In fact, over *\$450 trillion* (in notional amounts) in derivative contracts were in play at the end of 2007. The primary players in the market for derivatives are large companies and various financial institutions, which continue to find new uses for derivatives for speculation and risk management.

*What do the numbers mean?*

#### Total Swaps and Equity Derivatives

(\$ in trillions)

Financial engineers continue to develop new uses for derivatives, many times through the use of increasingly complex webs of transactions, spanning a number of markets. As new uses for derivatives appear, the financial system as a whole can be dramatically affected. As a result, some market-watchers are concerned about the risk that a crisis in one company or sector could bring the entire financial system to its knees.

This concern was illustrated recently when both **Fannie Mae** and **Freddie Mac** (two federally-chartered mortgage companies) indicated problems with their derivative accounting, and both of these companies had to restate their financial results for prior periods. This has led Congress to study whether the concentration of mortgages in these institutions is too high. With so many home buyers dependent on Fannie and Freddie, there is concern that these companies may be too loaded down with debt, which could negatively affect the home mortgage market.

Source: Data from International Swaps and Derivatives Association Market Survey (2007).

<sup>21</sup>GAAP also addresses the accounting for certain foreign currency hedging transactions. In general, these transactions are special cases of the two hedges we discuss here. [11] Understanding of foreign currency hedging transactions requires knowledge related to consolidation of multinational entities, which is beyond the scope of this textbook.

## Fair Value Hedge

### Objective 12

Explain how to account for a fair value hedge.

In a **fair value hedge**, a company uses a derivative to hedge (offset) the exposure to changes in the fair value of a recognized asset or liability or of an unrecognized commitment. In a perfectly hedged position, the gain or loss on the fair value of the derivative equals and offsets that of the hedged asset or liability.

Companies commonly use several types of fair value hedges. For example, companies use interest rate swaps to hedge the risk that changes in interest rates will impact the fair value of debt obligations. Or, they use put options to hedge the risk that an equity investment will decline in value.

To illustrate a fair value hedge, assume that on April 1, 2010, Hayward Co. purchases 100 shares of Sonoma stock at a market price of \$100 per share. Hayward does not intend to actively trade this investment. It consequently classifies the Sonoma investment as available-for-sale. Hayward records this available-for-sale investment as follows.

#### April 1, 2010

Available-for-Sale Securities	10,000	
Cash		10,000

Hayward records available-for-sale securities at fair value on the balance sheet. It reports unrealized gains and losses in equity as part of other comprehensive income.<sup>22</sup> Fortunately for Hayward, the value of the Sonoma shares increases to \$125 per share during 2010. Hayward records the gain on this investment as follows.

#### December 31, 2010

Security Fair Value Adjustment (Available-for-Sale)	2,500	
Unrealized Holding Gain or Loss—Equity		2,500

Illustration 17A-4 indicates how Hayward reports the Sonoma investment in its balance sheet.

HAYWARD CO. BALANCE SHEET (PARTIAL) DECEMBER 31, 2010	
<u>Assets</u>	
Available-for-sale securities (at fair value)	\$12,500
<u>Stockholders' Equity</u>	
Accumulated other comprehensive income	
Unrealized holding gain	\$2,500

**ILLUSTRATION 17A-4**  
Balance Sheet Presentation  
of Available-for-Sale  
Securities

While Hayward benefits from an increase in the price of Sonoma shares, it is exposed to the risk that the price of the Sonoma stock will decline. To hedge this risk, Hayward locks in its gain on the Sonoma investment by purchasing a put option on 100 shares of Sonoma stock.

Hayward enters into the put option contract on January 2, 2011, and designates the option as a fair value hedge of the Sonoma investment. This put option (which expires in two years) gives Hayward the option to sell Sonoma shares at a price of \$125. Since the exercise price equals the current market price, no entry is necessary at inception of the put option.<sup>23</sup>

#### January 2, 2011

No entry required. A memorandum indicates the signing of the put option contract and its designation as a fair value hedge for the Sonoma investment.

<sup>22</sup>We discussed the distinction between trading and available-for-sale investments in the chapter.

<sup>23</sup>To simplify the example, we assume no premium is paid for the option.

At December 31, 2011, the price of the Sonoma shares has declined to \$120 per share. Hayward records the following entry for the Sonoma investment.

<b>December 31, 2011</b>	
Unrealized Holding Gain or Loss—Income	500
Security Fair Value Adjustment (Available-for-Sale)	500

Note that upon designation of the hedge, the accounting for the available-for-sale security changes from regular GAAP. That is, Hayward records the unrealized holding loss in income, not in equity. If Hayward had not followed this accounting, a mismatch of gains and losses in the income statement would result. Thus, special accounting for the hedged item (in this case, an available-for-sale security) is necessary in a fair value hedge.

The following journal entry records the increase in value of the put option on Sonoma shares.

<b>December 31, 2011</b>	
Put Option	500
Unrealized Holding Gain or Loss—Income	500

The decline in the price of Sonoma shares results in an increase in the fair value of the put option. That is, Hayward could realize a gain on the put option by purchasing 100 shares in the open market for \$120 and then exercise the put option, selling the shares for \$125. This results in a gain to Hayward of \$500 (100 shares  $\times$  [\$125 - \$120]).<sup>24</sup>

Illustration 17A-5 indicates how Hayward reports the amounts related to the Sonoma investment and the put option.

**ILLUSTRATION 17A-5**  
Balance Sheet Presentation  
of Fair Value Hedge

<b>HAYWARD CO.</b>	
<b>BALANCE SHEET (PARTIAL)</b>	
<b>DECEMBER 31, 2011</b>	
Assets	
Available-for-sale securities (at fair value)	\$12,000
Put option	500

The increase in fair value on the option offsets or hedges the decline in value on Hayward's available-for-sale security. By using fair value accounting for both financial instruments, the financial statements reflect the underlying substance of Hayward's net exposure to the risks of holding Sonoma stock. By using fair value accounting for both these financial instruments, the balance sheet reports the amount that Hayward would receive on the investment and the put option contract if Hayward sold and settled them, respectively.

Illustration 17A-6 illustrates the reporting of the effects of the hedging transaction on income for the year ended December 31, 2011.

**ILLUSTRATION 17A-6**  
Income Statement  
Presentation of Fair Value  
Hedge

<b>HAYWARD CO.</b>	
<b>INCOME STATEMENT (PARTIAL)</b>	
<b>FOR THE YEAR ENDED DECEMBER 31, 2011</b>	
Other Income	
Unrealized holding gain—put option	\$ 500
Unrealized holding loss—available-for-sale securities	(500)

<sup>24</sup>In practice, Hayward generally does not have to actually buy and sell the Sonoma shares to realize this gain. Rather, unless the counterparty wants to hold Hayward shares, Hayward can "close out" the contract by having the counterparty pay it \$500 in cash. This is an example of the net settlement feature of derivatives.

The income statement indicates that the gain on the put option offsets the loss on the available-for-sale securities.<sup>25</sup> The reporting for these financial instruments, even when they reflect a hedging relationship, illustrates why the FASB argued that fair value accounting provides the most relevant information about financial instruments, including derivatives.

## Cash Flow Hedge

Companies use **cash flow hedges** to hedge exposures to **cash flow risk**, which results from the variability in cash flows. The FASB allows special accounting for cash flow hedges. Generally, companies measure and report derivatives at fair value on the balance sheet. They report gains and losses directly in net income. However, companies account for derivatives used in cash flow hedges at fair value on the balance sheet, but they **record gains or losses in equity, as part of other comprehensive income**.

To illustrate, assume that in September 2010 Allied Can Co. anticipates purchasing 1,000 metric tons of aluminum in January 2011. Concerned that prices for aluminum will increase in the next few months, Allied wants to hedge the risk that it might pay higher prices for inventory in January 2011. As a result, Allied enters into an aluminum futures contract.

A **futures contract** gives the holder the right and the obligation to purchase an asset at a preset price for a specified period of time.<sup>26</sup> In this case, the aluminum futures contract gives Allied the right and the obligation to purchase 1,000 metric tons of aluminum for \$1,550 per ton. This contract price is good until the contract expires in January 2011. The underlying for this derivative is the price of aluminum. If the price of aluminum rises above \$1,550, the value of the futures contract to Allied increases. Why? Because Allied will be able to purchase the aluminum at the lower price of \$1,550 per ton.<sup>27</sup>

Allied enters into the futures contract on September 1, 2010. Assume that the price to be paid today for inventory to be delivered in January—the **spot price**—equals the contract price. With the two prices equal, the futures contract has no value. Therefore no entry is necessary.

### September 2010

No entry required. A memorandum indicates the signing of the futures contract.

At December 31, 2010, the price for January delivery of aluminum increases to \$1,575 per metric ton. Allied makes the following entry to record the increase in the value of the futures contract.

### December 31, 2010

Futures Contract	25,000	
Unrealized Holding Gain or Loss—Equity		25,000
([\$1,575 – \$1,550] × 1,000 tons)		

Allied reports the futures contract in the balance sheet as a current asset. It reports the gain on the futures contract as part of other comprehensive income.

Since Allied has not yet purchased and sold the inventory, this gain arises from an **anticipated transaction**. In this type of transaction, a company accumulates in equity gains or losses on the futures contract as part of other comprehensive income until the period in which it sells the inventory, thereby affecting earnings.

<sup>25</sup>Note that the fair value changes in the option contract will not offset increases in the value of the Hayward investment. Should the price of Sonoma stock increase above \$125 per share, Hayward would have no incentive to exercise the put option.

<sup>26</sup>A **futures contract** is a firm contractual agreement between a buyer and seller for a specified asset on a fixed date in the future. The contract also has a standard specification so both parties know exactly what is being traded. A **forward** is similar but is not traded on an exchange and does not have standardized conditions.

<sup>27</sup>As with the earlier call option example, the actual aluminum does not have to be exchanged. Rather, the parties to the futures contract settle by paying the cash difference between the futures price and the price of aluminum on each settlement date.

### Objective 13

Explain how to account for a cash flow hedge.

### INTERNATIONAL INSIGHT

Under IGAAP, companies record unrealized holding gains or losses on cash flow hedges as adjustments to the value of the hedged item, not as “Other comprehensive income.”

In January 2011, Allied purchases 1,000 metric tons of aluminum for \$1,575 and makes the following entry.<sup>28</sup>

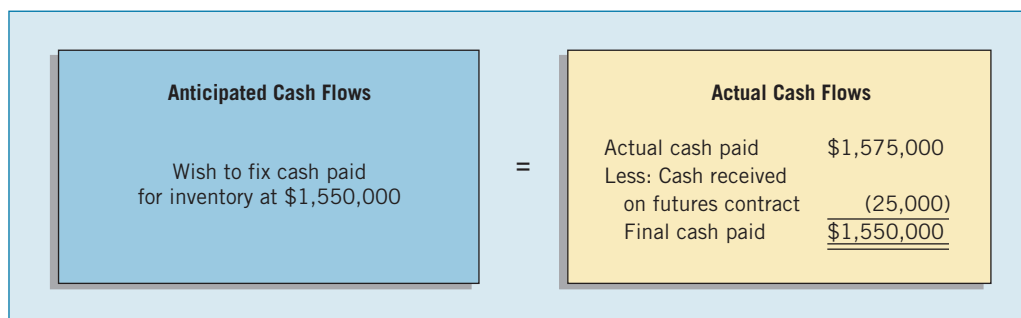

<b>January 2011</b>		
Aluminum Inventory	1,575,000	
Cash (\$1,575 × 1,000 tons)		1,575,000

At the same time, Allied makes final settlement on the futures contract. It records the following entry.

<b>January 2011</b>		
Cash	25,000	
Futures Contract (\$1,575,000 – \$1,550,000)		25,000

Through use of the futures contract derivative, Allied fixes the cost of its inventory. The \$25,000 futures contract settlement offsets the amount paid to purchase the inventory at the prevailing market price of \$1,575,000. The result: net cash outflow of \$1,550 per metric ton, as desired. As Illustration 17A-7 shows, Allied has therefore effectively hedged the cash flow for the purchase of inventory.

**ILLUSTRATION 17A-7**  
Effect of Hedge on Cash Flows

There are no income effects at this point. Allied accumulates in equity the gain on the futures contract as part of other comprehensive income until the period when it sells the inventory, affecting earnings through cost of goods sold.

For example, assume that Allied processes the aluminum into finished goods (cans). The total cost of the cans (including the aluminum purchases in January 2011) is \$1,700,000. Allied sells the cans in July 2011 for \$2,000,000, and records this sale as follows.

<b>July 2011</b>		
Cash	2,000,000	
Sales Revenue		2,000,000
Cost of Goods Sold	1,700,000	
Inventory (Cans)		1,700,000

Since the effect of the anticipated transaction has now affected earnings, Allied makes the following entry related to the hedging transaction.

<b>July 2011</b>		
Unrealized Holding Gain or Loss—Equity	25,000	
Cost of Goods Sold		25,000

The gain on the futures contract, which Allied reported as part of other comprehensive income, now reduces cost of goods sold. As a result, the cost of aluminum included in the overall cost of goods sold is \$1,550,000. The futures contract has worked as planned. Allied has managed the cash paid for aluminum inventory and the amount of cost of goods sold.

<sup>28</sup>In practice, futures contracts are settled on a daily basis. For our purposes, we show only one settlement for the entire amount.

## OTHER REPORTING ISSUES

The preceding examples illustrate the basic reporting issues related to the accounting for derivatives. Next, we discuss the following additional issues:

1. The accounting for embedded derivatives.
2. Qualifying hedge criteria.

### Embedded Derivatives

As we indicated at the beginning of this appendix, rapid innovation in the development of complex financial instruments drove efforts toward unifying and improving the accounting standards for derivatives. In recent years, this innovation has led to the development of **hybrid securities**. These securities have characteristics of both debt and equity. They often combine traditional and derivative financial instruments.

For example, a convertible bond (discussed in Chapter 16) is a hybrid instrument. It consists of two parts: (1) a debt security, referred to as the **host security**, combined with (2) an option to convert the bond to shares of common stock, the **embedded derivative**.

To provide consistency in accounting for similar derivatives, a company must account for embedded derivatives similarly to other derivatives. Therefore, to account for an embedded derivative, a company **should separate it from the host security** and then account for it using the accounting for derivatives. This separation process is referred to as **bifurcation**.<sup>29</sup> Thus, a company investing in a convertible bond must separate the stock option component of the instrument. It then accounts for the derivative (the stock option) at fair value and the host instrument (the debt) according to GAAP, as if there were no embedded derivative.<sup>30</sup>

### Qualifying Hedge Criteria

The FASB identified certain criteria that hedging transactions must meet before requiring the special accounting for hedges. The FASB designed these criteria to ensure the use of hedge accounting in a consistent manner across different hedge transactions. The general criteria relate to the following areas.

1. **Documentation, risk management, and designation.** At inception of the hedge, there must be formal **documentation** of the hedging relationship, the company's **risk management** objective, and the strategy for undertaking the hedge. **Designation** refers to identifying the hedging instrument, the hedged item or transaction, the nature of the risk being hedged, and how the hedging instrument will offset changes in the fair value or cash flows attributable to the hedged risk.

The FASB decided that documentation and designation are critical to the implementation of the special accounting for hedges. Without these requirements, companies might try to apply the hedge accounting provisions retroactively, only in response to negative changes in market conditions, to offset the negative impact of a transaction on the financial statements. Allowing special hedge accounting in such a setting could mask the speculative nature of the original transaction.

2. **Effectiveness of the hedging relationship.** At inception and on an ongoing basis, the hedging relationship should be **highly effective** in achieving offsetting changes in fair value or cash flows. Companies must assess effectiveness whenever preparing financial statements.

<sup>29</sup>A company can also designate such a derivative as a hedging instrument. The company would apply the hedge accounting provisions outlined earlier in the chapter.

<sup>30</sup>The issuer of the convertible bonds would not bifurcate the option component of the convertible bonds payable. GAAP explicitly precludes embedded derivative accounting for an embedded derivative that is indexed to a company's own common stock. If the conversion feature was tied to another company's stock, then the derivative would be bifurcated.

#### Objective 14

Identify special reporting issues related to derivative financial instruments that cause unique accounting problems.

#### INTERNATIONAL INSIGHT

iGAAP qualifying hedge criteria are similar to those used in U.S. GAAP.

The general guideline for effectiveness is that the fair values or cash flows of the hedging instrument (the derivative) and the hedged item exhibit a high degree of correlation. In practice, high effectiveness is assumed when the correlation is close to one (e.g., within plus or minus .10). In our earlier hedging examples (put option and the futures contract on aluminum inventory), the fair values and cash flows are perfectly correlated. That is, when the cash payment for the inventory purchase increased, it offset, dollar for dollar, the cash received on the futures contract.

If the effectiveness criterion is not met, either at inception or because of changes following inception of the hedging relationship, the FASB no longer allows special hedge accounting. The company should then account for the derivative as a free-standing derivative.<sup>31</sup>

- 3. Effect on reported earnings of changes in fair values or cash flows.** A change in the fair value of a hedged item or variation in the cash flow of a hedged forecasted transaction must have the potential to change the amount recognized in reported earnings.<sup>32</sup> There is no need for special hedge accounting if a company accounts for both the hedging instrument and the hedged item at fair value under existing GAAP. In this case, earnings will properly reflect the offsetting gains and losses.

For example, special accounting is not needed for a fair value hedge of a trading security, because a company accounts for both the investment and the derivative at fair value on the balance sheet with gains or losses reported in earnings. Thus, “special” hedge accounting is necessary only when there is a mismatch of the accounting effects for the hedging instrument and the hedged item under GAAP.<sup>33</sup>

## Summary of Derivatives Accounting

Illustration 17A-8 summarizes the accounting provisions for derivatives and hedging transactions.

### ILLUSTRATION 17A-8 Summary of Derivative Accounting under GAAP

Derivative Use	Accounting for Derivative	Accounting for Hedged Item	Common Example
Speculation	At fair value with unrealized holding gains and losses recorded in income.	Not applicable	Call or put option on an equity security.
Hedging			
Fair value	At fair value with holding gains and losses recorded in income.	At fair value with gains and losses recorded in income.	Put option to hedge an equity investment.
Cash flow	At fair value with unrealized holding gains and losses from the hedge recorded in other comprehensive income, and reclassified in income when the hedged transaction's cash flows affect earnings.	Use other generally accepted accounting principles for the hedged item.	Use of a futures contract to hedge a forecasted purchase of inventory.

<sup>31</sup>The accounting for the part of a derivative that is not effective in a hedge is at fair value, with gains and losses recorded in income.

<sup>32</sup>GAAP gives companies the option to measure most types of financial instruments—from equity investments to debt issued by the company—at fair value. Changes in fair value are recognized in net income each reporting period. Thus, GAAP provides companies with the opportunity to hedge their financial instruments without the complexity inherent in applying hedge accounting provisions. For example, if the fair value option is used, bifurcation of an embedded derivative is not required. **[12]**

<sup>33</sup>An important criterion specific to cash flow hedges is that the forecasted transaction in a cash flow hedge “is likely to occur.” A company should support this probability (defined as significantly greater than the term “more likely than not”) by observable facts such as frequency of similar past transactions and its financial and operational ability to carry out the transaction.

As indicated, the general accounting for derivatives relies on fair values. GAAP also establishes special accounting guidance when companies use derivatives **for hedging purposes**. For example, when a company uses a put option to hedge price changes in an available-for-sale stock investment in a fair value hedge (see the Hayward example earlier), it records unrealized gains on the investment in earnings, which is not GAAP for available-for-sale securities without such a hedge. This special accounting is justified in order to accurately report the nature of the hedging relationship in the balance sheet (recording both the put option and the investment at fair value) and in the income statement (reporting offsetting gains and losses in the same period).

Special accounting also is used for cash flow hedges. Companies account for derivatives used in qualifying cash flow hedges at fair value on the balance sheet, but record unrealized holding gains or losses in other comprehensive income until selling or settling the hedged item. In a cash flow hedge, a company continues to record the hedged item at its historical cost.

Disclosure requirements for derivatives are complex. Recent pronouncements on fair value information and financial instruments provide a helpful disclosure framework for reporting derivative instruments. Appendix 17C illustrates many of these disclosures, except for discussion of hedging issues. In general, companies that have derivatives are required to disclose the objectives for holding or issuing those instruments (speculation or hedging), the hedging context (fair value or cash flow), and the strategies for achieving risk-management objectives.

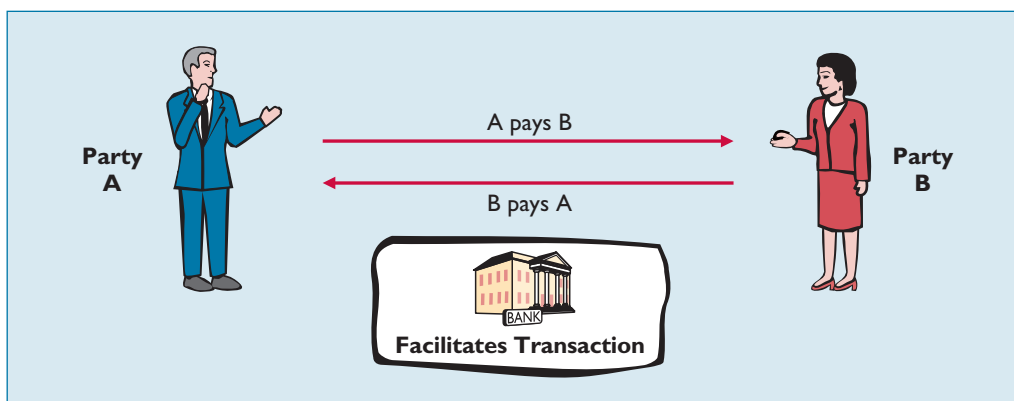

## COMPREHENSIVE HEDGE ACCOUNTING EXAMPLE

To provide a comprehensive example of hedge accounting, we examine the use of an interest rate swap. First, let's consider how swaps work and why companies use them.

Options and futures trade on organized securities exchanges. Because of this, options and futures have standardized terms. Although that standardization makes the trading easier, it limits the flexibility needed to tailor contracts to specific circumstances. In addition, most types of derivatives have relatively short time horizons, thereby excluding their use for reducing long-term risk exposure.

As a result, many corporations instead turn to the swap, a very popular type of derivative. A **swap** is a transaction between two parties in which the first party promises to make a payment to the second party. Similarly, the second party promises to make a simultaneous payment to the first party.

The most common type of swap is the **interest rate swap**. In this type, one party makes payments based on a fixed or floating rate, and the second party does just the opposite. In most cases, large money-center banks bring together the two parties. These banks handle the flow of payments between the parties, as shown in Illustration 17A-9.

**ILLUSTRATION 17A-9**  
Swap Transaction

### Fair Value Hedge

To illustrate the use of a swap in a fair value hedge, assume that Jones Company issues \$1,000,000 of five-year, 8 percent bonds on January 2, 2010. Jones records this transaction as follows.

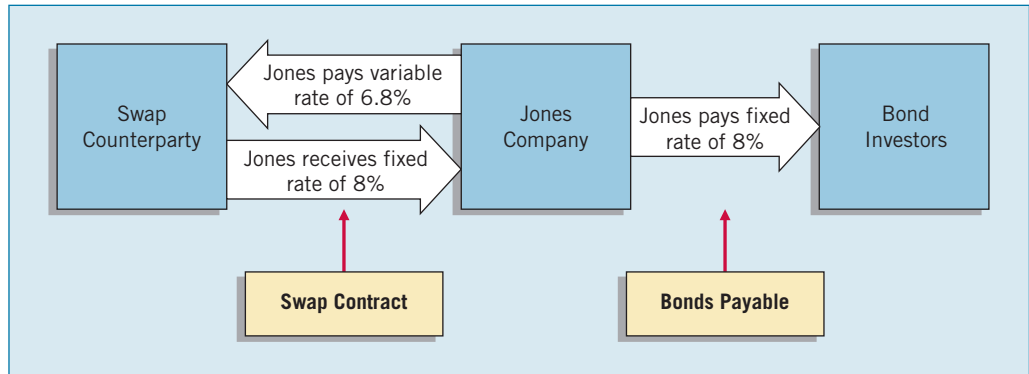

<b>January 2, 2010</b>		
Cash	1,000,000	
Bonds Payable		1,000,000

Jones offered a fixed interest rate to appeal to investors. But Jones is concerned that if market interest rates decline, the fair value of the liability will increase. The company will then suffer an economic loss.<sup>34</sup> To protect against the risk of loss, Jones hedges the risk of a decline in interest rates by entering into a five-year interest rate swap contract. Jones agrees to the following terms:

1. Jones will receive fixed payments at 8 percent (based on the \$1,000,000 amount).
2. Jones will pay variable rates, based on the market rate in effect for the life of the swap contract. The variable rate at the inception of the contract is 6.8 percent.

As Illustration 17A-10 shows, this swap allows Jones to change the interest on the bonds payable from a fixed rate to a variable rate.

**ILLUSTRATION 17A-10**  
Interest Rate Swap

The settlement dates for the swap correspond to the interest payment dates on the debt (December 31). On each interest payment (settlement) date, Jones and the counterparty compute the difference between current market interest rates and the fixed rate of 8 percent, and determine the value of the swap.<sup>35</sup> If interest rates decline, the value of the swap contract to Jones increases (Jones has a gain), while at the same time Jones’s fixed-rate debt obligation increases (Jones has an economic loss).

The swap is an effective risk-management tool in this setting. Its value relates to the same underlying (interest rates) that will affect the value of the fixed-rate bond payable. Thus, if the value of the swap goes up, it offsets the loss related to the debt obligation.

Assuming that Jones enters into the swap on January 2, 2010 (the same date as the issuance of the debt), the swap at this time has no value. Therefore no entry is necessary.

**January 2, 2010**

No entry required. A memorandum indicates the signing of the swap contract.

At the end of 2010, Jones makes the interest payment on the bonds. It records this transaction as follows.

<b>December 31, 2010</b>		
Interest Expense	80,000	
Cash (8% × \$1,000,000)		80,000

<sup>34</sup>This economic loss arises because Jones is locked into the 8 percent interest payments even if rates decline.

<sup>35</sup>The underlying for an interest rate swap is some index of market interest rates. The most commonly used index is the London Interbank Offer Rate, or LIBOR. In this example, we assume the LIBOR is 6.8 percent.

At the end of 2010, market interest rates have declined substantially. Therefore the value of the swap contract increases. Recall (see Illustration 17A-9) that in the swap, Jones receives a fixed rate of 8 percent, or \$80,000 ( $\$1,000,000 \times 8\%$ ), and pays a variable rate (6.8%), or \$68,000. Jones therefore receives \$12,000 ( $\$80,000 - \$68,000$ ) as a settlement payment on the swap contract on the first interest payment date. Jones records this transaction as follows.

<b>December 31, 2010</b>	
Cash	12,000
Interest Expense	12,000

In addition, a market appraisal indicates that the value of the interest rate swap has increased \$40,000. Jones records this increase in value as follows.<sup>36</sup>

<b>December 31, 2010</b>	
Swap Contract	40,000
Unrealized Holding Gain or Loss—Income	40,000

Jones reports this swap contract in the balance sheet. It reports the gain on the hedging transaction in the income statement. Because interest rates have declined, the company records a loss and a related increase in its liability as follows.

<b>December 31, 2010</b>	
Unrealized Holding Gain or Loss—Income	40,000
Bonds Payable	40,000

Jones reports the loss on the hedging activity in net income. It adjusts bonds payable in the balance sheet to fair value.

## Financial Statement Presentation of an Interest Rate Swap

Illustration 17A-11 indicates how Jones reports the asset and liability related to this hedging transaction on the balance sheet.

<b>JONES COMPANY</b>	
<b>BALANCE SHEET (PARTIAL)</b>	
<b>DECEMBER 31, 2010</b>	
<u>Current assets</u>	
Swap contract	\$40,000
<u>Long-term liabilities</u>	
Bonds payable	\$1,040,000

**ILLUSTRATION 17A-11**  
Balance Sheet Presentation  
of Fair Value Hedge

The effect on Jones's balance sheet is the addition of the swap asset and an increase in the carrying value of the bonds payable. Illustration 17A-12 indicates how Jones reports the effects of this swap transaction in the income statement.

<b>JONES COMPANY</b>	
<b>INCOME STATEMENT (PARTIAL)</b>	
<b>FOR THE YEAR ENDED DECEMBER 31, 2010</b>	
Interest expense ( $\$80,000 - \$12,000$ )	\$68,000
<u>Other income</u>	
Unrealized holding gain—swap contract	\$40,000
Unrealized holding loss—bonds payable	(40,000)
Net gain (loss)	\$-0-

**ILLUSTRATION 17A-12**  
Income Statement  
Presentation of Fair  
Value Hedge

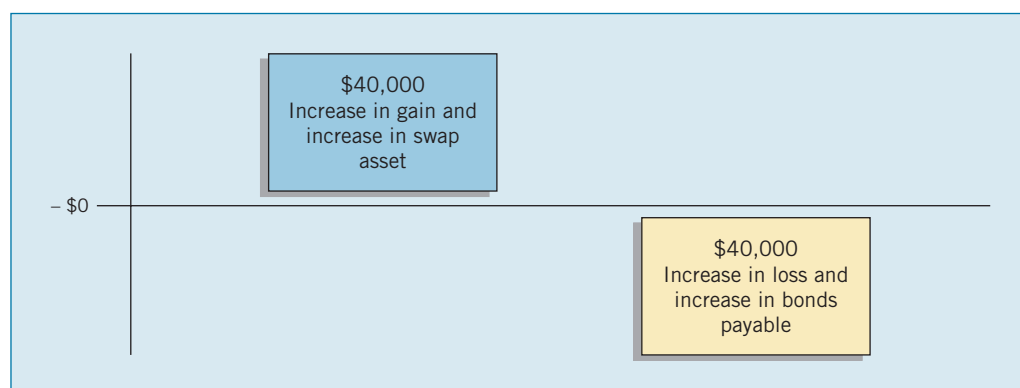

<sup>36</sup>Theoretically, this fair value change reflects the present value of expected future differences in variable and fixed interest rates.

On the income statement, Jones reports interest expense of \$68,000. Jones has effectively changed the debt's interest rate from fixed to variable. That is, by receiving a fixed rate and paying a variable rate on the swap, the company converts the fixed rate on the bond payable to variable. This results in an effective interest rate of 6.8 percent in 2010.<sup>37</sup> Also, the gain on the swap offsets the loss related to the debt obligation. Therefore the net gain or loss on the hedging activity is zero.

Illustration 17A-13 shows the overall impact of the swap transaction on the financial statements.

#### ILLUSTRATION 17A-13

Impact on Financial Statements of Fair Value Hedge

In summary, to account for fair value hedges (as illustrated in the Jones example) **record the derivative at its fair value in the balance sheet, and record any gains and losses in income.** Thus, the gain on the swap offsets or hedges the loss on the bond payable, due to the decline in interest rates.

By adjusting the hedged item (the bond payable in the Jones case) to fair value, with the gain or loss recorded in earnings, the accounting for the Jones bond payable deviates from amortized cost. This special accounting is justified in order to report accurately the nature of the hedging relationship between the swap and the bond payable in the balance sheet (both the swap and the debt obligation are recorded at fair value) and in the income statement (offsetting gains and losses are reported in the same period).<sup>38</sup>

#### INTERNATIONAL INSIGHT

International accounting for hedges (*IAS 39*) is similar to the provisions of U.S. GAAP.

## CONTROVERSY AND CONCLUDING REMARKS

Companies need rules to properly measure and report derivatives in financial statements. However, some argue that reporting derivatives at fair value results in unrealized gains and losses that are difficult to interpret. Still, others raise concerns about the complexity and cost of implementing GAAP in this area.

However, we believe that the long-term benefits of using fair value and reporting derivatives at fair value will far outweigh any short-term implementation costs. As the volume and complexity of derivatives and hedging transactions continue to grow, so does the risk that investors and creditors will be exposed to unexpected losses arising

<sup>37</sup>Jones will apply similar accounting and measurement at future interest payment dates. Thus, if interest rates increase, Jones will continue to receive 8 percent on the swap (records a loss) but will also be locked into the fixed payments to the bondholders at an 8 percent rate (records a gain).

<sup>38</sup>An interest rate swap can also be used in a cash flow hedge. A common setting is the cash flow risk inherent in having variable rate debt as part of a company's debt structure. In this situation, the variable debt issuer can hedge the cash flow risk by entering into a swap contract to receive variable rate cash flows but pay fixed rate. The cash received on the swap contract will offset the variable cash flows to be paid on the debt obligation.

from derivative transactions. Statement readers must have comprehensive information concerning many derivative financial instruments and the effects of hedging transactions using derivatives.

## SUMMARY OF LEARNING OBJECTIVES FOR APPENDIX 17A

**•9 Explain who uses derivatives and why.** Any company or individual that wants to ensure against different types of business risks may use derivative contracts to achieve this objective. In general, these transactions involve some type of hedge. Speculators also use derivatives, attempting to find an enhanced return. Speculators are very important to the derivatives market because they keep it liquid on a daily basis. Arbitrageurs attempt to exploit inefficiencies in various derivative contracts. A company primarily uses derivatives for purposes of hedging its exposure to fluctuations in interest rates, foreign currency exchange rates, and commodity prices.

**•10 Understand the basic guidelines for accounting for derivatives.** Companies should recognize derivatives in the financial statements as assets and liabilities, and report them at fair value. Companies should recognize gains and losses resulting from speculation immediately in income. They report gains and losses resulting from hedge transactions in different ways, depending on the type of hedge.

**•11 Describe the accounting for derivative financial instruments.** Companies report derivative financial instruments in the balance sheet, and record them at fair value. Except for derivatives used in hedging, companies record realized and unrealized gains and losses on derivative financial instruments in income.

**•12 Explain how to account for a fair value hedge.** A company records the derivative used in a qualifying fair value hedge at its fair value in the balance sheet, recording any gains and losses in income. In addition, the company also accounts for the item being hedged with the derivative at fair value. By adjusting the hedged item to fair value, with the gain or loss recorded in earnings, the accounting for the hedged item may deviate from GAAP in the absence of a hedge relationship. This special accounting is justified in order to report accurately the nature of the hedging relationship between the derivative hedging instruments and the hedged item. A company reports both in the balance sheet, reporting offsetting gains and losses in income in the same period.

**•13 Explain how to account for a cash flow hedge.** Companies account for derivatives used in qualifying cash flow hedges at fair value on the balance sheet, but record gains or losses in equity as part of other comprehensive income. Companies accumulate these gains or losses, and reclassify them in income when the hedged transaction's cash flows affect earnings. Accounting is according to GAAP for the hedged item.

**•14 Identify special reporting issues related to derivative financial instruments that cause unique accounting problems.** A company should separate a derivative that is embedded in a hybrid security from the host security, and account for it using the accounting for derivatives. This separation process is referred to as bifurcation. Special hedge accounting is allowed only for hedging relationships that meet certain criteria. The main criteria are: (1) There is formal documentation of the hedging relationship, the company's risk management objective, and the strategy for undertaking the hedge, and the company designates the derivative as either a cash flow or fair value hedge. (2) The company expects the hedging relationship to be highly effective in achieving offsetting

changes in fair value or cash flows. (3) “Special” hedge accounting is necessary only when there is a mismatch of the accounting effects for the hedging instrument and the hedged item under GAAP.

## APPENDIX 17B

## VARIABLE-INTEREST ENTITIES

### Objective 15

Describe the accounting for the variable-interest entities.

The FASB has issued an interpretation to address the concern that some companies are not reporting the risks and rewards of certain investments and other financial arrangements in their consolidated financial statements. [13] As one analyst noted, **Enron** showed the world the power of the idea that “if investors can’t see it, they can’t ask you about it—the ‘it’ being assets and liabilities.”

What exactly did Enron do? First, it created a number of entities whose purpose was to hide debt, avoid taxes, and enrich certain management personnel to the detriment of the company and its stockholders. In effect, these entities, called **special purpose entities (SPEs)**, appeared to be separate entities for which Enron had a limited economic interest. For many of these arrangements, Enron actually had a substantial economic interest; the risks and rewards of ownership were not shifted to the entities but remained with Enron. In short, Enron was obligated to repay investors in these SPEs when they were unsuccessful. Once Enron’s problems were discovered, it soon became apparent that many other companies had similar problems.

## WHAT ABOUT GAAP?

A reasonable question to ask with regard to SPEs is, “Why didn’t GAAP prevent companies from hiding SPE debt and other risks, by forcing companies to include these obligations in their consolidated financial statements?” To understand why, we have to look at the basic rules of consolidation.

The GAAP rules indicate that consolidated financial statements are “usually necessary for a fair presentation when one of the companies in the group directly or indirectly has a controlling financial interest in other companies.” They further note that “the usual condition for a controlling financial interest is ownership of a majority voting interest.”<sup>39</sup> In other words, if a company, like **Intel**, owns more than 50 percent of the voting stock of another company, Intel consolidates that company. GAAP also indicates that controlling financial interest may be achieved through arrangements that do not involve voting interests. However, applying these guidelines in practice is difficult.

Whenever GAAP uses a clear line, like “greater than 50 percent,” companies sometimes exploit the criterion. For example, some companies set up joint ventures in which each party owns exactly 50 percent. In that case, neither party consolidates. Or like **Coca-Cola** in the opening story, a company may own less than 50 percent of the voting stock, but maintain effective control through board of director relationships, supply relationships, or through some other type of financial arrangement.

So the FASB realized that changes had to be made to GAAP for consolidations, and it issued new guidelines. These guidelines define when a company should use factors other than voting interest to determine controlling financial interest. In this pronouncement, the FASB created a new risk-and-reward model to be used in situations where voting interests were unclear. The risk-and-reward model answers the basic questions of who stands to gain or lose the most from ownership in an SPE when ownership is uncertain.

<sup>39</sup>“Consolidation of Certain Special Purpose Entities,” Proposed Interpretation (Norwalk, Conn.: FASB, June 28, 2002).

In other words, we now have two models for consolidation:

1. **Voting-interest model**—If a company owns more than 50 percent of another company, then consolidate in most cases.
2. **Risk-and-reward model**—If a company is involved substantially in the economics of another company, then consolidate.

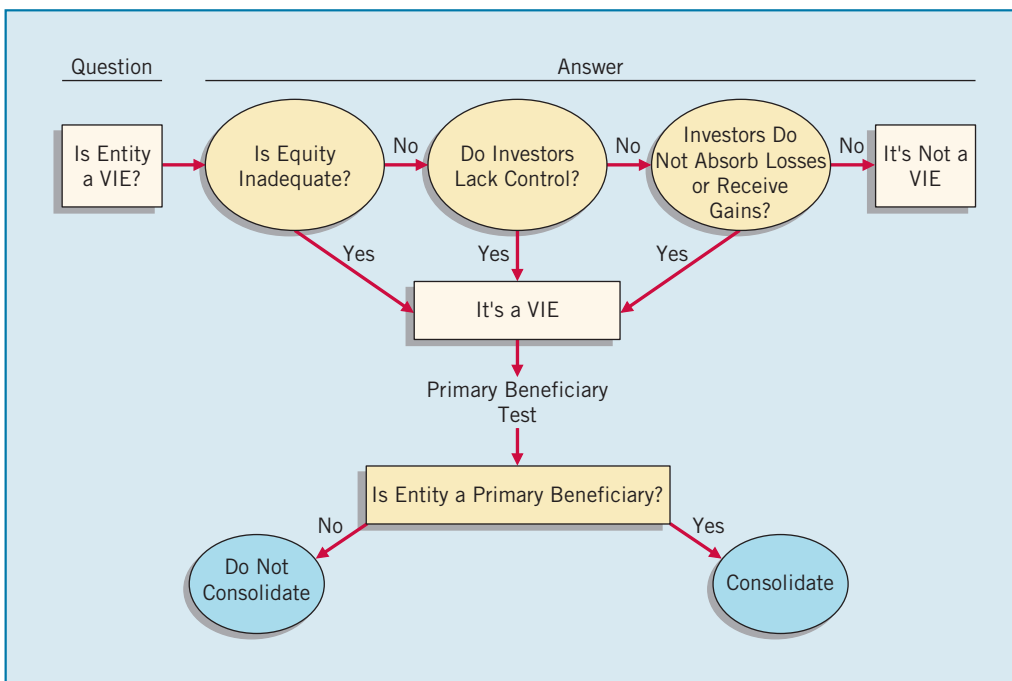

Operationally, the voting-interest model is easy to apply: It sets a “bright line” ownership standard of more than 50 percent of the voting stock. However, if companies cannot determine control based on voting interest, they may use the risk-and-reward model.

## CONSOLIDATION OF VARIABLE-INTEREST ENTITIES

To answer the question of who gains or loses when voting rights do not determine consolidation, the FASB developed the risk-and-reward model. In this model, the FASB introduced the notion of a variable-interest entity. A **variable-interest entity (VIE)** is an entity that has one of the following characteristics:

1. **Insufficient equity investment at risk.** Stockholders are assumed to have sufficient capital investment to support the entity’s operations. If thinly capitalized, the entity is considered a VIE and is subject to the risk-and-reward model.
2. **Stockholders lack decision-making rights.** In some cases, stockholders do not have the influence to control the company’s destiny.
3. **Stockholders do not absorb the losses or receive the benefits of a normal stockholder.** In some entities, stockholders are shielded from losses related to their primary risks, or their returns are capped or must be shared with other parties.

Once the company determines that an entity is a variable-interest entity, it no longer can use the voting-interest model. The question that must then be asked is, “What party is exposed to the majority of the risks and rewards associated with the VIE?” This party is called the primary beneficiary and must consolidate the VIE. Illustration 17B-1 shows the decision model for the VIE consolidation model.

**ILLUSTRATION 17B-1**  
VIE Consolidation Model

### Some Examples

Let’s look at a couple of examples to illustrate how this process works.

#### Example 1

Assume that **Citigroup** sells notes receivable to another entity called RAKO. RAKO’s assets are financed in two ways: Lenders provide 90 percent, and investors provide the remaining 10 percent as an equity investment. If Citigroup does not guarantee the debt, Citigroup has low or nonexistent risk. Therefore, Citigroup would not consolidate the assets and liabilities of RAKO. On the other hand, if Citigroup guarantees RAKO’s debt, then RAKO is a VIE, and Citigroup is the primary beneficiary. In that case, Citigroup must consolidate.

#### Example 2

**San Diego Gas and Electric (SDGE)** is required by law to buy power from small, local producers. In some cases, SDGE has contracts requiring it to purchase substantially all the power generated by these local companies over their lifetime. Because SDGE controls the outputs of the producers, they are VIEs. In this case, the risks and rewards related to ownership apply to SDGE. In other words, it is the primary beneficiary, and SDGE should include these producers in the consolidated financial statements.

Note that the primary beneficiary may have the risks and rewards of ownership through use of a variety of instruments and financial arrangements, such as equity investments, loans to the VIE, leases, derivatives, and guarantees. Potential VIEs include the following: corporations, partnerships, limited liability companies, and majority-owned subsidiaries.

**ILLUSTRATION 17B-2**  
Impact of Rule Involving Risk-and-Reward Model

Source: Company Reports, Glass, Lewis, & Co. Research Report (November 6, 2003).

### What Is Happening in Practice?

For most companies, the new reporting related to VIEs will not materially affect their financial statements. As shown in Illustration 17B-2, one study of 509 companies with total market values over \$500 million found that just 17 percent of the companies reviewed have a material impact.

Of the material VIEs disclosed in the study, the most common types (42 percent) were related to joint-venture equity investments, followed by off-balance-sheet lease arrangements (22 percent). In some cases, companies are restructuring transactions to avoid consolidation. For example, **Pep Boys**, **Choice Point, Inc.**, and **Anadarko** all appear to have restructured their lease transactions to avoid consolidation. On the other hand, companies like **eBay**, **Kimberly-Clark**, and **Williams-Sonoma Inc.** intend to or have consolidated their VIEs.

In summary, companies are now required to consolidate certain investments and other financing arrangements that previously were reported off-balance-sheet. As a result, financial statements should be more complete in reporting the risks and rewards of these transactions.

#### KEY TERMS

- risk-and-reward model, 903
- special purpose entity (SPE), 902
- variable-interest entity (VIE), 903
- voting-interest model, 903

## SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 17B

**LO 15** Describe the accounting for variable-interest entities. Special variable-interest accounting is used in situations where control cannot be determined based on voting rights. A company is required to consolidate a variable-interest entity if it is the primary beneficiary of the variable-interest entity.

## APPENDIX 17C

## FAIR VALUE MEASUREMENTS AND DISCLOSURES

As indicated in the chapter, the FASB believes that fair value information is relevant for making effective business decisions. However, others express concern about fair value measurements for two reasons: (1) the lack of reliability related to the fair value measurement in certain cases, and (2) the ability to manipulate fair value measurements to achieve financial results inconsistent with the underlying economics of the situation.

The Board recognizes these concerns and has attempted to develop a sound conceptual basis for measuring and reporting fair value information. In addition, it has placed emphasis on developing guidelines for reporting fair value information for financial instruments, because many of these instruments have relatively active markets for which valuations can be reliably determined. The purpose of this appendix is to explain the disclosure requirements for financial instruments related to fair value information.

## DISCLOSURE OF FAIR VALUE INFORMATION: FINANCIAL INSTRUMENTS—NO FAIR VALUE OPTION

One requirement related to fair value disclosure is that both the cost and the fair value of all financial instruments be reported in the notes to the financial statements. [14] This enables readers of the financial statements to understand the fair value of the company's financial instruments and the potential gains and losses that might occur in the future as a result of these instruments.

The Board also decided that companies should disclose information that enables users to determine the extent of usage of fair value and the inputs used to implement fair value measurement. Two reasons for additional disclosure beyond the simple itemization of fair values are:

1. Differing levels of reliability exist in the measurement of fair value information; it therefore is important to understand the varying risks involved in measurement. It is difficult to incorporate these levels of uncertainty into the financial statements. Disclosure provides a framework for addressing the qualitative aspects related to risk and measurement.
2. Changes in the fair value of financial instruments are reported differently in the financial statements, depending upon the type of financial instrument involved and whether the fair value option is employed. Note disclosure provides an opportunity to explain more precisely the impact that changes in the value of financial instruments have on financial results. In assessing the inputs, the Board recognizes that the reliability of the fair value measurement is of extreme importance. Many financial instruments are traded in active markets, and their valuation is not difficult. Other instruments are complex/illiquid, and their valuation is difficult.

To highlight these levels of reliability in valuation, the FASB established a fair value hierarchy. As discussed in Chapter 2 (page 43), this hierarchy identifies three broad levels—1, 2, and 3—related to the measurement of fair values. Level 1 is the most reliable measurement because fair value is based on quoted prices in active markets *for identical assets or liabilities*. Level 2 is less reliable; it is not based on quoted market prices for identical assets and liabilities but instead may be based on *similar assets or liabilities*. Level 3 is least reliable; it uses unobservable inputs that reflect the company's assumption as to the value of the financial instrument.

Illustration 17C-1 is an example of a fair value note disclosure for Sabathia Company. It includes both the fair value amounts and the reliability level. (A similar disclosure would be presented for liabilities.)

**ILLUSTRATION 17C-1**  
Example of Fair Value Hierarchy

<b>SABATHIA COMPANY</b>				
<b>NOTES TO THE FINANCIAL STATEMENTS</b>				
(\$ in 000s)	Fair Value Measurements at Reporting Data Using			
	Fair Value 12/31/10	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Description				
Trading securities	\$115	\$105	\$10	
Available-for-sale securities	75	75		
Derivatives	60	25	15	\$20
Venture capital investments	10			10
Total	<u>\$260</u>	<u>\$205</u>	<u>\$25</u>	<u>\$30</u>

For assets and liabilities measured at fair value and classified as Level 3, a reconciliation of Level 3 changes for the period is required. In addition, companies should report an analysis of how Level 3 changes in fair value affect total gains and losses and their impact on net income. Illustration 17C-2 is an example of this disclosure.

**ILLUSTRATION 17C-2**  
Reconciliation of Level 3 Inputs

<b>SABATHIA COMPANY</b>			
<b>NOTES TO THE FINANCIAL STATEMENTS</b>			
(\$ in 000s)	Fair Value Measurements Using Significant Unobservable Inputs (Level 3)		
	Derivatives	Venture Capital Investments	Total
Beginning balance	\$14	\$11	\$25
Total gains or losses (realized/unrealized)			
Included in earnings (or changes in net assets)	11	(3)	8
Included in other comprehensive income	4		4
Purchases, issuances, and settlements	(7)	2	(5)
Transfers in and/or out of Level 3	(2)		(2)
Ending balance	<u>\$20</u>	<u>\$10</u>	<u>\$30</u>
The amount of total gains or losses for the period included in earnings (or changes in net assets) attributable to the change in unrealized gains or losses relating to assets still held at the reporting date	<u>\$7</u>	<u>\$2</u>	<u>\$9</u>
Gains and losses (realized and unrealized) included in earnings (or changes in net assets) for the period (above) are reported in trading revenues and in other revenues as follows.			
	Trading Revenues	Other Revenues	
Total gains or losses included in earnings (or changes in net assets) for the period (as shown in the table above)	<u>\$11</u>	<u>\$(3)</u>	
Change in unrealized gains or losses relating to assets still held at reporting date	<u>\$7</u>	<u>\$2</u>	

Sabathia Company's disclosure provides to the user of the financial statements an understanding of the following:

1. The carrying amount and the fair value of the company's financial instruments segregated by level of reliability. Thus the reader of the financial statements has a basis for judging what credence should be given to the fair value amounts.
2. For Level 3 financial instruments, a reconciliation of the balance from the beginning to the end of the period. This reconciliation enables the reader to understand the composition of the change. It is important because these calculations are most affected by subjective estimates and could be subject to manipulation.
3. The impact of changes in fair value on the net assets of the company from one period to the next.

## DISCLOSURE OF FAIR VALUE INFORMATION: FINANCIAL INSTRUMENTS—FAIR VALUE OPTION

Some companies may choose to use the fair value option for some or all of their financial instruments. [15] In that case, companies have the option of incorporating the entire guidelines related to fair value measurement into one master schedule, or they can provide in a separate schedule information related solely to the fair value option. Illustration 17C-3 for Sheets Company includes only information related to the fair value option. It integrates the disclosure of the carrying amount in addition to the fair value disclosure.

**ILLUSTRATION 17C-3**  
Disclosure of Fair Value Option

<b>SHEETS COMPANY</b>								
<b>NOTES TO THE FINANCIAL STATEMENTS</b>								
(\$ in 000s)	Fair Value Measurements at December 31, 2010 Using				Changes in Fair Values for the 12-Month Period Ended December 31, 2010, for Items Measured at Fair Value Pursuant to Election of the Fair Value Option			
	Fair Value Measure- ments 12/31/10	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)	Other Gains and Losses	Interest Income on Loans	Interest Expense on Long-Term Debt	Total Changes in Fair Values Included in Current- Period Earnings
Description								
Trading securities	\$115	\$105	\$ 10					
Available-for-sale securities	75	75						
Loans	150	0	100	\$ 50	\$ (3)	\$10		\$ 7
Derivatives	60	25	15	20				
Private equity investments*	75	0	25	50	(18)			(18)
Long-term debt	(60)	(30)	(10)	(20)	13		\$(4)	9

\*Represents investments that would otherwise be accounted for under the equity method of accounting.

Loans are included in loans and lease receivables in the statement of financial position. As of December 31, 2010, approximately \$160,000 of lease receivables are included in loans and lease receivables in the statement of financial position and are not eligible for the fair value option.

Source: Adapted from FASB ASC 825-10-25 (Norwalk, Conn.: FASB, February 2007), Table 2, p. 47.

## DISCLOSURE OF FAIR VALUES: IMPAIRED ASSETS OR LIABILITIES

In addition to financial instruments, companies often have assets or liabilities that are remeasured on a nonrecurring basis due to impairment. In this case the fair value hierarchy can highlight the reliability of the measurement, coupled with the related

gain or loss for the period. Illustration 17C-4 highlights this disclosure for McClung Company.

**ILLUSTRATION 17C-4**

Disclosure of Fair Value,  
with Impairment

<b>McCLUNG COMPANY</b>				
<b>NOTES TO THE FINANCIAL STATEMENTS</b>				
(\$ in millions)	Fair Value Measurements Using			
Description	Year Ended 12/31/10	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Long-lived assets held and used	\$75		\$75	
Goodwill	30			\$30
Long-lived assets held for sale	26		26	

Long-lived assets held and used with a carrying amount of \$100 million were written down to their fair value of \$75 million, resulting in an impairment charge of \$25 million, which was included in earnings for the period.

Goodwill with a carrying amount of \$65 million was written down to its implied fair value of \$30 million, resulting in an impairment charge of \$35 million, which was included in earnings for the period.

In accordance with the provisions of the Impairment or Disposal of Long-Lived Assets Subsections of FASB Codification Subtopic 360-10, long-lived assets held for sale with a carrying amount of \$35 million were written down to their fair value of \$26 million, less cost to sell of \$6 million (or \$20 million), resulting in a loss of \$15 million, which was included in earnings for the period.

**Exercises**

Access the FASB Codification at <http://asc.fasb.org/home> to prepare responses to the following exercises. Provide Codification references for your responses.

**CE17-1** Access the glossary (“Master Glossary”) to answer the following.

- (a) What are trading securities?
- (b) What is the definition of “holding gain or loss”?
- (c) What is a cash flow hedge?
- (d) What is a fair value hedge?

**CE17-2** What guidance does the SEC give for disclosures regarding accounting policies used for derivatives?

**CE17-3** When would an investor discontinue applying the equity method in an investment? Are there any exceptions to this rule?

**CE17-4** For balance sheet purposes, can the fair value of a derivative in a loss position be netted against the fair value of a derivative in a gain position?

**An additional Codification case can be found in the Using Your Judgment section, on page 928.**

**Be sure to check the companion website for a Review and Analysis Exercise, with solution.**

*Note:* All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

**QUESTIONS**

At what amount should trading, available-for-sale, and held-to-maturity securities be reported on the balance sheet?</li> <li>8. On July 1, 2010, Wheeler Company purchased \$4,000,000 of Duggen Company’s 8% bonds, due on July 1, 2017. The bonds, which pay interest semiannually on January 1 and July 1, were purchased for \$3,500,000 to yield 10%. Determine the amount of interest revenue Wheeler should report on its income statement for year ended December 31, 2010.</li> <li>9. If the bonds in question 8 are classified as available-for-sale and they have a fair value at December 31, 2010, of</li> </ul> |
|---|---|

- \$3,604,000, prepare the journal entry (if any) at December 31, 2010, to record this transaction.
10. Indicate how unrealized holding gains and losses should be reported for investment securities classified as trading, available-for-sale, and held-to-maturity.
  11. (a) Assuming no Securities Fair Value Adjustment (Available-for-Sale) account balance at the beginning of the year, prepare the adjusting entry at the end of the year if Laura Company's available-for-sale securities have a market value \$60,000 below cost. (b) Assume the same information as part (a), except that Laura Company has a debit balance in its Securities Fair Value Adjustment (Available-for-Sale) account of \$10,000 at the beginning of the year. Prepare the adjusting entry at year-end.
  12. Identify and explain the different types of classifications for investment in equity securities.
  13. Why are held-to-maturity investments applicable only to debt securities?
  14. Hayes Company sold 10,000 shares of Kenyon Co. common stock for \$27.50 per share, incurring \$1,770 in brokerage commissions. These securities were classified as trading and originally cost \$260,000. Prepare the entry to record the sale of these securities.
  15. Distinguish between the accounting treatment for available-for-sale equity securities and trading equity securities.
  16. What constitutes "significant influence" when an investor's financial interest is below the 50% level?
  17. Explain how the investment account is affected by investee activities under the equity method.
  18. When the equity method is applied, what disclosures should be made in the investor's financial statements?
  19. Hiram Co. uses the equity method to account for investments in common stock. What accounting should be made for dividends received from these investments subsequent to the date of investment?
  20. Raleigh Corp. has an investment with a carrying value (equity method) on its books of \$170,000 representing a 30% interest in Borg Company, which suffered a \$620,000 loss this year. How should Raleigh Corp. handle its proportionate share of Borg's loss?
  21. Where on the asset side of the balance sheet are trading securities, available-for-sale securities, and held-to-maturity securities reported? Explain.
  22. Explain why reclassification adjustments are necessary.
  23. Briefly discuss how a transfer of securities from the available-for-sale category to the trading category affects stockholders' equity and income.
  24. When is a debt security considered impaired? Explain how to account for the impairment of an available-for-sale debt security.
  25. What is the GAAP definition of fair value?
  26. What is the fair value option?
  27. Franklin Corp. has an investment that it has held for several years. When it purchased the investment, Franklin classified and accounted for it as available-for-sale. Can Franklin use the fair value option for this investment? Explain.
  28. Where can authoritative iGAAP be found related to investments? 
  29. Briefly describe some of the similarities and differences between U.S. GAAP and iGAAP with respect to the accounting for investments. 
  30. Ramirez Company has an available-for-sale investment in the 6%, 20-year bonds of Soto Company. The investment was originally purchased for \$1,200,000 in 2009. Early in 2010, Ramirez recorded an impairment of \$300,000 on the Soto investment, due to Soto's financial distress. In 2011, Soto returned to profitability and the Soto investment was no longer impaired. What entry does Ramirez make in 2011 under (a) U.S. GAAP and (b) iGAAP? 
  - \*31. What is meant by the term underlying as it relates to derivative financial instruments?
  - \*32. What are the main distinctions between a traditional financial instrument and a derivative financial instrument?
  - \*33. What is the purpose of a fair value hedge?
  - \*34. In what situation will the unrealized holding gain or loss on an available-for-sale security be reported in income?
  - \*35. Why might a company become involved in an interest rate swap contract to receive fixed interest payments and pay variable?
  - \*36. What is the purpose of a cash flow hedge?
  - \*37. Where are gains and losses related to cash flow hedges involving anticipated transactions reported?
  - \*38. What are hybrid securities? Give an example of a hybrid security.
  - \*39. Explain the difference between the voting-interest model and the risk-and-reward model used for consolidation.
  - \*40. What is a variable-interest entity?

## BRIEF EXERCISES

-  **BE17-1** Garfield Company purchased, as a held-to-maturity investment, \$80,000 of the 9%, 5-year bonds of Chester Corporation for \$74,086, which provides an 11% return. Prepare Garfield's journal entries for (a) the purchase of the investment, and (b) the receipt of annual interest and discount amortization. Assume effective-interest amortization is used.

- 2** **BE17-2** Use the information from BE17-1, but assume the bonds are purchased as an available-for-sale security. Prepare Garfield's journal entries for (a) the purchase of the investment, (b) the receipt of annual interest and discount amortization, and (c) the year-end fair value adjustment. The bonds have a year-end fair value of \$75,500.
- 2** **BE17-3** Carow Corporation purchased, as a held-to-maturity investment, \$60,000 of the 8%, 5-year bonds of Harrison, Inc. for \$65,118, which provides a 6% return. The bonds pay interest semiannually. Prepare Carow's journal entries for (a) the purchase of the investment, and (b) the receipt of semiannual interest and premium amortization. Assume effective-interest amortization is used.
- 2** **BE17-4** Hendricks Corporation purchased trading investment bonds for \$50,000 at par. At December 31, Hendricks received annual interest of \$2,000, and the fair value of the bonds was \$47,400. Prepare Hendricks' journal entries for (a) the purchase of the investment, (b) the interest received, and (c) the fair value adjustment.
- 3** **BE17-5** Fairbanks Corporation purchased 400 shares of Sherman Inc. common stock as an available-for-sale investment for \$13,200. During the year, Sherman paid a cash dividend of \$3.25 per share. At year-end, Sherman stock was selling for \$34.50 per share. Prepare Fairbanks's journal entries to record (a) the purchase of the investment, (b) the dividends received, and (c) the fair value adjustment.
- 3** **BE17-6** Use the information from BE17-5 but assume the stock was purchased as a trading security. Prepare Fairbanks's journal entries to record (a) the purchase of the investment, (b) the dividends received, and (c) the fair value adjustment.
- 4** **BE17-7** Zoop Corporation purchased for \$300,000 a 30% interest in Murphy, Inc. This investment enables Zoop to exert significant influence over Murphy. During the year Murphy earned net income of \$180,000 and paid dividends of \$60,000. Prepare Zoop's journal entries related to this investment.
- 3** **BE17-8** Cleveland Company has a stock portfolio valued at \$4,000. Its cost was \$3,300. If the Securities Fair Value Adjustment (Available-for-Sale) account has a debit balance of \$200, prepare the journal entry at year-end.
- 7** **BE17-9** The following information relates to **Starbucks** for 2007: net income \$672.638 million; unrealized holding loss of \$20.380 million related to available-for-sale securities during the year; accumulated other comprehensive income of \$37.273 million on October 1, 2006. Assuming no other changes in accumulated other comprehensive income, determine (a) other comprehensive income for 2007, (b) comprehensive income for 2007, and (c) accumulated other comprehensive income at September 30, 2007.
- 6** **BE17-10** Hillsborough Co. has an available-for-sale investment in the bonds of Schuyler Corp. with a carrying (and fair) value of \$70,000. Hillsborough determined that due to poor economic prospects for Schuyler, the bonds have decreased in value to \$60,000. It is determined that this loss in value is other-than-temporary. Prepare the journal entry, if any, to record the reduction in value.

## EXERCISES

- 1 •3** **E17-1 (Investment Classifications)** For the following investments identify whether they are:

1. Trading Securities
2. Available-for-Sale Securities
3. Held-to-Maturity Securities

Each case is independent of the other.

- (a) A bond that will mature in 4 years was bought 1 month ago when the price dropped. As soon as the value increases, which is expected next month, it will be sold.
- (b) 10% of the outstanding stock of Farm-Co was purchased. The company is planning on eventually getting a total of 30% of its outstanding stock.
- (c) 10-year bonds were purchased this year. The bonds mature at the first of next year.
- (d) Bonds that will mature in 5 years are purchased. The company would like to hold them until they mature, but money has been tight recently and they may need to be sold.
- (e) A bond that matures in 10 years was purchased. The company is investing money set aside for an expansion project planned 10 years from now.
- (f) Preferred stock was purchased for its constant dividend. The company is planning to hold the preferred stock for a long time.

**E17-2 (Entries for Held-to-Maturity Securities)** On January 1, 2010, Jennings Company purchased at par 10% bonds having a maturity value of \$300,000. They are dated January 1, 2010, and mature January 1, 2015, with interest receivable December 31 of each year. The bonds are classified in the held-to-maturity category.

**Instructions**

- (a) Prepare the journal entry at the date of the bond purchase.
- (b) Prepare the journal entry to record the interest received for 2010.
- (c) Prepare the journal entry to record the interest received for 2011.

**E17-3 (Entries for Held-to-Maturity Securities)** On January 1, 2009, Roosevelt Company purchased 12% bonds, having a maturity value of \$500,000, for \$537,907.40. The bonds provide the bondholders with a 10% yield. They are dated January 1, 2009, and mature January 1, 2014, with interest receivable December 31 of each year. Roosevelt Company uses the effective-interest method to allocate unamortized discount or premium. The bonds are classified in the held-to-maturity category.

**Instructions**

- (a) Prepare the journal entry at the date of the bond purchase.
- (b) Prepare a bond amortization schedule.
- (c) Prepare the journal entry to record the interest received and the amortization for 2009.
- (d) Prepare the journal entry to record the interest received and the amortization for 2010.

**E17-4 (Entries for Available-for-Sale Securities)** Assume the same information as in E17-3 except that the securities are classified as available-for-sale. The fair value of the bonds at December 31 of each year-end is as follows.

2009	\$534,200	2012	\$517,000
2010	\$515,000	2013	\$500,000
2011	\$513,000		

**Instructions**

- (a) Prepare the journal entry at the date of the bond purchase.
- (b) Prepare the journal entries to record the interest received and recognition of fair value for 2009.
- (c) Prepare the journal entry to record the recognition of fair value for 2010.

**E17-5 (Effective-Interest versus Straight-Line Bond Amortization)** On January 1, 2010, Morgan Company acquires \$300,000 of Nicklaus, Inc., 9% bonds at a price of \$278,384. The interest is payable each December 31, and the bonds mature December 31, 2012. The investment will provide Morgan Company a 12% yield. The bonds are classified as held-to-maturity.

**Instructions**

- (a) Prepare a 3-year schedule of interest revenue and bond discount amortization, applying the straight-line method. (Round to nearest dollar.)
- (b) Prepare a 3-year schedule of interest revenue and bond discount amortization, applying the effective-interest method. (Round to nearest cent.)
- (c) Prepare the journal entry for the interest receipt of December 31, 2011, and the discount amortization under the straight-line method.
- (d) Prepare the journal entry for the interest receipt of December 31, 2011, and the discount amortization under the effective-interest method.

**E17-6 (Entries for Available-for-Sale and Trading Securities)** The following information is available for Kinney Company at December 31, 2010, regarding its investments.

Securities	Cost	Fair Value
3,000 shares of Petty Corporation Common Stock	\$40,000	\$46,000
1,000 shares of Dowe Incorporated Preferred Stock	25,000	22,000
	<u>\$65,000</u>	<u>\$68,000</u>

**Instructions**

- (a) Prepare the adjusting entry (if any) for 2010, assuming the securities are classified as trading.
- (b) Prepare the adjusting entry (if any) for 2010, assuming the securities are classified as available-for-sale.
- (c) Discuss how the amounts reported in the financial statements are affected by the entries in (a) and (b).

- E17-7 (Trading Securities Entries)** On December 21, 2010, Zurich Company provided you with the following information regarding its trading securities.

<b>December 31, 2010</b>			
Investments (Trading)	Cost	Fair Value	Unrealized Gain (Loss)
Stargate Corp. stock	\$20,000	\$19,000	\$(1,000)
Carolina Co. stock	10,000	9,000	(1,000)
Vectorman Co. stock	<u>20,000</u>	<u>20,600</u>	<u>600</u>
Total of portfolio	<u>\$50,000</u>	<u>\$48,600</u>	(1,400)
Previous securities fair value adjustment balance			<u>-0-</u>
Securities fair value adjustment—Cr.			<u>\$(1,400)</u>

During 2011, Carolina Company stock was sold for \$9,500. The fair value of the stock on December 31, 2011, was: Stargate Corp. stock—\$19,300; Vectorman Co. stock—\$20,500.

#### Instructions

- (a) Prepare the adjusting journal entry needed on December 31, 2010.
- (b) Prepare the journal entry to record the sale of the Carolina Company stock during 2011.
- (c) Prepare the adjusting journal entry needed on December 31, 2011.

- E17-8 (Available-for-Sale Securities Entries and Reporting)** Player Corporation purchases equity securities costing \$73,000 and classifies them as available-for-sale securities. At December 31, the fair value of the portfolio is \$67,000.

#### Instructions

Prepare the adjusting entry to report the securities properly. Indicate the statement presentation of the accounts in your entry.

- E17-9 (Available-for-Sale Securities Entries and Financial Statement Presentation)** At December 31, 2010, the available-for-sale equity portfolio for Wenger, Inc. is as follows.

Security	Cost	Fair Value	Unrealized Gain (Loss)
A	\$17,500	\$15,000	(\$2,500)
B	12,500	14,000	1,500
C	<u>23,000</u>	<u>25,500</u>	<u>2,500</u>
Total	<u>\$53,000</u>	<u>\$54,500</u>	1,500
Previous securities fair value adjustment balance—Dr.			<u>200</u>
Securities fair value adjustment—Dr.			<u>\$1,300</u>

On January 20, 2011, Wenger, Inc. sold security A for \$15,300. The sale proceeds are net of brokerage fees.

#### Instructions

- (a) Prepare the adjusting entry at December 31, 2010, to report the portfolio at fair value.
- (b) Show the balance sheet presentation of the investment related accounts at December 31, 2010. (Ignore notes presentation.)
- (c) Prepare the journal entry for the 2011 sale of security A.

- E17-10 (Comprehensive Income Disclosure)** Assume the same information as E17-9 and that Wenger, Inc. reports net income in 2010 of \$120,000 and in 2011 of \$140,000. Total holding gains (including any realized holding gain or loss) arising during 2011 total \$30,000.

#### Instructions

- (a) Prepare a statement of comprehensive income for 2010 starting with net income.
- (b) Prepare a statement of comprehensive income for 2011 starting with net income.

- E17-11 (Equity Securities Entries)** Capriati Corporation made the following cash purchases of securities during 2010, which is the first year in which Capriati invested in securities.

1. On January 15, purchased 9,000 shares of Gonzalez Company's common stock at \$33.50 per share plus commission \$1,980.
2. On April 1, purchased 5,000 shares of Belmont Co.'s common stock at \$52.00 per share plus commission \$3,370.
3. On September 10, purchased 7,000 shares of Thep Co.'s preferred stock at \$26.50 per share plus commission \$4,910.

On May 20, 2010, Capriati sold 3,000 shares of Gonzalez Company’s common stock at a market price of \$35 per share less brokerage commissions, taxes, and fees of \$2,850. The year-end fair values per share were: Gonzalez \$30, Belmont \$55, and Thep \$28. In addition, the chief accountant of Capriati told you that Capriati Corporation plans to hold these securities for the long term but may sell them in order to earn profits from appreciation in prices.

**Instructions**

- (a) Prepare the journal entries to record the above three security purchases.
- (b) Prepare the journal entry for the security sale on May 20.
- (c) Compute the unrealized gains or losses and prepare the adjusting entries for Capriati on December 31, 2010.

**E17-12 (Journal Entries for Fair Value and Equity Methods)** Presented below are two independent situations.

**Situation 1**

Hatcher Cosmetics acquired 10% of the 200,000 shares of common stock of Ramirez Fashion at a total cost of \$14 per share on March 18, 2010. On June 30, Ramirez declared and paid a \$75,000 cash dividend. On December 31, Ramirez reported net income of \$122,000 for the year. At December 31, the market price of Ramirez Fashion was \$15 per share. The securities are classified as available-for-sale.

**Situation 2**

Holmes, Inc. obtained significant influence over Nadal Corporation by buying 25% of Nadal’s 30,000 outstanding shares of common stock at a total cost of \$9 per share on January 1, 2010. On June 15, Nadal declared and paid a cash dividend of \$36,000. On December 31, Nadal reported a net income of \$85,000 for the year.

**Instructions**

Prepare all necessary journal entries in 2010 for both situations.

**E17-13 (Equity Method)** Gator Co. invested \$1,000,000 in Demo Co. for 25% of its outstanding stock. Demo Co. pays out 40% of net income in dividends each year.

**Instructions**

Use the information in the following T-account for the investment in Demo to answer the following questions.

Investment in Demo Co.	
1,000,000	
130,000	
	52,000

- (a) How much was Gator Co.’s share of Demo Co.’s net income for the year?
- (b) How much was Gator Co.’s share of Demo Co.’s dividends for the year?
- (c) What was Demo Co.’s total net income for the year?
- (d) What was Demo Co.’s total dividends for the year?

**E17-14 (Equity Investment—Trading)** Feiner Co. had purchased 300 shares of Guttman Co. for \$40 each this year and classified the investment as a trading security. Feiner Co. sold 100 shares of the stock for \$43 each. At year end the price per share of the Guttman Co. stock had dropped to \$35.

**Instructions**

Prepare the journal entries for these transactions and any year-end adjustments.

**E17-15 (Equity Investments—Trading)** Swanson Company has the following securities in its trading portfolio of securities on December 31, 2010.

Investments (Trading)	Cost	Fair Value
1,500 shares of Parker, Inc., Common	\$ 71,500	\$ 69,000
5,000 shares of Beilman Corp., Common	180,000	175,000
400 shares of Duncan, Inc., Preferred	60,000	61,600
	\$311,500	\$305,600

All of the securities were purchased in 2010. In 2011, Swanson completed the following securities transactions.

- March 1 Sold the 1,500 shares of Parker, Inc., Common, @ \$45 less fees of \$1,200.
- April 1 Bought 700 shares of McDowell Corp., Common, @ \$75 plus fees of \$1,300.

Swanson Company's portfolio of trading securities appeared as follows on December 31, 2011.

Investments (Trading)	Cost	Fair Value
5,000 shares of Beilman Corp., Common	\$180,000	\$175,000
700 shares of McDowell Corp., Common	53,800	50,400
400 shares of Duncan, Inc., Preferred	60,000	58,000
	\$293,800	\$283,400

### Instructions

Prepare the general journal entries for Swanson Company for:

- The 2010 adjusting entry.
- The sale of the Parker stock.
- The purchase of the McDowell stock.
- The 2011 adjusting entry for the trading portfolio.

**•3 •4** **E17-16 (Fair Value and Equity Method Compared)** Gregory Inc. acquired 20% of the outstanding common stock of Handerson Inc. on December 31, 2010. The purchase price was \$1,250,000 for 50,000 shares. Handerson Inc. declared and paid an \$0.80 per share cash dividend on June 30 and on December 31, 2011. Handerson reported net income of \$730,000 for 2011. The fair value of Handerson's stock was \$27 per share at December 31, 2011.

### Instructions

- Prepare the journal entries for Gregory Inc. for 2010 and 2011, assuming that Gregory cannot exercise significant influence over Handerson. The securities should be classified as available-for-sale.
- Prepare the journal entries for Gregory Inc. for 2010 and 2011, assuming that Gregory can exercise significant influence over Handerson.
- At what amount is the investment in securities reported on the balance sheet under each of these methods at December 31, 2011? What is the total net income reported in 2011 under each of these methods?

**•4** **E17-17 (Equity Method)** On January 1, 2010, Meredith Corporation purchased 25% of the common shares of Pirates Company for \$200,000. During the year, Pirates earned net income of \$80,000 and paid dividends of \$20,000.

### Instructions

Prepare the entries for Meredith to record the purchase and any additional entries related to this investment in Pirates Company in 2010.

**•6** **E17-18 (Impairment of Debt Securities)** Cairo Corporation has municipal bonds classified as available-for-sale at December 31, 2010. These bonds have a par value of \$800,000, an amortized cost of \$800,000, and a fair value of \$740,000. The unrealized loss of \$60,000 previously recognized as other comprehensive income and as a separate component of stockholders' equity is now determined to be other than temporary. That is, the company believes that impairment accounting is now appropriate for these bonds.

### Instructions

- Prepare the journal entry to recognize the impairment.
- What is the new cost basis of the municipal bonds? Given that the maturity value of the bonds is \$800,000, should Cairo Corporation amortize the difference between the carrying amount and the maturity value over the life of the bonds?
- At December 31, 2011, the fair value of the municipal bonds is \$760,000. Prepare the entry (if any) to record this information.

**•3 •5** **E17-19 (Fair Value Measurement)** Presented below is information related to the purchases of common stock by Lilly Company during 2010.

	Cost (at purchase date)	Fair Value (at December 31)
Investment in Arroyo Company stock	\$100,000	\$ 80,000
Investment in Lee Corporation stock	250,000	300,000
Investment in Woods Inc. stock	180,000	190,000
Total	\$530,000	\$570,000

**Instructions**

- What entry would Lilly make at December 31, 2010, to record the investment in Arroyo Company stock if it chooses to report this security using the fair value option?
- What entry would Lilly make at December 31, 2010, to record the investment in Lee Corporation, assuming that Lilly wants to classify this security as available-for-sale? This security is the only available-for-sale security that Lilly presently owns.
- What entry would Lilly make at December 31, 2010, to record the investment in Woods Inc., assuming that Lilly wants to classify this investment as a trading security?

**3 5**

**E17-20 (Fair Value Measurement Issues)** Assume the same information as in E17-19 for Lilly Company. In addition, assume that the investment in the Woods Inc. stock was sold during 2011 for \$195,000. At December 31, 2011, the following information relates to its two remaining investments of common stock.

	Cost (at purchase date)	Fair Value (at December 31)
Investment in Arroyo Company stock	\$100,000	\$140,000
Investment in Lee Corporation stock	250,000	310,000
Total	<u>\$350,000</u>	<u>\$450,000</u>

Net income before any security gains and losses for 2011 was \$905,000.

**Instructions**

- Compute the amount of net income or net loss that Lilly should report for 2011, taking into consideration Lilly's security transactions for 2011.
- Prepare the journal entry to record unrealized gain or loss related to the investment in Arroyo Company stock at December 31, 2011.

**2 3 5**

**E17-21 (Fair Value Option)** Presented below is selected information related to the financial instruments of Dawson Company at December 31, 2010. This is Dawson Company's first year of operations.

	Carrying Amount	Fair Value (at December 31)
Investment in debt securities (intent is to hold to maturity)	\$ 40,000	\$ 41,000
Investment in Chen Company stock	800,000	910,000
Bonds payable	220,000	195,000

**Instructions**

- Dawson elects to use the fair value option whenever possible. Assuming that Dawson's net income is \$100,000 in 2010 before reporting any securities gains or losses, determine Dawson's net income for 2010.
- Record the journal entry, if any, necessary at December 31, 2010, to record the fair value option for the bonds payable.

**11**

**\*E17-22 (Derivative Transaction)** On January 2, 2010, Jones Company purchases a call option for \$300 on Merchant common stock. The call option gives Jones the option to buy 1,000 shares of Merchant at a strike price of \$50 per share. The market price of a Merchant share is \$50 on January 2, 2010 (the intrinsic value is therefore \$0). On March 31, 2010, the market price for Merchant stock is \$53 per share, and the time value of the option is \$200.

**Instructions**

- Prepare the journal entry to record the purchase of the call option on January 2, 2010.
- Prepare the journal entry(ies) to recognize the change in the fair value of the call option as of March 31, 2010.
- What was the effect on net income of entering into the derivative transaction for the period January 2 to March 31, 2010? (Ignore tax effects.)

**12**

**\*E17-23 (Fair Value Hedge)** On January 2, 2010, MacCloud Co. issued a 4-year, \$100,000 note at 6% fixed interest, interest payable semiannually. MacCloud now wants to change the note to a variable-rate note.

As a result, on January 2, 2010, MacCloud Co. enters into an interest rate swap where it agrees to receive 6% fixed and pay LIBOR of 5.7% for the first 6 months on \$100,000. At each 6-month period, the variable rate will be reset. The variable rate is reset to 6.7% on June 30, 2010.

**Instructions**

- Compute the net interest expense to be reported for this note and related swap transaction as of June 30, 2010.
- Compute the net interest expense to be reported for this note and related swap transaction as of December 31, 2010.

- 13** \*E17-24 (Cash Flow Hedge) On January 2, 2010, Parton Company issues a 5-year, \$10,000,000 note at LIBOR, with interest paid annually. The variable rate is reset at the end of each year. The LIBOR rate for the first year is 5.8%.

Parton Company decides it prefers fixed-rate financing and wants to lock in a rate of 6%. As a result, Parton enters into an interest rate swap to pay 6% fixed and receive LIBOR based on \$10 million. The variable rate is reset to 6.6% on January 2, 2011.

#### Instructions

- Compute the net interest expense to be reported for this note and related swap transactions as of December 31, 2010.
- Compute the net interest expense to be reported for this note and related swap transactions as of December 31, 2011.

- 12** \*E17-25 (Fair Value Hedge) Sarazan Company issues a 4-year, 7.5% fixed-rate interest only, nonprepayable \$1,000,000 note payable on December 31, 2010. It decides to change the interest rate from a fixed rate to variable rate and enters into a swap agreement with M&S Corp. The swap agreement specifies that Sarazan will receive a fixed rate at 7.5% and pay variable with settlement dates that match the interest payments on the debt. Assume that interest rates have declined during 2011 and that Sarazan received \$13,000 as an adjustment to interest expense for the settlement at December 31, 2011. The loss related to the debt (due to interest rate changes) was \$48,000. The value of the swap contract increased \$48,000.

#### Instructions

- Prepare the journal entry to record the payment of interest expense on December 31, 2011.
- Prepare the journal entry to record the receipt of the swap settlement on December 31, 2011.
- Prepare the journal entry to record the change in the fair value of the swap contract on December 31, 2011.
- Prepare the journal entry to record the change in the fair value of the debt on December 31, 2011.

- 11** \*E17-26 (Call Option) On August 15, 2010, Outkast Co. invested idle cash by purchasing a call option on Counting Crows Inc. common shares for \$360. The notional value of the call option is 400 shares, and the option price is \$40. (Market price of an Outkast share is \$40.) The option expires on January 31, 2011. The following data are available with respect to the call option.

Date	Market Price of Counting Crows Shares	Time Value of Call Option
September 30, 2010	\$48 per share	\$180
December 31, 2010	\$46 per share	65
January 15, 2011	\$47 per share	30

#### Instructions

Prepare the journal entries for Outkast for the following dates.

- Investment in call option on Counting Crows shares on August 15, 2010.
- September 30, 2010—Outkast prepares financial statements.
- December 31, 2010—Outkast prepares financial statements.
- January 15, 2011—Outkast settles the call option on the Counting Crows shares.

- 13** \*E17-27 (Cash Flow Hedge) Hart Golf Co. uses titanium in the production of its specialty drivers. Hart anticipates that it will need to purchase 200 ounces of titanium in October 2010, for clubs that will be shipped in the holiday shopping season. However, if the price of titanium increases, this will increase the cost to produce the clubs, which will result in lower profit margins.

To hedge the risk of increased titanium prices, on May 1, 2010, Hart enters into a titanium futures contract and designates this futures contract as cash flow hedge of the anticipated titanium purchase. The notional amount of the contract is 200 ounces, and the terms of the contract give Hart the right and the obligation to purchase titanium at a price of \$500 per ounce. The price will be good until the contract expires on November 30, 2010.

Assume the following data with respect to the price of the call options and the titanium inventory purchase.

Date	Spot Price for November Delivery
May 1, 2010	\$500 per ounce
June 30, 2010	520 per ounce
September 30, 2011	525 per ounce

**Instructions**

Present the journal entries for the following dates/transactions.

- (a) May 1, 2010—Inception of futures contract, no premium paid.
- (b) June 30, 2010—Hart prepares financial statements.
- (c) September 30, 2010—Hart prepares financial statements.
- (d) October 5, 2010—Hart purchases 200 ounces of titanium at \$525 per ounce and settles the futures contract.
- (e) December 15, 2010—Hart sells clubs containing titanium purchased in October 2010 for \$250,000. The cost of the finished goods inventory is \$140,000.
- (f) Indicate the amount(s) reported in the income statement related to the futures contract and the inventory transactions on December 31, 2010.

See the book's companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), for a set of B Exercises.

**PROBLEMS**

**2 P17-1 (Debt Securities)** Presented below is an amortization schedule related to Spangler Company's 5-year, \$100,000 bond with a 7% interest rate and a 5% yield, purchased on December 31, 2008, for \$108,660.

Date	Cash Received	Interest Revenue	Bond Premium Amortization	Carrying Amount of Bonds
12/31/08				\$108,660
12/31/09	\$7,000	\$5,433	\$1,567	107,093
12/31/10	7,000	5,354	1,646	105,447
12/31/11	7,000	5,272	1,728	103,719
12/31/12	7,000	5,186	1,814	101,905
12/31/13	7,000	5,095	1,905	100,000

The following schedule presents a comparison of the amortized cost and fair value of the bonds at year-end.

	12/31/09	12/31/10	12/31/11	12/31/12	12/31/13
Amortized cost	\$107,093	\$105,447	\$103,719	\$101,905	\$100,000
Fair value	\$106,500	\$107,500	\$105,650	\$103,000	\$100,000

**Instructions**

- (a) Prepare the journal entry to record the purchase of these bonds on December 31, 2008, assuming the bonds are classified as held-to-maturity securities.
- (b) Prepare the journal entry(ies) related to the held-to-maturity bonds for 2009.
- (c) Prepare the journal entry(ies) related to the held-to-maturity bonds for 2011.
- (d) Prepare the journal entry(ies) to record the purchase of these bonds, assuming they are classified as available-for-sale.
- (e) Prepare the journal entry(ies) related to the available-for-sale bonds for 2009.
- (f) Prepare the journal entry(ies) related to the available-for-sale bonds for 2011.

**2 P17-2 (Available-for-Sale Debt Securities)** On January 1, 2010, Novotna Company purchased \$400,000, 8% bonds of Aguirre Co. for \$369,114. The bonds were purchased to yield 10% interest. Interest is payable semiannually on July 1 and January 1. The bonds mature on January 1, 2015. Novotna Company uses the effective-interest method to amortize discount or premium. On January 1, 2012, Novotna Company sold the bonds for \$370,726 after receiving interest to meet its liquidity needs.

**Instructions**

- (a) Prepare the journal entry to record the purchase of bonds on January 1. Assume that the bonds are classified as available-for-sale.
- (b) Prepare the amortization schedule for the bonds.
- (c) Prepare the journal entries to record the semiannual interest on July 1, 2010, and December 31, 2010.
- (d) If the fair value of Aguirre bonds is \$372,726 on December 31, 2011, prepare the necessary adjusting entry. (Assume the securities fair value adjustment balance on January 1, 2011, is a debit of \$3,375.)
- (e) Prepare the journal entry to record the sale of the bonds on January 1, 2012.

**•2 •3** **P17-3 (Available-for-Sale Investments)** Cardinal Paz Corp. carries an account in its general ledger called Investments, which contained debits for investment purchases, and no credits, with the following descriptions.

Feb. 1, 2010	Sharapova Company common stock, \$100 par, 200 shares	\$ 37,400
April 1	U.S. government bonds, 11%, due April 1, 2020, interest payable April 1 and October 1, 110 bonds of \$1,000 par each	110,000
July 1	McGrath Company 12% bonds, par \$50,000, dated March 1, 2010 purchased at 104 plus accrued interest, interest payable annually on March 1, due March 1, 2030	54,000

**Instructions**

(Round all computations to the nearest dollar.)

- (a) Prepare entries necessary to classify the amounts into proper accounts, assuming that all the securities are classified as available-for-sale.
- (b) Prepare the entry to record the accrued interest and the amortization of premium on December 31, 2010 using the straight-line method.
- (c) The fair values of the securities on December 31, 2010, were:

Sharapova Company common stock	\$ 31,800
U.S. government bonds	124,700
McGrath Company bonds	58,600

What entry or entries, if any, would you recommend be made?

- (d) The U.S. government bonds were sold on July 1, 2011, for \$119,200 plus accrued interest. Give the proper entry.

**•2** **P17-4 (Available-for-Sale Debt Securities)** Presented below is information taken from a bond investment amortization schedule with related fair values provided. These bonds are classified as available-for-sale.

	<u>12/31/10</u>	<u>12/31/11</u>	<u>12/31/12</u>
Amortized cost	\$491,150	\$519,442	\$550,000
Fair value	\$497,000	\$509,000	\$550,000

**Instructions**

- (a) Indicate whether the bonds were purchased at a discount or at a premium.
- (b) Prepare the adjusting entry to record the bonds at fair value at December 31, 2010. The Securities Fair Value Adjustment account has a debit balance of \$1,000 prior to adjustment.
- (c) Prepare the adjusting entry to record the bonds at fair value at December 31, 2011.

**•3** **P17-5 (Equity Securities Entries and Disclosures)** Parnevik Company has the following securities in its investment portfolio on December 31, 2010 (all securities were purchased in 2010): (1) 3,000 shares of Anderson Co. common stock which cost \$58,500, (2) 10,000 shares of Munter Ltd. common stock which cost \$580,000, and (3) 6,000 shares of King Company preferred stock which cost \$255,000. The Securities Fair Value Adjustment account shows a credit of \$10,100 at the end of 2010.

In 2011, Parnevik completed the following securities transactions.

- 1. On January 15, sold 3,000 shares of Anderson’s common stock at \$22 per share less fees of \$2,150.
- 2. On April 17, purchased 1,000 shares of Castle’s common stock at \$33.50 per share plus fees of \$1,980.

On December 31, 2011, the market values per share of these securities were: Munter \$61, King \$40, and Castle \$29. In addition, the accounting supervisor of Parnevik told you that, even though all these securities have readily determinable fair values, Parnevik will not actively trade these securities because the top management intends to hold them for more than one year.

**Instructions**

- (a) Prepare the entry for the security sale on January 15, 2011.
- (b) Prepare the journal entry to record the security purchase on April 17, 2011.
- (c) Compute the unrealized gains or losses and prepare the adjusting entry for Parnevik on December 31, 2011.
- (d) How should the unrealized gains or losses be reported on Parnevik’s balance sheet?

**•3** **P17-6 (Trading and Available-for-Sale Securities Entries)** McElroy Company has the following portfolio of investment securities at September 30, 2010, its last reporting date.

<u>Trading Securities</u>	<u>Cost</u>	<u>Fair Value</u>
Horton, Inc. common (5,000 shares)	\$215,000	\$200,000
Monty, Inc. preferred (3,500 shares)	133,000	140,000
Oakwood Corp. common (1,000 shares)	180,000	179,000

On October 10, 2010, the Horton shares were sold at a price of \$54 per share. In addition, 3,000 shares of Patriot common stock were acquired at \$54.50 per share on November 2, 2010. The December 31, 2010, fair values were: Monty \$106,000, Patriot \$132,000, and the Oakwood common \$193,000. All the securities are classified as trading.

#### Instructions

- Prepare the journal entries to record the sale, purchase, and adjusting entries related to the trading securities in the last quarter of 2010.
- How would the entries in part (a) change if the securities were classified as available-for-sale?

**2** **P17-7 (Available-for-Sale and Held-to-Maturity Debt Securities Entries)** The following information relates to the debt securities investments of Wildcat Company.

- On February 1, the company purchased 10% bonds of Gibbons Co. having a par value of \$300,000 at 100 plus accrued interest. Interest is payable April 1 and October 1.
- On April 1, semiannual interest is received.
- On July 1, 9% bonds of Sampson, Inc. were purchased. These bonds with a par value of \$200,000 were purchased at 100 plus accrued interest. Interest dates are June 1 and December 1.
- On September 1, bonds with a par value of \$60,000, purchased on February 1, are sold at 99 plus accrued interest.
- On October 1, semiannual interest is received.
- On December 1, semiannual interest is received.
- On December 31, the fair value of the bonds purchased February 1 and July 1 are 95 and 93, respectively.

#### Instructions

- Prepare any journal entries you consider necessary, including year-end entries (December 31), assuming these are available-for-sale securities.
- If Wildcat classified these as held-to-maturity securities, explain how the journal entries would differ from those in part (a).

**3 4 5** **P17-8 (Fair Value and Equity Methods)** Brooks Corp. is a medium-sized corporation specializing in quarrying stone for building construction. The company has long dominated the market, at one time achieving a 70% market penetration. During prosperous years, the company's profits, coupled with a conservative dividend policy, resulted in funds available for outside investment. Over the years, Brooks has had a policy of investing idle cash in equity securities. In particular, Brooks has made periodic investments in the company's principal supplier, Norton Industries. Although the firm currently owns 12% of the outstanding common stock of Norton Industries, Brooks does not have significant influence over the operations of Norton Industries.

Cheryl Thomas has recently joined Brooks as assistant controller, and her first assignment is to prepare the 2010 year-end adjusting entries for the accounts that are valued by the "fair value" rule for financial reporting purposes. Thomas has gathered the following information about Brooks's pertinent accounts.

- Brooks has trading securities related to Delaney Motors and Patrick Electric. During this fiscal year, Brooks purchased 100,000 shares of Delaney Motors for \$1,400,000; these shares currently have a market value of \$1,600,000. Brooks' investment in Patrick Electric has not been profitable; the company acquired 50,000 shares of Patrick in April 2010 at \$20 per share, a purchase that currently has a value of \$720,000.
- Prior to 2010, Brooks invested \$22,500,000 in Norton Industries and has not changed its holdings this year. This investment in Norton Industries was valued at \$21,500,000 on December 31, 2009. Brooks' 12% ownership of Norton Industries has a current market value of \$22,225,000.

#### Instructions

- Prepare the appropriate adjusting entries for Brooks as of December 31, 2010, to reflect the application of the "fair value" rule for both classes of securities described above.
- For both classes of securities presented above, describe how the results of the valuation adjustments made in (a) would be reflected in the body of and notes to Brooks' 2010 financial statements.
- Prepare the entries for the Norton investment, assuming that Brooks owns 25% of Norton's shares. Norton reported income of \$500,000 in 2010 and paid cash dividends of \$100,000.

**3 5** **P17-9 (Financial Statement Presentation of Available-for-Sale Investments)** Kennedy Company has the following portfolio of available-for-sale securities at December 31, 2010.

Security	Quantity	Percent Interest	Per Share	
			Cost	Market
Frank, Inc.	2,000 shares	8%	\$11	\$16
Ellis Corp.	5,000 shares	14%	23	19
Mendota Company	4,000 shares	2%	31	24

**Instructions**

- (a) What should be reported on Kennedy’s December 31, 2010, balance sheet relative to these long-term available-for-sale securities?

On December 31, 2011, Kennedy’s portfolio of available-for-sale securities consisted of the following common stocks.

Security	Quantity	Percent Interest	Per Share	
			Cost	Market
Ellis Corp.	5,000 shares	14%	\$23	\$28
Mendota Company	4,000 shares	2%	31	23
Mendota Company	2,000 shares	1%	25	23

At the end of year 2011, Kennedy Company changed its intent relative to its investment in Frank, Inc. and reclassified the shares to trading securities status when the shares were selling for \$8 per share.

- (b) What should be reported on the face of Kennedy’s December 31, 2011, balance sheet relative to available-for-sale securities investments? What should be reported to reflect the transactions above in Kennedy’s 2011 income statement?
- (c) Assuming that comparative financial statements for 2010 and 2011 are presented, draft the footnote necessary for full disclosure of Kennedy’s transactions and position in equity securities.

**P17-10 (Gain on Sale of Securities and Comprehensive Income)** On January 1, 2010, Acker Inc. had the following balance sheet.

ACKER INC. BALANCE SHEET AS OF JANUARY 1, 2010			
Assets		Equity	
Cash	\$ 50,000	Common stock	\$260,000
Available-for-sale securities	<u>240,000</u>	Accumulated other comprehensive income	<u>30,000</u>
Total	<u>\$290,000</u>	Total	<u>\$290,000</u>

The accumulated other comprehensive income related to unrealized holding gains on available-for-sale securities. The fair value of Acker Inc.’s available-for-sale securities at December 31, 2010, was \$190,000; its cost was \$140,000. No securities were purchased during the year. Acker Inc.’s income statement for 2010 was as follows. (Ignore income taxes.)

ACKER INC. INCOME STATEMENT FOR THE YEAR ENDED DECEMBER 31, 2010	
Dividend revenue	\$ 5,000
Gain on sale of available-for-sale securities	<u>30,000</u>
Net income	<u>\$35,000</u>

**Instructions**

(Assume all transactions during the year were for cash.)

- (a) Prepare the journal entry to record the sale of the available-for-sale securities in 2010.
- (b) Prepare a statement of comprehensive income for 2010.
- (c) Prepare a balance sheet as of December 31, 2010.

**P17-11 (Equity Investments—Available-for-Sale)** Castleman Holdings, Inc. had the following available-for-sale investment portfolio at January 1, 2010.

Evers Company	1,000 shares @ \$15 each	\$15,000
Rogers Company	900 shares @ \$20 each	18,000
Chance Company	500 shares @ \$9 each	<u>4,500</u>
Available-for-sale securities @ cost		37,500
Securities fair value adjustment—Available-for-sale		<u>(7,500)</u>
Available-for-sale securities @ fair value		<u>\$30,000</u>

During 2010, the following transactions took place.

1. On March 1, Rogers Company paid a \$2 per share dividend.
2. On April 30, Castleman Holdings, Inc. sold 300 shares of Chance Company for \$11 per share.
3. On May 15, Castleman Holdings, Inc. purchased 100 more shares of Evers Co. stock at \$16 per share.
4. At December 31, 2010, the stocks had the following price per share values: Evers \$17, Rogers \$19, and Chance \$8.

During 2011, the following transactions took place.

5. On February 1, Castleman Holdings, Inc. sold the remaining Chance shares for \$8 per share.
6. On March 1, Rogers Company paid a \$2 per share dividend.
7. On December 21, Evers Company declared a cash dividend of \$3 per share to be paid in the next month.
8. At December 31, 2011, the stocks had the following price per shares values: Evers \$19 and Rogers \$21.

**Instructions**

- (a) Prepare journal entries for each of the above transactions.
- (b) Prepare a partial balance sheet showing the Investments account at December 31, 2010 and 2011.

**P17-12 (Available-for-Sale Securities—Statement Presentation)** Fernandez Corp. invested its excess cash in available-for-sale securities during 2010. As of December 31, 2010, the portfolio of available-for-sale securities consisted of the following common stocks.

Security	Quantity	Cost	Fair Value
Lindsay Jones, Inc.	1,000 shares	\$ 15,000	\$ 21,000
Poley Corp.	2,000 shares	40,000	42,000
Arnold Aircraft	2,000 shares	72,000	60,000
Totals		<u>\$127,000</u>	<u>\$123,000</u>

**Instructions**

- (a) What should be reported on Fernandez’s December 31, 2010, balance sheet relative to these securities? What should be reported on Fernandez’s 2010 income statement?

On December 31, 2011, Fernandez’s portfolio of available-for-sale securities consisted of the following common stocks.

Security	Quantity	Cost	Fair Value
Lindsay Jones, Inc.	1,000 shares	\$ 15,000	\$20,000
Lindsay Jones, Inc.	2,000 shares	33,000	40,000
Duff Company	1,000 shares	16,000	12,000
Arnold Aircraft	2,000 shares	72,000	22,000
Totals		<u>\$136,000</u>	<u>\$94,000</u>

During the year 2011, Fernandez Corp. sold 2,000 shares of Poley Corp. for \$38,200 and purchased 2,000 more shares of Lindsay Jones, Inc. and 1,000 shares of Duff Company.

- (b) What should be reported on Fernandez’s December 31, 2011, balance sheet? What should be reported on Fernandez’s 2011 income statement?

On December 31, 2012, Fernandez’s portfolio of available-for-sale securities consisted of the following common stocks.

Security	Quantity	Cost	Fair Value
Arnold Aircraft	2,000 shares	\$72,000	\$82,000
Duff Company	500 shares	8,000	6,000
Totals		<u>\$80,000</u>	<u>\$88,000</u>

During the year 2012, Fernandez Corp. sold 3,000 shares of Lindsay Jones, Inc. for \$39,900 and 500 shares of Duff Company at a loss of \$2,700.

- (c) What should be reported on the face of Fernandez’s December 31, 2012, balance sheet? What should be reported on Fernandez’s 2012 income statement?
- (d) What would be reported in a statement of comprehensive income at (1) December 31, 2010, and (2) December 31, 2011?

**\*P17-13 (Derivative Financial Instrument)** The treasurer of Miller Co. has read on the Internet that the stock price of Wade Inc. is about to take off. In order to profit from this potential development, Miller Co. purchased a call option on Wade common shares on July 7, 2010, for \$240. The call option is for 200 shares

(notional value), and the strike price is \$70. (The market price of a share of Wade stock on that date is \$70.) The option expires on January 31, 2011. The following data are available with respect to the call option.

Date	Market Price of Wade Shares	Time Value of Call Option
September 30, 2010	\$77 per share	\$180
December 31, 2010	75 per share	65
January 4, 2011	76 per share	30

#### Instructions

Prepare the journal entries for Miller Co. for the following dates.

- July 7, 2010—Investment in call option on Wade shares.
- September 30, 2010—Miller prepares financial statements.
- December 31, 2010—Miller prepares financial statements.
- January 4, 2011—Miller settles the call option on the Wade shares.

- 11** \*P17-14 (Derivative Financial Instrument) Johnstone Co. purchased a put option on Ewing common shares on July 7, 2010, for \$240. The put option is for 200 shares, and the strike price is \$70. (The market price of a share of Ewing stock on that date is \$70.) The option expires on January 31, 2011. The following data are available with respect to the put option.

Date	Market Price of Ewing Shares	Time Value of Put Option
September 30, 2010	\$77 per share	\$125
December 31, 2010	75 per share	50
January 31, 2011	78 per share	0

#### Instructions

Prepare the journal entries for Johnstone Co. for the following dates.

- July 7, 2010—Investment in put option on Ewing shares.
- September 30, 2010—Johnstone prepares financial statements.
- December 31, 2010—Johnstone prepares financial statements.
- January 31, 2011—Put option expires.

- 11** \*P17-15 (Free-Standing Derivative) Warren Co. purchased a put option on Echo common shares on January 7, 2010, for \$360. The put option is for 400 shares, and the strike price is \$85 (which equals the price of an Echo share on the purchase date). The option expires on July 31, 2010. The following data are available with respect to the put option.

Date	Market Price of Echo Shares	Time Value of Put Option
March 31, 2010	\$80 per share	\$200
June 30, 2010	82 per share	90
July 6, 2010	77 per share	25

#### Instructions

Prepare the journal entries for Warren Co. for the following dates.

- January 7, 2010—Investment in put option on Echo shares.
- March 31, 2010—Warren prepares financial statements.
- June 30, 2010—Warren prepares financial statements.
- July 6, 2010—Warren settles the put option on the Echo shares.

- 12** \*P17-16 (Fair Value Hedge Interest Rate Swap) On December 31, 2010, Mercantile Corp. had a \$10,000,000, 8% fixed-rate note outstanding, payable in 2 years. It decides to enter into a 2-year swap with Chicago First Bank to convert the fixed-rate debt to variable-rate debt. The terms of the swap indicate that Mercantile will receive interest at a fixed rate of 8.0% and will pay a variable rate equal to the 6-month LIBOR rate, based on the \$10,000,000 amount. The LIBOR rate on December 31, 2010, is 7%. The LIBOR rate will be reset every 6 months and will be used to determine the variable rate to be paid for the following 6-month period.

Mercantile Corp. designates the swap as a fair value hedge. Assume that the hedging relationship meets all the conditions necessary for hedge accounting. The 6-month LIBOR rate and the swap and debt fair values are as follows.

Date	6-Month LIBOR Rate	Swap Fair Value	Debt Fair Value
December 31, 2010	7.0%	—	\$10,000,000
June 30, 2011	7.5%	(200,000)	9,800,000
December 31, 2011	6.0%	60,000	10,060,000

#### Instructions

- Present the journal entries to record the following transactions.
  - The entry, if any, to record the swap on December 31, 2010.
  - The entry to record the semiannual debt interest payment on June 30, 2011.

- (3) The entry to record the settlement of the semiannual swap amount receivables at 8%, less amount payable at LIBOR, 7%.
  - (4) The entry to record the change in the fair value of the debt on June 30, 2011.
  - (5) The entry to record the change in the fair value of the swap at June 30, 2011.
- (b) Indicate the amount(s) reported on the balance sheet and income statement related to the debt and swap on December 31, 2010.
  - (c) Indicate the amount(s) reported on the balance sheet and income statement related to the debt and swap on June 30, 2011.
  - (d) Indicate the amount(s) reported on the balance sheet and income statement related to the debt and swap on December 31, 2011.

**13** \*P17-17 (Cash Flow Hedge) LEW Jewelry Co. uses gold in the manufacture of its products. LEW anticipates that it will need to purchase 500 ounces of gold in October 2010, for jewelry that will be shipped for the holiday shopping season. However, if the price of gold increases, LEW's cost to produce its jewelry will increase, which would reduce its profit margins.

To hedge the risk of increased gold prices, on April 1, 2010, LEW enters into a gold futures contract and designates this futures contract as a cash flow hedge of the anticipated gold purchase. The notional amount of the contract is 500 ounces, and the terms of the contract give LEW the right and the obligation to purchase gold at a price of \$300 per ounce. The price will be good until the contract expires on October 31, 2010.

Assume the following data with respect to the price of the call options and the gold inventory purchase.

Date	Spot Price for October Delivery
April 1, 2010	\$300 per ounce
June 30, 2010	310 per ounce
September 30, 2010	315 per ounce

### Instructions

Prepare the journal entries for the following transactions.

- (a) April 1, 2010—Inception of the futures contract, no premium paid.
- (b) June 30, 2010—LEW Co. prepares financial statements.
- (c) September 30, 2010—LEW Co. prepares financial statements.
- (d) October 10, 2010—LEW Co. purchases 500 ounces of gold at \$315 per ounce and settles the futures contract.
- (e) December 20, 2010—LEW sells jewelry containing gold purchased in October 2010 for \$350,000. The cost of the finished goods inventory is \$200,000.
- (f) Indicate the amount(s) reported on the balance sheet and income statement related to the futures contract on June 30, 2010.
- (g) Indicate the amount(s) reported in the income statement related to the futures contract and the inventory transactions on December 31, 2010.

**12** \*P17-18 (Fair Value Hedge) On November 3, 2010, Sprinkle Co. invested \$200,000 in 4,000 shares of the common stock of Pratt Co. Sprinkle classified this investment as available-for-sale. Sprinkle Co. is considering making a more significant investment in Pratt Co. at some point in the future but has decided to wait and see how the stock does over the next several quarters.

To hedge against potential declines in the value of Pratt stock during this period, Sprinkle also purchased a put option on the Pratt stock. Sprinkle paid an option premium of \$600 for the put option, which gives Sprinkle the option to sell 4,000 Pratt shares at a strike price of \$50 per share. The option expires on July 31, 2011. The following data are available with respect to the values of the Pratt stock and the put option.

Date	Market Price of Pratt Shares	Time Value of Put Option
December 31, 2010	\$50 per share	\$375
March 31, 2011	45 per share	175
June 30, 2011	43 per share	40

### Instructions

- (a) Prepare the journal entries for Sprinkle Co. for the following dates.
  - (1) November 3, 2010—Investment in Pratt stock and the put option on Pratt shares.
  - (2) December 31, 2010—Sprinkle Co. prepares financial statements.
  - (3) March 31, 2011—Sprinkle prepares financial statements.
  - (4) June 30, 2011—Sprinkle prepares financial statements.
  - (5) July 1, 2011—Sprinkle settles the put option and sells the Pratt shares for \$43 per share.
- (b) Indicate the amount(s) reported on the balance sheet and income statement related to the Pratt investment and the put option on December 31, 2010.
- (c) Indicate the amount(s) reported on the balance sheet and income statement related to the Pratt investment and the put option on June 30, 2011.

**CONCEPTS FOR ANALYSIS**

**CA17-1 (Issues Raised about Investment Securities)** You have just started work for Warren Co. as part of the controller’s group involved in current financial reporting problems. Jane Henshaw, controller for Warren, is interested in your accounting background because the company has experienced a series of financial reporting surprises over the last few years. Recently, the controller has learned from the company’s auditors that there is authoritative literature that may apply to its investment in securities. She assumes that you are familiar with this pronouncement and asks how the following situations should be reported in the financial statements.

**Situation 1**

Trading securities in the current assets section have a fair value that is \$4,200 lower than cost.

**Situation 2**

A trading security whose fair value is currently less than cost is transferred to the available-for-sale category.

**Situation 3**

An available-for-sale security whose fair value is currently less than cost is classified as noncurrent but is to be reclassified as current.

**Situation 4**

A company’s portfolio of available-for-sale securities consists of the common stock of one company. At the end of the prior year the fair value of the security was 50% of original cost, and this reduction in market value was reported as an other than temporary impairment. However, at the end of the current year the fair value of the security had appreciated to twice the original cost.

**Situation 5**

The company has purchased some convertible debentures that it plans to hold for less than a year. The fair value of the convertible debentures is \$7,700 below its cost.

**Instructions**

What is the effect upon carrying value and earnings for each of the situations above? Assume that these situations are unrelated.

**CA17-2 (Equity Securities)** Lexington Co. has the following available-for-sale securities outstanding on December 31, 2010 (its first year of operations).

	Cost	Fair Value
Greenspan Corp. Stock	\$20,000	\$19,000
Summerset Company Stock	9,500	8,800
Tinkers Company Stock	20,000	20,600
	\$49,500	\$48,400

During 2011 Summerset Company stock was sold for \$9,200, the difference between the \$9,200 and the “fair value” of \$8,800 being recorded as a “Gain on Sale of Securities.” The market price of the stock on December 31, 2011, was: Greenspan Corp. stock \$19,900; Tinkers Company stock \$20,500.

**Instructions**

- (a) What justification is there for valuing available-for-sale securities at fair value and reporting the unrealized gain or loss as part of stockholders’ equity?
- (b) How should Lexington Company apply this rule on December 31, 2010? Explain.
- (c) Did Lexington Company properly account for the sale of the Summerset Company stock? Explain.
- (d) Are there any additional entries necessary for Lexington Company at December 31, 2011, to reflect the facts on the financial statements in accordance with generally accepted accounting principles? Explain.

(AICPA adapted)

**CA17-3 (Financial Statement Effect of Equity Securities)** Presented below are three unrelated situations involving equity securities.

**Situation 1**

An equity security, whose market value is currently less than cost, is classified as available-for-sale but is to be reclassified as trading.

**Situation 2**

A noncurrent portfolio with an aggregate market value in excess of cost includes one particular security whose market value has declined to less than one-half of the original cost. The decline in value is considered to be other than temporary.

**Situation 3**

The portfolio of trading securities has a cost in excess of fair value of \$13,500. The available-for-sale portfolio has a fair value in excess of cost of \$28,600.

**Instructions**

What is the effect upon carrying value and earnings for each of the situations above?

**CA17-4 (Equity Securities)** The Financial Accounting Standards Board issued accounting guidance to clarify accounting methods and procedures with respect to certain debt and all equity securities. An important part of the statement concerns the distinction between held-to-maturity, available-for-sale, and trading securities.

**Instructions**

- Why does a company maintain an investment portfolio of held-to-maturity, available-for-sale, and trading securities?
- What factors should be considered in determining whether investments in securities should be classified as held-to-maturity, available-for-sale, and trading? How do these factors affect the accounting treatment for unrealized losses?

**CA17-5 (Investment Accounted for under the Equity Method)** On July 1, 2011, Fontaine Company purchased for cash 40% of the outstanding capital stock of Knoblett Company. Both Fontaine Company and Knoblett Company have a December 31 year-end. Knoblett Company, whose common stock is actively traded in the over-the-counter market, reported its total net income for the year to Fontaine Company and also paid cash dividends on November 15, 2011, to Fontaine Company and its other stockholders.

**Instructions**

How should Fontaine Company report the above facts in its December 31, 2011, balance sheet and its income statement for the year then ended? Discuss the rationale for your answer.

(AICPA adapted)

**CA17-6 (Equity Investment)** On July 1, 2010, Selig Company purchased for cash 40% of the outstanding capital stock of Spoor Corporation. Both Selig and Spoor have a December 31 year-end. Spoor Corporation, whose common stock is actively traded on the American Stock Exchange, paid a cash dividend on November 15, 2010, to Selig Company and its other stockholders. It also reported its total net income for the year of \$920,000 to Selig Company.

**Instructions**

Prepare a one-page memorandum of instructions on how Selig Company should report the above facts in its December 31, 2010, balance sheet and its 2010 income statement. In your memo, identify and describe the method of valuation you recommend. Provide rationale where you can. Address your memo to the chief accountant at Selig Company.

**CA17-7 (Fair Value)** Addison Manufacturing holds a large portfolio of debt and equity securities as an investment. The fair value of the portfolio is greater than its original cost, even though some securities have decreased in value. Sam Beresford, the financial vice president, and Angie Nielson, the controller, are near year-end in the process of classifying for the first time this securities portfolio in accordance with GAAP. Beresford wants to classify those securities that have increased in value during the period as trading securities in order to increase net income this year. He wants to classify all the securities that have decreased in value as available-for-sale (the equity securities) and as held-to-maturity (the debt securities).

Nielson disagrees. She wants to classify those securities that have decreased in value as trading securities and those that have increased in value as available-for-sale (equity) and held-to-maturity (debt). She contends that the company is having a good earnings year and that recognizing the losses will help to smooth the income this year. As a result, the company will have built-in gains for future periods when the company may not be as profitable.

**Instructions**

Answer the following questions.

- Will classifying the portfolio as each proposes actually have the effect on earnings that each says it will?
- Is there anything unethical in what each of them proposes? Who are the stakeholders affected by their proposals?
- Assume that Beresford and Nielson properly classify the entire portfolio into trading, available-for-sale, and held-to-maturity categories. But then each proposes to sell just before year-end the securities with gains or with losses, as the case may be, to accomplish their effect on earnings. Is this unethical?

## USING YOUR JUDGMENT

### FINANCIAL REPORTING

#### Financial Reporting Problem

##### **The Procter & Gamble Company (P&G)**

The financial statements of **P&G** are presented in Appendix 5B or can be accessed at the book's companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso).

##### Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- (a) What investments does P&G report in 2007, and where are these investments reported in its financial statements?
- (b) How are P&G's investments valued? How does P&G determine fair value?
- (c) How does P&G use derivative financial instruments?

#### Comparative Analysis Case

##### **The Coca-Cola Company and PepsiCo, Inc.**

*The Coca-Cola Company*

##### Instructions

Go to the book's companion website and use information found there to answer the following questions related to **The Coca-Cola Company** and **PepsiCo, Inc.**

- (a) Based on the information contained in these financial statements, determine each of the following for each company.
  - (1) Cash used in (for) investing activities during 2007 (from the statement of cash flows).
  - (2) Cash used for acquisitions and investments in unconsolidated affiliates (or principally bottling companies) during 2007.
  - (3) Total investment in unconsolidated affiliates (or investments and other assets) at the end of 2007.
  - (4) What conclusions concerning the management of investments can be drawn from these data?
- (b) (1) Briefly identify from Coca-Cola's December 31, 2007, balance sheet the investments it reported as being accounted for under the equity method. (2) What is the amount of investments that Coca-Cola reported in its 2007 balance sheet as "cost method investments," and what is the nature of these investments?
- (c) In its Note number 9 on Financial Instruments, what total amounts did Coca-Cola report at December 31, 2007, as: (1) trading securities, (2) available-for-sale securities, and (3) held-to-maturity securities?

#### Financial Statement Analysis Case

##### **Union Planters**

**Union Planters** is a Tennessee bank holding company (that is, a corporation that owns banks). (Union Planters is now part of **Regions Bank**.) Union Planters manages \$32 billion in assets, the largest of which is its loan portfolio of \$19 billion. In addition to its loan portfolio, however, like other banks it has significant debt investments. The nature of these investments varies from short-term in nature to long-term in nature. As a consequence, consistent with the requirements of accounting rules, Union Planters reports its investments in two different categories—trading and available-for-sale. The following facts were found in a recent Union Planters' annual report.

(all dollars in millions)	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value
Trading account assets	\$ 275	—	—	\$ 275
Securities available for sale	8,209	\$108	\$15	8,302
Net income				224
Net securities gains (losses)				(9)

**Instructions**

- Why do you suppose Union Planters purchases investments, rather than simply making loans? Why does it purchase investments that vary in nature both in terms of their maturities and in type (debt versus stock)?
- How must Union Planters account for its investments in each of the two categories?
- In what ways does classifying investments into two different categories assist investors in evaluating the profitability of a company like Union Planters?
- Suppose that the management of Union Planters was not happy with its net income for the year. What step could it have taken with its investment portfolio that would have definitely increased reported profit? How much could it have increased reported profit? Why do you suppose it chose not to do this?

**BRIDGE TO THE PROFESSION****Professional Research: FASB Codification**

Your client, Cascade Company, is planning to invest some of its excess cash in 5-year revenue bonds issued by the county and in the stock of one of its suppliers, Teton Co. Teton's shares trade on the over-the-counter market. Cascade plans to classify these investments as available-for-sale. They would like you to conduct some research on the accounting for these investments.

**Instructions**

Access the FASB Codification at <http://asc.fasb.org/home> to conduct research using the Codification Research System to prepare responses to the following items. Provide Codification references for your responses.

- Since the Teton shares do not trade on one of the large stock markets, Cascade argues that the fair value of this investment is not readily available. According to the authoritative literature, when is the fair value of a security "readily determinable"?
- How is an impairment of a security accounted for?
- To avoid volatility in their financial statements due to fair value adjustments, Cascade debated whether the bond investment could be classified as held-to-maturity; Cascade is pretty sure it will hold the bonds for 5 years. How close to maturity could Cascade sell an investment and still classify it as held-to-maturity?
- What disclosures must be made for any sale or transfer from securities classified as held-to-maturity?

**Professional Simulation**

Go to the book's companion website, at [www.wiley.com.college/kieso](http://www.wiley.com.college/kieso), to find an interactive problem that simulates the computerized CPA exam. The professional simulation for this chapter asks you to address questions related to the accounting for investments.

**Remember to check the book's companion website to find additional resources for this chapter.**

## CHAPTER 18

# REVENUE RECOGNITION

### LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Apply the revenue recognition principle.
- 2 Describe accounting issues for revenue recognition at point of sale.
- 3 Apply the percentage-of-completion method for long-term contracts.
- 4 Apply the completed-contract method for long-term contracts.
- 5 Identify the proper accounting for losses on long-term contracts.
- 6 Describe the installment-sales method of accounting.
- 7 Explain the cost-recovery method of accounting.

### IT'S BACK

Several years after passage, the accounting world continues to be preoccupied with the Sarbanes-Oxley Act of 2002 (SOX). Unfortunately, SOX did not solve one of the classic accounting issues—how to properly account for revenue. In fact, revenue recognition practices are the most prevalent reasons for accounting restatements. A number of the revenue recognition issues relate to possible fraudulent behavior by company executives and employees. Consider some of the recent SEC actions:

- The SEC charged the former co-chairman and CEO of **Qwest Communications International Inc.** and eight other former Qwest officers and employees with fraud and other violations of the federal securities laws. Three of these people fraudulently characterized nonrecurring revenue from one-time sales as revenue from recurring data and Internet services. The SEC release notes that internal correspondence likened Qwest's dependence on these transactions to fill the gap between actual and projected revenue to an addiction.
- The SEC filed a complaint against three former senior officers of **iGo Corp.**, alleging that the defendants collectively caused iGo to improperly recognize revenue on consignment sales and products that were not shipped or that were shipped after the end of a fiscal quarter.

- The SEC filed a complaint against the former CEO and chairman of **Homestore Inc.** and its former executive vice president of business development, alleging that they engaged in a fraudulent scheme to overstate advertising and subscription revenues. The scheme involved a complex structure of “round-trip” transactions using various third-party companies that, in essence, allowed Homestore to recognize its own cash as revenue.
- The SEC claims that **Lantronix** deliberately sent excessive product to distributors and granted them generous return rights and extended payment terms. In addition, as part of its alleged channel stuffing and to prevent product returns, Lantronix loaned funds to a third party to purchase Lantronix products from one of its distributors. The third party later returned the product. The SEC also asserted that Lantronix engaged in other improper revenue recognition practices, including shipping without a purchase order and recognizing revenue on a contingent sale.

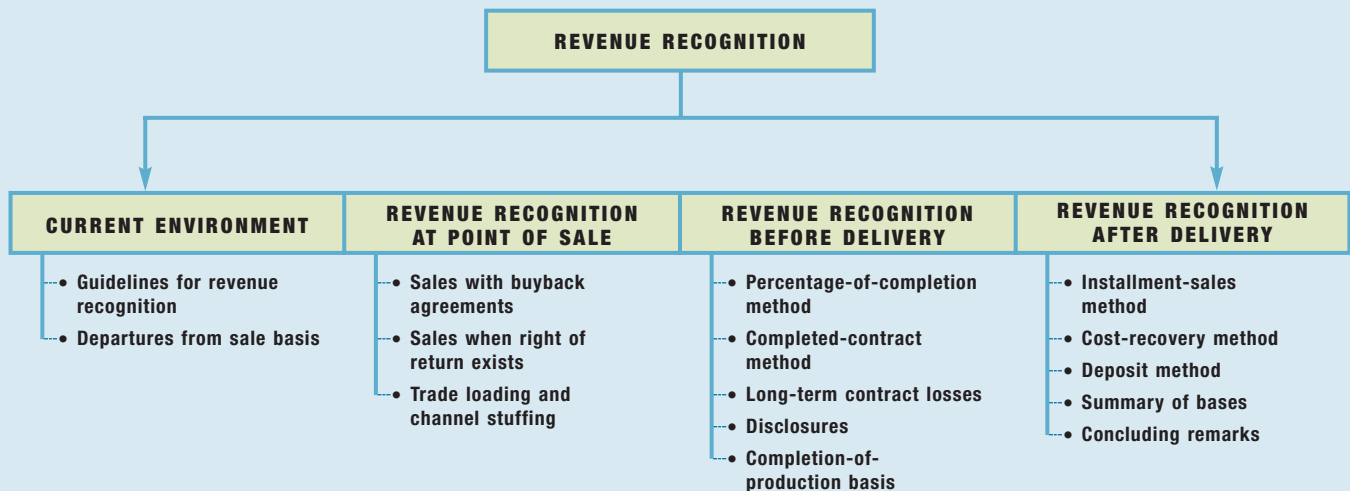

Though the cases cited involved fraud and irregularity, not all revenue recognition errors are intentional. For example, in April 2005 **American Home Mortgage Investment Corp.** announced that it would reverse revenue recognized from its fourth-quarter 2004 loan securitization, and would recognize it in the first quarter of 2005 instead. As a result, American Home restated its financial results for 2004.

So, how does a company ensure that revenue transactions are recorded properly? Some answers will become apparent after you study this chapter.

Taub, “SEC Accuses Ex-CFO of Channel Stuffing,” *CFO.com* (September 30, 2006).

## PREVIEW OF CHAPTER 18

As indicated in the opening story, the issue of when revenue should be recognized is complex. The many methods of marketing products and services make it difficult to develop guidelines that will apply to all situations. This chapter provides you with general guidelines used in most business transactions. The content and organization of the chapter are as follows.

## THE CURRENT ENVIRONMENT

According to one study, revenue recognition has been the largest single source of public-company restatements over the past decade. The study noted the following:

1. Restatements for improper revenue recognition result in larger drops in market capitalization than any other type of restatement.
2. Revenue problems caused eight of the top ten market value losses in a recent year.
3. Of the ten companies, the leading three lost \$20 billion in market value in just three days following disclosure of revenue recognition problems.<sup>1</sup>

### INTERNATIONAL INSIGHT

IFGAAP has less-detailed revenue recognition rules compared to U.S. GAAP.

As a result of such revenue recognition problems, the SEC has increased its enforcement actions in this area (as evidenced in the opening story). In some of these cases, companies made significant adjustments to previously issued financial statements. As Lynn Turner, a former chief accountant of the SEC, indicated, “When people cross over the boundaries of legitimate reporting, the Commission will take appropriate action to ensure the fairness and integrity that investors need and depend on every day.”<sup>2</sup>

Inappropriate recognition of revenue can occur in any industry. Products that are sold to distributors for resale pose different risks than products or services that are sold directly to customers. Sales in high-technology industries, where rapid product obsolescence is a significant issue, pose different risks than sale of inventory with a longer life, such as farm or construction equipment, automobiles, trucks, and appliances.<sup>3</sup>

As indicated in Chapter 10, telecom companies such as **Global Crossing** and **Qwest Communications** swapped fiber-optic capacity to increase revenue. The SEC has expressed concern that dot-coms also are increasing their revenue by including product sales in their revenue even though they are acting only as the distributor (intermediary) on behalf of other companies. Instead, dot-coms should be reporting only a distribution (brokerage) fee for selling another company’s products.<sup>4</sup>

### GROSSED OUT

Consider **Priceline.com**, the company made famous by William Shatner’s ads about “naming your own price” for airline tickets and hotel rooms. In one of its quarterly SEC filings, Priceline reported that it earned \$152 million in revenues. But that included the full amount customers paid for tickets, hotel rooms, and rental cars. Traditional travel agencies call that amount “gross bookings,” not revenues. And much like regular travel agencies, Priceline keeps only a small portion of gross bookings—namely, the spread between the customers’ accepted bids and the price it paid for the merchandise. The rest, which Priceline calls “product costs,” it pays to the airlines and hotels that supply the tickets and rooms.

### What do the numbers mean?

<sup>1</sup>PricewaterhouseCoopers, “Current Developments for Audit Committees 2002” (Florham Park, N.J.: PricewaterhouseCoopers, 2002), p. 65.

<sup>2</sup>The Sarbanes-Oxley Act of 2002 also makes it clear that Congress will not tolerate abuses of the financial reporting process and that those who fail to adhere to “certain standards” will be prosecuted.

<sup>3</sup>Adapted from American Institute of Certified Public Accountants, Inc., *Audit Issues in Revenue Recognition* (New York: AICPA, 1999).

<sup>4</sup>“Revenue Recognition in Financial Statements,” *SEC Staff Accounting Bulletin No. 101*, December 3, 1999.

However, Priceline's product costs came to \$134 million, leaving Priceline just \$18 million of what it calls "gross profit" and what most other companies would call revenues. And that's before all of Priceline's other costs—like advertising and salaries—which netted out to a loss of \$102 million. The difference isn't academic: Priceline stock traded at about 23 times its reported revenues but at a mind-boggling 214 times its "gross profit." This and other aggressive recognition practices led the SEC to issue stricter revenue recognition guidance indicating that if a company performs as an agent or broker without assuming the risks and rewards of ownership of the goods, the company should report sales on a net (fee) basis. [1]

**What do the numbers mean?**  
(continued)

## Guidelines for Revenue Recognition

In general, the guidelines for revenue recognition are quite broad. On top of the broad guidelines, certain industries have specific additional guidelines that provide further insight into when revenue should be recognized. The **revenue recognition principle** provides that companies should recognize revenue<sup>5</sup> (1) when it is realized or realizable and (2) when it is earned.<sup>6</sup> Therefore, proper revenue recognition revolves around three terms:

See the FASB Codification section (page 966).

### Objective 1

Apply the revenue recognition principle.

Revenues are **realized** when a company exchanges goods and services for cash or claims to cash (receivables).

Revenues are **realizable** when assets a company receives in exchange are readily convertible to known amounts of cash or claims to cash.

Revenues are **earned** when a company has substantially accomplished what it must do to be entitled to the benefits represented by the revenues—that is, when the earnings process is complete or virtually complete.<sup>7</sup>

Four revenue transactions are recognized in accordance with this principle:

1. Companies recognize revenue from selling products at the date of sale. This date is usually interpreted to mean the date of delivery to customers.
2. Companies recognize revenue from services provided, when services have been performed and are billable.
3. Companies recognize revenue from permitting others to use enterprise assets, such as interest, rent, and royalties, as time passes or as the assets are used.
4. Companies recognize revenue from disposing of assets other than products at the date of sale.

### Underlying Concepts

Revenues are inflows of assets and/or settlements of liabilities from delivering or producing goods, providing services, or other earning activities that constitute a company's ongoing major or central operations during a period.

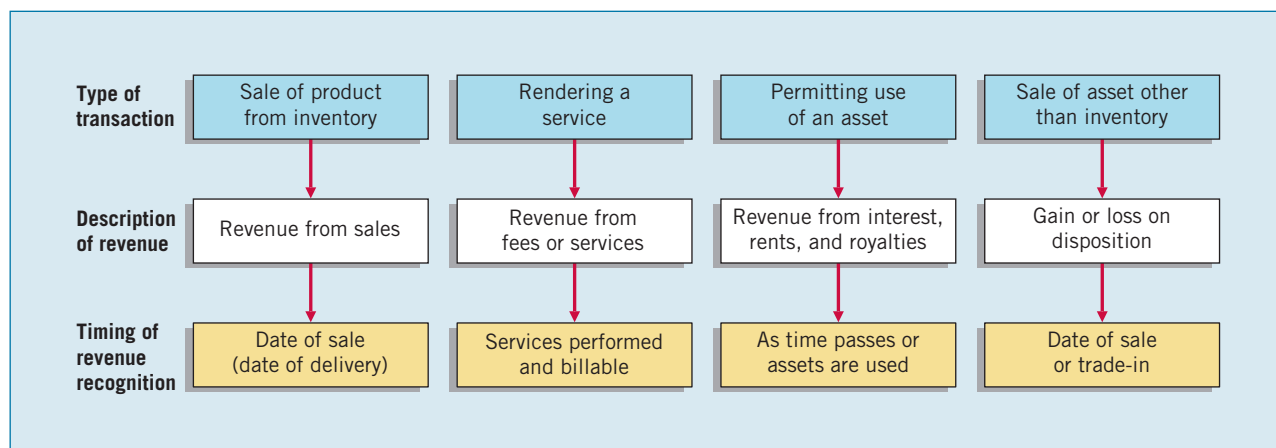

<sup>5</sup>Recognition is "the process of formally recording or incorporating an item in the accounts and financial statements of an entity" (SFAC No. 3, par. 83). "Recognition includes depiction of an item in both words and numbers, with the amount included in the totals of the financial statements" (SFAC No. 5, par. 6). For an asset or liability, recognition involves recording not only acquisition or incurrence of the item but also later changes in it, including removal from the financial statements previously recognized.

Recognition is not the same as realization, although the two are sometimes used interchangeably in accounting literature and practice. *Realization* is "the process of converting noncash resources and rights into money and is most precisely used in accounting and financial reporting to refer to sales of assets for cash or claims to cash" (SFAC No. 3, par. 83).

<sup>6</sup>"Recognition and Measurement in Financial Statements of Business Enterprises," *Statement of Financial Accounting Concepts No. 5* (Stamford, Conn.: FASB, 1984), par. 83.

<sup>7</sup>Gains (as contrasted to revenues) commonly result from transactions and other events that do not involve an "earning process." For gain recognition, being earned is generally less significant than being realized or realizable. Companies commonly recognize gains at the time of an asset's sale, disposition of a liability, or when prices of certain assets change.

These revenue transactions are diagrammed in Illustration 18-1.

**ILLUSTRATION 18-1**  
Revenue Recognition  
Classified by Nature of  
Transaction

The preceding statements are the basis of accounting for revenue transactions. Yet, in practice there are departures from the revenue recognition principle. Companies sometimes recognize revenue at other points in the earning process, owing in great measure to the considerable variety of revenue transactions.<sup>8</sup>

### Departures from the Sale Basis

An FASB study found some common **reasons for departures from the sale basis**.<sup>9</sup> One reason is a desire to **recognize earlier** than the time of sale the effect of earning activities. Earlier recognition is appropriate if there is a high degree of certainty about the amount of revenue earned. A second reason is a desire to **delay recognition** of revenue beyond the time of sale. Delayed recognition is appropriate if the degree of uncertainty concerning the amount of either revenue or costs is sufficiently high or if the sale does not represent substantial completion of the earnings process.

This chapter focuses on two of the four general types of revenue transactions described earlier: (1) selling products and (2) providing services. Both of these are **sales transactions**. (In several other sections of the textbook, we discuss the other two types of revenue transactions—revenue from permitting others to use enterprise assets, and revenue from disposing of assets other than products.) Our discussion of product sales transactions in this chapter is organized around the following topics:

1. Revenue recognition at point of sale (delivery).
2. Revenue recognition before delivery.
3. Revenue recognition after delivery.
4. Revenue recognition for special sales transactions—franchises and consignments.

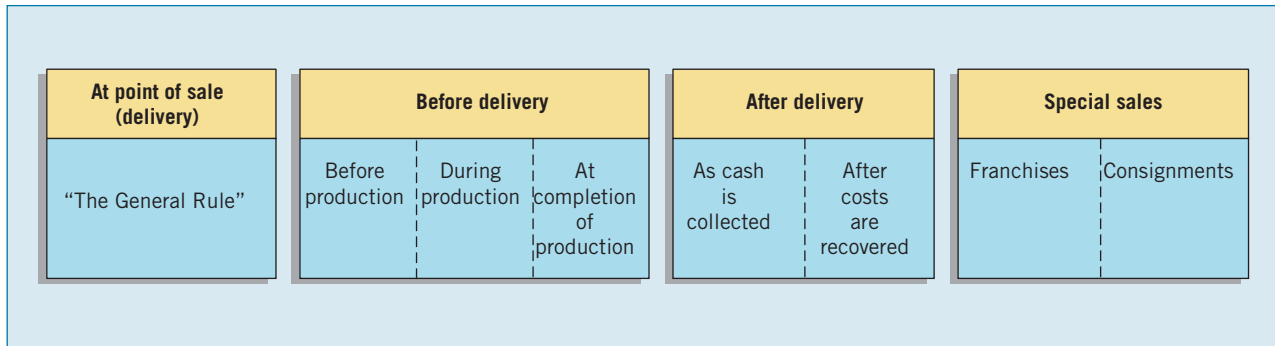

Examples of Revenue  
Recognition Policies

<sup>8</sup>The FASB and IASB are now involved in a joint project on revenue recognition. The purpose of this project is to develop comprehensive conceptual guidance on when to recognize revenue. Presently, the Boards are evaluating a customer-consideration model. In this model, a company accounts for the contract asset or liability that arises from the rights and performance obligations in an enforceable contract with the customer. At contract inception, the rights in the contract are measured at the amount of the promised customer payment (that is, the customer consideration). That amount is then allocated to the individual performance obligations identified within the contract in proportion to the standalone selling price of each good or service underlying the performance obligation. It is hoped that this approach (rather than using the earned and realized or realized criteria) will lead to a better basis for revenue recognition. (See [www.fasb.org/project/revenue\\_recognition.shtml](http://www.fasb.org/project/revenue_recognition.shtml).)

Revenue Recognition  
Alternatives

## REVENUE RECOGNITION AT POINT OF SALE (DELIVERY)

According to the FASB’s *Concepts Statement No. 5*, companies usually meet the two conditions for recognizing revenue (being realized or realizable and being earned) by the time they deliver products or render services to customers.<sup>10</sup> Therefore, companies commonly recognize revenues from manufacturing and selling activities at **point of sale** (usually meaning delivery).<sup>11</sup> Implementation problems, however, can arise. We discuss three such problematic situations on the following pages.

**Objective 2**

Describe accounting issues for revenue recognition at point of sale.

### Sales with Buyback Agreements

If a company sells a product in one period and agrees to buy it back in the next accounting period, has the company sold the product? As indicated in Chapter 8, legal title has transferred in this situation. However, the economic substance of the transaction is that the seller retains the risks of ownership. The FASB has curtailed recognition of revenue using this practice. When a repurchase agreement exists at a set price and this price covers all cost of the inventory plus related holding costs, the inventory and related liability remain on the seller’s books. [3] In other words, no sale.

### Sales When Right of Return Exists

Whether cash or credit sales are involved, a special problem arises with claims for returns and allowances. In Chapter 7, we presented the accounting treatment for normal returns and allowances. However, certain companies experience such a **high rate of returns**—a high ratio of returned merchandise to sales—that they find it necessary to postpone reporting sales until the return privilege has substantially expired.

For example, in the publishing industry, the rate of return approaches 25 percent for hardcover books and 65 percent for some magazines. Other types of companies that experience high return rates are perishable food dealers, distributors who sell to retail outlets, recording-industry companies, and some toy and sporting goods manufacturers. Returns in these industries are frequently made either through a right of contract or as a matter of practice involving “guaranteed sales” agreements or consignments.

**Underlying Concepts**

This is an example of realized but unearned revenue. When high rates of return exist and cannot be reasonably estimated, a question arises as to whether the earnings process has been substantially completed.

<sup>10</sup>The SEC believes that revenue is realized or realizable and earned when all of the following criteria are met: (1) Persuasive evidence of an arrangement exists; (2) delivery has occurred or services have been provided; (3) the seller’s price to the buyer is fixed or determinable; and (4) collectibility is reasonably assured. [2] The SEC provided more specific guidance because the general criteria were difficult to interpret.

<sup>11</sup>*Statement of Financial Accounting Concepts No. 5*, op. cit., par. 84.

Three alternative revenue recognition methods are available when the right of return exposes the seller to continued risks of ownership. These are: (1) not recording a sale until all return privileges have expired; (2) recording the sale, but reducing sales by an estimate of future returns; and (3) recording the sale and accounting for the returns as they occur. The FASB concluded that if a company sells its product but gives the buyer the right to return it, the company should **recognize revenue** from the sales transactions at the time of sale **only if all of the following six conditions** have been met. [4]

1. The seller's price to the buyer is substantially fixed or determinable at the date of sale.
2. The buyer has paid the seller, or the buyer is obligated to pay the seller, and the obligation is not contingent on resale of the product.
3. The buyer's obligation to the seller would not be changed in the event of theft or physical destruction or damage of the product.
4. The buyer acquiring the product for resale has economic substance apart from that provided by the seller.
5. The seller does not have significant obligations for future performance to directly bring about resale of the product by the buyer.
6. The seller can reasonably estimate the amount of future returns.

What if the six conditions are not met? In that case, the company must recognize sales revenue and cost of sales either when the return privilege has substantially expired or when those six conditions subsequently are met, **whichever occurs first**. In the income statement, the company must reduce sales revenue and cost of sales by the amount of the estimated returns.

## Trade Loading and Channel Stuffing

Some companies record revenues at date of delivery with neither buyback nor unlimited return provisions. Although they appear to be following acceptable point-of-sale revenue recognition practices, they are recognizing revenues and earnings prematurely.

For example, the domestic cigarette industry at one time engaged in a distribution practice known as **trade loading**. As one commentator described this practice, "Trade loading is a crazy, uneconomic, insidious practice through which manufacturers—trying to show sales, profits, and market share they don't actually have—induce their wholesale customers, known as the trade, to buy more product than they can promptly resell."<sup>12</sup> In total, the cigarette industry appears to have exaggerated a couple years' operating profits by as much as \$600 million by taking the profits from future years.

In the computer software industry, a similar practice is referred to as **channel stuffing**. When a software maker needed to make its financial results look good, it offered deep discounts to its distributors to overbuy, and then recorded revenue when the software left the loading dock.<sup>13</sup> Of course, the distributors' inventories become bloated and the marketing channel gets too filled with product, but the software maker's current-period financials are improved. However, financial results in future periods will suffer, unless the company repeats the process.

Trade loading and channel stuffing distort operating results and "window dress" financial statements. If used without an appropriate allowance for sales returns, channel stuffing is a classic example of booking tomorrow's revenue today. Business managers need to be aware of the ethical dangers of misleading the financial community by engaging in such practices to improve their financial statements.

<sup>12</sup>"The \$600 Million Cigarette Scam," *Fortune* (December 4, 1989), p. 89.

<sup>13</sup>"Software's Dirty Little Secret," *Forbes* (May 15, 1989), p. 128.

### INTERNATIONAL INSIGHT

General revenue recognition principles are provided by iGAAP that are consistent with U.S. GAAP but contain limited detailed or industry-specific guidance.

## NO TAKE-BACKS

Investors in **Lucent Technologies** were negatively affected when Lucent violated one of the fundamental criteria for revenue recognition—the “no take-back” rule. This rule holds that revenue should not be booked on inventory that is shipped if the customer can return it at some point in the future. In this particular case, Lucent agreed to take back shipped inventory from its distributors, if the distributors were unable to sell the items to their customers.

In essence, Lucent was “stuffing the channel.” By booking sales when goods were shipped, even though they most likely would get them back, Lucent was able to report continued sales growth. However, Lucent investors got a nasty surprise when distributors returned those goods and Lucent had to restate its financial results. The restatement erased \$679 million in revenues, turning an operating profit into a loss. In response to this bad news, Lucent’s stock price declined \$1.31 per share, or 8.5 percent. Lucent is not alone in this practice. **Sunbeam** got caught stuffing the sales channel with barbecue grills and other outdoor items, which contributed to its troubles when it was forced to restate its earnings.

Investors can be tipped off to potential channel stuffing by carefully reviewing a company’s revenue recognition policy for generous return policies and by watching inventory and receivable levels. When sales increase along with receivables, that’s one sign that customers are not paying for goods shipped on credit. And growing inventory levels are an indicator that customers have all the goods they need. Both scenarios suggest a higher likelihood of goods being returned and revenues and income being restated. So remember, no take-backs!

*Source:* Adapted from S. Young, “Lucent Slashes First Quarter Outlook, Erases Revenue from Latest Quarter,” *Wall Street Journal Online* (December 22, 2000); and Tracey Byrnes, “Too Many Thin Mints: Spotting the Practice of Channel Stuffing,” *Wall Street Journal Online* (February 7, 2002).

**What do the numbers mean?**

## REVENUE RECOGNITION BEFORE DELIVERY

For the most part, companies recognize revenue at the point of sale (delivery) because at point of sale most of the uncertainties in the earning process are removed and the exchange price is known. Under certain circumstances, however, companies recognize revenue prior to completion and delivery. The most notable example is long-term construction contract accounting, which uses the percentage-of-completion method.

Long-term contracts frequently provide that the seller (builder) may bill the purchaser at intervals, as it reaches various points in the project. Examples of long-term contracts are construction-type contracts, development of military and commercial aircraft, weapons-delivery systems, and space exploration hardware. When the project consists of separable units, such as a group of buildings or miles of roadway, contract provisions may provide for delivery in installments. In that case, the seller would bill the buyer and transfer title at stated stages of completion, such as the completion of each building unit or every 10 miles of road. The accounting records should record sales when installments are “delivered.”<sup>14</sup>

Two distinctly different methods of accounting for long-term construction contracts are recognized.<sup>15</sup> They are:

- **Percentage-of-Completion Method.** Companies recognize revenues and gross profits each period based upon the progress of the construction—that is, the percentage of completion. The company accumulates construction costs **plus gross profit earned to date** in an inventory account (Construction in Process), and it accumulates progress billings in a contra inventory account (Billings on Construction in Progress).

<sup>14</sup>Statement of Financial Accounting Concepts No. 5, par. 84, item c.

<sup>15</sup>*Accounting Trends and Techniques—2007* reports that of the 90 of its 600 sample companies that referred to long-term construction contracts, 81 used the percentage-of-completion method and 9 used the completed-contract method.

*Additional Disclosures  
of Revenue Recognition  
Policies*

- **Completed-Contract Method.** Companies recognize revenues and gross profit **only** when the contract is completed. The company accumulates construction costs in an inventory account (Construction in Process), and it accumulates progress billings in a contra inventory account (Billings on Construction in Process).

The rationale for using percentage-of-completion accounting is that under most of these contracts the buyer and seller have enforceable rights. The buyer has the legal right to require specific performance on the contract. The seller has the right to require progress payments that provide evidence of the buyer's ownership interest. As a result, a continuous sale occurs as the work progresses. Companies should recognize revenue according to that progression.

### Underlying Concepts

The percentage-of-completion method recognizes revenue from long-term contracts in the periods in which the revenue is earned. The firm contract fixes the selling price. And, if costs are estimable and collection reasonably assured, the revenue recognition concept is not violated.

Companies *must* use the percentage-of-completion method when estimates of progress toward completion, revenues, and costs are reasonably dependable and **all of the following conditions** exist. [5]

1. The contract clearly specifies the enforceable rights regarding goods or services to be provided and received by the parties, the consideration to be exchanged, and the manner and terms of settlement.
2. The buyer can be expected to satisfy all obligations under the contract.
3. The contractor can be expected to perform the contractual obligations.

Companies should use the completed-contract method when one of the following conditions applies:

- when a company has primarily short-term contracts, *or*
- when a company cannot meet the conditions for using the percentage-of-completion method, *or*
- when there are inherent hazards in the contract beyond the normal, recurring business risks.

The presumption is that percentage-of-completion is the better method. Therefore, companies should use the completed-contract method only when the percentage-of-completion method is inappropriate. We discuss the two methods in more detail in the following sections.

## Percentage-of-Completion Method

### Objective 3

Apply the percentage-of-completion method for long-term contracts.

The **percentage-of-completion method** recognizes revenues, costs, and gross profit as a company makes progress toward completion on a long-term contract. To defer recognition of these items until completion of the entire contract is to misrepresent the efforts (costs) and accomplishments (revenues) of the accounting periods during the contract. In order to apply the percentage-of-completion method, a company must have some basis or standard for measuring the progress toward completion at particular interim dates.

### Measuring the Progress toward Completion

As one practicing accountant wrote, "The big problem in applying the percentage-of-completion method . . . has to do with the ability to make reasonably accurate estimates of completion and the final gross profit."<sup>16</sup> Companies use various methods to determine the **extent of progress toward completion**. The most common are the *cost-to-cost* and *units-of-delivery* methods.<sup>17</sup>

<sup>16</sup>Richard S. Hickok, "New Guidance for Construction Contractors: 'A Credit Plus,'" *The Journal of Accountancy* (March 1982), p. 46.

<sup>17</sup>R. K. Larson and K. L. Brown, "Where Are We with Long-Term Contract Accounting?" *Accounting Horizons* (September 2004), pp. 207–219.

The objective of all these methods is to measure the extent of progress in terms of costs, units, or value added. Companies identify the various measures (costs incurred, labor hours worked, tons produced, floors completed, etc.) and classify them as input or output measures. **Input measures** (costs incurred, labor hours worked) are efforts devoted to a contract. **Output measures** (with units of delivery measured as tons produced, floors of a building completed, miles of a highway completed) track results. Neither are universally applicable to all long-term projects. Their use requires the exercise of judgment and careful tailoring to the circumstances.

Both input and output measures have certain disadvantages. The input measure is based on an established relationship between a unit of input and productivity. If inefficiencies cause the productivity relationship to change, inaccurate measurements result. Another potential problem is front-end loading, in which significant up-front costs result in higher estimates of completion. To avoid this problem, companies should disregard some early-stage construction costs—for example, costs of uninstalled materials or costs of subcontracts not yet performed—if they do not relate to contract performance.

Similarly, output measures can produce inaccurate results if the units used are not comparable in time, effort, or cost to complete. For example, using floors (stories) completed can be deceiving. Completing the first floor of an eight-story building may require more than one-eighth the total cost because of the substructure and foundation construction.

The most popular input measure used to determine the progress toward completion is the **cost-to-cost basis**. Under this basis, a company like **EDS** measures the percentage of completion by comparing costs incurred to date with the most recent estimate of the total costs required to complete the contract. Illustration 18-3 shows the formula for the cost-to-cost basis.

$$\frac{\text{Costs incurred to date}}{\text{Most recent estimate of total costs}} = \text{Percent complete}$$

**ILLUSTRATION 18-3**  
Formula for Percentage-of-Completion, Cost-to-Cost Basis

Once EDS knows the percentage that costs incurred bear to total estimated costs, it applies that percentage to the total revenue or the estimated total gross profit on the contract. The resulting amount is the revenue or the gross profit to be recognized to date. Illustration 18-4 shows this computation.

$$\text{Percent complete} \times \frac{\text{Estimated total revenue (or gross profit)}}{\text{Estimated total revenue (or gross profit)}} = \text{Revenue (or gross profit) to be recognized to date}$$

**ILLUSTRATION 18-4**  
Formula for Total Revenue to Be Recognized to Date

To find the amounts of revenue and gross profit recognized each period, EDS subtracts total revenue or gross profit recognized in prior periods, as shown in Illustration 18-5.

$$\text{Revenue (or gross profit) to be recognized to date} - \text{Revenue (or gross profit) recognized in prior periods} = \text{Current-period revenue (or gross profit)}$$

**ILLUSTRATION 18-5**  
Formula for Amount of Current-Period Revenue, Cost-to-Cost Basis

Because **the cost-to-cost method is widely used** (without excluding other bases for measuring progress toward completion), we have adopted it for use in our examples. [6]

**Example of Percentage-of-Completion Method—Cost-to-Cost Basis**

To illustrate the percentage-of-completion method, assume that Hardhat Construction Company has a contract to construct a \$4,500,000 bridge at an estimated cost of \$4,000,000. The contract is to start in July 2010, and the bridge is to be completed in October 2012. The following data pertain to the construction period. (Note that by the end of 2011 Hardhat has revised the estimated total cost from \$4,000,000 to \$4,050,000.)

	2010	2011	2012
Costs to date	\$1,000,000	\$2,916,000	\$4,050,000
Estimated costs to complete	3,000,000	1,134,000	—
Progress billings during the year	900,000	2,400,000	1,200,000
Cash collected during the year	750,000	1,750,000	2,000,000

Hardhat would compute the percentage complete as shown in Illustration 18-6.

**ILLUSTRATION 18-6**  
Application of Percentage-of-Completion Method, Cost-to-Cost Basis

	2010	2011	2012
Contract price	\$4,500,000	\$4,500,000	\$4,500,000
Less estimated cost:			
Costs to date	1,000,000	2,916,000	4,050,000
Estimated costs to complete	<u>3,000,000</u>	<u>1,134,000</u>	<u>—</u>
Estimated total costs	<u>4,000,000</u>	<u>4,050,000</u>	<u>4,050,000</u>
Estimated total gross profit	<u>\$ 500,000</u>	<u>\$ 450,000</u>	<u>\$ 450,000</u>
<b>Percent complete</b>	<b>25%</b>	<b>72%</b>	<b>100%</b>
	( <u>\$1,000,000</u> ) ( <u>\$4,000,000</u> )	( <u>\$2,916,000</u> ) ( <u>\$4,050,000</u> )	( <u>\$4,050,000</u> ) ( <u>\$4,050,000</u> )

On the basis of the data above, Hardhat would make the following entries to record (1) the costs of construction, (2) progress billings, and (3) collections. These entries appear as summaries of the many transactions that would be entered individually as they occur during the year.

**ILLUSTRATION 18-7**  
Journal Entries—Percentage-of-Completion Method, Cost-to-Cost Basis

	2010	2011	2012
<b>To record cost of construction:</b>			
Construction in Process	1,000,000	1,916,000	1,134,000
Materials, Cash, Payables, etc.	1,000,000	1,916,000	1,134,000
<b>To record progress billings:</b>			
Accounts Receivable	900,000	2,400,000	1,200,000
Billings on Construction in Process	900,000	2,400,000	1,200,000
<b>To record collections:</b>			
Cash	750,000	1,750,000	2,000,000
Accounts Receivable	750,000	1,750,000	2,000,000

In this example, the costs incurred to date are a measure of the extent of progress toward completion. To determine this, Hardhat evaluates the costs incurred to date as a proportion of the estimated total costs to be incurred on the project. The estimated revenue and gross profit that Hardhat will recognize for each year are calculated as shown in Illustration 18-8 (on page 941).

	2010	2011	2012
<b>Revenue recognized in:</b>			
2010	$\$4,500,000 \times 25\%$	<u><b>\$1,125,000</b></u>	
2011	$\$4,500,000 \times 72\%$	\$3,240,000	
	Less: Revenue recognized in 2010	<u>1,125,000</u>	
	Revenue in 2011	<u><b>\$2,115,000</b></u>	
2012	$\$4,500,000 \times 100\%$		\$4,500,000
	Less: Revenue recognized in 2010 and 2011		<u>3,240,000</u>
	Revenue in 2012		<u><b>\$1,260,000</b></u>
<b>Gross profit recognized in:</b>			
2010	$\$500,000 \times 25\%$	<u><b>\$ 125,000</b></u>	
2011	$\$450,000 \times 72\%$	\$ 324,000	
	Less: Gross profit recognized in 2010	<u>125,000</u>	
	Gross profit in 2011	<u><b>\$ 199,000</b></u>	
2012	$\$450,000 \times 100\%$		\$ 450,000
	Less: Gross profit recognized in 2010 and 2011		<u>324,000</u>
	Gross profit in 2012		<u><b>\$ 126,000</b></u>

**ILLUSTRATION 18-8**  
Percentage-of-Completion, Revenue and Gross Profit, by Year

Illustration 18-9 shows Hardhat’s entries to recognize revenue and gross profit each year and to record completion and final approval of the contract.

	2010	2011	2012
<b>To recognize revenue and gross profit:</b>			
Construction in Process (gross profit)	125,000	199,000	126,000
Construction Expenses	1,000,000	1,916,000	1,134,000
Revenue from Long-Term Contracts	1,125,000	2,115,000	1,260,000
<b>To record completion of the contract:</b>			
Billings on Construction in Process			4,500,000
Construction in Process			4,500,000

**ILLUSTRATION 18-9**  
Journal Entries to Recognize Revenue and Gross Profit and to Record Contract Completion—Percentage-of-Completion Method, Cost-to-Cost Basis

Note that Hardhat debits gross profit (as computed in Illustration 18-8) to Construction in Process. Similarly, it credits Revenue from Long-Term Contracts for the amounts computed in Illustration 18-8. Hardhat then debits the difference between the amounts recognized each year for revenue and gross profit to a nominal account, Construction Expenses (similar to Cost of Goods Sold in a manufacturing company). It reports that amount in the income statement as the actual cost of construction incurred in that period. For example, Hardhat uses the actual costs of \$1,000,000 to compute both the gross profit of \$125,000 and the percent complete (25 percent).

Hardhat continues to accumulate costs in the Construction in Process account, in order to maintain a record of total costs incurred (plus recognized profit) to date. Although theoretically a series of “sales” takes place using the percentage-of-completion method, the selling company cannot remove the inventory cost until the construction is completed and transferred to the new owner. Hardhat’s Construction in Process account for the bridge would include the following summarized entries over the term of the construction project.

**ILLUSTRATION 18-10**  
Content of Construction  
in Process Account—  
Percentage-of-Completion  
Method

Construction in Process			
2010 construction costs	\$1,000,000	12/31/12	to close
2010 recognized gross profit	125,000		completed
2011 construction costs	1,916,000		project
2011 recognized gross profit	199,000		
2012 construction costs	1,134,000		
2012 recognized gross profit	126,000		
Total	<u>\$4,500,000</u>	Total	<u>\$4,500,000</u>

Recall that the Hardhat Construction Company example contained a **change in estimate**: In the second year, 2011, it increased the estimated total costs from \$4,000,000 to \$4,050,000. The change in estimate is accounted for in a **cumulative catch-up manner**. This is done by, first, adjusting the percent completed to the new estimate of total costs. Next, Hardhat deducts the amount of revenues and gross profit recognized in prior periods from revenues and gross profit computed for progress to date. That is, it accounts for the change in estimate in the period of change. That way, the balance sheet at the end of the period of change and the accounting in subsequent periods are as they would have been if the revised estimate had been the original estimate.

**Financial Statement Presentation—Percentage-of-Completion**

Generally, when a company records a receivable from a sale, it reduces the Inventory account. Under the percentage-of-completion method, however, the company continues to carry both the receivable and the inventory. Subtracting the balance in the **Billings account** from Construction in Process avoids double-counting the inventory. During the life of the contract, Hardhat reports in the balance sheet the difference between the Construction in Process and the Billings on Construction in Process accounts. If that amount is a debit, Hardhat reports it as a **current asset**; if it is a credit, it reports it as a **current liability**.

At times, the costs incurred plus the gross profit recognized to date (the balance in Construction in Process) exceed the billings. In that case, Hardhat reports this excess as a current asset entitled “Cost and recognized profit in excess of billings.” Hardhat can at any time calculate the unbilled portion of revenue recognized to date by subtracting the billings to date from the revenue recognized to date, as illustrated for 2010 for Hardhat Construction in Illustration 18-11.

**ILLUSTRATION 18-11**  
Computation of Unbilled  
Contract Price at  
12/31/10

Contract revenue recognized to date:	$\$4,500,000 \times \frac{\$1,000,000}{\$4,000,000}$	\$1,125,000
Billings to date		900,000
Unbilled revenue		<u>\$ 225,000</u>

At other times, the billings exceed costs incurred and gross profit to date. In that case, Hardhat reports this excess as a current liability entitled “Billings in excess of costs and recognized profit.”

It probably has occurred to you that companies often have more than one project going at a time. When a company has a number of projects, costs exceed billings on some contracts and billings exceed costs on others. In such a case, the company segregates the contracts. The asset side includes only those contracts on which costs and recognized profit exceed billings. The liability side includes only those on which billings exceed costs and recognized profit. Separate disclosures of the dollar volume of billings and costs are preferable to a summary presentation of the net difference.

Using data from the bridge example, Hardhat Construction Company would report the status and results of its long-term construction activities under the percentage-of-completion method as shown in Illustration 18-12 (on page 943).

HARDHAT CONSTRUCTION COMPANY			
	2010	2011	2012
<b>Income Statement</b>			
Revenue from long-term contracts	\$1,125,000	\$2,115,000	\$1,260,000
Costs of construction	1,000,000	1,916,000	1,134,000
Gross profit	\$ 125,000	\$ 199,000	\$ 126,000

**ILLUSTRATION 18-12**  
Financial Statement  
Presentation—Percentage-  
of-Completion Method

<b>Balance Sheet (12/31)</b>			
Current assets			
Accounts receivable	\$ 150,000	\$ 800,000	
Inventories			
Construction in process	\$1,125,000		
Less: Billings	900,000		
Costs and recognized profit in excess of billings	225,000		
Current liabilities			
Billings (\$3,300,000) in excess of costs and recognized profit (\$3,240,000)		\$ 60,000	

**Note 1. Summary of significant accounting policies.**  
**Long-Term Construction Contracts.** The company recognizes revenues and reports profits from long-term construction contracts, its principal business, under the percentage-of-completion method of accounting. These contracts generally extend for periods in excess of one year. The amounts of revenues and profits recognized each year are based on the ratio of costs incurred to the total estimated costs. Costs included in construction in process include direct materials, direct labor, and project-related overhead. Corporate general and administrative expenses are charged to the periods as incurred and are not allocated to construction contracts.

## Completed-Contract Method

Under the **completed-contract method**, companies recognize revenue and gross profit only at point of sale—that is, when the contract is completed. Under this method, companies accumulate costs of long-term contracts in process, but they make no interim charges or credits to income statement accounts for revenues, costs, or gross profit.

**Objective 4**  
Apply the completed-contract method for long-term contracts.

The principal advantage of the completed-contract method is that reported revenue reflects final results rather than *estimates* of unperformed work. Its major disadvantage is that it does not reflect current performance when the period of a contract extends into more than one accounting period. Although operations may be fairly uniform during the period of the contract, the company will not report revenue until the year of completion, creating a distortion of earnings.

**INTERNATIONAL INSIGHT**  
iGAAP prohibits the use of the completed-contract method of accounting for long-term construction contracts. Companies must use the percentage-of-completion method. If revenues and costs are difficult to estimate, then companies recognize revenue only to the extent of the cost incurred—a zero-profit approach.

Under the completed-contract method, the company would make the same **annual entries** to record costs of construction, progress billings, and collections from customers as those illustrated under the percentage-of-completion method. The significant difference is that the company **would not make entries to recognize revenue and gross profit**.

For example, under the completed-contract method for the bridge project illustrated on the preceding pages, Hardhat Construction Company would make the following entries in 2012 to recognize revenue and costs and to close out the inventory and billing accounts.

Billings on Construction in Process	4,500,000	
Revenue from Long-Term Contracts		4,500,000
Costs of Construction	4,050,000	
Construction in Process		4,050,000

Illustration 18-13 compares the amount of gross profit that Hardhat Construction Company would recognize for the bridge project under the two revenue-recognition methods.

**ILLUSTRATION 18-13**  
Comparison of Gross Profit Recognized under Different Methods

	Percentage-of-Completion	Completed-Contract
2010	\$125,000	\$ 0
2011	199,000	0
2012	126,000	450,000

Under the completed-contract method, Hardhat Construction would report its long-term construction activities as follows.

**ILLUSTRATION 18-14**  
Financial Statement Presentation—Completed-Contract Method

<b>HARDHAT CONSTRUCTION COMPANY</b>			
	2010	2011	2012
<b>Income Statement</b>			
Revenue from long-term contracts	—	—	\$4,500,000
Costs of construction	—	—	<u>4,050,000</u>
Gross profit	—	—	<u>\$ 450,000</u>
<b>Balance Sheet (12/31)</b>			
Current assets			
Accounts receivable	\$150,000	\$800,000	
Inventories			
Construction in process	\$1,000,000		
Less: Billings	<u>900,000</u>		
Unbilled contract costs	100,000		
Current liabilities			
Billings (\$3,300,000) in excess of contract costs (\$2,916,000)		\$384,000	
<b>Note 1. Summary of significant accounting policies.</b>			
<b>Long-Term Construction Contracts.</b> The company recognizes revenues and reports profits from long-term construction contracts, its principal business, under the completed-contract method. These contracts generally extend for periods in excess of one year. Contract costs and billings are accumulated during the periods of construction, but no revenues or profits are recognized until completion of the contract. Costs included in construction in process include direct material, direct labor, and project-related overhead. Corporate general and administrative expenses are charged to the periods as incurred.			

### Long-Term Contract Losses

Two types of losses can become evident under long-term contracts:<sup>18</sup>

**Objective-5**

Identify the proper accounting for losses on long-term contracts.

- 1. Loss in the Current Period on a Profitable Contract.** This condition arises when, during construction, there is a significant increase in the estimated total contract costs but the increase does not eliminate all profit on the contract. Under the percentage-of-completion method only, the estimated cost increase requires a current-period adjustment of excess gross profit recognized on the project in prior periods. The company records this adjustment as a loss in the current period because it is a **change in accounting estimate** (discussed in Chapter 22).

<sup>18</sup>Sak Bhamornsiri, "Losses from Construction Contracts," *The Journal of Accountancy* (April 1982), p. 26.

**2. Loss on an Unprofitable Contract.** Cost estimates at the end of the current period may indicate that a loss will result on completion of the *entire* contract. Under both the percentage-of-completion and the completed-contract methods, the company must recognize in the current period the entire expected contract loss.

The treatment described for unprofitable contracts is consistent with the accounting custom of anticipating foreseeable losses to avoid overstatement of current and future income (conservatism).

**Underlying Concepts**

*Conservatism* justifies recognizing the losses immediately. Loss recognition does not require *realization*; it only requires evidence that an impairment of asset value has occurred.

**Loss in Current Period**

To illustrate a loss in the current period on a contract expected to be profitable upon completion, we'll continue with the Hardhat Construction Company bridge project. Assume that on December 31, 2011, Hardhat estimates the costs to complete the bridge contract at \$1,468,962 instead of \$1,134,000 (refer to page 940). Assuming all other data are the same as before, Hardhat would compute the percentage complete and recognize the loss as shown in Illustration 18-15. Compare these computations with those for 2011 in Illustration 18-6 (page 940). The "percent complete" has dropped, from 72 percent to 66½ percent, due to the increase in estimated future costs to complete the contract.

Cost to date (12/31/11)	\$2,916,000
Estimated costs to complete (revised)	<u>1,468,962</u>
Estimated total costs	<u>\$4,384,962</u>
Percent complete (\$2,916,000 ÷ \$4,384,962)	66½%
Revenue recognized in 2011 (\$4,500,000 × 66½%) – \$1,125,000	\$1,867,500
Costs incurred in 2011	<u>1,916,000</u>
<b>Loss recognized in 2011</b>	<b><u>\$ 48,500</u></b>

**ILLUSTRATION 18-15**

Computation of Recognizable Loss, 2011—Loss in Current Period

The 2011 loss of \$48,500 is a cumulative adjustment of the "excessive" gross profit recognized on the contract in 2010. Instead of restating the prior period, the company absorbs the prior period misstatement entirely in the current period. In this illustration, the adjustment was large enough to result in recognition of a loss.

Hardhat Construction would record the loss in 2011 as follows.

Construction Expenses	1,916,000	
Construction in Process (loss)		48,500
Revenue from Long-Term Contracts		1,867,500

Hardhat will report the loss of \$48,500 on the 2011 income statement as the difference between the reported revenues of \$1,867,500 and the costs of \$1,916,000.<sup>19</sup> **Under the completed-contract method, the company does not recognize a loss in 2011.** Why not? Because the company still expects the contract to **result in a profit**, to be recognized in the year of completion.

**Loss on an Unprofitable Contract**

To illustrate the accounting for an **overall loss on a long-term contract**, assume that at December 31, 2011, Hardhat Construction Company estimates the costs to complete the

<sup>19</sup>In 2012 Hardhat Construction will recognize the remaining 33½ percent of the revenue (\$1,507,500), with costs of \$1,468,962 as expected, and will report a gross profit of \$38,538. The total gross profit over the three years of the contract would be \$115,038 [\$125,000 (2010) – \$48,500 (2011) + \$38,538 (2012)]. This amount is the difference between the total contract revenue of \$4,500,000 and the total contract costs of \$4,384,962.

bridge contract at \$1,640,250 instead of \$1,134,000. Revised estimates for the bridge contract are as follows.

	2010	2011
	Original Estimates	Revised Estimates
Contract price	\$4,500,000	\$4,500,000
Estimated total cost	4,000,000	4,556,250*
Estimated gross profit	\$ 500,000	
Estimated loss		\$ (56,250)
	*(\$2,916,000 + \$1,640,250)	

**Under the percentage-of-completion method**, Hardhat recognized \$125,000 of gross profit in 2010 (see Illustration 18-8 on page 941). This amount must be offset in 2011 because it is no longer expected to be realized. In addition, since losses must be recognized as soon as estimable, the company must recognize the total estimated loss of \$56,250 in 2011. Therefore, Hardhat must recognize a total loss of \$181,250 (\$125,000 + \$56,250) in 2011.

Illustration 18-16 shows Hardhat’s computation of the revenue to be recognized in 2011.

**ILLUSTRATION 18-16**  
Computation of Revenue Recognizable, 2011—Unprofitable Contract

Revenue recognized in 2011:		
Contract price		\$4,500,000
Percent complete		× 64%*
Revenue recognizable to date		2,880,000
Less: Revenue recognized prior to 2011		1,125,000
<b>Revenue recognized in 2011</b>		<b><u>\$1,755,000</u></b>
*Cost to date (12/31/11)	\$2,916,000	
Estimated cost to complete	1,640,250	
Estimated total costs	<u>\$4,556,250</u>	
Percent complete: \$2,916,000 ÷ \$4,556,250 = 64%		

To compute the construction costs to be expensed in 2011, Hardhat adds the total loss to be recognized in 2011 (\$125,000 + \$56,250) to the revenue to be recognized in 2011. Illustration 18-17 shows this computation.

**ILLUSTRATION 18-17**  
Computation of Construction Expense, 2011—Unprofitable Contract

Revenue recognized in 2011 (computed above)		\$1,755,000
Total loss recognized in 2011:		
Reversal of 2010 gross profit	\$125,000	
Total estimated loss on the contract	<u>56,250</u>	<u>181,250</u>
<b>Construction cost expensed in 2011</b>		<b><u>\$1,936,250</u></b>

Hardhat Construction would record the long-term contract revenues, expenses, and loss in 2011 as follows.

Construction Expenses	1,936,250	
Construction in Process (Loss)		181,250
Revenue from Long-Term Contracts		1,755,000

At the end of 2011, Construction in Process has a balance of \$2,859,750 as shown below.<sup>20</sup>

Construction in Process			
2010 Construction costs	1,000,000		
2010 Recognized gross profit	125,000		
2011 Construction costs	1,916,000	2011 Recognized loss	181,250
<b>Balance</b>	<b>2,859,750</b>		

**ILLUSTRATION 18-18**  
Content of Construction in Process Account at End of 2011—Unprofitable Contract

Under the completed-contract method, Hardhat also would recognize the contract loss of \$56,250, through the following entry in 2011 (the year in which the loss first became evident).

Loss from Long-Term Contracts	56,250	
Construction in Process (Loss)		56,250

Just as the Billings account balance cannot exceed the contract price, neither can the balance in Construction in Process exceed the contract price. In circumstances where the Construction in Process balance exceeds the billings, the company can deduct the recognized loss from such accumulated costs on the balance sheet. That is, under both the percentage-of-completion and the completed-contract methods, the provision for the loss (the credit) may be combined with Construction in Process, thereby reducing the inventory balance. In those circumstances, however (as in the 2011 example above), where the billings exceed the accumulated costs, Hardhat must report separately on the balance sheet, as a current liability, the amount of the estimated loss. That is, under both the percentage-of-completion and the completed-contract methods, Hardhat would take the \$56,250 loss, as estimated in 2011, from the Construction in Process account and report it separately as a current liability titled “Estimated liability from long-term contracts.” [7]

### Disclosures in Financial Statements

Construction contractors usually make some unique financial statement disclosures in addition to those required of all businesses. Generally these additional disclosures are made in the notes to the financial statements. For example, a construction contractor should disclose the following: the method of recognizing revenue, [8] the basis used to classify assets and liabilities as current (the nature and length of the operating cycle), the basis for recording inventory, the effects of any revision of estimates, the amount of backlog on uncompleted contracts, and the details about receivables (billed and unbilled, maturity, interest rates, retainage provisions, and significant individual or group concentrations of credit risk).

<sup>20</sup>If the costs in 2012 are \$1,640,250 as projected, at the end of 2012 the Construction in Process account will have a balance of \$1,640,250 + \$2,859,750, or \$4,500,000, equal to the contract price. When the company matches the revenue remaining to be recognized in 2012 of \$1,620,000 [\$4,500,000 (total contract price) – \$1,125,000 (2010) – \$1,755,000 (2011)] with the construction expense to be recognized in 2012 of \$1,620,000 [total costs of \$4,556,250 less the total costs recognized in prior years of \$2,936,250 (2010, \$1,000,000; 2011, \$1,936,250)], a zero profit results. Thus the total loss has been recognized in 2011, the year in which it first became evident.

### What do the numbers mean?

#### LESS CONSERVATIVE

**Halliburton** provides engineering- and construction-related services, in jobs around the world. Much of the company's work is completed under contract over long periods of time. The company uses percentage-of-completion accounting. The SEC started enforcement proceedings against the company related to its accounting for contract claims and disagreements with customers, including those arising from change orders and disputes about billable amounts and costs associated with a construction delay.

Prior to 1998, Halliburton took a very conservative approach to its accounting for disputed claims. As stated in the company's 1997 annual report, "Claims for additional compensation are recognized during the period such claims are resolved." That is, the company waited until all disputes were resolved before recognizing associated revenues. In contrast, in 1998 the company recognized revenue for disputed claims before their resolution, using estimates of amounts expected to be recovered. Such revenue and its related profit are more tentative and are subject to possible later adjustment than revenue and profit recognized when all claims have been resolved. As a case in point, the company noted that it incurred losses of \$99 million in 1998 related to customer claims.

The accounting method put in place in 1998 is more aggressive than the company's former policy, but it is still within the boundaries of generally accepted accounting principles. However, the SEC noted that over six quarters, Halliburton failed to disclose its change in accounting practice. In the absence of any disclosure the SEC believed the investing public was misled about the precise nature of Halliburton's income in comparison to prior periods. The Halliburton situation illustrates the difficulty of using estimates in percentage-of-completion accounting and the impact of those estimates on the financial statements.

Source: "Failure to Disclose a 1998 Change in Accounting Practice," SEC (August 3, 2004), [www.sec.gov/news/press/2004-104.htm](http://www.sec.gov/news/press/2004-104.htm). See also "Accounting Ace Charles Mulford Answers Accounting Questions," *Wall Street Journal Online* (June 7, 2002).

### Completion-of-Production Basis

#### Underlying Concepts

This is not an exception to the revenue recognition principle. At the completion of production, realization is virtually assured and the earning process is substantially completed.

In certain cases companies recognize revenue at the completion of **production** even though no sale has been made. Examples of such situations involve precious metals or agricultural products with assured prices. Under the **completion-of-production basis**, companies recognize revenue when these metals are mined or agricultural crops harvested because the sales price is reasonably assured, the units are interchangeable, and no significant costs are involved in distributing the product.<sup>21</sup> (See discussion in Chapter 9, page 445, "Valuation at Net Realizable Value.")

Likewise, when sale or cash receipt precedes production and delivery, as in the case of magazine subscriptions, companies recognize revenues as earned by production and delivery.<sup>22</sup>

### REVENUE RECOGNITION AFTER DELIVERY

In some cases, the collection of the sales price is not reasonably assured and revenue recognition is deferred. One of two methods is generally employed to defer revenue recognition until the company receives cash: the **installment-sales method** or the **cost-recovery method**. A third method, the **deposit method**, applies in situations in which a company receives cash prior to delivery or transfer of the property; the company records that receipt as a deposit because the sale transaction is incomplete. This section examines these three methods.

<sup>21</sup>Such revenue satisfies the criteria of *Concepts Statement No. 5* since the assets are readily realizable and the earning process is virtually complete (see par. 84, item c).

