Foreword

When the editors at SAGE Publications approached me nearly 4 years ago to describe a new leadership handbook series they hoped to develop and to ask if I might be interested in serving as a series consulting editor, I was intrigued. From the viewpoint of a librarian who has worked with the Jepson School of Leadership Studies at the University of Richmond, I was familiar firsthand with the needs of both faculty researchers and undergraduate students and topics of interest and relevance. From this perspective, I collaborated with SAGE to develop a list that, over the intervening years, has evolved into a series of two-volume reference handbooks on political and civic leadership, gender and women's leadership, leadership in nonprofit organizations, leadership in science and technology, and environmental leadership.

It is my hope that students, faculty, researchers, and reference librarians will benefit from this series by discovering the many varied ways that leadership permeates a wide variety of disciplines and interdisciplinary topics. SAGE's *Encyclopedia of Leadership* (2004) has been an outstanding reference tool in recent years to assist students with understanding some of the major theories and developments within leadership studies. As one of the newest interdisciplinary fields in academia in the past 20 years, leadership studies has drawn on many established resources in the social sciences, humanities, and organizational management. However, academic resources that are wholly dedicated and developed to focus on leadership as an academic study have been few and far between. The *SAGE Reference Series on Leadership* will provide an excellent starting place for the student who wants a thorough understanding of primary leadership topics within a particular discipline. The chapters in each of the handbooks will introduce them to key concepts, controversies, history, and so forth, as well as helping them become familiar with the best-known scholars and authors in this emerging field of study. Not only will the handbooks be helpful in leadership studies schools and programs, they will also assist students in numerous disciplines and other interdisciplinary studies programs. The sources will also be useful for leaders and researchers in nonprofit and business organizations.

I would like to acknowledge Jim Brace-Thompson, senior editor, and Rolf Janke, vice president and publisher at SAGE Reference for their guidance, superb organization, and enthusiasm throughout the handbook creation process. I admire both of them for their intellectual curiosity and their willingness to create new reference tools for leadership studies. I would also like to acknowledge the faculty, staff, and students of the Jepson School of Leadership Studies for the many contributions they have made to the establishment of leadership studies as an academic field. Founded in 1992, the Jepson School of Leadership Studies is the only institution of its kind in the world, with a full-time, multidisciplinary faculty dedicated to pursuing new insights into the complexities and challenges of leadership and to teaching the subject to undergraduates. When I was assigned to serve as the liaison librarian to the new school in 1992, I had no idea of how much I would learn about leadership studies. Over the past 18 years, I have audited courses in the school, attended numerous Jepson Forums and speaker series, taught library and information research skills to Jepson students, assisted faculty and staff with various research questions, and engaged in enlightening conversations with both faculty and students. Through these many experiences, my knowledge and understanding of the field has grown tremendously, and it has been a unique experience to observe the development of a new field of study in a very brief time. I thank my Jepson colleagues for including me on the journey.

Lucretia McCulley, Consulting Editor
Director, Outreach Services
Liaison Librarian for Leadership Studies
Boatwright Memorial Library
University of Richmond, Richmond, VA

INTRODUCTION

Leaders of nonprofit organizations deliver programs and services vital to the quality of life in the United States. All the activities of our religious communities; the vast majority of the arts and culture, human services, and community development services; as well as education and environmental advocacies take root and deliver services in the nonprofit sector.

This social space is where various individuals and like-minded groups can organize themselves to "petition government." This sector is where individuals with common interests "peaceably assemble." "Freedom of religion" is expressed in the nonprofit sector. The nonprofit, or independent, or third, or charitable, or tax exempt, or volunteer, or philanthropic (all names used for these activities and organizations) sector is how "we the people of the United States" retain our sovereignty.

This reference volume engages a range of voices on issues and leadership topics important to those seeking to understand more about this dynamic sector of society. The authors include academic researchers and theorists who consider the role and function of nonprofit organizations in our way of life. Other writers of chapters are current sector leaders, practitioners with responsibility for key nonprofit and foundation organizations. Still other contributors are new PhDs describing current research and thinking about leadership in this sector. In total, these voices provide a wide range of knowledge and wisdom on these important topics.

The authors have been encouraged to speak from their own experiences, research, knowledge, and perspective. Some of the chapters are formal and academic in tone. Other chapters are informal and conversational. This diversity in the background of the authors and the presentation of their material is a direct reflection of the variety, vibrancy, and creativity of the sector itself.

By the same token, the chapters in this volume describe a robust and diverse assortment of organizations and opportunities for leadership. For readers interested in pursuing a profession as a nonprofit or foundation leader, there are several chapters defining the sector and describing its development in the United States. Only by understanding the language and definitions of their profession will emerging leaders be able to assume roles as thoughtful, reflective practitioners or researchers. Several chapters provide an overview of the history of nonprofit organizations in our country. Many issues that new leaders will face are rooted in the political, economic, and social theory of the nation and the history that frames the sector.

A major focus in this reference work is on the specific roles and skills required of the nonprofit leader. While many of these chapters might be defined as management chapters, each section details the basic requirements that must be mastered by the effective leader to consider and lead on issues of larger organizational strategy. With a deep understanding of theory and history, paired with mastery of skills and responsibilities of management, the nonprofit leader is prepared to assume the role of effective leadership.

Leadership can happen at any level of an organization, not only "at the top." Since everyone "has a boss," all leaders are also followers. Everyone reports to someone else who has power over what he or she does. These dual roles provide nonprofit leaders with opportunities to gain insight into their own leadership styles and preferences as they observe the leaders who have authority over their work. Leaders can be men or women, or even children. They come in many shapes and sizes and ages. Personalities vary as do their personal styles. Many nonprofits are so small that there is not the luxury of making a distinction between management and leadership, hence in every area of the organization there is the opportunity for both.

Leadership also occurs in many places. The mid-level manager in a nonprofit organization might be the choir director in her religious community. The secretary might be the president of the Junior League outside of work. The janitor might be an Eagle Scout adviser or a captain in the Salvation Army. The executive director might work as a server in a local food pantry. The volunteer board member, leading a large corporation in the community, may help his fellow board members from the women's shelter paint playground equipment for the agency children. Several chapters explore the nature of leadership and its complexities, as exemplified in the nonprofit sector.

The chapters in this handbook can be read in order, starting from the general definitions of the sector and working through final chapters about leadership. A reader can also select a specific section that groups chapters addressing an aspect of leadership of nonprofits. Finally, the reader can simply pick and choose chapters based on an individual question or area of interest.

The appendices include a number of resources for readers who want to pursue a deeper level of understanding. These appendices include annotated descriptions of books, websites, and organizations. Appendix D is a set of chapters from the only high school–level textbook in the nation on philanthropy. These chapters offer a perspective on the nonprofit sector through the lens of the social studies disciplines taught in the high schools. Philanthropy related to government, economics, history, and geography is introduced in both the United States and from an international perspective. College students in related majors, such as political science, economics, U.S. history, and geography, will find these chapters useful in directly applying their academic field of study to their interest in nonprofit leadership.

This is a large, independent, diverse, and dynamic part of our society. In many ways, the new ideas generated by volunteers and citizens acting to solve problems keep our society fresh, changing, and vibrant. In the United States, when people see a problem or envision a better world, they bring together their friends, form a nonprofit organization, roll up their sleeves, and "do it themselves." Not only is the government not threatened by this citizen engagement in solving public problems but the United States provides a number of tax advantages to encourage and support this activism. The power of private citizen action for the betterment of the community helps define the American character.

Welcome to the world of leadership in nonprofit organizations. The sector offers a place to lead and ways to meet needs that can encompass the interests and skills of each individual. There is an opportunity to serve, and an opportunity to lead. We all benefit when each of us commits to giving, serving, and acting as private individuals for the common good.

Acknowledgments

This reference exists due to the talents and commitment of a team of professionals at the Johnson Center for Philanthropy at Grand Valley State University and at SAGE Publications, as well as a network of passionate authors and leaders who love the charitable sector and seek to enhance its role in making the world a better place. Special thanks go to Johnson Center student Alyssa Desgranges who led the organization of chapters and communications with all the contributors. As she takes the next step in her career, I know she will become a great international lawyer. Recognition must also be extended to all the Johnson Center staff. Thanks to each of you for supporting this work and for "going the extra mile" to benefit all students, on top of your already committed schedules. To the dean of the College of Community and Public Service, George Grant Jr., thank you for your leadership and support of the Johnson Center and for the time involved in completing this work.

The simple listing of the SAGE team and editors does not do justice to their vision for this project, their dedicated labor in bringing it to our sector and our students, and their e-mail friendship. Thank you. I have learned a lot about the effort and talent needed to provide us with such a comprehensive resource. Your careful reading, project nurturing, and expert editing of all our words will make a difference in the world. In addition to the members of the SAGE team listed in the masthead, thanks to Charles Wankel for sharing his experience, his resources, and providing very timely advice.

To each and every author, my sincere gratitude for taking the time to wrestle with your chapter(s) and to pour your energy into sharing your expertise with our next generation of philanthropic leaders. You are each actively involved in other endeavors yet still committed to sharing what you have learned with others. You model the qualities of giving from the sector you serve.

There are not enough thanks that can be given to the editorial board members of this reference. They are longstanding leaders, wise counselors, activists, and role models who have shaped and nurtured the nonprofit sector and individual scholars and practitioners worldwide. Dottie, Russ, Patrick, and Robert, thank you for who you are, what you've done, and all that you still contribute to supporting citizen action for the common good.

Finally, a personal thank you for the ongoing support of Hans Agard; Kelly, Michael, Piper, and Gavin Greeby; and Corey, Jennifer, and Avery Agard.

With deep gratitude for all that has been given us and for our common heritage of seeing need, reaching out, digging deep, and pitching in to help one another.

Kathryn A. Agard, Editor

Executive Director,
Dorothy A. Johnson Center for Philanthropy

Grand Valley State University

About the Editors

Editor

Kathryn A. Agard is the executive director of the Dorothy A. Johnson Center for Philanthropy, a department of the College of Community and Public Service at Grand Valley State University. The Johnson Center is a university-based academic center serving nonprofits, foundations, and other charitable organizations that seek to transform their communities for the common good. The center assists communities through applied research, professional development, and the advancement of social technologies.

Prior to joining the Johnson Center in May of 2006, Dr. Agard served for a decade as the founding executive director of *Learning to Give,* an initiative of the Council of Michigan Foundations. In this role, she provided leadership and had management responsibility for a new national venture to develop, test, refine, and infuse into the kindergarten through twelfth-grade school curriculum the teaching of philanthropy (www.learningtogive.org).

Prior to her work with *Learning to Give,* Dr. Agard led the development and implementation of the Michigan Community Foundations' Youth Project (MCFYP) for the Council of Michigan Foundations. MCFYP was a $70 million W. K. Kellogg Foundation–funded project designed to (1) extend the reach of community foundations to serve every community and donor in Michigan, (2) bring each foundation up to a minimum level of organizational viability, and (3) engage generations of Michigan youth in the process of grantmaking. Designed as a challenge grant program, MCFYP generated an additional $140 million from local donors in permanent assets endowed for Michigan communities.

Dr. Agard has over 40 years of nonprofit management and executive experience in health care, higher education, and foundation philanthropy. She has held nonprofit leadership roles in organizations in Michigan, including the cities of Muskegon, Grand Rapids, and Detroit, and in Philadelphia, Pennsylvania. She holds a doctorate in educational leadership from Western Michigan University with a double major in public administration and human resource development. Her dissertation identified the common characteristics of community foundations at differing ages and asset sizes. Her master's degree in public administration is from Western Michigan University, and her bachelor's is from Albion College, where she achieved a double major in political science and communication. Dr. Agard has written and published numerous books and monographs related to organizational development and the nonprofit sector.

Along with her career in the nonprofit sector, Kathy has served on a number of nonprofit boards of trustees, including past service as the vice chair of the board of a community hospital, where she also chaired the Investigational Review Committee and served on the Executive and Personnel committees. She has been a lay leader of her church and on a number of community-based nonprofit boards. Currently, she serves as a board member of *Learning to Give* and on the statewide board of the Michigan Nonprofit Association. She is a board member of the Nonprofit Academic Centers Council where she served on the first Curriculum Committee, which developed guidelines for instruction on philanthropy and nonprofit leadership in colleges and universities.

Dr. Agard and her husband of over 30 years, Hans Agard, live in Muskegon, Michigan. She has two grown and married children and three perfect grandchildren.

Associate Editor

Alyssa Mary Desgranges completed her undergraduate degree at Grand Valley State University in May 2010, with a major in legal studies and a double minor in Spanish and criminal justice. During college she worked part time for 3 years at the Johnson Center for Philanthropy as a student administrative assistant. At the center, she worked closely with Dr. Agard who gave her the opportunity to be the associate editor for this publication. Ms. Desgranges was very active in student life at Grand Valley and was a member of the GVSU Law Society and of Alpha Phi Sigma—the criminal justice honor society. When she is not at school or work, she enjoys spending time with her family and friends. She is from Ionia, Michigan, and currently resides in Houston, Texas, where she will be attending South Texas College of Law in the fall of 2010.

About the Contributors

Rikki Abzug (PhD, Yale University) is an associate professor of management, Anisfield School of Business, Ramapo College of New Jersey. A researcher of organizational governance, sector theory, social purpose organizations, and neo-institutionalism in organizations, Dr. Abzug is coauthor (with Jeffrey Simonoff) of *Nonprofit Trusteeship in Different Contexts*.

Salvatore P. Alaimo is an assistant professor in the School of Public, Nonprofit, and Health Administration at Grand Valley State University. Dr. Alaimo earned his PhD in philanthropic studies from Indiana University and has 9 years experience working and consulting for nonprofit organizations. His published works include a journal article titled "Nonprofits and Evaluation: Managing Expectations From the Leader's Perspective" in *New Directions for Evaluation* and a chapter titled "Contracting Out" in *Nonprofit Economics and Management*.

Ann Armstrong has been an instructor at the Rotman School of Management for the past 10 years. She is the director of the Social Enterprise Initiative. In that role, she is responsible for increasing the school's involvement in the nonprofit/social enterprise sectors through curriculum design, research, and community engagement. Armstrong teaches in various executive programs internationally as well as in the MBiotech, Management, and Culture, Communication and Technology programs at the University of Toronto at Mississauga. She is the academic director of Rotman's Learning Exchange with Regent Park. She sits on several nonprofit boards and works on a research project supported by the Canadian Social Sciences and Humanities Research Council that looks at the social economy of Ontario. She has coauthored two textbooks: *Organization Theory and Design,* with R. Daft, and *Understanding Canada's Social Economy*, with J. Quarter and L. Mook, both published in 2009.

Philip L. Barclift is director of liberal studies and associate professor of theology and nonprofit leadership at Seattle University. His research has moved in two interconnected directions. A large part of his research has been done on the ground in the Middle East, where he studies the status of the Palestinians under Israeli occupation on the West Bank and Gaza. He also studies the dynamics of philanthropy (that is, why do some people act altruistically while others act selfishly, even to the point of using unwarranted violence toward others), philanthropic ethics, and the relationship between faith and philanthropy.

Audrey Barrett, PhD, LCSW, received her degree in leadership studies with a special emphasis on nonprofit organizational management from the University of San Diego in May 2008. She was nominated for and received the William P. Foster Outstanding Dissertation Award for her work in developing the Nonprofit Ethics Survey. Following graduation, Dr. Barrett has extended her work to make the survey available online to nonprofit organizations. She worked as a doctoral research assistant for the Institute for Nonprofit Education and Research while completing her degree and represents one of the first graduates nationally with a doctoral degree focusing on third-sector studies. She currently serves as an adjunct faculty member at various institutions of higher education and is a practicing licensed clinical social worker. Dr. Barrett and her husband, Kevin, have two young sons.

Teresa R. Behrens is the editor-in-chief of *The Foundation Review* and a senior research associate at the Dorothy A. Johnson Center for Philanthropy at Grand Valley State University. She was formerly the director of evaluation at the W. K. Kellogg Foundation, a program officer for the Michigan Strategic Fund, and a consultant to nonprofit and government agencies. She earned her MS and PhD in psychology from North Carolina State University and her BA from Case Western Reserve University.

Karabi Chaudhury Bezboruah is an assistant professor at the School of Urban and Public Affairs at the University of Texas at Arlington. Previously, she worked as a visiting assistant professor at the Department of Public Administration at the University of North Texas. She studies corporate philanthropy and its implications for nonprofit organizations, especially in terms of resource development and leadership and management. Her other research interests include organizational change and behavior, accountability issues in nonprofit management, nongovernmental organizations, and economic and community development. She was awarded the Emerging Scholar Award at the 2008 ARNOVA Conference. She graduated with her doctoral degree in public affairs in 2008 from the University of Texas at Dallas with specialization in nonprofit organizations.

Wolfgang Bielefeld is professor of public and nonprofit management and philanthropic studies in the School of Public and Environmental Affairs at Indiana University in Indianapolis. He also holds appointments in the Sociology Department and at the Center on Philanthropy at that university. He received his PhD in sociology from the University of Minnesota. His research interests include the dynamics of urban nonprofit sectors, the relations between nonprofit organizations and their environments, nonprofit social entrepreneurship and enterprise, and the involvement of faith-based organizations in service delivery.

Angela Bies is an assistant professor at the Bush School of Government and Public Service, Texas A & M University, where her teaching and research focus on nonprofit management and the nonprofit sector. Bies was previously a nonprofit executive working in accountability and evaluation, international development, education, and arts contexts.

Joseph Borrell is an associate professor at Shippensburg University and chair of the Communication/Journalism Department. He regularly teaches writing for the electronic media, Internet communication, and radio production courses. In addition to teaching undergraduate broadcast and public relations courses, he also offers a media research and grant-writing course at the graduate level. Dr. Borrell earned a PhD from the University of Pennsylvania's Annenberg School for Communication in 2000, holds a master's degree from Duke University, and completed his BS degree at the Georgia Institute of Technology. His recent research has been supported by grants from the Kennedy and Rockefeller foundations.

John Brothers is a recognized leader in the nonprofit arena with nearly 20 years of sector experience. He is a national expert in the field of executive transition management, nonprofit effectiveness and sustainability, and assisting organizations in organizational crises and turnarounds. Brothers is working toward a doctorate in law and policy from Northeastern University in Boston and has an MPA in nonprofit and public management from New York University and an MBA in public policy from American Public University. He is an adjunct professor in nonprofit finance at New York University's Wagner School for Public Service and a visiting fellow at the Hauser Center for Nonprofit Organizations at Harvard University. In addition, Mr. Brothers is a senior fellow in executive leadership with the Support Center for Nonprofit Management, for which he also is the editor of the *Journal for Nonprofit Management.* He is the principal of Cuidiu Consulting, a consulting firm servicing nonprofit and government agencies throughout the United States.

Kimberly A. Carlson is a PhD candidate at the Center for Public Administration and Policy at Virginia Tech, with a concentration in nonprofit management, organizational development, and leadership development. She received her BS in psychology and BA in theater arts, with a minor in sociology, from Virginia Tech in 1997. She also received her MSW in clinical social work and a certificate in arts and community practice from Florida State University in 2000. Before returning to Virginia Tech, Kimberly worked as a director for community arts and arts education programs at various arts organizations in both Oklahoma City, Oklahoma, and Pensacola, Florida.

Heather Carpenter has served as a nonprofit manager, accidental techie, consultant, researcher, and trainer to nonprofit organizations for over 7 years. She is former assistant director of Aspiration, a technology nonprofit whose mission is to help nonprofits understand software so they can better achieve their missions. Heather earned her MM in nonprofit administration from North Park University in Chicago, Illinois, and is currently pursuing her PhD in leadership at the University of San Diego, where she serves as Viterbi Family Doctoral Fellow and research assistant at the Caster Family Center for Nonprofit Research. She teaches and presents on a variety of topics in the nonprofit sector and is a well-known blogger in the sector through her Nonprofit Leadership 601 blog.

Paul Cavanagh is a social worker with a master's degree from Stony Brook University and a doctoral degree from the Columbia University School of Social Work. His professional career has encompassed two primary areas of service delivery: in agencies serving individuals with a developmental disability and in the administration of large volunteer organizations. Cavanagh is currently an assistant professor at Seton Hall University in the Department of Public and Healthcare Administration. His current research interests focus on the use of technology in human services administration and entrepreneurial efforts by nonprofit organizations.

Frederik Claeyé is a doctoral researcher and lecturer at Middlesex University Business School, United Kingdom, and visiting lecturer at Nelson Mandela Metropolitan University, South Africa. He holds an MA in conflict and development from Ghent University (Belgium) and an MSc in research methods from Middlesex University Business School. In his doctoral research project, he examines the power dynamics shaping the emergence of hybrid management systems in nonprofit organizations in South Africa. In 2006–2007 he carried out independent research on local notions of development in Morogoro, Tanzania. In 2007–2008 he was key researcher for the project Cross-Cultural Management in Health Service Project Delivery: HIV/AIDS & TB in South Africa and Botswana, funded by the UK Department of Education and British Council. He has presented a number of conference papers in the area of cross-cultural management and power dynamics in international development.

Forrest Clift is the assistant director of community outreach in the College of Education (COE) at Grand Valley State University (GVSU). His current work focuses on creating programs, resources, and opportunities that link COE faculty, staff, and students with local underserved and/or underfunded school systems. His additional professional interests include place-based education and developing transitional programs utilizing service learning. He currently sits on the Governing Board of Groundswell, a regional hub committed to providing middle- and high-school students with opportunities to engage in environmental stewardship/education focused on the Grand River Watershed and the Great Lakes. He holds a BA in English (writing) and an MEd (elementary) from the University of Mary Washington in Fredericksburg, Virginia.

Michele T. Cole, JD, PhD, is director of the masters program in nonprofit management and associate professor of nonprofit management at Robert Morris University, Moon Township, Pennsylvania. She received her law degree in 1982 from Duquesne University and her doctorate in public administration with a concentration in nonprofit management in 1993 from the University of Pittsburgh. Her research interests include effective online instruction, nonprofit-sector curriculum development, legal issues in personnel management, and application of business best practices and research to the nonprofit sector, as well as the application of technology to learning strategies.

Robert S. Collier serves as president and CEO of the Council of Michigan Foundations (CMF), a statewide nonprofit association of more than 350 private and community foundations. With an MPA from Central Michigan University, his career in philanthropy includes service as a program officer with the C. S. Mott Foundation, grants director for the Gannett Foundation, executive director of Rotary Charities of Traverse City, and founding director of the Grand Traverse Regional Community Foundation. Since joining CMF in 1995, Collier has been involved in the creation of family foundations, corporate foundations, community foundations, and their donor-advised funds. He has also worked on development of community foundations and youth philanthropy programs nationally and globally.

Kathryn Collins is an advanced PhD candidate at the University of Pittsburgh in the Graduate School of Public and International Affairs. She worked with the University Center for Social and Urban Research to measure the impact of the nonprofit sector on the county (and on the city of Pittsburgh). She specializes in organizational research and the nonprofit sector.

Julie Couturier, CPA, is the accountant for the Dorothy A. Johnson Center for Philanthropy at Grand Valley State University. She is responsible for all financial reporting, budgeting, and financial analysis for the Johnson Center. Couturier is also a business and accounting adjunct instructor for Grand Rapids Community College. Before joining the Johnson Center in 2006, Julie was the finance supervisor from 2004 to 2006 at Spectrum Health Hospital. She was responsible for all financial reporting, budgeting, and financial analysis for ambulatory services. From 1997 to 2004, Julie was the accounting manager for Holland Community Hospital. Julie holds a BS in business administration from Central Michigan University and is a certified public accountant.

Mariam DeLand is a recent graduate of the MSW program at the University of Michigan. She is interested in finding ways to help nonprofit organizations become more efficient and effective through a better understanding of collaborations and mergers.

Lisa A. Dicke, PhD, is an associate professor in the Department of Public Administration at the University of North Texas. She is an active member of the American Society for Public Administration and the Association for Research on Nonprofit Organizations and Voluntary Action. Her teaching and research interests are in government and nonprofit management, accountability, and capacity building.

Barbara Dillbeck is curriculum director of Learning to Give (LTG), a program that empowers youth to discover and develop their "philanthropic muscles" through service learning. She is a certified teacher and has an MEd in curriculum and instruction with a service learning/philanthropic focus. She is responsible for the content and quality of educational resources on the LTG website (www.learningtogive.org). Dillbeck mentors teachers in writing lessons that teach children about giving time, talent, and treasure, and about taking action for the common good. She trains teachers in philanthropy education and service learning, presents at state and national conferences.

Shannon Dosemagen has an MS degree in anthropology and a master's certificate in nonprofit management from the University of Wisconsin, Milwaukee. Her research has dealt with political and social movement formation, youth subcultural social activism, and generating public memory and political identities in post-Katrina New Orleans. She has worked for a number of environmental and cultural nonprofit organizations in roles ranging from development, education, and research to community advocacy and organizing.

Matthew Downey is the director for Nonprofit Services and Development for the Dorothy A. Johnson Center for Philanthropy at Grand Valley State University. He holds a master's degree in public administration from Grand Valley State University and a bachelor's degree in nonprofit arts administration from Butler University. Downey has worked in the nonprofit sector for 18 years as a fund development officer, program manager, consultant, and board member for a wide variety of organizations, a few of which include the United Negro College Fund (Detroit, Michigan), St. Mary's Hospital for Children (Bayside, New York), Child Care Action Campaign (New York, New York), Queens Borough Public Library (Jamaica, New York), and Irving S. Gilmore International Keyboard Festival (Kalamazoo, Michigan). He is currently a member of Rotary International.

James Edwards is director of the Community Research Institute for the Dorothy A. Johnson Center at Grand Valley State University and an assistant professor in the School of Social Work at Grand Valley State. He earned his doctorate in social work from Michigan State University. Prior to moving into higher education, Edwards accumulated 13 years of human service and nonprofit experience in child welfare, juvenile justice, mental health, and substance use services. He has led numerous trainings on ethics and technology use in service delivery.

Gianfranco Farruggia is associate professor of nonprofit management at North Park University's School of Business and Nonprofit Management in Chicago, Illinois. He earned his PhD at The Union Institute in Cincinnati, Ohio, in social service administration. His areas of research in the nonprofit sector are strategic planning and management, board governance and executive management, capacity building, and issues of ethics and impropriety. He has over 30 years of managerial and executive experience in the areas of human care and employment and training services, has founded three nonprofit organizations, and has been instrumental in establishing more than a dozen nonprofit entities. In addition to his faculty appointment, he actively consults with various human service organizations.

Derrick Feldmann is the CEO of Achieve. He received his MA in philanthropic studies from the Center on Philanthropy at Indiana University. As CEO of Achieve, Derrick provides overall strategic direction for the work of the firm, clients, and partners. He is a regular contributor to nonprofit trade publications and a speaker on fundraising, donor engagement, and strategies for organizations. Prior to founding Achieve, Derrick was responsible for all major development programs at The LEAGUE and Learning to Give organizations. His responsibilities beyond fundraising included program expansion, external partnerships, and sponsorship programs, where he led efforts to expand the program offerings in four new markets, negotiated in-kind TV campaigns at a value of more than $10 million, and increased fundraising by 200%.

Robert L. Fischer is research associate professor at the Mandel School of Applied Social Sciences of Case Western Reserve University and program faculty at the Mandel Center for Nonprofit Organizations. He is also codirector of the Center on Urban Poverty and Community Development and leads the center's efforts in regard to evaluation research. He currently coordinates various evaluation projects including the ongoing studies of Invest in Children, a countywide early childhood initiative. Fischer is an active member of the American Evaluation Association (AEA) and is the current president of the Ohio Program Evaluators' Group, a statewide professional organization affiliated with the AEA. He is the 2006 recipient of the Teacher of the Year Award from the Mandel Center for Nonprofit Organizations and the 2003 recipient of the Emerging Scholar Award from the Association for Community Organization and Social Administration. Fischer received his PhD from Vanderbilt University in policy development and program evaluation.

Brian Flanagan has been associate director of the Hauenstein Center for Presidential Studies at Grand Valley State University since 2003 and program director of the Peter Cook Leadership Academy since 2009. He graduated with honors from the University of Notre Dame (2003) and earned his master's degree in public administration from Grand Valley State University (2009). Flanagan's research interests include the American presidency, leadership, and public affairs. He served on Michigan's Abraham Lincoln Bicentennial Committee and as a teaching and learning resources adviser to the National Endowment for the Humanities.

Betsy Flikkema is former associate director of curriculum for The LEAGUE curriculum by Learning to Give. She is a certified teacher who taught for 9 years before moving into the world of educational publishing. She edited and developed teaching materials for a major publisher and eventually became its director of new product development. For Learning to Give, Betsy writes and edits philanthropic lessons, mentors and trains teachers, and presents at state and national conferences on philanthropic education and service learning.

John B. Ford is a professor of marketing and international business at the College of Business and Public Administration, Old Dominion University, where he also serves as the coordinator for the PhD in the marketing program. He holds a PhD in business administration from the University of Georgia. His research interests include international advertising strategy, cross-cultural issues in marketing research, nonprofit marketing issues, and gender issues in marketing. His publications have appeared in the *Journal of Advertising*, *Journal of Advertising Research*, *Journal of Business Research*, *International Journal of Nonprofit and Voluntary Sector Marketing,* and *Journal of the Academy of Marketing Science*.

David Forte is currently a graduate student at the Evans School of Public Affairs at the University of Washington. He holds a certificate in nonprofit management and a BA in international studies from Texas A&M University. His research interests center on microfinance and poverty reduction.

Thomas G. Fuechtmann earned his PhD in political science from the University of Chicago. His study of an emergent organization—the ecumenical religious coalition formed in response to a major steel mill shutdown in Youngstown, Ohio—was published as *Steeples and Stacks: Religion and Steel Crisis in Youngstown* (1989) in the series *Religion and Public Life in America.* As senior government relations officer for Loyola University Chicago and DePaul University, he worked with civic and nonprofit boards as member and consultant. Now retired, he teaches nonprofit board governance in DePaul's School of Public Service.

Marybeth Gasman is an associate professor of higher education in the Graduate School of Education at the University of Pennsylvania. Her research focuses on African American philanthropy, African American leadership, and historically black colleges and universities.

James Gelatt, PhD, is a professor and program director in the doctoral program at the University of Maryland University College. He is the author of three books on management, one of which has been translated into several languages, including Mandarin Chinese, and has been used as a college text. He is also a regular columnist on nonprofit management for *Contributions* magazine and the editor of a popular series of books on fundraising. In his consulting capacity, Gelatt has provided fundraising, strategic planning, and organizational development assistance to over 75 local, regional, and national nonprofits and associations. A past president of the Washington, D.C., chapter of the Association of Fundraising Professionals, Gelatt was also the founder of the Association Foundation Group.

Paige Haber is an instructor in the Department of Leadership Studies at the University of San Diego. She is also a doctoral candidate in the Leadership Studies Program at the University of San Diego. Haber's background is in the area of college student leadership education and development, and her research is in leadership studies, college student leadership development, emotional intelligence, and women's leadership.

Richard Hoefer, PhD, is a professor in the School of Social Work, University of Texas at Arlington. He received his doctorate in social work and social science (political science) from the University of Michigan, Ann Arbor. His publications include books on social policy and journal articles on nonprofit administration, social work management, advocacy, comparative social policy, and program evaluation.

Monika L. Hudson is an assistant professor at the University of San Francisco (USF) and teaches organizational behavior, entrepreneurship, and public administration on both the graduate and undergraduate levels. She is concurrently serving as the director of USF's Gellert Family Business Center, which promotes and supports family business in the Bay Area through a range of educational and networking opportunities. A trained mediator, Hudson developed her expertise in small group facilitation and mediation, strategic planning, business/economic development, and community engagement over a 30-year career in local government. Dr. Hudson served as city manager of both Colma and East Palo Alto, California. She was also an assistant city administrator of Millbrae, California, and served in a range of executive management positions in the California cities of Oakland, Oxnard, Sacramento, and South San Francisco. Hudson is a Mandel Fellow and received her doctor of management from Case Western Reserve University in Cleveland, Ohio.

Chris Huizenga, MNA, received his BA in organizational communications in 2000 from North Central College in Naperville, Illinois. He graduated in 2009 from North Park University in Chicago with a master's degree in nonprofit administration, where he also holds certificates in health care management and nonprofit governance. Chris's strategic marketing experience led him to a position with a 501(c)(6) professional association in 2004, and in 2008 he took his talents and experience to marketing and strategy for one of the top-ranking health care systems in America. He currently lives in Chicago, Illinois, with his wife, Erin.

Terence Jackson, PhD, is professor of cross-cultural management at Middlesex University Business School, London. He has published widely in the area of cross-cultural and NGO management, more recently researching international development, particularly health projects in HIV/AIDS, the informal economy in Africa and indigenous voices, and China in Africa and its implications. He is the author of the book *Management and Change in Africa: A Cross Cultural Perspective* (2004) and edits *International Journal of Cross Cultural Management*.

Cynthia R. Jasper is the chair of the Interdisciplinary Studies Department in the School of Human Ecology at the University of Wisconsin, Madison, where she is also a professor in the Consumer Science Department. She earned her PhD at the University of Wisconsin, Madison. Her research focuses on women and philanthropy, and she is especially interested in the changing role of women and its implications for women's philanthropy. She has published a chapter titled, "Women Executives and Business Owners: A New Philanthropy" in *The Transformative Power of Women's Philanthropy*.

Carol Jessup is a native of Springfield, Illinois. She obtained her bachelor's and master's degrees in accounting from the former Sangamon State University. Her PhD in business administration, with an emphasis in management and public policy studies, is from Saint Louis University. Jessup is currently an associate professor of accounting at Southern Illinois University Edwardsville. Her current research pertains to fraud, audit-related topics, and governmental accounting and transparency. Prior to entering academia, Carol was employed in various positions within the Illinois state government. She was also budget manager and chief accountant for the city of Springfield. She is a licensed CPA and a certified fraud examiner.

Theodore R. Jones, MSW, is a recent graduate of the University of Michigan School of Social Work, with a focus on management of community systems and a minor in community organization. He is currently a community organizer in Detroit, Michigan, with the Harriet Tubman Center and Southwest Solutions.

Alvin Kamienski is an associate professor in the School of Business and Nonprofit Management at North Park University, where he teaches graduate and undergraduate courses in finance and economics. Kamienski's research interests include the economics of education, school reform, especially charter schools, and the financial performance of nonprofit organizations. His current research projects include an examination of the financial allocation decisions and academic achievement for a national charter educational management organization and an exploration of faith and religiosity on early career outcomes. He is a member of the American Educational Research Association and the Association for the Research of Nonprofit Organizations and Voluntary Action.

James R. Kienker is a student at the Center on Philanthropy at Indiana University, Purdue University, Indianapolis, where he is working on a master of arts in philanthropic studies. He received his BA in history at Westminster College in Fulton, Missouri, with a double minor in prelaw and American studies. His research interest is in the history of religious philanthropy.

Sarah Eisner Kirch received her BS in human development and psychological services from Northwestern University and her master's degree in nonprofit administration from North Park University's School of Business and Nonprofit Management. She has 5 years of experience working with nonprofit organizations providing vital services to children, adolescents, and families.

Theresa A. Kirchner is an assistant professor of management with the School of Business, Hampton University. She earned a PhD in international business with a concentration in marketing from Old Dominion University in Norfolk, Virginia. Her background includes work with nonprofit boards for more than 20 years as well as extensive executive experience in the corporate world. Dr. Kirchner's research interests include strategic management and marketing of nonprofit organizations and organizational business continuity planning. Her publications have appeared in the *International Journal of Nonprofit and Voluntary Sector Marketing, Disaster Recovery Journal,* the *European Journal of Management*, and peer-reviewed proceedings of the *International Conference on Arts and Cultural Management*.

Lisa Wyatt Knowlton, EdD, is a strategy architect, management guru, and learning coach with Phillips Wyatt Knowlton, Inc. She received a BA in international relations from Michigan State University, as well as an MPA and EdD in management and policy from Western Michigan University. Her work history includes management and program responsibilities with private, corporate, and community foundations. She is a W. K. Kellogg National Leadership Fellow and has considerable experience in Central America, Asia, and Europe. She is coauthor of *The Logic Model Guidebook: Better Strategies for Great Results* (2009). Knowlton is a passionate advocate for adoption and Lake Michigan conservation.

Halima Leak is an associate director of the annual fund at Barnard College and a doctoral student in the Department of Administration, Leadership and Technology at New York University's Steinhardt School of Culture, Education and Human Development. Her research interests include ethnic culture and philanthropy, historically black colleges and universities, gender and African American higher education, and African American leadership in higher education.

Johannes Leitner is a research associate at Wirtschaftsuniversität Wien, Austria. He researches and teaches nonprofit management. The topic of his dissertation is *Organizational Slack and Its Impact on Innovation in Nonprofit Organizations.* His research interests are in business administration and interdisciplinary southeast European studies in Austria and Italy.

Al Lyons is former director of the Nonprofit Leadership Institute of the Dorothy A. Johnson Center for Philanthropy at Grand Valley State University. He joined the Johnson Center in 2008 as director of resource development. His current research is on the fundraising and engagement practices of nonprofit organizations serving specific ethnic populations in western Michigan. Before joining the Johnson Center and while completing a doctorate in philanthropic studies from Indiana University, Lyons helped establish the social entrepreneurship program at Indiana University and for 3 years served as its associate director. Prior to entering the Indiana University doctorate program, Al had over 30 years of professional consulting and leadership experience working with nonprofit organizations in the areas of organizational management, board development, strategic planning, program evaluation and accountability, and comprehensive fund development programs. His primary work has been with nonprofit hospitals and health care organizations.

Heather MacIndoe is an assistant professor in the Department of Public Policy and Public Affairs at the University of Massachusetts Boston. She holds a PhD in sociology from the University of Chicago. MacIndoe's research focuses on nonprofit organizations and philanthropic foundations in urban areas of the United States. She recently completed a survey of service-providing nonprofits in Boston that examines the extent to which these organizations engage in advocacy.

Florentine Maier is a researcher at the Nonprofit Management Group at Wirtschaftsuniversität Vienna University of Economics and Business. She holds a doctoral degree in personnel management and organizational behavior from Wirtschaftsuniversität (2008). Her research areas are the management of NPOs and alternative forms of organizing.

Catherine McCall Marsh, EdD, has more than 30 years experience in organizational development, human resource development, and fundraising. She is an associate professor of management at North Park in the School of Business and Nonprofit Management. Her expertise stems not only from her functional background but also from lengthy periods during which she lived and worked internationally. Before entering academia, she was director of human resources for 21st Century Telecom Group and founder and president of Catherine Marsh Consulting. In addition to her doctoral degree, Dr. Marsh has an MBA and focuses her research on ethics and leadership development in for-profit and nonprofit organizations.

Teresa Martinelli-Lee is an adjunct faculty member in the MSLM program at University of La Verne, California. She has more than 20 years of experience in the aerospace, hospitality, education, health care, and nonprofit human services industries. She is currently a doctoral candidate in public administration. Her research emphasis is on environmental stewardship and transformational leadership among southern California municipalities. Martinelli-Lee has conducted workshops and presented at several national and international conferences, including the Organizational Behavior Teaching Conference and the International Leadership Association Global Conference.

Robin McCoy has spent over 20 years using her leadership skills to advance organizations through periods of organizational growth and expansion. Her expertise includes leadership development, strategic planning for organizations, and marketing. She holds a PhD in organizational leadership, an MBA in business strategy, and a BS in finance. McCoy's current research involves leadership development and assessment of leadership programs. Some nontraditional approaches she is researching include behavioral simulations and the art of influencing others through team development activities. McCoy is also on the faculty at the University of San Diego's School of Business. Previously she was president of Murphy Marketing, a management and marketing research company providing a wide range of business development, marketing research, and management consulting services.

Mary B. Mc Donald, PhD, is an assistant professor at the University of San Diego. Her research focus is nonprofits and philanthropy, and she is currently the lead researcher for the "Diversity in Philanthropy" project of the Council of Michigan Foundations (CMF) and lead evaluator for the Office of Foundation Liaison in the Michigan Governor's Office. Mc Donald was formerly the director of the Community Research Institute (CRI) at the Dorothy A. Johnson Center for Philanthropy at Grand Valley State University. In that capacity she was regularly involved with both community-based and university-based research in philanthropy and the nonprofit sector. She earned her PhD at Michigan State University in family and child ecology in 2002.

Jasmine McGinnis is currently a PhD student in a joint public policy program at the Andrew Young School of Policy Studies at Georgia State University and the Ivan Allen College of Public Policy at Georgia Institute of Technology. She received her undergraduate degree from Emory University and her MPA from the University of Georgia. Before entering graduate school, Jasmine worked in corporate fundraising as a senior development manager and was always struck by the emphasis on diversity yet lack of connection between diversity and performance in the sector. Her primary research interest is examining the connection between foundation governance and grantmaking.

Agnes Meinhard is associate professor of organizational behavior and theory in the Ted Rogers School of Management at Ryerson University. She is the founding director of the Centre for Voluntary Sector Studies at Ryerson. Her research focuses on the voluntary and nonprofit sector: for example, the formation, growth, and demise of voluntary organizations; risk management in nonprofit organizations; corporate participation in the social economy; and partnerships between for-profit and nonprofit organizations. Her work has been published in books and academic journals. Meinhard was instrumental in establishing Canada's first undergraduate interdisciplinary curriculum in nonprofit and voluntary sector management at Ryerson University and teaches courses in developing effective nonprofit organizations and leading nonprofit organizations through change. She serves on the boards of several nonprofit organizations.

Stuart Mendel is the assistant dean for the Maxine Goodman Levin College of Urban Affairs, and cofounder and codirector of the Center for Nonprofit Policy and Practice. He received a PhD in social policy history and a master's in nonprofit organizations from Case Western Reserve University in 2000 and 1991, respectively, and a BA in geology and geography from Miami University of Ohio in 1983. His research interests include the nature of the nonprofit sector, uses of nonprofit organizations in civil society, social capital, private/public partnerships, the political capacity of nonprofit organizations, and urban history.

Debra Mesch is director of the Women's Philanthropy Institute at the Center on Philanthropy, professor of public and nonprofit management in the School of Public and Environmental Affairs at Indiana University–Purdue University Indianapolis, as well as professor of philanthropic studies at Indiana University. Her primary focus has been on expanding the research on women's philanthropy. She received both her MBA and PhD in organizational behavior/human resource management from Indiana University Kelley School of Business. Mesch has published over 30 articles in management and nonprofit journals and has worked with many nonprofit organizations such as Goodwill Industries, Big Brothers Big Sisters, and United Way in dealing with human resource management issues.

Barbara A. Metelsky is an independent organization development consultant with more than 20 years of nonprofit sector experience. During the first half of her career, Metelsky held leadership positions in nonprofit organizations. She has spent the second half of her career in administrative positions in nonprofit academic centers at Seton Hall University and most recently at North Carolina State University. Metelsky has a master's degree in public administration with a concentration in nonprofit organization management. She is currently completing doctoral studies at North Carolina State University, where she is a member of an interdisciplinary research team studying the communication practices of nonprofit boards. Her work has been published in practitioner and academic outlets including the *Philanthropy Journal*, the *International Encyclopedia of Civil Society*, and *Human Resource Development Quarterly*.

Michael Meyer is a professor for nonprofit management at the Wirtschaftsuniversität Wien (WU). He is head of the Research Institute for Nonprofit Organisations and academic director of a professional MBA program in social management, and a member of the European network of excellence CINEFOGO (www.cinefogo.org). His current research comprises NPOs, third sector and civil society, careers in NPOs, the social theory of Pierre Bourdieu, text and discourse analysis, and organizational analysis.

Seong-gin Moon is currently assistant professor in the Department of Public Administration, Inha University, Republic of Korea. He specializes in environmental policy and public and nonprofit management. His current research interest is in assessing organizational and individual volunteer behavior in improving environmental conditions and philanthropy. Specifically, he has written on issues of corporate environmental responsibility and Asian Americans' charitable giving and volunteering. His works have been published in several journals, including *Social Science Quarterly, Organization and Environment,* and *Comparative Technology Transfer and Society.*

Melissa Morriss-Olson, PhD, serves as dean of the Graduate School and professor of nonprofit management and philanthropy at Bay Path College in Longmeadow, Massachusetts. She is the founding director of Bay Path's graduate programs in nonprofit management and strategic fundraising and philanthropy. She previously served as the founding director and professor at the Axelson Center for nonprofit management at North Park University in Chicago, Illinois. While at North Park, she created the nationally recognized annual "Symposium for Nonprofit Professionals" event, which attracts over 700 nonprofit leaders. Morriss-Olson obtained her master's degree from Northeastern Illinois University in counselor education and her doctorate degree from Loyola University (Chicago) in educational leadership and policy studies. She is a frequent presenter at numerous conferences throughout the United States, is a member of several prestigious organizations, and serves on a number of nonprofit boards, including the Massachusetts Nonprofit Network (MNN).

J. Patrick Murphy is director and associate professor of the School of Public Service at DePaul University in Chicago. He founded Vincent on Leadership: The Hay Project, a research and training center, also at DePaul. He received his MBA from DePaul and his PhD from Stanford University. He served as treasurer of DePaul and as board chair of two nonprofit organizations. His published books include *Visions and Values in Catholic Higher Education* and (with Victor Meyer Jr. and published in Portuguese in Brazil) *Dinosaurs, Gazelles and Tigers: New Approaches to Higher Education Management, a Brazil US Dialog,* and *Leadership and Management in Catholic Higher Education in the Americas.* He has lectured in Europe, Asia, and South America.

Dorothy Norris-Tirrell is director and associate professor, Division of Public and Nonprofit Administration, School of Urban Affairs and Public Policy, at the University of Memphis. Her research and engaged scholarship focus is on governance, strategic planning, evaluation, and board development for nonprofit organizations, university-community partnerships, and cross-sector collaborative processes in a variety of policy settings, including community resilience and immigration. Her research has appeared in books and journals including the *Policy Studies Journal, American Review of Public Administration, Journal of Health and Human Services Administration,* and *International Journal of Public Administration.* She is coauthor of the book, *Strategic Collaboration in Public and Nonprofit Administration: A Practice Based Approach to Solving Shared Problems*. Norris-Tirrell has extensive experience as a nonprofit agency manager, board member, consultant, and volunteer. She received her PhD in public administration from Florida International University.

S. Nouman Ashraf is a research fellow at the Desautels Centre for Integrative Thinking at the Rotman School of Management within the University of Toronto. He possesses a broad range of professional, academic, and research interests. For the last decade, he has held progressively senior administrative positions at the University of Toronto, where he most recently served as the director of the university's Anti-Racism and Cultural Diversity Office. In this role, he worked closely with senior administrators, student leaders, faculty members, and policymakers in crafting and enabling strategies for the engagement of diverse communities at Canada's largest postsecondary institution. He has also consulted for the private sector in change management. With a particular interest in understanding organizational behavior and drivers of systems-wide cultural change, Nouman Ashraf has served as a consultant to important organizations such as the United Way of Canada and the Ontario Public Service. He holds an undergraduate degree in Economics and History, as well as an Executive MBA from the Rotman School of Management, where he teaches in various executive programs.

Timothy O'Brien, PhD, is an assistant professor of nonprofit finance at North Park University's School of Business and Nonprofit Management. He received his PhD in organizational behavior from Union Institute and University and combines a background in nonprofit financial management with organizational behavior in academic as well as consulting engagements. He has served on several nonprofit boards and is currently publishing and presenting original research in the area of nonprofit financial health.

Joel J. Orosz is the distinguished professor of philanthropic studies at the Dorothy A. Johnson Center for Philanthropy of Grand Valley State University. At the Johnson Center, Orosz created the *Nonprofit Good Practice Guide,* a free resource with a wealth of information for nonprofit managers, and founded the Grantmaking School, the first university-based training center teaching principles of good grantmaking to employees of charitable foundations. He currently conducts research, writes, and teaches continuing education courses on the topics of philanthropy, volunteerism, and nonprofit initiative. Before coming to Grand Valley State University, Orosz spent 15 years with the W. K. Kellogg Foundation of Battle Creek, Michigan. He has authored or edited six books on the history of museums, numismatics, and philanthropy, most notably *For the Benefit of All: A History of Philanthropy in Michigan; The Insider's Guide to Grantmaking: How Foundations Find, Fund and Manage Effective Programs;* and *Effective Foundation Management: 14 challenges of Philanthropic Leadership—and How to Outfox Them*.

Andrea Pactor is assistant director of the Women's Philanthropy Institute, where she is responsible for operations and coordinating educational services. She has served arts, education, and faith-based organizations as a professional and volunteer for more than 25 years. She was director of development at the Jewish Community Center in Indianapolis, director of publicity and grants at the Herron School of Art, and visual arts and museum coordinator at the Indiana Arts Commission. She was also local and regional president of her faith-based women's group and a United Way allocations committee member for 10 years. Her BA in history and literature is from The American University in Washington, D.C., and she holds an MA in museum practice from the University of Michigan and an MA in philanthropic studies from Indiana University.

Joseph Palus is a PhD candidate in philanthropic studies at the Center on Philanthropy at Indiana University. His research interests include family foundation boards and how they make decisions, as well as how foundations and other grantmaking organizations communicate their purposes and policies. His professional experience includes over 9 years in grantmaking and 20 years in grant seeking.

Dennis L. Poole, PhD, is a dean and professor in the College of Social Work at the University of South Carolina at Columbia.

Jayme R. Pyne is the assistant director of the College of Education Community Outreach Office at Grand Valley State University. He coordinates the College of Education's service learning initiative. He earned his BA in history from Aquinas College and an MEd in school counseling from Grand Valley State University. Pyne writes and manages grants to promote service learning in K–12 schools, writes and presents on counseling, community partnerships, and service learning, and connects College of Education faculty and staff to community-based initiatives. He also created and manages an online educational community called ColleaguesPlus.

Ramya Ramanath is assistant professor at Grand Valley State University's School of Public, Nonprofit and Health Administration, where she teaches philanthropy, voluntarism, and management of nonprofit and nongovernmental organizations. She conducts research on nonprofit–government relations, interorganizational collaboration, voluntarism, and urban poverty. Her research has been published in the *Nonprofit and Voluntary Sector Quarterly, Nonprofit Management and Leadership, Public Voices*, and elsewhere. Her employment and research experience span work in public, for-profit, and nonprofit settings in both India and the United States. She has a PhD in public and international affairs from Virginia Tech and a master's in social work from the Tata Institute of Social Sciences in Mumbai, India.

Sarah Jane Rehnborg, PhD, is a professor and the associate director of planning and development for the RGK Center for Philanthropy and Community Service at the LBJ School of Public Affairs at the University of Texas at Austin.

Jenna Leigh Riedi received her bachelor's degree in history from the University of Wisconsin and her master's degree in nonprofit management from the University of Wisconsin, Milwaukee. She has been working with and volunteering for nonprofit organizations in several capacities over the past 7 years. Her areas of interest in the nonprofit sector are environmental protection and animal rights groups. She currently lives in Milwaukee, Wisconsin, with her dog, Montague (Monty), and her cat, Loki.

John Risley has a PhD in evaluation (public policy evaluation) from Western Michigan University. He has several years of experience working with local governments, community groups, and nonprofit organizations on evaluation and research projects while at Grand Valley State University, Western Michigan University, and the Greater Kalamazoo United Way.

Darlene Xiomara Rodriguez is an assistant professor in the Political Science Department at the University of North Carolina at Greensboro. Her research and teaching interests are identity-based nonprofit organizations, organizational effectiveness, and federal immigration policy.

Michael K. Roemer, MA, is an assistant professor at Ball State in the Sociology of Religion Department.

Pier C. Rogers, PhD, is the director of the Axelson Center for Nonprofit Management and professor of nonprofit management in the School of Business and Nonprofit Management, North Park University in Chicago.

John C. Ronquillo is a doctoral candidate in the School of Public and International Affairs at the University of Georgia. His primary research interests are in public and nonprofit management, innovation and organizational change, social entrepreneurship, and diversity as it relates to public and nonprofit organizations. Prior to entering academia, he worked in the fields of applied research and policy analysis, intergovernmental relations, and social impact assessment.

Ashima Saigal is formerly the director of technology and social media at the Dorothy A. Johnson Center for Philanthropy at Grand Valley State University. Prior to joining the Johnson Center in 2005, she worked as director of services for the Grand Rapids office of NPower Michigan, as a senior engineer at Steelcase, and as a senior developer at AudienceOne, as well as owned an award-winning computer consulting business. Her master's degree is in computing and information systems and her bachelor's is in computer science. Saigal enjoys spreading her knowledge of technology to the nonprofit community and can often be found teaching classes or consulting with nonprofits on effectively using their existing technology tools.

Steve Schneiter is a former PhD student in Higher Education at Virginia Tech. He currently resides in Ohio where he is the CEO of Inspiration Archaeology, a leadership consultant, and a corporate trainer.

Margaret Schulte is associate professor in the Graduate Program in Health Administration at Grand Valley State University, serves on the faculty of the Northwestern University Masters of Science in Medical Informatics program, and is editor of *Frontiers in Health Services Management*, a publication of the American College of Healthcare Executives. Previously she served as vice president of education for the Healthcare Information and Management Systems Society (HIMSS), where she was responsible for the professional education programs of this membership association of IT professionals. She has also held positions as vice president of research and development for the publishing division of the American Hospital Association, as director of education with the Healthcare Financial Management Association, and as faculty of the graduate program in Healthcare Policy and Management at Mercer University in Atlanta, Georgia. Schulte holds a doctorate in business administration from Nova Southeastern University, Fort Lauderdale, Florida, and a master's in business administration from Xavier University, Cincinnati, Ohio. Her recent publications include *Healthcare Delivery in the USA: An Introduction* and *The EHR: Award Winning Implementation*.

H. Luke Shaefer is an assistant professor at the University of Michigan School of Social Work, where he teaches nonprofit management and community-level practice. His current research focuses on the economics of nonprofit administration, especially on the responses of human service providers to the recent economic crisis. He also studies the effectiveness of the U.S. social safety net in serving low-wage workers. His research has appeared in *Administration in Social Work, Social Service Review,* and *Journal of Social Policy.* He received his PhD in social service administration from the University of Chicago.

Robert Shalett is the director of communications at the Dorothy A. Johnson Center for Philanthropy at Grand Valley State University. Robert joined the Johnson Center in 2008 after having worked in marketing and publications for nonprofits for over 20 years, primarily in health care and philanthropic-related fields. Before joining the Johnson Center, Robert served in the marketing and/or communications departments at the Council on Foundations, the American Society of Clinical Oncologists, the American College of Obstetricians and Gynecologists, and the American Psychiatric Association. Robert graduated from Southern Methodist University with a BA in advertising and a minor in English.

Robb Shoaf is pastor of the United Methodist Church in Madison, New Jersey. He has served in Madison for the past 18 of his 30 plus years in ministry. The United Methodist

Church is adjacent to Drew University, where Shoaf has taught in the seminary, led the Religious Life Council, and presently sits on the Institutional Review Board. He serves on the Council of Finance and Administration for the Greater New Jersey Annual Conference. He has both an MDiv and PhD from Drew. He also holds an MS in nonprofit management from New York University.

Diana Sieger is the president of the Grand Rapids Community Foundation located in Grand Rapids, Michigan, and has held that position since 1987. She received her MSW with a concentration in policy, planning, and administration from Western Michigan University in 1978. She has two honorary degrees—Doctor of Humane Letters from Aquinas College and from Grand Valley State University. Sieger has been a leader in the social/nonprofit sector since 1973. The areas of focus in her career have primarily been that of a funder, policymaker, and advocate for social change.

S. Wojciech Sokolowski is senior research associate for the Johns Hopkins University Center for Civil Society Studies. He received his PhD in sociology from Rutgers University. The central focus of his academic work involves comparative, cross-national research on civil society institutions worldwide. He has coauthored numerous publications that have reported data on nonprofit institutions in over 40 countries. His academic interests also include social organization of work and the professions in a cross-national perspective, and cognitive implications of different arrangements of social organization of work and professional practice. He has published a book and several journal articles reporting results of empirical inquiries into this subject area.

Alan D. Steinman received his PhD in botany/aquatic ecology from Oregon State University and did his postdoctoral research at Oak Ridge National Laboratory. Steinman has been director of Grand Valley State University's Annis Water Resources Institute, located in Muskegon, Michigan, since 2001. Previously, he was director of the Lake Okeechobee Restoration Program at the South Florida Water Management District in West Palm Beach, Florida. Steinman has published over 100 scientific articles and book chapters, is associate editor of two scientific journals, has been awarded over $40 million in grants for scientific and engineering projects, and has been invited to speak throughout the world. His awards include Phi Beta Kappa, the U.S. Army Corps of Engineers Outstanding Planning Achievement Award, and the Joan Hodges Queneau Palladium Medal from the National Audubon Society. Currently, he is a member of U.S. EPA's Science Advisory Board—Report on the Environment Committee. Steinman's current research projects include economic valuation of ecosystem services, ecological impacts of stormwater and nonpoint source pollution, and the use of created wetlands to mitigate nonpoint source pollution.

Hephzibah V. Strmic-Pawl is an advanced PhD candidate in the Sociology Department at the University of Virginia. She holds an MA from the University of Chicago and a BS from the University of Wisconsin, Madison. Her research interests are race, inequality, family, gender, and intersectional analysis. Her dissertation focuses on multiracial identity, specifically in respect to how racial identity options are changing and the resilience of racism. Outside of academia, Strmic-Pawl is a trained community organizer and has worked with several nonprofits and student organizations, including as multicultural issues director for a state student association. She also leads her own nonprofit, Continuing College, which helps community college students transfer to four-year universities/colleges.

Lorri Sulpizio has worked with gender, leadership, and authority for over 10 years in an applied setting and within an academic environment—teaching and conducting research. She is cofounder and chief executive partner of the Lotus Leadership Institute, a research, consulting, and leadership development company for women. Sulpizio teaches women and leadership at the University of San Diego and teaches graduate and undergraduate courses in the School of Business and Management at National University. Additionally, she has sat on the board for the New Children's Museum in San Diego and the California Community College Women's Basketball Association. Her current research interests and projects include women and authority, women developing their leadership capacity, and transitional leadership. Sulpizio received her PhD in leadership from the University of San Diego.

Louis B. Swartz, JD, is associate professor of legal studies at Robert Morris University, Moon Township, Pennsylvania. He teaches legal environment of business and the Constitution and current legal issues at the undergraduate level and legal issues of executive management in the MBA program. He received his bachelor's degree from the University of Wisconsin in Madison and his juris doctorate from Duquesne University in Pittsburgh, Pennsylvania. He is the coordinator of the Robert Morris University Pre-Law Advisory Program and a member of the Northeast Association of Pre-Law Advisers (NAPLA) and the Academy of Legal Studies in Business (ALSB). His research interests include online education, legal studies, and business law.

Lisa Gale Van Brackle is a doctoral candidate in the social welfare program of the Graduate Center of the City University of New York. She holds a master's degree in social work, earned at the Hunter College School of Social Work, where she has also taught courses in administration and social policy. Her work stems from her 20-year career in nonprofit program development, organizational development, and administration and management and undergraduate studies in marketing and consumer research at Bernard Baruch College, also of the City University of New York.

Jon Van Til is professor of urban studies and community planning at Rutgers University, Camden, New Jersey. Among the 12 books he has authored or edited are *Growing Civil Society* (2008, 2000), *Critical Issues in American Philanthropy* (1990), and *Mapping the Third Sector: Voluntarism in a Changing Social Economy* (1988). Van Til served as editor-in-chief of *Nonprofit and Voluntary Sector Quarterly* (formerly the *Journal of Voluntary Action Research*) from 1978 through 1992. He was twice elected president of the Association of Voluntary Action Scholars and is the founding board chair of the Center for Nonprofit Corporations (Trenton). In 1994, Van Til received the Career Award for Outstanding Research and Service from the Association for Research in Nonprofit Organizations and Voluntary Action (ARNOVA). He has also served as Carlson Distinguished Visiting Professor of Social Science at West Virginia University and as Distinguished Fulbright Scholar at the University of Ulster (Northern Ireland) in 2004. He currently is listed as a Fulbright Senior Specialist and serves as adviser to international programs such as INCORE (International Conflict Resolution) Northern Ireland, the Swarthmore College foreign studies program, and Elte University (Budapest).

Lora Vitek graduated in 2000 from Millikin University with a degree in marketing. Her career of nearly 10 years in the nonprofit sector began with her position as consultant for a nonprofit consulting firm, Nike B. Whitcomb Associates in Chicago, Illinois. Vitek's responsibilities included events management, marketing communications, feasibility studies, and board development for nonprofit clients. She then took a position with the National Safety Council in Itasca, Illinois, where her responsibilities included events management, annual giving, and donor relations. Today, Vitek is the director of development and public relations for Teen Parent Connection, formerly Greater DuPage MYM. Vitek holds additional degrees from North Park University that include a master's of business administration, a master's of management in nonprofit administration, and additional certificates in marketing and management.

Lilya Wagner, EdD, CFRE, is director of Philanthropic Service for Institutions, an internal consulting department for a system of North American organizations. She is also on the faculties of the Center on Philanthropy and The Fund Raising School, where she was employed until 2005. She received her doctorate in education (curriculum and instruction) from the University of Florida and has master's degrees in journalism and music. Her work in leadership resulted in a book titled *Leading Up: Transformational Leadership for Fundraisers.*

Melissa A. Walker, PhD (University of Chicago), MPA (Harvard University), teaches nonprofit management in a graduate MPA program. She teaches financial management, human resource management, strategic planning, and program evaluation, and she has extensive experience working with nonprofit organizations in these areas. Her research explores the intersection of the public and nonprofit sectors. Walker's current research interests include tax exemption and Medicaid fee-for-service arrangements.

Lili Wang is an assistant professor in nonprofit leadership and management at the School of Community Resources and Development of Arizona State University. She received her PhD in public administration from the University of Southern California. Her research focuses on individual charitable behavior, institutional philanthropy, social capital, international NGOs, and health policy. She has published in various journals, including *Nonprofit and Voluntary Sector Quarterly*, *VOLUNTAS: International Journal of Voluntary and Nonprofit Organizations*, *Social Science and Medicine*, *Journal of Health Politics,* and *Policy and Law*, among others.

Gleaves Whitney has been director of the Hauenstein Center for Presidential Studies at Grand Valley State University since 2003. Previously he worked for 11 years in Michigan Governor John Engler's administration, serving as senior writer, chief speechwriter, and historian. In addition to his public work, Gleaves is a scholar who writes and lectures nationally on a variety of historical topics. He is author or editor of 14 books, including most recently (with Mark Rozell) *Testing the Limits: George W. Bush and the Imperial Presidency*. In 2008, Whitney was awarded a Russell Mawby Fellowship for Philanthropic Studies. Several of his talks have appeared on C-SPAN, and he has been interviewed by CNN, MSNBC, ABC, FOX News, *Newsweek*, *US News & World Report*, and NPR affiliates. Gleaves graduated with honors from Colorado State University, was elected into the Phi Beta Kappa honor society, and was a Fulbright scholar in Germany. His master's degree and doctoral candidacy were at the University of Michigan. He has taught at the University of Michigan, Droste-Hulshof Gymnasium, Colorado State University, Aquinas College, and Grand Valley State University. He received the honorary Doctor of Humane Letters from the Graduate Theological Union, Berkeley, California.

E. Miles Wilson is director of The Grantmaking School at the Johnson Center for Philanthropy. Prior to this position, he was an independent nonprofit consultant supporting nonprofit capacity building, civic engagement, and philanthropic efforts in Greater Cincinnati, Ohio, and nationally. As a program director at the Omidyar Foundation in Redwood City, California, Wilson worked with a small team of professionals assisting the founder and chairman of Ebay with his charitable endeavors. Prior to this, he served from 1998 through 2003 as vice president for grants and programs with the Greater Cincinnati Foundation, a regional community foundation that serves southwestern Ohio, northern Kentucky, and southeastern Indiana. He was also part of the original start-up team that initiated the

AmeriCorps National Service program after the legislation passed in late 1993. Wilson served as associate director in the Office of Community Service Learning at Ohio Wesleyan University and a research associate with R/K Dawson & Associates—a nonprofit and government consulting firm based in Columbus, Ohio. He holds a bachelor's degree from Ohio Wesleyan University and a master's degree in higher education policy and leadership from The Ohio State University.

Claudia Sowa Wojciakowski is a professor in the College of Education at Grand Valley State University. She teaches in the School Counseling Program and directs the College of Education Community Outreach Office. Her publications and presentations are primarily in the area of student development and achievement. She is involved in the integration of service learning in schools to promote learning, character development, and academic success in K–12 students. Wojciakowski has a PhD in counseling and educational psychology from Michigan State University. She also graduated from Michigan State University with a BS in mathematics and a master's in K–12 school counseling.

Matthew Wojciakowski currently serves as community engagement coordinator with the Carlson Leadership and Public Service Center at the University of Washington, Seattle campus. His work connects students and community-based organizations in reciprocal partnerships that deepen learning, advance civic leadership, and contribute to the greater community. After earning a master's degree in student development administration from Seattle University, Wojciakowski has studied how students connect academic study and their experiences beyond the classroom. A focus for his work is examining how higher education institutions and community development organizations can work together to support students in thinking critically about issues facing society and defining their role within the context of public service and civic responsibility.

Jessica K. A. Word is an assistant professor of public administration at the University of Nevada, Las Vegas (UNLV). She graduated from the Askew School of Public Administration and Policy with her PhD in 2006. She currently serves as the director of the Graduate Certificate in Nonprofit Management at UNLV and as the director of UNLV's Office of Nonprofit Excellence (UNLV ONE). Her research interests include public and nonprofit management, nonprofit organizations, program evaluation, and organizational behavior.

PART I

The Nonprofit and Philanthropic Sector

1

LEGAL DEFINITIONS, LEGAL ACCOUNTABILITY, AND THE ROLES AND RESPONSIBILITIES OF BOARD LEADERSHIP

MICHELE T. COLE and LOUIS B. SWARTZ

Robert Morris University

According to the National Center for Charitable Statistics, which is the national clearinghouse for data on nonprofit organizations in the United States, there were more than 1.5 million nonprofit organizations registered with the Internal Revenue Service (IRS) in 2008. In the decade between 1998 and 2008, the number of nonprofits increased by 32.7% reflecting the continuing expansion of the nonprofit and philanthropic sector. Worldwide, there are many more nongovernmental or voluntary sector organizations providing essential services to people and governments. Nonprofits as well as nongovernmental organizations are legally constituted entities that operate independently from the government. Under U.S. law, nongovernmental organizations are classified as nonprofit organizations. Their missions vary widely. The American Bar Association, a membership organization setting standards for the legal profession, is a nonprofit organization, as is the John R. and Zelda Z. Grubb Charitable Foundation, a private operating foundation in Iowa. Nonprofit organizations come in all shapes and sizes, from the Red Cross and the Salvation Army to local homeless shelters and food banks.

These varied organizations make up the nonprofit sector, also referred to as the philanthropic sector, the independent sector, or the third sector. Most but not all nonprofits are tax exempt. An organization may be operating not-for-profit without applying for tax-exempt status. Tax-exempt status is recognized on the federal level by the IRS based on the organization's compliance with the requirements set forth in the statute. More than 50 categories of tax-exempt organizations are listed under section 501 of the Internal Revenue Code. These include title-holding companies, cemeteries, labor unions, social clubs, social welfare organizations, churches, educational institutions, and charities, among others. Those tax-exempt organizations that are charitable organizations are enumerated in section 501(c)(3). Foundations are 501(c)(3) organizations.

To understand where nonprofit organizations fit in the world of organizations, it may be helpful to envision a series of concentric circles, the largest of which is all organizations in U.S. society. Nonprofits are a subset of all organizations. Tax-exempt organizations are a subset of nonprofit organizations. Charitable organizations are a subset of tax-exempt organizations. Foundations are a subset of charitable organizations.

Nonprofit organizations are organized, governed, and taxed differently than government agencies and for-profit corporations based on distinctions made in the law with regard to purpose and function. Nonprofit organizations are private-sector entities organized to deliver public goods. Although they may provide the same types of services, nonprofit sector organizations are distinguishable from public-sector entities (i.e., governmental) in that they cannot tax or legislate. Nonprofit organizations differ from for-profit entities in the private sector in that the nonprofit organization's "bottom line" is mission fulfillment, as opposed to profit making. Charitable nonprofits do not have stockholders as do for-profits, and they are bound by the nondistribution constraint. That is, for-profits generally distribute their profits to their owners, the stockholders. Nonprofit corporations must reinvest their excess revenue or profit in services and programs. The reasoning here is that if the organization is to serve the public, it should not be able to benefit private individuals. This argument resurfaces in the context of excess compensation (private inurement). Bruce Hopkins (2003), an early and oft-quoted expert in nonprofit law, considers the doctrine of private inurement to be the substantive defining characteristic distinguishing nonprofit from for-profit corporations.

Nonprofit organizations that meet the legal requirements for tax exemption as *charities* are exempt from federal tax on organizational income. The rationale for tax exemption is that charitable organizations perform a public service that the government would otherwise be obligated to provide, such as education, health care, or emergency services. Tax exemption on the federal level often leads to exemption from state (and sometimes local) taxes, such as income, sales, use, personal property, and real estate taxes. Churches do not need to apply for tax exemption to be exempt. In addition, the federal government provides special tax treatment to taxpayers for donations to charitable nonprofits.

Most nonprofit organizations that apply for tax-exempt status choose to incorporate to protect themselves and their governing boards from liability. It is important to remember that incorporation is a state-regulated process. Tax exemption is a federally regulated process. They are not the same. Incorporated nonprofits generally fall into two broad categories, membership and nonmembership corporations. The American Bar Association is a membership organization. Civil legal services programs for the poor are not membership organizations. Most incorporated nonprofits are nonmembership corporations.

Nonprofit organizations are both alike and different from for-profit corporations and public agencies. Legally however, nonprofit organizations are private-sector entities and are treated as such in the law, with the exception of religious nonprofits. The Establishment and Free Exercise clauses of the First Amendment give religious organizations more latitude in how they operate, to whom they are accountable, and how they govern themselves than they give to other nonprofits.

In this chapter, we will focus on legal definitions of particular relevance to the nonprofit leader, legal accountability as it is developing in the nonprofit sector, and the roles and responsibilities of board members of nonprofit organizations.

Legal Definitions

A legal definition is one that explains or sets forth a concept, a word, or a reference that derives its meaning from a law. The law could be part of a statute as defined by a legislative body; it may be defined in a case by a court; or it may be set forth in a regulation by an administrative body. Legal definitions might also be found in Executive Orders issued from the Executive Branch. Legal definitions that are most relevant, if not unique, to nonprofit organizations can be grouped by the core differences between the nonprofit, the for-profit, and the public sectors. Purpose and function help to define the differences between the three sectors. The purpose of a nonprofit is to fulfill its mission; the purpose of a business is to return profit to its shareholders; the purpose of a government agency is to serve the public. Organizations in each of the three sectors function according to laws and regulations, some of which are specific to the sector. Helping to distinguish the nonprofit sector from the for-profit and public sectors are the laws governing tax exemption, charitable donations, religious expression, distribution of profits, governance, and, to some degree, accountability.

Tax Exemption

Under federal tax law, *institutions* such as churches, universities, colleges, schools, and hospitals are exempt from taxation without having to demonstrate a charitable purpose. It is clear that education and health care are public goods. Churches are vehicles for religious expression. Other nonprofit entities must seek a determination from the IRS that the organization's purpose deserves an exemption from federal income tax. Nonprofit organizations whose purpose is determined to be charitable under section 501(c)(3) are both tax exempt and eligible to solicit donations that are tax deductible for the donor when filing his or her federal income tax return. Although a nonprofit organization's income may be exempt from taxation, the income still must be reported. IRS Form 990 is the required report. Originally a financial report on the operations of the tax-exempt entity, the report now serves as a profile of the operations, management, and governance of the nonprofit organization.

Tax exemption provides considerable advantages to a nonprofit organization. It allows the tax-exempt nonprofit to use funds that would have been paid to the government to further its public mission. Loss of the organization's tax exemption can mean the end of the organization. Organizations can lose their tax-exempt status or find themselves subject to *intermediate sanctions* in the form of significant tax penalties if they run afoul of the restrictions on private inurement, conduct substantial lobbying, engage in prohibited political activity, or fail to report unrelated business income, among other activities. Owners of for-profit entities hope to gain, that is, receive a portion of the business's profit. Nonprofit, tax-exempt organizations and, most particularly, charitable organizations cannot operate for the gain of a private person. This is the doctrine of *private inurement.* Violating it can cause the organization to lose its tax-exempt status.

Nonprofit organizations are allowed to *lobby*, that is, attempt to influence a legislative process or executive branch or regulatory agencies' decisions within certain parameters. Unfortunately, the guidelines for an acceptable amount of lobbying are very unclear. Nonprofit organizations that expect to do any substantial lobbying on behalf of their missions are advised to seek legal counsel first. Nonprofit organizations may advocate and, in many cases, are encouraged to do so to further their missions. *Advocacy* is a broader concept than lobbying, which is allowable in the form of education, litigation, and certain program activity. Advocacy also includes political activity. Tax-exempt organizations are prohibited from *partisan political activity*. Some churches have come under fire for advocating from the pulpit on behalf of certain candidates for office.

A number of nonprofit organizations operate business ventures. The income from business ventures related to the mission of the organization, such as museum shops, is not taxable. However, income from an unrelated business venture, such as health clubs attached to YMCAs, is taxable as unrelated business income tax (UBIT). Successful business ventures by nonprofit organizations may also result in challenges to the organization's local property tax exemption. Some nonprofits with or without business ventures have agreed to make payments in lieu of taxes to municipalities in recognition of the services provided to them, such as fire, water, and waste removal.

Charitable Donations

Contributions to nonprofit organizations may be tax deductible under federal law when certain conditions are met. If the nonprofit organization has been determined to be *charitable*, meaning that it has met at least one of the required charitable objectives in the Internal Revenue Code, individuals, foundations, or corporations making donations of tangible or intangible property may deduct those contributions from the taxes they owe.

Under state law, charitable organizations that receive more than a specified amount in contributions must register with the state. Donations may be restricted by the donor for particular purposes, in which case, the nonprofit must account for the gift as a restricted one and must also use the gift as stipulated by the donor. In-kind contributions must be valued by the donor based on market value and recorded in that way by the nonprofit organization. Gifts may be tangible or intangible. In either case, it is the responsibility of the organization to perform due diligence before accepting the donation. Donations that do not further the organization's mission but which are given to allow the donor to take a tax deduction should be declined.

Religious Expression

Religious nonprofit organizations do not need to apply for tax exemption, nor do they need to incorporate to enjoy the same tax privileges as other nonprofit organizations, although many do seek formal recognition under state and federal statutes. However, religious organizations are subject to IRS regulations governing tax exemption and may lose that tax exemption if they operate outside of those regulations. Religious organizations also must pay taxes on income from unrelated business activities.

Religious organizations are protected under the *Establishment and Free Exercise* clauses of the First Amendment, which prohibit the government from creating a church, favoring a particular religion, or interfering in people's religious practices or forms of worship.

Distribution of Profits

Unlike the private-for-profit sector, nonprofit organizations may not distribute the profit from their operations to a private person. Under the *nondistribution constraint,* profits must be returned to the nonprofit entity for its programs and services. Under the doctrine of *private inurement***,** the nonprofit may not transfer profits through the organization to its owners. This doctrine, particularly in the section 501(c)(3) context, may cause a tax-exempt organization to lose or to be denied tax-exempt status. This is because the IRS has determined that the organization is being operated for the private gain of a person.

Governance

Governance is the umbrella term for the ultimate accountability, authority, and responsibility for an organization. Nonprofit organizations are governed by a *board of directors* or, in the case of a trust or other charitable entity, by a *board of trustees.* The number and constitution of directors is determined by the incorporating state's law. However, additional directors, board committees, notice requirements for meetings, and the organizational requirements are set in the *bylaws.* With the passage of Sarbanes-Oxley in 2002, governance issues have taken the forefront in the discussion of the role and responsibility of nonprofit organizations in American society. Directors and trustees of nonprofit organizations are fiduciaries of the nonprofit, that is, they are bound to look after the affairs of the organization using the same standards of care and prudence as they would with regard to their own affairs. This is the business judgment rule.

Accountability

Because of their tax-exempt status and their ability to solicit tax-deductible funding from the taxpayer, all nonprofits need to be ready and able to explain themselves to the public. In Jeavons's (2005) view, accountability is part of the social contract that tax-exempt organizations have with society. Nonprofit organizations that serve critical public functions and that enjoy public subsidies (tax exemption and deductions) create fiduciary obligations to the stakeholders (Rhode & Packel, 2009). Nonprofit organizations have always been accountable to their stakeholders, those who have an interest or a stake in the mission of the organization. However, in many cases, it would be difficult for a member of the public to determine how accountable the nonprofit truly is.

The 2008 changes to the 990 form (the income reporting form that nonprofit organizations file annually with the IRS) have made the organization's transactions more transparent. The public is entitled to request a nonprofit's 990. The additional scrutiny has resulted from the public's reaction to the Public Company Accounting Reform and Investor Protection Act of 2002 (Sarbanes-Oxley, P.L. 107–204), enacted to correct inadequacies in the law that allowed numerous incidents of corporate fraud. The act regulates publicly traded entities. Two provisions of Title XI, corporate fraud and accountability, apply to nonprofit organizations.

Legal Accountability

Nonprofit organizations have multiple and diverse stakeholders. Unlike stockholders of a for-profit company, stakeholders of a nonprofit organization have no financial ownership of the organization. However, that does not mean that the organization is not accountable to those stakeholders. This creates a certain ambiguity, which makes understanding accountability in the nonprofit sector more difficult than understanding what accountability means in the public sector or the private-for-profit sector. Leaders in the public sector are accountable, responsible to the taxpayer. Leaders in the business sector are accountable, responsible to their stockholders. To whom are leaders in the nonprofit sector accountable or responsible? The stakeholders in a nonprofit organization include funders, donors, clients, staff, board members, and the public. How do you measure accountability in a nonprofit organization when the expectations of the different stakeholders vary based on their relationship to the organization? For-profit entities are accountable to their stockholders for a profit. Government entities are accountable to the taxpayer for services. The nonprofit is accountable to donors for funds well spent; to funders for performance stipulated in their grants and contracts; to the public for doing good; to clients for quality services; and to staff for a safe work environment and fair wages. Full disclosure to board members is required. Furthermore, all nonprofit organizations have an ethical obligation to be accountable to their donors, to their supporters, and to their members (Jeavons, 2005).

Accountability can be defined as an obligation or willingness to accept responsibility or to account for one's actions. How does a nonprofit leader take a broad definition such as that and implement measures to ensure accountability? Several people have written about accountability and how to evaluate or measure it in nonprofit organizations. Kevin Kearns is well regarded for his work in designing a framework for looking at accountability in the nonprofit sector. In a 1994 article, he suggested that accountability needed to be viewed from two dimensions: performance standards codified in law (statutory, regulatory, or contractual) and performance standards specific to the organization. The first is legal accountability; the second is more amorphous because it is defined by internal organizational choices and issues. In this chapter, the focus is on the first, legal accountability.

Legal accountability is a broad term for responsibility of a person or persons set forth in either statutory or case law. In the nonprofit sector, leaders are responsible to their stakeholders for their actions and those of their organizations. The stakeholders of a nonprofit organization include its clients, customers, patients, or consumers; its funders; its staff and volunteers; its regulators; its partners; its vendors; and members of the public. In addition, nonprofits have a unique obligation to the public to be accountable for what they do to justify their tax exemption. The seminal case on legal accountability is *Stern v. Lucy Webb Hayes National Training School*, 381 F. Supp. 1003 (D. D.C. 1974), also referred to as the Sibley case. What is significant about the case is not the decision itself (defendants/hospital trustees were found not guilty of the alleged self-interested decision making), but the court's definition of the duties a trustee must adhere to in order to avoid liability. These are the duty of care, the duty of loyalty, and the duty of obedience.

Nonprofits are exempt from federal taxes because they provide services benefiting the public that otherwise the government would need to provide. Exemption from state and local taxes follows from the rationale for federal tax exemption. Challenges to tax exemption are generally limited to charitable organizations engaged in commercial activities. As municipal governments face rising costs and shrinking revenues, however, more attention may be paid to the number of 501(c)(3) organizations that own property but do not pay property taxes. In recent years, several of the larger nonprofits, such as universities and hospitals, have voluntarily made payments in lieu of taxes for their usage of municipal services.

There is concern about accountability in all sectors, and it is not limited to entities in the United States. Nonprofit practitioners, private and government funding sources, individual donors, clients, and the general public have been involved in conversations about accountability in the nonprofit sector sparked in part by the passage of the Sarbanes-Oxley Act of 2002 in the wake of the Enron, Tyco International, and WorldCom fiascos.

Sarbanes-Oxley set new and stronger accounting and reporting standards for corporate (publicly traded) boards, management, and the public accounting firms that work for them. Although only two sections of the act apply to nonprofits (relating to whistle-blower protection and document destruction), Sarbanes-Oxley is now on the radar of most leaders in the nonprofit sector and is under discussion in many nonprofit forums.

Asked by the Senate Committee on Finance to develop recommendations for nonprofit organizations, the Independent Sector formed the Panel on the Nonprofit Sector in October 2004. The panel prepared a series of recommendations for Congress to improve the oversight and governance of charitable organizations and to ensure high standards of ethics and accountability for individual nonprofit organizations. The panel issued a report to Congress and the nonprofit sector, *Strengthening Transparency, Governance, and Accountability of Charitable Organizations*, in June 2005 and followed up with a supplemental report by the same name in April 2006. In October 2007, the panel released *Principles for Good Governance and Ethical Practice: A Guide for Charities and Foundations*. Both are available on the Independent Sector website (http://www.independentsector.org/).

In 2005, the American Bar Association published a *Guide to Nonprofit Corporate Governance in the Wake of Sarbanes Oxley,* which outlined the general principles and intent of the major reforms set forth in the act and discussed their applicability to governance in nonprofit organizations. The guide lists 10 general principles from Sarbanes-Oxley for consideration in the governance of nonprofit organizations. The first five relate directly to the responsibility and role of the board:

1. The governing board should ensure that its oversight will ensure effective and ethical management.
2. The board should ensure that independent judgment is exercised at the committee and full board level.
3. There should be an audit committee to ensure an independent external audit, to ensure that internal controls are in place, to review the organization's accounting policies, and to monitor the financial reports.
4. Board committees should be established and used to focus on core governance and board composition.
5. There should be a compensation committee to determine and review the performance and compensation of the executive director.

The guide reinforces the two sections of the statute that apply to nonprofits: policies to allow for disclosure of wrongdoing and protection for whistle-blowers and policies on document retention and destruction.

In addition to the other accountability measures, the American Bar Association recommends fair and full disclosure of the organization's financial position and operations; the implementation of an ethics and business conduct code; and finally, fair, performance-tied compensation.

Some argue that reforms imposed on the nonprofit sector as a result of the scandals in the nonprofit world, such as the reported embezzlement of funds at Acorn and Points of Light, and the impact of Sarbanes-Oxley will result in increasing donor confidence at a minimal cost to the organization (Mead, 2008). The three reforms of most importance are requiring nonprofit officers, not just the auditors, to certify financial statements; requiring audits of all nonprofit organizations' financial statements, not just those of larger nonprofit organizations; and putting independent audit committees on nonprofit boards.

Legal accountability and board governance are inseparable concepts. While each is distinct, neither concept exists without the other. That having been said, a leader is accountable when that leader acknowledges responsibility for the nonprofit organization's actions, policies, decisions, and their consequences. Governing board members of a nonprofit organization assume a responsibility that encompasses oversight of management and policy making. Ultimately, the responsibility for accountability rests with the nonprofit organization's board of directors, acting as one.

Roles and Responsibilities of Boards of Directors

The roles and responsibilities of nonprofit boards of directors traditionally have been within the purview of the state in which the nonprofit has been incorporated and are set forth in the state's incorporation statutes. These state-defined roles and responsibilities are reflected in the corporation's bylaws. Additional requirements for boards of nonprofit organizations are found in federal income tax law. Each state's attorney general has the responsibility for monitoring nonprofit corporations operating within the state. The IRS has that responsibility on the national level. While some courts have held that the director of a nonprofit corporation should be held to a higher standard of care based on the rationale that directors function as trustees, most have looked to the business judgment rule as the standard in both the for-profit and nonprofit cases.

Broadly speaking, the standard to which board members of nonprofit organizations are held is one that requires the person to act in good faith in the performance of board duties, with the care that would be exercised by a prudent person in a similar situation, in a way that the person reasonably believes to be in the best interest of the nonprofit.

Board members of nonprofit organizations are fiduciaries of the organization who owe a duty of care, a duty of loyalty, and a duty of obedience to the organization they serve. The duty of care means that the board member must be reasonably informed about the activities of the organization and participate in decisions affecting the organization. This means attending board meetings and reading board meeting minutes, committee reports, and financial statements. The duty of care also requires that the board member be informed before voting, use independent judgment, and be aware of compliance issues. The duty of loyalty requires the board member to put the organization's interests above his or her own professional and personal interests. This means disclosing potential as well as actual conflicts of interest, not using corporate opportunities for the member's individual gain, and not disclosing the organization's confidential information. The duty of obedience requires compliance with applicable federal, state, and local statutes relating to the organization, adherence to the organization's bylaws and articles of incorporation, and commitment to the organization's mission. Board members who fulfill these duties are protected from liability, should the nonprofit be sued (Hopkins, 2005a).

Boards of directors are responsible for defining and overseeing the implementation of the organization's mission, for hiring and firing the executive director, and for sustaining the organization. Board members are responsible for policy setting and oversight. Another way to look at board responsibilities is to consider seven elements in managing an organization: personnel, in this case, the executive director; finance, budget approval and review of expenditures; fundraising, approval of the organization's development activities, and participation in fundraising events and campaigns; planning, participating in the development of the organization's plan, and overseeing its execution; board development, ensuring the vitality of the board itself by reviewing its composition and recruiting new members; public relations, advocating for the organization; and advising, lending expertise and experience as appropriate to the organization. Others have characterized the roles and responsibilities of a board member as: setting the direction of the organization (mission, planning, and policy setting), steering it toward mission fulfillment ethically (protecting assets and ensuring adequate resources), and leading (ensuring accountability and legality, oversight of performance, treatment of personnel and financial dealings) (Anheir, 2005).

The board of a nonprofit corporation executes its responsibilities typically through committees. The executive committee is composed of the officers of the board, president or chair, treasurer, and secretary. In some cases, committee chairs form part of the executive committee. Generally, the executive director or CEO of the nonprofit attends all executive committee meetings, whether or not the executive director or CEO is a voting member of the board. The most common standing committees are the executive, nominating, finance, and development committees. The executive committee sets the board agenda and acts as a gatekeeper. The executive committee may be empowered to act on behalf of the board in certain circumstances as set forth in the bylaws. The nominating committee vets board candidates, evaluates board member performance, and prepares the slate of officers for the corporation. Its role is to maintain and further board membership. The finance committee is responsible for clearly and accurately reporting the organization's financial position to the board. It is important to have directors who are knowledgeable about nonprofit financial practices and the applicable law governing nonprofit accounting on this committee. The development committee raises funds, expands the NPO's network of supporters, and assists in capacity building within the organization. The audit committee is an ad hoc committee made up of directors who are not on the finance committee; it includes the treasurer. Its purpose is to select an auditor, to review the auditor's findings, and to make a recommendation to the board whether to accept the audited financial statements.

Which committees should be established depend in part on the stage of development in which the nonprofit organization finds itself. Organizations may be thought of as living organisms evolving from the founder's organization (board members perform the day-to-day operations) to a mature organization in which the board is a policy-making group with limited involvement in day-to day operations. In between the two are different degrees of organizational sophistication and structure. As the organization grows, the need for management and administrative staff often grows, and it may also find it needs infrastructure supports for technology. As the organization changes, its board of directors' roles change as well. For example, program committees that were charged with developing service components are replaced with public relations committees whose task it is to refine and deliver the organization's message. Capital campaigns generally require campaign committees and community advisory boards that reach beyond the scope of the board's development committee. Building purchases result in property committees, endowments in endowment committees. With these committees come additional policies and procedures that guide board decisions.

How well a board functions depends on more than its operating structure; it also depends on the relationship of the executive director or CEO to the board, particularly, to the board chair. Peter Drucker (1990), among others, held that effective leadership in organizations requires a strong working partnership between the board and the executive. The board chair or president manages the board. He or she is responsible for making the board function as a whole in support of the organization's mission.

As part of its fiduciary duty, the board is responsible for hiring, evaluating, and when necessary replacing the CEO of the organization. There is some question about whether the CEO, or as is more common in human services agencies, the executive director, should be a voting member of the board. In most nonprofit organizations, board members are not compensated for their time. By law, directors can have no financial interest in the organization. Taking money out of the equation helps to ensure putting mission at the forefront of decision making. While a CEO or executive director would not be paid for board activity, it would be difficult to imagine that the staff leader could put aside self-interest in board decision making.

Management (what the CEO and the senior staff do) and governance (what the board does) are different responsibilities in the nonprofit organization. Keeping these functions separate is important both to the operation and to the accountability of the nonprofit organization.

The Carver Model

In his model of board governance, John Carver (1990) created an integrated board leadership paradigm that is intended to enable the board to focus on the large issues, to delegate clearly and appropriately, to control the management function without unwarranted intrusion, to evaluate the organization's performance, and, in essence, to lead the organization. The belief is that employing the Carver model, The Policy Governance® Model, will lead to greater accountability. The 10 principles on which the Policy Governance Model is built (Carver & Carver, 1996a) can be summarized as: trust in the board by the stakeholders of the organization; unity of the board behind decisions; policy making as the board's focus; policy based on broad, shared values; definition and delegation; a focus on the desired ends; boundary setting as the way to hold staff accountable; board job design; a balanced relationship between board and CEO; CEO evaluation based on policy criteria. Carver is credited with advocating for a small board, generally seven members, to facilitate the policy-making process. Nonprofit organizations that rely on stakeholder-representative boards may find that number too small to accommodate their charters. Others argue that boards need to be small enough to enable discussion and timely decision making and at the same time large enough to perform the various functions of a board.

The New Work of the Nonprofit Board

Another model of nonprofit governance that has been cited frequently was described in a 1996 article in *Harvard Business Review* (Taylor, Chait, & Holland, 1996). This model has four basic characteristics. It focuses board energies on "do or die" issues. It is results driven and tied to a timetable. Everyone understands the measures of success, which engage those inside and outside the organization in fulfilling the mission. In this model, the board members are engaged and energized rather than consumed with minutiae. To implement the model, board and staff work together to identify the issues that are important to the organization and set the agenda for action. This is the new work of the board.

Making the Most of Board Meetings

One of the greatest aids to ensuring that the board focuses on large issues and is able to make policy decisions in a thoughtful manner is a controlled board meeting. Tropman (1996) suggests seven imperatives to make board meetings work: the orchestra principle (preparing, setting the pace, and allowing interaction); the three-characters principle (announce things, discuss things, decide things); the role principle (change how the board members interact by changing the meeting master's role); accepting no new business; having no more reports; following the imperative of productivity; and making high-quality decisions. To make these imperatives or others chosen by the organization work, many nonprofits rely on *Robert's Rules of Order,* which identifies process and procedures for most board actions.

In recent years, the consent agenda has gained popularity with nonprofit boards. The consent agenda allows the board members to vote to accept a number of routine board items, which have been sent out with the minutes prior to the actual board meeting with one group vote. If a board member wants to discuss any of the items on the consent agenda, it is removed and placed on the agenda as a separate item. A consent agenda is not intended to mask the organization's activities or to force a decision on an issue that needs to be discussed. Its purpose is to facilitate board meetings by minimizing time spent on routine issues.

Minimizing Risk

Absent criminal wrongdoing and egregious disregard for the duties and responsibilities of a trustee, board members are protected by the nonprofit corporations' directors and officers' liability insurance, professional liability (malpractice) insurance where the director performs services for the nonprofit, indemnification language in the organization's bylaws, and, in some states, state statute. Most homeowners' policies permit riders to provide addition coverage for a policyholder serving in the capacity of a trustee. The organization itself should have adequate coverage for its operations, such as general liability, errors and omission, automobile, and malpractice insurance. If it does not, the injured party may seek damages from a director or directors.

To further reduce risk, a prospective board member should know if the organization is incorporated and what its federal tax status is. He or she should read the bylaws and understand how the day-to-day program activities comport with the mission and governing documents of the organization. He or she should know what the composition of the board is and what time and talent requirements are made of board members. He or she should know if there is a conflict of interest policy and if it is implemented. Most important, the prospective board member should determine if the nonprofit organization is in compliance with all applicable laws and whether the organization is financially sound.

The kinds of corporate misdeeds that led to Sarbanes-Oxley have been echoed in the nonprofit sector; instances include the questionable direction of disaster donations by the Red Cross, excess compensation issues in United Way chapters, and the collapse of Allegheny Health Education and Research Foundation (AHERF). Each of these is an example of a failure of board oversight and a failure to comprehend the nature of accountability necessary in a nonprofit organization. Volunteer board members face an ever increasing burden of issues, shifting demographic patterns that impact service delivery, personnel issues that surface with changes in technology, and conflicts of interest made more critical with the tightening constraints on resources, to name three.

Litigation affecting nonprofits thus far has been relatively limited, in part due to the nature of the services provided, to the limited liability afforded by statute, and to the lack of "deep pockets." However, cases are being brought against organizations and, in some instances, against board members as individuals. Although the scandals involving excess compensation (private inurement) of top executives and misuse of corporate funds receive generous press coverage, most of the litigation to date has been in the area of employee suits for sexual harassment, wrongful discharge, and contract and pension violations. Some nonprofits are declaring bankruptcy (for example, Los Angeles–based Glass Youth and Family Services); others are simply going out of business, such as Mondavi's Copia (Strom, 2009). Each time a scandal breaks, public confidence in the sector decreases. Each time a nonprofit is forced to dissolve, a community is diminished.

Future Directions

Nonprofits are facing particularly difficult times in a recession: Donors are less able to contribute; government funding streams are lessening; clients, customers, and patients are less able to pay for services; and endowment values are shrinking. Scandals in the sector have left donors mistrustful of the very organizations that need their support the most. Each of these affects the nonprofit's ability to carry out its mission, deliver services, and maintain programs. For the indefinite future, new strategies will be needed, innovative approaches to management found, and effective leadership demonstrated. More than ever, it matters how nonprofits choose their boards of directors. Issues of accountability will only grow in importance as increased scrutiny and oversight are directed to the nonprofit sector.

Governance has been defined as an umbrella term for the ultimate authority, accountability, and responsibility for the nonprofit. Governance, Ott (2001b) says, is the result of the organization's purpose, its people and resources, its clients and community networks, and its contracts.

Hopkins (2005a) points to an emerging trend with the incorporation of nonprofit governance principles in federal tax law, as evidenced in the changes to the IRS Form 990. He suggests that emerging corporate governance principles will require that boards of directors truly become the managers of their charitable organizations. Boards of directors will need to be more involved and knowledgeable about the nonprofit's finances and programs, to be aware of conflicts of interest, and to put the nonprofit's objectives above personal interest; in essence, the board must be prepared to govern.

Resisting the argument to make statutory what is now advisory, Brody (2007) suggests that required board training, the adoption of best practices, policies and procedures that facilitate removal of fiduciaries when necessary, and the dissolution of nonfunctioning charities and the transfer of their assets to functioning charities would be the better direction to take in response to the calls for reform than the imposition of sector-wide restrictions.

If membership on a nonprofit board was ever primarily a resume builder, it is far more now. Finally, it is leadership, on the board and from the executive, that makes governance effective and the organization accountable.

Types of Foundations and Their Leadership Characteristics

Robert S. Collier

Council of Michigan Foundations

The purpose of this chapter is to introduce private charitable foundations and public charitable foundations and discuss their leadership characteristics. Although foundations have been around for more than a century, the decade of the 1990s caused an explosion in the growth of private and public foundations. The Internal Revenue Service (IRS) reports that there are now more than 85,000 of these organized philanthropic organizations in the United States, an increase from about 37,000 in 1990.

However, it is important to note that, according to Giving USA, the total contributions of all of these foundations is less than 15% of the total charitable giving in the United States. Individual giving is still the primary engine that drives the religious and nonprofit sectors.

Four primary sources are used for this introduction to foundations:

1. The IRS, www.irs.gov/charities/charitable
2. Foundation Center in New York, www.founationcenter.org
3. The Council on Foundations in Washington, www.cof.org
4. The Council of Michigan Foundations, www.michigan foundations.org

The Private Foundation

The word *foundation* is not trademarked; when we think of private foundations, we are considering a nonprofit corporation or charitable trust that has been organized under state and federal law to serve charitable purposes and created by one donor. The donor is usually an individual, a family, or a corporation. While many foundations at one time were formed as charitable trusts with the approval of a court, the common structure for foundations today is the nonprofit corporation.

States can allow for creation of a nonprofit corporation, but the IRS provides the tax-exempt status. To receive a tax-exempt 501(c)(3) nonprofit status from the IRS, the foundation must file a Form 1023 application and declare that the principal purpose is making grants to unrelated organizations, institutions, or individuals for scientific, educational, cultural, religious, or other charitable purposes.

Many private foundations include this language in their articles of incorporation and their bylaws—two of the fundamental required organizing documents for nonprofit organizations. But while this general language is used, it is complemented often by the donor's priorities. These priorities may include: geographic focus, such as the community in which the donors made their wealth; an issue, such as a specific illness; a target population, such as youth or seniors; and named public charities that have a 501(c)(3) status, such as the local YMCA or Boys and Girls Clubs.

However, there are a number of restrictions on private foundations in the federal tax code that may impact a donor's decision to choose this philanthropic structure. The first restriction is on self-dealing between the private foundation and the donor and other family members—referred to as disqualified persons in the tax code. The issue of self-dealing has been a major concern to Congress and the IRS as a result of several highly publicized cases of bad performance by foundations in the 1990s. As a result, the IRS has added new criteria for the submission of

Form 1023—inclusion of a board-approved conflict of interest statement. An example of self-dealing is when the donor rents office space to the foundation at a below market rate. Even though it is a reduced rental rate, the IRS would still consider this to be self-dealing because the donor is receiving income from the foundation.

The second restriction on private foundations is the required minimum 5% payout. This means that a private foundation must make a charitable distribution each year equivalent to 5% of its assets. This payout was introduced by Congress as a result of hearings in the 1960s looking at private foundations that were not making any charitable distributions while the donor had still received substantial tax benefits from the government. Nonprofit organizations, such as the National Committee for Responsive Philanthropy, have tried over the years to encourage and mandate a higher payout. Research commissioned by the Council of Michigan Foundations and conducted by Cambridge Research Associates in 2000 and again in 2004 has confirmed that the 5% payout requirement is the best rate that will not impact the foundation's ability to maintain the value of its endowment in perpetuity.

A third restriction on private foundations is the excise tax. Private foundations are the only charity that is taxed by the federal government. The 1984 Tax Act allows the excise tax on investment income to be reduced from 2% to 1% if a foundation's payout for the year in question equals or exceeds an amount equal to the year's assets times the average payout percentage for the 5 years, plus 1% of the foundation's net investment income.

The private foundation community agreed to this tax at the time as a way to support regulation and review of the growing nonprofit sector by the IRS. It is estimated to produce about $500 million annually for the federal government, however, the proceeds have not been targeted for the intended purpose of regulatory oversight. Originally designed to provide an incentive for more foundation giving, the tax has resulted in just the opposite over the years. Small private foundations often just pay the higher tax of 2% without trying to calculate the formula. Others hire their accountants to calculate the tax, and others reduce their grants so they will not have to pay the higher tax.

In 2010, there was bipartisan support for legislation in both the House and Senate to simplify this tax to a flat revenue-neutral number, a proposal that is still under discussion. Research conducted by Cambridge Associates for the Council of Michigan Foundations has determined that a flat tax of 1.32% would result in no loss of revenue to the federal treasury but would also make the tax much easier for private foundations to manage.

Before leaving this brief summary of the special restrictions that the federal tax code contains on private foundations, it is important to note that federal law also limits the holdings that private foundations can have in private businesses and contains provisions that investments must not jeopardize the ability of the foundation to carry out its charitable tax-exempt purpose. Private foundations complete an annual report to the IRS—the Form 990-PF—that provides the data required by the government to ensure that the foundation is in compliance with the charitable tax-exempt provisions of the federal tax code. The Form 990 that all public charities complete was recently updated by the IRS to require more information about the operations of public charities. Similar changes are expected to be made to the Form 990-PF.

Family Foundations

Family foundations make up about 50% of all private foundations in the United States. While *family foundation* is not a legal term, the Council on Foundations, the national trade association for organized philanthropy, defines a family foundation as one that has been created by a single family as donor. At least one family member must serve on the board of trustees or as an officer of the corporation during the lifetime of the foundation. Most family foundations are run by family members—the donor and spouse or children of the donor—who serve as volunteer trustees without compensation.

The Council on Foundations, through a peer process, has developed Stewardship Principles for Family Foundations, which are summarized here as part of this introduction to private foundations. These nine principles provide a useful framework about the leadership characteristics of family foundations and are designed to cover the themes of governance, accountability, and family legacy.

Governance is essential to leadership, and the *first principle* is that the foundation must have a governing board that establishes the foundation's mission, guides its operations, oversees its effectiveness, and ensures its ethical conduct. Although a family foundation is established to support the family's charitable interests, it is important to have a written mission statement with grantmaking guidelines to reduce confusion on the part of other family members as well as other stakeholders, as noted below. Effective governance is recognized as a fundamental building block for good nonprofit management, and foundations are expected to model effective practice for their peers and their grantees.

The *second principle* is that authority is vested in the governing board as a whole, and each member is equipped to advance the foundation's mission. The bylaws of the foundation are the most important tool for governance, and because they have been submitted with Form 1023 to the IRS for tax-exempt status, they are a public document. Therefore, the bylaws need to include provisions for inclusion of nonfamily members, term limits, and succession. It is not unusual for family foundations to include trustees' advisers, experts on an issue, or family friends on the family foundation board. Bylaws commonly allow for conducting business electronically, and this helps when family members live in different parts of the country; it is important, however, that the family board have at least one face-to-face meeting each year. Family foundation meetings are often built into the schedule of annual holiday gatherings.

The *third principle* is to consider multiple strategies to help advance the foundation's mission. Before exploring multiple strategies, it is important to consider the foundation's mission. It is a common belief that families create a foundation to avoid taxes. While that is one consideration, research conducted by the Foundation Center, The Center on Philanthropy at Indiana University, and others has indicated that the three primary reasons donors give for creating a family foundation are: to give back to my community, to impact an issue I care about, and to enable my children and grandchildren to continue the privilege of giving. As a result, the missions of most family foundations are defined by the following characteristics: They have a specific geographic focus; they help others affected by tragedies the family has endured; or they serve institutions such as colleges, universities, and art organizations that have provided value to the donor over the years.

A defining characteristic of private foundations is that they have been created to make grants for charitable purposes. Many family foundations do not accept grant applications because the donor has designated the specific charities to benefit. However, many family foundations are recognizing that their charitable grantmaking can be complemented by other strategies. Although not new, these five examples of strategies that complement grantmaking have been growing in use in the first decade of the new century:

1. Collaborating with other family foundations on a common issue, such as early childhood programs and issues
2. Providing technical assistance to grantees through consultants and other resources that focus on the governance, finance, administration, and fundraising of the organization
3. Convening the community to explore an issue or bringing together grantees to share lessons learned in tackling a common issue
4. Supporting public policy educational efforts through research, data gathering, and other efforts to help policymakers at all levels of government better understand the impact of the charitable nonprofit sector
5. Making program related investments to leverage other investments by the public and for profit sectors in projects with a charitable purpose

The *fourth principle* is that the foundation board shall exercise fiscal oversight—that trustees shall know and practice their fiduciary duties. There have been examples of a donor indicating that the foundation should continue to be invested in primarily one company stock, with the foundation's charitable goals often curtailed by the performance of that company. As a result, board leadership is vital in approving an investment policy that will include an asset allocation strategy and provisions for the annual charitable payout.

Expenses of the foundation need to be reasonable and in proportion to the amount spent on grants and other charitable strategies. Although many small family foundations operate as purely volunteer efforts, it is important to note that board members may be reasonably compensated for functions that a staff would normally do. The foundation board should adopt an annual budget that includes its administrative expenses as well as charitable activities. And as part of its annual fiscal oversight, it is important to have an outside financial review, with an independent audit performed every 3 years for small family foundations but every year for large family foundations.

The *fifth principle* addresses the accountability issue by recognizing that the foundation has multiple stakeholders because of its status as a nonprofit charitable corporation. There is an inherent tension in the field of organized philanthropy around the question of "whose money is this anyhow?" More than one donor has been heard to exclaim, "This is my money, and I will do with it what I please!" In 2009, The Philanthropy Roundtable published *How Public Is Private Philanthropy? Separating Myth From Reality,* which explores this issue in greater detail. Because the donor has chosen to create the family foundation, the donor needs to understand that other family members are stakeholders along with the charitable organizations—grantees and grant seekers the donor wants to support. In addition, because of the tax-exempt status, the government and the public are both stakeholders by virtue of the tax deductions the donor has received to support his or her charitable interests.

In recognizing that the foundation has multiple stakeholders, many foundations have deliberately sought out the diverse perspectives of these stakeholders by including representatives on the board or in special advisory committees exploring an issue. The foundation needs to also protect itself from the appearance of self-dealing. Minutes of foundation board meetings need to include those times when trustees have acknowledged that they serve on the board of a potential grantee. A visible conflict of interest policy is considered a best practice and should be reviewed annually by the foundation board.

Organized philanthropy could not exist in the United States without a strong nonprofit sector—in short, well-run charitable nonprofits are essential to the success of the charitable goals of private foundations. The *sixth principle* speaks to the need to respect these nonprofit partners—their missions and their expertise—and to establish positive working relationships with grantees based on candor, understanding, and fairness.

Too often, a nonprofit organization that has applied to a foundation will be heard to comment, "I have been waiting for a response to my proposal for more than 6 months." In this era of "just in time," who has the patience to wait and wait and wait? Assuming the foundation considers unsolicited proposals, a well-defined grant review process is an essential leadership practice. The grant review process may have a timeline so that applicants know, for example, how often the board considers proposals and that a response can be anticipated within a certain number of days. The process also includes a formal grant agreement letter that details the purpose of the grant, how the grant is going to be paid, a progress report confirming expenditure of the funds, and how the foundation should be acknowledged in any publicity.

Many family foundations have adopted the common grant application format promoted by regional associations of grantmakers. An example of a common grant application can be found on the Council of Michigan Foundations website at www.michiganfoundations.org. While this practice is more common with private corporate foundations, a number of family foundations are also moving to online grant application formats. Managing the grants process has become a recognized skill set in the field of organized philanthropy. There is even a grant manager network that can be accessed at info@.gmnetwork.org. Family foundations often invest in grants management software to help the board maintain its data on grants over time.

For years, many family foundations operated almost invisibly. Most donors did not want the visibility of a Carnegie or Rockefeller. But with the arrival of high-profile large donors like Ted Turner, George Soros, and Bill and Melinda Gates, the pressure to be more open and to communicate openly about the work of the foundation has become the *seventh principle.* Thanks to the Internet, a family foundation's Form 990-PF is available to the public and often can raise more questions than it answers. As a result, some family foundations produce an annual report or a letter that simply summarizes the work of the foundation for the year. It is not uncommon as well for family foundations that accept unsolicited proposals to have their own website.

What is the legacy that the donor and his or her family intend to have? The *eighth* and *ninth principles* address the issue of donor intent and leadership continuity while also recognizing the demands of a changing world. Having been involved in helping donors with the creation of their family foundations, the author has learned that a key leadership practice by donors is documenting their intentions while providing for the flexibility future generations may need in governing the foundation. Too late, heirs raise the rhetorical question, "if only Granddad had talked to me about his goals for the foundation?"

More family foundations are now using strategies to engage the next generation, such as matching personal gifts of trustees who live in other states or who may not be able to support the same geographic focus. Other family foundations have created teen-giving circles when the cousins gather annually at reunions or holiday time, and others are engaging the next generation as "junior trustees." This engagement impacts the decision to make the foundation term limited or perpetual. The highly publicized decision by Bill and Melinda Gates to end their foundation 50 years after their deaths has caused more families to consider having their foundation's term limited to one or two succeeding generations.

These nine stewardship principles frame core leadership qualities for family foundations, but let's compare them with the Stewardship Principles for Independent Foundations and Corporate Foundations.

Independent Foundations

The primary distinction for independent private foundations is that family members or corporate leaders—both representing the primary benefactor—are not involved in governance as trustees. Most of the largest private foundations are considered independent, although they may have started as family foundations. As with family foundations, a peer group of independent foundations that are members of the Council on Foundations approved a set of stewardship principles in 2005 that are very similar to the principles adopted by the family foundations and referenced above. When the family factor is removed from the equation, there are seven instead of nine principles.

Without repeating them in detail, it is worth noting several additional recommended practices. For example, with Principle 2—the recommended number of in-person meetings each year is two instead of one. In Principle 3, which addresses fiscal oversight, more attention is given to compensation practices because unlike family foundations, which are largely volunteer run, independent foundations usually have paid staff. In the early years of the new millennium, members of Congress led by the Senate Finance Committee held hearings on the issue of executive compensation in the nonprofit sector, including foundations. While not mandated by law, the Intermediate Sanctions Provisions governing executive compensation practices of public charities are now recommended for private foundations as well. This means that the board of the foundation needs to document its homework in detailing the comparable data on which salary levels are set.

The principle that addresses multiple strategies includes effective practices related to evaluation and the sharing of lessons learned. It is worth noting that an attribute of leadership is being willing to talk about failure, and this has not been a leadership attribute many foundations have been willing to adopt. Many authors on the subject of philanthropy in the United States have declared that philanthropy is the "venture capital of the nonprofit sector." Yet, it is common knowledge that successful venture capital investments require taking risks, and many investments are not successful. Therefore, it has been a cultural shift to see foundation boards and executives willing to talk publicly about their lessons learned from grants that did not produce the desired results.

The subject of diversity and inclusion is not new to the nonprofit sector. However, the principle that addresses multiple stakeholders promotes proactive work by independent foundations in seeking diverse appointments to their boards and staff. This effective practice has generated a lot of activity in the field of organized philanthropy, promoted in part by a 2008 report issued by the Greenlining Institute in California that led to the introduction of state legislation that would have required large foundations to document the diversity of trustees and staff for both themselves and grantees. Led by the California Wellness Foundation, a number of major foundations initiated the national Diversity in Philanthropy Project, which has complemented the efforts of regional associations of grantmakers and the Foundation Center to document the diversity of foundation boards and management-level staff for the first time. The initial results from surveys in California, Michigan, and New York confirm that much progress is still needed.

Finally, the principle that deals with the need to respect nonprofit organizations and strive for positive relationships with grantees includes a relatively new effective practice for all foundations—namely, asking for feedback. The Center for Effective Philanthropy at www.effectivephilanthropy.org provides comparative data to enable higher performance by foundations. Its independent assessment tools completed by applicants and grantees can help foundations answer key questions, such as: Are we working productively with grantees? The stewardship principles that help define private foundations continue to be very similar for corporate foundations as we find below.

The Corporate Foundation

Many corporations have chosen to create nonprofit private foundations to complement but not replace the corporation's community relations giving activities. If the company is privately owned, the owners may use the company as the basis for a family foundation. However, publicly traded companies can decide to create a corporate foundation as part of their corporate social responsibility plan. The corporate foundation receives the majority of its funding from the parent company, often through an annual allocation determined by the company's management team.

Research confirms that endowing the corporate foundation when the company is doing well will provide a cushion to continue its philanthropy during those times when the company may not be meeting its profit goals. While the board of the corporate foundation is usually made up of representatives selected from the company's management team, it is not unusual for companies to include representatives from outside the company—particularly if the company has a geographic focus on certain communities.

Corporate foundation members of the Council on Foundations have also adopted the seven common stewardship principles referred to above for family and independent foundations. The principle on accountability adds additional focus on documenting the affiliations or involvement of company directors with potential and actual grantees to avoid conflict of interest situations that may be both perceived and actual.

However, two recommended stewardship principles are unique to corporate foundations and reflective of the leadership role that corporate philanthropy can play on a national and global level. The first is to ensure that the mission and activities of the foundation are in alignment with the company's vision, mission, values, and culture. In 2010, this principle is in action, as many companies have been refocusing their corporate foundation's charitable activities on opportunities to impact education and energy—issues more aligned with their need to support development of the next generation of a trained workforce. The result in some cases has been a reduction in long-time support for arts and culture organizations.

The second principle addresses an asset unique to corporate foundations, namely, the opportunity to engage the company's employees in charitable activities. Corporate foundations use a range of strategies to implement this principle, including involving employees in the review and presentation of grants, linking employees to volunteer opportunities, and offering employees matching programs as incentives for their individual giving and volunteering.

Philanthropy is often defined as the giving of one's time, talent, and money. The corporate foundation, of the three types reviewed thus far, is best equipped, thanks to the assets of the company's employees, in putting philanthropy to work in the fullest sense. Before leaving this summary of the private foundation types, it is important to note one other type of private foundation that receives little attention from policymakers or the media but does have considerable influence in the nonprofit sector. This option is called the *private operating foundation.*

The Private Operating Foundation

The IRS tax code includes a subclassification of private foundations called operating foundations. Still a 501(c)(3) tax-exempt organization as recognized by the IRS, the operating foundation is created to conduct its own charitable, educational, or other tax-exempt activities but does not make grants like the private foundations discussed earlier in this chapter. Examples of operating foundations include research facilities, zoos, libraries, and museums. Created by the gift of one primary donor, the foundation will spend 85% of its income directly for the activities that fulfill its mission. While not accepting unsolicited proposals, the foundation may issue requests for proposals from targeted partners that can help it create programs aligned with its mission.

A number of unique features about the treatment of private operating foundations encourage donors to consider their creation; in some respects, the tax code treats them more as public charities than private foundations. For example, contributions to operating foundations are deductible to taxpayers on the same basis as contributions to public charities. In addition, an operating foundation may receive qualifying charitable distributions from other private foundations.

An example of a private operating foundation in Michigan is the Fetzer Institute (www.fetzer.org), based in Kalamazoo, which engages people and projects globally to help bring the power of love, forgiveness, and compassion to the center of individual and community life. It accomplishes this mission through a combination of projects, events, and resources.

All of the stewardship principles summarized earlier in this chapter that deal with governance and accountability and transparency issues are still appropriate and would be subscribed to by the board of a private operating foundation like the Fetzer Institute. Although the original benefactor or family members may be involved on the board, other outsiders with expertise in the operations of programs that will contribute to the mission are usually added to the board. In addition, operating foundations are staffed, so the principles that apply to the effective operations—ranging from compensation to the use of operating reserves for facilities—apply.

Later in this chapter, leadership characteristics of foundations are explored in greater detail. But it is worth noting that the leadership of private operating foundations is often measured by how the board and staff share their expertise on an issue to benefit the broader community. As a result, many operating foundations either host or cosponsor events with other partners and have active publishing initiatives.

Before discussing the leadership characteristics of foundations in greater detail, it is necessary to spend some time on the defining characteristics of public charities, which also operate as foundations, especially community foundations.

The Public Charity Foundation

As noted in the introduction of this chapter, the term *foun dation* is not trademarked, nor is it a legal term. As a result, even though an organization may have its tax-exempt status from the IRS and have the word *foundation* in its name, it is not safe to assume that it makes grants. Many nonprofit organizations and units of government, ranging from hospitals to libraries to universities and public school districts have created foundations as a tool to raise funds in a separate 501(c)(3) structure for the purposes it serves. These foundations are sometimes referred to as single-purpose public charity foundations.

The majority of these foundations do not have permanent endowment funds but raise funds annually and pass them through to the hospital or school to support special equipment needs, educational efforts, and classroom enrichment, as just three examples of thousands of possible charitable purposes. A trend in the last 20 years among some of these institutional-based foundations, such as hospitals and libraries, has been to add community grantmaking programs focusing on health and literacy issues as an outreach strategy for their organization.

A second trend that has grown over the last 20 years has been the expansion of public charity foundations that make grants for specific targeted populations, such as women's funds or ethnic funds aimed at growing immigrant populations. A number of affinity groups have developed to support these organizations, such as Hispanics in Philanthropy. More information on these affinity groups can be found on the Council on Foundations website referred to at the start of this chapter. A special example of these types of funds in Michigan is the Arab-American Community Foundation, a national effort incubated by ACCESS (www.accesscommunity.org), the largest Arab American human services and educational public charity in the United States, with support from the W. K. Kellogg Foundation, C. S. Mott Foundation, and others. Many of these relatively new grantmaking organizations and their affinity support groups have modeled their best practices on the national standards adopted by community foundations and discussed below.

However, although many public charities have received unexpected bequests earmarked for an endowment fund, these endowment funds tend to lay dormant without growing from both additional gifts and investment practices due to the lack of investment policies and expertise. As a result, many of the smaller public charities, not large colleges and universities, have determined that the best strategy to grow their endowment fund is to become an agency fund of the community foundation serving their geographic region. This allows them to take advantage of the investment expertise of the community foundation while also receiving the income generated by their endowed funds to use for the charitable purposes they designate.

This introduction to public charity foundations leads us to more information on community foundations, the fastest-growing example of a public charity foundation allowed in the U.S. tax code.

Community Foundations

Unlike the private foundation models reviewed above, which are usually created by one donor, the community foundation derives its support from a diversity of sources, which may include individuals, corporations, government agencies, and private foundations—all supporting the creation of permanent charitable funds that help their region meet changing needs over time. Unlike a family foundation board, which can be as small as three, the community foundation board is usually composed of leading citizens representing the diversity of the community and can range in size from 12 to 24.

The first community foundation was started in Cleveland in 1914, so the 100th anniversary will soon be celebrated. There are now more than 700 community foundations in the

United States, with additional models of community foundations in Europe, Africa, Russia, Southeast Asia, Korea, Japan, Canada, Mexico, and other countries in the Americas. In short, the community foundation has become a global form of organized philanthropy.

Many of the community foundations have received a boost from large private foundations, such as the W. K. Kellogg Foundation and Lilly Endowment's successful efforts to have community foundation networks serving all residents of their states of Michigan and Indiana. In Germany, the Bertlesmann Foundation has helped to create a robust network of more than 100 community foundations, and the C. S. Mott Foundation from Michigan and the Open Society Institute of George Soros led the development of community foundation efforts in Eastern Europe and Russia.

The assets controlled by community foundations have grown dramatically in the last two decades. Michigan, for example, started 1990 with 30 community foundations serving one third of the state and holding about $320 million in assets. The 2008 calendar year ended with 65 community foundations and 34 geographic affiliates serving the entire state with about $2 billion in assets. This growth is attributable in part to the ease of creating an endowed fund with a community foundation and the popularity in particular of a donor-advised fund.

Community foundations have been described by legal, financial, and tax experts as the most flexible form of organized philanthropy in the U.S. tax code. Hundreds of thousands of donors have used this form to create a *donor advised fund* instead of an independent family foundation. If a family knows what its charitable goals are, it can create a donor-advised fund in as short a period of time as 48 hours, whereas creating a family foundation can take up to 6 months.

While the community foundation retains ultimate control of the endowed funds, it considers recommendations from family members designated as advisers to the fund, and the fund can bear the name of the family. Community foundations do not have a required payout of 5% as private family foundations do, but most community foundations distribute more than 5% from their donor-advised funds. A lot depends on the size of the fund and if it is brand new or a number of years old.

In addition to the donor-advised fund, a community foundation normally has three other broad types of endowed fund. As already mentioned above, thousands of community nonprofits have created *endowed agency funds* at community foundations. In Michigan, state law was changed so that private gifts made to public units of government, including libraries and school systems, can transfer these gifts to agency endowments at their local community foundation.

The third type of endowed fund is referred to as the *field of interest fund,* and donors have created these for issues such as education, the arts, the environment, economic development, and youth. Field of interest funds, each of which can have an advisory committee, are one strategy that the community foundation can employ to ensure that it is being inclusive in serving all of the community. For example, 14 community foundations in Michigan, Ohio, Illinois, and Indiana have recently created endowed funds supporting access to recreation, enabling them to better reach populations with disabilities.

Finally, the fourth and basic endowed fund is the *unre stricted community fund,* in which a donor indicates that the foundation's board can determine the future needs of the community to be supported.

While grantmaking is a primary activity of community foundations, their leadership roles as discussed in the next section below are much broader. As they identify current and emerging issues, channel resources to address needs, and help their regions prepare for the future, community foundations are a unifying force for the public, private, and nonprofit sectors of the regions they serve.

The question can be asked: Do community foundations have recommended stewardship principles as the private foundations do? Community foundations have taken principles one step further by the development of national standards now administered by the Community Foundations National Standards Board, a supporting organization of the Council on Foundations. More than 500 community foundations are now certified through a peer review process that includes 41 standards grouped in six key areas of community foundation functioning:

1. Mission, structure, and governance including board accountability, compensation, independence, fiduciary responsibility and representation of the community
2. Resource development including parameters for administration of funds, disclosures to donors, and commitment to building long term resources
3. Stewardship and accountability covering investment and management of funds, annual audits, and public availability of financial information
4. Grantmaking and community leadership including open grantmaking programs, due diligence, and responsiveness to community needs
5. Donor relations including educating and involving donors in responding to community needs
6. Communications including frequent communications about activities and finances

These standards include the principles for private foundations as appropriate and have been implemented and promoted to community foundations with shared goals of accountability, transparency, and continuous self-improvement. They have also been implemented with a goal of promoting donor trust and reducing the potential of additional government regulation. For more information on these national standards, visit www.cfstandards.org.

The community leadership standards just noted provide an appropriate transition to further exploration of the leadership characteristics of private and public charity grantmaking foundations.

Summary

Ask a policymaker or a nonprofit organization executive or a donor to a community foundation about the distinguishing characteristics of private and public charitable grantmaking foundations, and leadership is usually in the top three. In fact, it often will trump grantmaking. Why? The assets of these foundations are defined by much more than the financial resources they have available for grants. The assets include the foundation's reputation and credibility, the leadership skills of trustees and staff, and the ability to leverage relationships and all resources for the public's benefit.

While leadership has been extensively researched and written about for years, its importance has become more significant to the nonprofit charitable sector, including organized philanthropy, in the United States with the rapid growth in both the number of organizations and their economic assets since 1990. Research conducted by Public Sector Consultants in 2008 for the Council of Michigan Foundations and the Michigan Nonprofit Association confirmed that 1 in 10 residents in Michigan works for a nonprofit charitable organization. Estimates by national economists project that the charitable sector represents 10% to 12% of the country's Gross National Product. In sum, as the introduction to the 2005 report by Grantmakers for Effective Organizations states, "Leadership matters."

In the words of leadership guru Warren Bennis, from the book *Leaders: Strategies for Taking Charge* (Bennis & Nanus, 2003), "Managers are people who do things right and leaders are people who do the right thing" (p. i). This characteristic of leadership is manifested in the values that many foundations promote equally as much as their mission and vision. It is not uncommon to find values such as honesty, integrity, openness, fairness, and accountability listed. As a result of the business scandals triggered by the collapse of Enron in the 1990s—and because so many foundations have close relationships through their boards of trustees to the business sector—ethical leadership has joined the list of values. In fact, a number of foundations, such as the Charles Stewart Mott Foundation (www.mott.org/home), have added codes of ethics that include statements, such as "We are committed to be a good corporate citizen and to comply with both the spirit and the letter of the law."

Many definitions of leadership include elements of social influence and collective action, and these elements well describe the potential of a board of trustees of a private or public charitable foundation. Each trustee of a foundation has the opportunity to participate in collective action with diverse perspectives and opinions in drawing on the collective judgment of the board to contribute to the solution of a social problem. However, leadership does not replace the formal legal structure of the foundation as a nonprofit corporation.

Over the last 20 years, there has been a shift in deliberative leadership by foundations, especially with the founders of the new private foundations created by their own and not inherited wealth. The entrepreneurial spirit of these donors has tackled the tension between the desire to achieve impact and the reluctance to impose an agenda on others. It has given place to a new recognition that leadership by foundations can be demonstrated in trying to sustain the conditions through which grantees and their stakeholders take responsibility for tackling problems and generating solutions that are better attuned to the politics and culture of the their environment. This style of leadership has been named *adaptive leadership* and is well detailed in the 2004 *Stanford Social Innovation Review* article, "Leading Boldly" by Heifetz, Kania, and Kramer. The authors share that if foundations are to be effective institutions of adaptive leadership, they must understand the value of employing their expertise, political access, media skills, and bold strategies besides their grant dollars.

While larger private and community foundations have the financial assets to employ staff to attend to operations and regulatory matters, all foundations have boards of trustees, usually started by the original donor. In his 2005 opinion piece, "Leadership and Philanthropy: The Virtue of Getting Things Done," Joe Lumarda (quoted in Kass, 2008) has captured the critical leadership characteristics of foundations:

1. *Founder leadership* donors serving as mentors to future generations of givers
2. *Leadership vision* what are the social needs not only now but in the future?
3. *Innovation leadership* introducing new perspectives, energy, skills, and risk taking to the world of social change
4. *Connective leadership* providing a safe, welcoming, and inclusive place for all ideas and perspectives
5. *Leadership communication* willing to act as a megaphone on behalf of responsible giving
6. *Management leadership* providing organizational competence, positive corporate culture, and executive integrity

While trustees of foundations both private and public can embrace these six leadership characteristics as appropriate, they also can be embraced by the staff of foundations as well—especially the program staff, who often have the most contact with potential and actual grantees. These six characteristics, however, do not represent a set of organizational or personal capacities; rather, they are individual and collective actions at work.

In this regard, it is valuable to note the recent work of the National Task Force on Community Leadership of the Council on Foundations in adopting the December 2008 *Framework for Community Leadership by a Community Foundation* (www.cof.org). This framework uses the building blocks of values, culture, will, relationships, resources, understanding, and skills to effectively exercise community leadership. The framework offers a powerful challenge to all community foundations, big and small, in its definition: "The community foundation is a catalyzing force that creates a better future for all by addressing the community's most critical or persistent challenges, inclusively uniting people, institutions and resources and producing significant, widely shared and lasting results."

As noted at the start of this chapter, foundations are enabled by the federal tax code. In a brief encounter in Washington, D.C., Congressman Charles Rangel, chair of the House Ways and Means Committee, commented to the author, "I want to know what foundations are doing to address my three Rs. Are they doing their business with rigor? Are they relevant? And are they getting results?" The leadership characteristics highlighted above apply to all foundations small and large and cover all three of his concerns. In partnership with their grantees, foundations are seeing results benefiting communities across the United States and the globe. The response to Congressman Rangel was yes on all three of his Rs.

In a rapidly changing and challenging world, there is ample evidence that private and public charitable foundations are exercising their leadership characteristics to mobilize the resources of people to survive and thrive. Just visit the websites cited at the start of this chapter to find examples. However, although money helps, it is not the answer. Foundations offer a sense of stability and opportunity for trusting relationships that foster leadership in their partners in the nonprofit, private, and public sectors as well. As Bruce Sievers wrote in his 2005 article, "Philanthropic Leadership, Money and Collective Goods," "Money alone does not a leader make. . . . How does one lead in philanthropy? . . . With as much humility as possible" (quoted in Kass, 2008).

Definition of Scope, Scale, and Role of the Nonprofit Sector

Kathryn Collins

University of Pittsburgh

The existence and profusion of nonprofit organizations has been a defining characteristic of the United States almost since its inception. Alexis de Tocqueville (1969) declared that the associational life of Americans was a major explanation of how the United States was able to avoid the dangers of tyranny and barbarism despite its highly individualistic culture. However, although nonprofit associations and organizations have a long history within the United States, the notion of a distinctive nonprofit sector composed of organizations with shared characteristics has emerged only recently. Despite this, there is still much debate about what and who constitutes the nonprofit sector. Some have argued that "almost anything that one can say about (nonprofits) is true—or false—in at least some instance, somewhere" (Esman & Uphoff, 1984, p. 58; Najam, 1996). At the heart of the disagreement is what the sector does and does not entail, namely its external boundaries. There is widespread agreement about the boundaries of the two other sectors, the market (private) and the state (public), but no agreement exists in regard to the nonprofit sector. It is often thought of in residual terms as the organizations and associations "left over" and defined, not in terms of what it is, but what it is not (hence the term *nonprofit*). Nonetheless, there is an impetus among scholars and politicians to define this sector, particularly given its growing importance in local, national, and international policy making, implementation, and evaluation.

Today, the United States has one of the largest nonprofit sectors in both size and scope of any nation in the world. The reliance on the sector to provide services and to act as a venue for citizen interests reflects a long-standing American tradition of individualism and hostility toward government. However, a tradition of collaboration between government and nonprofit organizations also exists, combining the resources of the state with the service-delivery capabilities of the nonprofit organizations. In addition, particularly since the 1960s, the nonprofit sector has provided the genesis for a host of crucial social movements, including the civil rights movement, the environmental movement, the consumer movement, the gay rights movement, the women's movement, and many more.

Organizations within the United States are typically thought to fall into one of three sectors: (1) the *private sec tor*, consisting of businesses and industry that are "for-profit"; (2) the *public sector*, which includes government at all levels (federal, state, local) that provides services and regulations; and (3) the *nonprofit sector*, organizations that do not distribute profits to the owners or directors. Nonprofit organizations qualify for tax-exempt status under U.S. tax law, although there are different codes and requirements depending on the type of organization. The nonprofit sector composes a large and, by most measures, growing share of the U.S. economy that accounts for a substantial number of jobs throughout the country. It is also extremely diverse, including religious congregations, universities, hospitals, museums, homeless shelters, civil rights groups, labor unions, and political parties. Most of these organizations are public serving in one way or another. They provide basic need services as well as cultural, spiritual, and educational services. The sector can work as a collaborator with governments to provide enhanced services, to offer services to those who are marginalized, or to act as a proxy for a government program. In addition, the sector can also serve as a watchdog on governments and businesses and a venue for citizens to advocate and organize around specific interests.

The Nonprofit Sector and the U.S. Economy

It is often difficult to gather exact numbers about nonprofit organizations, given the fact that the majority of them are small. Universities, hospitals, and churches make up the largest part of the sector in terms of assets and employment, however, most nonprofit organizations are small. Of the 27.7 million formal organizations in the United States in 2005, 1.4 million (5.9%) were nonprofits, with businesses making up approximately 94% of all entities (and government 0.3%) (Pollak & Blackwood, 2007). The nonprofit sector accounts for about 5% of gross domestic product (GDP) and 8% of wages and salaries paid in the United States (Pollak & Blackwood, 2007). In addition to paid employees, the nonprofit sector also makes use of millions of volunteers and volunteer hours to provide services to its clients. Since the 1970s, the share of GDP produced by the nonprofit sector has risen (while governments have shrunk). Increasingly, government is shifting from direct provision of service to contracting out for other organizations to deliver the services. Declines in government employment for producing goods and services correspond to increases in nonprofit employment. In addition, in 2005, individuals, corporations, and foundations gave $260 billion in charitable contributions to nonprofits, and 29% of Americans volunteered through a formal organization (Pollak & Blackwood, 2007).

There are more than 800,000 charitable nonprofits in the United States, excluding foundations and religious congregations, an increase of more than 60% since 1993. Almost 300,000 charitable nonprofits have gross receipts of more than $25,000 and filed an IRS Form 990 in 2003. The total assets of these reporting organizations were $1.76 trillion in 2003, with total expenditures of $945 billion. The Bill & Melinda Gates Foundation was the biggest foundation giver in 2003, distributing more than $1.1 billion to nonprofits. The asset base of the sector would make the nonprofit economy the sixth largest in the world—larger than the economies of Brazil, Russia, Canada, Mexico, and South Korea (Alvarado, 2003). The National Center for Charitable Statistics (NCCS) collects information from the Internal Revenue Service (IRS) and other sources to compile comprehensive data on the nonprofit community in the United States.

The U.S. tax code defines nonprofit organizations in terms of their tax status, with the largest subset of exempt organizations known as charitable organizations and described under section 501(c)(3) of the Internal Revenue Code. Roughly half of nonprofit organizations are exempt under section 501(c)(3) and known as *charitable organiza tions;* there are many other types of tax-exempt organizations, including social welfare organizations, 501(c)(4); labor and agricultural associations, 501(c)(5); business leagues, 501(c)(6); and fraternal beneficiary societies, 501(c)(8). The IRS defines 501(c)(3) organizations as *charitable* because they serve broad public purposes, including educational, religious, scientific, and literary activities, among others, as well as the relief of poverty and other public benefit actions (NCCS, 2008).

The National Taxonomy of Exempt Entities (NTEE) system is used by both the IRS and the NCCS to classify 501(c)(3) nonprofit organizations into 26 major groups under 10 broad categories: (1) arts, culture, and humanities; (2) education; (3) environment and animals; (4) health; (5) human services; (6) international, foreign affairs; (7) public, societal benefit; (8) religion related; (9) mutual/membership benefit; and (10) unknown/unclassified. This system was initiated in the mid-1990s by the IRS and classifies charitable organizations by the area in which they do their primary work.

Definition of the Sector

There are many definitions of nonprofit organizations and many more debates surrounding the definitions that have emerged. Nonprofits are organizations that are precluded, by external regulation or their governance structure, from distributing their financial surplus to those who control the use of organizational assets. Further subcategorization separates nonprofit organizations into charitable organizations and mutual benefit organizations. Charitable organizations are organizations concerned with helping those in need of food, shelter, and other necessities of life. They include organizations that specifically target the needy as well as broader serving organizations such as churches, schools, hospitals, and social service organizations (Powell & Steinberg, 2006). Mutual benefit organizations, such as labor unions, trade associations, and social clubs, which are also nonprofit, are different from charitable organizations in that they benefit a specific class of members. Charitable organizations are treated more favorably under tax and regulatory laws.

In the United States, nonprofit organizations are legally defined as incorporated entities that qualify for tax exemption from federal income tax under any of the 26 specific subsections of the Internal Revenue Code. Another definition of a nonprofit emphasizes that they are not-for-profit, while a third definition emphasizes the functions organizations perform, with the most common type of function being the promotion of the public interest.

Salamon and Anheier (1997) define the nonprofit sector by looking at the basic structure and operation of an organization. The nonprofit sector can, therefore, be defined as a collection of entities with the following characteristics:

- *Organized, formal, or institutionalized* to some extent. This is signified by a formal charter of incorporation but can also be demonstrated by having regular meetings, officers, rules of procedure, or some degree of organizational permanence. Examples range from complex organizations like a hospital or university to a local baseball league. Organizations do not have to apply to the IRS for tax exempt status to be considered formal, although it makes their status clearer if they do. They merely have to have some organizing instrument, some governing rules, and regularly chosen officers.

- *Private* or separate from government. Nonprofit organizations are neither part of government nor controlled by it, although they may receive significant financial support from the government. As such, they are often heavily influenced by government policies, which affect funding and can stimulate the rise and fall of nonprofit organizations. In addition, nonprofit organizations are often collaborators with government, working together to deliver services. Despite this close relationship, nonprofit organizations in the United States are governed by boards and are considered part of the private sector.
- *Nonprofit* or not returning any profits generated to owners or directors. Nonprofit organizations may earn profits in a given year, but they must be invested back into the organization rather than distributed among owners as in the private sector. Even unincorporated organizations must be operated in such a way that no earnings benefit the organization's officers or directors. Nonprofit organizations are permitted to *earn* profits, and many do, but those profits are to be used only to further the mission of the organization, not for the benefit of its management.
- *Self governing* or equipped to control its own activities. Nonprofit organizations must have their own internal governing procedures and not be controlled externally. Central to this is the development of a formal set of procedures for internal governance, including the designation of governing bodies and procedures for selecting trustees, choosing officers, and disposing of assets on the organization's dissolution.
- *Voluntary* or some meaningful degree of nonpaid participation. For example, the presence of some voluntary input, even if only a voluntary board of directors, is sufficient to define an organization as *voluntary.* This criteria works along with the *not for profit* requirement as a proxy for an organization that provides public benefit.

Terminology

There are many ways to categorize and label organizations, and while the focus here is on the nonprofit sector, a variety of alternative nomenclature can be found throughout the literature and may be confusing. The term *nonprofit* may be the most neutral, in that it emphasizes the most basic defining feature of these organizations, the fact that they do not exist to generate profits for owners or shareholders. However, the term itself is negative in defining the organization as what it is *not* rather than what it is. In addition, it implies that these organizations fail to generate profit, which can be misleading because many can and do generate profit but do not distribute it. Therefore, some authors choose to call these organizations *not for profit* rather than simply *nonprofit*.

Another popular way to refer to the nonprofit sector is *charities* or *charitable organizations*. It identifies these organizations as helping the needy and emphasizes the support they get from individual giving, foundations, and government. However, this sector incorporates many different types of organizations, including ones that deal with the arts, culture, education, and other activities, which while contributing to public welfare, do not specifically target the needy. In addition, some large nonprofit organizations receive most of their funding from fees for goods and services and do not rely on donations at all (e.g., hospitals).

A third way to refer to the nonprofit sector is *voluntary organizations*. Although more common in the United Kingdom than the United States, this term emphasizes the critical role played by volunteers in these organizations. However, it fails to address the correspondingly crucial role played by paid employees in this sector, which has become increasingly professionalized in recent years. Much of the day-to-day operation and function of these organizations, as well as future planning, is undertaken by paid staff rather than volunteers.

The *independent sector,* a fourth way to discuss these organizations, is also contested and problematic. This term emphasizes the role these organizations play as a counterpoint to the public (government) and private (business) sectors. They can play a role and provide a vehicle for citizens to be involved in social and political life, as well as provide checks and balances on the other sectors, serving as a watchdog for the public good. However, although the nonprofit sector does serve outside of the administrative structure of the state, it is not completely independent. Organizations are often heavily financially dependent on the state and often engaged in a mutually beneficial partnership with it to serve the public.

Finally, this sector is often referred to as the *tax exempt sector,* which is fundamentally correct. These organizations share a common characteristic in how the U.S. tax law treats them. However, this terminology is vague and unhelpful in trying to determine what and for whom these organizations work.

There are some other confusing terms that it is helpful to clarify. *Nongovernmental organizations* have various definitions, but it is common to define them similarly to nonprofit organizations, although this group often refers to organizations in the developing world. The term *third sec tor* often refers to this sector's position opposite the public and private sectors. This term is synonymous with *civil society*, referring to "a part of society that is distinct from states and markets, formed for the purposes of advancing common interests and facilitating collective action" (Edwards, 2004, pp. vi–viii; Najam, 1996). In this sense, civil society contains all associations and networks between the family and the state, excluding firms (e.g., religious organizations, bowling leagues, labor unions, hospitals). There is little agreement around definitions throughout the literature, and depending on the area of the world, this sector is referred to in different terms. In the United States, it is called the nonprofit sector, in the United Kingdom, the voluntary sector, and in France, the social economy. Regardless of the differences, the role of this sector in all economies can be similar in the types of organizations that encompass it as well as its role in societies as a service provider and as an advocate for special interests.

Legal Status/Form

In the U.S. legal code, nonprofit organizations can take any of three different legal forms: unincorporated associations, corporations, or trusts. *Unincorporated associations* are groups of people who form an association and function as a nonprofit without any government approval and, as such, can establish a bank account, accept contributions, and provide services. They can claim tax-exempt status provided they do not exist to distribute profits to their officers or directors; they adopt basic rules and procedures for their organizations and, if their purpose is charitable, can even offer donors deductions on their taxes for contributions.

Although nonprofit organizations are permitted to exist without formal status, *incorporated associations* have become more common in recent years as a way to limit the liability of directors and officers for the acts of the organization and a convenient and reliable way to achieve tax-exempt status, given the government's stipulation that a group must pass an "organization test" to demonstrate that its members are truly an organization and not a "formless aggregation of individuals." Corporation laws vary by state in the United States. Finally, nonprofit organizations can be *trusts*, a collection of assets dedicated to a particular purpose. Many foundations are established as trusts, but the trust form does not protect against personal liability as the corporate form does.

Types of Tax-Exempt Organizations: Public Serving Versus Member Serving

In the United States, entities within the nonprofit sector are covered in a relatively comprehensive body of law (section 501 of the tax code and its relevant subsectors). U.S. law recognizes a separate sector of organizations that both serve public purposes and are not organized principally to earn a profit, resulting in their ability to claim exemption from federal income taxes and most state and local taxes. There are 26 different subsections of the tax law under which an organization can claim tax-exempt status, which can broadly be classified into two groups—one covering member-serving organizations such as business associations, social clubs, and labor unions and the other covering more public-serving organizations. These public-serving groups, defined by section 501(c)(3) of the U.S. tax code, are generally regarded as the charitable nonprofit sector; in addition to being exempt from federal income tax, these groups can offer donors the opportunity to claim gifts as a deduction on their own income taxes.

Section 501(c)(3) organizations can be separated into three major subgroups: religious groups, foundations and other financial intermediaries, and charitable service organizations. *Religious congregations* are considered nonprofit organizations, and because of the constitutional prohibition against governmental interference in religion, these organizations have a special status under the law. In addition to being tax exempt, they are exempt from the formal requirements to incorporate or to register and are exempt from the requirement of other nonprofits to report annually on their finances (Salamon & Anheier, 1997). The one stipulation is that they have to be engaged in religious activity and, as such, have a set of beliefs and some set of rituals.

Foundations and other financial intermediaries do not differ from charitable service organizations in their goals but merely in the means to achieve them. Private foundations do not carry out programs or deliver services but funnel their resources to organizations that do. The key feature distinguishing foundations from other charitable organizations is that they receive their income from a single source, whereas others can receive income from multiple private and public sources. Private foundations are also required to pay out a minimum of 5% of the value of their assets each year in grants. There are also operating foundations, private foundations that use the bulk of their resources to carry out their own charitable programs, rather than making grants to other organizations. The Carnegie Endowment for International Peace and the Getty Trust are examples of operating foundations. Finally, there are community foundations, organizations that pool the resources of many donors and focus their grantmaking on a particular city or region. The Cleveland Foundation and the New York Community Trust are examples of community foundations.

The IRS classifies community foundations as publicly supported charities, not private foundations. Therefore, these groups are not subject to excise taxes or distribution requirements like private foundations, and donations by individuals are tax deductible. Some nonprofits, such as hospitals and public colleges, create related or supporting 501(c)(3) organizations that may be called foundations; these groups are fundraising (rather than grantmaking) organizations and typically raise money from a broad range of donors and then distribute the proceeds to the parent organization. In addition, some other charities include the word *foundation* in their names even though they are not considered foundations according to legal definitions.

Charitable service organizations deliver services, provide information, educate the public, advocate for particular causes, provide management and financial assistance, and engage in dozens of other charitable activities. Within this group are private universities, schools, hospitals, clinics, orchestras, art galleries, museums, environmental groups, civic associations, social service agencies, day care centers, community development organizations, and many more. They make up the majority of organizations under the 501(c)(3) codes.

Member serving organizations are classified under the 501(c) codes but not under 501(c)(3). Generally, these organizations are vehicles through which groups of people can pursue common interests or goals. This includes business and professional organizations, including business leagues, chambers of commerce, and trade associations. Also included are social and fraternal organizations (e.g., homeowners' associations, fraternities and sororities, and veterans associations) and mutual benefit organizations (e.g., teachers' retirement funds, mutual insurance companies, credit unions, and farmers cooperatives).

Social welfare organizations such as the National Association for the Advancement of Colored People, the National Rifle Association, and the National Organization for Women are exempt under Section 501(c)(4) of the tax code. These nonprofits are often called social welfare or advocacy organizations, and contributions to them are not tax deductible. As a result, these nonprofits have greater latitude to participate in legislative advocacy, lobbying, and political campaign activities.

Under Section 501(c)(6) of the tax code, professional and trade associations qualify for tax-exempt status. These include chambers of commerce, business leagues, and other organizations that promote the business or professional interests of a community, an industry, or a profession. Similar to 501(c)(4), contributions to these nonprofit organizations are not tax deductible, but membership dues may be deductible as business expenses.

Scope of the Sector

Where and What

The nonprofit sector incorporates a wide variety of organizations in both size and scope, from neighborhood associations that have no paid staff to multibillion-dollar hospitals and universities. Of the 1.4 million nonprofit organizations in the United States in 2005, nearly half a million collected more than $25,000 in gross receipts, requiring them to file annual Form 990 returns with the IRS. The remaining organizations are either too small or are religious congregations, which are not required to file (Pollak & Blackwood, 2007). Organizations with less than $25,000 in gross receipts are not required to file annually with the IRS, while those with less than $5,000 in gross receipts do not have to register with the government.

The vast majority of nonprofit organizations are registered with the IRS as 501(c)(3) *public charities,* a category that includes most arts, education, health care, and human service organizations (this also includes the nation's roughly 350,000 religious congregations). The remaining 501(c)(3) organizations are private foundations, which are usually endowed by an individual, family, or, less frequently, a corporation and typically fund the charities. Examples of large foundations include the Ford Foundation, which funds projects focused on strengthening democratic values, community and economic development, education, media, arts and culture, and human rights, and the Bill and Melinda Gates Foundation, which looks to improve health care and reduce poverty throughout the world.

Although nonprofit organizations are located throughout the United States, 42% of them are located in seven states (California, Florida, Illinois, New York, Ohio, Pennsylvania, and Texas), and the organizations within these states account for 42% of the sector's assets nationwide (Alvarado, 2003). In addition, New England has the largest number of organizations per resident (disregarding the District of Columbia, which has four times the number of organizations per resident of the closest state). Nonprofits are found in all 50 states and are located in both urban and rural areas, although more organizations are located within urban areas.

Scale of the Sector

Size of Sector

It is difficult to gauge the size of the sector given the large number of unincorporated and unregistered organizations. In 2005, there were about 1.4 million nonprofit organizations registered with the IRS, which excludes religious congregations and organizations with income less than $5,000 a year, which are not required to register. Most of these registered organizations are considered *public charities* (more than 800,000 in 2005), although fewer than half of those earn more than $25,000 a year. In addition, there are more than 100,000 private foundations in the United States, with assets totaling over $450 billion. Nonprofit organizations receive $260 billion annually from private sources, more than 75% of that from individuals and households. People give an average of 2% of their income to the nonprofit sector, and 65 million people volunteer in this sector annually (Pollak & Blackwood, 2007). In addition, the sector is growing in both size and scope, with 300,000 more nonprofits registered in 2004 than in 1994 and assets more than doubling over the same period.

The majority of charitable nonprofits are small to midsize organizations. In 2003, 77% of reporting organizations had assets of less than $1 million (holding less than 2% of the total assets of the sector) (Alvarado, 2003). In contrast, only 5% of the reporting organizations had assets greater than $10 million, but these organizations controlled 88% of the sector's assets. There are many small nonprofit organizations in terms of both employment and asset size, and the large organizations are very large and control a huge share of the sector's assets. For example, although fewer than 2% of reporting organizations are nonprofit hospitals, they hold almost 30% of the sector's assets. Alternatively, human service organizations have the largest number of organizations (with over a third of the total) but hold only 11% of the sector's assets.

Funding

In 2004, more than 70% of the revenue of public charities came from fees for goods and services (with other revenue sources including 13% from private contributions, 9% from government grants, and 4% for investment income) (Pollak & Blackwood, 2007). Within private contributions, the majority of donations come from individual giving (83%), with the remaining from private foundations (11%) and corporations (5%). Government grants include funds from federal, state, and local sources while investment income includes money from endowments and other investment funds, which accounts for a small part of private charity income. Although the common perception of this sector is that it heavily relies on charitable contributions, it is relatively self-sustaining, receiving most of its income from its own goods and services. In terms of contributions, individuals contribute the most money to these organizations.

Roughly a third of all individual charitable contributions were given to religious organizations, while education received almost 15% of total contributions (Giving USA Foundation, 2006). Individual giving has been relatively stable since the 1970s, and although private charitable contributions are not the primary source of income for nonprofits overall, they are the major source of support for five subsectors, including organizations classified under arts (41%), environment (51%), international (68%), public societal benefit (42%) and religious (57%) (Powell & Steinberg, 2006). Hospitals and higher education get most of their funds from fees for goods and services, but the rest of the sector heavily relies on private and public contributions.

Subsectors

In terms of the number of organizations, human services and public and societal benefit are the largest categories. More than one third of nonprofit organizations are considered human service organizations, although the majority of them are small in size and scope. In terms of revenue size, the health sector (which includes hospitals) is far and away the largest, with $843 billion in revenue in 2008, more than three times larger than the next largest category, which is education, with $278 billion in revenue (National Center for Charitable Statistics, 2008).

Arts, Culture, Humanities

These organizations include museums, libraries, and orchestras. They rely primarily on private contributions and often provide services free or at highly discounted rates. In addition to the tangible, they provide cultural events and meeting places for other groups within a society and area. They provide services that often entertain and attract people from outside a region, helping to stimulate local economies.

Education

The education category is broken into higher education and other education. Although higher education organizations make up fewer than 5% of the education organizations, they possess more than 75% of its assets (National Center for Charitable Statistics, 2008). This category is the second largest in terms of asset size (after the health sector). About half of all colleges and universities are nonprofit organizations, although they enroll a considerably smaller share of total students nationwide than do public universities.

Health Care

Although the number of health care organizations is less than 13% of the total number of nonprofit organizations, they own the majority of assets. Within this category, organizations are classified as to their purpose, with hospitals and primary-care facilities owning the largest amount of assets. In addition, because of the sheer size of these institutions, they often skew data one way or another. For example, most of the money for nonprofits comes from fees for goods and services. However, when health and education organizations are removed from the analysis, the remaining small charitable organizations rely much more heavily on private contributions. Just over half of all hospitals are private-nonprofit in form, with about one third governmental and the balance for-profit organizations.

Human Services

Most nonprofits—more than one third—are human services organizations. These organizations cover a broad range of topics with the common objective of meeting human needs. They include organizations that focus on job training, food distribution, shelter, youth development, and legal aid. These are the traditional charitable organizations. For the most part, they are small, rely heavily on volunteers and private donations, and are widely disbursed nationally and within states.

Others

The remaining charitable organizations fall into five categories (they are environment, international and foreign affairs, public and societal benefit, religion-related, and unknown/unclassified). The nonprofit organizations all play a role in society and, although classified in one category, often provide services and do work in other fields as well. For example, a hospital provides educational services as well as various human services (e.g., programs for expectant mothers), but its primary focus is health care, hence its classification.

Role of Sector

There are numerous debates as to what the role of this sector is and should be within society and the economy as a whole. The sector can collaborate with government to provide better and more widespread services, and it can also be a check on the states' power, ensuring that the minority is not overrun by the majority (Edwards & Hulme, 1996; Gramsci, 1971). This sector can provide services that the government either cannot or will not provide, and such groups can be efficient service delivery agents (Edwards & Hulme, 1996). In addition, this sector can represent minority groups such as women, ethnic groups, or environmentalists, whereas, in a democratic society, the government often must represent the majority.

The nonprofit sector can fulfill essential democratic functions within a society. It can provide a means for expressing and actively addressing the varied and complex needs of society; it can motivate individuals to act as citizens in all aspects of society rather than relying on the state; it can promote pluralism and diversity in society—protecting and strengthening various identities, create alternatives to state agencies for providing services with greater independence and flexibility, and establish mechanisms by which governments and markets can be held accountable to the public.

Key Issues/Future Directions

Relations With Government

The policies and practices of the U.S. government—specifically, providing financial support—helped to rapidly expand the nonprofit sector throughout the 1960s and 1970s. By the late 1970s, government assistance to nonprofits accounted for more than 30% of the overall operating revenues of nonprofit charitable service agencies, while private charitable giving by individuals, corporations, and foundations accounted for less than 20% (Salamon, 1999). The 1980s Reagan era saw government removing itself from the picture, resulting in significant fiscal strain for the nonprofit sector. Outside of the health field, federal support to nonprofit organizations declined by one fourth in the early part of the decade and did not return to its 1980 level until 1990.

In the 1990s, nonprofit organizations became more important because they were often a more efficient and effective service delivery mechanism than government. These organizations are often able to go where governments cannot, can represent minority groups (whereas the government necessarily represents the majority), and are often cheaper than government agencies, given the amount of volunteer time and private contributions. Governments are increasingly partnering with nonprofit organizations and contracting out services to these organizations (Salamon, 1999). However, there are some limitations and areas that the sector should focus on to improve services and the sector as a whole. For many of the nonprofit organizations—particularly the small ones, which make up the majority of groups within this sector—unreliable sources of funding make it difficult to plan for the future (Weisbrod, 1988). Reliance on any one source of funding—in the 1970s, for example, on government funding—makes an organization highly vulnerable to changes in the economic, political, or social climates. Thus, the economic downturn after 2007 could severely affect many nonprofit organizations, which once relied heavily on private contributions or even public contributions. Many groups wonder what funds they will have this year, making it difficult for them to fulfill their missions and deliver their services. For nonprofit organizations to survive and thrive, they need to diversify their funding. In addition, there is increasing focus on social enterprise for nonprofit organizations, ventures that allow nonprofit groups to run small businesses that pay for their other programs, allowing them to become fully self-sufficient and not reliant on outside sources of funding.

Accountability

In addition to funding questions, more attention has been paid to accountability, which can be defined as organizations answering to stakeholders (including beneficiaries, boards, donors, staff, partners, and peers) for the results and impacts of projects and programs and the use of resources to achieve those results (Edwards & Hulme, 1996). In addition, accountability for nonprofits is multidirectional, having at least two bottom lines, their mission's effectiveness and their financial sustainability (Edwards & Hulme, 1996). Nonprofits are legally accountable to sector regulators and in some cases to donors, governments, and partners; financially accountable to their boards and funders; and ethically responsible to those they seek to serve (Edwards & Hulme, 1996). Because such organizations have multiple accountabilities and no primary constituency, there can be no "best practices" but merely good practices that work for a particular problem or situation.

Nonprofit organizations are legally responsible only to their governments (e.g., in the United States, they are classified as 501(c)(3) organizations, and as such, remain not-for-profit) and to those donors with whom they sign contracts. In recent years, donors have required more results, or at least have required evidence of those results (Edwards & Hulme, 1996). In addition, nonprofits are financially responsible to their boards. In recent years, with an increasing focus on results, the needs of the people these organizations seek to serve have emerged, with more attention paid to questions of accountability and the dangers of overaccountability to governments and donors at the expense of downward or sideways accountability to clients and beneficiaries (Edwards & Hulme, 1996).

The mission statements of many nonprofits reveal that they are advocates for and on behalf of the public for a shared common good. However, their leaders are not elected, and therefore, it is difficult for the public to hold them accountable, especially if public information is inadequate or inaccessible. By ignoring downward accountability, the effectiveness of programs and ability to achieve their mission come into question. Nonprofits are responsible to multiple stakeholders, including funders, sector regulators, and clients and communities, and as such, have to be transparent and accountable to many different people and in many different ways.

Summary

The nonprofit sector in the United States has a long and important history. Today, it plays a significant role in the U.S. economy, as an economic driver, a large employer, and a provider of necessary services. There are numerous definitions about what types of organizations make up this sector, but most groups have key similarities. They are organizations that are formal, private, not-for-profit, self-governing, and voluntary. In addition, they perform a wide variety of services and include diverse organizations such as hospitals, universities, museums, religious congregations, and food banks. They can be public serving or member serving. Public-serving organizations are typically considered as charities and serve the public good, whereas member-serving organizations serve the interests of their members (e.g., labor unions). Most nonprofit organizations in the United States are public-serving organizations.

Nonprofit organizations can be found throughout the country, in urban, suburban, and rural areas. Of the 1.4 million nonprofits, most are small in size, and most work in the human services field. However, in terms of assets owned, the health field is far and away the largest, followed closely by organizations classified under education. A small number of organizations hold most of the total assets in the nonprofit sector. There are a few very large organizations while the rest in the nonprofit sector are small in size and scope.

Most of the revenue of nonprofit organizations comes from fees for goods and services. However, this can be misleading, given the large share that hospitals and universities hold within this sector. Private contributions make up the majority of revenue in the arts, environment, international organizations, public and societal benefit, and religious organizations. Within private contributions, most of the money comes from individuals, followed by government and corporate giving.

The role of the sector is twofold, to provide services and to act as a venue for citizen action. Nonprofit organizations provide services that governments cannot or will not provide, often to marginalized groups that otherwise would not receive services or in place of government as more efficient service delivery mechanisms. In addition, organizations within this sector can represent the interests of minority groups within society, groups such as women, ethnic groups, or environmentalists and give them a venue or provide a service to them that governments cannot do. In addition, the nonprofit sector fills an essential role within a democratic society by providing a means for expressing and actively addressing the varied and complex needs of society.

There are numerous future challenges for this sector. The 1990s saw a greater reliance on nonprofits as service deliverers and increased collaboration between governments and nonprofit organizations. However, nonprofit organizations often rely too much on government funding and can be heavily affected by economic and political changes. In addition, because of the nature of nonprofit revenue, with a large portion of funding coming from individual donations, economic downturns can inhibit whether nonprofits can deliver their services and fulfill their mission, often when the services are needed most.

Greater focus on the nonprofit organization's accountability arose in the 1990s as well. Because organizations have dual purposes, financial sustainability and mission fulfillment, they are accountable to their funders, their boards, and their clients. With greater focus on performance and transparency, this sector is becoming increasingly professionalized. With less money to go around, more attention is being paid to effective delivery of programs. Nonprofit organizations have to be financially sustainable, fulfill their goals, and be professional. The current U.S. economic climate promises a large role for the nonprofit sector in providing social services like health care, job training, and educational skills for those people who have lost their jobs. This sector is growing, and nonprofit organizations are and will be vital in economic, political, and social development in the United States.

A Nonprofit Organization

Lisa A. Dicke

University of North Texas

Nonprofit organizations are officially recognized in the U.S. tax code by their placement indicated as 501(c). The nonprofit organizations designated as public charities carry the subcategory number 501(c)(3). These are organizations with the mission to improve the common good in areas such as education, the environment, health care, the arts, community development, assistance to individuals and families, and all of religious activity.

The nonprofit sector is composed of all types of nonprofit organizations, including small, unincorporated groups and associations with few members and little to no budget; large and formally incorporated organizations with hundreds of paid staff members, cadres of unpaid volunteers, and budgets exceeding millions of dollars; and those that fall somewhere in between. The number of nonprofit organizations in the United States includes "1.8 million registered organizations and several million other associations, including support groups, book clubs, and neighborhood action committees" (O'Neill, 2002, p. xvii); estimates by the Independent Sector in 2005 put the number of registered organizations closer to 1.9 million (Swoboda & Swoboda, 2009, p. 3).

Currently, 956,760 public charities and 112,959 private foundations are registered with the Internal Revenue Service (IRS). In addition, 443,464 other types of nonprofit organizations, such as chambers of commerce, fraternal organizations, and civic leagues, are also registered (The Urban Institute, 2008).

Characterizing the nonprofit sector as a whole is a daunting proposition. "The easiest way to describe or define the nonprofit sector is to identify what it *is not* [e.g., it is not government or business], and what it *does not do* [e.g., it does not distribute profits to owners or shareholders]" (Ott, 2001, p. 1). Exactly what it means to be part and parcel of something that *is not* or *does not do* makes providing a singular definition for the phrase *a nonprofit organization* perilous. In addition, the boundary of what constitutes the nonprofit sector is extremely permeable.

The discussion in this chapter focuses on private nonprofit organizations in the United States (the largest group of formal and informal nonprofit organizations worldwide). Nonprofit organizations exist in every country in a variety of forms and with disparate funding mechanisms. International governmental organizations (IGOs) are nonprofits whose members are governments of nation-states that voluntarily join, contribute financing, and govern. Examples of these organizations include the United Nations, the North Atlantic Treaty Organization (NATO), the European Union (EU), and the League of Arab states (the Arab League) (Pease, 2008, p. 1). In addition, there are hundreds of thousands of nongovernmental organizations (NGOs) globally including grassroots membership organizations, village councils, agriculture cooperatives, and women's credit groups funded locally or from sources abroad. Large international nongovernmental organizations (INGOs) with relief and human development missions also exist, some with household names including Oxfam, Save the Children, and Médicins Sans Frontières. The number of formal relief and development nonprofit organizations has grown substantially since the 1970s in response to corporate expansion and increasing concerns associated with globalization (Lindenberg & Bryant, 2001, p. 4). Discussion of these important national and international nonprofit organizations, however, is outside the scope of this chapter.

What Is a Nonprofit Organization?

The definition posited at the outset of this chapter is insufficient to capture many distinctive features of nonprofit organizations in the United States. Salamon (1999) defines a nonprofit organization as one that has a formal charter of incorporation, regular meetings, officers, rules of procedures, and some degree of organizational permanence. These organizations are private, self-governing, and voluntary, and they do not distribute profits. This definition includes important features of formally organized nonprofit organizations but it does not accurately describe many small, loosely knit associations.

From a public policy perspective, Hall (1987) defines a nonprofit organization as

> a body of individuals who associate for any of three purposes: (1) to perform tasks that have been delegated to them by the state; (2) to perform public tasks for which there is a demand that neither the state nor for profit organizations are willing to fulfill; or (3) to influence the direction of policy in the state, the for profit sector, other nonprofit organizations. (p. 3)

Frumkin (2002) identifies three common features of nonprofit sector organizations; they do not coerce participation, they do not distribute profits to stakeholders, and they exist without simple and clear lines of ownership and accountability (p. 3).

Anheier (2005, pp. 4–9) introduces a dizzying array of nonprofit organizations including museums, orchestras, schools, universities, adult educational organizations, research institutions, policy think tanks, health organizations, mental health organizations, human services organizations, credit and savings associations, environment and natural resources groups, local development and housing groups, humanitarian relief associations and international development organizations, human rights organizations, rural farmers' associations, religious organizations, foundations, service organizations, fraternities and sororities, special interest associations and advocacy groups, and self-help groups.

The IRS uses a coding system to classify roughly 28 different types of nonprofit organizations. These codes apply to organizations that have formally incorporated at the state level and applied for tax-exempt status under federal guidelines. This includes a great number of organizations, but many, most notably religious organizations, are exempt from filing. Very small groups and associations, likewise, are not captured in these categories.

Nonprofits are rarely established as ends in themselves. Rather, "they are instruments created to achieve other ends" (Morgan, 2006, p. 15). Van Til (2005) describes the purposes for which organizations are established by sector. A first sector includes corporations and businesses, which are formed to make a profit, produce the bulk of goods and services for a society, and hire the most labor. A second sector is government, which provides military capacity, serves as a regulator, and provides some welfare services. Private voluntary and nonprofit organizations form a third sector and pursue a variety of altruistic and social ends. These organizations "address a number of educational, charitable, and membership purposes and are supplemented by much valuable voluntary effort" (p. 41). A final sector includes family and kinship relations.

Van Til's third-sector distinction of organizations as *pri vate* and *nonprofit* differentiates them from government agencies, for-profit firms, or family or kin relations. His definition also interjects the notion of *voluntary.* Lohmann (1992) notes that a "distinction between productive and unproductive labor is, in all likelihood, the theoretical source of the contemporary distinction of profit-making and nonprofit endeavors" (p. 37). Nonprofit organizations rely on volunteer labor. About 61.8 million people, or 26.4% of the U.S. population, volunteered for an organization between September 2007 and September 2008. About 35% of these volunteers worked the most hours in religious organizations, followed by 26% at educational or youth services. Another 14% of volunteers performed activities mainly for social or community service organizations (U.S. Department of Labor, the Bureau of Labor Statistics, 2009).

Some nonprofit organizations serve almost as an arm of government. Funding patterns blur distinctions, and nonprofits can become subject to pervasive governmental direction and oversight. "Most nonprofit service organizations depend on government support for over half of their revenues: for many, government support comprises their entire budget" (Smith & Lipsky, 1993, p. 4). Nonprofits are not organized for purposes of generating profits like private businesses, but to suggest that they do not seek surplus revenues would be misleading. Many engage in entrepreneurial activities. "Money is vital. . . . No organization can operate without money" (Swoboda & Swoboda, 2009, p. 13).

Nonprofit Organizations as Organizations

The structure of a nonprofit organization varies based on size, purpose, government laws, and organizational bylaws that govern the organization and appointments to its board of directors. Nonprofit organizations are typically private organizations that are governed by a board of directors or trustees who do not receive compensation. These governing bodies provide policy direction and set and revise the nonprofit's mission and vision. They are also responsible for ensuring the fiscal viability of the organization and hiring and firing an executive director, who is responsible for its day-to-day operations. This person is typically compensated for his or her time.