<sup>22</sup>*Statement of Financial Accounting Concepts No. 5*, par. 84, item b.

## Installment-Sales Method

The **installment-sales method** recognizes income in the periods of collection rather than in the period of sale. The logic underlying this method is that when there is no reasonable approach for estimating the degree of collectibility, companies should not recognize revenue until cash is collected.

The expression “installment sales” generally describes any type of sale for which payment is required in periodic installments over an extended period of time. All types of farm and home equipment as well as home furnishings are sold on an installment basis. The heavy equipment industry also sometimes uses the method for machine installations paid for over a long period. Another application of the method is in land-development sales.

Because payment is spread over a relatively long period, the risk of loss resulting from uncollectible accounts is greater in installment-sales transactions than in ordinary sales. Consequently, selling companies use various devices to protect themselves. Two common devices are: (1) the use of a *conditional sales contract*, which specifies that title to the item sold does not pass to the purchaser until all payments are made, and (2) use of notes secured by a *chattel* (personal property) *mortgage* on the article sold. Either of these permits the seller to “repossess” the goods sold if the purchaser defaults on one or more payments. The seller can then resell the repossessed merchandise at whatever price it will bring to compensate for the uncollected installments and the expense of repossession.

Under the installment-sales method of accounting, companies defer income recognition until the period of cash collection. They recognize both revenues and costs of sales in the period of sale, but defer the related gross profit to those periods in which they collect the cash. Thus, **instead of deferring the sale, along with related costs and expenses, to the future periods of anticipated collection, the company defers only the proportional gross profit.** This approach is equivalent to deferring both sales and cost of sales. Other expenses—that is, selling expense, administrative expense, and so on—are not deferred.

Thus, the installment-sales method matches cost and expenses against sales through the gross profit figure, but no further. Companies using the installment-sales method generally record operating expenses without regard to the fact that they will defer some portion of the year’s gross profit. This practice is often justified on the basis that (1) these expenses do not follow sales as closely as does the cost of goods sold, and (2) accurate apportionment among periods would be so difficult that it could not be justified by the benefits gained.<sup>23</sup>

### Acceptability of the Installment-Sales Method

The use of the installment-sales method for revenue recognition has fluctuated widely. At one time it was widely accepted for installment-sales transactions. Somewhat paradoxically, as installment-sales transactions increased in popularity, acceptance and use of the installment-sales method decreased. Finally, the profession concluded that except in special circumstances, “the installment method of recognizing revenue is not acceptable.” [9] The rationale for this position is simple: Because the installment method recognizes no income until cash is collected, it is not in accordance with the accrual accounting concept.

Use of the installment-sales method was often justified on the grounds that the risk of not collecting an account receivable may be so great that the sale itself is not sufficient evidence that recognition should occur. In some cases, this reasoning is valid, but not in a majority of cases. The general approach is that a company should recognize a completed sale. If the company expects bad debts, it should record this possibility as separate estimates of uncollectibles. Although collection expenses, repossession

#### Objective 6

Describe the installment-sales method of accounting.

#### Underlying Concepts

Realization is a critical part of revenue recognition. Thus, if a high degree of uncertainty exists about collectibility, a company must defer revenue recognition.

<sup>23</sup>In addition, other theoretical deficiencies of the installment-sales method could be cited. For example, see Richard A. Scott and Rita K. Scott, “Installment Accounting: Is It Inconsistent?” *The Journal of Accountancy* (November 1979).

expenses, and bad debts are an unavoidable part of installment-sales activities, the in-currence of these costs and the collectibility of the receivables are reasonably predictable.

We study this topic in intermediate accounting because the method is acceptable in cases where a company believes there to be no reasonable basis of estimating the degree of collectibility. In addition, the sales method of revenue recognition has certain weaknesses when used for franchise and land-development operations. Application of the sales method to **franchise and license operations** has resulted in the abuse described earlier as “front-end loading.” In some cases, franchisors recognized revenue prematurely, when they granted a franchise or issued a license, rather than when revenue was earned or the cash is received. Many **land-development** ventures were susceptible to the same abuses. As a result, the FASB prescribes application of the installment-sales method of accounting for sales of real estate under certain circumstances. [10]<sup>24</sup>

**Procedure for Deferring Revenue and Cost of Sales of Merchandise**

One could work out a procedure that deferred both the uncollected portion of the sales price and the proportionate part of the cost of the goods sold. Instead of apportioning both sales price and cost over the period of collection, however, the installment-sales method defers **only the gross profit**. This procedure has exactly the same effect as deferring both sales and cost of sales, but it requires only one deferred account rather than two.

For the **sales in any one year**, the steps companies use to defer gross profit are as follows.

1. During the year, record both sales and cost of sales in the regular way, using the special accounts described later, and compute the rate of gross profit on installment-sales transactions.
2. At the end of the year, apply the rate of gross profit to the cash collections of the current year’s installment sales, to arrive at the realized gross profit.
3. Defer to future years the gross profit not realized.

For **sales made in prior years**, companies apply the gross profit rate of each year’s sales against cash collections of accounts receivable resulting from that year’s sales, to arrive at the realized gross profit.

Special accounts must be used in the installment-sales method. These accounts provide certain special information required to determine the realized and unrealized gross profit in each year of operations. In computing net income under the installment-sales method as generally applied, the only peculiarity is the **deferral of gross profit until realized by accounts receivable collection**. We will use the following data to illustrate the installment-sales method in accounting for the sales of merchandise.

	2010	2011	2012
Installment sales	\$200,000	\$250,000	\$240,000
Cost of installment sales	150,000	190,000	168,000
Gross profit	\$ 50,000	\$ 60,000	\$ 72,000
Rate of gross profit on sales	25% <sup>a</sup>	24% <sup>b</sup>	30% <sup>c</sup>
Cash receipts			
2010 sales	\$ 60,000	\$100,000	\$ 40,000
2011 sales		100,000	125,000
2012 sales			80,000
	<sup>a</sup> \$50,000	<sup>b</sup> \$60,000	<sup>c</sup> \$72,000
	\$200,000	\$250,000	\$240,000

<sup>24</sup>The installment-sales method of accounting must be applied to a retail land sale that meets all of the following criteria: (1) the period of cancellation of the sale with refund of the down payment and any subsequent payments has expired; (2) cumulative cash payments equal or exceed 10 percent of the sales value; and (3) the seller is financially capable of providing all promised contract representations (e.g., land improvements, off-site facilities).

To simplify this example, we have excluded interest charges. Summary entries in general journal form for the year 2010 are as follows.

<b>2010</b>		
Installment Accounts Receivable, 2010	200,000	
Installment Sales		200,000
(To record sales made on installment in 2010)		
Cash	60,000	
Installment Accounts Receivable, 2010		60,000
(To record cash collected on installment receivables)		
Cost of Installment Sales	150,000	
Inventory (or Purchases)		150,000
(To record cost of goods sold on installment in 2010 on either a perpetual or a periodic inventory basis)		
Installment Sales	200,000	
Cost of Installment Sales		150,000
Deferred Gross Profit, 2010		50,000
(To close installment sales and cost of installment sales for the year)		
Deferred Gross Profit, 2010	15,000	
Realized Gross Profit on Installment Sales		15,000
(To remove from deferred gross profit the profit realized through cash collections; \$60,000 × 25%)		
Realized Gross Profit on Installment Sales	15,000	
Income Summary		15,000
(To close profits realized by collections)		

Illustration 18-19 shows computation of the realized and deferred gross profit for the year 2010.

<b>2010</b>		
Rate of gross profit current year	25%	
Cash collected on current year's sales	\$60,000	
Realized gross profit (25% of \$60,000)	15,000	
Gross profit to be deferred (\$50,000 – \$15,000)	35,000	

**ILLUSTRATION 18-19**  
Computation of Realized and Deferred Gross Profit, 2010

Summary entries in journal form for year 2 (2011) are as follows.

<b>2011</b>		
Installment Accounts Receivable, 2011	250,000	
Installment Sales		250,000
(To record sales made on installment in 2011)		
Cash	200,000	
Installment Accounts Receivable, 2010		100,000
Installment Accounts Receivable, 2011		100,000
(To record cash collected on installment receivables)		
Cost of Installment Sales	190,000	
Inventory (or Purchases)		190,000
(To record cost of goods sold on installment in 2011)		
Installment Sales	250,000	
Cost of Installment Sales		190,000
Deferred Gross Profit, 2011		60,000
(To close installment sales and cost of installment sales for the year)		
Deferred Gross Profit, 2010 (\$100,000 × 25%)	25,000	
Deferred Gross Profit, 2011 (\$100,000 × 24%)	24,000	
Realized Gross Profit on Installment Sales		49,000
(To remove from deferred gross profit the profit realized through cash collections)		
Realized Gross Profit on Installment Sales	49,000	
Income Summary		49,000
(To close profits realized by collections)		

Illustration 18-20 shows computation of the realized and deferred gross profit for the year 2011.

**ILLUSTRATION 18-20**  
Computation of Realized and Deferred Gross Profit, 2011

2011	
<b>Current year's sales</b>	
Rate of gross profit	24%
Cash collected on current year's sales	\$100,000
Realized gross profit (24% of \$100,000)	24,000
Gross profit to be deferred (\$60,000 – \$24,000)	36,000
<b>Prior year's sales</b>	
Rate of gross profit—2010	25%
Cash collected on 2010 sales	\$100,000
Gross profit realized in 2011 on 2010 sales (25% of \$100,000)	25,000
<b>Total gross profit realized in 2011</b>	
Realized on collections of 2010 sales	\$ 25,000
Realized on collections of 2011 sales	24,000
Total	<u>\$ 49,000</u>

The entries in 2012 would be similar to those of 2011, and the total gross profit taken up or realized would be \$64,000, as shown by the computations in Illustration 18-21.

**ILLUSTRATION 18-21**  
Computation of Realized and Deferred Gross Profit, 2012

2012	
<b>Current year's sales</b>	
Rate of gross profit	30%
Cash collected on current year's sales	\$ 80,000
Gross profit realized on 2012 sales (30% of \$80,000)	24,000
Gross profit to be deferred (\$72,000 – \$24,000)	48,000
<b>Prior years' sales</b>	
<i>2010 sales</i>	
Rate of gross profit	25%
Cash collected	\$ 40,000
Gross profit realized in 2012 on 2010 sales (25% of \$40,000)	10,000
<i>2011 sales</i>	
Rate of gross profit	24%
Cash collected	\$125,000
Gross profit realized in 2012 on 2011 sales (24% of \$125,000)	30,000
<b>Total gross profit realized in 2012</b>	
Realized on collections of 2010 sales	\$ 10,000
Realized on collections of 2011 sales	30,000
Realized on collections of 2012 sales	24,000
Total	<u>\$ 64,000</u>

In summary, here are the basic concepts you should understand about accounting for installment sales:

1. How to compute a proper gross profit percentage.
2. How to record installment sales, cost of installment sales, and deferred gross profit.
3. How to compute realized gross profit on installment receivables.
4. How the deferred gross profit balance at the end of the year results from applying the gross profit rate to the installment accounts receivable.

### Additional Problems of Installment-Sales Accounting

In addition to computing realized and deferred gross profit currently, other problems are involved in accounting for installment-sales transactions. These problems are related to:

1. Interest on installment contracts.
2. Uncollectible accounts.
3. Defaults and repossessions.

**Interest on Installment Contracts.** Because the collection of installment receivables is spread over a long period, it is customary to charge the buyer interest on the unpaid balance. The seller and buyer set up a schedule of equal payments consisting of interest and principal. Each successive payment is attributable to a smaller amount of interest and a correspondingly larger amount of principal, as shown in Illustration 18-22. This illustration assumes that a company sells for \$3,000 an asset costing \$2,400 (rate of gross profit = 20%), with interest of 8 percent included in the three installments of \$1,164.10.

Date	Cash (Debit)	Interest Earned (Credit)	Installment Receivables (Credit)	Installment Unpaid Balance	Realized Gross Profit (20%)
1/2/10	—	—	—	\$3,000.00	—
1/2/11	\$1,164.10 <sup>a</sup>	\$240.00 <sup>b</sup>	\$ 924.10 <sup>c</sup>	2,075.90 <sup>d</sup>	\$184.82 <sup>e</sup>
1/2/12	1,164.10	166.07	998.03	1,077.87	199.61
1/2/13	1,164.10	86.23	1,077.87	—0—	215.57
					<u>\$600.00</u>

<sup>a</sup>Periodic payment = Original unpaid balance ÷ PV of an annuity of \$1.00 for three periods at 8%;  
 $\$1,164.10 = \$3,000 \div 2.57710$ .  
<sup>b</sup> $\$3,000.00 \times .08 = \$240$ .  
<sup>c</sup> $\$1,164.10 - \$240.00 = \$924.10$ .  
<sup>d</sup> $\$3,000.00 - \$924.10 = \$2,075.90$ .  
<sup>e</sup> $\$924.10 \times .20 = \$184.82$ .

**ILLUSTRATION 18-22**  
Installment Payment  
Schedule

The company accounts for interest separate from the gross profit recognized on the installment-sales collections during the period, by recognizing interest revenue at the time of its cash receipt.

**Uncollectible Accounts.** The problem of bad debts or uncollectible accounts receivable is somewhat different for concerns selling on an installment basis because of a repossession feature commonly incorporated in the sales agreement. This feature gives the selling company an opportunity to recoup an uncollectible account through repossession and resale of repossessed merchandise. If the experience of the company indicates that repossessions do not, as a rule, compensate for uncollectible balances, it may be advisable to provide for such losses through charges to a special bad debt expense account, just as is done for other credit sales.

**Defaults and Repossessions.** Depending on the terms of the sales contract and the policy of the credit department, the seller can repossess merchandise sold under an installment arrangement if the purchaser fails to meet payment requirements. The seller may then recondition repossessed merchandise before offering it for re-sale, for cash or installment payments.

The accounting for **repossessions** recognizes that the company is not likely to collect the related installment receivable and should write it off. Along with the

installment account receivable, the company must remove the applicable deferred gross profit using the following entry:

Repossessed Merchandise (an inventory account)	xxx	
Deferred Gross Profit	xxx	
Installment Accounts Receivable		xxx

This entry assumes that the company will record the repossessed merchandise at exactly the amount of the uncollected account less the deferred gross profit applicable. This assumption may or may not be proper. To determine the correct amount, the company should consider the condition of the repossessed merchandise, the cost of reconditioning, and the market for second-hand merchandise of that particular type. The objective should be to put any asset acquired on the books at its fair value, or at the best possible approximation of fair value when fair value is not determinable. A loss can occur if the fair value of the repossessed merchandise is less than the uncollected balance less the deferred gross profit. In that case, the company should record a “loss on repossession” at the date of repossession.<sup>25</sup>

To illustrate the required entry, assume that Klein Brothers sells a refrigerator to Marilyn Hunt for \$1,500 on September 1, 2010. Terms require a down payment of \$600 and \$60 on the first of every month for 15 months, starting October 1, 2010. It is further assumed that the refrigerator cost \$900, and that Klein Brothers priced it to provide a 40 percent rate of gross profit on selling price. At the year-end, December 31, 2010, Klein Brothers should have collected a total of \$180 in addition to the original down payment.

If Hunt makes her January and February payments in 2011 and then defaults, the account balances applicable to Hunt at time of default are as shown in Illustration 18-23.

**ILLUSTRATION 18-23**  
Computation of  
Installment Receivable  
Balances

Installment accounts receivable (September 1, 2010)	\$1,500	
Less: Down payment:	\$600	
Payments to date (\$60 × 5)	300	900
Installment accounts receivable (March 1, 2011)		\$ 600
Installment accounts receivable (March 1, 2011)		\$600
Gross profit rate		× 40%
Deferred gross profit		\$240

As indicated, Klein Brothers compute the balance of deferred gross profit applicable to Hunt’s account by applying the gross profit rate for the year of sale to the balance of Hunt’s account receivable: 40 percent of \$600, or \$240. The account balances are therefore:

Installment Account Receivable, 2010	600 (dr.)
Deferred Gross Profit, 2010	240 (cr.)

Klein repossesses the refrigerator following Hunt’s default. If Klein sets the estimated fair value of the repossessed article at \$150, it would make the following entry to record the repossession.

Deferred Gross Profit, 2010	240	
Repossessed Merchandise	150	
Loss on Repossession	210	
Installment Accounts Receivable, 2010		600

<sup>25</sup>Some contend that a company should record repossessed merchandise at a valuation that will permit the company to make its regular rate of gross profit on resale. If the company enters the value at its approximated cost to purchase, the regular rate of gross profit could be provided for upon its ultimate sale, but that is completely a secondary consideration. It is more important that the company record the repossessed asset at fair value. This accounting would be in accordance with the general practice of carrying assets at acquisition price, as represented by the fair value at the date of acquisition.

Klein determines the amount of the loss in two steps: (1) It subtracts the deferred gross profit from the amount of the account receivable, to determine the unrecovered cost (or book value) of the merchandise repossessed. (2) It then subtracts the estimated fair value of the merchandise repossessed from the unrecovered cost, to get the amount of the loss on repossession. Klein Brothers computes the loss on the refrigerator as shown in Illustration 18-24.

Balance of account receivable (representing uncollected selling price)	\$600
Less: Deferred gross profit	<u>240</u>
Unrecovered cost	360
Less: Estimated fair value of merchandise repossessed	<u>150</u>
<b>Loss (Gain) on repossession</b>	<b><u>\$210</u></b>

**ILLUSTRATION 18-24**  
Computation of Loss on  
Repossession

As pointed out earlier, the loss on repossession may be charged to Allowance for Doubtful Accounts if a company carries such an account.

**Financial Statement Presentation of Installment-Sales Transactions**

If installment-sales transactions represent a significant part of total sales, it is desirable to make full disclosure of installment sales, the cost of installment sales, and any expenses allocable to installment sales. However, if installment-sales transactions constitute an insignificant part of total sales, it may be satisfactory to include only the realized gross profit in the income statement as a special item following the gross profit on sales. Illustration 18-25 shows this simpler presentation.

<b>HEALTH MACHINE COMPANY</b>	
<b>INCOME STATEMENT</b>	
<b>FOR THE YEAR ENDED DECEMBER 31, 2011</b>	
Sales	\$620,000
Cost of goods sold	<u>490,000</u>
Gross profit	130,000
<b>Gross profit realized on installment sales</b>	<b><u>51,000</u></b>
Total gross profit	<u>\$181,000</u>

**ILLUSTRATION 18-25**  
Disclosure of Installment-Sales Transactions—  
Insignificant Amount

If a company wants more complete disclosure of installment-sales transactions, it would use a presentation similar to that shown in Illustration 18-26.

<b>HEALTH MACHINE COMPANY</b>			
<b>INCOME STATEMENT</b>			
<b>FOR THE YEAR ENDED DECEMBER 31, 2011</b>			
	<u>Installment</u>	<u>Other</u>	<u>Total</u>
	<u>Sales</u>	<u>Sales</u>	
Sales	<b>\$248,000</b>	\$620,000	\$868,000
Cost of goods sold	<u>182,000</u>	<u>490,000</u>	<u>672,000</u>
Gross profit	<b>66,000</b>	130,000	196,000
Less: Deferred gross profit on installment sales of this year	<u>47,000</u>		<u>47,000</u>
Realized gross profit on this year's sales	<b>19,000</b>	130,000	149,000
Add: Gross profit realized on installment sales of prior years	<u>32,000</u>		<u>32,000</u>
Gross profit realized this year	<b>\$ 51,000</b>	\$130,000	\$181,000

**ILLUSTRATION 18-26**  
Disclosure of Installment-Sales Transactions—  
Significant Amount

The presentation in Illustration 18-26 is awkward. Yet the awkwardness of this method is difficult to avoid if a company wants to provide full disclosure of installment-sales transactions in the income statement. One solution, of course, is to prepare a separate schedule showing installment-sales transactions, with only the final figure carried into the income statement.

In the balance sheet it is generally considered desirable to classify installment accounts receivable by year of collectibility. There is some question as to whether companies should include in current assets installment accounts that are not collectible for two or more years. Yet if installment sales are **part of normal operations**, companies may consider them as current assets because they are collectible within the operating cycle of the business. Little confusion should result from this practice if the company fully discloses maturity dates, as illustrated in the following example.

**ILLUSTRATION 18-27**  
Disclosure of Installment  
Accounts Receivable,  
by Year

<u>Current assets</u>		
Notes and accounts receivable		
Trade customers	\$78,800	
Less: Allowance for doubtful accounts	<u>3,700</u>	
	75,100	
Installment accounts collectible in 2011	22,600	
Installment accounts collectible in 2012	<u>47,200</u>	\$144,900

On the other hand, a company may have receivables from an installment contract, resulting from a transaction not related to normal operations. In that case, the company should report such receivable in the “Other assets” section if due beyond one year.

Repossessed merchandise is a part of inventory, and companies should report it as such in the “Current assets” section of the balance sheet. They should include any gain or loss on repossession in the income statement in the “Other revenues and gains” or “Other expenses and losses” section.

If a company has **deferred gross profit on installment sales**, it generally treats it as unearned revenue and classifies it as a current liability. Theoretically, deferred gross profit consists of three elements: (1) income tax liability to be paid when the sales are reported as realized revenue (current liability); (2) allowance for collection expense, bad debts, and repossession losses (deduction from installment accounts receivable); and (3) net income (retained earnings, restricted as to dividend availability). Because of the difficulty in allocating deferred gross profit among these three elements, however, companies frequently report the whole amount as unearned revenue.

In contrast, the FASB in *SFAC No. 6* states that “no matter how it is displayed in financial statements, deferred gross profit on installment sales is conceptually an asset valuation—that is, a reduction of an asset.”<sup>26</sup> We support the FASB position, but we recognize that until an official standard on this topic is issued, financial statements will probably continue to report such deferred gross profit as a current liability.

### Cost-Recovery Method

**Objective 7**

Explain the cost-recovery method of accounting.

Under the **cost-recovery method**, a company recognizes no profit until cash payments by the buyer exceed the cost of the merchandise sold. After the seller has recovered all costs, it includes in income any additional cash collections. The seller’s income statement for the period reports sales revenue, the cost of goods

<sup>26</sup>See *Statement of Financial Accounting Concepts No. 6*, pars. 232–234.

sold, and the gross profit—both the amount (if any) that is recognized during the period and the amount that is deferred. The deferred gross profit is offset against the related receivable—reduced by collections—on the balance sheet. Subsequent income statements report the gross profit as a separate item of revenue when the company recognizes it as earned.

A seller is permitted to use the cost-recovery method to account for sales in which “there is no reasonable basis for estimating collectibility.” In addition, use of this method is required where a high degree of uncertainty exists related to the collection of receivables. [11], [12], [13]

To illustrate the cost-recovery method, assume that early in 2010, Fesmire Manufacturing sells inventory with a cost of \$25,000 to Higley Company for \$36,000. Higley will make payments of \$18,000 in 2010, \$12,000 in 2011, and \$6,000 in 2012. If the cost-recovery method applies to this transaction and Higley makes the payments as scheduled, Fesmire recognizes cash collections, revenue, cost, and gross profit as follows.<sup>27</sup>

	2010	2011	2012
Cash collected	<u>\$18,000</u>	<u>\$12,000</u>	<u>\$6,000</u>
Revenue	\$36,000	–0–	–0–
Cost of goods sold	<u>25,000</u>	<u>–0–</u>	<u>–0–</u>
Deferred gross profit	11,000	\$11,000	\$6,000
Recognized gross profit	<u>–0–</u>	<u>5,000*</u>	<u>6,000</u>
Deferred gross profit balance (end of period)	<u>\$11,000</u>	<u>\$ 6,000</u>	<u>\$ –0–</u>

\*\$25,000 – \$18,000 = \$7,000 of unrecovered cost at the end of 2010; \$12,000 – \$7,000 = \$5,000, the excess of cash received in 2011 over unrecovered cost.

**ILLUSTRATION 18-28**  
Computation of Gross Profit—Cost-Recovery Method

Under the cost-recovery method, Fesmire reports total revenue and cost of goods sold in the period of sale, similar to the installment-sales method. However, unlike the installment-sales method, which recognizes income as cash is collected, Fesmire recognizes profit under the cost-recovery method **only when cash collections exceed the total cost of the goods sold.**

Therefore, Fesmire’s journal entry to record the deferred gross profit on the Higley sale transaction (after recording the sale and the cost of sale in the normal manner) at the end of 2010 is as follows.

2010		
Sales	36,000	
Cost of Sales		25,000
Deferred Gross Profit		11,000
(To close sales and cost of sales and to record deferred gross profit on sales accounted for under the cost-recovery method)		

<sup>27</sup>An alternative format for computing the amount of gross profit recognized annually is shown below.

Year	Cash Received	Original Cost Recovered	Balance of Unrecovered Cost	Gross Profit Realized
Beginning balance	—	—	\$25,000	—
12/31/10	\$18,000	\$18,000	7,000	\$ –0–
12/31/11	12,000	7,000	–0–	5,000
12/31/12	6,000	–0–	–0–	6,000

In 2011 and 2012, the deferred gross profit becomes realized gross profit as the cumulative cash collections exceed the total costs, by recording the following entries.

2011		
Deferred Gross Profit	5,000	
Realized Gross Profit (To recognize gross profit to the extent that cash collections in 2011 exceed costs)		5,000
2012		
Deferred Gross Profit	6,000	
Realized Gross Profit (To recognize gross profit to the extent that cash collections in 2012 exceed costs)		6,000

### LIABILITY OR REVENUE?

Suppose you purchased a gift card for spa services at Sundara Spa for \$300. The gift card expires at the end of six months. When should Sundara record the revenue? Here are two choices:

1. At the time Sundara receives the cash for the gift card.
2. At the time Sundara provides the service to the gift-card holder.

If you answered number 2, you would be right. Companies should recognize revenue when the obligation is satisfied—which is when Sundara performs the service.

Now let's add a few more facts. Suppose that the gift-card holder fails to use the card in the six-month period. Statistics show that between 2 and 15 percent of gift-card holders never redeem their cards. So, do you still believe that Sundara should record the revenue at the expiration date?

If you say you are not sure, you are probably right. Here is why: Certain states (such as California) do not recognize expiration dates, and therefore the customer has the right to redeem an otherwise expired gift card at any time. Let's for the moment say we are in California. Because the card holder may never redeem, when can Sundara recognize the revenue? In that case Sundara would have to show statistically that after a certain period of time, the likelihood of redemption is remote. If it can make that case, it can recognize the revenue. Otherwise it may have to wait a long time.

Unfortunately Sundara may still have a problem. It may be required to turn over the value of the spa service to the state. The treatment for unclaimed gift cards may fall under the state abandoned-and-unclaimed-property laws. Most common unclaimed items are required to be remitted to the states after a five-year period. Failure to report and remit the property can result in additional fines and penalties. So if Sundara is in a state where unclaimed property must be sent to the state, Sundara should report a liability on its balance sheet.

*Source: PricewaterhouseCoopers, "Issues Surrounding the Recognition of Gift Card Sales and Escheat Liabilities," Quick Brief (December 2004).*

### What do the numbers mean?

### Deposit Method

In some cases, a company receives cash from the buyer before it transfers the goods or property. In such cases the seller has not performed under the contract and has no claim against the purchaser. There is not sufficient transfer of the risks and rewards of ownership for a sale to be recorded. The method of accounting for these incomplete transactions is the **deposit method**.

Under the **deposit method** the seller reports the cash received from the buyer as a deposit on the contract and classifies it on the balance sheet as a liability (refundable deposit or customer advance). The seller continues to report the property as an asset on its balance sheet, along with any related existing debt. Also, the seller continues to charge depreciation expense as a period cost for the property. **The seller does not recognize revenue or income until the sale is complete.** [14] At that time, it closes the deposit account and applies one of the revenue recognition methods discussed in this chapter to the sale.

The major difference between the installment-sales and cost-recovery methods and the deposit method relates to contract performance. In the installment-sales and cost-recovery methods it is assumed that the seller has performed on the contract, but cash collection is highly uncertain. In the deposit method, the seller has *not* performed and no legitimate claim exists. The deposit method postpones recognizing a sale until the company determines that a sale has occurred for accounting purposes. If there has not been sufficient transfer of risks and rewards of ownership, even if the selling company has received a deposit, the company postpones recognition of the sale until sufficient transfer has occurred. In that sense, the deposit method is not a revenue recognition method as are the installment-sales and cost-recovery methods.

### Summary of Product Revenue Recognition Bases

Illustration 18-29 summarizes the revenue-recognition bases or methods, the criteria for their use, and the reasons for departing from the sale basis.<sup>28</sup>

**ILLUSTRATION 18-29**  
Revenue Recognition Bases Other Than the Sale Basis for Products

Recognition Basis (or Method of Applying a Basis)	Criteria for Use	Reason(s) for Departing from Sale Basis
Percentage-of-completion method	Long-term construction of property; dependable estimates of extent of progress and cost to complete; reasonable assurance of collectibility of contract price; expectation that both contractor and buyer can meet obligations; and absence of inherent hazards that make estimates doubtful.	Availability of evidence of ultimate proceeds; better measure of periodic income; avoidance of fluctuations in revenues, expenses, and income; performance is a “continuous sale” and therefore not a departure from the sale basis.
Completed-contract method	Use on short-term contracts, and whenever percentage-of-completion cannot be used on long-term contracts.	Existence of inherent hazards in the contract beyond the normal, recurring business risks; conditions for using the percentage-of-completion method are absent.
Completion-of-production basis	Immediate marketability at quoted prices; unit interchangeability; and no significant distribution costs.	Known or determinable revenues; inability to determine costs and thereby defer expense recognition until sale.
Installment-sales method and cost-recovery method	Absence of reasonable basis for estimating degree of collectibility and costs of collection.	Collectibility of the receivable is so uncertain that gross profit (or income) is not recognized until cash is actually received.
Deposit method	Cash received before the sales transaction is completed.	No recognition of revenue and income because there is not sufficient transfer of the risks and rewards of ownership.

## CONCLUDING REMARKS

As indicated, revenue recognition principles are sometimes difficult to apply and often vary by industry. Recently, the SEC has attempted to provide more guidance in this area because of concern that the revenue recognition principle is sometimes being incorrectly applied. Many cases of intentional misstatement of revenue to achieve better financial results have recently come to light. Such practices are fraudulent, and the SEC is vigorously prosecuting these situations.

For our capital markets to be efficient, investors must have confidence that the financial information provided is both relevant and reliable. As a result, it is imperative that the accounting profession, regulators, and companies eliminate aggressive revenue recognition practices. It is our hope that recent efforts by the SEC and the accounting profession will lead to higher-quality reporting in this area.

<sup>28</sup>Adapted from *Survey of Present Practices in Recognizing Revenues, Expenses, Gains, and Losses*, op. cit., pp. 12–13.

**INTERNATIONAL INSIGHT**

There is no international enforcement body comparable to the U.S. SEC.

You will want to read the **CONVERGENCE CORNER** on page 960

For discussion of how international convergence efforts relate to revenue recognition.

# CONVERGENCE CORNER

## REVENUE RECOGNITION

The general concepts and principles used for revenue recognition are similar between U.S. GAAP and international GAAP (iGAAP). Where they differ is in the detail. As indicated in the chapter, U.S. GAAP provides specific guidance related to revenue recognition for many different industries. That is not the case for iGAAP. Also the SEC has issued broad and specific guidance for public companies in the United States related to revenue recognition. Again, the IASB does not have a regulatory body that provides additional guidance.

### RELEVANT FACTS

- The IASB defines revenue to include both revenues and gains. U.S. GAAP provides separate definitions for revenues and gains.
- Revenue recognition fraud is a major issue in U.S. financial reporting. The same situation occurs overseas as evidenced by revenue recognition breakdowns at Dutch software company **Baan NV**, Japanese electronics giant **NEC**, and Dutch grocer **AHold NV**.
- A specific standard exists for revenue recognition under iGAAP (*IAS 18*). In general, the standard is based on the probability that the economic benefits associated with the transaction will flow to the company selling the goods, rendering the service, or receiving investment income. In addition, the revenues and costs must be capable of being measured reliably. U.S. GAAP uses concepts such as realized, realizable, and earned as a basis for revenue recognition.
- iGAAP prohibits the use of the completed-contract method of accounting for long-term construction contracts (*IAS 13*). Companies must use the percentage-of-completion method. If revenues and costs are difficult to estimate, then companies recognize revenue only to the extent of the cost incurred—a zero-profit approach.
- In long-term construction contracts, iGAAP requires recognition of a loss immediately if the overall contract is going to be unprofitable. In other words, U.S. GAAP and iGAAP are the same regarding this issue.

### ABOUT THE NUMBERS

As mentioned, iGAAP does not permit the completed-contract method of accounting for long-term construction contracts. If costs or revenues cannot be reliably determined, then how does a company report revenues related to its construction contracts using iGAAP? To illustrate, assume the following facts for England Construction Co. for a contract to build a dam at Windswept Canyon.

- The contract price to construct the dam is \$400 million.
- Estimated incurred costs are \$54 million in 2010, \$180 million in 2011, and \$126 million in 2012.
- England uses iGAAP but is uncertain as regards these cost numbers.

In this situation, England recognizes revenue up to the cost incurred until the cost numbers can be more reliably determined. For example, assume that England incurred \$55 million in costs in 2010. The presentation on its income statement would be as follows.

Revenue from long-term contracts	\$55,000,000
Costs of construction	55,000,000
Gross profit	\$ -0-

Under iGAAP, zero profit is recognized. Once costs can be reliably determined, the percentage-of-completion method is used in future periods.

### ON THE HORIZON

The FASB and IASB are now involved in a joint project on revenue recognition. The objective of the project is to develop coherent conceptual guidance for revenue recognition and a comprehensive statement on revenue recognition based on those concepts. In particular, the project is intended to improve financial reporting by (1) converging U.S. and international standards on revenue recognition, (2) eliminating inconsistencies in the existing conceptual guidance on revenue recognition, (3) providing conceptual guidance that would be useful in addressing future revenue recognition issues, (4) eliminating inconsistencies in existing standards-level authoritative literature and accepted practices, (5) filling voids in revenue recognition guidance that have developed over time, and (6) establishing a single, comprehensive standard on revenue recognition. Presently, the Boards are evaluating a “customer-consideration” model. It is hoped that this approach (rather than using the earned and realized or realized criteria) will lead to a better basis for revenue recognition. For more on this topic, see [http://www.fasb.org/project/revenue\\_recognition.shtml](http://www.fasb.org/project/revenue_recognition.shtml).

## SUMMARY OF LEARNING OBJECTIVES

**1 Apply the revenue recognition principle.** The revenue recognition principle provides that a company should recognize revenue (1) when revenue is realized or realizable and (2) when it is earned. Revenues are realized when goods or services are exchanged for cash or claims to cash. Revenues are realizable when assets received in exchanges are readily convertible to known amounts of cash or claims to cash. Revenues are earned when a company has substantially accomplished what it must do to be entitled to the benefits represented by the revenues—that is, when the earnings process is complete or virtually complete.

**2 Describe accounting issues for revenue recognition at point of sale.** The two conditions for recognizing revenue are usually met by the time a company delivers products or merchandise or provides services to customers. Companies commonly recognize revenue from manufacturing and selling activities at time of sale. Problems of implementation can arise because of (1) sales with buyback agreements, (2) revenue recognition when right of return exists, and (3) trade loading and channel stuffing.

**3 Apply the percentage-of-completion method for long-term contracts.** To apply the percentage-of-completion method to long-term contracts, a company must have some basis for measuring the progress toward completion at particular interim dates. One of the most popular input measures used to determine the progress toward completion is the cost-to-cost basis. Using this basis, a company measures the percentage of completion by comparing costs incurred to date with the most recent estimate of the total costs to complete the contract. The company applies that percentage to the total revenue or the estimated total gross profit on the contract, to arrive at the amount of revenue or gross profit to be recognized to date.

**4 Apply the completed-contract method for long-term contracts.** Under this method, companies recognize revenue and gross profit only at point of sale—that is, when the company completes the contract. The company accumulates costs of long-term contracts in process and current billings. It makes no interim charges or credits to income statement accounts for revenues, costs, and gross profit. The annual entries to record costs of construction, progress billings, and collections from customers would be identical to those for the percentage-of-completion method—with the significant exclusion of the recognition of revenue and gross profit.

**5 Identify the proper accounting for losses on long-term contracts.** Two types of losses can become evident under long-term contracts: (1) *Loss in current period on a profitable contract*: Under the percentage-of-completion method only, the estimated cost increase requires a current-period adjustment of excess gross profit recognized on the project in prior periods. The company records this adjustment as a loss in the current period because it is a change in accounting estimate. (2) *Loss on an unprofitable contract*: Under both the percentage-of-completion and the completed-contract methods, the company must recognize the entire expected contract loss in the current period.

**6 Describe the installment-sales method of accounting.** The installment-sales method recognizes income in the periods of collection rather than in the period of sale. The installment-sales method of accounting is justified on the basis that when there is no reasonable approach for estimating the degree of collectibility, a company should not recognize revenue until it has collected cash.

**7 Explain the cost-recovery method of accounting.** Under the cost-recovery method, companies do not recognize profit until cash payments by the buyer exceed the seller's cost of the merchandise sold. After the seller has recovered all costs, it includes in income any additional cash collections. The income statement for the period of sale

reports sales revenue, the cost of goods sold, and the gross profit—both the amount recognized during the period and the amount deferred. The deferred gross profit is offset against the related receivable on the balance sheet. Subsequent income statements report the gross profit as a separate item of revenue when revenue is recognized as earned.

## APPENDIX 18A

## REVENUE RECOGNITION FOR SPECIAL SALES TRANSACTIONS

To supplement our presentation of revenue recognition, in this appendix we cover two common yet unique types of business transactions—**franchises** and **consignments**.

### FRANCHISES

#### Objective 8

Explain revenue recognition for franchises and consignment sales.

As indicated throughout this chapter, companies recognize revenue on the basis of two criteria: (1) when it is realized or realizable (occurrence of an exchange for cash or claims to cash), and (2) when it is earned (completion or virtual completion of the earnings process). These criteria are appropriate for most business activities. For some sales transactions, though, they do not adequately define when a company should recognize revenue. The fast-growing franchise industry is of special concern and challenge.

In accounting for franchise sales, a company must analyze the transaction and, considering all the circumstances, use judgment in selecting one or more of the revenue recognition bases, and then possibly must monitor the situation over a long period of time.

Four types of franchising arrangements have evolved: (1) manufacturer-retailer, (2) manufacturer-wholesaler, (3) service sponsor-retailer, and (4) wholesaler-retailer. The fastest-growing category of franchising, and the one that caused a reexamination of appropriate accounting, has been the third category, **service sponsor-retailer**. Included in this category are such industries and businesses as:

- Soft ice cream/frozen yogurt stores (**Tastee Freeze, TCBY, Dairy Queen**)
- Food drive-ins (**McDonald's, KFC, Burger King**)
- Restaurants (**TGI Friday's, Pizza Hut, Denny's**)
- Motels (**Holiday Inn, Marriott, Best Western**)
- Auto rentals (**Avis, Hertz, National**)
- Others (**H & R Block, Meineke Mufflers, 7-Eleven Stores, Kelly Services**)

Franchise companies derive their revenue from one or both of two sources: (1) from the sale of initial franchises and related assets or services, and (2) from continuing fees based on the operations of franchises. The **franchisor** (the party who grants business rights under the franchise) normally provides the **franchisee** (the party who operates the franchised business) with the following services.

1. Assistance in site selection: (a) analyzing location and (b) negotiating lease.
2. Evaluation of potential income.
3. Supervision of construction activity: (a) obtaining financing, (b) designing building, and (c) supervising contractor while building.
4. Assistance in the acquisition of signs, fixtures, and equipment.
5. Bookkeeping and advisory services: (a) setting up franchisee's records; (b) advising on income, real estate, and other taxes; and (c) advising on local regulations of the franchisee's business.

6. Employee and management training.
7. Quality control.
8. Advertising and promotion.<sup>29</sup>

In the past, it was standard practice for franchisors to recognize the entire franchise fee at the date of sale, whether the fee was received then or was collectible over a long period of time. Frequently, franchisors recorded the entire amount as revenue in the year of sale, even though many of the services were yet to be performed and uncertainty existed regarding the collection of the entire fee.<sup>30</sup> (In effect, the franchisors were counting their fried chickens before they were hatched.) However, a **franchise agreement** may provide for refunds to the franchisee if certain conditions are not met, and franchise fee profit can be reduced sharply by future costs of obligations and services to be rendered by the franchisor. To curb the abuses in revenue recognition that existed and to standardize the accounting and reporting practices in the franchise industry, the FASB issued rules which form the basis for the accounting discussed below.

### Initial Franchise Fees

The **initial franchise fee** is payment for establishing the franchise relationship and providing some initial services. Franchisors record initial franchise fees as revenue only when and as they make “substantial performance” of the services they are obligated to perform and when collection of the fee is reasonably assured. **Substantial performance** occurs when the franchisor has no remaining obligation to refund any cash received or excuse any nonpayment of a note and has performed all the initial services required under the contract. Commencement of operations by the franchisee shall be presumed to be the earliest point at which substantial performance has occurred, unless it can be demonstrated that substantial performance of all obligations, including services rendered voluntarily, has occurred before that time. [15]

#### Example of Entries for Initial Franchise Fee

To illustrate, assume that Tum’s Pizza Inc. charges an initial franchise fee of \$50,000 for the right to operate as a franchisee of Tum’s Pizza. Of this amount, \$10,000 is payable when the franchisee signs the agreement, and the balance is payable in five annual payments of \$8,000 each. In return for the initial franchise fee, Tum’s will help locate the site, negotiate the lease or purchase of the site, supervise the construction activity, and provide the bookkeeping services. The credit rating of the franchisee indicates that money can be borrowed at 8 percent. The present value of an ordinary annuity of five annual receipts of \$8,000 each discounted at 8 percent is \$31,941.68. The discount of \$8,058.32 represents the interest revenue to be accrued by the franchisor over the payment period. The following examples show the entries that Tum’s Pizza Inc. would make under various conditions.

1. If there is reasonable expectation that Tum’s Pizza Inc. may refund the down payment and if substantial future services remain to be performed by Tum’s Pizza Inc., the entry should be:

Cash	10,000.00	
Notes Receivable	40,000.00	
Discount on Notes Receivable		8,058.32
Unearned Franchise Fees		41,941.68

<sup>29</sup>Archibald E. MacKay, “Accounting for Initial Franchise Fee Revenue,” *The Journal of Accountancy* (January 1970), pp. 66–67.

<sup>30</sup>In 1987 and 1988 the SEC ordered a half-dozen fast-growing startup franchisors, including **Jiffy Lube International**, **Moto Photo, Inc.**, **Swensen’s, Inc.**, and **LePeep Restaurants, Inc.**, to defer their initial franchise fee recognition until earned. See “Claiming Tomorrow’s Profits Today,” *Forbes* (October 17, 1988), p. 78.

2. If the probability of refunding the initial franchise fee is extremely low, the amount of future services to be provided to the franchisee is minimal, collectibility of the note is reasonably assured, and substantial performance has occurred, the entry should be:

Cash	10,000.00	
Notes Receivable	40,000.00	
Discount on Notes Receivable		8,058.32
Revenue from Franchise Fees		41,941.68

3. If the initial down payment is not refundable, represents a fair measure of the services already provided, with a significant amount of services still to be performed by Tum's Pizza in future periods, and collectibility of the note is reasonably assured, the entry should be:

Cash	10,000.00	
Notes Receivable	40,000.00	
Discount on Notes Receivable		8,058.32
Revenue from Franchise Fees		10,000.00
Unearned Franchise Fees		31,941.68

4. If the initial down payment is not refundable and no future services are required by the franchisor, but collection of the note is so uncertain that recognition of the note as an asset is unwarranted, the entry should be:

Cash	10,000.00	
Revenue from Franchise Fees		10,000.00

5. Under the same conditions as those listed in case 4 above, except that the down payment is refundable or substantial services are yet to be performed, the entry should be:

Cash	10,000.00	
Unearned Franchise Fees		10,000.00

In cases 4 and 5—where collection of the note is extremely uncertain—franchisors may recognize cash collections using the installment-sales method or the cost-recovery method.<sup>31</sup>

## Continuing Franchise Fees

**Continuing franchise fees** are received in return for the continuing rights granted by the franchise agreement and for providing such services as management training, advertising and promotion, legal assistance, and other support. Franchisors report continuing fees as revenue when they are earned and receivable from the franchisee, unless a portion of them has been designated for a particular purpose, such as providing a specified amount for building maintenance or local advertising. In that case, the portion deferred shall be an amount sufficient to cover the estimated cost in excess of continuing franchise fees and provide a reasonable profit on the continuing services.

## Bargain Purchases

In addition to paying continuing franchise fees, franchisees frequently purchase some or all of their equipment and supplies from the franchisor. The franchisor would account for these sales as it would for any other product sales.

Sometimes, however, the franchise agreement grants the franchisee the right to make **bargain purchases** of equipment or supplies after the franchisee has paid the initial franchise fee. If the bargain price is lower than the normal selling price of the same product, or if it does not provide the franchisor a reasonable profit, then the franchisor should defer a portion of the initial franchise fee. The franchisor would account for the deferred portion as an adjustment of the selling price when the franchisee subsequently purchases the equipment or supplies.

<sup>31</sup>A study that compared four revenue recognition procedures—installment-sales basis, spreading recognition over the contract life, percentage-of-completion basis, and substantial performance—for franchise sales concluded that the percentage-of-completion method is the most acceptable revenue recognition method; the substantial-performance method was found sometimes to yield ultra-conservative results. See Charles H. Calhoun III, "Accounting for Initial Franchise Fees: Is It a Dead Issue?" *The Journal of Accountancy* (February 1975), pp. 60–67.

## Options to Purchase

A franchise agreement may give the franchisor an **option to purchase** the franchisee's business. As a matter of management policy, the franchisor may reserve the right to purchase a profitable franchise outlet, or to purchase one that is in financial difficulty.

If it is **probable** at the time the option is given that the franchisor will ultimately purchase the outlet, then the franchisor should not recognize the initial franchise fee as revenue but should instead record it as a liability. When the franchisor exercises the option, the liability would reduce the franchisor's investment in the outlet.

## Franchisor's Cost

Franchise accounting also involves proper accounting for the **franchisor's cost**. The objective is to match related costs and revenues by reporting them as components of income in the same accounting period. Franchisors should ordinarily defer **direct costs** (usually incremental costs) relating to specific franchise sales for which revenue has not yet been recognized. They should not, however, defer costs without reference to anticipated revenue and its realizability. **[16] Indirect costs** of a regular and recurring nature, such as selling and administrative expenses that are incurred irrespective of the level of franchise sales, should be expensed as incurred.

## Disclosures of Franchisors

Franchisors must disclose all significant commitments and obligations resulting from franchise agreements, including a description of services that have not yet been substantially performed. They also should disclose any resolution of uncertainties regarding the collectibility of franchise fees. Franchisors segregate initial franchise fees from other franchise fee revenue if they are significant. Where possible, revenues and costs related to franchisor-owned outlets should be distinguished from those related to franchised outlets.

---

## CONSIGNMENTS

In some cases, manufacturers (or wholesalers) deliver goods but retain title to the goods until they are sold. This specialized method of marketing certain types of products makes use of a device known as a **consignment**. Under this arrangement, the **consignor** (manufacturer or wholesaler) ships merchandise to the **consignee** (dealer), who is to act as an agent for the consignor in selling the merchandise. Both consignor and consignee are interested in selling—the former to make a profit or develop a market, the latter to make a commission on the sale.

The consignee accepts the merchandise and agrees to exercise due diligence in caring for and selling it. The consignee remits to the consignor cash received from customers, after deducting a sales commission and any chargeable expenses.

In consignment sales, the consignor uses a modified version of the sale basis of revenue recognition. That is, the consignor recognizes revenue only after receiving notification of sale and the cash remittance from the consignee. The consignor carries the merchandise as inventory throughout the consignment, separately classified as Merchandise on Consignment. **The consignee does not record the merchandise as an asset on its books.** Upon sale of the merchandise, the consignee has **a liability for the net amount due the consignor**. The consignor periodically receives from the consignee a report called **account sales** that shows the merchandise received, merchandise sold, expenses chargeable to the consignment, and the cash remitted. Revenue is then recognized by the consignor.

To illustrate consignment accounting entries, assume that Nelba Manufacturing Co. ships merchandise costing \$36,000 on consignment to Best Value Stores. Nelba pays \$3,750 of freight costs, and Best Value pays \$2,250 for local advertising costs that are reimbursable from Nelba. By the end of the period, Best Value has sold two-thirds of the consigned merchandise for \$40,000 cash. Best Value notifies Nelba of the sales, retains a 10 percent commission, and remits the cash due Nelba. Illustration 18A-1 (on page 966) shows the journal entries of the consignor (Nelba) and the consignee (Best Value).

**ILLUSTRATION 18A-1**  
 Entries for Consignment  
 Sales

NELBA MFG. CO. (CONSIGNOR)		BEST VALUE STORES (CONSIGNEE)	
<b>Shipment of consigned merchandise</b>			
Inventory on Consignment	36,000	No entry (record memo of merchandise received).	
Finished Goods Inventory	36,000		
<b>Payment of freight costs by consignor</b>			
Inventory on Consignment	3,750	No entry.	
Cash	3,750		
<b>Payment of advertising by consignee</b>			
No entry until notified.		Receivable from Consignor	2,250
		Cash	2,250
<b>Sales of consigned merchandise</b>			
No entry until notified.		Cash	40,000
		Payable to Consignor	40,000
<b>Notification of sales and expenses and remittance of amount due</b>			
Cash	33,750	Payable to Consignor	40,000
Advertising Expense	2,250	Receivable from	
Commission Expense	4,000	Consignor	2,250
Revenue from		Commission Revenue	4,000
Consignment Sales	40,000	Cash	33,750
<b>Adjustment of inventory on consignment for cost of sales</b>			
Cost of Goods Sold	26,500	No entry.	
Inventory on Consignment	26,500		
[2/3 (\$36,000 + \$3,750) = \$26,500]			

Under the consignment arrangement, the consignor accepts the risk that the merchandise might not sell and relieves the consignee of the need to commit part of its working capital to inventory. Companies use a variety of different systems and account titles to record consignments, but they all share the common goal of postponing the recognition of revenue until it is known that a sale to a third party has occurred.

**KEY TERMS**

- account sales, 965
- consignee, 965
- consignment, 965
- consignor, 965
- continuing franchise fees, 964
- franchisee, 962
- franchisor, 962
- initial franchise fee, 963
- substantial performance, 963

**SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 18A**

**LO 8 Explain revenue recognition for franchises and consignment sales.** In a franchise arrangement, the franchisor records as revenue the initial franchise fee as it makes substantial performance of the services it is obligated to perform and collection of the fee is reasonably assured. Franchisors recognize continuing franchise fees as revenue when they are earned and receivable from the franchisee. In a consignment sale, the consignor recognizes revenue when it receives cash and notification of the sale from the consignee.

### Exercises

Access the FASB Codification at <http://asc.fasb.org/home> to prepare responses to the following exercises. Provide Codification references for your responses.

CE18-1 Access the glossary (“Master Glossary”) to answer the following.

- What is the cost-recovery method?
- What is the percentage-of-completion method?
- What is the deposit method?
- What is the installment method?

CE18-2 Is the installment method of recognizing revenue generally acceptable? Why or why not?

CE18-3 When would a construction company be allowed to use the completed-contract method?

CE18-4 When is it appropriate to use the cost-recovery method?

**An additional Codification case can be found in the Using Your Judgment section, on page 988.**

**Be sure to check the companion website for a Review and Analysis Exercise, with solution.**

*Note:* All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

## QUESTIONS

1. Explain the current environment regarding revenue recognition.
2. When is revenue conventionally recognized? What conditions should exist for the recognition at date of sale of all or part of the revenue of any sale transaction?
3. When is revenue recognized in the following situations: (a) Revenue from selling products? (b) Revenue from services rendered? (c) Revenue from permitting others to use enterprise assets? (d) Revenue from disposing of assets other than products?
4. Identify several types of sales transactions and indicate the types of business for which that type of transaction is common.
5. What are the three alternative accounting methods available to a seller that is exposed to continued risks of ownership through return of the product?
6. Under what conditions may a seller who is exposed to continued risks of a high rate of return of the product sold recognize sales transactions as current revenue?
7. What are the two basic methods of accounting for long-term construction contracts? Indicate the circumstances that determine when one or the other of these methods should be used.
8. Hawkins Construction Co. has a \$60 million contract to construct a highway overpass and cloverleaf. The total estimated cost for the project is \$50 million. Costs incurred in the first year of the project are \$8 million. Hawkins Construction Co. appropriately uses the percentage-of-completion method. How much revenue and gross profit should Hawkins recognize in the first year of the project?
9. For what reasons should the percentage-of-completion method be used over the completed-contract method whenever possible?
10. What methods are used in practice to determine the extent of progress toward completion? Identify some “input measures” and some “output measures” that might be used to determine the extent of progress.
11. What are the two types of losses that can become evident in accounting for long-term contracts? What is the nature of each type of loss? How is each type accounted for?
12. Under the percentage-of-completion method, how are the Construction in Process and the Billings on Construction in Process accounts reported in the balance sheet?
13. Explain the differences between the installment-sales method and the cost-recovery method.
14. Identify and briefly describe the two methods generally employed to account for the cash received in situations where the collection of the sales price is not reasonably assured.
15. What is the deposit method and when might it be applied?
16. What is the nature of an installment sale? How do installment sales differ from ordinary credit sales?
17. Describe the installment-sales method of accounting.
18. How are operating expenses (not included in cost of goods sold) handled under the installment-sales method of accounting? What is the justification for such treatment?
19. Mojave sold her condominium for \$500,000 on September 14, 2010; she had paid \$330,000 for it in 2002. Mojave collected the selling price as follows: 2010, \$80,000; 2011, \$320,000; and 2012, \$100,000. Mojave appropriately uses the installment-sales method. Prepare a schedule to determine the gross profit for 2010, 2011, and 2012 from the installment sale.
20. When interest is involved in installment-sales transactions, how should it be treated for accounting purposes?
21. How should the results of installment sales be reported on the income statement?
22. At what time is it proper to recognize income in the following cases: (a) Installment sales with no reasonable basis for estimating the degree of collectibility? (b) Sales for future delivery? (c) Merchandise shipped on consignment? (d) Profit on incomplete construction contracts? (e) Subscriptions to publications?
23. When is revenue recognized under the cost-recovery method?
24. When is revenue recognized under the deposit method? How does the deposit method differ from the installment-sales and cost-recovery methods?
25. What is a major difference between iGAAP and U.S. GAAP as regards revenue recognition practices? 
26. iGAAP prohibits the use of the completed-contract method in accounting for long-term contracts. If revenues and costs are difficult to estimate, how must companies account for long-term contracts? 
27. Livesey Company has signed a long-term contract to build a new basketball arena. The total revenue related to the contract is \$120 million. Estimated costs for building the arena are \$40 million in the first year and \$30 million in both the second and third year. The costs cannot be 

- reliably estimated. How much revenue should Livesey Company report in the first year under iGAAP?
- \*28. Why in franchise arrangements may it not be proper to recognize the entire franchise fee as revenue at the date of sale?
- \*29. How does the concept of “substantial performance” apply to accounting for franchise sales?
- \*30. How should a franchisor account for continuing franchise fees and routine sales of equipment and supplies to franchisees?
- \*31. What changes are made in the franchisor’s recording of the initial franchise fee when the franchise agreement:
- Contains an option allowing the franchisor to purchase the franchised outlet, and it is likely that the option will be exercised?
  - Allows the franchisee to purchase equipment and supplies from the franchisor at bargain prices?
- \*32. What is the nature of a sale on consignment? When is revenue recognized from a consignment sale?

## BRIEF EXERCISES

- 1 •2** **BE18-1** Aamodt Music sold CDs to retailers and recorded sales revenue of \$700,000. During 2010, retailers returned CDs to Aamodt and were granted credit of \$78,000. Past experience indicates that the normal return rate is 15%. Prepare Aamodt’s entries to record (a) the \$78,000 of returns and (b) estimated returns at December 31, 2010.
- 3** **BE18-2** Turner, Inc. began work on a \$7,000,000 contract in 2010 to construct an office building. During 2010, Turner, Inc. incurred costs of \$1,700,000, billed their customers for \$1,200,000, and collected \$960,000. At December 31, 2010, the estimated future costs to complete the project total \$3,300,000. Prepare Turner’s 2010 journal entries using the percentage-of-completion method.
- 3** **BE18-3** O’Neil, Inc. began work on a \$7,000,000 contract in 2010 to construct an office building. O’Neil uses the percentage-of-completion method. At December 31, 2010, the balances in certain accounts were: construction in process \$2,450,000; accounts receivable \$240,000; and billings on construction in process \$1,400,000. Indicate how these accounts would be reported in O’Neil’s December 31, 2010 balance sheet.
- 4** **BE18-4** Use the information from BE18-2, but assume Turner uses the completed-contract method. Prepare the company’s 2010 journal entries.
- 4** **BE18-5** Guillen, Inc. began work on a \$7,000,000 contract in 2010 to construct an office building. Guillen uses the completed-contract method. At December 31, 2010, the balances in certain accounts were construction in process \$1,715,000; accounts receivable \$240,000; and billings on construction in process \$1,000,000. Indicate how these accounts would be reported in Guillen’s December 31, 2010, balance sheet.
- 5** **BE18-6** Archer Construction Company began work on a \$420,000 construction contract in 2010. During 2010, Archer incurred costs of \$278,000, billed its customer for \$215,000, and collected \$175,000. At December 31, 2010, the estimated future costs to complete the project total \$162,000. Prepare Archer’s journal entry to record profit or loss using (a) the percentage-of-completion method and (b) the completed-contract method, if any.
- 6** **BE18-7** Gordeeva Corporation began selling goods on the installment basis on January 1, 2010. During 2010, Gordeeva had installment sales of \$150,000; cash collections of \$54,000; cost of installment sales of \$102,000. Prepare the company’s entries to record installment sales, cash collected, cost of installment sales, deferral of gross profit, and gross profit recognized, using the installment-sales method.
- 6** **BE18-8** Lazaro Inc. sells goods on the installment basis and uses the installment-sales method. Due to a customer default, Lazaro repossessed merchandise that was originally sold for \$800, resulting in a gross profit rate of 40%. At the time of repossession, the uncollected balance is \$520, and the fair value of the repossessed merchandise is \$275. Prepare Lazaro’s entry to record the repossession.
- 6** **BE18-9** At December 31, 2010, Grinkov Corporation had the following account balances.

Installment Accounts Receivable, 2009	\$ 65,000
Installment Accounts Receivable, 2010	110,000
Deferred Gross Profit, 2009	23,400
Deferred Gross Profit, 2010	41,800

Most of Grinkov’s sales are made on a 2-year installment basis. Indicate how these accounts would be reported in Grinkov’s December 31, 2010, balance sheet. The 2009 accounts are collectible in 2011, and the 2010 accounts are collectible in 2012.

- 7** **BE18-10** Schuss Corporation sold equipment to Potsdam Company for \$20,000. The equipment is on Schuss's books at a net amount of \$13,000. Schuss collected \$10,000 in 2010, \$5,000 in 2011, and \$5,000 in 2012. If Schuss uses the cost-recovery method, what amount of gross profit will be recognized in each year?
- 8** **\*BE18-11** Frozen Delight, Inc. charges an initial franchise fee of \$75,000 for the right to operate as a franchisee of Frozen Delight. Of this amount, \$25,000 is collected immediately. The remainder is collected in 4 equal annual installments of \$12,500 each. These installments have a present value of \$41,402. There is reasonable expectation that the down payment may be refunded and substantial future services be performed by Frozen Delight, Inc. Prepare the journal entry required by Frozen Delight to record the franchise fee.
- 8** **\*BE18-12** Jansen Corporation shipped \$20,000 of merchandise on consignment to Gooch Company. Jansen paid freight costs of \$2,000. Gooch Company paid \$500 for local advertising which is reimbursable from Jansen. By year-end, 60% of the merchandise had been sold for \$21,500. Gooch notified Jansen, retained a 10% commission, and remitted the cash due to Jansen. Prepare Jansen's entry when the cash is received.

## EXERCISES

- 1** **2** **E18-1 (Revenue Recognition on Book Sales with High Returns)** Uddin Publishing Co. publishes college textbooks that are sold to bookstores on the following terms. Each title has a fixed wholesale price, terms f.o.b. shipping point, and payment is due 60 days after shipment. The retailer may return a maximum of 30% of an order at the retailer's expense. Sales are made only to retailers who have good credit ratings. Past experience indicates that the normal return rate is 12%, and the average collection period is 72 days.

### Instructions

- (a) Identify alternative revenue recognition criteria that Uddin could employ concerning textbook sales.
- (b) Briefly discuss the reasoning for your answers in (a) above.
- (c) In late July, Uddin shipped books invoiced at \$15,000,000. Prepare the journal entry to record this event that best conforms to generally accepted accounting principles and your answer to part (b).
- (d) In October, \$2 million of the invoiced July sales were returned according to the return policy, and the remaining \$13 million was paid. Prepare the entries recording the return and payment.

- 1** **2** **E18-2 (Sales Recorded Both Gross and Net)** On June 3, Hunt Company sold to Ann Mount merchandise having a sale price of \$8,000 with terms of 2/10, n/60, f.o.b. shipping point. An invoice totaling \$120, terms n/30, was received by Mount on June 8 from the Olympic Transport Service for the freight cost. Upon receipt of the goods, June 5, Mount notified Hunt Company that merchandise costing \$600 contained flaws that rendered it worthless. The same day Hunt Company issued a credit memo covering the worthless merchandise and asked that it be returned at company expense. The freight on the returned merchandise was \$24, paid by Hunt Company on June 7. On June 12, the company received a check for the balance due from Mount.

### Instructions

- (a) Prepare journal entries on Hunt Company books to record all the events noted above under each of the following bases.
  - (1) Sales and receivables are entered at gross selling price.
  - (2) Sales and receivables are entered net of cash discounts.
- (b) Prepare the journal entry under basis 2, assuming that Ann Mount did not remit payment until August 5.

- 1** **2** **E18-3 (Revenue Recognition on Marina Sales with Discounts)** Taylor Marina has 300 available slips that rent for \$800 per season. Payments must be made in full at the start of the boating season, April 1, 2011. Slips for the next season may be reserved if paid for by December 31, 2010. Under a new policy, if payment is made by December 31, 2010 a 5% discount is allowed. The boating season ends October 31, and the marina has a December 31 year-end. To provide cash flow for major dock repairs, the marina operator is also offering a 20% discount to slip renters who pay for the 2012 season.

For the fiscal year ended December 31, 2010, all 300 slips were rented at full price. Two hundred slips were reserved and paid for for the 2011 boating season, and 60 slips were reserved and paid for for the 2012 boating season.

### Instructions

- (a) Prepare the appropriate journal entries for fiscal 2010.
- (b) Assume the marina operator is unsophisticated in business. Explain the managerial significance of the accounting above to this person.

- 3 •4** **E18-4 (Recognition of Profit on Long-Term Contracts)** During 2010 Nilsen Company started a construction job with a contract price of \$1,600,000. The job was completed in 2012. The following information is available.

	2010	2011	2012
Costs incurred to date	\$400,000	\$825,000	\$1,070,000
Estimated costs to complete	600,000	275,000	–0–
Billings to date	300,000	900,000	1,600,000
Collections to date	270,000	810,000	1,425,000

#### Instructions

- Compute the amount of gross profit to be recognized each year assuming the percentage-of-completion method is used.
  - Prepare all necessary journal entries for 2011.
  - Compute the amount of gross profit to be recognized each year assuming the completed-contract method is used.
- 3** **E18-5 (Analysis of Percentage-of-Completion Financial Statements)** In 2010, Steinrotter Construction Corp. began construction work under a 3-year contract. The contract price was \$1,000,000. Steinrotter uses the percentage-of-completion method for financial accounting purposes. The income to be recognized each year is based on the proportion of cost incurred to total estimated costs for completing the contract. The financial statement presentations relating to this contract at December 31, 2010, follow.

<b>Balance Sheet</b>		
Accounts receivable—construction contract billings		\$18,000
Construction in progress	\$65,000	
Less: Contract billings	<u>61,500</u>	
Cost of uncompleted contract in excess of billings		3,500
<b>Income Statement</b>		
Income (before tax) on the contract recognized in 2010		\$19,500

#### Instructions

- How much cash was collected in 2010 on this contract?
- What was the initial estimated total income before tax on this contract?

(AICPA adapted)

- 3** **E18-6 (Gross Profit on Uncompleted Contract)** On April 1, 2010, Dougherty Inc. entered into a cost-plus-fixed-fee contract to construct an electric generator for Altom Corporation. At the contract date, Dougherty estimated that it would take 2 years to complete the project at a cost of \$2,000,000. The fixed fee stipulated in the contract is \$450,000. Dougherty appropriately accounts for this contract under the percentage-of-completion method. During 2010 Dougherty incurred costs of \$800,000 related to the project. The estimated cost at December 31, 2010, to complete the contract is \$1,200,000. Altom was billed \$600,000 under the contract.

#### Instructions

Prepare a schedule to compute the amount of gross profit to be recognized by Dougherty under the contract for the year ended December 31, 2010. Show supporting computations in good form.

(AICPA adapted)

- 3** **E18-7 (Recognition of Profit, Percentage-of-Completion)** In 2010 Gurney Construction Company agreed to construct an apartment building at a price of \$1,200,000. The information relating to the costs and billings for this contract is shown below.

	2010	2011	2012
Costs incurred to date	\$280,000	\$600,000	\$ 785,000
Estimated costs yet to be incurred	520,000	200,000	–0–
Customer billings to date	150,000	500,000	1,200,000
Collection of billings to date	120,000	320,000	940,000

#### Instructions

- Assuming that the percentage-of-completion method is used, (1) compute the amount of gross profit to be recognized in 2010 and 2011, and (2) prepare journal entries for 2011.
- For 2011, show how the details related to this construction contract would be disclosed on the balance sheet and on the income statement.

- 3 •4** **E18-8 (Recognition of Revenue on Long-Term Contract and Entries)** Hamilton Construction Company uses the percentage-of-completion method of accounting. In 2010, Hamilton began work under contract #E2-D2, which provided for a contract price of \$2,200,000. Other details follow:

	2010	2011
Costs incurred during the year	\$640,000	\$1,425,000
Estimated costs to complete, as of December 31	960,000	–0–
Billings during the year	420,000	1,680,000
Collections during the year	350,000	1,500,000

#### Instructions

- What portion of the total contract price would be recognized as revenue in 2010? In 2011?
- Assuming the same facts as those above except that Hamilton uses the completed-contract method of accounting, what portion of the total contract price would be recognized as revenue in 2011?
- Prepare a complete set of journal entries for 2010 (using the percentage-of-completion method).

- 3 •4** **E18-9 (Recognition of Profit and Balance Sheet Amounts for Long-Term Contracts)** Yanmei Construction Company began operations January 1, 2010. During the year, Yanmei Construction entered into a contract with Lundquist Corp. to construct a manufacturing facility. At that time, Yanmei estimated that it would take 5 years to complete the facility at a total cost of \$4,500,000. The total contract price for construction of the facility is \$6,000,000. During the year, Yanmei incurred \$1,185,800 in construction costs related to the construction project. The estimated cost to complete the contract is \$4,204,200. Lundquist Corp. was billed and paid 25% of the contract price.

#### Instructions

Prepare schedules to compute the amount of gross profit to be recognized for the year ended December 31, 2010, and the amount to be shown as “costs and recognized profit on uncompleted contract in excess of related billings” or “billings on uncompleted contract in excess of related costs and recognized profit” at December 31, 2010, under each of the following methods.

- Completed-contract method.
- Percentage-of-completion method.

Show supporting computations in good form.

(AICPA adapted)

- 4 •5** **E18-10 (Long-Term Contract Reporting)** Berstler Construction Company began operations in 2010. Construction activity for the first year is shown below. All contracts are with different customers, and any work remaining at December 31, 2010, is expected to be completed in 2011.

Project	Total Contract Price	Billings through 12/31/10	Cash Collections through 12/31/10	Contract Costs Incurred through 12/31/10	Estimated Additional Costs to Complete
1	\$ 560,000	\$ 360,000	\$340,000	\$450,000	\$130,000
2	670,000	220,000	210,000	126,000	504,000
3	520,000	500,000	440,000	330,000	–0–
	<u>\$1,750,000</u>	<u>\$1,080,000</u>	<u>\$990,000</u>	<u>\$906,000</u>	<u>\$634,000</u>

#### Instructions

Prepare a partial income statement and balance sheet to indicate how the above information would be reported for financial statement purposes. Berstler Construction Company uses the completed-contract method.

- 6** **E18-11 (Installment-Sales Method Calculations, Entries)** Coffin Corporation appropriately uses the installment-sales method of accounting to recognize income in its financial statements. The following information is available for 2010 and 2011.

	2010	2011
Installment sales	\$900,000	\$1,000,000
Cost of installment sales	594,000	680,000
Cash collections on 2010 sales	370,000	350,000
Cash collections on 2011 sales	–0–	450,000

#### Instructions

- Compute the amount of realized gross profit recognized in each year.
- Prepare all journal entries required in 2011.

- 6 E18-12 (Analysis of Installment-Sales Accounts)** Samuels Co. appropriately uses the installment-sales method of accounting. On December 31, 2012, the books show balances as follows.

Installment Receivables		Deferred Gross Profit		Gross Profit on Sales	
2010	\$12,000	2010	\$ 7,000	2010	35%
2011	40,000	2011	26,000	2011	33%
2012	80,000	2012	95,000	2012	32%

#### Instructions

- Prepare the adjusting entry or entries required on December 31, 2012 to recognize 2012 realized gross profit. (Installment receivables have already been credited for cash receipts during 2012.)
- Compute the amount of cash collected in 2012 on accounts receivable each year.

- 6 E18-13 (Gross Profit Calculations and Repossessed Merchandise)** Basler Corporation, which began business on January 1, 2010, appropriately uses the installment-sales method of accounting. The following data were obtained for the years 2010 and 2011.

	2010	2011
Installment sales	\$750,000	\$840,000
Cost of installment sales	510,000	588,000
General & administrative expenses	70,000	84,000
Cash collections on sales of 2010	310,000	300,000
Cash collections on sales of 2011	–0–	400,000

#### Instructions

- Compute the balance in the deferred gross profit accounts on December 31, 2010, and on December 31, 2011.
- A 2010 sale resulted in default in 2012. At the date of default, the balance on the installment receivable was \$12,000, and the repossessed merchandise had a fair value of \$8,000. Prepare the entry to record the repossession.

(AICPA adapted)

- 6 E18-14 (Interest Revenue from Installment Sale)** Becker Corporation sells farm machinery on the installment plan. On July 1, 2010, Becker entered into an installment-sale contract with Valente Inc. for a 8-year period. Equal annual payments under the installment sale are \$100,000 and are due on July 1. The first payment was made on July 1, 2010.

#### Additional information

- The amount that would be realized on an outright sale of similar farm machinery is \$586,842.
- The cost of the farm machinery sold to Valente Inc. is \$425,000.
- The finance charges relating to the installment period are based on a stated interest rate of 10%, which is appropriate.
- Circumstances are such that the collection of the installments due under the contract is reasonably assured.

#### Instructions

What income or loss before income taxes should Becker record for the year ended December 31, 2010, as a result of the transaction above?

(AICPA adapted)

- 6 •7 E18-15 (Installment-Sales Method and Cost-Recovery Method)** Swift Corp., a capital goods manufacturing business that started on January 4, 2010, and operates on a calendar-year basis, uses the installment-sales method of profit recognition in accounting for all its sales. The following data were taken from the 2010 and 2011 records.

	2010	2011
Installment sales	\$480,000	\$620,000
Gross profit as a percent of costs	25%	28%
Cash collections on sales of 2010	\$130,000	\$240,000
Cash collections on sales of 2011	–0–	\$160,000

The amounts given for cash collections exclude amounts collected for interest charges.

#### Instructions

- Compute the amount of realized gross profit to be recognized on the 2011 income statement, prepared using the installment-sales method.

- (b) State where the balance of Deferred Gross Profit would be reported on the financial statements for 2011.
- (c) Compute the amount of realized gross profit to be recognized on the income statement, prepared using the cost-recovery method.

(CIA adapted)

**•6 •7 E18-16 (Installment-Sales Method and Cost-Recovery Method)** On January 1, 2010, Wetzel Company sold property for \$250,000. The note will be collected as follows: \$120,000 in 2010, \$90,000 in 2011, and \$40,000 in 2012. The property had cost Wetzel \$150,000 when it was purchased in 2008.

**Instructions**

- (a) Compute the amount of gross profit realized each year, assuming Wetzel uses the cost-recovery method.
- (b) Compute the amount of gross profit realized each year, assuming Wetzel uses the installment-sales method.

**•6 E18-17 (Installment Sales—Default and Repossession)** Crawford Imports Inc. was involved in two default and repossession cases during the year:

1. A refrigerator was sold to Cindy McClary for \$1,800, including a 30% markup on selling price. McClary made a down payment of 20%, four of the remaining 16 equal payments, and then defaulted on further payments. The refrigerator was repossessed, at which time the fair value was determined to be \$800.
2. An oven that cost \$1,200 was sold to Travis Longman for \$1,500 on the installment basis. Longman made a down payment of \$240 and paid \$80 a month for six months, after which he defaulted. The oven was repossessed and the estimated fair value at time of repossession was determined to be \$750.

**Instructions**

Prepare journal entries to record each of these repossessions using a fair value approach. (Ignore interest charges.)

**•6 E18-18 (Installment Sales—Default and Repossession)** Seaver Company uses the installment-sales method in accounting for its installment sales. On January 1, 2010, Seaver Company had an installment account receivable from Jan Noble with a balance of \$1,800. During 2010, \$500 was collected from Noble. When no further collection could be made, the merchandise sold to Noble was repossessed. The merchandise had a fair value of \$650 after the company spent \$60 for reconditioning of the merchandise. The merchandise was originally sold with a gross profit rate of 30%.

**Instructions**

Prepare the entries on the books of Seaver Company to record all transactions related to Noble during 2010. (Ignore interest charges.)

**•8\* E18-19 (Franchise Entries)** Pacific Crossburgers Inc. charges an initial franchise fee of \$70,000. Upon the signing of the agreement, a payment of \$28,000 is due. Thereafter, three annual payments of \$14,000 are required. The credit rating of the franchisee is such that it would have to pay interest at 10% to borrow money.

**Instructions**

Prepare the entries to record the initial franchise fee on the books of the franchisor under the following assumptions.

- (a) The down payment is not refundable, no future services are required by the franchisor, and collection of the note is reasonably assured.
- (b) The franchisor has substantial services to perform, the down payment is refundable, and the collection of the note is very uncertain.
- (c) The down payment is not refundable, collection of the note is reasonably certain, the franchisor has yet to perform a substantial amount of services, and the down payment represents a fair measure of the services already performed.

**•8\* E18-20 (Franchise Fee, Initial Down Payment)** On January 1, 2010, Lesley Benjamin signed an agreement to operate as a franchisee of Campbell Inc. for an initial franchise fee of \$50,000. The amount of \$10,000 was paid when the agreement was signed, and the balance is payable in five annual payments of \$8,000 each, beginning January 1, 2011. The agreement provides that the down payment is not refundable and that no future services are required of the franchisor. Lesley Benjamin's credit rating indicates that she can borrow money at 11% for a loan of this type.

**Instructions**

- (a) How much should Campbell record as revenue from franchise fees on January 1, 2010? At what amount should Benjamin record the acquisition cost of the franchise on January 1, 2010?
- (b) What entry would be made by Campbell on January 1, 2010, if the down payment is refundable and substantial future services remain to be performed by Campbell?
- (c) How much revenue from franchise fees would be recorded by Campbell on January 1, 2010, if:
  - (1) The initial down payment is not refundable, it represents a fair measure of the services already provided, a significant amount of services is still to be performed by Campbell in future periods, and collectibility of the note is reasonably assured?
  - (2) The initial down payment is not refundable and no future services are required by the franchisor, but collection of the note is so uncertain that recognition of the note as an asset is unwarranted?
  - (3) The initial down payment has not been earned and collection of the note is so uncertain that recognition of the note as an asset is unwarranted?

**8\*** **E18-21 (Consignment Computations)** On May 3, 2010, Eisler Company consigned 80 freezers, costing \$500 each, to Remmers Company. The cost of shipping the freezers amounted to \$840 and was paid by Eisler Company. On December 30, 2010, a report was received from the consignee, indicating that 40 freezers had been sold for \$750 each. Remittance was made by the consignee for the amount due, after deducting a commission of 6%, advertising of \$200, and total installation costs of \$320 on the freezers sold.

**Instructions**

- (a) Compute the inventory value of the units unsold in the hands of the consignee.
- (b) Compute the profit for the consignor for the units sold.
- (c) Compute the amount of cash that will be remitted by the consignee.

See the book's companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), for a set of B Exercises.

..... **PROBLEMS** .....

**2** **3** **4**  
**6**

**P18-1 (Comprehensive Three-Part Revenue Recognition)** Van Hatten Industries has three operating divisions—Depp Construction Division, DeMent Publishing Division, and Ankiel Securities Division. Each division maintains its own accounting system and method of revenue recognition.

**Depp Construction Division**

During the fiscal year ended November 30, 2010, Depp Construction Division had one construction project in process. A \$30,000,000 contract for construction of a civic center was granted on June 19, 2010, and construction began on August 1, 2010. Estimated costs of completion at the contract date were \$25,000,000 over a 2-year time period from the date of the contract. On November 30, 2010, construction costs of \$7,200,000 had been incurred and progress billings of \$9,500,000 had been made. The construction costs to complete the remainder of the project were reviewed on November 30, 2010, and were estimated to amount to only \$16,800,000 because of an expected decline in raw materials costs. Revenue recognition is based upon a percentage-of-completion method.

**DeMent Publishing Division**

The DeMent Publishing Division sells large volumes of novels to a few book distributors, which in turn sell to several national chains of bookstores. DeMent allows distributors to return up to 30% of sales, and distributors give the same terms to bookstores. While returns from individual titles fluctuate greatly, the returns from distributors have averaged 20% in each of the past 5 years. A total of \$7,000,000 of paperback novel sales were made to distributors during fiscal 2010. On November 30, 2010 (the end of the fiscal year) \$1,500,000 of fiscal 2010 sales were still subject to return privileges over the next 6 months. The remaining \$5,500,000 of fiscal 2010 sales had actual returns of 21%. Sales from fiscal 2009 totaling \$2,000,000 were collected in fiscal 2010 less 18% returns. This division records revenue according to the method referred to as revenue recognition when the right of return exists.

**Ankiel Securities Division**

Ankiel Securities Division works through manufacturers' agents in various cities. Orders for alarm systems and down payments are forwarded from agents, and the Division ships the goods f.o.b. factory directly to customers (usually police departments and security guard companies). Customers are billed directly for the balance due plus actual shipping costs. The company received orders for \$6,000,000 of goods during the fiscal year ended November 30, 2010. Down payments of \$600,000 were received, and \$5,200,000 of goods were billed and shipped. Actual freight costs of \$100,000 were also billed. Commissions of 10% on product price are paid to manufacturing agents after goods are shipped to customers. Such goods are warranted for 90 days after shipment, and warranty returns have been about 1% of sales. Revenue is recognized at the point of sale by this division.

**Instructions**

- (a) There are a variety of methods of revenue recognition. Define and describe each of the following methods of revenue recognition, and indicate whether each is in accordance with generally accepted accounting principles.
  - (1) Point of sale.
  - (2) Completion-of-production.
  - (3) Percentage-of-completion.
  - (4) Installment-sales.
- (b) Compute the revenue to be recognized in fiscal year 2010 for each of the three operating divisions of Van Hatten Industries in accordance with generally accepted accounting principles.

**P18-2 (Recognition of Profit on Long-Term Contract)** Shanahan Construction Company has entered into a contract beginning January 1, 2010, to build a parking complex. It has been estimated that the complex will cost \$600,000 and will take 3 years to construct. The complex will be billed to the purchasing company at \$900,000. The following data pertain to the construction period.

	2010	2011	2012
Costs to date	\$270,000	\$450,000	\$610,000
Estimated costs to complete	330,000	150,000	-0-
Progress billings to date	270,000	550,000	900,000
Cash collected to date	240,000	500,000	900,000

**Instructions**

- (a) Using the percentage-of-completion method, compute the estimated gross profit that would be recognized during each year of the construction period.
- (b) Using the completed-contract method, compute the estimated gross profit that would be recognized during each year of the construction period.

**P18-3 (Recognition of Profit and Entries on Long-Term Contract)** On March 1, 2010, Chance Company entered into a contract to build an apartment building. It is estimated that the building will cost \$2,000,000 and will take 3 years to complete. The contract price was \$3,000,000. The following information pertains to the construction period.

	2010	2011	2012
Costs to date	\$ 600,000	\$1,560,000	\$2,100,000
Estimated costs to complete	1,400,000	520,000	-0-
Progress billings to date	1,050,000	2,000,000	3,000,000
Cash collected to date	950,000	1,950,000	2,850,000

**Instructions**

- (a) Compute the amount of gross profit to be recognized each year assuming the percentage-of-completion method is used.
- (b) Prepare all necessary journal entries for 2012.
- (c) Prepare a partial balance sheet for December 31, 2011, showing the balances in the receivables and inventory accounts.

**P18-4 (Recognition of Profit and Balance Sheet Presentation, Percentage-of-Completion)** On February 1, 2010, Hewitt Construction Company obtained a contract to build an athletic stadium. The stadium was to be built at a total cost of \$5,400,000 and was scheduled for completion by September 1, 2012. One clause of the contract stated that Hewitt was to deduct \$15,000 from the \$6,600,000 billing price for each

week that completion was delayed. Completion was delayed 6 weeks, which resulted in a \$90,000 penalty. Below are the data pertaining to the construction period.

	2010	2011	2012
Costs to date	\$1,620,000	\$3,850,000	\$5,500,000
Estimated costs to complete	3,780,000	1,650,000	–0–
Progress billings to date	1,200,000	3,300,000	6,510,000
Cash collected to date	1,000,000	2,800,000	6,510,000

### Instructions

- Using the percentage-of-completion method, compute the estimated gross profit recognized in the years 2010–2012.
- Prepare a partial balance sheet for December 31, 2011, showing the balances in the receivable and inventory accounts.

•3 •4 •5

**P18-5 (Completed Contract and Percentage of Completion with Interim Loss)** Reynolds Custom Builders (RCB) was established in 1985 by Avery Conway and initially built high-quality customized homes under contract with specific buyers. In the 1990s, Conway's two sons joined the company and expanded RCB's activities into the high-rise apartment and industrial plant markets. Upon the retirement of RCB's long-time financial manager, Conway's sons recently hired Ed Borke as controller for RCB. Borke, a former college friend of Conway's sons, has been associated with a public accounting firm for the last 6 years.

Upon reviewing RCB's accounting practices, Borke observed that RCB followed the completed-contract method of revenue recognition, a carryover from the years when individual home building was the majority of RCB's operations. Several years ago, the predominant portion of RCB's activities shifted to the high-rise and industrial building areas. From land acquisition to the completion of construction, most building contracts cover several years. Under the circumstances, Borke believes that RCB should follow the percentage-of-completion method of accounting. From a typical building contract, Borke developed the following data.

#### BLUESTEM TRACTOR PLANT

Contract price: \$8,000,000

	2010	2011	2012
Estimated costs	\$1,600,000	\$2,880,000	\$1,920,000
Progress billings	1,000,000	2,500,000	4,500,000
Cash collections	800,000	2,300,000	4,900,000

### Instructions

- Explain the difference between completed-contract revenue recognition and percentage-of-completion revenue recognition.
- Using the data provided for the Bluestem Tractor Plant and assuming the percentage-of-completion method of revenue recognition is used, calculate RCB's revenue and gross profit for 2010, 2011, and 2012, under **each** of the following circumstances.
  - Assume that all costs are incurred, all billings to customers are made, and all collections from customers are received within 30 days of billing, as planned.
  - Further assume that, as a result of unforeseen local ordinances and the fact that the building site was in a wetlands area, RCB experienced cost overruns of \$800,000 in 2010 to bring the site into compliance with the ordinances and to overcome wetlands barriers to construction.
  - Further assume that, in addition to the cost overruns of \$800,000 for this contract incurred under part (b)2, inflationary factors over and above those anticipated in the development of the original contract cost have caused an additional cost overrun of \$850,000 in 2011. It is not anticipated that any cost overruns will occur in 2012.

(CMA adapted)

•3 •4 •5

**P18-6 (Long-Term Contract with Interim Loss)** On March 1, 2010, Pechstein Construction Company contracted to construct a factory building for Fabrik Manufacturing Inc. for a total contract price of \$8,400,000. The building was completed by October 31, 2012. The annual contract costs incurred, estimated costs to complete the contract, and accumulated billings to Fabrik for 2010, 2011, and 2012 are given below.

	2010	2011	2012
Contract costs incurred during the year	\$2,880,000	\$2,230,000	\$2,190,000
Estimated costs to complete the contract at 12/31	3,520,000	2,190,000	–0–
Billings to Fabrik during the year	3,200,000	3,500,000	1,700,000

**Instructions**

- (a) Using the percentage-of-completion method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2010, 2011, and 2012. (Ignore income taxes.)
- (b) Using the completed-contract method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2010, 2011, and 2012. (Ignore incomes taxes.)

**P18-7 (Long-Term Contract with an Overall Loss)** On July 1, 2010, Torvill Construction Company Inc. contracted to build an office building for Gumbel Corp. for a total contract price of \$1,900,000. On July 1, Torvill estimated that it would take between 2 and 3 years to complete the building. On December 31, 2012, the building was deemed substantially completed. Following are accumulated contract costs incurred, estimated costs to complete the contract, and accumulated billings to Gumbel for 2010, 2011, and 2012.

	At 12/31/10	At 12/31/11	At 12/31/12
Contract costs incurred to date	\$ 300,000	\$1,200,000	\$2,100,000
Estimated costs to complete the contract	1,200,000	800,000	–0–
Billings to Gumbel	300,000	1,100,000	1,850,000

**Instructions**

- (a) Using the percentage-of-completion method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2010, 2011, and 2012. (Ignore income taxes.)
- (b) Using the completed-contract method, prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2010, 2011, and 2012. (Ignore income taxes.)

**P18-8 (Installment-Sales Computations and Entries)** Presented below is summarized information for Johnston Co., which sells merchandise on the installment basis.

	2010	2011	2012
Sales (on installment plan)	\$250,000	\$260,000	\$280,000
Cost of sales	155,000	163,800	182,000
Gross profit	<u>\$ 95,000</u>	<u>\$ 96,200</u>	<u>\$ 98,000</u>
Collections from customers on:			
2010 installment sales	\$ 75,000	\$100,000	\$ 50,000
2011 installment sales		100,000	120,000
2012 installment sales			100,000

**Instructions**

- (a) Compute the realized gross profit for each of the years 2010, 2011, and 2012.
- (b) Prepare in journal form all entries required in 2012, applying the installment-sales method of accounting. (Ignore interest charges.)

**P18-9 (Installment-Sales Income Statements)** Chantal Stores sells merchandise on open account as well as on installment terms.

	2010	2011	2012
Sales on account	\$385,000	\$426,000	\$525,000
Installment sales	320,000	275,000	380,000
Collections on installment sales			
Made in 2010	100,000	90,000	40,000
Made in 2011		110,000	140,000
Made in 2012			125,000
Cost of sales			
Sold on account	270,000	277,000	341,000
Sold on installment	214,400	176,000	228,000
Selling expenses	77,000	87,000	92,000
Administrative expenses	50,000	51,000	52,000

**Instructions**

From the data above, which cover the 3 years since Chantal Stores commenced operations, determine the net income for each year, applying the installment-sales method of accounting. (Ignore interest charges.)

- 6 P18-10 (Installment-Sales Computations and Entries)** Paul Dobson Stores sell appliances for cash and also on the installment plan. Entries to record cost of sales are made monthly.

<b>PAUL DOBSON STORES</b>		
<b>TRIAL BALANCE</b>		
<b>DECEMBER 31, 2011</b>		
	<u>Dr.</u>	<u>Cr.</u>
Cash	\$153,000	
Installment Accounts Receivable, 2010	56,000	
Installment Accounts Receivable, 2011	91,000	
Inventory—New Merchandise	123,200	
Inventory—Repossessed Merchandise	24,000	
Accounts Payable		\$ 98,500
Deferred Gross Profit, 2010		45,600
Capital Stock		170,000
Retained Earnings		93,900
Sales		343,000
Installment Sales		200,000
Cost of Sales	255,000	
Cost of Installment Sales	120,000	
Loss on Repossession	800	
Selling and Administrative Expenses	128,000	
	<u>\$951,000</u>	<u>\$951,000</u>

The accounting department has prepared the following analysis of cash receipts for the year.

Cash sales (including repossessed merchandise)	\$424,000
Installment accounts receivable, 2010	96,000
Installment accounts receivable, 2011	109,000
Other	36,000
Total	<u>\$665,000</u>

Repossessions recorded during the year are summarized as follows.

	<u>2010</u>
Uncollected balance	\$8,000
Loss on repossession	800
Repossessed merchandise	4,800

**Instructions**

From the trial balance and accompanying information:

- (a) Compute the rate of gross profit on installment sales for 2010 and 2011.
- (b) Prepare closing entries as of December 31, 2011, under the installment-sales method of accounting.
- (c) Prepare an income statement for the year ended December 31, 2011. Include only the realized gross profit in the income statement.

- 6 P18-11 (Installment-Sales Entries)** The following summarized information relates to the installment-sales activity of Phillips Stores, Inc. for the year 2010.

Installment sales during 2010	\$500,000
Cost of goods sold on installment basis	350,000
Collections from customers	180,000
Unpaid balances on merchandise repossessed	24,000
Estimated value of merchandise repossessed	11,200

**Instructions**

- (a) Prepare journal entries at the end of 2010 to record on the books of Phillips Stores, Inc. the summarized data above.
- (b) Prepare the entry to record the gross profit realized during 2010.

- 6 P18-12 (Installment-Sales Computation and Entries—Periodic Inventory)** Mantle Inc. sells merchandise for cash and also on the installment plan. Entries to record cost of goods sold are made at the end of each year.

Repossessions of merchandise (sold in 2010) were made in 2011 and were recorded correctly as follows.

Deferred Gross Profit, 2010	7,200	
Repossessed Merchandise	8,000	
Loss on Repossession	2,800	
Installment Accounts Receivable, 2010		18,000

Part of this repossessed merchandise was sold for cash during 2011, and the sale was recorded by a debit to Cash and a credit to Sales.

The inventory of repossessed merchandise on hand December 31, 2011, is \$4,000; of new merchandise, \$127,400. There was no repossessed merchandise on hand January 1, 2011.

Collections on accounts receivable during 2011 were:

Installment Accounts Receivable, 2010	\$80,000
Installment Accounts Receivable, 2011	50,000

The cost of the merchandise sold under the installment plan during 2011 was \$111,600.

The rate of gross profit on 2010 and on 2011 installment sales can be computed from the information given.

**MANTLE INC.**  
**TRIAL BALANCE**  
**DECEMBER 31, 2011**

	Dr.	Cr.
Cash	\$118,400	
Installment Accounts Receivable, 2010	80,000	
Installment Accounts Receivable, 2011	130,000	
Inventory, Jan. 1, 2011	120,000	
Repossessed Merchandise	8,000	
Accounts Payable		\$ 47,200
Deferred Gross Profit, 2010		64,000
Capital Stock, Common		200,000
Retained Earnings		40,000
Sales		400,000
Installment Sales		180,000
Purchases	360,000	
Loss on Repossession	2,800	
Operating Expenses	112,000	
	<u>\$931,200</u>	<u>\$931,200</u>

**Instructions**

- (a) From the trial balance and other information given above, prepare adjusting and closing entries as of December 31, 2011.
- (b) Prepare an income statement for the year ended December 31, 2011. Include only the realized gross profit in the income statement.

 **P18-13 (Installment Repossession Entries)** Selected transactions of TV Land Company are presented below.

1. A television set costing \$540 is sold to Jack Matre on November 1, 2010, for \$900. Matre makes a down payment of \$300 and agrees to pay \$30 on the first of each month for 20 months thereafter.
2. Matre pays the \$30 installment due December 1, 2010.
3. On December 31, 2010, the appropriate entries are made to record profit realized on the installment sales.
4. The first seven 2011 installments of \$30 each are paid by Matre. (Make one entry.)
5. In August 2011 the set is repossessed, after Matre fails to pay the August 1 installment and indicates that he will be unable to continue the payments. The estimated fair value of the repossessed set is \$100.

**Instructions**

Prepare journal entries to record the transactions above on the books of TV Land Company. Closing entries should not be made.

 **P18-14 (Installment-Sales Computations and Schedules)** Saprano Company, on January 2, 2010, entered into a contract with a manufacturing company to purchase room-size air conditioners and to sell the units on an installment plan with collections over approximately 30 months with no carrying charge.

For income tax purposes Saprano Company elected to report income from its sales of air conditioners according to the installment-sales method.

Purchases and sales of new units were as follows.

Year	Units Purchased		Units Sold	
	Quantity	Price Each	Quantity	Price Each
2010	1,400	\$130	1,100	\$200
2011	1,200	112	1,500	170
2012	900	136	800	205

Collections on installment sales were as follows.

	Collections Received		
	2010	2011	2012
2010 sales	\$42,000	\$88,000	\$ 80,000
2011 sales		51,000	110,000
2012 sales			34,600

In 2012, 50 units from the 2011 sales were repossessed and sold for \$120 each on the installment plan. At the time of repossession, \$2,000 had been collected from the original purchasers, and the units had a fair value of \$3,000.

General and administrative expenses for 2012 were \$60,000. No charge has been made against current income for the applicable insurance expense from a 3-year policy expiring June 30, 2013, costing \$7,200, and for an advance payment of \$12,000 on a new contract to purchase air conditioners beginning January 2, 2013.

**Instructions**

Assuming that the weighted-average method is used for determining the inventory cost, including repossessed merchandise, prepare schedules computing for 2010, 2011, and 2012:

- (a) (1) The cost of goods sold on installments.
- (2) The average unit cost of goods sold on installments for each year.
- (b) The gross profit percentages for 2010, 2011, and 2012.
- (c) The gain or loss on repossessions in 2012.
- (d) The net income from installment sales for 2012. (Ignore income taxes.)

(AICPA adapted)

**P18-15 (Completed-Contract Method)** Monat Construction Company, Inc., entered into a firm fixed-price contract with Hyatt Clinic on July 1, 2010, to construct a four-story office building. At that time, Monat estimated that it would take between 2 and 3 years to complete the project. The total contract price for construction of the building is \$4,400,000. Monat appropriately accounts for this contract under the completed-contract method in its financial statements and for income tax reporting. The building was deemed substantially completed on December 31, 2012. Estimated percentage of completion, accumulated contract costs incurred, estimated costs to complete the contract, and accumulated billings to the Hyatt Clinic under the contract are shown below.

	At December 31, 2010	At December 31, 2011	At December 31, 2012
Percentage of completion	30%	70%	100%
Contract costs incurred	\$1,140,000	\$3,290,000	\$4,800,000
Estimated costs to complete the contract	\$2,660,000	\$1,410,000	—0—
Billings to Hyatt Clinic	\$1,400,000	\$2,500,000	\$4,300,000

**Instructions**

- (a) Prepare schedules to compute the amount to be shown as “Cost of uncompleted contract in excess of related billings” or “Billings on uncompleted contract in excess of related costs” at December 31, 2010, 2011, and 2012. Ignore income taxes. Show supporting computations in good form.
- (b) Prepare schedules to compute the profit or loss to be recognized as a result of this contract for the years ended December 31, 2010, 2011, and 2012. Ignore income taxes. Show supporting computations in good form.

(AICPA adapted)

**P18-16 (Revenue Recognition Methods—Comparison)** Sue’s Construction is in its fourth year of business. Sue performs long-term construction projects and accounts for them using the completed-contract

 method. Sue built an apartment building at a price of \$1,100,000. The costs and billings for this contract for the first three years are as follows.

	2010	2011	2012
Costs incurred to date	\$240,000	\$600,000	\$ 790,000
Estimated costs yet to be incurred	560,000	200,000	–0–
Customer billings to date	150,000	410,000	1,100,000
Collection of billings to date	120,000	340,000	950,000

Sue has contacted you, a certified public accountant, about the following concern. She would like to attract some investors, but she believes that in order to recognize revenue she must first “deliver” the product. Therefore, on her balance sheet, she did not recognize any gross profits from the above contract until 2012, when she recognized the entire \$310,000. That looked good for 2012, but the preceding years looked grim by comparison. She wants to know about an alternative to this completed-contract revenue recognition.

**Instructions**

Draft a letter to Sue, telling her about the percentage-of-completion method of recognizing revenue. Compare it to the completed-contract method. Explain the idea behind the percentage-of-completion method. In addition, illustrate how much revenue she could have recognized in 2010, 2011, and 2012 if she had used this method.

**P18-17 (Comprehensive Problem—Long-Term Contracts)** You have been engaged by Buhl Construction Company to advise it concerning the proper accounting for a series of long-term contracts. Buhl commenced doing business on January 1, 2010. Construction activities for the first year of operations are shown below. All contract costs are with different customers, and any work remaining at December 31, 2010, is expected to be completed in 2011.

Project	Total Contract Price	Billings Through 12/31/10	Cash Collections Through 12/31/10	Contract Costs Incurred Through 12/31/10	Estimated Additional Costs to Complete
A	\$ 300,000	\$200,000	\$180,000	\$248,000	\$ 72,000
B	350,000	110,000	105,000	67,800	271,200
C	280,000	280,000	255,000	186,000	–0–
D	200,000	35,000	25,000	118,000	87,000
E	240,000	205,000	200,000	190,000	10,000
	<u>\$1,370,000</u>	<u>\$830,000</u>	<u>\$765,000</u>	<u>\$809,800</u>	<u>\$440,200</u>

**Instructions**

- (a) Prepare a schedule to compute gross profit (loss) to be reported, unbilled contract costs and recognized profit, and billings in excess of costs and recognized profit using the percentage-of-completion method.
- (b) Prepare a partial income statement and balance sheet to indicate how the information would be reported for financial statement purposes.
- (c) Repeat the requirements for part (a) assuming Buhl uses the completed-contract method.
- (d) Using the responses above for illustrative purposes, prepare a brief report comparing the conceptual merits (both positive and negative) of the two revenue recognition approaches.

**CONCEPTS FOR ANALYSIS**

**CA18-1 (Revenue Recognition—Alternative Methods)** Peterson Industries has three operating divisions—Farber Mining, Glesen Paperbacks, and Enyart Protection Devices. Each division maintains its own accounting system and method of revenue recognition.

**Farber Mining**

Farber Mining specializes in the extraction of precious metals such as silver, gold, and platinum. During the fiscal year ended November 30, 2010, Farber entered into contracts worth \$2,250,000 and shipped metals worth \$2,000,000. A quarter of the shipments were made from inventories on hand at the beginning of the fiscal year, and the remainder were made from metals that were mined during the year. Mining totals for the year, valued at market prices, were: silver at \$750,000, gold at \$1,400,000, and platinum at \$490,000. Farber uses the completion-of-production method to recognize revenue, because its operations meet the specified criteria—i.e., reasonably assured sales prices, interchangeable units, and insignificant distribution costs.

**Enyart Paperbacks**

Enyart Paperbacks sells large quantities of novels to a few book distributors that in turn sell to several national chains of bookstores. Enyart allows distributors to return up to 30% of sales, and distributors give the same terms to bookstores. While returns from individual titles fluctuate greatly, the returns from distributors have averaged 20% in each of the past 5 years. A total of \$7,000,000 of paperback novel sales were made to distributors during the fiscal year. On November 30, 2010, \$2,200,000 of fiscal 2010 sales were still subject to return privileges over the next 6 months. The remaining \$4,800,000 of fiscal 2010 sales had actual returns of 21%. Sales from fiscal 2009 totaling \$2,500,000 were collected in fiscal 2010, with less than 18% of sales returned. Enyart records revenue according to the method referred to as revenue recognition when the right of return exits, because all applicable criteria for use of this method are met by Enyart's operations.

**Glesen Protection Devices**

Glesen Protection Devices works through manufacturers' agents in various cities. Orders for alarm systems and down payments are forwarded from agents, and Glesen ships the goods f.o.b. shipping point. Customers are billed for the balance due plus actual shipping costs. The firm received orders for \$6,000,000 of goods during the fiscal year ended November 30, 2010. Down payments of \$600,000 were received, and \$5,000,000 of goods were billed and shipped. Actual freight costs of \$100,000 were also billed. Commissions of 10% on product price were paid to manufacturers' agents after the goods were shipped to customers. Such goods are warranted for 90 days after shipment, and warranty returns have been about 1% of sales. Revenue is recognized at the point of sale by Glesen.

**Instructions**

- (a) There are a variety of methods for revenue recognition. Define and describe each of the following methods of revenue recognition, and indicate whether each is in accordance with generally accepted accounting principles.
  - (1) Completion-of-production method.
  - (2) Percentage-of-completion method.
  - (3) Installment-sales method.
- (b) Compute the revenue to be recognized in the fiscal year ended November 30, 2010, for
  - (1) Farber Mining.
  - (2) Enyart Paperbacks.
  - (3) Glesen Protection Devices.

(CMA adapted)

**CA18-2 (Recognition of Revenue—Theory)** Revenue is usually recognized at the point of sale. Under special circumstances, however, bases other than the point of sale are used for the timing of revenue recognition.

**Instructions**

- (a) Why is the point of sale usually used as the basis for the timing of revenue recognition?
- (b) Disregarding the special circumstances when bases other than the point of sale are used, discuss the merits of each of the following objections to the sales basis of revenue recognition:
  - (1) It is too conservative because revenue is earned throughout the entire process of production.
  - (2) It is not conservative enough because accounts receivable do not represent disposable funds, sales returns and allowances may be made, and collection and bad debt expenses may be incurred in a later period.
- (c) Revenue may also be recognized (1) during production and (2) when cash is received. For each of these two bases of timing revenue recognition, give an example of the circumstances in which it is properly used and discuss the accounting merits of its use in lieu of the sales basis.

(AICPA adapted)

**CA18-3 (Recognition of Revenue—Theory)** The earning of revenue by a business enterprise is recognized for accounting purposes when the transaction is recorded. In some situations, revenue is recognized approximately as it is earned in the economic sense. In other situations, however, accountants have developed guidelines for recognizing revenue by other criteria, such as at the point of sale.

**Instructions**

(Ignore income taxes.)

- (a) Explain and justify why revenue is often recognized as earned at time of sale.
- (b) Explain in what situations it would be appropriate to recognize revenue as the productive activity takes place.
- (c) At what times, other than those included in (a) and (b) above, may it be appropriate to recognize revenue? Explain.

**CA18-4 (Recognition of Revenue—Bonus Dollars)** Griseta & Dubel Inc. was formed early this year to sell merchandise credits to merchants who distribute the credits free to their customers. For example, customers can earn additional credits based on the dollars they spend with a merchant (e.g., airlines and hotels). Accounts for accumulating the credits and catalogs illustrating the merchandise for which the credits may be exchanged are maintained online. Centers with inventories of merchandise premiums have been established for redemption of the credits. Merchants may not return unused credits to Griseta & Dubel.

The following schedule expresses Griseta & Dubel's expectations as to percentages of a normal month's activity that will be attained. For this purpose, a "normal month's activity" is defined as the level of operations expected when expansion of activities ceases or tapers off to a stable rate. The company expects that this level will be attained in the third year and that sales of credits will average \$6,000,000 per month throughout the third year.

Month	Actual Credit Sales Percent	Merchandise Premium Purchases Percent	Credit Redemptions Percent
6th	30%	40%	10%
12th	60	60	45
18th	80	80	70
24th	90	90	80
30th	100	100	95

Griseta & Dubel plans to adopt an annual closing date at the end of each 12 months of operation.

#### Instructions

- Discuss the factors to be considered in determining when revenue should be recognized in measuring the income of a business enterprise.
- Discuss the accounting alternatives that should be considered by Griseta & Dubel Inc. for the recognition of its revenues and related expenses.
- For each accounting alternative discussed in (b), give balance sheet accounts that should be used and indicate how each should be classified.

(AICPA adapted)

**CA18-5 (Recognition of Revenue from Subscriptions)** *Cutting Edge* is a monthly magazine that has been on the market for 18 months. It currently has a circulation of 1.4 million copies. Negotiations are underway to obtain a bank loan in order to update the magazine's facilities. They are producing close to capacity and expect to grow at an average of 20% per year over the next 3 years.

After reviewing the financial statements of *Cutting Edge*, Andy Rich, the bank loan officer, had indicated that a loan could be offered to *Cutting Edge* only if it could increase its current ratio and decrease its debt to equity ratio to a specified level.

Jonathan Embry, the marketing manager of *Cutting Edge*, has devised a plan to meet these requirements. Embry indicates that an advertising campaign can be initiated to immediately increase circulation. The potential customers would be contacted after the purchase of another magazine's mailing list. The campaign would include:

- An offer to subscribe to *Cutting Edge* at 3/4 the normal price.
- A special offer to all new subscribers to receive the most current world atlas whenever requested at a guaranteed price of \$2.
- An unconditional guarantee that any subscriber will receive a full refund if dissatisfied with the magazine.

Although the offer of a full refund is risky, Embry claims that few people will ask for a refund after receiving half of their subscription issues. Embry notes that other magazine companies have tried this sales promotion technique and experienced great success. Their average cancellation rate was 25%. On average, each company increased its initial circulation threefold and in the long run increased circulation to twice that which existed before the promotion. In addition, 60% of the new subscribers are expected to take advantage of the atlas premium. Embry feels confident that the increased subscriptions from the advertising campaign will increase the current ratio and decrease the debt to equity ratio.

You are the controller of *Cutting Edge* and must give your opinion of the proposed plan.

#### Instructions

- When should revenue from the new subscriptions be recognized?
- How would you classify the estimated sales returns stemming from the unconditional guarantee?
- How should the atlas premium be recorded? Is the estimated premium claims a liability? Explain.
- Does the proposed plan achieve the goals of increasing the current ratio and decreasing the debt to equity ratio?

**CA18-6 (Long-Term Contract—Percentage-of-Completion)** Widjaja Company is accounting for a long-term construction contract using the percentage-of-completion method. It is a 4-year contract that is currently in its second year. The latest estimates of total contract costs indicate that the contract will be completed at a profit to Widjaja Company.

**Instructions**

- What theoretical justification is there for Widjaja Company's use of the percentage-of-completion method?
- How would progress billings be accounted for? Include in your discussion the classification of progress billings in Widjaja Company financial statements.
- How would the income recognized in the second year of the 4-year contract be determined using the cost-to-cost method of determining percentage of completion?
- What would be the effect on earnings per share in the second year of the 4-year contract of using the percentage-of-completion method instead of the completed-contract method? Discuss.

(AICPA adapted)

**CA18-7 (Revenue Recognition—Real Estate Development)** Lillehammer Lakes is a new recreational real estate development which consists of 500 lake-front and lake-view lots. As a special incentive to the first 100 buyers of lake-view lots, the developer is offering 3 years of free financing on 10-year, 12% notes, no down payment, and one week at a nearby established resort—"a \$1,200 value." The normal price per lot is \$15,000. The cost per lake-view lot to the developer is an estimated average of \$3,000. The development costs continue to be incurred; the actual average cost per lot is not known at this time. The resort promotion cost is \$700 per lot. The notes are held by Harper Corp., a wholly owned subsidiary.

**Instructions**

- Discuss the revenue recognition and gross profit measurement issues raised by this situation.
- How would the developer's past financial and business experience influence your decision concerning the recording of these transactions?
- Assume 50 persons have accepted the offer, signed 10-year notes, and have stayed at the local resort. Prepare the journal entries that you believe are proper.
- What should be disclosed in the notes to the financial statements?

**CA18-8 (Revenue Recognition)** Nimble Health and Racquet Club (NHRC), which operates eight clubs in the Chicago metropolitan area, offers one-year memberships. The members may use any of the eight facilities but must reserve racquetball court time and pay a separate fee before using the court. As an incentive to new customers, NHRC advertised that any customers not satisfied for any reason could receive a refund of the remaining portion of unused membership fees. Membership fees are due at the beginning of the individual membership period. However, customers are given the option of financing the membership fee over the membership period at a 9% interest rate.

Some customers have expressed a desire to take only the regularly scheduled aerobic classes without paying for a full membership. During the current fiscal year, NHRC began selling coupon books for aerobic classes to accommodate these customers. Each book is dated and contains 50 coupons that may be redeemed for any regularly scheduled aerobics class over a one-year period. After the one-year period, unused coupons are no longer valid.

During 2008, NHRC expanded into the health equipment market by purchasing a local company that manufactures rowing machines and cross-country ski machines. These machines are used in NHRC's facilities and are sold through the clubs and mail order catalogs. Customers must make a 20% down payment when placing an equipment order; delivery is 60–90 days after order placement. The machines are sold with a 2-year unconditional guarantee. Based on past experience, NHRC expects the costs to repair machines under guarantee to be 4% of sales.

NHRC is in the process of preparing financial statements as of May 31, 2011, the end of its fiscal year. Marvin Bush, corporate controller, expressed concern over the company's performance for the year and decided to review the preliminary financial statements prepared by Joyce Kiley, NHRC's assistant controller. After reviewing the statements, Bush proposed that the following changes be reflected in the May 31, 2011, published financial statements.

- Membership revenue should be recognized when the membership fee is collected.
- Revenue from the coupon books should be recognized when the books are sold.
- Down payments on equipment purchases and expenses associated with the guarantee on the rowing and cross-country machines should be recognized when paid.

Kiley indicated to Bush that the proposed changes are not in accordance with generally accepted accounting principles, but Bush insisted that the changes be made. Kiley believes that Bush wants to manage income to forestall any potential financial problems and increase his year-end bonus. At this point, Kiley is unsure what action to take.

**Instructions**

- (a) (1) Describe when Nimble Health and Racquet Club (NHRC) should recognize revenue from membership fees, court rentals, and coupon book sales.
- (2) Describe how NHRC should account for the down payments on equipment sales, explaining when this revenue should be recognized.
- (3) Indicate when NHRC should recognize the expense associated with the guarantee of the rowing and cross-country machines.
- (b) Discuss why Marvin Bush's proposed changes and his insistence that the financial statement changes be made is unethical. Structure your answer around or to include the following aspects of ethical conduct: competence, confidentiality, integrity, and/or objectivity.
- (c) Identify some specific actions Joyce Kiley could take to resolve this situation.

(CMA adapted)

**CA18-9 (Revenue Recognition—Membership Fees)** Midwest Health Club offers one-year memberships. Membership fees are due in full at the beginning of the individual membership period. As an incentive to new customers, MHC advertised that any customers not satisfied for any reason could receive a refund of the remaining portion of unused membership fees. As a result of this policy, Richard Nies, corporate controller, recognized revenue ratably over the life of the membership.

MHC is in the process of preparing its year-end financial statements. Rachel Avery, MHC's treasurer, is concerned about the company's lackluster performance this year. She reviews the financial statements Nies prepared and tells Nies to recognize membership revenue when the fees are received.

**Instructions**

Answer the following questions.

- (a) What are the ethical issues involved?
- (b) What should Nies do?

**\*CA18-10 (Franchise Revenue)** Amigos Burrito Inc. sells franchises to independent operators throughout the northwestern part of the United States. The contract with the franchisee includes the following provisions.

1. The franchisee is charged an initial fee of \$120,000. Of this amount, \$20,000 is payable when the agreement is signed, and a \$20,000 non-interest-bearing note is payable at the end of each of the 5 subsequent years.
2. All of the initial franchise fee collected by Amigos is to be refunded and the remaining obligation canceled if, for any reason, the franchisee fails to open his or her franchise.
3. In return for the initial franchise fee, Amigos agrees to (a) assist the franchisee in selecting the location for the business, (b) negotiate the lease for the land, (c) obtain financing and assist with building design, (d) supervise construction, (e) establish accounting and tax records, and (f) provide expert advice over a 5-year period relating to such matters as employee and management training, quality control, and promotion.
4. In addition to the initial franchise fee, the franchisee is required to pay to Amigos a monthly fee of 2% of sales for menu planning, receipt innovations, and the privilege of purchasing ingredients from Amigos at or below prevailing market prices.

Management of Amigos Burrito estimates that the value of the services rendered to the franchisee at the time the contract is signed amounts to at least \$20,000. All franchisees to date have opened their locations at the scheduled time, and none have defaulted on any of the notes receivable.

The credit ratings of all franchisees would entitle them to borrow at the current interest rate of 10%. The present value of an ordinary annuity of five annual receipts of \$20,000 each discounted at 10% is \$75,816.

**Instructions**

- (a) Discuss the alternatives that Amigos Burrito Inc. might use to account for the initial franchise fees, evaluate each by applying generally accepted accounting principles, and give illustrative entries for each alternative.
- (b) Given the nature of Amigos Burrito's agreement with its franchisees, when should revenue be recognized? Discuss the question of revenue recognition for both the initial franchise fee and the additional monthly fee of 2% of sales, and give illustrative entries for both types of revenue.
- (c) Assume that Amigos Burrito sells some franchises for \$100,000, which includes a charge of \$20,000 for the rental of equipment for its useful life of 10 years; that \$50,000 of the fee is payable immediately and the balance on non-interest-bearing notes at \$10,000 per year; that no portion of the \$20,000 rental payment is refundable in case the franchisee goes out of business; and that title to the equipment remains with the franchisor. Under those assumptions, what would be the preferable method of accounting for the rental portion of the initial franchise fee? Explain.

(AICPA adapted)

## USING YOUR JUDGMENT

### FINANCIAL REPORTING

#### Financial Reporting Problem

##### **The Procter & Gamble Company (P&G)**

The financial statements of **P&G** are presented in Appendix 5B or can be accessed at the book's companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso).

##### Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- (a) What were P&G's sales for 2007?
- (b) What was the percentage of increase or decrease in P&G's sales from 2006 to 2007? From 2005 to 2006? From 2002 to 2007?
- (c) In its notes to the financial statements, what criteria does P&G use to recognize revenue?
- (d) How does P&G account for trade promotions? Does the accounting conform to accrual accounting concepts? Explain.

#### Comparative Analysis Case

##### **The Coca-Cola Company and PepsiCo, Inc.**

*The Coca-Cola Company*

##### Instructions

Go to book's companion website and use information found there to answer the following questions related to **The Coca-Cola Company** and **PepsiCo, Inc.**

- (a) What were Coca-Cola's and PepsiCo's net revenues (sales) for the year 2007? Which company increased its revenues more (dollars and percentage) from 2006 to 2007?
- (b) Are the revenue recognition policies of Coca-Cola and PepsiCo similar? Explain.
- (c) In which foreign countries (geographic areas) did Coca-Cola (see Note 21) and PepsiCo experience significant revenues in 2007? Compare the amounts of foreign revenues to U.S. revenues for both Coca-Cola and PepsiCo.

#### Financial Statement Analysis Case

##### **Westinghouse Electric Corporation**

The following note appears in the "Summary of Significant Accounting Policies" section of the Annual Report of **Westinghouse Electric Corporation**.

**Note 1 (in part): Revenue Recognition.** Sales are primarily recorded as products are shipped and services are rendered. The percentage-of-completion method of accounting is used for nuclear steam supply system orders with delivery schedules generally in excess of five years and for certain construction projects where this method of accounting is consistent with industry practice.

WFSI revenues are generally recognized on the accrual method. When accounts become delinquent for more than two payment periods, usually 60 days, income is recognized only as payments are received. Such delinquent accounts for which no payments are received in the current month, and other accounts on which income is not being recognized because the receipt of either principal or interest is questionable, are classified as nonearning receivables.

##### Instructions

- (a) Identify the revenue recognition methods used by Westinghouse Electric as discussed in its note on significant accounting policies.
- (b) Under what conditions are the revenue recognition methods identified in the first paragraph of Westinghouse's note above acceptable?
- (c) From the information provided in the second paragraph of Westinghouse's note, identify the type of operation being described and defend the acceptability of the revenue recognition method.

## BRIDGE TO THE PROFESSION

### Professional Research: FASB Codification

Employees at your company disagree about the accounting for sales returns. The sales manager believes that granting more generous return provisions can give the company a competitive edge and increase sales revenue. The controller cautions that, depending on the terms granted, loose return provisions might lead to non-GAAP revenue recognition. The company CFO would like you to research the issue to provide an authoritative answer.

#### Instructions

Access the FASB Codification at <http://asc.fasb.org/home> to conduct research using the Codification Research System to prepare responses to the following items. Provide Codification references for your responses.

- What is the authoritative literature addressing revenue recognition when right of return exists?
- What is meant by “right of return”?
- When there is a right of return, what conditions must the company meet to recognize the revenue at the time of sale?
- What factors may impair the ability to make a reasonable estimate of future returns?

### Professional Simulation

Go to the book’s companion website, at [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), to find an interactive problem that simulates the computerized CPA exam. The professional simulation for this chapter asks you to address questions related to the accounting for revenue recognition.

**Remember to check the book’s companion website to find additional resources for this chapter.**

## CHAPTER 19

# ACCOUNTING FOR INCOME TAXES

### LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Identify differences between pretax financial income and taxable income.
- 2 Describe a temporary difference that results in future taxable amounts.
- 3 Describe a temporary difference that results in future deductible amounts.
- 4 Explain the purpose of a deferred tax asset valuation allowance.
- 5 Describe the presentation of income tax expense in the income statement.
- 6 Describe various temporary and permanent differences.
- 7 Explain the effect of various tax rates and tax rate changes on deferred income taxes.
- 8 Apply accounting procedures for a loss carryback and a loss carryforward.
- 9 Describe the presentation of deferred income taxes in financial statements.
- 10 Indicate the basic principles of the asset-liability method.

### TAX UNCERTAINTY

One set of costs that companies manage are those related to taxes. In fact, in today's competitive markets, managers are expected to look for places in the tax code that a company can exploit to pay less tax to state and federal governments. By paying less in taxes, companies have more cash available to fund operations, finance expansion, and create new jobs. What happens, though, when companies push the tax-saving envelope? Well, they may face a tax audit, the results of which could hurt their financial statements.

A notable example of corporate maneuvering to reduce taxable income involved **Limited Brands Inc.** It managed state-tax costs downward by locating part of its business in low-tax-rate states while operating retail outlets elsewhere. For example, by basing a subsidiary (which does nothing more than hold the trademarks for Bath and Body Works and Victoria's Secret) in Delaware, it is able to transfer hundreds of millions of dollars from Limited's retail outlets in high-tax states into Delaware, which has a state tax rate of zero.

However, the IRS and some states have been increasing their scrutiny of transactions that seem done only to avoid taxes and that do not serve a legitimate business purpose. In

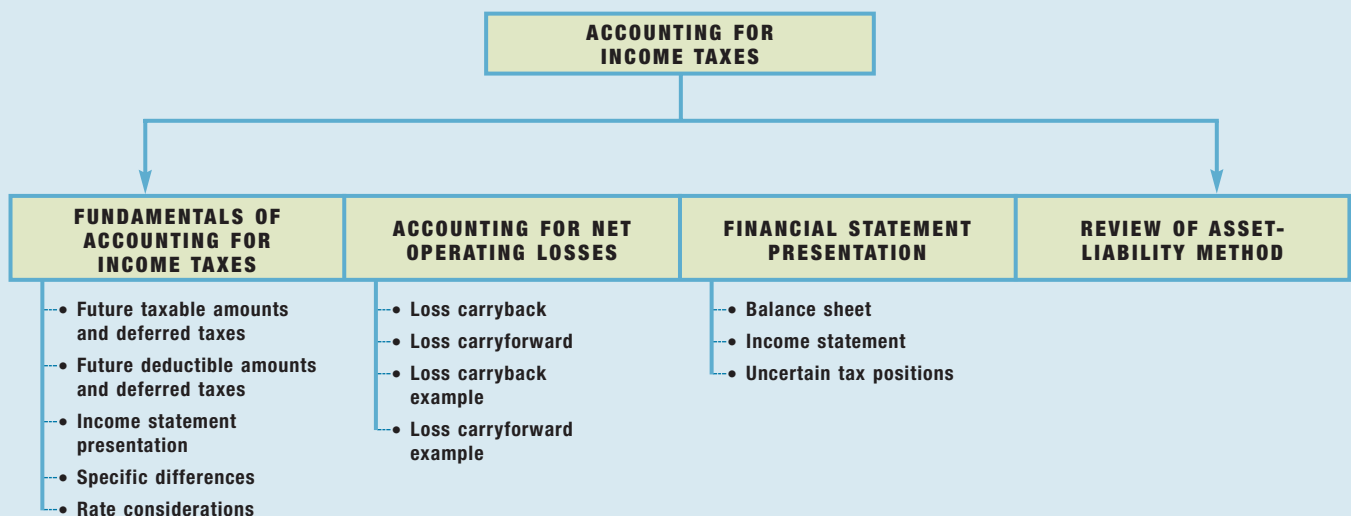

one case, an attorney for North Carolina alleged that Limited Brands Inc. “. . . engaged in hocus pocus bookkeeping and deceptive accounting,” the sole purpose of which was to reduce its state-tax bill. The court agreed, and Limited Inc. had to pay millions of dollars in taxes dating back to 1994.

Limited Brands shareholders likely got an unpleasant surprise when they learned the company also had a big tax obligation from its “uncertain tax position” related to off-shore locations. The same can be said for many other companies that take tax deductions that may not hold up under the scrutiny of the tax court or an IRS audit. Unfortunately, at the time, accounting rules were not very specific on when companies had to record an obligation for taxes owed on uncertain tax positions. Recently the FASB has clarified the rules for accounting for uncertain tax positions. Under these new guidelines, some companies will be winners, and some companies will be losers. Companies that have used stricter guidelines in accounting for these situations may have their tax liabilities decrease or their tax assets increase. Others that followed less-conservative guidelines may have to increase their liabilities or reduce their assets, with a resulting negative effect on net income.

*Source:* See Glenn Simpson, “A Tax Maneuver in Delaware Puts Squeeze on States,” *Wall Street Journal* (August 9, 2002), p. A1.

## PREVIEW OF CHAPTER 19

As our opening story indicates, companies spend a considerable amount of time and effort to minimize their income tax payments. And with good reason, as income taxes are a major cost of doing business for most corporations. Yet, at the same time, companies must present financial information to the investment community that provides a clear picture of present and potential tax obligations and tax benefits. In this chapter, we discuss the basic guidelines that companies must follow in reporting income taxes. The content and organization of the chapter are as follows.

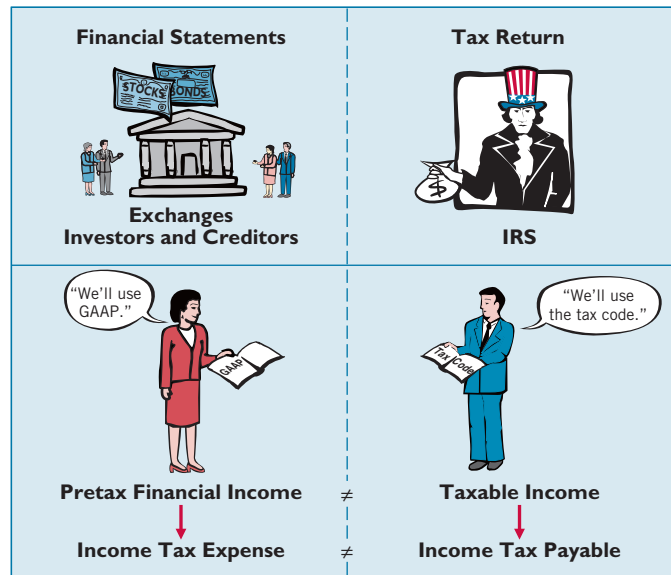

## FUNDAMENTALS OF ACCOUNTING FOR INCOME TAXES

**Objective 1**

Identify differences between pretax financial income and taxable income.

Up to this point, you have learned the basic guidelines that corporations use to report information to investors and creditors. Corporations also must file income tax returns following the guidelines developed by the Internal Revenue Service (IRS). Because GAAP and tax regulations differ in a number of ways, so frequently do pretax financial income and taxable income. Consequently, the amount that a company reports as tax expense will differ from the amount of taxes payable to the IRS. Illustration 19-1 highlights these differences.

**ILLUSTRATION 19-1**  
Fundamental Differences between Financial and Tax Reporting

**Pretax financial income** is a *financial reporting* term. It also is often referred to as *income before taxes*, *income for financial reporting purposes*, or *income for book purposes*. Companies determine pretax financial income according to GAAP. They measure it with the objective of providing useful information to investors and creditors.

**Taxable income** (income for tax purposes) is a *tax accounting* term. It indicates the amount used to compute income tax payable. Companies determine taxable income according to the Internal Revenue Code (the tax code). Income taxes provide money to support government operations.

To illustrate how differences in GAAP and IRS rules affect financial reporting and taxable income, assume that Chelsea Inc. reported revenues of \$130,000 and expenses of \$60,000 in each of its first three years of operations. Illustration 19-2 shows the (partial) income statement over these three years.

**ILLUSTRATION 19-2**  
Financial Reporting Income

CHELSEA INC. GAAP REPORTING				
	2010	2011	2012	Total
Revenues	\$130,000	\$130,000	\$130,000	
Expenses	60,000	60,000	60,000	
<b>Pretax financial income</b>	<b>\$ 70,000</b>	<b>\$ 70,000</b>	<b>\$ 70,000</b>	<b>\$ 210,000</b>
<b>Income tax expense (40%)</b>	<b>\$ 28,000</b>	<b>\$ 28,000</b>	<b>\$ 28,000</b>	<b>\$ 84,000</b>

For tax purposes (following the tax code), Chelsea reported the same expenses to the IRS in each of the years. But, as Illustration 19-3 shows, Chelsea reported taxable revenues of \$100,000 in 2010, \$150,000 in 2011, and \$140,000 in 2012.

CHELSEA INC. TAX REPORTING				
	2010	2011	2012	Total
Revenues	\$100,000	\$150,000	\$140,000	
Expenses	60,000	60,000	60,000	
<b>Taxable income</b>	<b>\$ 40,000</b>	<b>\$ 90,000</b>	<b>\$ 80,000</b>	<b>\$ 210,000</b>
<b>Income tax payable (40%)</b>	<b>\$ 16,000</b>	<b>\$ 36,000</b>	<b>\$ 32,000</b>	<b>\$ 84,000</b>

**ILLUSTRATION 19-3**  
Tax Reporting Income

Income tax expense and income tax payable differed over the three years, but were equal **in total**, as Illustration 19-4 shows.

CHELSEA INC. INCOME TAX EXPENSE AND INCOME TAX PAYABLE				
	2010	2011	2012	Total
Income tax expense	\$28,000	\$28,000	\$28,000	\$84,000
Income tax payable	16,000	36,000	32,000	84,000
<b>Difference</b>	<b>\$12,000</b>	<b>\$ (8,000)</b>	<b>\$ (4,000)</b>	<b>\$ 0</b>

**ILLUSTRATION 19-4**  
Comparison of Income Tax Expense to Income Tax Payable

The differences between income tax expense and income tax payable in this example arise for a simple reason. For financial reporting, companies use the full accrual method to report revenues. For tax purposes, they use a modified cash basis. As a result, Chelsea reports pretax financial income of \$70,000 and income tax expense of \$28,000 for each of the three years. However, taxable income fluctuates. For example, in 2010 taxable income is only \$40,000, so Chelsea owes just \$16,000 to the IRS that year. Chelsea classifies the income tax payable as a current liability on the balance sheet.

As Illustration 19-4 indicates, for Chelsea the \$12,000 (\$28,000 – \$16,000) difference between income tax expense and income tax payable in 2010 reflects taxes that it will pay in future periods. This \$12,000 difference is often referred to as a **deferred tax amount**. In this case it is a **deferred tax liability**. In cases where taxes will be lower in the future, Chelsea records a **deferred tax asset**. We explain the measurement and accounting for deferred tax liabilities and assets in the following two sections.<sup>1</sup>

**INTERNATIONAL INSIGHT**

In some countries, taxable income equals pretax financial income. As a consequence, accounting for differences between tax and book income is insignificant.

### Future Taxable Amounts and Deferred Taxes

The example summarized in Illustration 19-4 shows how income tax payable can differ from income tax expense. This can happen when there are temporary differences between the amounts reported for tax purposes and those reported for book purposes. A **temporary difference** is the difference between the tax basis of an asset or liability and its reported (carrying or book) amount in the financial statements, which will result in taxable amounts or deductible amounts in future

**Objective 2**

Describe a temporary difference that results in future taxable amounts.

<sup>1</sup>Determining the amount of tax to pay the IRS is a costly exercise for both individuals and companies. For example, a recent study documented that the average person spends about \$200 annually collecting, calculating, and compiling tax data. U.S. corporations had a total cost of compliance of \$170 billion. This is not surprising, when you consider that General Electric filed a return equivalent to 24,000 printed pages. J. Abrams, "Americans Spend 27 Hours, \$200," *Naples (FL) Daily News* (April 15, 2008), p. 3a.

years. **Taxable amounts** increase taxable income in future years. **Deductible amounts** decrease taxable income in future years.

In Chelsea’s situation, the only difference between the book basis and tax basis of the assets and liabilities relates to accounts receivable that arose from revenue recognized for book purposes. Illustration 19-5 indicates that Chelsea reports accounts receivable at \$30,000 in the December 31, 2010, GAAP-basis balance sheet. However, the receivables have a zero tax basis.

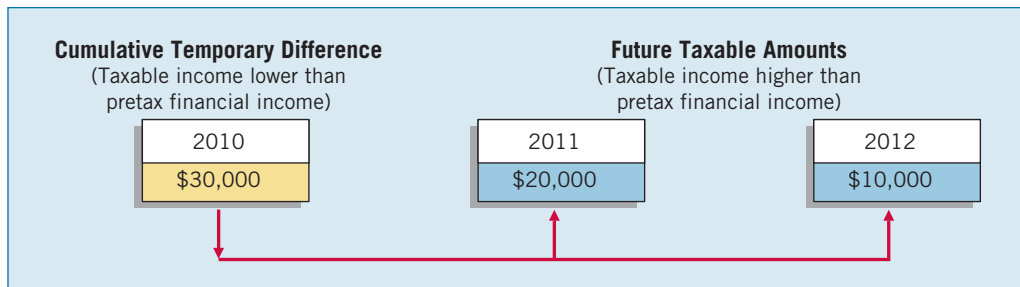

**ILLUSTRATION 19-5**  
Temporary Difference,  
Sales Revenue

Per Books	12/31/10	Per Tax Return	12/31/10
Accounts receivable	<u>\$30,000</u>	Accounts receivable	<u>\$-0-</u>

What will happen to the \$30,000 temporary difference that originated in 2010 for Chelsea? Assuming that Chelsea expects to collect \$20,000 of the receivables in 2011 and \$10,000 in 2012, this collection results in future taxable amounts of \$20,000 in 2011 and \$10,000 in 2012. These future taxable amounts will cause taxable income to exceed pretax financial income in both 2011 and 2012.

An assumption inherent in a company’s GAAP balance sheet is that companies recover and settle the assets and liabilities at their reported amounts (carrying amounts). This assumption creates a requirement under accrual accounting to recognize *currently* the deferred tax consequences of temporary differences. That is, companies recognize the amount of income taxes that are payable (or refundable) when they recover and settle the reported amounts of the assets and liabilities, respectively. Illustration 19-6 shows the reversal of the temporary difference described in Illustration 19-5 and the resulting taxable amounts in future periods.

**ILLUSTRATION 19-6**  
Reversal of Temporary  
Difference, Chelsea Inc.

Chelsea assumes that it will collect the accounts receivable and report the \$30,000 collection as taxable revenues in future tax returns. A payment of income tax in both 2011 and 2012 will occur. Chelsea should therefore record in its books in 2010 the deferred tax consequences of the revenue and related receivables reflected in the 2010 financial statements. Chelsea does this by recording a deferred tax liability.

**Deferred Tax Liability**

A **deferred tax liability** is the deferred tax consequences attributable to taxable temporary differences. In other words, a **deferred tax liability represents the increase in taxes payable in future years as a result of taxable temporary differences existing at the end of the current year.**

Recall from the Chelsea example that income tax payable is \$16,000 ( $\$40,000 \times 40\%$ ) in 2010 (Illustration 19-4 on page 993). In addition, a temporary difference exists at year-end because Chelsea reports the revenue and related accounts receivable differently for book and tax purposes. The book basis of accounts receivable is \$30,000, and the tax basis is zero. Thus, the total deferred tax liability at the end of 2010 is \$12,000, computed as shown in Illustration 19-7 (on page 995).

Book basis of accounts receivable	\$30,000
Tax basis of accounts receivable	<u>-0-</u>
Cumulative temporary difference at the end of 2010	30,000
Tax rate	<u>40%</u>
<b>Deferred tax liability at the end of 2010</b>	<b><u>\$12,000</u></b>

**ILLUSTRATION 19-7**  
Computation of Deferred Tax Liability, End of 2010

Companies may also compute the deferred tax liability by preparing a schedule that indicates the future taxable amounts due to existing temporary differences. Such a schedule, as shown in Illustration 19-8, is particularly useful when the computations become more complex.

	Future Years		Total
	2011	2012	
Future taxable amounts	\$20,000	\$10,000	\$30,000
Tax rate	<u>40%</u>	<u>40%</u>	
<b>Deferred tax liability at the end of 2010</b>	<b><u>\$ 8,000</u></b>	<b><u>\$ 4,000</u></b>	<b><u>\$12,000</u></b>

**ILLUSTRATION 19-8**  
Schedule of Future Taxable Amounts

Because it is the first year of operations for Chelsea, there is no deferred tax liability at the beginning of the year. Chelsea computes the income tax expense for 2010 as shown in Illustration 19-9.

Deferred tax liability at end of 2010	\$12,000
Deferred tax liability at beginning of 2010	<u>-0-</u>
Deferred tax expense for 2010	12,000
Current tax expense for 2010 (Income tax payable)	<u>16,000</u>
<b>Income tax expense (total) for 2010</b>	<b><u>\$28,000</u></b>

**ILLUSTRATION 19-9**  
Computation of Income Tax Expense, 2010

This computation indicates that income tax expense has two components—**current tax expense** (the amount of income tax payable for the period) and deferred tax expense. **Deferred tax expense** is the increase in the deferred tax liability balance from the beginning to the end of the accounting period.

Companies credit taxes due and payable to Income Tax Payable, and credit the increase in deferred taxes to Deferred Tax Liability. They then debit the sum of those two items to Income Tax Expense. For Chelsea, it makes the following entry at the end of 2010.

Income Tax Expense	28,000	
Income Tax Payable		16,000
Deferred Tax Liability		12,000

At the end of 2011 (the second year), the difference between the book basis and the tax basis of the accounts receivable is \$10,000. Chelsea multiplies this difference by the applicable tax rate to arrive at the deferred tax liability of \$4,000 ( $\$10,000 \times 40\%$ ), which it reports at the end of 2011. Income tax payable for 2011 is \$36,000 (Illustration 19-3 on page 993), and the income tax expense for 2011 is as shown in Illustration 19-10.

Deferred tax liability at end of 2011	\$ 4,000
Deferred tax liability at beginning of 2011	<u>12,000</u>
Deferred tax expense (benefit) for 2011	(8,000)
Current tax expense for 2011 (Income tax payable)	<u>36,000</u>
<b>Income tax expense (total) for 2011</b>	<b><u>\$28,000</u></b>

**ILLUSTRATION 19-10**  
Computation of Income Tax Expense, 2011

Chelsea records income tax expense, the change in the deferred tax liability, and income tax payable for 2011 as follows.

Income Tax Expense	28,000	
Deferred Tax Liability	8,000	
Income Tax Payable		36,000

The entry to record income taxes at the end of 2012 reduces the Deferred Tax Liability by \$4,000. The Deferred Tax Liability account appears as follows at the end of 2012.

**ILLUSTRATION 19-11**  
Deferred Tax Liability  
Account after Reversals

Deferred Tax Liability			
2011	8,000	2010	12,000
2012	4,000		

The Deferred Tax Liability account has a zero balance at the end of 2012.

### “REAL LIABILITIES”

Some analysts dismiss deferred tax liabilities when assessing the financial strength of a company. But the FASB indicates that the deferred tax liability meets the definition of a liability established in *Statement of Financial Accounting Concepts No. 6, “Elements of Financial Statements”* because:

- 1. It results from a past transaction.** In the Chelsea example, the company performed services for customers and recognized revenue in 2010 for financial reporting purposes but deferred it for tax purposes.
- 2. It is a present obligation.** Taxable income in future periods will exceed pretax financial income as a result of this temporary difference. Thus, a present obligation exists.
- 3. It represents a future sacrifice.** Taxable income and taxes due in future periods will result from past events. The payment of these taxes when they come due is the future sacrifice.

A study by B. Ayers indicates that the market views deferred tax assets and liabilities similarly to other assets and liabilities. Further, the study concludes that the FASB rules in this area increased the usefulness of deferred tax amounts in financial statements.

*Source:* B. Ayers, “Deferred Tax Accounting Under SFAS No. 109: An Empirical Investigation of Its Incremental Value-Relevance Relative to APB No. 11,” *The Accounting Review* (April 1998).

### What do the numbers mean?

### Summary of Income Tax Accounting Objectives

**One objective** of accounting for income taxes is to recognize the amount of taxes payable or refundable for the current year. In Chelsea’s case, income tax payable is \$16,000 for 2010.

A **second objective** is to recognize deferred tax liabilities and assets for the future tax consequences of events already recognized in the financial statements or tax returns. For example, Chelsea sold services to customers that resulted in accounts receivable of \$30,000 in 2010. It reported that amount on the 2010 income statement, but not on the tax return as income. That amount will appear on future tax returns as income for the period **when collected**. As a result, a \$30,000 temporary difference exists at the end of 2010, which will cause future taxable amounts. Chelsea reports a deferred tax liability of \$12,000 on the balance sheet at the end of 2010, which represents the increase in taxes payable in future years (\$8,000 in 2011 and \$4,000 in 2012) as a result of a temporary difference existing at the end of the current year. The related deferred tax liability is reduced by \$8,000 at the end of 2011 and by another \$4,000 at the end of 2012.

In addition to affecting the balance sheet, deferred taxes impact income tax expense in each of the three years affected. In 2010, taxable income (\$40,000) is less than pretax financial income (\$70,000). Income tax payable for 2010 is therefore \$16,000 (based on taxable income). Deferred tax expense of \$12,000 results from the increase in the Deferred Tax Liability account on the balance sheet. Income tax expense is then \$28,000 for 2010.

In 2011 and 2012, however, taxable income will exceed pretax financial income, due to the reversal of the temporary difference (\$20,000 in 2011 and \$10,000 in 2012). Income tax payable will therefore exceed income tax expense in 2011 and 2012. Chelsea will debit the Deferred Tax Liability account for \$8,000 in 2011 and \$4,000 in 2012. It records credits for these amounts in Income Tax Expense. These credits are often referred to as a **deferred tax benefit** (which we discuss again later on).

### Future Deductible Amounts and Deferred Taxes

Assume that during 2010, Cunningham Inc. estimated its warranty costs related to the sale of microwave ovens to be \$500,000, paid evenly over the next two years. For book purposes, in 2010 Cunningham reported warranty expense and a related estimated liability for warranties of \$500,000 in its financial statements. For tax purposes, **the warranty tax deduction is not allowed until paid**. Therefore, Cunningham recognizes no warranty liability on a tax-basis balance sheet. Illustration 19-12 shows the balance sheet difference at the end of 2010.

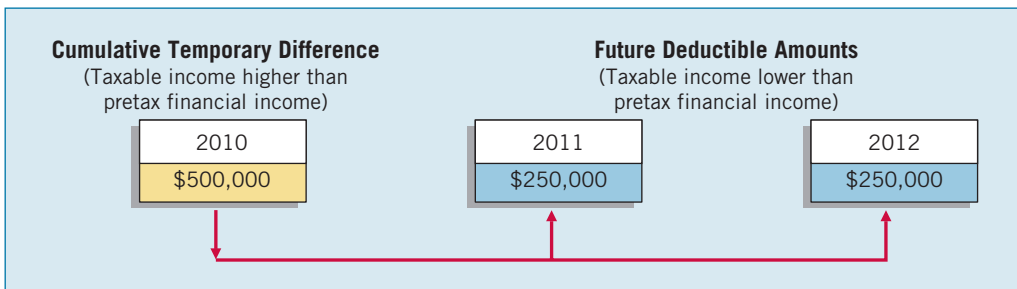

**Objective•3**  
Describe a temporary difference that results in future deductible amounts.

Per Books	12/31/10	Per Tax Return	12/31/10
Estimated liability for warranties	\$500,000	Estimated liability for warranties	\$-0-

**ILLUSTRATION 19-12**  
Temporary Difference, Warranty Liability

When Cunningham pays the warranty liability, it reports an expense (deductible amount) for tax purposes. Because of this temporary difference, Cunningham should recognize in 2010 the tax benefits (positive tax consequences) for the tax deductions that will result from the future settlement of the liability. Cunningham reports this future tax benefit in the December 31, 2010, balance sheet as a **deferred tax asset**.

We can think about this situation another way. Deductible amounts occur in future tax returns. These **future deductible amounts** cause taxable income to be less than pretax financial income in the future as a result of an existing temporary difference. Cunningham’s temporary difference originates (arises) in one period (2010) and reverses over two periods (2011 and 2012). Illustration 19-13 diagrams this situation.

**ILLUSTRATION 19-13**  
Reversal of Temporary Difference, Cunningham Inc.

### Deferred Tax Asset

A **deferred tax asset** is the deferred tax consequence attributable to deductible temporary differences. In other words, a **deferred tax asset represents the increase in taxes refundable (or saved) in future years as a result of deductible temporary differences existing at the end of the current year**.

To illustrate, assume that Hunt Co. accrues a loss and a related liability of \$50,000 in 2010 for financial reporting purposes because of pending litigation. Hunt cannot deduct this amount for tax purposes until the period it pays the liability, expected in 2011. As a result, a deductible amount will occur in 2011 when Hunt settles the liability (Estimated Litigation Liability), causing taxable income to be lower than pretax financial income. Illustration 19-14 (on page 998) shows the computation of the deferred tax asset at the end of 2010 (assuming a 40 percent tax rate).

**ILLUSTRATION 19-14**  
Computation of Deferred Tax Asset, End of 2010

Book basis of litigation liability	\$50,000
Tax basis of litigation liability	<u>—</u>
Cumulative temporary difference at the end of 2010	50,000
Tax rate	<u>40%</u>
<b>Deferred tax asset at the end of 2010</b>	<b><u>\$20,000</u></b>

Hunt can also compute the deferred tax asset by preparing a schedule that indicates the future deductible amounts due to deductible temporary differences. Illustration 19-15 shows this schedule.

**ILLUSTRATION 19-15**  
Schedule of Future Deductible Amounts

	<u>Future Years</u>
Future deductible amounts	\$50,000
Tax rate	<u>40%</u>
<b>Deferred tax asset at the end of 2010</b>	<b><u>\$20,000</u></b>

Assuming that 2010 is Hunt’s first year of operations, and income tax payable is \$100,000, Hunt computes its income tax expense as follows.

**ILLUSTRATION 19-16**  
Computation of Income Tax Expense, 2010

Deferred tax asset at end of 2010	\$ 20,000
Deferred tax asset at beginning of 2010	<u>—</u>
Deferred tax expense (benefit) for 2010	(20,000)
Current tax expense for 2010 (Income tax payable)	<u>100,000</u>
<b>Income tax expense (total) for 2010</b>	<b><u>\$ 80,000</u></b>

The **deferred tax benefit** results from the increase in the deferred tax asset from the beginning to the end of the accounting period (similar to the Chelsea example earlier). The deferred tax benefit is a negative component of income tax expense. The total income tax expense of \$80,000 on the income statement for 2010 thus consists of two elements—current tax expense of \$100,000 and a deferred tax benefit of \$20,000. For Hunt, it makes the following journal entry at the end of 2010 to record income tax expense, deferred income taxes, and income tax payable.

Income Tax Expense	80,000	
Deferred Tax Asset	20,000	
		100,000

At the end of 2011 (the second year), the difference between the book value and the tax basis of the litigation liability is zero. Therefore, there is no deferred tax asset at this date. Assuming that income tax payable for 2011 is \$140,000, Hunt computes income tax expense for 2011 as shown in Illustration 19-17.

**ILLUSTRATION 19-17**  
Computation of Income Tax Expense, 2011

Deferred tax asset at the end of 2011	\$ —
Deferred tax asset at the beginning of 2011	<u>20,000</u>
Deferred tax expense (benefit) for 2011	20,000
Current tax expense for 2011 (Income tax payable)	<u>140,000</u>
<b>Income tax expense (total) for 2011</b>	<b><u>\$160,000</u></b>

The company records income taxes for 2011 as follows.

Income Tax Expense	160,000	
Deferred Tax Asset	20,000	
		140,000

The total income tax expense of \$160,000 on the income statement for 2011 thus consists of two elements—current tax expense of \$140,000 and deferred tax expense of \$20,000. Illustration 19-18 shows the Deferred Tax Asset account at the end of 2011.

Deferred Tax Asset			
2010	20,000	2011	20,000

**ILLUSTRATION 19-18**  
Deferred Tax Asset  
Account after Reversals

**“REAL ASSETS”**

A key issue in accounting for income taxes is whether a company should recognize a deferred tax asset in the financial records. Based on the conceptual definition of an asset, a deferred tax asset meets the three main conditions for an item to be recognized as an asset:

- 1. It results from a past transaction.** In the Hunt example, the accrual of the loss contingency is the past event that gives rise to a future deductible temporary difference.
- 2. It gives rise to a probable benefit in the future.** Taxable income exceeds pretax financial income in the current year (2010). However, in the next year the exact opposite occurs. That is, taxable income is lower than pretax financial income. Because this deductible temporary difference reduces taxes payable in the future, a probable future benefit exists at the end of the current period.
- 3. The entity controls access to the benefits.** Hunt can obtain the benefit of existing deductible temporary differences by reducing its taxes payable in the future. Hunt has the exclusive right to that benefit and can control others’ access to it.

*What do the numbers mean?*

Market analysts’ reactions to the **write-off** of deferred tax assets also supports their treatment as assets. When **Bethlehem Steel** reported a \$1 billion charge in a recent year to write off a deferred tax asset, analysts believed that Bethlehem was signaling that it would not realize the future benefits of the tax deductions. Thus, Bethlehem should write down the asset like other assets.

Source: J. Weil and S. Liesman, “Stock Gurus Disregard Most Big Write-Offs But They Often Hold Vital Clues to Outlook,” *Wall Street Journal Online* (December 31, 2001).

**Deferred Tax Asset—Valuation Allowance**

Companies recognize a deferred tax asset for all deductible temporary differences. However, based on available evidence, a company should reduce a deferred tax asset by a **valuation allowance** if it is **more likely than not** that it **will not realize** some portion or all of the deferred tax asset. **“More likely than not”** means a level of likelihood of at least slightly more than 50 percent.

**Objective 4**  
Explain the purpose of a deferred tax asset valuation allowance.

Assume that Jensen Co. has a deductible temporary difference of \$1,000,000 at the end of its first year of operations. Its tax rate is 40 percent, which means it records a deferred tax asset of \$400,000 ( $\$1,000,000 \times 40\%$ ). Assuming \$900,000 of income taxes payable, Jensen records income tax expense, the deferred tax asset, and income tax payable as follows.

Income Tax Expense	500,000	
Deferred Tax Asset	400,000	
Income Tax Payable		900,000

After careful review of all available evidence, Jensen determines that it is more likely than not that it will not realize \$100,000 of this deferred tax asset. Jensen records this reduction in asset value as follows.

Income Tax Expense	100,000	
Allowance to Reduce Deferred Tax Asset to Expected Realizable Value		100,000

This journal entry increases income tax expense in the current period because Jensen does not expect to realize a favorable tax benefit for a portion of the deductible temporary

difference. Jensen simultaneously establishes a valuation allowance to recognize the reduction in the carrying amount of the deferred tax asset. This valuation account is a contra account. Jensen reports it on the financial statements in the following manner.

**ILLUSTRATION 19-19**  
Balance Sheet Presentation of Valuation Allowance Account

Deferred tax asset	\$400,000
Less: Allowance to reduce deferred tax asset to expected realizable value	<u>100,000</u>
Deferred tax asset (net)	\$300,000

Jensen then evaluates this allowance account at the end of each accounting period. If, at the end of the next period, the deferred tax asset is still \$400,000, but now it expects to realize \$350,000 of this asset, Jensen makes the following entry to adjust the valuation account.

Allowance to Reduce Deferred Tax Asset to Expected Realizable Value	50,000	
Income Tax Expense		50,000

Jensen should consider all available evidence, both positive and negative, to determine whether, based on the weight of available evidence, it needs a valuation allowance. For example, if Jensen has been experiencing a series of loss years, it reasonably assumes that these losses will continue. Therefore, Jensen will lose the benefit of the future deductible amounts. We discuss the use of a valuation account under other conditions later in the chapter.

### Income Statement Presentation

**Objective-5**  
Describe the presentation of income tax expense in the income statement.

Circumstances dictate whether a company should add or subtract the change in deferred income taxes to or from income tax payable in computing income tax expense. For example, a company adds an increase in a deferred tax liability to income tax payable. On the other hand, it subtracts an increase in a deferred tax asset from income tax payable. The formula in Illustration 19-20 is used to compute income tax expense (benefit).

**ILLUSTRATION 19-20**  
Formula to Compute Income Tax Expense

Income Tax Payable or Refundable	±	Change in Deferred Income Taxes	=	Total Income Tax Expense or Benefit
----------------------------------	---	---------------------------------	---	-------------------------------------

In the income statement or in the notes to the financial statements, a company should disclose the significant components of income tax expense attributable to continuing operations. Given the information related to Chelsea on page 993, Chelsea reports its income statement as follows.

**ILLUSTRATION 19-21**  
Income Statement Presentation of Income Tax Expense

CHELSEA INC.	
INCOME STATEMENT	
FOR THE YEAR ENDING DECEMBER 31, 2010	
Revenues	\$130,000
Expenses	<u>60,000</u>
Income before income taxes	70,000
Income tax expense	
Current	\$16,000
Deferred	<u>12,000</u>
	<u>28,000</u>
Net income	<u>\$ 42,000</u>

As illustrated, Chelsea reports both the current portion (amount of income tax payable for the period) and the deferred portion of income tax expense. Another option is to simply report the total income tax expense on the income statement, and then indicate in the notes to the financial statements the current and deferred portions. Income tax expense is often referred to as “Provision for income taxes.” Using this terminology, the current provision is \$16,000, and the provision for deferred taxes is \$12,000.

## Specific Differences

Numerous items create differences between pretax financial income and taxable income. For purposes of accounting recognition, these differences are of two types: (1) temporary, and (2) permanent.

### Objective 6

Describe various temporary and permanent differences.

## Temporary Differences

**Taxable temporary differences** are temporary differences that will result in taxable amounts in future years when the related assets are recovered. **Deductible temporary differences** are temporary differences that will result in deductible amounts in future years, when the related book liabilities are settled. Taxable temporary differences give rise to recording deferred tax liabilities. Deductible temporary differences give rise to recording deferred tax assets. Illustration 19-22 provides examples of temporary differences.

### ILLUSTRATION 19-22

Examples of Temporary Differences

#### A. Revenues or gains are taxable after they are recognized in financial income.

An asset (e.g., accounts receivable or investment) may be recognized for revenues or gains that will result in **taxable amounts in future years** when the asset is recovered. Examples:

1. Sales accounted for on the accrual basis for financial reporting purposes and on the installment (cash) basis for tax purposes.
2. Contracts accounted for under the percentage-of-completion method for financial reporting purposes and a portion of related gross profit deferred for tax purposes.
3. Investments accounted for under the equity method for financial reporting purposes and under the cost method for tax purposes.
4. Gain on involuntary conversion of nonmonetary asset which is recognized for financial reporting purposes but deferred for tax purposes.
5. Unrealized holding gains for financial reporting purposes (including use of the fair value option), but deferred for tax purposes.

#### B. Expenses or losses are deductible after they are recognized in financial income.

A liability (or contra asset) may be recognized for expenses or losses that will result in **deductible amounts in future years** when the liability is settled. Examples:

1. Product warranty liabilities.
2. Estimated liabilities related to discontinued operations or restructurings.
3. Litigation accruals.
4. Bad debt expense recognized using the allowance method for financial reporting purposes; direct write-off method used for tax purposes.
5. Stock-based compensation expense.
6. Unrealized holding losses for financial reporting purposes (including use of the fair value option), but deferred for tax purposes.

#### C. Revenues or gains are taxable before they are recognized in financial income.

A liability may be recognized for an advance payment for goods or services to be provided in future years. For tax purposes, the advance payment is included in taxable income upon the receipt of cash. Future sacrifices to provide goods or services (or future refunds to those who cancel their orders) that settle the liability will result in **deductible amounts in future years**. Examples:

1. Subscriptions received in advance.
2. Advance rental receipts.
3. Sales and leasebacks for financial reporting purposes (income deferral) but reported as sales for tax purposes.
4. Prepaid contracts and royalties received in advance.

#### D. Expenses or losses are deductible before they are recognized in financial income.

The cost of an asset may have been deducted for tax purposes faster than it was expensed for financial reporting purposes. Amounts received upon future recovery of the amount of the asset for financial reporting (through use or sale) will exceed the remaining tax basis of the asset and thereby result in **taxable amounts in future years**. Examples:

1. Depreciable property, depletable resources, and intangibles.
2. Deductible pension funding exceeding expense.
3. Prepaid expenses that are deducted on the tax return in the period paid.

Determining a company’s temporary differences may prove difficult. A company should prepare a balance sheet for tax purposes that it can compare with its GAAP balance sheet. Many of the differences between the two balance sheets are temporary differences.

**Originating and Reversing Aspects of Temporary Differences.** An **originating temporary difference** is the initial difference between the book basis and the tax basis of an asset or liability, regardless of whether the tax basis of the asset or liability exceeds or is exceeded by the book basis of the asset or liability. A **reversing difference**, on the other hand, occurs when eliminating a temporary difference that originated in prior periods and then removing the related tax effect from the deferred tax account.

For example, assume that Sharp Co. has tax depreciation in excess of book depreciation of \$2,000 in 2008, 2009, and 2010. Further, it has an excess of book depreciation over tax depreciation of \$3,000 in 2011 and 2012 for the same asset. Assuming a tax rate of 30 percent for all years involved, the Deferred Tax Liability account reflects the following.

**ILLUSTRATION 19-23**  
Tax Effects of Originating and Reversing Differences

		Deferred Tax Liability					
Tax Effects of Reversing Differences	{	2011	900	2008	600	}	Tax Effects of Originating Differences
		2012	900	2009	600		
				2010	600		

The originating differences for Sharp in each of the first three years are \$2,000. The related tax effect of each originating difference is \$600. The reversing differences in 2011 and 2012 are each \$3,000. The related tax effect of each is \$900.

**Permanent Differences**

Some differences between taxable income and pretax financial income are permanent.

**Permanent differences** result from items that (1) enter into pretax financial income but **never** into taxable income, or (2) enter into taxable income but **never** into pretax financial income.

Congress has enacted a variety of tax law provisions to attain certain political, economic, and social objectives. Some of these provisions exclude certain revenues from taxation, limit the deductibility of certain expenses, and permit the deduction of certain other expenses in excess of costs incurred. A corporation that has tax-free income, nondeductible expenses, or allowable deductions in excess of cost, has an effective tax rate that differs from its statutory (regular) tax rate.

Since permanent differences affect only the period in which they occur, they do not give rise to future taxable or deductible amounts. As a result, **companies recognize no deferred tax consequences**. Illustration 19-24 shows examples of permanent differences.

**INTERNATIONAL INSIGHT**

If companies switch to iGAAP, the impact on tax accounting methods will require consideration. For example, in cases in which U.S. GAAP and tax rules are the same, what happens if iGAAP is different from U.S. GAAP? Should the tax method change to iGAAP? And what might happen at the state level, due to changes in the financial reporting rules?

**ILLUSTRATION 19-24**  
Examples of Permanent Differences

- A. **Items are recognized for financial reporting purposes but not for tax purposes.**  
Examples:
  1. Interest received on state and municipal obligations.
  2. Expenses incurred in obtaining tax-exempt income.
  3. Proceeds from life insurance carried by the company on key officers or employees.
  4. Premiums paid for life insurance carried by the company on key officers or employees (company is beneficiary).
  5. Fines and expenses resulting from a violation of law.
- B. **Items are recognized for tax purposes but not for financial reporting purposes.**  
Examples:
  1. “Percentage depletion” of natural resources in excess of their cost.
  2. The deduction for dividends received from U.S. corporations, generally 70% or 80%.

### Examples of Temporary and Permanent Differences

To illustrate the computations used when both temporary and permanent differences exist, assume that Bio-Tech Company reports pretax financial income of \$200,000 in each of the years 2008, 2009, and 2010. The company is subject to a 30 percent tax rate, and has the following differences between pretax financial income and taxable income.

1. Bio-Tech reports an installment sale of \$18,000 in 2008 for tax purposes over an 18-month period at a constant amount per month beginning January 1, 2009. It recognizes the entire sale for book purposes in 2008.
2. It pays life insurance premiums for its key officers of \$5,000 in 2009 and 2010. Although not tax-deductible, Bio-Tech expenses the premiums for book purposes.

The installment sale is a temporary difference, whereas the life insurance premium is a permanent difference. Illustration 19-25 shows the reconciliation of Bio-Tech's pretax financial income to taxable income and the computation of income tax payable.

	2008	2009	2010
Pretax financial income	\$200,000	\$200,000	\$200,000
<b>Permanent difference</b>			
Nondeductible expense		5,000	5,000
<b>Temporary difference</b>			
Installment sale	(18,000)	12,000	6,000
Taxable income	182,000	217,000	211,000
Tax rate	30%	30%	30%
Income tax payable	<u>\$ 54,600</u>	<u>\$ 65,100</u>	<u>\$ 63,300</u>

**ILLUSTRATION 19-25**  
Reconciliation and  
Computation of Income  
Taxes Payable

Note that Bio-Tech **deducts** the installment sales revenue from pretax financial income to arrive at taxable income. The reason: pretax financial income includes the installment sales revenue; taxable income does not. Conversely, it **adds** the \$5,000 insurance premium to pretax financial income to arrive at taxable income. The reason: pretax financial income records an expense for this premium, but for tax purposes the premium is not deductible. As a result, pretax financial income is lower than taxable income. Therefore, the life insurance premium must be added back to pretax financial income to reconcile to taxable income.

Bio-Tech records income taxes for 2008, 2009, and 2010 as follows.

<b>December 31, 2008</b>		
Income Tax Expense (\$54,600 + \$5,400)	60,000	
Deferred Tax Liability (\$18,000 × 30%)		5,400
Income Tax Payable (\$182,000 × 30%)		54,600
<b>December 31, 2009</b>		
Income Tax Expense (\$65,100 – \$3,600)	61,500	
Deferred Tax Liability (\$12,000 × 30%)	3,600	
Income Tax Payable (\$217,000 × 30%)		65,100
<b>December 31, 2010</b>		
Income Tax Expense (\$63,300 – \$1,800)	61,500	
Deferred Tax Liability (\$6,000 × 30%)	1,800	
Income Tax Payable (\$211,000 × 30%)		63,300

Bio-Tech has one temporary difference, which originates in 2008 and reverses in 2009 and 2010. It recognizes a deferred tax liability at the end of 2008 because the temporary difference causes future taxable amounts. As the temporary difference reverses, Bio-Tech reduces the deferred tax liability. There is no deferred tax amount associated with the difference caused by the nondeductible insurance expense because it is a permanent difference.

Although an enacted tax rate of 30 percent applies for all three years, the effective rate differs from the enacted rate in 2009 and 2010. Bio-Tech computes the **effective tax rate** by dividing total income tax expense for the period by pretax financial income. The effective rate is 30 percent for 2008 ( $\$60,000 \div \$200,000 = 30\%$ ) and 30.75 percent for 2009 and 2010 ( $\$61,500 \div \$200,000 = 30.75\%$ ).

### Tax Rate Considerations

**Objective 7**

Explain the effect of various tax rates and tax rate changes on deferred income taxes.

In our previous illustrations, the enacted tax rate did not change from one year to the next. Thus, to compute the deferred income tax amount to report on the balance sheet, a company simply multiplies the cumulative temporary difference by the current tax rate. Using Bio-Tech as an example, it multiplies the cumulative temporary difference of \$18,000 by the enacted tax rate, 30 percent in this case, to arrive at a deferred tax liability of \$5,400 ( $\$18,000 \times 30\%$ ) at the end of 2008.

#### Future Tax Rates

What happens if tax rates are expected to change in the future? In this case, a company should use the **enacted tax rate** expected to apply. Therefore, a company must consider presently enacted changes in the tax rate that become effective for a particular future year(s) when determining the tax rate to apply to existing temporary differences. For example, assume that Warlen Co. at the end of 2007 has the following cumulative temporary difference of \$300,000, computed as shown in Illustration 19-26.

**ILLUSTRATION 19-26**

Computation of Cumulative Temporary Difference

Book basis of depreciable assets	\$1,000,000
Tax basis of depreciable assets	700,000
<b>Cumulative temporary difference</b>	<b>\$ 300,000</b>

Furthermore, assume that the \$300,000 will reverse and result in taxable amounts in the future, with the enacted tax rates shown in Illustration 19-27.

**ILLUSTRATION 19-27**

Deferred Tax Liability Based on Future Rates

	2008	2009	2010	2011	2012	Total
Future taxable amounts	\$80,000	\$70,000	\$60,000	\$50,000	\$40,000	\$300,000
Tax rate	40%	40%	35%	30%	30%	
<b>Deferred tax liability</b>	<b>\$32,000</b>	<b>\$28,000</b>	<b>\$21,000</b>	<b>\$15,000</b>	<b>\$12,000</b>	<b>\$108,000</b>

The total deferred tax liability at the end of 2007 is \$108,000. Warlen may only use tax rates other than the current rate when the future tax rates have been enacted, as is the case in this example. **If new rates are not yet enacted for future years, Warlen should use the current rate.**

In determining the appropriate enacted tax rate for a given year, companies must use the **average tax rate**. The Internal Revenue Service and other taxing jurisdictions tax income on a graduated tax basis. For a U.S. corporation, the IRS taxes the first \$50,000 of taxable income at 15 percent, the next \$25,000 at 25 percent, with higher incremental levels of income at rates as high as 39 percent. In computing deferred income taxes, companies for which graduated tax rates are a significant factor must therefore **determine the average tax rate and use that rate.**

#### Revision of Future Tax Rates

When a change in the tax rate is enacted, companies should record its effect on the existing deferred income tax accounts immediately. **A company reports the effect as an adjustment to income tax expense in the period of the change.**

Assume that on December 10, 2007, a new income tax act is signed into law that lowers the corporate tax rate from 40 percent to 35 percent, effective January 1, 2009.

If Hostel Co. has one temporary difference at the beginning of 2007 related to \$3 million of excess tax depreciation, then it has a Deferred Tax Liability account with a balance of \$1,200,000 ( $\$3,000,000 \times 40\%$ ) at January 1, 2007. If taxable amounts related to this difference are scheduled to occur equally in 2008, 2009, and 2010, the deferred tax liability at the end of 2007 is \$1,100,000, computed as follows.

	2008	2009	2010	Total
Future taxable amounts	\$1,000,000	\$1,000,000	\$1,000,000	\$3,000,000
Tax rate	40%	35%	35%	
<b>Deferred tax liability</b>	<b>\$ 400,000</b>	<b>\$ 350,000</b>	<b>\$ 350,000</b>	<b>\$1,100,000</b>

**ILLUSTRATION 19-28**  
Schedule of Future  
Taxable Amounts and  
Related Tax Rates

Hostel, therefore, recognizes the decrease of \$100,000 ( $\$1,200,000 - \$1,100,000$ ) at the end of 2007 in the deferred tax liability as follows.

Deferred Tax Liability	100,000	
Income Tax Expense		100,000

Corporate tax rates do not change often. Therefore, companies usually employ the current rate. However, state and foreign tax rates change more frequently, and they require adjustments in deferred income taxes accordingly.<sup>2</sup>

## SHELTERED

As mentioned in the opening story, companies employ various tax strategies to reduce their tax bills and their effective tax rates. The following table reports some high-profile cases in which profitable companies paid little income tax and, in some cases, got tax refunds.

Company	Pretax Income (\$ millions)	Federal Tax Paid (Refund) (\$ millions)	Tax Rate (%)
<b>Enron</b>	\$ 1,785	\$(381)	(21.34)%
<b>El Paso Energy</b>	1,638	(254)	(15.51)
<b>Goodyear</b>	442	(23)	(5.20)
<b>Navistar</b>	1,368	28	2.05
<b>General Motors</b>	12,468	740	5.94

*What do the  
numbers mean?*

These companies used various tools to lower their tax bills, including off-shore tax shelters, tax deferrals, and hefty use of stock options, the cost of which reduce taxable income but do not affect pretax financial income. Thus, companies can use various provisions in the tax code to reduce their effective tax rate well below the statutory rate of 35 percent.

One IRS provision designed to curb excessive tax avoidance is the **alternative minimum tax (AMT)**. Companies compute their potential tax liability under the AMT, adjusting for various preference items that reduce their tax bills under the regular tax code. (Examples of such preference items are accelerated depreciation methods and the installment method for revenue recognition.) Companies must pay the higher of the two tax obligations computed under the AMT and the regular tax code. But, as indicated by the cases above, some profitable companies avoid high tax bills, even in the presence of the AMT. Indeed, a recent study by the Government Accounting Office found that roughly two-thirds of U.S. and foreign corporations paid no federal income taxes from 1998–2005. Many citizens and public-interest groups cite corporate avoidance of income taxes as a reason for more tax reform.

Source: H. Gleckman, D. Foust, M. Arndt, and K. Kerwin, "Tax Dodging: Enron Isn't Alone," *Business Week* (March 4, 2002), pp. 40–41; and L. Browning, "Study Tallies Corporations Not Paying Income Tax," *New York Times* (August 13, 2008), p. C3.

<sup>2</sup>Tax rate changes nearly always will substantially impact income numbers and the reporting of deferred income taxes on the balance sheet. As a result, you can expect to hear an economic consequences argument every time that Congress decides to change the tax rates. For example, when Congress raised the corporate rate from 34 percent to 35 percent in 1993, companies took an additional "hit" to earnings if they were in a deferred tax liability position.

## ACCOUNTING FOR NET OPERATING LOSSES

**Objective 8**

Apply accounting procedures for a loss carryback and a loss carryforward.

Every management hopes its company will be profitable. But hopes and profits may not materialize. For a start-up company, it is common to accumulate operating losses while expanding its customer base but before realizing economies of scale. For an established company, a major event such as a labor strike, rapidly changing regulatory and competitive forces, or a disaster such as 9/11 or Hurricane Ike can cause expenses to exceed revenues—a net operating loss.

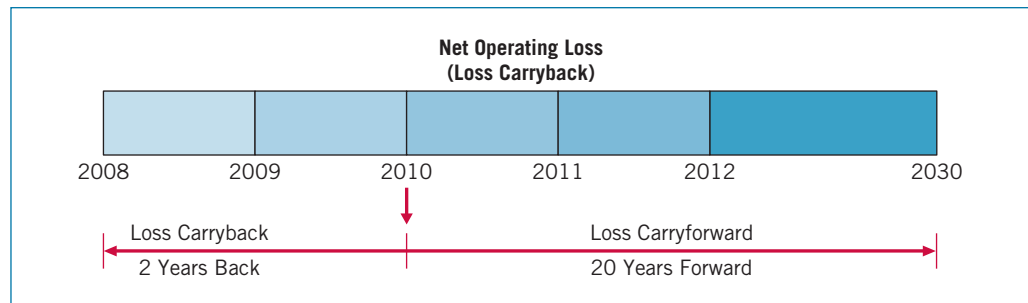

A **net operating loss (NOL)** occurs for tax purposes in a year when tax-deductible expenses exceed taxable revenues. An inequitable tax burden would result if companies were taxed during profitable periods without receiving any tax relief during periods of net operating losses. Under certain circumstances, therefore, the federal tax laws permit taxpayers to use the losses of one year to offset the profits of other years.

Companies accomplish this income-averaging provision through the **carryback and carryforward of net operating losses**. Under this provision, a company pays no income taxes for a year in which it incurs a net operating loss. In addition, it may select one of the two options discussed below and on the following pages.

### Loss Carryback

Through use of a **loss carryback**, a company may carry the net operating loss back two years and receive refunds for income taxes paid in those years. The company must apply the loss to the earlier year first and then to the second year. It may **carry forward** any loss remaining after the two-year carryback up to 20 years to offset future taxable income. Illustration 19-29 diagrams the loss carryback procedure, assuming a loss in 2010.

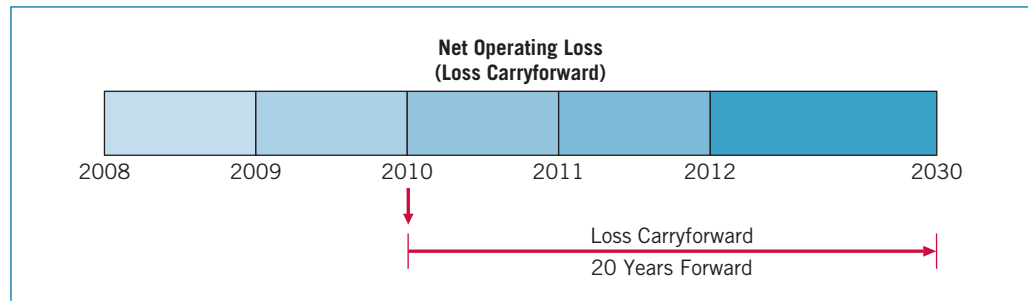

**ILLUSTRATION 19-29**  
Loss Carryback Procedure

### Loss Carryforward

A company may forgo the loss carryback and use only the **loss carryforward** option, offsetting future taxable income for up to 20 years. Illustration 19-30 shows this approach.

**ILLUSTRATION 19-30**  
Loss Carryforward Procedure

Operating losses can be substantial. For example, **Yahoo!** had net operating losses of approximately \$5.4 billion in a recent year. That amount translates into tax savings of \$1.4 billion if Yahoo! is able to generate taxable income before the NOLs expire.

## Loss Carryback Example

To illustrate the accounting procedures for a net operating loss carryback, assume that Groh Inc. has no temporary or permanent differences. Groh experiences the following.

Year	Taxable Income or Loss	Tax Rate	Tax Paid
2006	\$ 50,000	35%	\$17,500
2007	100,000	30%	30,000
2008	200,000	40%	80,000
2009	(500,000)	—	—0—

In 2009, Groh incurs a net operating loss that it decides to carry back. Under the law, Groh must apply the carryback first to the **second year preceding the loss year**. Therefore, it carries the loss back first to 2007. Then, Groh carries back any unused loss to 2008. Accordingly, Groh files amended tax returns for 2007 and 2008, receiving refunds for the \$110,000 (\$30,000 + \$80,000) of taxes paid in those years.

For accounting as well as tax purposes, the \$110,000 represents the **tax effect (tax benefit)** of the loss carryback. Groh should recognize this tax effect in 2009, the loss year. Since the tax loss gives rise to a refund that is both measurable and currently realizable, Groh should recognize the associated tax benefit in this loss period.

Groh makes the following journal entry for 2009.

Income Tax Refund Receivable	110,000	
Benefit Due to Loss Carryback (Income Tax Expense)		110,000

Groh reports the account debited, **Income Tax Refund Receivable**, on the balance sheet as a current asset at December 31, 2009. It reports the account credited on the income statement for 2009 as shown in Illustration 19-31.

GROH INC. INCOME STATEMENT (PARTIAL) FOR 2009	
Operating loss before income taxes	\$(500,000)
Income tax benefit	
Benefit due to loss carryback	<u>110,000</u>
Net loss	<u><u>\$(390,000)</u></u>

**ILLUSTRATION 19-31**  
Recognition of Benefit of the Loss Carryback in the Loss Year

Since the \$500,000 net operating loss for 2009 exceeds the \$300,000 total taxable income from the 2 preceding years, Groh carries forward the remaining \$200,000 loss.

## Loss Carryforward Example

If a carryback fails to fully absorb a net operating loss, or if the company decides not to carry the loss back, then it can carry forward the loss for up to 20 years.<sup>3</sup> Because companies use carryforwards to offset future taxable income, the **tax effect of a loss carryforward** represents **future tax savings**. Realization of the future tax benefit depends on future earnings, an uncertain prospect.

The key accounting issue is whether there should be different requirements for recognition of a deferred tax asset for (a) deductible temporary differences, and (b) operating loss carryforwards. The FASB's position is that in substance these items are the same—both are tax-deductible amounts in future years. As a result, the Board concluded that there **should not be different requirements** for recognition of

<sup>3</sup>The length of the carryforward period has varied. It has increased from 7 years to 20 years over a period of time.

a deferred tax asset from deductible temporary differences and operating loss carryforwards.<sup>4</sup>

### Carryforward without Valuation Allowance

To illustrate the accounting for an operating loss carryforward, return to the Groh example from the preceding section. In 2009 the company records the tax effect of the \$200,000 loss carryforward as a deferred tax asset of \$80,000 ( $\$200,000 \times 40\%$ ), assuming that the enacted future tax rate is 40 percent. Groh records the benefits of the carryback and the carryforward in 2009 as follows.

<b>To recognize benefit of loss carryback</b>		
Income Tax Refund Receivable	110,000	
Benefit Due to Loss Carryback (Income Tax Expense)		110,000
<b>To recognize benefit of loss carryforward</b>		
Deferred Tax Asset	80,000	
Benefit Due to Loss Carryforward (Income Tax Expense)		80,000

Groh realizes the income tax refund receivable of \$110,000 immediately as a refund of taxes paid in the past. It establishes a Deferred Tax Asset for the benefits of future tax savings. The two accounts credited are contra income tax expense items, which Groh presents on the 2009 income statement shown in Illustration 19-32.

**ILLUSTRATION 19-32**  
Recognition of the Benefit of the Loss Carryback and Carryforward in the Loss Year

GROH INC.		
INCOME STATEMENT (PARTIAL) FOR 2009		
Operating loss before income taxes		\$(500,000)
Income tax benefit		
Benefit due to loss carryback	\$110,000	
Benefit due to loss carryforward	80,000	190,000
Net loss		\$(310,000)

The **current tax benefit** of \$110,000 is the income tax refundable for the year. Groh determines this amount by applying the carryback provisions of the tax law to the taxable loss for 2009. The \$80,000 is the **deferred tax benefit** for the year, which results from an increase in the deferred tax asset.

For 2010, assume that Groh returns to profitable operations and has taxable income of \$250,000 (prior to adjustment for the NOL carryforward), subject to a 40 percent tax rate. Groh then realizes the benefits of the carryforward for tax purposes in 2010, which it recognized for accounting purposes in 2009. Groh computes the income tax payable for 2010 as shown in Illustration 19-33.

**ILLUSTRATION 19-33**  
Computation of Income Tax Payable with Realized Loss Carryforward

Taxable income prior to loss carryforward		\$ 250,000
Loss carryforward deduction		(200,000)
Taxable income for 2010		50,000
Tax rate		40%
Income tax payable for 2010		\$ 20,000

Groh records income taxes in 2010 as follows.

Income Tax Expense	100,000	
Deferred Tax Asset		80,000
Income Tax Payable		20,000

<sup>4</sup>This requirement is controversial because many believe it is inappropriate to recognize deferred tax assets except when assured beyond a reasonable doubt. Others argue that companies should never recognize deferred tax assets for loss carryforwards until realizing the income in the future.

The benefits of the NOL carryforward, realized in 2010, reduce the Deferred Tax Asset account to zero.

The 2010 income statement that appears in Illustration 19-34 does **not report** the tax effects of either the loss carryback or the loss carryforward, because Groh had reported both previously.

<b>GROH INC.</b>		
<b>INCOME STATEMENT (PARTIAL) FOR 2010</b>		
Income before income taxes		\$250,000
Income tax expense		
Current	\$20,000	
Deferred	<u>80,000</u>	<u>100,000</u>
Net income		<u>\$150,000</u>

**ILLUSTRATION 19-34**  
Presentation of the Benefit of Loss Carryforward Realized in 2010, Recognized in 2009

### Carryforward with Valuation Allowance

Let us return to the Groh example. Assume that it is more likely than not that Groh will *not* realize the entire NOL carryforward in future years. In this situation, Groh records the tax benefits of \$110,000 associated with the \$300,000 NOL carryback, as we previously described. In addition, it records a Deferred Tax Asset of \$80,000 ( $\$200,000 \times 40\%$ ) for the potential benefits related to the loss carryforward, and an allowance to reduce the deferred tax asset by the same amount. Groh makes the following journal entries in 2009.

#### To recognize benefit of loss carryback

Income Tax Refund Receivable	110,000	
Benefit Due to Loss Carryback (Income Tax Expense)		110,000

#### To recognize benefit of loss carryforward

Deferred Tax Asset	80,000	
Benefit Due to Loss Carryforward (Income Tax Expense)		80,000

#### To record allowance amount

Benefit Due to Loss Carryforward (Income Tax Expense)	80,000	
Allowance to Reduce Deferred Tax Asset to Expected Realizable Value		80,000

The latter entry indicates that because positive evidence of sufficient quality and quantity is unavailable to counteract the negative evidence, Groh needs a valuation allowance. Illustration 19-35 shows Groh's 2009 income statement presentation.

<b>GROH INC.</b>		
<b>INCOME STATEMENT (PARTIAL) FOR 2009</b>		
Operating loss before income taxes		\$(500,000)
Income tax benefit		
Benefit due to loss carryback	<u>110,000</u>	
Net loss		<u>\$(390,000)</u>

**ILLUSTRATION 19-35**  
Recognition of Benefit of Loss Carryback Only

In 2010, assuming that Groh has taxable income of \$250,000 (before considering the carryforward), subject to a tax rate of 40 percent, it realizes the deferred tax asset. It thus no longer needs the allowance. Groh records the following entries.

#### To record current and deferred income taxes

Income Tax Expense	100,000	
Deferred Tax Asset		80,000
Income Tax Payable		20,000

#### To eliminate allowance and recognize loss carryforward

Allowance to Reduce Deferred Tax Asset to Expected Realizable Value	80,000	
Benefit Due to Loss Carryforward (Income Tax Expense)		80,000

Groh reports the \$80,000 Benefit Due to the Loss Carryforward on the 2010 income statement. The company did not recognize it in 2009 because it was more likely than not that it would not be realized. Assuming that Groh derives the income for 2010 from continuing operations, it prepares the income statement as shown in Illustration 19-36.

**ILLUSTRATION 19-36**  
Recognition of Benefit of  
Loss Carryforward When  
Realized

GROH INC.		
INCOME STATEMENT (PARTIAL) FOR 2010		
Income before income taxes		\$250,000
Income tax expense		
Current	\$ 20,000	
Deferred	80,000	
Benefit due to loss carryforward	<u>(80,000)</u>	<u>20,000</u>
Net income		<u><u>\$230,000</u></u>

Another method is to report only one line for total income tax expense of \$20,000 on the face of the income statement and disclose the components of income tax expense in the notes to the financial statements.

### Valuation Allowance Revisited

A company should consider all positive and negative information in determining whether it needs a valuation allowance. Whether the company will realize a deferred tax asset depends on whether sufficient taxable income exists or will exist within the carryforward period available under tax law. Illustration 19-37 shows possible sources of taxable income that may be available under the tax law to realize a tax benefit for deductible temporary differences and carryforwards.<sup>5</sup>

**ILLUSTRATION 19-37**  
Possible Sources of  
Taxable Income

Taxable Income Sources
a. Future reversals of existing taxable temporary differences
b. Future taxable income exclusive of reversing temporary differences and carryforwards
c. Taxable income in prior carryback year(s) if carryback is permitted under the tax law
d. <b>Tax-planning strategies</b> that would, if necessary, be implemented to:
(1) Accelerate taxable amounts to utilize expiring carryforwards
(2) Change the character of taxable or deductible amounts from ordinary income or loss to capital gain or loss
(3) Switch from tax-exempt to taxable investments. <b>[1]</b>

 See the FASB  
Codification section  
(page 1028).

If any one of these sources is sufficient to support a conclusion that a valuation allowance is unnecessary, a company need not consider other sources.

Forming a conclusion that a valuation allowance is not needed is difficult when there is negative evidence such as cumulative losses in recent years. Companies may also cite positive evidence indicating that a valuation allowance is not needed. Illustration 19-38 (on page 1011) presents examples (not prerequisites) of evidence to consider when determining the need for a valuation allowance.<sup>6</sup>

<sup>5</sup>Companies implement a tax-planning strategy to realize a tax benefit for an operating loss or tax credit carryforward before it expires. Companies consider tax-planning strategies when assessing the need for and amount of a valuation allowance for deferred tax assets.

<sup>6</sup>**General Motors** announced that it would record a charge of \$39 billion for the third quarter of 2007 related to establishing a valuation allowance against its deferred assets in the U.S., Canada, and Germany. The company noted that this large loss was taken because of the company's three-year historical loss up to the third quarter of 2007, its losses related to its mortgage business in GMAC financial services, and the challenging near-term automotive market conditions in the U.S. and Germany. These all indicate that it will be more likely than not that GM will not realize its deferred tax asset.

**Negative Evidence**

- a. A history of operating loss or tax credit carryforwards expiring unused
- b. Losses expected in early future years (by a presently profitable entity)
- c. Unsettled circumstances that, if unfavorably resolved, would adversely affect future operations and profit levels on a continuing basis in future years
- d. A carryback, carryforward period that is so brief that it would limit realization of tax benefits if (1) a significant deductible temporary difference is expected to reverse in a single year or (2) the enterprise operates in a traditionally cyclical business.

**Positive Evidence**

- a. Existing contracts or firm sales backlog that will produce more than enough taxable income to realize the deferred tax asset based on existing sale prices and cost structures
- b. An excess of appreciated asset value over the tax basis of the entity's net assets in an amount sufficient to realize the deferred tax asset
- c. A strong earnings history exclusive of the loss that created the future deductible amount (tax loss carryforward or deductible temporary difference) coupled with evidence indicating that the loss is an aberration rather than a continuing condition (for example, the result of an unusual, infrequent, or extraordinary item). [2]

**ILLUSTRATION 19-38**  
Evidence to Consider in Evaluating the Need for a Valuation Account

The use of a valuation allowance provides a company with an opportunity to manage its earnings. As one accounting expert notes, "The 'more likely than not' provision is perhaps the most judgmental clause in accounting." Some companies may set up a valuation account and then use it to increase income as needed. Others may take the income immediately to increase capital or to offset large negative charges to income.

**INTERNATIONAL INSIGHT** 

Under international accounting standards (*IAS 12*), a company may not recognize a deferred tax asset unless realization is "probable." However, "probable" is not defined in the standard, leading to diversity in the recognition of deferred tax assets.

**READ THOSE NOTES**

A recent study of companies' valuation allowances indicates that the allowances are related to the factors identified as positive and negative evidence. And though there is little evidence that companies use the valuation allowance to manage earnings, the press sometimes understates the impact of reversing the deferred tax valuation allowance.

For example, in one year **Verity, Inc.** eliminated its entire valuation allowance of \$18.9 million but focused on a net deferred tax gain of \$2.9 million in its press release. Why the difference? As revealed in Verity's financial statement notes, other deferred tax expense amounts totaled over \$16 million. Thus, the one-time valuation reversal gave an \$18.9 million bump to income, not the net \$2.9 million reported in the press.

The lesson: After you read the morning paper, read the financial statement notes.

*Source:* G. S Miller and D. J. Skinner, "Determinants of the Valuation Allowance for Deferred Tax Assets under SFAS No. 109," *The Accounting Review* (April 1998).

*What do the numbers mean?*

**FINANCIAL STATEMENT PRESENTATION**

**Balance Sheet**

Deferred tax accounts are reported on the balance sheet as assets and liabilities. Companies should classify these accounts as a net current amount and a net non-current amount. **An individual deferred tax liability or asset is classified as current or noncurrent based on the classification of the related asset or liability for financial reporting purposes.**

A company considers a deferred tax asset or liability to be related to an asset or liability, if reduction of the asset or liability causes the temporary difference to reverse or

**Objective 9**  
Describe the presentation of deferred income taxes in financial statements.

turn around. A company should classify a deferred tax liability or asset that is unrelated to an asset or liability for financial reporting, including a deferred tax asset related to a loss carryforward, according to the expected reversal date of the temporary difference.

To illustrate, assume that Morgan Inc. records bad debt expense using the allowance method for accounting purposes and the direct write-off method for tax purposes. It currently has Accounts Receivable and Allowance for Doubtful Accounts balances of \$2 million and \$100,000, respectively. In addition, given a 40 percent tax rate, Morgan has a debit balance in the Deferred Tax Asset account of \$40,000 ( $40\% \times \$100,000$ ). It considers the \$40,000 debit balance in the Deferred Tax Asset account to be related to the Accounts Receivable and the Allowance for Doubtful Accounts balances because collection or write-off of the receivables will cause the temporary difference to reverse. Therefore, Morgan classifies the Deferred Tax Asset account as current, the same as the Accounts Receivable and Allowance for Doubtful Accounts balances.

In practice, most companies engage in a large number of transactions that give rise to deferred taxes. Companies should classify the balances in the deferred tax accounts on the balance sheet in two categories: one for the **net current amount**, and one for the **net noncurrent amount**. We summarize this procedure as follows.

- 1. Classify the amounts as current or noncurrent.** If related to a specific asset or liability, classify the amounts in the same manner as the related asset or liability. If not related, classify them on the basis of the expected reversal date of the temporary difference.
- 2. Determine the net current amount** by summing the various deferred tax assets and liabilities classified as current. If the net result is an asset, report it on the balance sheet as a current asset; if a liability, report it as a current liability.
- 3. Determine the net noncurrent amount** by summing the various deferred tax assets and liabilities classified as noncurrent. If the net result is an asset, report it on the balance sheet as a noncurrent asset; if a liability, report it as a long-term liability.

To illustrate, assume that K. Scott Company has four deferred tax items at December 31, 2010. Illustration 19-39 shows an analysis of these four temporary differences as current or noncurrent.

**ILLUSTRATION 19-39**  
Classification of  
Temporary Differences as  
Current or Noncurrent

Temporary Difference	Resulting Deferred Tax		Related Balance Sheet Account	Classification
	(Asset)	Liability		
1. Rent collected in advance: recognized when earned for accounting purposes and when received for tax purposes.	\$ (42,000)		Unearned Rent	Current
2. Use of straight-line depreciation for accounting purposes and accelerated depreciation for tax purposes.		\$214,000	Equipment	Noncurrent
3. Recognition of profits on installment sales during period of sale for accounting purposes and during period of collection for tax purposes.		45,000	Installment Accounts Receivable	Current
4. Warranty liabilities: recognized for accounting purposes at time of sale; for tax purposes at time paid.	(12,000)		Estimated Liability under Warranties	Current
Totals	<u>\$ (54,000)</u>	<u>\$259,000</u>		

K. Scott classifies as current a deferred tax asset of \$9,000 ( $\$42,000 + \$12,000 - \$45,000$ ). It also reports as noncurrent a deferred tax liability of \$214,000. Consequently,

K. Scott's December 31, 2010, balance sheet reports deferred income taxes as shown in Illustration 19-40.

<u>Current assets</u>	
Deferred tax asset	\$ 9,000
<u>Long-term liabilities</u>	
Deferred tax liability	\$214,000

**ILLUSTRATION 19-40**  
Balance Sheet Presentation  
of Deferred Income Taxes

As we indicated earlier, a deferred tax asset or liability **may not be related** to an asset or liability for financial reporting purposes. One example is an operating loss carry-forward. In this case, a company records a deferred tax asset, but there is no related, identifiable asset or liability for financial reporting purposes. In these limited situations, deferred income taxes are classified according to the **expected reversal date** of the temporary difference. That is, a company should report the tax effect of any temporary difference reversing next year as current, and the remainder as noncurrent. If a deferred tax asset is noncurrent, a company should classify it in the "Other assets" section.

The total of all deferred tax liabilities, the total of all deferred tax assets, and the total valuation allowance should be disclosed. In addition, companies should disclose the following: (1) any net change during the year in the total valuation allowance, and (2) the types of temporary differences, carryforwards, or carrybacks that give rise to significant portions of deferred tax liabilities and assets.

Income tax payable is reported as a current liability on the balance sheet. Corporations make estimated tax payments to the Internal Revenue Service quarterly. They record these estimated payments by a debit to Prepaid Income Taxes. As a result, the balance of the Income Tax Payable offsets the balance of the Prepaid Income Taxes account when reporting income taxes on the balance sheet.

**INTERNATIONAL  
INSIGHT**

IGAAP requires that deferred tax assets and liabilities be classified as noncurrent, regardless of the classification of the underlying asset or liability.

## Income Statement

Companies should allocate income tax expense (or benefit) to continuing operations, discontinued operations, extraordinary items, and prior period adjustments. This approach is referred to as intraperiod tax allocation.

In addition, companies should disclose the significant components of income tax expense attributable to continuing operations:

1. Current tax expense or benefit.
2. Deferred tax expense or benefit, exclusive of other components listed below.
3. Investment tax credits.
4. Government grants (if recognized as a reduction of income tax expense).
5. The benefits of operating loss carryforwards (resulting in a reduction of income tax expense).
6. Tax expense that results from allocating tax benefits either directly to paid-in capital or to reduce goodwill or other noncurrent intangible assets of an acquired entity.
7. Adjustments of a deferred tax liability or asset for enacted changes in tax laws or rates or a change in the tax status of a company.
8. Adjustments of the beginning-of-the-year balance of a valuation allowance because of a change in circumstances that causes a change in judgment about the realizability of the related deferred tax asset in future years.

In the notes, companies must also reconcile (using percentages or dollar amounts) income tax expense attributable to continuing operations with the amount that results from applying domestic federal statutory tax rates to pretax income from continuing significant reconciling items. Illustration 19-41 (on page 1014) presents an example from the 2007 annual report of **PepsiCo, Inc.**

**Carryforwards and Allowances**

Operating loss carryforwards totaling \$7.1 billion at year-end 2007 are being carried forward in a number of foreign and state jurisdictions where we are permitted to use tax operating losses from prior periods to reduce future taxable income. These operating losses will expire as follows: \$0.5 billion in 2008, \$5.6 billion between 2009 and 2027 and \$1.0 billion may be carried forward indefinitely. We establish valuation allowances for our deferred tax assets if, based on the available evidence, it is more likely than not that some portion or all of the deferred tax assets will not be realized.

*continued on next page*

In 2006, the Financial Accounting Standards Board (FASB) issued FASB Interpretation No. 48, *Accounting for Uncertainty in Income Taxes—an Interpretation of FASB Statement No. 109*, (FIN 48), which clarifies the accounting for uncertainty in tax positions. FIN 48 requires that we recognize in our financial statements the impact of a tax position, if that position is more likely than not of being sustained on audit, based on the technical merits of the position. We adopted the provisions of FIN 48 as of the beginning of our 2007 fiscal year. As a result of our adoption of FIN 48, we recognized a \$7 million decrease to reserves for income taxes, with a corresponding increase to opening retained earnings.

These income tax disclosures are required for several reasons:

1. **Assessing Quality of Earnings.** Many investors seeking to assess the quality of a company's earnings are interested in the reconciliation of pretax financial income to taxable income. Analysts carefully examine earnings that are enhanced by a favorable tax effect, particularly if the tax effect is nonrecurring. For example, the tax disclosure in Illustration 19-41 indicates that PepsiCo's effective tax rate increased from 19.3 percent in 2006 to 25.9 percent in 2007 (primarily due to less tax settlements in 2007). This increase in the effective tax rate decreased income for 2007.
2. **Making Better Predictions of Future Cash Flows.** Examination of the deferred portion of income tax expense provides information as to whether taxes payable are likely to be higher or lower in the future. In PepsiCo's case, analysts expect future taxable amounts and higher tax payments, due to realization of gains on equity investments, lower depreciation in the future, and higher payments for pension expense. PepsiCo expects future deductible amounts and lower tax payments due to deductions for carryforwards, employee benefits, and state taxes. These deferred tax items indicate that actual tax payments for PepsiCo will be higher than the tax expense reported on the income statement in the future.<sup>7</sup>
3. **Predicting Future Cash Flows for Operating Loss Carryforwards.** Companies should disclose the amounts and expiration dates of any operating loss carryforwards for tax purposes. From this disclosure, analysts determine the amount of income that the company may recognize in the future on which it will pay no income tax. For example, the PepsiCo disclosure in Illustration 19-41 indicates that PepsiCo has \$7.1 billion in net operating loss carryforwards that it can use to reduce future taxes. However, the valuation allowance indicates that \$695 million of deferred tax assets may not be realized in the future.

Additional Examples of  
Deferred Tax Disclosures

Loss carryforwards can be valuable to a potential acquirer. For example, as mentioned earlier, **Yahoo!** has a substantial net operating loss carryforward. A potential acquirer would find Yahoo more valuable as a result of these carryforwards. That is, the acquirer may be able to use these carryforwards to shield future income. However the acquiring company has to be careful, because the structure of the deal may lead to a situation where the deductions will be severely limited.

Much the same issue arises in companies emerging from bankruptcy. In many cases these companies have large NOLs, but the value of the losses may be limited. This is because any gains related to the cancellation of liabilities in bankruptcy must be offset against the NOLs. For example, when **Kmart Holding Corp.** emerged from bankruptcy in early 2004, it disclosed NOL carryforwards approximating \$3.8 billion. At the same time, Kmart disclosed cancellation of debt gains that reduced the value of the NOL carryforward. These reductions soured the merger between Kmart and **Sears Roebuck** because the cancellation of the indebtedness gains reduced the value of the Kmart carryforwards to the merged company by \$3.74 billion.<sup>8</sup>

<sup>7</sup>An article by R. P. Weber and J. E. Wheeler, "Using Income Tax Disclosures to Explore Significant Economic Transactions," *Accounting Horizons* (September 1992), discusses how analysts use deferred tax disclosures to assess the quality of earnings and to predict future cash flows.

<sup>8</sup>P. McConnell, J. Pegg, C. Senyak, and D. Mott, "The ABCs of NOLs," *Accounting Issues*, Bear Stearns Equity Research (June 2005). The IRS frowns on acquisitions done solely to obtain operating loss carryforwards. If it determines that the merger is solely tax-motivated, the IRS disallows the deductions. But because it is very difficult to determine whether a merger is or is not tax-motivated, the "purchase of operating loss carryforwards" continues.

**NOLs: GOOD NEWS OR BAD?**

Here are some net operating loss numbers reported by several notable companies.

**NOLs (\$ in millions)**

Company	Income (Loss)	Operating Loss Carryforward	Tax Benefit (Deferred Tax Asset)	Comment
<b>Delta Airlines, Inc.</b>	(\$5,198.00)	\$7,500.00	\$2,848.00	Begins to expire in 2022. Valuation allowance recorded.
<b>Goodyear</b>	114.80	1,306.60	457.30	Begins to expire in next year. Full valuation allowance.
<b>Kodak</b>	556.00	509.00	234.00	Begins to expire in next year. Valuation allowance on foreign credits only.
<b>Yahoo Inc.</b>	42.82	5,400.00	1,443.50	State and federal carryforwards. Begins to expire in next year. Valuation allowance recorded.

**What do the numbers mean?**

All of these companies are using the carryforward provisions of the tax code for their NOLs. For many of them, the NOL is an amount far exceeding their reported profits. Why carry forward the loss to get the tax deduction? First, the company may have already used up the carryback provision, which allows only a two-year carryback period. (Carryforwards can be claimed up to 20 years in the future.) In some cases, management expects the tax rates in the future to be higher. This difference in expected rates provides a bigger tax benefit if the losses are carried forward and matched against future income. Is there a downside? To realize the benefits of carryforwards, a company must have future taxable income in the carryforward period in order to claim the NOL deductions. As we learned, if it is more likely than not that a company will not have taxable income, it must record a valuation allowance (and increased tax expense). As the data above indicate, recording a valuation allowance to reflect the uncertainty of realizing the tax benefits has merit. But for some, the NOL benefits begin to expire in the following year, which may be not enough time to generate sufficient taxable income in order to claim the NOL deduction.

Source: Company annual reports.

**Uncertain Tax Positions**

Whenever there is a contingency, companies determine if the contingency is *probable* and can be reasonably estimated. If both of these criteria are met, the company records the contingency in the financial statements. These guidelines also apply to uncertain tax positions. **Uncertain tax positions** are tax positions for which the tax authorities may disallow a deduction in whole or in part. Uncertain tax positions often arise when a company takes an aggressive approach in its tax planning. Examples are instances in which the tax law is unclear or the company may believe that the risk of audit is low. Uncertain tax positions give rise to tax benefits either by reducing income tax expense or related payables or by increasing an income tax refund receivable or deferred tax asset.

Unfortunately, companies have not applied these provisions consistently in accounting and reporting of uncertain tax positions. Some companies have not recognized a tax benefit unless it is probable that the benefit will be realized and can be reasonably estimated. Other companies have used a lower threshold, such as that found in the existing authoritative literature. As we have learned, the lower threshold—described as “*more likely than not*”—means that the company believes it has at least a 51 percent chance that the uncertain tax position will pass muster with the taxing authorities. Thus, there has been diversity in practice concerning the accounting and reporting of uncertain tax positions.

As a result, the FASB recently issued rules for companies to follow to determine whether it is “more likely than not” that tax positions will be sustained upon audit. **[3]** If the probability is more than 50 percent, companies may reduce their liability or increase their assets. If the probability is less than 50 percent, companies may not record the tax benefit. In determining “more likely than not,” companies must assume that they will be audited by the tax authorities. If the recognition threshold is passed, companies must then estimate the amount to record as an adjustment to their tax assets and liabilities. (This estimation process is complex and is beyond the scope of this textbook.)

Companies will experience varying financial statement effects upon adoption of these rules. Those with a history of conservative tax strategies may have their tax liabilities decrease or their tax assets increase. Others that followed more aggressive tax planning may have to increase their liabilities or reduce their assets, with a resulting negative effect on net income. For example, as indicated in Illustration 19-41 (on page 1014), PepsiCo recorded a \$7 million increase to retained earnings upon adoption of these new guidelines.

## REVIEW OF THE ASSET-LIABILITY METHOD

The FASB believes that the **asset-liability method** (sometimes referred to as the **liability approach**) is the most consistent method for accounting for income taxes. One objective of this approach is to recognize the amount of taxes payable or refundable for the current year. A second objective is to recognize **deferred tax liabilities and assets** for the **future tax consequences** of events that have been recognized in the financial statements or tax returns.

**Objective 10**

Indicate the basic principles of the asset-liability method.

To implement the objectives, companies apply some basic principles in accounting for income taxes at the date of the financial statements, as listed in Illustration 19-42. [4]

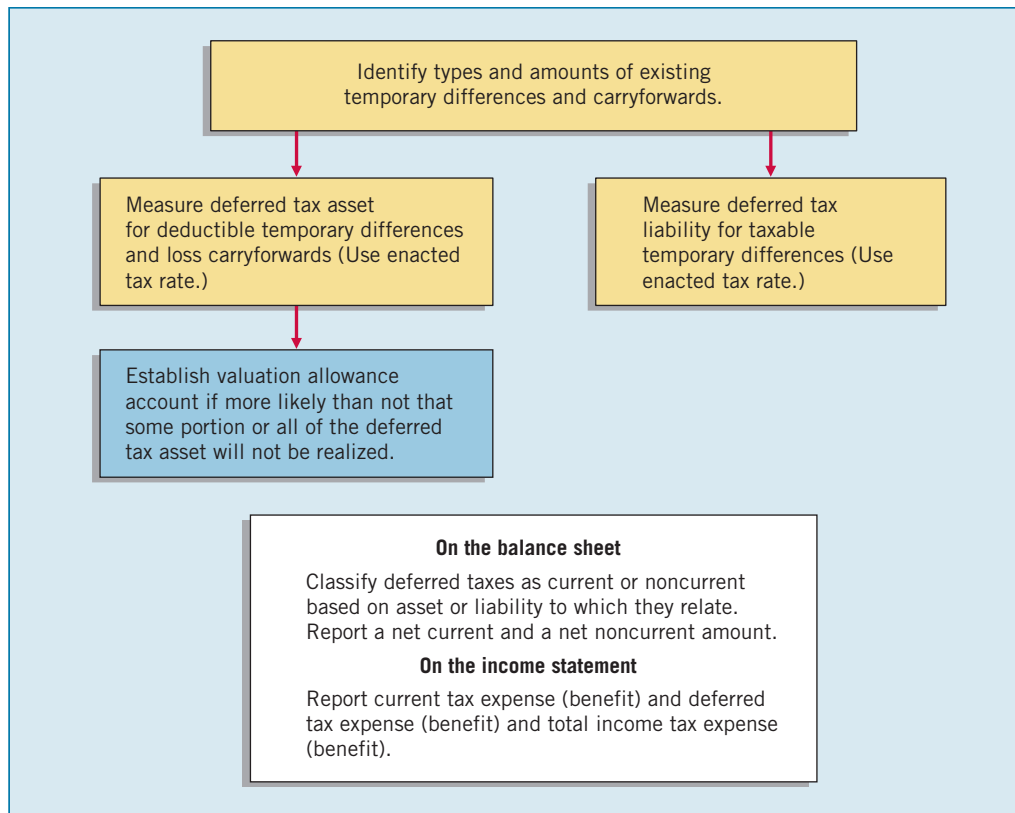

**Basic Principles**

- a. A current tax liability or asset is recognized for the estimated taxes payable or refundable on the tax return for the current year.
- b. A deferred tax liability or asset is recognized for the estimated future tax effects attributable to temporary differences and carryforwards.
- c. The measurement of current and deferred tax liabilities and assets is based on provisions of the enacted tax law; the effects of future changes in tax laws or rates are not anticipated.
- d. The measurement of deferred tax assets is reduced, if necessary, by the amount of any tax benefits that, based on available evidence, are not expected to be realized.

**ILLUSTRATION 19-42**

Basic Principles of the Asset-Liability Method

Illustration 19-43 diagrams the procedures for implementing the asset-liability method.

**ILLUSTRATION 19-43**

Procedures for Computing and Reporting Deferred Income Taxes

Discussion of Conceptual Approaches to Interperiod Tax Allocation

As an aid to understanding deferred income taxes, we provide the following glossary.

## KEY DEFERRED INCOME TAX TERMS

INTERNATIONAL  
INSIGHT

IGAAP on income taxes is based on the same principles as U.S. GAAP—comprehensive recognition of deferred tax assets and liabilities.

**CARRYBACKS.** Deductions or credits that cannot be utilized on the tax return during a year and that may be carried back to reduce taxable income or taxes paid in a prior year. An **operating loss carryback** is an excess of tax deductions over gross income in a year. A **tax credit carryback** is the amount by which tax credits available for utilization exceed statutory limitations.

**CARRYFORWARDS.** Deductions or credits that cannot be utilized on the tax return during a year and that may be carried forward to reduce taxable income or taxes payable in a future year. An **operating loss carryforward** is an excess of tax deductions over gross income in a year. A **tax credit carryforward** is the amount by which tax credits available for utilization exceed statutory limitations.

**CURRENT TAX EXPENSE (BENEFIT).** The amount of income taxes paid or payable (or refundable) for a year as determined by applying the provisions of the enacted tax law to the taxable income or excess of deductions over revenues for that year.

**DEDUCTIBLE TEMPORARY DIFFERENCE.** Temporary differences that result in deductible amounts in future years when recovering or settling the related asset or liability, respectively.

**DEFERRED TAX ASSET.** The deferred tax consequences attributable to deductible temporary differences and carryforwards.

**DEFERRED TAX CONSEQUENCES.** The future effects on income taxes as measured by the enacted tax rate and provisions of the enacted tax law resulting from temporary differences and carryforwards at the end of the current year.

**DEFERRED TAX EXPENSE (BENEFIT).** The change during the year in a company's deferred tax liabilities and assets.

**DEFERRED TAX LIABILITY.** The deferred tax consequences attributable to taxable temporary differences.

**INCOME TAXES.** Domestic and foreign federal (national), state, and local (including franchise) taxes based on income.

**INCOME TAXES CURRENTLY PAYABLE (REFUNDABLE).** Refer to current tax expense (benefit).

**INCOME TAX EXPENSE (BENEFIT).** The sum of current tax expense (benefit) and deferred tax expense (benefit).

**TAXABLE INCOME.** The excess of taxable revenues over tax deductible expenses and exemptions for the year as defined by the governmental taxing authority.

**TAXABLE TEMPORARY DIFFERENCE.** Temporary differences that result in taxable amounts in future years when recovering or settling the related asset or liability, respectively.

**TAX-PLANNING STRATEGY.** An action that meets certain criteria and that a company implements to realize a tax benefit for an operating loss or tax credit carryforward before it expires. Companies consider tax-planning strategies when assessing the need for and amount of a valuation allowance for deferred tax assets.

**TEMPORARY DIFFERENCE.** A difference between the tax basis of an asset or liability and its reported amount in the financial statements that will result in taxable or deductible amounts in future years when recovering or settling the reported amount of the asset or liability, respectively.

**VALUATION ALLOWANCE.** The portion of a deferred tax asset for which it is more likely than not that a company will not realize a tax benefit.

You will want to read the **CONVERGENCE CORNER** on page 1019

For discussion of how international convergence efforts relate to income taxes.

# CONVERGENCE CORNER

## INCOME TAXES

The accounting for income taxes in iGAAP is covered in *IAS 12* (“Income Taxes”). Similar to U.S. GAAP, iGAAP uses the asset and liability approach for recording deferred taxes. The differences between iGAAP and U.S. GAAP involve a few exceptions to the asset-liability approach; some minor differences in the recognition, measurement, and disclosure criteria; and differences in implementation guidance.

### RELEVANT FACTS

- The classification of deferred taxes under iGAAP is always noncurrent. As indicated in the chapter, U.S. GAAP classifies deferred taxes based on the classification of the asset or liability to which it relates.
- Under iGAAP, an affirmative judgment approach is used, by which a deferred tax asset is recognized up to the amount that is probable to be realized. U.S. GAAP uses an impairment approach. In this approach, the deferred tax asset is recognized in full. It is then reduced by a valuation account if it is more likely than not that all or a portion of the deferred tax asset will not be realized.
- iGAAP uses the enacted tax rate or substantially enacted tax rate. (“Substantially enacted” means virtually certain.) For U.S. GAAP, the enacted tax rate must be used.
- The tax effects related to certain items are reported in equity under iGAAP. That is not the case under U.S. GAAP, which charges or credits the tax effects to income.
- U.S. GAAP requires companies to assess the likelihood of uncertain tax positions being sustainable upon audit. Potential liabilities must be accrued and disclosed if the position is “more likely than not” to be disallowed. Under iGAAP, *all potential liabilities* must be recognized. With respect to measurement, iGAAP uses an expected-value approach to measure the tax liability, which differs from U.S. GAAP.

### ABOUT THE NUMBERS

The following schedule taken from the annual report of **Glaxo-SmithKline plc** (which uses iGAAP) indicates the impact of differences in iGAAP and U.S. GAAP for deferred taxes.

Reconciliation to U.S. accounting principles	
<b>(e) Deferred taxation (in part):</b>	
Total tax expense (in millions of British pounds)	
IFRS:	2006
Current tax expense	2,710
Deferred tax (credit)/expense	(409)
Total tax expense	2,301
U.S. GAAP:	
Current tax expense	2,735
Deferred tax credit	(685)
Total tax expense	2,050
Total tax expense difference	(251)

Thus, due to the differences highlighted above, Glaxo’s income tax expense under iGAAP is 251 million pounds higher than that reported under U.S. GAAP.

### ON THE HORIZON

The FASB and the IASB have been working to address some of the differences in the accounting for income taxes. Some of the issues under discussion are the term “probable” under iGAAP for recognition of a deferred tax asset, which might be interpreted to mean “more likely than not.” If the term is changed, the reporting for impairments of deferred tax assets will be essentially the same between U.S. GAAP and iGAAP. In addition, the IASB is considering adoption of the classification approach used in U.S. GAAP for deferred assets and liabilities. Also, U.S. GAAP will likely continue to use the enacted tax rate in computing deferred taxes, except in situations where the U.S. taxing jurisdiction is not involved. In that case, companies should use iGAAP, which is based on enacted rates or substantially enacted tax rates. Finally, the issue of allocation of deferred income taxes to equity for certain transactions under iGAAP must be addressed in order to conform to U.S. GAAP, which allocates the effects to income. At the time of this printing, deliberations on the income tax project have been suspended indefinitely. The FASB has no plans to issue an amendment to its literature at this time, but it may revisit this project after the IASB further develops its replacement to *IAS 12*.

## SUMMARY OF LEARNING OBJECTIVES

- LO 1 Identify differences between pretax financial income and taxable income.** Companies compute pretax financial income (or income for book purposes) in accordance with generally accepted accounting principles. They compute taxable income (or income for tax purposes) in accordance with prescribed tax regulations. Because tax regulations and GAAP differ in many ways, so frequently do pretax financial income and taxable income. Differences may exist, for example, in the timing of revenue recognition and the timing of expense recognition.
- LO 2 Describe a temporary difference that results in future taxable amounts.** Revenue recognized for book purposes in the period earned but deferred and reported as revenue for tax purposes when collected results in future taxable amounts. The future taxable amounts will occur in the periods the company recovers the receivable and reports the collections as revenue for tax purposes. This results in a deferred tax liability.
- LO 3 Describe a temporary difference that results in future deductible amounts.** An accrued warranty expense that a company pays for and deducts for tax purposes, in a period later than the period in which it incurs and recognizes it for book purposes, results in future deductible amounts. The future deductible amounts will occur in the periods during which the company settles the related liability for book purposes. This results in a deferred tax asset.
- LO 4 Explain the purpose of a deferred tax asset valuation allowance.** A deferred tax asset should be reduced by a valuation allowance if, based on all available evidence, it is more likely than not (a level of likelihood that is at least slightly more than 50 percent) that it will not realize some portion or all of the deferred tax asset. The company should carefully consider all available evidence, both positive and negative, to determine whether, based on the weight of available evidence, it needs a valuation allowance.
- LO 5 Describe the presentation of income tax expense in the income statement.** Significant components of income tax expense should be disclosed in the income statement or in the notes to the financial statements. The most commonly encountered components are the current expense (or benefit) and the deferred expense (or benefit).
- LO 6 Describe various temporary and permanent differences.** Examples of temporary differences are: (1) revenue or gains that are taxable after recognition in financial income; (2) expenses or losses that are deductible after recognition in financial income; (3) revenues or gains that are taxable before recognition in financial income; (4) expenses or losses that are deductible before recognition in financial income. Examples of permanent differences are: (1) items recognized for financial reporting purposes but not for tax purposes, and (2) items recognized for tax purposes but not for financial reporting purposes.
- LO 7 Explain the effect of various tax rates and tax rate changes on deferred income taxes.** Companies may use tax rates other than the current rate only after enactment of the future tax rates. When a change in the tax rate is enacted, a company should immediately recognize its effect on the deferred income tax accounts. The company reports the effects as an adjustment to income tax expense in the period of the change.
- LO 8 Apply accounting procedures for a loss carryback and a loss carryforward.** A company may carry a net operating loss back two years and receive refunds for income taxes paid in those years. The loss is applied to the earlier year first and then to the second year. Any loss remaining after the two-year carryback may be carried forward up to 20 years to offset future taxable income. A company may forgo the loss carryback and use the loss carryforward, offsetting future taxable income for up to 20 years.

**9** Describe the presentation of deferred income taxes in financial statements. Companies report deferred tax accounts on the balance sheet as assets and liabilities. These deferred tax accounts are classified as a net current and a net noncurrent amount. Companies classify an individual deferred tax liability or asset as current or noncurrent based on the classification of the related asset or liability for financial reporting. A deferred tax liability or asset that is not related to an asset or liability for financial reporting, including a deferred tax asset related to a loss carryforward, is classified according to the expected reversal date of the temporary difference.

**10** Indicate the basic principles of the asset-liability method. Companies apply the following basic principles in accounting for income taxes at the date of the financial statements: (1) Recognize a current tax liability or asset for the estimated taxes payable or refundable on the tax return for the current year. (2) Recognize a deferred tax liability or asset for the estimated future tax effects attributable to temporary differences and carryforwards using the enacted tax rate. (3) Base the measurement of current and deferred tax liabilities and assets on provisions of the enacted tax law. (4) Reduce the measurement of deferred tax assets, if necessary, by the amount of any tax benefits that, based on available evidence, companies do not expect to realize.

## APPENDIX 19A

## COMPREHENSIVE EXAMPLE OF INTERPERIOD TAX ALLOCATION

This appendix presents a comprehensive illustration of a deferred income tax problem with several temporary and permanent differences. The example follows one company through two complete years (2009 and 2010). **Study it carefully.** It should help you understand the concepts and procedures presented in the chapter.

### Objective • 11

Understand and apply the concepts and procedures of interperiod tax allocation.

### FIRST YEAR—2009

Allman Company, which began operations at the beginning of 2009, produces various products on a contract basis. Each contract generates a gross profit of \$80,000. Some of Allman's contracts provide for the customer to pay on an installment basis. Under these contracts, Allman collects one-fifth of the contract revenue in each of the following four years. For financial reporting purposes, the company recognizes gross profit in the year of completion (accrual basis); for tax purposes, Allman recognizes gross profit in the year cash is collected (installment basis).

Presented below is information related to Allman's operations for 2009.

1. In 2009, the company completed seven contracts that allow for the customer to pay on an installment basis. Allman recognized the related gross profit of \$560,000 for financial reporting purposes. It reported only \$112,000 of gross profit on installment sales on the 2009 tax return. The company expects future collections on the related installment receivables to result in taxable amounts of \$112,000 in each of the next four years.
2. At the beginning of 2009, Allman Company purchased depreciable assets with a cost of \$540,000. For financial reporting purposes, Allman depreciates these assets using the straight-line method over a six-year service life. For tax purposes, the assets fall in the five-year recovery class, and Allman uses the MACRS system. The depreciation schedules for both financial reporting and tax purposes are shown on page 1022.

Year	Depreciation for Financial Reporting Purposes	Depreciation for Tax Purposes	Difference
2009	\$ 90,000	\$108,000	\$(18,000)
2010	90,000	172,800	(82,800)
2011	90,000	103,680	(13,680)
2012	90,000	62,208	27,792
2013	90,000	62,208	27,792
2014	90,000	31,104	58,896
	<u>\$540,000</u>	<u>\$540,000</u>	<u>\$ -0-</u>

3. The company warrants its product for two years from the date of completion of a contract. During 2009, the product warranty liability accrued for financial reporting purposes was \$200,000, and the amount paid for the satisfaction of warranty liability was \$44,000. Allman expects to settle the remaining \$156,000 by expenditures of \$56,000 in 2010 and \$100,000 in 2011.
4. In 2009 nontaxable municipal bond interest revenue was \$28,000.
5. During 2009 nondeductible fines and penalties of \$26,000 were paid.
6. Pretax financial income for 2009 amounts to \$412,000.
7. Tax rates enacted before the end of 2009 were:
 

2009	50%
2010 and later years	40%
8. The accounting period is the calendar year.
9. The company is expected to have taxable income in all future years.

### Taxable Income and Income Tax Payable—2009

The first step is to determine Allman Company’s income tax payable for 2009 by calculating its taxable income. Illustration 19A-1 shows this computation.

**ILLUSTRATION 19A-1**  
Computation of Taxable  
Income, 2009

Pretax financial income for 2009	\$412,000
Permanent differences:	
Nontaxable revenue—municipal bond interest	(28,000)
Nondeductible expenses—fines and penalties	26,000
Temporary differences:	
Excess gross profit per books (\$560,000 – \$112,000)	(448,000)
Excess depreciation per tax (\$108,000 – \$90,000)	(18,000)
Excess warranty expense per books (\$200,000 – \$44,000)	<u>156,000</u>
<b>Taxable income for 2009</b>	<b><u>\$100,000</u></b>

Allman computes income tax payable on taxable income for \$100,000 as follows.

**ILLUSTRATION 19A-2**  
Computation of Income  
Tax Payable, End of 2009

Taxable income for 2009	\$100,000
Tax rate	50%
<b>Income tax payable (current tax expense) for 2009</b>	<b><u>\$ 50,000</u></b>

### Computing Deferred Income Taxes—End of 2009

The schedule in Illustration 19A-3 (on page 1023) summarizes the temporary differences and the resulting future taxable and deductible amounts.

	Future Years					Total
	2010	2011	2012	2013	2014	
Future taxable (deductible) amounts:						
Installment sales	\$112,000	\$112,000	\$112,000	\$112,000		\$448,000
Depreciation	(82,800)	(13,680)	27,792	27,792	\$58,896	18,000
Warranty costs	(56,000)	(100,000)				(156,000)

**ILLUSTRATION 19A-3**  
Schedule of Future Taxable and Deductible Amounts, End of 2009

Allman computes the amounts of deferred income taxes to be reported at the end of 2009 as shown in Illustration 19A-4.

Temporary Difference	Future Taxable (Deductible) Amounts	Tax Rate	Deferred Tax	
			(Asset)	Liability
Installment sales	\$448,000	40%		\$179,200
Depreciation	18,000	40%		7,200
Warranty costs	(156,000)	40%	\$(62,400)	
<b>Totals</b>	<b>\$310,000</b>		<b>\$(62,400)</b>	<b>\$186,400*</b>

\*Because only a single tax rate is involved in all relevant years, these totals can be reconciled:  
\$310,000 × 40% = \$(62,400) + \$186,400.

**ILLUSTRATION 19A-4**  
Computation of Deferred Income Taxes, End of 2009

A temporary difference is caused by the use of the accrual basis for financial reporting purposes and the installment method for tax purposes. This temporary difference will result in future taxable amounts, and hence, a deferred tax liability. Because of the installment contracts completed in 2009, a temporary difference of \$448,000 originates that will reverse in equal amounts over the next four years. The company expects to have taxable income in all future years, and there is only one enacted tax rate applicable to all future years. Allman uses that rate (40 percent) to compute the entire deferred tax liability resulting from this temporary difference.

The temporary difference caused by different depreciation policies for books and for tax purposes originates over three years and then reverses over three years. This difference will cause deductible amounts in 2010 and 2011 and taxable amounts in 2012, 2013, and 2014. These amounts sum to a net future taxable amount of \$18,000 (which is the cumulative temporary difference at the end of 2009). Because the company expects to have taxable income in all future years and because there is only one tax rate enacted for all of the relevant future years, Allman applies that rate to the net future taxable amount to determine the related net deferred tax liability.

The third temporary difference is caused by different methods of accounting for warranties. This difference will result in deductible amounts in each of the two future years it takes to reverse. Because the company expects to report a positive income on all future tax returns and because there is only one tax rate enacted for each of the relevant future years, Allman uses that 40 percent rate to calculate the resulting deferred tax asset.

### Deferred Tax Expense (Benefit) and the Journal Entry to Record Income Taxes—2009

To determine the deferred tax expense (benefit), we need to compare the beginning and ending balances of the deferred income tax accounts. Illustration 19A-5 (on page 1024) shows that computation.

**ILLUSTRATION 19A-5**  
Computation of Deferred Tax Expense (Benefit), 2009

Deferred tax asset at the end of 2009	\$ 62,400
Deferred tax asset at the beginning of 2009	<u>–0–</u>
<b>Deferred tax expense (benefit)</b>	<b><u><u>\$(62,400)</u></u></b>
Deferred tax liability at the end of 2009	\$186,400
Deferred tax liability at the beginning of 2009	<u>–0–</u>
<b>Deferred tax expense (benefit)</b>	<b><u><u>\$186,400</u></u></b>

The \$62,400 increase in the deferred tax asset causes a deferred tax benefit to be reported in the income statement. The \$186,400 increase in the deferred tax liability during 2009 results in a deferred tax expense. These two amounts **net** to a deferred tax expense of \$124,000 for 2009.

**ILLUSTRATION 19A-6**  
Computation of Net Deferred Tax Expense, 2009

Deferred tax expense (benefit)	\$ (62,400)
Deferred tax expense (benefit)	<u>186,400</u>
<b>Net deferred tax expense for 2009</b>	<b><u><u>\$124,000</u></u></b>

Allman then computes the total income tax expense as follows.

**ILLUSTRATION 19A-7**  
Computation of Total Income Tax Expense, 2009

Current tax expense for 2009	\$ 50,000
Deferred tax expense for 2009	<u>124,000</u>
<b>Income tax expense (total) for 2009</b>	<b><u><u>\$174,000</u></u></b>

Allman records income tax payable, deferred income taxes, and income tax expense as follows.

Income Tax Expense	174,000	
Deferred Tax Asset	62,400	
Income Tax Payable		50,000
Deferred Tax Liability		186,400

### Financial Statement Presentation—2009

Companies should classify deferred tax assets and liabilities as current and noncurrent on the balance sheet based on the classifications of related assets and liabilities. Multiple categories of deferred taxes are classified into a net current amount and a net non-current amount. Illustration 19A-8 shows the classification of Allman’s deferred tax accounts at the end of 2009.

**ILLUSTRATION 19A-8**  
Classification of Deferred Tax Accounts, End of 2009

Temporary Difference	Resulting Deferred Tax		Related Balance Sheet Account	Classification
	(Asset)	Liability		
Installment sales		\$179,200	Installment Receivable	Current
Depreciation		7,200	Plant Assets	Noncurrent
Warranty costs	\$(62,400)		Warranty Obligation	Current
<b>Totals</b>	<b><u><u>\$(62,400)</u></u></b>	<b><u><u>\$186,400</u></u></b>		

For the first temporary difference, there is a related asset on the balance sheet, installment accounts receivable. Allman classifies that asset as current because it has a trade practice of selling to customers on an installment basis. Allman therefore classifies the resulting deferred tax liability as a current liability.

Certain assets on the balance sheet are related to the depreciation difference—the property, plant, and equipment being depreciated. Allman would classify the plant assets as noncurrent. Therefore, it also classifies the resulting deferred tax liability as noncurrent. Since the company’s operating cycle is at least four years in length, Allman classifies the entire \$156,000 warranty obligation as a current liability. Thus, it also classifies the related deferred tax asset of \$62,400 as current.<sup>9</sup>

The balance sheet at the end of 2009 reports the following amounts.

<u>Current liabilities</u>	
Income tax payable	\$ 50,000
Deferred tax liability (\$179,200 – \$62,400)	116,800
<u>Long-term liabilities</u>	
Deferred tax liability	\$ 7,200

**ILLUSTRATION 19A-9**  
Balance Sheet Presentation of Deferred Taxes, 2009

Allman’s income statement for 2009 reports the following.

Income before income taxes		\$412,000
Income tax expense		
Current	\$ 50,000	
Deferred	<u>124,000</u>	<u>174,000</u>
Net income		<u>\$238,000</u>

**ILLUSTRATION 19A-10**  
Income Statement Presentation of Income Tax Expense, 2009

## SECOND YEAR—2010

1. During 2010 Allman collected \$112,000 from customers for the receivables arising from contracts completed in 2009. The company expects recovery of the remaining receivables to result in taxable amounts of \$112,000 in each of the following three years.
2. In 2010 the company completed four new contracts that allow for the customer to pay on an installment basis. These installment sales created new installment receivables. Future collections of these receivables will result in reporting gross profit of \$64,000 for tax purposes in each of the next four years.
3. During 2010 Allman continued to depreciate the assets acquired in 2009 according to the depreciation schedules appearing on page 1022. Thus, depreciation amounted to \$90,000 for financial reporting purposes and \$172,800 for tax purposes.
4. An analysis at the end of 2010 of the product warranty liability account showed the following details.

Balance of liability at beginning of 2010	\$156,000
Expense for 2010 income statement purposes	180,000
Amount paid for contracts completed in 2009	(56,000)
Amount paid for contracts completed in 2010	<u>(50,000)</u>
Balance of liability at end of 2010	<u>\$230,000</u>

<sup>9</sup>If Allman’s operating cycle were less than one year in length, the company would expect to settle \$56,000 of the warranty obligation within one year of the December 31, 2009, balance sheet and would use current assets to do so. Thus \$56,000 of the warranty obligation would be a current liability and the remaining \$100,000 warranty obligation would be a long-term (noncurrent) liability. This would mean that Allman would classify \$22,400 ( $\$56,000 \times 40\%$ ) of the related deferred tax asset as a current asset, and \$40,000 ( $\$100,000 \times 40\%$ ) of the deferred tax asset as a noncurrent asset. *In doing homework problems, unless it is evident otherwise, assume a company’s operating cycle is not longer than a year.*

The balance of the liability is expected to require expenditures in the future as follows.

\$100,000 in 2011 due to 2009 contracts
\$ 50,000 in 2011 due to 2010 contracts
\$ 80,000 in 2012 due to 2010 contracts
<u>\$230,000</u>

- 5. During 2010 nontaxable municipal bond interest revenue was \$24,000.
- 6. Allman accrued a loss of \$172,000 for financial reporting purposes because of pending litigation. This amount is not tax-deductible until the period the loss is realized, which the company estimates to be 2018.
- 7. Pretax financial income for 2010 amounts to \$504,800.
- 8. The enacted tax rates still in effect are:

2009	50%
2010 and later years	40%

### Taxable Income and Income Tax Payable—2010

Allman computes taxable income for 2010 as follows.

**ILLUSTRATION 19A-11**  
Computation of Taxable  
Income, 2010

Pretax financial income for 2010	\$504,800
Permanent difference:	
Nontaxable revenue—municipal bond interest	(24,000)
Reversing temporary differences:	
Collection on 2009 installment sales	112,000
Payments on warranties from 2009 contracts	(56,000)
Originating temporary differences:	
Excess gross profit per books—2010 contracts	(256,000)
Excess depreciation per tax	(82,800)
Excess warranty expense per books—2010 contracts	130,000
Loss accrual per books	172,000
<b>Taxable income for 2010</b>	<b><u>\$500,000</u></b>

Income tax payable for 2010 is as follows.

**ILLUSTRATION 19A-12**  
Computation of Income  
Tax Payable, End of 2010

Taxable income for 2010	\$500,000
Tax rate	40%
<b>Income tax payable (current tax expense) for 2010</b>	<b><u>\$200,000</u></b>

**ILLUSTRATION 19A-13**  
Schedule of Future  
Taxable and Deductible  
Amounts, End of 2010

### Computing Deferred Income Taxes—End of 2010

The schedule in Illustration 19A-13 summarizes the temporary differences existing at the end of 2010 and the resulting future taxable and deductible amounts.

	Future Years					Total
	2011	2012	2013	2014	2018	
Future taxable (deductible) amounts:						
Installment sales—2009	\$112,000	\$112,000	\$112,000			\$336,000
Installment sales—2010	64,000	64,000	64,000	\$64,000		256,000
Depreciation	(13,680)	27,792	27,792	58,896		100,800
Warranty costs	(150,000)	(80,000)				(230,000)
Loss accrual					\$(172,000)	(172,000)

Allman computes the amounts of deferred income taxes to be reported at the end of 2010 as follows.

Temporary Difference	Future Taxable (Deductible) Amounts	Tax Rate	Deferred Tax	
			(Asset)	Liability
Installment sales	\$592,000*	40%		\$236,800
Depreciation	100,800	40%		40,320
Warranty costs	(230,000)	40%	\$ (92,000)	
Loss accrual	(172,000)	40%	(68,800)	
<b>Totals</b>	<b>\$290,800</b>		<b>\$(160,800)</b>	<b>\$277,120**</b>

\*Cumulative temporary difference = \$336,000 + \$256,000  
 \*\*Because of a flat tax rate, these totals can be reconciled: \$290,800 × 40% = \$(160,800) + \$277,120

**ILLUSTRATION 19A-14**  
 Computation of Deferred Income Taxes, End of 2010

### Deferred Tax Expense (Benefit) and the Journal Entry to Record Income Taxes—2010

To determine the deferred tax expense (benefit), Allman must compare the beginning and ending balances of the deferred income tax accounts, as shown in Illustration 19A-15.

Deferred tax asset at the end of 2010	\$160,800
Deferred tax asset at the beginning of 2010	62,400
Deferred tax expense (benefit)	<u>\$ (98,400)</u>
Deferred tax liability at the end of 2010	\$277,120
Deferred tax liability at the beginning of 2010	186,400
<b>Deferred tax expense (benefit)</b>	<b><u>\$ 90,720</u></b>

**ILLUSTRATION 19A-15**  
 Computation of Deferred Tax Expense (Benefit), 2010

The deferred tax expense (benefit) and the total income tax expense for 2010 are, therefore, as follows.

Deferred tax expense (benefit)	\$ (98,400)
Deferred tax expense (benefit)	<u>90,720</u>
Deferred tax benefit for 2010	(7,680)
Current tax expense for 2010	<u>200,000</u>
<b>Income tax expense (total) for 2010</b>	<b><u>\$192,320</u></b>

**ILLUSTRATION 19A-16**  
 Computation of Total Income Tax Expense, 2010

The deferred tax expense of \$90,720 and the deferred tax benefit of \$98,400 net to a deferred tax benefit of \$7,680 for 2010.

Allman records income taxes for 2010 with the following journal entry.

Income Tax Expense	192,320	
Deferred Tax Asset	98,400	
Income Tax Payable		200,000
Deferred Tax Liability		90,720

### Financial Statement Presentation—2010

Illustration 19A-17 (on the next page) shows the classification of Allman’s deferred tax accounts at the end of 2010.

**ILLUSTRATION 19A-17**  
Classification of Deferred Tax Accounts, End of 2010

Temporary Difference	Resulting Deferred Tax		Related Balance Sheet Account	Classification
	(Asset)	Liability		
Installment sales		\$236,800	Installment Receivables	Current
Depreciation		40,320	Plant Assets	Noncurrent
Warranty costs	\$ (92,000)		Warranty Obligation	Current
Loss accrual	(68,800)		Litigation Obligation	Noncurrent
Totals	<u>\$(160,800)</u>	<u>\$277,120</u>		

The new temporary difference introduced in 2010 (due to the litigation loss accrual) results in a litigation obligation that is classified as a long-term liability. Thus, the related deferred tax asset is noncurrent.

Allman’s balance sheet at the end of 2010 reports the following amounts.

**ILLUSTRATION 19A-18**  
Balance Sheet Presentation of Deferred Taxes, End of 2010

<u>Other assets (noncurrent)</u>	
Deferred tax asset (\$68,800 – \$40,320)	\$ 28,480
<u>Current liabilities</u>	
Income tax payable	\$200,000
Deferred tax liability (\$236,800 – \$92,000)	144,800

The income statement for 2010 reports the following.

**ILLUSTRATION 19A-19**  
Income Statement Presentation of Income Tax Expense, 2010

Income before income taxes		\$504,800
Income tax expense		
Current	\$200,000	
Deferred	<u>(7,680)</u>	<u>192,320</u>
Net income		<u>\$312,480</u>

## SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 19A

**LO 11 Understand and apply the concepts and procedures of interperiod tax allocation.** Accounting for deferred taxes involves the following steps: Calculate taxable income and income tax payable for the year. Compute deferred income taxes at the end of the year. Determine deferred tax expense (benefit) and make the journal entry to record income taxes. Classify deferred tax assets and liabilities as current or noncurrent in the financial statements.

## FASB CODIFICATION

### FASB Codification References

- [1] FASB ASC 740-10-30-18. [Predecessor literature: “Accounting for Income Taxes,” *Statement of Financial Accounting Standards No. 109* (Norwalk, Conn.: FASB, 1992).]

**Exercises**

Access the FASB Codification at <http://asc.fasb.org/home> to prepare responses to the following exercises. Provide Codification references for your responses.

**CE19-1** Access the glossary (“Master Glossary”) to answer the following.

- (a) What is a deferred tax asset?
- (b) What is taxable income?
- (c) What is the definition of valuation allowance?
- (d) What is a deferred tax liability?

**CE19-2** What are the two basic requirements applied to the measurement of current and deferred income taxes at the date of the financial statements?

**CE19-3** A company wishes to conduct business in a foreign country that attracts businesses by granting “holidays” from income taxes for a certain period of time. Would the company have to disclose this “holiday” to the SEC? If so, what information must be disclosed?

**CE19-4** When is a company allowed to initially recognize the financial statement effects of a tax position?

**An additional Codification case can be found in the Using Your Judgment section, on page 1046.**

## QUESTIONS

1. Explain the difference between pretax financial income and taxable income.
2. What are the two objectives of accounting for income taxes?
3. Interest on municipal bonds is referred to as a permanent difference when determining the proper amount to report for deferred taxes. Explain the meaning of permanent differences, and give two other examples.
4. Explain the meaning of a temporary difference as it relates to deferred tax computations, and give three examples.
5. Differentiate between an originating temporary difference and a reversing difference.
6. The book basis of depreciable assets for Erwin Co. is \$900,000, and the tax basis is \$700,000 at the end of 2011. The enacted tax rate is 34% for all periods. Determine the amount of deferred taxes to be reported on the balance sheet at the end of 2011.
7. Roth Inc. has a deferred tax liability of \$68,000 at the beginning of 2011. At the end of 2011, it reports accounts receivable on the books at \$90,000 and the tax basis at zero (its only temporary difference). If the enacted tax rate is 34% for all periods, and income tax payable for the period is \$230,000, determine the amount of total income tax expense to report for 2011.
8. What is the difference between a future taxable amount and a future deductible amount? When is it appropriate to record a valuation account for a deferred tax asset?
9. Pretax financial income for Lake Inc. is \$300,000, and its taxable income is \$100,000 for 2011. Its only temporary difference at the end of the period relates to a \$70,000 difference due to excess depreciation for tax purposes. If the tax rate is 40% for all periods, compute the amount of income tax expense to report in 2011. No deferred income taxes existed at the beginning of the year.
10. How are deferred tax assets and deferred tax liabilities reported on the balance sheet?
11. Describe the procedures involved in segregating various deferred tax amounts into current and noncurrent categories.
12. How is it determined whether deferred tax amounts are considered to be “related” to specific asset or liability amounts?
13. At the end of the year, Falabella Co. has pretax financial income of \$550,000. Included in the \$550,000 is \$70,000 interest income on municipal bonds, \$25,000 fine for dumping hazardous waste, and depreciation of \$60,000. Depreciation for tax purposes is \$45,000. Compute income taxes payable, assuming the tax rate is 30% for all periods.
14. Addison Co. has one temporary difference at the beginning of 2010 of \$500,000. The deferred tax liability established for this amount is \$150,000, based on a tax rate of 30%. The temporary difference will provide the following taxable amounts: \$100,000 in 2011; \$200,000 in 2012, and \$200,000 in 2013. If a new tax rate for 2013 of 20% is enacted into law at the end of 2010, what is the journal entry necessary in 2010 (if any) to adjust deferred taxes?
15. What are some of the reasons that the components of income tax expense should be disclosed and a reconciliation between the effective tax rate and the statutory tax rate be provided?

16. Differentiate between “loss carryback” and “loss carryforward.” Which can be accounted for with the greater certainty when it arises? Why?
17. What are the possible treatments for tax purposes of a net operating loss? What are the circumstances that determine the option to be applied? What is the proper treatment of a net operating loss for financial reporting purposes?
18. What controversy relates to the accounting for net operating loss carryforwards?
19. What is an uncertain tax position, and what are the general guidelines for accounting for uncertain tax positions?
20. Where can authoritative iGAAP related to the accounting for taxes be found?
21. Briefly describe some of the similarities and differences between U.S. GAAP and iGAAP with respect to income tax accounting.
22. Describe the current convergence efforts of the FASB and IASB in the area of accounting for taxes.

## BRIEF EXERCISES

- 1 •2** **BE19-1** In 2010, Amirante Corporation had pretax financial income of \$168,000 and taxable income of \$120,000. The difference is due to the use of different depreciation methods for tax and accounting purposes. The effective tax rate is 40%. Compute the amount to be reported as income taxes payable at December 31, 2010.
- 1 •2** **BE19-2** Oxford Corporation began operations in 2010 and reported pretax financial income of \$225,000 for the year. Oxford’s tax depreciation exceeded its book depreciation by \$40,000. Oxford’s tax rate for 2010 and years thereafter is 30%. In its December 31, 2010 balance sheet, what amount of deferred tax liability should be reported?
- 9** **BE19-3** Using the information from BE19-2, assume this is the only difference between Oxford’s pretax financial income and taxable income. Prepare the journal entry to record the income tax expense, deferred income taxes, and income tax payable, and show how the deferred tax liability will be classified on the December 31, 2010, balance sheet.
- 2 •5** **BE19-4** At December 31, 2010, Appaloosa Corporation had a deferred tax liability of \$25,000. At December 31, 2011, the deferred tax liability is \$42,000. The corporation’s 2011 current tax expense is \$48,000. What amount should Appaloosa report as total 2011 tax expense?
- 1 •3** **BE19-5** At December 31, 2010, Suffolk Corporation had an estimated warranty liability of \$105,000 for accounting purposes and \$0 for tax purposes. (The warranty costs are not deductible until paid.) The effective tax rate is 40%. Compute the amount Suffolk should report as a deferred tax asset at December 31, 2010.
- 3 •5** **BE19-6** At December 31, 2010, Percheron Inc. had a deferred tax asset of \$30,000. At December 31, 2011, the deferred tax asset is \$59,000. The corporation’s 2011 current tax expense is \$61,000. What amount should Percheron report as total 2011 tax expense?
- 4** **BE19-7** At December 31, 2010, Hillyard Corporation has a deferred tax asset of \$200,000. After a careful review of all available evidence, it is determined that it is more likely than not that \$60,000 of this deferred tax asset will not be realized. Prepare the necessary journal entry.
- 5** **BE19-8** Mitchell Corporation had income before income taxes of \$195,000 in 2010. Mitchell’s current income tax expense is \$48,000, and deferred income tax expense is \$30,000. Prepare Mitchell’s 2010 income statement, beginning with income before income taxes.
- 2 •3** **BE19-9** Shetland Inc. had pretax financial income of \$154,000 in 2010. Included in the computation of that amount is insurance expense of \$4,000 which is not deductible for tax purposes. In addition, depreciation for tax purposes exceeds accounting depreciation by \$10,000. Prepare Shetland’s journal entry to record 2010 taxes, assuming a tax rate of 45%.
- 2** **BE19-10** Clydesdale Corporation has a cumulative temporary difference related to depreciation of \$580,000 at December 31, 2010. This difference will reverse as follows: 2011, \$42,000; 2012, \$244,000; and 2013, \$294,000. Enacted tax rates are 34% for 2011 and 2012, and 40% for 2013. Compute the amount Clydesdale should report as a deferred tax liability at December 31, 2010.
- 7** **BE19-11** At December 31, 2010, Fell Corporation had a deferred tax liability of \$680,000, resulting from future taxable amounts of \$2,000,000 and an enacted tax rate of 34%. In May 2011, a new income tax act is signed into law that raises the tax rate to 40% for 2011 and future years. Prepare the journal entry for Fell to adjust the deferred tax liability.

**•8** BE19-12 Conlin Corporation had the following tax information.

Year	Taxable Income	Tax Rate	Taxes Paid
2008	\$300,000	35%	\$105,000
2009	\$325,000	30%	\$ 97,500
2010	\$400,000	30%	\$120,000

In 2011 Conlin suffered a net operating loss of \$480,000, which it elected to carry back. The 2011 enacted tax rate is 29%. Prepare Conlin’s entry to record the effect of the loss carryback.

**•8** BE19-13 Rode Inc. incurred a net operating loss of \$500,000 in 2010. Combined income for 2008 and 2009 was \$350,000. The tax rate for all years is 40%. Rode elects the carryback option. Prepare the journal entries to record the benefits of the loss carryback and the loss carryforward.

**•4 •8** BE19-14 Use the information for Rode Inc. given in BE19-13. Assume that it is more likely than not that the entire net operating loss carryforward will not be realized in future years. Prepare all the journal entries necessary at the end of 2010.

**•9** BE19-15 Youngman Corporation has temporary differences at December 31, 2010, that result in the following deferred taxes.

Deferred tax liability—current	\$38,000
Deferred tax asset—current	\$(62,000)
Deferred tax liability—noncurrent	\$96,000
Deferred tax asset—noncurrent	\$(27,000)

Indicate how these balances would be presented in Youngman’s December 31, 2010, balance sheet.

## EXERCISES

**•2 •5** E19-1 (One Temporary Difference, Future Taxable Amounts, One Rate, No Beginning Deferred Taxes) Starfleet Corporation has one temporary difference at the end of 2010 that will reverse and cause taxable amounts of \$55,000 in 2011, \$60,000 in 2012, and \$75,000 in 2013. Starfleet’s pretax financial income for 2010 is \$400,000, and the tax rate is 30% for all years. There are no deferred taxes at the beginning of 2010.

### Instructions

- Compute taxable income and income taxes payable for 2010.
- Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2010.
- Prepare the income tax expense section of the income statement for 2010, beginning with the line “Income before income taxes.”

**•2** E19-2 (Two Differences, No Beginning Deferred Taxes, Tracked through 2 Years) The following information is available for McKee Corporation for 2010.

- Excess of tax depreciation over book depreciation, \$40,000. This \$40,000 difference will reverse equally over the years 2011–2014.
- Deferral, for book purposes, of \$25,000 of rent received in advance. The rent will be earned in 2011.
- Pretax financial income, \$350,000.
- Tax rate for all years, 40%.

### Instructions

- Compute taxable income for 2010.
- Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2010.
- Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2011, assuming taxable income of \$325,000.

**•2 •5** E19-3 (One Temporary Difference, Future Taxable Amounts, One Rate, Beginning Deferred Taxes) Brennan Corporation began 2010 with a \$90,000 balance in the Deferred Tax Liability account. At the end of 2010, the related cumulative temporary difference amounts to \$350,000, and it will reverse evenly over

the next 2 years. Pretax accounting income for 2010 is \$525,000, the tax rate for all years is 40%, and taxable income for 2010 is \$400,000.

#### Instructions

- (a) Compute income taxes payable for 2010.
- (b) Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2010.
- (c) Prepare the income tax expense section of the income statement for 2010 beginning with the line "Income before income taxes."

**2** **3** **5**  
**6**

**E19-4 (Three Differences, Compute Taxable Income, Entry for Taxes)** Havaci Company reports pretax financial income of \$80,000 for 2010. The following items cause taxable income to be different than pretax financial income.

1. Depreciation on the tax return is greater than depreciation on the income statement by \$16,000.
2. Rent collected on the tax return is greater than rent earned on the income statement by \$27,000.
3. Fines for pollution appear as an expense of \$11,000 on the income statement.

Havaci's tax rate is 30% for all years, and the company expects to report taxable income in all future years. There are no deferred taxes at the beginning of 2010.

#### Instructions

- (a) Compute taxable income and income taxes payable for 2010.
- (b) Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2010.
- (c) Prepare the income tax expense section of the income statement for 2010, beginning with the line "Income before income taxes."
- (d) Compute the effective income tax rate for 2010.

**2** **3** **5**

**E19-5 (Two Temporary Differences, One Rate, Beginning Deferred Taxes)** The following facts relate to Alschuler Corporation.

1. Deferred tax liability, January 1, 2010, \$40,000.
2. Deferred tax asset, January 1, 2010, \$0.
3. Taxable income for 2010, \$115,000.
4. Pretax financial income for 2010, \$200,000.
5. Cumulative temporary difference at December 31, 2010, giving rise to future taxable amounts, \$220,000.
6. Cumulative temporary difference at December 31, 2010, giving rise to future deductible amounts, \$35,000.
7. Tax rate for all years, 40%.
8. The company is expected to operate profitably in the future.

#### Instructions

- (a) Compute income taxes payable for 2010.
- (b) Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2010.
- (c) Prepare the income tax expense section of the income statement for 2010, beginning with the line "Income before income taxes."

**6**

**E19-6 (Identify Temporary or Permanent Differences)** Listed below are items that are commonly accounted for differently for financial reporting purposes than they are for tax purposes.

#### Instructions

For each item below, indicate whether it involves:

- (1) A temporary difference that will result in future deductible amounts and, therefore, will usually give rise to a deferred income tax asset.
- (2) A temporary difference that will result in future taxable amounts and, therefore, will usually give rise to a deferred income tax liability.
- (3) A permanent difference.

Use the appropriate number to indicate your answer for each.

- (a) \_\_\_\_ The MACRS depreciation system is used for tax purposes, and the straight-line depreciation method is used for financial reporting purposes for some plant assets.
- (b) \_\_\_\_ A landlord collects some rents in advance. Rents received are taxable in the period when they are received.

- (c) \_\_\_\_\_ Expenses are incurred in obtaining tax-exempt income.
- (d) \_\_\_\_\_ Costs of guarantees and warranties are estimated and accrued for financial reporting purposes.
- (e) \_\_\_\_\_ Installment sales of investments are accounted for by the accrual method for financial reporting purposes and the installment method for tax purposes.
- (f) \_\_\_\_\_ Interest is received on an investment in tax-exempt municipal obligations.
- (g) \_\_\_\_\_ For some assets, straight-line depreciation is used for both financial reporting purposes and tax purposes but the assets' lives are shorter for tax purposes.
- (h) \_\_\_\_\_ Proceeds are received from a life insurance company because of the death of a key officer. (The company carries a policy on key officers.)
- (i) \_\_\_\_\_ The tax return reports a deduction for 80% of the dividends received from U.S. corporations. The cost method is used in accounting for the related investments for financial reporting purposes.
- (j) \_\_\_\_\_ Estimated losses on pending lawsuits and claims are accrued for books. These losses are tax deductible in the period(s) when the related liabilities are settled.
- (k) \_\_\_\_\_ Expenses on stock options are accrued for financial reporting purposes.

**E19-7 (Terminology, Relationships, Computations, Entries)**

**Instructions**

Complete the following statements by filling in the blanks.

- (a) In a period in which a taxable temporary difference reverses, the reversal will cause taxable income to be \_\_\_\_\_ (less than, greater than) pretax financial income.
- (b) If a \$68,000 balance in Deferred Tax Asset was computed by use of a 40% rate, the underlying cumulative temporary difference amounts to \$\_\_\_\_\_.
- (c) Deferred taxes \_\_\_\_\_ (are, are not) recorded to account for permanent differences.
- (d) If a taxable temporary difference originates in 2011, it will cause taxable income for 2011 to be \_\_\_\_\_ (less than, greater than) pretax financial income for 2011.
- (e) If total tax expense is \$50,000 and deferred tax expense is \$65,000, then the current portion of the expense computation is referred to as current tax \_\_\_\_\_ (expense, benefit) of \$\_\_\_\_\_.
- (f) If a corporation's tax return shows taxable income of \$105,000 for Year 2 and a tax rate of 40%, how much will appear on the December 31, Year 2, balance sheet for "Income tax payable" if the company has made estimated tax payments of \$36,500 for Year 2? \$\_\_\_\_\_.
- (g) An increase in the Deferred Tax Liability account on the balance sheet is recorded by a \_\_\_\_\_ (debit, credit) to the Income Tax Expense account.
- (h) An income statement that reports current tax expense of \$82,000 and deferred tax benefit of \$23,000 will report total income tax expense of \$\_\_\_\_\_.
- (i) A valuation account is needed whenever it is judged to be \_\_\_\_\_ that a portion of a deferred tax asset \_\_\_\_\_ (will be, will not be) realized.
- (j) If the tax return shows total taxes due for the period of \$75,000 but the income statement shows total income tax expense of \$55,000, the difference of \$20,000 is referred to as deferred tax \_\_\_\_\_ (expense, benefit).

**E19-8 (Two Temporary Differences, One Rate, 3 Years)** Gordon Company has two temporary differences between its income tax expense and income taxes payable. The information is shown below.

	2010	2011	2012
Pretax financial income	\$840,000	\$910,000	\$945,000
Excess depreciation expense on tax return	(30,000)	(40,000)	(20,000)
Excess warranty expense in financial income	20,000	10,000	8,000
Taxable income	<u>\$830,000</u>	<u>\$880,000</u>	<u>\$933,000</u>

The income tax rate for all years is 40%.

**Instructions**

- (a) Prepare the journal entry to record income tax expense, deferred income taxes, and income tax payable for 2010, 2011, and 2012.
- (b) Assuming there were no temporary differences prior to 2010, indicate how deferred taxes will be reported on the 2012 balance sheet. Gordon's product warranty is for 12 months.
- (c) Prepare the income tax expense section of the income statement for 2012, beginning with the line "Pretax financial income."

- E19-9 (Carryback and Carryforward of NOL, No Valuation Account, No Temporary Differences)** The pretax financial income (or loss) figures for Synergetics Company are as follows.

2006	\$160,000
2007	250,000
2008	90,000
2009	(160,000)
2010	(350,000)
2011	120,000
2012	100,000

Pretax financial income (or loss) and taxable income (loss) were the same for all years involved. Assume a 45% tax rate for 2006 and 2007 and a 40% tax rate for the remaining years.

#### Instructions

Prepare the journal entries for the years 2008 to 2012 to record income tax expense and the effects of the net operating loss carrybacks and carryforwards assuming Synergetics Company uses the carryback provision. All income and losses relate to normal operations. (In recording the benefits of a loss carryforward, assume that no valuation account is deemed necessary.)

- E19-10 (Two NOLs, No Temporary Differences, No Valuation Account, Entries and Income Statement)** Lanier Corporation has pretax financial income (or loss) equal to taxable income (or loss) from 2003 through 2011 as follows.

	Income (Loss)	Tax Rate
2003	\$29,000	30%
2004	40,000	30%
2005	22,000	35%
2006	48,000	50%
2007	(150,000)	40%
2008	90,000	40%
2009	30,000	40%
2010	105,000	40%
2011	(50,000)	45%

Pretax financial income (loss) and taxable income (loss) were the same for all years since Lanier has been in business. Assume the carryback provision is employed for net operating losses. In recording the benefits of a loss carryforward, assume that it is more likely than not that the related benefits will be realized.

#### Instructions

- What entry(ies) for income taxes should be recorded for 2007?
- Indicate what the income tax expense portion of the income statement for 2007 should look like. Assume all income (loss) relates to continuing operations.
- What entry for income taxes should be recorded in 2008?
- How should the income tax expense section of the income statement for 2008 appear?
- What entry for income taxes should be recorded in 2011?
- How should the income tax expense section of the income statement for 2011 appear?

- E19-11 (Three Differences, Classify Deferred Taxes)** At December 31, 2010, Cascade Company had a net deferred tax liability of \$450,000. An explanation of the items that compose this balance is as follows.

Temporary Differences	Resulting Balances in Deferred Taxes
1. Excess of tax depreciation over book depreciation	\$200,000
2. Accrual, for book purposes, of estimated loss contingency from pending lawsuit that is expected to be settled in 2011. The loss will be deducted on the tax return when paid.	(50,000)
3. Accrual method used for book purposes and installment method used for tax purposes for an isolated installment sale of an investment.	300,000
	<u>\$450,000</u>

In analyzing the temporary differences, you find that \$30,000 of the depreciation temporary difference will reverse in 2011, and \$120,000 of the temporary difference due to the installment sale will reverse in 2011. The tax rate for all years is 40%.

**Instructions**

Indicate the manner in which deferred taxes should be presented on Cascade Company's December 31, 2010, balance sheet.

**•2 •3 •5** **E19-12 (Two Temporary Differences, One Rate, Beginning Deferred Taxes, Compute Pretax Financial Income)** The following facts relate to McKane Corporation.

1. Deferred tax liability, January 1, 2010, \$60,000.
2. Deferred tax asset, January 1, 2010, \$20,000.
3. Taxable income for 2010, \$115,000.
4. Cumulative temporary difference at December 31, 2010, giving rise to future taxable amounts, \$210,000.
5. Cumulative temporary difference at December 31, 2010, giving rise to future deductible amounts, \$95,000.
6. Tax rate for all years, 40%. No permanent differences exist.
7. The company is expected to operate profitably in the future.

**Instructions**

- (a) Compute the amount of pretax financial income for 2010.
- (b) Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2010.
- (c) Prepare the income tax expense section of the income statement for 2010, beginning with the line "Income before income taxes."
- (d) Compute the effective tax rate for 2010.

**•2 •7** **E19-13 (One Difference, Multiple Rates, Effect of Beginning Balance versus No Beginning Deferred Taxes)** At the end of 2010, Wasicsko Company has \$180,000 of cumulative temporary differences that will result in reporting future taxable amounts as follows.

2011	\$ 70,000
2012	50,000
2013	40,000
2014	20,000
	<u>\$180,000</u>

Tax rates enacted as of the beginning of 2009 are:

2009 and 2010	40%
2011 and 2012	30%
2013 and later	25%

Wasicsko's taxable income for 2010 is \$340,000. Taxable income is expected in all future years.

**Instructions**

- (a) Prepare the journal entry for Wasicsko to record income taxes payable, deferred income taxes, and income tax expense for 2010, assuming that there were no deferred taxes at the end of 2009.
- (b) Prepare the journal entry for Wasicsko to record income taxes payable, deferred income taxes, and income tax expense for 2010, assuming that there was a balance of \$22,000 in a Deferred Tax Liability account at the end of 2009.

**•3 •4** **E19-14 (Deferred Tax Asset with and without Valuation Account)** Callaway Corp. has a deferred tax asset account with a balance of \$150,000 at the end of 2010 due to a single cumulative temporary difference of \$375,000. At the end of 2011 this same temporary difference has increased to a cumulative amount of \$500,000. Taxable income for 2011 is \$850,000. The tax rate is 40% for all years. No valuation account related to the deferred tax asset is in existence at the end of 2010.

**Instructions**

- (a) Record income tax expense, deferred income taxes, and income taxes payable for 2011, assuming that it is more likely than not that the deferred tax asset will be realized.
- (b) Assuming that it is more likely than not that \$30,000 of the deferred tax asset will not be realized, prepare the journal entry at the end of 2011 to record the valuation account.

**•3 •4 •5** **E19-15 (Deferred Tax Asset with Previous Valuation Account)** Assume the same information as E19-14, except that at the end of 2010, Callaway Corp. had a valuation account related to its deferred tax asset of \$40,000.

**Instructions**

- (a) Record income tax expense, deferred income taxes, and income taxes payable for 2011, assuming that it is more likely than not that the deferred tax asset will be realized in full.
- (b) Record income tax expense, deferred income taxes, and income taxes payable for 2011, assuming that it is more likely than not that none of the deferred tax asset will be realized.

**2** **5** **7**  
**9**

**E19-16 (Deferred Tax Liability, Change in Tax Rate, Prepare Section of Income Statement)** Sharrer Inc.'s only temporary difference at the beginning and end of 2010 is caused by a \$2 million deferred gain for tax purposes for an installment sale of a plant asset, and the related receivable (only one-half of which is classified as a current asset) is due in equal installments in 2011 and 2012. The related deferred tax liability at the beginning of the year is \$800,000. In the third quarter of 2010, a new tax rate of 34% is enacted into law and is scheduled to become effective for 2012. Taxable income for 2010 is \$5,000,000, and taxable income is expected in all future years.

**Instructions**

- (a) Determine the amount reported as a deferred tax liability at the end of 2010. Indicate proper classification(s).
- (b) Prepare the journal entry (if any) necessary to adjust the deferred tax liability when the new tax rate is enacted into law.
- (c) Draft the income tax expense portion of the income statement for 2010. Begin with the line "Income before income taxes." Assume no permanent differences exist.

**2** **3** **7**

**E19-17 (Two Temporary Differences, Tracked through 3 Years, Multiple Rates)** Taxable income and pretax financial income would be identical for Jones Co. except for its treatments of gross profit on installment sales and estimated costs of warranties. The following income computations have been prepared.

Taxable income	<u>2010</u>	<u>2011</u>	<u>2012</u>
Excess of revenues over expenses (excluding two temporary differences)	\$160,000	\$210,000	\$90,000
Installment gross profit collected	8,000	8,000	8,000
Expenditures for warranties	<u>(5,000)</u>	<u>(5,000)</u>	<u>(5,000)</u>
Taxable income	<u>\$163,000</u>	<u>\$213,000</u>	<u>\$93,000</u>
Pretax financial income	<u>2010</u>	<u>2011</u>	<u>2012</u>
Excess of revenues over expenses (excluding two temporary differences)	\$160,000	\$210,000	\$90,000
Installment gross profit earned	24,000	-0-	-0-
Estimated cost of warranties	<u>(15,000)</u>	<u>-0-</u>	<u>-0-</u>
Income before taxes	<u>\$169,000</u>	<u>\$210,000</u>	<u>\$90,000</u>

The tax rates in effect are: 2010, 45%; 2011 and 2012, 40%. All tax rates were enacted into law on January 1, 2010. No deferred income taxes existed at the beginning of 2010. Taxable income is expected in all future years.

**Instructions**

Prepare the journal entry to record income tax expense, deferred income taxes, and income tax payable for 2010, 2011, and 2012.

**2** **3** **7**

**E19-18 (Three Differences, Multiple Rates, Future Taxable Income)** During 2010, Graham Co.'s first year of operations, the company reports pretax financial income of \$250,000. Graham's enacted tax rate is 40% for 2010 and 35% for all later years. Graham expects to have taxable income in each of the next 5 years. The effects on future tax returns of temporary differences existing at December 31, 2010, are summarized below.

	<u>Future Years</u>					
	<u>2011</u>	<u>2012</u>	<u>2013</u>	<u>2014</u>	<u>2015</u>	<u>Total</u>
Future taxable (deductible) amounts:						
Installment sales	\$32,000	\$32,000	\$32,000			\$ 96,000
Depreciation	6,000	6,000	6,000	\$6,000	\$6,000	30,000
Unearned rent	<u>(50,000)</u>	<u>(50,000)</u>				<u>(100,000)</u>

**Instructions**

- (a) Complete the schedule below to compute deferred taxes at December 31, 2010.
- (b) Compute taxable income for 2010.
- (c) Prepare the journal entry to record income tax payable, deferred taxes, and income tax expense for 2010.

Temporary Difference	Future Taxable (Deductible) Amounts	Tax Rate	December 31, 2010	
			Deferred Tax (Asset)	Liability
Installment sales	\$ 96,000			
Depreciation	30,000			
Unearned rent	(100,000)	—	—	—
Totals	\$ _____	==	==	==

**E19-19 (Two Differences, One Rate, Beginning Deferred Balance, Compute Pretax Financial Income)**

Shamess Co. establishes a \$90 million liability at the end of 2010 for the estimated litigation settlement for manufacturing defects. All related costs will be paid and deducted on the tax return in 2011. Also, at the end of 2010, the company has \$50 million of temporary differences due to excess depreciation for tax purposes, \$7 million of which will reverse in 2011.

The enacted tax rate for all years is 40%, and the company pays taxes of \$64 million on \$160 million of taxable income in 2010. Shamess expects to have taxable income in 2011.

**Instructions**

- (a) Determine the deferred taxes to be reported at the end of 2010.
- (b) Indicate how the deferred taxes computed in (a) are to be reported on the balance sheet.
- (c) Assuming that the only deferred tax account at the beginning of 2010 was a deferred tax liability of \$10,000,000, draft the income tax expense portion of the income statement for 2010, beginning with the line “Income before income taxes.” (*Hint:* You must first compute (1) the amount of temporary difference underlying the beginning \$10,000,000 deferred tax liability, then (2) the amount of temporary differences originating or reversing during the year, then (3) the amount of pretax financial income.)

**E19-20 (Two Differences, No Beginning Deferred Taxes, Multiple Rates)**

Macinski Inc., in its first year of operations, has the following differences between the book basis and tax basis of its assets and liabilities at the end of 2010.

	Book Basis	Tax Basis
Equipment (net)	\$400,000	\$340,000
Estimated warranty liability	\$150,000	\$ -0-

It is estimated that the warranty liability will be settled in 2011. The difference in equipment (net) will result in taxable amounts of \$20,000 in 2011, \$30,000 in 2012, and \$10,000 in 2013. The company has taxable income of \$550,000 in 2010. As of the beginning of 2010, the enacted tax rate is 34% for 2010–2012, and 30% for 2013. Macinski expects to report taxable income through 2013.

**Instructions**

- (a) Prepare the journal entry to record income tax expense, deferred income taxes, and income tax payable for 2010.
- (b) Indicate how deferred income taxes will be reported on the balance sheet at the end of 2010.

**E19-21 (Two Temporary Differences, Multiple Rates, Future Taxable Income)**

Flynn Inc. has two temporary differences at the end of 2010. The first difference stems from installment sales, and the second one results from the accrual of a loss contingency. Flynn’s accounting department has developed a schedule of future taxable and deductible amounts related to these temporary differences as follows.

	2011	2012	2013	2014
Taxable amounts	\$40,000	\$50,000	\$60,000	\$90,000
Deductible amounts		(15,000)	(19,000)	
	\$40,000	\$35,000	\$41,000	\$90,000

As of the beginning of 2010, the enacted tax rate is 34% for 2010 and 2011, and 38% for 2012–2015. At the beginning of 2010, the company had no deferred income taxes on its balance sheet. Taxable income for 2010 is \$400,000. Taxable income is expected in all future years.

**Instructions**

- Prepare the journal entry to record income tax expense, deferred income taxes, and income taxes payable for 2010.
- Indicate how deferred income taxes would be classified on the balance sheet at the end of 2010.

**2 3 9**

**E19-22 (Two Differences, One Rate, First Year)** The differences between the book basis and tax basis of the assets and liabilities of Morgan Corporation at the end of 2010 are presented below.

	<u>Book Basis</u>	<u>Tax Basis</u>
Accounts receivable	\$50,000	\$0-
Litigation liability	20,000	-0-

It is estimated that the litigation liability will be settled in 2011. The difference in accounts receivable will result in taxable amounts of \$30,000 in 2011 and \$20,000 in 2012. The company has taxable income of \$300,000 in 2010 and is expected to have taxable income in each of the following 2 years. Its enacted tax rate is 34% for all years. This is the company's first year of operations. The operating cycle of the business is 2 years.

**Instructions**

- Prepare the journal entry to record income tax expense, deferred income taxes, and income tax payable for 2010.
- Indicate how deferred income taxes will be reported on the balance sheet at the end of 2010.

**4 7 8**

**E19-23 (NOL Carryback and Carryforward, Valuation Account versus No Valuation Account)** Sondgeroth Inc. reports the following pretax income (loss) for both financial reporting purposes and tax purposes. (Assume the carryback provision is used for a net operating loss.)

<u>Year</u>	<u>Pretax Income (Loss)</u>	<u>Tax Rate</u>
2009	\$110,000	34%
2010	90,000	34%
2011	(260,000)	38%
2012	220,000	38%

The tax rates listed were all enacted by the beginning of 2009.

**Instructions**

- Prepare the journal entries for the years 2009–2012 to record income tax expense (benefit) and income tax payable (refundable) and the tax effects of the loss carryback and carryforward, assuming that at the end of 2011 the benefits of the loss carryforward are judged more likely than not to be realized in the future.
- Using the assumption in (a), prepare the income tax section of the 2011 income statement beginning with the line "Operating loss before income taxes."
- Prepare the journal entries for 2011 and 2012, assuming that based on the weight of available evidence, it is more likely than not that one-fourth of the benefits of the loss carryforward will not be realized.
- Using the assumption in (c), prepare the income tax section of the 2011 income statement beginning with the line "Operating loss before income taxes."

**4 7 8**

**E19-24 (NOL Carryback and Carryforward, Valuation Account Needed)** Nielson Inc. reports the following pretax income (loss) for both book and tax purposes. (Assume the carryback provision is used where possible for a net operating loss.)

<u>Year</u>	<u>Pretax Income (Loss)</u>	<u>Tax Rate</u>
2009	\$100,000	40%
2010	90,000	40%
2011	(240,000)	45%
2012	120,000	45%

The tax rates listed were all enacted by the beginning of 2009.

**Instructions**

- Prepare the journal entries for years 2009–2012 to record income tax expense (benefit) and income tax payable (refundable), and the tax effects of the loss carryback and loss carryforward, assuming that based on the weight of available evidence, it is more likely than not that one-half of the benefits of the loss carryforward will not be realized.
- Prepare the income tax section of the 2011 income statement beginning with the line "Operating loss before income taxes."
- Prepare the income tax section of the 2012 income statement beginning with the line "Income before income taxes."

**4 • 7 • 8** E19-25 (NOL Carryback and Carryforward, Valuation Account Needed) Hayes Co. reported the following pretax financial income (loss) for the years 2009–2013.

2009	\$240,000
2010	350,000
2011	90,000
2012	(550,000)
2013	180,000

Pretax financial income (loss) and taxable income (loss) were the same for all years involved. The enacted tax rate was 34% for 2009 and 2010, and 40% for 2011–2013. Assume the carryback provision is used first for net operating losses.

**Instructions**

- (a) Prepare the journal entries for the years 2011–2013 to record income tax expense, income tax payable (refundable), and the tax effects of the loss carryback and loss carryforward, assuming that based on the weight of available evidence, it is more likely than not that one-fifth of the benefits of the loss carryforward will not be realized.
- (b) Prepare the income tax section of the 2012 income statement beginning with the line “Income (loss) before income taxes.”

See the book’s companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), for a set of B Exercises.

**PROBLEMS**

**2 • 3 • 5** P19-1 (Three Differences, No Beginning Deferred Taxes, Multiple Rates) The following information is available for Remmers Corporation for 2010.

- 1. Depreciation reported on the tax return exceeded depreciation reported on the income statement by \$120,000. This difference will reverse in equal amounts of \$30,000 over the years 2011–2014.
- 2. Interest received on municipal bonds was \$10,000.
- 3. Rent collected in advance on January 1, 2010, totaled \$60,000 for a 3-year period. Of this amount, \$40,000 was reported as unearned at December 31, for book purposes.
- 4. The tax rates are 40% for 2010 and 35% for 2011 and subsequent years.
- 5. Income taxes of \$320,000 are due per the tax return for 2010.
- 6. No deferred taxes existed at the beginning of 2010.

**Instructions**

- (a) Compute taxable income for 2010.
- (b) Compute pretax financial income for 2010.
- (c) Prepare the journal entries to record income tax expense, deferred income taxes, and income taxes payable for 2010 and 2011. Assume taxable income was \$980,000 in 2011.
- (d) Prepare the income tax expense section of the income statement for 2010, beginning with “Income before income taxes.”

**3 • 5 • 6** P19-2 (One Temporary Difference, Tracked for 4 Years, One Permanent Difference, Change in Rate) The pretax financial income of Truttman Company differs from its taxable income throughout each of 4 years as follows.

Year	Pretax Financial Income	Taxable Income	Tax Rate
2010	\$290,000	\$180,000	35%
2011	320,000	225,000	40%
2012	350,000	260,000	40%
2013	420,000	560,000	40%

Pretax financial income for each year includes a nondeductible expense of \$30,000 (never deductible for tax purposes). The remainder of the difference between pretax financial income and taxable income in each period is due to one depreciation temporary difference. No deferred income taxes existed at the beginning of 2010.

**Instructions**

- (a) Prepare journal entries to record income taxes in all 4 years. Assume that the change in the tax rate to 40% was not enacted until the beginning of 2011.
- (b) Prepare the income statement for 2011, beginning with income before income taxes.

**2** **5** **6**  
**9**

**P19-3 (Second Year of Depreciation Difference, Two Differences, Single Rate, Extraordinary Item)**

The following information has been obtained for the Gocker Corporation.

- 1. Prior to 2010, taxable income and pretax financial income were identical.
- 2. Pretax financial income is \$1,700,000 in 2010 and \$1,400,000 in 2011.
- 3. On January 1, 2010, equipment costing \$1,200,000 is purchased. It is to be depreciated on a straight-line basis over 5 years for tax purposes and over 8 years for financial reporting purposes. (*Hint:* Use the half-year convention for tax purposes, as discussed in Appendix 11A.)
- 4. Interest of \$60,000 was earned on tax-exempt municipal obligations in 2011.
- 5. Included in 2011 pretax financial income is an extraordinary gain of \$200,000, which is fully taxable.
- 6. The tax rate is 35% for all periods.
- 7. Taxable income is expected in all future years.

**Instructions**

- (a) Compute taxable income and income tax payable for 2011.
- (b) Prepare the journal entry to record 2011 income tax expense, income tax payable, and deferred taxes.
- (c) Prepare the bottom portion of Gocker’s 2011 income statement, beginning with “Income before income taxes and extraordinary item.”
- (d) Indicate how deferred income taxes should be presented on the December 31, 2011, balance sheet.

**2** **3** **5**

**P19-4 (Permanent and Temporary Differences, One Rate)** The accounting records of Shinault Inc. show the following data for 2010.

- 1. Life insurance expense on officers was \$9,000.
- 2. Equipment was acquired in early January for \$300,000. Straight-line depreciation over a 5-year life is used, with no salvage value. For tax purposes, Shinault used a 30% rate to calculate depreciation.
- 3. Interest revenue on State of New York bonds totaled \$4,000.
- 4. Product warranties were estimated to be \$50,000 in 2010. Actual repair and labor costs related to the warranties in 2010 were \$10,000. The remainder is estimated to be paid evenly in 2011 and 2012.
- 5. Sales on an accrual basis were \$100,000. For tax purposes, \$75,000 was recorded on the installment-sales method.
- 6. Fines incurred for pollution violations were \$4,200.
- 7. Pretax financial income was \$750,000. The tax rate is 30%.

**Instructions**

- (a) Prepare a schedule starting with pretax financial income in 2010 and ending with taxable income in 2010.
- (b) Prepare the journal entry for 2010 to record income tax payable, income tax expense, and deferred income taxes.

**5** **7** **8**  
**9**

**P19-5 (NOL without Valuation Account)** Jennings Inc. reported the following pretax income (loss) and related tax rates during the years 2006–2012.

	Pretax Income (loss)	Tax Rate
2006	\$ 40,000	30%
2007	25,000	30%
2008	50,000	30%
2009	80,000	40%
2010	(180,000)	45%
2011	70,000	40%
2012	100,000	35%

Pretax financial income (loss) and taxable income (loss) were the same for all years since Jennings began business. The tax rates from 2009–2012 were enacted in 2009.

**Instructions**

- (a) Prepare the journal entries for the years 2010–2012 to record income tax payable (refundable), income tax expense (benefit), and the tax effects of the loss carryback and carryforward. Assume that Jennings elects the carryback provision where possible and expects to realize the benefits of any loss carryforward in the year that immediately follows the loss year.
- (b) Indicate the effect the 2010 entry(ies) has on the December 31, 2010, balance sheet.

- (c) Prepare the portion of the income statement, starting with “Operating loss before income taxes,” for 2010.
- (d) Prepare the portion of the income statement, starting with “Income before income taxes,” for 2011.

**P19-6 (Two Differences, Two Rates, Future Income Expected)** Presented below are two independent situations related to future taxable and deductible amounts resulting from temporary differences existing at December 31, 2010.

1. Mooney Co. has developed the following schedule of future taxable and deductible amounts.

	<u>2011</u>	<u>2012</u>	<u>2013</u>	<u>2014</u>	<u>2015</u>
Taxable amounts	\$300	\$300	\$300	\$ 300	\$300
Deductible amount	—	—	—	(1,600)	—

2. Roesch Co. has the following schedule of future taxable and deductible amounts.

	<u>2011</u>	<u>2012</u>	<u>2013</u>	<u>2014</u>
Taxable amounts	\$300	\$300	\$ 300	\$300
Deductible amount	—	—	(2,300)	—

Both Mooney Co. and Roesch Co. have taxable income of \$4,000 in 2010 and expect to have taxable income in all future years. The tax rates enacted as of the beginning of 2010 are 30% for 2010–2013 and 35% for years thereafter. All of the underlying temporary differences relate to noncurrent assets and liabilities.

**Instructions**

For each of these two situations, compute the net amount of deferred income taxes to be reported at the end of 2010, and indicate how it should be classified on the balance sheet.

**P19-7 (One Temporary Difference, Tracked 3 Years, Change in Rates, Income Statement Presentation)**

Crosley Corp. sold an investment on an installment basis. The total gain of \$60,000 was reported for financial reporting purposes in the period of sale. The company qualifies to use the installment-sales method for tax purposes. The installment period is 3 years; one-third of the sale price is collected in the period of sale. The tax rate was 40% in 2010, and 35% in 2011 and 2012. The 35% tax rate was not enacted in law until 2011. The accounting and tax data for the 3 years is shown below.

	<u>Financial Accounting</u>	<u>Tax Return</u>
<u>2010 (40% tax rate)</u>		
Income before temporary difference	\$ 70,000	\$70,000
Temporary difference	60,000	20,000
Income	<u>\$130,000</u>	<u>\$90,000</u>
<u>2011 (35% tax rate)</u>		
Income before temporary difference	\$ 70,000	\$70,000
Temporary difference	—0—	20,000
Income	<u>\$ 70,000</u>	<u>\$90,000</u>
<u>2012 (35% tax rate)</u>		
Income before temporary difference	\$ 70,000	\$70,000
Temporary difference	—0—	20,000
Income	<u>\$ 70,000</u>	<u>\$90,000</u>

**Instructions**

- (a) Prepare the journal entries to record the income tax expense, deferred income taxes, and the income tax payable at the end of each year. No deferred income taxes existed at the beginning of 2010.
- (b) Explain how the deferred taxes will appear on the balance sheet at the end of each year. (Assume the Installment Accounts Receivable is classified as a current asset.)
- (c) Draft the income tax expense section of the income statement for each year, beginning with “Income before income taxes.”

**P19-8 (Two Differences, 2 Years, Compute Taxable Income and Pretax Financial Income)** The following information was disclosed during the audit of Elbert Inc.

1.
 

<u>Year</u>	<u>Amount Due per Tax Return</u>
2010	\$130,000
2011	104,000

2. On January 1, 2010, equipment costing \$600,000 is purchased. For financial reporting purposes, the company uses straight-line depreciation over a 5-year life. For tax purposes, the company uses the elective straight-line method over a 5-year life. (*Hint:* For tax purposes, the half-year convention as discussed in Appendix 11A must be used.)
3. In January 2011, \$225,000 is collected in advance rental of a building for a 3-year period. The entire \$225,000 is reported as taxable income in 2011, but \$150,000 of the \$225,000 is reported as unearned revenue in 2011 for financial reporting purposes. The remaining amount of unearned revenue is to be earned equally in 2012 and 2013.
4. The tax rate is 40% in 2010 and all subsequent periods. (*Hint:* To find taxable income in 2010 and 2011, the related income tax payable amounts will have to be “grossed up.”)
5. No temporary differences existed at the end of 2009. Elbert expects to report taxable income in each of the next 5 years.

#### Instructions

- (a) Determine the amount to report for deferred income taxes at the end of 2010, and indicate how it should be classified on the balance sheet.
- (b) Prepare the journal entry to record income taxes for 2010.
- (c) Draft the income tax section of the income statement for 2010 beginning with “Income before income taxes.” (*Hint:* You must compute taxable income and then combine that with changes in cumulative temporary differences to arrive at pretax financial income.)
- (d) Determine the deferred income taxes at the end of 2011, and indicate how they should be classified on the balance sheet.
- (e) Prepare the journal entry to record income taxes for 2011.
- (f) Draft the income tax section of the income statement for 2011, beginning with “Income before income taxes.”

**P19-9 (Five Differences, Compute Taxable Income and Deferred Taxes, Draft Income Statement)** Wise Company began operations at the beginning of 2011. The following information pertains to this company.

1. Pretax financial income for 2011 is \$100,000.
2. The tax rate enacted for 2011 and future years is 40%.
3. Differences between the 2011 income statement and tax return are listed below:
  - (a) Warranty expense accrued for financial reporting purposes amounts to \$7,000. Warranty deductions per the tax return amount to \$2,000.
  - (b) Gross profit on construction contracts using the percentage-of-completion method per books amounts to \$92,000. Gross profit on construction contracts for tax purposes amounts to \$67,000.
  - (c) Depreciation of property, plant, and equipment for financial reporting purposes amounts to \$60,000. Depreciation of these assets amounts to \$80,000 for the tax return.
  - (d) A \$3,500 fine paid for violation of pollution laws was deducted in computing pretax financial income.
  - (e) Interest revenue earned on an investment in tax-exempt municipal bonds amounts to \$1,500. (Assume (a) is short-term in nature; assume (b) and (c) are long-term in nature.)
4. Taxable income is expected for the next few years.

#### Instructions

- (a) Compute taxable income for 2011.
- (b) Compute the deferred taxes at December 31, 2011, that relate to the temporary differences described above. Clearly label them as deferred tax asset or liability.
- (c) Prepare the journal entry to record income tax expense, deferred taxes, and income taxes payable for 2011.
- (d) Draft the income tax expense section of the income statement beginning with “Income before income taxes.”

### CONCEPTS FOR ANALYSIS

**CA19-1 (Objectives and Principles for Accounting for Income Taxes)** The amount of income taxes due to the government for a period of time is rarely the amount reported on the income statement for that period as income tax expense.

#### Instructions

- (a) Explain the objectives of accounting for income taxes in general purpose financial statements.
- (b) Explain the basic principles that are applied in accounting for income taxes at the date of the financial statements to meet the objectives discussed in (a).
- (c) List the steps in the annual computation of deferred tax liabilities and assets.

**CA19-2 (Basic Accounting for Temporary Differences)** Dexter Company appropriately uses the asset-liability method to record deferred income taxes. Dexter reports depreciation expense for certain machinery purchased this year using the modified accelerated cost recovery system (MACRS) for income tax purposes and the straight-line basis for financial reporting purposes. The tax deduction is the larger amount this year.

Dexter received rent revenues in advance this year. These revenues are included in this year's taxable income. However, for financial reporting purposes, these revenues are reported as unearned revenues, a current liability.

**Instructions**

- (a) What are the principles of the asset-liability approach?
- (b) How would Dexter account for the temporary differences?
- (c) How should Dexter classify the deferred tax consequences of the temporary differences on its balance sheet?

**CA19-3 (Identify Temporary Differences and Classification Criteria)** The asset-liability approach for recording deferred income taxes is an integral part of generally accepted accounting principles.

**Instructions**

- (a) Indicate whether each of the following independent situations should be treated as a temporary difference or as a permanent difference, and explain why.
  - (1) Estimated warranty costs (covering a 3-year warranty) are expensed for financial reporting purposes at the time of sale but deducted for income tax purposes when paid.
  - (2) Depreciation for book and income tax purposes differs because of different bases of carrying the related property, which was acquired in a trade-in. The different bases are a result of different rules used for book and tax purposes to compute the basis of property acquired in a trade-in.
  - (3) A company properly uses the equity method to account for its 30% investment in another company. The investee pays dividends that are about 10% of its annual earnings.
  - (4) A company reports a gain on an involuntary conversion of a nonmonetary asset to a monetary asset. The company elects to replace the property within the statutory period using the total proceeds so the gain is not reported on the current year's tax return.
- (b) Discuss the nature of the deferred income tax accounts and possible classifications in a company's balance sheet. Indicate the manner in which these accounts are to be reported.

**CA19-4 (Accounting and Classification of Deferred Income Taxes)**

**Part A**

This year Gumowski Company has each of the following items in its income statement.

1. Gross profits on installment sales.
2. Revenues on long-term construction contracts.
3. Estimated costs of product warranty contracts.
4. Premiums on officers' life insurance policies with Gumowski as beneficiary.

**Instructions**

- (a) Under what conditions would deferred income taxes need to be reported in the financial statements?
- (b) Specify when deferred income taxes would need to be recognized for each of the items above, and indicate the rationale for such recognition.

**Part B**

Gumowski Company's president has heard that deferred income taxes can be classified in different ways in the balance sheet.

**Instructions**

Identify the conditions under which deferred income taxes would be classified as a noncurrent item in the balance sheet. What justification exists for such classification?

(AICPA adapted)

**CA19-5 (Explain Computation of Deferred Tax Liability for Multiple Tax Rates)** At December 31, 2010, Higley Corporation has one temporary difference which will reverse and cause taxable amounts in 2011. In 2010 a new tax act set taxes equal to 45% for 2010, 40% for 2011, and 34% for 2012 and years thereafter.

**Instructions**

Explain what circumstances would call for Higley to compute its deferred tax liability at the end of 2010 by multiplying the cumulative temporary difference by:

- (a) 45%.
- (b) 40%.
- (c) 34%.

**CA19-6 (Explain Future Taxable and Deductible Amounts, How Carryback and Carryforward Affects Deferred Taxes)** Maria Rodriguez and Lynette Kingston are discussing accounting for income taxes. They are currently studying a schedule of taxable and deductible amounts that will arise in the future as a result of existing temporary differences. The schedule is as follows.

	Current Year	Future Years			
	2010	2011	2012	2013	2014
Taxable income	<u>\$850,000</u>				
Taxable amounts		\$375,000	\$375,000	\$ 375,000	\$375,000
Deductible amounts				(2,400,000)	
Enacted tax rate	50%	45%	40%	35%	30%

#### Instructions

- Explain the concept of future taxable amounts and future deductible amounts as illustrated in the schedule.
- How do the carryback and carryforward provisions affect the reporting of deferred tax assets and deferred tax liabilities?

**CA19-7 (Deferred Taxes, Income Effects)** Stephanie Delaney, CPA, is the newly hired director of corporate taxation for Acme Incorporated, which is a publicly traded corporation. Ms. Delaney's first job with Acme was the review of the company's accounting practices on deferred income taxes. In doing her review, she noted differences between tax and book depreciation methods that permitted Acme to realize a sizable deferred tax liability on its balance sheet. As a result, Acme paid very little in income taxes at that time.

Delaney also discovered that Acme has an explicit policy of selling off plant assets before they reversed in the deferred tax liability account. This policy, coupled with the rapid expansion of its plant asset base, allowed Acme to "defer" all income taxes payable for several years, even though it always has reported positive earnings and an increasing EPS. Delaney checked with the legal department and found the policy to be legal, but she's uncomfortable with the ethics of it.

#### Instructions

Answer the following questions.

- Why would Acme have an explicit policy of selling plant assets before the temporary differences reversed in the deferred tax liability account?
- What are the ethical implications of Acme's "deferral" of income taxes?
- Who could be harmed by Acme's ability to "defer" income taxes payable for several years, despite positive earnings?
- In a situation such as this, what are Ms. Delaney's professional responsibilities as a CPA?

## USING YOUR JUDGMENT

### FINANCIAL REPORTING

#### Financial Reporting Problem

#### The Procter & Gamble Company (P&G)

The financial statements of P&G are presented in Appendix 5B or can be accessed at the book's companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso).

#### Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- What amounts relative to income taxes does P&G report in its:
  - 2007 income statement?
  - June 30, 2007, balance sheet?
  - 2007 statement of cash flows?

- (b) P&G's provision for income taxes in 2005, 2006, and 2007 was computed at what effective tax rates? (See the notes to the financial statements.)
- (c) How much of P&G's 2007 total provision for income taxes was current tax expense, and how much was deferred tax expense?
- (d) What did P&G report as the significant components (the details) of its June 30, 2007, deferred tax assets and liabilities?

## Comparative Analysis Case

### The Coca-Cola Company and PepsiCo, Inc.

*The Coca-Cola Company*

#### Instructions

Go to the book's companion website and use information found there to answer the following questions related to **The Coca-Cola Company** and **PepsiCo, Inc.**

- (a) What are the amounts of Coca-Cola's and PepsiCo's provision for income taxes for the year 2007? Of each company's 2007 provision for income taxes, what portion is current expense and what portion is deferred expense?
- (b) What amount of cash was paid in 2007 for income taxes by Coca-Cola and by PepsiCo?
- (c) What was the U.S. federal statutory tax rate in 2007? What was the effective tax rate in 2007 for Coca-Cola and PepsiCo? Why might their effective tax rates differ?
- (d) For the year-end 2007, what amounts were reported by Coca-Cola and PepsiCo as (a) gross deferred tax assets and (b) gross deferred tax liabilities?
- (e) Do either Coca-Cola or PepsiCo disclose any net operating loss carrybacks and/or carryforwards at year-end 2007? What are the amounts, and when do the carryforwards expire?

## Financial Statement Analysis Case

### Homestake Mining Company

**Homestake Mining Company** is a 120-year-old international gold mining company with substantial gold mining operations and exploration in the United States, Canada, and Australia. At year-end, Homestake reported the following items related to income taxes (thousands of dollars).

Total current taxes	\$ 26,349
Total deferred taxes	(39,436)
Total income and mining taxes (the provision for taxes per its income statement)	<u>(13,087)</u>
Deferred tax liabilities	\$303,050
Deferred tax assets, net of valuation allowance of \$207,175	<u>95,275</u>
Net deferred tax liability	<u>\$207,775</u>

**Note 6:** The classification of deferred tax assets and liabilities is based on the related asset or liability creating the deferred tax. Deferred taxes not related to a specific asset or liability are classified based on the estimated period of reversal.

Tax loss carryforwards (U.S., Canada, Australia, and Chile)	\$71,151
Tax credit carryforwards	\$12,007

#### Instructions

- (a) What is the significance of Homestake's disclosure of "Current taxes" of \$26,349 and "Deferred taxes" of \$(39,436)?
- (b) Explain the concept behind Homestake's disclosure of gross deferred tax liabilities (future taxable amounts) and gross deferred tax assets (future deductible amounts).
- (c) Homestake reported tax loss carryforwards of \$71,151 and tax credit carryforwards of \$12,007. How do the carryback and carryforward provisions affect the reporting of deferred tax assets and deferred tax liabilities?

## BRIDGE TO THE PROFESSION

### Professional Research: FASB Codification

Kleckner Company started operations in 2007, and although it has grown steadily, the company reported accumulated operating losses of \$450,000 in its first four years in business. In the most recent year (2011), Kleckner appears to have turned the corner and reported modest taxable income of \$30,000. In addition to a deferred tax asset related to its net operating loss, Kleckner has recorded a deferred tax asset related to product warranties and a deferred tax liability related to accelerated depreciation.

Given its past operating results, Kleckner has established a full valuation allowance for its deferred tax assets. However, given its improved performance, Kleckner management wonders whether the company can now reduce or eliminate the valuation allowance. They would like you to conduct some research on the accounting for its valuation allowance.

#### Instructions

Access the FASB Codification at <http://asc.fasb.org/home> to conduct research using the Codification Research System to prepare responses to the following items. Provide Codification references for your responses.

- Briefly explain to Kleckner management the importance of future taxable income as it relates to the valuation allowance for deferred tax assets.
- What are the sources of income that may be relied upon to remove the need for a valuation allowance?
- What are tax-planning strategies? From the information provided, does it appear that Kleckner could employ a tax-planning strategy to support reducing its valuation allowance?

### Professional Simulation

Go to the book's companion website, at [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), to find an interactive problem that simulates the computerized CPA exam. The professional simulation for this chapter asks you to address questions related to the accounting for taxes.

**Remember to check the book's companion website to find additional resources for this chapter.**

## CHAPTER 20

# ACCOUNTING FOR PENSIONS AND POSTRETIREMENT BENEFITS

### LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Distinguish between accounting for the employer's pension plan and accounting for the pension fund.
- 2 Identify types of pension plans and their characteristics.
- 3 Explain alternative measures for valuing the pension obligation.
- 4 List the components of pension expense.
- 5 Use a worksheet for employer's pension plan entries.
- 6 Describe the amortization of prior service costs.
- 7 Explain the accounting for unexpected gains and losses.
- 8 Explain the corridor approach to amortizing gains and losses.
- 9 Describe the requirements for reporting pension plans in financial statements.

### WHERE HAVE ALL THE PENSIONS GONE?

Many companies have benefit plans that promise income and other benefits to retired employees in exchange for services during their working years. However, a shift is on from traditional defined-benefit plans, in which employers bear the risk of meeting the benefit promises, to plans in which employees bear more of the risk. In some cases, employers are dropping retirement plans altogether. Here are some of the reasons for the shift.

*Competition.* Newer and foreign competitors do not have the same retiree costs that older U.S. companies do. **Southwest Airlines** does not offer a traditional pension plan, but **Northwest** and **United** both have pension deficits exceeding \$100,000 per employee.

*Cost.* Retirees are living longer, and the costs of retirement are higher. Combined with annual retiree healthcare costs, retirement benefits are costing the S&P 500 companies over \$25 billion a year and are rising at double-digit rates.

*Insurance.* Pensions are backed by premiums paid to the **Pension Benefit Guarantee Corporation** (PBGC). When a company fails, the PBGC takes over the plan. But due to a number of significant company failures, the PBGC is running a deficit, and healthy companies are subsidizing the weak. For example, steel companies pay just 3 percent of PBGC premiums but account for 56 percent of the claims.

*Accounting.* To bring U.S. standards in line with international rules, accounting rule makers are considering rules that will require companies to "mark their pensions to market" (value them at market rates). Such a move would increase the reported volatility of the retirement plan and of company financial statements. When Britain made this shift, 25 percent of British companies closed their plans to new entrants.

As a result of such factors, it is not hard to believe that experts can think of no major company that has instituted a traditional pension plan in the past decade.

What does this mean for you as you evaluate job offers and benefit packages in the not-too-distant future? To start, you should begin building *your own* retirement nest egg, rather than relying on your employer to provide postretirement income and healthcare benefits. A look at recent data on retirees' financial position, summarized in the chart to the right, supports a strategy to become more self-reliant.

As indicated, the average person at retirement has about \$360,000 in resources to sustain him or her in the retirement years. However, Social Security and traditional pension benefits comprise a substantial share of wealth for typical near-to-retirement households—nearly two-thirds of their \$361,000 in total wealth. This wealth snapshot highlights the extraordinary importance of Social Security, traditional pensions, and owner-occupied housing (not very liquid) for typical near-retiree households today. Together, these assets comprise nearly four-fifths of wealth of those on the verge of retirement.

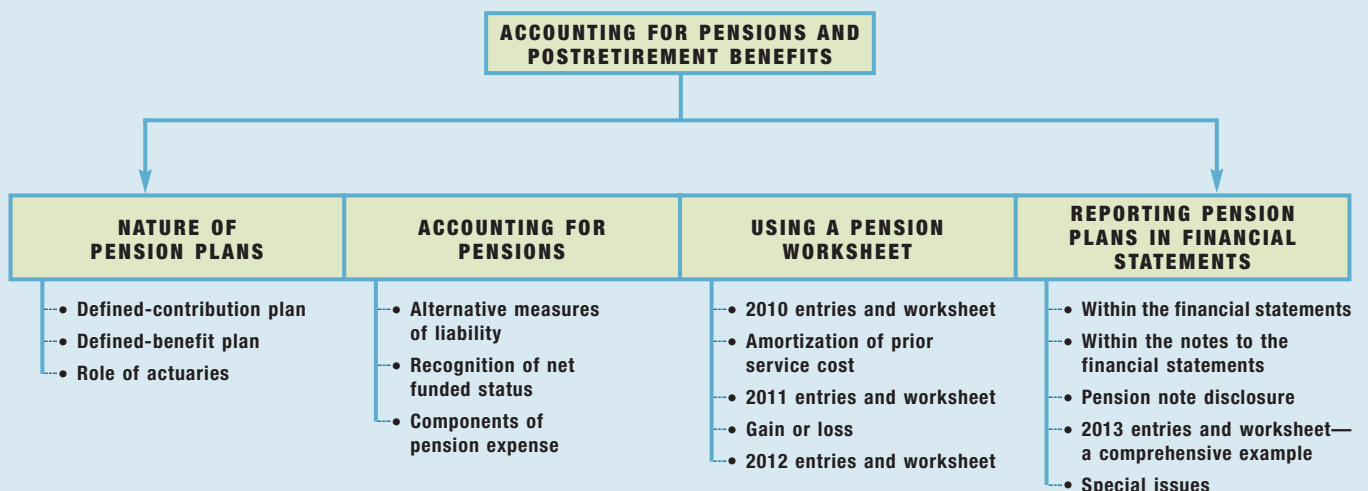

However, these sources of income are in decline and will likely continue to shrink as employers and governments wrestle with financial and other constraints discussed earlier. That means that retirement accounts, including individual retirement accounts and defined-contribution pensions such as 401(k) plans, will need to become a bigger piece of the pie to fill the gap left by smaller government and employer-sponsored benefits. So get started now with a personal savings strategy to ensure an adequate nest egg at your retirement.

Sources: Story adapted from Nanette Byrnes with David Welch, "The Benefits Trap," *BusinessWeek* (July 19, 2004), pp. 54–72. Source of chart: G. Mermin, "Typical Wealth Held by Those at the Verge of Retirement," Urban Institute, <http://www.urban.org/url.cfm?ID=411618> (February 22, 2008).

## PREVIEW OF CHAPTER 20

As our opening story indicates, the cost of retirement benefits is getting steep. For example, **General Motors'** pension and healthcare costs for retirees in a recent year totaled \$6.2 billion, or approximately \$1,784 per vehicle produced. General Motors and many other companies are facing substantial pension and other postretirement expenses and obligations. In this chapter we discuss the accounting issues related to these benefit plans. The content and organization of the chapter are as follows.

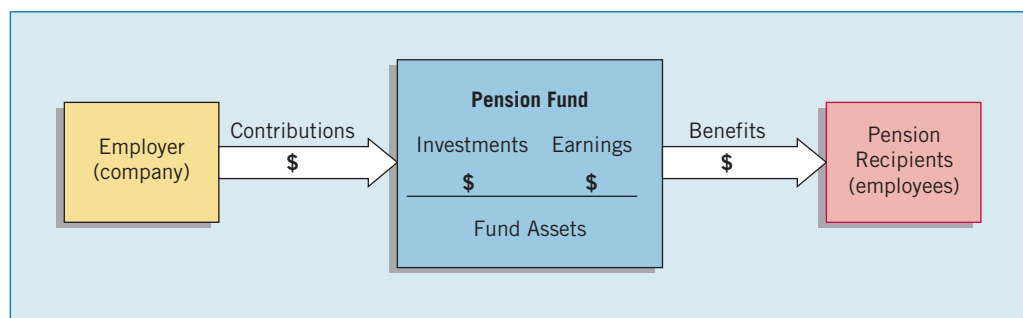

## NATURE OF PENSION PLANS

### Objective 1

Distinguish between accounting for the employer's pension plan and accounting for the pension fund.

A **pension plan** is an arrangement whereby an employer provides benefits (payments) to retired employees for services they provided in their working years. Pension accounting may be divided and separately treated as **accounting for the employer** and **accounting for the pension fund**. The *company* or *employer* is the organization sponsoring the pension plan. It incurs the cost and makes contributions to the pension fund. The *fund* or *plan* is the entity that receives the contributions from the employer, administers the pension assets, and makes the benefit payments to the retired employees (pension recipients). Illustration 20-1 shows the three entities involved in a pension plan and indicates the flow of cash among them.

**ILLUSTRATION 20-1**  
Flow of Cash among  
Pension Plan Participants

A pension plan is **funded** when the employer makes payments to a funding agency.<sup>1</sup> That agency accumulates the assets of the pension fund and makes payments to the recipients as the benefits come due.

Some pension plans are **contributory**. In these, the employees bear part of the cost of the stated benefits or voluntarily make payments to increase their benefits. Other plans are **noncontributory**. In these plans, the employer bears the entire cost. Companies generally design their pension plans so as to take advantage of federal income tax benefits. Plans that offer tax benefits are called **qualified pension plans**. They permit **deductibility of the employer's contributions to the pension fund and tax-free status of earnings from pension fund assets**.

**The pension fund should be a separate legal and accounting entity.** The pension fund, as a separate entity, maintains a set of books and prepares financial statements. Maintaining records and preparing financial statements for the fund, an activity known as "accounting for employee benefit plans," is not the subject of this chapter.<sup>2</sup> Instead, this chapter explains the pension accounting and reporting problems **of the employer** as the sponsor of a pension plan.

The need to properly administer and account for pension funds becomes apparent when you understand the size of these funds. Listed in Illustration 20-2 (on page 1051) are the pension fund assets and pension expenses of seven major companies.

<sup>1</sup>When used as a verb, **fund** means to pay to a funding agency (as to fund future pension benefits or to fund pension cost). Used as a noun, it refers to assets accumulated in the hands of a funding agency (trustee) for the purpose of meeting pension benefits when they become due.

<sup>2</sup>The FASB issued a separate standard covering the accounting and reporting for employee benefit plans. [1]

Company (\$ in millions)	Size of Pension Fund	2007 Pension Expense	Pension Expense as % of Pretax Income
General Motors	\$117,378	\$1,799	28.77%
Hewlett-Packard	4,258	(81)	0.88
Deere & Company	10,002	99	3.70
Goodyear Tire	6,566	344	74.14
Merck	7,385	447	13.27
The Coca-Cola Company	3,428	113	1.44
Molson Coors Brewing	5,031	21	4.01

**ILLUSTRATION 20-2**  
Pension Funds and  
Pension Expense

As Illustration 20-2 indicates, pension expense is a substantial percentage of total pretax income for many companies.<sup>3</sup> The two most common types of pension plans are **defined-contribution plans** and **defined-benefit plans**, and we look at each of them in the following sections.

## Defined-Contribution Plan

In a **defined-contribution plan**, the employer agrees to contribute to a pension trust a certain sum each period, based on a formula. This formula may consider such factors as age, length of employee service, employer's profits, and compensation level. **The plan defines only the employer's contribution.** It makes no promise regarding the ultimate benefits paid out to the employees. A common form of this plan is a **401(k) plan**.

The size of the pension benefits that the employee finally collects under the plan depends on several factors: the amounts originally contributed to the pension trust, the income accumulated in the trust, and the treatment of forfeitures of funds caused by early terminations of other employees. A company usually turns over to an **independent third-party trustee** the amounts originally contributed. The trustee, acting on behalf of the beneficiaries (the participating employees), assumes ownership of the pension assets and is accountable for their investment and distribution. The trust is separate and distinct from the employer.

**The accounting for a defined-contribution plan is straightforward.** The employee gets the benefit of gain (or the risk of loss) from the assets contributed to the pension plan. The employer simply contributes each year based on the formula established in the plan. As a result, the employer's annual cost (pension expense) is simply the amount that it is obligated to contribute to the pension trust. The employer reports a liability on its balance sheet only if it does not make the contribution in full. The employer reports an asset only if it contributes more than the required amount.

In addition to pension expense, the employer must disclose the following for a defined-contribution plan: a plan description, including employee groups covered; the basis for determining contributions; and the nature and effect of significant matters affecting comparability from period to period. **[2]**

## Defined-Benefit Plan

A **defined-benefit plan** outlines the benefits that employees will receive when they retire. These benefits typically are a function of an employee's years of service and of the compensation level in the years approaching retirement.

To meet the defined-benefit commitments that will arise at retirement, a company must determine what the contribution should be today (a time value of money computation). Companies may use many different contribution approaches. However, the

### Objective 2

Identify types of pension plans and their characteristics.

Disclosures for Defined-Contribution Plans

<sup>3</sup>One study indicated that during the 1990s, pension funds (private and public) held or owned approximately 25 percent of the market value of corporate stock outstanding and accounted for 32 percent of the daily trading volume on the New York Stock Exchange. The enormous size (and the social significance) of these funds is staggering.

**INTERNATIONAL INSIGHT**

Outside the U.S., private pension plans are less common because many other nations rely on government-sponsored pension plans. Consequently, accounting for defined-benefit pension plans is typically a less important issue elsewhere in the world.

funding method should provide enough money at retirement to meet the benefits defined by the plan.

The **employees** are the beneficiaries of a defined-**contribution** trust, but the **employer** is the beneficiary of a defined-**benefit** trust. Under a defined-benefit plan, the trust's primary purpose is to safeguard and invest assets so that there will be enough to pay the employer's obligation to the employees. **In form**, the trust is a separate entity. **In substance**, the trust assets and liabilities belong to the employer. That is, **as long as the plan continues, the employer is responsible for the payment of the defined benefits (without regard to what happens in the trust)**. The employer must make up any shortfall in the accumulated assets held by the trust. On the other hand, the employer can recapture any excess accumulated in the trust, either through reduced future funding or through a reversion of funds.

Because a defined-benefit plan specifies benefits in terms of uncertain future variables, a company must establish an appropriate funding pattern to ensure the availability of funds at retirement in order to provide the benefits promised. This funding level depends on a number of factors such as turnover, mortality, length of employee service, compensation levels, and interest earnings.

**Employers are at risk with defined-benefit plans because they must contribute enough to meet the cost of benefits that the plan defines.** The expense recognized each period is not necessarily equal to the cash contribution. Similarly, the liability is controversial because its measurement and recognition relate to unknown future variables. Thus, the accounting issues related to this type of plan are complex. **Our discussion in the following sections deals primarily with defined-benefit plans.**<sup>4</sup>

### WHICH PLAN IS RIGHT FOR YOU?

Defined-contribution plans have become much more popular with employers than defined-benefit plans. One reason is that they are cheaper. Defined-contribution plans often cost no more than 3 percent of payroll, whereas defined-benefit plans can cost 5 to 6 percent of payroll.

In the late 1970s approximately 15 million individuals had defined-contribution plans; today over 62 million do. The following chart reflects this significant change. It shows the percentage of companies using various types of plans, based on a survey of approximately 150 CFOs and managing corporate directors.

### What do the numbers mean?

Although many companies are changing to defined-contribution plans, over 40 million individuals still are covered under defined-benefit plans.

<sup>4</sup>In terms of total assets, recent Federal Reserve (2005) statistics indicate that assets in private defined-benefit and defined-contribution plans were more than \$14.4 trillion. In many cases, companies offer a defined-contribution plan in combination with a defined-benefit plan. A recent federal law requires employees to explicitly opt out of an employer-sponsored defined-contribution plan. This should help employees build their own nest eggs (as suggested in the opening story) and will contribute to further growth in defined-contribution plans. See D. Darlin, "On Making Enrollment in a 401(k) Automatic," *New York Times* (August 19, 2006), p. B1.

## The Role of Actuaries in Pension Accounting

The problems associated with pension plans involve complicated mathematical considerations. Therefore, companies engage **actuaries** to ensure that a pension plan is appropriate for the employee group covered.<sup>5</sup> Actuaries are individuals trained through a long and rigorous certification program to assign probabilities to future events and their financial effects. The insurance industry employs actuaries to assess risks and to advise on the setting of premiums and other aspects of insurance policies. Employers rely heavily on actuaries for assistance in developing, implementing, and funding pension funds.

Actuaries make predictions (called *actuarial assumptions*) of mortality rates, employee turnover, interest and earnings rates, early retirement frequency, future salaries, and any other factors necessary to operate a pension plan. They also compute the various pension measures that affect the financial statements, such as the pension obligation, the annual cost of servicing the plan, and the cost of amendments to the plan. In summary, accounting for defined-benefit pension plans relies heavily upon information and measurements provided by actuaries.

## ACCOUNTING FOR PENSIONS

In accounting for a company's pension plan, two questions arise: (1) What is the pension obligation that a company should report in the financial statements? (2) What is the pension expense for the period? Attempting to answer the first question has produced much controversy.

### Objective 3

Explain alternative measures for valuing the pension obligation.

## Alternative Measures of the Liability

Most agree that an employer's **pension obligation** is the deferred compensation obligation it has to its employees for their service under the terms of the pension plan. Measuring that obligation is not so simple, though, because there are alternative ways of measuring it.<sup>6</sup>

One measure of the pension obligation is to base it only on the benefits vested to the employees. **Vested benefits** are those that the employee is entitled to receive even if he or she renders no additional services to the company. Most pension plans require a certain minimum number of years of service to the employer before an employee achieves vested benefits status. Companies compute the **vested benefit obligation** using only vested benefits, at current salary levels.

Another way to measure the obligation uses both vested and nonvested years of service. On this basis, the company computes the deferred compensation amount on all years of employees' service—**both vested and nonvested**—using current salary levels. This measurement of the pension obligation is called the **accumulated benefit obligation**.

### INTERNATIONAL INSIGHT

Japan is the most rapidly aging nation in the developed world. By the year 2015, 24 percent of its population is expected to be over 65, compared with 17 percent in Europe and 15 percent in the U.S. Aging populations will affect pension liabilities in these countries.

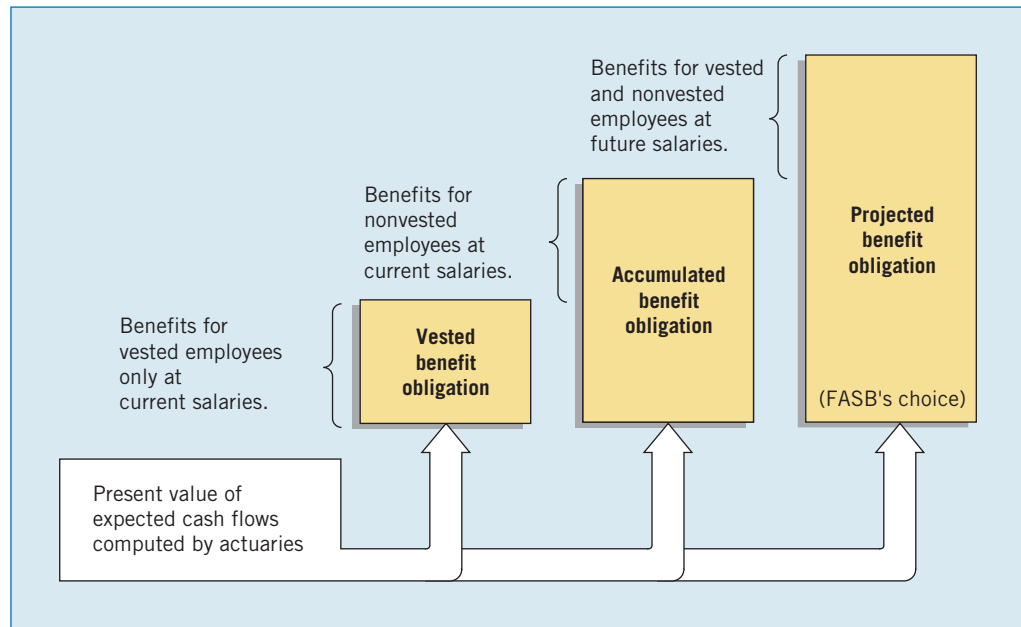

<sup>5</sup>An actuary's primary purpose is to ensure that the company has established an appropriate funding pattern to meet its pension obligations. This computation involves developing a set of assumptions and continued monitoring of these assumptions to ensure their realism. That the general public has little understanding of what an actuary does is illustrated by the following excerpt from the *Wall Street Journal*: "A polling organization once asked the general public what an actuary was, and received among its more coherent responses the opinion that it was a place where you put dead actors."

<sup>6</sup>One measure of the pension obligation is to determine the amount that the **Pension Benefit Guaranty Corporation** would require the employer to pay if it defaulted. (This amount is limited to 30 percent of the employer's net worth.) The accounting profession rejected this approach for financial reporting because it is too hypothetical and ignores the going concern concept.

A third measure bases the deferred compensation amount on both vested and non-vested service **using future salaries**. This measurement of the pension obligation is called the **projected benefit obligation**. Because future salaries are expected to be higher than current salaries, this approach results in the largest measurement of the pension obligation.

The choice between these measures is critical. The choice affects the amount of a company's pension liability and the annual pension expense reported. The diagram in Illustration 20-3 presents the differences in these three measurements.

**ILLUSTRATION 20-3**  
Different Measures of the  
Pension Obligation

Which of these alternative measures of the pension liability does the profession favor? **The profession adopted the projected benefit obligation—the present value of vested and nonvested benefits accrued to date, based on employees' future salary levels.**<sup>7</sup> Those in favor of the projected benefit obligation contend that a promise by an employer to pay benefits based on a percentage of the employees' future salaries is far greater than a promise to pay a percentage of their current salary, and such a difference should be reflected in the pension liability and pension expense.

Moreover, companies discount to present value the estimated future benefits to be paid. Minor changes in the interest rate used to discount pension benefits can dramatically affect the measurement of the employer's obligation. For example, a 1 percent decrease in the discount rate can increase pension liabilities 15 percent. Accounting rules require that, at each measurement date, a company must determine the appropriate discount rate used to measure the pension liability, based on current interest rates.

#### Underlying Concepts

The FASB and IASB are studying whether the liability should include estimates of future salaries. This debate will center on whether a company can have a liability today that is based in part on future salaries that have not yet been earned.

<sup>7</sup>When we use the term "present value of benefits" throughout this chapter, we really mean the *actuarial* present value of benefits. **Actuarial present value** is the amount payable adjusted to reflect the time value of money *and* the probability of payment (by means of decrements for events such as death, disability, withdrawals, or retirement) between the present date and the expected date of payment. For simplicity, though, we use the term "present value" instead of "actuarial present value" in our discussion.

## Recognition of the Net Funded Status of the Pension Plan

Companies must recognize on their balance sheet the full overfunded or underfunded status of their defined-benefit pension plan.<sup>8</sup> [3] The **overfunded** or **underfunded status** is measured as the difference between the fair value of the plan assets and the projected benefit obligation.

To illustrate, assume that Coker Company has a projected benefit obligation of \$300,000, and the fair value of its plan assets is \$210,000. In this case, Coker Company's pension plan is underfunded, and therefore it reports a pension liability of \$90,000 (\$300,000 – \$210,000) on its balance sheet. If, instead, the fair value of Coker's plan assets were \$430,000, it would report a pension asset of \$130,000 (\$430,000 – \$300,000).

As recently as 2004, pension plans for companies in the S&P 500 were underfunded (liabilities exceeded assets) in the aggregate by \$158.4 billion. In 2007, by slowing the growth of pension liabilities and increasing contributions to pension funds, the S&P 500 companies reported aggregate overfunding (assets exceeded liabilities) of \$61.9 billion.<sup>9</sup>

### INTERNATIONAL INSIGHT

iGAAP differs from U.S. GAAP in that companies have the option to report the funded status of their pension plans on the balance sheet.

## Components of Pension Expense

There is broad agreement that companies should account for pension cost on the **accrual basis**.<sup>10</sup> The profession recognizes that **accounting for pension plans requires measurement of the cost and its identification with the appropriate time periods**. The determination of pension cost, however, is extremely complicated because it is a function of the following components.

### Objective 4

List the components of pension expense.

- 1. Service Cost.** Service cost is the expense caused by the increase in pension benefits payable (the **projected benefit obligation**) to employees because of their services rendered during the current year. Actuaries compute **service cost** as the present value of the new benefits earned by employees during the year.
- 2. Interest on the Liability.** Because a pension is a deferred compensation arrangement, there is a time value of money factor. As a result, companies record the pension liability on a discounted basis. **Interest expense accrues each year on the projected benefit obligation just as it does on any discounted debt.** The actuary helps to select the interest rate, referred to as the **settlement rate**.
- 3. Actual Return on Plan Assets.** The return earned by the accumulated pension fund assets in a particular year is relevant in measuring the net cost to the employer of sponsoring an employee pension plan. Therefore, **a company should adjust annual pension expense for interest and dividends that accumulate within the fund, as well as increases and decreases in the market value of the fund assets.**
- 4. Amortization of Prior Service Cost.** Pension plan amendments (including initiation of a pension plan) often include provisions to increase benefits (or in rare situations, to decrease benefits) for employee service provided in prior years. A company grants plan amendments with the expectation that it will realize economic benefits in future periods. Thus, **it allocates the cost (prior service cost) of providing these**

### Underlying Concepts

The expense recognition principle and the definition of a liability justify accounting for pension cost on the accrual basis. This requires recording an expense when employees earn the future benefits, and recognizing an existing obligation to pay pensions later based on current services received.

<sup>8</sup>Recognize that GAAP applies to pensions as well as other postretirement benefit plans (OPEBs). Appendix 20A addresses the accounting for OPEBs.

<sup>9</sup>J. Ciesielski, "Benefit Plans 2007: Close To The Edge—And Back," *The Analyst's Accounting Observer* (April 25, 2008).

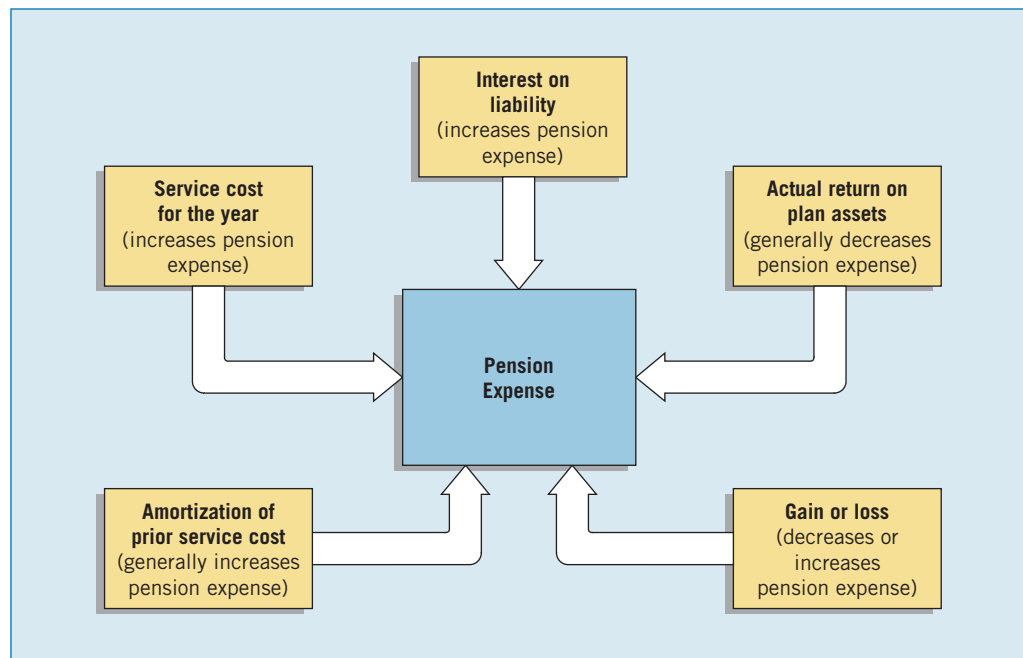

<sup>10</sup>At one time, companies applied the **cash basis** of accounting to pension plans by recognizing the amount paid in a particular accounting period as the pension expense for the period. The problem was that the amount paid or funded in a fiscal period depended on financial management and was too often discretionary. For example, funding could depend on the availability of cash, the level of earnings, or other factors unrelated to the requirements of the plan. Application of the cash basis made it possible to manipulate the amount of pension expense appearing in the income statement simply by varying the cash paid to the pension fund.

retroactive benefits to pension expense in the future, specifically to the remaining service-years of the affected employees.

5. **Gain or Loss.** Volatility in pension expense can result from sudden and large changes in the market value of plan assets and by changes in the projected benefit obligation (which changes when actuaries modify assumptions or when actual experience differs from expected experience). Two items comprise this gain or loss: (1) the difference between the actual return and the expected return on plan assets, and (2) amortization of the net gain or loss from previous periods. We will discuss this complex computation later in the chapter.

Illustration 20-4 shows the **components of pension expense** and their effect on total pension expense (increase or decrease).

**ILLUSTRATION 20-4**  
Components of Annual  
Pension Expense

### Service Cost

The **service cost** is the **actuarial present value of benefits attributed by the pension benefit formula to employee service during the period**. That is, the actuary predicts the additional benefits that an employer must pay under the plan's benefit formula as a result of the employees' current year's service, and then discounts the cost of those future benefits back to their present value.

The Board concluded that **companies must consider future compensation levels in measuring the present obligation and periodic pension expense if the plan benefit formula incorporates them**. In other words, the present obligation resulting from a promise to pay a benefit of 1 percent of an employee's **final pay** differs from the promise to pay 1 percent of **current pay**. To overlook this fact is to ignore an important aspect of pension expense. Thus, the FASB adopts the **benefits/years-of-service actuarial method, which determines pension expense based on future salary levels**.

Some object to this determination, arguing that a company should have more freedom to select an expense recognition pattern. Others believe that incorporating future salary increases into current pension expense is accounting for events that have not yet happened. They argue that if a company terminates the plan today, it pays only liabilities for accumulated benefits. **Nevertheless, the FASB indicates that the projected benefit obligation provides a more realistic measure of the employer's obligation under the plan on a going concern basis and, therefore, companies should use it as the basis for determining service cost.**

### Interest on the Liability

The second component of pension expense is **interest on the liability**, or **interest expense**. Because a company defers paying the liability until maturity, the company records it on a discounted basis. The liability then accrues interest over the life of the employee. **The interest component is the interest for the period on the projected benefit obligation outstanding during the period.** The FASB did not address the question of how often to compound the interest cost. To simplify our illustrations and problem materials, we use a simple-interest computation, applying it to the beginning-of-the-year balance of the projected benefit liability.

How do companies determine the interest rate to apply to the pension liability? The Board states that the assumed discount rate should **reflect the rates at which companies can effectively settle pension benefits**. In determining these **settlement rates**, companies should look to rates of return on high-quality fixed-income investments currently available, whose cash flows match the timing and amount of the expected benefit payments. The objective of selecting the assumed discount rates is to measure a single amount that, if invested in a portfolio of high-quality debt instruments, would provide the necessary future cash flows to pay the pension benefits when due.

### Actual Return on Plan Assets

Pension plan assets are usually investments in stocks, bonds, other securities, and real estate that a company holds to earn a reasonable return, generally at minimum risk. Employer contributions and actual returns on pension plan assets increase pension plan assets. Benefits paid to retired employees decrease them. As we indicated, the actual return earned on these assets increases the fund balance and correspondingly reduces the employer's net cost of providing employees' pension benefits. That is, the higher the actual return on the pension plan assets, the less the employer has to contribute eventually and, therefore, the less pension expense that it needs to report.

**The actual return on the plan assets is the increase in pension funds from interest, dividends, and realized and unrealized changes in the fair-market value of the plan assets.** Companies compute the actual return by adjusting the change in the plan assets for the effects of contributions during the year and benefits paid out during the year. The equation in Illustration 20-5, or a variation thereof, can be used to compute the actual return.

$$\text{Actual Return} = \left( \begin{array}{r} \text{Plan Assets} \\ \text{Ending} \\ \text{Balance} \end{array} - \begin{array}{r} \text{Plan Assets} \\ \text{Beginning} \\ \text{Balance} \end{array} \right) - (\text{Contributions} - \text{Benefits Paid})$$

**ILLUSTRATION 20-5**  
Equation for Computing Actual Return

Stated another way, the actual return on plan assets is the difference between the **fair value of the plan assets** at the beginning of the period and at the end of the period, adjusted for contributions and benefit payments. Illustration 20-6 uses the equation above to compute the actual return, using some assumed amounts.

Fair value of plan assets at end of period		\$5,000,000
Deduct: Fair value of plan assets at beginning of period		<u>4,200,000</u>
Increase in fair value of plan assets		800,000
Deduct: Contributions to plan during period	\$500,000	
Less benefits paid during period	<u>300,000</u>	<u>200,000</u>
<b>Actual return on plan assets</b>		<b>\$ 600,000</b>

**ILLUSTRATION 20-6**  
Computation of Actual Return on Plan Assets

If the actual return on the plan assets is positive (a gain) during the period, a company subtracts it when computing pension expense. If the actual return is negative (a loss) during the period, the company adds it when computing pension expense.<sup>11</sup>

<sup>11</sup>At this point, we use the actual rate of return. Later, for purposes of computing pension expense, we use the expected rate of return.

## USING A PENSION WORKSHEET

We will now illustrate the basic computation of pension expense using the first three components: (1) service cost, (2) interest on the liability, and (3) actual return on plan assets. We discuss the other pension-expense components (amortization of prior service cost, and gains and losses) in later sections.

**Objective•5**

Use a worksheet for employer's pension plan entries.

Companies often use a worksheet to record pension-related information. As its name suggests, the worksheet is a working tool. A worksheet is **not** a permanent accounting record: it is neither a journal nor part of the general ledger. The worksheet is merely a device to make it easier to prepare entries and the financial statements.<sup>12</sup> Illustration 20-7 shows the format of the **pension worksheet**.

**ILLUSTRATION 20-7**  
Basic Format of Pension Worksheet

Pension Worksheet						
1	A	B	C	D	F	G
	General Journal Entries			Memo Record		
2	Items	Annual Pension Expense	Cash	Pension Asset/Liability	Projected Benefit Obligation	Plan Assets
3						
4						
5						
6						

The “General Journal Entries” columns of the worksheet (near the left side) determine the entries to record in the formal general ledger accounts. The “Memo Record” columns (on the right side) maintain balances in the projected benefit obligation and the plan assets. The difference between the projected benefit obligation and the fair value of the plan assets is the **pension asset/liability**, which is shown in the balance sheet. If the projected benefit obligation is greater than the plan assets, a pension liability occurs. If the projected benefit obligation is less than the plan assets, a pension asset occurs.

On the first line of the worksheet, a company records the beginning balances (if any). It then records subsequent transactions and events related to the pension plan using debits and credits, using both sets of columns as if they were one. For each transaction or event, the debits must equal the credits. **The ending balance in the Pension Asset/Liability column should equal the net balance in the memo record.**

### 2010 Entries and Worksheet

To illustrate the use of a worksheet and how it helps in accounting for a pension plan, assume that on January 1, 2010, Zarle Company provides the following information related to its pension plan for the year 2010.

- Plan assets, January 1, 2010, are \$100,000.
- Projected benefit obligation, January 1, 2010, is \$100,000.
- Annual service cost is \$9,000.
- Settlement rate is 10 percent.
- Actual return on plan assets is \$10,000.
- Funding contributions are \$8,000.
- Benefits paid to retirees during the year are \$7,000.

<sup>12</sup>The use of a pension entry worksheet is recommended and illustrated by Paul B. W. Miller, “The New Pension Accounting (Part 2),” *Journal of Accountancy* (February 1987), pp. 86–94.

Using the data presented on page 1058, the worksheet in Illustration 20-8 presents the beginning balances and all of the pension entries recorded by Zarle in 2010. Zarle records the beginning balances for the projected benefit obligation and the pension plan assets on the first line of the worksheet in the memo record. Because the projected benefit obligation and the plan assets are the same at January 1, 2010, the Pension Asset/Liability account has a zero balance at January 1, 2010.

1	A	B C D			F G	
		Annual Pension Expense	Cash	Pension Asset/Liability	Projected Benefit Obligation	Plan Assets
2	Items					
3	Balance, Jan. 1, 2010			—	100,000 Cr.	100,000 Dr.
4	(a) Service cost	9,000 Dr.			9,000 Cr.	
5	(b) Interest cost	10,000 Dr.			10,000 Cr.	
6	(c) Actual return	10,000 Cr.				10,000 Dr.
7	(d) Contributions		8,000 Cr.			8,000 Dr.
8	(e) Benefits				7,000 Dr.	7,000 Cr.
9						
10						
11	Journal entry for 2010	9,000 Dr.	8,000 Cr.	1,000 Cr.*		
12	Balance, Dec. 31, 2010			1,000 Cr.**	112,000 Cr.	111,000 Dr.
13						
14	*\$9,000 – \$8,000 = \$1,000					
15	**\$112,000 – \$111,000 = \$1,000					

ILLUSTRATION 20-8  
Pension Worksheet—2010

Entry (a) in Illustration 20-8 records the service cost component, which increases pension expense by \$9,000 and increases the liability (projected benefit obligation) by \$9,000. Entry (b) accrues the interest expense component, which increases both the liability and the pension expense by \$10,000 (the beginning projected benefit obligation multiplied by the settlement rate of 10 percent). Entry (c) records the actual return on the plan assets, which increases the plan assets and decreases the pension expense. Entry (d) records Zarle's contribution (funding) of assets to the pension fund, thereby decreasing cash by \$8,000 and increasing plan assets by \$8,000. Entry (e) records the benefit payments made to retirees, which results in equal \$7,000 decreases to the plan assets and the projected benefit obligation.

Zarle makes the "formal journal entry" on December 31, which records the pension expense in 2010, as follows.

2010	
Pension Expense	9,000
Cash	8,000
Pension Asset/Liability	1,000

The credit to Pension Asset/Liability for \$1,000 represents the difference between the 2010 pension expense of \$9,000 and the amount funded of \$8,000. Pension Asset/Liability (credit) is a liability because Zarle underfunds the plan by \$1,000. The Pension Asset/Liability account balance of \$1,000 also equals the net of the balances in the memo accounts. Illustration 20-9 shows that the projected benefit obligation exceeds the plan assets by \$1,000, which reconciles to the pension liability reported in the balance sheet.

Projected benefit obligation (Credit)	\$ (112,000)
Plan assets at fair value (Debit)	111,000
Pension asset/liability (Credit)	\$ (1,000)

ILLUSTRATION 20-9  
Pension Reconciliation  
Schedule—December 31,  
2010

If the net of the memo record balances is a credit, the reconciling amount in the pension asset/liability column will be a credit equal in amount. If the net of the memo record balances is a debit, the pension asset/liability amount will be a debit equal in amount. The worksheet is designed to produce this reconciling feature, which is useful later in the preparation of the financial statements and required note disclosure related to pensions.

In this illustration (for 2010), the debit to Pension Expense exceeds the credit to Cash, resulting in a credit to Pension Asset/Liability—the recognition of a liability. If the credit to Cash exceeded the debit to Pension Expense, Zarle would debit Pension Asset/Liability—the recognition of an asset.

### Amortization of Prior Service Cost (PSC)

**Objective 6**

Describe the amortization of prior service costs.

When either initiating (adopting) or amending a defined-benefit plan, a company often provides benefits to employees for years of service before the date of initiation or amendment. As a result of this prior service cost, the projected benefit obligation is increased to recognize this additional liability. In many cases, the increase in the projected benefit obligation is substantial.

Should a company report an expense for these **prior service costs (PSC)** at the time it initiates or amends a plan? The FASB says no. The Board’s rationale is that the employer would not provide credit for past years of service unless it expects to receive benefits in the future. As a result, a company should not recognize the **retroactive benefits** as pension expense in the year of amendment. Instead, **the employer initially records the prior service cost as an adjustment to other comprehensive income. The employer then recognizes the prior service cost as a component of pension expense over the remaining service lives of the employees who are expected to benefit from the change in the plan.**

**The cost of the retroactive benefits (including any benefits provided to existing retirees) is the increase in the projected benefit obligation at the date of the amendment.** An actuary computes the amount of the prior service cost. Amortization of the prior service cost is also an accounting function performed with the assistance of an actuary.

The Board prefers a **years-of-service method** that is similar to a units-of-production computation. First, the company computes the total number of service-years to be worked by all of the participating employees. Second, it divides the prior service cost by the total number of service-years, to obtain a cost per service-year (the unit cost). Third, the company multiplies the number of service-years consumed each year by the cost per service-year, to obtain the annual amortization charge.

To illustrate the amortization of the prior service cost under the years-of-service method, assume that Zarle Company’s defined-benefit pension plan covers 170 employees. In its negotiations with the employees, Zarle Company amends its pension plan on January 1, 2011, and grants \$80,000 of prior service costs to its employees. The employees are grouped according to expected years of retirement, as shown below.

Group	Number of Employees	Expected Retirement on Dec. 31
A	40	2011
B	20	2012
C	40	2013
D	50	2014
E	20	2015
	<u>170</u>	

Illustration 20-10 shows computation of the service-years per year and the total service-years.

Year	Service-Years					Total
	A	B	C	D	E	
2011	40	20	40	50	20	170
2012		20	40	50	20	130
2013			40	50	20	110
2014				50	20	70
2015					20	20
	<u>40</u>	<u>40</u>	<u>120</u>	<u>200</u>	<u>100</u>	<u>500</u>

**ILLUSTRATION 20-10**  
Computation of Service-Years

Computed on the basis of a prior service cost of \$80,000 and a total of 500 service-years for all years, the cost per service-year is \$160 ( $\$80,000 \div 500$ ). The annual amount of amortization based on a \$160 cost per service-year is computed as follows.

Year	Total Service-Years	×	Cost per Service-Year	=	Annual Amortization
2011	170		\$160		\$27,200
2012	130		160		20,800
2013	110		160		17,600
2014	70		160		11,200
2015	20		160		3,200
	<u>500</u>				<u>\$80,000</u>

**ILLUSTRATION 20-11**  
Computation of Annual Prior Service Cost Amortization

An alternative method of computing amortization of **prior service cost is permitted: Employers may use straight-line amortization over the average remaining service life of the employees.** In this case, with 500 service-years and 170 employees, the average would be 2.94 years ( $500 \div 170$ ). The annual expense would be \$27,211 ( $\$80,000 \div 2.94$ ). Using this method, Zarle Company would charge cost to expense in 2011, 2012, and 2013 as follows.

Year	Expense
2011	\$27,211
2012	27,211
2013	25,578*
	<u>\$80,000</u>

\*.94 × \$27,211

## 2011 Entries and Worksheet

Continuing the Zarle Company illustration into 2011, we note that the company amends the pension plan on January 1, 2011, to grant employees prior service benefits with a present value of \$80,000. Zarle uses the annual amortization amounts, as computed in the previous section using the years-of-service approach (\$27,200 for 2011). The following additional facts apply to the pension plan for the year 2011.

Annual service cost is \$9,500.

Settlement rate is 10 percent.

Actual return on plan assets is \$11,100.

Annual funding contributions are \$20,000.

Benefits paid to retirees during the year are \$8,000.

Amortization of prior service cost (PSC) using the years-of-service method is \$27,200.

Accumulated other comprehensive income (hereafter referred to as accumulated OCI) on December 31, 2010, is zero.

Illustration 20-12 presents a worksheet of all the pension entries and information recorded by Zarle in 2011. We now add an additional column to the worksheet to record the prior service cost adjustment to other comprehensive income. In addition, as shown in the last two lines of the “Items” column, the other comprehensive income amount related to prior service cost is added to accumulated other comprehensive income (“Accumulated OCI”) to arrive at a debit balance of \$52,800 at December 31, 2011.

**ILLUSTRATION 20-12**  
Pension Worksheet—2011

Pension Worksheet—2011							
	General Journal Entries				Memo Record		
			Other Comprehensive Income				
Items	Annual Pension Expense	Cash	Prior Service Cost	Pension Asset/Liability	Projected Benefit Obligation	Plan Assets	
Balance, Dec. 31, 2010				1,000 Cr.	112,000 Cr.	111,000 Dr.	
(f) Prior service cost			80,000 Dr.		80,000 Cr.	0	
Balance, Jan. 1, 2011					192,000 Cr.	111,000 Dr.	
(g) Service cost	9,500 Dr.				9,500 Cr.		
(h) Interest cost	19,200 Dr.				19,200 Cr.		
(i) Actual return	11,100 Cr.					11,100 Dr.	
(j) Amortization of PSC	27,200 Dr.		27,200 Cr.				
(k) Contributions		20,000 Cr.				20,000 Dr.	
(l) Benefits					8,000 Dr.	8,000 Cr.	
Journal entry for 2011	44,800 Dr.	20,000 Cr.	52,800 Dr.	77,600 Cr.			
Accumulated OCI, Dec. 31, 2010			0				
Balance, Dec. 31, 2011			52,800 Dr.	78,600 Cr.	212,700 Cr.	134,100 Dr.	

The first line of the worksheet shows the beginning balances of the Pension Asset/Liability account and the memo accounts. Entry (f) records Zarle’s granting of prior service cost, by adding \$80,000 to the projected benefit obligation and decreasing other comprehensive income—prior service cost by the same amount. Entries (g), (h), (i), (k), and (l) are similar to the corresponding entries in 2010. To compute the interest cost on the projected benefit obligation for entry (h), we use the beginning projected benefit balance of \$192,000, which has been adjusted for the prior service cost amendment on January 1, 2011. Entry (j) records the 2011 amortization of prior service cost by debiting Pension Expense for \$27,200 and crediting **Other Comprehensive Income (PSC)** for the same amount.

Zarle makes the following journal entry on December 31 to formally record the 2011 pension expense (the sum of the annual pension expense column), and related pension information.

<b>2011</b>			
Pension Expense		44,800	
Other Comprehensive Income (PSC)		52,800	
Cash			20,000
Pension Asset/Liability			77,600

Because the debits to Pension Expense and to Other Comprehensive Income (PSC) exceed the funding, Zarle credits the Pension Asset/Liability account for the \$77,600 difference. That account is a liability. In 2011, as in 2010, the balance of the Pension

Asset/Liability account (\$78,600) is equal to the net of the balances in the memo accounts, as shown in Illustration 20-13.

Projected benefit obligation (Credit)	\$(212,700)
Plan assets at fair value (Debit)	<u>134,100</u>
<b>Pension asset/liability (Credit)</b>	<b><u>\$ (78,600)</u></b>

**ILLUSTRATION 20-13**  
Pension Reconciliation  
Schedule—December 31,  
2011

The reconciliation is the formula that makes the worksheet work. It relates the components of pension accounting, recorded and unrecorded, to one another.

## Gain or Loss

Of great concern to companies that have pension plans are the uncontrollable and unexpected swings in pension expense that can result from (1) sudden and large changes in the market value of plan assets, and (2) changes in actuarial assumptions that affect the amount of the projected benefit obligation. If these gains or losses impact fully the financial statements in the period of realization or occurrence, substantial fluctuations in pension expense result.

Therefore, the FASB decided to reduce the volatility associated with pension expense by using **smoothing techniques** that dampen and in some cases fully eliminate the fluctuations.

### Objective 7

Explain the accounting for unexpected gains and losses.

## Smoothing Unexpected Gains and Losses on Plan Assets

One component of pension expense, actual return on plan assets, reduces pension expense (assuming the actual return is positive). A large change in the actual return can substantially affect pension expense for a year. Assume a company has a 40 percent return in the stock market for the year. Should this be substantial, and perhaps one-time, event affect current pension expense?

Actuaries ignore current fluctuations when they develop a funding pattern to pay expected benefits in the future. They develop an **expected rate of return** and multiply it by an asset value weighted over a reasonable period of time to arrive at an **expected return on plan assets**. They then use this return to determine a company's funding pattern.

The FASB adopted the actuary's approach to dampen wide swings that might occur in the actual return. That is, a company includes the **expected return** on the plan assets as a component of pension expense, not the actual return in a given year. To achieve this goal, the company multiplies the expected rate of return by the market-related value of the plan assets. The **market-related asset value** of the plan assets is either the fair value of plan assets or a calculated value that recognizes changes in fair value in a systematic and rational manner. [4]<sup>13</sup>

The difference between the expected return and the actual return is referred to as the **unexpected gain or loss**; the FASB uses the term **asset gains and losses**. **Asset gains** occur when actual return exceeds expected return; **asset losses** occur when actual return is less than expected return.

What happens to unexpected gains or losses in the accounting for pensions? Companies record asset gains and asset losses in an account, **Other Comprehensive Income (G/L)**, combining them with gains and losses accumulated in prior years. This treatment

<sup>13</sup>Companies may use different ways of determining the calculated market-related value for different classes of assets. For example, an employer might use fair value for bonds and a five-year-moving-average for equities. But companies should consistently apply the manner of determining market-related value from year to year for each asset class. Throughout our Zarle illustrations, we assume that market-related values based on a calculated value and the fair value of plan assets are equal. For homework purposes, use the fair value of plan assets as the measure for the market-related value.

**INTERNATIONAL INSIGHT**

Both iGAAP and U.S. GAAP use smoothing provisions. The Boards are studying whether it is appropriate to eliminate the smoothing mechanism and require companies to report directly in the income statement actual asset returns and any actuarial gains and losses.

is similar to prior service cost. The Board believes this treatment is consistent with the practice of including in other comprehensive income certain changes in value that have not been recognized in net income (for example, unrealized gains and losses on available-for-sale securities). [5] In addition, the accounting is simple, transparent, and symmetrical.

To illustrate the computation of an unexpected gain or loss and its related accounting, assume that in 2012, Zarle Company has an actual return on plan assets of \$12,000 when the expected return is \$13,410 (the expected rate of return of 10% on plan assets times the beginning of the year plan assets). The unexpected asset loss of \$1,410 (\$12,000 – \$13,410) is debited to Other Comprehensive Income (G/L) and credited to Pension Expense.

### What do the numbers mean?

#### PENSION COSTS UPS AND DOWNS

For some companies, pension plans generated real profits in the late 1990s. The plans not only paid for themselves but also increased earnings. This happens when the expected return on pension assets exceed the company's annual costs. At **Norfolk Southern**, pension income amounted to 12 percent of operating profit. It tallied 11 percent of operating profit at **Lucent Technologies**, **Coastal Corp.**, and **Unisys Corp.** The issue is important because in these cases management is not driving the operating income—pension income is. And as a result, income can change quickly.

Unfortunately, when the stock market stops booming, pension expense substantially increases for many companies. The reason: Expected return on a smaller asset base no longer offsets pension service costs and interest on the projected benefit obligation. As a result, many companies find it difficult to meet their earnings targets, and at a time when meeting such targets is crucial to maintaining the stock price.

#### Smoothing Unexpected Gains and Losses on the Pension Liability

In estimating the projected benefit obligation (the liability), actuaries make assumptions about such items as mortality rate, retirement rate, turnover rate, disability rate, and salary amounts. Any change in these actuarial assumptions affects the amount of the projected benefit obligation. Seldom does actual experience coincide exactly with actuarial predictions. These unexpected gains or losses from changes in the projected benefit obligation are called **liability gains and losses**.

Companies report liability gains (resulting from unexpected decreases in the liability balance) and liability losses (resulting from unexpected increases) in Other Comprehensive Income (G/L). Companies combine the liability gains and losses in the same Other Comprehensive Income (G/L) account used for asset gains and losses. They accumulate the asset and liability gains and losses from year to year that are not amortized in Accumulated Other Comprehensive Income. This amount is reported on the balance sheet in the stockholders' equity section.

#### Corridor Amortization

##### Objective 8

Explain the corridor approach to amortizing gains and losses.

The asset gains and losses and the liability gains and losses can offset each other. As a result, the Accumulated OCI account related to gains and losses may not grow very large. But, it is possible that no offsetting will occur and that the balance in the Accumulated OCI account related to gains and losses will continue to grow.

To limit the growth of the Accumulated OCI account, the FASB invented the **corridor approach** for amortizing the account's accumulated balance when it gets too large. How large is too large? The FASB set a limit of 10 percent of the larger of the beginning balances of the projected benefit obligation or the market-related value of the plan assets. **Above that size, the Accumulated OCI account related to gains and losses is considered too large and must be amortized.**

To illustrate the corridor approach, data for Callaway Co.'s projected benefit obligation and plan assets over a period of six years are shown in Illustration 20-14.

Beginning-of-the-Year Balances	Projected Benefit Obligation	Market-Related Asset Value	Corridor* +/- 10%
2009	\$1,000,000	\$ 900,000	\$100,000
2010	1,200,000	1,100,000	120,000
2011	1,300,000	1,700,000	170,000
2012	1,500,000	2,250,000	225,000
2013	1,700,000	1,750,000	175,000
2014	1,800,000	1,700,000	180,000

\*The corridor becomes 10% of the larger (in colored type) of the projected benefit obligation or the market-related plan asset value.

**ILLUSTRATION 20-14**  
Computation of the Corridor

How the corridor works becomes apparent when we portray the data graphically, as in Illustration 20-15.

**ILLUSTRATION 20-15**  
Graphic Illustration of the Corridor

If the balance in the Accumulated OCI account related to gains and losses stays within the upper and lower limits of the corridor, no amortization is required. In that case, Callaway carries forward unchanged the accumulated OCI related to gains and losses.

If amortization is required, the minimum amortization is the excess divided by the average remaining service period of active employees who are expected to receive benefits under the plan. Callaway may use any systematic method of amortization of gains and losses in lieu of the minimum, provided it is greater than the minimum. It must use the method consistently for both gains and losses, and must disclose the amortization method used.

### Example of Gains/Losses

In applying the corridor, companies should include amortization of the net gain or loss as a component of pension expense only if, at the **beginning of the year**, the net gain or loss in Accumulated OCI exceeded the corridor. That is, if no net gain or loss exists in Accumulated OCI at the beginning of the period, the company cannot recognize pension expense gains or losses in that period.

To illustrate the amortization of net gains and losses, assume the following information for Soft-White, Inc.

	2010	2011	2012
	(beginning of the year)		
Projected benefit obligation	\$2,100,000	\$2,600,000	\$2,900,000
Market-related asset value	2,600,000	2,800,000	2,700,000

Soft-White recorded in Other Comprehensive Income actuarial losses of \$400,000 in 2010 and \$300,000 in 2011.

If the average remaining service life of all active employees is 5.5 years, the schedule to amortize the net gain or loss is as shown in Illustration 20-16.

**ILLUSTRATION 20-16**  
Corridor Test and  
Gain/Loss Amortization  
Schedule

Year	Projected Benefit Obligation <sup>a</sup>	Plan Assets <sup>a</sup>	Corridor <sup>b</sup>	Accumulated OCI (G/L) <sup>a</sup>	Minimum Amortization of Loss (For Current Year)
2010	\$2,100,000	\$2,600,000	\$260,000	\$ -0-	\$ -0-
2011	2,600,000	2,800,000	280,000	400,000	21,818 <sup>c</sup>
2012	2,900,000	2,700,000	290,000	678,182 <sup>d</sup>	70,579 <sup>d</sup>

<sup>a</sup>All as of the beginning of the period.  
<sup>b</sup>10% of the greater of projected benefit obligation or plan assets market-related value.  
<sup>c</sup>\$400,000 - \$280,000 = \$120,000; \$120,000 ÷ 5.5 = \$21,818  
<sup>d</sup>\$400,000 - \$21,818 + \$300,000 = \$678,182; \$678,182 - \$290,000 = \$388,182; \$388,182 ÷ 5.5 = \$70,579.

As Illustration 20-16 indicates, the loss recognized in 2011 increased pension expense by \$21,818. This amount is small in comparison with the total loss of \$400,000. It indicates that the corridor approach dampens the effects (reduces volatility) of these gains and losses on pension expense.

The rationale for the corridor is that gains and losses result from refinements in estimates as well as real changes in economic value; over time, some of these gains and losses will offset one another. It therefore seems reasonable that Soft-White should not fully recognize gains and losses as a component of pension expense in the period in which they arise.

**However, Soft-White should immediately recognize in net income certain gains and losses—if they arise from a single occurrence not directly related to the operation of the pension plan and not in the ordinary course of the employer's business.** For example, a gain or loss that is directly related to a plant closing, a disposal of a business component, or a similar event that greatly affects the size of the employee work force, should be recognized as a part of the gain or loss associated with that event.