One way of understanding a nonprofit organization is to observe the goals or ends to which it aspires. This is found in its mission statement, which outlines its purpose. The array of nonprofit missions is diverse. Some designated as *charitable* are public-serving organizations established for broad, often altruistic purposes. These organizations serve the poor or disadvantaged; seek to protect people, animals, or the environment; promote health, safety, science, or the arts; and provide education, information, and other goods and services to the general public.

Other *noncharitable* nonprofit organizations serve only a subsection of the public. Membership-based nonprofit organizations may provide incidental or latent benefits to a larger community, but they are organized to provide benefits to their base, typically dues-paying members. These benefits may include tangible goods and services (such as insurance coverage, automobile towing, newsletters, and bumper stickers), access to exclusive "country club" facilities and social activities (such as golf courses, swimming pools, and dances or other social events), professional development, education and networking opportunities, and intangible and psychic benefits such as an enhanced self-image, a feeling of belonging, camaraderie, and friendship.

The nonprofit sector as a whole is advantaged with an image suggestive of a selfless and generous lot, but while many nonprofit organizations are formed for beneficent purposes, the characterization is too limited (Wagner, 2000). The broader nongovernmental sector includes extremist, terrorist, and hate groups, as well as unincorporated entities such as street gangs. By one estimate, the number of hate groups in the United States is rising. Some of these are organized as nonprofit corporations, whereas others are informal groups without 501(c)(3) nonprofit charitable status. In 2008, there were 926 such groups, up from 888 the previous year (Holthouse, 2009). Ku Klux Klans, neo-Nazis, and various skinhead groups are among these. In discussing the sector, it is helpful to recognize that, collectively, the vast majority of organizations are charitable, serve the common good, and provide benefits to society. The handful of recognized hate groups that exist should not be seen as defining of the sector. Nonetheless, given broad definitions and the scope of associations that exist in the United States, they are arguably one element of the nonprofit sector.

What's in a Name?

Organizations in the nonprofit sector have been referred to as voluntary organizations, public charities, charitable organizations, informal organizations, associations, clubs, and service-providing organizations. Each descriptor captures some of the characteristics of a nonprofit organization, but each is deficient to accurately describe the features of all.

The phrase *voluntary organization,* for example, recognizes the noncoercive nature of a nonprofit organization (Frumkin, 2002) and invokes the image of voluntary labor that is necessary for the governance and the day-to-day operations of many contemporary nonprofit organizations. Nonprofit boards of directors are volunteers, who do not receive remuneration for their labor and cannot be enriched through the revenues generated by the organization. These volunteers are often professionals and leaders in their communities, bringing their experience, time, talent, treasure, and connections to their boards.

Volunteer labor is also widely used in nonprofit organizations for administrative and support services as well as for program operations, fundraising, event planning, and implementation. Yet, the phrase *voluntary sector* does not recognize the paid labor force supported by nonprofits. In 2006, nonprofit organizations—including public charities, private foundations, and all others—accounted for 8.11% of the wages and salaries paid in the United States (The Urban Institute, 2008). Contemporary nonprofit organizations are not profit seeking by definition, but they must create steady revenue streams to grow, develop, and sustain their activities. Sustaining a nonprofit organization in today's competitive environment requires attracting people with professional skill sets to their doors, and these people are increasingly compensated.

It is estimated that of the roughly 1.9 million nonprofits in the United States, 1.2 million are registered as public charities. The word *charity* means "individual benevolence and caring" and "includes relief of poverty, helping the sick, disabled and elderly, supporting education, religion and cultural heritage" (Anheier, 2005, p. 8). Charitable exempt purposes are set forth in section 501(c)(3) of the IRS code. These purposes

> are charitable, religious, educational, scientific, literary, testing for public safety, fostering national or international amateur sports competition, and preventing cruelty to children or animals. The term charitable is used in its generally accepted legal sense and includes relief of the poor, the distressed, or the underprivi leged; advancement of religion; advancement of education or sci ence; erecting or maintaining public buildings, monuments, or works; lessening the burdens of government; lessening neigh borhood tensions; eliminating prejudice and discrimination; defending human and civil rights secured by law; and combating community deterioration and juvenile delinquency. (IRS, 2009)

Many organizations can qualify as charitable. As mentioned previously, however, charitable nonprofits are just one type of nonprofit organization recognized under state laws or in the IRS codes.

A Firm Legal Foundation

The First Amendment in the Bill of Rights to the U.S. Constitution provides a firm legal foundation for nonprofit organizations to exist. Freedoms of speech, religion, association, and the press, along with the right of the people to petition the government, create wide latitude for citizens to form associations for almost any purpose. In 1819, the U.S. Supreme Court upheld the right of nonprofit corporations to remain beyond the reach of excessive government interference. In *Dartmouth College v. Woodward* (1819), the Court held that the composition of a board of directors of a legal private, charitable, eleemosynary corporation could not be altered by government. The ruling also upheld the right of boards of directors to govern and make policy decisions relatively unfettered.

A Simple Incorporation Process

To legally incorporate a nonprofit organization is a relatively simple process, which serves to facilitate rather than discourage applications. It is estimated that every day 100 new nonprofits are incorporated in the United States. To create a legal corporation, a nonprofit must file articles of incorporation documents with the state's secretary of state. Application fees are relatively small, often only a few hundred dollars (Hopkins, 2009).

The benefits of incorporation include legal safeguards for the group's officers, employees, and volunteers and reductions in state and local taxes or exemptions from property, sales, and income taxes. Legally incorporated nonprofit organizations may also apply to the IRS to request federal tax exemptions. The IRS is Congress's designated agency for reviewing applications, but eligibility, approval, and the type or amount of beneficial treatment is determined by Congress. The 1954 tax act established the codes used today by the IRS (Ott, 2001). The classifications vary based on the organization's purpose or mission, but almost all fall under the umbrella of section 501(c) of the Internal Revenue Code. Presently, almost 30 501(c) classifications exist.

Nonprofit Organizations

The categories identified by the IRS (2009) under the 501(c) coding scheme are shown in Table 4.1. A host of other nonprofits are also identified under IRS codes 501(d), 501(e), 501(f), 501(k), 521(a), and 527. As can be seen from this extensive listing, the purposes and types of nonprofit organizations are varied and vast. Examples of the most popular types of nonprofit organizations are described more fully in the following sections.

Internal Revenue Code	*Typical Organizations*
501(c)(1)	Corporations organized under act of Congress (including federal credit unions)
501(c)(2)	Title-holding corporations
501(c)(3)	Religious, charitable, and similar organizations
501(c)(4)	Civic leagues and social welfare organizations
501(c)(5)	Labor and agricultural organizations
501(c)(6)	Business leagues
501(c)(7)	Social and recreation clubs
501(c)(8)	Fraternal beneficiary associations
501(c)(9)	Voluntary employees' beneficiary associations
501(c)(10)	Domestic fraternal beneficiary associations
501(c)(11)	Teachers' retirement fund associations
501(c)(12)	Benevolent life insurance associations, mutual ditch or irrigation companies, mutual or cooperative telephone companies, or like organizations
501(c)(13)	Cemetery companies (owned and operated exclusively for the benefit of their members)
501(c)(14)	State-chartered credit unions, mutual reserve funds
501(c)(15)	Mutual insurance companies or associations
501(c)(16)	Cooperative organizations to finance crop operations
501(c)(18)	Employee funded pension trusts (created before June 25, 1959)
501(c)(21)	Black lung benefit trusts
501(c)(22)	Withdrawal liability payment funds
501(c)(25)	Title-holding corporations or trusts with multiple parents
501(c)(26)	State-sponsored, high-risk health coverage organizations
501(c)(27)	State-sponsored worker's compensation reinsurance organizations

Table 4.1 Main IRS Nonprofit Categories

501(c)(3) Charities

The number of charitable organizations in the United States is estimated at 1.2 million. This category of nonprofits includes service-providing charities, religious organizations, and funding intermediaries including foundations, federated funders, and professional fundraising groups (Salamon, 1999, p. 26).

One prominent service-providing charity is the Alzheimer's Association, a national nonprofit organization with state and local affiliated chapters. The Alzheimer's Association is the leading voluntary health organization in Alzheimer care, support, and research. Its mission is to "eliminate Alzheimer's disease through the advancement of research; to provide and enhance care and support for all affected; and to reduce the risk of dementia through the promotion of brain health" (Alzheimer's Association, 2010).

In addition to mission statements that explain the purpose and existence of an organization, nonprofits often use a vision statement to help inspire staff and offer the community a glimpse into what the organization hopes to achieve. The vision of the Alzheimer's Association is "a world without Alzheimer's disease." Hotlines, special event fundraisers, research and journal publications, consumer awareness bulletins, town hall meetings, support groups, research grants, information and referral for families, care consultations, education and safety services, online message boards, library services, conferences, and the like are goods and services provided by the Alzheimer's Association.

Religious charities are treated somewhat differently than other charitable nonprofit organizations. The Establishment Clause of the First Amendment to the U.S. Constitution provides organizations that promote religious views with protection from interference by government. John Marshall, Supreme Court Justice from 1801 to 1835, noted that "the power to tax" is also "the power to destroy." Thus, religious nonprofits are able to exercise a great deal of fiscal autonomy and are not held to the same reporting requirements as other charities. Of the estimated 377,640 congregations that currently serve their communities in the United States, about half have chosen to register with the IRS (The Urban Institute, 2008).

Religious nonprofit organizations are protected from invasive government inquiry and regulation, but this freedom is not absolute. Faith-based organizations that contract with governments to deliver services or those that have been charged with blatant abuses of the public trust, for example, may become subject to stringent fiscal reporting requirements. These are exceptions, however, rather than the rule. The largest faith-based organizations in the United States include Christianity, Judaism, Islam, Hinduism, Wicca, Buddhism, Sikhism, and Baha'i World Faith (Indiana University of Pennsylvania, 2009).

Funding intermediaries are charitable organizations whose principal purpose is to channel financial support, especially private charitable support, to other nonprofit organizations. These intermediaries include foundations, federated funders such as United Way of America and its affiliates, and professional fundraisers.

Foundations provide funding to other charitable nonprofit organizations, typically through earnings garnered from an endowment (Salamon, 1999, p. 26). The Foundation Center, a national nonprofit service organization that publishes research on trends in foundation growth, practices, and giving, reports that charitable foundations gave $45.6 billion in 2008 (The Urban Institute, 2008). Of this amount, 72% came from private independent foundations, 10% came from community foundations, 10% from corporate foundations, and 8% from operating foundations (The Urban Institute, 2008).

A well-known private foundation is the W. K. Kellogg Foundation, established in 1930 by breakfast cereal pioneer W. K. Kellogg. The foundation receives its income primarily from the W. K. Kellogg Foundation Trust, which owns substantial equity in the Kellogg Company, in addition to a diversified financial portfolio. The foundation is governed by an independent board of trustees and receives its income primarily from the trust's investments. The charitable mission of the W. K. Kellogg Foundation is to "support children, families, and communities as they strengthen and create conditions that propel vulnerable children to achieve success as individuals and as contributors to the larger community and society." Today, the organization ranks among the world's largest private foundations (W. K. Kellogg Foundation, 2009).

501(c)(4) Civic Leagues and Social Welfare Organizations

Civic leagues and social welfare organizations "operate primarily to further the common good and general welfare of the people of the community (such as by bringing about civic betterment and social improvements)" (IRS, 2009). Seeking legislation germane to the organization's programs is a permissible means of attaining purposes. Although 501(c)(3) charities may advocate for policy changes and engage in lobbying activity, it cannot be their primary purpose or they will jeopardize their charitable status. Thus, 501(c)(4) civic leagues and social welfare organizations may be created for the purpose of engaging in lobbying as a primary activity.

An example of a prominent 501(c)(4) organization in the United States is the National Rifle Association of America (NRA), which was founded in 1871. The NRA's Internet website includes the history and the many activities of the organization.

> While widely recognized today as a major political force and as America's foremost defender of Second Amendment rights, the NRA has, since its inception, been the premier firearms education organization in the world. But our successes would not be possible without the tireless efforts and countless hours of service our nearly four million members have given to champion Second Amendment rights and support NRA pro grams. As former Clinton spokesman George Stephanopoulos

> said, “Let me make one small vote for the NRA. They’re good citizens. They call their Congressmen. They write. They vote. They contribute. And they get what they want over time.” (NRA, 2009)

Another prominent 501(c)(4) organization is the National Organization for Women (NOW). NOW was founded in 1966 by women’s rights advocates and boasts a membership of 500,000 contributing members (NOW, 2009). Its purpose “is to take action to bring women into full participation in society—sharing equal rights, responsibilities and opportunities with men, while living free from discrimination.” NOW describes itself as the largest, most comprehensive feminist advocacy group in the United States.

> NOW’s vast and diverse membership gives us clout in the government, media and the public eye. By speaking out and taking action, NOW activists make change happen at the local, state and national level. Because we don’t rely on foun dation or corporate dollars, NOW’s work for equality and jus tice is made possible by membership dues, individual donations and volunteer hours. (NOW, 2009)

Social welfare organizations such as the NRA and NOW offer their members selective benefits such as membership cards, magazines, newspapers, e-mail alerts, bumper stickers, insurance, and the like. Membership dues are not deductible as charitable contributions and donors to these organizations cannot deduct their gifts from their personal tax obligations.

501(c)(5) Labor and Agricultural Organizations

Section 501(c)(5) provides for exemption of labor and agricultural or horticultural organizations. To gain exemption, these groups share the requirement applicable to all other nonprofit organizations: that the net earnings of the organization may not inure to the benefit of any member. The objectives of 501(c)(5) organizations must relate to the

> betterment of conditions of those engaged in the pursuits of labor, agriculture, and horticulture, the improvement of the grade of their products, and the development of a higher degree of efficiency in their respective occupations. Seeking legislation germane to the labor or agricultural organiza tion’s programs is recognized as a permissible means of attaining its exempt purposes. Thus, a section 501(c)(5) organization may further its exempt purposes through lob bying as its primary activity without jeopardizing its exempt status. (IRS, 2009)

An example of a 501(c)(5) organization is the Iowa Soybean Association (ISA). The ISA was organized in 1964 by a group of Iowa farmers who came together with a common goal of increasing the profitability of soybean production in the state. Currently, the association serves 6,000 members (ISA, 2009).

The ISA describes its activities as initiating grassroots governmental affairs activities at all levels and promoting state soybean policy positions in Des Moines, Iowa, and Washington, D.C. The organization conducts member services programs and contracts for consumer and industry information, producer communications, and research. “Members of the ISA are interested in increasing the profitability of soybeans and want to assure their livelihood in the production of soybean” (ISA, 2009).

501(c)(6) Business Leagues

Section 501(c)(6) of the Internal Revenue Code provides for the exemption of business leagues, chambers of commerce, real estate boards, boards of trade, and professional football leagues, which are not organized for profit. As with other nonprofits, they share the nondistribution restriction, which means that no part of their net earnings may be used to benefit any officer or member of the organization.

A business league is an association of people having some common business interest; the organization’s purpose is to promote that common interest. These are not the regular businesses in the for-profit sector. Trade associations and professional associations are business leagues. To be exempt, a business league’s activities must be devoted to improving business conditions of one or more lines of business as distinguished from performing particular services for individuals. The term *line of business* generally refers either to an entire industry or to all components of an industry within a geographic area. It does not include a group composed of businesses that market a particular brand within an industry (IRS, 2009). Chambers of commerce and boards of trade are organizations of the same general type as business leagues. They direct their efforts at promoting the common economic interests of all commercial enterprises in a trade or community, however.

The American Medical Association (AMA) is a well-known 501(c)(6) nonprofit organization with a mission “to promote the art and science of medicine and the betterment of public health.” Its vision is “to be an essential part of the professional life of every physician” (AMA, 2009). The AMA seeks to help doctors help patients by uniting physicians nationwide to work on the most important professional and public health issues.

> The future of medicine should be decided by physicians themselves not legislators or private interests like insurance companies. So the AMA represents physicians’ interests in both the public and private sectors and offers valuable tools that empower physicians to do their best work. (AMA, 2009)

501(c)(7) Social and Recreational Clubs

Social and recreational clubs are organized for the pleasure and recreation of their members, and almost all of its activities must be for these purposes. A club will not be recognized as tax exempt if its charter, bylaws, other governing instrument, or any written policy statement provides for discrimination against any person based on race, color, or religion. There is an exception, however, for a club that in good faith limits its membership to members of a particular religion, to further the teachings or principles of that religion and not to exclude individuals of a particular race or color.

The mark of a social or recreational club is limited membership. In other words, if a club's facilities are open to the general public (people other than members or their dependents or guests), it may cause denial of exemption. This does not mean that any dealing with outsiders will automatically deprive a club of exemption, but nonprofit organizations of this type are not public-serving enterprises.

To be recognized as a 501(c)(7) organization, the IRS requires that a club to be supported solely by membership fees, dues, and assessments. A section 501(c)(7) organization may receive up to 35% of its gross receipts, including investment income, from sources outside of its membership without losing its tax-exempt status. No more than 15% of this amount may be derived from the use of the club's facilities or services by the general public or from other activities not furthering social or recreational purposes for members (IRS, 2009). If an organization has nonmember income that exceeds these limits, the club will be subject to IRS scrutiny, and its exempt status will be called into question.

The category of popular 501(c)(7) organizations is numerous and may include golf clubs, country clubs, campus sororities and fraternities, hiking clubs, book clubs, and the like. An essential earmark of an exempt club is personal contact, commingling, and face-to-face fellowship. Thus, these organizations are often small with perhaps up to several hundred members. Members must share interests and have a common goal directed toward pleasure, recreation, or other nonprofitable purpose. A statewide or nationwide organization that is made up of individual members but is divided into local groups satisfies this requirement if fellowship is a material part of the life of each local group.

501(c)(8) or 501(c)(10) Fraternal Beneficiary Societies, Domestic Fraternal Beneficiary Societies

To be exempt under IRS section 501(c)(8), a fraternal beneficiary society, order, or association must have a fraternal purpose, and its membership must be based on a common tie or the pursuit of a common object. The organization must also have a substantial program of fraternal activities and operate under the lodge system or for the exclusive benefit of the members of a fraternal organization (IRS, 2009). A lodge system requires, at a minimum, two active entities: (1) a parent organization and (2) a subordinate (called a lodge, branch, or the like) chartered by the parent that is largely self-governing. It must provide for the payment of life, sickness, accident, or other benefits to the members of such society, order, or association or their dependents. An organization that provides benefits to some, but not all of its members may qualify for exemption so long as most of the members are eligible for benefits, and criteria for excluding certain members are reasonable (IRS, 2009).

To be exempt under IRC 501(c)(10), a domestic fraternal society, order, or association must meet the above requirements but must *not* provide for the payment of life, sickness, accident or other benefits to its members. The organization may arrange with insurance companies to provide optional insurance to its members without jeopardizing its exempt status. In addition, it must devote its net earnings exclusively to religious, charitable, scientific, literary, educational, and fraternal purposes, and it must be a *domestic* organization, that is, it must be organized in the United States (IRS, 2009). Referred to colloquially as "animal organizations," the hundreds of Moose, Eagles and Elks lodges in the United States are among the best-known fraternal nonprofit organizations. The mission of the Benevolent and Protective Order of Elks of the United States is as follows:

> To inculcate the principles of Charity, Justice, Brotherly Love and Fidelity; to recognize a belief in God; to promote the wel fare and enhance the happiness of its Members; to quicken the spirit of American patriotism; to cultivate good fellowship; to perpetuate itself as a fraternal organization, and to provide for its government. The Benevolent and Protective Order of Elks of the United States of America will serve the people and communities through benevolent programs, demonstrating that Elks Care and Elks Share. (www.elks.org)

The number of traditional fraternal organizations in the United States has been on the decline in recent decades. This has been attributed to a number of causes, including hyperindividualism and an aging membership base (Bellah, Madsen, Sullivan, Swidler, & Tipton, 1985). The reduction in the number of these organizations poses dilemmas for members and raises interesting questions about the role of such organizations in local communities (Dicke, 2008).

Benefits Available to Legally Incorporated Nonprofits

A host of laws and regulations have evolved over time to provide for the exemption of nonprofit charitable, religious, educational organizations, fraternal beneficiary societies, and certain mutual savings banks and mutual insurance companies. These exemptions have been justified based on arguments of public support, ethics and morals, public policy, and special interest.

> Each of these types of entities (and numerous others) are granted exemptions generally because of the political power these special interest groups represent or the legislature's

> feeling these group's (veterans particularly) should be rewarded for past services to the country. These classifica tions also lend credence to the diversity and free association argument for exemption. (Scrivner, 2001, p. 128)

Incorporated nonprofit organizations of all types may be able to take advantage of certain tax benefits and qualify for eligibility for government grants or contracts or foundation grants. Preferred postage rates received from the United States Postal Service (USPS) is another benefit that also may be available. Only some nonprofit organizations are able to take advantage of all of these benefits. For example, donors making a contribution to a 501(c)(3) charitable nonprofit organization are able to deduct all or some of their donation from their personal tax obligation. This incentive to encourage charitable giving by individuals does not apply to other 501(c) nonprofit organizations.

The favorable postage rate provided by the USPS is likewise targeted to just a few types of nonprofits, and there are restrictions on how and when these can be used. To apply for authorization to mail at nonprofit rates, potentially eligible organizations must provide supporting documentation that they are organized and operated for a qualifying primary purpose. The organization must also show that they are not organized for profit and also that none of the organization's net income is intended to benefit any individual or private stockholder.

The USPS recognizes 10 categories of organizations that may apply for authorization to mail at nonprofit standard mail rates. These include religious, educational, scientific, and philanthropic (charitable), agricultural, labor, veterans, and fraternal organizations, along with voter registration officials and national and state political parties (USPS, 2009). Explicitly *excluded* from eligibility are organizations including government, associations of rural electric cooperatives, automobile clubs, business leagues, chambers of commerce, citizen's and civic improvement association, individuals, mutual insurance associations, political organizations other than those specified, social and hobby clubs, and trade associations.

Taken together, there are a number of attractive benefits and incentives for incorporated nonprofit organizations, with the 501(c)(3) charitable organizations receiving the best package. These nonprofits receive the most favorable tax treatment under U.S. law because they provide goods and services to the public that, in their absence, government would have to provide. There is also general support from the public for the generally beneficial activities of these organizations.

Summary

The definition of a nonprofit organization provided at the outset of this chapter offers insight but "developing a cognitive map of the [nonprofit] sector is difficult" (Gronberg, in Ott, 2001, p. ix). Attempting to describe even one small part of it with consistency is challenging. A nonprofit organization can be accurately described as a small, loose association of people with like-minded goals who volunteer their time for public purposes, but it also could just as easily be characterized as a large, formally incorporated structure with hundreds of volunteers and paid employees. And whereas vast numbers of nonprofit organizations provide benefits to the larger society, others pursue corrosive ends.

This chapter has provided an overview of nonprofit organizations that are formally organized in the United States. At the time of this writing, the information included is as precise as is possible, but changes in state or federal laws or the adoption of new policies or regulations that affect nonprofits could change its accuracy. Thus, the reader is urged to stay abreast of relevant laws, rules, and so on to ensure access to the most up-to-date information affecting the status of nonprofit organizations in the United States.

What has been provided here should by no means be considered an exhaustive discussion of nonprofit organizations. In countries such as the United Kingdom, many government agencies have adopted what are referred to as "new public management reforms." These partnerships between governments and nonprofits are proliferating, and there is a growing body of research about these collaborations (Chew & Osborne, 2009). There is much to be learned about these and a host of other nonprofit initiatives in the years to come.

In general,

> the purposes of nonprofit organizations and for profit organiza tions differ with the purpose of a nonprofit serving as the basis of its formal exemption from paying federal income taxes. Additionally, unlike for profit organizations, most nonprofit organizations are legally constrained from distributing residual earnings to individuals who exercise control over the firm, such as officers, directors, or members. (The Urban Institute, 2008)

Roles of Government, Nonprofit Sector, Business, and Family and Their Interaction in Democracy

Stuart Mendel

Maxine Goodman Levin College of Urban Affairs

In 2008, democracy was credited as being practiced as the formally recognized national government in 121 countries around the globe, according to Freedom House, an independent watchdog organization that monitors and promotes democracy and human rights. In each of these places, the national character, practices, and influences on democracy are heavily influenced by the history, economy, culture, religious values, and long-standing traditions of each land. For example, few would argue that there are considerable differences in the manner in which democracy is practiced in Great Britain and India; Israel and the United States; Venezuela and Germany; France and Turkey; Spain and Sri Lanka; Ukraine and Mexico. Because of the variations in place-bound democracy, it will be efficient to consider a single model that can serve as comparison for other countries of the globe.

This chapter will discuss government, the nonprofit sector, business, and family and their interaction in American democracy. It will establish a context for understanding the overarching polity—all the actions that together compose the political fabric of a community—in the United States. It will also offer definition and insight into the distinctive American civil society, a concept whose product results from the combined workings of government, the nonprofit sector, business, and family. The model will provide opportunity for students and scholars to establish four benchmark characteristics of democracy for further comparison to other countries around the globe, which are listed in the closing paragraphs. Finally, readers will note that this chapter focuses on Western underpinnings and experience and does not address issues as experienced by native peoples on the North American continent.

Background

Democracy in America has been practiced in permutations of successive complexity for nearly 400 years. It has advanced from its origins within a particular framework of countervailing economic, political, and social forces that prized individuals and their desire for a life in pursuit of their own interests. It should come as no surprise the original principles serve as the foundation for the democracy in the United States of the 21st century. So, to understand democracy today, it is necessary to recall and analyze the origins, circumstance, and principles from which American civil society arose on the North American continent.

Formal institutions of government were few during the early years of European settlement of America. In the absence of an established public civil authority, the rule of law over commercial transactions, the ownership of property, and the behavior of residents was governed by a combination of military court justice, private church leaders, and associations of individuals united by common self-interest (Ubbelhode, 1960). These practices filled a gap arising from the slender thread of public authority in a wilderness whose isolation from the Old World traditions and rituals was exacerbated by the time it took a wooden-masted sailing ship of the late 17th and early 18th centuries to cross the Atlantic Ocean and return with proper instructions to resolve conflict and establish order. In the absence of enforceable local government, a tradition of problem solving and decision making over the public good through local consensus took hold, in which the opinion and choice of private interests with economic concerns, operations, or property ownership increased in importance.

The absence of a public and formal coercive authority with the means to enforce the law stimulated affluent landowning and enterprising residents of America to associate in the pursuit of their self-interests. We are reminded that self-interests were first and foremost economic in nature. Even in the case of the Puritans, whose arrival in America is commonly attributed to a desire to escape the religious persecution in the countries of Europe, success directly related to the ability of individual communities to be not only self-sustaining but commercially profitable. This was certainly the case with the early Virginia settlements at Jamestown.

During the 17th and 18th centuries, the practice of independent decision making in colonial America was marked by two characteristics. First, although individuals preferred to be left to their own devices, they would join together for the public good when it was in their interests to do so. Second, the presence of a vast expanse of property available to those who had the power and capacity to appropriate it from the native residents of the land offered individuals opportunities for independent wealth generation and the liberty to engage in profit-making enterprises as they were inclined. The notion of profit making and wealth creation to define the intention behind the use of the terms *liberty* and *freedom* would later appear in the Constitution of the United States.

During the early to middle colonial period, democracy was local and informal; it was initially less a tool of the coercive power of government than a collaborative method of preserving the interests of individuals to exploit the opportunities for wealth in the great rough countryside. While settled communities were small and isolated by vast forests, streams, and mountains, the important connections with liberal democracy resided with the individuals, their family groups, and small-town leaders. The leading citizens of each community were associated through their level of education and affluence. But this is not the whole story. In addition to the moral purism ascribed by early leading colonial citizens such as John Winthrop in the 1630s Model of Christian Charity, wherein small-town life was cast as a shining city on the hill in the backwoods, the founders of the nation were influenced by the philosophies of freedom of rights, equality of man, and market-based economic principles put forth by the classical thinkers John Locke, Edmund Burke, Adam Smith, and others.

Looking back on these origins allows us to understand the formative seeds of democracy as political pluralism; its normative tensions among American democracy, government, business, nonprofit organizations, and family yield a distinct polity and civil society. Unlike the situation in established countries of the Old World, the tensions of governance in the New World were moderated by economic incentives that served to protect the interests of individuals by placing safeguards against, as James Madison warned, "the tyranny of the majority" and that of "private factions." In public government, the doctrine of separation of powers, separation of religion from state, freedom of speech, and the remaining rights declared in the U.S. Constitution limited the statutory power of public authority. At the same time, limits on private power and authority are set in place by public statute, market competition, and the associative organizing action individuals.

The American Political Tradition and the Ecology of Games

Democracy in middle to late colonial America incubated in an environment of little or no central authority. In place of establish regimes, bureaucracy, and the military, which might be found in the countries of the Old World, the values of informal private association for economic self-interests, small families and communities, religion, and the pragmatism of geographic isolation fashioned a private governance over public matters. Private governance rested on a delicate balance between the rights assumed by individuals and the responsibilities required of individuals to maintain those rights for all. The combination of public and private authority bound together to nurture the best conditions possible for the acquisition of wealth and composed what we might today consider a distinctive "civil society" (O'Connell, 1999).

The American political tradition arose from the early framework, established during the colonial era, of individual effort whose rewards were the creation of wealth with little interference from public authority. The sentiments behind this philosophy arose through the tug and pull of competing interests that compose American civil society and through the thinking of the founding generation of American leaders—James Madison, Thomas Jefferson, and others—who advanced the proposition that owning of property by a large number of individuals was a desirable basis for a representative government. The motivation for these yeoman farmers—independent, self-made men—would be a collective self-interest for preserving each one's ability to earn and protect his liberty to amass wealth (Gould, 2003). Today, we recognize elements of this tradition in the political platforms of the two major national parties and in the subconscious promise of freedom and liberty extended to American families, which advances the potential of the individual.

Although the well-known historian Richard Hofstadter offered an influential criticism of the American political tradition as much more nuanced in the development of U.S. economic, political, and social structures by the nation's important leaders and political figures, the tradition offers a useful lens through which to understand the roots of democracy in this country. For one, the tradition assigns to its public and private institutions, business activity, and the nature and structure of our families an important role in preserving the liberty to accumulate wealth. An important mechanism to stimulate and preserve this liberty is the tension between government, business, nonprofits, and individuals, which serve as a "check and balance" against perpetual unrestrained power in society.

This notion of check and balance will sound familiar and is a parallel to the well-known separation of powers the authors wrote into the U.S. Constitution. In the usage beyond government, the tensions between government, business, nonprofits, and individuals provide for trust, which is the life blood of liberal, pluralistic democracy and civil society. Democracy in this way of thinking obtains its character through the complex interactions—the tensions—of all the actors of polity, bound together in a competition for the creation or accumulation of wealth and the freedom to obtain wealth. Viewed through this lens, the practice of democracy depends on a civil society characterized by engaged citizens acting toward their individual and collective self-interests.

In more contemporary times, the threads of connection to the earlier era of democracy are readily apparent. People in the United States today can surely agree that self-interest is a powerful force that frames and defines our nationhood. But Americans will also recognize that competition among individuals, associations, and public authority requires a buffer to mediate points of conflict that are not resolvable if left to the government, the market, associations, or the family. As Norton Long described in his important writing of the Local Community and the Ecology of Games each player in this societal competition or "games" contends to advance their own interests by using others and are in turn used to achieve the aims of others. According to Long (1958), in the local polity, overall planning for the public good is seldom, if at all, a rational process guided by a single authority. Rather, policy decisions for public resources result from an aggregate of actions by many individuals working both independently of one another and in concert with one another through institutions they form (Banfield & Meyerson, 1955). The blend of their actions produces a contextual mosaic that Long called an "ecology" or an unconscious operation of intertwined systems that produce predictable results.

At the core of Long's (1958) thesis are associations or communities of people brought together by common goals to which they can aspire as individuals or in collaboration with others. The goals are achieved through structured activities and calculable strategies and tactics in which the community members and others can measure their success or failure. Long called these competitive interactions *games* because the primary participants compete, keep score, and win or lose based on their ability to recognize secondary and tertiary allies and to understand the advantages and possibilities presented on a shifting playing field.

Although the primary focus of community participants is on one game, interactions between multiple games occur frequently when players of one game are compelled to use and be used by players in other games. By way of illustration, Long (1958) offered examples of the real estate developer using the banker, the banker using the civic leader, the civic leader using the faith-based leader, the newspaperman, and so on. At the point where bridging connections between game communities are institutionalized through formation of nonprofit organizations, players become constituents with a greater interest in keeping score. It is important to note that the interrelationships between communities comprise a system of partnership and investment resulting in derivative constituencies of each game.

The enormous upside is that individuals may become wealthy through their own efforts in a system of democracy constructed to aid that process. Unfortunately, the price paid for the potential reward of great wealth has a cruel downside for individuals: If a player fails, the government does not offer a safety net.

Applying the ecology of games theory to democracy and public policy, which shifts with changes in technology and entrepreneurialism, successful outcomes will be incremental and deliberate in their progress. In the best of circumstances, the wheels of government move slowly but deliberatively. On the other hand, unsuccessful outcomes of the ecology of games are reflected in policy-blocking actions, government gridlock, and the political dogmatism of entrenched interests.

Defining the Roles of Government, Business, Nonprofit Organizations, and the Family in Democracy

Democracy

Much has been written about American democracy. Historians such as Gordon S. Wood point to the 18th century and the American and French Revolutions as among the most noteworthy examples of radical change from nobility-based government to the emergence of the kind of representative democracy that has come to be practiced in the United States. These early examples of modern democracy differed in terms of the level of violence and disorder employed by citizens to shift from monarchial governance in the respective countries. Nevertheless, both shared the characteristic of moving toward government that served the greater population of property owners and represented the emergence of an educated middle class of people engaged in skilled trades or business enterprise. In America, equality in democracy was established by the rule of law foremost as a way to protect the property rights and business concerns of people using representative governance by the people, for the people (Bailyn, 1992).

In America, democracy drew its character from the tension of a political philosophy that pit the rule of law and central authority against the more informal aspects of associational citizenship and the responsibility of individuals to participate in their own governance. Invariably, this tension arose in anticipation of individuals who might use the tools of public governance for their own self-interest. James Madison warned of this tendency in Federalist Papers No. 10, where he noted the danger of parties who were at the same time judges in their own causes. Most would agree that the intention of the nation's founders was to place barriers to deter government from entering into oppressive action and expensive ventures. As a result, the separation of powers was an important element of the U.S. Constitution, which positioned government to concentrate its work on maintaining favorable conditions for the development and expansion of business enterprise.

Democracy's relationship with government in the United States is one of many tensions or, as Robert Dahl wrote, conflict arising through public process and private interest. Tension is necessary to nurture and safeguard trust among the broader community because without it, no one can be trusted to act in anything but his or her own self-interest. For example, enacting legislation is a deliberative process requiring time, and compromise provides opportunity for all citizens to be made aware of the proceedings. Slowing the deliberative process also protects the private interests, which may then take action through the function of advocacy and associational interest groups. On the other hand, private interest groups must be monitored by government and other private-interest groups to avoid their undue influence and interference in the business of government.

The relationship between government and democracy is a union of actor and process. Government establishes the legal framework and mechanism for establishing an environment favorable to individuals engaged in creating and preserving wealth. Democracy provides a process through which individuals are bound to follow laws and participate in government. Intermediary organizations that we have come to call nonprofits facilitate the differences between the interests of government and business and correlate the processes of democracy with the interests of individuals. In perpetuating tension among government, business, nonprofits, and the individuals, democracy is preserved and enhanced in a manner that protects the rights and freedoms of individuals.

Liberal Tradition in American Democracy

Among the more important contributions to our understanding of liberal democracy in the United States is the thinking offered by the consensus era scholar Louis Hartz (1955) in *The Liberal Tradition in America*. Hartz explained that the classical liberalism, which embraces capitalism as an organizing principle and was proposed by the 17th-century philosopher John Locke, contributed to the long-standing and exceptional character of democracy in America. Locke's influence on the authors of the U.S Constitution was reflected in the provisions for separation of church and state, separation of powers within government, and the linkage of property ownership to economy and as arising from the labor of individuals (Ashcraft, 1986). The prevailing view was that the American colonies did not have to overthrow a feudal social and economic class system. In fact, some such as Theodore Lowi (1995) argue that the Mayflower Compact established the tone in the New World for civil agreements and resolutions for disagreement as it constituted government through written contract. Tocqueville's observations in the 1830s supported this explanation for the relatively nonviolent nature of the American Revolution as compared to the French (and by extension the Russian revolution in the early 20th century.

Hartz's (1955) treatment of the subject was among the first to point out that liberalism in American democracy arose through the work of individuals as a propertied but class-less polity. This tended to support the framework of the American political tradition and the use of liberal democracy as a way to manage tensions and change in society. The considerable criticism of Hartz by subsequent scholars did not refute his supposition that liberal democracy was present, expressed in the manner he portrayed, or that it influenced the greater society and political character of the United States. Rather, opponents to Hartz focused on his assertions that the American populace shared a uniformity of thought, social status, and access to the economic spoils of their labors. In other words, the criticism was not about liberal democracy as a feature of American polity, but about the fact that in its practice, liberal democracy was not accessible to women and racial and ethnic minorities, who did not participate in or benefit from it.

Government

Government's role in American democracy is a matter of practical application. In granting rights to citizens and expediting their participation in the process of representation, government provides the institutional space to practice democracy. Government also establishes the conditions by which citizens can achieve their self-interests within the bounds of laws. But government's role is also idealistic in that its actions must generate trust by citizens of a nation in the institutions of government and in their private interactions with businesses, nonprofits, and other individuals.

The scholarly literature on government is vast. Even so, a single standard definition of *government* is difficult to establish. For example, *Webster's Online Dictionary* offers six distinctive definitions, each using the term *govern* in its definition of government. Among them are (1) the body of persons that constitutes the governing authority of a political unit or organization, such as the officials comprising the governing body of a political unit and constituting the organization as an active agency, and (2) a small group of persons holding simultaneously the principal political executive offices of a nation or other political unit and being responsible for the direction and supervision of public affairs.

Another online source, Wikipedia, a popular cultural encyclopedia that is not monitored by formal scholarly authority, with millions of articles contributed collaboratively, defines government as "the body within an organization that has authority and function to make and the power to enforce laws, regulations, or rules." Typically, government refers to a civil government that is local, provincial, or national. However, commercial, academic, religious, or other formal organizations are also governed by internal bodies that may be considered as constituting a private government.

The classical thinker Thomas Hobbes, who predated John Locke by 50 years, considered government as a way to order society in a manner so that a single authority would make decisions to the benefit of all. In Hobbes's world, government was best provided by an authoritarian sovereign; the alternative was civil war and chaos, characteristics he felt were "natural" to man. Max Weber, an important 19th-century German social theorist, considered the coercive power of government—its ability to control the behavior of others—as its most distinctive characteristic.

More recently, Lowi (1995) explained that government in America was established as a contract between the framers of the U.S Constitution—a land-owning power elite—and the people. The contract required the elites to put limits on their power in return for consent on the part of all the people to allow government to take place. The powers were delegated to an elected legislature that allocated cascading responsibilities for public control over states and localities. The limitations on national government arose from its role to primarily promote and facilitate commerce by individuals among the states and beyond the nation's borders.

An important distinction in any discussion of government and its role in American democracy are the terms *public* and *private.* For example, a private business or nonprofit organization can provide a service for government via contracted services. In those instances, considerable fuzziness exists as to whether business enterprises or nonprofits that act in place of government or at the side of government are simply operating under the umbrella of government or acting as government.

Barry Bozeman (1987) suggested that public-ness is based on the degree to which an organization is influenced by government and market factors. An important essay by Smith and Lipsky (1993) described the phenomenon of government contracting with nonprofits to provide vital public services and the changes on the culture, operations, and values systems of these private organizations, effectively blurring the line between public and private, government or nonprofit. Dennis Young (2000) took this line of thinking further in arguing that nonprofit organizations have a role for which they may be defined through their relationship with government. Young offered that nonprofits serve as supplement, complement, or advocate against government.

Business

The discovery and exploitation of the resources of nature, skilled crafts, trades, industrial production, commerce, and the movement of goods and services were activities that stimulated the Old World to exploit the New World. The earliest enterprises in America were meant to stimulate wealth for investors who sent the first groups of settlers to Jamestown, Virginia. History informs us, then, that government in America was conceived as tool to promote and sustain commerce and business enterprise. Consequently, risk and reward are at the heart of the American political tradition.

Business forms the basis for everything American. Long ago, it was the reason for the discovery, exploration, and Old World settlement and founding of the country. Business enterprise provided the rationale for the risk-taking ventures that led to the American Revolution and the growth and development of American democracy, association, and civil society. Business interests shaped the U.S. Constitution and provided the motivation for immigration and the advancement of quality of life for individuals and families.

Simply, a business in America is a formal enterprise engaged in the provision of goods or services at a profit. Profits can be shared by owners of a business or industry to increase individual and collective wealth. Among the more simple forms of business enterprise found in capitalist countries such as the United States are those owned by a single individual or family. Traditionally, families in early America are the primary business owners and operators. Today, family-owned business and sole proprietorship still comprise the overwhelming majority of American business enterprises.

The historian Alfred Chandler (1977) wrote that business-sector enterprise in America had two distinct periods of development. The first, prior to the 1850s, was relatively unregulated and focused on the creativity and energy of individuals serving small communities. According to Chandler, business was dominated by the output of plantations and farms, small mills, and skilled crafts. After 1850, businesses emerged that took on more a corporate character, with complex manufacturing managed by professionals spread across the landscape, sometimes at great distance. Today, we would recognize these aspects of business enterprise as common characteristics of corporations of all sizes.

The independent profit motive of U.S. business enterprises requires an environment of low taxes, reliable and quality public services, and minimal regulation by outside authorities, which can result in increased costs of carrying out business activity. In this framework for business enterprise, the American political tradition exists to achieve the best balance of freedom of business operation and public oversight through regulation to protect the public interest while maintaining the best circumstances to achieve profits and generate wealth.

It is important to appreciate that the pursuit of wealth is a common interest to nearly every citizen and resident of the United States, going back to the founding of the nation. If not for the pursuit of wealth through organized business endeavors, American democracy could not exist, for individuals and families who have no tangible assets would have no stake in the system. Democracy gains traction in American society because of the belief that residents are not born into a limited life-long status but can accumulate wealth and the freedom it buys if they work hard and make smart decisions. In this sense, business and democracy are mutually sustaining components of American life.

Nonprofit Organizations

Peter Drucker (1990) observed that private nonprofit institutions are central to American society and are its most distinguishing feature. But the term *not for profit* or *non profit* is a modern invention of the U.S. government and refers to any one of 32 types of tax-exempt private organizations (Internal Revenue Service, 1997). These organizations are differentiated by the subsector of the economy in which they operate, and the Internal Revenue Service (IRS) distinctions reflect varying degrees of tax exemption and limitations on their charitable works.

Generally speaking, nonprofit organizations are governed by a volunteer board of directors who, as stewards of the organizational mission, serve a custodial role over the enterprise, receiving no monetary or business compensation for their services. Surplus operating funds, donations, grants, fees, and endowment income of the organization are reinvested for the betterment of the organization and not distributed to individuals as capital gains or return on investment.

There are many ways to understand what nonprofits are and their role in American democracy. For example, David Horton Smith and Ce Shen (2002) have written that voluntary, informal, grassroots associations are a form of nonprofit and are distinguished from governments, businesses, and families by the substantial presence of voluntary altruism. Smith and Shen do not differentiate one form of nonprofit from simple association between individuals based on the budget size or the issue drawing people together. Rather the essence of the definition is the actions of the association and the formality of its work. Smith and Shen (2002) also note that small community-based nonprofits contribute to political pluralism, participatory democracy, and permissive political control, which in turn sustain civil society.

In his primer on the nonprofit sector, Lester Salamon refers to the private nonprofit sector as the set of organizations that are privately incorporated but serve a public purpose (Salamon, 2002). We learn from Salamon that in America, nonprofit organizations predated the state because communities formed before government institutions were in place to help deal with common concerns. This use of informal associations was the means of establishing social and economic norms and ultimately civil society in America. Over time, formal private institutions have come to sustain civil society and democracy.

In the *Nonprofit Economy*, Burton D. Weisbrod (1981) noted that the limitations of government and private enterprises place the unique characteristics of nonprofits in an important role to serve important social aims that neither of the other two can serve well. In a democratic society in which government tends to serve the needs of the majority, nonprofit institutions can respond to the demands of people who feel intensely about special-interest activities.

The considerable increase in government contracting of services with nonprofit providers since the 1980s has been well documented. Steven R. Smith and Michael Lipsky (1993) express the view that contracting with nonprofits dramatically changed the way public policy was realized and that nonprofits were significantly changed by their relationship with government to deliver social welfare services. In very simple terms, private organizations with government contracts to perform public services are obligated to follow the operational rules and regulations for accountability of taxpayer-supplied funds. Maintaining compliance with government regulations adds costs and complexity to private organizations that might otherwise not have been necessary.

Dennis R. Young (2000) picks up on this theme of partnership between government and private nonprofit organizations and informs us that nonprofits can be founded and designed to serve government. Young suggested that nonprofits can serve as a supplement or complement to public services and authority. At the same time, they also serve as advocate for change through the act of feeding back information to government based on the work performed.

Walter Powell and Elisabeth Clemens (1998) have noted that nonprofit organizations exist in a gray area, straddling government and the marketplace. They appear to be neither commercial nor governmental and yet are partially sheltered by government from market forces and subsidized in part by government funding. Whether they should be tax exempt and autonomous from government and whether they should provide services to benefit the public good are issues of great concern to donors, policymakers, and governments.

In performing the work of government and providing a link to associational life in America, nonprofit organizations serve as prime agents for advocacy with public authority and in informing private interests. Nonprofits have a responsibility and provide the societal mechanism to feed information back into the system of policymakers, grantmakers, and philanthropists working to solve political, economic, and social problems and assist decision makers over the public good.

The role of nonprofits as advocates between the sectors of American society is a function of democracy that is not readily found elsewhere on the globe. As mediating or bridging organizations, nonprofits inform and allow political minorities to influence decision makers in government and protect the rights of individual citizens against unrestrained, unmonitored business activity, while preserving the environment for business enterprise. In simplest terms, nonprofits moderate tension at the boundaries of government and the market, wherein services, planning, and mediation are necessary to sustain an American political tradition that rewards individualistic effort, the creation of wealth, and limited government. Through the process of private action, nonprofits promote involvement by individuals in the regulation of government, business, and other nonprofits, using the franchise of democracy.

Family

John Gardner (2003), the influential founder of the Independent Sector, former secretary of the Department of Health Education and Welfare (HEW) in the administration of Lyndon B. Johnson, and a well-known speaker on the topic of leadership in American life, noted that each generation of caring citizens must take action to re-create and reshape society to meet the unrolling future. The social historian Arthur M. Schlesinger Sr. (1968) devoted an entire chapter in his final work, *The Birth of the Nation,* to the role of the American family, crediting the American family as the basis for sound community life, made more urgent by economic need during the country's formative years.

The theme of family resonates throughout American history as an anchor of civil society and social norms. Although traditional notions of family have been revised over the second half of the 20th century to account for the high incidence of divorce, single-parent families, children raised by grandparents, domestic partnerships, and the like, the family as a basic organizing structure, and the transfer of values from parental figures to children and youth still remains important to American democracy.

It is worth noting that interconnections between groups of people begin with family relationships and the social values and work ethic each contributes to associations with others. American democracy requires civic engagement by individuals and, through an ecology of games, contributes to the public social-policy debate. In other words, the smallest association of people, the family, forms the basis for participatory democracy.

Peter L. Berger and Richard John Neuhaus (1977), writing under the banner of the conservative American Enterprise Institute, authored an influential book called *To Empower People: The Role of Mediating Structures in Public Policy,* asserting that one way to increase public welfare services without increasing the size of government was through the use of mediating organizations. Berger and Neuhaus defined mediating organizations as structures that stand between individual people and impersonal institutions. They posited mediating structures listed in *To Empower People* were the neighborhood, the family, the church, and the voluntary association.

Neighborhoods, families, churches, and voluntary associations as mediating structures were mentioned for three reasons. First, the mediating structures enveloped the endorsement of many ideologies concerned with community by classical thinkers such as Edmund Burke, Alexis de Tocqueville, Karl Marx, and Émile Durkheim. These mediating structures were transforming dramatically in America throughout the 1950s, 1960s, and 1970s as reflected by the post–World War II baby boom, suburbanization, the decline of major American industrialized cities, and the rise of other urban areas. Second, the mediating structures sat at the center of Great Society War on Poverty programs, which called for "maximum feasible participation" and played important roles in civil and welfare rights and social justice initiatives. Third, Berger and Neuhaus's mediating structures provided rallying points (Fisher, 1993) during the 1960s and 1970s for people who had begun to question the size of government and its role in the welfare state in an American society (Smith & Lipsky, 1993) committed to private property, low taxes, and individualistic effort.

Practically speaking, the neighborhood, the family, the church, and the voluntary association readily amassed grassroots support from people in city neighborhoods for civil and welfare rights advocacy and wealth preservation in community organizing (Banfield, 1970). As a result, private nonprofit neighborhood organizations were positioned to work on behalf of their constituents with the public sector. As Berger and Neuhaus (1977) pointed out, formal associations of people provide an institutional mechanism to hold government, business, and others accountable through democratic action.

Most relevant for nonprofit executives were the characteristics Berger and Neuhaus (1977) assigned to their mediating structures. Borrowing from Burke, they suggested that the "small platoon" was an effective way to assuage the alienation people felt from their public institutions and to bridge the gap between public policy and best practice. Neighborhood-based organizations allowed for innovative problem solving. Private organizations were adaptable to changing circumstances. Mission-driven nonprofit organizations had board membership from the neighborhood and were accessible to people close to the problems at hand.

Summary and Future Directions

There is much to be learned about the nature of civil society and democracy in America. Terms such as democracy, civil society, government, business, nonprofits, and the family are familiar and yet much more complex than we may credit at first glance. Numerous scholarly journals produce even more numerous articles that struggle to pin down these surprisingly elusive concepts.

It is also no coincidence that the terms *democracy* and *civil society* are often paired in scholarly discourse. The credibility of democracy arises from the trust individuals have in the system and the seriousness with which they take their responsibilities for voting, associating, and maintaining a health oversight of public and private matters (Skocpol & Fiorina, 1999). The interconnections between Americans and their tendency to organize around issues of all kinds lay the groundwork for trust in society. Robert Putnam's (1993) research connecting effectiveness of democracy in Italy to the presence and vibrancy of voluntary associations there illustrates this principle quite clearly.

Four reinforcing facets of this discussion stand out as useful tools that students of American democracy may use to inform their understanding of the interconnections between government, business, nonprofits, and families. First, the engagement of individuals, families, businesses, nonprofits, and government officials in an ecology of games in a local community is necessary to form bonds of partnership that sustain democracy. These interconnections form the fabric of civil society and allow communities to solve public problems by private means. Second, multiple constituencies influence the goals and objectives of government, business, nonprofits, and families as they contend with other players in the ecology of games.

Third, when individuals, families, businesses, nonprofits, and government officials are flexible in their actions and organization structure and have an entrepreneurial spirit, they are extremely attractive as partners to other institutions and individuals. This characteristic promotes democracy and its evolution to meet new challenges in the United States. Fourth, associations minimize atomistic concerns of people, improve opportunities for wealth, protect the rights of people from the tyranny of unchecked authority and business, and nurture the institutions of civil society.

Understanding Social Capital, Civic Engagement, and Community Building

Mary B. Mc Donald

University of San Diego

A major strategy of a successful nonprofit organization is collaboration with other organizations. This involvement can be structured in a number of ways including partnerships, coalitions, or collaborations (Provan, Fish, & Sydow, 2007). Activities conducted by collaborative structures include policy development, needs assessment, program delivery, or community initiatives. Such activities take both time (Cohen & Prusak, 2001) and human and financial resources (Taylor, 2002). Despite that fact, the number of collaborative relationships between nonprofit organizations and across sectors has increased significantly since the 1980s (Gray, 1989). Organizations may believe there are various reasons for collaboration. Grantmakers frequently encourage collaboration. The nonprofit may need further resources to achieve its mission or seek to achieve efficiencies in its operations. Nonprofit leaders assert that, at the community level, issues are often not resolved when one organization works in isolation (Rubin & Rubin, 2001). Motivated to come together, individual agencies and institutions often form some type of community collaborative structure to organize and accomplish the work.

Despite differences in structure, activities, or motivations, when nonprofit leaders collaborate, their experiences will have core similarities. Provan and colleagues (2007), in their review of interorganizational networks, called these dimensions "common themes, including interaction (or individuals acting on behalf of their organizations), relationships, connectedness, collaboration, collective action, trust and cooperation" (p. 481). These themes work simultaneously in a community, and so to be successful, a nonprofit leader needs to understand them and maximize them appropriately. This chapter examines collaboration as a practical way to achieve community change and then asserts that it can be understood and used strategically by applying two concepts: social networks and social capital.

Practical Aspects of Collaboration

What is a collaborative, and what does the work look like? Chaskin (1992) defined a *community collaborative* as "a group of individuals, usually representing different backgrounds and fields, who come together and organize to address a concern regarding child, family or neighborhood well-being that transcends any one organizational response" (p. 9). In collaborative work, an individual represents his or her own particular system's constituency and responsibilities and comes together with people doing the same; therefore, both the individual's motivations and the goals of the organization are involved in any collaborative activity. The family court, for example has a legislated responsibility to enforce the policies of the juvenile justice code. Schools have a legislated responsibility to provide equal opportunity for quality education. A private, mission-driven, delinquency-prevention program shares responsibilities with both the court and the schools by reducing delinquency as enforced by the court among the adolescents who attend the school. Collaborative organizations have been established all over the country to bring these seemingly differing viewpoints together formally to create integrated systems of care (Chaskin, 1999).

The capacity of a collaborative can be viewed from a number of levels. In a review of literature on interorganizational collaboration, Foster-Fishman, Berkowitz, Lounsbury, Jacobsen, and Allen (2001) found that four critical levels of capacity exist to some extent in all collaboratives: member capacity, relational capacity, organizational capacity, and programmatic capacity. This collaborative capacity refers to the conditions necessary for coalitions to be effective and build sustainable community change. Member capacity refers to individual and collective knowledge and attitudes. Programmatic capacity is the extent to which individual members and the collaborative can deliver programs; that is, can they do work?

Organizational capacity is the level of identification with the collaborative and the ability of the group to develop and to deliver a group vision. This need is pronounced when, during collaboration, the traditional role of institutions is changed. The Three-Sector Initiative (Fosler, 2002), a collaborative effort among seven organizations in the government, business, and nonprofit sectors, more specifically defined the organizational capacity required. The initiative examined these changing roles and relationships to determine how to improve cross-sector collaboration. The participants concluded that for such collaboration to be successful, the organizations (or collaboration) need to have the "capacity to collaborate" (Fosler, 2002). This capacity to collaborate does often, in fact, result in members that identify with a shared vision, and that shared vision comes to influences the work they do individually as well as the work of the collective (Bruner & Chavez, 1996).

Broad relational capacity based on members' having new ways of interacting with current contacts (relationships across participating members and organizations) and external organizations is extremely important for success (Foster-Fishman, Berkowitz, et al., 2001). In a collaborative activity, the author has observed the changes that are required for success. These include changes in each individual's role and relationships, the social and economic structures affecting the organizations, and the interactions between the collaborating organizations.

Collaborative relationships can bring with them a redistribution of power as well as a redefinition of roles. Given that the group has come together to accomplish something beyond its individual members' missions, power redistribution is a function of the coming-together process (Wolff, 2001). Redistribution of power takes the form of sharing information and referrals (Foster-Fishman, Salem, Allen, & Fahrback, 2001), as well as funding (Oliver & Ebers, 1998); creating new relationships, which might include welcoming participants from communities and points of view not normally engaged in community partnerships; and changing the perspectives of nonprofit organizations to embrace a common vision.

Collaboration is "practically" about relationships; between individuals, between two organizations (a dyad), or within a network of organizations. As described in the capacities, a successful collaboration is not "just a group" of organizations but a group with certain characteristics best understood using the conceptual dimensions of social networks.

Social Networks

A network is made up of relational ties that are used to allocate resources in a social structure. Analyzing those ties is a way of "taking social structure seriously" (Wellman, 1988, p. 20). A network comprises patterns of relationships linking a defined set of persons, objects, or events. A network is a function of the nature of those ties, in terms of when actors come together (frequency), why they do so (motivation), and what outcomes or consequences result (Mitchell, 1969). A community includes a number of networks.

Network ties are the stable, relational patterns that represent an individual's position within a network (Stevenson & Greenberg, 2000) and the emergence of subgroups based on the cross-linkages of ties (Wellman, 1988). Subgroups in a network emerge when an individual (actor) is more likely to interact with a particular subgroup of actors than with any other actors. In a study of an interagency collaborative, Frank and Yasumoto (1998) found that individuals within a collaborative formed cross-linked subgroups and were more likely than those not involved in the collaborative to exchange resources. The researchers also discovered that the ties between members of a subgroup could be distinguished from ties within a subgroup. The within-group ties bonded actors together with norms and reciprocity, whereas ties between groups bridged actors to potential resources. These subgroups exist embedded as a collection of relational ties, which form a community relational infrastructure.

Relational ties can be classified as strong or weak. Strong relational ties are emotional bonds of friendship, intimacy, and reciprocity; they tend to endure over time, whereas weak ties are less frequent and less intimate (Krackhard, 1992). Weak ties, most common among those who are unequal or heterogeneous in their social identities (Blau, 1994), tend to be more instrumental and are more likely to be threatened by conflict (Ashman, Brown, & Zwick, 1998). Weak ties have been found to increase the capacity of an individual or a subgroup to elicit new information and resources that would otherwise not be accessible. The cohesive subgroups of a network define an actor's primary affiliation, but he or she can still pursue resources through ties with other groups (Frank & Yasumoto, 1998).

In collaborative networks, there are strong and weak ties between subgroups. Operating in that context, people form associations most easily with those who are most like themselves (Putnam, 1995), whereas those with differing values, interests, or degrees of power often find it difficult to establish the bonds necessary to build trust (Ashman et al., 1998). For those participants in a collaboration who hold different values or come to the common work from different subgroups, the collaboration can help develop stronger bonds by building friendships or using other members of the group who are in a position to bring the disparate participants together and support the common community. The nature of individual relationships between and among members of a social network determines how those individuals behave within the network structure. Strong ties provide the stable structure of shared values, trust, and reciprocity, and weak ties furnish access to unique resources (Frank & Yasumoto, 1998). These relationships often help ideas to move between the nonprofits participating in the collaboration.

Another determinant of an actor's behavior within a network is the position the actor occupies in relation to others. Stevenson and Greenberg (2000) found that actors can be enabled by their network position or constrained by it. Those individuals who are central to the network are powerful in their capacity to influence a number of relational ties directly (and to allocate corresponding resources), whereas those on the periphery need brokers within the network to exert influence. There is, however, power in the periphery. Although a central position likely brings an actor access to information and resources, actors on the outside tend to be specialists or to possess unique advantages in specific areas, and that can leave those in a central position reacting to innovations on the periphery (Stevenson & Greenberg, 2000). According to Gittell and Vidal (1998), occupying a peripheral position gives an entrepreneurial advantage to those on the outside.

Two types of exchanges operate within a network to access and distribute resources: direct or generalized (indirect). These types of exchanges operate in the exchange of goods or in a social exchange in which the exchange results in acquisition of social rewards, as in quid quo pro exchanges (Bearman, 1997). In direct exchange, there is an exchange of some equivalence in perceived values. A gift is given that induces direct reciprocation. This could be an exchange of identical items, as in "You speak to me and I will speak to you," or items of equivalent value, as in "You speak to me and I will open the door for you." Another example would be an individual's acting in a certain way because doing so gives him or her a sense of warmth or regard.

The second type of exchange, generalized exchange, rests in the norm of reciprocity in that "the takers are obliged to be givers" (Bearman, 1997, p. 1390). In this type of exchange, for example, an individual will give preferential access or attention to another based on the norm that such would be afforded to him or her in some form at some time. Generalized exchange is a force in moving individual actions to be reallocated into a network of actors. In other words I do something for another without an expectation of direct reciprocity but rather with the expectation that there is general advantage for me because my actions are part of a network of others. That is a generalized exchange and is a function of the relational ties in a social network.

The ties between and among individuals in a community collaborative network define an individual's position in a network, the presence of cohesive groups, and access to potential resources through a method of exchange. Thus, ties influence both the individual actors and the network of actors within a social structure. To successfully understand these ties, one must view them at both the micro (individual) and the macro (network) levels. The concept of social capital can be used to accommodate such views.

Social Capital

Social capital is the value that is inherent in the social ties of a network (Cohen & Prusak, 2001), "the aggregate of the actual or potential resources which are linked to possession of a durable network" (Bourdieu, 1985, p. 248). A community's capacity to act on common concerns (Temkin & Rohe, 1996) and its capacity to mobilize the community involved is related to the social capital in the community. Working with more than three dozen community foundations, Putnam (2002) administered the Social Capital Community Benchmark Survey to assess the strength of a community network, based on the quality of civic ties. The survey measured dimensions of civic life, including social trust, political participation, civic leadership, and associational involvement. The survey also included a measure of giving and volunteering, a measure of faith-based engagement, a measure of the diversity of friendships, and a measure of the equality of civic engagement at the community level. Aggregate results indicated that ethnic diversity in a community was a strong predictor for a number of these dimensions. Ethnically diverse communities reported a higher density of neighborhood, ethnic, or self-help groups, and in these diverse communities, residents were more likely to report friendships with people of color and gays. These residents also reported more tolerance; the greater the community's ethnic diversity, the less likely its residents were to say that books should be banned from a public library because most people do not approve of them. The study further indicated that the more diverse a community, the less likely its residents were to trust each other, including those in their own ethnic group, and the less likely they were to connect with each other. Residents of more diverse communities were more likely to be personally isolated, to claim fewer friends, and to have less of a sense of community. Community foundations involved in the study were committed to funding programs that would build levels of connectedness and strengthen social ties within their community by giving residents the opportunity and the space to connect.

Putnam and the community foundations participating in the Social Capital Community Benchmark Survey were not alone in their focus on proximity and opportunity as critical conditions for social capital construction. Paxton (2002) referred to them as the association between individuals who are tied within a social space. After conducting a series of organizational studies, Cohen and Prusak (2001) concluded that regular patterns of association are critical for the development of the trusting, reciprocal ties that hold social capital. Such conditions also have been found to exist in housing and other related coalitions (Gittell & Vidal, 1998).

In a study of computer innovation in schools, Frank and Zhao (2001) found evidence that social capital can be built within a social space such as a school. Whereas traditional ties tended to fall within grade or curriculum groups, new collegial ties between teachers emerged informally through "technology talk" across school subgroups. This supported the informal movement of resources between groups and the potential to form shared values about the technology and subsequently built new social capital within the school network.

Understanding social capital, how it is built, and its relationship to collaborative networks is somewhat problematic because it is relevant on both the individual and the network levels (Coleman, 1990). In a community network, for example, an individual actor's capacity to access actual or potential resources through social ties (i.e., information about funding, assistance with a client) is social capital. The resources, as in the allocation of funding or the coordination of services, rest in the network and are based on collective norms, trust, and resulting action. The question is: Under what conditions does the individual level make the transition to the network level?

Frank (1995) used the metaphor of a rotating system to represent aspects of social capital in a dynamic model. He conceptualized a system with a set of actors and ties among them, where the system has mass based on the number of actors and density based on the number of ties among actors. The ties indicate that the actors are confined in a system with each other (as in teachers in a school or members of a collaborative) and must exchange with one another (see Frank, 1995). The more equal the interests of each actor in the exchange of social and nonsocial rewards, the greater the capacity for exchange. When an exchange of social or nonsocial resources occurs across the ties of two actors, the system rotates and gains momentum, positioning actors for further exchange. The force of exchanges fuels rotation of the system and moves the social tie between two individuals together, merging into collective interests and a spiraling identification with a collective. When applied to a collaborative network, this theory suggests that when members of such a network define themselves as confined to a system and exchange resources, two things occur. First, the distance between the interests of individual social ties will compress toward collective interests as exchange across social ties gains momentum and force, and second, individual exchanges will be transformed into network resources because of the dynamic nature of social capital.

Coleman (as cited in Frank & Zhao, 2001) saw norms as the form of social capital that transforms individual, direct exchange of resources to the network level. Individuals' actions "cause norms, which in turn cause sanctions and conformity" (pp. 4–5), providing momentum to a system of exchange. Actors allocate resources based on a level of certainty that their interests will compensated, based on the strength of the norms as evidenced by the accumulated experience of resource allocation.

According to Coleman (1990), social capital exists in an actor's individual (micro) position related to other actors in the network. That social capital, in turn, has implications for the network (macro) in that context. Social capital as an operating framework allows a nonprofit leader to observe individuals and their context, to make micro/macro transitions (Frank, 1995; Paxton, 2002). For illustration, consider three actors who are part of a network of agency directors. Actor A has a tie with Actor B, who in turn has such a tie with Actor C. The relationship tie between actors A and B is a social capital tie, one that holds actual or potential access to resources (Bourdieu, 1985) where the actors share values, have reciprocal regard, and act to mutual benefit (Coleman, 1990). The tie between actors B and C possesses social capital as well. Access to resources within the network, the potential between A/B and B/C, is implied by the position of the three actors within the network. Actors A and B share a level of potential and actors B and C share a level of potential, but to access or distribute resources through the network, actor A would want to go to actor B and actor C would want to go to actor B. Actor B, on the other hand, could go to either actor A or B and could, theoretically, access resources for one from the other. The relationships between actors have implications for resource acquisition based on reciprocity and mutual action. Figure 6.1 illustrates how social capital flows.

Within the context of the network, the potential to access resources or social capital is greater than just the two separate relationships. Basically, the whole is greater than the sum of the parts. Coleman (1988) asserted that social capital creates a form of organizational structure in which the structure of relationships among people facilitates action and produces results that would not be possible without such organization. Applying this notion to actors A, B, and C, then, the position of actor B influences

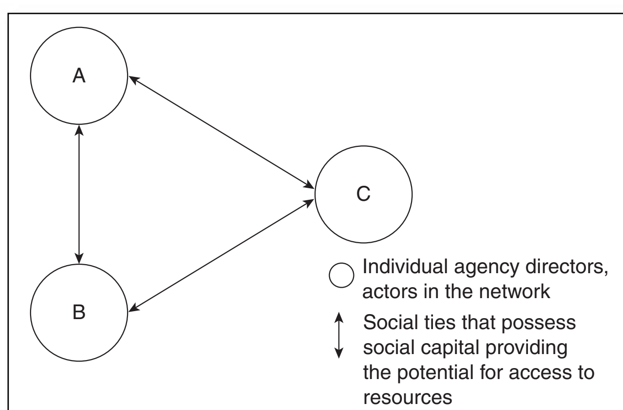

Figure 6.1 Social Capital Among Actors in a Network

SOURCE: McDonald, 2002.

the flow of resources within this network as the resources flow from actor C to actor A. The quality of ties or relationships in a community can be represented in the presence of social capital as those particular social ties, the "stock of active connections among people" (Cohen & Prusak, 2001, p. 14). The presence of social capital is a critical component for the success of a collaborative effort and for meeting the needs of the community.

The relationship between social capital and a community collaborative network is shown in Figure 6.2. When an individual becomes involved in a network, one or more of the three individual-social-ties situations may exist for that person. The person may or may not have social ties to other members of the network before the network association. Oliver and Ebers (1998) defined a social network as a pattern of interactions that connect individual actors with one another. Applied to this study, those actors would be the members of the collaborative, and the social ties for those individuals could be any combination of the three illustrated in Figure 6.2.

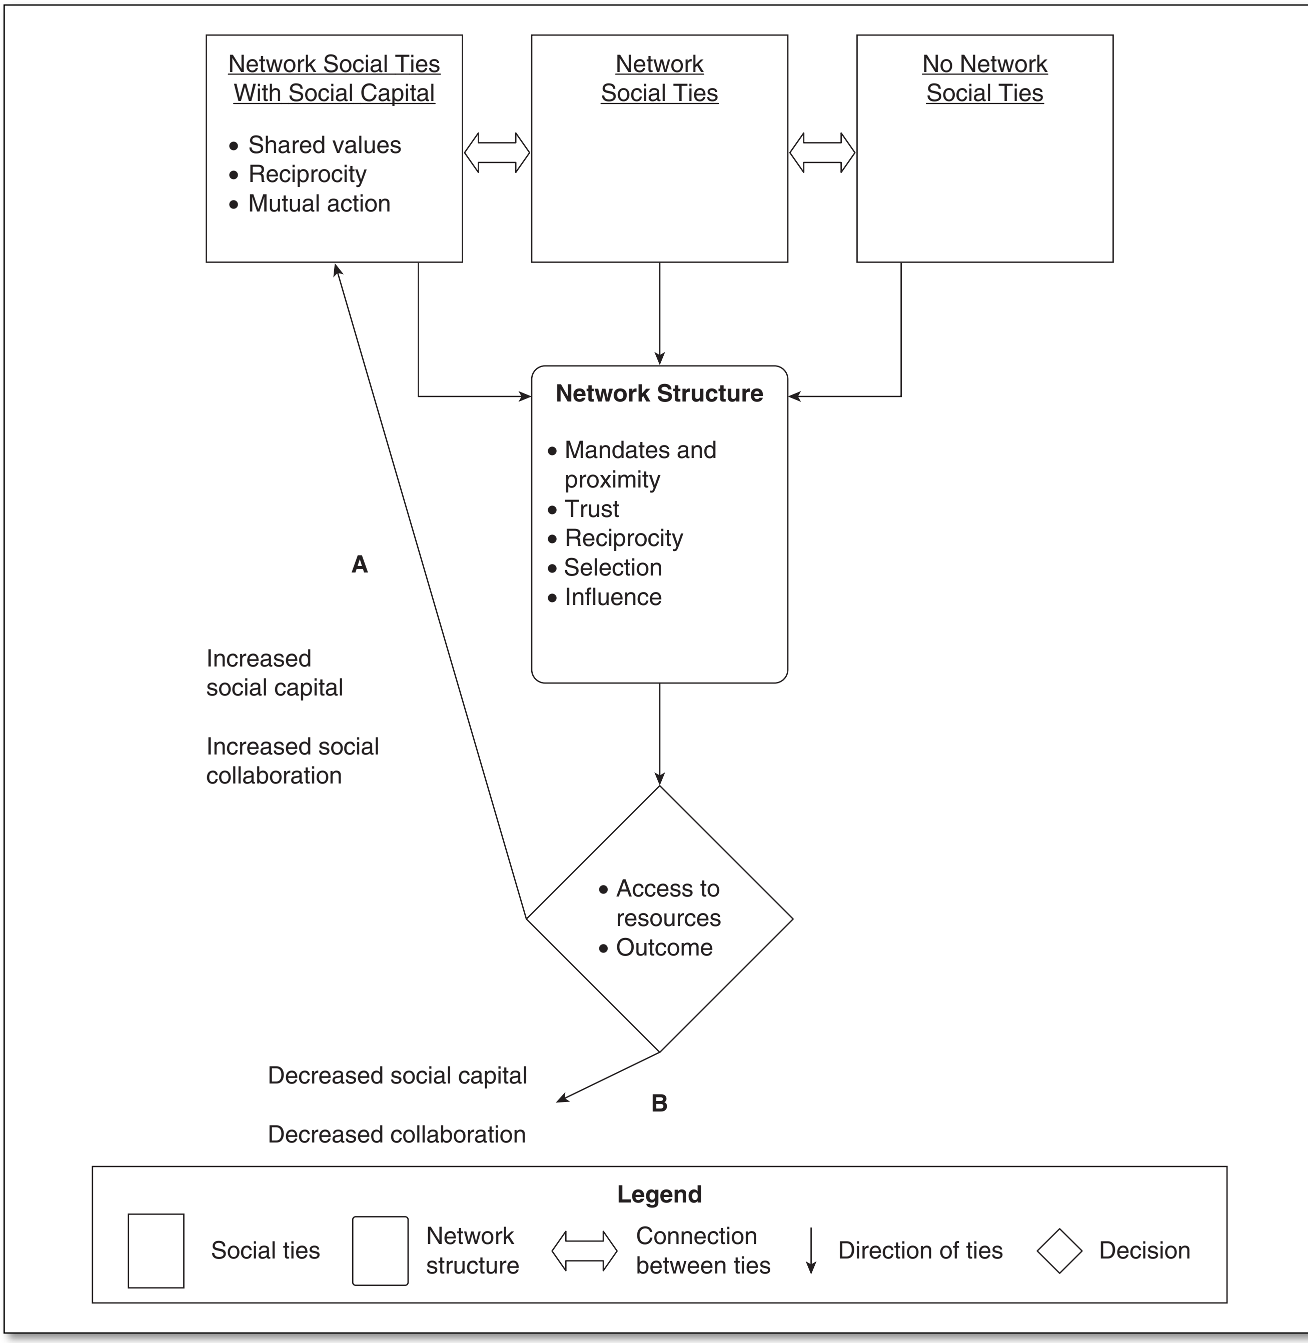

Figure 6.2 Social Capital in a Community Collaborative Network

SOURCE: McDonald, 2002.

One actor may have some ties with other collaborative network actors that possess social capital and those that do not. There may also be network actors with whom the individual has no ties. All of the potentially varied social ties are brought into the collaborative network, where, through the formal association of the collaborative, the individual ties may be influenced.

The structure of a community collaborative network is defined formally and informally. The formal structure includes traditional organizational items such as governing agreements, job descriptions, and organizational charts (mandates). The formal structure is most often the focus of collaborative research (Wolff, 2001). Those organizational items connect the individual members by providing structure and context. However, in a review of 80 articles, Foster-Fishman, Berkowitz, and colleagues (2001) concluded that collaboration requires broader relational networks (as opposed to traditional delivery) and new ways of interacting within established networks. Thus, relationships are central to the work of community coalitions.

In Figure 6.2, the social ties converge into the process labeled Network Structure, which includes all ties, both formal (organizational structure) and informal (social ties/relational structure). Formal ties include the working agreements that define the members' prescribed access or proximity, both to one another and to the formally mandated work. Into that formal process flows the relational structure, represented by the varied social ties of the individual members. Interagency collaboration is a pattern of association and includes exchange, sharing of resources, and joint efforts (Foster-Fishman et al., 2001).

When an interagency collaborative is studied as a social network, the associations between and among members can be analyzed more precisely. A social network is a specific type of relationship linking a defined set of people, objects, or events (Mitchell, 1969). These specific relationships include the individuals involved and the ramifications of the collaboration for each participant and the community as a whole. One individual nonprofit leader, for example, has a number of relationships. Within the collaborative network, while individual actors may form subgroups and hold a primary affiliation with members of their subgroups, they likely also identify through ties with others (Frank & Yasumoto, 1998).

Individuals also select some people over others. This selection occurs when one actor chooses to interact with others based on their attributes (Wasserman & Faust, 1994, part VI). Theoretically, the selection process occurs at network for one of two reasons. People choose others either because they are similar to themselves (balance seeking) or because they need some type of information (information seeking). The information can help a person achieve a goal or gain power; it can be used to gain understanding, reduce uncertainty, or inoculate an individual against risk (Frank & Fahrbach, 1997). Influence can affect an actor's pattern of social ties in a network. Interpersonal influence occurs when one influences what another thinks and subsequently does (Frank & Fahrbach, 1997).

At the junction (illustrated in Figure 6.2 as the Network Structure process), the linkages of individuals to each other and to the system are combined with the organizational structures of collaboration. At some point in that process, decisions are made about the individual and system linkages, and the consequences of those linkages become clear. Simply put, positioned with various relational ties within a structure, a person decides to engage, selects to engage with certain individuals rather than others, and through those choices can realize relational ties rich in social capital.

The consequences are represented in Figure 6.2 as arrow A and arrow B. If the process results in increased actual or potential access to resources (social capital) or increased interagency collaboration (shared resources, joint efforts), then the consequences would follow a feedback loop. In that case, the collaborative network process would have built social capital. If the process results in a decrease, then the collaborative network would have "burned" social capital, or at least failed to build any.

The point where individual social ties and the collaborative structure combine to form a network process, the decisions that are made, and the resulting consequences (as illustrated in Figure 6.2) is the success point for a community collaborative.

Making It Concrete: The Words of Collaborators

Background

In 2002, a research study was conducted on a collaborative made up of executive directors, presidents, and other cross-sector organizational leaders in a community in the Midwest, the Family Coordinating Council (FCC). In the study, social capital and social networks were used as an organizing framework for the work of the organization. Key informant interviews were conducted with members, and their responses were analyzed to form themes. The stakeholders reported that they were part of a network of relationships and came together to do community work. The findings are presented here to illustrate how individuals described their collaborative participation (McDonald, 2002).

Individuals Selected Relationships and Exercised Influence

Two themes emerged from this research related to relational ties. First, stakeholders said that their relationships varied in terms of quality; second, external forces as well as personal preference and experience, in part, determined that quality.

When asked to describe relationships with others, all key stakeholders who were interviewed indicated that they had a variety of ties with others (as conceptualized in Figure 6.2) and agreed that the quality of the ties could be considered as the granting of preferential consideration to some individuals and not to others. "I would do for him because he expects me to and we know that," one remarked. "I know that he will consider what will help me, just as he would for himself," another stated. When asked how he knew of this regard, the individual said, "We talked about it." A number of people described this quasi-formal contracting process as a method to develop collaborative relationships intentionally between either dyads of members or subgroups. This is a type of norm-setting activity. This is important in group process and, according to collaborative researchers, is evident in collaboratives that are considered successful (Wolff, 2001).

The norm-setting process is also consistent with the concept of social capital, in which trust supports the development of norms (Coleman, 1990). The reward for following norms was described in this study as increased quality in the ties. The relationships build, as one stakeholder indicated: "You learn, over time, how a person behaves behind the scenes and develop trust in the consistency." However, as regards norms, if one does not follow them, the opposite is true. Stakeholders indicated that you "renegotiate the contract" if someone "stiffs you," either with a conversation or by withdrawing from mutual action.

Stakeholders were forthcoming about the presence and value of a network that includes a variety of ties. Preferential consideration does occur, and as more than one person indicated, it is "neither good nor bad." This variation allowed the FCC member to "shop for relationships," promoting the concept of the FCC as "a cocktail party." Variation also allowed members to come and go in the network. "I connect with the people I need to but always have access to others if I have a reason to develop a stronger linkage" was the way one member described the value; another quipped, "It is one big pool of possible people." Stakeholders were clear, however, that the FCC network is an egocentric one (Wasserman & Faust, 1994), where the network is defined from the perspective of the individual actor. Many stakeholders reported that they were positioned with a variety of ties that held the potential to "parlay value" by intentionally maximizing the quality of one's network ties.

Motivation to Meet a Mandate, to Gain Access or Proximity

An individual's relationship with the collaborative (FCC) often was an economic decision based on community realities. Some stakeholders indicated that they joined the collaborative because they saw it as a source of money. The FCC distributes money for programming, and some said they went to "get at some of that." Others said that grantmakers required collaborative involvement to access other funding. This is more of a contingency involvement; that is, they were involved because it would eventually "get them resources." Thus, these two sets of people saw the FCC as a source of money.

The second group saw FCC involvement as a source of information to make them more competitive. Some used FCC involvement to sharpen the edges of a niche. One individual said he was involved to expand his sphere of influence beyond his own system and into groups that normally had nothing in common with him. "Who would have thought," he said, "that I can go to a neighborhood meeting for breakfast and the community foundation for their annual lunch? I would never have been invited before." Others saw the information as a rich source of context for their own particular work. These individuals asserted that each of the systems (i.e., education, health care, and juvenile justice) could "better" achieve its "own" outcomes if those were defined in an integrated community context. Therefore, they came to the FCC for information and linkages that colored in a richer community picture.

People described their involvement in economic rather than social or political terms. It was clearly a decision about participation as having a payback in resources into their systems. Stakeholders indicated that there was not always economic advantage, and when that occurred, they adjusted their engagement. One stakeholder indicated that community work diluted her organization's position, so she did not work in community collaboration unless there was direct benefit. She occasionally showed up to get the "lowdown" and then acted on her own. Some people said that, in a competitive environment, participating in community work is not "cost effective" because it takes so much time. Also, directors of small organizations indicated that there must be work that is done "for me" at meetings. "If I can kill two birds with one stone and connect with people, then the FCC is worthwhile for me," one commented. The economic advantage was, at least for some members, about "getting the work of my organization" done through the community table. Others thought the economic advantage to a community table created outcomes that collectively got her organization's work and that of others done.

Stakeholders reported a full range of resources that were accessed as well as distributed through the collaborative network, where, because of an individual's membership, either information or other forms of preferential access were granted. Being in a room with public policymakers and private grantmakers gives members access. Because the access is regular and semistructured, members know they might see someone else, can plan on that connection, and can use it as a point of familiarity. At the most basic level, members reported that membership in the network moved you "one step up from a cold call," granting an implied level of familiarity. As one member explained, "It is like if I see you in my neighborhood, I at least know that we have that in common, even if you were lost." So, two stakeholders who have an FCC affiliation have that in common. Should there be interest in something more, the affiliation supports that development. The "something more" often does happen, according to the stakeholders. "You see people around certain values," according to one member, "and you connect because you talk about important issues for families."

Collective Work

Stakeholders considered the opportunity for the leaders of cross-sector institutions to work together on issues critically important to the collaboration. They reported a clear need for the leaders to be engaged in some joint work. "This table is open for people who will show up and do the work," according to one of the FCC's original members. That is particularly true when there are disagreements. "You have to say what you mean, right in the meeting [not outside or when it is over] if the relationship is going to move forward," according to one participant. Being able to agree on joint projects and act collectively was a core theme among stakeholders in terms of relationships. To be able to disagree "is the only way to build trust, and that is core to doing anything between systems. I tell people all the time," one stakeholder remarked, "the key to long-term relationships in a community is sticking with it and figuring stuff out." Figuring stuff out, according to this stakeholder and others, is not just conflict resolution but more often a process of mediation. Through the discussion process, commonalities are chiseled from what may have appeared "rock-hard" positions. This type of process builds trust. According to key informants, then, common work is about outcomes (outcomes that have value to either individuals or the collective) and an engaged process.

Growth of Relationships: The Building of Trust and Reciprocity

Participation in the collaborative often changed relationships, described in Frank's rotating system (Frank, 1995). The relationship can gain momentum and expand over time or can be diluted and lose momentum over time. Take trust, for example. Informants explained how experience with others and opportunities to witness them in various settings and with various others facilitated the development of trust. It would seem, then, that the more such opportunities are presented, the higher the network's levels of trust. That is not, however, the case, according to the stakeholder interviews and meetings. Another dimension also influences relationships and work. Some stakeholders reported trust building and relationship building based on the experiences previously described, but others indicated the opposite. "I used to think he was a jerk," one stakeholder said candidly, and "then I have to go to meetings and find out that for sure he is" (conversation between the author and a participant while completing research on community collaboratives). The study results indicated that the collaborative process does not naturally develop levels of social capital but that the process provides an infrastructure for potential development. The nexus where the work and the relationships come together with resources and outcomes will take one of two trajectories. Either the relational path will build and regenerate the system, or it will exit the system. An individual will either engage in an increasingly collective effort or go elsewhere.

Direct and Generalized Exchange

Stakeholders reported a sharp difference in the level of engagement for various members. Insider/outsider distinctions were also made. Stakeholders who described themselves as "at the core" or on the inside were the stakeholders who also described themselves as coming to the table to "lean in" or to adapt "individual protocol for collaborative practice." These individuals described the FCC work with the same words—"come to the table and give more than you take"—and all said some others agreed with them and some did not.

A second group of stakeholders described themselves as "outside" or as emerging and saw the collaborative as the point of access to the "mucky-mucks" for the "doers." These people believed that the FCC helped them do the work of their organizations. They indicated that they were not being excluded from inside involvement but rather did not need to be inside. They also indicated that if they did some FCC work, they would expect a direct result.

Stakeholders expressed distinguishable differences in their relationships with each dimension of the collaborative network across the individual, the dyad, and network levels. Because the level of engagement is determined at the individual level (is egocentric), all levels of engagement can be operating at the same time.

The three levels can be interpreted as "levels of collaborative engagement" as well as levels of social capital. It is at the network level that the expressions of trust, reciprocity, and work (mutual action) reach the level conceptualized by social capital theorists (Portes, 1998).

Summary

This chapter examined collaboration as a practical way to achieve community change and then asserted that it can be understood and used strategically by applying two concepts; social networks and social capital. For nonprofit leaders, the obvious point is that collaboration is framed by relational ties and that an individual joins in collaborative activities at various levels of engagement.

Table 6.1 summarizes the levels using the dimensions of collaboration (mandates and work), social networks (influence, selection, and proximity) and social capital (reciprocity and trust).

	Individual	*Dyad*	*Network*
Mandate	Involved to meet organizational mandates/access resources	Involved to meet mandates/access for certain others	Involved to meet collective mandates and access to resources
Proximity	Access to "tell my story"	Access to hear/see others to position my story	Access to create a new story
Trust	Consider "myself" Confidence in "myself"	Consider certain others Confidence in certain others	Consider others as I would consider myself
Reciprocity	I will do for you if you do for me	I will do for you if you do for me or our mutual goals	I will do for us
Selection	I select to inoculate myself	I select to expand myself	I select because you are like me/not like me
Influence	I am not influenced	Certain others influence my work	Others' thoughts change my behavior
Work	I do my work I will do my part	I do my work through you I will do my part to help you	We do our work I will redefine my part

Table 6.1 Collaborative Dimensions

SOURCE: McDonald, 2002.

Individuals who engage at the individual level do so for direct benefit. At the dyad level, an individual is extending his or her organization and uses the access/proximity of the whole network but selects, influences, and trusts only certain people. At the network level, the sense of "doing our work" exemplifies engagement, a level at which collective work can result in new solutions. For a nonprofit leader, there is strategic advantage and success in taking each of the relational ties in the community seriously. The decision to participate in collaborative activities needs to consider these dimensions in the context of the underlying structure of community relationships.

Membership Associations

James Gelatt

University of Maryland University College

This chapter looks at membership associations. Take a guess at how many membership associations there are in the United States: 1,000? 10,000? 25,000? The answer is nearly 25,000 (*Encyclopedia of Associations,* 2008). They include national, nonprofit, membership associations; international associations housed or functioning in the United States; and for-profit associations.

Associations play a huge role in American life. Nine out of ten Americans belong to an association; one in four belongs to four or more associations. These associations provide a wide range of social and financial benefits, including the following:

- Providing education and training to their members and the public. About 95% of associations provide courses in technology, business, the arts, and health care.
- Establishing professional standards   codes of ethics; "setting the bar" on what is acceptable in terms of quality. The Association of Fundraising Professionals (www.afpnet.org), for example, has developed and published a code of ethics for its members and helped develop a Donor Bill of Rights. The Donor Bill of Rights is intended to demonstrate that "philanthropy merits the respect and trust of the general public." Among the donor rights is the assurance that their contributions "will be used for the purposes for which they were given."
- Fostering *volunteering* (getting involved without financial remuneration) and *voluntarism* (reliance on voluntary action to maintain an organization's viability). According to the *Chronicle of Philanthropy* (www.philanthropy.com), more than 60 million people (a quarter of Americans age 16 or older), performed unpaid work for a nonprofit organization in 2009.
- Developing and disseminating information; informing the public on important societal issues (the environment, for example). Much of what ultimately becomes law or other public policy starts with nonprofit associations that brought issues to the attention of the American public.
- Providing forums for the exchange of ideas (for example, the League of Women Voters' sponsorship of presidential debates). Politics is made up of political parties that sometimes seem to spend more time attacking one another than talking about issues. Forums provide a chance for unbiased interviewers to ask the hard questions we all want answered.
- Speaking for those who may not be able to speak for themselves (people with a disability, for example). It can be argued that the *Americans with Disabilities Act*, which assures fair and equal treatment for people with disabilities, originated with nonprofit associations who championed their cause.

Organizations and the Origins of Philanthropy in the United States

The United States has long been considered a world leader in philanthropy, and the philanthropic tradition had its roots in several major factors. These factors not only contributed to the beginnings of philanthropic organizations but also continue to influence the quantity and diversity of those organizations today.

One of the earliest factors contributing to American philanthropy and the organizations that reflect it was Hebrew tradition. The Hebrew religion believed in the God Yahweh, who made ethical demands on his people. In return, he was attentive to the needs of humans. The Hebrew people saw themselves as moral teachers for humanity, believing that God had disclosed his law to them (as in the Ten Commandments). Central to Hebrew belief, as reflected in the Torah and the Old Testament Bible was the theme of justice, which included caring for those who were poor, weak, or oppressed. The biblical belief became codified in laws.

In the Christian tradition, Jesus said the way to true meaning was moral purity—which found expression in the love of one's fellows, which is the definition of *philan thropy*. Christianity thus preached active love and compassion for those who suffer. Christianity offered a sense of meaning to people when neither philosophy nor the here-and-now offered them much; as such, it appealed to people who were poor, uneducated, oppressed—and to those who sought to help those less fortunate.

Consider the difference in the way society was organized in these major time eras in Europe, before the United States became a sovereign entity:

- In preliterate society, the family the clan, the relatives took care of their own. Giving was in the nature of reciprocity: You help us in our time of trouble, and we will do the same for you some time.
- Prior to the Middle Ages, support for the needy continued to come from family, friends, and patrons (such as the Medicis). Philanthropy was largely charity and mainly came from the church.
- With the Middle Ages, three factors the growth in population, the plague, and the emergence of cities outstripped the church's ability to help and led to the need for government intervention. As we moved from an agricultural, family based, localized society to an industrial, urban, geographically dispersed society, the way in which people took care of one another changed dramatically. If we no longer lived with family, who took care of us when we were sick? Who taught us? Who monitored our behavior? The answer became: *societal institutions*.

Philanthropy in the United States

Philanthropy in the United States is said to have begun in 1641, when three clergymen went from Boston to London in search of funding for Harvard University. Harvard was one of many schools started by a church that were moving toward a more secular teaching philosophy. That meant a different kind of organization, with a different funding stream.

Another among the first major institutions launched by philanthropy was established in 1835, when James Smithson contributed a half million dollars in his bequest. A congressional debate ensued over the legality of charitable trusts. When the Smithson bequest was accepted and the Smithsonian Institution established, what came with it was the tradition of public philanthropy—the use of private funds for public purposes through public instrumentalities. The United States was acknowledging that nonprofits, with their unique characteristics and unique tax status, were formally becoming part of the American landscape.

Support of nonprofit hospitals and educational institutions contributed to the belief that nonprofit organizations were a logical way to address social and community needs. Individuals of great wealth (e.g., Andrew Carnegie) established permanent mechanisms to give away their wealth.

Some Relevant Legislation in the United States

- 1913: The Revenue Act of 1913 (created following implementation of income taxes) provides tax exemption for organizations "operated exclusively for religious, charitable, scientific, or education purposes."
- 1917: Congress passes a law allowing tax deductions for charitable contributions.
- 1954: The Internal Revenue Service (IRS) codifies tax exempt organizations, creating "501" status.
- 1969: Tax Reform Act establishes rules for defining the private (grantmaking) foundation and hence all other nonprofits, which were referred to as "not a private foundation."

American Philanthropy Personified: Andrew Carnegie

Andrew Carnegie is a classic example of American philanthropy. In no small measure, it is because of people like Carnegie that the United States has such a plethora of organizations committed to the public good. Carnegie was born in Scotland and came to the United States in 1848 at the age of 13. His skill as a telegrapher caught the attention of executives with the Pennsylvania Railroad, where he began to rise through the ranks before age 20. After the Civil War, he turned to the iron industry. In 1873, he invested his entire assets in the first U.S. steel mills. Twenty years later, he was one of the wealthiest persons in world.

What is noteworthy is what came next: In 1901, Carnegie gave up his business for philanthropy. In the next 18 years, he gave away some $350 million (in 1900 dollars). The grantmaking foundation that he established is vibrant today. It and others like it, including the Rockefeller Foundation, set the bar for what we should expect of ourselves. Life was not just about making money. It was also about making a difference (Brinkley, 1995).

A Nation of Joiners

In 1821, Alexis de Tocqueville and a close friend and colleague were sent to the United States by the French monarchy, ostensibly to study the U.S. prison system and penology in general. Tocqueville spent the better part of a year in the United States. His scope of research expanded dramatically, with the result being a two-volume exploration of the American way of life titled *Democracy in America* (2006; quotations from pp. 593 and following). Tocqueville was a keen observer, and one of the phenomena that he observed was the American penchant for forming and joining associations.

> In no country in the world has the principle of association been more successfully used, or more unsparingly applied to a multitude of different objects, than in America. Besides the permanent associations which are established by law under the names of townships, cities, and counties, a vast number of

> others are formed and maintained by the agency of private individuals.
>
> If a stoppage occurs in a thoroughfare, and the circulation of the public is hindered, the neighbors immediately constitute a deliberative body; and this extemporaneous assembly gives rise to an executive power which remedies the inconvenience before anybody has thought of recurring to an authority superior to that of the persons immediately concerned. If the public pleasures are concerned, an association is formed to provide for the splendor and the regularity of the entertainment. Societies are formed to resist enemies which are exclusively of a moral nature, and to diminish the vice of intemperance: in the United States associations are established to promote public order, commerce, industry, morality, and religion; for there is no end which the human will, seconded by the collective exertions of individuals, despairs of attaining.
>
> An association unites the efforts of minds which have a tendency to diverge in one single channel, and urges them vigorously towards one single end which it points out.
>
> The second degree in the right of association is the power of meeting. When an association is allowed to establish centres of action at certain important points in the country, its activity is increased and its influence extended. Men have the opportunity of seeing each other; means of execution are more readily combined, and opinions are maintained with a degree of warmth and energy which written language cannot approach.
>
> Americans of all ages, all conditions, and all dispositions, constantly form associations. They have not only commercial and manufacturing companies, in which all take part, but associations of a thousand other kinds religious, moral, serious, futile, extensive or restricted, enormous or diminutive. The Americans make associations to give entertainments, to found establishments for education, to build inns, to construct churches, to diffuse books, to send missionaries to the antipodes; and in this manner they found hospitals, prisons, and schools. If it be proposed to advance some truth, or to foster some feeling by the encouragement of a great example, they form a society.

Tocqueville goes on to distinguish Americans from the English: "The English often perform great things singly; whereas the Americans form associations for the smallest undertakings." Tocqueville links this passion for associations with Americans' passion for democracy:

> Thus the most democratic country on the face of the earth is that in which men have in our time carried to the highest perfection the art of pursuing in common the object of their common desires, and have applied this new science to the greatest number of purposes.

Associations are not only a way to get things done; they provide a sense of belonging:

> As soon as several of the inhabitants of the United States have taken up an opinion or a feeling that they wish to promote in the world, they look out for mutual assistance; and as soon as they have found each other out, they combine. From that moment they are no longer isolated men, but a power seen from afar, whose actions serve for an example, and whose language is listened to.

A Day in the Life of a "Joiner"

Sara Stone is a development officer for a nonprofit arts organization called The Arts Project in Bethesda, Maryland, just outside Washington, D.C. As an undergraduate at Colgate University, Sara was a member of a popular sorority, a member of the college's art's council, and an officer in Colgate's Figure Skating Club. Sara had no real background in fundraising when she went to work at the arts organization, but soon after joining The Arts Project, she earned a master's degree in nonprofit management from the University of Maryland, University College. She has recently joined the Washington, D.C., chapter of the Association of Fundraising Professionals. The chapter, which has more than 700 members, offers monthly educational luncheon seminars and a large annual conference that draws attendance from across the nation. The chapter is, in turn, part of the national Association of Fundraising Professionals, housed in northern Virginia, which has more than 30,000 members nationally and internationally.

Sara recently became active in Colgate's local alumni club, where as a volunteer she manages the club's intranet mailings. She also volunteers for the Susan G. Komen Race for the Cure. Sara is interested in working for the grantmaking aspect of nonprofits. She has made contact with the Washington Regional Association of Grantmakers. According to its website, WRAG "promotes and supports effective, strategic, and efficient charitable investment in the Greater Washington region." Its members "include independent foundations, community foundations, operating foundations, charitable trusts, corporate foundations, and corporate giving programs."

When Sara talked with the WRAG executive director, she learned that the Washington Regional Association of Grantmakers belongs to two organizations of grantmakers. One is the Forum of Regional Associations of Grantmakers (www.givingforum.org). The "Giving Forum," as it is known, has regional association members in every state and, in some larger states, several member associations. Sara, who is in her late 20s, learned that the number and scope of grantmaking organizations has grown enormously since she was born: Over the last 25 years, the field of philanthropy has grown from 22,000 foundations in 1980 to more than 71,000 foundations today. In addition to providing educational programs and technical support to its regional members, the Giving Forum has recently focused on encouraging new, younger people who become involved in philanthropy. One strategy is forming "giving circles," which are composed of groups of people who combine their money and decide where to donate it. By pooling their donor resources, giving circles are able to target causes of interest to the circle members and have a greater impact than they would individually.

The WRAG also belongs to a national association of grantmakers called the Council on Foundations (www.cof.org). The council is located in northern Virginia, so rather than attempt a visit, Sara went to the Council's website, where she learned that the council represents funders whose assets collectively total more than $300 billion. The council represents community foundations, corporate grantmakers, family philanthropy, global philanthropy, and independent (grantmaking) foundations.

As is the case with many such associations, the council has a robust ethics program that addresses the importance of *transparency* (making programs visible to the public), *stewardship* (managing resources to maximize their philanthropic purposes and minimize any private gain); and *diversity and inclusiveness* (to reflect the communities where member organizations are located and to ensure that their funding reflects a range of viewpoints to serve the common good).

The executive director of the Washington Regional Association of Grantmakers told Sara about a national organization, composed of both grantmakers and grantseekers, that is just a few blocks from WRAG's headquarters. The organization is known as Independent Sector (www.independentsector.org), which is one of the terms applied to the segment of American society dedicated to philanthropy (other terms being the third sector, voluntary organizations, and social enterprise). Independent Sector describes itself as

> [the] leadership forum for charities, foundations, and corporate giving programs committed to advancing the common good in America and around the world. . . . [Its] nonpartisan coalition of approximately 600 organizations leads, strengthens, and mobilizes the charitable community in order to fulfill [Independent Sector's] vision of a just and inclusive society and a healthy democracy of active citizens, effective institutions, and vibrant communities.

Independent Sector has a strong commitment to ethics, diversity and inclusiveness, and transparency, like other grantmaking and grantseeking associations. What makes Independent Sector unique, as Sara learned, is that it serves as a meeting ground for the leaders of America's charitable (grantseeking) and philanthropic organizations. This "meeting ground" concept occurs primarily at the Independent Sector's annual conference. In addition, members—both grantseekers and grantmakers—are involved in developing and promoting policies and addressing issues of common interest (such as the potential for increased government regulation).

In many ways, Sara learned, organizations such as Independent Sector echo what Tocqueville found nearly 180 years ago. Were he alive today, Tocqueville might well appreciate Independent Sector's mission ("To advance the common good by leading, strengthening, and mobilizing the charitable community") and vision ("a just and inclusive society and a healthy democracy of active citizens, effective institutions, and vibrant communities").

In one rather busy day, Sara learned what few people know, and that is how pervasive and how valuable membership associations are to the "common good" in American society.

Types and Descriptions of Nonprofit Membership Organizations

Tax exemption is one unifying characteristic of many organizations within the nonprofit sector. Section 501(c) of the U.S. Internal Revenue Code lists 26 types of nonprofit organizations that are exempt from some federal income taxes. Probably the best known of the 501(c) organizations are categorized under 501(c)(3)—organizations that are eligible for tax-deductible contributions. These nonprofits, in general, exist, for religious, educational, charitable, or scientific purposes.

Membership organizations fall under several other 501(c) categories, including the following:

- 501(c)(4) civic leagues, social welfare organizations, and local associations of employees
- 501(c)(5) labor, agricultural, and horticultural organizations
- 501(c)(6) business leagues, chambers of commerce, real estate boards, etc.
- 501(c)(7) social and recreational clubs
- 501(c)(8) fraternal beneficiary societies and associations
- 501(c)(9) voluntary employees beneficiary associations
- 501(c)(10) domestic fraternal societies and associations

Under IRS rules, all 501(c) organizations are subject to tax only on what is known as *unrelated business income*, any income that is not specifically related to the purpose for which the nonprofit achieved its tax status. The Washington, D.C., chapter of the Association of Fundraising Professionals raises much of its budget from an annual conference. The income from that event would not be considered taxable. But if the chapter elected to hold bingo parties or run a golf tournament, the income received would be subject to tax.

What we think of as associations—including Sara's examples of the Washington Regional Association of Grantmakers, the Council on Foundations, the Forum of Regional Associations of Grantmakers, the Association of Fundraising Professionals, and Independent Sector—are all 501(c) organizations.

Community Foundations

Community foundations are tax-exempt public charities composed of individuals and organizations who share a commitment to improving the quality of life in their area. Community foundations provide a way for individuals, families, businesses, and organizations to create permanent charitable funds without having to actually manage those funds on a day-to-day basis. The community foundation invests and administers these funds.

Because they are considered public charities, community foundations may engage in fundraising, and donations to community foundations are tax deductible as they would be for any 501(c)(3) organization.

In the United States, community foundations administer more than $31 billion in charitable funds and serve nearly 700 communities and regions.

American Society of Association Executives

As might be expected from a nation of joiners, even associations have their own membership associations. The largest of these is the American Society of Association Executives (ASAE; www.asaecenter.org) and the Center for Association Leadership. ASAE is a membership organization of more than 22,000 members, including association CEOs, senior staff, industry partners (e.g., members of the hotel and hospitality industry), and consultants. Together with the Center for Association Leadership, ASAE serves about 10,000 associations representing more than 287 million people and organizations worldwide.

As Independent Sector sees itself as the principal voice for grantmakers and grantseekers, ASAE positions itself as the principal voice for the association community. Together with the Center for Association Leadership, ASAE offers numerous educational programs each year, produces two publications—*Associations Now Magazine* and the *Journal of Association Leadership*, and provides its members and others with future-focused and market-focused research. ASAE is itself organized into professional interest sections, among them communication, executive management, finance, and business operations.

Association Foundation Group

The tax status that most associations hold—501(c)(6)—does not allow donors to deduct their contributions from taxes. For that reason, about 40% of American associations have affiliated 501(c)(3) entities connected with them. Usually referred to as *association foundations,* these entities exist to complement the mission of the association, which is to serve its members, with a broader societal focus. The Association Foundation Group (www.afgnet.org) provides monthly educational sessions and an annual national conference; it also offers technical assistance to its members and the public.

The National Council of Nonprofits

The National Council of Nonprofits (www.councilofnonprofits.org) is a network of state and regional nonprofit associations, which provides services to more than 20,000 member organizations. The purpose of the National Council is to link local nonprofit organizations across the nation by means of state associations. The National Council sees as its purpose helping small and mid-size nonprofits manage and lead more effectively, collaborate with one another, and collectively engage in the discussion of important policy issues affecting the sector.

The National Council's vision is reflective of the goals that are common to much of the nonprofit sector: "To create a better place for people to live—one that is socially just and equal—and serve as a vehicle for improving lives and communities." Its mission is just as clear about the focus on the common good and the benefits of membership organizations: "The National Council of Nonprofits advances the vital role and capacity of the nonprofit sector in civil society and supports and gives voice to state and regional associations of nonprofit organizations."

In terms of the programs that it offers to its members and others, The National Council provides technical help through direct requests for assistance and web and audio conferencing. It also serves as a clearinghouse for information on state associations and the nonprofit sector; it publishes *What You Need to Know*, a member e-newsletter, and *Nonprofit Policy News*, a policy e-newsletter. The National Council also conducts research, resulting in publications such as the *United States Nonprofit Sector* report, a member mapping survey, and *State of the Sector* reports.

Council for the Advancement and Support of Education

The Council for the Advancement and Support of Education (CASE; www.case.org) is a professional association serving educational institutions and development (fundraising) professionals who work in college and university alumni relations, communications, development, marketing, and related areas. Its membership includes nearly 3,400 colleges and universities, primary and secondary independent (private) and international schools, and nonprofit organizations in 59 countries. Through its membership, it serves more than 60,000 development officers on the staffs of member institutions.

CASE offers a wide variety of publications and other products, including fundraising-related books, audiotapes from CASE conferences, *CURRENTS* magazine, and white papers and reports on the field of fundraising in education.

Association for Healthcare Philanthropy

The Association for Healthcare Philanthropy (AHP; www.ahp.org) is an international membership organization that encourages charity and undertakes fundraising in North American health care organizations. Its 5,000 or so members represent more than 2,200 health care facilities in the United States and Canada. Among the health care organizations served by AHP members are community and private hospitals, medical centers, children's hospitals, teaching hospitals, long-term care facilities, hospices, and specialty hospitals.

AHP provides its members and others with education, networking, information, and research in health care philanthropy.

State Associations

Nationwide, state associations serve an estimated 20,000 members and other nonprofits. As is the case with national associations, state associations represent the spectrum of charitable organizations in their work with state, national, and local nonprofit partners. State associations engage in advocacy and advancement of public policy; they also provide management and professional development training workshops in areas such as fundraising, nonprofit governance, financial management, and technology. Some state associations take advantage of the collective buying power of their members to negotiate lower prices on office products. In addition, many state associations offer member discounts in health care coverage, directors' and officers' liability insurance, and publications.

Sara Stone belongs to Maryland Nonprofits, one of the largest state associations for nonprofits, with more than 1,700 nonprofit organization members, as well as 400 associate members, most of which provide products and services to nonprofits. The Maryland Nonprofit's mission is "to strengthen and support nonprofits' ability to serve the public, while promoting the highest standards of ethics and accountability in nonprofit governance and management."

Reflecting its commitment to advancing the nonprofit sector, and in a state that stretches 12,407 square miles, Maryland Nonprofits offers a wide range of programs online, including a program leading to a certificate in nonprofit management.

One of Maryland Nonprofits's programs is the Standards for Excellence initiative. The program, launched in 1998, is dedicated to promoting the highest standards of ethics and accountability in nonprofit governance, management, and operations. The centerpiece for the program is a code of ethics, the Standards for Excellence: An Ethics and Accountability Code for the Nonprofit Sector. Maryland Nonprofits supports nonprofits' efforts to live by the code in its comprehensive educational programming and a voluntary accreditation program. Maryland Nonprofits has achieved national recognition for the Standards for Excellence® program and has distributed the Standards for Excellence code and related materials nationwide. In response to demand from capacity-building organizations around the country, Maryland Nonprofits has launched its Standards for Excellence Institute, which works to strengthen nonprofits using the Standards for Excellence program around the nation. Today, the Standards for Excellence program is offered under the auspices of the association's Standards for Excellence Institute and through licensed replication partners working with nonprofits in states like Louisiana, Ohio, Pennsylvania, Oklahoma, West Virginia, Delaware, and also in the Pike's Peak region of Colorado, and with nonprofits affiliated with national partners The Arc of the United States and the National Leadership Roundtable on Church Management.

Standards for Excellence—Guiding Principles

Mission and Program

Nonprofits are founded for the public good and operate to accomplish a stated purpose through specific program activities. A nonprofit should have a well-defined mission, and its programs should effectively and efficiently work toward achieving that mission. Nonprofits have an obligation to ensure program effectiveness and to devote the resources of the organization to achieving its stated purpose.

Governing Body

Nonprofits are governed by an elected, volunteer board of directors that should consist of individuals who are committed to the mission of the organization. An effective nonprofit board should determine the mission of the organization, establish management policies and procedures, assure that adequate human resources (volunteer or paid staff) and financial resources (earned income, government contracts and grants, and charitable contributions) are available, and actively monitor the organization's financial and programmatic performance.

Conflict of Interest

Nonprofit board and staff members should act in the best interest of the organization, rather than in furtherance of personal interests or the interests of third parties. A nonprofit should have policies in place and should

(Continued)

(Continued)

routinely and systematically implement those policies to prevent actual, potential, or perceived conflicts of interest.

Human Resources

A nonprofit's relationship to its employees and volunteers is fundamental to its ability to achieve its mission. Volunteers occupy a special place in nonprofit organizations, serving in governance, administrative, and programmatic capacities. An organization's human resource policies should address both paid employees and volunteers and should be fair, establish clear expectations, and provide for meaningful and effective performance evaluation.

Financial and Legal

Nonprofits must practice sound financial management and comply with a diverse array of legal and regulatory requirements. A nonprofit's financial system should assure that accurate financial records are kept and that the organization's financial resources are used in furtherance of the organization's charitable purposes. Organizations should conduct periodic reviews to address regulatory and liability concerns.

Openness

Nonprofits are private corporations that operate for public purposes with public support. As such, they should provide the public with information about their mission, program activities, and finances. A nonprofit should also be accessible and responsive to members of the public who express interest in the affairs of the organization.

Fundraising

Charitable fundraising provides an important source of financial support for the work of most nonprofit organizations. An organization's fundraising program should be maintained on a foundation of truthfulness and responsible stewardship. Its fundraising policies should be consistent with its mission, compatible with its organizational capacity, and respectful of the interests of donors and prospective donors.

Public Affairs and Public Policy

Nonprofits provide an important vehicle through which individuals organize and work together to improve their communities. Nonprofits should represent the interests of the people they serve through public education and public policy advocacy, as well as by encouraging board members, staff, volunteers and constituents to participate in the public affairs of the community.

Ostend Street, Suite 201, Baltimore, MD 21230, 410-727-1726, www.standardsforexcellenceinstitute.org, for one-time use in this publication. Others seeking permission to reproduce the Standards in any way should contact the Standards for Excellence Institute directly.

Funders' Network

The Funders' Network (www.fundersnetwork.org) consists of grantmakers organized around a specific funding topic, geographic location, or issue-based community. The Funders' Network includes small and large private foundations, community foundations, and individual donors. By pooling resources around a common area of interest, the Funders' Network attempts to motivate collective philanthropic leadership and encourage more funders to invest in innovative solutions. Among the areas of focus addressed by members of the network are: African grantmaking, disability, emerging practitioners in philanthropy, environmental issues, rural funding, civic engagement, Hispanic philanthropy, and homelessness.

Society for Nonprofit Organizations

The Society for Nonprofit Organizations (www.snpo.org) is a nonprofit management support organization with 6,000 members. The principal benefit of membership is receipt of *Nonprofit World*, a bimonthly magazine that provides nonprofit staff and volunteers with practical information. Members also have access to a searchable database of articles going back to 1996. Members may also participate in online courses in areas such as strategic planning, resource development (fundraising), governance, volunteer management, and marketing.

Center for Nonprofit Advancement

The Center for Nonprofit Advancement (www.nonprofitadvancement.org) is an example of a local membership association for nonprofits. The center provides training and technical assistance, as well as opportunities to meet and get to know others in philanthropy, government, and the corporate sector.

Foundation Center

Although it is essentially an extensive library and database for grantseekers, the Foundation Center (www.foundationcenter.org) is also a membership organization. The center claims to have the most comprehensive database on U.S. grantmakers and their grants. It conducts and publishes research on trends in foundation growth, giving, and practice and offers educational programs, some at no cost to participants. In addition to its main office in New York City, the Foundation Center has four other regional library/learning centers in Atlanta, Cleveland, San Francisco, and Washington, D.C.; and a national network of more than 400 funding information centers at libraries, nonprofit resource centers, and organizations across the United States and abroad. The center's online database, *Foundation Directory Online*, provides information about more than 95,000 U.S. foundations and corporate donors and nearly 2 million grants.

Giving Institute

The Giving Institute (www.aafrc.org), formerly the American Association of Fundraising Counsel (AAFRC), is a membership organization with 34 members, all of which are engaged in fundraising counsel. The Giving Institute's mission is "to educate and engage members in the ethical delivery of counsel and related services to nonprofits through research, advocacy, and best practices." The Giving Institute is best known for its annual publication on philanthropy titled *Giving USA*. The publication, more than 50 years old, documents who gives what to whom in the United States.

Summary

This chapter has attempted to provide an overview of the breadth and scope of one aspect of the nonprofit sector—membership organizations.

Nonprofit means voluntarism. Voluntarism is more than just volunteering. Voluntarism is a philosophical belief; volunteering is how it plays out. Voluntarism means that we are self-reliant. We do what needs to be done—as individuals, as organizations, as communities. Government plays a role, in part, by allowing for the existence of nonprofits. That is as it ought to be: Government cannot—and should not—provide all of the services that its citizens need. As the Center for the Study of Philanthropy and Voluntarism observes, "Whether or not they are grouped together as a 'sector' of the economy, classified as a mode of behavior or studied as an orientation towards life, philanthropy and voluntary organizations constitute important phenomena that are worth serious attention." We are a nation of "joiners." It is how much gets done to advance the common good.

Leadership in Service Clubs and Benevolent Societies

Matthew Downey

Johnson Center for Philanthropy, Grand Valley State University

Service clubs and benevolent societies offer nonprofit organizations and nonprofit leaders great opportunities for community and philanthropic partnerships. These entities, which see identifying and responding to community needs as an organizational priority, are filled with members who are well-positioned community leaders, all eager to make a positive difference in their communities. By participating in these organizations, nonprofit leaders can help educate community members about a nonprofit's mission and identify new volunteers, donors, and board members. In a sense, the local chapters of many service clubs and benevolent societies serve as local town squares, where members of the business, public, and nonprofit sectors all come together to form relationships and share ideas.

For many citizens, involvement in a service club or benevolent society offers the most expedient means to pursue true civic involvement. Robert Wuthnow (1998), a Princeton University sociologist, suggests that without civic engagement, American citizens relinquish all say in local, state, and national affairs to the few who hold power. He explains, "Civic involvement consists of participation in social activities that either mediate between citizens and government or provide ways for citizens to pursue common objectives with or without the help of government" (p. 7). In this sense, a strong democracy relies on the willingness of its citizens to come together, identify mutual concerns, and develop effective responses to their greatest challenges.

Although the membership data from service clubs and benevolent societies demonstrates a steady decline in participation over the last several decades (Putnam, 2000), the international landscape of these organizations is vast. In the United States alone, nearly 170,000 service clubs and benevolent societies are registered with the Internal Revenue Service (IRS) (National Center for Charitable Statistics, 2010), and the number of current members reaches well into the millions. Organizations such as these can be found quite literally in every city, suburb, township, or village.

The available literature about these organizations uses a variety of loosely defined terms for what are essentially two broad groupings of civic organizations. A few examples of the various terms authors have used include: service clubs, volunteer clubs, mutual aid societies, voluntary associations, benevolent associations, fraternal organizations, and so on.

In this chapter, the term *service club* refers to a membership organization of business men and women who regularly gather for the purpose of pursuing service activities that seek to improve their local community and to network with each other with the goal of strengthening business and social ties. Although local chapter affiliates carry out much of the work of service clubs, a hierarchical structure maintained by a central office ensures that local chapters adhere to the cultural, policy, and financial obligations of their members (Winkle, 1999). Some common examples of service clubs include Rotary, Kiwanis, Professional Employer Organization, Lions, and Optimists.

Conversely, in this chapter, the term *benevolent society* refers to a membership organization with the purpose of meeting the social and religious needs of its members. They generally function under a lodge system, and membership is often exclusive (Hoyt, 1998; Winkle, 1999). Some common examples of benevolent societies include Elks, Moose, Masons, and Shriners.

The intent of this chapter is to offer a broad introduction to service clubs and benevolent societies with an eye toward why they exist and how they help nonprofit organizations succeed in their goals. In doing so, we will explore their historical roots, outline their basic structure, identify their IRS tax-exempt classifications, consider their distinct cultural characteristics, offer examples of their philanthropic endeavors, and describe the process for becoming a member.

Historical Background and Context

Beginning in the late 1800s, the American population was growing rapidly, and citizens were participating in formal education at increasingly higher rates. As the population grew, so did the need for more and better social services. As Americans achieved higher levels of education, they gained a more sophisticated understanding of citizen needs and how to respond to them. These converging conditions led Americans to the realization that if they were going to respond effectively to the new demands of this quickly changing society, they needed a stronger, more effective voice in national civic affairs. They achieved this through forming large, chapter-based civic associations where individuals from across the country could collectively overcome the barriers of distance and isolation, share concerns and frustrations, and mobilize themselves to demand desired governmental and nongovernmental responses. During the early 1900s, participation in civic associations saw a steady and impressive increase in membership. After a slight period of disassociation that came about during the Great Depression, World War II brought on a resurgence of patriotism, and Americans quickly returned in even greater numbers to their participation in civic associations (Putnam, 2000).

Although participation was encouraged through local community-based club chapters, service clubs and benevolent societies organized themselves into tall, hierarchical membership structures. Individuals joined at the local level, and then, in cooperation with the members of chapters in other locations, they put forth a common voice when it came to articulating the issues, concerns, and ideas they were most passionate about. The impetus for establishing these vertical structures was to overcome the communication challenges brought about by the sheer distance between American cities and rural settlements. The strategic intent of the hierarchical structure was to attract as many members in as many locations as possible. By representing great numbers of people over a broad geographical area, civic associations could achieve political clout when it came to advising government officials on policy and social service matters, claiming that all of their members speak with one voice. Later in this chapter, the functional structure of service clubs and benevolent societies will be discussed in greater detail.

Many of these associations were organized by and for men, although a few were organized by women. In the 1950s and 1960s, minority groups, such as immigrants and African Americans, began forming their own associations in a similar manner. As a means to encourage cohesion among members, who were spread across the vast American landscape, associations developed strong cultural identities steeped with tradition and rituals. This was done so that if one were to visit multiple local chapters of the same association, a sense of familiarity and sameness would be recognizable at each, further reinforcing the sense of membership and belonging. Although active civic participation through formal associations is still considered a unique attribute of American cultural identity, many of these associations expanded internationally into Canada, Europe, and eventually Asia and elsewhere (Putnam, 2000).

Declining Participation

It is well noted in today's literature on civic participation that Americans no longer engage each other through formal associations in quite the same way as they traditionally have (Putnam, 2000; Wuthnow, 1998). Throughout the last few decades, a new understanding of patriotism, community service, and civic engagement has evolved. There is concern among older generations of service club and benevolent society members that the notion of earnest community involvement that drove them to participation is not translating down to younger generations: "Younger generations seem unable to fit traditional community service groups into their lifestyles and jobs" (Wuthnow, 1998, p. 13).

At the local level, in particular, connectedness among community members in today's society is very different than it was at the turn of the 20th century. Public opinion polls, the Internet, social networking, mass communication devices, and nonprofit advocacy groups have changed how the needs and priorities of citizens are communicated. As a result, it is no longer the group with the most members that achieves the loudest voice; instead, the group that succeeds is the one that can best leverage the wide variety of available communication channels. For service clubs and benevolent societies, this suggests that the associations most willing to recognize and respond to societal change by reinventing how they foster relationships among their members are the ones that will survive in the years to come (Wuthnow, 1998).

Yet, despite the general decline in civic participation, many of these organizations remain strong. Service clubs, in particular, frequently serve as a community's town square, where issues and needs are identified and community members are mobilized to respond. What this means is that despite the complicated landscape of communication devices and competing demands for time, people are still people; fearing isolation, they desire a connection to others in their community. They all recognize society's challenges and genuinely wish for a better life for their children, families, friends, and neighbors. Essentially, civic associations can and do still provide the means to fulfill these goals. However, to succeed in today's more complicated society, they must encourage informal relationships among their members—the loose connections, so to speak—while reinforcing the vertical hierarchy, or formal connections, if they are to effectively represent a broad and diverse constituency (Wuthnow, 1998).

Herein lies the opportunity for nonprofit leaders and organizations. A great distrust in government's ability to respond to citizen needs pervades today's American political thought. Through civic connectedness, that trust, particularly at the local level, can be cultivated and reinforced. Members of civic associations join out of a desire to meet one another, learn from each other, strengthen business ties, recognize community needs, and find opportunities to make a difference. Nonprofit leaders who recognize and act on the opportunity to participate in civic associations, assume leadership roles, and help association members succeed in fulfilling their goals will help further their own organizations' missions, gather much needed support, and potentially realize results that would otherwise not be achievable alone.

Organizational Structure

Although the most recognizable presence of service clubs and benevolent societies is found at the local chapter level, all local affiliates belong to a vast national or international network of other local chapters. The largest service clubs and benevolent societies involve hundreds of thousands to millions of members, each belonging to one local chapter or another. As with any club or organization, maintaining culture, rituals and historical legacies are critical components of their survival strategies. In other words, without reinforcing cohesion among their members, service clubs and benevolent societies have little reason to remain intact. Therefore, large hierarchical structures, overseen by national or international governing bodies, have been established with strict guidelines and reporting procedures for their numerous local chapters. These governing bodies are professionally staffed, frequently by long-standing members. They geographically subdivide their local chapters by states, regions, or districts.

The core funding of the international system comes from member dues. The dues, paid at the local level, trickle up the hierarchical system. Each local chapter retains a portion of a member's dues and sends the remaining funds to the state or district headquarters, which will retain a portion for operating expenses, sending the balance to the international governing body. In return, club policies, manuals, membership memorabilia, public relations and marketing materials, and charitable directives trickle back down the system to the local chapters. Despite this clearly delineated hierarchy, local chapters retain their own unique identity and culture and pursue their own charitable endeavors. Frequently, small groupings of local chapters will collaborate with each other on various marketing or charitable activities as a means to pool resources, raise local awareness, and encourage new memberships.

At various points throughout the year, district, national, and international conventions are held. Chapters will elect representatives to attend these events. At these conventions, club rituals and purposes are reinforced, local chapter representatives learn from each other, new leadership positions are filled, and broad goals and objectives for the international club are identified.

An example of this hierarchical structure and its network of local chapters can be found within the International Chapter P.E.O. (Philanthropic Educational Organization) Sisterhood, commonly referred to as P.E.O (http://www.peointernational.org). Headquartered in Des Moines, Iowa, this organization was founded in 1869 as a membership organization for women with the purpose of encouraging educational attainment and achievement. Today, the organization claims almost 250,000 members who participate in local chapters throughout the United States and Canada. Each local chapter reports to a state chapter, and each state chapter reports to the international governing body. The international entity provides members with opportunities to apply for a variety of educational grants and scholarships, and it owns and operates Cottey College, a women's liberal arts school in Missouri. At the local level, chapters will design and implement their own programs that offer educational opportunities and grants for women in their local communities.

Tax-Exempt Status and Tax-Deductible Gifts

The IRS provides three different tax-exempt classifications for service clubs and benevolent societies. All three classifications fall under the IRS section of 501(c) tax-exempt organizations. To be eligible for tax-exempt status under the 501(c) classification, an organization must operate for the purpose of providing social benefits to the public or mutual benefits to its members (Hoyt, 1998). Among the 25 different types of 501(c) organizations, only 3 generally relate to service clubs and benevolent societies: 501(c)(4), 501(c)(8), and 501(c)(10).

Service clubs fall under the IRS classification 501(c)(4). These organizations are considered social welfare entities that "promote general welfare of a community by bringing about civic betterments and social improvements" (Hoyt, 1998, p. 149). Examples of 501(c)(4) organizations include Rotary International, Lions Club International, Optimist International, and International Chapter P.E.O. Sisterhood.

Benevolent societies are grouped into two different IRS classifications, 501(c)(8) and 501(c)(10). 501(c)(8) organizations are fraternal benefit societies, orders, or associations, operating under a lodge system. These entities are unique in that they extend financial benefits to members and their dependents for life, sickness, accident, or other financial needs (Hoyt, 1998, p. 150). Common examples are the Benevolent and Protective Order of Elks of the USA, Sons of Norway, Knights of Columbus, Moose International, and Fraternal Order of Police. Similarly, 501(c)(10) organizations are fraternal, sorority, or domestic societies that operate under a lodge system. Net earnings are devoted to religious, charitable, scientific, literary, educational, and fraternal purposes. No financial benefits, such as life or health insurance, are provided for members (Hoyt, 1998, p. 150). Common examples of this type of entity are Masonic Lodges, the Fraternal Order of Eagles, and Shriners International.

Although the clubs are classified as tax-exempt organizations, members cannot claim club dues and fees as charitable contributions on their income tax returns. Only organizations classified by the IRS as 501(c)(3) are eligible to receive tax-deductible contributions. Therefore, as a means to further their charitable endeavors, most service clubs and benevolent societies establish separate entities that qualify under the IRS 501(c)(3) ruling. By establishing a separate 501(c)(3), service clubs and benevolent societies can benefit from further financial support from their members. Members are encouraged to make contributions to the 501(c)(3) organization, which they can report on their tax returns for deductions.

Generally, the affiliated 501(c)(3) entity is established as a foundation or endowment. This means that the entity retains a pool of invested funds and annually distributes a percentage of the annual investment earnings for charitable purposes. In the eyes of the IRS, the affiliated foundation is a completely separate legal entity, with its own mission and governing board of trustees. The board of trustees is composed of club members who have demonstrated leadership and commitment to the club.

An example of a service club with an affiliated 501(c)(3) foundation is Kiwanis International. Now headquartered in Indianapolis, Indiana, Kiwanis (http://kif.kiwanis.org) was founded in Detroit, Michigan, in 1915 as a service club for businessmen. Although the original intention was to offer its members business networking opportunities, individual chapters took on service-oriented initiatives aimed at helping poor residents in their communities. Later, Kiwanis International decided to formalize its charitable service endeavors by targeting aid and assistance to programs that help poor children. In 1939, to further its charitable service goals, the club established the Kiwanis International Foundation with the mission "to assist Kiwanis International in serving the children of the world." In 2008, the foundation ended its fiscal year with more than $10 million in assets and made nearly $300,000 in direct grants to nonprofit organizations serving children.

Cultural Characteristics

Describing the different IRS classifications that are applied to service clubs and benevolent societies is helpful when it comes to understanding their core functional attributes. Yet, function alone does not fully explain their distinct cultural characteristics, particularly in terms of how they engage their members. Fully exploring the cultural characteristics of service clubs and benevolent societies presents a bit of a challenge, as each individual club and society has its own unique personality, character, rituals, and behavior. Therefore, the intent of this section is to provide a basic overview for how these organizations create their own unique culture, particularly in terms of how they foster relationships among their members.

Service Club Culture

Because of their orientation to business and civic leaders, service clubs are perhaps the easiest for outsiders to understand. For an outsider who attends a club meeting for the first time, the experience will appear like nothing more than an average gathering of business men and women. This rather conventional approach to club meetings ensures that a diverse group of individuals can all come together and feel comfortable in the setting. Although most service clubs were founded as strictly male organizations, the societal demands of equity and inclusion have changed these attitudes over time; beginning in the 1970s, service clubs opened their memberships to women, and today, they seek to grow by increasing ethnic minority representation. This willingness to adapt to societal change, although not always immediately welcomed by older members, is likely the reason many service clubs are still in existence (Wuthnow, 1998).

A sense of belonging and camaraderie is a key cultural aspect of service clubs; this characteristic is encouraged through the informal relationships that develop among members. Some key aspects of club behavior foster these cordial relationships. For example, the frequency of meetings, often weekly and over a meal, keeps members in regular contact. Likewise, the collective feeling of pride that results when members together successfully complete a local service project is another way that camaraderie is reinforced. Members are encouraged to become well acquainted with each other, often forming lifelong bonds and friendships. For many who join, networking for business purposes is a key interest. For-profit business leaders join as a way to express corporate citizenship and identify potential customers. Elected officials join as a way to stay in close contact with key constituents. Nonprofit leaders choose membership as an opportunity to spread the word about their missions.

Although club rituals are not as prevalent among service clubs as they are in benevolent societies, certain ceremonial procedures are exercised at every formal club gathering. Generally, these are nothing more than offering a nondenominational prayer, reciting the Pledge of Allegiance, or singing a song. While younger and newer members may see these rituals as peculiar or unnecessary, when performed routinely, they serve to focus members' attention, signal the official beginning of a meeting, and encourage cohesiveness in an otherwise diverse mix of individuals.

Over time, service clubs have developed mechanisms that strengthen the culture and contribute to their ongoing existence. For instance, leadership roles, such as board positions or committee chairs, are rotated with frequency as a way to strengthen the depth of skill and ability among members. This strategy ensures that when active members depart from the club, other members are prepared to step into their places. Much of the work of service clubs actually takes place outside of their regular meetings. Numerous committees are formed either to operate certain aspects of club management, such as membership or marketing committees, or to facilitate the club's community service projects. For many clubs, service on a committee is highly encouraged, if not required. Club leaders will help new members identify a committee that meets their skills and interests, but they also seek to rotate committee assignments so that members have the greatest chance to meet each other and build as many personal relationships within the club as possible. Frequently, chapters will hire professional staff who maintain member communications and manage the more mundane administrative tasks. This is particularly true in larger chapters with hundreds of members. By relieving members of these responsibilities, service clubs can keep members enthusiastic about membership and committee service (Wuthnow, 1998).

In a time when society is more mobile, traditional work arrangements have been dramatically redefined, and communities interact on the Internet as much as they do in person, service clubs struggle to find a balance between these changes in human behavior and their core traditions, particularly the frequency of regular club meetings and the expectations for time-demanding committee service. Smaller chapters, in particular, tend to rely on every member to take on a key aspect of club service. While most club chapters still abide by their core traditions, others have made some slight changes in the hopes of retaining member interest and enthusiasm. A popular change among many chapters has been to lower attendance expectations. In a few cases, club chapters have moved to two regular meetings per month, rather than four. Others have started conducting certain committee meetings over the phone or Internet (Wuthnow, 1998).

Benevolent Society Culture

The cultural characteristics of benevolent societies are distinctly different from service clubs. Whereas service clubs see strength in the diversity among their members, benevolent societies seek to build community among individuals who all have something in common, such as a religious tradition, an ethnic heritage, or a profession. For instance, the Sons of Norway's purpose is to encourage social connections among families who trace their ethnic heritage to the country of Norway; the Knights of Columbus was born out of the Catholic tradition; and the Fraternal Order of Police is a community of individuals who are all sworn law enforcement officers. Because of the shared experience among members of benevolent societies, families often see membership as an aspect of their own traditions and encourage younger generations to continue the family legacy by joining the society when they come of age. Although benevolent societies do welcome new members, they do so with great care. Society elders will interview a prospective member, screening him or her carefully to ensure the individual is an appropriate fit.

Within these organizations, ritual, heritage, history, and rites of passage have developed over decades and are passed on, with great intentionality, from one generation to the next. The formal ritualistic nature of society behavior serves to instill tight bonds among members while creating a literal barrier between those who are members and those who are not. As with service clubs, the camaraderie and informal relationships that develop among members are important factors to benevolent societies; however, the formality of society behavior and the shroud of secrecy that is a part of most benevolent societies serves as a mechanism to ensure group cohesion in a way that is simply not present among service clubs. Becoming aware of the society's secrets is a rite of passage for new members; telling outsiders about these secrets is strictly forbidden. As a result, outsiders often look at these organizations with great skepticism. For instance, rumors about the secret traditions of Masons and Shriners have led these organizations to be the subject of endless criticism and speculation about what they do behind closed doors.

Another cultural trait that is common among benevolent societies is a tall organizational hierarchy, with multiple levels of membership. Years of service and the successful performance of certain duties is generally the pathway many members take as they climb the ranks of society membership. While little is known about what benefits members receive as they reach higher levels of service, status, prestige, and respect appear to be important goals for lifelong members. It is evident that this progression of membership levels is used as an additional mechanism for retaining member enthusiasm and ensuring group cohesion.

Unlike service clubs, which have sought to create easy pathways to membership as a mechanism for ensuring their survival, benevolent societies have taken an opposite approach. They use their strict culture and barriers to membership as a mechanism for keeping current members active and loyal. This strict approach to member relations has not helped these organizations grow over time. In fact, for some, their mere survival is at risk. Although today their memberships still remain in the hundreds of thousands, even millions, the unwillingness to adapt to societal change has generally brought about more hardship than success for benevolent societies.

International Service

Philanthropically, service clubs and benevolent societies have made significant contributions to our society, nation, and world. At the national and international levels, all service clubs and benevolent societies report some impressive service-related successes. They have achieved these successes by mobilizing all of their members to collectively make an impact in one targeted area of service. For example, Rotary International has made it a priority to eradicate the world of poliovirus. Similarly, Shriners International, through its Shriners Hospitals for Children, was an early pioneer in pediatric health care, and its impact in this area continues today.

Rotary International and Polio Eradication

In 1987, Rotary International, through its charitable affiliate, the Rotary Foundation, announced as its global service priority a plan to play a leading, significant role in eradicating polio worldwide. In doing so, it launched an international campaign to raise $120 million. By 1988, one year later, Rotary surpassed its $120 million goal by contributing an initial $247 million to the effort. Rotary's leadership in the global effort to eradicate polio is considered the defining moment that inspired a worldwide philanthropic initiative, calling to action numerous other donors, nongovernmental groups, governments, and world health authorities. Jointly, these parties created the Global Polio Eradication Initiative (GPEI; http://www.polioeradication.org), a joint project of the World Health Organization, U.S. Centers for Disease Control and Prevention, UNICEF, Rotary International, and numerous national governments. Thanks to Rotary's leadership, GPEI is considered the largest single internationally coordinated public health project in the world's history.

Today, responding to large challenge grants made by the Bill & Melinda Gates Foundation, The Rotary Foundation (http://www.rotary.org) reports that its contributions to polio eradication are approaching $1.2 billion, with more than 1.2 million Rotary members contributing to the cause. Globally, the effort has raised more than $6.17 billion (Brown, 2009), and world health experts report that more than 2 billion children in 122 countries have successfully received polio protection.

Shriners International and Shriners Hospitals for Children

Shriners International (http://www.shrinershq.org) was born out of the Masonic movement in the late 1800s. It formed as a fraternity of Masons who had achieved the Master Mason status of the Freemasonry Fraternity. Although socializing and networking were the original motivations behind the formation of Shriners International, the pursuit of philanthropic endeavors was always a priority of the group. Through the early 1900s, each local chapter of Shriners engaged in its own individual acts of charity, frequently offering financial support to the victims of natural disasters. In 1919, a Philadelphian Shriner, Freeland Kendrick, who had just been elected as imperial potentate, the highest achievable Shrine position, sought to identify a single cause that all members of the organization could rally behind. During a national campaign, he told Shriners, "While we have spent money for songs and spent money for bands, it's time for the Shrine to spend money on humanity." As a result, Shriners agreed to formalize their philanthropy and directed their efforts towards pediatric health care. In 1922, the organization established the first Shriners Hospital for Children in Shreveport, Louisiana. At the time, the focus was on orthopedic care to respond to some of the more serious conditions of the time, such as clubfoot. In doing so, Shriners Hospitals for Children made historic advances in surgical procedures and leg braces. Initially, access to care was intended specifically for children of families who could not otherwise afford to pay for the care.

Today, Shriners Hospitals for Children have more than 22 locations spread throughout the United States, Canada, and Mexico. Through the support of its 411,000 members, the organization reports that more than 835,000 children have received care through the health care system, all at no cost to their families. Now, the only criterion for a child to be admitted to a Shriners Hospital is that a physician's referral must indicate that a reasonable possibility exists the child could benefit from the care. This means that family income is no longer an aspect of hospital admission eligibility. The range of services now offered goes beyond orthopedic care and includes burn care, spinal cord injury rehabilitation, cleft lip and palate care, medical research, and physician education.

Local Service

Aside from the collective philanthropic priorities of service clubs and benevolent societies, local chapters all take on their own service initiatives directed at improving the quality of life in their immediate communities. On this front, the service activities of local chapters are broad and diverse. The members of local chapters, as leaders in their communities, work hard to identify local needs and organize themselves to make a positive difference. These organizations engage in a wide array of local service projects, from helping local social service nonprofit organizations achieve their goals to the direct delivery of food and emergency aid to poor and needy families. The stories that local chapters tell of their impact are each special and serve as an ongoing source of pride and enthusiasm among their members. Two examples, one from the Michigan district of Kiwanis International and another from a Lions Clubs International chapter in Prescott, Arizona, are offered to demonstrate how these organizations seek to better their own communities, particularly in times of need.

Michigan Kiwanis Clubs and Kids Against Hunger

In April 2009, as a part of Kiwanis One Day, an international day of service facilitated by Kiwanis International, members of Michigan's Kiwanis clubs joined together to assemble healthy meal packets for the state's growing number of needy families. The volunteers assembled ready-to-cook recipes of rice, soy, dried vegetables, and chicken broth, the perfect ingredients for a healthy soup or casserole meal. One packet alone was designed to feed six adults and up to 12 children. A combination of food donations from local vendors and cash donations from members provided the supplies necessary to complete the project. In one day, more than 300,000 meals were packaged and distributed to food banks across the state. Kiwanis members, their families, and other community volunteers participated in the effort, which was coordinated at 11 different assembly locations across the state. One site in the city of Grand Rapids was responsible for gathering 100 volunteers, who assembled 30,000 meals in a single day (Reinstadler, 2009).

Prescott (AZ) Noon Lions and a Local Newspaper Recycling Program

Fifteen years ago, responding to the understanding that only 40% of Americans recycle their daily newspapers, the Prescott Noon Lions Club in Prescott, Arizona, came to the realization that this problem was even more severe in their community because there was no formal recycling program. Therefore, the Lions chose to make it their community service priority to pool their resources and launch a community-based recycling program. Ever since, two mornings each week, 35 of the club's members get up before dawn and collect old newspapers from local residents. After sorting the papers, the club ships them off to regional recycling centers. Since launching the program, members have collected more than 53 million pounds of newspapers. Members volunteer their time, more than 850 hours each month, and use their own vehicles, accounting for more than 25,000 donated miles each year. The effort not only helps to keep newspapers out of the local landfill, it serves as a club fundraiser. In one year alone, the group raised more than $230,000, all of which was donated to more than 40 local nonprofit organizations, such as Big Brothers, Big Sisters, and a local center for the blind (see Lions Clubs International, http://www.lionsclubs.org).

Getting Involved

As mentioned earlier, service clubs and benevolent societies offer nonprofit leaders great opportunities for networking, learning about the community, forming partnerships, and identifying new donors, volunteers, and board members. Although these organizations position themselves as a group of community leaders who are eager to make a collective difference in their communities, the culture of camaraderie that develops among their members encourages an environment where the interests of those who belong to the group come before the interests of those who do not. In other words, nonprofit leaders who belong to the club benefit from greater access to its leaders and stand a better chance of leveraging the club's philanthropic resources. It is true that service clubs and benevolent societies welcome opportunities to partner with nonprofit organizations, but they are naturally more inclined to respond to community service ideas that are first presented by their own members. Therefore, nonprofit leaders have two options: Either get acquainted with a club member, or join the club themselves. Clearly, the latter option is the more expedient path toward forming a partnership with a service club or benevolent society. Through active membership, participation in committees, and assuming leadership roles, nonprofit leaders will earn the respect of the organization's members. It is a common understanding that achieving respect from club members comes before one can realize his or her personal motivations for joining the organization.

Both service clubs and benevolent societies have many nonprofit executives as members. Yet, it is clear that joining service clubs is an easier, more expedient process than joining a benevolent society. As mentioned earlier, membership in a benevolent society is generally derived from one's personal ethnic heritage, religious tradition, or professional affiliation. Likewise, because of the strict cultural traditions associated with benevolent societies, the process for membership is often more involved. This is particularly true for those that are registered with the IRS as 501(c)(8) organizations, which offer financial benefits to their members. That being said, all of these organizations require new members to ensure their own survival. Thus, if club or society membership appears to be a logical option for an aspiring nonprofit executive, one should not shy away from seeking opportunities to get involved.

On their websites, nearly all service clubs and benevolent societies outline the process that prospective members must pursue to join. For either situation, knowing an active member is the easiest and preferred way. Due to the complicated and often secret process for joining a benevolent society, only the process for joining a service club will be explored in this chapter. For those who are interested in joining a benevolent society, it is recommended that one contact a local chapter directly and express interest.

Joining a Service Club

The new member process for a service club varies from club to club and chapter to chapter. Generally, the first step toward joining a service club is attending a regular club meeting as the guest of a current member. The current member will often inform the membership committee chairperson that a prospective new member has expressed an interest in joining the club. As a response, the committee chair will acknowledge the request and suggest that the prospective member come to a meeting as a club guest. In doing so, the club will often cover the cost of the meal for this first introduction to the club. A good host will lead the prospective member around the meeting room and introduce the individual to key members. If the prospective member is still interested, many service clubs require that he or she attend several meetings to allow the individual adequate opportunity to get better acquainted with members and see the club in action.

Once the prospect decides to continue down the path toward membership, he or she will fill out an application. Applications give a prospective member the chance to communicate his or her professional background, past service club experience, and community leadership roles. An application will ask the prospect to identify any and all current club members the individual already knows. Many clubs will require a prospective member to identify current members who will serve as his or her primary and secondary sponsors. By signing a prospective member's application, sponsors indicate to the membership committee that the individual would be a good fit for club membership. Once the application has been submitted, the membership committee will meet and discuss the attributes of the proposed member. In a day when club growth and survival is a frequent topic of concern for service clubs, it would be rare for a new member's application to be declined.

Once the membership committee has approved an application, a couple of the committee's members will ask to meet with the applicant and explain member expectations and how the club works. This conversation will cover such topics as the club's community service initiatives, member dues, attendance, charitable expectations, and the various opportunities for committee service. A formal new-member orientation with other prospective members will soon follow, where these and other topics, such as the club's history and international service priorities, are explained in greater detail. Once these steps have been completed, the new members will be presented at a regular club meeting, where their professional backgrounds and other personal attributes and interests are shared. New members are then welcomed by the group and are presented with the club's official pin.

When joining, nonprofit executives should be clear about the financial obligations that come with club membership and make certain that their superiors or board members are aware of these costs, which will vary from club to club and chapter to chapter. Although the financial costs of membership are not exorbitant—roughly $1,000 or slightly more per year—for small and mid-size nonprofit organizations that tend to pay lower staff salaries, these costs may be out of reach for an individual staff member to cover out of his or her pocket. Generally, for-profit companies that ask their employees to join service clubs will pay for all of the associated membership costs. The savvy nonprofit organization will do the same for its employees.

That being said, it is wise for the nonprofit executive who joins a service club to enthusiastically embrace the opportunity and put forth the effort required to make his or her organization's investment worthwhile. Club leaders will explain to new members that the benefits of club membership depend on the extent of time, effort, and energy that one is willing to invest in club participation. Merely joining the club will not necessarily yield a direct return on the investment. What is more, a nonprofit executive should avoid overstating to his or her board members the potential for a financial return on the investment in club membership. It is important to note that any returns may not be immediately recognizable and may come about in nonmonetary ways, such as through a greater awareness among community leaders of the nonprofit organization's mission and programs. In many cases, nonprofit executives will benefit the most from establishing personal relationships with individual club members. Again, active participation in the workings of the club provides the best opportunity for nonprofit representatives to achieve these goals.

Once a nonprofit executive has established himself or herself as a dedicated new member, he or she may have the opportunity to ask that the programming committee consider allowing time at a regular meeting for a presentation on his or her nonprofit organization's mission. Such a presentation will introduce the club's membership to the organization's goals, services to the community, and results of its work. If inspiring, such a presentation could attract new donors, board members, and volunteers. The possibility always exists that the club could take on support for the nonprofit as one of its local service priorities. Clubs tend to identify new service projects as a response to a moving presentation about a serious community need. Although this may seem like a terrific opportunity for a nonprofit organization and could justify the financial and time costs for joining, being too forceful with club members in this regard could backfire and do more harm than good. Clubs prefer to set their own service agendas. Any strategy for attracting the club's attention to a particular nonprofit organization should be pursued only with great respect and admiration for the club's internal decision-making process and culture.

Tips for Students and Young Nonprofit Leaders

Because the very nature of service clubs is to gather business and community leaders together for the purpose of pursuing community service, these organizations tend to shy away from attracting prospective members who have not yet begun their careers. Yet, students and young leaders can employ strategies to prepare themselves for future club service.

While still in school, students can develop leadership skills by joining service-oriented campus organizations. This experience offers a great introduction to the demands of club membership and will prepare a student for future leadership roles in more formal professional-service clubs. Participating in a debate or speech team can also help build confidence and refine public-speaking skills. For those who fear standing and speaking in front of a crowd, something that is frequently asked of service club members, such experience will be invaluable.

Many international service clubs offer junior or young member chapters as a strategy for identifying and cultivating future lifelong members. An example of this is Rotaract, which is an affiliate of Rotary International. Some local Rotary chapters sponsor their own Rotaract club, but not all. A similar option can be found with an international service club that is specifically designed for young business leaders, Junior Chamber International (http://www.jci.cc), or "Jaycees" for short. Its mission is to cultivate young leaders between the ages of 21 and 40. This organization has roughly 200,000 members in more than 100 countries. Many notable personalities, such as Bill Clinton, Ronald Reagan, and Larry Bird, are former members. Through a variety of community service projects, the young members of this club build lifelong relationships and hone their leadership skills. The membership process is easy, and annual membership dues are generally between $50 and $75. The experience offers a great opportunity for young leaders to first develop their skills and learn about service club membership before joining a more formal professional club, such as Kiwanis or Rotary.

Summary

For those who are new to a community, just starting a career, or forming a new nonprofit organization, service clubs and benevolent societies can offer an effective, expedient way to form new relationships and build social capital. Although service clubs and benevolent societies have suffered declines in participation in recent decades, they still serve as important gathering spaces where civic and business leaders join together in hopes of making their communities a better place to live. Should these organizations continue to find new ways to adapt their cultures and traditions to the complexities of today's society, their potential to build trust among citizens and make a positive difference in communities is great. It is clear that nonprofit organizations and their leaders belong in this environment. Nonprofit organizations, in order to succeed, must know and understand their communities. Service clubs and benevolent societies offer a perfect opportunity for networking and building community awareness.

Umbrella Organizations in the United States

John Brothers
Cuidiu Consulting

A popular term in both business school classes and in the private sector is the term *quality control.* Quality control aims to enhance the company's products and services, ensuring a successful process that obtains quality. In addition, quality control also includes the development of employees, understanding the proper skills and training both to correct the company's issues and to advance its workforce. Corporations are able to dedicate entire divisions toward the issue of quality control. In the nonprofit sector, the internal resources available to be dedicated toward quality control are very limited. The need for quality control, therefore, has led to the creation and expansion of organizations dedicated to building the capacity of and providing technical assistance to nonprofit organizations. In the magazine titled *Foundation News and Commentary,* Gwen I. Walden (2006) states that "Nonprofit Infrastructure Organizations (NPIOs) form the backbone of the nonprofit sector by providing vital management, training, professional development and technical services."

Elizabeth Boris provides additional insight into these types of organizations. In The Nonprofit Quarterly's *Study on Nonprofit and Philanthropic Infrastructure*, Boris (2009) states that

> if I were to describe the network of organizations that supports the nonprofit sector, I would not use the word *infrastructure,* which connotes a fixed and unchanging support system. These organizations are hardly the static bones of the sector; rather, they are the interactive forces that transmit information and propel change. This network connects civil society organizations through its hubs, which create opportunities for peer to peer learning and shared experiences as well as for improving prac tices, conducting and using research, and developing ethical stan dards. At their best, support organizations are propellants that drive organizations to excel. They promote an overarching view of the nonprofit sector's role in society by articulating the collec tive challenges of organizations and their constituents and by developing alternatives to address these challenges.

For young and aspiring nonprofit leaders, infrastructure organizations may be the best starting point in their careers. Opportunities exist to help these leaders understand the needs of both nonprofit organizations and the tools and mechanisms necessary to help these organizations move to the next level. This chapter will outline infrastructure organizations in several environments including:

- Academic centers
- Online resources and technology
- Press and publications
- Nonprofit associations
- Nonprofit research and statistics
- Umbrella organizations
- Cause related support organizations

Outlining organizations within these subsections is not an endorsement of any particular organization but should give the reader an understanding of the types of infrastructure organizations that exist and potential entry points for those interested in careers in the nonprofit sector.

Author's note: The information about organizations in this chapter has been compiled from their websites. Further information can be obtained using the URLs provided.

Academic Centers

Nonprofit Academic Centers Council
www.naccouncil.org

With the growth of the nonprofit sector, many colleges and universities provide graduate degrees and certificates in nonprofit and philanthropic management. In addition, many of these schools have created academic centers that expand on these degrees, delving into research and capacity-building activities. The following is an overview of academic centers throughout the United States.

Hauser Center for Nonprofit Organizations at Harvard University
www.hks.harvard.edu/hauser

The Hauser Center for Nonprofit Organizations at Harvard University is a university-wide center for the study of nonprofit organizations and civil society. The Hauser Center seeks to expand understanding and accelerate critical thinking about the leadership of nonprofit and nongovernmental organizations (NGOs) through the key goals of research, education, and practice.

The center's stated goals include the following:

- *Research:* Explore the critical questions affecting nonprofits and NGOs and widely disseminate the findings
- *Education: S*upport teaching about nonprofit organizations across Harvard University and development of curricula in the field
- *Practice:* Connect current and future leaders with new thinking and scholarship

Notable Research and Programs

- Organizing a major collaboration to study federated organizations, a component of the nonprofit sector that has not heretofore been the focus of scholarly research, despite the fact that so many nonprofits central to civil society are federated entities
- Engaging in a process to expand research opportunities untapped in nonprofit incubators across the country and to increase knowledge about the dynamics of start ups
- Sponsoring with the Harvard Law School a 5 year research initiative on nonprofit governance and accountability

New York University

New York University includes two key academic centers that touch on the nonprofit and philanthropic sector. They are as follows:

National Center on Philanthropy and Law (NCPL)
www1.law.nyu.edu/ncpl

The NCPL was established at the NYU School of Law to explore a broad range of legal issues affecting the nation's nonprofit sector and to provide an integrated examination of the legal doctrines related to the activities of charitable organizations. The NCPL operates for the benefit of the international philanthropic community. Scholars, students, practitioners, and nonprofit organizations worldwide have benefited both directly and indirectly from the resources it provides.

The NCPL's goals of increasing the knowledge of students, faculty, scholars, attorneys, and nonprofit organizations worldwide in the area of law and philanthropy and improving the practice of law in this field are realized through the following eight core activities:

1. Curriculum
2. Scholarly research
3. Conferences
4. Library collection
5. Bibliography
6. Fellowships
7. Placement
8. Faculty development

Research Center for Leadership in Action (RCLA)
http://wagner.nyu.edu/leadership/index.php

Housed within NYU's Wagner Graduate School of Public Service, the RCLA creates collaborative learning environments that break down the potential isolation of the nonprofit fields of study, foster needed connections and networks, and yield new and practical insights and strategies. It engages the leadership of a diverse spectrum of public service organizations from government agencies to nonprofits large and small to community-based and social change groups, both across the country and around the world. RCLA crafts and runs customized, experiential leadership programs that both expand individuals' skills and strengthen the organizations in which they work.

The Center on Philanthropy at Indiana University
www.philanthropy.iupui.edu

The Center on Philanthropy at Indiana University is dedicated to increasing the understanding of philanthropy and improving its practice through research, teaching, public service, and public affairs. The Center on Philanthropy was founded to professionalize fundraising and to building knowledge about the philanthropy field.

Notable Research and Programs

- *The Fund Raising School:* The Fund Raising School helps nonprofit fund raisers, executives, board members, and volunteers improve the success of their organizations by improving their fundraising success. The school teaches comprehensive, proven fundraising concepts and principles, incorporating the latest research. At the same time, it offers specific tools and techniques that empower fundraisers to effectively plan and manage their development efforts.

- *The Third Millennium Philanthropy and Leadership Initiative:* A collaborative effort that focuses on enhancing philanthropy among people of color, women, and youth. Its goal is to learn from and share the center's philanthropic expertise with those whose philanthropy has always been vibrant but who have been historically underrepresented in nonprofit leadership positions.
- *Lake Institute on Faith and Giving:* Provides educational offerings, research, and civic conversations to churches and congregations, religious institutions, nonprofit organizations, theological schools and seminaries, attorneys and financial advisers, community groups, and civic organizations.
- *Women's Philanthropy Institute:* Consults with and provides technical assistance to organizations around the world that are interested in engaging women in philanthropy. WPI also acts as a clearinghouse for information about women's philanthropy, and helps individuals and organizations network and link to one another.

Duke University, Sanford School of Public Policy
www.sanford.duke.edu

Duke University includes two key academic centers that touch on the nonprofit and philanthropic sector. They are as follows:

Center for the Study of Volunteerism and Philanthropy
sanford.duke.edu/centers/philvol

The center offers a professional master's degree in public policy analysis and management as well as an undergraduate major in public policy. The center's major objectives are:

- To support scholarly research on issues related to philanthropy and voluntarism
- To stimulate the exchange of ideas and research findings among scholars and practitioners
- To encourage the development of university courses in the area of philanthropy

The Center for Strategic Philanthropy and Civil Society (CSPCS)
cspcs.sanford.duke.edu

The center researches, analyzes, and promotes philanthropy that consistently produces high impact. CSPCS stimulates communication, collaboration, and problem-solving around pressing issues of public policy and philanthropy. To support the center's mission, CSPCS has a goal to increase the public policy impact of philanthropic individuals and private, corporate, and community foundations

Online Resources and Technology

Over the last several years, nonprofits have come to rely on the use of technology as one of the main threads of the fiber in an organization. To assist with this, organizations have been created that exist online to provide information and resources to the nonprofit sector. Those online groups are as follows:

The Innovation Network
www.innonet.org

The Innovation Network develops and shares online tools and know-how to help organizations measure results. The online tools include the following:

- *Organizational assessment tool:* A self assessment survey and reporting tool that provides nonprofit leaders and stakeholders with a snapshot of organizational strengths and areas for improvement.
- *Logic model builder:* A step by step guide for articulating and connecting organizational or program goals, resources, activities, outputs, and outcomes.
- *Evaluation plan builder:* Transfers key data from the logic model builder and moves from goal setting to identification of evaluation questions, indicators, and data collection strategies for evaluating program outcomes and implementation.
- *Point K resources:* The searchable resource database at Point K focuses on resources for evaluation and capacity building. More than 200 publications and links are yours to browse through.

Action Without Borders/Idealist
www.idealist.org

Action Without Borders is a nonprofit organization headquartered in New York City. Among other programs, Action Without Borders runs the website Idealist.org, which facilitates connections between individuals and institutions that are interested in improving their communities. More than 84,000 nonprofit organizations from more than 180 countries have created profiles on Idealist.org. They use these profiles to list information about their missions, programs, services, and opportunities. Idealist offers the following services:

- *The Career Center:* Provides guidance to people starting or changing careers, with advice on everything from resume writing to sector switching.
- *Public Service Graduate Education Resource Center:* Contains advice and tools for people considering graduate school and its connection to their future social change careers.
- *Community Action Center:* Offers techniques, tools, and other support for launching, leading, and sustaining a community project.
- *Tools for organizations:* Has useful introductory materials on issues faced by nonprofit managers, from tips on starting a nonprofit to fundraising and technology.

- *Generation Idealist:* Features resources for up and coming community leaders and world changers.
- *Tools for teachers:* Provides classroom materials and activities for schoolteachers who want to introduce their students to concepts like community service and the work of nonprofits.
- *International Volunteerism Resource Center:* Provides advice and tips for people interested in volunteering abroad, whether on their own or through a volunteer sending organization.
- *Tools for webmasters:* Gives webmasters and bloggers a variety of ways to make their own sites interface with Idealist.
- *Mid Career Transitions Resource Center:* Offers advice and resources for a range of professionals seeking to change careers and find a fulfilling job in the nonprofit sector.
- *The Volunteer Center:* Offers advice and leads for people interested in volunteering, whether in their own communities or in far off places.
- *The Nonprofit FAQ:* Uses an interactive Q&A format to delve into all sorts of specific issues in the nonprofit sector, from building a board to obtaining tax exemption to using the right technology in your organization.
- *The Volunteer Management Resource Center:* Contains an encyclopedic array of resources, best practices, networking opportunities, and professional development links for anyone involved in the administration of volunteers.
- *Nonprofit Human Resources Center:* Has a huge range of information, tools, and other useful knowledge for nonprofit human resources professionals and those interested in human resources.

Foundation Center
foundationcenter.org

The Foundation Center maintains the most comprehensive database on U.S. grantmakers and their grants; issues a wide variety of print, electronic, and online information resources; conducts and publishes research on trends in foundation growth, giving, and practice; and offers an array of free and affordable educational programs. The Foundation Center includes the following online and in-person services:

- Library/learning centers in five locations New York City, Washington, D.C., Atlanta, Cleveland, and San Francisco that offer free access to information resources and educational programs.
- Unique databases of information on the more than 95,000 foundations, corporate donors, and grantmaking public charities in the United States and 1.3 million of their recent grants. Its *Foundation Directory Online* subscription service is the most popular means for searching these databases.
- A content rich website with a variety of free search tools, tutorials, downloadable reports, and other information updated daily, including *Philanthropy News Digest*, its daily news service, and *PubHub*, its searchable online collection of thousands of reports published by foundations and nonprofit organizations.
- Research and reports on the growth of the foundation field and on trends in foundation support of the nonprofit sector, including the annual *Foundations Today Series.*
- A full curriculum of training courses educating thousands of people each year in the classroom and online in the form of self paced courses and tutorials, as well as webinars. Free and affordable classes nationwide cover the funding research process, proposal writing, grantmakers and their giving, and related topics.
- Books ranging from basic primers on fundraising and nonprofit management to comprehensive reference works.

GuideStar
www.guidestar.org

GuideStar is a project of Philanthropic Research, Inc. (PRI), a nonprofit organization. PRI's mission is to support philanthropy in America by providing information that supports better donor decision-making, greater nonprofit operating effectiveness, and a more efficient allocation of resources to and within the nonprofit sector. To this end, PRI works to provide the public with a database of quality information about the programs and finances of U.S. nonprofit organizations.

The GuideStar database contains records on more than 700,000 nonprofit organizations classified as 501(c)(3) by the Internal Revenue Service (IRS). Data is collected directly from the charities and from the IRS Business Master File, IRS Forms 990, and 990s EZ. Outside of search services, GuideStar provides the following fee-for-service programs to the nonprofit sector:

- *Nonprofit compensation report:* Benchmark of thousands of organization's salary and benefits packages. Find information by job category, program area, gender, and geography. Scan high level data in the report's executive summary, which highlights key compensation trends in the nonprofit sector.
- *Matching and verification:* GuideStar's matching and verification solution compares client provided data sets with the GuideStar database to verify nonprofit status, confirm charitable status, and append data fields.
- *GuideStar for Education:* GuideStar for Education offers academic researchers, instructors, and their students complimentary access to its database of information on more than 1.8 million nonprofit organizations.

IdeaEncore Network
www.ideaencore.com

IdeaEncore provides nonprofit organizations, foundations, and quality content owners with an online marketplace for sharing ready-to-use tools, templates, training content, policies, and program materials. A wide variety of materials are shared from peers across the spectrum of nonprofit organizations, including:

- Agreements/contracts
- Analyses/research/studies

- Articles/position papers
- Books
- Brochures/fliers/viewbooks
- Definitions
- Evaluations/assessments
- Exhibits/displays
- How to/guides
- Law/regulation/compliance
- Newsletters/publications
- Podcasts
- Policies/procedures/processes
- Software/online tools
- Surveys/data collection tools
- Workbooks
- Workshops/training materials

Press and Publications

As the nonprofit sector grows, so seemingly does the number of media outlets dedicated to it, especially relating to online media. These informational outlets provide the latest updates on opinions and trends in the sector as well as practical tools and resources that can be applied to everyday practice. The following are the most accessed media organizations that assist nonprofit organizations with infrastructure and capacity-building information:

The Chronicle of Philanthropy
www.philanthropy.com

The Chronicle of Philanthropy provides news and information for executives of tax-exempt organizations in health, education, religion, the arts, social services, and other fields, as well as fundraisers, professional employees of foundations, institutional investors, corporate grantmakers, and charity donors. Along with news, the chronicle offers such service features as lists of grants, fundraising ideas and techniques, statistics, reports on tax and court rulings, summaries of books, and a calendar of events. In print, *The Chronicle of Philanthropy* publishes 18 times per year, and a digital edition is also available. Either format provides subscribers with complete access to philanthropy.com, which features the latest news, trend analysis, and fundraising strategies available in the nonprofit sector. The weekly information on the latest nonprofit news also includes:

- Fundraising and giving
- Managing nonprofit organizations
- Highlighting specific causes and organizations
- Facts and figures on the nonprofit sector
- Jobs in the sector

Stanford Social Innovation Review
www.ssireview.org

The *Stanford Social Innovation Review* (SSIR) is a quarterly magazine published by the Stanford Graduate School of Business for leaders in nonprofits, foundations, government, and socially responsible businesses. The mission of SSIR is to share substantive insights and practical experiences that will help those who do the important work of improving society do it even better. SSIR seeks to strike a balance between the pragmatic and the intellectual, to embrace no predefined political ideology, and to champion the interests of no single constituency. SSIR features powerful case studies illuminating what's working today in nonprofits, foundations, and socially responsible businesses, expert analysis of trends and new models for social impact and strategies organizations can employ from groundbreaking nonprofits and social enterprises.

The Nonprofit Quarterly
www.nonprofitquarterly.org

The Nonprofit Quarterly (NPQ) is a management magazine for nonprofit leaders and managers. It provides analysis of themes such as governance, fundraising, philanthropy, evaluation, technology, and financial management. A free monthly electronic newsletter on NPQ's website includes an executive director's guide and a manual that includes step-by-step instructions, case studies, and tips on nonprofit management issues.

GOOD Magazine
www.good.is

Launched in September 2006, *GOOD*'s mission is to provide content, experiences, and utilities to serve this community. *GOOD* currently produces a website, videos, live events, and a print magazine. *GOOD* magazine provides:

- *Marketplace:* Information on our consumer culture
- *Portraits:* A collection of people doing things that matter
- *Stimuli:* A collection of essays on the newest trends in culture
- *Features:* In depth explorations of people, ideas, and institutions

Need
www.needmagazine.com

NEED magazine creates exposure for humanitarian aid via an educational, artistic, visual narrative of human stories, both around the world and domestically. This exposure offers an innovative and dynamic approach to building awareness and increasing support for relief organizations and humanitarian aid. The following are the specific sections within *NEED*:

- The Home department draws attention to situations revolving around the home, such as: slums, refugee camps, availability of clean water and sanitation, stories of displaced people due to war or natural disasters, and the programs that are improving these situations.

- The Kids department looks at issues affecting children, such as: child prostitution, street kids, education issues, child soldiers, orphans, and the organizations that are helping children to succeed.
- The Work section focuses on situations and organizations creating innovative solutions dealing with working life. These include: child labor, sexual slavery, war's effect on work, changes in working life after natural disasters, lack of work, and so on.
- The Health section focuses on projects that improve the physical well being of individuals in need.
- The Generosity section shares stories of the philanthropic activities of individuals, corporations, nonprofits, and governments as well as the impact that giving has on people receiving aid. These stories will inspire and encourage ongoing support to make lasting change a reality for those in need.
- The Future section highlights projects that are an investment in the future, including: sustainable development projects, postwar or disaster reconstruction, child soldier reintegration programs, and so on.
- The Cooperation section highlights projects or situations in which multiple parties are working together to solve a problem or create a sustainable solution.
- The Dialogue section documents a conversation with someone associated with Humanitarian issues, such as: an aid worker in the field or a high profile person directly involved in relief efforts.

Nonprofit Associations

According to the American Society of Association Executives, an association is a group of people who find strength in numbers while sharing common interests in industries, professions, charities, hobbies, or philanthropic action. Most associations are nonprofit organizations, and some are dedicated specifically to the nonprofit sector. Some key associations dedicated to the development and advancement of the nonprofit sector are described here.

Association of Fundraising Professionals
www.afpnet.net

The Association of Fundraising Professionals (AFP) represents more than 30,000 members in 206 chapters throughout the world, working to advance philanthropy through advocacy, research, education and certification programs. AFP fosters development and growth of fundraising professionals and promotes high ethical standards in the fundraising profession.

AFP has a variety of programs aimed toward resource development. Their programs aim:

- To foster development and growth of fundraising professionals committed to the preserving and enhancing philanthropy
- To collect, research, publish, and disseminate historical, managerial, and technical information on philanthropy and philanthropic fundraising
- To promote public understanding of philanthropy and philanthropic fundraising
- To conduct activities that maintain and develop legislation favorable to philanthropy

These programs include the following:

- The AFP International Conference on Fundraising, held annually, draws more than 4,000 people from around the world and provides the ultimate educational and networking opportunity through the many participatory workshops, leadership forums, roundtables, plenary sessions, and social events.
- AFP publications include: *eWire/Skill Builder*, a weekly e mail newsletter, which provides fundraising news, tips, and guidance; *Public Policy Updates* and *Action Alerts,* which provide up to date information on government relations issues; and *Advancing Philanthropy*, a bimonthly magazine, which provides practical fundraising advice and information. AFP also publishes quarterly newsletters on diversity (*Kaleidoscope*) and Latin American fundraising (*Te Informa*).
- The AFP website (*www.afpnet.org*) provides members with all of the latest news, information, updates, and analysis from around the nonprofit sector, the fundraising profession, and AFP. Through the AFP website, members can take courses online, participate in online discussions, or use the online resource center.

Association for Research on Nonprofit Organizations and Voluntary Action
www.arnova.org

Founded in 1971 as the Association of Voluntary Action Scholars, the Association for Research on Nonprofit Organizations and Voluntary Action (ARNOVA) is a neutral, open forum committed to strengthening the research community in the emerging field of nonprofit and philanthropic studies. ARNOVA brings together both theoretical and applied interests, helping scholars gain insight into the day-to-day concerns of third-sector organizations, while providing nonprofit professionals with research they can use to improve the quality of life for citizens and communities.

Principal activities include an annual conference, publications, electronic discussions, and special interest groups. ARNOVA maintains a popular national conference and disseminates the *Nonprofit and Voluntary Sector Quarterly* (NVSQ), the official journal of ARNOVA. NVSQ provides cutting-edge research, discussion, and analysis of the field and leads its readers to understanding the impact the nonprofit sector has on society.

National Council of Nonprofits
www.councilofnonprofits.org

National Council of Nonprofits is the network of state and regional nonprofit associations serving more than 20,000 member organizations. The National Council links local organizations to a national audience through state associations and helps small and mid-size nonprofits

- manage and lead more effectively,
- collaborate and exchange solutions,
- engage in critical policy issues affecting the sector, and
- achieve greater impact in their communities.

Programs and services include the following:

- *Public policy:* The National Council informs nonprofits about legislation and regulation affecting the nonprofit sector and about ways to get involved in advocacy efforts. In addition, the National Council actively participates in coalitions and campaigns at the state and national level and works to increase the role of nonprofits in the policy process.
- *Technical assistance and tools:* The National Council provides technical assistance to state association members and the general public through direct requests for assistance, web and audio conferencing, and tools, such as a contact management database. The website *www.councilofnonprofits.org* is a clearinghouse for information on state associations and the sector.
- *Publications:* The National Council publishes *What You Need to Know*, a member e newsletter, as well as toolkits and case stories on topics such as evaluation, public policy and advocacy, and media relations. Additional signature publications include *Nonprofit Policy News*, a policy e newsletter highlighting critical nonprofit issues at the state and federal level; and the annual *Legislative Overview,* which summarizes state and federal policy changes and trends.
- *Research:* The National Council conducts research and analyzes information to communicate the value of state associations and the nonprofit sector. Projects include the *United States Nonprofit Sector* report, the Member Mapping Survey, and State of the Sector Reports.
- *Special events:* The National Council hosts an annual Member Meeting that brings state association leaders together to chart a course for the network and the sector. The National Council also participates in numerous events with national and statewide partners and provides *trainings and webinars* on select topics.
- *Thought leadership:* The National Council is a valued resource to congressional leaders, national peers, and the media, and is regularly sought out for its informed and objective analysis on the charitable sector.

BoardSource
www.boardsource.org

BoardSource was established in 1988 as the National Center for Nonprofit Boards by the Independent Sector and the Association of Governing Boards of Universities and Colleges, when they recognized the sector's need for an organization that specifically focuses on improving nonprofit effectiveness by strengthening nonprofit boards. BoardSource is dedicated to advancing the public good by building exceptional nonprofit boards and inspiring board service. BoardSource strives to support and promote excellence in board service, is the premier source of cutting-edge thinking and resources related to nonprofit boards, and engages and develops the next generation of board leaders.

BoardSource provides

- knowledge and resources for nonprofit leaders through workshops, training, assessment tools, an extensive website, and a membership program;
- governance consultants who work directly with nonprofit leaders to design specialized solutions to meet an organization's needs;
- the world's largest, most comprehensive selection of material on nonprofit governance, including publications and CDs; and
- an annual conference that convenes about 900 governance experts, board members, chief executives, and senior staff from around the world to discuss the newest thinking and practices in nonprofit governance.

Council on Foundations
www.cof.org

The Council on Foundations, formed in 1949, is a nonprofit membership association of grantmaking foundations and corporations. Members of the council include about 2,000 independent, operating, community, public, company-sponsored foundations and corporate-giving programs in the United States and abroad. The assets of council members total more than $307 billion. The council's mission is to provide the opportunity, leadership, and tools philanthropic organizations need to expand, enhance, and sustain their ability to advance the common good. The council's programs include providing legal information, public policy assistance, professional development, and research to its member foundations.

Nonprofit Research

Independent Sector
www.independentsector.org

Independent Sector's nonprofit, nonpartisan coalition of charities, foundations, and corporate philanthropy programs works every day to meet society's needs in diverse areas such as the arts, education, human services, community development, and health care. Independent Sector members collectively represent tens of thousands of charitable groups serving millions of Americans in every state across the nation. Since its founding in 1980, Independent Sector fulfills its mission in the following ways:

- Convening opportunities for sector leaders to work together on key issues. The most prominent forum of this kind is the Independent Sector Annual Conference, but Independent Sector committees are another key part of developing collective strategies.
- Promoting policies that enable the charitable community to engage with public officials on a nonpartisan basis. Independent Sector focuses on issues such as protecting advocacy rights of nonprofits, promoting tax incentives for charitable giving, and addressing federal and state budget concerns.

- Supporting the development and dissemination of strategies to strengthen volunteering, voting, giving, and other forms of citizen engagement.
- Encouraging the sector to meet the highest standards of ethical practice and effectiveness. As part of continuing efforts in this area, Independent Sector has convened the Panel on the Nonprofit Sector, which is making recommendations in the areas of governance, fiduciary responsibility, government oversight, self regulation, and financial accountability.

National Center on Nonprofit Enterprise
www.nationalcne.org

The National Center on Nonprofit Enterprise (NCNE) helps nonprofits make wise economic decisions. NCNE focuses on resources—how nonprofits can find them and use them well; and on ideas—how ways of thinking can improve the way nonprofits work. To that end, NCNE engages a network of academic researchers, business leaders, consultants, and nonprofit practitioners. NCNE has several programs, including the following:

- *Publications:* NCNE has produced books about a range of ways to make wise economic decisions, based on the proceedings of its two national conferences, and one that offers new thinking about how nonprofits can best secure the resources to achieve their missions.
- *Conferences/seminars:* One of the principal ways in which NCNE both develops and disseminates its ideas and knowledge is through bringing together people with different perspectives. These convenings take the form of the NCNE National Conference, presentations, and seminars.
- *Training:* NCNE offers a limited number of training workshops. As with all NCNE's work, training is delivered by trainers with extensive experience of training and nonprofit practice and a strong grasp of the latest research, analysis, and practice in how nonprofits raise and manage their resources.
- *Consulting:* NCNE offers a unique consultancy service to nonprofits that want to enhance their overall economic viability or face particular challenges in how they secure and use resources. NCNE's consultancy teams of two or three people always combine academic and practitioner perspectives, with one or two team members always being selected from NCNE's Research networks.

Aspen Institute
www.aspeninstitute.org

The Aspen Institute's mission is to foster values-based leadership, encouraging individuals to reflect on the ideals and ideas that define a good society, and to provide a neutral and balanced venue for discussing and acting on critical issues.

The Aspen Institute does this primarily in four ways:

1. Seminars, which help participants reflect on what they think makes a good society, thereby deepening knowledge, broadening perspectives, and enhancing their capacity to solve the problems leaders face.
2. Young leader fellowships around the globe, which bring a selected class of proven leaders together for an intense multiyear program and commitment. The fellows become better leaders and apply their skills to significant challenges.
3. Policy programs, which serve as nonpartisan forums for analysis, consensus building, and problem solving on a wide variety of issues.
4. Public conferences and events, which provide a commons for people to share ideas.

The Aspen Institute hosts the Program on Philanthropy and Social Innovation, an agenda-setting body of foundation, nonprofit, and private sector leaders at the cutting edge of change. The issues its members identify are subsequently considered in cross-sector working groups, with the aim of gaining consensus where possible and spurring collaborative action when opportune. Among the current workshop series is an effort to ensure high-quality and accessible statistical data on social sector activity. The program's leadership development initiatives include the American Express Foundation–Aspen Institute Fellowship for Emerging Nonprofit Leaders; the Aspen Philanthropy Seminar-Aspen; the Aspen Philanthropy Seminar-Greater Washington, D.C.; and the Seminar Series for Mid-America Foundation CEOs. Its communications program includes the *Aspen Philanthropy Letter,* an e-newsletter on ideas and developments that may affect philanthropy and those it supports for years to come.

Urban Institute
www.urban.org

The Urban Institute gathers data, conducts research, evaluates programs, offers technical assistance overseas, and educates Americans on social and economic issues—to foster sound public policy and effective government. Urban Institute researchers study the role and impact of nonprofits, performance measurement, nonprofit governance, and charitable giving and volunteering trends.

Urban Institute has an Outcome Indicators Project that gives nonprofits a performance-tracking framework to deliver timely, meaningful, and practical feedback. Urban Institute's National Center for Charitable Statistics—a national storehouse of data on the nonprofit sector—developed an online system for filing IRS Form 990 and state charity forms. E-filing benefits nonprofits, regulators, researchers, and donors. In addition, Urban Institute has an e-postcard system for the IRS help designed to track small nonprofits that aren't required to fill out a Form 990.

Umbrella Organizations

Umbrella organizations exist to support a network of groups and individuals. The following groups are concentrated around building the capacity and infrastructure of nonprofit groups throughout the United States, including groups that focus on risk and finance. The groups below represent national efforts and many of the foremost leading umbrella organizations:

Alliance for Nonprofit Management

www.allianceonline.org

The Alliance for Nonprofit Management is a multidisciplinary network of individuals and organizations dedicated to strengthening the management and performance of nonprofit organizations. The alliance's mission is to increase the effectiveness of individuals and organizations that help nonprofits build their power and impact. The alliance offers a variety of programs and services geared toward promoting professional development of its members, improving the quality and impact of services for nonprofit organizations, and providing thought leadership in the capacity-building field.

The alliance has a network of more than 1,300 individuals and organizations from all regions of the country. Their members include management support organizations (MSOs), individual professionals, and a range of regional/national/international academic, professional and philanthropic organizations that provide technical assistance (training and consulting) to nonprofits. The alliance's programs include the following:

- *Cultural Competency Initiative* is building the knowledge, skill, and will of nonprofit capacity builders to intentionally focus on culture in their work that strengthens nonprofit leadership and organizational effectiveness.
- *Ethical Standards in Nonprofit Capacity Building* supports the growing field of capacity building of nonprofit organizations, in which a broad range of practitioners support nonprofits in management and governance. To be effective, capacity builders need to be intentional models of the kind of ethical behaviors they aim to foster in nonprofit organizations.
- *Best Practices Awards* confer special recognition on members, corporations, and constituent organizations that have distinguished themselves in the capacity building profession.
- *Terry McAdam Book Award* goes to the book that makes the greatest contribution to nonprofit management; each year, the Alliance for Nonprofit Management reviews books published in the nonprofit sector to make a selection.
- *Affinity Groups/Learning Communities* are formed by alliance members who share common interests so they can advance their goals as capacity builders. Affinity groups provide venues for members with similar interests and identities to share knowledge and information and provide professional support through a variety of educational programs. Affinity groups include: executive transitions; faith based capacity builders; governance; management support organization staff; people of color; and, young and emerging professionals.

Academy of Management

www.aomonline.org

The Academy of Management (AOM) is a leading professional association for scholars dedicated to creating and disseminating knowledge about management and organizations. Academy members are scholars at colleges, universities, and research institutions, as well as practitioners with scholarly interests from business, government, and not-for-profit organizations. The Public and Nonprofit Division of the Academy of Management brings together scholars, managers, and students who continue this tradition by studying the public and nonprofit sectors, and the relationships among public, nonprofit, and private-sector organizations. The division's members study decision making, strategy, organizational behavior, human resource management, and political behavior; collaborations among public, nonprofit, and private organizations; organizational networks involving public and nonprofit organizations; public policy; and the social and ethical dimensions of public and nonprofit activity. The members pay special attention to how distinctive qualities of the public and nonprofit sectors influence management and organizational processes.

American Humanics

www.humanics.org

American Humanics is a national alliance of colleges, universities, and nonprofits dedicated to educating, preparing, and certifying professionals to strengthen and lead nonprofit organizations. The American Humanics program is an innovative course of study that equips college and university students to become skilled professionals and leaders in America's service agencies. American Humanics provides leadership opportunities, internships, and scholarships as well as its education curriculum.

American Humanics administers two major programs: AmeriCorps*ProCorps and Next Generation Nonprofit Leaders Program. American Humanics ProCorps is an AmeriCorps initiative that places students and alumni of American Humanics-affiliated campuses in paid AmeriCorps positions working with at-risk youth and as volunteer coordinators. NextGen is a competitive scholarship program that awards $4,500 to a racially and ethnically diverse group of students with demonstrated leadership potential and is centered on an internship with a nonprofit organization.

Nonprofit Finance Fund

www.nffusa.org

Nonprofit Finance Fund (NFF) is a national leader in helping nonprofits strengthen their financial health and improve their capacity to serve their communities. NFF's strategy is to provide financial resources, in the form of loans, grants, and asset-building programs, in concert with management advice. NFF works directly and with funders to strengthen these organizations and the system by which they are funded. The only national community development finance institution focused exclusively on nonprofits, NFF has lent more than $200 million and leveraged $1 billion of capital investment on behalf of its nonprofit clients. Beyond direct lending, in partnership with others, NFF has generated $16 million for nonprofits for building reserves, cash reserves, and endowments through its multiyear asset-building product. NFF also has provided $1.2 million in loan guarantees, $10.3 million in 9/11 recovery grants, about $13 million in capital grants, and $2 million in planning grants. NFF's technical assistance or advisory services help nonprofits make good decisions about their growth. They include workshops, referrals, the nonprofit business analysis, and other resources.

Nonprofit Risk Management Center
www.nonprofitrisk.org

The Nonprofit Risk Management Center was established in 1990 to provide assistance and resources for community-serving nonprofit organizations. As a nonprofit, the center's mission is to help nonprofits cope with uncertainty. The center offers a wide range of services (from technical assistance to software to training and consulting help) on a vast array of risk management topics (from employment practices to insurance purchasing to internal controls and preventing child abuse). The Nonprofit Risk Management Center offers the following programs:

- Free technical assistance by telephone or e mail to nonprofit staff and volunteers
- An interactive risk assessment software program on the web called *Nonprofit CARES* (Computer Assisted Risk Evaluation System)
- The *Risk Management Essentials* newsletter, which is distributed to thousands of nonprofits three times each year
- Design and delivery of workshops at events and conferences sponsored by nonprofit organizations, umbrella groups and associations, and insurance providers
- Regional conferences on risk management each spring and an annual conference each fall
- Competitively priced consulting services, including risk assessments

TCC Group
www.tccgrp.com

TCC Group provides strategic planning, program development, evaluation, and management consulting services to foundations, nonprofit organizations, corporate community involvement programs, and government agencies. Its consulting staff includes individuals with wide-ranging expertise and experience in a diverse range of issues including education, arts and culture, community and economic development, human services, health care, children and family issues, and the environment. In addition to consulting services, TCC also provides online assessment through its Core Capacity Assessment Tool (CCAT).

The CCAT is a 146-question online survey that measures a nonprofit organization's effectiveness in relation to four core capacities—leadership, adaptability, management, and technical capacities—as well as organizational culture. In addition, the tool helps organizations identify their life cycle stage and provides a real-time findings report, a prioritized capacity-building plan, and the technology to generate self-selected benchmark reports from a national database of 1,000-plus nonprofits. The CCAT is the most comprehensive, valid, and reliable tool of its kind and has been used by funders and nonprofits as a planning, capacity-building, research, and evaluation tool.

Cause-Related Support Organizations

The nonprofit world embraces a large number of causes. Every issue, cause, or subject matter has an organization dedicated to it, and if there are a number of organizations dedicated to the area, then more than likely an effort exists to support those organizations. The following list outlines some large cause-related national organizations and represents a very small sampling of cause-related support organizations that exist throughout the United States. Because the author has a specific expertise in causes related to low-income children and families, the sample concentrates in this area.

United Way of America
http://national.unitedway.org

United Way is a worldwide network in 45 countries and territories, including nearly 1,300 local organizations in the United States. It advances the common good, creating opportunities for a better life for all, by focusing on the three key building blocks of education, income, and health. The United Way movement creates long-lasting community change by addressing the underlying causes of problems that prevent progress in these areas.

America's Promise
www.americaspromise.org

America's Promise is a cross-sector partnership of more than 300 corporations, nonprofits, faith-based organizations, and advocacy groups that are passionate about improving lives and changing outcomes for children. America's Promise has made it a top priority to ensure that all young people graduate from high school ready for college, work, and life. Their work involves raising awareness, encouraging action, and engaging in advocacy to provide children the key supports we call the Five Promises: caring adults, safe places, a healthy start, an effective education, and opportunities to help others.

Coro
www.coro.org

Coro trains ethical, diverse civic leaders nationwide. Coro leaders develop skills; master tools needed to engage and empower communities; gain experience in government, business, labor, and not-for-profit community organizations; and participate in special community and political problem-solving processes.

Alliance for Children and Families
www.alliance1.org

The alliance, formed by the 1998 merger of Family Service America and the National Association of Homes and Services for Children, helps member agency leaders successfully meet today's and tomorrow's challenges by drawing on its more than 90 years of leadership in the human services community. The Alliance for Children and Families provides services to nonprofit child- and family-serving and economic empowerment organizations. Motivated by a vision of a healthy society and strong communities, we work to strengthen America's nonprofit sector and through advocacy assure the sector's continued independence.

Child Welfare League of America
www.cwla.org

CWLA is a powerful coalition of hundreds of private and public agencies serving vulnerable children and families since 1920. Our expertise, leadership and innovation on policies, programs, and practices help improve the lives of millions of children in all 50 states. CWLA's focus is children and youth who may have experienced abuse, neglect, family disruption, or a range of other factors that jeopardize their safety, permanence, or well-being. CWLA also focuses on the families, caregivers, and the communities that care for and support these children.

Community Action Partnership
www.communityactionpartnership.com

The Community Action Partnership was established in 1971 as the National Association of Community Action Agencies (NACAA) and is the national organization representing the interests of the 1,000 Community Action Agencies (CAAs) working to fight poverty at the local level. The mission of the Community Action Partnership is to strengthen, promote, represent, and serve the network of member agencies to assure that the issues of poverty are effectively presented and addressed.

National Alliance to End Homelessness
www.endhomelessness.org

The National Alliance to End Homelessness is a nonprofit, nonpartisan organization committed to preventing and ending homelessness in the United States. The alliance provides capacity-building assistance to help communities turn policy solutions and proven best practices into viable, on-the-ground programs. The alliance provides communities with best practices, how-to kits, and technical assistance trainings to help communities across the country implement solutions developed through policy, research, and practice.

Summary

We began this section discussing the for-profit's concentration on quality control. Many nonprofits lack the resources necessary to ensure the best quality control, and as a result, national infrastructure organizations are able to provide the support and resources needed to help these causes move to the next level.

As this chapter is part of a larger series about nonprofit leadership, one of the great understandings of leadership is to know when to ask for help. Organizations and leaders that are heavily linked into their respective infrastructure organizations will show greater success. The above cited organizations provide a great start to succeeding as a nonprofit leader.

PART II

History of the Nonprofit and Philanthropic Sector

10

Classic Thought Leaders Framing U.S. Philanthropy

Jon Van Til

Rutgers University

Voluntary action is central to a number of classical theoretical perspectives in social science. Writing at the turn of the 19th century, Émile Durkheim, following in the steps of his countryman Alexis de Tocqueville, gave a major role to associations in his theories of social structure. The observations of Max Weber and Robert Michels, contemporaries of Durkheim, illuminated aspects of organizational reality in the voluntary sector. Karl Marx, while never a voluntarist, nevertheless left an implicit theory of voluntarism that is as critical as it is incomplete. And, in the 20th century, social theorist Talcott Parsons saw the voluntary sector performing basic functions of integration in society.

The voluntary sector, unlike the polity or economy, has not given rise to a separate scholarly discipline for its study (e.g., political science, economics). Sociologists who have specialized in voluntary action research often complain of the marginality of the field, at least in their colleagues' perception. However valid these complaints, the fact remains that the field has been central in the thought of many of the foremost developers of the sociological tradition.

In this chapter, I will focus on questions of central interest to a consideration of the relations between the third sector and other sectors, examining five problems associated with the central concerns of five classic thought leaders in social theory: Tocqueville, Michels, Weber, Marx, and Parsons (for more detail, see Van Til, 1988, Chapter 4, and Van Til, 2008, Chapter 1). Understanding these ideas is critical for leadership in the nonprofit world, as the visions of such major thinkers sustain and support the work of voluntary organizations in our own time.

The Tocqueville Problem: Can Association Restrain Benign Despotism?

The first classic problem in the field of voluntary action research derives from the work of Tocqueville and his sociological descendant and countryman, Durkheim (1858–1917). It may be identified as the problem of social and political pluralism.

To Tocqueville, the basic problem facing modern societies is the building of consensus. Faced with the demise of the old hierarchical order and the leveling occasioned by the rise of democratic politics, Tocqueville "sought to assess whether such democratic societies would be able to maintain free political institutions or whether they might slip into some new kind of despotism" (Bellah, Madsen, Sullivan, Swidler, & Tipton, 1985, p. 36).

The fear that democracy might prove a temporary societal form, prone to give way to a seemingly benign and yet irrevocable despotism of the "mass," troubled Tocqueville. Durkheim would later identify the sociopsychological root of this condition as *anomie,* the inability to connect societal goals with means to achieve them.

To both Tocqueville and Durkheim, the solution to the problem lay in the building of intermediate associations, groups that permitted individuals to transcend the gentle bonds of individualism and to participate in the realities of contemporary social living. Durkheim (1958) put the matter graphically: "A society composed of an infinite number of unorganized individuals, which a hypertrophied state is forced to oppress and contain, constitutes a veritable sociological monstrosity" (p. 28). Durkheim offered his prescription for hyperindividualism and the untrammeled state, asserting that the individual requires being dragged into the "general torrent of social life" by voluntary associations (p. 28).

The Michels Problem: Is Oligarchy Inevitable?

The Tocqueville problem is essentially a societal one, addressing the interrelations of large organizations and the patterns of their connections. The Michels problem, on the other hand, pertains to voluntary organizations and their own internal structure. Michels (1876–1936) posited as a central characteristic of the turn-of-the-century German Social Democratic Party the separation of its members into two internal classes: leaders and masses. He notes that those who assumed leadership in the party acquired both inside knowledge and the love of power and its accompanying privileges.

Michels's *iron law of oligarchy*—"who says organization says oligarchy"—has been widely accepted in the study of political organizations. Thus, Lipset, Trow, and Coleman (1956) sought to test the iron law in a study of the International Typographical Union, and countless political sociologists have pointed to the applicability of the law in other modes of organization. Students of voluntary organization have generally assumed the applicability of the law to many quintessential voluntary groups, as well.

Michels's law is more often referenced than tested, however, and contemporary organizational studies of voluntary action have cast it in a rather different light. When a distinction is made between what contemporary voluntary action researchers call a *PSNPO*—a paid-staff nonprofit organization—and a wholly volunteer-based organization, the iron law does not appear universally applicable. Indeed, Jone Pearce (1980) has contended that Michels's law does not apply at all to many volunteer-staffed organizations. Rather, her studies find that the very act of leadership in a volunteer organization can be problematic in itself because the costs of exercising leadership in such organizations clearly outweigh the immediately perceptible gains.

The Michels problem can rather clearly be specified in modern society. The iron law applies most directly to those organizations in which rank-and-file assume more highly paid positions on (s)election to them and in which they enjoy considerably heightened privilege as a consequence of their new rank. The law applies less well to many contemporary corporations, including universities, in which the costs of advancement may be more apparent than the gains.

If the Michels proposition does not universally apply in the realm of paid employment, it seems even less broadly applicable to the volunteer organization that is without paid staff, as Pearce's work (1980) so dramatically demonstrates. Yet, Michels's insights are not wholly inapplicable to the voluntary sector. Countless voluntary organizations at all societal levels do not demonstrate shared and revolving leadership patterns but rather become the bailiwick of a single dominant leader.

The Weber Problem: Can the Perils of Bureaucracy Be Avoided by the Voluntary Sector?

The Michels problem is in many ways a subunit of a broader problem, that of the organizational structure of modern society. Viewed as involving the increasing dominance of bureaucratic principles of organization in society, this issue is most closely linked to the work of Max Weber (1864–1920).

Alford and Friedland (1985) have identified this problem as involving the managerial perspective on society. The unit of analysis in such a view is the organization, seen to "have a significant degree of autonomy from society and the individual and group relations" that compose the organization (p. 5). The managerial perspective involves a heightened awareness of *interorganizational networks,* organized structures of power, and a pervasive conflict between centralization and fragmentation.

Students of American life have often noted the resistance of voluntary associations to the bureaucratic principle. Focusing on the breadth and significance of informal organizational patterns, they have asserted the importance of neighboring, familism, and other interactional patterns. Donald and Rachelle Warren (1985) have identified a widespread system of *problem anchored helping systems*, which allow most Americans access to unpaid counseling, home care, and other assistance. Their studies show that these informal patterns of assistance far outweigh the services of formal organizations in terms of the frequency of their use.

Such informal patterns of help seeking and help giving differ from those involved in formal organizations in several ways. As Hoch and Hemmens (1985) explain:

> People conceive of informal helping within the context of ongoing social relationships. Unlike organized help in which the function defines the boundaries of the social relationship between the help giver and the recipient, informal help is defined by the qualities of the social relationships within which helping occurs. (p. 5)

Such informal help tends to be reciprocal, rather than one way, and may be seen to "compose the basic fabric of social life in households, communities, and organizations" (p. 5).

Formal organizational theory, on the other hand, takes a very different position. When it considers voluntary organizations, it gives central attention to the rising professionalism of such groups, and it sees that professionalism as a response to the weakened effectiveness of amateurism in American voluntarism. Many factors render effective volunteering problematic, including the widespread difficulty of volunteer-based organizations to secure effective leadership. Formalizing and professionalizing the voluntary agency is informed by the desire for efficacy, but it may lead to a rigid and bureaucratized structure.

Contemporary forces at work in the environment external to voluntary organizations impel such organizations toward models that are bureaucratic and increasingly corporate in form, if not in spirit. As Kramer (1985) puts it,

> Voluntary agencies will be confronted with the related dilemmas of entrepreneurialism and vendorism, both of which have an exceedingly high potential for goal deflection. . . . Not surprisingly, with reductions in their governmental income, many voluntary agencies have been attracted to the prospect of earning funds not dependent on grants or contributions. (p. 388)

Alford and Friedland (1985) note that, in the managerial view of society, the concept of *voluntary association* becomes replaced by that of *organization* (p. 449). In such an *organizational society,* the distinctions between private and public, profit and nonprofit, are greatly lessened. All organizations, be they voluntary, corporate, or governmental, are seen to follow the same laws of organizational domination and competition. All come to be seen as ultimately dependent on their ability to secure an economic niche capable of sustaining them.

From the organizational perspective, the tendency for voluntary organizations to become more bureaucratic in form and more dependent on the sale of their products in practice is to be expected. Such are also the expectations placed on contemporary governmental programs (with the single exception of the military) and economic enterprises themselves (including those industries, like nuclear energy and defense contracting, which are themselves sustained by their privileged role with relation to the state).

In contemporary society, the nonprofit organization increasingly takes the form of a tax-free business (cf. Kuttner, 1997), organizing itself around "profit centers" and divesting program elements that do not lead to its organizational growth and survival. If such "loss centers" involve people with profound personal and economic needs, there is a special sense of regret. But bills must be paid, and the shrunken welfare state cannot be expected to perform at levels it achieved in the days before the great economic transformation of 1973.

Neil Gilbert (1983) explains that, "although the voluntary sector generates a significant volume of service, there is little evidence that it possesses the inherent capacity to move far beyond current levels of activity or to compensate in any reasonable degree for decreased public spending in the social market" (p. 133). In this respect, the bureaucratization of the voluntary sector occurs along with the straightening of class lines in society. The Weber problem, then, develops in a close dance with what concerns us next, the Marx problem.

The Marx Problem: Do Voluntary Organizations Pose the Right Questions?

The centrality of economic power and control in society was the focus of the life and work of Karl Marx (1818–1883). In his holistic societal perspective, labor and capital struggle with each other in a contradictory and unstable relationship maintained only by class power. Either the dominative hegemony of the state-capital relationship maintains itself, or a radical transformation occurs in which labor takes revolutionary control of society.

The role of the voluntary sector has not been seen as a central problem by Marxists. From this perspective, as Alford and Friedland (1985) note, "Explosions of participation—in the voting booth, in the factories, or in the streets—are treated as manifestations of societal contradictions" (p. 5).

In attempting to investigate Marxist views on voluntary association, one is immediately confronted with a seeming contradiction: While Marxists have historically accorded voluntary associations—revolutionary parties, political movements, cooperatives, and so on—a central role in the struggle to achieve socialism, analysis of the voluntary sector's role within capitalism is notably absent from the Marxist literature. Part of the reason for this neglect apparently results from the emphasis that has been placed since Marx's day on the relations of production as the primary determinant of capitalist society and as the necessary focus for attempts to transform that society. Yet, even for neo-Marxists, who have attempted to assert a more prominent role for the state and cultural institutions in the maintenance of class relations, the role of the voluntary association is largely taken as a given, undeserving of detailed analysis. One is thereby left to attempt to draw inferences from concepts in the literature that posit space within the social structure for voluntary associations or that assume their existence, to construct a Marxist analysis of voluntary association.

Building on Marxist concepts of domination in the social and political spheres, one can postulate a role for voluntary association that corresponds to various functional types of associations. Fraternal, cultural, and religious organizations may be seen to play roles in the reproduction of labor and to provide compensation for feelings of alienation; philanthropic and social service organizations may be seen to maintain a dependent reserve army of labor; and political organizations can be viewed as serving to legitimize existing social relations.

Add to these roles of associations Gramsci's concept of *hegemony,* or ideological domination, and one sees that while the state performs its task of maintaining hegemony, it also assumes important supportive functions to sustain capitalists and the capitalist process. This requirement would appear to suggest an important role for institutions that can carry out state functions while not creating increased demands on state (and ultimately capitalist) finances and that can influence the expectations of workers about their rights. While not directly recognized by neo-Marxist writers, voluntary sector organizations, given their involvement in nearly every aspect of social life and their ostensible independence from both business and government, appear uniquely suited to fulfill such a role.

Drawing on classical and neo-Marxist concepts, the beginning outlines of a Marxist theory of voluntary action may now be discerned. Three general characteristics of voluntary associations may be identified, all of which may be seen by Marxists as useful for the maintenance and support of capitalist relations.

First, because they are dependent on outside funding, the programs and activities of voluntary associations can be controlled or influenced by members of the ruling class. Marxist instrumentalists have pointed to the mechanisms of this control. Of particular importance are the large foundations established by corporations; they have played an important role in creating and supporting a wide range of voluntary associations. Roelofs (1985) has noted that foundations choose to fund organizations that engage in safe reformist activities while shunning those whose activities—such as promoting cooperative ownership—are inconsistent with the interests of the power structure. Through their funding of various research activities and think tanks, foundations also can "create, disseminate and sustain an ideology protective of capitalism; they can deflect criticism and mask or actually correct damaging abuses of the system" (p. 61). Ruling-class members also dominate positions on the governing boards of major philanthropic institutions, not only directing these organizations but also reinforcing their elite status through activities of "conspicuous leisure," to use Veblen's classic phrase.

The subservience of voluntary associations to the interests of the capitalist class is furthered by another characteristic of the voluntary sector—the use of unpaid volunteers. Because volunteers provide unpaid and, to the Marxist, often gratuitous labor, they are seen as unlikely to have a deep interest in the setting of organizational goals. Their lesser stake in the organization makes them less likely to organize around interests or grievances. If they eventually do advance to paid work, volunteers are likely to fall prey to the indoctrination of organizational values and be disinclined to mount internal organizational challenges or external campaigns regarding social power. The high turnover in grassroots volunteers, due in great part to the lack of remuneration, gives paid staff justification to limit the influence of participants over fundamental organizational policy—further constraining the possibilities for debate within the voluntary sector on goals and activities that might challenge aspects of capitalist domination.

A final characteristic of voluntary groups relevant to the maintenance of capitalist relations involves the fragmentation within the voluntary sector. What liberals hail as pluralism in the sector, Marxists argue is a fragmentation that prevents effective class-based organizations from developing to challenge the system. The fragmentation is perpetuated by piecemeal funding that leads groups to address isolated issues or service discrete sectors of the population rather than allowing them to confront problems on a systemwide basis. The precariousness of funding for voluntary associations reinforces the fragmentation by limiting the scope of issues that groups are able to address and their ability to organize large numbers of workers.

Moreover, the fragmentation serves to create a marketplace of groups competing with each other in promoting the ethic of self-interested individualism—a crucial part of capitalist hegemony.

Building on these three major elements, the Marxist theory of voluntarism would surely note that social service organizations develop as an adjunct to the family providing for social reproduction and controlling the reserve army of the unemployed. Fraternal/cultural organizations play their role in social reproduction by filling leisure time with what have been called "sterile diversions." Among these diversions may be included consumption of the mass media and its messages, participation in organized religion, problem solving in self-help groups, and the celebration of patriotic rituals. Political organizations, finally, serve to marginalize subversive groups and channel others into safe activities. System challenges are blunted by reformist groups, and politics becomes harmless to ruling interests. "It is in the interest of the elite," writes Roelofs (1985), "to have every type of 'disadvantaged' person join a separate organization; each neighborhood, block, or backyard to have its own revolution" (p. 87).

Despite their central focus on the power of the ruling class to retain hegemony, most Marxists retain the belief that radical change will eventually occur, while other Marxists are even more optimistic about the role of voluntary associations in creating change. Dreier (1980), to take one instance, argues that alternative worker-based organizations such as producer and consumer cooperatives and employee-owned enterprises constitute "socialist incubators" that can provide participants, and eventually the entire society, with instruction in practical socialist solutions to the problems of modern capitalism. Even organizations advancing reformist goals, he argues, can be seen to further socialist struggle by "providing large numbers of people with the self-esteem, self-confidence, and opportunity to 'make history'—to wrest some control over their lives in a concrete, strategic, and confrontational way" (p. 34).

The Marxist approach provides the student of voluntarism with a crucial challenge: confronting with brutal honesty the role of voluntary associations in sustaining privilege, inequality, and injustice in the contemporary political economy. The right questions to ask, the Marxist asserts, are not those aimed to foster voluntarism; rather, they are those directed at the way various forms of voluntarism restrain critical thought and decisive action. On the basis of such a critical perspective, the Marxist contends, those forms of voluntary action that will ultimately usher in a new age can be identified and nurtured. The right question from this perspective is that of the meaning of the voluntary act for the future of the political economy.

The Parsons Problem: What Is the Structure of Interdependence?

The 20th-century sociological theorist Talcott Parsons (1902–1979) saw society as structured around the provision of four basic functions: adaptation, goal attainment, integration, and latent pattern maintenance (or culture). The great institutions of society—(1) the economy, (2) the state, (3) the voluntary, and (4) church, home, and family—were seen to develop, respectively, around the four basic functions. Parsons developed a macro-societal theory around these four functions and their related institutions.

Of greatest interest to the present study, Parsons (1966) observed that each institution relates to each of the others. The currency may be power, or influence, or money—but in each case, the major institutional sectors of society are in active relationships with one another. From the Parsonian perspective, a sector may dominate over another, but it should not be seen to be independent of another.

Parsons's perspective is vital in identifying the links between the three major sectors that concern us in this work: economy, state, and association. The associational relationship to the state, to take one example, gives rise to a vexing problem. On the one hand is the recognition of citizen impact, through groups, on government policy and action—surely a desirable aspect of democracy. On the other hand threatens the dark side of direct democracy, replete with the blue smoke and mirrors of "special interests," political action committees, and direct mail. Knoke and Wood (1981) describe the threat well:

> Special interest organizations have proliferated in recent years to the point of subjecting the legislature and executive at all levels of government to almost continual pressure to accede to narrowly focused objectives. . . . The result is a real threat that minority special interests will triumph over wider societal values. (pp. 191 192)

Growing Civil Society: Seven Leadership Themes

Posed in the way we have considered the Parsons problem, echoes of previous problems resound: questions of citizen power as seen by Tocqueville; matters of elite dominance as seen by Michels; issues of bureaucratization as viewed by Weber; issues of economic domination of the state as seen by Marx. That is, the problem is seen as one of major institutions engaged in transactions with each other—the corporation's buying power with money, the state's asserting power by regulation, the association's claiming power by participation. In these transactions between the sectors, one finds insight into a number of crucial issues that face contemporary third-sector leadership, of which the following will be discussed in the remainder of this chapter:

1. Social capital
2. Sociopolitical pluralism/associationalism
3. Communitarianism
4. The farewell state
5. The end of work
6. Social economy/social entrepreneurship
7. Civil society

Social Capital as a Product of Citizen Participation

The concept of *social capital* was introduced in 1990 by University of Chicago sociologist James S. Coleman in his massive treatise, *Foundations of Social Theory*, and used to very good advantage by Harvard political scientist Robert Putnam in his widely admired study of democracy in Italy, *Making Democracy Work*.

Social capital, Putnam (1993) advises, "refers to features of social organization, such as trust, norms, and networks, that can improve the efficiency of society by facilitating coordinated actions" (p. 167). It is an idea parallel to the *physical capital* formed by machines and the *human capital* represented by an educated workforce. Social capital is that fund of valued interaction that results in a confidence that new problems can be tackled and resolved by groups of neighbors or citizens or fellow workers.

The steady depletion of social capital in modern society, Putnam asserts, provides a major challenge. His work illustrates that social capital is a public good, one that markets and their private agents alone cannot provide. Third-sector organizations, on the other hand, can play a crucial role in its amassing.

Putnam (1993) observes, "Building social capital will not be easy, but it is the key to making democracy work" (p. 185). Where social capital exists, people can come together to understand what needs to be done and work to accomplish needed tasks. Where it is absent, they will stay home and let the TV set explain that much is going wrong in the world around them, but there is not much that anybody can do about it.

Sociopolitical Pluralism/Associationalism

The idea of sociopolitical pluralism emerges from classical political and social thought, closely connected to concepts of separation of powers and relative autonomy of institutional activity in society. The pluralist vision involves a multi-institutional structure for society, in which political, economic, cultural, and associational forces are each able to organize themselves in relative independence from each other, to advance the distinct purposes they each embody.

Political theorist Paul Hirst presents a major statement of contemporary pluralist thought in his book, *Associative Democracy*. Hirst (1994) notes that associationalism

> is not a new idea. It developed in the nineteenth century as an alternative to both liberal individualism and socialist collectivism. . . . Associationalism had two characteristic features. . . . The first was the advocacy of a decentralized economy based on the non capitalistic principles of coopera tion and mutuality. The second was the criticism of the cen tralized and sovereign state, with radical federalist and political pluralist ideas advanced as a substitute. The associa tionalists believed in voluntarism and self government, not collectivism and state compulsion. (p. 15)

In Hirst's (1994) conception, society is best organized if voluntary organizations are numerous, effective, and "thick" in meaning. A basic role of government is to assure a level playing field for these associations to grow, act, and contest with each other. Associations not only address social aims, but also serve as means for economic organization and cooperation.

The pluralist position emerged prominently in the sociology and political science of the 1950s as a counterpoint to theories of democratic elitism, which contended that a small "power elite" tended to control decision making in American communities, from the small town to the national level. Many social scientists, like C. Wright Mills and William Domhoff, whose studies identified the prominence of the elite pattern in American life, were dismayed with what they found. Others, like a group of political scientists at Yale University led by Robert Dahl, tended to find strengths in the pattern and accommodated their pluralism to realities of limited participation. Recalling the work of political economist Joseph Schumpeter, these observers warned of a political system that might become overheated by excessive participation and identified positive functions to such nonparticipatory actions as not voting, trusting in one's representatives, and even being functionally apathetic. Yale's Dahl made the case most memorably when he noted that "where the rational citizen seems to abdicate, nevertheless angels seem to tread."

In the 1960s, the pluralists' effort to secure a position more accommodative to values of participation and equality was swamped by the rise of conceptions of more highly *participatory democracy.* These ideas were much more akin to those of direct democratic decision making and became the mantra of a variety of New Left and movement organizations, whose impact was felt both within the social politics of the age and the academic theories of the day. Increasingly, the pluralist approach was painted as just one more conservative, status quo–oriented theory.

What the pluralists had neglected, noted their critics from the Left, was an observation made early in the debate by Schattschneider (1960): "The flaw in the pluralist heaven is that the heavenly chorus sings with a strong upper-class accent" (p. 35). But rather than efforts to correct inequalities by incremental policies, visions of dramatic transformations, or even revolutions, increasingly came to characterize progressive political thought. Relying on the outcomes produced by an independent set of institutional spheres was seen as insufficient; the powers of economic control needed to be harnessed more directly to serve the good of a reformed society.

Ultimately, of course, the revolution did not occur, and the wealth and power of those who controlled America's great organizational empires, whether economic, political, or nonprofit, lay largely undisturbed. Taxes were dramatically reduced for those at the highest incomes; the spread in income and wealth between those at the top of the heap and those of moderate or even lesser means became a yawning gap; and the operational ideology of the era became that of *democratic capitalism,* with the emphasis on the noun.

Communitarianism and the Search for Responsible Voluntarism

Communitarianism, an awkward term coined by sociologist-reformer Amitai Etzioni, sought to combine liberal pluralist themes with conservative themes of individual responsibility. Adherents of this social theory, such as political theorist William Galston, were influential within President Bill Clinton's administration, and Clinton himself often articulated tenets of this theory.

Communitarianism, granted, is a name that markets poorly, but its efforts to link the liberal tradition of individual rights with the conservative focus on individual responsibility represents an intriguing attempt to create a synthesizing intellectual perspective. In his inaugural State of the Union Address, Clinton struck strong communitarian themes, saying:

> It is time to break the bad habit of expecting something for nothing from our Government or from each other. Let us all take more responsibility not only for ourselves and our fami lies, but also for our communities and our country. . . .

> I challenge a new generation of young Americans to a season of service; to act on your idealism by helping troubled children, keeping company with those in need, reconnecting our torn communities. There is so much to be done. Enough, indeed, for millions of others who are still young in spirit to give of themselves in service, too.
>
> In serving, we recognize a simple but powerful truth: We need each other and we must care for each other.

Communitarian thought recognizes the "dark side" of the voluntary tradition. It seeks to find ways in which "private governments," whether they be corporations, labor unions, or voluntary associations, can become more responsible to their members and more responsive to the needs of their communities.

As Etzioni (1993), the founder of the contemporary communitarian movement, envisions it, a communitarian society carries out a "multilogue," or national town meeting, which is itself inspired by third-sector social movements.

> In it, millions of citizens over beers in bowling alleys, at water coolers at work, and over coffee and at cocktail parties discuss and debate the issues flagged by sit ins, demonstrations, boycotts, and other such dramatizations. The multilogue is further extended in radio call in shows, letters to the editor, sermons in churches and synagogues. Gradually a new consensus emerges. (pp. 230 231)

What the third sector might particularly provide to such a multilogue is a commitment to "responsible voluntarism." Such activity might take the form of a particular dedication to work, or whistle-blowing within a governmental or corporate bureaucracy, or working with neighbors to care for elders, install a stop sign, or restrain illicit drug sales within a neighborhood.

Voluntary and nonprofit associations form one important set of institutions in the organizational world of contemporary society. From Tocqueville to the present, students of society have found in the intermediate association a source of participation, political competence, and legitimation. But such associations might also be accountable to tests of effectiveness, equity, and responsibility.

The Farewell State

Jacquelyn Thayer Scott has noted the rise of the "farewell state" in Canada and the United States in a brilliant doctoral dissertation, *Voluntary Sector in Crisis.* The farewell state, it may be observed, offers us a view from the rear of a disappearing welfare state.

The farewell state was simultaneously introduced in the United States by President Ronald Reagan and in Britain by Prime Minister Margaret Thatcher. Its contemporary adherents in the U.S. Congress, led by former House Speaker Newt Gingrich and his allies, often make Reagan and Thatcher look like timid liberals in comparison to the proposals they continue to advance.

The tenets of the farewell state are clear and unambiguous:

1. The basic function of government is to provide for order in society (what Hobbes called the "watchman state"). Police and defense should grow; all other governmental programs should be drastically reduced.
2. The business of a nation is business (as Reagan's favorite predecessor, Calvin Coolidge, put it). If taxes can be sufficiently reduced, those who own a country's corporations can be counted on to provide employment to all its workers; a rising economic tide will lift all boats.
3. The family is society's basic institution. If children will only say no and parents will only stay together, the need for most social programs will be largely reduced.
4. If any societal problems remain, the spirit of voluntarism can be relied on to relieve suffering and to provide hope to those in need.

The critics of the farewell state identify a subtext to this chant. They see the rise of unprecedented corporate power and increasing levels of social and economic inequality; they see the domination of politics by the voting power of the rich and fearful; they see a reign of morality inappropriate to the increasingly desperate lives of the poor; and they see a third sector overwhelmed by societal need itself seeking to cope with the loss of governmental and philanthropic support.

The farewell state emerges to replace the welfare state, a creation of four centuries in the Anglo-American experience. The welfare state itself may be traced to the Poor Laws of 1601 in Britain, when Parliament offered support to children whose parents were unable to provide for their support. Before that time, Catholic Britain provided such care through the parish and the local community. But as need and mobility increased in society, the local community yielded to the impersonality and rigors of the industrial-urban society.

The welfare state became regularly, if inelegantly, extended throughout British and American history, its milestones marked by the development of a wide range of social insurance programs in the early 1900s, the passage of the Social Security Act in 1935, and the many programs developed during the War on Poverty of the 1960s. The high-water mark of the welfare state, however, was reached in Britain in 1948 with the establishment of socialized medicine and universal access to higher education.

As the farewell state takes its place, it is with a friendly admonition to do the right thing and the hearty wish that all will be for the best in this best of all possible worlds. Words, and not deeds, are the farewell state's strong suit.

Nonprofit organizations come in for some unpleasant surprises in the farewell state. As efforts continue to balance budgets while at the same time cutting taxes, increasingly deep cuts may be anticipated in governmental support for nonprofit organizations. Unless this shortfall can be filled, the 21st century may find society torn by conflicts between the wealthy and the desperate, the complacent and the needy. We may yet come to miss the welfare state and to realize that it must be reinvented.

The End of Work

The concept of "the end of work" was developed by economist and policy analyst Jeremy Rifkin in a book of the same title. Most of the book is about work and why it has become so hard to find in recent years. Rifkin documents the impact of the new technology revolution brought by automation and microchip-based information processing. This revolution offers a choice between liberation from long work hours, on the one hand, and an increasing social division between the over- and the underemployed, on the other.

Rifkin believes that we are in the process of making the wrong choice and that future generations will be faced with dwindling prospects for steady employment of any sort. While fortunes are being made by those who own the patents on technological innovations, most members of the middle classes are on their way to dwindling incomes, threats to whatever jobs they are able to secure, and an inadequate financial base to assure a comfortable retirement.

Society provides its members with only four institutional means of solving its problems: government, business, the third sector, and the informal sector (family and neighborhood). If government is bowing out at the same time that corporations radically cut back their offers of work, what is left for us? Can the family replace the need for income and social service? Can the third sector?

So where does this leave us? Rifkin, having painted us into a corner, is not without hope. He sees two ways of dealing with the potential crisis of uneven employment: (1) by developing public policies that share the available work by shortening the workweek and thereby redistributing income; and (2) by developing governmental programs "to provide alternative employment in the third sector—the social economy—for those whose labor is no longer required in the marketplace."

Social Economy/Social Entrepreneurship

The concept of *social economy* (*economie sociale*, as widely used in France in the 1970s, and introduced to American audiences by the present writer in his *Mapping the Third Sector* in 1988, and then to a wider public by Jeremy Rifkin in his book, *The End of Work,* in 1995), depicts a society that meets many of its economic needs through the provision of cooperative economic activity. Rifkin (1995) notes that the

> French economist Thierry Jeantet says that the social economy is not "measured the way one measures capitalism, in terms of salaries, revenues etc., but its outputs integrate social results with indirect economic gains, for example the number of hand icapped persons well cared for at home and not in hospitals; the degree of solidarity between persons of different age groups in a neighborhood." (p. 242)

The idea of *social entrepreneurship* also seeks to integrate the third sector into economic life. Social entrepreneurs work within their organizations to blend business and traditional social service by themselves generating some of the wealth that they use. They seek to make money while providing service and deploy their profits to expand the services they provide. Programs based on ideas of social economy and social enterprise respond to the provision of economic goals in an era of declining public and private employment.

Duhl (1990) observes that social entrepreneurs or planners must direct their loyalty "outside of particular organizations and specific goals." He identifies the social entrepreneur as one who has developed substantial "map-making skills" and can navigate the "cracks between systems" (p. 113). The social entrepreneur is an effective boundary spanner, an individual experienced in the arts of community and organizational collaboration.

Civil Society

The idea of *civil society* has become the most fashionable of contemporary third-sector concepts. It is a very old and very slippery concept. The civil society concept has become the master theme in contemporary thought about the third sector.

Classical political economists like John Stuart Mill and Adam Smith viewed civil society as a realm of virtuous freedom, both economic and personal, and contrasted it with the evils of the state. G. W. F. Hegel, on the other hand, used it to explain how government could find its niche in a market-driven society by nurturing cooperation in the face of economic and social conflict.

Marx expanded Hegel's argument and delineated the terrain of civil society as one of "exploitation, alienation and social injustice" (Abdelramen, 1998, p. 6). Neo-Marxist Antonio Gramsci saw civil society as the "place where the state operates to enforce invisible, intangible and subtle forms of power, through educational, cultural and religious systems and other institutions" (Abdelramen, 1998, p. 7).

The idea of civil society was rescued from the dustbin of history by its seeming fit to the needs of emerging democracies in Eastern Europe following the evaporation of Communist structures in 1979 and thereafter. In its current incarnation, civil society continues to mean many things to many people, coming perilously close to being the "play-dough" of the social sciences, capable of being formed into nearly whatever shape the theorist chooses.

An appealing aspect of the civil society concept may be found in the linguistic root it shares with the concept of *civility.* Sociologist Edward Shils, who used the concept often, sought to establish links between the theory of civil society and civility in behavior. Like Hegel, Shils tended to see civil society as highly interrelated with a market economy. Shils (1997, pp. 91–97) was concerned that civil society was declining in American life, citing its decline within universities, churches, persons of wealth, labor unions, rural communities, and among the "rather large unemployed *Lumpenproletariat* and the criminal and delinquent class."

No small part of the appeal of the concept of civil society lies in this apparent ability to grow while in decline. Civil society appeals to us because of its many implications: It sounds better to be civil to each other than to be uncivil; things civil also seem rather less regimented than what is militarized or bureaucratic; and, of course, a civil society has a welcome ring to it in a time of uncertainty and social turbulence.

But a wholesome sound goes only so far in social theory. The fact remains that the concept of civil society will have to be more solidly defined and constructed if it is to play a role in the reconstruction of modern society. But then again, so will many other central concepts in the field of philanthropic, nonprofit, and third-sector studies. Returning to the insights of classic thought leaders in social theory will continue to repay those who seek answers to the central question: How can organizations and actors within the voluntary/nonprofit/third sector actually make a difference in the complex social, economic, and political arrangements of our modern world?

Origins of the Nonprofit Sector in the United States

From the Elizabethan "Poor Laws" Through the Civil War

Joel J. Orosz

Johnson Center for Philanthropy, Grand Valley State University

For the European immigrants in the early years of the founding of the United States, far from the governments, churches, and charitable organizations that had supported them in their home countries, life was hard. To survive the challenges of settling on a new continent and to thrive in the new world, they were required to invent new organizations and to innovate on ideas and institutions they knew from Europe.

The religious beliefs of the first settlers, motivated to cross a dangerous ocean because of religious intolerance in England, combined with English secular traditions and laws, provided the context for establishing institutions of mutual support in the new nation. Influenced by the confederated democracy and values of the Native American Iroquois nation, this mix of ideas turned into a framework for our current political, legal, and philanthropic structures.

This chapter explores some of the highlights of the period between the enactments of the Elizabethan Poor Laws in England from 1552 to 1601, through the start of the Civil War in the United States in 1861. During this 260-year period, waves of immigrants fled Europe for America, the new U.S. democracy was formed, cities emerged, nonprofit organizations were established, and, at the end of this period, the nation was torn apart by the Civil War.

Today, nonprofit and foundation leaders are faced with issues related to defining and articulating the vision and mission for their organizations. Challenged by increasing calls for outside regulation and alternative models of service delivery, the nonprofit leader often is called on to define and defend charitable and philanthropic work.

Knowing the deep roots of the nonprofit sector in the United States, and understanding its relationship to preserving a strong democracy, will help nonprofit leaders reflect on and advance the field. This chapter is a short highlight of the fascinating journey of the idea, ingrained in our national character, that private individual action can make a difference for the common good.

Charitable Organizations in England

Scholars of philanthropy often cite the Judeo-Christian tradition as expressed in the Bible as the basis for understanding the charitable impulse in Western civilization.: "For when I was hungry, you gave me food; when thirsty, you gave drink; when I was a stranger, you took me into your home; when naked you clothed me; when I was ill, you came to my help; when In prison, you visited me" (Matthew 25: 35–37, in Metzger & Murphy, 1991).

He defines for us one major stream of thinking in Western culture, the theme of charitable giving and action that arises from religious belief. The concept of *steward ship* is a faith-based idea that all we are given on earth comes from a greater power. Human beings are stewards for these gifts, neither bringing them with us at birth nor taking them with us at death. We are provided what we need to live and have a responsibility for what we are given.

The prevailing religious beliefs in Europe, based in Christianity, defined seven corporal works of mercy. These are acts of charity that are required of people of faith and are aimed to assist others in distress, as defined by Jesus in Matthew 25: 32–46. These acts are to

- feed the hungry,
- give drink to the thirsty,
- welcome the stranger,
- clothe the naked,
- visit the sick,
- visit the prisoner, and
- bury the dead.

These acts did not contemplate the notion of addressing systemic problems leading to hunger, thirst, loneliness, poverty, illness, imprisonment, or even death. The works of mercy were designed to immediately relieve individual suffering. People of faith acted on these precepts because of their beliefs. This was a private act, voluntarily provided from one person (or one institution, such as the church) to another, with accountability only to one's God.

It is important to note that virtually all of the major religious traditions across the world hold similar views of charity and the responsibility of people to care for one another. The Christian tradition provides the background for this chapter because of its historic role in Western civilization and particularly in the motivations, experience, and point of view of the original British settlers of what became the United States of America.

A second theme defining our philanthropic heritage comes through the classical thought of Greece and Rome. The point of view in this heritage is not one of religion, but rather a philosophy of how people might live together in a democracy. Classical thought provides a more institutional view of philanthropy and a concern about fixing systems that lead to human want.

Some practitioners today make a distinction between acts of charity and programs of philanthropy. Those who make this distinction discuss acts of charity as specific service to an individual in need without primary consideration to addressing the root causes or reforming the systems that gave rise to the problem in the first place. In contrast, the programs called philanthropy are focused on removing root causes and ameliorating systems to prevent human suffering and need. For example, a food pantry that supplies groceries to anyone who walks in the door, without questioning their circumstances or requiring their participation in any program, would be delivering a charitable service. A nonprofit food advocacy organization seeking the passage of legislation to establish community gardens in poor neighborhoods would be engaged in philanthropy. In a strict translation, the word *philanthropy* means "love of mankind," which definition provides a broad enough umbrella under which to shelter both charitable service and systemic action.

Many of our modern nonprofit organizations provide both immediate charitable assistance to those in need, and work on solving systemic problems to change the reasons why people require assistance. This duality in role is common and reflects the long evolution of the third sector as both a charitable and philanthropic force in the United States.

In England in the early 1600s, there was concern about migration from the countryside to the cities, which exacerbated the problems of urban poverty, the declining influence of the church, the consequent rise in values not grounded in religious belief, and the increasing misuse of charitable gifts. The Statute of Charitable Uses was passed by Parliament in 1601, near the end of the Elizabethan era, culminating a series of Poor Laws passed over a period of decades, to assure that charitable activities continued as intended and were supported by law.

Specifically, the Poor Laws enacted between 1552 and 1601 were as follows:

1552 Registration of the poor to create an official record of those in poverty.

1563 Definition of various states of poverty into three major groups:

Deserving Poor: The able bodied who would work but could not find work. They were provided assistance by being given a job or gift of money or food and clothing to help their situation.

Idle Poor: The able bodied who could work, but would not. These people were publicly flogged until they changed their ways.

Impotent or Deserving Poor: The elderly, the ill, or those too young to work. The help for these groups was provided through almshouses, hospitals, orphanages, or poor houses. Bloy (2002) notes that the orphans and children were given apprenticeships to provide a trade.

1572 Passage of the first tax on the community to assist those in poverty.

1601 Passage of the Elizabethan Poor Law (Bloy, 2002), which consolidates the previous laws into one law.

Within the context of the Elizabethan Poor Laws in England, the Pilgrims left for Plymouth plantation on the new continent.

Founding of the Philanthropic Tradition in the United States

In 1620, the Pilgrims, having left for the northern reaches of the existing colony of Virginia, landed instead at Plymouth Rock, New Plymouth, Massachusetts. Before they left the Mayflower, the Pilgrims pledged their commitment to one another in a written document called the Mayflower Compact. Many view the Mayflower Compact

Mayflower Compact: Agreement Between the Settlers at New Plymouth, 1620

IN THE NAME OF GOD, AMEN. We, whose names are underwritten, the Loyal Subjects of our dread Sovereign Lord King *James*, by the Grace of God, of *Great Britain*, *France*, and *Ireland*, King, *Defender of the Faith*, &c. Having undertaken for the Glory of God, and Advancement of the Christian Faith, and the Honour of our King and Country, a Voyage to plant the first Colony in the northern Parts of *Virginia*; Do by these Presents, solemnly and mutually, in the Presence of God and one another, covenant and combine ourselves together into a civil Body Politick, for our better Ordering and Preservation, and Furtherance of the Ends aforesaid: And by Virtue hereof do enact, constitute, and frame, such just and equal Laws, Ordinances, Acts, Constitutions, and Officers, from time to time, as shall be thought most meet and convenient for the general Good of the Colony; unto which we promise all due Submission and Obedience. IN WITNESS whereof we have hereunto subscribed our names at *Cape-Cod* the eleventh of November, in the Reign of our Sovereign Lord King *James*, of *England*, *France*, and *Ireland*, the eighteenth, and of *Scotland* the fifty-fourth, *Anno Domini*; 1620. (As held by Avalon Project, 2008)

as the first form of European government in the United States, and philanthropic organizations can also point to it as one of the first voluntary organizations in the territory that was to become the United States.

In the Mayflower Compact, members of the community joined themselves together voluntarily and submitted to the formation of a new covenant. They created a democratic community and also devised a voluntary association.

The Puritans were people strong-willed enough to cross the ocean and settle in a wild land, but they were also pragmatic about the challenges that faced them. Far from the institutions that had sustained them in England, confronted daily with the harsh struggle to survive in an unforgiving environment, they soon learned that survival required cooperation. By sheer necessity, therefore, the Puritans—and their descendants—developed new ways of working together through voluntary association.

This streak of independence, coupled with the propensity to organize themselves toward common goals, created an environment conducive to the formation and survival of voluntary associations. Soon, to provide the essential services of a civil society—health care, education, human services, arts and culture, and religion—a vast network of nonprofit hospitals, schools, almshouses, museums, and churches spread through Britain's American provinces. The historic explosive growth in the development of voluntary associations and charitable organizations began, and it has continued down to the present day.

In 1636, Puritans concerned about the education of new clergymen founded Harvard College, the first institution of higher education in the British colonies. The Great and General Court of the Massachusetts Bay Colony established the college and named it after its first benefactor, Reverend John Harvard, who left his library and half of his estate to the college. The new institution began with only nine students and a single instructor, and growth was slow if steady in the ensuing years. The first scholarship fund was set up in 1643 with a gift from Ann Radcliffe (The Harvard Guide, 2007).

The New York Times reports that the Harvard Endowment, despite the difficult economic times and a major stock market decline, is worth $26 billion and includes over 11,000 individual funds given by donors over the past 373 years (Fabrikant, 2009). From the first gifts of John Harvard and Ann Radcliffe, the university has grown into an intellectual treasure with a worldwide reputation for excellence.

Other universities followed Harvard. In 1693, The College of William & Mary was founded, making it the second-oldest college in America. King William III and Queen Mary II of England chartered the school where George Washington received his surveyor's license and Thomas Jefferson, John Tyler, and James Monroe received their undergraduate educations. The college became state supported in 1906, 213 years after its founding (The College of William & Mary, 2010).

In 1701, Yale University was founded by colonial clergymen. The school was renamed in 1718 in honor of a gift from Elihu Yale. Mr. Yale gave the college 417 books, a portrait of King George I, and an endowment. These early universities, while founded to encourage the education of clergy in the new country, quickly diversified into the classical and liberal arts, although they did not offer vocational training until much later in their history.

A politician, an inventor, a statesman, and a founding father of philanthropy, Benjamin Franklin launched several new voluntary associations in Philadelphia. In 1727, he established the Junto Association. This was a club made up of a mix of academics and working artisans who got together for what Franklin called mutual improvement. The members explored issues related to morals, politics, and science. They wrote essays and engaged in discussion. Much like a modern book club or writers' support group, the Junto was a voluntary group of people joined together to achieve mutual goals. Out of the Junto grew the idea of a lending library, which was realized in the formation of the Library Company of Philadelphia in 1731. So successful was the library in Philadelphia that the idea spread throughout the colonies. The Junto evolved into the American Philosophical Society in 1743 and still exists today in Philadelphia.

Franklin organized the first volunteer fire departments. He created Philadelphia Hospital in 1751. This was the first permanent hospital founded by volunteers. The Pennsylvania Academy, another Franklin inspiration, was the first liberal arts college in the country and grew into the prestigious University of Pennsylvania. Both the hospital and the academy were independent of both government and religious organizations.

Franklin died in 1790, but created one last innovation through his will. His estate plan created two trusts for the benefit of the cities of Philadelphia and Boston. Under the terms of his will, the trusts were to operate as loan funds, making small, low-interest loans to enterprising young artificers of good character to help them establish their businesses and support their families. The funds were to be invested when not loaned out to the workmen. After 100 years, the will provided that three quarters of the existing funds should be paid out to the two cities, and the remaining one quarter used for the same purposes for another century. Accordingly, in 1890, both Boston and Philadelphia used the proceeds ($298,602 for Boston, $90,000 for Philadelphia) to found Franklin Institutes in each of their cities. The reinvested quarter was again used as a loan fund until 1990, when the remainders were paid out to the two cities ($5 million for Boston, $2 million for Philadelphia). Franklin thus created one of the precursors to the American limited-lifespan charitable foundation (Orosz, 2000).

If Benjamin Franklin provides an example of the thoughtful and innovative creation of nonprofit organizations to promote a higher quality of civic life, the Philadelphia yellow fever epidemic of 1793 offers examples of voluntary leaders who were literally heroic in confronting a crisis and promoting the public good. In 1793, Philadelphia was the largest city in the Unites States (population 55,000), the temporary capital of its infant republic, and the capital city of Pennsylvania. Located between two rivers, the Delaware and Schuylkill, it was also surrounded by swampy ground, an ideal breeding place for the mosquitoes that carried the lethal yellow fever virus. Those infected by the virus are rapidly overtaken with headaches, fevers, and vomiting. About half of those infected recover if they receive good medical care, but the other half die in grisly fashion, with bleeding disorders, liver and kidney failure, and delirium commonly occurring before death less than a week after the initial infection. Today, we know that mosquitoes transmit the virus, and we have an effective vaccine to prevent the disease. In 1793, however, doctors neither understood the cause of the disease nor had any effective treatment for it. Any epidemic of yellow fever, therefore, rapidly spread panic throughout any city.

In July 1793, refugees fleeing political turmoil in the Caribbean brought yellow fever with them. Mosquitoes were flourishing in Philadelphia's unusually warm and dry summer, and they quickly spread the contagion across the city. The death toll soon climbed to over 100 per day. Panicked citizens who could afford to do so fled the town, followed by the leaders of the state and federal governments as well as the municipal administration. Mayor Matthew Clarkson was virtually the only political leader who stayed to face the horror. Facing the breakdown of governmental authority, he desperately called for volunteers to help care for the sick (whose numbers had overwhelmed the hospitals) and to bury the dead (whose numbers had similarly overwhelmed the mortuary facilities).

Among the first to answer the mayor's desperate call was Bishop Richard Allen of the African Methodist Episcopal Church and a leader of the Free African Society, a mutual help association of free blacks founded in 1787. Despite the fact that its membership had experienced terrible discrimination on the part of much of the city's white population, the Free African Society's members responded to the call, offering their free services to care for the sick, provide food for the hungry, and bury the dead, many of whom lay for days where they had died, in their beds or even in the streets. Society members knew they were risking their own lives to save those of their neighbors, and many Society members did in fact become ill and die. But they continued their heroic voluntary services until the frosts of November brought the epidemic to an end.

Most of Philadelphia's doctors, acutely aware that they could do nothing to either prevent or cure the disease, followed the fleeing populace and politicians. One who stayed, however, was Dr. Benjamin Rush, a signer of the Declaration of Independence and a friend of President Washington.

Dr. Rush, disregarding his personal safety, walked day after day across the city, entering reeking sickrooms, providing care for patients both rich and poor of all races and all faiths. He saw more than 100 patients a day for weeks at a time and eventually contracted the dreaded fever himself. Undaunted, he continued to see patients well enough to come to his sickbed. He struggled back to his feet after a few days and resumed his work, only to be felled once more by a relapse of the fever. Once more, he prescribed to patients from his bed, and once again, when he partially recovered, he went back to his grim rounds. It was an extraordinary exhibition of voluntary courage and love for one's fellow humans, an example that shamefully few of his medical colleagues emulated.

Ironically, Rush's great valor also hastened the death of a substantial percentage of the 4,000 or so people who died in the epidemic. Dr. Rush firmly believed that desperate times required desperate measures, and his prescription for yellow fever's victims was drastic: a three-barrel regimen of bleeding, jalap, and mercury. Rush believed that the victims harbored poison in their systems and that poison must be eliminated by copious bleedings (often 3 to 4 pints at one time); the ingestion of jalap, the root of a plant related to the morning glory (which caused severe diarrhea); and heavy dosages of mercury, which would counteract poisons not removed by bleeding and excretions (enough mercury to turn his patients' teeth black). For many of Rush's patients, already weakened by the fever, the treatment regimen quite literally finished them off. Sadly enough, most of his patients would probably have been better off if Rush had fled the city with his less dutiful brethren; certainly, some would have survived had it not been for his treatment.

Eventually, with the frosts that killed the mosquitoes, the fever subsided, and then disappeared. The government officials returned, and life in the city of Philadelphia reverted to some semblance of normal (if a city that had just lost nearly 10% of its citizens could be called normal). The great heroes of the crisis were not exactly royally rewarded. Members of the Free African Society, instead of receiving thanks for their selfless services, were once again the targets of racism. Dr. Rush was (rightly) criticized for his blunderbuss prescriptions. He stoutly defended his methods until his death, finding it particularly galling that some of his accusers were, as he saw it, cowards who had fled the city and shirked their medical responsibilities during the crisis.

The Philadelphia yellow fever epidemic of 1793 shows the nonprofit sector at its best and at its worst. When anarchy was on the horizon, and when people were in desperate need, fearless and selfless volunteers like the members of the Free African Society and Dr. Rush stepped into the void left by a government that had literally run away from its duties. They offered their services for free and put their own lives on the line to save those of others. They did it because it was the right thing to do, and their fellow citizens desperately needed their aid. However, Dr. Rush's experience shows that volunteers can also inadvertently do harm while trying to do good, for when someone acts voluntarily, as did Dr. Rush, he also acts without oversight. Sometimes, in their zeal to help, volunteers can actually make a bad situation worse. The Free African Society provides a sad illustration of how society often undervalues services, however heroically provided, that are given for free. In spite of their selfless service during the crisis, once the crisis passed, white Philadelphians showed precious little gratitude (Powell, 1993).

In 1769, Dartmouth College was founded for the education of Native Americans by Congregational minister Reverend Eleazar Wheelock. The college was an extension of his school in Connecticut, which educated Native American children. Dartmouth is named in honor of William Legge, the Second Earl of Dartmouth, in honor of his support to Reverend Wheelock (Dartmouth, n.d.).

Dartmouth played a central role in the evolution of the American nonprofit sector through the pivotal Dartmouth College case, argued before the U.S. Supreme Court in 1819 by Daniel Webster. Prior to this case, little distinction was drawn in U.S. laws between public and private institutions. Both Harvard and Dartmouth colleges had close ties to their respective states, and public officials sat on the governing boards of both colleges. Partisan politics began to encroach on the governance of the colleges, and eventually, Governor William Plumer of New Hampshire attempted to place the college directly under the control of the state government.

Dartmouth argued that the college was a private entity and that there was an important distinction between public and private organizations. The college's position was that it was a private charitable trust supported by private donations. The question before the Supreme Court was whether laws protecting contracts applied to Dartmouth because the college's property was private and it was a private corporation.

Neem (2003) writes:

> [Chief Justice John] Marshall had little doubt that Dartmouth's charter was a contract that vested private property rights in its trustees. "This is plainly a contract to which the donors, the trustees, and the Crown (to whose rights and obligations New Hampshire succeeds) were the original parties." He continued, "it is a contract on the faith of which real and personal estate has been conveyed to the corporation." Marshall explained that "in every literary or charitable institution, unless the objects of the bounty be themselves incorporated, the whole legal interest is in trustees and can be asserted only by them." Thus, the Board of Trustees had the same legal capacity to take and to use property as any natural person, limited only by the terms of the charter and the gift. This decision clarified the ambiguous status of charitable corporations by embracing the Federalists' definition. A corporation, Marshall asserted, must be considered "an artificial being." (p. 353)

This lawsuit established, very early in the history of the nation and its law, that there is a sphere or sector in the United States where private organizations can exist outside of the control of government and that these organizations have many of the same rights as people.

Because of the Dartmouth case, characteristics of our modern nonprofits find a legal basis. Nonprofit organizations can own property; they can sue and be sued; their trustees are the legal person with specific fiduciary duties such as loyalty to the organization and care in implementing their work.

In 1776, the new nation was born. Enshrined in the founding documents were two key sections related to the role of charitable organizations: the Preamble to the Constitution and the Bill of Rights (ratified in 1791). Founding director of the Independent Sector and Medal of Freedom winner Dr. John Gardner, in a 1992 interview, provided the story of the genius of the Preamble to the Constitution. He states:

> When Gouverneur Morris, one of the signers of the Constitution, one of the framers, was asked to prepare a clean copy of the proceedings, he wrote the preamble and he sat down and wrote these words: "We the People of the United

> States." Quite surprising to many people. Some delegates did n't like it. Patrick Henry objected. He said what it should say is: "We the assembled delegates of Massachusetts Bay Colony, Virginia, New Jersey, etc." But most people were thrilled, thrilled at the idea that the new nation would base its legitimacy on the people.
>
> In Europe, the phrase just ran like wild fire through informed circles. And many Europeans, weary of monarchs, were not only thrilled but astonished that a new nation would be so bold as to find its legitimacy in that phrase.
>
> Now, unfortunately, a lot of Americans have forgotten what the phrase means. The phrase was not "We, the govern ment," or "We, the powerful," or "We, the experts;" just "We, the People." Us, all of us. (Learning to Give, n.d.)

Dr. Gardner was highlighting this aspect of democracy, that the legitimate authority arises from the people themselves; and they consent to be governed rather than having government imposed on them. This precept of where the authority in a democracy lies also means that whatever power isn't specifically given to government by the people in the country remains with the people. Nonprofit organizations are an organizational vehicle in this private (nongovernmental) sphere where people can use this power to achieve charitable goals and meet human needs.

In the Bill of Rights, particularly the First Amendment, the Constitution explicitly states the rights of citizens in the United States.

> **Freedoms, Petitions, Assembly**
>
> Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press, or the right of the peo ple peaceably to assemble, and to petition the Government for a redress of grievances.

The First Amendment becomes real in the United States when the nonprofit, voluntary sector provides the arena for exercise of this freedom. Half of the health care, nearly half of the education, most of the social services, nearly all of the arts and culture, and all of the religious life in America is carried out in the private nonprofit sector. Advocacy organizations are a part of the nonprofit sector; they both protect the right to free speech and speak on behalf of the powerless. When people peaceably assemble it is through voluntary association, often organized for the purpose of providing service to the community. As individuals or groups see a problem in their community, one of the first steps is to organize themselves, and when they have an idea on the solution they would like to see, they petition government for assistance.

With this legal status secured, one of the essential roles of the nonprofit sector is to provide a vehicle for minority voices to be heard and to advocate for social change. Residing outside of government, individuals can organize themselves to promote their ideas until the majority of the population agrees and the change they desire occurs. One option for individuals and groups with a considered social position is to engage in civil disobedience. This is a conscious and moral decision to break what is considered to be an unjust law, with the willingness to go to jail for confronting injustice. This is an extreme form of peaceful advocacy, which can occur when free people organize themselves.

Such an example of civil disobedience within the civil society sector but outside of the government began early in the 19th century with the work of the volunteer conductors and safe houses of the Underground Railroad. Confronting the evil institution of American chattel slavery, the Underground Railroad was a volunteer effort that freed an estimated 100,000 enslaved people between 1810 and 1850 by moving them north (National Underground Railroad Freedom Center, n.d.).

The Underground Railroad is estimated to have begun in 1780. While not a formalized organization, the railroad was a volunteer network that guided fugitives as they moved from one local community to another.

Individuals donated money to provide clothes and supplies for the runaways and to help support the conductors. Groups organized to raise private donations were called vigilance committees. These committees also provided food and shelter. The Quakers were among the early groups calling for the abolition of chattel slavery, and these abolitionist associations advocated for changes in the laws. Once out of enslavement, the African Americans and those who supported their freedom developed mutual aid societies to help others in need (Thompson, 2004).

By 1835, the nonprofit sector in the United States had grown considerably in scope and scale. A Frenchman visited the United States and wrote a remarkably perceptive two-volume book of his insights about America. *Democracy in America* by Alexis de Tocqueville (1967) is one of the indispensable classic works describing the United States. In Chapter 5, Tocqueville describes in detail both the prevalence of the nonprofit sector and the political theory he believes supports this very American set of institutions. Chapter 5 is titled "Of the Use Which the Americans Make of Public Associations in Civil Life." His words deserve to be quoted in some detail as he describes this important and distinctive characteristic of the United States.

Tocqueville focuses this section of his analysis on associations formed in "civil life." He writes:

> Americans of all ages, all conditions, and all dispositions con stantly form associations. They have not only commercial and manufacturing companies, in which all take part, but associa tions of a thousand other kinds, religious, moral, serious, futile, general or restricted, enormous or diminutive. The Americans make associations to give entertainments, to found seminaries, to build inns, to construct churches, to diffuse books, to send missionaries to the antipodes; in this manner they found hospitals, prisons, and schools. If it is proposed to inculcate some truth or to foster some feeling by the encour agement of a great example, they form a society. Wherever at the head of some new undertaking you see the government in

> France, or a man of rank in England, in the United States you will be sure to find an association. . . .
>
> I have since traveled over England, from which the Americans have taken some of their laws and many of their customs; and it seemed to me that the principle of association was by no means so constantly or adroitly used in that country. The English often perform great things singly, whereas the Americans form associations for the smallest undertakings. It is evident that the former people consider association as a powerful means of action, but the latter seem to regard it as the only means they have of acting.
>
> Thus the most democratic country on the face of the earth is that in which men have, in our time, carried to the highest perfection the art of pursuing in common the object of their common desires and have applied this new science to the greatest number of purposes. Is this the result of accident, or is there in reality any necessary connection between the principle of association and that of equality? (p. 128)

Tocqueville then continues a discussion of power and how individuals in a democracy use voluntary association to accomplish their goals. In other countries, individuals with power can require compliance while in a democracy people with equal power must work together. He continues:

> As soon as several of the inhabitants of the United States have taken up an opinion or a feeling which they wish to promote in the world, they look out for mutual assistance; and as soon as they have found one another out, they combine. From that moment they are no longer isolated men, but a power seen from afar, whose actions serve for an example and whose language is listened to. . . .
>
> Nothing, in my opinion, is more deserving of our attention than the intellectual and moral associations of America. The political and industrial associations of that country strike us forcibly; but the others elude our observation, or if we discover them, we understand them imperfectly because we have hardly ever seen anything of the kind. It must be acknowledged, however, that they are as necessary to the American people as the former, and perhaps more so. In democratic countries the science of association is the mother of science; the progress of all the rest depends upon the progress it has made.
>
> Among the laws that rule human societies there is one which seems to be more precise and clear than all others. If men are to remain civilized or to become so, the art of associating together must grow and improve in the same ratio in which the equality of conditions is increased. (Tocqueville, 1967, p. 133)

In 1829, another notable European provided a major gift to the United States. James Smithson, a British scientist, gifted his estate to the United States, should his nephew die without heirs. His will reads in part:

> In the case of the death of my said Nephew without leaving a child or children, or the death of the child or children he may have had under the age of twenty one years or intestate, I then bequeath the whole of my property subject to the Annuity of One Hundred pounds to John Fitall, & for the security & payment of which I mean Stock to remain in this Country, to the United States of America, to found at Washington, under the name of the Smithsonian Institution, an Establishment for the increase & diffusion of knowledge among men.

The gift was received when President Andrew Jackson informed Congress of the bequest. The estate was equal to 100,000 gold sovereigns and is estimated to be valued at more than $500,000. In 1846, President James Polk signed legislation establishing the Smithsonian Institution.

As the United States struggled through the Civil War, President Lincoln signed into law the creation of the United States Sanitary Commission, providing for thousands of women to work in cities across the northern states to help stop disease and raise money for the war effort.

The idea of the Sanitary Commission came from the leadership of the Women's Central Association of Relief and their supporters, who had observed the successful efforts of the British Sanitary Commission during the Crimean War.

Women volunteers raised millions of dollars, provided food, sewed, and worked in the kitchens in support of the federal army. Ladies aid societies developed across the North and provided services that the government could not

Summary

This chapter ends with the start of the Civil War. Building on the traditions of Western civilization, as articulated in the teaching of Aristotle and Plato, moving to the leadership of Queen Elizabeth I in passing laws to take care of the poor, to the establishment of a new nation and the flourishing of voluntary associations, this period of history framed the nonprofit sector we know today.

As a nonprofit leader, it is important to understand the history and the theory behind the development of this special sector of society. Knowledge of the history will help nonprofit leaders defend the role of their organizations as independent of government. Knowledge of history will provide insight into the interactions of charity with its religious basis, focused on individual relief, and philanthropy, with its secular focus on changing social systems. The tension that sometimes exists in nonprofits between their service and their advocacy roles relates back to this ongoing insight on the two intertwined themes of religion and civil society.

Across time, a number of events, large and small, have shaped the sector. A few of those critical events and examples of the role of volunteers, advocacy groups, and major gifts have been introduced as a first step toward deeper understanding of the sector.

John Gardner concluded an interview on philanthropy with a note about what he would like his grandchildren to know about the nonprofit sector. His comments provide a fitting conclusion to this chapter.

> I'm going to go way back to basics. I want my grandchildren to know their history, the history of their culture, the history of their religion, the history of their kind of people, the history of the various cultures which impinge on our culture or have been assimilated within our culture. I want them to know the long road that humans have traveled to get where they are now. All the glorious victories and all the dreadful defeats and

the grandeur and the misery that is the human story. I want them to know that it's there and they're a part of it. I want them to feel very deeply their commitment to this. I want them to understand that history has a lot of chapters and they're going to have to write the next chapter. And it matters deeply how they do it. Not to carelessly throw away freedoms that their forbearers won in hardship and suffering; not to fail in the trust that we've placed in them to write that next chapter. That's what I want my grandchildren to understand. And if they understand that they will find the non profit sector a very fruitful way to pursue some of those goals. (Learning to Give, n.d.)

History of Nonprofit Leadership in the United States

From the Civil War to the Great Depression

Teresa Martinelli-Lee

University of La Verne

Many nonprofit and philanthropic organizations of the 21st century can trace their foundational roots to the early years of the Pilgrims of Plymouth, Massachusetts. A mere 16 years after their arrival, a young minister, John Harvard of Charlestown, bequeathed his library collection and half of his estate to the Great General Court of the Massachusetts Bay Colony. The court promptly voted to name the new learning institution Harvard College. Established in 1636, this was the first American organization to initiate a fundraising campaign (Bellas, Lenger, Murphy, & Solomita, 2004; Grimm, 2002; Hall, 2003; Hammack, 2002; National Philanthropic Trust, 2007; Neem, 2003).

With this initial leadership of benevolence began the rich and diversified history of American humanitarian, benevolent, and philanthropic organizational practices. Today, these practices are called nonprofits or nonprofit organizations. Indeed, no other country then or since has engaged in the unique and empowering development of human and social benevolence. In the formation of the United States as a republic, the legitimacy of nonprofits finds its origin in the founder's ideologies. With philosophies based on the Roman republic, sovereignty principles, civic humanism, and independence, the framers of the Constitution envisioned a republic united with, for, and by the people. With this ideology, the founders introduced the design of federalism and "created a *novus ordo seclorum*: a new order of the ages" (McDonald, 1985, p. 262).

By design, benevolent associations in American culture stem from this very ideology. Such associations are not simply the means to independent and predetermined ends. Rather, as early American society evolved, benevolent associations shaped and transformed public goals and needs. The freedom to create such charitable and benevolent associations influenced the developing democracy and has had a long-standing influence on the U.S. model of civil society for the world.

Famed observer and historian Alexis de Tocqueville identified the apparent propensity of Americans to form social associations built on common objectives and goals toward the common good. In the now classic work, *Democracy in America,* published in 1835, Tocqueville was astonished at the social and cultural American benevolence. Indeed, the inclination of Americans to "make associations to give entertainment, to found seminaries, to build inns, to construct churches, to diffuse books, to send missionaries" and establish all manner of hospitals, prisons, and schools was unheard of in his travels (Heffner, 1956, p. 198). Thus, these early days of nationhood indicated the American propensity toward humanitarian and benevolent activities.

Volunteerism and charitable actions were also observed by Tocqueville, who "admired the extreme skill with which the inhabitants of the United States succeed in proposing a common object to the exertions of a great many men, and in inducing them voluntarily to pursue it" (Heffner, 1956, p. 198).

Such engagement in activities created a thriving set of voluntary organizations throughout the Age of Expansion and Sectionalism in the years preceding the Civil War.

This chapter will identify and explore the leadership and organizational expansion of nonprofits in the 65 years between the end of the Civil War and the start of the Great Depression. Beginning with the period of Reconstruction, a time of healing for a battered nation, American benevolent ideology and practices will be explored. Then, the enrichment of culture known as the Gilded Age will be seen through the surge of philanthropic expressions. Last, the movements that dominated the early 20th century through feats of flight, science, and a world war to the start of the Great Depression will be seen through the lenses of philanthropy, benevolence, and charity.

Reconstruction, 1865–1876

The development of charitable organizations thrived throughout the Age of Expansion (1830–1860), as the United States took great westward leaps through land purchases, occupation, and a transcontinental railroad infrastructure. In the process, a distinction between a public service and a member or group service was established (Salamon, 1992). Those organizations with public-serving identities included educational and religious associations such as schools and churches. Member-serving organizations were geared toward filling the gap, particularly where state and federal social welfare was either lacking or insufficient. Such organizations were able to provide services better and more efficiently due to their well-established organizational structures, long-standing aid programs, and narrow service areas. Member-serving associations were focused on mutual benefits for members. These associations were popular among fraternal and civic groups including labor and agriculture, banking, and insurance companies. Indeed, with fear of possible revival of a monarchy rule or bureaucratic establishment, many Americans were more comfortable with these types of nongovernment organizations (Arnsberger, Ludlum, Riley, & Stanton, 2008; Neem, 2003; Salamon, 1992). As such, Americans favored charitable organizations over government-led programs and were more likely to be highly charitable.

At the beginning of the Civil War, Abraham Lincoln established the U.S. Sanitary Commission (1861). Its primary function during the war was to support sanitary, welfare, and health conditions in Union Army camps (Attie, 1998; Giesberg, 2000; Goodwin, 2005; Hammack, 2002). Lincoln believed that the commission should "at all times, be ready to recognize the paramount claims of the solider of the nation, in the disposition of public trusts" (Goodwin, 2005, p.703). Organizers of this volunteer group were high-society women of the Women's Central Association of Relief of New York City. Women volunteers supplied nursing services in field and ship hospitals, ran kitchens, and organized medical services. Despite cynicism from government officials, military surgeons, and physicians, the women raised $20 million toward goods and funds for the Union Army. Following the war, this official yet voluntary agency linked disabled veterans with government jobs, endeavored to secure bounty and back pay, and helped veterans apply for pensions (Attie, 1998; Giesberg, 2000; Ginzberg, 1990; McCarthy, 1991). Although the commission was disbanded in 1866, it is considered the forerunner of the American Red Cross (1900).

Among the thousands of women who provided comfort and medical support to Union soldiers was Clara Barton, an innovative and humanitarian leader of the period. With strong and fervent religious beliefs, Barton was a pioneer of war-related benevolence. She is considered a crucial leader during the Reconstruction period. Organizing many postwar activities including the search for missing soldiers, Barton connected with a number of period leaders including Susan B. Anthony, which amplified her work with the women's suffrage movement. Such activist endeavors, along with her wartime experience, made her sympathetic to black civil rights, linking her to abolitionist Frederick Douglass. Her years of searching for missing soldiers and her work during the war were physically wearing, and in 1868, on her physician's advice, she departed for a European trip. While there, Barton was introduced to the Switzerland-based International Committee of the Red Cross (ICRC), a humanitarian organization started during the Franco-Prussian War. With a refreshed and strengthened spirit, Barton returned to the United States and established a movement toward an American version of the ICRC (Attie, 1998; Eiselein, 1993).

The postwar American consensus was that the country would never again engage in war. Barton thus faced resistance when seeking funds and supporters for her organization, even though its framework would suit both wartime and peacetime conditions. Through three presidential administrations and nearly 12 diligent years, Barton appealed for a humanitarian organization that could respond to crises regardless of war or battle. In 1881, after obtaining secured funding and presidential approval from Chester Arthur, Barton and financial supporters incorporated the American Association of the Red Cross. The association later became known as the American National Red Cross (1893); congressional charters (1900 and 1905) served to validate the working partnership between the federal government and the American Red Cross (ARC) during national disasters.

For more than 20 years, Barton served as president of the organization; she resigned in 1904. Yet not hampered by age, Barton at 83 refocused her attention to other movements and interests, including establishing the short-term National First Aid Association of America, where she served for 5 years. The organization was geared toward providing first aid instruction, assembling first aid kits, and ensuring emergency preparedness. Although Barton had introduced these programs prior to her retirement from the Red Cross, that organization did not incorporate these practices as a standard of health and safety programs until several years after her death in 1912.

Foundations

Postwar Reconstruction society saw a surge of nonprofit organizations, many of which continue to play key roles today. Numerous corporations, companies, and associations organized to conduct benevolent or charitable services for religious, educational, fraternal, or land preservation purposes. Other models of postwar organizational reform include foundations, having a distinction as either private (individually or family funded) or public charities (community or group funded) and philanthropic organizations (Burlingame, 2004). The driver of these foundations is found in the federal government initiative to protect the interests of black citizens emancipated from slavery. While the South found its economy and infrastructure in dire ruin, the North was tasked with the formidable task of stitching the Union back together (Blay, 1960; Dowie, 2001; Powell & Steinberg, 2006).

The 3.5 million new citizens emancipated from slavery found themselves in a sea of desolation and dejection. Most were untrained, uneducated, unemployable, and practiced only in the plantation system. Emancipation placed the black, formerly enslaved people, in a condition between freedom and uncertainty. The federal government was in a crisis after Andrew Johnson succeeded the assassinated Abraham Lincoln, and lack of leadership may have contributed to the ultimate failure of the Reconstruction period (Blay, 1960). The U.S. Bureau of Refugees, Freedmen, and Abandoned Lands (more popularly known as the Freedman's Bureau), established near the end of Lincoln's lifetime, was intended to last for one year following the end of the war, with the purpose of providing aid to refugees and people emancipated from slavery. Due to the enormity of the new social class of citizens emancipated from slavery, the Freedman's Bureau operated until 1872 in its quest to procure transitional aid and prevent exploitation of impoverished blacks (Powell & Steinberg, 2006). Yet, the Freedman's Bureau—the first welfare agency, but lacking adequate funding and skilled staffing—could not accomplish its objectives of building hospitals and schools or rendering medical assistance without the help of private philanthropic foundations.

Despite the lack of government efficiency and the failure of federal Reconstruction efforts, Americans staunchly embraced the democratic value of the common good. This benevolence toward community aid was a powerful impetus that propelled the voluntary and philanthropic movement. Initially, some foundations were created to provide a source of education for those emancipated from slavery. However, some early foundation funds were created for the specific purpose of education of all, without distinction of race or creed. Established foundations include Amos Kendall and Edward Miner Gallaudet University for the deaf and hard of hearing (1864), the Peabody Fund (1867), the John F. Slater Fund (1882), and later the John D. Rockefeller General Education Board Fund (1903) (National Philanthropic Trust, 2007; Powell & Steinberg, 2006).

Considered the first modern fund, the Peabody Fund was designed to provide financial support for educational construction, scholarships, teachers, and industrial education for newly emancipated people. George Peabody (1795–1869), merchant investor, banker, and philanthropist Peabody entrusted generous sums for the benefit of those afflicted after the Civil War (Peabody, 1862). The fund included a provision to encourage the establishment of free education as part of a state system (National Philanthropic Trust, 2007; Roelofs, 2003).

Religious Organizations

Blacks emancipated from slavery also turned for help to the tolerant and welcoming practices of church organizations. Protected by the First Amendment of the U.S. Constitution through separation of church and state, and resonating with the heritage of many of the people coming out of enslavement, churches offered southern blacks opportunities for civic engagement, political activity, and a safe platform for political leadership. By 1870, the United States was home to 72,000 churches and temples, including Methodist, Baptist, Presbyterian, Catholic, and Jewish congregations, with the majority of faiths being Protestant (Blay, 1960). The Protestant elite, however, sought to restrain both Catholics and Jews by limiting admission to higher education, as well as law and medical schools. Alternatively, both Catholic and Jewish nonprofits challenged the long-standing Protestant elite by instituting and building their own parochial schools, universities, hospitals, social welfare agencies, and other philanthropic organizations (Powell & Steinberg, 2006).

Religious organizations could operate outside the scope of state and federal boundaries. A few benevolent and philanthropic leaders understood the social coin had two sides, on one the few rich, and powerful, and on the other, the many poor and powerless. In New York, Boston, and other large East Coast cities, poor families lived in substandard housing and tenements lacking running water, heat, and lighting; those who could not pay the rent were relegated to the outdoors. The homeless living in crowded slums were subject to many rampant diseases, including cholera, scarlet fever, smallpox, typhoid, and tuberculosis, thus creating a health and safety epidemic (Blay, 1960; Dowie, 2001). By the 1890s, many church groups, welfare agencies, and political organizations were devoted to the problem of poverty and dependency. The focus of these nonprofit organizations was not simply to provide aid but also to improve the conditions and perhaps eliminate the causes that created poverty.

One of the vociferous voices of the Reconstruction was that of Henry Ward Beecher, minister of the Plymouth Congregational Church in Brooklyn, New York. Beecher was a notable orator who spoke from the pulpit on behalf of social reform, emancipation, and women's rights. He inspired his congregation to take to the streets against bigotry and slavery and on behalf of temperance and women's suffrage. News of Beecher's sermons led him to the lecture circuit, furthering his advocacy agenda in packed churches and universities (Applegate, 2006). Thus, the voices that stimulated the populace were those that comforted and consoled while at the same time rousing the public to social equity, humanitarianism, and benevolence toward a variety of causes both social and political.

The Gilded Age, 1876–1900

Efforts to reconstruct the 11 states in the Confederacy were left to state and federal governments. Through constitutional amendments and a variety of legislative reforms, most civil programs were adopted as the nation swept into the Gilded Age. Following the Reconstruction period, an era of massive change brought the nation to life. Writers of the period such as Walt Whitman and Mark Twain wrote of the tidal wave of change as the coasts were linked by five transcontinental railroads and the frontier reached the Pacific. Mark Twain and Charles Dudley Warner coined the period's name in their book *The Gilded Age: A Tale of Today* (1873) (Bartlett, 1969). These writers also noted that the social elite and wealthy were polarized from the ethnically diverse working-class during the Industrial Revolution. Indeed, the upper class's show of opulence and self-indulgence was in many cases excessive and wasteful (Blay, 1960).

The burgeoning wealthy class set new standards for the nation with extravagant displays of wealth and excess. Their wealth gave rise to a new kind of benevolence. American philanthropy became the rage for the upper class. As businesses and entrepreneurs accumulated riches through new industries, factories, and financial manipulations, the powerful who controlled the nation's finances began to share their wealth. Andrew Carnegie, Henry Flagler, J. P. Morgan, John D. Rockefeller, and Cornelius Vanderbilt were among the many prosperous industrialists and bankers to endow funds for colleges, academic institutions, public libraries, museums, hospitals, art and music foundations, and other charities. As a generation, they established some of the large, endowed, grantmaking foundations that continue to benefit society to this day.

Of these, Andrew Carnegie (1835–1919) was the most articulate in recognizing the conditions that had made possible his accumulation of wealth and power (Powell & Steinberg, 2006). In his essay, "Gospel of Wealth," published in 1889, Carnegie laid out his belief that the wealthy were responsible to use their fortune not only for their families but also for the society that had generated their fortune. Indeed, Carnegie believed in recirculation of funds to sustain the greater good. Yet, Carnegie also believed that simply bequeathing one's fortune to charity was irresponsible. Thus, he encouraged the formation of philanthropic organizations where the benefactor could retain direction of funds. This was better, he thought, than charitable giving because the latter would simply sustain the poor in their impoverished condition without offering opportunities to better themselves. Carnegie encouraged a movement to create opportunities for future beneficiaries yet retain control of how funds were to be spent.

Social Welfare

As the century drew to a close, a new fervor of humanitarian activity began to take shape. A significant number of Americans continued to dedicate themselves to benevolent activities, the majority of which were geared toward social reform. An increasing number of dedicated women and men were displaying a social conscience regarding the care of the financially indigent, mentally disabled, and wayward young (Powell & Steinberg, 2006).

Reform ideals of social services provision were set in motion by religious nonprofits such as the Salvation Army, founded in 1865 by William Booth. This organization launched rescue missions in large cities such as New York and Boston, flooded with European immigrants from Germany, Ireland, and Italy. Other urban-based religious organizations expanded their social ministries to serve the growing number of poor within city limits. Not to be outdone, university-based religious organizations such as the Phillips Brooks House at Harvard (1893) jumped into the movement by sending students to support social action and provide public service. This experience provided vital community engagement and led students toward volunteer social services and activism. Social services and inclusion were also promoted by another religiously based university organization, the Young Men's Christian Association (YMCA), founded by Dwight Hall at Yale. This nonprofit sought to create civic leadership through social justice concerns, the promotion of public service, and activism (Powell & Steinberg, 2006).

Such activism and reform were common among the middle class as well as the elite. Having played a major role throughout and following the Civil War, women continued their contribution to social services and welfare through any number of growing charitable and social welfare organizations. Indeed, women proved to be an important and integral source of support as new forms of activism began to flourish. Women of the late 19th century became increasingly educated, especially within traditional higher education systems (Blay, 1960; Klenke, 1996; McCarthy, 1991).

Whereas the East Coast was home to many white males-only educational institutions, the Midwest had a growing number coeducational institutions, particularly following the Morrill Act of 1862, which gave states large tracts of land to endow colleges toward engineering and agricultural disciplines. The Morrill Act opened a floodgate of higher education, including colleges for women only and blacks only. The need for advanced education was clear as the country moved out of the Industrial Revolution and into science, business, fine arts, engineering, public management, education, liberal arts, and law disciplines. Midwest colleges of the period include Oberlin College in Oberlin, Ohio, Carleton College, Texas Christian University, and the University of Iowa, which was the first state university. Notable and prestigious women's colleges of the period include Vassar College, Radcliffe College, Wellesley College, and Bryn Mawr College. On the West Coast, Stanford University was established in 1885 with a large endowment including 8,000 acres of land from Leland Stanford, railroad magnate and governor of California (National Philanthropic Trust, 2007).

Charitable funds and endowments for higher education became embedded in the fabric of American benevolence. The need for higher education was underscored by the "increasingly dense and complex network of organizations including business corporations, charitable and cultural institutions dependent on [universities] for technology, expertise, professional and scholarly societies." Furthermore, "book and periodical publishers sought to disseminate the scholarship of their faculties, while trade associations and groups advocating social and economic reform" sought to translate studies and results into policy (Powell & Steinberg, 2006, p. 45).

However, women of the Gilded Age continued to be deprived career opportunities, the right to vote, and ability to own property once married. Driven by international support for the ideals of women's suffrage, the United States experienced a surge of nonprofit organizations aimed at the reform of women's rights. With vigorous voices, spirited feminists such as Victoria Woodhull, Carrie Chapman Catt, Elizabeth Cady Stanton, and Susan B. Anthony took their cause to the streets, the newspapers, and their state and federal legislators. The Nineteenth Amendment to the Constitution was passed in 1920.

Science and the Environment

Other humanitarian causes of the Gilded Age that transformed practices and established patterns of action include nonprofits for land preservation and for animal protection, establishing patterns of action still practiced today. The first philanthropic land preservation was Yellowstone National Park. After the Civil War, the area was explored by several government and privately sponsored expeditions. Initially, these Wyoming lands were to be publicly auctioned. However, based on a report by explorer F. V. Hayden, head of the U.S. Geological Survey of the Territories, Congress withdrew the region from the sale registry. In 1872, President Ulysses S. Grant signed the Yellowstone National Park bill into law, thus creating the first national public park.

The land was overflowing with buffalo, mule, deer, elk, and antelope, along with natural geysers, ecosystems, forests, and grassland. However, uncontrolled poaching and vandalism was causing destruction of the natural resources and creating harmful conditions for endangered or threatened wildlife. To stop the continued and unabated destruction, publisher and naturalist George Bird Grinnell and General Phillip Sheridan, commander of the U.S. Army, began a charitable crusade to garner financial support to fight against the indiscriminate slaughter of wildlife. Along with Theodore Roosevelt, General William Sherman, and Gifford Pinchot, Grinnell founded the Boone and Crocket Club (1895), which focused on wildlife preservation and land conservation. In 1894, President Grover Cleveland signed a law protecting park wildlife.

Modeling the same beliefs that motivated Grinnell, John Muir advocated the preservation of all American wildernesses, not just that of Yellowstone. He petitioned Congress to make Yosemite in California a national park to protect the land from the damage being caused by livestock. His many writings about the Sierra Nevada region were influential in moving Congress to make Yosemite and Sequoia valleys national parks. Exemplifying the very nature of conservationism, ecology, and environmental consciousness, Muir founded the Sierra Club in 1892. As a grassroots environmental nonprofit, the Sierra Club seeks to protect wildernesses, promote responsible use natural resources, and protect the quality of the environment for man and nature (National Philanthropic Trust, 2007).

Currently the largest nonprofit scientific and educational institution, the National Geographic Society was founded in 1888 by a group of dedicated explorers and scientists seeking "the increase and diffusion of geographic knowledge" (National Philanthropic Trust, 2007). The National Geographic Society is best known for its high-quality magazine, however, its goal then and now has been to advocate and inspire care for the environment. The society has grown from 200 charter members to more than 9 million members. Grants and funds raised have served to endow explorations, expeditions, education, and conservation efforts worldwide. The society has created additional nonprofit sections within its operations, including the Education Foundation, Conservation Trust, and a Research and Exploration Council (National Geographic Society, 2010).

Robber Barons

Business magnates of the Gilded Age were innovative industrialists, bankers, and businessmen whose names are synonymous with affluence. However, they obtained their wealth by what today would be called unfair business and labor practices. Indeed, so-called robber barons or industrial barons seem to dominate the late 19th century. Nevertheless, such enormous wealth also created the large philanthropic nonprofits of the Gilded Age. The factories, industrial towns, railroads, oil, coal mining, and banking organizations gave the industrial barons the financial fuel they needed to generate their wealth. Yet, those same barons turned some of their wealth back into society by creating generous American philanthropic endeavors. At the time, many Americans considered the practice countercultural and somewhat outrageous (Burlingame, 2004; Dowie, 2001; Hammack, 1998). Why would men of wealth want to give away their money for the public good? American philanthropists did so to focus on improving the quality of life for fellow citizens rather than simply contributing money to sustain the impoverished.

Andrew Carnegie, who was among the first to share his wealth, believed that "the best means of benefiting the community is to place within its reach the ladders on which the aspiring can rise" (quoted in Powell & Steinberg, 2006, p. 46). Carnegie encouraged his counterparts to be wise in their decision making by persuading them to be stewards of the funds they bequeathed to their philanthropic ideals. It is important to clarify that these charitable foundations were subject to taxation until federal legislation brought tax relief to personal giving. The Revenue Act of 1909 granted a tax exemption to "any corporation or association organized and operated exclusively for religious, charitable, or educational purposes, no part of the net income of which inures to the benefit of any private stockholder or individual" (Arnsberger et al., 2008, p. 107).

The industrial barons launched a long and deep history of philanthropic activity in America. Of the 20 industrial barons, a few initiated philanthropic activities in the Gilded Age. In 1884, John D. Rockefeller, Standard Oil magnate, funded Atlanta Baptist Female Academy, a black women's college commissioned to provide education for black women emancipated from slavery. The school was renamed for Rockefeller's in-laws, who were staunch abolitionists. In California, Leland Stanford, railroad magnate, wanting to memorialize his beloved son, donated land and funds to start a new nontraditional coeducational university. Andrew Carnegie, steel magnate, began his philanthropic activities in 1889 with a charitable donation to build the first free library in Braddock, Pennsylvania. Although a free public library is taken for granted today, such an idea was revolutionary in the 19th century. Most citizens did not have free access to education, let alone educational materials.

The 35 years of the Gilded Age were a time of tremendous transformation at every level of government and society. This era was the gateway to patterns of action and behavior that continue to influence society today. Politics were "considered a matter of Tweedledum and Tweedledee (Republicans and Democrats both essentially alike) and foreign relations were thought to be minor and unimportant" (Bartlett, 1969, p. 1). Despite the complicated revolutions within society and government, the Gilded Age was a time of regeneration. As such, the era became the seedbed for 20th-century American exploration and discovery.

1900–1929: The Seeds of the Great Depression

At the cusp of the new millennium, the 20th century, a new world arena was charged by dynamic philanthropic changes. This was the Progressive Era, which planted the seeds of reform in areas of politics, society, modernization, corruption, constitutional amendments, and economic policy. The Progressives advocated a purification of society and politics with stringent exclusions of blacks, who were at that time illiterate, and European immigrants, many of whom did not speak English. The steps taken toward civil rights seem to have been nullified by the restrictive ideologies of the Progressives. In contrast, however, Progressives advocated women's suffrage with the belief that a "pure" female would better serve political deliberation (Bergman & Bernardi, 2005; Ginzberg, 1990).

The Progressives also intended to settle the score with the industrial barons, who controlled such extraordinary wealth. Theodore Roosevelt, an advocate of the Progressive movement, argued that "the essence of the struggle is to equalize opportunity, destroy privilege, and give to the life and citizenship of every individual the highest possible value both to himself and to the commonwealth" (Howland, 2001). Congress helped to support the movement through tax legislation such as the Revenue Act of 1909 and 1913, which established the modern income tax system and regulated charitable organizations so they could not be used by the wealthy as a means to avoid taxable income (Arnsberger et al., 2008, p. 107).

The Progressive Era

Aware of the Progressive movement, the industrial barons did not oppose its ideals. Rather they embraced its functionality against the abuse and waste of resources in society. Strong political proponents of the movement, however, had the ear of President Theodore Roosevelt (1901–1909), who was a vocal but cautious reformer. Roosevelt was an advocate of the natural environment, having been a naturalist, hunter, explorer, and soldier. He promoted regulation of interstate commerce, spoke out against trusts, and passed legislation for the conservation of natural resources. He further criticized the "malefactors of great wealth" while demanding increased regulation of business to support labor (Howland, 2001).

For the industrial barons, these Progressive principles were the motivating factors to substantiate the reasons for trusts and foundations. Nevertheless, the new century was filled with new philanthropic causes and opportunities.

The idea of a grantmaking foundation was developed by Andrew Carnegie, who sought to create a permanent endowment with expansive purposes such as reforming social and economic life. Although Congress would not give Carnegie or Rockefeller a charter for their philanthropic organization, the New York State Assembly was willing to approve the charters needed to create trusts and foundations. Once Carnegie obtained charter registry, he established several innovative foundations. Between 1900 and 1911, Carnegie launched three foundations: the Foundation for the Advancement of Teaching (1905), the Endowment for International Peace (1910), and the Carnegie Corporation of New York (1911) (Powell & Steinberg, 2006). Although Carnegie had stated in his treatise, "Gospel of Wealth" (1889), that philanthropists should be stewards of their wealth to decide specifically how best to use endowments, his foundations of the early 20th century were more open-ended in purpose. Furthermore, the trustees had a great deal of autonomy on how the funds should be spent.

In 1907, the Russell Sage Foundation was established as the first private family foundation. The intent of the foundation was "the improvement of social and living conditions in the United States" (National Philanthropic Trust, 2007). Among other goals, the foundation's initiatives were to help resolve problems of the indigent and elderly and to develop improved conditions for hospitals and prison. The Russell Sage Foundation is considered the first modern foundation because it merged grantmaking with sustained and active participation in its initiatives. The Russell Sage Foundation was both pioneering and innovative. First, at a time when nonprofits tended to be geared toward specific societal needs, the scope of the Russell Sage Foundation was both wide-ranging and national. Second, the $10 million endowment was on a scale of generosity most citizens had never envisioned. Up to this point in American philanthropic action, no one, not even Rockefeller or Carnegie, had contributed this remarkable amount. Finally, the creator was not only a visionary but also a woman. Margaret Olivia Sage, second wife of railroad magnate and financier, Russell Sage. By her own words, she recognized that the aim of the foundation was "to take up the larger and more difficult problems, and to take them up so far as possible in such a manner as to secure co-operation and aid in their solution" (Russell Sage Foundation, 2007, p. 2). Indeed, her aspirations were to seek the causes of poverty, improve living conditions, and finally to alleviate poverty rather than merely provide assistance.

By the turn of the century, John D. Rockefeller was perhaps the wealthiest American, followed closely by Carnegie and J. P. Morgan. Rockefeller had created several foundations aimed at the specific areas of education, medicine, and religion, including the Rockefeller Medical Institute and the University of Chicago. His General Education Board (GEB) (1903) was by far the most comprehensive foundation geared to education. It sought to improve K–12 education for both white and black children, to contribute to agricultural studies in Boys and Girls Clubs, and to underwrite the modernization of state education systems and curricula standards (Dowie, 2001; Powell & Steinberg, 2006).

These smaller foundations provided relatively minor funding; for example, the University of Chicago endowment (1889) was only $600,000 (National Philanthropic Trust, 2007). Thus, Rockefeller created quite a social and political stir when he proposed and sought a charter for an open-ended grantmaking foundation valued at $100 million. This large-scale, unprecedented benevolence was difficult for Americans and government officials to accept. Indeed, the question was why this industrial magnate would invest such an enormous sum in an institution whose sole directive was to "promote the well being of mankind throughout the world" (National Philanthropic Trust, 2007). National news media and politicians alike denounced his attempt to gain a charter. President Theodore Roosevelt, a fervent Progressive, derided the charter, arguing, "No amount of charity in spending such fortunes can compensate in any way for the misconduct in acquiring them" (Howland, 2001).

In an attempt to appease the public and the politicians, Rockefeller suggested that the trustee appointments would require government approval, further affirming that the foundation was to serve the common good and not be self-serving. Yet nothing seemed adequate to subdue the disturbance. Finally, like Carnegie, Rockefeller turned to the New York State Assembly for approval and consent. Regardless of the public and political outcry, by 1915, the Russell Sage Foundation (1907) and the Rockefeller Foundation (1913) were becoming the most sought after and influential philanthropic institutions. Both were very different in mission from previous foundations, in that the trustees were giving wide-ranging discretion. However, the unequivocal mission was reforming social, economic, and political life.

What are now called "think tanks" began in these grantmaking foundations. Rather than political action, some foundations required the examination and study of political conditions. The outcomes and findings were made available to influential citizens, who would then share the findings with the masses as a way to bring about change. This new century model of organizational and political reform connected the expertise of business, government, professional institutions, and academics toward effective nonpartisan policy change.

Reluctant to create controversy, other philanthropists stayed away from the level of benevolence shown by Sage, Rockefeller, and Carnegie. Those who invested in foundations were cautious and stayed "under the radar" by funding noncontroversial institutions devoted, for example, to education and health care. Other philanthropists engaged intermediary institutions and provided grants to focus on public policy. Included in these nonprofit organizations were the National Research Council, the Social Science Research Council, the American Council of Learned

Societies, and the National Bureau of Economic Research Foundation (Powell & Steinberg, 2006).

By the start of America's participation in World War I (1917), numerous Progressive institutions were being endowed by philanthropic funding sources. The war seems to have increased the establishment of economic, political, and social associations committed to building a better American nation. Yet, the nation was too occupied with the war effort to be concerned with wealthy Americans creating grantmaking foundations. Thus, the controversy and concern over massively funded philanthropic charitable foundations came to an end.

By the turn of the century, most Americans accepted the ideology of the Progressive movement, proven by twice electing the movement's leader, President Theodore Roosevelt. Newspapers, politicians, and society alike accepted the Progressive ideals, which included that economic, social, and political institutions were in need of reform.

Philanthropically supported and charitable institutions continued to play key roles during the period up to and including the beginning of the Great Depression (1929). One example is the Reverend Edgar J. Helms and the establishment of Goodwill Industries (1902). As a Methodist minister, Reverend Helms envisioned a process in which used household goods and clothing from elite families of major cities could be used to begin a vocational program and nonprofit retail operation.

Court clerk Ernest Coulter believed that delinquent boys in congested cities could stay clear of trouble—and out of his courtroom—if they were mentored by responsible and compassionate adults. After seeking and obtaining volunteers, Coulter initiated the Big Brothers, Big Sisters of America.

The Hershey family of Pennsylvania (1909) used their wealth to build a home and school for orphaned boys. The Hershey Industrial School continues as a cost-free coeducational home and school for children.

In 1922, the Shriners Hospital for Children opened, with the objective of providing free medical and orthopedic care to children with crippling conditions. At the brink of the Great Depression (1929), the Capuchin Soup Kitchen opened its doors to the poor and destitute of Detroit. Serving a simple meal of soup and sandwich, the friars regularly found more than 2,000 people waiting in line. The Capuchin Society today partners with the secular Franciscan order to raise funds, collect food, and bake bread in a daily effort to ensure that everyone gets at least one meal a day.

Communities were indeed challenged by low-income neighborhoods and the need for social services and welfare. State and local government agencies were underfunded and understaffed. People in poverty and individuals experiencing mental illness were forced to seek and share limited resources. Yet, with the benevolent attitude still strong in America, the 20th century experienced a surge of nonprofit, charitable, and humanitarian organizations committed to helping those in need.

Summary

Through the Reconstruction era and the Gilded Age, America experienced a time of frontier explorations, mechanical inventions, scientific discoveries, social reconstruction, and rapid wealth creation, yet with minimal sharing of that wealth. Massive wealth overflowing for the few and privileged was juxtaposed to the critical needs of many people. This chapter has attempted to develop the cause-driven motivations for humanitarian and benevolent practices of the late 19th century. Linkages between society, lifestyles, politics, economy, social conciseness, and environmental responsibility were discussed.

The Reconstruction era led to social and charitable programs organized by people of compassion and empathy. The charitable work of nonprofit organizations, in a variety of nonprofit forms, helped to start the healing of some social wounds, and to begin to meet human needs. Those same nonprofit paradigms became models for many nonprofit organizations today.

History of Nonprofit Leadership in the United States

From the Great Depression to World War II

James R. Kienker
Indiana University–Purdue University Indianapolis

In many ways, the Great Depression served as the groundwork for the contemporary nonprofit sector. During this time period, the government greatly increased its role in the provision of social services in the United States. Meanwhile, nonprofits were forced to adapt their roles around a new actor. Nonprofit leaders took on greater advocacy roles within the government, and a public/private partnership was formed that lasts to this day. Knowing this history is critical in understanding why the nonprofit and government sectors interact in the way that they do today. This history also yields useful suggestions on how the sector should respond to future economic depressions or recessions, as the Great Depression itself revealed both the limits of the nonprofit sector and what actions nonprofit leaders took to break these limits in the service of others.

The Great Depression and the Beginning of the Modern Partnership Between the Government and Nonprofit Sectors

Today's provision of social services in the United States is marked by varying levels of competition and partnership between nonprofit and governmental service providers. These levels of competition and partnership are often not clearly demarcated. Indeed, even within the same sector, like education, direct assistance to the poor, and so on, government and nonprofit entities both compete and partner in the provision of services. Today, nonprofit leaders must not only ensure that their own projects are doing good work in their communities, but also be active in the governmental sphere: advocating for more or less government assistance, serving as a watchdog for government programs, and navigating their own nonprofits through the ever-changing legal and funding landscape created by changes in government public policy.

This modern environment of government-nonprofit interaction finds its roots most directly in the tumult of the Great Depression. Certainly, there were instances of government involvement in the provision of social services before Franklin Delano Roosevelt instituted his New Deal. Nonprofit groups, more commonly known at that time as voluntary or private associations, were also active in government advocacy before the Great Depression. However, no previous occasion of nonprofit advocacy or government service provision equaled the extent to which both expanded during the Great Depression.

The period encompassing the Great Depression and World War II was one predominantly characterized by increased federal government involvement in the provision of what was then called "poor relief" in the United States. Poor relief, or assistance to the poor, encompassed both gifts of cash, food, or clothing to needy families and job placement or make-work assistance. Prior to the Great Depression, much of this aid was distributed through private social work agencies, churches, and other local community organizations. However, these local organizations quickly proved no match for the economic fallout from the Depression, and, by the end of the 1930s, the federal government had become the primary provider of aid to the poor in the United States. Consequently, the period of the Great Depression was a time of transition from a poor-relief system dominated by private agencies to one characterized by extensive federal involvement.

The leadership of two presidents, Herbert Hoover (1928–1932) and Franklin Delano Roosevelt (1932–1945), especially shaped this transition. Hoover's administration placed the primary responsibility for providing relief to the poor on local community groups and state agencies. However, as the Depression worsened, it quickly became clear that private agencies, as well as state and local governments, could not adequately address the needs of their communities with the resources on hand. Local and national nonprofit leaders lobbied the government to aid private organizations and increase its public aid to the poor. When Roosevelt became president in 1932, he expanded federal welfare programs in response to public cries for assistance and, in the process, transformed the federal government into the primary provider of relief services in the United States.

Nonprofit leaders during the Great Depression had to address two predominant concerns: (1) meeting the immediate relief needs of their local communities and (2) navigating the changing public relief landscape generated by the New Deal. The first concern led nonprofit leaders to approach the federal government for assistance at the end of the Hoover administration. The second concern divided nonprofit leaders in the debate between the Hoover and Roosevelt administrations over the scope of federal assistance. Some nonprofit leaders supported a permanent and extensive federal involvement in poor relief, whereas others appreciated federal support but wanted it to be limited in scope.

The Great Depression was the most severe economic disaster the United States had ever seen. In less than 3 years from its start, a quarter of the nation's population became unemployed. Private relief agencies, which we would refer to today as nonprofit organizations, collected and distributed millions of dollars in donations and provided aid to millions of impoverished families. In this environment, nonprofit leadership was critical in providing much needed relief to Americans across the country. The Depression also changed the way private agencies and the federal government interacted with one another. By the end of the decade, with the arrival of World War II, private agencies became active partners with the federal government in relief efforts.

The Philanthropic Environment Prior to the Great Depression

For the purposes of providing perspective to the poor-relief programs of the Great Depression, it is necessary to review a few of the characteristics of pre-Depression efforts to assist the poor of the United States. The early 20th century was marked by both an increased number of formal philanthropic institutions and a greater professionalization within social service agencies.

The creation of a number of major foundations marked the first two decades of the 20th century. Philanthropists placed hundreds of millions of dollars in these endowed foundations to address a host of different public and social issues. The Carnegie Corporation (1911) and the Rockefeller Foundation (1913) focused on public education and health programs. The Russell Sage Foundation (1907) and the Commonwealth Fund (1918) promoted projects in social work and child welfare (Leiby, 1978, p. 170). Between 1920 and 1931 alone, the number of private foundations in the United States grew from 102 to 350 (Leiby, 1978, p. 170). Yet, such giving instruments were the foray of the extremely wealthy. Community chests provided opportunities for less wealthy businessmen and community members to raise money in their cities.

Community chests served to consolidate fundraising and distribution efforts in individual cities. In these organizations, a committee, often made up of local businessmen and community leaders, would organize annual funding drives that would raise money for numerous sponsored community agencies at once. Unlike community foundations, which maintained a constant fund of money from numerous givers throughout the year, community chests usually ran either an annual campaign for funding or several seasonal campaigns throughout the year. These chests were the precursors to today's United Way funding drives, and their main goals were to streamline fundraising efforts in cities while also introducing standards to determine worthy recipients for the donations. During the 1920s, community chests grew in number and popularity. Between 1919 and 1930, the number of community chests rose from 12 to 363, with their total fundraising also increasing from $14 million per year to $75 million during that same time period (Leiby, 1998, p. 173).

During the decades preceding the Great Depression, the predominantly private social work field became more professionalized. The number of social work schools in the United States increased from 5 in 1915 to 45 by 1930 (Katz, 1986, p. 209). Private organizations developed bureaucracies to cope with caseloads and improve administrative practices. Mary Richmond, a social worker and nonprofit administrator, through collaboration with the Russell Sage Foundation, laid the intellectual framework for the social work practice of *casework,* or, as she termed it, *social case work* (Leiby, 1978, p. 123). Public administration schools flourished, and major philanthropists, like Rockefeller and Carnegie, donated money to create research institutes that would investigate proper management and social work administration procedures. The Bureau of Municipal Research was one such organization, which was started with funds from both Carnegie and Rockefeller (Leiby, 1978, p. 175). The bureau began operations in 1907, doubling as a research institute for public administration and a training program (Leiby, 1978, p. 175).

Despite improvements in public administration theory and professionalization, *public welfare* was generally frowned on in the 1920s social work environment. As James Leiby (1978) wrote in his *A History of Social Welfare and Social Work in the United States*, "In the National Conference of Social Work, the largest forum for professionals and their allies, public welfare was not prominent" (p. 179). Professional social workers favored private agencies like community chests both as funding opportunities and as vehicles through which to execute their programs. In some cases, public welfare experts would even move out of public institutions into private agencies or create their own organizations through private philanthropic dollars (Leiby, 1978, p. 179).

In summary, the philanthropic environment present before the Great Depression was characterized by active voluntary or private organizations that shouldered much of the social welfare obligation for a community. Its landscape was dotted by hundreds of private foundations and community chests. Its actors were far more professionalized than their predecessors, and the environment was marked by more efficient operating and administrative practices. However, in the face of the Great Depression's economic devastation, philanthropic organizations found themselves rapidly pushed to the limits of their newly developed resources and practices.

The Onslaught of the Great Depression

The Great Depression, as a creator of unemployment, was indiscriminant in its selection of targets. Previously, economic recessions and downturns had affected primarily unskilled industrial workers whose job opportunities were not very stable to begin with. Even in the booming 1920s, many of these laborers faced real prospects of unemployment. The Great Depression was different in that it also put middle-income and upper-income workers out of work. Poor-relief records, reported by the Works Progress Administration in 1935, demonstrated that the Depression affected members in every working group and profession in the United States. Although farm workers and unskilled laborers made up the majority of the unemployed, nearly a quarter of the unemployed had been engaged in office work and professional trades, normally economically resilient fields (Khan, 1937, p. 15).

Between 1929 and 1932, asset values, employment numbers, and production values all collapsed. Stock values fell 75% from their 1929 highs (Khan, 1937, p. 27). Overall production across the country dropped 46% (Khan, 1937, p. 27). Total national income was halved from $81 billion in 1929 to $40 billion in 1932 (Khan, 1937, p. 27). Total unemployment in the country increased almost tenfold, from 1.8 million unemployed persons in 1929 to over 13.1 million unemployed in 1933 (Khan, 1937, p. 27). By the beginning of 1933, one in every four American workers was unemployed (Katz, 1986, p. 207).

At the onset of the Great Depression, President Hoover made it clear that he felt private agencies and local government presented the best means to meet the needs of the growing number of poor people. Even in February 1931, 15 months after the October 1929 stock market crash, Hoover praised the work of voluntary organizations and continued his support of local organizations over federal programs. "Victory over this depression and over our other difficulties," said Hoover in a February 13, 1931, radio address, "will be won by the resolution of our people to fight their own battles in their own communities" (Rollins, 1966, p. 17). Such an approach constituted what Hoover termed "the American way" to solving problems (Rollins, 1966, p. 17). In his view, increasing federal spending would destroy this approach. As a result, Hoover did not create any direct federal programs to address the unemployment and poverty issues generated by the Depression until the final year of his administration. Indeed, Hoover vetoed a 1931 relief bill that would have created "federally funded public works, an expanded federal employment service, and unemployment insurance" (Katz, 1986, p. 216).

Private agencies were forced to take on much of the early responsibility to care for the nation's growing numbers of unemployed and impoverished. The Depression quickly crippled the budgets of state and local governments. As unemployment rose and assets depreciated in value, tax revenues quickly fell. To make matters worse, many local governments were encumbered with billions of dollars in existing debt accumulated during the 1920s (Katz, 1986, p. 214). Over a thousand of these local governments defaulted on their debt loads by 1933 (Katz, 1986, p. 214). Most of the largest cities in the country were unable to provide relief payments to all of their unemployed citizens. For example, New York City could barely support a quarter of its unemployed population. Even for the one in four unemployed New Yorkers who were lucky enough to receive relief payments, the amounts were paltry: only $2.97 a week for all living expenses (Katz, 1986, p. 213). These factors greatly hindered public relief in the first few years of the Great Depression. With weakened state and local government relief programs, community chests and other private relief organizations faced even more demand for their resources.

Community Chests: Their Successes and Failures in Responding to the Depression

For the first 2 years of the Depression, community chests performed quite well. Chests in the nation's largest cities quickly launched funding drives to address their individual community needs. As a result, community chests across the United States recorded major increases in giving during the first 2 years of the Depression. Twenty-nine of the largest community chests in the country recorded a combined fundraising total of $38.4 million in 1929. In 1930, the first full year of the Depression, these organizations raised more than $42 million. Giving to these 29 chests reached its peak in 1931 with $51.7 million in donations, a record that would stand until the second year of U.S. involvement in World War II (Jones, 1946, p. 71). Considering a larger data set of 171 community chests, 1932 was the true peak year in community chest fundraising, as this larger group raised and distributed more than $78.5 million in funding that year (Brown, 1971, p. 412).

Hoover sought to harness this private assistance through the creation of his President's Organization for Unemployment Relief (POUR) in August 1931 (Singleton, 2000, p. 68). This organization coordinated private funding drives with local government welfare programs. This private money was combined with state and local government funds to provide a coordinated approach to caring for the poor (Singleton, 2000, p. 70). Some of the POUR drives were very successful, most notably in New York and Philadelphia (Singleton, 2000, p. 71). However, the number of needy quickly outpaced the private resources raised for the program. For example, through POUR, the city of Chicago raised more than $10 million in the fall of 1931. By the winter, the city was spending $3 million a month on assistance programs (Singleton, 2000, p. 75). As a result, the city had to approach the state government for a $20 million appropriation to shore up relief efforts (Singleton, 2000, p. 75). Other cities, like Detroit, cut their relief provisions to stretch out funding (Singleton, 2000, p. 77).

Community chests continued to push forward despite closures and rising demand. The 1932 fall campaign represented the final push from community chests to remain major players in the nation's poor relief. Across the country, they cut funding to nonrelief agencies and shifted all of their resources to organizations that provided assistance to the poor. Hoover supported the action and exhorted Americans to give. Yet, while the chests raised more money in 1932 than in any year previously, it was not enough. Altogether, the private funding could support only a fifth of all poor-relief services for that year. Federal loans financed the rest of the relief work (Brown, 1971, pp. 131–132).

Foundations

The initial response to the Great Depression from large foundations was mixed. Some foundations increased their funding levels in the first 2 years of the Depression. The Julius Rosenwald Fund, for example, increased its giving from $586,000 in 1929 to $1.87 million in 1930 and increased it again to $2.47 million in 1931 (Jones, 1946, p. 74). The General Education Board doubled its annual giving from 1929 to 1930, from $14.8 million to $30 million (Jones, 1946, p. 74). Other foundations, like the Carnegie Corporation and Rockefeller Foundation, decreased their grant appropriations in 1930 but raised them in 1931 (Jones, 1946, p. 74). The Carnegie Corporation's grantmaking total dropped from $5.4 million in 1929 to $4.4 million in 1930 before rising to $5 million in 1931 (Jones, 1946, p. 74). The Rockefeller Foundation followed a similar path, dropping its annual giving from $21.4 million (1929) to $18.1 million (1930) and then increasing it to $20 million (1931) (Jones, 1946, p. 74).

Large community foundations, meanwhile, significantly increased their grant totals in the first few years of the Depression. Three of the largest community foundations in the country, the Cleveland Foundation, Chicago Community Trust, and the New York Community Trust, all increased their giving and maintained high levels of grantmaking, although the totals were dwarfed by the large private foundations, throughout the Depression. For example, the Chicago Community Trust increased its giving from $93,000 in 1929 to $118,000 in 1930 and $135,000 in 1931. The Cleveland Foundation raised its giving from $61,000 in 1929 to $247,000 in 1931. These three community foundations maintained their high giving levels throughout the Great Depression (Jones, 1946, p. 74). Foundation giving, including both private and community foundations, recorded a 25-five year (1920–1945) giving high in 1930 (Jones, 1946, p. 74). Generally, despite initial increases in giving, private foundations were unable to sustain increased giving levels through the entire Depression. In most cases, by 1931 and 1932, nearly all of the foundations had returned to their pre-Depression giving levels.

Private Agencies

Private relief organizations like the Red Cross, local churches, and social work agencies formed the frontline for private assistance in the United States. These organizations were supported by local community chests, individual donations, and political leaders. In 1932, the former Democratic presidential candidate Al Smith, who had run against Herbert Hoover in 1928, actively campaigned to raise funds on behalf of the Red Cross. By 1932, the Red Cross had activated 2,300 of its chapters to provide assistance to the poor and unemployed in cities and towns across the United States ("Smith Calls Nation," 1932). In some cases, the Red Cross was the only organization working in communities to assist the impoverished. When Smith made his appeal on behalf of the Red Cross, he noted that the organization had provided "flour and bread to 18,000,000 persons and clothing to 7,000,000" in 1932 alone ("Smith Calls Nation," 1932). Although he did not specify a fundraising goal, Smith urged Americans to give to the Red Cross as they had done in World War I and help "alleviate the suffering" of their neighbors ("Smith Calls Nation," 1932).

Community chests were arguably the most visible and influential philanthropic actors in the urban communities of the United States. Nearly every major American city had one. In 1934, there were a total of 385 community chests operating in cities across the United States (Trolander, 1975, p. 59). Community chests in most of these cities held the purse strings for much of the charitable activity carried out by social work agencies like settlement houses. The latter would turn over their entire fundraising operations to a local community chest, which would then raise and administer funds gathered from its annual citywide funding drives (Trolander, 1975, p. 50). The decision-making power on how the money was spent rested in the hands of each community chest's board, which had the power to choose which individual programs it would fund (Trolander, 1975, p. 56). If it wanted to, a community chest board could force an agency to restructure its budget, endorse specific programs, or cut programs as a stipulation in the reception of chest funding.

Not all social service agencies were under the control of community chests. Settlement houses in New York and Chicago operated independently and created funding cooperatives that pool their fundraising resources. Jane Addams's Hull House remained unaffiliated with either a community chest or a settlement house fundraising pool while she ran the institution. Other social work agencies raised their own funds. For instance, one New York social work agency, the Association for Improving the Condition of the Poor, raised $1.3 million on its own in 1929 ("Expended $1,397,047," 1932). Churches and religious agencies were also independently financed through either donations from their congregants or through general, "public appeals." These organizations served as the primary social work agencies before the government became involved. The Catholic Charities of the Brooklyn Diocese, for example, donated clothing and food to impoverished families. In the first 6 months of 1932, it ran work-relief projects, which employed 205 people, and provided job search assistance to 10,454 men, of whom 931 found jobs ("Catholic Charity," 1932). However, by July 1 of that year, the organization had to stop accepting applicants because it had run out of funding ("Catholic Charity," 1932).

A Call for Increased Government Involvement

Resource shortages led philanthropic leaders to approach both federal and state governments, urging them to increase public support for poor relief. By 1932, the Family Welfare Association of America (FWAA) and the Association of Community Chests and Councils (ACCC) reported that their affiliate organizations had been forced to cut grants to families by 40% due to budgetary restrictions. Meanwhile, funding requests to these organizations had increased by a similar percentage (Brown, 1971, p. 122). Private agencies across the country reported having to make deep cuts in their nonrelief programs to keep even a small portion of direct aid flowing to their recipient families. State and local governments had to take similar actions by cutting such budget items as health and cultural spending to keep their relief payments flowing. This lack of capacity to respond to the Depression led leaders of private agencies to call on the different levels of government for assistance. For instance, Newton D. Baker, the chairman of the citizen's relief committee of the ACCC, remarked in general appeal to state legislatures in 1932,

> It is evident that unless this winter's imperative increase in unemployment relief can be lifted from local resources by state activity and hence by larger R.F.C. [Reconstruction Finance Corporation] loans our whole distinctive American organization for human betterment will be crippled if not demolished. (Brown, 1971, p. 132)

Hoover's Reversal of Course

As a result of the numerous community chest and relief organization failures, Hoover signed into law an act that created the Reconstruction Finance Corporation (RFC) in July 1932. Instead of grants to state governments and agencies, the RFC provided federal loans to states to assist them in creating public works programs and making relief payments. In a sign of the extreme need for the federal loan money, most of the original $300 million loan fund was disbursed by April 1933 (Brown, 1971, p. 142).

While it represented the first step in providing some form of federal aid, the RFC was regarded as inadequate in addressing the real needs of private agencies and state governments in meeting poor relief. Harry L. Hopkins, a previous executive of the Red Cross and the New York Tuberculosis Association, noted that, for a federal program to address basic unemployment assistance for even 10% of the nation's unemployed, it would require at least a billion dollars in funding. Furthermore, private and governmental agencies preferred direct grant aid to federal loans as the latter placed a repayment burden on the state agencies that received the funding. This desire for grant aid was consistently reiterated at gatherings of private and governmental relief actors, like the November 1932 conference on Maintenance of Welfare Standards (Brown, 1971, pp. 135–136).

This is not to say that the RFC was a complete failure. Indeed, a study by the Russell Sage Foundation found that the program had actually fostered the development of state-level welfare organizations in nearly all of the participating states (Katz, 1986, p. 216). However, as noted earlier, the program did not provide the financial resources required to take the financial burden of poor relief off of state and private relief agencies. Ultimately, it would take the election of Franklin Delano Roosevelt and his administration to finally bring the federal government completely into the once privately dominated world of poor relief.

FDR, the New Deal, and Increased Government Funding

Franklin Roosevelt's relief efforts while he was president mirrored many of the policies he had enacted while governor of New York. As governor, Roosevelt had increased

New York's welfare spending when the state began losing jobs. By 1931, close to a million of its citizens were unemployed (Crouse, 1986, p. 53). In the face of the growing numbers of unemployed and failing private agencies, Roosevelt successfully created, through legislation, the Temporary Emergency Relief Administration (TERA), which provided up to $20 million in relief funding directly from the state government to local agencies working in poor relief (Crouse, 1985, pp. 54–55). Harry L. Hopkins was appointed executive director of TERA in New York, and the program set the tone for what Roosevelt would do as president (Brown, 1971, pp. 91–94).

When he accepted the Democratic nomination for president, Roosevelt promised a "new deal for the American people" (Leuchtenburg, 1963, p. 8). The term *New Deal* came to represent the entire package of relief programs that Roosevelt proposed, a course that was very different from his predecessor's. Under New Deal policies, the federal government would take a far more active role in poor relief in the United States.

After beating Hoover in 1932 and taking office the following year, Roosevelt and his administration quickly increased federal funding to assist the poor. Federal relief obligations increased to $480 million in 1933, then to $1 billion and $1.3 billion in 1934 and 1935, respectively (Khan, 1937, p. 40). In all 3 years, federal spending constituted at least 60% of all incurred relief obligations and accounted for more than 70% of all relief obligations in 1934 and 1935 (Khan, 1937, p. 40). In 1935 alone, Roosevelt allocated more than $4.6 billion in federal relief aid for numerous public works, work-relief, and direct aid projects (Khan, 1937, p. 88).

Roosevelt also launched a series of work-relief programs, headed by Hopkins, which provided payments to the unemployed if they worked on government construction projects. Hopkins and Roosevelt both preferred work-relief programs over direct aid to individuals because work relief was thought to provide its recipients with a respectable means of support. Work relief provided jobs that its recipients could proudly hold instead of feeling as if they were "public wards" who were completely reliant on the "dole" (Bremner, 1985, p. 72). Roosevelt created the Civilian Conservation Corps (CCC), the first work-relief program, within months of taking office. The CCC provided work opportunities in natural conservation projects for unemployed men across the country. As a condition of employment, the CCC required that participants send a majority of their earnings back home to support their families. By the program's end in 1942, the CCC had employed more than 2.5 million young men, who had passed along $670 million in monetary aid to their families at home (Bremner, 1985, pp. 70–71). The Hopkins-led Federal Emergency Relief Administration (FERA) created the Civil Works Administration (CWA) in November 1933. By January 1934, the program employed over 4 million Americans and paid out about $800 million in wages (Bremner, 1985, pp. 72–73). In 1935, FERA and the CWA were replaced by the Works Progress Administration (WPA), also headed by Hopkins, which administered more than $11.4 billion in public works appropriations and employed more than 8.5 million people during its 8-year life span (Bremner, 1985, p. 73).

Direct cash aid represented another approach to combating the Depression. While not as heavily favored by Roosevelt or Hopkins, direct aid provided a living stipend for impoverished families who did not have a breadwinner who qualified to work in the work-relief programs. Between 1933 and 1935, the value of the average relief grant to families rose from $15.15 per month in 1933 to $24.53 in 1934. By 1935, the national average increased again to $29.33 per month per family (Brown, 1971, p. 249). Besides these cash grants, the federal government also installed a number of financial safety nets for the elderly and unemployed during the New Deal. The Social Security Act of 1935 provided for the nation's first old-age insurance program and required states to maintain unemployment insurance programs (Katz, 1986, p. 199).

The New Deal programs were by no means perfect. Common complaints against the work relief programs centered on the facts that these programs did not pay adequate wages and were not widely available to all unemployed individuals who needed work (Katz, 1986, p. 229). Even with increased federal support, direct cash grants were still barely enough for families to live on each month. However, despite these shortcomings, the programs played an important role in shifting the responsibility for poor relief from local organizations to the federal government.

The New Deal's Effect on Private Organizations

New Deal programs focused on providing aid and assistance through government agencies. FERA funds, for instance, were limited to public organizations (Bremner, 1985, p. 72). Some private relief agencies were absorbed into the federal programs while some private social workers became government social workers. More generally, exemplified in the cases of community chests and family welfare agencies, private organizations had to reinvent themselves to justify their existence in the face of a broader federal relief program (Brown, 1971, pp. 409–419). Other organizations ceased to exist altogether as their funding quickly dried up. Private giving generally decreased in the first few years of the Depression. For some organizations, like community chests, these giving levels returned as the Depression ended and World War II began. Other organizations, like churches, never recovered their pre-Depression charitable giving levels.

The increased federal government involvement in poor relief greatly affected community chests as federal programs replaced projects previously funded by these organizations

(Brown, 1971, p. 410). Community chests found themselves in a situation where they had to justify their continued existence. As noted earlier, the peak year for community chest donations was 1932. This giving level would not be matched again until 1942. During this 10-year period, the average giving for community chests dropped below its pre-Depression levels. Considering the 29 community chests mentioned earlier, giving dropped from the $51.7 million high in 1931 to an average giving level that hovered around $33 million during the rest of the 1930s (Jones, 1946, p. 71). It was not until the war fund drives of World War II that the community chests had a clear purpose for their fundraising drives.

Private family welfare agencies surrendered their social work duties to the federal government. As Josephine Brown (1971), noted in her book, *Public Relief 1929–1939*, "Having been forced to recognize, in 1932 and 1933, that private agencies could not carry the load of unemployment relief, they [private family welfare agencies] relinquished the responsibility to public agencies and entered upon a period of readjustment" (p. 414). In 1929, private funding constituted around 24% of all public welfare spending in 116 American cities. By 1939, after the passage of the New Deal programs, that portion dropped to 1% (Brown, 1971, p. 415).

Many private social work agencies simply became government agencies. In the beginning phases of the New Deal, private agencies were eligible for and often received federal funding. Indeed, 25 private agencies associated with the predominantly private Family Welfare Association of America received all, or most, of their funding from the federal government in the first year of the New Deal (Brown, 1971, p. 187). When the law changed in 1933, requiring that only public organizations could receive public funding, these organizations were faced with a decision: either give up government funding or become public agencies. Private organizations could qualify for public funds by creating a public relief division that was separate from their private operations (Brown, 1971, pp. 188–189). Other private agencies converted to public ones when their executive directors took government appointments (Brown, 1971, pp. 187–189).

As government relief aid increased, church relief aid from Christian denominations decreased significantly. A recent economic study has suggested that this decrease in Christian charitable aid resulted directly from the increase in government welfare spending (Gruber & Hungerman, 2007). Church expenditures, disregarding upkeep and maintenance costs, outstripped state and local government charitable giving by $90 million in 1926 (Gruber & Hungerman, 2007). When federal government spending increased, church charitable giving declined. The per capita charitable giving average for six sampled Christian denominations fell by a third between 1926 and 1936. Consequently, some have argued that increased federal government spending caused a "crowd out" effect on religious charitable giving, creating the 30% decline in Christian charitable giving during the 1930s (Gruber & Hungerman, 2007).

Private agencies presented a measured response to this government encroachment. The Russell Sage Foundation's Russell Kurtz praised the federal work relief efforts. However, he and his colleagues feared that the New Deal also ran the risk of undercutting traditional direct aid programs. Without such aid programs, which private agencies had provided, Kurtz argued that individuals who did not qualify for the work relief programs would fall through the cracks (Crouse, 1986, p. 205). Either the government or private agencies needed to maintain these direct aid programs to fully cover all of the poor's needs (Crouse, 1986, p. 205).

Charles Taft, the chairman of the 1938 mobilization of the ACCC, raised similar concerns about federal aid not being comprehensive enough. The ACCC that year advocated for more efficient government spending that more evenly addressed all of the victims of the Depression. These suggestions were prompted by the previously mentioned problems surrounding the WPA and its uneven provision of work opportunities. As Taft noted, the 1938 WPA programs left 800,000 able-bodied men without work because the appropriations were not high enough to provide jobs for everyone ("Needs Parley," 1938).

Nonprofit leaders also argued the merits of private poor relief and its necessary place in the community. However, in view of real world conditions, these arguments were tempered with an acknowledgment that private organizations could not shoulder additional service responsibilities on their own. For instance, Joseph M. Proskauer, the president of the Federation for the Support of Jewish Philanthropic Societies, told *The New York Times* in 1935,

> Poverty leaves a deeper mark than mere starvation and cold; it warps family life; it perverts and twists human nature; it sickens the soul as well as the body. And to render true human welfare we need the individual touch that private philanthropy offers, even in relief work itself. ("Social Work Vital," 1935)

Proskauer and his colleagues from the Better Times symposium agreed that the private relief agencies had a vital role to play in caring for the poor alongside government involvement. However, they also acknowledged that it was impossible for private agencies to take on all of the care responsibilities from the government ("Social Work Vital," 1935).

To take these complaints as an argument that the government was attempting to stamp out private assistance to the poor would be a mistake. On the contrary, Roosevelt regularly spoke before associations of charitable groups like the ACCC and publicly encouraged citizens to support their local private agencies. In an October 14, 1938, radio address to community chest leaders, Roosevelt called for a partnership between private agencies and the government: "Private community effort is not contradictory in principle to government effort, whether local, state, or national," Roosevelt said. "All of these are needed to make a partnership upon which our nation is founded" ("President Hails," 1938). He went on to say,

> Community leaders have met the challenge of changing con ditions. They are not looking backward with resentment against the government. They have welcomed the acts of their government as a liberation of their efforts, as an opportunity to move forward on the front of social progress. . . . I call upon the American people to fall in behind such leadership and to widen the social horizon. ("President Hails," 1938)

This partnership between private relief agencies and the government was strengthened during World War II and characterizes the relationship between these two types of organizations to the present day.

World War II

World War II effectively ended both the Depression and the stagnant giving environment of the 1930s. It provided a new sense of purpose for community chests and private relief agencies, whose roles had been taken over by government programs during the Depression. It also fostered greater cooperation between private relief agencies and the federal government.

By 1942, the first full year of U.S. involvement in World War II, unemployment had dropped below 5% (Bureau of Labor Statistics, 2008). The next year, unemployment fell to below 2%. Meanwhile, national manufacturing exceeded its pre-Depression levels. This new prosperity, coupled with the war, provided both the resources and a purpose for renewed charitable giving. Between 1940 and 1943, private charitable contributions rose from $734 million a year to $1.8 billion a year (Jones, 1946, p. 3). Total charitable giving, which takes into account foundation giving, bequests, individual giving, and so on, doubled from $1 billion to $2.1 billion in this same time frame (Jones, 1946, p. 3). Community chest giving exceeded its 1931 and 1932 records between 1942 and 1944 as community chests collected private war-fund donations. The 29 largest community chests in the United States collected $66.9 million in 1942, rising to $82.5 million in 1944 (Jones, 1946, p. 71). Well over a quarter of these donations were marked for the war fund (Jones, 1946, p. 71).

Roosevelt exhorted Americans to give to community chests during the war. An October 6, 1943, *New York Times* article reported on one of Roosevelt's radio speeches encouraging giving:

> Asking all to give generously, the President said the fund [the war fund] would stand before the world as the symbol of "the brightest ray of hope and the greatest power for good in the world today the sovereign voice of the people of the United States." ("President Is Heard," 1943)

Donations to the war fund went to the USO and other "war-related welfare and relief organizations" ("President Is Heard," 1943). Later, when the war drew to a close, the U.S. government would make use of private aid groups again to assist in postwar relief efforts around the globe.

Summary

The years spanning the Great Depression and World War II were some of the most turbulent in the history of the United States. Heading into these years, the relationship between private charitable agencies and the federal government was characterized by a strict division. Charitable care was left to local governmental and private community actors with minimal involvement by the federal government. As the Great Depression ravaged the nation's economy, this wall dissolved out of necessity. What emerged from this time period was a stronger, more active federal government, which was the primary social welfare provider. A partnership between private agencies and the federal government, which emerged out of this turbulence, was fostered during World War II and became more pronounced decades later. Indeed, the present distribution of social services in the United States is built on this partnership.

The leadership of two men, Herbert Hoover and Franklin Delano Roosevelt, guided this transition. Hoover opposed government intervention for fear that it would destroy individuality. His leadership and beliefs left the burden of poor relief on the shoulders of private organizations. When these resources were no match for the Depression, Hoover responded to criticism and took the first step toward greater federal involvement with the RFC. Roosevelt's leadership fully realized this development of the federal government's role as the primary social welfare provider.

Nonprofit leaders guided their organizations through this time period with an eye on both maintaining private involvement in the nation's public welfare work and delivering care to their communities. Community chests did everything that they could to provide care for the poor in the early years of the Depression. Social work agencies and church organizations served as soup kitchens, clothing providers, and job bureaus. Besides providing these direct services to their communities, nonprofit leaders also had to be advocates for additional government support. Out of care for their communities, nonprofit leaders like Newton D. Baker and associations like the ACCC and the FWAA advocated for more federal involvement in poor relief. These calls for help carried weight within the government because these individuals were on the front lines, combating poverty in communities across the United States. In many cases, as in the example of Hopkins, former nonprofit leaders became leaders in the government relief programs. Ultimately, the real world experience that these individuals brought to the table made them invaluable assets in making the nonprofit government approach to caring for the poor a success.

When the federal government became involved in poor relief, leaders, like Joseph M. Proskauer, argued that private charity should not be abandoned because it could aid people in ways that the federal government could not. Charles Taft and others advocated for more efficient government spending, while political leaders like Al Smith, Herbert Hoover, and Franklin Delano Roosevelt encouraged citizens to give. This strong leadership from both philanthropic and governmental actors was crucial to the creation of a public-private partnership that has characterized government-nonprofit relations since the 1930s. It also guided the United States successfully through one of its most tumultuous economic disasters.

History of Nonprofit Leadership in the United States

From World War II to the 1969 Tax Act

E. Miles Wilson
Johnson Center for Philanthropy, Grand Valley State University

This chapter explores highlights of an unprecedented time of growth and development of the citizen sector in the United States. From World War II to the passage of the 1969 Tax Act, nonprofits, foundations, social movements, and volunteerism deepened their roots in American life and achieved great prosperity.

Scholar and author Lester M. Salamon (1999), musing on the nonprofit and philanthropic sector, states the following:

> Few aspects of American society are as poorly understood or as obscured by mythology as the thousands of day care centers, clinics, hospitals, higher education institutions, civic action groups, museums, symphonies, and related organizations that comprise America's private, nonprofit sector. (Salamon, 1999, p. 7)

As we begin the second decade of the 21st century, we face new challenges affecting both the growth and form of our current organizations. To respond, nonprofit and philanthropic leaders must have a clear understanding of the history and circumstances that launched our modern organizations. Without such an understanding, many will find it difficult at best to properly analyze and to respond to the constantly unfolding events affecting their work.

This chapter offers some initial background on the events following the start of World War II that continue to resonate in today's nonprofit and philanthropic sector.

World War II and the Early Postwar Years

The United States formally entered World War II with the bombing of Pearl Harbor by the Japanese empire in 1941. Prior to our entry into the war, hundreds of American volunteers were already fighting the Japanese in China under the command of Claire Chennault's American Volunteer Group, better known as the Flying Tigers (Chennault, 1949/1991). In Europe, more than 100 American airmen are believed to have volunteered to fly with British airmen protecting their nation from German bombs in the Battle of Britain (Johnson, 1998).

Because it was illegal for U.S. citizens to engage in the war, these airmen risked their U.S. citizenship as well as their lives in these highly dangerous battles before America's entry into the war. Their voluntary sacrifice protected the critical supplies to Chinese soldiers and citizens and helped England to push back the threat of German invasion by protecting its borders and skies until the United States joined the war effort.

During the war years, American citizens provided thousands of acts of selfless volunteerism. They served at home to support the war and abroad in the voluntary military. One critical contribution made on the home front by millions of Americans was their investment in war bonds to help fund our fighting effort. These were voluntary loans to the government through the purchase of special war bonds. The Smithsonian in its educational collection discusses the role of these voluntary purchases by citizens:

> One of the great incarnations of the volunteer spirit in American history was the public response to a government savings bond program. Called Defense Bonds before the Japanese attack on Pearl Harbor and War Bonds afterwards, these U.S. Treasury securities served two purposes, financing the war and taking money out of circulation to hold down inflation. The bonds were sold in denominations beginning at $25. Less expensive stamps could be saved in a book and redeemed for a bond. Purchase of bonds amounted to a gen erous loan from the American people to the American gov ernment: they yielded a modest return, 2.9 percent after a maturity of ten years.
>
> By the end of the war, more than 85 million Americans, out of a population of 139 million, had bought bonds. Millions had participated in bond selling drives organized by such groups as Scout troops, men's lodges, women's clubs, and union locals. The total cost of the war to the federal government has been estimated at $340 billion in 1940s dollars. Nearly half of that came from bond sales. (Smithsonian, 2007)

In the midst of war, other activities were under way in the nonprofit and philanthropic sectors. While initially some Rotary Clubs were forced to close because their members were fighting overseas, their challenge would inspire efforts of goodwill still felt worldwide. In 1942, Rotary sponsored a conference that anticipated the end of the war and sought to establish international exchanges, which became the inspiration for the founding of UNESCO (Rotary International, 2010).

> The basic mission of UNESCO is to contribute to sustainable human development in a culture of peace, underpinned by tol erance, democracy and human rights, through programmes and projects in UNESCO's fields of competence education, the natural and social sciences, culture, and communication and information. (UNESCO, 2010)

Even during the war, new nonprofits began to emerge. In 1944, the United Negro College Fund (UNCF) was established. The presidents of Tuskegee Institute (now Tuskegee University), and Bethune-Cookman College (now Bethune-Cookman University), along with 27 other colleges, established the fund to support historically black colleges and universities (UNCF, 1999). To this very day, the fundraising partnership of UNCF continues to help African American youth achieve their dream of a college education.

On May 7, 1945, the war in Europe ended, and May 8, 1945, was declared VE-Day (Victory in Europe). On August 14, the war with Japan ended, and August 15 was declared VJ-Day (Victory over Japan). The war in Europe and Asia left millions of residents homeless and destitute. Their homes and communities were bombed to the ground, and populations were displaced.

America began to clearly demonstrate its compassion for the victims. Postwar assistance began almost immediately with the inauguration of CARE, the world's largest private international relief organization. A collaboration of 22 American humanitarian nonprofits, CARE was founded in 1945 to send food to the survivors of World War II. The acronym stood for Cooperative for American Remittances to Europe. (Given its international private humanitarian mission, the name was later changed to Cooperative for Assistance and Relief Everywhere, Inc.)

CARE (n.d.) highlights its history:

> On May 11, 1946, the first 20,000 packages reached the bat tered port of Le Havre, France. Some 100 million more CARE Packages reached people in need during the next two decades, first in Europe and later in Asia and other parts of the developing world.

Much later, President John F. Kennedy wrote to the world of this ongoing nonprofit assistance, saying: "Every CARE Package is a personal contribution to the world peace our nation seeks. It expresses America's concern and friendship in a language all peoples understand" (CARE, n.d.).

At the end of the war, the United Nations began looking for a permanent home. John D. Rockefeller Jr., a well-known philanthropist with holdings in New York, donated six city blocks for the U.N. headquarters. The United States declared this to be an international site. In 1945, this generous gift was estimated to be worth $8.5 million (PBS, 1999–2000). By all best estimates, American philanthropic contributions to war reconstruction and relief totaled "$470 million in 1945 and $650 million in 1946, then remained in the $450 million to $550 million range through the 1950's" (Hammack, 2003).

As the United States built on its postwar strength, tax policies implemented in the early 1900s were starting to have an impact on the giving behavior of individuals in the postwar period. In 1913, the personal income tax was initiated, and in 1917, Congress passed legislation that encouraged private giving by approving an income tax deduction for gifts to charitable organizations. The results for charities from these two tax policies began to be felt in the postwar period as Americans started to make more money and to pay more income tax.

Along with the purely benevolent giving by Americans, those other than the very wealthy began to look for ways to shelter some of their income from taxes and began to increase their donations to charity. The IRS reports that "by 1945, the last year of World War II, charitable contributions reported in income-tax returns were five times as large as they were in 1939" (Billitteri, 2000). By 1946, corporate America began to give in substantial ways when Congress approved a 5% tax deduction for charitable gifts from corporations.

Also during the decades following the war, thousands of private foundations were established. These foundations were set up, on the face of it, as a way to provide private funding to serve public needs and demonstrate the generosity of many wealthy Americans, but they were also established to shelter income from taxes. Whatever their intent, the outcome was the strengthening of organizations focused on good works.

By 1949, the growth of foundations was such that they began to organize themselves. Originally started by community foundations, the National Committee on Foundations and Trusts for Community Welfare was established and became the first association for American foundations. Later, this organization changed its name to the Council on Foundations (COF) (2008). The member foundations remained independent but voluntarily joined the COF to help advance their common interests. Outlining the impact of post–World War II legislative actions, scholar Peter Hall (2003) said, "Curiously, neither average citizen nor policymakers fully understood how profoundly changes in tax policy would affect the architecture and dynamics of economic, political, and social institutions in the postwar years" (p. 365).

The Korean Conflict and the 1950s

Following World War II, Korea had been divided into north and south at the 38th parallel. The North Korean zone came under the influence of the Soviet Union, the South Korean zone the United States. On June 25, 1950, the Korean conflict began when the army of North Korea invaded South Korea. Fighting continued until July of 1953, when an armistice paused the fighting, although technically the war continues to this day (Harry S. Truman Library & Museum, 2006).

While the Korean War was beginning, Internal Revenue Service (IRS) Form 990 entered the world of philanthropy. Form 990 must be filled out by most nonprofit organizations to provide public disclosure and a degree of transparency regarding the structure and the use of charitable dollars. About the same time, legislation was passed requiring charities to pay an unrelated business income tax (UBIT) for dollars raised through activities that are not specifically related to the mission of the nonprofit organization (Billitteri, 2000). For example, if an art museum holds an art appreciation course and charges a fee, its income is considered to be mission related. However, if the same art museum decided to run a laundry, it would be required by pay a UBIT because the source of money is from business activities and not mission related.

Of the many successes of private philanthropy, the development of the Salk vaccine to prevent polio is perhaps one of the greatest. In 1954, nationwide testing of the polio vaccine was launched, involving 2 million schoolchildren. Known as "America's polio pioneers," these children completed the field trials that became "the largest peace-time mobilization of volunteers in U.S. history" (March of Dimes, 2010).

The field trials proved successful, with data showing that the Salk vaccine was 80% to 90% effective. Immediately following the successful trials, 450 million doses of the vaccine were administered across the nation. As a result of the important work done by foundations during these years, this disease, which had killed thousands of children and paralyzed many more, including President Franklin D. Roosevelt, is now close to eradication worldwide (March of Dimes, 2010).

In 1938, President Roosevelt had founded the National Foundation for Infantile Paralysis because of increasing polio epidemics. By the mid-1950s, their privately funded research efforts had begun to make a difference in preventing polio. Comedian Eddie Cantor coined the phrase, "March of Dimes" by asking his fans to send dimes to the White House. These dimes funded the research by Dr. Jonas Salk for the purpose of developing a vaccine (March of Dimes, 2010).

> The March of Dimes represents the first large scale, nation wide biomedical initiative, led by a charitable organization. It also helped make the volunteer movement an integral part of the fabric of American life. (March of Dimes, 2010)

Growth also continued in the development of organizations to support the work of the nonprofit sector. In 1956, during the era of Senator Joseph McCarthy (R-Wisconsin), concerns were raised about grantmaking foundations in the United States. Amid Senator McCarthy's unrelenting search from communist infiltrators, questions were raised about foundations. Foundations and individuals seeking to defend the work of the charitable and especially the foundation sector found that there was no central repository of information about foundations and their work.

In response to this lack of knowledge, five major foundations launched The Foundation Library Center (now called the Foundation Center) to encourage foundation transparency. The founding foundations were the Carnegie Corporation of New York, the Ford Foundation, the Rockefeller Foundation, the W. K. Kellogg Foundation, and the Russell Sage Foundation. The Foundation Center continues to serve the field today with data and research and with regional offices across the United States. Equally important, the National Council on Community Foundations was officially incorporated in New York in 1957. The first members were community foundations, which had met starting in 1949 as the National Committee on Foundations and Trusts for Community Welfare. In 1958, the council welcomed corporate and private foundations to become affiliated (COF, 2008).

Major Social Movements of the 1960s

One of the major roles of the nonprofit and philanthropic sector is to provide the political space where individual citizens can organize themselves and advocate for new ideas. This freedom allows the United States to have a continuous stream of new energy and new ideas helping to shape solutions to challenges old and new. Nonprofits create a space where anyone with a good idea can connect with people of similar interests and form a nonprofit as a vehicle for their solution. These organizations can then receive private donations, work for change, advocate new public policies, and educate the public toward new ways of thinking and behaving.

The nonprofit sector plays a vital role as the open forum where a clash of ideas moves the nation toward common agreement. Nonprofit organizations have and continue to play an important role in challenging our thinking on issues such as abortion, global warming, environmental protection, and drunk-driving campaigns, to name a few.

The Anti-War Movement

During the late 1960s, as the United States slid into the war in Vietnam, three major social movements began to shape the future of American society: the anti-war movement, the civil rights movement, and the women's movement.

In the years of war escalation in Vietnam, a strong citizen-led anti-war effort emerged. The anti-war activists learned from the strategies and tactics of the civil rights movement. A defining characteristic of the anti-war effort was the leadership from college-age students. In 1962, the Students for Democratic Society (SDS) formed at the University of Michigan and later aligned themselves with the United Auto Workers to support Lyndon Johnson for president in hopes of bringing reform to American society. Interestingly, over time, SDS became one of the leading groups to challenge President Johnson and the war he waged in Vietnam.

In 1965, protesters organized a march on Washington against the war. This was followed up by "teach-ins" at universities and ongoing turmoil across American cities. An active modern underground railroad was operated by volunteers and pacifist churches to move draft evaders from the United States to Canada or Sweden. Clashes occurred across the country between protesters and police. While the 1965 march was not without impact, a second march on Washington in 1969, attracting a crowd of more than 500,000, generated the political will to end to the war. The anti-war movement is a powerful example of free people organizing themselves to protest their government's actions. This form of citizen organizing was supported by organizations in the nonprofit sector.

The Civil Rights Movement

During the period from 1955 to 1968, the United States was engaged in a civil rights movement to improve the lives of African Americans across the nation. A series of court rulings, leadership by nonprofit and religious organizations, and numerous acts of nonviolent protest and civil disobedience became the hallmark of the modern civil rights era.

Many identify the beginning of the civil rights movement with the 1954 Supreme Court ruling in *Brown v. Board of Education of Topeka, Kansas.* The ruling established that segregation policies in American public schools were illegal. This court case was followed in 1955 by the historic civil disobedience of Rosa Parks, who refused to give up her seat on a Montgomery, Alabama, bus so it could be available to white citizens. Her action set off a year-long boycott of the Montgomery bus system and engaged the nation in a clash of ideas about the justice of a segregated society. In expressing the "empathy" of labor unions across the country, United Auto Workers President Walter Reuther sent a contribution of $25,000 to support the cause of justice (Clegg, 2003). In 1956, the U.S. Supreme Court declared that segregation on public buses is illegal.

Then, in 1957, the Reverend Martin Luther King Jr. joined others to establish the Southern Christian Leadership Conference (SCLC) to work for African American civil rights. SCLC joined other similar voluntary organizations in leading a citizen effort for social change. Examples include the National Association for the Advancement of Colored People (NAACP), and its efforts to enforce the new school desegregation law by helping nine African American children integrate the first school in Alabama. Groups like the Congress for Racial Equality (CORE) in 1961 led the effort to desegregate public travel across state lines by organizing a Freedom Ride.

In 1962, the Taconic Foundation, Field Foundation, and the Edgar Stern Family Fund together contributed more than $780,000 to support the Voter Education Project to address African American voter disenfranchisement in the South. And, in 1967, SCLC received $230,000 from the Ford Foundation to train and produce new leadership in the African American community in advance of the planned Poor People's Campaign of 1968 (Clegg, 2003).

This political activism resulted in

- the Civil Rights Act of 1964, which bans discrimination in employment;
- the Voting Rights Act of 1965, which protects the African American right to vote;
- the Immigration and Nationality Services Act of 1965, which opens immigration to more non European immigrants; and
- the Civil Rights Act of 1968, which bans discrimination in housing and renting.

The Women's Movement

The women's movement of the 1960s built on the success and dreams of the early suffrage movement, which successfully advocated for women's voting rights. Like African Americans who worked to complete the work of the Emancipation Proclamation through the civil rights movement, women in the United States organized themselves to complete the work of women's suffrage.

In 1963, the Commission on the Status of Women, chaired by Eleanor Roosevelt, documented problems with discrimination against women across American society. This federal commission was soon followed by state and local commissions that found similar results. Betty Friedan's 1963 book, *The Feminine Mystique* raised awareness in women of how their lives were being limited to the role of homemaker.

Title VII of the Civil Rights Act of 1964 prohibited employment discrimination based on sex. This was along with discrimination based on religion, national origin, or race. To enforce the new law, an Equal Employment Opportunity Commission was established.

In 1966, the National Organization for Women (NOW) was founded by Betty Friedan and others to advocate for women in the same way that the NAACP advocates for African Americans. Many young college women involved in advocacy against the Vietnam War and for civil rights for African Americans found that male leaders of these groups relegated them to menial clerical and support roles (National Women's History Project, 1997–2002).

These women started organizations that were called "women's liberation" organizations and held consciousness-raising meetings in their homes. Significant and focused philanthropic efforts on behalf of women's rights did not begin until 12 years after the founding of NOW. These included the Ms. Foundation, established by Gloria Steinem and the co-editors of *Ms.* magazine in 1972 (Women's Funding Network, n.d.). The Equal Rights Amendment, first proposed in 1923, was approved by Congress and sent to the states for ratification in 1972. So far, it has been ratified by 35 states, three states short of what is required and to make it part of the Constitution (see www.equalrightsamendment.org).

Fundraising and the Nonprofit Sector

As with any growing and independent organizational infrastructure, the need for resources to fund ideas and activities is a crucial component of any change agenda. As we like to say in my organization, *money is the lever to move social change, and knowledge is the power to make the right choices*. To this end, the nonprofit sector was in need of an ever more professional group of managers to raise dollars for its organizations, yet there was no national organization focused on assisting nonprofit fundraising professionals. In 1960, an initial step was taken in this direction by establishing the National Society of Fund Raisers, later becoming known as the National Society of Fund Raising Executives (NSFRE).

Benjamin Sklar from Brandeis University, Harry Rosen from the Federation of Jewish Philanthropies, and William R. Simms of the National Urban League came together in 1959 to discuss the need for an association for fundraisers. NSFRE was legally launched in New York in June 1960. By spring of 1962, there were 197 members. At the same time, there were significant changes in the manner that money could be raised. President Dwight D. Eisenhower had taken steps to organize fundraising within the federal government through the President's Committee on Fund Raising. By 1961, President Kennedy determined that the system was well organized enough to be moved totally into the Civil Service Commission as the new Combined Federal Campaign (U.S. Office of Personnel Management, n.d.). This provided a workplace giving option through payroll deduction for federal employees.

By the end of 1965, NSFRE had almost 500 members from 26 states, including Hawaii. NSFRE was truly becoming national, and the dream of an international association for fundraisers was slowly coming to fruition. Now called the Association of Fundraising Professionals (AFP; http://www.afpnet.org), there are in 2009 more than 30,000 members and more than 200 chapters around the world.