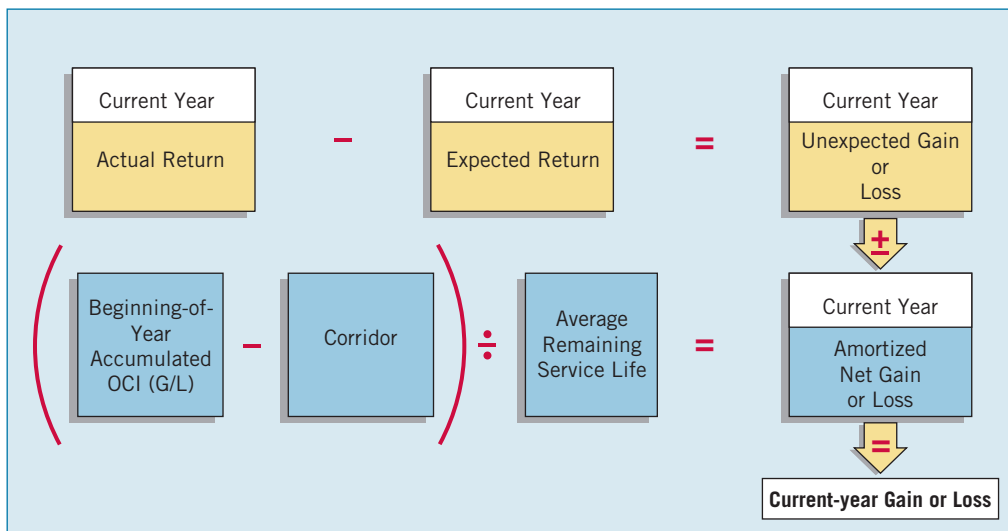

For example, at one time, **Bethlehem Steel** reported a quartererly loss of \$477 million. A great deal of this loss was attributable to future estimated benefits payable to workers who were permanently laid off. In this situation, the loss should be treated as an adjustment to the gain or loss on the plant closing and should not affect pension cost for the current or future periods.

**Summary of Calculations for Asset Gain or Loss**

The difference between the actual return on plan assets and the expected return on plan assets is the **unexpected asset gain or loss** component. This component defers the difference between the actual return and expected return on plan assets in computing

current-year pension expense. Thus, after considering this component, **it is really the expected return on plan assets (not the actual return) that determines current pension expense.**

Companies determine the amortized net gain or loss by amortizing the Accumulated OCI amount related to net gain or loss at the beginning of the year subject to the corridor limitation. In other words, **if the accumulated gain or loss is greater than the corridor, these net gains and losses are subject to amortization.** Soft-White computed this minimum amortization by dividing the net gains or losses subject to amortization by the average remaining service period. When the current-year unexpected gain or loss is combined with the amortized net gain or loss, we determine the current-year gain or loss. Illustration 20-17 summarizes these gain and loss computations.

**ILLUSTRATION 20-17**  
Graphic Summary of Gain or Loss Computation

In essence, these gains and losses are subject to *triple* smoothing. That is, companies first smooth the asset gain or loss by using the expected return. Second, they do not amortize the accumulated gain or loss at the beginning of the year unless it is greater than the corridor. Finally, they spread the excess over the remaining service life of existing employees.

## 2012 Entries and Worksheet

Continuing the Zarle Company illustration, the following facts apply to the pension plan for 2012.

Annual service cost is \$13,000.

Settlement rate is 10 percent; expected earnings rate is 10 percent.

Actual return on plan assets is \$12,000.

Amortization of prior service cost (PSC) is \$20,800.

Annual funding contributions are \$24,000.

Benefits paid to retirees during the year are \$10,500.

Changes in actuarial assumptions resulted in an end-of-year projected benefit obligation of \$265,000.

The worksheet in Illustration 20-18 (on page 1068) presents all of Zarle's 2012 pension entries and related information. The first line of the worksheet records the beginning balances that relate to the pension plan. In this case, Zarle's beginning balances are the ending balances from its 2011 pension worksheet in Illustration 20-12 (page 1062).

Pension Worksheet—2012							
	General Journal Entries					Memo Record	
	Other Comprehensive Income						
Items	Annual Pension Expense	Cash	Prior Service Cost	Gains/Losses	Pension Asset/Liability	Projected Benefit Obligation	Plan Assets
Balance, Jan. 1, 2012					78,600 Cr.	212,700 Cr.	134,100 Dr.
(m) Service cost	13,000 Dr.					13,000 Cr.	
(n) Interest cost	21,270 Dr.					21,270 Cr.	
(o) Actual return	12,000 Cr.						12,000 Dr.
(p) Unexpected loss	1,410 Cr.			1,410 Dr.			
(q) Amortization of PSC	20,800 Dr.		20,800 Cr.				
(r) Contributions		24,000 Cr.					24,000 Dr.
(s) Benefits						10,500 Dr.	10,500 Cr.
(t) Liability increase				28,530 Dr.		28,530 Cr.	
Journal entry for 2012	41,660 Dr.	24,000 Cr.	20,800 Cr.	29,940 Dr.	26,800 Cr.		
Accumulated OCI, Dec. 31, 2011			52,800 Dr.	0			
Balance, Dec. 31, 2012*			32,000 Dr.	29,940 Dr.	105,400 Cr.	265,000 Cr.	159,600 Dr.
*Accumulated OCI (PSC)	\$32,000 Dr.						
Accumulated OCI (G/L)	29,940 Dr.						
Accumulated OCI, Dec. 31, 2012	\$61,940 Dr.						

**ILLUSTRATION 20-18**  
Pension Worksheet—2012

Entries (m), (n), (o), (q), (r), and (s) are similar to the corresponding entries in 2010 or 2011.

Entries (o) and (p) are related. We explained the recording of the actual return in entry (o) in both 2010 and 2011; it is recorded similarly in 2012. In both 2010 and 2011 Zarle assumed that the actual return on plan assets was equal to the expected return on plan assets. In 2012, the expected return of \$13,410 (the expected rate of return of 10 percent times the beginning-of-the-year plan assets balance of \$134,100) is higher than the actual return of \$12,000. To smooth pension expense, Zarle defers the unexpected loss of \$1,410 (\$13,410 – \$12,000) by debiting the Other Comprehensive Income (G/L) account and crediting Pension Expense. **As a result of this adjustment, the expected return on the plan assets is the amount actually used to compute pension expense.**

Entry (t) records the change in the projected benefit obligation resulting from the change in the actuarial assumptions. As indicated, the actuary has now computed the ending balance to be \$265,000. Given the PBO balance at December 31, 2011, and the related transactions during 2012, the PBO balance to date is computed as shown in Illustration 20-19.

**ILLUSTRATION 20-19**  
Projected Benefit Obligation Balance (Unadjusted)

December 31, 2011, PBO balance	\$212,700
Service cost [entry (m)]	13,000
Interest cost [entry (n)]	21,270
Benefits paid	(10,500)
December 31, 2012, PBO balance (before liability increases)	<u>\$236,470</u>

The difference between the ending balance of \$265,000 and the balance of \$236,470 before the liability increase is \$28,530 (\$265,000 – \$236,470). This \$28,530 increase in the employer’s liability is an unexpected loss. The journal entry on December 31, 2012, to record the pension information is as follows.

Pension Expense	41,660	
Other Comprehensive Income (G/L)	29,940	
Cash		24,000
Other Comprehensive Income (PSC)		20,800
Pension Asset/Liability		26,800

As the 2012 worksheet indicates, the \$105,400 balance in the Pension Asset/Liability account at December 31, 2012, is equal to the net of the balances in the memo accounts. Illustration 20-20 shows this computation.

Projected benefit obligation (Credit)	\$(265,000)
Plan assets at fair value (Debit)	<u>159,600</u>
<b>Pension asset/liability</b>	<b><u>\$(105,400)</u></b>

**ILLUSTRATION 20-20**  
Pension Reconciliation  
Schedule—December 31,  
2012

## BOUNCING BACK

The chart below shows what has happened to the financial health of pension plans over the last few years. It is a real roller coaster.

*What do the numbers mean?*

At the turn of the century, when the stock market was strong, pension plans were overfunded. However the bubble burst, and by 2002 companies in the S&P 500 saw their pension plans funded at just 85 percent of reported liabilities. In recent years, plans have bounced back, and by 2007 pension plans were overfunded again. However, due to recent downturns, plans may be soon underfunded again.

A number of factors cause a fund to change from being overfunded to underfunded: First, low interest rates, such as those experienced in the early part of this decade, decimate returns on pension plan assets. As a result, pension fund assets have not grown; in some cases, they have declined in value. Second, using low interest rates to discount the projected benefit payments leads to a higher pension liability. Finally, more individuals are retiring, which leads to a depletion of the pension plan assets. In short, the years 2002 and 2003 produced the perfect pension storm. Since 2003, companies have increased contributions to their plans and curtailed benefits promised to employees, which have helped the plans bounce back.

## REPORTING PENSION PLANS IN FINANCIAL STATEMENTS

As you might suspect, a phenomenon as significant and complex as pensions involves extensive reporting and disclosure requirements. We will cover these requirements in two categories: (1) those within the financial statements, and (2) those within the notes to the financial statements.

### Objective 9

Describe the requirements for reporting pension plans in financial statements.

## Within the Financial Statements

### Recognition of the Net Funded Status of the Pension Plan

Companies must recognize on their balance sheet the overfunded (pension asset) or underfunded (pension liability) status of their defined-benefit pension plan. The overfunded or underfunded status is measured as the difference between the fair value of the plan assets and the projected benefit obligation.

### Classification of Pension Asset or Pension Liability

No portion of a pension asset is reported as a current asset. The excess of the fair value of the plan assets over the benefit obligation is classified as a noncurrent asset. The rationale for noncurrent classification is that the pension plan assets are restricted. That is, these assets are used to fund the projected benefit obligation, and therefore noncurrent classification is appropriate.

The current portion of a net pension liability represents the amount of benefit payments to be paid in the next 12 months (or operating cycle, if longer), if that amount cannot be funded from existing plan assets. Otherwise, the pension liability is classified as a noncurrent liability.<sup>14</sup>

### Aggregation of Pension Plans

Some companies have two or more pension plans. In such instances, a question arises as to whether these multiple plans should be combined and shown as one amount on the balance sheet. The Board takes the position that **all overfunded plans should be combined** and shown as a pension asset on the balance sheet. Similarly, if the company has two or more underfunded plans, the **underfunded plans are combined and shown as one amount** on the balance sheet.

The FASB rejected the alternative of combining *all* plans and representing the net amount as a single net asset or net liability. The rationale: A company does not have the ability to offset excess assets of one plan against underfunded obligations of another plan. Furthermore, netting all plans is inappropriate because offsetting assets and liabilities is not permitted under GAAP unless a right of offset exists.

To illustrate, assume that Cresci Company has three pension plans as shown in Illustration 20-21.

**ILLUSTRATION 20-21**  
Multiple Pension Plans'  
Funded Status

	Pension Assets (at Fair Value)	Projected Benefit Obligation	Pension Asset/Liability
Plan A	\$400,000	\$300,000	\$100,000 Asset
Plan B	600,000	720,000	120,000 Liability
Plan C	550,000	700,000	150,000 Liability

In this case, Cresci reports a pension plan asset of \$100,000 and a pension plan liability of \$270,000 (\$120,000 + \$150,000).

### Actuarial Gains and Losses/Prior Service Cost

Actuarial gains and losses not recognized as part of pension expense are recognized as increases and decreases in other comprehensive income. The same type of accounting is also used for prior service cost. The Board requires that the prior service cost arising in the year of the amendment (which increases the projected benefit obligation) be recognized by an offsetting debit to other comprehensive income. By recognizing both

<sup>14</sup>Recently, the FASB proposed more extensive disclosures related to pension plan assets. At a minimum, companies would have to disclose the amount of assets allocated to equities, government and corporate bonds, mortgage-backed securities, derivatives, and real estate. Also, information on concentrations of risk must be explained. Finally, fair value disclosures would be required, including classification of amounts into levels of the fair value hierarchy. (See [http://www.fasb.org/project/fas132r\\_disclosures\\_about\\_plan\\_assets.shtml](http://www.fasb.org/project/fas132r_disclosures_about_plan_assets.shtml).)

actuarial gains and losses and prior service cost as part of other comprehensive income, the Board believes that the usefulness of financial statements is enhanced.

To illustrate the presentation of other comprehensive income and related accumulated OCI, assume that Obey Company provides the following information for the year 2010. None of the Accumulated OCI on January 1, 2010, should be amortized in 2010.

Net income for 2010	\$100,000
Actuarial liability loss for 2010	60,000
Prior service cost adjustment to provide additional benefits in December 2010	15,000
Accumulated OCI, January 1, 2010	40,000

Both the actuarial liability loss and the prior service adjustment decrease the funded status of the plan on the balance sheet. This results because the projected benefit obligation increases. However, neither the actuarial liability loss nor the prior service cost adjustment affects pension expense in 2010. In subsequent periods, these items will impact pension expense through amortization.

For Obey Company, the computation of “Other comprehensive loss” for 2010 is as follows.

Actuarial liability loss	\$60,000
Prior service cost benefit adjustment	<u>15,000</u>
Other comprehensive loss	<u>\$75,000</u>

**ILLUSTRATION 20-22**  
Computation of Other Comprehensive Income

The computation of “Comprehensive income” for 2010 is as follows.

Net income	\$100,000
Other comprehensive loss	<u>75,000</u>
Comprehensive income	<u>\$ 25,000</u>

**ILLUSTRATION 20-23**  
Computation of Comprehensive Income

The components of other comprehensive income must be reported in one of three ways: (1) in a second income statement, (2) in a combined statement of comprehensive income, or (3) as a part of the statement of stockholders’ equity. Regardless of the format used, net income must be added to other comprehensive income to arrive at comprehensive income. *For homework purposes*, use the second income statement approach unless stated otherwise. Earnings per share information related to comprehensive income is not required.

To illustrate the second income statement approach, assume that Obey Company has reported a traditional income statement. The comprehensive income statement is shown in Illustration 20-24.

<b>OBEY COMPANY</b>		
<b>COMPREHENSIVE INCOME STATEMENT</b>		
<b>FOR THE YEAR ENDED DECEMBER 31, 2010</b>		
Net income		\$100,000
Other comprehensive loss		
Actuarial liability loss	\$60,000	
Prior service cost	<u>15,000</u>	<u>75,000</u>
Comprehensive income		<u>\$ 25,000</u>

**ILLUSTRATION 20-24**  
Comprehensive Income Reporting

The computation of “Accumulated other comprehensive income” as reported in stockholders’ equity at December 31, 2010, is as follows.

**ILLUSTRATION 20-25**

Computation of Accumulated Other Comprehensive Income

Accumulated other comprehensive income, January 1, 2010	\$40,000
Other comprehensive loss	<u>75,000</u>
Accumulated other comprehensive loss, December 31, 2010	<u>\$35,000</u>

Regardless of the display format for the income statement, the accumulated other comprehensive loss is reported on the stockholders’ equity section of the balance sheet of Obey Company as shown in Illustration 20-26. (Illustration 20-26 uses assumed data for the common stock and retained earnings information.)

**ILLUSTRATION 20-26**

Reporting of Accumulated OCI

<b>OBHEY COMPANY</b> <b>BALANCE SHEET</b> <b>AS OF DECEMBER 31, 2010</b> <b>(STOCKHOLDERS’ EQUITY SECTION)</b>	
Stockholders’ equity	
Common stock	\$100,000
Retained earnings	60,000
Accumulated other comprehensive loss	<u>35,000</u>
Total stockholders’ equity	<u>\$125,000</u>

By providing information on the components of comprehensive income as well as total accumulated other comprehensive income, the company communicates all changes in net assets.

In this illustration, it is assumed that the accumulated other comprehensive income at January 1, 2010, is not adjusted for the amortization of any prior service cost or actuarial gains and losses that would change pension expense. As discussed in the earlier examples, these items will be amortized into pension expense in future periods.

**Within the Notes to the Financial Statements**

Pension plans are frequently important to understanding a company’s financial position, results of operations, and cash flows. Therefore, a company discloses the following information, either in the body of the financial statements or in the notes. [6]

1. A schedule showing all the major components of pension expense.  
*Rationale:* Information provided about the components of pension expense helps users better understand how a company determines pension expense. It also is useful in forecasting a company’s net income.
2. A **reconciliation** showing how the projected benefit obligation and the fair value of the plan assets changed from the beginning to the end of the period.  
*Rationale:* Disclosing the projected benefit obligation, the fair value of the plan assets, and changes in them should help users understand the economics underlying the obligations and resources of these plans. Explaining the changes in the projected benefit obligation and fair value of plan assets in the form of a reconciliation provides a more complete disclosure and makes the financial statements more understandable.

**INTERNATIONAL INSIGHT**

The IASB and FASB are studying whether the various components of pension expense, such as interest cost and investment earnings on plan assets, should be presented separately in the income statement along with other interest expense and investment earnings.

3. A disclosure of the rates used in measuring the benefit amounts (discount rate, expected return on plan assets, rate of compensation).  
*Rationale:* Disclosure of these rates permits users to determine the reasonableness of the assumptions applied in measuring the pension liability and pension expense.
4. A table indicating the allocation of pension plan assets by category (equity securities, debt securities, real estate, and other assets), and showing the percentage of the fair value to total plan assets. In addition, a company must include a narrative description of investment policies and strategies, including the target allocation percentages (if used by the company).  
*Rationale:* Such information helps financial statement users evaluate the pension plan's exposure to market risk and possible cash flow demands on the company. It also will help users better assess the reasonableness of the company's expected rate of return assumption.
5. The **expected benefit payments** to be paid to current plan participants for each of the next five fiscal years and in the aggregate for the five fiscal years thereafter. Also required is disclosure of a company's best **estimate of expected contributions** to be paid to the plan during the next year.  
*Rationale:* These disclosures provide information related to the cash outflows of the company. With this information, financial statement users can better understand the potential cash outflows related to the pension plan. They can better assess the liquidity and solvency of the company, which helps in assessing the company's overall financial flexibility.
6. The nature and amount of changes in plan assets and benefit obligations recognized in net income and in other comprehensive income of each period.  
*Rationale:* This disclosure provides information on pension elements affecting the projected benefit obligation and plan assets and on whether those amounts have been recognized in income or deferred to future periods.
7. The accumulated amount of changes in plan assets and benefit obligations that have been recognized in other comprehensive income and that will be recycled into net income in future periods.  
*Rationale:* This information indicates the pension-related balances recognized in stockholders' equity, which will affect future income.
8. The amount of estimated net actuarial gains and losses and prior service costs and credits that will be amortized from accumulated other comprehensive income into net income over the next fiscal year.  
*Rationale:* This information helps users predict the impact of deferred pension expense items on next year's income.

In summary, the disclosure requirements are extensive, and purposely so. One factor that has been a challenge for useful pension reporting has been the lack of consistent terminology. Furthermore, a substantial amount of offsetting is inherent in the measurement of pension expense and the pension liability. These disclosures are designed to address these concerns and take some of the mystery out of pension reporting.

## Example of Pension Note Disclosure

In the following sections we provide examples and explain the key pension disclosure elements.

### Components of Pension Expense

The FASB requires disclosure of the individual pension expense components (derived from the information in the pension expense worksheet column): (1) service cost,

(2) interest cost, (3) expected return on assets, (4) other gains or losses component, and (5) prior service cost component. The purpose of such disclosure is to clarify to more sophisticated readers how companies determine pension expense. Providing information on the components should also be useful in predicting future pension expense.

Illustration 20-27 presents an example of this part of the disclosure. It uses the information from the Zarle illustration, specifically the expense component information from the worksheets in Illustrations 20-8 (page 1059), 20-12 (page 1062), and 20-18 (page 1068).

**ILLUSTRATION 20-27**  
Summary of Expense Components—2010, 2011, 2012

<b>ZARLE COMPANY</b>			
	2010	2011	2012
<b>Components of Pension Expense</b>			
Service cost	\$ 9,000	\$ 9,500	\$13,000
Interest cost	10,000	19,200	21,270
Expected return on plan assets	(10,000)	(11,100)	(13,410)*
Amortization of prior service cost	—0—	27,200	20,800
Pension expense	<u>\$ 9,000</u>	<u>\$44,800</u>	<u>\$41,660</u>

\*Note that the expected return must be disclosed, not the actual return. In 2012, the expected return is \$13,410, which is the actual gain (\$12,000) adjusted by the unrecognized loss (\$1,410).

**Underlying Concepts**

This represents another compromise between relevance and reliability. Disclosure attempts to balance these objectives.

**Funded Status of Plan**

Having a reconciliation of the changes in the assets and liabilities from the beginning of the year to the end of the year, statement readers can better understand the underlying economics of the plan. In essence, this disclosure contains the information in the pension worksheet for the projected benefit obligation and plan asset columns. Using the information for Zarle, the schedule in Illustration 20-28 provides an example of the reconciliation.

**ILLUSTRATION 20-28**  
Pension Disclosure for Zarle Company—2010, 2011, 2012

<b>ZARLE COMPANY PENSION DISCLOSURE</b>			
	2010	2011	2012
<b>Change in benefit obligation</b>			
Benefit obligation at beginning of year	\$100,000	\$112,000	\$ 212,700
Service cost	9,000	9,500	13,000
Interest cost	10,000	19,200	21,270
Amendments (Prior service cost)	—0—	80,000	—0—
Actuarial loss	—0—	—0—	28,530
Benefits paid	(7,000)	(8,000)	(10,500)
<b>Benefit obligation at end of year</b>	<b>112,000</b>	<b>212,700</b>	<b>265,000</b>
<b>Change in plan assets</b>			
Fair value of plan assets at beginning of year	100,000	111,000	134,100
Actual return on plan assets	10,000	11,100	12,000
Contributions	8,000	20,000	24,000
Benefits paid	(7,000)	(8,000)	(10,500)
<b>Fair value of plan assets at end of year</b>	<b>111,000</b>	<b>134,100</b>	<b>159,600</b>
<b>Funded status (Pension asset/liability)</b>	<b>\$ (1,000)</b>	<b>\$ (78,600)</b>	<b>\$ (105,400)</b>

The 2010 column reveals that Zarle underfunds the projected benefit obligation by \$1,000. The 2011 column reveals that Zarle reports the underfunded liability of \$78,600 in the balance sheet. Finally, the 2012 column indicates that Zarle recognizes the underfunded liability of \$105,400 in the balance sheet.

## 2013 Entries and Worksheet—A Comprehensive Example

Incorporating the corridor computation and the required disclosures, we continue the Zarle Company pension plan accounting based on the following facts for 2013.

Service cost is \$16,000.

Settlement rate is 10 percent; expected rate of return is 10 percent.

Actual return on plan assets is \$22,000.

Amortization of prior service cost is \$17,600.

Annual funding contributions are \$27,000.

Benefits paid to retirees during the year are \$18,000.

Average service life of all covered employees is 20 years.

Zarle prepares a worksheet to facilitate accumulation and recording of the components of pension expense and maintenance of amounts related to the pension plan. Illustration 20-29 shows that worksheet, which uses the basic data presented above. Beginning-of-the-year 2013 account balances are the December 31, 2012, balances from Zarle's revised 2012 pension worksheet in Illustration 20-18 (on page 1068).

### Underlying Concepts

Does it make a difference to users of financial statements whether companies recognize pension information in the financial statements or disclose it only in the notes? The FASB was unsure, so in accord with the full disclosure principle, it decided to provide extensive pension plan disclosures.

**ILLUSTRATION 20-29**  
Comprehensive Pension Worksheet—2013

	General Journal Entries					Memo Record	
	Other Comprehensive Income

Balance, Dec. 31, 2013*			14,400 Dr.	23,728 Dr.	98,900 Cr.	289,500 Cr.	190,600 Dr.
*Accumulated OCI (PSC)	\$14,400 Dr.						
Accumulated OCI (G/L)	23,728 Dr.						
Accumulated OCI, Dec. 31, 2013	\$38,128 Dr.						

### Worksheet Explanations and Entries

Entries (aa) through (gg) are similar to the corresponding entries previously explained in the prior years' worksheets, with the exception of entry (dd). In 2012 the expected return on plan assets exceeded the actual return, producing an unexpected loss. In 2013 the actual return of \$22,000 exceeds the expected return of \$15,960 ( $\$159,600 \times 10\%$ ), resulting in an unexpected gain of \$6,040, entry (dd). By netting the gain of \$6,040 against the actual return of \$22,000, pension expense is affected only by the expected return of \$15,960.

A new entry (hh) in Zarle's worksheet results from application of the corridor test on the accumulated balance of net gain or loss in accumulated other comprehensive

income. Zarle Company begins 2013 with a balance in the net loss account of \$29,940. The company applies the corridor criterion in 2013 to determine whether the balance is excessive and should be amortized. In 2013 the corridor is 10 percent of the larger of the beginning-of-the-year projected benefit obligation of \$265,000 or the plan asset's \$159,600 market-related asset value (assumed to be fair value). The corridor for 2013 is \$26,500 ( $\$265,000 \times 10\%$ ). Because the balance in Accumulated OCI is a net loss of \$29,940, the excess (outside the corridor) is \$3,440 ( $\$29,940 - \$26,500$ ). Zarle amortizes the \$3,440 excess over the average remaining service life of all employees. Given an average remaining service life of 20 years, the amortization in 2013 is \$172 ( $\$3,440 \div 20$ ). In the 2013 pension worksheet, Zarle debits Pension Expense for \$172 and credits that amount to Other Comprehensive Income (G/L). Illustration 20-30 shows the computation of the \$172 amortization charge.

**ILLUSTRATION 20-30**  
Computation of 2013 Amortization Charge (Corridor Test)

2013 Corridor Test	
Net (gain) or loss at beginning of year in accumulated OCI	\$29,940
10% of larger of PBO or market-related asset value of plan assets	<u>26,500</u>
Amortizable amount	<u>\$ 3,440</u>
Average service life of all employees	20 years
2013 amortization ( $\$3,440 \div 20$ years)	<u>\$172</u>

Zarle formally records pension expense for 2013 as follows.

2013	
Pension Expense	44,312
Pension Asset/Liability	6,500
Cash	27,000
Other Comprehensive Income (G/L)	6,212
Other Comprehensive Income (PSC)	17,600

**Note Disclosure**

Illustration 20-31 (next page) shows the note disclosure of Zarle's pension plan for 2013. Note that this example assumes that the pension liability is noncurrent and that the 2014 adjustment for amortization of the net gain or loss and amortization of prior service cost are the same as 2013.

**Underlying Concepts**

Many plans are underfunded but still quite viable. For example, at one time **Loews Corp.** had a \$159 million shortfall, but also had earnings of \$594 million and a good net worth. Thus, the going concern assumption permits us to ignore pension underfundings in some cases because in the long run they are not significant.

**Special Issues**

**The Pension Reform Act of 1974**

The Employee Retirement Income Security Act of 1974—**ERISA**—affects virtually every private retirement plan in the United States. It attempts to safeguard employees' pension rights by mandating many pension plan requirements, including minimum funding, participation, and vesting.

These requirements can influence the employers' cash flows significantly. Under this legislation, annual funding is no longer discretionary. An employer now must fund the plan in accordance with an actuarial funding method that over time will be sufficient to pay for all pension obligations. If companies do not fund their plans in a reasonable manner, they may be subject to fines and/or loss of tax deductions.<sup>15</sup>

<sup>15</sup>In 2006, Congress passed the Pension Protection Act. This new law has many provisions. One important aspect of the Act is that it will force many companies to expedite their contributions to their pension plans. One group estimates that companies in the S&P 500 would have had to contribute \$47 billion to their pension plans if the new rules were fully phased in for 2006. That amount is about 57 percent more than the \$30 billion that companies were expecting to contribute to their plans that year. (Source: Credit Suisse, "Pension Protection Act," August 14, 2006, p. 1.)

**ILLUSTRATION 20-31**  
Minimum Note Disclosure  
of Pension Plan, Zarle  
Company, 2013

<b>ZARLE COMPANY</b>	
<b>NOTES TO THE FINANCIAL STATEMENTS</b>	
<b>Note D.</b> The company has a pension plan covering substantially all of its employees. The plan is noncontributory and provides pension benefits that are based on the employee's compensation during the three years immediately preceding retirement. The pension plan's assets consist of cash, stocks, and bonds. The company's funding policy is consistent with the relevant government (ERISA) and tax regulations.	
Pension expense for 2013 is comprised of the following components of pension cost.	
Service cost	\$16,000
Interest on projected benefit obligation	26,500
Expected return on plan assets	(15,960)
Amortization of prior service cost	17,600
Amortization of net loss	<u>172</u>
Pension expense	\$44,312
<b>Other changes in plan assets and benefit obligations recognized in other comprehensive income</b>	
Net actuarial gain	\$ 6,212
Amortization of prior service cost	<u>17,600</u>
Total recognized in other comprehensive income	<u>23,812</u>
Total recognized in pension expense and other comprehensive income	<u>\$20,500</u>
The estimated net actuarial loss and prior service cost for the defined-benefit pension plan that will be amortized from accumulated other comprehensive into pension expense over the next year are estimated to be the same as this year.	
The amount recognized as a long-term liability in the balance sheet is as follows:	
<b>Noncurrent liability</b>	
Pension liability	<u>\$98,900</u>
The amounts recognized in accumulated other comprehensive income related to pensions consist of:	
Net actuarial loss	\$23,728
Prior service cost	<u>14,400</u>
Total	<u>\$38,128</u>
<b>Change in benefit obligation</b>	
Benefit obligation at beginning of year	\$265,000
Service cost	16,000
Interest cost	26,500
Amendments (Prior service cost)	—0—
Actuarial gain	—0—
Benefits paid	<u>(18,000)</u>
<b>Benefit obligation at end of year</b>	<b>289,500</b>
<b>Change in plan assets</b>	
Fair value of plan assets at beginning of year	159,600
Actual return on plan assets	22,000
Contributions	27,000
Benefits paid	<u>(18,000)</u>
<b>Fair value of plan assets at end of year</b>	<b>190,600</b>
<b>Funded status (liability)</b>	<b>\$ 98,900</b>
The weighted-average discount rate used in determining the 2013 projected benefit obligation was 10 percent. The rate of increase in future compensation levels used in computing the 2013 projected benefit obligation was 4.5 percent. The weighted-average expected long-term rate of return on the plan's assets was 10 percent.	

Components of pension expense

Amounts recognized in other comprehensive income

Amounts recognized in the balance sheet

Reconciliations of pension liability and plan assets

Funded status of plan

Rates used to estimate plan elements

The law requires plan administrators to publish a comprehensive description and summary of their plans, along with detailed annual reports that include many supplementary schedules and statements.

Another important provision of the Act is the creation of the Pension Benefit Guaranty Corporation (PBGC). **The PBGC's purpose is to administer terminated plans** and to impose liens on an employer's assets for certain unfunded pension liabilities. If a

company terminates its pension plan, the PBGC can effectively impose a lien against the employer's assets for the excess of the present value of guaranteed vested benefits over the pension fund assets. This lien generally has had the status of a tax lien; it takes priority over most other creditorship claims. This section of the Act gives the PBGC the power to force an involuntary termination of a pension plan whenever the risks related to nonpayment of the pension obligation seem too great. Because ERISA restricts to 30 percent of net worth the lien that the PBGC can impose, the PBGC must monitor all plans to ensure that net worth is sufficient to meet the pension benefit obligations.<sup>16</sup>

A large number of terminated plans have caused the PBGC to pay out substantial benefits. Currently the PBGC receives its funding from employers, who contribute a certain dollar amount for each employee covered under the plan.<sup>17</sup>

### Pension Terminations

A congressman at one time noted, "Employers are simply treating their employee pension plans like company piggy banks, to be raided at will." What this congressman was referring to is the practice of paying off the projected benefit obligation and pocketing any excess. ERISA prevents companies from recapturing excess assets unless they pay participants what is owed to them and then terminate the plan. As a result, companies were buying *annuities* to pay off the pension claimants and then used the excess funds for other corporate purposes.<sup>18</sup>

For example, at one time, pension plan terminations netted \$363 million for **Occidental Petroleum Corp.**, \$95 million for **Stroh's Brewery Co.**, \$58 million for **Kellogg Co.**, and \$29 million for **Western Airlines**. Recently, many large companies have terminated their pension plans and captured billions in surplus assets. The U.S. Treasury also benefits: Federal legislation requires companies to pay an excise tax of anywhere from 20 percent to 50 percent on the gains. All of this is quite legal.<sup>19</sup>

The accounting issue that arises from these terminations is whether a company should recognize a gain when pension plan assets revert back to the company (often called **asset reversion** transactions). The issue is complex: in some cases, a company

<sup>16</sup>The major problems in underfunding are occurring in four labor-intensive industries—steel, autos, rubber, and airlines. For example, **General Motors'** pension plan at one time was 92 percent funded but still had a deficit of over \$6 billion.

<sup>17</sup>**Pan American Airlines** is a good illustration of how difficult it is to assess when to terminate. When Pan Am filed for bankruptcy in 1991, it had a pension liability of \$900 million. From 1983 to 1991, the IRS gave it six waivers so it did not have to make contributions. When Pan Am terminated the plan, there was little net worth left upon which to impose a lien. An additional accounting problem relates to the manner of disclosing the possible termination of a plan. For example, should Pan Am have disclosed a contingent liability for its struggling plan? At present this issue is unresolved, and considerable judgment would be needed to analyze a company with these contingent liabilities.

<sup>18</sup>A question exists as to whose money it is. Some argue that the excess funds belong to the employees, not the employer. In addition, given that the funds have been reverting to the employer, critics charge that cost-of-living increases and the possibility of other increased benefits are reduced, because companies will be reluctant to use those remaining funds to pay for such increases.

<sup>19</sup>Another way that companies have reduced their pension obligations is through adoption of **cash-balance plans**. These are *hybrid* plans combining features of defined-benefit and defined-contribution plans. Although these plans permit employees to transfer their pension benefits when they change employers (like a defined-contribution plan), they are controversial because the change to a cash-balance plan often reduces benefits to older workers.

The accounting for cash-balance plans is similar to that for defined-benefit plans, because employers bear the investment risk in cash-balance plans. When an employer adopts a cash-balance plan, the measurement of the future benefit obligation to employees generally is lower, compared to a traditional defined-benefit plan. See A. T. Arcady and F. Mellors, "Cash-Balance Conversions," *Journal of Accountancy* (February 2000), pp. 22–28.

starts a new defined-benefit plan after it eliminates the old one. Thus, some contend that there has been no change in substance, but merely a change in form. However, the FASB disagrees. It requires recognition in earnings of a gain or loss when the employer settles a pension obligation either by lump-sum cash payments to participants or by purchasing nonparticipating annuity contracts. [7]<sup>20</sup>

## BAILING OUT

The **Pension Benefit Guaranty Corp.** (PBGC) recently announced that it would take over responsibility for the pilots' pension plan at **United Airlines**, to the tune of \$1.4 billion. This federal agency, which acts as an insurer for corporate pension plans, has spent much of the past few years securing pension plans for "Big Steel" (U.S. steel companies), and it looks as if airlines are next.

For example, the PBGC also became the trustee of **US Airways** pilots' pensions in 2003, and it may soon announce a takeover of that struggling carrier's other three pension plans. The grand total at US Airways? It's \$2.8 billion—mere pocket change next to the \$6.4 billion the PBGC will owe if it has to bail out all four of United Airlines' plans. To date, the airline industry, which makes up 2 percent of participants in the program, has made 20 percent of the claims. The chart below shows how a \$6.4 billion bailout would compare with the PBGC's biggest payouts to date.

Source: Kate Bonamici, "By the Numbers," *Fortune* (January 24, 2005), p. 24.

*What do the numbers mean?*

## Concluding Observations

Hardly a day goes by without the financial press analyzing in depth some issue related to pension plans in the United States. This is not surprising, since U.S. pension funds now hold over \$14.4 trillion in assets. As you have seen, the accounting issues related to pension plans are complex. Recent changes to GAAP have clarified many of these issues and should help users understand the financial implications of a company's pension plans on its financial position, results of operations, and cash flows.

<sup>20</sup>Some companies have established *pension poison pills* as an anti-takeover measure. These plans require asset reversions from termination of a plan to benefit employees and retirees rather than the acquiring company. For a discussion of pension poison pills, see Eugene E. Comiskey and Charles W. Mulford, "Interpreting Pension Disclosures: A Guide for Lending Officers," *Commercial Lending Review* (Winter 1993–94), Vol. 9, No. 1.

You will want to read the **CONVERGENCE CORNER** on page 1080

For discussion of how international convergence efforts relate to pension accounting.

# CONVERGENCE CORNER

## POSTRETIREMENT BENEFITS

The accounting for various forms of compensation plans under iGAAP is found in *IAS 19* (“Employee Benefits”) and *IFRS 2* (“Share-Based Payment”). *IAS 19* addresses the accounting for a wide range of compensation elements—wages, bonuses, postretirement benefits, and compensated absences. Both of these standards were recently amended, resulting in significant convergence between iGAAP and U.S. GAAP in this area.

### RELEVANT FACTS

- iGAAP and U.S. GAAP separate pension plans into defined-contribution plans and defined-benefit plans. The accounting for defined-contribution plans is similar.
- For defined-benefit plans, both iGAAP and U.S. GAAP recognize the net of the pension assets and liabilities on the balance sheet. Unlike U.S. GAAP, which recognizes prior service cost on the balance sheet (as an element of “Accumulated other comprehensive income”), iGAAP does not recognize prior service costs on the balance sheet. Both GAAPs amortize prior service costs into income over the expected service lives of employees.
- Another difference in defined-benefit recognition is that under iGAAP companies have the choice of recognizing actuarial gains and losses in income immediately or amortizing them over the expected remaining working lives of employees. U.S. GAAP does not permit choice; actuarial gains and losses (and prior service costs) are recognized in “Accumulated other comprehensive income” and amortized to income over remaining service lives.
- The IASB has recently issued a discussion paper on pensions proposing: (1) elimination of smoothing via the corridor approach, (2) a different presentation of pension costs in the income statement, and (3) a new category of pensions for accounting purposes—so-called “contribution-based promises.”

### ABOUT THE NUMBERS

The following schedule is taken from the annual report of **Cadbury Schweppes**, which uses iGAAP.

#### 25. Retirement benefit obligations continued (in part)

The market value of the assets and liabilities of the defined-benefit schemes and postretirement medical benefit schemes at 31 December 2006 are as follows:

	UK pension schemes £m	Overseas pension schemes £m	Post- retirement medical benefits £m	Total all schemes £m
Equities	1,002	350	2	1,298
Bonds	763	143	1	907
Property	183	32	—	215
Other	30	34	—	120
	1,978	559	3	2,540
Present value of benefit obligations	(1,988)	(720)	(36)	(2,744)
Recognised in the balance sheet	(10)	(161)	(33)	(204)

The Group’s policy is to recognise all actuarial gains and losses immediately. Consequently there are no unrecognized gains or losses.

### ON THE HORIZON

The FASB and the IASB are working collaboratively on a postretirement benefit project. As discussed in the chapter, the FASB has issued GAAP rules addressing the recognition of benefit plans in financial statements. The FASB has begun work on the second phase of the project, which will reexamine expense measurement of postretirement benefit plans. The IASB also has added a project in this area, but on a different schedule. The IASB is monitoring the FASB’s progress and hopes to issue a converged standard in this area by 2010.

## SUMMARY OF LEARNING OBJECTIVES

- 1** **Distinguish between accounting for the employer's pension plan and accounting for the pension fund.** The company or employer is the organization sponsoring the pension plan. It incurs the cost and makes contributions to the pension fund. The fund or plan is the entity that receives the contributions from the employer, administers the pension assets, and makes the benefit payments to the pension recipients (retired employees). The fund should be a separate legal and accounting entity; it maintains a set of books and prepares financial statements.
- 2** **Identify types of pension plans and their characteristics.** The two most common types of pension arrangements are: (1) *Defined-contribution plans*: The employer agrees to contribute to a pension trust a certain sum each period based on a formula. This formula may consider such factors as age, length of employee service, employer's profits, and compensation level. Only the employer's contribution is defined; no promise is made regarding the ultimate benefits paid out to the employees. (2) *Defined-benefit plans*: These plans define the benefits that the employee will receive at the time of retirement. The formula typically provides for the benefits to be a function of the employee's years of service and the compensation level when he or she nears retirement.
- 3** **Explain alternative measures for valuing the pension obligation.** One measure bases the pension obligation only on the benefits vested to the employees. Vested benefits are those that the employee is entitled to receive even if he or she renders no additional services under the plan. Companies compute the *vested benefits pension obligation* using current salary levels; this obligation includes only vested benefits. Another measure of the obligation, called the *accumulated benefit obligation*, computes the deferred compensation amount based on all years of service performed by employees under the plan—both vested and nonvested—using current salary levels. A third measure, called the *projected benefit obligation*, bases the computation of the deferred compensation amount on both vested and nonvested service using future salaries.
- 4** **List the components of pension expense.** Pension expense is a function of the following components: (1) service cost, (2) interest on the liability, (3) return on plan assets, (4) amortization of prior service cost, and (5) gain or loss.
- 5** **Use a worksheet for employer's pension plan entries.** Companies may use a worksheet unique to pension accounting. This worksheet records both the formal entries and the memo entries to keep track of all the employer's relevant pension plan items and components.
- 6** **Describe the amortization of prior service costs.** An actuary computes the amount of the prior service cost and records it as an adjustment to the projected benefit obligation and other comprehensive income. It then amortizes it, generally using a "years-of-service" amortization method, similar to a units-of-production computation. First, the company computes total estimated number of service-years to be worked by all of the participating employees. Second, it divides the accumulated prior service cost by the total number of service-years, to obtain a cost per service-year (the unit cost). Third, the company multiplies the number of service-years consumed each year times the cost per service-year, to obtain the annual amortization charge.
- 7** **Explain the accounting for unexpected gains and losses.** In estimating the projected benefit obligation (the liability), actuaries make assumptions about such items as mortality rate, retirement rate, turnover rate, disability rate, and salary amounts. Any change in these actuarial assumptions affects the amount of the projected benefit obligation. These unexpected gains or losses from changes in the projected benefit obligation are liability gains and losses. Liability gains result from unexpected decreases in the liability balance; liability losses result from unexpected increases. Companies also incur asset gains or losses. Both types of actuarial gains and losses are recorded in other comprehensive income and adjust either the projected benefit obligation or the plan assets.

**8 Explain the corridor approach to amortizing gains and losses.** The FASB set a limit for the size of an accumulated net gain or loss balance. That arbitrarily selected limit (called a *corridor*) is 10 percent of the larger of the beginning balances of the projected benefit obligation or the market-related value of the plan assets. Beyond that limit, an accumulated net gain or loss balance is considered too large and must be amortized. If the balance of the accumulated net gain or loss account stays within the upper and lower limits of the corridor, no amortization is required.

**9 Describe the requirements for reporting pension plans in financial statements.** Currently, companies must disclose the following pension plan information in their financial statements: (1) The components of pension expense for the period. (2) A schedule showing changes in the benefit obligation and plan assets during the year. (3) The amount of prior service cost and net gains and losses in accumulated OCI, including the estimated prior service cost and gains and losses that will affect net income in the next year. (4) The weighted-average assumed discount rate, the rate of compensation increase used to measure the projected benefit obligation, and the weighted-average expected long-term rate of return on plan assets. (5) A table showing the allocation of pension plan assets by category and the percentage of the fair value to total plan assets. (6) The expected benefit payments for current plan participants for each of the next five fiscal years and for the following five years in aggregate, along with an estimate of expected contributions to the plan during the next year.

## APPENDIX 20A

## ACCOUNTING FOR POSTRETIREMENT BENEFITS

In March 1991 **IBM's** adoption of a new GAAP requirement on postretirement benefits resulted in a \$2.3 billion charge and a historical curiosity—IBM's first-ever quarterly loss. **General Electric** disclosed that its charge for adoption of the same GAAP rules would be \$2.7 billion. In the fourth quarter of 1993, **AT&T** absorbed a \$2.1 billion pretax hit for postretirement benefits. What is GAAP in this area, and how could its adoption have so grave an impact on companies' earnings?

### ACCOUNTING GUIDANCE

After a decade of study, the FASB in December 1990 issued GAAP rules on "Employers' Accounting for Postretirement Benefits Other Than Pensions." **8** It alone was the cause for the large charges to income cited above. These rules cover for healthcare and other "welfare benefits" provided to retirees, their spouses, dependents, and beneficiaries.<sup>21</sup> These other welfare benefits include life insurance offered outside a pension plan; medical, dental, and eye care; legal and tax services; tuition assistance; day care; and housing assistance.<sup>22</sup> Because healthcare benefits are the largest of the other postretirement benefits, we use this item to illustrate accounting for postretirement benefits.

<sup>21</sup>*Accounting Trends and Techniques—2007* reports that of its 600 surveyed companies, 317 reported benefit plans that provide postretirement healthcare benefits. In response to rising healthcare costs and higher premiums on healthcare insurance, companies are working to get their postretirement benefit costs under control. For example, a recent study of employer health-benefit plans indicates that employers are limiting or curtailing postretirement health benefits. See Kelly Greene, "Health Benefits for Retirees Continue to Shrink, Study Says," *Wall Street Journal* (September 16, 2002), p. A2.

<sup>22</sup>"OPEB" is the acronym frequently used to describe postretirement benefits other than pensions. This term came into being before the scope of guidance was narrowed from "other postemployment benefits" to "other postretirement benefits," thereby excluding postemployment benefits related to severance pay or wage continuation to disabled, terminated, or laid-off employees.

For many employers (about 95 percent) these GAAP rules required a change from the predominant practice of accounting for postretirement benefits on a pay-as-you-go (cash) basis to an accrual basis. Similar to pension accounting, the accrual basis necessitates measuring the employer's obligation to provide future benefits and accrual of the cost during the years that the employee provides service.

One of the reasons companies had not prefunded these benefit plans was that payments to prefund healthcare costs, unlike excess contributions to a pension trust, are not tax-deductible. Another reason was that postretirement healthcare benefits were once perceived to be a low-cost employee benefit that could be changed or eliminated at will and therefore were not a legal liability. Now, the accounting definition of a liability goes beyond the notion of a legally enforceable claim; the definition now encompasses equitable or constructive obligations as well, making it clear that the postretirement benefit promise is a liability.<sup>23</sup>

## DIFFERENCES BETWEEN PENSION BENEFITS AND HEALTHCARE BENEFITS

The FASB used the GAAP rules on pensions as a reference for the accounting prescribed for healthcare and other nonpension postretirement benefits.<sup>24</sup> Why didn't the FASB cover these other types of postretirement benefits in the earlier pension accounting statement? Because the apparent similarities between the two benefits mask some significant differences. Illustration 20A-1 shows these differences.<sup>25</sup>

### Objective 10

Identify the differences between pensions and postretirement healthcare benefits.

Item	Pensions	Healthcare Benefits
<b>Funding</b>	Generally funded.	Generally <i>NOT</i> funded.
<b>Benefit</b>	Well-defined and level dollar amount.	Generally uncapped and great variability.
<b>Beneficiary</b>	Retiree (maybe some benefit to surviving spouse).	Retiree, spouse, and other dependents.
<b>Benefit payable</b>	Monthly.	As needed and used.
<b>Predictability</b>	Variables are reasonably predictable.	Utilization difficult to predict. Level of cost varies geographically and fluctuates over time.

### ILLUSTRATION 20A-1

Differences between Pensions and Postretirement Healthcare Benefits

Two of the differences in Illustration 20A-1 highlight why measuring the future payments for healthcare benefit plans is so much more difficult than for pension plans.

1. Many postretirement plans do not set a limit on healthcare benefits. No matter how serious the illness or how long it lasts, the benefits continue to flow. (Even if the employer uses an insurance company plan, the premiums will escalate according to the increased benefits provided.)
2. The levels of healthcare benefit use and healthcare costs are difficult to predict. Increased longevity, unexpected illnesses (e.g., AIDS, SARS, and avian flu), along with new medical technologies and cures, cause changes in healthcare utilization.

<sup>23</sup>"Elements of Financial Statements," *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: 1985), p. 13, footnote 21.

<sup>24</sup>Other postemployment (but before retirement) benefits include, but are not limited to, salary continuation, disability-related benefits, severance benefits, and continuance of healthcare benefits and life insurance for inactive or former (e.g., terminated, disabled, or deceased) employees or their beneficiaries. These benefits are accounted for similar to accounting for compensated absences (see Chapter 13). [9]

<sup>25</sup>D. Gerald Searfoss and Naomi Erickson, "The Big Unfunded Liability: Postretirement Health-Care Benefits," *Journal of Accountancy* (November 1988), pp. 28–39.

Additionally, although the fiduciary and reporting standards for employee benefit funds under government regulations generally cover healthcare benefits, the stringent minimum vesting, participation, and funding standards that apply to pensions do not apply to healthcare benefits. Nevertheless, as you will learn, many of the basic concepts of pensions, and much of the related accounting terminology and measurement methodology, do apply to other postretirement benefits. Therefore, in the following discussion and illustrations, we point out the similarities and differences in the accounting and reporting for these two types of postretirement benefits.

**What do the numbers mean?**

**OPEBs—HOW BIG ARE THEY?**

For many companies, *other postretirement benefit obligations* (OPEBs) are substantial. Generally, OPEBs are not well funded because companies are not permitted a tax deduction for contributions to the plan assets, as is the case with pensions. That is, the company may not claim a tax deduction until it makes a payment to the participant (pay-as-you-go).

Presented below are companies with the largest OPEB obligations, indicating their relationship with other financial items.

(For year ended 12/31/2007 \$ in millions)	Obligation	% Underfunded	Obligation as a % of Stockholders' Equity
General Motors	\$64,013	74.53%	172.57%
Ford Motor Company	28,096	86.21%	499.22%
SBC Communications Inc.	40,385	57.91%	35.01%
Verizon Communications Inc.	27,306	84.83%	53.98%
General Electric	12,983	86.10%	11.23%
Boeing Co.	7,662	97.06%	85.10%
Delphi Corp.	8,732	100%	64.82%

So, how big are OPEB obligations? REALLY big.

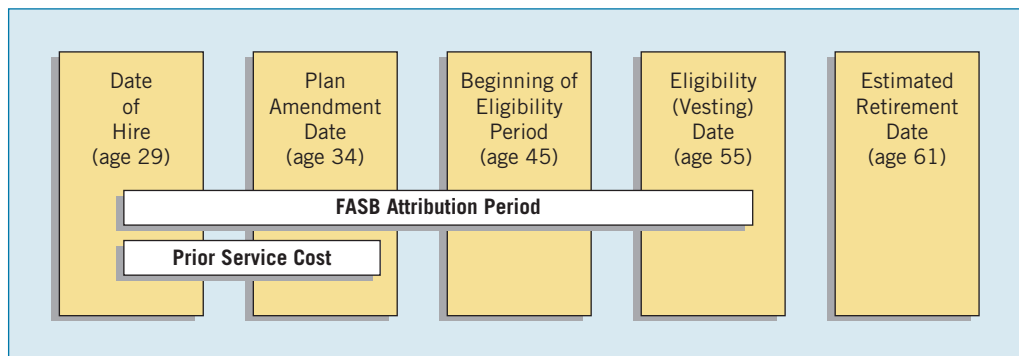

Source: Company reports.

**POSTRETIREMENT BENEFITS ACCOUNTING PROVISIONS**

Healthcare and other postretirement benefits for current and future retirees and their dependents are forms of deferred compensation. They are earned through employee service and are subject to accrual during the years an employee is working.

The period of time over which the postretirement benefit cost accrues is called the **attribution period**. It is the period of service during which the employee earns the benefits under the terms of the plan. The attribution period, shown in Illustration 20A-2

**ILLUSTRATION 20A-2**  
Range of Possible Attribution Periods

for a hypothetical employee, generally begins when an employee is hired and ends on the date the employee is eligible to receive the benefits and ceases to earn additional benefits by performing service, the vesting date.<sup>26</sup>

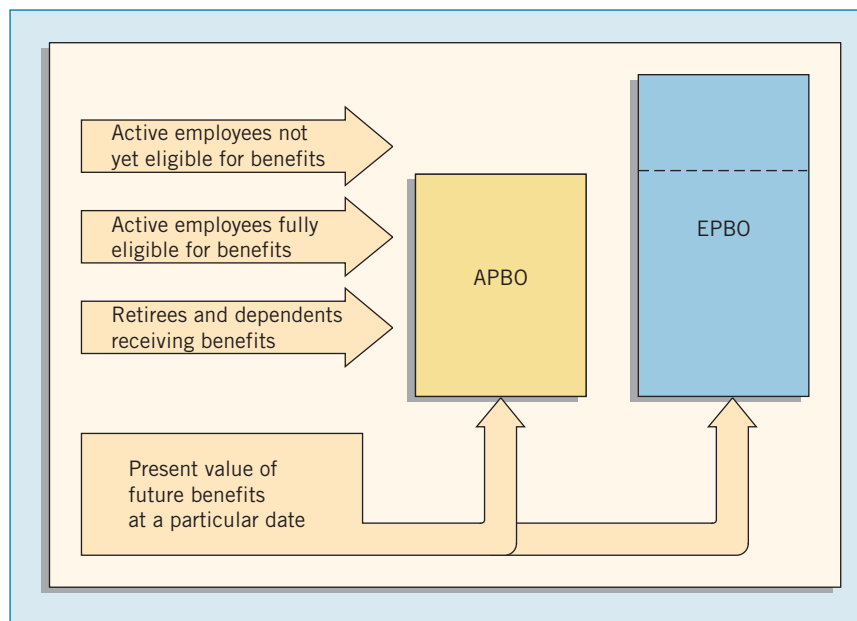

## Obligations Under Postretirement Benefits

In defining the obligation for postretirement benefits, the FASB maintained many concepts similar to pension accounting. It also designed some new and modified terms specifically for postretirement benefits. Two of the most important of these specialized terms are (a) expected postretirement benefit obligation and (b) accumulated postretirement benefit obligation.

The **expected postretirement benefit obligation (EPBO)** is the actuarial present value as of a particular date of **all benefits a company expects to pay after retirement to employees and their dependents**. Companies do not record the EPBO in the financial statements, but they do use it in measuring periodic expense.

The **accumulated postretirement benefit obligation (APBO)** is the actuarial present value of **future benefits attributed to employees' services rendered to a particular date**. The APBO is equal to the EPBO for retirees and active employees fully eligible for benefits. Before the date an employee achieves full eligibility, the APBO is only a portion of the EPBO. Or stated another way, the difference between the APBO and the EPBO is the future service costs of active employees who are not yet fully eligible.

Illustration 20A-3 contrasts the EPBO and the APBO.

**ILLUSTRATION 20A-3**  
APBO and EPBO  
Contrasted

At the date an employee is fully eligible (the end of the attribution period), the APBO and the EPBO for that employee are equal.

<sup>26</sup>This is a benefit-years-of-service approach (the projected unit credit actuarial cost method). The FASB found no compelling reason to switch from the traditional pension accounting approach. It rejected the employee's full service period (i.e., to the estimated retirement date) because it was unable to identify any approach that would appropriately attribute benefits beyond the date when an employee attains full eligibility for those benefits. Employees attain full eligibility by meeting specified age, service, or age and service requirements of the plan.

## Postretirement Expense

**Postretirement expense** is the employer's annual expense for postretirement benefits. Also called **net periodic postretirement benefit cost**, this expense consists of many of the familiar components used to compute annual pension expense. The components of net periodic postretirement benefit cost are as follows. [10]<sup>27</sup>

1. **Service Cost:** The portion of the EPBO attributed to employee service during the period.
2. **Interest Cost:** The increase in the APBO attributable to the passage of time. Companies compute interest cost by applying the beginning-of-the-year discount rate to the beginning-of-the-year APBO, adjusted for benefit payments to be made during the period. The discount rate is based on the rates of return on high-quality, fixed-income investments that are currently available.<sup>28</sup>
3. **Actual Return on Plan Assets:** The change in the fair value of the plan's assets adjusted for contributions and benefit payments made during the period. Because companies charge or credit the postretirement expense for the gain or loss on plan assets (the difference between the actual and the expected return), this component is actually the expected return.
4. **Amortization of Prior Service Cost:** The amortization of the cost of retroactive benefits resulting from plan amendments. The typical amortization period, beginning at the date of the plan amendment, is the remaining service periods through the full eligibility date.
5. **Gains and Losses:** In general, changes in the APBO resulting from changes in assumptions or from experience different from that assumed. For funded plans, this component also includes the difference between actual return and expected return on plan assets.

---

## ILLUSTRATIVE ACCOUNTING ENTRIES

Like pension accounting, the accounting for postretirement plans must recognize in the accounts and in the financial statements effects of several significant items. These items are:

### Objective 11

Contrast accounting for pensions to accounting for other postretirement benefits.

1. Expected postretirement benefit obligation (EPBO).
2. Accumulated postretirement benefit obligation (APBO).
3. Postretirement benefit plan assets.
4. Prior service cost.
5. Net gain or loss.

The EPBO is not recognized in the financial statements or disclosed in the notes. Companies recompute it each year, and the actuary uses it in measuring the annual service cost. Because of the numerous assumptions and actuarial complexity involved in measuring annual service cost, we have omitted these computations of the EPBO.

Similar to pensions, companies must recognize in the financial statements items 2 through 5 listed above. In addition, as in pension accounting, companies must know the exact amount of these items in order to compute postretirement expense. Therefore, companies use the worksheet like that for pension accounting to record both the formal general journal entries and the memo entries.

<sup>27</sup>See James R. Wilbert and Kenneth E. Dakduk, "The New FASB 106: How to Account for Postretirement Benefits," *Journal of Accountancy* (August 1991), pp. 36–41.

<sup>28</sup>The FASB concluded that the discount rate for measuring the present value of the postretirement benefit obligation and the service cost component should be the same as that applied to pension measurements. It chose not to label it the *settlement rate*, in order to clarify that the objective of the discount rate is to measure the time value of money.

### 2010 Entries and Worksheet

To illustrate the use of a worksheet in accounting for a postretirement benefits plan, assume that on January 1, 2010, Quest Company adopts a healthcare benefit plan. The following facts apply to the postretirement benefits plan for the year 2010.

- Plan assets at fair value on January 1, 2010, are zero.
- Actual and expected returns on plan assets are zero.
- Accumulated postretirement benefit obligation (APBO), January 1, 2010, is zero.
- Service cost is \$54,000.
- No prior service cost exists.
- Interest cost on the APBO is zero.
- Funding contributions during the year are \$38,000.
- Benefit payments to employees from plan are \$28,000.

Using that data, the worksheet in Illustration 20A-4 presents the postretirement entries for 2010.

1	General Journal Entries			Memo Record		
	2 Items	Annual Postretirement Expense	Cash	Postretirement Asset/Liability	APBO	Plan Assets
3	Balance, Jan. 1, 2010					
4	(a) Service cost	54,000 Dr.			54,000 Cr.	
5	(b) Contributions		38,000 Cr.			38,000 Dr.
6	(c) Benefits				28,000 Dr.	28,000 Cr.
7						
8	Journal entry for 2010	54,000 Dr.	38,000 Cr.	16,000 Cr.*		
9	Balance, Dec. 31, 2010			16,000 Cr.**	26,000 Cr.	10,000 Dr.
10						
11	*\$54,000 – \$38,000 = \$16,000					
12	**\$26,000 – \$10,000 = \$16,000					
13						
14						
15						

**ILLUSTRATION 20A-4**  
Postretirement  
Worksheet—2010

Entry (a) records the service cost component, which increases postretirement expense \$54,000 and increases the liability (APBO) \$54,000. Entry (b) records Quest’s funding of assets to the postretirement fund. The funding decreases cash \$38,000 and increases plan assets \$38,000. Entry (c) records the benefit payments made to retirees, which results in equal \$28,000 decreases to the plan assets and the liability (APBO).

Quest’s December 31 adjusting entry formally records the postretirement expense in 2010, as follows.

December 31, 2010	
Postretirement Expense	54,000
Cash	38,000
Postretirement Asset/Liability	16,000

The credit to Postretirement Asset/Liability for \$16,000 represents the difference between the APBO and the plan assets. The \$16,000 credit balance is a liability because the plan is underfunded. The Postretirement Asset/Liability account balance of \$16,000 also equals the net of the balances in the memo accounts.

Illustration 20A-5 shows the funded status reported in the balance sheet. (Notice its similarity to the pension schedule.)

**ILLUSTRATION 20A-5**  
Postretirement  
Reconciliation Schedule—  
December 31, 2010

Accumulated postretirement benefit obligation (Credit)	\$(26,000)
Plan assets at fair value (Debit)	<u>10,000</u>
<b>Postretirement asset/liability (Credit)</b>	<b><u>\$(16,000)</u></b>

## Recognition of Gains and Losses

Gains and losses represent changes in the APBO or the value of plan assets. These changes result either from actual experience different from that expected or from changes in actuarial assumptions. The amortization of these gains and losses follows the approach used for pensions. That is, the gains and losses are recorded in other comprehensive income.

### The Corridor Approach

Consistent with pension accounting, companies amortize the gains and losses in accumulated other comprehensive income as a component of postretirement expense if, at the beginning of the period, they exceed a “corridor” limit. The corridor is measured as the greater of 10 percent of the APBO or 10 percent of the market-related value of plan assets.

The intent of the **corridor approach** is to reduce volatility of postretirement expense by providing a reasonable opportunity for gains and losses to offset over time without affecting net periodic expense.

### Amortization Methods

If the company must amortize gains and losses (beyond the corridor) on postretirement benefit plans, the **minimum amortization amount** is the excess gain or loss divided by the average remaining service life to expected retirement of all active employees. Companies may use any systematic method of amortization provided that: (1) the amount amortized in any period is equal to or greater than the minimum amount, (2) the company applies the method consistently, and (3) the company applies the method similarly for gains and losses.

The company must recompute the amount of gain or loss in accumulated other comprehensive income each year and amortize the gain or loss over the average remaining service life if the net amount exceeds the “corridor.”

## 2011 Entries and Worksheet

Continuing the Quest Company illustration into 2011, the following facts apply to the postretirement benefits plan for the year 2011.

Actual return on plan assets is \$600.

Expected return on plan assets is \$800.

Discount rate is 8 percent.

Increase in APBO due to change in actuarial assumptions is \$60,000.

Service cost is \$26,000.

Funding contributions during the year are \$18,000.

Benefit payments to employees during the year are \$5,000.

Average remaining service to expected retirement: 25 years.

The worksheet in Illustration 20A-6 (on page 1089) presents all of Quest’s postretirement benefit entries and information for 2011. The beginning balances on the first line of the worksheet are the ending balances from Quest’s 2010 postretirement benefits worksheet in Illustration 20A-4 (on page 1087).

Items	General Journal Entries				Memo Record	
	Annual Postretirement Expense	Cash	Other Comprehensive Income (G/L)	Postretirement Asset/Liability	APBO	Plan Assets
Balance, Jan. 1, 2011				16,000 Cr.	26,000 Cr.	10,000 Dr.
(d) Service cost	26,000 Dr.				26,000 Cr.	
(e) Interest cost	2,080 Dr.				2,080 Cr.	
(f) Actual return	600 Cr.					600 Dr.
(g) Unexpected loss	200 Cr.		200 Dr.			
(h) Contributions		18,000 Cr.				18,000 Dr.
(i) Benefits					5,000 Dr.	5,000 Cr.
(j) Increase in APBO (Loss)			60,000 Dr.		60,000 Cr.	
Journal entry for 2011	27,280 Dr.	18,000 Cr.	60,200 Dr.	69,480 Cr.		
Accumulated OCI, Dec. 31, 2010			0			
Balance, Dec. 31, 2011			60,200 Dr.	85,480 Cr.	109,080 Cr.	23,600 Dr.

**ILLUSTRATION 20A-6**  
Postretirement Benefits Worksheet—2011

Entries (d), (h), and (i) are similar to the corresponding entries previously explained for 2010. Entry (e) accrues the interest expense component, which increases both the liability and the postretirement expense by \$2,080 (the beginning APBO multiplied by the discount rate of 8%). Entries (f) and (g) are related. The expected return of \$800 is higher than the actual return of \$600. To smooth postretirement expense, Quest defers the unexpected loss of \$200 (\$800 – \$600) by debiting Other Comprehensive Income (G/L) and crediting Postretirement Expense. As a result of this adjustment, the expected return on the plan assets is the amount actually used to compute postretirement expense.

Entry (j) records the change in the APBO resulting from a change in actuarial assumptions. This \$60,000 increase in the employer’s accumulated liability is an unexpected loss. Quest debits this loss to Other Comprehensive Income (G/L).

On December 31 Quest formally records net periodic expense for 2011 as follows.

**December 31, 2011**

Postretirement Expense	27,280
Other Comprehensive Income (G/L)	60,200
Cash	18,000
Postretirement Asset/Liability	69,480

The balance of the Postretirement Asset/Liability account at December 31, 2011, is \$85,480. This balance is equal to the net of the balances in the memo accounts as shown in the reconciliation schedule in Illustration 20A-7.

Accumulated Postretirement Benefit Obligation (Credit)	\$109,080
Plan Assets at Fair Value (Debit)	<u>23,600</u>
<b>Postretirement Asset/Liability (Credit)</b>	<b><u>\$ (85,480)</u></b>

**ILLUSTRATION 20A-7**  
Postretirement Benefits Reconciliation Schedule—December 31, 2011

**Amortization of Net Gain or Loss in 2012**

Quest has a beginning balance in Accumulated OCI related to losses of \$60,200. Therefore, Quest must apply the corridor test for amortization of the balance for 2012. Illustration 20A-8 shows the computation of the amortization charge for the loss.

Accumulated OCI at beginning of year	\$60,200
10% of greater of APBO or market-related value of plan assets (\$109,080 × .10)	<u>10,908</u>
Amortizable amount	<u>\$49,292</u>
Average remaining service to expected retirement	25 years
<b>2012 amortization of loss (\$49,292 ÷ 25)</b>	<b><u>\$1,972</u></b>

**ILLUSTRATION 20A-8**  
Computation of Amortization Charge (Corridor Test)—2012

## DISCLOSURES IN NOTES TO THE FINANCIAL STATEMENTS

The disclosures required for other postretirement benefit plans are similar to and just as detailed and extensive as those required for pensions. The note disclosure for **Tootsie Roll, Inc.** in Illustration 20A-9 provides a good example of the extensive disclosure required for other postretirement benefit plans.

**ILLUSTRATION 20A-9**  
Postretirement Benefit Disclosure

### Tootsie Roll Industries, Inc.

#### Notes to Financial Statements

**Note 7 Employee Benefit Plans (partial)**

Postretirement health care and life insurance benefit plans (\$000):

The Company provides certain postretirement health care and life insurance benefits for corporate office and management employees. Employees become eligible for these benefits based upon their age and service and if they agree to contribute a portion of the cost. The Company has the right to modify or terminate these benefits. The Company does not fund postretirement health care and life insurance benefits in advance of payments for benefit claims.

Amounts recognized in accumulated other comprehensive loss (pre-tax) at December 31, 2007 are as follows:

Amounts recognized in other comprehensive income

Prior service credit	\$(1,127)
Net actuarial loss	<u>1,812</u>
Net amount recognized in accumulated other comprehensive loss	<u>\$ 685</u>

The estimated actuarial loss, prior service credit and transition obligation to be amortized from accumulated other comprehensive income into net periodic benefit cost during 2008 are \$158, \$(125), and \$0, respectively.

The changes in the accumulated postretirement benefit obligation at December 31, 2007 and 2006, consist of the following:

Reconciliation of OPEB liability

	December 31,	
	2007	2006
Benefit obligation, beginning of year	\$12,582	\$ 9,924
Service cost	667	524
Interest cost	694	539
Actuarial (gain)/loss	(550)	2,101
Benefits paid	<u>(179)</u>	<u>(506)</u>
Benefit obligation, end of year	<u>\$13,214</u>	<u>\$12,582</u>

Net periodic postretirement benefit cost included the following components:

Components of OPEB expense

	2007	2006	2005
Service cost—benefits attributed to service during the period	\$ 667	\$524	\$474
Interest cost on the accumulated postretirement benefit obligation	694	539	519
Net amortization	90	(84)	(74)
Net periodic postretirement benefit cost	<u>\$1,451</u>	<u>\$979</u>	<u>\$919</u>

For measurement purposes, the 2007 annual rate of increase in the per capita cost of covered health care benefits was assumed to be 8.0% for pre-age 65 retirees, 9.5% for post-age 65 retirees and 11.0% for prescription drugs; these rates were assumed to decrease gradually to 5.0% for 2014 and remain at that level thereafter. The health care cost trend rate assumption has a significant effect on the amounts reported. The weighted-average discount rate used in determining the accumulated postretirement benefit obligation was 5.70% and 5.60% at December 31, 2007 and 2006, respectively.

Rates used to estimate plan elements

Increasing or decreasing the health care trend rates by one percentage point in each year would have the following effect on:

	1% Increase	1% Decrease
Postretirement benefit obligation	\$1,814	\$(1,497)
Total of service and interest cost components	\$ 236	\$ (190)

The Company estimates future benefit payments will be \$453, \$483, \$569, \$598 and \$677 in 2008 through 2012, respectively, and a total of \$4,723 in 2013 through 2017. The future benefit payments are net of the annual Medicare Part D subsidy of approximately \$1,095 beginning in 2008.

As indicated in Illustration 20A-9, Tootsie Roll shows the impact of the postretirement benefit plan on income, the balance sheet, and the cash flow statement, and it provides information on important assumptions used in the measurement of the postretirement benefit obligation. Also note that given no tax incentives for funding, Tootsie Roll (like many companies) does not have any assets set aside for its other postretirement benefit obligations.

While Tootsie Roll has only an other postretirement benefit plan, many companies sponsor both defined-benefit pension and other postretirement plans. Given the similarities in accounting for these plans, companies can combine pension and other postretirement benefit disclosures.

## ACTUARIAL ASSUMPTIONS AND CONCEPTUAL ISSUES

Measurement of the EPBO, the APBO, and the net periodic postretirement benefit cost is involved and complex. Due to the uncertainties in forecasting healthcare costs, rates of use, changes in government health programs, and the differences employed in non-medical assumptions (e.g., discount rate, employee turnover, rate of pre-65 retirement, spouse-age difference), estimates of postretirement benefit costs may have a large margin of error. Is the information relevant, reliable, or verifiable? The FASB concluded that “the obligation to provide postretirement benefits meets the definition of a liability, is representationally faithful, is relevant to financial statement users, and can be measured with sufficient reliability at a justifiable cost.” [11] Failure to accrue an obligation and an expense prior to payment of benefits would result in an unfaithful representation of what financial statements should represent.

The FASB took a momentous step by requiring recognition of a postretirement liability. Many opposed the requirement, warning that the GAAP rules would devastate earnings. Others argued that putting these numbers on the balance sheet was inappropriate. Others noted that the requirement would force companies to curtail postretirement benefits to employees.

The authors believe that the FASB deserves special praise. Because the Board addressed this issue, companies now recognize the magnitude of these costs. This recognition has led to efforts to control escalating healthcare costs. As John Ruffle, a former president of the Financial Accounting Foundation noted, “The Board has done American industry a gigantic favor. Over the long term, industry will look back and say thanks.”

### GASB WHO?

The Governmental Accounting Standards Board (GASB) was organized in 1984 as an operating entity of the Financial Accounting Foundation (FAF) to establish standards of financial accounting and reporting for state and local governmental entities. Similar to the FASB, FAF Trustees are responsible for selecting the members of the GASB and its Advisory Council, funding their activities, and exercising general oversight (with the exception of the GASB’s resolution of technical issues). The GASB’s function is important because high-quality external financial reporting can demonstrate financial accountability of state and local governments to the public and is the basis for investment, credit, and many legislative and regulatory decisions.

Until recently, the GASB went about its work in relative obscurity. How did the GASB get everyone’s attention? It recommended that governmental units recognize other postretirement benefits on their balance sheets on an accrual basis, similar to the accounting required for pensions. Some states do not like that recommendation and have proposed legislation that will allow them to ignore GASB standards. However, the GASB, with the support of users of government reports, has pushed for the change. They are concerned that without the new requirements, governments will continue to misrepresent the true cost of their retirement-related promises to public employees. In their view, the new accounting rules are in the best interests of municipal bondholders and the public in general. Thus, it appears that the FASB is not the only standard-setter subject to political pressure.

Source: R. H. Attmore, “Who Do Texas Elected Officials Think They Are Fooling?” *The Bond Buyer* (June 18, 2007). For more information on the GASB, go to [www.gasb.org/](http://www.gasb.org/).

*What do the numbers mean?*

## KEY TERMS

accumulated

expected postretirement  
benefit obligation  
(EPBO), 1085

SUMMARY OF LEARNING OBJECTIVES FOR  
APPENDIX 20A**LO 10 Identify the differences between pensions and postretirement healthcare benefits.**

Pension plans are generally funded, but healthcare benefit plans are not. Pension benefits are generally well-defined and level in amount; healthcare benefits are generally uncapped and variable. Pension benefits are payable monthly; healthcare benefits are paid as needed and used. Pension plan variables are reasonably predictable, whereas healthcare plan variables are difficult to predict.

**LO 11 Contrast accounting for pensions to accounting for other postretirement benefits.**

Many of the basic concepts, accounting terminology, and measurement methodology that apply to pensions also apply to other postretirement benefit accounting. Because other postretirement benefit plans are unfunded, large obligations can occur. Two significant concepts peculiar to accounting for other postretirement benefits are (a) expected postretirement benefit obligation (EPBO), and (b) accumulated postretirement benefit obligation (APBO).

**Exercises**

Access the FASB Codification at <http://asc.fasb.org/home> to prepare responses to the following exercises. Provide Codification references for your responses.

**CE20-1** Access the glossary (“Master Glossary”) to answer the following.

- (a) What is an accumulated benefit obligation?
- (b) What is a defined benefit postretirement plan?
- (c) What is the definition of “actuarial present value”?
- (d) What is a prior service cost?

**CE20-2** In general, how can an employer choose an appropriate discount rate for its pension plan? What information could an employer use in choosing a discount rate?

**CE20-3** If an employer has a defined-benefit pension plan, what components would make up its net periodic pension cost?

**CE20-4** What information about its pension plan must a publicly traded company disclose in its interim financial statements?

**An additional Codification case can be found in the Using Your Judgment section, on page 1113.**

**Be sure to check the companion website for a Review and Analysis Exercise, with solution.**

*Note:* All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

## QUESTIONS

1. What is a private pension plan? How do contributory and noncontributory pension plans differ?
2. Differentiate between a defined-contribution pension plan and a defined-benefit pension plan. Explain how the employer’s obligation differs between the two types of plans.
3. Differentiate between “accounting for the employer” and “accounting for the pension fund.”
4. The meaning of the term “fund” depends on the context in which it is used. Explain its meaning when used as a noun. Explain its meaning when it is used as a verb.
5. What is the role of an actuary relative to pension plans? What are actuarial assumptions?
6. What factors must be considered by the actuary in measuring the amount of pension benefits under a defined benefit plan?
7. Name three approaches to measuring benefit obligations from a pension plan and explain how they differ.
8. Explain how cash-basis accounting for pension plans differs from accrual-basis accounting for pension plans. Why is cash-basis accounting generally considered unacceptable for pension plan accounting?
9. Identify the five components that comprise pension expense. Briefly explain the nature of each component.
10. What is service cost, and what is the basis of its measurement?
11. In computing the interest component of pension expense, what interest rates may be used?
12. Explain the difference between service cost and prior service cost.
13. What is meant by “prior service cost”? When is prior service cost recognized as pension expense?
14. What are “liability gains and losses,” and how are they accounted for?
15. If pension expense recognized in a period exceeds the current amount funded by the employer, what kind of account arises, and how should it be reported in the financial statements? If the reverse occurs—that is, current funding by the employer exceeds the amount recognized as pension expense—what kind of account arises, and how should it be reported?
16. Given the items and amounts shown on page 1094, compute the actual return on plan assets: fair value of plan

- assets at the beginning of the period \$9,500,000; benefits paid during the period \$1,400,000; contributions made during the period \$1,000,000; and fair value of the plan assets at the end of the period \$10,150,000.
17. How does an “asset gain or loss” develop in pension accounting? How does a “liability gain or loss” develop in pension accounting?
  18. What is the meaning of “corridor amortization”?
  19. At the end of the current period, Agler Inc. had a projected benefit obligation of \$400,000 and pension plan assets (at fair value) of \$350,000. What are the accounts and amounts that will be reported on the company’s balance sheet as pension assets or pension liabilities?
  20. At the end of the current year, Pociak Co. has prior service cost of \$9,150,000. Where should the prior service cost be reported on the balance sheet?
  21. Describe the accounting for actuarial gains and losses.
  22. Boey Company reported net income of \$25,000 in 2011. It had the following amounts related to its pension plan in 2011: Actuarial liability gain \$10,000; Unexpected asset loss \$14,000; Accumulated other comprehensive income (G/L) (beginning balance), zero. Determine for 2011 (a) Boey’s other comprehensive income, and (b) comprehensive income.
  23. Describe the reporting of pension plans for a company with multiple plans, some of which are underfunded and some of which are overfunded.
  24. Determine the meaning of the following terms.
    - (a) Contributory plan.
    - (b) Vested benefits.
    - (c) Retroactive benefits.
    - (d) Years-of-service method.
  25. A headline in the *Wall Street Journal* stated, “Firms Increasingly Tap Their Pension Funds to Use Excess Assets.” What is the accounting issue related to the use of these “excess assets” by companies?
  26. Where can authoritative iGAAP related to the accounting for pensions be found?
  27. Briefly describe some of the similarities and differences between U.S. GAAP and iGAAP with respect to the accounting for pensions.
  28. **Cadbury Company**, which uses iGAAP, has a postretirement benefit plan. During 2010 Cadbury recognized \$30,000 unexpected asset gains in income. Just \$10,000 of the gains exceeded the corridor, and the average remaining service lives of Cadbury’s employees is 10 years. Discuss how Cadbury’s accounting for the unexpected losses would affect comparisons to a U.S. GAAP company with a similar unexpected gain.
  29. Briefly discuss the IASB/FASB convergence efforts in the area of postretirement-benefit accounting.
  - \*30. What are postretirement benefits other than pensions?
  - \*31. Why didn’t the FASB cover both types of postretirement benefits—pensions and healthcare—in the earlier pension accounting rules?
  - \*32. What are the major differences between postretirement healthcare benefits and pension benefits?
  - \*33. What is the difference between the APBO and the EPBO? What are the components of postretirement expense?

**BRIEF EXERCISES**

- 4** BE20-1 **AMR Corporation** (parent company of **American Airlines**) reported the following for 2007 (in millions).

Service cost	\$370
Interest on P.B.O.	672
Return on plan assets	747
Amortization of prior service cost	16
Amortization of net loss	25

Compute **AMR Corporation’s** 2007 pension expense.

- 4** BE20-2 For Warren Corporation, year-end plan assets were \$2,000,000. At the beginning of the year, plan assets were \$1,780,000. During the year, contributions to the pension fund were \$120,000, and benefits paid were \$200,000. Compute Warren’s actual return on plan assets.
- 5** BE20-3 At January 1, 2010, Beaty Company had plan assets of \$280,000 and a projected benefit obligation of the same amount. During 2010, service cost was \$27,500, the settlement rate was 10%, actual and expected return on plan assets were \$25,000, contributions were \$20,000, and benefits paid were \$17,500. Prepare a pension worksheet for Beaty Company for 2010.
- 4** BE20-4 For 2007, **Campbell Soup Company** had pension expense of \$32 million and contributed \$32 million to the pension fund. Prepare Campbell Soup Company’s journal entry to record pension expense and funding.

**•6** **BE20-5** Mancuso Corporation amended its pension plan on January 1, 2010, and granted \$160,000 of prior service costs to its employees. The employees are expected to provide 2,000 service years in the future, with 350 service years in 2010. Compute prior service cost amortization for 2010.

**•9** **BE20-6** At December 31, 2010, Besler Corporation had a projected benefit obligation of \$560,000, plan assets of \$322,000, and prior service cost of \$127,000 in accumulated other comprehensive income. Determine the pension asset/liability at December 31, 2010.

**•8** **BE20-7** Shin Corporation had a projected benefit obligation of \$3,100,000 and plan assets of \$3,300,000 at January 1, 2010. Shin also had a net actuarial loss of \$465,000 in accumulated OCI at January 1, 2010. The average remaining service period of Shin’s employees is 7.5 years. Compute Shin’s minimum amortization of the actuarial loss.

**•9** **BE20-8** Hawkins Corporation has the following balances at December 31, 2010.

Projected benefit obligation	\$2,600,000
Plan assets at fair value	2,000,000
Accumulated OCI (PSC)	1,100,000

How should these balances be reported on Hawkins’s balance sheet at December 31, 2010?

**•9** **BE20-9** Norton Co. had the following amounts related to its pension plan in 2010.

Actuarial liability loss for 2010	\$28,000
Unexpected asset gain for 2010	18,000
Accumulated other comprehensive income (G/L) (beginning balance)	7,000 Cr.

Determine for 2010: (a) Norton’s other comprehensive income (loss), and (b) comprehensive income. Net income for 2010 is \$26,000; no amortization of gain or loss is necessary in 2010.

**•9** **BE20-10** Lahey Corp. has three defined-benefit pension plans as follows.

	Pension Assets (at Fair Value)	Projected Benefit Obligation
Plan X	\$600,000	\$500,000
Plan Y	900,000	720,000
Plan Z	550,000	700,000

How will Lahey report these multiple plans in its financial statements?

**•10 •11** **\*BE20-11** Manno Corporation has the following information available concerning its postretirement benefit plan for 2010.

Service cost	\$40,000
Interest cost	47,400
Actual and expected return on plan assets	26,900

Compute Manno’s 2010 postretirement expense.

**•10 •11** **\*BE20-12** For 2010, Sampsell Inc. computed its annual postretirement expense as \$240,900. Sampsell’s contribution to the plan during 2010 was \$180,000. Prepare Sampsell’s 2010 entry to record postretirement expense.

**EXERCISES**

**•4 •6** **E20-1 (Pension Expense, Journal Entries)** The following information is available for the pension plan of Brady Company for the year 2010.

Actual and expected return on plan assets	\$ 15,000
Benefits paid to retirees	40,000
Contributions (funding)	90,000
Interest/discount rate	10%
Prior service cost amortization	8,000
Projected benefit obligation, January 1, 2010	500,000
Service cost	60,000

**Instructions**

- (a) Compute pension expense for the year 2010.
- (b) Prepare the journal entry to record pension expense and the employer’s contribution to the pension plan in 2010.

**4 6** **E20-2 (Computation of Pension Expense)** Bickner Company provides the following information about its defined-benefit pension plan for the year 2010.

Service cost	\$ 90,000
Contribution to the plan	105,000
Prior service cost amortization	10,000
Actual and expected return on plan assets	64,000
Benefits paid	40,000
Plan assets at January 1, 2010	640,000
Projected benefit obligation at January 1, 2010	700,000
Accumulated OCI (PSC) at January 1, 2010	150,000
Interest/discount (settlement) rate	10%

**Instructions**

Compute the pension expense for the year 2010.

**5** **E20-3 (Preparation of Pension Worksheet)** Using the information in E20-2 prepare a pension worksheet inserting January 1, 2010, balances, showing December 31, 2010, balances, and the journal entry recording pension expense.

**5** **E20-4 (Basic Pension Worksheet)** The following facts apply to the pension plan of Boudreau Inc. for the year 2010.

Plan assets, January 1, 2010	\$490,000
Projected benefit obligation, January 1, 2010	490,000
Settlement rate	8%
Service cost	40,000
Contributions (funding)	25,000
Actual and expected return on plan assets	49,700
Benefits paid to retirees	33,400

**Instructions**

Using the preceding data, compute pension expense for the year 2010. As part of your solution, prepare a pension worksheet that shows the journal entry for pension expense for 2010 and the year-end balances in the related pension accounts.

**6** **E20-5 (Application of Years-of-Service Method)** Andrews Company has five employees participating in its defined-benefit pension plan. Expected years of future service for these employees at the beginning of 2010 are as follows.

Employee	Future Years of Service
Jim	3
Paul	4
Nancy	5
Dave	6
Kathy	6

On January 1, 2010, the company amended its pension plan increasing its projected benefit obligation by \$72,000.

**Instructions**

Compute the amount of prior service cost amortization for the years 2010 through 2015 using the years-of-service method setting up appropriate schedules.

**4** **E20-6 (Computation of Actual Return)** Gingrich Importers provides the following pension plan information.

Fair value of pension plan assets, January 1, 2010	\$2,400,000
Fair value of pension plan assets, December 31, 2010	2,725,000
Contributions to the plan in 2010	280,000
Benefits paid retirees in 2010	350,000

**Instructions**

From the data above, compute the actual return on the plan assets for 2010.

•5 •6

**E20-7 (Basic Pension Worksheet)** The following defined pension data of Rydell Corp. apply to the year 2010.

Projected benefit obligation, 1/1/10 (before amendment)	\$560,000
Plan assets, 1/1/10	546,200
Pension liability	13,800
On January 1, 2010, Rydell Corp., through plan amendment, grants prior service benefits having a present value of	120,000
Settlement rate	9%
Service cost	58,000
Contributions (funding)	65,000
Actual (expected) return on plan assets	52,280
Benefits paid to retirees	40,000
Prior service cost amortization for 2010	17,000

### Instructions

For 2010, prepare a pension worksheet for Rydell Corp. that shows the journal entry for pension expense and the year-end balances in the related pension accounts.

•8

**E20-8 (Application of the Corridor Approach)** Kenseth Corp. has the following beginning-of-the-year present values for its projected benefit obligation and market-related values for its pension plan assets.

	Projected Benefit Obligation	Plan Assets Value
2009	\$2,000,000	\$1,900,000
2010	2,400,000	2,500,000
2011	2,950,000	2,600,000
2012	3,600,000	3,000,000

The average remaining service life per employee in 2009 and 2010 is 10 years and in 2011 and 2012 is 12 years. The net gain or loss that occurred during each year is as follows: 2009, \$280,000 loss; 2010, \$90,000 loss; 2011, \$11,000 loss; and 2012, \$25,000 gain. (In working the solution the gains and losses must be aggregated to arrive at year-end balances.)

### Instructions

Using the corridor approach, compute the amount of net gain or loss amortized and charged to pension expense in each of the four years, setting up an appropriate schedule.

•9

**E20-9 (Disclosures: Pension Expense and Other Comprehensive Income)** Taveras Enterprises provides the following information relative to its defined benefit pension plan.

<u>Balances or Values at December 31, 2010</u>	
Projected benefit obligation	\$2,737,000
Accumulated benefit obligation	1,980,000
Fair value of plan assets	2,278,329
Accumulated OCI (PSC)	210,000
Accumulated OCI—Net loss (1/1/10 balance, –0–)	45,680
Pension liability	458,671
Other pension plan data:	
Service cost for 2010	\$ 94,000
Prior service cost amortization for 2010	42,000
Actual return on plan assets in 2010	130,000
Expected return on plan assets in 2010	175,680
Interest on January 1, 2010, projected benefit obligation	253,000
Contributions to plan in 2010	93,329
Benefits paid	140,000

### Instructions

- Prepare the note disclosing the components of pension expense for the year 2010.
- Determine the amounts of other comprehensive income and comprehensive income for 2010. Net income for 2010 is \$35,000.
- Compute the amount of accumulated other comprehensive income reported at December 31, 2010.

- 5** **E20-10 (Pension Worksheet)** Webb Corp. sponsors a defined-benefit pension plan for its employees. On January 1, 2010, the following balances relate to this plan.

Plan assets	\$480,000
Projected benefit obligation	600,000
Pension asset/liability	120,000
Accumulated OCI (PSC)	100,000

As a result of the operation of the plan during 2010, the following additional data are provided by the actuary.

Service cost for 2010	\$90,000
Settlement rate, 9%	
Actual return on plan assets in 2010	55,000
Amortization of prior service cost	19,000
Expected return on plan assets	52,000
Unexpected loss from change in projected benefit obligation, due to change in actuarial predictions	76,000
Contributions in 2010	99,000
Benefits paid retirees in 2010	85,000

#### Instructions

- Using the data above, compute pension expense for Webb Corp. for the year 2010 by preparing a pension worksheet.
- Prepare the journal entry for pension expense for 2010.

- 4 9** **E20-11 (Pension Expense, Journal Entries, Statement Presentation)** Henning Company sponsors a defined benefit pension plan for its employees. The following data relate to the operation of the plan for the year 2010 in which no benefits were paid.

- The actuarial present value of future benefits earned by employees for services rendered in 2010 amounted to \$56,000.
- The company's funding policy requires a contribution to the pension trustee amounting to \$145,000 for 2010.
- As of January 1, 2010, the company had a projected benefit obligation of \$900,000, an accumulated benefit obligation of \$800,000, and a balance of \$400,000 in accumulated OCI (PSC). The fair value of pension plan assets amounted to \$600,000 at the beginning of the year. The actual and expected return on plan assets was \$54,000. The settlement rate was 9%. No gains or losses occurred in 2010 and no benefits were paid.
- Amortization of prior service cost was \$50,000 in 2010. Amortization of net gain or loss was not required in 2010.

#### Instructions

- Determine the amounts of the components of pension expense that should be recognized by the company in 2010.
- Prepare the journal entry or entries to record pension expense and the employer's contribution to the pension trustee in 2010.
- Indicate the amounts that would be reported on the income statement and the balance sheet for the year 2010.

- 4 6 7 8 9** **E20-12 (Pension Expense, Journal Entries, Statement Presentation)** Ferreri Company received the following selected information from its pension plan trustee concerning the operation of the company's defined benefit pension plan for the year ended December 31, 2010.

	January 1, 2010	December 31, 2010
Projected benefit obligation	\$1,500,000	\$1,527,000
Market-related and fair value of plan assets	800,000	1,130,000
Accumulated benefit obligation	1,600,000	1,720,000
Accumulated OCI (G/L)—Net gain	—0—	(200,000)

The service cost component of pension expense for employee services rendered in the current year amounted to \$77,000 and the amortization of prior service cost was \$120,000. The company's actual funding (contributions) of the plan in 2010 amounted to \$250,000. The expected return on plan assets and the actual rate were both 10%; the interest/discount (settlement) rate was 10%. Accumulated other comprehensive income (PSC) had a balance of \$1,200,000 on January 1, 2010. Assume no benefits paid in 2010.

#### Instructions

- Determine the amounts of the components of pension expense that should be recognized by the company in 2010.
- Prepare the journal entry to record pension expense and the employer's contribution to the pension plan in 2010.

- (c) Indicate the pension-related amounts that would be reported on the income statement and the balance sheet for Ferreri Company for the year 2010.

**E20-13 (Computation of Actual Return, Gains and Losses, Corridor Test, and Pension Expense)** Erickson Company sponsors a defined benefit pension plan. The corporation’s actuary provides the following information about the plan.

	January 1, 2010	December 31, 2010
Vested benefit obligation	\$1,500	\$1,900
Accumulated benefit obligation	1,900	2,730
Projected benefit obligation	2,500	3,300
Plan assets (fair value)	1,700	2,620
Settlement rate and expected rate of return		10%
Pension asset/liability	800	?
Service cost for the year 2010		400
Contributions (funding in 2010)		700
Benefits paid in 2010		200

**Instructions**

- (a) Compute the actual return on the plan assets in 2010.
- (b) Compute the amount of the other comprehensive income (G/L) as of December 31, 2010. (Assume the January 1, 2010, balance was zero.)
- (c) Compute the amount of net gain or loss amortization for 2010 (corridor approach).
- (d) Compute pension expense for 2010.

**E20-14 (Worksheet for E20-13)** Using the information in E20-13 about Erickson Company’s defined-benefit pension plan, prepare a 2010 pension worksheet with supplementary schedules of computations. Prepare the journal entries at December 31, 2010, to record pension expense and related pension transactions. Also, indicate the pension amounts reported in the balance sheet.

**E20-15 (Pension Expense, Journal Entries)** Latoya Company provides the following selected information related to its defined-benefit pension plan for 2010.

Pension asset/liability (January 1)	\$ 25,000 Cr.
Accumulated benefit obligation (December 31)	400,000
Actual and expected return on plan assets	10,000
Contributions (funding) in 2010	150,000
Fair value of plan assets (December 31)	800,000
Settlement rate	10%
Projected benefit obligation (January 1)	700,000
Service cost	80,000

**Instructions**

- (a) Compute pension expense and prepare the journal entry to record pension expense and the employer’s contribution to the pension plan in 2010. Preparation of a pension worksheet is not required. Benefits paid in 2010 were \$35,000.
- (b) Indicate the pension-related amounts that would be reported in the company’s income statement and balance sheet for 2010.

**E20-16 (Amortization of Accumulated OCI (G/L), Corridor Approach, Pension Expense Computation)** The actuary for the pension plan of Gustafson Inc. calculated the following net gains and losses.

Incurred during the Year	(Gain) or Loss
2010	\$300,000
2011	480,000
2012	(210,000)
2013	(290,000)

Other information about the company’s pension obligation and plan assets is as follows.

As of January 1,	Projected Benefit Obligation	Plan Assets (market-related asset value)
2010	\$4,000,000	\$2,400,000
2011	4,520,000	2,200,000
2012	5,000,000	2,600,000
2013	4,240,000	3,040,000

Gustafson Inc. has a stable labor force of 400 employees who are expected to receive benefits under the plan. The total service-years for all participating employees is 5,600. The beginning balance of

accumulated OCI (G/L) is zero on January 1, 2010. The market-related value and the fair value of plan assets are the same for the 4-year period. Use the average remaining service life per employee as the basis for amortization.

**Instructions**

(Round to the nearest dollar)

Prepare a schedule which reflects the minimum amount of accumulated OCI (G/L) amortized as a component of net periodic pension expense for each of the years 2010, 2011, 2012, and 2013. Apply the “corridor” approach in determining the amount to be amortized each year.

**8** **E20-17 (Amortization of Accumulated OCI Balances)** Keeton Company sponsors a defined-benefit pension plan for its 600 employees. The company’s actuary provided the following information about the plan.

	January 1,	December 31,	
	2010	2010	2011
Projected benefit obligation	\$2,800,000	\$3,650,000	\$4,195,000
Accumulated benefit obligation	1,900,000	2,430,000	2,900,000
Plan assets (fair value and market-related asset value)	1,700,000	2,900,000	3,790,000
Accumulated net (gain) or loss (for purposes of the corridor calculation)	–0–	198,000	(24,000)
Discount rate (current settlement rate)		9%	8%
Actual and expected asset return rate		10%	10%
Contributions		1,030,000	660,000

The average remaining service life per employee is 10.5 years. The service cost component of net periodic pension expense for employee services rendered amounted to \$400,000 in 2010 and \$475,000 in 2011. The accumulated OCI (PSC) on January 1, 2010, was \$1,260,000. No benefits have been paid.

**Instructions**

(Round to the nearest dollar)

- (a) Compute the amount of accumulated OCI (PSC) to be amortized as a component of net periodic pension expense for each of the years 2010 and 2011.
- (b) Prepare a schedule which reflects the amount of accumulated OCI (G/L) to be amortized as a component of pension expense for 2010 and 2011.
- (c) Determine the total amount of pension expense to be recognized by Keeton Company in 2010 and 2011.

**5 8** **E20-18 (Pension Worksheet—Missing Amounts)** The accounting staff of Usher Inc. has prepared the following pension worksheet. Unfortunately, several entries in the worksheet are not decipherable. The company has asked your assistance in completing the worksheet and completing the accounting tasks related to the pension plan for 2010.

1	General Journal Entries						Memo Record	
	2	3	4	5	6	7	8	9
Items	Annual Pension Expense	Cash	OCI—Prior Service Cost	OCI—Gain/Losse	Pension Asset/Liability	Projected Benefit Obligation	Plan Assets	
3	Balance, Jan. 1, 2010				1,100 Cr.	2,800	1,700	
4	Service cost	(1)				500		
5	Interest cost	(2)				280		
6	Actual return	(3)					220	
7	Unexpected gain	150		(4)				
8	Amortization of PSC	(5)		55				
9	Contributions		800					800
10	Benefits					200	200	
11	Liability increase				(6)	365		
12	Journal entry	(7)	(8)	(9)	(10)	(11)		
13								
14	Accumulated OCI, Dec. 31, 2009			1,100	0			
15	Balance, Dec. 31, 2010			1,045	215	1,225	3,745	2,520
16								

**Instructions**

- Determine the missing amounts in the 2010 pension worksheet, indicating whether the amounts are debits or credits.
- Prepare the journal entry to record 2010 pension expense for Usher Inc.
- The accounting staff has heard of a pension accounting procedure called “corridor amortization.” Is Usher required to record any amounts for corridor amortization in (1) 2010? In (2) 2011? Explain.

**10 • 11** \*E20-19 (Postretirement Benefit Expense Computation) Kreter Co. provides the following information about its postretirement benefit plan for the year 2010.

Service cost	\$ 45,000
Contribution to the plan	10,000
Actual and expected return on plan assets	11,000
Benefits paid	20,000
Plan assets at January 1, 2010	110,000
Accumulated postretirement benefit obligation at January 1, 2010	330,000
Discount rate	8%

**Instructions**

Compute the postretirement benefit expense for 2010.

**10 • 11** \*E20-20 (Postretirement Benefit Worksheet) Using the information in \*E20-19, prepare a worksheet inserting January 1, 2010, balances, and showing December 31, 2010, balances. Prepare the journal entry recording postretirement benefit expense.

**10 • 11** \*E20-21 (Postretirement Benefit Expense Computation) Garner Inc. provides the following information related to its postretirement benefits for the year 2010.

Accumulated postretirement benefit obligation at January 1, 2010	\$710,000
Actual and expected return on plan assets	34,000
Prior service cost amortization	21,000
Discount rate	10%
Service cost	83,000

**Instructions**

Compute postretirement benefit expense for 2010.

**10 • 11** \*E20-22 (Postretirement Benefit Expense Computation) Englehart Co. provides the following information about its postretirement benefit plan for the year 2010.

Service cost	\$ 90,000
Prior service cost amortization	3,000
Contribution to the plan	56,000
Actual and expected return on plan assets	62,000
Benefits paid	40,000
Plan assets at January 1, 2010	710,000
Accumulated postretirement benefit obligation at January 1, 2010	760,000
Accumulated OCI (PSC) at January 1, 2010	100,000 Dr.
Discount rate	9%

**Instructions**

Compute the postretirement benefit expense for 2010.

**10 • 11** \*E20-23 (Postretirement Benefit Worksheet) Using the information in \*E20-22, prepare a worksheet inserting January 1, 2010, balances, showing December 31, 2010, balances, and the journal entry recording postretirement benefit expense.

**10 • 11** \*E20-24 (Postretirement Benefit Worksheet—Missing Amounts) The accounting staff of Holder Inc. has prepared the postretirement benefit worksheet on page 1102. Unfortunately, several entries in the worksheet are not decipherable. The company has asked your assistance in completing the worksheet and completing the accounting tasks related to the pension plan for 2010.

Postretirement Benefit Worksheet—Holder Inc.							
	General Journal Entries				Memo Record		
Items	Annual Expense	Cash	Other Comprehensive Income—PSC	Postretirement Asset/Liability	APBO	Plan Assets	
Balance, Jan. 1, 2010				290,000	410,000	120,000	
Service cost	(1)				56,000		
Interest cost	(2)				36,900		
Actual/Expected return	(3)					2,000	
Contributions		66,000				(4)	
Benefits					5,000	5,000	
Amortization of PSC	3,000		(5)				
Journal entry for 2010	(6)	(7)	(8)	(9)			
Accumulated OCI, Dec. 31, 2009			30,000 Dr.				
Balance, Dec. 31, 2010			27,000 Dr.	314,900 Cr.	497,900 Cr.	183,000 Dr.	

**Instructions**

- (a) Determine the missing amounts in the 2010 postretirement worksheet, indicating whether the amounts are debits or credits.
- (b) Prepare the journal entry to record 2010 postretirement expense for Holder Inc.
- (c) What discount rate is Holder using in accounting for the interest on its other postretirement benefit plan? Explain.

See the book's companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), for a set of B Exercises.

**PROBLEMS**

5 6 7  
9

**P20-1 (2-Year Worksheet)** On January 1, 2010, Cunningham Company has the following defined-benefit pension plan balances.

Projected benefit obligation	\$4,500,000
Fair value of plan assets	4,200,000

The interest (settlement) rate applicable to the plan is 10%. On January 1, 2011, the company amends its pension agreement so that prior service costs of \$500,000 are created. Other data related to the pension plan are as follows.

	2010	2011
Service cost	\$150,000	\$180,000
Prior service cost amortization	—0—	90,000
Contributions (funding) to the plan	240,000	285,000
Benefits paid	200,000	280,000
Actual return on plan assets	252,000	260,000
Expected rate of return on assets	6%	8%

**Instructions**

- (a) Prepare a pension worksheet for the pension plan for 2010 and 2011.
- (b) For 2011, prepare the journal entry to record pension-related amounts.

5 6 7  
9

**P20-2 (3-Year Worksheet, Journal Entries, and Reporting)** Jackson Company adopts acceptable accounting for its defined-benefit pension plan on January 1, 2009, with the following beginning balances: plan assets \$200,000; projected benefit obligation \$250,000. Other data relating to 3 years' operation of the plan are shown on the next page.

	2009	2010	2011
Annual service cost	\$16,000	\$ 19,000	\$ 26,000
Settlement rate and expected rate of return	10%	10%	10%
Actual return on plan assets	18,000	22,000	24,000
Annual funding (contributions)	16,000	40,000	48,000
Benefits paid	14,000	16,400	21,000
Prior service cost (plan amended, 1/1/10)		160,000	
Amortization of prior service cost		54,400	41,600
Change in actuarial assumptions establishes a December 31, 2011, projected benefit obligation of:			520,000

**Instructions**

- (a) Prepare a pension worksheet presenting all 3 years' pension balances and activities.
- (b) Prepare the journal entries (from the worksheet) to reflect all pension plan transactions and events at December 31 of each year.
- (c) Indicate the pension-related amounts reported in the financial statements for 2011.

**P20-3 (Pension Expense, Journal Entries, Amortization of Loss)** Gottschalk Company sponsors a defined benefit plan for its 100 employees. On January 1, 2010, the company's actuary provided the following information.

Accumulated other comprehensive loss (PSC)	\$150,000
Pension plan assets (fair value and market-related asset value)	200,000
Accumulated benefit obligation	260,000
Projected benefit obligation	380,000

The average remaining service period for the participating employees is 10 years. All employees are expected to receive benefits under the plan. On December 31, 2010, the actuary calculated that the present value of future benefits earned for employee services rendered in the current year amounted to \$52,000; the projected benefit obligation was \$490,000; fair value of pension assets was \$276,000; the accumulated benefit obligation amounted to \$365,000. The expected return on plan assets and the discount rate on the projected benefit obligation were both 10%. The actual return on plan assets is \$11,000. The company's current year's contribution to the pension plan amounted to \$65,000. No benefits were paid during the year.

**Instructions**

- (a) Determine the components of pension expense that the company would recognize in 2010. (With only one year involved, you need not prepare a worksheet.)
- (b) Prepare the journal entry to record the pension expense and the company's funding of the pension plan in 2010.
- (c) Compute the amount of the 2010 increase/decrease in gains or losses and the amount to be amortized in 2010 and 2011.
- (d) Indicate the pension amounts reported in the financial statement as of December 31, 2010.

**P20-4 (Pension Expense, Journal Entries for 2 Years)** Gordon Company sponsors a defined benefit pension plan. The following information related to the pension plan is available for 2010 and 2011.

	2010	2011
Plan assets (fair value), December 31	\$699,000	\$849,000
Projected benefit obligation, January 1	700,000	800,000
Pension asset/liability, January 1	140,000 Cr.	?
Prior service cost, January 1	250,000	240,000
Service cost	60,000	90,000
Actual and expected return on plan assets	24,000	30,000
Amortization of prior service cost	10,000	12,000
Contributions (funding)	115,000	120,000
Accumulated benefit obligation, December 31	500,000	550,000
Interest/settlement rate	9%	9%

**Instructions**

- (a) Compute pension expense for 2010 and 2011.
- (b) Prepare the journal entries to record the pension expense and the company's funding of the pension plan for both years.

- 7 •8** **P20-5 (Computation of Pension Expense, Amortization of Net Gain or Loss—Corridor Approach, Journal Entries for 3 Years)** Hiatt Toothpaste Company initiates a defined-benefit pension plan for its 50 employees on January 1, 2010. The insurance company which administers the pension plan provided the following selected information for the years 2010, 2011, and 2012.

	For Year Ended December 31,		
	2010	2011	2012
Plan assets (fair value)	\$50,000	\$ 85,000	\$180,000
Accumulated benefit obligation	45,000	165,000	292,000
Projected benefit obligation	60,000	200,000	324,000
Net (gain) loss (for purposes of corridor calculation)	–0–	78,400	86,121
Employer's funding contribution (made at end of year)	50,000	60,000	105,000

There were no balances as of January 1, 2010, when the plan was initiated. The actual and expected return on plan assets was 10% over the 3-year period but the settlement rate used to discount the company's pension obligation was 13% in 2010, 11% in 2011, and 8% in 2012. The service cost component of net periodic pension expense amounted to the following: 2010, \$60,000; 2011, \$85,000; and 2012, \$119,000. The average remaining service life per employee is 12 years. No benefits were paid in 2010, \$30,000 of benefits were paid in 2011, and \$18,500 of benefits were paid in 2012 (all benefits paid at end of year).

#### Instructions

(Round to the nearest dollar.)

- Calculate the amount of net periodic pension expense that the company would recognize in 2010, 2011, and 2012.
- Prepare the journal entries to record net periodic pension expense, employer's funding contribution, and related pension amounts for the years 2010, 2011, and 2012.

- 6 •7 •8** **P20-6 (Computation of Prior Service Cost Amortization, Pension Expense, Journal Entries, and Net Gain or Loss)** Aykroyd Inc. has sponsored a noncontributory-defined benefit pension plan for its employees since 1987. Prior to 2010, cumulative net pension expense recognized equaled cumulative contributions to the plan. Other relevant information about the pension plan on January 1, 2010, is as follows.

- The company has 200 employees. All these employees are expected to receive benefits under the plan. The average remaining service life per employee is 12 years.
- The projected benefit obligation amounted to \$5,000,000 and the fair value of pension plan assets was \$3,000,000. The market-related asset value was also \$3,000,000. Unrecognized prior service cost was \$2,000,000.

On December 31, 2010, the projected benefit obligation and the accumulated benefit obligation were \$4,850,000 and \$4,025,000, respectively. The fair value of the pension plan assets amounted to \$4,100,000 at the end of the year. A 10% settlement rate and a 10% expected asset return rate were used in the actuarial present value computations in the pension plan. The present value of benefits attributed by the pension benefit formula to employee service in 2010 amounted to \$200,000. The employer's contribution to the plan assets amounted to \$775,000 in 2010. This problem assumes no payment of pension benefits.

#### Instructions

(Round all amounts to the nearest dollar.)

- Prepare a schedule, based on the average remaining life per employee, showing the prior service cost that would be amortized as a component of pension expense for 2010, 2011, and 2012.
- Compute pension expense for the year 2010.
- Prepare the journal entries required to report the accounting for the company's pension plan for 2010.
- Compute the amount of the 2010 increase/decrease in net gains or losses and the amount to be amortized in 2010 and 2011.

- 5 •6 •7** **P20-7 (Pension Worksheet)** Hanson Corp. sponsors a defined-benefit pension plan for its employees. On January 1, 2010, the following balances related to this plan.

Plan assets (market-related value)	\$520,000
Projected benefit obligation	700,000
Pension asset/liability	180,000 Cr.
Prior service cost	81,000
Net gain or loss (debit)	91,000

As a result of the operation of the plan during 2010, the actuary provided the following additional data at December 31, 2010.

Service cost for 2010	\$108,000
Settlement rate, 9%; expected return rate, 10%	
Actual return on plan assets in 2010	48,000
Amortization of prior service cost	25,000
Contributions in 2010	133,000
Benefits paid retirees in 2010	85,000
Average remaining service life of active employees	10 years

**Instructions**

Using the preceding data, compute pension expense for Hanson Corp. for the year 2010 by preparing a pension worksheet that shows the journal entry for pension expense. Use the market-related asset value to compute the expected return and for corridor amortization.

**P20-8 (Comprehensive 2-Year Worksheet)** Lemke Company sponsors a defined-benefit pension plan for its employees. The following data relate to the operation of the plan for the years 2010 and 2011.

	2010	2011
Projected benefit obligation, January 1	\$600,000	
Plan assets (fair value and market-related value), January 1	410,000	
Pension asset/liability, January 1	190,000 Cr.	
Prior service cost, January 1	160,000	
Service cost	40,000	\$ 59,000
Settlement rate	10%	10%
Expected rate of return	10%	10%
Actual return on plan assets	36,000	61,000
Amortization of prior service cost	70,000	50,000
Annual contributions	97,000	81,000
Benefits paid retirees	31,500	54,000
Increase in projected benefit obligation due to changes in actuarial assumptions	87,000	–0–
Accumulated benefit obligation at December 31	721,800	789,000
Average service life of all employees		20 years
Vested benefit obligation at December 31		464,000

**Instructions**

- (a) Prepare a pension worksheet presenting both years 2010 and 2011 and accompanying computations and amortization of the loss (2011) using the corridor approach.
- (b) Prepare the journal entries (from the worksheet) to reflect all pension plan transactions and events at December 31 of each year.
- (c) For 2011, indicate the pension amounts reported in the financial statements.

**P20-9 (Comprehensive 2-Year Worksheet)** Hobbs Co. has the following defined-benefit pension plan balances on January 1, 2010.

Projected benefit obligation	\$4,600,000
Fair value of plan assets	4,600,000

The interest (settlement) rate applicable to the plan is 10%. On January 1, 2011, the company amends its pension agreement so that prior service costs of \$600,000 are created. Other data related to the pension plan are:

	2010	2011
Service cost	\$150,000	\$170,000
Prior service cost amortization	–0–	90,000
Contributions (funding) to the plan	200,000	184,658
Benefits paid	220,000	280,000
Actual return on plan assets	252,000	350,000
Expected rate of return on assets	6%	8%

**Instructions**

- (a) Prepare a pension worksheet for the pension plan in 2010.
- (b) Prepare any journal entries related to the pension plan that would be needed at December 31, 2010.
- (c) Prepare a pension worksheet for 2011 and any journal entries related to the pension plan as of December 31, 2011.
- (d) Indicate the pension-related amounts reported in the 2011 financial statements.

5 6 7

**P20-10 (Pension Worksheet – Missing Amounts)** Kramer Co. has prepared the following pension worksheet. Unfortunately, several entries in the worksheet are not decipherable. The company has asked your assistance in completing the worksheet and completing the accounting tasks related to the pension plan for 2010.

1	General Journal Entries					Memo Record		
	2	Annual Pension Expense	Cash	OCI—Prior Service Cost	OCI—Gain/Loss	Pension Asset/Liability	Projected Benefit Obligation	Plan Assets
3	Balance, Jan. 1, 2010					120,000	325,000	205,000 Dr.
4	Service cost	(1)					20,000	
5	Interest cost	(2)					26,000	
6	Actual return	(3)						18,000 Dr.
7	Unexpected loss	2,500			(4)			
8	Amortization of PSC	(5)		35,000				
9	Contributions		41,000					41,000 Dr.
10	Benefits						15,000	15,000 Cr.
11	Increase in PBO				(6)		43,500	
12	Journal entry for 2010	(7)	(8)	(9)	(10)	(11)		
13	Accumulated OCI, Dec. 31, 2009			80,000	0			
14	Balance, Dec. 31, 2010			45,000	46,000	150,500 Cr.	399,500 Cr.	249,000 Dr.

**Instructions**

- (a) Determine the missing amounts in the 2010 pension worksheet, indicating whether the amounts are debits or credits.
- (b) Prepare the journal entry to record 2010 pension expense for Kramer Co.
- (c) Determine the following for Kramer for 2010: (1) settlement rate used to measure the interest on the liability and (2) expected return on plan assets.

5 6 7  
8 9

**P20-11 (Pension Worksheet)** The following data relate to the operation of Kramer Co.’s pension plan in 2011. The pension worksheet for 2010 is provided in P20-10.

Service cost	\$59,000
Actual return on plan assets	32,000
Amortization of prior service cost	28,000
Annual contributions	51,000
Benefits paid retirees	27,000
Average service life of all employees	25 years

For 2011, Kramer will use the same assumptions as 2010 for the expected rate of returns on plan assets. The settlement rate for 2011 is 10%.

**Instructions**

- (a) Prepare a pension worksheet for 2011 and accompanying computations and amortization of the loss, if any, in 2011 using the corridor approach.
- (b) Prepare the journal entries (from the worksheet) to reflect all pension plan transactions and events at December 31.
- (c) Indicate the pension amounts reported in the financial statements.

5 6 7  
8 9

**P20-12 (Pension Worksheet)** Larson Corp. sponsors a defined-benefit pension plan for its employees. On January 1, 2011, the following balances related to this plan.

Plan assets (market-related value)	\$270,000
Projected benefit obligation	340,000
Pension asset/liability	70,000 Cr.
Prior service cost	90,000
OCI—Loss	39,000

As a result of the operation of the plan during 2011, the actuary provided the following additional data at December 31, 2011.

Service cost for 2011	\$ 45,000
Actual return on plan assets in 2011	27,000
Amortization of prior service cost	12,000
Contributions in 2011	65,000
Benefits paid retirees in 2011	41,000
Settlement rate	7%
Expected return on plan assets	8%
Average remaining service life of active employees	10 years

**Instructions**

- (a) Compute pension expense for Larson Corp. for the year 2011 by preparing a pension worksheet that shows the journal entry for pension expense.
- (b) Indicate the pension amounts reported in the financial statements.

**\*P20-13 (Postretirement Benefit Worksheet)** Hollenbeck Foods Inc. sponsors a postretirement medical and dental benefit plan for its employees. The following balances relate to this plan on January 1, 2010.

Plan assets	\$200,000
Expected postretirement benefit obligation	820,000
Accumulated postretirement benefit obligation	200,000
No prior service costs exist.	

As a result of the plan’s operation during 2010, the following additional data are provided by the actuary.

Service cost for 2010 is \$70,000
Discount rate is 10%
Contributions to plan in 2010 are \$65,000
Expected return on plan assets is \$10,000
Actual return on plan assets is \$15,000
Benefits paid to employees are \$44,000
Average remaining service to full eligibility: 20 years

**Instructions**

- (a) Using the preceding data, compute the net periodic postretirement benefit cost for 2010 by preparing a worksheet that shows the journal entry for postretirement expense and the year-end balances in the related postretirement benefit memo accounts. (Assume that contributions and benefits are paid at the end of the year.)
- (b) Prepare any journal entries related to the postretirement plan for 2010 and indicate the postretirement amounts reported in the financial statements for 2010.

**\*P20-14 (Postretirement Benefit Worksheet—2 Years)** Elton Co. has the following postretirement benefit plan balances on January 1, 2010.

Accumulated postretirement benefit obligation	\$2,250,000
Fair value of plan assets	2,250,000

The interest (settlement) rate applicable to the plan is 10%. On January 1, 2011, the company amends the plan so that prior service costs of \$175,000 are created. Other data related to the plan are:

	2010	2011
Service costs	\$ 75,000	\$ 85,000
Prior service costs amortization	–0–	12,000
Contributions (funding) to the plan	45,000	35,000
Benefits paid	40,000	45,000
Actual return on plan assets	140,000	120,000
Expected rate of return on assets	8%	6%

**Instructions**

- (a) Prepare a worksheet for the postretirement plan in 2010.
- (b) Prepare any journal entries related to the postretirement plan that would be needed at December 31, 2010.
- (c) Prepare a worksheet for 2011 and any journal entries related to the postretirement plan as of December 31, 2011.
- (d) Indicate the postretirement-benefit–related amounts reported in the 2011 financial statements.

## CONCEPTS FOR ANALYSIS

**CA20-1 (Pension Terminology and Theory)** Many business organizations have been concerned with providing for the retirement of employees since the late 1800s. During recent decades a marked increase in this concern has resulted in the establishment of private pension plans in most large companies and in many medium- and small-sized ones.

The substantial growth of these plans, both in numbers of employees covered and in amounts of retirement benefits, has increased the significance of pension cost in relation to the financial position, results of operations, and cash flows of many companies. In examining the costs of pension plans, a CPA encounters certain terms. The components of pension costs that the terms represent must be dealt with appropriately if generally accepted accounting principles are to be reflected in the financial statements of entities with pension plans.

### Instructions

- (a) Define a private pension plan. How does a contributory pension plan differ from a noncontributory plan?
- (b) Differentiate between “accounting for the employer” and “accounting for the pension fund.”
- (c) Explain the terms “funded” and “pension liability” as they relate to:
  - (1) The pension fund.
  - (2) The employer.
- (d)
  - (1) Discuss the theoretical justification for accrual recognition of pension costs.
  - (2) Discuss the relative objectivity of the measurement process of accrual versus cash (pay-as-you-go) accounting for annual pension costs.
- (e) Distinguish among the following as they relate to pension plans.
  - (1) Service cost.
  - (2) Prior service costs.
  - (3) Vested benefits.

 **CA20-2 (Pension Terminology)** The following items appear on Brueggen Company’s financial statements.

1. Under the caption Assets:  
Pension asset/liability.
2. Under the caption Liabilities:  
Pension asset/liability.
3. Under the caption Stockholders’ Equity:  
Prior service cost as a component of Accumulated Other Comprehensive Income.
4. On the income statement:  
Pension expense.

### Instructions

Explain the significance of each of the items above on corporate financial statements. (*Note:* All items set forth above are not necessarily to be found on the statements of a single company.)

**CA20-3 (Basic Terminology)** In examining the costs of pension plans, Helen Kaufman, CPA, encounters certain terms. The components of pension costs that the terms represent must be dealt with appropriately if generally accepted accounting principles are to be reflected in the financial statements of entities with pension plans.

### Instructions

- (a)
  - (1) Discuss the theoretical justification for accrual recognition of pension costs.
  - (2) Discuss the relative objectivity of the measurement process of accrual versus cash (pay-as-you-go) accounting for annual pension costs.
- (b) Explain the following terms as they apply to accounting for pension plans.
  - (1) Market-related asset value.
  - (2) Projected benefit obligation.
  - (3) Corridor approach.
- (c) What information should be disclosed about a company’s pension plans in its financial statements and its notes?

(AICPA adapted)

**CA20-4 (Major Pension Concepts)** Davis Corporation is a medium-sized manufacturer of paperboard containers and boxes. The corporation sponsors a noncontributory, defined-benefit pension plan that covers its 250 employees. Sid Cole has recently been hired as president of Davis Corporation. While reviewing last year's financial statements with Carol Dilbeck, controller, Cole expressed confusion about several of the items in the footnote to the financial statements relating to the pension plan. In part, the footnote reads as follows.

**Note J.** The company has a defined-benefit pension plan covering substantially all of its employees. The benefits are based on years of service and the employee's compensation during the last four years of employment. The company's funding policy is to contribute annually the maximum amount allowed under the federal tax code. Contributions are intended to provide for benefits expected to be earned in the future as well as those earned to date.

The net periodic pension expense on Davis Corporation's comparative income statement was \$72,000 in 2010 and \$57,680 in 2009.

The following are selected figures from the plan's funded status and amounts recognized in the Davis Corporation's Statement of Financial Position at December 31, 2010 (\$000 omitted).

Actuarial present value of benefit obligations:	
Accumulated benefit obligation (including vested benefits of \$636)	<u>\$ (870)</u>
Projected benefit obligation	\$(1,200)
Plan assets at fair value	<u>1,050</u>
Projected benefit obligation in excess of plan assets	<u>\$ (150)</u>

Given that Davis Corporation's work force has been stable for the last 6 years, Cole could not understand the increase in the net periodic pension expense. Dilbeck explained that the net periodic pension expense consists of several elements, some of which may increase or decrease the net expense.

### Instructions

- The determination of the net periodic pension expense is a function of five elements. List and briefly describe each of the elements.
- Describe the major difference and the major similarity between the accumulated benefit obligation and the projected benefit obligation.
- Explain why pension gains and losses are not recognized on the income statement in the period in which they arise.
  - Briefly describe how pension gains and losses are recognized.

(CMA adapted)

**CA20-5 (Implications of GAAP Rules on Pensions)** Jill Vogel and Pete Dell have to do a class presentation on GAAP rules for reporting pension information. In developing the class presentation, they decided to provide the class with a series of questions related to pensions and then discuss the answers in class. Given that the class has all read the rules related to pension accounting and reporting, they felt this approach would provide a lively discussion. Here are the questions:

- In an article in *Business Week* prior to new rules related to pensions, it was reported that the discount rates used by the largest 200 companies for pension reporting ranged from 5% to 11%. How can such a situation exist, and does GAAP alleviate this problem?
- An article indicated that when new GAAP rules were issued related to pensions, it caused an increase in the liability for pensions for approximately 20% of companies. Why might this situation occur?
- A recent article noted that while "smoothing" is not necessarily an accounting virtue, pension accounting has long been recognized as an exception—an area of accounting in which at least some dampening of market swings is appropriate. This is because pension funds are managed so that their performance is insulated from the extremes of short-term market swings. A pension expense that reflects the volatility of market swings might, for that reason, convey information of little relevance. Are these statements true?

4. Understanding the impact of the changes required in pension reporting requires detailed information about its pension plan(s) and an analysis of the relationship of many factors, particularly:
  - (a) the type of plan(s) and any significant amendments.
  - (b) the plan participants.
  - (c) the funding status.
  - (d) the actuarial funding method and assumptions currently used.
 What impact does each of these items have on financial statement presentation?
5. An article noted “You also need to decide whether to amortize gains and losses using the corridor method, or to use some other systematic method. Under the corridor approach, only gains and losses in excess of 10% of the greater of the projected benefit obligation or the plan assets would have to be amortized.” What is the corridor method and what is its purpose?

**Instructions**

What answers do you believe Jill and Pete gave to each of these questions?

**CA20-6 (Gains and Losses, Corridor Amortization)** Vickie Plato, accounting clerk in the personnel office of Streisand Corp., has begun to compute pension expense for 2012 but is not sure whether or not she should include the amortization of unrecognized gains/losses. She is currently working with the following beginning-of-the-year present values for the projected benefit obligation and market-related values for the pension plan:

	Projected Benefit Obligation	Plan Assets Value
2009	\$2,200,000	\$1,900,000
2010	2,400,000	2,500,000
2011	2,900,000	2,600,000
2012	3,900,000	3,000,000

The average remaining service life per employee in 2009 and 2010 is 10 years and in 2011 and 2012 is 12 years. The net gain or loss that occurred during each year is as follows.

2009	\$280,000 loss
2010	85,000 loss
2011	12,000 loss
2012	25,000 gain

(In working the solution, you must aggregate the unrecognized gains and losses to arrive at year-end balances.)

**Instructions**

You are the manager in charge of accounting. Write a memo to Vickie Plato, explaining why in some years she must amortize some of the net gains and losses and in other years she does not need to. In order to explain this situation fully, you must compute the amount of net gain or loss that is amortized and charged to pension expense in each of the 4 years listed above. Include an appropriate amortization schedule, referring to it whenever necessary.

**CA20-7 (Nonvested Employees—An Ethical Dilemma)** Thinken Technology recently merged with College Electronix (CE), a computer graphics manufacturing firm. In performing a comprehensive audit of CE’s accounting system, Gerald Ott, internal audit manager for Thinken Technology, discovered that the new subsidiary did not record pension assets and liabilities, subject to GAAP.

The net present value of CE’s pension assets was \$15.5 million, the vested benefit obligation was \$12.9 million, and the projected benefit obligation was \$17.4 million. Ott reported this audit finding to Julie Habbe, the newly appointed controller of CE. A few days later Habbe called Ott for his advice on what to do. Habbe started her conversation by asking, “Can’t we eliminate the negative income effect of our pension dilemma simply by terminating the employment of nonvested employees before the end of our fiscal year?”

**Instructions**

How should Ott respond to Habbe’s remark about firing nonvested employees?

## USING YOUR JUDGMENT

### FINANCIAL REPORTING

#### Financial Reporting Problem

##### The Procter & Gamble Company (P&G)

The financial statements of P&G are presented in Appendix 5B or can be accessed at the book's companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso).

##### Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- (a) What kind of pension plan does P&G provide its employees in the United States?
- (b) What was P&G's pension expense for 2007, 2006, and 2005 for the United States?
- (c) What is the impact of P&G's pension plans for 2007 on its financial statements?
- (d) What information does P&G provide on the target allocation of its pension assets? (Compare the asset allocation for "Pensions and Other Retiree Benefits.") How do the allocations relate to the expected returns on these assets?

#### Comparative Analysis Case

##### The Coca-Cola Company versus PepsiCo, Inc.

##### Instructions

Go to the book's companion website and use information found there to answer the following questions related to **The Coca-Cola Company** and **PepsiCo, Inc.**

- (a) What kind of pension plans do Coca-Cola and PepsiCo provide their employees?
- (b) What net periodic pension expense (cost) did Coca-Cola and PepsiCo report in 2007?
- (c) What is the year-end 2007 funded status of Coca-Cola's and PepsiCo's U.S. plans?
- (d) What relevant rates were used by Coca-Cola and PepsiCo in computing their pension amounts?
- (e) Compare the expected benefit payments and contributions for Coca-Cola and PepsiCo.

#### \*Financial Statement Analysis Case

##### General Electric

A *Wall Street Journal* article discussed a \$1.8 billion charge to income made by **General Electric** for postretirement benefit costs. It was attributed to previously unrecognized healthcare and life insurance cost. As financial vice president and controller for Peake, Inc., you found this article interesting because the president recently expressed interest in adopting a postemployment benefit program for Peake's employees, to complement the company's existing defined-benefit plan. The president, Martha Beyerlein, wants to know how the expense on the new plan will be determined and what impact the accounting for the plan will have on Peake's financial statements.

##### Instructions

- (a) As financial vice president and controller of Peake, Inc., explain the calculation of postemployment benefit expense under GAAP, and indicate how the accounting for the plan will affect Peake's financial statements.
- (b) Discuss the similarities and differences in the accounting for the other postemployment benefit plan relative to the accounting for the defined-benefit plan.

#### International Reporting Case

**Kyowa Hakko Kogyo Co., Ltd.**, is an R&D-based company with special strengths in biotechnology. The company is dedicated to the creation of new value in the life sciences, especially in its two core business segments of pharmaceuticals and biochemicals, and strives to contribute to the health and well-being of people around the world. The company provided the following disclosures related to its retirement benefits in its 2007 annual report.

**Kyowa Hakko Kogyo Co., Ltd.****Note 1. Basis of Presenting Consolidated Financial Statements (partial)**

Kyowa Hakko Kogyo Co., Ltd. (the "Company") and its consolidated subsidiaries maintain their accounts and records in accordance with the provisions set forth in the Securities and Exchange Law and in conformity with generally accepted accounting principles and practices prevailing in Japan. . . . The Company's fiscal year is from April 1 to March 31. Therefore, "fiscal 2007" begins on April 1, 2006 and ends on March 31, 2007.

**Reserve for Retirement Benefits to Employees**

A reserve for retirement benefits to employees is provided at an amount equal to the present value of the projected benefit obligation less fair value of the plan assets at the year-end. Unrecognized prior service costs are amortized on a straight-line basis over five years from the year they occur. Unrecognized actuarial differences are amortized on a straight-line basis over ten years from the year after they occur.

**Note 9. Reserve for Retirement Benefits to Employees**

The Company and its domestic consolidated subsidiaries operate various defined benefit plans, including a corporate pension plan (the so-called cash-balanced plan), a group contributory plan, a tax-qualified pension plan and a severance payment plan.

(a) The reserve for retirement benefits as of March 31, 2007, is analyzed as follows.

	Millions of Yen 2007	Thousands of U.S. Dollars 2007
Projected benefit obligations	¥(62,221)	\$(526,895)
Plan assets	42,888	363,181
Unfunded benefit obligations	(19,333)	(163,714)
Unrecognized actuarial differences	1,660	14,057
Unrecognized prior service costs (Note 2)	(2,350)	(19,900)
Prepaid pension cost	(1,359)	(11,678)
	<u>¥(21,402)</u>	<u>\$(181,235)</u>

(b) The net periodic pension expense related to the retirement benefits for fiscal 2007 is as follows.

	Millions of Yen 2007	Thousands of U.S. Dollars 2007
Service cost	¥(2,445)	\$(20,705)
Interest cost	1,518	12,855
Expected return on plan assets	(1,136)	(9,620)
Amortization of unrecognized actuarial differences	1,158	9,806
Amortization of unrecognized prior service costs	(1,222)	(10,348)
Special severance payment	202	1,771
	<u>¥ 2,965</u>	<u>\$ 25,109</u>

(c) Assumptions used in calculation of the above information are as follows.

	<u>2007</u>
Discount rate	2.5%
Expected rate of return	3.0%

**Instructions**

Use the information on Kyowa to respond to the following requirements.

- What are the key differences in accounting for pensions under U.S. and Japanese standards?
- Briefly explain how differences in U.S. and Japanese standards for pensions would affect the amounts reported in the financial statements.
- In light of the differences identified above, would Kyowa's income and equity be higher or lower under U.S. GAAP compared to Japanese standards? Explain.

## BRIDGE TO THE PROFESSION

### Professional Research: FASB Codification

Monat Company has grown rapidly since its founding in 2002. To instill loyalty in its employees, Monat is contemplating establishment of a defined-benefit plan. Monat knows that lenders and potential investors will pay close attention to the impact of the pension plan on the company's financial statements, particularly any gains or losses that develop in the plan. Monat has asked you to conduct some research on the accounting for gains and losses in a defined-benefit plan.

#### Instructions

Access the FASB Codification at <http://asc.fasb.org/home> to conduct research using the Codification Research System to prepare responses to the following items. Provide Codification references for your responses.

- Briefly describe how pension gains and losses are accounted for.
- Explain the rationale behind the accounting method described in part (a).
- What is the related pension asset or liability that will show up on the balance sheet? When will each of these situations occur?

### Professional Simulation

Go to the book's companion website, at [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), to find an interactive problem that simulates the computerized CPA exam. The professional simulation for this chapter asks you to address questions related to the accounting for pensions.

**Remember to check the book's companion website to find additional resources for this chapter.**

## CHAPTER 21

# ACCOUNTING FOR LEASES

## LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Explain the nature, economic substance, and advantages of lease transactions.
- 2 Describe the accounting criteria and procedures for capitalizing leases by the lessee.
- 3 Contrast the operating and capitalization methods of recording leases.
- 4 Identify the classifications of leases for the lessor.
- 5 Describe the lessor's accounting for direct-financing leases.
- 6 Identify special features of lease arrangements that cause unique accounting problems.
- 7 Describe the effect of residual values, guaranteed and unguaranteed, on lease accounting.
- 8 Describe the lessor's accounting for sales-type leases.
- 9 List the disclosure requirements for leases.

### MORE COMPANIES ASK, "WHY BUY?"

Leasing has grown tremendously in popularity. Today it is the fastest growing form of capital investment. Instead of borrowing money to buy an

airplane, computer, nuclear core, or satellite, a company makes periodic payments to lease these assets. Even gambling casinos lease their slot machines. Of the 600 companies surveyed by the AICPA in 2007, 591 disclosed lease data.\*

A classic example is the airline industry. Many travelers on airlines such as **United**, **Delta**, and **Southwest** believe these airlines own the planes on which they are flying. Often, this is not the case. Airlines lease many of their airplanes due to the favorable accounting treatment they receive if they lease rather than purchase. Presented on the next page are the lease percentages for the major U.S. airlines.

What about other companies? They are also exploiting the existing lease-accounting rules to keep assets and liabilities off the books. For example, **Krispy Kreme**, a chain of 217 doughnut shops, had been showing good growth and profitability, using a relatively small bit

\*AICPA, *Accounting Trends and Techniques—2007*. Eight out of 10 U.S. companies lease all or some of their equipment. Companies that lease tend to be smaller, are high growth, and are in technology-oriented industries (see [www.techlease.com](http://www.techlease.com)).

of capital. That's an impressive feat if you care about return on capital. But there's a hole in this doughnut. The company explained that it was building a \$30 million new mixing plant and warehouse in Effingham, Illinois. Yet the financial statements failed to disclose the investments and obligations associated with that \$30 million.

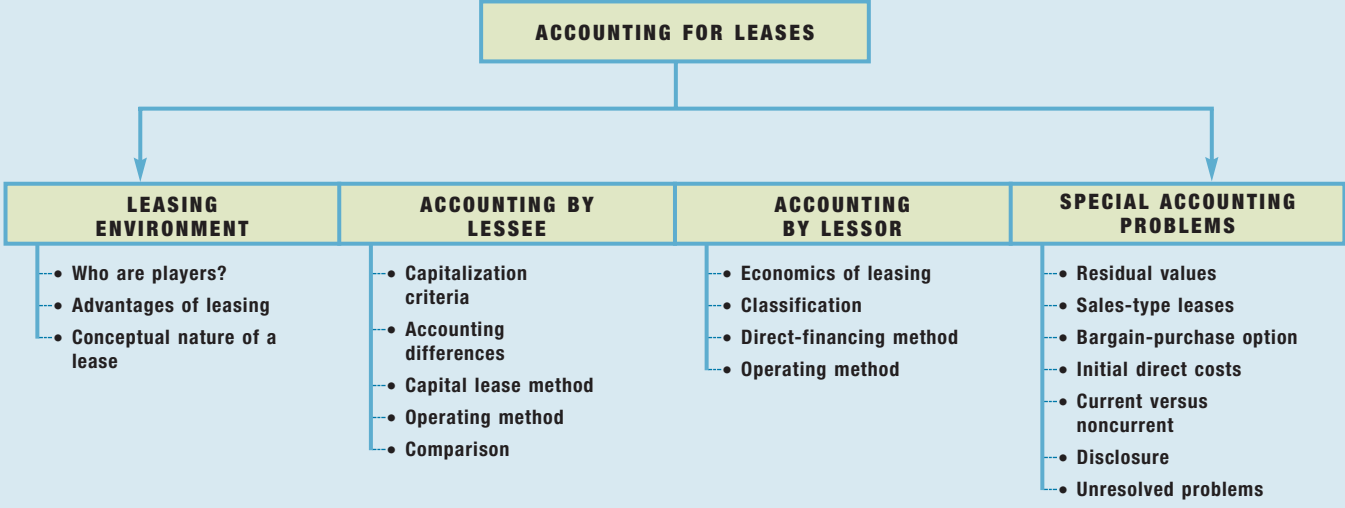

By financing through a synthetic lease, Krispy Kreme kept the investment and obligation off the books. In a synthetic lease, a financial institution like **Bank of America** sets up a *special purpose entity* (SPE) that borrows money to build the plant and then leases it to Krispy Kreme. For accounting purposes, Krispy Kreme reports only rent expense, but for tax purposes Krispy Kreme can be considered the owner of the asset and gets depreciation tax deductions.

In response to negative publicity about the use of SPEs to get favorable financial reporting and tax benefits, Krispy Kreme announced it would change its method of financing construction of its dough-making plant.

Source: Adapted from Seth Lubore and Elizabeth MacDonald, "Debt? Who, Me?" *Forbes* (February 18, 2002), p. 56.

**PREVIEW OF CHAPTER 21**

Our opening story indicates the increased significance and prevalence of lease arrangements. As a result, the need for uniform accounting and informative reporting of these transactions has intensified. In this chapter we look at the accounting issues related to leasing. The content and organization of this chapter are as follows.

## THE LEASING ENVIRONMENT

### Objective 1

Explain the nature, economic substance, and advantages of lease transactions.

Aristotle once said, “Wealth does not lie in ownership but in the use of things”! Clearly, many U.S. companies have decided that Aristotle is right, as they have become heavily involved in leasing assets rather than owning them. For example, according to the Equipment Leasing Association (ELA), the global equipment-leasing market is a \$600–\$700 billion business, with the U.S. accounting for about one-third of the global market. The ELA estimates that of the \$850 billion in total fixed investment expected from domestic businesses in 2006, \$229 billion (27 percent) will be financed through leasing. Remember that these statistics are just for equipment leasing; add in real estate leasing, which is probably larger, and we are talking about a very large and growing business, one that is at least in part driven by the accounting.

What types of assets are being leased? As the opening story indicated, any type of equipment can be leased, such as railcars, helicopters, bulldozers, barges, CT scanners, computers, and so on.

Illustration 21-1 summarizes, in their own words, what several major companies are leasing.

### ILLUSTRATION 21-1

What Do Companies Lease?

Company	Ticker	Description
<b>Gap</b>	GPS	“We lease most of our store premises and some of our headquarters facilities and distribution centers.”
<b>Exxon Mobil Corp.</b>	XOM	“Minimum commitments for operating leases, shown on an undiscounted basis, cover drilling equipment, tankers, service stations, and other properties.”
<b>JPMorgan Chase</b>	JPM	“JPMorgan Chase and its subsidiaries were obligated under a number of noncancelable operating leases for premises and equipment used primarily for banking purposes.”
<b>Maytag Corp.</b>	MYG	“The Company leases real estate, machinery, equipment, and automobiles under operating leases, some of which have renewal options.”
<b>McDonald's Corp.</b>	MCD	“The Company was the lessee at 15,235 restaurant locations through ground leases (the Company leases the land and the Company or franchisee owns the building) and through improved leases (the Company leases land and buildings).”
<b>Starbucks Corp.</b>	SBUX	“Starbucks leases retail stores, roasting and distribution facilities, and office space under operating leases.”
<b>TXU Corp.</b>	TXU	“TXU Energy Holdings and TXU Electric Delivery have entered into operating leases covering various facilities and properties including generation plant facilities, combustion turbines, transportation equipment, mining equipment, data processing equipment, and office space.”
<b>Viacom Inc.</b>	VIA.B	“The Company has long-term non-cancelable operating lease commitments for office space and equipment, transponders, studio facilities, and vehicles. The Company also enters into capital leases for satellite transponders.”

Source: Company 10-K filings; D. Zion, B. Carcache, and A. Varshney, “Bring It On: Off-Balance Sheet Operating Leases,” *Credit Suisse Equity Research: Accounting and Tax* (April 19, 2006).

The largest group of leased equipment involves information technology equipment, followed by assets in the transportation area (trucks, aircraft, rail), and then construction and agriculture.

### Who Are the Players?

A **lease** is a contractual agreement between a lessor and a lessee. This arrangement gives the **lessee** the right to use specific property, owned by the **lessor**, for a specified

period of time. In return for the use of the property, the lessee makes rental payments over the lease term to the lessor.

Who are the lessors that own this property? They generally fall into one of three categories:

1. Banks.
2. Captive leasing companies.
3. Independents.

### **Banks**

Banks are the largest players in the leasing business. They have low-cost funds, which give them the advantage of being able to purchase assets at less cost than their competitors. Banks also have been more aggressive in the leasing markets. They have decided that there is money to be made in leasing, and as a result they have expanded their product lines in this area. Finally, leasing transactions are now more standardized, which gives banks an advantage because they do not have to be as innovative in structuring lease arrangements. Thus banks like **Wells Fargo**, **Chase**, **Citigroup**, and **PNC** have substantial leasing subsidiaries.

### **Captive Leasing Companies**

Captive leasing companies are subsidiaries whose primary business is to perform leasing operations for the parent company. Companies like **Caterpillar Financial Services Corp.** (for Caterpillar), **Chrysler Financial** (for Daimler-Chrysler), and **IBM Global Financing** (for IBM) facilitate the sale of products to consumers. For example, suppose that **Sterling Construction Co.** wants to acquire a number of earthmovers from Caterpillar. In this case, Caterpillar Financial Services Corp. will offer to structure the transaction as a lease rather than as a purchase. Thus, Caterpillar Financial provides the financing rather than an outside financial institution.

Captive leasing companies have the point-of-sale advantage in finding leasing customers. That is, as soon as Caterpillar receives a possible order, its leasing subsidiary can quickly develop a lease-financing arrangement. Furthermore, the captive lessor has product knowledge that gives it an advantage when financing the parent's product.

The current trend is for captives to focus primarily on their companies' products rather than do general lease financing. For example, **Boeing Capital** and **UPS Capital** are two captives that have left the general finance business to focus exclusively on their parent companies' products.

### **Independents**

Independents are the final category of lessors. Independents have not done well over the last few years. Their market share has dropped fairly dramatically as banks and captive leasing companies have become more aggressive in the lease-financing area. Independents do not have point-of-sale access, nor do they have a low cost of funds advantage. What they *are* often good at is developing innovative contracts for lessees. In addition, they are starting to act as captive finance companies for some companies that do not have a leasing subsidiary.

According to recent data at [www.ficinc.com](http://www.ficinc.com) on new business volume by lessor type, banks hold about 44 percent of the market, followed by independents at 30 percent. Captives had the remaining 26 percent of new business. Data on changes in market share show that both banks and captives have increased business at the expense of the independents. That is, banks' and captives' market shares had grown by 58 percent and 36 percent respectively, while the independents' market share declined by 44 percent.

## Advantages of Leasing

The growth in leasing indicates that it often has some genuine advantages over owning property, such as:

1. **100% Financing at Fixed Rates.** Leases are often signed without requiring any money down from the lessee. This helps the lessee conserve scarce cash—an especially desirable feature for new and developing companies. In addition, lease payments often remain fixed, which protects the lessee against inflation and increases in the cost of money. The following comment explains why companies choose a lease instead of a conventional loan: “Our local bank finally came up to 80 percent of the purchase price but wouldn’t go any higher, and they wanted a floating interest rate. We just couldn’t afford the down payment, and we needed to lock in a final payment rate we knew we could live with.”
2. **Protection Against Obsolescence.** Leasing equipment reduces risk of obsolescence to the lessee, and in many cases passes the risk of residual value to the lessor. For example, **Merck** (a pharmaceutical maker) leases computers. Under the lease agreement, Merck may turn in an old computer for a new model at any time, canceling the old lease and writing a new one. The lessor adds the cost of the new lease to the balance due on the old lease, less the old computer’s trade-in value. As one treasurer remarked, “Our instinct is to purchase.” But if a new computer is likely to come along in a short time, “then leasing is just a heck of a lot more convenient than purchasing.” Naturally, the lessor also protects itself by requiring the lessee to pay higher rental payments or provide additional payments if the lessee does not maintain the asset.
3. **Flexibility.** Lease agreements may contain less restrictive provisions than other debt agreements. Innovative lessors can tailor a lease agreement to the lessee’s special needs. For instance, the duration of the lease—the **lease term**—may be anything from a short period of time to the entire expected economic life of the asset. The rental payments may be level from year to year, or they may increase or decrease in amount. The payment amount may be predetermined or may vary with sales, the prime interest rate, the Consumer Price Index, or some other factor. In most cases the rent is set to enable the lessor to recover the cost of the asset plus a fair return over the life of the lease.
4. **Less Costly Financing.** Some companies find leasing cheaper than other forms of financing. For example, start-up companies in depressed industries or companies in low tax brackets may lease to claim tax benefits that they might otherwise lose. Depreciation deductions offer no benefit to companies that have little if any taxable income. Through leasing, the leasing companies or financial institutions use these tax benefits. They can then pass some of these tax benefits back to the user of the asset in the form of lower rental payments.
5. **Tax Advantages.** In some cases, companies can “have their cake and eat it too” with tax advantages that leases offer. That is, for financial reporting purposes companies do not report an asset or a liability for the lease arrangement. For tax purposes, however, companies can capitalize and depreciate the leased asset. As a result, a company takes deductions earlier rather than later and also reduces its taxes. A common vehicle for this type of transaction is a “synthetic lease” arrangement, such as that described in the opening story for **Krispy Kreme**.
6. **Off-Balance-Sheet Financing.** Certain leases do not add debt on a balance sheet or affect financial ratios. In fact, they may add to borrowing capacity.<sup>1</sup> Such **off-balance-sheet financing** is critical to some companies.

### INTERNATIONAL INSIGHT

Some companies “double dip” on the international level too. The leasing rules of the lessor’s and lessee’s countries may differ, permitting both parties to own the asset. Thus, both lessor and lessee receive the tax benefits related to depreciation.

<sup>1</sup>As demonstrated later in this chapter, certain types of lease arrangements are not capitalized on the balance sheet. The liabilities section is thereby relieved of large future lease commitments that, if recorded, would adversely affect the debt to equity ratio. The reluctance to record lease obligations as liabilities is one of the primary reasons some companies resist capitalized lease accounting.

## OFF-BALANCE-SHEET FINANCING

As shown in our opening story, airlines use lease arrangements extensively. This results in a great deal of off-balance-sheet financing. The following chart indicates that many airlines that lease aircraft understate debt levels by a substantial amount.

*What do the numbers mean?*

Airlines are not the only ones playing the off-balance-sheet game. A recent SEC study estimates that for SEC registrants, off-balance-sheet lease obligations total more than \$1.3 trillion, or 31 times the amount of on-balance-sheet obligations. (See SEC Off-Balance Sheet report at [www.sec.gov/news/studies/soxoffbalancerept.pdf](http://www.sec.gov/news/studies/soxoffbalancerept.pdf).) Thus, analysts must adjust reported debt levels for the effects of non-capitalized leases. A methodology for making this adjustment is discussed in Eugene A. Imhoff, Jr., Robert C. Lipe, and David W. Wright, "Operating Leases: Impact of Constructive Capitalization," *Accounting Horizons* (March 1991).

## Conceptual Nature of a Lease

If **Delta** borrows \$47 million on a 10-year note from **Bank of America** to purchase a Boeing 737 jet plane, Delta should clearly report an asset and related liability at that amount on its balance sheet. Similarly, if Delta purchases the 737 for \$47 million directly from Boeing through an installment purchase over 10 years, it should obviously report an asset and related liability (i.e., it should "capitalize" the installment transaction).

However, what if Delta **leases** the Boeing 737 for 10 years from **International Lease Finance Corp. (ILFC)**—the world's largest lessor of airplanes—through a noncancelable lease transaction with payments of the same amount as the installment purchase transaction? In that case, opinion differs over how to report this transaction. The various views on **capitalization of leases** are as follows.

1. **Do Not Capitalize Any Leased Assets.** This view considers capitalization inappropriate, because Delta does not own the property. Furthermore, a lease is an "executory" contract requiring continuing performance by both parties. Because companies do not currently capitalize other executory contracts (such as purchase commitments and employment contracts), they should not capitalize leases either.
2. **Capitalize Leases That Are Similar to Installment Purchases.** This view holds that companies should report transactions in accordance with their economic substance. Therefore, if companies capitalize installment purchases, they should also capitalize leases that have similar characteristics. For example, Delta Airlines makes the same payments over a 10-year period for either a lease or an installment purchase. Lessees make rental payments, whereas owners make mortgage

**Underlying Concepts**

The issue of how to report leases is the classic case of substance versus form. Although legal title does not technically pass in lease transactions, the benefits from the use of the property do transfer.

payments. Why should the financial statements not report these transactions in the same manner?

- 3. **Capitalize All Long-Term Leases.** This approach requires only the long-term right to use the property in order to capitalize. This property-rights approach capitalizes all long-term leases.<sup>2</sup>
- 4. **Capitalize Firm Leases Where the Penalty for Nonperformance Is Substantial.** A final approach advocates capitalizing only “firm” (noncancelable) contractual rights and obligations. “Firm” means that it is unlikely to avoid performance under the lease without a severe penalty.<sup>3</sup>

In short, the various viewpoints range from no capitalization to capitalization of all leases. The FASB apparently agrees with the capitalization approach when the lease is similar to an installment purchase: It notes that Delta **should capitalize a lease that transfers substantially all of the benefits and risks of property ownership, provided the lease is noncancelable.** **Noncancelable** means that Delta can cancel the lease contract only upon the outcome of some remote contingency, or that the cancellation provisions and penalties of the contract are so costly to Delta that cancellation probably will not occur.

This viewpoint leads to three basic conclusions: (1) Companies must identify the characteristics that indicate the transfer of substantially all of the benefits and risks of ownership. (2) The same characteristics should apply consistently to the lessee and the lessor. (3) Those leases that do **not** transfer substantially all the benefits and risks of ownership are operating leases. Companies should not capitalize operating leases. Instead, companies should account for them as rental payments and receipts.

## ACCOUNTING BY THE LESSEE

**Objective-2**

Describe the accounting criteria and procedures for capitalizing leases by the lessee.

If Delta Airlines (the lessee) **capitalizes** a lease, it records an asset and a liability generally equal to the present value of the rental payments. ILFC (the lessor), having transferred substantially all the benefits and risks of ownership, recognizes a sale by removing the asset from the balance sheet and replacing it with a receivable. The typical journal entries for Delta and ILFC, assuming leased and capitalized equipment, appear as shown in Illustration 21-2.

**ILLUSTRATION 21-2**

Journal Entries for Capitalized Lease

Delta (Lessee)		ILFC (Lessor)	
Leased Equipment	XXX	Lease Receivable	XXX
Lease Liability	XXX	Equipment	XXX

Having capitalized the asset, Delta records depreciation on the leased asset. Both ILFC and Delta treat the lease rental payments as consisting of interest and principal.

If Delta does not capitalize the lease, it does not record an asset, nor does ILFC remove one from its books. When Delta makes a lease payment, it records rental expense; ILFC recognizes rental revenue.

<sup>2</sup>The property rights approach was originally recommended in a research study by the AICPA: John H. Myers, “Reporting of Leases in Financial Statements,” *Accounting Research Study No. 4* (New York: AICPA, 1964), pp. 10–11. Recently, this view has received additional support. See Peter H. Knutson, “Financial Reporting in the 1990s and Beyond,” Position Paper (Charlottesville, Va.: AIMR, 1993), and Warren McGregor, “Accounting for Leases: A New Approach,” Special Report (Norwalk, Conn.: FASB, 1996).

<sup>3</sup>Yuji Ijiri, *Recognition of Contractual Rights and Obligations*, Research Report (Stamford, Conn.: FASB, 1980).

In order to record a lease as a **capital lease**, the lease must be noncancelable. Further, it must meet one or more of the four criteria listed in Illustration 21-3.

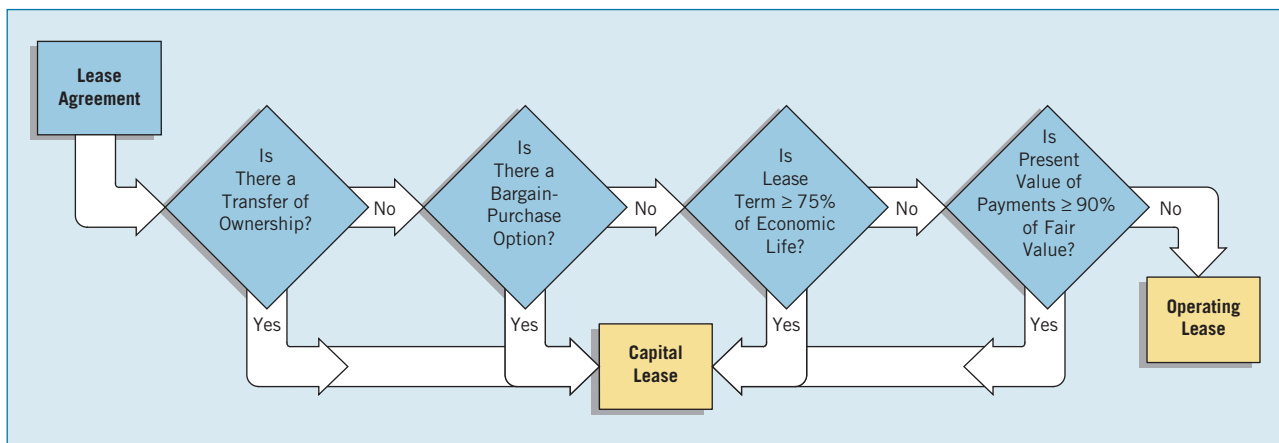

#### Capitalization Criteria (Lessee)

- The lease transfers ownership of the property to the lessee.
- The lease contains a bargain-purchase option.<sup>4</sup>
- The lease term is equal to 75 percent or more of the estimated economic life of the leased property.
- The present value of the minimum lease payments (excluding executory costs) equals or exceeds 90 percent of the fair value of the leased property. [1]

**ILLUSTRATION 21-3**  
Capitalization Criteria for Lessee

 See the FASB Codification section (page 1160).

Delta classifies and accounts for leases that **do not meet any of the four criteria** as **operating leases**. Illustration 21-4 shows that a lease meeting any one of the four criteria results in the lessee having a capital lease.

**ILLUSTRATION 21-4**  
Diagram of Lessee's Criteria for Lease Classification

In keeping with the FASB's reasoning that a company consumes a significant portion of the value of the asset in the first 75 percent of its life, the lessee applies neither the third nor the fourth criterion when the inception of the lease occurs during the last 25 percent of the asset's life.

## Capitalization Criteria

Three of the four **capitalization criteria** that apply to lessees are controversial and can be difficult to apply in practice. We discuss each of the criteria in detail on the following pages.

### Transfer of Ownership Test

If the lease transfers ownership of the asset to the lessee, it is a capital lease. This criterion is not controversial and easily implemented in practice.

### Bargain-Purchase Option Test

A **bargain-purchase option** allows the lessee to purchase the leased property for a price that is **significantly lower** than the property's expected fair value at the date the option becomes exercisable. At the inception of the lease, the difference between the option price and the expected fair market value must be large enough to make exercise of the option reasonably assured.

<sup>4</sup>We define a bargain-purchase option in the next section.

For example, assume that Brett's Delivery Service was to lease a Honda Accord for \$599 per month for 40 months, with an option to purchase for \$100 at the end of the 40-month period. If the estimated fair value of the Honda Accord is \$3,000 at the end of the 40 months, the \$100 option to purchase is clearly a bargain. Therefore, Brett must capitalize the lease. In other cases, the criterion may not be as easy to apply, and determining *now* that a certain *future* price is a bargain can be difficult.

### Economic Life Test (75% Test)

If the lease period equals or exceeds 75 percent of the asset's economic life, the lessor transfers most of the risks and rewards of ownership to the lessee. Capitalization is therefore appropriate. However, determining the lease term and the economic life of the asset can be troublesome.

The **lease term** is generally considered to be the fixed, noncancelable term of the lease. However, a bargain-renewal option, if provided in the lease agreement, can extend this period. A **bargain-renewal option** allows the lessee to renew the lease for a rental that is lower than the expected fair rental at the date the option becomes exercisable. At the inception of the lease, the difference between the renewal rental and the expected fair rental must be great enough to make exercise of the option to renew reasonably assured.

For example, assume that **Home Depot** leases **Dell** PCs for two years at a rental of \$100 per month per computer and subsequently can lease them for \$10 per month per computer for another two years. The lease clearly offers a bargain-renewal option; the lease term is considered to be four years. However, with bargain-renewal options, as with bargain-purchase options, it is sometimes difficult to determine what is a bargain.<sup>5</sup>

Determining estimated economic life can also pose problems, especially if the leased item is a specialized item or has been used for a significant period of time. For example, determining the economic life of a nuclear core is extremely difficult. It is subject to much more than normal "wear and tear." As indicated earlier, the FASB takes the position that if the lease starts during the last 25 percent of the life of the asset, companies cannot use the economic life test to classify a lease as a capital lease.

#### INTERNATIONAL INSIGHT

iGAAP does not specify an exact percentage, such as 90%. Instead, it uses the term "substantially all." This difference illustrates the distinction between rules-based and principles-based standards.

### Recovery of Investment Test (90% Test)

If the present value of the minimum lease payments equals or exceeds 90 percent of the fair market value of the asset, then a lessee like Delta should capitalize the leased asset. Why? If the present value of the minimum lease payments is reasonably close to the market price of the aircraft, Delta is effectively purchasing the asset.

Determining the present value of the minimum lease payments involves three important concepts: (1) minimum lease payments, (2) executory costs, and (3) discount rate.

**Minimum Lease Payments.** Delta is obligated to make, or expected to make, **minimum lease payments** in connection with the leased property. These payments include the following.

1. **Minimum Rental Payments**—Minimum rental payments are those that Delta must make to ILFC under the lease agreement. In some cases, the minimum rental payments may equal the minimum lease payments. However, the minimum lease payments may also include a guaranteed residual value (if any), penalty for failure to renew, or a bargain-purchase option (if any), as we note on the next page.

<sup>5</sup>The original lease term is also extended for leases having the following: substantial penalties for nonrenewal; periods for which the lessor has the option to renew or extend the lease; renewal periods preceding the date a bargain-purchase option becomes exercisable; and renewal periods in which any lessee guarantees of the lessor's debt are expected to be in effect or in which there will be a loan outstanding from the lessee to the lessor. The lease term, however, can never extend beyond the time a bargain-purchase option becomes exercisable. [2]

2. **Guaranteed Residual Value**—The residual value is the estimated fair (market) value of the leased property at the end of the lease term. ILFC may transfer the risk of loss to Delta or to a third party by obtaining a guarantee of the estimated residual value. The **guaranteed residual value** is either (1) the certain or determinable amount that Delta will pay ILFC at the end of the lease to purchase the aircraft at the end of the lease, or (2) the amount Delta or the third party guarantees that ILFC will realize if the aircraft is returned. (**Third-party guarantors** are, in essence, insurers who for a fee assume the risk of deficiencies in leased asset residual value.) If not guaranteed in full, the **unguaranteed residual value** is the estimated residual value exclusive of any portion guaranteed.<sup>6</sup>
3. **Penalty for Failure to Renew or Extend the Lease**—The amount Delta must pay if the agreement specifies that it must extend or renew the lease, and it fails to do so.
4. **Bargain-Purchase Option**—As we indicated earlier (in item 1), an option given to Delta to purchase the aircraft at the end of the lease term at a price that is fixed sufficiently below the expected fair value, so that, at the inception of the lease, purchase is reasonably assured.

Delta excludes executory costs (defined below) from its computation of the present value of the minimum lease payments.

**Executory Costs.** Like most assets, leased tangible assets incur insurance, maintenance, and tax expenses—called **executory costs**—during their economic life. If ILFC retains responsibility for the payment of these “ownership-type costs,” **it should exclude**, in computing the present value of the minimum lease payments, a portion of each lease payment that represents executory costs. Executory costs do not represent payment on or reduction of the obligation.

Many lease agreements specify that the lessee directly pays executory costs to the appropriate third parties. In these cases, the lessor can use the rental payment **without adjustment** in the present value computation.

**Discount Rate.** A lessee, like Delta, generally computes the present value of the minimum lease payments using its **incremental borrowing rate**. This rate is defined as: “The rate that, at the inception of the lease, the lessee would have incurred to borrow the funds necessary to buy the leased asset on a secured loan with repayment terms similar to the payment schedule called for in the lease.” [4]

To determine whether the present value of these payments is less than 90 percent of the fair market value of the property, Delta discounts the payments using its incremental borrowing rate. Determining the incremental borrowing rate often requires judgment because the lessee bases it on a hypothetical purchase of the property.

However, there is one exception to this rule. If (1) Delta knows the **implicit interest rate computed by ILFC** and (2) it is less than Delta’s incremental borrowing rate, then Delta **must use ILFC’s implicit rate**. What is the **interest rate implicit in the lease**? It is the discount rate that, when applied to the minimum lease payments and any unguaranteed residual value accruing to the lessor, causes the aggregate present value to equal the fair value of the leased property to the lessor. [5]

The purpose of this exception is twofold. First, **the implicit rate of ILFC is generally a more realistic rate** to use in determining the amount (if any) to report as the asset and related liability for Delta. Second, the guideline ensures that Delta **does not use an artificially high incremental borrowing rate** that would cause the present value of the minimum lease payments to be less than 90 percent of the fair market value of the aircraft. Use of such a rate would thus make it possible to avoid capitalization of the asset and related liability.

<sup>6</sup>A lease provision requiring the lessee to make up a residual value deficiency that is attributable to damage, extraordinary wear and tear, or excessive usage is not included in the minimum lease payments. Lessees recognize such costs as period costs when incurred. [3]

Delta may argue that it cannot determine the implicit rate of the lessor and therefore should use the higher rate. However, in most cases, Delta can approximate the implicit rate used by ILFC. The determination of whether or not a reasonable estimate could be made will require judgment, particularly where the result from using the incremental borrowing rate comes close to meeting the 90 percent test. Because Delta **may not capitalize the leased property at more than its fair value** (as we discuss later), it cannot use an excessively low discount rate.

### Asset and Liability Accounted for Differently

**In a capital lease transaction, Delta uses the lease as a source of financing.** ILFC finances the transaction (provides the investment capital) through the leased asset. Delta makes rent payments, which actually are installment payments. Therefore, over the life of the aircraft rented, **the rental payments to ILFC constitute a payment of principal plus interest.**

#### Asset and Liability Recorded

Under the capital lease method, Delta treats the lease transaction as if it purchases the aircraft in a financing transaction. That is, Delta acquires the aircraft and creates an obligation. Therefore, it records a capital lease as an asset and a liability at the lower of (1) the present value of the minimum lease payments (excluding executory costs) or (2) the fair value of the leased asset at the inception of the lease. The rationale for this approach is that companies should not record a leased asset for more than its fair value.

#### Depreciation Period

One troublesome aspect of accounting for the depreciation of the capitalized leased asset relates to the period of depreciation. If the lease agreement transfers ownership of the asset to Delta (criterion 1) or contains a bargain-purchase option (criterion 2), Delta depreciates the aircraft consistent with its normal depreciation policy for other aircraft, **using the economic life of the asset.**

On the other hand, if the lease does not transfer ownership or does not contain a bargain purchase option, then Delta depreciates it over the **term of the lease.** In this case, the aircraft reverts to ILFC after a certain period of time.

#### Effective-Interest Method

Throughout the term of the lease, Delta uses the **effective-interest method** to allocate each lease payment between principal and interest. This method produces a periodic interest expense equal to a constant percentage of the carrying value of the lease obligation. When applying the effective-interest method to capital leases, Delta must use the same discount rate that determines the present value of the minimum lease payments.

#### Depreciation Concept

Although Delta computes the amounts initially capitalized as an asset and recorded as an obligation at the same present value, the **depreciation of the aircraft and the discharge of the obligation are independent accounting processes** during the term of the lease. It should depreciate the leased asset by applying conventional depreciation methods: straight-line, sum-of-the-years'-digits, declining-balance, units of production, etc. The FASB uses the term "amortization" more frequently than "depreciation" to recognize intangible leased property rights. We prefer "depreciation" to describe the write-off of a tangible asset's expired services.

### Capital Lease Method (Lessee)

To illustrate a capital lease, assume that **Caterpillar Financial Services Corp.** (a subsidiary of Caterpillar) and **Sterling Construction Corp.** sign a lease agreement dated

January 1, 2011, that calls for Caterpillar to lease a front-end loader to Sterling beginning January 1, 2011. The terms and provisions of the lease agreement, and other pertinent data, are as follows.

- The term of the lease is five years. The lease agreement is noncancelable, requiring equal rental payments of \$25,981.62 at the beginning of each year (annuity due basis).
- The loader has a fair value at the inception of the lease of \$100,000, an estimated economic life of five years, and no residual value.
- Sterling pays all of the executory costs directly to third parties except for the property taxes of \$2,000 per year, which is included as part of its annual payments to Caterpillar.
- The lease contains no renewal options. The loader reverts to Caterpillar at the termination of the lease.
- Sterling’s incremental borrowing rate is 11 percent per year.
- Sterling depreciates, on a straight-line basis, similar equipment that it owns.
- Caterpillar sets the annual rental to earn a rate of return on its investment of 10 percent per year; Sterling knows this fact.

The lease meets the criteria for classification as a capital lease for the following reasons:

1. The lease term of five years, being equal to the equipment’s estimated economic life of five years, satisfies the 75 percent test.
2. The present value of the minimum lease payments (\$100,000 as computed below) exceeds 90 percent of the fair value of the loader (\$100,000).

The minimum lease payments are \$119,908.10 ( $\$23,981.62 \times 5$ ). Sterling computes the amount capitalized as leased assets as the present value of the minimum lease payments (excluding executory costs—property taxes of \$2,000) as shown in Illustration 21-5.

$$\begin{aligned}
 \text{Capitalized amount} &= (\$25,981.62 - \$2,000) \times \text{Present value of an annuity due of 1 for} \\
 &\qquad\qquad\qquad 5 \text{ periods at 10\% (Table 6-5)} \\
 &= \$23,981.62 \times 4.16986 \\
 &= \mathbf{\$100,000}
 \end{aligned}$$

**ILLUSTRATION 21-5**  
Computation of Capitalized Lease Payments

Sterling uses Caterpillar’s implicit interest rate of 10 percent instead of its incremental borrowing rate of 11 percent because (1) it is lower and (2) it knows about it.<sup>7</sup> Sterling records the capital lease on its books on January 1, 2011, as:

Leased Equipment under Capital Leases	100,000	
Lease Liability		100,000

Note that the entry records the obligation at the net amount of \$100,000 (the present value of the future rental payments) rather than at the gross amount of \$119,908.10 ( $\$23,981.62 \times 5$ ).

Sterling records the **first lease payment on January 1, 2011**, as follows:

Property Tax Expense	2,000.00	
Lease Liability	23,981.62	
Cash		25,981.62

<sup>7</sup>If Sterling has an incremental borrowing rate of, say, 9 percent (lower than the 10 percent rate used by Caterpillar) and it did not know the rate used by Caterpillar, the present value computation would yield a capitalized amount of \$101,675.35 ( $\$23,981.62 \times 4.23972$ ). And, because this amount exceeds the \$100,000 fair value of the equipment, Sterling would have to capitalize the \$100,000 and use 10 percent as its effective rate for amortization of the lease obligation.

**Calculator Solution for Lease Payment**

	Inputs	Answer
N	5	
I	10	
PV	?	100,000
PMT	-23,981.59	
FV	0	

Each lease payment of \$25,981.62 consists of three elements: (1) a reduction in the lease liability, (2) a financing cost (interest expense), and (3) executory costs (property taxes). The total financing cost (interest expense) over the term of the lease is \$19,908.10. This amount is the difference between the present value of the lease payments (\$100,000) and the actual cash disbursed, net of executory costs (\$119,908.10). Therefore, the annual interest expense, applying the effective-interest method, is a function of the outstanding liability, as Illustration 21-6 shows.

**ILLUSTRATION 21-6**  
Lease Amortization Schedule for Lessee—Annuity-Due Basis

<b>STERLING CONSTRUCTION</b>					
<b>LEASE AMORTIZATION SCHEDULE</b>					
<b>ANNUITY-DUE BASIS</b>					
Date	Annual Lease Payment	Executory Costs	Interest (10%) on Liability	Reduction of Lease Liability	Lease Liability
	(a)	(b)	(c)	(d)	(e)
1/1/11					\$100,000.00
1/1/11	\$ 25,981.62	\$ 2,000	\$ -0-	\$ 23,981.62	76,018.38
1/1/12	25,981.62	2,000	7,601.84	16,379.78	59,638.60
1/1/13	25,981.62	2,000	5,963.86	18,017.76	41,620.84
1/1/14	25,981.62	2,000	4,162.08	19,819.54	21,801.30
1/1/15	25,981.62	2,000	2,180.32*	21,801.30	-0-
	<u>\$129,908.10</u>	<u>\$10,000</u>	<u>\$19,908.10</u>	<u>\$100,000.00</u>	

(a) Lease payment as required by lease.  
 (b) Executory costs included in rental payment.  
 (c) Ten percent of the preceding balance of (e) except for 1/1/11; since this is an annuity due, no time has elapsed at the date of the first payment and no interest has accrued.  
 (d) (a) minus (b) and (c).  
 (e) Preceding balance minus (d).  
 \*Rounded by 19 cents.

At the end of its fiscal year, December 31, 2011, Sterling records **accrued interest** as follows.

Interest Expense	7,601.84	
Interest Payable		7,601.84

Depreciation of the leased equipment over its five-year lease term, applying Sterling’s normal depreciation policy (straight-line method), results in the following entry on December 31, 2011.

Depreciation Expense—Capital Leases	20,000	
Accumulated Depreciation—Capital Leases (\$100,000 ÷ 5 years)		20,000

At December 31, 2011, Sterling separately identifies the assets recorded under capital leases on its balance sheet. Similarly, it separately identifies the related obligations. Sterling classifies the portion due within one year or the operating cycle, whichever is longer, with current liabilities, and the rest with noncurrent liabilities. For example, the current portion of the December 31, 2011, total obligation of \$76,018.38 in Sterling’s amortization schedule is the amount of the reduction in the obligation in 2012, or \$16,379.78. Illustration 21-7 shows the liabilities section as it relates to lease transactions at December 31, 2011.

**ILLUSTRATION 21-7**  
Reporting Current and Noncurrent Lease Liabilities

<u>Current liabilities</u>	
Interest payable	\$ 7,601.84
Lease liability	16,379.78
<u>Noncurrent liabilities</u>	
Lease liability	\$59,638.60

Sterling records the lease payment of January 1, 2012, as follows.

Property Tax Expense	2,000.00	
Interest Payable	7,601.84	
Lease Liability	16,379.78	
Cash		25,981.62

Entries through 2015 would follow the pattern above. Sterling records its other executory costs (insurance and maintenance) in a manner similar to how it records any other operating costs incurred on assets it owns.

**Upon expiration of the lease**, Sterling has fully amortized the amount capitalized as leased equipment. It also has fully discharged its lease obligation. If Sterling does not purchase the loader, it returns the equipment to Caterpillar. Sterling then removes the leased equipment and related accumulated depreciation accounts from its books.<sup>8</sup>

If Sterling purchases the equipment at termination of the lease, at a price of \$5,000 and the estimated life of the equipment changes from five to seven years, it makes the following entry.

Equipment (\$100,000 + \$5,000)	105,000	
Accumulated Depreciation—Capital Leases	100,000	
Leased Equipment under Capital Leases		100,000
Accumulated Depreciation—Equipment		100,000
Cash		5,000

## Operating Method (Lessee)

Under the **operating method**, rent expense (and the associated liability) accrues day by day to the lessee as it uses the property. **The lessee assigns rent to the periods benefiting from the use of the asset and ignores, in the accounting, any commitments to make future payments.** The lessee makes appropriate accruals or deferrals if the accounting period ends between cash payment dates.

For example, assume that the capital lease illustrated in the previous section did not qualify as a capital lease. Sterling therefore accounts for it as an operating lease. The first-year charge to operations is now \$25,981.62, the amount of the rental payment. Sterling records this payment on January 1, 2011, as follows.

Rent Expense	25,981.62	
Cash		25,981.62

Sterling does not report the loader, as well as any long-term liability for future rental payments, on the balance sheet. Sterling reports rent expense on the income statement. And, as discussed later in the chapter, **Sterling must disclose all operating leases that have noncancelable lease terms in excess of one year.**

## RESTATEMENTS ON THE MENU

Accounting for operating leases would appear routine, so it is unusual for a bevy of companies in a single industry—restaurants—to get caught up in the accounting rules for operating leases. Getting the accounting right is particularly important for restaurant chains, because they make extensive use of leases for their restaurants and equipment.

The problem stems from the way most property (and equipment) leases cover a specific number of years (the so-called *primary lease term*) as well as renewal periods (sometimes referred to as the *option term*). In some cases, companies were calculating their lease expense for the primary term but depreciating lease-related assets over both the primary and option terms. This practice resulted in understating the total cost of the lease and thus boosted earnings.

**What do the numbers mean?**

<sup>8</sup>If Sterling purchases the front-end loader during the term of a “capital lease,” it accounts for it like a renewal or extension of a capital lease. “Any difference between the purchase price and the carrying amount of the lease obligation shall be recorded as an adjustment of the carrying amount of the asset.” [6]

**What do the numbers mean?**  
(continued)

For example, the CFO at **CKE Restaurants Inc.**, owner of the Hardee’s and Carl’s Jr. chains, noted that CKE ran into trouble because it was not consistent in calculating the lease and depreciation expense. Correcting the error at CKE reduced earnings by nine cents a share in fiscal 2002, nine cents a share in fiscal 2003, and 10 cents a share in fiscal 2004. The company now uses the shorter, primary lease terms for calculating both lease expense and depreciation. The change increases depreciation annually, which in turn decreases total assets.