Volunteerism

In October 1961, speaking at the University of Michigan, President Kennedy encouraged students to give back to the nation as volunteers. This concept grew into an idea called the Peace Corps, and in August of 1961, he signed an executive order that launched the new international service organization. On September 22, Congress approved related legislation to "promote world peace and friendship" through three goals (Peace Corps, 2010):

1. To help the people of interested countries and areas in meeting their needs for trained men and women
2. To help promote a better understanding of Americans on the part of the peoples served
3. To help promote a better understanding of other peoples on the part of Americans

President Kennedy called for a formal and government-supported effort to engage U.S. citizens, particularly young people, in service around the world. He challenged the nation to "ask not what your country can do for you, but what you can do for your country."

A few years later, Volunteers in Service to America (VISTA) was established to engage Americans in domestic service opportunities. Soon, Peace Corps and VISTA volunteers would emerge from their service with new interests in positive youth development, and they helped to launch hundreds of local youth volunteering, service-learning, and philanthropy organizations and programs during the 1970s and 1980s. Many of these programs are designed to empower young people to join in service activities through local nonprofits and to volunteer to help children and youth. Over the years, federal efforts expanded to include the Retired Senior Volunteer Program (RSVP), Points of Light Foundation, Commission on National & Community Service, the Corporation for National & Community Service and the AmeriCorps programs.

The Great Society

Calling it the Great Society, President Johnson instituted a new era of federal money to support the work of the charitable sector. To this day, many nonprofits receive a large portion of their funding from contracts and grants from the federal government for services. This access to federal funding came with regulations, leading to an increasing blurring of lines between the governmental and the nonprofit sectors.

President Johnson introduced the idea of the Great Society at the University of Michigan, the same place where the Peace Corps was launched. In his speech, he stated:

> The Great Society rests on abundance and liberty for all. It demands an end to poverty and racial injustice, to which we are totally committed in our time. But that is just the beginning.
>
> The Great Society is a place where every child can find knowledge to enrich his mind and to enlarge his talents. It is a place where leisure is a welcome chance to build and reflect, not a feared cause of boredom and restlessness. It is a place where the city of man serves not only the needs of the body and the demands of commerce but the desire for beauty and the hunger for community. It is a place where man can renew contact with nature. It is a place which honors creation for its own sake and for what it adds to the understanding of the race. It is a place where men are more concerned with the quality of their goals than the quantity of their goods.
>
> But most of all, the Great Society is not a safe harbor, a resting place, a final objective, a finished work. It is a chal lenge constantly renewed, beckoning us toward a destiny where the meaning of our lives matches the marvelous prod ucts of our labor.
>
> So I want to talk to you today about three places where we begin to build the Great Society in our cities, in our coun tryside, and in our classrooms. (Johnson, 1964)

In 1965, President Johnson also introduced the culmination of President Kennedy's dream of a national service within the United States. President Johnson signed into law the VISTA (Volunteers in Service to America) act. He introduced the first VISTA volunteers by saying:

> Your pay will be low; the conditions of your labor often will be difficult. But you will have the satisfaction of leading a great national effort and you will have the ultimate reward which comes to those who serve their fellow man. (AmeriCorps, 2010)

Subcommittee on Foundations of the Select Committee on Small Business

While the nonprofit sector was growing rapidly, U.S. Representative Wright Patman (D-Texas) began holding hearings on foundations in 1961. He believed there were financial abuses that required federal investigation. The number of foundations was growing rapidly, and they were well known as good tax shelters for the wealthy.

Representative Patman believed that foundations and nonprofits were too powerful; had too much money and political influence; were being used to get around federal taxes; were not adequately regulated by the IRS; and did not compete fairly with corporate America. His concern about the secrecy of foundations became part of the regulations put in place in the 1969 Tax Act.

Because of Representative Patman's concerns, the Senate Finance Committee and the House Ways and Means Committee asked the Treasury Department to investigate. The 1965 Treasury Department's *Report on Private Foundations* conveyed six areas of concern about foundations:

1. *Delayed benefits to charity:* Some foundation kept their funds and did not make grants. The recommendation from the Treasury was to require some type of payment of grants, either giving away all of their income or a percentage of assets, whichever was greater.
2. *Self dealing:* Some foundations were involved in financial transactions that benefited the donor. The Treasury recommended that self dealing should be prohibited and a fine imposed for any wrongdoing.
3. *Foundation ownership of a business:* Some foundations held controlling interests in for profit companies. Treasury determined that this was unfair and recommended that the foundations should only own up to 20% of a company.
4. *Control of corporate property:* In a stock gift to a foundation, a donor could limit his business ownership and avoid some estate taxes. Treasury recommended that the foundation should make grants before the gift could be used to reduce taxes.
5. *Financial investments:* There was concern that some foundations were taking too much risk with their foundation investments. Treasury recommended prohibiting highly risky investments.
6. *Control of foundations by the donor:* Treasury suggested that there should be a limit to the control of the foundation board by the donor and family members.

These recommendations framed the Tax Reform Act of 1969 (U.S. Treasury Department, 1965).

Summary

The period from World War II until the passage of the 1969 Tax Act was a time of growth, prosperity, and turbulence that transformed the nonprofit and philanthropic sector. More than during any earlier period, this part of a citizen society demonstrated its economic power, capacity to help the work of government, and at critical points to push government toward more just policies for all people. As a result, government increased its reliance on the voluntary sector during the war years and came to fund and support the expansion of the sector during the 1960s. Partnerships between the government and philanthropic sector resulted in a blurring of lines between the public governmental and the private nonprofit and philanthropic.

While it's clear that the alliance between government and the nonprofit and philanthropic sector advanced the work and created great wealth for foundations, the other side of the relationship also produced increased levels of government oversight and rule making for a sector that had been almost exclusively private. Many of the laws, issues, and movements starting during this period affect the development and practice of nonprofit and philanthropic leadership to this very day. Understanding the roots of these issues will help future leaders to shape the charitable sector for the next century.

History of Nonprofit Leadership in the United States

From the 1969 Tax Act to the Present

Teresa Martinelli-Lee
University of La Verne

The final decades of the 20th century saw an astronomical explosion of nonprofit organizations including public charities, private foundations, trade unions, trusts, cooperatives, endowments, and a score of volunteer associations. Regardless or perhaps because of the disturbances of war, political conflicts, civic unrest, stock market crashes, and economic instabilities, private giving has seemed immune to such dissonant fluctuations. Indeed, after the civil rights gains of the 1960s, women and members of minorities could more easily build associations (Hammack, 2001). Furthermore, with improved household income, families had the capacity to purchase a number of nonprofit services including education, health care, and other social services. Moreover, increased income also permitted increased charitable giving. Charitable giving transformed from a mere benevolent approach to a revolution of charitable principles.

Nonprofits have begun the new millennium with growth and abundance despite the evolutionary and transformational changes the sector encountered in the late 20th century. The catalyst, which was to revolutionize the nonprofit sector, was the enactment of the Tax Reform Act of 1969. In many ways, the act was the impetus that created a new division of American organizational life identified as the third sector (Arnsberger, Ludlum, Riley, & Stanton, 2008; O'Neill, 1989; Powell & Steinberg, 2006). Government and business are no longer the royals of organizational life. The public and private sector must now contend and compete with the diversified nonprofit body for knowledge and resources. By all measure, this entity is complex, vast, and seemingly indefinable in design or functionality due to its diversification. The Internal Revenue Service (IRS) has attempted general descriptions of the functionality of nonprofits, but as the range of nonprofits expands, the IRS is challenged to categorize the range of nonprofit activities. From the local cemetery association, to the Moose Lodge, to the Chamber of Commerce and the Nature Conservancy, the range of organizations in the section of the IRS tax code identified as 501(c) is enormous.

Both the National Center for Charitable Statistics (NCCS; http://nccs.urban.org) and the IRS use the National Taxonomy of Exempt Entities system established in the 1980s to classify nonprofit institutions, governments, associations, and organizations (see Appendix C). The extensive code exhibits more than 650 types of organizations able to obtain exempt status. Based on this system, the IRS nevertheless in its bureaucratic wisdom created its own comprehensive list of nonprofit activity codes for organizations filing for nonprofit exempt status. The most familiar is the code for the charitable tax-exempt organizations, 925, 501(c)(3).

With pressure from elements of the public and zealous state representatives, Congress saw fit to change the taxable structures of multimillion-dollar foundations because they were perceived as entities corporations could use to hide revenues under the guise of a nonprofit organization.

The Tax Reform Act levied severe restrictions primarily on private foundations. The Tax Reform Act implemented an "excise tax on investment income, minimum payout requirements, and specific limitations on charitable gifts to foundations and penalties for such activities as self-dealing and excess business building" (Arnsberger et al., 2008). However, of the organizations that seek tax-exempt status, most apply under activity code 925, commonly known as section 501(c). These include religious faith-based institutions, health care, education, human services, arts, culture, humanities, and public/society benefit organizations among others. These organizers are driven, among other reasons, by the continued belief that government is ill equipped and inefficient to provide services for the public interest and further is unable to provide sustained aid for the public good (Hammack, 1998, 2002; Light, 2000; O'Neill, 1989). Following the Tax Reform Act of 1969, a flood of new nonprofits were founded, and the number continues to grow. This chapter is devoted to examining the initiative, drive, and courage of individual and group leaders who have forged a new organizational universe known as the third sector.

> *Freedom consists not in doing what we like, but in having the right to do what we ought.*
>
> Pope John Paul II

Evolution of Nonprofits

The United States is a homeland of voluntary associations. Writing in the famed *Democracy in America*, Alexis de Tocqueville identified "Americans of all ages, all stations in life, and all types of dispositions [as] forever forming associations" (Heffner, 1956, p. 198). Tocqueville observed,

> There are not only commercial and industrial associations in which all take part, but others of a thousand different parts religious, moral, serious, futile, very general and very limited, immensely large and very minute. . . . Nothing, in my view, deserves more attention than the intellectual and moral asso ciations in America. (p. 199)

Thus, the early days of nationhood indicated the American propensity toward humanitarian and benevolent activities. However, Tocqueville could not have imagined the impact such associations would have on the operational infrastructure and financial revenues of the federal government. As early as 1789, the Founding Fathers saw fit to impose tariffs on goods and services. Secretary of the Treasury Alexander Hamilton intended for the first Hamilton tariff to be a source of government revenue for operations and to repay foreign and domestic debt. In the next seven decades, Congress was to enact scarcely 11 tariffs.

Then, motivated by the need to fund the Civil War, the history of formal American formal tax acts began in 1861. The first federal income tax was a simple flat percentage tax based on income from a profession, vocation, or property. The Revenue Act of 1861 began a long history of U.S. taxation. With the ratification of the Sixteenth Amendment in 1913, Congress gave itself the power to "lay and collect taxes on incomes from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration" (National Archives and Records Administration, 2010). Congress quickly followed with enactment of the Revenue Act of 1913, which launched the modern income tax system. The act included tax exemptions for charitable income (Arnsberger et al., 2008). To date, no fewer than 57 tax acts and codes have been enacted by Congress and signed by presidents (Arnsberger et al., 2008).

Religious and Faith-Based Nonprofits

Through wars, conflicts, and civil unrest, the United States experienced slow but steady nonprofit growth. However, between 1936 and 1996, the population of nonprofits and religious congregations grew to a staggering 1,188,510 organizations nationwide (Powell & Steinberg, 2006). Prior to the enactment of the Tax Reform Act of 1969, there were a total of 416,000 nonprofit organizations. Just 10 years later, that number nearly doubled to 825,000. Of these, 333,000 were congregations defined as faith-based religious organizations. Thus, nearly half of all nonprofit organizations have been related to religious associations. Indeed, James Douglas (1987), in his essay "Political Theories of Nonprofit Organizations," identifies enduring links between long-standing religious institutions and service to society, particularly the poor and downtrodden. Douglas explains,

> The fields of activity we most readily associate with nonprofit organizations include health care, education, religions, the arts, and a vast array of social welfare services. In medieval times, these activities would have come primarily within the jurisdiction of the church rather than the state. (p. 43)

This relational activity between the economically disadvantaged and congregations continues to present day.

By 1987, religious organizations accounted for 46% of charitable recipients, earning $43.61 billion (O'Neill, 1989, p. 11). However, by 2008, charitable contributions by individuals, foundations, and corporations reached $284.99 billion (National Center for Charitable Statistics, 2009). Of this amount, religious organizations continue to account for the largest share of estimated contributions with 34.7%, equating to nearly $99 billion annually.

Local religious and faith-based organizations respond to the problems of the economically disadvantaged by coordinating and providing basic health care and education programs. Through constant contact with local communities, religious congregations build relationships and familiarity through hands-on contact. Such organizations know the problems, social needs, and aspirations of disadvantaged communities. Knowing the limitations of government support, such charitable agencies often outlast short-term-only public assistance programs. The effort of community charitable nonprofits can sustain and build on developmental programs and bring about community change. While the form of support may be different, the priorities and requirements remain the same.

The leading national religious organizations that provide community support include the Catholic Church, Eastern Orthodox churches, Oriental Orthodox churches, and Protestant churches. Non-Judeo-Christian organizations include Ismaili and Ahmadiyya (Islamic), Tibetan Buddhism and Thailand Buddhists, and the Church of Scientology. Catholic Charities, USA, is associated with the Pontifical Council, Cor Unum, which globally administers charitable activities. Currently headquartered in Alexandra, Virginia, Catholic Charities was founded in 1910 and continues to be among the top 25 nonprofit organizations in the United States, with an annual income of $3.3 billion (National Philanthropic Trust [NPT], 2007; "Top 100," 2009). As it celebrates its centennial as a service and charity organization, Catholic Charities' primary mission continues to be reducing poverty. With a century of experience, this highly organized institution promotes advocacy for change by providing leadership training and networking opportunities, develops community programs, serves as a national advocate to promote human dignity, prepares for disasters, provides financial benefits to the economically disadvantaged within American society, and works to eradicate poverty and racism. Catholic Charities provides housing, food, health care, workforce training, and advocacy services to a number of groups, including people afflicted with AIDS, single parents, children, the elderly, the disabled, and immigrants.

Current president and CEO, the Reverend Larry Snyder, has held the reins of the organization since 2005. In partnership with the U.S. Conference of Catholic Bishops and Catholic Health Associations, Catholic Charities serves a national advocate for society's vulnerable population. Civil rights activist and scholar William E. B. Du Bois wrote, "To be a poor man is hard, but to be a poor race in a land of dollars is the very bottom of hardships" (Association of Black Foundation Executives, 2010). Catholic Charities has a strong legislative agenda to reduce poverty in America. Indeed, Reverend Snyder states that Catholic Charities proposes reducing national poverty in half by the year 2020 (Catholic Charities USA, 2010).

Other significant religious and faith-based organizations created after the Tax Reform Act of 1969 include the Bread for the World, the St. Ann Foundation, and Metropolitan Area Neighborhood Nutrition Alliance (MANNA). In 1972, a grassroots group of Catholic and Protestant ministers and laypeople convened to assess the formation of a nonpartisan Christian organization to end hunger in the United States. By 1974, the organization gained enough support as a collective to mobilize and focus its energies on influencing public policy and creating programs in an effort to resolve the cause and reduce the effects of hunger. For two decades, this charitable movement was led by a Lutheran minister, the Reverend Arthur Simon (NPT, 2007). Bread for the World continues its work as a collaborative of 58,000 members with the continued goal of addressing the cause of hunger.

The Sisters of Charity of St. Augustine have been serving in Cleveland, Ohio, since 1852. With a commitment to service, the sisters built St. Ann's Hospitals and other health care centers to serve the needs of the Cleveland communities. In 1973, the hospital was sold to Kaiser Permanente Medical Care Program. The resulting income permitted this religious community to establish the St. Ann Foundation, which became the nation's first health care conversion foundation able to provide grantmaking endowment services. Through its charitable services, the foundation supports religious, educational, and scientific health-related programs. As a model of success, St. Ann Foundation prompted more than 117 nonprofit hospitals to transfer assets to grantmaking foundations.

MANNA currently prepares more than 70,000 meals a day for homebound individuals, providing nourishment to clients living with HIV/AIDS, cancer, or other life-threatening illness. Established in 1990 by the First Presbyterian Church in Philadelphia, MANNA initially struggled for charitable and volunteer support due to the stigma and ignorance associated with HIV/AIDS. Today, MANNA serves children and adults, offering both nutritious meals and counseling. As a nonsectarian nonprofit, MANNA operates primarily through an army of volunteers serving the greater Philadelphia and southern New Jersey area.

While most religious ministries work toward community health care, welfare, and hunger, Habitat for Humanity International is an ecumenical Christian housing ministry that builds low-cost housing for economically disadvantaged communities worldwide. With strong Christian convictions, Millard and Linda Fuller originated the idea of partnership housing in 1976. Millard Fuller had started a successful marketing firm while still in college, and thanks to a natural keenness for business processes and an entrepreneurial drive, he earned his first million by the age of 29. His health and marriage suffered, however, and following a personal and spiritual renewal, the couple redefined their approach to wealth and focused their energies instead to creating a program that would build homes for the poor. The philosophy of the organization revolves around the belief that poor families need not charity, but capital; not caseworkers, but coworkers. Since then, Habitat for Humanity has built more than 300,000 homes and shelters worldwide. As one of the top 25 nonprofits in the United States, this Christian-based organization reported assets exceeding $1 billion in 2008 (National Center for Charitable Statistics, 2009).

In general, action by the religious nonprofit sector helps to relieve the public burden to care for the economically disadvantaged in American society. Such organizations validate the doctrine of separation of church and state. According to

David C. Hammack, nonprofit author and professor of history at Case Western Reserve University, the Tax Reform Act of 1969 encouraged an increase in nonprofits and nongovernment organizations (NGOs) in the United States because (2001, p. 158):

- all citizens are allowed to organize to provide services in ways that accord with their values and preferences;
- nonprofit organizations have clear legal titles to their properties and the right to sell services and to seek and hold donations; and
- governments invest tax revenues in the purchase of services provided by NGOs, and individual incomes are large enough to enable people to pay for a wide variety of services.

Third-sector organizations operate at their best when social and legislative change, community action, shared governance, and organizational missions come together in a common effort. Government funding throughout the final decades of the 20th century waxed and waned depending on the economy and the political agenda at the time. Public confidence in government and the economy has a tendency to rise and fall depending on the political or social crisis of the day. On the other hand, self-governing nonprofits can perform public welfare and support services outside the bureaucratic state. Free to organize without the pressures of paying income taxes, nonprofit sector organizations proliferated into the next millennium.

Nationwide, most nonprofit organizations are comparatively small, with fewer than 100 full-time employees. The majority of nonprofit employees work in a small group of rather large organizations, such as universities, hospitals, and human services agencies. According to the *Nonprofit Almanac of 2008*, nonprofits accounted for about 8.11% of all wages and salaries (National Center for Charitable Statistics, 2009). This equates to the employment of more than "12.9 million individuals or approximately 9.7 percent of the U.S. economy" (Blackwood, Wing, & Pollak, 2008). The most recent IRS report on tax-exempt status shows that between fiscal years 2005 and 2008, the number of active and sustained tax-exempt organizations rose from 1.7 million to nearly 1.9 million (Tax-Exempt Organizations and Nonexempt Charitable Trusts, Fiscal Years 2005–2008). In the early 1970s, there were 535,000 charitable and noncharitable nonprofit organizations and congregations. By 2009, the number of nonprofits had reached nearly 1.9 million. Thus, the implementation of the Tax Reform Act of 1969 was followed by a remarkable 72% increase in the number of nonprofit organizations.

The Seventies

The 1970s was termed the "me decade" by journalist and novelist Tom Wolfe in an essay titled "The Me Decade and the Third Great Awakening" from the 1976 issue of *New York* magazine. The phrase refers to what sociologists characterize as self-absorption. Nevertheless, following the Tax Reform Act of 1969, this decade saw a doubling of charitable and noncharitable nonprofit organizations. Lester M. Salamon (1994), director of the Institute for Policy Studies at the Johns Hopkins University, cautions,

> The proliferation of these groups may be permanently altering the relationship between states and citizens, with an impact extending far beyond the material services they provide. Virtually all of America's major social movements, for example, whether civil rights, environmental, consumer, women's or con servative, have had their roots in the nonprofit sector. (p. 109)

The diversity of nonprofits began to take shape in the seventies as public confidence in the government was low. Even with the end of the Vietnam War (1973), social disillusionment was confounded by a number of factors. These included opposition to nuclear weapons, an energy crisis (1979), an economic depression, the impeachment of President Richard Nixon (1974), the oil embargoes by the Organization of Arab Petroleum Exporting Countries (OAPEC) (1973 and 1979), and other conflicts such as the Soviet-Afghan War, Arab-Israeli conflicts, and the Iranian revolution. American society also experienced space exploration, the rise of computing technology, the early stages of an environmental movement, and a transformation of gender roles and civil rights for women and minorities. Thus, it was a period of intense political, economic, and social conflict, dramatic scientific development, and decisive social changes.

The time was ripe for the creation of specialized and specific nonprofits, including those related the environment, civil rights, science, and even animal rights. Peter Drucker, famed management and leadership guru, recognized that nonprofits would change their organizational structures, resulting in new strategies for employees and new models of shared governance and commitment to outcomes. Drucker identified the nonprofit sector as an organism with responsibility to forge "new bonds of community, a new commitment to active citizenship, to social responsibilities, to values" (as quoted in Gardiner, 2006, p. 66). Grassroots ideals funded by large philanthropic associations and continued benevolence of principled individuals contributed to the growth of nonprofits.

Following on the heels of the civil rights movement and anti–Vietnam War campaign, Robert S. Brown founded the Twenty-First Century Foundation (21CF) in 1971. The 21CF is "an endowed, national philanthropic institution that supports the civil rights, economic empowerment, and grassroots leadership of the African American community in the United States through its grantmaking and donor services" (NPT, 2007). Seeking to build economic growth at the peak of the civil rights fervor, Brown's innovative ideals fostered a variety of economic developmental vehicles to improve black communities.

With goals to support black community leadership, the Association of Black Foundation Executives (ABFE) was founded in 1971 to bring together foundation senior leaders from ethnic and racially diverse backgrounds (NPT, 2007). Founder James A. Joseph asserted, "The most fundamental contribution of civil society may be its message that doing something for someone else—making the condition of others our own—is the most powerful force in building community" (Association of Black Foundation Executives, 2010). As the field of philanthropic activities broadened among people of color, this affinity group sought to acknowledge all executives of color. Jean E. Fairfax, civil rights activist, expert in child education, and philanthropic leader, eloquently affirms, "Black trustees have an obligation to initiate honest discourse, even when it is not in the tradition and may be painful" (ABFE, 2010). Furthermore, recognizing that a collaborative network of influential trustees and grantmaking institutions would advance its mission of promoting effective and responsive munificence in black communities, ABFE become the first and oldest of the affinity groups that are a part of the Council on Foundations (COF). From its inception, the ABFE has been a trailblazer in promoting professional training programs, sharing best practices, sponsoring learning engagement opportunities, making recommendations for strategic philanthropic investments, and collaborating with the COF.

In its 40-year history, the ABFE has been a pioneer of development and improvement programs for black communities nationwide. In association with the COF, the ABFE has provided educational and technical assistance to individuals, increasing the power and effectiveness of nonprofits. In particular, member-driven networks such as the Council on Foundations are concerned with the many challenges faced as a result of government and political changes. Associations such as the COF strive to create awareness of and engagement in philanthropic action in order to promote successful projects and to achieve effective and sustainable program outcomes. As the voice of grantmaking foundations, COF influences more than $307 billion in philanthropic assets through its 2,100 grantmaking foundation and corporate members.

Other less endowed but prevalent nonprofit organizations of the 1970s include humanitarian, health care, and animal rights advocacy groups. Charitable trends in these areas were driven by the power of media and the increase in the number of American higher education institutions and expanded student activism on campuses across the country. Focusing a spotlight on a variety of civic issues, nonprofit activism has increased public knowledge, improved public policy, and stimulated greater motivation for civic engagement.

For example, beginning as a grassroots movement, but with a vibrant and judicious energy, the National Gay and Lesbian Task Force, Inc., was founded in New York in 1973. Its initial agenda was to create a political lobbying taskforce to bring gay-lesbian-bisexual-transgender (GLBT) issues to national awareness (NPT, 2007). Founded as a social welfare organization, the GLBT achieved tax-exempt status in 1974. The GLBT also lobbied to eliminate medical and civil law classifications that identified homosexuality as a disorder.

As an example in another area, when the 3-year-old daughter of Philadelphia Eagles tight end Fred Hill was in the hospital battling leukemia, her father spent hours sleeping on hard vinyl institutional chairs. His meals came from a vending machine. At a time when individuals are struggling with worry and concern for family members, uncomfortable surroundings tend to add more strain to an already difficult and emotional situation. Driven by the belief that there must be a better way, Hill gathered his teammates to raise funds to create a more hospitable and comfortable environment for families of ill children. With the support of the Eagles' general manager Jim Murray and Dr. Audrey Evans, Hill created a partnership with local McDonald's regional manager Ed Rensi to raise funds to open the first Ronald McDonald House. In so doing, a new community-based charitable organization was born, serving children and their families worldwide (NPT, 2007). In its 35-year history, the Ronald McDonald House Charities (RMHC; http://rmhc.org) has opened 271 houses in 52 countries and regions. As a foundation, RMHC has been able to expand services to vulnerable children in low-income communities by providing higher education scholarships and by dispatching mobile units to offer medical, dental, and health education services. Staying true to the mission of focusing on the needs of children, RMHC reported 2008 assets exceeding $123 million (National Center for Charitable Statistics, 2009).

America's Second Harvest, "the largest domestic hunger-relief organization in the United States," changed its name to Feeding America in 2008 (NPT, 2007). The organization grew out of St. Mary's Food Bank, established in 1976 by Jon van Hegel, a retired executive in Phoenix, Arizona. It was the country's first food bank. St. Mary's Food Bank received a federal grant to build a nationwide network of food banks. Hegel's initial innovation generated a multimillion-dollar hunger-relief organization with a mission to feed America's hungry. Today, Feeding America is among the largest food rescue and service organizations with current assets exceeding $657 million (NCCS, 2009). Through a network of more than 200 food banks in the United States and Puerto Rico, Feeding America retains partnerships with a number of corporate donors and government grants. Not limited to providing food for the poor, Feeding America also has a political voice lobbying for federal food safety and supplemental programs.

The Eighties: The Age of Conservatism and the Rise of Celebrity Endorsements

Novelist Tom Wolfe identified the eighties as the "splurge generation." Yet, the decade is best known as the age of conservatism primarily delivered by the strong conservative political agenda of President Ronald Reagan, known as the "great communicator." Wolfe envisioned the baby boomer generation spending its earnings on material goods and seeking personal status; the age of conservatism refers to the revival of laissez-faire economics, policies, and politics, better known as Reaganomics. Faced with double-digit inflation, newly elected President Reagan reduced government spending and lowered taxes to spur economic growth.

The eighties also saw higher health care costs, corporate mergers, the rise of AIDS-related deaths, natural and non-natural disasters, assassinations, and population growth. Regardless, in 1989 alone, Americans gave $115 billion to charity (NCCS, 2007). Thus, it can be said that the nonprofit sector continued to flourish during the age of social, political, and economic conservatism. The proliferation of nonprofits, along with the social environment of the times, sustained the momentum of charitable giving, grantmaking activities, and program redevelopment.

In 1986, Congress passed another tax reform, which again affected philanthropic activities. The main changes include "the end of not itemizing deductions, the inclusion of gain portions of gifts of appreciated property in calculating the alternative minimum tax, and finally the requirement that private foundations pay estimated tax" (Arnsberger et al., 2008). These actions by Congress did not prevent philanthropic action, community foundations, or specifically aimed associations from multiplying.

The rise of new nonprofits in the eighties began with the establishment of widely known organizations such as the Make a Wish Foundation, Mothers Against Drunk Drivers, Human Rights Campaign Foundation, the John D. and Catherine T. MacArthur Foundation, the Statue of Liberty–Ellis Island Foundation, the Betty Ford Center, and the Children's Miracle Network. However, in 1985, celebrity-endorsed nonprofit associations began to flourish, the purpose being to spotlight their specific cause and to mobilize supporters. In the early days of celebrity endorsement, most celebrities participated in philanthropic activities, not because it was popular to do so, but because they were true advocates of a cause. Nonprofit organizations were able to take advantage of such influential support because the celebrity's role brought more media attention and healthier fundraising revenues.

Among the first of such endorsers was Elizabeth Taylor, who determined to speak out to oppose discrimination against the GLBT community and those afflicted with HIV/AIDS. As noted, the rise of reported HIV/AIDS cases brought to light the need for national awareness of a disease that would eventually become a pandemic. As a cultural icon and international stage and screen star, Taylor joined forces with Dr. Mathilde Krim and a group of medical professionals to form the American Foundation for AIDS Research (amfAR) in 1985 (NCCS, 2007). As the organization's founding chairperson, Taylor was a vocal proponent who brought enormous media attention, as well as generous gifts initially totaling $2 million. On behalf of the foundation, Taylor traveled abroad to endorse awareness and fundraising. Her success and exposure resulted in the opportunity to testify before Congress to support the Ryan White CARE Act, which was enacted in 1990.

Comic Relief was launched by BBC-ONE in 1985 in response to African famine in the Sudan. The U.S. counterpart was founded by writer/comedian Bob Zmuda in 1986 with the purpose of raising funds for homeless individuals and health care services (NPT, 2007). American comedians Robin Williams, Billy Crystal, and Whoopi Goldberg hosted events. Throughout its existence, Comic Relief has featured more than 2,000 volunteer celebrities, including Woody Allen, Jerry Springer, and Johnny Depp. Unlike the British original, the American version of Comic Relief is hosted by Home Box Office (HBO) and is a sporadic event. Nevertheless, as a charitable organization, Comic Relief has raised and distributed $50 million and currently holds more than $4 million in assets.

The familiar grocery-shelf label featuring Paul Newman is a reflection of an innovative nonprofit branded by a famous and admired celebrity. Since the idea's inception in 1982, the corresponding charity, known as Newman's Own Foundation, has generated more than $280 million for human services, health, education, and the arts. This popular charity has a premise that all profits from the sales of products are to be donated (after taxes are paid) to specific charities, congregations, and causes of Newman's choosing. The first funds raised were donated to build a cost-free camp for children with cancer and other life-threatening illness. Called The Hole in the Wall Gang, the camp received a $5 million gift from Khaled Albegelan from Saudi Arabia to continue the work of providing a natural environment for chronically ill children (NPT, 2007).

In 1988, following the success of TV's *The Cosby Show,* comedian, television star, and professor Bill Cosby and his wife, Camille, donated $20 million to Spelman College. Located in Atlanta, Georgia, Spelman is the oldest (129 years) liberal arts college for black women. The endowment was intended to build a center housing academic departments and to endow three chairs in the liberal arts, social sciences, and humanities. The Camille Olivia Hanks Cosby Academic Center is also home to a writing and resource center and a museum. Of the 112 black colleges and universities, Spelman received the largest personal endowment gift ever made by an African American to an educational institution (NPT, 2007).

The close of the eighties saw a number of important social and political events. The Cold War ended, the U.S. Constitution celebrated its 200th birthday, the Exxon *Valdez* spilled oil in Alaska, arcade and video games and home computers flourished, faulty O-rings destroyed the space shuttle *Challenger,* the Berlin wall fell marking the reunification of Germany, Halley's Comet revisited the inner solar system, and ET phoned home. In the ever-expanding universe of nonprofits, many more trailblazing associations and grantmaking foundations collaborate to continue the work of social change, the alleviation of hunger for the financially indigent, and health care support for the economically disadvantaged.

The Nineties

The explosion of new media and communication sources such as the Internet and mobile telephones made the 1990s a vastly different decade. During the Clinton administration, middle-class wealth increased, yet a gap in earnings between minority groups and whites remained. The United States experienced nearly a decade of economic expansion. However, regardless of the countless philanthropic efforts, the Welfare Reform Act of 1996, and changes to public policy and tax codes, poverty in minority and rural communities persisted.

The first bombings on American soil since World War II—the World Trade Center (1993) and the Oklahoma City (1995)—brought the United States within the target ring of international terrorism. The attacks of September 11, 2001, on the World Trade Center and the Pentagon eliminated Americans' sense of security and complacency. Yet, regardless of potential threats, new foundations serving a variety of social, economic, and scientific causes and philanthropic activity continued to grow.

In 1991, the Keck I telescope was dedicated, thanks to funding from the W. M. Keck Foundation of Los Angeles. The foundation, founded in 1954, remains an energetic charitable organization supporting scientific, engineering, and medical research (NPT, 2007). The original funds came from William Myron Keck, president of Superior Oil Company (now Exxon Mobil). With the technological directions of this decade, the Keck Foundation was well suited to provide grants for engineering research.

Similar in concept to the Ronald McDonald Houses, Gilda's Club is an organization that provides resting places for women and their families dealing with the effects of ovarian cancer. In tribute to comedic actress and Emmy Award winner Gilda Radner, best known for her Roseanne Roseannadanna character on *Saturday Night Live*, the club was founded by Radner's husband, Gene Wilder, film critic Joel Siegel, and Gilda's psychotherapist, Joanna Bull, in 1991. The foundation has become a nationwide and worldwide entity with assets totaling nearly $8 million.

As Dame Elizabeth Taylor collaborated to create a foundation for HIV/AIDS, so too did singer composer Sir Elton John establish the Elton John AIDS Foundation in 1992. Its mission is to provide education awareness programs as well as hospice services for individuals living with the disease.

Famed publisher and diplomat Walter H. Annenberg stepped into the philanthropic history books by bequeathing $500 million to the Annenberg Foundation in 1993, dedicated to public education reform. Annenberg said,

> I believe in social responsibility. A man's service to others must be at least in ratio to the character of his own success in life. When one is fortunate enough to gain a measure of material well being, however small, service to others should be uppermost in his mind. (Annenberg Foundation, 2010)

Established in 1989, the foundation has a strong history of grant making. Annenberg allotted specific amounts to some areas of study: the arts, $23 million; public media, $90 million; higher education, $120 million; public education, $500 million; and professional educational development, $40 million (Annenberg Foundation, 2010). Later in 1998, Walter and Leonore Annenberg presented a gift of $10 million to build a complex to house the Liberty Bell and to renovate Independence Mall as a unit of the National Historical Park in Philadelphia (NPT, 2007).

With the admonition, "I'm putting the rich on notice," media mogul Ted Turner challenged America's wealthiest individuals to reconsider the source of their wealth and to donate more to charitable causes. He provided a model by pledging $1 billion to the United Nations. In 1997, the size and scope of the pledge were unprecedented. The gift was used to establish the United Nations Foundation. Unfortunately, because of a steep decline in Time Warner stock, Turner only donated $600 million of his original pledge.

Perhaps the most famous and beloved of all philanthropic foundations is that of talk show host Oprah Winfrey, called Oprah's Angel Network. Established in 1997 in an associative partnership with other nonprofits, it delivers a network of outreach programs to fulfill basic human needs and cultivate dignity (NPT, 2007). Serving primarily economically disadvantaged communities, the Angel Network has distributed $2.5 million to 33 organizations. The network, which has received more than $80 million in public donations, is associated with Habitat for Humanity International, the Boys and Girls Clubs of America, and UNICEF.

Finally, the nineties conclude with a pledge of $200 million in 1997 for the formidable task of connecting public libraries to the Internet. This gift was given to the Gates Library Foundation by the Bill & Melinda Gates Foundation (http://www.gatesfoundation.org), which was established in 1994 (NPT, 2007).

The New Millennium

The first steps into the next millennium were taken gingerly because of unsubstantiated fears of a Year 2000 computer bug generally referred to as the Y2K or millennium bug. The basis for concern was that some older computer systems might not adjust to the digital code of 00 representing the year, thus creating a logical processing error. Congress went so far as to pass the Year 2000 Information and Readiness Disclosure Act to ensure funding and readiness for potentially disastrous problems. While there were some glitches, all were easily resolved. Of course, the decade is overshadowed by terrorist attacks on the World Trade Center and the Pentagon, and the crash of a third hijacked airliner in a small field in Pennsylvania.

While this catastrophe had a serious impact on the American psyche, the nonprofit universe remained prosperous. As the nation mourned, the benevolent American spirit reacted with compassion and goodwill. Individual, group, and corporate donations flew to many well-established nonprofits such as the YMCA, United Way, Catholic Charities USA, Goodwill Industries International, the Salvation Army, American Red Cross, Boys & Girls Club of America, and a host of others.

The surge in donations continued for several years until the effects of the recession as well as natural disasters such as the Hurricane Katrina disaster of 2005 took their toll on the economy. Nevertheless, poverty remains a root cause of social, economic, and political disparities. Both technology and the globalization of telecommunications and transportation have expanded the world of capitalism and democracy, yet America still faces high unemployment, lack of proper health care, hunger, and poverty. This ensures a role for the expanding universe of nonprofit enterprises in the independent third sector.

According to the National Center for Charitable Statistics, the nation is home to 1,569,572 tax-exempt organizations, 997,579 of which are public charities, 118,423 private foundations, and 453,570 other nonprofits. Public charities reported more than $1.4 trillion in total revenues and $2.6 trillion in total assets for the 2007 fiscal year (NCCS, 2009). The numbers indicate the growing presence and future of nonprofits in the form of grantmaking foundations.

The 10 largest foundations hold 20% of all foundation assets nationwide, which equates to holdings of $91 billion in 2009 (see Table 15.1).

These prominent foundations are identified as grantmaking organizations dedicated to specific or specialized causes, movements, enterprises, or policy lobbying; or as operating foundations with an underlying principle to formulate and distribute grants, conduct social or scientific research, or provide client services. Of these the Bill & Melinda Gates Foundation, Ford Foundation, J. Paul Getty Trust, Lily Endowment, Inc., and the Robert Wood Johnson Foundation have retained the top 10 status for several years (Foundation Center, 2010).

Summary

This chapter has focused on recent history of nonprofits through tax reform legislation and social, economic, and political upheavals. This sector has recognized that as the environment to operate changes, the operation infrastructure must change as well to sustain viability and capacity building. New philanthropies and public charities have emerged in the first decade of the millennium, each contending with the economic recession. With the anticipated retirement of a large number of baby boom–era leaders of the sector over the next few years, a new generation will be asked to assume leadership positions. The training and professional preparation of this next, and demographically much smaller, generation is an important concern.

Rank	*Name (State)*	*Assets ($)*	*As of Fiscal Year End Date*
1.	Bill & Melinda Gates Foundation (WA)	29,889,702,125	12/31/2008
2.	J. Paul Getty Trust (CA)	10,837,340,620	06/30/2008
3.	The Ford Foundation (NY)	10,234,860,000	09/30/2009
4.	The Robert Wood Johnson Foundation (NJ)	7,513,607,363	12/31/2008
5.	W. K. Kellogg Foundation (MI)	6,813,784,639	08/31/2009
6.	The William and Flora Hewlett Foundation (CA)	6,208,980,453	12/31/2008
7.	Lilly Endowment Inc. (IN)	5,718,809,817	12/31/2008
8.	John D. and Catherine T. MacArthur Foundation (IL)	5,014,059,260	12/31/2008
9.	The David and Lucile Packard Foundation (CA)	4,650,858,492	12/31/2008
10.	Gordon and Betty Moore Foundation (CA)	4,509,705,996	12/31/2008

Table 15.1 Top 10 U.S. Foundations by Asset Size

SOURCE: The list is ranked by the market value of assets, based on the most current audited financial data in the Foundation Center's database as of April 20, 2010. Fiscal records will be updated when more recent audited financial information is obtained. The Foundation Center, http://foundationcenter.org/findfunders/topfunders/top100assets.html, 2010.

Two decades of celebrity endorsements and paparazzi attention to some nonprofit organizations have generally resulted in positive revenue increases, but when scandals occur in the nonprofit sector, they raise concerns among funders and citizens alike. In 1993, United Way of America CEO William Aramony was convicted of conspiracy, fraud, and filing false returns. In 1995, John G. Bennett Jr., was found to have created the largest Ponzi schemes in American history with the establishment of the Foundation for New Era Philanthropies (NPT, 2007).

The outlook, however, is promising. In its August 2009 special issue, the *Nonprofit Times* recognized top executives of the third sector when they wrote:

> Service is the new black. It's so fashionable that those leading the national service movement have packed the catwalk of *The 2009 NPT Power & Influence Top 50.* Whether it's military conscription, stipend service, or traditional volunteering community building is the core of the sector these days. ("Volunteering," 2009, p.15)

Philanthropic Leadership in Totalitarian and Communist Countries

S. Wojciech Sokolowski

Johns Hopkins University

Contrary to popular perceptions that civil society is a predominantly Western and especially American phenomenon, virtually every country has some form of organized civic activities. Civil society organizations operate in countries that substantially differ in the level of economic development, system of governance, and cultural and religious traditions (Salamon, Sokolowski, & Associates, 2004). This implies that Western political and economic institutions—democratic governance, constitutionally guaranteed rights and liberties, and market economy—are not a necessary condition for civil society, although empirical research demonstrates that these institutions create favorable conditions for civil society growth.

Therefore, a cross-national, comparative look at civil society institutions can offer invaluable insights into the operations of civil society organizations and their relationship to other social, political, and economic institutions. Totalitarian and communist countries are particularly important in such a comparative analysis because they offer counterfactual cases to historical analyses of civil society development in democratic countries. In comparative research, *counterfactual* denotes an exploration: What if a phenomenon of interest took place in a different set of historical circumstances? In this particular case, the value of this counterfactual is that it is an actually existing condition rather than one being merely hypothesized by researchers. The methodological value of this approach is highlighting the relationship between civil society and political institutions, especially government.

Despite the considerable attention it has received in academic research (Smith & Grønbjerg, 2006), the relationship between civil society and government is generally poorly understood in popular discourse. Perhaps the most prevailing misconception, both in the United States and newly democratized countries of Latin America and Eastern Europe, is that civil society is an alternative to government, especially in the realm of social protection. An empirical analysis of the government–civil society relationship under authoritarian rule, contrasting it to the relationship in democracies, will highlight the crucial role government plays in the functioning of civil society and help us explore the historical roots of misconceptions about that role. Although authoritarianism is a thing of the past in most modern countries, the political attitudes and intellectual frameworks that developed in such regimes still persist in public discourse to this day. Perhaps it is time to put these attitudes and frameworks shaped by the past to rest, and this chapter is intended to contribute to that goal.

This analysis can offer a valuable practical lesson for nonprofit leaders as well as policymakers, especially those working in countries that experienced periods of authoritarian rule in their recent history. It will allow them to put the government–civil society relationship in a much broader perspective than the one shaped by negative experiences in their particular countries. The chapter will also provide empirically grounded examples of "favorable" and "unfavorable" government–civil society relations, which in turn is helpful in crafting social policy that promotes growth of a healthy civil society.

Key Concepts

For the purpose of this chapter, *philanthropic leadership* is defined as people who manage, control, and otherwise directly influence the civil society sector (CSS). The CSS is a set of organizations, legally registered or informal, that are generally recognized and operating on a more or less permanent basis, organizations that do not distribute profits and are private (institutionally separate from government), self-governing (having the capacity to act, enter transactions, and cease operations in its own right), and noncompulsory (their membership is not coerced by state). This definition excludes entities that may perform philanthropic functions (e.g., give charitable grants) but are government agencies or their subsidiaries, enterprises whose primary purpose is procurement and distribution of economic gains to their owners or stockholders, or entities that are subsidiaries or arms of other organizations (Salamon et al., 2004, pp. 9–10).

Civil society organizations operate in countries that substantially differ in their level of economic development, system of governance, and cultural and religious traditions. Consequently, their organizational structure, behavior, and social functions differ to fit their particular environments. This cross-national variation in key dimensions of the CSS as a whole—size and composition of the workforce, activities, revenue sources, and a relationship with other social and political institutions, especially the government—is extremely useful in highlighting the roles of such organizations and the challenges they face under totalitarian or communist rule.

Totalitarianism and *communism* have been used in political science and popular discourse to denote and denounce political systems in which the government exercises total control of political, economic, and private lives. Because the definitions and usage of these concepts are tainted by ideological preferences of the users and thus prone to exaggeration and hyperbole, a more neutral approach is to identify empirically observable characteristics that identify specific political systems as totalitarian or communist.

For the purpose of this discussion, a political system is totalitarian if it allows the government, especially its executive branches, to systematically bypass or subvert the democratic process in imposing its policy priorities by the following means:

- Frequent and widespread curtailments of basic civil rights (such as the right to assembly, right to free speech, or the right to a due process) and basic economic interests (such as property rights or employment opportunity) of certain segments of the population
- Extensive control or manipulation of major political institutions, especially elections, the parliament, and the judiciary
- A governance system that systematically inhibits the political representation of views and preferences of significant segments of the population
- Frequent and widespread persecution of political opponents

The communist system is a subset of the totalitarian class, as defined above, and denotes a political system that meets the additional three criteria:

- Nationalization of most economic institutions and assets
- High level of government funding of social welfare services and the exclusive government provision of most of such services
- Adoption of an official state ideology proclaiming superiority of working class interests over other social class interests

Both concepts are mainly of historical significance, as none of the political regimes they denote exist today in any but a few peripheral states (e.g., North Korea or Burma.) This underscores the transitory nature of the regimes in question. Consequently, it is more accurate to say that rather than *being* totalitarian or communist, a country may *experience* a totalitarian or a communist period in its recent history. Examples of countries with totalitarian periods include Germany, Italy, Portugal, and Spain before and after World War II and Argentina and Chile in the 1970s. Examples of countries with communist periods include Russia after World War I and Czechoslovakia, Hungary, Poland, and Romania after World War II until 1989. The foregoing analysis focuses on a few countries selected for the purpose of illustrating the effects of totalitarianism and communism on civil society. It is not intended to provide a comprehensive list of countries that meet the above criteria of totalitarian and communist regimes and to which this analysis may apply by extrapolation.

Rather than being stable and continuous like the established democracies, both totalitarianism and communism were created by social upheavals, introduced large-scale social, political, and economic changes, and came to an end in a wave of other social, political, and economic changes. It is, therefore, useful to identify three stages in the rise and decline of these political systems: onset, interim, and termination.

The *onset stage* represents changes in the economy and society that create conditions leading to the imposition of totalitarian or communist regimes. In the case of totalitarian regimes, this typically represents industrialization and the rise of working-class power, which threatens the power of entrenched landed and industrial elites. In the case of communist regimes, economic backwardness and lagging industrialization led to social unrest and eventually the collapse of the premodern social and political order, typically precipitated by a war and a foreign invasion (Drake, 1996; Gerschenkron, 1952/1992; Moore, 1966; Paige, 1975; Rueschemeyer, Stephens, & Stephens, 1992; Wright, 2007).

The *interim stage* comprises social, political, and economic transformations introduced by the totalitarian or communist regimes themselves. In the case of totalitarian regimes, this typically includes an authoritarian governance system, based on military or single-party rule, a significant curtailment of civil liberties, economic policies reinforcing the power of existing industrial elites, and widespread persecution of perceived opponents. In some countries (e.g., Chile or Germany), these policies led to industrialization and economic development, whereas in others (e.g., Portugal or Spain), they resulted in prolonged economic stagnation.

In the case of communist regimes, the interim stage included, in addition to those characteristics listed above, nationalization of the economy, accelerated industrialization, rapid economic growth followed by stagnation (Chavance, 1994), urbanization, and the introduction of wide-ranging public education and social welfare programs funded and provided by the state.

The *termination stage* encompasses political and economic transformations implemented at the end of the totalitarian or the communist period and counteracting the effects of government policies pursued during the interim stage. For totalitarian regimes, the termination stage involves the liberalization of the polity (multiparty system, free elections) and a restoration of civil liberties, especially the freedom of speech and association. For communist regimes, this also includes de-nationalization of economic institutions and assets. In both cases, this stage involves significant cross-national transfer or isomorphic mimicry of social, political, and economic institutions that developed in industrialized countries, especially Western Europe (Hausner, Jessop, & Nielsen, 1995; Wedel, 1998).

Types of Government–Civil Society Relations

Each of these three stages had different impacts on the CSS and its leadership. These impacts can be demonstrated by contrasting the development of the CSS under the regimes in question with that in Western industrialized democracies. Inasmuch as such democracies guaranteed freedom of association to all or most of their citizens, associations were formed to tackle the adverse social impact of industrialization, to represent political and economic interests of various social groups, and to provide venues for cultural and leisure activities for the growing urban population. The growth of such associations was, in large part, a function of economic development—the more advanced the industrialization process, the greater the number of associations. These associations were formed and supported by private citizens and received little or no government assistance in the early days.

This significantly changed with the emergence of social welfare policies in the first half of the 20th century, which resulted in directing unprecedented amounts of public resources to the amelioration of social problems created by industrialization, such as unemployment, industrial injuries, sickness, or old-age destitution (Flora & Heidenheimer, 1987). There were three patterns in that development, which differed in the relative amount of public resources dedicated to social welfare and the role of private organizations in the provision of social welfare services (Salamon & Anheier, 1998; Salamon, Sokolowski, & Associates, in press).

Continental Western Europe developed a system of political organization termed *corporatism,* in which various interest groups, such as business associations, labor unions, or civil society organizations, cooperate with a governing jurisdiction to achieve common societal goals (Wiarda, 1996). Under the corporatist system, the level of government support of welfare services is very high, but the delivery of these services remains to a substantial degree in private hands, under the so-called subsidiary principle, which delineates responsibilities and duties of government and private parties in addressing social problems. This opened an immense opportunity for the existing civil society organizations, many of which were linked to organized religion, to become major providers of publicly funded social services (Evers & Laville, 2004).

The *liberal pattern,* prevailing in English-speaking countries, is characterized by limited government involvement in economic affairs, at least in prevailing doctrine. In this system, the level of government support of welfare services remained lower than that in the corporatist states, and the role of private philanthropy in funding such services was emphasized, at least in principle (Hall, 2002). However, growing social problems prompted more government social spending and enlisting private nonprofit organizations to deliver these services (Salamon, 1995).

Finally, in the *social democratic development,* prevailing in the Scandinavian countries, the government assumed both financing and delivery of social services (Esping-Andersen, 1990). The existing private service-providing organizations were incorporated into the public welfare system, as a consensus among leadership of such organizations emerged that this would improve both professionalism and service quality. The parts of the CSS that remained private were mainly civic associations and membership organizations serving as conduits for leisure activities Pestoff, 2004). This resulted in shifting the balance of CSS activities from the provision of human services (education, health, and social assistance) to the expression of cultural, social, and political interests of members, which includes cultural and recreational activities, sports, civic participation, and activities of professional associations and labor unions (Salamon et al., 2004, pp. 23–24).

In sum, the CSS in industrial democracies grew significantly as a result of two factors. First was the growing demand for social welfare services and the growing involvement of government in funding such services. This created an opportunity for the CSS to substantially expand its service operations. Indeed, about three fourths of the CSS resources in Western European countries are engaged in service delivery (health, education, and social services), and more than half of these resources come from government funding (Salamon et al., 2004). The second factor was the demand for political representation, participation in public affairs, and cultural expression of the population.

Under the totalitarian and communist regimes, however, the development of the CSS took a very different turn. This is partly a result of the dynamic and transitory nature of these regimes, pursuing radical social changes and spurring radical reactions to those changes, and partly an outcome of the policies these regimes adopted toward the CSS itself. The role and capacity of the CSS as a whole changed substantially from one stage of the regime development to another, and in the end the CSS re-emerged as a major player on the national stage, but with its capacity substantially weakened.

Civil Society Sector Under Totalitarianism

In the onset stage, countries experiencing totalitarian periods in their history went through processes similar to those observed in industrialized democracies—progressing industrialization created a need for social welfare services and political representation, which led to the growth of associations representing working-class interests, such as unions, mutuals, or cooperatives. This growing power of labor, which in some cases (Chile in 1970 and Spain in 1936) led to the election of left-leaning national governments, threatened the interests of entrenched rural and industrial elites, which were instrumental in orchestrating totalitarian takeovers of national governments (Drake, 1996; Kwon, 2004; Moore, 1966; Rueschemeyer et al., 1992; Stepan, 1985; Wright, 2007).

In the interim stage, the totalitarian governments suppressed or altogether eliminated the civil society organizations associated with left-leaning social movements and working-class interests (Drake, 1996; Stepan, 1985). However, organizations aligned with fascist movements as well as charities associated with organized religion, especially the Catholic Church, received government support (Barbetta, 1997, pp. 93–103; Franco, Sokolowski, Hairel, & Salamon, 2005). Due to an amicable relation between the Catholic Church and the political regime, church-affiliated organizations often provided a safe heaven for civil society activities otherwise repressed by the state (Irrarazaval, Hairel, Sokolowski, & Salamon, 2006).

The termination stage of totalitarian regimes varied significantly from country to country. In Italy and Germany, it was brought about by the military victory of the Allied forces, ending World War II. By contrast, totalitarian regimes of Portugal and Spain survived until the 1970s and ended with their respective dictators' demise. In Chile, the totalitarian government slowly drifted toward a free-market economy and eventually allowed free elections, which ended its reign in 1980. However, regardless of the course of events that ended totalitarian periods, the termination stage reinstated the corporatist models of social welfare based on government–CSS partnership in service delivery.

Germany had already developed corporatist policies toward social welfare in the onset stage (the Weimar Republic), and these policies were re-established during the termination stage in the Federal Republic of Germany (the German Democratic Republic, however, followed the communist model). As a result, the CSS again became a major government partner in welfare service delivery (Bode & Evers, 2004). Prior to the coup of 1973, Chile also pursued corporatist welfare policies, and the democratically elected government retuned to these policies after taking power in 1989, thus stimulating re-emergence of the CSS on the national stage (Irrarazaval et al., 2006). In Italy, the constitution introducing a social welfare model favoring the CSS as a government partner was passed in 1948, but that model was largely ignored until the 1970s. Instead, welfare services (especially health) were provided by public institutions controlled by political parties, which diminished the role of the CSS (Barbetta, 1997; Borzaga, 2004). In Portugal, the end of dictatorship in 1974 and subsequent integration to the European Union, as well as the strong position of the Catholic Church, strengthened the corporatist tendencies and public support for a service-providing CSS.

The overall effect of the totalitarian interlude on the development of the CSS is difficult to assess due to the lack of data. The first comprehensive measures of the CSS capacity and structure were undertaken in the 1990s, long after the totalitarian period had ended in the European countries considered here (Germany, Italy, Portugal, and Spain). However, an approximate assessment of that effect can be obtained by comparing these countries to other industrialized countries with corporatist models of social welfare that did not experience totalitarianism. Table 16.1 shows such a comparison for three dimensions of the CSS as a whole: the size of paid staff, volunteer participation, and the size of government payments (which include both service contracts and grants).

Country Group	*Paid Staff (% of EAP[1])*	*Volunteers (% of EAP)*	*Government Payments (% of CSS revenue)*
With totalitarian past	2.9	1.6	43
Corporatist	5.4	2.3	58
Global[2] average	2.7	1.6	34

Table 16.1 Size of Paid and Volunteer Staff and Government Payments to Civil Society Sector, Countries With Totalitarian Past Versus Corporatist Countries Versus Global Average

SOURCES: Salamon et al., 2004, Table 1.9; Franco et al., 2005 (data for Portugal).

[1]Economically active population.

[2]Based on 36 industrialized and developing countries.

The data in Table 16.1 show that the CSS in European countries that experienced totalitarianism in the past have a substantially lower level of paid employment than their corporatist counterparts (2.9% versus 5.4% of the economically active population [EAP]). However, differences in volunteer participation are much smaller than those in paid employment. The level of government payments to the CSS in countries with a totalitarian past is also markedly lower than that in corporatist countries (43% versus 58% of CSS revenue) but still higher than the global average (34%).

In interpreting these differences, one should keep in mind that countries that experienced a totalitarian rule had already developed a sizable CSS (but difficult to quantify due to the lack of data) prior to the totalitarian period. The totalitarian regimes suppressed those segments of that sector linked to labor interests and largely bypassed the service-providing organizations, implementing welfare policies in which the state played a central role. In this light, the differences shown in Table 16.1 suggest that totalitarian rule diminished the capacity of the CSS and strained government–CSS relations. These effects were difficult to overcome, even after the termination of totalitarian rule. However, extreme caution in accepting these conclusions is advised due to a rather long lag between the termination of totalitarian regimes in the countries of interest and the time when the measurements were taken.

Civil Society Sector Under Communism

The onset stage of communist rule is characterized by economic backwardness and a low level of urbanization caused by the concentration of political power in the hands of landed gentry (Gella, 1988; Moore, 1966; Paige, 1975; Rueschemeyer et al., 1992). This backwardness, in turn, is responsible for the underdevelopment of civil society in Eastern Europe vis-à-vis more developed Western neighbors, a fact that facilitated the success of the communist revolution in Russia (Trotsky, 1906/1996). Although subsequent communist takeovers in Eastern Europe resulted from the outcome of World War II, which led to Soviet control of its neighboring countries, the condition of social and economic backwardness still persisted in most of that geographical region (with the exception of East Germany, Bohemia, and Moravia).

In the interim stage, communist governments for the most part eliminated the civil society organizations linked to the bourgeois political order, which included right-leaning political parties as well as charitable organizations linked to organized religion. Their functions were replaced by a public welfare system conditioned on employment in the nationalized sector of the economy and administered by government agencies. The CSS, then, consisted of large-scale membership organizations instrumental for mobilizing popular support for government policies. These organizations fall into three broadly defined categories: professional associations and labor unions, political organizations (typically offshoots of the ruling Communist Party and youth organizations), and organizations for cultural, sport, and leisure activities. In the late 1960s, social service-oriented organizations were introduced, dealing primarily with social problems that the employment-based welfare system could not effectively address (alcoholism, drug abuse, or childhood disability). However, these organizations played a marginal role because public funding of private organizations was restricted (Sokolowski, 2001). Another type of organized activity that emerged during that time, especially in Hungary and the USSR, was environmental organizations formed to counterbalance adverse effects of industrialization (Lang-Pickvance, Manning, & Pickvance, 1997; Weiner, 1999).

The termination stage of the communist period occurred more or less simultaneously across the region in the late 1980s and early 1990s, after the Soviet-controlled governments allowed free elections as a part of the *pere stroika* (Russian for *restructuring*) campaign. The democratically elected governments renounced the official communist ideology, instituted multiparty governance, restored freedom of speech and assembly, and denationalized large segments of the economy.

These changes produced several different impacts on civil society development. First, the large membership organizations created during the interim stage were officially dissolved. Membership in these organizations started to decline from the late 1970s as a result of popular dissatisfaction with the regime, and the dissolution provided cadres and organizational know-how for new private civil society organizations. What is more, a push toward reforming public social welfare system encouraged many service professionals (physicians, social workers) to establish private organizations for the purpose of introducing new kinds of social and health services to local service markets (Sokolowski, 2000, 2001). Finally, the availability of foreign funding spurred the emergence of civil society organizations aiming to further various, often incoherent goals of Western donors (Wedel, 1998). Among these, the most noteworthy are efforts to introduce sustainable use of natural resources, sponsored by Greenpeace, the World Wildlife Fund, the Biodiversity Conservation Center, and the International Union for the Conservation of Nature.

The overall effect of the communist regime on the development of the CSS has two components. First is the effect of the social conditions in the onset stage—the rule of landed elites, which slowed economic development and urbanization and then facilitated the rise of communist rule in the first place. Second is the effect of government policies pursued during the interim stage.

The effects of the interim stage can be demonstrated by contrasting countries with a communist past (Czech Republic, Hungary, Romania, Slovakia, and Poland) to those that pursued similar state-centered social welfare policies but in a democratic fashion. The latter are exemplified by the social democratic Scandinavian countries discussed earlier (Finland, Norway, and Sweden). The effect of the social conditions prevailing in the onset stage can be assessed by contrasting the Czech Republic with Slovakia and Poland, which share the same communist past. However, the Czech Republic comprises two regions (Bohemia and Moravia) where the rule of the landed nobility ended in 1620 as a result of a military defeat by Habsburg forces. By contrast, the rule of landed nobility and its correlates, economic backwardness and predominantly rural character of society, extended into the 19th century in the territories that now belong to Slovakia and Poland (Gella, 1988).

Table 16.2 shows such a comparison for four dimensions of the CSS as a whole: the size of paid staff, volunteer participation, the scope of the expressive role, and the size of government payments (which include both service contracts and grants).

The implementation of a social welfare system in which the state was both the funder and provider of services—a common trait of the communist and social democratic regimes—shifted the balance of CSS activities from human service provision to expressive functions. This is demonstrated by the fact that in both social democratic (Scandinavian) and postcommunist countries, the share of the CSS workforce in expressive roles (50% and 64%, respectively) is almost double the global average (32%). The state financial support of CSS activities in both regime types (31% and 33% of CSS revenue) is also lower than that found in corporatist regimes (58%).

However, the democratic or authoritarian manner in which such a welfare model was implemented had a significant impact on the CSS capacity, especially volunteering. Under the social democratic model, the incorporation of private organizations into the public welfare system was a result of a democratic process and a broad consensus among organization leaders that such incorporation would improve the quality of services and was thus beneficial to the society. Under the communist model, by contrast, that incorporation was a hostile takeover and dissolution of "undesirable" organizational forms imposed in an authoritarian manner by the government. The end effect was significant decrease of the CSS capacity under the communist model vis-à-vis its social democratic counterpart. The size of the CSS paid staff in postcommunist countries (0.8% of EAP) is only about a third of both the Scandinavian and global averages (2.3% and 2.7%, respectively), whereas the size of the CSS volunteer staff (0.4% of EAP) is 10 times smaller than that in the Scandinavian countries (4.1%) and four times smaller than the global average (1.6%). A significant decline of public participation in civic activities due to popular dissatisfaction with government policies started in the early 1980s (Sokolowski, 2001, p. 57) and accelerated during the final phase of the interim stage (Lewenstein & Melchior, 1992).

The effect of onset conditions (backwardness and ruralism) is visible from a comparison of the Czech Republic to Slovakia (which until 1992 was a single country) and neighboring Poland. All three countries experienced a communist rule in the same time period, but the CSS employment and volunteer workforce in the Czech Republic (1.3% and 0.7% of EAP, respectively) were twice the size of those in Slovakia and Poland (0.6% and 0.2%, respectively), in the termination stage. A likely explanation of this difference is different social conditions during the onset stage. Prior to the onset of communist rule, the Czech lands were significantly more modern and urban than the Slovak or Polish territories.

Country Group	*Paid Staff (% of EAP[1])*	*Volunteers (% of EAP)*	*Expressive Role (% of workforce)*	*Government Payments (% of CSS revenue)*
With communist past	0.8%	0.4%	50%	31%
Czech Republic	1.3%	0.7%	54%	39%
Poland	0.6%	0.2%	46%	24%
Slovakia	0.6%	0.2%	59%	22%
Scandinavian	2.3%	4.1%	64%	33%
Global[2] average	2.7%	1.6%	32%	34%

Challenges for CSS Leadership

The transitory nature of the totalitarian and communist regimes pose two distinct challenges to the leadership of the CSS: the challenge of surviving government restrictions and marginalization of their activities under these regimes (the interim stage) and the challenge of renewal and catching up with democratic countries after the termination of these regime types. Because both regime types persecuted political opponents, civil society cadres often faced personal risk of imprisonment or even death resulting from their involvement, especially immediately after the imposition of totalitarian or communist rule. However, that risk was substantially reduced, if not altogether gone, in the final stages of these regimes. For example, toward the end of its rule, the military government of Chile gradually allowed greater freedom of assembly and tolerated limited activities of trade unions and organizations linked to the Catholic Church, and civil society organizations became a substitute for political parties (Irrarazaval et al., 2006).

Similar developments took place in the last stages of communist rule. The main challenges of that period involved effectively representing the interests of professional groups, such as engineers, technicians, or teachers (Kennedy, 1991; Konrad & Szelenyi, 1979), and overcoming huge bureaucratic obstacles in forming new organizations independent of state control (Kurczewski, 1992; Sokolowski, 2001).

After the termination of the regimes in question, the challenges of survival became mere historical anecdotes, and they were overshadowed by the challenges of rebuilding civil society. Although public attention focused mainly on political functions of civil society organizations, especially their role in restoring democracy, a far more important aspect of the postauthoritarian renewal was the service function these organizations were to perform. The main reason was the emerging consensus about the government–CSS partnership in the delivery of social welfare services (Evers & Lavile, 2004; Gidron et al., 1992; Salamon, 1995), which became the model for the new democracies.

Countries that had already established corporatist government–CSS relations prior to authoritarian rule (e.g., Chile or Germany) had a head start in implementing this welfare partnership model. However, countries in which corporatist relations were absent or underdeveloped prior to authoritarian rule (e.g., Poland) faced a difficult task of developing such a model almost from scratch. This posed a twofold challenge: introducing previously unknown types of social welfare services to the general population and convincing government agencies—unaccustomed to working with private partners—to financially support these services. Civil society organizations, whose innovation role has been established elsewhere (Kramer, 1981; Osborne, 1998), turned out to be a useful tool for service professionals aiming to introduce these novel services (Sokolowski, 2000, 2001). Despite its small capacity in postcommunist countries, the CSS performed an important innovation function during the transition period.

Summary

Totalitarian and communist regimes were transitory historical phenomena that emerged in response to challenges and problems of modernization and industrialization. They aimed at radical restructuring of key social, political, and economic institutions. The main thrust of these changes relied on a centralized state apparatus, and the CSS was generally perceived as marginal to the achievement of these aims. Consequently, these regimes suppressed or promoted civil society organizations according to whether they were antagonistic or instrumental in the achievement of their objectives. For the totalitarian regimes, organizations linked to labor interests were suppressed, and organizations performing traditional charitable functions linked to organized religion were tolerated or supported. The reverse was true for the communist regimes, which dissolved traditional charities, replacing them with public welfare institutions, and promoted large-scale membership organizations as the means of political mobilization and venues for leisure activities.

Totalitarian and communist policies toward the CSS reduced its capacity and strained government–CSS relations. This effect was particularly strong in countries under the communist regime due to two factors, economic backwardness and ruralism prevailing in the onset stage and the duration of the communist interlude, which was considerably longer (about 45 years) than the totalitarian interlude in most countries.

Despite these adverse effects, the CSS experienced quick rebirth after the end of the regimes in question. The most important aspect of that rebirth was the re-establishment of government–CSS partnerships in the delivery of social welfare services. In most countries that experienced totalitarianism, this was in essence a return to the CSS function already in place before the totalitarian period. For countries under communism, however, this was largely a novel function. Civil society organizations played an important role in implementing this innovation by introducing new services and building partnerships with government agencies to establish stable public financial support for the delivery of these services.

Although totalitarian and communist regimes belong to the past in most modern countries, these regimes still live in memory. The political attitudes and intellectual frameworks that they developed still persist in public discourse to this day. They produce misconceptions—especially among civil society leaders in Eastern Europe (and to a lesser degree in Latin America)—that government is the enemy of civil society, and the way to rebuild a robust CSS is private philanthropy rather than a healthy partnership with government. These misconceptions are fueled by neoliberal ideology disseminated by conservative Western think tanks. Perhaps, it is time to put these attitudes, frameworks, and misconceptions to a well-deserved rest.

The American Presidency and Philanthropy Since the Civil War

Gleaves Whitney and Brian Flanagan

Grand Valley State University

The focus of this chapter is on the American presidency and philanthropy since the Civil War. Yet, at the outset, it is important to set the stage, for there are more than a half dozen sources of philanthropy in the early American experience on which later presidents and first ladies would draw.

First are the examples of philanthropically minded leaders. Most famous of all was Benjamin Franklin, whose service and sacrifice made a lasting impression on America's civic culture. Franklin's impact on humankind's quality of life is fathomless, given his voluntary efforts to establish educational institutions, make cities more habitable, found improvement associations, advance science, and safeguard families (for example, by inventing the lightning rod).

Like Franklin, U.S. presidents and first ladies developed the idea and practice of philanthropy more than is generally realized. Indeed, several first families could rightly be considered the nation's "first givers," going all the way back to George and Martha Washington. The first "first family" made heroic sacrifices on behalf of the American founding, first during the 8 years of the War for Independence, then during the 8 years of the presidency.

Second are the U.S. Constitution and significant U.S. Supreme Court decisions, which limited government and helped establish our nation's free-market economy. Chief Justice John Marshall's Court instantiated "the pursuit of happiness" as a material right. Within the free-market framework, businesspeople who earned sufficient income could—and were encouraged to—donate to philanthropic causes. That ethos was certainly strong in the 19th century—as Andrew Carnegie's libraries illustrate. And in the 20th century, one sees the link between business success and philanthropic giving in Bill and Melinda Gates, who established the largest charitable foundation in human history, taking on such challenges as eradicating malaria and ignorance.

Third are the institutions in civil society—churches, temples, meeting houses, and mutual aid societies—that cultivated the philanthropic impulse in human nature. Civil society is an idea with a long history, traceable to Aristotle's *koinonia politike* and Cicero's *societas civilis.* By the time Alexis de Tocqueville visited the United States in the 1830s, it was clear that American civil society was one of our nation's greatest achievements. There were historical reasons for the development of civil society in the United States. Britain's habit of benign neglect toward her North American colonies had forced Americans to be self-reliant. Also, colonial government was less dominating, less intrusive, than government back in the homeland. Tocqueville concluded that civil society was much stronger in America than it was in Europe. Voluntary associations, he observed, were filled with superabundant force and energy to get things done. They performed indispensable functions. Such associations acted as the "independent eye of society," enabling people to help one another when the need was greater than an individual or family could meet, and when state action was too long in coming or not the optimal solution in any case (Whitney, 2002, p. 152).

Fourth is America's particular cultural legacy, which included periodic great awakenings, the transcendental movement, the social gospel, and earnest efforts at moral improvement, altruism, and service to others. Fifth, and especially important in the American context, has been the challenge of the frontier, which encouraged self-reliance. Barn-raising is the iconic expression of “haves” donating time, talent, and treasure to neighboring “have-nots” with whom they were sympathetic. Sixth, from the earliest days of the nation, numerous military engagements have encouraged Americans to give aid to soldiers and military families. Seventh, economists estimate that at least two dozen economic downturns have occurred in U.S. history, the more severe of which were called *panics,* then *depressions,* then *recessions,* which often brought Americans together in a philanthropic spirit.

These seven factors and others would powerfully shape the American ethos of philanthropy among U.S. presidents, first ladies, and citizens. Indeed, the United States would acquire a global reputation for its generosity at home and abroad. Our nation’s reputation for generosity was buttressed by the actions of a few key presidents demonstrating “goodwill to fellowmen,” and making “the active effort to promote human welfare,” which are elements in the typical definition of *philanthropy.*

Two Presidential Models

Two 20th-century presidents in particular have shaped the presidential approach to promoting human welfare—Herbert Hoover and John F. Kennedy. No two modern presidents strike a starker contrast in our collective memory. Citizens today associate one with the gray and desperate images of the Great Depression, and the other with the bright and hopeful symbols of the dawning sixties. We associate one with age and outmoded ideas, and the other with youth and vision. One is judged in textbooks and in popular rankings as a failed president and the other as a near-great president who could have accomplished more, had he not been assassinated. Scholars and citizens continue to debate the divergent legacies of both men, but what receives less attention is a quality they had in common. Hoover and Kennedy are forever linked by their shared faith in American generosity and idealism. Both men inspired and were inspired by the charitable spirit of Americans, and they are drawn together still by enduring models they advanced for using the presidency to stimulate philanthropy. Kennedy’s Peace Corps showed what presidents can do; Hoover’s relief efforts showed what ex-presidents can do; numerous commanders-in-chief have followed in their footsteps.

Hoover and Kennedy agreed on the first principle of generosity in the United States: Ultimately, the servant’s calling must come from within. Hoover was quick to point out that only dictators can demand individual effort from the top down. In democracies, effort must be galvanized “from the bottom up.” Kennedy recognized the same truth in the midst of the Cold War, when he hoped to send young Americans abroad to serve the developing world and to compete for hearts and minds. He saw absolute dictators training and volunteering “hundreds of men and women, scientists, physicists, teachers, engineers, doctors, [and] nurses . . . in the service of world communism.”[1] Can a free society compete? That’s the question Kennedy posed to students at the University of Michigan in 1960. “I think it can, and I think Americans are willing to contribute.”[2]

Where Hoover and Kennedy differed—this is key—was in their use of federal authority to *organize* American generosity. This was at least in part an outcome of differences in context and generational assumptions. Hoover took the oath of office amid prosperity. In the post–World War I years, there was a sense of normalcy in which culture, business, and the middle class flourished. Hoover regarded himself as a president in the spirit of the Progressive era—a period that celebrated government reform, along with the power of professionals and the middle class to assist those in need and to cure social ills from the bottom up. His defeat at the hands of Franklin Roosevelt in 1932 ushered in the New Deal, causing a fundamental shift in assumptions about the appropriate role of the federal government in the life of the nation. When Hoover took office, however, he preferred to use his *informal* powers—above all, professional reputation and prestige—to inspire generosity organized at the grassroots.

Kennedy, on the other hand, became president within living memory of Roosevelt’s and Eisenhower’s administrations, which encouraged the notion, according to political scientist Thomas Cronin, that American presidents were both omnipotent and benevolent (Nelson, 2006, p. 2). No symbol better suggested this notion than Camelot—that idealized castle and court of the wise and benign King Arthur, a legend that came to be popularly associated with the Kennedy clan and administration. Coming before Lyndon Johnson and Richard Nixon, Kennedy was inaugurated in a time when Americans trusted their president to exercise federal power and when academics Richard Neustadt and James MacGregor Burns wrote books exploring ways to further expand the president’s power (Nelson, 2006, pp. 2–3). It is, therefore, not surprising that Kennedy was comfortable taking a different tack from that of Hoover by using *formal* powers—executive orders, public laws, and federal budgets—to organize American generosity from the White House.

Of course, both men and their approaches to government were also shaped by a lifetime of experience before they reached the peak of national power.

Herbert Hoover and Food Relief

Hoover’s approach to stimulating philanthropy was forged through a two-decades-long career in the private sector that took him to distant corners of the world. Orphaned at the age of nine, Hoover lived with various aunts and uncles before matriculating tuition-free at Stanford University. A member of Stanford’s inaugural graduating class, Hoover spent much of his life before the age of 42 amassing a personal fortune as a mining engineer in England, Australia, and China and as a mining consultant all over the world. His successes gained him a considerable professional reputation and a great deal of prestige—two vital ingredients for public influence. He began putting his tremendous wealth and influence—not to mention his organizational skills—to good use for the public interest 15 years before taking the oath of office as president. On August 3, 1914, the American ambassador to Great Britain contacted Hoover, who was by that time a well-known American national in Europe, urgently requesting assistance in relieving and repatriating 120,000 Americans stranded by the "guns of August." By nightfall the next day, Hoover had organized 500 volunteers and a relief center that fed, clothed, and dispatched to the United States his distressed countrymen. Hoover and his engineering colleagues helped finance the operation with a $1.5 million loan. This was only the beginning, as Hoover later acknowledged. "I did not realize it at the moment," he said, "but . . . I was on the slippery road of public life."[3]

Before Hoover's humanitarian career ended, scholars estimate that he kept an astounding 80 million people from malnutrition and starvation. Biographer George Nash contends that Hoover fed more people than any other human being who has ever walked the planet. As a private citizen, he organized what became the Committee for Relief in Belgium (CRB), carrying through combatant lines of German-occupied Belgium meat, beans, wheat, rice, and corn from North and South America and Asia.[4] As head of the U.S. Food Administration under President Woodrow Wilson, Hoover organized efforts on the home front to conserve domestic foodstuffs for distribution in war-torn Europe. "Food will win the war," became Hoover's motto, and citizens from coast to coast supported the effort by participating in Hoover's meatless Mondays and wheatless Wednesdays.

As postwar head of the American Relief Administration, he fed millions of starving Europeans, finding food surpluses across the globe, negotiating prices, and distributing food to places of greatest need. As secretary of commerce, Hoover directed emergency relief efforts after the great Mississippi River flood of 1927 displaced 1.5 million Americans in six states. Decades later, at the end of World War II, President Harry Truman enlisted elder statesman Hoover to feed millions of Germans after their government and economy collapsed. Hoover toured Germany and Austria to assess the situation, wrote commission reports shaping the president's policy, and initiated a school meals program that fed an estimated 3.5 million children.

Hoover's relief efforts made him an international hero. In the United States today, we recall "Hoovervilles"—shanty towns where the homeless gathered during the Great Depression. Abroad, many recall earlier words derived from Hoover's name. "Hoover lunches" (Hoover *Speisungen* in German) fed starving Belgians during World War I and Germans after World War II. *Hooverplein* was a square in Louven, Belgium, named for their hero. To "hoover" meant to help, and to "hooverize" in the United States meant to sacrifice comforts at home to benefit starving allies abroad.[5]

Through all of his relief efforts, Hoover learned four lessons that he would apply to his stimulation of philanthropy during and after the presidency. First, the American people can be counted on to sacrifice their comforts and to mobilize tremendous resources to help neighbors and destitute citizens of the world. His European relief efforts benefited from numerous food and clothing drives on the home front and from fundraising events, individual contributions, and an enormous supply of volunteer labor. "If you tell them what is needed," Hoover said of the American people, "they will give you anything and everything."[6]

A second lesson was that nonprofit organizations are the surest means for providing relief. During World War I, Hoover worked with countless nonprofit organizations to collect and distribute needed resources. The National Committee on Food for Small Democracies, Finnish Relief Fund, Polish Relief Commission, Famine Emergency, and Hoover's own American Relief Administration and European Children's Fund are just a few of numerous examples.

Third, Hoover learned that the best-designed voluntary and charitable efforts are guided from the top but accomplished from the bottom. "Centralize ideas but decentralize execution," he said (Irwin, 1928, p. 193). After World War II, Hoover depended heavily on the American Red Cross, an organization he had counseled in the 1920s. He recommended that the organization rebuild itself on an international scale, with a central office managing the big picture and a decentralized network of local agencies executing voluntary and charitable efforts throughout the world. "Through cooperation with these agencies," Hoover argued, "the support of the whole world can be mobilized on any one point or any one effort."[7] This brand of decentralization was the organizing principle for all of Hoover's relief efforts.

Fourth, Hoover learned that his own reputation and prestige were a crucial force in inspiring others to serve and sacrifice. During and after World War I, Hoover himself traveled the world as European relief's chief diplomat, negotiator, fundraiser, volunteer organizer, and communicator. His presence—his *leadership*—lent credibility and energy to the efforts of countless thousands across the globe. Depend on the people, depend on nonprofits, decentralize execution, and leverage personal prestige—these are the lessons Hoover learned about mobilizing service and giving.

John F. Kennedy and the Spirit of National Service

John F. Kennedy's approach to stimulating philanthropy was forged through an upbringing and lifestyle that stood far outside what was typical of his times. His parents, Joseph and Rose Kennedy, had risen from the middle class to great wealth through Joseph's banking and real estate careers, his dubious trading on preregulation Wall Street, and his sometimes controversial interests in liquor imports and Hollywood film production. Joseph's eventual fortune allowed him to move his family to wealthy Bronxville, New York, and to purchase seasonal homes in Hyannis Port, Massachusetts, and Palm Beach, Florida—where the entire family famously gathered for summers and holidays. It also allowed him to set up $10 million trust funds for each of his nine children. Yet, Joseph and Rose Kennedy cultivated a spirit of national service among their children. "Of those to whom much is given," John Kennedy would later say, paraphrasing the New Testament, "much is required."[8] Public issues and national politics were constant fodder for debate at the Kennedy dinner table. Rose would post articles for the children to read. Joseph would present a subject over dinner, biographer Geoffrey Perret (2001) writes, "for the light of Kennedy brains and wit to play upon" (p. 30). Each member of the Kennedy clan supposed some form of national service was in his or her future, and, in fact, five of the six eligible children volunteered to serve during World War II—Joe Jr. and John in the Navy, Kathleen in the Red Cross, Eunice in the State Department, and Robert in the Naval Reserve. The youngest Kennedy child, Ted, served in the army during the Korean War. The family's commitment was magnified in the years ahead, as each of the three eldest sons—Joe, John, and Bobby—was killed in the service of his country.

In the course of his upbringing and education, John F. Kennedy learned three lessons that, as president, would apply to his encouragement of philanthropy. First, individual leaders are often the shapers of history. He did not believe that huge and impersonal forces move men. "Kennedy felt individuals could make a difference for history, and within limits could make a great difference," said Kennedy adviser and biographer Arthur Schlesinger Jr. (quoted in Smith, 2004, p. 684). This belief was informed by his voracious reading of history and biography—his lifelong study of American and European statesmen. It was also informed by his presence in the British House of Commons in 1939 as Parliament prepared to declare war against Germany, by his own wartime service, and by his contemplation of the momentous effects of political decisions on ordinary people. It was shaped by his observation of Potsdam and the San Francisco U.N. Conference—where he came face to face with the world's most consequential leaders. Finally, it was shaped by his research for two books—*Why England Slept* and *Profiles in Courage*—which uncovered the consequences of both cowardly and courageous individuals.

Second, he learned to put great faith in the power of government to have a positive impact on lives. He came of age during the Great Depression and watched as his conservative father—with the help of Arthur Krock—wrote his 1936 book, *I'm for Roosevelt*, in support of New Deal programs. Faith in government and in Democratic politics was Kennedy's inheritance. His paternal grandfather, P. J. Kennedy, had served five terms as a Democrat in the Massachusetts House of Representatives, then three terms in the state Senate, and finally had given a seconding speech for the nomination of Grover Cleveland for president at the 1888 Democratic National Convention. John Kennedy's maternal grandfather, John "Honey Fitz" Fitzgerald, had been a Democratic member of the Boston Common Council, state senator, three-term U.S. congressman, two-term mayor of Boston, and chair of the Massachusetts delegation to the Democratic National Convention in 1912. John Kennedy's father, Joseph P. Kennedy, had leveraged his business successes to become the first chairman of the U.S. Securities and Exchange Commission under President Franklin Roosevelt and then the U.S. ambassador to Great Britain. John's older brother Joe talked openly about his intention to become president of the United States.

Growing up, John Kennedy would have taken for granted access to the highest public offices available. The year after he was born, Henry Adams—grandson and great-grandson of presidents and son of a U.S. representative and ambassador to Great Britain—described his boyhood meeting with President Zachary Taylor (famously referring to himself in the third person):

> The President was friendly, and the boy felt no sense of strangeness that he could ever recall. . . . As for the White House, all the boy's family had lived there, and barring the eight years of Andrew Jackson's reign, had been more or less at home there ever since it was built. The boy half thought he owned it, and took for granted that he should some day live in it. He felt no sensation whatever before Presidents. A President was a matter of course in every respectable family. (Adams, 2000, p. 46)

John Kennedy—who from an early age traveled the world and met with presidents and prime ministers—must have felt similarly at ease in the presence of power.

Third, Kennedy learned that the American people—especially the young—are eager to serve. In Massachusetts, Kennedy followed in his grandfather Honey Fitz's footsteps as a campaigner who won his seat one handshake at a time (Perret, 2001, p. 24). He continued his intimate campaigning style as a national candidate. Long-time adviser and speechwriter Theodore Sorensen noted that at the outset of his political career, Kennedy had seen much of the world but little of his own country. But by 1961, "it could be said that no President had ever seen so often and known so well the people and the problems of every part of the country" (Sorenson, 2009, p. 27). In fact, Kennedy is credited for being the first president to win his party's nomination through an aggressive, coast-to-coast campaign—on a scale normally reserved for the general election—rather than through back-channel power brokering at the national convention. As he met more and more Americans and witnessed their idealism, he grew confident that he could make a call to service a central theme of his presidency. Have faith in the power of great men and women to make history; have faith in governing institutions; and have faith in the readiness of Americans to serve—these are lessons that shaped Kennedy's approach to mobilizing service and giving.

Organizing Philanthropy From the White House

Kennedy's context and experience prepared him to provide the more aggressive presidential model for organizing philanthropy. His Peace Corps is the model case. The Peace Corps was a program with many fathers, according to Sorensen, including Senators Hubert Humphrey and William Fulbright, Congressman Henry Reuss, General James Gavin, Governor Fritz Hollings, and Kennedy advisers Milton Shapp and Fred Dutton (Sorenson, 2008, p. 329). Senator Humphrey, in fact, introduced a failed Peace Corps bill in the Senate in 1957. However, when Kennedy brought the idea to the 1960 presidential campaign trail, then put the energy of the executive behind it in 1961, the Peace Corps was established. The Peace Corps is an American volunteer program run by the federal government, which sends citizens all over the developing world to provide technical expertise and service. As of 2010, the program had sent nearly 200,000 volunteers to serve in 139 host nations (Peace Corps, 2009). Kennedy used the informal and formal powers of the presidency to make it happen.

First, Kennedy placed himself in the role of "the great man." The large and impersonal forces of history may have factored into his ascendancy, but Kennedy decided to use his moment to push history forward. He called an entire generation of Americans to service. "We are not here to curse the darkness; we are here to light a candle." So said the newly nominated presidential candidate at the 1960 Democratic convention.

> We stand today on the edge of a New Frontier. . . . But the New Frontier of which I speak is not a set of promises. It is a set of challenges. It sums up not what I intend to offer to the American people, but what I intend to ask of them. . . . It holds out the promise of more sacrifice instead of more security.[9]

Six months later, President Kennedy's famous inaugural words articulated his call to service against tyranny, poverty, and disease. "The torch has been passed to a new generation of Americans," he declared. But that generation must know that "here on earth God's work must truly be our own." Then: "Ask not what your country can do for you—ask what you can do for your country." Playing the great man, Kennedy worked to inspire a generation of followers to carry forward his charge to "light the world."[10]

He publicly proposed the Peace Corps at a student rally at the University of Michigan. "How many of you who are going to be doctors are willing to spend your days in Ghana?" he asked in October 1960.

> Technicians or engineers, how many of you are willing to work in the Foreign Service and spend your lives traveling around the world? On your willingness to do that, not merely to serve one year or two years in the service, but on your willingness to contribute part of your life to this country, I think will depend the answer whether a free society can compete.[11]

The public response was overwhelming, so Kennedy proposed the Peace Corps in a national address 3 weeks later. "We cannot discontinue training our young men as soldiers of war," he said in San Francisco, "but we also want them to be ambassadors of peace."[12]

Second, Kennedy used his formal powers in the White House to create a government institution that would organize Americans eager to answer his call to service. Kennedy's Executive Order 10924 established and funded the Peace Corps and its director under the Department of State. "We will send those abroad who are committed to the concept which motivates the Peace Corps," Kennedy said on signing the Executive Order.

> It will not be easy. None of the men and women will be paid a salary. They will live at the same level as the citizens of the country which they are sent to, doing the same work, eating the same food, speaking the same language.[13]

Within months, Kennedy requested and signed Congress's Peace Corps Act to make the program permanent and give it greater definition.

Finally, he released the energy and idealism of the American people. In the last 3 years of his life, Kennedy promoted the Peace Corps with 60 speeches in 20 cities—from Los Angeles to New York and from Chicago to New Orleans. He talked about it in each of his three State of the Union addresses. He talked about it to international audiences at the United Nations and in Bonn, Valencia, Mexico City, and San Juan. The corps began with 500 volunteers in 1961. It grew to 900 by 1963 and 12,000 by 1965 (Sorenson, 2008, p. 332). Using the energy of the executive, President Kennedy organized what was perhaps the largest philanthropic outpouring of his generation.

By contrast, Hoover refused to organize philanthropy from the White House. He believed in the people, in nonprofits, and in decentralized generosity. "The friendliness and charity of our countrymen can always be relied upon to relieve their fellow citizens in misfortune," Hoover said 3 years into his presidency. "This is not an issue as to whether the people are going hungry or cold in the United States," Hoover said,

> It is solely a question of the best method by which hunger and cold can be prevented. It is a question as to whether the American people . . . will maintain the spirit of charity and of mutual self help through voluntary giving and the responsibility of local government. . . . My own conviction is strongly that if we break down this sense of responsibility . . . we

> have not only impaired something infinitely valuable in the life of the American people but have struck at the roots of self government.[14]

Hoover's view was immensely attractive to many Americans in his day, and it remains so today. George H. W. Bush successfully mobilized volunteerism with his articulation of the "thousand points of light." But of course, the Great Depression presented a uniquely devastating set of challenges. Local governments and charities collapsed under the tremendous weight of citizens' needs, and beleaguered Americans had fewer resources to give. The sad irony of Hoover's presidency is that his heroics during and after World War I had been successful, yet had forged in him a philosophy ill-equipped to deal with the depths of the Great Depression. Civil society could not be counted on to provide relief when civil society itself was crumbling.

After losing the 1932 presidential election, Hoover went on to provide a tremendous model for what an ex-president can do to promote philanthropy. First, he lent his prestige to charitable organizations after leaving the White House. The Boy Scouts of America, Boys' Clubs of America, and the American Red Cross, in particular, benefited from Hoover's support. His name was printed on their letterhead; he wrote personal letters of support; and he became their champion.

Second, he was at his president's call to serve. After World War II, he was dispatched by President Truman to assess food needs and food surpluses and to draft commission reports that would shape presidential policy. In the spring and summer of 1946, Hoover—age 71—personally visited nearly 40 nations. He was indefatigable. In March, he visited Canada, Portugal, France, Italy, Switzerland, Czechoslovakia, Poland, and Finland. In April, he was in Sweden, Norway, England, Belgium, Holland, Denmark, Germany, Austria, Yugoslavia, Greece, Egypt, Iraq, India, Thailand, and the Philippines. In May, he was in China, Korea, Japan, Mexico, Panama, Colombia, and Ecuador. Finally, in June, Hoover visited Peru, Chile, Argentina, Uruguay, Brazil, Venezuela, and Cuba. Along the way, Hoover gauged the world's needs, met with world leaders to enlist their support, delivered impassioned speeches, and remained connected to the American people and president. Hoover's travel journal, where he wrote that he had to attend all events "with a mighty painful back," may be the single most valuable firsthand account of geopolitics in the wake of World War II.[15]

Finally, he used personal diplomacy to rally the American people and world leaders to yet another relief effort. "Hunger hangs over the homes of more than 800,000,000 people—over one-third of the people on earth," Hoover told Americans gathered in Chicago. "If we can succeed in persuading every man and woman, every nation to do their utmost, we shall master this famine."[16] "The final voice of victory is the guns," Hoover said in London, "but the first voice of peace is food."[17] Statesman Hoover led the worldwide effort to begin repairing war-torn nations by feeding the starving millions. Hoover himself went on to establish a school meals program that fed 3.5 million children across Germany. "Every day we think of you when we get our Hooverbreakfast," wrote one child from Hamburg, Germany, in a letter preserved at the Herbert Hoover Presidential Library. "The whole day we are happy when we think of the breakfast."[18]

In many ways, the American presidency was both the worst thing and the best thing to happen to Herbert Hoover. The Great Depression and his successor—FDR—greatly diminished the reputation he had built over a long career of service. And yet, the presidential prestige he took with him for the rest of his life, and the drive to repair his broken reputation, fueled one of the most energetic and impactful postpresidencies in history. "You have had the acclaim of the American people; you have had the criticism of the American people," President Kennedy's father, Joseph, wrote to Hoover in 1949. "Now in the twilight of your life, the American people have come to realize that Herbert Hoover is one of our few . . . outstanding men in the public life of this generation."[19]

Summary

Presidents Kennedy and Hoover were great philanthropists in their own right, giving significant sums to charity. In fact, both men gave away every dollar they earned from the federal government. But perhaps their greatest contribution was the example they set for how to use the presidency and its prestige to inspire and organize the giving of time, talent, and treasure. When President Bill Clinton established AmeriCorps in 1993, and when President George W. Bush increased the number of AmeriCorps volunteers by 50%, they were following Kennedy's model. When President Barack Obama issued a call to service in his 2009 inaugural address, he was following Kennedy's model—with a twist: text messages, YouTube, and serve.gov have become primary outlets for the president's call. When Gerald Ford and Jimmy Carter teamed up to promote education and other causes, they were following Hoover. When George H. W. Bush, Bill Clinton, and George W. Bush lent their prestige to relief efforts—in Indonesia, New Orleans, and Haiti—all three men were in Herbert Hoover's footsteps. The Hoover and Kennedy models for linking the presidency and philanthropy endure.

ADVOCACY ORGANIZATIONS

HEATHER MACINDOE

University of Massachusetts, Boston

Advocacy can be broadly defined as an attempt by individuals, groups, or formal organizations to effect social or political change concerning a particular issue. A wide variety of activities constitute advocacy. These include approaches as diverse as public education campaigns, collective action events like marches and demonstrations, and lobbying of elected officials to support (or defeat) proposed legislation (Boris & Maronick, 2009; Reid, 2006). Advocacy can vary in scale as well as scope, involving issues on a city block, an urban area, several states, or a multinational coalition of nations. Engagement in advocacy can be more or less enduring, involving volunteers on a weekend or encompassing paid professionals who build careers pursuing social and political change (Reid, 2000).

Many different types of social actors are involved in advocacy work. Individuals can express their support for specific policies by voting for political candidates who support their views and by donating to their re-election campaigns. Groups of people who share common interests can work together on an issue or cause that is important to them. For example, residents of a town can petition their local government to set aside part of a public park for a dog run or to designate funds to build a bike path or to clean up a playground. Such civic engagement by individuals or groups is an important part of a democratic society. Formal organizations also play a vital role in social and political advocacy.

Formal organizations involved in advocacy have important advantages over individuals or informal groups. Organizations can raise funds specifically to support an advocacy campaign. In addition to economic resources, advocacy organizations have the ability to leverage the expertise of professional staff and volunteers, as well as their involvement in organizational networks, to bring issues into the public consciousness and onto the political agenda (Frumkin, 2002). For students, nonprofit advocacy organizations represent opportunities for current and future employment, for meaningful engagement with political issues, and for participation in the political process, now and in the future. This chapter defines and examines advocacy organizations, with a particular focus on the ways that nonprofit organizations engage in advocacy work.

Defining Advocacy Organizations

Organizations that participate in advocacy work are known by many names, including public interest groups (Berry & Arons, 2003), citizen groups (Walker, 1991), social movement organizations (Zald & McCarthy, 1987), grassroots associations (Smith, 2000), and nonprofit policy advocates (Jenkins, 2006). In part, this diversity of terms reflects their association with different research traditions (Jenkins, 2006, p. 107). For example, the study of interest groups in political science has a shared lineage with the study of social movement organizations in sociology. In this way, the term *advocacy organizations* is a broad label that describes a truly diverse set of organizations (Saidel, 2002). Research across a number of disciplines has discussed the "advocacy explosion," the marked growth in the number of advocacy organizations

Author's note: The author would like to acknowledge helpful comments on an earlier draft from Jennifer Mosley and Christian Weller.

at the national level since the U.S. protest movements of the 1960s (Berry, 1997). Some researchers have argued that the growth in advocacy organizations has increased the diversity of issues that make it to the public agenda; conversely, others have argued that the growth of advocacy organizations has been accompanied by a decreased importance of individual members and a narrowing of the issues represented by these national groups (Minkoff, Aisenbrey, & Agnone, 2009; Skocpol, 2003).

One frequently cited definition of advocacy organizations describes them as "organizations that make public interest claims either promoting or resisting social change that, if implemented, would conflict with the social, cultural, and political, or economic interests or values of other constituencies or groups" (Andrews & Edwards, 2004, p. 485). This definition captures the inherently contested nature of advocacy as a struggle between competing interests. Advocacy organizations negotiate this struggle in different ways. Some organizations target the political structure and attempt to change legislation. Others work at the grassroots level, educating the public to put pressure on the advocacy target, whether it be a corporation, a government agency, or a legislature. While advocacy organizations can differ in the targets of their efforts, the beneficiaries of their work can also vary. Beneficiaries of advocacy can include the organizations themselves, specific groups of citizens (e.g., women, the elderly), or the public at large (Boris & Krehely, 2002; McCarthy & Castelli, 2002).

In addition to variation in the degree of involvement with the government and in the intended beneficiaries of their work, a particularly important distinction among advocacy organizations involves their legal form. Organizations in the U.S. economy generally take one of three legal forms: public (government organizations), for-profit (private organizations), and nonprofit (private tax-exempt organizations). Regulation of advocacy activity varies across these organizational forms. Political advocacy by managers of public organizations is subject to rules that largely restrict public managers from lobbying. However, for-profit firms face fewer restrictions on their involvement in lobbying (Mosley, 2009a). For-profit organizations engage in advocacy on behalf of their shareholders. For example, a car manufacturer might hire a lobbying firm based in Washington, D.C., to lobby Congress about a new law regulating emissions standards for cars that could pose significant redesign and manufacturing costs. Although significant, for-profit lobbying expenses can be a cost-effective attempt to thwart potentially costly regulation. Research indicates that for-profit business interests are widely represented by advocacy organizations. In their study of pressure groups located in Washington, D.C., Schlozman and Tierney (1986) found that 70% of the organizations were representing business interests, while only 20% were nonprofit public charities. In contrast to for-profit firms, nonprofit organizations have a different set of concerns that motivates their involvement in advocacy.

Nonprofit Advocacy Organizations

Nonprofit organizations get tax-exempt status from the Internal Revenue Service (IRS), which recognizes over two dozen tax-exempt categories, including labor unions, social clubs, political action committees, fraternal societies, and other membership-oriented groups (Boris & Mosher-Williams, 1998; Reid, 2000). Nonprofit organizations are prevented from distributing profits to staff, board directors, or other interested parties in the organization. However, contrary to common belief, nonprofits are not prevented from ending their fiscal year with a positive balance sheet. Many nonprofit organizations, those called *public charities,* provide a wide array of goods and services that are recognized to be in the public interest. The nonprofit advocacy sector generally consists of three classifications of organizations, including charitable nonprofits, public benefit organizations, and political organizations (Minkoff et al., 2009; Reid, 2006).

Each of these nonprofit organizations has a separate tax-exempt status and is subject to different rules concerning its involvement in advocacy. In general, these rules represent a trade-off between two factors: tax deductibility of donations and involvement in partisan advocacy concerning legislation and elections. Nonprofits that are eligible to receive tax-deductible donations, an incentive for individuals and corporations to give money, are subject to the most stringent oversight of their advocacy activities concerning legislation and elections.

Advocacy: Lobbying, Elections, and "Everything Else"

Advocacy work includes a very diverse set of organizational activities. When nonprofit organizations are involved in advocacy that attempts to influence public policy, they are subject to regulations that arise from their tax-exempt status (Boris & Mosher-Williams, 1998). A central concern related to advocacy by public charities is the appropriateness of granting tax exemption to organizations for political activities (Jenkins, 2006). An additional tax benefit is conferred on donors to these 501(c)(3) nonprofits, as they can take tax deductions for their contributions. From a legal and regulatory perspective, there are essentially three forms of advocacy: lobbying, electioneering, and "everything else" (Mosley, 2009a, pp. 461–462). Regulations concerning nonprofit participation in lobbying and electioneering are specified in the Internal Revenue Code. The advocacy activities of these organizations are subject to IRS oversight and, in some cases involving political campaigns, regulation by the Federal Election Commission.

Lobbying involves attempting to influence public policy by stating a position (for or against) on legislation to elected officials or to government employees such as Senate staffers. When an organization takes the initiative in this type of lobbying and makes contacts with lawmakers, this is called *direct lobbying* (Fremont-Smith, 2004; Reid, 2006). Another type of lobbying, *grassroots lobbying,* involves encouraging members of the public to contact legislators or government employees and express their support (or opposition) to legislation (Fremont-Smith, 2004; Reid, 2006). Grassroots lobbying differs from direct lobbying in that it includes a "call to action" that encourages the public to contact a government official, provides a way to identify which legislator to contact, or offers materials to assist in making the contact (e.g., a pamphlet summarizing issues) (Fremont-Smith, 2004, p. 288). Advocacy involving lobbying is specifically focused on persuading elected and government officials to adopt a particular position toward legislation. Another form of advocacy concerns political elections. Electioneering or *express advocacy* involves attempts to support or oppose the election of a candidate to political office. Nonprofit involvement in express advocacy is strictly regulated (see below). Tax-exempt organizations found in violation of lobbying and election regulations may be subject to fines and could lose their tax-exempt status. The next section discusses advocacy rules for three types of nonprofit tax-exempt organizations: public charities, public benefit organizations, and political organizations. Public charities, which are tax exempt under section 501(c)(3) of the Internal Revenue Code, are service-providing organizations in a variety of fields (e.g., education, health, arts). They are the organizations that most people think of when they hear the term *nonprofit.* Private foundations are also classified as public charities because they provide grants to nonprofits to support service activities. Public benefit organizations, which are tax exempt under sections 501(c)(4), (5), and (6), include member-focused organizations like labor unions and business leagues. Finally, political organizations, which are tax exempt under section 527, include political parties and political action committees (PACs), which exist exclusively to work in support of (or opposition to) the election of candidates to public office. Regulations concerning advocacy by each type of tax-exempt organization are summarized in Table 18.1.

Public Charities: 501(c)(3)

Public charities receive exemption from federal taxes under section 501(c)(3) of the Internal Revenue Code. In addition to exemption from federal (and often state) income taxes, 501(c)(3) organizations are eligible to receive tax-deductible contributions from individuals and corporations. Tax deductibility of donations serves as an incentive for donors to give money to nonprofits. Of the three main types of tax-exempt organizations involved in advocacy, public charities are subject to the most stringent oversight of their advocacy activities concerning lobbying and elections.

Public charities may engage in a limited amount of lobbying. The IRS has applied two approaches to evaluating public charity involvement in lobbying activity. One approach specifies that organizational resources, including staff time and expenditures, should not constitute a "substantial part" of organizational activity. In response to the vagueness of this standard, Congress adopted section 501(h) in 1976, which details expenditure limits for public charities involved in direct and grassroots lobbying (see Independent Sector, 2009, or Duncan, 2004). Public charities can choose to operate under section 501(h) by filing paperwork with the IRS. Although classified as public charities, private foundations are prohibited from lobbying.

Public charity advocacy organizations can take several actions that constitute exceptions to government restrictions on lobbying. Fremont-Smith (2004) describes these exceptions as (a) publicizing nonpartisan research, which may advocate a position on legislation "so long as there is sufficient information presented to allow the recipient to form their own conclusions"; (b) discussing broad socioeconomic issues without reference to specific legislation; (c) providing "technical advice" on written request from a government agency; (d) lobbying in "self-defense" in response to actions that could impact a charity's existence or tax-exempt status; and (e) communicating with members about legislation as long as lobbying is not encouraged (pp. 288–289; also see Independent Sector, 2009).

While public charities are permitted to engage in lobbying to a limited extent, these organizations are strictly prohibited engaging in express advocacy for or against a candidate for political office (Reid, 2006). In addition to the prohibition on candidate endorsement, public charities cannot contribute money, time, or facilities to a candidate and cannot coordinate activities with a political candidate (Independent Sector, 2009). However, public charities can participate in nonpartisan election activities such as get-out-the-vote efforts, voter education, voter registration, and nonpartisan candidate forums; they can also work on a ballot measure (Boris, 2000; Independent Sector, 2009; Reid, 2006).

Public Benefit Organizations: 501(c)(4), 501(c)(5), 501(c)(6)

Nonprofit organizations with tax-exempt status under sections 501(c)(4) to (6) are subject to a less stringent set of regulations on their advocacy activities. These organizations include social welfare organizations, labor unions, and business leagues (such as chambers of commerce). Such nonprofits do not receive tax-deductible contributions and can engage in unlimited lobbying, both direct and grassroots. In fact, lobbying is permitted to be the primary function of this type of nonprofit, without endangering its tax-exempt status (Independent Sector, 2009). This is in sharp contrast to public charities, which cannot engage in lobbying as their primary or sole organizational activity.

	Organization Type		
	Public Charities	*Social Welfare Organizations, Labor Organizations, and Business Leagues*	*Political Organizations*
Tax-exempt status	501(c)(3)	501(c)(4), 501(c)(5), and 501(c)(6)	Section 527
Contributions tax deductible?	Yes	No	No
Permitted activities	Charitable and educational activities; includes private foundations	Includes activities permitted to 501(c)(3) charities plus any activity that serves public purposes	Primary activity is to influence elections: for example, political parties and political action committees (PACs)
Lobbying allowed?	Yes, to a limited extent (see below) in most cases, but no lobbying allowed for private foundations	Yes, issue advocacy (direct or grassroots support for legislation) is unrestricted	Issue advocacy is a nonexempt activity; such expenditures by 527 organizations may be taxable
Lobbying rules	• Lobbying must not be a "substantial part" of an organization's activities • An organization can elect to operate under section 501(h), which states specific expenditure tests	• No restrictions on lobbying • Lobbying may be primary activity of the organization	• Lobbying is a nonexempt activity, and expenditures for issue advocacy by 527 organizations may be taxable
Political campaign activity allowed?	• Campaign intervention prohibited • No express advocacy for or against a candidate for political office • Nonpartisan activities allowed, for example: voter registration, voter education, get-out-the-vote efforts	• Express advocacy allowed with respect to members (e.g., union members), but not to the general public • Political campaign activity must not be a primary organizational activity	• Express advocacy permitted, unlimited, and tax exempt • Some 527 organizations (e.g., PACs) are subject to limits on donations and expenditures
Reporting requirements	• IRS Form 990 annually • Report lobbying expenses on Schedule A of IRS Form 990 • No public disclosure of donors	• IRS Form 990 annually • No separate reporting of lobbying expenditures required • No public disclosure of donors	• Donors, contributions, and expenditures reported to IRS • Some activities regulated by the Federal Elections Commission

Table 18.1 Overview of Regulations for Advocacy by Tax-Exempt Organizations

SOURCES: Internal Revenue Service, 2008, 2009; Independent Sector, 2009.

Public benefit nonprofits are also subject to less restrictive rules than public charities concerning their involvement in elections. Specifically, they are allowed to engage in express advocacy concerning political candidates, but only with respect to their membership, not the general public (Reid, 2006). For example, a labor union could mail information endorsing a political candidate to union members only. Finally, political campaign activity by public benefit nonprofits cannot be the principal activity of these organizations.

Political Organizations: Section 527

A final group of nonprofit organizations, which is involved specifically with advocacy around political elections, are political organizations with tax exemption under section 527 of the Internal Revenue Code. Unlike public charities or public benefit organizations, political organizations do not provide services to the general public or a specific membership. Instead, they exist solely for the purpose of electing political candidates. These tax-exempt political organizations include political parties, political candidate campaign committees, and political action committees (PACs), which make expenditures to support the election of political candidates. Section 527 organizations receive tax exemption for donations, dues, and fundraising monies, as long as this income is "used to influence the selection of candidates to public office" (Fei, 2000, p. 23). Lobbying is not an exempt activity for section 527 political organizations, so lobbying expenditures by these organizations may be subject to taxation (Reid, 2006). However, express advocacy by section 527 organizations associated with political campaigns can be unlimited, and funds the organizations raise for this purpose are tax exempt.

Research on Nonprofit Advocacy

Explaining Levels of Nonprofit Participation in Advocacy

Previous research has found that 501(c)(3) charitable nonprofits have relatively low levels of engagement in advocacy, particularly lobbying (Berry & Arons, 2003; Boris & Krehely, 2002; Jenkins, 2006). Boris and Maronick (2009) found that the percentage of charities that report lobbying expenses remains consistently low. Relying on data from the National Center for Charitable Statistics, they find that only 1.3% of charities that filed a tax return in 1996 reported any lobbying expenses. Ten years later, by 2006, this percentage had risen to just under 2% (Boris & Maronick, 2009, p. 6). This finding of consistently low engagement in lobbying by public charities is puzzling, given regulations that actually permit nonprofits (including the public charities examined by Boris and Maronick) to engage in a substantial amount of advocacy. A large and growing body of research examines nonprofit advocacy. Of particular interest to scholars is to try to explain why advocacy by 501(c)(3) public charities is so low.

Research that attempts to explain variation in nonprofit involvement in advocacy generally centers on two explanations that emphasize resource factors and institutional characteristics as determining advocacy activity (Chaves, Stephens, & Galaskiewicz, 2004; Nicholson-Crotty, 2007; Suarez, 2009). Some researchers hypothesize that nonprofit organizations that rely on government funding may be less likely to engage in advocacy. Other researchers suggest that having government funding may make nonprofit organizations more likely to participate in advocacy work as they develop relationships with governmental actors. In contrast, institutional explanations of nonprofit advocacy involvement have focused on how the political and cultural environments in which nonprofits operate influence the extent and nature of their advocacy activities.

Resource Dependence Explanations

Many scholars have argued that the most significant deterrent to nonprofit involvement in advocacy work is the relative threat to the financial stability of the organization. Resource dependency theory posits that dependence on government funding might stifle nonprofit advocacy that challenges the political status quo (Chaves et al., 2004). In fact, a few nonprofit executives have reported outright punishment from the government in response to nonprofit advocacy. In their study of the impact of government funding on nonprofit political activity, Chaves and colleagues (2004) found that some nonprofits claimed governmental agencies had ceased grant support and referred fewer clients to their agencies. While such examples are rare in the literature, this does not prevent nonprofits from fearing retaliation that would impact their funding. The fear of losing tax-exempt status is often mentioned as an explanation for why many nonprofits fail to engage in advocacy work, or do so to a much lesser extent than what is legally permitted.

One theoretical explanation of resource dependence suggests that the level of government funding has an inverse relationship to the level of advocacy in nonprofits (Schmid, Bar, & Nirel, 2008). As the level of government funding increases, according to this theory, the level of political advocacy would decrease. However, some empirical research refutes this theoretical claim. Several studies have found that, to the contrary, the dependence on government funding in fact has either a positive or a null effect on nonprofit political activity (Chaves et al., 2004; Mosley, 2009b; Nicholson-Crotty, 2007). Both Mosley's research on Los Angeles human service nonprofit organizations and Nicholson-Crotty's research on reproductive health nonprofits found that an increase in government funding correlates with an increase in advocacy activity. Mosley (2009b) suggests that "government funding may be more important in increasing ties and legitimacy than in controlling the activities of the organization" (p. 529). In other words, government funding may serve as a kind of enfranchisement for nonprofits, buoying civic engagement.

In addition, the relationships between government and the nonprofit sector may be more mutual and interdependent than resource dependence theory predicts. Due to the growth of devolution and the privatization of public services, the provision of social services has been extensively subcontracted to the nonprofit sector. This contracting has created government-nonprofit relations that entail reciprocity. While nonprofits are dependent on the government to provide funding, the government is dependent on nonprofits to provide services (Chaves et al., 2004). Because the government is dependent on the nonprofit sector to implement its social welfare mandates, nonprofits may have less to fear in terms of punishment from the government for challenging the political status quo. Furthermore, Marwell (2004) argues that elected officials often rely on nonprofits to build voting blocs. Because the services provided by many nonprofits bind citizens to their organizations, nonprofits may actually develop voting constituencies for local elected officials, who in turn steer contracts to the nonprofits (Marwell, 2004). Nonprofits' fear of a punitive response by government funders may be somewhat misguided, as the nonprofit sector may have more power than it realizes.

Yet, resource dependence theory's explanatory power extends beyond a concern about possible loss of tax-exempt status for nonprofits. The effects of government funding on nonprofits extend to their organizational structure and behavior. As nonprofits evolve to meet reporting and other demands from government funders, their involvement in the community and with their clients may change, "redirecting organizational attention, energy, and resources away from political activity and toward administrative activities made necessary [by the parameters of] government funding" (Chaves et al., 2004). This metamorphosis requires that nonprofits focus more on the processes of service provision rather than the ideological character of their programs, civic engagement, and advocacy on behalf of their constituents.

New Institutional Explanations

Nonprofit researchers have also looked to new institutional theory to explain nonprofit involvement in advocacy. New institutional theory asserts that the legitimacy of nonprofits stems from conforming to cultural norms and institutional rules (Mosley, 2009b). Normative rules for organizational behavior are established and imposed by funders, the public, state agencies, and professional associations (Nicholson-Crotty, 2007). As Suarez and Hwang (2008) state, "Many activities emerge from cultural scripts or institutional logics rather than from the functional demands of the market" (p. 98). In other words, the political and cultural environment in which a nonprofit operates can influence whether or not the organization participates in policy advocacy and what kinds of strategies and tactics a given nonprofit might find feasible and effective.

The more enmeshed nonprofits are in their sociopolitical environment, the greater the influence of social and institutional norms on their advocacy behavior. With the professionalization and standardization of administrative activities through the requirements dictated by government funders, nonprofits may be subjected to coercive pressures in an environment in which the established institutional norm is to dedicate organizational energy and attention solely to service provision and to refrain from political activity (Schmid et al., 2008). However, Suarez and Hwang (2008) identify two instances in which nonprofits' sociopolitical environment might encourage policy advocacy, specifically nonprofit involvement in lobbying. In their examination of the policy advocacy activities of human rights and environmental organizations, they found that nonprofits working in "fields characterized by an institutional logic of social change" might be more likely to lobby (p. 101). In addition, Suarez and Hwang argue that nonprofits facing "cross-sector competition" with other organizations might also be more likely to lobby.

Expanding Definitions of Advocacy Activities and Advocacy Organizations

Another area of research on nonprofit advocacy has focused on refining the definition of advocacy, with specific attention to the types of organizations and the specific organizational activities involved in this work. For example, Boris and Mosher-Williams (1998) argue that the traditional rights-oriented concept of advocacy organizations, as working on behalf of others, should be expanded to encompass civil society organizations. Using data from the National Center for Charitable Statistics, they demonstrate that existing organizational typologies can be adapted to enlarge the group of nonprofits ordinarily selected for examination as advocacy organizations. Because nonprofits participate at multiple points in the policy process, these researchers "conceptualize a continuum of advocacy organizations that moves from the narrow definitions of rights-oriented groups to those engaged primarily in public education and community building" (Boris & Mosher-Williams, 1998, p. 492). This research persuasively demonstrates that traditional notions of advocacy organizations should be expanded to include a multitude of other nonprofit organizations that, while they may not explicitly advocate for the rights of a specific group (e.g., veterans or children), are nonetheless an important part of the policy advocacy process. This focus of different types of organizations has been echoed in a call to reconsider the range of organizational advocacy activities.

In their analysis of nonprofit advocacy, McCarthy and Castelli (2002) argue that many discussions of nonprofit advocacy organizations fail to specify the "range of behaviors" that constitute advocacy (p. 106). Furthermore, they argue that the variety of terms (e.g., social movement organizations, public interest groups, etc.) that are applied to advocacy organizations focus on the "stated organizational goals rather than patterns of action" (p. 108). In a philosophically similar approach, Duncan (2004, pp. 9–10) identifies six types of advocacy activities. While no typology can fully capture the range of advocacy activities in which nonprofit organizations engage, this list is a useful catalog of possible organizational activities. Where appropriate, terminology used by other researchers is noted. Duncan's list of advocacy behavior includes the following:

1. Agency advocacy, which is focused on ensuring access to services for individuals or groups.

2. Legislative advocacy, which seeks policy change through an appeal to legislators or other government employees. Other researchers call this lobbying and distinguish between direct (organization initiates contact) and grassroots (organization encourages the public to initiate contact) approaches (Reid, 2006).
3. Legal advocacy, which focuses on protecting and expanding rights through the legal system.
4. Community advocacy, which educates citizens about issues through the media.
5. Issue advocacy, which identifies social problems and possible solutions. Other researchers have used this term to apply to lobbying (Reid, 2006).
6. Political campaign advocacy, which other researchers call express advocacy and which entails advocating on behalf of particular candidates and is forbidden to public charities (Boris & Krehely, 2002).

The next section highlights new developments in nonprofit advocacy that suggest possible expansions to existing typologies of advocacy activities.

New Forms of Nonprofit Advocacy

Scholars have identified several interesting new approaches in nonprofit advocacy, two of which are reviewed here. The first approach involves the growing use of technology, including the Internet, by nonprofit organizations. The second new form of nonprofit advocacy involves new interorganizational relationships, including coalitions of nonprofits, and coordinating efforts across different types of tax-exempt entities.

Technology and the Internet

Many nonprofits are using the Internet as a "low-cost and low-risk" way to reach multiple diverse constituencies (Boris & Maronick, 2009, p. 1). This use of technology involves a variety of activities: raising money from online donations, educating the public via e-mail newsletters, broadcasting e-communications to e-mail listservs, and attracting new volunteers, customers, and clients (Boris, 2000; Reid, 2006; Suarez, 2009). In his study of Internet advocacy by nonprofits, Suarez (2009, p. 267) argues that the Internet presents a "novel opportunity for nonprofits to scale their social impact" but cautions that the use of the Internet is a "nascent" research domain and that much remains to be learned about its genuine impact on nonprofit advocacy practices and advocacy outcomes.

Organizational Coalitions

Another development in nonprofit advocacy is the growth of organizational advocacy coalitions. These coalitions vary across issues, duration, and the makeup of the organizational members (e.g., nonprofit and for-profit). One approach has been for nonprofits to make strategic use of the tax-exempt regulations to establish "complementary organizations and segregate activities into the appropriate use" (Boris & Maronick, 2009, pp. 11–12). For example, a nonprofit organization working on the same issues might have a 501(c)(3) charitable nonprofit (accepting tax-deductible donations and providing services); a 501(c)(4) social welfare organization, which is permitted to conduct issue advocacy; a "connected" PAC, which can raise funds for political candidates; and a related section 527 organization (Boris, 2000). According to Reid (2006), these separate organizations "are part of a complex organizational structure that cannot share control of day-to-day activities but can have overlapping boards, share advocacy goals, collaborate on strategies of action, and manage their resources in ways to best achieve their political ends" (p. 363). The transfer of resources between these organizations is regulated such that resources raised in one tax-exempt structure cannot be used to "subsidize activities elsewhere that the nonprofit [that raised the funds] cannot itself conduct" (Reid, 2006, p. 363). The complexity of this coordinated approach to advocacy requires organizational sophistication and ongoing monitoring of evolving regulations concerning permitted advocacy activities and rules about fundraising and expenditures for each type of tax-exempt organization (Boris & Maronick, 2009; Reid, 2006).

Summary

Nonprofit advocacy organizations are important to the student of nonprofits for a number of reasons. For students who wish to study the nonprofit sector, it is important to understand and appreciate the complex regulations that govern how nonprofit organizations can participate in policy advocacy. Tax-exempt organizations are an increasingly important part of partisan politics. They shape public opinion about elections, the way voters behave, and what issues make it to the policy agenda. Legal regulations concerning these organizations (e.g., section 527 political organizations) are evolving and are likely to continue to influence electoral politics in the future (Reid, 2006). In addition to being an important influence in public policy advocacy, nonprofit organizations are a large and growing sector of the U.S. economy. For some students, organizations in the nonprofit sector may become employers in the future. At some point in their lives, many students will benefit from services provided by nonprofit organizations and will make donations to nonprofit organizations whose work they support. Finally, nonprofit advocacy organizations provide students with meaningful ways to be involved in their communities as volunteers and members and can serve as an important training ground for their postgraduate civic participation.

Role of the Nonprofit Sector in Leading Innovation in Public Policy and Social Change

Shannon Dosemagen
University of Wisconsin, Milwaukee

The nonprofit sector has long been viewed as the third sector or the service sector. It tackles a vastly diverse range of issues and problems that society faces, and it seeks to create a better social environment for people. The nonprofit sector is constructed of multiple identities and ideas that intermix and work to create social change, generate new ideas on ways to solve problems, and help determine the direction that public policy will take. The nonprofit sector also relies heavily on the tradition of volunteering that is deeply embedded in the fabric of the United States. With the combination of boards, staff members, and volunteers, nonprofits have the ability to approach social issues with multivalent perspectives and opinions. This is one of the unique attributes of the nonprofit sector: Diverse groups of people from all walks of life are working on an equally diverse set of issues.

The nonprofit sector is also the ideal place to begin tackling social issues because of the variance in organization focus and organization structure. Nonprofit organizations can be broad in scope, focusing on human rights violations across the globe without a regional focus, or they may specifically look at ensuring that youth in a certain location have access to a park in their neighborhood. This range of focus allows nonprofits to play a role not only in the global community, but also in each of the local communities of which they are physically a part. Thus, this sector is the ideal location to begin thinking about ways in which social change and new public policy can be envisioned, tested, and then implemented on a number of different scales from the local to the global.

The nonprofit sector is also in the unique position of being driven largely by people and other organizations or foundations that support the mission and vision of the nonprofit. In this way, the public also has a say in the advocacy and social change initiatives that nonprofits work toward and introduce into public dialogue. Unlike the business sector, the nonprofit sector cannot make decisions in isolation. Nonprofits are accountable beyond the broad organizational umbrella to the public, and thus the social change and public policy that nonprofits engage in are likely to address the concerns of different segments of society. This chapter will address the role of the nonprofit sector in creating and leading social change and public policy as well as experimenting with new ideas.

This chapter will focus on three main ideas. In the first section, it will briefly define what public policy is and then provide a short history of the interaction of nonprofits with public policy. Then, it will discuss why this engagement is important and look at the way that nonprofits act as public advocates. Finally, there will be a short case examination of how the nonprofit sector has helped to change public policy relating to AIDS. In the second section, this chapter will discuss the role of the nonprofit sector in creating and leading social change. After a brief history of nonprofit interaction with social change focusing on grassroots nonprofits and social activism in nonprofits, this chapter will look at three different case examples in which nonprofit organizations helped to lead social change. The third section will discuss why the nonprofit sector is the ideal location to begin experimenting with new ideas and look specifically at three different types of new ideas in which nonprofits have engaged. This chapter will end with a short discussion of future directions for nonprofit organizations in relation to leading public policy, social change, and new ideas.

Public Policy and Nonprofits

The idea of public policy is twofold in that it includes both the actual written and governing documents and policies by which our government and citizens abide and also the critique and analysis of those policies. It is important for the nonprofit to engage with public policy making on every level, from the basic community to the national level, if those policies will affect the work of a nonprofit (Hula & Jackson-Elmoore, 2001). Nonprofits must stay engaged with the policies that guide their organizations, and they need to have a strong voice in developing policy that ensures the continuation of public funding and public support. Nonprofits are essential in creating public policy change because they are the medium between the public and government and ought to represent the best interests of citizens and the community that they serve. Without nonprofit organizations interacting in the policy-making process, funding allocations and policies might not be in critical response to the public (Rathgeb Smith, 2007). In the public policy-making process, nonprofits thus serve as both the advocates and middle ground between the public and the government (Crutchfield & McLeod Grant, 2008).

The Role of the Nonprofit Sector in Changing Public Policy

Public policy is embedded in the fabric of our society, and thus, it is important for people to engage with the policy-making process to avert a society that is alienated and disengaged from the policies and rules by which it is governed. Not everyone, however, has the opportunity to voice their opinion. This is where the nonprofit sector comes in. The nonprofit sector is essential for acting as the public's voice and thus interacts and works toward changing public policy in a number of different ways that will be discussed in this section.

First, nonprofits are the organizations that engage with the social problems that the other sectors (business and government) are not adequately addressing. In an era in which the government outsources to private nonprofits and for-profit companies to fill the gaps in the social services they are providing (Brock, 2001; Mitchell, Longo, & Vodden, 2001), it is even more important that the nonprofit sector engage in public policy change. The nonprofit sector many times is the sector working directly with communities on localized social problems. Thus, nonprofit organizations may be more authoritative in lobbying[1] and advocacy processes than policymakers who have little direct experience with the community.

Nonprofits are able to act as a voice for marginalized communities in the public policy process (Brock, 2001). Many times, the organizations that work the closest with communities have done door-to-door surveying or research and have the quantitative statistics to identify critical needs for the community (Van Til, 2000). As nonprofits have the closest connection to the communities that policies target, they have a responsibility to serve the people with whom they work and to be advocates for their community (Bryce, 2005, 2006). For example, when policy is aimed to benefit developers who seek to gentrify and economically displace communities, nonprofit entities can voice public consensus and help show either negative or positive impacts on the economics, structure, health, and stability of residents.

The nonprofit sector also plays an important role in changing public policy because it both researches the community that policy will affect and acts as advocate (Bryce, 2005). Nonprofits should be at the forefront of public policy advocacy. Simly working directly with people is not enough. With parties having multiple perspectives that may or may not be beneficial to social communities, nonprofits should make sure that the best interests of the residents they are working with are served. The process of advocacy includes lobbying and dialogue with policymakers about the actual governing documents. It also includes educating people about policies that may affect them and ensuring that people have a say in the decision-making process; if individuals are not being heard, nonprofits can help voice public consensus that is being overlooked.

One other strength of nonprofits in garnering public policy change is the actual structure of the organizations. Nonprofit boards, executive committees, honorary chair people, and volunteers often are well known in communities (both physical ones and interest categories) and thus can be a strong source of advocacy for a particular social issue. As mentioned at the beginning of this section, nonprofits must engage in multiple levels of policy, ranging from the local level to the national or international level if they are a larger nonprofit. Although this may seem like a difficult challenge, having to come up with resources themselves, nonprofits should be present at different levels of policy making (Hula & Jackson-Elmoore, 2001) because policies most critical to the mission of the organization are often made at the most localized level. Thus, the role of the nonprofit sector should be to engage in policy and help to educate people with whom they work about the policies that affect them. In addition, nonprofits should advocate for the interests of their constituents and be a supporting voice for people who may not be able to speak freely for themselves because of their social position.

Case Examples of Public Policy Change Resulting From Nonprofit Action

An organizational example of a nonprofit organization that is trying to change public policy is Growing Power.

This organization was started as a grassroots effort in Milwaukee, Wisconsin, and is now a national organization, and its model is used widely in organizations that work with sustainable food systems. The mission of Growing Power goes beyond developing sustainable food systems to involving community members and youth in educational programs, creating a chain in which healthy, sustainable food sources are an essential part of a healthy and thriving community. Growing Power specifically works on public policy relating to food systems, and the organization is involved in the policy change-based organization, The Chicago Food Policy Advisory Council. It also works with government initiatives related to food security and sustainability, such as the Illinois Local and Organic Food and Farm's Taskforce (Growing Power, n.d.).

The foundation of the Growing Power mission is to create sustainable food systems with integrated outreach and educational programs (Growing Power, n.d.). However, Growing Power also sees advocating policy relating to food security and sustainability as essential to its mission. As green reform and urban agriculture are relatively new to the mainstream public, organizations like Growing Power need to concentrate on advocating policy surrounding food systems, or decisions will be made without consideration of the communities, farmers, growers, and other beneficiaries of food sources. With its policy change efforts involving multiple platforms, Growing Power is a model of how organizations can interact locally and on a nationwide scale with the policy process.

Moving from the individual organization to the nonprofit sector in general, nonprofits have played a large role in public policy changes relating to AIDS. The nonprofit sector pushed forward new forms of public policy in the late 1980s when the government would not recognize the effects of AIDS on socially marginalized populations of people such as gay men (Sheridan, 2008). The nonprofit sector successfully spearheaded efforts that resulted in a joint effort of government-based health care and the nonprofit sector (Sheridan, 2008). This partnership between the government and the nonprofit sector successfully addressed the emerging crisis that HIV/AIDS was creating for health care systems. It demonstrates that nonprofit organizations centered on HIV/AIDS research and care were able to use their position as advocates and experts, who had worked in communities being hit the hardest with the HIV/AIDS virus, to change public policy. They could then transform their approach to working in HIV/AIDS research so that they could better serve their constituents.

Social Change and Nonprofits

The term *social structure* is used to discuss the relationships between individuals and groups in societies. Social structures are complex and describe relationships such as how governments interact with their citizens, how children are integrated into educational systems, and how segregation happens in an urban location. The term *social change* thus designates changes that are made in social structures, and this includes group organization and interaction, basic behaviors, and the values placed on different facets of our social lives. Social change arises from both individuals and groups, primarily when something happens in society that people feel is unjust or not in the best interests of the public. Social change, although it can come from the top down (or the government down to the public), primarily happens through a bottom-up model, which means starting with the people who make actual changes in the social structures and public policy or laws that govern a body of people. Nonprofits play a large role in social change because they are typically the organizational body that develops funds and generates momentum behind issues that call for social change. This chapter will look at the role of the nonprofit sector in challenging social issues and creating social change.

The Role of the Nonprofit Sector in Social Change

The nonprofit sector can shape social change in a number of different ways. This section will concentrate on four of them. The role of individual nonprofit organizations is to act as the embodiment of public consensus (Reid, 2006). Thus, nonprofit organizations act as an activist device, advocate for change, and work toward empowering the community with which they work. The biggest role of nonprofits in working toward social change is to locate the problem, engage with community members, and then help to find solutions for the issues that people are facing (Rose-Ackerman, 1996). One of the strengths of nonprofit organizations is that they link what they are doing, whether in the environmental, medical, or cultural fields, back to human populations. Even organizations such as the Sierra Club, which might seem to be concerned only with environmental conservation and justice, have embedded in their mission the idea that conserving the environment will lead to healthier and happier people. Nonprofits can also play a large role in conducting research and analysis of social issues by interviewing community members, holding community meetings, and acting as an organizational catalyst to get people thinking and working in the same direction.

Second, nonprofits, like individuals, can act as the activist apparatus. One of the strengths of the sector is that nonprofits exist only if there is a backbone of community supporters and funders to promote the organization's mission. Many nonprofit organizations have staff members who act as community organizers or community advocates. The role of a nonprofit as an activist force is one in which ideas and hopes meet structure and the ability to act and push for change (Hessenius, 2007). Activists work from the ground up, building volunteer support bases, and then mobilizing people, potentially using a nonprofit backdrop as a source of support to make people aware of the issue and to engage in direct action.

The 1999 World Trade Organization protests are an example of direct action. Hundreds of organizations, nonprofit and otherwise, as well as individual participants, came together to dispute trade negotiations that were happening at the largely private meetings. A number of these groups were what are termed grassroots organizations or organizations that are developed at the local community level, either to tackle specific localized issues or to look at global social issues that affect the local community. Grassroots organizations have been both highly successful and visible within the last decade because they are better able to engage with community members, act as advocates for change (Hessenius, 2007), and then help to empower their communities. With the onset of the new "green revolution" since the early part of this millennium, the mantra of "go local" has also begun to re-construct the way that we organize our communities. Although the global nonprofit organizations that fight for the broader issues of social justice, human rights, hunger relief, poverty reduction, and environmental conservation will by no means become a thing of the past, there has been a drive to look inward to our own communities and reconsider how we tackle local problems and address communal concerns.

Third, nonprofits can act as advocates for social change. The basic idea of advocacy is that an advocate speaks for another person or group. Nonprofits can engage in the role of advocacy by acting as the public voice for different groups of people (Reid, 2006), especially people who have been historically marginalized or oppressed because of their social background. Many times, naturalized hierarchies in our society leave out of public dialogue the people whom social problems are most directly affecting. The role of the nonprofit sector can thus be one in which nonprofits act as a catalyst for getting equal recognition of social problems (Hessenius, 2007), regardless of where a community is located or how much money it has. Nonprofits typically concentrate their work on communities that have been marginalized because they are unable to get their voices heard. Nonprofits typically do not interact or advocate for change for affluent communities because these communities most directly benefit from existing social and political structures. Nonprofit organizations also advocate for the voiceless, as in environmental or cultural heritage sites, by acting as the unit that protects and advocates for the future conservation of locations of concern. Nonprofit advocacy is also many times political (Reid, 2006). Nonprofit organizations take the role of acting as the public voice for communities in political debates or courts of law and with people who may not agree with the complaints of these communities.

This is where the fourth and final role of community empowerment comes in. Nonprofits and their communities would find themselves in a static, unchanging position if nonprofits did not also seek to empower community members. In community empowerment, nonprofits take the ideas, direct action that they have worked toward, and models that they have found beneficial and then direct them back into communities. This is so that people in the community can either develop a stronger identity and thus a more powerful political voice or continue to work on the problems that the nonprofit has addressed within their community. Community empowerment allows for people to contribute to the solutions to their problems; it builds a stronger bond between community members and the physical location of the community and helps people to work through creating their own, locally determined solutions to problems (Hula & Jackson-Elmoore, 2001). Larger nonprofits can engage in this type of community empowerment as well. The issues that engage larger, global nonprofits exist in localized areas, and thus a step for these larger organizations would be to do ground-level work and community empowerment so that local and global activist networks are developed that can resolve critical issues. One of the main benefits of community empowerment is that it negates the "victim" category into which groups of marginalized people are often clumped and constructs communities around the idea of people being survivors, able to speak and act for themselves and engage critically in the social problems facing their neighborhood.

Case Examples of Nonprofits Working in Social Change

The nonprofit sector consists of organizations working in a multitude of niches (Galaskiewicz & Bielefeld, 1998) for a diverse array of social causes. However, this final section will give case examples of how nonprofit organizations engage in social change from two different sectors, environmental and cultural.

T.R.U.E. Skool, Milwaukee, Wisconsin

T.R.U.E. Skool is a cultural organization that was developed in Milwaukee, Wisconsin, to teach the arts of hip hop culture to local youth, including classes in aerosol art, break dancing, DJing and emceeing (verbal rhyming). T.R.U.E. Skool uses education and cultural art forms as a foundation of the organization, but as with nonprofits working in social change, this is simply the basis for what this organization hopes to achieve through its work. First, the organization uses participants from Milwaukee's hip hop community to teach classes on these art forms. In this way, the organization seeks community engagement instead of isolation. By engaging the expertise of the community, T.R.U.E. Skool also develops a core of community support, at the same time making sure that youth who participate in classes are actively engaged with community members and elders who have been participating in hip hop for years.

Second, T.R.U.E. Skool does not simply want youth to participate in their educational programs; the organization works toward creating leadership skills and empowering youth in their daily lives, as many participants in their programs come from marginalized backgrounds. The group's mission statement suggests that cultural education is simply the first building block for youngsters as they learn and use a skill set that will help them become stronger people and thus community members. "We advance our mission by infusing conflict resolution, self-expression, non-violence, youth organizing, community activism and community service projects into our programs and services" (T.R.U.E. Skool, 2009). Finally, as a local grassroots organization, T.R.U.E. Skool hopes that its program will be successful in Milwaukee and that its model can be used for working with and empowering urban youth in other locations.

Northwest Sustainable Energy for Economic Development (SEED), Seattle, Washington

Northwest SEED is a nonprofit organization that was founded in 2001 with the mission of "establish[ing] a clean, diverse, and affordable Northwest energy system" (Northwest SEED, 2009). This organization pushes for social change by working with communities to create long-term goals. Particularly, Northwest SEED hopes to create a sustainable energy alternative for the American Northwest by 2025. A number of different group initiatives not only will service the community but also actively engage members in the social change.

Northwest SEED ties together educational initiatives with partnerships that they have created in different communities throughout the Northwest. It will engage the communities in the process of environmental action it is attempting to spearhead. This organization is also a prime example of how a localized initiative largely supported and funded through a nonprofit organization has the potential to interact on the global level because creating sustainable energy is one of the largest initiatives in the forefront of the current "green revolution." As with T.R.U.E. Skool, Northwest SEED can serve as a model for similar projects across the nation. Finally, Northwest SEED is a prime example of how nonprofits working for social change can be concerned with a number of different types of social concerns while working for the benefit of human communities. The principal mission of Northwest SEED is to develop sustainable energy projects and an economic basis for sustainable energy, while at the same time creating sustainable jobs.

Nonprofits and Experimentation With New Ideas

The idea of experimenting with new ideas may seem to be a concept that is easily approached and defined. However, this is not the case. Many times, when traditional approaches to problems and an organization's work are effective, these organizations will avoid change. This is similar for all organizations including the government, business, and nonprofit sector. To keep with traditional static approaches to operations may be smart in some instances, but static approaches do not take into account the changing social needs of the public. Therefore, the nonprofit sector is the ideal location for organizations to begin experimenting with new ideas and approaches to embedded social issues. Nonprofits represent the sector that should be most concerned with representing the public interest and serving the public good. Thus, through their missions, nonprofits should constantly be engaged in experimenting with new ideas and approaches that will help strengthen the organization's mission-based work.

The category of new ideas is ambiguous and could potentially cover many different areas of nonprofit work. This section will touch on three ways that nonprofits have begun to experiment with new ideas. First, nonprofits have reached outside the boundaries of their own organization to begin sharing ideas and resources. In the current economy of sparse resources, sharing ideas, approaches, and models to work on nonprofit issues can lead to new solutions (Walden, 2006). Nonprofits can work on social issues in a community with other nonprofit organizations, with businesses (Arsenault, 1998), or with governmental groups. One of the strongest current trends in nonprofits is to partner with businesses that want to put money into the local community (Austin, 2000), ensure the economic stability of the community in which their business is located, have a place where employees can volunteer, and collaborate on topics in which the business might be interested. This type of partnership gives nonprofits the opportunity to expand their traditional approaches to social service (Rathgeb Smith, 2006), and it provides a stronger pool of volunteer support and potentially an additional source of funding (Simsa, 2003). Although many organizations and businesses are competitive with one another, it is important that groups work together with the goal of benefiting the community. It is also important to realize each organization's impact on the community and see the potential in partnering with groups that, from the outside, might not seem like the best match but overall have similar goals and desires for the community (Cheng, 2009).

Second, the nonprofit sector both abides by the phrase, "think globally, act locally," and turns it on its head: "think locally, act globally." The broad ideas that nonprofits develop can be global in influence and then applied at the ground level. Currently, looking back to the examples of T.R.U.E. Skool, Growing Power, and Northwest SEED, these organizations are all engaging in the "think locally, act globally" model. They are starting at a local level, working directly with smaller communities, and then using their model to branch out and interact with national (and even international) populations. By first partnering with businesses and other nonprofits in their neighborhood and addressing the needs of the immediate community, these organizations are able to build a stronger organizational model that can be developed and used in a number of different scenarios and locations. These nonprofits have engaged with new ideas by concentrating on building collaborative partnerships that benefit the work they are doing in the local community (Hula & Jackson-Elmoore, 2001) and then looking globally for how their organization and its successes can benefit communities elsewhere.

Finally, nonprofits are beginning to engage with the experimentation of new ideas through the way that they approach problems. An example of this is a recent campaign that Serve, a nonprofit marketing group, did for the Shaken Baby Association, Inc. In the campaign, the group did a "radio roadblock" (Stephenson, 2009) in which every radio station that chose to participate had the sound of a crying or screaming baby at the exact same time, ending with a message about never shaking a baby. If listeners tried to change radio stations to escape the sound of the crying baby, they would be met with the same thing on almost all radio stations, essentially creating an inescapable moment. Following up on this "radio roadblock," the Shaken Baby Association, Inc. held community meetings and addressed different ways to handle crying children via an interactive website designed for them by Serve. This scenario demonstrates not only the collaborative approach that these two nonprofit groups took in approaching shaken baby syndrome, but also how organizations can engage in new ideas and approaches to old problems so that they can adequately reach a contemporary audience (Kotler & Roberto, 1989) in this hyper-technological society.

Future Directions

In planning for the future, nonprofits can make an important move by continuing collaborations and partnerships that will strengthen the work that each organization does. This section will discuss one principal future direction that the nonprofit sector can take and has begun experimenting with in creating social change, changing public policy, and experimenting with new ideas.

Nonprofits in Cyberspace

We have entered an era in which cyberspace is a primary communication medium. People seek information on the Internet more and more often, and they also interact with nonprofits primarily through the different resources that nonprofit organizations provide via cyberspace (Reid, 2006). Nonprofit organizations must first figure out how to represent themselves and to determine what audience they want to access via their visibility on the Internet. Nonprofits can simply have organizational websites, or they can create various identities through social networking sites such as Facebook, MySpace, Twitter, blogs, YouTube, and podcasts. To have a more visible identity on the Internet, nonprofits must generate technological savvy among employees. Staff members have a deep knowledge of the work that they do and can contribute outside of organization-based web presence to dialogues that are happening on other blogs and news sources.

Nonprofit organizations can also use the Internet for their benefit because of the immediacy that cyberspace provides people. Nonprofits can generate e-mail lists and send out e-newsletters or even petitions, where people can either sign or donate money by just clicking a button. This is especially beneficial for nonprofits that are working in public policy or other activities in which a last-minute surge of support can be useful. Nonprofits also can be much more engaged with their community via the Internet by having forums, discussion boards, and comment areas on their website so that people can pass on information and opinions to the organizations.

Cyberspace also allows for the development of social networking so that communities (Anderson, 1983) can be formed around similar issues across the globe. The Internet and new social media allow organizers and activists the ability to discuss their work across global boundaries. In some instances (as long as there is Internet accessibility), nonprofits can engage directly with the human populations their work is affecting, for example, international environmental groups working on issues affecting populations in the Brazilian rainforests (Conklin & Graham, 1995). Finally, cyberspace is also a good place for the public to begin the search for organizational information and news on a cause that interests them and that they might support either through voluntary action or through donations. An example of a successful approach to generating public involvement is Kiva.org, a site that is specifically geared toward connecting donors with individuals or groups that seek micro loans for specific purposes.

Summary

The nonprofit sector has a number of different exciting opportunities and directions that it can take to address social change, to implement public policy change, and to engage with new ideas. As the service sector, it is in the ideal position to lead both the public and other sectors in constructing a more engaged social consciousness to deal with problems that need to be addressed. As discussed above, public policy change can come from local, grassroots nonprofits or collaborative efforts of nonprofits working together on a particular issue, advocating for the public interest. The nonprofit sector should be engaged with public policy on all levels because nonprofits can act in the interest of the communities that they serve and strive to push for policy that will benefit their mission and their geographic location. They should also recognize the responsibility that they have to act as advocates for their mission and to educate and empower the people with whom they work. Finally, nonprofits should recognize that public policy also affects their organization and the sector in general and thus continue to be engaged in the public policy-making process on local, regional, and national levels.

Nonprofits should also be the leaders in social change efforts as they directly work with communities. Nonprofits can engage with communities and develop their efforts around public concerns, receiving input at all steps of the process. They can act as activists, engaging in community organizing and leading direct actions toward social change, both locally and globally. Nonprofits can act as advocates for social change because they constitute the primary sector that researches and works in community organization and education, and thus, they are the closest link to the needs of groups of people. Finally, nonprofits have the responsibility of empowering the people that they work with so that communities can work toward strengthening and transforming through their own initiative.

Nonprofits engage with new ideas in a number of ways and at every step of the advocacy, change, and empowerment process in working with social issues and public policy. Engagement in new ideas as suggested in this chapter includes developing collaborative partnerships and using new forms of media. Generating new ideas and approaches to old and new social problems should be at the forefront of the work that nonprofits do because it creates a drive for organizations to not remain static, and it addresses social issues in ingenious ways to keep up with the changing atmosphere of our nation.

Note

1. The basic goal of a lobbyist is to represent the interests of a particular group by influencing decisions that are made in a leg islature. Lobbyists who directly interact in the legislative process are required to be registered and submit reports that give updated information on their activities.

The Arts and Nonprofit Organizations

Theresa A. Kirchner
Hampton University

John B. Ford
Old Dominion University

This chapter offers an overview of the nonprofit arts sector in terms of characteristics, structure, and economic/financial considerations, and then it focuses on strategic concepts and differences that make arts organizations unique in the nonprofit arena. It concentrates on aspects of strategic management and marketing that are often neglected by arts organization managers and boards, who can feel pressured to direct efforts and resources toward surviving in a day-to-day mode that presents constant challenges. This chapter proposes that strategic planning is vital and need not be unduly time consuming. It offers a streamlined strategic planning model for arts organizations, which can be addressed in stages. It suggests opportunities for governance effectiveness in leveraging and controlling the synergistic efforts of internal stakeholders of the organization—management, staff members, volunteers, and the board of directors. Emerging opportunities and future directions for the arts sector are examined, including potential for "coopetition" among arts organizations and cost-effective research opportunities.

Characteristics of Nonprofit Arts Organizations

Nature and Types of Nonprofit Arts Organizations

Definition of the scope of the arts sector has historically been difficult because the borderline between arts and the broader concept of culture has not been definitively established. Nations and subcultures tend not to clearly delimit *arts,* or they define the term diversely, and any definition tends to reflect the influence of the definer's specific arts stakeholders and funding opportunities. The scope of arts sometimes is defined in the narrow context of *fine arts.* A more expansive characterization of arts includes the broader sphere of culture and nontraditional art forms, such as folk arts.

Nonprofit arts organizations fall into three general categories: performing arts, visual arts, and support organizations. Major types of performing arts organizations include music (e.g., chamber music groups, choral groups, and symphony orchestras), theater, opera, and dance. U.S. economic census data indicate the presence of 9,303 U.S. performing arts organizations in 2002, an increase of 104 over the 5 years from 1997 to 2002. In terms of sector size, the data show that states that had large numbers of such organizations at the start often lost organizations, while smaller states tended to add organizations.

The primary category of visual arts organizations is the museum. Data on museums aggregated by the Institute of Museum & Library Services (IMLS), estimated a total of 17,500 museums in the United States in 2005. Support organizations include arts presenters, arts agencies, arts councils, cultural alliances, arts education organizations, and colleges/universities.

Organizational Structure

Although the structures of nonprofit arts organizations vary, two models predominate in the sector. The structural type is headed by an executive director with managerial responsibility for the entire organization, including both artistic and operational functions. The second model has dual leadership, either formal or informal, and is effectively headed by an artistic director, who is responsible for both the artistic vision and functions of the organization, and an executive or managing director, who oversees the administrative and operational functioning of the organization. The latter dual leadership model is inherently more complex and often characterized by an ongoing struggle for leadership, resources, and power between the artistic and executive leaders. For example, the artistic director's focus may be on achievement of artistic quality, whereas the executive director may simply be trying to keep the organization alive in the face of financial and competitive challenges. In such a case, creativity may need to defer to strategic and tactical imperatives required to maintain or save the organization.

In both models, the directors typically report to a board of directors, headed by a board chairperson/president. That board may have committees responsible for overseeing functions such as development, finance, marketing, and strategic planning. As a result, there may be significant direct interaction between members of those committees and the managers of related staff positions. Informal organizational structures are often observed in nonprofit arts organizations, and they can result in both positive and negative effects on the health and effectiveness of the organization.

Many nonprofit arts organizations, particularly those in the performing arts, were conceived and started up by the first artistic director of the organization, who initially may have headed it without other managerial support or a board of directors. As the organization grows and matures, and staff and a board are added, the shift in culture may create conflicting cultural changes and unrest. A particularly significant void can be caused if the initial artistic director leaves the organization, taking with him or her the original vision and energy. The board of directors should anticipate that possibility by analyzing the degree to which the organization should be integrally tied to the founder and determining whether or not to take steps to minimize that dependence (e.g., by establishing a generic organizational name, marketing the organization rather than the founder, etc.). This can be quite a touchy issue as founders may become quite offended at the thought that they are not as important as they once were, and they may be tempted to leave and create a new and directly competing entity. Undue placation of the original artistic director, however, can be more detrimental than beneficial, so this issue must be approached carefully.

Economic/Financial Considerations

Arts organizations historically have labored to subsist even in good economic conditions. In recessionary environments, significant numbers will either close or struggle with impending bankruptcy. From an economic and artistic standpoint, nonprofit arts organizations are unique in several ways. Unlike other sectors, they experience increasing artistic and operational costs over time but are unlikely or unable to achieve significant productivity gains, a problem known as "Baumol's curse," named after the economist who first identified it. As a result, arts organizations tend to depend on unearned income because earned income does not cover their expenses. In most cases, they rely on a combination of public and private contributions for the majority of their income.

Sources of revenue for arts organizations can be classified into two types: earned income and unearned income in the form of contributions. Earned income includes revenue from ticket sales, memberships, and auxiliary operations (e.g., organization shops). Contributions may be either monetary or nonmonetary and include individual donations, corporate contributions and support, foundation grants and funding, and government funding and other support, such as tax relief.

The Strategic Planning and Management Process

The strategic planning and management process is arguably the most significant function of arts organization boards and managers. This chapter presents a practical, structured, and streamlined process geared to the time and resources available to most organizations of this type. That process includes the following elements: evaluation of the current business model; development of a competitive strategy, the organization's vision and mission, and its strategic and tactical goals; compilation of the formal strategic plan; and establishment of measurement and reporting capabilities and a stakeholder communication plan. It is usually not necessary or desirable to attempt to complete the process in a single board meeting or strategic planning session. A structured, well-planned approach is more likely to result in a strategic plan that is optimal, effective, and likely to be used on an ongoing basis rather than being relegated to a shelf and forgotten until a crisis arises.

Brainstorming should be used throughout the strategic planning process to achieve optimal results. It is important to acknowledge and capture all ideas, not just those that are used immediately, because they may be valuable after refinement or at a future time.

Understanding and Assessing the Business Model

The business model of an arts organization is established by developing a realistic assessment of reliable net income. The first step is to establish how the organization makes money. Who are the income-generating clients or customers? What do those clients need, want, and desire?

How does that translate into steady income based on historical data? Arts organizations must consider that any source of income is a stakeholder. For example, government agencies should be regarded as clients to be cultivated, marketed to, and served.

The second step in the establishment of a business model is to determine the extent to which value associated with income-producing activities is delivered to clients at an appropriate cost. This step quantifies core, reliable expenses in terms of activities and numbers associated with production, development, and operations based on past data.

The third step in business model development involves projecting reliable net income based on past actual numbers by subtracting the realistic estimates of annual expenses, developed in the second step, from the realistic estimates of annual income, developed in the first step.

The major benefit associated with developing and quantifying the business model is that it focuses the board of directors and management on thinking rigorously about the business and how all of the elements of the business fit together.

Competitive Strategy

Assessment of opportunities for competitive advantage and its development involves defining the direction in which the organization should move. The process begins with defining the organization's niche and its potential sources of competitive advantage. Attempting to appeal to everyone undermines that advantage; therefore, focusing on market-served segments is imperative. Establishing who the true competitors of the organization are, in terms of people's time and money, is also critical. Often, the major competition for nonprofit arts organizations comes not from other arts organizations but from indirect competitors, such as commercial entertainment, sporting events, cable TV, the Internet, and, for people overwhelmed by full schedules, simply staying home. The organization must look at all ways in which customers might spend their money to achieve an entertainment experience.

A key factor in the development of competitive strategy involves determining how to position the organization as top-of-mind in the eyes of its customers. Such positioning may involve the need for conscious segmentation decisions to concentrate on certain current/potential clients while actually de-emphasizing others.

In terms of competitive timing, research shows that being the first in the market usually pays off—if the organization maintains sustainability. This is particularly true with arts organizations because they are typically community-based, and a community often can support only one of each type of arts organization (e.g., symphony, opera, ballet). In such cases, it is critical to be the "first mover" because emerging as a viable second mover may not be possible. For arts organizations, the same often applies to being the best in the minds of their customers, with well-established organizations having an advantage over newcomers.

Strategy development needs to be focused on the long term, not just tactical issues. Developing long-term strategy must be consciously addressed and continuously assessed by the board of directors and management. Too often, in nonprofit arts organizations, strategy development and related decisions are done on an ad hoc basis, adopted from ideas thrown out by individual board members, clients, and funder representatives. Individual stakeholder suggestions and opinions are typically narrow in scope, unrefined, and represent a "sample size of one." Although the individual and the idea may be pertinent to the organization, a vast number of well-intentioned disasters might have been avoided if these ideas had been assessed and developed using the formal strategy development and assessment process.

A strategic planning activity often done in conjunction with assessment of the organization's business model and development of its competitive strategy is SWOT analysis, which assesses the organization's strengths and weaknesses (internal factors) and its opportunities and threats (external factors). This analysis can be rewarding in yielding important ideas and issues, but it may also be time consuming and resource intensive if done well. There is a risk that an organization may become mired in SWOT analysis at the expense of completing the larger strategic plan, so its board of directors and management should carefully weigh if and when SWOT analysis should be undertaken.

Mission Statement

The mission statement serves as the foundation for clarification and development of the vision of the organization. It should be a clear, concise declaration of the organization's high-level strategy, developed from the perspective of its stakeholders, which correlates with the vision statement. It is the organization's main tool for introducing and describing itself to the world and should capture the "who, what, where, when, and why" that represent the scope of the organization:

- What the organization does
- How it does it
- For whom it does it
- Where it does it
- How the organization excels
- What the organization wants to accomplish

Vision Statement

Using the statement developed above, the organization's vision statement, which is an even higher-level statement about what the organization wants to become, should then be discerned. The vision statement should take the form of a high-level sentence that captures the organization's core "reason for being," phrased as a direct, powerful, and active statement that is inspirational and easy to remember.

Example: San Francisco Opera

This example of vision and mission statements for the San Francisco Opera is particularly effective because the board of directors and management have thought beyond those statements to anticipate and define the resources that will be required to achieve the mission. Its three statements can be used as a basis for developing and maintaining the strategic goals, tactical objectives, and budget of the opera company.

Vision Statement: To be the most exciting force in the opera world

Mission Statement:

- To present opera performances of the highest international quality available to the widest possible audiences
- To perpetuate and enrich the operatic art form
- To be creative and innovative in all aspects of opera

To take a leadership role in training, arts education, and audience development *This Mission Demands:*

- A diversified, highly committed, qualified Board of Directors working in partnership with an efficient and effective top quality management team and staff
- Healthy financial performance with a balanced budget and adequate endowment
- Involvement with our community
- An image that reflects our artistic quality

Translating Vision to Reality

Too often, the vision and mission developed by an organization are underutilized. Those statements are meant to guide the organization, on an ongoing basis, to ensure that it stays focused. They are the foundation on which the strategic goals should be based. On the other hand, the statements should not lock the organization into a particular direction, and they should be re-evaluated periodically. As the organization grows and the environment changes over time, both the vision and mission are likely to require tweaking or restatement.

The vision and mission statements are powerful tools for communicating with current and potential stakeholders of the organization. For example, public relations and promotional uses of vision and mission statements include putting them on the organization's website and business cards.

Strategic Goals

The organization's strategic goals should be consistent with its mission and vision, and they should be shaped by the choice of overall strategy and business model. Strategic goals are typically developed with a 3- to 5-year time frame. For volatile organizations, a shorter time frame may initially be beneficial as long as the goals can realistically be realized within the specified periods. The strategic goals should address current, major issues facing the organization. Goals that are too narrow do not warrant strategic planning; they should be translated into action items. Goals that are too broad may be difficult to address; they should be limited or subdivided. It is important to tackle only issues and opportunities that the organization can do something about and achieve, from a practical standpoint. A range of three to seven issues/opportunities, translated into high-level goals, is the optimal number that most organizations should undertake. It may be beneficial to have shorter term as well as longer term goals, understanding the timeframe implications associated with each type.

Tactical Objectives

After the organization's goals have been defined, tactical objectives with narrower focused expectations must be developed. Those objectives should be realistic, achievable, operational, and measurable. Each should specify related activities, the person(s) responsible for completing them, and projected completion dates. The resources needed to achieve the goals must be identified and quantified, along with related costs. All costs should be budgeted. For objectives that are implemented immediately, it is important to ensure that the associated costs can be paid for within the current budget.

Compiling and Documenting the Strategic Plan

Compilation of the strategic plan is the culmination of the strategic planning effort. The plan consolidates the vision and mission statements, the strategic goals, and the tactical objectives, along with any other documentation that contributes important information to the strategic plan. It includes examination and integration of various potential tactical actions into an action plan that will be followed to achieve the tactical objectives, which should, in turn, result in achievement of the overall goals.

Clarity, readability, and visual attractiveness are critical in terms of ensuring that a strategic plan is used on a regular basis and effectively communicates vital information to the organization's stakeholders. It is therefore essential to find a good editor to structure, format, and proof the plan. The plan document should be flexible, adaptable, and easily changed.

The consolidated strategic plan should undergo a realistic review process. It should be vetted with the organization's key stakeholders to ensure that they buy into it. To be effective and enduring, the plan must be a living document, and its owners, the board of directors and management, must view it as the organization's official ongoing commitment to action. The plan itself should specify how often, and under what conditions, the plan will be reviewed and updated.

The plan should also outline how results will be measured, monitored, controlled, and reported at all levels of the strategic plan. Data collection should be set up to allow ongoing evaluation of what was expected as compared to what actually happened, which allows the organization to spot problems and make corrections if they appear before they become critical. Results measurement should evaluate actual performance against the related objective, which is the ultimate test of whether or not the objective has been achieved.

Monitoring and controlling the strategic planning process should be ongoing and cyclical. Periodic evaluation of actual results against planned results should lead to re-evaluation of strategies, goals, and objectives and implementation of alternate options as necessary and appropriate.

Risk management and contingency planning are important efforts that should be considered in even the smallest of organizations. Risk management includes assessment tools, frameworks, and processes that are implemented to manage potential issues and negative situations. Contingency planning is the process of evolving solutions to potential problems and disasters that facilitate an organization's effective response when such situations occur. For most arts organizations, it is impossible, and undesirable from a resource standpoint, to eliminate all risk. Rather, the goal is to reduce such risks to a level deemed acceptable by the board of directors and senior managers by using proven tools and techniques to develop alternative courses of action, based on potential negative scenarios, that can be activated as necessary. For example, in a declining economic environment, an organization's pre-set indicators (e.g., unexpected gaps between actual versus expected results) might mobilize predetermined processes to assess current activities and potential cost reductions.

Arts organizations often cannot afford sophisticated information systems. For them, simple information systems can be developed using word processing and spreadsheet tools to collect, condense, analyze, organize, update, and report measurement data in forms that the organization can effectively use.

For presentation of results to stakeholders, visual techniques, such as dashboard and balanced scorecard approaches, are valuable. For communication with external stakeholders, effective presentation of information in one or two pages focuses them on key summarized points. The goal is to highlight useful and motivating information, so high-quality presentation in terms of materials, layout, content, color, and graphics is valuable.

Using and Maintaining the Strategic Plan

It is possible to get mired at some stage in the strategic planning process. If that happens, it is important to focus on producing a working plan, realizing that it can be modified, as needed, after it is adopted.

Once the strategic plan has been developed and adopted, the organization must allocate adequate resources. In arts organizations, which often face unanticipated crises, it is easy to allow extraneous activities to drain allocated resources.

When the strategic plan enters the review and maintenance phase, strategic planning considerations should be incorporated into executive committee and board meetings. Decisions should be evaluated in terms of whether or not they fit the strategic plan. Knowing when to adjust or abandon a strategy or goal that is not working is important. The strategic planning documents should be modified based on actual performance. The strategic planning process is never "done"—it is cyclical and continuous.

Best Practices: Doing Things Right

Best practices in the arts sector can be defined as specific principles, strategies, approaches, processes, procedures, methods, and activities identified through research and evaluation of successful arts organizations that excel over time and are widely recognized as resulting in superior performance, results, effectiveness, and efficiency in specific areas.

While developing benchmarks for practice through studying what works well and learning from what doesn't can be helpful, the resulting knowledge should be evaluated critically because blindly adopting best practices may hurt, rather than help an organization. When assessing what makes arts organizations successful, it is important to concentrate on organizations that have been successful over time in achieving positive results and quantifiable gains, with strategies and tactics that are generalizable, replicable, and relevant for the evaluating organization.

Research does not indicate any best practices that come close to meeting all relevant criteria for nonprofit arts organizations. There is no proven "best" or "right" way to organize and manage that guarantees organizational health and effectiveness. Management and board practices are important, but they must be tailored to each organization's values, mission, and stakeholders' expectations because nonprofit arts organizational effectiveness is whatever its various stakeholders perceive and judge that it is.

Research does indicate that, if there is a best practice, it is probably consistent and productive communication and dialogue, in diverse ways, with the range of stakeholders, particularly those who impact the organization in significant ways. That dialogue enables the organization's leaders to shape the knowledge and expectations that stakeholders use in judging organizational effectiveness.

Arts Organization Governance

Governance Effectiveness

Research shows that stakeholders (management, board members, clients and customers, funders, and vendors) evaluate nonprofit organizational effectiveness in different ways. Stakeholders tend to perceive that board effectiveness and organizational effectiveness are related. However, the research suggests that adoption of generally recommended board practices does not result in improved board effectiveness. Similarly, a change to adopt the use of generally accepted management practices does not result in improved organizational effectiveness. On the other hand, good governance and reputation are inextricably linked.

Board and Management/Staff Interaction

Power and decision making in arts organizations are typically shared, with the roles and the degree and type of interaction between the board and management/staff often geared to the size and stage of development of the organization. Management and staff need a clear picture of the scope of the board's power and responsibility because board actions can strengthen and/or undermine nonprofit organizations. A strong, competent, relationship-oriented executive director is a key to success. A healthy relationship between the president/chairman of the board and the executive director is important, for example, to proactively and effectively address group and individual dynamics problems.

Staff Management

Effective staff management requires several elements, which often are missing in nonprofit arts organizations. These include complete organizational charts (staff, board, volunteer, and summary) and key function and process documentation. Position descriptions and performance appraisals must be developed and maintained for managers, staff, the board of directors, and volunteers. An integrated planning calendar is an important operational tool. Risk analysis and management are also important, including contingency planning for significant problems, crises, and disasters and off-site backups for documentation and computer files.

Managers of nonprofit arts organizations often do not have sufficient education or training in the use of the managerial tools and techniques outlined above. There is some irony in the typical contrast between the extensive training that artists receive and the relatively little training that their managers receive in how to run arts organizations successfully. Executive directors should assess their own training and development needs, as well as those of their staffs, and work with their Boards of Directors and professional association and community resources to acquire needed knowledge and skills.

Volunteers

According to the National Endowment for the Arts,

> more than 1.6 million Americans volunteered with arts or cul tural organizations in 2005. In contrast to volunteers with other types of organizations, arts volunteers are older, better educated, and more giving of their time. Regardless of a per son's education level, gender, or age, performing arts atten dance increases the probability of volunteering with arts organizations by 25 percentage points. Moreover, levels of activity, including arts and sports attendance, are better pre dictors of volunteering than are demographic traits.

The skills and abilities that volunteers bring to arts organizations range from minimal to professional. Volunteers with relatively little education and expertise can provide valuable low-level services that would otherwise be performed by paid staff members or would go undone. On the other hand, many volunteers have important business experience and capabilities, in areas such as management, marketing, and information technology, which the nonprofit arts organization often could not afford to buy. Volunteers at all levels benefit, as well, from experience building, skill development, and networking opportunities.

Volunteer Motivations and Recruitment

Research shows that people are motivated to volunteer to serve an organization for a variety of reasons, including (a) a sense of self-satisfaction, altruism, or desire to help others; (b) companionship and the chance to meet people; (c) the opportunity to learn; (d) an entrepreneurial desire to help to create or maintain an organization; (e) professional contact development; (f) advancement in their place of primary employment; (g) gaining training or experience, social status, or prestige enhancement; and (h) a feeling of pride in an organization's achievements.

A 1988 Gallup poll, which asked volunteers how they began serving nonprofit organizations, indicated that 40% were asked to volunteer, 39% participated somehow in the organization before volunteering, and 28% learned about the opportunity from family or friends. About 19% were proactive in seeking volunteer opportunities themselves. Only 5% responded to an advertisement asking for volunteers. Clearly, the most effective way for organizations to recruit volunteers is simply to ask them to do so. While advertising may serve other purposes, it evidently is not effective in attracting potential volunteers.

Volunteer Management

Volunteers play valuable and sometimes essential roles in nonprofit arts organizations. To maximize the benefits for both the organization and the volunteers, they must be treated professionally. Although they are unpaid, it is helpful to view them as staff members.

Recruiting, training, supervising, evaluating, and managing volunteers are functions that should be considered by the board of directors and management as part of the strategic and tactical planning processes. Functions, duties, and tasks to be performed by volunteers must be identified and developed.

Managers should begin the process of acculturating each volunteer through an orientation program, as they would do with staff members. Volunteers should be given documentation that includes the organization chart, strategic plan, position description, and other pertinent background material. They should participate in tours and in meetings with staff and other volunteers. They should receive appropriate training and supervision, individualized performance goals and benchmarks, and diplomatic evaluation and control. The nonprofit arts manager should consider that volunteers are uncompensated for the valuable services that they may provide, that they have options in terms of how they spend their time, and that they are motivated by recognition and other benefits, such as complimentary tickets.

Although volunteers are significant and often indispensable resources for nonprofit arts organizations, it is important to recognize that too much reliance on untrained volunteers in place of trained professionals can be problematic. Arts organization managers should carefully evaluate the use of volunteers, welcome them when they can serve effectively, but resist the natural tendency to use them simply to lower personnel costs. Potential staff compensation savings should be balanced against the resources required to train and monitor volunteers and the risk of using volunteers for some key functions. Volunteers, who may also be patrons and donors, must be managed and controlled differently from the organization's employees.