CKE was not alone in improper operating lease accounting. Notable restaurateurs who ran afoul of the lease rules included **Brinker International Inc.**, operator of Chili’s; **Darden Restaurants Inc.**, which operates Red Lobster and Olive Garden; and **Jack in the Box**. To correct their operating lease accounting, these restaurants reported restatements that resulted in lower earnings and assets.

**Comparison of Capital Lease with Operating Lease**

**Objective 3**

Contrast the operating and capitalization methods of recording leases.

As we indicated, if accounting for the lease as an operating lease, the first-year charge to operations is \$25,981.62, the amount of the rental payment. Treating the transaction as a capital lease, however, results in a first-year charge of \$29,601.84: depreciation of \$20,000 (assuming straight-line), interest expense of \$7,601.84 (per Illustration 21-6), and executory costs of \$2,000. Illustration 21-8 shows that **while the total charges to operations are the same over the lease term whether accounting for the lease as a capital lease or as an operating lease, under the capital lease treatment the charges are higher in the earlier years and lower in the later years.**<sup>9</sup>

**ILLUSTRATION 21-8**  
Comparison of Charges to Operations—Capital vs. Operating Leases

STERLING CONSTRUCTION SCHEDULE OF CHARGES TO OPERATIONS CAPITAL LEASE VERSUS OPERATING LEASE						
Year	Capital Lease			Total Charge	Operating Lease Charge	Difference
	Depreciation	Executory Costs	Interest			
2011	\$ 20,000	\$ 2,000	\$ 7,601.84	\$ 29,601.84	\$ 25,981.62	\$3,620.22
2012	20,000	2,000	5,963.86	27,963.86	25,981.62	1,982.24
2013	20,000	2,000	4,162.08	26,162.08	25,981.62	180.46
2014	20,000	2,000	2,180.32	24,180.32	25,981.62	(1,801.30)
2015	20,000	2,000	—	22,000.00	25,981.62	(3,981.62)
	<u>\$100,000</u>	<u>\$10,000</u>	<u>\$19,908.10</u>	<u>\$129,908.10</u>	<u>\$129,908.10</u>	<u>\$ -0-</u>

If using an accelerated method of depreciation, the differences between the amounts charged to operations under the two methods would be even larger in the earlier and later years.

In addition, using the capital lease approach results in an asset and related liability of \$100,000 initially reported on the balance sheet. The lessee would not report any asset or liability under the operating method. Therefore, the following differences occur if using a capital lease instead of an operating lease:

1. An increase in the amount of reported debt (both short-term and long-term).
2. An increase in the amount of total assets (specifically long-lived assets).
3. A lower income early in the life of the lease and, therefore, lower retained earnings.

<sup>9</sup>The higher charges in the early years is one reason lessees are reluctant to adopt the capital lease accounting method. Lessees (especially those of real estate) claim that it is really no more costly to operate the leased asset in the early years than in the later years. Thus, they advocate an even charge similar to that provided by the operating method.

Thus, many companies believe that capital leases negatively impact their financial position: Their debt to total equity ratio increases, and their rate of return on total assets decreases. As a result, the business community resists capitalizing leases.

Whether this resistance is well founded is debatable. From a cash flow point of view, the company is in the same position whether accounting for the lease as an operating or a capital lease. Managers often argue against capitalization for several reasons: First is that capitalization can more easily lead to **violation of loan covenants**. It also can affect the **amount of compensation received by owners** (for example, a stock compensation plan tied to earnings). Finally, capitalization can **lower rates of return** and **increase debt to equity relationships**, making the company less attractive to present and potential investors.<sup>10</sup>

## ARE YOU LIABLE?

Under current accounting rules, companies can keep the obligations associated with operating leases off the balance sheet. (For example, see the “What Do the Numbers Mean?” box on page 1115 for the effects of this approach for airlines.) This approach may change if the IASB and FASB are able to craft a new lease-accounting rule. The current plans for a new rule in this area should result in many more operating leases on balance sheets. Analysts are beginning to estimate the expected impact of a new rule. As shown in the table below, if the IASB and FASB issue a new rule on operating leases, a company like **Whole Foods** could see its liabilities jump a whopping 374 percent.

*What do the numbers mean?*

### Ring It Up

Rulemakers are debating a change to lease accounting that would have a major impact on the balance sheets of some big-name retailers:

Retailer	Estimated Off-Balance-Sheet Lease Liabilities	Jump in Liabilities If They Were on the Balance Sheet
<b>Whole Foods Market</b> Organic grocer leases all but five of its 175 stores, plus its distribution centers, “bakehouses,” and administrative facilities.	\$1.96 billion	374%
<b>Walgreen</b> Drugstore has opened 886 stores in the past two years. Of all its stores, 82% are leased, a total of \$24 billion in obligations.	15.24	266
<b>Bed Bath &amp; Beyond</b> Home goods retailer leases most of its 809 stores, plus 690,000 square feet of storage space, and 270,000 square feet of offices.	2.24	224
<b>Circuit City Stores</b> Retailer leases 626 U.S. stores, owns 5. Also leases distribution facilities, warehouses, and its headquarters in Richmond, Va.	3.53	208
<b>Starbucks</b> Owns its U.S. roasting and distribution locations, but nearly all of its 6,000 retail coffee bars are leased.	2.45	172
<b>CVS</b> Owns approximately 3% of its 5,471 retail and specialty pharmacy drugstores and leases its mail-order sites.	11.11	160

\*as of 5/22/06

Data: Credit Suisse Group, company reports, Bloomberg Financial Markets.

This is not a pretty picture, but investors need to see it if they are to fully understand a company’s lease obligations.

Source: Nanette Byrnes, “You May Be Liable for That Lease,” *BusinessWeek* (June 5, 2006), p. 76.

<sup>10</sup>One study indicates that management’s behavior did change as a result of the leasing rules. For example, many companies restructure their leases to avoid capitalization. Others increase their purchases of assets instead of leasing. Still others, faced with capitalization, postpone their debt offerings or issue stock instead. However, note that the study found no significant effect on stock or bond prices as a result of capitalization of leases. A. Rashad Abdel-khalik, “The Economic Effects on Lessees of FASB Statement No. 13, Accounting for Leases,” Research Report (Stamford, Conn.: FASB, 1981).

## ACCOUNTING BY THE LESSOR

Earlier in this chapter we discussed leasing’s advantages to the lessee. Three important benefits are available to the lessor:

**INTERNATIONAL INSIGHT**

Recently, the IASB indicated it plans to reform the rules on accounting for leased assets.

- 1. Interest Revenue.** Leasing is a form of financing. Banks, captives, and independent leasing companies find leasing attractive because it provides competitive interest margins.
- 2. Tax Incentives.** In many cases, companies that lease cannot use the tax benefit of the asset, but leasing allows them to transfer such tax benefits to another party (the lessor) in return for a lower rental rate on the leased asset. To illustrate, **Boeing Aircraft** might sell one of its 737 jet planes to a wealthy investor who needed only the tax benefit. The investor then leased the plane to a foreign airline, for whom the tax benefit was of no use. Everyone gained. Boeing sold its airplane, the investor received the tax benefit, and the foreign airline cheaply acquired a 737.<sup>11</sup>
- 3. High Residual Value.** Another advantage to the lessor is the return of the property at the end of the lease term. Residual values can produce very large profits. **Citigroup** at one time assumed that the commercial aircraft it was leasing to the airline industry would have a residual value of 5 percent of their purchase price. It turned out that they were worth 150 percent of their cost—a handsome profit. At the same time, if residual values decline, lessors can suffer losses when less-valuable leased assets are returned at the conclusion of the lease. Recently, automaker **Ford** took a \$2.1 billion write-down on its lease portfolio, when rising gas prices spurred dramatic declines in the resale values of leased trucks and SUVs. Such residual value losses led **Chrysler** to get out of the leasing business altogether.

### Economics of Leasing

A lessor, such as Caterpillar Financial in our earlier example, determines the amount of the rental, basing it on the rate of return—the implicit rate—needed to justify leasing the front-end loader. In establishing the rate of return, Caterpillar considers the credit standing of Sterling Construction, the length of the lease, and the status of the residual value (guaranteed versus unguaranteed).

In the Caterpillar/Sterling example on pages 1124–1127, Caterpillar’s implicit rate was 10 percent, the cost of the equipment to Caterpillar was \$100,000 (also fair market value), and the estimated residual value was zero. Caterpillar determines the amount of the lease payment as follows.

**ILLUSTRATION 21-9**  
Computation of Lease Payments

Fair market value of leased equipment	\$100,000.00
Less: Present value of the residual value	—0—
Amount to be recovered by lessor through lease payments	<u>\$100,000.00</u>
Five beginning-of-the-year lease payments to yield a 10% return (\$100,000 ÷ 4.16986 <sup>a</sup> )	<u>\$ 23,981.62</u>
<sup>a</sup> PV of an annuity due of 1 for 5 years at 10% (Table 6-5)	

If a residual value is involved (whether guaranteed or not), Caterpillar would not have to recover as much from the lease payments. Therefore, the lease payments would be less. (Illustration 21-16, on page 1136, shows this situation.)

<sup>11</sup>Some would argue that there is a loser—the U.S. government. The tax benefits enable the profitable investor to reduce or eliminate taxable income.

## Classification of Leases by the Lessor

For accounting purposes, the **lessor** may classify leases as one of the following:

1. Operating leases.
2. Direct-financing leases.
3. Sales-type leases.

Illustration 21-10 presents two groups of capitalization criteria for the lessor. If at the date of inception, the lessor agrees to a lease that meets **one or more** of the Group I criteria (1, 2, 3, and 4) and **both** of the Group II criteria (1 and 2), the lessor shall classify and account for the arrangement as a direct-financing lease or as a sales-type lease. [7] (Note that the Group I criteria are identical to the criteria that must be met in order for a lessee to classify a lease as a capital lease, as shown in Illustration 21-3 on page 1121.)

### Objective 4

Identify the classifications of leases for the lessor.

#### Capitalization Criteria (Lessor)

##### Group I

1. The lease transfers ownership of the property to the lessee.
2. The lease contains a bargain-purchase option.
3. The lease term is equal to 75 percent or more of the estimated economic life of the leased property.
4. The present value of the minimum lease payments (excluding executory costs) equals or exceeds 90 percent of the fair value of the leased property.

##### Group II

1. Collectibility of the payments required from the lessee is reasonably predictable.
2. No important uncertainties surround the amount of unreimbursable costs yet to be incurred by the lessor under the lease (lessor's performance is substantially complete or future costs are reasonably predictable).

**ILLUSTRATION 21-10**  
Capitalization Criteria for Lessor

Why the Group II requirements? The profession wants to ensure that the lessor has really transferred the risks and benefits of ownership. If collectibility of payments is not predictable or if performance by the lessor is incomplete, then the criteria for revenue recognition have not been met. The lessor should therefore account for the lease as an operating lease.

For example, computer leasing companies at one time used to buy **IBM** equipment, lease the equipment, and remove the leased assets from their balance sheets. In leasing the assets, the computer lessors stated that they would substitute new IBM equipment if obsolescence occurred. However, when IBM introduced a new computer line, IBM refused to sell it to the computer leasing companies. As a result, a number of the lessors could not meet their contracts with their customers and had to take back the old equipment. The computer leasing companies therefore had to reinstate the assets they had taken off the books. Such a case demonstrates one reason for the Group II requirements.

**The distinction for the lessor between a direct-financing lease and a sales-type lease is the presence or absence of a manufacturer's or dealer's profit (or loss):** A sales-type lease involves a manufacturer's or dealer's profit, and a direct-financing lease does not. The profit (or loss) to the lessor is evidenced by the difference between the fair value of the leased property at the inception of the lease and the lessor's cost or carrying amount (book value).

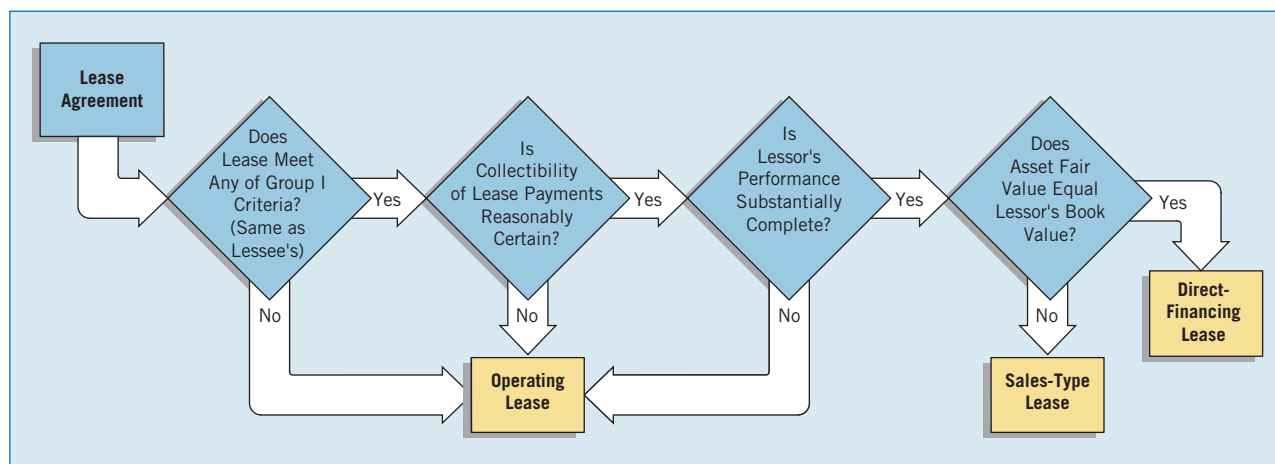

Normally, sales-type leases arise when manufacturers or dealers use leasing as a means of marketing their products. For example, a computer manufacturer will lease its computer equipment (possibly through a captive) to businesses and institutions. Direct-financing leases generally result from arrangements with lessors that are primarily engaged in financing operations (e.g., banks). However, a lessor need not be a manufacturer or dealer to recognize a profit (or loss) at the inception of a lease that requires application of sales-type lease accounting.

#### INTERNATIONAL INSIGHT

U.S. GAAP is consistent with *International Standard No. 17* (Accounting for Leases). However, the international standard is a relatively simple statement of basic principles, whereas the U.S. rules on leases are more prescriptive and detailed.

Lessors classify and account for all leases that do not qualify as direct-financing or sales-type leases as operating leases. Illustration 21-11 shows the circumstances under which a lessor classifies a lease as operating, direct-financing, or sales-type.

### ILLUSTRATION 21-11

Diagram of Lessor's Criteria for Lease Classification

As a consequence of the additional Group II criteria for lessors, a lessor may classify a lease as an **operating** lease but the lessee may classify the same lease as a **capital** lease. In such an event, both the lessor and lessee will carry the asset on their books, and both will depreciate the capitalized asset.

For purposes of comparison with the lessee's accounting, we will illustrate only the operating and direct-financing leases in the following section. We will discuss the more complex sales-type lease later in the chapter.

## Direct-Financing Method (Lessor)

### Objective-5

Describe the lessor's accounting for direct-financing leases.

**Direct-financing leases** are in substance the financing of an asset purchase by the lessee. In this type of lease, the lessor records a **lease receivable** instead of a leased asset. The lease receivable is the present value of the minimum lease payments. Remember that "minimum lease payments" include:

1. Rental payments (excluding executory costs).
2. Bargain-purchase option (if any).
3. Guaranteed residual value (if any).
4. Penalty for failure to renew (if any).

Thus, the lessor records the residual value, whether guaranteed or not. Also, recall that if the lessor pays any executory costs, then it should reduce the rental payment by that amount in computing minimum lease payments.

The following presentation, using the data from the preceding Caterpillar/Sterling example on pages 1124–1127, illustrates the accounting treatment for a direct-financing lease. We repeat here the information relevant to Caterpillar in accounting for this lease transaction.

1. The term of the lease is five years beginning January 1, 2011, noncancelable, and requires equal rental payments of \$25,981.62 at the beginning of each year. Payments include \$2,000 of executory costs (property taxes).
2. The equipment (front-end loader) has a cost of \$100,000 to Caterpillar, a fair value at the inception of the lease of \$100,000, an estimated economic life of five years, and no residual value.

3. Caterpillar incurred no initial direct costs in negotiating and closing the lease transaction.
4. The lease contains no renewal options. The equipment reverts to Caterpillar at the termination of the lease.
5. Collectibility is reasonably assured and Caterpillar incurs no additional costs (with the exception of the property taxes being collected from Sterling).
6. Caterpillar sets the annual lease payments to ensure a rate of return of 10 percent (implicit rate) on its investment as shown in Illustration 21-12.

Fair market value of leased equipment	\$100,000.00
Less: Present value of residual value	—0—
Amount to be recovered by lessor through lease payments	<u>\$100,000.00</u>
Five beginning-of-the-year lease payments to yield a 10% return (\$100,000 ÷ 4.16986 <sup>a</sup> )	<u>\$ 23,981.62</u>
<sup>a</sup> PV of an annuity due of 1 for 5 years at 10% (Table 6-5).	

**ILLUSTRATION 21-12**  
Computation of Lease Payments

The lease meets the criteria for classification as a direct-financing lease for several reasons: (1) The lease term exceeds 75 percent of the equipment's estimated economic life. (2) The present value of the minimum lease payments exceeds 90 percent of the equipment's fair value. (3) Collectibility of the payments is reasonably assured. And (4) Caterpillar incurs no further costs. It is not a sales-type lease because there is no difference between the fair value (\$100,000) of the loader and Caterpillar's cost (\$100,000).

The Lease Receivable is the present value of the minimum lease payments (excluding executory costs which are property taxes of \$2,000). Caterpillar computes it as follows.

Lease receivable = (\$25,981.62 – \$2,000) × Present value of an annuity due of 1 for 5 periods at 10% (Table 6-5)
= \$23,981.62 × 4.16986
= <b>\$100,000</b>

**ILLUSTRATION 21-13**  
Computation of Lease Receivable

Caterpillar records the lease of the asset and the resulting receivable on January 1, 2011 (the inception of the lease), as follows.

Lease Receivable	100,000	
Equipment		100,000

Companies often **report** the lease receivable in the balance sheet as "Net investment in capital leases." Companies classify it either as current or noncurrent, depending on when they recover the net investment.<sup>12</sup>

Caterpillar replaces its investment (the leased front-end loader, a cost of \$100,000), with a lease receivable. In a manner similar to Sterling's treatment of interest, Caterpillar applies the effective-interest method and recognizes interest revenue as a function of the lease receivable balance, as Illustration 21-14 (on page 1134) shows.

<sup>12</sup>In the notes to the financial statements (see Illustration 21-32, page 1147), the lease receivable is reported at its gross amount (minimum lease payments plus the unguaranteed residual value). In addition, the lessor also reports total unearned interest related to the lease. As a result, some lessors record lease receivable on a gross basis and record the unearned interest in a separate account. We illustrate the net approach here because it is consistent with the accounting for the lessee.

**ILLUSTRATION 21-14**

Lease Amortization  
Schedule for Lessor—  
Annuity-Due Basis

<b>CATERPILLAR FINANCIAL</b>					
<b>LEASE AMORTIZATION SCHEDULE</b>					
<b>ANNUITY-DUE BASIS</b>					
Date	Annual Lease Payment	Executory Costs	Interest (10%) on Lease Receivable	Lease Receivable Recovery	Lease Receivable
	(a)	(b)	(c)	(d)	(e)
1/1/11					\$100,000.00
1/1/11	\$ 25,981.62	\$ 2,000.00	\$ —	\$ 23,981.62	76,018.38
1/1/12	25,981.62	2,000.00	7,601.84	16,379.78	59,638.60
1/1/13	25,981.62	2,000.00	5,963.86	18,017.76	41,620.84
1/1/14	25,981.62	2,000.00	4,162.08	19,819.54	21,801.30
1/1/15	25,981.62	2,000.00	2,180.32*	21,801.30	—
	<u>\$129,908.10</u>	<u>\$10,000.00</u>	<u>\$19,908.10</u>	<u>\$100,000.00</u>	

(a) Annual rental that provides a 10% return on net investment.  
 (b) Executory costs included in rental payment.  
 (c) Ten percent of the preceding balance of (e) except for 1/1/11.  
 (d) (a) minus (b) and (c).  
 (e) Preceding balance minus (d).  
 \*Rounded by 19 cents.

On January 1, 2011, Caterpillar records receipt of the first year’s lease payment as follows.

Cash	25,981.62	
Lease Receivable		23,981.62
Property Tax Expense/Property Taxes Payable		2,000.00

On December 31, 2011, Caterpillar recognizes the interest revenue earned during the first year through the following entry.

Interest Receivable	7,601.84	
Interest Revenue—Leases		7,601.84

At December 31, 2011, Caterpillar reports the lease receivable in its balance sheet among current assets or noncurrent assets, or both. It classifies the portion due within one year or the operating cycle, whichever is longer, as a current asset, and the rest with noncurrent assets.

Illustration 21-15 shows the assets section as it relates to lease transactions at December 31, 2011.

**ILLUSTRATION 21-15**

Reporting Lease  
Transactions by Lessor

<u>Current assets</u>	
Interest receivable	\$ 7,601.84
Lease receivable	16,379.78
<u>Noncurrent assets (investments)</u>	
Lease receivable	\$59,638.60

The following entries record receipt of the second year’s lease payment and recognition of the interest earned.

<b>January 1, 2012</b>		
Cash	25,981.62	
Lease Receivable		16,379.78
Interest Receivable		7,601.84
Property Tax Expense/Property Taxes Payable		2,000.00
<b>December 31, 2012</b>		
Interest Receivable	5,963.86	
Interest Revenue—Leases		5,963.86

Journal entries through 2015 follow the same pattern except that Caterpillar records no entry in 2015 (the last year) for earned interest. Because it fully collects the receivable by January 1, 2015, no balance (investment) is outstanding during 2015. Caterpillar **recorded no depreciation**. If Sterling buys the loader for \$5,000 upon expiration of the lease, Caterpillar recognizes disposition of the equipment as follows.

Cash	5,000	
Gain on Sale of Leased Equipment		5,000

## Operating Method (Lessor)

Under the **operating method**, the lessor records each rental receipt as rental revenue. It **depreciates the leased asset in the normal manner**, with the depreciation expense of the period matched against the rental revenue. The amount of revenue recognized in each accounting period is a level amount (straight-line basis) regardless of the lease provisions, unless another systematic and rational basis better represents the time pattern in which the lessor derives benefit from the leased asset.

In addition to the depreciation charge, the lessor expenses maintenance costs and the cost of any other services rendered under the provisions of the lease that pertain to the current accounting period. The lessor **amortizes over the life of the lease** any costs paid to independent third parties, such as appraisal fees, finder's fees, and costs of credit checks, usually on a straight-line basis.

To illustrate the operating method, assume that the direct-financing lease illustrated in the previous section does not qualify as a capital lease. Therefore, Caterpillar accounts for it as an operating lease. It records the cash rental receipt, assuming the \$2,000 was for property tax expense, as follows.

Cash	25,981.62	
Rental Revenue		25,981.62

Caterpillar records depreciation as follows (assuming a straight-line method, a cost basis of \$100,000, and a five-year life).

Depreciation Expense—Leased Equipment	20,000	
Accumulated Depreciation—Leased Equipment		20,000

If Caterpillar pays property taxes, insurance, maintenance, and other operating costs during the year, it records them as expenses chargeable against the gross rental revenues.

If Caterpillar owns plant assets that it uses in addition to those leased to others, the company **separately classifies the leased equipment and accompanying accumulated depreciation** as Equipment Leased to Others or Investment in Leased Property. If significant in amount or in terms of activity, Caterpillar separates the rental revenues and accompanying expenses in the income statement from sales revenue and cost of goods sold.

## SPECIAL ACCOUNTING PROBLEMS

The features of lease arrangements that cause unique accounting problems are:

1. Residual values.
2. Sales-type leases (lessor).
3. Bargain-purchase options.
4. Initial direct costs.
5. Current versus noncurrent classification.
6. Disclosure.

### Objective • 6

Identify special features of lease arrangements that cause unique accounting problems.

We discuss each of these features on the following pages.

## Residual Values

Up to this point, in order to develop the basic accounting issues related to lessee and lessor accounting, we have generally ignored residual values. Accounting for residual values is complex and will probably provide you with the greatest challenge in understanding lease accounting.

### Meaning of Residual Value

The **residual value** is the estimated fair value of the leased asset at the end of the lease term. Frequently, a significant residual value exists at the end of the lease term, especially when the economic life of the leased asset exceeds the lease term. If title does not pass automatically to the lessee (criterion 1) and a bargain-purchase option does not exist (criterion 2), the lessee returns physical custody of the asset to the lessor at the end of the lease term.<sup>13</sup>

### Guaranteed versus Unguaranteed

The residual value may be unguaranteed or guaranteed by the lessee. Sometimes the lessee agrees to make up any deficiency below a stated amount that the lessor realizes in residual value at the end of the lease term. In such a case, that stated amount is the **guaranteed residual value**.

The parties to a lease use guaranteed residual value in lease arrangements for two reasons. The first is a business reason: It protects the lessor against any loss in estimated residual value, thereby ensuring the lessor of the desired rate of return on investment. The second reason is an accounting benefit that you will learn from the discussion at the end of this chapter.

### Lease Payments

A guaranteed residual value—by definition—has more assurance of realization than does an unguaranteed residual value. As a result, the lessor may adjust lease payments because of the increased certainty of recovery. After the lessor establishes this rate, it makes no difference from an accounting point of view whether the residual value is guaranteed or unguaranteed. The net investment that the lessor records (once the rate is set) will be the same.

Assume the same data as in the Caterpillar/Sterling illustrations except that Caterpillar estimates a residual value of \$5,000 at the end of the five-year lease term. In addition, Caterpillar assumes a 10 percent return on investment (ROI),<sup>14</sup> whether the residual value is guaranteed or unguaranteed. Caterpillar would compute the amount of the lease payments as follows.

**ILLUSTRATION 21-16**  
Lessor's Computation of  
Lease Payments

CATERPILLAR'S COMPUTATION OF LEASE PAYMENTS (10% ROI) GUARANTEED OR UNGUARANTEED RESIDUAL VALUE ANNUITY-DUE BASIS, INCLUDING RESIDUAL VALUE	
Fair market value of leased asset to lessor	\$100,000.00
Less: Present value of residual value (\$5,000 × .62092, Table 6-2)	<u>3,104.60</u>
Amount to be recovered by lessor through lease payments	\$ 96,895.40
Five periodic lease payments (\$96,895.40 ÷ 4.16986, Table 6-5)	<u>\$ 23,237.09</u>

<sup>13</sup>When the lease term and the economic life are not the same, the residual value and the salvage value of the asset will probably differ. For simplicity, we will assume that residual value and salvage value are the same, even when the economic life and lease term vary.

<sup>14</sup>Technically, the rate of return Caterpillar demands would differ depending upon whether the residual value was guaranteed or unguaranteed. To simplify the illustrations, we are ignoring this difference in subsequent sections.

Contrast the foregoing lease payment amount to the lease payments of \$23,981.62 as computed in Illustration 21-9 (on page 1130), where no residual value existed. In the second example, the payments are less, because the present value of the residual value reduces Caterpillar’s total recoverable amount from \$100,000 to \$96,895.40.

**Lessee Accounting for Residual Value**

Whether the estimated residual value is guaranteed or unguaranteed has both economic and accounting consequence to the lessee. We saw the economic consequence—lower lease payments—in the preceding example. The accounting consequence is that the **minimum lease payments**, the basis for capitalization, include the guaranteed residual value but excludes the unguaranteed residual value.

*Guaranteed Residual Value (Lessee Accounting).* A guaranteed residual value affects the lessee’s computation of minimum lease payments. Therefore it also affects the amounts capitalized as a leased asset and a lease obligation. In effect, the guaranteed residual value is an additional lease payment that the lessee will pay in property or cash, or both, at the end of the lease term.

**Objective 7**  
Describe the effect of residual values, guaranteed and unguaranteed, on lease accounting.

Using the rental payments as computed by the lessor in Illustration 21-16, the minimum lease payments are \$121,185.45  $(\$23,237.09 \times 5) + \$5,000$ . Illustration 21-17 shows the capitalized present value of the minimum lease payments (excluding executory costs) for Sterling Construction.

<b>STERLING’S CAPITALIZED AMOUNT (10% RATE)</b>	
<i>ANNUITY-DUE BASIS, INCLUDING GUARANTEED RESIDUAL VALUE</i>	
Present value of five annual rental payments $(\$23,237.09 \times 4.16986, \text{ Table } 6-5)$	\$ 96,895.40
Present value of guaranteed residual value of \$5,000 due five years after date of inception: $(\$5,000 \times .62092, \text{ Table } 6-2)$	<u>3,104.60</u>
<b>Lessee’s capitalized amount</b>	<b><u>\$100,000.00</u></b>

**ILLUSTRATION 21-17**  
Computation of Lessee’s Capitalized Amount—Guaranteed Residual Value

Sterling prepares a schedule of interest expense and amortization of the \$100,000 lease liability. That schedule, shown in Illustration 21-18, is based on a \$5,000 final guaranteed residual value payment at the end of five years.

<b>STERLING CONSTRUCTION</b>					
<b>LEASE AMORTIZATION SCHEDULE</b>					
<i>ANNUITY-DUE BASIS, GUARANTEED RESIDUAL VALUE—GRV</i>					
Date	Lease Payment Plus GRV	Executory Costs	Interest (10%) on Liability	Reduction of Lease Liability	Lease Liability
(a)	(b)	(c)	(d)	(e)	(e)
1/1/11					\$100,000.00
1/1/11	\$ 25,237.09	\$ 2,000	–0–	\$ 23,237.09	76,762.91
1/1/12	25,237.09	2,000	\$ 7,676.29	15,560.80	61,202.11
1/1/13	25,237.09	2,000	6,120.21	17,116.88	44,085.23
1/1/14	25,237.09	2,000	4,408.52	18,828.57	25,256.66
1/1/15	25,237.09	2,000	2,525.67	20,711.42	4,545.24
12/31/15	5,000.00*		454.76**	4,545.24	–0–
	<u>\$131,185.45</u>	<u>\$10,000</u>	<u>\$21,185.45</u>	<u>\$100,000.00</u>	

(a) Annual lease payment as required by lease.      \*Represents the guaranteed residual value.  
 (b) Executory costs included in rental payment.      \*\*Rounded by 24 cents.  
 (c) Preceding balance of (e) × 10%, except 1/1/11.  
 (d) (a) minus (b) and (c).  
 (e) Preceding balance minus (d).

**ILLUSTRATION 21-18**  
Lease Amortization Schedule for Lessee—Guaranteed Residual Value

Sterling records the leased asset (front-end loader) and liability, depreciation, interest, property tax, and lease payments on the basis of a guaranteed residual value. (These journal entries are shown in Illustration 21-23, on page 1140.) The format of these entries is the same as illustrated earlier, although the amounts are different because of the guaranteed residual value. Sterling records the loader at \$100,000 and depreciates it over five years. To compute depreciation, it subtracts the guaranteed residual value from the cost of the loader. Assuming that Sterling uses the straight-line method, the depreciation expense each year is \$19,000  $[(\$100,000 - \$5,000) \div 5 \text{ years}]$ .

At the end of the lease term, before the lessee transfers the asset to Caterpillar, the lease asset and liability accounts have the following balances.

**ILLUSTRATION 21-19**  
Account Balances on Lessee’s Books at End of Lease Term—Guaranteed Residual Value

Leased equipment under capital leases	\$100,000.00	Interest payable	\$ 454.76
Less: Accumulated depreciation—capital leases	95,000.00	Lease liability	4,545.24
	<u>\$ 5,000.00</u>		<u>\$5,000.00</u>

If, at the end of the lease, the fair market value of the residual value is less than \$5,000, Sterling will have to record a loss. Assume that Sterling depreciated the leased asset down to its residual value of \$5,000 but that the fair market value of the residual value at December 31, 2015, was \$3,000. In this case, Sterling would have to report a loss of \$2,000. Assuming that it pays cash to make up the residual value deficiency, Sterling would make the following journal entry.

Loss on Capital Lease	2,000.00	
Interest Expense (or Interest Payable)	454.76	
Lease Liability	4,545.24	
Accumulated Depreciation—Capital Leases	95,000.00	
Leased Equipment under Capital Leases		100,000.00
Cash		2,000.00

If the fair market value *exceeds* \$5,000, a gain may be recognized. Caterpillar and Sterling may apportion gains on guaranteed residual values in whatever ratio the parties initially agree.

When there is a guaranteed residual value, the lessee must be careful not to depreciate the total cost of the asset. For example, if Sterling mistakenly depreciated the total cost of the loader (\$100,000), a misstatement would occur. That is, the carrying amount of the asset at the end of the lease term would be zero, but Sterling would show the liability under the capital lease at \$5,000. In that case, if the asset was worth \$5,000, Sterling would end up reporting a gain of \$5,000 when it transferred the asset back to Caterpillar. As a result, Sterling would overstate depreciation and would understate net income in 2011–2014; in the last year (2015) net income would be overstated.

**Unguaranteed Residual Value (Lessee Accounting).** From the lessee’s viewpoint, an **unguaranteed residual value** is the same as no residual value in terms of its effect upon the lessee’s method of computing the minimum lease payments and the capitalization of the leased asset and the lease liability.

Assume the same facts as those above except that the \$5,000 residual value is **unguaranteed** instead of guaranteed. The amount of the annual lease payments would be the same—\$23,237.09. Whether the residual value is guaranteed or unguaranteed, Caterpillar will recover the same amount through lease rentals—that is, \$96,895.40. The

minimum lease payments are \$116,185.45 ( $\$23,237.09 \times 5$ ). Lessee Company would capitalize the amount shown in Illustration 21-20.

<b>STERLING'S CAPITALIZED AMOUNT (10% RATE)</b>	
<b>ANNUITY-DUE BASIS, INCLUDING UNGUARANTEED RESIDUAL VALUE</b>	
Present value of 5 annual rental payments of $\$23,237.09 \times 4.16986$ (Table 6-5)	\$96,895.40
Unguaranteed residual value of \$5,000 (not capitalized by lessee)	-0-
<b>Lessee's capitalized amount</b>	<b><u>\$96,895.40</u></b>

**ILLUSTRATION 21-20**  
Computation of Lessee's Capitalized Amount—Unguaranteed Residual Value

Illustration 21-21 shows Sterling's schedule of interest expense and amortization of the lease liability of \$96,895.40, assuming an unguaranteed residual value of \$5,000 at the end of five years.

<b>STERLING CONSTRUCTION</b>

 (d) (a) minus (b) and (c).  
 (e) Preceding balance minus (d).

\*Rounded by 19 cents.

**ILLUSTRATION 21-21**  
Lease Amortization Schedule for Lessee—Unguaranteed Residual Value

Sterling records the leased asset and liability, depreciation, interest, property tax, and lease payments on the basis of an unguaranteed residual value. (These journal entries are shown in Illustration 21-23, on page 1140.) The format of these capital lease entries is the same as illustrated earlier. Note that Sterling records the leased asset at \$96,895.40 and depreciates it over five years. Assuming that it uses the straight-line method, the depreciation expense each year is \$19,379.08 ( $\$96,895.40 \div 5$  years). At the end of the lease term, before Sterling transfers the asset to Caterpillar, the lease asset and liability accounts have the following balances.

Leased equipment under capital leases	\$96,895	Lease liability	<u>\$-0-</u>
Less: Accumulated depreciation—capital leases	96,895		
	<u>\$ -0-</u>		

**ILLUSTRATION 21-22**  
Account Balances on Lessee's Books at End of Lease Term—Unguaranteed Residual Value

Assuming that Sterling has fully depreciated the leased asset and has fully amortized the lease liability, no entry is required at the end of the lease term, except to remove the asset from the books.

If Sterling depreciated the asset down to its unguaranteed residual value, a misstatement would occur. That is, the carrying amount of the leased asset would be \$5,000 at the end of the lease, but the liability under the capital lease would be stated at zero before the transfer of the asset. Thus, Sterling would end up reporting a loss of \$5,000 when it transferred the asset back to Caterpillar. Sterling would understate depreciation and would overstate net income in 2011–2014; in the last year (2015) net income would be understated because of the recorded loss.

*Lessee Entries Involving Residual Values.* Illustration 21-23 shows, in comparative form, Sterling’s entries for both a guaranteed and an unguaranteed residual value.

<u>Guaranteed Residual Value</u>		<u>Unguaranteed Residual Value</u>	
<b>Capitalization of lease (January 1, 2011):</b>			
Leased Equipment under Capital Leases	100,000.00	Leased Equipment under Capital Leases	96,895.40
Lease Liability	100,000.00	Lease Liability	96,895.40
<b>First payment (January 1, 2011):</b>			
Property Tax Expense	2,000.00	Property Tax Expense	2,000.00
Lease Liability	23,237.09	Lease Liability	23,237.09
Cash	25,237.09	Cash	25,237.09
<b>Adjusting entry for accrued interest (December 31, 2011):</b>			
Interest Expense	7,676.29	Interest Expense	7,365.83
Interest Payable	7,676.29	Interest Payable	7,365.83
<b>Entry to record depreciation (December 31, 2011):</b>			
Depreciation Expense—Capital Leases	19,000.00	Depreciation Expense—Capital Leases	19,379.08
Accumulated Depreciation—Capital Leases (\$100,000 – \$5,000) ÷ 5 years	19,000.00	Accumulated Depreciation—Capital Leases (\$96,895.40 ÷ 5 years)	19,379.08
<b>Second payment (January 1, 2012):</b>

Cash	25,237.09	Cash	25,237.09

**ILLUSTRATION 21-23**  
Comparative Entries for Guaranteed and Unguaranteed Residual Values, Lessee Company

**Lessor Accounting for Residual Value**

As we indicated earlier, the lessor will recover the same net investment whether the residual value is guaranteed or unguaranteed. That is, the lessor works on the assumption that it will realize **the residual value at the end of the lease term whether guaranteed or unguaranteed**. The lease payments required in order for the company to earn a certain return on investment are the same (e.g., \$23,237.09 in our example) whether the residual value is guaranteed or unguaranteed.

To illustrate, we again use the Caterpillar/Sterling data and assume classification of the lease as a direct-financing lease. With a residual value (either guaranteed or unguaranteed) of \$5,000, Caterpillar determines the payments as follows.

Fair market value of leased equipment	\$100,000.00
Less: Present value of residual value (\$5,000 × .62092, Table 6-2)	<u>3,104.60</u>
Amount to be recovered by lessor through lease payments	<u>\$ 96,895.40</u>
Five beginning-of-the-year lease payments to yield a 10% return (\$96,895.40 ÷ 4.16986, Table 6-5)	<u>\$ 23,237.09</u>

**ILLUSTRATION 21-24**  
Computation of Direct-Financing Lease Payments

The amortization schedule is the same for guaranteed or unguaranteed residual value, as Illustration 21-25 shows.

<b>CATERPILLAR FINANCIAL</b>					
<b>LEASE AMORTIZATION SCHEDULE</b>					
<b>ANNUITY-DUE BASIS, GUARANTEED OR UNGUARANTEED RESIDUAL VALUE</b>					
Date	Annual Lease Payment Plus Residual Value (a)	Executory Costs (b)	Interest (10%) on Lease Receivable (c)	Lease Receivable Recovery (d)	Lease Receivable (e)
1/1/11					\$100,000.00
1/1/11	\$ 25,237.09	\$ 2,000.00	\$ -0-	\$ 23,237.09	76,762.91

 (e) Preceding balance minus (d).  
 \*Rounded by 24 cents.

**ILLUSTRATION 21-25**  
Lease Amortization Schedule, for Lessor—Guaranteed or Unguaranteed Residual Value

Using the amounts computed above, Caterpillar would make the following entries for this direct-financing lease in the first year. Note the similarity to Sterling’s entries in Illustration 21-23.

<b>Inception of lease (January 1, 2011):</b>		
Lease Receivable	100,000.00	
Equipment		100,000.00
<b>First payment received (January 1, 2011):</b>		
Cash	25,237.09	
Lease Receivable		23,237.09
Property Tax Expense/Property Taxes Payable		2,000.00
<b>Adjusting entry for accrued interest (December 31, 2011):</b>		
Interest Receivable	7,676.29	
Interest Revenue		7,676.29

**ILLUSTRATION 21-26**  
Entries for Either Guaranteed or Unguaranteed Residual Value, Lessor Company

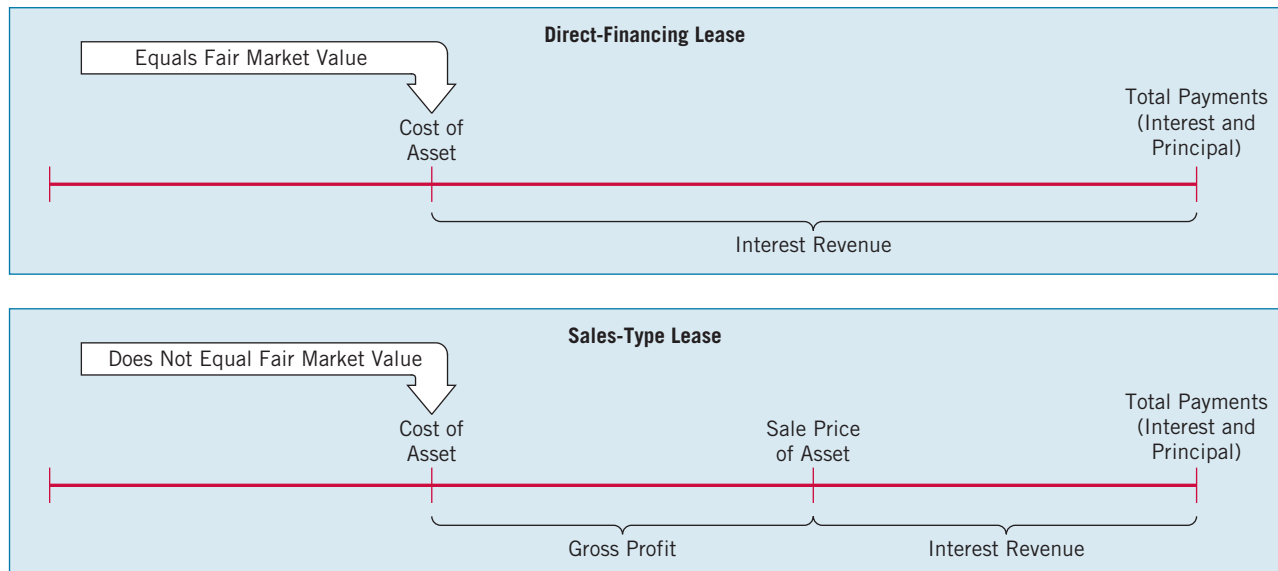

### Sales-Type Leases (Lessor)

As already indicated, the primary difference between a direct-financing lease and a sales-type lease is the manufacturer’s or dealer’s gross profit (or loss). The diagram in Illustration 21-27 (on page 1142) presents the distinctions between direct-financing and sales-type leases.

**Objective-8**

Describe the lessor’s accounting for sales-type leases.

**ILLUSTRATION 21-27**  
Direct-Financing versus  
Sales-Type Leases

In a sales-type lease, the lessor records the sale price of the asset, the cost of goods sold and related inventory reduction, and the lease receivable. The information necessary to record the sales-type lease is as follows.

#### SALES-TYPE LEASE TERMS

**LEASE RECEIVABLE** (also referred to as **NET INVESTMENT**). The present value of the minimum lease payments plus the present value of any unguaranteed residual value. The lease receivable therefore includes the present value of the residual value, whether guaranteed or not.

**SALES PRICE OF THE ASSET.** The present value of the minimum lease payments.

**COST OF GOODS SOLD.** The cost of the asset to the lessor, less the present value of any unguaranteed residual value.

When recording sales revenue and cost of goods sold, there is a difference in the accounting for guaranteed and unguaranteed residual values. The guaranteed residual value can be considered part of sales revenue because the lessor knows that the entire asset has been sold. But there is less certainty that the unguaranteed residual portion of the asset has been “sold” (i.e., will be realized). Therefore, the lessor recognizes sales and cost of goods sold only for the portion of the asset for which realization is assured. However, **the gross profit amount on the sale of the asset is the same whether a guaranteed or unguaranteed residual value is involved.**

To illustrate a sales-type lease with a guaranteed residual value and with an unguaranteed residual value, assume the same facts as in the preceding direct-financing lease situation (pages 1132–1135). The estimated residual value is \$5,000 (the present value of which is \$3,104.60), and the leased equipment has an \$85,000 cost to the dealer, Caterpillar. Assume that the fair market value of the residual value is \$3,000 at the end of the lease term.

Illustration 21-28 shows computation of the amounts relevant to a sales-type lease.

Sales-Type Lease		
	Guaranteed Residual Value	Unguaranteed Residual Value
Lease receivable	\$100,000 [\$23,237.09 × 4.16986 (Table 6-5) + \$5,000 × .62092 (Table 6-2)]	Same
Sales price of the asset	\$100,000	\$96,895.40 (\$100,000 – \$3,104.60)
Cost of goods sold	\$85,000	\$81,895.40 (\$85,000 – \$3,104.60)
Gross profit	\$15,000 (\$100,000 – \$85,000)	\$15,000 (\$96,895.40 – \$81,895.40)

**ILLUSTRATION 21-28**  
Computation of Lease Amounts by Caterpillar Financial—Sales-Type Lease

Caterpillar records the same profit (\$15,000) at the point of sale whether the residual value is guaranteed or unguaranteed. The difference between the two is that **the sales revenue and cost of goods sold amounts are different.**

In making this computation, we deduct the present value of the unguaranteed residual value from sales revenue and cost of goods sold for two reasons: (1) The criteria for revenue recognition have not been met. (2) It is improper to match expense against revenue not yet recognized. The revenue recognition criteria have not been met **because of the uncertainty surrounding the realization of the unguaranteed residual value.**

Caterpillar makes the following entries to record this transaction on January 1, 2011, and the receipt of the residual value at the end of the lease term.

**ILLUSTRATION 21-29**  
Entries for Guaranteed and Unguaranteed Residual Values, Lessor Company—Sales-Type Lease

<u>Guaranteed Residual Value</u>		<u>Unguaranteed Residual Value</u>	
<b>To record sales-type lease at inception (January 1, 2011):</b>			
Cost of Goods Sold	85,000.00	Cost of Goods Sold	81,895.40
Lease Receivable	100,000.00	Lease Receivable	100,000.00
Sales Revenue	100,000.00	Sales Revenue	96,895.40
Inventory	85,000.00	Inventory	85,000.00
<b>To record receipt of the first lease payment (January 1, 2011):</b>			
Cash	25,237.09	Cash	25,237.09
Lease Receivable	23,237.09	Lease Receivable	23,237.09
Property Tax Exp./Pay.	2,000.00	Property Tax Exp./Pay.	2,000.00
<b>To recognize interest revenue earned during the first year (December 31, 2011):</b>			
Interest Receivable	7,676.29	Interest Receivable	7,676.29
Interest Revenue	7,676.29	Interest Revenue	7,676.29
(See lease amortization schedule, Illustration 21-25 on page 1141.)			
<b>To record receipt of the second lease payment (January 1, 2011):</b>			
Cash	25,237.09	Cash	25,237.09
Interest Receivable	7,676.29	Interest Receivable	7,676.29
Lease Receivable	15,560.80	Lease Receivable	15,560.80
Property Tax Exp./Pay.	2,000.00	Property Tax Exp./Pay.	2,000.00
<b>To recognize interest revenue earned during the second year (December 31, 2012):</b>			
Interest Receivable	6,120.21	Interest Receivable	6,120.21
Interest Revenue	6,120.21	Interest Revenue	6,120.21
<b>To record receipt of residual value at end of lease term (December 31, 2015):</b>			
Inventory	3,000	Inventory	3,000
Cash	2,000	Loss on Capital Lease	2,000
Lease Receivable	5,000	Lease Receivable	5,000

Companies must periodically review the **estimated unguaranteed residual value in a sales-type lease**. If the estimate of the unguaranteed residual value declines, the company must revise the accounting for the transaction using the changed estimate. The decline represents a reduction in the lessor's lease receivable (net investment). The lessor recognizes the decline as a loss in the period in which it reduces the residual estimate. Companies do not recognize upward adjustments in estimated residual value.

### What do the numbers mean?

#### XEROX TAKES ON THE SEC

**Xerox** derives much of its income from leasing equipment. Reporting such leases as sales leases, Xerox records a lease contract as a sale, therefore recognizing income immediately. One problem is that each lease receipt consists of payments for items such as supplies, services, financing, and equipment.

The SEC *accused* Xerox of inappropriately allocating lease receipts, which affects the timing of income that it reports. If Xerox applied SEC guidelines, it would report income in different time periods. Xerox contended that its methods were correct. It also noted that when the lease term is up, the bottom line is the same using either the SEC's recommended allocation method or its current method.

Although Xerox can refuse to change its method, the SEC has the right to prevent a company from selling stock or bonds to the public if the agency rejects filings of the company.

Apparently, being able to access public markets is very valuable to Xerox. The company agreed to change its accounting according to SEC wishes, and Xerox will pay \$670 million to settle a shareholder lawsuit related to its lease transactions. Its former auditor, **KPMG LLP**, will pay \$80 million.

*Source:* Adapted from "Xerox Takes on the SEC," *Accounting Web* (January 9, 2002) ([www.accountingweb.com](http://www.accountingweb.com)); and K. Shwiff and M. Maremont, "Xerox, KPMG Settle Shareholder Lawsuit," *Wall Street Journal Online* (March 28, 2008), p. B3.

### Bargain-Purchase Option (Lessee)

As stated earlier, a bargain-purchase option allows the lessee to purchase the leased property for a future price that is substantially lower than the property's expected future fair value. The price is so favorable at the lease's inception that the future exercise of the option appears to be reasonably assured. If a bargain-purchase option exists, **the lessee must increase the present value of the minimum lease payments by the present value of the option price.**

For example, assume that Sterling Construction in Illustration 21-18 on page 1137 had an option to buy the leased equipment for \$5,000 at the end of the five-year lease term. At that point, Sterling and Caterpillar expect the fair value to be \$18,000. The significant difference between the option price and the fair value creates a bargain-purchase option, and the exercise of that option is reasonably assured.

A bargain-purchase option affects the accounting for leases in essentially the same way as a guaranteed residual value. In other words, with a guaranteed residual value, the lessee must pay the residual value at the end of the lease. Similarly, a purchase option that is a bargain will almost certainly be paid by the lessee. Therefore, the computations, amortization schedule, and entries that would be prepared for this \$5,000 bargain-purchase option are identical to those shown for the \$5,000 guaranteed residual value (see Illustrations 21-16, 21-17, and 21-18 on pages 1136 and 1137).

The only difference between the accounting treatment for a bargain-purchase option and a guaranteed residual value of identical amounts and circumstances is in the **computation of the annual depreciation**. In the case of a guaranteed residual value, Sterling depreciates the asset over the lease term; in the case of a bargain-purchase option, it uses the **economic life** of the asset.

## Initial Direct Costs (Lessor)

**Initial direct costs** are of two types: incremental and internal. [8] **Incremental direct costs** are paid to independent third parties for originating a lease arrangement. Examples include the cost of independent appraisal of collateral used to secure a lease, the cost of an outside credit check of the lessee, or a broker's fee for finding the lessee.

**Internal direct costs** are directly related to specified activities performed by the lessor on a given lease. Examples are evaluating the prospective lessee's financial condition; evaluating and recording guarantees, collateral, and other security arrangements; negotiating lease terms and preparing and processing lease documents; and closing the transaction. The costs directly related to an employee's time spent on a specific lease transaction are also considered initial direct costs.

However, initial direct costs should **not** include **internal indirect costs**. Such costs are related to activities the lessor performs for advertising, servicing existing leases, and establishing and monitoring credit policies. Nor should the lessor include the costs for supervision and administration or for expenses such as rent and depreciation.

The accounting for initial direct costs depends on the type of lease:

- For **operating leases**, the lessor should defer initial direct costs and **allocate them over the lease term** in proportion to the recognition of rental revenue.
- For **sales-type leases**, the lessor expenses the initial direct costs **in the period** in which it recognizes the profit on the sale.
- For a **direct-financing lease**, the lessor adds initial direct costs to the net investment in the lease and **amortizes them over the life of the lease as a yield adjustment**.

In a direct-financing lease, the lessor must disclose the unamortized deferred initial direct costs that are part of its investment in the direct-financing lease. For example, if the carrying value of the asset in the lease is \$4,000,000 and the lessor incurs initial direct costs of \$35,000, then the lease receivable (net investment in the lease) would be \$4,035,000. The yield would be lower than the initial rate of return, and the lessor would adjust the yield to ensure proper amortization of the amount over the life of the lease.

## Current versus Noncurrent

Earlier in the chapter we presented the classification of the lease liability/receivable in an annuity-due situation. Illustration 21-7 (on page 1126) indicated that Sterling's current liability is the payment of \$23,981.62 (excluding \$2,000 of executory costs) to be made on January 1 of the next year. Similarly, as shown in Illustration 21-15 (on page 1134), Caterpillar's current asset is the \$23,981.62 (excluding \$2,000 of executory costs) it will collect on January 1 of the next year. In these annuity-due instances, the balance sheet date is December 31 and the due date of the lease payment is January 1 (less than one year), so the present value (\$23,981.62) of the payment due the following January 1 is the same as the rental payment (\$23,981.62).

What happens if the situation is an ordinary annuity rather than an annuity due? For example, assume that the rent is due at the **end of the year** (December 31) rather than at the beginning (January 1). *FASB Statement No. 13* does not indicate how to measure the current and noncurrent amounts. It requires that for the lessee the "obligations shall be separately identified on the balance sheet as obligations under capital leases and shall be subject to the same considerations as other obligations in classifying them with current and noncurrent liabilities in classified balance sheets." [9] **The most common method of measuring the current liability portion in ordinary annuity leases is the change-in-the-present-value method.**<sup>15</sup>

<sup>15</sup>For additional discussion on this approach and possible alternatives, see R. J. Swieringa, "When Current Is Noncurrent and Vice Versa!" *The Accounting Review* (January 1984), pp. 123–30, and A. W. Richardson, "The Measurement of the Current Portion of the Long-Term Lease Obligations—Some Evidence from Practice," *The Accounting Review* (October 1985), pp. 744–52.

To illustrate the change-in-the-present-value method, assume an ordinary-annuity situation with the same facts as the Caterpillar/Sterling case, excluding the \$2,000 of executory costs. Because Sterling pays the rents at the end of the period instead of at the beginning, Caterpillar sets the five rents at \$26,379.73, to have an effective interest rate of 10 percent. Illustration 21-30 shows the ordinary-annuity amortization schedule.

**ILLUSTRATION 21-30**

Lease Amortization Schedule—Ordinary-Annuity Basis

<b>STERLING/CATERPILLAR LEASE AMORTIZATION SCHEDULE ORDINARY-ANNUITY BASIS</b>				
Date	Annual Lease Payment	Interest 10%	Reduction of Lease Liability/Receivable	Balance of Lease Liability/Receivable
1/1/11				\$100,000.00
12/31/11	\$ 26,379.73	\$10,000.00	\$ 16,379.73	83,620.27
12/31/12	26,379.73	8,362.03	18,017.70	65,602.57
12/31/13	26,379.73	6,560.26	19,819.47	45,783.10
12/31/14	26,379.73	4,578.31	21,801.42	23,981.68
12/31/15	26,379.73	2,398.05*	23,981.68	–0–
	<u>\$131,898.65</u>	<u>\$31,898.65</u>	<u>\$100,000.00</u>	

\*Rounded by 12 cents.

The current portion of the lease liability/receivable under the **change-in-the-present-value method** as of December 31, 2011, would be \$18,017.70 (\$83,620.27 – \$65,602.57). As of December 31, 2012, the current portion would be \$19,819.47 (\$65,602.57 – \$45,783.10). At December 31, 2011, Caterpillar classifies \$65,602.57 of the receivable as noncurrent.

Thus, both the annuity-due and the ordinary-annuity situations report the reduction of principal for the next period as a current liability/current asset. In the annuity-due situation, Caterpillar accrues interest during the year but is not paid until the next period. As a result, **a current asset arises for the receivable reduction and for the interest** that was earned in the preceding period.

In the ordinary-annuity situation, the interest accrued during the period is also paid in the same period. Consequently, the lessor shows as a current asset only the principal reduction.

## Disclosing Lease Data

### Objective-9

List the disclosure requirements for leases.

The FASB requires **lessees** and **lessors** to disclose certain information about leases in their financial statements or in the notes. These requirements vary based upon the type of lease (capital or operating) and whether the issuer is the lessor or lessee. These disclosure requirements provide investors with the following information:

- General description of the nature of leasing arrangements.
- The nature, timing, and amount of cash inflows and outflows associated with leases, including payments to be paid or received for each of the five succeeding years.
- The amount of lease revenues and expenses reported in the income statement each period.
- Description and amounts of leased assets by major balance sheet classification and related liabilities.
- Amounts receivable and unearned revenues under lease agreements. **[10]**

Illustration 21-31 (on page 1147) presents financial statement excerpts from the 2007 annual report of **Tasty Baking Company**. These excerpts represent the statement and note disclosures typical of a lessee having both capital leases and operating leases.

**Tasty Baking Company**

(dollar amounts in thousands)

<u>Current Liabilities</u>	<u>2007</u>	<u>2006</u>
Current obligations under capital leases	\$ 431	\$327
<u>Noncurrent Liabilities</u>		
Long-term obligations under capital leases, less current portion	\$1,003	\$208

**Note 8: Commitments and Contingencies**

The Company leases certain facilities, machinery, automotive and computer equipment under noncancelable lease agreements. The Company expects that in the normal course of business, leases that expire will be renewed or replaced by other leases. Property, plant and equipment relating to capital leases were \$1,618 at December 29, 2007, and \$2,234 at December 30, 2006, with accumulated amortization of \$116 and \$1,881, respectively. Depreciation and amortization of assets recorded under capital leases was \$468 in 2007 and \$719 in 2006.

The following is a schedule of future minimum lease payments as of December 29, 2007:

	<u>Capital Leases</u>	<u>Noncancelable Operating Leases</u>
2008	\$ 565	\$1,119
2009	503	947
2010	395	645
2011	193	467
2012	—	180
Later years	—	396
Total minimum lease payments	\$1,656	\$3,754
Less interest portion of payments	221	
Present value of future minimum lease payments	\$1,435	

Rental expense was approximately \$2,634 in 2007 and \$2,732 in 2006.

Nature, timing, and amounts of cash outflows

Amount of lease rental expense

Illustration 21-32 presents the lease note disclosure from the 2007 annual report of **Hewlett-Packard Company**. The disclosure highlights required lessor disclosures.

**Hewlett-Packard Company**

**Notes to Financial Statements**

(in millions)

**Note 10: Financing Receivables and Operating Leases**

Financing receivables represent sales-type and direct-financing leases resulting from the marketing of HP's and third-party products. These receivables typically have terms from two to five years and are usually collateralized by a security interest in the underlying assets. Financing receivables also include billed receivables from operating leases. The components of net financing receivables, which are included in financing receivables and long-term financing receivables and other assets, were as follows for the following fiscal years ended October 31:

	<u>2007</u>	<u>2006</u>
	(In millions)	
Minimum lease payments receivable	\$5,568	\$5,010
Allowance for doubtful accounts	(84)	(80)
Unguaranteed residual value	291	289
Unearned income	(490)	(439)
Financing receivables, net	\$5,285	\$4,780
Less current portion	(2,507)	(2,440)
Amounts due after one year, net	\$2,778	\$2,340

continued on next page

**ILLUSTRATION 21-32**

Disclosure of Leases by Lessor

General description

Amount receivable and unearned revenues

Nature, timing, and amounts of cash inflows

As of October 31, 2007, scheduled maturities of HP's minimum lease payments receivable were as follows for the following fiscal years ended October 31:

	2008	2009	2010	2011	2012	Thereafter	Total
	(In millions)						
Scheduled maturities of minimum lease payments receivable	\$2,706	\$1,485	\$759	\$334	\$168	\$116	\$5,568

Description of leased assets

Equipment leased to customers under operating leases was \$2.4 billion at October 31, 2007 and \$2.1 billion at October 31, 2006 and is included in machinery and equipment. Accumulated depreciation on equipment under lease was \$0.6 billion at both October 31, 2007 and October 31, 2006. As of October 31, 2007, minimum future rentals on non-cancelable operating leases related to leased equipment were as follows for the following fiscal years ended October 31:

	2008	2009	2010	2011	2012	Thereafter	Total
	(In millions)						
Minimum future rentals on non-cancelable operating leases	\$882	\$430	\$196	\$85	\$31	\$25	\$1,649

Amount of future rentals

Additional Lease Disclosures

## LEASE ACCOUNTING—UNRESOLVED PROBLEMS

As we indicated at the beginning of this chapter, lease accounting is subject to abuse. Companies make strenuous efforts to circumvent GAAP in this area. In practice, the strong desires of lessees to resist capitalization have rendered the accounting rules for capitalizing leases partially ineffective. Leasing generally involves large dollar amounts that, when capitalized, materially increase reported liabilities and adversely affect the debt-to-equity ratio. Lessees also resist lease capitalization because charges to expense made in the early years of the lease term are higher under the capital lease method than under the operating method, frequently without tax benefit. As a consequence, "let's beat the lease standard" is one of the most popular games in town.<sup>16</sup>

To avoid leased asset capitalization, companies design, write, and interpret lease agreements to prevent satisfying any of the four capitalized lease criteria. Companies can easily devise lease agreements in such a way, by meeting the following specifications.

1. Ensure that the lease does not specify the transfer of title of the property to the lessee.
2. Do not write in a bargain-purchase option.
3. Set the lease term at something less than 75 percent of the estimated economic life of the leased property.
4. Arrange for the present value of the minimum lease payments to be less than 90 percent of the fair value of the leased property.

The real challenge lies in disqualifying the lease as a capital lease to the lessee, while having the same lease qualify as a capital (sales or financing) lease to the lessor. Unlike lessees, lessors try to avoid having lease arrangements classified as operating leases.<sup>17</sup>

<sup>16</sup>Richard Dieter, "Is Lessee Accounting Working?" *CPA Journal* (August 1979), pp. 13–19. This article provides interesting examples of abuses of GAAP in this area, discusses the circumstances that led to the current situation, and proposes a solution.

<sup>17</sup>The reason is that most lessors are banks, which are not permitted to hold these assets on their balance sheets except for relatively short periods of time. Furthermore, the capital-lease transaction from the lessor's standpoint provides higher income flows in the earlier periods of the lease life.

**Avoiding the first three criteria is relatively simple, but it takes a little ingenuity to avoid the “90 percent recovery test” for the lessee while satisfying it for the lessor.** Two of the factors involved in this effort are: (1) the use of the incremental borrowing rate by the lessee when it is higher than the implicit interest rate of the lessor, by making information about the implicit rate unavailable to the lessee; and (2) residual value guarantees.

**The lessee’s use of the higher interest rate is probably the more popular subterfuge.** Lessees are knowledgeable about the fair value of the leased property and, of course, the rental payments. However, they generally are unaware of the estimated residual value used by the lessor. Therefore, the lessee who does not know exactly the lessor’s implicit interest rate might use a different (higher) incremental borrowing rate.

**The residual value guarantee is the other unique, yet popular, device used by lessees and lessors.** In fact, a whole new industry has emerged to circumvent symmetry between the lessee and the lessor in accounting for leases. The residual value guarantee has spawned numerous companies whose principal, or even sole, function is to guarantee the residual value of leased assets.

Because the minimum lease payments include the guaranteed residual value for the lessor, this satisfies the 90 percent recovery of fair market value test. The lease is a nonoperating lease to the lessor. **But because a third-party guarantees the residual value, the minimum lease payments of the lessee exclude the guarantee.** Thus, by merely transferring some of the risk to a third party, lessees can alter substantially the accounting treatment by converting what would otherwise be capital leases to operating leases.<sup>18</sup>

The nature of the criteria encourages much of this circumvention, stemming from weaknesses in the basic objective of the lease-accounting guidelines. Accounting rule-makers continue to have poor experience with arbitrary break points or other size and percentage criteria—such as rules like “90 percent of” and “75 percent of.” Some believe that a more workable solution is to require capitalization of all leases that have noncancelable payment terms in excess of one year. Under this approach, lessee acquires an asset (a property right) and a corresponding liability, rather than on the basis that the lease transfers substantially all the risks and rewards of ownership.

Three years after it issued a lease-accounting pronouncement, a majority of the FASB expressed “the tentative view that, if the lease-accounting rules were to be reconsidered, they would support a property right approach in which all leases are included as ‘rights to use property’ and as ‘lease obligations’ in the lessee’s balance sheet.”<sup>19</sup> The FASB and other international standard-setters have issued a report on lease accounting that proposes the capitalization of more leases.<sup>20</sup>

#### INTERNATIONAL INSIGHT

Recently the IASB and the FASB have agreed to jointly undertake a project to reconsider lease-accounting standards.

<sup>18</sup>As an aside, third-party guarantors have experienced some difficulty. **Lloyd’s of London**, at one time, insured the fast-growing U.S. computer-leasing industry in the amount of \$2 billion against revenue losses, and losses in residual value, for canceled leases. Because of “overnight” technological improvements and the successive introductions of more efficient and less expensive computers, lessees in abundance canceled their leases. As the market for second-hand computers became flooded, residual values plummeted, and third-party guarantor Lloyd’s of London projected a loss of \$400 million. The lessees’ and lessors’ desire to circumvent GAAP stimulated much of the third-party guarantee business.

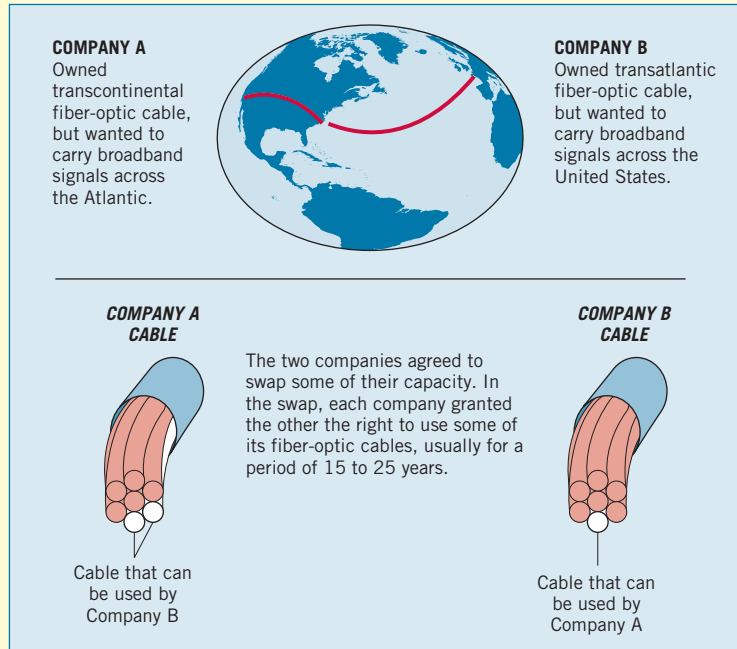

<sup>19</sup>“Is Lessee Accounting Working?” op. cit., p. 19.

**What do the numbers mean?**

**SWAP MEET**

Telecommunication companies have developed one of the more innovative and controversial uses of leases. In order to provide fiber-optic service to their customers in areas where they did not have networks installed, telecommunication companies such as **Global Crossing**, **Qwest Communications International**, and **Cable and Wireless** entered into agreements to swap some of their unused network capacity in exchange for the use of another company's fiber-optic cables. Here's how it works:

Such trades seem like a good way to make efficient use of telecommunication assets. What got some telecommunications companies in trouble, though, was how they did the accounting for the swap.

The most conservative accounting for the capacity trades is to treat the swap as an exchange of assets, which does not affect the income statement. However, Global Crossing got into trouble with the SEC when it structured some of its capacity swaps as leases—the legal right to use capacity. Global Crossing was recognizing as revenue the payments received for the outgoing transfer of capacity, while payments for the incoming cable capacity were treated as capital expenditures, and therefore not expensed. As a result, Global Crossing was showing strong profits from its capacity swaps. However, the company's investors got an unpleasant surprise when the market for bandwidth cooled off and there was no longer demand for its broadband capacity or its long-term leasing arrangements.

You will want to read the **CONVERGENCE CORNER** on page 1151

For discussion of how international convergence efforts relate to lease accounting.

# CONVERGENCE CORNER

## LEASE ACCOUNTING

Leasing is a global business. Lessors and lessees enter into arrangements with one another without regard to national boundaries. Although U.S. GAAP and iGAAP for leasing are similar, both the FASB and the IASB have decided that the existing accounting does not provide the most useful, transparent, and complete information about leasing transactions that should be provided in the financial statements.

### RELEVANT FACTS

- Leasing was on the FASB's initial agenda in 1973 and *SFAS No. 13* was issued in 1976 (before the conceptual framework was developed). *SFAS No. 13* has been the subject of more than 30 interpretations since its issuance.
- The iGAAP leasing standard is *IAS 17*, first issued in 1982. This standard is the subject of only three interpretations. One reason for this small number of interpretations is that iGAAP does not specifically address a number of leasing transactions that are covered by U.S. GAAP. Examples include lease agreements for natural resources, sale-leasebacks, real estate leases, and leveraged leases.
- Both U.S. GAAP and iGAAP share the same objective of recording leases by lessees and lessors according to their economic substance—that is, according to the definitions of assets and liabilities.
- U.S. GAAP for leases is much more “rule-based” with specific bright-line criteria to determine if a lease arrangement transfers the risks and rewards of ownership; iGAAP is more general in its provisions.

### ABOUT THE NUMBERS

One illustration of the differences between U.S. GAAP and iGAAP for leases involves disclosure policy. Under U.S. GAAP, extensive disclosure of future noncancelable lease payments is required for the next five years and the years thereafter. Under iGAAP, not as much detail is required, as shown in the sample disclosure below.

#### iGAAP Sample Lease Note Disclosure

**Note 38 Leasing arrangements (in part)** Finance leases relate to manufacturing equipment with lease terms of 5 years. The Group has options to purchase the equipment for a nominal amount at the conclusion of the lease agreements. The Group's obligations under finance leases are secured by the lessors' title to the leased assets.

**Finance lease liabilities**  
(euros, 000,000)

	Minimum lease payments, 31/12/08
No later than 1 year	€ 58
Later than 1 year and not later than 5 years	44
Later than 5 years	—
	102
Less: Future finance charges	13
Present value of minimum lease payments	<u>€ 89</u>

Although some international companies (e.g., **Nokia**) provide a year-by-year breakout of payments due in years 1 through 5, iGAAP does not require it.

### ON THE HORIZON

Lease accounting is one of the areas identified in the IASB/FASB Memorandum of Understanding and also a topic recommended by the SEC in its off-balance-sheet study for standard-setting attention. It was formally added to the agenda of the FASB and IASB as a joint project in 2006. The joint project will initially focus primarily on lessee accounting. One of the first areas to be studied is, “What are the assets and liabilities to be recognized related to a lease contract?” Should the focus remain on the leased item or the right to use the leased item? This question is tied to the Boards' joint project on the conceptual framework—defining an “asset” and a “liability.”

The Boards began deliberations of lease-accounting issues in 2007. Those deliberations will result in issuing a discussion paper for public comment, to be published in 2008, that explores those issues and describes the preliminary views of both Boards. You can follow the lease project at either the FASB (<http://www.fasb.org/project/leases.shtml>) or IASB (<http://www.iasb.org/Current+Projects/IASB+Projects/Leases/Leases.htm>) websites.

## SUMMARY OF LEARNING OBJECTIVES

**LO 1 Explain the nature, economic substance, and advantages of lease transactions.** A lease is a contractual agreement between a lessor and a lessee that conveys to the lessee the right to use specific property (real or personal), owned by the lessor, for a specified period of time. In return, the lessee periodically pays cash (rent) to the lessor. The advantages of lease transactions are: (1) 100 percent financing; (2) protection against obsolescence, (3) flexibility, (4) less costly financing, (5) possible tax advantages, and (6) off-balance-sheet financing.

**LO 2 Describe the accounting criteria and procedures for capitalizing leases by the lessee.** A lease is a capital lease if it meets one or more of the following (Group I) criteria: (1) The lease transfers ownership of the property to the lessee. (2) The lease contains a bargain-purchase option. (3) The lease term is equal to 75 percent or more of the estimated economic life of the leased property. (4) The present value of the minimum lease payments (excluding executory costs) equals or exceeds 90 percent of the fair value of the leased property. For a capital lease, the lessee records an asset and a liability at the lower of (1) the present value of the minimum lease payments, or (2) the fair market value of the leased asset at the inception of the lease.

**LO 3 Contrast the operating and capitalization methods of recording leases.** The total charges to operations are the same over the lease term whether accounting for the lease as a capital lease or as an operating lease. Under the capital lease treatment, the charges are higher in the earlier years and lower in the later years. If using an accelerated method of depreciation, the differences between the amounts charged to operations under the two methods would be even larger in the earlier and later years. If using a capital lease instead of an operating lease, the following occurs: (1) an increase in the amount of reported debt (both short-term and long-term), (2) an increase in the amount of total assets (specifically long-lived assets), and (3) lower income early in the life of the lease and, therefore, lower retained earnings.

**LO 4 Identify the classifications of leases for the lessor.** A lessor may classify leases for accounting purposes as follows: (1) operating leases, (2) direct-financing leases, (3) sales-type leases. The lessor should classify and account for an arrangement as a direct-financing lease or a sales-type lease if, at the date of the lease agreement, the lease meets one or more of the Group I criteria (as shown in learning objective 2 for lessees) and *both* of the following Group II criteria. *Group II:* (1) Collectibility of the payments required from the lessee is reasonably predictable; and (2) no important uncertainties surround the amount of unreimbursable costs yet to be incurred by the lessor under the lease. The lessor classifies and accounts for all leases that fail to meet the criteria as operating leases.

**LO 5 Describe the lessor's accounting for direct-financing leases.** Leases that are in substance the financing of an asset purchase by a lessee require the lessor to substitute a "lease receivable" for the leased asset. "Lease receivable" is the present value of the minimum lease payments plus the present value of the unguaranteed residual value. Therefore lessors include the residual value, whether guaranteed or unguaranteed, as part of lease receivable.

**LO 6 Identify special features of lease arrangements that cause unique accounting problems.** The features of lease arrangements that cause unique accounting problems are: (1) residual values; (2) sales-type leases (lessor); (3) bargain-purchase options; (4) initial direct costs; (5) current versus noncurrent; and (6) disclosures.

**•7 Describe the effect of residual values, guaranteed and unguaranteed, on lease accounting.** Whether the estimated residual value is guaranteed or unguaranteed is of both economic and accounting consequence to the lessee. The accounting consequence is that the minimum lease payments, the basis for capitalization, include the guaranteed residual value but exclude the unguaranteed residual value. A guaranteed residual value affects the lessee's computation of minimum lease payments and the amounts capitalized as a leased asset and a lease obligation. In effect, the guaranteed residual value is an additional lease payment that the lessee will pay in property or cash, or both, at the end of the lease term. An unguaranteed residual value from the lessee's viewpoint is the same as no residual value in terms of its effect upon the lessee's method of computing the minimum lease payments and the capitalization of the leased asset and the lease liability.

**•8 Describe the lessor's accounting for sales-type leases.** A sales-type lease recognizes interest revenue like a direct-financing lease. It also recognizes a manufacturer's or dealer's profit. In a sales-type lease, the lessor records at the inception of the lease the sales price of the asset, the cost of goods sold and related inventory reduction, and the lease receivable. Sales-type leases differ from direct-financing leases in terms of the cost and fair value of the leased asset, which results in gross profit. Lease receivable and interest revenue are the same whether a guaranteed or an unguaranteed residual value is involved. The accounting for guaranteed and for unguaranteed residual values requires recording sales revenue and cost of goods sold differently. The guaranteed residual value can be considered part of sales revenue because the lessor knows that the entire asset has been sold. There is less certainty that the unguaranteed residual portion of the asset has been "sold"; therefore, lessors recognize sales and cost of goods sold only for the portion of the asset for which realization is assured. However, the gross profit amount on the sale of the asset is the same whether a guaranteed or unguaranteed residual value is involved.

**•9 List the disclosure requirements for leases.** The disclosure requirements for the lessees and lessors vary based upon the type of lease (capital or operating) and whether the issuer is the lessor or lessee. These disclosure requirements provide investors with the following information: (1) general description of the nature of leasing arrangements, (2) the nature, timing and amount of cash inflows and outflows associated with leases, including payments to be paid or received for each of the five succeeding years, (3) the amount of lease revenues and expenses reported in the income statement each period, (4) description and amounts of leased assets by major balance sheet classification and related liabilities, and (5) amounts receivable and unearned revenues under lease agreements.

*Expanded Discussion of  
Real Estate Leases and  
Leveraged Leases*

## APPENDIX 21A

## EXAMPLES OF LEASE ARRANGEMENTS

To illustrate concepts discussed in this chapter, assume that Morgan Bakeries is involved in four different lease situations. Each of these leases is noncancelable, and in no case does Morgan receive title to the properties leased during or at the end of the lease term. All leases start on January 1, 2011, with the first rental due at the beginning of the year. The additional information is shown in Illustration 21A-1 (on page 1154).

### Objective • 10

Understand and apply lease-accounting concepts to various lease arrangements.

	Harmon, Inc.	Arden's Oven Co.	Mendota Truck Co.	Appleland Computer
Type of property	Cabinets	Oven	Truck	Computer
Yearly rental	\$6,000	\$15,000	\$5,582.62	\$3,557.25
Lease term	20 years	10 years	3 years	3 years
Estimated economic life	30 years	25 years	7 years	5 years
Purchase option	None	\$75,000 at end of 10 years \$4,000 at end of 15 years	None	\$3,000 at end of 3 years, which approximates fair market value
Renewal option	None	5-year renewal option at \$15,000 per year	None	1 year at \$1,500; no penalty for nonrenewal; standard renewal clause
Fair market value at inception of lease	\$60,000	\$120,000	\$20,000	\$10,000
Cost of asset to lessor	\$60,000	\$120,000	\$15,000	\$10,000
Residual value				
Guaranteed	–0–	–0–	\$7,000	–0–
Unguaranteed	\$5,000	–0–	–0–	\$3,000
Incremental borrowing rate of lessee	12%	12%	12%	12%
Executory costs paid by	<i>Lessee</i> \$300 per year	<i>Lessee</i> \$1,000 per year	<i>Lessee</i> \$500 per year	<i>Lessor</i> Estimated to be \$500 per year
Present value of minimum lease payments				
Using incremental borrowing rate of lessee	\$50,194.68	\$115,153.35	\$20,000	\$8,224.16
Using implicit rate of lessor	Not known	Not known	Not known	Known by lessee, \$8,027.48
Estimated fair market value at end of lease	\$5,000	\$80,000 at end of 10 years \$60,000 at end of 15 years	Not available	\$3,000

**ILLUSTRATION 21A-1**  
Illustrative Lease Situations, Lessors

### EXAMPLE 1: HARMON, INC.

The following is an analysis of the Harmon, Inc. lease.

- 1. Transfer of title?** No.
- 2. Bargain-purchase option?** No.
- 3. Economic life test (75% test).** The lease term is 20 years and the estimated economic life is 30 years. Thus it **does not** meet the 75 percent test.
- 4. Recovery of investment test (90% test):**

Fair market value	\$60,000	Rental payments	\$ 6,000
Rate	× 90%	PV of annuity due for	
90% of fair market value	<u>\$54,000</u>	20 years at 12%	× 8.36578
		PV of rental payments	<u>\$50,194.68</u>

Because the present value of the minimum lease payments is less than 90 percent of the fair market value, the lease does not meet the 90 percent test.

Both Morgan and Harmon should account for this lease as an operating lease, as indicated by the January 1, 2011, entries shown in Illustration 21A-2 (on page 1155).

Morgan Bakeries (Lessee)		Harmon, Inc. (Lessor)	
Rent Expense	6,000	Cash	6,000
Cash	6,000	Rental Revenue	6,000

**ILLUSTRATION 21A-2**  
Comparative Entries for  
Operating Lease

## EXAMPLE 2: ARDEN'S OVEN CO.

The following is an analysis of the Arden's Oven Co. lease.

- 1. Transfer of title?** No.
- 2. Bargain-purchase option?** The \$75,000 option at the end of 10 years does not appear to be sufficiently lower than the expected fair value of \$80,000 to make it reasonably assured that it will be exercised. However, the \$4,000 at the end of 15 years when the fair value is \$60,000 does appear to be a bargain. From the information given, criterion 2 is therefore met. Note that both the guaranteed and the unguaranteed residual values are assigned zero values because the lessor does not expect to repossess the leased asset.
- 3. Economic life test (75% test):** Given that a bargain-purchase option exists, the lease term is the initial lease period of 10 years plus the five-year renewal option since it precedes a bargain-purchase option. Even though the lease term is now considered to be 15 years, this test is still not met because 75 percent of the economic life of 25 years is 18.75 years.
- 4. Recovery of investment test (90% test):**

Fair market value	\$120,000	Rental payments	\$ 15,000.00
Rate	× 90%	PV of annuity due for	
90% of fair market value	<u>\$108,000</u>	15 years at 12%	× 7.62817
		PV of rental payments	<u>\$114,422.55</u>
PV of bargain-purchase option: = \$4,000 × (PVF <sub>15,12%</sub> ) = \$4,000 × .18270 = \$730.80			
	PV of rental payments	\$114,422.55	
	PV of bargain-purchase option	<u>730.80</u>	
	PV of minimum lease payments	<u>\$115,153.35</u>	

The present value of the minimum lease payments is greater than 90 percent of the fair market value; therefore, the lease does meet the 90 percent test.

Morgan Bakeries should account for this as a capital lease because the lease meets both criteria 2 and 4. Assuming that Arden's implicit rate is less than Morgan's incremental borrowing rate, the following entries are made on January 1, 2011.

Morgan Bakeries (Lessee)		Arden's Oven Co. (Lessor)	
Leased Asset—Oven	115,153.35	Lease Receivable	120,000
Lease Liability	115,153.35	Asset—Oven	120,000

**ILLUSTRATION 21A-3**  
Comparative Entries for  
Capital Lease—Bargain-  
Purchase Option

Morgan Bakeries would depreciate the leased asset over its economic life of 25 years, given the bargain-purchase option. Arden's Oven Co. does not use sales-type accounting because the fair market value and the cost of the asset are the same at the inception of the lease.

## EXAMPLE 3: MENDOTA TRUCK CO.

The following is an analysis of the Mendota Truck Co. lease.

- 1. Transfer of title?** No.
- 2. Bargain-purchase option?** No.

- 3. **Economic life test (75% test):** The lease term is three years and the estimated economic life is seven years. Thus it **does not** meet the 75 percent test.
- 4. **Recovery of investment test (90% test):**

Fair market value	\$20,000	Rental payments	\$ 5,582.62
Rate	× 90%	PV of annuity due for	
90% of fair market value	<u>\$18,000</u>	3 years at 12%	× 2.69005
		PV of rental payments	<u>\$15,017.54</u>

(Note: Adjusted for \$0.01 due to rounding)

PV of guaranteed residual value: = \$7,000 × (PVF<sub>3,12%</sub>) = \$7,000 × .71178 = \$4,982.46

PV of rental payments	\$15,017.54
PV of guaranteed residual value	<u>4,982.46</u>
PV of minimum lease payments	<u>\$20,000.00</u>

The present value of the minimum lease payments is greater than 90 percent of the fair market value; therefore, the lease meets the 90 percent test.

Assuming that Mendota’s implicit rate is the same as Morgan’s incremental borrowing rate, the following entries are made on January 1, 2011.

**ILLUSTRATION 21A-4**  
Comparative Entries for  
Capital Lease

Morgan Bakeries (Lessee)		Mendota Truck Co. (Lessor)	
Leased Asset—Truck	20,000	Lease Receivable	20,000
Lease Liability	20,000	Cost of Goods Sold	15,000
		Inventory—Truck	15,000
		Sales	20,000

Morgan depreciates the leased asset over three years to its guaranteed residual value.

**EXAMPLE 4: APPLELAND COMPUTER**

The following is an analysis of the Appleland Computer lease.

- 1. **Transfer of title?** No.
- 2. **Bargain-purchase option?** No. The option to purchase at the end of three years at approximate fair market value is clearly not a bargain.
- 3. **Economic life test (75% test):** The lease term is three years, and no bargain-renewal period exists. Therefore the 75 percent test **is not** met.
- 4. **Recovery of investment test (90% test):**

Fair market value	\$10,000	Rental payments	\$3,557.25
Rate	× 90%	Less executory costs	<u>500.00</u>
90% of fair market value	<u>\$ 9,000</u>		3,057.25
		PV of annuity-due factor for	
		3 years at 12%	× 2.69005
		PV of minimum lease payments	
		using incremental borrowing rate	<u>\$8,224.16</u>

The present value of the minimum lease payments using the incremental borrowing rate is \$8,224.16; using the implicit rate, it is \$8,027.48 (see Illustration 21A-1 on page 1154). The lessor’s implicit rate is therefore higher than the incremental borrowing rate. Given this situation, the lessee uses the \$8,224.16 (lower interest rate when discounting) when comparing with the 90 percent of fair market value. Because the present value of the minimum lease payments is lower than 90 percent of the fair market value, the lease does **not** meet the recovery of investment test.

The following entries are made on January 1, 2011, indicating an operating lease.

Morgan Bakeries (Lessee)		Appleland Computer (Lessor)	
Rent Expense	3,557.25	Cash	3,557.25
Cash	3,557.25	Rental Revenue	3,557.25

**ILLUSTRATION 21A-5**  
Comparative Entries for  
Operating Lease

If the lease payments had been \$3,557.25 with no executory costs involved, this lease arrangement would have qualified for capital-lease accounting treatment.

## SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 21A

**LO 10 Understand and apply lease-accounting concepts to various lease arrangements.** The classification of leases by lessees and lessors is based on criteria that assess whether the lessor has transferred to the lessee substantially all of the risks and benefits of ownership of the asset. In addition, lessors assess two additional criteria to ensure that payment is assured and that there are not uncertainties about lessor's future costs. Lessees capitalize leases that meet any of the criteria, recording a lease asset and related lease liability. For leases that are in substance a financing of an asset purchase, lessors substitute a lease receivable for the leased asset. In a sales-type lease, the fair value of the leased asset is greater than the cost, and lessors record gross profit. Leases that do not meet capitalization criteria are classified as operating leases, on which rent expense (revenue) is recognized by lessees (lessors) for lease payments.

## APPENDIX 21B

## SALE-LEASEBACKS

The term **sale-leaseback** describes a transaction in which the owner of the property (seller-lessee) sells the property to another and simultaneously leases it back from the new owner. The use of the property is generally continued without interruption.

Sale-leasebacks are common. Financial institutions (e.g., **Bank of America** and **First Chicago**) have used this technique for their administrative offices, public utilities (**Ohio Edison** and **Pinnacle West Corporation**) for their generating plants, and airlines (**Continental** and **Alaska Airlines**) for their aircraft. The advantages of a sale-leaseback from the seller's viewpoint usually involve two primary considerations:

### Objective 11

Describe the lessee's accounting for sale-leaseback transactions.

- 1. Financing**—If the purchase of equipment has already been financed, a sale-leaseback can allow the seller to refinance at lower rates, assuming rates have dropped. In addition, a sale-leaseback can provide another source of working capital, particularly when liquidity is tight.
- 2. Taxes**—At the time a company purchased equipment, it may not have known that it would be subject to an alternative minimum tax and that ownership might increase its minimum tax liability. By selling the property, the seller-lessee may deduct the entire lease payment, which is not subject to alternative minimum tax considerations.

## DETERMINING ASSET USE

To the extent the **seller-lessee continues to use** the asset after the sale, the sale-leaseback is really a form of financing. Therefore the lessor **should not recognize a gain or loss** on the transaction. In short, the seller-lessee is simply borrowing funds.

### Underlying Concepts

A sale-leaseback is similar in substance to the parking of inventories (discussed in Chapter 8). The ultimate economic benefits remain under the control of the “seller,” thus satisfying the definition of an asset.

On the other hand, if the **seller-lessee gives up the right to the use** of the asset, the transaction is in substance a sale. In that case, **gain or loss recognition** is appropriate. Trying to ascertain when the lessee has given up the use of the asset is difficult, however, and the FASB has formulated complex rules to identify this situation.<sup>21</sup> To understand the profession’s position in this area, we discuss the basic accounting for the lessee and lessor below.

### Lessee

If the lease meets one of the four criteria for treatment as a capital lease (see Illustration 21-3 on page 1121), the **seller-lessee accounts for the transaction as a sale and the lease as a capital lease**. The seller-lessee should defer any profit or loss it experiences from the sale of the assets that are leased back under a capital lease; it should **amortize that profit over the lease term** (or the economic life if either criterion 1 or 2 is satisfied) in proportion to the amortization of the leased assets.

For example, assume **Scott Paper** sells equipment having a book value of \$580,000 and a fair value of \$623,110 to **General Electric Credit** for \$623,110 and leases the equipment back for \$50,000 a year for 20 years. Scott should amortize the profit of \$43,110 over the 20-year period at the same rate that it depreciates the \$623,110. [12] It credits the \$43,110 ( $\$623,110 - \$580,000$ ) to **Unearned Profit on Sale-Leaseback**.

If none of the capital lease criteria are satisfied, the **seller-lessee accounts for the transaction as a sale and the lease as an operating lease**. Under an operating lease, the lessee defers such profit or loss and amortizes it in proportion to the rental payments over the period when it expects to use the assets.

There are exceptions to these two general rules. They are:

1. **Losses Recognized**—When the fair value of the asset is **less than the book value** (carrying amount), the lessee must recognize a loss immediately, up to the amount of the difference between the book value and fair value. For example, if Lessee, Inc. sells equipment having a book value of \$650,000 and a fair value of \$623,110, it should charge the difference of \$26,890 to a loss account.<sup>22</sup>
2. **Minor Leaseback**—Leasebacks in which the present value of the rental payments are 10 percent or less of the fair value of the asset are **minor leasebacks**. In this case, the seller-lessee gives up most of the rights to the use of the asset sold. Therefore, the transaction is a sale, and full gain or loss recognition is appropriate. It is not a financing transaction because the risks of ownership have been transferred.<sup>23</sup>

### Lessor

If the lease meets one of the criteria in Group I and both of the criteria in Group II (see Illustration 21-10 on page 1131), the **purchaser-lessor** records the transaction as a purchase and a direct-financing lease. If the lease does not meet the criteria, the purchaser-lessor records the transaction as a purchase and an operating lease.

---

## SALE-LEASEBACK EXAMPLE

To illustrate the accounting treatment accorded a sale-leaseback transaction, assume that **American Airlines** on January 1, 2011, sells a used Boeing 757 having a carrying

<sup>21</sup>Sales and leasebacks of real estate are often accounted for differently. A discussion of the issues related to these transactions is beyond the scope of this textbook. [11]

<sup>22</sup>There can be two types of losses in sale-leaseback arrangements. One is a **real economic loss** that results when the carrying amount of the asset is higher than the fair market value of the asset. In this case, the loss should be recognized. An **artificial loss** results when the sale price is below the carrying amount of the asset but the fair market value is above the carrying amount. In this case the loss is more in the form of prepaid rent, and the lessee should defer the loss and amortize it in the future.

<sup>23</sup>In some cases the seller-lessee retains more than a minor part but less than substantially all. The computations to arrive at these values are complex and beyond the scope of this textbook.

amount on its books of \$75,500,000 to **CitiCapital** for \$80,000,000. American immediately leases the aircraft back under the following conditions:

1. The term of the lease is 15 years, noncancelable, and requires equal rental payments of \$10,487,443 at the beginning of each year.
2. The aircraft has a fair value of \$80,000,000 on January 1, 2011, and an estimated economic life of 15 years.
3. American pays all executory costs.
4. American depreciates similar aircraft that it owns on a straight-line basis over 15 years.
5. The annual payments assure the lessor a 12 percent return.
6. American's incremental borrowing rate is 12 percent.

This lease is a capital lease to American because the lease term exceeds 75 percent of the estimated life of the aircraft and because the present value of the lease payments exceeds 90 percent of the fair value of the aircraft to CitiCapital. Assuming that collectibility of the lease payments is reasonably predictable and that no important uncertainties exist in relation to unreimbursable costs yet to be incurred by CitiCapital, it should classify this lease as a direct-financing lease.

Illustration 21B-1 presents the typical journal entries to record the sale-leaseback transactions for American and CitiCapital for the first year.

**ILLUSTRATION 21B-1**  
Comparative Entries for  
Sale-Leaseback for Lessee  
and Lessor

<u>American Airlines (Lessee)</u>		<u>CitiCapital (Lessor)</u>			
<b>Sale of Aircraft by American to CitiCapital (January 1, 2011):</b>					
Cash	80,000,000		Aircraft	80,000,000	
Aircraft		75,500,000	Cash	80,000,000

	1/1/12	10,487,443	8,341,507	2,145,936	67,366,621

## KEY TERMS

minor leaseback, 1157

sale-leaseback, 1158

SUMMARY OF LEARNING OBJECTIVE FOR  
APPENDIX 21B

**LO 11** Describe the lessee's accounting for sale-leaseback transactions. If the lease meets one of the four criteria for treatment as a capital lease, the seller-lessee accounts for the transaction as a sale and the lease as a capital lease. The seller-lessee defers any profit it experiences from the sale of the assets that are leased back under a capital lease. The seller-lessee amortizes any profit over the lease term (or the economic life if either criterion 1 or 2 is satisfied) in proportion to the amortization of the leased assets. If the lease satisfies none of the capital lease criteria, the seller-lessee accounts for the transaction as a sale and the lease as an operating lease. Under an operating lease, the lessee defers such profit and amortizes it in proportion to the rental payments over the period of time that it expects to use the assets.

**Exercises**

Access the FASB Codification at <http://asc.fasb.org/home> to prepare responses to the following exercises. Provide Codification references for your responses.

**CE21-1** Access the glossary (“Master Glossary”) to answer the following.

- (a) What is a bargain-purchase option?
- (b) What is the definition of “incremental borrowing rate”?
- (c) What is the definition of “estimated residual value”?
- (d) What is an unguaranteed residual value?

**CE21-2** What comprises a lessee’s minimum lease payments? What is excluded?

**CE21-3** What information should a lessee disclose about its capital leases in its financial statements and footnotes?

**CE21-4** How should a lessor measure its initial gross investment in either a sales-type lease or a direct-financing lease?

**An additional Codification case can be found in the Using Your Judgment section, on page 1179.**

**Be sure to check the companion website for a Review and Analysis Exercise, with solution.**

*Note:* All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

## QUESTIONS

1. What are the major lessor groups in the United States? What advantage does a captive have in a leasing arrangement?
2. Bradley Co. is expanding its operations and is in the process of selecting the method of financing this program. After some investigation, the company determines that it may (1) issue bonds and with the proceeds purchase the needed assets or (2) lease the assets on a long-term basis. Without knowing the comparative costs involved, answer these questions:
  - (a) What might be the advantages of leasing the assets instead of owning them?
  - (b) What might be the disadvantages of leasing the assets instead of owning them?
  - (c) In what way will the balance sheet be differently affected by leasing the assets as opposed to issuing bonds and purchasing the assets?
3. Identify the two recognized lease-accounting methods for lessees and distinguish between them.
4. Ballard Company rents a warehouse on a month-to-month basis for the storage of its excess inventory. The company periodically must rent space whenever its production greatly exceeds actual sales. For several years the company officials have discussed building their own storage facility, but this enthusiasm wavers when sales increase sufficiently to absorb the excess inventory. What is the nature of this type of lease arrangement, and what accounting treatment should be accorded it?
5. Distinguish between minimum rental payments and minimum lease payments, and indicate what is included in minimum lease payments.
6. Explain the distinction between a direct-financing lease and a sales-type lease for a lessor.
7. Outline the accounting procedures involved in applying the operating method by a lessee.
8. Outline the accounting procedures involved in applying the capital-lease method by a lessee.
9. Identify the lease classifications for lessors and the criteria that must be met for each classification.
10. Outline the accounting procedures involved in applying the direct-financing method.
11. Outline the accounting procedures involved in applying the operating method by a lessor.

12. Walker Company is a manufacturer and lessor of computer equipment. What should be the nature of its lease arrangements with lessees if the company wishes to account for its lease transactions as sales-type leases?
13. Metheny Corporation's lease arrangements qualify as sales-type leases at the time of entering into the transactions. How should the corporation recognize revenues and costs in these situations?
14. Alice Foyle, M.D. (lessee) has a noncancelable 20-year lease with Brownback Realty, Inc. (lessor) for the use of a medical building. Taxes, insurance, and maintenance are paid by the lessee in addition to the fixed annual payments, of which the present value is equal to the fair market value of the leased property. At the end of the lease period, title becomes the lessee's at a nominal price. Considering the terms of the lease described above, comment on the nature of the lease transaction and the accounting treatment that should be accorded it by the lessee.
15. The residual value is the estimated fair value of the leased property at the end of the lease term.
- (a) Of what significance is (1) an unguaranteed and (2) a guaranteed residual value in the lessee's accounting for a capitalized-lease transaction?
- (b) Of what significance is (1) an unguaranteed and (2) a guaranteed residual value in the lessor's accounting for a direct-financing lease transaction?
16. How should changes in the estimated unguaranteed residual value be handled by the lessor?
17. Describe the effect of a "bargain-purchase option" on accounting for a capital-lease transaction by a lessee.
18. What are "initial direct costs" and how are they accounted for?
19. What disclosures should be made by lessees and lessors related to future lease payments?
20. Where can authoritative iGAAP guidance related to leases be found? 
21. Briefly describe some of the similarities and differences between U.S. GAAP and iGAAP with respect to the accounting for leases. 
22. Both iGAAP and U.S. GAAP require footnote disclosure of operating lease payments. Are there any differences in the information provided to statement readers in these disclosures? Explain. 
23. Briefly discuss the IASB and FASB efforts to converge their accounting guidelines for leases. 
- \*24. What is the nature of a "sale-leaseback" transaction?

## BRIEF EXERCISES

-  **BE21-1** **Callaway Golf Co.** leases telecommunication equipment. Assume the following data for equipment leased from Photon Company. The lease term is 5 years and requires equal rental payments of \$31,000 at the beginning of each year. The equipment has a fair value at the inception of the lease of \$138,000, an estimated useful life of 8 years, and no residual value. Callaway pays all executory costs directly to third parties. Photon set the annual rental to earn a rate of return of 10%, and this fact is known to Callaway. The lease does not transfer title or contain a bargain-purchase option. How should Callaway classify this lease?
-  **BE21-2** Waterworld Company leased equipment from Costner Company. The lease term is 4 years and requires equal rental payments of \$43,019 at the beginning of each year. The equipment has a fair value at the inception of the lease of \$150,000, an estimated useful life of 4 years, and no salvage value. Waterworld pays all executory costs directly to third parties. The appropriate interest rate is 10%. Prepare Waterworld's January 1, 2011, journal entries at the inception of the lease.
-  **BE21-3** Rick Kleckner Corporation recorded a capital lease at \$300,000 on January 1, 2011. The interest rate is 12%. Kleckner Corporation made the first lease payment of \$53,920 on January 1, 2011. The lease requires eight annual payments. The equipment has a useful life of 8 years with no salvage value. Prepare Kleckner Corporation's December 31, 2011, adjusting entries.
-  **BE21-4** Use the information for Rick Kleckner Corporation from BE21-3. Assume that at December 31, 2011, Kleckner made an adjusting entry to accrue interest expense of \$29,530 on the lease. Prepare Kleckner's January 1, 2012, journal entry to record the second lease payment of \$53,920.
-  **BE21-5** Jana Kingston Corporation enters into a lease on January 1, 2011, that does not transfer ownership or contain a bargain-purchase option. It covers 3 years of the equipment's 8-year useful life, and the present value of the minimum lease payments is less than 90% of the fair market value of the asset leased. Prepare Jana Kingston's journal entry to record its January 1, 2011, annual lease payment of \$35,000.
-   **BE21-6** Assume that **IBM** leased equipment that was carried at a cost of \$150,000 to Sharon Swander Company. The term of the lease is 6 years beginning January 1, 2011, with equal rental payments of \$30,044

at the beginning of each year. All executory costs are paid by Swander directly to third parties. The fair value of the equipment at the inception of the lease is \$150,000. The equipment has a useful life of 6 years with no salvage value. The lease has an implicit interest rate of 8%, no bargain-purchase option, and no transfer of title. Collectibility is reasonably assured with no additional cost to be incurred by IBM. Prepare IBM's January 1, 2011, journal entries at the inception of the lease.

- 4 •5** **BE21-7** Use the information for **IBM** from BE21-6. Assume the direct-financing lease was recorded at a present value of \$150,000. Prepare IBM's December 31, 2011, entry to record interest.
- 4** **BE21-8** Jennifer Brent Corporation owns equipment that cost \$80,000 and has a useful life of 8 years with no salvage value. On January 1, 2011, Jennifer Brent leases the equipment to Donna Havaci Inc. for one year with one rental payment of \$15,000 on January 1. Prepare Jennifer Brent Corporation's 2011 journal entries.
- 6 •7** **BE21-9** Indiana Jones Corporation enters into a 6-year lease of equipment on January 1, 2011, which requires 6 annual payments of \$40,000 each, beginning January 1, 2011. In addition, Indiana Jones guarantees the lessor a residual value of \$20,000 at lease-end. The equipment has a useful life of 6 years. Prepare Indiana Jones' January 1, 2011, journal entries assuming an interest rate of 10%.
- 6 •7** **BE21-10** Use the information for Indiana Jones Corporation from BE21-9. Assume that for Lost Ark Company, the lessor, collectibility is reasonably predictable, there are no important uncertainties concerning costs, and the carrying amount of the machinery is \$202,921. Prepare Lost Ark's January 1, 2011, journal entries.
- 8** **BE21-11** Geiberger Corporation manufactures replicators. On January 1, 2011, it leased to Althaus Company a replicator that had cost \$110,000 to manufacture. The lease agreement covers the 5-year useful life of the replicator and requires 5 equal annual rentals of \$40,800 payable each January 1, beginning January 1, 2011. An interest rate of 12% is implicit in the lease agreement. Collectibility of the rentals is reasonably assured, and there are no important uncertainties concerning costs. Prepare Geiberger's January 1, 2011, journal entries.
- 11\*** **BE21-12** On January 1, 2011, Irwin Animation sold a truck to Peete Finance for \$33,000 and immediately leased it back. The truck was carried on Irwin's books at \$28,000. The term of the lease is 5 years, and title transfers to Irwin at lease-end. The lease requires five equal rental payments of \$8,705 at the end of each year. The appropriate rate of interest is 10%, and the truck has a useful life of 5 years with no salvage value. Prepare Irwin's 2011 journal entries.

## EXERCISES

- 2** **E21-1 (Lessee Entries, Capital Lease with Unguaranteed Residual Value)** On January 1, 2011, Adams Corporation signed a 5-year noncancelable lease for a machine. The terms of the lease called for Adams to make annual payments of \$9,968 at the beginning of each year, starting January 1, 2011. The machine has an estimated useful life of 6 years and a \$5,000 unguaranteed residual value. The machine reverts back to the lessor at the end of the lease term. Adams uses the straight-line method of depreciation for all of its plant assets. Adams's incremental borrowing rate is 10%, and the Lessor's implicit rate is unknown.

### Instructions

- What type of lease is this? Explain.
- Compute the present value of the minimum lease payments.
- Prepare all necessary journal entries for Adams for this lease through January 1, 2012.

- 2** **E21-2 (Lessee Computations and Entries, Capital Lease with Guaranteed Residual Value)** Brecker Company leases an automobile with a fair value of \$10,906 from Emporia Motors, Inc., on the following terms:
- Noncancelable term of 50 months.
  - Rental of \$250 per month (at end of each month). (The present value at 1% per month is \$9,800.)
  - Estimated residual value after 50 months is \$1,180. (The present value at 1% per month is \$715.) Brecker Company guarantees the residual value of \$1,180.
  - Estimated economic life of the automobile is 60 months.
  - Brecker Company's incremental borrowing rate is 12% a year (1% a month). Emporia's implicit rate is unknown.

**Instructions**

- (a) What is the nature of this lease to Brecker Company?
- (b) What is the present value of the minimum lease payments?
- (c) Record the lease on Brecker Company's books at the date of inception.
- (d) Record the first month's depreciation on Brecker Company's books (assume straight-line).
- (e) Record the first month's lease payment.

**•2•7****E21-3 (Lessee Entries, Capital Lease with Executory Costs and Unguaranteed Residual Value)**

Assume that on January 1, 2011, **Kimberly-Clark Corp.** signs a 10-year noncancelable lease agreement to lease a storage building from Trevino Storage Company. The following information pertains to this lease agreement.

1. The agreement requires equal rental payments of \$90,000 beginning on January 1, 2011.
2. The fair value of the building on January 1, 2011 is \$550,000.
3. The building has an estimated economic life of 12 years, with an unguaranteed residual value of \$10,000. Kimberly-Clark depreciates similar buildings on the straight-line method.
4. The lease is nonrenewable. At the termination of the lease, the building reverts to the lessor.
5. Kimberly-Clark's incremental borrowing rate is 12% per year. The lessor's implicit rate is not known by Kimberly-Clark.
6. The yearly rental payment includes \$3,088.14 of executory costs related to taxes on the property.

**Instructions**

Prepare the journal entries on the lessee's books to reflect the signing of the lease agreement and to record the payments and expenses related to this lease for the years 2011 and 2012. Kimberly-Clark's corporate year end is December 31.

**•5**

**E21-4 (Lessor Entries, Direct-Financing Lease with Option to Purchase)** Krauss Leasing Company signs a lease agreement on January 1, 2011, to lease electronic equipment to Stewart Company. The term of the noncancelable lease is 2 years, and payments are required at the end of each year. The following information relates to this agreement:

1. Stewart has the option to purchase the equipment for \$16,000 upon termination of the lease.
2. The equipment has a cost and fair value of \$240,000 to Krauss Leasing Company. The useful economic life is 2 years, with a salvage value of \$16,000.
3. Stewart Company is required to pay \$7,000 each year to the lessor for executory costs.
4. Krauss Leasing Company desires to earn a return of 10% on its investment.
5. Collectibility of the payments is reasonably predictable, and there are no important uncertainties surrounding the costs yet to be incurred by the lessor.

**Instructions**

- (a) Prepare the journal entries on the books of Krauss Leasing to reflect the payments received under the lease and to recognize income for the years 2011 and 2012.
- (b) Assuming that Stewart Company exercises its option to purchase the equipment on December 31, 2012, prepare the journal entry to reflect the sale on Krauss's books.

**•2•3**

**E21-5 (Type of Lease, Amortization Schedule)** Jacobsen Leasing Company leases a new machine that has a cost and fair value of \$75,000 to Stadler Corporation on a 3-year noncancelable contract. Stadler Corporation agrees to assume all risks of normal ownership including such costs as insurance, taxes, and maintenance. The machine has a 3-year useful life and no residual value. The lease was signed on January 1, 2011. Jacobsen Leasing Company expects to earn a 9% return on its investment. The annual rentals are payable on each December 31.

**Instructions**

- (a) Discuss the nature of the lease arrangement and the accounting method that each party to the lease should apply.
- (b) Prepare an amortization schedule that would be suitable for both the lessor and the lessee and that covers all the years involved.

**•8**

**E21-6 (Lessor Entries, Sales-Type Lease)** Wadkins Company, a machinery dealer, leased a machine to Romero Corporation on January 1, 2011. The lease is for an 8-year period and requires equal annual payments of \$38,514 at the beginning of each year. The first payment is received on January 1, 2011. Wadkins had purchased the machine during 2010 for \$170,000. Collectibility of lease payments is reasonably predictable, and no important uncertainties surround the amount of costs yet to be incurred by Wadkins. Wadkins set the annual rental to ensure an 11% rate of return. The machine has an economic life of 10 years with no residual value and reverts to Wadkins at the termination of the lease.

**Instructions**

- (a) Compute the amount of the lease receivable.
- (b) Prepare all necessary journal entries for Wadkins for 2011.

**•8** E21-7 (**Lessee-Lessor Entries, Sales-Type Lease**) On January 1, 2011, Palmer Company leased equipment to Woods Corporation. The following information pertains to this lease.

1. The term of the noncancelable lease is 6 years, with no renewal option. The equipment reverts to the lessor at the termination of the lease.
2. Equal rental payments are due on January 1 of each year, beginning in 2011.
3. The fair value of the equipment on January 1, 2011, is \$200,000, and its cost is \$150,000.
4. The equipment has an economic life of 8 years, with an unguaranteed residual value of \$10,000. Woods depreciates all of its equipment on a straight-line basis.
5. Palmer sets the annual rental to ensure an 11% rate of return. Woods's incremental borrowing rate is 12%, and the implicit rate of the lessor is unknown.
6. Collectibility of lease payments is reasonably predictable, and no important uncertainties surround the amount of costs yet to be incurred by the lessor.

**Instructions**

(Both the lessor and the lessee's accounting period ends on December 31.)

- (a) Discuss the nature of this lease to Palmer and Woods.
- (b) Calculate the amount of the annual rental payment.
- (c) Prepare all the necessary journal entries for Woods for 2011.
- (d) Prepare all the necessary journal entries for Palmer for 2011.

**•6 •7** E21-8 (**Lessee Entries with Bargain-Purchase Option**) The following facts pertain to a noncancelable lease agreement between Lennox Leasing Company and Gill Company, a lessee.

Inception date:	May 1, 2010
Annual lease payment due at the beginning of each year, beginning with May 1, 2010	\$18,829.49
Bargain-purchase option price at end of lease term	\$ 4,000.00
Lease term	5 years
Economic life of leased equipment	10 years
Lessor's cost	\$65,000.00
Fair value of asset at May 1, 2010	\$81,000.00
Lessor's implicit rate	10%
Lessee's incremental borrowing rate	10%

The collectibility of the lease payments is reasonably predictable, and there are no important uncertainties surrounding the costs yet to be incurred by the lessor. The lessee assumes responsibility for all executory costs.

**Instructions**

(Round all numbers to the nearest cent.)

- (a) Discuss the nature of this lease to Gill Company.
- (b) Discuss the nature of this lease to Lennox Company.
- (c) Prepare a lease amortization schedule for Gill Company for the 5-year lease term.
- (d) Prepare the journal entries on the lessee's books to reflect the signing of the lease agreement and to record the payments and expenses related to this lease for the years 2010 and 2011. Gill's annual accounting period ends on December 31. Reversing entries are used by Gill.

**•8** E21-9 (**Lessor Entries with Bargain-Purchase Option**) A lease agreement between Lennox Leasing Company and Gill Company is described in E21-8.

**Instructions**

(Round all numbers to the nearest cent.)

Refer to the data in E21-8 and do the following for the lessor.

- (a) Compute the amount of the lease receivable at the inception of the lease.
- (b) Prepare a lease amortization schedule for Lennox Leasing Company for the 5-year lease term.
- (c) Prepare the journal entries to reflect the signing of the lease agreement and to record the receipts and income related to this lease for the years 2010, 2011, and 2012. The lessor's accounting period ends on December 31. Reversing entries are not used by Lennox.

**•5 E21-10 (Computation of Rental, Journal Entries for Lessor)** Fieval Leasing Company signs an agreement on January 1, 2010, to lease equipment to Reid Company. The following information relates to this agreement.

1. The term of the noncancelable lease is 6 years with no renewal option. The equipment has an estimated economic life of 6 years.
2. The cost of the asset to the lessor is \$343,000. The fair value of the asset at January 1, 2010, is \$343,000.
3. The asset will revert to the lessor at the end of the lease term at which time the asset is expected to have a residual value of \$61,071, none of which is guaranteed.
4. Reid Company assumes direct responsibility for all executory costs.
5. The agreement requires equal annual rental payments, beginning on January 1, 2010.
6. Collectibility of the lease payments is reasonably predictable. There are no important uncertainties surrounding the amount of costs yet to be incurred by the lessor.

#### Instructions

(Round all numbers to the nearest cent.)

- (a) Assuming the lessor desires a 10% rate of return on its investment, calculate the amount of the annual rental payment required. Round to the nearest dollar.
- (b) Prepare an amortization schedule that would be suitable for the lessor for the lease term.
- (c) Prepare all of the journal entries for the lessor for 2010 and 2011 to record the lease agreement, the receipt of lease payments, and the recognition of income. Assume the lessor's annual accounting period ends on December 31.

**•2 E21-11 (Amortization Schedule and Journal Entries for Lessee)** Grady Leasing Company signs an agreement on January 1, 2010, to lease equipment to Azure Company. The following information relates to this agreement.

1. The term of the noncancelable lease is 5 years with no renewal option. The equipment has an estimated economic life of 5 years.
2. The fair value of the asset at January 1, 2010, is \$90,000.
3. The asset will revert to the lessor at the end of the lease term, at which time the asset is expected to have a residual value of \$7,000, none of which is guaranteed.
4. Azure Company assumes direct responsibility for all executory costs, which include the following annual amounts: (1) \$900 to Frontier Insurance Company for insurance and (2) \$1,600 to Crawford County for property taxes.
5. The agreement requires equal annual rental payments of \$20,541.11 to the lessor, beginning on January 1, 2010.
6. The lessee's incremental borrowing rate is 12%. The lessor's implicit rate is 10% and is known to the lessee.
7. Azure Company uses the straight-line depreciation method for all equipment.
8. Azure uses reversing entries when appropriate.

#### Instructions

(Round all numbers to the nearest cent.)

- (a) Prepare an amortization schedule that would be suitable for the lessee for the lease term.
- (b) Prepare all of the journal entries for the lessee for 2010 and 2011 to record the lease agreement, the lease payments, and all expenses related to this lease. Assume the lessee's annual accounting period ends on December 31.

**•3 •4 E21-12 (Accounting for an Operating Lease)** On January 1, 2011, Secada Co. leased a building to Ryker Inc. The relevant information related to the lease is as follows.

1. The lease arrangement is for 10 years.
2. The leased building cost \$3,600,000 and was purchased for cash on January 1, 2011.
3. The building is depreciated on a straight-line basis. Its estimated economic life is 50 years with no salvage value.
4. Lease payments are \$220,000 per year and are made at the end of the year.
5. Property tax expense of \$85,000 and insurance expense of \$10,000 on the building were incurred by Secada in the first year. Payment on these two items was made at the end of the year.
6. Both the lessor and the lessee are on a calendar-year basis.

**Instructions**

- Prepare the journal entries that Secada Co. should make in 2011.
- Prepare the journal entries that Ryker Inc. should make in 2011.
- If Secada paid \$30,000 to a real estate broker on January 1, 2011, as a fee for finding the lessee, how much should be reported as an expense for this item in 2011 by Secada Co.?

**•3 •4** **E21-13 (Accounting for an Operating Lease)** On January 1, 2011, a machine was purchased for \$900,000 by Floyd Co. The machine is expected to have an 8-year life with no salvage value. It is to be depreciated on a straight-line basis. The machine was leased to Crampton Inc. on January 1, 2011, at an annual rental of \$180,000. Other relevant information is as follows.

- The lease term is for 3 years.
- Floyd Co. incurred maintenance and other executory costs of \$25,000 in 2011 related to this lease.
- The machine could have been sold by Floyd Co. for \$940,000 instead of leasing it.
- Crampton is required to pay a rent security deposit of \$35,000 and to prepay the last month's rent of \$15,000.

**Instructions**

- How much should Floyd Co. report as income before income tax on this lease for 2011?
- What amount should Crampton Inc. report for rent expense for 2011 on this lease?

**•3 •4** **E21-14 (Operating Lease for Lessee and Lessor)** On February 20, 2011, Hooke Inc., purchased a machine for \$1,200,000 for the purpose of leasing it. The machine is expected to have a 10-year life, no residual value, and will be depreciated on the straight-line basis. The machine was leased to Sage Company on March 1, 2011, for a 4-year period at a monthly rental of \$15,600. There is no provision for the renewal of the lease or purchase of the machine by the lessee at the expiration of the lease term. Hooke paid \$30,000 of commissions associated with negotiating the lease in February 2011:

**Instructions**

- What expense should Sage Company record as a result of the facts above for the year ended December 31, 2011? Show supporting computations in good form.
- What income or loss before income taxes should Hooke record as a result of the facts above for the year ended December 31, 2011? (*Hint: Amortize commissions over the life of the lease.*)  
(AICPA adapted)

**•11** **\*E21-15 (Sale-Leaseback)** Assume that on January 1, 2011, **Elmer's Restaurants** sells a computer system to Liquidity Finance Co. for \$510,000 and immediately leases the computer system back. The relevant information is as follows.

- The computer was carried on Elmer's books at a value of \$450,000.
- The term of the noncancelable lease is 10 years; title will transfer to Elmer.
- The lease agreement requires equal rental payments of \$83,000.11 at the end of each year.
- The incremental borrowing rate for Elmer is 12%. Elmer is aware that Liquidity Finance Co. set the annual rental to ensure a rate of return of 10%.
- The computer has a fair value of \$680,000 on January 1, 2011, and an estimated economic life of 10 years.
- Elmer pays executory costs of \$9,000 per year.

**Instructions**

Prepare the journal entries for both the lessee and the lessor for 2011 to reflect the sale-leaseback agreement. No uncertainties exist, and collectibility is reasonably certain.

**•11** **\*E21-16 (Lessee-Lessor, Sale-Leaseback)** Presented below are four independent situations.

- On December 31, 2011, Beard Inc. sold computer equipment to Barber Co. and immediately leased it back for 10 years. The sales price of the equipment was \$560,000, its carrying amount is \$400,000, and its estimated remaining economic life is 12 years. Determine the amount of deferred revenue to be reported from the sale of the computer equipment on December 31, 2011.
- On December 31, 2011, Nicklaus Co. sold a machine to Ozaki Co. and simultaneously leased it back for one year. The sale price of the machine was \$480,000, the carrying amount is \$420,000, and it had an estimated remaining useful life of 14 years. The present value of the rental payments for the one year is \$35,000. At December 31, 2011, how much should Nicklaus report as deferred revenue from the sale of the machine?
- On January 1, 2011, Barone Corp. sold an airplane with an estimated useful life of 10 years. At the same time, Barone leased back the plane for 10 years. The sales price of the airplane was \$500,000,

the carrying amount \$401,000, and the annual rental \$73,975.22. Barone Corp. intends to depreciate the leased asset using the sum-of-the-years'-digits depreciation method. Discuss how the gain on the sale should be reported at the end of 2011 in the financial statements.

- (d) On January 1, 2011, Durocher Co. sold equipment with an estimated useful life of 5 years. At the same time, Durocher leased back the equipment for 2 years under a lease classified as an operating lease. The sales price (fair market value) of the equipment was \$212,700, the carrying amount is \$300,000, the monthly rental under the lease is \$6,000, and the present value of the rental payments is \$115,753. For the year ended December 31, 2011, determine which items would be reported on its income statement for the sale-leaseback transaction.

See the book's companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), for a set of B Exercises.

## PROBLEMS

**2 • 8** **P21-1 (Lessee-Lessor Entries, Sales-Type Lease)** Glaus Leasing Company agrees to lease machinery to Jensen Corporation on January 1, 2010. The following information relates to the lease agreement.

- The term of the lease is 7 years with no renewal option, and the machinery has an estimated economic life of 9 years.
- The cost of the machinery is \$525,000, and the fair value of the asset on January 1, 2010, is \$700,000.
- At the end of the lease term the asset reverts to the lessor. At the end of the lease term the asset has a guaranteed residual value of \$100,000. Jensen depreciates all of its equipment on a straight-line basis.
- The lease agreement requires equal annual rental payments, beginning on January 1, 2010.
- The collectibility of the lease payments is reasonably predictable, and there are no important uncertainties surrounding the amount of costs yet to be incurred by the lessor.
- Glaus desires a 10% rate of return on its investments. Jensen's incremental borrowing rate is 11%, and the lessor's implicit rate is unknown.

### Instructions

(Assume the accounting period ends on December 31.)

- Discuss the nature of this lease for both the lessee and the lessor.
- Calculate the amount of the annual rental payment required.
- Compute the present value of the minimum lease payments.
- Prepare the journal entries Jensen would make in 2010 and 2011 related to the lease arrangement.
- Prepare the journal entries Glaus would make in 2010 and 2011.

**3 • 4**

**P21-2 (Lessee-Lessor Entries, Operating Lease)** Cleveland Inc. leased a new crane to Abriendo Construction under a 5-year noncancelable contract starting January 1, 2011. Terms of the lease require payments of \$33,000 each January 1, starting January 1, 2011. Cleveland will pay insurance, taxes, and maintenance charges on the crane, which has an estimated life of 12 years, a fair value of \$240,000, and a cost to Cleveland of \$240,000. The estimated fair value of the crane is expected to be \$45,000 at the end of the lease term. No bargain-purchase or renewal options are included in the contract. Both Cleveland and Abriendo adjust and close books annually at December 31. Collectibility of the lease payments is reasonably certain, and no uncertainties exist relative to unreimbursable lessor costs. Abriendo's incremental borrowing rate is 10%, and Cleveland's implicit interest rate of 9% is known to Abriendo.

### Instructions

- Identify the type of lease involved and give reasons for your classification. Discuss the accounting treatment that should be applied by both the lessee and the lessor.
- Prepare all the entries related to the lease contract and leased asset for the year 2011 for the lessee and lessor, assuming the following amounts.
  - Insurance \$500.
  - Taxes \$2,000.
  - Maintenance \$650.
  - Straight-line depreciation and salvage value \$15,000.
- Discuss what should be presented in the balance sheet, the income statement, and the related notes of both the lessee and the lessor at December 31, 2011.

2 • 8 • 9

**P21-3 (Lessee-Lessor Entries, Balance Sheet Presentation, Sales-Type Lease)** Winston Industries and Ewing Inc. enter into an agreement that requires Ewing Inc. to build three diesel-electric engines to Winston’s specifications. Upon completion of the engines, Winston has agreed to lease them for a period of 10 years and to assume all costs and risks of ownership. The lease is noncancelable, becomes effective on January 1, 2011, and requires annual rental payments of \$413,971 each January 1, starting January 1, 2011.

Winston’s incremental borrowing rate is 10%. The implicit interest rate used by Ewing Inc. and known to Winston is 8%. The total cost of building the three engines is \$2,600,000. The economic life of the engines is estimated to be 10 years, with residual value set at zero. Winston depreciates similar equipment on a straight-line basis. At the end of the lease, Winston assumes title to the engines. Collectibility of the lease payments is reasonably certain; no uncertainties exist relative to unreimbursable lessor costs.

**Instructions**

(Round all numbers to the nearest dollar.)

- (a) Discuss the nature of this lease transaction from the viewpoints of both lessee and lessor.
- (b) Prepare the journal entry or entries to record the transaction on January 1, 2011, on the books of Winston Industries.
- (c) Prepare the journal entry or entries to record the transaction on January 1, 2011, on the books of Ewing Inc.
- (d) Prepare the journal entries for both the lessee and lessor to record the first rental payment on January 1, 2011.
- (e) Prepare the journal entries for both the lessee and lessor to record interest expense (revenue) at December 31, 2011. (Prepare a lease amortization schedule for 2 years.)
- (f) Show the items and amounts that would be reported on the balance sheet (not notes) at December 31, 2011, for both the lessee and the lessor.

2 • 6 • 9

**P21-4 (Balance Sheet and Income Statement Disclosure—Lessee)** The following facts pertain to a noncancelable lease agreement between Alschuler Leasing Company and McKee Electronics, a lessee, for a computer system.

Inception date	October 1, 2010
Lease term	6 years
Economic life of leased equipment	6 years
Fair value of asset at October 1, 2010	\$300,383
Residual value at end of lease term	–0–
Lessor’s implicit rate	10%
Lessee’s incremental borrowing rate	10%
Annual lease payment due at the beginning of each year, beginning with October 1, 2010	\$62,700

The collectibility of the lease payments is reasonably predictable, and there are no important uncertainties surrounding the costs yet to be incurred by the lessor. The lessee assumes responsibility for all executory costs, which amount to \$5,500 per year and are to be paid each October 1, beginning October 1, 2010. (This \$5,500 is not included in the rental payment of \$62,700.) The asset will revert to the lessor at the end of the lease term. The straight-line depreciation method is used for all equipment.

The following amortization schedule has been prepared correctly for use by both the lessor and the lessee in accounting for this lease. The lease is to be accounted for properly as a capital lease by the lessee and as a direct-financing lease by the lessor.

Date	Annual Lease Payment/Receipt	Interest (10%) on Unpaid Liability/Receivable	Reduction of Lease Liability/Receivable	Balance of Lease Liability/Receivable
10/01/10				\$300,383
10/01/10	\$ 62,700		\$ 62,700	237,683
10/01/11	62,700	\$23,768	38,932	198,751
10/01/12	62,700	19,875	42,825	155,926
10/01/13	62,700	15,593	47,107	108,819
10/01/14	62,700	10,822	51,818	57,001
10/01/15	62,700	5,699*	57,001	–0–
	<u>\$376,200</u>	<u>\$75,817</u>	<u>\$300,383</u>	

\*Rounding error is \$1.

**Instructions**

(Round all numbers to the nearest cent.)

- (a) Assuming the lessee's accounting period ends on September 30, answer the following questions with respect to this lease agreement.
- (1) What items and amounts will appear on the lessee's income statement for the year ending September 30, 2011?
  - (2) What items and amounts will appear on the lessee's balance sheet at September 30, 2011?
  - (3) What items and amounts will appear on the lessee's income statement for the year ending September 30, 2012?
  - (4) What items and amounts will appear on the lessee's balance sheet at September 30, 2012?
- (b) Assuming the lessee's accounting period ends on December 31, answer the following questions with respect to this lease agreement.
- (1) What items and amounts will appear on the lessee's income statement for the year ending December 31, 2010?
  - (2) What items and amounts will appear on the lessee's balance sheet at December 31, 2010?
  - (3) What items and amounts will appear on the lessee's income statement for the year ending December 31, 2011?
  - (4) What items and amounts will appear on the lessee's balance sheet at December 31, 2011?

**5** **9**

**P21-5 (Balance Sheet and Income Statement Disclosure—Lessor)** Assume the same information as in P21-4.

**Instructions**

(Round all numbers to the nearest cent.)

- (a) Assuming the lessor's accounting period ends on September 30, answer the following questions with respect to this lease agreement.
- (1) What items and amounts will appear on the lessor's income statement for the year ending September 30, 2011?
  - (2) What items and amounts will appear on the lessor's balance sheet at September 30, 2011?
  - (3) What items and amounts will appear on the lessor's income statement for the year ending September 30, 2012?
  - (4) What items and amounts will appear on the lessor's balance sheet at September 30, 2012?
- (b) Assuming the lessor's accounting period ends on December 31, answer the following questions with respect to this lease agreement.
- (1) What items and amounts will appear on the lessor's income statement for the year ending December 31, 2010?
  - (2) What items and amounts will appear on the lessor's balance sheet at December 31, 2010?
  - (3) What items and amounts will appear on the lessor's income statement for the year ending December 31, 2011?
  - (4) What items and amounts will appear on the lessor's balance sheet at December 31, 2011?

**2** **7**

**P21-6 (Lessee Entries with Residual Value)** The following facts pertain to a noncancelable lease agreement between Faldo Leasing Company and Vance Company, a lessee.

Inception date	January 1, 2010
Annual lease payment due at the beginning of each year, beginning with January 1, 2010	\$124,798
Residual value of equipment at end of lease term, guaranteed by the lessee	\$50,000
Lease term	6 years
Economic life of leased equipment	6 years
Fair value of asset at January 1, 2010	\$600,000
Lessor's implicit rate	12%
Lessee's incremental borrowing rate	12%

The lessee assumes responsibility for all executory costs, which are expected to amount to \$5,000 per year. The asset will revert to the lessor at the end of the lease term. The lessee has guaranteed the lessor a residual value of \$50,000. The lessee uses the straight-line depreciation method for all equipment.

**Instructions**

(Round all numbers to the nearest cent.)

- (a) Prepare an amortization schedule that would be suitable for the lessee for the lease term.
- (b) Prepare all of the journal entries for the lessee for 2010 and 2011 to record the lease agreement, the lease payments, and all expenses related to this lease. Assume the lessee's annual accounting period ends on December 31 and reversing entries are used when appropriate.

**P21-7 (Lessee Entries and Balance Sheet Presentation, Capital Lease)** Ludwick Steel Company as lessee signed a lease agreement for equipment for 5 years, beginning December 31, 2010. Annual rental payments of \$40,000 are to be made at the beginning of each lease year (December 31). The taxes, insurance, and the maintenance costs are the obligation of the lessee. The interest rate used by the lessor in setting the payment schedule is 9%; Ludwick’s incremental borrowing rate is 10%. Ludwick is unaware of the rate being used by the lessor. At the end of the lease, Ludwick has the option to buy the equipment for \$1, considerably below its estimated fair value at that time. The equipment has an estimated useful life of 7 years, with no salvage value. Ludwick uses the straight-line method of depreciation on similar owned equipment.

**Instructions**

(Round all numbers to the nearest dollar.)

- (a) Prepare the journal entry or entries, with explanations, that should be recorded on December 31, 2010, by Ludwick.
- (b) Prepare the journal entry or entries, with explanations, that should be recorded on December 31, 2011, by Ludwick. (Prepare the lease amortization schedule for all five payments.)
- (c) Prepare the journal entry or entries, with explanations, that should be recorded on December 31, 2012, by Ludwick.
- (d) What amounts would appear on Ludwick’s December 31, 2012, balance sheet relative to the lease arrangement?

**P21-8 (Lessee Entries and Balance Sheet Presentation, Capital Lease)** On January 1, 2011, Cage Company contracts to lease equipment for 5 years, agreeing to make a payment of \$137,899 (including the executory costs of \$6,000) at the beginning of each year, starting January 1, 2011. The taxes, the insurance, and the maintenance, estimated at \$6,000 a year, are the obligations of the lessee. The leased equipment is to be capitalized at \$550,000. The asset is to be depreciated on a double-declining-balance basis, and the obligation is to be reduced on an effective-interest basis. Cage’s incremental borrowing rate is 12%, and the implicit rate in the lease is 10%, which is known by Cage. Title to the equipment transfers to Cage when the lease expires. The asset has an estimated useful life of 5 years and no residual value.

**Instructions**

(Round all numbers to the nearest dollar.)

- (a) Explain the probable relationship of the \$550,000 amount to the lease arrangement.
- (b) Prepare the journal entry or entries that should be recorded on January 1, 2011, by Cage Company.
- (c) Prepare the journal entry to record depreciation of the leased asset for the year 2011.
- (d) Prepare the journal entry to record the interest expense for the year 2011.
- (e) Prepare the journal entry to record the lease payment of January 1, 2012, assuming reversing entries are not made.
- (f) What amounts will appear on the lessee’s December 31, 2011, balance sheet relative to the lease contract?

**P21-9 (Lessee Entries, Capital Lease with Monthly Payments)** Shapiro Inc. was incorporated in 2010 to operate as a computer software service firm with an accounting fiscal year ending August 31. Shapiro’s primary product is a sophisticated online inventory-control system; its customers pay a fixed fee plus a usage charge for using the system.

Shapiro has leased a large, Alpha-3 computer system from the manufacturer. The lease calls for a monthly rental of \$40,000 for the 144 months (12 years) of the lease term. The estimated useful life of the computer is 15 years.

Each scheduled monthly rental payment includes \$3,000 for full-service maintenance on the computer to be performed by the manufacturer. All rentals are payable on the first day of the month beginning with August 1, 2011, the date the computer was installed and the lease agreement was signed. The lease is noncancelable for its 12-year term, and it is secured only by the manufacturer’s chattel lien on the Alpha-3 system.

This lease is to be accounted for as a capital lease by Shapiro, and it will be depreciated by the straight-line method with no expected salvage value. Borrowed funds for this type of transaction would cost Shapiro 12% per year (1% per month). Following is a schedule of the present value of \$1 for selected periods discounted at 1% per period when payments are made at the beginning of each period.

Periods (months)	Present Value of \$1 per Period Discounted at 1% per Period
1	1.000
2	1.990
3	2.970
143	76.658
144	76.899

**Instructions**

Prepare, in general journal form, all entries Shapiro should have made in its accounting records during August 2011 relating to this lease. Give full explanations and show supporting computations for each entry. Remember, August 31, 2011, is the end of Shapiro's fiscal accounting period and it will be preparing financial statements on that date. Do not prepare closing entries.

(AICPA adapted)

**4** **7** **8**

**P21-10 (Lessor Computations and Entries, Sales-Type Lease with Unguaranteed RV)** George Company manufactures a computer with an estimated economic life of 12 years and leases it to National Airlines for a period of 10 years. The normal selling price of the equipment is \$278,072, and its unguaranteed residual value at the end of the lease term is estimated to be \$20,000. National will pay annual payments of \$40,000 at the beginning of each year and all maintenance, insurance, and taxes. George incurred costs of \$180,000 in manufacturing the equipment and \$4,000 in negotiating and closing the lease. George has determined that the collectibility of the lease payments is reasonably predictable, that no additional costs will be incurred, and that the implicit interest rate is 10%.

**Instructions**

(Round all numbers to the nearest dollar.)

- (a) Discuss the nature of this lease in relation to the lessor and compute the amount of each of the following items.
  - (1) Lease receivable.
  - (2) Sales price.
  - (3) Cost of sales.
- (b) Prepare a 10-year lease amortization schedule.
- (c) Prepare all of the lessor's journal entries for the first year.

**2** **6** **7**

**P21-11 (Lessee Computations and Entries, Capital Lease with Unguaranteed Residual Value)** Assume the same data as in P21-10 with National Airlines Co. having an incremental borrowing rate of 10%.

**Instructions**

(Round all numbers to the nearest dollar.)

- (a) Discuss the nature of this lease in relation to the lessee, and compute the amount of the initial obligation under capital leases.
- (b) Prepare a 10-year lease amortization schedule.
- (c) Prepare all of the lessee's journal entries for the first year.

**2** **6**

**P21-12 (Basic Lessee Accounting with Difficult PV Calculation)** In 2009 Grishell Trucking Company negotiated and closed a long-term lease contract for newly constructed truck terminals and freight storage facilities. The buildings were erected to the company's specifications on land owned by the company. On January 1, 2010, Grishell Trucking Company took possession of the lease properties. On January 1, 2010 and 2011, the company made cash payments of \$948,000 that were recorded as rental expenses.

Although the terminals have a composite useful life of 40 years, the noncancelable lease runs for 20 years from January 1, 2010, with a bargain-purchase option available upon expiration of the lease.

The 20-year lease is effective for the period January 1, 2010, through December 31, 2029. Advance rental payments of \$800,000 are payable to the lessor on January 1 of each of the first 10 years of the lease term. Advance rental payments of \$320,000 are due on January 1 for each of the last 10 years of the lease. The company has an option to purchase all of these leased facilities for \$1 on December 31, 2029. It also must make annual payments to the lessor of \$125,000 for property taxes and \$23,000 for insurance. The lease was negotiated to assure the lessor a 6% rate of return.

**Instructions**

(Round all numbers to the nearest dollar.)

- (a) Prepare a schedule to compute for Grishell Trucking Company the discounted present value of the terminal facilities and related obligation at January 1, 2010.
- (b) Assuming that the discounted present value of terminal facilities and related obligation at January 1, 2010, was \$7,600,000, prepare journal entries for Grishell Trucking Company to record the:
  - (1) Cash payment to the lessor on January 1, 2012.
  - (2) Amortization of the cost of the leased properties for 2012 using the straight-line method and assuming a zero salvage value.
  - (3) Accrual of interest expense at December 31, 2012.

Selected present value factors are as follows:

Periods	For an Ordinary Annuity of \$1 at 6%	For \$1 at 6%
1	.943396	.943396
2	1.833393	.889996
8	6.209794	.627412
9	6.801692	.591898
10	7.360087	.558395
19	11.158117	.330513
20	11.469921	.311805

(AICPA adapted)

•4 •7 •8

**P21-13 (Lessor Computations and Entries, Sales-Type Lease with Guaranteed Residual Value)** Amirante Inc. manufactures an X-ray machine with an estimated life of 12 years and leases it to Chambers Medical Center for a period of 10 years. The normal selling price of the machine is \$411,324, and its guaranteed residual value at the end of the noncancelable lease term is estimated to be \$15,000. The hospital will pay rents of \$60,000 at the beginning of each year and all maintenance, insurance, and taxes. Amirante Inc. incurred costs of \$250,000 in manufacturing the machine and \$14,000 in negotiating and closing the lease. Amirante Inc. has determined that the collectibility of the lease payments is reasonably predictable, that there will be no additional costs incurred, and that the implicit interest rate is 10%.

#### Instructions

(Round all numbers to the nearest dollar.)

- (a) Discuss the nature of this lease in relation to the lessor and compute the amount of each of the following items.
  - (1) Lease receivable at inception
  - (2) Sales price.
  - (3) Cost of sales.
- (b) Prepare a 10-year lease amortization schedule.
- (c) Prepare all of the lessor's journal entries for the first year.

•2 •7

**P21-14 (Lessee Computations and Entries, Capital Lease with Guaranteed Residual Value)** Assume the same data as in P21-13 and that Chambers Medical Center has an incremental borrowing rate of 10%.

#### Instructions

(Round all numbers to the nearest dollar.)

- (a) Discuss the nature of this lease in relation to the lessee, and compute the amount of the initial obligation under capital leases.
- (b) Prepare a 10-year lease amortization schedule.
- (c) Prepare all of the lessee's journal entries for the first year.

•2 •3 •7

**P21-15 (Operating Lease vs. Capital Lease)** You are auditing the December 31, 2011, financial statements of Hockney, Inc., manufacturer of novelties and party favors. During your inspection of the company garage, you discovered that a 2010 Shirk automobile not listed in the equipment subsidiary ledger is parked in the company garage. You ask Stacy Reeder, plant manager, about the vehicle, and she tells you that the company did not list the automobile because the company was only leasing it. The lease agreement was entered into on January 1, 2011, with Crown New and Used Cars.

You decide to review the lease agreement to ensure that the lease should be afforded operating lease treatment, and you discover the following lease terms.

1. Noncancelable term of 4 years.
2. Rental of \$3,240 per year (at the end of each year). (The present value at 8% per year is \$10,731.)
3. Estimated residual value after 4 years is \$1,100. (The present value at 8% per year is \$809.) Hockney guarantees the residual value of \$1,100.
4. Estimated economic life of the automobile is 5 years.
5. Hockney's incremental borrowing rate is 8% per year.

#### Instructions

You are a senior auditor writing a memo to your supervisor, the audit partner in charge of this audit, to discuss the above situation. Be sure to include (a) why you inspected the lease agreement, (b) what you determined about the lease, and (c) how you advised your client to account for this lease. Explain every journal entry that you believe is necessary to record this lease properly on the client's books. (It is also necessary to include the fact that you communicated this information to your client.)

2 · 4 · 7

**P21-16 (Lessee-Lessor Accounting for Residual Values)** Goring Dairy leases its milking equipment from King Finance Company under the following lease terms.

1. The lease term is 10 years, noncancelable, and requires equal rental payments of \$30,300 due at the beginning of each year starting January 1, 2011.
2. The equipment has a fair value and cost at the inception of the lease (January 1, 2011) of \$220,404, an estimated economic life of 10 years, and a residual value (which is guaranteed by Goring Dairy) of \$20,000.
3. The lease contains no renewable options, and the equipment reverts to King Finance Company upon termination of the lease.
4. Goring Dairy's incremental borrowing rate is 9% per year. The implicit rate is also 9%.
5. Goring Dairy depreciates similar equipment that it owns on a straight-line basis.
6. Collectibility of the payments is reasonably predictable, and there are no important uncertainties surrounding the costs yet to be incurred by the lessor.

#### Instructions

- (a) Evaluate the criteria for classification of the lease, and describe the nature of the lease. In general, discuss how the lessee and lessor should account for the lease transaction.
- (b) Prepare the journal entries for the lessee and lessor at January 1, 2011, and December 31, 2011 (the lessee's and lessor's year-end). Assume no reversing entries.
- (c) What would have been the amount capitalized by the lessee upon the inception of the lease if:
  - (1) The residual value of \$20,000 had been guaranteed by a third party, not the lessee?
  - (2) The residual value of \$20,000 had not been guaranteed at all?
- (d) On the lessor's books, what would be the amount recorded as the Net Investment (Lease Receivable) at the inception of the lease, assuming:
  - (1) The residual value of \$20,000 had been guaranteed by a third party?
  - (2) The residual value of \$20,000 had not been guaranteed at all?
- (e) Suppose the useful life of the milking equipment is 20 years. How large would the residual value have to be at the end of 10 years in order for the lessee to qualify for the operating method? (Assume that the residual value would be guaranteed by a third party.) (*Hint:* The lessee's annual payments will be appropriately reduced as the residual value increases.)

### CONCEPTS FOR ANALYSIS

**CA21-1 (Lessee Accounting and Reporting)** On January 1, 2011, Evans Company entered into a noncancelable lease for a machine to be used in its manufacturing operations. The lease transfers ownership of the machine to Evans by the end of the lease term. The term of the lease is 8 years. The minimum lease payment made by Evans on January 1, 2011, was one of eight equal annual payments. At the inception of the lease, the criteria established for classification as a capital lease by the lessee were met.

#### Instructions

- (a) What is the theoretical basis for the accounting standard that requires certain long-term leases to be capitalized by the lessee? Do not discuss the specific criteria for classifying a specific lease as a capital lease.
- (b) How should Evans account for this lease at its inception and determine the amount to be recorded?
- (c) What expenses related to this lease will Evans incur during the first year of the lease, and how will they be determined?
- (d) How should Evans report the lease transaction on its December 31, 2011, balance sheet?

**CA21-2 (Lessor and Lessee Accounting and Disclosure)** Sylvan Inc. entered into a noncancelable lease arrangement with Breton Leasing Corporation for a certain machine. Breton's primary business is leasing; it is not a manufacturer or dealer. Sylvan will lease the machine for a period of 3 years, which is 50% of the machine's economic life. Breton will take possession of the machine at the end of the initial 3-year lease and lease it to another, smaller company that does not need the most current version of the machine. Sylvan does not guarantee any residual value for the machine and will not purchase the machine at the end of the lease term.

Sylvan's incremental borrowing rate is 10%, and the implicit rate in the lease is 9%. Sylvan has no way of knowing the implicit rate used by Breton. Using either rate, the present value of the minimum lease payments is between 90% and 100% of the fair value of the machine at the date of the lease agreement.

Sylvan has agreed to pay all executory costs directly, and no allowance for these costs is included in the lease payments.

Breton is reasonably certain that Sylvan will pay all lease payments, and because Sylvan has agreed to pay all executory costs, there are no important uncertainties regarding costs to be incurred by Breton. Assume that no indirect costs are involved.

#### Instructions

- (a) With respect to Sylvan (the lessee), answer the following.
  - (1) What type of lease has been entered into? Explain the reason for your answer.
  - (2) How should Sylvan compute the appropriate amount to be recorded for the lease or asset acquired?
  - (3) What accounts will be created or affected by this transaction, and how will the lease or asset and other costs related to the transaction be matched with earnings?
  - (4) What disclosures must Sylvan make regarding this leased asset?
- (b) With respect to Breton (the lessor), answer the following:
  - (1) What type of leasing arrangement has been entered into? Explain the reason for your answer.
  - (2) How should this lease be recorded by Breton, and how are the appropriate amounts determined?
  - (3) How should Breton determine the appropriate amount of earnings to be recognized from each lease payment?
  - (4) What disclosures must Breton make regarding this lease?

(AICPA adapted)

**CA21-3 (Lessee Capitalization Criteria)** On January 1, Santiago Company, a lessee, entered into three noncancelable leases for brand-new equipment, Lease L, Lease M, and Lease N. None of the three leases transfers ownership of the equipment to Santiago at the end of the lease term. For each of the three leases, the present value at the beginning of the lease term of the minimum lease payments, excluding that portion of the payments representing executory costs such as insurance, maintenance, and taxes to be paid by the lessor, is 75% of the fair value of the equipment.

The following information is peculiar to each lease.

1. Lease L does not contain a bargain-purchase option. The lease term is equal to 80% of the estimated economic life of the equipment.
2. Lease M contains a bargain-purchase option. The lease term is equal to 50% of the estimated economic life of the equipment.
3. Lease N does not contain a bargain-purchase option. The lease term is equal to 50% of the estimated economic life of the equipment.

#### Instructions

- (a) How should Santiago Company classify each of the three leases above, and why? Discuss the rationale for your answer.
- (b) What amount, if any, should Santiago record as a liability at the inception of the lease for each of the three leases above?
- (c) Assuming that the minimum lease payments are made on a straight-line basis, how should Santiago record each minimum lease payment for each of the three leases above?

(AICPA adapted)

#### CA21-4 (Comparison of Different Types of Accounting by Lessee and Lessor)

##### Part 1

Capital leases and operating leases are the two classifications of leases described in FASB pronouncements from the standpoint of the **lessee**.

#### Instructions

- (a) Describe how a capital lease would be accounted for by the lessee both at the inception of the lease and during the first year of the lease, assuming the lease transfers ownership of the property to the lessee by the end of the lease.
- (b) Describe how an operating lease would be accounted for by the lessee both at the inception of the lease and during the first year of the lease, assuming equal monthly payments are made by the lessee at the beginning of each month of the lease. Describe the change in accounting, if any, when rental payments are not made on a straight-line basis.

Do **not** discuss the criteria for distinguishing between capital leases and operating leases.

##### Part 2

Sales-type leases and direct-financing leases are two of the classifications of leases described in FASB pronouncements from the standpoint of the **lessor**.

**Instructions**

Compare and contrast a sales-type lease with a direct-financing lease as follows.

- (a) Lease receivable.
- (b) Recognition of interest revenue.
- (c) Manufacturer's or dealer's profit.

Do **not** discuss the criteria for distinguishing between the leases described above and operating leases.

(AICPA adapted)

**CA21-5 (Lessee Capitalization of Bargain-Purchase Option)** Albertsen Corporation is a diversified company with nationwide interests in commercial real estate developments, banking, copper mining, and metal fabrication. The company has offices and operating locations in major cities throughout the United States. Corporate headquarters for Albertsen Corporation is located in a metropolitan area of a midwestern state, and executives connected with various phases of company operations travel extensively. Corporate management is currently evaluating the feasibility of acquiring a business aircraft that can be used by company executives to expedite business travel to areas not adequately served by commercial airlines. Proposals for either leasing or purchasing a suitable aircraft have been analyzed, and the leasing proposal was considered to be more desirable.

The proposed lease agreement involves a twin-engine turboprop Viking that has a fair value of \$1,000,000. This plane would be leased for a period of 10 years beginning January 1, 2011. The lease agreement is cancelable only upon accidental destruction of the plane. An annual lease payment of \$141,780 is due on January 1 of each year; the first payment is to be made on January 1, 2011. Maintenance operations are strictly scheduled by the lessor, and Albertsen Corporation will pay for these services as they are performed. Estimated annual maintenance costs are \$6,900. The lessor will pay all insurance premiums and local property taxes, which amount to a combined total of \$4,000 annually and are included in the annual lease payment of \$141,780. Upon expiration of the 10-year lease, Albertsen Corporation can purchase the Viking for \$44,440. The estimated useful life of the plane is 15 years, and its salvage value in the used plane market is estimated to be \$100,000 after 10 years. The salvage value probably will never be less than \$75,000 if the engines are overhauled and maintained as prescribed by the manufacturer. If the purchase option is not exercised, possession of the plane will revert to the lessor, and there is no provision for renewing the lease agreement beyond its termination on December 31, 2020.

Albertsen Corporation can borrow \$1,000,000 under a 10-year term loan agreement at an annual interest rate of 12%. The lessor's implicit interest rate is not expressly stated in the lease agreement, but this rate appears to be approximately 8% based on ten net rental payments of \$137,780 per year and the initial market value of \$1,000,000 for the plane. On January 1, 2011, the present value of all net rental payments and the purchase option of \$44,440 is \$888,890 using the 12% interest rate. The present value of all net rental payments and the \$44,440 purchase option on January 1, 2011, is \$1,022,226 using the 8% interest rate implicit in the lease agreement. The financial vice president of Albertsen Corporation has established that this lease agreement is a capital lease as defined in GAAP.

**Instructions**

- (a) What is the appropriate amount that Albertsen Corporation should recognize for the leased aircraft on its balance sheet after the lease is signed?
- (b) Without prejudice to your answer in part (a), assume that the annual lease payment is \$141,780 as stated in the question, that the appropriate capitalized amount for the leased aircraft is \$1,000,000 on January 1, 2011, and that the interest rate is 9%. How will the lease be reported in the December 31, 2011, balance sheet and related income statement? (Ignore any income tax implications.)

(CMA adapted)

**CA21-6 (Lease Capitalization, Bargain-Purchase Option)** Baden Corporation entered into a lease agreement for 10 photocopier machines for its corporate headquarters. The lease agreement qualifies as an operating lease in all terms except there is a bargain-purchase option. After the 5-year lease term, the corporation can purchase each copier for \$1,000, when the anticipated market value is \$2,500.

Jerry Suffolk, the financial vice president, thinks the financial statements must recognize the lease agreement as a capital lease because of the bargain-purchase agreement. The controller, Diane Buchanan, disagrees: "Although I don't know much about the copiers themselves, there is a way to avoid recording the lease liability." She argues that the corporation might claim that copier technology advances rapidly and that by the end of the lease term the machines will most likely not be worth the \$1,000 bargain price.

**Instructions**

Answer the following questions.

- (a) What ethical issue is at stake?
- (b) Should the controller's argument be accepted if she does not really know much about copier technology? Would it make a difference if the controller were knowledgeable about the pace of change in copier technology?
- (c) What should Suffolk do?

**\*CA21-7 (Sale-Leaseback)** On January 1, 2011, Perriman Company sold equipment for cash and leased it back. As seller-lessee, Perriman retained the right to substantially all of the remaining use of the equipment. The term of the lease is 8 years. There is a gain on the sale portion of the transaction. The lease portion of the transaction is classified appropriately as a capital lease.

**Instructions**

- (a) What is the theoretical basis for requiring lessees to capitalize certain long-term leases? **Do not discuss the specific criteria for classifying a lease as a capital lease.**
- (b) (1) How should Perriman account for the sale portion of the sale-leaseback transaction at January 1, 2011?  
(2) How should Perriman account for the leaseback portion of the sale-leaseback transaction at January 1, 2011?
- (c) How should Perriman account for the gain on the sale portion of the sale-leaseback transaction during the first year of the lease? Why?

(AICPA adapted)

**\*CA21-8 (Sale-Leaseback)** On December 31, 2010, Shellhammer Co. sold 6-month old equipment at fair value and leased it back. There was a loss on the sale. Shellhammer pays all insurance, maintenance, and taxes on the equipment. The lease provides for eight equal annual payments, beginning December 31, 2011, with a present value equal to 85% of the equipment's fair value and sales price. The lease's term is equal to 80% of the equipment's useful life. There is no provision for Shellhammer to reacquire ownership of the equipment at the end of the lease term.

**Instructions**

- (a) (1) Why is it important to compare an equipment's fair value to its lease payments' present value and its useful life to the lease term?  
(2) Evaluate Shellhammer's leaseback of the equipment in terms of each of the four criteria for determination of a capital lease.
- (b) How should Shellhammer account for the sale portion of the sale-leaseback transaction at December 31, 2010?
- (c) How should Shellhammer report the leaseback portion of the sale-leaseback transaction on its December 31, 2011, balance sheet?

## USING YOUR JUDGMENT

### FINANCIAL REPORTING

---

#### Financial Reporting Problem

#### The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix 5B or can be accessed at the book's companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso).

**Instructions**

Refer to P&G's financial statements, accompanying notes, and management's discussion and analysis to answer the following questions.

- (a) What types of leases are used by P&G?
- (b) What amount of capital leases was reported by P&G in total and for less than one year?
- (c) What minimum annual rental commitments under all noncancelable leases at June 30, 2007, did P&G disclose?

## Comparative Analysis Case

### UAL, Inc. and Southwest Airlines

#### Instructions

Go to the book's companion website or the company websites and use information found there to answer the following questions related to **UAL, Inc.** and **Southwest Airlines**.

- What types of leases are used by Southwest and on what assets are these leases primarily used?
- How long-term are some of Southwest's leases? What are some of the characteristics or provisions of Southwest's (as lessee) leases?
- What did Southwest report in 2007 as its future minimum annual rental commitments under non-cancelable leases?
- At year-end 2007, what was the present value of the minimum rental payments under Southwest's capital leases? How much imputed interest was deducted from the future minimum annual rental commitments to arrive at the present value?
- What were the amounts and details reported by Southwest for rental expense in 2007, 2006, and 2005?
- How does UAL's use of leases compare with Southwest's?

## Financial Statement Analysis Case

### Tasty Baking Company

Presented in Illustration 21-31 are the financial statement disclosures from the 2007 annual report of **Tasty Baking Company**.

#### Instructions

Answer the following questions related to these disclosures.

- What is the total obligation under capital leases at December 29, 2007, for Tasty Baking Company?
- What is the book value of the assets under capital lease at December 29, 2007, for Tasty Baking Company? Explain why there is a difference between the amounts reported for assets and liabilities under capital leases.
- What is the total rental expense reported for leasing activity for the year ended December 29, 2007, for Tasty Baking Company?
- Estimate the off-balance-sheet liability due to Tasty Baking's operating leases at fiscal year-end 2007.

## International Reporting Case

As discussed in the chapter, U.S. GAAP accounting for leases allows companies to use off-balance-sheet financing for the purchase of operating assets. International accounting standards are similar to U.S. GAAP in that under these rules, companies can keep leased assets and obligations off their balance sheets. However, under *International Accounting Standard No. 17 (IAS 17)*, leases are capitalized based on the subjective evaluation of whether the risks and rewards of ownership are transferred in the lease. In Japan, virtually all leases are treated as operating leases. Furthermore, unlike U.S. GAAP and iGAAP, the Japanese rules do not require disclosure of future minimum lease payments.

Presented below are financial data for three major airlines that lease some part of their aircraft fleet. **American Airlines** prepares its financial statements under U.S. GAAP and leases approximately 27% of its fleet. **KLM Royal Dutch Airlines** and **Japan Airlines (JAL)** present their statements in accordance with their home country GAAP (Netherlands and Japan, respectively). KLM leases about 22% of its aircraft, and JAL leases approximately 50% of its fleet.

Financial Statement Data	American Airlines (millions of dollars)	KLM Royal Dutch Airlines (millions of guilders)	Japan Airlines (millions of yen)
<b>As-reported</b>			
Assets	20,915	19,205	2,042,761
Liabilities	14,699	13,837	1,857,800
Income	985	606	4,619
<b>Estimated impact of capitalizing operating leases on:<sup>1</sup></b>			
Assets	5,897	1,812	244,063
Liabilities	6,886	1,776	265,103
Income	(143)	24	(9,598)

<sup>1</sup>Based on *Apples to Apples: Global Airlines: Flight to Quality* (New York: N.Y.: Morgan Stanley Dean Witter).

**Instructions**

- Using the as-reported data for each of the airlines, compute the rate of return on assets and the debt to assets ratio. Compare these companies on the basis of this analysis.
- Adjust the as-reported numbers of the three companies for the effects of non-capitalization of leases, and then redo the analysis in part (a).
- The following statement was overheard in the library: “Non-capitalization of operating leases is not that big a deal for profitability analysis based on rate of return on assets, since the operating lease payments (under operating lease accounting) are about the same as the sum of the interest and depreciation expense under capital lease treatment.” Do you agree? Explain.
- Since the accounting for leases worldwide is similar, does your analysis above suggest there is a need for an improved accounting standard for leases? (*Hint*: Reflect on comparability of information about these companies’ leasing activities, when leasing is more prevalent in one country than in others.)

**BRIDGE TO THE PROFESSION****Professional Research: FASB Codification**

Daniel Hardware Co. is considering alternative financing arrangements for equipment used in its warehouses. Besides purchasing the equipment outright, Daniel is also considering a lease. Accounting for the outright purchase is fairly straightforward, but because Daniel has not used equipment leases in the past, the accounting staff is less informed about the specific accounting rules for leases.

The staff is aware of some lease rules related to a “90 percent of fair value,” “75 percent of useful life,” and “residual value deficiencies,” but they are unsure about the meanings of these terms in lease accounting. Daniel has asked you to conduct some research on these items related to lease capitalization criteria.

**Instructions**

Access the FASB Codification at <http://asc.fasb.org/home> to conduct research using the Codification Research System to prepare responses to the following items. Provide Codification references for your responses.

- What is the objective of lease classification criteria?
- An important element of evaluating leases is determining whether substantially all of the risks and rewards of ownership are transferred in the lease. How is “substantially all” defined in the authoritative literature?
- Besides the noncancelable term of the lease, name at least three other considerations in determining the “lease term.”
- A common issue in the accounting for leases concerns lease requirements that the lessee make up a residual value deficiency that is attributable to damage, extraordinary wear and tear, or excessive usage (e.g., excessive mileage on a leased vehicle). Do these features constitute a lessee guarantee of the residual value such that the estimated residual value of the leased property at the end of the lease term should be included in minimum lease payments? Explain.

**Professional Simulations**

Go to the book’s companion website, at [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), to find interactive problems that simulate the computerized CPA exam. The professional simulations for this chapter asks you to address questions related to the accounting for leases.

**Remember to check the book’s companion website to find additional resources for this chapter.**

## CHAPTER 22

# ACCOUNTING CHANGES AND ERROR ANALYSIS

### LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Identify the types of accounting changes.
- 2 Describe the accounting for changes in accounting principles.
- 3 Understand how to account for retrospective accounting changes.
- 4 Understand how to account for impracticable changes.
- 5 Describe the accounting for changes in estimates.
- 6 Identify changes in a reporting entity.
- 7 Describe the accounting for correction of errors.
- 8 Identify economic motives for changing accounting methods.
- 9 Analyze the effect of errors.

### IN THE DARK

The FASB's conceptual framework describes comparability (including consistency) as one of the qualitative characteristics that contribute to the usefulness of accounting information. Unfortunately, companies are finding it difficult to maintain comparability and consistency due to the numerous changes in accounting principles mandated by the FASB. In addition, a number of companies have faced restatements due to errors in their financial statements. For example, the table below shows types and numbers of recent accounting changes.

Stock-based compensation	437	Inventories	8
Defined-benefit pension and postretirement plans	305	Goodwill and other intangibles	5
Asset retirement obligations	29	Lease/rental costs	5
Prior period financial statement misstatements	18	Other (including servicing rights, exchanges of nonmonetary assets, and impairments)	34

Although the percentage of companies reporting material changes or errors is small, readers of financial statements still must be careful. The reason: The amounts in the financial statements may have changed due to changing accounting principles and/or restatements. The chart on the next page indicates the recent trends in restatements.

There is some good news in the chart. As indicated, the number of restatements declined in 2007 compared to the high of 2006. However, investors can be in the dark when a company has an error that requires restatement. It may take some time for companies to sort out the source of an error, prepare corrected statements, and get auditor sign-off. Recent data indicate it takes on average about 3 months to resolve a restatement. The following table reports the range of periods when investors are in the dark due to a restatement.

Time to File Restated Financial Statements	% of All Restatements
Up to 3 Months	77
3–9 Months	11
Greater than 9 Months	12

Note: Chart includes all U.S.-listed companies. The total number of companies is based on the number of unique companies that filed at least one annual report, quarterly report, or effective registration statement with the SEC during the year. In 2007, that number was 13,540 and in 2006 it was 13,899.

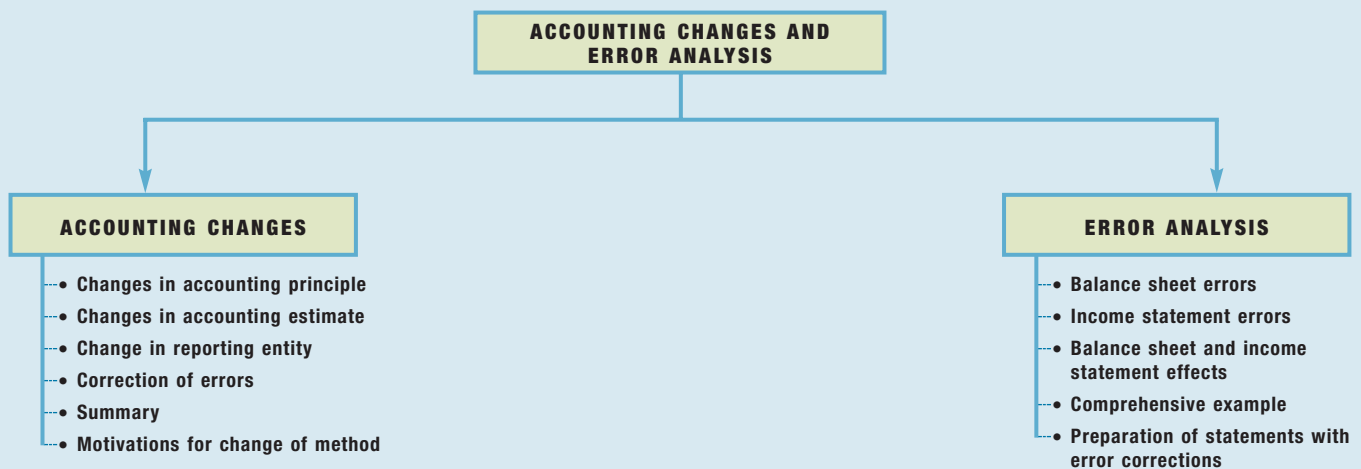

While most companies (77%) resolve their errors within 3 months, 12% (or over 200 companies) take more than 9 months to file corrected statements.

These lengthy “dark periods” have caught the attention of policy-setters and were a topic of discussion of the Committee for Improvements in Financial Reporting (CIFR). As one member of CIFR noted, “The dark period is bad for users.” As a result, the committee is proposing that for some errors, companies might not need to go through the pain of restatement, but enhanced disclosures about errors are needed.

Sources: Accounting change data from *Accounting Trends and Techniques—2007* (New York: AICPA, 2007). Restatement data from M. Grothe, “The Tide is Turning,” *Trend Alert* (January 15, 2008), Glass Lewis and Co., p. 2, and M. Leone, “Materiality Debate Emerges from the Dark,” *CFO.com* (July 14, 2008).

## PREVIEW OF CHAPTER 22

As our opening story indicates, changes in accounting principles and errors in financial information have increased substantially in recent years. When these changes occur, companies must follow specific accounting and reporting requirements. In addition, to ensure comparability among companies, the FASB has standardized reporting of accounting changes, accounting estimates, error corrections, and related earnings per share information. In this chapter, we discuss these reporting standards, which help investors better understand a company’s financial condition. The content and organization of the chapter are as follows.

## SECTION 1 • ACCOUNTING CHANGES

**Objective•1**

Identify the types of accounting changes.

Accounting alternatives diminish the comparability of financial information between periods and between companies; they also obscure useful historical trend data. For example, if **Ford** revises its estimates for equipment useful lives, depreciation expense for the current year will not be comparable to depreciation expense reported by Ford in prior years. Similarly, if **Best Buy** changes to FIFO inventory pricing while **Circuit City** uses LIFO, it will be difficult to compare these companies' reported results. A reporting framework helps preserve comparability when there is an accounting change.

The FASB has established a reporting framework, which involves three types of accounting changes. [1] The three types of accounting changes are:

1. **Change in Accounting Principle.** A change from one generally accepted accounting principle to another one. For example, a company may change its inventory valuation method from LIFO to average cost.
2. **Change in Accounting Estimate.** A change that occurs as the result of new information or additional experience. For example, a company may change its estimate of the useful lives of depreciable assets.
3. **Change in Reporting Entity.** A change from reporting as one type of entity to another type of entity. As an example, a company might change the subsidiaries for which it prepares consolidated financial statements.

A fourth category necessitates changes in accounting, though it is not classified as an accounting change.

4. **Errors in Financial Statements.** Errors result from mathematical mistakes, mistakes in applying accounting principles, or oversight or misuse of facts that existed when preparing the financial statements. For example, a company may incorrectly apply the retail inventory method for determining its final inventory value.

The FASB classifies changes in these categories because each category involves different methods of recognizing changes in the financial statements. In this chapter we discuss these classifications. We also explain how to report each item in the accounts and how to disclose the information in comparative statements.

## CHANGES IN ACCOUNTING PRINCIPLE

**Objective•2**

Describe the accounting for changes in accounting principles.

By definition, a **change in accounting principle** involves a change from one generally accepted accounting principle to another. For example, a company might change the basis of inventory pricing from average cost to LIFO. Or it might change its method of revenue recognition for long-term construction contracts from the completed-contract to the percentage-of-completion method.

Companies must carefully examine each circumstance to ensure that a change in principle has actually occurred. **Adoption of a new principle** in recognition of events that have occurred for the first time or that were previously immaterial is not an accounting change. For example, a change in accounting principle has not occurred when a company adopts an inventory method (e.g., FIFO) for **newly** acquired items of inventory, even if FIFO differs from that used for **previously recorded** inventory. Another example is certain marketing expenditures that were previously immaterial and expensed in the period incurred. It would not be considered a change in accounting principle if they become material and so may be acceptably deferred and amortized.

Finally, what if a company previously followed an accounting principle that was not acceptable? Or what if the company applied a principle incorrectly? In such cases,

See the FASB Codification section (page 1218).

**Underlying Concepts**

While changes in accounting may enhance the qualitative characteristic of *usefulness*, these changes may adversely affect the characteristics of *comparability* and *consistency*.

the profession considers a change to a generally accepted accounting principle a **correction of an error**. For example, a switch from the cash (income tax) basis of accounting to the accrual basis is a correction of an error. Or, if a company deducted salvage value when computing double-declining depreciation on plant assets and later recomputed depreciation without deducting estimated salvage value, it has corrected an error.

There are three possible approaches for reporting changes in accounting principles:

**Report changes currently.** In this approach, companies report the cumulative effect of the change in the current year's income statement as an irregular item. The **cumulative effect** is the difference in prior years' income between the newly adopted and prior accounting method. Under this approach, the effect of the change on prior years' income appears only in the current-year income statement. The company does not change **prior-year financial statements**.

Advocates of this position argue that changing prior years' financial statements results in a loss of confidence in financial reports. How do investors react when told that the earnings computed three years ago are now entirely different? Changing prior periods, if permitted, also might upset contractual arrangements based on the old figures. For example, profit-sharing arrangements computed on the old basis might have to be recomputed and completely new distributions made, creating numerous legal problems. Many practical difficulties also exist: The cost of changing prior-period financial statements may be excessive, or determining the amount of the prior-period effect may be impossible on the basis of available data.

**Report changes retrospectively.** **Retrospective application** refers to the application of a different accounting principle to recast previously issued financial statements—**as if the new principle had always been used**. In other words, the company “goes back” and adjusts **prior years' statements** on a basis consistent with the newly adopted principle. The company shows any cumulative effect of the change as an adjustment to beginning retained earnings of the earliest year presented.

Advocates of this position argue that retrospective application ensures comparability. Think for a moment what happens if this approach is not used: The year *previous* to the change will be on the old method; the year *of the change* will report the entire cumulative adjustment; and the *following* year will present financial statements on the new basis without the cumulative effect of the change. Such lack of consistency fails to provide meaningful earnings-trend data and other financial relationships necessary to evaluate the business.

**Report changes prospectively (in the future).** In this approach, previously reported results remain. As a result, companies do not adjust opening balances to reflect the change in principle. Advocates of this position argue that once management presents financial statements based on acceptable accounting principles, they are final; management cannot change prior periods by adopting a new principle. According to this line of reasoning, the current-period cumulative adjustment is not appropriate, because that approach includes amounts that have little or no relationship to the current year's income or economic events.

Given these three possible approaches, which does the accounting profession prefer? The FASB **requires that companies use the retrospective approach**. Why? Because it provides financial statement users with more useful information than the cumulative-effect or prospective approaches. **[2]** The rationale is that changing the prior statements to be on the same basis as the newly adopted principle results in greater consistency across accounting periods. Users can then better compare results from one period to the next.<sup>1</sup>

<sup>1</sup>Adoption of the retrospective approach contributes to international accounting convergence. The FASB and the IASB are collaborating on a project in which they have agreed to converge around high-quality solutions to resolve differences between U.S. GAAP and International Financial Reporting Standards (IFRS). By adopting the retrospective approach, which is the method used in IFRS, the FASB agreed that this approach is superior to the current approach.

#### INTERNATIONAL INSIGHT

IAS 8 generally requires retrospective application to prior years for accounting changes. However, IAS 8 permits the cumulative-effect method or prospective method if a company cannot reasonably determine the amounts to which to restate prior periods.

### What do the numbers mean?

#### QUITE A CHANGE

The cumulative-effect approach results in a loss of comparability. Also, reporting the cumulative adjustment in the period of the change can significantly affect net income, resulting in a misleading income figure. For example, at one time **Chrysler Corporation** changed its inventory accounting from LIFO to FIFO. If Chrysler had used the cumulative-effect approach, it would have reported a \$53,500,000 adjustment to net income. That adjustment would have resulted in net income of \$45,900,000, instead of a net loss of \$7,600,000.

A second case: In the early 1980s the railroad industry switched from the retirement-replacement method of depreciating railroad equipment to more generally used methods such as straight-line depreciation. Using cumulative treatment, railroad companies would have made substantial adjustments to income in the period of change. Many in the industry argued that including such large cumulative-effect adjustments in the current year would distort the information and make it less useful.

Such situations lend support to retrospective application so that comparability is maintained.

### Retrospective Accounting Change Approach

#### Objective-3

Understand how to account for retrospective accounting changes.

A presumption exists that once a company adopts an accounting principle, it should not change. That presumption is understandable, given the idea that consistent use of an accounting principle enhances the usefulness of financial statements. However, the environment continually changes, and companies change in response. Recent standards on such subjects as stock options, exchanges of non-monetary assets, and derivatives indicate that changes in accounting principle will continue to occur.

When a company changes an accounting principle, it should report the change using retrospective application. In general terms, here is what it must do:

1. It adjusts its financial statements for each prior period presented. Thus, financial statement information about prior periods is on the same basis as the new accounting principle.
2. It adjusts the carrying amounts of assets and liabilities as of the beginning of the first year presented. By doing so, these accounts reflect the cumulative effect on periods prior to those presented of the change to the new accounting principle. The company also makes an offsetting adjustment to the opening balance of retained earnings or other appropriate component of stockholders' equity or net assets as of the beginning of the first year presented.

For example, assume that **Target** decides to change its inventory valuation method in 2010 from the retail inventory method (FIFO) to the retail inventory (average cost). It provides comparative information for 2008 and 2009 based on the new method. Target would adjust its assets, liabilities, and retained earnings for periods prior to 2008 and report these amounts in the 2008 financial statements, when it prepares comparative financial statements.

#### Retrospective Accounting Change: Long-Term Contracts

To illustrate the retrospective approach, assume that Denson Company has accounted for its income from long-term construction contracts using the completed-contract method. In 2010 the company changed to the percentage-of-completion method. Management believes this approach provides a more appropriate measure of the income earned. For tax purposes, the company uses the completed-contract method and plans to continue doing so in the future. (We assume a 40 percent enacted tax rate.)

Illustration 22-1 shows portions of three income statements for 2008–2010—for both the completed-contract and percentage-of-completion methods.

COMPLETED-CONTRACT METHOD			
DENSON COMPANY			
INCOME STATEMENT (PARTIAL)			
FOR THE YEARS ENDED DECEMBER 31			
	2008	2009	2010
Income before income tax	\$400,000	\$160,000	\$190,000
Income tax (40%)	160,000	64,000	76,000
Net income	<u>\$240,000</u>	<u>\$ 96,000</u>	<u>\$114,000</u>

PERCENTAGE-OF-COMPLETION METHOD			
DENSON COMPANY			
INCOME STATEMENT (PARTIAL)			
FOR THE YEARS ENDED DECEMBER 31			
	2008	2009	2010
Income before income tax	\$600,000	\$180,000	\$200,000
Income tax (40%)	240,000	72,000	80,000
Net income	<u>\$360,000</u>	<u>\$108,000</u>	<u>\$120,000</u>

**ILLUSTRATION 22-1**  
Comparative Income Statements for Completed-Contract versus Percentage-of-Completion Methods

To record a change from the completed-contract to the percentage-of-completion method, we analyze the various effects, as Illustration 22-2 shows.

Year	Pretax Income from		Difference in Income		
	Percentage-of-Completion	Completed-Contract	Difference	Tax Effect 40%	Income Effect (net of tax)
Prior to 2009	\$600,000	\$400,000	\$200,000	\$80,000	\$120,000
In 2009	180,000	160,000	20,000	8,000	12,000
Total at beginning of 2010	<u>\$780,000</u>	<u>\$560,000</u>	<u>\$220,000</u>	<u>\$88,000</u>	<u>\$132,000</u>
Total in 2010	<u>\$200,000</u>	<u>\$190,000</u>	<u>\$ 10,000</u>	<u>\$ 4,000</u>	<u>\$ 6,000</u>

**ILLUSTRATION 22-2**  
Data for Retrospective Change Example

The entry to record the change at the beginning of 2010 would be:

Construction in Process	220,000	
Deferred Tax Liability		88,000
Retained Earnings		132,000

The Construction in Process account increases by \$220,000 (as indicated in the first column under “Difference in Income” in Illustration 22-2). The credit to Retained Earnings of \$132,000 reflects the cumulative income effects prior to 2010 (third column under “Difference in Income” in Illustration 22-2). The company credits Retained Earnings because prior years’ income is closed to this account each year. The credit to Deferred Tax Liability represents the adjustment to prior years’ tax expense. The company now recognizes that amount, \$88,000, as a tax liability for future taxable amounts. That is, in future periods, taxable income will be higher than book income as a result of current temporary differences. Therefore, Denson must report a deferred tax liability in the current year.

### What do the numbers mean?

## CHANGE MANAGEMENT

**Halliburton** offers a case study in the importance of good reporting of an accounting change. Recall from Chapter 18 that Halliburton uses percentage-of-completion accounting for its long-term construction-services contracts. Recently, the SEC questioned the company about its change in accounting for disputed claims.

Prior to 1998 Halliburton took a very conservative approach to its accounting for disputed claims. That is, the company waited until all disputes were resolved before recognizing associated revenues. In contrast, in 1998 the company recognized revenue for disputed claims *before* their resolution, using estimates of amounts expected to be recovered. Such revenue and its related profit are more tentative and subject to possible later adjustment. The accounting method adopted in 1998 is more aggressive than the company's former policy but is within the boundaries of GAAP.

It appears that the problem with Halliburton's accounting stems more from how the company handled its accounting change than from the new method itself. That is, Halliburton did not provide in its 1998 annual report an explicit reference to its change in accounting method. In fact, rather than stating its new policy, the company simply deleted the sentence that described how it accounted for disputed claims. Then later, in its 1999 annual report, the company stated its new accounting policy.

When companies make such changes in accounting, investors need to be informed about the change and about its effects on the financial results. With such information, investors and analysts can compare current results with those of prior periods and can make a more informed assessment about the company's future prospects.

*Source:* Adapted from "Accounting Ace Charles Mulford Answers Accounting Questions," *Wall Street Journal Online* (June 7, 2002).

**Reporting a Change in Principle.** The disclosure of accounting changes is particularly important. Users of the financial statements want consistent information from one period to the next. Such consistency ensures the usefulness of financial statements. The major disclosure requirements are as follows.

1. The nature of and reason for the change in accounting principle. This must include an explanation of why the newly adopted accounting principle is preferable.
2. The method of applying the change, and:
  - a. A description of the prior-period information that has been retrospectively adjusted, if any.
  - b. The effect of the change on income from continuing operations, net income (or other appropriate captions of changes in net assets or performance indicators), any other affected line item, and any affected per-share amounts for the current period and for any prior periods retrospectively adjusted.
  - c. The cumulative effect of the change on retained earnings or other components of equity or net assets in the statement of financial position as of the beginning of the earliest period presented.<sup>2</sup>

To illustrate, Denson will prepare comparative financial statements for 2009 and 2010 using the percentage-of-completion method (the new-construction accounting method). Illustration 22-3 (on page 1187) indicates how Denson presents this information.

<sup>2</sup>Presentation of the effect on financial statement subtotals and totals other than income from continuing operations and net income (or other appropriate captions of changes in the applicable net assets or performance indicator) is not required. [3]

**ILLUSTRATION 22-3**  
Comparative Information  
Related to Accounting  
Change (Percentage-of-  
Completion)

<b>DENSON COMPANY</b>		
<b>INCOME STATEMENT (PARTIAL)</b>		
<b>FOR THE YEAR ENDED</b>		
	2010	2009
		As adjusted (Note A)
Income before income tax	\$200,000	\$180,000
Income tax (40%)	<u>80,000</u>	<u>72,000</u>
Net income	<u>\$120,000</u>	<u>\$108,000</u>

**Note A: Change in Method of Accounting for Long-Term Contracts.** The company has accounted for revenue and costs for long-term construction contracts by the percentage-of-completion method in 2010, whereas in all prior years revenue and costs were determined by the completed-contract method. The new method of accounting for long-term contracts was adopted to recognize . . . [state justification for change in accounting principle] . . . , and financial statements of prior years have been restated to apply the new method retrospectively. For income tax purposes, the completed-contract method has been continued. The effect of the accounting change on income of 2010 was an increase of \$6,000 net of related taxes and on income of 2009 as previously reported was an increase of \$12,000 net of related taxes. The balances of retained earnings for 2009 and 2010 have been adjusted for the effect of applying retroactively the new method of accounting. As a result of the accounting change, retained earnings as of January 1, 2009, increased by \$120,000 compared to that reported using the completed-contract method.

As Illustration 22-3 shows, Denson Company reports net income under the newly adopted percentage-of-completion method for both 2009 and 2010. The company retrospectively adjusted the 2009 income statement to report the information on a percentage-of-completion basis. Also, the note to the financial statements indicates the nature of the change, why the company made the change, and the years affected.

In addition, companies are required to provide data on important differences between the amounts reported under percentage-of-completion versus completed-contract. When identifying the significant differences, some companies show the *entire* financial statements and line-by-line differences between percentage-of-completion and completed-contract. However, most companies will show only line-by-line differences. For example, Denson would show the differences in construction in process, retained earnings, gross profit, and net income for 2009 and 2010 under the completed-contract and percentage-of-completion methods.

**Retained Earnings Adjustment.** As indicated earlier, one of the disclosure requirements is to show the cumulative effect of the change on retained earnings as of the beginning of the earliest period presented. For Denson Company, that date is January 1, 2009. Denson disclosed that information by means of a narrative description (see Note A in Illustration 22-3). Denson also would disclose this information in its retained earnings statement. Assuming a retained earnings balance of \$1,360,000 at the beginning of 2008, Illustration 22-4 shows Denson’s retained earnings statement under the completed-contract method—that is, before giving effect to the change in accounting principle. (The income information comes from Illustration 22-1 on page 1185.)

**ILLUSTRATION 22-4**  
Retained Earnings  
Statement before  
Retrospective Change

<b>DENSON COMPANY</b>			
<b>RETAINED EARNINGS STATEMENT</b>			
<b>FOR THE YEAR ENDED</b>			
	2010	2009	2008
Retained earnings, January 1	\$1,696,000	\$1,600,000	\$1,360,000
Net income	<u>114,000</u>	<u>96,000</u>	<u>240,000</u>
Retained earnings, December 31	<u>\$1,810,000</u>	<u>\$1,696,000</u>	<u>\$1,600,000</u>

If Denson presents comparative statements for 2009 and 2010 under percentage-of-completion, then it must change the beginning balance of retained earnings at January 1,

2009. The difference between the retained earnings balances under completed-contract and percentage-of-completion is computed as follows.

Retained earnings, January 1, 2009 (percentage-of-completion)	\$1,720,000
Retained earnings, January 1, 2009 (completed-contract)	<u>1,600,000</u>
Cumulative-effect difference	<u>\$ 120,000</u>

The \$120,000 difference is the cumulative effect. Illustration 22-5 shows a comparative retained earnings statement for 2009 and 2010, giving effect to the change in accounting principle to percentage-of-completion.

**ILLUSTRATION 22-5**  
Retained Earnings  
Statement after  
Retrospective Application

<b>DENSON COMPANY</b>		
<b>RETAINED EARNINGS STATEMENT</b>		
<b>FOR THE YEAR ENDED</b>		
	2010	2009
Retained earnings, January 1, as reported	—	<u>\$1,600,000</u>
Add: Adjustment for the cumulative effect on prior years of applying retrospectively the new method of accounting for construction contracts		<u>120,000</u>
Retained earnings, January 1, as adjusted	\$1,828,000	1,720,000
Net income	<u>120,000</u>	<u>108,000</u>
Retained earnings, December 31	<u>\$1,948,000</u>	<u>\$1,828,000</u>

Denson adjusted the beginning balance of retained earnings on January 1, 2009, for the excess of percentage-of-completion net income over completed-contract net income in 2008. This comparative presentation indicates the type of adjustment that a company needs to make. It follows that this adjustment would be much larger if a number of prior periods were involved.

**Retrospective Accounting Change: Inventory Methods**

As a second illustration of the retrospective approach, assume that Lancer Company has accounted for its inventory using the LIFO method. In 2010, the company changes to the FIFO method because management believes this approach provides a more appropriate measure of its inventory costs. Illustration 22-6 provides additional information related to Lancer Company.

**ILLUSTRATION 22-6**  
Lancer Company  
Information

1. Lancer Company started its operations on January 1, 2008. At that time stockholders invested \$100,000 in the business in exchange for common stock.			
2. All sales, purchases, and operating expenses for the period 2008–2010 are cash transactions. Lancer’s cash flows over this period are as follows.			
	2008	2009	2010
Sales	\$300,000	\$300,000	\$300,000
Purchases	90,000	110,000	125,000
Operating expenses	<u>100,000</u>	<u>100,000</u>	<u>100,000</u>
Cash flow from operations	<u>\$110,000</u>	<u>\$ 90,000</u>	<u>\$ 75,000</u>
3. Lancer has used the LIFO method for financial reporting since its inception.			
4. Inventory determined under LIFO and FIFO for the period 2008–2010 is as follows.			
	LIFO Method	FIFO Method	Difference
January 1, 2008	\$ 0	\$ 0	\$ 0
December 31, 2008	10,000	12,000	2,000
December 31, 2009	20,000	25,000	5,000
December 31, 2010	32,000	39,000	7,000

*continued on next page*

5. Cost of goods sold under LIFO and FIFO for the period 2008–2010 are as follows.

	Cost of Goods Sold		Difference
	LIFO	FIFO	
2008	\$ 80,000	\$ 78,000	\$2,000
2009	100,000	97,000	3,000
2010	113,000	111,000	2,000

6. Earnings per share information is not required on the income statement.

7. All tax effects for this illustration should be ignored.

Given the information about Lancer Company, Illustration 22-7 shows its income statement, retained earnings statement, balance sheet, and statement of cash flows for 2008–2010 under LIFO.

**ILLUSTRATION 22-7**

<b>Total liabilities and stockholders' equity</b>	<b>\$220,000</b>	<b>\$320,000</b>	<b>\$407,000</b>

<b>LANCER COMPANY</b>			
<b>STATEMENT OF CASH FLOWS</b>			
<b>FOR THE YEAR ENDED DECEMBER 31</b>			
	2008	2009	2010
Cash flows from operating activities			
Sales	\$300,000	\$300,000	\$300,000
Purchases	90,000	110,000	125,000
Operating expenses	100,000	100,000	100,000
<b>Net cash provided by operating activities</b>	<b>110,000</b>	<b>90,000</b>	<b>75,000</b>
Cash flows from financing activities			
Issuance of common stock	100,000	—	—
<b>Net increase in cash</b>	<b>210,000</b>	<b>90,000</b>	<b>75,000</b>
Cash at beginning of year	0	210,000	300,000
<b>Cash at end of year</b>	<b>\$210,000</b>	<b>\$300,000</b>	<b>\$375,000</b>

As Illustration 22-7 indicates, under LIFO Lancer Company reports \$120,000 net income in 2008, \$100,000 net income in 2009, and \$87,000 net income in 2010. The amount of inventory reported on Lancer's balance sheet reflects LIFO costing.

Illustration 22-8 shows Lancer's income statement, retained earnings statement, balance sheet, and statement of cash flows for 2008–2010 under **FIFO**. You can see that **the cash flow statement under FIFO is the same as under LIFO**. Although the net incomes are different in each period, there is no cash flow effect from these differences in net income. (If we considered income taxes, a cash flow effect would result.)

Compare the financial statements reported in Illustration 22-7 and Illustration 22-8. You can see that, under retrospective application, the change to FIFO inventory valuation affects reported inventories, cost of goods sold, net income, and retained earnings. In the following sections we discuss the accounting and reporting of Lancer's accounting change from LIFO to FIFO.

Given the information provided in Illustrations 22-6, 22-7, and 22-8, we now are ready to account for and report on the accounting change.

Our first step is to adjust the financial records for the change from LIFO to FIFO. To do so, we perform the analysis in Illustration 22-9.

Year	Net Income		Difference in Income
	LIFO	FIFO	
2008	\$120,000	\$122,000	\$2,000
2009	100,000	103,000	3,000
Total at beginning of 2010	\$220,000	\$225,000	\$5,000
Total in 2010	\$ 87,000	\$ 89,000	\$2,000

**ILLUSTRATION 22-9**  
Data for Recording Change in Accounting Principle

The entry to record the change to the FIFO method at the beginning of 2010 is as follows.

Inventory	5,000	
Retained Earnings		5,000

The change increases the inventory account by \$5,000. This amount represents the difference between the ending inventory at December 31, 2009, under LIFO (\$20,000) and the ending inventory under FIFO (\$25,000). The credit to Retained Earnings indicates the amount needed to change prior-year's income, assuming that Lancer had used FIFO in previous periods.

**Reporting a Change in Principle.** Lancer Company will prepare comparative financial statements for 2009 and 2010 using FIFO (the new inventory method). Illustration 22-10 indicates how Lancer might present this information.

<b>LANCER COMPANY</b>						
<b>INCOME STATEMENT</b>						
<b>FOR THE YEAR ENDED DECEMBER 31</b>						
	2010			2009		
				As adjusted (Note A)		
Sales	\$300,000			\$300,000		
Cost of goods sold	111,000			97,000		
Operating expenses	100,000			100,000		
Net income	<u>\$ 89,000</u>			<u>\$103,000</u>		
<b>Note A</b>						
<i>Change in Method of Accounting for Inventory Valuation</i> On January 1, 2010, Lancer Company elected to change its method of valuing its inventory to the FIFO method; in all prior years inventory was valued using the LIFO method. The Company adopted the new method of accounting for inventory to better report cost of goods sold in the year incurred. Comparative financial statements of prior years have been adjusted to apply the new method retrospectively. The following financial statement line items for years 2010 and 2009 were affected by the change in accounting principle.						
	2010			2009		
Balance Sheet	LIFO	FIFO	Difference	LIFO	FIFO	Difference
Inventory	\$ 32,000	\$ 39,000	\$7,000	\$ 20,000	\$ 25,000	\$5,000
Retained earnings	307,000	314,000	7,000	220,000	225,000	5,000
Income Statement						
Cost of goods sold	\$113,000	\$111,000	\$2,000	\$100,000	\$ 97,000	\$3,000
Net income	87,000	89,000	2,000	100,000	103,000	3,000
Statement of Cash Flows						
(no effect)						
As a result of the accounting change, retained earnings as of January 1, 2009, increased from \$120,000, as originally reported using the LIFO method, to \$122,000 using the FIFO method.						

**ILLUSTRATION 22-10**  
Comparative Information Related to Accounting Change (FIFO)

Nature and reason for change  
Description of prior period information adjusted

Effect of change on key performance indicators

Cumulative effect on retained earnings

As Illustration 22-10 shows, Lancer Company reports net income under the newly adopted FIFO method for both 2009 and 2010. The company retrospectively adjusted the 2009 income statement to report the information on a FIFO basis. In addition, the note to the financial statements indicates the nature of the change, why the company made the change, and the years affected. The note also provides data on important differences between the amounts reported under LIFO versus FIFO. (When identifying the significant differences, some companies show the *entire* financial statements and line-by-line differences between LIFO and FIFO.)

**Retained Earnings Adjustment.** As indicated earlier, one of the disclosure requirements is to show the cumulative effect of the change on retained earnings as of the beginning of the earliest period presented. For Lancer Company, that date is January 1, 2009. Lancer disclosed that information by means of a narrative description (see Note A in Illustration 22-10). Lancer also would disclose this information in its retained earnings statement. Illustration 22-11 shows Lancer’s retained earnings statement under LIFO—that is, before giving effect to the change in accounting principle. (This information comes from Illustration 22-7 on page 1189.)

**ILLUSTRATION 22-11**  
Retained Earnings  
Statements (LIFO)

	2010	2009	2008
Retained earnings, January 1	\$220,000	\$120,000	\$ 0
Net income	<u>87,000</u>	<u>100,000</u>	<u>120,000</u>
Retained earnings, December 31	<u>\$307,000</u>	<u>\$220,000</u>	<u>\$120,000</u>

If Lancer presents comparative statements for 2009 and 2010 under FIFO, then it must change the beginning balance of retained earnings at January 1, 2009. The difference between the retained earnings balances under LIFO and FIFO is computed as follows.

Retained earnings, January 1, 2009 (FIFO)	\$122,000
Retained earnings, January 1, 2009 (LIFO)	<u>120,000</u>
Cumulative effect difference	<u>\$ 2,000</u>

The \$2,000 difference is the cumulative effect. Illustration 22-12 shows a comparative retained earnings statement for 2009 and 2010, giving effect to the change in accounting principle to FIFO.

**ILLUSTRATION 22-12**  
Retained Earnings  
Statements after  
Retrospective Application

	2010	2009
Retained earnings, January 1, as reported		\$120,000
Add: Adjustment for the cumulative effect on prior years of applying retrospectively the new method of accounting for inventory		<u>2,000</u>
Retained earnings, January 1, as adjusted	\$225,000	122,000
Net income	<u>89,000</u>	<u>103,000</u>
Retained earnings, December 31	<u>\$314,000</u>	<u>\$225,000</u>

Lancer adjusted the beginning balance of retained earnings on January 1, 2009, for the excess of FIFO net income over LIFO net income in 2008. This comparative presentation indicates the type of adjustment that a company needs to make. It follows that the amount of this adjustment would be much larger if a number of prior periods were involved.

## Direct and Indirect Effects of Changes

Are there other effects that a company should report when it makes a change in accounting principle? For example, what happens when a company like Lancer has a bonus plan based on net income and the prior year's net income changes when FIFO is retrospectively applied? Should Lancer also change the reported amount of bonus expense? Or what happens if we had not ignored income taxes in the Lancer example? Should Lancer adjust net income, given that taxes will be different under LIFO and FIFO in prior periods? The answers depend on whether the effects are direct or indirect.

**Direct Effects.** The FASB takes the position that companies should retrospectively apply the **direct effects of a change in accounting principle**. An example of a **direct effect** is an adjustment to an inventory balance as a result of a change in the inventory valuation method. For example, Lancer Company should change the inventory amounts in prior periods to indicate the change to the FIFO method of inventory valuation. Another inventory-related example would be an impairment adjustment resulting from applying the lower-of-cost-or-market test to the adjusted inventory balance. Related changes, such as deferred income tax effects of the impairment adjustment, are also considered direct effects. This entry was illustrated in the Denson example, in which the change to percentage-of-completion accounting resulted in recording a deferred tax liability.

**Indirect Effects.** In addition to direct effects, companies can have **indirect effects related to a change in accounting principle**. An **indirect effect** is any change to current or future cash flows of a company that result from making a change in accounting principle that is applied retrospectively. An example of an indirect effect is a change in profit-sharing or royalty payment that is based on a reported amount such as revenue or net income. **Indirect effects do not change prior-period amounts.**

For example, let's assume that Lancer has an employee profit-sharing plan based on net income. As Illustration 22-9 (on page 1191) showed, Lancer would report higher income in 2008 and 2009 if it used the FIFO method. In addition, let's assume that the profit-sharing plan requires that Lancer pay the incremental amount due based on the FIFO income amounts. In this situation, Lancer reports this additional expense **in the current period**; it would not change prior periods for this expense. If the company prepares comparative financial statements, it follows that it does not recast the prior periods for this additional expense.<sup>3</sup>

If the terms of the profit-sharing plan indicate that *no payment is necessary* in the current period due to this change, then the company need not recognize additional profit-sharing expense in the current period. Neither does it change amounts reported for prior periods.

When a company recognizes the indirect effects of a change in accounting principle, it includes in the financial statements a description of the indirect effects. In doing so, it discloses the amounts recognized in the current period and related per share information.

## Impracticability

It is not always possible for companies to determine how they would have reported prior periods' financial information under retrospective application of an accounting principle change. Retrospective application is considered **impracticable** if a company cannot determine the prior-period effects using every reasonable effort to do so.

<sup>3</sup>The rationale for this approach is that companies should recognize, in the period the adoption occurs (not the prior period), the effect on the cash flows that is caused by the adoption of the new accounting principle. That is, the accounting change is a necessary "past event" in the definition of an asset or liability that gives rise to the accounting recognition of the indirect effect in the current period. [4]

### INTERNATIONAL INSIGHT

iGAAP does not explicitly address the accounting and disclosure of indirect effects.

### Objective 4

Understand how to account for impracticable changes.

Companies should not use retrospective application if one of the following conditions exists:

1. The company cannot determine the effects of the retrospective application.
2. Retrospective application requires assumptions about management’s intent in a prior period.
3. Retrospective application requires significant estimates for a prior period, and the company cannot objectively verify the necessary information to develop these estimates.

If any of the above conditions exists, it is deemed impracticable to apply the retrospective approach. In this case, the company **prospectively applies** the new accounting principle as of the earliest date it is practicable to do so. [5]

For example, assume that Williams Company changed its inventory method from FIFO to LIFO, effective January 1, 2011. Williams prepares statements on a calendar-year basis and has used the FIFO method since its inception. Williams judges it impracticable to retrospectively apply the new method. Determining prior-period effects would require subjective assumptions about the LIFO layers established in prior periods. These assumptions would ordinarily result in the computation of a number of different earnings figures.

As a result, the only adjustment necessary may be to restate the beginning inventory to a cost basis from a lower-of-cost-or-market approach. Williams must disclose only the effect of the change on the results of operations in the period of change. Also, the company should explain the reasons for omitting the computations of the cumulative effect for prior years. Finally, it should disclose the justification for the change to LIFO. [6]<sup>4</sup> Illustration 22-13, from the annual report of **Quaker Oats Company**, shows the type of disclosure needed.

**ILLUSTRATION 22-13**  
Disclosure of Change to LIFO

**The Quaker Oats Company**

**Note 1 (In Part): Summary of Significant Accounting Policies**

*Inventories.* Inventories are valued at the lower of cost or market, using various cost methods, and include the cost of raw materials, labor and overhead. The percentage of year-end inventories valued using each of the methods is as follows:

June 30	Current Year	Prior Year
Average quarterly cost	21%	54%
Last-in, first-out (LIFO)	65%	29%
First-in, first-out (FIFO)	14%	17%

Effective July 1, the Company adopted the LIFO cost flow assumption for valuing the majority of remaining U.S. Grocery Products inventories. The Company believes that the use of the LIFO method better matches current costs with current revenues. The cumulative effect of this change on retained earnings at the beginning of the year is not determinable, nor are the pro-forma effects of retroactive application of LIFO to prior years. The effect of this change on current-year fiscal results was to decrease net income by \$16.0 million, or \$.20 per share.

If the LIFO method of valuing certain inventories were not used, total inventories would have been \$60.1 million higher in the current year, and \$24.0 million higher in the prior year.

<sup>4</sup>In practice, many companies defer the formal adoption of LIFO until year-end. Management thus has an opportunity to assess the impact that a change to LIFO will have on the financial statements and to evaluate the desirability of a change for tax purposes. As indicated in Chapter 8, many companies use LIFO because of the advantages of this inventory valuation method in a period of inflation.

## CHANGES IN ACCOUNTING ESTIMATE

To prepare financial statements, companies must estimate the effects of future conditions and events. For example, the following items require estimates.

**Objective 5**

Describe the accounting for changes in estimates.

1. Uncollectible receivables.
2. Inventory obsolescence.
3. Useful lives and salvage values of assets.
4. Periods benefited by deferred costs.
5. Liabilities for warranty costs and income taxes.
6. Recoverable mineral reserves.
7. Change in depreciation methods.

A company cannot perceive future conditions and events and their effects with certainty. Therefore, estimating requires the exercise of judgment. Accounting estimates will change as new events occur, as a company acquires more experience, or as it obtains additional information.

### Prospective Reporting

Companies report prospectively **changes in accounting estimates**. That is, companies should not adjust previously reported results for changes in estimates. Instead, they account for the effects of all changes in estimates in (1) the period of change if the change affects that period only, or (2) the period of change and future periods if the change affects both. The FASB views changes in estimates as **normal recurring corrections and adjustments**, the natural result of the accounting process. It prohibits retrospective treatment.

The circumstances related to a change in estimate differ from those for a change in accounting principle. If companies reported changes in estimates retrospectively, continual adjustments of prior years' income would occur. It seems proper to accept the view that, because new conditions or circumstances exist, the revision fits the new situation (not the old one). Companies should therefore handle such a revision in the current and future periods.

To illustrate, Underwriters Labs Inc. purchased for \$300,000 a building that it originally estimated to have a useful life of 15 years and no salvage value. It recorded depreciation for 5 years on a straight-line basis. On January 1, 2010, Underwriters Labs revises the estimate of the useful life. It now considers the asset to have a total life of 25 years. (Assume that the useful life for financial reporting and tax purposes and depreciation method are the same.) Illustration 22-14 shows the accounts at the beginning of the sixth year.

Building	\$300,000
Less: Accumulated depreciation—building (5 × \$20,000)	<u>100,000</u>
Book value of building	<u>\$200,000</u>

**ILLUSTRATION 22-14**

Book Value after Five Years' Depreciation

Underwriters Labs records depreciation for the year 2010 as follows:

Depreciation Expense	10,000
Accumulated Depreciation—Building	10,000

The company computes the \$10,000 depreciation charge as shown in Illustration 22-15.

$$\text{Depreciation charge} = \frac{\text{Book value of asset}}{\text{Remaining service life}} = \frac{\$200,000}{25 \text{ years} - 5 \text{ years}} = \$10,000$$

**ILLUSTRATION 22-15**

Depreciation after Change in Estimate

Companies sometime find it difficult to differentiate between a change in estimate and a change in accounting principle. Is it a change in principle or a change in estimate when a company changes from deferring and amortizing marketing costs to expensing them as incurred because future benefits of these costs have become doubtful? If it is impossible to determine whether a change in principle or a change in estimate has occurred, the rule is this: **Consider the change as a change in estimate.** This is often referred to as a **change in estimate effected by a change in accounting principle.**

Another example of a change in estimate effected by a change in principle is a change in depreciation (as well as amortization or depletion) methods. Because companies change depreciation methods based on changes in estimates about future benefits from long-lived assets, it is not possible to separate the effect of the accounting principle change from that of the estimates. **As a result, companies account for a change in depreciation methods as a change in estimate effected by a change in accounting principle. [7]**

A similar problem occurs in differentiating between a change in estimate and a correction of an error, although here the answer is more clear-cut. How does a company determine whether it overlooked the information in earlier periods (an error), or whether it obtained new information (a change in estimate)? Proper classification is important because the accounting treatment differs for corrections of errors versus changes in estimates. The general rule is this: **Companies should consider careful estimates that later prove to be incorrect as changes in estimate.** Only when a company obviously computed the estimate incorrectly because of lack of expertise or in bad faith should it consider the adjustment an error. There is no clear demarcation line here. Companies must use good judgment in light of all the circumstances.<sup>5</sup>

## Disclosures

Illustration 22-16 shows disclosure of a change in estimated useful lives, which appeared in the annual report of **Ampco-Pittsburgh Corporation.**

**ILLUSTRATION 22-16**  
Disclosure of Change  
in Estimated Useful Lives

### **Ampco-Pittsburgh Corporation**

**Note 11: Change in Accounting Estimate.** The Corporation revised its estimate of the useful lives of certain machinery and equipment. Previously, all machinery and equipment, whether new when placed in use or not, were in one class and depreciated over 15 years. The change principally applies to assets purchased new when placed in use. Those lives are now extended to 20 years. These changes were made to better reflect the estimated periods during which such assets will remain in service. The change had the effect of reducing depreciation expense and increasing net income by approximately \$991,000 (\$.10 per share).

For the most part, companies need not disclose changes in accounting estimate made as part of normal operations, such as bad debt allowances or inventory obsolescence, unless such changes are material. However, for a change in estimate that affects several periods (such as a change in the service lives of depreciable assets), companies should disclose the effect on income from continuing operations and related per-share

<sup>5</sup>In evaluating reasonableness, the auditor should use one or a combination of the following approaches.

- (a) Review and test the process used by management to develop the estimate.
- (b) Develop an independent expectation of the estimate to corroborate the reasonableness of management's estimate.
- (c) Review subsequent events or transactions occurring prior to completion of fieldwork.

"Auditing Accounting Estimates," *Statement on Auditing Standards No. 57* (New York: AICPA, 1988).

amounts of the current period. When a company has a change in estimate effected by a change in accounting principle, it must indicate why the new method is preferable. In addition, companies are subject to all other disclosure guidelines established for changes in accounting principle.

## CHANGE IN REPORTING ENTITY

Occasionally companies make changes that result in different reporting entities. In such cases, companies report the change by **changing the financial statements of all prior periods presented**. The revised statements show the financial information for the **new reporting entity** for all periods.

Examples of a change in reporting entity are:

1. Presenting consolidated statements in place of statements of individual companies.
2. Changing specific subsidiaries that constitute the group of companies for which the entity presents consolidated financial statements.
3. Changing the companies included in combined financial statements.
4. Changing the cost, equity, or consolidation method of accounting for subsidiaries and investments.<sup>6</sup> In this case, a change in the reporting entity does not result from creation, cessation, purchase, or disposition of a subsidiary or other business unit.

In the year in which a company changes a reporting entity, it should disclose in the financial statements the nature of the change and the reason for it. It also should report, for all periods presented, the effect of the change on income before extraordinary items, net income, and earnings per share. These disclosures need not be repeated in subsequent periods' financial statements.

Illustration 22-17 shows a note disclosing a change in reporting entity, from the annual report of **Hewlett-Packard Company**.

### Objective•6

Identify changes in a reporting entity.

### Hewlett-Packard Company

#### Note: Accounting and Reporting Changes (In Part)

*Consolidation of Hewlett-Packard Finance Company.* The company implemented a new accounting pronouncement on consolidations. With the adoption of this new pronouncement, the company consolidated the accounts of Hewlett-Packard Finance Company (HPFC), a wholly owned subsidiary previously accounted for under the equity method, with those of the company. The change resulted in an increase in consolidated assets and liabilities but did not have a material effect on the company's financial position. Since HPFC was previously accounted for under the equity method, the change did not affect net earnings. Prior years' consolidated financial information has been restated to reflect this change for comparative purposes.

### ILLUSTRATION 22-17

Disclosure of Change in Reporting Entity

## CORRECTION OF ERRORS

No business, large or small, is immune from errors. As the opening story discussed, the number of accounting errors that lead to restatement are beginning to decline. However, without accounting and disclosure guidelines for the reporting of errors, investors can be left in the dark about the effects of errors.

Certain errors, such as misclassifications of balances within a financial statement, are not as significant to investors as other errors. Significant errors would

### Objective•7

Describe the accounting for correction of errors.

<sup>6</sup>An exception to retrospective application occurs when changing from the equity method. We provide an expanded illustration of the accounting for a change from or to the equity method in Appendix 22A.

be those resulting in overstating assets or income, for example. However, investors should know the potential impact of all errors. Even “harmless” misclassifications can affect important ratios. Also, some errors could signal important weaknesses in internal controls that could lead to more significant errors.

In general, accounting errors include the following types:

1. A change from an accounting principle that is **not** generally accepted to an accounting principle that is acceptable. The rationale is that the company incorrectly presented prior periods because of the application of an improper accounting principle. For example, a company may change from the cash (income tax) basis of accounting to the accrual basis.
2. Mathematical mistakes, such as incorrectly totaling the inventory count sheets when computing the inventory value.
3. Changes in estimates that occur because a company did not prepare the estimates in good faith. For example, a company may have adopted a clearly unrealistic depreciation rate.
4. An oversight, such as the failure to accrue or defer certain expenses and revenues at the end of the period.
5. A misuse of facts, such as the failure to use salvage value in computing the depreciation base for the straight-line approach.
6. The incorrect classification of a cost as an expense instead of an asset, and vice versa.

**ILLUSTRATION 22-18**  
Accounting-Error Types

Accounting errors occur for a variety of reasons. Illustration 22-18 indicates 11 major categories of accounting errors that drive restatements.

Accounting Category	Type of Restatement
Expense recognition	Recording expenses in the incorrect period or for an incorrect amount
Revenue recognition	Improper revenue accounting. This category includes instances in which revenue was improperly recognized, questionable revenues were recognized, or any other number of related errors that led to misreported revenue.
Misclassification	Misclassifying significant accounting items on the balance sheet, income statement, or statement of cash flows. These include restatements due to misclassification of short- or long-term accounts or those that impact cash flows from operations
Equity—other	Improper accounting for EPS, restricted stock, warrants, and other equity instruments
Reserves/Contingencies	Errors involving accounts receivables bad debts, inventory reserves, income tax allowances, and loss contingencies
Long-lived assets	Asset impairments of property, plant, and equipment, goodwill, or other related items.
Taxes	Errors involving correction of tax provision, improper treatment of tax liabilities, and other tax-related items
Equity—other comprehensive income	Improper accounting for comprehensive income equity transactions including foreign currency items, minimum pension liability adjustments, unrealized gains and losses on certain investments in debt, equity securities, and derivatives.
Inventory	Inventory costing valuations, quantity issues, and cost of sales adjustments
Equity—stock options	Improper accounting for employee stock options
Other	Any restatement not covered by the listed categories including those related to improper accounting for acquisitions or mergers

Source: T. Baldwin and D. Yoo, “Restatements—Traversing Shaky Ground,” *Trend Alert*, Glass Lewis & Co. (June 2, 2005), p. 8.

As soon as a company discovers an error, it must correct the error. Companies record **corrections of errors** from prior periods as an adjustment to the beginning balance of retained earnings in the current period. Such corrections are called **prior period adjustments**.<sup>7</sup> [8]

<sup>7</sup>See Mark L. DeFord and James Jiambalvo, “Incidence and Circumstances of Accounting Errors,” *The Accounting Review* (July 1991) for examples of different types of errors and why these errors might have occurred.

If it presents comparative statements, a company should restate the prior statements affected, to correct for the error.<sup>8</sup> The company need not repeat the disclosures in the financial statements of subsequent periods.

### Example of Error Correction

To illustrate, in 2011 the bookkeeper for Selectro Company discovered an error: In 2010 the company failed to record \$20,000 of depreciation expense on a newly constructed building. This building is the only depreciable asset Selectro owns. The company correctly included the depreciation expense in its tax return and correctly reported its income taxes payable. Illustration 22-19 presents Selectro's income statement for 2010 (starting with income before depreciation expense) with and without the error.

SELECTRO COMPANY INCOME STATEMENT FOR THE YEAR ENDED, DECEMBER 31, 2010				
		Without Error		With Error
Income before depreciation expense		\$100,000		\$100,000
Depreciation expense		20,000		0
Income before income tax		80,000		100,000
Current	\$32,000		\$ 32,000	
Deferred	-0-	32,000	8,000	40,000
Net income		<u>\$ 48,000</u>		<u>\$ 60,000</u>

**ILLUSTRATION 22-19**  
Error Correction  
Comparison

Illustration 22-20 shows the entries that Selectro should have made and did make for recording depreciation expense and income taxes.

Entries Company Should Have Made (Without Error)			Entries Company Did Make (With Error)		
Depreciation Expense	20,000		No entry made for depreciation		
Accumulated Depreciation —Buildings		20,000			
Income Tax Expense	32,000		Income Tax Expense	40,000	
Income Tax Payable		32,000	Deferred Tax Liability		8,000
			Income Tax Payable		32,000

**ILLUSTRATION 22-20**  
Error Entries

As Illustration 22-20 indicates, the \$20,000 omission error in 2010 results in the following effects.

#### Income Statement Effects

Depreciation expense (2010) is understated \$20,000.

Income tax expense (2010) is overstated \$8,000 ( $\$20,000 \times 40\%$ ).

Net income (2010) is overstated \$12,000 ( $\$20,000 - \$8,000$ ).

#### Balance Sheet Effects

Accumulated depreciation—buildings is understated \$20,000.

Deferred tax liability is overstated \$8,000 ( $\$20,000 \times 40\%$ ).

To make the proper correcting entry in 2011, Selectro should recognize that net income in 2010 is overstated by \$12,000, the Deferred Tax Liability is overstated by \$8,000,

<sup>8</sup>The term **restatement** is used for the process of revising previously issued financial statements to reflect the correction of an error. This distinguishes an error correction from a change in accounting principle. [9]

and Accumulated Depreciation—Buildings is understated by \$20,000. The entry to correct this error in 2011 is as follows:

Retained Earnings	12,000	
Deferred Tax Liability	8,000	
Accumulated Depreciation—Buildings		20,000

The debit to Retained Earnings results because net income for 2010 is overstated. The debit to the Deferred Tax Liability is made to remove this account, which was caused by the error. The credit to Accumulated Depreciation—Buildings reduces the book value of the building to its proper amount. Selectro will make the same journal entry to record the correction of the error in 2011 whether it prepares single-period (noncomparative) or comparative financial statements.

### Single-Period Statements

To demonstrate how to show this information in a single-period statement, assume that Selectro Company has a beginning retained earnings balance at January 1, 2011, of \$350,000. The company reports net income of \$400,000 in 2011. Illustration 22-21 shows Selectro’s retained earnings statement for 2011.

**ILLUSTRATION 22-21**  
Reporting an Error—  
Single-Period Financial  
Statement

<b>SELECTRO COMPANY</b>		
<b>RETAINED EARNINGS STATEMENT</b>		
<b>FOR THE YEAR ENDED DECEMBER 31, 2011</b>		
Retained earnings, January 1, as reported		\$350,000
Correction of an error (depreciation)	\$20,000	
Less: Applicable income tax reduction	<u>8,000</u>	<u>(12,000)</u>
Retained earnings, January 1, as adjusted		338,000
Add: Net income		<u>400,000</u>
Retained earnings, December 31		<u>\$738,000</u>

The balance sheet in 2011 would not have any deferred tax liability related to the building, and Accumulated Depreciation—Buildings is now restated at a higher amount. The income statement would not be affected.

### Comparative Statements

If preparing comparative financial statements, a company should make adjustments to correct the amounts for all affected accounts reported in the statements for **all periods** reported. The company should restate the data to the correct basis for each year presented. It should **show any catch-up adjustment as a prior period adjustment to retained earnings for the earliest period it reported**. These requirements are essentially the same as those for reporting a change in accounting principle.

For example, in the case of Selectro, the error of omitting the depreciation of \$20,000 in 2010, discovered in 2011, results in the restatement of the 2010 financial statements. Illustration 22-22 shows the accounts that Selectro restates in the 2010 financial statements.

**ILLUSTRATION 22-22**  
Reporting an Error—  
Comparative Financial  
Statements

<b>In the balance sheet:</b>	
Accumulated depreciation—buildings	\$20,000 increase
Deferred tax liability	\$ 8,000 decrease
Retained earnings, ending balance	\$12,000 decrease
<b>In the income statement:</b>	
Depreciation expense—buildings	\$20,000 increase
Income tax expense	\$ 8,000 decrease
Net income	\$12,000 decrease
<b>In the retained earnings statement:</b>	
Retained earnings, ending balance (due to lower net income for the period)	\$12,000 decrease

Selectro prepares the 2011 financial statements in comparative form with those of 2010 **as if the error had not occurred**. In addition, Selectro must disclose that it has restated its previously issued financial statements, and it describes the nature of the error. Selectro also must disclose the following:

1. The effect of the correction on each financial statement line item and any per-share amounts affected for each prior period presented.
2. The cumulative effect of the change on retained earnings or other appropriate components of equity or net assets in the statement of financial position, as of the beginning of the earliest period presented. [10]

## SUMMARY OF ACCOUNTING CHANGES AND CORRECTION OF ERRORS

Having guidelines for reporting accounting changes and corrections has helped resolve several significant and long-standing accounting problems. Yet, because of diversity in situations and characteristics of the items encountered in practice, use of professional judgment is of paramount importance. In applying these guidelines, the primary objective is to serve the users of the financial statements. Achieving this objective requires accuracy, full disclosure, and an absence of misleading inferences.

Illustration 22-23 summarizes the main distinctions and treatments presented in the discussion in this chapter.

### • Changes in accounting principle

Employ the retrospective approach by:

- a. Changing the financial statements of all prior periods presented.
- b. Disclosing in the year of the change the effect on net income and earnings per share for all prior periods presented.
- c. Reporting an adjustment to the beginning retained earnings balance in the statement of retained earnings in the earliest year presented.

If impracticable to determine the prior period effect (e.g., change to LIFO):

- a. Do not change prior years' income.
- b. Use opening inventory in the year the method is adopted as the base-year inventory for all subsequent LIFO computations.
- c. Disclose the effect of the change on the current year, and the reasons for omitting the computation of the cumulative effect and pro forma amounts for prior years.

### • Changes in accounting estimate.

Employ the current and prospective approach by:

- a. Reporting current and future financial statements on the new basis.
- b. Presenting prior period financial statements as previously reported.
- c. Making no adjustments to current-period opening balances for the effects in prior periods.

### • Changes in reporting entity.

Employ the retrospective approach by:

- a. Restating the financial statements of all prior periods presented.
- b. Disclosing in the year of change the effect on net income and earnings per share data for all prior periods presented.

### • Changes due to error.

Employ the restatement approach by:

- a. Correcting all prior period statements presented.
- b. Restating the beginning balance of retained earnings for the first period presented when the error effects occur in a period prior to the first period presented.

### ILLUSTRATION 22-23

Summary of Guidelines for Accounting Changes and Errors

Changes in accounting principle are appropriate **only** when a company demonstrates that the newly adopted generally accepted accounting principle is **preferable** to the existing one. Companies and accountants determine preferability on the basis of

whether the new principle constitutes an **improvement in financial reporting**, not on the basis of the income tax effect alone.<sup>9</sup>

But it is not always easy to determine an improvement in financial reporting. **How does one measure preferability or improvement?** Such measurement varies from company to company. **Quaker Oats Company**, for example, argued that a change in accounting principle to LIFO inventory valuation “better matches current costs with current revenues” (see Illustration 22-13, page 1194). Conversely, another company might change from LIFO to FIFO because it wishes to report a more realistic ending inventory. How do you determine which is the better of these two arguments? Determining the preferable method requires some “standard” or “objective.” Because no universal standard or objective is generally accepted, the problem of determining preferability continues to be difficult.

Initially the SEC took the position that the auditor should indicate whether a change in accounting principle was preferable. The SEC has since modified this approach, noting that greater reliance may be placed on management’s judgment in assessing preferability. Even though the preferability criterion is difficult to apply, the general guidelines have acted as a deterrent to capricious changes in accounting principles.<sup>10</sup> **If a FASB rule creates a new principle, expresses preference for, or rejects a specific accounting principle, a change is considered clearly acceptable.**

**What do the numbers mean?**

**CAN I GET MY MONEY BACK?**

When companies report restatements, investors usually lose money. What should investors do if a company misleads them by misstating its financial results? Join other investors in a class-action suit against the company and in some cases, the auditor.

Class-action activity has picked up in recent years, and settlements can be large. To find out about class actions, investors can go online to see if they are eligible to join any class actions. Below are some recent examples.

Company	Settlement Amount	Contact for Claim
<b>Xerox</b>	\$670 million	<a href="http://www.gilardi.com">www.gilardi.com</a>
<b>Transamerica HomeFirst</b>	\$ 8 million	<a href="http://www.gilardi.com">www.gilardi.com</a>
<b>Tommy Hilfiger Corp.</b>	\$ 6 million	<a href="http://www.gilardi.com">www.gilardi.com</a>

The amounts reported are *before* attorney’s fees, which can range from 15 to 30 percent of the total. Also, investors may owe taxes if the settlement results in a capital gain on the investment. Thus, investors can get back some of the money they lost due to restatements, but they should be prepared to pay an attorney and the government first.

Source: Adapted from C. Coolidge, “Lost and Found,” *Forbes* (October 1, 2001), pp. 124–125; data from [www.gilardi.com](http://www.gilardi.com) as of 8/14/08.

<sup>9</sup>A change in accounting principle, a change in the reporting entity (special type of change in accounting principle), and a correction of an error require an explanatory paragraph in the auditor’s report discussing lack of consistency from one period to the next. A change in accounting estimate does not affect the auditor’s opinion relative to consistency; however, if the change in estimate has a material effect on the financial statements, disclosure may still be required. Error correction not involving a change in accounting principle does not require disclosure relative to consistency.

<sup>10</sup>If management has not provided reasonable justification for the change in accounting principle, the auditor should express a qualified opinion. Or, if the effect of the change is sufficiently material, the auditor should express an adverse opinion on the financial statements. “Reports on Audited Financial Statements,” *Statement on Auditing Standards No. 58* (New York: AICPA, 1988).

## MOTIVATIONS FOR CHANGE OF ACCOUNTING METHOD

Difficult as it is to determine which accounting standards have the strongest conceptual support, other complications make the process even more complex. These complications stem from the fact that managers have self-interest in how the financial statements make the company look. They naturally wish to show their financial performance in the best light. A **favorable profit picture** can influence investors, and a strong liquidity position can influence creditors. **Too favorable a profit picture**, however, can provide union negotiators and government regulators with ammunition during bargaining talks. Hence, managers might have varying motives for reporting income numbers.

Research has provided additional insight into why companies may prefer certain accounting methods.<sup>11</sup> Some of these reasons are as follows:

### Objective 8

Identify economic motives for changing accounting methods.

1. **Political Costs.** As companies become larger and more politically visible, politicians and regulators devote more attention to them. The larger the firm, the more likely it is to become subject to regulation such as antitrust, and the more likely it is to be required to pay higher taxes. Therefore, companies that are politically visible may seek to report low income numbers, to avoid the scrutiny of regulators. In addition, other constituents, such as labor unions, may be less willing to ask for wage increases if reported income is low. Researchers have found that the larger the company, the more likely it is to adopt income-decreasing approaches in selecting accounting methods.
2. **Capital Structure.** A number of studies have indicated that the capital structure of the company can affect the selection of accounting methods. For example, a company with a high debt-to-equity ratio is more likely to be constrained by debt covenants. The debt covenant may indicate that the company cannot pay dividends if retained earnings fall below a certain level. As a result, such a company is more likely to select accounting methods that will increase net income.
3. **Bonus Payments.** Studies have found that if compensation plans tie managers' bonus payments to income, management will select accounting methods that maximize their bonus payments.
4. **Smooth Earnings.** Substantial earnings increases attract the attention of politicians, regulators, and competitors. In addition, large increases in income are difficult to achieve in following years. Further, executive compensation plans would use these higher numbers as a baseline and make it difficult for managers to earn bonuses in subsequent years. Conversely, investors and competitors might view large decreases in earnings as a signal that the company is in financial trouble. Also, substantial decreases in income raise concerns on the part of stockholders, lenders, and other interested parties about the competency of management. For all these reasons, companies have an incentive to "manage" or "smooth" earnings. In general, management tends to believe that a steady 10 percent growth a year is much better than a 30 percent growth one year and a 10 percent decline the next.<sup>12</sup> In other words, managers usually prefer a gradually increasing income report and sometimes change accounting methods to ensure such a result.

Management pays careful attention to the accounting it follows and often changes accounting methods, not for conceptual reasons, but for economic reasons. As indicated

<sup>11</sup>See Ross L. Watts and Jerold L. Zimmerman, "Positive Accounting Theory: A Ten-Year Perspective," *The Accounting Review* (January 1990) for an excellent review of research findings related to management incentives in selecting accounting methods.

<sup>12</sup>O. Douglas Moses, "Income Smoothing and Incentives: Empirical Tests Using Accounting Changes," *The Accounting Review* (April 1987). The findings provide evidence that earnings smoothing is associated with firm size, the existence of bonus plans, and the divergence of actual earnings from expectations.

throughout this textbook, such arguments have come to be known as **economic consequences** arguments. These arguments focus on the supposed impact of the accounting method on the behavior of investors, creditors, competitors, governments, or managers of the reporting companies themselves.<sup>13</sup>

To counter these pressures, standard-setters such as the FASB have declared, as part of their conceptual framework, that they will assess the merits of proposed standards from a position of **neutrality**. That is, they evaluate the soundness of standards on the basis of conceptual soundness, not on the grounds of possible impact on behavior. It is not the FASB's place to choose standards according to the kinds of behavior it wishes to promote and the kinds it wishes to discourage. At the same time, it must be admitted that some standards often **will have** the effect of influencing behavior. Yet their justification should be conceptual, and not viewed in terms of their economic impact.

## SECTION 2 • ERROR ANALYSIS

### Objective 9

Analyze the effect of errors.

In this section, we show some additional types of accounting errors. Companies generally do not correct for errors that do not have a significant effect on the presentation of the financial statements. For example, should a company with a total annual payroll of \$1,750,000 and net income of \$940,000 correct its financial statements if it failed to record accrued wages of \$5,000? No—it would not consider this error significant.

Obviously, defining materiality is difficult, and managers and auditors must use experience and judgment to determine whether adjustment is necessary for a given error. We assume **all errors discussed in this section to be material and to require adjustment**. (Also, we ignore all tax effects in this section.)

Companies must answer three questions in error analysis:

1. What type of error is involved?
2. What entries are needed to correct for the error?
3. After discovery of the error, how are financial statements to be restated?

As indicated earlier, companies treat errors as **prior-period adjustments and report them in the current year as adjustments to the beginning balance of Retained Earnings**. If a company presents comparative statements, it restates the prior affected statements to correct for the error.

### BALANCE SHEET ERRORS

Balance sheet errors affect only the presentation of an asset, liability, or stockholders' equity account. Examples are the classification of a short-term receivable as part of the investment section, the classification of a note payable as an account payable, and the classification of plant assets as inventory.

When the error is discovered, the company reclassifies the item to its proper position. If the company prepares comparative statements that include the error year, it should correctly restate the balance sheet for the error year.

<sup>13</sup>Lobbyists use economic consequences arguments—and there are many of them—to put pressure on standard-setters. We have seen examples of these arguments in the oil and gas industry about successful efforts versus full cost, in the technology area with the issue of mandatory expensing of research and developmental costs and stock options.

## INCOME STATEMENT ERRORS

Income statement errors involve the improper classification of revenues or expenses. Examples include recording interest revenue as part of sales, purchases as bad debt expense, and depreciation expense as interest expense. An income statement classification error has no effect on the balance sheet and **no effect on net income**.

A company must make a reclassification entry when it discovers the error, if it makes the discovery in the same year in which the error occurs. If the error occurred in prior periods, the company does not need to make a reclassification entry at the date of discovery because the accounts for the current year are correctly stated. (Remember that the company has closed the income statement accounts from the prior period to retained earnings.) If the company prepares comparative statements that include the error year, it restates the income statement for the error year.

## BALANCE SHEET AND INCOME STATEMENT ERRORS

The third type of error involves both the balance sheet and income statement. For example, assume that the bookkeeper overlooked accrued wages payable at the end of the accounting period. The effect of this error is to understate expenses, understate liabilities, and overstate net income for that period of time. This type of error affects both the balance sheet and the income statement. We classify this type of error in one of two ways—counterbalancing or noncounterbalancing.

**Counterbalancing errors** are those that will be offset or corrected over two periods. For example, the failure to record accrued wages is a counterbalancing error because over a two-year period the error will no longer be present. In other words, the failure to record accrued wages in the previous period means: (1) net income for the first period is overstated; (2) accrued wages payable (a liability) is understated, and (3) wages expense is understated. In the next period, net income is understated; accrued wages payable (a liability) is correctly stated; and wages expense is overstated. For the **two years combined**: (1) net income is correct; (2) wages expense is correct; and (3) accrued wages payable at the end of the second year is correct. Most errors in accounting that affect both the balance sheet and income statement are counterbalancing errors.

**Noncounterbalancing errors** are those that are not offset in the next accounting period. An example would be the failure to capitalize equipment that has a useful life of five years. If we expense this asset immediately, expenses will be overstated in the first period but understated in the next four periods. At the end of the second period, the effect of the error is not fully offset. Net income is correct in the aggregate only at the end of five years, because the asset is fully depreciated at this point. Thus, **noncounterbalancing errors are those that take longer than two periods to correct themselves**.

Only in rare instances is an error never reversed. An example would be if a company initially expenses land. Because land is not depreciable, theoretically the error is never offset, unless the land is sold.

### Counterbalancing Errors

We illustrate the usual types of counterbalancing errors on the following pages. In studying these illustrations, keep in mind a couple of points, discussed below.

First, determine whether the company has closed the books for the period in which the error is found:

1. **If the company has closed the books in the current year:**
  - (a) If the error is already counterbalanced, no entry is necessary.
  - (b) If the error is not yet counterbalanced, make an entry to adjust the present balance of retained earnings.

**2. If the company has not closed the books in the current year:**

- (a) If the error is already counterbalanced, make an entry to correct the error in the current period and to adjust the beginning balance of Retained Earnings.
- (b) If the error is not yet counterbalanced, make an entry to adjust the beginning balance of Retained Earnings.

Second, if the company presents comparative statements, it must restate the amounts for comparative purposes. **Restatement is necessary even if a correcting journal entry is not required.**

To illustrate, assume that Sanford's Cement Co. failed to accrue revenue in 2008 when earned, but recorded the revenue in 2009 when received. The company discovered the error in 2011. It does not need to make an entry to correct for this error because the effects have been counterbalanced by the time Sanford discovered the error in 2011. However, if Sanford presents comparative financial statements for 2008 through 2011, it must **restate the accounts and related amounts for the years 2008 and 2009 for financial reporting purposes.**

The sections that follow demonstrate the accounting for the usual types of counterbalancing errors.

**Failure to Record Accrued Wages**

On December 31, 2010, Hurley Enterprises did not accrue wages in the amount of \$1,500. The entry in 2011 to correct this error, assuming Hurley has not closed the books for 2011, is:

Retained Earnings	1,500	
Wages Expense		1,500

The rationale for this entry is as follows: (1) When Hurley pays the 2010 accrued wages in 2011, it makes an additional debit of \$1,500 to 2011 Wages Expense. (2) Wages Expense—2011 is overstated by \$1,500. (3) Because the company did not record 2010 accrued wages as Wages Expense in 2010, the net income for 2010 was overstated by \$1,500. (4) Because 2010 net income is overstated by \$1,500, the Retained Earnings account is overstated by \$1,500 (because net income is closed to Retained Earnings).

**If Hurley has closed the books for 2011, it makes no entry, because the error is counterbalanced.**

**Failure to Record Prepaid Expenses**

In January 2010 Hurley Enterprises purchased a two-year insurance policy costing \$1,000. It debited Insurance Expense, and credited Cash. The company made no adjusting entries at the end of 2010.

The entry on December 31, 2011, to correct this error, assuming Hurley has not closed the books for 2011, is:

Insurance Expense	500	
Retained Earnings		500

**If Hurley has closed the books for 2011, it makes no entry, because the error is counterbalanced.**

**Understatement of Unearned Revenue**

On December 31, 2010, Hurley Enterprises received \$50,000 as a prepayment for renting certain office space for the following year. At the time of receipt of the rent payment, the company recorded a debit to Cash and a credit to Rent Revenue. It made no adjusting entry as of December 31, 2010. The entry on December 31, 2011, to correct for this error, assuming that Hurley has not closed the books for 2011, is:

Retained Earnings	50,000	
Rent Revenue		50,000

**If Hurley has closed the books for 2011, it makes no entry, because the error is counterbalanced.**

**Overstatement of Accrued Revenue**

On December 31, 2010, Hurley Enterprises accrued as interest revenue \$8,000 that applied to 2011. On that date, the company recorded a debit to Interest Receivable and a credit to Interest Revenue. The entry on December 31, 2011, to correct for this error, assuming that Hurley has not closed the books for 2011, is:

Retained Earnings	8,000	
Interest Revenue		8,000

If Hurley has closed the books for 2011, it makes no entry, because the error is counterbalanced.

**Overstatement of Purchases**

Hurley’s accountant recorded a purchase of merchandise for \$9,000 in 2010 that applied to 2011. The physical inventory for 2010 was correctly stated. The company uses the periodic inventory method. The entry on December 31, 2011, to correct for this error, assuming that Harley has not closed the books for 2011, is:

Purchases	9,000	
Retained Earnings		9,000

If Hurley has closed the books for 2011, it makes no entry, because the error is counterbalanced.

**Noncounterbalancing Errors**

The entries for noncounterbalancing errors are more complex. Companies must make correcting entries, even if they have closed the books.

**Failure to Record Depreciation**

Assume that on January 1, 2010, Hurley Enterprises purchased a machine for \$10,000 that had an estimated useful life of five years. The accountant incorrectly expensed this machine in 2010, but discovered the error in 2011. If we assume that Hurley uses straight-line depreciation on this asset, the entry on December 31, 2011, to correct for this error, given that Hurley has not closed the books, is:

Machinery	10,000	
Depreciation Expense	2,000	
Retained Earnings		8,000*
Accumulated Depreciation (20% × \$10,000 × 2)		4,000

\*Computations:

<b>Retained Earnings</b>	
Overstatement of expense in 2010	\$10,000
Proper depreciation for 2010 (20% × \$10,000)	<u>(2,000)</u>
Retained earnings understated as of Dec. 31, 2010	<u>\$ 8,000</u>

If Hurley has closed the books for 2011, the entry is:

Machinery	10,000	
Retained Earnings		6,000*
Accumulated Depreciation		4,000

\*Computations:

<b>Retained Earnings</b>	
Retained earnings understated as of Dec. 31, 2010	\$ 8,000
Proper depreciation for 2011 (20% × \$10,000)	<u>(2,000)</u>
Retained earnings understated as of Dec. 31, 2011	<u>\$ 6,000</u>

**Failure to Adjust for Bad Debts**

Companies sometimes use a specific charge-off method in accounting for bad debt expense when a percentage of sales is more appropriate. They then make adjustments to change from the specific write-off to some type of allowance method. For example,

assume that Hurley Enterprises has recognized bad debt expense when it has the following uncollectible debts.

	2010	2011
From 2010 sales	\$550	\$690
From 2011 sales		700

Hurley estimates that it will charge off an additional \$1,400 in 2012, of which \$300 is applicable to 2010 sales and \$1,100 to 2011 sales. The entry on December 31, 2011, assuming that Hurley **has not closed the books for 2011**, is:

Bad Debt Expense	410
Retained Earnings	990
Allowance for Doubtful Accounts	1,400

**Allowance for doubtful accounts:** Additional \$300 for 2010 sales and \$1,100 for 2011 sales.

**Bad debts and retained earnings balance:**

	2010	2011
Bad debts charged for	\$1,240*	\$ 700
Additional bad debts anticipated in 2012	300	1,100
Proper bad debt expense	1,540	1,800
Charges currently made to each period	(550)	(1,390)
<b>Bad debt adjustment</b>	<b>\$ 990</b>	<b>\$ 410</b>

\*\$550 + \$690 = \$1,240

If Hurley **has closed the books for 2011**, the entry is:

Retained Earnings	1,400
Allowance for Doubtful Accounts	1,400

## COMPREHENSIVE EXAMPLE: NUMEROUS ERRORS

In some circumstances a combination of errors occurs. The company therefore prepares a worksheet to facilitate the analysis. The following problem demonstrates use of the worksheet. The mechanics of its preparation should be obvious from the solution format. The income statements of Hudson Company for the years ended December 31, 2009, 2010, and 2011 indicate the following net incomes.

2009	\$17,400
2010	20,200
2011	11,300

An examination of the accounting records for these years indicates that Hudson Company made several errors in arriving at the net income amounts reported:

1. The company consistently omitted from the records wages earned by workers but not paid at December 31. The amounts omitted were:

December 31, 2009	\$1,000
December 31, 2010	\$1,400
December 31, 2011	\$1,600

When paid in the year following that in which they were earned, Hudson recorded these amounts as expenses.

2. The company overstated merchandise inventory on December 31, 2009, by \$1,900 as the result of errors made in the footings and extensions on the inventory sheets.
3. On December 31, 2010, Hudson expensed unexpired insurance of \$1,200, applicable to 2011.
4. The company did not record on December 31, 2010, interest receivable in the amount of \$240.

- 5. On January 2, 2010, Hudson sold for \$1,800 a piece of equipment costing \$3,900. At the date of sale the equipment had accumulated depreciation of \$2,400. The company recorded the cash received as Miscellaneous Income in 2010. In addition, the company continued to record depreciation for this equipment in both 2010 and 2011 at the rate of 10 percent of cost.

The first step in preparing the worksheet is to prepare a schedule showing the corrected net income amounts for the years ended December 31, 2009, 2010, and 2011. Each correction of the amount originally reported is clearly labeled. The next step is to indicate the balance sheet accounts affected as of December 31, 2011. Illustration 22-24 shows the completed worksheet for Hudson Company.

**ILLUSTRATION 22-24**  
Worksheet to Correct  
Income and Balance Sheet  
Errors

HUDSON COMPANY Worksheet to Correct Income and Balance Sheet Errors								
1	A	Worksheet Analysis of Changes in Net Income				Balance Sheet Correction at December 31, 2011		
		2009	2010	2011	Totals	Debit	Credit	Account
2								
3	Net income as reported	\$17,400	\$20,200	\$11,300	\$48,900			
4	Wages unpaid, 12/31/09	(1,000)	1,000		-0-			
5	Wages unpaid, 12/31/10		(1,400)	1,400	-0-			
6	Wages unpaid, 12/31/11			(1,600)	(1,600)		\$1,600	Wages Payable
7	Inventory overstatement, 12/31/09	(1,900)	1,900		-0-			
8	Unexpired insurance, 12/31/10		1,200	(1,200)	-0-			
9	Interest receivable, 12/31/10		240	(240)	-0-			
10	Correction for entry made upon sale of equipment, 1/2/10 <sup>a</sup>		(1,500)		(1,500)	\$2,400		Accumulated Depreciation Machinery
11	Overcharge of depreciation, 2010		390		390	390		Accumulated Depreciation
12	Overcharge of depreciation, 2011			390	390	390		Accumulated Depreciation
13	<b>Corrected net income</b>	<b>\$14,500</b>	<b>\$22,030</b>	<b>\$10,050</b>	<b>\$46,580</b>			
14	<sup>a</sup> Cost	\$ 3,900						
15	Accumulated depreciation	2,400						
16	Book value	1,500						
17	Proceeds from sale	1,800						
18	Gain on sale	300						
19	Income reported	(1,800)						
20	Adjustment	\$ (1,500)						

Assuming that Hudson Company **has not closed the books**, correcting entries on December 31, 2011, are:

Retained Earnings	1,400	
Wages Expense		1,400
(To correct improper charge to Wages Expense for 2011)		
Wages Expense	1,600	
Wages Payable		1,600
(To record proper wages expense for 2011)		
Insurance Expense	1,200	
Retained Earnings		1,200
(To record proper insurance expense for 2011)		
Interest Revenue	240	
Retained Earnings		240
(To correct improper credit to Interest Revenue in 2011)		

Retained Earnings	1,500	
Accumulated Depreciation	2,400	
Machinery		3,900
(To record write-off of machinery in 2010 and adjustment of Retained Earnings)		
Accumulated Depreciation	780	
Depreciation Expense		390
Retained Earnings		390
(To correct improper charge for depreciation expense in 2010 and 2011)		

If Hudson Company has closed the books for 2011, the correcting entries are:

Retained Earnings	1,600	
Wages Payable		1,600
(To record proper wage expense for 2011)		
Retained Earnings	1,500	
Accumulated Depreciation	2,400	
Machinery		3,900
(To record write-off of machinery in 2010 and adjustment of Retained Earnings)		
Accumulated Depreciation	780	
Retained Earnings		780
(To correct improper charge for depreciation expense in 2010 and 2011)		

---

## PREPARATION OF FINANCIAL STATEMENTS WITH ERROR CORRECTIONS

Up to now, our discussion of error analysis has focused on identifying the type of error involved and accounting for its correction in the records. We have noted that companies must present the correction of the error on comparative financial statements.

The following example illustrates how a company would restate a typical year’s financial statements, given many different errors.

Dick & Wally’s Outlet is a small retail outlet in the town of Holiday. Lacking expertise in accounting, the company does not keep adequate records, and numerous errors occurred in recording accounting information.

1. The bookkeeper inadvertently failed to record a cash receipt of \$1,000 on the sale of merchandise in 2011.
2. Accrued wages expense at the end of 2010 was \$2,500; at the end of 2011, \$3,200. The company does not accrue for wages; all wages are charged to Administrative Expenses.
3. The company had not set up an allowance for estimated uncollectible receivables. Dick and Wally decided to set up such an allowance for the estimated probable losses, as of December 31, 2011, for 2010 accounts of \$700, and for 2011 accounts of \$1,500. They also decided to correct the charge against each year so that it shows the losses (actual and estimated) relating to that year’s sales. The company has written off accounts to bad debt expense (selling expense) as follows.

	<u>In 2010</u>	<u>In 2011</u>
2010 accounts	\$400	\$2,000
2011 accounts		1,600

4. Unexpired insurance not recorded at the end of 2010 was \$600, and at the end of 2011, \$400. All insurance is charged to Administrative Expenses.
5. An account payable of \$6,000 should have been a note payable.

- 6. During 2010, the company sold for \$7,000 an asset that cost \$10,000 and had a book value of \$4,000. At the time of sale Cash was debited, and Miscellaneous Income was credited for \$7,000.
- 7. As a result of the last transaction, the company overstated depreciation expense (an administrative expense) in 2010 by \$800 and in 2011 by \$1,200.

Illustration 22-25 presents a worksheet that begins with the unadjusted trial balance of Dick & Wally's Outlet. You can determine the correcting entries and their effect on the financial statements by examining the worksheet.

**ILLUSTRATION 22-25**  
Worksheet to Analyze Effect of Errors in Financial Statements

DICK & WALLY'S OUTLET Worksheet Analysis to Adjust Financial Statements for the Year 2011									
1	A	B Trial Balance Unadjusted		C Adjustments		G Income Statement Adjusted		I Balance Sheet Adjusted	
		Debit	Credit	Debit	Credit	Debit	Credit	Debit	Credit
2									
3	Cash	3,100		(1)	1,000				4,100

17	Sales		94,000			(1)	1,000		
18	Cost of Goods Sold	21,000						21,000	
19	Selling Expenses	22,000				(3)	500 <sup>b</sup>	21,500	
20	Administrative Expenses	23,000		(2)	700	(4)	400	22,700	
21				(4)	600	(7)	1,200		
22	Totals	265,500	265,500						
23	Wages Payable					(2)	3,200		3,200
24	Allowance for Doubtful Accounts					(3)	2,200 <sup>b</sup>		2,200
25	Unexpired Insurance			(4)	400				400
26	Net Income							29,800	29,800
27	Totals				25,900		25,900	95,000	95,000
								190,900	190,900

**Computations:**

<sup>a</sup> Machinery	
Proceeds from sale	\$7,000
Book value of machinery	4,000
Gain on sale	3,000
Income credited	7,000
Retained earnings adjustment	<u>\$4,000</u>

<sup>b</sup> Bad Debts	2010	2011
Bad debts charged for	\$2,400	\$1,600
Additional bad debts anticipated	700	1,500
	3,100	3,100
Charges currently made to each year	(400)	(3,600)
Bad debt adjustment	<u>\$2,700</u>	<u>\$ (500)</u>

You will want to read the **CONVERGENCE CORNER** on page 1212

For discussion of how international convergence efforts relate to accounting changes and errors.

# CONVERGENCE CORNER

## ACCOUNTING CHANGES AND ERRORS

The iGAAP standard addressing accounting and reporting for changes in accounting principles, changes in estimates, and errors is *IAS 8* (“Accounting Policies, Changes in Accounting Estimates and Errors”). Various presentation issues related to restatements are addressed in *IAS 1* (“Presentation of Financial Statements”). As indicated in the chapter, the FASB has issued guidance on changes in accounting principles, changes in estimates, and corrections of errors, which essentially converges U.S. GAAP to *IAS 8*.

### RELEVANT FACTS

- One area in which iGAAP and U.S. GAAP differ is the reporting of error corrections in previously issued financial statements. While both GAAPs require restatement, U.S. GAAP is an absolute standard—that is, there is no exception to this rule.
- The accounting for changes in estimates is similar between U.S. GAAP and iGAAP.
- Under U.S. GAAP and iGAAP, if determining the effect of a change in accounting principle is considered impracticable, then a company should report the effect of the change in the period in which it believes it practicable to do so, which may be the current period.
- Under iGAAP, the impracticability exception applies both to changes in accounting principles and to the correction of errors. Under U.S. GAAP, this exception applies only to changes in accounting principle.
- *IAS 8* does not specifically address the accounting and reporting for indirect effects of changes in accounting principles. As indicated in the chapter, U.S. GAAP has detailed guidance on the accounting and reporting of indirect effects.

### ABOUT THE NUMBERS

An interesting sidelight to our discussion of accounting changes involves how companies that follow iGAAP report financial information related to the equity method of accounting. Under the equity method of accounting, the investor increases its investment for the pro-rata share of the net income of the investee (often referred to as an associated company under iGAAP). On the other hand, the investor reduces its investment for any dividends received from the investee. Both iGAAP and U.S. GAAP follow this accounting approach.

However, there is a subtle difference between iGAAP and U.S. GAAP related to how the investor evaluates the accounting policies of the investee. To illustrate, assume that Kirkland Company (the investor company) uses the FIFO inventory method, and Margo Company (the investee company) uses average cost for its inventory valuation. If Kirkland follows iGAAP, Kirkland must conform the accounting policies of Margo to its own accounting policies. Therefore Kirkland adjusts the net income of Margo so its net income is reported on the FIFO basis.

This procedure is not used under U.S. GAAP. Under U.S. GAAP Kirkland ignores the fact that Margo uses a different method of inventory valuation. Kirkland records its pro-rata share of the net income of Margo without adjusting for the fact that Margo uses a different inventory valuation method. As a result, there is a lack of comparability in the inventory methods used to report net income for Kirkland Company under U.S. GAAP.

### ON THE HORIZON

For the most part, iGAAP and U.S. GAAP are similar in the area of accounting changes and reporting the effects of errors. Thus, there is no active project in this area. A related development involves the presentation of comparative data. Under iGAAP, when a company prepares financial statements on a new basis, 2 years of comparative data are reported. U.S. GAAP requires comparative information for a 3-year period. Use of the shorter comparative data period must be addressed before U.S. companies can adopt iGAAP.

## SUMMARY OF LEARNING OBJECTIVES

**•1 Identify the types of accounting changes.** The three different types of accounting changes are: (1) *Change in accounting principle*: a change from one generally accepted accounting principle to another generally accepted accounting principle. (2) *Change in accounting estimate*: a change that occurs as the result of new information or as additional experience is acquired. (3) *Change in reporting entity*: a change from reporting as one type of entity to another type of entity.

**•2 Describe the accounting for changes in accounting principles.** A change in accounting principle involves a change from one generally accepted accounting principle to another. A change in accounting principle is not considered to result from the adoption of a new principle in recognition of events that have occurred for the first time or that were previously immaterial. If the accounting principle previously followed was not acceptable or if the principle was applied incorrectly, a change to a generally accepted accounting principle is considered a correction of an error.

**•3 Understand how to account for retrospective accounting changes.** The general requirement for changes in accounting principle is retrospective application. Under retrospective application, companies change prior years' financial statements on a basis consistent with the newly adopted principle. They treat any part of the effect attributable to years prior to those presented as an adjustment of the earliest retained earnings presented.

**•4 Understand how to account for impracticable changes.** Retrospective application is impracticable if the prior period effect cannot be determined using every reasonable effort to do so. For example, in changing to LIFO, the base-year inventory for all subsequent LIFO calculations is generally the opening inventory in the year the company adopts the method. There is no restatement of prior years' income because it is often too impractical to do so.

**•5 Describe the accounting for changes in estimates.** Companies report changes in estimates prospectively. That is, companies should make no changes in previously reported results. They do not adjust opening balances nor change financial statements of prior periods.

**•6 Identify changes in a reporting entity.** An accounting change that results in financial statements that are actually the statements of a different entity should be reported by restating the financial statements of all prior periods presented, to show the financial information for the new reporting entity for all periods.

**•7 Describe the accounting for correction of errors.** Companies must correct errors as soon as they discover them, by proper entries in the accounts, and report them in the financial statements. The profession requires that a company treat corrections of errors as prior-period adjustments, record them in the year in which it discovered the errors, and report them in the financial statements in the proper periods. If presenting comparative statements, a company should restate the prior statements affected to correct for the errors. The company need not repeat the disclosures in the financial statements of subsequent periods.

**•8 Identify economic motives for changing accounting methods.** Managers might have varying motives for income reporting, depending on economic times and whom they seek to impress. Some of the reasons for changing accounting methods are: (1) political costs, (2) capital structure, (3) bonus payments, and (4) smoothing of earnings.

### KEY TERMS

change in accounting estimate, 1182, 1195  
 change in accounting principle, 1182  
 change in accounting estimate effected by a change in accounting principle, 1196  
 change in reporting entity, 1182  
 correction of an error, 1198  
 counterbalancing errors, 1205  
 cumulative effect, 1183  
 direct effects of change in accounting principle, 1193  
 economic consequences, 1204  
 impracticable, 1193  
 indirect effects of change in accounting principle, 1193  
 noncounterbalancing errors, 1205  
 prior period adjustments, 1198  
 prospectively, 1183  
 restatement, 1199(n)  
 retrospective application, 1183

**9 Analyze the effect of errors.** Three types of errors can occur: (1) *Balance sheet errors*, which affect only the presentation of an asset, liability, or stockholders' equity account. (2) *Income statement errors*, which affect only the presentation of revenue, expense, gain, or loss accounts in the income statement. (3) *Balance sheet and income statement errors*, which involve both the balance sheet and income statement. Errors are classified into two types: (1) *Counterbalancing errors* are offset or corrected over two periods. (2) *Non-counterbalancing errors* are not offset in the next accounting period and take longer than two periods to correct themselves.

As an aid to understanding accounting changes, we provide the following glossary.

#### KEY TERMS RELATED TO ACCOUNTING CHANGES

**ACCOUNTING CHANGE.** A change in (1) an accounting principle, (2) an accounting estimate, or (3) the reporting entity. The correction of an error in previously issued financial statements is not an accounting change.

**CHANGE IN ACCOUNTING PRINCIPLE.** A change from one generally accepted accounting principle to another generally accepted accounting principle when two or more generally accepted accounting principles apply or when the accounting principle formerly used is no longer generally accepted.

**CHANGE IN ACCOUNTING ESTIMATE.** A change that has the effect of adjusting the carrying amount of an existing asset or liability or altering the subsequent accounting for existing or future assets or liabilities. Changes in accounting estimates result from new information.

**CHANGE IN ACCOUNTING ESTIMATE EFFECTED BY A CHANGE IN ACCOUNTING PRINCIPLE.** A change in accounting estimate that is inseparable from the effect of a related change in accounting principle.

**CHANGE IN THE REPORTING ENTITY.** A change that results in financial statements that, in effect, are those of a different reporting entity (see page 1197).

**DIRECT EFFECTS OF A CHANGE IN ACCOUNTING PRINCIPLE.** Those recognized changes in assets or liabilities necessary to effect a change in accounting principle.

**ERROR IN PREVIOUSLY ISSUED FINANCIAL STATEMENTS.** An error in recognition, measurement, presentation, or disclosure in financial statements resulting from mathematical mistakes, mistakes in the application of GAAP, or oversight or misuse of facts that existed at the time the financial statements were prepared. A change from an accounting principle that is not generally accepted to one that is generally accepted is a correction of an error.

**INDIRECT EFFECTS OF A CHANGE IN ACCOUNTING PRINCIPLE.** Any changes to current or future cash flows of an entity that result from making a change in accounting principle that is applied retrospectively.

**RESTATEMENT.** The process of revising previously issued financial statements to reflect the correction of an error in those financial statements.

**RETROSPECTIVE APPLICATION.** The application of a different accounting principle to one or more previously issued financial statements, or to the statement of financial position at the beginning of the current period, as if that principle had always been used, or a change to financial statements of prior accounting periods to present the financial statements of a new reporting entity as if it had existed in those prior years. **[11]**

## APPENDIX 22A

## CHANGING FROM OR TO THE EQUITY METHOD

As noted in the chapter, companies generally should report an accounting change that results in financial statements for a different entity by **changing the financial statements of all prior periods presented**.

An example of a change in reporting entity is when a company's level of ownership or influence changes, such as when it changes from or to the equity method. When changing **to** the equity method, companies use retrospective application. Companies treat a change **from** the equity method prospectively. We present examples of these changes in entity in the following two sections.

## CHANGE FROM THE EQUITY METHOD

If the investor level of influence or ownership falls below that necessary for continued use of the equity method, a company must change from the equity method to the fair value method. The earnings or losses that the investor previously recognized under the equity method should **remain as part of the carrying amount** of the investment, with no retrospective application to the new method.

When a company changes **from the equity method to the fair value method, the cost basis for accounting purposes is the carrying amount of the investment at the date of the change**. The investor applies the new method in its entirety once the equity method is no longer appropriate. At the next reporting date, the investor should record the unrealized holding gain or loss to recognize the difference between the carrying amount and fair value.<sup>14</sup>

**Objective 10**

Make the computations and prepare the entries necessary to record a change from or to the equity method of accounting.

## Dividends in Excess of Earnings

In subsequent periods, dividends received by the investor company may exceed its share of the investee's earnings for such periods (all periods following the change in method). To the extent that they do so, the investor company should account for such dividends as a **reduction of the investment carrying amount**, rather than as revenue. The reason: dividends in excess of earnings are viewed as a liquidating dividend with this excess then accounted for as a reduction of the equity investment.

To illustrate, assume that on January 1, 2009, Investor Company purchased 250,000 shares of Investee Company's 1,000,000 shares of outstanding stock for \$8,500,000. Investor correctly accounted for this investment using the equity method. After accounting for dividends received and investee net income, in 2009, Investor reported its investment in Investee Company at \$8,780,000 at December 31, 2009. On January 2, 2010, Investee Company sold 1,500,000 additional shares of its own common stock to the public, thereby reducing Investor Company's ownership from 25 percent to 10 percent. Illustration 22A-1 shows the net income (or loss) and dividends of Investee Company for the years 2010 through 2012.

Year	Investor's Share of Investee Income (Loss)	Investee Dividends Received by Investor
2010	\$600,000	\$ 400,000
2011	350,000	400,000
2012	-0-	210,000
Totals	<u>\$950,000</u>	<u>\$1,010,000</u>

**ILLUSTRATION 22A-1**

Income Earned and  
Dividends Received

<sup>14</sup>A retrospective application for this type of change is impracticable in many cases. Determining fair values on a portfolio basis for securities in previous periods may be quite difficult. As a result, prospective application is used.

Assuming a change from the equity method to the fair value method as of January 2, 2010, Investor Company's reported investment in Investee Company and its reported income would be as shown in Illustration 22A-2.

**ILLUSTRATION 22A-2**  
Impact on Investment  
Carrying Amount

Year	Dividend Revenue Recognized	Cumulative Excess of Share of Earnings Over Dividends Received	Investment at December 31
2010	\$400,000	\$200,000 <sup>a</sup>	\$8,780,000
2011	400,000	150,000 <sup>b</sup>	8,780,000
2012	150,000	(60,000) <sup>c</sup>	\$8,780,000 – \$60,000 = \$8,720,000

<sup>a</sup>\$600,000 – \$400,000 = \$200,000  
<sup>b</sup>(\$350,000 – \$400,000) + \$200,000 = \$150,000  
<sup>c</sup>\$150,000 – \$210,000 = \$(60,000)

Investor Company would record the dividends and earnings data for the three years subsequent to the change in methods as shown by the following entries.

#### 2010 and 2011

Cash	400,000	
Dividend Revenue		400,000
(To record dividend received from Investee Company)		

#### 2012

Cash	210,000	
Available-for-Sale Securities		60,000
Dividend Revenue		150,000
(To record dividend revenue from Investee Company in 2012 and to recognize cumulative excess of dividends received over share of Investee earnings in periods subsequent to change from equity method)		

## CHANGE TO THE EQUITY METHOD

When converting to the equity method, companies use retrospective application. Such a change involves adjusting the carrying amount of the investment, results of current and prior operations, and retained earnings of the investor **as if the equity method has been in effect during all of the previous periods in which this investment was held.** [12] When changing from the fair value method to the equity method, companies also must eliminate any balances in the Unrealized Holding Gain or Loss—Equity account and the Securities Fair Value Adjustment account. In addition, they eliminate the available-for-sale classification for this investment, and they record the investment under the equity method.

For example, on January 2, 2010, Amsted Corp. purchased, for \$500,000 cash, 10 percent of the outstanding shares of Cable Company common stock. On that date, the net identifiable assets of Cable Company had a fair value of \$3,000,000. The excess of cost over the underlying equity in the net identifiable assets of Cable Company is goodwill. On January 2, 2012, Amsted Corp. purchased an additional 20 percent of Cable Company's stock for \$1,200,000 cash when the fair value of Cable's net identifiable assets was \$4,000,000. The excess of cost over fair value related to this additional investment is goodwill. Now having a 30 percent interest, Amsted Corp. must use the equity method.

From January 2, 2010, to January 2, 2012, Amsted Corp. used the fair value method and categorized these securities as available-for-sale. At January 2, 2012, Amsted has a credit balance of \$92,000 in its Unrealized Holding Gain or Loss—Equity account and a debit balance in its Securities Fair Value Adjustment account of the same amount. This change in fair value occurred in 2010 (Income tax effects are ignored.) Illustration 22A-3 (page 1217) shows the net income reported by Cable Company and the Cable Company dividends received by Amsted during the period 2010 through 2012.

**ILLUSTRATION 22A-3**  
 Income Earned and  
 Dividends Received

Year	Cable Company Net Income	Cable Co. Dividends Paid to Amsted
2010	\$ 500,000	\$ 20,000
2011	1,000,000	30,000
2012	1,200,000	120,000

Amsted makes the following journal entries from January 2, 2010, through December 31, 2012, relative to Amsted Corp.'s investment in Cable Company, reflecting the data above and a change from the fair value method to the equity method.<sup>15</sup>

**January 2, 2010**

Available-for-Sale Securities	500,000	
Cash		500,000
(To record the purchase of a 10% interest in Cable Company)		

**December 31, 2010**

Cash	20,000	
Dividend Revenue		20,000
(To record the receipt of cash dividends from Cable Company)		
Securities Fair Value Adjustment (Available-for-Sale)	92,000	
Unrealized Holding Gain or Loss—Equity		92,000
(To record increase in fair value of securities)		

**December 31, 2011**

Cash	30,000	
Dividend Revenue		30,000
(To record the receipt of cash dividends from Cable Company)		

**January 2, 2012**

Investment in Cable Stock	1,300,000	
Cash		1,200,000
Retained Earnings		100,000
(To record the purchase of an additional interest in Cable Company and to reflect retrospectively a change from the fair value method to the equity method of accounting for the investment. The \$100,000 adjustment is computed as follows:)		

	<u>2010</u>	<u>2011</u>	<u>Total</u>
Amsted Corp. equity in earnings of Cable Company (10%)	\$50,000	\$100,000	\$150,000
Dividend received	<u>(20,000)</u>	<u>(30,000)</u>	<u>(50,000)</u>
Retrospective application	<u>\$30,000</u>	<u>\$ 70,000</u>	<u>\$100,000</u>

**January 2, 2012**

Investment in Cable Stock	500,000	
Available-for-Sale Securities		500,000
(To reclassify initial 10% interest to equity method)		

**January 2, 2012**

Unrealized Holding Gain or Loss—Equity	92,000	
Securities Fair Value Adjustment (Available-for-Sale)		92,000
(To eliminate fair value accounts for change to equity method)		

<sup>15</sup>Adapted from Paul A. Pacter, "Applying APB Opinion No. 18—Equity Method," *Journal of Accountancy* (September 1971), pp. 59–60.

December 31, 2012		
Investment in Cable Stock	360,000	
Revenue from Investment [To record equity in earnings of Cable Company (30% of \$1,200,000)]		360,000
Cash	120,000	
Investment in Cable Stock (To record the receipt of cash dividends from Cable Company)		120,000

Companies change to the equity method by placing the accounts related to and affected by the investment on the same basis **as if the equity method had always been the basis of accounting for that investment**. Thus, they report the effects of this accounting change using the retrospective approach.<sup>16</sup>

## SUMMARY OF LEARNING OBJECTIVES FOR APPENDIX 22A

**LO 10** **Make the computations and prepare the entries necessary to record a change from or to the equity method of accounting.** When changing *from* the equity method to the fair value method, the cost basis for accounting purposes is the carrying amount used for the investment at the date of change. The investor company applies the new method in its entirety once the equity method is no longer appropriate. When changing *to* the equity method, the company adjusts the accounts to be on the same basis as if the equity method had always been used for that investment.

<sup>16</sup>The change to the equity method illustration assumes that the fair value and the book value of the net identifiable assets of the investee are the same. However, the fair value of the net identifiable assets of the investee may be greater than their book value. In this case, this excess (if depreciable or amortizable) reduces the net income reported by the investor from the investee. For example, assume that the fair value of an investee's building is \$1,000,000 and its book value is \$800,000 at the time of change to the equity method. In that case, this difference of \$200,000 is depreciated over the useful life of the building, thereby reducing the amount of investee's net income reported on the investor's books.

### Exercises

Access the FASB Codification at <http://asc.fasb.org/home> to prepare responses to the following exercises. Provide Codification references for your responses.

CE22-1 Access the glossary (“Master Glossary”) to answer the following.

- What is a change in accounting estimate?
- What is a change in accounting principle?
- What is a restatement?
- What is the definition of “retrospective application”?

CE22-2 When a company has to restate its financial statements to correct an error, what information must the company disclose?

CE22-3 What reporting requirements does retrospective application require?

CE22-4 If a company registered with the SEC justifies a change in accounting method as preferable under the circumstances, and the circumstances change, can that company switch back to its prior method of accounting before the change? Why or why not?

**An additional Codification case can be found in the Using Your Judgment section, on page 1240.**

**Be sure to check the companion website for a Review and Analysis Exercise, with solution.**

*Note:* All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

## QUESTIONS

- In recent years, the *Wall Street Journal* has indicated that many companies have changed their accounting principles. What are the major reasons why companies change accounting methods?
- State how each of the following items is reflected in the financial statements.
  - Change from FIFO to LIFO method for inventory valuation purposes.
  - Charge for failure to record depreciation in a previous period.
  - Litigation won in current year, related to prior period.
  - Change in the realizability of certain receivables.
  - Write-off of receivables.
  - Change from the percentage-of-completion to the completed-contract method for reporting net income.
- Discuss briefly the three approaches that have been suggested for reporting changes in accounting principles.
- Identify and describe the approach the FASB requires for reporting changes in accounting principles.
- What is the indirect effect of a change in accounting principle? Briefly describe the reporting of the indirect effects of a change in accounting principle.
- Define a change in estimate and provide an illustration. When is a change in accounting estimate effected by a change in accounting principle?

7. Lenexa State Bank has followed the practice of capitalizing certain marketing costs and amortizing these costs over their expected life. In the current year, the bank determined that the future benefits from these costs were doubtful. Consequently, the bank adopted the policy of expensing these costs as incurred. How should the bank report this accounting change in the comparative financial statements?
8. Indicate how the following items are recorded in the accounting records in the current year of Coronet Co.
  - (a) Impairment of goodwill.
  - (b) A change in depreciating plant assets from accelerated to the straight-line method.
  - (c) Large write-off of inventories because of obsolescence.
  - (d) Change from the cash basis to accrual basis of accounting.
  - (e) Change from LIFO to FIFO method for inventory valuation purposes.
  - (f) Change in the estimate of service lives for plant assets.
9. Whittier Construction Co. had followed the practice of expensing all materials assigned to a construction job without recognizing any salvage inventory. On December 31, 2010, it was determined that salvage inventory should be valued at \$52,000. Of this amount, \$29,000 arose during the current year. How does this information affect the financial statements to be prepared at the end of 2010?
10. Parsons Inc. wishes to change from the completed-contract to the percentage-of-completion method for financial reporting purposes. The auditor indicates that a change would be permitted only if it is to a preferable method. What difficulties develop in assessing preferability?
11. Discuss how a change to the LIFO method of inventory valuation is handled when it is impracticable to determine previous LIFO inventory amounts.
12. How should consolidated financial statements be reported this year when statements of individual companies were presented last year?
13. Simms Corp. controlled four domestic subsidiaries and one foreign subsidiary. Prior to the current year, Simms Corp. had excluded the foreign subsidiary from consolidation. During the current year, the foreign subsidiary was included in the financial statements. How should this change in accounting entity be reflected in the financial statements?
14. Distinguish between counterbalancing and noncounterbalancing errors. Give an example of each.
15. Discuss and illustrate how a correction of an error in previously issued financial statements should be handled.
16. Prior to 2010, Heberling Inc. excluded manufacturing overhead costs from work in process and finished goods inventory. These costs have been expensed as incurred. In 2010, the company decided to change its accounting methods for manufacturing inventories to full costing by including these costs as product costs. Assuming that these costs are material, how should this change be reflected in the financial statements for 2009 and 2010?
17. Elliott Corp. failed to record accrued salaries for 2009, \$2,000; 2010, \$2,100; and 2011, \$3,900. What is the amount of the overstatement or understatement of Retained Earnings at December 31, 2012?
18. In January 2010, installation costs of \$6,000 on new machinery were charged to Repair Expense. Other costs of this machinery of \$30,000 were correctly recorded and have been depreciated using the straight-line method with an estimated life of 10 years and no salvage value. At December 31, 2011, it is decided that the machinery has a remaining useful life of 20 years, starting with January 1, 2011. What entry(ies) should be made in 2011 to correctly record transactions related to machinery, assuming the machinery has no salvage value? The books have not been closed for 2011 and depreciation expense has not yet been recorded for 2011.
19. On January 2, 2010, \$100,000 of 11%, 10-year bonds were issued for \$97,000. The \$3,000 discount was charged to Interest Expense. The bookkeeper, Mark Landis, records interest only on the interest payment dates of January 1 and July 1. What is the effect on reported net income for 2010 of this error, assuming straight-line amortization of the discount? What entry is necessary to correct for this error, assuming that the books are not closed for 2010?
20. An entry to record Purchases and related Accounts Payable of \$13,000 for merchandise purchased on December 23, 2011, was recorded in January 2012. This merchandise was not included in inventory at December 31, 2011. What effect does this error have on reported net income for 2011? What entry should be made to correct for this error, assuming that the books are not closed for 2011?
21. Equipment was purchased on January 2, 2010, for \$24,000, but no portion of the cost has been charged to depreciation. The corporation wishes to use the straight-line method for these assets, which have been estimated to have a life of 10 years and no salvage value. What effect does this error have on net income in 2010? What entry is necessary to correct for this error, assuming that the books are not closed for 2010?
22. Where can authoritative iGAAP related to accounting changes be found? 
23. Briefly describe some of the similarities and differences between U.S. GAAP and iGAAP with respect to reporting accounting changes. 
24. How might differences in presentation of comparative data under U.S. and iGAAP affect adoption of iGAAP by U.S. companies? 

**BRIEF EXERCISES**

- 3** **BE22-1** Wertz Construction Company decided at the beginning of 2010 to change from the completed-contract method to the percentage-of-completion method for financial reporting purposes. The company will continue to use the completed-contract method for tax purposes. For years prior to 2010, pre-tax income under the two methods was as follows: percentage-of-completion \$120,000, and completed-contract \$80,000. The tax rate is 35%. Prepare Wertz's 2010 journal entry to record the change in accounting principle.
- 3** **BE22-2** Refer to the accounting change by Wertz Construction Company in BE22-1. Wertz has a profit-sharing plan, which pays all employees a bonus at year-end based on 1% of pre-tax income. Compute the indirect effect of Wertz's change in accounting principle that will be reported in the 2010 income statement, assuming that the profit-sharing contract explicitly requires adjustment for changes in income numbers.
- 3** **BE22-3** Shannon, Inc., changed from the LIFO cost flow assumption to the FIFO cost flow assumption in 2010. The increase in the prior year's income before taxes is \$1,200,000. The tax rate is 40%. Prepare Shannon's 2010 journal entry to record the change in accounting principle.
- 5** **BE22-4** Tedesco Company changed depreciation methods in 2010 from double-declining-balance to straight-line. Depreciation prior to 2010 under double-declining-balance was \$90,000, whereas straight-line depreciation prior to 2010 would have been \$50,000. Tedesco's depreciable assets had a cost of \$250,000 with a \$40,000 salvage value, and an 8-year remaining useful life at the beginning of 2010. Prepare the 2010 journal entries, if any, related to Tedesco's depreciable assets.
- 5** **BE22-5** Sesame Company purchased a computer system for \$74,000 on January 1, 2009. It was depreciated based on a 7-year life and an \$18,000 salvage value. On January 1, 2011, Sesame revised these estimates to a total useful life of 4 years and a salvage value of \$10,000. Prepare Sesame's entry to record 2011 depreciation expense.
- 7** **BE22-6** In 2010, Bailey Corporation discovered that equipment purchased on January 1, 2008, for \$50,000 was expensed at that time. The equipment should have been depreciated over 5 years, with no salvage value. The effective tax rate is 30%. Prepare Bailey's 2010 journal entry to correct the error.
- 7** **BE22-7** At January 1, 2010, Beidler Company reported retained earnings of \$2,000,000. In 2010, Beidler discovered that 2009 depreciation expense was understated by \$400,000. In 2010, net income was \$900,000 and dividends declared were \$250,000. The tax rate is 40%. Prepare a 2010 retained earnings statement for Beidler Company.
- 7** **BE22-8** Indicate the effect—Understate, Overstate, No Effect—that each of the following errors has on 2010 net income and 2011 net income.

	<u>2010</u>	<u>2011</u>
(a) Equipment purchased in 2009 was expensed.	—	—
(b) Wages payable were not recorded at 12/31/10.	—	—
(c) Equipment purchased in 2010 was expensed.	—	—
(d) 2010 ending inventory was overstated.	—	—
(e) Patent amortization was not recorded in 2011.	—	—

- 3 •5** **BE22-9** Roundtree Manufacturing Co. is preparing its year-end financial statements and is considering the accounting for the following items.
  1. The vice president of sales had indicated that one product line has lost its customer appeal and will be phased out over the next 3 years. Therefore, a decision has been made to lower the estimated lives on related production equipment from the remaining 5 years to 3 years.
  2. The Hightone Building was converted from a sales office to offices for the Accounting Department at the beginning of this year. Therefore, the expense related to this building will now appear as an administrative expense rather than a selling expense on the current year's income statement.
  3. Estimating the lives of new products in the Leisure Products Division has become very difficult because of the highly competitive conditions in this market. Therefore, the practice of deferring and amortizing preproduction costs has been abandoned in favor of expensing such costs as they are incurred.

Identify and explain whether each of the above items is a change in principle, a change in estimate, or an error.

- 3-7 BE22-10** Palmer Co. is evaluating the appropriate accounting for the following items.
1. Management has decided to switch from the FIFO inventory valuation method to the LIFO inventory valuation method for all inventories.
  2. When the year-end physical inventory adjustment was made for the current year, the controller discovered that the prior year's physical inventory sheets for an entire warehouse were mislaid and excluded from last year's count.
  3. Palmer's Custom Division manufactures large-scale, custom-designed machinery on a contract basis. Management decided to switch from the completed-contract method to the percentage-of-completion method of accounting for long-term contracts.

Identify and explain whether each of the above items is a change in accounting principle, a change in estimate, or an error.

- 10 \*BE22-11** Simmons Corporation owns stock of Armstrong, Inc. Prior to 2010, the investment was accounted for using the equity method. In early 2010, Simmons sold part of its investment in Armstrong, and began using the fair value method. In 2010, Armstrong earned net income of \$80,000 and paid dividends of \$95,000. Prepare Simmons's entries related to Armstrong's net income and dividends, assuming Simmons now owns 10% of Armstrong's stock.

- 10 \*BE22-12** Oliver Corporation has owned stock of Conrad Corporation since 2007. At December 31, 2010, its balances related to this investment were:

Available-for-Sale Securities	\$185,000
Securities Fair Value Adj (AFS)	34,000 Dr.
Unrealized Holding Gain or Loss—Equity	34,000 Cr.

On January 1, 2011, Oliver purchased additional stock of Conrad Company for \$475,000 and now has significant influence over Conrad. If the equity method had been used in 2007–2010, income would have been \$33,000 greater than dividends received. Prepare Oliver's journal entries to record the purchase of the investment and the change to the equity method.

**EXERCISES**

- 3 E22-1 (Change in Principle—Long-Term Contracts)** Cherokee Construction Company changed from the completed-contract to the percentage-of-completion method of accounting for long-term construction contracts during 2010. For tax purposes, the company employs the completed-contract method and will continue this approach in the future. (*Hint:* Adjust all tax consequences through the Deferred Tax Liability account.) The appropriate information related to this change is as follows.

	Pretax Income from:		
	Percentage-of-Completion	Completed-Contract	Difference
2009	\$780,000	\$610,000	\$170,000
2010	700,000	480,000	220,000

**Instructions**

- (a) Assuming that the tax rate is 35%, what is the amount of net income that would be reported in 2010?
- (b) What entry(ies) are necessary to adjust the accounting records for the change in accounting principle?

- 3 E22-2 (Change in Principle—Inventory Methods)** Whitman Company began operations on January 1, 2008, and uses the average cost method of pricing inventory. Management is contemplating a change in inventory methods for 2011. The following information is available for the years 2008–2010.

	Net Income Computed Using		
	Average Cost Method	FIFO Method	LIFO Method
2008	\$16,000	\$19,000	\$12,000
2009	18,000	21,000	14,000
2010	20,000	25,000	17,000

**Instructions**

(Ignore all tax effects.)

- (a) Prepare the journal entry necessary to record a change from the average cost method to the FIFO method in 2011.

- (b) Determine net income to be reported for 2008, 2009, and 2010, after giving effect to the change in accounting principle.
- (c) Assume Whitman Company used the LIFO method instead of the average cost method during the years 2008–2010. In 2011, Whitman changed to the FIFO method. Prepare the journal entry necessary to record the change in principle.

**E22-3 (Accounting Change)** Ramirez Co. decides at the beginning of 2010 to adopt the FIFO method of inventory valuation. Ramirez had used the LIFO method for financial reporting since its inception on January 1, 2008, and had maintained records adequate to apply the FIFO method retrospectively. Ramirez concluded that FIFO is the preferable inventory method because it reflects the current cost of inventory on the balance sheet. The table presents the effects of the change in accounting principle on inventory and cost of goods sold.

Date	Inventory Determined by		Cost of Goods Sold Determined by	
	LIFO Method	FIFO Method	LIFO Method	FIFO Method
January 1, 2008	\$ 0	\$ 0	\$ 0	\$ 0
December 31, 2008	100	80	800	820
December 31, 2009	200	240	1,000	940
December 31, 2010	320	390	1,130	1,100

Retained earnings reported under LIFO are as follows:

	Retained Earnings Balance
December 31, 2008	\$2,200
December 31, 2009	4,200
December 31, 2010	6,070

Other information:

1. For each year presented, sales are \$4,000 and operating expenses are \$1,000.
2. Ramirez provides two years of financial statements. Earnings per share information is not required.

**Instructions**

- (a) Prepare income statements under LIFO and FIFO for 2008, 2009, and 2010.
- (b) Prepare income statements reflecting the retrospective application of the accounting change from the LIFO method to the FIFO method for 2010 and 2009.
- (c) Prepare the note to the financial statements describing the change in method of inventory valuation. In the note, indicate the income statement line items for 2010 and 2009 that were affected by the change in accounting principle.
- (d) Prepare comparative retained earnings statements for 2009 and 2010 under FIFO.

**E22-4 (Accounting Change)** Linden Company started operations on January 1, 2006, and has used the FIFO method of inventory valuation since its inception. In 2012, it decides to switch to the average cost method. You are provided with the following information.

	Net Income		Retained Earnings (Ending balance)
	Under FIFO	Under Average Cost	Under FIFO
2006	\$100,000	\$ 92,000	\$100,000
2007	70,000	65,000	160,000
2008	90,000	80,000	235,000
2009	120,000	130,000	340,000
2010	300,000	293,000	590,000
2011	305,000	310,000	780,000

**Instructions**

- (a) What is the beginning retained earnings balance at January 1, 2008, if Linden prepares comparative financial statements starting in 2008?
- (b) What is the beginning retained earnings balance at January 1, 2011, if Linden prepares comparative financial statements starting in 2011?
- (c) What is the beginning retained earnings balance at January 1, 2012, if Linden prepares single-period financial statements for 2012?
- (d) What is the net income reported by Linden in the 2011 income statement if it prepares comparative financial statements starting with 2009?

**E22-5 (Accounting Change)** Presented on page 1224 are income statements prepared on a LIFO and FIFO basis for Carlton Company, which started operations on January 1, 2009. The company presently uses the LIFO method of pricing its inventory and has decided to switch to the FIFO method in 2010. The FIFO income statement is computed in accordance with GAAP requirements. Carlton’s profit-sharing agreement

with its employees indicates that the company will pay employees 5% of income before profit sharing. Income taxes are ignored.

	LIFO Basis		FIFO Basis	
	2010	2009	2010	2009
Sales	\$3,000	\$3,000	\$3,000	\$3,000
Cost of goods sold	1,130	1,000	1,100	940
Operating expenses	1,000	1,000	1,000	1,000
Income before profit sharing	870	1,000	900	1,060
Profit sharing expense	44	50	45	53
Net income	<u>\$ 826</u>	<u>\$ 950</u>	<u>\$ 855</u>	<u>\$1,007</u>

### Instructions

Answer the following questions.

- If comparative income statements are prepared, what net income should Carlton report in 2009 and 2010?
- Explain why, under the FIFO basis, Carlton reports \$50 in 2009 and \$48 in 2010 for its profit-sharing expense.
- Assume that Carlton has a beginning balance of retained earnings at January 1, 2010, of \$8,000 using the LIFO method. The company declared and paid dividends of \$2,500 in 2010. Prepare the retained earnings statement for 2010, assuming that Carlton has switched to the FIFO method.

**5** **E22-6 (Accounting Changes—Depreciation)** Robillard Inc. acquired the following assets in January of 2007.

Equipment, estimated service life, 5 years; salvage value, \$15,000	\$465,000
Building, estimated service life, 30 years; no salvage value	\$780,000

The equipment has been depreciated using the sum-of-the-years'-digits method for the first 3 years for financial reporting purposes. In 2010, the company decided to change the method of computing depreciation to the straight-line method for the equipment, but no change was made in the estimated service life or salvage value. It was also decided to change the total estimated service life of the building from 30 years to 40 years, with no change in the estimated salvage value. The building is depreciated on the straight-line method.

### Instructions

- Prepare the journal entry to record depreciation expense for the equipment in 2010.
- Prepare the journal entry to record depreciation expense for the building in 2010. (Round to nearest dollar.)

**5** **7** **E22-7 (Change in Estimate and Error; Financial Statements)** Presented below are the comparative income statements for Pannebecker Inc. for the years 2009 and 2010.

	2010	2009
Sales	\$340,000	\$270,000
Cost of sales	200,000	142,000
Gross profit	140,000	128,000
Expenses	88,000	50,000
Net income	<u>\$ 52,000</u>	<u>\$ 78,000</u>
Retained earnings (Jan. 1)	\$125,000	\$ 72,000
Net income	52,000	78,000
Dividends	(30,000)	(25,000)
Retained earnings (Dec. 31)	<u>\$147,000</u>	<u>\$125,000</u>

The following additional information is provided:

- In 2010, Pannebecker Inc. decided to switch its depreciation method from sum-of-the-years'-digits to the straight-line method. The assets were purchased at the beginning of 2009 for \$90,000 with an estimated useful life of 4 years and no salvage value. (The 2010 income statement contains depreciation expense of \$27,000 on the assets purchased at the beginning of 2009.)
- In 2010, the company discovered that the ending inventory for 2009 was overstated by \$20,000; ending inventory for 2010 is correctly stated.

### Instructions

Prepare the revised retained earnings statement for 2009 and 2010, assuming comparative statements. (Ignore income taxes.)

**3 • 5 • 7** **E22-8 (Accounting for Accounting Changes and Errors)** Listed below are various types of accounting changes and errors.

- \_\_\_\_\_ 1. Change from FIFO to average cost inventory method.
- \_\_\_\_\_ 2. Change due to overstatement of inventory.
- \_\_\_\_\_ 3. Change from sum-of-the-years'-digits to straight-line method of depreciation.
- \_\_\_\_\_ 4. Change from presenting unconsolidated to consolidated financial statements.
- \_\_\_\_\_ 5. Change from LIFO to FIFO inventory method.
- \_\_\_\_\_ 6. Change in the rate used to compute warranty costs.
- \_\_\_\_\_ 7. Change from an unacceptable accounting principle to an acceptable accounting principle.
- \_\_\_\_\_ 8. Change in a patent's amortization period.
- \_\_\_\_\_ 9. Change from completed-contract to percentage-of-completion method on construction contracts.
- \_\_\_\_\_ 10. Change in a plant asset's salvage value.

#### Instructions

For each change or error, indicate how it would be accounted for using the following code letters:

- (a) Accounted for prospectively.
- (b) Accounted for retrospectively.
- (c) Neither of the above.

**5 • 7** **E22-9 (Error and Change in Estimate—Depreciation)** Tarkington Co. purchased a machine on January 1, 2007, for \$440,000. At that time it was estimated that the machine would have a 10-year life and no salvage value. On December 31, 2010, the firm's accountant found that the entry for depreciation expense had been omitted in 2008. In addition, management has informed the accountant that the company plans to switch to straight-line depreciation, starting with the year 2010. At present, the company uses the sum-of-the-years'-digits method for depreciating equipment.

#### Instructions

Prepare the general journal entries that should be made at December 31, 2010 to record these events. (Ignore tax effects.)

**5** **E22-10 (Depreciation Changes)** On January 1, 2006, McElroy Company purchased a building and equipment that have the following useful lives, salvage values, and costs.

Building, 40-year estimated useful life, \$50,000 salvage value, \$1,200,000 cost  
Equipment, 12-year estimated useful life, \$10,000 salvage value, \$130,000 cost

The building has been depreciated under the double-declining balance method through 2009. In 2010, the company decided to switch to the straight-line method of depreciation. McElroy also decided to change the total useful life of the equipment to 9 years, with a salvage value of \$5,000 at the end of that time. The equipment is depreciated using the straight-line method.

#### Instructions

- (a) Prepare the journal entry(ies) necessary to record the depreciation expense on the building in 2010.
- (b) Compute depreciation expense on the equipment for 2010.

**5** **E22-11 (Change in Estimate—Depreciation)** Thurber Co. purchased equipment for \$710,000 which was estimated to have a useful life of 10 years with a salvage value of \$10,000 at the end of that time. Depreciation has been entered for 7 years on a straight-line basis. In 2011, it is determined that the total estimated life should be 15 years with a salvage value of \$4,000 at the end of that time.

#### Instructions

- (a) Prepare the entry (if any) to correct the prior years' depreciation.
- (b) Prepare the entry to record depreciation for 2011.

**5** **E22-12 (Change in Estimate—Depreciation)** Frederick Industries changed from the double-declining balance to the straight-line method in 2010 on all its plant assets. There was no change in the assets' salvage values or useful lives. Plant assets, acquired on January 2, 2007, had an original cost of \$2,400,000, with a \$100,000 salvage value and an 8-year estimated useful life. Income before depreciation expense was \$370,000 in 2009 and \$300,000 in 2010.

#### Instructions

- (a) Prepare the journal entry(ies) to record the change in depreciation method in 2010.
- (b) Starting with income before depreciation expense, prepare the remaining portion of the income statement for 2009 and 2010.

- E22-13 (Change in Principle—Long-Term Contracts)** Bryant Construction Company changed from the completed-contract to the percentage-of-completion method of accounting for long-term construction contracts during 2010. For tax purposes, the company employs the completed-contract method and will continue this approach in the future. The appropriate information related to this change is as follows.

	Pretax Income from		
	Percentage-of-Completion	Completed-Contract	Difference
2009	\$980,000	\$730,000	\$250,000
2010	900,000	480,000	420,000

#### Instructions

- (a) Assuming that the tax rate is 40%, what is the amount of net income that would be reported in 2010?
- (b) What entry(ies) are necessary to adjust the accounting records for the change in accounting principle?

- E22-14 (Various Changes in Principle—Inventory Methods)** Below is the net income of Benchley Instrument Co., a private corporation, computed under the three inventory methods using a periodic system.

	FIFO	Average Cost	LIFO
2008	\$26,000	\$23,000	\$20,000
2009	30,000	25,000	21,000
2010	29,000	27,000	24,000
2011	34,000	30,000	26,000

#### Instructions

(Ignore tax considerations.)

- (a) Assume that in 2011 Benchley decided to change from the FIFO method to the average cost method of pricing inventories. Prepare the journal entry necessary for the change that took place during 2011, and show net income reported for 2008, 2009, 2010, and 2011.
  - (b) Assume that in 2011 Benchley, which had been using the LIFO method since incorporation in 2008, changed to the FIFO method of pricing inventories. Prepare the journal entry necessary to record the change in 2011 and show net income reported for 2008, 2009, 2010, and 2011.
- E22-15 (Error Correction Entries)** The first audit of the books of Fenimore Company was made for the year ended December 31, 2010. In examining the books, the auditor found that certain items had been overlooked or incorrectly handled in the last 3 years. These items are:
1. At the beginning of 2008, the company purchased a machine for \$510,000 (salvage value of \$51,000) that had a useful life of 5 years. The bookkeeper used straight-line depreciation, but failed to deduct the salvage value in computing the depreciation base for the 3 years.
  2. At the end of 2009, the company failed to accrue sales salaries of \$45,000.
  3. A tax lawsuit that involved the year 2008 was settled late in 2010. It was determined that the company owed an additional \$85,000 in taxes related to 2008. The company did not record a liability in 2008 or 2009 because the possibility of loss was considered remote, and debited the \$85,000 to a loss account in 2010 and credited Cash for the same amount.
  4. Fenimore Company purchased a copyright from another company early in 2008 for \$50,000. Fenimore had not amortized the copyright because its value had not diminished. The copyright has a useful life at purchase of 20 years.
  5. In 2010, the company wrote off \$87,000 of inventory considered to be obsolete; this loss was charged directly to Retained Earnings and credited to Inventory.

#### Instructions

Prepare the journal entries necessary in 2010 to correct the books, assuming that the books have not been closed. Disregard effects of corrections on income tax.

- E22-16 (Error Analysis and Correcting Entry)** You have been engaged to review the financial statements of Longfellow Corporation. In the course of your examination you conclude that the bookkeeper hired during the current year is not doing a good job. You notice a number of irregularities as follows.
1. Year-end wages payable of \$3,400 were not recorded because the bookkeeper thought that “they were immaterial.”
  2. Accrued vacation pay for the year of \$31,100 was not recorded because the bookkeeper “never heard that you had to do it.”
  3. Insurance for a 12-month period purchased on November 1 of this year was charged to insurance expense in the amount of \$3,300 because “the amount of the check is about the same every year.”

- Reported sales revenue for the year is \$1,908,000. This includes all sales taxes collected for the year. The sales tax rate is 6%. Because the sales tax is forwarded to the state's Department of Revenue, the Sales Tax Expense account is debited. The bookkeeper thought that "the sales tax is a selling expense." At the end of the current year, the balance in the Sales Tax Expense account is \$103,400.

**Instructions**

Prepare the necessary correcting entries, assuming that Longfellow uses a calendar-year basis.

**7** **E22-17 (Error Analysis and Correcting Entry)** The reported net incomes for the first 2 years of Sinclair Products, Inc., were as follows: 2010, \$147,000; 2011, \$185,000. Early in 2012, the following errors were discovered.

- Depreciation of equipment for 2010 was overstated \$19,000.
- Depreciation of equipment for 2011 was understated \$38,500.
- December 31, 2010, inventory was understated \$50,000.
- December 31, 2011, inventory was overstated \$14,200.

**Instructions**

Prepare the correcting entry necessary when these errors are discovered. Assume that the books for 2011 are closed. (Ignore income tax considerations.)

**7 9** **E22-18 (Error Analysis)** Emerson Tool Company's December 31 year-end financial statements contained the following errors.

	<u>December 31, 2009</u>	<u>December 31, 2010</u>
Ending inventory	\$9,600 understated	\$7,100 overstated
Depreciation expense	\$2,300 understated	—

An insurance premium of \$60,000 was prepaid in 2009 covering the years 2009, 2010, and 2011. The entire amount was charged to expense in 2009. In addition, on December 31, 2010, fully depreciated machinery was sold for \$15,000 cash, but the entry was not recorded until 2011. There were no other errors during 2009 or 2010, and no corrections have been made for any of the errors. (Ignore income tax considerations.)

**Instructions**

- Compute the total effect of the errors on 2010 net income.
- Compute the total effect of the errors on the amount of Emerson's working capital at December 31, 2010.
- Compute the total effect of the errors on the balance of Emerson's retained earnings at December 31, 2010.

**7 9** **E22-19 (Error Analysis and Correcting Entries)** A partial trial balance of Dickinson Corporation is as follows on December 31, 2010.

	<u>Dr.</u>	<u>Cr.</u>
Supplies on hand	\$ 2,500	
Accrued salaries and wages		\$ 1,500
Interest receivable	5,100	
Prepaid insurance	90,000	
Unearned rent		-0-
Accrued interest payable		15,000

Additional adjusting data:

- A physical count of supplies on hand on December 31, 2010, totaled \$1,100.
- Through oversight, the Accrued Salaries and Wages account was not changed during 2010. Accrued salaries and wages on December 31, 2010, amounted to \$4,400.
- The Interest Receivable account was also left unchanged during 2010. Accrued interest on investments amounts to \$4,350 on December 31, 2010.
- The unexpired portions of the insurance policies totaled \$65,000 as of December 31, 2010.
- \$24,000 was received on January 1, 2010 for the rent of a building for both 2010 and 2011. The entire amount was credited to rental income.
- Depreciation for the year was erroneously recorded as \$5,000 rather than the correct figure of \$50,000.
- A further review of depreciation calculations of prior years revealed that depreciation of \$7,200 was not recorded. It was decided that this oversight should be corrected by a prior period adjustment.

**Instructions**

- (a) Assuming that the books have not been closed, what are the adjusting entries necessary at December 31, 2010? (Ignore income tax considerations.)
- (b) Assuming that the books have been closed, what are the adjusting entries necessary at December 31, 2010? (Ignore income tax considerations.)

**7 9** **E22-20 (Error Analysis)** The before-tax income for Fitzgerald Co. for 2010 was \$101,000 and \$77,400 for 2011. However, the accountant noted that the following errors had been made:

1. Sales for 2010 included amounts of \$38,200 which had been received in cash during 2010, but for which the related products were delivered in 2011. Title did not pass to the purchaser until 2011.
2. The inventory on December 31, 2010, was understated by \$8,640.
3. The bookkeeper in recording interest expense for both 2010 and 2011 on bonds payable made the following entry on an annual basis.

Interest Expense	15,000	
Cash		15,000

The bonds have a face value of \$250,000 and pay a stated interest rate of 6%. They were issued at a discount of \$10,000 on January 1, 2010, to yield an effective interest rate of 7%. (Assume that the effective-interest method should be used.)

4. Ordinary repairs to equipment had been erroneously charged to the Equipment account during 2010 and 2011. Repairs in the amount of \$8,000 in 2010 and \$9,400 in 2011 were so charged. The company applies a rate of 10% to the balance in the Equipment account at the end of the year in its determination of depreciation charges.

**Instructions**

Prepare a schedule showing the determination of corrected income before taxes for 2010 and 2011.

**7 9** **E22-21 (Error Analysis)** When the records of Archibald Corporation were reviewed at the close of 2011, the errors listed below were discovered. For each item indicate by a check mark in the appropriate column whether the error resulted in an overstatement, an understatement, or had no effect on net income for the years 2010 and 2011.

Item	2010			2011		
	Over-statement	Under-statement	No Effect	Over-statement	Under-statement	No Effect
1. Failure to reflect supplies on hand on balance sheet at end of 2010.						
2. Failure to record the correct amount of ending 2010 inventory. The amount was understated because of an error in calculation.						
3. Failure to record merchandise purchased in 2010. Merchandise was also omitted from ending inventory in 2010 but was not yet sold.						
4. Failure to record accrued interest on notes payable in 2010; that amount was recorded when paid in 2011.						
5. Failure to record amortization of patent in 2011.						

**10** \*E22-22 (Change from Fair Value to Equity) On January 1, 2010, Sandburg Co. purchased 25,000 shares (a 10% interest) in Yvette Corp. for \$1,400,000. At the time, the book value and the fair value of Yvette’s net identifiable assets were \$13,000,000.

On July 1, 2011, Sandburg paid \$3,040,000 for 50,000 additional shares of Yvette common stock, which represented a 20% investment in Yvette. The fair value of Yvette’s identifiable assets net of liabilities was equal to their carrying amount of \$14,200,000. As a result of this transaction, Sandburg owns 30% of Yvette and can exercise significant influence over Yvette’s operating and financial policies. Any excess of the cost over the fair value of the identifiable net assets is attributed to goodwill.

Yvette reported the following net income and declared and paid the following dividends.

	Net Income	Dividend per Share
Year ended 12/31/10	\$900,000	None
Six months ended 6/30/11	500,000	None
Six months ended 12/31/11	815,000	\$1.40

**Instructions**

Determine the ending balance that Sandburg Co. should report as its investment in Yvette Corp. at the end of 2011.

**10** \*E22-23 (Change from Equity to Fair Value) Gamble Corp. was a 30% owner of Sabrina Company, holding 210,000 shares of Sabrina’s common stock on December 31, 2010. The investment account had the following entries.

Investment in Sabrina			
1/1/09 Cost	\$3,180,000	12/6/09 Dividend received	\$150,000
12/31/09 Share of income	390,000	12/5/10 Dividend received	200,000
12/31/10 Share of income	510,000		

On January 2, 2011, Gamble sold 126,000 shares of Sabrina for \$3,440,000, thereby losing its significant influence. During the year 2011 Sabrina experienced the following results of operations and paid the following dividends to Gamble.

	Sabrina Income (Loss)	Dividends Paid to Gamble
2011	\$350,000	\$50,400

At December 31, 2011, the fair value of Sabrina shares held by Gamble is \$1,570,000. This is the first reporting date since the January 2 sale.

**Instructions**

- (a) What effect does the January 2, 2011, transaction have upon Gamble’s accounting treatment for its investment in Sabrina?
- (b) Compute the carrying amount in Sabrina as of December 31, 2011.
- (c) Prepare the adjusting entry on December 31, 2011, applying the fair value method to Gamble’s long-term investment in Sabrina Company securities.

See the book’s companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), for a set of B Exercises.

PROBLEMS

**2 5 7** P22-1 (Change in Estimate and Error Correction) Holtzman Company is in the process of preparing its financial statements for 2010. Assume that no entries for depreciation have been recorded in 2010. The following information related to depreciation of fixed assets is provided to you:

1. Holtzman purchased equipment on January 2, 2007, for \$85,000. At that time, the equipment had an estimated useful life of 10 years with a \$5,000 salvage value. The equipment is depreciated on a straight-line basis. On January 2, 2010, as a result of additional information, the company determined that the equipment has a remaining useful life of 4 years with a \$3,000 salvage value.
2. During 2010 Holtzman changed from the double-declining balance method for its building to the straight-line method. The building originally cost \$300,000. It had a useful life of 10 years and a

salvage value of \$30,000. The following computations present depreciation on both bases for 2008 and 2009.

	2009	2008
Straight-line	\$27,000	\$27,000
Declining-balance	48,000	60,000

3. Holtzman purchased a machine on July 1, 2008, at a cost of \$120,000. The machine has a salvage value of \$16,000 and a useful life of 8 years. Holtzman's bookkeeper recorded straight-line depreciation in 2008 and 2009 but failed to consider the salvage value.

#### Instructions

- (a) Prepare the journal entries to record depreciation expense for 2010 and correct any errors made to date related to the information provided.
- (b) Show comparative net income for 2009 and 2010. Income before depreciation expense was \$300,000 in 2010, and was \$310,000 in 2009. Ignore taxes.

**P22-2 (Comprehensive Accounting Change and Error Analysis Problem)** Botticelli Inc. was organized in late 2008 to manufacture and sell hosiery. At the end of its fourth year of operation, the company has been fairly successful, as indicated by the following reported net incomes.

2008	\$140,000 <sup>a</sup>	2010	\$205,000
2009	160,000 <sup>b</sup>	2011	276,000

<sup>a</sup>Includes a \$10,000 increase because of change in bad debt experience rate.

<sup>b</sup>Includes extraordinary gain of \$30,000.

The company has decided to expand operations and has applied for a sizable bank loan. The bank officer has indicated that the records should be audited and presented in comparative statements to facilitate analysis by the bank. Botticelli Inc. therefore hired the auditing firm of Check & Doublecheck Co. and has provided the following additional information.

- In early 2009, Botticelli Inc. changed its estimate from 2% to 1% on the amount of bad debt expense to be charged to operations. Bad debt expense for 2008, if a 1% rate had been used, would have been \$10,000. The company therefore restated its net income for 2008.
- In 2011, the auditor discovered that the company had changed its method of inventory pricing from LIFO to FIFO. The effect on the income statements for the previous years is as follows.

	2008	2009	2010	2011
Net income unadjusted—LIFO basis	\$140,000	\$160,000	\$205,000	\$276,000
Net income unadjusted—FIFO basis	<u>155,000</u>	<u>165,000</u>	<u>215,000</u>	<u>260,000</u>
	<u>\$ 15,000</u>	<u>\$ 5,000</u>	<u>\$ 10,000</u>	<u>(\$ 16,000)</u>

- In 2011 the auditor discovered that:
  - The company incorrectly overstated the ending inventory by \$14,000 in 2010.
  - A dispute developed in 2009 with the Internal Revenue Service over the deductibility of entertainment expenses. In 2008, the company was not permitted these deductions, but a tax settlement was reached in 2011 that allowed these expenses. As a result of the court's finding, tax expenses in 2011 were reduced by \$60,000.

#### Instructions

- (a) Indicate how each of these changes or corrections should be handled in the accounting records. Ignore income tax considerations.
- (b) Present comparative income statements for the years 2008 to 2011, starting with income before extraordinary items. Ignore income tax considerations.

**P22-3 (Error Corrections and Accounting Changes)** Penn Company is in the process of adjusting and correcting its books at the end of 2010. In reviewing its records, the following information is compiled.

- Penn has failed to accrue sales commissions payable at the end of each of the last 2 years, as follows.

December 31, 2009	\$3,500
December 31, 2010	\$2,500

- In reviewing the December 31, 2011, inventory, Penn discovered errors in its inventory-taking procedures that have caused inventories for the last 3 years to be incorrect, as follows.

December 31, 2008	Understated	\$16,000
December 31, 2009	Understated	\$19,000
December 31, 2010	Overstated	\$ 6,700

Penn has already made an entry that established the incorrect December 31, 2010, inventory amount.

- At December 31, 2010, Penn decided to change the depreciation method on its office equipment from double-declining balance to straight-line. The equipment had an original cost of \$100,000 when purchased on January 1, 2008. It has a 10-year useful life and no salvage value. Depreciation expense recorded prior to 2010 under the double-declining balance method was \$36,000. Penn has already recorded 2010 depreciation expense of \$12,800 using the double-declining balance method.
- Before 2010, Penn accounted for its income from long-term construction contracts on the completed-contract basis. Early in 2010, Penn changed to the percentage-of-completion basis for accounting purposes. It continues to use the completed-contract method for tax purposes. Income for 2010 has been recorded using the percentage-of-completion method. The following information is available.

	Pretax Income	
	Percentage-of-Completion	Completed-Contract
Prior to 2010	\$150,000	\$105,000
2010	60,000	20,000

**Instructions**

Prepare the journal entries necessary at December 31, 2010, to record the above corrections and changes. The books are still open for 2010. The income tax rate is 40%. Penn has not yet recorded its 2010 income tax expense and payable amounts so current-year tax effects may be ignored. Prior-year tax effects must be considered in item 4.

**P22-4 (Accounting Changes)** Aston Corporation performs year-end planning in November of each year before their calendar year ends in December. The preliminary estimated net income is \$3 million. The CFO, Rita Warren, meets with the company president, J. B. Aston, to review the projected numbers. She presents the following projected information.

ASTON CORPORATION PROJECTED INCOME STATEMENT FOR THE YEAR ENDED DECEMBER 31, 2010		
Sales		\$29,000,000
Cost of goods sold	\$14,000,000	
Depreciation	2,600,000	
Operating expenses	<u>6,400,000</u>	<u>23,000,000</u>
Income before income tax		6,000,000
Income tax		<u>3,000,000</u>
Net income		<u>\$ 3,000,000</u>

ASTON CORPORATION SELECTED BALANCE SHEET INFORMATION AT DECEMBER 31, 2010	
Estimated cash balance	\$ 5,000,000
Available-for-sale securities (at cost)	10,000,000
Security fair value adjustment account (1/1/10)	200,000

Estimated market value at December 31, 2010:

Security	Cost	Estimated Market
A	\$ 2,000,000	\$ 2,200,000
B	4,000,000	3,900,000
C	3,000,000	3,000,000
D	<u>1,000,000</u>	<u>1,800,000</u>
Total	<u>\$10,000,000</u>	<u>\$10,900,000</u>

Other information at December 31, 2010:

Equipment	\$ 3,000,000
Accumulated depreciation (5-year SL)	1,200,000
New robotic equipment (purchased 1/1/10)	5,000,000
Accumulated depreciation (5-year DDB)	2,000,000

The corporation has never used robotic equipment before, and Warren assumed an accelerated method because of the rapidly changing technology in robotic equipment. The company normally uses straight-line depreciation for production equipment.

Aston explains to Warren that it is important for the corporation to show a \$7,000,000 income before taxes because Aston receives a \$1,000,000 bonus if the income before taxes and bonus reaches \$7,000,000. Aston also does not want the company to pay more than \$3,000,000 in income taxes to the government.

**Instructions**

- (a) What can Warren do within GAAP to accommodate the president’s wishes to achieve \$7,000,000 in income before taxes and bonus? Present the revised income statement based on your decision.
- (b) Are the actions ethical? Who are the stakeholders in this decision, and what effect do Warren’s actions have on their interests?

**3** **P22-5 (Change in Principle—Inventory—Periodic)** The management of Utrillo Instrument Company had concluded, with the concurrence of its independent auditors, that results of operations would be more fairly presented if Utrillo changed its method of pricing inventory from last-in, first-out (LIFO) to average cost in 2010. Given below is the 5-year summary of income under LIFO and a schedule of what the inventories would be if stated on the average cost method.

<b>UTRILLO INSTRUMENT COMPANY</b>					
<b>STATEMENT OF INCOME AND RETAINED EARNINGS</b>					
<b>FOR THE YEARS ENDED MAY 31</b>					
	2006	2007	2008	2009	2010
Sales—net	\$13,964	\$15,506	\$16,673	\$18,221	\$18,898
Cost of goods sold					
Beginning inventory	1,000	1,100	1,000	1,115	1,237
Purchases	13,000	13,900	15,000	15,900	17,100
Ending inventory	(1,100)	(1,000)	(1,115)	(1,237)	(1,369)
Total	12,900	14,000	14,885	15,778	16,968
Gross profit	1,064	1,506	1,788	2,443	1,930
Administrative expenses	700	763	832	907	989
Income before taxes	364	743	956	1,536	941
Income taxes (50%)	182	372	478	768	471
Net income	182	371	478	768	470
Retained earnings—beginning	1,206	1,388	1,759	2,237	3,005
Retained earnings—ending	\$ 1,388	\$ 1,759	\$ 2,237	\$ 3,005	\$ 3,475
Earnings per share	\$1.82	\$3.71	\$4.78	\$7.68	\$4.70

**SCHEDULE OF INVENTORY BALANCES USING AVERAGE COST METHOD**  
**FOR THE YEARS ENDED MAY 31**

2005	2006	2007	2008	2009	2010
\$1,010	\$1,124	\$1,101	\$1,270	\$1,500	\$1,720

**Instructions**

Prepare comparative statements for the 5 years, assuming that Utrillo changed its method of inventory pricing to average cost. Indicate the effects on net income and earnings per share for the years involved. Utrillo Instruments started business in 2005. (All amounts except EPS are rounded up to the nearest dollar.)

**5 • 7 • 9** **P22-6 (Accounting Change and Error Analysis)** On December 31, 2010, before the books were closed, the management and accountants of Madrasa Inc. made the following determinations about three depreciable assets.

1. Depreciable asset A was purchased January 2, 2007. It originally cost \$540,000 and, for depreciation purposes, the straight-line method was originally chosen. The asset was originally expected to be useful for 10 years and have a zero salvage value. In 2010, the decision was made to change the depreciation method from straight-line to sum-of-the-years’-digits, and the estimates relating to useful life and salvage value remained unchanged.
2. Depreciable asset B was purchased January 3, 2006. It originally cost \$180,000 and, for depreciation purposes, the straight-line method was chosen. The asset was originally expected to be useful for 15 years and have a zero salvage value. In 2010, the decision was made to shorten the total life of this asset to 9 years and to estimate the salvage value at \$3,000.

- Depreciable asset C was purchased January 5, 2006. The asset’s original cost was \$160,000, and this amount was entirely expensed in 2006. This particular asset has a 10-year useful life and no salvage value. The straight-line method was chosen for depreciation purposes.

Additional data:

- Income in 2010 before depreciation expense amounted to \$400,000.
- Depreciation expense on assets other than A, B, and C totaled \$55,000 in 2010.
- Income in 2009 was reported at \$370,000.
- Ignore all income tax effects.
- 100,000 shares of common stock were outstanding in 2009 and 2010.

**Instructions**

- Prepare all necessary entries in 2010 to record these determinations.
- Prepare comparative retained earnings statements for Madrasa Inc. for 2009 and 2010. The company had retained earnings of \$200,000 at December 31, 2008.

**P22-7 (Error Corrections)** You have been assigned to examine the financial statements of Zarle Company for the year ended December 31, 2010. You discover the following situations.

- Depreciation of \$3,200 for 2010 on delivery vehicles was not recorded.
- The physical inventory count on December 31, 2009, improperly excluded merchandise costing \$19,000 that had been temporarily stored in a public warehouse. Zarle uses a periodic inventory system.
- A collection of \$5,600 on account from a customer received on December 31, 2010, was not recorded until January 2, 2011.
- In 2010, the company sold for \$3,700 fully depreciated equipment that originally cost \$25,000. The company credited the proceeds from the sale to the Equipment account.
- During November 2010, a competitor company filed a patent-infringement suit against Zarle claiming damages of \$220,000. The company’s legal counsel has indicated that an unfavorable verdict is probable and a reasonable estimate of the court’s award to the competitor is \$125,000. The company has not reflected or disclosed this situation in the financial statements.
- Zarle has a portfolio of trading securities. No entry has been made to adjust to market. Information on cost and market value is as follows.

	<u>Cost</u>	<u>Market</u>
December 31, 2009	\$95,000	\$95,000
December 31, 2010	\$84,000	\$82,000

- At December 31, 2010, an analysis of payroll information shows accrued salaries of \$12,200. The Accrued Salaries Payable account had a balance of \$16,000 at December 31, 2010, which was unchanged from its balance at December 31, 2009.
- A large piece of equipment was purchased on January 3, 2010, for \$40,000 and was charged to Repairs Expense. The equipment is estimated to have a service life of 8 years and no residual value. Zarle normally uses the straight-line depreciation method for this type of equipment.
- A \$12,000 insurance premium paid on July 1, 2009, for a policy that expires on June 30, 2012, was charged to insurance expense.
- A trademark was acquired at the beginning of 2009 for \$50,000. No amortization has been recorded since its acquisition. The maximum allowable amortization period is 10 years.

**Instructions**

Assume the trial balance has been prepared but the books have not been closed for 2010. Assuming all amounts are material, prepare journal entries showing the adjustments that are required. (Ignore income tax considerations.)

**P22-8 (Comprehensive Error Analysis)** On March 5, 2011, you were hired by Hemingway Inc., a closely held company, as a staff member of its newly created internal auditing department. While reviewing the company’s records for 2009 and 2010, you discover that no adjustments have yet been made for the items listed below.

**Items**

- Interest income of \$14,100 was not accrued at the end of 2009. It was recorded when received in February 2010.

- A computer costing \$4,000 was expensed when purchased on July 1, 2009. It is expected to have a 4-year life with no salvage value. The company typically uses straight-line depreciation for all fixed assets.
- Research and development costs of \$33,000 were incurred early in 2009. They were capitalized and were to be amortized over a 3-year period. Amortization of \$11,000 was recorded for 2009 and \$11,000 for 2010.
- On January 2, 2009, Hemingway leased a building for 5 years at a monthly rental of \$8,000. On that date, the company paid the following amounts, which were expensed when paid.

Security deposit	\$20,000
First month's rent	8,000
Last month's rent	<u>8,000</u>
	<u>\$36,000</u>

- The company received \$36,000 from a customer at the beginning of 2009 for services that it is to perform evenly over a 3-year period beginning in 2009. None of the amount received was reported as unearned revenue at the end of 2009.
- Merchandise inventory costing \$18,200 was in the warehouse at December 31, 2009, but was incorrectly omitted from the physical count at that date. The company uses the periodic inventory method.

**Instructions**

Indicate the effect of any errors on the net income figure reported on the income statement for the year ending December 31, 2009, and the retained earnings figure reported on the balance sheet at December 31, 2010. Assume all amounts are material, and ignore income tax effects. Using the following format, enter the appropriate dollar amounts in the appropriate columns. Consider each item independent of the other items. It is not necessary to total the columns on the grid.

Item	Net Income for 2009		Retained Earnings at 12/31/10	
	Understated	Overstated	Understated	Overstated

(CIA adapted)

**P22-9 (Error Analysis)** Lowell Corporation has used the accrual basis of accounting for several years. A review of the records, however, indicates that some expenses and revenues have been handled on a cash basis because of errors made by an inexperienced bookkeeper. Income statements prepared by the bookkeeper reported \$29,000 net income for 2009 and \$37,000 net income for 2010. Further examination of the records reveals that the following items were handled improperly.

- Rent was received from a tenant in December 2009. The amount, \$1,000, was recorded as income at that time even though the rental pertained to 2010.
- Wages payable on December 31 have been consistently omitted from the records of that date and have been entered as expenses when paid in the following year. The amounts of the accruals recorded in this manner were:

December 31, 2008	\$1,100
December 31, 2009	1,200
December 31, 2010	940

- Invoices for office supplies purchased have been charged to expense accounts when received. Inventories of supplies on hand at the end of each year have been ignored, and no entry has been made for them.

December 31, 2008	\$1,300
December 31, 2009	940
December 31, 2010	1,420

**Instructions**

Prepare a schedule that will show the corrected net income for the years 2009 and 2010. All items listed should be labeled clearly. (Ignore income tax considerations.)

**P22-10 (Error Analysis and Correcting Entries)** You have been asked by a client to review the records of Roberts Company, a small manufacturer of precision tools and machines. Your client is interested in buying the business, and arrangements have been made for you to review the accounting records. Your examination reveals the information shown on page 1235.

1. Roberts Company commenced business on April 1, 2008, and has been reporting on a fiscal year ending March 31. The company has never been audited, but the annual statements prepared by the bookkeeper reflect the following income before closing and before deducting income taxes.

Year Ended March 31	Income Before Taxes
2009	\$ 71,600
2010	111,400
2011	103,580

2. A relatively small number of machines have been shipped on consignment. These transactions have been recorded as ordinary sales and billed as such. On March 31 of each year, machines billed and in the hands of consignees amounted to:

2009	\$6,500
2010	none
2011	5,590

Sales price was determined by adding 25% to cost. Assume that the consigned machines are sold the following year.

3. On March 30, 2010, two machines were shipped to a customer on a C.O.D. basis. The sale was not entered until April 5, 2010, when cash was received for \$6,100. The machines were not included in the inventory at March 31, 2010. (Title passed on March 30, 2010.)
4. All machines are sold subject to a 5-year warranty. It is estimated that the expense ultimately to be incurred in connection with the warranty will amount to ½ of 1% of sales. The company has charged an expense account for warranty costs incurred.

Sales per books and warranty costs were as follows.

Year Ended March 31	Sales	Warranty Expense for Sales Made in			
		2009	2010	2011	Total
2009	\$ 940,000	\$760			\$ 760
2010	1,010,000	360	\$1,310		1,670
2011	1,795,000	320	1,620	\$1,910	3,850

5. Bad debts have been recorded on a direct write-off basis. Experience of similar enterprises indicates that losses will approximate ¼ of 1% of sales. Bad debts written off were:

	Bad Debts Incurred on Sales Made in			
	2009	2010	2011	Total
2009	\$750			\$ 750
2010	800	\$ 520		1,320
2011	350	1,800	\$1,700	3,850

6. The bank deducts 6% on all contracts financed. Of this amount, ½% is placed in a reserve to the credit of Roberts Company that is refunded to Roberts as finance contracts are paid in full. The reserve established by the bank has not been reflected in the books of Roberts. The excess of credits over debits (net increase) to the reserve account with Roberts on the books of the bank for each fiscal year were as follows.

2009	\$ 3,000
2010	3,900
2011	5,100
	<u>\$12,000</u>

7. Commissions on sales have been entered when paid. Commissions payable on March 31 of each year were as follows.

2009	\$1,400
2010	900
2011	1,120

8. A review of the corporate minutes reveals the manager is entitled to a bonus of 1% of the income before deducting income taxes and the bonus. The bonuses have never been recorded or paid.

**Instructions**

- (a) Present a schedule showing the revised income before income taxes for each of the years ended March 31, 2009, 2010, and 2011. Make computations to the nearest whole dollar.
- (b) Prepare the journal entry or entries you would give the bookkeeper to correct the books. Assume the books have not yet been closed for the fiscal year ended March 31, 2011. Disregard correction of income taxes.

(AICPA adapted)

**10** \*P22-11 **(Fair Value to Equity Method with Goodwill)** On January 1, 2010, Millay Inc. paid \$700,000 for 10,000 shares of Genso Company’s voting common stock, which was a 10% interest in Genso. At that date the net assets of Genso totaled \$6,000,000. The fair values of all of Genso’s identifiable assets and liabilities were equal to their book values. Millay does not have the ability to exercise significant influence over the operating and financial policies of Genso. Millay received dividends of \$1.50 per share from Genso on October 1, 2010. Genso reported net income of \$550,000 for the year ended December 31, 2010.

On July 1, 2011, Millay paid \$2,325,000 for 30,000 additional shares of Genso Company’s voting common stock which represents a 30% investment in Genso. The fair values of all of Genso’s identifiable assets net of liabilities were equal to their book values of \$6,550,000. As a result of this transaction, Millay has the ability to exercise significant influence over the operating and financial policies of Genso. Millay received dividends of \$2.00 per share from Genso on April 1, 2011, and \$2.50 per share on October 1, 2011. Genso reported net income of \$650,000 for the year ended December 31, 2011, and \$350,000 for the 6 months ended December 31, 2011.

**Instructions**

- (a) Prepare a schedule showing the income or loss before income taxes for the year ended December 31, 2010, that Millay should report from its investment in Genso in its income statement issued in March 2011.
- (b) During March 2012, Millay issues comparative financial statements for 2010 and 2011. Prepare schedules showing the income or loss before income taxes for the years ended December 31, 2010 and 2011, that Millay should report from its investment in Genso.

(AICPA adapted)

**10** \*P22-12 **(Change from Fair Value to Equity Method)** On January 3, 2009, Martin Company purchased for \$500,000 cash a 10% interest in Renner Corp. On that date the net assets of Renner had a book value of \$3,700,000. The excess of cost over the underlying equity in net assets is attributable to undervalued depreciable assets having a remaining life of 10 years from the date of Martin’s purchase.

The fair value of Martin’s investment in Renner securities is as follows: December 31, 2009, \$560,000, and December 31, 2010, \$515,000.

On January 2, 2011, Martin purchased an additional 30% of Renner’s stock for \$1,545,000 cash when the book value of Renner’s net assets was \$4,150,000. The excess was attributable to depreciable assets having a remaining life of 8 years.

During 2009, 2010, and 2011 the following occurred.

	Renner Net Income	Dividends Paid by Renner to Martin
2009	\$350,000	\$15,000
2010	450,000	20,000
2011	550,000	70,000

**Instructions**

On the books of Martin Company prepare all journal entries in 2009, 2010, and 2011 that relate to its investment in Renner Corp., reflecting the data above and a change from the fair value method to the equity method.

**CONCEPTS FOR ANALYSIS**

**CA22-1 (Analysis of Various Accounting Changes and Errors)** Joblonsky Inc. has recently hired a new independent auditor, Karen Ogleby, who says she wants “to get everything straightened out.” Consequently, she has proposed the accounting changes shown on page 1237 in connection with Joblonsky Inc.’s 2010 financial statements.

1. At December 31, 2009, the client had a receivable of \$820,000 from Hendricks Inc. on its balance sheet. Hendricks Inc. has gone bankrupt, and no recovery is expected. The client proposes to write off the receivable as a prior period item.
2. The client proposes the following changes in depreciation policies.
  - (a) For office furniture and fixtures it proposes to change from a 10-year useful life to an 8-year life. If this change had been made in prior years, retained earnings at December 31, 2009, would have been \$250,000 less. The effect of the change on 2010 income alone is a reduction of \$60,000.
  - (b) For its equipment in the leasing division the client proposes to adopt the sum-of-the-years'-digits depreciation method. The client had never used SYD before. The first year the client operated a leasing division was 2010. If straight-line depreciation were used, 2010 income would be \$110,000 greater.
3. In preparing its 2009 statements, one of the client's bookkeepers overstated ending inventory by \$235,000 because of a mathematical error. The client proposes to treat this item as a prior period adjustment.
4. In the past, the client has spread preproduction costs in its furniture division over 5 years. Because its latest furniture is of the "fad" type, it appears that the largest volume of sales will occur during the first 2 years after introduction. Consequently, the client proposes to amortize preproduction costs on a per-unit basis, which will result in expensing most of such costs during the first 2 years after the furniture's introduction. If the new accounting method had been used prior to 2010, retained earnings at December 31, 2009, would have been \$375,000 less.
5. For the nursery division the client proposes to switch from FIFO to LIFO inventories because it believes that LIFO will provide a better matching of current costs with revenues. The effect of making this change on 2010 earnings will be an increase of \$320,000. The client says that the effect of the change on December 31, 2009, retained earnings cannot be determined.
6. To achieve a better matching of revenues and expenses in its building construction division, the client proposes to switch from the completed-contract method of accounting to the percentage-of-completion method. Had the percentage-of-completion method been employed in all prior years, retained earnings at December 31, 2009, would have been \$1,075,000 greater.

#### Instructions

- (a) For each of the changes described above decide whether:
  - (1) The change involves an accounting principle, accounting estimate, or correction of an error.
  - (2) Restatement of opening retained earnings is required.
- (b) What would be the proper adjustment to the December 31, 2009, retained earnings?

**CA22-2 (Analysis of Various Accounting Changes and Errors)** Various types of accounting changes can affect the financial statements of a business enterprise differently. Assume that the following list describes changes that have a material effect on the financial statements for the current year of your business enterprise.

1. A change from the completed-contract method to the percentage-of-completion method of accounting for long-term construction-type contracts.
2. A change in the estimated useful life of previously recorded fixed assets as a result of newly acquired information.
3. A change from deferring and amortizing preproduction costs to recording such costs as an expense when incurred because future benefits of the costs have become doubtful. The new accounting method was adopted in recognition of the change in estimated future benefits.
4. A change from including the employer share of FICA taxes with payroll tax expenses to including it with "Retirement benefits" on the income statement.
5. Correction of a mathematical error in inventory pricing made in a prior period.
6. A change from presentation of statements of individual companies to presentation of consolidated statements.
7. A change in the method of accounting for leases for tax purposes to conform with the financial accounting method. As a result, both deferred and current taxes payable changed substantially.
8. A change from the FIFO method of inventory pricing to the LIFO method of inventory pricing.

#### Instructions

Identify the type of change that is described in each item above and indicate whether the prior year's financial statements should be retrospectively applied or restated when presented in comparative form with the current year's financial statements.

**CA22-3 (Analysis of Three Accounting Changes and Errors)** Listed below are three independent, unrelated sets of facts relating to accounting changes.

**Situation 1**

Sanford Company is in the process of having its first audit. The company has used the cash basis of accounting for revenue recognition. Sanford president, B. J. Jimenez, is willing to change to the accrual method of revenue recognition.

**Situation 2**

Hopkins Co. decides in January 2011 to change from FIFO to weighted-average pricing for its inventories.

**Situation 3**

Marshall Co. determined that the depreciable lives of its fixed assets are too long at present to fairly match the cost of the fixed assets with the revenue produced. The company decided at the beginning of the current year to reduce the depreciable lives of all of its existing fixed assets by 5 years.

**Instructions**

For each of the situations described, provide the information indicated below.

- (a) Type of accounting change.
- (b) Manner of reporting the change under current generally accepted accounting principles including a discussion, where applicable, of how amounts are computed.
- (c) Effect of the change on the balance sheet and income statement.

**CA22-4 (Analysis of Various Accounting Changes and Errors)** Katherine Irving, controller of Lotan Corp., is aware that a pronouncement on accounting changes has been issued. After reading the pronouncement, she is confused about what action should be taken on the following items related to Lotan Corp. for the year 2010.

1. In 2010, Lotan decided to change its policy on accounting for certain marketing costs. Previously, the company had chosen to defer and amortize all marketing costs over at least 5 years because Lotan believed that a return on these expenditures did not occur immediately. Recently, however, the time differential has considerably shortened, and Lotan is now expensing the marketing costs as incurred.
2. In 2010, the company examined its entire policy relating to the depreciation of plant equipment. Plant equipment had normally been depreciated over a 15-year period, but recent experience has indicated that the company was incorrect in its estimates and that the assets should be depreciated over a 20-year period.
3. One division of Lotan Corp., Hawthorne Co., has consistently shown an increasing net income from period to period. On closer examination of their operating statement, it is noted that bad debt expense and inventory obsolescence charges are much lower than in other divisions. In discussing this with the controller of this division, it has been learned that the controller has increased his net income each period by knowingly making low estimates related to the writeoff of receivables and inventory.
4. In 2010, the company purchased new machinery that should increase production dramatically. The company has decided to depreciate this machinery on an accelerated basis, even though other machinery is depreciated on a straight-line basis.
5. All equipment sold by Lotan is subject to a 3-year warranty. It has been estimated that the expense ultimately to be incurred on these machines is 1% of sales. In 2010, because of a production breakthrough, it is now estimated that  $\frac{1}{2}$  of 1% of sales is sufficient. In 2008 and 2009, warranty expense was computed as \$64,000 and \$70,000, respectively. The company now believes that these warranty costs should be reduced by 50%.
6. In 2010, the company decided to change its method of inventory pricing from average cost to the FIFO method. The effect of this change on prior years is to increase 2008 income by \$65,000 and increase 2009 income by \$20,000.

**Instructions**

Katherine Irving has come to you, as her CPA, for advice about the situations above. Prepare a report, indicating the appropriate accounting treatment that should be given each of these situations.

**CA22-5 (Change in Principle, Estimate)** As a certified public accountant, you have been contacted by Joe Davison, CEO of Sports-Pro Athletics, Inc., a manufacturer of a variety of athletic equipment. He has asked you how to account for the following changes.

1. Sports-Pro appropriately changed its depreciation method for its production machinery from the double-declining balance method to the production method effective January 1, 2010.

- Effective January 1, 2010, Sports-Pro appropriately changed the salvage values used in computing depreciation for its office equipment.
- On December 31, 2010, Sports-Pro appropriately changed the specific subsidiaries constituting the group of companies for which consolidated financial statements are presented.

### Instructions

Write a 1–1.5 page letter to Joe Davison explaining how each of the above changes should be presented in the December 31, 2010, financial statements.

**CA22-6 (Change in Estimate)** Mike Crane is an audit senior of a large public accounting firm who has just been assigned to the Frost Corporation's annual audit engagement. Frost has been a client of Crane's firm for many years. Frost is a fast-growing business in the commercial construction industry. In reviewing the fixed asset ledger, Crane discovered a series of unusual accounting changes, in which the useful lives of assets, depreciated using the straight-line method, were substantially lowered near the midpoint of the original estimate. For example, the useful life of one dump truck was changed from 10 to 6 years during its fifth year of service. Upon further investigation, Mike was told by Kevin James, Frost's accounting manager, "I don't really see your problem. After all, it's perfectly legal to change an accounting estimate. Besides, our CEO likes to see big earnings!"

### Instructions

Answer the following questions.

- What are the ethical issues concerning Frost's practice of changing the useful lives of fixed assets?
- Who could be harmed by Frost's unusual accounting changes?
- What should Crane do in this situation?

## USING YOUR JUDGMENT

### FINANCIAL REPORTING

#### Financial Reporting Problem

#### The Procter & Gamble Company (P&G)

The financial statements of **P&G** are provided in Appendix 5B or can be accessed at the book's companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso).

### Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- Were there changes in accounting principles reported by P&G during the three years covered by its income statements (2004–2007)? If so, describe the nature of the change and the year of change.
- What types of estimates did P&G discuss in 2007?

#### Comparative Analysis Case

#### The Coca-Cola Company and PepsiCo, Inc.

*The Coca-Cola Company*

**PEPSICO**

### Instructions

Go to the book's companion website and use information found there to answer the following questions related to **The Coca-Cola Company** and **PepsiCo Inc.**

- Identify the changes in accounting principles reported by Coca-Cola during the 3 years covered by its income statements (2005–2007). Describe the nature of the change and the year of change.
- Identify the changes in accounting principles reported by PepsiCo during the 3 years covered by its income statements (2005–2007). Describe the nature of the change and the year of change.
- For each change in accounting principle by Coca-Cola and PepsiCo, identify, if possible, the cumulative effect of each change on prior years and the effect on operating results in the year of change.

## BRIDGE TO THE PROFESSION

### Professional Research: FASB Codification

As part of the year-end accounting process and review of operating policies, Cullen Co. is considering a change in the accounting for its equipment from the straight-line method to an accelerated method. Your supervisor wonders how the company will report this change in principle. He read in a newspaper article that the FASB has issued a standard in this area and has changed GAAP for a “change in estimate that is effected by a change in accounting principle.” (Thus, the accounting may be different from that he learned in intermediate accounting.) Your supervisor wants you to research the authoritative guidance on a change in accounting principle related to depreciation methods.

#### Instructions

Access the FASB Codification at <http://asc.fasb.org/home> to conduct research using the Codification Research System to prepare responses to the following items. Provide Codification references for your responses.

- What are the accounting and reporting guidelines for a change in accounting principle related to depreciation methods?
- What are the conditions that justify a change in depreciation method, as contemplated by Cullen Co.?
- What guidance does the SEC provide concerning the impact that recently issued accounting standards will have on the financial statements in a future period?

### Professional Simulation

Go to the book’s companion website, at [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), to find an interactive problem that simulates the computerized CPA exam. The professional simulation for this chapter asks you to address questions related to changes in accounting principles.

**Remember to check the book’s companion website to find additional resources for this chapter.**

## CHAPTER 23

# STATEMENT OF CASH FLOWS

## LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Describe the purpose of the statement of cash flows.
- 2 Identify the major classifications of cash flows.
- 3 Differentiate between net income and net cash flows from operating activities.
- 4 Contrast the direct and indirect methods of calculating net cash flow from operating activities.
- 5 Determine net cash flows from investing and financing activities.
- 6 Prepare a statement of cash flows.
- 7 Identify sources of information for a statement of cash flows.
- 8 Discuss special problems in preparing a statement of cash flows.
- 9 Explain the use of a worksheet in preparing a statement of cash flows.

### DON'T TAKE CASH FLOW FOR GRANTED

Investors usually look to net income as a key indicator of a company's financial health and future prospects. The following graph shows

the net income of one company over a seven-year period.

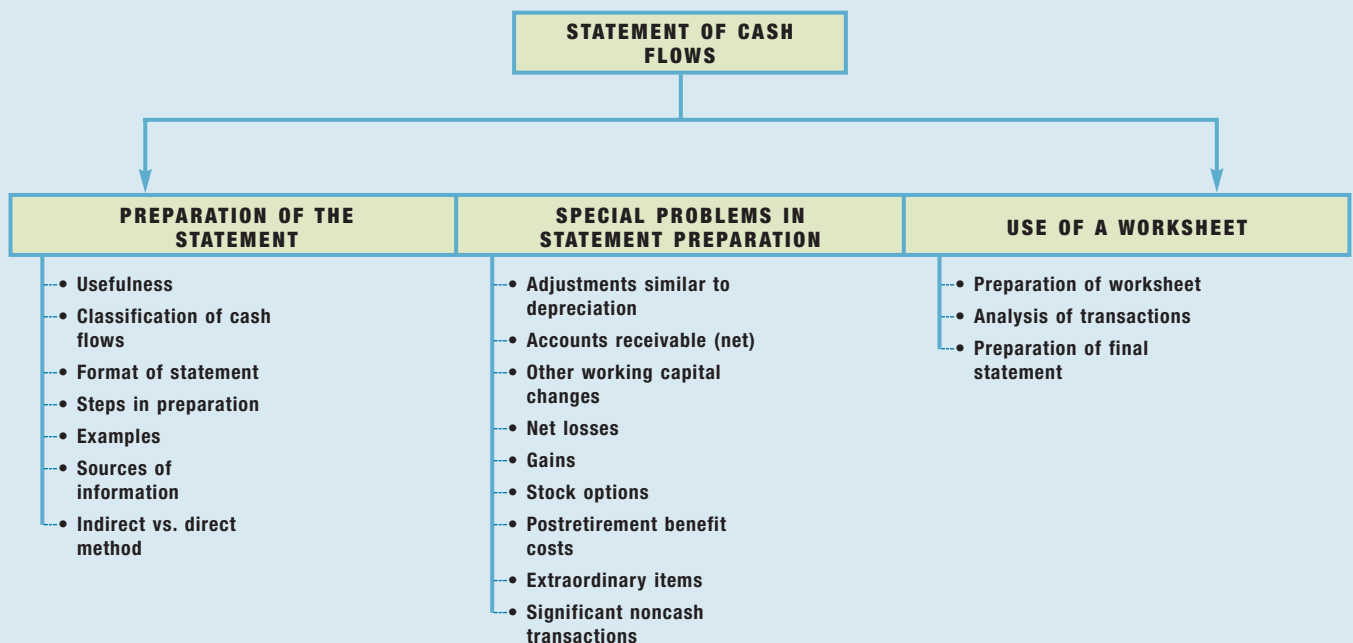

The company showed a pattern of consistent profitability and even some periods of income growth. Between years 1 and 4, net income for this company grew by 32 percent, from \$31 million to \$41 million. Would you expect its profitability to continue? The company had consistently paid dividends and interest. Would you expect it to continue to do so? Investors answered “yes” to these questions, by buying the company’s stock. Eighteen months later, this company—**W. T. Grant**—filed for bankruptcy, in what was then the largest bankruptcy filing in the United States.

How could this happen? As indicated by the second line in the graph, the company had experienced several years of negative cash flow from its operations, even though it reported profits. How can a company have negative cash flows while reporting profits? The answer lay partly in the fact that W. T. Grant was having trouble collecting the receivables from its credit sales, causing cash flow to be less than the net income. Investors who analyzed the cash flows would have been likely to find an early warning signal of W. T. Grant’s operating problems.

Source: Adapted from James A. Largay III and Clyde P. Stickney, “Cash Flows, Ratio Analysis, and the W. T. Grant Company Bankruptcy,” *Financial Analysts Journal* (July–August 1980), p. 51.

## PREVIEW OF CHAPTER 23

As the opening story indicates, examination of **W. T. Grant**’s cash flows from operations would have shown the financial inflexibility that eventually caused the company’s bankruptcy. This chapter explains the main components of a statement of cash flows and the types of information it provides. The content and organization of the chapter are as follows.

## SECTION 1 • PREPARATION OF THE STATEMENT OF CASH FLOWS

### Objective 1

Describe the purpose of the statement of cash flows.

The primary purpose of the **statement of cash flows** is to provide information about a company's cash receipts and cash payments during a period. A secondary objective is to provide cash-basis information about the company's operating, investing, and financing activities. The statement of cash flows therefore reports cash receipts, cash payments, and net change in cash resulting from a company's operating, investing, and financing activities during a period. Its format reconciles the beginning and ending cash balances for the period.

### USEFULNESS OF THE STATEMENT OF CASH FLOWS

The statement of cash flows provides information to help investors, creditors, and others assess the following [1]:

1. **The entity's ability to generate future cash flows.** A primary objective of financial reporting is to provide information with which to predict the amounts, timing, and uncertainty of future cash flows. By examining relationships between items such as sales and net cash flow from operating activities, or net cash flow from operating activities and increases or decreases in cash, it is possible to better predict the future cash flows than is possible using accrual-basis data alone.
2. **The entity's ability to pay dividends and meet obligations.** Simply put, cash is essential. Without adequate cash, a company cannot pay employees, settle debts, pay out dividends, or acquire equipment. A statement of cash flows indicates where the company's cash comes from and how the company uses its cash. Employees, creditors, stockholders, and customers should be particularly interested in this statement, because it alone shows the flows of cash in a business.
3. **The reasons for the difference between net income and net cash flow from operating activities.** The net income number is important: It provides information on the performance of a company from one period to another. But some people are critical of accrual-basis net income because companies must make estimates to arrive at it. Such is not the case with cash. Thus, as the opening story showed, financial statement readers can benefit from knowing why a company's net income and net cash flow from operating activities differ, and can assess for themselves the reliability of the income number.
4. **The cash and noncash investing and financing transactions during the period.** Besides operating activities, companies undertake investing and financing transactions. *Investing* activities include the purchase and sale of assets other than a company's products or services. *Financing* activities include borrowings and repayments of borrowings, investments by owners, and distributions to owners. By examining a company's investing and financing activities, a financial statement reader can better understand why assets and liabilities increased or decreased during the period. For example, by reading the statement of cash flows, the reader might find answers to following questions:

Why did cash decrease for **Toys R Us** when it reported net income for the period?

How much did **Southwest Airlines** spend on property, plant, and equipment last year?

Did dividends paid by **Campbell's Soup** increase?

How much money did **Coca-Cola** borrow last year?

How much cash did **Hewlett-Packard** use to repurchase its common stock?

See the FASB Codification section (page 1285).

## CLASSIFICATION OF CASH FLOWS

The statement of cash flows classifies cash receipts and cash payments by operating, investing, and financing activities.<sup>1</sup> Transactions and other events characteristic of each kind of activity is as follows.

**Objective 2**  
Identify the major classifications of cash flows.

1. **Operating activities** involve the cash effects of transactions that enter into the determination of net income, such as cash receipts from sales of goods and services, and cash payments to suppliers and employees for acquisitions of inventory and expenses.
2. **Investing activities** generally involve long-term assets and include (a) making and collecting loans, and (b) acquiring and disposing of investments and productive long-lived assets.
3. **Financing activities** involve liability and stockholders' equity items and include (a) obtaining cash from creditors and repaying the amounts borrowed, and (b) obtaining capital from owners and providing them with a return on, and a return of, their investment.

Illustration 23-1 classifies the typical cash receipts and payments of a company according to operating, investing, and financing activities. The operating activities category is the most important. It shows the cash provided by company operations. This source of cash is generally considered to be the best measure of a company's ability to generate enough cash to continue as a going concern.

<p><b>Operating</b></p> <p>Cash inflows</p> <ul style="list-style-type: none"> <li>From sales of goods or services.</li> <li>From returns on loans (interest) and on equity securities (dividends).</li> </ul> <p>Cash outflows</p> <ul style="list-style-type: none"> <li>To suppliers for inventory.</li> <li>To employees for services.</li> <li>To government for taxes.</li> <li>To lenders for interest.</li> <li>To others for expenses.</li> </ul>	}	<b>Income Statement Items</b>
<p><b>Investing</b></p> <p>Cash inflows</p> <ul style="list-style-type: none"> <li>From sale of property, plant, and equipment.</li> <li>From sale of debt or equity securities of other entities.</li> <li>From collection of principal on loans to other entities.</li> </ul> <p>Cash outflows</p> <ul style="list-style-type: none"> <li>To purchase property, plant, and equipment.</li> <li>To purchase debt or equity securities of other entities.</li> <li>To make loans to other entities.</li> </ul>	}	<b>Generally Long-Term Asset Items</b>
<p><b>Financing</b></p> <p>Cash inflows</p> <ul style="list-style-type: none"> <li>From sale of equity securities.</li> <li>From issuance of debt (bonds and notes).</li> </ul> <p>Cash outflows</p> <ul style="list-style-type: none"> <li>To stockholders as dividends.</li> <li>To redeem long-term debt or reacquire capital stock.</li> </ul>	}	<b>Generally Long-Term Liability and Equity Items</b>

**ILLUSTRATION 23-1**  
Classification of Typical Cash Inflows and Outflows

**INTERNATIONAL INSIGHT** 

According to International Accounting Standards, companies can define "cash and cash equivalents" as "net monetary assets"—that is, as "cash and demand deposits and highly liquid investments less short-term borrowings."

<sup>1</sup>The basis recommended by the FASB for the statement of cash flows is actually "cash and cash equivalents." **Cash equivalents** are short-term, highly liquid investments that are both: (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in interest rates. Generally, only investments with original maturities of three months or less qualify under this definition. Examples of cash equivalents are Treasury bills, commercial paper, and money market funds purchased with cash that is in excess of immediate needs.

Although we use the term "cash" throughout our discussion and illustrations, we mean cash and cash equivalents when reporting the cash flows and the net increase or decrease in cash.

Note the following general guidelines about the classification of cash flows.

1. Operating activities involve income statement items.
2. Investing activities involve cash flows resulting from changes in investments and long-term asset items.
3. Financing activities involve cash flows resulting from changes in long-term liability and stockholders' equity items.

Companies classify some cash flows relating to investing or financing activities as operating activities.<sup>2</sup> For example, companies classify receipts of investment income (interest and dividends) and payments of interest to lenders as operating activities. Why are these considered operating activities? Companies report these items in the income statement, where the results of operations are shown.

Conversely, companies classify some cash flows relating to operating activities as investing or financing activities. For example, a company classifies the cash received from the sale of property, plant, and equipment at a gain, although reported in the income statement, as an investing activity. It excludes the effects of the related gain in net cash flow from operating activities. Likewise, a gain or loss on the payment (extinguishment) of debt is generally part of the cash outflow related to the repayment of the amount borrowed. It therefore is a financing activity.

### HOW'S MY CASH FLOW?

To evaluate overall cash flow, it is useful to understand where in the product life cycle a company is. Generally, companies move through several stages of development, which have implications for cash flow. As the graph below shows, the pattern of cash flows from operating, financing, and investing activities will vary depending on the stage of the product life cycle.

*What do the numbers mean?*

In the introductory phase, the product is likely not generating much revenue (operating cash flow is negative). Because the company is making heavy investments to get a product off the ground, cash flow from investment is negative, and financing cash flows are positive.

<sup>2</sup>Banks and brokers must classify cash flows from purchases and sales of loans and securities specifically for resale and carried at market value as operating activities. This requirement recognizes that for these firms these assets are similar to inventory in other businesses. [2]

As the product moves to the growth and maturity phases, these cash flow relationships reverse. The product generates more cash flow from operations, which can be used to cover investments needed to support the product, and less cash is needed from financing. So is a negative operating cash flow bad? Not always. It depends on the product life cycle.

Source: Adapted from Paul D. Kimmel, Jerry J. Weygandt, and Donald E. Kieso, *Financial Accounting: Tools for Business Decision Making*, 5th ed. (New York: John Wiley & Sons, 2009), p. 606.

**What do the numbers mean?**  
(continued)

## FORMAT OF THE STATEMENT OF CASH FLOWS

The three activities we discussed above constitute the general format of the statement of cash flows. The operating activities section always appears first. It is followed by the investing activities section and then the financing activities section.

A company reports the individual inflows and outflows from investing and financing activities separately. That is, a company reports them gross, not netted against one another. Thus, a cash outflow from the purchase of property is reported separately from the cash inflow from the sale of property. Similarly, a cash inflow from the issuance of debt is reported separately from the cash outflow from its retirement.

The net increase or decrease in cash reported during the period should reconcile the beginning and ending cash balances as reported in the comparative balance sheets. The general format of the statement of cash flows presents the results of the three activities discussed previously—operating, investing, and financing. Illustration 23-2 shows a widely used form of the statement of cash flows.

COMPANY NAME STATEMENT OF CASH FLOWS PERIOD COVERED		
Cash flows from operating activities		
Net income		XXX
Adjustments to reconcile net income to net cash provided (used) by operating activities:		
(List of individual items)	XX	XX
Net cash provided (used) by operating activities		XXX
Cash flows from investing activities		
(List of individual inflows and outflows)	XX	
Net cash provided (used) by investing activities		XXX
Cash flows from financing activities		
(List of individual inflows and outflows)	XX	
Net cash provided (used) by financing activities		XXX
Net increase (decrease) in cash		XXX
Cash at beginning of period		XXX
Cash at end of period		XXX

**ILLUSTRATION 23-2**  
Format of the Statement of Cash Flows

### INTERNATIONAL INSIGHT

Both IGAAP and U.S. GAAP specify that companies must classify cash flows as operating, investing, or financing.

## STEPS IN PREPARATION

Companies prepare the statement of cash flows differently from the three other basic financial statements. For one thing, it is not prepared from an adjusted trial balance. The cash flow statement requires detailed information concerning the changes in account balances that occurred between two points in time. An adjusted trial balance will not provide the necessary data. Second, the statement of cash flows deals with cash

receipts and payments. As a result, the company must adjust the effects of the use of accrual accounting to determine cash flows. The information to prepare this statement usually comes from three sources:

1. **Comparative balance sheets** provide the amount of the changes in assets, liabilities, and equities from the beginning to the end of the period.
2. **Current income statement** data help determine the amount of cash provided by or used by operations during the period.
3. **Selected transaction data** from the general ledger provide additional detailed information needed to determine how the company provided or used cash during the period.

Preparing the statement of cash flows from the data sources above involves three major steps:

**Step 1. Determine the change in cash.** This procedure is straightforward. A company can easily compute the difference between the beginning and the ending cash balance from examining its comparative balance sheets.

**Step 2. Determine the net cash flow from operating activities.** This procedure is complex. It involves analyzing not only the current year's income statement but also comparative balance sheets as well as selected transaction data.

**Step 3. Determine net cash flows from investing and financing activities.** A company must analyze all other changes in the balance sheet accounts to determine their effects on cash.

On the following pages we work through these three steps in the process of preparing the statement of cash flows for Tax Consultants Inc. over several years.

## FIRST EXAMPLE—2009

To illustrate a statement of cash flows, we use the **first year of operations** for Tax Consultants Inc. The company started on January 1, 2009, when it issued 60,000 shares of \$1 par value common stock for \$60,000 cash. The company rented its office space, furniture, and equipment, and performed tax consulting services throughout the first year. The comparative balance sheets at the beginning and end of the year 2009 appear in Illustration 23-3.

**ILLUSTRATION 23-3**  
Comparative Balance  
Sheets, Tax Consultants  
Inc., Year 1

<b>TAX CONSULTANTS INC.</b>			
<b>COMPARATIVE BALANCE SHEETS</b>			
<u>Assets</u>	Dec. 31, 2009	Jan. 1, 2009	Change Increase/Decrease
Cash	\$49,000	\$—	\$49,000 Increase
Accounts receivable	36,000	—	36,000 Increase
Total	<u>\$85,000</u>	<u>\$—</u>	
<b>Liabilities and Stockholders' Equity</b>			
Accounts payable	\$ 5,000	\$—	\$ 5,000 Increase
Common stock (\$1 par)	60,000	—	60,000 Increase
Retained earnings	20,000	—	20,000 Increase
Total	<u>\$85,000</u>	<u>\$—</u>	

Illustration 23-4 (on page 1249) shows the income statement and additional information for Tax Consultants.

TAX CONSULTANTS INC. INCOME STATEMENT FOR THE YEAR ENDED DECEMBER 31, 2009	
Revenues	\$125,000
Operating expenses	<u>85,000</u>
Income before income taxes	40,000
Income tax expense	<u>6,000</u>
Net income	<u>\$ 34,000</u>

**Additional Information**  
Examination of selected data indicates that a dividend of \$14,000 was declared and paid during the year.

**ILLUSTRATION 23-4**  
Income Statement, Tax Consultants Inc., Year 1

### Step 1: Determine the Change in Cash

To prepare a statement of cash flows, the first step is to **determine the change in cash**. This is a simple computation. Tax Consultants had no cash on hand at the beginning of the year 2009. It had \$49,000 on hand at the end of 2009. Thus, cash changed (increased) in 2009 by \$49,000.

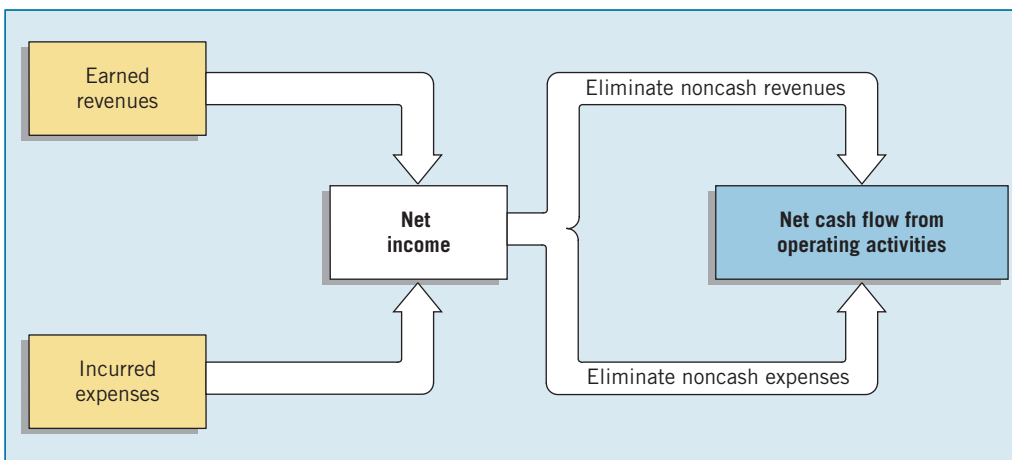

### Step 2: Determine Net Cash Flow from Operating Activities

To determine net cash flow from operating activities,<sup>3</sup> companies adjust net income in numerous ways. A useful starting point is to understand why net income must be converted to net cash provided by operating activities.