Development and Marketing

Pricing

In general, demand for nonprofit arts organizations is inelastic. In most cases, arts groups can increase prices, sometimes substantially and especially for upper tiers, without losing customers.

Another consideration in considering the establishment of price points is that higher price can effectively signal higher quality and value to arts patrons, which often is a message that the organization wants to send. Arts organizations, therefore, may be able to increase both income and perceived value by additional tiering and differentiation of ticket pricing and donor levels, which can be supported by related, often low-cost benefits.

It's All About the Experience!

Social aspects of an event can be as important a motivator for attendance as the art form itself. Some customer segments attend (and return) just as much for the social aspects of an event as for its artistic content. Social reasons for attending arts events include the opportunity to meet new people, time with family members and friends, pre- and post-event receptions and lectures, and the desire for exposure to something new.

To increase audience sizes, the organization should carefully evaluate possible experience offerings, beginning by surveying a sample of potential new audience members. Successful organizations get their positioning information from their target markets. However, trying to appeal to everyone may undermine the organization's distinctive niche and related appeal. Due to the clutter of leisure alternatives in the marketplace, arts organizations must find effective ways to break through in terms of positioning and differentiation (a recent *Harvard Business Review* article [Porter, 1998] focused on the need to maintain customer experience management instead of customer relationship management practices/procedures).

Marketing to Stakeholders

Nonprofit arts organizations are accustomed to marketing programs and events to their patrons. Their approach to individual, corporate, and foundation donors, however, is typically viewed from a development perspective that may not sufficiently leverage the wide range of marketing tools and techniques to optimize donations. While foundations often are quite clear in their criteria for funding arts organizations, corporations often are less so, and donor expectations tend to be much more personal and unspecified and often must be discerned and elicited by the particular arts organization.

Marketing to government funding and support agencies is also an underused idea. Nonprofit arts organizations should cultivate government funders with the same effort and energy that they use to market to ticket purchasers and contributors in the private sector. Government agencies tend to reward arts organizations that demonstrably meet their expectations, and they increasingly specify criteria for funding recipients, such as evidence of financial health and good financial management, artistic achievements that enhance the community, operational success, and effective marketing programs.

Arts organizations should use information on expectations and desires of donor and funding stakeholders in development of their strategic plans, marketing plans, and other stakeholders. They should evaluate current marketing tools and techniques in terms of their potential to enhance donor and funder income and use them in both broad and targeted contexts, as appropriate.

Stakeholder Communications

Effective and ongoing communication with stakeholders is vital. The organization's website and direct e-mails to stakeholders are valuable tools for communication. The organization's mission, vision, goals, objectives, and related reporting, such as the balanced scorecard, should be posted and clearly labeled on its website. Everything on the website, such as the organization's calendar and contact list, should be current, so regular updates and maintenance are required.

Reporting to stakeholders should be regular and consistent. One or more vehicles should be provided and publicized for convenient stakeholder feedback. Information provided to and about the organization should be acknowledged and analyzed. For example, accesses to the website should be analyzed to determine the number of hits, which pages are accessed, and who is accessing them.

Future Directions: Strategic Opportunities

Innovative Marketing Approaches

Recent research that is relevant for nonprofit arts organizations has focused on several different marketing concepts. One of the newest is the desirability of cultivating “love for the brand” with “invested” arts consumers and patrons. An arts organization can achieve that result by recognizing desires for mystery, nostalgia, sensuality, and intimacy. It also needs to understand and build a unique “brand personality.” Trial, purchase, repurchase, and donation are investments by customers on which the organization can build. An ongoing, mutually valued relationship requires stakeholder trust and commitment. To achieve these ends, the organization should endeavor to find out and, ideally, anticipate its stakeholders’ concerns so that it can address them and alleviate cognitive dissonance.

Coopetition and Arts Clusters

Historically, the challenge of competition has been met with a “business is war” outlook and strategy. The idea of “coopetition,” a relatively modern approach to competition characterized by contemporaneous cooperation among competitors, was championed in the seminal work of Brandenburger and Nalebuff (1996). They proposed that “business is simultaneously war and peace. Most businesses succeed only if others also succeed.” For arts organizations, the idea that collaboration and competition can productively coexist is a powerful and productive one. For leaders of arts organizations, who may tend to cooperate even in situations that prove not to be economically viable, it is important to remember that cooperation pays off in some situations; competition in others. Where coopetition is mutually beneficial, it can take many forms, from single transactions or single projects to strategic alliances with other nonprofits or corporations.

Clustering is a concept that is closely related to coopetition. Clusters are occupational communities with geographic, cultural, and institutional proximity that experience unique coopetitive success in a particular industry or sector. Compared with isolated arts organizations, those that are part of arts clusters tend to enjoy the benefits of interaction with each other, better information, and powerful incentives. Interaction and collaboration among arts groups tend to result in increased productivity, creativity, and innovation. They stimulate the formation of new, related complementary businesses. Competitive advantage relies, to a large extent, on local synergies that cannot be duplicated by groups of organizations that are not geographically concentrated. Often, nonprofit arts organizations in clusters can more easily find individual and mutually beneficial community solutions to the challenges that face them.

Research Opportunities and Consulting Assistance From Universities

Universities and their faculties are often willing to assist nonprofit organizations on a pro bono basis. They can be helpful in identifying and analyzing existing research that may be valuable to an organization. They can help develop surveys and often can provide online survey options, including hosting and results analysis, development, presentation, and reporting, at no or low cost. Organizations must realize, of course, that good research must be planned and generally takes time. Conducting and analyzing a survey, for example, is not a one-week project.

Summary

Nonprofit arts organizations are inherently different from for-profit organizations in several ways. They are nonprofit, to a large extent, because market forces lack the economic incentive to fully support their products and services, which are socially desirable but often intangible, and because they typically require government subsidies and other philanthropic support to survive. As a result, the spectrum of nonprofit arts organization stakeholders is significantly different from that of for-profit organizations because they serve both public and private constituents. The financial statements of nonprofit arts organizations are also different, reflecting their tax-exempt status, a typically significant percentage of unearned income, and the varied sources of that unearned income.

Despite the differences outlined above, there is much that nonprofit arts organizations can learn from for-profit businesses. They should leverage, and adapt as necessary, the management, marketing, information systems and technology, and communications tools, techniques, and products developed and successfully used in the corporate arena.

Nonprofit arts organizations have some significant strategic advantages. They often have the inherent capability to develop special relationships with their stakeholders, which may be based on philanthropic and aesthetic desires, strong trust, intense loyalty, and emotional attachment. Their tax-exempt status and ability to attract public-spirited contributions can also be advantageous.

On the other hand, a disadvantage for the arts sector is that, for most people, the arts represent a want or desire rather than a necessity. The emerging presence of a variety of appealing substitutes (e.g., high-quality home audio systems and classical CDs versus live performances) may threaten arts organizations in difficult economic times. They must respond with innovative and appealing approaches, which will differ for each organization, depending on its niche and the desires of its stakeholders. Although nonprofit arts organizations may view each other as competitors, surviving and thriving may depend on their ability to cooperate with each other and their stakeholders, in unique and compelling ways, to achieve success.

Community Development

Forrest Clift and Claudia Sowa Wojciakowski
Grand Valley State University

Matthew Wojciakowski
University of Washington, Seattle

Community development, in both concept and action, is dependent on a group of like-minded people working together to improve and further grow a local community. The group of people who work on developing a community includes a range of individuals from citizens and business owners to activists, civic leaders, and local supporting organizations, including service industries (police, fire, and rescue) and nonprofit organizations (United Way, Goodwill Industries, and community foundations). These varied groups can join in simple activities such as holding community clean-up days, creating local book clubs, or organizing area functions/events. Larger, more intricate, financial projects may include infrastructure improvements, educational initiatives, vocational programs, job possibilities for the unemployed, assistance for low-income families, and even housing opportunities.

Whether large or small, these projects are mutually beneficial for the community and the nonprofit organization.

Community Development

What is formally referred to as *community development* is often informally called *community building.* The goals and objectives are the same for both concepts. In each case, nonprofit organizations' roles are to provide a group of individuals, associations, and organizations with the skills and abilities they need and desire to create change within their defined community. An important component for the success of a nonprofit organization in community development is the inclusion of the community in the determination of need and the assessment of desire.

The importance of the dialogue between community and nonprofit organizations cannot be overemphasized. Quite often, the agenda of community development or community building is determined based on recognized needs of the community, which are often defined as a deficit. The goal of community development within nonprofit organizations, however, is a positive one: assisting community members in creating a strong and vibrant community with a unified vision or outcome.

Initially, community development or community building was born out of issues addressing the nation's poverty crisis in the late 1960s. In her article "Community Building in Theory and Practice: Three Case Studies," author Joan Walsh (1997) states that poverty was widely viewed as a framework of related problems including lack of educational experience, high unemployment rates, poor health, juvenile delinquency, and more. The federal government created programs designed to encourage the poor to use the resources at hand. Decades later, critics were still crying foul, saying the assistance had likely made the situation worse. According to former President Ronald Reagan, "We fought a war on poverty, and poverty won" (quoted in Walsh, 1997, p. 294). By the late 1980s, the federal government started to steer away from systematic approaches to addressing needs of low-income families and individuals and instead to examine how building relationships and networks within depressed or underserved areas could result in improved communities. Community building coalitions between nonprofit organizations and community governmental structures examined a problem (often poverty) as part of a bigger web of complex community problems, such as family issues, lack of education, unemployment, crime, and poor health. Leaders in this movement included the Annie E. Casey Foundation, which launched its New Futures program by investing $50 million in midsize cities to create collaborative structures in communities. The Ford Foundation developed projects targeted to human services and community development through the Neighborhood and Family Initiative. The Rockefeller Foundation allocated funds to address urban poverty and renewal issues as part of its Community Planning and Action Program. Most of the work in community development was undertaken by the members of the community who wanted change. Often through the funds of nonprofit organizations, people were hired by businesses and government to oversee, manage, monitor, and maintain the change. These hires were called *community developers.* They worked to ensure that the growth of the community was created by its members and not controlled by political forces, which may at times have an investment or stake in a community's success. Community developers worked and continue to work today in a variety of capacities including organizing meetings, conducting surveys, targeting potential problems or deficiencies, conducting needs assessment, identifying human talents or capabilities within the community, and more. The focus of the community developer's position was and is to create opportunities, manage barriers, and assist in implementation of projects to produce the desired results and improvements wanted by the community and the nonprofit organization.

In the *Journal of Community Psychology*, Joseph McNeely (1999) provides examples that demonstrate how communities are able to identify their own needs, commit to planning and action, and, in the end, review the success and impact of the actions taken. The community itself often finds the solution to its problems through organizing, planning, and taking responsibility. Two examples from McNeely's research are the city of Baltimore, Maryland, and a neighborhood of Washington, D.C.

In the drug-riddled Boyd-Booth neighborhood of southwest Baltimore, a community group banded together to stop the open-air drug trade on their local streets. With police cooperation and with funding from the governor's office and the Citizens and Planning Housing Association, community members held marches and community cleanup days, installed new street lighting, and developed positive alternatives for youth such as afterschool and summer youth programs. The result of this work was a 52% decrease in violent crime and an 80% drop in drug arrests within the community in 2 years.

Similarly, a Washington, D.C., tenant association took over the management of its public housing project and developed its own cadre of social services and development initiatives with the help of the mayor's office, local doctors and dentists, and an area employment agency. During the first 4 years of the project, rent collections increased by 77%, 102 jobs were created for residents, and 132 residents were able to get off of welfare.

In both Baltimore and Washington, community building was based on the engagement of constituents in all aspects of the needs assessment and solution implementation. The key to successful community building is the fact that change is driven from within and the process is inclusive of community members with the outside assistance of nonprofit organizations.

Asset-Based Community Development

When a neighborhood is struggling to survive, it can be a result of a lack of monies to fund projects; an increase of crime and violence; a migration of people from the community, leaving homes and businesses vacant; or a deficit of jobs and a sustainable economy. Communities often start by searching for more money to make improvements. An asset-based community development (ABCD) approach asks the community to review and rethink the problem and create a new solution by tapping into and supporting the growth of their current resources. John McKnight and John Kretzmann, Northwestern University faculty and cofounders of the Asset-Based Community Development Institute, call ABCD a means for a community to build on the people, establishments, and associations that are found in poor and struggling areas. This process of community development focuses on the positives people can offer and not the negative associations (crime, unemployment) tied to a specific community.

ABCD helps a community by using the gifts and capacities (assets) of its members. In the previously mentioned Washington, D.C., scenario, a single welfare mother took the initiative to create a program for getting children in the public housing complex to go to college. The tenants rallied behind this individual to support the college encouragement program and ultimately took over management of the housing complex. Solutions and a stronger sense of community pride and value are derived by focusing on what skills and abilities are available versus what is needed or lacking within the community.

Kretzmann and McKnight (1993) suggest that certain communities in the United States automatically generate a negative response based on their name and image, for example, the South Bronx and South Central Los Angeles. Unfavorable images of crime, drugs, gangs, and welfare dependency have become what the authors label as the "whole truth" of a community, and not part of the truth.

> As a result, many lower income urban neighborhoods are now environments of service where behaviors are affected because residents come to believe that their well being

> depends upon being a client. They begin to see themselves as people with special needs that can only be met by outsiders. They become consumers of services, with no incentive to be producers. (p. 3)

This idea is supported by the earlier theory of Charles Murray (1984), who argued that growing welfare programs had hurt the poor because they rewarded idleness, enabled illegitimacy, and allowed fathers to abandon their children to the mothers, who ultimately were tied to the welfare system.

So how does a community turn the thinking around to become producers and not just consumers of services? ABCD invests in the abilities of those who live and work in the community. This investment is also termed *capacity focused development* because the work undertaken is targeted toward what residents are capable of and what skills and assets they can bring to the solution.

Historical evidence, according to Kretzmann and McKnight (1993), indicates that significant community development takes place when people are willing to dedicate their personal talents to the effort of improving their own environment. This, they conclude, is why "communities are never built from the top down, or from the outside in" (p. 5). Plus, with numerous localities both rural and urban competing for national, state, and local funding in these difficult economic times, one viable alternative is to look at what is actually on hand to start creating growth and improvement. Ultimately, it is the people—residents, business owners, associations, and institutions—who are the greatest resource for change in the community.

ABCD relies on the people to create an agenda and examine the capacities of all of the partners in solving the problem(s) at hand. This work is internally focused and although it does not exclude outside resources or services, it maintains the value of finding solutions in the assets of people within the community. ABCD, then, is most often relationship dependent and typically succeeds when community developers continually create dynamic relationships between individuals, businesses, schools, service institutions (such as police, fire, rescue, hospitals), and nonprofit organizations. Deficiencies are addressed through community-based programs, policies, and services and ultimately result in teaching residents the nature of their problems and the value of their work and commitment to improvement.

A good example of a nonprofit organization that centers its programs on ABCD is the Annie E. Casey Foundation. The foundation's website (http://www.aecf.org) describes its primary mission as aiming to

> foster public policies, human service reforms, and community supports that more effectively meet the needs of today's vul nerable children and families. In pursuit of this goal, the Foundation makes grants that help states, cities, and neigh borhoods fashion more innovative, cost effective responses to these needs.

As part of its Civic Sites grantmaking program, the foundation supports cities where they have close hometown connections (Atlanta, Baltimore, New Haven) and envision that they will be part of a strong and growing leadership program for years to come. And their work continues to expand outside of these areas, including Washington, D.C., "where we have strong ties to their child welfare and juvenile justice agencies, leadership, and philanthropic base." The importance of relationship and community assets is reflected in the fact that the foundation does not seek or often fund unsolicited grants. Their website notes: "The Foundation's approach to grant making focuses on making multi-year, multi-site commitments that enable us to invest in long-term strategies and partnerships that strengthen families and communities."

Similarly, the Great Rochester Health Foundation (GRHF) in New York State supports growth and development through ABCD. In 2008, GRHF launched a program called Neighborhood Health Status Improvement aimed at aiding five different communities in developing grassroots, asset-centered improvements of the health of their community members. Each individual community received funding and support based on specific health problems tied to poverty and social issues.

Each community examines a variety of issues including the local economy, jobs, environment, and housing and looks at how healthy social interactions can address these problem areas. As GRHF funding continues, community members assist in creating community health improvement plans that ultimately improve the lives of residents and the great Rochester area as a whole.

For many communities that are struggling with poverty and social issues, the asset-based approach as shown by the Annie E. Casey Foundation and the GRHF provide a sense of pride as well as financial support. Including the communities in the solution rather than focusing on their problems helps to ensure the success of these programs.

What Makes a Strong Successful Community

An often-cited author, who examined what constitutes a good or successful community, is activist, educator, and political appointee John W. Gardner. Gardner was the secretary of the Department of Health, Education, and Welfare (HEW) during the Lyndon B. Johnson administration and worked tirelessly to create programs and services that promoted the "common good" of all people. His achievements include civil rights enforcement during the late 1960s, overseeing the HEW launch of Medicare, expanding the Elementary and Secondary Education Act of 1965, and establishing the public television network (Corporation for Public Broadcasting). John Gardner also created the first U.S. nonprofit public interest group, Common Cause, which is dedicated to making government more open and accountable to the public interest.

As a prolific writer and speechmaker, Gardner's interests lay in improving the way of life for Americans through the routes of communities, education, and leadership. In a 1998 broadcast address, Gardner set forth the five factors he believed were necessary in building a healthy community. These factors were described as:

1. *Wholeness incorporating diversity:* The community allows diverse groups of people to get to know one another and uses conflict resolution and collaborative problem solving across groups. In his address, Gardner stated that "it requires institutions that transcend group differences" to promote this characteristic and to establish incorporated diversity within a community.
2. *Reasonable base of shared values:* The community recognizes a shared value system across its members and provides leadership that reflects the community values. He said, "Every successful society we know anything about has created a framework of law, custom, and beliefs to channel behavior toward purposes deemed to be acceptable."
3. *Effective internal communication:* The community building also relies on open, honest, and ongoing communication across all boundaries and groups. According to Gardner, the dialogue must be "candid and continued" in order for all parties to understand the assumptions of others and to provide a solid foundation for community development based on community needs.
4. *Caring, trust, and teamwork:* The community dialogue must reflect care, trust, and teamwork across diverse community members. This type of dialogue translates into respect for all community members. Gardner suggests that through teamwork, shared values, and the establishment of trust, a community builds its own social capital.
5. *Participation:* The community needs to foster leadership and membership participation in its developmental programs that is inclusive of all its diverse groups. According to Gardner, "We must help potential leaders at all social levels to know and understand one another." The community must take an active role in encouraging diverse community members to play a role in public leadership.

A good example of the application of Gardner's tenets is the Communities and Government Office of the United Kingdom (www.communities.gov.uk). On its website, this entity asserts that it works to provide citizens with "a safe, prosperous and healthy community. A community where everyone has the right to the same opportunities, freedom and respect. Somewhere we can be proud of." The mission includes increasing home construction in hopes of helping to reduce homelessness, improving public services, creating additional jobs in revitalized areas, and addressing environment and social behaviors. Their website continues to define sustainable communities as "places where people want to live and work. . . . They meet the needs of existing and future residents, are sensitive to their environment, and contribute to a high quality of life." Furthermore, these sustainable communities are viewed as safe, well-built, and well-run, offering everyone the same quality of opportunities and services.

Whether intentionally or unintentionally, Gardner's targeted look at leadership is commonly used in dialogue resulting in strong communities. These discussions often result in a community that provides successful programs in: family services; education that promotes success for all children; healthy environments free of pollution and with clean water and reduced crime and violence; affordable housing; adequate transportation and effective community policing; and economic and job development. The common threads in applying Gardner to these communities are the inclusion of diverse community members and respectful discussions of issues including what people want and need for themselves from their community.

What Community Members Want and Need

In educational psychology, a body of research examines factors that influence human behavior and motivation. These factors include biology, achievement, and even power to influence the outcome. One of the premier authors who synthesized and conceptualized this research is Abraham Maslow (1954). His conceptualization of human motivation is presented as Maslow's Hierarchy of Needs and is shown in Figure 21.1.

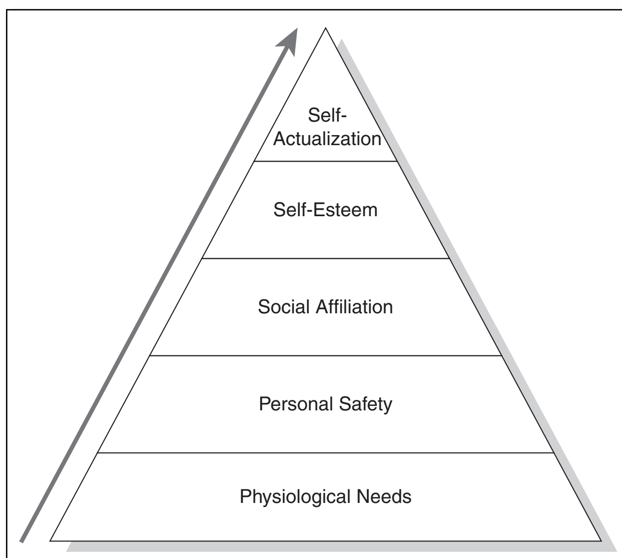

Figure 21.1 Framework for Maslow's Hierarchy of Needs

SOURCE: Maslow, 1954.

This conceptualization provides a hierarchy of human needs in which the lower need must be met before moving to a higher need. The first human needs depicted are basic needs, including physiological needs for food, water, warmth, and rest, and then issues related to safety and security. Once a person has satisfied these basic needs, the psychological needs of belonging and affiliation with others, love, and self-esteem, as represented by satisfaction with personal accomplishment and recognition, become the focus and the motivation for the individual. On fulfilling both basic needs and psychological needs, the person's next stage is self-actualization, which includes reaching one's potential. Self-actualized people are solution focused, appreciate life, and have the ability to help others find self-fulfillment and realize their potential.

According to Maslow (1943), to be satisfied in their environments, people typically need to have 10% of their self-actualization needs, 40% of their self-esteem needs, 50% of their belonging and love needs, 70% of their safety needs, and 85% of physiological needs met through the community. Therefore, nonprofit organizations' initiatives would want to work initially to assess the housing, environment, transportation, and safety issues.

In an ideal world, by combining the work of Gardner (1998) and Maslow (1954), nonprofit organizations and community leaders would work to support communities and reduce the number of residents living at or below the poverty level (defined by the U.S. Census Bureau as a household income of $22,025 for a family of four). The funding and development of community programs such as the Goodwill Industries, which provides vocational training, or the Salvation Army, which addresses housing, food, and physical and mental health needs, are essential for a community that recognizes and meets the needs of all its members. A wide range of appropriate services accessible to the public and the entire community including health care, social services, education, and training is the framework for community development.

The basic needs of food and shelter are coupled with the feeling of security and safety. In the increasingly diverse and multicultural U.S. society, social and cultural exchanges that are harmonious, safe, and inclusive are key elements in community development. These exchanges must be based on tolerance, respect, and interaction with people from diverse backgrounds and the support of law enforcement agencies.

A number of foundations and nonprofit programs provide vital support for fostering secure and safe communities. Many of them have funded or developed programs aimed at reducing or eliminating gang violence within urban communities. They include The Foundation for Full Recovery (http://ffrwhatcom.org), the San Diego Foundation "Stop Now" program (www.sdfoundation.org), the Community Solution to Gang Violence (www.csgv.ca), and Ceasefire Chicago (www.ceasefirechicago.org). Each of these programs works to meet the most basic needs of safety and security within a community. Ceasefire Chicago, for example, developed a public education campaign to help residents understand that violent actions are not acceptable. Ideally, these programs also enhance interactions within the community through friendly cooperation and exchange of words and ideas across cultures or diverse community groups.

The sense of security and safety allows a strong community to develop the visible presence of multiple cultures in its activities, leisure, entertainment, and sports. The respectful and safe inclusion of all people within a community yields low levels of crime, a sense of a secure community, and a sense of belonging.

A sense of belonging is enhanced through effective representation, which is inclusive of diverse people and organizations within the community, whether it be a political group (city council, board of supervisors) or community groups such as homeowner associations or neighborhood watch programs. Community participation enhances a sense of belonging that allows the community to develop in ways that reflect a commitment to civic values held by all community members.

This commitment extends development beyond basic needs to issues that facilitate community pride such as public and green spaces that are maintained and can be used by all residents, from children to the elderly; efficient and effective use of resources and services provided (water management, land resources, waste management, recycling, etc.) based on low negative impact; protection of natural resources (water and air quality, reduction of noise pollution) with a mindset on providing future generations to come; facilities and services providing residents with links to home, job, school, and health care; and other services, including roadways, public transport, walking pathways, and bike trails, and adequate parking facilities for community members, friends, and guests. A diverse and flourishing local community depends on and promotes a wide range of jobs and job training opportunities.

The result of this type of positive community development goes beyond supporting community members in their everyday existence. It allows service providers and nonprofit organizations to be visionary with regard to the future and how outside forces may affect the local community (government monies/services). Community development is not limited to discussions of present community needs but looks ahead. It has the ability to create new jobs and a strong businesses sector with connection to a wider economy. It allows the transportation of communication through telecommunication and Internet availability to improve communication and feedback across local and global communities. Community development moves community from maintaining to truly growing and developing a future.

Other Communities

Given the previous tenets regarding community development and meeting the basic needs of community members, is it possible for other communities to be developed in the same sense as those that have a shared locality or geographic region? Is it possible for communities' members to be bound by values, shared interests, or actions rather than locality?

In the past, "other communities" were often subgroups within communities based on locality. For example, the definition of neighborhoods in large cities was often defined by ethnicity (e.g., Irish neighborhoods, Polish neighborhoods, Hispanic neighborhoods, etc.). Religion also played a role in defining community and the individual, with stereotypes and cultural traditions related to religious practice (e.g., Jewish communities, Catholic communities) and members who shared ethnic or religious background. Not-for-profit organizations associated with churches and neighborhoods came into existence to support subcommunities of larger localities. Examples of these include the Jewish Foundation of Los Angeles, California (www.jewishfoundationla.org) or the Polish Heritage Society of Grand Rapids, Michigan (www.polishheritagessociety.com). Although individuals were members of multiple communities, the interaction among community members continued to be based on locality or geographic proximity.

The current and future possibilities of online communities have substantially changed the definition and extended the opportunities for "other communities" to go beyond local regions, providing the potential for global communities that are bound by actions, vision, and values.

A community, then, may be developed around a product, a link to a well-known business entity, or the promise of information that is perceived as having value or interest. Communities are founded on common values and interests that are not location bound. This freedom from geographic limitations also increases the opportunities for an individual to be a member of multiple communities.

If an online site is the foundation of the community, the opportunity to grow the audience or develop the community is easier, based on the issue of availability. The number of opportunities for the member to interact within the online community strengthens the individual's identification as part of the larger sphere of people who share the same interest or values. In turn, if the community or online site creates dynamic interactions that allow members to discuss their needs, share information and opinions, and provide resources supporting members' needs, online communities may be the most powerful of all communities that nonprofit organizations can develop.

The online community offers a vehicle for building leadership and strong communities, as suggested by Gardner in his 1954 address. The information generated within an online community is based on the diverse perspectives of its members. Blogs may provide visitors with information and insight from any number of experts relating to a specific topic or field, or they may offer the opportunity to voice opinions as well as read the concerns of other members. Communication is open and visible to the constituents of the potentially global community, and all members of the community have a voice. If the website features an online forum, such as an area of user-generated dialogue, reaction, and comment on a specific subject, the online community provides thought-provoking interaction for readers and users alike that allows all members to participate and shape their online community.

Many popular online communities feature resource directories providing visitors with information, service providers, coupons, helpful hints and more to meet their needs. Directory information is culled from numerous sources and provides a broader net of growing a community. For example, an online resources directory at The Parent Report (theparentreport.com) lets users browse information by topic, ranging from children's behavior to traveling with children; at the same site, users can learn about developmental issues related to age group, such as newborn or teen. Choose a topic, and you are provided with a wealth of information via articles, book excerpts, and even radio programs. Visitors can even post their input related to specific articles or answer questions that users have posted.

The late 20th century saw the rapid growth of e-mail for both personal and business communication. In less than two decades, online social network communities (Facebook, YouTube, MySpace, and Twitter) quickly altered the way in which information was disseminated. Online websites have and may serve as the best in community development, allowing for diversity in membership, openness in communication, participation of all members in leadership and voice, and resources that enhance the lives of members.

There is no question that with the increasing growth of technology and society's reliance on it, specific ways of communicating within communities have changed, both locally and globally. However, are all forums communities? Are forums including the increasingly popular fan-based websites—which serve as a means for sharing likes and dislikes about an aspect of a book, movie, television show, or other entertainment media—considered a community based on interest or values? Many would speculate yes.

When online bloggers picked up the story of an unknown Scottish woman's singing audition on a British television talent show, they posted a link to the YouTube video of the performance. The link became an overnight sensation and was viewed more than 47 million times worldwide within a week (http://mashable.com). It has become one of YouTube's most popular videos with more than 80 million views registered. This popularity translated into retail success according to Nielsen SoundScan, and Susan Boyle's debut album broke the record for the highest, single-week album sales in 2009, with more than 701,000 units sold. This number also gives her the best-selling debut album by a female artist since data were first collected in 1991 (www.billboard.com). Are those who viewed Susan Boyle members of a community?

Look at the impact of texting in light of the 2010 Haitian 7.0 magnitude earthquake that devastated the country and killed hundreds of thousands of residents. Within 2 days of the news, the American Red Cross raised more than $7 million from 700,000 wireless customers via text messaging, with every major wireless network represented according to some sources. The response was astounding, but according to analyst Jeff Roster, not surprising. “People are comfortable with text messaging,” he says. “Texting is the form of communication for the next generation” (quoted in Kaneshige, 2010). Is it also the representation of a global community?

Future Directions

Nonprofit organizations such as the American Red Cross have used online communication as a vehicle to connect to members. It is impossible for online communities to exist without a base that supplies the framework and direction for member interactions. The purpose or reason for this base may suggest whether the online site is truly a community. Community development is founded on meeting basic needs of its constituents and enhancing their growth. If one applies these criteria to online communities, the phenomenon of Susan Boyle did not constitute a community, and the American Red Cross and its use of texting to support Haiti relief may represent community.

When a geographic area or online site creates a dynamic interaction that is inclusive of diverse members, it provides the basis for community. As community develops, the organization provides a comprehensive communication system that allows members to discuss their needs and share information. The community also works to build an infrastructure that creates and provides the resources to meet members’ needs and enhance members’ lives. This communication is integral to community development and may be face to face or online.

As nonprofit organizations look to support community development today and in the future, more than likely, both online sites and geographic locations may need to be considered. This hybrid approach allows for the expansion of the definition of community beyond geographic location to a global entity that incorporates worldviews and resources. The incorporation of the online community increases the assets and talents available to address community concerns. This hybrid approach also recognizes and anticipates the future in its inclusion of a global community.

If communities are defined as people, then people and what they bring to the table in terms of knowledge, talent, and values must be part of the solution. As nonprofit organizations continue to support community development, they continue to support people. The reciprocity of this relationship between nonprofit organizations and the people they support is integral in understanding community development. Communities and nonprofit organizations cannot accomplish their goals without the support and involvement of the other. Therefore, the nonprofit organization not only assists in the development of the community but becomes part of the community itself. This integration places the support and assistance of the nonprofit organization in the context of the community itself and ensures the successful community development.

Education (Pre-Birth, Preschool, and Early Childhood)

Sarah Eisner Kirch

North Park University School of Business and Nonprofit Management

"It takes a village to raise a child." This ancient African proverb is particularly applicable to the nonprofit sector's approach to and involvement with education from pregnancy through early childhood. Decades of research have demonstrated the need for education services for young children and families as a preventive measure against later school failure and behavioral problems. In fact, high-quality early childhood education services can contribute to better school and life success. Longitudinal studies have demonstrated long-lasting effects of such programs, and nonprofit organizations have been heavily involved in the providing them.

There is a great need for nonprofit involvement in early childhood education, as "only one penny from every new, non-defense dollar spent by the federal government has gone to children and children's programs over the past five years" (Isaacs, 2008a, p. 1). This encompasses all spending on children, of which funding for early education and care is only part. The nonprofit sector has played a significant role in providing community/direct services in early education, many of which provide examples of best practices or model programming. In addition to direct service, nonprofit organizations have achieved major accomplishments in research and advocacy.

Key Nonprofit Organizations Involved in Pre-Birth, Preschool, and Early Childhood Education

While a great many nonprofit organizations are involved in the issues of pre-birth, preschool, and early childhood education, the following organizations stand out for the length of their involvement and the level of their accomplishments.

Annie E. Casey Foundation

One of the largest private, philanthropic foundations in the world, the Annie E. Casey Foundation (http://www.aecf.org) was founded in 1948. The foundation's mission is "to foster public policies, human-service reforms, and community supports that more effectively meet the needs of today's vulnerable children and families" (Annie E. Casey Foundation, n.d.). All of the foundation's programs focus on providing necessary funding and services to children and families, and the Early Childhood and School Readiness initiative is particularly relevant for young children.

The goal of the early childhood and school readiness initiative is to ensure that all children and families have equal and accessible opportunities to obtain high-quality and culturally sensitive early childhood programming. The initiative seeks to find examples of best practices and provides grant funding to a number of key nonprofit agencies working in early childhood education, including Zero to Three, the United Way of America, and the Children's Defense Fund.

The Brookings Institution

The Brookings Institution is a nonprofit organization focused on research and public policy. Brookings is considered to be one of the most influential and trusted nonprofit think tanks in the United States. The Brookings Institution houses a Center on Children and Families that "studies policies that affect the well-being of America's children and their parents, especially children in less advantaged families" (Isaacs, 2008a, p. 29). One of their focus areas is the role education can play in reducing inequality and poverty in our society. The Center on Children and Families also collaborates with Princeton University in publishing a journal titled *The Future of Children* (http://www.futureofchildren.org). *The Future of Children* is published twice each year and focuses on using research to create valuable policies and programs for children and to influence legislators and policymakers.

Carnegie Corporation of New York

The Carnegie Corporation (http://www.carnegie.org) is a nonprofit foundation that was started by Andrew Carnegie in 1911. One of the Carnegie Corporation's main goals is to further education and knowledge in the pursuit of Carnegie's philanthropic vision "to do real and permanent good in this world." The Carnegie Corporation has played a significant role in advancing the cause of early education in the United States.

Children's Defense Fund

The Children's Defense Fund (CDF; http://www.childrensdefense.org) is a national nonprofit organization focused on child advocacy to help provide children with necessary resources. One of CDF's goals is to provide regular and high-quality education to all children. CDF publishes an annual report titled *State of America's Children* that details the most current and trusted state and national research on issues facing children and families, including a section on early childhood care and development.

The Children's Defense Fund also sponsors an Emerging Leaders project. The goal is to provide training for early childhood development advocates and a forum to help advocates find and connect with one another. The project holds two annual events that focus on sharing research and best practices and provide extensive networking opportunities.

First Focus

First Focus is a nonprofit organization dedicated to bipartisan advocacy. Their goal is to make children and families a national priority in terms of both policy and budgetary decisions. Education is a primary concern for First Focus, and the organization works to bridge the partisan divide to influence federal policy making (Isaacs, 2008a, p. 29).

March of Dimes

March of Dimes (http://www.marchofdimes.com) has played a long and prominent role in American society. Originally created to eradicate polio, March of Dimes changed its mission after the polio vaccine contributed to the near-elimination of this disease. Since 1958, their mission has been "to improve the health of babies by preventing birth defects, premature birth, and infant mortality. We carry out this mission through research, community services, education and advocacy to save babies' lives."

National Association for the Education of Young Children

The National Association for the Education of Young Children (NAEYC; http://www.naeyc.org) is focused on "improving the well-being of all young children, with particular focus on the quality of educational and developmental services for all children from birth through age 8." NAEYC conducts research to set standards for quality early childhood education, works to improve both professional development opportunities and working conditions for early childhood education staff, and promotes the importance of early childhood education among parents, families, legislators, and governments.

Pew Charitable Trusts

According to its website, the Pew Charitable Trusts (http://www.pewtrusts.org) "is driven by the power of knowledge to solve today's most challenging problems. Pew applies a rigorous, analytical approach to improve public policy, inform the public and stimulate civic life." Pew has three projects that focus on the area of early childhood education: Pre-K Now, the National Early Childhood Accountability Task Force, and the National Institute for Early Education Research. Pre-K Now, a campaign of the Pew Center on the States, advocates for quality prekindergarten programs for all children ages 3 and 4. The National Early Childhood Accountability Task Force studies the performance of prekindergarten (or preschool) programs. This research will be used to assist states in the development and improvement of preschool performance. The goals of the National Institute for Early Education Research are to effectively study prekindergarten education and to advocate for increased funding for said services.

Promising Practices Network on Children, Families, and Communities

The Promising Practices Network is operated by the RAND Corporation, a highly influential nonprofit think tank, and seeks to impart high-quality and evidence-based research on programs and practices that work to make a difference in the lives of children and families (Promising Practices Network). PPN reviews early childhood education programs in order to assess which programs have the most promise for effective outcomes for children and families. The organization also provides extensive research on a variety of issues pertaining to children and families and on service delivery for practitioners.

United Way of America

Comprising a large national network of almost 1,300 local organizations, United Way of America (http://www.liveunited.org) works to "advance the common good by focusing on education, income and health." The national organization seeks to produce long-term changes in these issues by examining the principal causes. As one of their primary focus areas, education takes on primary importance, and many local United Ways participate in campaigns to address early childhood education and development.

Zero to Three: National Center for Infants, Toddlers, and Families

Zero to Three (http://www.zerotothree.org) was established in 1977 as a national nonprofit organization focused on providing effective research, training, and support to early childhood education and development professionals, policymakers, and families. The organization's mission is "to promote the health and development of infants and toddlers." Zero to Three also provides technical assistance to states regarding the health and development of infants. Their primary focus areas are on training early education and development professionals, creating collaborative networks, influencing policy changes that positively affect young children and families, and increasing public awareness about the needs of this age group.

Pre-Birth Education

Community/Direct Service

In general, pre-birth (or prenatal) education focuses on the pregnant mother and parents. The majority of nonprofit work done in this arena centers around adequately educating mothers and fathers about how to care for their pregnancies and their newborn babies to prevent prematurity, birth defects, and infant mortality.

Parent Education and Resources

A number of organizations, including the March of Dimes and the American Pregnancy Association (http://www.americanpregnancy.org), provide educational resources for pregnant mothers and parents, which focus on helping women to have healthy pregnancies and positive birth outcomes. March of Dimes has a Pregnancy and Newborn Health Education Center, which provides a place for pregnant women to obtain free and confidential advice regarding pregnancy and newborn health. The American Pregnancy Association operates a national toll-free helpline to provide easy access to necessary information, primarily for expecting parents.

Nurse Family Partnership Programs

The Nurse-Family Partnership is a program through which nurses perform a number of home visits with low-income, first-time mothers. These visits begin during pregnancy and end when the child becomes 2 years old. The services provide help to teach pregnant mothers healthy behaviors and parenting skills to improve pregnancy outcomes and the health and development of children. The nurses also work with the mother to figure out plans for her life, including schooling, work, and the timing of future pregnancies (Isaacs, 2008a, p. 23). The Nurse-Family Partnership National Service Office (http://www.nursefamilypartnership.org) is a nonprofit organization that assists communities in effectively implementing this home-visiting program.

Random-assignment evaluations of the Nurse-Family Partnership program in three locations have demonstrated positive outcomes in a variety of areas for both mothers and children involved in the program. The outcomes for children have included improved achievement scores, better language skills, and reduced criminal activity. Outcomes for mothers include improved health during pregnancy, better birth outcomes, and reduced rates of child abuse and neglect (Isaacs, 2008a, pp. 23–24).

Research and Advocacy

March of Dimes has been particularly influential in researching and increasing public awareness about premature birth. Many important medical advances have come from March of Dimes researchers and funding, including the development of the PKU and biotinidase deficiency tests, which assist in the identification and prevention of some developmental disabilities. March of Dimes funding has also led to the first successful bone marrow transplant and in utero treatment to correct birth defects.

In addition to research, March of Dimes has made a significant impact on legislation to protect children and families. In 1996, March of Dimes volunteers played a significant role in helping to pass the Mothers' and Newborns' Health Protection Act, which served to increase the minimum hospital stay for mothers to 48 hours after delivery. In 1997, volunteers assisted in passing the State Children's Health Insurance Program (S-CHIP), which made health care available for up to 5 million children. In 2007, March of Dimes volunteers contributed to increased newborn screening throughout the states.

Infant and Toddler Education

Research has demonstrated that the quality of interactions with both people and their surroundings affects brain development and formation of neural pathways in infants and toddlers (Isaacs, 2008b, p. 103). While more attention has been paid to preschool and early childhood education, this research indicates that it is vital to devote both time and resources to this stage of development.

Community/Direct Service

The need for affordable education and child care services for all American children is great. The National Institute of Child Health and Human Development's 1997 Study of Early Child Care revealed that 72% of infants experienced care by someone other than their parents during their first year of life. The average age at which infants entered nonparental care was 3.31 months (Shonkoff & Phillips, 2000, pp. 300–301). According to a report by Action for Children, Chicago Metropolis 2020, and Illinois Facilities Fund (2005), titled *The Economic Impact of the Early Care and Education Industry in Illinois*, the cost of year-round full-time infant care in a child center is more than the annual tuition for an undergraduate resident at the University of Illinois. Based on the extensive research demonstrating the importance of the early years of life, there is a clear need for nonprofit organizations to provide high-quality and affordable child care and education services.

Early Head Start and Nonprofit Providers

The goal of Early Head Start is to provide essential child development services to disadvantaged pregnant women and families with children under the age of 3. Early Head Start focuses on health, cognitive, and language development for infants and toddlers in addition to socioemotional well-being and family development. A variety of organizations, including many nonprofits, offer Early Head Start services through center-based programming and home visits. A randomized assignment evaluation of Early Head Start found mostly small positive effects at ages 2 and 3 years on cognitive and school-related outcomes such as improved cognitive development and language skills, increased child engagement with parents, and improved parental outcomes (Isaacs, 2008a, pp. 14–15).

Research and Advocacy

Research conducted by nonprofit organizations has helped to demonstrate best practices for infant and toddler education. This research has also helped to influence advocacy on the part of infant and toddler education, with the goal of influencing policymakers and legislators to increase funding and support for such programs.

The Infant Health and Development Program

The Infant Health and Development Program (IHDP) is a comprehensive multisite intervention for low birth weight and premature infants funded by the March of Dimes Foundation, the National Institute of Child Health and Human development, the Pew Charitable Trusts, the Robert Wood Johnson Foundation, the Stanford Center for the Study of Families, Children, and Youth, and the U.S. Department of Health and Human Services (Promising Practices Network). It is clear that the impetus for this project came primarily from the nonprofit sector due to the high prevalence of nonprofit funders.

The purpose of the IHDP was to reduce the health and developmental issues that are commonly associated with low birth weight and prematurity. The IHDP was planned as a randomized clinical trial and studied free intervention services provided to study participants, including home visits, attendance at a child development center, group meetings for parents, and pediatric follow-up. Infants began the program discharge from the neonatal nursery and continued until the age of 36 months (see Promising Practices Network, http://www.promisingpractices.net).

In this study, 985 infants were analyzed, with one third receiving the intervention services and the remaining two thirds assigned to a control group. The children were assessed eight times between infancy and 36 months and have been studied through the age of 18. The study addressed outcomes such as cognitive development, behavior, school achievement, and health.

When the infants were studied at 24 months, researchers found significant, positive effects in IQ, vocabulary, receptive language, and visual-motor skills. The intervention seemed to have a differential effect on cognitive outcomes for children based on their birth weight, race, and quality of their home environment. According to the Promising Practices Network on Children, Families and Communities, the IHDP has demonstrated effect sizes for cognitive development and achievement that are considered "promising."

Starting Points and I Am Your Child

The Carnegie Corporation of New York published a report in 1994 called *Starting Points: Meeting the Needs of Our Youngest Children.* This report focused on the research on children ages 0 to 3 and concluded that, as a nation, we were silently neglecting the needs of this age group. This report received significant media coverage and helped to spur the legislation that created Early Head Start (Levine & Smith, 2001, p. 143).

Shortly after Early Head Start was enacted, political shifts led to increased state responsibility for social policy. The Carnegie Corporation responded by forming the Starting Points Initiative to encourage both understanding and program and policy changes in the arena of early childhood education and development. The Starting Points Initiative led to increased research focus, the formation of numerous partnerships with politicians and legislators, and collaboration with the Clinton administration to plan two White House conferences on the subject of early childhood development in 1997 (Levine & Smith, 2001, p. 144).

The Carnegie Corporation collaborated with more than a dozen other nonprofit and for-profit organizations to support *I Am Your Child*, a national public awareness campaign headed by filmmaker Rob Reiner and the Families and Work Institute, another nonprofit. The campaign distributed a variety of materials, including research reports, community planning resources, videotapes, and a CD-ROM to educate parents of young children about child development and education. *I Am Your Child* also partnered with *Newsweek* magazine to create a special edition titled *Your Child: Birth to Three*. State coalitions worked in conjunction with the national campaign to increase the impact (Levine & Smith, 2001, p. 144).

Preschool

Community/Direct Service

History of Preschools in America

Historically, nonprofit organizations have been heavily involved in the movement to provide preschool education. In the early 19th century, when it was in vogue to educate one's children at home, many mothers from more affluent backgrounds stayed at home to raise their children. However, poor women were strongly encouraged to use the services of the charity infant schools to educate their children. It was believed that the home environment these children encountered could be harmful to their social and intellectual development and that they would be better prepared by attending a charity school (Beatty, 1995, p. 21).

The growth of the American preschool movement was heavily influenced by the nonprofit sector. Societies to promote the formation of charity infant schools were prominent in Boston, New York, and Philadelphia. Mainly, the charity schools were meant to serve indigent children, while privileged families sent their children to private infant schools (Beatty, 1995, p. 21).

Contract Failure and Nonprofit Preschools

Nonprofit organizations continue to play a significant role in the provision of preschool education. There are both nonprofit and for-profit preschools in the United States, and a significant amount of research has been done on the similarities and differences between the two.

Based on the "contract failure" theory of Henry Hansmann, it seems likely that consumers of preschool services would choose nonprofit providers over for-profit providers (Cleveland & Krashinsky, 2005, p. 7). The contract failure theory states that nonprofit organizations have an advantage when consumers do not feel capable of adequately evaluating the quality of the service provided or when the primary recipient of the service is someone other than the individual paying for said service. This is the case with preschool education, in which the primary recipient is the payer's child. This is compounded by the fact that young children, the primary recipients of preschool education, cannot be entrusted to sufficiently assess the quality of the services they receive. A parent cannot expect 3- or 4-year-olds to be able to effectively speak to the depth and value of the education and environment to which they are exposed in their preschool classroom.

When these information asymmetries exist, Hansmann's contract failure theory hypothesizes that consumers will be more likely to choose nonprofit firms because they are expected to be trustworthy and to serve the public good. Numerous studies have indicated that nonprofit preschools provide a higher quality of service than do for-profit firms (Cleveland & Krashinsky, 2005, p. 12). A study done by the New Zealand Council for Educational Research demonstrated that nonprofit early education centers employed a high number of staff with a teaching qualification, paid their staff higher wages, offered better working conditions, had more parent involvement, and had higher ratings of process quality than for-profit centers (Mitchell, 2002, pp. 2–3).

Similar results have been found in studies from the United States. One such study demonstrated that the directors of nonprofit and for-profit centers had different priorities, with the nonprofit directors focusing on quality of services and the for-profit directors emphasizing costs and benefits. The directors made operating decisions based on these emphases.

The Montessori Schools

Undoubtedly, the most well-known preschools in the United States are Montessori schools. Maria Montessori founded her first school, the *Casa dei Bambini* or Children's House in the San Lorenzo district of Rome on January 6, 1907. She first visited the United States in 1913, the year Alexander Graham Bell and his wife started the Montessori Educational Association in Washington, D.C. Now, every Montessori school is independently owned and operated (North American Montessori Teachers' Association, 2010).

A number of nonprofit organizations are affiliated with the Montessori movement, including the American Montessori Society (http://www.amshq.org/society) and the Montessori Foundation (http://www.montessori.org). The purpose of these organizations is to oversee and provide a forum for Montessori education, helping to further the influence of the Montessori movement in American education.

Head Start and Nonprofit Preschools

Head Start is a federal program designed to serve disadvantaged 3- and 4-year-olds to provide them with educational and health services that will help to mitigate the negative effects of their upbringing (Isaacs, 2008b). Federal grants are directed to a variety of local agencies, including many nonprofit organizations, to provide community services to children and families. These services include preschool education, health care (addressing physical, dental, and mental health issues), nutrition services, and parental services.

Results of various studies on Head Start have demonstrated mostly modest outcomes from the programming. The quality of Head Start programs varies considerably depending on the agency delivering the services. However, a national random assignment evaluation found small to moderate positive effects on pre-reading, pre-writing, vocabulary, and literacy skills for children enrolled in Head Start. Even with these positive results, Head Start failed to live up to its promise, as the children enrolled did not catch up to their peers nationally in terms of school readiness skills (Isaacs, 2008a, p. 9).

Other studies have demonstrated less optimistic results. The largest review of research literature on Head Start, published by the U.S. Department of Health and Human Services, covered more than 200 studies and did not find any enduring academic advantage to Head Start participation (Coulson, 2009, p. 1).

Model Early Childhood Programs

Two of the most effective and thoroughly reviewed early childhood education programs were facilitated by nonprofit organizations. These programs, the Carolina Abecedarian Project and the High Scope/Perry Preschool Program, have demonstrated significantly positive results in longitudinal studies and have helped to establish the need for preschool education as well as the components of a high-quality preschool education.

The Carolina Abecedarian Project was a center-based program at the Frank Porter Graham Child Development Center at the University of North Carolina at Chapel Hill. The project began in 1972 with Dr. Craig Ramey as the principal investigator and served indigent children from 6 weeks through 5 years of age. The children were enrolled full-time and received highly individualized educational services and home visits designed to improve social, emotional, and cognitive development (O'Brien & Sanders, 1974, pp. 2–3).

The Perry Preschool Program began in the early 1960s in Ypsilanti, Michigan. David Weikart, the special education director in the Ypsilanti Public Schools, was frustrated with the district's inefficiency in dealing with individuals who struggled with school failure by retaining these individuals. Weikart started the preschool program to get to the root of the problem (Schweinhart, 2002, p. 1). The Perry Preschool Program served children ages 3 and 4 with part-day educational programming and weekly home visits (Barnett, 2006, p. 4). Longitudinal studies have followed the children served in the Perry Preschool Program through age 40, demonstrating positive results.

Museums and Libraries

Public libraries have a long history in America, as well as a significant place in the history of the nonprofit sector. Libraries currently provide a variety of educational and literacy programs for infants, toddlers, and young children, including story hours and other school readiness experiences. According to a study by the National Center for Education Statistics, 86% of public libraries surveyed provide educational group programs for children in preschool and kindergarten and 40% present programs for infants and toddlers, a significant increase from earlier studies (Herb & Willoughby-Herb, 2001, p. 1).

The Association of Children's Museums (ACM; http://www.childrensmuseums.org) is a nonprofit membership organization composed of 341 museum members representing 22 countries. About 98% of children's museums are nonprofit organizations, and 81% of ACM museums have an exhibit space that is dedicated to early-childhood education for infants and toddlers. Although most museums do not provide long-term educational programming for young children, more than 30 million children and families visited children's museums in 2007. This indicates that museums can play a sizable role in providing supplemental educational experiences for infants, toddlers, and young children.

Research and Advocacy

The nonprofit sector has been highly involved in conducting research on preschool programming. This research has served a variety of purposes: to study program characteristics, particularly of model programs, to determine what makes a preschool program effective; to study the long-term consequences of quality preschool education; and to study the economic impact of preschool education. The research conducted by nonprofit organizations has influenced the number of children receiving preschool education in the United States.

Nonprofit organizations, including the Brookings Institution, First Focus, National Association for the Education of Young Children, Pew Charitable Trusts, and the Annie E. Casey Foundation focus on conducting extensive research into early childhood education and are also heavily involved in advocacy, using research results to encourage legislators, policymakers, and local, state, and federal governments to increase funding for and attention to early childhood education and other programs that benefit children and families. Other nonprofit organizations involved in research and advocacy include colleges, universities, and think tanks.

Study of Program Characteristics

The Abecedarian Project and Perry Preschool Program have likely been the most researched and influential nonprofit preschool programs. The longitudinal studies discussed here have demonstrated considerable and long-lasting positive results. These programs are universally considered to be highly effective, and research on these and other preschool programs, both nonprofit and for-profit, have demonstrated particular characteristics of effective programs.

This research has focused on both structural and process quality. Structural quality includes indicators such as the ratio of staff members to children, teacher and staff qualifications, the number of children in a class, rates of staff turnover, and staff wages. Process quality is harder to quantify and focuses on the atmosphere and environment of the preschool classroom. Process quality is demonstrated in the relationships between caregivers and children and how the children interact with their surroundings (Huntsman & Tully, 2008, p. 1).

Long Term Consequences of Preschool Education

The Abecedarian Project and Perry Preschool Program have both been the subject of numerous longitudinal studies, with the Abecedarian participants studied through age 21 and the Perry Preschool Program participants studied through age 40. The results have demonstrated significant and long-term benefits from both programs. The Abecedarian Project demonstrated long-lasting improvements in IQ scores for program participants. Both programs resulted in positive educational outcomes including reduced need for special education, lower rates of grade retention, and higher rates of high school graduation (Barnett, 2006, p. 3). In addition, the longitudinal studies demonstrated that the programs resulted in positive long-term effects such as higher employment rates (for the Perry Preschool Program) and earnings, lower rates of criminal activity (among Perry Preschool Program participants), lower rates of teen parenthood, reduced dependence on welfare (Perry Preschool Program), and lower rates of marijuana use (Abecedarian) (Isaacs, 2008a, pp. 18–19).

Despite the overwhelmingly positive research results of these programs, it is difficult to extrapolate to a larger population, as the Abecedarian Program served only 111 children, and the Perry Preschool Program served only 123 children (Barnett, 2006, p. 4). These model programs provide positive examples of the types of preschool programming that provide long-term benefits to children, but it would be very difficult to offer the same depth and intensity of services to a much larger, national population.

Economic Impact of Preschool Education

The economic research done by nonprofit organizations such as the Center on Children and Families at the Brookings Institution and First Focus has centered on the benefit-cost ratios of preschool programs. The benefits are calculated by the savings to society that result from program effects such as lower grade retention, higher educational levels, higher earnings, lower crime rates, lower teen pregnancy rates, and less welfare dependence. The Abecedarian model has the highest total cost per participant at $36,929 for the multiyear services and demonstrates a rate of return of $3.23 to $3.71 per dollar invested in the program. The Perry Preschool Program is estimated to cost $16,264 per participant and returns between $5.15 and $17.10 per dollar invested, depending on the study (Barnett, 2006, p. 14; Isaacs, 2008a, p. 19).

Significant Nonprofit Advocacy Accomplishments in Preschool Education

Preschool programming has the benefit of broad political appeal because there is a high level of need among American families, and many studies have demonstrated the highly positive outcomes that can result, including the long-term economic benefits. In fact, the great majority of voters, 87% according to national surveys, believe that state governments should provide the funding for all children to attend preschool (Mead, 2004, p. 20).

Nonprofits have played a significant role in helping to create this broad public appeal and in convincing both state and federal governments to fund early childhood education programs. Some notable accomplishments of the National Association for the Education of Young Children include extensive involvement in the development and administration of the accreditation systems for associate, baccalaureate, and graduate degrees to teach and train early childhood educators and the development of a national voluntary accreditation system for early childhood education programs. These accreditation programs have improved the quality of education provided through preschool programs, established standards for accountability, and provided parents and caregivers with an objective rating of quality preschool programming.

The HighScope Perry Preschool Program established the Center for the Study of Public Policies for Young Children in 1979 (the name was later changed to the Voices for Children Project). Supported by the Carnegie Corporation, the center widely publicized the results of research conducted on the Perry Preschool Project through the use of press releases and a New York City press conference. This spurred the national news media to take notice and led to significant and long-lasting bipartisan support for an increase in Head Start funding, from $735 million in 1980 to $6.2 billion in 2001. The center was later involved in advocating for funding for Head Start during the Reagan administration, influencing the director of the federal Office of Management and Budget to designate Head Start as a “social safety net program,” thereby protecting it from decreases in government funding (Schweinhart, 2002, p. 4). In addition, David Weikart of the Perry Preschool Program has used the data on economic returns from preschool education to persuade state legislatures to increase funding for early childhood education programs serving at-risk preschoolers (Kendall, 1995, p. 7).

KIDS COUNT is a state-level and nationwide project that seeks to measure the status of American children.

These census data measure the well-being of children on multiple levels, including educational, social, economic, and physical well-being. The purpose of KIDS COUNT is to educate policymakers and American citizens about the status of children and to encourage and expand on national dialogue about children and families. "KIDS COUNT exists to measure child outcomes and contribute to public accountability for those outcomes, resulting in a model for data-driven advocacy for children, their families, and their communities" (Annie E. Casey Foundation, n.d.). KIDS COUNT reports have generated an extensive amount of media coverage and have encouraged both public and private initiatives to address the issues faced by children and families and enhance their lives.

Nonprofit leaders are also called to testify for state and federal legislatures regarding the issue of early childhood education. Regarded as experts in the field, these nonprofit leaders use applicable research results to attempt to convince the government to increase funding for early childhood education programs and to make children and families more of a priority. As Ron Haskins, senior fellow at the Brookings Institution and senior consultant at the Annie E. Casey Foundation, stated during his testimony for the House Committee of Education and Labor on January 23, 2008,

> There is good evidence from scientific research that preschool education can be an effective tool in our nation's long struggle to reduce the achievement gap between poor children and children from non poor families. Reducing the achievement gap holds great promise for reducing poverty in the long term and even for reducing inequality. Having spent many years studying social intervention programs, I think it is fair to say that there is no body of evidence on any social intervention that holds as much promise of producing as wide a range of positive effects as high quality preschool programs. (Haskins, 2008, p. 1)

Kindergarten

Community/Direct Service

The kindergarten movement began in the United States in the 1850s. From the beginning, kindergarten was viewed in a positive light as a supplementary education for children from all backgrounds and socioeconomic statuses. Prior to 1890, charities were heavily involved in providing kindergarten programs directly to children. Philanthropists often provided the funding to provide free, half-day kindergarten services to children of working-class parents, many of whom were immigrants (Berg, 2008). By 1900, most kindergarten programs were provided by public schools rather than by charities or other private institutions.

By the 1980s, American kindergartens were focused on providing children with academic preparation for elementary school. Between 82% and 95%, or about 4 million American children, attend kindergarten. About three quarters of those children go to public school kindergarten (Berg, 2008). This leaves a sizable minority attending other kindergarten options, including nonprofit institutions.

The Role of Colleges and Universities in Training Kindergartners

Historically, kindergarten teachers were known as kindergartners (Beatty, 1995). In the 1880s and 1890s, private women's liberal arts colleges and universities began to offer kindergarten training classes (Beatty, 1995). This acceptance of kindergarten into the academic world demonstrated the widespread societal recognition of the benefits and need for kindergarten education for children. The Laura Spelman Rockefeller Memorial, created by John D. Rockefeller, Senior, in honor of his deceased wife, funded nursery school and child development institutes at universities nationwide (Beatty, 2006, p. 4).

At Wellesley College, Arthur Norton developed the first training devoted entirely to kindergarten education. Norton became the chair of the Education Department of Wellesley in 1912 and contributed to the development of the Anne L. Page School in 1913. The school provided kindergarten education for young children and training in kindergarten methods for students at Wellesley College (Beatty, 1995, pp. 114–115).

Today, universities and colleges offer many teacher training programs. These nonprofit institutions are influential in educating the generations of teachers in the most current teaching methods. In this role, colleges and universities continue to shape the course of American preschool, elementary, and secondary education.

Research and Advocacy

Historically, a number of nonprofit organizations have been formed to perform research and advocate for kindergarten education. Members of the New York Free Kindergarten Association started the National Kindergarten Association (NKA) in 1909 as a political action group. The NKA sought to organize national kindergarten campaigns and to advocate for the inclusion of kindergarten programs in public schools. The goal was to provide kindergarten for all students between the ages of 4 and 6 years. In 1920, the NKA estimated that there were 4 million children in that age range who were not enrolled in kindergarten ("Planning to Extend," 1920).

The NKA played a significant role in the establishment of public kindergarten education in the United States, as well as in advocating for adequate education and training for kindergarten teachers (Beatty, 1995, p. 112). Bessie Locke, NKA's director, campaigned extensively through towns and states to involve important stakeholders, including businessmen, politicians, PTAs, and church groups, in the cause. Locke also created model statutes, lobbied state legislatures, and directed a Kindergarten Bureau within the U.S. Bureau of Education (Beatty, 2006, p. 4). The work took years, but the continued and intensive effort that

Locke and the NKA made to advocate for the integration of kindergartens into public schools paid off.

Future Directions

Given their historical involvement, it seems clear that nonprofit organizations will continue to play a significant role in early childhood education. A number of well-known and prominent organizations, including March of Dimes, the Brookings Institution, the Carnegie Corporation, and Pew Charitable Trusts, have chosen early childhood education as one of their primary focus areas. These and other organizations will continue to guide the development of effective and high-quality early childhood education programming, conduct essential research into the needs of this population and the effects of varied interventions, and advocate for increased state and federal support and funding.

EDUCATION (K–COLLEGE)

BARBARA DILLBECK AND BETSY FLIKKEMA
Learning to Give

For over a decade, the Council of Michigan Foundations (CMF) has led a comprehensive effort to infuse the teaching of philanthropy content (private citizen action intended for the common good) into the core academic curriculum of the K–12 school systems nationwide. This new curriculum is called *Learning to Give*. The case statement for this project, as presented on the website http://learningtogive.org/about, provides a place to begin in discussing the role of nonprofit leadership and philanthropy with K through college education. The following is an excerpt from the website and the original case statement provided with permission from CMF.

> Each day, leaders from emerging democracies come to the United States with a relatively surprising question. They want to know how they can create a civil society sector in their countries. They ask for guidance on teaching democratic and philanthropic principles to their children and for systems to pass on the tradition of private citizens working for the com mon good. They come to the United States because they rec ognize that the civil society sector in America is fundamental to building and sustaining a secure democracy, supporting government, and making our heterogeneous society function.
>
> Their questions echo many of those posed by teachers and civic leaders in the United States: How do we engage children in civic life? How do we harness youthful idealism and com bat growing cynicism? How do we teach caring about others, particularly those less fortunate? What is missing from our courses in government, history, economics, sociology, psy chology, and philosophy that results in young adults lacking understanding or passion for the noble ideas of their society?
>
> In this country, history is taught without serious attention to the role of volunteers in building the first black colleges or the role of private donors in funding the Salk vaccine for polio. Psychology and sociology, frequently focused on behaviors outside the healthy and normal, often do not explore the motivations and the relationships involved in setting aside self interest for the benefit of the community. (Council of Michigan Foundations, 1997)

As one of the founding classroom teachers in the project wrote in comments evaluating the new curriculum:

> It is my belief that philanthropy is an important part of our soci ety. I also believe that there is a danger that the concept and knowledge of philanthropy will be forgotten if we, as educators, do not include these concepts in the curriculum. I think that social studies is the perfect forum to instill the knowledge of philanthropy and volunteerism in our young people. (C. Thomas Webb, Fulton Middle School, Fulton Schools, Middleton, Michigan [Program evaluation response])

The *Learning to Give* case statement goes on to describe how the transmission of these core traditions of our society has occurred without being taught in schools.

> We have relied in the past on churches, families, friends, and neighborhoods to teach children the value and significance of service and giving. We have assumed that our children know their heritage as citizens who do not need to be empowered by an outside agency but who are born empowered as their inher ent right of citizenship. It is sadly ironic that in the late 20th century, as emerging foreign democracies were seeking our assistance in establishing philanthropic traditions of their own, the traditional forces for teaching this ethic to children in the United States were eroding.
>
> The very skills and community cohesion necessary to off set forces of social disintegration, especially in an increas ingly diverse culture, are skills and experiences found in the civil society sector. Yet, an understanding of this sector remains a mystery to many American children. (Council of Michigan Foundations, 1997)

Helping Young People Understand Philanthropy

The definition of philanthropy used by *Learning to Give* in schools is "giving time, talent, and treasure, and taking action for the common good." People often mistakenly think that philanthropy is money given by old rich people. In contrast, the school definition of philanthropy represents a democratic ideal that anyone can be a philanthropist. Anyone can give time, talent, or treasure to promote the common good. With this definition, young people learn that they can be effective philanthropists who can make a real difference.

Philanthropy includes voluntary action and service to the needs of others with the intention of enhancing the "good" for individuals and communities. The value of a gift or service is unique to each person and situation. A $10 gift from a child's piggybank is a greater gift of philanthropy than $100 from a wealthy adult. Treasure may include a baseball card collection or someone's long hair that is donated for wigs for cancer patients. There is a more lasting impact when a child notices a need and uses his or her voice to address that need than when a youth fills mandatory hours in a project designed by a teacher or parent.

> Philanthropy comes from the civil society sector and arises out of need. Acts of philanthropy may promote human or ani mal welfare and fill a need where families, government, orga nizations, or the capitalist system fails. (Council of Michigan Foundations, 1997)

Fourth- and fifth-grade students from Grand Haven, Michigan, define philanthropy from their own experiences:

> Philanthropy is a very kind thing to do. What kind of philan thropy have you done? If you haven't done any . . . YOU SHOULD!

> Philanthropy is something you do for free without paying because that means you have a heart.

> I helped someone by shoveling their driveway so they would n't have to come out in the freezing cold. See, philanthropy makes you and the other person very happy.

Philanthropy is learned behavior that has a benefit for all. It can provide job skills or help build a resume, and students discover it can be done at any age with any amount of money and time and can be fun.

Other Key Terms

Another key term in discussing philanthropy with K through 12 students is the concept of *civic virtue*. Civic virtue is the idea of putting the common good above your individual interests. What does civic virtue look like? For a high school student, practicing civic virtue might mean volunteering at a local day care center with friends rather than going on an Internet networking site after school. It might also mean trying to change an attendance policy that is unpopular but will be better for the school. Or it might mean donating hard-earned money to a food bank rather than spending it on a new pair of shoes.

Many terms are used to describe the part of society where people put the common good before their own. These terms reflect various aspects of the process. The terms often used are *philanthropic* (from the Greek meaning love of man), *civil society* (reflecting that this is where citizen action occurs), *nonprofit* (describing the U.S. tax status of organizations doing work for others), *volunteer* (reflecting that fact that many people engaged in helping are not paid), *independent* (because the people and organizations work outside of business or government), or *char itable* (reflecting the Roman idea of taking care of others through direct assistance).

The idea of civil society describes a multitude of nonprofit organizations and the individual actions that are not a part of business or government. Actions by these organizations and individuals are usually the source of social change in the United States. Many of the "big ideas" for the benefit of all in society have been advocated by the organizations and individuals in the civil society sector.

Another important term used to describe activity and the importance of action in the nonprofit sector is called *social capital.* Generally speaking, social capital is the development of deep relationships, trust, and ties of affiliation that hold together communities. The social capital of a group helps it to weather disagreements while acting together to bring about change.

Teaching Philanthropy in the Classroom

Often taught through the social studies curriculum, civic education introduces students to core democratic values and examines what it means to be responsible citizens. To be civic minded is to be philanthropic.

Civil society topics are an important element in almost every social studies subject area. For instance, in economics, students should learn that 13% of the economy is represented by the activities of the civil society sector and that 20 billion volunteer hours contributed each year add value to the economy and promote our common community interests.

In civics, students should learn that the civil society sector is the source of new ideas that lead to social policy changes; civil society develops the skills that are needed for public discourse and democratic compromise. The relationships between social activism, a healthy democracy, and active engagement of citizens in government are critical to our country's success.

School-to-work programs should promote opportunities for employment in the civil society sector found by 12.5 million Americans, nearly 1 in 9.5 workers in the United States. Social studies courses prepare students to make decisions as responsible citizens. Responsible citizenship includes learning to give. Giving for the common good demonstrates the importance of and our commitment to a civil society. It is one of the basic ideas in a democracy.

Civil Society and Philanthropy in History

> Good citizenship is tantamount to success both in and out of school and we, as educators, cannot afford to leave its develop ment to chance. It is often said that history repeats itself. Perhaps by teaching the good and unselfish acts of mankind, we may steer youth into repeating the positive aspects of our his tory. (Pamela McIntosh, Woodward Elementary, Detroit Public Schools, Detroit, Michigan [Program evaluation response])

As far as we know, philanthropy, or giving to help others, has been present for all of human history. Philanthropy is often viewed as one thing that makes people uniquely human. There is satisfaction in helping others, and in some cultures it is an expected part of traditions. Families, villages, extended families, cultural groups, and even complete strangers give willingly of their money, services, and time.

In prehistoric times, family groups provide a basis for caring for one another through sacrifice, sharing, and living in community. Ancient Hebrews started a tax (a tithe) to help the poor of the community. The word *philanthropy* was first used in the fifth century BCE in the Greek play *Prometheus Bound*. Prometheus is punished by the gods for giving humans the gifts of fire and hope. Plato's Academy was a voluntary association for the public good and the first institution of higher learning. The first Roman emperor gave public aid to 200,000 citizens.

During the early settlement and colonization, the Native Americans played a key role in shaping the traditions of the settlers. The generosity of the Native Americans kept many of the colonists alive. Elements of our Constitution mirror ideas in the Constitution of the Iroquois Nations. Many of the colonies depended on volunteer organizations to meet their needs where in other nations the government supplied those needs. The Mayflower Compact forms the first social contract as a governing force for activities in the New World. As early as 1636, the leaders set up the groundwork for a public education system. Benjamin Franklin and friends organized the American Philosophical Society, which set up a free library, a voluntary fire department, and more.

The Revolutionary War was fully a volunteer effort. This set the precedent that citizens acting independent of government can change unfair practices by the ruling powers.

Between the 1780s and the 1830s, tens of thousands gained freedom through the Underground Railroad, which was a courageous group of black and white volunteers working to free slaves and move them north. The abolitionist movement, run by volunteers, led to the Emancipation Proclamation in 1863.

After the Civil War, under the leadership of Clara Barton, the Red Cross became the largest disaster relief organization in America. Also, the abolitionists inspired the women's rights movement in America. In the late 1800s, women began to organize and speak up against injustice.

At the end of the 19th century, Andrew Carnegie and John D. Rockefeller led the way for large-scale philanthropy and benevolent foundations. This led to the establishment of other foundations in the early 1900s, such as the W. K. Kellogg Foundation and the Ford Foundation. In 1917, the US allowed an income-tax deduction for charitable giving. This led many people to make charitable donations in order to receive the tax benefits.

During the Depression, when many nonprofits went bankrupt, President Roosevelt created jobs and relief programs through the New Deal, a form of government philanthropy. This government effort to deal with these enormous needs changed the way people think about the role of government in solving social problems. Thus, it changed how philanthropy and government worked together.

In the 1960s Lyndon B. Johnson launched the Great Society, which included aid for education, health care, and beautification.

As President Barack Obama took office in 2009 in a time of imminent economic crisis, it was apparent that the government needed to step in again with an emphasis on philanthropy and community service. Obama increased funds for existing youth programs like AmeriCorps and encouraged all Americans to pick up the responsibility where government could not or would not address all the needs. Nonprofit organizations have been the seedbed of major social movements and issues of justice in our history, including abolition of slavery, concern for exploited children, women's suffrage, humane treatment of animals, care for the mentally ill, civil rights, and environmental issues.

Uniquely American Tradition

America's constitutional democracy sets up a unique environment that promotes philanthropy. John W. Gardner (1912–2002) was Lyndon B. Johnson's secretary of health, education, and welfare and played a major role in civil rights enforcement and education reform; he was instrumental in creating Medicare and establishing the public television network. Dr. Gardner, in a 1995 interview, tells a story about why our Constitution drives our unique heritage of civil society.

> When Governor Morris, one of the signers of the Constitution, one of the framers, was asked to prepare a clean copy of the proceedings, he wrote the preamble and he sat down and wrote these words: "We the People of the United States." Quite sur prising to many people. Some delegates didn't like it. Patrick Henry objected. He said what it should say is: "We the assem bled delegates of Massachusetts Bay Colony, Virginia, New Jersey, etc." But most people were thrilled, thrilled at the idea that the new nation would base its legitimacy on the people.

> In Europe, the phrase just ran like wildfire through informed circles. And many Europeans, weary of monarchs, were not only thrilled but astonished that a new nation would be so bold as to find its legitimacy in that phrase.
>
> Now, unfortunately, a lot of Americans have forgotten what the phrase means. The phrase was not "We, the government," or "We, the powerful," or "We, the experts"; just "We, the People." Us, all of us. And if we forget that, which many have, there can be dark days ahead. And I want you to call to mind that in the 1996 presidential election, fewer than 50 percent of the eligible voters voted. Now we've got to turn that around; we simply have to turn that around.

Although giving in America remains high compared to other countries, it decreased gradually during the late 20th century among members of both faith-based and secular organizations. Volunteer service by young Americans (18 to 25 years of age) is strong. Young people are more likely to volunteer, but they avoid government and political issues to a greater degree than older Americans. More than 60% of American 12- to 17-year-olds reported that they volunteered for community service during 1999. Yet, they tended to be uninterested in politics, government, and civic affairs.

At the dawn of the 21st century, civic leaders expressed great concern about civic and political apathy in the United States, especially among young Americans. A report of the National Commission on Civic Renewal in their report "A Nation of Spectators" (1998), warned that the United States risks moving from a nation of people to act to a nation of people who watch. Others have agreed that the civic condition of the United States is weaker than it was and needs to be improved. Participation of citizens in their civil society and government has steadily declined.

Robert D. Putnam's (2000) book, *Bowling Alone: The Collapse and Revival of American Community*, makes a convincing case about the decline of civic and political participation in the United States. Studying the loss of community activity of Americans that he calls social capital, Putnam's book has been a popular wake up call to the nation.

Historical Role of the Nonprofit Sector

To maintain the American tradition of the civil society, teachers must directly teach how to create and maintain a civil society. They teach that nonprofits are an essential element of democracy, serving as a vehicle through which individuals organize and speak together to achieve a common mission. And nonprofits ensure an informed public policy debate in our democratic process. Every movement for social change in America, every effort to protect the rights of a segment of society, has had its roots in the nonprofit sector.

Safeguarding Democracy

The nonprofit sector also provides a voice for those who would otherwise be voiceless. It strives to influence public policy on behalf of portions of the population that would have no influence without it. Nonprofits often become the champions of democracy in a society where the bureaucracy might (and occasionally does) become a steamroller of the powerful flattening the powerless. Nonprofit organizations such as Marian Wright Edelman's Children's Defense Fund and the American Association of People with Disabilities ensure that these softer voices are also heard.

Nonprofits work ceaselessly to ensure that no one sector (e.g., business or government), because of money or power or social standing, gets more of a place at the table than any other. The American Civil Liberties Union*,* for example, which strives to protect the letter of the Constitution in all areas of American life, is just one of many advocacy groups that have risen out of the need to see that all citizens are heard and their rights protected.

Democracy in America also receives bottom-up (grassroots) support from community nongovernmental organizations acting for the public good. Civil society organizations are public guardians through which citizens take responsibility for their rights and hold public officials responsible. Through participation in organizational activities, members also acquire the knowledge, skills, and virtues that keep philanthropy and democracy going.

Enriching Lives

In addition to providing services and strengthening democracy, nonprofit organizations enrich people's lives. Nonprofit voluntary hospitals and medical schools save lives and improve the quality of life through medical research and educating health care professionals. Nonprofit health advocacy groups have worked to increase access to health care and to improve the quality of health services for rich and poor alike. The American Red Cross, which has aided millions across the world in times of disaster and tragedy, grew out of the valiant efforts of dedicated volunteers who worked tirelessly.

Our lives are enhanced and made safer by the selflessness of such volunteers as firefighters, block parents, Neighborhood Watch groups, and clean-up committees. Imagine communities without orchestras, choirs, theaters, bands, libraries, and museums—most of which are maintained by donations of time and money from individuals and groups who believe that the arts should be accessible and affordable to all.

Teaching Youth to Care

In the second half of the 20th century, each generation has learned about philanthropy and private voluntary citizen action by watching parents and other adults participate in such activities. Young people who engage in group activities through their houses of worship, schools, or youth groups are more likely to engage in volunteer activities. And young people who learned to give and volunteer from their parents (or a caring adult such as their teacher) are more likely to continue such practices as adults. When students give back to the community by volunteering and reflecting on what they learn from their experience, it becomes a grassroots citizen-building experience in the best sense.

A Multifaceted Sector

The role of the nonprofit sector in a civil society is multifaceted—protector of rights, enricher of lives, advocate for the voiceless, nurturer of youth, guardian of the future, watchdog for the environment, and haven for the destitute. If government had to provide all of the services that the nonprofit sector provides, it would be immensely more costly to our communities. In addition to revenues from contributions, fees, and services, nonprofits depend on the contributed labor of millions of volunteers. Such nonprofit efforts have resulted in remarkable accomplishments on behalf of Americans and the voiceless around the world.

Civil Society and Education

> We have found that when students are involved in [philan thropic] projects, we see improved attendance and behav ior. We also see that this philanthropy philosophy helps us talk to students about behavior, respect, caring, and "doing the right thing" across the school day and the school year. It's a hook, a language we can use to "hang our hat" on. (Deb Juriga, Principal at Wick Elementary, Romulus Community Schools, Romulus, Michigan [Program evalu ation response])

Public education itself is an important part of democracy and civil society. For a civil society to perpetuate itself, it must educate its citizens in the principles of citizenship. The founders of America made public education a priority, and educators understand the central responsibility of schools to teach the next generation about how to act as virtuous citizens. Schools must teach students to balance personal needs with the needs of the common good and to recognize when sacrifice is necessary. Philanthropy education is an important part of perpetuating the civic ideal.

Schools act as mini-societies, and students are responsible citizens of a small community with a social contract. This is an opportunity for educators to teach the lessons of community that build understanding of the importance of a civil society. Students in school communities learn to respect diverse interests and abilities and value them as important contributions to a more complete community. They also learn about the social contract, which depends on honoring each other and sometimes sacrificing personal wants for the sake of the whole. Students learn from each other in a classroom community, and this increases respect and trust, which help hold the community together. When students learn the lessons of community and civil society on a small scale, they bring this understanding to the larger community.

In addition to the social contract and civil society, students learn about their history. They learn about the "long road that humans have traveled to get where they are now. All the glorious victories and all the dreadful defeats and the grandeur and the misery that is the human story" (Gardner, 1995). They will come

> [to] understand that history has a lot of chapters and they're going to have to write the next chapter. And it matters deeply how they do it. Not to carelessly throw away freedoms that their forbearers won in hardship and suffering; not to fail in the trust that we've placed in them to write that next chapter. . . . And if they understand that they will find the nonprofit sector a very fruitful way to pursue some of those goals. (Private interview with John Gardner, 1995; transcript is available on the Learning to Give website, LearningToGive.org)

How Children Learn to Give

Children learn to give first from their parents through modeling of a moral tradition. The more that significant adults (parents, caregivers, grandparents, and other role models) teach first lessons about love, social interactions, and generosity, the more likely students are to learn the lessons of giving and serving. Then, as they enter school, students learn that society of the bigger world is still held together by respect, character, and social agreements. In addition to acting as civically responsible role models, teachers introduce young people to the lessons of giving and civil society at developmentally appropriate stages through deliberate teaching and experience-based methods.

A widely accepted model of human development is *Maslow's Hierarchy of Needs* (The Institute for Management Excellence, 2009). Maslow outlines the five basic levels of needs through which every human progresses. For example, our needs of survival must be met before we feel safe, and it is difficult to feel love and belonging if we don't feel safe. When engaging students in acts of giving and service, teachers pay attention to these levels to increase student empowerment. Younger students can understand providing food and clothing for homeless people before they recognize the value of spending time with older people at a nursing home. Maslow's levels of need and growth in philanthropic behavior can be identified using the pyramid model:

- Survival (providing food for homeless)
- Safety (helping someone at a nursing home)

- Love and belonging (scouting group)
- Esteem (awards for giving)
- Self actualization (selfless giving to unknown others and the arts)

A second theory of development for humans is Erikson's stages of development. Erikson's ideas also relate to growth in philanthropic understanding. In each developmental stage (infant, toddler, adolescent, etc.), the individual must work through a developmental issue, such as trust, love, or independence, to move on to the next stage. Each developmental stage opens up new opportunities for growth in philanthropic behaviors as well. Infants develop trust, toddlers develop the will to meet individual needs, preschoolers develop courage to take initiative, school-age children develop feelings as competent community members, teens develop a sense of being a good person, and young adults develop love. Teachers can adapt service projects and civil society lessons to help build experiences with each of these sequential philanthropic indicators. The lessons on philanthropy and expectations of students' appropriate behavior in the classroom community are linked to their age, maturity, and how their psychological needs have been met. Effective philanthropy education stresses learning by doing. Knowledge, skills, and attitudes about the connections of philanthropy, civil society, and democracy in America combine knowledge with experience of civic engagement.

Several organizations are dedicated to the promotion of civic education. Three popular resources include the Center for Civic Education, CIVNET, and The LEAGUE Curriculum by *Learning to Give.* Each develops materials for educators and practitioners to use in classroom settings for the purpose of teaching civics education.

Instruction at all ages is a mixture of theory (character education, history of philanthropy, and why it is our obligation to continue) and real experiences in giving and serving. The earlier teacher-directed and positive experiences set the groundwork for young people to continue to serve and become leaders in later projects. Philanthropy education educates, equips, and empowers young people to make a difference in the world.

Benefits of Service Learning

Service learning is a research-based, best-practice teaching strategy in which classroom learning is deepened through service to others. As described by the Learn and Serve America's National Service Learning Clearinghouse (http://www.servicelearning.org), "service-learning is a teaching and learning strategy that integrates meaningful community service with instruction and reflection to enrich the learning experience, teach civic responsibility, and strengthen communities."

Whether it takes place on their school campus, at a local food bank, or in a distant rainforest, service learning is an experiential teaching strategy that empowers children to make a difference in their communities. When quality service learning becomes part of a school culture, repeated in a variety of classes with ongoing monitoring and reflection, results include lifelong lessons for students, improved school climate, and a stronger society for us all.

Research identifies several benefits to students who engage in academic service-learning. These benefits fall into the categories of personal growth, career development, social development, and cognitive (academic) development (Caskey et al., 1995). Students who apply classroom learning to real sharing and giving for the sake of another are found to have increased self-esteem and confidence. They feel more personal responsibility and an increased sense of personal efficacy, or effectiveness. A variety of quality service experiences that engage students in the community help students explore career interests and increase understanding of the world of work. They learn specific job skills and gain greater confidence in career choices. As students work with classmates and partners in the community from diverse backgrounds and with diverse strengths and talents, they improve their interpersonal and teamwork skills. Repeated experiences and lessons increase empathy and students' global community view. Students increase their sense of social competency. Research also indicates that students engaged in service learning improve their grades and skills in language arts, math, science, social studies, and critical thinking. They improve language and communication skills and are more likely to graduate. Service learning also teaches students that service is a positive learning experience.

Teachers report that the experience-based methodology and character development bring many benefits to the classroom environment. They have increased knowledge of students' abilities as classroom learning is applied to real-world applications. The real-world situations give relevance to academic knowledge. Teachers like their role shift from giver of knowledge to facilitator of knowledge when students take on more responsibility. At-risk behavior and discipline issues often decrease as all students become engaged. The school's visibility and respect increase as students connect to community needs and form partnerships. Research also shows service learning increases student civic responsibility and academic achievement.

Communities also benefit from service learning because schools get directly involved in addressing real community needs. This adds to the economy and engages more hands in working for renewal. Students provide free assistance that uses their youthful enthusiasm and creativity. When the community values their youth as a resource, a stronger sense of cohesion develops. The structured process of service learning involves student decision making in preparation for and implementation of meaningful experiences; provides time for reflection before, during, and after the action; and requires communication with respect that seeks to understand and value the diverse backgrounds and perspectives of those offering and receiving service. Four stages of service-learning provide this structure (Billig, 2008).

Preparation

With guidance from their teacher, students

- explore their community and identify a need;
- analyze the underlying problem and use teamwork along with skills and knowledge to make decisions;
- collaborate with community partners and identify and analyze different points of view to gain understanding of multiple perspectives; and
- develop a plan that encourages responsibility and defines realistic parameters for implementation.

Action

Through direct service, indirect service, research, or advocacy, students take action that

- has meaningful outcomes valued by those being served;
- addresses issues that are personally relevant to the students;
- uses previously learned and newly acquired academic skills and knowledge; and
- offers unique learning experiences and a safe environment to learn, to make mistakes, and to succeed.

Reflection and Celebration

The teacher (or student captain) guides the reflection process using various modalities, such as role-play, discussion, art, and journal writing. Participating students

- reflect before, during, and after the service experience;
- think deeply about issues, attitudes, and connections;
- describe what happened and examine the difference it made;
- discuss thoughts and feelings and place experience in a larger context;
- consider project improvements;
- generate ideas and identify questions; and
- receive feedback.

The celebration is an important part of any successful service learning project, both for the students and the partners involved. Celebrations may include certificates, parties, ceremonies, and thank you notes.

Demonstration

Students demonstrate skills, insights, and outcomes to an outside group. Demonstrations may include

- reporting to peers, faculty, parents, and/or community members;
- writing articles or letters to local newspapers regarding issues of public concern;
- creating a publication or website that helps others to learn from the students' experiences; and
- creating presentations, performances, or visual art forms to communicate the goals and outcomes of the service learning experience.

When service learning adheres to quality standards, it has the potential to make real and dramatic change in the lives of youth and in the community and world. In 2008, the *Growing to Greatness* study by the National Youth Leadership Council formulated eight K–12 service learning standards for quality practice. These eight standards describe the attributes of quality service learning in terms that are measurable and actionable. When service learning incorporates these, schools see maximum benefit from their experience. The eight standards include youth voice, diversity, reflection, progress monitoring, duration and intensity, link to curriculum, partnerships, and meaningful service.

In a quality service learning environment, students work together for the whole year and gain continuity from year to year (duration and intensity). Service learning begins with students identifying and assessing the needs of their communities and envisioning a better tomorrow (youth voice). Through reflection, problem solving, and application of academic skills, students determine an appropriate action to meet an important need or take social action (reflection, link to curriculum).

The teacher facilitates collaborative partnerships with community or world nonprofit agencies/charitable organizations (partnerships). With trusted adults and in a safe environment, students negotiate and problem-solve with people of diverse backgrounds and points of view to establish the specific project. Through this process, students recognize diverse backgrounds and perspectives as strengths and overcome stereotypes. As students' experience and perspectives are broadened, they strengthen their ability to live and work in a global community (diversity).

Important classroom goals and lessons gain relevance to the students as they are brought to the real-world playing field (link to curriculum). The academic lessons explore concepts of democracy, civil society, citizenship, community, poverty, homelessness, justice, kindness, and environmental stewardship, while empowering students to investigate and reflect on their personal motivation, strengths, and interests in contributing to the common good (meaningful service, reflection).

Reflection is key to ensuring a quality service learning experience for students. Reflection helps students evaluate, improve, and move forward in their understanding of and commitment to being a global citizen. Reflections should use a variety of learning approaches and take place before the event to envision a better tomorrow and during the planning and implementation of the project to remind students of the focus of the project. The postservice reflections challenge students, through speech, writing, art, or a physical activity, to find the common good, the motivation, the impact, and the personal growth that takes their learning to the next level (reflection).

Acknowledging and celebrating the students' achievements is an important part of creating a lasting experience. Throughout the project, participants collect data and show specific progress and growth in skills and service goals. Then students are recognized for their individual and team growth and contributions. Recognition may take place at school assemblies and in local newspapers and other media. This helps students and schools celebrate and receive recognition for their impact on the community and world (progress monitoring).

What Motivates Students to Lifelong Ethic of Service?

Whether it is through classroom or small-group activities, students fully engage in meaningful service learning when three factors are present—they are *using their personal talents and treasures* as they contribute meaningfully of their *giving passion* and work *along with their peers*, or people they care about. Repeated, ongoing, and meaningful service projects engage a student for lifelong ethic and habit of service.

As teachers, parents, and leaders provide a variety of experiences in diverse settings and serving diverse needs, students grow to understand their talents and giving passions. In a religious group, for example, a student may serve food to urban poor, help an overworked farmer bring in a harvest, or provide recreation activities for local children. At school, they may collect blankets and food for local organizations or donate spare change for children across the world to attend school. Through varied exposure, students find their giving passion, singling out activities that bring them the joy of giving. They begin to recognize that their contribution matters. Students are empowered when they recognize that their personal talents are valuable to others. A student may find she is good at organizing sports; he's a good leader or can tutor younger children after school; another student enjoys talking to older adults. And spending time with people you like is a great motivator that increases enjoyment. Putting these three elements together—talent, passion, and good company—in repeated experiences motivates students to seek out further opportunities for giving back to their community. Students consistently feel that as they give, they get so much more in return. This builds a

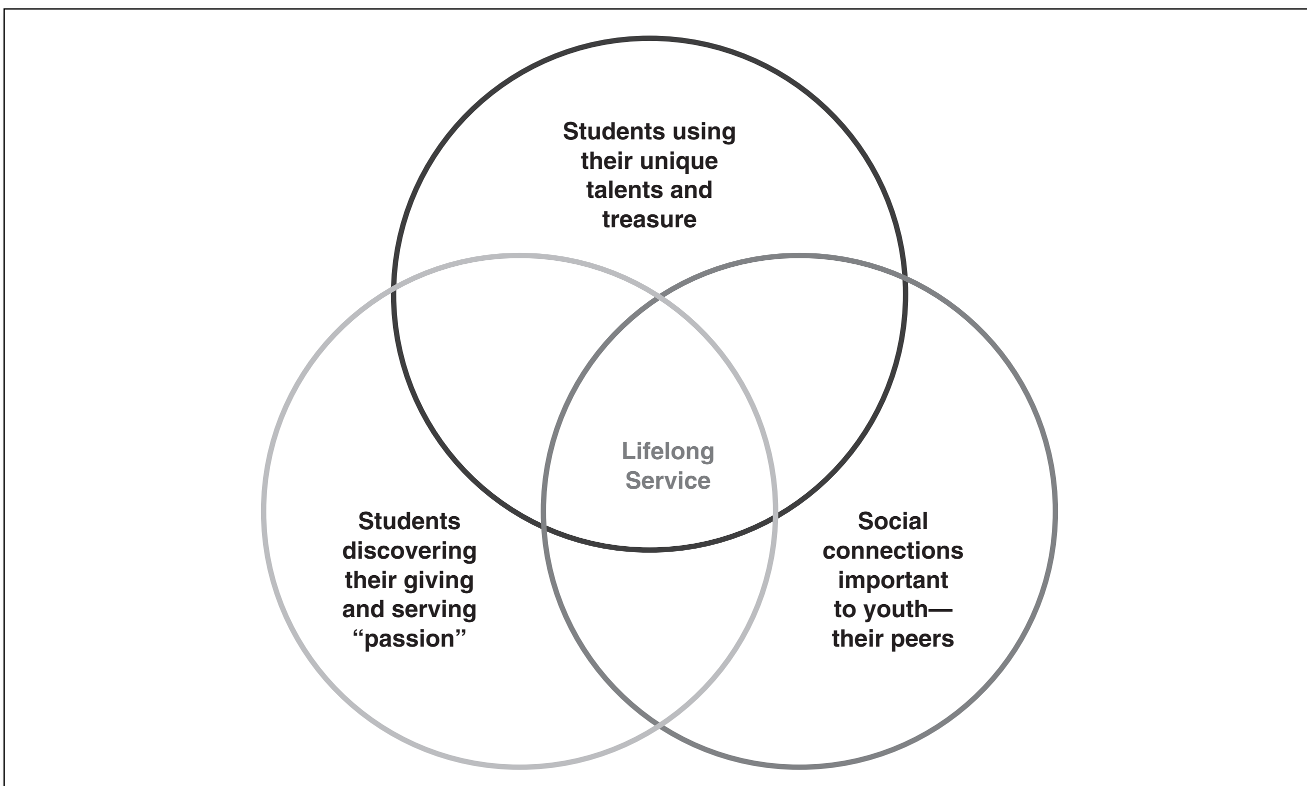

Figure 23.1 Three Elements of Lifelong Service: A Combination of Motivations Leads to Personal Commitment to Service

SOURCE: TheLeague.org.

foundation that benefits all of the community as students start on the path to lifelong service and giving.

Summary

Civic education that stresses philanthropy is key to a strong democracy in the United States. If the United States is to have a healthy constitutional democracy in the 21st century, then young people must learn how to grow their philanthropy muscles and discover their giving passion in civil society. Students must learn what philanthropy and civil society are, why they are important in a democracy, and how they depend on civic participation by citizens. Furthermore, they need to increase their knowledge and skills by working successfully with others and volunteering to improve society. Finally, students in schools must develop civic attitudes favoring philanthropy in order to maintain and improve democracy.

Education about philanthropy in civil society should not end with a young person's formal education. If democracy is to be strengthened, then adults must also participate in learning about the connections between philanthropy, civil society, and democracy. Adult education for democracy is most often experienced through participation in the voluntary associations of civil society, such as labor unions, professional associations, community service clubs, and faith-based organizations.

Alexis de Tocqueville noted the importance of formal and informal education of Americans for responsible citizenship in democracy. He identified civic morality, or commitment to do what is "right and just," as the most important characteristic to be learned by citizens. Tocqueville stressed that a good constitution, good institutions of government, and good laws are necessary. However, they are not enough for a healthy democracy. Tocqueville concluded that strong moral qualities or "habits of the heart" were essential for citizens to practice philanthropy. Let us, then, resolve to revitalize and renew democratic citizenship in America through lifelong civic education that stresses the morality of public action for the common good. Public action for the common good, Tocqueville's "habits of the heart," is the solid foundation for philanthropy in a free and open society that will nourish democracy and freedom in the United States.

Environment

Alan D. Steinman
Grand Valley State University

The environmental condition of our planet is in peril. It is facing unprecedented stress from the actions of humans, including (a) warming temperatures and rising sea levels associated with global climate change; (b) disruption of ecological food webs because of the introduction of invasive species; (c) increasing scarcity of fresh water because of inappropriate resource management; and (d) loss of natural habitat and biodiversity related to changing land use. Solutions to these issues will require new and improved technology, innovative policies, committed political will, increased funding, and a multidisciplinary approach to problem solving.

Ultimately, we need a suite of disciplines working in collaboration to solve complex environmental problems. Historically, most of these disciplines operated independently of one another. In the future, technical disciplines such as ecology, engineering, geology, and hydrology will have to collaborate to address, for example, water scarcity issues. In turn, the natural and physical scientists will need to work with social scientists, economists, and lawyers to effect change. Indeed, we have seen some of this occurring through the emerging discipline of sustainability. Often defined as meeting the needs of the current generation without compromising the opportunities of future generations to meet their needs (World Commission on Environment and Development, 1987), sustainability in its truest form addresses not just the environment, but also economic and social conditions (Holdren, 2008). All three of these sectors are essential for human and global well-being; sustainability is often compared to a three-legged stool—remove one leg, or lengthen one at the expense of the other, and the stool is no longer viable.

Although technical solutions already exist for many environmental problems, their implementation is often precluded by an imbalance among the three sustainability sectors. For example, a suite of proven technologies and best management practices can reduce water quality impairments associated with storm water runoff. However, society has not, in general, implemented these solutions. The reasons are varied: (a) the economic cost of implementation may be viewed as too high relative to the environmental or human health risk associated with impaired water quality; (b) individuals may not believe the problem is that significant; or (c) society may simply place greater value on getting storm water off our streets and yards and into our storm drains than on the possible environmental consequences associated with this runoff.

Because the implementation of solutions to our environmental problems requires an understanding of and ability to effectively operate within our social, economic, and political systems, we need people and organizations that are adept at developing and implementing policy, building relationships, and raising funds. Nonprofit organizations are particularly well-versed in these skills.

Nonprofit organizations have a long history in the environmental movement (Bosso, 2005), but their roles are varied, and they often face unique challenges. A 1993 study published in the *Chronicle of Philanthropy* showed not one environmental organization listed in the top 20 of "best liked" or "most credible" nonprofit organizations (Hemphill, 1996). Perhaps even more revealing is that the environmental sector

Author's note: I am grateful to Kathy Agard for the invitation to participate in this book and to Annoesjka Steinman, Mary Ogdahl, and Elaine Sterrett Isely for their constructive comments on an early draft of this chapter.

is excluded in the recent nonprofit sector research handbook by Powell and Steinberg (2006). Yet, it is clear that environmental organizations have the ability to influence policy; by the mid-1990s, some of the major environmental organizations had memberships of more than a million individuals and budgets in the $25 to $40 million range (Jordan & Maloney, 1997). In addition, in a study comparing traits of organizational leaders, those leading environmental organizations were more open to change than other types (Egri & Herman, 2000); presumably, the longer term, complex, multidisciplinary, and emotion-charged nature of environmental problems requires a more malleable type of leader than other types of organizations.

This chapter is not intended to be a comprehensive treatment of environmental nonprofit organizations (ENOs); both Shaiko (1999) and Bosso (2005) have written books to that effect. Rather, the chapter focuses on arbitrarily chosen examples within three different types of ENOs: environmental organizations, philanthropic foundations, and higher education. The goal of the chapter is to review the diversity and history of nonprofit organizations that address environmental issues. Emphasis is placed on how these organizations have changed over time, their different missions and strategies, the roles they have played and continue to play in the environmental movement and society in general, and the different ways that individuals can become involved, which varies depending on the type of organization.

A Brief Review of Environmental Nonprofit Organizations

The growth and development of the environmental movement is unparalleled within the public interest, nonprofit sector (Shaiko, 1999). In the early 1960s, about 150,000 citizens were involved in the U.S. environmental movement, and the collective wealth of the existing environmental groups was less than $20 million annually; in only 40 years, this sector had grown to more than 8 million individuals, who contributed more than $750 million per year to environmental causes (Shaiko, 1999).

George Perkins Marsh is often credited with starting the environmental movement in the United States. His speech to the Agricultural Society of Rutland County (Vermont) addressed the problem of deforestation; published in 1847, the speech was the basis for his book (Marsh, 1864). In truth, Marsh's activities are better described as starting the *conservation* movement in the United States. Most of the organized efforts in the 19th century and early to mid-20th century were focused on conservation of U.S. natural resources. Examples of these early environmental nonprofit organizations include the Appalachian Mountain Club in 1876, the National Audubon Society in 1905 (although the first Audubon Society club formed in 1886), and the Sierra Club (1892).

The second distinct phase of ENO growth included organizations founded by sportsmen, with the goal of preserving natural areas for hunting, fishing, and other recreational purposes, such as the Izaak Walton League (1922) and the National Wildlife Federation (1936). Two other well-known ENOs that formed shortly thereafter, but with different missions, were the World Wildlife Fund (1948) and The Nature Conservancy (1951).

By the 1960s, a growing awareness had permeated the psyche of the country. Increased industrialization and its attendant pollution helped catalyze a new environmental movement, and many new ENOs emerged in this period, broadly coinciding with the first Earth Day in 1970. A few of these ENOs include the Environmental Defense Fund (1967), the Natural Resources Defense Council (1970), Environmental Action (1970), League of Conservation Voters (1970), Clean Water Action (1971), and Greenpeace USA (1971). These new ENOs had a stronger mission of advocacy and, with a growing willingness of the federal judiciary to allow environmental claims to be brought to court, were not afraid to use litigation when deemed appropriate (Bosso, 2005). There was a growing appreciation of the need for professional staffing, marketing, and fundraising to achieve their missions, and both old and new ENOs began to adopt more professional organizational structures (Shaiko, 1999). Finally, the more radical environmental groups were formed in the latter part of the 20th century, including Earth First! (1980).

People not familiar with the environmental movement may be surprised at the amount of diversity of nonprofit groups in this sector. This diversity is expressed in their missions, sizes, ages, financial holdings, and organizational structures. Nonetheless, there are similarities among ENOs, especially those operating at the national level, and they are not always flattering. For example, charges against ENOs, not uncommon in the 1990s, include too strong a focus on fundraising, alleged politicization of scientific data, tension with local activists, and overpaid executives (Bosso, 2005). Executive leadership is a particularly thorny problem for ENOs; these relatively large organizations require a set of skills that include financial, communication, technological, and political aptitude. However, the pool of candidates with these skills is relatively small, especially if the ENOs want someone with a strong environmental ethos. As a consequence, there has been an increasing trend toward hiring leaders from outside not only their own organizations but the environmental community altogether, with many drawn from the general nonprofit sector, government service, the legal community, or the private sector (Shaiko, 1999). Some have seen this as a shortcoming, arguing that to hire leaders from outside the environmental culture is an indicator that the environmental community is not nurturing and developing its own leadership (Borrelli, 1988). Perhaps surprisingly, given the progressive nature of most ENOs, the demographics of recent ENO executive leadership show limited diversity, with a strong bias to white males. Between 1980 and 1997, a selected sample of 10 ENOs had a total of 37 leaders (indicating rapid turnover in executive leadership); of those 37, only 8 (22%) were female (Shaiko, 1999).

Environmental Nonprofit Organizations: Case Studies

Environmental organizations, philanthropic foundations, and institutions of higher education all operate in the environmental world, but they have different missions and structures, and they present different opportunities for involvement. In many respects, the environmental organizations are the face of the environmental movement, but foundations and higher education play critical roles in helping support them, in terms of both funding and volunteers. The sheer diversity of ENOs is staggering, and it is clear that environmental nonprofit organizations are not created equal.

Environmental Organizations

Environmental organizations come in all shapes and sizes. Bosso (2005), building on the earlier work of McCloskey (1992), created a classification scheme for environmental organizations. One axis portrays an ideological spectrum, ranging from the radical organizations to the more pragmatic groups, which are accommodating to big business and political compromise. The other axis reflects the size and breadth of each organization, ranging from broad spectrum to very narrow niche players (Bosso, 2005). Although this chapter focuses primarily on three of the larger, better-known environmental organizations, it also recognizes the important role played by smaller, niche organizations.

Sierra Club
(http://www.sierraclub.org)

According to its website, the mission of the Sierra Club is

> to explore, enjoy, and protect the wild places of the earth; to practice and promote the responsible use of the earth's ecosystems and resources; to educate and enlist humanity to protect and restore the quality of the natural and human environment; and to use all lawful means to carry out these objectives.

Self-described as the "oldest, largest, and most influential grassroots environmental organization in the United States," the Sierra Club was founded in 1892 with the original goal to protect Yosemite National Park. Today, it boasts 1.3 million members.

The Sierra Club's founder and first president was John Muir, an iconic figure in the environmental movement, who is often thought of as the father of the country's national parks. The former executive director of the Sierra Club, Carl Pope, led this ENO from 1992 until January 2010. He was succeeded by the new executive director, Michael Brune, and continues on as executive chairman of the Sierra Club. Pope is a bit of an anomaly in the world of ENOs, given both his long tenure as executive director and length of service (30 years) within one organization.

The Sierra Club is organizationally unique among large ENOs in that its membership is very involved in the decision-making process; this contrasts markedly with the National Wildlife Federation, another large ENO, where the sole connection of most of its members to the federation is via magazine subscription (Shaiko, 1999). In contrast, the grassroots structure of the Sierra Club allows its entire membership to vote on a national board of directors. Below the national level, there are more than 50 chapters (state or regional levels), each with an elected executive committee, and one tier below that, at the local level, are more than 300 groups. The sheer size of this bureaucracy has resulted in criticism that the Sierra Club has been co-opted by Washington, D.C., insiders and is no longer the environmental organization presenting bold, new initiatives. As noted by its first executive director, David Brower, decision making at the Sierra Club is "becoming like Velveeta; everything must be processed" (Borrelli, 1988), although changes over the past decade have focused on streamlining the decision-making process. Worth noting is that Sierra Club's national headquarters are located in San Francisco, not Washington, D.C., although this may reflect the fact that a significant percentage of Sierra Club's membership is based in California (Shaiko, 1999).

As is the case for almost all ENOs, the goals of the Sierra Club have changed with time. Originally, the Sierra Club was focused on protecting wild places. While that goal has not disappeared, today there is a much stronger focus on climate change, with the development of a Climate Recovery Agenda, described on the website as "a set of initiatives that will help cut carbon emissions 80% by 2050, reduce our dependence on foreign oil, create a clean energy economy and protect our natural heritage, communities and country from the consequences of global warming."

The Nature Conservancy
(http://www.nature.org)

The mission of The Nature Conservancy is to preserve the plants, animals, and natural communities that represent the diversity of life on Earth by protecting the lands and waters they need to survive. The group's defining characteristic is to identify parcels of land that science considers worthy of conservation and to preserve them through acquisition. Its origins can be traced back to a splinter group from the Ecological Society of America in 1917, but it was officially founded in 1951 and today has more than one million members in more than 30 countries.

The Nature Conservancy is governed by a volunteer board of directors, which has ultimate responsibility for its operation. Its board of directors consists of a who's who of academia and business, reflecting the organization's pragmatism: melding business and scientific leaders to develop a unique approach to conservation. Responsibility for day-to-day operations is delegated to its president and chief executive officer. Mark Tercek became president and CEO in July 2008, leaving his post as a managing director at Goldman Sachs, where he headed the firm's Center for Environmental Markets and its Environmental Strategy Group. Tercek's appointment reaffirmed The Nature Conservancy's pragmatic approach to conservation: recruiting a leader who has deep financial skills but understands and is sympathetic to the need for environmental action.

Given The Nature Conservancy's focus on collaborative, science-based conservation, grassroots involvement by membership is not a strong component of its mission. Rather, it achieves its goals by pursuing "non-confrontational, pragmatic solutions to conservation challenges." It partners with indigenous communities, businesses, governments, multilateral institutions, and other nonprofits. The Nature Conservancy has seven priority conservation initiatives, focused in fire, climate change, freshwater, marine, invasive species, protected areas, and forest ecosystems.

Greenpeace
(http://www.greenpeace.org)

The core values of Greenpeace USA, described on its website, include

> bearing witness to environmental destruction in a peaceful, non violent manner; using non violent confrontation to raise the level and quality of public debate; exposing threats to the environment and finding solutions while having no permanent allies or adversaries; ensuring financial independence from political or commercial interests; and seeking solutions for, and promoting open, informed debate about society's envi ronmental choices.

Greenpeace was founded in 1971, when a small group of environmental activists leased a small fishing vessel to protest U.S. nuclear testing off the coast of Alaska by placing themselves in harm's way. Today, Greenpeace has 2.8 million members in 41 countries, with its international headquarters in Amsterdam and U.S. headquarters in Washington, D.C.

Greenpeace International is governed by a board of directors who set the organization's annual budget and elect and monitor the Greenpeace International Executive Director. The board members are chosen by representatives from national and regional offices, who are in turn chosen by national and regional boards elected by Greenpeace members. The executive director of Greenpeace USA since 2000 is John Passacantando, who previously served as executive director of the Florence and John Schumann Foundation, funding campaign finance reform and environmental issues. He then founded Ozone Action, an anti-global warming group. Passacantando advocates using a variety of tactics to promote his cause, including lobbying, letter writing, consumer boycott, and civil disobedience. Formerly a political conservative and supply-side economics supporter, his selection as executive director suggests that Greenpeace is seeking organizational pragmatism while not abandoning its founding principles.

Despite its relative youth, the focus of Greenpeace, like the other ENOs, has evolved over time. Greenpeace initially focused on ecological peace protests, such as entering the forbidden zones of nuclear test sites to attract the public's attention. Greenpeace has expanded its agenda and now defines its purpose through six primary objectives: halting climate change, protecting oceans, saving ancient forests, achieving disarmament and peace, reducing toxics in materials, and encouraging sustainable agriculture.

Philanthropic Foundations

This case study examines both a private foundation and a community foundation. Private foundations are created based on an endowment from a single source, while community foundations build an endowment from a variety of sources to address local needs within a specific geographic region (Daly, 2008).

The Charles Stewart Mott Foundation
(http://www.mott.org)

The Charles Stewart Mott Foundation is a private, not-for-profit foundation with $2.8 billion assets under management. The Mott Foundation was established as a private foundation in 1926 and is based in Flint, Michigan. Its overall mission is to support efforts that promote a just, equitable, and sustainable society. The foundation's four core programs are civil society, environment, Flint area, and pathways out of poverty.

The Mott Foundation's environment program has its own mission to support the efforts of an engaged citizenry working to create accountable and responsive institutions, sound public policies, and appropriate models of development that protect the diversity and integrity of selected ecosystems in North America and around the world. The environment program has three focal areas: conservation of freshwater ecosystems, international finance for sustainability, and special initiatives. A search of the Mott Foundation's grants results database showed that between 1977 (the earliest year a search could begin) and 2009, the environment program awarded 2,190 grants totaling an astounding $265,616,037. The Mott Foundation provides funding for on-the-ground environmental activities ranging from land acquisition to conferences, as well as the development of environmental programs at community foundations.

Community Foundations

Community foundations are distinct from private foundations in that they oversee a pool of donor-provided funds that reflect the different sectors of the community; their boards of directors are representative of the public interest, and they produce an annual report that is distributed within the served community (Lowe, 2004). As of 2001, there were more than 300 community foundations in the United States with at least $5 million each in assets, providing a total of more than $2 billion in annual giving (Foundation Center, 2002). Historically, community foundations have been strong supporters of the arts, community development, scholarship programs, and social needs; the environment is a relatively recent focus of community foundations.

One example of community foundation involvement in funding local environmental projects is the Great Lakes Environmental Collaborative. Conceived by Rob Collier of the Council of Michigan Foundations, the collaborative was funded by the Great Lakes Protection Fund and the Charles Stewart Mott Foundation with the goal of establishing endowment funds within local community foundations to support local and regional environmental initiatives. In 1997, 21 shoreline community foundations throughout the Great Lakes region were selected to participate in the collaborative. As a condition of participating, the foundations were required to establish a permanent environmental committee, establish an environmental endowment, and sponsor a minimum of two community awareness meetings during the first year of the project. In addition, foundation staff participated in educational workshops and presentations to gain a better understanding of the complexity of the Great Lakes environment.

The Community Foundation for Muskegon County (CFFMC; http://www.cffmc.org) was one of the leaders in the Great Lakes Environmental Collaborative. With assistance from foundation staff member Arn Boezaart, the CFFMC first established a never-before-available mailing/contact list of all of the environmental organizations within Muskegon County and the surrounding region. Starting with an initial award of $2,500 from the collaborative and the promise of a $15,000 match toward a permanent endowment, the CFFMC established a $100,000 environmental endowment in just 9 months. A permanent environmental committee composed of board trustees, university representatives, and participants from businesses and environmental organizations was established within the foundation. The CFFMC's environmental committee has awarded 39 grants since its formation in 1998, totaling almost $105,000. Most grants are modest in size, usually less than $5,000. A community foundation environmental endowment serves a number of important roles: (a) it provides an attraction for other philanthropic interests of a like mind; (b) it gives environmental issues more visibility and ongoing attention at the local level because community foundations typically have a high community profile and are generally well respected in their communities; and (c) it brings new enthusiasm, ideas, and resources to the table.

Higher Education

Most U.S. colleges and universities now have some type of environmental program. Many of these programs emerged in the 1970s in response to the growing environmental movement following the first Earth Day in 1970. These programs vary in their content and focus and may include environmental design, environmental education, environmental engineering, environmental policy, environmental theory, forestry, geospatial sciences, geology, marine science, water resources, and wildlife ecology. Today, there is a growing resurgence in these programs, driven in part by concerns over global climate change and a new emphasis on sustainability. Students enrolled in these environmental programs want a degree and have goals of career enhancement, but they also have a passion for making a difference. In some cases, this passion was nurtured by a prior association with an environmental organization, reflecting a potentially reciprocal relationship: An early interest in the environment results in the individual joining an environmentally based organization or assisting with grassroots activities, which in turn leads the individual to an environmental program at an institution of higher education. After graduation, the individual can become involved in ENOs through a variety of mechanisms (see below). In the case of higher education, an individual's continued association with his or her alma mater will depend on both the quality of the educational experience at the institution and future tracking by the institution's alumni and development offices.

Although literally hundreds of environmental programs are available at higher education institutions, for simplicity, this chapter provides a brief overview of two organizations. The first, Duke University's Nicholas School of the Environment, has a broad environmental mission, while the second, Grand Valley State University's Annis Water Resources Institute, is focused more narrowly on freshwater ecosystems.

The Nicholas School of the Environment
(http://www.nicholas.duke.edu)

The Nicholas School of the Environment has a mission of creating knowledge and global leaders for a sustainable future. Faculty, staff, and students attempt to understand the Earth and the environment including humans as an integrated whole and to advance a more sustainable future by strategically focusing resources on addressing the major environmental issues of our times and training a new and environmentally informed generation of global leaders.

The Nicholas School was officially created in 1991, when the School of Forestry and Environmental Studies and the Duke University Marine Lab (both formed in 1938) came together to become the School of Environment, which was named the Nicholas School of the Environment in 1995 following a $20 million gift from Peter M. and Ginny Nicholas. The Nicholas School, headquartered on the main campus of Duke University in Durham, North Carolina, is composed of three divisions: marine science and conservation; earth and ocean sciences; and environmental sciences and policy. More than 70 faculty members hold appointments at the Nicholas School, which offers master of environmental management and master of forestry degrees, as well as educational opportunities at the doctoral and undergraduate levels.

Annis Water Resources Institute
(http://www.gvsu.edu/wri)

In contrast to the broad approach of the Nicholas School of the Environment, the Annis Water Resources Institute (AWRI) at Grand Valley State University has a much more defined focus on the freshwater environment. Its mission is to integrate research, education, and outreach to enhance and preserve freshwater resources.

AWRI was created in 1986 and moved about 35 miles from the main campus of Grand Valley State in Allendale, Michigan, to Muskegon, Michigan, in 2001. It was named after Robert B. Annis in 1997, in recognition of his long-time support. AWRI is composed of three main program areas: education and outreach; information/geospatial services; and ecological research. AWRI has about 70 full and part-time employees, with eight principal investigators. A master of science degree, with an emphasis in aquatic sciences, is offered through the Department of Biology.

Opportunities for Involvement

Environmental Organizations

Most early environmental organizations formed as bottom-up, grassroots organizations, which provided a social networking opportunity for engagement and activism at the local and state levels. However, toward the end of the 20th century, as these organizations evolved to survive rapidly changing economic conditions, local grassroots involvement was replaced by organized entities who "involved" their membership largely through their publications and recruited or retained their membership via direct mail, telemarketing, and to a lesser degree, canvassing (Shaiko, 1999). The intimacy and passion that characterized the involvement of members in the founding environmental organizations has been replaced in many modern organizations by an involvement that amounts to little more than an annual membership renewal, or what has become known as a "checkbook affiliation" (Hayes, 1983).

Concerns that environmental organizations were becoming too bureaucratic and too focused on insider politics in Washington, D.C., first developed prior to World War II and continued to build through the 20th century. Decision making became more centralized, and a greater emphasis was placed on professional staff at the expense of volunteers (Bosso, 2005). In response, there was a growing call—including behavior that was angry and impolite—for a return to grassroots activism at the local level (Dowie, 1995).

Today, involvement in and by these organizations can take many different forms (Figure 24.1). However, for those looking for opportunities to become engaged in ENOs, it is important to first decide what type of organization best reflects one's own personal philosophy and interest. As noted earlier, ENOs are not created equal.

Broad-spectrum environmental organizations (coined "keynotes" by Bosso [2005] to reflect keystone predators and the wide-ranging influence they have in natural ecosystems) pursue the broadest policy agendas and include Sierra Club, Natural Resources Defense Council, and World Wildlife Fund. Most of the broad-spectrum ENOs have moderate and accommodating ideologies, which is perhaps to be expected given their diverse missions and memberships; their diverse audiences require a nonconfrontational approach to environmental problem solving. For individuals wanting to get involved in specific causes, the broad-based organizations may be, in general, inappropriate because their lack of depth in tackling any one issue may not appeal to activists. In that case, the sectoral and niche organizations may be more appropriate. Bosso (2005) defines sectoral players as ENOs that still pursue a broad policy agenda but have oriented themselves with respect to a specific cause, such as Greenpeace over marine issues or The Nature Conservancy over land acquisition for conservation purposes. Again, these organizations rarely fall into radical camps, although some are less accommodating than the broad-spectrum ENOs (such as Greenpeace). In contrast, The Nature Conservancy often partners with big business to acquire land and has been viewed as overly accommodating (Bosso, 2005). Niche players typically are small and specialized and fill the entire ideological spectrum ranging from radical (e.g., Earth First!) to conservative (e.g., Ducks Unlimited).

Motivations for individual involvement in environmental organizations are often difficult to quantify but usually relate to either an affinity for organizational goals and contacts with fellow members, the perceived threat of environmental harm, or tangible incentives (e.g., publications, tote bags, etc.; Shaiko, 1999). The mechanisms by which individuals become involved also are varied. Passive involvement includes becoming a member and paying annual dues. This money helps offset the costs of organizational maintenance, but increasingly, this is becoming a less significant source of revenue for ENOs, replaced by major gifts and grants (Bosso, 2005). Rather,

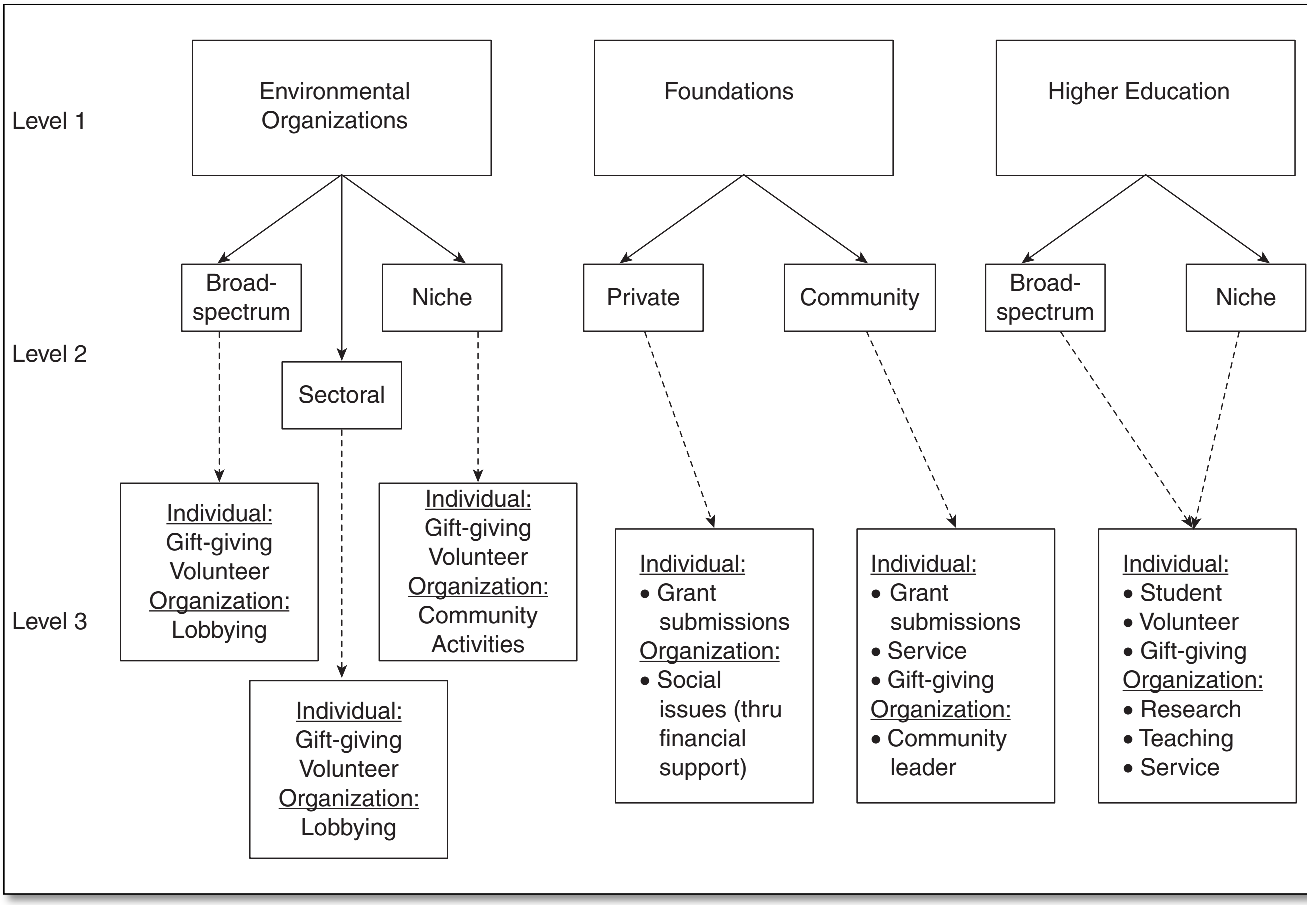

Figure 24.1 Flow Chart Showing Types of Environmental Nonprofit Organizations (ENOs) and Opportunities for Involvement

NOTE: Level 1: broad categories of ENOs; Level 2: finer scale description of ENOs; Level 3: opportunities for involvement by individuals within an ENO and by organizations within the environmental sector. See text for more detail.

increased membership numbers are relevant because they are an indicator of organizational success and can be used as an effective marketing tool. However, active involvement is also possible, depending on the organization and how *active* is defined. For example, many environmental organizations host educational and research field trips, where members are encouraged to participate. Among the large, broad-spectrum environmental organizations, the Sierra Club is the poster child for local involvement. Through local chapters, members can get involved (there is a "get involved" linked on their local chapter websites) through outings, volunteer activities, and internships. There are also links to local issues, informing members about lobbying and letter-writing activities. This type of local emphasis is rare among broad-spectrum environmental organizations.

In a fortuitous confluence of growing activism and technological advancement, the emergence of the Internet in the late 20th century has provided several new avenues for involvement by individuals interested in environmental activism. The maturation of ENOs in the late 20th and early 21st centuries resulted not only in more professional staff and management but also in much more sophisticated information technology. The websites of most ENOs provide a wealth of information about the host organization as well as environmental issues and stewardship tips: Blogs and social messaging (e.g., Twitter) are commonplace, although it is unknown if these means of communication are being developed and maintained because they are truly effective or because of peer pressure. Bosso and Collins (2002) note that despite the growth of Internet services, most ENOs use websites to inform their audiences, recruit and mobilize advocates, and fundraise. It is unclear if the emergence and growth of new social networking links, such as Flickr, YouTube, and Facebook, will change these dynamics, or if there will be a movement to revitalize an actual, not virtual, grassroots with real people (Bosso, 2005).

Involving membership via electronic media is clearly a growing trend, and the possibilities for informing, nurturing, and growing members are still in the exploratory phase. However, nonprofit marketing research suggests that smaller nonprofits (not specifically ENOs) are not using their online resources to their fullest potential. Many simply rely on their website for one-way communications with members, clients, funders, and so on, instead of using it as a resource to develop relationships (Pope, Isely, & Asamoa-Tutu, in press). In contrast, Sierra Club currently maintains three blogs on its website's home page under the names Carl Pope (the executive director), The Green Life (daily environmental tips), and Scrapbook (highlighting Sierra Club staff and membership news). Will the future lead to more blogs, or will high maintenance result in fewer blogs? The Sierra Club home page also has links to Flickr, YouTube, and their Facebook page. YouTube appears to be well watched; their current video, *Celebrity Sierra Club Supporters Say Thank You to President Obama,* had 28,585 views and 143 comments within 2 months of its March 30, 2009, posting. Sierra Club's Facebook wall has 27,084 fans, a nontrivial number but only 2% of its total membership. In contrast to the Sierra Club, the blogs on The Nature Conservancy's website tend to be based on scientific information and lack the more personal approach of Sierra Club. Greenpeace's website is very focused on membership involvement; its home page features staff blogs and a Twitter side bar. One of the links is "get involved," which provides guidance on the following activities: making online contact with elected officials and corporate executives, creating a blog, joining the group's Facebook page, making a donation, joining its MySpace community; or subscribing to Greenpeace's YouTube channel.

Websites of environmental organizations also feature opportunities specifically tailored to students. The Sierra Club has Sierra Student Coalition (http://ssc.sierraclub.org), which is a network of high school and college students throughout the United States working to protect the environment. Involvement can include working on political campaigns, receiving a monthly newsletter, obtaining phone or summer trainings, becoming a campus or community organizer, or joining a national committee. The Nature Conservancy does not host a web page dedicated explicitly to students, but it does list a variety of volunteer activities that are organized by state. These include both outdoor and indoor activities, as well as volunteering opportunities through the group's partners. Greenpeace features a student network (http://members.greenpeace.org/students), which is coordinated by the Greenpeace grassroots team and led by Greenpeace student activists. Roles include serving as a student network coordinator, who helps design campaign priorities for the network, orients new student leaders, and helps to coordinate actions; or serving as a campus coordinator, who coordinates campaigns on his/her campus and stays in touch with other leaders in the network. Greenpeace also offers an *organizing term* (http://www.greenpeace.org/usa/getinvolved/greenpeace-organizing-term), which is a semester of hands-on training for students who wish to become active in the environmental movement.

Finally, environmental organizations offer career opportunities through their websites. It is perhaps telling that for broad-spectrum organizations such as Sierra Club there are often as many, if not more job listings for administration, communications, information technology, development, and fundraising than for conservation and outdoor activities. Again, this reflects the maturation of these organizations and their need to retain a professional staff that keeps the ENO in business. The Nature Conservancy, with a stronger focus on science, tends to list a greater number of technical positions than broad-spectrum ENOs.

Foundations

Opportunities for individual involvement with private foundations are limited, given their mission and organizational structure. Involvement is principally through an application for grant funds. However, these private foundations can significantly influence environmental issues through their financial resources. For example, the Ford Foundation provided significant funding for organizations engaged in public interest law (Bosso, 2005). Private foundations, such as Ford Foundation, Mott Foundation, Pew Charitable Trusts, and Gordon and Betty Moore Foundation, have substantial environmental programs. Whether private or public, foundations strongly recommend that organizations seeking grants contact the relevant program officer before submission to make sure their proposal is consistent with the goals of the organization. Foundations tend to fund noncontroversial organizations because of tax considerations, focusing on activities that avoid lobbying or that are not overtly political in nature (Bosso, 2005).

Opportunities for involvement in community foundations include applying for grant funds (similar to private foundations), making donations to the foundation, and volunteering to serve on foundation committees. The CFFMC, located in west Michigan, exemplifies these different types of individual involvement. In 2007, the CFFMC awarded about $130,000 in grants to projects in the environmental sector (CFFMC, 2007); this is about 3% of the total amount in grants awarded that year. Funding priorities for the CFFMC's environmental committee include projects associated with environmental education, smart-growth principles, habitat protection, and community-wide recycling initiatives. Individual involvement also can include serving on the committees that evaluate the proposals and donating to the foundation. In turn, the community foundations can get involved in environmental issues; the CFFMC has shown leadership in the Muskegon region by helping support sustainability, land conservation, and alternative energy (CFFMC, 2007).

Higher Education

The most common opportunity for individual involvement in institutions of higher education is to enroll as a student. This option may not be viable or of interest to all individuals, in which case involvement can include paid employment (e.g., internships, technical assistance), volunteer activities, and gift giving. Volunteer activities vary tremendously depending on the size, location, and mission of the organization. For example, one of the prominent volunteer programs at Duke University's Nicholas School of the Environment is at Duke Forest, where opportunities range from office administration to trail maintenance. In contrast, at AWRI at Grand Valley State University, volunteer opportunities are available on education and research vessels, where more than 120,000 passengers have received a hands-on educational experience.

As with environmental organizations and foundations, donations are a critical element in the financial stability of higher education facilities. The Nicholas School of the Environment has a number of giving opportunities, including unrestricted support to an annual fund, an alumni fellowship fund to assist current students, sponsored fellowships and internships, lectures, leadership gifts and naming opportunities, and matching gifts through employers. This level of sophistication and expertise is to be expected from a large organizational entity within Duke University. AWRI is an academic unit within Grand Valley State's College of Liberal Arts and Sciences and, being much smaller, does not have its own development office. However, the previous and current directors of AWRI have spent considerable time developing personal relationships with the community and helping to build endowment funds that support research and monitoring activities, the maintenance of the vessels, educational cruises, internships, and graduate assistantships. Gift-giving opportunities exist through funds established at both the CFFMC and the Grand Valley State office of university development.

The missions of most institutions of higher education, which include research, teaching, and service, also provide both direct and indirect opportunities for societal involvement. The research findings that emerge from higher education often serve as the foundation for resource management decisions although societal values, political climates, and economic conditions ultimately will determine to what degree these scientific findings are used (Rosenberg, 2007; Steinman, Havens, & Luttenton, 2004). Teaching results in a better educated populace, and a devoted mentor can be the difference between an unengaged individual and a future environmental leader. Finally, service by faculty and staff includes making presentations to civic groups, participating in committees on foundations or environmental organizations, leading outings, and providing technical expertise.

Summary

Environmental nonprofit organizations at all levels play an important role in addressing the environmental problems facing the planet today. These ENOs come in many different types and sizes and should not be viewed as a homogenous sector. There has been a clear evolution in these organizations over time, with greater emphasis being placed on professional staffing and executive leadership. Still, there are many small grassroots organizations—but they are more difficult to sustain and tend to receive less exposure because of their localized work. It is unclear if the emergence of new social networking tools on the Internet will catalyze more grassroots activism or if these tools will simply be a replacement (albeit much faster) for prior avenues of passive involvement, such as printed magazines for top-down information sharing and letter writing for bottom-up feedback.

Despite the variety of ENOs, there is considerable overlap in opportunities for involvement (see Figure 24.1). This overlap is potentially deceptive, as specialization within the ENO community has resulted in different submarkets within the environmental community. Perhaps the most significant change in the environmental nonprofit world, apart from the trend toward professionalization, is the specialization evident in a large array of these organizations.

As we enter the second decade of the 21st century, a much greater emphasis is being placed on the sustainability of our ecosystems and the roles that humans play (Vitousek, Mooney, Lubchenco, & Melillo, 1997). It is becoming increasingly evident that environmental problems cannot be solved without consideration of economic prosperity and social justice. Within the environmental nonprofit sector, the foundations and organizations of higher education appear to be embracing this philosophy. Environmental organizations that have positioned themselves as less accommodating run a greater risk of being marginalized in today's more pragmatic world. Nonetheless, change is constant, and it is entirely plausible that an unanticipated environmental crisis could result in shifting priorities and transform a current niche organization into a powerful player in the future.

Health and Hospitals

Margaret Schulte

Grand Valley State University

Leadership in health care presents opportunity for unique challenge and self-fulfillment. It also calls on deep personal strength, values, and vision. In addressing health care leaders, we are reminded of the clear differences among them: Some lead academic medical centers, others are responsible for health systems comprising multiple hospitals, and still others work in long-term care services, rehabilitation and specialty hospitals, hospice care, outpatient and ambulatory care, teaching and research institutions, managed care organizations, and other divergent organizations—all of them participants within a continuum of care. In some cases, hospitals stand alone as the sole provider in their communities, smaller in size, more narrow in scope of services, and limited to the primary and secondary care services that are within their range of technology and practitioner skill. Still others are of moderate size and scope. In each case, leadership is faced with similar challenges related to changing reimbursement systems, clinician workforce shortages, new technologies, and waves of patients unable to pay for their services.

Hospitals daily face competitive environments in which not only other hospitals but also their own medical staff providers often pursue competitive interests (e.g., in building their own surgery centers and thereby pulling market share from the hospital). As professionals, health care leaders are going to find themselves faced with even more competition in the years ahead (Birk, 2008, p. 10).

They work in a world in which the tax exemption that favors them brings with it the cost of providing community benefits to the poor and needy in the community—and increasing pressure from community leaders to do so. They face increasing shortages of key personnel and growing demands among a public that is reaching deeper into its pocket to pay for medical care and correspondingly bringing higher expectations to the care setting.

While leading in the turbulent times of the last decade, and facing a new decade of even more intense environmental pressures, hospital leaders are compelled to bring a strong sense of values and vision to their practice. This chapter will address some of the issues and promises that are the environment in which the health care leader functions—at whatever level of responsibility that leader is found in the hospital.

Gail Warden, former CEO of Henry Ford Hospital in Detroit, summarized the role of the health care leader in three essential contexts: Hospitals have a strong community service mission, and they must

- exert leadership in carrying out this mission;
- ensure that there are mechanisms to promote the provisions of high quality services and compassionate care; and
- use systematic processes for determining goals and objectives in relation to change in the environment and the needs of the community.

The Health of the Population Versus the Health of the Individual

The United States is generally viewed as having the best health care in the world—when *best* is defined as having the most advanced technology and highly skilled specialists. However, when the United States is compared on basic health status factors against other countries in the world, it comes up deficient. Infant mortality status is a measure of how many children die before their first birthday. On this measure, the United States ranks 42nd in the world behind countries such as Cuba, Portugal, Finland, the Czech Republic and many others (Central Intelligence Agency, 2008). When measured on the average life span of its citizens, the United States was reported in 2006 at 78.0 years, the same as Cuba and Chile and behind countries such as Switzerland (82), Spain (81), Sweden (81), Canada (81), Singapore (80), and the United Kingdom (79).[1] These data suggest that the U.S. population, while enjoying access to the most highly sophisticated medical services available, is not as healthy as other developed and underdeveloped countries.

This presents a problem for health care leadership—one in which improving the health of the community comes into conflict with the existing structure of the delivery system. Basic health indicators suggest that the "low-hanging fruit" of population health improvement is in the expansion of primary care services. However, these services have the least financial support in U.S. reimbursement mechanisms, whereas in other countries, primary and preventive care has historically been a hallmark of health care system design. The challenge for leadership presented by these data is one of restructuring medical delivery with a balanced focus on primary care and access without diminishing the specialized services that are the pride of U.S. communities and providers.

The "New" Consumer

The evolving role of consumers in taking more responsibility for their health and the consequent rise of consumerism in health care have created the need for a shift in the way in which health care executives think about their customers. Compelled to reach deeper and deeper into their pockets to cover the cost of care, customers are more knowledgeable and bring higher expectations to their medical care experience. Effective leadership entails a move away from physician-centric operations to consumer-centric practices, from passive models of customer service to active models, one that measures success from the patient's perspective—which typically is focused on the health care experience.

Much of consumerism is being driven by the high cost of health care. Payment programs and employer benefit plans require more and more consumer financial participation in the cost of care through increased deductibles and copays. Increasing numbers of major employers are establishing consumer-directed health care programs, which are designed to provide each employee with a given annual amount of money that is placed into a health care account. The corollary health benefit insurance plan then places high deductibles on the employee—a deductible that approximates the amount of funding the employer places in the employee health savings account. In this arrangement, the employee has the choice of how to spend these dollars, and any that are not spent stay in the employee's account for future use. The objective of this strategy is to encourage the employees and their families to make judicious use of medical services and to seek out those that are less expensive.

This has implications for the hospital—in a slow economy more patients are unable to pay for medical costs, and the hospital is at higher risk of bad debts when the patient cannot pay for services. If, on the other hand, consumers do not get medical care, they go to emergency rooms in acute phases of illness—a very costly alternative to the primary care they might have sought, had they had the financial resources or the will to seek care early.

Corporate Status of Hospitals and Health Systems

Hospitals may be structured as nonprofit or as for-profit organizations. As with other nonprofits, this organization structure brings with it the opportunity for tax exemption and the responsibility to provide community benefit. Recent controversies in the hospital sector have questioned whether the levels of charity care, community benefit, and executive compensation provided by not-for-profit hospitals are consistent with mandates of their tax-exempt status and mission statements.

In the United States, about 60% of hospitals are non-government-owned, nonprofit community hospitals (about 18% are for-profit corporate entities, and 22% are state and local government-owned hospitals) (American Hospital Association, 2007). Along with the significant advantage to be found in tax-exempt status comes the demand that proportionate community benefit should be returned. While this is a basic and long-standing quid pro quo, the criteria by which community benefit is defined and measured have not yet been defined: What is indigent care? What services/costs are included in community benefit? What proportion of revenue is the correct amount to dedicate to community benefit? Answers to these questions are wending their way through the courts and the legislatures of states across the country.

Governance: The Boardroom

Boards of nonprofit hospitals are typically organized under the voluntary model—board members do not get paid for their service. A 2007 survey of The Governance Institute reported that only 9.5% of hospitals used cash compensation for their board chairs, and 8.3% reported providing compensation to other board members. While hospital boards have remained generally voluntary, other core elements have changed—changes that reflect evolving issues for health care. In response to financial events such as the collapse of Enron and abuses at other major companies and the controversy related to tax-exempt status and community benefit, boards have created committees focused on executive compensation. As suggested by Owens (2005), "To address the current probe by the Internal Revenue Service, hospitals must begin to link their executive compensation with their organizational mission" (p. 237).

Following the 1999 report of the Institute of Medicine, *To Err Is Human,* which reported that up to 98,000 patients die in hospitals annually due to preventable medical errors, many hospital boards have incorporated a quality committee into their structure, seeing oversight of the core outcome of the enterprise as a key factor in their responsibility. In further transition, as hospital boards have faced increasingly complex financing, a highly competitive environment, and the need for strategic thinking, they have tended to constitute their membership differently—moving from a country club model in which appointments are made based on status and position in the community to a more professional model. Hospital "boards tend to devote more attention to recruiting members based on the organization's needs and candidates' expertise so those members can provide substantive input" (The Governance Institute, 2008, p. 64). At the heart of these transitions is a need driven by both internal and external forces for greater transparency, accountability, and independence among hospital boards and executive management (The Governance Institute, 2007).

Physicians

Physician/Hospital Relationships

Hospitals' relationships with their medical staffs have historically been characterized by the need to collaborate based on their interdependence and by conflict arising out of the different perspective each brings to its role in the hospital. William Petasnick, CEO of Froedtert & Community Health in Milwaukee, Wisconsin, and chair of the American Hospital Association, puts it best when he says that in hospitals, the "challenge of leadership [arises from a structure] in which the business model is built upon skilled practitioners who are not on the payroll of the organization" (Petasnick, 2007, p. 3).

Most physicians work in hospitals not as employees, but as members of the medical staff of the hospital. The medical staff is an organizational structure separate from the hospital's operations and management; it is organized under the authority of the governing board of the hospital and serves as the vehicle through which physicians are credentialed to work in the hospital—admitting, diagnosing, and treating patients there. This structure is long standing and historically has been a source of conflict. While the hospital functions on a business model, physicians place priority on their clinical care and avoid the complexities of the business realm of the hospital. The hospital cannot earn revenue from its clinical services without a member of the separate organization, the medical staff, placing an order for the test or procedure on which billing occurs to generate revenue. Executives must create and maintain a positive relationship with their medical staff and individual physicians to assure cooperation and collaboration. The role of the administration is to assure that the two occasionally competing interests are in alignment.

> While hospital bylaws guide and constrain physician behav ior, physicians are ultimately ethically accountable only to their peers and patients and legally accountable primarily to state licensing boards. . . . While management can speak with authority to the issues and concerns of all other healthcare workers, management cannot represent this critical cadre of participants in the healthcare delivery process. . . . Some degree of distrust seems inherent in the relationship between physicians and hospital executives. (The Governance Institute, 2007, p. 58)

Civility/Disruptive Behavior/Bullying Among Physicians (and Other Staff)

Health care leadership has been particularly challenged over the past decades by the phenomenon of the disruptive, uncivil, or bullying physician—the physician whose intimidating or angry behavior toward employees and patients in the clinical setting leads to medical errors and compromised patient care.

> Bullying, incivility, and their associated disruptive behaviors are insidious and destructive forces with negative conse quences that require identification and intervention at the individual and organizational level. Costs incurred secondary to these insensitive behaviors are substantial and involve mat ters of patient safety, absenteeism, turnover, turnover inten tions, organizational commitment, and employee health care. (Felblinger, 2009, p. 13)

Hospitals have been reticent to address this issue, fearing the loss of admissions and revenue should the doctor leave—and also the very wrath that intimidates their staff. With new accrediting standards and concern about the impact of bullying on the quality of patient care, hospitals have initiated policies and practices to address this issue. Although confronting the problem is difficult, corporate values insist that hospitals not continue to turn a blind eye to bullying among their physicians and other staff.

Physicians in Management

During the latter half of the 20th century, as the management of health care institutions was taken over by professional managers, physicians transferred to their generally preferred world in the clinic, and the numbers of them in management roles decreased. However, this trend has been changing substantially in the last decade. Hospitals, needing to form more positive relationships with their physicians, have created and expanded the management roles of physicians. Positions have been created for the chief medical officer, vice president of medical affairs, chief medical information officer, and chiefs of various clinical operations and of quality. Physicians also continue to move into the office of the chief executive officer and into the board room.

Dr. Michael Perry, CEO of FHN Hospital in Rockford, Illinois, finds substantial value in effective physician leadership in the hospital. He says,

> Physicians often have disdain for administrators who have never practiced medicine or taken calls from patients. If physicians are asked for input they prefer to explain clinical opinions to leaders who understand clinical medicine. . . . If leadership can discuss shared values and goals with the affil iated physicians leading the way, then strategies and deci sions will be implemented with more success. (Perry, 2007, p. 32)

Staff

The hospital environment is composed of a highly skilled, diverse, often independent-minded workforce: nurses, pharmacists, technologists, therapists, dietitians, and other allied health personnel, as well as researchers, quality specialists, risk managers, financial managers, engineers, information managers and many others. Skill and vision are required to motivate and direct the enterprise in the midst of the many who are highly trained and skilled and who bring a wide array of scientific and program knowledge that is essential to the enterprise.

Leading Into a Future of Workforce Shortages

The environment of the hospital leader is like a finely woven cloth full of all the color and texture that is such a diverse human enterprise, yet health care leaders are confronting a daunting and unique challenge. As the population changes, the baby boom generation retires, and financial and technology incentives favor clinicians who are specialized, the demand for primary care physicians and for registered nurses is expected to far exceed demand. Forecasts indicate that the United States may face a shortage of 80,000 to 100,000 primary care doctors and more than 350,000 registered nurses by 2020.

For health care leaders, the solution to this shortage problem will not be found in short-term strategies unless new directions are taken. Physicians cannot be trained quickly, and nursing programs that are lacking PhD nurses cannot quickly expand to meet demand. There is no quick solution to the serious and growing shortage problem unless new strategies are pursued. A limited range of solutions are being found in the use of nurse practitioners and physician assistants in roles of “physician extenders” and in their own independent practices providing basic primary care services. In their work, they can relieve schedules of primary care physicians. Other solutions will be found on the demand side of medicine, as the U.S. payer systems increasingly use financial incentives to change consumer behavior and give clinicians incentives to practice at the primary care level.

Diversity in the Workforce

The populations served by hospitals reflect the diversity found in communities across the country. Yet, the management structures of hospitals and health systems are generally found to be not as diverse as the communities they serve. This is due to a number of factors, including the lack of preparation for advancement that too many people in minority populations experience and the consequent lack of numbers of promising managers prepared for advancement. This sets the stage for the health care executive to seek out and cultivate minority talent and skill, to, as Myers and Dreachslin (2007) suggest, “promote the full participation of all workers, regardless of their rank or identity group, and reward excellence” (p. 296).

One particular study is telling. “Data suggest that the number of women in leadership roles [in health care] is increasing, but women remain underrepresented in the top echelons of healthcare leadership, and gender differences exist in the types of leadership roles women do attain” (Lantz, 2008, pp. 302–303). In a study conducted by the University of Michigan, researchers selected hospitals that were considered to be high-quality, leading institutions as indicated by their inclusion in the Solucient 100 Top Hospitals in 2005. These hospitals were selected under the assumption that as cutting-edge hospitals, they were most likely to have significant gender diversity in their leadership. In their study, Dunham and Yhouse concluded that of the 474 chief administrators of the top hospitals responding to the survey, only 114 (24%) were women.

> The results also revealed that nearly one third (30%) of the Solucient 100 Top Hospitals employed no female chief administrators, and another third (34%) employed one female chief administrator. . . . Out of 100 top performing acute care hospitals in the United States, only 15 employed a female CEO. (cited in Lantz, 2008)

Despite several decades of efforts among women and policymakers and the overt express wish of hospitals executives to achieve a more representative balance in leadership of health care institutions, minimal results have occurred.

A commitment to diversity needs to be written into the mission statement and articulated in the goals of the organization. Without these as a starting point, advancement to a more diverse leadership and overall workforce will not happen. Besides assuring that diversity is included in the documents that express the purpose and strategy of the hospital, health care executives need to also be personally involved, have a communication strategy, and integrate their personal vision for diversity into organizational functions (American College of Healthcare Executives, 2004). As Gail Warden (1999), former CEO of the Henry Ford Health System in Detroit, Michigan, said,

> Each leader in an organization must evaluate the demograph ics represented in the governance of the organization, its exec utive and physician leadership, and its workforce. A commitment by leaders to change leadership demographics is the first step in designing a new corporate culture that makes diversity as important as the bottom line, customer service, quality and organizational growth. (p. 422)

Quality

Institute of Medicine Report

In 1999, the Institute of Medicine released a study titled *To Err Is Human,* reporting credible evidence of tens of thousands of deaths in hospitals, deaths that were caused by preventable medical errors in drug and IV dosage or in medication administration and caused by wrong-site surgery, by equipment malfunction, by hospital-induced infections. Prior to the report, health care leaders knew but were reticent to acknowledge the outcomes of the errors noted anecdotally in patient charts, and available studies were not credible or sufficiently attention-getting to support the idea of patient deaths resulting from poor processes or failure to follow those processes or even from lack of technology to measure the results of errors and failed processes. But the institute's report made it clear—as many as 98,000 people were dying in U.S. hospitals each year as a result of preventable errors. This does not count the numbers who were injured or those who experienced an error but did not have an adverse outcome—the "near misses" (Schulte, 2009, p. 149).

While these adverse events have a direct and often mortal impact on patients, they also impact the hospital. The cost of medical errors is high. From 2004 to 2006, the cost of patient safety incidents was $8.8 billion, and of the 270,491 deaths resulting from errors, 238,337 were preventable (HealthGrades, 2008).

After two decades of implementing a successive range of initiatives to improve quality, providers found themselves entering the 21st century face to face with a morbid reality: People are dying while receiving care from those whose mission is life. J. M. Rona, former president of the Virginia Mason Medical Center, discussing the institute's report, asked:

> Is this really the state of healthcare in the twenty first century America? Sadly, it is. The lack of vision, determination, and adequate management methods of those who lead America's healthcare organizations are the reason. . . . Leaders should question their own accountability and integrity and reconnect with the core value of medicine "Do no harm" to be able to lead in the name of their customers. (Rona, 2005, p. 87)

Health care executives have undertaken a number of initiatives to correct the environment in which preventable medical errors occur. Creating a culture of safety (i.e., patient safety) is high among those initiatives. A focus on accuracy and process permeates a culture of safety, and employees understand that each has a role to play—that there is no margin for error. Hospitals continue to make major investments in information systems to more clearly record orders for drugs and tests and to collect, analyze, and disseminate information for a better understanding of where and how errors occur, of best practices, and of evidence-based medicine (Ruchlin, 2004).

Hospitals have also adopted Six Sigma and lean management methods. One of the major examples of this is the Virginia Mason Health System, which has taken a lead role in becoming a quality leader:

> [The change is] shifting from believing defects are to be expected to believing zero defects in healthcare is not only possible, but also necessary. Generally, healthcare has advanced in technology and understanding of disease, but its business and management systems have changed little since the 1950s. (Kaplan & Patterson, 2008, p. 17)

Virginia Mason's leadership is committed to a process of instituting and integrating the Virginia Mason Production System (VMPS), which led to savings in planned capital investments, reduced inventory costs, and reduced labor expense. Patient safety alerts—computerized notices to clinicians when they, for example, prescribe a medicine to which the patient is allergic—increased between 2002 to 2007 from 222 per month to 8,112 (Kaplan & Patterson, 2008).

Financing Health Care

The financing of health care in the United States is part public, part private; part national health insurance through Medicare, Medicaid, and several other government-sponsored programs; part employer sponsored; and increasingly individually purchased through private-pay insurance plans and out-of-pocket payments from consumers. It's a complex system that, for all the wealth it consumes and creates in the United States, still has left almost 20% of the population with no coverage and many more with far too little coverage. Under the health reform legislation of 2010 (HR 3590, The Patient Protection and Affordable Care Act, and HR 4872, The Reconciliation Act), many of the uninsured will receive health care coverage through an expanded Medicaid program or under the requirement that everyone purchase insurance. For those who do not meet the poverty guidelines for the expanded Medicaid coverage, an insurance exchange will be available through which they are expected to be able to find affordable coverage.

Even with expansion in insurance coverage, public policy will still place hospitals in the role of default insurer for that portion of the population, including illegal immigrants, who are not covered. Under the Emergency Medical Treatment and Active Labor Act, hospitals are required to accept the uninsured in their emergency rooms and to provide essential diagnostic and treatment services required to stabilize those patients without consideration of their ability to pay. This generates a very expensive cost-shifting phenomenon in which costs charged to private-paying patients and insurers are increased by amounts not collected from the uninsured and underinsured.

How Much Does Health Care Cost in the United States?

The first place to start our discussion of health care financial management is to grasp how much the cost of health care is in the United States and what is driving the rapid rate of increase in costs. At the end of 2006, the U.S. tab for health care (hospitals, physicians, pharmaceuticals, nursing home care, and so on) was $2.3 trillion or 16% of gross domestic product (GDP). This represented a 6.9% increase from the previous year and a cost per person of $7,026. By 2016, health care expenditures are expected to reach $4.2 trillion or 20% of GDP (National Coalition on Health Care, http://www.nchc.org). As a result of health reform legislation of 2010, the Congressional Budget Office predicts that the rate of increase in health care expenditures will decrease.

Many external and internal factors drive this rate of expenditure, including technological advancements, growth in the population, changing reimbursement systems, an atmosphere of plenty in the face of the destitution of many, the numbers of uninsured among the U.S. population, incentives for costly services, a history of third-party payment that separates the consumer from the cost of care, an expanding workforce of specialists, and other factors. None of these factors functions in isolation from the other. They lend themselves to the creation of a volatile financial environment. Together they create a complicated and tightly woven web of forces driving up the cost of medical care.

Financial and economic volatility has significant impact on hospital leadership just as it does on the leadership of other industries. The 2009 Health Forum and American Hospital Association Leadership Summit led its keynote program with sessions titled “The economic crisis and its impact on healthcare” and “Surviving and even thriving amidst ‘the perfect storm.’” In their role of strategically managing through these storms, health care management professionals have been part of cost-cutting initiatives, of creating a highly competitive environment in which expansion and new technologies are undertaken to maintain market share, of strategically managing their payer mix, and of creating integrated delivery systems or networks that bring together under one organizational structure the various venues of medical delivery along a continuum of care to reduce overhead and marshal resources to retain patients within their systems and to expand services. Despite these initiatives, the rate of increase in the cost of medical care continues to outstrip other U.S. economic indicators.

Reimbursement Programs

To understand the complexity of the U.S. approach to paying for health care requires an examination of the major reimbursement programs that make up the payer mix in hospitals.

Medicare was established in 1965 to finance care for people age 65 and older. Subsequent to its passage, further legislation added coverage for the disabled and for people with end-stage renal disease. Medicare provides coverage under four distinct parts. Part A, hospital insurance or HI, covers hospital, skilled nursing, home health, and hospice care; Part B, Medical Insurance or MI, pays for physician services and other medical services and supplies; Part C provides coverage through managed care plans, such as HMOs; and Part D provides prescription coverage. For Parts A and B, the enrollee is responsible for deductibles and co-insurance payments. These coverage exceptions are called gaps in Medicare, and for them, the enrollee can purchase Medicare supplemental insurance. Administratively, Medicare is administered centrally by the Centers for Medicare and Medicaid Services within the US Department of Health and Human Services.

Medicaid came into being as Title XIX of the Social Security Amendments, which were passed in 1963. Medicaid provides health care coverage to people who are indigent and who are eligible for coverage based on specific criteria related to their poverty level. Medicaid is a state-administered program that is funded under a federal/state partnership arrangement in which the federal government covers up to about 70% of the cost (the percentage is based on the state’s average income). All states currently participate in the program, and even though Medicaid has extensive federal requirements and restrictions, states administer the program with many options available to them. Well over 50 million people are enrolled in Medicaid in the United States. The number of enrollees is expected to expand with the implementation of the provisions of the 2010 health reform.

The State Children’s Health Insurance Program, which was initiated in 1997 under Title XXI of the Social Security Act, provides federal funds for states to expand Medicaid eligibility to children who are uninsured but who live in families with an income level above that required for enrollment in Medicaid.

Managed care is a system in which the insurance company both receives premiums from the purchaser and implements procedures to influence what health care services patients consume and from whom in an attempt to manage and coordinate the patient’s care and thereby limit costs. Under most managed care programs, patients have less freedom of choice in selecting providers. In their focus on cost control, managed care organizations negotiate with providers for discounted fees for medical services. Once the two parties enter into an agreed-on fee schedule, as well as co-insurance and deductible levels, the health care provider may not bill the patient for the discounted portion of the fees.

Expanding the range of insurers are the plans that private health insurers offer individuals. These plans are growing in numbers as employer-sponsored health insurance diminishes in the United States.

The Regulatory Environment: Leading Under Intense Scrutiny

The Government's Role in Health Care

The government's role in health care delivery is tri-fold. The government serves as a *payer* of health care, as a *provider* of health care, and as a *regulator* of health care. Each of these roles is distinct, and each has its own impact on the delivery of health care.

At a federal level, the government serves as a payer through programs such as those discussed above. In its role as provider of health care, the government at the federal, state, and local level owns and operates direct service departments (e.g., the Veterans Administration and Indian Health Services at the federal level, mental health facilities and hospitals at the state and local level) (Schulte, 2009, p. 105).

As *regulator*, governments at all levels impose laws, regulations, and ordinances on hospitals. In addition to the rules and regulations of the state and local governments that impact environmental, sanitation, reporting, building, licensing, reimbursement, and operations of health facilities, federal laws and regulations affect every area of the hospital's operations. Included among these are the following:

- The Emergency Medical Transportation and Active Labor Act
- Certificate of need
- The Stark and antifraud and abuse laws
- The Health Insurance Portability and Accountability Act

Keeping Pace With Technology

Technology is one of medicine's most fascinating dimensions. In a relatively short time, medicine has gone from a basic understanding of infection and its causes to the ability to successfully perform multiple organ transplants, to re-attach limbs after they have been severed, and to prolong life with procedures and drugs that were unheard of only decades ago. Increased volume and complexity of the information that is generated at the bedside, along with the need to pass that information from provider to provider to improve the safety of patient care and to improve efficiency and effectiveness, have made the implementation of health care information technology mandatory. Yet, advances in medical technology and deployment of information technology consume huge investments and require time and process change. Medical technology involves a wide range of procedures, tools, and interventions that are used to diagnose and treat health care problems. Focus in this section is on pharmaceuticals and genomics and subsequently on information technology.

Pharmaceuticals

New drugs come to market on an ongoing basis, as pharmaceutical companies and researchers discover and develop new compounds to address the health conditions that afflict human beings. However, the process of getting those new drugs to market is complex, time consuming, and very expensive—a new drug can cost a company hundreds of millions of dollars.

> Innovations in the health sciences have resulted in dramatic changes in the ability to treat disease and improve the quality of life. Expenditures on pharmaceuticals have grown faster than other major components of the health care system since the late 1990s. Consequently, the debates on rising health care costs and the development of new medical technologies have focused increasingly on the pharmaceutical industry, which is both a major participant in the health care industry and a major source of advances in health care technologies. (DiMasi, Hansen, & Grabowski, 2003, p. 151)

Genomics

The Institute of Medicine in 2005 defined genomics research as "an emerging field that assesses the impact of genes and their interaction with behavior, diet, and the environment on the population's health." A human genome includes all the genetic material (DNA) of an organism. Having access to the human genome sequence is a powerful tool for understanding the pathogenesis of disease—it has greatly accelerated the pace of research in medicine. Far more remains to be learned about how genes affect human health, and the field of pharmacogenomics is poised for this study.

Pharmacogenomics is the study of how an individual's genetic inheritance affects the body's response to drugs. This field holds the promise of personalized health care in which drugs of the future might be tailor-made for individuals and thereby adapted to each person's own genetic makeup. Pharmacogenomics is expected to make possible a future of more powerful, better, and safer medicines, better vaccines, and a decrease in the cost of health care.

These new research areas also open up ethical issues relative to confidentiality and potential discrimination by insurers and employers, to the potential misuse of the science in human design, and to the further separation of the "have-nots" from the "haves" of society. While genomics offers an exciting frontier for health care, the field is challenged to ensure wise and appropriate application of genomic developments, fairness and equity, and protection of confidentiality for patients. The latter issue was codified into law when the Genetic Information Nondiscrimination Act was signed in 2008. It is intended to protect Americans against discrimination in health insurance and employment and to pave the way for people to take full advantage of the promise of personalized medicine without fear of discrimination.

Information Technology

Information is central to medicine and medical care delivery. Without accurate and complete information, the incredible opportunities that are in medicine's future, the quality of care, and the comprehensiveness of care cannot be realized. Yet, this huge industry that is health care has been slow in the implementation of information systems and information sharing. Health care provider organizations lag far behind other sectors of the U.S. economy in the implementation of electronic information systems.

While we can go to any ATM in the world and perform banking functions with our "back home" bank, we cannot go from one provider to another and have access to our health information in order to interact with that provider. In most cases, we find ourselves repeating the same information for input into the paper records of the new provider or into a stand-alone computer system; the provider cannot electronically access the results of any tests or interventions we might have had previously.

Beyond the issue of what patients and providers face is the financial impact of lack of electronic access to medical records. This lack opens the potential to unneeded testing, prescription errors, burdensome administrative functions, inefficiencies, and other costly consequences. As health care costs consume more than 16% of GDP and continue to rise at alarming rates, while the quality of outcomes puts the United States further and further behind those in other developed countries, the imperative for the fully functional, shared electronic health record grows.

A number of significant issues impact the implementation and adoption of the electronic health record. Key among these are the following.

Investment Demands

Hospitals have historically invested less than 2% of their revenues in information technology; other industries generally invest between 5% and 7%. Investment in electronic health records (EHR) requires tens of millions of dollars for smaller hospitals and billions of dollars for larger multi-hospital systems. Confounding this investment is the lack of documentation of financial return on investment. While hospitals are compelled to invest in information technology to improve quality, others are slower to make a full commitment to the EHR. The investment is beyond their budget.

Interoperability

In implementing the EHR, a key requirement is that multiplatform systems be able to communicate with one another. Standards organizations are plentiful, however, the industry struggles with reaching consensus on standards and with implementation of those standards. Organizations such as Integrating the Healthcare Enterprise and the Certification Commission for Healthcare Information Technology are substantially moving forward the standards agenda, yet health care providers continue to be faced with the challenges of achieving interoperability of new systems, of legacy systems, and of disparate systems in the clinical and administrative environments.

Behavior Change

Perhaps the major barrier to successful health care information technology deployment is the lack of readiness of health care organizations and their physicians and staff to adopt process change and to change their behaviors in the use of electronic information systems. Many find it burdensome to undergo the extensive training that is needed to develop facility with the systems, and others are simply resistant to changing their old ways.

Privacy and Security

Maintaining the privacy and security of patient data is essential—and required by law. However, the systems (both technology and human) are not yet hardwired to unfailingly protect the confidentiality of patient information. Both the technology and the legal environment continue to shape advances in the protection of information.

Readiness to Share Information

The full implementation of the EHR requires the sharing of information among providers. While sharing of information within health care systems between doctors and diagnostic services is increasingly accepted, sharing from system to system meets with resistance. The number of health information exchanges, which facilitate regional sharing of data, is growing and with them a realization of the need to share data for access at any point in the delivery system.

Summary

Health care is a complex field, composed of many unrelated but interdependent venues of care, of a wide array of highly skilled people in clinical and management backgrounds, and of a complex array of reimbursement programs. It is being driven toward change by a changing demographic population, a consumer orientation, an untenable level of escalating costs, new technologies, changing societal values, and demands for transparency in financial reporting and quality performance. The health care leader is compelled to develop and master skills that are transformational, the focus turning to communication, customer satisfaction, and superb performance. This is the challenge of leadership in the complex environment of health care. Not only is the field complex, but more is expected of health care leaders than those in other fields. From a long history shaped by the Hippocratic oath, "health care leaders must be authentic and transparent in the way that they lead their organizations" (Buell, 2008). They are called to a higher standard.

YOUTH AND CHARACTER DEVELOPMENT

CLAUDIA SOWA WOJCIAKOWSKI AND JAYME R. PYNE

Grand Valley State University

In 2002, the centennial year of the 4-H (Head, Heart, Hands, and Health) movement in the United States, the National 4-H Council held a nationwide conversation on youth development in the 21st century. The conversation involved 600 organizations and more than 1,200 youths and adults in creating strategies and action steps that would enhance the organization's mission of empowering youth to reach their full potential.

4-H, largely seen as an organization for rural youth, has changed as the cultural landscape of America has changed, engaging nearly as many urban and suburban youths as rural by the new millennium. Believing that policy on youth development was too often passed down from on high at universities or government agencies, 4-H took a populist approach to confronting the challenges it faced at the start of the 21st century. The organization adapted its focus and allowed people from all walks of life to join the conversation and direct the organization's movement.

The final report of the national conversation intended to give key recommendations for improving and expanding youth development in America. Key findings included involving youth as policymakers, seeking multicultural acceptance for varied lifestyles, and building collaboration between youth organizations and government programs. The work of 4-H serves as a basis for the examination of nonprofits and the best practices in youth character development.

Youth character development is a fundamental part of nonprofit organizations. While the statement "children are our future" may seem like a cliché, it nonetheless reflects the integral role of youth in nonprofit organizations. Whether directly or indirectly stated within their missions, most nonprofit organizations are likely to incorporate youth and character development as part of their vision for the future.

To fully explore the concept of youth character development within nonprofit organizations' programming, this chapter provides definitions and theories of character development and moral development. Also examined are the historical perspective of character development within American history and the current role of nonprofit organizations in the character development of youth today. Ultimately, this chapter will explore the role of character development in a community, and it presents examples of how nonprofit organizations further their missions through work with youth.

Defining Character Development

According to Kevin Ryan (1997),

> The word *character* comes from the Greek word, to engrave. . . . Character of course, concerns itself particularly with the issues of what is right and what is wrong. When one forms character, one forms both a moral sensibility and also the enduring habits by which people live their lives. (p. 14)

Character development, then, is a process. In a formal sense, it may be referred to as values, moral, or character education. In an informal sense, it is the way in which each of us experiences, learns, and expresses a sense of right and wrong.

It is important to note that the actions and ideas of what is right and wrong fall on a continuum of what a community or society deems "good" and "bad." Each society or community has a set of values and determines acceptable and unacceptable practices based on these values. Unacceptable practices are considered delinquent or illegal (e.g., stealing from another person) or simply frowned on or immoral (e.g., infidelity). Acceptable practices are authorized or legal and may even be considered essential to a healthy society or community (e.g., moral). It is natural to relate character development to moral development.

Character development in youth is the creation, maintenance, and diffusion of morals deemed essential to that society or community. An individual with character is thought to have exceptional moral qualities, virtues, and reasoning skills.

However, character is not necessarily universal across cultures or even within culture. It is instead an agreed-on set of qualities within a particular community that signifies an exceptional or moral individual. To this end, the exact definition of character is largely defined by the cultural norms of the community. This depiction of character falls short of moral relativism; it is instead a statement that character is unerringly connected with many aspects of a culture, including that culture's morals. For this chapter, character often intersects with morals but is not synonymous with morality, which some see as a universal construct.

Understanding Moral Development

Although not the same, the development of character and the development of morals are intertwined. According to Reimer, Paolitto, and Hersh (1983), the conceptual foundation of Lawrence Kohlberg's work on moral development is Jean Piaget's work on cognitive development. To understand a person's perception of right and wrong, which is a reflection of character, one must consider how the person thinks.