Under generally accepted accounting principles, most companies use the accrual basis of accounting. As you have learned, this basis requires that companies record revenue when earned and record expenses when incurred. Earned revenues may include credit sales for which the company has not yet collected cash. Expenses incurred may include some items that the company has not yet paid in cash. Thus, under the accrual basis of accounting, net income is not the same as net cash flow from operating activities.

To arrive at net cash flow from operating activities, a company must determine revenues and expenses on a **cash basis**. **It does this by eliminating the effects of income statement transactions that do not result in an increase or decrease in cash.** Illustration 23-5 shows the relationship between net income and net cash flow from operating activities.

**Objective•3**  
Differentiate between net income and net cash flows from operating activities.

**ILLUSTRATION 23-5**  
Net Income versus Net Cash Flow from Operating Activities

<sup>3</sup>“Net cash flow from operating activities” is a generic phrase, replaced in the statement of cash flows with either “Net cash provided by operating activities” if operations increase cash, or “Net cash used by operating activities” if operations decrease cash.

In this chapter, we use the term **net income** to refer to **accrual-based net income**. A company may convert net income to net cash flow from operating activities through either a direct method or an indirect method. We explain both methods in the following sections. The advantages and disadvantages of these two methods are discussed later in the chapter.

**Direct Method**

**Objective 4**

Contrast the direct and indirect methods of calculating net cash flow from operating activities.

The **direct method** (also called the **income statement method**) reports cash receipts and cash disbursements from operating activities. The difference between these two amounts is the net cash flow from operating activities. In other words, the direct method deducts operating cash disbursements from operating cash receipts. The direct method results in the presentation of a condensed cash receipts and cash disbursements statement.

As indicated from the accrual-based income statement, Tax Consultants reported revenues of \$125,000. However, because the company’s accounts receivable increased during 2009 by \$36,000, the company collected only \$89,000 (\$125,000 – \$36,000) in cash from these revenues. Similarly, Tax Consultants reported operating expenses of \$85,000. However, accounts payable increased during the period by \$5,000. Assuming that these payables relate to operating expenses, cash operating expenses were \$80,000 (\$85,000 – \$5,000). Because no taxes payable exist at the end of the year, the company must have paid \$6,000 income tax expense for 2009 in cash during the year. Tax Consultants computes net cash flow from operating activities as shown in Illustration 23-6.

**ILLUSTRATION 23-6**  
Computation of Net Cash Flow from Operating Activities, Year 1—Direct Method

Cash collected from revenues	\$89,000
Cash payments for expenses	<u>80,000</u>
Income before income taxes	9,000
Cash payments for income taxes	<u>6,000</u>
<b>Net cash provided by operating activities</b>	<b><u>\$ 3,000</u></b>

“Net cash provided by operating activities” is the equivalent of cash basis net income. (“Net cash used by operating activities” is equivalent to cash basis net loss.)

**Indirect Method**

The **indirect method** (or **reconciliation method**) starts with net income and converts it to net cash flow from operating activities. In other words, **the indirect method adjusts net income for items that affected reported net income but did not affect cash**. To compute net cash flow from operating activities, a company adds back noncash charges in the income statement to net income and deducts noncash credits. We explain the two adjustments to net income for Tax Consultants, namely, the increases in accounts receivable and accounts payable, as follows.

**Increase in Accounts Receivable—Indirect Method.** Tax Consultant’s accounts receivable increased by \$36,000 (from \$0 to \$36,000) during the year. For Tax Consultants, this means that cash receipts were \$36,000 lower than revenues. The Accounts Receivable account in Illustration 23-7 shows that Tax Consultants had \$125,000 in revenues (as reported on the income statement), but it collected only \$89,000 in cash.

**ILLUSTRATION 23-7**  
Analysis of Accounts Receivable

		Accounts Receivable	
1/1/09	Balance	–0–	
	Revenues	125,000	Receipts from customer <span style="float: right;">89,000</span>
12/31/09	Balance	36,000	

As shown in Illustration 23-8, to adjust net income to net cash provided by operating activities, Tax Consultants must deduct the increase of \$36,000 in accounts receivable from net income. When the Accounts Receivable balance *decreases*, cash receipts are higher than revenue earned under the accrual basis. Therefore, the company adds to net income the amount of the decrease in accounts receivable to arrive at net cash provided by operating activities.

**Increase in Accounts Payable—Indirect Method.** When accounts payable increase during the year, expenses on an accrual basis exceed those on a cash basis. Why? Because Tax Consultants incurred expenses, but some of the expenses are not yet paid. To convert net income to net cash flow from operating activities, Tax Consultants must add back the increase of \$5,000 in accounts payable to net income.

As a result of the accounts receivable and accounts payable adjustments, Tax Consultants determines net cash provided by operating activities is \$3,000 for the year 2009. Illustration 23-8 shows this computation.

Net income		\$34,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Increase in accounts receivable	\$(36,000)	
Increase in accounts payable	<u>5,000</u>	<u>(31,000)</u>
<b>Net cash provided by operating activities</b>		<b><u>\$ 3,000</u></b>

**ILLUSTRATION 23-8**  
Computation of Net Cash Flow from Operating Activities, Year 1—Indirect Method

Note that net cash provided by operating activities is the same whether using the direct (Illustration 23-6) or the indirect method (Illustration 23-8).

### PUMPING UP CASH

Due to recent concerns about a decline in the quality of earnings, some investors have been focusing on cash flow. Management has an incentive to make operating cash flow look good because Wall Street has paid a premium for companies that generate a lot of cash from operations, rather than through borrowings. However, similar to earnings, companies have ways to pump up cash flow from operations.

One way that companies can boost their operating cash flow is by “securitizing” receivables. That is, companies can speed up cash collections by selling their receivables. For example, **Federated Department Stores** reported a \$2.2 billion increase in cash flow from operations. This seems impressive until you read the fine print, which indicates that a big part of the increase was due to the sale of receivables. As discussed in this section, decreases in accounts receivable increase cash flow from operations. So while it appeared that Federated’s core operations had improved, the company really did little more than accelerate collections of its receivables. In fact, the cash flow from the securitizations represented more than half of Federated’s operating cash flow. Thus, just like earnings, cash flow can be of high or low quality.

*Source:* Adapted from Ann Tergesen, “Cash Flow Hocus Pocus,” *Business Week* (July 16, 2002), pp. 130–131. See also Bear Stearns Equity Research, *Accounting Issues: Cash Flow Metrics* (June 2006).

*What do the numbers mean?*

### Step 3: Determine Net Cash Flows from Investing and Financing Activities

After Tax Consultants has computed the net cash provided by operating activities, the next step is to determine whether any other changes in balance sheet accounts caused an increase or decrease in cash.

For example, an examination of the remaining balance sheet accounts for Tax Consultants shows increases in both common stock and retained earnings. The

**Objective 5**  
Determine net cash flows from investing and financing activities.

common stock increase of \$60,000 resulted from the issuance of common stock for cash. The issuance of common stock is reported in the statement of cash flows as a receipt of cash from a financing activity.

Two items caused the retained earnings increase of \$20,000:

1. Net income of \$34,000 increased retained earnings.
2. Declaration of \$14,000 of dividends decreased retained earnings.

Tax Consultants has converted net income into net cash flow from operating activities, as explained earlier. The additional data indicate that it paid the dividend. Thus, the company reports the dividend payment as a cash outflow, classified as a financing activity.

### Statement of Cash Flows—2009

#### Objective 6

Prepare a statement of cash flows.

We are now ready to prepare the statement of cash flows. The statement starts with the operating activities section. Tax Consultants may use either the direct or indirect method to report net cash flow from operating activities.

The FASB **encourages** the use of the direct method over the indirect method. If a company uses the direct method of reporting net cash flow from operating activities, the FASB **requires** that the company provide in a separate schedule a reconciliation of net income to net cash flow from operating activities. If a company uses the indirect method, it can either report the reconciliation within the statement of cash flows or can provide it in a separate schedule, with the statement of cash flows reporting only the **net** cash flow from operating activities. **[3]** Throughout this chapter we use the indirect method, which is also used more extensively in practice.<sup>4</sup> *In doing homework assignments, you should follow instructions for use of either the direct or indirect method.*

Illustration 23-9 shows the statement of cash flows for Tax Consultants Inc., for year 1 (2009).

**ILLUSTRATION 23-9**  
Statement of Cash Flows,  
Tax Consultants Inc.,  
Year 1

TAX CONSULTANTS INC. STATEMENT OF CASH FLOWS FOR THE YEAR ENDED DECEMBER 31, 2009 INCREASE (DECREASE) IN CASH		
Cash flows from operating activities		
Net income		\$34,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Increase in accounts receivable	\$(36,000)	
Increase in accounts payable	<u>5,000</u>	<u>(31,000)</u>
Net cash provided by operating activities		3,000
Cash flows from financing activities		
Issuance of common stock	60,000	
Payment of cash dividends	<u>(14,000)</u>	
Net cash provided by financing activities		<u>46,000</u>
Net increase in cash		49,000
Cash, January 1, 2009		<u>-0-</u>
Cash, December 31, 2009		<u>\$49,000</u>

As indicated, the \$60,000 increase in common stock results in a financing-activity cash inflow. The payment of \$14,000 in cash dividends is a financing-activity outflow of cash. The \$49,000 increase in cash reported in the statement of cash flows agrees with the increase of \$49,000 shown in the comparative balance sheets as the change in the cash account.

<sup>4</sup>*Accounting Trends and Techniques—2007* reports that out of its 600 surveyed companies, 594 (approximately 99 percent) used the indirect method, and only 6 used the direct method.

## SECOND EXAMPLE—2010

Tax Consultants Inc. continued to grow and prosper in its second year of operations. The company purchased land, building, and equipment, and revenues and net income increased substantially over the first year. Illustrations 23-10 and 23-11 present information related to the second year of operations for Tax Consultants Inc.

<b>TAX CONSULTANTS INC.</b>			
<b>COMPARATIVE BALANCE SHEETS</b>

Sheets, Tax Consultants  
Inc., Year 2

<b>TAX CONSULTANTS INC.</b>		
<b>INCOME STATEMENT</b>		
<b>FOR THE YEAR ENDED DECEMBER 31, 2010</b>		
Revenues		\$492,000
Operating expenses (excluding depreciation)	\$269,000	
Depreciation expense	<u>21,000</u>	<u>290,000</u>
Income from operations		202,000
Income tax expense		<u>68,000</u>
Net income		<u>\$134,000</u>
<b>Additional Information</b>		
(a) The company declared and paid an \$18,000 cash dividend.		
(b) The company obtained \$150,000 cash through the issuance of long-term bonds.		
(c) Land, building, and equipment were acquired for cash.		

**ILLUSTRATION 23-11**  
Income Statement, Tax  
Consultants Inc., Year 2

### Step 1: Determine the Change in Cash

To prepare a statement of cash flows from the available information, the first step is to determine the change in cash. As indicated from the information presented, cash decreased \$12,000 (\$49,000 – \$37,000).

### Step 2: Determine Net Cash Flow from Operating Activities—Indirect Method

Using the indirect method, we adjust net income of \$134,000 on an accrual basis to arrive at net cash flow from operating activities. Explanations for the adjustments to net income follow.

**Decrease in Accounts Receivable.** Accounts receivable decreased during the period, because cash receipts (cash-basis revenues) are higher than revenues reported on an accrual basis. To convert net income to net cash flow from operating activities, the decrease of \$10,000 in accounts receivable must be added to net income.

**Increase in Prepaid Expenses.** When prepaid expenses (assets) increase during a period, expenses on an accrual-basis income statement are lower than they are on a cash-basis income statement. The reason: Tax Consultants has made cash payments in the current period, but expenses (as charges to the income statement) have been deferred to future periods. To convert net income to net cash flow from operating activities, the company must deduct from net income the increase of \$6,000 in prepaid expenses. An increase in prepaid expenses results in a decrease in cash during the period.

**Increase in Accounts Payable.** Like the increase in 2009, Tax Consultants must add the 2010 increase of \$35,000 in accounts payable to net income, to convert to net cash flow from operating activities. The company incurred a greater amount of expense than the amount of cash it disbursed.

**Depreciation Expense (Increase in Accumulated Depreciation).** The purchase of depreciable assets is a use of cash, shown in the investing section in the year of acquisition. Tax Consultant's depreciation expense of \$21,000 (also represented by the increase in accumulated depreciation) is a noncash charge; the company adds it back to net income, to arrive at net cash flow from operating activities. The \$21,000 is the sum of the \$11,000 depreciation on the building plus the \$10,000 depreciation on the equipment.

Certain other periodic charges to expense do not require the use of cash. Examples are the amortization of intangible assets and depletion expense. Such charges are treated in the same manner as depreciation. Companies frequently list depreciation and similar noncash charges as the first adjustments to net income in the statement of cash flows.

As a result of the foregoing items, net cash provided by operating activities is \$194,000 as shown in Illustration 23-12.

**ILLUSTRATION 23-12**  
Computation of Net Cash Flow from Operating Activities, Year 2—Indirect Method

Net income		\$134,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	\$21,000	
Decrease in accounts receivable	10,000	
Increase in prepaid expenses	(6,000)	
Increase in accounts payable	35,000	60,000
<b>Net cash provided by operating activities</b>		<b>\$194,000</b>

### Step 3: Determine Net Cash Flows from Investing and Financing Activities

After you have determined the items affecting net cash provided by operating activities, the next step involves analyzing the remaining changes in balance sheet accounts. Tax Consultants Inc. analyzed the following accounts.

**Increase in Land.** As indicated from the change in the land account, the company purchased land of \$70,000 during the period. This transaction is an investing activity, reported as a use of cash.

**Increase in Building and Related Accumulated Depreciation.** As indicated in the additional data, and from the change in the building account, Tax Consultants acquired an office building using \$200,000 cash. This transaction is a cash outflow, reported in the investing section. The \$11,000 increase in accumulated depreciation results from recording depreciation expense on the building. As indicated earlier, the reported depreciation expense has no effect on the amount of cash.

**Increase in Equipment and Related Accumulated Depreciation.** An increase in equipment of \$68,000 resulted because the company used cash to purchase equipment. This transaction is an outflow of cash from an investing activity. The depreciation expense entry for the period explains the increase in Accumulated Depreciation—Equipment.

**Increase in Bonds Payable.** The bonds payable account increased \$150,000. Cash received from the issuance of these bonds represents an inflow of cash from a financing activity.

**Increase in Retained Earnings.** Retained earnings increased \$116,000 during the year. Two factors explain this increase: (1) Net income of \$134,000 increased retained earnings, and (2) dividends of \$18,000 decreased retained earnings. As indicated earlier, the company adjusts net income to net cash provided by operating activities in the operating activities section. Payment of the dividends is a financing activity that involves a cash outflow.

## Statement of Cash Flows—2010

Combining the foregoing items, we get a statement of cash flows for 2010 for Tax Consultants Inc., using the indirect method to compute net cash flow from operating activities.

TAX CONSULTANTS INC. STATEMENT OF CASH FLOWS FOR THE YEAR ENDED DECEMBER 31, 2010 INCREASE (DECREASE) IN CASH		
Cash flows from operating activities

## THIRD EXAMPLE—2011

Our third example, covering the 2011 operations of Tax Consultants Inc., is more complex. It again uses the indirect method to compute and present net cash flow from operating activities.

Tax Consultants Inc. experienced continued success in 2011 and expanded its operations to include the sale of computer software used in tax-return preparation and tax planning. Thus, inventory is a new asset appearing in the company's December 31, 2011, balance sheet. Illustrations 23-14 and 23-15 (on page 1256) show the comparative balance sheets, income statements, and selected data for 2011.

Income Statement, Tax  
Consultants Inc., Year 3

<b>TAX CONSULTANTS INC.</b>		
<b>INCOME STATEMENT</b>		
<b>FOR THE YEAR ENDED DECEMBER 31, 2011</b>		
Revenues		\$890,000
Cost of goods sold	\$465,000	
Operating expenses	221,000	
Interest expense	12,000	
Loss on sale of equipment	2,000	700,000
Income from operations		190,000
Income tax expense		65,000
Net income		<u>\$125,000</u>
<b>Additional Information</b>		
(a) Operating expenses include depreciation expense of \$33,000 and expiration of prepaid expenses of \$2,000.		
(b) Land was sold at its book value for cash.		
(c) Cash dividends of \$55,000 were declared and paid.		
(d) Interest expense of \$12,000 was paid in cash.		
(e) Equipment with a cost of \$166,000 was purchased for cash. Equipment with a cost of \$41,000 and a book value of \$36,000 was sold for \$34,000 cash.		
(f) Bonds were redeemed at their book value for cash.		
(g) Common stock (\$1 par) was issued for cash.		

### Step 1: Determine the Change in Cash

The first step in the preparation of the statement of cash flows is to determine the change in cash. As the comparative balance sheets show, cash increased \$17,000 in 2011.

### Step 2: Determine Net Cash Flow from Operating Activities—Indirect Method

We explain the adjustments to net income of \$125,000 as follows.

**Increase in Accounts Receivable.** The increase in accounts receivable of \$42,000 represents recorded accrual-basis revenues in excess of cash collections in 2011. The company deducts this increase from net income to convert from the accrual basis to the cash basis.

**Increase in Inventories.** The \$54,000 increase in inventories represents an operating use of cash, not an expense. Tax Consultants therefore deducts this amount from net

income, to arrive at net cash flow from operations. In other words, when inventory purchased exceeds inventory sold during a period, cost of goods sold on an accrual basis is lower than on a cash basis.

**Decrease in Prepaid Expenses.** The \$2,000 decrease in prepaid expenses represents a charge to the income statement for which Tax Consultants made no cash payment in the current period. The company adds back the decrease to net income, to arrive at net cash flow from operating activities.

**Decrease in Accounts Payable.** When accounts payable decrease during the year, cost of goods sold and expenses on a cash basis are higher than they are on an accrual basis. To convert net income to net cash flow from operating activities, the company must deduct the \$7,000 in accounts payable from net income.

**Depreciation Expense (Increase in Accumulated Depreciation).** Accumulated Depreciation—Buildings increased \$10,000 (\$21,000 – \$11,000). The Buildings account did not change during the period, which means that Tax Consultants recorded depreciation expense of \$10,000 in 2011.

Accumulated Depreciation—Equipment increased by \$18,000 (\$28,000 – \$10,000) during the year. But Accumulated Depreciation—Equipment decreased by \$5,000 as a result of the sale during the year. Thus, depreciation for the year was \$23,000. The company reconciled Accumulated Depreciation—Equipment as follows.

Beginning balance	\$10,000
Add: Depreciation for 2011	<u>23,000</u>
	33,000
Deduct: Sale of equipment	<u>5,000</u>
Ending balance	<u>\$28,000</u>

The company must add back to net income the total depreciation of \$33,000 (\$10,000 + \$23,000) charged to the income statement, to determine net cash flow from operating activities.

**Loss on Sale of Equipment.** Tax Consultants Inc. sold for \$34,000 equipment that cost \$41,000 and had a book value of \$36,000. As a result, the company reported a loss of \$2,000 on its sale. To arrive at net cash flow from operating activities, it must add back to net income the loss on the sale of the equipment. The reason is that the loss is a noncash charge to the income statement. The loss did not reduce cash, but it did reduce net income.<sup>5</sup>

From the foregoing items, the company prepares the operating activities section of the statement of cash flows, as shown in Illustration 23-16.

Cash flows from operating activities		
Net income		\$125,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	\$33,000	
Loss on sale of equipment	2,000	
Increase in accounts receivable	(42,000)	
Increase in inventories	(54,000)	
Decrease in prepaid expenses	2,000	
Decrease in accounts payable	<u>(7,000)</u>	<u>(66,000)</u>
<b>Net cash provided by operating activities</b>		<b>59,000</b>

#### ILLUSTRATION 23-16

Operating Activities  
Section of Cash Flows  
Statement

### Step 3: Determine Net Cash Flows from Investing and Financing Activities

By analyzing the remaining changes in the balance sheet accounts, Tax Consultants identifies cash flows from investing and financing activities.

<sup>5</sup>A similar adjustment is required for unrealized gains or losses recorded on trading security investments or other financial assets and liabilities accounted for under the fair value option. Marking these assets and liabilities to fair value results in an increase or decrease in income, but there is no effect on cash flows.

**Land.** Land decreased \$25,000 during the period. As indicated from the information presented, the company sold land for cash at its book value. This transaction is an investing activity, reported as a \$25,000 source of cash.

**Equipment.** An analysis of the equipment account indicates the following.

Beginning balance	\$ 68,000
Purchase of equipment	166,000
	<u>234,000</u>
Sale of equipment	41,000
Ending balance	<u>\$193,000</u>

The company used cash to purchase equipment with a fair value of \$166,000—an investing transaction reported as a cash outflow. The sale of the equipment for \$34,000 is also an investing activity, but one that generates a cash inflow.

**Bonds Payable.** Bonds payable decreased \$40,000 during the year. As indicated from the additional information, the company redeemed the bonds at their book value. This financing transaction used \$40,000 of cash.

**Common Stock.** The common stock account increased \$160,000 during the year. As indicated from the additional information, Tax Consultants issued common stock of \$160,000 at par. This financing transaction provided cash of \$160,000.

**Retained Earnings.** Retained earnings changed \$70,000 (\$206,000 – \$136,000) during the year. The \$70,000 change in retained earnings results from net income of \$125,000 from operations and the financing activity of paying cash dividends of \$55,000.

### Statement of Cash Flows—2011

Tax Consultants Inc. combines the foregoing items to prepare the statement of cash flows shown in Illustration 23-17.

Cash, December 31, 2011		<u>\$ 54,000</u>

## SOURCES OF INFORMATION FOR THE STATEMENT OF CASH FLOWS

### Objective 7

Identify sources of information for a statement of cash flows.

Important points to remember in the preparation of the statement of cash flows are these:

1. Comparative balance sheets provide the basic information from which to prepare the report. Additional information obtained from analyses of specific accounts is also included.
2. An analysis of the Retained Earnings account is necessary. The net increase or decrease in Retained Earnings without any explanation is a meaningless amount in the statement. Without explanation, it might represent the effect of net income, dividends declared, or prior period adjustments.
3. The statement includes all changes that have passed through cash or have resulted in an increase or decrease in cash.
4. Write-downs, amortization charges, and similar “book” entries, such as depreciation of plant assets, represent neither inflows nor outflows of cash, because they have no effect on cash. To the extent that they have entered into the determination of net income, however, the company must add them back to or subtract them from net income, to arrive at net cash provided (used) by operating activities.

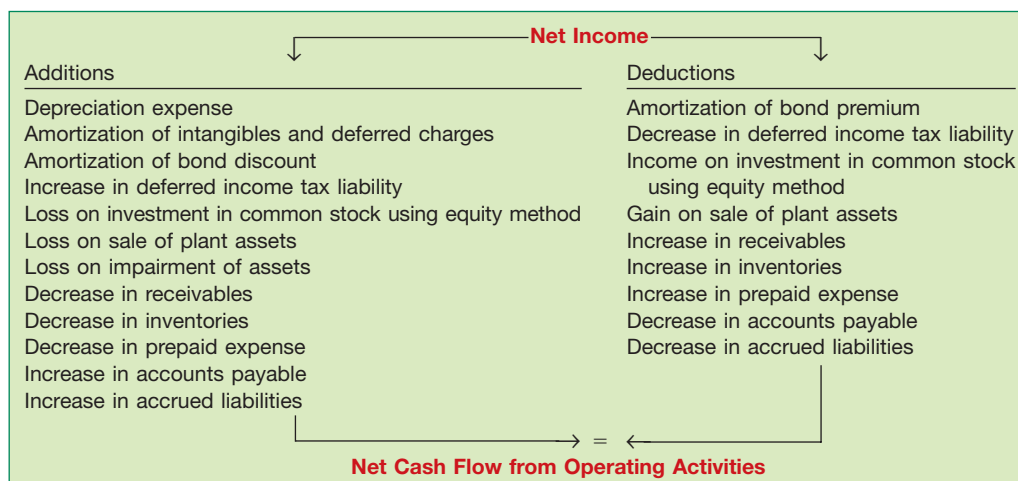

## NET CASH FLOW FROM OPERATING ACTIVITIES—INDIRECT VERSUS DIRECT METHOD

As we discussed previously, the two different methods available to adjust income from operations on an accrual basis to net cash flow from operating activities are the indirect (reconciliation) method and the direct (income statement) method.

The FASB encourages use of the direct method and permits use of the indirect method. Yet, if the direct method is used, the Board requires that companies provide in a separate schedule a reconciliation of net income to net cash flow from operating activities. Therefore, under either method, companies must prepare and report information from the indirect (reconciliation) method.

### Indirect Method

For consistency and comparability and because it is the most widely used method in practice, we used the indirect method in the examples just presented. We determined net cash flows from operating activities by adding back to or deducting from net income those items that had no effect on cash. Illustration 23-18 presents more completely

### ILLUSTRATION 23-18

Adjustments Needed to Determine Net Cash Flow from Operating Activities—Indirect Method

the common types of adjustments that companies make to net income to arrive at net cash flow from operating activities.

The additions and deductions in Illustration 23-18 reconcile net income to net cash flow from operating activities, illustrating why the indirect method is also called the reconciliation method.

### Direct Method—An Example

Under the direct method the statement of cash flows reports net cash flow from operating activities as major classes of *operating cash receipts* (e.g., cash collected from customers and cash received from interest and dividends) and *cash disbursements* (e.g., cash paid to suppliers for goods, to employees for services, to creditors for interest, and to government authorities for taxes).

We illustrate the direct method here in more detail to help you understand the difference between accrual-based income and net cash flow from operating activities. This example also illustrates the data needed to apply the direct method. Emig Company, which began business on January 1, 2010, has the following selected balance sheet information.

**ILLUSTRATION 23-19**  
Balance Sheet Accounts,  
Emig Co.

	December 31, 2010	January 1, 2010
Cash	\$159,000	0-
Accounts receivable	15,000	0-

Net income		<u><u>\$112,000</u></u>

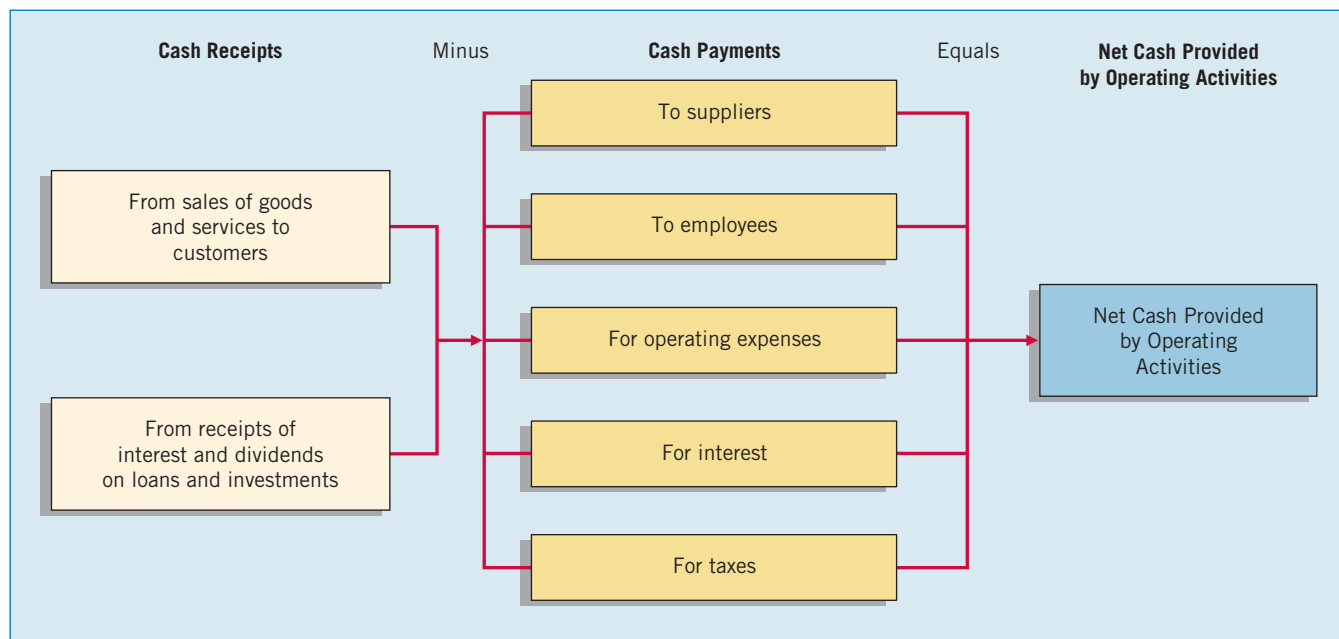

**Additional Information:**

- (a) Dividends of \$70,000 were declared and paid in cash.
- (b) The accounts payable increase resulted from the purchase of merchandise.
- (c) Prepaid expenses and accrued expenses payable relate to operating expenses.

Under the **direct method**, companies compute net cash provided by operating activities by **adjusting each item in the income statement** from the accrual basis to the cash basis. To simplify and condense the operating activities section, only major classes

of operating cash receipts and cash payments are reported. As Illustration 23-21 shows, the difference between these major classes of cash receipts and cash payments is the net cash provided by operating activities.

**ILLUSTRATION 23-21**  
Major Classes of Cash Receipts and Payments

An efficient way to apply the direct method is to analyze the revenues and expenses reported in the income statement in the order in which they are listed. The company then determines cash receipts and cash payments related to these revenues and expenses. In the following sections, we present the direct method adjustments for Emig Company in 2010, to determine net cash provided by operating activities.

**Cash Receipts from Customers.** The income statement for Emig Company reported revenues from customers of \$780,000. To determine cash receipts from customers, the company considers the change in accounts receivable during the year.

When accounts receivable increase during the year, revenues on an accrual basis are higher than cash receipts from customers. In other words, operations led to increased revenues, but not all of these revenues resulted in cash receipts. To determine the amount of increase in cash receipts, deduct the amount of the increase in accounts receivable from the total sales revenues. Conversely, a decrease in accounts receivable is added to sales revenues, because cash receipts from customers then exceed sales revenues.

For Emig Company, accounts receivable increased \$15,000. Thus, cash receipts from customers were \$765,000, computed as follows.

Revenues from sales	\$780,000
Deduct: Increase in accounts receivable	<u>15,000</u>
Cash receipts from customers	<u>\$765,000</u>

Emig could also determine cash receipts from customers by analyzing the Accounts Receivable account as shown below.

Accounts Receivable				
1/1/10	Balance	-0-	Receipts from customers	765,000
	Revenue from sales	780,000		
12/31/10	Balance	15,000		

Illustration 23-22 shows the relationships between cash receipts from customers, revenues from sales, and changes in accounts receivable.

**ILLUSTRATION 23-22**  
Formula to Compute Cash Receipts from Customers

<b>Cash receipts from customers</b>	=	<b>Revenues from sales</b>	$\left\{ \begin{array}{l} + \text{ Decrease in accounts receivable} \\ \text{or} \\ - \text{ Increase in accounts receivable} \end{array} \right.$
-------------------------------------	---	----------------------------	--

**Cash Payments to Suppliers.** Emig Company reported cost of goods sold on its income statement of \$450,000. To determine cash payments to suppliers, the company first finds purchases for the year, by adjusting cost of goods sold for the change in inventory. When inventory increases during the year, purchases this year exceed cost of goods sold. As a result, the company adds the increase in inventory to cost of goods sold, to arrive at purchases.

In 2010, Emig Company’s inventory increased \$160,000. The company computes purchases as follows.

Cost of goods sold	\$450,000
Add: Increase in inventory	<u>160,000</u>
<b>Purchases</b>	<b><u>\$610,000</u></b>

After computing purchases, Emig determines cash payments to suppliers by adjusting purchases for the change in accounts payable. When accounts payable increase during the year, purchases on an accrual basis are higher than they are on a cash basis. As a result, it deducts from purchases the increase in accounts payable to arrive at cash payments to suppliers. Conversely, if cash payments to suppliers exceed purchases, Emig adds to purchases the decrease in accounts payable. Cash payments to suppliers were \$550,000, computed as follows.

Purchases	\$610,000
Deduct: Increase in accounts payable	<u>60,000</u>
Cash payments to suppliers	<b><u>\$550,000</u></b>

Emig also can determine cash payments to suppliers by analyzing Accounts Payable, as shown below.

Accounts Payable			
Payments to suppliers	550,000	1/1/10	Balance
			–0–
			<u>Purchases</u>
			610,000
		12/31/10	Balance
			<u>60,000</u>

Illustration 23-23 shows the relationships between cash payments to suppliers, cost of goods sold, changes in inventory, and changes in accounts payable.

**ILLUSTRATION 23-23**  
Formula to Compute Cash Payments to Suppliers

<b>Cash payments to suppliers</b>	=	<b>Cost of goods sold</b>	$\left\{ \begin{array}{l} + \text{ Increase in inventory} \\ \text{or} \\ - \text{ Decrease in inventory} \end{array} \right.$	$\left\{ \begin{array}{l} + \text{ Decrease in accounts payable} \\ \text{or} \\ - \text{ Increase in accounts payable} \end{array} \right.$
-----------------------------------	---	---------------------------	--	--

**Cash Payments for Operating Expenses.** Emig reported operating expenses of \$160,000 on its income statement. To determine the cash paid for operating expenses, it must adjust this amount for any changes in prepaid expenses and accrued expenses payable.

For example, when prepaid expenses increased \$8,000 during the year, cash paid for operating expenses was \$8,000 higher than operating expenses reported on the income statement. To convert operating expenses to cash payments for operating expenses, the company adds to operating expenses the increase of \$8,000. Conversely, if prepaid expenses decrease during the year, it deducts from operating expenses the amount of the decrease.

Emig also must adjust operating expenses for changes in accrued expenses payable. When accrued expenses payable increase during the year, operating expenses on an accrual basis are higher than they are on a cash basis. As a result, the company deducts from operating expenses an increase in accrued expenses payable, to arrive at cash payments for operating expenses. Conversely, it adds to operating expenses a decrease in accrued expenses payable, because cash payments exceed operating expenses.

Emig Company’s cash payments for operating expenses were \$148,000, computed as follows.

Operating expenses	\$160,000
Add: Increase in prepaid expenses	8,000
Deduct: Increase in accrued expenses payable	<u>(20,000)</u>
Cash payments for operating expenses	<u>\$148,000</u>

The relationships among cash payments for operating expenses, changes in prepaid expenses, and changes in accrued expenses payable are shown in Illustration 23-24.

<b>Cash payments for operating expenses</b>	=	<b>Operating expenses</b>	{	+ Increase in prepaid expense or – Decrease in prepaid expense	}	+ Decrease in accrued expenses payable or – Increase in accrued expenses payable
---	---	---------------------------	---	--	---	--

**ILLUSTRATION 23-24**  
Formula to Compute Cash Payments for Operating Expenses

Note that the company did not consider depreciation expense, because it is a non-cash charge.

**Cash Payments for Income Taxes.** The income statement for Emig shows income tax expense of \$48,000. This amount equals the cash paid. How do we know that? Because the comparative balance sheet indicated no income taxes payable at either the beginning or end of the year.

**Summary of Net Cash Flow from Operating Activities—Direct Method**

The following schedule summarizes the computations illustrated above.

Accrual Basis		Adjustment	Add (Subtract)	Cash Basis
Revenues from sales	\$780,000	– Increase in accounts receivable	\$(15,000)	<u>\$765,000</u>
Cost of goods sold	450,000	+ Increase in inventory	160,000	
		– Increase in accounts payable	(60,000)	550,000
Operating expenses	160,000	+ Increase in prepaid expenses	8,000	
		– Increase in accrued expenses payable	(20,000)	148,000
Depreciation expense	10,000	– Depreciation expense	(10,000)	–0–
Income tax expense	<u>48,000</u>			<u>48,000</u>
Total expense	<u>668,000</u>			<u>746,000</u>
Net income	<u>\$112,000</u>	Net cash provided by operating activities		<u>\$ 19,000</u>

**ILLUSTRATION 23-25**  
Accrual Basis to Cash Basis

Illustration 23-26 shows the presentation of the direct method for reporting net cash flow from operating activities for the Emig Company illustration.

**ILLUSTRATION 23-26**  
Operating Activities  
Section—Direct Method,  
2010

<b>EMIG COMPANY</b>		
<b>STATEMENT OF CASH FLOWS (PARTIAL)</b>		
Cash flows from operating activities		
Cash received from customers		\$765,000
Cash payments:		
To suppliers	\$550,000	
For operating expenses	148,000	
For income taxes	48,000	746,000
		<u>746,000</u>
<b>Net cash provided by operating activities</b>		<b><u>\$ 19,000</u></b>

If Emig Company uses the direct method to present the net cash flows from operating activities, it must provide in a separate schedule the reconciliation of net income to net cash provided by operating activities. The reconciliation assumes the identical form and content of the indirect method of presentation, as shown below.

**ILLUSTRATION 23-27**  
Reconciliation of Net  
Income to Net Cash  
Provided by Operating  
Activities

<b>EMIG COMPANY</b>		
<b>RECONCILIATION</b>		
Net income		\$112,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	\$ 10,000	
Increase in accounts receivable	(15,000)	
Increase in inventory	(160,000)	
Increase in prepaid expenses	(8,000)	
Increase in accounts payable	60,000	
Increase in accrued expense payable	20,000	(93,000)
		<u>(93,000)</u>
<b>Net cash provided by operating activities</b>		<b><u>\$ 19,000</u></b>

When the direct method is used, the company may present this reconciliation at the bottom of the statement of cash flows or in a separate schedule.

## Direct versus Indirect Controversy

The most contentious decision that the FASB faced related to cash flow reporting was choosing between the direct method and the indirect method of determining net cash flow from operating activities. Companies lobbied *against* the direct method, urging adoption of the indirect method. Commercial lending officers expressed to the FASB a strong preference in favor of the direct method. In the next two sections, we consider the arguments in favor of each of the methods.

### In Favor of the Direct Method

The principal advantage of the direct method is that **it shows operating cash receipts and payments**. Thus, it is more consistent with the objective of a statement of cash flows—to provide information about cash receipts and cash payments—than the indirect method, which does not report operating cash receipts and payments.

Supporters of the direct method contend that knowledge of the specific sources of operating cash receipts and the purposes for which operating cash payments were made in past periods is useful in estimating future operating cash flows. Furthermore, information about amounts of major classes of operating cash receipts and payments is more useful than information only about their arithmetic sum (the net cash flow from

operating activities). Such information is more revealing of a company's ability (1) to generate sufficient cash from operating activities to pay its debts, (2) to reinvest in its operations, and (3) to make distributions to its owners. [4]

Many companies indicate that they do not currently collect information in a manner that allows them to determine amounts such as cash received from customers or cash paid to suppliers directly from their accounting systems. But supporters of the direct method contend that the incremental cost of determining operating cash receipts and payments is not significant.

### In Favor of the Indirect Method

The principal advantage of the indirect method is that **it focuses on the differences between net income and net cash flow from operating activities**. That is, it provides a useful link between the statement of cash flows and the income statement and balance sheet.

Many companies contend that it is less costly to adjust net income to net cash flow from operating activities (indirect) than it is to report gross operating cash receipts and payments (direct). Supporters of the indirect method also state that the direct method, which effectively reports income statement information on a cash rather than an accrual basis, may erroneously suggest that net cash flow from operating activities is as good as, or better than, net income as a measure of performance.

### Special Rules Applying to Direct and Indirect Methods

Companies that use the direct method are required, at a minimum, to report separately the following classes of operating cash receipts and payments:

#### Receipts

1. Cash collected from customers (including lessees, licensees, etc.).
2. Interest and dividends received.
3. Other operating cash receipts, if any.

#### Payments

1. Cash paid to employees and suppliers of goods or services (including suppliers of insurance, advertising, etc.).
2. Interest paid.
3. Income taxes paid.
4. Other operating cash payments, if any.

The FASB encourages companies to provide further breakdowns of operating cash receipts and payments that they consider meaningful.

Companies using the indirect method must disclose separately changes in inventory, receivables, and payables in order to reconcile net income to net cash flow from operating activities. In addition, they must disclose, elsewhere in the financial statements or in accompanying notes, interest paid (net of amount capitalized) and income taxes paid.<sup>6</sup> The FASB requires these separate and additional disclosures so that users may approximate the direct method. Also, an acceptable alternative presentation of the indirect method is to report net cash flow from operating activities as a single line item in the statement of cash flows and to present the reconciliation details elsewhere in the financial statements.

<sup>6</sup>*Accounting Trends and Techniques—2007* reports that of the 600 companies surveyed, 298 disclosed interest paid in notes to the financial statements, 282 disclosed interest paid at the bottom of the statement of cash flows, 6 disclosed interest paid within the statement of cash flows, and 14 reported no separate amount. Income taxes paid during the year were disclosed in a manner similar to interest payments.

#### INTERNATIONAL INSIGHT

Consolidated statements of cash flows may be of limited use to analysts evaluating multinational companies. Without disaggregation, users of such statements are not able to determine "where in the world" the funds are sourced and used.

### What do the numbers mean?

#### NOT WHAT IT SEEMS

The controversy over direct and indirect methods highlights the importance that the market attributes to operating cash flow. By showing an improving cash flow, a company can give a favorable impression of its ongoing operations. For example, **WorldCom** concealed declines in its operations by capitalizing certain operating expenses—to the tune of \$3.8 billion! This practice not only “juiced up” income but also made it possible to report the cash payments in the investing section of the cash flow statement rather than as a deduction from operating cash flow.

The SEC recently addressed a similar cash flow classification issue with automakers like **Ford**, **GM**, and **Chrysler**. For years, automakers classified lease receivables and other dealer-financing arrangements as investment cash flows. Thus, they reported an increase in lease or loan receivables from cars sold as a use of cash in the investing section of the statement of cash flows. The SEC objected and now requires automakers to report these receivables as operating cash flows, since the leases and loans are used to facilitate car sales. At GM, these reclassifications reduced its operating cash flows from \$7.6 billion to \$3 billion in the year before the change. So while the overall cash flow—from operations, investing, and financing—remained the same, operating cash flow at these companies looked better than it really was.

Source: Peter Elstrom, “How to Hide \$3.8 Billion in Expenses,” *BusinessWeek Online* (July 8, 2002); and Judith Burns, “SEC Tells US Automakers to Retool Cash-Flow Accounting,” *Wall Street Journal Online* (February 28, 2005).

## SECTION 2 • SPECIAL PROBLEMS IN STATEMENT PREPARATION

### Objective-8

Discuss special problems in preparing a statement of cash flows.

We discussed some of the special problems related to preparing the statement of cash flows in connection with the preceding illustrations. Other problems that arise with some frequency in the preparation of this statement include the following.

1. Adjustments similar to depreciation.
2. Accounts receivable (net).
3. Other working capital changes.
4. Net losses.
5. Gains.
6. Stock options.
7. Postretirement benefit cost.
8. Extraordinary items.
9. Significant noncash transactions.

### ADJUSTMENTS SIMILAR TO DEPRECIATION

Depreciation expense is the most common adjustment to net income that companies make to arrive at net cash flow from operating activities. But there are numerous other noncash expense or revenue items. Examples of expense items that companies must add back to net income are the **amortization of limited-life intangible assets** such as patents, and the **amortization of deferred costs** such as bond issue costs. These charges to expense involve expenditures made in prior periods that a company amortizes currently. These charges reduce net income without affecting cash in the current period.

Also, **amortization of bond discount or premium** on long-term bonds payable affects the amount of interest expense. However, neither changes cash. As a result, a

company should add back discount amortization and subtract premium amortization from net income to arrive at net cash flow from operating activities.

In a similar manner, **changes in deferred income taxes** affect net income but have no effect on cash. For example, **Delta Airlines** reported an increase in its liability for deferred taxes of approximately \$1.2 billion. This change in the liability increased tax expense and decreased net income, but did not affect cash. Therefore, Delta added back \$1.2 billion to net income on its statement of cash flows.

Another common adjustment to net income is a **change related to an investment in common stock** when recording income or loss under the equity method. Recall that under the equity method, the investor (1) debits the investment account and credits revenue for its share of the investee's net income, and (2) credits dividends received to the investment account. Therefore, the net increase in the investment account does not affect cash flow. A company must deduct the net increase from net income to arrive at net cash flow from operating activities.

Assume that Victor Co. owns 40 percent of Milo Inc. During the year Milo reports net income of \$100,000 and pays a cash dividend of \$30,000. Victor reports this in its statement of cash flows as a deduction from net income in the following manner—Equity in earnings of Milo, net of dividends, \$28,000  $[(\$100,000 - \$30,000) \times 40\%]$ .

If Victor Co. does not exercise significant influence over Milo, it cannot use the equity method. Instead, it uses the fair value method. Under the fair value method, Victor does not recognize any of Milo's net income. Further, it records any cash dividend received as revenue. As a result, the company makes no adjustment to net income in the statement of cash flows because cash dividends received are included in income.

## ACCOUNTS RECEIVABLE (NET)

Up to this point, we assumed no allowance for doubtful accounts—a contra account—to offset accounts receivable. However, if a company needs an allowance for doubtful accounts, how does that allowance affect the company's determination of net cash flow from operating activities? For example, assume that Redmark Co. reports net income of \$40,000. It has the accounts receivable balances as shown in Illustration 23-28.

	2010	2009	Change Increase/Decrease
Accounts receivable	\$105,000	\$90,000	\$15,000 Increase
Allowance for doubtful accounts	(10,000)	(4,000)	6,000 Increase
Accounts receivable (net)	<u>\$ 95,000</u>	<u>\$86,000</u>	9,000 Increase

**ILLUSTRATION 23-28**  
Accounts Receivable  
Balances, Redmark Co.

## Indirect Method

Because an increase in the Allowance for Doubtful Accounts results from a charge to bad debt expense, a company should add back an increase in the Allowance for Doubtful Accounts to net income to arrive at net cash flow from operating activities. Illustration 23-29 shows one method for presenting this information in a statement of cash flows.

REDMARK CO. STATEMENT OF CASH FLOWS (PARTIAL) FOR THE YEAR 2010		
Cash flows from operating activities		
Net income		\$40,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Increase in accounts receivable	\$(15,000)	
Increase in allowance for doubtful accounts	<u>6,000</u>	<u>(9,000)</u>
		<u>\$31,000</u>

**ILLUSTRATION 23-29**  
Presentation of Allowance for Doubtful Accounts—  
Indirect Method

As we indicated, the increase in the Allowance for Doubtful Accounts balance results from a charge to bad debt expense for the year. Because bad debt expense is a noncash charge, a company must add it back to net income in arriving at net cash flow from operating activities.

Instead of separately analyzing the allowance account, a short-cut approach is to net the allowance balance against the receivable balance and compare the change in accounts receivable on a net basis. Illustration 23-30 shows this presentation.

**ILLUSTRATION 23-30**  
Net Approach to Allowance for Doubtful Accounts—Indirect Method

REDMARK CO. STATEMENT OF CASH FLOWS (PARTIAL) FOR THE YEAR 2010	
Cash flows from operating activities	
Net income	\$40,000
Adjustments to reconcile net income to net cash provided by operating activities:	
Increase in accounts receivable (net)	(9,000)
	<u>\$31,000</u>

This short-cut procedure works also if the change in the allowance account results from a write-off of accounts receivable. This reduces both the Accounts Receivable and the Allowance for Doubtful Accounts. No effect on cash flows occurs. Because of its simplicity, use the net approach for your homework assignments.

### Direct Method

If using the direct method, a company **should not net** the Allowance for Doubtful Accounts against Accounts Receivable. To illustrate, assume that Redmark Co.'s net income of \$40,000 consisted of the following items.

**ILLUSTRATION 23-31**  
Income Statement, Redmark Co.

REDMARK CO. INCOME STATEMENT FOR THE YEAR 2010		
Sales		\$100,000
Expenses		
Salaries	\$46,000	
Utilities	8,000	
Bad debts	<u>6,000</u>	<u>60,000</u>
Net income		<u>\$ 40,000</u>

If Redmark deducts the \$9,000 increase in accounts receivable (net) from sales for the year, it would report cash sales at \$91,000 (\$100,000 – \$9,000) and cash payments for operating expenses at \$60,000. Both items would be misstated: Cash sales should be reported at \$85,000 (\$100,000 – \$15,000), and total cash payments for operating expenses should be reported at \$54,000 (\$60,000 – \$6,000). Illustration 23-32 shows the proper presentation.

**ILLUSTRATION 23-32**  
Bad Debts—Direct Method

REDMARK CO. STATEMENT OF CASH FLOWS (PARTIAL) FOR THE YEAR 2010		
Cash flows from operating activities		
Cash received from customers		\$85,000
Salaries paid	\$46,000	
Utilities paid	<u>8,000</u>	<u>54,000</u>
Net cash provided by operating activities		<u>\$31,000</u>

An added complication develops when a company writes off accounts receivable. Simply adjusting sales for the change in accounts receivable will not provide the proper amount of cash sales. The reason is that the write-off of the accounts receivable is not a cash collection. Thus an additional adjustment is necessary.

---

## OTHER WORKING CAPITAL CHANGES

Up to this point, we showed how companies handled all of the changes in working capital items (current asset and current liability items) as adjustments to net income in determining net cash flow from operating activities. You must be careful, however, because **some changes in working capital, although they affect cash, do not affect net income**. Generally, these are investing or financing activities of a current nature.

One activity is the purchase of **short-term available-for-sale securities**. For example, the purchase of short-term available-for-sale securities for \$50,000 cash has no effect on net income but it does cause a \$50,000 decrease in cash.<sup>7</sup> A company reports this transaction as a cash flow from investing activities as follows. [5]

Cash flows from investing activities	
Purchase of short-term available-for-sale securities	\$(50,000)

What about **trading securities**? Because companies hold these investments principally for the purpose of selling them in the near term, companies should classify the cash flows from purchases and sales of trading securities as cash flows from **operating activities**. [6]

Another example is the issuance of a **short-term nontrade note payable** for cash. This change in a working capital item has no effect on income from operations but it increases cash by the amount of the note payable. For example, a company reports the issuance of a \$10,000 short-term note payable for cash in the statement of cash flows as follows.

Cash flows from financing activities	
Issuance of short-term note	\$10,000

Another change in a working capital item that has no effect on income from operations or on cash is a **cash dividend payable**. Although a company will report the cash dividends when paid as a financing activity, it does not report the declared but unpaid dividend on the statement of cash flows.

---

## NET LOSSES

If a company reports a net loss instead of a net income, it must adjust the net loss for those items that do not result in a cash inflow or outflow. The net loss, after adjusting for the charges or credits not affecting cash, may result in a negative or a positive cash flow from operating activities.

For example, if the net loss is \$50,000 and the total amount of charges to add back is \$60,000, then net cash provided by operating activities is \$10,000. Illustration 23-33 (on page 1270) shows this computation.

<sup>7</sup>If the basis of the statement of cash flows is **cash and cash equivalents** and the short-term investment is considered a cash equivalent, then a company reports nothing in the statement because the transaction does not affect the balance of cash and cash equivalents. The Board notes that cash purchases of short term investments generally are part of the company's cash management activities rather than part of its operating, investing, or financing activities.

**ILLUSTRATION 23-33**  
Computation of Net Cash  
Flow from Operating  
Activities—Cash Inflow

Net loss		\$(50,000)
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation of plant assets	\$55,000	
Amortization of patents	<u>5,000</u>	<u>60,000</u>
<b>Net cash provided by operating activities</b>		<b><u>\$ 10,000</u></b>

If the company experiences a net loss of \$80,000 and the total amount of the charges to add back is \$25,000, the presentation appears as follows.

**ILLUSTRATION 23-34**  
Computation of Net Cash  
Flow from Operating  
Activities—Cash Outflow

Net loss		\$(80,000)
Adjustments to reconcile net income to net cash used by operating activities:		
Depreciation of plant assets	<u>25,000</u>	
<b>Net cash used by operating activities</b>		<b><u>\$(55,000)</u></b>

Although not illustrated in this chapter, a negative cash flow may result even if the company reports a net income.

## GAINS

In the illustration for Tax Consultants, the company experienced a loss of \$2,000 from the sale of equipment. The company added this loss to net income to compute net cash flow from operating activities because **the loss is a noncash charge in the income statement.**

If Tax Consultants experiences a **gain** from a sale of equipment it too requires an adjustment to net income. Because a company reports the gain in the statement of cash flows as part of the cash proceeds from the sale of equipment under investing activities, **it deducts the gain from net income to avoid double counting**—once as part of net income, and again as part of the cash proceeds from the sale.

## STOCK OPTIONS

Recall for share-based compensation plans that companies are required to use the fair value method to determine total compensation cost. The compensation cost is then recognized as an expense in the periods in which the employee provides services. When Compensation Expense is debited, Paid-in Capital—Stock Options is often credited. Cash is not affected by recording the expense. **Therefore, the company must increase net income by the amount of compensation expense from stock options in computing net cash flow from operating activities.**

To illustrate how this information should be reported on a statement of cash flows, assume that First Wave Inc. grants 5,000 options to its CEO, Ann Johnson. Each option entitles Johnson to purchase one share of First Wave's \$1 par value common stock at \$50 per share at any time in the next two years (the service period). The fair value of the options is \$200,000. First Wave records compensation expense in the first year as follows:

Compensation Expense ( $\$200,000 \div 2$ )	100,000	
Paid-in Capital—Stock Options		100,000

In addition, if we assume that First Wave has a 35 percent tax rate, it would recognize a deferred tax asset of \$35,000 ( $\$100,000 \times 35\%$ ) in the first year as follows:

Deferred Tax Asset	35,000	
Income Tax Expense		35,000

Therefore, on the statement of cash flows for the first year, First Wave reports the following (assuming a net income of \$600,000).

Net income	\$600,000
Adjustments to reconcile net income to net cash provided by operating activities:	
Share-based compensation expense	100,000
Increase in deferred tax asset	(35,000)

As shown in First Wave's statement of cash flows, it adds the share-based compensation expense to net income because it is a noncash expense. The increase in the deferred tax asset and the related reduction in income tax expense increase net income. Although the negative income tax expense increases net income, it does not increase cash. Therefore it should be deducted.

Subsequently, if Ann Johnson exercises her options, Third Wave reports "Cash provided by exercise of stock options" in the financing section of the statement of cash flows.<sup>8</sup>

## POSTRETIREMENT BENEFIT COSTS

If a company has postretirement costs such as an employee pension plan, chances are that the pension expense recorded during a period will either be higher or lower than the cash funded. It will be higher when there is an unfunded liability and will be lower when there is a prepaid pension cost. When the expense is higher or lower than the cash paid, **the company must adjust net income by the difference between cash paid and the expense reported** in computing net cash flow from operating activities.

## EXTRAORDINARY ITEMS

Companies should report **either as investing activities or as financing activities** cash flows from extraordinary transactions and other events whose effects are included in net income, but which are not related to operations.

For example, assume that Tax Consultants had land with a carrying value of \$200,000, which was condemned by the state of Maine for a highway project. The condemnation proceeds received were \$205,000, resulting in a gain of \$5,000 less \$2,000 of taxes. In the statement of cash flows (indirect method), the company would deduct the \$5,000 gain from net income in the operating activities section. It would report the \$205,000 cash inflow from the condemnation as an investing activity, as follows.

Cash flows from investing activities	
Condemnation of land	\$205,000

Note that Tax Consultants handles the gain at its **gross** amount (\$5,000), not net of tax. The company reports the cash received in the condemnation as an investing activity at \$205,000, also exclusive of the tax effect.

The FASB requires companies to classify **all income taxes paid as operating cash outflows**. Some suggested that income taxes paid be allocated to investing and financing transactions. But the Board decided that allocation of income taxes paid to operating, investing, and financing activities would be so complex and

### Underlying Concepts

By rejecting the requirement to allocate taxes to the various activities, the Board invoked the cost-benefit constraint. The information would be beneficial, but the cost of providing such information would exceed the benefits of providing it.

<sup>8</sup>Companies receive a tax deduction related to share-based compensation plans at the time employees exercise their options. The amount of the deduction is equal to the difference between the market price of the stock and the exercise price at the date the employee purchases the stock, which in most cases, is much larger than the total compensation expense recorded. When the tax deduction exceeds the total compensation recorded, this provides an additional cash inflow to the company. For example, in a recent year **Cisco Systems** reported an additional cash inflow related to its stock option plans equal to \$537 million. Under GAAP, this tax-related cash inflow is reported in the financing section of the statement of cash flows. [7]

arbitrary that the benefits, if any, would not justify the costs involved. Under both the direct method and the indirect method, companies must disclose the total amount of income taxes paid.<sup>9</sup>

## SIGNIFICANT NONCASH TRANSACTIONS

Because the statement of cash flows reports only the effects of operating, investing, and financing activities in terms of cash flows, it omits some **significant noncash transactions** and other events that are investing or financing activities. Among the more common of these noncash transactions that a company should report or disclose in some manner are the following.

1. Acquisition of assets by assuming liabilities (including capital lease obligations) or by issuing equity securities.
2. Exchanges of nonmonetary assets.
3. Refinancing of long-term debt.
4. Conversion of debt or preferred stock to common stock.
5. Issuance of equity securities to retire debt.

**A company does not incorporate these noncash items in the statement of cash flows.** If material in amount, these disclosures may be either narrative or summarized in a separate schedule at the bottom of the statement, or they may appear in a separate note or supplementary schedule to the financial statements.<sup>10</sup> Illustration 23-35 shows the presentation of these significant noncash transactions or other events in a separate schedule at the bottom of the statement of cash flows.

Examples of Cash Flow Statements

**ILLUSTRATION 23-35**  
Schedule Presentation of  
Noncash Investing and  
Financing Activities

Net increase in cash	\$3,717,000
Cash at beginning of year	<u>5,208,000</u>
Cash at end of year	<u>\$8,925,000</u>
<b>Noncash investing and financing activities</b>	
Purchase of land and building through issuance of 250,000 shares of common stock	\$1,750,000
Exchange of Steadfast, NY, land for Bedford, PA, land	\$2,000,000
Conversion of 12% bonds to 50,000 shares of common stock	\$500,000

Or, companies may present these noncash transactions in a separate note, as shown in Illustration 23-36.

**ILLUSTRATION 23-36**  
Note Presentation of  
Noncash Investing and  
Financing Activities

<b>Note G: Significant noncash transactions.</b> During the year the company engaged in the following significant noncash investing and financing transactions:	
Issued 250,000 shares of common stock to purchase land and building	\$1,750,000
Exchanged land in Steadfast, NY, for land in Bedford, PA	\$2,000,000
Converted 12% bonds to 50,000 shares of common stock	\$500,000

<sup>9</sup>For an insightful article on some weaknesses and limitations in the statement of cash flows, see Hugo Nurnberg, "Inconsistencies and Ambiguities in Cash Flow Statements Under FASB Statement No. 95," *Accounting Horizons* (June 1993), pp. 60–73. Nurnberg identifies the inconsistencies caused by the three-way classification of all cash receipts and cash payments, gross versus net of tax, the ambiguous disclosure requirements for noncash investing and financing transactions, and the ambiguous presentation of third-party financing transactions. See also Paul B. W. Miller, and Bruce P. Budge, "Nonarticulation in Cash Flow Statements and Implications for Education, Research, and Practice," *Accounting Horizons* (December 1996), pp. 1–15; and Charles Mulford and Michael Ely, "Calculating Sustainable Cash Flow: A Study of the S&P 100," *Georgia Tech Financial Analysis Lab* (October 2004).

<sup>10</sup>Some noncash investing and financing activities are part cash and part noncash. Companies should report only the cash portion on the statement of cash flows. The noncash component should be reported at the bottom of the statement or in a separate note.

Companies do not generally report certain other significant noncash transactions or other events in conjunction with the statement of cash flows. Examples of these types of transactions are **stock dividends, stock splits, and restrictions on retained earnings**. Companies generally report these items, neither financing nor investing activities, in conjunction with the statement of stockholders' equity or schedules and notes pertaining to changes in capital accounts.

### CASH FLOW TOOL

By understanding the relationship between cash flow and income measures, analysts can gain better insights into company performance. Because earnings altered through creative accounting practices generally do not change operating cash flows, analysts can use the relationship between earnings and operating cash flow to detect suspicious accounting practices. Also, by monitoring the ratio between cash flow from operations and operating income, they can get a clearer picture of developing problems in a company.

For example, the chart below plots the ratio of operating cash flows to earnings for **Xerox Corp.** in the years leading up to the SEC singling it out in 2000 for aggressive revenue recognition practices on its leases.

*What do the numbers mean?*

Similar to **W. T. Grant** in the chapter opening story, Xerox was reporting earnings growth in the years leading up to its financial breakdown in 2000 but teetering near bankruptcy in 2001. However, Xerox's ratio of cash flow to earnings showed a declining trend and became negative well before its revenue recognition practices were revealed. The trend revealed in the graph should have given any analyst reason to investigate Xerox further. As one analyst noted, "Earnings growth that exceeds the growth in operating cash flow cannot continue for extended periods and should be investigated."

## SECTION 3 • USE OF A WORKSHEET

When numerous adjustments are necessary or other complicating factors are present, companies often use a **worksheet to assemble and classify the data that will appear on the statement of cash flows**. The worksheet (a **spreadsheet** when using computer software) is merely a device that aids in the preparation of the

### Objective-9

#### ILLUSTRATION 23-37

Format of Worksheet for Preparation of Statement of Cash Flows

The following guidelines are important in using a worksheet.

1. In the balance sheet accounts section, **list accounts with debit balances separately from those with credit balances.** This means, for example, that Accumulated Depreciation is listed under credit balances and not as a contra account under debit balances. Enter the beginning and ending balances of each account in the appropriate columns. Then, enter the transactions that caused the change in the account balance during the year as reconciling items in the two middle columns.

After all reconciling items have been entered, each line pertaining to a balance sheet account should foot across. That is, the beginning balance plus or minus the reconciling item(s) must equal the ending balance. When this agreement exists for all balance sheet accounts, all changes in account balances have been reconciled.

2. The bottom portion of the worksheet consists of the operating, investing, and financing activities sections. Accordingly, it provides the information necessary to prepare the formal statement of cash flows. **Enter inflows of cash as debits in the reconciling columns, and outflows of cash as credits in the reconciling columns.** Thus, in this section, a company would enter the sale of equipment for cash at book value as a debit under inflows of cash from investing activities. Similarly, it would enter the purchase of land for cash as a credit under outflows of cash from investing activities.
3. **Do not enter in any journal or post to any account the reconciling items shown in the worksheet.** These items do not represent either adjustments or corrections of the balance sheet accounts. They are used only to facilitate the preparation of the statement of cash flows.

## PREPARATION OF THE WORKSHEET

The preparation of a worksheet involves the following steps.

**Step 1.** Enter the balance sheet accounts and their beginning and ending balances in the balance sheet accounts section.

**Step 2.** Enter the data that explain the changes in the balance sheet accounts (other than cash) and their effects on the statement of cash flows in the reconciling columns of the worksheet.

**Step 3.** Enter the increase or decrease in cash on the cash line and at the bottom of the worksheet. This entry should enable the totals of the reconciling columns to be in agreement.

To illustrate the preparation and use of a worksheet and to illustrate the reporting of some of the special problems discussed in the prior section, we present a comprehensive example for Satellite Corporation. Again, the indirect method serves as the basis for the computation of net cash provided by operating activities. Illustrations 23-38 and 23-39 (on page 1276) present the balance sheet, combined statement of income and retained

Net income			117,000
Retained earnings, January 1			496,000
Less:			
Cash dividends	6,000		
Stock dividend		<u>15,000</u>	<u>21,000</u>
Retained earnings, December 31			<u>\$592,000</u>
Per share:			
Income before extraordinary item			\$2.02
Extraordinary item			<u>.11</u>
Net income			<u>\$2.13</u>
<b>Additional Information</b>			
(a) Other income of \$3,500 represents Satellite's equity share in the net income of Porter Co., an equity investee. Satellite owns 22% of Porter Co.			
(b) An analysis of the equipment account and related accumulated depreciation indicates the following:			
	Equipment Dr./(Cr.)	Accum. Dep. Dr./(Cr.)	Gain or (Loss)
Balance at end of 2009	\$142,000	\$(31,000)	
Purchases of equipment	53,000		
Sale of equipment	(8,000)	2,500	\$(1,500)
Depreciation for the period		(11,500)	
Major repair charged to accumulated depreciation		<u>11,000</u>	
Balance at end of 2010	<u>\$187,000</u>	<u>\$(29,000)</u>	
(c) Land in the amount of \$60,000 was purchased through the issuance of a long-term note; in addition, certain parcels of land costing \$10,500 were condemned. The state government paid Satellite \$18,500, resulting in an \$8,000 gain which has a \$2,000 tax effect.			
(d) The change in the accumulated depreciation—buildings, trademark, and premium on bonds payable accounts resulted from depreciation and amortization entries.			
(e) An analysis of the paid-in capital accounts in stockholders' equity discloses the following:			
	Common Stock	Additional Paid-In Capital	
Balance at end of 2009	\$50,000	\$ 38,000	
Issuance of 2% stock dividend	1,000	14,000	
Sale of stock for cash	<u>9,000</u>	<u>135,000</u>	
Balance at end of 2010	<u>\$60,000</u>	<u>\$187,000</u>	
(f) Interest paid (net of amount capitalized) is \$9,000; income taxes paid is \$62,000.			

earnings, and additional information for Satellite Corporation. The discussion that follows these financial statements provides additional explanations related to the preparation of the worksheet.

## ANALYSIS OF TRANSACTIONS

The following discussion explains the individual adjustments that appear on the worksheet in Illustration 23-40 (page 1281). Because cash is the basis for the analysis, Satellite reconciles the cash account last. Because income is the first item that appears on the statement of cash flows, it is handled first.

### Change in Retained Earnings

Net income for the period is \$117,000. The entry for it on the worksheet is as follows.

	(1)		
Operating—Net Income		117,000	
Retained Earnings			117,000

Satellite reports net income on the bottom section of the worksheet. This **is the starting point for preparation of the statement of cash flows (under the indirect method)**.

A stock dividend and a cash dividend also affected retained earnings. The retained earnings statement reports a stock dividend of \$15,000. The worksheet entry for this transaction is as follows.

	(2)		
Retained Earnings		15,000	
Common Stock			1,000
Additional Paid-in Capital			14,000

The issuance of stock dividends is not a cash operating, investing, or financing item. Therefore, **although the company enters this transaction on the worksheet for reconciling purposes, it does not report it in the statement of cash flows.**

The \$6,000 cash dividend paid represents a financing activity cash outflow. Satellite makes the following worksheet entry:

	(3)		
Retained Earnings		6,000	
Financing—Cash Dividends			6,000

The company reconciles the beginning and ending balances of retained earnings by entry of the three items above.

### Accounts Receivable (Net)

The increase in accounts receivable (net) of \$53,000 represents adjustments that did not result in cash inflows during 2010. As a result, the company would deduct from net income the increase of \$53,000. Satellite makes the following worksheet entry.

	(4)		
Accounts Receivable (net)		53,000	
Operating—Increase in Accounts Receivable (net)			53,000

## Inventories

The increase in inventories of \$152,000 represents an operating use of cash. The incremental investment in inventories during the year reduces cash without increasing the cost of goods sold. Satellite makes the following worksheet entry.

<b>(5)</b>		
Inventories	152,000	
Operating—Increase in Inventories		152,000

## Prepaid Expense

The decrease in prepaid expenses of \$500 represents a charge in the income statement for which there was no cash outflow in the current period. Satellite should add that amount back to net income through the following entry.

<b>(6)</b>		
Operating—Decrease in Prepaid Expenses	500	
Prepaid Expenses		500

## Investment in Stock

Satellite's investment in the stock of Porter Co. increased \$3,500. This amount reflects Satellite's share of net income earned by Porter (its equity investee) during the current year. Although Satellite's revenue, and therefore its net income increased \$3,500 by recording Satellite's share of Porter Co.'s net income, no cash (dividend) was provided. Satellite makes the following worksheet entry.

<b>(7)</b>		
Investment in Stock of Porter Co.	3,500	
Operating—Equity in Earnings of Porter Co.		3,500

## Land

Satellite purchased land in the amount of \$60,000 through the issuance of a long-term note payable. This transaction did not affect cash. It is a significant noncash investing/financing transaction that the company would disclose either in a separate schedule below the statement of cash flows or in the accompanying notes. Satellite makes the following entry to reconcile the worksheet.

<b>(8)</b>		
Land	60,000	
Notes Payable		60,000

In addition to the noncash transaction involving the issuance of a note to purchase land, the Land account was decreased by the condemnation proceedings. The following worksheet entry records the receipt of \$18,500 for land having a book value of \$10,500.

<b>(9)</b>		
Investing—Proceeds from Condemnation of Land	18,500	
Land		10,500
Operating—Gain on Condemnation of Land		8,000

In reconciling net income to net cash flow from operating activities, Satellite deducts from net income the extraordinary gain of \$8,000. The reason is that the transaction that gave rise to the gain is an item whose cash effect is already classified as an investing cash inflow. The Land account is now reconciled.

## Equipment and Accumulated Depreciation

An analysis of Equipment and Accumulated Depreciation shows that a number of transactions have affected these accounts. The company purchased equipment in the amount of \$53,000 during the year. Satellite records this transaction on the worksheet as follows.

<b>(10)</b>		
Equipment	53,000	
Investing—Purchase of Equipment		53,000

In addition, Satellite sold at a loss of \$1,500 equipment with a book value of \$5,500. It records this transaction as follows.

<b>(11)</b>		
Investing—Sale of Equipment	4,000	
Operating—Loss on Sale of Equipment	1,500	
Accumulated Depreciation—Equipment	2,500	
Equipment		8,000

The proceeds from the sale of the equipment provided cash of \$4,000. In addition, the loss on the sale of the equipment has reduced net income, but did not affect cash. Therefore, the company adds back to net income the amount of the loss, in order to accurately report cash provided by operating activities.

Satellite reported depreciation on the equipment at \$11,500 and recorded it on the worksheet as follows.

<b>(12)</b>		
Operating—Depreciation Expense—Equipment	11,500	
Accumulated Depreciation—Equipment		11,500

The company adds depreciation expense back to net income because that expense reduced income but did not affect cash.

Finally, the company made a major repair to the equipment. It charged this expenditure, in the amount of \$11,000, to Accumulated Depreciation—Equipment. This expenditure required cash, and so Satellite makes the following worksheet entry.

<b>(13)</b>		
Accumulated Depreciation—Equipment	11,000	
Investing—Major Repairs of Equipment		11,000

After adjusting for the foregoing items, Satellite has reconciled the balances in the Equipment and related Accumulated Depreciation accounts.

## Building Depreciation and Amortization of Trademark

Depreciation expense on the buildings of \$3,100 and amortization of trademark of \$2,400 are both expenses in the income statement that reduced net income but did not require cash outflows in the current period. Satellite makes the following worksheet entry.

<b>(14)</b>		
Operating—Depreciation Expense—Buildings	3,100	
Operating—Amortization of Trademark	2,400	
Accumulated Depreciation—Buildings		3,100
Trademark		2,400

## Other Noncash Charges or Credits

Analysis of the remaining accounts indicates that changes in the Accounts Payable, Accrued Liabilities, Income Tax Payable, Premium on Bonds Payable, and Deferred Tax Liability balances resulted from charges or credits to net income that did not

affect cash. The company should individually analyze each of these items and enter them in the worksheet. The following compound entry summarizes these noncash, income-related items.

<b>(15)</b>		
Income Tax Payable	13,000	
Premium on Bonds Payable	1,000	
Operating—Increase in Accounts Payable	1,000	
Operating—Increase in Accrued Liabilities	4,000	
Operating—Increase in Deferred Tax Liability	3,000	
Operating—Decrease in Income Tax Payable		13,000
Operating—Amortization of Bond Premium		1,000
Accounts Payable		1,000
Accrued Liabilities		4,000
Deferred Tax Liability		3,000

### Common Stock and Related Accounts

Comparison of the common stock balances and the additional paid-in capital balances shows that transactions during the year affected these accounts. First, Satellite issues a stock dividend of 2 percent to stockholders. As the discussion of worksheet entry (2) indicated, no cash was provided or used by the stock dividend transaction. In addition to the shares issued via the stock dividend, Satellite sold shares of common stock at \$16 per share. The company records this transaction as follows.

<b>(16)</b>		
Financing—Sale of Common Stock	144,000	
Common Stock		9,000
Additional Paid-in Capital		135,000

Also, the company purchased shares of its common stock in the amount of \$17,000. It records this transaction on the worksheet as follows.

<b>(17)</b>		
Treasury Stock	17,000	
Financing—Purchase of Treasury Stock		17,000

### Final Reconciling Entry

The final entry to reconcile the change in cash and to balance the worksheet is shown below. The \$7,000 amount is the difference between the beginning and ending cash balance.

<b>(18)</b>		
Decrease in Cash	7,000	
Cash		7,000

Once the company has determined that the differences between the beginning and ending balances per the worksheet columns have been accounted for, it can total the reconciling transactions columns, and they should balance. Satellite can prepare the statement of cash flows entirely from the items and amounts that appear at the bottom of the worksheet under “Statement of Cash Flows Effects,” as shown in Illustration 23-40 (on page 1281).

SATELLITE CORPORATION

Statement of Cash Flows,  
Satellite Corporation

*Discussion of the  
T-Account Approach to  
Preparation of the  
Statement of Cash Flows*

You will want to read  
the **CONVERGENCE  
CORNER** on  
page 1283

For discussion of how  
international conver-  
gence efforts relate to  
the statement of cash  
flows.

<b>SATELLITE CORPORATION</b>		
<b>STATEMENT OF CASH FLOWS</b>		
<b>FOR THE YEAR ENDED DECEMBER 31, 2010</b>		
<b>INCREASE (DECREASE) IN CASH</b>		
<b>Cash flows from operating activities</b>		
Net income		\$117,000
Adjustments to reconcile net income to net cash used by operating activities:		
Depreciation expense	\$ 14,600	
Amortization of trademark	2,400	
Amortization of bond premium	(1,000)	
Equity in earnings of Porter Co.	(3,500)	
Gain on condemnation of land	(8,000)	
Loss on sale of equipment	1,500	
Increase in deferred tax liability	3,000	
Increase in accounts receivable (net)	(53,000)	
Increase in inventories	(152,000)	
Decrease in prepaid expenses	500	
Increase in accounts payable	1,000	
Increase in accrued liabilities	4,000	
Decrease in income tax payable	(13,000)	(203,500)
Net cash used by operating activities		(86,500)
<b>Cash flows from investing activities</b>		
Proceeds from condemnation of land	18,500	
Purchase of equipment	(53,000)	
Sale of equipment	4,000	
Major repairs of equipment	(11,000)	
Net cash used by investing activities		(41,500)
<b>Cash flows from financing activities</b>		
Payment of cash dividend	(6,000)	
Issuance of common stock	144,000	
Purchase of treasury stock	(17,000)	
Net cash provided by financing activities		121,000
Net decrease in cash		(7,000)
Cash, January 1, 2010		66,000
Cash, December 31, 2010		<u>\$ 59,000</u>
<b>Supplemental Disclosures of Cash Flow Information:</b>		
Cash paid during the year for:		
Interest (net of amount capitalized)		\$ 9,000
Income taxes		\$ 62,000
<b>Supplemental Schedule of Noncash Investing and Financing Activities:</b>		
Purchase of land for \$60,000 in exchange for a \$60,000 long-term note.		

# CONVERGENCE CORNER

## STATEMENT OF CASH FLOWS

As in U.S. GAAP, the statement of cash flows is a required statement for iGAAP. In addition, the content and presentation of an iGAAP balance sheet is similar to one used for U.S. GAAP. However, the disclosure requirements related to the statement of cash flows are more extensive under U.S. GAAP. IAS 7 (“Cash Flow Statements”) provides the overall iGAAP requirements for cash flow information.

### RELEVANT FACTS

- Companies preparing financial statements under iGAAP must prepare a statement of cash flows as an integral part of the financial statements.
- Both iGAAP and U.S. GAAP require that the statement of cash flows should have three major sections—operating, investing, and financing—along with changes in cash and cash equivalents.
- Similar to U.S. GAAP, the cash flow statement can be prepared using either the indirect or direct method under iGAAP. In both U.S. and international settings, companies choose for the most part to use the indirect method for reporting net cash flows from operating activities.
- iGAAP encourages companies to disclose the aggregate amount of cash flows that are attributable to the increase in operating capacity separately from those cash flows that are required to maintain operating capacity.
- The definition of cash equivalents used in iGAAP is similar to that used in U.S. GAAP. A major difference is that in certain situations bank overdrafts are considered part of cash and cash equivalents under iGAAP (which is not the case in U.S. GAAP). Under U.S. GAAP, bank overdrafts are classified as financing activities.
- iGAAP requires that noncash investing and financing activities be excluded from the statement of cash flows. Instead, these noncash activities should be reported elsewhere. This requirement is interpreted to mean that noncash investing and financing activities should be disclosed in the notes to the financial statements instead of in the financial statements. Under U.S. GAAP, companies may present this information in the cash flow statement.

### ABOUT THE NUMBERS

One area where there can be substantive differences between iGAAP and U.S. GAAP relates to the classification of interest, dividends, and taxes. The following table indicates the differences between the two approaches.

Item	iGAAP	U.S. GAAP
Interest paid	Operating or financing	Operating
Interest received	Operating or investing	Operating
Dividends paid	Operating or financing	Financing
Dividends received	Operating or investing	Operating
Taxes paid	Operating—unless specific identification with financing or investing	Operating <sup>1, 2</sup>

<sup>1</sup>U.S. GAAP has additional disclosure rules

<sup>2</sup>U.S. GAAP has specific rules regarding the classification of the benefit associated with share-based compensation arrangements and the classification of derivatives that contain a financing element

Source: PricewaterhouseCoopers, *Similarities and Difference—A Comparison of IFRS and U.S. GAAP* (October 2007).

As indicated, the major difference is that iGAAP provides more alternatives for disclosing certain items.

### ON THE HORIZON

Presently, the FASB and the IASB are involved in a joint project on the presentation and organization of information in the financial statements. With respect to the cash flow statement specifically, the notion of *cash equivalents* will probably not be retained. The definition of cash in the existing literature would be retained, and the statement of cash flows would present information on changes in cash only. In addition, the FASB favors presentation of operating cash flows using the direct method only. However, the majority of IASB members express a preference for not requiring use of the direct method of reporting operating cash flows. So the two Boards will have to resolve their differences in this area in order to issue a converged standard for the statement of cash flows.

## KEY TERMS

cash equivalents, 1245(n)  
 direct method, 1250  
 financing activities, 1245  
 indirect method, 1250  
 investing activities, 1245  
 operating activities, 1245  
 significant noncash transactions, 1272  
 statement of cash flows, 1244

## SUMMARY OF LEARNING OBJECTIVES

**LO 1 Describe the purpose of the statement of cash flows.** The primary purpose of the statement of cash flows is to provide information about cash receipts and cash payments of an entity during a period. A secondary objective is to report the entity's operating, investing, and financing activities during the period.

**LO 2 Identify the major classifications of cash flows.** Companies classify cash flows as: (1) *Operating activities*—transactions that result in the revenues, expenses, gains, and losses that determine net income. (2) *Investing activities*—lending money and collecting on those loans, and acquiring and disposing of investments, plant assets, and intangible assets. (3) *Financing activities*—obtaining cash from creditors and repaying loans, issuing and reacquiring capital stock, and paying cash dividends.

**LO 3 Differentiate between net income and net cash flows from operating activities.** Companies must adjust net income on an accrual basis to determine net cash flow from operating activities because some expenses and losses do not cause cash outflows, and some revenues and gains do not provide cash inflows.

**LO 4 Contrast the direct and indirect methods of calculating net cash flow from operating activities.** Under the direct approach, companies calculate the major classes of operating cash receipts and cash disbursements. Companies summarize the computations in a schedule of changes from the accrual to the cash basis income statement. Presentation of the direct approach of reporting net cash flow from operating activities takes the form of a condensed cash-basis income statement. The indirect method adds back to net income the noncash expenses and losses and subtracts the noncash revenues and gains.

**LO 5 Determine net cash flows from investing and financing activities.** Once a company has computed the net cash flow from operating activities, the next step is to determine whether any other changes in balance sheet accounts caused an increase or decrease in cash. Net cash flows from investing and financing activities can be determined by examining the changes in noncurrent balance sheet accounts.

**LO 6 Prepare a statement of cash flows.** Preparing the statement involves three major steps: (1) *Determine the change in cash.* This is the difference between the beginning and the ending cash balance shown on the comparative balance sheets. (2) *Determine the net cash flow from operating activities.* This procedure is complex; it involves analyzing not only the current year's income statement but also the comparative balance sheets and the selected transaction data. (3) *Determine cash flows from investing and financing activities.* Analyze all other changes in the balance sheet accounts to determine the effects on cash.

**LO 7 Identify sources of information for a statement of cash flows.** The information to prepare the statement usually comes from three sources: (1) *Comparative balance sheets.* Information in these statements indicates the amount of the changes in assets, liabilities, and equities during the period. (2) *Current income statement.* Information in this statement is used in determining the cash provided by operations during the period. (3) *Selected transaction data.* These data from the general ledger provide additional detailed information needed to determine how cash was provided or used during the period.

**LO 8 Discuss special problems in preparing a statement of cash flows.** These special problems are: (1) adjustments similar to depreciation; (2) accounts receivable (net); (3) other working capital changes; (4) net losses; (5) gains; (6) stock options; (7) postretirement benefit costs; (8) extraordinary items; and (9) significant noncash transactions.

**9 Explain the use of a worksheet in preparing a statement of cash flows.** When numerous adjustments are necessary, or other complicating factors are present, companies often use a worksheet to assemble and classify the data that will appear on the statement of cash flows. The worksheet is merely a device that aids in the preparation of the statement. Its use is optional.

### Exercises

Access the FASB Codification at <http://asc.fasb.org/home> to prepare responses to the following exercises. Provide Codification references for your responses.

**CE23-1** Access the glossary (“Master Glossary”) to answer the following.

- (a) What are cash equivalents?
- (b) What are financing activities?
- (c) What are investing activities?
- (d) What are operating activities?

**CE23-2** Name five cash inflows that would qualify as a “financing activity.”

**CE23-3** How should cash flows from purchases, sales, and maturities of available-for-sale securities be classified and reported in the statement of cash flows?

**CE23-4** Do companies need to disclose information about investing and financing activities that do not affect cash receipts or cash payments? If so, how should such information be disclosed?

**An additional codification case can be found in the Using Your Judgment section, on page 1311.**

**Be sure to check the companion website for a Review and Analysis Exercise, with solution.**

## QUESTIONS

1. What is the purpose of the statement of cash flows? What information does it provide?
2. Of what use is the statement of cash flows?
3. Differentiate between investing activities, financing activities, and operating activities.
4. What are the major sources of cash (inflows) in a statement of cash flows? What are the major uses (outflows) of cash?
5. Identify and explain the major steps involved in preparing the statement of cash flows.
6. Identify the following items as (1) operating, (2) investing, or (3) financing activities: purchase of land; payment of dividends; cash sales; and purchase of treasury stock.
7. Unlike the other major financial statements, the statement of cash flows is not prepared from the adjusted trial balance. From what sources does the information to prepare this statement come, and what information does each source provide?
8. Why is it necessary to convert accrual-based net income to a cash basis when preparing a statement of cash flows?
9. Differentiate between the direct method and the indirect method by discussing each method.
10. Broussard Company reported net income of \$3.5 million in 2010. Depreciation for the year was \$520,000; accounts receivable increased \$500,000; and accounts payable increased \$300,000. Compute net cash flow from operating activities using the indirect method.
11. Collinsworth Co. reported sales on an accrual basis of \$100,000. If accounts receivable increased \$30,000, and the allowance for doubtful accounts increased \$9,000 after a write-off of \$2,000, compute cash sales.
12. Your roommate is puzzled. During the last year, the company in which she is a stockholder reported a net loss of \$675,000, yet its cash increased \$321,000 during the same period of time. Explain to your roommate how this situation could occur.
13. The board of directors of Gifford Corp. declared cash dividends of \$260,000 during the current year. If dividends payable was \$85,000 at the beginning of the year and \$90,000 at the end of the year, how much cash was paid in dividends during the year?
14. Explain how the amount of cash payments to suppliers is computed under the direct method.
15. The net income for Letterman Company for 2010 was \$320,000. During 2010, depreciation on plant assets was \$124,000, amortization of patent was \$40,000, and the company incurred a loss on sale of plant assets of \$21,000. Compute net cash flow from operating activities.
16. Each of the following items must be considered in preparing a statement of cash flows for Blackwell Inc. for the year ended December 31, 2010. State where each item is to be shown in the statement, if at all.
  - (a) Plant assets that had cost \$18,000 6½ years before and were being depreciated on a straight-line basis over 10 years with no estimated scrap value were sold for \$4,000.
  - (b) During the year, 10,000 shares of common stock with a stated value of \$20 a share were issued for \$41 a share.
  - (c) Uncollectible accounts receivable in the amount of \$22,000 were written off against the Allowance for Doubtful Accounts.
  - (d) The company sustained a net loss for the year of \$50,000. Depreciation amounted to \$22,000, and a gain of \$9,000 was realized on the sale of available-for-sale securities for \$38,000 cash.
17. Classify the following items as (1) operating, (2) investing, (3) financing, or (4) significant noncash investing and financing activities, using the direct method.
  - (a) Cash payments to employees.
  - (b) Redemption of bonds payable.
  - (c) Sale of building at book value.
  - (d) Cash payments to suppliers.
  - (e) Exchange of equipment for furniture.
  - (f) Issuance of preferred stock.
  - (g) Cash received from customers.
  - (h) Purchase of treasury stock.
  - (i) Issuance of bonds for land.
  - (j) Payment of dividends.
  - (k) Purchase of equipment.
  - (l) Cash payments for operating expenses.
18. Stan Conner and Mark Stein were discussing the presentation format of the statement of cash flows of Bombeck Co. At the bottom of Bombeck's statement of cash flows was a separate section entitled "Noncash investing and financing activities." Give three examples of significant noncash transactions that would be reported in this section.
19. During 2010, Simms Company redeemed \$2,000,000 of bonds payable for \$1,880,000 cash. Indicate how this transaction would be reported on a statement of cash flows, if at all.
20. What are some of the arguments in favor of using the indirect (reconciliation) method as opposed to the direct method for reporting a statement of cash flows?
21. Why is it desirable to use a worksheet when preparing a statement of cash flows? Is a worksheet required to prepare a statement of cash flows?
22. Where can authoritative iGAAP related to the statement of cash flows be found? 
23. Briefly describe some of the similarities and differences between U.S. GAAP and iGAAP with respect to cash flow reporting. 

24. Some believe that iGAAP provides too many choices within its accounting guidance. Is this a possible concern in the area of cash flow reporting? Explain.
25. What are some of the key obstacles for the FASB and IASB in their convergence project for the statement of cash flows?

**BRIEF EXERCISES**

- 5** BE23-1 Wainwright Corporation had the following activities in 2010.
- |  |   |
|--|---|
| 1. Sale of land \$180,000              | 4. Purchase of equipment \$415,000                    |
| 2. Purchase of inventory \$845,000     | 5. Issuance of common stock \$320,000                 |
| 3. Purchase of treasury stock \$72,000 | 6. Purchase of available-for-sale securities \$59,000 |

Compute the amount Wainwright should report as net cash provided (used) by investing activities in its statement of cash flows.

- 5** BE23-2 Stansfield Corporation had the following activities in 2010.
- |  |  |
|--|--|
| 1. Payment of accounts payable \$770,000 | 4. Collection of note receivable \$100,000 |
| 2. Issuance of common stock \$250,000    | 5. Issuance of bonds payable \$510,000     |
| 3. Payment of dividends \$350,000        | 6. Purchase of treasury stock \$46,000     |

Compute the amount Stansfield should report as net cash provided (used) by financing activities in its 2010 statement of cash flows.

- 2** BE23-3 Novak Corporation is preparing its 2010 statement of cash flows, using the indirect method. Presented below is a list of items that may affect the statement. Using the code below, indicate how each item will affect Novak's 2010 statement of cash flows.

Code Letter	Effect
A	Added to net income in the operating section
D	Deducted from net income in the operating section
R-I	Cash receipt in investing section
P-I	Cash payment in investing section
R-F	Cash receipt in financing section
P-F	Cash payment in financing section
N	Noncash investing and/or financing activity

**Items**

- |  |   |
|--|---|
| ___ (a) Purchase of land and building.             | ___ (j) Increase in accounts payable.       |
| ___ (b) Decrease in accounts receivable.           | ___ (k) Decrease in accounts payable.       |
| ___ (c) Issuance of stock.                         | ___ (l) Loan from bank by signing note.     |
| ___ (d) Depreciation expense.                      | ___ (m) Purchase of equipment using a note. |
| ___ (e) Sale of land at book value.                | ___ (n) Increase in inventory.              |
| ___ (f) Sale of land at a gain.                    | ___ (o) Issuance of bonds.                  |
| ___ (g) Payment of dividends.                      | ___ (p) Retirement of bonds payable.        |
| ___ (h) Increase in accounts receivable.           | ___ (q) Sale of equipment at a loss.        |
| ___ (i) Purchase of available-for-sale investment. | ___ (r) Purchase of treasury stock.         |

- 3 4** BE23-4 Bloom Corporation had the following 2010 income statement.

Sales	\$200,000
Cost of goods sold	<u>120,000</u>
Gross profit	80,000
Operating expenses (includes depreciation of \$21,000)	<u>50,000</u>
Net income	<u>\$ 30,000</u>

The following accounts increased during 2010: accounts receivable \$12,000; inventory \$11,000; accounts payable \$13,000. Prepare the cash flows from operating activities section of Bloom's 2010 statement of cash flows using the direct method.

- 3 4** BE23-5 Use the information from BE23-4 for Bloom Corporation. Prepare the cash flows from operating activities section of Bloom's 2010 statement of cash flows using the indirect method.

- 4** BE23-6 At January 1, 2010, Eikenberry Inc. had accounts receivable of \$72,000. At December 31, 2010, accounts receivable is \$54,000. Sales for 2010 total \$420,000. Compute Eikenberry's 2010 cash receipts from customers.

**4** BE23-7 Moxley Corporation had January 1 and December 31 balances as follows.

	1/1/10	12/31/10
Inventory	\$95,000	\$113,000
Accounts payable	61,000	69,000

For 2010, cost of goods sold was \$500,000. Compute Moxley's 2010 cash payments to suppliers.

**6** BE23-8 In 2010, Elbert Corporation had net cash provided by operating activities of \$531,000; net cash used by investing activities of \$963,000; and net cash provided by financing activities of \$585,000. At January 1, 2010, the cash balance was \$333,000. Compute December 31, 2010, cash.

**3** **4** BE23-9 Loveless Corporation had the following 2010 income statement.

Revenues	\$100,000
Expenses	60,000
	\$ 40,000

In 2010, Loveless had the following activity in selected accounts.

Accounts Receivable				Allowance for Doubtful Accounts			
1/1/10	20,000					1,200	1/1/10
Revenues	100,000	1,000	Write-offs	Write-offs	1,000	1,840	Bad debt expense
		90,000	Collections				
12/31/10	29,000					2,040	12/31/10

Prepare Loveless's cash flows from operating activities section of the statement of cash flows using (a) the direct method and (b) the indirect method.

**3** BE23-10 Hendrickson Corporation reported net income of \$50,000 in 2010. Depreciation expense was \$17,000. The following working capital accounts changed.

Accounts receivable	\$11,000 increase
Available-for-sale securities	16,000 increase
Inventory	7,400 increase
Nontrade note payable	15,000 decrease
Accounts payable	12,300 increase

Compute net cash provided by operating activities.

**3** BE23-11 In 2010, Wild Corporation reported a net loss of \$70,000. Wild's only net income adjustments were depreciation expense \$81,000, and increase in accounts receivable \$8,100. Compute Wild's net cash provided (used) by operating activities.

**8** BE23-12 In 2010, Leppard Inc. issued 1,000 shares of \$10 par value common stock for land worth \$40,000.

- (a) Prepare Leppard's journal entry to record the transaction.
- (b) Indicate the effect the transaction has on cash.
- (c) Indicate how the transaction is reported on the statement of cash flows.

**9** BE23-13 Indicate in general journal form how the items below would be entered in a worksheet for the preparation of the statement of cash flows.

- (a) Net income is \$317,000.
- (b) Cash dividends declared and paid totaled \$120,000.
- (c) Equipment was purchased for \$114,000.
- (d) Equipment that originally cost \$40,000 and had accumulated depreciation of \$32,000 was sold for \$10,000.

## EXERCISES

**2** E23-1 (Classification of Transactions) Springsteen Co. had the following activity in its most recent year of operations.

- |  |   |
|--|---|
| <ol style="list-style-type: none"> <li>(a) Pension expense exceeds amount funded.</li> <li>(b) Redemption of bonds payable.</li> <li>(c) Sale of building at book value.</li> <li>(d) Depreciation.</li> </ol> | <ol style="list-style-type: none"> <li>(e) Exchange of equipment for furniture.</li> <li>(f) Issuance of capital stock.</li> <li>(g) Amortization of intangible assets.</li> <li>(h) Purchase of treasury stock.</li> </ol> |
|--|---|

- (i) Issuance of bonds for land.
- (j) Payment of dividends.
- (k) Increase in interest receivable on notes receivable.
- (l) Purchase of equipment.

**Instructions**

Classify the items as (1) operating—add to net income; (2) operating—deduct from net income; (3) investing; (4) financing; or (5) significant noncash investing and financing activities. Use the indirect method.

**E23-2 (Statement Presentation of Transactions—Indirect Method)** Each of the following items must be considered in preparing a statement of cash flows (indirect method) for Granderson Inc. for the year ended December 31, 2010.

- (a) Plant assets that had cost \$25,000 6 years before and were being depreciated on a straight-line basis over 10 years with no estimated scrap value were sold at the beginning of the year for \$5,300.
- (b) During the year, 10,000 shares of common stock with a stated value of \$10 a share were issued for \$33 a share.
- (c) Uncollectible accounts receivable in the amount of \$27,000 were written off against the Allowance for Doubtful Accounts.
- (d) The company sustained a net loss for the year of \$50,000. Depreciation amounted to \$22,000, and a gain of \$9,000 was realized on the sale of land for \$39,000 cash.
- (e) A 3-month U.S. Treasury bill was purchased for \$100,000. The company uses a cash and cash-equivalent basis for its cash flow statement.
- (f) Patent amortization for the year was \$20,000.
- (g) The company exchanged common stock for a 70% interest in Plumlee Co. for \$900,000.
- (h) During the year, treasury stock costing \$47,000 was purchased.

**Instructions**

State where each item is to be shown in the statement of cash flows, if at all.

**E23-3 (Preparation of Operating Activities Section—Indirect Method, Periodic Inventory)** The income statement of Rodriquez Company is shown below.

<b>RODRIQUEZ COMPANY</b>		
<b>INCOME STATEMENT</b>		
<b>FOR THE YEAR ENDED DECEMBER 31, 2010</b>		
Sales		\$6,900,000
Cost of goods sold		
Beginning inventory	\$1,900,000	
Purchases	<u>4,400,000</u>	
Goods available for sale	6,300,000	
Ending inventory	<u>1,600,000</u>	
Cost of goods sold		<u>4,700,000</u>
Gross profit		2,200,000
Operating expenses		
Selling expenses	450,000	
Administrative expenses	<u>700,000</u>	
		<u>1,150,000</u>
Net income		<u>\$1,050,000</u>

Additional information:

1. Accounts receivable decreased \$310,000 during the year.
2. Prepaid expenses increased \$170,000 during the year.
3. Accounts payable to suppliers of merchandise decreased \$275,000 during the year.
4. Accrued expenses payable decreased \$120,000 during the year.
5. Administrative expenses include depreciation expense of \$60,000.

**Instructions**

Prepare the operating activities section of the statement of cash flows for the year ended December 31, 2010, for Rodriquez Company, using the indirect method.

**E23-4 (Preparation of Operating Activities Section—Direct Method)** Data for the Rodriquez Company are presented in E23-3.

**Instructions**

Prepare the operating activities section of the statement of cash flows using the direct method.

- E23-5 (Preparation of Operating Activities Section—Direct Method)** Norman Company's income statement for the year ended December 31, 2010, contained the following condensed information.

Revenue from fees		\$840,000
Operating expenses (excluding depreciation)	\$624,000	
Depreciation expense	60,000	
Loss on sale of equipment	<u>26,000</u>	<u>710,000</u>
Income before income taxes		130,000
Income tax expense		<u>40,000</u>
Net income		<u>\$ 90,000</u>

Norman's balance sheet contained the following comparative data at December 31.

	<u>2010</u>	<u>2009</u>
Accounts receivable	\$37,000	\$59,000
Accounts payable	46,000	31,000
Income taxes payable	4,000	8,500

(Accounts payable pertains to operating expenses.)

#### Instructions

Prepare the operating activities section of the statement of cash flows using the direct method.

- E23-6 (Preparation of Operating Activities Section—Indirect Method)** Data for Norman Company are presented in E23-5.

#### Instructions

Prepare the operating activities section of the statement of cash flows using the indirect method.

- E23-7 (Computation of Operating Activities—Direct Method)** Presented below are two independent situations.

#### Situation A:

Chenoweth Co. reports revenues of \$200,000 and operating expenses of \$110,000 in its first year of operations, 2010. Accounts receivable and accounts payable at year-end were \$71,000 and \$39,000, respectively. Assume that the accounts payable related to operating expenses. Ignore income taxes.

#### Instructions

Using the direct method, compute net cash provided (used) by operating activities.

#### Situation B:

The income statement for Edgebrook Company shows cost of goods sold \$310,000 and operating expenses (exclusive of depreciation) \$230,000. The comparative balance sheet for the year shows that inventory increased \$21,000, prepaid expenses decreased \$8,000, accounts payable (related to merchandise) decreased \$17,000, and accrued expenses payable increased \$11,000.

#### Instructions

Compute (a) cash payments to suppliers and (b) cash payments for operating expenses.

- E23-8 (Schedule of Net Cash Flow from Operating Activities—Indirect Method)** Messner Co. reported \$145,000 of net income for 2010. The accountant, in preparing the statement of cash flows, noted several items occurring during 2010 that might affect cash flows from operating activities. These items are listed below and on page 1291.

- Messner purchased 100 shares of treasury stock at a cost of \$20 per share. These shares were then resold at \$25 per share.
- Messner sold 100 shares of IBM common at \$200 per share. The acquisition cost of these shares was \$165 per share. This investment was shown on Messner's December 31, 2009, balance sheet as an available-for-sale security.
- Messner revised its estimate for bad debts. Before 2010, Messner's bad debt expense was 1% of its net sales. In 2010, this percentage was increased to 2%. Net sales for 2010 were \$500,000, and net accounts receivable decreased by \$12,000 during 2010.
- Messner issued 500 shares of its \$10 par common stock for a patent. The market value of the shares on the date of the transaction was \$23 per share.
- Depreciation expense is \$39,000.
- Messner Co. holds 30% of the Sanchez Company's common stock as a long-term investment. Sanchez Company reported \$27,000 of net income for 2010.

7. Sanchez Company paid a total of \$2,000 of cash dividends to all investees in 2010.
8. Messner declared a 10% stock dividend. One thousand shares of \$10 par common stock were distributed. The market price at date of issuance was \$20 per share.

**Instructions**

Prepare a schedule that shows the net cash flow from operating activities using the indirect method. Assume no items other than those listed above affected the computation of 2010 net cash flow from operating activities.

**•6 E23-9 (SCF—Direct Method)** Waubensee Corp. uses the direct method to prepare its statement of cash flows. Waubensee’s trial balances at December 31, 2010 and 2009, are as follows.

	December 31	
	2010	2009
<u>Debits</u>		
Cash	\$ 35,000	\$ 32,000
Accounts receivable	33,000	30,000
Inventory	31,000	47,000
Property, plant, & equipment	100,000	95,000
Unamortized bond discount	4,500	5,000
Cost of goods sold	250,000	380,000
Selling expenses	141,500	172,000
General and administrative expenses	137,000	151,300
Interest expense	4,300	2,600
Income tax expense	20,400	61,200
	<u>\$756,700</u>	<u>\$976,100</u>
<u>Credits</u>		
Allowance for doubtful accounts	\$ 1,300	\$ 1,100
Accumulated depreciation	16,500	13,500
Trade accounts payable	25,000	17,000
Income taxes payable	21,000	29,100
Deferred income taxes	5,300	4,600
8% callable bonds payable	45,000	20,000
Common stock	50,000	40,000
Additional paid-in capital	9,100	7,500
Retained earnings	44,700	64,600
Sales	538,800	778,700
	<u>\$756,700</u>	<u>\$976,100</u>

Additional information:

1. Waubensee purchased \$5,000 in equipment during 2010.
2. Waubensee allocated one-third of its depreciation expense to selling expenses and the remainder to general and administrative expenses.
3. Bad debt expense for 2010 was \$5,000, and writeoffs of uncollectible accounts totaled \$3,800.

**Instructions**

Determine what amounts Waubensee should report in its statement of cash flows for the year ended December 31, 2010, for the following items.

1. Cash collected from customers.
2. Cash paid to suppliers.
3. Cash paid for interest.
4. Cash paid for income taxes.
5. Cash paid for selling expenses.

**•2 •8 E23-10 (Classification of Transactions)** Following are selected balance sheet accounts of Sander Bros. Corp. at December 31, 2010 and 2009, and the increases or decreases in each account from 2009 to 2010. Also presented is selected income statement information for the year ended December 31, 2010, and additional information.

Selected balance sheet accounts	2010	2009	Increase (Decrease)
<u>Assets</u>			
Accounts receivable	\$ 34,000	\$ 24,000	\$ 10,000
Property, plant, and equipment	277,000	247,000	30,000
Accumulated depreciation	(178,000)	(167,000)	(11,000)

	2010	2009	Increase
<u>Liabilities and stockholders' equity</u>			
Bonds payable	\$ 49,000	\$46,000	\$ 3,000
Dividends payable	8,000	5,000	3,000
Common stock, \$1 par	22,000	19,000	3,000
Additional paid-in capital	9,000	3,000	6,000
Retained earnings	104,000	91,000	13,000

**Selected income statement information for the year ended December 31, 2010**

Sales revenue	\$155,000
Depreciation	38,000
Gain on sale of equipment	14,500
Net income	31,000

Additional information:

1. During 2010, equipment costing \$45,000 was sold for cash.
2. Accounts receivable relate to sales of merchandise.
3. During 2010, \$25,000 of bonds payable were issued in exchange for property, plant, and equipment. There was no amortization of bond discount or premium.

**Instructions**

Determine the category (operating, investing, or financing) and the amount that should be reported in the statement of cash flows for the following items.

1. Payments for purchase of property, plant, and equipment.
2. Proceeds from the sale of equipment.
3. Cash dividends paid.
4. Redemption of bonds payable.

**6** **E23-11 (SCF—Indirect Method)** Condensed financial data of Fairchild Company for 2010 and 2009 are presented below.

**FAIRCHILD COMPANY**  
**COMPARATIVE BALANCE SHEET**  
**AS OF DECEMBER 31, 2010 AND 2009**

	2011	2010
Cash	\$1,800	\$1,100
Receivables	1,750	1,300
Inventory	1,600	1,900
Plant assets	1,900	1,700
Accumulated depreciation	(1,200)	(1,170)
Long-term investments (Held-to-maturity)	1,300	1,470
	<u>\$7,150</u>	<u>\$6,300</u>
Accounts payable	\$1,200	\$ 800
Accrued liabilities	200	250
Bonds payable	1,400	1,650
Capital stock	1,900	1,700
Retained earnings	<u>2,450</u>	<u>1,900</u>
	<u>\$7,150</u>	<u>\$6,300</u>

**FAIRCHILD COMPANY**  
**INCOME STATEMENT**  
**FOR THE YEAR ENDED DECEMBER 31, 2010**

Sales	\$6,900
Cost of goods sold	<u>4,700</u>
Gross margin	2,200
Selling and administrative expense	<u>930</u>
Income from operations	1,270
Other revenues and gains	
Gain on sale of investments	<u>80</u>
Income before tax	1,350
Income tax expense	<u>540</u>
Net income	<u>\$ 810</u>

Additional information:

During the year, \$70 of common stock was issued in exchange for plant assets. No plant assets were sold in 2010. Cash dividends were \$260.

**Instructions**

Prepare a statement of cash flows using the indirect method.

- 6 E23-12 (SCF—Direct Method)** Data for Fairchild Company are presented in E23-11.

**Instructions**

Prepare a statement of cash flows using the direct method. (Do not prepare a reconciliation schedule.)

- 6 E23-13 (SCF—Direct Method)** Andrews Inc., a greeting card company, had the following statements prepared as of December 31, 2010.

<b>ANDREWS INC.</b>		
<b>COMPARATIVE BALANCE SHEET</b>		
<b>AS OF DECEMBER 31, 2010 AND 2009</b>		
	12/31/10	12/31/09
Cash	\$ 6,000	\$ 9,000
Accounts receivable	62,000	49,000
Short-term investments (Available-for-sale)	35,000	18,000
Inventories	40,000	60,000
Prepaid rent	5,000	4,000
Printing equipment	154,000	130,000
Accumulated depr.—equipment	(35,000)	(25,000)
Copyrights	46,000	50,000
Total assets	<u>\$313,000</u>	<u>\$295,000</u>
Accounts payable	\$ 46,000	\$ 42,000
Income taxes payable	4,000	6,000
Wages payable	8,000	4,000
Short-term loans payable	8,000	10,000
Long-term loans payable	60,000	67,000
Common stock, \$10 par	100,000	100,000
Contributed capital, common stock	30,000	30,000
Retained earnings	57,000	36,000
Total liabilities & stockholders' equity	<u>\$313,000</u>	<u>\$295,000</u>

<b>ANDREWS INC.</b>		
<b>INCOME STATEMENT</b>		
<b>FOR THE YEAR ENDING DECEMBER 31, 2010</b>		
Sales		\$338,150
Cost of goods sold		<u>175,000</u>
Gross margin		163,150
Operating expenses		<u>120,000</u>
Operating income		43,150
Interest expense	\$11,400	
Gain on sale of equipment	<u>2,000</u>	<u>9,400</u>
Income before tax		33,750
Income tax expense		<u>6,750</u>
Net income		<u>\$ 27,000</u>

Additional information:

- Dividends in the amount of \$6,000 were declared and paid during 2010.
- Depreciation expense and amortization expense are included in operating expenses.
- No unrealized gains or losses have occurred on the investments during the year.
- Equipment that had a cost of \$30,000 and was 70% depreciated was sold during 2010.

**Instructions**

Prepare a statement of cash flows using the direct method. (Do not prepare a reconciliation schedule.)

- 6** E23-14 (SCF—Indirect Method) Data for Andrews Inc. are presented in E23-13.

**Instructions**

Prepare a statement of cash flows using the indirect method.

- 6** E23-15 (SCF—Indirect Method) Presented below are data taken from the records of Morganstern Company.

	December 31, 2010	December 31, 2009
Cash	\$ 15,000	\$ 10,000
Current assets other than cash	85,000	58,000
Long-term investments	10,000	53,000
Plant assets	<u>335,000</u>	<u>215,000</u>
	<u>\$445,000</u>	<u>\$336,000</u>
Accumulated depreciation	\$ 20,000	\$ 40,000
Current liabilities	40,000	22,000
Bonds payable	75,000	—0—
Capital stock	254,000	254,000
Retained earnings	<u>56,000</u>	<u>20,000</u>
	<u>\$445,000</u>	<u>\$336,000</u>

Additional information:

- Held-to-maturity securities carried at a cost of \$43,000 on December 31, 2009, were sold in 2010 for \$34,000. The loss (not extraordinary) was incorrectly charged directly to Retained Earnings.
- Plant assets that cost \$60,000 and were 80% depreciated were sold during 2010 for \$8,000. The loss (not extraordinary) was incorrectly charged directly to Retained Earnings.
- Net income as reported on the income statement for the year was \$59,000.
- Dividends paid amounted to \$10,000.
- Depreciation charged for the year was \$28,000.

**Instructions**

Prepare a statement of cash flows for the year 2010 using the indirect method.

- 2 3 5** E23-16 (Cash Provided by Operating, Investing, and Financing Activities) The balance sheet data of Wyeth Company at the end of 2010 and 2009 follow.

	2010	2009
Cash	\$ 30,000	\$ 35,000
Accounts receivable (net)	55,000	45,000
Merchandise inventory	65,000	45,000
Prepaid expenses	15,000	25,000
Equipment	90,000	75,000
Accumulated depreciation—equipment	(18,000)	(8,000)
Land	<u>70,000</u>	<u>40,000</u>
	<u>\$307,000</u>	<u>\$257,000</u>
Accounts payable	\$ 65,000	\$ 52,000
Accrued expenses	15,000	18,000
Notes payable—bank, long-term	—0—	23,000
Bonds payable	30,000	—0—
Common stock, \$10 par	189,000	159,000
Retained earnings	<u>8,000</u>	<u>5,000</u>
	<u>\$307,000</u>	<u>\$257,000</u>

Land was acquired for \$30,000 in exchange for common stock, par \$30,000, during the year; all equipment purchased was for cash. Equipment costing \$13,000 was sold for \$3,000; book value of the equipment was \$6,000. Cash dividends of \$9,000 were declared and paid during the year.

**Instructions**

Compute net cash provided (used) by:

- Operating activities.
- Investing activities.
- Financing activities.

- E23-17 (SCF—Indirect Method and Balance Sheet)** Ochoa Inc., had the following condensed balance sheet at the end of operations for 2009.

<b>OCHOA INC.</b>			
<b>BALANCE SHEET</b>			
<b>DECEMBER 31, 2009</b>			
Cash	\$ 8,500	Current liabilities	\$ 15,000
Current assets other than cash	29,000	Long-term notes payable	25,500
Investments	20,000	Bonds payable	75,000
Plant assets (net)	67,500	Capital stock	24,500
Land	<u>40,000</u>	Retained earnings	<u>24,500</u>
	<u>\$165,000</u>		<u>\$165,000</u>

During 2010 the following occurred.

1. A tract of land was purchased for \$11,000.
2. Bonds payable in the amount of \$20,000 were retired at par.
3. An additional \$10,000 in capital stock was issued at par.
4. Dividends totaling \$9,375 were paid to stockholders.
5. Net income was \$30,250 after deducting depreciation of \$13,500.
6. Land was purchased through the issuance of \$22,500 in bonds.
7. Ochoa Inc. sold part of its investment portfolio for \$12,875. This transaction resulted in a gain of \$2,000 for the company. The company classifies the investments as available-for-sale.
8. Both current assets (other than cash) and current liabilities remained at the same amount.

#### Instructions

- (a) Prepare a statement of cash flows for 2010 using the indirect method.
- (b) Prepare the condensed balance sheet for Ochoa Inc. as it would appear at December 31, 2010.

- E23-18 (Partial SCF—Indirect Method)** The accounts below appear in the ledger of Popovich Company.

		Retained Earnings	Dr.	Cr.	Bal.
Jan. 1, 2010	Credit Balance				\$ 42,000
Aug. 15	Dividends (cash)		\$15,000		27,000
Dec. 31	Net Income for 2010			\$50,000	77,000
		Machinery	Dr.	Cr.	Bal.
Jan. 1, 2010	Debit Balance				\$140,000
Aug. 3	Purchase of Machinery		\$62,000		202,000
Sept. 10	Cost of Machinery Constructed		48,000		250,000
Nov. 15	Machinery Sold			\$66,000	184,000
		Accumulated Depreciation— Machinery	Dr.	Cr.	Bal.
Jan. 1, 2010	Credit Balance				\$ 84,000
Apr. 8	Extraordinary Repairs		\$21,000		63,000
Nov. 15	Accum. Depreciation on Machinery Sold		25,200		37,800
Dec. 31	Depreciation for 2010			\$16,800	54,600

#### Instructions

From the postings in the accounts above, indicate how the information is reported on a statement of cash flows by preparing a partial statement of cash flows using the indirect method. The loss on sale of equipment (November 15) was \$5,800.

- E23-19 (Worksheet Analysis of Selected Accounts)** Data for Popovich Company are presented in E23-18.

#### Instructions

Prepare entries in journal form for all adjustments that should be made on a worksheet for a statement of cash flows.

- E23-20 (Worksheet Analysis of Selected Transactions)** The transactions below took place during the year 2010.

- Convertible bonds payable with a par value of \$300,000 were exchanged for unissued common stock with a par value of \$300,000. The market price of both types of securities was par.
- The net income for the year was \$360,000.
- Depreciation expense for the building was \$90,000.
- Some old office equipment was traded in on the purchase of some newer office equipment and the following entry was made. (The exchange has commercial substance.)

Office Equipment	45,000	
Accum. Depreciation—Office Equipment	30,000	
Office Equipment		40,000
Cash		34,000
Gain on Disposal of Plant Assets		1,000

The Gain on Disposal of Plant Assets was credited to current operations as ordinary income.

- Dividends in the amount of \$123,000 were declared. They are payable in January of next year.

#### Instructions

Show by journal entries the adjustments that would be made on a worksheet for a statement of cash flows.

- E23-21 (Worksheet Preparation)** Below is the comparative balance sheet for Lowenstein Corporation.

	Dec. 31, 2010	Dec. 31, 2009
Cash	\$ 16,500	\$ 24,000
Short-term investments	25,000	19,000
Accounts receivable	43,000	45,000
Allowance for doubtful accounts	(1,800)	(2,000)
Prepaid expenses	4,200	2,500
Inventories	81,500	57,000
Land	50,000	50,000
Buildings	125,000	78,500
Accumulated depreciation—buildings	(30,000)	(23,000)
Equipment	53,000	46,000
Accumulated depreciation—equipment	(19,000)	(15,500)
Delivery equipment	39,000	39,000
Accumulated depreciation—delivery equipment	(22,000)	(20,500)
Patents	15,000	—
	<u>\$379,400</u>	<u>\$300,000</u>
Accounts payable	\$ 26,000	\$ 16,000
Short-term notes payable (trade)	4,000	6,000
Accrued payables	3,000	4,600
Mortgage payable	73,000	53,400
Bonds payable	50,000	62,500
Capital stock	140,000	102,000
Additional paid-in capital	10,000	4,000
Retained earnings	73,400	51,500
	<u>\$379,400</u>	<u>\$300,000</u>

Dividends in the amount of \$10,000 were declared and paid in 2010.

**Instructions**

From this information, prepare a worksheet for a statement of cash flows. Make reasonable assumptions as appropriate. The short-term investments are considered available-for-sale, and no unrealized gains or losses have occurred on these securities.

See the book's companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), for a set of B Exercises.

**PROBLEMS**

•6•7•8

**P23-1 (SCF—Indirect Method)** The following is Sullivan Corp.'s comparative balance sheet accounts at December 31, 2010 and 2009, with a column showing the increase (decrease) from 2009 to 2010.

COMPARATIVE BALANCE SHEETS			
	2010	2009	Increase (Decrease)
Cash	\$ 815,000	\$ 700,000	\$115,000
Accounts receivable	1,128,000	1,168,000	(40,000)
Inventories	1,850,000	1,715,000	135,000
Property, plant and equipment	3,307,000	2,967,000	340,000
Accumulated depreciation	(1,165,000)	(1,040,000)	(125,000)
Investment in Myers Co.	310,000	275,000	35,000
Loan receivable	250,000	—	250,000
<b>Total assets</b>	<u><b>\$6,495,000</b></u>	<u><b>\$5,785,000</b></u>	<u><b>\$710,000</b></u>
Accounts payable	\$1,015,000	\$ 955,000	\$ 60,000
Income taxes payable	30,000	50,000	(20,000)
Dividends payable	80,000	100,000	(20,000)
Capital lease obligation	400,000	—	400,000
Capital stock, common, \$1 par	500,000	500,000	—
Additional paid-in capital	1,500,000	1,500,000	—
Retained earnings	<u>2,970,000</u>	<u>2,680,000</u>	<u>290,000</u>
<b>Total liabilities and stockholders' equity</b>	<u><b>\$6,495,000</b></u>	<u><b>\$5,785,000</b></u>	<u><b>\$710,000</b></u>

Additional information:

- On December 31, 2009, Sullivan acquired 25% of Myers Co.'s common stock for \$275,000. On that date, the carrying value of Myers's assets and liabilities, which approximated their fair values, was \$1,100,000. Myers reported income of \$140,000 for the year ended December 31, 2010. No dividend was paid on Myers's common stock during the year.
- During 2010, Sullivan loaned \$300,000 to TLC Co., an unrelated company. TLC made the first semi-annual principal repayment of \$50,000, plus interest at 10%, on December 31, 2010.
- On January 2, 2010, Sullivan sold equipment costing \$60,000, with a carrying amount of \$38,000, for \$40,000 cash.
- On December 31, 2010, Sullivan entered into a capital lease for an office building. The present value of the annual rental payments is \$400,000, which equals the fair value of the building. Sullivan made the first rental payment of \$60,000 when due on January 2, 2011.
- Net income for 2010 was \$370,000.
- Sullivan declared and paid cash dividends for 2010 and 2009 as shown below.

	2010	2009
Declared	December 15, 2010	December 15, 2009
Paid	February 28, 2011	February 28, 2010
Amount	\$80,000	\$100,000

**Instructions**

Prepare a statement of cash flows for Sullivan Corp. for the year ended December 31, 2010, using the indirect method.

(AICPA adapted)

•6 •7 •8

**P23-2 (SCF—Indirect Method)** The comparative balance sheets for Hinckley Corporation show the following information.

	December 31	
	2010	2009
Cash	\$ 33,500	\$13,000
Accounts receivable	12,250	10,000
Inventory	12,000	9,000
Investments	–0–	3,000
Building	–0–	29,750
Equipment	45,000	20,000
Patent	5,000	6,250
	<u>\$107,750</u>	<u>\$91,000</u>
Allowance for doubtful accounts	\$ 3,000	\$ 4,500
Accumulated depreciation on equipment	2,000	4,500
Accumulated depreciation on building	–0–	6,000
Accounts payable	5,000	3,000
Dividends payable	–0–	5,000
Notes payable, short-term (nontrade)	3,000	4,000
Long-term notes payable	31,000	25,000
Common stock	43,000	33,000
Retained earnings	<u>20,750</u>	<u>6,000</u>
	<u>\$107,750</u>	<u>\$91,000</u>

Additional data related to 2010 are as follows.

1. Equipment that had cost \$11,000 and was 40% depreciated at time of disposal was sold for \$2,500.
2. \$10,000 of the long-term note payable was paid by issuing common stock.
3. Cash dividends paid were \$5,000.
4. On January 1, 2010, the building was completely destroyed by a flood. Insurance proceeds on the building were \$30,000 (net of \$2,000 taxes).
5. Investments (available-for-sale) were sold at \$1,700 above their cost. The company has made similar sales and investments in the past.
6. Cash was paid for the acquisition of equipment.
7. A long-term note for \$16,000 was issued for the acquisition of equipment.
8. Interest of \$2,000 and income taxes of \$6,500 were paid in cash.

**Instructions**

Prepare a statement of cash flows using the indirect method. Flood damage is unusual and infrequent in that part of the country.

•6

**P23-3 (SCF—Direct Method)** Mortonson Company has not yet prepared a formal statement of cash flows for the 2010 fiscal year. Comparative balance sheets as of December 31, 2009 and 2010, and a statement of income and retained earnings for the year ended December 31, 2010, are presented below.

**MORTONSON COMPANY**  
**STATEMENT OF INCOME AND RETAINED EARNINGS**  
**FOR THE YEAR ENDED DECEMBER 31, 2010**

**STATEMENT OF RETAINED EARNINGS  
FOR THE YEAR ENDED DECEMBER 31, 2010**

January 1, 2010	Balance (deficit)	\$ (450,000)
March 31, 2010	Net income for first quarter of 2010	25,000
April 1, 2010	Transfer from paid-in capital	425,000
	Balance	—0—
December 31, 2010	Net income for last three quarters of 2010	90,000
	Dividend declared—payable January 21, 2011	(70,000)
	Balance	<u>\$ 20,000</u>

Your working papers from the audit contain the following information:

- On April 1, 2010, the existing deficit was written off against paid-in capital created by reducing the stated value of the no-par stock.
- On November 1, 2010, 29,600 shares of no-par stock were sold for \$257,000. The board of directors voted to regard \$5 per share as stated capital.
- A patent was purchased for \$15,000.
- During the year, machinery that had a cost basis of \$16,400 and on which there was accumulated depreciation of \$5,200 was sold for \$9,000. No other plant assets were sold during the year.
- The 12%, 20-year bonds were dated and issued on January 2, 1998. Interest was payable on June 30 and December 31. They were sold originally at 106. These bonds were retired at 100.9 plus accrued interest on March 31, 2010.
- The 8%, 40-year bonds were dated January 1, 2010, and were sold on March 31 at 97 plus accrued interest. Interest is payable semiannually on June 30 and December 31. Expense of issuance was \$839.
- Alexander Corporation acquired 70% control in Crimson Company on January 2, 2010, for \$100,000. The income statement of Crimson Company for 2010 shows a net income of \$15,000.
- Extraordinary repairs to buildings of \$7,200 were charged to Accumulated Depreciation—Buildings.
- Interest paid in 2010 was \$10,500 and income taxes paid were \$34,000.

**Instructions**

From the information given, prepare a statement of cash flows using the indirect method. A worksheet is not necessary, but the principal computations should be supported by schedules or skeleton ledger accounts. The company uses straight-line amortization for bond interest.

**P23-6 (SCF—Indirect Method, and Net Cash Flow from Operating Activities, Direct Method)** Comparative balance sheet accounts of Marcus Inc. are presented below.

<b>MARCUS INC.</b>		
<b>COMPARATIVE BALANCE SHEET ACCOUNTS</b>		
<b>AS OF DECEMBER 31, 2010 AND 2009</b>		
<b>Debit Accounts</b>	December 31	
	2010	2009
Cash	\$ 42,000	\$ 33,750
Accounts Receivable	70,500	60,000
Merchandise Inventory	30,000	24,000
Investments (available-for-sale)	22,250	38,500
Machinery	30,000	18,750
Buildings	67,500	56,250
Land	7,500	7,500
	<u>\$269,750</u>	<u>\$238,750</u>
<b>Credit Accounts</b>		
Allowance for Doubtful Accounts	\$ 2,250	\$ 1,500
Accumulated Depreciation—Machinery	5,625	2,250
Accumulated Depreciation—Buildings	13,500	9,000
Accounts Payable	35,000	24,750
Accrued Payables	3,375	2,625
Long-Term Note Payable	21,000	31,000
Common Stock, no par	150,000	125,000
Retained Earnings	39,000	42,625
	<u>\$269,750</u>	<u>\$238,750</u>

Additional data (ignoring taxes):

1. Net income for the year was \$42,500.
2. Cash dividends declared and paid during the year were \$21,125.
3. A 20% stock dividend was declared during the year. \$25,000 of retained earnings was capitalized.
4. Investments that cost \$25,000 were sold during the year for \$28,750.
5. Machinery that cost \$3,750, on which \$750 of depreciation had accumulated, was sold for \$2,200.

Marcus's 2010 income statement follows (ignoring taxes).

Sales	\$540,000
Less: Cost of goods sold	<u>380,000</u>
Gross margin	160,000
Less: Operating expenses (includes \$8,625 depreciation and \$5,400 bad debts)	<u>120,450</u>
Income from operations	39,550
Other: Gain on sale of investments	\$3,750
Loss on sale of machinery	<u>(800)</u>
Net income	<u>\$ 42,500</u>

**Instructions**

- (a) Compute net cash flow from operating activities using the direct method.
- (b) Prepare a statement of cash flows using the indirect method.

**P23-7 (SCF—Direct and Indirect Methods from Comparative Financial Statements)** Chapman Company, a major retailer of bicycles and accessories, operates several stores and is a publicly traded company. The comparative statement of financial position and income statement for Chapman as of May 31, 2010, are shown on the next page. The company is preparing its statement of cash flows.

**CHAPMAN COMPANY**

**CHAPMAN COMPANY**  
**INCOME STATEMENT**  
**FOR THE YEAR ENDED MAY 31, 2010**

Sales	\$1,255,250
Cost of merchandise sold	<u>722,000</u>
Gross profit	<u>533,250</u>
Expenses	
Salary expense	252,100
Interest expense	75,000
Other expenses	8,150
Depreciation expense	<u>25,000</u>
Total expenses	<u>360,250</u>
Operating income	173,000
Income tax expense	<u>43,000</u>
Net income	<u>\$ 130,000</u>

The following is additional information concerning Chapman's transactions during the year ended May 31, 2010.

- All sales during the year were made on account.
- All merchandise was purchased on account, comprising the total accounts payable account.
- Plant assets costing \$98,000 were purchased by paying \$28,000 in cash and issuing 7,000 shares of stock.
- The "other expenses" are related to prepaid items.
- All income taxes incurred during the year were paid during the year.
- In order to supplement its cash, Chapman issued 2,000 shares of common stock at par value.
- There were no penalties assessed for the retirement of bonds.
- Cash dividends of \$105,000 were declared and paid at the end of the fiscal year.

**Instructions**

- Compare and contrast the direct method and the indirect method for reporting cash flows from operating activities.
- Prepare a statement of cash flows for Chapman Company for the year ended May 31, 2010, using the direct method. Be sure to support the statement with appropriate calculations. (A reconciliation of net income to net cash provided is not required.)
- Using the indirect method, calculate only the net cash flow from operating activities for Chapman Company for the year ended May 31, 2010.

**P23-8 (SCF—Direct and Indirect Methods)** Comparative balance sheet accounts of Sharpe Company are presented below.

<b>SHARPE COMPANY</b>			
<b>COMPARATIVE BALANCE SHEET ACCOUNTS</b>			
<b>AS OF DECEMBER 31</b>			
<u>Debit Balances</u>	<u>2010</u>	<u>2009</u>	
Cash	\$ 70,000	\$ 51,000	
Accounts Receivable	155,000	130,000	
Merchandise Inventory	75,000	61,000	
Investments (Available-for-sale)	55,000	85,000	
Equipment	70,000	48,000	
Buildings	145,000	145,000	
Land	40,000	25,000	
Totals	<u>\$610,000</u>	<u>\$545,000</u>	
<u>Credit Balances</u>			
Allowance for Doubtful Accounts	\$ 10,000	\$ 8,000	
Accumulated Depreciation—Equipment	21,000	14,000	
Accumulated Depreciation—Building	37,000	28,000

Income Taxes Payable	12,000	10,000	
Long-Term Notes Payable	62,000	70,000	
Common Stock	310,000	260,000	
Retained Earnings	92,000	95,000	
Totals	<u>\$610,000</u>	<u>\$545,000</u>	

Additional data:

- Equipment that cost \$10,000 and was 60% depreciated was sold in 2010.
- Cash dividends were declared and paid during the year.
- Common stock was issued in exchange for land.
- Investments that cost \$35,000 were sold during the year.
- There were no write-offs of uncollectible accounts during the year.

Sharpe's 2010 income statement is as follows.

Sales	\$950,000
Less: Cost of goods sold	<u>600,000</u>
Gross profit	350,000
Less: Operating expenses (includes depreciation expense and bad debt expense)	<u>250,000</u>
Income from operations	100,000
Other revenues and expenses	
Gain on sale of investments	\$15,000
Loss on sale of equipment	<u>(3,000)</u>
Income before taxes	112,000
Income taxes	<u>45,000</u>
Net income	<u>\$ 67,000</u>

**Instructions**

- Compute net cash provided by operating activities under the direct method.
- Prepare a statement of cash flows using the indirect method.

•6 •7 •8

**P23-9 (Indirect SCF)** Dingel Corporation has contracted with you to prepare a statement of cash flows. The controller has provided the following information.

	December 31	
	2010	2009
Cash	\$ 38,500	\$13,000
Accounts receivable	12,250	10,000
Inventory	12,000	10,000
Investments	–0–	3,000
Building	–0–	29,750
Equipment	40,000	20,000
Copyright	5,000	5,250
Totals	<u>\$107,750</u>	<u>\$91,000</u>
Allowance for doubtful accounts	\$ 3,000	\$ 4,500
Accumulated depreciation on equipment	2,000	4,500
Accumulated depreciation on building	–0–	6,000
Accounts payable	5,000	4,000
Dividends payable	–0–	5,000
Notes payable, short-term (nontrade)	3,000	4,000
Long-term notes payable	36,000	25,000
Common stock	38,000	33,000
Retained earnings	20,750	5,000
	<u>\$107,750</u>	<u>\$91,000</u>

Additional data related to 2010 are as follows.

1. Equipment that had cost \$11,000 and was 30% depreciated at time of disposal was sold for \$2,500.
2. \$5,000 of the long-term note payable was paid by issuing common stock.
3. Cash dividends paid were \$5,000.
4. On January 1, 2010, the building was completely destroyed by a flood. Insurance proceeds on the building were \$33,000 (net of \$4,000 taxes).
5. Investments (available-for-sale) were sold at \$1,500 above their cost. The company has made similar sales and investments in the past.
6. Cash and long-term note for \$16,000 were given for the acquisition of equipment.
7. Interest of \$2,000 and income taxes of \$5,000 were paid in cash.

**Instructions**

- (a) Use the indirect method to analyze the above information and prepare a statement of cash flows for Dingel. Flood damage is unusual and infrequent in that part of the country.
- (b) What would you expect to observe in the operating, investing, and financing sections of a statement of cash flows of:
  - (1) A severely financially troubled firm?
  - (2) A recently formed firm that is experiencing rapid growth?

**CONCEPTS FOR ANALYSIS**

**CA23-1 (Analysis of Improper SCF)** The following statement was prepared by Maloney Corporation’s accountant.

<b>MALONEY CORPORATION</b>	
<b>STATEMENT OF SOURCES AND APPLICATION OF CASH</b>	
<b>FOR THE YEAR ENDED SEPTEMBER 30, 2010</b>	
Sources of cash	
Net income	\$111,000
Depreciation and depletion	70,000
Increase in long-term debt	179,000
Changes in current receivables and inventories, less current liabilities (excluding current maturities of long-term debt)	14,000
	<u>\$374,000</u>

Application of cash	
Cash dividends	\$ 60,000
Expenditure for property, plant, and equipment	214,000
Investments and other uses	20,000
Change in cash	<u>80,000</u>
	<u>\$374,000</u>

The following additional information relating to Maloney Corporation is available for the year ended September 30, 2010.

- Wage and salary expense attributable to stock option plans was \$25,000 for the year.
- |   |                  |
|---|------------------|
| Expenditures for property, plant, and equipment             | \$250,000        |
| Proceeds from retirements of property, plant, and equipment | <u>36,000</u>    |
| Net expenditures  | <u>\$214,000</u> |
- A stock dividend of 10,000 shares of Maloney Corporation common stock was distributed to common stockholders on April 1, 2010, when the per share market price was \$7 and par value was \$1.
- On July 1, 2010, when its market price was \$6 per share, 16,000 shares of Maloney Corporation common stock were issued in exchange for 4,000 shares of preferred stock.
- |                      |                  |
|----------------------|------------------|
| Depreciation expense | \$ 65,000        |
| Depletion expense    | <u>5,000</u>     |
|                      | <u>\$ 70,000</u> |
- |                            |                  |
|----------------------------|------------------|
| Increase in long-term debt | \$620,000        |
| Retirement of debt         | <u>441,000</u>   |
| Net increase               | <u>\$179,000</u> |

**Instructions**

- In general, what are the objectives of a statement of the type shown above for Maloney Corporation? Explain.
- Identify the weaknesses in the form and format of Maloney Corporation’s statement of cash flows without reference to the additional information. (Assume adoption of the indirect method.)
- For each of the six items of additional information for the statement of cash flows, indicate the preferable treatment and explain why the suggested treatment is preferable.

(AICPA adapted)

**CA23-2 (SCF Theory and Analysis of Improper SCF)** Teresa Ramirez and Lenny Traylor are examining the following statement of cash flows for Pacific Clothing Store’s first year of operations.

**PACIFIC CLOTHING STORE  
STATEMENT OF CASH FLOWS  
FOR THE YEAR ENDED JANUARY 31, 2010**

Sources of cash	
From sales of merchandise	\$ 382,000
From sale of capital stock	380,000
From sale of investment	120,000
From depreciation	80,000
From issuance of note for truck	30,000
From interest on investments	<u>8,000</u>
Total sources of cash	<u>1,000,000</u>
Uses of cash	
For purchase of fixtures and equipment	330,000
For merchandise purchased for resale	253,000
For operating expenses (including depreciation)	170,000
For purchase of investment	95,000
For purchase of truck by issuance of note	30,000
For purchase of treasury stock	10,000
For interest on note	<u>3,000</u>
Total uses of cash	<u>891,000</u>
Net increase in cash	<u>\$ 109,000</u>

Teresa claims that Pacific’s statement of cash flows is an excellent portrayal of a superb first year, with cash increasing \$109,000. Lenny replies that it was not a superb first year—that the year was an operating failure, the statement was incorrectly presented, and \$109,000 is not the actual increase in cash.

**Instructions**

- (a) With whom do you agree, Teresa or Lenny? Explain your position.
- (b) Using the data provided, prepare a statement of cash flows in proper indirect method form. The only noncash items in income are depreciation and the gain from the sale of the investment (purchase and sale are related).

**CA23-3 (SCF Theory and Analysis of Transactions)** Ashley Company is a young and growing producer of electronic measuring instruments and technical equipment. You have been retained by Ashley to advise it in the preparation of a statement of cash flows using the indirect method. For the fiscal year ended October 31, 2010, you have obtained the following information concerning certain events and transactions of Ashley.

1. The amount of reported earnings for the fiscal year was \$700,000, which included a deduction for an extraordinary loss of \$110,000 (see item 5 below).
2. Depreciation expense of \$315,000 was included in the income statement.
3. Uncollectible accounts receivable of \$40,000 were written off against the allowance for doubtful accounts. Also, \$51,000 of bad debt expense was included in determining income for the fiscal year, and the same amount was added to the allowance for doubtful accounts.
4. A gain of \$6,000 was realized on the sale of a machine. It originally cost \$75,000, of which \$30,000 was undepreciated on the date of sale.
5. On April 1, 2010, lightning caused an uninsured building loss of \$110,000 (\$180,000 loss, less reduction in income taxes of \$70,000). This extraordinary loss was included in determining income as indicated in 1 above.
6. On July 3, 2010, building and land were purchased for \$700,000. Ashley gave in payment \$75,000 cash, \$200,000 market value of its unissued common stock, and signed a \$425,000 mortgage note payable.
7. On August 3, 2010, \$800,000 face value of Ashley's 10% convertible debentures was converted into \$150,000 par value of its common stock. The bonds were originally issued at face value.

**Instructions**

Explain whether each of the seven numbered items above is a source or use of cash, and explain how it should be disclosed in Ashley's statement of cash flows for the fiscal year ended October 31, 2010. If any item is neither a source nor a use of cash, explain why it is not, and indicate the disclosure, if any, that should be made of the item in Ashley's statement of cash flows for the fiscal year ended October 31, 2010.

**CA23-4 (Analysis of Transactions' Effect on SCF)** Each of the following items must be considered in preparing a statement of cash flows for Cruz Fashions Inc. for the year ended December 31, 2010.

1. Fixed assets that had cost \$20,000 6½ years before and were being depreciated on a 10-year basis, with no estimated scrap value, were sold for \$4,750.
2. During the year, goodwill of \$15,000 was considered impaired and was completely written off to expense.
3. During the year, 500 shares of common stock with a stated value of \$25 a share were issued for \$32 a share.
4. The company sustained a net loss for the year of \$2,100. Depreciation amounted to \$2,000 and patent amortization was \$400.
5. Uncollectible accounts receivable in the amount of \$2,000 were written off against the Allowance for Doubtful Accounts.
6. Investments (available-for-sale) that cost \$12,000 when purchased 4 years earlier were sold for \$10,600. The loss was considered ordinary.
7. Bonds payable with a par value of \$24,000 on which there was an unamortized bond premium of \$2,000 were redeemed at 101. The gain was credited to ordinary income.

**Instructions**

For each item, state where it is to be shown in the statement and then how you would present the necessary information, including the amount. Consider each item to be independent of the others. Assume that correct entries were made for all transactions as they took place.

**CA23-5 (Purpose and Elements of SCF)** GAAP requires the statement of cash flows be presented when financial statements are prepared.

**Instructions**

- (a) Explain the purposes of the statement of cash flows.
- (b) List and describe the three categories of activities that must be reported in the statement of cash flows.
- (c) Identify and describe the two methods that are allowed for reporting cash flows from operations.
- (d) Describe the financial statement presentation of noncash investing and financing transactions. Include in your description an example of a noncash investing and financing transaction.

**CA23-6 (Cash Flow Reporting)** Brockman Guitar Company is in the business of manufacturing top-quality, steel-string folk guitars. In recent years the company has experienced working capital problems resulting from the procurement of factory equipment, the unanticipated buildup of receivables and inventories, and the payoff of a balloon mortgage on a new manufacturing facility. The founder and president of the company, Barbara Brockman, has attempted to raise cash from various financial institutions, but to no avail because of the company's poor performance in recent years. In particular, the company's lead bank, First Financial, is especially concerned about Brockman's inability to maintain a positive cash position. The commercial loan officer from First Financial told Barbara, "I can't even consider your request for capital financing unless I see that your company is able to generate positive cash flows from operations."

Thinking about the banker's comment, Barbara came up with what she believes is a good plan: With a more attractive statement of cash flows, the bank might be willing to provide long-term financing. To "window dress" cash flows, the company can sell its accounts receivables to factors and liquidate its raw materials inventories. These rather costly transactions would generate lots of cash. As the chief accountant for Brockman Guitar, it is your job to tell Barbara what you think of her plan.

#### Instructions

Answer the following questions.

- What are the ethical issues related to Barbara Brockman's idea?
- What would you tell Barbara Brockman?

## USING YOUR JUDGMENT

### FINANCIAL REPORTING

#### Financial Reporting Problem

#### The Procter & Gamble Company (P&G)

The financial statements of **P&G** are presented in Appendix 5B or can be accessed at the book's companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso).

#### Instructions

Refer to P&G's financial statements and the accompanying notes to answer the following questions.

- Which method of computing net cash provided by operating activities does P&G use? What were the amounts of net cash provided by operating activities for the years 2005, 2006, and 2007? Which two items were most responsible for the increase in net cash provided by operating activities in 2007?
- What was the most significant item in the cash flows used for investing activities section in 2007? What was the most significant item in the cash flows used for financing activities section in 2007?
- Where is "deferred income taxes" reported in P&G's statement of cash flows? Why does it appear in that section of the statement of cash flows?
- Where is depreciation reported in P&G's statement of cash flows? Why is depreciation added to net income in the statement of cash flows?

#### Comparative Analysis Case

*The Coca-Cola Company*

#### The Coca-Cola Company and PepsiCo, Inc.

**PEPSICO**

#### Instructions

Go to the book's companion website and use information found there to answer the following questions related to **The Coca-Cola Company** and **PepsiCo, Inc.**

- What method of computing net cash provided by operating activities does Coca-Cola use? What method does PepsiCo use? What were the amounts of cash provided by operating activities reported by Coca-Cola and PepsiCo in 2007?
- What was the most significant item reported by Coca-Cola and PepsiCo in 2007 in their investing activities sections? What is the most significant item reported by Coca-Cola and PepsiCo in 2007 in their financing activities sections?
- What were these two companies' trends in net cash provided by operating activities over the period 2005 to 2007?

- (d) Where is “depreciation and amortization” reported by Coca-Cola and PepsiCo in their statements of cash flows? What is the amount and why does it appear in that section of the statement of cash flows?
- (e) Based on the information contained in Coca-Cola’s and PepsiCo’s financial statements, compute the following 2007 ratios for each company. These ratios require the use of statement of cash flows data. (These ratios were covered in Chapter 5.)
- (1) Current cash debt coverage ratio.
  - (2) Cash debt coverage ratio.
- (f) What conclusions concerning the management of cash can be drawn from the ratios computed in (e)?

## Financial Statement Analysis Case

### Vermont Teddy Bear Co.

Founded in the early 1980s, the **Vermont Teddy Bear Co.** designs and manufactures American-made teddy bears and markets them primarily as gifts called Bear-Grams or Teddy Bear-Grams. Bear-Grams are personalized teddy bears delivered directly to the recipient for special occasions such as birthdays and anniversaries. The Shelburne, Vermont, company’s primary markets are New York, Boston, and Chicago. Sales have jumped dramatically in recent years. Such dramatic growth has significant implications for cash flows. Provided below are the cash flow statements for two recent years for the company.

	Current Year	Prior Year
Cash flows from operating activities:		
Net income	\$ 17,523	\$ 838,955
Adjustments to reconcile net income to net cash provided by operating activities		
Deferred income taxes	(69,524)	(146,590)
Depreciation and amortization	316,416	181,348
Changes in assets and liabilities:		
Accounts receivable, trade	(38,267)	(25,947)
Inventories	(1,599,014)	(1,289,293)
Prepaid and other current assets	(444,794)	(113,205)
Deposits and other assets	(24,240)	(83,044)
Accounts payable	2,017,059	(284,567)
Accrued expenses	61,321	170,755
Accrued interest payable, debentures	—	(58,219)
Other	—	(8,960)
Income taxes payable	—	117,810
Net cash provided by (used for) operating activities	236,480	(700,957)
Net cash used for investing activities	(2,102,892)	(4,422,953)
Net cash (used for) provided by financing activities	(315,353)	9,685,435
Net change in cash and cash equivalents	(2,181,765)	4,561,525
Other information:		
Current liabilities	\$ 4,055,465	\$ 1,995,600
Total liabilities	4,620,085	2,184,386
Net sales	20,560,566	17,025,856

### Instructions

- (a) Note that net income in the current year was only \$17,523 compared to prior-year income of \$838,955, but cash flow from operations was \$236,480 in the current year and a negative \$700,957 in the prior year. Explain the causes of this apparent paradox.
- (b) Evaluate Vermont Teddy Bear’s liquidity, solvency, and profitability for the current year using cash flow-based ratios.

### International Reporting Case

As noted in the chapter, there is international diversity in the preparation of the statement of cash flows. For example, under International Accounting Standards companies may choose how to classify dividends and interest in the cash flow statement. In some countries, like Brazil, a cash flow statement is not required. **Embraer**, a Brazilian aircraft manufacturer, prepared a statement of changes in financial position, rather than a statement of cash flows.

**Instructions**

Refer to Embraer's recent statement of changes in financial position below, to answer the following questions.

- Briefly discuss at least two similarities between Embraer's statement of changes in financial position and a statement of cash flows prepared according to U.S. GAAP.
- Briefly discuss at least two differences between Embraer's statement of changes in financial position and a statement of cash flows prepared according to U.S. GAAP.

<b>Embraer</b>	
<b>Consolidated Statement of Changes in Financial Position</b>	
<b>(in thousands of Brazilian reais)</b>	
<b>Sources of Funds</b>	
Provided from operations	
Net income	1,255,833
Items not affecting working capital	
Equity in unconsolidated subsidiary	
Translation losses on foreign investments	19,613
Minority interest	8,618
Depreciation and amortization	221,554
Net book value of permanent asset disposal	799
Interest on long-term items added to principal, net	(25,759)
Net monetary and exchange variations on long-term items	(201,030)
Provision for losses	34,268
Long-term deferred income and social contribution taxes	(47,765)
Provisions for contingencies	57,930
Funds provided from operations	<u>1,324,061</u>
From shareholders	
Capital increase	<u>9,524</u>
From third parties	
Increase in long-term liabilities	
Customers' advances	257,528
Loans	1,317,535
Accounts payable and other liabilities	964,260
Tax incentives	5,672
Transfers to current asset	1,042,182
Increase in minority interest	17,997
Funds provided from third parties	<u>3,605,174</u>
Total sources	<u>4,938,759</u>
<b>Applications of Funds</b>	
Increase in noncurrent assets	1,390,520
Investments	41,219
Property plant and equipment	109,656
Deferred charges	415,954
Transfers to current liabilities	731,098
Interest on capital	585,173
Total applications	<u>3,273,620</u>
<b>Increase in working capital</b>	<u>1,665,139</u>
<b>Working capital—end of year</b>	
Current assets	10,329,032
Current liabilities	<u>5,420,966</u>
	<u>4,908,066</u>
<b>Working capital—beginning of year</b>	<u>3,242,927</u>
<b>Increase in working capital</b>	<u>1,665,139</u>

## BRIDGE TO THE PROFESSION

### Professional Research: FASB Codification

As part of the year-end accounting process for your company, you are preparing the statement of cash flows according to GAAP. One of your team, a finance major, believes the statement should be prepared to report the change in working capital, because analysts many times use working capital in ratio analysis. Your supervisor would like research conducted to verify the basis for preparing the statement of cash flows.

#### Instructions

Access the FASB Codification at <http://asc.fasb.org/home> to conduct research using the Codification Research System to prepare responses to the following items. Provide Codification references for your responses.

- What is the primary objective for the statement of cash flows? Is working capital the basis for meeting this objective?
- What information is provided in a statement of cash flows?
- List some of the typical cash inflows and outflows from operations.

### Professional Simulation

Go to the book's companion website, at [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), to find an interactive problem that simulates the computerized CPA exam. The professional simulation for this chapter asks you to address questions related to the accounting for the statement of cash flows.

**Remember to check the book's companion website to find additional resources for this chapter.**

## CHAPTER 24

# FULL DISCLOSURE IN FINANCIAL REPORTING

### LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- 1 Review the full disclosure principle and describe implementation problems.
- 2 Explain the use of notes in financial statement preparation.
- 3 Discuss the disclosure requirements for major business segments.
- 4 Describe the accounting problems associated with interim reporting.
- 5 Identify the major disclosures in the auditor's report.
- 6 Understand management's responsibilities for financials.
- 7 Identify issues related to financial forecasts and projections.
- 8 Describe the profession's response to fraudulent financial reporting.

### HIGH-QUALITY FINANCIAL REPORTING—ALWAYS IN FASHION

Here are excerpts from leading experts regarding the importance of high-quality financial reporting:  
Warren E. Buffett, Chairman and Chief Executive Officer, **Berkshire Hathaway Inc.:**

Financial reporting for Berkshire Hathaway, and for me personally, is the beginning of every decision that we make around here in terms of capital. I'm punching out 10-Ks and 10-Qs every single day. We look at the numbers and try to evaluate the quality of the financial reporting, and then we try to figure out what that means for the bonds and stocks that we're looking at, and thinking of either buying or selling.

Judy Lewent, Executive Vice President and Chief Financial Officer, **Merck & Co., Inc.**

. . . Higher standards, when properly implemented, drive excellence. I can make a parallel to the pharmaceutical industry. If you look around the world at where innovations come from, economists have studied and seen that where regulatory standards are the highest is where innovation is also the highest.

Floyd Norris, Chief Financial Correspondent, the **New York Times:**

We are in a situation now in our society where the temptations to provide "bad" financial reporting are probably greater than they used to be. The need to get the stock price up, or to keep it up, is intense. So, the temptation to play games, the temptation to manage earnings—some of which can be legitimate and some of which cannot be—is probably greater than it used to be.

Abby Joseph Cohen, Chair, Investment Policy Committee, **Goldman, Sachs & Co.:**

High-quality financial reporting is perhaps the most important thing we can expect from companies. For investors to make good decisions—whether those investors are buying stocks or bonds or making private investments—they need to know the truth. And we think that when information is as clear as possible and is reported as frequently as makes sense, investors can do their jobs as best they can.

We can also get insight into the importance of high-quality reporting based on the market assessment of companies perceived to have poor-quality reporting. In a recent quarter, **Coach, Inc.** stopped reporting as separate items sales from regular stores (full price) and factory outlets. As a result, readers of its financial statements have a hard time determining the source of Coach's sales growth. Analysts are especially concerned that the less-transparent reporting may obscure slowing sales at its regular stores, as consumers cut down on luxury goods in the sluggish economy. Did Coach's stock price suffer as a result of this lower-quality reporting? You bet, as shown in the price graph on the right.

Since the change in reporting in 2007, Coach's stock price has been down 34 percent. As one analyst noted, "It's never a good sign when you reduce transparency . . . It's a sign of weakness."

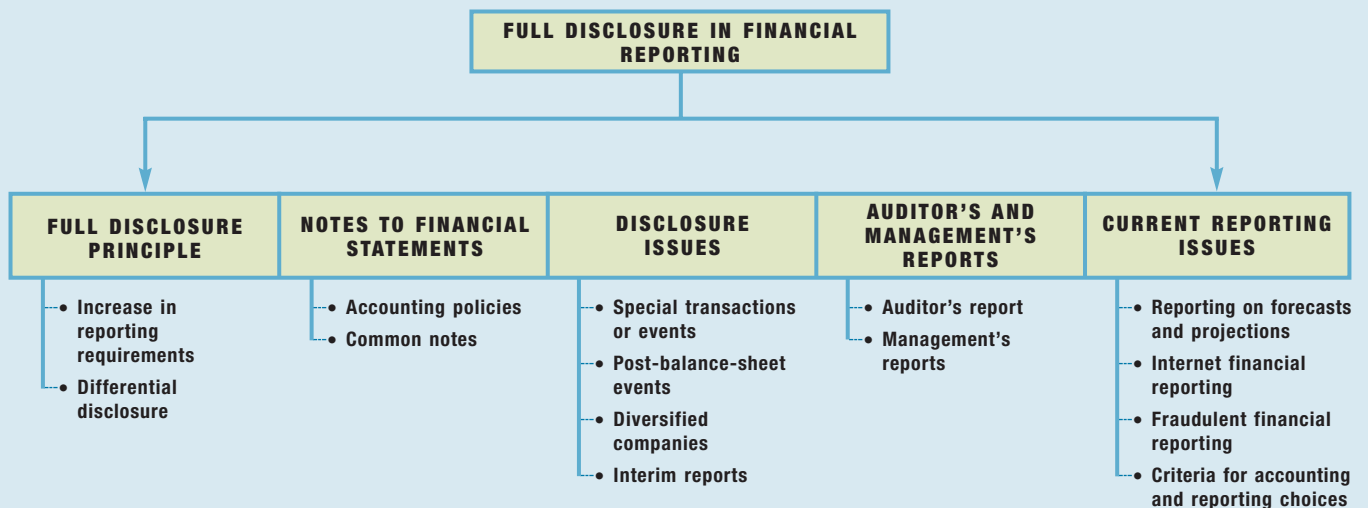

In short, the analysts' comments above illustrate why high-quality reporting is always in fashion—for companies, investors, and the capital markets. And, as the Coach example illustrates, full disclosure is at the heart of high-quality reporting.

Sources: Excerpts taken from video entitled "Financially Correct with Ben Stein," Financial Accounting Standards Board (Norwalk, Conn.: FASB, 2002). By permission. See also J. Porter, "As Belts Tighten, Coach Feels the Pinch," *BusinessWeek* (May 29, 2008), p. 66.

## PREVIEW OF CHAPTER 24

As the opening story indicates, our markets will not function properly without transparent, complete, and truthful reporting of financial performance. Investors and other interested parties need to read and understand all aspects of financial reporting—the financial statements, the notes, the president's letter, and management's discussion and analysis. In this chapter, we cover the full disclosure principle in more detail and examine disclosures that must accompany financial statements so that they are not misleading. The content and organization of this chapter are as follows.

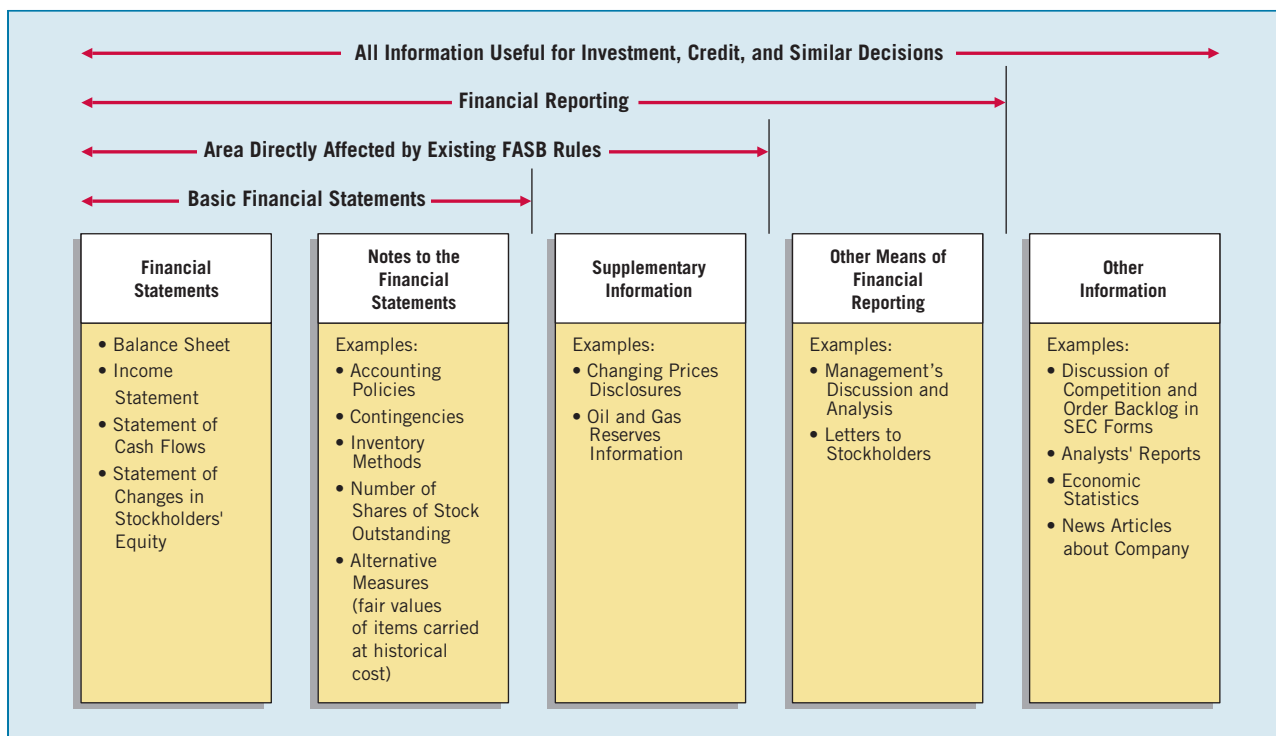

## FULL DISCLOSURE PRINCIPLE

FASB Concepts Statement No. 1 notes that some useful information is best provided in the financial statements, and some is best provided by means other than in financial statements. For example, earnings and cash flows are readily available in financial statements—but investors might do better to look at comparisons to other companies in the same industry, found in news articles or brokerage house reports.

FASB rules directly affect financial statements, notes to the financial statements, and supplementary information. Other types of information found in the annual report, such as management’s discussion and analysis, are not subject to FASB rules. Illustration 24-1 indicates the various types of financial information.

**Objective • 1**

Review the full disclosure principle and describe implementation problems.

**ILLUSTRATION 24-1**

Types of Financial Information

As Chapter 2 indicated, the profession has adopted a **full disclosure principle**. The full disclosure principle calls for financial reporting of **any financial facts significant enough to influence the judgment of an informed reader**. In some situations, the benefits of disclosure may be apparent but the costs uncertain. In other instances, the costs may be certain but the benefits of disclosure not as apparent.

For example, recently, the SEC required companies to provide expanded disclosures about their contractual obligations. In light of the off-balance-sheet accounting frauds at companies like **Enron**, the benefits of these expanded disclosures seem fairly obvious to the investing public. While no one has documented the exact costs of disclosure in these situations, they would appear to be relatively small.

On the other hand, the cost of disclosure can be substantial in some cases and the benefits difficult to assess. For example, at one time the *Wall Street Journal* reported that if segment reporting were adopted, a company like **Fruehauf** would have had to increase its accounting staff 50 percent, from 300 to 450 individuals. In this case, the cost of disclosure can be measured, but the benefits are less well defined.

**Underlying Concepts**

Here is a good example of the trade-off between cost considerations and the benefits of full disclosure.

Some even argue that the reporting requirements are so detailed and substantial that users have a difficult time absorbing the information. These critics charge the profession with engaging in **information overload**.

Financial disasters at **Microstrategy**, **PharMor**, **WorldCom**, and **AIG** highlight the difficulty of implementing the full disclosure principle. They raise the issue of why investors were not aware of potential problems: Was the information these companies presented not comprehensible? Was it buried? Was it too technical? Was it properly presented and fully disclosed as of the financial statement date, but the situation later deteriorated? Or was it simply not there? In the following sections, we describe the elements of high-quality disclosure that will enable companies to avoid these disclosure pitfalls.

## Increase in Reporting Requirements

Disclosure requirements have increased substantially. One survey showed that the size of many companies' annual reports is growing in response to demands for increased transparency. For example, annual report page counts ranged from 70 pages for **Gateway** up to a whopping 244 pages in **Eastman Kodak's** annual report. Compared to prior years' reports, the percentage increase in pages ranged from 17 percent at **IBM** to over 80 percent at **Siebel Systems**.<sup>1</sup> This result is not surprising; as illustrated throughout this textbook, the FASB has issued many pronouncements in the last 10 years that have substantial disclosure provisions.

The reasons for this increase in disclosure requirements are varied. Some of them are:

**Complexity of the Business Environment.** The increasing complexity of business operations magnifies the difficulty of distilling economic events into summarized reports. Such areas as derivatives, leasing, business combinations, pensions, financing arrangements, revenue recognition, and deferred taxes are complex. As a result, companies extensively use **notes to the financial statements** to explain these transactions and their future effects.

**Necessity for Timely Information.** Today, more than ever before, users are demanding information that is current and predictive. For example, users want more complete **interim data**. Also, the SEC recommends published financial forecasts, long avoided and even feared by management.

**Accounting as a Control and Monitoring Device.** The government has recently sought public disclosure of such phenomena as management compensation, off-balance-sheet financing arrangements, and related party transactions. An "Enronitis" concern is expressed in many of these newer disclosure requirements, and the SEC has selected accountants and auditors as the agents to assist in controlling and monitoring these concerns.

## Differential Disclosure

A trend toward **differential disclosure** is also occurring. For example, the SEC requires that companies report to it certain substantive information that is not found in annual reports to stockholders. Likewise, the FASB, recognizing that certain disclosure requirements are costly and unnecessary for certain companies, has eliminated reporting requirements for nonpublic enterprises in such areas as fair value of financial instruments and segment reporting.<sup>2</sup>

<sup>1</sup>Aliya Sternstein, "Heavy Lifting Required," *Forbes* (October 13, 2003) p. 58.

<sup>2</sup>The FASB has had a disclosure-effectiveness project. The revised pension and postretirement benefit disclosures discussed in Chapter 20 are one example of how disclosures can be streamlined and made more useful. However, as noted by one FASB member, the usefulness of expanded required disclosure also depends on users' ability to distinguish between disclosed versus recognized items in financial statements. Research to date is inconclusive on this matter. See Katherine Schipper, "Required Disclosures in Financial Reports," Presidential Address to the American Accounting Association Annual Meeting; San Francisco, CA (August 2005).

### Underlying Concepts

The AICPA's Special Committee on Financial Reporting notes that business reporting is not free, and improving it requires considering the relative costs and benefits of information. Undisciplined expansion of mandated reporting could result in large and needless costs.

### Underlying Concepts

The AICPA's Special Committee on Financial Reporting states that to meet users' changing needs, business reporting must: (1) Provide more forward-looking information. (2) Focus more on the factors that create longer-term value, including nonfinancial measures. (3) Better align information reported externally with the information reported internally.

### What do the numbers mean?

#### “THE HEART OF THE MATTER”

As we discussed in the opening story, financial disclosure is one of a number of institutional features that contribute to vibrant security markets. In fact, a recent study of disclosure and other mechanisms (such as civil lawsuits and criminal sanctions) found that good disclosure is the most important contributor to a vibrant market.

The study, which compared disclosure and other legal and regulatory elements across 49 countries, found that countries with the best disclosure laws have the biggest stock markets. Countries with more successful market environments also tend to have regulations that make it relatively easy for private investors to sue corporations that provide bad information. That is, while criminal sanctions can be effective in some circumstances, disclosure and other legal and regulatory elements encouraging good disclosure are the most important determinants of highly liquid and deep securities markets.

These findings hold for nations in all stages of economic development, with particular importance for nations that are in the early stages of securities regulation. The lesson: Disclosure is good for your market.

Source: Rebecca Christie, “Study: Disclosure at Heart of Effective Securities Laws,” *Wall Street Journal Online* (August 11, 2003).

#### Underlying Concepts

The AICPA Special Committee on Financial Reporting indicated that users differ in their needs for information and that not all companies should report all elements of information. Rather, companies should report only information that users and preparers agree is needed in the particular circumstances.

#### Objective 2

Explain the use of notes in financial statement preparation.

Some still complain that the FASB has not gone far enough. They note that certain types of companies (small or nonpublic) should not have to follow complex GAAP requirements such as those for deferred income taxes, leases, or pensions. This issue, often referred to as “**big GAAP versus little GAAP**,” continues to be controversial. The FASB takes the position that there should be one set of GAAP, except in unusual situations.<sup>3</sup>

## NOTES TO THE FINANCIAL STATEMENTS

As you know from your study of this textbook, notes are an integral part of the financial statements of a business enterprise. However, readers of financial statements often overlook them because they are highly technical and often appear in small print. **Notes are the means of amplifying or explaining the items presented in the main body of the statements.** They can explain in qualitative terms information pertinent to specific financial statement items. In addition, they can provide supplementary data of a quantitative nature to expand the information in the financial statements. Notes also can explain restrictions imposed by financial arrangements or basic contractual agreements. Although notes may be technical and difficult to understand, they provide meaningful information for the user of the financial statements.

### Accounting Policies

**Accounting policies** are the specific accounting principles and methods a company currently uses and considers most appropriate to present fairly its financial statements. GAAP

<sup>3</sup>In response to cost-benefit concerns, the SEC has exempted some small public companies from certain rules implemented in response to the Sarbanes-Oxley Act of 2002. For example, smaller companies have more time to comply with the internal control rules required by the Sarbanes-Oxley law and have more time to file annual and interim reports. Both the FASB and the AICPA are studying the big GAAP/little GAAP issue to ensure that any kind of differential reporting is conceptually sound and meets the needs of users. See Remarks of Robert H. Herz, Chairman, Financial Accounting Standards Board, 2004 AICPA National Conference on Current SEC and PCAOB Reporting Developments (December 7, 2004).

states that information about the accounting policies adopted by a reporting entity is essential for financial statement users in making economic decisions. It recommended that companies should present **as an integral part of the financial statements a statement identifying the accounting policies adopted and followed by the reporting entity**. Companies should present the disclosure as the first note or in a separate Summary of Significant Accounting Policies section preceding the notes to the financial statements.

The Summary of Significant Accounting Policies answers such questions as: What method of depreciation is used on plant assets? What valuation method is employed on inventories? What amortization policy is followed in regard to intangible assets? How are marketing costs handled for financial reporting purposes?

Refer to Appendix 5B, pages 210–238, for an illustration of note disclosure of accounting policies (Note 1) and other notes accompanying the audited financial statements of **The Procter & Gamble Company**. Illustration 24-2 shows another example, from **Tootsie Roll Industries**.

**INTERNATIONAL  
INSIGHT**

iGAAP has a project that is considering different accounting rules for small- and medium-sized enterprises.

**Tootsie Roll Industries, Inc. and Subsidiaries**

(Dollars in thousands, except per share amounts)

**Note 1—Significant Accounting Policies (in part)**

**Basis of consolidation**

The consolidated financial statements include the accounts of Tootsie Roll Industries, Inc. and its wholly-owned subsidiaries (the Company), which are primarily engaged in the manufacture and sale of candy products. All significant intercompany transactions have been eliminated.

The preparation of financial statements in conformity with generally accepted accounting principles in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expense during the reporting period. Actual results could differ from those estimates.

Certain reclassifications have been made to the prior year financial statements to conform to the current year presentation.

**Revenue recognition**

Products are sold to customers based on accepted purchase orders which include quantity, sales price and other relevant term of sale. Revenue, net of applicable provisions for discounts, returns, allowances, and certain advertising and promotional costs, is recognized when products are delivered to customers and collectibility is reasonably assured. Shipping and handling costs of \$41,775, \$40,353 and \$37,836 in 2007, 2006 and 2005, respectively, are included in selling, marketing and administrative expenses. Accounts receivable are unsecured. Revenues from a major customer aggregated approximately 22.4%, 23.7% and 24.0% of net product sales during the years ended December 31, 2007, 2006 and 2005, respectively. . . .

**Cash and cash equivalents**

The Company considers temporary cash investments with an original maturity of three months or less to be cash equivalents.

**Investments**

Investments consist of various marketable securities with maturities of generally up to four years. The Company classifies debt and equity securities as either available for sale or trading. Available for sale are not actively traded and are carried at fair value. Unrealized gains and losses on these securities are excluded from earnings and are reported as a separate component of shareholders' equity, net of applicable taxes, until realized. Trading securities relate to deferred compensation arrangements and are carried at fair value. The Company invests in trading securities to hedge changes in its deferred compensation liabilities.

**Hedging activities**

From time to time, the Company enters into commodities futures contracts that are intended and effective as hedges of market price risks associated with the anticipated purchase of certain raw materials (primarily sugar). To qualify as a hedge, the Company evaluates a variety of characteristics of these transactions, including the probability that the anticipated transaction will occur. If the anticipated transaction were not to occur, the gain or loss would then be recognized in current earnings. The Company does not engage in trading or other speculative use of derivative instruments. The Company does assume the risk that counter parties may not be able to meet the terms of their contracts. The Company does not expect any losses as a result of counter party defaults.

**ILLUSTRATION 24-2**

Note Disclosure of Accounting Policies

The Company's commodities futures contracts are being accounted for as cash flow hedges and are recorded on the balance sheet at fair value. Changes therein are recorded in other comprehensive earnings and are reclassified to earnings in the periods in which earnings are affected by the hedged item. Substantially all amounts reported in accumulated other comprehensive earnings (loss) are expected to be reclassified to cost of goods sold.

#### **Inventories**

Inventories are stated at cost, not to exceed market. The cost of substantially all of the Company's inventories (\$54,367 and \$61,092 at December 31, 2007 and 2006, respectively) has been determined by the last-in, first-out (LIFO) method. The excess of current cost over LIFO cost of inventories approximates \$11,284 and \$7,350 at December 31, 2007 and 2006, respectively. The cost of certain foreign inventories (\$3,036 and \$2,865 at December 31, 2007 and 2006, respectively) has been determined by the first-in, first-out (FIFO) method. Rebates, discounts and other cash consideration received from a vendor related to inventory purchases is reflected as a reduction in the cost of the related inventory item, and is therefore reflected in cost of sales when the related inventory item is sold.

#### **Property, plant and equipment**

Depreciation is computed for financial reporting purposes by use of the straight-line method based on useful lives of 20 to 35 years for buildings and 5 to 20 years for machinery and equipment. Depreciation expense was \$15,859, \$15,816, and \$14,687 in 2007, 2006 and 2005, respectively.

#### **Carrying value of long-lived assets**

The Company reviews long-lived assets to determine if there are events or circumstances indicating that the amount of the asset reflected in the Company's balance sheet may not be recoverable. When such indicators are present, the Company compares the carrying value of the long-lived asset, or asset group, to the future undiscounted cash flows of the underlying assets to determine if an impairment exists. If applicable, an impairment charge would be recorded to write down the carrying value to its fair value. The determination of fair value involves the use of estimates of future cash flows that involve considerable management judgment and are based upon assumptions about expected future operating performance. The actual cash flows could differ from management's estimates due to changes in business conditions, operating performance, and economic conditions. No impairment charges were recorded by the Company during 2007, 2006 or 2005.

#### **Postretirement health care and life insurance benefits**

The Company provides certain postretirement health care and life insurance benefits. The cost of these postretirement benefits is accrued during employees' working careers. The Company also provides split dollar life insurance benefits to certain executive officers. The Company records an asset equal to the cumulative insurance premiums that will be recovered upon the death of a covered employee(s) or earlier under the terms of the plan. Split dollar premiums paid were \$1,586, \$3,002, and \$3,678 in 2007, 2006 and 2005, respectively.

#### **Goodwill and intangible assets**

The Company accounts for intangible assets in accordance with SFAS No. 142, "Goodwill and Other Intangible Assets." In accordance with this statement, goodwill and intangible assets with indefinite lives are not amortized, but rather tested for impairment at least annually. All trademarks have been assessed by management to have indefinite lives because they are expected to generate cash flows indefinitely. The Company has completed its annual impairment testing of its goodwill and trademarks during the fourth quarter of each of the years presented, and recorded an impairment of \$4,743 in the fourth quarter of 2005 relating to a minor trademark and related goodwill. No impairments were recorded in either 2007 or 2006.

#### **Income taxes**

Deferred income taxes are recorded and recognized for future tax effects of temporary differences between financial and income tax reporting. The Company records valuation allowances in situations where the realization of deferred tax assets is not likely. Federal income taxes are provided on the portion of income of foreign subsidiaries that is expected to be remitted to the U.S. and become taxable, but not on the portion that is considered to be permanently invested in the foreign subsidiary.

#### **Foreign currency translation**

The Company has determined the functional currency for each foreign subsidiary. The U.S. dollar is used as the functional currency where a substantial portion of the subsidiary's business is indexed to the U.S. dollar or where its manufactured products are principally sold in the U.S. All other foreign subsidiaries use the local currency as their functional currency. Where the U.S. dollar is used as the functional currency, foreign currency translation adjustments are recorded as a charge or credit to other income in the statement of earnings. Where the foreign currency is used as the functional currency, translation adjustments are recorded as a separate component of comprehensive earnings (loss).

#### **Joint venture**

The Company's 50% interest in two companies is accounted for using the equity method. The Company records an increase in its investment in the joint venture to the extent of its share of the joint venture's earnings, and reduces its investment to the extent of dividends received. Dividends of \$861, \$1,946 and

\$651 were paid in 2007, 2006 and 2005, respectively, by the joint venture. The \$1,946 dividend declared in 2006 was not received by the Company until after December 31, 2006; this amount is included in other receivables at December 31, 2006.

**Comprehensive earnings**

Comprehensive earnings includes net earnings, foreign currency translation adjustments and unrealized gains/losses on commodity hedging contracts, available for sale securities and certain postretirement benefit obligations.

**Earnings per share**

A dual presentation of basic and diluted earnings per share is not required due to the lack of potentially dilutive securities under the Company's simple capital structure. Therefore, all earnings per share amounts represent basic earnings per share.

Analysts examine carefully the summary of accounting policies to determine whether a company is using conservative or liberal accounting practices. For example, depreciating plant assets over an unusually long period of time is considered liberal. Using LIFO inventory valuation in a period of inflation is generally viewed as conservative.