Jean Piaget

Piaget (1932/1965) was a Swiss scholar who was trained as a biologist. His writings discuss the process of reasoning that children use, and his research was on the development of human intelligence. Piaget describes the process of reasoning as developing in four periods or stages: (1) *sensorimotor*, which is preverbal and is when children gain information derived through the senses and motor activities (e.g., the attachment of children and their caregivers based on touch and security), (2) *preopera tional*, when children show thought in their actions, purposeful behaviors that are egocentric or self-centered (e.g., a child crying to get fed or changed), (3) *concrete*, in which children can classify items in a concrete way based on learning and can understand item conservation across a variety of situations (e.g., a child reciting letters and colors and knowing right from wrong), and (4) *formal*, in which the person can express thoughts based on logic and abstract thinking (e.g., a child expressing views and analyzing situations from multiple perspectives, including those not directly experienced).

Piaget also believes that regardless of stage, all humans use their intellect to reason and process information. This cognitive processing provides a means for organization, adaptation, assimilation, and accommodation of the information they derive from experience. According to Reimer and colleagues' (1983) overview of Piaget, organization refers to the tendency to systematize information into coherent systems, which do not function properly unless they assist the person in adapting to the environment in which the person lives. For example, young children are taught colors, letters, religions, gender, values, and right and wrong and begin to understand and organize information based on these categories. This process helps children communicate in everyday life as well as predict consequences of their own behaviors. It helps them adapt to the environment in which they live. It is a process in which they begin to understand and become part of a community.

Once this framework is created, children have a means to assimilate new information. The first tendency of an individual is to assimilate information into what he or she already knows. When children are given a new box of crayons and asked what color a particular crayon is, they automatically answer with a color they know. They do not question if a crayon *is* a color, as all crayons are categorized as color, but they try to fit the new color into the categories of colors they know. For example, they may say that orange is red because they know red is a color and appears similar to what they are seeing.

As adults, we assimilate information about other people and may find that we predict what someone is going to say or do based on previous experiences with that person or someone else. We may or may not be correct, but the process helps us determine how we are going to act and the consequences of our actions with this person. Therefore, assimilation refers to the way an individual processes and acts on information in the environment based on the person's current organization of information. If this assimilation causes conflict for the person (e.g., a small girl throws a tantrum because she does not get what she wants as she did previously), the individual then begins to alter his or her organization of information to accommodate the new information. Accommodation takes information from the environment and modifies the current organization (e.g., given no reaction to the tantrum, the little girl may not throw a tantrum again, suggesting that she has learned that throwing tantrums will not get her what she wants).

Therefore, the application of Piaget's theory suggests that individuals and communities, including nonprofit organizations, can influence the experiences and the learning of an individual. Consequently, they may then influence how a person thinks.

Lawrence Kohlberg

What does this mean for moral development? Although David Riesman (1950), Erik Erikson (1955), and Erich Fromm (1955) had previously tried to examine more or less mature forms of moral thinking, Lawrence Kohlberg was the first person to conceptualize moral development based on Piaget's stages of cognitive development (Reimer et al., 1983). Kohlberg's (1971) stages of moral development were based on how an individual assimilates and accommodates information, as defined by Piaget, to make moral judgment. The theory describes three levels of moral reasoning: (1) *preconventional*, which includes the two stages of heteronymous morality and individualism, (2) *conventional*, which involves the stages of mutual interpersonal expectations and social system and conscience, and (3) *postconventional*, which includes the stages of social contract and universal ethical principles. Reimer, Paolitto, and Hersh (1983) describe Kohlberg's theory. A summary of their description of Kohlberg's levels and stages of moral reasoning is found in Table 26.1.

In general, *preconventional* moral judgments are based on avoiding punishment and following the rules. As a person develops cognitive reasoning, more *conven tional* moral judgments can be made based on meeting the expectations of others and wanting to be seen as "good," based on the laws of society. The third type of moral judgment requires abstract thinking and is based on the ability to decide what is the greatest good for the greatest number. People at this stage are able to use self-chosen ethical principles.

The question is, does cognitive development automatically reflect moral development? As people mature cognitively to a level of formal thinking, do they automatically become more aware of universal ethical principles? If so, and they act according to these principles, cognitive development, moral development, and character development walk hand-in-hand. However, this conclusion does not always appear to be true. For example, Adolph Hitler and Charles Manson are well-known for being extremely intelligent and having the ability to use high levels of abstract thinking, but their moral development would not be considered parallel to their cognitive development.

Although people have the ability to think abstractly, they do not always make moral judgments that reflect a process of assimilating and accommodating information regarding right and wrong based on established ethical principles. A person's cognitive development period is innately part of human development. Moral development, however, must be taught. Therefore, experiences teach moral and ethical principles and develop character. The development of character has been an integral part of American moral education and history.

Historical Perspective of Character Development

An exhaustive history of character development in America can hardly be covered in this chapter. The contributions of many diverse groups must be inferred without exploring in great detail. Therefore, this section will explore character development from the Anglo-American perspective based on its direct influence in most modern depictions of formal education in America. In this context, American character development began with the issue of moral education. Moral education was of the utmost importance to the first settlements, particularly to the Puritans of the Massachusetts Bay Colony, who left behind more records of their quest for moral development than other colonies that would form the original United States. For Puritans, and indeed most colonists, moral education was a question of both spiritual and physical survival. Having left the Old World, the Puritans fought fiercely to maintain their values in the wilderness of America.

Level and Stage	*Description*
Level 1: Preconventional	
Stage 1: Heteronymous	Moral judgments are rule based and are made to avoid punishment
Stage 2: Individualism	Moral judgments are based on following rules based on one's needs or interests and letting others do the same
Level 2: Conventional	
Stage 3: Mutual expectations	Moral judgments are based on meeting expectations of others and a belief in the wanting to be seen by others as good
Stage 4: Social system and conscience	Moral judgments are based on laws and maintaining society
Level 3: Postconventional	
Stage 5: Social contact	Moral judgments are based on the greatest good for the greatest number
Stage 6: Universal ethical principles	Moral judgments are based on self-chosen ethical principles

Table 26.1 Kohlberg Theory of Moral Development

SOURCE: Adapted from J. Reimer, D. P. Paolitto, & R. H. Hersh, *Promoting Moral Growth From Piaget to Kohlberg,* pp. 58 61. Copyright 1983 Longman, Inc.

Responsibility for education in Puritan society fell largely on the nuclear and extended family. The bulk of this education was based on knowing scripture and the laws and values of the society (McClellan, 1999). This early indoctrination of personal responsibility to one's community is reflected in the foundation of our modern ideas of character development, character education, and civic responsibility.

It would be unwise, however, to credit our current understanding of American character development solely to Puritanical beginnings. In fact, Anglicans who settled in Virginia and Quakers in Pennsylvania were deeply interested in moral education, for similar reasons as the Puritans: to maintain their communities and their values although economic motives had brought them to the New World. Adult men educated their young men through religious doctrine and saw religious education as a means of conveying heritage and pursuing values as well as teaching content such as reading and history. The task of the community, and in turn church and family, was to mold men of character.

After the American Revolution, the educated elite such as Thomas Jefferson were concerned that the fledgling nation would not be able to survive without a properly educated and virtuous populace. Therefore, these intellectuals envisioned a state-run education system (the prototype to our current public school system) in which the primary objective was to teach patriotism and democratic values. In a sense, the early days of the public school system were intended entirely to promote an indoctrinated form of character education. Formal education *was* character education, focusing on personal sacrifice for the common good, and it remained so throughout the 18th century.

In the 19th century, character education was punctuated by the need to balance diversity, unity, and order within the nation. Increasing mobility of the American people meant that parents could no longer guarantee that they could be a moral compass for their children throughout their lives (McClellan, 1999). Adult males now worked away from home, and the early moral education of the child became the mother's duty. According to Holly Salls (2007), "Mothers cultivated an inner desire for virtuous living in their children and forged a tie between virtue and happiness" (p. 7). However, concern remained that these women were not prepared to help children adapt to the changing world outside of the family. Fearing that a populace that was too freedom minded could lead to anarchy, proponents of the public school model argued that schools for immigrants and the poor could teach morality, ensuring that societal harmony endured.

Salls (2007) notes, "Character education in the public schools was also a means to achieve political and economic ends; it would create diligent workers and responsible citizens, men and women of virtue" (p. 8). Public schools began to appear in increasing numbers, with primers stressing reading and virtue. Formal public education was expanded, allowing most white children to attend a school for low or no fees.

The 20th century, with two world wars and a Cold War, led the United States to a competitive global vision for public education. Schools needed to emphasize technology and science to help children and the country compete with other developed countries. The role of character development within education was diminished, and the recognition of the multicultural nature of the country became a prominent issue. This brought to question the existence of common ground or universal principles of society in public education. The federal government worked to guarantee civil rights and began examining public schools to ensure tolerance. Two U.S. Supreme Court cases (*Engle v. Vitale* and *Abington Township School District v. Schemp*) reinforced the separation of church and state and recognized public education as state driven. Schools then stepped back from character education and inadvertently created a gap in the foundation of this democratic society.

Importance of Character Development in Democratic Society

Freedom and responsibility.
Liberty and duty.
That's the deal.

John Gardner (O'Connell, 1999, p. 126)

The quotation above, reflecting on American culture, comprehensively sums up the role of the individual in a democratic society: with freedom comes responsibility and with liberty comes duty. But to look to the other side of the coin, that is, when this "deal" is not realized, we gain a more unnerving perspective. Reflecting on the fall of Athens, the world's first democracy, historian Edward Gibbon wrote an epitaph:

> When the Athenians finally wanted not to give to society but for society to give to them, when the freedom they wished for was freedom from responsibility, then Athens ceased to be free.

To maintain a healthy democratic society, the general public, as a collection of individuals, must have some compass that guides it to proper or moral duties. No society, regardless of how overly legalistic it may be, can enforce the implementation of all morality to its citizenry through laws and regulations. To this end, democratic societies require that the citizenry have character and act to "fill the gap" between legality and what is morally favorable. Citizens of character are the background of democracy.

Because America is, at its heart, a nation of immigrants, the cultural structure has been erected much differently than with many other countries. People coming to the United States did not necessarily come as families and instead found companionship by joining in association with like-minded people. French writer Alexis de Tocqueville (1863) visited America in the early 19th century and observed with fascination that "Americans of all ages, all stations in life, and all types of disposition are forever forming associations" (p. 129).

In fact, Americans throughout history have joined associations more than most other peoples of the world. As a "nation of joiners," the United States built its foundation of democracy around the idea that civic engagement is a cornerstone to democracy. Democracy requires actions as individuals, communities, and charitable organizations that enhance the greater good and support society. This investment in community and society by interested citizens through advocacy and volunteerism is referred to as *social capital.* Democracy, therefore, requires social capital.

However, although the sheer number of associations in America is continually on the rise, the percentage of U.S. citizens actively involved in these associations is actually decreasing. Americans still give generously to charities, but while a check in the mail is a noble gesture, it does not build social capital like active volunteers or philanthropists. Take, for instance, the continual decline in organizational involvement in the United States. In the 1960s, most Americans spent at least some time each week involved with a community organization, but by the 1990s, only one quarter of Americans were involved with a community organization on a weekly basis. There are similar downward trends in volunteerism as well.

Putnam (2000) sees these declines as generational; older citizens continue to remain involved, while the younger generations of Americans simply do not participate in associations at all. Whether it is due to technology, time pressures and constraints, sprawl, globalization, distrust of government, disillusionment with the power of community or perhaps a change in public and character education, young people are simply not showing up.

In Bricker (1989), Kenneth A. Strike laments,

> Americans seem to have lost sight of the fact that institutions form character. We have forgotten the lessons of Plato and Aristotle, that a society's constitution, its politics, its way of conducting business, and the forms that human associations take, are also (perhaps even primarily) ways of creating people. (p. xi)

Because a democracy is centered on an active public, it cannot appropriately function without one. Paradoxically, or perhaps reciprocally, the democratic society creates the informed and responsible person, but it takes informed and responsible people to maintain the democratic society.

To reverse the current trend, it is necessary for social capital to be increased through engaging larger numbers of citizens, particularly younger citizens. More young people must become involved and active citizens in their communities. The task of creating such active citizens is, at its core, an exercise in character development in education. In short, while character education has a significant impact on the individuals receiving the education, it has an equal or greater impact on maintaining and expanding the values structure of democratic society as a whole.

So what is necessary to promote the development of character and social capital within this democracy? In the book *Civil Society*, Brian O'Connell (1999) points out that individuals are highly likely, if not assured, to be active citizens if they experience all or most of the following as youth (pp. 111–112):

1. Having a parent or other adult role model who volunteers
2. Being involved in a youth group or other secular organized volunteerism
3. Being involved in volunteering through a religious congregation
4. Being exposed to volunteering as part of a school activity
5. Seeing a respected peer volunteering
6. Being exposed to favorable media coverage of volunteering

Such experiences in childhood and adolescence enhance the work of civil society, in the short and long term, and simultaneously build character in youth.

Countless nonprofit organizations offer nearly limitless opportunities for young people to be involved with their communities and gain these experiences. These independent opportunities, in conjunction with school-related activities, can create a substantial base of character development for youths.

O'Connell (1999, pp. 107–113) further states that the actions of individuals are so important, there must be

1. preparation for citizenship at every level of education,
2. acceptance that civic engagement and understanding is a priority for all,
3. assurances that these values are passed to the next generation, and
4. an expanded role of the citizenry as the foundation of society.

These "action points" for civic engagement contain all the factors necessary to build character in youth. In a way, one hand washes the other. Character education is learned indirectly through civic engagement, while the health of civil society is maintained through the continued workings of those with character.

To view it another way, civic education and character education are two sides of the same coin; civic education is focused on creating a responsible and enlightened citizenry and a collective initiative, while character education is focused on creating responsible and enlightened individual initiative. Both, however, contribute to one another.

The burden for much of this civil and character education, to "fill the gap" in civil society, has fallen to educational institutions and nonprofit organizations. Whether such education is taught directly—through regular instruction and guidance on the subjects—or indirectly—through the initiatives created as a result of a nonprofit's mission or a school's commitment to extracurricular activities—youth must be exposed to developmental activities and ideas that will increase their chances of becoming civic minded and philanthropic adults of character.

Nonprofit Organizations and Character Education

In nonprofit organizations, character development is an intentional and vital component, directed toward the infusion of long-lasting socially positive values within a community. The role of a nonprofit organization is either to support an undersupported positive aspect of a community (local, regional, national, international) or, in the event that such a positive aspect is nonexistent or shunned, to work to change the culture of the community to accept the positive aspect. To fulfill this mission, the nonprofit organization creates opportunities for civic engagement that foster volunteerism, philanthropy, and character.

Character development is a key component in sustaining the work of most nonprofit organizations. This is true because most nonprofit organizations must form communities of interested individuals that maintain the nonprofit's cause or sustain the organization itself. If there is no community of interested individuals who have a sense of moral and civic responsibility, there will be no citizens to continue the work of the nonprofit.

In this respect, many nonprofit organizations are involved in youth character development. Programs funded or supported by nonprofits help to develop the values and morals that are integral to the development of character. Because, as stated earlier, we gain much of our sense of philanthropy and civic engagement from our childhood and adolescent experiences, nonprofit organizations do well to incorporate interactions with young people in furthering their mission.

Examples of Character Development in Nonprofit Organizations

Interest in youth takes multiple forms. Nonprofit organizations have initiatives focused on character development and others that are not, but even the latter contribute to character development in youth.

Character Development Focused

Nonprofit organizations have worked to supplement a student's formal education with both in-school and out-of-school programs that directly promote character development. These programs also allow nonprofit organizations to promote their missions and foster stewardship of our country's social capital through service, philanthropy, and advocacy.

Learning to Give (LTG, www.learningtogive.org) is a good example of a character-focused nonprofit organization that works within a school system through its curriculum. Funded initially in 1997 by the Council of Michigan Foundations and a consortium of nonprofit organizations, governmental agencies, and businesses, LTG is an example of nonprofits interested and involved in character development within schools.

LTG fosters and promotes the work of nonprofits in a direct way. Through a curriculum of more than 1,300 lessons, LTG and in turn the Council of Michigan Foundations educate K through 12 students in the areas of philanthropy, civic responsibility, service learning, and the common good (actions that benefit the community over an individual's needs). LTG includes curriculum, teacher training, and supplemental materials to support lessons, and it ties philanthropy education into state education standards and the academic achievement of students.

This process of curriculum integration allows philanthropy education to be integral to education as a whole. According to Michigan State's (2003) evaluation of LTG, the program "encourages students to develop ideas, skills, and projects that build character and instill positive attitudes and behaviors toward citizenship and toward other people in their families, neighborhoods, schools, and communities" (p. 7). LTG returns character education to public and faith-based schools as a vehicle to educate citizens in a critical aspect of democracy, civic responsibility, and to help them achieve academic success.

Another good example of how nonprofits began to supplement public education in character education is 4-H (www.4-H.org), referenced at the beginning of this chapter. Integral to the 4-H program is a curriculum based around science, engineering, and technology; healthy living; and citizenship, which shows a clear link between the organization's mission and character education. In the case of 4-H, youth character development is central to the nonprofit's mission. However, even though this organization is likely to promote best practices in character development, there may be no consensus on what youth character development looks like, how it is defined, what it entails, or how it should be approached.

Similarly, Boys and Girls Clubs (http://www.bgca.org) have programs aimed at fostering youth leadership and character development. These programs assist youth in becoming more responsible, caring, and democratic citizens. The organization implements Keystone Clubs (small-group leadership development), Youth of the Year (recognizing youth for service and academic performance), and the Torch Club (small-group community-service development) to promote character development in youth across the country.

In these cases, youth character development is the focal point for the nonprofit organization. Therefore, character education is pivotal to the missions and the sustainability of programs. In addition, these programs may create democratic social capital and build character in youth, which can then be applied to causes outside the organization's reach.

Noncharacter Development Focused

Nonprofit organizations may work with youth even though their missions are not directly connected to youth character development. Their activities may be focused on youth working within the nonprofit organization to help further its mission or may solely increase awareness and appreciation to build social capital surrounding the arts, environment, government, and so on.

In the case of the Great Lakes Fishery Trust (GLFT, www.glft.org), the nonprofit's mission is to "enhance, protect, and rehabilitate the Great Lakes fishery." In part, the trust understands that to further its mission, these actions must be generational, and today's youth must be tomorrow's watershed stewards. To that end, the nonprofit has created an educational division of the trust called the Great Lakes Stewardship Initiative, which is involved in connecting "K-12 schools with their communities to create opportunities for learning that are meaningful for students and have a lasting impact on the environment" (GLFT, 2008, p. 9). Part of the organization's interest naturally falls on ensuring that the next generation in the community will become or remain lifelong protectors of the environment.

Another example would be Americans for the Arts, which is "dedicated to representing and serving local communities and creating opportunities for every American to participate in and appreciate all forms of the arts" (www.artsusa.org/about us). One of its initiatives is Arts Education in Your Community. This joint initiative with the National School Boards Association promotes the presence and advancement of art education in American public schools. In this case, the organization's mission is to promote and sustain art. However, the sustainability of the organization requires the involvement of youth in art education. Youth involvement creates ongoing interest in the arts, builds social capital for communities, and develops character, all while furthering the organization's mission and goals.

Although youth character development is not the focal point of these organizations, the programming provided through these nonprofit organizations promotes and develops leadership and the attributes associated with good character.

Summary

Cognitive development and moral development are intertwined. Both values and morals are taught through character education. Throughout the history of education in the United States, character education has played a critical role in the development of a knowledgeable citizenry and in creating the foundation for a democratic community. As issues of relativism and separation of church and state have been critically examined, the federal government has taken a greater role in the ensuring that public education respects all cultures and focuses on students' academic achievement. As a result, character education no longer plays a pivotal role in schools, reducing the role of formal education in creating a common foundation of values that promote democracy and character.

Nonprofit organizations have worked to create in-school and out-of-school programs that promote character development either directly or indirectly. The funding of these programs allows nonprofit organizations to promote continuity from generation to generation in order to maintain stewardship of our country's social capital through service, philanthropy, and advocacy. In supporting character development of youth in their sponsorship of programs, nonprofit organizations ensure both their own continuity and the healthy state of democratic society.

PART IV

Nonprofit Organizations and Historically Disenfranchised Groups

27

Gender Matters

Women Transforming Philanthropy

Debra Mesch and Andrea Pactor

Indiana University–Purdue University Indianapolis

In the past 30 years, women have emerged on the philanthropic landscape as a visible and bold presence. They are changing the face of philanthropy and are transforming society around the world. Today's reality is that women, strengthened by increasing economic power and education, are as likely as men to be philanthropists. Consider Sheila Johnson cofounder of the Black Entertainment Network, CARE ambassador, and devoted supporter of arts and education causes; Ann Lurie, Chicago philanthropist and $100 million donor to the Children's Memorial Hospital; or simply the women in giving circles around the country.

Interest in understanding how and why women give has grown exponentially, prompting researchers to examine gender issues in philanthropy from new angles. Gender in philanthropy matters because research informs us that men and women differ in their motivations for giving, their philanthropic behavior, and their leadership styles (e.g., Andreoni & Vesterlund, 2001; Brown & Rooney, 2008; Mesch, Rooney, Steinberg, & Denton, 2006; Piper & Schnepf, 2008). Research has also demonstrated that women influence philanthropic decisions in households (e.g., Andreoni, Brown, & Rischall, 2003; Brown, 2005; Rooney, Brown, & Mesch, 2007). The more we understand gender differences in giving, the more society will benefit from contributions of time, talent, and treasure by all individuals to meet today's challenges and to prepare for tomorrow's opportunities.

Historically, women have long served as volunteers in the community, sharing their time and talent to improve their community and the world. Exceptional, visionary women in American history also contributed financial resources for projects to improve aspects of society. Notable among them are Lady Anne Mowlson (Anne Radcliffe), Mary Lyon, Mary Elizabeth Garrett, and Mrs. Russell Sage, who saw a need and met it with boundless energy and enthusiasm. In 1643, Lady Mowlson endowed a scholarship fund for sons of blacksmiths and farmers at Harvard College, which had been created just 7 years earlier. Lyon was a pioneer in women's education in America, founding in 1834 the Wheaton Female Seminary, which became Wheaton College, and the Mount Holyoke Female Seminary in 1837, which became Mount Holyoke College. In a curious parallel to the United States in 2009, during the years that Lyon traveled the country raising funds for Mount Holyoke, the Panic of 1837 catapulted the country into its worst recession since its founding. Despite bank closures, Lyon persevered, believing fiercely that women should have the same educational opportunities as did men.

Garrett donated the remainder of funds needed for the new medical school at Johns Hopkins University in 1893, provided that the university would agree to admit women on the same basis as men. Mrs. Sage created the Russell Sage Foundation in 1907 for the improvement of social and living conditions in the United States, using social science research as the framework for its grantmaking. Other women philanthropists during this period contributed generously to specific endeavors across the country.

The changing sociocultural landscape in the United States since the 1970s prompted the emergence of the modern women's philanthropy movement as women gained more economic independence, achieved higher levels of education, and made strides in business, government, and the nonprofit sector.

In the 20th and early 21st centuries, women serve myriad roles in philanthropy as donors, volunteers, nonprofit organization staff, board members, foundation executives, and scholars. Today, women are as likely to volunteer their time as to contribute small and major gifts to strengthen the social fabric. Indeed, communities around the world are enriched by the rich mosaic of ways in which women contribute time, talent, and treasure to advance the common good.

The Modern Women's Philanthropy Movement

Sondra Shaw-Hardy, cofounder with Martha Taylor of the Women's Philanthropy Institute, calls the modern women's philanthropy movement "an outgrowth of the feminist movement with leaders like Gloria Steinem" (Shaw-Hardy, 2006, p. 11). Several trends emerged as distinctive characteristics of this era: development of innovative organizational models such as women's funds and giving circles led by women and involving women in leadership and staff positions; collective giving as exemplified by the giving circle model; women providing support for women's and girls' programs; and women providing support for all causes. As women's philanthropic leadership gained momentum, thousands of women throughout the country and around the globe became engaged in effecting social change for the public good, some for the very first time.

Steinem was one of the four founders of the Ms. Foundation for Women in 1972, the first women's fund in the country. Marlo Thomas, Patricia T. Carbine, Letty Cottin Pogrebin, and Steinem had founded *Ms. Magazine* in 1971 and created the foundation to distribute the magazine's profits to support the grassroots women's movement. The Ms. Foundation's mission is to assist women to govern their own lives and influence the world around them.

Following the model established by the Ms. Foundation to provide support for women and girls, other women's funds were created at the state and local level and eventually in communities around the globe. Today, more than 130 women's funds belong to an international membership association, the Women's Funding Network. With assets of more than $450 million, these funds allocated about $50 million in 2008 as investments in women and girls.

Not all women's funds invest in programs for women and girls. Some, like the Washington Women's Foundation (www.wawomensfoundation.org), provide support for all causes. Some focus on a single cause, such as Rachel's Network (www.rachelsnetwork.org), which supports environmental issues. The Women Donors Network (www.womendonors.org) supports progressive social justice causes. The myriad portals through which women can become engaged in philanthropy are one of the movement's greatest strengths.

Giving circles are another distinctive contribution by women to the philanthropic landscape. As defined by New Ventures in Philanthropy, an initiative of the Forum of Regional Associations of Grantmakers, a giving circle is a "pooled fund, often hosted or sponsored by a charitable organization such as a community foundation, through which members make grants together" (Bearman, 2007, p. 1). Shaw-Hardy, a pioneer leader in women's philanthropy, published "Creating a Women's Giving Circle" in 2000. This short booklet provided a framework for starting a giving circle and prompted scores of women in local communities to explore this form of democratic civic engagement. The popular media, picking up on the new trend, published scores of articles about the rise of giving circles and contributed to the expansion of the idea around the country. A second scan of giving circles, released by New Ventures in 2007, reported that 81% of giving circle participants were women (Bearman, 2007, p. 7).

For women, giving circles build on traditions of sewing circles, book clubs, and, more recently, investment clubs. They offer participants a safe and neutral environment in which to learn about their communities and causes and their philanthropic values and to make decisions collectively about how to improve some facet of their community or world. Coed circles and men's giving circles are on the rise, leading to a conclusion in the 2007 New Ventures scan that giving circles are not only a growing philanthropic movement but an "enduring and expanding philanthropic trend" (Bearman, 2007, p. 1).

Toward the end of the 20th century, nonprofit organizations recognized the growing power of women's philanthropy and created structures within existing frameworks to engage women more fully in organizational life. In 1988, Martha Taylor, a visionary leader at the University of Wisconsin-Madison, organized the first women's philanthropy council in an institution of higher education. Soon, colleges and universities around the country followed Wisconsin's lead and developed philanthropy initiatives for women alumnae and donors, generally within development departments. Some initiatives emphasized leadership or volunteer opportunities. Some focused on providing scholarships and mentoring to current undergraduates. Some concentrated on cultivating major gifts and integrating women into capital campaigns. While each initiative developed along distinct lines, all of the programs built networks among their women alumnae and donors, created goodwill, generated new donors, and increased gifts for their institutions.

More recently, several national nonprofits developed women's philanthropy initiatives. The United Way of America formalized its national Women's Leadership Council in 2004 with a goal of increasing annual funds raised by women donors in United Way affiliates across the country from $59 million to $100 million by 2008. In 2007, more than 100 women's councils, representing 40,000 women, raised $105 million, exceeding their initial goal by 5%. Patricia J. Mitchell, Women's Leadership Council national chair, said of the councils, "We are a powerful voice of women in philanthropy, and a powerful voice to advocate for the critical needs in our communities locally, nationally and internationally" (Mitchell, 2009). Mitchell stated that "women are the economic powerhouse of the 21st century."

At the 2009 Women's Leadership Council Summit, United Way leaders reported that the local United Way agencies with women's leadership councils in place are driving the growth of local United Ways. They are outpacing those local agencies that do not have an organized women's philanthropy program.

The same volunteer leadership that prompted the start of the United Way women's group brought the concept to the American Red Cross in 2006. Under the dynamic leadership of Bonnie McIlvain Hunter and Melanie Sabelhaus, the Tiffany Circle, a Society of Leaders, exceeded all expectations in its pilot year. The Tiffany Circle started in eight cities around the country, attracted 235 women donors, and raised three times the amount of the established goal, $3 million instead of $1 million. Despite operational differences, national nonprofits such as the United Way of America and American Red Cross have been able to generate visibility and a national brand and bring women's philanthropy to scale.

Women's philanthropy developed its own infrastructure with the creation of Women & Philanthropy in 1977, the Women's Funding Network in 1985, and the Women's Philanthropy Institute in 1997. Women & Philanthropy's goal was to increase the funding from foundations for programs that benefited women and girls. After 30 years of advocacy, Women & Philanthropy ceased operation in 2008 primarily because of lack of funding. The seeds from which the Women's Philanthropy Institute grew, germinated in 1991 when Sondra Shaw-Hardy and Martha Taylor established the National Network of Women as Philanthropists (NNWP) at the University of Wisconsin-Madison. The network served as a clearinghouse of information on women's philanthropy and was dedicated to education for philanthropists, development professionals, and nonprofit leaders. Its name was changed to the Women's Philanthropy Institute in 1997, and it became incorporated as a free-standing nonprofit. The institute became part of the Center on Philanthropy at Indiana University in January 2004.

The institute's mission is to further the understanding of women's philanthropy through research, education, and knowledge dissemination. By addressing significant and groundbreaking research questions and translating that research into increased understanding and improvements in practice, the institute helps to leverage new and expanded resources for the common good.

As part of the modern women's philanthropy movement, hundreds if not thousands of women leaders have taken all kinds of leadership roles. Deborah Tannen, professor of linguistics at Georgetown University, has demonstrated through research that how boys and girls learn to interact as children predicts their behavior as adults. "The research . . . has shown that, although both boys and girls find ways of creating rapport and negotiating status, girls tend to learn conversational rituals that focus on the rapport dimension of relationships while boys tend to learn rituals that focus on the status dimension" (Tannen, 1995, p. 140).

Marie Wilson, former president of the Ms. Foundation and founder of The White House Project, states that women lead differently than men. Wilson reports that research shows women leaders in politics "tend to include diverse viewpoints in decision making, have a broader conception of public policy, and offer new solutions" (Wilson, 2007, p. 9). In addition, Wilson says, women define "women's issues" broadly, and they "put these issues at the top of the legislative agenda—bills dealing with children, education, and health care, for instance" (Wilson, 2007, p. 10). For women, the advocacy, political, and philanthropic agendas are intertwined.

Research Helps Build a Movement

Interest in understanding how and why women give has grown exponentially since 1990, prompting researchers to examine gender issues in philanthropy from new angles. Over the past several decades, the research literature on altruism, empathy, helping, and prosocial behavior suggests that these motives and behaviors are more highly developed in women than in men. Differences in how men and women behave have been well-documented in social and behavioral sciences. Much of the empirical research across these disciplines suggests that females are more likely than males to be donors to charity (e.g., Andreoni et al., 2003; Bekkers, 2004; Kamas, Preston, & Baum, 2008; Mesch et al., 2006; Piper & Schnepf, 2008).

An Example From the Philanthropic Studies Literature

Mesch and colleagues. (2006) examined the effects of race, gender, and marital status on giving and volunteering and conclude the following:

1. Prosocial behavior is more highly developed in women than in men because of the differences in the way women are raised and the expectations that are placed on them. Women are socialized differently than men. As a result they express different attitudes about caring and self sacrifice, altruism, empathy, social reasoning, and care and well being of others.

2. Single females and married couples give more and are more likely to give when compared to single men (even when holding everything else constant such as income, education, age, and race). Single women are more

likely to be donors than single men (9% to 10% more likely). Married women are more likely to be donors than single men.

3. Women volunteer more than men. These findings are consistent across the age groups.
4. Women desire involvement with organizations to which they contribute and are more interested in effecting change with their giving.
5. Women appear to socialize men with regard to philanthropic giving.

These research findings, among others, suggest that a more proactive, strategic engagement of women in philanthropy will unleash new volunteer and financial resources for the public good.

The Impact of Marriage and Family on Women's Giving

The 2003 Center on Philanthropy Panel Study showed that married couples exhibit giving patterns that flow with the life cycle, with peak giving happening between ages 40 and 65 and dropping later in life. In contrast, the giving of donors who have never been married grows after age 65. Married couples, on average, gave more between ages 40 and 65 ($2,905) than donor couples under 40 ($1,499) and over 65 ($2,156). As the related 2003 Panel Study of Income Dynamics indicates, about four of five married couples make their charitable giving decisions jointly.

Researchers continue to explore couples' philanthropic decision-making patterns. When Andreoni and colleagues (2003) surveyed married couples, they found that charitable giving decisions largely favored the husband's preferences. When women were the decision makers, more charities received donations, but those donations were smaller.

A subsequent study by Eleanor Brown (2005) notes:

> The picture that emerges from the data is one in which mar ried women's influence over their families' charitable giving is growing. As married women's earnings and their potential earnings grow should they choose to increase their time in the labor market, women's voice in the disposition of chari table giving grows at home. Charitable organizations may wish to pay attention to these trends as they decide to whom in a couple they should pitch their requests for financial sup port; wives today may be taking a more active role in deci sion making than past experience in fundraising suggests. (p. 70)

Expanding on Brown's work on married couples' giving, Rooney and colleagues (2007) explored whether husbands or wives were more likely to determine whether and how much money to donate to educational institutions. In "Who Decides in Giving to Education? A Study of Charitable Giving by Married Couples," the researchers used the Panel Study on Income Dynamics (8,000 households) and found that men have little or no influence on the decision to give to education at all or the amounts donated to education. Conversely, women decision makers are more likely to have a positive effect on both the likelihood of giving to education and the amounts given to education. That is, women, whether deciding on their own or jointly with their husbands, have a significant effect on the decision to give to education as well as the amount given. The researchers stated, "While women may suffer from a pay-gap in the labor market, men seem to suffer from an influence gap in the philanthropic giving decision-making sphere" (Rooney et al., 2007, p. 240).

Furthermore, Ellen Remmer's (2006) study on "The Dynamics of Women and Family Philanthropy" supports the notion that "women are more likely to use a participative and inclusive leadership style" when charged with philanthropic decision making (p. 91). They also are almost twice as likely as men to agree that it's important for family members to be involved in philanthropic decisions and for children to understand that "affluence brings responsibility" (p. 91).

Directions for Future Research

Research in the field of women's philanthropy is in its infancy—and there are many more questions to be addressed than have been answered. Below are some areas of research that are, to date, underdeveloped—but will be critically important in helping to inform the field:

- What are women's patterns of giving? Does the pattern of giving change over time? Does the pattern of giving change across cultures? Are there differences between men and women in the way they give gifts? Are there different preferred gift mechanisms?
- Where do women learn their philanthropy? Are there differences in the way in which men and women are socialized in their philanthropic giving?
- What do we know about philanthropic decision making between men and women?
- How does giving among women change through the generations? In particular, what are the differences in how baby boomer and older women give from those in Generation Y and younger?
- What are the differences in motives to give between men and women? How do these differences translate into philanthropic giving?
- How do we inform women about planned giving? What language do they prefer? What philanthropic vehicles do they prefer? How do they prefer to talk about leaving a legacy?

While researchers enrich the knowledge base in the field, women donors and leaders will continue to weave the intricate and complex tapestry that has become the modern women's philanthropy movement.

Emerging Trends in Women's Philanthropy

A Subtle Shift in Message

At the same time women's funds were investing heavily in women and girls and Women & Philanthropy was encouraging foundations to leverage resources for programs that supported women and girls, the emerging microfinance loan program allowed women in developing countries to borrow small amounts of funds to develop businesses and entrepreneurial projects to support themselves and their families. The confluence of these efforts and the success the projects had in helping women gain economic independence raised the profile of the potential of women's philanthropy to address society's most persistent challenges. Sensing the momentum, women leaders in the women's funding movement began adjusting their message to reflect a broader construct of social justice, with investment in women and girls as the way to achieve that goal.

Christine Grumm, president and CEO of the Women's Funding Network, has shared this story at conferences and workshops: In the world of international development, people refer to an old saying: If you give a man a fish, they will eat for a day, but if you teach a man to fish, he will eat for a lifetime. In the world of women's funds, we think the story goes like this:

> Give a woman a fish and she will feed her family for the day. Teach a woman to fish and she will feed her family until the lake becomes polluted or they take away her fishing rights; however, give the women in the community access to capital and they will buy the lake, feed their families, keep the lake environmentally clean and have something to pass on for gen erations to come. (Personal communication, 2007)

One example of a comprehensive program that focuses on the return on investment in women and girls is "the girl effect," created by the collaboration of the Nike and NoVo Foundations and catalyzed by a $100 million 3-year grant (www.girleffect.org). The NoVo Foundation is funded by investor Warren Buffet and chaired by his son and daughter-in-law, Peter and Jennifer Buffett. In announcing the partnership, Peter Buffett stated,

> Investing in the girl effect offers the potential for tremendous economic impact, which leads to more stability, less poverty and more opportunity for economic growth. Just one compo nent of the girl effect the increase on family income associ ated with an additional year of a girl's education nets more than a 40 fold return according to conservative calculations. (Nike Foundation, 2008)

Kofi Annan (2002), former secretary-general of the United Nations, summarized women's potential in this way: "When women are fully involved, the benefits can be seen immediately: families are healthier; they are better fed; their income, savings, and reinvestment go up. And what is true of families is true of communities, and, eventually, the world."

Increasing Visibility and Raising the Bar

In partnership with the Women's Funding Network, sisters Swanee and Helen LaKelly Hunt formed the Women Moving Millions campaign in 2007 to help women's funds build capacity and become more sustainable. The concept was simple: invite 100 women to give $1 million each to raise $150 million for women's funds around the world. The Hunt sisters, daughters of the oil tycoon, H. L. Hunt, contributed the first $10 million for this effort. As of December 2008, the campaign had raised $110 million toward its $150 million goal. By April 2009, despite the harsh economic climate, the campaign exceeded its goal by 16%, raising $174 million. In setting the threshold at $1 million, the Hunts wanted to raise the profile and expand the visibility of women's philanthropic contributions.

In a similar fashion, following her contribution of $30 million to the Carnival Center for the Performing Arts in Miami, philanthropist Adriene Arsht allowed her name to be put on the center because "when people see a name attached, they are more likely to be inspired to give at whatever level they can" ("The Philanthropy 50," 2009, p. 33).

Women and the Rapidly Expanding Field of Family Philanthropy

Family philanthropy as expressed through organized family foundations and direct gifts to nonprofits is growing rapidly. Women's roles are as diverse and dynamic in family philanthropy as they are across the nonprofit spectrum, with women serving as donors, founders, staff, board members, and volunteers for family foundations. Remmer (2006) suggests research questions to address the paucity of empirical knowledge in this area such as the role of gender in intergenerational dynamics and relationships to wealth—whether earned, married, or inherited.

Women's Philanthropic Behavior as a Benchmark for Future Giving

Center on Philanthropy researchers explored whether there might be gender differences in giving by generation. Recognizing that women's roles in society have changed in the past 50 years, researchers conducted a national survey in the spring of 2007 about giving in 2006 to examine theses issues (Brown & Rooney, 2008). Before controls, they found that boomer women (those born between 1946 and 1964) gave the most to charity whereas millennials (those born between 1980 and 2000) gave the least. Boomer women gave more than boomer men ($2,129 versus $1,847) (Brown & Rooney, 2008).

Additional results from the survey after controls include the following:

- Gen X (born between 1964 and 1980) women and great generation women give more to religion than Gen X men, boomer men, and silent generation men (born between 1926 and 1945).
- Women, especially millennial women, respond to an "improve the world" message.
- Boomer and older women (but not Gen X or millennials) are more likely than boomer men to respond to a message of "responsibility to help others."
- Women are less likely than men to respond to the messages "to improve the community" and to "provide services where the government can't/won't."
- Boomer women respond well to the message "to help those with less."

This study implied that men in Gen X and the millennial generation seem to be thinking more like women rather than women thinking more like men. It also portended the possibility that generational differences, which are clear among older generations and baby boomers, may narrow or disappear in younger generations. This may be because younger men and women are more likely to have similar life experiences than did men and women of earlier generations. As younger women become more likely to earn more, to get a college education, and to join the workforce, and as younger men and women become more alike in other ways, some researchers speculate that their giving may become more alike as well.

Women's Leadership in Global Philanthropy

Women have emerged as philanthropic leaders in countries around the globe. The Global Fund for Women, an activist grantmaking organization based in California, makes grants to support women's groups throughout the Global South. Established in 1987 by Anne Murray Firth, the Global Fund for Women (www.globalfundforwomen.org) funds human rights issues in six key areas: ending gender-based violence and building peace; ensuring economic and environmental justice; advancing health and sexual and reproductive rights; expanding civic and political participation; increasing access to education; and fostering social change philanthropy. The Women's Funding Network counts member funds from around the globe among its members, including Mama Cash, the oldest international women's fund, which was founded in 1983 in the Netherlands.

Some women's initiatives around the globe focus on specific issues. Zainab Salbi founded Women for Women International (www.womenforwomen.org) in 1993 to help women in conflict and postconflict environments rebuild their lives. Other efforts, such as the Women's Fund in Turkey and the Central American Women's Fund based in Nicaragua, address broader issues that challenge women.

Women's Fund Addresses Issues in Turkey

The Women's Fund is the first institutional grant program in Turkey that provides resources to women's organizations on a project-by-project basis. The fund was established by the Women Entrepreneurs Association of Turkey (KAGIDER) to mobilize funds from national and international communities and to make charitable contributions to women's organizations working toward women's economic, political, and social empowerment and enhancement of gender equality in Turkey. Since its establishment 4 years ago, 17 women's organizations have been granted funds with more than 300,000 euros. The projects supported by the Women's Fund, have provided target women with vocational training, psychological and judiciary consultancy services, day care services and entrepreneurship opportunities. The fund also has supported movie-making and local radio programs on women's issues, as well as initiatives promoting women's participants in local administrations. KAGIDER has recently identified combating violence against women as a program area because violence against women is a serious problem in Turkey. Turkish women still face the prospect of being murdered to protect family honor. Under its "Stopping Violence Against Women" program, the fund supports projects designed to provide safe places for women whose lives are in danger, to establish women's shelters, to initiate campaigns on violence against women, to counsel victims of violence and to empower women economically.

One of the Women's Fund grantees is KA-MER, founded in 1997 in Diyarbakir, which espouses personal empowerment, social participation, and the value of developing a grassroots movement for sustainable social and political change. KA-MER continues to contribute to improving the status of women in Turkey by empowering women at the local level, building the grassroots networks that serve as a watchdog for women's human rights, and lobbying and advocating at the state level for better policies and enforcement of positive legal reforms. Violence against women is difficult to eradicate. It is fueled and perpetuated by unequal power relationships and deeply entrenched ideas about gender relations. But in Turkey, thanks to this kind of effort, the issue has come out from behind closed doors and is now squarely in the public arena. KA-MER, together with other women's organizations, helped initiate social transformation.

Central American Women's Fund Advances Women's Human Rights

The mission of the Fondo Centroamericano de Mujeres (FCAM) (Central American Women's Fund) is to mobilize resources to advance women's human rights in Central America by providing grants to women (especially young women) who lead grassroots groups committed to this mission. FCAM (www.fcmujeres.org) is the first and only fund based in the region that mobilizes resources for women's organizations working to defend and promote women's human rights in Central America. In addition to providing grants, FCAM offers capacity-building activities to grantees to ensure their sustainability. It prioritizes women's initiatives that address new or controversial themes, use innovative strategies, have little access to other funds, are located in rural or underserved areas, or support the most marginalized women of the region. Currently, FCAM has 82 grantees in six Central American countries: Belize, Costa Rica, El Salvador, Guatemala, Honduras, and Nicaragua.

Challenges in the Field

The modern women's philanthropy movement has blossomed, cultivated by grassroots efforts and nurtured by the determination and perseverance of individual leaders. Yet, the challenges facing the movement today are much the same as they have been throughout the past 30 years and may be categorized as: a perception that gender does not matter in philanthropy; barriers perceived by women donors and expressed by fundraisers; underresourced investments; development of a construct parallel to mainstream philanthropy; and the difficulties in bringing efforts to scale.

Perceptions and Reality About the Role of Gender in Philanthropy

As Lisa Witter and Lisa Chen state in their 2008 book, *The She Spot: Why Women Are the Market for Changing the World—and How to Reach Them,* "women are not a niche audience. They are *the* audience" (p. xv). Not everyone has recognized women's socioeconomic achievements in the 21st century, and not everyone has embraced the return on investment when women join the philanthropic table. The facts are clear: Women control over half of the total wealth in America, and they are projected to inherit, control, and manage much of the wealth in the future. About 43% of the nation's top wealth holders (individuals with assets of $1.5 million or more) are women, according to Internal Revenue Service (IRS) figures for 2004, the most recent year for which data are available. Assets of these 1,173,000 women were valued at $4.6 billion.

Women give, and they give significantly. Women are committed donors who care deeply about the causes they support. Women approach giving differently than men. When organizations and their leaders recognize that gender matters and invest in infrastructure to attract women donors, they will enrich their ability to fulfill their mission for the long term.

Barriers Perceived by Women Donors and Expressed by Fundraisers

Many women donors experience some barriers in regards to philanthropy. These may include the following:

- Women don't think of themselves as philanthropists.
- Women don't feel ownership of the family money.
- Women who did not "earn" wealth but received it through inheritance, marriage, or divorce may not feel it is theirs to dispose of as they would choose.
- If women have "earned" their wealth, they are likely more financially literate and more confident philanthropists.
- Women are afraid of outliving their resources. (Barriers include fear of outliving money, health crises, disability, bag lady syndrome, family issues.)
- Women have just made money and feel it might not be there tomorrow.
- Women want anonymity.
- Women's financial advisers don't encourage them to give to charitable causes.
- Women aren't asked to give.

Over time women donors can overcome these barriers with education, networking, and learning from others.

Barriers also exist in the fundraising and organizational arenas. Some fundraisers have suggested that because it takes longer to cultivate women as donors, it is not worth the investment. Some development offices function in a male-centered culture without women in major leadership positions, limiting opportunities for women to contribute their voice to the conversation. And, in some places, there is little organizational commitment to women's philanthropy.

Deliberate and strategic plans can help overcome these barriers.

Underresourced Investments

In the past 15 years, some women's philanthropy initiatives, particularly in higher education, have collapsed due in part to being underresourced and, in part, to not being institutionalized. Working with women's philanthropy initiatives requires investment of human and financial capital. All too often, the staff person responsible for the initiative also is responsible for other areas and cannot dedicate enough time to build the volunteer leadership base, to generate marketing and communication programs, and to focus on capacity. Initiatives also suffer when they are not institutionalized in that they are not part of the organizational fabric. This occurs most frequently when an individual staff member takes ownership of the program and fails to integrate it into the organizational culture.

Development of a Construct Parallel to Mainstream Philanthropy

The modern women's philanthropy movement has been powered and led by women. The framework that supports women's philanthropy created many new professional and volunteer opportunities for women to assume leadership positions. At the same time, the modern women's philanthropy movement developed to a large extent outside of mainstream philanthropy, creating a parallel construct. This is not new. Historian Kathleen D. McCarthy has described in several articles the "parallel power structures" that 19th-century American women created when they were excluded from the male-dominated institutions (McCarthy, 1990, 1994).

Although the long-term implications of this parallel universe are uncertain, several issues have surfaced. First, despite significant efforts to raise the profile of women's philanthropy, it is not yet fully embraced by the entire philanthropic community. Second, the field is underfinanced from both fundraising and grantmaking perspectives. While it is impossible to put a total dollar figure to the amount women have raised and allocated annually in women's funds, giving circles, and agency initiatives, the amount pales when compared to the amount the largest foundations in the United States allocate annually. Third, mainstream philanthropy has not benefited from the innovative and creative vision and voices of the women who created the parallel universe. And, finally, the complex challenges facing the United States and the global community today—children's issues, education, health care, poverty—are exactly those that women have taken to their hearts throughout time (Wilson, 2007, p. 10).

Bringing to Scale

The kaleidoscope of philanthropic opportunities available to women in the 21st century is also a challenge to creating a unified movement. The tension between women's funds supporting programs for women and girls and those supporting all causes inhibits collaboration. The multiplicity of organizations addressing similar causes in different geographic regions limits scaling up. How might the 100-plus women's funds in the United States collaborate to address issues of poverty and economic development for women? Financial constraints prevent ramping up as well.

Summary

The richness of the modern women's philanthropy movement is characterized by the many ways in which women are engaged in advancing the public good; the distinctive leadership styles women bring to problem solving; the individual and collective giving opportunities women seek; and the common goal to leave the world a better place. Throughout history, women have contributed time, talent, and treasure to enriching their communities, their cities, and the world. If, as Patricia Mitchell, United Way of America Women's Leadership Council chair, stated "women are the economic powerhouse of the 21st century," then indeed women's philanthropy will be at the forefront of social change around the globe in the future (Mitchell, 2009).

As the role of women in society continues to evolve and as women move more from the sidelines to front and center at the philanthropic table, women's philanthropy may be among the biggest growth areas in the field. Research suggests that women's philanthropic behavior may become the norm for both gender and generations. Given the potential, this emerging trend in nonprofit leadership, which has yet to reach its "tipping point," will be increasingly important as fundraisers seek new resources, search out a broader diversity of leadership, and look to engage new volunteers in their missions. The next generation of nonprofit leaders should be well grounded in the rich history and multidimensional facets of women's philanthropy.

Women's Leadership in Philanthropy

Cynthia R. Jasper
University of Wisconsin, Madison

Women have provided leadership in philanthropy over the years by giving money, time, and themselves to causes they have identified with and in which they believe. Their leadership has included various aspects of the philanthropic landscape, including leading efforts for advocacy, direct service for individuals, politics, social services, education, religion, the arts, health care, and research. Women have many roles within their philanthropic activities—they may be donors, professionals within the nonprofit sector, fundraisers, development leaders, and entrepreneurial creators and responders to societal needs. Over the years women's leadership in philanthropic endeavors has improved the lives of individuals and improved communities throughout the world.

Women are active in philanthropy when they take on leadership roles within the nonprofit sector. They may work in corporations, leading the companies' corporate philanthropy and helping to make decisions regarding the disbursement of funds. Many lead or have established foundations designed to distribute wealth for various causes, such as to promote health research or girls' education. Within these foundations, they also serve as executives, who lead and set policy for the organization's giving programs. Women may also work in nonprofit organizations promoting philanthropic goals.

Also common today are women joining forces with friends, relatives, and neighbors to collectively distribute financial assets through giving circles and clubs. Often, women play one or several of these roles at the same time. Thus, the role of women in philanthropy is a complex set of expectations and roles that may change over time.

Historical Aspects of Women's Leadership in Philanthropy

In 2005, Walton said:

> Despite the long list of women's philanthropic engagements, until recent decades women have been virtually absent from dominant accounts of U.S. philanthropy. . . . As has been the case in many other fields, women were written out of the his tory of philanthropy by virtue of what "counted" in the minds of those who wrote the conventional histories. (p. 2)

She notes, however, that within the last 20 years, scholars have begun to address this lack of scholarly work regarding women's philanthropic contributions. She concludes that substantial work remains to document and explain women's philanthropic behavior (Walton, 2005). McCarthy (2001) states that women have been involved in philanthropic activities since the 18th century, especially by helping the poor and disadvantaged populations. McCarthy (1990) concludes,

> What is clear is that giving and voluntarism have traditionally provided and continue to provide the means through which women have grasped, wielded, and maintained public power not only in America, but overseas as well. As such, philanthropy lies at the heart of women's history. (p. xi)

Philanthropy can be traced as far back as the ancient civilizations of Greece, Rome, and the Middle East. However, women's philanthropic roles within these societies are difficult to ascertain, even though women's role and leadership in philanthropy can be traced back to the ancient times of recorded history. In fact, the word *philanthropy* stems from Greek. A Greek woman named Menodroa donated 300,000 dinarii for support of orphaned children. She also gave wheat away to her fellow citizens. Another woman named Atlanta, from Asia Minor, distributed wheat during famines. She also gave gifts to the poor and was generous with loans to her fellow citizens (Constantelos, 2009).

During the Middle Ages, Constantelos (2009) says, "The examples are many of [Greek] women . . . who dedicated their lives to works of philanthropy and social betterment" (p. 6). The idea of philanthropy was an ideal that Greeks incorporated into their early culture, and it continued over the years. During the Christian Byzantine period, women were ordained as deacons, and part of this role was to lead and participate in philanthropic endeavors. Also, Theodora, wife of Emperor Justinian, was known for her leadership in thoughtful efforts to assist others. She was also known for using her own wealth to build a reformatory for troubled girls (Constantelos, 2009).

Examples of women's philanthropic work can be found throughout history within many societies. Argentinean women have played vital philanthropic roles in their nation for more than 200 years; specifically, through charitable giving through the Catholic Church (Viladrich & Thompson, 1996). Throughout history, Dutch women have been significant donors of their time due to their role in society as housewives. Dutch women were expected to give their time to volunteering for philanthropic efforts because they were not a part of the labor force (Plemper, 1996). Research on the role of women's philanthropy in India indicates that even though Indian women were of low socioeconomic status, they made significant contributions to Indian society. Women in India volunteer for social welfare and development agencies such as the Red Cross and the YWCA (Young Woman's Christian Association). They also work in nonprofits and have created women-only organizations to address the needs of the underprivileged and the disabled in the society (Sundar, 1996).

As early as 1643, women's philanthropic giving has been documented in the American colonies, as the wealthy Ann Radcliffe donated to the first scholarship fund at the first colonial college, Harvard University. This fund was created to give financial support to students whose families did not have the resources to support their enrollment and graduation from college. What was quite remarkable about this gift is that it inspired others to contribute to higher education. People at all income levels—farmers, artisans, and colonists whose sons had benefited from Radcliffe's generosity—all began to contribute. In 1651, these colonists began to collect grain to send to the college, and it was called the "corn tax" (Spain, 2001). Thus, citizens were directly supporting and encouraging education. This tradition has continued today, with many women donating to assist in the education of students who are outside of their immediate families (Gaudiani, 2006).

Other early women philanthropists include Mary Elizabeth Lange, who in 1827 founded a Catholic religious order, the Oblate Sisters of Providence, with the goal of educating African American children. She was a Haitian immigrant who believed that black children should be educated and that they could become teachers. She encouraged others to donate to her order in support of the education of black children. This order continues to this day, and it recently received a major contribution from Camille Cosby, wife of comedian Bill Cosby, who was educated by this order (Gaudiani, 2006).

Over the years, scholars and others have been concerned about the role and impact of wealthy women's philanthropic endeavors. Odendahl (1990) elaborates on this by arguing,

> American women of wealth are both privileged and subordinate. They have less power than the men of their class, yet they have more authority and status than most people because of their connections to powerful men, their philanthropy, and their money. . . . Rich women are in a position to exploit other women, as well as working and middle class men, but their status is lower than that of their fathers, husbands, and brothers. (p. 100)

However, in recent years, women have taken control of their wealth and are now becoming less dependent on their husbands and other family members.

Thus, the modern women's philanthropy movement evolved as women became more economically independent, and this was reflected in expectations regarding the changing role of women. Davidson (n.d.) notes that 50% of the investment wealth in the United States is owned by women. This wealth and the consequential independence for women is the result of employment and changes in marital tax laws. Prior to this, women's giving was often based on their husbands' or families' wealth. In addition to a long-standing tradition of volunteering, women began to donate financial resources in support of philanthropic causes. It became apparent that both of these forms of giving back had an impact on their communities and the larger society (Shaw-Hardy, 2006). Next, women began to establish women's funds, which focused on helping women and girls gain economic independence and deal with domestic and other types of violence (Shaw-Hardy, 2006).

In 1977, corporations and philanthropic foundations began to work on securing funds for women and girls, and to this end, Jing Lyman began the Women in Philanthropy group. The objective of this group is to increase positive changes in the philanthropic giving of women. It focuses on leveraging the power of women and girls in creating a just and peaceful world. In addition, the first modern women's foundation to focus specifically on women and philanthropy was begun by Tracy Gary, who is one of the heirs to the Pillsbury fortune (Marchetti, 2000). In 1985, the Women's Funding Network was founded to connect various women's funds (Shaw-Hardy, 2006). Gary also consulted and advised women to educate them regarding their financial planning and philanthropic giving.

Women began to organize their philanthropic giving with friends and acquaintances by creating and joining circles and clubs that are now common throughout the United States, such as one called the Women's Giving Circle of Marinette (Wisconsin) and Menominee (Michigan) Counties. This giving circle has 75 members and is located in two counties on the Wisconsin and Michigan border. It recently received an anonymous donation and is now focusing on projects that support women interested in starting and growing their own businesses, gaining additional education, or obtaining safe and affordable child care. Nonprofit, volunteer, and charitable organizations are invited to apply for these grants ("Women's Giving Circle," 2009).

Several authors have focused on women and their philanthropic giving, such as McCarthy (1990) and Theresa Odendahl (1990), and Ann Castle compiled a bibliography of books and articles that focus on women and their giving (Shaw-Hardy, 2006). In the ensuing years, many books and research publications have focused on women and their roles as philanthropists. The academic journal, *Voluntas,* devoted an entire volume to women and their philanthropic giving across societies around the world.

In recent years, extensive focus has been given to women's leadership in philanthropic efforts. This grew out of concerns regarding funding for women's and girls' causes. Also, women were stereotypically perceived as being less philanthropic than men. This was especially evident when fundraisers addressed men rather than women, even when the money belonged to the women. In 1992, a conference was held in Racine, Wisconsin, to address issues related to women and philanthropy. Fifty leaders from across the United States addressed issues regarding women and philanthropy and studied how to promote giving among women.

Davidson (n.d.) notes that currently women's philanthropy is concerned with several factors. These include

> effective methods to raise money for targeting causes; the means to build lasting relations with donors; ways to expose potential donors to women's issues; focusing funds on issues specifically pertaining to women and girls; and working for change through philanthropic endeavors. Furthermore, lead ers in the philanthropic community are influencing public pol icy, lobbying for selected causes, testifying in Congress, and generally raising awareness about issues of concern to women from all ethnic, racial and demographic backgrounds in their capacities as chairpersons of women's funds, private philan thropies, and corporate philanthropic initiatives, and as non profit leaders and board members. (Davidson, n.d.)

Discussion

Women have advanced substantially in their leadership of philanthropy. The women who give money and time as girls and young women are more likely to follow these giving patterns throughout their lives.

Motivations for Giving

When studying women's leadership in philanthropy, it is imperative to understand why women give, why they play leadership roles in terms of their philanthropic giving, and the role that altruism plays in the process. Curti (1961) notes that philanthropy is often used to address issues and problems not adequately provided by the government. Thus, a motivation for women's giving is to help fill this gap. An example is helping to meet the needs of the poor within a society. In a study about altruism, Piliavin and Charng (1990) conclude that "theory and data now being advanced are more compatible with the view that true altruism—acting with the goal of benefiting another—does exist and is a part of human nature" (p. 27).

Women have many motives for giving. In 1995, Shaw-Hardy and Taylor suggested that there are six "Cs" regarding women's motivations for giving. These include a desire to create, change, connect, collaborate, commit, and celebrate giving. Clary and Snyder (1995) found that motivations for giving include several psychological reasons related to self-esteem, guilt, and promotion of one's career, as well as serving others. Ostrander and Fisher (1995) say that women philanthropists want to know the cause for which their financial gifts are being solicited and to emphasize their support and helpfulness to their community.

Truett (2004), in her study of donor motivations of women philanthropists, groups motivations into six categories. These include direct personal experience, financial ability, passion for the cause, social change creation, community building, and learned behavior. She defines direct personal experience as when women donate to organizations that once benefited or helped them. Truett's second category of motivation is having the financial ability or available disposable income to make financial philanthropic contributions. The third category is having passion for the cause. Women are more likely to donate to causes about which they are passionate. Truett credits a fourth motivation for giving to create social change. Women are more likely to give to causes that generate or bring about social change; especially because women have been marginalized members of society throughout history. Building community is an explanation for motivation that shows that women like to collaborate. Finally, women are motivated to give because giving is a learned behavior through tradition (Truett, 2004).

Role of Women Philanthropists

The Changing Role of Women

Philanthropic work has been an integral part of the role of women over the years. This role has changed throughout history as women joined the workforce in vast numbers. The result is that they now have their own money to give to philanthropic causes that are important to them. Girls are being socialized into the role of philanthropists as they grow up. Over the years, girls have been expected to volunteer during their high school as well as college years. In fact, volunteering and helping out in the community are often criteria for entrance into college and university programs. Thus, the expectation of contributing to one's community and society is often engrained at an early age.

Another fact that will change the landscape of women's leadership in philanthropy is that the largest transfer of inherited wealth will occur in the next 20 years. It is expected that a huge amount, trillions of dollars, will change hands from one generation to the next. Some of this money is expected to go toward philanthropic giving (Gutner, 2000). Considering this, as well as women's increasing earning power, several organizations have focused on educating women to give them confidence in the philanthropic process of giving. As Kathleen McCarthy (2001) notes, in the past, women were often invisible in their giving. Giving would often be in their husband's name, and the donations would be to his favorite charity. Even after the husband died, some wives continued their giving to their husband's charity, often working against their own values and beliefs.

Other factors such as stereotypical beliefs also complicate matters (Capek, n.d.). Often, fundraisers and development officers discussing a prospective gift with a married couple focused their attention on the man rather than talking to the couple, assuming that the wealth belongs to the husband. Women have even complained that eye contact was often directed toward the man rather than the woman. This leads philanthropic leaders such as Tracy Gary to say that women must learn to be in command of their financial assets and insert their views regarding philanthropic giving. Gary also says that women must learn to use and manage their money for the social good (Marchetti, 2000).

As noted earlier, philanthropy has been an important part of the role of women for a long time—for example, volunteering and providing leadership for various community and social events such as the Parent Teacher Association (PTA). The role expectations included providing leadership for civic organizations such as for the Girl Scouts or for the local 4-H club, all designed to help socialize children by giving them skills that were designed to contribute to their societies.

Demographic factors also play a role in women's giving of their time and money. A study by Eschholz and Van Slyke (2002) found that women with higher levels of education were more likely to give money and to volunteer than those with lower levels of education. Mesch and Berentes (2008) note that educated, wealthy, and older women are more likely to give time and money than their less educated, poorer, and younger counterparts.

In recent years, as women's employment status and wages have gone up, they are increasingly making financial contributions to numerous causes. As women's earning power continues to increase, this will promote more philanthropic giving among women and contribute to women taking on more leadership roles within the philanthropic sector of the economy. As more and more women joined the workforce, philanthropic activities became part of the role of businesswomen, with women expected to volunteer or contribute financially to various causes often selected by the company. Thus, businesswomen are increasingly becoming active in philanthropy as their positions and wages rise. Most businesses within the United States see philanthropic activity as an important part of their role in their communities. Some companies even require philanthropic contributions from their workers (Jasper, 2006).

In 2000, the National Foundation of Women Business Owners conducted a survey and found that those women who gave the most money also volunteered the most. This is an interesting correlation, showing the relationship between giving time and giving money. Interestingly, they found that women business owners who gave $10,000 or more per year volunteered an average of 22 hours per month. Those business owners who gave less than $5,000 a year volunteered just 7 hours per month (National Foundation for Women Business Owners, 2000). Thus, as women become more successful within the business world, they are more likely to contribute time and money.

A 2003 study by Robert J. Williams analyzed the role of women serving on corporate boards. It was theorized that by serving on corporate boards, women would have an impact on the corporation's philanthropic plans. The findings indicate a link between the number of women serving on corporate boards and corporate giving. Corporate boards with more women are more likely to have a strong commitment to giving.

Working and Leading Philanthropic Activities: A New Role for Women

Even though women have increasingly taken on leadership roles within the philanthropic sector, women still have fewer board of director memberships. An interesting finding by Bradshaw, Murray, and Wolpin (1992) is that the more women on the board of directors of an organization, the more likely it is to be a low-prestige organization. However, this may change as more and more women take on these types of roles.

Another relatively new role for women is in the area of fundraisers for philanthropic causes. This is a role that up until about 30 years ago was dominated by men. In fact, within development departments, men still dominate in this role. Women are also actively working in the nonprofit sector. Preston (1990) notes that these jobs pay about 15% to 20% less than similar jobs in the for-profit sector.

Women's Role in Creating Foundations

Women are creating and establishing foundations to support their giving. For example, the founders of the Vera Bradley Company, a luggage company, established the Vera Bradley Foundation for Breast Cancer to fund studies to research the causes and treatment of breast cancer.

Another foundation, called the Three Guineas Fund, was founded in 1994 by Catherine Muther, the former head of marketing at Cisco Systems, a networking equipment supplier. She left the company after about 5 years with millions of dollars in stock. She then became what is called a venture philanthropist. In that role, she takes part in the causes she supports. The Three Guineas Fund promotes economic equality for women and girls by working on health care literacy education and self-esteem. It also invests in new companies and organizations that have little capital.

The Body Shop Foundation was started in 2000 by Anita Roddick, the owner of The Body Shop. It focuses on human rights and animal and environmental protection. It gives a biannual Body Shop Human Rights Award in recognition of those who help eliminate child labor and assist children with education.

Women's Support of the Arts

Traditionally, wealthy women often donated money to support the arts, and this type of giving became stereotypically associated with the wealthy. Although women give to many other types of organizations, the arts are still an important part of their giving. Brooke Astor (1902–2007) was a New York City high-society philanthropist who donated wealth from her husband to the arts and cultural institutions of New York City. She was awarded the Presidential Medal of Freedom in 1998, the highest U.S. civilian honor, for her philanthropic endeavors. She lived by the quote, "Money is like manure, it should be spread around" (Huguenin, Lisberg, & Goldiner, 2007).

Different Types of Women's Philanthropic Endeavors

Women's Philanthropic Care for Children and Others

The care of and concern for others continues to be an important part of the role of women, and it has been integrated into their leadership of philanthropic giving. This includes leadership roles in the creation and promotion of many nonprofit organizations addressing care and other issues for women. Women of all ethnic and religious backgrounds have led work to reform societal issues; for example, working on moral issues such as the abolition of slavery and civil rights for all people.

An example of this is Mildred Robbins Leet, a New York real estate businesswoman, who in 1948 cofounded the United Cerebral Palsy foundation while still in her twenties. She also cofounded with her husband, Glen Leet, an organization called Trickle-Up, which is an international nonprofit focused on helping the poorest people in the world. Trickle-Up helps the poor start their own businesses. More than 100,000 businesses have been started through assistance by Trickle-Up.

Another philanthropist who has promoted the well-being of children is Pleasant Rowland, the creator of a doll collection called the American Girl. She supports the Pleasant Company's Fund for Children, which provides grants to enhance children's education in the arts, culture, and the environment. She also gives generously to the Madison Children's Museum in Madison, Wisconsin, and has donated hundreds of thousands of books to nonprofits. At the international level, she supports Kids in Distress Situations, which assists poor children throughout the world.

Helen Johnson-Leipold, chair and CEO of Johnson Outdoors and Johnson Financial Group divisions of S. C. Johnson Company, founded the Next Generation Now, which supports issues related to child development and family support.

Women's Philanthropic Work Related to Civil Rights and Community Issues

Davidson (n.d.) notes that women philanthropists have been concerned with civil rights, and this has led to organizations designed to help address these issues. Davidson describes two organizations that are designed to assist women in their giving role. The Women of Color Fundraising Institute offers training programs to grassroots women's organizations. The Sister Fund also works with grassroots women's organizations, addressing women and girls' issues.

Jane Addams (1860–1935) was the first woman to receive the Nobel Peace Prize, honoring her work with immigrants. She cofounded Hull House in Chicago in 1889. This house was designed to educate the immigrant neighborhood about services and culture.

Women and Ethnic and Religious Philanthropy

Most ethnic groups in the United States have their own specific philanthropic endeavors. This is true for African Americans, Native Americans, and Hispanics. Religious groups, whether Catholic, Protestant, Muslim, Buddhist, or Jewish, have their own philanthropic organizations. In all of these religious sectors, giving is an important part of their belief systems and values. Women within all of these traditions have donated time and money to their religious groups and to causes supported by their religious group. For example, most major religious groups have specific funds to support their social services work along with international aid to people in need throughout the world.

Within the Hispanic tradition, several women have donated their time and money to improve the lives and communities of their fellow Hispanics. One of these Hispanic female philanthropists is Juanita Gonzales, who advocated for civil rights for Hispanics, better education for children, and better employment for adults. She encouraged children to graduate from high school and go on to achieve a college education. She also worked to encourage Hispanics to vote. She was able to receive financial support for new schools and community development in her Midwestern town (Taylor, 2005).

Madam C. J. Walker (1867–1919) became the first African American woman millionaire in the United States by establishing a hair care and cosmetic company in 1908. She supported education and the well-being of African Americans with her philanthropic giving.

Women's Philanthropic Work Related to Health Issues, Health Care, and Research

Many women have worked to improve health care throughout the world. For example, in the 19th century Dorothea Lynde Dix (1802–1887) fought for the humane treatment of the mentally ill and opened hospitals that provided care for them. Florence Nightingale (1820–1910) devoted her life to educating nurses and improving health care throughout England and other countries. Eileen Fisher, who founded a women's apparel company, gives 10% of her pretax profits to her employees, along with other generous benefits such as education and wellness benefits. She also supports organizations that promote the well-being of women through improved health care and education (Profeldt, 2003).

Elizabeth Fry (1780–1845), a 19th-century English philanthropist, worked to reform the conditions of women's prisons. She also worked to improve the hospital system ("Elizabeth Fry," 2009). These are just a few examples. There are many more accomplished women philanthropists throughout the world. All of these women have given their time and money to various well-known causes.

Women in Educational Philanthropy

Women have been leaders in educational philanthropy throughout U.S. and world history. Walton (2005) states:

> Since at least the early 1800s, U.S. women have participated in shaping education through philanthropy. They have supported institutions in which education occurs formally, from preschools and kindergartens to colleges and universities, and they have been influential as well in institutions and settings that foster more informal modes of education, sites ranging from the museum and the church to the charity organization. Indeed, by volunteering their time and donating both money and gifts in kind, women have fashioned careers as philanthropists and edu cators, have used education to promote social change, and have been instrumental in establishing and sustaining a wide array of institutions where education occurs. (pp. 1 2)

Sara Martinez Tucker chairs the Hispanic Scholarship Fund, which is designed to assist Hispanic students with scholarships, so that they can attend and graduate from college. She has raised more than $30 million from corporations for scholarships for Hispanic students. Her goal is to increase the number of Hispanic students who earn college degrees (Taylor, 2005). Darla Moore gave millions of dollars to the University of South Carolina, which then named its business school after her (Darla Moore School of Business, 2009).

Women's Leadership in Funding Women's and Girls' Programs

Several charitable organizations that focus on the well-being of women and girls have been established at the community, regional, national, and global levels. Some examples of these organizations include Global Fund for Women, Ms. Foundation, New York Women's Foundation, Women's Funds at Community Foundations, and Women's Funding Network.

Global Fund for Women was established in 1987 with a mission to address the lack of funding available to women activists worldwide with the creation of a global foundation dedicated to their support. Since then, the Global Fund for Women (2009) has granted more than $47 million to 3,000 women's groups throughout the world.

Ms. Foundation for Women (2009) actively works to bring race, class, age, and sexuality to the center of feminist organizing and to bring a gender lens to the center of broader progressive organizing. The organization fosters alliances among women's organizations and other social justice groups to strengthen and expand the breadth and power of social justice movements.

New York Women's Foundation (2009) was founded in 1987 as a public philanthropy to be a voice for women and a force for change. The foundation combines hands-on philanthropy with community-driven projects to address the needs of low-income women and girls. The foundation builds partnerships among women who have the resources to give and women who are overcoming the challenges of poverty.

Women's Funds at Community Foundations funds only women's and girls' programs. The Women's Fund of Central Indiana (2009) raises money from women in the community and distributes grants to nonprofits that directly serve the local community. A Fund for Women (http://www.madisoncommunityfoundation.org/home/), at the Madison Community Foundation in Wisconsin, focuses its effort on education, employment, and self-esteem of women and girls throughout the community.

Women's Funding Network (2009) was founded 40 years ago. Despite growing interest and activism around opportunities and human rights for women and girls, there were no funding organizations dedicated to women's leadership and causes. Now, the Women's Funding Network consists of 133 such organizations called women's funds—in the United States and across the globe—all championing investment in women and girls.

Future Directions

Women's leadership in philanthropy will continue to expand as girls and women are educated about the benefits of giving. Recent educational programs have been developed to teach girls about philanthropy. In addition, women have been creating their own wealth, as well as inheriting it from their husbands or perhaps from their family of origin. Women also often outlive their husbands. Recently, half of the nation's wealth is in the hands of women, and this percentage is expected to grow to 60% by the year 2010 and perhaps as high as 70% in the not too distant future (Portnoy, 2008). In 2008, Portnoy in the newsletter *PhilanTopic* states, "Women are poised to change the face of philanthropy. That change is likely to constitute a revolution of sorts—from a vertical model to one that is far more horizontal, a model more democratic than aristocratic" (p. 1). Portnoy goes on to say, "Women, better educated and able to take care of themselves, will also take care of their children, moving their families from poverty to economic self-sufficiency" (p. 1). She concludes that children from poor countries will be better educated because of the women's philanthropy leadership.

Women will continue to use their entrepreneurial drive to improve and shape societies throughout the world. Their philanthropic leadership will become an even more important part of the role of women as their collective wealth increases. This field of study will continue to be an area of research interest as the collective wealth of women increases.

Women and their leadership of philanthropic causes is certainly an area that needs more attention and research. The literature on the history of this subject is limited, especially in the area of quantitative data. Also, more research on the role of women within the philanthropic realm would be helpful.

It is clear that women will continue to make a difference in the leadership of philanthropy throughout the world. As women's economic and social power continues to increase throughout most of the world, they will make even bigger impacts in the world of philanthropy. They will continue to lead and make a difference in others' lives and their community through their philanthropic work in the areas of advocacy, direct service to others, politics, social services, education, the arts, and health care. Women's leadership in philanthropic endeavors will continue to reflect women's values and help shape our communities and societies across the globe.

Role of the Nonprofit Sector in Providing Opportunities for Unpopular Causes and Disenfranchised People

Darlene Xiomara Rodriguez
University of North Carolina, Greensboro

> The nonprofit sector's legacy from its inception has been to serve as a vehicle by which those who had no voice individu ally could have one collectively. However, some have argued that there are some voices in America that are considered more acceptable than others. Fortunately, the diverse makeup of the nonprofit sector (e.g., pro and anti groups), are able to assemble and serve the needs of those who share their philos ophy. It is because of our individual freedoms through the U.S. Constitution that the sector is able to provide opportuni ties for unpopular causes. (Wolff & De Shalit, 2007)

This chapter will show the nonprofit sector's history in serving disenfranchised people. A discussion follows on how the nonprofit sector serves as a catalyst for change when it comes to the incorporation or mainstreaming of such causes into the American political system. Furthermore, this chapter shows how nonprofit organizations have played a pivotal role in American history by shaping and influencing social movements and public policy. It concludes with some discussion of what our individual role is in being faithful to our democratic ideals of aiding those who are disenfranchised.

Religion and Government Influence on the Nonprofit Sector

The antecedents for today's modern nonprofit sector are rooted in the Judeo-Christian traditions that shaped the early formation of the United States. Ancient Judaic cultures and social structures provided protection for the most powerless in society (e.g., the poor, the orphans, and the widows). Many of these social welfare concerns were addressed by the church and were considered a private matter, with limited support from the government. Because religion prevented those in need from being excluded from society, greater attention was paid to symptoms and causes of need in an effort to focus on preventative rather than reactive measures. However, in 1601, when the English government established the Elizabethan Poor Laws, it further affirmed the role of the church and the private citizen in providing relief for the most needy. The laws decreed that the needy had a legal right to receive government assistance, but who should be classified as "needy" was an important question. To define the boundaries of government help, the law distinguished among three classes of dependents and proposed remedial measures: "Needy children were given apprenticeships, the able-bodied were given work, and the worthy poor were provided with either indoor (institutional) or outdoor (home) relief" (Karger & Stoesz, 1998, p. 34). Consequently, the law ordered local governments to assume responsibility for the needy. However, at the local level, organized religion became increasingly involved as a supplier of social services. More important, this philosophy was coupled with "their ability to forge connections across large segments of the population, spanning communities and regions and drawing together people from different ethnic backgrounds and occupations" (Wuthnow, 1998, p. 362). Together, they formed the cornerstone of who got served and who had attributed status in colonial and postcolonial America (Karger & Stoesz, 1998).

Transition to Individual and Elite Charity

Since the founding of the United States, the church and the government have been grappling with the question of who are the "worthy and unworthy" poor. In an effort to address this question, individuals with means began to form nonprofit organizations.

By providing financial support for individual causes, projects, and programs, these wealthy donors contributed to the public good. Some might argue that they also advanced their own personal agendas and that charitable work was a way to wield power and influence over those of lower social status.

As the nonprofit sector matured, increased levels of government regulation began to force the hand of the elite. This was a way in which governments attempted to garner control over individuals advancing their own agendas. Ironically, as the nonprofit sector grew and began to embrace its independence, the public sector began to fear voluntary organizations when they became involved in decision-making and influencing public policy. This love-hate relationship was not only true between the state and the sector, but also between existing and emerging nonprofit organizations. With each new organization and objective, more established associations felt as though they were being encroached upon, which would result in their agendas not being advanced or promoted (Hall, 1992).

Ironically, sector lore has long promoted the writings of Alexis de Tocqueville as one of the seminal pieces in describing the role of voluntary associations within the United States. In *Democracy in America,* Tocqueville describes the importance of private contributions and support for aiding others in society and how such actions illustrate democratic ideals. Voluntary organizations were observed as being a "natural and perhaps a necessary connection" between civic organizations and political ones through which citizens work in concert with one another to influence the state (Tocqueville, 1969, p. 115). He goes on to say that "Americans of all ages, all conditions, and all dispositions constantly form associations" (Tocqueville, 1969, p. 117). Such writing leads one to assume that the formation of associations was a constant and permanent aspect of American life.

But, what he observed was only those actions that were publicly supported as being "worthy" of benefit and collective action. Historically, little attention has been paid to the nonprofit sector's role in helping the "unworthy" poor until the mid-20th century when the sector began to define itself. According to Odendahl (1991), "The philanthropy of elites is not a system whereby the fortunate distribute resources to the less fortunate." Philanthropy is instead a "system whereby the wealthy help to finance their own interests and institutions" (p. 246). Even the Commission of Private Philanthropy and Public Needs, commonly known as the Filer Commission, noted that "grants made directly for social change or to assist the powerless are dwarfed by the massive philanthropic contributions made annually in support of education, the arts, health services, and the like" (Clotfelter & Ehrlich, 1999, p. 110).

Famous family names such as Carnegie, Ford, and Rockefeller benefited their own empires by using their wealth to support charitable organizations. The argument has been made that their benevolent practices were more of a financial transaction rather than a humanitarian one. That is because those who formed such organizations could maintain their status and promote policies that would protect their interests, rather than being champions for social and economic justice (Milofsky, 1988). As a matter of fact, it was "undergirded by social Darwinist ideology as a means by which to advance the race, rather than alleviate human suffering" (Hall, 1992, p. 121).

Who Are the Unworthy?

For most of the 20th century, social theorists have been concerned with those who are vulnerable or on "the margins." Although the precise definition of the word *vulnerable* is problematic, as it is socially constructed (Moore & Miller, 1999), it is important to offer a shared definition to help better understand the concept. Silva (1995) suggests that a vulnerable person is an individual who experiences "diminished autonomy due to physiological/psychological factors or status inequalities" (p. 15). Others see vulnerability as the "activation of the processes that lead toward oppression, discrimination, stigmatizations, and disempowerment" (Butler, Elliott, & Gunther, 2001, p. vi).

Part of defining who is marginal has a great deal to do with a lack of power. Power is defined as "the capacity to influence the forces which affect one's life space for one's own benefit. [Conversely,] powerlessness is the incapacity to exert such influence" (Pinderhughes, 1983, p. 332). Those who are disenfranchised are seen as largely powerless and suffering from the debilitating effects of such circumstances—circumstances that are often degrading and distressful. Broad and evolving lists of those who are vulnerable have been developed by Butler and Weatherly (1992) and others. Clustering the concepts of marginality by theme shows that people are vulnerable due to one or more of the following: religion/spirituality, race/ethnicity, gender/sexual orientation, age, health diagnosis, involvement in the criminal justice system, residency issues, natural disasters, occupational status, and economic status (Alperin & Richie, 2001).

As one can see, these themes are not mutually exclusive. Equally important is that someone can be part of a disenfranchised group on a permanent or temporary basis. Thus, long-term or short-term marginalization can impact the same person in various aspects of her or his life at the same time. Hence, we have the terms *overlapping* *marginality* (Madriz, 2000, p. 7), *doubly vulnerable per sons* (Moore & Miller, 1999, p. 1034), and *multifaceted vulnerability* (Radley, Hodgetts, & Cullen, 2005, p. 274).

Regrettably, those who are perceived as being unworthy or on "the margins," regardless of the reason, end up becoming stigmatized in society. As a result, nonprofit organizations that serve disenfranchised people may be equally affected. Conversations around stigma and taboo for serving a particular group, need, or cause have become more prevalent as society's social ills can no longer be addressed by the public and private sectors (Falk, 2001).

According to Goffman (1986), there are three primary types of stigma. First are stigmas that stem from physical deformities visible to the common person. Second are stigmas based on tribal nation, race, country of origin, and religion. Third, and finally, are

> blemishes of individual character perceived as weak will, domineering or unnatural passions, treacherous and rigid belief, and dishonesty, these being inferred from a known record of, for example, mental disorder, imprisonments, addiction, alcoholism, homosexuality, unemployment, sui cidal attempts, and radical political behavior. (Goffman, 1986, p. 4)

With all three types of stigma, the process, Goffman argues, the end results are the same. People are hindered from establishing normal social relationships because of their "undesired differentness from what we had anticipated" (Goffman, 1986, p. 5).

As poverty, crime, homelessness, joblessness, illness, and other social issues rise, it is no longer wise to ignore the wants of the disenfranchised, for they begin to impact capitalism. As we seek to minimize the gap between the "haves" and the "have-nots," Riis (2005) offers up a solution of building a "bridge founded upon justice and built of human hearts" to keep at bay the tide of need and misery that will befall society if we ignore the plight of those who are viewed as "unworthy."

Ironically, the "haves" and the "have-nots" vary. Thus, those who may have been viewed by religion, government, the elite, or society as being marginalized in the past may no longer be considered disenfranchised today. Because society and culture change and the ways we examine government and religion are influenced by the social construct of the time in which we live, it is important to note that who is disenfranchised or part of an unpopular group is dynamic. Therefore, one person may be classified into contradicting groups based on what issue is being examined, as well as how one might self-identify.

Advocacy has been a means through which groups use their experiences to improve their plight. The 21st century has witnessed growing motivation to increase citizen participation and thus to democratize nonprofit sector service and philanthropy as a means by which to "advocate for those who are most in need" (Clotfelter, 1992, p. 3). Among the many types of nonprofit organizations, those that are human service organizations owe their origins to similar efforts to cope with poverty and the massive influx of immigrants into the United States in the late 19th and early 20th centuries.

The Role of Human Service Organizations Today

The Internal Revenue Service (IRS) defines 27 types of nonprofits; of these, 501(c)(3) charitable organizations are the most common (Salamon, 1999). Human service organizations constitute the largest single component of the charitable nonprofit sector in terms of 501(c)(3) organizations. Our modern social welfare system is larger than ever. Marginal groups represent special populations that have been ignored, excluded, or oppressed by mainstream society. Their number reflects the capacity of American culture to maintain its equilibrium while excluding many groups from full social participation. A partial list of marginal interest groups includes: Native Americans, African Americans, Asian Americans, Hispanic Americans, women, disabled persons, homosexuals, rural dwellers, Jewish and Muslim individuals, and immigrants. These groups are of concern to nonprofit students and professionals because typically, they have not had the same opportunities as mainstream populations. In short, it could be argued that they have been denied social justice. Within the context of democratic capitalism, elevating marginal interests remain extraordinarily problematic, but, by benefiting those who are in the margins, society as a whole benefits.

In American culture, groups excluded from the mainstream are expected to gather their resources and identify leaders who will mount programs to serve their particular group. Although this expectation is congruent with traditional values such as self-sufficiency and community cohesion, the solidarity approach does not necessarily ensure success. Hence, nonprofit organizations provide a vehicle through which marginalized groups can engage in democratic policy making and transform civil society. In this respect, the voluntary sector is essential to the nation's culture, in that it is a correcting influence to the indifference often shown to marginal populations by governmental and corporate bureaucracies.

The ability of nonprofit organizations to assist disenfranchised groups and represent unpopular causes gives rise to social policy formulation. *Social policy* refers to those policies that focus on how individuals and groups relate to the larger society (Burger & Youkeles, 2000). The aim of social policy is to improve the lives of people, which is also the goal for human service organizations.

According to Burger and Youkeles (2000), social policy is characterized in four ways:

1. It is problem oriented.
2. It is action oriented.
3. It is focused on individuals or groups.
4. It involves making choices regarding the kind and/or extent of action to be taken.

Because social policy regarding human service organizations is important to all three sectors, it is important to recognize the unique role the nonprofit sector plays. Policy in the nonprofit sector is established to address unmet needs that have not attracted sufficient political support (Alperin & Richie, 2001). Thus, the work of such organizations has been essential to the development of the nation's culture and correcting issues of indifference and intolerance exhibited toward marginalized populations by private and public sectors. Nonprofits take on issues that do not attract the broad spectrum of public support necessary for legislative mandates or private enterprise (O'Connell, 1993).

In other words, the voluntary sector serves as the best—and in some cases, the only—vehicle for addressing certain social seeds. Indeed, much of what Americans would identify as central to their culture can be attributed to nonprofit organizations: hospitals, religious organizations, schools, and welfare agencies. Many of these organizations are based on serving those in need and ensuring liberty and justice for all. Consequently, the nonprofit sector fosters much of American pluralism.

Nonprofit and community organizations are mediating institutions between government and society in an effort to promote pluralism of thought and individual freedoms (Schambra, 1999). This is accomplished through grassroots organizing, which has propelled social movements that yield benefits from government programs. Legislation has mandated the creation or revision of programs to improve the plight of disadvantaged groups. Social movements such as civil rights, farm worker's rights, women's rights, voting rights, and, more recently, rights for homosexuals, people with disabilities, and immigrants have been propelled through the work of the nonprofit sector advocating for the welfare of unpopular groups.

Such accomplishments have resulted from the voluntary sector's ability to "innovate, create, and engage in controversial experiments" (O'Connell, 1993, p. 3). Just as these social movements have changed the definition of the "worthy and unworthy," it can be argued that virtually every far-reaching social change in American history has resulted from efforts within the nonprofit sector. These movements and the nonprofit organizations that supported them helped create new social norms and active forms of citizen engagement, both of which are the hallmark of American democracy.

To maintain an open democratic American culture, anyone must be free to organize for purposes of rectifying past injustices or current wrongs. Recruiting participants, forming a board of directors, filing for tax-exempt status under IRS Code section 501(c)(3) or (4), soliciting contributions, and applying for grants and contracts are all modern avenues through which to get one's voice heard. With more organizations emerging that serve unpopular causes or disenfranchised people, additional leadership opportunities and avenues for civic participation exist to promote discursive dialogue in communicating their concerns to the larger populace.

Most Americans indicate certain preferences for voluntary organizations to address social problems. Of respondents to a 2001 poll, 56% ranked sectarian agencies as important for "solving social problems in their communities," compared to 53% for local nonprofits, 39% for the United Way, 33% for state government, and 28% for the federal government (Morin, 2001, p. A19). This supports the premise that the nonprofit sector is better able to respond to changes in the environment and is more responsive than government, especially when confronted with new demands for human services. Whether filling gaps and holes in the "social safety net," complementing each other's efforts, or responding to newly emerging needs, the nonprofit sector adapts to changing social and economic circumstances by founding new organizations (Chambré, 1995, p. 125).

In many communities, nonprofits lead in addressing these social problems through innovations and by raising awareness about social issues among public officials, citizens, and private organizations (O'Neill, 1989; Salamon, 1992). As response strategies have become increasingly multifaceted, nonprofits are working together more frequently with local government and other groups to formulate comprehensive strategies for program advocacy, service delivery, crisis relief, and other efforts (Bryson & Crosby, 1992).

The Importance of the Nonprofit Sector

Both the market and the government are limited in providing social services (Salamon, 1992). The market has the "free rider problem," which allows consumers to benefit from collective goods without having to pay for them. Governments are unable to garner support from the majority to fulfill unmet need of underrepresented groups. Nonprofit organizations, then, are expected to focus more heavily on the poor and disenfranchised in circumstances where existing government programs are less effective and/or inadequate. In this theory, the nonprofit sector is viewed as a mechanism for satisfying demands for collective goods that are not satisfied or are left unmet by both the private and public sectors (Weisbrod, 1988).

This is the traditional explanation for why the nonprofit sector is important, but it underestimates the vital role nonprofit organizations play as change agents (Clemens, 2006). Jackson-Elmoore and Hula (2000) argue that "if the market represents exchange and the government represents authority, then it is appropriate to think of the nonprofit sector as a mechanism for cooperation" (p. 3). These networks of collaborative relationships help give voice to important social issues that are worthy of being placed on the policy agenda for good governance and profitable business.

Nonprofits are valued because they are seen as imaginative, flexible organizations that can tailor national or state programs to fit particular local circumstances and needs (Smith & Lipsky, 1993). Among these needs are services for disenfranchised groups. Nonprofit organizations have a strong record of providing effective service, and they have gained institutional legitimacy for not being self-serving. Nonprofits also facilitate community building that breeds trust and cooperation among those in society (Putnam, 1993). These characteristics have benefited the sector. Having a positive reputation for mobilizing disenfranchised groups and making their concerns more salient to decision makers has prompted the other sectors to grant legitimacy to the concerns of unpopular causes. In short, people have formed nonprofit organizations in order to exercise their rights to free speech and express unpopular ideas.

Efficacy in Working With Disenfranchised Groups

The ability of individuals to form groups as a way of improving democracy is a unique aspect of American civic life. According to March and Olsen (1995), involvement in nonprofit organizations engenders the "civilized citizen," someone committed to democratic ideals, while exercising the rights and responsibilities that come with democratic freedoms (p. 57). Nonprofits help individuals move beyond themselves to a larger group of people who have a shared interest. These relationships are a catalyst for resource sharing and building community. As these organizations increase in number, it has been found that the density of nonprofits in neighborhoods increases the level of collective civic action, indicating that the locus of collective action is shifting from individuals to formal organizations (McAdam, Sampson, Weffer, & MacIndoe, 2005). This shift calls attention to the social and civic dimensions of nonprofit activity, which evolve to improve conditions for the communities they support as agents of social change (Clemens, 2006).

Conventional institutions (e.g., political, economic, social, educational, administrative, and legal systems) are slow to meet the needs of society's most marginalized groups and often pose barriers to those who desire to actively promote their needs and concerns (Castole, Watson, & White, 2002). Consequently, nonprofit organizations, and those who seek to join them, provide those who are on the fringes of society with solidarity and a shared space to empower their own communities (DuBois & Miley, 1999). Since the 1990s, the nonprofit sector has intentionally increased efforts to find alternative forms of civic engagement to empower disenfranchised communities (Wolch, 1990). In doing so, the pervasive negative valuations of unpopular causes or groups are lessened, which helps to free populations at risk from further oppression.

But such efforts require gathering of resources, diverse ideas, entrepreneurial activities, planning and coordination, the formation of a shared purpose or niche, and a figurehead to advance its mission (Cameron & Whetten, 1985). This is where *you* as an individual can play an important role in serving as an advocate for unpopular causes or disenfranchised people. It is common for the sector to involve individuals from a wide cross-section of society in organizations that do not necessarily reflect their own specific needs. Rather, individuals join organizations to serve as advocates and activists for causes and communities that may not have the organizational infrastructure to help them advance their own cause. Thus, many contentious social change activities and social movements have been absorbed into formal nonprofit organizations as a way of elevating their position in society (McAdam et al., 2005). Consequently, this challenges the elite, by going "through a process of issue and action formulation by which [they] develop consciousness of the needs, possibilities, and strategies of challenge" and carry out "the process of mobilization of action upon issues" (Castole et al., 2002, p. 6). In doing so, nonprofit organizations help marginalized groups build collective power to articulate and meet their needs.

As the United States becomes increasingly heterogeneous, more unpopular causes are likely to surface. Incremental efforts to address those causes, and to help the individuals who are disenfranchised, will be made within the complex and political world in which we live. Individuals and nonprofit organizations must engage these very issues to meet the needs of society's disenfranchised populations (Hyde, 2003).

Any form of oppression or intolerance that is the result of individual or institutional efforts is worthy of nonprofit status. Hence, the heterogeneity of the American populace is represented in the diverse organizational arrangements and perspectives within the nonprofit sector. These organizations, by their mere existence, attempt to influence social and political systems to restructure policies that connect disenfranchised groups (Nagda & Gutierrez, 2000). As a result, these organizations not only serve the needs of their constituents but also advocate on their behalf. According to Jenkins (2006), advocacy refers to "any attempt to influence the decisions of any institutional elite on behalf of a collective interest" (p. 297). Although advocacy is a broad term, such efforts can range from informal support of ideas to regulated legislative action or formal lobbying (Jenkins, 2006). "Advocacy is a crucial element of nonprofit service, for it is the action through which empowerment of disenfranchised and oppressed client systems is accomplished" (Mickelson, 1995). Advocacy done in collaboration with oppressed and disenfranchised populations assists them in moving closer to attaining and maintaining social and economic justice (DuBois &Miley, 1999; Gamble & Weil, 1995). These efforts can be done on the individual or group level. However, for greatest impact, collective support is often required. Organizations engaged in advocacy know they will be far more effective if they are able to mobilize their constituents and do not have to rely solely on their lobbyists (Berry, 2005).

Nonprofit organizations that engage in empowering their clients "seek to develop the capacity of individuals to understand their environment, make choices, take responsibilities for their choices, and influence their life situations through organization and advocacy" (Gamble & Weil, 1995, pp. 483–484). In view of that, organizations educate and mobilize followers who otherwise would remain uninformed and passive. Because the nonprofit sector plays an integral role in creating social policy, it is important to know what steps an individual must take. Burger and Youkeles (2000) outline the following steps. First, social policy requires one to adopt a "problem-oriented" and proactive view. Second, it is imperative to identify and understand the unmet needs of the target population. Third, social policy requires innovative thinking among individuals and sector workers. Fourth, and finally, involve a diverse cross-section of stakeholders from the target population, and the three sectors, in the creation, implementation, and dissemination of a comprehensive plan. Policy development, formulation, implementation, and evaluation make up a complex process. By accepting this challenge, nonprofit organizations that serve unpopular causes play a vital role in American society and reflect American commitment to responsible citizenship in the community (Drucker, 2003).

The irony is that for every nonprofit organization that promotes a certain perspective or promotes a particular social policy, there is another equally legitimate nonprofit organization that can have a diametrically opposed perspective. These competing missions place these organizations at odds with one another. The questions then come: Who determines "what is an unpopular cause" and "who are the disenfranchised"? Although the public and the law may predetermine what and who they are, it is even more important for an individual to make that decision independently.

Future Directions

Because determining who is marginalized is a decision that draws on one's personal, social, religious, and professional values, there are some important concepts to keep in mind. Of particular importance is awareness of one's own values and attitudes toward disenfranchised groups. Nonprofit workers and those who are involved in the sector should be especially aware of their own stereotypes and prejudices and how this may result in discrimination of particular segments of society (Neukrug, 2000).

According to Towle (1965), it is important to recognize the human needs of all people, regardless of one's role in society. Thus, clients from marginal groups should be treated as individuals, as well as members of a larger disenfranchised group or representative of an unpopular cause. Social equality implies equal intrinsic worth to every individual or group. Similarly, everyone is entitled to equal civil, economic, political, and social rights and responsibilities to develop his or her own human potential (Gil, 1976). Therefore, vulnerable individuals or groups "should be subject only to the general limitations that any individual's or group's right to freedom and self-actualization must never interfere with the identical rights of all other individuals and groups" (Gil, 1976, p. 4). By keeping these factors in mind, one can minimize any distortions or incongruent expectations between disenfranchised individuals and society as a whole (Neukrug, 2000).

To make this discussion more personal, you are encouraged to consider what issues you are passionate about. Do any of them focus on a group you would view as being disenfranchised? Would society consider this group disenfranchised? Is it an issue that is unpopular? Does the cause result in tensions within society, law, or religion? A great variety of organizations seek to restore relationships between excluded groups and public stakeholders. To do so, nonprofits, and the individuals involved, serve as brokers between disenfranchised groups and the public services or rights they are seeking. Because the university campus is a microcosm of the larger society, Collins (2000) offers several suggestions on how individuals can use their college experience as a way to help them understand the value of the sector in providing opportunities for unpopular causes and disenfranchised people. Establish a club with the purpose of emphasizing respect among all people and in particular for a disenfranchised group or unpopular cause. The focus should be on developing empathy among the members of the organization by avoiding the "blame game" (Collins, 2000). Examine causes of interpersonal bias, and explore opportunities whereby people can move from bias to tolerance. Use books, blogs, news events, and new media to promote discussions. Have students anonymously write papers, Facebook messages, tweets on Twitter, and blogs that recount their own experiences and feeling about being marginalized. Read and discuss the entries and invite open discussion of their content. By learning among your own peers about how they have felt and reacted to being marginalized, the needs of disenfranchised groups may become more "real" to you. Stories about people you know may prompt individuals to get involved in nonprofit sector service.

Such exercises help bring to life the need for social equality in structuring human relationships. They also facilitate forming partnerships, communicating challenges, defining directions, and identifying strengths (DuBois & Miley, 1999). Each of these efforts can be done within various American social institutions, including, but not limited to business, education, family, government, health, military, recreation, and welfare. However, what sets nonprofit organizations apart is that they are at the core of what helps excluded populations access and benefit from the rights that are provided to them by law. These insights may help you to better understand how disenfranchised individuals are assisted through the nonprofit sector and how nonprofit organizations seek to minimize their disadvantage and risk in society.

Understanding How Philanthropy and Nonprofit Activities Manifest in Minority Communities in the United States

Lili Wang

Arizona State University

Philanthropy is the giving of time, money, and talent to support a socially beneficial cause without any apparent expectation of financial or material reward. Philanthropic activity, including charitable giving and volunteering, provides important resources for nonprofit organizations. GivingUSA Foundation estimates that the total amount of charitable giving from individuals, foundations, and corporations exceeded $300 billion in the United States in 2007. The lion's share of all donor dollars comes from individuals. Individual giving reached $252 billion, or 82.3% of the total. In addition, the U.S. Census Bureau survey shows that about 61.8 million American adults, or 26.4% of the population, volunteered through or for an organization in 2007. With the estimated dollar value at $19.51 per hour and the median annual volunteer hours of 52 hours, American volunteers contributed about $63 billion to the nonprofit sector (Independent Sector, 2008). These numbers testify to the importance of understanding individual philanthropic activity in the United States.

Although there are a plethora of studies of elite philanthropy, scholars have only recently turned their attention to philanthropic behavior of minority populations, which are often portrayed as takers rather than givers. There is a common perception that minorities are less generous than white Americans. This perception is partly based on the findings of several national studies that reported significantly lower levels of giving and volunteering by black, Hispanic, and nonwhite populations (Hodgkinson & Weitzman, 1996). However, we should interpret these findings with caution because these studies define giving and volunteering narrowly as formal giving and volunteering or giving to and volunteering for formal organizations. A growing number of studies show that members of minority groups do give time and money, but they tend to focus on informal giving, which includes giving to and volunteering for families, neighbors, and communities. Therefore, a broad definition of philanthropy, including both formal and informal philanthropy, is needed when we examine the charitable behavior of minority populations. This study focuses on charitable giving and volunteering of African American, Asian American, and Hispanic people. For each minority group, the demographic characteristics pertinent to philanthropy and fundraising, the history and culture of philanthropy, and the patterns of giving and volunteering are discussed.

African American Giving and Volunteering

The history of African American philanthropy dates back to the arrival of Africans in America more than 300 years ago. The harsh reality of oppression experienced by the African American population shaped their philanthropy. Since the 18th century, African American philanthropy has been an important mechanism for mutual assistance, for the struggle of social justice, for the enhancement of the educational and economic status of blacks, and for the establishment of institutions. African Americans have traditionally relied on the philanthropic resources of their own community to help blacks in need. The Fraternal Order of Prince Hall Masons, founded in Boston in 1775, was one of the earliest organized philanthropic groups in the black community. It provided mutual aid to freed slaves and their families. The organization continues today as a provider of social services and scholarships to the black community. Other examples of organized African American philanthropy include the Free African Society formed in 1787 in Philadelphia, which provided an array of aid including nursing and burial services; the African Society for Mutual Aid and Charity formed in 1796, which provided financial help and job placement; the Brown Fellowship Society founded in 1790, which provided education for free black children in Charleston, South Carolina; and the Juvenile Garrison Independent Society, which was active in the 1830s and 1840s as an organization for teenagers (Fairfax, 1995).

The philosophical root of African American philanthropy is what James A. Joseph called the African cosmology of connectedness.

> The communal tradition of caring for each other has deep his torical and metaphysical roots. *Homo communalis*, the idea that we live and have our being in a caring social community, is at the heart of African metaphysics. . . . This cosmology of connectedness provided the first principle of black philan thropy. (Joseph, 1991, pp. 4 5)

The sense of connectedness has driven African American philanthropy in its personal as well as organized forms.

Informal giving is an important part of African American philanthropy. Smith, Shue, Vest, and Villarreal (1999) find that giving and volunteering of this minority group are largely informal and take place primarily within families or the black community. African American families tend to be defined broadly and often are large kinship networks related by blood and association. The definition of kinship determines African Americans' giving and sharing patterns and choice of beneficiaries. In the broadest terms, kin may include all African Americans, people of color, fellow workers, or fellow church members, who are often referred as "brothers and sisters." One might be expected to give to family members first, then to extended family, followed by neighbors, communities and church members, and finally to other African American populations, people of color, and people in need. Emergency and immediate assistance to family and friends is a common form of African American philanthropy.

The church has been a central community organizing and community service tool for African Americans. More than two thirds of African American charitable dollars go to their church, which is higher than the percentage of donations white donors give to their church (59%). The large share of giving to the church is a sign not merely of the impact of religious belief on charitable giving, but also of trust in an institution that historically has served spiritual, social, and economic needs of the black community. In many cases, the church serves as a conduit to channel charitable donations received from members of the congregation to other organizations, such as black institutions of higher education (Carson, 1990).

In the 20th century, the number and types of vehicles for organized African American philanthropy have grown remarkably. Examples of contemporary African American formal philanthropic organizations include the National Association for the Advancement of Colored People (NAACP), a civil rights organization founded in 1909 to fight for social justice for blacks; the National Urban League, the largest community-based organization, founded in 1910 to empower the black population and to reduce discrimination; and the United Negro College Fund, a federated fundraising organization serving 40 private, historically black member colleges and universities.

Empirical studies on African American philanthropy show that African Americans give disproportionately to black charitable organizations. In addition, their giving tends to be unplanned and spontaneous. In terms of motivation, African Americans often state that they feel obliged to give back to the community (Smith et al., 1999). The tax advantages of giving do not seem to be the primary motivation for African Americans to donate (Fairfax, 1995). Although African Americans have the highest poverty rate, at 22.1%, and the lowest median annual household income, $30,439, in the nation, they are still more generous than other population groups. Carson (1990) found that after controlling for differences in income, a greater percentage of African Americans contribute to charitable organizations than whites. Moreover, African Americans of low income contribute a higher percentage of their income to charities than whites. Furthermore, the growing African American middle class and upper class, consisting of business owners, entertainers, and athletes, provide additional charitable resources to the mainstream nonprofit organizations, such as the United Way and the donors' alma mater.

To encourage and foster African American philanthropy, it is important to understand and overcome the barriers to involvement and contribution from this population. Rogers (2002) pointed out that low expectations of giving from African Americans, taboos against discussing money, organizational competition for donations, and inadequate philanthropic support structures are some of the factors that could impede the growth and development of African American philanthropy.

Another important aspect of African American philanthropy is volunteerism. The church is the dominant institution for African Americans to volunteer their time. Smith and his associates (1999) found that black women tend to volunteer more often than black men, which is partly the result of the roles that have been assigned to men and women by the African American culture and the larger society. It is also worth noting that African American volunteers have traditionally been a strong force in fighting against racial discrimination and advocating for social justice.

Asian American Giving and Volunteering

Asian Americans are one of the fastest-growing minorities in the United States. From 1990 to 2007, the Asian American population has increased 90%, reaching 13 million or over 4% of the total U.S. population.[1] Most Asian Americans reside in the states of California, New York, Texas, New Jersey, Illinois, and Hawaii. According to the 2000 U.S. Census classification, Asian Americans are composed of 16 subgroups based on their countries of origin. Chinese, Asian Indian, Filipino, Vietnamese, and Korean are the largest subgroups, with populations exceeding 1 million.

Although some scholars emphasize the integration and culture similarities among the Asian American population, there is an increasing recognition of the significant cultural, religious, linguistic, and socioeconomic differences among Asian American subgroups. About 80% of the Asian American population is foreign born. Their reasons for coming to the United States vary from political asylum, religious freedom, education, career advancement, and business to family reunion (Chao, 2001). The diversity of Asian Americans' cultural background, the reasons for migration, and their experiences in the United States affect their decisions to participate and contribute to communities in this country. In view of the diversity of Asian American subgroups, this section focuses on the philanthropic culture and activities of the three largest Asian population—Chinese, Asian Indian, and Filipino.

Chinese Americans

The Chinese have the longest history in America of any Asian subgroups. Chinese immigrants came to the United States in several waves. Prior to 1942, the Chinese immigrants, mostly Cantonese from the southern part of China, came as cheap labor for the mining, railroad construction, agriculture, and other industries. From 1942 to 1949 most Chinese immigrants came from north and central China; from 1949 to 1979 most were from Taiwan; since 1979, a growing number of immigrants came from the People's Republic of China (Smith et al., 1999). Currently, there are about 3 million Chinese in America, and 52% of them were born in the United States. The percentage of Chinese Americans who have college degrees is nearly double that of the general population (Ho, 2004). High education attainment and professional jobs have resulted in a tremendous increase in affluence among Chinese Americans.

Philanthropy has been highly regarded in Chinese civilization. The tradition of sharing wealth and resources is deeply rooted in Confucianism and Buddhism. Buddhism values compassion and service to others, and Confucianism teaches the concepts of benevolence, filial piety, and reciprocity.[2] Since Chinese culture emphasizes obligations to families, friends, communities, and villages, informal and indigenous giving activities based on kinship, family, clan, and hometown association are the most common forms of philanthropy in Chinese American community (Smith et al., 1999). Chinese giving often focuses on providing for the family first, then the ethnic community, and then mainstream society. As Jessica Chao (1999) argued, many Chinese Americans, particularly first-generation immigrants, need to feel "their lives and those of their families were financially secure—regardless of their level of wealth" (p. 235) before they commit significant financial contributions. As a result, Chinese Americans are unlikely to make planned gifts or leave bequests to charities unless there are some personal relationships or connections with the recipients or fundraisers who represent these charities.

Like other immigrant groups, first-generation Chinese immigrants send a considerate amount of financial aid in the form of remittances to their home country. According to the World Bank, China received about $34 billion in remittances in 2008, which accounted for 1% of its gross domestic product. This money supported not only family, but also community improvements, schools, and hospitals (Chao, 1999).

Mutual aid associations, rotating credit organizations, Chinese consolidated benevolent associations, family associations, and business associations are forms of organized Chinese philanthropy that have a long history in the United States. Lai (1987) traced the development of Chinese consolidated benevolent associations from their emergence in the 1880s in the Chinatowns of major U.S. cities to the present. Lai described the evolution of myriad associations or *Huiguan* based on united clans or groups from the same region of China, led by the immigrant merchant class. These associations evolved into the Chinese consolidated benevolent associations in response to the growing sense of community that crossed clan or regional lines. In their early years, these associations helped immigrants by providing temporary housing and jobs and later raised money from members for community projects, sponsored Chinese schools, and served as social centers. With an increasing wave of young Chinese immigrants who were less clan and more ethnically oriented, credit unions were created to serve member needs and help communities by working with social service agencies or by dispersing scholarships to members' children.

In terms of mainstream formal giving, education institutions have been a top recipient of Chinese philanthropy. This is likely due to the strong emphasis placed on getting a good education in Chinese culture. Many Chinese Americans who have high levels of educational attainment would consider donation to educational institutions as a way to "give back" to those who have helped them the most (Ho, 2004). One recent example is Yahoo, Inc., cofounder Jerry Yang, who donated $75 million to his alma mater, Stanford University, in 2007. In addition to education, Chinese Americans also tend to support services for the elderly, health care, religion, and political causes (Smith et al., 1999). Furthermore, Robert Lee (1990) documented the growth of foundations in the Chinese American community and linked it to economic successes in the field of technology and real estate. As Chinese Americans transition from a majority first-generation immigrant group to a majority American-born Chinese group in the 21st century, their culture and attitudes toward philanthropy will likely change. The second and third generations may broaden their charitable giving from ethnic-centered charities and educational institutions to other formal institutions, such as museums and youth-service agencies, as a way to gain access to mainstream social circles.

Asian Indians

Asian Indians are the richest immigrants in the United States. Among all American foreign-born residents, India-born immigrants are the most highly educated and have the highest median household income. A 2003 Merrill Lynch study found that one in nine India-born immigrants in the United States were millionaires (Burge, 2008). In 2007, there were about 2.5 million Asian Indians in this country, and 80% of them reside in 10 states, including California, New York, New Jersey, and Texas.

The Asian Indians' culture of philanthropy is rooted in their religious beliefs. Asian Indians in the United States are composed of adherents of various religions of the Indian subcontinent, including Hindus, Muslims, Christians, and others. The act of giving a gift (*dana)* is one of the most important aspects of Hindu religiosity. *Dana* broadly defines almost any type of giving that is not reciprocal and not motivated by immediate self-interest (Anand, 2004). It is an expression of obligation and centers on gifts and ability to make donations. Hinduism holds that charity should be first directed toward family, then society, and finally to the world and all living beings. Therefore, informal giving to extended family members is common among Asian Indians. For Muslims, the practice of regular almsgiving is a religious requirement. In addition, voluntary charity (*sadaqah*) and good treatment of orphans, elderly, and parents are advocated in the Islamic tradition. For Christian Asian Indians, charity or contributing a certain amount of income as measure of gratitude to God is a common practice.

In *Remaking America*, Joseph (1995) noted that Asian Indians brought "a strong tradition of voluntary associations and organized charity and philanthropy to this country" (p. 122). Many Asian Indians came to the United States in the last few decades to study in their professional fields. As they became professionally well established and financially successful, their desire to give back, both in the United States and in India, increased.

Asian Indians' philanthropy mainly focuses on improving lives of Indians—both overseas and in India—and promoting culture exchange. Studies on Indian diaspora philanthropy show that Asian Indians in the United States donated more than $315 million to India in 2000 to 2001, which is about one third of total foreign contribution to India that year (Anand, 2004). Many successful Asian Indians in the United States got a great education back in India, and, being grateful, they wanted to help others in India. In addition, India is considered a land of a million causes. It has great riches but also has grinding poverty (Burge, 2008). The great needs in India call for donations from overseas.

In the last decade, several foundations were established by successful India-born immigrants in the United States to raise money for philanthropic causes in India and local philanthropies that promote awareness of Indian culture. For example, the American Indian Foundation, founded in 2001, has been immensely successful in channeling the philanthropic generosity of the Indian American community into humanitarian assistance in India. The Next Generation Foundation, also founded in 2001, aims at eradicating illiteracy and poverty among Indian youths.

With an average family income of $64,000, which is more than twice the national average, Asian Indians are also becoming a strong force in mainstream philanthropy in the United States. It is reported that more Indian Americans are donating to charitable causes, and the group of those considered large donors is growing. The most recent example is that John N. Kapoor, who donated $11 million to the State University of New York at Buffalo.

For most Asian Indians, religion provides the rationale for charity, and thus religious donation remains central to Asian Indian philanthropy. Religious centers—such as Gurudwaras (Sikh temple), temples, and mosques—act as community culture centers and raise funds for charity in India and the United States (Anand, 2004). Today, there are more than 200 temples and 500 Hindu religious movements, such as the Ramakrishna Mission, Chinmaya Mission, and the Sathya Sai Organization, in the United States. In a study of the Hindu diaspora and religious philanthropy in the United States, Anand (2004) surveyed about 50 respondents to discuss donor motivation and values in religious giving. The study noted that in the Hindu religion, it is customary to make small offerings of money when one visits the temple. People either put money to the *hundis* (collection boxes) or pay a small token to the *pujari* (priest) who performs the *puja*. There is no expectation as to the amount of money one should give, and each gives based on his or her ability. In the United States, the temples receive a large percentage, ranging from 10% to 40%, of their funds from *hundis*. Many temples support humanitarian causes in both U.S. local communities and in India. For example, they gave to local police associations and soup kitchens, and they raised funds after 9/11 and an earthquake in India.

Filipino Americans

Religion is also an important aspect of the Filipino American's life. Filipinos are predominately Christian, with an estimated 85% of them Roman Catholic (Chao, 1999). In 2007, about 2.3 million Filipinos were living in the United States, and more than 70% of foreign-born Filipinos lived in the states of California, Hawaii, New York, New Jersey, and Illinois. The median family income of Filipinos is about $60,000 (Garchitorena, 2007).

Most Filipino immigrants arrived in the United States in three waves. Prior to World War II, Filipino students were sent to the United States to gain knowledge and learn American-style democracy. Filipino contract workers were also recruited as agricultural labor in Hawaii and California. During World War II and the 1950s, Filipino "war brides" or those who had served in the U.S. armed forces moved to the United States. The third wave began after the passage of the Immigration Act of 1965. About two thirds of Filipino immigrants in this wave were professionals, mainly nurses and other medical personnel (Smith et al., 1999).

Filipinos are heavily influenced by both Spanish and American cultures, which make them the most Westernized group of the Asian Americans. Their giving patterns are also influenced by Western cultures and are different from those of other Asian subgroups. In addition, there are salient differences in giving patterns between the generations. First-generation Filipinos give to causes related to the Philippines and to the church—whatever reminds them of the Philippines—whereas the second and third generations give to local communities and to the causes that concern them (Smith et al., 1999).

Like Chinese Americans, first-generation Filipinos stress obligations and loyalty to family, clan members, friends, and communities. Therefore, informal giving, sharing, and helping are common in this group (Chao, 1999). Family is the basic social structure that supports Filipinos in need. When people need help, they go first to family members for giving and support. Similarly, when people are in a position to offer help, they first think of family members. This kind of interdependence in social relationships is valued in Philippine society. Once Filipino immigrants have acculturated to the American society, they come to value financial independence and thus feel less financially obligated to family members. However, the disparities in relative income and standard of living between the Philippines and the United States mean that first-generation Filipino immigrants have increased financial obligations to family members living in the home country (Smith et al., 1999). A large amount of money is sent by overseas Filipinos to the Philippines annually. From 1990 to 2005, the Philippine Central Bank reported more than $80 billion in cash remittances, mostly from the United States. In 2006, remittances reached $12.6 billion, roughly 10% of the gross domestic product (Garchitorena, 2007).[3]

In addition to giving to family members, Filipinos also contribute to formal organizations, such as hometown associations, professional groups, community organizations, and public charities in the United States. These organizations mainly serve the growing Filipino community in the United States and around the world (Smith et al., 1999). Some examples of public charities include ABS-CBN Foundation USA, Philippine International Aid Foundation, and the Ayala Foundation USA.

The Catholic Church is an integral part of Filipino's way of life, shaping Filipino giving patterns. Smith and his coauthors (1999) observed that the giving and volunteering behavior of Filipinos differed from that of Catholics in other countries. Because the Catholic Church in the Philippines is a missionary church, relying on the archdiocese or outside funding for many of its activities, Filipinos do not contribute as much or as regularly to the general collection as Catholics do in other countries. When Filipinos move to America, they continue to donate a relatively small amount, which leads to the impression that Filipinos are not generous or are the "dollar givers." However, Filipinos do pay or donate money for church services or religious rituals, such as weddings, baptisms, housing blessings, and so on.

Some Comparisons

Overall, Asian Americans are often considered a model minority. As a whole, they are perceived to be hardworking and family oriented. In addition, they are highly educated; 86% graduate from high school, and 44% have a bachelor's degree or more. Their median household income is above the national average. As a group, Asian Americans have a tradition of saving and have higher rates of savings than average. As their wealth grows, more Asian Americans are becoming prospective donors, not only for their own ethnic groups, but also for the mainstream American organizations. However, there is a general misconception that Asian Americans are not generous in giving and sharing. This may be partly caused by the fact that a large portion of Asian American giving is informal, family focused, ethnic specific, and directed to their home countries. Studies show that Asian Americans actually give more in relation to household income than the general population (Shao, 1995), and they are commonly interested in giving to education.

As a large percentage of Asian Americans are first-generation immigrants, their charitable giving activities vary by the length of their residence in the United States. Chao (2001) argued that in general, Asian American immigrants go through three stages in their philanthropic activity: (1) survival stage, in which people struggle through the immigrant years by sharing financial, emotional, informational, and skills-based resources, (2) help stage, in which people have reached financial stability and can help those less fortunate or in greater need, and (3) invest stage, in which people have developed higher levels of confidence and sense of permanence and thus invest in charity to realize their vision of an ideal community. As a growing number of Asian Americans achieve financial success in America, we expect more will become mainstream donors and contribute to non-Asian groups and causes.

In terms of volunteering, the U.S. Census Bureau's Current Population Survey finds that 18.7% of Asian Americans volunteered in 2008, which is a lower proportion than whites and blacks, who volunteer at the rate of 27.9% and 19.1%, respectively (U.S. Census Bureau, 2009). Among Asian Americans, Filipinos tend to volunteer at a higher rate than Asian Indians and Chinese. This can be partly attributed to the differences in religious obligations, as well as the practice and norms of service in the country of origin of Asian immigrants. For example, the 2001 World Value Survey shows that 21% of Chinese respondents in China volunteered compared to 32% of Indians and 58% of Filipinos in their own countries (Sundeen, Garcia, & Wang, 2007). These findings suggest that countries differ in the extent to which they embrace volunteerism. As for religious influence on volunteering, Ecklund and Park (2005) note that Chinese Americans practicing Eastern religions are less likely to volunteer to formal secular organizations relative to other Asian Americans in Eastern religions. In general, Protestant Asian Americans are more likely to volunteer than those with other religious beliefs. Chinese Protestants and Catholics, however, do not differ from other Asian American groups in formal volunteering. In addition, Hinduism emphasizes both giving and service. The concept of s*erva* (service) refers to the practice of giving time and menial duties to the maintenance of temple deities. Compared to *dana* (giving), *serva* emphasizes gestures and acts and, therefore, is more easily accessible to anyone willing to provide time and devotion (Juergensmeyer & McMahon, 1998).

With regard to volunteering through secular formal institutions, Chao (1999) found that Filipino Americans "participate in associations based on common locality and, in recent years, profession" (p. 203). Smith and his coauthors (1999) shared similar findings. Many Filipino and Chinese American mutual aid associations were organized along geographic lines, such as towns, provinces, or even neighborhoods, and many are composed almost exclusively of people from the same region. Studies also show that acculturation, social resources, and personal resources affect Asian Americans' volunteering behavior (Sundeen, Garcia, & Wang, 2007).

Hispanic Giving and Volunteering

The U.S. Census Bureau defines Hispanics or Latinos as those who classified themselves in one of the specific Spanish, Hispanic, or Latino categories listed on the census 2000 questionnaire—Mexican, Mexican American, Chicano, Puerto Rican, or Cuban—as well as those who indicate that they are "other Spanish/Hispanic/Latino," which includes those whose origins are in Spain, the Spanish-speaking countries of Central or South America, and the Dominican Republic or people who generally identify themselves as Spanish, Spanish American, Hispanic, Hispano, Latino, and so on (U.S. Census Bureau, 2000). In this study, the term *Hispanic* is used to describe both Hispanic and Latino populations.

There were about 48 million Hispanics residing in America in 2007, 70% of whom were concentrated in seven states: California, Texas, Florida, New York, Illinois, Arizona, and New Jersey. About 40% of Hispanics in the United States are foreign-born. It is projected that the total population of Hispanic origin will grow from 35.6 million to 102.6 million, an increase of 188%, between 2000 and 2050. Their share of the nation's total population would nearly double, from 12.6% to about 25% (U.S. Census Bureau, 2004). The percentage of Hispanics in the U.S. workforce is high, but incomes tend to be low. The median Hispanic household annual income is about $38,679, which is lower than the national median for non-Hispanic households, $54,920 (U.S. Census Bureau, 2008). The poverty rate of Hispanics is about 20.7%, compared with 24.7% among Africans and 10.6% among Asians. These statistics have significant implications for philanthropy and fundraising among Hispanics in the United States.

Although the Hispanic population in America represents 21 countries, members share many important values related to philanthropy and fundraising, such as *familial ismo* (importance of family), *personalismo* (personalism), *confianza* (trust), *espiritualidad* (spirituality), *servicio* (service), and *obligación* (obligation) (Royce & Rodriguez, 1999). The concept of family is central to understanding Hispanic giving patterns (Smith et al., 1999), both for recent immigrants and for those who have been here for many generations. The family normally extends beyond the nuclear family to include the extended family and close friends. Sometimes, it even includes all Hispanics. One's family network provides support and help for child rearing, care in times of sickness, economic and material assistance in times of need, and other psychological support in times of crisis. This traditional communal and familial support has influenced the giving patterns of Hispanics. Compared to mainstream American philanthropy, there tends to be more giving within the community and the family among Hispanics. Remittance is an example of such giving. Mexico received $27 billion remittances in 2007, which accounts for 3% of its gross domestic product, and remittances to Latin America totaled $66 billion.

Personal relationships and the web of obligations they entail are also valued across various Hispanic groups, such as Mexican Americans, Cuban Americans, and Puerto Ricans. This explains the importance of personal connections in Hispanic giving. Royce and Rodriguez noted (1999) that for Hispanics, there needs to be an intimacy about giving so that they feel a personal connection to the cause or to the people soliciting funds. The person involved in fundraising is as important as, if not more important than, the cause. The emphasis on personal connection explains why testimonials are important and effective tools in fundraising among Hispanic populations.

Another important value related to Hispanic philanthropy is trust (Cortes, 1995). In general, trust in an individual promotes charitable giving. Royce and Rodriguez (1999) found that Hispanics trust their families, close friends, and friends of the family. Trust rapidly diminishes outside the circle. In addition, Hispanics are suspicious of organizations outside their personal network, which makes it difficult for formal nonprofit organizations to solicit donations. A possible solution is to get as many Hispanics involved in formal organizations, serving either as board members or as volunteers. For those organizations with no traditional connection to the Hispanic community, it is even more critical to get Hispanics on board or to use volunteer opportunities as a point of entry to capture Hispanic prospects.

Religion is another factor that has strong influence on Hispanic philanthropy. The church is an important center of philanthropic activity. The dominant religious tradition among Hispanics in the United States is Catholicism. Therefore, the Catholic Church is the primary beneficiary of Hispanic giving outside the family and community. Smith and his coauthors (1999) find that Mexicans in the San Francisco Bay area give large portions of time and money to the Catholic Church for the upkeep of church structures, the weekly collection, the maintenance of various parish programs, and other efforts. The study shows that monetary donations to the church start at a very young age. Parents often volunteer and give to the church and church-related programs, such as Catholic schools, and tend to have a strong influence on a child's philanthropic behavior. In many ways, strong Catholic upbringing fosters the sense of community and helping out others in the Hispanic population.

Despite the dominance of the Catholic religion, there are significant differences in faith and religious practice among the Hispanic population in America. Many new Hispanic immigrants have the view that Latin America is Catholic and North America is Protestant; therefore, they tend to identify with Protestantism in the United States and join evangelical or pentecostal denominations. Royce and Rodriguez (1999) find that evangelicals give differently from Catholics. Evangelical churches use scripture regularly to explain the importance of tithing, which sets them apart from most Roman Catholic churches. In addition, the hierarchy in the Catholic Church is deeper and more pronounced than in evangelical denominations. Smith and his coauthors (1999) find some differences in giving patterns reported by Salvadorans when compared to the other Hispanic groups: Nearly 25% of the population of El Salvador is evangelical Protestant.

Other than the faith-based formal philanthropic organizations, Hispanics often give to mutual assistance associations (Cortes, 1995) or organizations focusing on the causes of arts and culture, education, child development, and people in need. Smith and colleagues (1999) find that Guatemalans in the San Francisco Bay area give mostly to social service organizations such as United Way, Easter Seals, soup kitchens, and homeless groups. They also give to organizations with strong communal roots such as the Boy and Girl Scouts. The rapid growth of Hispanic nonprofits, which are controlled or led by members of Latino communities and exist primarily to serve these communities, is likely to increase Hispanic formal giving (Cortes, 1999). Some examples of Hispanic nonprofits include the Latino Community Foundation, Hispanics in Philanthropy, and New America Alliance.

In addition to the impact of culture and religious affiliation on formal or informal Hispanic philanthropy, studies show that generation, social class, and region of the country also lead to differences in attitudes toward giving and the actual patterns of giving among Hispanic populations (Royce & Rodriguez, 1999). Second-generation Hispanics are knowledgeable about both Hispanic culture and the mainstream Anglo culture. They are more likely to contribute to local and national causes than first-generation Hispanic immigrants, who often support causes in the communities of their home countries. In terms of age, youngest and oldest Hispanics give the least, while those between the ages of 35 and 49 give the most. Moreover, Hispanics with higher education, social class, or occupation are more likely to see the importance of causes not directly connected to them and, therefore, support these causes. Studies also show that language barriers, limited financial resources, and lack of participation opportunities or not being solicited for individual gifts are perceived as principal obstacles to Hispanic philanthropy.

Overall, Hispanics give generously to families, individuals in need, or religious organizations. Their giving is mostly informal, through noninstitutional means, and sporadic. Giving through secular philanthropic organizations is a new concept to Hispanics. Therefore, to promote formal Hispanic giving, nonprofit institutions, especially Hispanic-focused philanthropic organizations, need to develop an infrastructure that helps the Hispanic community understand the importance of organized philanthropy.

Another essential element of Hispanic philanthropy is volunteering. The U.S. Census Current Population Survey shows that 14.4% Hispanics volunteered for or through formal organizations in 2008, which is up from 13.5% in 2007. However, this rate is still much lower than the rates for whites (27.9%), blacks (19.1%), and Asians (18.7%). One explanation of the low rate is that Hispanics often help and care for family, friends, and neighbors, and this type of informal volunteering is not captured by the survey. In addition, Hispanics may have a different understanding of volunteering. They may consider certain volunteering activities as fulfilling an obligation and, therefore, not identify these activities as volunteering in their responses to the survey.

Despite their overall low rate of volunteering, Hispanics volunteer extensively in the church. Royce and Rodriguez (1999) argued that "the notion of service is deeply embedded in the older Hispanic population. It derives from a sense of obligation, reciprocity, and the need to give back, and its source is both religious and secular" (p. 16). Volunteering for the Catholic Church, such as cooking meals or directing Bible study, is common among Hispanics.

Studies also show that education, income, acculturation, and the presence of children in a family tend to foster Hispanic volunteering (Sundeen, Garcia, & Raskoff, 2008). Having a child in the family increases Hispanic parents' chance of being asked to volunteer for school activities. Moreover, acculturated Hispanics have more social networks and are more likely to be asked to volunteer. To increase overall Hispanic volunteering through formal organizations, nonprofits should create an environment that makes Hispanics experience meaningful participation, a sense of belonging, and a feeling of satisfaction and of making a difference.

Summary

At the beginning of the millennium, the U.S. Census Bureau estimated that the racial and ethnic makeup of the United Stated population will dramatically change from a large majority (69%) of non-Hispanic whites to a population of about half whites and half all other race and ethnicities in the next 50 years. The census data also show that the minority populations in the United States are growing not only in numbers but also in influence and wealth. This demographic shift suggests that it is imperative for undergraduate students in nonprofit programs, who are future nonprofit managers, fundraisers, or volunteer managers, to understand minority philanthropic culture, donor motivation, and their giving and volunteering patterns

This study shows that minority populations have a strong tradition of philanthropy, just as whites do. However, minority groups donate more to informal networks and ethnic-oriented organizations than to mainstream American philanthropy. In addition, minorities tend to give to nonprofit organizations they trust, such as the church. The findings suggest that to nurture long-term charitable commitments, a nonprofit organization can provide opportunities for prospective minority donors to engage in organization leadership and then gradually build their trust. Moreover, the diversity of philanthropic culture and giving patterns among African Americans, Asian Americans, and Hispanics suggests that a nonprofit organization must develop a fundraising plan that is appropriate to the specific groups it wishes to approach. African Americans, Asian Americans, and Latinos are no longer just the takers of charity; they have substantial amounts of untapped wealth to make them prospective givers. The nonprofit sector must recognize the philanthropic potential of these minority groups and be willing to create philanthropic strategies attractive to new and diverse populations.

Notes

1. Since the 2000 U.S. Census, respondents are allowed to check multiple races. To make the data comparable to the 1990 U.S. Census, we count only the Asian alone population. If Asian Americans with two or more races are included, the growth rate and the share of total population would be even higher.

2. Although Christianity is not a traditional religion of the Chinese, the impact of Christianity on Chinese Americans' char itable behavior is also essential. It is estimated that 32% of the Chinese in the United States today are Christians, many of whom are adult converts from non Christian family backgrounds.

3. If donations hand carried from abroad and the monetary worth of in kind donations are included in calculations of chari table giving, the total amount is significantly higher.

Leadership Competencies in a Diverse Culture

Ann Armstrong and S. Nouman Ashraf

University of Toronto

Leaders need to promote and to engage in divergent thinking if they are to be effective in a world of diverse cultures. One of the critical challenges that leaders face today is how to move beyond a merely theoretical agreement to *accommodate* diversity and instead *use* diversity as a strategic lever that propels innovative ideas and solutions. The American Red Cross learned, through its response to Hurricane Katrina, how ill prepared it was to provide a suitably diverse response to the crisis. “During the days and weeks after the storm, language and cultural barriers created serious miscommunication, misunderstanding, and mistrust between the largely white volunteer corps and the [diverse] residents of the gulf region” (Asirvatham, 2007). As a result, the American Red Cross was not able to provide support to all those who needed it. At that time, both the leadership and the organization appeared not to have the necessary cultural competence or the divergent thinking to respond to the diversity of the victims of Hurricane Katrina. Since then, the American Red Cross has been asked some difficult questions by members of the House of Representatives and has engaged in a process of reflection and change (“Red Cross Makes,” 2006).

In this chapter, we review the current portrait of diversity among the leadership of the not-for-profit sector in North America. Then, we describe some leadership practices that current and aspiring leaders in the sector need to develop. We discuss what we might do to enhance diversity of thought and practice in the sector. We focus, in particular, on integrative thinking, a recent and exciting approach to rigorous thinking (Martin, 2007). We conclude with a description of an interesting initiative developed by the Maytree Foundation, which is designed to increase diversity in the leadership of the greater Toronto area. We have also included some questions that aspiring leaders in the not-for-profit sector should consider as they think about working in this challenging sector.

Portrait of Diversity

The portrait of diversity in the not-for-profit sector is disappointing. According to Tempel and Smith (2007), research has found that diversity is a significant challenge in the not-for-profit sector. The lack of diversity is most pronounced at the leadership level. Similarly, according to a 2004 study conducted by the Annie E. Casey Foundation, most of the not-for-profit leadership in the United States is white while less than half of the not-for-profit organizations they lead serve white communities (Annie E. Casey Foundation, 2004). As well, 90% of the leadership of foundations in the United States is also white (Tempel & Smith, 2007).

Compasspoint’s research on executive directors found that 82% were white and, perhaps even more significantly, that young executive directors were white, too (Watson, 2007). Furthermore, the larger the organization, the less likely it is to be headed by a woman (Joslyn, 2007). Light (2002), in his study of 250 not-for-profit executives, notes, “the data reveal not only a glass ceiling at larger nonprofits but a significant age bulge” (p. 82). Therefore, women and younger executive directors tend to work at smaller, younger organizations. A recent study of board members in the United States found that 86% were white (Joslyn, 2007). The picture is not entirely bleak, however. A recent exploratory study on social entrepreneurs found that they are likely to be female, nonwhite, younger, urban, college-educated individuals with some business experience (Van Ryzin, Grossman, DiPadova-Stocks, & Bergrud, 2009).

The Canadian picture is not much different than the American one. The leadership in Canadian not-for-profits "is primarily female, aging and not very diverse" (Toupin & Plewes, 2007, p. 130). At the board level, women are quite well represented, but the percentage of board members from different ethnic backgrounds and from visible minorities is small; for example, women hold 44% of the board seats, but whites are most likely to be on boards (average of 87.6%), followed by Aboriginals (average of 8.2%), and South Asians (average of 7.4%) (Bradshaw, Fredette, & Sukornyk, 2009). These data are disturbing, as Canada is believed to be the most ethnically diverse country in the world (RBC, 2005).

There are various explanations for the lack of diversity in the not-for-profit sector. Tempel and Smith (2007) have identified some key barriers: (a) the many pressures that not-for-profit leaders face, coupled with the competing ways they are evaluated, can get in the way of their valuing and planning for staff diversity; (b) there is a lack of diversity training for the current leadership; and (c) it is difficult to attract, retain, and promote younger, diverse individuals to become sector leaders. Others have noted that "inconvenient truth" in the not-for-profit sector:

> [The] ways we transact business, seek information, move from job to job, advance our ideas and seek collaborative partners all rely on relationships and trust. Doing what is comfortable may lead us to seek out only those we are used to collaborating with, relying on familiar networks. . . . The exercise of preference reinforces exclusion. (Lindsey, cited in Tempel & Smith, 2007)

In short, the portrait of the degree of diversity among the not-for-profit leadership is not inspiring. Furthermore, it appears that the degree of diversity in the not-for-profit sector lags that of the for-profit sector. This portrait is particularly concerning as the not-for-profit sector, at its heart, exists to right social injustice. Light (2002) presents a sobering insight on the consequence of organizational exclusion—or lack of diversity—when he notes,

> To the extent the nonprofit sector sharply constrains the number of new organizations in coming years, it will lose an important training ground for the young, female, and nonwhite executives . . . to fill the leadership posts about to be vacated by the older, male, and white executives at its larger, flagship organizations. (p. 83)

The North American not-for-profit sector is already facing a serious leadership deficit that is likely to worsen. As Crutchfield and McLeod Grant (2008) note, "At a time when the social sector is growing in size and importance, the need for skilled leadership has never been greater" (p. 176). According to Tierney (2006), the not-for-profit sector in the United States will need to find 640,000 new executives by 2016. The leadership deficit is large, and the demand for competent leaders is growing: "The steady rise in the number of non-profits and the commensurate need for more management talent shows no sign of stopping" (Tierney, 2006, p. 29). The picture in Canada is similar. In addition, there is concern that younger individuals may not be attracted to the not-for-profit sector as they can often get better salaries and working conditions in the for-profit sector (Toupin & Plewes, 2007, p. 130).

Leadership Competencies

The leadership literature is vast and will not be reviewed here. Rather, we focus on some of the current thinking about what makes an effective leader in the not-for-profit sector, today and tomorrow. Light (2002) notes, based on his research of excellence in the not-for-profit sector, that "it is impossible to overstate the importance of the leader to the high-performing organization" (p. 50). His findings identify five key conditions that a not-for-profit leader needs to create for followers so that they can succeed: (1) foster open communication, (2) motivate people, (3) fundraise, (4) clarify board/staff relationships, and (5) embrace participation (Light, 2002). One of the respondents to his study describes the tensions of being an effective leader, noting that leadership involves inspiring inspiration in followers *and* helping them find their own inspiration.

Servant leadership is a model that leaders in the not-for-profit sector should examine as one way to encourage their followers to find their own inspiration. The concept was first articulated by Greenleaf (1977), who was inspired by the character Leo in Hermann Hesse's book, *Journey to the East*. Leo is a servant, and when he disappears, the group he served struggles to stay together and then disbands. Greenleaf says,

> This is my thesis: caring for persons, the more able and the less able serving each other, is the rock upon which a good society is built. . . . If a better society is to be built, one that is more just and more loving, one that provides greater creative opportunity for its people, then the most open course is to raise both the capacity to serve and the very performance as servant of existing major institutions by new regenerative forces operating within them. (Quoted in Greenleaf Center for Servant Leadership, 2008)

Servant leadership entails a desire to serve and to empower followers. It has been labeled Theory S and contrasted to Theory X, Y, and Z styles of leadership (Stone & Winston, cited in Wong, 2003). Theory X views followers as lazy individuals needing to be controlled. Theory Y views followers as individuals who are self-motivated, and Theory Z tries to incorporate both views (Wong, 2003). Theory S is closest to Theory Y; it assumes that followers will respond well to those leaders who serve and empower them in their work. While Theory S is grounded in a

Judeo-Christian tradition and practiced by some Christian church leaders, its 10 competencies have broader application, especially for leaders in the not-for-profit sector. They are: (1) listening, (2) empathy, (3) healing, (4) general and self-awareness, (5) persuasion, (6) conceptualization to "dream great dreams," (7) foresight, (8) stewardship, (9) commitment to the growth of followers, and (10) building community (Spears, 2004). Practiced together, these 10 competencies should help leaders in the sector to respond to the diversity of their followers by giving them voice. The leaders, in turn, should be able to grow in their ability to think beyond their own lived experiences and beyond the scope of their own interests.

Similarly, Badaracco's (1998) model of moral leadership should help leaders in the not-for-profit sector to be guided by their moral compass as they make decisions. Badaracco highlights the importance of defining moments in shaping who we are and how we act. He describes a defining moment as one "that challenges us . . . to choose between two or more ideals in which we deeply believe. Such challenges rarely have a 'correct' response" (Badaracco, 1998, p. 3). In defining moments, leaders need to manage the tension between diverse and possibly divergent values and make a choice that permits some sort of harmony between or integration of them. Defining moments "force us to find a balance between our hearts in their idealism and our jobs in their messy reality" (Badaracco, 1998, p. 11). If defining moments lead to a process of self-inquiry and reflection, leaders can learn from them and shape and refine their moral compass. The task is daunting but vital so leaders in the sector can build their character as they use their moral compass.

Current and future leaders need to be able to respond to the increasing diversity around them, both demographic and intellectual. Leaders need to become culturally competent, at a minimum. Rose (2008) urges not-for-profit leaders and staff to get an in-depth appreciation of the cultures of the individuals their organizations are serving. According to Egan and Bendick (2008), cultural competence is a "set of congruent behaviours, attitudes, policies . . . in professionals that allows them to work together" (p. 391). They see personal cultural intelligence as having four elements:

1. *Metacognitive intelligence* the ability to perceive others' cultural preferences before and during interactions
2. *Cognitive intelligence* knowledge of socioeconomic dynamics of other cultures
3. *Motivational intelligence* desire to learn about and function in situations involving cultural differences
4. *Behavioral intelligence* the ability to exhibit situationally appropriate behaviors

Their model is useful as it highlights the complexity of becoming culturally competent while highlighting some possible levers leaders can use to effecting personal development. The idea of cultural fluency expands the model of cultural competence. According to LeBaron, it is "the ability to internalize and respond to a range of different worldviews or perspectives . . . to understand a range of starting points and cultural currencies, and to be able to respond to [them] in related contexts" (quoted in Hartley, 2005, p. 1). LeBaron provides a helpful metaphor in explaining her concept of culture: She describes culture as an "underground river because it is fluid, changing and hugely influential but often outside people's . . . awareness" (Hartley, 2005, p. 1). Leaders in the not-for-profit sector should practice heightened awareness of the cultural differences among all its stakeholders so that they can have more thoughtful impact in their work. There is an interesting paradox here as leaders need to become more conscious of the degree of cultural diversity so that they become more culturally fluent. And doing so will make them better able to manage the differences between them their different and differing stakeholders.

Becoming culturally competent and fluent is not an easy process, and strong individual and organizational forces of inertia can hinder the process. The most pervasive of them is prejudice. Although it may be consoling to think that individuals and organizations are free of bias, particularly in the not-for-profit sector, discrimination continues to plague society in North America. For example, Wesley (2008), in her in-depth study of minority women in executive-level positions in American not-for-profit organizations, found that an individual's race and gender can affect career progress. Other research hopefully suggests that people can overcome their biases by changing their thinking to see people as individuals rather than as members of a group (Thiederman, 2008). She argues that it is possible to "bust bias" because there

> is no genetic predisposition to bias, no bias gene rides on our chromosomes, there is no DNA test that can identify who is biased and who is not. Bias is learned. It is an acquired habit of thought rooted in fear and fuelled by conditioning and, as such, can be unacquired and deconditioned. (Thiederman, 2003)

To deal with prejudice in organizations, Ashburn-Nardo, Morris, and Goodwin (2008, pp. 333–334) suggest, perhaps paradoxically, encouraging confrontation of discrimination, noting that "encouraging confrontation may see like a counter-intuitive." However, they use a definition of confrontation—expressing dissatisfaction about discriminatory behavior to the individuals engaging in such behavior—that can range from subtle to more direct confrontations. They have developed the confronting prejudiced responses (CPR) model, which should be useful to individuals in the for-profit and not-for-profit sectors. Their model is essentially decision process of five steps, each of which can be a behavioral hurdle. Assuming that there is a discriminatory event, then the first question is "Is the event interpreted as discrimination?" If the answer is yes, then the next question is

"Is the event interpreted as an emergency?" If the answer is yes, then the next question is "Does the observer take responsibility?" If the answer is yes, then the next question is "Does the observer identify a response?" If the answer is yes, the next question is "Does the observer take action?" And if the final answer is yes, then the outcome is to confront the discrimination. If the response to any of the questions is no, then the outcome is not to confront discrimination. Not-for-profit leaders can become trained in this model so that they act to address and confront discrimination in their workplaces and beyond.

Besides becoming culturally competent themselves, leaders need to create organizations that are culturally competent so that they can attract and retain a diverse staff and volunteers. Leaders should begin with an initial audit of the level of cultural competency in their organizations and then engage in cross-cultural training for the staff and volunteers. In addition, leaders need to ensure that the organization's symbols are culturally appropriate. It is important that a commitment to diversity and cultural inclusion are incorporated into the organization's mission and values (Del Castilla & Zalenski, 2008). Not-for-profit organizations have been urged to create a senior role of diversity officer as one way to improve diversity and to signal its importance (Asirvatham, 2007). Leaders need to be able to deal with the inevitable conflict that will arise from the diversity of cultures and thoughts and serve as boundary spanners within their organizations and with the organization's stakeholders (Del Castilla & Zalenski, 2008). Leaders need to model the way, create succession plans so that their values continue after they leave, look out for diverse talent, and celebrate diversity (Anft & Joslyn, 2007). Furthermore, it is vital that a commitment to diversity and inclusion shape the values of the organization. Recent research on the basis of volunteers' commitment to their jobs highlighted that the greatest motivating factor was values. When volunteers are matched with jobs that are congruent with their values, they are likely to be happier and to continuing volunteering (Upsher-Myles, 2007).

According to Lipman-Blumen (2002), leaders must learn to integrate two opposing tensions—interdependence (e.g., overlapping visions, mutual problems, and common goals) and diversity (e.g., diverse nature of individuals, groups, and organizations). Leaders must face, address, and integrate the two and develop their ability to be connective. The world has now become so connected that leaders need somehow to understand and address the paradox of connection and difference. According to Lipman-Blumen (2002),

> [Unlike] individualistic leaders before them, connective lead ers, can see the overlap between their own visions and those of other leaders. Eventually, through joint action on even small problems, stereotypes of opponents often soften, empa thy sprouts, and the common ground expands. (p. 91)

Connective leaders are characterized by six key competencies:

1. Being political, but ethical, savvy
2. Displaying authenticity and accountability
3. Engaging in a politics of commonalities, which is inclusive
4. Thinking long term and acting short term
5. Leading by expectation
6. Pursuing a quest for meaning

Being a connective leader is not easy; however, as not-for-profit leaders work in a diverse and interdependent culture, the connective leadership model gives both guidance and comfort as they navigate the uneven and unpredictable terrain. The idea of connective leadership seems to capture the spirit of *ubuntu*, an African word for which we have no North American equivalent. According to Tutu (2009),

> Africans have this thing called UBUNTU. It is about the essence of being human, it is part of the gift that Africa will give the world. It embraces hospitality, caring about others, being able to go the extra mile for the sake of others. We believe that a person is a person through another person, that my humanity is caught up, bound up, inextricably, with yours. When I dehumanise you, I inexorably dehumanise myself. The solitary human being is a contradiction in terms and therefore you seek to work for the common good because your humanity comes into its own in belonging.

Integrative Thinking for Diversity

Plato's observation on the role of introspection and critical discourse in enabling personal and professional development has relevance for the not-for-profit sector. It points to why approaching diversity from an integrative frame is important: Social innovation is facilitated when individual and organizational actors are able to develop common standards of critique and debate in a genuine quest for newer, more robust models with the potential to increase the sector's contributions.

One essential prerequisite to capturing all the value that comes from the not-for-profit sector is to harmonize the potentially disparate understandings of the value of diversity. This is a critical first step. To take on the big, tough questions of our age—such as poverty reduction, equal opportunity employment, accessible education, global health solutions, environmental sustainability, and social exclusion, to name only a few—the not-for-profit sector must have a framework that promotes equity of voice regarding idea generation and the subsequent program design and evaluation. This, however, is much easier said than done, as the demands of funders and stakeholders are often quite divergent. On the one hand, activists and community organizations are reacting to the harsh realities on the ground. Meanwhile, the business sector, which is becoming an increasingly important partner in social transformation, demands the metrics of success that demonstrate a systemwide return on investment. This tension has led to the emergence of a new cadre of leaders, social entrepreneurs, who try to marry the best of social mission and business practice; two examples are the late actor Paul Newman and Jeff Skoll, founding president of eBay.

In his *Dialogues*, Plato presents a powerful argument for the necessity of a community of practice that engages in critical thinking when he notes that it

> is in the rubbing together of these [ideas], each with the other names and definitions, and things seen and sensed, . . . testing them in arguments with goodwill and questioning and answering without jealousy, there flashes forth the light of intelligence and reason with respect to each thing. (Cited in Desjardins, 2004, p. 212)

The philosopher's choice of metaphor ("flashing forth") is an evocative one. In our view, a reasonable interpretation is that Plato was speaking of diversity of thought, an emergent yet incredibly important area in social transformation. However, one of the obstacles to the articulation of unconventional approaches within organizations is self-censorship. Self-censorship is often a result of a fear of judgment by others within the organizational context. Only when leaders set the tone by engaging difference as a source of a positive, creative tension can the stigma around raising unconventional ideas be lessened. Integrative thinking is one tool that enables leaders to so do.

Integrative Thinking

Integrative thinking is the ability to face the tension between opposing models so that we do not pick one but we generate a creative resolution or model. As Martin, the thought leader on integrative thinking puts it,

> The new model contains elements of the individual models but is superior to each. This means that Integrative Thinkers are model creators not model takers. . . . It means that whenever you face a decision between two options, don't think that your job is to choose: think that your job is to create a better option. (Dcontinuum, 2009)

Integrative thinkers have several distinguishing characteristics: (a) they take a very broad view of what is salient and do not mind dealing with messy, complex problems; (b) they do not flinch from considering multidimensional and nonlinear causal relationship; (c) they do not break down problems to work on each component separately but keep the entire problem in their minds as they work on the problem; and (d) they will look for creative ways to resolve the tension, rather than accepting trade-off (Martin, 2007, pp. 41–43).

Being an integrative thinker is not easy. However, Martin (2007, pp. 144–157) has developed some tools that can help us become integrative thinkers. The first tool is generative reasoning, which is a process that asks not what is but what might be. Generative reasoning is useful for helping us develop frameworks for addressing creative tensions. The second tool is causal modeling, which helps us understand the nonlinear and multidirectional links between relevant variables. Martin illustrates the tool of causal modeling by describing the pioneering work of Taddy Blecher, founder of CIDA City Campus in South Africa. Blecher built a causal model that helped him go from the existing state of disadvantaged, disempowered black youth who had neither hope nor opportunity to his desired end state that they would have self-esteem and opportunity. The third tool is assertive inquiry, which requires us to explore opposing models and, in particular, models that oppose our own. Used together, these tools should help leaders better understand the diversity and the complexity of the not-for-profit sector but also become more agile thinkers. In essence, agile thinkers have growth mind-sets (Elmhirst, 2006). Dweck (2006), who developed the distinction between fixed and growth mind-sets, describes the individual with a growth mind-set as follows: "Because you believe your basic talents and abilities can be cultivated, the whole goal is to learn and improve" (Elmhirst, 2006). Agile thinkers have a growth mind-set, coupled with a stance of openness, and are therefore better able to understand and face the messy realities in which they work.

Maytree Foundation Initiative: DiverseCity

The Maytree Foundation was founded in 1982 in Toronto, Canada, and began working on the issues of multilingual literacy and refugee settlement. Since then, it has expanded its work such that it now has a significant role in generating social action and policy on making Canada a more diverse and inclusive country. The foundation sees its role as

> [investing] in leaders to build a Canada that can benefit from the skills, experience and energy of all its people. Our policy insights promote equity and prosperity. Our programs and grants create diversity in the workplace, in the boardroom and in public office, changing the face of leadership in our country. (http://www.maytree.com)

In 2005, the foundation launched its abcGTA initiative, which was renamed DiverseCity: The Greater Toronto Leadership Project in 2008. The foundation works in partnership with Toronto City Summit Alliance to support the initiative. DiverseCity consists of a group of projects led by prominent community individuals "who recognize the potential and value of diversity in leadership for the region's social and economic prosperity" ("DiverseCity

Counts," 2009). The DiverseCity initiative has eight components: (1) Nexus, a speakers' series; (2) Fellows, fellowships for rising leaders; (3) onBoard, a program to match diverse candidates with governance positions; (4) Civic Leadership, a program to equip new leaders to run for office; (5) Voices, which connects subject-matter experts to media; (6) Advantage, which builds a research base on the advantages of diversity; (7) Perspectives, a discussion forum; and (8) Counts, which tracks progress. Its first DiverseCity Counts report found that visible minorities are underrepresented in the most senior leadership positions in the greater Toronto area. About 45% of the population in the greater Toronto area are visible minorities. In particular, among the largest charitable organizations and foundations, visible minorities represent only 8% of executives and 14% of board members ("DiverseCity Counts," 2009, p. 2).

While the initiative is still in its early stages, it shows promise as it provides a systemic and multipronged approach to increasing diversity of participation in the community. In addition to the research that DiverseCity is sharing, there are diversity resources available from the Annie E. Casey Foundation, the Center for Assessment and Policy Development in New Jersey, and the Cultural Competency Initiative, which is a project of the Alliance for Nonprofit Management, among others ("Advice on Diversity," 2007).

Summary

Both leaders and organizations in the not-for-profit sector face significant challenges if they are to become diverse in practice and thought. This chapter has outlined the nature and the challenge and provided some intellectual tools to assist. The sector needs talented young people as it is facing a significant leadership deficit in North America. The sector needs to attract, to retain, and to develop a diverse pool of young people who have the passion and the intellectual rigor to confront and address social injustices. As Schmitz and Stroup (2005) urgently and correctly note,

> [All] parts of the nonprofit world must unite to develop additional ideas and push for resources to be directed [toward] the most promising approaches. At a time when nonprofit groups are being asked to do more with less, steps should be taken to assure that a talented and diverse work force is available to ensure the future effectiveness and growth of organizations working to improve communities at home and abroad.

ATTRACTING LEADERSHIP FROM ACROSS DIVERSE COMMUNITIES

HEPHZIBAH V. STRMIC-PAWL

University of Virginia

The United States is increasingly recognizing the importance of an inclusive, diverse, multicultural environment. From the political scene to multinational corporations to small nonprofits, the message of diversity is emphasized. Unfortunately, although many nonprofits can identify the importance of diversity, there is not much research that is directed at the nonprofit structure and culture. Questions ranging from "what is diversity" to "where do you find diversity" can be difficult for both new nonprofits and those celebrating their centennial. This chapter provides the basics and some specific models for nonprofits desiring to incorporate diverse leadership into their organizations. First, definitions of diversity are provided, followed by a discussion of why diversity is important. The next two sections detail general strategies for recruiting diverse leaders and four specific models for approaching diversity. These models are followed by a checklist of factors to avoid and to encourage. Prior to the conclusion, a brief section, targeted at undergraduate students, suggests some avenues for beginning their education on and experience with diversity while in school. This chapter concludes with possible areas for future research regarding diversity issues.

What Do We Mean by Diversity?

The term *diversity* is used quite frequently, but what do we really mean when we say diversity? How are we to know when we have achieved diversity? One way to define diversity is to divide it into demographic and functional diversity. Demographic diversity refers to composition, such as having equal numbers of men and women or having populations from ethnic groups proportional to the served community. Functional diversity, on the other hand, is having a variety of voices and perspectives in the policy-making processes. Thus, one could be functionally diverse by accounting for multiple communities' concerns without being demographically diverse; ideally the organization should have both types (Daley & Angulo, 1994).

Another way to categorize diversity is by observable attributes and underlying attributes. Observable attributes are those that can usually be easily detected, such as race, gender, and age, whereas examples of underlying attributes are attitudes, values, and socioeconomic status (Brown, 2002). In a similar vein, one can assess diversity via primary versus secondary characteristics. Primary dimensions are associated with prominent identity factors including age, ethnicity, gender, mental/physical characteristics, race, and sexual orientation. In comparison, secondary dimensions can be education, family status, military experience, organizational role and level, religion, first language, geographic location, income, work experience, and work style (Frusti, Niesen, & Campion, 2003).

Another type of diversity is cognitive diversity, which is evaluation of one's educational experience. Consideration is given to nontraditional education, the continual practice of education in and outside of a person's job field, and varied backgrounds in both for-profit and nonprofit organizations (Glasrud, 2003). Sometimes, a specific definition of diversity is not desired, but rather a general focus on diversity as difference is used. Difference can involve ethnicity, gender, sexual orientation, age, religion, class and economic status, parental status, or having a physical or mental challenge. Yet other differences can include private identities that vary such as recovering alcoholic or incest survivor (Delphi Consulting Group, 2007; Gitin, 2001).

Organizations can generally be placed into one of three types regarding diversity: monolithic, pluralistic, and multicultural. Monolithic organizations are mostly homogenous groups, which may have a few minorities but where culture is expected to conform to the majority. Pluralistic groups have achieved diverse representation, usually accomplished via specific recruitment efforts, but this diversity is not incorporated or valued in a meaningful manner. Multicultural organizations, the most successful type of diverse organizations, value diverse members, encourage all members to learn from one another, and incorporate some norms and values of the underrepresented groups (Cox, 1991).

Clearly, there are various ways of approaching and defining diversity. However, there are always two important points to consider when evaluating diversity. One, do not reduce diversity to just race and gender. Although race and gender are extremely important, they are not the only components to consider, and other less directly observable traits are necessary to incorporate. Two, assess what kind or type of diversity is needed or most relevant for each particular organization. A successful organization speaks to and represents its community needs. For example, an organization that targets immigrant communities may prioritize diversification based on Spanish dialects, geographic region, and socioeconomic class, while an organization that seeks to expand camp counselor diversity may focus on race, gender, and sexual orientation. In an ideal world, nonprofits would have equal representation based on numerous facets, but this goal is neither realistic nor accomplishable. Organizations' diversity plans should primarily be focused on their particular culture, community, and needs.

Why the Focus on Diversity?

Diversity and multiculturalism are big buzz words in today's economy, and both individuals and organizations are increasingly expected to know that diversity is important and why. Some of the reasons are more obvious. For example, in regard to race, the United States has elected its first black president; nonwhite populations are expected to almost equal the white population by 2050, and the 2008 U.S. Census population projection states that those who identify with two or more races will triple by 2050, from 5.2 million to 16.2 million (Bernstein & Edwards, 2008; Cheeseman Day, n.d.). In regard to gender and sexual orientation, women are no longer restricted to the household and are participating equally in many sectors of the labor force, and gay and lesbian families live in 99.3% of all counties in the United States (Human Rights Campaign, 2001; U.S. Department of Labor, 2008). Moreover, based on a survey of 704 foundation boards, only two in five foundations have one or more people of color on their boards. The majority of minority board members identified in the surveys serve on community foundation boards rather than on family foundation boards (Bryson, 2004). The demographic changes in and political movements associated with race, gender, and sexual orientation help to make clear why people from these groups must be involved, but other facets of and reasons for diversity also need consideration.

The reasons to recruit multiple types of diversity and to create a supportive atmosphere for diversity are many and prudent for developing a successful and sustainable organization. On a base level, a diverse organization invites different ideas and perspectives that can lead to innovation, creativity, and problem solving (Brown, 2003). Specifically in regard to nonprofits, board diversity is often a priority. Board diversity can help in reaching a variety of constituents and donors, attaining fair representation of constituents, reflecting organizational values, accomplishing requirements of funders, and expanding knowledge to make optimal policy decisions (Bryson, 2004; Gitin, 2001).

In addition to the organizational benefits derived from diversity, there is also a moral facet to diversity. Diversification needs to be understood within the long U.S. history of tumultuous struggles between those *with* and those *without.* Diversity means providing everyone with a voice, particularly those who have been silenced in the past, for if philanthropy is supposed to express "love of humanity, then how broadly or narrowly that humanity is defined opens or closes the doors of diversity" (Gitin, 2001, p. 79). And, as Gilbert Casellas of Dell, Inc., says, "Frankly, the argument about making a case for diversity is as silly as making a case for oxygen or gravity, that surround us each and every moment. Diversity is an inescapable fact of life" (as cited in Berman & Gunderson, 2008, p. 4). Attaining a strong understanding of why diversity is important and necessary is the first step in a diversity plan—moving forward with diversity initiatives solely because one feels pressure to do so or because one is told to do so will most likely result in frustration and defeat.

Attracting Diverse Leaders

An organization can follow some general strategies to attract leaders from diverse communities. These strategies can be organized into internal activities and external activities or, in other words, actions to take within the organization's culture and workings and actions to take outside in the community. Internal and external general strategies are described in the next section.

Internal Activities

Before an organization even begins job postings or other recruitment activities, much work needs to be done with both the material and immaterial facets of the nonprofit. Four main steps can be proposed: (1) assess and evaluate the organization, (2) plan for changes, (3) use leaders, and (4) create a special committee(s) on diversity. The first step is to assess the history and context of the organization: What is the history of diversity at the organization? What methods were previously used to increase recruitment? What does the current situation look like? Do not be afraid to provide answers that are positive, negative, or perhaps mixed. Having an honest assessment of where the organization has been and how it appears today will greatly aid in creating a realistic diversity plan (Daley, 2002).

Within this assessment, one might consider particularly evaluating the *cultural competency* of the organization—a set of behaviors, attitudes, and policies that lets people work together in cross-cultural situations (Del Castillo & Zalenski, 2008). Focus should be on barriers and avenues that permit people to work together. Sometimes, such an assessment can lead to acceptance of unearned privileges such as white privilege (social and economic benefits that are strongly correlated with having phenotypical features that are deemed white), upper-class privilege, male privilege, heterosexual privilege, and able-body privilege (Bryson, 2004). People can be reluctant to recognize or accept such privileges, but this process is often essential; privilege assessment helps in recruiting *and* retaining diverse leaders as denial or unfair use of these privileges will likely make the targeted marginalized communities feel unwelcome. Gitin (2001) specifically notes the crucial need for white boards to confront and accept their white privilege; this often requires much self-education and training workshops. A good example of this practice is the "Changing and Healing Racism" workshops in the W. K. Kellogg Foundation, which "has a general mission to be anti-racist" (as cited in Berman & Gunderson, 2008).

After evaluation, the next step is to plan for the changes that will take place: Identify key actors and their roles, create a conceptual framework for board diversity, account for multiple possible outcomes and changes, and ensure proper authorization for the diversity plan. The above steps will aid in defining and analyzing the problem, setting specific goals, and developing an actionable plan (Daley, 2002). The plan for recruitment usually necessitates a change in governance documents and processes. Governance documents such as mission statements, grant guidelines, and job postings should reflect the goals of diversity and the organization's inclusiveness (Bryson, 2004; Delphi Consulting Group, 2007). A good example of this point can be seen via the California Endowment, which accomplishes this by posting a Diversity Statement and Plan on its website (Delphi Consulting Group, 2007). However, before changing documents or posting significant website changes, it is probably best that everyone internal to the organization be consulted and at least notified of the intentions. Moving forward on a diversity plan that without everyone's understanding and agreement may lead to some members feeling alienated, a particularly detrimental sentiment to foster in nonprofits.

This point leads to the next step, using leadership to help get everyone on board. It is imperative that the leadership of the organization be proactive and supportive of the diversity agenda. Effective leaders have the ability to form the cultural core of an organization and can transmit messages on diversity goals via teaching, coaching, role modeling, reward allocation, recruitment, and promotion (Jaskyte, 2004). Leaders "can motivate employees to pursue goals that may not have otherwise been attempted, alter employees' values through changes in the psychological contracts (unwritten commitments made between employees and employers), and encourage the need for change" (Jaskyte, 2004, p. 154). Implementing a diversity plan is also a great avenue for fostering new leaders; consider putting new leaders into place who are a part of the targeted community. Using leaders will be particularly helpful if the ideas or investment needed is new to the organization. Remember, "people drive policies, not the other way around" (Bryson, 2004).

The fourth main step is to form official committees or councils to direct the diversity initiatives. Committees or councils assume the bulk of planning and overall act as the directors and advisers on the plan. When specifically trying to recruit a new board member, a nominating committee is often advised. Independent nomination committees screen potential applicants, conduct interviews, and provide recommendations to the full board for candidates (Brown, 2003, 2007; Mccrory, 2004). It is central that the members of these committees have a firm grasp of what diversity is and why the plan is being undertaken. In this vein, it is important not to conflate diversity expansion with affirmative action. Gilbert, Stead, and Ivancevich (1999) make a valuable contribution to this discussion by offering a distinction between affirmative action and what they term *diversity management.* Affirmative action is recruitment of specific individuals, most often guided by quotas. Diversity management, on the other hand, is the recruitment of targeted groups *and* a holistic change in the demographic and cultural facets of the organization. Achieving such change requires conscious efforts on the part of management to welcome a new diverse atmosphere, instead of merely adding people who look different.

After evaluating and working on these four steps, it is time to begin on external activities.

External Activities

The vast majority of work in attracting diverse leaders is done inside the organization as it sets the solid foundation for successful recruitment and retention of diverse individuals. Only after (a) the leaders of the organization have undertaken the diversity plan, (b) the culture of the organization has been primed for change, and (c) a clear plan with explicit goals and dates is set in place, should recruitment efforts begin. Attracting diverse leaders entails looking in new places, considering locations overlooked in the past, and capitalizing on informal networks (Brown, 2007; Daley, 2002). Two main tactics can be used to attract individuals (although they are not necessarily mutually exclusive). One, work with a community/organization on its projects and find a way to serve that community—this route gives trusting relationships a chance to develop, leading to later possibilities for recruitment. Providing service and help to others as the *first* step, before asking for one's owns desires, usually works best. Two, place advertisements and send e-mails to the desired targeted communities. For instance, you can send e-mails out to organizational or community listservs or put job advertisements in local shops and newspapers. Note, the content and layout of advertisement and recruitment messages can affect successful recruitment; ensure that a diversity mission statement is written and that the wording of the advertisement reflects the goals of the diversity plan. In particular, Perkins, Thomas, and Taylor (2000) found advertisements intended to recruit racial minorities were more successful if they portrayed racial diversity (the portrayal of racial minorities had no adverse effects on whites). As you continue the recruitment process, remember to be open to changes in communities because communities are living, changing entities and require constant attention (Bryson, 2004; Del Castillo & Zalenski, 2008). Once potential candidates are discovered, avoid being quick to dismiss them based on seemingly necessary criteria. A part of attracting diverse leaders is handling diverse backgrounds, so if need be, create "customized commitments" regarding time restrictions, missed meetings, and child care. Furthermore, hiring the best person sometimes means providing training. If the position is for a board member then try not to require large financial donations (Del Castillo & Zalenski, 2008; Mccrory, 2004).