Companies that fail to adopt high-quality reporting policies may be heavily penalized by the market. For example, when **Microstrategy** disclosed that it would restate prior-year results due to use of aggressive revenue recognition policies, its share price dropped over 60 percent in one day. Investors viewed Microstrategy's quality of earnings as low.

## Common Notes

We have discussed many of the **notes to the financial statements** throughout this textbook, and will discuss others more fully in this chapter. The more common are as follows.

### MAJOR DISCLOSURES

**INVENTORY.** Companies should report the basis upon which inventory amounts are stated (lower-of-cost-or-market) and the method used in determining cost (LIFO, FIFO, average cost, etc.). Manufacturers should report, either in the balance sheet or in a separate schedule in the notes, the inventory composition (finished goods, work in process, raw materials). Unusual or significant financing arrangements relating to inventories that may require disclosure include transactions with related parties, product financing arrangements, firm purchase commitments, involuntary liquidation of LIFO inventories, and pledging of inventories as collateral. Chapter 9 (pages 457–459) illustrates these disclosures.

**PROPERTY, PLANT, AND EQUIPMENT.** Companies should state the basis of valuation for property, plant, and equipment. It is usually historical cost. Companies also should disclose pledges, liens, and other commitments related to these assets. In the presentation of depreciation, companies should disclose the following in the financial statements or in the notes: (1) depreciation expense for the period; (2) balances of major classes of depreciable assets, by nature and function, at the balance sheet date; (3) accumulated depreciation, either by major classes of depreciable assets or in total, at the balance sheet date; and (4) a general description of the method or methods used in computing depreciation with respect to major classes of depreciable assets. Finally, companies should explain any major impairments. Chapter 11 (pages 559–560) illustrates these disclosures.

**CREDITOR CLAIMS.** Investors normally find it extremely useful to understand the nature and cost of creditor claims. However, the liabilities section in the

balance sheet can provide the major types of liabilities only in the aggregate. Note schedules regarding such obligations provide additional information about how a company is financing its operations, the costs that it will bear in future periods, and the timing of future cash outflows. Financial statements must disclose for each of the five years following the date of the statements the aggregate amount of maturities and sinking fund requirements for all long-term borrowings. Chapter 14 (pages 711–712) illustrates these disclosures.

**EQUITY HOLDERS' CLAIMS.** Many companies present in the body of the balance sheet information about equity securities: the number of shares authorized, issued, and outstanding and the par value for each type of security. Or, companies may present such data in a note. Beyond that, a common equity note disclosure relates to contracts and senior securities outstanding that might affect the various claims of the residual equity holders. An example would be the existence of outstanding stock options, outstanding convertible debt, redeemable preferred stock, and convertible preferred stock. In addition, it is necessary to disclose certain types of restrictions currently in force. Generally, these types of restrictions involve the amount of earnings available for dividend distribution. Examples of these types of disclosures are illustrated in Chapter 15 (pages 765–766) and Chapter 16 (pages 821–822).

**CONTINGENCIES AND COMMITMENTS.** A company may have gain or loss contingencies that are not disclosed in the body of the financial statements. These contingencies include litigation, debt and other guarantees, possible tax assessments, renegotiation of government contracts, and sales of receivables with recourse. In addition, companies should disclose in the notes commitments that relate to dividend restrictions, purchase agreements (through-put and take-or-pay), hedge contracts, and employment contracts. Disclosures of such items are illustrated in Chapter 7 (page 343), Chapter 9 (pages 446–447), and Chapter 13 (pages 662–665).

**FAIR VALUES.** Companies that have assets or liabilities measured at fair value must disclose both the cost and the fair value of all financial instruments in the notes to the financial statements. Fair value measurements may be used for many financial assets and liabilities, investments, impairments of long-lived assets, and some contingencies. Companies also provide disclosure of information that enables users to determine the extent of usage of fair value and the inputs used to implement fair value measurement. This fair value hierarchy identifies three broad levels related to the measurement of fair values (Levels 1, 2, and 3). The levels indicate the reliability of the measurement of fair value information. An appendix to Chapter 17 (pages 905–908) discusses in detail fair value disclosures.

**DEFERRED TAXES, PENSIONS, AND LEASES.** The FASB also requires extensive disclosure in the areas of deferred taxes, pensions, and leases. Chapter 19 (pages 1011–1015), Chapter 20 (pages 1069–1074), and Chapter 21 (pages 1146–1148) discuss in detail each of these disclosures. Users of financial statements should carefully read notes to the financial statements for information about off-balance-sheet commitments, future financing needs, and the quality of a company's earnings.

**CHANGES IN ACCOUNTING PRINCIPLES.** The profession defines various types of accounting changes and establishes guides for reporting each type. Companies discuss, either in the summary of significant accounting policies or in the other notes, changes in accounting principles (as well as material changes in estimates and corrections of errors). See Chapter 22 (pages 1191–1196).

### Underlying Concepts

The AICPA Special Committee on Financial Reporting notes that standard-setters should address disclosures and accounting requirements for off-balance-sheet financial arrangements. The goal should be to report the risks, opportunities, resources, and obligations that result from those arrangements, consistent with users' needs for information.

In earlier chapters we discussed the disclosures listed above. The following sections of this chapter illustrate four additional disclosures of significance—special transactions or events, subsequent events, segment reporting, and interim reporting.

Additional Examples  
of Major Disclosures

## FOOTNOTE SECRETS

Often, note disclosures are needed to give a complete picture of a company's financial position. A good example of such disclosures is the required disclosure of debt triggers that may be buried in financing arrangements. These triggers can require a company to pay off a loan immediately if the debt rating collapses; they are one of the reasons **Enron** crumbled so quickly. But few Enron stockholders knew about the debt triggers until the gun had gone off. Companies are also disclosing more about their bank credit lines, liquidity, and any special purpose entities. (The latter were major villains in the Enron drama.)

How can you get better informed about note disclosures that may contain important information related to your investments? Beyond your study in this class, a good web resource for understanding the contents of note disclosures is <http://www.footnoted.org/>. This site highlights "the things companies bury in their SEC filings." It notes that company reports are more complete of late, but only the largest companies are preparing documents that are readable. As the editor of the site noted, "[some companies] are being dragged kicking and screaming into plain English."

Source: Gretchen Morgenson, "Annual Reports: More Pages, But Better?" *New York Times* (March 17, 2002), and D. Stead, "The Secrets in SEC Filings," *BusinessWeek* (August 25, 2008), p. 12.

What do the  
numbers mean?

## DISCLOSURE ISSUES

### Disclosure of Special Transactions or Events

Related-party transactions, errors and fraud, and illegal acts pose especially sensitive and difficult problems. The accountant/auditor who has responsibility for reporting on these types of transactions must take care to properly balance the rights of the reporting company and the needs of users of the financial statements.

**Related-party transactions** arise when a company engages in transactions in which one of the parties has the ability to significantly influence the policies of the other. They may also occur when a nontransacting party has the ability to influence the policies of the two transacting parties.<sup>4</sup> Competitive, free-market dealings may not exist in related-party transactions, and so an "arm's-length" basis cannot be assumed. Transactions such as borrowing or lending money at abnormally low or high interest rates, real estate sales at amounts that differ significantly from appraised value, exchanges of nonmonetary assets, and transactions involving enterprises that have no economic substance ("shell corporations") suggest that related parties may be involved.

In order to make adequate disclosure, companies should report the economic substance, rather than the legal form, of these transactions. GAAP requires the following disclosures of material related-party transactions. **[1]**

1. The nature of the relationship(s) involved.
2. A description of the transactions (including transactions to which no amounts or nominal amounts were ascribed) for each of the periods for which income statements are presented.

<sup>4</sup>Examples of related-party transactions include transactions between (a) a parent company and its subsidiaries; (b) subsidiaries of a common parent; (c) a company and trusts for the benefit of employees (controlled or managed by the enterprise); and (d) a company and its principal owners, management, or members of immediate families, and affiliates. Two classic cases of related-party transactions were **Enron**, with its misuse of special purpose entities, and **Tyco International**, which forgave loans to its management team.

See the FASB  
Codification section  
(page 1361).

3. The dollar amounts of transactions for each of the periods for which income statements are presented.
4. Amounts due from or to related parties as of the date of each balance sheet presented.

Illustration 24-3, from the annual report of **Harley-Davidson, Inc.**, shows disclosure of related-party transactions.

**ILLUSTRATION 24-3**  
Disclosure of Related-Party Transactions

### Harley-Davidson, Inc.

#### Note 12. Related Party Transactions

The Company has the following material related party transactions. A director of the Company is Chairman and Chief Executive Officer and an equity owner of Fred Deeley Imports Ltd. (Deeley Imports), the exclusive distributor of the Company's motorcycles in Canada. During 2007, 2006 and 2005, the Company recorded revenue and financial services income from Deeley Imports of \$231.9 million, \$187.7 million and \$145.1 million, respectively, and had accounts receivables balances due from Deeley Imports of \$42.6 million and \$21.0 million at December 31, 2007 and 2006, respectively. All such products were provided in the ordinary course of business at prices and on terms and conditions that the Company believes are the same as those that would result from arm's-length negotiations between unrelated parties.

Many companies are involved in related-party transactions. Errors, fraud (sometimes referred to as irregularities), and illegal acts, however, are the exception rather than the rule. Accounting **errors** are **unintentional** mistakes, whereas **fraud** (misappropriation of assets and fraudulent financial reporting) involves **intentional** distortions of financial statements.<sup>5</sup> As indicated earlier, companies should correct the financial statements when they discover errors. The same treatment should be given fraud. The discovery of fraud, however, gives rise to a different set of procedures and responsibilities for the accountant/auditor.<sup>6</sup>

**Illegal acts** encompass such items as illegal political contributions, bribes, kickbacks, and other violations of laws and regulations.<sup>7</sup> In these situations, the accountant/auditor must evaluate the adequacy of disclosure in the financial statements. For example, if a company derives revenue from an illegal act that is considered material in relation to the financial statements, this information should be disclosed. The Sarbanes-Oxley Act of 2002 is intended to deter these illegal acts. This law adds significant fines and longer jail time for those who improperly sign off on the correctness of financial statements that include willing and knowing misstatements.

Disclosure plays a very important role in these types of transactions because the events are more qualitative than quantitative and involve more subjective than objective evaluation. Users of the financial statements need some indication of the existence and nature of these transactions, through disclosures, modifications in the auditor's report, or reports of changes in auditors.

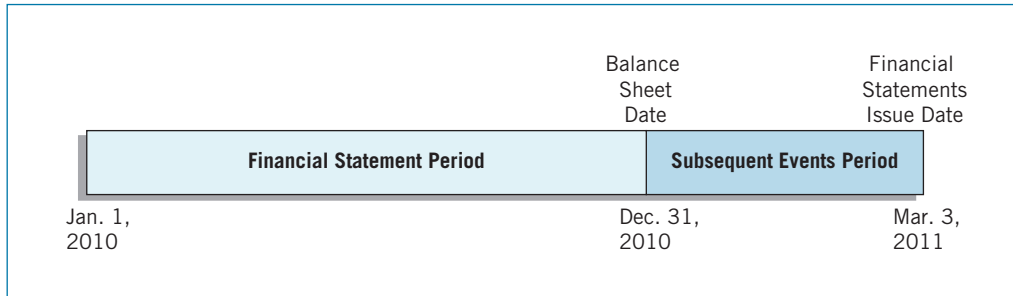

<sup>5</sup>"Consideration of Fraud in a Financial Statement Audit," *Statement on Auditing Standards No. 99* (New York, AICPA, 2002). We have an expanded discussion of fraudulent financial reporting later in this chapter. Since passage of the Sarbanes-Oxley Act of 2002, auditors of public companies are regulated by the Public Company Accounting Oversight Board (PCAOB). The PCAOB is now the audit standard-setter for auditors of public companies. It has adopted much of the prior auditing standards issued by the Auditing Standards Board of the AICPA.

<sup>6</sup>The profession became so concerned with certain management frauds that affect financial statements that it established a National Commission on Fraudulent Financial Reporting. The major purpose of this organization was to determine how fraudulent reporting practices could be constrained. Fraudulent financial reporting is discussed later in this chapter.

<sup>7</sup>"Illegal Acts by Clients," *Statement on Auditing Standards No. 54* (New York, AICPA, 1988).

## Post-Balance-Sheet Events (Subsequent Events)

Notes to the financial statements should explain any significant financial events that took place after the formal balance sheet date, but before the statement is issued. These events are referred to as **post-balance-sheet events**, or just plain **subsequent events**. Illustration 24-4 shows a time diagram of the subsequent events period.

**ILLUSTRATION 24-4**  
Time Periods for  
Subsequent Events

A period of several weeks, and sometimes months, may elapse after the end of the fiscal year but before the company issues financial statements. Various activities involved in closing the books for the period and issuing the statements all take time: taking and pricing the inventory, reconciling subsidiary ledgers with controlling accounts, preparing necessary adjusting entries, ensuring that all transactions for the period have been entered, obtaining an audit of the financial statements by independent certified public accountants, and printing the annual report. During the period between the balance sheet date and its distribution to stockholders and creditors, important transactions or other events may occur that materially affect the company's financial position or operating situation.

Many who read a balance sheet believe the balance sheet condition is constant, and they project it into the future. However, readers must be told if the company has experienced a significant change—e.g., sold one of its plants, acquired a subsidiary, suffered extraordinary losses, settled significant litigation, or experienced any other important event in the post-balance-sheet period. Without an explanation in a note, the reader might be misled and draw inappropriate conclusions.

Two types of events or transactions occurring after the balance sheet date may have a material effect on the financial statements or may need disclosure so that readers interpret these statements accurately:

1. Events that provide additional evidence about conditions **that existed** at the balance sheet date, including the estimates inherent in the process of preparing financial statements. These events are referred to as **recognized subsequent events** and require adjustments to the financial statements. All information available prior to the issuance of the financial statements helps investors and creditors evaluate estimates previously made. To ignore these subsequent events is to pass up an opportunity to improve the accuracy of the financial statements. This first type of event encompasses information that an accountant would have recorded in the accounts had the information been known at the balance sheet date.

For example, if a loss on an account receivable results from a customer's bankruptcy subsequent to the balance sheet date, the company adjusts the financial statements before their issuance. The bankruptcy stems from the customer's poor financial health existing at the balance sheet date.

The same criterion applies to settlements of litigation. The company must adjust the financial statements if the events that gave rise to the litigation, such as personal injury or patent infringement, took place prior to the balance sheet date.

2. Events that provide evidence about conditions that **did not exist** at the balance sheet date but arise subsequent to that date. These events are referred to as **nonrecognized subsequent events** and do not require adjustment of the financial statements. To illustrate, a loss resulting from a customer's fire or flood *after* the balance sheet date does not reflect conditions existing at that date. Thus, adjustment of the financial

### Underlying Concepts

The periodicity or time period assumption implies that economic activities of an enterprise can be divided into artificial time periods for purpose of analysis.

statements is not necessary. A company should not recognize subsequent events that provide evidence about conditions that did not exist at the date of the balance sheet but that arose after the balance sheet date.

The following are examples of nonrecognized subsequent events:

- (a) Sale of a bond or capital stock issued after the balance sheet date.
- (b) A business combination that occurs after the balance sheet date.
- (c) Settlement of litigation when the event giving rise to the claim took place after the balance sheet date.
- (d) Loss of plant or inventories as a result of fire or natural disaster that occurred after the balance sheet date.
- (e) Losses on receivables resulting from conditions (such as a customer's major casualty) arising after the balance sheet date.
- (f) Changes in the quoted market prices of securities or foreign exchange rates after the balance sheet date.
- (g) Entering into significant commitments or contingent liabilities, for example, by issuing significant guarantees after the balance sheet date. [2]<sup>8</sup>

### Underlying Concepts

A company also should consider supplementing the historical financial statements with pro forma financial data. Occasionally, a nonrecognized subsequent event may be so significant that disclosure can best be made by means of pro forma financial data.

Some nonrecognized subsequent events may have to be disclosed to keep the financial statements from being misleading. For such events, a company discloses the nature of the event and an estimate of its financial effect.

Illustration 24-5 presents an example of subsequent events disclosure, excerpted from the annual report of **Masco Corporation**.

**ILLUSTRATION 24-5**  
Disclosure of  
Subsequent Events

### Masco Corporation

#### Note K (In Part): Debt

##### Subsequent Event

On January 20, 2007, holders of \$1.8 billion (94 percent) principal amount at maturity of the Zero Coupon Convertible Senior Notes ("Notes") required the Company to repurchase their Notes at a cash value of \$825 million. As a result of this repurchase, a \$93 million deferred income tax liability will be payable in June 2007. Subsequent to the repurchase, there were outstanding \$108 million principal amount at maturity of such Notes, with an accreted value of \$51 million, which has been included in long-term debt at December 31, 2006, as the next put option date is July 20, 2011. The Company may, at any time on or after January 25, 2007, redeem all or part of the Notes at their accreted value.

Many subsequent events or developments do not require adjustment of or disclosure in the financial statements. Typically, these are nonaccounting events or conditions that management normally communicates by other means. These events include legislation, product changes, management changes, strikes, unionization, marketing agreements, and loss of important customers.

### Objective 3

Discuss the disclosure requirements for major business segments.

### Reporting for Diversified (Conglomerate) Companies

In certain business climates, companies have a tendency to diversify their operations. Take the case of conglomerate **General Electric (GE)**, whose products include locomotives and jet engines, credit card services, and water purification

<sup>8</sup>The effects from natural disasters, like hurricanes Katrina and Rita, which occurred after the year-end for companies with August fiscal years, require disclosure in order to keep the statements from being misleading. Some companies may have to consider whether these disasters affect their ability to continue as going concerns. *Accounting Trends and Techniques—2007* listed the following types of subsequent events and their frequency of occurrence among the 600 companies surveyed: business combinations pending or effected, 94; debt incurred, reduced or refinanced, 63; discontinued operations or asset disposals, 60; litigation, 42; restructuring/bankruptcy, 28; capital stock issued or purchased, 27; stock splits or dividends, 18; and employee benefits, 12.

systems. Its **NBC Universal** subsidiary owns **NBC TV**, **Vivendi Universal Entertainment**, and **Universal Pictures**. When businesses are so diversified, investors and investment analysts want more information about the details behind conglomerate financial statements. Particularly, they want income statement, balance sheet, and cash flow information on the **individual segments** that compose the total income figure.

Illustration 24-6 shows **segmented** (disaggregated) financial information of an office equipment and auto parts company.

<b>OFFICE EQUIPMENT AND AUTO PARTS COMPANY</b>			
<b>INCOME STATEMENT DATA</b>			
<b>(IN MILLIONS)</b>			
	<u>Consolidated</u>	<u>Office Equipment</u>	<u>Auto Parts</u>
Net sales	<b>\$78.8</b>	\$18.0	\$60.8
Manufacturing costs			
Inventories, beginning	12.3	4.0	8.3
Materials and services	38.9	10.8	28.1
Wages	12.9	3.8	9.1
Inventories, ending	(13.3)	(3.9)	(9.4)
	<u>50.8</u>	<u>14.7</u>	<u>36.1</u>
Selling and administrative expenses	12.1	1.6	10.5
Total operating expenses	<u>62.9</u>	<u>16.3</u>	<u>46.6</u>
Income before taxes	15.9	1.7	14.2
Income taxes	(9.3)	(1.0)	(8.3)
<b>Net income</b>	<b><u>\$ 6.6</u></b>	<b><u>\$ 0.7</u></b>	<b><u>\$ 5.9</u></b>

**ILLUSTRATION 24-6**  
Segmented Income  
Statement

Much information is hidden in the aggregated totals. If the analyst has only the consolidated figures, he/she cannot tell the extent to which the differing product lines **contribute to the company's profitability, risk, and growth potential**. For example, in Illustration 24-6, the office equipment segment looks like a risky venture. Segmented reporting would provide useful information about the two business segments and would be useful for making an informed investment decision regarding the whole company.

In addition to the example of **Coach, Inc.** in the opening story, a classic situation that demonstrates the need for segmented data involved **Caterpillar, Inc.** The SEC cited Caterpillar because it failed to tell investors that nearly a quarter of its income in one year came from a Brazilian unit and was nonrecurring in nature. The company knew that different economic policies in the next year would probably greatly affect earnings of the Brazilian unit. But Caterpillar presented its financial results on a consolidated basis, not disclosing the Brazilian operations. The SEC found that Caterpillar's failure to include information about Brazil left investors with an incomplete picture of the company's financial results and denied investors the opportunity to see the company "through the eyes of management."

Companies have always been somewhat hesitant to disclose segmented data for various reasons:

1. Without a thorough knowledge of the business and an understanding of such important factors as the competitive environment and capital investment requirements, the investor may find the segmented information meaningless or may even draw improper conclusions about the reported earnings of the segments.
2. Additional disclosure may be helpful to competitors, labor unions, suppliers, and certain government regulatory agencies, and thus harm the reporting company.
3. Additional disclosure may discourage management from taking intelligent business risks because segments reporting losses or unsatisfactory earnings may cause stockholder dissatisfaction with management.
4. The wide variation among companies in the choice of segments, cost allocation, and other accounting problems limits the usefulness of segmented information.

5. The investor is investing in the company as a whole and not in the particular segments, and it should not matter how any single segment is performing if the overall performance is satisfactory.
6. Certain technical problems, such as classification of segments and allocation of segment revenues and costs (especially “common costs”), are formidable.

On the other hand, the advocates of segmented disclosures offer these reasons in support of the practice:

1. Investors need segmented information to make an intelligent investment decision regarding a diversified company.
  - (a) Sales and earnings of individual segments enable investors to evaluate the differences between segments in growth rate, risk, and profitability, and to forecast consolidated profits.
  - (b) Segmented reports help investors evaluate the company’s investment worth by disclosing the nature of a company’s businesses and the relative size of the components.
2. The absence of segmented reporting by a diversified company may put its unsegmented, single product-line competitors at a competitive disadvantage because the conglomerate may obscure information that its competitors must disclose.

The advocates of segmented disclosures appear to have a much stronger case. Many users indicate that segmented data are the most useful financial information provided, aside from the basic financial statements. As a result, the FASB has issued extensive reporting guidelines in this area.

### Objective of Reporting Segmented Information

The objective of reporting segmented financial data is to provide information about the **different types of business activities** in which an enterprise engages and the **different economic environments** in which it operates. Meeting this objective will help users of financial statements do the following.

- (a) Better understand the enterprise’s performance.
- (b) Better assess its prospects for future net cash flows.
- (c) Make more informed judgments about the enterprise as a whole.

### Basic Principles

Financial statements can be disaggregated in several ways. For example, they can be disaggregated by products or services, by geography, by legal entity, or by type of customer. However, it is not feasible to provide all of that information in every set of financial statements. GAAP requires that general-purpose financial statements include selected information on a single basis of segmentation. Thus, a company can meet the segmented reporting objective by providing financial statements segmented based on how the company’s operations are managed. The method chosen is referred to as the **management approach**. [3] **The management approach reflects how management segments the company for making operating decisions.** The segments are evident from the components of the company’s organization structure. These components are called **operating segments**.

### Identifying Operating Segments

An **operating segment** is a component of an enterprise:

- (a) That engages in business activities from which it earns revenues and incurs expenses.
- (b) Whose operating results are regularly reviewed by the company’s chief operating decision maker to assess segment performance and allocate resources to the segment.
- (c) For which discrete financial information is available that is generated by or based on the internal financial reporting system.

Companies may aggregate information about two or more operating segments only if the segments have the same basic characteristics in each of the following areas.

- (a) The nature of the products and services provided.
- (b) The nature of the production process.
- (c) The type or class of customer.
- (d) The methods of product or service distribution.
- (e) If applicable, the nature of the regulatory environment.

After the company decides on the possible segments for disclosure, it makes a quantitative materiality test. This test determines whether the segment is significant enough to warrant actual disclosure. An operating segment is deemed significant, and therefore a reportable segment, if it satisfies **one or more** of the following quantitative thresholds.

1. Its **revenue** (including both sales to external customers and intersegment sales or transfers) is 10 percent or more of the combined revenue of all the company's operating segments.
2. The absolute amount of its **profit or loss** is 10 percent or more of the greater, in absolute amount, of (a) the combined operating profit of all operating segments that did not incur a loss, or (b) the combined loss of all operating segments that did report a loss.
3. Its **identifiable assets** are 10 percent or more of the combined assets of all operating segments.

In applying these tests, the company must consider two additional factors. First, segment data must explain a significant portion of the company's business. Specifically, the segmented results must equal or exceed 75 percent of the combined sales to unaffiliated customers for the entire company. This test prevents a company from providing limited information on only a few segments and lumping all the rest into one category.

Second, the profession recognizes that reporting too many segments may overwhelm users with detailed information. The FASB decided that 10 is a reasonable upper limit for the number of segments that a company must disclose.

To illustrate these requirements, assume a company has identified six possible reporting segments, as shown in Illustration 24-7 (000s omitted).

Segments	Total Revenue (Unaffiliated)	Operating Profit (Loss)	Identifiable Assets
A	\$ 100	\$10	\$ 60
B	50	2	30
C	700	40	390
D	300	20	160
E	900	18	280
F	100	(5)	50
	<u>\$2,150</u>	<u>\$85</u>	<u>\$970</u>

**ILLUSTRATION 24-7**  
Data for Different Possible Reporting Segments

The company would apply the respective tests as follows:

**Revenue test:**  $10\% \times \$2,150 = \$215$ ; C, D, and E meet this test.

**Operating profit (loss) test:**  $10\% \times \$90 = \$9$  (note that the \$5 loss is ignored, because the test is based on non-loss segments); A, C, D, and E meet this test.

**Identifiable assets tests:**  $10\% \times \$970 = \$97$ ; C, D, and E meet this test.

### Underlying Concepts

The AICPA Special Committee on Financial Reporting notes that multi-segment companies operate diverse businesses that are subject to different opportunities and risks. Segment information provides additional insight about the opportunities and risks of investments and sharpens predictions. Because of its predictive value, providing segment information is of the highest priority.

The reporting segments are therefore A, C, D, and E, assuming that these four segments have enough sales to meet the 75 percent of combined sales test. The 75 percent test is computed as follows.

**75% of combined sales test:**  $75\% \times \$2,150 = \$1,612.50$ . The sales of A, C, D, and E total \$2,000 (\$100 + \$700 + \$300 + \$900); therefore, the 75 percent test is met.

### Measurement Principles

The accounting principles that companies use for segment disclosure need not be the same as the principles they use to prepare the consolidated statements. This flexibility may at first appear inconsistent. But, preparing segment information in accordance with generally accepted accounting principles would be difficult because some principles are not expected to apply at a segment level. Examples are accounting for the cost of company-wide employee benefit plans, accounting for income taxes in a company that files a consolidated tax return, and accounting for inventory on a LIFO basis if the pool includes items in more than one segment.

The FASB does not require allocations of joint, common, or company-wide costs solely for external reporting purposes. **Common costs** are those incurred for the benefit of more than one segment and whose interrelated nature prevents a completely objective division of costs among segments. For example, the company president's salary is difficult to allocate to various segments. Allocations of common costs are inherently arbitrary and may not be meaningful. There is a presumption that if companies allocate common costs to segments, these allocations are either directly attributable or reasonably allocable.

### Segmented Information Reported

The FASB requires that an enterprise report the following.

1. **General information about its operating segments.** This includes factors that management considers most significant in determining the company's operating segments, and the types of products and services from which each operating segment derives its revenues.
2. **Segment profit and loss and related information.** Specifically, companies must report the following information about each operating segment if the amounts are included in determining segment profit or loss.
  - (a) Revenues from transactions with external customers.
  - (b) Revenues from transactions with other operating segments of the same enterprise.
  - (c) Interest revenue.
  - (d) Interest expense.
  - (e) Depreciation, depletion, and amortization expense.
  - (f) Unusual items.
  - (g) Equity in the net income of investees accounted for by the equity method.
  - (h) Income tax expense or benefit.
  - (i) Extraordinary items.
  - (j) Significant noncash items other than depreciation, depletion, and amortization expense.
3. **Segment assets.** A company must report each operating segment's total assets.
4. **Reconciliations.** A company must provide a reconciliation of the total of the segments' revenues to total revenues, a reconciliation of the total of the operating segments' profits and losses to its income before income taxes, and a reconciliation of the total of the operating segments' assets to total assets.
5. **Information about products and services and geographic areas.** For each operating segment not based on geography, the company must report (unless it is impracticable): (1) revenues from external customers, (2) long-lived assets, and (3) expenditures during the period for long-lived assets. This information, if material, must be reported (a) in the enterprise's country of domicile and (b) in each other country.

6. *Major customers.* If 10 percent or more of company revenue is derived from a single customer, the company must disclose the total amount of revenue from each such customer by segment.

## Interim Reports

### Objective 4

Describe the accounting problems associated with interim reporting.

Another source of information for the investor is interim reports. As noted earlier, **interim reports** cover periods of less than one year. The stock exchanges, the SEC, and the accounting profession have an active interest in the presentation of interim information.

The SEC mandates that certain companies file a **Form 10-Q**, in which a company discloses quarterly data similar to that disclosed in the annual report. It also requires those companies to disclose selected quarterly information in notes to the annual financial statements. Illustration 24-9 presents the selected quarterly disclosure of **Tootsie Roll Industries, Inc.** In addition to Form 10-Q, GAAP narrows the reporting alternatives related to interim reports. [4]

**ILLUSTRATION 24-9**  
Disclosure of Selected  
Quarterly Data

<b>Tootsie Roll Industries, Inc.</b>

4th Qtr	\$27.44	\$23.55	\$.08		

### Underlying Concepts

For information to be relevant, it must be available to decision makers before it loses its capacity to influence their decisions (timeliness). Interim reporting is an excellent example of this concept.

Because of the short-term nature of the information in these reports, there is considerable controversy as to the general approach companies should employ. One group, which favors the **discrete approach**, believes that companies should treat each interim period as a separate accounting period. Using that treatment, companies would follow the principles for deferrals and accruals used for annual reports. In this view, companies should report accounting transactions as they occur, and expense recognition should not change with the period of time covered.

Another group, which favors the **integral approach**, believes that the interim report is an integral part of the annual report and that deferrals and accruals should take into consideration what will happen for the entire year. In this approach, companies should assign estimated expenses to parts of a year on the basis of sales volume or some other activity base.

At present, many companies follow the discrete approach for certain types of expenses and the integral approach for others, because the standards currently employed in practice are vague and lead to differing interpretations.

### Interim Reporting Requirements

Generally, companies should use the same accounting principles for interim reports and for annual reports. They should recognize revenues in interim periods on the same basis as they are for annual periods. For example, if Cedars Corp. uses the installment-sales method as the basis for recognizing revenue on an annual basis, then it should

use the installment basis for interim reports as well. Also, Cedars should treat costs directly associated with revenues (product costs, such as materials, labor and related fringe benefits, and manufacturing overhead) in the same manner for interim reports as for annual reports.

Companies should use the same inventory pricing methods (FIFO, LIFO, etc.) for interim reports and for annual reports. However, the following exceptions are appropriate at interim reporting periods.

1. Companies may use the gross profit method for interim inventory pricing. But they must disclose the method and adjustments to reconcile with annual inventory.
2. When a company liquidates LIFO inventories at an interim date and expects to replace them by year-end, cost of goods sold should include the expected cost of replacing the liquidated LIFO base, rather than give effect to the interim liquidation.
3. Companies should not defer inventory market declines beyond the interim period unless they are temporary and no loss is expected for the fiscal year.
4. Companies ordinarily should defer planned variances under a standard cost system; such variances are expected to be absorbed by year-end.

Companies often charge to the interim period, as incurred, costs and expenses other than product costs (often referred to as **period costs**). But companies may allocate these costs among interim periods on the basis of an estimate of time expired, benefit received, or activity associated with the periods. Companies display considerable latitude in accounting for these costs in interim periods, and many believe more definitive guidelines are needed.

Regarding disclosure, companies should report the following interim data at a minimum.

1. Sales or gross revenues, provision for income taxes, extraordinary items, and net income.
2. Basic and diluted earnings per share where appropriate.
3. Seasonal revenue, cost, or expenses.
4. Significant changes in estimates or provisions for income taxes.
5. Disposal of a component of a business and extraordinary, unusual, or infrequently occurring items.
6. Contingent items.
7. Changes in accounting principles or estimates.
8. Significant changes in financial position.

The FASB encourages, but does not require, companies to publish an interim balance sheet and statement of cash flows. If a company does not present this information, it should disclose significant changes in such items as liquid assets, net working capital, long-term liabilities, and stockholders' equity.

### Unique Problems of Interim Reporting

GAAP reflects a preference for the integral approach. However, within this broad guideline, a number of unique reporting problems develop related to the following items.

*Advertising and Similar Costs.* The general guidelines are that companies should defer in an interim period costs such as advertising if the benefits extend beyond that period; otherwise the company should expense those costs as incurred. But such a determination is difficult, and even if the company defers the costs, how should it allocate them between quarters?

Because of the vague guidelines in this area, accounting for advertising varies widely. At one time, some companies in the food industry, such as **RJR Nabisco** and

**Pillsbury**, charged advertising costs as a percentage of sales and adjusted to actual at year-end, whereas **General Foods** and **Kellogg** expensed these costs as incurred.

The same type of problem relates to such items as Social Security taxes, research and development costs, and major repairs. For example, should the company expense Social Security costs (payroll taxes) on highly paid personnel early in the year, or allocate and spread them to subsequent quarters? Should a major repair that occurs later in the year be anticipated and allocated proportionately to earlier periods?

*Expenses Subject to Year-End Adjustment.* Companies often do not know with a great deal of certainty amounts of bad debts, executive bonuses, pension costs, and inventory shrinkage until year-end. **They should estimate these costs and allocate them to interim periods as best they can.** Companies use a variety of allocation techniques to accomplish this objective.

*Income Taxes.* Not every dollar of corporate taxable income is taxed at the same rate; the tax rate is progressive. This aspect of business income taxes poses a problem in preparing interim financial statements. Should the company use the **annualized approach**, which is to annualize income to date and accrue the proportionate income tax for the period to date? Or should it follow the **marginal principle approach**, which is to apply the lower rate of tax to the first amount of income earned? At one time, companies generally followed the latter approach and accrued the tax applicable to each additional dollar of income.

The profession now, however, uses the annualized approach. This requires that “at the end of each interim period the company should make its best estimate of the effective tax rate expected to be applicable for the full fiscal year. The rate so determined should be used in providing for income taxes on income for the quarter.” [5]<sup>9</sup>

Because businesses did not uniformly apply this guideline in accounting for similar situations, the FASB issued authoritative guidance. GAAP now requires companies, when computing the year-to-date tax, to apply the **estimated annual effective tax rate** to the year-to-date “ordinary” income at the end of each interim period. Further, the **interim period tax** related to “ordinary” income shall be the difference between the amount so computed and the amounts reported for previous interim periods of the fiscal period. [6]<sup>10</sup>

*Extraordinary Items.* Extraordinary items consist of unusual and nonrecurring material gains and losses. In the past, companies handled them in interim reports in one of three ways: (1) absorbed them entirely in the quarter in which they occurred; (2) prorated them over four quarters; or (3) disclosed them only by note. **The required approach now is to charge or credit the loss or gain in the quarter in which it occurs**, instead of attempting some arbitrary multiple-period allocation. This approach is consistent with the way in which companies must handle extraordinary items on an annual basis. No attempt is made to prorate the extraordinary items over several years.

Some favor the omission of extraordinary items from the quarterly net income. They believe that inclusion of extraordinary items that may be large in proportion to interim results distorts the predictive value of interim reports. Many, however, consider such an omission inappropriate because it deviates from actual results.

*Earnings per Share.* Interim reporting of earnings per share has all the problems inherent in computing and presenting annual earnings per share, and then some. If a company issues shares in the third period, EPS for the first two periods will not reflect year-end

<sup>9</sup>The estimated annual effective tax rate should reflect anticipated tax credits, foreign tax rates, percentage depletion, capital gains rates, and other available tax-planning alternatives.

<sup>10</sup>“Ordinary” income (or loss) refers to “income (or loss) from continuing operations before income taxes (or benefits)” excluding extraordinary items and discontinued operations.

EPS. If an extraordinary item is present in one period and the company sells new equity shares in another period, the EPS figure for the extraordinary item will change for the year. On an annual basis only one EPS figure can be associated with an extraordinary item and that figure does not change; the interim figure is subject to change.

For purposes of computing earnings per share and making the required disclosure determinations, each interim period should stand alone. That is, all applicable tests should be made for that single period.

**Seasonality.** Seasonality occurs when most of a company's sales occur in one short period of the year while certain costs are fairly evenly spread throughout the year. For example, the natural gas industry has its heavy sales in the winter months. In contrast, the beverage industry has its heavy sales in the summer months.

The problem of seasonality is related to the expense recognition principle in accounting. Generally, expenses are associated with the revenues they create. In a seasonal business, wide fluctuations in profits occur because off-season sales do not absorb the company's fixed costs (for example, manufacturing, selling, and administrative costs that tend to remain fairly constant regardless of sales or production).

To illustrate why seasonality is a problem, assume the following information.

Selling price per unit	\$1
Annual sales for the period (projected and actual) 100,000 units @ \$1	\$100,000
Manufacturing costs	
Variable	10¢ per unit
Fixed	20¢ per unit or \$20,000 for the year
Nonmanufacturing costs	
Variable	10¢ per unit
Fixed	30¢ per unit or \$30,000 for the year

**ILLUSTRATION 24-10**  
Data for Seasonality Example

Sales for four quarters and the year (projected and actual) were:

		Percent of Sales
1st Quarter	\$ 20,000	20%
2nd Quarter	5,000	5
3rd Quarter	10,000	10
4th Quarter	65,000	65
Total for the year	<u>\$100,000</u>	<u>100%</u>

**ILLUSTRATION 24-11**  
Sales Data for Seasonality Example

Under the present accounting framework, the income statements for the quarters might be as shown in Illustration 24-12.

	1st Qtr	2nd Qtr	3rd Qtr	4th Qtr	Year
Sales	\$20,000	\$ 5,000	\$10,000	\$65,000	\$100,000
Manufacturing costs					
Variable	(2,000)	(500)	(1,000)	(6,500)	(10,000)
Fixed <sup>a</sup>	(4,000)	(1,000)	(2,000)	(13,000)	(20,000)
	14,000	3,500	7,000	45,500	70,000
Nonmanufacturing costs					
Variable	(2,000)	(500)	(1,000)	(6,500)	(10,000)
Fixed <sup>b</sup>	(7,500)	(7,500)	(7,500)	(7,500)	(30,000)
<b>Net income</b>	<b>\$ 4,500</b>	<b>\$(4,500)</b>	<b>\$(1,500)</b>	<b>\$31,500</b>	<b>\$ 30,000</b>

<sup>a</sup>The fixed manufacturing costs are inventoried, so that equal amounts of fixed costs do not appear during each quarter.  
<sup>b</sup>The fixed nonmanufacturing costs are not inventoried, so equal amounts of fixed costs appear during each quarter.

**ILLUSTRATION 24-12**  
Interim Net Income for Seasonal Business—Discrete Approach

An investor who uses the first quarter's results might be misled. If the first quarter's earnings are \$4,500, should this figure be multiplied by four to predict annual earnings of \$18,000? Or, if first-quarter sales of \$20,000 are 20 percent of the predicted sales for the year, would the net income for the year be \$22,500 ( $\$4,500 \times 5$ )? Both figures are obviously wrong, and after the second quarter's results occur, the investor may become even more confused.

The problem with the conventional approach is that the fixed nonmanufacturing costs are not charged in proportion to sales. Some enterprises have adopted a way of avoiding this problem by making all fixed nonmanufacturing costs follow the sales pattern, as shown in Illustration 24-13.

**ILLUSTRATION 24-13**  
Interim Net Income for  
Seasonal Business—  
Integral Approach

	1st Qtr	2nd Qtr	3rd Qtr	4th Qtr	Year
Sales	\$20,000	\$ 5,000	\$10,000	\$65,000	\$100,000
Manufacturing costs					
Variable	(2,000)	(500)	(1,000)	(6,500)	(10,000)
Fixed	(4,000)	(1,000)	(2,000)	(13,000)	(20,000)
	14,000	3,500	7,000	45,500	70,000
Nonmanufacturing costs					
Variable	(2,000)	(500)	(1,000)	(6,500)	(10,000)
Fixed	(6,000)	(1,500)	(3,000)	(19,500)	(30,000)
<b>Net income</b>	<b>\$ 6,000</b>	<b>\$ 1,500</b>	<b>\$ 3,000</b>	<b>\$19,500</b>	<b>\$ 30,000</b>

This approach solves some of the problems of interim reporting: Sales in the first quarter are 20 percent of total sales for the year, and net income in the first quarter is 20 percent of total income. In this case, as in the previous example, the investor cannot rely on multiplying any given quarter by four, but can use comparative data or rely on some estimate of sales in relation to income for a given period.

The greater the degree of seasonality experienced by a company, the greater the possibility of distortion. Because there are no definitive guidelines for handling such items as the fixed nonmanufacturing costs, variability in income can be substantial. To alleviate this problem, the profession recommends that companies subject to material seasonal variations disclose the seasonal nature of their business and consider supplementing their interim reports with information for 12-month periods ended at the interim date for the current and preceding years.

The two illustrations highlight the difference between the **discrete** and **integral** approaches. Illustration 24-12 represents the discrete approach, in which the fixed nonmanufacturing expenses are expensed as incurred. Illustration 24-13 shows the integral approach, in which expenses are charged to expense on the basis of some measure of activity.

#### INTERNATIONAL INSIGHT

iGAAP requires that interim financial statements use the discrete method, except for tax expenses.

#### Underlying Concepts

The AICPA Special Committee on Financial Reporting indicates that users would benefit from separate fourth-quarter reporting, including management's analysis of fourth-quarter activities and events. Also, the Committee recommended quarterly segment reporting, which companies now provide.

**Continuing Controversy.** The profession has developed some rules for interim reporting, but much still has to be done. As yet, it is unclear whether the discrete or the integral method, or some combination of the two, will be settled on.

Discussion also persists about the independent auditor's involvement in interim reports. Many auditors are reluctant to express an opinion on interim financial information, arguing that the data are too tentative and subjective. On the other hand, more people are advocating some examination of interim reports. As a compromise, the SEC currently requires that auditors perform a review of interim financial information. Such a review, which is much more

limited in its procedures than the annual audit, provides some assurance that the interim information appears to be in accord with GAAP.<sup>11</sup>

Analysts and investors want financial information as soon as possible, before it's old news. We may not be far from a continuous database system in which corporate financial records can be accessed via the Internet. Investors might be able to access a company's financial records whenever they wish and put the information in the format they need. Thus, they could learn about sales slippage, cost increases, or earnings changes as they happen, rather than waiting until after the quarter has ended.<sup>12</sup>

A steady stream of information from the company to the investor could be very positive because it might alleviate management's continual concern with short-run interim numbers. Today many contend that U.S. management is too oriented to the short-term. The truth of this statement is echoed by the words of the president of a large company who decided to retire early: "I wanted to look forward to a year made up of four seasons rather than four quarters."

### "I WANT IT FASTER"

The SEC has decided that timeliness of information is of extreme importance. First, the SEC has said that large public companies will have only 60 days to complete their annual reports, down from 90 days. Quarterly reports must be done within 40 days of the close of the quarter, instead of 45. In addition, corporate executives and shareholders with more than 10 percent of a company's outstanding stock now have two days to disclose their sale or purchase of stock.

Also, in a bid to increase Internet disclosure, the SEC encourages companies to post current, quarterly, and annual reports on their websites—or explain why they don't. The Internet postings would have to be made by the day the company submits the information to the SEC, rather than within 24 hours as current rules allow.

*What do the numbers mean?*

## AUDITOR'S AND MANAGEMENT'S REPORTS

### Auditor's Report

Another important source of information, which is often overlooked, is the **auditor's report**. An **auditor** is an accounting professional who conducts an independent examination of a company's accounting data.

If satisfied that the financial statements present the financial position, results of operations, and cash flows fairly in accordance with generally accepted accounting principles, the auditor expresses an **unqualified opinion**. An example is shown in Illustration 24-14 (on page 1336).<sup>13</sup>

#### Objective 5

Identify the major disclosures in the auditor's report.

<sup>11</sup>"Interim Financial Information," *Statement on Auditing Standards No. 101* (New York, AICPA, 2002).

<sup>12</sup>A step in this direction is the SEC's mandate for companies to file their financial statements electronically with the SEC. The system, called EDGAR (electronic data gathering and retrieval) provides interested parties with computer access to financial information such as periodic filings, corporate prospectuses, and proxy materials.

<sup>13</sup>This auditor's report is in exact conformance with the specifications contained in "Reports on Audited Financial Statements," *Statement on Auditing Standards No. 58* (New York: AICPA, 1988). The last paragraph refers to the assessment of the company's internal controls, as required by the PCAOB.

**ILLUSTRATION 24-14**  
 Auditor's Report

**Best Buy Co., Inc.**
**Report of Independent Registered Public Accounting Firm**
**To the Board of Directors and Shareholders of Best Buy Co., Inc.**

We have audited the accompanying consolidated balance sheets of Best Buy Co., Inc. and subsidiaries (the "Company") as of March 1, 2008 and March 3, 2007, and the related consolidated statements of earnings, shareholders' equity, and cash flows for each of the three years in the period ended March 1, 2008, March 3, 2007 and February 25, 2006. Our audits also included the financial statement schedule listed in the index at Item 15(a). These financial statements and financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on the financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of Best Buy Co., Inc. and subsidiaries as of March 1, 2008 and March 3, 2007, and the results of their operations and their cash flows for each of the three years in the period ended March 1, 2008, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, such financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein.

As discussed in Note 1 to the consolidated financial statements, effective March 4, 2007, Best Buy Co., Inc. and subsidiaries changed their method of accounting for uncertain tax benefits upon adoption of Financial Accounting Standards Board Interpretation No. 48, *Accounting for Uncertainty in Income Taxes—an Interpretation of FASB Statement No. 109*.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company's internal control over financial reporting as of March 1, 2008, based on the criteria established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated April 25, 2008 expressed an unqualified opinion on the Company's internal control over financial reporting.

Minneapolis, Minnesota  
 April 25, 2008

In preparing the report, the auditor follows these reporting standards.

1. The report states whether the financial statements are in accordance with generally accepted accounting principles.
2. The report identifies those circumstances in which the company has not consistently observed such principles in the current period in relation to the preceding period.
3. Users are to regard the informative disclosures in the financial statements as reasonably adequate unless the report states otherwise.
4. The report contains either an expression of opinion regarding the financial statements taken as a whole or an assertion to the effect that an opinion cannot be expressed. When the auditor cannot express an overall opinion, the report should state the reasons. In all cases where an auditor's name is associated with financial statements, the report should contain a clear-cut indication of the character of the auditor's examination, if any, and the degree of responsibility being taken.

In most cases, the auditor issues a standard **unqualified** or **clean opinion**. That is, the auditor expresses the opinion that the financial statements present fairly, in all material respects, the financial position, results of operations, and cash flows of the entity in conformity with generally accepted accounting principles.

Certain circumstances, although they do not affect the auditor's unqualified opinion, may require the auditor to add an explanatory paragraph to the audit report. Some of the more important circumstances are as follows.

1. **Going Concern.** The auditor must evaluate whether there is substantial doubt about the entity's **ability to continue as a going concern** for a reasonable period of time, taking into consideration all available information about the future. (The future is at least, but not limited to, 12 months from the end of the reporting period.) If substantial doubt exists about the company continuing as a going concern, the auditor adds to the report an explanatory note describing the potential problem. [7]
2. **Lack of Consistency.** If a company has changed accounting principles or the method of their application in a way that has a material effect on the comparability of its financial statements, the auditor should refer to the change in an explanatory paragraph of the report. Such an explanatory paragraph should identify the nature of the change and refer readers to the note in the financial statements that discusses the change in detail. The auditor's concurrence with a change is implicit unless the auditor takes exception to the change in expressing an opinion as to fair presentation in conformity with generally accepted accounting principles.
3. **Emphasis of a Matter.** The auditor may wish to emphasize a matter regarding the financial statements, but nevertheless intends to express an unqualified opinion. For example, the auditor may wish to emphasize that the entity is a component of a larger business enterprise or that it has had significant transactions with related parties. The auditor presents such explanatory information in a separate paragraph of the report.

In some situations, however, the auditor is required to express (1) a **qualified** opinion or (2) an **adverse** opinion, or (3) to **disclaim** an opinion.

A **qualified opinion** contains an exception to the standard opinion. Ordinarily the exception is not of sufficient magnitude to invalidate the statements as a whole; if it were, an adverse opinion would be rendered. The usual circumstances in which the auditor may deviate from the standard unqualified short-form report on financial statements are as follows.

1. The scope of the examination is limited or affected by conditions or restrictions.
2. The statements do not fairly present financial position or results of operations because of:
  - (a) Lack of conformity with generally accepted accounting principles and standards.
  - (b) Inadequate disclosure.

If confronted with one of the situations noted above, the auditor must offer a qualified opinion. A qualified opinion states that, except for the effects of the matter to which the qualification relates, the financial statements present fairly, in all material respects, the financial position, results of operations, and cash flows in conformity with generally accepted accounting principles.

Illustration 24-15 (page 1338) shows an example of an auditor's report with a qualified opinion. The auditor qualified the opinion because the company used an accounting principle at variance with generally accepted accounting principles.

**ILLUSTRATION 24-15**  
Qualified Auditor's  
Report

**Helio Company**

**Independent Auditor's Report**

*(Same first and second paragraphs as the standard report)*

Helio Company has excluded, from property and debt in the accompanying balance sheets, certain lease obligations that, in our opinion, should be capitalized in order to conform with generally accepted accounting principles. If these lease obligations were capitalized, property would be increased by \$1,500,000 and \$1,300,000, long-term debt by \$1,400,000 and \$1,200,000, and retained earnings by \$100,000 and \$50,000 as of December 31, in the current and prior year, respectively. Additionally, net income would be decreased by \$40,000 and \$30,000 and earnings per share would be decreased by \$.06 and \$.04, respectively, for the years then ended.

In our opinion, except for the effects of not capitalizing certain lease obligations as discussed in the preceding paragraph, the financial statements referred to above present fairly, in all material respects, the financial position of Helio Company, and the results of its operations and its cash flows for the years then ended in conformity with generally accepted accounting principles.

An **adverse opinion** is required in any report in which the exceptions to fair presentation are so material that in the independent auditor's judgment, a qualified opinion is not justified. In such a case, the financial statements taken as a whole are not presented in accordance with generally accepted accounting principles. Adverse opinions are rare, because most companies change their accounting to conform with GAAP. The SEC will not permit a company listed on an exchange to have an adverse opinion.

A **disclaimer of an opinion** is appropriate when the auditor has gathered so little information on the financial statements that no opinion can be expressed.

The audit report should provide useful information to the investor. One investment banker noted, "Probably the first item to check is the auditor's opinion to see whether or not it is a clean one—in conformity with generally accepted accounting principles—or is qualified in regard to differences between the auditor and company management in the accounting treatment of some major item, or in the outcome of some major litigation."

## Management's Reports

### Management's Discussion and Analysis

The SEC mandates inclusion of **management's discussion and analysis (MD&A)**. This section covers three financial aspects of an enterprise's business—liquidity, capital resources, and results of operations. In it, management highlights favorable or unfavorable trends and identifies significant events and uncertainties that affect these three factors. This approach obviously involves subjective estimates, opinions, and soft data. However, the SEC believes that the relevance of this information exceeds the potential lack of reliability.

Illustration 24-16 presents an excerpt from the MD&A section (2007 "Business Risks" only) of **PepsiCo's** annual report.

**ILLUSTRATION 24-16**  
Management's Discussion  
and Analysis

**PEPSICO**

**PepsiCo, Inc.**

**Our Business Risks**

We are subject to risks in the normal course of business. We manage our risks through an integrated risk management framework.

**Risk Management Framework**

The achievement of our strategic and operating objectives will necessarily involve taking risks. Our risk management process is intended to ensure that risks are taken knowingly and purposefully. As such, we leverage an integrated risk management framework to identify, assess, prioritize, manage, monitor and communicate risks across the Company. This framework includes:

- The PepsiCo Executive Council (PEC), comprised of a cross-functional, geographically diverse, senior management group which identifies, assesses, prioritizes and addresses strategic and reputational risks;
- Division Risk Committees (DRCs), comprised of cross-functional senior management teams which meet regularly each year to identify, assess, prioritize and address division-specific operating risks;

- PepsiCo's Risk Management Office, which manages the overall risk management process, provides ongoing guidance, tools and analytical support to the PEC and the DRCs, identifies and assesses potential risks, and facilitates ongoing communication between the parties, as well as to PepsiCo's Audit Committee and Board of Directors;
- PepsiCo Corporate Audit, which evaluates the ongoing effectiveness of our key internal controls through periodic audit and review procedures; and
- PepsiCo's Compliance Office, which leads and coordinates our compliance policies and practices.

#### Market Risks

We are exposed to market risks arising from adverse changes in:

- commodity prices, affecting the cost of our raw materials and energy.
- foreign exchange rates, and
- interest rates.

In the normal course of business, we manage these risks through a variety of strategies, including productivity initiatives, global purchasing programs and hedging strategies. Ongoing productivity initiatives involve the identification and effective implementation of meaningful cost saving opportunities or efficiencies. Our global purchasing programs include fixed-price purchase orders and pricing agreements. Our hedging strategies include the use of derivatives. Certain derivatives are designated as either cash flow or fair value hedges and qualify for hedge accounting treatment, while others do not qualify and are marked to market through earnings. We do not use derivative instruments for trading or speculative purposes, and we limit our exposure to individual counterparties to manage credit risk. The fair value of our derivatives fluctuates based on market rates and prices. The sensitivity of our derivatives to these market fluctuations is discussed below. See Note 10 for further discussion of these derivatives and our hedging policies. See "Our Critical Accounting Policies" for a discussion of the exposure of our pension plan assets and pension and retiree medical liabilities to risks related to stock prices and discount rates.

Inflationary, deflationary and recessionary conditions impacting these market risks also impact the demand for and pricing of our products.

#### Commodity Prices

Our open commodity derivative contracts that qualify for hedge accounting had a face value of \$5 million at December 29, 2007 and \$55 million at December 30, 2006. . . .

Our open commodity derivative contracts that do not qualify for hedge accounting had a face value of \$105 million at December 29, 2007 and \$196 million at December 30, 2006. . . .

We expect to be able to continue to reduce the impact of increases in our raw material and energy costs through our hedging strategies and ongoing productivity initiatives.

#### Foreign Exchange

Financial statements of foreign subsidiaries are translated into U.S. dollars using period-end exchange rates for assets and liabilities and weighted-average exchange rates for revenues and expenses. Adjustments resulting from translating net assets are reported as a separate component of accumulated other comprehensive loss within shareholders' equity under the caption currency translation adjustment.

Our operations outside of the U.S. generate 44% of our net revenue with Mexico, the United Kingdom and Canada comprising 19% of our net revenue. As a result, we are exposed to foreign currency risks. During 2007, net favorable foreign currency, primarily due to appreciation in the euro, British pound, Canadian dollar and Brazilian real, contributed 2 percentage points to net revenue growth. Currency declines which are not offset could adversely impact our future results. . . .

#### Interest Rates

We centrally manage our debt and investment portfolios considering investment opportunities and risks, tax consequences and overall financing strategies. We may use interest rate and cross currency interest rate swaps to manage our overall interest expense and foreign exchange risk. These instruments effectively change the interest rate and currency of specific debt issuances. These swaps are entered into concurrently with the issuance of the debt that they are intended to modify. The notional amount, interest payment and maturity date of the swaps match the principal, interest payment and maturity date of the related debt. Our counterparty credit risk is considered low because these swaps are entered into only with strong creditworthy counterparties and are generally settled on a net basis.

Assuming year-end 2007 variable rate debt and investment levels, a 1-percentage-point increase in interest rates would have decreased net interest expense by \$1 million in 2007.

#### ILLUSTRATION 24-16

(continued)

#### Underlying Concepts

*FASB Concepts Statement No. 1* notes that management knows more about the company than users and therefore can increase the usefulness of financial information by identifying significant transactions that affect the company and by explaining their financial impact.

The MD&A section also must provide information about the effects of inflation and changing prices, if they are material to financial statement trends. The SEC has not required specific numerical computations, and companies have provided little analysis on changing prices.

An additional voluntary disclosure provided in the MD&A of many companies is discussion of the company's critical accounting policies. This disclosure identifies

Expanded Discussion of Accounting for Changing Prices

**Objective 6**

Understand management's responsibilities for financials.

accounting policies that require management to make subjective judgments regarding uncertainties, resulting in potentially significant effects on the financial results.<sup>14</sup> For example, in its critical accounting policy disclosure, **PepsiCo** showed the impact on stock-based compensation expense in response to changes in estimated interest rates and stock return volatility. Through this voluntary disclosure, companies can expand on the information contained in the notes to the financial statements to indicate the sensitivity of the financial results to accounting policy judgments.

**Management's Responsibilities for Financial Statements**

The Sarbanes-Oxley Act requires the SEC to develop guidelines for *all* publicly traded companies to report on management's responsibilities for, and assessment of, the internal control system. An example of the type of disclosure that public companies are now making is shown in Illustration 24-17.<sup>15</sup>

**Home Depot**

**ILLUSTRATION 24-17**  
Report on Management's Responsibilities

**Management's Responsibility for Financial Statements**

The financial statements presented in this Annual Report have been prepared with integrity and objectivity and are the responsibility of the management of The Home Depot, Inc. These financial statements have been prepared in conformity with U.S. generally accepted accounting principles and properly reflect certain estimates and judgments based upon the best available information.

The financial statements of the Company have been audited by KPMG LLP, an independent registered public accounting firm. Their accompanying report is based upon an audit conducted in accordance with the standards of the Public Company Accounting Oversight Board (United States).

The Audit Committee of the Board of Directors, consisting solely of outside directors, meets five times a year with the independent registered public accounting firm, the internal auditors and representatives of management to discuss auditing and financial reporting matters. In addition, a telephonic meeting is held prior to each quarterly earnings release. The Audit Committee retains the independent registered public accounting firm and regularly reviews the internal accounting controls, the activities of the independent registered public accounting firm and internal auditors and the financial condition of the Company. Both the Company's independent registered public accounting firm and the internal auditors have free access to the Audit Committee.

**Management's Report an Internal Control over Financial Reporting**

Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Rules 13a-15(f) promulgated under the Securities Exchange Act of 1934, as amended. Under the supervision and with the participation of our management, including our chief executive officer and chief financial officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting as of February 3, 2008 based on the framework in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Based on our evaluation, our management concluded that our internal control over financial reporting was effective as of February 3, 2008 in providing reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. The effectiveness of our internal control over financial reporting as of February 3, 2008 has been audited by KPMG LLP, an independent registered public accounting firm, as stated in their report which is included on page 32 in this Form 10-K.

Francis S. Blake  
Chairman & Chief Executive Officer

Carol B. Tomé  
Chief Financial Officer &  
Executive Vice President—Corporate Services

<sup>14</sup>See *Cautionary Advice Regarding Disclosure about Critical Accounting Policies*, Release Nos. 33-8040; 34-45149; FR-60 (Washington, D.C.: SEC); and *Proposed Rule: Disclosure in Management's Discussion and Analysis about the Application of Critical Accounting Policies*, Release Nos. 33-8098; 34-45907; International Series Release No. 1258; File No. S7-16-02 (Washington, D.C.: SEC).

<sup>15</sup>As indicated in this disclosure, management is responsible for preparing the financial statements and establishing and maintaining an effective system of internal controls. The auditor provides an independent assessment of whether the financial statements are prepared in accordance with GAAP, and for public companies, whether the internal controls are effective (see the audit opinion in Illustration 24-14 on page 1336).

## CURRENT REPORTING ISSUES

### Reporting on Financial Forecasts and Projections

In recent years, the investing public's demand for more and better information has focused on disclosure of corporate expectations for the future.<sup>16</sup> These disclosures take one of two forms:<sup>17</sup>

#### Objective 7

Identify issues related to financial forecasts and projections.

**Financial forecasts.** A **financial forecast** is a set of prospective financial statements that present, to the best of the responsible party's knowledge and belief, a company's expected financial position, results of operations, and cash flows. The responsible party bases a financial forecast on conditions it expects to exist and the course of action it expects to take.

**Financial projections.** **Financial projections** are prospective financial statements that present, to the best of the responsible party's knowledge and belief, given one or more *hypothetical assumptions*, an entity's expected financial position, results of operations, and cash flows. The responsible party bases a financial projection on conditions it expects *would* exist and the course of action it expects *would* be taken, given one or more hypothetical assumptions.

The difference between a financial forecast and a financial projection is clear-cut: A forecast provides information on what is **expected** to happen, whereas a projection provides information on what **might** take place, but is not necessarily expected to happen.

Whether companies should be required to provide financial forecasts is the subject of intensive discussion with journalists, corporate executives, the SEC, financial analysts, accountants, and others. Predictably, there are strong arguments on either side. Listed below are some of the arguments.

#### Arguments for requiring published forecasts:

1. Investment decisions are based on future expectations. Therefore information about the future facilitates better decisions.
2. Companies already circulate forecasts informally. This situation should be regulated to ensure that the forecasts are available to all investors.
3. Circumstances now change so rapidly that historical information is no longer adequate for prediction.

#### Arguments against requiring published forecasts:

1. No one can foretell the future. Therefore forecasts will inevitably be wrong. Worse, they may mislead, if they convey an impression of precision about the future.
2. Companies may strive only to meet their published forecasts, thereby failing to produce results that are in the stockholders' best interest.
3. If forecasts prove inaccurate, there will be recriminations and probably legal actions.<sup>18</sup>

<sup>16</sup>Some areas in which companies are using financial information about the future are equipment lease-versus-buy analysis, analysis of a company's ability to successfully enter new markets, and examination of merger and acquisition opportunities. In addition, companies also prepare forecasts and projections for use by third parties in public offering documents (requiring financial forecasts), tax-oriented investments, and financial feasibility studies. Use of forward-looking data has been enhanced by the increased capability of microcomputers to analyze, compare, and manipulate large quantities of data.

<sup>17</sup>"Financial Forecasts and Projections," and "Guide for Prospective Financial Information," *Codification of Statements on Standards for Attestation Engagements* (New York: AICPA 2006), pars. 3.04 and 3.05.

<sup>18</sup>The issue is serious. Over a recent three-year period, 8 percent of the companies on the NYSE were sued because of an alleged lack of financial disclosure. Companies complain that they are subject to lawsuits whenever the stock price drops. And as one executive noted, "You can even be sued if the stock price goes up—because you did not disclose the good news fast enough."

4. Disclosure of forecasts will be detrimental to organizations, because forecasts will inform competitors (foreign and domestic), as well as investors.

### Underlying Concepts

The AICPA's Special Committee on Financial Reporting indicates that the legal environment discourages companies from disclosing forward-looking information. Companies should not have to expand reporting of forward-looking information unless there are more effective deterrents to unwarranted litigation.

The AICPA has issued a statement on standards for accountants' services on prospective financial information. This statement establishes guidelines for the preparation and presentation of financial forecasts and projections.<sup>19</sup> It requires accountants to provide (1) a summary of significant assumptions used in the forecast or projection and (2) guidelines for minimum presentation.

To encourage management to disclose prospective financial information, the SEC has a **safe harbor rule**. It provides protection to a company that presents an erroneous forecast, as long as the company prepared the forecast on a reasonable basis and disclosed it in good faith.<sup>20</sup> However, many companies note that the safe harbor rule does not work in practice, since it does not cover oral statements, nor has it kept them from investor lawsuits.

### Experience in Great Britain

Great Britain permits financial forecasts, and the results have been fairly successful. Some significant differences do exist between the English and the U.S. business and legal environments.<sup>21</sup> But such differences probably could be overcome if influential interests in this country cooperated to produce an atmosphere conducive to quality forecasting. A typical British forecast adapted from a construction company's report to support a public offering of stock is as follows.

**ILLUSTRATION 24-18**  
Financial Forecast of a  
British Company

Profits have grown substantially over the past 10 years and directors are confident of being able to continue this expansion. . . . While the rate of expansion will be dependent on the level of economic activity in Ireland and England, the group is well structured to avail itself of opportunities as they arise, particularly in the field of property development, which is expected to play an increasingly important role in the group's future expansion.

Profits before taxation for the half year ended 30th June were 402,000 pounds. On the basis of trading experiences since that date and the present level of sales and completions, the directors expect that in the absence of unforeseen circumstances, the group's profits before taxation for the year to 31st December will be not less than 960,000 pounds.

No dividends will be paid in respect of the current year. In a full financial year, on the basis of above forecasts (not including full year profits) it would be the intention of the board, assuming current rates of tax, to recommend dividends totaling 40% (of after-tax profits), which will be payable in the next two years.

A general narrative-type forecast issued by a U.S. corporation might appear as follows.

**ILLUSTRATION 24-19**  
Financial Forecast for an  
American Company

On the basis of promotions planned by the company for the second half of the fiscal year, net earnings for that period are expected to be approximately the same as those for the first half of the fiscal year, with net earnings for the third quarter expected to make the predominant contribution to net earnings for the second half of the year.

<sup>19</sup>Op cit., par. 1.02.

<sup>20</sup>"Safe-Harbor Rule for Projections," *Release No. 5993* (Washington: SEC, 1979). The Private Securities Litigation Reform Act of 1995 recognizes that some information that is useful to investors is inherently subject to less certainty or reliability than other information. By providing safe harbor for forward-looking statements, Congress has sought to facilitate access to this information by investors.

<sup>21</sup>The British system, for example, does not permit litigation on forecasted information, and the solicitor (lawyer) is not permitted to work on a contingent fee basis. See "A Case for Forecasting—The British Have Tried It and Find That It Works," *World* (New York: Peat, Marwick, Mitchell & Co., Autumn 1978), pp. 10–13.

## Questions of Liability

What happens if a company does not meet its forecasts? Can the company and the auditor be sued? If a company, for example, projects an earnings increase of 15 percent and achieves only 5 percent, should stockholders be permitted to have some judicial recourse against the company?

One court case involving **Monsanto Chemical Corporation** set a precedent. In this case, Monsanto predicted that sales would increase 8 to 9 percent and that earnings would rise 4 to 5 percent. In the last part of the year, the demand for Monsanto's products dropped as a result of a business turndown. Instead of increasing, the company's earnings declined. Investors sued the company because the projected earnings figure was erroneous, but a judge dismissed the suit because the forecasts were the best estimates of qualified people whose intents were honest.

As indicated earlier, the SEC's safe harbor rules are intended to protect companies that provide good-faith projections. However, much concern exists as to how the SEC and the courts will interpret such terms as "good faith" and "reasonable assumptions" when erroneous forecasts mislead users of this information.

## Internet Financial Reporting

Most companies now use the power and reach of the Internet to provide more useful information to financial statement readers. All large companies have Internet sites, and a large proportion of companies' websites contain links to their financial statements and other disclosures. The popularity of such reporting is not surprising, since companies can reduce the costs of printing and disseminating paper reports with the use of Internet reporting.

Does Internet financial reporting improve the usefulness of a company's financial reports? Yes, in several ways: First, dissemination of reports via the Web allows firms **to communicate more easily and quickly with users** than do traditional paper reports. In addition, **Internet reporting allows users to take advantage of tools** such as search engines and hyperlinks to quickly find information about the firm and, sometimes, to download the information for analysis, perhaps in computer spreadsheets. Finally, **Internet reporting can help make financial reports more relevant** by allowing companies to report expanded disaggregated data and more timely data than is possible through paper-based reporting. For example, some companies voluntarily report weekly sales data and segment operating data on their websites.

Given the widespread use of the Internet by investors and creditors, it is not surprising that organizations are developing new technologies and standards to further enable Internet financial reporting. An example is the increasing use of extensible business reporting language (XBRL). **XBRL** is a computer language adapted from the code of the Internet. It "tags" accounting data to correspond to financial reporting items that are reported in the balance sheet, income statement, and the cash flow statement. Once tagged, any company's XBRL data can be easily processed using spreadsheets and other computer programs. In fact, the SEC is planning to require all companies and mutual funds to prepare their financial reports using XBRL, thereby allowing users to more easily search a company's reports, extract and analyze data, and perform financial comparisons within industries.<sup>22</sup>

<sup>22</sup>C. Twarowski, "Financial Data 'on Steroids,'" *Washington Post* (August 19, 2008), p. D01. Also, see [www.xbrl.org/us/us/BusinessCaseForXBRL.pdf](http://www.xbrl.org/us/us/BusinessCaseForXBRL.pdf) for additional information on XBRL. The FASB has issued a report on electronic dissemination of financial reports. This report summarizes current practice and research conducted on Internet financial reporting. See Business Reporting Research Project, "Electronic Distribution of Business Reporting Information" (Norwalk, Conn.: FASB, 2000).

To complement the implementation of XBRL use, the SEC has also announced a major upgrade to its EDGAR database. The new system is called IDEA (short for Interactive Data Electronic Applications). This replacement of EDGAR marks the SEC’s transition from collecting forms and documents to making the information itself freely available to investors in a timely form they can readily use. With IDEA, investors will be able to quickly collate information from thousands of companies and forms and create reports and analysis on the fly, in any way they choose. It is hoped that IDEA will open the door for both the SEC and investors to the new world of financial disclosure in interactive data (XBRL) format.<sup>23</sup>

### NEW FORMATS, NEW DISCLOSURE

#### What do the numbers mean?

As indicated earlier in the Convergence Corner discussions, the FASB and the IASB are exploring better ways to present information in the financial statements. Recently, these two standard-setters have issued a discussion paper that requests input on a proposed reformatting of the financial statements. The table below provides a “snapshot” of the proposed changes (go to [http://www.fasb.org/project/financial\\_statement\\_presentation.shtml](http://www.fasb.org/project/financial_statement_presentation.shtml) to learn more about this joint international project).

Statement of Financial Position	Statement of Comprehensive Income	Statement of Cash Flows
Business	Business	Business
<ul style="list-style-type: none"> <li>• Operating assets and liabilities</li> <li>• Investing assets and liabilities</li> </ul>	<ul style="list-style-type: none"> <li>• Operating income and expenses</li> <li>• Investing income and expenses</li> </ul>	<ul style="list-style-type: none"> <li>• Operating cash flows</li> <li>• Investing cash flows</li> </ul>
Financing	Financing	Financing
<ul style="list-style-type: none"> <li>• Financing assets</li> <li>• Financing liabilities</li> </ul>	<ul style="list-style-type: none"> <li>• Financing asset income</li> <li>• Financing liability expenses</li> </ul>	<ul style="list-style-type: none"> <li>• Financing asset cash flows</li> <li>• Financing liability cash flows</li> </ul>
Income Taxes	Income Taxes	Income Taxes

As indicated, each statement will use the same format. While the proposed changes will not affect the measurement of individual financial statement elements, the use of a consistent format (e.g., Business, Financing, Income Taxes), will help users understand the interrelationships in the financial statements. In addition, a new schedule reconciling cash flows to comprehensive income will be provided. As part of this schedule, changes in fair value will be included. It is a good thing the timeline for the project is lengthy, as these changes in presentation are significant.

### Fraudulent Financial Reporting

#### Objective-8

Describe the profession’s response to fraudulent financial reporting.

**Fraudulent financial reporting** is defined as “intentional or reckless conduct, whether act or omission, that results in materially misleading financial statements.”<sup>24</sup> Fraudulent reporting can involve gross and deliberate distortion of corporate records (such as inventory count tags), or misapplication of accounting

<sup>23</sup>See “SEC Announces Successor to EDGAR Database,” <http://www.sec.gov/news/press/2008/2008-179.htm>. The SEC has implemented other regulations to ensure that investors get high-quality disclosures. For example, as discussed in Chapter 4, the SEC was concerned that companies may use pro forma reporting to deflect investor attention from bad news. In response, the SEC issued Regulation G, which requires companies to reconcile non-GAAP financial measures to GAAP. This regulation provides investors with a roadmap to analyze adjustments companies make to their GAAP numbers to arrive at pro forma results. [See SEC Regulation G, “Conditions for Use of Non-GAAP Financial Measures,” Release No. 33-8176 (March 28, 2003).] Regulation FD (Release Nos. 33-7881) was issued in 2000 to address the concern that some analysts were receiving information sooner than the general public (e.g., during conference calls with analysts when earnings releases were discussed). Regulation FD requires that when relevant information is released, all have equal access to it.

<sup>24</sup>“Report of the National Commission on Fraudulent Financial Reporting” (Washington, D.C., 1987), page 2. Unintentional errors as well as corporate improprieties (such as tax fraud, employee embezzlements, and so on) which do not cause the financial statements to be misleading are excluded from the definition of fraudulent financial reporting.

principles (failure to disclose material transactions). Although frauds are unusual, recent events involving such well-known companies as **Enron**, **WorldCom**, **Adelphia**, and **Tyco** indicate that more must be done to address this issue.

### Causes of Fraudulent Financial Reporting

Fraudulent financial reporting usually occurs because of conditions in a company's internal or external environment. Influences in the **internal environment** relate to poor internal control systems, management's poor attitude toward ethics, or perhaps a company's liquidity or profitability. Those in the **external environment** may relate to industry conditions, overall business environment, or legal and regulatory considerations.

General incentives for fraudulent financial reporting vary. Common ones are the desire to obtain a higher stock price, to avoid default on a loan covenant, or to make a personal gain of some type (additional compensation, promotion). Situational pressures on the company or an individual manager also may lead to fraudulent financial reporting. Examples of these situational pressures include the following.

- *Sudden decreases in revenue or market share* for a single company or an entire industry.
- *Unrealistic budget pressures* may occur when headquarters arbitrarily determines profit objectives (particularly for short-term results) and budgets without taking actual conditions into account.
- *Financial pressure resulting from bonus plans* that depend on short-term economic performance. This pressure is particularly acute when the bonus is a significant component of the individual's total compensation.

Opportunities for fraudulent financial reporting are present in circumstances when the fraud is easy to commit and when detection is difficult. Frequently these opportunities arise from:

1. *The absence of a board of directors or audit committee* that vigilantly oversees the financial reporting process.
2. *Weak or nonexistent internal accounting controls*. This situation can occur, for example, when a company's revenue system is overloaded as a result of a rapid expansion of sales, an acquisition of a new division, or the entry into a new, unfamiliar line of business.
3. *Unusual or complex transactions* such as the consolidation of two companies, the divestiture or closing of a specific operation, and the purchase and sale of derivative instruments.
4. *Accounting estimates requiring significant subjective judgment* by company management, such as the allowance for loan losses and the estimated liability for warranty expense.
5. *Ineffective internal audit staffs* resulting from inadequate staff size and severely limited audit scope.

A weak corporate ethical climate contributes to these situations. Opportunities for fraudulent financial reporting also increase dramatically when the accounting principles followed in reporting transactions are nonexistent, evolving, or subject to varying interpretations.<sup>25</sup>

<sup>25</sup>The discussion in this section is based on the Report of the National Commission on Fraudulent Financial Reporting, pp. 23–24. See "2004 Report to the Nation on Occupational Fraud and Abuse, Association of Certified Fraud Examiners," ([www.cfenet.com/pdfs/2004RtN.pdf](http://www.cfenet.com/pdfs/2004RtN.pdf)) for fraudulent financial reporting causes and consequences.

The AICPA has issued numerous auditing standards in response to concerns of the accounting profession, the media, and the public.<sup>26</sup> For example, the recent standard on fraudulent financial reporting “raises the bar” on the performance of financial statement audits by explicitly requiring auditors to assess the risk of material financial misstatement due to fraud.<sup>27</sup> As indicated earlier, the Sarbanes-Oxley Act now raises the penalty substantially for executives who are involved in fraudulent financial reporting.

### What do the numbers mean?

#### HERE'S A FRAUD

**ESM Government Securities, Inc. (ESM)** is a classic case exemplifying the seriousness of financial reporting frauds. ESM was a Fort Lauderdale securities dealer entrusted with monies to invest by municipalities from Toledo, Ohio, to Beaumont, Texas. The cities that provided funds thought, based on the company name, that ESM was collateralized with government securities.

Examination of ESM's balance sheet indicated that the company owed about as much as it expected to collect. Unfortunately, the amount it expected to collect was from insolvent affiliates which, in effect, meant that ESM was bankrupt. In fact, ESM had been bankrupt for more than six years, and the fraud was discovered only because a customer questioned a note to the balance sheet! ESM had disguised more than \$300 million of losses.

Source: For an expanded discussion of this case, see Robert J. Sack and Robert Tangreti, “ESM: Implications for the Profession,” *Journal of Accountancy* (April 1987).

### Criteria for Making Accounting and Reporting Choices

Throughout this textbook, we have stressed the need to provide information that is useful to predict the amounts, timing, and uncertainty of future cash flows. To achieve this objective, companies must make judicious choices between alternative accounting concepts, methods, and means of disclosure. You are probably surprised by the large number of choices that exist among acceptable alternatives.

You should recognize, however, as indicated in Chapter 1, that accounting is greatly influenced by its environment. It does not exist in a vacuum. Therefore, it is unrealistic to assume that the profession can entirely eliminate alternative presentations of certain transactions and events. Nevertheless, we are hopeful that the profession, by adhering to the conceptual framework, will be able to focus on the needs of financial statement users and eliminate diversity where appropriate. The SEC's and FASB's projects on principle-based standards are directed at these very issues. They seek to develop guidance that will result in accounting and financial reporting that reflects the economic substance of the transactions, not the desired financial result of management. The profession must continue its efforts to develop a sound foundation upon which to build financial standards and practice. As Aristotle said, “The correct beginning is more than half the whole.”

#### Underlying Concepts

The FASB concept statements on objectives of financial reporting, elements of financial statements, qualitative characteristics of accounting information, and recognition and measurement are important steps in the right direction.

You will want to read the **CONVERGENCE CORNER** on page 1347

For discussion of how international convergence efforts relate to disclosure.

<sup>26</sup>Because the profession believes that the role of the auditor is not well understood outside the profession, much attention has been focused on the expectation gap. The **expectation gap** is the gap between (1) the expectation of financial statement users concerning the level of assurance they believe the independent auditor provides, and (2) the assurance that the independent auditor actually does provide under generally accepted auditing standards.

<sup>27</sup>“Consideration of Fraud in a Financial Statement Audit,” *Statement on Auditing Standards No. 99* (New York: AICPA, 2002).

# CONVERGENCE CORNER

## DISCLOSURE

iGAAP and U.S. GAAP disclosure requirements are similar in many regards. The iGAAP standards addressing related-party disclosures are: *IAS 1* (“First Time Adoption of IFRS”); *IAS 24* (“Related Party Disclosures”); disclosure and recognition of post-balance-sheet events in *IAS 10* (“Events after the Balance Sheet Date”); segment reporting iGAAP provisions in *IFRS 8* (“Operating Segments”); and interim reporting requirements in *IAS 34* (“Interim Financial Reporting”).

### RELEVANT FACTS

- Due to the broader range of judgments allowed in more principle-based iGAAP, note disclosures generally are more expansive under iGAAP compared to U.S. GAAP.
- Like U.S. GAAP, iGAAP requires that for transactions with related parties, companies disclose the amounts involved in a transaction, the amount, terms and nature of the outstanding balances, and any doubtful amounts related to those outstanding balances for each major category of related parties. There is no specific requirement to disclose the name of the related party.
- iGAAP and U.S. GAAP have similar standards on post-balance-sheet events. That is, under both sets of GAAP, events that occurred after the balance sheet date that provide additional evidence of conditions that existed at the balance sheet date are recognized in the financial statements.
- Following the recent issuance of *IFRS 8*, “Operating Segments,” the requirements under iGAAP and U.S. GAAP are very similar. That is, both GAAPs use the management approach to identify reportable segments, and similar segment disclosures are required.
- Neither U.S. GAAP nor iGAAP requires interim reports. Rather the SEC and stock exchanges outside the U.S. establish the rules. In the U.S., interim reports generally are provided on a quarterly basis; outside the U.S., 6-month interim reports are common.

### ABOUT THE NUMBERS

Because iGAAP and U.S. GAAP are quite similar in their disclosure provisions, we provide some observations on the application of iGAAP by foreign companies listing securities in the United States. Recently the staff of the SEC reviewed the financial statements filed with the SEC by 100 foreign issuers, prepared for the first time using iGAAP. The staff did not make any statements regarding the overall *quality* of the reports but did identify areas where additional questions might be asked. Here are some of the items that warranted staff comment:

1. Revenue recognition, especially where a company provided generic policy disclosure but did not provide disclosure specific to its circumstances.
2. Intangible assets and goodwill, including the factors that led a company to recognize them in a business combination.
3. Companies’ policies for identifying and evaluating impairment, the circumstances resulting in impairment recognition, or the circumstances surrounding impairment reversals of long-lived assets including goodwill.
4. Leases, including their terms and the future minimum payments under operating and financial leases.
5. Contingent liabilities, including their nature and estimated financial effects.
6. The significant terms of financial instruments, including derivatives, their effects on future cash flow, and the recognition and measurement criteria the company applied in accounting for financial instruments.
7. Additional issues related to income statement and cash flow statement formats and related notes.

### ON THE HORIZON

Sir David Tweedie, chair of the IASB, recently stated, “By 2011–2012, U.S. and international accounting should be pretty much the same.” There is no question that iGAAP and U.S. GAAP are converging quickly. We have provided the Convergence Corner discussions to help you understand the issues surrounding convergence as they relate to intermediate accounting. After reading these discussions, you should realize that iGAAP and U.S. GAAP are very similar in many areas, with differences in those areas revolving around some minor technical points. In other situations, the differences are major; for example, iGAAP does not permit LIFO inventory accounting. Our hope is that the FASB and IASB can quickly complete their convergence efforts, resulting in a single set of high-quality accounting standards for use by companies around the world.

## SUMMARY OF LEARNING OBJECTIVES

**LO 1 Review the full disclosure principle and describe implementation problems.** The full disclosure principle calls for financial reporting of any financial facts significant enough to influence the judgment of an informed reader. Implementing the full disclosure principle is difficult, because the cost of disclosure can be substantial and the benefits difficult to assess. Disclosure requirements have increased because of (1) the growing complexity of the business environment, (2) the necessity for timely information, and (3) the use of accounting as a control and monitoring device.

**LO 2 Explain the use of notes in financial statement preparation.** Notes are the accountant's means of amplifying or explaining the items presented in the main body of the statements. Notes can explain in qualitative terms information pertinent to specific financial statement items, and can provide supplementary data of a quantitative nature. Common note disclosures relate to such items as: accounting policies; inventories; property, plant, and equipment; creditor claims; contingencies and commitments; and subsequent events.

**LO 3 Discuss the disclosure requirements for major business segments.** Aggregated figures hide much information about the composition of these consolidated figures. There is no way to tell from the consolidated data the extent to which the differing product lines contribute to the company's profitability, risk, and growth potential. As a result, the profession requires segment information in certain situations.

**LO 4 Describe the accounting problems associated with interim reporting.** Interim reports cover periods of less than one year. Two viewpoints exist regarding interim reports. The discrete approach holds that each interim period should be treated as a separate accounting period. The integral approach is that the interim report is an integral part of the annual report and that deferrals and accruals should take into consideration what will happen for the entire year.

Companies should use the same accounting principles for interim reports that they use for annual reports. A number of unique reporting problems develop related to the following items: (1) advertising and similar costs, (2) expenses subject to year-end adjustment, (3) income taxes, (4) extraordinary items, (5) earnings per share, and (6) seasonality.

**LO 5 Identify the major disclosures in the auditor's report.** The auditor expresses an unqualified opinion if satisfied that the financial statements present the financial position, results of operations, and cash flows fairly in accordance with generally accepted accounting principles. A qualified opinion contains an exception to the standard opinion; ordinarily the exception is not of sufficient magnitude to invalidate the statements as a whole.

An adverse opinion is required when the exceptions to fair presentation are so material that a qualified opinion is not justified. A disclaimer of an opinion is appropriate when the auditor has so little information on the financial statements that no opinion can be expressed.

**LO 6 Understand management's responsibilities for financials.** Management's discussion and analysis (MD&A) section covers three financial aspects of an enterprise's business: liquidity, capital resources, and results of operations. Management's responsibility for the financial statements is often indicated in a letter to stockholders in the annual report.

**LO 7 Identify issues related to financial forecasts and projections.** The SEC has indicated that companies are permitted (not required) to include profit forecasts in their reports. To encourage management to disclose such information, the SEC issued a safe harbor

rule. The rule provides protection to a company that presents an erroneous forecast, as long as it prepared the projection on a reasonable basis and disclosed it in good faith. However, the safe harbor rule has not worked well in practice.

**•8 Describe the profession's response to fraudulent financial reporting.** Fraudulent financial reporting is intentional or reckless conduct, whether through act or omission, that results in materially misleading financial statements. Fraudulent financial reporting usually occurs because of poor internal control, management's poor attitude toward ethics, poor performance, and so on. The Sarbanes-Oxley Act has numerous provisions intended to help prevent fraudulent financial reporting.

## APPENDIX 24A

## BASIC FINANCIAL STATEMENT ANALYSIS

What would be important to you in studying a company's financial statements? The answer depends on your particular interest—whether you are a creditor, stockholder, potential investor, manager, government agency, or labor leader. For example, **short-term creditors** such as banks are primarily interested in the ability of the firm to pay its currently maturing obligations. In that case, you would examine the current assets and their relation to short-term liabilities to evaluate the short-run solvency of the firm.

**Bondholders**, on the other hand, look more to long-term indicators, such as the enterprise's capital structure, past and projected earnings, and changes in financial position. **Stockholders**, present or prospective, also are interested in many of the features considered by a long-term creditor. As a stockholder, you would focus on the earnings picture, because changes in it greatly affect the market price of your investment. You also would be concerned with the financial position of the company, because it affects indirectly the stability of earnings.

The **managers** of a company are concerned about the composition of its capital structure and about the changes and trends in earnings. This financial information has a direct influence on the type, amount, and cost of external financing that the company can obtain. In addition, the company managers find financial information useful on a day-to-day operating basis in such areas as capital budgeting, breakeven analysis, variance analysis, gross margin analysis, and for internal control purposes.

## PERSPECTIVE ON FINANCIAL STATEMENT ANALYSIS

Readers of financial statements can gather information by examining relationships between items on the statements and identifying trends in these relationships. The relationships are expressed numerically in ratios and percentages, and trends are identified through comparative analysis.

A problem with learning how to analyze statements is that the means may become an end in itself. Analysts could identify and calculate thousands of possible relationships and trends. If one knows only how to calculate ratios and trends without understanding how such information can be used, little is accomplished. Therefore, a logical approach to financial statement analysis is necessary, consisting of the following steps.

1. **Know the questions for which you want to find answers.** As indicated earlier, various groups have different types of interest in a company.
2. **Know the questions that particular ratios and comparisons are able to help answer.** These will be discussed in this appendix.
3. **Match 1 and 2 above.** By such a matching, the statement analysis will have a logical direction and purpose.

### Objective•9

Understand the approach to financial statement analysis.

### Underlying Concepts

Because financial statements report on the past, they emphasize the *qualitative characteristic of feedback value*. This feedback value is useful because it can be used to better achieve the *qualitative characteristic of predictive value*.

**INTERNATIONAL INSIGHT**

Some companies outside the U.S. provide “convenience” financial statements for U.S. readers. These financial statements have been translated into English, and they may also translate the currency units into U.S. dollars. However, the statements are *not restated* using U.S. accounting principles; financial statement analysis needs to take this fact into account.

Several caveats must be mentioned. **Financial statements report on the past.** Thus, analysis of these data is an examination of the past. When using such information in a decision-making (future-oriented) process, analysts assume that the past is a reasonable basis for predicting the future. This is usually a reasonable approach, but its limitations should be recognized.

Also, ratio and trend analyses will help identify a company’s present strengths and weaknesses. They may serve as “red flags” indicating problem areas. In many cases, however, such analyses will not reveal **why** things are as they are. Finding answers about “why” usually requires an in-depth analysis and an awareness of many factors about a company that are not reported in the financial statements.

Another caveat is that a **single ratio by itself is not likely to be very useful.** For example, analysts may generally view a current ratio of 2 to 1 (current assets are twice current liabilities) as satisfactory. However, if the industry average is 3 to 1, such a conclusion may be invalid. Even given this industry average, one may conclude that the particular company is doing well if one knows the previous year’s ratio was 1.5 to 1. Consequently, to derive meaning from ratios, analysts need some standard against which to compare them. Such a standard may come from industry averages, past years’ amounts, a particular competitor, or planned levels.

Finally, **awareness of the limitations of accounting numbers used in an analysis** is important. We will discuss some of these limitations and their consequences later in this appendix.

---

## RATIO ANALYSIS

**Objective 10**

Identify major analytic ratios and describe their calculation.

In analyzing financial statement data, analysts use various devices to bring out the comparative and relative significance of the financial information presented. These devices include ratio analysis, comparative analysis, percentage analysis, and examination of related data. No one device is more useful than another. Every situation is different, and analysts often obtain the needed answers only upon close examination of the interrelationships among all the data provided. Ratio analysis is the starting point. Ratios can be classified as follows.

### MAJOR TYPES OF RATIOS

**LIQUIDITY RATIOS.** Measures of the company’s short-run ability to pay its maturing obligations.

**ACTIVITY RATIOS.** Measures of how effectively the company is using the assets employed.

**PROFITABILITY RATIOS.** Measures of the degree of success or failure of a given company or division for a given period of time.

**COVERAGE RATIOS.** Measures of the degree of protection for long-term creditors and investors.<sup>28</sup>

We have integrated discussions and illustrations about the computation and use of these financial ratios throughout this book. Illustration 24A-1 (on page 1351) summarizes all of the ratios presented in the book and identifies the specific chapters that presented that material.

<sup>28</sup>Some analysts use other terms to categorize these ratios. For example, liquidity ratios are sometimes referred to as *solvency ratios*; activity ratios as *turnover* or *efficiency ratios*; and coverage ratios as *leverage* or *capital structure ratios*.

## ILLUSTRATION 24A-1

Summary of Financial Ratios

SUMMARY OF RATIOS PRESENTED IN EARLIER CHAPTERS		
Ratio	Formula for Computation	Reference
I. Liquidity		
1. <b>Current ratio</b>	$\frac{\text{Current assets}}{\text{Current liabilities}}$	Chapter 13, p. 665
2. <b>Quick or acid-test ratio</b>	$\frac{\text{Cash, marketable securities, and net receivables}}{\text{Current liabilities}}$	Chapter 13, p. 666
3. <b>Current cash debt coverage ratio</b>	$\frac{\text{Net cash provided by operating activities}}{\text{Average current liabilities}}$	Chapter 5, p. 204
II. Activity		
4. <b>Receivables turnover</b>	$\frac{\text{Net sales}}{\text{Average trade receivables (net)}}$	Chapter 7, p. 344
5. <b>Inventory turnover</b>	$\frac{\text{Cost of goods sold}}{\text{Average inventory}}$	Chapter 9, p. 459
6. <b>Asset turnover</b>	$\frac{\text{Net sales}}{\text{Average total assets}}$	Chapter 11, p. 560
III. Profitability		
7. <b>Profit margin on sales</b>	$\frac{\text{Net income}}{\text{Net sales}}$	Chapter 11, p. 561
8. <b>Rate of return on assets</b>	$\frac{\text{Net income}}{\text{Average total assets}}$	Chapter 11, p. 561
9. <b>Rate of return on common stock equity</b>	$\frac{\text{Net income minus preferred dividends}}{\text{Average common stockholders' equity}}$	Chapter 15, p. 767
10. <b>Earnings per share</b>	$\frac{\text{Net income minus preferred dividends}}{\text{Weighted shares outstanding}}$	Chapter 16, p. 812
11. <b>Payout ratio</b>	$\frac{\text{Cash dividends}}{\text{Net income}}$	Chapter 15, p. 767
IV. Coverage		
12. <b>Debt to total assets ratio</b>	$\frac{\text{Debt}}{\text{Total assets}}$	Chapter 14, p. 713
13. <b>Times interest earned</b>	$\frac{\text{Income before interest expense and taxes}}{\text{Interest expense}}$	Chapter 14, p. 713
14. <b>Cash debt coverage ratio</b>	$\frac{\text{Net cash provided by operating activities}}{\text{Average total liabilities}}$	Chapter 5, p. 204
15. <b>Book value per share</b>	$\frac{\text{Common stockholders' equity}}{\text{Outstanding shares}}$	Chapter 15, p. 768

You can find additional coverage of these ratios, accompanied by assignment material, at the book's website, at [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso). This supplemental coverage takes the form of a comprehensive case adapted from the annual report of a large international chemical company that we have disguised under the name of Anetek Chemical Corporation.

### Limitations of Ratio Analysis

The reader of financial statements must understand the basic limitations associated with ratio analysis. As analytical tools, ratios are attractive because they are simple and convenient. But too frequently, decision makers base their decisions

#### Objective 11

Explain the limitations of ratio analysis.

Financial Analysis Primer

on only these simple computations. The ratios are only as good as the data upon which they are based and the information with which they are compared.

One important limitation of ratios is that they generally are **based on historical cost, which can lead to distortions in measuring performance**. Inaccurate assessments of the enterprise's financial condition and performance can result from failing to incorporate fair value information.

Also, investors must remember that **where estimated items (such as depreciation and amortization) are significant, income ratios lose some of their credibility**. For example, income recognized before the termination of a company's life is an approximation. In analyzing the income statement, users should be aware of the uncertainty surrounding the computation of net income. As one writer aptly noted, "The physicist has long since conceded that the location of an electron is best expressed by a probability curve. Surely an abstraction like earnings per share is even more subject to the rules of probability and risk."<sup>29</sup>

Probably the greatest limitation of ratio analysis is the **difficult problem of achieving comparability among firms in a given industry**. Achieving comparability requires that the analyst (1) identify basic differences in companies' accounting principles and procedures, and (2) adjust the balances to achieve comparability. Basic differences in accounting usually involve one of the following areas.

1. Inventory valuation (FIFO, LIFO, average cost).
2. Depreciation methods, particularly the use of straight-line versus accelerated depreciation.
3. Capitalization versus expensing of certain costs.
4. Capitalization of leases versus noncapitalization.
5. Investments in common stock carried at equity versus fair value.
6. Differing treatments of postretirement benefit costs.
7. Questionable practices of defining discontinued operations, impairments, and extraordinary items.

The use of these different alternatives can make a significant difference in the ratios computed. For example, at one time **Anheuser-Busch** noted that if it had used average cost for inventory valuation instead of LIFO, inventories would have increased approximately \$33,000,000. Such an increase would have a substantive impact on the current ratio. Several studies have analyzed the impact of different accounting methods on financial statement analysis. The differences in income that can develop are staggering in some cases. Investors must be aware of the potential pitfalls if they are to be able to make the proper adjustments.<sup>30</sup>

Finally, analysts should recognize that a **substantial amount of important information** is not included in a company's financial statements. Events involving such things as industry changes, management changes, competitors' actions, technological developments, government actions, and union activities are often critical to a company's successful operation. These events occur continuously, and information about them must come from careful analysis of financial reports in the media and other sources. Indeed many argue, in what is known as the **efficient-market hypothesis**, that financial statements contain "no surprises" to those engaged in market activities. They contend that the effect of these events is known in the marketplace—and the price of the company's stock adjusts accordingly—well before the issuance of such reports.

<sup>29</sup>Richard E. Cheney, "How Dependable Is the Bottom Line?" *The Financial Executive* (January 1971), p. 12.

<sup>30</sup>See for example, Eugene A. Imhoff, Jr., Robert C. Lipe, and David W. Wright, "Operating Leases: Impact of Constructive Capitalization," *Accounting Horizons* (March 1991).

### Underlying Concepts

Consistency and comparability are important concepts for financial statement analysis. If the principles and assumptions used to prepare the financial statements are continually changing, accurate assessments of a company's progress become difficult.

## COMPARATIVE ANALYSIS

**Comparative analysis** presents the same information for two or more different dates or periods, so that like items may be compared. Ratio analysis provides only a single snapshot, for one given point or period in time. In a comparative analysis, an investment analyst can concentrate on a given item and determine whether it appears to be growing or diminishing year by year and the proportion of such change to related items. Generally, companies present comparative financial statements.<sup>31</sup> They typically include two years of balance sheet information and three years of income statement information.

In addition, many companies include in their annual reports five- or ten-year summaries of pertinent data that permit readers to examine and analyze trends. As indicated in GAAP, “the presentation of comparative financial statements in annual and other reports enhances the usefulness of such reports and brings out more clearly the nature and trends of current changes affecting the enterprise.” Illustration 24A-2 presents a five-year condensed statement, with additional supporting data, of Anetek Chemical Corporation.

### Objective 12

Describe techniques of comparative analysis.

<sup>a</sup>Adjusted for stock splits and stock dividends.

<sup>31</sup>All 600 companies surveyed in *Accounting Trends and Techniques—2007* presented comparative 2005 amounts in their 2006 balance sheets and presented comparative 2004 and 2005 amounts in their 2006 income statements.

## PERCENTAGE (COMMON-SIZE) ANALYSIS

### Objective 13

Describe techniques of percentage analysis.

Analysts also use percentage analysis to help them evaluate and compare companies. **Percentage analysis** consists of reducing a series of related amounts to a series of percentages of a given base. For example, analysts frequently express all items in an income statement as a percentage of sales or sometimes as a percentage of cost of goods sold. They may analyze a balance sheet on the basis of total assets. Percentage analysis facilitates comparison and is helpful in evaluating the relative size of items or the relative change in items. A conversion of absolute dollar amounts to percentages may also facilitate comparison between companies of different size.

Illustration 24A-3 shows a comparative analysis of the expense section of Anetek for the last two years.

**ILLUSTRATION 24A-3**  
Horizontal Percentage  
Analysis

ANETEK CHEMICAL CORPORATION				
HORIZONTAL COMPARATIVE ANALYSIS				
(000,000 OMITTED)				
	2010	2009	Difference	% Change Inc. (Dec.)
Cost of sales	\$1,000.0	\$850.0	\$150.0	17.6%
Depreciation and amortization	150.0	150.0	0	0
Selling and administrative expenses	225.0	150.0	75.0	50.0
Interest expense	50.0	25.0	25.0	100.0
Income taxes	100.0	75.0	25.0	33.3

This approach, normally called **horizontal analysis**, indicates the proportionate change over a period of time. It is especially useful in evaluating trends, because absolute changes are often deceiving.

Another comparative approach, called **vertical analysis**, is the proportional expression of each financial statement item in a given period to a base figure. For example, Anetek Chemical's income statement using this approach appears in Illustration 24A-4.

**ILLUSTRATION 24A-4**  
Vertical Percentage  
Analysis

ANETEK CHEMICAL CORPORATION		
INCOME STATEMENT		
(000,000 OMITTED)		
	Amount	Percentage of Total Revenue
Net sales	\$1,600.0	96%
Other revenue	75.0	4
Total revenue	1,675.0	100
Less:		
Cost of sales	1,000.0	60
Depreciation and amortization	150.0	9
Selling and administrative expenses	225.0	13
Interest expense	50.0	3
Income taxes	100.0	6
Total expenses	1,525.0	91
Net income	\$ 150.0	9%

Vertical analysis is frequently called **common-size analysis** because it reduces all of the statement items to a "common size." That is, all of the elements within each statement are expressed in percentages of some common number and always add up to 100 percent. Common-size (percentage) analysis reveals the composition of each of the financial statements.

In the analysis of the balance sheet, common-size analysis answers such questions as: What percentage of the capital structure is stockholders' equity, current liabilities, and long-term debt? What is the mix of assets (percentage-wise) with which the company has chosen to conduct business? What percentage of current assets is in inventory, receivables, and so forth?

Common-size analysis of the income statement typically relates each item to sales. It is instructive to know what proportion of each sales dollar is absorbed by various costs and expenses incurred by the enterprise.

Analysts may use common-size statements to compare one company's statements from different years, to detect trends not evident from comparing absolute amounts. Also, common-size statements provide intercompany comparisons regardless of size because they recast financial statements into a comparable common-size format.

## SUMMARY OF LEARNING OBJECTIVES FOR APPENDIX 24A

**LO 9 Understand the approach to financial statement analysis.** Basic financial statement analysis involves examining relationships between items on the statements (ratio and percentage analysis) and identifying trends in these relationships (comparative analysis). Analysis is used to predict the future, but ratio analysis is limited because the data are from the past. Also, ratio analysis identifies present strengths and weaknesses of a company, but it may not reveal *why* they are as they are. Although single ratios are helpful, they are not conclusive; for maximum usefulness, analysts must compare them with industry averages, past years, planned amounts, and the like.

**LO 10 Identify major analytic ratios and describe their calculation.** Ratios are classified as liquidity ratios, activity ratios, profitability ratios, and coverage ratios: (1) *Liquidity ratio analysis* measures the short-run ability of a company to pay its currently maturing obligations. (2) *Activity ratio analysis* measures how effectively a company is using its assets. (3) *Profitability ratio analysis* measures the degree of success or failure of a company to generate revenues adequate to cover its costs of operation and provide a return to the owners. (4) *Coverage ratio analysis* measures the degree of protection afforded long-term creditors and investors.

**LO 11 Explain the limitations of ratio analysis.** Ratios are based on historical cost, which can lead to distortions in measuring performance. Also, where estimated items are significant, income ratios lose some of their credibility. In addition, comparability problems exist because companies use different accounting principles and procedures. Finally, analysts must recognize that a substantial amount of important information is not included in a company's financial statements.

**LO 12 Describe techniques of comparative analysis.** Companies present comparative data, which generally includes two years of balance sheet information and three years of income statement information. In addition, many companies include in their annual reports five- to ten-year summaries of pertinent data that permit the reader to analyze trends.

**LO 13 Describe techniques of percentage analysis.** Percentage analysis consists of reducing a series of related amounts to a series of percentages of a given base. Analysts use two approaches: *Horizontal analysis* indicates the proportionate change in financial statement items over a period of time; such analysis is most helpful in evaluating trends. *Vertical analysis* (common-size analysis) is a proportional expression of each item on the financial statements in a given period to a base amount. It analyzes the composition of each of the financial statements from different years (a) to detect trends not evident from the comparison of absolute amounts and (b) to make intercompany comparisons of different-sized enterprises.

## APPENDIX 24B

## INTERNATIONAL ACCOUNTING STANDARDS

**Objective 14**

Describe the current international accounting environment.

In Chapter 1, we noted that the former U.S. Secretary of the Treasury judged the single most important innovation shaping the capital markets to be the idea of generally accepted accounting principles. He went on to say that we need something similar internationally.

We believe the secretary is right. We also believe that environmental forces are in place to achieve a worldwide set of accounting standards in the not-too-distant future. Currently, many companies find it costly to comply with different reporting standards in different countries. Likewise, investors, attempting to diversify their holdings and manage their risks, have become very interested in investing overseas. Having one common set of accounting rules will make it easier for international investors to compare the financial results of companies from different countries.

The purpose of this appendix is to provide additional insight into the movement toward one set of accounting standards to be used by all companies.

## THE PRESENT ENVIRONMENT

Most agree that, for the following reasons, there is a need for one set of globalized accounting standards.

**Multinational corporations.** Today companies view the entire world as their market. Some of the best-known corporations, such as **Coca-Cola**, **Intel**, and **McDonald's**, generate more than 50 percent of their sales outside the United States. These organizations no longer think of themselves as simply U.S. companies. The same situation is occurring overseas as many foreign companies find their largest market to be the United States.

**Mergers and acquisitions.** All you have to do is look in the *Wall Street Journal* to quickly understand the merger activity taking place between companies from different countries. The merger of such an international giant as **Vodafone/Mannesmann** suggest that we will see even more of this type of merger in the future.

**Information technology.** We have witnessed an incredible transformation in the speed and scale of communications among companies and individuals across borders. As communication barriers continue to drop, companies and individuals in different countries and markets are becoming comfortable buying and selling goods and services from one another.

**Financial markets.** Financial markets are some of the most significant international markets today. Whether it is currency, equity securities (stocks), bonds, or derivatives, there are active markets throughout the world trading these types of instruments. With the touch of a computer key, billions of dollars are transferred from one market to another.

## REASONS TO UNDERSTAND INTERNATIONAL ACCOUNTING STANDARDS

As we discuss more fully below, the FASB and international accounting standard-setters are working diligently to narrow the differences between U.S. GAAP and international accounting standards (iGAAP). As a result, U.S. investors, regulators, and preparers who have vested interests in the reporting practices of multinational companies should be familiar with iGAAP. Here is why.

**Convergence.** International accounting standards **converge** when differences between international and U.S. standards are eliminated. Such **convergence** is illustrated if U.S. GAAP changes to international standards. For example, a recent IASB exposure draft

requires companies to record all liability contingencies at fair value, no matter the likelihood of occurrence. If this standard passes, no doubt the FASB will also consider the change. This change could affect the financial reporting practices of U.S. companies.

**Investors' expectations.** To attract foreign investors, U.S. companies may need to provide additional information regarding how iGAAP would affect their financial statements. As investors gain a better understanding of iGAAP, they may demand this additional information from U.S. companies.

**Competitive factors.** There is some concern that iGAAP may provide certain companies with a competitive advantage. For example, international standards that are more permissive for revenue recognition may lead to an income number that is more favorable but in reality is misleading. Conversely, the U.S. standards may force a U.S. company to report lower income. Understanding this difference may be important in judging the competing companies.

Given these forces, it is no wonder that many are working to establish a set of accounting principles that can be used worldwide.

---

## THE CHALLENGE OF INTERNATIONAL ACCOUNTING

The only way that international standards will work is if they are of high quality. High-quality standards must have the following characteristics.<sup>32</sup>

- They must permit *few alternative practices*.
- They must be *clearly stated*, to allow for easy interpretation and consistent application.
- They must be *comprehensive*, covering the major transactions facing companies, and must provide an *effective system* for responding to new transactions.
- They must provide *transparency of information* (full disclosure, understandability), to make that information relevant for making effective decisions.

Developing high-quality international standards is not easy. Accounting for transactions in the United States sometimes differs significantly from practices in other countries. We have highlighted these differences throughout the text within the Convergence Corner pages. These differences in some cases are quite fundamental; they involve issues such as when companies should recognize and measure assets, liabilities, revenues, and expenses.

Here are some examples of such differences:

- iGAAP permits companies to value assets at fair value using appraisals. In the United States this practice is not allowed.
- iGAAP prohibits use of LIFO costing for inventories. In the United States, a significant number of companies use LIFO to cost some, or their entire, inventory.
- iGAAP gives companies the option of reporting the funded position of postretirement benefit plans in the balance sheet. U.S. GAAP requires recognition.
- iGAAP requires use of the cost-recovery method instead of completed-contract revenue recognition for long-term contracts.

The FASB and international accounting standard-setters have already eliminated some differences between U.S. GAAP and iGAAP.<sup>33</sup> Discussions in this book have highlighted a number of the remaining differences between them. The fact that there *are* differences should not be surprising, because standard-setters worldwide have developed standards in response to different user needs. In some countries, the primary users of financial statements are private investors; in others, the primary users are tax authorities or central government planners. In the United States, capital market participants (investors and creditors) have driven accounting standard formulation.

<sup>32</sup>Adapted from Edmund L. Jenkins, "Global Financial Reporting and the Global Financial Markets," 1999 Financial Executive Summit (Vancouver, B.C., May 28, 1999).

<sup>33</sup>Notable examples are exchanges of nonmonetary assets (discussed in Chapter 10) and accounting changes (discussed in Chapter 22.)

## WHO ARE THE KEY PLAYERS IN DEVELOPING INTERNATIONAL STANDARDS?

Throughout this book, we have discussed the FASB and its role in establishing accounting rules. We have also explained the role the SEC plays in ensuring that companies follow these standards appropriately. Both of these organizations have strongly supported the movement toward one set of international standards.

In the international arena, the primary organization involved in developing iGAAP is the International Accounting Standards Board (IASB).

### IASB

Ed Jenkins, former chair of the FASB, noted, “We have reached a historic milestone for the future of financial reporting that will benefit investors around the world. The FASB is pleased that the **IASC**—a standard-setting organization based in London—has accepted the recommendations of its Strategy Working Party to restructure the IASC. When it is in place, the proposed restructuring would provide an independent, objective international standard-setter whose standards could meet the needs of the global capital markets.”<sup>34</sup>

The independent objective standard-setting body now in place is called the **International Accounting Standards Board (IASB)**. The IASB is a privately funded accounting standard-setter based in London, UK. Its members currently come from nine countries and have a variety of functional backgrounds; twelve of the fourteen IASB’s members have full-time positions on the Board. The Board is committed to developing, in the public interest, a single set of high-quality, understandable, and enforceable global accounting standards that require transparent and comparable information in general-purpose financial statements. In addition, the Board cooperates with national accounting standard-setters to achieve convergence in accounting standards around the world.<sup>35</sup>

The standard-setting structure internationally is now very similar to the standard-setting structure in the United States. That is, the structure is comprised of two main bodies: The International Accounting Standards Committee Foundation (IASCF) provides oversight. The International Accounting Standards Board (IASB) develops the standards, which are referred to as **International Financial Reporting Standards (IFRS)** or **iGAAP**. In addition, the IASB has an interpretations committee (similar to the U.S. Emerging Issues Task Force) and an advisory council (similar to the FASB’s Financial Accounting Standards Advisory Committee). The structure is depicted in Illustration 24B-1 (on page 1359).

Because it is a private organization, the IASB has no regulatory mandate and therefore no enforcement mechanism in place. In other words, unlike the U.S. setting, there is no SEC to enforce the use of IASB standards. Their use is completely voluntary.<sup>36</sup>

### Other Organizations

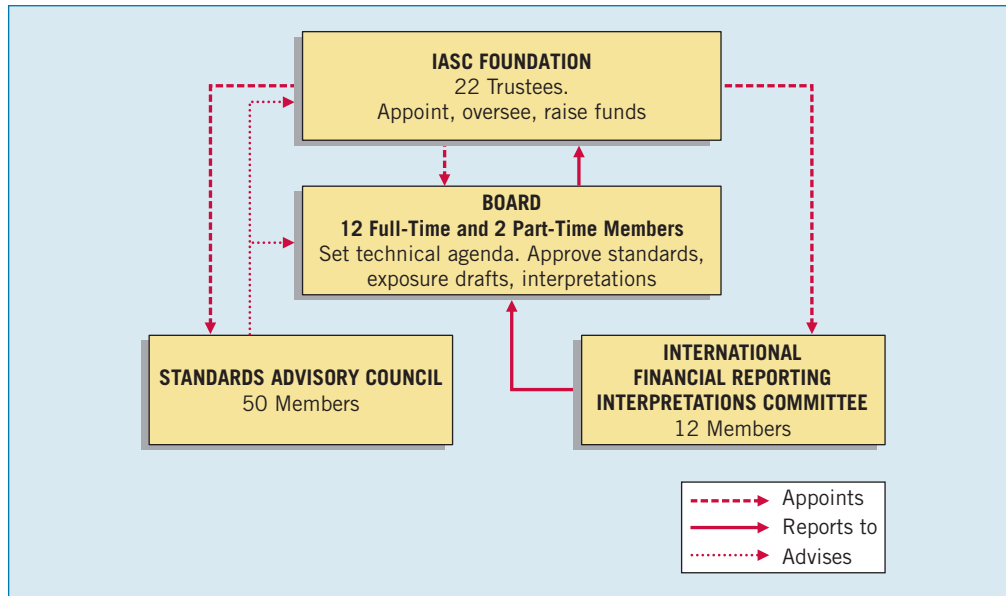

**National Standard-Setters.** Some countries have domestic accounting standard-setting organizations. For example, Canada and the United Kingdom have Accounting Standards Boards that develop accounting standards to be used by companies that do not list their securities on international exchanges. These national standard-setters often consult with the IASB in establishing accounting rules.

**IOSCO.** IOSCO stands for **International Organization of Securities Commissions**. IOSCO does not set accounting standards. This organization is dedicated to ensuring that the global markets can operate in an efficient and effective basis. The SEC, for example, is a member of IOSCO.

<sup>34</sup>Edmund L. Jenkins, “Global Financial Reporting and the Global Financial Markets,” 1999 Financial Executive Summit (Vancouver, B.C., May 28, 1999). See also SEC Concept Release, “International Accounting Standards” (Washington, D.C.: SEC, 2000).

<sup>35</sup>See [www.iasb.org/about/constitution.asp](http://www.iasb.org/about/constitution.asp).

<sup>36</sup>Effective January 1, 2005, the European Union (EU) required member country companies that list on EU securities exchanges to use IASB standards.

**ILLUSTRATION 24B-1**  
International Standard-Setting Structure

## ACCOUNTING STANDARD-SETTING AND INTERNATIONAL CONVERGENCE

The FASB and the IASB are working together toward the goal of a single set of high-quality accounting standards that will be used both domestically and internationally. To achieve this goal, the FASB and IASB are undertaking several joint projects. One joint project is development of a common conceptual framework for financial accounting and reporting. The goal of this project is to build a framework that both the FASB and the IASB can use when developing new and revised accounting standards.

Other joint efforts involve developing new standards on major topics. Presently, the FASB and IASB are working on such major projects as lease accounting, revenue recognition, and financial statement presentation. When these issues are ultimately settled, there should be little, if any, difference between the FASB and IASB standards.

The FASB and IASB are also attempting to eliminate or narrow differences through short-term convergence projects. This approach has been quite successful so far. For example, the FASB has issued standards that mirror present IASB standards on such reporting issues as exchanges of nonmonetary assets and accounting changes. The goal of this collaboration is to select the better standard and move forward with it.

Finally, the two Boards are also coordinating interpretive activity. As often stated, “the devil is in the details.” Both groups are working hard to ensure that not only are the broad conceptual approaches the same, but also the methods of applying them are the same. The Boards are not looking for mutual recognition of each other’s standards. Rather, they want the **same** standards, interpretations, and language.

Regarding the FASB and convergence, Bob Herz, present chair of the FASB, has taken a position he calls “killing three birds with one stone.” That is, he hopes that new standards will accomplish the following: (1) improve U.S. reporting, (2) simplify U.S. standards and standard-setting, and (3) provide international convergence.

To illustrate what the FASB is trying to accomplish, consider leasing. As you learned in your study of leases, there are many rules and interpretations related to the accounting for leasing transactions. Most agree that the reporting results achieved in applying the present standard often do not reflect the substance of the transaction. Recently, the IASB and the FASB started a joint project that will revisit the questions related to accounting and reporting of leases. When this project is completed, the parties hope that it will (1) improve U.S. reporting, (2) simplify U.S. standards, and (3) lead to international convergence.

## Challenges to Convergence

There are many challenges to convergence. Presently, domestic and international accounting parties are often starting from different places. Not only are the FASB and the IASB involved, but also numerous national standard-setters are in the mix, as indicated in Illustration 24B-2.

**ILLUSTRATION 24B-2**  
International Standard-Setters

Country(ies)	Standard-Setter
Australia	Australian Accounting Standards Board (AASB)
Canada	Accounting Standards Board (AcSB)
France	Conseil Nationale de la Comptabilité (CNC)
Germany	German Accounting Standards Committee (DRSC)
Japan	Accounting Standards Board of Japan (ASBJ)
United Kingdom	Accounting Standards Board (ASB)
United States	Financial Accounting Standards Board (FASB)

It follows that there are significant cultural differences among countries and regions of the world. For example, Europe sometimes seems more interested in developing a **representative** IASB than an **independent** IASB. In the United States, the FASB is faced with a very litigious society, and therefore is often encouraged to write very detailed standards.

In addition, there are often institutional or legal barriers to change. For example, any time a standard is issued that affects debt versus equity classifications, loan covenants may have to be changed. In some countries, changing loan covenants is often very difficult to implement.

And there are the political issues. On both sides of the Atlantic, companies that do not want change are pleading with politicians to stop standards from being issued. In the United States, high-tech companies have fought bitterly to derail the stock-option standard issued by the FASB. In Europe, the IASB issued a similar option standard and met little opposition. Conversely, bankers in Europe were up in arms regarding an IASB standard to record derivatives at fair value; U.S. GAAP requires fair value for derivatives in most situations. Although there was much opposition in the United States, the FASB passed the rule and companies now report derivatives at fair values.

## CONCLUDING REMARKS

Financial statements prepared according to U.S. GAAP have been the standard for communicating financial information to the world. Regulators from around the world have readily accepted these financial statements when a company has chosen to list on an exchange. However, the IASB standards have become the common financial-statement language for over 12,000 companies in almost a hundred countries.

For many years, companies that report on a basis other than U.S. GAAP were required by the SEC to provide a **reconciliation** of their earnings and stockholders' equity to U.S. GAAP. This reconciliation imposed a cost on foreign filers: They essentially had to prepare two sets of financial statements, one under iGAAP (or their national GAAP) and one under U.S. GAAP. In 2007, the SEC eliminated this reconciliation in the name of convergence. In addition, the SEC has now proposed that U.S. companies be allowed to choose between using U.S. GAAP or iGAAP. While this proposal has not passed, it will be difficult for the SEC to permit foreign companies to file using iGAAP but not permit U.S. companies to do so as well.

It does make sense to have one set of international standards, but many are questioning the fast pace of change that is taking place. As we have indicated, in certain areas significant differences between iGAAP and U.S. GAAP need to be resolved. Until these issues are resolved, comparability among companies using iGAAP versus U.S. GAAP may be difficult. In summary, there are still many bumps in the road to the establishment of one set of worldwide standards, but the progress to date is remarkable.

## SUMMARY OF LEARNING OBJECTIVE FOR APPENDIX 24B

**LO 14** Describe the current international accounting environment. Investors and creditors increasingly demand international accounting reports. The growth of multinational corporations, increased international mergers and acquisitions, and financial markets, all facilitated by technology, contribute to the demand for international accounting standards. Given these forces, many are working to establish a set of accounting principles that can be used worldwide. High-quality international standards: (1) permit *few alternative practices*, (2) are *clearly stated* to allow for easy interpretation and consistent application, (3) are *comprehensive*, covering the major transactions facing companies, (4) provide an *effective system* for responding to new transactions, and (5) provide *transparency of information* (full disclosure, understandability), to make that information relevant for making effective decisions.

The leading international accounting standard-setter, the IASB, is working with the FASB to develop common, high-quality accounting standards. The U.S. SEC may allow U.S. companies to use iGAAP.

### Exercises

Access the FASB Codification at <http://asc.fasb.org/home> to prepare responses to the following exercises. Provide Codification references for your responses.

**CE24-1** Access the glossary (“Master Glossary”) to answer the following.

- (a) What is the definition of “ordinary income” (loss)?
- (b) What is an error in previously issued financial statements?
- (c) What is the definition of “earnings per share”?
- (d) What is a publicly traded company?

**CE24-2** What are some examples of related parties?

**CE24-3** What are the quantitative thresholds that would require a public company to report separately information about an operating segment?

**CE24-4** If an SEC-registered company uses the gross profit method to determine cost of goods sold for interim periods, would it be acceptable for the company to state that it's not practicable to determine components of inventory at interim periods? Why or why not?

An additional Codification case can be found in the Using Your Judgment section, on page 1379.

Be sure to check the companion website for a Review and Analysis Exercise, with solution.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

## QUESTIONS

- What are the major advantages of notes to the financial statements? What types of items are usually reported in notes?
- What is the full disclosure principle in accounting? Why has disclosure increased substantially in the last 10 years?
- The FASB requires a reconciliation between the effective tax rate and the federal government's statutory rate. Of what benefit is such a disclosure requirement?
- What type of disclosure or accounting do you believe is necessary for the following items?
  - Because of a general increase in the number of labor disputes and strikes, both within and outside the industry, there is an increased likelihood that a company will suffer a costly strike in the near future.
  - A company reports an extraordinary item (net of tax) correctly on the income statement. No other mention is made of this item in the annual report.
  - A company expects to recover a substantial amount in connection with a pending refund claim for a prior year's taxes. Although the claim is being contested, counsel for the company has confirmed the client's expectation of recovery.
- The following information was described in a note of Canon Packing Co.
 

"During August, Holland Products Corporation purchased 311,003 shares of the Company's common stock which constitutes approximately 35% of the stock outstanding. Holland has since obtained representation on the Board of Directors."

"An affiliate of Holland Products Corporation acts as a food broker for Canon Packing in the greater New York City marketing area. The commissions for such services after August amounted to approximately \$20,000."

Why is this information disclosed?
- What are the major types of subsequent events? Indicate how each of the following "subsequent events" would be reported.
  - Collection of a note written off in a prior period.
  - Issuance of a large preferred stock offering.
  - Acquisition of a company in a different industry.
  - Destruction of a major plant in a flood.
  - Death of the company's chief executive officer (CEO).
  - Additional wage costs associated with settlement of a four-week strike.
  - Settlement of a federal income tax case at considerably more tax than anticipated at year-end.
  - Change in the product mix from consumer goods to industrial goods.
- What are diversified companies? What accounting problems are related to diversified companies?
- What quantitative materiality test is applied to determine whether a segment is significant enough to warrant separate disclosure?
- Identify the segment information that is required to be disclosed by GAAP.
- What is an operating segment, and when can information about two operating segments be aggregated?
- The controller for Lafayette Inc. recently commented, "If I have to disclose our segments individually, the only people who will gain are our competitors and the only people that will lose are our present stockholders." Evaluate this comment.
- An article in the financial press entitled "Important Information in Annual Reports This Year" noted that annual reports include a management's discussion and analysis section. What would this section contain?
- "The financial statements of a company are management's, not the accountant's." Discuss the implications of this statement.
- Olga Conrad, a financial writer, noted recently, "There are substantial arguments for including earnings projections in annual reports and the like. The most compelling is that it would give anyone interested something now available to only a relatively select few—like large stockholders, creditors, and attentive bartenders." Identify some arguments against providing earnings projections.

15. The following comment appeared in the financial press: "Inadequate financial disclosure, particularly with respect to how management views the future and its role in the marketplace, has always been a stone in the shoe. After all, if you don't know how a company views the future, how can you judge the worth of its corporate strategy?" What are some arguments for reporting earnings forecasts?
16. What are interim reports? Why are balance sheets often not provided with interim data?
17. What are the accounting problems related to the presentation of interim data?
18. Dierdorf Inc., a closely held corporation, has decided to go public. The controller, Ed Floyd, is concerned with presenting interim data when a LIFO inventory valuation is used. What problems are encountered with LIFO inventories when quarterly data are presented?
19. What approaches have been suggested to overcome the seasonality problem related to interim reporting?
20. What is the difference between a CPA's unqualified opinion or "clean" opinion and a qualified one?
21. Jane Ellerby and Sam Callison are discussing the recent fraud that occurred at LowRental Leasing, Inc. The fraud involved the improper reporting of revenue to ensure that the company would have income in excess of \$1 million. What is fraudulent financial reporting, and how does it differ from an embezzlement of company funds?
-  22. Where can authoritative iGAAP be found related to the various disclosure issues discussed in the chapter?
-  23. Bill Novak is working on an audit of an iGAAP client. In his review of the client's interim reports, he notes that the reports are prepared on a discrete basis. That is, each interim report is viewed as a distinct period. Is this acceptable under iGAAP? If so, explain how that treatment could affect comparisons to a U.S. GAAP company.
- \*24. "The significance of financial statement data is not in the amount alone." Discuss the meaning of this statement.
- \*25. A close friend of yours, who is a history major and who has not had any college courses or any experience in business, is receiving the financial statements from companies in which he has minor investments (acquired for him by his now-deceased father). He asks you what he needs to know to interpret and to evaluate the financial statement data that he is receiving. What would you tell him?
- \*26. Distinguish between ratio analysis and percentage analysis relative to the interpretation of financial statements. What is the value of these two types of analyses?
- \*27. In calculating inventory turnover, why is cost of goods sold used as the numerator? As the inventory turnover increases, what increasing risk does the business assume?
- \*28. What is the relationship of the asset turnover ratio to the rate of return on assets?
- \*29. Explain the meaning of the following terms: (a) common-size analysis, (b) vertical analysis, (c) horizontal analysis, (d) percentage analysis.
- \*30. Presently, the profession requires that earnings per share be disclosed on the face of the income statement. What are some disadvantages of reporting ratios on the financial statements?
- \*31. Why is it important to understand international accounting standards?
- \*32. Describe some of the similarities between U.S. and international standard-setting structures.

## BRIEF EXERCISES

-  **BE24-1** An annual report of Crestwood Industries states, "The company and its subsidiaries have long-term leases expiring on various dates after December 31, 2010. Amounts payable under such commitments, without reduction for related rental income, are expected to average approximately \$5,711,000 annually for the next 3 years. Related rental income from certain subleases to others is estimated to average \$3,094,000 annually for the next 3 years." What information is provided by this note?
-  **BE24-2** An annual report of **Ford Motor Corporation** states, "Net income a share is computed based upon the average number of shares of capital stock of all classes outstanding. Additional shares of common stock may be issued or delivered in the future on conversion of outstanding convertible debentures, exercise of outstanding employee stock options, and for payment of defined supplemental compensation. Had such additional shares been outstanding, net income a share would have been reduced by 10¢ in the current year and 3¢ in the previous year. . . . As a result of capital stock transactions by the company during the current year (primarily the purchase of Class A Stock from Ford Foundation), net income a share was increased by 6¢." What information is provided by this note?
-  **BE24-3** Morlan Corporation is preparing its December 31, 2010, financial statements. Two events that occurred between December 31, 2010, and March 10, 2011, when the statements were issued, are described below.
1. A liability, estimated at \$160,000 at December 31, 2010, was settled on February 26, 2011, at \$170,000.
  2. A flood loss of \$80,000 occurred on March 1, 2011.

What effect do these subsequent events have on 2010 net income?

**3** BE24-4 Tina Bailey, a student of intermediate accounting, was heard to remark after a class discussion on segment reporting, "All this is very confusing to me. First we are told that there is merit in presenting the consolidated results, and now we are told that it is better to show segmental results. I wish they would make up their minds." Evaluate this comment.

**3** BE24-5 Foley Corporation has seven industry segments with total revenues as follows.

Penley	\$600	Cheng	\$225
Konami	650	Takuhi	200
KSC	250	Molina	700
Red Moon	275		

Based only on the revenues test, which industry segments are reportable?

**3** BE24-6 Operating profits and losses for the seven industry segments of Foley Corporation are:

Penley	\$ 90	Cheng	\$ (20)
Konami	(40)	Takuhi	34
KSC	25	Molina	150
Red Moon	50		

Based only on the operating profit (loss) test, which industry segments are reportable?

**3** BE24-7 Identifiable assets for the seven industry segments of Foley Corporation are:

Penley	\$500	Cheng	\$200
Konami	550	Takuhi	150
KSC	250	Molina	475
Red Moon	400		

Based only on the identifiable assets test, which industry segments are reportable?

**10** \*BE24-8 Answer each of the questions in the following unrelated situations.

- The current ratio of a company is 5:1 and its acid-test ratio is 1:1. If the inventories and prepaid items amount to \$500,000, what is the amount of current liabilities?
- A company had an average inventory last year of \$200,000 and its inventory turnover was 5. If sales volume and unit cost remain the same this year as last and inventory turnover is 8 this year, what will average inventory have to be during the current year?
- A company has current assets of \$90,000 (of which \$40,000 is inventory and prepaid items) and current liabilities of \$40,000. What is the current ratio? What is the acid-test ratio? If the company borrows \$15,000 cash from a bank on a 120-day loan, what will its current ratio be? What will the acid-test ratio be?
- A company has current assets of \$600,000 and current liabilities of \$240,000. The board of directors declares a cash dividend of \$180,000. What is the current ratio after the declaration but before payment? What is the current ratio after the payment of the dividend?

**10** \*BE24-9 Heartland Company's budgeted sales and budgeted cost of goods sold for the coming year are \$144,000,000 and \$99,000,000 respectively. Short-term interest rates are expected to average 10%. If Heartland can increase inventory turnover from its present level of 9 times a year to a level of 12 times per year, compute its expected cost savings for the coming year.

## EXERCISES

**2** E24-1 (Post-Balance-Sheet Events) Keystone Corporation issued its financial statements for the year ended December 31, 2010, on March 10, 2011. The following events took place early in 2011.

- On January 10, 10,000 shares of \$5 par value common stock were issued at \$66 per share.
- On March 1, Keystone determined after negotiations with the Internal Revenue Service that income taxes payable for 2010 should be \$1,320,000. At December 31, 2010, income taxes payable were recorded at \$1,100,000.

### Instructions

Discuss how the preceding post-balance-sheet events should be reflected in the 2010 financial statements.

**2** E24-2 (Post-Balance-Sheet Events) For each of the following subsequent (post-balance-sheet) events, indicate whether a company should (a) adjust the financial statements, (b) disclose in notes to the financial statements, or (c) neither adjust nor disclose.

- \_\_\_\_\_ 1. Settlement of federal tax case at a cost considerably in excess of the amount expected at year-end.
- \_\_\_\_\_ 2. Introduction of a new product line.
- \_\_\_\_\_ 3. Loss of assembly plant due to fire.
- \_\_\_\_\_ 4. Sale of a significant portion of the company's assets.
- \_\_\_\_\_ 5. Retirement of the company president.
- \_\_\_\_\_ 6. Issuance of a significant number of shares of common stock.
- \_\_\_\_\_ 7. Loss of a significant customer.
- \_\_\_\_\_ 8. Prolonged employee strike.
- \_\_\_\_\_ 9. Material loss on a year-end receivable because of a customer's bankruptcy.
- \_\_\_\_\_ 10. Hiring of a new president.
- \_\_\_\_\_ 11. Settlement of prior year's litigation against the company.
- \_\_\_\_\_ 12. Merger with another company of comparable size.

**E24-3 (Segmented Reporting)** LaGreca Company is involved in four separate industries. The following information is available for each of the four industries.

Operating Segment	Total Revenue	Operating Profit (Loss)	Identifiable Assets
W	\$ 60,000	\$15,000	\$167,000
X	10,000	1,500	83,000
Y	23,000	(2,000)	21,000
Z	9,000	1,000	19,000
	<u>\$102,000</u>	<u>\$15,500</u>	<u>\$290,000</u>

### Instructions

Determine which of the operating segments are reportable based on the:

- Revenue test.
- Operating profit (loss) test.
- Identifiable assets test.

**\*E24-4 (Ratio Computation and Analysis; Liquidity)** As loan analyst for Madison Bank, you have been presented the following information.

	Plunkett Co.	Herring Co.
<u>Assets</u>		
Cash	\$ 120,000	\$ 320,000
Receivables	220,000	302,000
Inventories	570,000	518,000
Total current assets	910,000	1,140,000
Other assets	500,000	612,000
Total assets	<u>\$1,410,000</u>	<u>\$1,752,000</u>
<u>Liabilities and Stockholders' Equity</u>		
Current liabilities	\$ 300,000	\$ 350,000
Long-term liabilities	400,000	500,000
Capital stock and retained earnings	710,000	902,000
Total liabilities and stockholders' equity	<u>\$1,410,000</u>	<u>\$1,752,000</u>
Annual sales	\$ 930,000	\$1,500,000
Rate of gross profit on sales	30%	40%

Each of these companies has requested a loan of \$50,000 for 6 months with no collateral offered. Inasmuch as your bank has reached its quota for loans of this type, only one of these requests is to be granted.

### Instructions

Which of the two companies, as judged by the information given above, would you recommend as the better risk and why? Assume that the ending account balances are representative of the entire year.

**\*E24-5 (Analysis of Given Ratios)** Robbins Company is a wholesale distributor of professional equipment and supplies. The company's sales have averaged about \$900,000 annually for the 3-year period 2009–2011. The firm's total assets at the end of 2011 amounted to \$850,000.

The president of Robbins Company has asked the controller to prepare a report that summarizes the financial aspects of the company's operations for the past 3 years. This report will be presented to the board of directors at their next meeting.

In addition to comparative financial statements, the controller has decided to present a number of relevant financial ratios which can assist in the identification and interpretation of trends. At the request of the controller, the accounting staff has calculated the following ratios for the 3-year period 2009–2011.

	2009	2010	2011
Current ratio	1.80	1.89	1.96
Acid-test (quick) ratio	1.04	0.99	0.87
Accounts receivable turnover	8.75	7.71	6.42
Inventory turnover	4.91	4.32	3.72
Total debt to total assets	51.0%	46.0%	41.0%
Long-term debt to total assets	31.0%	27.0%	24.0%
Sales to fixed assets (fixed asset turnover)	1.58	1.69	1.79
Sales as a percent of 2009 sales	1.00	1.03	1.05
Gross margin percentage	36.0%	35.1%	34.6%
Net income to sales	6.9%	7.0%	7.2%
Return on total assets	7.7%	7.7%	7.8%
Return on stockholders' equity	13.6%	13.1%	12.7%

In preparation of the report, the controller has decided first to examine the financial ratios independent of any other data to determine if the ratios themselves reveal any significant trends over the 3-year period.

#### Instructions

- The current ratio is increasing while the acid-test (quick) ratio is decreasing. Using the ratios provided, identify and explain the contributing factor(s) for this apparently divergent trend.
- In terms of the ratios provided, what conclusion(s) can be drawn regarding the company's use of financial leverage during the 2009–2011 period?
- Using the ratios provided, what conclusion(s) can be drawn regarding the company's net investment in plant and equipment?

**•10** \*E24-6 (Ratio Analysis) Howser Inc. is a manufacturer of electronic components and accessories with total assets of \$20,000,000. Selected financial ratios for Howser and the industry averages for firms of similar size are presented below.

	Howser			2011
	2009	2010	2011	Industry Average
Current ratio	2.09	2.27	2.51	2.24
Quick ratio	1.15	1.12	1.19	1.22
Inventory turnover	2.40	2.18	2.02	3.50
Net sales to stockholders' equity	2.75	2.80	2.95	2.85
Net income to stockholders' equity	0.14	0.15	0.17	0.11
Total liabilities to stockholders' equity	1.41	1.37	1.44	0.95

Howser is being reviewed by several entities whose interests vary, and the company's financial ratios are a part of the data being considered. Each of the parties listed below must recommend an action based on its evaluation of Howser's financial position.

*Citizens National Bank.* The bank is processing Howser's application for a new 5-year term note. Citizens National has been Howser's banker for several years but must reevaluate the company's financial position for each major transaction.

*Charleston Company.* Charleston is a new supplier to Howser and must decide on the appropriate credit terms to extend to the company.

*Shannon Financial.* A brokerage firm specializing in the stock of electronics firms that are sold over-the-counter, Shannon Financial must decide if it will include Howser in a new fund being established for sale to Shannon Financial's clients.

*Working Capital Management Committee.* This is a committee of Howser's management personnel chaired by the chief operating officer. The committee is charged with the responsibility of periodically reviewing the company's working capital position, comparing actual data against budgets, and recommending changes in strategy as needed.

#### Instructions

- Describe the analytical use of each of the six ratios presented above.
- For each of the four entities described above, identify two financial ratios, from those ratios presented in Illustration 24A-1 (on page 1351), that would be most valuable as a basis for its decision regarding Howser.

- (c) Discuss what the financial ratios presented in the question reveal about Howser. Support your answer by citing specific ratio levels and trends as well as the interrelationships between these ratios.

(CMA adapted)

See the book's companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), for a set of B Exercises.

**PROBLEMS**

**2** P24-1 (Subsequent Events) Your firm has been engaged to examine the financial statements of Almaden Corporation for the year 2010. The bookkeeper who maintains the financial records has prepared all the unaudited financial statements for the corporation since its organization on January 2, 2005. The client provides you with the information below.

<b>ALMADEN CORPORATION</b>			
<b>BALANCE SHEET</b>			
<b>DECEMBER 31, 2010</b>			
<b>Assets</b>		<b>Liabilities</b>	
Current assets	\$1,881,100	Current liabilities	\$ 962,400
Other assets	5,171,400	Long-term liabilities	1,439,500
	<u>                    </u>	Capital	4,650,600
	<u><u>\$7,052,500</u></u>		<u><u>\$7,052,500</u></u>

An analysis of current assets discloses the following.

Cash (restricted in the amount of \$300,000 for plant expansion)	\$ 571,000
Investments in land	185,000
Accounts receivable less allowance of \$30,000	480,000
Inventories (LIFO flow assumption)	645,100
	<u>                    </u>
	<u><u>\$1,881,100</u></u>
Other assets include:	
Prepaid expenses	\$ 62,400
Plant and equipment less accumulated depreciation of \$1,430,000	4,130,000
Cash surrender value of life insurance policy	84,000
Unamortized bond discount	34,500
Notes receivable (short-term)	162,300
Goodwill	252,000
Land	446,200
	<u>                    </u>
	<u><u>\$5,171,400</u></u>
Current liabilities include:	
Accounts payable	\$ 510,000
Notes payable (due 2013)	157,400
Estimated income taxes payable	145,000
Premium on common stock	150,000
	<u>                    </u>
	<u><u>\$ 962,400</u></u>
Long-term liabilities include:	
Unearned revenue	\$ 489,500
Dividends payable (cash)	200,000
8% bonds payable (due May 1, 2015)	750,000
	<u>                    </u>
	<u><u>\$1,439,500</u></u>
Capital includes:	
Retained earnings	\$2,810,600
Capital stock, par value \$10; authorized 200,000 shares, 184,000 shares issued	1,840,000
	<u>                    </u>
	<u><u>\$4,650,600</u></u>

The supplementary information below is also provided.

1. On May 1, 2010, the corporation issued at 95.4, \$750,000 of bonds to finance plant expansion. The long-term bond agreement provided for the annual payment of interest every May 1. The existing plant was pledged as security for the loan. Use the straight-line method for discount amortization.
2. The bookkeeper made the following mistakes.
  - (a) In 2008, the ending inventory was overstated by \$183,000. The ending inventories for 2009 and 2010 were correctly computed.
  - (b) In 2010, accrued wages in the amount of \$225,000 were omitted from the balance sheet, and these expenses were not charged on the income statement.
  - (c) In 2010, a gain of \$175,000 (net of tax) on the sale of certain plant assets was credited directly to retained earnings.
3. A major competitor has introduced a line of products that will compete directly with Almaden's primary line, now being produced in a specially designed new plant. Because of manufacturing innovations, the competitor's line will be of comparable quality but priced 50% below Almaden's line. The competitor announced its new line on January 14, 2011. Almaden indicates that the company will meet the lower prices that are high enough to cover variable manufacturing and selling expenses, but permit recovery of only a portion of fixed costs.
4. You learned on January 28, 2011, prior to completion of the audit, of heavy damage because of a recent fire to one of Almaden's two plants; the loss will not be reimbursed by insurance. The newspapers described the event in detail.

### Instructions

Analyze the above information to prepare a corrected balance sheet for Almaden in accordance with proper accounting and reporting principles. Prepare a description of any notes that might need to be prepared. The books are closed and adjustments to income are to be made through retained earnings.

- 3** **P24-2 (Segmented Reporting)** Cineplex Corporation is a diversified company that operates in five different industries: A, B, C, D, and E. The following information relating to each segment is available for 2011.

	A	B	C	D	E
Sales	\$40,000	\$ 75,000	\$580,000	\$35,000	\$55,000
Cost of goods sold	19,000	50,000	270,000	19,000	30,000
Operating expenses	10,000	40,000	235,000	12,000	18,000
Total expenses	29,000	90,000	505,000	31,000	48,000
Operating profit (loss)	\$11,000	\$(15,000)	\$ 75,000	\$ 4,000	\$ 7,000
Identifiable assets	\$35,000	\$ 80,000	\$500,000	\$65,000	\$50,000

Sales of segments B and C included intersegment sales of \$20,000 and \$100,000, respectively.

### Instructions

- (a) Determine which of the segments are reportable based on the:
  - (1) Revenue test.
  - (2) Operating profit (loss) test.
  - (3) Identifiable assets test.
- (b) Prepare the necessary disclosures required by GAAP.

- 10 12** **\*P24-3 (Ratio Computations and Additional Analysis)** Bradburn Corporation was formed 5 years ago through a public subscription of common stock. Daniel Brown, who owns 15% of the common stock, was one of the organizers of Bradburn and is its current president. The company has been successful, but it currently is experiencing a shortage of funds. On June 10, Daniel Brown approached the Topeka National Bank, asking for a 24-month extension on two \$35,000 notes, which are due on June 30, 2011, and September 30, 2011. Another note of \$6,000 is due on March 31, 2012, but he expects no difficulty in paying this note on its due date. Brown explained that Bradburn's cash flow problems are due primarily to the company's desire to finance a \$300,000 plant expansion over the next 2 fiscal years through internally generated funds.

The commercial loan officer of Topeka National Bank requested financial reports for the last 2 fiscal years. These reports are reproduced on page 1369.

**BRADBURN CORPORATION**  
**STATEMENT OF FINANCIAL POSITION**  
**MARCH 31**

Assets	2011	2010
Cash	\$ 18,200	\$ 12,500
Notes receivable	148,000	132,000
Accounts receivable (net)	131,800	125,500
Inventories (at cost)	105,000	50,000
Plant & equipment (net of depreciation)	<u>1,449,000</u>	<u>1,420,500</u>
Total assets	<u>\$1,852,000</u>	<u>\$1,740,500</u>
<b>Liabilities and Owners' Equity</b>		
Accounts payable	\$ 79,000	\$ 91,000
Notes payable	76,000	61,500
Accrued liabilities	9,000	6,000
Common stock (130,000 shares, \$10 par)	1,300,000	1,300,000
Retained earnings <sup>a</sup>	<u>388,000</u>	<u>282,000</u>
Total liabilities and owners' equity	<u>\$1,852,000</u>	<u>\$1,740,500</u>

<sup>a</sup>Cash dividends were paid at the rate of \$1 per share in fiscal year 2010 and \$2 per share in fiscal year 2011.

**BRADBURN CORPORATION**  
**INCOME STATEMENT**  
**FOR THE FISCAL YEARS ENDED MARCH 31**

	2011	2010
Sales	\$3,000,000	\$2,700,000
Cost of goods sold <sup>a</sup>	<u>1,530,000</u>	<u>1,425,000</u>
Gross margin	\$1,470,000	\$1,275,000
Operating expenses	<u>860,000</u>	<u>780,000</u>
Income before income taxes	\$ 610,000	\$ 495,000
Income taxes (40%)	<u>244,000</u>	<u>198,000</u>
Net income	<u>\$ 366,000</u>	<u>\$ 297,000</u>

<sup>a</sup>Depreciation charges on the plant and equipment of \$100,000 and \$102,500 for fiscal years ended March 31, 2010 and 2011, respectively, are included in cost of goods sold.

**Instructions**

- (a) Compute the following items for Bradburn Corporation.
  - (1) Current ratio for fiscal years 2010 and 2011.
  - (2) Acid-test (quick) ratio for fiscal years 2010 and 2011.
  - (3) Inventory turnover for fiscal year 2011.
  - (4) Return on assets for fiscal years 2010 and 2011. (Assume total assets were \$1,688,500 at 3/31/09.)
  - (5) Percentage change in sales, cost of goods sold, gross margin, and net income after taxes from fiscal year 2010 to 2011.
- (b) Identify and explain what other financial reports and/or financial analyses might be helpful to the commercial loan officer of Topeka National Bank in evaluating Daniel Brown's request for a time extension on Bradburn's notes.
- (c) Assume that the percentage changes experienced in fiscal year 2011 as compared with fiscal year 2010 for sales and cost of goods sold will be repeated in each of the next 2 years. Is Bradburn's desire to finance the plant expansion from internally generated funds realistic? Discuss.
- (d) Should Topeka National Bank grant the extension on Bradburn's notes considering Daniel Brown's statement about financing the plant expansion through internally generated funds? Discuss.

**13**\*P24-4 (Horizontal and Vertical Analysis) Presented on page 1370 are comparative balance sheets for the Gilmour Company.

**GILMOUR COMPANY**  
**COMPARATIVE BALANCE SHEET**  
**AS OF DECEMBER 31, 2011 AND 2010**

	December 31	
	2011	2010
<u>Assets</u>		
Cash	\$ 180,000	\$ 275,000
Accounts receivable (net)	220,000	155,000
Short-term investments	270,000	150,000
Inventories	1,060,000	980,000
Prepaid expenses	25,000	25,000
Fixed assets	2,585,000	1,950,000
Accumulated depreciation	<u>(1,000,000)</u>	<u>(750,000)</u>
	<u>\$3,340,000</u>	<u>\$2,785,000</u>
<u>Liabilities and Stockholders' Equity</u>		
Accounts payable	\$ 50,000	\$ 75,000
Accrued expenses	170,000	200,000
Bonds payable	450,000	190,000
Capital stock	2,100,000	1,770,000
Retained earnings	<u>570,000</u>	<u>550,000</u>
	<u>\$3,340,000</u>	<u>\$2,785,000</u>

**Instructions**

(Round to two decimal places.)

- (a) Prepare a comparative balance sheet of Gilmour Company showing the percent each item is of the total assets or total liabilities and stockholders' equity.
- (b) Prepare a comparative balance sheet of Gilmour Company showing the dollar change and the percent change for each item.
- (c) Of what value is the additional information provided in part (a)?
- (d) Of what value is the additional information provided in part (b)?

 **10** \*P24-5 (Dividend Policy Analysis) Matheny Inc. went public 3 years ago. The board of directors will be meeting shortly after the end of the year to decide on a dividend policy. In the past, growth has been financed primarily through the retention of earnings. A stock or a cash dividend has never been declared. Presented below is a brief financial summary of Matheny Inc. operations.

	(\$000 omitted)				
	2011	2010	2009	2008	2007
Sales	\$20,000	\$16,000	\$14,000	\$6,000	\$4,000
Net income	2,400	1,400	800	700	250
Average total assets	22,000	19,000	11,500	4,200	3,000
Current assets	8,000	6,000	3,000	1,200	1,000
Working capital	3,600	3,200	1,200	500	400
Common shares:					
Number of shares					
outstanding (000)	2,000	2,000	2,000	20	20
Average market price	\$9	\$6	\$4	—	—

**Instructions**

- (a) Suggest factors to be considered by the board of directors in establishing a dividend policy.
- (b) Compute the rate of return on assets, profit margin on sales, earnings per share, price-earnings ratio, and current ratio for each of the 5 years for Matheny Inc.
- (c) Comment on the appropriateness of declaring a cash dividend at this time, using the ratios computed in part (b) as a major factor in your analysis.

## CONCEPTS FOR ANALYSIS

**CA24-1 (General Disclosures; Inventories; Property, Plant, and Equipment)** Koch Corporation is in the process of preparing its annual financial statements for the fiscal year ended April 30, 2011. Because all of Koch's shares are traded intrastate, the company does not have to file any reports with the Securities and Exchange Commission. The company manufactures plastic, glass, and paper containers for sale to food and drink manufacturers and distributors.

Koch Corporation maintains separate control accounts for its raw materials, work-in-process, and finished goods inventories for each of the three types of containers. The inventories are valued at the lower-of-cost-or-market.

The company's property, plant, and equipment are classified in the following major categories: land, office buildings, furniture and fixtures, manufacturing facilities, manufacturing equipment, and leasehold improvements. All fixed assets are carried at cost. The depreciation methods employed depend on the type of asset (its classification) and when it was acquired.

Koch Corporation plans to present the inventory and fixed asset amounts in its April 30, 2011, balance sheet as shown below.

Inventories	\$4,814,200
Property, plant, and equipment (net of depreciation)	6,310,000

### Instructions

What information regarding inventories and property, plant, and equipment must be disclosed by Koch Corporation in the audited financial statements issued to stockholders, either in the body or the notes, for the 2010–2011 fiscal year?

(CMA adapted)

**CA24-2 (Disclosures Required in Various Situations)** Ace Inc. produces electronic components for sale to manufacturers of radios, television sets, and digital sound systems. In connection with her examination of Ace's financial statements for the year ended December 31, 2011, Gloria Rodd, CPA, completed field work 2 weeks ago. Ms. Rodd now is evaluating the significance of the following items prior to preparing her auditor's report. Except as noted, none of these items have been disclosed in the financial statements or notes.

#### Item 1

A 10-year loan agreement, which the company entered into 3 years ago, provides that dividend payments may not exceed net income earned after taxes subsequent to the date of the agreement. The balance of retained earnings at the date of the loan agreement was \$420,000. From that date through December 31, 2011, net income after taxes has totaled \$570,000 and cash dividends have totaled \$320,000. On the basis of these data, the staff auditor assigned to this review concluded that there was no retained earnings restriction at December 31, 2011.

#### Item 2

Recently Ace interrupted its policy of paying cash dividends quarterly to its stockholders. Dividends were paid regularly through 2010, discontinued for all of 2011 to finance purchase of equipment for the company's new plant, and resumed in the first quarter of 2012. In the annual report dividend policy is to be discussed in the president's letter to stockholders.

#### Item 3

A major electronics firm has introduced a line of products that will compete directly with Ace's primary line, now being produced in the specially designed new plant. Because of manufacturing innovations, the competitor's line will be of comparable quality but priced 50% below Ace's line. The competitor announced its new line during the week following completion of field work. Ms. Rodd read the announcement in the newspaper and discussed the situation by telephone with Ace executives. Ace will meet the lower prices that are high enough to cover variable manufacturing and selling expenses but will permit recovery of only a portion of fixed costs.

#### Item 4

The company's new manufacturing plant building, which cost \$2,400,000 and has an estimated life of 25 years, is leased from Wichita National Bank at an annual rental of \$600,000. The company is obligated to pay property taxes, insurance, and maintenance. At the conclusion of its 10-year noncancellable lease, the company has the option of purchasing the property for \$1. In Ace's income statement, the rental payment is reported on a separate line.

**Instructions**

For each of the items on page 1371, discuss any additional disclosures in the financial statements and notes that the auditor should recommend to her client. (The cumulative effect of the four items should not be considered.)

**CA24-3 (Disclosures, Conditional and Contingent Liabilities)** Presented below are three independent situations.

**Situation 1**

A company offers a one-year warranty for the product that it manufactures. A history of warranty claims has been compiled, and the probable amounts of claims related to sales for a given period can be determined.

**Situation 2**

Subsequent to the date of a set of financial statements, but prior to the issuance of the financial statements, a company enters into a contract that will probably result in a significant loss to the company. The amount of the loss can be reasonably estimated.

**Situation 3**

A company has adopted a policy of recording self-insurance for any possible losses resulting from injury to others by the company's vehicles. The premium for an insurance policy for the same risk from an independent insurance company would have an annual cost of \$4,000. During the period covered by the financial statements, there were no accidents involving the company's vehicles that resulted in injury to others.

**Instructions**

Discuss the accrual or type of disclosure necessary (if any) and the reason(s) why such disclosure is appropriate for each of the three independent sets of facts above.

(AICPA adapted)

**CA24-4 (Post-Balance-Sheet Events)** At December 31, 2010, Coburn Corp. has assets of \$10,000,000, liabilities of \$6,000,000, common stock of \$2,000,000 (representing 2,000,000 shares of \$1 par common stock), and retained earnings of \$2,000,000. Net sales for the year 2010 were \$18,000,000, and net income was \$800,000. As auditors of this company, you are making a review of subsequent events on February 13, 2011, and you find the following.

1. On February 3, 2011, one of Coburn's customers declared bankruptcy. At December 31, 2010, this company owed Coburn \$300,000, of which \$60,000 was paid in January, 2011.
2. On January 18, 2011, one of the three major plants of the client burned.
3. On January 23, 2011, a strike was called at one of Coburn's largest plants, which halted 30% of its production. As of today (February 13) the strike has not been settled.
4. A major electronics enterprise has introduced a line of products that would compete directly with Coburn's primary line, now being produced in a specially designed new plant. Because of manufacturing innovations, the competitor has been able to achieve quality similar to that of Coburn's products, but at a price 50% lower. Coburn officials say they will meet the lower prices, which are high enough to cover variable manufacturing and selling costs but which permit recovery of only a portion of fixed costs.
5. Merchandise traded in the open market is recorded in the company's records at \$1.40 per unit on December 31, 2010. This price had prevailed for 2 weeks, after release of an official market report that predicted vastly enlarged supplies; however, no purchases were made at \$1.40. The price throughout the preceding year had been about \$2, which was the level experienced over several years. On January 18, 2011, the price returned to \$2, after public disclosure of an error in the official calculations of the prior December, correction of which destroyed the expectations of excessive supplies. Inventory at December 31, 2010, was on a lower-of-cost-or-market basis.
6. On February 1, 2011, the board of directors adopted a resolution accepting the offer of an investment banker to guarantee the marketing of \$1,200,000 of preferred stock.

**Instructions**

State in each case how the 2010 financial statements would be affected, if at all.

**CA24-5 (Segment Reporting)** You are compiling the consolidated financial statements for Winsor Corporation International. The corporation's accountant, Anthony Reese, has provided you with the segment information shown on page 1373.

**Note 7: Major Segments of Business**

WCI conducts funeral service and cemetery operations in the United States and Canada. Substantially all revenues of WCI's major segments of business are from unaffiliated customers. Segment information for fiscal 2011, 2010, and 2009 follows.

	(thousands)						
	Funeral	Floral	Cemetery	Real Estate	Dried Whey	Limousine	Consolidated
<b>Revenues</b>							
2011	\$302,000	\$10,000	\$ 73,000	\$ 2,000	\$7,000	\$12,000	\$406,000
2010	245,000	6,000	61,000	4,000	4,000	4,000	324,000
2009	208,000	3,000	42,000	3,000	1,000	3,000	260,000
<b>Operating Income</b>							
2011	74,000	1,500	18,000	(36,000)	500	2,000	60,000
2010	64,000	200	12,000	(28,000)	200	400	48,800
2009	54,000	150	6,000	(21,000)	100	350	39,600
<b>Capital Expenditures</b>							
2011	26,000	1,000	9,000	400	300	1,000	37,700
2010	28,000	2,000	60,000	1,500	100	700	92,300
2009	14,000	25	8,000	600	25	50	22,700
<b>Depreciation and Amortization</b>							
2011	13,000	100	2,400	1,400	100	200	17,200
2010	10,000	50	1,400	700	50	100	12,300
2009	8,000	25	1,000	600	25	50	9,700
<b>Identifiable Assets</b>							
2011	334,000	1,500	162,000	114,000	500	8,000	620,000
2010	322,000	1,000	144,000	52,000	1,000	6,000	526,000
2009	223,000	500	78,000	34,000	500	3,500	339,500

**Instructions**

Determine which of the above segments must be reported separately and which can be combined under the category "Other." Then, write a one-page memo to the company's accountant, Anthony Reese, explaining the following.

- (a) What segments must be reported separately and what segments can be combined.
- (b) What criteria you used to determine reportable segments.
- (c) What major items for each must be disclosed.

**CA24-6 (Segment Reporting—Theory)** Presented below is an excerpt from the financial statements of **H. J. Heinz Company**.

**Segment and Geographic Data**

The company is engaged principally in one line of business—processed food products—which represents over 90% of consolidated sales. Information about the business of the company by geographic area is presented in the table below.

There were no material amounts of sales or transfers between geographic areas or between affiliates, and no material amounts of United States export sales.

(in thousands of U.S. dollars)	Foreign						Worldwide
	Domestic	United Kingdom	Canada	Western Europe	Other	Total	
Sales	\$2,381,054	\$547,527	\$216,726	\$383,784	\$209,354	\$1,357,391	\$3,738,445
Operating income	246,780	61,282	34,146	29,146	25,111	149,685	396,465
Identifiable assets	1,362,152	265,218	112,620	294,732	143,971	816,541	2,178,693
Capital expenditures	72,712	12,262	13,790	8,253	4,368	38,673	111,385
Depreciation expense	42,279	8,364	3,592	6,355	3,606	21,917	64,196

**Instructions**

- (a) Why does H. J. Heinz not prepare segment information on its products or services?
- (b) What are export sales, and when should they be disclosed?
- (c) Why are sales by geographical area important to disclose?

 **CA24-7 (Segment Reporting—Theory)** The following article appeared in the *Wall Street Journal*.

WASHINGTON—The Securities and Exchange Commission staff issued guidelines for companies grappling with the problem of dividing up their business into industry segments for their annual reports.

An industry segment is defined by the Financial Accounting Standards Board as a part of an enterprise engaged in providing a product or service or a group of related products or services primarily to unaffiliated customers for a profit.

Although conceding that the process is a “subjective task” that “to a considerable extent, depends on the judgment of management,” the SEC staff said companies should consider . . . various factors . . . to determine whether products and services should be grouped together or reported as segments.

#### Instructions

- What does financial reporting for segments of a business enterprise involve?
- Identify the reasons for requiring financial data to be reported by segments.
- Identify the possible disadvantages of requiring financial data to be reported by segments.
- Identify the accounting difficulties inherent in segment reporting.

**CA24-8 (Interim Reporting)** Snider Corporation, a publicly traded company, is preparing the interim financial data which it will issue to its stockholders and the Securities and Exchange Commission (SEC) at the end of the first quarter of the 2010–2011 fiscal year. Snider’s financial accounting department has compiled the following summarized revenue and expense data for the first quarter of the year.

Sales	\$60,000,000
Cost of goods sold	36,000,000
Variable selling expenses	1,000,000
Fixed selling expenses	3,000,000

Included in the fixed selling expenses was the single lump-sum payment of \$2,000,000 for television advertisements for the entire year.

#### Instructions

- Snider Corporation must issue its quarterly financial statements in accordance with generally accepted accounting principles regarding interim financial reporting.
  - Explain whether Snider should report its operating results for the quarter as if the quarter were a separate reporting period in and of itself, or as if the quarter were an integral part of the annual reporting period.
  - State how the sales, cost of goods sold, and fixed selling expenses would be reflected in Snider Corporation’s quarterly report prepared for the first quarter of the 2010–2011 fiscal year. Briefly justify your presentation.
- What financial information, as a minimum, must Snider Corporation disclose to its stockholders in its quarterly reports?

(CMA adapted)

**CA24-9 (Treatment of Various Interim Reporting Situations)** The following statement is an excerpt from the FASB pronouncement related to interim reporting.

Interim financial information is essential to provide investors and others with timely information as to the progress of the enterprise. The usefulness of such information rests on the relationship that it has to the annual results of operations. Accordingly, the Board has concluded that each interim period should be viewed primarily as an integral part of an annual period.

In general, the results for each interim period should be based on the accounting principles and practices used by an enterprise in the preparation of its latest annual financial statements unless a change in an accounting practice or policy has been adopted in the current year. The Board has concluded, however, that certain accounting principles and practices followed for annual reporting purposes may require modification at interim reporting dates so that the reported results for the interim period may better relate to the results of operations for the annual period.

#### Instructions

Listed on page 1375 are six independent cases on how accounting facts might be reported on an individual company’s interim financial reports. For each of these cases, state whether the method proposed to be used for interim reporting would be acceptable under generally accepted accounting principles applicable to interim financial data. Support each answer with a brief explanation.

- (a) J. D. Long Company takes a physical inventory at year-end for annual financial statement purposes. Inventory and cost of sales reported in the interim quarterly statements are based on estimated gross profit rates, because a physical inventory would result in a cessation of operations. Long Company does have reliable perpetual inventory records.
- (b) Rockford Company is planning to report one-fourth of its pension expense each quarter.
- (c) Republic Company wrote inventory down to reflect lower-of-cost-or-market in the first quarter. At year-end the market exceeds the original acquisition cost of this inventory. Consequently, management plans to write the inventory back up to its original cost as a year-end adjustment.
- (d) Gansner Company realized a large gain on the sale of investments at the beginning of the second quarter. The company wants to report one-third of the gain in each of the remaining quarters.
- (e) Fredonia Company has estimated its annual audit fee. It plans to pro rate this expense equally over all four quarters.
- (f) LaBrava Company was reasonably certain it would have an employee strike in the third quarter. As a result, it shipped heavily during the second quarter but plans to defer the recognition of the sales in excess of the normal sales volume. The deferred sales will be recognized as sales in the third quarter when the strike is in progress. LaBrava Company management thinks this is more representative of normal second- and third-quarter operations.

**CA24-10 (Financial Forecasts)** An article in *Barron's* noted the following.

Okay. Last fall, someone with a long memory and an even longer arm reached into that bureau drawer and came out with a moldy cheese sandwich and the equally moldy notion of corporate forecasts. We tried to find out what happened to the cheese sandwich—but, rats!, even recourse to the Freedom of Information Act didn't help. However, the forecast proposal was dusted off, polished up and found quite serviceable. The SEC, indeed, lost no time in running it up the old flagpole—but no one was very eager to salute. Even after some of the more objectionable features—compulsory corrections and detailed explanations of why the estimates went awry—were peeled off the original proposal.

Seemingly, despite the Commission's smiles and sweet talk, those craven corporations were still afraid that an honest mistake would lead them down the primrose path to consent decrees and class action suits. To lay to rest such qualms, the Commission last week approved a "Safe Harbor" rule that, providing the forecasts were made on a reasonable basis and in good faith, protected corporations from litigation should the projections prove wide of the mark (as only about 99% are apt to do).

#### Instructions

- (a) What are the arguments for preparing profit forecasts?
- (b) What is the purpose of the "safe harbor" rule?
- (c) Why are corporations concerned about presenting profit forecasts?

**CA24-11 (Disclosure of Estimates)** Nancy Tercek, the financial vice president, and Margaret Lilly, the controller, of Romine Manufacturing Company are reviewing the financial ratios of the company for the years 2010 and 2011. The financial vice president notes that the profit margin on sales ratio has increased from 6% to 12%, a hefty gain for the 2-year period. Tercek is in the process of issuing a media release that emphasizes the efficiency of Romine Manufacturing in controlling cost. Margaret Lilly knows that the difference in ratios is due primarily to an earlier company decision to reduce the estimates of warranty and bad debt expense for 2011. The controller, not sure of her supervisor's motives, hesitates to suggest to Tercek that the company's improvement is unrelated to efficiency in controlling cost. To complicate matters, the media release is scheduled in a few days.

#### Instructions

- (a) What, if any, is the ethical dilemma in this situation?
- (b) Should Lilly, the controller, remain silent? Give reasons.
- (c) What stakeholders might be affected by Tercek's media release?
- (d) Give your opinion on the following statement and cite reasons: "Because Tercek, the vice president, is most directly responsible for the media release, Lilly has no real responsibility in this matter."

**CA24-12 (Reporting of Subsequent Events)** In June 2010, the board of directors for McElroy Enterprises Inc. authorized the sale of \$10,000,000 of corporate bonds. Jennifer Grayson, treasurer for McElroy Enterprises Inc., is concerned about the date when the bonds are issued. The company really needs the

cash, but she is worried that if the bonds are issued before the company's year-end (December 31, 2010) the additional liability will have an adverse effect on a number of important ratios. In July, she explains to company president William McElroy that if they delay issuing the bonds until after December 31 the bonds will not affect the ratios until December 31, 2011. They will have to report the issuance as a subsequent event which requires only footnote disclosure. Grayson expects that with expected improved financial performance in 2011 ratios should be better.

### Instructions

- (a) What are the ethical issues involved?
- (b) Should McElroy agree to the delay?

**\*CA24-13 (Effect of Transactions on Financial Statements and Ratios)** The transactions listed below relate to Wainwright Inc. You are to assume that on the date on which each of the transactions occurred the corporation's accounts showed only common stock (\$100 par) outstanding, a current ratio of 2.7:1, and a substantial net income for the year to date (before giving effect to the transaction concerned). On that date the book value per share of stock was \$151.53.

Each numbered transaction is to be considered completely independent of the others, and its related answer should be based on the effect(s) of that transaction alone. Assume that all numbered transactions occurred during 2011 and that the amount involved in each case is sufficiently material to distort reported net income if improperly included in the determination of net income. Assume further that each transaction was recorded in accordance with generally accepted accounting principles and, where applicable, in conformity with the all-inclusive concept of the income statement.

For each of the numbered transactions you are to decide whether it:

- a. Increased the corporation's 2011 net income.
- b. Decreased the corporation's 2011 net income.
- c. Increased the corporation's total retained earnings directly (i.e., not via net income).
- d. Decreased the corporation's total retained earnings directly.
- e. Increased the corporation's current ratio.
- f. Decreased the corporation's current ratio.
- g. Increased each stockholder's proportionate share of total stockholders' equity.
- h. Decreased each stockholder's proportionate share of total stockholders' equity.
- i. Increased each stockholder's equity per share of stock (book value).
- j. Decreased each stockholder's equity per share of stock (book value).
- k. Had none of the foregoing effects.

### Instructions

List the numbers 1 through 9. Select as many letters as you deem appropriate to reflect the effect(s) of each transaction as of the date of the transaction by printing beside the transaction number the letter(s) that identifies that transaction's effect(s).

### Transactions

- \_\_\_ 1. In January the board directed the write-off of certain patent rights that had suddenly and unexpectedly become worthless.
- \_\_\_ 2. The corporation sold at a profit land and a building that had been idle for some time. Under the terms of the sale, the corporation received a portion of the sales price in cash immediately, the balance maturing at 6-month intervals.
- \_\_\_ 3. Treasury stock originally repurchased and carried at \$127 per share was sold for cash at \$153 per share.
- \_\_\_ 4. The corporation wrote off all of the unamortized discount and issue expense applicable to bonds that it refinanced in 2011.
- \_\_\_ 5. The corporation called in all its outstanding shares of stock and exchanged them for new shares on a 2-for-1 basis, reducing the par value at the same time to \$50 per share.
- \_\_\_ 6. The corporation paid a cash dividend that had been recorded in the accounts at time of declaration.
- \_\_\_ 7. Litigation involving Wainwright Inc. as defendant was settled in the corporation's favor, with the plaintiff paying all court costs and legal fees. In 2008 the corporation had appropriately established a special contingency for this court action. (Indicate the effect of reversing the contingency only.)

- \_\_\_ 8. The corporation received a check for the proceeds of an insurance policy from the company with which it is insured against theft of trucks. No entries concerning the theft had been made previously, and the proceeds reduce but do not cover completely the loss.
- \_\_\_ 9. Treasury stock, which had been repurchased at and carried at \$127 per share, was issued as a stock dividend. In connection with this distribution, the board of directors of Wainwright Inc. had authorized a transfer from retained earnings to permanent capital of an amount equal to the aggregate market value (\$153 per share) of the shares issued. No entries relating to this dividend had been made previously.

Statement Analysis  
Problems

## USING YOUR JUDGMENT

### FINANCIAL REPORTING

#### Financial Reporting Problem

##### **P&G** The Procter & Gamble Company (P&G)

As stated in the chapter, notes to the financial statements are the means of explaining the items presented in the main body of the statements. Common note disclosures relate to such items as accounting policies, segmented information, and interim reporting. The financial statements of **P&G** are provided in Appendix 5B or can be accessed at the book's companion website, [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso).

#### Instructions

Refer to **P&G's** financial statements and the accompanying notes to answer the following questions.

- (a) What specific items does P&G discuss in its Note 1—Summary of Significant Accounting Policies? (List the headings only.)
- (b) For what segments did P&G report segmented information? Which segment is the largest? Who is P&G largest customer?
- (c) What interim information was reported by P&G?

#### Comparative Analysis Case

##### The Coca-Cola Company versus PepsiCo, Inc.

#### Instructions

Go to the book's companion website and use information found there to answer the following questions related to **The Coca-Cola Company** and **PepsiCo, Inc.**

- (a) (1) What specific items does Coca-Cola discuss in its Note 1—Accounting Policies? (Prepare a list of the headings only.)
- (2) What specific items does PepsiCo discuss in its Note 2—Our Summary of Significant Accounting Policies? (Prepare a list of the headings only.)
- (b) For what lines of business or segments do Coca-Cola and PepsiCo present segmented information?
- (c) Note and comment on the similarities and differences between the auditors' reports submitted by the independent auditors of Coca-Cola and PepsiCo for the year 2007.

#### \*Financial Statement Analysis Case

RNA Inc. manufactures a variety of consumer products. The company's founders have run the company for 30 years and are now interested in retiring. Consequently, they are seeking a purchaser who will continue its operations, and a group of investors, Morgan Inc., is looking into the acquisition of RNA. To evaluate its financial stability and operating efficiency, RNA was requested to provide the latest financial statements and selected financial ratios. Summary information provided by RNA is presented on the next page.

**RNA**  
**INCOME STATEMENT**  
**FOR THE YEAR ENDED NOVEMBER 30, 2011**  
**(IN THOUSANDS)**

Sales (net)	\$30,500
Interest income	500
Total revenue	<u>31,000</u>
Costs and expenses	
Cost of goods sold	17,600
Selling and administrative expenses	3,550
Depreciation and amortization expense	1,890
Interest expense	900
Total costs and expenses	<u>23,940</u>
Income before taxes	7,060
Income taxes	<u>2,800</u>
Net income	<u>\$ 4,260</u>

**RNA**  
**STATEMENT OF FINANCIAL POSITION**  
**AS OF NOVEMBER 30**  
**(IN THOUSANDS)**

	2011	2010
Cash	\$ 400	\$ 500
Marketable securities (at cost)	300	200
Accounts receivable (net)	3,200	2,900
Inventory	<u>6,000</u>	<u>5,400</u>
Total current assets	9,900	9,000
Property, plant, & equipment (net)	<u>7,100</u>	<u>7,000</u>
Total assets	<u>\$17,000</u>	<u>\$16,000</u>
Accounts payable	\$ 3,700	\$ 3,400
Income taxes payable	900	800
Accrued expenses	<u>1,700</u>	<u>1,400</u>
Total current liabilities	6,300	5,600
Long-term debt	<u>2,000</u>	<u>1,800</u>
Total liabilities	<u>8,300</u>	<u>7,400</u>
Common stock (\$1 par value)	2,700	2,700
Paid-in capital in excess of par	1,000	1,000
Retained earnings	<u>5,000</u>	<u>4,900</u>
Total shareholders' equity	<u>8,700</u>	<u>8,600</u>
Total liabilities and shareholders' equity	<u>\$17,000</u>	<u>\$16,000</u>

**SELECTED FINANCIAL RATIOS**

	RNA		Current Industry Average
	2010	2009	
Current ratio	1.61	1.62	1.63
Acid-test ratio	.64	.63	.68
Times interest earned	8.55	8.50	8.45
Profit margin on sales	13.2%	12.1%	13.0%
Asset turnover	1.84	1.83	1.84
Inventory turnover	3.17	3.21	3.18

**Instructions**

- Calculate a new set of ratios for the fiscal year 2011 for RNA based on the financial statements presented.
- Explain the analytical use of each of the seven ratios presented, describing what the investors can learn about RNA's financial stability and operating efficiency.
- Identify two limitations of ratio analysis.

(CMA adapted)

**BRIDGE TO THE PROFESSION****Professional Research: FASB Codification**

As part of the year-end audit, you are discussing the disclosure checklist with your client. The checklist identifies the items that must be disclosed in a set of GAAP financial statements. The client is surprised by the disclosure item related to accounting policies. Specifically, since the audit report will attest to the statements being prepared in accordance with GAAP, the client questions the accounting policy checklist item. The client has asked you to conduct some research to verify the accounting policy disclosures.

**Instructions**

Access the FASB Codification at <http://asc.fasb.org/home> to conduct research using the Codification Research System to prepare responses to the following items. Provide Codification references for your responses.

- In general, what should disclosures of accounting policies encompass?
- List some examples of the most commonly required disclosures.

**\*Professional Simulation**

Go to the book's companion website, at [www.wiley.com/college/kieso](http://www.wiley.com/college/kieso), to find an interactive problem that simulates the computerized CPA exam. The professional simulation for this chapter asks you to address questions related to financial ratio analysis.

**Remember to check the book's companion website to find additional resources for this chapter.**