If recruitment of the desired individuals is not immediately successful, do not lose hope or permit frustration to build. People from socially marginalized groups have often been excluded from nonprofit structures in the past and are likely to have anxiety about joining. Also, many times, marginalized communities already have their own organizations that reflect their specific needs, such as Hispanics in Philanthropy (Gitin, 2001). On the whole, developing trust and relationships with diverse communities requires a firm commitment, time, and patience. Depending on the history of the organization, the climate of the community, perceptions of trust, and the loftiness of the diversity goals, successful incorporation of diversity can take anywhere from a few months to years.

Models for Attracting Diverse Leaders

This section outlines four models for attracting diverse leaders: the diversity competency model, an organizational approach, a grounded theory approach, and board diversity-value added. The first two models are directed at for-profit organizations, but the tactics and strategies can easily be transferred to nonprofits. As stated before, the depth of research on diversity in nonprofits is lacking, so it is incumbent on the nonprofit sector to take some pointers from the for-profit world, where more research on recruitment models has been done. The next two models, a grounded theory approach and board diversity-value added, are targeted at nonprofit structures. The grounded theory approach centers on forming enduring relationships across diverse people. The second model is guided by J. Rutledge, one of the first people to focus on diversity in nonprofits.

The Diversity Competency Model

Diversity competence is "an individual's ability to respect each person's uniqueness" (Frusti et al., 2003). This model was developed by Patrick Clayton, but the following information on using this model is derived from the article, "Creating a Culturally Competent Organization" by Frusti and colleagues. (2003). The model is based on four results-oriented goals: marketplace success, ability to compete, performance, and increased capability of staff. These goals are achieved via four key components: drivers, linkages, cultures, and measurements. Drivers refer to how an organization leads and responds to both internal and external forces. In this realm, leaders are evaluated on setting and directing diversity plans, including values, goals, and systems. Linkages are just what they sound like: how diversity is integrated (or "linked) throughout an organization. Here, the system should be judged to see if it supports the diversity goals and requirements; an organization's documents, policies, performance review tools, and guidelines should be appraised to make sure they support diversity. The third element is culture or how an organization creates and maintains an environment that reinforces desired behaviors. In regard to diversity, *culture* refers to how a diverse staff is developed and used. Four skills are needed to foster a successful culture. The first one is human resource diversity planning, which puts diversity goals and planning into specific recruitment and retention practices. The second skill is development of diverse employees by supporting people to help them reach their highest potentials. Diversity education, training, and development is the third skill; this factor focuses on employees' diversity awareness and biases. The fourth and final skill is development of a respectful work environment. Here, the concern is to create, maintain, and improve the environment and climate of the organization so that all people feel welcome and integrated. The diversity competency plan also focuses on measurement. It is intended to be evaluated for continuous progress and results, with scores assigned to the approach, deployment, and results of the diversity initiatives. Integrating the four main elements and measurement tools can guide nonprofits toward successful recruitment and retention plans.

An Organizational Approach to Creating Diversity

Allen and Montgomery (2001) use an organizational framework to elaborate on steps that an organization must take to accomplish diversity goals. This approach focuses on three steps: unfreezing, moving, and refreezing. Unfreezing refers to the disruption of the current culture of the organization. All members have to learn why diversity is important and the benefits that can be accrued by increasing diversity. Managers, in particular, should get sensitizing training if necessary as they need to be symbolic messengers of support for expanding diversity. The goals of the diversity plan should be clearly articulated and explicit as well as tailored to the organization's specific needs.

After unfreezing the culture, the organization should embark on "moving" or taking the steps necessary to achieve cultural change. Several different types of programs should be undertaken to aid in recruitment, such as internship programs, training/education programs, and mentoring and career development programs. Coinciding with this recruitment, organizational members should receive diversity awareness and sexual harassment training.

The third and final step is refreezing. This step ensures the cultural changes remain stable and the work to promote change is not lost. Existing procedures and policies should reflect diversity goals as well as job recruitment, compensation, and evaluation. Programs to survey and hold managers accountable for sustained diversity should be put in place—bonuses, compensation, advancement, and other rewards that are linked to diversity initiatives can be particularly effective in encouraging more growth and maintaining changes. The symbolic labels of unfreezing, moving, and refreezing in the organizational approach help to clarify what is undertaken in change—change cannot take place until there is fluidity, and change will not remain unless it is solidified in place.

A Grounded Theory Model in Voluntary Organizations

The following model is not about internal organizational assessment and recruitment practices as found in other models; instead, it focuses on how to build social capital between diverse individuals, which permits long-standing and trusting relationships. The intention of this model is to inform people what factors are important for creating relationships, especially across strained racial/ethnic lines. The model is set forth by J. Y. Weisinger and P. F. Salipante (2005, 2007). Organizations may face a particular set of problems when trying to attract and retain people from traditionally underrepresented racial and ethnic groups. Nonprofits are often honest in intent and motivated by their mission to improve diversity, but a lack of shared experiences and skills to communicate with others can be barriers to success. Thus, initial ties and relationships can be made while the necessary sustained relationships and strong social capital are not created.

Weisinger and Salipante put forth a two-pronged process model, processes 1.1 and 1.2 and processes 2.1 and 2.2, to accomplish meaningful interactions between racially diverse members. The first prong centers on increasing the numbers of the targeted group, and the second prong centers on turning these numbers into relationships where all are incorporated into the organization's mission and activities. Process 1.1 is labeled attraction through bonding whereby the targeted individuals are recruited and put into homogenous subgroups within the organization. Process 1.2 or organizational adaptation consists of the organization gradually modifying practices to be more inclusive of the needs and preferences of the targeted groups/subgroups. These two processes achieve more diverse representation and communicate the organization's diversity mission to the targeted communities. Processes 2.1 and 2.2 build on this foundation. Process 2.1, recategorization, entails disrupting the homogenous subgroups, incorporating them into the larger framework, and then creating diverse mixed groups. Process 2.2, the performance of organizationally distinctive routines, results in the recategorized mixed groups conducting practices that embody the organization's mission and values. As a part of processes 2.1 and 2.2, organizations should create interactions whereby individuals are seen as equals, and learning from each other is emphasized. The overall goal of this model is to take small sequential steps that lead toward creation and maintenance of pluralistic interactions across a diverse range of individuals to foster relationships built on mutual respect and trust.

Board Diversity-Value Added!

Perhaps one of the best-known and respected advisers on diversity improvement for nonprofit organizations is Jennifer M. Rutledge. Rutledge (1994) published *Building Board Diversity,* the first major publication that explained the necessity for diversity improvement and how to attain it. She is now partner and vice president of Delphi Consulting Group, Inc., and continues to lead diversity workshops. The following information does not represent a specific model, per se, but it outlines Rutledge's approach to and steps for accomplishing an effective and welcoming diverse organization. This information is derived from the webcast *Board Diversity Value Added* (Delphi Consulting Group, 2007).

First and foremost, emphasis is given to the ideas of both diversity (visible and invisible difference) *and* inclusion, "the practice of welcoming, engaging, and embracing all who support the organization's mission, vision, core values, plans and priorities in meaningful and significant ways" (p. 8). Five steps and strategies are a part of a typical cycle of building board diversity, and all five of these steps must be supported and directed by the *drivers,* also known as the leaders. Drivers must possess 6 Cs: commitment, clarity, communication, coordination, competence, and courage. The five strategies are: (1) building commitment and organizational assessment, (2) assessing and planning, (3) building awareness and acceptance, (4) taking action, and (5) evaluating progress.

In the first step of the cycle, it is vital to begin with the organization's structure by considering the organization's mission, vision and values, policies, plans, goals, priorities, processes and systems, requirements and standards, and traditions and rituals. Step 2 is planning and assessment, which includes articulating clear definitions and understandings of goals and terminology; linking plans with the organizational mission, policies, and plans; aligning resources; creating strong communication; and building dedication to a long-term process. Make sure to pose questions such as: Who, in particular, in the organization is going to be responsible for each task? What are the desired results? What are the most effective and doable strategies? What opportunities and/or challenges might be encountered?

Several tips can help planning and assessment go smoothly: create a diversity task force; research the community; use board retreats to develop awareness, direction, and cohesion; make necessary changes to policies, positions, and physical facilities to ensure they are reflective of an open and welcoming climate; and include every board member in the plan. The diversity task force, in particular, is helpful as it can be responsible for setting expectations, providing authority, assigning staff to jobs, and designing a budget.

Step 3, building awareness and acceptance, mostly involves education, training, and orientation of all members. It also might include linking the diversity plan to other campaigns, developing a list of community leaders, informing funders and sponsors of the goals, and working with other organizations that have diversity initiatives. The fourth step of the cycle, taking action, is clear: Take action. Put the committees and plans to work, and begin exploring networks to find potential candidates with a focus on creating mutually beneficial, two-way relationships. Candidate searches can start by accessing online resources, volunteer centers, personal contacts and networks, professional associations, colleges/universities, corporations and local businesses, and vendors/suppliers.

The fifth step—although not the last step as this model is a cyclical process—is evaluating progress. The evaluation stage is critical because both successes *and* failures need to be considered. This stage is partly preparation for the next cycle of diversity initiatives so paying particular attention to what did and did not work or what was and was not tried can aid in coordinating the next plan. This step should also include celebration. Communicate to the organization and all of its members what goals were attained and highlight those committees and individuals deserving of appreciation and recognition. Moreover, make sure that the organization's targeted communities know of the successes: Accomplishments can help build legitimacy and respect. In this model, as in virtually all models, remember that diversity is a long-term process that requires consistency and persistence.

Retention

The previous sections outlined strategies for successful recruitment of individuals, but attracting diverse leaders is only the first part of the work that needs to be done. Many organizations learn how to be effective in recruitment but are later faced with disappointment as people choose not to stay or relationships between members become strained. However, some tips can help with retention. Virtually all the works cited in this chapter, along with major publications on diversity, will mention some or all of the following suggestions.

Factors to Avoid

1. Avoid treating the diversity plan as a fad. Honest diversity initiatives will be treated with respect and will not need an automatic return on investment. Sometimes, the initial recruitment of people will take a longer time than expected or it may take some time before the benefits of incorporating diversity are observable. Be patient, continue to assess the organization's needs, and modify steps as necessary.

2. Avoid conflating numerical diversity goals with real people. Diversity is not a thing; diversity *is* real people's lives and feelings. Diversity is not merely adding numbers to ensure a certain racial or gender quota. It is honest inclusiveness and relationships with people from a wide spectrum of experiences and with many identities.

3. Avoid asking an individual to speak for an entire group. For example, a gay man cannot speak for the entire community, and a woman in a wheelchair cannot represent the entire physically challenged community. In a similar vein, do not peg a person with just one identity.

One person can have several identities according to, for example, gender, college experience, and foreign language ability. Members should be consulted for their opinions, but they should not be treated as an expert authority on all factors related to one of their identities.

4. Avoid recognition of only Christian and other dominant holidays/celebrations. Recognize and be supportive of all members' traditions and holidays. For example, do not schedule a retreat during the week of Ayyam-i-ha in the Bahá'í faith or have a luncheon during Yom Kippur in the Jewish faith.

Factors to Encourage

1. Make sure that all language, displays, physical facilities, and policies reflect the organization's diversity initiatives.

2. Consider linking diversity initiatives to bonuses or awards. Recognition for achieving goals helps maintain and encourage continued success.

3. Ask people how they feel. Sometimes, the most obvious actions are not done. Ask people how they feel, what concerns they have, or what fears they might have. Taking the time to touch base and provide validation for people's thoughts and experiences can go a long way in making people feel welcome.

4. Celebrate successes. Organization-wide celebrations are a great way to help everyone feel involved and create a positive space for people to interact. In addition, advertising successes through public venues such as websites or newsletters lets others learn about the organization and may lead to later involvement.

5. Treat diversity as a core value of the organization. If respect and trust for a diverse range of people is consistently placed as a priority, it will soon be a part of the culture and assumed expectation of the organization.

Preparing for a Diverse World

For those desiring to work or serve in a nonprofit organization, the expectations for cultural and diversity awareness may seem scary. Fortunately, as nonprofits have increasingly realized the necessity of diversity, so have higher education institutions (Antonio, 2001; Chang, 2002). Thus, due to new commitments by colleges and universities to expand diversity and cultural awareness, there are now several ways that students can begin their diversity education while on campus. Some routes students can consider are: diversity-related classes, diversity workshops, and community service projects.

Diversity-related classes include courses on race and ethnicity, gender, queer theory, multicultural education, and class stratification or, in general, classes focused on traditionally marginalized communities. Such classes can increase cultural knowledge, appreciation for cultural pluralism, and critical thinking skills. It also generally aids in understanding multiple types and levels of diversity (Chang, 2002; Hurtado, 2001). Moreover, in some cases, these classes have also been shown to help with leadership abilities (Hurtado, 2001). Diversity workshops that are targeted at assessing privilege and highlighting social inequality can also help (Hu & Kuh, 2003; Whitt, Edison, Pascarella, Terenzini, & Nora, 2001). Many colleges/universities offer workshops throughout the year, or student organizations may be dedicated to increasing cultural awareness and promoting positive relationships with people from different backgrounds.

A third formal route to help with diversity preparation is engagement with community service projects. On the vast majority of campuses, there are student organizations that direct coordinated visits to communities to help with a variety of tasks—from food banks to construction to child care (Rhoads & Neururer, 1998). In addition, many higher education institutions now offer alternative spring break or a similar program where students travel (both nationally and internationally) to work for communities in need. For example, Habitat for Humanity of New Orleans, Louisiana, reported that about 3,500 students from more than 100 schools volunteered with them during 2009 ("Over 3,500 Students," 2009). Alternative spring break programs have been successful, with people enhancing their sense of self, increasing their understanding of community, developing their commitment to service, and improving their ability to work with people from diverse backgrounds (Rhoads & Neururer, 1998). Community service can be a good way to expand one's cultural education while also providing much needed volunteer hours.

All three of these routes and others that may be available on particular campuses should be used to prepare for the diverse nonprofit sector. The central point to remember is that stepping out of one's comfort zone is an important step. In general, interracial interactions and nonhomogenous racial friendship groups result in cultural awareness, commitments to racial understandings, and better leadership abilities (Antonio, 2001). Whitt and colleagues (2001) find,

> Across the first three years of college, independent of all other influences, interactions with diverse peers, including conversations on topics associated with differences and which challenged previously held ideas and beliefs, were associated with significant gains in openness to diversity and challenge. (p. 195)

Moreover, while such interactions are shown to have a positive effect on all students, they are more helpful for white students (Hu & Kuh, 2003). If unsure of what options exist on their particular campus, students can check with their multicultural office or student organization office.

Further Directions

Diversity is increasingly becoming more important in the nonprofit sector. Traditionally marginalized communities, through struggle and federal governance, are gaining more education, thus making them prime for leadership roles. This chapter provides the fundamentals for any nonprofit that seeks to expand diversity among its members and leaders—the path may be long and arduous, but the benefits are large. Some key lessons to glean from this piece are: expand the terms of diversity—do not restrict diversity to only observable or primary attributes; foster cultural change inside of the organization before beginning recruitment measures; develop special diversity committees for researching, advising, and/or recommending hires; go beyond the usual networks to find new candidates; remember diversity is not a thing—it is working with people's lives; and work on measures to maintain a welcoming environment so that a pluralistic atmosphere thrives.

Future research concerned with diversity initiatives in nonprofits has many options. Recruitment and retention measures specifically designed for nonprofits are currently not very specific. Researchers may look into how strategies differ depending on the size and type of nonprofit. Another avenue for inquiry is evaluating how current changes in the political scene, such as the ending of affirmative action in many locales and the election of the first black (or biracial depending on your categorization) president, is affecting ideologies and actions toward diversity measures in nonprofits. Views on whether social and economic variables of traditionally marginalized communities are getting better and whether race relations are improving could be having an impact on diversity measures. In addition, qualitative analysis and ethnographic interviews of nonprofits with varying diversity initiatives could lend much to understanding which strategies are and are not working. These are just a few options for further research. The salience and importance of diversity call for a great level of attention from multiple lenses.

Leadership of Philanthropy Through African American Sororities and Fraternities

Marybeth Gasman
University of Pennsylvania

Halima Leak
New York University's Steinhardt School of Culture, Education, and Human Development

African American philanthropy is rooted in efforts to overcome centuries of discrimination. The history of black philanthropic giving demonstrates that those who gave throughout American history did so to help others in their own communities. In response to calls for action on the part of well-respected community members, African Americans contributed to causes that made change possible in their immediate surroundings. Black philanthropy has been a response to oppression. In the past, philanthropy responded to slavery and segregation. Today, black philanthropy responds to discrimination in education and the workplace. African American sororities and fraternities are among the most prominent philanthropic organizations in the black community. These organizations have, since their creation, been dedicated to service, specifically self-help and educational achievement.

This chapter examines the philanthropic efforts of black Greek letter organizations (BGLOs) to sustain the livelihood of African Americans. BGLOs, in myriad ways, have worked to serve and shape their community. These organizations can teach us a great deal about the civic leadership and contributions to public life among African Americans. Quite often, the service of these venerable organizations is ignored by scholars. While their insular character is often cited as a reason for overlooking them, the fact that BGLOs have been passed over may stem more from the fact that they are viewed by many—especially those in white communities studying philanthropy—as social, not philanthropic organizations. This chapter also seeks to inform our understanding of the service orientation embedded in the soil that is BGLOs. First, it provides an overview of African American giving throughout history. Then, it examines the philanthropic leadership and contributions of African American sororities and fraternities.

History and Background of African American Giving

The tradition of giving tithes started during the colonial period, when free African Americans, mostly residing in the North, created churches to serve poor African Americans. In the words of C. Eric Lincoln and Lawrence H. Mamiya (1990) in their seminal book, *The Black Church in the African American Experience*,

> The tradition of mutual aid lay deep in the African heritage, which stressed a greater communalism and social solidarity than either European or American customs allowed. These incipient traditions of mutual aid and self help in the slave

> quarters were formalized and legitimated with the Christianizing of the slaves in the eighteenth and nineteenth centuries. (p. 242; see also Joseph, 1995)

The growth of a separate system of black churches gave African Americans the chance to create the "first black-owned and operated institutions" (Smith, Shue, Vest, & Villarreal, 1999, p. 10). Since their inception, black churches have been the most significant institutions involved in African American philanthropy (Byrd, 1990; Frazier, 1963, 1997; Lincoln, 1974; Smith et al., 1999). They have also been the main beneficiary of black philanthropic giving (Abbe, 2002). African American pastors are typically the most influential and well-known members of their communities, and these individuals instill an obligation to give to the church in their congregants (Abbe, 2002, p. 4).

Most African Americans learn at an early age that they have the responsibility to contribute to their churches. Through the use of personal engagement and the creation of a bond of trust, African American pastors communicate the needs of their churches and constantly encourage their parishioners to support the labors of the church (Lincoln & Mamiya, 1990). This sense of obligation to give has provided the foundation for African American social and civic movements in the United States, including the civil rights movement (Garrow, 1987). Black pastors were mindful of the impact of racism on economic mobility in the United States, and thus, they sought to build a firm financial base on which political and social change could happen (Anderson & Moss, 1999). Since their establishment, black churches have served as de facto community centers, providing money, services, and goods that were pooled and redistributed to various black communities (Higginbotham, 1993; Lincoln & Mamiya, 1990). In the words of Smith and colleagues (1999), "the creation and evolution of the black church has been the most significant factor in the political, social, cultural, spiritual, educational and philanthropic development of African Americans in this country" (p. 9). Hence, black churches are an important example of African American agency and action. Even though forced on blacks by white slave masters, Christianity became a means for black emancipation and revolution in the hearts and minds of black leaders (Anderson & Moss, 1999).

Created out of black churches, mutual aid societies were among the earliest organizations formed by African Americans (Lincoln & Mamiya, 1990). These societies started in the North and were usually founded by free blacks. In addition to meeting the religious needs of African Americans, mutual aid societies also addressed the physical and social needs. Established in 1787 in Philadelphia, the first mutual aid society was the Free African Society. It was created by the African Methodist Episcopal and the African Protestant Episcopal churches. Other organizations included the New York Society, the Union Society of Brooklyn, the African Union Society, the Wilberforce Benevolent Society, the Woolman Society, and the Clarkson Society (Smith et al., 1999). Eventually, the mutual aid societies developed into cultural, economic, and political societies that helped to move blacks forward. Under the guidance of these societies, African Americans banded together—relying on one another in difficult circumstances. These societies were the precursor to national organizations such as the Urban League and the National Association for the Advancement of Colored People (NAACP) (Lincoln & Mamiya, 1990; see also Franklin, 1992). Furthermore, influential black businesses such as the National Benefit Life Insurance and the Central Life Insurance companies can trace their origins to these mutual aid societies (Smith et al., 1999, p. 11).

Starting in 1775 with the creation of the Prince Hall Masons, fraternal organizations began to work hand in hand with local black churches. These organizations were primarily communal and social, but they were also dedicated to curing social problems and contributing to the larger community. They frequently garnered monetary donations and gifts in kind from their members for low-income women and children. African American fraternal organizations consisted of two kinds, including those that were black chapters of white organizations and those that were created expressly for African Americans. Blacks established their own versions of the Masons, the Odd Fellows, Knights of Pythias, Eastern Star, Household of Ruth, Foresters, Shriners, and the Elks. Those organizations created *by* African Americans *for* African Americans included the Grand United Order of Galilean Fishermen, the Colored Brotherhood and Sisterhood of Honor, the Friends of Negro Freedom, the International Order of Twelve, the African Blood Brotherhood, the Colored Consolidated Brotherhood, the African Legion, and the Knights of the Invisible Colored Kingdom. Many of the fraternal societies created a secondary group for women, such as the Daughters of the Eastern Star for Masons (Graham, 2000). Fraternal societies were most widespread in northeastern cities with substantial African American populations, including Boston, Philadelphia, and New York. These societies contributed to an African American culture of giving back and uplifting the race.

During the pre–Civil War period, black women devised a variety of means for supporting issues important to the community. For instance, they participated in fairs with white abolitionist women in support of antislavery initiatives. These African American women also hosted their own fairs to sustain the African Methodist Episcopal Church, abolitionist Frederick Douglass, and the Union Anti-Slavery Society. Still other African American women's organizations held fairs to support the African American press as well as orphaned black children (Gordon, 1998). These labors by black women are yet another illustration of the importance of uplifting the race as an inspiration for benevolent giving.

African Americans in business and professional circles have also established many social service organizations for themselves. Because of the insular nature of these elite organizations and the fact that their membership is entirely black, their philanthropic contributions and volunteerism often go unnoticed by nonblacks, and they are consequently overlooked in discussions of African American philanthropic giving. Among the women's organizations in this grouping are the Links, the Girl Friends, National Smart Set, the Drifters, and the Northeasterners. For men, the organizations include the Boulé (Sigma Pi Phi), the Comus Club, the Reveille Club, the Ramblers, the Bachelor-Benedicts, and the Guardsmen.

Because most of the elite societies were created on a premise of volunteerism and charitable giving, the potential for philanthropy in these groups is clear. For instance, in publicity materials released in 2001, the Links proudly assert,

> [Our] tradition is based on volunteerism. For over fifty years, the organization has gathered momentum, continuously rede fined its purposes, sharpened its focus, and expanded its pro gram dimensions in order to make the name "Links" synonymous with not only a chain of friendship, but also a chain of purposeful service.

Within these elite societies, giving is an obligation—a requirement, in fact, of membership. The success of these black elite groups in supporting a large assortment of philanthropic endeavors is made possible by the strong bonds of trust within the organization (Graham, 2000). The historical genesis of African American giving has fashioned the current practices with the BGLOs.

Philanthropy Within the Context of African American Sororities

Much like other Greek letter societies, African American sororities are often considered elitist by outsiders (Frazier, 1957/1997). Membership is viewed as cloaked in mystery and is limited because of the financial obligation involved (Brown, Park, & Phillips, 2005). What is lacking in most critical evaluations of BGLOs is an examination of the members' philanthropic contributions and leadership. Members of the four black sororities are taught to help whenever they can, and this code extends to the organizations' membership and beyond. Each of the sororities has mechanisms—both formal and informal—that serve the needs of members in emergency situations. When BGLO members are out of work, without a home due to fire or other calamity, or in need of monetary help for their families, they can be confident that their organization will assist them. When tested, the bonds of sisterhood produce generosity (Brown et al., 2005).

To understand the power of the BGLO, it is important first to consider the guiding principles of each organization. Alpha Kappa Alpha Sorority, Inc., aims to be "supreme in service to all mankind" (Parker, 1978, 1999). Zeta Phi Beta Sorority, Inc., promotes "scholarship, service, sisterly love and finer womanhood" (Harrison, 1998). Delta Sigma Theta Sorority, Inc.'s brand is to "use their collective strength to promote academic excellence and to provide assistance to persons in need" (Giddings, 1988). And, Sigma Gamma Rho Sorority, Inc., seeks "to enhance the quality of life within the community" while providing "greater service, greater progress" (Lawrence-Brown & White, 1994). Basically, each of these sororities has pledged to build a legacy of social action and fostering community (Giddings, 1988; Harrison, 1998; Lawrence-Brown & White, 1994; Parker, 1978, 1999).

Together, these black sororities boast a membership of roughly 600,000 women who are devoted to shaping their local communities as well as making change nationally and internationally. About one fourth of their members are active. The largest percentages are in the fields of education, law, business, and medicine, and the social service professions also boast large numbers. Although these sororities were established at the collegiate level, estimates suggest more than 70% have postgraduate degrees.

An examination of the individual sorority member's efforts paints a rich picture of devotion to service through the giving of time, energy, and financial resources. For example, Mahlene Duckett Lee, a member of Alpha Kappa Alpha, spends roughly 30 hours per week doing service and providing leadership to her sorority. In her words, "AKA is 24 hours a day" and the gift of service never stops (personal communication, March 16, 2006). Members provide leadership nationally and internationally, and many add to their already hectic professional lives the equivalent of a full-time job through their service to their sorority. Furthermore, this volunteer role calls for travel for national board meetings. Those with the most flexible schedules are the presidents of the organizations, who typically do not have concurrent professional employment due to the hefty time commitment. As a collective, Alpha Kappa Alpha (www.aka1908.com) estimates that more than a million hours of volunteer time were donated by members between July 2002 and July 2004.

The sororities can also easily brag about their influence on philanthropic service within their communities. Sigma Gamma Rho (www.sgrho1922.org) has institutionalized its impact in this area by allowing auxiliary groups, called *Philos* (meaning friends), to form and operate in support of their mission. Members of a Philo club serve the goals and ideals of Sigma Gamma Rho but do not belong to the sorority. Since being officially recognized in 1954, these groups have given countless hours and thousands of dollars to the betterment of others through their affiliation with local chapters of Sigma Gamma Rho.

Although undergraduate members of black sororities lack financial means, they are equally as committed as their older counterparts. They also give of their time, talent, and financial resources. Fundraising drives, programming, and service events characterize the collegiate sorority experience. These young women traditionally support organizations such as the NAACP and the United Negro College Fund, and they serve as campus leaders through student government, Greek councils, and myriad student groups (Giddings, 1988; Parker, 1978, 1999). Among the undergraduate sorority members' recent service accomplishments is a worldwide clothing drive effort, in which members distributed more than 35,000 coats to the homeless (www.aka1908.com).

Within the undergraduate membership, leadership development is crucial. Sororities treat the undergraduate years as an incubator for civic engagement and leadership. Graduate chapters host mentoring programs, leadership gatherings, and service efforts for undergraduates (Brown et al., 2005; Shelton, 2003). For example, Alpha Kappa Alpha's leadership seminar and fellows program seeks to cultivate future leaders among young women by hosting an annual leadership conference focused on political action and economic advancement (Parker, 1978; Shelton, 2003). Likewise, Zeta Phi Beta sponsors the Zeta organizational leadership program, which trains its undergraduate members for future leadership roles within the sorority (Harrison, 1998).

Since their establishment, black sororities have focused on education as a doorway to economic and community advancement (Gasman, 2004; Giddings, 1988; Parker, 1978). They have solidified this endeavor by creating foundations that offer scholarships and fellowships. Since these organizations were created, they have raised millions of dollars in scholarship funds for African Americans as well as other racial and ethnic minorities. Sigma Gamma Rho championed chapter-based scholarships shortly before the Great Depression (Ross, 2001).

Likewise, during their 1937 national convening, the women of Delta Sigma Theta launched a nationwide library project. Their efforts addressed an urgent need in black communities, including many rural areas, for literacy education. Of the 9 million African Americans residing in the rural South, two thirds were without library services and, as such, had very little exposure to books (Giddings, 1988; Johnson, 1943). The national chapter of Delta Sigma Theta asked each of its chapters to contribute 10 books. Each chapter was equipped with a "book basket with a lock and key to facilitate the transportation of the books" (Giddings, 1988, p. 183).

The project was helped along by the donations of Delta member Mollie Lee, a college professor. Lee advised the library project and asked local teachers and principals to support it by helping with the allotment of books. Conceivably, one of the most original aspects of the program was the focus on providing books about African American history and achievement to people in rural areas, a strategy that gave African American children a look both into the past and ahead to the possibilities that lay before them. After the first year of the program, many teachers and parents wrote to the Deltas to offer their thanks for the library project. Even more important, some of the rural towns continued the sorority's efforts by creating permanent library collections (Giddings, 1988). In rural areas that could not support the infrastructure of a library, the Deltas provided help—sometimes contributing furniture, film projectors, and trained staff. The Deltas were also instrumental in lobbying state legislatures in the South for library funds, and when none were allotted, they provided bookmobiles with librarians (Vroman, 1964).

In the 1940s, the Grand Basileus of Zeta Phi Beta, Lullelia Harrison, initiated the prevention and control of juvenile delinquency initiative. The sisters were aware of increasing problems with juvenile wrongdoing and wanted to start a national effort to provide young people with an alternative to a life of crime. In conjunction with U.S. Attorney General Tom Clark, the Zetas created neighborhood-based programs to help youth.[1] Involvement with children, especially young girls, has been a foundation of Zeta service. For example, the Manhattan chapter, chartered in 1950, formed a cohesive partnership with Gompers High School in the Bronx. In collaboration with the school's administration, the Zeta volunteers taught reading, math, and science to African American and Hispanic girls in after-school programs. Eventually, the sorority's volunteerism expanded to include an emphasis on writing, which culminated in scholarship contests. From the beginning of their scholarship program, the Zetas tracked the recipients, asking about their success after college and bringing them into the sorority as undergraduate or graduate members (Ross, 2001). By focusing on academics, the Zetas encouraged women to work toward greater accomplishment in education, especially in nontraditional areas.

Between 1964 and 1989, Alpha Kappa Alpha joined the fight against poverty through the establishment of the Cleveland Job Corps, a vocational training organization for 16- to 24-year-olds (Parker, 1978, 1999). Currently, the sorority's premiere education program is the Ivy Reading AKAdemy, which supports the literacy of elementary school students. This program is funded by a $1.5 million grant from the U.S. Department of Education as well as the monetary contributions of local chapters (www.aka1908.com).

In conjunction with the National Science Foundation, Delta Sigma Theta provides learning opportunities in science and math for parents of primary school students. Sigma Gamma Rho's programming centers on children and families, emphasizing education, teen pregnancy prevention, and economic development. Among the Sigma Gamma Rho programs are Operation Big Book Bag, which provides tutoring, school supplies, and computers to homeless children and young adults across the nation (www.sgrho1922.org).

Like education, health is a significant focus of each of the sorority's national platforms. For instance, as one of its five program foci, Alpha Kappa Alpha addresses health issues in African American communities through education and broad advocacy strategies. Its national initiatives pertain to diabetes, sickle cell anemia, HIV/AIDS, and the collection of family histories to prevent and treat cancer (www.aka1908.com; see also Parker, 1999; Ross, 2001).

Delta Sigma Theta, through its health task force, encourages its membership and women in African American communities to live mentally, physically, and spiritually fit lives. As part of its lifestyle change initiative, Delta Sigma Theta targets obesity and heart disease (www.deltasigmatheta.org; see also Giddings, 1998; Ross, 2001). Since 1972, Zeta Phi Beta has, in collaboration with the March of Dimes (http://marchofdimes.com), sponsored its Stork's Nests program, which educates thousands of pregnant women. Through this program, sorority members fill a need in the black community for earlier and more systemic prenatal care. Sigma Gamma Rho operates a similar program, called Project Reassurance, geared toward educating teens about pre- and postnatal care, infant care, and child development. Moreover, Sigma Gamma Rho supports education, research, and activism through its cancer awareness and national bone marrow donor programs (Lawrence-Brown & White, 1994).

African American sororities have from their creation played a significant role in advancing the cause of civil rights (McKenzie, 1990). From participation in the 1913 women's suffrage march to the long-lasting fight for equal voting rights, their involvement in this area has been strong and steady (Giddings, 1988; Johnson, 1943). On March 3, 1913, Delta Sigma Theta members joined a national march on Washington on behalf of women's right to vote. Women of all racial and ethnic backgrounds endured taunts and insults by angry crowds. By participating in the march, the Deltas were disobeying the administration at Howard University, where they were studying, and, in many cases, were acting against the wishes of their families (Ross, 2001).

At the request of Norma Boyd, a founder of Alpha Kappa Alpha, the nonpartisan lobby for economic and democratic rights was created in 1938 to make our "power felt in the halls and on the floors of Congress" (Parker, 1978). Most of the lobby's activities focused on putting an end to police brutality and lynching, easing discrimination in public life, and fighting inequities in federal housing programs. Today, similar civic and lobbying activities fall under the Alpha Kappa Alpha connection committees that exist in each chapter to end injustice and guard civil liberties. Likewise, Delta Sigma Theta (www.deltasigmatheta.org) holds "Delta Days" at the nation's capitol, a yearly legislative conference to raise member participation in the public policy-making process. Making national headlines, Delta Sigma Theta pledged a major gift to the Legal Defense Fund of the NAACP (www.blackenterprise.com) to underwrite voting rights programs, commemorating the 40th anniversary of the 1965 Voting Rights Act.

As one, the nine National Pan Hellenic Council (www.nphchq.org) organizations joined forces with the National Coalition on Black Civic Participation for the Unity 04 Empowerment Campaign to increase the number of registered voters and voter turnout on Election Day in 2004. Significantly, BGLOs all aim to be heard through statewide days at the capital and in public policy forums. For example, on April 19, 2006, during Red & White Day in Baton Rouge, Louisiana, Louise White, the president of Delta Sigma Theta (www.deltasigmatheta.org), announced a $1 million pledge to support black colleges ravaged by Hurricane Katrina.

Through their service to education, civil rights, and economic empowerment, African American sororities have created a foundation of multifaceted philanthropy (Gasman, 2004; Giddings, 1988; Parker, 1978). The excitement and dedication of their members have helped these organizations to mature and be a powerful force for social change, educational advancement, and community volunteerism. The knowledge of their founders and leaders, along with the commitment of their members, has enabled each organization to achieve much success. African American sororities remain vital to the continuing fight for equality. The sisters who have answered the call to serve are steadfast in their philanthropic pledge.

African American Fraternities and Philanthropy

The legacy of African American fraternities begins in 1905 in Ithaca, New York, on Cornell University's racially intolerant campus. Pressured to "ascend" the "social and proscriptions of color common to American institutions of this era, and hampered by limited means of the average 'poor' student," the founders of the nation's oldest inter-collegiate black fraternity "faced the future and boldly endeavored to find a way out of their difficulties, scarcely realizing, however, the import of their action on subsequent generations" (Wesley, 1996, p. 15).

Initiates of Alpha Phi Alpha, Kappa Alpha Psi, Omega Psi Phi, Phi Beta Sigma, and Iota Phi Theta have, from the start, taken oaths to serve one another and humankind (Brown et al., 2005). The approach of each fraternity is expressed clearly in its mottos. The Kappas strive to produce "achievement in every field of human endeavor." The Omegas believe that "friendship is essential to the soul" and use it to serve others. Creating a "culture for service and service for humanity" is the Sigmas' doctrine. The Iotas believe in "building a tradition, not resting one" as they work to make social change. Being "servants to all" is what Alphas aim to do through their initiatives (Brown et al., 2005; Dreer, 1961; Savage & Reddick, 1957; Slade, 1999).

This overview of philanthropy in African American fraternities examines the historical models that Alpha Phi Alpha, Kappa Alpha Psi, Omega Psi Phi, Phi Beta Sigma, and Iota Phi Theta have used to increase the presence of African Americans in education, engage them civically, stimulate their entrepreneurial spirit, and create a foundation for giving through fraternity-based foundations.

African American fraternities formed national programs in response to crises of their time or the vision fraternity members had for future generations (McKenzie, 1990). During the earliest years of black fraternities, between 1906 and 1914, access to higher education for African American men and women was severely limited. Few blacks were aware of the payoffs of higher education, and discrimination was commonplace (Franklin & Moss, 1994). The black fraternities' methods for solving what many referred to as "the Negro problem" focused on eliminating inequality in public and private education, creating businesses, participating in the political process, establishing foundations, and building partnerships. Early discussions routinely challenged the effectiveness and sustainability of responding to community calls for action. These debates, however, helped to create the foundation on which future generations of fraternity men could stand to advance themselves, their families, and their communities (Brown et al., 2005; Kimbrough, 2003).

Within African American fraternities, philanthropic endeavors traditionally started at the local level and spread throughout each organization with the assistance of national conferences. Iota Phi Theta (www.iotaphitheta.org) exemplifies this idea on its national website:

> In the initial stages of the Fraternity's existence, the Fraternity's service initiatives were local in nature as reflected by the size of the Fraternity and the scope of its resources. As the Fraternity began to take on a National dimension, it became evident that its programmatic thrust would have to be adjusted accordingly. This adjustment was complicated how ever, by the fact that many chapters have had historical ties to service organizations and causes in their local areas.

Great overlap in philanthropic focus exists across fraternities. Each organization awards scholarships to members and nonmembers at the chapter, state, and national levels, amounting to millions of dollars spent on African American education. No single fraternity concentrates on only one national initiative, and efforts often overlap within chapters.

The members of Alpha Phi Alpha agree that a college education is the best predictor of future economic success. As a result, they developed the national Go-to-High School, Go-to-College campaign (www.alphaphialpha.net) in 1920. The campaign uses speakers, advertisements, and personal letters to showcase the benefits of a college education (Wesley, 1996). Today, Alphas deliver their message year round through a curriculum that pertains to time management, study skills, violence prevention, self-esteem, black history, gender in society, and current events (Ross, 2001).

Omega Psi Phi's national talent search awards scholarships to young people each year. The program began in the North and South Carolina chapters. Since 1953, Omegas have organized talent contests in local communities and at their national conclaves (Dreer, 1961). Likewise, Phi Beta Sigma (www.pbs1914.org) has focused on providing services to members through its national education program. Tutoring, scholarships, and lectures are its core objectives (Scott, 1970).

Before the establishment of the federal Office of Minority Business Enterprise in the 1960s, the brothers of Sigma introduced, in 1924, the "Bigger and Better Negro Business" exhibition to showcase the achievements of the race to the public. The first convention was in Philadelphia with more than 25 leading black businesses representing more than 50 exhibits. The response from local visitors was encouraging, and as a result, the fraternity voted, in 1925, to adopt Bigger and Better Negro Business as an annual program. This program is consistent with Phi Beta Sigma's commitment to improving the economic conditions of minorities and the welfare of society at large (www.pbs1914.org; Scott, 1970). As described on its website, the Bigger and Better Business program's present-day mission includes "the promotion and fostering of ideas for the effective organization, improvement and expansion of business and the dissemination and propagation of information for the advancement of sound business principles and practices." Bigger and Better Business has two initiatives under its programmatic umbrella. First, through partnerships with organizations such as the NAACP and the Urban League, Sigma offers financial and home ownership information to its members and their families. It also runs a credit union for its members and women of Zeta Phi Beta. Deposits are insured up to $100,000, and the credit union provides low-cost mortgages for fraternity and sorority members, as well as loans for personal home improvement and education.

Social action is the typical name most African American fraternities use to describe their activities focused on registering voters and increasing knowledge of the political process (McKenzie, 1990). In its national program aimed at voter registration, Alpha Phi Alpha (www.alphphialpha.net) proclaims that "A Voteless People Is a Hopeless People." The campaign started in the 1930s and was championed by chapters across the country. The Alphas have solidified and strengthened their interest and hope in the power of voting and participating fully in the political process over the years (Wesley, 1996). In fact, in 2005, they began an effort to raise awareness of the expiration of the Voting Rights Act. Members of the organization testified before Congress, and they worked in local communities to educate African Americans on the crucial importance of the Voting Rights Act's reauthorization. Likewise, the brothers of Omega Psi Phi (www.oppf.org) are dedicated to a national platform aimed at increasing political involvement and voting. According to their website, "all levels of the fraternity are expected to facilitate, participate and/or coordinate activities that will uplift their communities through the power of the vote."

Yet another way that African American fraternities work to increase knowledge among African American communities is through their health-related activities. For example, Omega Psi Phi chapters aim to uplift their local communities through the promotion of good health programs and practices. Specifically, the chapters participate in the Charles Drew Blood Drive each June, the

American Diabetes Association, and, most important, several AIDS/HIV awareness initiatives (Dreer, 1961; Gill, 1961). This last effort is particularly important as African Americans represent 50% of all new AIDS cases in the United States, according to the Centers for Disease Control (www.cdc.gov). Phi Beta Sigma chapters, like the Omegas, spend ample time raising money and educating local black communities on issues that are crucial to the health of African Americans, such as diabetes (Savage & Reddick, 1957).

Eliminating health disparities in the African American community has been a major thrust for fraternal organizations. In 2002, Iota Phi Theta initiated a sickle cell anemia awareness campaign with St. Jude Children's Research Hospital in Memphis, Tennessee. Alpha Phi Alpha forms a national partnership with the March of Dimes each year. Both fraternities work together to teach teenagers about sexual health and responsibility. Young males and females between the ages of 12 and 15 participate in sessions designed to help them to explore their attitudes and values toward sexuality; increase their knowledge of sexually transmitted diseases; and increase their self-esteem. Also, both fraternities fundraise for birth defects research and education programs, according to the March of Dimes (www.marchofdimes.com).

The prevalence of single-parent households is an important issue in African American communities. National organizations such as the Big Brothers/Big Sisters of America have aimed to decrease the pressures on these homes by providing children with "Bigs" to act as mentors. In 1990, Alpha Phi Alpha signed an agreement with the organization to assist Big Brothers/Big Sisters in its efforts to help create environments in which single parents and their children could increase opportunities with the aid of Alpha brothers (described on its website, www.alphaphialpha.net). The fraternity is also engaged in a partnership with the Boy Scouts of America. The goal is to create options for boys to receive career advice from successful black males. Also interested in increasing knowledge and opportunity, Iota men have helped communities succeed in a digital age through a joint effort with Africana.com and Microsoft Corporation to bridge the digital divide. The digital divide has been described as a social, racial, class, and even political problem in society that further separates the haves from the have-nots with regards to technology and access to information.

African American fraternities have partnered or donated to organizations like the NAACP, the Urban League, and the United Negro College Fund. Omega Psi Phi has an extensive history of giving to these organizations. At Omega Psi Phi's 1955 annual conference, it was determined that "each graduate chapter would purchase a Life Membership from the NAACP" and between 1955 and 1959, chapters contributed nearly $40,000 to the civil rights–focused organization (Gill, 1961). In the 1980s, the fraternity contributed $250,000 to the United Negro College Fund and authorized an "annual gift of 50,000 dollars to that organization in perpetuity," according to the organization's website (www.oppf.org).

Since pledging was officially abolished in 1990 by each African American fraternity, they all officially have put service at the core of their process to initiate new members (Brown et al., 2005).[2] In all cases, aspirants are required to design and implement a community service project or program during their orientation period. Each fraternity prides itself on what it has done to serve others. Service is their raison d´être. Each of their creation stories points to a void that was present in their communities and the steps they had to walk to improve themselves and society. Tradition is a powerful influence in the black fraternity, especially among the more senior members.

BGLOs and Philanthropic Foundations

BGLOs have a long history of expanding their impact through the work achieved in their philanthropic foundations, which has received virtually no research attention. Often depending on sorority and sorority membership as their primary source of funding, the foundations established by BGLOs exist mainly to support the programmatic goals of their respective organizations.

Founded in 1980, the Alpha Kappa Alpha Educational Advancement Foundation (EAF) was established out of a desire to provided service in perpetuity for the organization's oldest service program, education. To achieve its mission to "promote lifelong learning," the EAF provides financial support for scholarships and fellowships and offers community assistance programs designed to address specific civic, educational, or human services-related projects, according to its website (www.akaeaf.org). In 2008, EAF awarded more than $107,000 in scholarships to 108 students. An additional $128,300 was awarded to community assistance programming and its youth Partners Accessing Capital initiative. Encouraging the creation of a legacy support, EAF provides the sorority's members, organizations, and corporations with the ability to endow scholarships with an initial contribution of $1,000. The fund becomes fully endowed or capitalized at $20,000, at which time scholarships can be awarded. According to the EAF's 2007 annual report, at the close of 2007, the foundation reported $4.1 million in assets and 152 endowments, with 70 being fully capitalized.

Delta Sigma Theta's foundation, the Delta Research and Education Foundation (DREF), was founded in 1967 under the leadership of former Delta national president, Dr. Geraldine Pittman, who was a noted scientist. DREF's core goal of supporting African American women and their families is reflected in its mission, which includes the promotion of research that identifies solutions to issues affecting African American women and their families (see www.drefnet.org). This mission is a national and international priority for DREF. In her message from the foundation president, Dr. Alison J. Harmon reported that more than $125,000 will be awarded to support programs in the areas of economics, education, health, international affairs, and political awareness. DREF holds partnerships with organizations including the American Association for the Advancement of Science and the National Science Foundation. One of DREF's primary scholarships is the Stephanie Tubbs Jones Scholarship established by Senator Hillary Rodham Clinton and former President Bill Clinton in memory of deceased Congresswoman Stephanie Tubbs Jones.

Zeta Phi Beta's National Educational Foundation (NEF) was established in 1975 as the official nonprofit arm of the sorority. The NEF awards six scholarships and three fellowships in the areas of social work, health sciences, and education. In addition, NEF sponsors community service, social, and health care programming with a focus on minority communities. Serving as a major source of information regarding human genetic research in minority communities, the NEF holds collaborative partnerships with the Human Genome Project coordinated by the U.S. Department of Energy and the National Institutes of Health, as described on its website (www.zpbnef1975.org).

Unlike the other African American sorority foundations, Sigma Gamma Rho's Sigma Public Education and Research Foundation (SPEAR) includes among its goals the economic self-sufficiency of women and minorities, family preservation, and health initiatives and education initiatives targeting minorities and women. In addition, SPEAR focuses on research in the social sciences addressing poverty, illiteracy, morals/values, and family disintegration. Although the sorority supports an educational fund through which scholarships are awarded, the SPEAR Foundation provides financial support primarily to programs with measurable outcomes. These initiatives, described on the foundation's website (www spearfounda tion.org), include a rites of passage program for adolescent girls; programming promoting financial awareness among young people; advocacy for homeless families; and advocacy for the preservation of families. The youngest of the sorority foundations, SPEAR was founded in 1993, and its funding reflects the tradition of scientific philanthropy.

African American fraternities also have established philanthropic foundations, with goals that range from scholarships to community housing development. Support from the philanthropic foundations seems to be largely driven by needs produced by the current social climate. Alpha Phi Alpha has four foundations: Alpha Phi Alpha Building Foundation; Alpha Phi Alpha Business and Economic Development Foundation; Alpha Phi Alpha Education Foundation; and the MLK National Memorial Project Foundation. In addition to honoring the work of Dr. Martin Luther King Jr. through the Memorial Project Foundation, the foundations of Alpha Phi Alpha (www.alpha-phi-alpha.com) address community needs such as fair and affordable housing, business development for minorities and those in disadvantaged communities, educational training, and professional development.

The Kappa Alpha Psi Foundation (www.kappaalpha psi1911.com) exists primarily as an extension of the fraternity and serves to support the community service programming of the organization's graduate and undergraduate chapters. Emphasizing service benefiting primarily the African American community, this foundation serves to support scholarships, afterschool programs, and the fraternity's national programming partnerships such as Habitat for Humanity.

Established in 1984, the Omega Life Membership Foundation is the philanthropic arm of Omega Psi Phi (www.olmf.org). This foundation concentrates the majority of its efforts on educational, scholastic, charitable, and scientific initiatives. In addition, The Omega Life Membership Foundation, through scholarships, has provided financial support for students in performing arts and other scholastic endeavors.

In addition to being the primary source of support for the Phi Beta Sigma National Foundation (www.pbs1914.org), the members of Phi Beta Sigma played a key role in establishing the Sigma Beta Club Foundation. These affiliate partnerships and the creation of multiple foundations enable Phi Beta Sigma and its affiliate organizations to support Sigma's overarching philanthropic and community service goals.

Iota Phi Theta (www.iotaphitheta.org) describes its National Iota Foundation as, "a clearinghouse for funding and programs for worthwhile endeavors." One of the foundation's signature programs, the annual IOTA Black College Tour is designed to expose graduating high school seniors to historically black colleges and universities with the goal of encouraging them to choose to attend one of these institutions. Since its inception, the National Iota Foundation has awarded more than $25,000 in grants, aid, and services.

Summary

It is evident that BGLOs play a significant role in American philanthropy, specifically in the lives of African Americans. As shown, in formal and informal ways, African American sororities and fraternities have worked to serve and shape their communities. Unfortunately, the work of these historical organizations has been overlooked by historians and scholars, with little access to organizational papers and leaders in the organizations. As noted, this is often due to the secretive nature of BGLOs. However, through the scholarship of insiders and those scholars who are willing to invest the time, a rich, story of love of humankind is told. Telling this story is essential to establishing the relevance of BGLOs, especially in light of recent criticism around hazing issues. The black community and the larger public need to be made aware of the multilayered, sophisticated history of BGLOs to have a better understanding of their contributions to society.

Notes

1. Tom C. Clark Papers, Organizations material 1945 1977, Series IV, Tarlton Law Library, Jamail Center for Legal Research, University of Texas School of Law, Austin, Texas.

2. It should be noted that hazing is still a very prominent process of joining a black fraternity or sorority.

PART V

Leading the Nonprofit Organization

34

Theories of Nonprofit and Organizational Leadership

J. Patrick Murphy
DePaul University

There is no one best way to lead. If there were, surely someone would have stumbled on it by now, and we would all know the best way and do it. But leaders have to lead *people,* and each one is different, and each one changes constantly. There is the rub.

What are the most successful formal organizations in the world *using the single criterion of longevity?* The Roman Catholic and Lutheran churches, the parliaments of Britain and the Isle of Man, and medieval universities are among the oldest, continuously operating formal organizations in the world. Nonprofits and governments have survived the test of time. How do they do it?

Theories are ways of seeing our world and how it works. Having a theory is good. Having a good theory is better. Most people believe leadership makes a difference. We know leadership effects are often attributed to leaders without merit; some authors suggest that leadership is overrated in modern complex organizations—that they are little more than organized anarchies. Most researchers, however, point to the ample examples of famous leaders of nonprofit organizations—Mahatma Gandhi, Martin Luther King Jr., Nelson Mandela, Abraham Lincoln, Mother Teresa, and Vincent de Paul come to mind easily. But these are the famous leaders; other everyday leaders are equally effective but less famous. None of the famous leaders was likely to have used a leadership theory, but leadership principles are evident in each of them. Each had a dream or a mission and an urge to serve. Gandhi wanted to win freedom from British rule for his people by nonviolent means. Martin Luther King Jr. wanted equal rights for all. Mother Teresa and Vincent de Paul wanted to relieve the anguish of poverty for the poorest of the poor in their times. They were dreamers, visionaries, and riveted on their missions.

A Google search of *leadership* nets 153 million hits. An Amazon.com search of books on leadership nets 329,928 hits. (Google has 61,800,000 hits for books on leadership.) There is no lack of opinion or theory on leadership. Why is leadership so popular? Leaders get things done; they are inherently interesting people. What is leadership? Having a definition of leadership is useful for leaders. Most definitions are useful, but any definition that works for the leader is a good one. Here are a few definitions to consider:

> *Leadership is a process whereby an individual influences a group of individuals to achieve a common goal.*
>
> Peter G. Northouse, 2007

> *In essence leadership appears to be the art of getting others to want to do something you are convinced should be done.*
>
> Vance Packard, 1962

> *Leadership is the art of mobilizing others to want to struggle for shared aspirations.*
>
> Jim Kouzes and Barry Posner, 1995

> *The great leader is seen as servant first, and that simple fact is the key to greatness.*
>
> Robert K. Greenleaf, 1977

Kouzes and Posner summarize most modern theorists when they state that leadership is a relationship; it is everyone's business; and leadership development is self-development. Northouse (2007) does a marvelous job of codifying classic theories of leadership; they are worthy of scrutiny. Particularly suited to nonprofit management are several theories or principles of leadership offered here.

In one sense, we can make the case that leading people is much the same whether the organization is for-profit, nonprofit, or governmental. In another sense, these three sectors are nothing alike. The nonprofit sector relies on volunteers for much of its workforce and is dependent on charitable or government sources for its revenue. Another distinguishing feature is that employees, as well as volunteers, usually have strong personal commitments to the mission of the nonprofit, more, perhaps, than in the other two sectors.

In *The Leadership Challenge,* Kouzes and Posner (2007) offer five leadership practices—they're discussed later—based on years of research with thousands of leaders. Their work is most appealing for the nonprofit sector because it is based on values and is readily applicable to nonprofits. For example, the authors (in other volumes) applied their work specifically to two nonprofit arenas, higher education institutions and Christian organizations.

In *Servant Leadership,* Greenleaf (1977) provides a popular approach to leadership adopted and adapted by many organizations—including for-profits—but especially nonprofits and Christianity-based organizations.

Sally Helgesen (1995), in *The Web of Inclusion,* offers a pattern and process of leadership based on the web as model. Her approach is especially poignant inasmuch as she studied women leaders (in *The Female Advantage Women's Ways of Leadership,* 1990). For many years now, fully 70% of those working in nonprofit organizations are women. Many authors suggest women lead differently; Helgesen provides a theory for modern organizations, whether led by women or men.

These three sources—Kouzes and Posner, Greenleaf, and Helgesen—do not focus exclusively on nonprofit organizations or offer a theory of nonprofit leadership. They do, however, have common features and great insight into leadership practices that seem especially appropriate to nonprofits.

First, a word about the glue that holds nonprofits together, mission. Nonprofit organizations are rooted in mission. No modern organization can survive today without a keen sense of mission. This is especially true for nonprofits. Marginalized institutions will be squeezed out of existence or will find their niche depending on whether they find their distinctive mission and stick to it. It has to do with marketing, introspection, and hard work. Too many institutions have drifted into flailing and failing situations where they attempt to be all things to all people but end up offering second-rate programs because they have lost their way. Often, these institutions languish because of organizational drift from the original mission.

Mission is always long range, yet it requires action everyday. Action is where the fun is for administrators. Leaders are people of action; others ponder. A good mission attracts good people. This is foundational for nonprofits; good leaders take advantage of it—exploiting people's self-interest and personal values in the best ways. Whether volunteers or employees, people want to match their personal values with the distinctive values of the institution while working in a learning and teaching organization. A good mission allows people to see how they can make a difference in the world. Mission attracts good people, not only clients, but donors, stakeholders, and neighbors, too. It attracts funding, private and public, and focuses on a defined human need. It makes marketing meaningful and possible, providing meaning and opportunity to make a difference.

Mission serves a market—it is customer or client oriented—rather than product oriented. It looks outside itself for opportunity. This is essential for success but difficult to do well in nonprofit organizations because of creeping bureaucracy. Worse, the typical nonprofit organization has a flat structure, is complex and decentralized, has vague, ambiguous goals and fluid participation, and often looks and acts like an anarchy.

Excellent institutions fashion visions, missions, and marketing plans based on becoming distinctive. Perhaps, a few examples would illustrate. Long ago, when Stanford University was a sleepy little liberal arts college, a visionary president called on his faculty to develop "steeples of excellence" to make Stanford distinctive. In Florida, in the early 1980s, the new president of Barry College reviewed the mission (she called it her "midnight shakes" because the mission is what she would automatically think of if shaken awake at midnight and asked what Barry was all about). Within 5 years, she had doubled enrollment and faculty salaries, changed it from a college to a university, and expanded the campus considerably—based on a revitalized and widely shared mission.

A few examples of mission statements may help.

> *From the Girl Scouts of America:* Girl Scouting builds girls of courage, confidence, and character, who make the world a better place.
>
> *From the Friends of the Parks, Chicago:* Our mission is to preserve, protect, improve and promote the use of Chicago parks, forest preserves and recreational areas for the benefit of all neighborhoods and citizens.
>
> *From the United Way of Chicago:* Mission: To improve lives by mobilizing the caring power of communities.

Clearly worded statements that use evocative language to capture the imagination of readers make good missions. The best mission statements detail exactly what the organizations do, who benefits, and what makes them distinctive. Shorter is better. Compelling language is easier to remember. Can you fit it on the back of a T-shirt?

Even stodgy organizations like the Internal Revenue Service can have clear, forthright missions:

> Mission: the purpose of the IRS is to collect the proper amount of tax revenues at the least cost to the public, and in a manner that warrants the highest degree of public confidence in our integrity, efficiency and fairness.

Institutions with large endowments, if led well, can build in quality as their distinctive edge. Those without quality or distinction will be trampled. Size counts; age counts. Smaller, younger institutions must work harder at defining their missions and earning their distinctiveness. The challenge for leaders here is always mission. Leaders must balance resources based on mission and goals in respect to diversification—balance caution with rashness, opportunity with risk. Leaders keep their eye on the task, not on themselves.

Nonprofits differ from for-profit companies like Procter and Gamble. For instance, colleges like to create habits, vision, commitment, knowledge, and loyalties—attempting to become part of the recipient, not merely a supplier. The marketing problem then becomes one of selling an intangible, a concept. This is seriously different from selling a better shampoo.

The first rule of marketing is: You cannot do everything. Do not put scarce resources where you are not going to have results. The second rule is: Know your customers. A customer is anybody who can say no. Leaders take them seriously. The leader should be the chief marketing officer, exercising the role of gathering and disseminating information. For example, one college president would hang around the student cafeteria and ask students what they thought of the place (with tongue firmly in cheek, he told them he was a janitor). A few years ago at Brown University, the new president asked community members how they could become noteworthy when they had to compete directly with Harvard and Yale universities. Ten years later, Brown became distinctive for two things: focusing on professional women and getting close to the students—a plan put into place by listening to the students and by fashioning a mission in response to what they need. Focusing on mission and market made it so; it is the sine qua non for leaders in nonprofits.

The Five Practices of Leadership

Most leadership authors today agree with Kouzes and Posner when they say that anyone can be a leader and that we can lead from any place in an organization—except from behind a desk or computer. Leadership is interactive; we need to get in front of people and engage them. But anyone can do it—not only presidents and upper management. We find leadership at the lowest levels in organizations, informal but powerfully effective people doing ordinary things extraordinarily well.

Good organizations ask: What are our basic principles? What do we believe in? How can we design management principles and strategies that reflect our values? What can we do for our customers—better than our competitors? Kouzes and Posner (2007) began their research asking what people expected of leaders—more than 75,000 people around the world. They found that (p. 29)

> what is most striking and most evident is that only four [characteristics] over time . . . have always received over 60 percent of the votes. And these same four have consistently been ranked at the top *across different countries.*
>
> What people most look for in a leader (a person they would be willing to follow) has been constant over time. And our research documents this pattern across countries, cultures, ethnicities, organizational functions and hierarchies, gender, educational, and age groups. For people to follow someone willingly, the majority of constituents believe the leaders must be
>
> - Honest
> - Forward looking
> - Inspiring
> - Competent

Other characteristics included intelligent, fair minded, broad minded, supportive, straightforward, dependable, and many more. Students chose the same four characteristics for their best teachers. Credibility is the foundation of leadership. Who would follow anyone who was not honest? Why follow someone who is not forward-looking? Who could follow someone who was not inspiring or competent? These are the foundational characteristics of good leaders.

The first law of leadership, then, is if you don't believe in the messenger, you won't believe the message. All the clichés apply: Leaders practice what they preach, they walk the talk, their actions are consistent with their words, they put their money where their mouth is. But the fact is, *leaders do what they say they will do.*

Five Practices

Kouzes and Posner offer five practices of excellent leaders:

1. *Model the way.* Leadership begins with something that grabs hold of you and will not let go. Excellent leaders lead through their own words, lives, and actions. We cannot lead through someone else's life or words. Kouzes and Posner (2004) ask, what grabs *you*? Excellent leaders find their voice by clarifying their personal values. They set the example by aligning their actions with the shared values of the organizational members. "People sense that the great question in life is not between life and death. We are all going to die. The question is: What are you living for? Or what are you dying for? It is the same question" (p. 85).
2. *Inspiring a shared vision.* Kouzes and Posner found that excellent leaders envision the future by imagining exciting and ennobling possibilities. Then, they enlist others in a common vision by appealing to the shared aspirations of organizational members.
3. *Challenge the process.* Excellent leaders search for opportunities by seeking innovative ways to change, grow, and improve. They are not afraid to experiment and take risks by constantly generating small wins and learning from their mistakes.
4. *Enable others to act.* Kouzes and Posner's leaders foster collaboration by promoting cooperative goals and

building trust. They are able to strengthen others by sharing power and discretion with them.

5. *Encourage the heart.* Excellent leaders recognize contributions by showing appreciation for individual excellence. They celebrate organizational values and victories by creating a spirit of community among organizational members.

These practices are the core beliefs of Kouzes and Posner, based on 25 years of research. Kouzes and Posner found that people who use these behaviors are seen as being more effective in meeting job-related demands; being more successful in representing their units to upper management; creating higher performing teams; fostering loyalty and commitment; increasing motivational levels and willingness to work hard; reducing absenteeism, turnover, and dropout rates; and possessing high degrees of personal credibility.

One more thing: leaders are teachers. Leaders are about the business of teaching and learning. "There's solid evidence that the best leaders are highly attuned to what's going on inside themselves as they are leading and to what's going on with others. They're very self-aware and they're very socially aware" (Kouzes & Posner, 2006, p. 29). We learned long ago that the best teachers are those who are passionate about what they teach. Leaders are passionate about what they lead. The best leaders are teachers, too.

Most of us start out as teachers and then move into administration. As teachers, we learned that the best way to learn our subject matter was to teach it. The best way to learn about leadership is to teach it—in the classroom, on the job, in groups, and one-on-one. Nothing helps the learning process like experience and teaching. We in the business of higher education leadership do not need to look far for the greatest lessons on leadership. We need only teach them.

Kouzes and Posner (2006, p. 20) remind us that the best leaders are great teachers. Leaders teach the mission. Leaders should be the best teachers and should teach the mission relentlessly. We teach by modeling the way, by telling stories, and by focusing on mission.

The Leader as Servant

In a 1974 talk to the School Sisters of St. Francis at Alverno College, Greenleaf (1977) defined institution in these words:

> An institution is a gathering of persons who have accepted a common purpose, and a common discipline to guide the pur suit of that purpose, to the end that each involved person reaches higher fulfillment as a person, through *serving and being served* by the common venture, than would be achieved alone or in a less committed relationship. (p. 237)

Greenleaf believed nothing of substance will happen in society unless people inside institutions are able to (and want to) lead them into better performance for the public good. The idea of the servant as leader came to Greenleaf from his reading of Hermann Hesse's *Journey to the East*. Leo, the main character, is the stable boy who takes care of a group on a journey. Years later, they meet Leo again; he is now the leader of a monastic order. Realizing who Leo is, the narrator understands that Leo was leader even as servant boy—without him they would have lost their way. For Greenleaf, the story clearly says that *the great leader is seen as servant first*, and that simple fact is the key to greatness. For Leo, leadership was a by-product of service. Leadership could be taken or given away, but service and the servant nature was the real person—not bestowed, not assumed.

Servant leadership is a mission of care and service of others. It appeals to organizational members and volunteers in nonprofits. It is a theory popular with faith-based organizations because it helps people develop their own personal spirituality and provides a framework for virtue. Gandhi wrote, "The best way to find yourself is to lose yourself in the service of others" (quoted in Kumarasamy, 2006, p. 101). Mother Teresa and her followers lost themselves among the poor in Calcutta; St. Vincent de Paul and his followers lost themselves among the poor in Paris—all in service of others.

Greenleaf (1977) takes this approach: The natural servant, the person who is *servant first,* is more likely to persevere and refine a particular hypothesis on what serves another's highest-priority needs than is the person who is *leader first* and who later serves out of promptings of conscience or in conformity with normative expectations.

> My hope for the future rests in part on my belief that among the legions of deprived and unsophisticated people are many true servants who will lead, and that most of them can learn to discriminate among those who presume to serve them and identify the true servants whom they will follow. (p. 15)

Greenleaf realized that followers are incomplete creations, and the only way to accomplish anything through them is to serve them. If we are servants—either leader or follower—we are always searching, listening, expecting that a better solution is in the making. Greenleaf had a notion of continuous quality improvement. He suggested we take a fresh, critical look at issues of power and authority—from the point of view of service to others in pursuit of mission.

Greenleaf (1977) offered a new moral principle:

> The only authority deserving one's allegiance is that which is freely and "knowingly granted by the led to the leader in response to, and in proportion to, the clearly evident servant stature of the leader. Those who choose to follow this princi ple will not casually accept the authority of existing institu tions, *rather, they will freely respond only to individuals who are chosen as leaders because they are proven and trusted as servants."* (p. 10)

Power and authority develop organically in servant-leader organizations—freely given by the followers to the one among them who rises up by serving them. Silicon Valley entrepreneurs in the early days of personal computing provided one kind of example of leaders who were at the same time inspiring, compelling, and creative. But they also focused on leading their people by serving—providing Friday afternoon beer and pizza bashes, installing workout rooms for employees, and truly believing in the ingenuity and commitment of their teams. It is said that Apple founder and CEO Steve Jobs would invite the team designing the Macintosh computer to his home in Los Gatos where they would work, eat, sleep, and let off steam, sometimes for days at a time.

Who is the servant-leader? For Greenleaf, it begins with the natural feeling that one wants to serve, to serve *first*. Only then does the conscious choice to serve bring one to aspire to lead. This is much different from the usual—one who is leader first, to satisfy a power drive or to acquire objects. The leader-first and the servant-first are two extreme types. Between them is the continuum of the infinite variety of human nature. The difference manifests itself in the care by the servant-first to make sure to serve other people's highest-priority needs. Care is the hallmark of nonprofits.

Greenleaf provides three foundational questions to check the servant-leader:

> Do those served grow as people?
>
> Do they, *while being served*, become healthier, wiser, freer, more autonomous, more likely themselves to become servants?
>
> What is the effect on the least privileged in society; will they benefit, or, at least, not be further deprived?

Maslow (1971) asserted, in *The Farther Reaches of Human Nature,* that self-actualizing people such as Gandhi, Eleanor Roosevelt, and Albert Einstein were all committed to a greater purpose in life. If people are becoming healthier, wiser, freer, more autonomous—and more likely to become servants—are they not becoming more self-actualized?

Note in Greenleaf's third question his concern over the least privileged in society. Does this not connect directly to most nonprofit missions of concern, care, and service for others? What are we trying to do here? For Greenleaf, this is the hardest question to answer. What is our mission, vision, or goal? Leaders dream the dream and show the way. Organizations may arrive at a goal by group consensus or by inspiration of the leader. But the leader knows it and casts it in a creative way. Every achievement starts with a goal—a yearning for something that is currently out of reach. Leaders state it in compelling ways to challenge people. For Greenleaf, leaders must first earn the trust of their followers. Followers accept the risk along with the leader. Similar to Kouzes and Posner, Greenleaf says leaders earn trust only when we have confidence in their values, competence, and judgment and when they have a sustaining spirit.

Greenleaf notes that the very essence of leadership, going out ahead to show the way, comes from inspiration. Too many who presume to lead do not see clearly. Rather, too many leaders preserve the system in place—which Greenleaf calls a fatal error. The leader, he says, needs more than inspiration. The leader initiates, provides the ideas and the structure, and takes the risk of failure along with the chance of success. It is not enough to have a vision; the leader is constantly dreaming bigger dreams, pursuing a fresher vision, casting and recasting the mission to adjust to the environment as needed. For Greenleaf, nothing much happens without a dream. For something great to happen, there has to be a great dream. Behind every achievement is a dreamer of great dreams. Much more than a dreamer is required to bring it to reality; but the dream must be there first.

Greenleaf reminds us that the art of leadership is to bridge the information gap with intuition. Leaders must be more creative than most. Creativity is largely discovery—a push into the uncharted and the unknown. Occasionally, leaders need to think like poets, prophets, lovers, or dreamers. Intuition is a feel for patterns, the ability to generalize based on what has happened previously. Leaders act on hunches, but calculated ones.

Greenleaf (1977) believed foresight "is a better-than-average guess about *what* is going to happen *when* in the future beginning with a state of mind about *now*" (p. 24). The prudent leader constantly thinks of now as the moving concept in which past, present moment, and future are one organic unity. This requires living by a rhythm that encourages a high level of intuitive insight about the gamut of events from the past to the future.

It begins with listening. Greenleaf believed that only a true natural servant automatically responds to any problem by listening first. This helps others see the leader as servant first. The lesson here is that servant-leaders start by honing listening skills: To be a servant-leader, be a listener-leader. This works because true listening builds strength in others. Do we respect others so much as to give them our complete attention so they feel they are the most important person in the world to us? There may be another lesson: To identify servant-leaders, seek those who listen well.

Lincoln relied on storytelling successfully, too. Lincoln reminded people of their common goal (the preservation of the Union) and kept this mission foremost in everyone's mind by his constant, clear, concise vision, which he preached everywhere to persuade—because he had no power to command. He was able to lead by being led. He was the consummate listener—he persuaded others by listening well and creating a culture of consent. He developed trust of the common people by his great honesty, his power of persuasion, and his indefatigable pursuit of mission.

Greenleaf (1977) reminds us of another axiom about listening: "One must not be afraid of a little silence. Some find silence awkward or oppressive, but a relaxed approach to dialogue will include the welcoming of some silence" (p. 17). Greenleaf tells us that "leaders need two intellectual abilities not usually assessed in an academic way: they need a *sense for the unknowable* and they need to *foresee the unforeseeable*" (p. 21). Leaders get ahead of others because they know things and foresee things others do not. For Greenleaf, the failure of leaders to foresee may be an ethical failure. A serious ethical compromise today, he would say, is sometimes the result of a failure to make the effort at an earlier date to foresee today's events and take the right actions when there was freedom to act. How do leaders learn this business of foresight? They live at two levels of consciousness. One is the real world—concerned, responsible, effective, value oriented. At the same time, they live detached, riding above the real world, seeing today's events, and seeing themselves deeply involved in the events.

Where do we find these people? For Greenleaf (1977) the servant-leader always accepts the person, while sometimes refusing to accept some work or performance, as good enough. Great leaders have empathy and an unqualified acceptance of their people. Acceptance of the person requires a tolerance of imperfection. Gandhi used the simple, uneducated poor of India to bring the British Empire to its knees. Vincent de Paul recruited poor country girls to become Daughters of Charity to serve the sick and homeless of Paris. Anybody could lead perfect people—if there were any. There is none. Parents who try to raise perfect children raise neurotics.

For Greenleaf, the typical person—immature, stumbling, inept, lazy—is capable of great dedication and heroism if wisely led. Many are disqualified to lead because they are unable to work with and through the half-people they have. But they are all we have. The secret is in attracting a team of ordinary people to perform better than they would otherwise be able to do.

Power is the means of getting things done in organizations. Leaders create power by sharing it—not by hoarding it. Servant-leaders share power by working in the service of others helping them to discover and build their own power—together. Followers need to discover and develop power as they become more seasoned as organizational members and especially as they begin to assume more leadership. They learn about power from leaders primarily. It is easy enough to see the effects of power in organizations—things get done, goals accomplished—it is harder to learn to regulate the use of power appropriately.

Servant-leaders are powerful people, but their power is more like a gentle wind than a ball-peen hammer. Warren Bennis, the author and spokesperson on leadership and former president of the University of Cincinnati, was asked at one of his conferences why he did not use any examples of college presidents in his writing and research. He thought about it for a minute and replied, "I don't think of college presidents as leaders in the traditional sense; they are more like prime ministers." Prime ministers lead by persuasion, by working in the service of others who often work in opposition to each other. The prime minister has to keep one eye on the common goal, the other on those whose cooperation is necessary to reach it. That is servant leadership.

Years ago, Lisa Nigro, a former Chicago cop, founded the Inspiration Café—a small eatery for homeless people on the north side of the city. It is a place where the homeless are welcome to dine—to order off a menu, sit at a table, and be waited on as people are in restaurants anywhere. If they do not like the food, they are welcome to send it back. It is a warm café where patrons are treated like valued customers—not a soup kitchen, not a church basement, no serving lines. The homeless receive an excellent meal at no cost served by volunteer chefs, caring and respectful—"a restaurant for the homeless without the bill." The café also offers culinary training and job placement services to its guests.

The Inspiration Café is a place for homeless people where the dignity of the individual person comes first. Those receiving such service are then more able to offer similar service to others, too, perhaps as chefs in training. Volunteers, management, paid staff, cooks, and patrons all benefit from serving and being served. Inspired by the notion of servant leadership, the Inspiration Café offers respect and dignity to the least privileged through inspired service in such a way that they become servant-leaders themselves—a fitting example of servant leadership enacted and mission accomplished. Nigro says she wanted to create an atmosphere where "you would be missed if you didn't come."

There is good news here for leaders of nonprofit organizations: They do not have to find the best people for their causes, they just need to get the best out of the ordinary people they recruit. This is why connecting those individual, personal values of people to the mission and the organizational values of the nonprofit is the first step in effective leadership.

The Web of Inclusion

Sally Helgesen (1995) describes the web of inclusion as "a *pattern*, a model for coherently ordering people and their tasks; and as a *process*, a way of thinking and acting, of behaving and solving problems as they arise" (p. 19). As a web, the pattern is analogous to the spider's web with concentric circle structures linking people and processes to one another and bringing everyone close to the center (the leader). The women leaders she studied "labored continually to bring everyone at every point closer to the center—to tighten ties, provide increased exposure and encourage greater participation" (p. 20). For Helgesen, the women organization heads saw themselves at the center of things rather than the top—where they built consensus rather than issued orders and created collegial atmospheres where colleagues focused on "*what* needs to be done rather than *who* has the authority to do it" (p. 20).

The process feature of the web of inclusion focuses on inclusion via open communication. Continuous sharing of information reduces fear and enables colleagues to be more self-managing than traditional hierarchical structures and authoritarian lines of communication. Helgesen (1990) points out that the process feature of inclusive communication includes a teaching feature flowing outward from the center of the web: "The process of gathering and routing information, of guiding relationships and coaxing forth connections, strikes an educational note" (p. 56).

The web is based on *feminine principles* described by one of Helgesen's informants, Anita Roddick, founder of the Body Shop:

> Principles of caring, making intuitive decisions, not getting hung up on hierarchy or all those dreadfully boring business school management ideas; having a sense of work as being part of your life, not separate from it; putting your labor where your love is; being responsible to the world in how you use your profits; recognizing the bottom line should stay at the bottom. (Quoted in Helgesen, 1990, p. 5)

Helgesen (1990) quotes another of her subjects, Barbara Grogan: "I don't draft five-year plans—I just do the best job I can, and trust that it will lead me to where I'm supposed to be next" (p. 59). It is that sense of destiny—where she will be next—that highlights another feature of the web. The web includes a sense of intuition, opportunism, and patience for what is coming next—an audacious combination of leadership characteristics.

Women described their intellectual and ethical development as developing voice—and they preferred the notion of having a voice to having a vision. Vision implies seeing; voice implies hearing; for Helgesen (1990), the differences are significant. For instance, teachers use their voices to raise up students and to raise concern for causes, to persuade, listen, and learn. For the women Helgesen studied, the focus is always on finding their voice rather than having their vision—implying a dynamism and give-and-take with their colleagues in the web. "*Leading* with a voice is only possible when one has reached a certain level of development as a person; otherwise the voice will not ring true" (p. 230).

The flip side of having a voice is listening with care. Helgesen (1990) notes,

> The women in the diary studies all are skilled listeners; it was a strong aspect of their management style. They used listen ing both as a tool to gather information that had bearing on managerial decisions, and as a way of making the people in their organizations feel that their ideas and beliefs were of value. (p. 242)

One of the subjects, Frances Hesselbein, considered listening the heart of her leadership—the prototypical female skill (p. 243). The web of concern expands quickly to global proportions. Women leaders ask about "what role the company can play, . . . what role can I play, particularly as a woman. . . . Where can I make my best contribution? The question really gets down to *why was I born?*" (quoted in Helgesen, 1990, p. 49). In distinction to traditional, male models of leadership, the women in Helgesen's (1990) study were a gestalt—a whole: "By contrast, the women in the diary studies do not separate their personal selves from their workplace selves; they do not split being a mother off from being a manager, being an executive from being a friend" (p. 67).

The web of inclusion has already had effects on how we think of leadership—more collaborative, more listening, more negotiating, more humane. Gandhi, too, is a model of inclusivity: "Highly self-aware individuals such as Gandhi show an increasing sense of care, concern and compassion beyond the borders of their family and friends" (quoted in Kumarasamy, 2006, p. 109). Mahatma Gandhi said,

> Consciously, or unconsciously, every one of us does render some service or other. If we cultivate the habit of doing this service deliberately, our desire for service will steadily grow stronger, and will make not only for our own happiness, but that of the whole world at large. (p. 97)

Albert Schweitzer said, "I don't know what your destiny will be, but one thing I do know: the only ones among you who will be really happy are those who have sought and found how to serve" (quoted in Kumarasamy, 2006, p. 97).

Summary

The three theories—or authors—considered here have several things in common that serve nonprofit organizational leaders well. In no particular order, here is what we learned.

Leaders know themselves and understand what they have to offer—and they are able to meld their personal values with the mission and values of the organization. They are unwilling to put aside the qualities of being a mom, even as a CEO. They wanted to serve before they led. They are credible.

For each of the authors, leaders are outward focused and intent on others. They serve them, care for them, include them, build trust in them, and respect them. They are concerned for the underprivileged. They try to see the best in others—and to get the best out of them.

They are all listeners. To be visionaries and dreamers they find out they need to listen to others before they can engage them in their work.

They are dreamers and visionaries who connect through webs, service, common values, and shared aspirations. They are teachers.

There is a sense of the metaphysical and beyond-the-here-and-now aspect to each author's perspective on leadership. As they see it, leaders ask, "Why was I born?" and "What am I living for?" and "What grabs me?" They live to serve others and make a difference with their lives. There is a sense of spirituality or a spiritual dimension to them. They connect to causes and values that transcend the mundane.

Most of all, perhaps, the authors discussed in this chapter understood there is no one best way to lead.

Barry Posner has a baseball cap on a shelf in his office with MBFA stitched across it. He says it means *Management by Fooling Around*. Personally, Barry is a funny guy who takes great pleasure in all he does—even a job as stodgy as dean of the Leavey School of Business at Santa Clara University. But the lesson is sound. Great leaders constantly fool around with ideas great and small. They have fun, too.

DYNAMISM IN ACTION

Leadership of the Nonprofit Enterprise

LISA GALE VAN BRACKLE

City University of New York

Of the challenges confronting leaders of nonprofits at the beginning of the 21st century, the most pressing and urgent is the inadequacy of financing. Nonprofits have been called into question for decades.[1] Funders and stakeholders (which include the organization's board of directors, staff, watchdog groups, and regulatory agencies) continuously seek evidence that nonprofit organizations are effective and serve a legitimate purpose in our society. Skepticism is revealed through the reluctant support of social programs and more specifically these organizations. Public and private funders demand greater accountability for how their resources are being used by nonprofits. Private-sector firms are encouraged and invited to bid on government contracts for human services, which had previously been the exclusive domain of charitable organizations. The situation is particularly devastating for human service nonprofits, which are significantly dependent on government for their funding (Gronbjerg, 1998/2000; Salamon, 2002a).

In the best of times, nonprofit leaders anticipate declines in government funding (Salamon & Geller, 2007). Even as the country struggles to recover from the most significant economic crisis in decades, nonprofit leaders anticipate a negative ripple. And it is imminent: In 2008, individual giving was down 6.3% (this and the subsequent percentages include adjustments for inflation); charitable bequests dropped by 6.4%; corporate giving declined by 8.0%, foundation grants were lower by 0.8%, and total giving from all sources dropped by 5.7%—all during 2008 and as compared to support given in 2007 (*Giving USA*, 2009). The task for leaders is to make the case for these services so as to secure the resources that enable nonprofits to provide critical and essential services.

The Value of Nonprofit Organizations

The nonprofit, charitable, and voluntary sector is important to our society. The labels used to distinguish these organizations from government and private-sector corporations reveal their merits: *nonprofit*, accenting altruism and disregard of self-interest; *charitable*, referring to reliance on donations and generosity; and *voluntary*, indicating the significance of volunteers as a primary resource (Salamon, 2002c).

Their importance is more than ethereal. They are powerful generators of social value for certain, but they also create economic value. In the United States, these organizations are exempt from paying taxes because of their contribution to our economic, social, and political well-being. They extend the capacity of government and the private sector to be more effective. They are significant employers. They intercede when the private and public sectors fail. And yet, like all organizations, nonprofits shape and are shaped by the environment.

The Compromised Nonprofit

It is not surprising that nonprofit staff capacity, program quality, and operations are severely affected by the recalcitrant funding environment. The most vital resource that a nonprofit has is its people. When the organization lacks financial support, it cannot pay prevailing, living wages nor provide any guarantee of employment. Limited compensation and reduced job security breed low morale and high staff turnover, which limit organizational capacity. Time spent with clients is reduced to comply with available resources. In the human services, where the linchpin of service provision is consistency, clients may relapse because they are getting less care than workers know they need. Programs suffer as the inclination of staff to serve more and reach wider is squelched because staff is overextended.

Ironically, demand for nonprofit services and programs is most urgent during economic down cycles. More clients need human service organizations to help them find work, to put food on the table, and to continue to clothe and house their families. Unfortunately, these calls for help and assistance come when there are fewer and fewer funds supporting nonprofits, particularly in the human service field. The physical plant—offices of nonprofits—are less than adequate: There are few meeting spaces, and staff sit atop each other, sharing out-of-date and donated equipment and hoping on hope that their Internet connection is working. Inadequate financial support erodes nonprofit organizational capacity and, over time, their viability.

Nonprofit organizations and their leaders are not unaware nor idle in the face of this challenge. The unsupportive funding environment and threat that it poses to organizational survival is fertile ground for innovation and revolutionary change. Recognizing the importance of financial management to nonprofit existence, revenue diversification has evolved into a nonprofit strategy (Froelich, 1999), and nonprofits now expect that program staff will consider the management of resources as among their responsibilities (Froelich, 1999; Lohmann & Lohmann, 2008). These are strategies that are strikingly similar to those used in the private sector. However, unlike the private-sector organizations, human service nonprofits are not retrenching during economic downturns and instead are seeking new and diverse funding sources and improving their marketing approaches, consistent with their social missions (Golensky & Mulder, 2006).

There is also evidence to suggest that the composition of nonprofit financial sources has evolved, with income from fees from the sale of services and goods accounting for 70% of nonprofit revenue (of which 50% comes from private sources and 20% from government contracts) (Blackwood, Wing, & Pollak, 2008). Leaders of nonprofit organizations adopt these innovative strategies to lessen nonprofit dependence on external sources and retain control and autonomy of action.

Nonprofit Social Enterprise Emerges

Social enterprise is among the responses to the challenging funding environment confronting nonprofit organizations. A social enterprise is a strategy to engage in social purpose activities that generate income (Dees & Economy, 2001). Nonprofits recognize that they have resources or expertise that has value in the marketplace. So, for example:

- As an extension of a job training program, a community development focused nonprofit might open a business in an economically distressed neighborhood. The business fills a gap in services for the community and provides job opportunities for community members, including the hardest to employ.
- An organization might partner with a corporation in the latter's marketing campaign to raise money and raise awareness of a cause.
- There are ample examples of museum gift shops or thrift stores established to raise money for the parent nonprofit organization.

These strategies might be organized as a program of a nonprofit organization, as a subsidiary to the nonprofit (both of which are referred to as hybrids in the literature), or as completely separate legal entities formed with the sole purpose of providing financial support to a nonprofit. The social enterprise strategy enables the nonprofit to pursue its mission and opens up a new stream of revenue for the organization.

A small but growing body of literature focuses on social entrepreneurship, of which social enterprise is a part. Reflecting the nascence of the knowledge and the influence of scholars who represent various disciplines, social entrepreneurship reflects a broad, path-breaking strategy to significantly and innovatively solve social problems. Social enterprise[2] is not solely the province of nonprofit organizations: The strategy can and does form the basis of private-sector ventures by entrepreneurs who combine social responsibility and an economically viable idea. Within the context of nonprofit organizations, social enterprise is an entrepreneurial strategy because it also combines social value creation and revenue generation, which is innovatively achieved through market transactions. Although the continuum of social enterprise includes ventures that raise funds in activities that may or may not be related to mission, the nonprofit is strengthened regardless of motive because of the added resources or because of the additional resources and activity that align with the organization's social purpose (Dees & Economy, 2001). The achievement of social mission through the market is path-breaking for nonprofit organizations and is, therefore, entrepreneurial.

Leaders of nonprofits play a critical yet distinctive role in the deployment of the social enterprise strategy. Leaders are catalysts for new ideas and reforms. They are, by nature and function, influential. Like entrepreneurs, leaders can be "innovative, opportunity-oriented, resourceful change agents" (Dees & Economy, 2001, p. 4). They are distinct from, or arguably more than, entrepreneurs, in that it is their responsibility to influence and advocate for the social mission of the organization as well as its viability. Put another way, entrepreneurs are committed to an idea; leaders are committed to an organization.

The Nonprofit Leader's Challenge

Although it is not a new phenomenon, the social enterprise strategy represents an opportunity and challenge for the leaders of nonprofit organizations and a point of interesting debate among students of nonprofit management. On the one hand, it challenges our notions of what it means to be a nonprofit. It is also at odds with our expectations of these organizations. Is it possible for altruistic and selfless nonprofits to successfully operate in a market that is centered on competition, profitability, and efficiency? On the other hand, if nonprofits could achieve some success in the market, might that be sufficient evidence that they are effective and valuable? What does their success say about the centrality of market in our society and the relative unimportance of benevolence and charity? The social enterprise strategy may be a vehicle to address the financing challenge and respond to the nagging question of effectiveness and legitimacy. The successful implementation and representation of social enterprise strategy rests on nonprofit leaders.

The argument that has been presented thus far is that nonprofit organizations are engaging in social mission-driven market-based strategies in response to a less than supportive funding environment. The characterization of the nonprofit as providing primarily intangible social benefits has led to a misinterpretation of its role and diminution of the importance of the sector, which has contributed to its inconsistent financial support. The social enterprise strategy may provide a means to address inadequate financing and to communicate to its financing partners and stakeholder community its effectiveness and legitimacy. Although derived from private-sector strategies, social enterprise is distinctive in how it is implemented by nonprofits and may preserve the values that are strongly associated with the charitable, voluntary sector.

As social enterprise approaches are adopted by nonprofits, it is incumbent on the leadership to communicate their applicability to the achievement of social goals and rationalize how the strategy and nonprofit organizations in general can be more consistently supported. Leadership is critical to the implementation of strategy and can drive whether it becomes embedded or is further estranged from the needed sources of financing and support.

It is, therefore, the objective of this chapter to highlight the demands of operating a social enterprise on nonprofit leadership. The discussion that immediately follows reviews theories that describe the external and internal environment in which nonprofit leaders must navigate. The centerpiece of this chapter is a discussion about the challenges that leaders of nonprofits confront in their interactions with stakeholder groups as they employ the social enterprise strategy. This chapter concludes with questions for the next generation in the leadership of nonprofit organizations. Further examination and reflection on the management of and leadership in nonprofit organizations are certainly warranted, and students of nonprofit management are best suited to "step back" and contemplate the blending of the theory and practice and how it could shape the future of nonprofit organizations. As students of nonprofit management contemplate the role of leadership in these vital organizations, this chapter as a whole is meant to provide a foundation on which further changes can be catalyzed that ultimately enable organizations of the nonprofit sector not to survive, but thrive.

An Ecological View of Nonprofit Organizations

To fully appreciate the theoretical basis for the interactions between the organization and its environment, it might be useful to first identify the stakeholder community and its relative importance to the organization.

Nonprofit Stakeholders

The integrity of nonprofits is maintained by its various and committed stakeholders in its environment. The stakeholder groups are described in terms of what they do for the organization, their authority over the organization, and the frequency and intensity of the relationship.

- The board of directors provides oversight and represents one of many stakeholders who have authority over the organization. Technically, the board of directors is part of the leadership of the organization, having ultimate responsibility for the nonprofit organizations. The organization follows the strategic direction of the board. The choice to engage in social enterprise may require board approval, especially if a subsidiary is created to house the venture. The charter of the organization specifies the frequency of the interaction between the board and its executive director, but the nature of the relationship is subjective to the personalities of each.

- Funding organizations include government, foundations, corporations, and federated funds through which grants and contracts are available to nonprofit organizations. Organizations cannot exist without financial support so they must have relationships with this stakeholder group. Regardless of whether the funding is directed to the social enterprise, these organizations may react to the organization's decision to engage in enterprise by providing more or less support.

- Regulatory bodies hold significant influence over nonprofit organizations, having responsibility for assuring that the organization is operating in ways that are consistent with guidelines. The most significant regulatory presence is the Internal Revenue Service, which provides oversight to ensure that nonprofits are operating within the stated mandates of its tax-exempt status. There are other program-specific regulatory bodies as well. So long as the organization provides evidence of compliance, then relations with this stakeholder group remain positive. Unlike the board of directors or funding organizations, the nature of the relationship between the organization and the regulatory board is objective: The nonprofit provides requested information in a timely fashion, and the regulating agency responds, generally only when there is a problem.

- Although internal to the organization, staff is a powerful and important stakeholder group. Composed of the people who implement the ideas under the authority of leadership, staff votes "with their feet" on support of organizational strategies: Staff defections are possible if an organization is not adhering to stated goals or expectations.

- Finally, and not least, is the client. Clients have tremendous authority within an organization. If they are not satisfied and the funding for the program comes from public sources—or if the organization accepts any public funding—then the organization could be put at risk for compromising clients. Advocacy groups concerned about the degree to which the organization could be exploiting clients or charging them for services yield tremendous influence, which could serve to increase support or sully the nonprofit organization's reputation.

What separates a nonprofit from the private sector or government is that nonprofits have not one or two primary stakeholders but multiple stakeholders to which they are accountable. Consequently, doing anything within a nonprofit organization requires deftness and skill. Invariably, the leader of the organization is tasked with navigating these relationships.

Relevant Theories

The scholarly literature appreciates that environments shape organizations. Certainly, how an organization manages its internal processes and systems have a bearing on organizational viability. The earliest theories explored organizations as independent, autonomous, and self-contained entities, shaped by the actions taken within the organization by leaders, managers, and staff. Recent theory, however, recognizes the environment as a factor. Viability is achieved through positive and successful relationships between the organization and its environment. Relevant to this discussion, the organization's leaders represent the interests of the nonprofit and facilitate the relationship with stakeholders and funders. Effectiveness and legitimacy are established by the actions of the organizations and the responsiveness of its environment and are communicated through the leadership.

Of the theories that take this ecological view of organizations, resource dependence and institutional theory are relevant for leaders and provide some grist for how social enterprise may be received in the environment.

Resource Dependence Theory

Developed with private-sector firms in mind, resource dependence theory holds that organizational survival depends on the ability of the organization to demonstrate its effectiveness and efficiency. Pfeffer and Salancik (1978) cast effectiveness as an organizational goal that is measured by stakeholders outside of the organization and efficiency as a goal that is measured by examining internal operations. They define effectiveness as the measure of how well the organization meets the demands of its stakeholders (Pfeffer & Salancik, 1978).

Nonprofit organizations have multiple stakeholders who operate in a number of spheres or task environments that potentially influence the organization's ability to attain its goals (Weinbach, 2003). For example, government is an important stakeholder, and a nonprofit organization's ability to achieve outcomes is evidence that public resources are well spent and effective. Efficiency is an internally measured function of resources used to output produced. If an organization optimizes its output, it is easier to make the case for additional resources, especially in times when these resources are scarce. Effectiveness and efficiency are important to be measured and explicated if an organization intends to successfully engage with the environment. This theory has direct applicability to a discussion about the dependence of nonprofits on available resources.

Institutional Theory

Although nonprofit organizations are motivated by social mission, they operate in an increasingly competitive environment. Institutional norms and practices govern how nonprofits are supposed to behave. Generally, but particularly when confronting uncertainty and constraints, organizations tend to respond in the aggregate, maintaining "homogeneity in structure, thought and output" (DiMaggio & Powell, 1983, p. 147). Evidence suggests that the earned income of nonprofits has increased over the past decades (Salamon & Geller, 2007), and although public spending on social activities has increased, so too have reports of social enterprise activities. Organizations are modeling themselves on other more innovative organizations. As it attempts to replicate the social enterprise, each organization may be unconsciously innovating. This mimetic process is a cornerstone of isomorphism, the constraining process "that forces one unit in the population to resemble other units that face the same set of environmental conditions" (DiMaggio & Powell, 1983, p. 149).

Leadership Revisited

At the intersection of the work of the organization and the communication about that work sits the leadership, which includes the executive director and the board of directors. The leadership sets the tone for the organization, how it operates, what strategies it chooses. The executive director is generally the primary vehicle through which the organization interacts with its environment.

The literature on leadership is devolved into a study of the traits and capacities of individuals in a position to influence the direction of the organization. The literature on social entrepreneurship generally and social enterprise specifically also has determined that there are traits that include vision, drive, and perseverance. Such leaders are serial entrepreneurs, in that the tendency is to keep at it, attempting to build the better mousetrap.

Leaders in organizations that adopt nonprofit social enterprise are a different breed. An entrepreneur is an innovative, opportunity-oriented, resourceful, value-creating change agent (Dees & Economy, 2001). They can be found in corporations, government, and nonprofit organizations. In the case of social entrepreneurs, their focus and primary concern is social change, and the aforementioned definition of entrepreneur holds for them as well.

One should not assume that the social entrepreneur is the lone individual who possesses the commitment and intensity about the idea, system reform, or organizational strategy. Scholars suggest that to implement an entrepreneurial venture, there may be a catalyst, but more likely, a group of individuals with a shared vision of the innovation (Light, 2008; Sharir & Lerner, 2006). Furthermore, the social entrepreneurs need not be the executives of the organization. Ideas for entrepreneurial pursuits can emerge from line staff as well as program directors and organizational leadership. Because social entrepreneurship is a vehicle for ideas to be expressed, systems to be reformed, and resources to be reallocated, the leader rests at the center of the enterprise, influencing and directing and recalibrating the enterprise.

Invariably, the leadership confronts the questions and skepticism of the nonprofit's expansive list of stakeholders. As the primary communicator, catalyst, and person of influence, the leader will be required to shepherd an organization through the process of creating and maintaining a social enterprise. Adopting a new entrepreneurial approach to programs and operations means that staff must be convinced to participate or learn to live with the prospect of a business not only in their midst, but as part of what they do in the community. In addition, funders will think differently about nonprofit organizations that engage in social enterprise. This represents a bold new undertaking for nonprofits and is a particular challenge for nonprofit leaders.

With a burgeoning social entrepreneurship movement in the world, to operate a social enterprise poses a series of very significant and distinctive challenges for the leadership of organizations. The leadership demands will be articulated according to the needs of the various stakeholder groups, distinguishing between the challenges for internal and external audiences. Although social entrepreneurship can be rationalized as a response to a fickle funding environment, it requires leaders to face unique challenges with each of their stakeholder groups and the general population at large. Not to diminish the challenges associated with nonprofit organizations that obtain financial resources through more traditional channels, social enterprise opens up a host of challenges that either extend already existing troubles or create new ones.

Leadership Demands

With the understanding now that leaders have a distinct purpose to communicate and ultimately influence their stakeholders, this section details the demands or concerns that will have to be addressed in response to an organization choosing to engage in a social enterprise strategy. These demands correlate with the issues that various stakeholder groups have about the use of the social enterprise strategy by nonprofits in general. They are listed here because this author believes that leaders will invariably have to be ready to respond to these challenges.

Goal Displacement/Mission Drift

A nonprofit organization is generally founded with a specific social mission. The mission is stated in its organizational charter and restated on its website and in its collateral materials. The mission drives the organization, in that its work is in service to its mission. Strategic planning enables an organization to articulate how its goals, objectives, and strategies support goal attainment. Stakeholders decide to join or participate in supporting the organization through the recognition of the character of the organization, which is revealed by how the organization articulates its goals.

Social enterprise is not an organizational form but a strategy. There is no legal designation for social enterprise, although it is part of the lexicon of organizational behaviorists, used to recognize that an organization chooses to raise money through a market-based enterprise. The fact that an organization is operating a social enterprise is also not readily discernible unless the organization has created a separate subsidiary entity. A nonprofit may choose to operate a social enterprise alongside its traditional, grant-funded programming. This is referred to as a hybrid organization. In any event, to operate a social enterprise is a strategy that is generally rationalized by the leadership to fulfill the mission. As has already been noted, social enterprise exists along a continuum and as such may be fulfilling the mission by raising money to support operations and/or program.

Scholars and practitioners are concerned that the allure of money may eclipse mission, resulting in mission drift. A key characteristic distinguishing nonprofit and private-sector firms is their motives: Nonprofits are essentially driven by social purpose and the creation of social value, and private-sector firms are driven by profitability and efficiency. In a situation where an organization is structured as a hybrid, it can be a challenge to maintain the focus on mission when the enterprise is generating a larger portion of the revenue.

Mission drift is a chief concern of leadership and particularly so in the case of nonprofit organizations that operate social enterprises. Leaders are interested in finding strategies that help the organization to be sustainable, and social programs are difficult to finance. For example, nonprofit leaders may be inclined to expand successful market-based enterprises at the expense of charity-supported social programs that serve more vulnerable clients. The organization is defined by its social programs, yet the opportunity to generate revenue may entice leaders to proceed with the market venture. This is a judgment call for the leadership to make and a difficult one, given the funding environment and its challenges.

Identity Issue I: The Schizoid Organization

Another challenge is maintaining organizational coherence. Clients who interact with both sides of the organization should feel supported. An argument could be made for having part of the organization mirror the rhythm of the market as a way to prepare clients for the market. However, when one side of the organization is largely business focused and the other is social-service focused, it is a challenge to have clients experience a whole.

This issue is particularly germane for staff. There is tremendous potential for staff to feel dissonance, as each side of the operation has its own rules, traditions, and cultures. This extends beyond the amorphous: Evidence suggests that business and social service operations within an organization that has adopted the social enterprise strategy have different pacing, market risk, and strategies for organizing service technologies (Cooney, 2006). This creates difficulty for staff cohesion and a shared commitment to organizational goals.

Earnings Crowding Out Established Funding

Starting and operating a small business enterprise is difficult under the best of circumstances. In addition to challenges with having sufficient capital and skills to manage and maintain operations and levels of service, so too is the inevitable challenge of maintaining sufficient cash flow and learning and appreciating the business cycles. So the reason for starting the enterprise—to generate additional, independent revenue—could be compromised if the enterprise becomes a drain on organizational resources.

Success is both a blessing and a curse for a nonprofit social enterprise. If an organization is not performing well, then the leadership needs to consider whether to continue the operation. However, if the organization is successful, then a more urgent problem is that the organization's funders may presume that the organization does not need their support.

"Be careful what you wish for" is an umbrella expression that characterizes the problem emerging when an organization engages in an enterprise with the goal of supplementing its income. On some level, the expectation of the leadership is that the earned income program will supplement already existing funds acquired from contributions or earned income contracts or foundation grants. However, the literature reveals a problem: Nonprofit enterprises struggle to maintain their established support when they engage in enterprise activity (Tuckman & Chang, 2006). Put another way, earnings from enterprising activities crowd out traditional funding sources, as evidenced in a series of case studies of associations (Young, 1998). This raises concerns for leaders, who are tasked with managing the enterprise strategy and must redouble efforts to raise funds as existing financial supporters withdraw their support because they feel that the organization is in a good financial position.

Identity Issue II: For-Profit in Disguise?

U.S. nonprofits are granted tax-exempt status because these organizations are committed to pursuing a social goal that improves the condition of the society. When an organization earns revenue from commercial activities that do not support its mission, it can be subject to taxes, and if the activity recurs, it can lose its tax-exempt status.

There are advantages to operating a business as a nonprofit organization. The tax-exempt status opens the door to resources from grantmaking foundations. Being associated with a social cause gives an organization a distinctive flavor, as compared to other businesses in the marketplace.

Preserving identity is a challenge that affects the nonprofit leadership's ability to make a compelling case for continuing support. Once engaged in the domain of earning income, particularly in the market, organizations move beyond our expectations of what it means to be a nonprofit. Invariably, the organizations that are engaging in enterprise are leaders in the sense that they are among the first of their peers to adopt these approaches. As a consequence, leaders face a pressing demand to defend and characterize their activities, making it clear that they are not, in effect, a for-profit in disguise (Weisbrod, 1998).

The literature suggests that leaders of nonprofit organizations, which are committed to social purposes and their mission-related work, must structure their enterprises to protect and preserve their charitable, tax-exempt identity (Young, 2006).

Leadership Displacement

The decision to engage in social enterprise is very much linked to the predisposition of the leadership. While the leader may not have chosen or identified the opportunity—other staff may make the case for the organization to pursue an enterprise—the leader carries the ball when persuading stakeholder groups to offer their support and earning their belief that the venture offers income generation potential for the organization.

Different kinds of skills and expertise are needed to operate a business. In the case of Work Integration Social Enterprises (WISEs),[3] the organization might need to have talent in the area of employment and training, job development, and workforce retention strategies, not to mention the competencies to market and grow a business. The leadership is expected to possess many of the skills needed not to manage, but to lead the enterprise, which is linked with the identity of the leadership. If the executive director does not have the skills, the organization's board of directors may be inclined to hire a person who does.

Executive directors who promote the notion of a business and lack the needed skills to run it may well work themselves out of a job. As the leader is driving for this change, consultants are useful, but over time, the board may prefer to retain an executive director who has had some experience in managing a business enterprise.

This also raises issues and concerns for succession planning. Creating an enterprise that is too linked to a staff member or executive director could be problematic if that person leaves. It is important, therefore, to make sure that the enterprise aligns with the social mission of the organization and that the alignment is clear to the entire leadership. To engage in an enterprise with limited support means that the executive director could be out of a job, and it may create a public relations nightmare for the organization if it withdraws from an enterprise that is not suitable. This wastes time and effort on the part of staff and the leadership.

Promotion Versus Exploitation of Clients?

At the crux of concerns is the potential that the enterprise could have a negative effect on clients. It is part of the unspoken values within nonprofits and among their staffs that to have any negative impact on the target population is unacceptable. The needs of the organization never outweigh the needs of the client population.

However, a competitive advantage can be earned if the organization shows that vulnerable populations are gaining employment opportunities in its business. For example, the Greyston Bakery[4] website states unequivocally that it makes baked goods to employ people—and not the other way around. It is a short walk from this clarity of social mission to portraying vulnerable populations as poster children, focusing not on their success but on the life challenges they have faced and promoting support for the business as a way to help the individuals. Exploitation is defined as "taking selfish or unfair advantage of a person or situation," and promotion is "the encouragement or growth of something or someone." The line between the two is defined by the degree of respect accorded to the client.

Another issue with clients vis-à-vis the social enterprise is whether they pay for the service. Admittedly, it would seem that in WISEs, clients do not pay for training and earn their jobs. However, they are paying in the sense that they are associated with an enterprise known for employing the downtrodden or vulnerable. If the enterprise is not successful in the market, it becomes a ghetto for clients and does little to improve their circumstances.

Implications and Reflections

In light of the aforementioned challenges and demands for leaders of nonprofits, this might be a proper place for reflection. Nonprofit organizations hold a very distinctive place in the organizational landscape, and social enterprise strategies shatter traditional conceptions of their relation to the marketplace. As leaders forge ahead to implement this strategy, students of these organizations must take the long view, considering how social enterprise could affect not only how the organizations are financed but also how these organizations are characterized and supported by stakeholder groups.

Questions for Reflection

The author urges readers to consider the following questions as an impetus for papers, conjecture, and practice:

- For profit businesses operate from a paradigm of scarcity of resources, which helps to define the economic value of their product. Many nonprofits operate from a paradigm of abundance, which assumes resources will be attracted to good causes and ideas. Can these two paradigms exist in one organization?
- How do you learn to lead the social enterprise when so few currently exist?
- Is stronger relationship building and communication to stakeholders about nonprofits, using the language of business, enough to address the inadequate financing of this sector?
- What does the need to introduce market based services to nonprofits say about their financial situation?
- To what degree does social enterprise give a false sense that the organization is being more effective in achieving its social goals?

- Why might nonprofit led social ventures be more or less successful, and how is success defined?
- In what ways can theories about management and leadership be augmented to include an emphasis on social value creation?

Summary

The bottom line is this: Nonprofit organizations lack sufficient resources to deliver needed services—from the tools and equipment to staffing. If neither government nor corporations can rationalize greater and more consistent financing for nonprofits, these organizations will have to enact new strategies and approaches. Students of nonprofit organizations need to be prepared to think outside of the box, to color outside of the lines by leading to innovate, to thoughtfully break down barriers that restrict how nonprofits work, and to do so while continuing to press for increased public funding of their work.

Notes

1. Reference the repeated efforts by government to determine the efficacy of nonprofit organizations.
2. The terms *social enterprise, social venture,* or *social pur pose business* are used interchangeably throughout this chapter.
3. WISEs are a popular and much researched type of social enterprise in the literature from Europe. These organizations provide sheltered employment opportunities for vulnerable populations. One of the recent and definitive works about WISEs is by Defourney and Nyssens, *Social Enterprise: At the Crossroads of Market, Public Policies and Civil Society* (London & New York: Routledge, 2006).
4. Based in Yonkers, New York, Greyston Foundation is a leader and a model social enterprise. Learn more by visiting www.greystonfoundation.org.

Progressive Leadership

Models and Perspectives for Effective Leadership

Paige Haber
University of San Diego

Leadership is a concept used in many different contexts with an array of meanings. Accordingly, there is a lack of common understanding as to what leadership is and what constitutes good leadership. In fact, a Google search of *leadership definition* leads to more than 22 million results. The purpose of this chapter is to offer some clarity to the concept of leadership and provide a thoughtful discussion on leadership perspectives and models that can be identified as progressive and effective for both personal and organizational success.

Leadership is an important concept for professionals working in nonprofit organizations. The discussions in this chapter highlight how leadership is a process that takes place in all aspects of an organization, and professionals can influence leadership in the organization and larger community from any level of an organization. To engage in leadership or enhance and demonstrate leadership skills, one must not be the CEO or a member of the board of directors. Anyone can engage in leadership through being a committed, engaged, and hard-working member of the organization who is in touch with and acts in line with the organizational purpose and values.

In this chapter, different understandings of leadership are presented, including a discussion on leadership and management. Next, the importance of leadership is presented, followed by a brief history on the development of leadership studies. This discussion of leadership progression leads to an overview of *progressive* leadership perspectives, which are those that challenge the traditional leader-centric approaches to leadership. The chapter concludes with a discussion on the future of leadership and a chapter summary.

Understandings of Leadership

In everyday language, the word *leadership* is used in a variety of ways, resulting in a myriad of quite different understandings of the same word. A few examples follow:

- *Position or rank:* “The leadership of the organization is made up of six members.”
- *Status or marketshare:* “The organization has leadership in the industry.”
- *Direction:* “She provided leadership for the initiative.”
- *Skill or capacity:* “He demonstrates strong leadership.”
- *Activity:* “The group engaged in leadership.”

These different understandings can also be distinguished by something someone *is* (position), something someone *has* (skill), and something someone *does* (activity). These are three different concepts that are worth distinguishing.

Another important distinction is the difference between *leader* and *leadership,* two concepts and terms often used interchangeably. Whereas a *leader* is a position or a person, *leadership* can be viewed as an activity. In addition, while a leader can engage in leadership, it is important to recognize that leaders do not *always* engage in leadership, and one need not hold the title of leader to engage in leadership. Reframing this common misconception—that only a leader can do leadership—is important, especially because people who are not in leadership positions can still make a positive difference and contribute to the leadership process.

In this chapter, *leadership* is primarily emphasized as an activity, or something someone does. While there is also a focus on leadership as a capacity, or something someone has, these skills and capacities are not important if one does not put them to use. In other words, what someone does is more important than what someone is capable of doing. To effectively engage in leadership, one must develop a range of leadership skills and capacities.

Leadership and Management

Scholars and practitioners spend a great deal of energy distinguishing between the concepts of *leadership* and *man agement.* Rather than focus so intently on the differences, it is perhaps more helpful to understand why they are both important and how these functions complement one another. Leadership and management both involve working with other people and striving to accomplish goals (Northouse, 2007). The overall focus of time, goals, functions, and the nature of the relationship (between the leadership or manager and follower or subordinate) differ across the two concepts of leadership and management. Table 36.1 provides an overview of these differences.

While the two concepts may seem quite distinct and different, the reality is that they go hand in hand. A long-term focus and sustainable organizational change (leadership) cannot happen without a parallel focus on short-term goals and completion of tasks (management). Without the function of staffing (management), there would be no people to align (leadership); in some situations, there is a need for control (management) and, in others, inspiration or motivation (leadership).

In addition, these functions are not so distinct and clear-cut. Often, even within the same situation, someone may engage in planning (management) while he or she is providing direction (leadership). What is perhaps most distinct between the two concepts is the nature of the relationships. Often, management involves a top-down authority relationship, whereas the relationships within leadership are based more on influence between the members, whereby the leader influences the followers and the overall leadership process, and the followers also influence the leaders and the leadership process. Although these distinctions may appear to be clean and clear on paper, the reality is that in practice, they overlap and even merge. It is important to recognize that the two concepts complement one another and that both are needed for organizational success, for without leadership, an organization will become stagnant and perhaps die, and without management, an organization will not function, and people will not get paid.

Why Leadership?

The above discussion presents some different understandings of leadership. For the purpose of this chapter, leadership is understood as *a process or activity in which people are mobilized to create positive change.* Note that the definition identifies leadership as a process or activity in which many people can partake (not a position or skill), and it involves creating change (not maintaining the status quo).

So why should we focus on and care about leadership? The answer is multifaceted and perhaps most easily understood in examining this question on three levels: individual, group, and societal. On an individual or personal level, developing leadership capacity is important because it helps someone become a more effective person and group member, one who is able to think innovatively and initiate change. On a group or organizational level, leadership is important for sustainability and long-term success; leadership contributes to innovative thinking and new ways of

	Leadership	*Management*
Time focus	Long-term	Short-term
Goals (Northouse, 2007)	Envisioning and creating change Influencing others	Reducing chaos Completing tasks Mastering routines
Functions (Kotter, 2001)	Providing direction Aligning people Envisioning Motivating and inspiring	Planning and budgeting Staffing Organizing Controlling
Nature of relationship (Rost, 1991)	Influence relationship Reciprocal	Authority relationship Top-down

Table 36.1 Leadership and Management

operating and thriving in an ever-changing and complex world. On a larger, societal level, leadership is needed for creating a better, more just world. Leadership goes beyond serving one's needs, and its service-oriented nature lends it to creating positive change, which is needed for the sustainability of humanity and the environment. Leadership relates to these three contexts (individual, group, societal), which are in fact nested and interconnected, whereby what happens on an individual level influences the group and societal levels, what happens on a group level influences the individuals and larger society, and leadership and change on a societal level influences individuals and groups (Heifetz, Grashow, & Linsky, 2009; Komives & Wagner, 2009).

Leader-centric Perspectives on Leadership

Looking back at how the study of leadership emerged can help explain how leadership is understood today. Leadership has traditionally and historically been understood as a leader-centric concept, meaning that it focuses on the role of leaders in terms of who they are and what they do.

There is evidence that the concept of leadership has been recognized and studied since the time of Aristotle (Northouse, 2007); additional evidence points to the concepts of leadership, leader, and follower being present in Egyptian hieroglyphics from more than 5,000 years ago (Bass, 1995). The study of leadership began with a focus on leaders, and the first systematic studies focused on *great leaders*. These studies are dubbed *great man theories* or *trait theories,* and they sought to understand what characteristics, or traits, made these leaders great (Northouse, 2007). These leaders, almost entirely men, were believed to be born with innate qualities that made them great leaders.

Trait theories suggest that leaders have certain traits that other, nonleaders do not have. Some of these traits include: intelligence, determination, integrity, sociability, self-confidence, masculinity, and dominance (Northouse, 2007). These trait theories are problematic, however, for a number of reasons. First, there is ambiguity and inconsistency as to a definitive set of traits; different studies resulted in different traits, and the studies were often quite subjective as to what constitutes good leaders or good leadership (Northouse, 2007). Trait approaches are also problematic because they fail to focus on context or situations; what it takes to be successful or great in one situation (i.e., business) may be different from what it takes to be successful or great in another situation (i.e., classroom) (Northouse, 2007). Similarly, trait approaches fail to consider the presence of other people in a group or organization; working with different people may require different approaches or capacities. Last, focusing on leadership as a trait is very limiting, as it implies that leadership is a predetermined disposition that cannot be learned. The belief that leaders are born and that leadership cannot be developed or learned is commonly recognized as a leadership myth (Komives, Lucas, & McMahon, 2007; Northouse, 2007).

From the study of traits came the subsequent study of leadership skills, or the capabilities of a leader, which can be learned and developed over time (Northouse, 2009). Studies also emerged on the leadership behaviors and styles that are actually practiced and demonstrated by a leader (Komives et al., 2007). These studies sought to identify the best way to lead and took into consideration the presence of the people who were being led. Still, these leadership perspectives focused almost entirely on the leader and his or her actions, without consideration at all for the situation or context and with relatively little consideration of the other people in the group organization (beyond recognition that a leader engages in a behavior that may impact another person). Situational and contingency approaches to leadership were introduced as a new perspective on leadership, which takes into consideration the situation and the people in the organization when determining how a leader should lead (Komives et al., 2007).

The leader-centric nature of these different leadership perspectives is clear; these perspectives contend that leadership is either (a) who a leader is (traits), (b) what a leader is capable of doing (skills), or (c) what a leader does (behavior, style, situational). While these different aspects may be helpful in understanding what are believed to be important qualities, capacities, and behaviors of a leader, the perspectives on leadership are very limited in that they do not take into consideration the complexity of situations in which they operate nor the vast potential of the other people in the group. The next section focuses on progressive leadership models, which are those models that challenge these leader-centric perspectives on leadership and emphasize a more relational and systemic view of leadership.

Progressive Leadership Perspectives

Progressive leadership is the term used in this chapter to describe leadership perspectives that challenge the traditional, leader-centric conceptions of leadership. Progressive leadership is characterized by the following tenets:

- Leadership is an action or process, not a person or a position.
- Leadership is relational, with a focus on building relationships and collaboration.
- The intention of leadership is creating a positive change in something beyond oneself.
- Leadership has a moral and ethical dimension.
- Leadership involves the interconnected levels of individual, group, and system.

Progressive leadership speaks to the leadership challenges facing our organizations and society today, and it is through embracing these perspectives on leadership that real, significant, and sustainable change can take place and organizations can thrive (Heifetz et al., 2009). In addition, these progressive leadership approaches increase individuals' leadership capacity and ability to mobilize change (Bass & Riggio, 2006; Heifetz et al., 2009).

The models and perspectives presented in this section reflect many of the characteristics of progressive leadership identified above. Two foundational perspectives of leadership are presented, followed by a number of more recent models of progressive leadership. While they do not each touch on all of the characteristics presented above, each provides a valuable and unique framework that can inform leadership practice.

Foundations of Progressive Leadership

James MacGregor Burns, a pioneer in leadership studies, introduced the concept of transforming leadership. Transforming leadership stresses the mutual, reciprocal relationship between a leader and followers, whereby the motivation and the morality of both the leader and the followers are raised to higher levels (Burns, 1978). This relationship results in higher potential in both parties as well as greater capacity for *real* change. Transforming leadership is contrasted with transactional leadership, which is a relationship based on a transaction or exchange between a leader and follower, such as giving a raise for meeting certain performance standards. This conceptualization of leadership served as a guide and foundation for many other leadership models. Burns challenged leadership scholars and practitioners to look beyond the role of the leader alone and instead focus on the reciprocal relationship between leader and follower. He also introduced the concept of morals and ethics into the leadership conversation.

Rost (1991), following Burns's lead, introduced the concept of *postindustrial leadership* and called for a paradigm shift in how we should view leadership. He called the leader-centric perspectives on leadership *industrial* perspectives and advocated for new ways of thinking that fit our ever-changing and complex world with shifting values. Postindustrial leadership stresses the mutual relationship of influence between leader and followers, the importance of followers being active players in the leadership process, striving for a substantive and transforming change that is mutually agreed on and reflects a shared purpose (Rost, 1991). Together, Burns's (1978) transforming leadership and Rost's postindustrial leadership provide a strong foundation for a new way of viewing leadership that challenges a leader-centric focus and has the potential for significant, transforming impact.

Servant Leadership

The perspective of servant leadership stresses that a servant leader is servant first; one begins with a desire to serve others or a greater purpose, which then leads to a desire to lead (Greenleaf, 2008). This results in a servant leader who is committed to serving something beyond him- or herself. Ideally, those people being served benefit, grow, and become more motivated and likely, in turn, to serve others.

While leaders are not necessarily always servants first, the servant leadership perspective has many implications. It stresses the importance of leaders' focusing efforts on something greater than themselves, whether it is the well-being of others, a cause, or a purpose of an organization. Servant leaders, therefore, put the needs of others in front of their own needs and in turn create a positive difference and enrich others in the process (Greenleaf, 2008). Servant leadership also implies that leaders should be in tune with their followers through listening to them, exercising empathy, nurturing their growth, and working to build community. The leader-follower relationship is important and should be based on ethics, care, and concern.

Servant leadership is a helpful perspective for organizations that are mission centered and that seek to create a positive difference and serve others. Servant leadership emphasizes the social responsibility that leaders have to do what they are capable of doing to serve those people who need help and are not as fortunate (Northouse, 2007). In an organizational context, servant leaders are concerned with all members of the organization, regardless of role or status; no one should be recognized as more or less important than others.

Followership

Followership is a different way of looking at leadership that recognizes the crucial role that followers play in the leadership process (Kelley, 1995). While our society's focus is often solely on the leader of an organization, the reality is that the followers or members of an organization play a significant role in whether or not an organization fails or succeeds. An organization needs effective leaders and followers, and they are ultimately both part of the leadership process. It is helpful to understand that the role of leader and follower shift and change in different contexts; even within the same organization, someone may be a leader in one committee and a member without a leadership title in another. It is important, however, that the person is effective and committed in both roles. Kelley (1995) shares qualities of effective followers:

- Followers manage themselves well.
- Followers are committed to their organization and its purpose.
- Followers work hard and perform at high levels.
- Followers demonstrate courage, honesty, and credibility.

These qualities sound a lot like what might be expected of effective leaders, and that is exactly the point; leaders and followers should demonstrate the same commitments, abilities, and skills. Through the perspective of followership, being a follower is not thoughtlessly and blindly complying with the leader; it involves being an active, engaged, and committed member who can think critically. Followership stresses the importance of leaders and followers in the organization's success. In addition, followership is an empowering perspective that encourages people from any level in a group to be an engaged participant in the leadership process.

Relational Leadership Model

Relational leadership is a perspective that stresses leadership as a process that involves many people working together to create a positive difference or change (Komives et al., 2007). Relationships are at the forefront of this type of leadership, and the model identifies five key components of the relational leadership model: purpose, inclusive, empowering, ethical, and process (Figure 36.1). Each component is briefly described below (Komives et al., 2007):

- *Purpose* is at the core of the model; it involves identifying a common group goal or vision and being committed to work toward this common purpose. In addition, purpose involves creating a positive difference.
- *Inclusive* involves being aware of and valuing difference and diversity on many levels, such as opinions, background characteristics, and styles. Inclusive also means including a variety of people in the leadership process and working to develop the skills and capacity of group members.
- *Empowering* reflects shared power in a group, whereby group members step up and become involved in the group process and are supported to do so through the creation of an environment that promotes involvement and ownership.
- *Ethical* is the component of the model that identifies the importance of acting in line with the values of the individual and group to create something positive that serves something beyond self.
- *Process* encompasses each of the other components of the model, focusing on how a group works together. This involves how a group functions and makes decisions when working toward its purpose. The group should be aware of its process and act intentionally.

This model stresses the importance of the process and the group, challenging the more traditional leadership perspectives of focusing solely on the outcome and the individual leader. In fact, this model does not even distinguish between the roles of leader or follower; everyone is part of the group leadership process and plays important roles, which may shift depending on the activity or point in the process. The model provides guidelines for an effective group leadership process.

Social Change Model of Leadership

The social change model of leadership shares some of the same assumptions about leadership as the relational leadership model. The social change model also stresses the importance of the leadership process and the role of the group (Komives & Wagner, 2009). In addition, values and positive change are cornerstones of this model (see Table 36.2). Its ultimate outcome and goal are change, more specifically, positive social change. There are eight key values that can be described in behavioral terms.

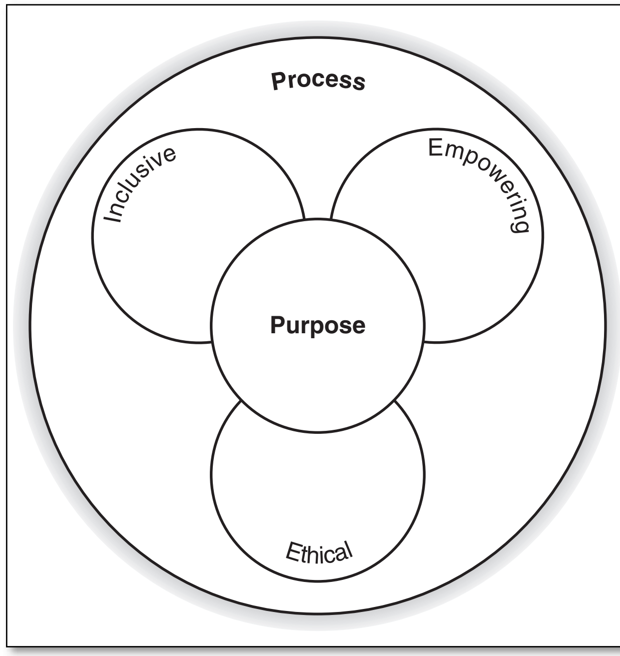

Figure 36.1 Relational Leadership Model

SOURCE: S. R. Komives, N. Lucas, & T. R. McMahon, *Exploring Leadership: For College Students Who Want to Make a Difference,* 2nd ed. (San Francisco: Jossey Bass, 2007), p. 75. Reprinted with permission of John Wiley & Sons, Inc.

The individual dimension refers to the individual's role and commitments in the leadership process; it stresses the inner work in which one must engage (Cilente, 2009). The three values associated with this dimension of the model are: consciousness of self, congruence, and commitment. The group dimension reflects how a group of people works together and interacts in a way that supports the goals and purpose of the group (Cilente, 2009). The values associated with this dimension of the model include: collaboration, common purpose, and controversy with civility. Last, the society/community dimension of the model recognizes the various communities to which people belong and in which they should be actively engaged to work toward creating a positive difference. This dimension includes the value of citizenship (Cilente, 2009). Each of the dimensions of the model interacts and influences the other. Individuals' abilities to be aware of who they are, commit to their responsibilities, and act in line with their values in turn influence the group's ability to function and influence the larger community. In addition, the group influences an individual's self-development and so forth.

The social change model is a very useful model for recognizing the importance of the individual, group, and larger community in creating positive change. It also provides a number of values that can guide a successful process of leadership, resulting in more effective and self-aware individuals, higher functioning groups, and thriving communities. Like the relational leadership model, it is also an empowering model that recognizes

Value	*Definition*
Change	As the hub and ultimate goal of the Social Change Model, Change gives meaning and purpose to the other [values]. Change means improving the status quo, creating a better world, and demonstrating a comfort with transition and ambiguity in the process of change.
Citizenship	Citizenship occurs when one becomes responsibly connected to the community/society in which one resides by actively working toward change to benefit others through care, service, social responsibility, and community involvement.
Common Purpose	Common purpose necessitates and contributes to a high level of group trust involving all participants in shared responsibility toward collective aims, values, and vision.
Collaboration	Collaboration multiplies a group's effort through collective contributions, capitalizing on the diversity and strengths of the relationships and interconnections of individuals involved in the change process. Collaboration assumes that a group is working toward a Common Purpose, with mutually beneficial goals, and serves to generate creative salutations as a result of group diversity, requiring participants to engage across differences and share authority, responsibility, and accountability for its success.
Controversy With Civility	With a diverse group, it is inevitable that differing viewpoints will exist. In order for a group to work toward positive social change, open, critical, and civil discourses can lead to new, creative solutions and is an integral component of the leadership process. Multiple perspectives need to be understood, integrated, and bring value to a group.
Consciousness of Self	Consciousness of self requires an awareness of personal beliefs, values, attitudes, and emotions. Self-awareness, conscious mindfulness, introspection, and continual personal reflection are foundational elements in the leadership process.
Congruence	Congruence requires that one has identified personal values, beliefs, attitudes, and emotions and acts consistently with those values, beliefs, attitudes, and emotions. A congruent individual is genuine and honest and "walks the talk."
Commitment	Commitment requires an intrinsic passion, energy, and purposeful investment toward action. Follow-through and willing involvement through commitment lead to positive social change.

Table 36.2 Social Change Model of Leadership Values

SOURCE: K. Cilente, "An Overview of the Social Change Model of Leadership," in S. R. Komives & W. Wagner (Eds.), *Leadership for a Better World: Understanding the Social Change Model of Leadership Development* (San Francisco: Jossey Bass, 2009), pp. 43 77. Reprinted with permission of John Wiley & Sons, Inc.

the importance of every member of a leadership process, regardless of position.

Emotional Intelligence and Leadership

Over the past 20 years, emotional intelligence has been identified as a form of human intelligence, different from IQ, which measures one's intelligence based on ability to reason. Emotional intelligence (often called EI or EQ) focuses on one's ability to be aware of and manage one's own emotions, be aware of others' emotions, and manage relationships with others. Research suggests that EI is a greater indicator of success and outstanding leadership than IQ (Goleman, Boyatzis, & McKee, 2002). Resonant leadership includes two key categories: personal competence and social competence. Personal competence includes the domains of self-awareness (understanding oneself, values, and emotions) and self-management (managing emotions and feelings). Social competence includes the domains of social awareness (empathy and awareness of social factors and needs) and relationship management (ability to manage, collaborate with, and lead others) (Goleman et al., 2002). Within the four domains are 19 individual competencies. For example, the domain of self-awareness includes the competencies of emotional self-awareness, accurate self-assessment, and self-confidence. The competencies are considered learned abilities as opposed to innate traits or talents, and one does not need to develop each of these competencies to be effective; the competencies can instead be viewed as helpful tools in the leadership process.

Another model that combines the concepts of EI and leadership is *emotionally intelligent leadership* (Shankman & Allen, 2008). This model describes three facets of consciousness that are important for a leader to recognize: context, self, and others. Consciousness of context is being aware of the larger environment in which the leaders and followers operate; consciousness of self is awareness of one's own emotions and abilities; and consciousness of others is awareness of others, their roles, and relationships. There are 21 capacities of emotionally intelligent leadership across these three facets of consciousness, which are highlighted in Table 36.3.

The concept of emotional intelligence stresses the importance of awareness of oneself and others in the leadership relationship. This human aspect of the leadership process is important, as organizations are made up of people, and to create change, one must be able to work with and mobilize others. The emotional intelligence component of leadership is vital to one's own self-awareness and leadership effectiveness, developing and maintaining meaningful relationships with others, and organizational success.

Adaptive Leadership

The concept of adaptive leadership is understood, like many progressive leadership models, as an action or process. Heifetz and colleagues (2009) describe adaptive leadership as "the practice of mobilizing people to tackle tough challenges and thrive" (p. 14). They use the word *thrive* to portray the process by which an organism successfully adapts to changing conditions. This evolutionary metaphor of a living system needing to adapt to survive is applied to organizations. Organizations exist within the larger system or environment of our global society. Like living organisms, they must learn to adapt to changes in the larger environment. There are many examples of organizations that have failed to adapt and survive due to changes, such as economic downturns, in the larger society.

Organizations face a number of challenges; Heifetz and colleagues (2009) distinguish between *technical* and *adaptive* challenges. Technical challenges are those that are easily seen and understood; there is a clear understanding of the problem and what needs to be done to remedy it. Adaptive

Consciousness of Context
Environmental awareness: Thinking intentionally about the environment of a leadership situation *Group savvy:* Interpreting the situation and/or network of an organization
Consciousness of Self
Emotional self perception: Identifying your emotions and reactions and their impact on you *Honest self understanding:* Being aware of your own strengths and limitations *Healthy self esteem:* Having a balanced sense of self *Emotional self control:* Consciously moderating your emotions and reactions *Authenticity:* Being transparent and trustworthy *Flexibility:* Being open and adaptive to changing situations *Achievement:* Being driven to improve according to personal standards *Optimism:* Being positive *Initiative:* Wanting and seeking opportunities
Consciousness of Others
Empathy: Understanding others from their perspective *Citizenship:* Recognizing and fulfilling your responsibility for others or the group *Inspiration:* Motivating and moving others toward a shared vision *Influence:* Demonstrating skills of persuasion *Coaching:* Helping others enhance their skills and abilities *Change agent:* Seeking out and working with others toward new directions *Conflict management:* Identifying and resolving problems with others *Developing relationships:* Creating connections between, among, and with people *Teamwork:* Working effectively with others in a group *Capitalizing on difference:* Building on assets that come from differences with others

challenges, on the other hand, are not as easily seen or understood, have not been faced before, and do not have clear answers; they must be addressed by viewing things in new ways, adopting new beliefs, and trying new behaviors (Heifetz et al., 2009). People are often resistant to change and look for quick fixes to problems, which often results in responding to adaptive challenges with technical solutions.

For example, the adaptive challenge of having a younger generation of employees entering the workforce who are more community oriented and technologically savvy could be approached in a number of different ways. A technical response would be to continue to run the organization as it has always been run, trying to assimilate the different generation of employees into the existing organizational culture. An adaptive response may involve examining how the current organizational structure may support or hold back the creativity and potential of the new employees; organizational structures may need to be adapted, the ways in which decisions are made may need to be altered, and organizational norms may need to be shifted. While the adaptive response requires a shift in values and culture, along with a greater amount of energy, it is likely to result in a shifting organization that will better support the new employees, and their expertise and talents will be used in a way that helps the organization thrive. The technical response could stifle creativity and potential, leading to loss of employees and a gradual deterioration of the organization due to lack of ability to adapt with societal changes. This is a larger-scale example, however, adaptive challenges and responses can also be viewed in more everyday examples. Potential adaptive challenges such as starting a new job, getting feedback on an evaluation, or shifting organizational goals and resources require adaptive leadership; resorting to technical responses can result in short-term outcomes that ultimately fail to address the issue, perhaps even making it worse.

Adaptive leadership provides an important perspective in recognizing how much of ourselves we must bring to the leadership process; to engage in adaptive leadership, we must be in touch with ways of being and acting, and assessing how these beliefs and patterns serve or detract from what we are trying to accomplish. Adaptive leadership also involves the engaged participation of many people and the ability to mobilize others in this leadership process. Heifetz and colleagues (2009) provide a number of tasks that facilitate adaptive leadership. Refer to their work for additional information on this topic.

Integrating Different Leadership Perspectives

This section included a number of different leadership perspectives that address leadership from different angles and with different lenses, assumptions, and priorities. Rather than prescribe one leadership perspective or figure out which ones are best or worst, it may be more helpful to identify strengths from each perspective and seek to integrate them into an understanding and approach to leadership that pulls from the different models and perspectives and that makes sense for you, your group, and your organization.

Leadership is more than just what one does or how one acts; effective leadership can be viewed through the framework of knowing, being, and doing (Cilente, 2009; Komives et al., 2007). *Knowing* involves the knowledge one has, *being* encompasses the values, beliefs, attitudes, and awareness one possesses, and *doing* reflects one's actions, behaviors, and skills. Effective leadership involves each of these three components, and the components are interconnected. For example, what you know can influence how you think; how you act or behave can lead to new awareness or new knowledge. Developing as a leader also means developing as a person through becoming more knowledgeable about oneself, others, and leadership concepts; through identifying and solidifying one's values, beliefs, and commitments; and through developing different skills and capacities (Komives et al., 2007).

Future Directions

As our society continues to become more complex, with increased competition and limited resources, it is imperative that we adapt the ways in which we operate as individuals, as organizations, and as society as a whole. Outdated and ineffective practices are bound to lead to loss in market share, decreased impact, and deteriorating organizational health. In addition, if society fails to operate in new ways, the future of the human race and our planet may be endangered. Our society is facing large, pivotal adaptive challenges that will require multiple perspectives, solutions, and approaches. Accordingly, individuals and organizations must adapt and engage in innovative and collaborative approaches to face these challenges.

Although leader-centric and trait approaches to leadership still dominate popular literature on leadership, progressive leadership perspectives provide the thoughts and approaches needed to engage in and mobilize successful change. Our thinking on leadership must move beyond the focus of leadership as a position, skill, or trait. Leadership is a multifaceted process characterized by commitment; collaboration; awareness of self, others, and the greater system; a focus on ethics; and efforts to create a positive difference beyond oneself. The more we can embrace and practice leadership through this perspective, the better equipped we will be to handle the adaptive challenges that we face now and will face in the future.

Summary

This chapter provides a discussion on approaches and models of leadership that reflect progressive thinking that will equip leaders for creating and mobilizing significant positive change. The term *leadership* is used in many different contexts in the English language; this chapter approaches leadership as *a process or activity in which people are mobi lized to create positive change.* Rather than understanding leadership as a position or an inherent trait, leadership is understood as an activity or process that involves the development of certain skills or capacities. While leadership differs in many ways from management, it is imperative that both functions exist and complement one another. Leadership is ultimately what will lead to innovation and positive change, and management assists in this process.

To address the complex and adaptive challenges our society is facing today and will face in the future, we must find new ways to view leadership and engage in leadership in our organizations. A number of progressive leadership models and perspectives were presented, reflecting leadership as a process, highlighting the leader-follower relationship, recognizing the role of the larger system, stressing the importance of collaboration, emphasizing the role of ethics, and serving the ultimate goal of creating positive change.

These models present innovative thinking and ways of viewing the complex concept of leadership; they also provide a source of empowerment for younger members of nonprofit organizations, who may not necessarily hold the formal *leader* title. Every member of our society and our organizations has the ability to contribute to the leadership process through a variety of roles. We all have a place in the leadership process, and ultimately, we all have a responsibility to contribute to something positive beyond ourselves. Incorporating these concepts and understandings into nonprofit organizations' philosophies of leadership will empower broader-based action and mobilize positive organizational and societal change.

Basic Skills of Nonprofit Leadership

Richard Hoefer
University of Texas at Arlington

Being a leader in a nonprofit organization is difficult at best and nearly impossible at worst. The skill set required is daunting to acquire, challenging to use, and constantly changing (Hopkins & Hyde, 2002). The pay is not the highest, but most people in such positions find the work immensely rewarding. Those drawn to the nonprofit sector to exercise leadership capabilities generally desire to accomplish positive change through their work. This chapter covers several major topics: What is leadership? What are nonprofit leadership skills to be used for? What are the basic skills of nonprofit leadership? The major conclusion from this exploration is that the nonprofit leader must have many skills, which are needed and best employed in different organizational situations. Part of the genius of successful nonprofit leaders lies in knowing which skills are called for in which situations. This chapter will provide guidance for nonprofit leaders to become more skillful in their jobs.

What Is Leadership?

The term *leadership* is bandied about so frequently that it is easy to think that, like the U.S. Supreme Court justice said about pornography, "I can't define it, but I know it when I see it." Shelves at libraries and stores are filled with books on the subject, some written by business leaders, some by officers in the military, and others by elected officials. Leadership is usually seen as a generic skill: that is, leadership is leadership, whether in the commercial sector, military, or government arenas. Most of this material is not academically rigorous—in fact, it is little more than entertaining storytelling, with a few kernels of wisdom amid the large amount of chaff that readers have to sift through. Still, leadership is important and learning more about it is good for organizations and society. Poertner (2006) shows that client outcomes vary in connection with the leadership ability of agency managers. Warren Bennis (2009), a respected business leadership guru, indicates that leaders shape the effectiveness of organizations, provide inspiration and restore hope, and are able to recognize problems, yet rise above the current context of society to see a better tomorrow. Because of the importance of leadership, a brief discussion of this term is important before addressing what basic skills are needed to be a nonprofit leader.

Renowned organizational theorist Richard Cyert (1990) offers a classic definition: "Leadership is the ability to get participants in an organization to focus their attention on the problems that the leader considers significant" (p. 29). In a similar vein, Shenkman (2007) argues that "the leader's real work is to create followers" (p. 13).

In nonprofits, however, the aim of leadership is not merely to create followers, but rather to create followers to accomplish something useful, such as quality services. The centrality of values in the nonprofit sector is widely recognized and supported (Rothschild & Milofsky, 2006). Thus, being a leader in the nonprofit sector requires a personal commitment to the sector's core values and those of the particular nonprofit organization of one's choosing. It almost always requires placing considerable value on member/follower involvement in the decision-making process, so as to create buy-in about the decisions being made. Although it was made in a different context, President Dwight D. Eisenhower's observation is apt: "Leadership is the art of getting someone else to do something you want done because he wants to do it" (quoted in Hughes, Ginnett,

& Curphy, 2006, p. 405). Leadership, in its essence, is not about commanding but about influencing others.

What Are Nonprofit Leadership Skills Used to Do?

Before describing the basic skills that nonprofit managers need to use, we should examine the underlying and more philosophical question: What are nonprofit leaders going to use their skills to accomplish?

The commonsense view of nonprofit organizations is that they can best be understood as single goal-maximizing organizations. In the case of human service organizations, their goal would be to eliminate the problems of their clients. For sports nonprofits, the goal would be to maximize the number of youth playing the sport. For arts organizations, the goal might be to expose as many people as possible to theater/opera/music productions or the visual arts. A major problem with this approach is that organizations, as organizations, cannot have goals—only people can have goals (Mohr, 1982). Treating the organization as a person in this way leads to a failure to understand the nuances of what a leader must do to get individuals to align their goals with the organization's mission. Other problems with this organizational goal perspective are that goals often are not very specific and that unofficial or unstated goals are often as important to organizational staff as are the professed goals of the organization (Herman & Renz, 1997). For example, an agency leader may try to achieve certain outcomes in an organization, not for the good of the agency, but because it will put him in a good position to get a better job in another organization.

A second theoretical approach to understanding what a nonprofit leader is using skills to accomplish is the system resources approach, which posits that the key metric for understanding organizational success is the level of resources extracted from the environment to support the organization. In other words, the larger the budget (or the larger the percentage increase in the budget), the more successful the organization (and thus its leader) is said to be (Herman & Renz, 2004). This approach to what nonprofits leaders are trying to achieve would have to be an implicit, rather than an explicit goal of the leader. Other goals, such as the implementing the articulated mission or achieving client outcomes, are what provide a nonprofit with its legitimacy and thus its ability to obtain resources from the environment. Donors or other stakeholders would not look kindly on a nonprofit leader espousing the goal of accumulating lots of cash reserves, and funding would most likely decrease, rather than increase, if this were the announced goal of the organization.

A third view of what leaders in the nonprofit sector are seeking, the multiple constituency view, says that the different stakeholders of a nonprofit (leader, staff, clients/patrons, funders, general public and so on) may all have different ideas about what the organization is about. Because each group is important in the nonprofit's work, each of these stakeholders' views is correct, even if the views seem contradictory to another stakeholder's view (Herman & Renz, 2004). The task for the organization's leader is to balance the demands on the agency to accomplish these different goals. Thus, funders may value organizational effectiveness in solving client problems, clients may want to know that their assigned staff member cares about them as individuals, staff members may want a secure job, and the general public may want an agency that is free from scandal. The nonprofit leader is thus required to pay attention to different stakeholders sequentially, attending first to one aspect of the organization, then another. This requires a tremendous repertoire of skills and a highly developed dose of political savvy. It also requires understanding the leadership theory in use.

Leadership Theories

Opinions about the skills that are needed in nonprofits vary considerably, depending on the theory of leadership to which one ascribes. Perhaps the oldest theory of leadership is that there are "born leaders" who have the traits needed to be effective (Carlyle, 1841). Traits that are associated with leaders are: drive, leadership motivation, honesty, integrity, self-confidence, cognitive ability, and knowledge (Kirkpatrick & Locke, 1991). The practical implication of this is to identify the traits of leadership, screen the population for people who have these traits, and then provide training and opportunities for these traits to be used.

Lewin, Lippitt, and White (1970) proposed three styles of leadership: authoritarian, democratic, and laissez-faire, based on observations of boys interacting in experimentally constructed clubs. Authoritarian leaders told others what to do without consultation. Democratic leaders solicited others' opinions and sought to influence their ideas so that a general consensus might emerge. Laissez-faire leaders did not put much effort into being leaders and allowed others to do as they wished. The boys in Lewin and colleagues (1970) studies generally preferred the democratic leaders, followed by laissez-faire leaders, with least approval for authoritarian leaders.

Despite the popularity of the democratic style of leadership, later research indicates that each style of leadership can be effective, given the right circumstances. For example, when time is limited and the leader has all the facts needed to make a decision, the authoritarian approach can (and perhaps should) be used. In other circumstances, such as when staff members have some or all of the information and the leader does not, a democratic leadership style will bring about better results. This later research led to the realization that there is not just one correct model of leadership; rather, the leadership style must match the situation. Several different versions of contingency theory emerged from this insight. Perhaps the most influential was developed by Fielder.

Fielder (1967) argued that leadership could be understood as behavior relating to a continuum of carrying out tasks by developing positive relationships with people (relationship oriented), on the one hand and carrying out the task by focusing on task accomplishment, on the other. According to Fielder, when relations are good between leader and followers, the task is well structured, and the leader has high position power, then task orientation is effective. When the opposite is true (that is, relations are not very good, the task is poorly structured, and the leader does not have very high power from his or her position), task orientation can also be effective. For situations that are intermediate in relationship, structure, or position power, relationship-oriented leadership is more effective. A recent restatement of contingency leadership declares that the best outcomes occur when the fit between leader and circumstances is "aligned" (Dym & Hutson, 2005).

Two additional recent leadership approaches include transformational leadership (Burns, 1978) and servant leadership (Greenleaf, 1991).

Transformational leadership offers followers a chance to accomplish great things by making large changes in their organization and, even, themselves. Transformational leaders create a vision, sell that vision to followers, and then move forward to enact the vision, along with their followers, always leading the charge. Transformational leaders are usually charismatic, inspirational, intellectually stimulating, and people oriented, providing individualized attention to others. Servant leadership is described by Greenleaf (1991) as a feeling and a choice that the leader makes to lead, but to lead in a way that is in service to others. The goal for the servant-leader is to serve first and to acquire power or influence later, but only to continue to serve others.

As can be seen clearly, the different leadership theories and styles use different skill sets. An authoritarian leader requires far fewer people skills than does someone following a servant-leader model. In addition, leaders must be flexible in how they approach their job based on the needs of the organization. As Rothschild and Milofsky (2006) remind us, the needs of the organization (which can vary according to where it is in its life cycle, the state of its distinctive technologies, and the demands of its external constituencies) determine how the leader must act to be effective, and the personal desires of the leader are secondary. For example, a person not normally seen as charismatic may need to use such abilities to develop a following for a large-scale and difficult project. At other times, a visionary leader may need to focus on detailed "running of the ship" to achieve the vision that has come together.

Different methods can be chosen to move a nonprofit organization along a chosen path, partially depending on the organization's situation, both internal and external. Different leadership styles are more or less effective depending on the tasks at hand. In the final analysis, different situations and leadership styles demand different leadership skills. Schmid (2006) has assembled an excellent empirically based approach to linking organizational situation to leadership duties required.

According to Schmid (2006), leaders can locate themselves and their organization's needs on a two-axis plane (see Figure 37.1 on page 327). One axis is labeled as people-versus task-oriented, whereas the other axis is labeled internal versus external orientation. This creates four quadrants, which we will examine in turn.

Quadrant I represents "task-oriented with an internal focus." The leader with such an approach will be focused on achieving organizational goals using standard work processes. Centralization will be the byword, with few opportunities for others to be involved in the decision-making process. The leader will keep subordinates on a short leash, with strict attention to organizational goals and objectives being met. Following organizational rules and processes is considered very important.

While this type of leader does not sound very much in tune with nonprofit values of democracy and openness, Schmid argues that such a set of behaviors in a leader has its place. Residential boarding institutions, for example, require strict following of rules to protect residential rights, maintain legitimacy, and assure an adequate level of resources flowing into the organization. Reports of abuses by staff of dependent clients (such as in prisons, state schools, or nursing homes) are far too common and reflect a breakdown in the control of the organization, leading to lawsuits, governmental inquiries, and possible elimination of the organization.

Quadrant II also has an internal orientation, but the leader in this case is people oriented, not task oriented. Leadership behaviors in this quadrant are designed to motivate, involve, and empower staff to do the work of the organization. The leader acts as coach and mentor, seeking to develop staff members to achieve more and to be committed to improving themselves as they accomplish the goals of the organization.

Schmid (2006) argues that the most appropriate situation for Quadrant II leadership is the early years of a nonprofit organization's existence. Rules are not yet written, patterns are not yet fully established, and the founder(s) of the organization have the most direct influence on the organization and its members/clients/staff. An internal focus for leadership is necessary to stabilize the organization and to create routine job processes and procedures.

Quadrant III sets aside the internal focus of Quadrants I and II to look external to the organization, while remaining task oriented as in Quadrant I. Quadrant III can be seen as the leader conquering the world outside of the organization—the push is to acquire legitimacy and resources from external sources so as to institutionalize the nonprofit. Leaders in this situation tend to be very directive and authoritative and to rely on their formal authority much more than their ability to influence indirectly or through the use of inducements. Because the task or organizational institutionalization is seen as so important, staff members and volunteers are frequently seen narrowly as resources to be used to achieve the goal, rather than as important actors in the process.

Quadrant IV represents the convergence of an external orientation with a people focus. Leaders in this area of the model seek to control the future of their organization by reducing its dependence on others for resources while making others more dependent on them. Considerable attention is paid to developing staff members to improve their ability to handle the external environment's constraints. Because the leader is using so much time and energy to build coalitions and alliances external to the organization, staff members must be trained and developed to handle as many issues themselves as possible—the organization's top staff members are working with outside constituencies.

Given the multiple theories and approaches to leadership discussed so far, and the different situations within which leadership must be exercised, it is possible to be overwhelmed by the complexity of being a nonprofit leader. Are there some skills that all nonprofit leaders should have, which can be considered the "basic" skills of nonprofit leadership? The next section answers this question.

What Are the Basic Skills of Nonprofit Leadership?

Nonprofit organizations come in a variety of sizes, fields, and purposes. Obviously, some are small local organizations, aiming to affect one neighborhood or community by providing services to a marginalized group. Contrast this with international organizations whose purpose is worldwide in scope, such as trying to reverse the process of global warming. While the exact skills of being a leader may be somewhat different in different types of nonprofits, the literature has some clear guidelines regarding what skills are necessary. Chief among these are being able to work with a board of directors.

All nonprofits have a board of directors, which is legally responsible for the organization. Thus, one of the distinctive abilities of leaders in the nonprofit sector is to be able to work with their boards. Even though the boards are the legally mandated decision makers, they may hire an executive director and perhaps other staff (or the executive director may hire additional staff with the approval of the board. Thus, while the executive director has "merely" a supporting role in theory, she or he has the central role in the day-to-day running of the organization in practice.

Skills necessary for an effective executive director to use in working with a board of directors include (Herman & Heimovics, 2005, p. 158)

- facilitating interaction in board relationships;
- showing consideration and respect toward board members;
- envisioning change and innovation for the organization with the board;
- providing useful and helpful information to the board;
- initiating and maintaining structure for the board; and
- promoting board accomplishments and productivity.

Additional requirements for successful leadership at the executive director level in the nonprofit world include (Herman & Heimovics, 2005)

- spending time on external relations;
- developing an informal information network, particularly regarding future events;
- knowing your agenda;
- improvising and accepting multiple, partial solutions; and
- using a political frame to understand issues.

In summary, Herman and Heimovics (2005) declare: "Board-centered, external and political skills are what distinguish particularly effective nonprofit chief executives" (p. 169). But, lest one believe that nonprofits should operate under a "great leader" model, where all the responsibility for success or failure rests on the shoulders of one person, Grant and Crutchfield (2008) describe the importance of leadership being shared. These authors studied 12 nonprofit organizations extensively for a number of years, developing lessons about what made these organizations so high impact. One of the most important of these lessons is: "Leaders of these organizations are able to *share power and inspire others to lead.* Leadership doesn't stop at the top; rather, it extends throughout the organization and a larger network or movement" (p. 46) [emphasis in original]. The metaphor used by Grant and Crutchfield (2008) is important: They describe the nonprofit director, not as the person on top of the hierarchy, but rather the person at the hub of many people, all working to accomplish the mission of the organization.

Leadership Skills at Different Levels of an Organization

Most people do not move directly from graduating from college or graduate school to becoming the executive director of a nonprofit organization. They move up the ranks, just as in the corporate and government worlds. Still, leadership skills are necessary at all levels of nonprofits. Thus, even as a person begins to learn the desired skills of a nonprofit leader at the executive director level, it is vital to remember that leadership skills should be improved throughout one's tenure at whatever organization one is currently working in and throughout one's life. The next section examines more specifically the desired skills that have been described in the literature.

Much of the rest of this chapter will refer to management skills at nonprofit human service organizations rather than at the full array of nonprofits. This is not to downgrade the importance of arts, sports, education, or other types of nonprofits. This focus reflects the literature that has been published to provide guidance to nonprofit human service managers, especially those who are not yet at the top level of nonprofit leadership, and so have less interaction with the board of directors.

Studies of What Social Work Managers Do and Should Know

The mid-1990s saw considerable research to answer basic questions in the field of nonprofit administration. Two vital questions addressed are: What *do* nonprofit human service managers *do?* and What *should* human service managers *know how to do?* This section looks at three major recent comprehensive lists of job skills that have been put forward by academics and practitioners in social work. Hoefer (1993, 2003), Menefee and Thompson (1994), and the National Network of Social Work Managers (NNSWM), as articulated by Wimpfheimer (2004), have compiled extensive lists of what human service administrators should know how to do.

Hoefer (1993, with a follow-up article in 2003) addresses the questions of what should be taught and where it should be taught. Hoefer (1993) uses a sample of human service administrators from Chicago and later (Hoefer, 2003) adds social work educators, government program managers, and public administration educators to the pool of raters. His results show that 37 skills, attitudes, and knowledge areas found in the literature could be rated individually in terms of importance. They could also be condensed into four categories (people skills, attitudes and experiences, substantive knowledge, and management skills) to determine what social work administrators should know how to do. The level of agreement among the different groups asked to rate the skills was high, with Spearman's rho correlations between the four groups of raters significant at the .001 level for entry, middle, and top levels of management: Hoefer (2003) develops three primary conclusions based on the ratings of the 37 identified skills and the four grouped skill sets:

- "Strong agreement exists regarding which skills are most important at the three different levels of administration across disciplines and types of administrators" (p. 41).
- The desired knowledge, skills sets, and attitudes of human services administrators do not change very much as they move from lower levels of administration to higher levels. But it is important to become more accomplished in each of the areas as one reaches a higher level of administration.
- "For all respondents, at all levels, 'people skills' are the most important and 'management' skills are the least important" (p. 38).

This empirical work, while useful, is hampered in its utility by having no theoretical or conceptual basis. Nevertheless, because the list of skills was drawn from the literature, it has high face validity, and the four sets of respondents ranking them provide additional support for their importance as vital elements of social work management practice.

Menefee and Thompson (1994) conducted their research to provide a "comprehensive perspective on what social work managers report they do today" (p. 6). (Menefee [1998] conducted a follow-up study that confirmed these results.) In the initial study, Menefee and Thompson surveyed members of the NNSWM plus 80 social work managers throughout Tennessee regarding how often they performed 35 administrative competencies and how important they ranked 163 skills organized and listed by competency.

After analyzing their results, Menefee and Thompson (1994) argue that what managers do can be categorized into 12 management dimensions, each of which is composed of a number of key skills. Going beyond a simple listing of what skills and dimensions are most often done, they also asked about the importance of each skill. Combining how frequently tasks were done with the perceived importance of the tasks, Menefee and Thompson (1994) develop an overall ranking regarding each management dimension. From most to least important, they are: communicating (1st), supervising (2nd), boundary spanning (tied for 3rd), futuring (tied for 3rd), facilitating (tied for 5th), teaming (tied for 5th), aligning (7th), evaluating (8th), policy practice (9th), managing resources (10th), leveraging resources (11th), and advocating (12th). (Austin & Kruzich [2004] place these 12 dimensions into three larger sets of managerial roles: leadership roles, interactional roles and analytic roles.) Menefee's (1998) follow-up results add additional support to the importance of these identified skills.

A third conceptualization of what social work managers should know was developed by the NNSWM (2004) and discussed in Wimpfheimer (2004). Developed through a lengthy process of consultations with practitioners and academics, 14 competency areas are considered vital for social work managers. To receive the *certified social work manager* credential from the NNSWM, applicants must demonstrate their abilities in these areas. The NNSWM (2004) standards are not a minimum but are the competencies for experienced and academically trained managers. A total of 51 skills flesh out the 14 competency areas. The list of competency areas consists of the following:

- Advocacy
- Communication and interpersonal relationships
- Ethics
- Evaluation
- Financial development
- Financial management
- Governance
- Human resource management and development
- Information technology
- Leadership
- Planning

- Program development and organizational management
- Public/community relations and marketing
- Public policy

While these standards have no explicit theoretical foundation, they have solid face validity given the process used to develop and refine the list (NNSWM, 2004).

Despite the seeming differences among the authors on what should be known by human services administrators, the amount of agreement far exceeds the amount of disagreement. The independent processes used to arrive at these lists provide further confidence regarding what to teach to social work administration students. Thus, as Hoefer (2003) states: "There is strong agreement . . . on which skills are considered important" (p. 36), across all levels of management and all four categories of respondents.

To summarize this section, the answer to the question "Do we know what should be considered as basic nonprofit leadership skills?" is a strong "Yes." While the research available to us is not in complete agreement, a great deal of core material is agreed on within and between the practice community and academics. When added to the recommendations of Herman and Heimovics (2005), there is an even stronger sense that the basic skills have been identified.

In looking at Figure 37.1, we combine Schmid's approach with its two axes (internal/external and task/people) with the consolidated lists of management skills found in Hoefer (2003), Menefee (1998), and NNSWM (2004). (The placement of these skills in each quadrant is, of course, somewhat arbitrary, as some of the listings could be in more than one quadrant. Still, this approximation seems supported by the descriptions each of the sources provides.)

The skills that seem to fit best in Schmid's (2006) Quadrant I (Task and Internal orientations) are: aligning, supervising, managing resources, and evaluating from Menefee (1998); program development and planning, financial management, information technology, and evaluation from NNSWM (2004); and from Hoefer (2003), most of the management skills (decision making, personnel management, program planning, coordination, budgeting, evaluation, MIS, statistics, computer spreadsheet, accounting, computer database, word processing) and two of the substantive knowledge skills (organization theory and service technology).

Next, in Quadrant II (People and Internal orientations), Menefee's (1998) facilitating and aspects of communicating, and policy practice seem to fit. The NNSWM's (2004) human resources management and development is appropriate, as are parts of what they describe as communication. Hoefer (2003) adds a list of attitudes and experiences (professionalism, identifying with agency, commitment to clients, tolerance for ambiguity, entrepreneurial attitude, previous work in an agency; and previous work in that agency).

Quadrant III (Task and External orientations) contains leveraging resources and aspects of boundary spanning from Menefee (1998); financial development from NNSWM (2004); and some of the substantive knowledge and management skills from Hoefer (2003) (administrative law, agency policy area; fundraising; knowledge of community; marketing, social policy, and strategic planning).

Finally, Quadrant IV (People and External orientations) includes advocating; futuring; and elements of boundary spanning, communicating, policy practice, and teaming from Menefee (1998); advocacy, governance leadership, public policy; public relations, and aspects of communication from the NNSWM (2004). From Hoefer (2003), we see parts of his people skills category (leadership, oral communication, written communication, conflict resolution, group dynamics, meeting management, and negotiation) as well as policy process skills and political connections. Herman and Heimovics stress the importance of managing the board relationships and of external relations in general, along with the use of a political framework. All of these seem to be linked to this quadrant.

One element of the NNSWM's (2004) list that has so far not been placed is ethics. This is shown in Figure 37.1 as underlying all the quadrants.

Combining the theoretical view of nonprofit leadership set forth by Schmid (2006) with the specific skill sets described by a number of authors yields a clear approximation of which nonprofit leadership skills are needed with different leadership styles, which, in turn, work best in different organizational situations. It is important to remember that none of the quadrants is "better" than another—and none of the sets of skills described is inferior to another. Just as a carpenter uses many different tools depending on the job to be done, nonprofit managers must have a set of skills at their disposal in order to be able to employ the ones that fit the situation best.

Future Directions

Leadership is a fascinating topic for those in the nonprofit field. Given the difficult-to-define nature of what nonprofits are to achieve and the multiplicity of theories about how to be a good leader, continued research is imperative. Besides better defining which skills might be most important in what type of situations, other areas for research are needed. One of the important topics is to assess how students and current leaders can learn new skills and improve current basic levels of leadership skills. Are leadership skills best learned in formal academic programs such as nonprofit management, in schools of social work, in business administration, in public administration, or in on the job experience? Another area of needed research is perhaps the most difficult of all: How does improved leadership link to improved outcomes for clients, students, or the public at large? Because nonprofits are legally chartered to enhance the public good, we must always keep sight of the

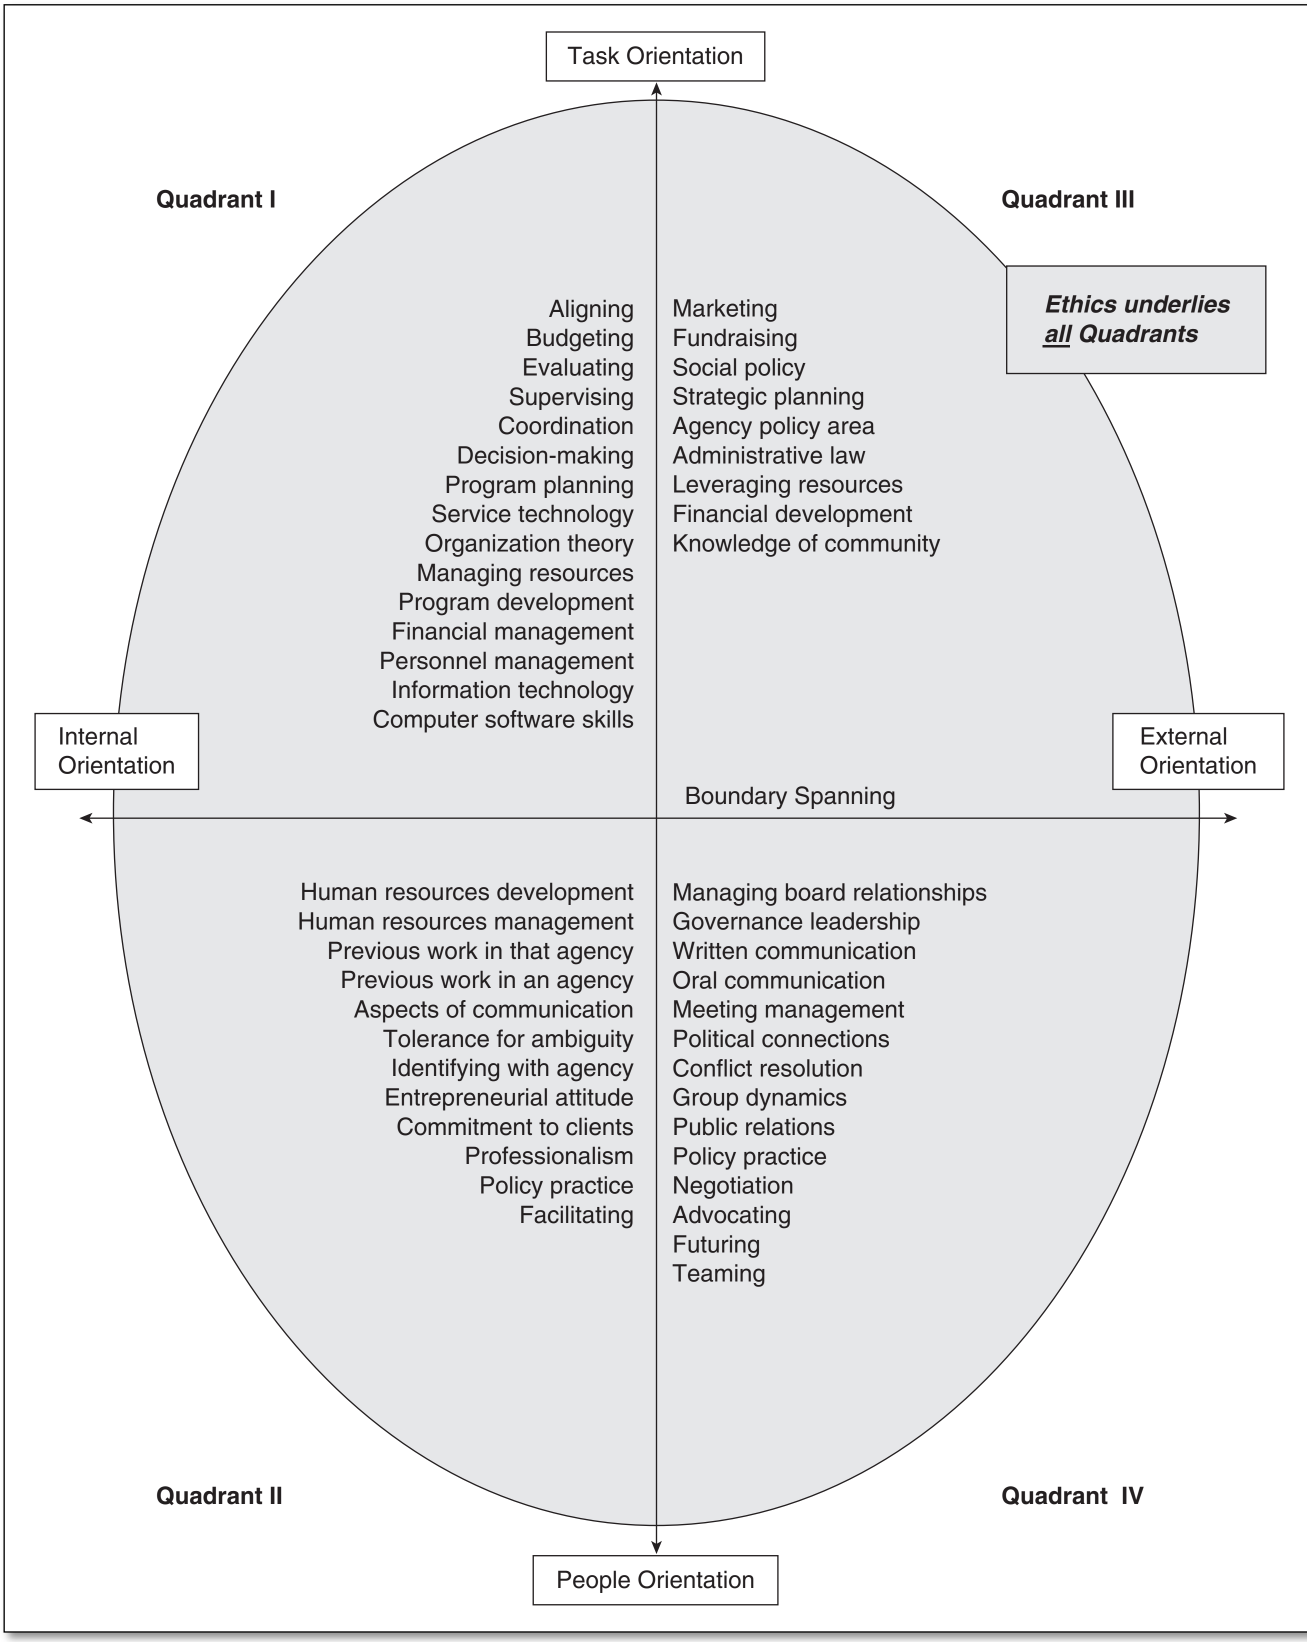

Figure 37.1 Leadership Orientations and Corresponding Skills

SOURCES: Adapted from Hoefer, 2003; Menefee and Thompson, 1994; National Network for Social Work Managers, 2004; and Schmid, 2006.

connection between what leaders do and how the public benefits from those actions.

Summary

In the end, we must echo Tschirhart's (1996) words as she ends her book on leadership in nonprofit arts organizations: "There are no simple formulas to adopt" (p. 84). Despite this warning, we have identified basic leadership skills that are needed across the spectrum of nonprofit organizations (particularly human service agencies) and the situations in which they are most useful. With this as a guide, organization leaders may find it easier to have a positive impact, despite daunting challenges in their everyday work.

Roles, Responsibilities, and Characteristics of Nonprofit Leadership

Kimberly A. Carlson and Steve Schneiter

Virginia Polytechnic Institute and State University

Jim Collins (2005) described the purpose of the social, or nonprofit, sector as being "to meet social objectives, human needs, and national priorities that cannot be priced at a profit" (p. 19). Although nonprofits have similarities with for-profit organizations, some important differences include the following (Beck, Lengnick-Hall, & Lengnick-Hall, 2008; Collins, 2005):

- Nonprofits are driven by values, not profits.
- Nonprofit personnel, including paid staff and volunteers, are often highly diverse.
- Most nonprofits have small staffs and small budgets, compounding leadership and management challenges.
- Chief executives of nonprofits deal with a wide variety of organizational challenges, often wearing too many hats.
- Nonprofits deal with increased scrutiny from benefactors and government agencies.

Considering these differences, nonprofit leaders need to develop a unique set of skills that differentiate them from many for-profit leaders, like fundraising and grantwriting, balancing governance issues with management issues, understanding nonprofit budgeting and accounting, and dealing with basic program design and evaluation as they relate to funding and reporting requirements (Nanus & Dobbs, 1999).

In this chapter, we explore a key driver that brings all of these aspects together to produce a functioning, effective organization: leadership. So what does it mean to be a leader in a nonprofit organization? We will answer this question with the three Rs—roles, responsibilities, and required experience; these are the basics of most careers. Each of these characteristics of nonprofit leadership can be looked at internally and externally, both of the leader and of the organization itself.

In the typical structure of a nonprofit organization, as shown in Figure 38.1, the executive director has the broadest contact within the organization. Herman and Heimovics (1994) say, "Boards retain their legal and hierarchical superiority (and sometimes must exercise it), while executives typically have greater information, expertise, and greater stake in and identification with the organization" (p. 139). Given this, our conversation about the three Rs will focus on leadership through the executive position.

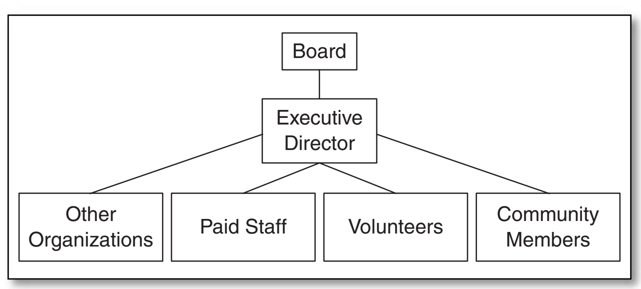

Figure 38.1 The General Structure of Nonprofit Organizations

Before we address the three Rs, this chapter will first seek to define leadership and what leaders do in general, setting a context for the rest of the chapter. We will then focus on the three Rs. Because all organizations operate in a greater context, the three Rs will be described from internal and external viewpoints. The chapter will conclude with ideas to consider for those interested in a leadership role in nonprofit organizations.

Defining Leadership and Its Importance

Throughout the ages, people have been preoccupied with leadership. Early written concepts of leadership can be found in Egyptian hieroglyphs, Chinese classical writings by Confucius and Lao-tzu, and Greek writings about heroes and leaders in such works as Homer's *Iliad* and Plato's *Republic*. Our preoccupation with leadership has continued to grow. For instance, in 2005, Google Scholar listed 16,800 books on leadership along with 95,500 other publications (Bass, 2008). This points to one important conclusion: Leadership matters.

Although the literature on leadership continues to burgeon, leadership experts focus almost exclusively on the for-profit business world (Collins, 2005; Drucker, 1990; Nanus & Dobbs, 1999). Given the abundant focus on for-profit leadership, we will focus our attention on defining leadership through the lens of literature related to the nonprofit sector. By doing this, we hope to synthesize an understanding of leadership that is unique to that sector.

Doe (2008) defines leadership as "a process by which one person influences the thoughts, attitudes, and behaviors of others. Leaders set a direction for the rest of us; they help us see what lies ahead; they help us visualize what we might achieve; they encourage us and inspire us." Similarly, Northouse (2007) defines leadership as "a process whereby an individual influences a group of individuals to achieve a common goal" (p. 3). Inherent in these definitions is the notion that leadership involves influencing others on multiple levels and creating a common cause or purpose.

Van Wart (2003) looks more directly at administrative leadership, suggesting several important aspects of leadership based on organizational norms, situations, and experiences. Important aspects of administrative leadership include

- achieving required results in an efficient, effective, and legal manner;
- developing and supporting followers who provide the results;
- aligning the organization with the external environment, especially necessary macro level changes, while realigning the internal culture as appropriate;
- maintaining a service focus; and
- providing guidance and feedback for technical performance, internal direction to followers, and external organizational direction all with a public service orientation.

In addition to influence and common purpose, Van Wart suggests that leadership also involves a balance between efficiency and effectiveness, on the one hand, and authority and legality, on the other hand. Van Wart goes on to suggest that leadership includes the development of followers, alignment of the internal organization with the external environment, and a commitment to a service orientation.

Berry and Cartwright (2000) argue that leadership cannot be separated from the social and political context in which it occurs. Despite the fact that we have entered into a world of postmodern theory, they say, many leadership frameworks are based on a functional perspective defined by a traditional principle/agent model. They argue that this focus is not sustainable. For leadership to be effective, it must be contextualized in the social and organizational processes in which it occurs. This context is especially important for the social sector, with its focus on meeting social objectives and human needs. Given this focus, nonprofits deal with a much greater diversity of people, in terms of those who contribute to the programs and those who receive benefits from the programs (Beck, Lengnick-Hall, & Lengnick-Hall, 2008; Drucker, 1990).

Jim Collins (2005) has done important work in translating his model for leadership from the for-profit arena to nonprofit organizations. In what he calls *Level 5 Leadership,* Collins has identified healthy and critical leadership characteristics that are required as someone progresses through their development as a leader. His model for nonprofits looks something like this (p. 12):

- *Level 1, Highly Capable Individual:* Has developed the knowledge and skills to contribute productively to the organization.
- *Level 2, Contributing Team Member:* Uses individual capabilities to work with others to achieve group goals effectively.
- *Level 3, Competent Manager:* Able to manage others and resources to achieve predetermined goals.
- *Level 4, Effective Leader:* Creates clear and compelling vision and goals for the organization and is able to compel others to achieve those goals and perform at a higher standard.
- *Level 5, Executive:* Builds greatness through blend of personal will and humility.

With this model, Collins (2005) identifies several important aspects of leadership. First, leadership can be learned in a stepwise and progressive fashion. The model begins with leaders developing personal skills and abilities that allow them to contribute personally to an organization. From here, leaders learn to apply their skills in a group setting, developing a sense of interdependence within the organization. Leaders then learn how to manage others in their own process of developing personal skills and abilities and applying those effectively in their work with others toward the goals established by the organization. Finally, the leader learns how to set organizational goals and mission while motivating others to understand those goals and strive for achievement.

Kouzes and Posner (1995) add yet another dimension to our discussion of leadership. Starting in 1980, they began research on the characteristics most admired in leaders. During a 10-year period, they surveyed more than 20,000 people on four continents. They found that most people admire and are willing to follow leaders who are honest, forward-looking, inspiring, and competent. These four qualities together help the leader establish credibility with followers, a critical precursor to group success.

So where does this leave us? To really understand leadership, we must understand that it has multiple dimensions. Leadership is

- a process of influencing others toward achieving common goals;
- a balance of efficiency and effectiveness with authority and ethics;
- a commitment to developing followers and maintaining a service orientation;
- a framework through which we contextualize our actions in social and organizational processes;
- a learning paradigm through which we view and influence our own development as well as the development of others; and
- a set of qualities that increase the likelihood of group success.

Van Wart (2003) sums up an effective leader's role:

> Effective leadership provides higher quality and more efficient goods and services; it provides a sense of cohesiveness, personal development, and higher levels of satisfaction among those conducting the work; and it provides an overarching sense of direction and vision, an alignment with the environment, a healthy mechanism for innovation and creativity, and a resource for invigorating the organizational culture. (p. 214)

Within this description of leadership, who then is a leader? Although we are focusing here on the position of executive director, leadership is not necessarily confined to the person hired for a position of authority. Any person in a nonprofit can and should be a leader within his or her position and given authority. This is yet another point that distinguishes nonprofit organizations from for-profits: the necessity for everyone from board member to staff member to volunteer to be a leader (Drucker, 1990). This has inherent challenges with it, but it also opens up the possibility for someone who is committed and dedicated to develop a strong sense of his or her own leadership style.

Before we discuss this, however, we will turn our attention back to the role of executive director, discussing the three Rs and their implication within the organization and outside the organization.

Roles and Responsibilities

This section will describe the first two Rs together because they are interrelated. The first R—role of a nonprofit leader—involves a more holistic, cerebral view of leadership whereas the second R—responsibilities of the nonprofit leader—involves more of the tasks and activities of leadership.

Figure 38.2 provides a visual for the general roles and responsibilities of an executive director. Inherent in these roles are three major aspects of nonprofit organizations: governance, programs, and central administration. Governance occurs primarily at the board level. At this level, key decisions are made regarding the focus of the organization, strategy, and other issues with legal, ethical, or financial implications. Roles at this level include being a visionary, strategist, campaigner, politician, and decision maker (McNamara, 1997; Nanus & Dobbs, 1999).

Through the board, the nonprofit organization is empowered to execute its purpose through the various programs it provides. These programs serve as the public representation of the organization's mission and purpose. The central administration, including the executive director, exists as a liaison between the board and the organization's programs to ensure proper resource allocation, reporting, and staff support. Executive roles include being a coach, change agent, project and resource manager, community liaison, fundraiser, and resource manager (McNamara, 1997).

In general, the role of a good leader in a nonprofit organization is to help drive that organization to succeed. The leader helps envision the overall environment in which

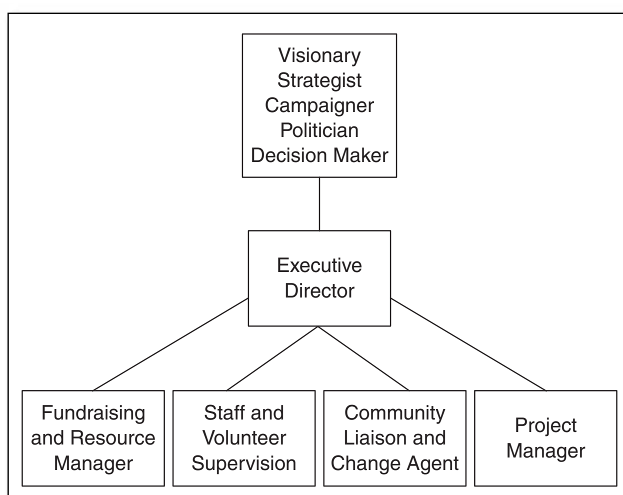

Figure 38.2 The General Roles/Responsibilities of an Executive Director

that organization works and its context, then works to assemble and motivate a team of employees to make decisions to be successful in that field. Leaders set the overall vision, mood, energy, and priorities for the organization. "Leaders should look into the congruency of their purposes, values, goals, objectives, and expressive outputs" (Mason, 1996, p. 196) and then guide the team in the appropriate direction while also overseeing and evaluating their actions. The leader must not only align the organization to its external context but also assess the organization internally to discover opportunities for improvement and to position the company to be most effective in their environment.

This notion of organizational alignment with the external environment is a critical responsibility for leaders in nonprofit organizations. Nonprofit organizations exist to fill societal needs that cannot be priced by the free market. Given this, an important aspect of leading any nonprofit organization is being able to recognize a need in society, define that need, and create and implement a strategy for addressing that need. The initial process of identifying and defining a need is critical in the process of creating the organizational mission—translating good intentions into performance (Collins, 2005; Drucker, 1990).

Nanus and Dobbs (1999) describe this process: "The primary mission of leadership in nonprofit organizations is to focus laser-like attention throughout the organization on the great good that it is capable of providing and then to marshal the energy and resource to make that great good happen" (p. 29). Figure 38.3 highlights key elements of this process.

From this figure, it is clear that the critical link between the external environment and the internal organization is

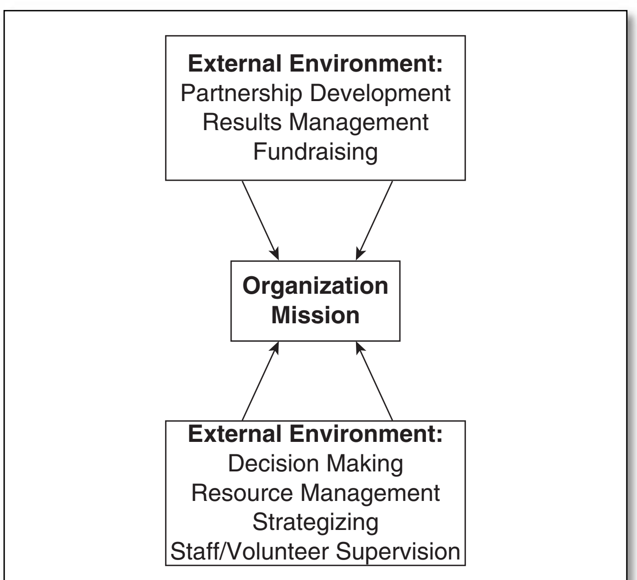

Figure 38.3 Critical Aspects of Organizational Alignment

the organization's stated mission. For the external environment, a clear mission communicates a set of intentions that allow other organizations, philanthropists, potential staff, and volunteers and beneficiaries to more accurately assess the congruence between the spoken intentions and their own interests. For the internal organization, a clear mission defines operational parameters and performance expectations and provides a focus for efforts. Research has demonstrated that a clear mission and vision leads to greater employee satisfaction, increased productivity, and greater organizational success (Blanchard, 2007).

Let's look more closely at external and internal responsibilities of leaders in a nonprofit context.

External Responsibility

One of the main responsibilities of nonprofit leaders is results management. To accomplish this, nonprofit leaders survey the environment in which their organization works to better understand community trends and needs. In turn, they assess their organization to find out how they are effectively meeting those needs, becoming responsive both to the community and to the field in which the organization works. Through their survey and assessment, leaders can help establish social and political capital, which is important to further situate the organization for success. Another characteristic of externally focused responsibility is collaboration with other organizations. A leader can leverage his or her organization's specialties and capacities by partnering with another organization whose different skill sets help to enhance the first organization.

In a telephone survey of 250 executives from nonprofit organizations across the United States, Paul Light (2002) found that high-performing executives aggressively interact within their environment. They "actively collaborate with other organizations," engage in some type of entrepreneurial activities that "generate at least some unrestricted income," diversify their funding and resources, and "measure the results or outcomes of what they do" by comparing their organization with others (p. 46).

Internal Responsibility

Internally, the leader is responsible to both the employees and the board of directors. A good leader focuses on enhancing employee relations. He or she can do this by (a) mobilizing employees around a common philosophy, goal, and vision; (b) encouraging and recognizing employee contributions; (c) helping employees balance work and personal lives; and (d) helping employees grow professionally.

Mason (1996) argues that organizations and employees are successful when a sense of community and cohesiveness is nourished. Leaders can develop this cohesion, Mason says, through the development of "ceremonies and symbols, communication . . . functional interdependence, future prospects, actions to harmonize differences, homogeneity, frequent interaction, . . . integrity, . . . feelings of ownership, proximity, [and] shared experiences" (p. 154). Mason continues by citing factors that destroy cohesion—"competition among groups for scarce resources, conflicts among individuals, conflicts over values, and goal evolution" (p. 154).

As stated earlier, the executive director of the nonprofit organization is the one who has direct responsibility to the board of directors. Other leaders in the organization interact with the board indirectly but are still responsible to the board for their actions through the executive director. The executive's responsibility to the board includes (a) being a liaison between the board and the employees, (b) expressing organizational difficulties and successes to the board, (c) helping the board with fundraising and organizational development, and (d) making sure the board's policies and demands are carried out.

Additional internal responsibilities of the nonprofit leader are related to organizational strategy, which includes intentional actions to enhance the future of the organization. A leader is responsible to organizational strategy when he or she

- thinks and acts strategically for the organization's future;
- works with the board of directors to establish a vision and goal for the organization;
- encourages innovation at all levels of the organization;
- promotes an atmosphere of determination, hard work, and expectations for greatness;
- fixes problems directly and forthrightly;
- allows employees to contribute to decision making; and
- is fiscally responsible by using resources wisely.

Mason (1996) believes that organization strategy is mandatory because "organizations can drift into serious trouble if they simply extend one year's activities into the next without intentionally directing their efforts toward where they should be going" (p. 184). He highlights activities that all leaders should do to enhance organizational strategy—assessment, planning, organizing, recruiting and guiding staff, and feedback evaluation.

Required Skills, Attributes, and Experiences

"Managing and leading a nonprofit is a complex job, requiring a wide range of complex skills. The more a manager understands the functions that are effective, the more effective will that person become," says Mason (1996, p. 225). He posits that effective managerial functions include inclusive communication, participative decision making, systematic delegation, emphasis on ethics, opportunities for expression, conflict management, and support and empowerment of others.

After interviewing 166 graduates of top policy and administration schools, Paul Light (2000, p. 43) found eight leadership skills that more than 50% of the graduates believe are necessary for success in nonprofit leadership—maintaining ethical standards (89%), leading others (76%), managing conflict (66%), managing information and communication technology (66%), managing innovation and change (57%), doing policy analysis (55%), influencing policymakers (54%), and raising money and generating extra revenue (51%).

We categorize these skills into intrapersonal and interpersonal skills. Intrapersonal skills include being competent, honest, ethical, flexible, courageous, and present- and forward-looking. It also includes having tenacity and passion for the work that you are doing. "Leaders in the nonprofit sector must be able to deal with non-conforming free spirits and welcome flexibility, innovation, and creativity," says Mason (1996, p. 16). A leader has interpersonal skills when he or she inspires others, has empathy for others, and has good communication skills.

Employee Relations

Leadership in any organization is important; it is critical in a nonprofit organization. Because many nonprofit organizations rely on the manpower of the people that work for it, having someone to guide the staff to a mutual vision and goal is crucial to successful cooperation and teamwork. Leadership of any kind requires followers that the leader can direct (Doe, 2008). Lack of good leadership can cause an organization's members to become disorganized, have conflicts, or make decisions based on self-interests (Doe, 2008). As such, good leaders need to have well-defined interpersonal skills and an emphasis on ethics (Doe, 2008; Van Wart, 2003).

The first behavior related to employee relations is to mobilize employees around a common philosophy, goal, and vision. As a way of controlling discourses, "it has been argued that leadership is a process of seduction to draw people into commitment to the corporation or organization" (Berry & Cartwright, 2000, p. 346).

Other leadership skills related to relations with employees include recognizing employees for their contributions to the company and their successes, having empathy for others and making them feel important, helping employees balance work with personal growth and family, and allowing employees space and freedom to grow professionally. "It is not easy to let someone else take the lead. To do this demands a special openness and the ability to recognize what is best for the organization and how best to respond to a given issue," says De Pree (2004, p. 49). It is important to allow employees the opportunity to give their input and even more important for the leadership to incorporate those suggestions.

De Pree (2004) describes the impact that a good leader has on employees:

> In a day when so much energy seems to be spent on mainte nance and manuals, on bureaucracy and meaningless quantifi cation, to be a leader is to enjoy the special privileges of complexity, of ambiguity, of diversity. But to be a leader means, especially, having the opportunity to make a meaning ful difference in the lives of those who permit leaders to lead. (p. 22)

Company Strategy

A major skill that many leaders mention is to think and act strategically for the future of the company, establishing a vision and goal for the direction of the company. They also find it is important for the company to be innovative at all levels, to hire the right people, and to make connections across all areas in the company. Furthermore, leaders should promote a company atmosphere of determination, hard work, and expectations for greatness. Understanding and fixing problems up front helps the company to grow and become better.

Many of these skills seem similar to those needed in the private sector. Although private business leaders agree overall on the type of leadership skills for the private sector, these may not exactly apply to the nonprofit sector. Van Wart (2003) says that leadership styles can vary in effectiveness depending on the type of situation—maintenance, project or task force, line versus function, start-up or turning an organization around. However, Rainey and Bozeman (2000, summarizing Herbert Simon, 1995), say that "public, private, and nonprofit organizations are essentially identical on the dimension that receives more attention than virtually any other in discussion of the unique aspects of public organizations—the capacities of leaders to reward employees" (p. 449). If rewarding employees is similar across the sectors, then could other skills be effective in the nonprofit sector as well?

Max De Pree (2004, p. 24) agrees with a variance in leadership skills because businesses are moving away from management through power to persuasion, which makes the traditional, formal power structure out of date. He says the most effective management in today's business is one of participation because "effectiveness is doing the right thing" while "efficiency is doing the thing right" (p. 19).

Doing the right thing in nonprofit administration is using resources wisely to provide services for the public and community. This efficiency of resources may require some leadership skills from the business sector, like setting strategic goals for the future, expecting high performance from employees, and allowing employees to contribute to decision making. "Leadership takes place primarily through the means of visions, strategies, and overall guidelines, rather than traditional command or work based on and using the means of bureaucracy" (Alvesson & Sveningsson, 2003, p. 964).

In addition, business leaders of the private sector cite clear and constant communication with employees as one of the skills they have learned to be successful. By implementing communication processes, nonprofit leaders can help to break down power structures within their organization and construct their own institutional reality, which can help make that organization successful. Alvesson and Sveningsson (2003, p. 982) warn, however, that the discourse of leadership regarding visions, values, and strategies may contradict the practical constraints, administrative demands, and uncertain relevance of their work. This contradiction may lead researchers to assume language regarding good leadership translates into good actions of those leaders when in reality it does not (Alvesson & Sveningsson, 2003).

Experiences Required

Just as the skills needed to be a nonprofit leader are varied, so are their backgrounds. Many leaders enter into nonprofit organizations from the private sector; others start as entry-level employees in nonprofits and work their way up through the organization. We argue that no particular experiences are required to be a leader in an organization other than the willingness to work hard, learn from others, and allow others to participate in the process. Being a nonprofit leader is a sink or swim proposition most of the time. To be a leader, one needs to jump in and take charge with whatever authority and responsibility he or she is given.

Recommendations for Students

> *Most leaders I've seen were neither born nor made. They were self made.*
>
> Bernard Bass

The next question some may ask is how one becomes a good leader. Berry and Cartwright (2000) suggest there are three ways to form a good leader: (1) leadership is inherent and can be formed through experience on the job; (2) it can be formed through action learning—a process of learning involving action, reflection, and theory building; or (3) it is designed and built. Most researchers support the second method of leadership formation (Berry & Cartwright, 2000; Bolshyk, 2000; Brooks-Harris & Stock-Ward, 1999; Revans, 1980).

Researchers have identified other factors that increase the effectiveness of the action learning process. First, combining academic components with experiential components leads to greater transformation. When academics are blended with experience, the information being learned is rooted in the experience of the participants and becomes more tangible. When experience is combined with academics, participants are better able to process the deeper rationales and issues involved with their personal experiences (Bolshyk, 2000; Brooks-Harris & Stock-Ward, 1999; Revans, 1980). This factor is becoming more practical with the proliferation of academic programs in nonprofit leadership. Johnson (2009) cited the existence of only 17 graduate programs with a concentration in nonprofit management in 1990. By 2007, the number jumped to 145. Those numbers will continue to increase as interest in careers with nonprofit organizations grows (Johnson, 2009).

Second, leadership development that occurs over time, as opposed to occurring through isolated presentations or experiences, leads to greater outcomes. Drawing learning experiences out over time allows participants to process information more deeply and apply it to real world situations (Avolio, 1999; Conger & Benjamin, 1999; Van Linden & Fertman, 1998). You can accomplish this, again, by taking classes and by getting involved in student organizations, volunteer activities, or internships.

Third, leadership development is enhanced through the inclusion of structured reflection or journal writing. Through journal writing, learners are able to process material, associate the material with their own experience, and apply the material to future decisions and actions (Van Linden & Fertman, 1998).

Finally, the presence of coaches or mentors leads to greater outcomes for learners. Coaches and mentors also allow for deeper reflection by learners in addition to providing guidance, support, motivation, and life examples (Bolshyk, 2000; Van Linden & Fertman, 1998). Seeking leaders in the nonprofit world is a great way to network as well as build relationships that can enhance learning.

Earlier in the chapter, we talked about *Level 5 Leadership* by Jim Collins. Within that discussion, we suggested that this model could be used to map out a leadership development program. The model begins with the leaders developing personal skills and abilities that allow them to contribute personally to an organization. From there, leaders learn to apply their skills in a group setting, developing a sense of interdependence within the organization. Leaders then learn how to manage others in their own process of developing personal skills and abilities and applying those effectively in their work. Finally, the leader learns how to set organizational goals and mission while motivating others to understand those goals and drive for achievement (Collins, 2005).

As you look at your college career, find organizations or volunteer opportunities that you are passionate about. Try them out as a general member or participant. As your understanding of the organization and leadership grows, take on more and more responsibility, making sure you note key learning moments that occur during your experience. Work with leaders within the organization to build a network of support to enhance your present learning and future possibilities.

Summary

Leadership is a critical aspect of any organization, particularly nonprofits. With so many perspectives on leadership, it can be difficult to define. Appelbaum, Hébert, and Leroux (1999) contend that leadership is a process in which leaders are constantly evolving within a social context and a socially constructed reality. They are working with a team of employees to accomplish certain goals, and therefore, they do not need to motivate people but help to facilitate the process (Appelbaum, Hébert, & Leroux, 1999). As such, different people within the organization move in and out of leadership positions in pursuit of the organization's mission and goals.

Considering these dynamics, it is important to reiterate how we view leadership. It is

- a process of influencing others;
- a balance of efficiency and effectiveness;
- a commitment to developing followers while maintaining a service orientation;
- a framework that guides our actions;
- a learning paradigm; and
- a set of qualities that increases group success.

Important to these perspectives, a leader must be able to navigate a complex organization tied to a social context by the mission it espouses. To successfully navigate the complexities, a leader must work with the board of directors to establish a clear and understandable mission and to establish credibility with the greater community, through meaningful interactions, accurate needs assessments, and results that matter. These results are obtained by aligning the internal organization with the overall mission of the organization while managing resources and personnel fairly and effectively.

It seems that many of these skills are interpersonal skills related to the charisma and management style of the individual leader. Yes, there are outside influences that can limit what a leader may do. There are choices, however, that individual leaders can make that are similar to the leadership skills found in private business. Employee relations skills work well in the public agency. A leader can praise employees for work well done, a leader can make others feel important, a leader can motivate others with honest and sincere recognition and celebration, a leader can show respect to others, a leader can give credit for success to others, and a leader can encourage high-concept thinking and skills—in other words, *Level 5 Leadership* (Collins, 2005).

Company strategy skills that nonprofit leaders can employ include offering opportunities for their employees to contribute suggestions for decisions and communicating with employees about common goals and philosophies of the agency. Leaders can do many things within the constraints of the organizational structure to make their agency more efficient and effective in promoting its mission.

Traditional and Unique Features of the Nonprofit CEO Role

Gianfranco Farruggia
North Park University, Chicago

Nonprofit CEOs shoulder tremendous responsibilities in administering nonprofit organizations across the United States, from Maine to Florida, California, and Hawaii. These individuals take on quite a rewarding burden in administering, managing, and at times operating these types of organizations. This chapter offers a good foundation for deconstructing their various traditional and unique roles. The work of a nonprofit CEO is indeed challenging and complex, but if the necessary management tools are properly used, the various tasks are not complicated.

Brinckerhoff (2004) sets the appropriate stage by pointing out that nonprofit organizations belong to the communities (groups of people, geographic determinants, social space) they serve, and leaders (CEOs are in this designation) have temporary and transitory stewardship over these entities and their various assets.

First, it is essential that readers understand how this author defines words in the chapter title: *traditional, unique, nonprofit, CEO*. The dictionary defines *traditional* as "inherited, established, or customary pattern of thought, action, or behavior" and *unique* as "being without a like or equal." Siegel (2006) defines a *nonprofit* entity as one that is structured and operated under articulated state laws, based on statutes governing nonprofit corporations. Pidgeon (2004) identifies the *CEO* as the person who attends to the realization of a core mission, as well as maintaining an organization's fiscal integrity. These foci are carried out with the following duties: supervising employed staff members and staffs that support volunteers; undertaking program development, which may include activities for individual members; and raising annual funds to support various activities. These definitions make a start at describing the responsibilities CEOs undertake and getting an appreciation of foundations and traditions.

How do these definitions relate to each other? Chief administrators who manage (and possibly operate) nonprofit entities need to have an appreciation for *time honored* methods for achieving distinctive organization missions, by *adhering to applicable laws* that govern its operations, staff, and finances. Following traditions to attain an organization's purpose is all well and good, but CEOs of nonprofit organizations of all stripes and hues must often think, behave, and act with "outside the box" methods that may be *considered nontraditional and unique*.

In the business sector, a CEO is responsible for operations, marketing, strategy, financing, creation of company culture, human resources, regulatory compliance, sales, and public relations. Pidgeon (2004) sees the evolution of the nonprofit CEO as a blending of past traditions with many business-sector CEO characteristics. Some traditions that were part of early America in the late 1700s and 1800s became more fully developed by the 1950s through the 1970s (Pidgeon, 2004): establishment of volunteer-driven organizations that eventually became commercial; formation of charitable and social welfare organizations, educational institutions, and health organizations; and development of religious institutions, civil rights movements, leisure

Author's note: I want to thank my current academic colleagues, my various graduate students, and my former staff members during my 25 plus years of executive office experience in shaping this submission.

organizations, and trade associations and fraternal organizations. Beyond these past traditions, Pidgeon (2004) points out that nonprofits and their leaders played key roles in America's transition from frontier to an industrial nation with an even greater role after World War II.

Typical words ascribed to a chief executive are visionary, leader, decision maker, and manager. According to McNamara (1997–2008), typical nonprofit CEO functions are board administration and support; overseeing program and service delivery; management of human resources, finances, risk, and facilities; assurance of community and public relations; and overseeing fundraising planning and implementation. As one can plainly see, these functions are similar to the responsibilities listed for business sector CEOs.

Nonprofit CEOs typically direct and administer organization operations and are customarily responsible and accountable for carrying out the policies established by the board of directors. Lencioni (1998) starts his leadership tale with the following: "Being the chief executive of an organization is one of the most difficult challenges a person can face in a career. But it is not a complicated one" (p. vii). As we explore the role of CEOs in nonprofit organizations, keep Lencioni's statement in mind, especially issues of challenge and complexity.

Traditional Nonprofit CEO Roles

What follows is a detailing of basic and traditional responsibilities using McNamara's (1997–2008) schema: (a) providing board administration and support; (b) overseeing program and service delivery; (c) managing human resources, finances, and risk; (d) assuring community and public relations; and (e) overseeing fundraising planning and implementation.

Board Administration and Support

Axelrod (2005) informs us that there have been assorted models for building effective boards, from constructing an intact partitioning of the board and staff to entrusting board leadership and development to the CEO. In addition to the division of labor and leadership, Axelrod (2005) states, historically, some boards and executives have confined policy formulation to boards and policy implementation to staff. Herman and Heimovics (2005) say "much of the substantial normative literature on nonprofit boards accepts . . . putting the board at the top of the hierarchy and at the center of the leadership responsibility" (p. 155). To place this into legal and moral perspectives, various laws maintain that nonprofit boards are ultimately answerable for organizational affairs and conduct as stewards of the public interest (Herman & Heimovics, 2005). Adding to this perspective, Overton and Frey (2002) point out that "the duty of care calls upon a director to act in a reasonable and informed manner when participating in the board's decisions and its oversight of the corporation's management" (p. 19).

As the division of labor may be dependent on the nonprofit entity's size and its current life-cycle stage, there is a convention that CEOs provide staff support to boards. According to Herman and Heimovics (2005), this practice does not mean that CEOs are simply agents of the board. In fact, it is acknowledged that board relationships with chief executives are more multifaceted than normative models indicate, and a partnership image is used to depict the association. Adding to this partnership perspective, Moyers (2006) states a most important governance responsibility shared by chief executives and boards entails ensuring organizations have a firm plan for the future. Ensuring a solid plan comes about by what Chait, Ryan, and Taylor (2005) call "governance as leadership." This model of governance and executive management implies

> more macrogovernance in exchange for less micromanagement . . . [in that] neither the board nor management can accept the "*quid*" but withhold the "*quo*." In other words, the board cannot move toward the top of the generative curve, where issues are framed, and at the same time remain as active at the bottom of the curve where strategic plans and technical tasks are executed. Likewise, executives cannot "evict" the board from the zone of micromanagement without some other place for the trustees to go, namely the realm of generative governance. (p. 179)

We start getting a sense of how working relationships and efforts are important traditions. Nonprofit CEOs should work in unison with boards (or trustees) for the benefit of the organization, its service delivery, and constituencies served by being "stewards of the public interest" as Herman and Heimovics fittingly put it.

Program Service Delivery and Evaluation

Service Delivery

CEOs have ultimate oversight responsibility for delivering the services and programs provided by nonprofit organizations. These duties of oversight and stewardship inherently embody choosing service over self-centeredness (Brinckerhoff, 2004). O'Neill (2002) aptly points out that the nonprofit sector touches all of us by having an immense presence in society through places of worship, health care, camps and amateur leagues, schools, research institutes, theaters and symphonies, human rights groups, and a host of others. This list displays the impact nonprofits have on our lives—worship activity; medical attention; Saturday morning soccer and baseball excursions; college degrees; plays or operas; or civil rights marches—the organizations that sponsor such events comprise the nonprofit sector and are being managed by chief executives. This responsibility involves some level of stewardship, which Block (1996) identifies as "the umbrella idea which promises the means of achieving fundamental change in the way we govern our institutions" (p. xx).

Furthermore, Salamon (1999) identifies service provision as one major contribution of nonprofit organizations. This function

> has been particularly important in a society which . . . is reluc tant to turn to government to respond to social and economic needs. The nonprofit sector thus functions as a first line of defense, a flexible mechanism through which people con cerned about a social or economic problem can begin to respond immediately without having to convince a majority of their fellow citizens that the problem deserves a more gen eral, governmental response. (p. 15)

Nonprofit CEOs thus, are somewhat averse to government intervention and address issues without government involvement.

One prominent and traditional way that nonprofits provide services and programs is through unpaid volunteers. McCurley (2005) points out that as the number of volunteer workers increases, their jobs become more multifaceted, and competition for their work becomes more common, volunteer management has also become more refined and imaginative. For a number of nonprofit organizations, CEOs have ultimate responsibility for volunteer programs and coordinating volunteers' efforts (see McCurley & Lynch, 2006).

Evaluation

Whether services are provided solely by volunteers, by paid employees, or a combination thereof, some level of program evaluation must occur. Kopczynski and Pritchard (2004) inform us community-level evaluation takes place to provide particular services to a particular population. Evaluation occasionally occurs when funders request assessment of individual programs that provide a service directly or indirectly. This responsibility is carried out for stewardship purposes and evaluation of program efforts. CEOs need to assure organizations' various publics that they're fulfilling their responsibilities and mandates in accordance with established missions and purposes. In addition, Spaulding (2008) indicates program evaluation is carried out for decision-making purposes by investigating programs to establish their significance and to make suggestions for programmatic enhancement.

Human Resources, Finances, and Risk

CEOs must manage an organization's human resources, finances, and risk, with a balanced understanding of human characteristics, the full impact of fiscal issues, and the various risks related to both the human and financial components of any nonprofit organization.

Human Resources

According to Pynes (1997), nonprofit organizations are finding themselves confronting various economic, technological, legal, and cultural changes and challenges with which to cope if they are to remain viable, and she believes a key to viability is well-trained and adaptable employees. Environmental factors clearly affect an organization's human resources management. Macduff (2005) also identifies the importance of training as organizations openly acknowledge that employees need a certain level of proficiency to work toward the organization's mission.

Attracting, selecting, and retaining staff are perhaps the most significant processes organization managers undertake; organizational employees are the "architects and agents of everything that ultimately gets accomplished" (Watson & Abzug, 2005, p. 623). An interesting issue revolves around the paradox that Watson and Abzug (2005) identify; leaders of nonprofit organizations often need reminding about the importance of the organization's people, even though their very missions are humanistic in nature, and humanism should come naturally. Most organizations in the nonprofit sector need the best compensation system they can afford to attract and reward the best workforce.

Without the human factor, nonprofit organizations could not offer services and programs. The management of human resources involves a fair amount of detail beyond mere recruitment, hiring, supervising, evaluation, and potential dismissal. Human resource management also needs to consider: (a) Do employees' motivations and motives fit with the organization's mission? (b) Are the job duties and responsibilities proper and appropriate? (c) Is the compensation package adequate for current economic conditions? (d) Are there employees who should be developed for the ultimate CEO level?

Financial Decisions

CEOs must make sound financial decisions within board-established boundaries by following established regulatory standards and best practices. CEOs don't need to be certified public accountants, but they should be familiar with the essential principles of finance and accounting and have the capacity to make capable resolutions on the basis of the organization's overall financial picture. Anthony and Young (2005) remind us of two elementary differences between commercial and nonprofit organizations: Commercial businesses have shareholder transactions, whereas nonprofits do not, and nonprofit organizations receive contributions, which businesses do not.

Stewardship necessitates financial oversight, and Brinckerhoff (2004) indicates that nonprofit executives' financial reporting should "provide *accurate, complete information* . . . [to] be presented in a form that is *useful to the intended audiences*" (p. 140; italics in original). Rigorous financial oversight is necessary in any type of economic condition, be it harsh, mild, or bountiful. Attending to financial assets, properly accounting for such assets, and being transparent with such information is of utmost importance for nonprofit CEOs.

A troubling part of administering nonprofits is that while nonprofit leaders recognize that risk management is important for the sustainable fitness of their organizations, they may not seek out education and training in this area. Many nonprofit leaders view risk management as an unaffordable extravagance. Others are unsettled by risk management's technical features, including its finance component, and some managers are disturbed by its business orientation and analysis (Herman, 2005). A CEO must devote effort to developing risk management plans by committing time and necessary personnel—depending on organizational size, this may be led by a volunteer or board committee, the CEO and staff members, the human resources department, or an outside consulting firm. Risk is inherent in operating nonprofit organizations (or any other type, for that matter), and this must be viewed as a challenge to be met head-on by the chief executive and other staff members.

Community and Public Relations

CEOs must assure the oversight of an organization's community and public relations. Gainer and Moyer (2005) indicate that nonprofits recognize the need to extend their actions beyond direct services or advocacy and to concentrate on the clientele they are trying to reach. These activities involve understanding and fulfilling these needs with plans based on understanding markets to meet various stakeholders' requirements.

According to Moyers (2006), the CEO, more than any other nonprofit leader, serves as the organization's most noticeable and consistent public face. Furthermore, board members and senior staff also should publicly represent the organization and assist in building relationships with individuals, organizations, funders, partners, and policymakers. In fact, Andreasen and Kotler (2008) argue that

> marketing is among the most critical if not *the* most criti cal discipline needed for nonprofit success. Just as in the private sector, success ultimately requires that nonprofits influence behavior in a wide range of key target markets clients, funders, policy makers, volunteers, and the media, as well as the nonprofit's own staff. (p. xix)

In competitive markets, public advocacy, public relations, and marketing are an important set of tools for harvesting both public and financial support. To this end, Brinckerhoff (2004) identifies a number of characteristics of a market-driven nonprofit: (1) having a knowledge of markets, (2) treating all constituencies as customers, (3) involving all staff and volunteers in marketing efforts, (4) staying attuned to customer needs, (5) sustaining innovation and flexibility, and (6) not fearing the competition.

Fundraising Planning and Implementation

CEOs have ultimate responsibility for planning and implementing efforts to raise funds from various sources—private, foundations, and government. Nonprofits that rely on private sources experience quite a bit of anxiety, Moyers (2006) states. CEOs are clearly important participants in building relationships with key institutions and individuals and in ensuring effective involvement of board member in fundraising efforts.

Fogal (2005) reminds us that raising funds is a most important management and leadership assignment and has become sophisticated, aggressive, and competitive. Nonprofits, nevertheless, should not exist just to raise funds; they pursue a mission pursuit to benefit some current or future public component. One important fact is highlighted by Emerson (2005):

> Because of the charitable sector's importance and dramatic growth, and because of the unfortunate fact that there have always been individuals who engage in charitable solicitation fraud, [numerous] states have enacted solicitation statutes that typically require organizations to register before they solicit a state's residents for charitable contributions. (p. 8.1)

Social Enterprise

One issue attracting quite a bit of attention revolves around enterprising organizations, social innovators who are entrepreneurial in spirit and action. Massarsky (2005) discusses ventures that earn income to provide organizations with additional streams of revenue to support their efforts. Some proposed examples are: (a) charging service fees; (b) selling products; (c) developing, selling, and leasing land and buildings; and (d) holding assets such as copyrights, patents, and trademarks. A noteworthy consideration is made by Farruggia (2007):

> The social enterprising "train" is moving along the track at a very strong pace and nonprofit organizations that wish to "keep their heads above water" need to "purchase" the correct "ticket" so they will not be left at the station with a tattered suitcase from last century. (p. 12)

Fundraising issues direct our attention to the need to be good stewards and to honor the various inherent functions, behaviors, and obligations associated with these words.

Synopsis

Responsibility peppers this section. The CEO of any nonprofit organization must openly accept ultimate responsibility for providing support to the board of directors by working collaboratively with them. The CEO also has vital oversight of program and services, encompassing human, financial, and risk factors. Furthermore, the CEO engages in community and public relations by recognizing the commitment to be the organization's "public face" and to oversee fundraising from various sources.

Unique Nonprofit CEO Roles

What follows is a review of the author's practical and experiential awareness of unique methods and mechanisms for nonprofit organization CEOs. These methods can be used individually, or in combination, as ways of sustaining and advancing organizations (Farruggia, 2005). These components include addressing issues of resources, operations, strategic planning, government relations, performance, environmental factors, relationships, and the necessity and need for the nonprofit sector and its place in our social constellation.

Developing and Perpetuating Resources

This unique feature is related to the above-mentioned traditional features of overseeing fundraising planning and implementation and managing human resources, finances, and risk. CEOs of nonprofit organizations must develop and perpetuate resources through fiscal growth and organizational expansion. This translates into developing a sizable power base, extending services to nontraditional clientele, providing products and services, and adopting and using some form of social entrepreneurism for generating earned income. An organization's mission-based services are of great importance; being in a position that allows service growth is directly related to its purpose, which in turn, reflects positively on the CEO's fidelity to it.

The livelihoods of employees at nonprofit organizations require that CEOs develop and sustain fiscal resources so that services and missions can be continued. Resource development also involves a realistic need to develop a sizable power base, which can be drawn on for support and sustenance. The CEO must accomplish this resource development with the proviso of not appearing to be power hungry, which is not an admirable quality for nonprofit CEOs. Stewardship is at the heart of this feature as opposed to the mere collection of power and resources for personal gain and private inurement.

Making Operations "Business" Acclimated

This unique feature is related to the above-mentioned traditional features of providing board administration and support and overseeing program service delivery and program evaluation.

CEOs must make an organization's operations more business acclimated; this involves maintaining a competitive edge in an organization's market, using corporate best practices. Addressing internal and external environmental forces requires good business people, individuals who are knowledgeable about the various aspects that encompass nonprofit administration and management and can use them effectively.

A CEO must know the business of nonprofit services, its multifarious components, and the scheme of where and how it properly fits into current social and economic strata. This necessitates the development of corporate best practices such as corporate structures, financial accountability, service efficiency, and responsiveness to current and anticipated market conditions.

Employing Strategic Planning and Management

This unique feature is related to the above-mentioned traditional features of overseeing program service delivery and program evaluation; managing human resources, finances, and risk; assuring community and public relations; and overseeing fundraising planning and implementation.

CEOs need to employ strategic planning and management; this involves remaining open, responsive, and sensitive to managerial and operational changes and needs. It is important to know and understand the various components that make up the system in which the nonprofit organization is located or situated and its own specific place in that system—be it human care, health or rehabilitation services, youth services, vocational education, or the other myriad realms of nonprofit activity. Openness, responsiveness, and sensitivity to changes are ongoing concerns when it comes to maintaining an organization. Responsiveness to the needs of an organization's multiple constituencies is of unparalleled importance in providing better services to its communities.

To be open and sensitive to the changing and elastic needs of constituencies, CEOs must have full understanding of their responsibilities to be responsive to the needs of clienteles, funding sources, governmental representatives, politicians, other service providers, the business community, media outlets, general public, and other entities that interact with their organization and may have a stake in it. An important proviso is the possibility of bending in the wrong direction for the mere purpose of satisfying a particularly important constituent or constituency group (for further details, see Zack, 2003).

Fostering Government Relations

This unique feature is related to the above-mentioned traditional feature of assuring community and public relations. CEOs need to foster government relations by being aware of and understanding politics (process and politicians), legislation (past, present, and proposed), and public policies (past, present, and proposed). Otherwise, government affairs in these three areas may wreak havoc. Also needed are efforts to provide a better service by being on top of things.

Using Outcome Measures and Performance Indicators

This unique feature is related to the above-mentioned traditional feature of overseeing program service delivery and program evaluation. Understanding and adopting performance and outcome measures means that CEOs must embrace business-like behaviors. Nonprofit organizations have a moral and fiduciary responsibility to perform successfully and provide outcome data for the public good. Performance indicators and outcome measures speak to organizational success, and reputations depend on what is done and how an organization carries itself.

Using Environmental Factors and Conditions

This unique feature is related to the above-mentioned traditional features of overseeing program service delivery and program evaluation; managing human resources, finances, and risk; assuring community and public relations; and overseeing fundraising planning and implementation.

Using environmental factors and conditions as organizational guides means that CEOs incorporate stewardship, the blending of market and mission, community involvement, and mission advocacy. Understanding mission and stewardship means acknowledging the organization's constituency. This is an economic reality as much as it is a social goal. The responsible pairing of mission adherence and respect for the market as compatible and equal social goals is what makes the nonprofit sector different from the governmental and commercial sectors.

Maintaining involvement in a constituency or geographically based community cannot be separated from the organization's mission. CEOs require and use mission and advocacy to attract an increasing power base to expand resources and influence. An organization's staff must respect the market as a formidable component of the mission. It is part of the environment in which services are provided and one of the major guides for any organization.

Collaboration, Competition, and Consolidation

This unique feature is related to the above-mentioned traditional' features of overseeing program service delivery and program evaluation; managing human resources, finances, and risk; assuring community and public relations; and overseeing fundraising planning and implementation.

Collaboration, competition, and consolidation involve networking, consolidation for efficiency and efficacy, the possibility of organizational merger, and an ever-present realistic competition for financial and human resources. Networking is essential for CEOs to function effectively on behalf of and within their organization. Organizations must go beyond survival and advancement modes to endure by joining others via alliances and partnerships and using the strength in numbers paradigm as growth and sustainability activities.

Competition within and by nonprofit organizations is a reality that cannot be escaped. Organizations compete for funds, human resources, public recognition, political influence (clout), constituencies, and all the other big and small things that are valued and ultimately make the difference between sustainability and failure. When it comes to sustainability, CEOs find themselves on some point along the collaboration-competition-consolidation continuum, epending on the need of the organization at any given time.

Understanding Nonprofit Pervasiveness and Necessity

This unique feature is related to the above-mentioned traditional features of providing board administration and support; overseeing program service delivery and program evaluation; managing human resources, finances, and risk; assuring community and public relations; and overseeing fundraising planning and implementation.

CEOs must fully understand and appreciate that the nonprofit sector is pervasive and necessary. Because of the existence of the have-nots, traditionalism is a driving force for the sector. History has shown that have-nots have existed since time immemorial and that some form of service has been provided in an informal fashion or some developed institutionalized form. Because needs exist, nonprofit organizations will maintain themselves in a position to meet the seemingly ongoing problems and issues that vex humankind or to address some unmet need due to the failures of the market or government.

Summary

As Galbraith and Lawler (1998) show, it is increasingly apparent that corporations, in order to compete, must continuously improve. In fact, Galbraith and Lawler state that an organization "cannot just match the latest innovation, it must also develop new competencies so that it creates the next innovation" (p. 2). CEOs must also maintain a competitive edge in their arenas, through a clear knowledge of nonprofit administration. Perri 6 (1993) also maintains that a competitive edge will help nonprofit organizations respond to a wide variety of variables and innovations.

It is no surprise that in Farruggia's (2001 as cited in Farruggia, 2005) original research, one theme garnered 100% agreement: *Management must discern new growth opportunities*. The building of resources, as reflected in this theme, is essential. Nonprofit CEOs are saying that they need to build their organizations by keeping their eyes and ears open to new prospects for organizational and programmatic advancements. They are also saying that they have a strong desire to do this via nongovernmental funding streams. All this is for the purpose of good stewardship and mission-driven service provision.

Having a clear knowledge of how to administer and manage a nonprofit organization involves understanding the system in which these organizations are participating. It is composed of various constituencies, entities, and stakeholders that are interrelated and quite often have conflicting requirements. Part of the key to navigating the system and surviving it involves "actively manag[ing] the triplet of cost, quality, and product or service" (Galbraith & Lawler, 1998, p. 2). Farruggia (2005) clearly points to the need for nonprofit CEOs to employ strategic planning and use outcome measures and performance indicators to properly navigate the system so that the nonprofit survives and its mission flourishes.

Several organizations have adopted various corporate-like practices for the following reasons: (a) to dispel the public's notion that nonprofits are not "real businesses" by using corporate titles and structures and renaming their public relations department *brand management;* (b) to generate more earned income in light of increasing competition and less government support; and (c) to use corporate techniques and best practices to achieve mission goals. Furthermore, Young (2000) indicates that nonprofit organizations can be thought of as commercial activities with social significance and portrays them as privately governed entities needing to remain solvent by participating in markets and competing for resources. They must not gauge their performance and effectiveness primarily on financial success because society has entrusted them to carry out social missions. This thesis is also very strongly promoted by Brinckerhoff (2004). CEOs seeking a full perspective on the issues of stewardship, corporate best practices, and sustainability may turn to the work of Tom Ralser (2007), who states: "Nonprofits are not that different from for-profits" (p. 3). This statement provokes impassioned discussion and debate, many may dismiss the idea. The management skills and missions may be different, but both nonprofits and for-profits "must *provide value to investors*" (p. 3). If a commercial enterprise does not do this, the market puts it out of business. If nonprofits don't do this, they are not funded. The message to nonprofit CEOs is quite clear:

> Nonprofits have investors, people, foundations, and corpora tions give money in return for something. . . . Not an investor as in an equity position, complete with shares of stock and legal claims on assets, but an investor in that they expect something in return for their money. The challenge [for CEOs] is in identifying what the investors expect and then giving it to them. (Ralser, 2007, p. 9)

To this view, Auerswald (2009) adds that social entrepreneurs matter for similar reasons that other entrepreneurs matter: They generate new, "disruptive models for organizing human activity . . . [by] . . . creating *social value*" (p. 51).

It's quite apparent that one cannot eliminate the need for nonprofit organizations from the environment, and the environment cannot be detached from such entities; or as Heimovics, Herman, and Coughlin (1993) indicate, all nonprofit organizations must engage in transaction with the environment as a condition of survival. Farruggia (2005) also points to using environmental factors and conditions as the guideposts for direction. These factors involve a judicious blending of market realities and mission fidelity and traditions. This brings into question our romanticized notion of the charitable subsector of the nonprofit sector. How does the presumed "invisible hand" of the market play a role in the lives of nonprofit CEOs?

The one theme that shines through with clarity is the current pervasive need for nonprofit services due to the omnipresent existence of the have-nots of the haves and have-nots dichotomy. This could cynically be interpreted as the social service subsector of the overall nonprofit sector being part of a system that earns its living off the backs of the poor. But the more positive spin on the need for social services comes through in the simplicity of the statement made by O'Neill and Young (1988): For nonprofits, the primary concern is the particular service, the given constituency, or the expressed cause, which is not submissive to a bottom line of financial or political matters.

The administration and overall leadership needed to operate nonprofit organizations is not an easy undertaking. This can be clearly measured by the above-identified CEO-generated management strategies formulated and grounded in the original gathered and researched data from Farruggia (2001, as cited in Farruggia, 2005). If an organization's CEO is properly performing designated duties and taking full responsibility for carrying out the organization's purpose, then continued operation and ultimate survival of the organization's mission and services are primary in his or her mind and actions. The need to carry on requires the acknowledgment and understanding that the particular service, the given constituency, or the articulated cause is not submissive in a wholesale fashion to the bottom line. The organization's primary interest has to be attended to by capable and competent leaders. CEOs must incorporate a philosophy of accountability that emanates from the past, endures in the present, and is conveyed to future leaders. Accountability takes into consideration the multiple constituencies with which all organization representatives need to interact and appreciates their varying definitions of organizational effectiveness. A nonprofit CEO has to be willing to endure impossible challenges and periodic unstable environmental conditions by being responsive and adaptive.

The author is not suggesting that one should abandon lofty ideals and goals and therefore discard the original intentions for the creation, development, and existence of the nonprofit sector. In the world of daily existence, down in the trenches, the lofty goals must be tempered by the realities of survival, the threats of mortality and extinction, and the need to keep an organization, its staff, and its clientele flowing. Life in the nonprofit sector is demanding, and it often takes the girding of one's loins and the steeling of one's emotions and feelings to make it. One does what one can and the best that one can with what one has.

Farruggia (2005) concludes with this thought expressed by a CEO of a Chicago-based nonprofit organization:

> I think the genius of the not for profit sector is its flexibility and adaptability and I think it needs to retain that; there will be new requirements and new needs that develop and I'm fully confident that somewhere in the not for profit commu nity some organization will respond to that. (p. 14)

To add to this, the CEO has a very prominent role in an organization's flexibility, adaptability, development, confidence, and responsiveness.

Remember Lencioni's words (1998): "Being the chief executive of an organization is one of the most difficult challenges a person can face in a career. But it is not a complicated one" (p. vii). All the above-mentioned details should give readers a good foundation for deconstructing the traditional and unique roles of the nonprofit CEO. The work of a nonprofit CEO is indeed challenging, but if the necessary management tools are properly used, the various tasks are not complicated; challenging yes, difficult yes, frustrating and aggravating yes, but not complicated in their simplest forms.

Servant, Transformational, and Transactional Leadership

John C. Ronquillo
University of Georgia

In every nonprofit or socially beneficial organization, leadership is a quintessential element. Although many organizations fit the classification of nonprofit when they are being distinguished from government and commercial counterparts, they are exceptionally diverse in terms of directives, goals, and missions. Each organization has objectives and goals, and the various methods by which these objectives are achieved (or not achieved) are often a direct result of leadership styles and attributes of the people in charge. Many, if not most of the prominent leadership theories applied to public and business organizations can be applied as well to nonprofit organizations. Along similar lines, leadership traits among CEOs, executive directors, and individual board members entrusted to lead and manage nonprofit organizations also vary greatly, and the methods and techniques they employ in guiding their organizations to achieve tangible outcomes are often related to their personal leadership styles. There have been many case studies and scholarly articles on leadership traits and qualities in charitable organizations, philanthropic foundations, religious organizations, or other organizations classified as nonprofits, yet there is no singular successful leadership theory or practice. To date, each theory offered by leaders and researchers alike has demonstrated both positive and negative attributes. Some of these theories have more success in practice than others, and often, leaders must demonstrate flexibility in displaying their leadership skills, sometimes shifting from one practice to another depending on the situation. The premise of this chapter is to specifically focus on three of those concepts: servant leadership, transformational leadership, and transactional leadership. This chapter will survey literature that has examined the theories and practices surrounding these concepts of leadership and their relationship to the nonprofit sector.

The first section is devoted to the topic of servant leadership, its conceptual origins, a brief review on some recent scholarly research, critiques, and suggestions for future directions of servant leadership in nonprofit organizations. The subsequent section focuses on transformational and transactional leadership and how these theories of leadership may be related, intersect, or vary from each other. A brief review of the literature on transactional and transformational leadership is also included, along with some critiques. The chapter then concludes with some final remarks on these theories and offers suggestions for future research and practice in the nonprofit context.

Servant Leadership

Conceptual Origins

The concept of servant leadership is one that has attracted substantial interest among many leaders over the past few decades.[1] Many scholars attribute the concept of servant leadership to Robert K. Greenleaf, a notable management consultant who, prior to entering that field of work, spent a significant number of years at AT&T working in management development, research, and education (Spears, 2004).

Greenleaf (1977) posited that "the servant-leader *is* servant first. . . . It begins with the natural feeling that one wants to serve" (pp. 27–28, emphasis in original). In this sense, leadership begins with a commitment from the potential leader to serve others rather than pursuing his own self-interest, and this essentially is what is central to a leader's greatness (Spears, 2004). Greenleaf believed the primary purpose of business organizations should be to create a positive impact on their employees and surrounding community (Schermerhorn, Hunt, & Osborn, 2008). Yukl (2006) sums up additional attributes of servant leadership:

> The servant leader must stand for what is good and right, even when it is not in the financial interest of the organization. Social injustice and inequality should be opposed whenever possible. Even the weak and marginal members of society must be treated with respect and appreciation. Greenleaf pro posed that providing meaningful work for employees is as important as providing a quality product or service for the customer. He advocated that business organizations should consider social responsibility as one of the major objectives, and the board of directors should take primary responsibility for evaluating and facilitating progress on this objective.
>
> The servant leader must empower followers instead of using power to dominate them. Trust is established by being completely honest and open, keeping actions consistent with values, and showing trust in followers. . . . People should pre pare themselves to lead and accept the opportunity when offered. The result will be more people who serve as moral agents in society. (p. 420)

Spears (1998, 2004) perhaps best summarized the main tenets of servant leadership into 10 core characteristics from studying Greenleaf's original writings (although this list is not exhaustive, by any means). Spears listed them as follows:[2]

1. *Listening*. Leaders are often valued for their communication skills. Servant leaders listen intently to others and help reinforce the will of their followers by using this skill. An effective leader is also an effective listener.
2. *Empathy*. Servant leaders seek to identify with their followers and often go out of their way to help others feel accepted and valued in an organization.
3. *Healing*. Servant leaders often assist others in overcoming emotional difficulties; they seek ways in which they can help others to realize their full potential by overcoming personal grief or distress.
4. *Awareness*. This characteristic aids the servant leader in understanding issues involving ethics and values. Servant leaders who are self aware (i.e., aware of their role and how it works in sync with the organization and others in it), and aware of their organizational environs become stronger and more effective.
5. *Persuasion*. Servant leaders often rely on persuasion rather than authoritative positional authority when making decisions and leading an organization. Helping others see the rationale behind certain organizational motives without oppressive force is a key element in servant leadership.
6. *Conceptualization*. The ability to examine and eventually solve problems requires servant leaders to take a thoughtful and holistic approach to the entirety of a situation and not just the elemental steps of a given moment. In essence, they are required to focus simultaneously on both the "here and now" elements of their organization and the "big picture."
7. *Foresight*. Servant leaders must rely to a certain degree on intuition based on experiences from the past and elements of the present.
8. *Stewardship*. This characteristic is intricately tied to the greater concept of servant leadership, as it centers on the commitment to serving the needs of others. This element of stewardship conveys that leaders "invest" in those they serve in order to yield advantageous organizational progress and achieve goals on behalf of the organization.
9. *Commitment to the growth of people*. Servant leaders are nurturers and place great emphasis on ensuring that their followers realize their worth and overall value in an organization and individuals.
10. *Building community*. Servant leaders often set examples for others so that, in turn, others become servant leaders themselves. Servant leaders build smaller communities in the institutions where they work. This power of diffusion is also an important element of servant leadership.

Russell (2001) studied the role of values in servant leadership. He stated that values are an important part of every individual's psyche as they are the "underlying thoughts that stimulate human behavior. . . . Since values are prescriptive, they play an important role in determining the choices we make. Values are enduring standards that collectively form the value systems of our lives" (p. 76). Russell also noted that servant-leaders assert important placement of values, beliefs, and principles in leadership and that values are the core elements of the practice, which eventually incite servant leadership behavior in others. Furthermore, Russell identified several other attributes of servant-leaders, such as vision, credibility, trust, service, modeling, pioneering, appreciation of others, and empowerment. In terms of servant leadership affecting organizational performance, he wrote:

> Leader values significantly affect followers and ultimately influence organizational performance. In order to establish sound leadership practices, leaders must first examine their own belief systems. Thereafter, leaders should examine the values of their organizations. "Not until we have considered our leadership model at the level of its values, assumptions, and principles, can we discern to what extent we are leading from a power or a servant base" (Rinehart, 1998, p. 30). Such evaluations could spur leaders to challenge their personal beliefs and their organizational cultures. In so doing, they might initiate a revolution of servant leadership . . . may it be so. (Russell, 2001, p. 81)

Recent Research on Servant Leadership

Russell and Stone (2002) composed a very thorough literature review on the topic of servant leadership and acknowledged its growing popularity in terms of the various forms and styles of leadership. They noted that in Greenleaf's (1977, 1978) earlier work, he argued that colleges, universities, and seminaries fail in preparing young people for leadership roles in society and that leadership among a new generation is needed to address "the leadership crisis" Greenleaf describes. In addition to the attributes listed by Spears (1998, 2004) and others above, Russell and Stone noted the importance of the following traits in servant leadership based on trends from other research. They include: communication, competence, visibility, influence, encouragement, teaching, and delegation.

Joseph and Winston (2005) explored the relationship between employee perceptions of servant leadership, leader trust, and organizational trust. They found that perceptions of servant leadership were positively correlated with both leader and organizational trust; organizations that were perceived as "servant-led" exhibited higher levels of leader trust and organizational trust than organizations that were perceived as "non-servant-led." These findings supported Greenleaf's (1977) view that servant leadership is an antecedent of leader and organizational trust.

Barbuto and Wheeler's (2006) work was devoted to developing and validating an instrument that measured 11 potential dimensions of leadership, which included calling, listening, empathy, healing, awareness, persuasion, conceptualization, foresight, stewardship, growth, and community building—characteristics very similar, if not identical, to those previously mentioned in this chapter. They acknowledge the previous research completed since Greenleaf's original introduction of the concept, but they assert that there has been no consensus construct for empirical research. They believe that while most articles on servant leadership have stand-alone qualities, the work has not evolved, and the literature has now provided more differentiation than integration. They used data from 80 local leaders and asked 388 raters to test internal consistency, to confirm the factor structure, and to assess convergent, divergent, and predictive validity. From this, the results produced five servant leadership factors: altruistic calling, emotional healing, persuasive mapping, wisdom, and organizational stewardship. These factors had significant relations to transformational leadership, leader-member exchange, extra effort, satisfaction, and organizational effectiveness. These five factors, in effect, become even more concise than previous listings of the various qualities of servant leadership, without losing any of Greenleaf's (1977, 1978) original intent.

Critiques of Servant Leadership

Despite natural assumptions that tend to lend credence to the concept and its purported popular and positive view in practice, the concept of servant leadership is not without criticism. Though scholars have analyzed servant leadership in business, leadership studies, and organizational behavior, servant leadership studies in nonprofit organizations are virtually absent from top academic journals in the nonprofit and voluntary field. Many researchers believe that more empirical studies are needed to help validate the concept (Russell & Stone, 2002; Sendjaya & Sarros, 2002). Russell and Stone (2002) claim that it is systematically undefined and that the existing literature on servant leadership is predominantly philosophical. While the introduction of the concept of servant leadership is most often attributed to Greenleaf, several others (including scholars) have helped servant leadership achieve its relative prominence.

After calls to further substantiate and legitimize servant leadership as an important leadership theory and practice, more research of an empirical nature subsequently materialized (see Barbuto & Wheeler, 2006; Dennis & Bocarnea, 2005; Dennis & Winston, 2003; Joseph & Winston, 2005; Page & Wong, 2000). The relative lack of diffusion of servant leadership research among other academic fields and the absence of publications in other journals have most likely delayed the wider acceptance of servant leadership, although it continues to permeate audiences in additional fields, thus lending some credence to the theory and practice. Many schools of business and other academic programs in organizational behavior and theory have some instruction on the concept, although most texts (e.g., Schermerhorn et al., 2008; Yukl, 2006) relegate its coverage to just a few paragraphs. In very few cases, some colleges and universities place a distinct emphasis on servant leadership in academic training,[3] and many religious congregations and organizations also place a heavy emphasis on servant leadership.[4] Nevertheless, the trend of continued research on servant leadership is still emerging. The growth of servant leadership in practice can be attributed to continued work by organizations such as the Greenleaf Center for Servant Leadership,[5] continued academic research, and written works from the popular press. In addition, leadership consultants and intraorganizational training programs that educate individuals and groups also provide a way for the diffusion of the servant leadership concept among practitioners, which largely makes up for the lack of work done by academicians.

The Future of Servant Leadership in Nonprofit Organizations

What does the future hold for the concept of servant leadership as it pertains to nonprofit organizations? The seemingly absent research on servant leadership within nonprofit organizations should be of some concern. More than anything, it presents an opportunity to expand research and practice in servant leadership in an area many see as a natural fit. The caveat, however, is that servant leadership is not necessarily the natural leadership style for many individuals, nor is it the best practice for every organization. Like many situations in organizations, a contingency or situational approach—where one seeks ways to meet the needs of different management situations based on environmental factors—may be best. Different situations may require different approaches to leadership at different times. The concept of servant leadership seems reasonably relevant to the many nonprofit organizations that have a human services focus. In fact, many of them embody servant leadership. Nonprofit organizations that have a central mission focused on social responsibility seem to be a logical fit, as Greenleaf (1977, 1978) placed heavy emphasis on social responsibility in his original concept of servant leadership. Nevertheless, this theory of leadership merits further exploration within the nonprofit sector, as do the following theories: transformational and transactional leadership.

Transformational and Transactional Leadership

Transformational leadership and transactional leadership, like the theory of servant leadership, can be directly applied to the context of nonprofit and socially beneficial organizations. In the preceding section, servant leadership was defined as the commitment from a leader to serve others rather than pursuing his or her own self-interest. The theory posits that service to followers is the paramount responsibility of leaders and the "essence of ethical leadership" (Yukl, 2006) and that servant-leaders are those who attend to the needs of their followers, help them become more willing to accept the responsibilities entrusted to them, and often learn about their followers' needs and are willing to share in their difficulties and frustrations (Schermerhorn et al., 2008; Yukl, 2006). Transformational and transactional leadership, however, vary in approach from the concept of servant leadership as illustrated in Table 40.1. Although transformational and transactional leadership are different from each other, they are often described in tandem because transactional leadership often extends into transformational leadership. This section will explain the two theories through a review of previous literature on the subject and will conclude with a discussion on their relation to nonprofit organizations.

Transitioning to Transformational and Transactional Leadership

Rainey (2003) credits political scientist, James McGregor Burns (1978), as one of the first social scientists to develop the distinguishing characteristics of transformational and transactional leadership. Bernard Bass (1985b, 1998), an academician trained in industrial psychology who was influenced by Burns and by Robert House's theory of charismatic leadership,[6] is largely credited with further developing and influencing the theory of transformational leadership (Rainey, 2003; Miner, 2005; Schermerhorn et al., 2008;

	Servant Leadership	*Transformational Leadership*
Nature of theory	Normative	Normative
Role of leader	To serve followers	To inspire followers to pursue organizational goals
Role of follower	To become wiser, freer, and more autonomous	To pursue organizational goals
Moral component	Explicit	Unspecified
Outcomes expected	Follower satisfaction, development, and commitment to service and societal betterment	Goal congruence; increased effort, satisfaction, and productivity; organizational gain
Individual level	Desire to serve	Desire to lead
Interpersonal level	Leader serves followers	Leader inspires followers
Group level	Leader serves group to meet member needs	Leader unites group to pursue group goals
Organizational level	Leader prepares organization to serve community	Leader inspires followers to pursue organizational goals
Societal level	Leader leaves a positive legacy for the betterment of society	Leader inspires society to pursue articulated goals

Table 40.1 Comparison of Servant Leadership and Transformational Leadership Theories

SOURCE: Adapted from Barbuto and Wheeler, 2006.

Yukl, 2006). Anheier (2005) offers concise definitions for both transformational and transactional leadership:

> *Transformational leadership* involves the motivation of employees and members to perform normal expectations for meeting the organization's mission and for achieving organi zational goals. It inspires staff and members to put aside per sonal self interest for the common good of the organization and to have confidence in their ability to achieve the "extra ordinary" challenges before them.
>
> *Transactional leadership* is about maintaining an align ment between the organization's mission and goals on the one hand, and the motivation and interests of employees and members in achieving set objectives on the other. (p. 163)

Transactional leadership, in concept, involves leader-follower exchanges necessary for achieving specific or routine performance mutually agreed on by leaders and followers (Schermerhorn et al., 2008). As the name implies, there is somewhat of a quid pro quo involved in this theory. Leaders often promise certain rewards or actions in exchange for something from their followers, usually completion of a task, high performance, or essentially whatever terms the leader and follower agree on. Denhardt, Denhardt, and Aristigueta (2002) capture quite succinctly how transactional leadership parlays into transformational leadership:

> Transactional leadership . . . involves an exchange of valued things (e.g., economic, political, psychological) between ini tiators and respondents. For example, a political leader might agree to support a particular policy in exchange for votes in the next election. . . . In the case of transactional leader ship, the two parties come together in a relationship that advances the interests of both, but there is no deep or enduring link between them. Transformational leadership, on the other hand, occurs when leaders and followers engage with one another in such a way that they raise one another to higher levels or morality and motivation. Although the leaders and followers initially might come together out of the pursuit of their own interests or because the leader recognized some spe cial potential in the followers, as the relationship evolves, their interests become fused into mutual support for common purposes. (pp. 200 201)

Schermerhorn and colleagues (2008, p. 258) cite four dimensions of leader-follower exchanges or behaviors as they involve transactional leadership:

1. *Contingent rewards.* Various kinds of rewards in exchange for mutually agreed upon goal accomplishments.
2. *Active management by exception.* Involves watching for deviations from organizational rules and standards and taking corrective action.
3. *Passive management by exception.* Requires intervening only if standards are not met.
4. *Laissez faire.* Involves giving up responsibilities and avoiding decisions.

Tichy and Ulrich (1984) issued their "call for the transformational leader" in response to a declining economy:

> A new brand of leadership is necessary. Instead of managers who continue to move organizations along historical tracks, the new leaders must transform the organizations and head them down new tracks. . . . We call these new leaders transfor mational leaders, for they must create something new out of something old: out of an old vision, they must develop and communicate a new vision and get others not only to see the vision but also commit themselves to it. Where transactional managers make only minor adjustments in the organization's mission, structure, and human resource management, transfor mational leaders not only make changes in these three areas but they also evoke fundamental changes in the basic political and cultural systems of the organization. The revamping of the political and cultural systems is what most distinguishes the transformational leader from the transactional one. (p. 59)

According to Yukl (2006), Bass (1985b) positioned transformational and transactional leadership as distinct, but not mutually exclusive processes. Transformational leadership increases follower motivation and performance in more ways than transactional leadership, however, effective leaders employ both types. Rainey (2003), discussing Bass's (1985b, 1998) work on the Multifactor Leadership Questionnaire (MLQ) and based on that work, lists the following behaviors associated with transformational leadership (p. 204):

1. *Idealized influence.* Arouses followers' emotional attachment to the leader and identification with him or her.
2. *Intellectual stimulation.* Engages followers in recognizing and confronting challenges, and in viewing challenges from new perspectives.
3. *Individualized consideration.* Provides support, encouragement and coaching.
4. *Inspirational motivation.* Communicates an appealing vision, using symbols to focus efforts, and modeling appropriate behaviors.

Transformational and Transactional Leadership in Nonprofit Organizations

To date, research on transformational and transactional leadership with direct implications for nonprofit organizations has been relatively scarce. A handful of researchers and practitioners, nevertheless, have produced some noteworthy works that should be given due attention. Anheier (2005) states that the transactional and transformational leadership types suggest a connection between the organizational life cycle and leadership. He cites Nanus and Dobbs (1999) and their suggestions for what nonprofit leaders need to focus on (Anheier, 2005, p. 163):

1. Internal organizational aspects, in particular the board, staff, volunteers, members, and users that the leader has to inspire, encourage, and unite behind a common mission

2. External organizational aspects, in particular donors, policy makers, the media, and other constituencies whose support the leader needs for financial resources and legitimacy
3. Present operations such as organizational performance and service quality, demand, information flows, organizational conflicts and motivation, and community support
4. Future possibilities, where the leader addresses questions of sustainability and potential threats and opportunities that may have important implications for the organization and its direction

Riggio, Bass, and Orr (2004) wrote that the essence of transformational leadership is the leader who does not just inspire commitment to a vision or cause but also develops or "transforms" followers to reach their highest potential and to take on the responsibilities of leading the organization to achieving its mission, which makes the theory "a particularly appropriate one" for nonprofit organizations. As it was with servant leadership, there has been little research—empirical or otherwise—on transformational leadership in nonprofit organizations. Riggio and colleagues (2004) highlight this, particularly in contrast to the significant research that has investigated transformational leadership in for-profit companies, the government, the military, and educational institutions (Bass, 1998).

To illustrate this, they cite a study by Egan, Sarros, and Santora (1995) that compares two CEOs of nonprofit organizations with two CEOs from "similarly sized" private, for-profit organizations. The authors claim that nonprofit organizations should be more conducive to transformational leadership, however, results showed no significant differences among the executives (Egan et al., 1995). The sample size of only four, however, compromises the validity of the study (Riggio et al., 2004). While the design of this chapter is not to advocate one type of methodology over another, the sample size of four perhaps presents a better opportunity to study subjects in-depth for a case study, whereas an empirical research study with a larger sample would allow hypothesis testing to show greater potential variance; moreover, means tests may be able to show whether or not there is indeed a difference between private and nonprofit transactional leadership styles. Riggio and colleagues (2004) also cited a study by Egri and Herman (2000) in which 33 nonprofit leaders were compared to 38 leaders in private for-profit companies in the United States and Canada. All of the organizations were environmental organizations that provided similar services or products. Although transformational leadership was significant among all environmental organizations, there were no significant differences between private for-profit and nonprofit organizations. Overall results, however, indicated that nonprofits were more receptive to the idea than their for-profit counterparts (Egri & Herman, 2000; Riggio et al., 2004).

Dym and Hutson (2005) cited Gandhi, Martin Luther King Jr., Winston Churchill, and Franklin D. Roosevelt as transformative and visionary leaders whose leadership "was based on ethical and national ideals and communicated in brilliant rhetoric and through acts of individual courage" (p. 42). These leaders, the authors claimed, embodied their message in ways that magnified their credibility and attractiveness. "What is more, they had an intuitive grasp of what their followers would and could do, a strategic empathy, if you will" (p. 42). Dym and Hutson claim that transformational leadership is "aligned" leadership in two important ways:

> First, although the focus is not on relationship, transforma tional leadership is based on relationship. Leaders cannot per suade in such powerful ways without a powerful, explicit or implicit relationship with followers. Second, the notion of transformation is itself a form of alignment. It generally builds through virtuous cycles. The leader proposes actions in ways that catch the imagination of followers. As followers begin to join the leader, she is encouraged and makes further bolder proposals, which further capture the imagination of followers, who come on board with greater number and enthusiasm, which spurs the leader to further, . . . and so it goes. While this virtual cycle is enacted, a seamless and unselfconscious bond builds between leaders and followers. Their every action seems aligned to each other and to their objectives. (pp. 42 43)

Jaskyte (2004), in one of the few research articles addressing transformational leadership in human services organizations, examined this leadership context as it relates to organizational culture and organizational innovativeness. Her research shows that positive relationships exist among transformational leadership, organizational values, and the degree of agreement among employees on those values (otherwise known as "cultural consensus"). She concluded that examining linkages between transformational leadership and organizational culture is critical to understanding the relation between leadership and innovation; her results indicated that transformational leadership may not be related to organizational innovation. In fact, the relationships in her study indicate that leadership practices carried out in the sample created strong cultural consensus around values that may actually hinder innovation.

Perceived Weaknesses of Transformational Leadership

Yukl (1999) stated that the concept of transformational leadership provides several important insights, but several conceptual weaknesses need to be corrected to make the theory more useful. These criticisms of transformational leadership are not offered here to refute the theory by any means: It is a valid theory in numerous situations and is applicable to a variety of settings. Rather, they are offered to give a more holistic view in terms of understanding the theory. Yukl (1999) illustrates the criticisms in eight main points:

1. *Ambiguity about underlying influence processes.* The influence processes for transformational and transactional leadership are vague and have not been studied in a systematic way. "The theory would be stronger if the essential influence processes were identified more clearly

and used to explain how each type of behavior affects each type of mediating variable and outcome" (Yukl, 1999, p. 287). Influence processes mentioned by Yukl include the arousal of motives or emotions, increased self-efficacy or optimism, and increased task commitment.

2. *Overemphasis on dyadic processes.* "Most theories of transformational leadership are conceptualized primarily at the dyadic level. The major interest is to explain a leader's direct influence over individual followers, not leader influence on group or organizational processes. . . . How leaders influence these group processes is not explained very well by the transformational leadership theories" (Yukl, 1999, pp. 287–288). Yukl gives examples of relevant group processes: how well work is organized to use personnel and resources; how well interrelated group activities are coordinated; mutual trust and cooperation among members; and member confidence in the capacity of the group to attain its objectives.

3. *Ambiguity about transformational behaviors.* Specific types of transformational behavior are usually based on the inductive process of factor analysis. Yukl (1999) claims that the theoretical rationale for differentiating among behaviors is not clearly explained. "Developing includes coaching and mentoring. Supporting includes being friendly, helpful, considerate, and appreciative of individual subordinates. It is reasonable to treat developing as a core transformational behavior, because it enhances subordinates skills and self-efficacy. However, there does not seem to be a good rationale to include supporting as a core transformational behavior; . . . there is ample research to show that it increases satisfaction with the leader . . . but has only a weak effect on subordinate motivation or performance" (p. 288).

4. *Ambiguity about transactional leadership.* Yukl (1999) claims that transactional leadership theory fails to make a strong linkage between the process of leader-subordinate exchange and each transactional behavior. "Instead, transactional leadership includes a diverse collection of (mostly ineffective) leader behaviors that lack any clear common denominator. Contingent reward behavior includes things that are clearly involved in an impersonal exchange process (e.g., explaining reward contingencies, offering incentives, rewarding good performance). However, contingent reward behavior also includes providing recognition to subordinates. . . . Providing praise and recognition is usually more personal and may involve transformational leadership as well as transactional leadership" (p. 289).

5. *Omission of important behaviors.* Yukl (1999) claims that Bass (1990, 1996) omits important transformational behaviors in his version of the theory. These missing behaviors, Yukl states, can be identified by examining other theories and research on effective leadership, some of which include "facilitating agreement about objectives and strategies, facilitating mutual trust and cooperation, and building group identification and collective efficacy. . . . The core transformational behaviors should probably include articulating a vision and strategy for the organization, guiding and facilitating change, and promoting organizational learning" (p. 290). Yukl is especially critical of Bass's (1996) use of the label "full range leadership theory" and notes that it invites critical evaluation of completeness.

6. *Insufficient specification of situational variables.* One criticism that is fairly apparent is that Bass (1996) proposes that transformational leadership is beneficial for followers and their organization, regardless of the situation at hand. This is clearly untrue. Yukl (1999) offers another criticism here and writes that the "search for situational moderator variables may be more successful if directed at specific types of transformational behavior. Even if there is always some type of transformational behavior that is relevant for effective leadership, not every type of transformational behavior will be relevant in every situation" (p. 291).

7. *Insufficient identification of negative effects.* This criticism deals mostly with the fact that the theory does not offer room for criticism of itself—there is no explicit part of the theory that identifies a situation where transformational leadership is "detrimental." Yukl (1999) cites several researchers who point to potentially negative elements of transformational leadership. For example, the role of leadership in increasing task motivation and performance can be biased toward top management at the expense of employees. Furthermore, role ambiguity and role conflict can be heightened by different leaders with competing visions. Yukl calls for more research in terms of the potential negative outcomes related to transformational leadership.

8. *Heroic leadership bias.* Yukl (1999) claims that, like most other earlier leadership theories, the transformational leadership theories reflect the "implicit assumptions associated with the 'heroic leadership' bias" (p. 292). Yukl further states, "When a correlation is found between transformational leadership and subordinate commitment or performance, the results are interpreted as showing that the leader influenced subordinates to perform better. There is little interest in describing reciprocal influence processes or shared leadership. Researchers study how leaders motivate followers of overcome their resistance, not how leaders encourage followers to challenge the leader's vision or develop a better one" (p. 292).

Despite these criticisms of transformational leadership, numerous elements of the theory are highly applicable to nonprofit organizations merit further research on transformational leadership in the specific nonprofit context. Riggio and colleagues (2004) call for more research on the role of transformational leaders in nonprofit organizations. "One obvious reason is that for-profit organizations, with their large numbers of employees, easy access to leadership consultants, and large leadership development budgets, are more likely venues for scholars to study transformational leadership quantitatively" (Riggio et al., 2004, p. 54). These authors also make claim to a shortage of qualitative research on transformational leadership to better explore the fit between transformational leadership and the nonprofit world. Furthermore, studies that highlight whether or not transformational leadership varies based on sector (i.e., public, private, nonprofit) may also yield interesting results that could potentially enhance the theory.

Summary

Of the multitudinous theories on leadership, those few presented here—servant leadership and transactional and transformational leadership—can be highly relevant to the operations of nonprofit organizations and may eventually play a role in either the success or demise of these organizations. The central belief surrounding the concept of servant leadership as put forth by Greenleaf was that business organizations should create a positive impact on the organization's employees and throughout the surrounding community (Schermerhorn, et al., 2008). This is an ideal that is upheld by countless nonprofit organizations (along with many organizations in the public and private sector as well). Despite this often unifying theme across nonprofit organizations, some resources that are common in private businesses or government agencies (i.e., sustained streams of funding, large employee base, benefits and other incentives, etc.) are lacking in nonprofit organizations. In these cases, servant leadership behaviors, as well as the behaviors related to transactional and transformational leadership, are often subsequently related to sustainable and successful nonprofit organizations. The sometimes amorphous term *nonprofit* can make it difficult to assess these behaviors. A small, community-based social benefit organization with a mission to end homelessness may significantly differ from a wealthy national foundation with a large staff in terms of many of the aforementioned resources and leadership behaviors. Various other differences exist among nonprofit organizations based on environmental factors and organizational mission. These are but a few of the reasons the concepts of servant, transactional, and transformational leadership remain important to these organizations. Furthermore, this reinforces the call for further research on these leadership behaviors with specific application to nonprofit organizations.

Next Steps: Assessing Your Leadership Potential

As you ponder what you have learned in this chapter, I hope you have asked yourself on more than one occasion, What kind of leader am I? The information on leadership provided here is clearly not exhaustive as the various typologies and techniques that individuals employ in directing the efforts of their organizations are exceptionally numerous. However, practices involving servant leadership and transactional and transformational leadership are clearly on the rise. Old methods of leadership that are dated and ill-suited for the ever-changing nature of 21st-century nonprofit organizations are being set aside for newer, more innovative, groundbreaking techniques. The vitality of many nonprofit organizations is tied to leaders' ability to thoughtfully guide them through times both prosperous and turbulent. Tactics of servant and transformational leadership, as well as many other types of leadership, are becoming increasingly important in nonprofit organizations.

Individuals carry with them a variety of abilities and talents when it comes to leadership. Some will argue that leaders are born, whereas others will assert that leaders can be "made." Regardless of your position, you have the capacity to be a leader. Regarding these specific instances of servant leadership and transformational leadership, readers should take inventory of their leadership qualities by asking a series of questions:

- What motivates you to lead?
- Who are the exemplars of leadership you aspire to emulate?
- What are your strengths as a leader?
- What aspects of leadership can you improve?
- What traits of servant leadership do you exemplify?
- What traits of transactional and/or transformational leadership do you exemplify?
- In what areas of your life can you further display your leadership talents?
- How can you help foster or cultivate leadership in others?

These questions should help form the basis for your leadership inventory, and you should add additional questions that are more relevant to you and your personal goals. Write them down along with answers, look at them often, and change them as needed, or you can create some sort of visual reminder to help keep these questions fresh in your mind. Seek constructive feedback from your peers, trusted mentors, and those you lead. Set goals that pertain to your development as a leader, and on occasion, reexamine your strengths and areas you might need to improve. They may change over time, but a constant cognition focused on your qualities and attributes will continue to strengthen your overall potential and effectiveness as a leader.

Notes

1. For extensive literature reviews on servant leadership, see Russell and Stone (2002) and Barbuto and Wheeler (2006).
2. The descriptions of these characteristics are paraphrased from Spears (2004).
3. For example, see Viterbo University's Master of Arts in Servant Leadership (http://www.viterbo.edu/sl).
4. For example, see The Servant Leadership School of Greensboro, NC (http://www.servantleadergreensboro.com).
5. See http://www.greenleaf.org.
6. Charismatic leadership refers to "personal characteristics of leaders that inspire in others pride, faith, identification, dedication, and commitment and a willingness to follow directives and accept decisions" (Anheier, 2005, p. 162). For a more detailed description of charismatic leadership in organizational settings see Boal and Bryson (1988), Conger and Kanungo (1987, 1998), and Conger (1989).

Leading Volunteers in Nonprofit Organizations

Sarah Jane Rehnborg

University of Texas at Austin

Dennis L. Poole

University of South Carolina at Columbia

Michael K. Roemer

Ball State University

Over the past two decades, considerable progress has been made in the development of national and community service volunteer programs. At the federal level, George H. W. Bush signed into law the National and Community Service Volunteer Act of 1990 (P. L. 101–610). The act established the White House Office of National Service, the Points of Light Foundation, and the Commission for National and Community Service. Three years later, the National and Community Service Trust Act (P. L. 206–170) became law under the leadership of Bill Clinton. The newly named *Corporation* for National & Community Service was directed to manage several volunteer and national service initiatives under three broad program categories: Senior Corps, AmeriCorps, and Learn and Serve America. In 2002, George W. Bush established USA Freedom Corps, the White House's response to the president's call to service for all Americans to devote the equivalent of 2 years of their lives to service and volunteerism. The support for volunteerism and service is likely to grow. In his first address to a joint session of Congress, President Barack Obama called for a "renewed spirit of national service for this and future generations" and quickly followed up on this pledge by proposing one of the most significant expansions of national service since the Kennedy administration (Herszenhorn, 2009).

These federal initiatives build on the ethos of volunteerism and service famously chronicled by Alexis de Tocqueville in the early 1800s as he observed a nation of joiners, eager to freely associate and work for the common good. It was not, however, until the later part of the 1960s that concerted effort emerged to conceptualize volunteers as a *workforce.* Although the first national count of Americans as volunteers was released in 1971, more attention has been given to tracking volunteers over the last 20 years. The Independent Sector, an organization that advocates for nonprofit organizations and philanthropy in general, surveyed volunteering and giving behaviors of Americans throughout the 1990s. Since the year 2000, the Corporation for National & Community Service has commissioned the Census Bureau to track these phenomena. In 2007, nearly 61 million Americans volunteered, giving more than 8.1 billion hours of service, a contribution of time valued at $158 billion to American communities (Musick & Wilson, 2008; see also Corporation for National & Community Service, 2009). As the nonprofit sector formalized and professional organizations congealed and strengthened throughout the remainder of the 20th century, organizations counted volunteers as critical assets in their efforts to address social, civic, and safety concerns of all types.

Despite enthusiasm for such initiatives, assessing the quality of volunteer service programs, both nationally and locally, remains a challenge. Numerous measurement tools are available to conduct organizational assessments (Herman & Renz, 1998; Shilbury & Moore, 2006), but few can be used to determine the quality of the volunteer service dimension of organizational operations. Existing tools have not been scientifically tested for reliability and validity, nor have they been designed to accommodate or account for the presence of a volunteer workforce.

In 2004, the Corporation for National & Community Service—via a contract with Education, Training, and Research (ETR) Associates—commissioned researchers at the University of Texas at Austin to develop a valid, reliable, and efficient tool for program managers to conduct self-assessments of their national and/or community service volunteer programs. Based on the results of such an assessment, organizations could undertake efforts to strengthen the infrastructure associated with volunteer and national service programs. The Corporation for National & Community Service envisioned linking web-based services to such a tool and providing training and technical assistance services to specific objectives derived from such an assessment. Although experts had long recognized the need for better assessment tools in volunteerism (Flynn & Hodgkinson, 2001; Hall, Phillips, Meillat, & Pickering, 2003; Herman & Renz, 1998; Inglis & Cleave, 2006; Poole, Nelson, Carnahan, Chepenick, & Tubiak, 2000), this project was the first systematic effort to advance measurement in the field of volunteerism beyond traditional practice. Evaluation research dictates that such instruments be reliable, valid, and sensitive to change (Kanji, 2002). For practical use, they should also be user friendly, relatively brief, easy to score, and relevant to the program type (Royce & Thyer, 1996).

This chapter briefly overviews the scientific procedures used to design and test the instrument, herein referred to as Volunteer Program Assessment Tool (VPAT). The complexity of volunteer initiatives within service organizations is described in a graph that emerged from the research. The chapter then presents the assessment instrument, which is available to readers at the Lyndon B. Johnson School of Public Affairs' RGK Center of Philanthropy and Community Service website (http://www.utexas.edu/lbj/rgk/myimprovementplan/selfassessment 36item.html), and describes ways in which the tool may be of value in designing and strengthening programs that rely on volunteers and national service members as agents of change and service delivery.

For purposes of discussion, it should be noted that community volunteers and national service participants are grouped together. Not only is there significant overlap between the two populations, but both groups serve voluntarily, and compensation when provided is significantly below market value. Hereafter, community volunteer initiatives and national service programs in diverse organizational settings will be referred to as *volunteer programs*.

Assessing Service Initiatives: A Complex Environment

Terminology

Since its inception, the corporation has managed three main streams of service: (1) *Senior Corp*s, which incorporates the long-standing Foster Grandparents, Retired and Senior Volunteer (RSVP), and Senior Companion Programs, (2) *AmeriCorps*, the more recently established initiative, which integrates the long-standing Volunteers in Service to America (VISTA), the new National Civilian Community Corps programs, and the full-time AmeriCorps demonstration program that had been established under the 1990 act, and (3) *Learn and Serve America*, formerly known as Serve America. *Learn and Serve America* encompasses service-learning initiatives that engage students at all educational levels in service work designed to enhance and augment curriculum objectives. Students engaged in service-learning initiatives are considered volunteers for the purposes of this discussion. These three service streams, along with the legions of private community volunteers, represent the collective national service and community volunteer enterprise (Rehnborg, 2005).

Although VPAT was chiefly developed for federal grantees that operate service programs within the three service streams, the tool is useful to local nonprofit organizations and public agencies that engage volunteers. Because of its rigorous construction methodology, the tool can assist nonprofit managers as they self-assess the overall functioning of their community service initiatives.

Although numerous assessment tools and program audits are available to assess volunteer and national service programs, none of the existing tools is empirically based. To create a valid, reliable tool designed to help shape practice and guide program development, the authors constructed a multitiered, mixed-methods approach to the development of the VPAT.

Methodology

Following an extensive review of the literature and a comprehensive analysis of existing assessment tools, the team employed Concept Mapping, a software program developed by Trochim (1989), which allows researchers to statistically analyze qualitative focus group data through rigorous quantitative methods. This software system employs multivariate statistical techniques of multidimensional scaling and hierarchical cluster analysis and translates this complex qualitative data into a pictorial form, or map. The findings from this stage of the tool development will be discussed at greater length later in this chapter.

Based on the outcomes of the Concept Mapping system, the team distilled the data into an initial draft of an assessment instrument. The draft assessment instrument was shared with numerous focus groups of subject-matter experts, as well as experienced program leaders, the type of people who would be among the tool's target audience. These groups reviewed the wording of the instrument and assisted the research team as it sought to refine and hone the assessment instrument.

Once the instrument was sufficiently refined, it was pilot-tested using a stratified random sample of 1,187 national service and community volunteer program managers. To meet the minimum requirements for sample size and ensure adequate statistical power for the planned psychometric analyses, the national sampling frame was stratified by five subgroups: AmeriCorps, AmeriCorps VISTA, Senior Corps, Learn and Serve, and community-based volunteer leaders. An invitation to participate in the VPAT research project was sent via e-mail to all program managers within the national sampling frame. During the 3-week time period set for data collection, 239 complete responses were gathered, representing 20% of the overall sample. The first 103 respondents were also asked to complete an additional research instrument for criterion-related validity testing; 41 complete responses to this second instrument were received. With the exception of Learn and Serve, all of the subgroups had an adequate number of responses for subgroup analyses.

To assure internal consistency reliability, the researchers used the Cronbach's (1951) coefficient alpha method. The results of this analysis indicated similar patterns of internal consistency within four of the five subgroups of our sample: AmeriCorps, VISTA, Senior Corps, and community-based groups. (The small sample size for the Learn and Serve programs precluded separate psychometric testing.) The alphas demonstrate that the VPAT scales are, in effect, equally reliable for a general population and for each of the four subgroups. This supports the idea that the scales contain little or no bias relative to these groups. Comparable analysis was performed to examine the content, criterion-related, and construct validity for each subgroup.

Using a tool developed by The Colorado Trust (2002), the researchers assured criterion-related validity with resultant coefficients in the upper moderate-to-large range. The data was also subjected to psychometric measures to assure construct validity, or the degree to which the instrument measures the concepts it purports to measure. Collectively, the results of the various tests to which the findings were subjected provide strong evidence that the VPAT scales are valid indicators of overall programmatic functioning. For a comprehensive overview of the development of the tool and the psychometric testing to which it was subjected, go to http://www.utexas.edu/lbj/rgk/research/past.php.

Understanding Volunteerism Within an Organizational Context

Concept Mapping as an Organizational Process

To develop an assessment tool that captures the complexity of engaging volunteers and national service members in organizations, the research team turned to Concept Mapping, the software system that converts qualitative focus group information into quantitative data. To fulfill the requirements necessary to use this methodology, two focus groups were convened simultaneously. One focus group included leaders of the national service programs delineated above while the other was composed of leaders from community-based volunteer initiatives. Both groups were asked to identify the observable indicators of a "well-managed program/project using volunteers or national service participants" (Concept Systems, Inc., 2003).

With 44 focus group members split between the two groups, it took more than 2 hours to collect all of the observable indicators. After the focus groups, the researchers compared the two sets of indicators and culled duplicated items. In all, 128 separate observable indicators emerged from the discussions. The second step of the Concept Mapping process asked the focus group participants to sort, organize, prioritize, and name the indicators by placing each of the 128 concepts into groups of ideas that fit well together. This information was then entered into the Concept Mapping software program.

The multistage analysis process produces pictorial and graphic representations as it organizes the focus group information. As seen in Figure 41.1, the software program generates graphic pictorial representations of indicators and uses the names most frequently given to the indicators by participants to organize and identify meaningful clusters of data. Examined holistically, this map served as the basis both for organizing the assessment instrument and for examining the complexity of the organizational processes involved in working effectively with volunteers and national service participants.

When groups and organizations decide to involve volunteers in their work, they think about what needs to be done, where to find volunteers to do it, and how to bring them into the organization. When a volunteer program grows in size, organizations may assign someone to work with the volunteers, often calling this person a coordinator of volunteers. This person is then assigned the tasks associated with organizing the volunteers or national service participants, preparing them for work, and overseeing the effort.

Figure 41.1, however, is a clear testimony to the broader scope of the work actually involved in volunteer initiatives. The observations of the focus group participants as codified through Concept Mapping tell us that well-managed programs include: an infrastructure for the effort; skills in marketing and communications as well as staffing and development; the capacity to involve the community as well as build partnerships and collaborations; a certain level of expertise in financial management along with program accountability; the informed involvement of boards and advisory leaders; an organizational culture conducive to community engagement; and skills in both volunteer administration and engagement. These conceptual areas, which shed light on the complexity of volunteer engagement, became the building blocks for the assessment tool.

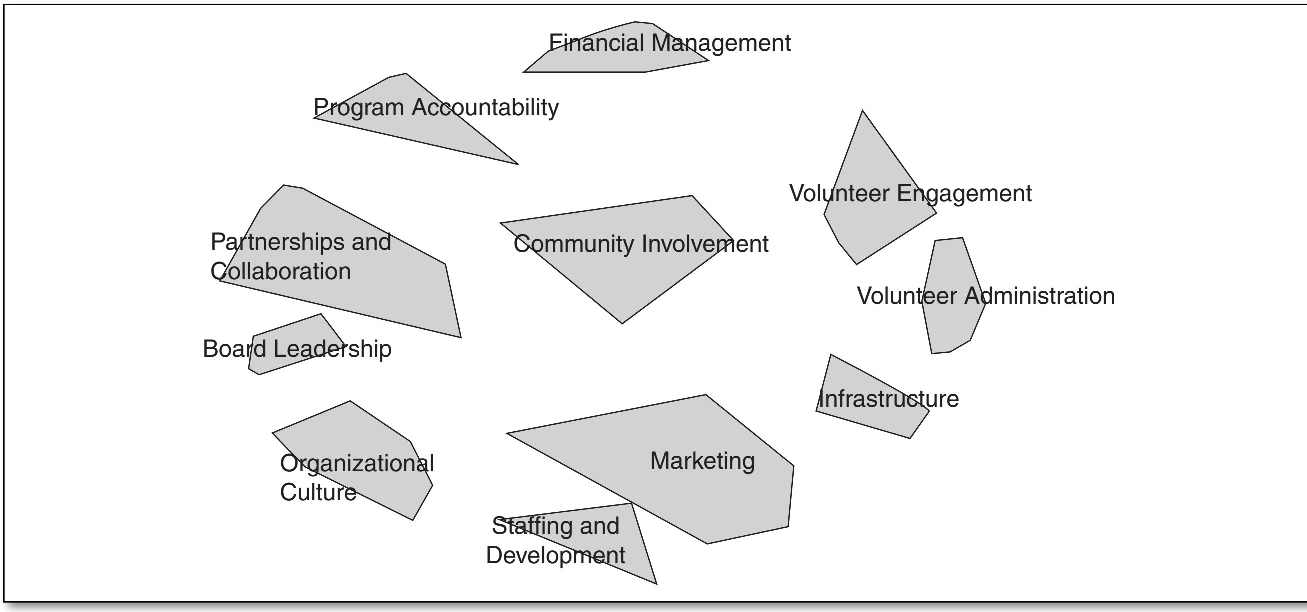

Figure 41.1 11-Cluster Solution

SOURCE: S. J. Rehnborg, D. L. Poole, K. Casey, D. W. Duvall, and L. F. Mangrum, *Tool for Improving Programs: A National Quality Assessment Project for National and Community Service Programs,* unpublished manuscript, University of Texas at Austin, 2004.

After a comprehensive process of refinement, piloting, and statistical analysis, the VPAT included 10 cluster areas of work for the organization that desires to effectively engage volunteers. This chapter will review each of these areas.

Volunteer Involvement: A Multidimensional Organizational Process

Volunteer Management

The initial focus group information from Concept Mapping identified two clusters of tasks that pertained to the skills and attributes generally associated with volunteer management: volunteer engagement and volunteer administration (see Figure 41.1). Volunteer administration generally captured the preliminary aspects of volunteer involvement such as work identification, job description development, and tasks associated with bringing a volunteer or national service participant into the organization. Volunteer engagement, on the other hand, focused more on the person doing the work. This cluster of skills captured tasks such as those associated with job preparation, support, and assessment of work performed. These two clusters corresponded loosely with the tasks associated with a human resources officer, who brings a new employee into an organization (volunteer administration), and the somewhat separate tasks associated with the work of an employee's supervisor (volunteer engagement). As the assessment instrument was subjected to pilot-testing and psychometric analysis, however, we learned that collapsing these two categories into one larger domain of volunteer management was statistically justifiable and intuitively more accurate for the responder. Table 41.1 lists all of the tasks associated with this broader area of work.

Organizations that effectively engage volunteers and national service participants think carefully about the work that will be performed by community members, prepare job descriptions to capture these expectations, and provide staff support to prepare and support volunteers. These programs also provide the orientation materials necessary to engage the person in the work of the organization, evaluate job performance, and make certain to thank people for the work performed. Table 41.1 also captures the fact that it is important to thank staff (Item 40) as well as volunteers. While virtually every item in this list applies equally to volunteers and national service participants, Item 41 serves as an exception. One of the goals of AmeriCorps and AmeriCorps VISTA is to create an ethos of citizenship. As such, Item 41 asks organizations about the work they are doing to follow up with their national service participants to assure their long-term civic involvement.

Infrastructure

Less visible but equally important to a well-run, effective program is the infrastructure developed to support the initiative. Table 41.2 captures many of the less obvious, background requirements for a good volunteer program. Like regular salaried staff, volunteers need a place to do their work, equipment and technology to perform the tasks at hand, and methods for internal and external communication. In addition, program leadership needs to maintain accurate records and contact information, back up these records, and take advantage of up-to-date, multifunctional

1. Our program creates service placements based on needs assessments.
2. Our program clearly defines *volunteer* roles and responsibilities.
3. Our program provides written position descriptions (duties, skills, qualifications, performance measures) for all *volunteers.*
4. Our program provides written position descriptions (duties, skills, qualifications, performance measures) for all staff.
5. Our program uses the abilities of *volunteers* effectively.
6. Our program respects the time commitments of *volunteers*.
7. Our program offers *volunteer* opportunities at different levels of responsibility or intensity.
8. Our program creates new *volunteer* opportunities as necessary.
9. Our program offers service opportunities to meet the needs of diverse audiences.
10. Our program creates opportunities for service recipients to become involved as *volunteers.*
11. Our program employees and *volunteers* understand each other's roles and responsibilities.
12. Our program receives continuous inquiries from persons interested in joining our program.
13. Our program interviews *volunteers.*
14. Our program screens *volunteers*.
15. Our program matches *volunteers'* skills, knowledge, attitudes, and interests with appropriate placement sites.
16. Our program provides appropriate accommodation for *volunteers* with special needs.
17. Our program promotes diversity in the work environment, including accessibility to people with disabilities.
18. Our program periodically reviews *volunteers* to determine if their personalities, skills, abilities, and interests are being appropriately utilized.
19. Our program offers career paths to sustain *volunteer* interests.
20. Our program provides leadership development opportunities for *volunteers.*
21. Our program has many *volunteers* capable of assuming leadership roles.
22. Our program has a comprehensive *volunteer* handbook.
23. Our program provides an orientation for all *volunteers* for their service opportunity.
24. Our program demonstrates an awareness of diversity during in-service training, celebrations, and other organizational functions.
25. Our program has an ongoing support system for *volunteers* once they are placed.
26. Our program provides clear lines of *volunteer* supervision.
27. Our program leaders provide *volunteers* clear feedback on their work.
28. Our program supervises and supports off-site *volunteers.*
29. Our program has grievance and termination procedures to address *volunteer* performance problems.
30. Our program monitors *volunteer* retention and assesses the reasons for any unexpected turnover.
31. Program *volunteers* remain with us until they fulfill their original commitment or longer.
32. Our program *volunteers* evaluate their involvement and provide feedback to the organization.
33. Our program engages *volunteers* for regular input on program operations.

Table 41.1 Volunteer Management

34. Our program *volunteers* are treated as partners in achieving program mission and goals.
35. Our program *volunteers* regularly participate in project planning.
36. Our program *volunteers* are involved in program changes as the changes are being planned and implemented.
37. Our program thanks and recognizes *volunteers* for the work they perform.
38. Our program recognizes *volunteers* on the basis of performance.
39. Our program rewards employees who effectively engage *volunteers* in their work.
40. Our program thanks and recognizes employees for the work they perform.
41. Our program keeps *volunteers* engaged after they complete their original service assignment.
42. Our program uses tracking systems to measure *volunteer* involvement in civic activities following terms of service.

SOURCE: S. J. Rehnborg, D. L. Poole, K. Casey, D. W. Duvall, and L. F. Mangrum, *Tool for Improving Programs: A National Quality Assessment Project for National and Community Service Programs,* unpublished manuscript, University of Texas at Austin, 2004.

1. Our program administrator maintains comprehensive files and documentation on *volunteers.*
2. Our program maintains a database including *volunteer* demographics, work hours, and assignments.
3. Our program provides adequate space for *volunteers* to work.
4. Our program provides adequate equipment and supplies for *volunteers* to perform their work.
5. Our program gives *volunteers* timely feedback on their performance, questions, and concerns.
6. Our program implements effective volunteer recruitment methods, such as presentations, written materials, media events, and e-mail.
7. Our program recruitment initiatives are targeted to specific *volunteer* populations.
8. Our program *volunteers* recruit new *volunteers* for the program.
9. Our program maintains a comprehensive *volunteer* risk management plan with background checks and liability insurance.
10. Our program has access to adequate ongoing technical support and documentation.
11. Our program prevents data loss and corruption through back-up systems, virus protection, and software upgrades.
12. Our staff uses technology effectively to support the program.
13. Our employees have access to the computer hardware and software they need to do their jobs.
14. Our *volunteers* have access to the computer hardware and software they need to do their jobs.
15. Our computer systems and equipment are compatible and relatively new.
16. Our program's computers maintain Internet connections from our desktops.
17. Our employees and *volunteers* are able to use e-mail accounts as appropriate.

Table 41.2 Infrastructure

SOURCE: S. J. Rehnborg, D. L. Poole, K. Casey, D. W. Duvall, and L. F. Mangrum, *Tool for Improving Programs: A National Quality Assessment Project for National and Community Service Programs,* unpublished manuscript, University of Texas at Austin, 2004.

technology systems. Reference checks need to be tailored to the type of tasks performed, and insurance should be in place to manage risk and ensure everyone's well-being. And finally, volunteer programs are not self-perpetuating entities. Recruitment is a year-round obligation that must be planned for and implemented.

Marketing and Communication

If infrastructure is the internal glue that helps to maintain effective programs, skills in marketing and communication are essential to connecting the community volunteer initiative with the community around it (see Table 41.3). Volunteers need to know that this organization is eager to garner community assistance, and the staff and clients served by the organization need to be welcoming to community members and open to volunteer involvement. The presence of volunteers in the workforce should be a part of the organization's public relations message, a component of its annual report, a subject of discussion at board meetings, and a part of the official storyline. Ongoing marketing and communication efforts should continually note the role of the community in the work of the organization and serve as a continuous avenue for volunteer recruitment. In addition, staff should be looking for opportunities to apply for awards and citations that recognize the organization's effort to engage volunteers and national service members.

Staffing and Development

Given that the U.S. population takes pride in its voluntary spirit, many Americans think that being a volunteer equates with knowledge about how to work with volunteers. Unfortunately, this is not the case. Many staff members fear the responsibilities associated with supervising volunteers, while others are unclear about carving assignments for a part-time workforce. Still others question volunteers' skills and abilities or are concerned with inadvertently offending a community member and generating negative publicity for the organization. For these and other reasons, staffing and development emerged as a critical area of effective programming. Organizations need to prepare staff to understand the dynamics of volunteer involvement and provide insights into supervising an unpaid workforce. Although strong interpersonal skills are required, so is an understanding of the motivational needs of volunteers and the flexibility that may be required when planning special events or other assignments that involve a community workforce. In addition, staff needs to become cognizant of the lead time required to locate volunteers and prepare them for work within the organization.

Working well with volunteers, while important, is not the only expectation that accompanies a staff position in a volunteer-centric organization. Effective volunteer-involving organizations set expectations for staff to actively engage

1. Our program facilitates regular communication with **internal** stakeholders about *volunteer* value, impact, and outcomes.
2. Our program facilitates regular communication with **external** stakeholders about *volunteer* value, impact, and outcomes.
3. Our program communicates and markets effectively.
4. Our program's public relations materials include a statement on nondiscrimination and accessibility.
5. Our program's public relations materials reflect an awareness of diversity of the community.
6. Recruitment materials reflect current trends in volunteerism.
7. Our program uses the World Wide Web for effective recruitment, public relations, and marketing purposes.
8. Our program *volunteers* know who is the official spokesperson for the organization.
9. Our program staff knows who is the official spokesperson for the organization.
10. Our organization receives awards and recognition for the work it does.
11. Our program staff responds to inquiries from the media and/or public in an open and efficient manner.
12. We proactively seek to tell the program's story at every opportunity, such as calling media attention to possible connections with current news events.
13. Our organizational leadership publicly acknowledges the work of *volunteers*.

Table 41.3 Marketing and Communications

SOURCE: S. J. Rehnborg, D. L. Poole, K. Casey, D. W. Duvall, and L. F. Mangrum, *Tool for Improving Programs: A National Quality Assessment Project for National and Community Service Programs,* unpublished manuscript, University of Texas at Austin, 2004.

volunteers in the accomplishment of assigned duties. Staff understand that volunteer involvement extends beyond direct service to advisory positions, roles in advocacy, consulting capacities, or special events assistance to name just a few of the roles that community members play. Such expectations for volunteer involvement are generally part of the employee evaluation system and performance review.

To assure that an organization works effectively with volunteers and provides staff the support they need to engage this workforce, principles of good practice strongly encourage designating a staff person with volunteer management duties. A full-time point person—a staff position assigned to assuring effective volunteer involvement—is one of the most effective means of guaranteeing a well-run volunteer initiative. This person manages the record keeping associated with volunteers; operates as an organizational consultant for community involvement; oversees recruiting, interviewing, placement, and recognition of volunteers; and trouble-shoots problems. The indicators associated with preparing staff to work effectively with volunteers appear in Table 41.4.

Program Accountability

Closely aligned with preparing staff to work effectively with volunteers is clarity about the work of the organization itself. Few organizations exist solely to care for volunteers or members of national service programs. Rather, these community-based, voluntary workforces move into action to meet critical community, environmental, educational, and other needs. As such, volunteers, just like the staff with whom they work, want their efforts to be consequential. They want to know that their time is being used well and their energy is making a difference. For these reasons and others, program accountability has emerged as a critical component of the assessment instrument.

1. Our program provides a dedicated onsite supervisor or coordinator of *volunteers.*
2. Our program has a *volunteer* coordinator who understands and effectively applies the principles of volunteer management.
3. Our program has a *volunteer* coordinator who understands and effectively applies the principles of program development.
4. Our other program employees understand and effectively apply the principles of *volunteer* management.
5. Our other program employees understand and effectively apply the principles of program development.
6. Our program placement sites have a designated staff member serving as a coordinator of volunteers.
7. We have a succession plan for employee leadership in the organization.
8. We have a succession plan for *volunteer* leadership in the organization.
9. Our program trains employees to work with *volunteers.*
10. Our program assesses employee skills in working with *volunteers.*
11. Our program staff demonstrates effective interpersonal skills.
12. Our program *volunteers* are encouraged to reach their full potential.
13. Our program employees are encouraged to reach their full potential.
14. Our program provides a written training plan for all staff that addresses position-specific and personal leadership development needs.
15. Our program incorporates staff development as a management strategy.
16. Program staff is trained to manage change.
17. Our program offers a high level of training and ongoing supervision to *volunteers* or members to address the specific service area (e.g., literacy).
18. Our program employees receive feedback on performance.

Table 41.4 Staffing and Development

SOURCE: S. J. Rehnborg, D. L. Poole, K. Casey, D. W. Duvall, and L. F. Mangrum, *Tool for Improving Programs: A National Quality Assessment Project for National and Community Service Programs,* unpublished manuscript, University of Texas at Austin, 2004.

Mission is a key motivator of volunteers. An organization with a well-defined mission statement that carefully relates work functions to mission achievement is inherently attractive to community members. Work that aligns with mission and is measurable helps everyone to feel as if his or her time and effort matters. Likewise volunteers want to be more than simply helping hands in the process. Those who make a serious investment in the outcomes of a group generally want the opportunity to have a say in the development of plans. Organizations committed to community engagement need to provide opportunities for the community to influence the planning and analysis of the effort. Table 41.5 captures some of the critical ways in which program accountability measures contribute to successful volunteer involvement.

Financial Management

The interrelatedness of organizational management issues is perhaps most clear in Table 41.6. Few would automatically equate effective community engagement initiatives with the list of criteria found in the financial management table, yet the experienced leaders of volunteer and national service programs articulated these concerns. Just as mission clarity and goal attainment (Table 41.5) are indicative of effective programs, so, too, is financial acuity. Volunteer programs, like every other component of an organization, require a budget comparable to the work to be accomplished. Volunteers are not free. National service programs operate within complex federal fiscal guidelines. Within organizational settings, volunteers serve as extensions of the organization, and their actions tie back to the management of the organization. Like other funders of an organization, volunteers want to be sure that their investment of time and energy is being made on behalf of an organization that is fiscally solvent and here for the long haul. Besides allowing for the costs associated with volunteer and national service programs, organizations engaging the community need to attend to their financial future if they are to actively and effectively compete in the volunteer marketplace for community time. In addition, the contribution of volunteers can be translated into a financial attribute for grant development and for general reporting purposes.

1. Our program has a well-defined mission statement.
2. Our program includes *volunteers* in its strategic plan.
3. Our program's strategic plan is measurable and achievable.
4. Our program's strategic plan is based on needs assessment and evaluation data.
5. Our program develops goals and objectives with input from key stakeholders such as staff, *volunteers,* clients, funders, and community partners.
6. Our program has objectives that relate to the overall mission of the sponsoring or host organization.
7. Our program uses valid and reliable evaluation tools to measure program effectiveness.
8. Our program uses outside evaluators to measure program effectiveness.
9. Our program measures the performance of staff, *volunteers,* members, board members, and program partners.
10. Program performance is measured from the perspective of *volunteers* and service recipients.
11. Our program provides opportunities for board members, employees, *volunteers,* and program participants to self-assess their effectiveness.
12. Our program provides opportunities for board members, employees, *volunteers,* and program participants to self-assess their level of satisfaction with the program.
13. Descriptive and outcome data are collected on *volunteers* and activities.
14. Our program produces an annual report that includes measurable outcomes, progress, and outreach of the program.
15. Program and agency staffing and resource capacities are considered when making decisions.
16. Our program has an impact on the community.

Table 41.5 Program Accountability

SOURCE: S. J. Rehnborg, D. L. Poole, K. Casey, D. W. Duvall, and L. F. Mangrum, *Tool for Improving Programs: A National Quality Assessment Project for National and Community Service Programs,* unpublished manuscript, University of Texas at Austin, 2004.

1. Our board or advisory committee approves and oversees the budget, including revenue generation and expenditures.
2. Our leadership ensures funding is tied to key program objectives and goals.
3. Our program produces regular financial reports for effective management.
4. Our program expends funds in accordance with budget plans and in line with board oversight.
5. Our program practices effective financial management.
6. Our program manages grants effectively.
7. Our program meets grant requirements.
8. Our program provides activities that match the criteria, purpose, and goals required by the funding source.
9. We have budgeted defined costs to facilitate *volunteer* involvement, such as staffing support, equipment, and supplies.
10. Our program allocates funds for program evaluation.
11. Our program maintains administrative overhead costs consistent with similar nonprofit programs.
12. Our program diversifies funding sources.
13. Our program has a sustainability plan that is periodically updated.
14. Our program has a contingency plan that addresses potential loss of major funding.
15. Our program staff has proposal writing skills.
16. Our program staff can navigate the complexities of funding agencies.
17. Our program has partnerships that involve shared resource commitments.
18. When appropriate, our program translates *volunteer* service hours into financial or full-time equivalents

Table 41.6 Financial Management

SOURCE: S. J. Rehnborg, D. L. Poole, K. Casey, D. W. Duvall, and L. F. Mangrum, *Tool for Improving Programs: A National Quality Assessment Project for National and Community Service Programs,* unpublished manuscript, University of Texas at Austin, 2004.

Community Collaboration, and Partnerships and Collaboration

The very essence of volunteer involvement is collaboration, a collaboration between concerned community members and the goals and objectives of the organization. Volunteers are an active representation of the organization's openness to developing community partnerships and to building local ties. The presence of volunteers, particularly volunteers representing the community that is served, signals community support, indicates a responsiveness to local concerns, and demonstrates the organization's willingness to secure input. In fact, for many organizations, volunteers are a key way in which the organization keeps its hand on the pulse of the local area served. Table 41.7 (Community Collaboration) captures criteria that indicate an orientation to teamwork in general, and Table 41.8 (Partnerships and Collaboration) reflects an orientation to working closely with area organizations and groups dedicated to similar causes or concerns. Both sets of indicators signal an organizational culture open to local involvement and focused on effective action made possible in part by close connections to the community.

Organizational Culture

Considered by some to be the flip side of the leadership coin, organizational culture is perhaps best understood as the internal and unspoken, yet clear manifestation of a climate supportive of volunteers. As the indicators suggest, an organization that genuinely supports and encourages volunteer involvement does so almost without conscious thought. Volunteers are readily introduced to coworkers and visitors with the same ease that introductions are performed for and with salaried staff. Everyone considers the implications of decisions on those who work with the organization only a few hours a week in the same way that it does for those keeping a full-time schedule. Coffee and other office amenities are available for all. In short, volunteers, AmeriCorps members, student interns, and retired seniors are all valued members of the team. The assessment criteria that describe this aspect of an organization that supports community engagement appear in Table 41.9.

Board and Advisory Leadership

The criteria enumerated for board leadership closely parallel guidelines that define the role of a nonprofit board

1. Our program has a clear understanding of the needs and assets of our community.
2. Our program has a community involvement plan with employee roles and responsibilities specified.
3. Our program encourages staff to network and build community connections.
4. Our program is able to benefit from and contribute to the community.
5. Our program utilizes community input and feedback to develop new program ideas.
6. Our program needs and priorities are influenced by people living in the communities served.
7. Our program has a community-based participatory planning process.
8. Our program conducts periodic data collection from community stakeholders on opportunities, challenges, and trends.
9. Our program recruits staff from community residents.
10. Our program *volunteers* are representative of the community they serve.
11. Our program patronizes local community businesses.
12. We make our organizational resources available to other community groups.
13. Our organization is regularly approached to participate in community problem solving.
14. Our organization encourages community involvement to ensure long-term sustainability of the program.

Table 41.7 Community Collaboration

SOURCE: S. J. Rehnborg, D. L. Poole, K. Casey, D. W. Duvall, and L. F. Mangrum, *Tool for Improving Programs: A National Quality Assessment Project for National and Community Service Programs,* unpublished manuscript, University of Texas at Austin, 2004.

1. Our program partners with organizations that understand the roles, responsibilities, and importance of *volunteers*.
2. Our program provides clearly defined roles and responsibilities for community partners.
3. Our program provides orientation and training for community partners.
4. Our organization produces a comprehensive multisite management plan, if appropriate.
5. Our organization produces a multisite management plan with written memoranda of agreement with community partners, if appropriate.
6. Our program facilitates regular meetings with employees in partner organizations about placements.
7. Our program has the staff capacity to continually identify and engage new community partners.
8. Our program collaborates effectively with other community-based organizations.
9. Our program collaborates effectively with professional networking groups such as corporate *volunteer* councils and others.
10. Our program has adequate staff capacity to administer collaborative efforts.
11. Our organization retains its partnerships with other organizations over time.
12. Our organization actively works to develop external champions for the program.
13. Our organization regularly gathers and shares effective practices with other community-based organizations.
14. Our program employees and *volunteers* participate in a wide array of activities to learn about effective practices.
15. Our program work plans are consistent with effective practices in similar program areas.

Table 41.8 Partnerships and Collaboration

SOURCE: S. J. Rehnborg, D. L. Poole, K. Casey, D. W. Duvall, and L. F. Mangrum, *Tool for Improving Programs: A National Quality Assessment Project for National and Community Service Programs,* unpublished manuscript, University of Texas at Austin, 2004.

(see Table 41.10). Distinguishing this list from general compendiums of best practices, however, is the specific focus on understanding the role of service, administrative, policy, and fundraising volunteers. More specifically, board members of organizations that engage volunteers effectively are alert to the role that volunteers and national service members play in furthering the mission of their organization. They are knowledgeable champions of community engagement who advocate for volunteers, and they think of themselves not only as trustees, but also as active community volunteers. These board members set the tone within the organization for effective volunteer involvement.

1. Our organizational culture values community participation, including all types of *volunteers,* students in service learning, AmeriCorps, AmeriCorps/VISTA members, and others.
2. Senior leadership supports the role of *volunteers* in the organization.
3. Senior leadership speaks positively and passionately about the role of *volunteers.*
4. Decision makers in the organization are accessible to employees, *volunteers,* and community members.
5. Decision makers in the organization support our program objectives.
6. Everyone in the organization understands the importance of our *volunteer* initiatives.
7. Our program *volunteers* advocate for the program on many levels.
8. Our program staff advocates for the program on many levels.
9. Our program leadership inspires *volunteers* and employees.
10. Our program leaders model effective problem-solving processes.
11. There is a positive synergy between employees, *volunteers*, and clients in our program.
12. Senior leadership is able to articulate the role of *volunteers* or national service participants to organized labor union leaders and to engage in collaborative discussions about the boundaries between paid jobs and volunteer service.

Table 41.9 Organizational Culture

SOURCE: S. J. Rehnborg, D. L. Poole, K. Casey, D. W. Duvall, and L. F. Mangrum, *Tool for Improving Programs: A National Quality Assessment Project for National and Community Service Programs,* unpublished manuscript, University of Texas at Austin, 2004.

1. Our board members understand the organization's mission and its programs.
2. Our board members understand their role as *volunteers* in a governance position and provide strong leadership.
3. Our board understands the work of the program and its role in the community.
4. Board members can articulate the role of *volunteers,* students on service-learning, AmeriCorps VISTA members, and others in the work of the organization.
5. Our board members support the work of *volunteers* in achieving the goals of the organization.
6. Board composition is diverse and representative of the community.
7. Our board maintains a written plan for board development.
8. Our board fulfills its legal responsibilities to the organization.
9. Our board members make financial contributions to the organization.
10. Our board provides the organization with sound fiscal advice and oversight.
11. Our program involves an active advisory committee with members representative of the community.
12. Our program has an active community advisory committee that provides regular input and feedback.

Table 41.10 Board and Advisory Leadership

Summary

The VPAT, through each of its indicators, provides an overview of the complexity of engaging community members in the life and work of a nonprofit organization. This chapter presents the research methodology used to develop the VPAT. It is important to be aware of the need for such research for the nonprofit sector to properly evolve, and this chapter is offered as one example of interesting research design in the sector. As an aspiring nonprofit professional, you may also serve as a volunteer and will be called on to work with volunteers. This chapter provides an overview of the complexity of engaging the community and offers insight into the multifaceted dimensions of preparing an organization to benefit from the largess of the community. But volunteering is not only about the organizational side of the equation. It is also very much about the experience of the person who wants to serve, who has time and talents to share, and who hopes to make the community a better place for all people to live. The very essence of volunteering and national service is about building a better tomorrow. Careful planning and thoughtful management are critical to taking the efforts of those who want to serve and engaging that service in ways that sustain the person who gives and helps the cause for which the service is intended.

Policies and Procedures for Leaders

Conflict of Interest, Transparency, and Accountability

Angela Bies

Texas A & M University

David Forte

University of Washington, Seattle

In recent decades, as nonprofit organizations have grown in numbers, assets, and scope of activity, so have expectations for professional leadership, organizational performance, and accountability, through strategies such as government regulation, nonprofit self-regulation, and board governance.

This chapter, first, provides a brief history and review of general accountability concerns and approaches and introduces key accountability expectations. This is followed by the treatment of two central accountability strategies: conflict of interest, central to boards of directors and key employees; and transparency, thought to be a central responsibility of nonprofit governance, codified in law, and embedded in self-regulation approaches. Each section provides an overview of the issues and core theories that orient the various accountability approaches and discusses policies, procedures, and resources that are useful for implementation by nonprofit leaders. These topics are not without some ambiguity, competing thoughts, and complication; where appropriate the chapter addresses central controversies and debates.

Accountability

Definitions

In its most basic form, accountability involves responsibility to account for one's personal activities or those of an organization. This definition focuses on the external attributes of accountability where a "principal holds an agent to account" (Ebrahim, 2005, p. 59), in which accountability is characterized by *answerability* (the requirement to justify one's actions) and *enforcement* (or the penalties imposed if these actions are deemed unsatisfactory) (Goetz & Jenkins, 2007, p. 68). In addition to responsibility for exercising powers according to external requirements (Transparency International, 2009), accountability may be characterized by internal elements such as being "motivated by a 'felt responsibility' as expressed through individual action and organizational mission" (Ebrahim, 2005, p. 59).

However, as clear-cut as the concept may appear, there is also a great deal of ambiguity associated with accountability. Expanding analysis of this concept has eroded its precision, generating "widespread concern that the term will become devalued or incapacitated through overuse" (Weisband & Ebrahim, 2007, p. 1). Such slipperiness is somewhat apparent when considering policy around accountability.

Policy Considerations

Despite a degree of convergence about what accountability is, there is, nonetheless, considerable variation in self-regulation and legal procedures for enforcing accountability.

For instance, at the state level, there are varying degrees of strictness about filing requirements at different levels of state (Irvin, 2005). Moreover, increasingly states are duplicating watchdog organizations' standards and existing federal regulations to the point where the span of regulatory interest of the state attorneys general and the Internal Revenue Service (IRS) coincide but yet are considered alternately heavy-handed because of overlapping requirements or insufficient in light of growth and increasing complexity in nonprofits (Silk, 2007, p. 32). In addition, the cost of legally mandated accountability requirements among states is variable. For instance, Irvin (2005) provides quantitative estimates of the costs related to filing, based on the hours necessary for organizations to complete the paperwork, the hourly wage based on the Independent Sector's estimate of the "value of volunteer labor," and the number of states with which an organization is required to file (p. 168). According to these estimates, the cost of filing per state for the average organization is $366 (Irvin, 2005, p. 168). However, if the organization solicits donations nationwide, the cost to an organization can vary between $8,000 and $150,000 per year (p. 169). At its worst, this state filing requirement to maintain accountability serves as a fixed operating cost, which could, nonetheless, be viewed as a barrier to entry into the nonprofit sector. At the very least, as Irvin points out, the associated cost of filing could reduce the number and kind of services that organizations are able to provide to the public.

Mechanisms of Accountability

Accompanying external mechanisms to regulate accountability, there are various internal mechanisms that organizations can use and have in place to promote accountability, such as codes of conduct, ethics, or behavior. These mechanisms establish behavioral expectations and standards for organizations, government bodies, companies, or affiliated groups and individuals and include reference to minimal levels of compliance and the disciplinary actions an organization will take against staff and volunteers (Transparency International, 2009, p. 8). By adopting such standards independently, nonprofits become not only "agents of an external authority," but also leaders that shape standards for the sector as a whole (Ebrahim, 2007, p. 200). Moreover, as Silk (2007) argues, governing boards play a key role in setting ethical standards and could productively adopt and evaluate a code of ethics "that describes behavior it wants to encourage and behavior it wants to discourage" (p. 35).

Yet, while such sector-wide codes of conduct and ethics garnered attention in the 1990s, they have not taken hold in any widespread way, leading some commentators (e.g., Bothwell, 2001) to question whether voluntary compliance alone can provide effective regulation or if government oversight is required. Indeed, as Goetz and Jenkins (2007) observe, a fundamental flaw of accountability is the imbalance between what those in power demand and what ordinary citizens expect. However, alternative self-regulatory measures, such as accreditation systems, are more substantive and provide mechanisms for systematic monitoring and oversight (Brody, 2001, p. 16) as well as incentives for compliance and penalties for noncompliance.

For example, certifications or accreditations, such as those given by the Maryland Association of Nonprofit Organizations, serve to reinforce public trust of organizations and alienate those who are not in compliance. In one study (Bothwell, 2001), it is reported that 85% of Marylanders were more inclined to make giving decisions if a charity could provide a seal of approval for ethical standards and accountability given by a reputable association. Jordan (2007) argues, however, that certain accreditation programs, specifically those created through commercial or third-party private-sector organizations, are not always relevant to the nonprofit sector. Moreover, many such accreditation programs are developed in the hope of creating market demand among donors, which, in turn, will require nonprofits to undergo scrutiny. Consequently, some nonprofits may view accountability programs with suspicion, as mechanisms of control (Jordan, 2007, p. 154). Bies and Bowman (2008) find that nonprofit organizations report learning from accreditation processes in ways helpful to their internal operations and donor relationships. Recent research by Sloan (2008) further reinforces the potential value of consumer- or donor-oriented reviews in increasing charitable donations, particularly by individual donors.

Industry Guidance

Nonetheless, industry organizations generally agree that organizational accountability can be advanced by both transparency and conflict of interest policies, and they have made several recommendations to this effect. For instance, according to the Minnesota Council on Nonprofits (2005), all nonprofits have an "ethical obligation to their constituents and the public to conduct their activities with accountability and transparency" (p. 10). Similarly, the Maryland Association of Nonprofit Organizations (2009) suggests that the duty of the board of directors is to hold its organization accountable to its mission and core values, and the association emphasizes the importance of long- and short-term planning activities that help to identify the mission of the organization, define specific goals, and evaluate success. The Charities Review Council (2009) affirms the idea of active and engaged governing boards that develop strategy, take responsibility for an organization's mission and programs, and provide fiduciary oversight (p. 7).

The Better Business Bureau's Wise Giving Alliance (2003) approach to standards echoes these statements and adds a means of measuring financial accountability to its clients through, first, an expense ratio that calls for at least 65% of revenue to be spent on program services, as well as a second ratio that measures fundraising expenses as related to the total related contributions. The alliance recommends that fundraising expenses should not exceed 35% of total fundraising revenues. To understand these kinds of financial ratios and fulfill fiduciary responsibility, nonprofit organizations need to ensure that boards find ways to draw on independent financial expertise, by, for instance, inviting individuals who are financially literate onto the board (Independent Sector, 2009). Industry organizations have also recommended that financial statements be audited according to general accounting standards to improve the quality of information they make available (Panel on the Nonprofit Sector, 2005, p. 35). Table 42.1 provides a summary listing of key industry organizations and key elements of their accountability standards.

To Whom Are Nonprofits Held Accountable?

It is generally accepted that nonprofits are held accountable at various levels. This concept of *multidirectional accountability* means that different parts of a nonprofit organization must respond to a range of stakeholders, partners, and donors to meet the respective accountability challenge (Bryant, 2007, p. 170). Yet, these various levels of accountability can create an asymmetrical relationship where those with the most power are favored over the less influential, and often, favorable attention is given to external stakeholders, especially donors (Ebrahim, 2005, p. 60). Although the goals of various stakeholders are not always in opposition, this kind of favoritism can cause an organization to focus its accountability efforts more on these external actors and less on the communities it serves and the mission statement from which it derives its organizational focus (Ebrahim, 2005, p. 60).

In fact, the nonprofit sector's largest stakeholder is the greater public because the preferential tax treatment offered to nonprofits provides revenue that could alternatively be used for public projects with public mechanisms of control (Lee, 2004). Consequently, Lee (2004) suggests transferring the accountability modes and structures of

public administration to the nonprofit sector. These public methods could, for example, accomplish accountability directly to the public through e-reporting and publishing information on organizational websites, and indirectly, through news media. Such an approach to accountability would also mitigate the cost burden of filing identified by Irvin (2005) because, like government agencies, nonprofits also "generate significant amounts of information for internal management and financial reporting purposes . . . [and] can often be repackaged for public reporting. Therefore, public reporting does not need to be an undue and new financial burden" (Lee, 2004, p. 179).

Controversies

Organizations often feel there is a mismatch between existing accountability mechanisms and their value base and mission (Jordan, 2007, p. 153). Indeed, Jordan (2007) argues it is premature to begin a discussion about accountability and its mechanisms. In his view, it is unclear whether the nonprofit sector has a single definition of accountability or understands that its intrinsic value compels them to engage with the issue. Moreover, he argues, it is premature to assume both that there are broadly understood universal standards of accountability and that "the question, to whom or to what NGOs should be accountable is easily answered" (p. 154).

Moreover, more accountability does not always yield the most positive outcomes. For instance, more information is not always beneficial, as most donors do not have the time or capacity to analyze extensive documents (Bothwell, 2001). Similarly, O'Neill (2002) criticizes the overuse of accountability, particularly in relationship to program matters, stating:

> Unfortunately I think [accountability] often obstructs the proper aims of professional practice. Police procedures for preparing cases are so demanding that fewer cases can be pre pared, and fewer criminals brought to court. Doctors speak of the inroads that required record keeping makes into the time they can spend finding out what is wrong with their patients and listening to their patients. Even children are not exempt from the new accountability: exams are more frequent and time for learning shrinks. In many parts of the public sector, complaint procedures are so burdensome that avoiding com plaints, including ill founded complaints, becomes a central institutional goal in its own right. We are heading towards defensive medicine, defensive teaching and defensive polic ing. (pp. 49 50)

Instead of a concept of accountability that is measured by how well it defends entities from malpractice, accountability could be viewed as an area of opportunity. For instance, accreditation can be a positive influence on potential donors, and both transparency and avoiding conflicts of interest can boost public trust. Accordingly, there is work to be done to help nonprofits understand the value of accountability as a strategic choice "rather than a punitive process divorced from the mission of an NGO" (Jordan, 2007, p. 155).

Conflict of Interest

Definitions

The IRS defines conflict of interest as a situation where "a person in a position of authority over an organization, such as a director, officer, or manager, may benefit personally from a decision he or she could make" (IRS, 2006, p. 9). However, a conflict of interest may arise outside of traditional leadership roles and include staff and volunteers (Council on Foundations, n.d., p. 4). Indeed, all individuals associated with an organization may be involved in a conflict of interest, if a decision they are making impacts the organization in some way (MacDonald, McDonald, & Norman, 2002). In a phrasing similarly to the IRS conception, MacDonald and colleagues (2002) define conflict of interest as a "situation in which a person has a private or personal interest sufficient to appear to influence the objective exercise of his or her official duties as, say, a public official, an employee, or a professional" (p. 68). According to the Council on Foundations (n.d.), a conflict of interest can occur directly, between an individual (e.g., board members, other personnel, or donors) and the foundation, or indirectly, through business, investments, or family ties (p. 4). Such conflicts usually take on one of the following three forms: financial, personal, or a gift-related conflict of interest (pp. 4–5). Transparency International (2009) says a conflict of interest occurs when individuals "or the entity for which they work, whether a government, business, media outlet, or civil society organization, [are] confronted with choosing between the duties and demands of their position and their own private interests" (p. 11).

Two additional definitions related to conflicts of interest are those of nepotism and cronyism. The first is "a particular kind of conflict of interest . . . [applying] to a situation in which a person uses his or her public power to obtain a favor—very often a job—for a member of his or her family" (Transparency International, 2000, p. 197). The second is a broader term that "covers situations where preferences are given to friends and colleagues" (Transparency International, 2000, p. 198).

Implications

Conflicts of interest can negatively affect an organization's reputation and erode the trust an organization has built up with its stakeholders, particularly donors (MacDonald et al., 2002). Although it is not a federal requirement in the application for tax-exempt status (IRS, 2006, p. 9), adopting and enforcing a conflict of interest policy statement safeguards the organization and ensures that organizational affiliates put their duty to the interests of the organization before their own individual and private interests (Panel on the Nonprofit Sector, 2005, p. 81).

The public has traditionally held nonprofits in high esteem. Recently, however, nonprofits "have been accused of wrongdoings ranging from mismanagement of resources and use of funds for personal gain to sexual misconduct and fraud" (Weisband & Ebrahim, 2007, p. 9). An infamous example is that of the scandal involving financial misbehavior of United Way president William Aramony; scandals such as this have a negative effect on nonprofits broadly (Bothwell, 2001). Therefore, even where there is no substantive conflict of interest, the appearance of one can result in the loss of public confidence. Consequently, openness or transparency, as discussed in the final section of this chapter, is a key element both in defining conflicts of interest and in managing them.

As with accountability in general, there is a haphazard system of public regulation at the state level related to nonprofit reporting. Os noted earlier, there is concern that regulation and self-regulation approaches are becoming "increasingly duplicative" at the state level (Irvin, 2005, p. 162), as watchdog organizations such as GuideStar, the Better Business Bureau's Wise Giving Alliance, and the National Center for Charitable Statistics publicize organizational information for the scrutiny of the general public (p. 162). Nonetheless, there is consensus among state governments that states mandate that "directors and officers owe a duty of loyalty to the organization" and where organization affiliates benefit improperly from "a transaction involving a conflict of interest," this likely violates that duty (Panel on the Nonprofit Sector, 2005, p. 82).

Conflicts of Interest, Nonprofits, and Sarbanes-Oxley Act (2002)

The Sarbanes-Oxley Act was signed into law in response to corporate scandals; the act was developed with an overarching aim of rebuilding public trust in the corporate sector (BoardSource and the Independent Sector, 2006, p. 2). The law is therefore strictly applicable to publicly traded corporations; however, the legislation has two provisions that apply to all corporations, including those with nonprofit status: prohibiting the destruction of litigation-related documents and protecting whistleblowers who speak out against fraud (BoardSource and the Independent Sector, 2006, p. 2). Furthermore, organizations such as BoardSource and the Independent Sector recommend this legislation be viewed as a reference for the nonprofit sector as to how accountability should be addressed (p. 2). The sections of this legislation regarding audit committees, the filing of financial statements, the approval of organizational loans to executives, and whistle-blower protection are of particular significance to the nonprofit sector with regard to conflicts of interest (BoardSource and the Independent Sector, 2006).

Title II of the Sarbanes-Oxley Act emphasizes that auditing committees be independent of the organization itself. Nonprofits can look to this legislation as a recommendation that individuals on nonprofit audit committees should not be compensated for their service and should have no financial interest in the organization "or any other conflict of interest with any entity doing business with the organization" (BoardSource and the Independent Sector, 2006, p. 4).

A conflict of interest may also arise when certifying and filing financial statements. Section 302 of the Sarbanes-Oxley Act requires the chief executive officer (CEO) of a corporation to certify all financial reports filed. Organizations in the nonprofit sector are required to file the IRS Form 990. CEOs should fully understand the financial situation of their organization as presented on this tax form. As these documents are made electronically available to the public on a mass scale, it is important that the board and executive officers certify their accuracy. A conflict of interest may arise if the executive certifying these documents also served on the auditing committee (BoardSource and the Independent Sector, 2006, p. 7), and so executives should remain separate from these tasks.

Section 402 of the Sarbanes-Oxley Act prohibits the issuance of loans to corporate executives. Nonprofits may find themselves in a conflict of interest if they are transferring funds to organizational affiliates, especially as these funds were most likely donated with the intention of "doing good." This section of the Sarbanes-Oxley Act should be followed strictly throughout nonprofit organizations as the misuse of organizational funds has the potential to tarnish the reputation of an organization and detour future donations.

The whistle-blower protection set forth through the Sarbanes-Oxley Act in Section 806 provides protection from any form of retaliation for individuals who report fraudulence within a corporation. This provision is fully applicable to the nonprofit sector, where the disclosure of fraudulent activity within an organization may reveal a conflict of interest. Thus, these reports should be taken seriously, and the individuals providing them should be granted protection from any legal retaliation.

Grant Williams (2006), analyzing a report published by the Urban Institute for the *Chronicle of Philanthropy*, found that the impact, costs, and value of implementing such provisions would vary depending on the size of the organization. Because larger organizations—most of them for-profit—are more likely already to have the Sarbanes-Oxley Act provisions voluntarily in place (Ostrower & Bobowick, 2006), mandatory implementation is a concern for the nonprofit sector, as it would disproportionately impact the operations of smaller organizations.

Similarly, audit compliance (i.e., the use of an independent audit committee with a CPA or other knowledgeable financial adviser) is positively correlated to the size of an organization's annual budget. In one study looking at nonprofits that do not currently have audit committees (Ostrower & Bobowick, 2006), most indicated they would find it difficult to comply with any law that required such committees, and 54% admitted they would find it difficult to comply with a law that required organizations to include a financial expert on their audit committee (p. 2). Smaller organizations tend to have fewer resources, to include a less extensive social network, and to maintain smaller budgets. Thus, a similar trend was found with regard to whistle-blower protection provisions, where the likelihood that a whistle-blower protection policy is in place positively correlates to the size of an organization's annual budget (Ostrower & Bobowick, 2006). These findings pose implications for organizational capacity needs vis-à-vis accountability, transparency, and conflict of interest provisions.

Overall, voluntary compliance and familiarity with the Sarbanes-Oxley Act is increasing (Williams, 2004). In 2007, a survey by Grant Thornton, an accounting and business advisory group, showed that 20% of nonprofit officials made voluntary changes in their operations as a result of the Sarbanes-Oxley Act. One year later, the same survey found that 48% had made such changes; that familiarity with Sarbanes-Oxley legislation had also increased; and that more than 75% of organizations had implemented conflict of interest policies.

Industry Guidance

Despite recent corporate scandals, the public's confidence and support for charitable organizations has remained fairly strong (Independent Sector, 2002, p. 5). However, nonprofit executives are cautioned against complacency in their efforts to maintain ethical and accountability standards in their organizations. Indeed, there is a general consensus among nonprofit organizations that the adoption of conflict of interest policies is vitally important in the effort to uphold ethical standards and safeguard "charitable organizations against engaging in unethical or illegal practices" (Panel on the Nonprofit Sector, 2005, p. 82). In the effort to improve sectorwide accountability and trust, various nonprofit organizations, such as the Wise Giving Alliance of the Better Business Bureau, the Independent Sector, and BoardSource, have established sectorwide ethical standards and good practices. As the Independent Sector (2004) notes, the credibility of organizations is radically undermined when tax-exempt funds are not used "exclusively for charitable purposes" (p. 2). The Council on Foundations (n.d.) argues that although the tax code does not require organizations to establish conflict of interests policies, without them, it is hard to "achieve or demonstrate compliance" with the law (p. 3). Therefore, industry organizations, such as the Panel on the Nonprofit Sector (2005), recommend that charitable organizations "adopt and enforce" conflict of interest policies that are "tailored to [the] organization's specific needs and consistent with laws in their state" (p. 81).

Creating a Conflict of Interest Policy

According to industry organizations, conflict of interest policies have a range of purposes. First, the general purpose is to "identify and provide guidance on the most important and most common conflict of interest situations faced by a foundation, and set down general principles that can be applied to situations not covered in the policy" (Council on Foundations, 2006, p. 3). Second, policies should

> prevent the personal interest of staff members, board mem bers, and volunteers from interfering with the performance of their duties to, or result in personal financial, professional, or political gain on the part of such persons at the expense of its Members, supporters, and other stakeholders. (Council on Foundations, 2006)

Third, boards should include an annual disclosure form, signed by board members, as well as procedures for handling conflicts of interest, and, fourth, conflict of interest policies should also require employees to disclose "relationships, nepotism, and interested party transactions" (Minnesota Council of Nonprofits, 2005, p. 16). Thus, a nonprofit board of directors must ensure enforcement of its conflict of interest policy. While there are slight variations of how various nonprofit industry organizations view the necessary content of such policies and the structure of internal enforcement mechanisms, the importance and emphasis placed on their use is apparent, as part of efforts to enhance accountability, particularly as it relates to fiduciary responsibility.

The information included in Table 42.2 provides guidance on how to develop a conflict of interest policy.

Additional detail may be included for a more extensive or organization-specific policy; the IRS, for example, provides guidance regarding the inclusion of provisions for compensation, annual statements, and the maintenance of board meeting minutes.

Controversies

Issues of proper stewardship of charitable contributions also relate to the management of conflicts of interest. Because nonprofits accept "the privilege of tax exemption and the right to solicit tax-deductible contributions," they are held accountable to the public at large "for the way they use resources that would otherwise have gone into the public treasury" (Lee, 2004, p. 172). With this idea of accountability as a backdrop, Brody (2001) points out that "under charitable trust law" when dealing with donor-restricted funding, "the wishes of the donor determine the use of the funds forever" (p. 9). However, an interesting situation arises where nonprofits that accept donor-restricted funding may inadvertently fall into a conflict of interest due to the fact that an individual restriction from a donor may contradict the idea that an organization "operates exclusively for the public benefit" (Brody, 2001, p. 7).

Basic elements of a conflict of interest policy include:

Section I: State the purpose of the document.

Section II: Define necessary terminology. This section may vary depending on the nature of the organization, though it should at least identify "to whom and to what [the document] applies" (Council on Foundations, 2006, p. 4).

Section III: Disclosure. Here the document should require the disclosure of any conflicts of interest, whether they are actual or potential. "The best safeguard against entering into an actual or apparent conflict of interest transaction is disclosure" (Council on Foundations, 2006, p. 5).

Section IV: Procedures. This portion should clearly present instructions explaining how to determine if a conflict of interest exists, as well as procedures for mitigating the situation of conflict into an acceptable solution that is in compliance with the policy as well as state and federal regulations (Council on Foundations, 2006, p. 5).

Table 42.2 How to Develop a Conflict of Interest Policy

Such cases point to the need for transparency in mechanisms and approaches to conflict of interest.

Transparency

The term *transparency* is often presented and heard synonymously with accountability. However, whereas accountability is associated with providing an explanation for "decisions, actions and their consequences, . . . transparency is about providing information" rather than justification (Bryant, 2007, p. 169). To be transparent is to offer enough information about the organization so a person can make informed judgments. Therefore, transparency is also a process achieved by "collecting information and making it available and accessible for public scrutiny" (Weisband & Ebrahim, 2007, p. 5). Transparency underpins the duty of "public officials, civil servants, the managers and directors of companies and organizations, and board trustees . . . to act visibly, predictably, and understandably to promote participation and accountability" (Transparency International, 2009, p. 44). Transparency is often associated with the term *disclosure,* defined as the "provision of information under law or in good faith, regarding activities of a private individual, public official, company, or organization" (Transparency, 2009, p. 16).

State Regulation and Transparency

Although most states require fundraising counsel and professional solicitors to register and report pre- and post-campaign fundraising, not all states require nonprofit organizations to file initial and annual registration forms (Irvin, 2005). According to Irvin (2005), only 39 states now have this requirement, and the need for these additional disclosures is debated due to the duplication of federal compliance filing. On the one hand, the added state requirements provide public officials (and often the general public) with information to scrutinize and publicly rebuke fraudulence during re-election campaigns (Irvin, 2005, p. 165); while on the other, the system generates state revenue through filing fees. These can accumulate to a significant revenue stream for some states with high numbers of nonprofit organizations, such as California and Pennsylvania (p. 165). However, state motivations are not solely revenue driven. Concerns about protecting donors against deceptive solicitations and for maintaining public trust in the sector are attendant drivers (p. 166). Nonetheless, Irvin argues in favor of deregulating financial filing requirements because there is already a range of information that can be used to track fraudulent nonprofit activity, such as consumer complaints and analysis of the Form 990 (p. 173). This deregulation would lift the burden of complying with varying state regulations from the shoulders of nonprofit organizations and allow state governments to focus on greater oversight with information that already exists.

Transparency and Public Reporting Requirements

In addition to involvement with conflict of interest practices, the Sarbanes-Oxley Act requires a number of financial disclosures concerning transparency from audit committees, as well as information concerning material changes in financial conditions or operations (p. 47). In comparison to publicly traded corporations, nonprofit financial filings are far less extensive, although equally important in terms of transparency, and in fact, this portion of the legislation does not apply directly to the nonprofit sector. Yet, it is worth considering in the achievement of greater public disclosure, as is the general recommendation that nonprofits file the Form 990 in a timely, accurate, and complete manner (BoardSource and the Independent Sector, 2006, p. 8).

The Form 990 discloses information regarding an organization's mission, programs, and annual finances; detailed examination of the document can reveal the overall financial health of an organization. According to IRS (2008b) Publication 557, "every organization exempt from federal income tax under section 501(a) must file an annual information return" (p. 9). Exceptions exist, most notably for organizations with a religious affiliation (p. 9). The form details the sources of revenue and the outflow of expenditures and accounts for organizational assets and liabilities (IRS, 2008b). However, as Lee (2004) points out, the Form 990 is rather user-unfriendly. To be useful, its information requires analysis, and therefore, on its own, it should not be seen as "fulfilling the purpose of public reporting" (p. 178).

In accordance with the IRS Publication 557, organizations are required to make their most recent 3 years of IRS Forms 990 "widely available," and, in this way, the federal government is able to enforce transparency. The IRS (2008c) defines "widely available" as making 990s available via the Internet or by provision of forms on individual request, declaring, "If the request is made in person, the notice must be provided immediately. If the request is made in writing, the notice must be provided within 7 days" (p. 17). The IRS substantially revised the Form 990 in 2007 (its previous major revision was in 1979) to reduce the reporting burden and to ensure inclusion of relevant data because the old form "failed to reflect the changes in the law and the increasing size, diversity, and complexity of the exempt sector" and served the needs of neither tax compliance nor transparency and accountability (IRS, 2008a). Although reaction to these changes is mixed, they are perceived by some as the phantom child of the Sarbanes-Oxley Act. The new form serves to show the "importance of transparency and accountability regarding a tax-exempt's finances and operations and to emphasize board and officer involvement in the area" (O'Reilly, 2008, p. 60). A major change includes the first page, which is condensed to include key elements typical of an annual report, such as summary income and expense figures, governance practices, and information on program operations.

Industry Guidance

There is general consensus among industry organizations that transparency should be advanced as a means of greater accountability on the grounds that "nonprofit organizations are private corporations that operate for public purposes with public support. As such, they should provide the public with information about their mission, program activities, and finances" (Maryland Association of Nonprofit Organizations, 2009, p. 8). The Panel on the Nonprofit Sector (2007) presents a similar position: "A charitable organization should make information about its operations, including its governance, finances, programs and activities, widely available to the public" (p. 12). There is, in fact, an emerging belief that transparency should extend beyond required financial disclosures to "strengthen the respect (and justify the privileges) that America gives to charity and charitable giving (Better Business Bureau's Wise Giving Alliance, 2007, p. 7). For instance, in addition to the basic federal requirements, the panel (2007) believes organizations should demonstrate their commitment to transparency by providing additional documents about their operations, including an annual report, evidence of evaluation, and a detailed and user-friendly website with links to their IRS Form 990 (p. 12), and generally by taking a leadership role in "providing more and better information than the tax collector and state require" (Brody, 2002, p. 492).

Options for meeting the demands of transparency are increasingly available through technology, facilitating rapid and relatively inexpensive exchange of information. Technology, however, has its limits. For instance, Lee (2004) argues that the media has a "general lack of interest in detailed and ongoing coverage . . . [making] it much harder for public agencies to report to the public through traditional indirect routes using the media" (p. 176). Consequently, perhaps, the Internet increasingly plays a pivotal role in direct reporting, dramatically broadening the scope of public disclosure through organizations such as GuideStar, which electronically make available a vast array of information about organizations via voluntarily posted reports and IRS files (Bothwell, 2001). E-reporting "offers inexpensive and effective means for reaching individual citizens in an unprecedented way" (Lee, 2004, p. 177), as do social networking websites such as Twitter and Facebook. Indeed, although many nonprofit organizations already use social networking technologies to advance their organizations' voluntary transparency, social networking technology is relatively new and warrants further research.

Controversies

The need for transparency and the technology available to support it raises two important issues. First, while the media make information readily available, how they do so—almost always neglecting its "vital duty to put the 'bad' news it reports into the context of the 'good' news that forms the backdrop," according to Bothwell (2001)—has been criticized. As Bothwell argues, there is a greater amount of "good" news available, but "it takes much more effort to gather it than does the 'bad'" (2001). Yet, this imbalance has consequences for nonprofit organizations. For instance, following the September 11, 2001, attacks in 2001, the American Red Cross was accused of misleading donors, soliciting for funds to be dedicated to September 11th victims and then using them for more general operations. The media's negativity overshadowed the extraordinary services that were being provided, according to an assessment by Gotbaum (2003), but as a consequence, the

American Red Cross set out to increase its own transparency. This included a national public relations effort to educate the country about the reasons for its actions. Interestingly, nonprofit and for-profit organizations respond in different ways to negative attacks on their sector as a whole, Gotbaum said. After the Enron scandal, for-profit "industry groups began visiting Washington decision makers"; however, the Red Cross's colleague organizations in the nonprofit sector responded with isolation and silence. This suggests two potential complications with nonprofits' use of the media as a mechanism of transparency: Nonprofits may not be sufficiently mature in their use of the media, and nonprofits may lack sufficient collective identity and sense of affiliation to other nonprofits.

Second, while increased transparency is generally perceived as a positive aspect contributing to accountability, there are questions about the potential trade-off with confidentiality. For instance, some leaders in the nonprofit world—for example, Dan Borochoff, American Institute of Philanthropy, and Bennet Weiner, Better Business Bureau's Wise Giving Alliance—"worry about the privacy of donors . . . especially . . . those who contribute to controversial causes" (Bothwell, 2001), Moreover, where nonprofits are working to empower underprivileged populations through either overt or covert means, transparency can "make it easier for vested interests to identify what is happening and thus more effectively oppose it, or, at worst, lead to the deregistration and closure of the organization for being subversive (Bryant, 2007, p. 169).

Summary

In summary, while there is broad consensus within the nonprofit sector about the value of and need for accountability, there is considerable variation across states in codes of conduct and procedures for enforcing accountability. The cost of legally mandated accountability requirements among states is variable, impacting, at worst, decisions about whether organizations can or should become nonprofits and, at the very least, the kind of and level of services that nonprofits provide. Despite these variations, organizations can use various self-regulation mechanisms to moderate internal behaviors and to promote accountability, such as codes of conduct, ethics, or behavior, along with regulatory and peer-reviewed accreditation programs, which contribute to systematic monitoring and oversight. Such mechanisms are important in the context of public mistrust. Moreover, there is general agreement among industry organizations that organizational accountability can be viewed as an area of opportunity to boost public trust in the nonprofit sector, and, accordingly, to advance both transparency and conflict of interest policies.

Transitional Leadership

Lorri Sulpizio and Robin McCoy

Lotus Leadership Institute

Nonprofit organizations are faced with unique challenges that require both specific knowledge of the nonprofit sector and organizational skills, and also special leadership skills. While there are many leadership theories and approaches to the exercise of leadership, this chapter will introduce *transitional leadership* and the philosophy behind the theory. Transitional leadership assists people at every level of the nonprofit organization to increase their leadership capacity and address the complex and challenging issues facing nonprofits today.

After a brief historical overview of leadership theories, we will present the transitional leadership model and explain the components that provide the foundation for the philosophy of the model. To highlight the applicability of the model, a nonprofit case will be presented as an example of the transitional leadership theory. The case involves a nonprofit organization and a critical incident that required transitional leadership. After the case is discussed, the ideas will be synthesized in a summary section.

It is the intent of the authors that those wishing to exercise leadership in the nonprofit sector will be able to use and apply transitional leadership theory to mobilize people for effective change while working toward purpose and managing the transitional process.

Leadership Theories

Leadership theories abound in the organizational and business literature. With so many approaches, strategies, and theories from which to choose, it is difficult for organizational leaders to discern which approach or style of leadership best suits the needs of their organization. In addition, the thought that one particular theory can meet the needs of all leaders, all organizations, and all situations may add to the confusion of those hoping to navigate a path for their group or organization and exercise leadership.

Contemporary understanding of leadership began with the "great man theory" in the early 1900s, which essentially claimed that leadership could be best understood by studying the great men who led nations. This approach led to an examination of presidents and generals, such as Sir Winston Churchill, Joseph Stalin, Franklin Delano Roosevelt, and Abraham Lincoln. By understanding the actions, approaches, and styles of these men, proponents contended, one could understand good leadership.

The great man theory evolved into trait theory (Stodghill, 1974), a theory that suggested certain people contain the necessary traits for leadership—essentially saying that leaders are born. From this perspective, leadership is viewed as being linked to certain traits, and people who have those traits will make good leaders. In the first part of the 20th century, leadership was understood by studying the traits and behaviors of people who held leadership roles. Around the middle of the century, the focus shifted as scholars began recognizing the complex social influences on both individuals and organizations. Situational leadership claims that the most appropriate action of a leader depends on a variety of situational factors. Hersey and Blanchard's (1977) situational leadership theory claims that a leader should base his or her style and leadership behavior on the specific situation of the followers.

Similar to situational leadership is contingency theory. Made popular by Fiedler (1967), contingency theory acknowledges the many influences on leadership activity and suggests that leadership behavior is contingent on many different factors, such as the leader's preferred style, the group of followers, and the situation. These more classic theories dominated the leadership literature for a large part of the 20th century.

As the issues facing organizations became more complex, leadership theories began reflecting the dynamic and multifaceted nature of leadership issues. Theories began describing the importance of values in leadership behavior, suggesting that leadership serves and helps people, improves situations, and brings everyone involved to a higher moral place (Burns, 1978; Greenleaf, 2002). In addition, the practice of leadership became a focus of study, and leadership scholars claimed that the complexities of contemporary issues and the demands on individuals and groups required a deeper attention to learning, adapting, and self-awareness (Argyris & Schön, 1978; Heifetz, 1994; Senge, Scharmer, Jaworski, & Flowers, 2004).

Currently, high-level administrators, directors, and officers in organizations are faced with questions about how to best serve the people in their company, meet the needs of production and profit, and uphold their vision and mission. In many ways, the work of leadership is about transition. Those hoping to lead their organization must meet the challenges of dealing with change and managing the transitional process. To better understand the transitional work of leadership, people must first understand the difference between leadership and authority.

An Authority-Leadership Distinction

All organizations have an authority hierarchy—a chain of command or administrative levels. Typically, within nonprofit organizations, the board of directors and the various subcommittees of the board hold the highest level of authority within the organization as a whole. Nonprofit boards vary in involvement, with a "hands-on" board being very involved in much of the activity. An executive director typically holds the highest level of authority within the nonprofit staff group, and several assistant directors manage various components of the organization's need. Figure 43.1 depicts a typical nonprofit organizational structure.

The structural model in Figure 43.1 reflects the authority levels of the organization. Authority can be defined as power that is earned or assigned by others and is accompanied by an expectation and right to perform work or a service (Sulpizio & McCoy, 2009). To better understand an authority role, consider a doctor, who has the power to diagnose an illness and prescribe medication. Both the American Medical Association, who awarded a medical license to the doctor, and the patient, who has selected this doctor for medical care, have conferred authority on the doctor. Similarly, a police officer has the power to issue a speeding ticket. Both the city and the community have conferred authority on the police officer.

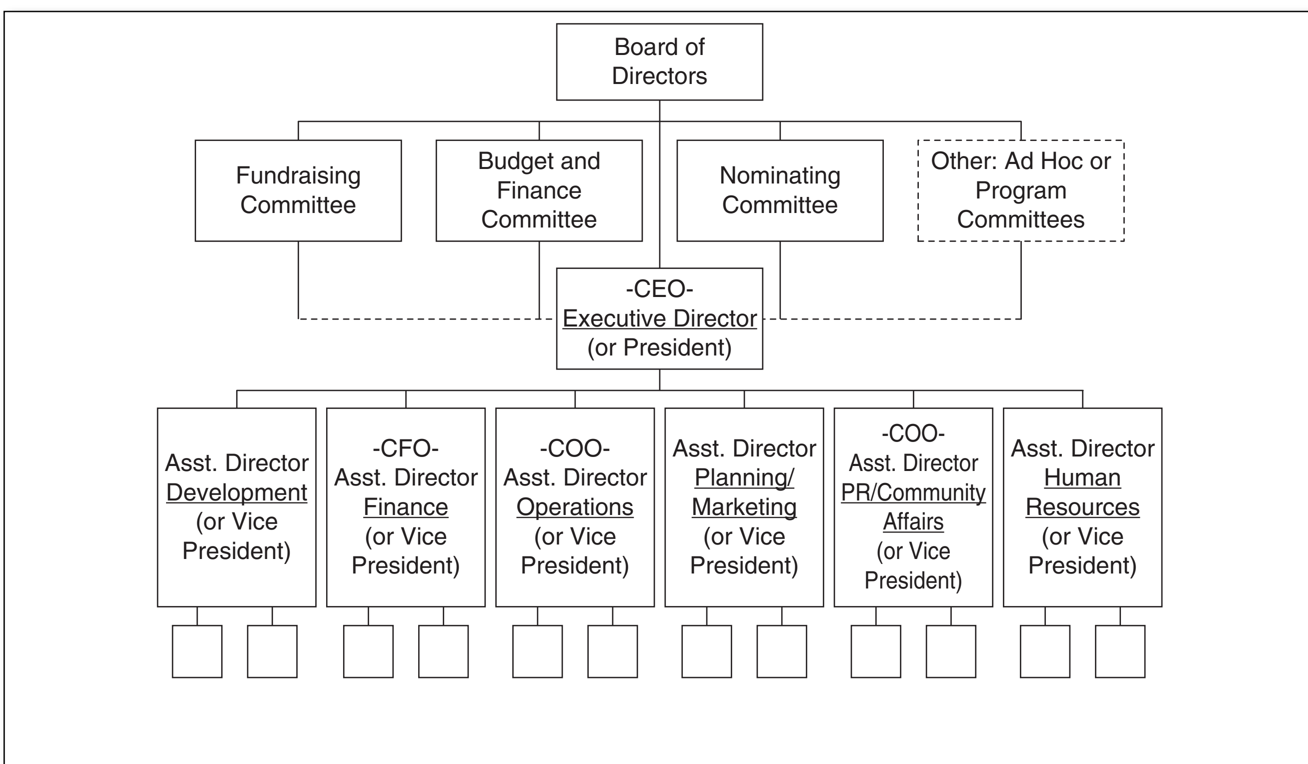

Figure 43.1 Traditional Nonprofit Organizational Structure

In a nonprofit organization, those with authority have been assigned their roles. In many cases, there is a selection process for board members and a hiring process for all staff, including the director and assistant directors. Assigned authority is power that results from a positional role within a group or organizational. This role is formalized by a hire, voting, or appointing process. The president of the United States holds the highest assigned authority role in the country. Other examples of assigned authority are CEOs, senators, and captains of sports teams.

In addition to being assigned, authority can also be earned. Earned authority occurs when an individual gains power through respect, trust, and expertise. In this way, a person can emerge within a group as one with authority simply because he or she has earned the trust and respect. Earned authority also comes with the expectation of service. For example, among a class of students, one student may have earned the respect of her classmates based on previous answers to questions, test scores, and dialogue with the professor. In this way, this student will have earned the authority in the class, and other students may expect her to answer questions, have an intelligent comment to add to a group discussion, or know more about course information.

There is a very important relationship between authority and leadership. An authority role does not guarantee that a person exercises leadership. In fact, many people confuse the two terms and refer to those in authority roles as leaders, calling the CEO of a company the leader. Referring to those in authority roles as leaders is incorrect because a person in authority may or may not exercise leadership. In fact, those in authority roles may exercise leadership *some* of the time, but not all of the time. In many instances, those in authority roles may be doing procedural work or routine tasks such as scheduling meetings, reviewing and returning e-mails, holding weekly team meetings, and so on. Leadership, on the other hand, is defined by transitional work—work that is defined by change or movement from one place, position, or issue to the next. Transitional work could be downsizing personnel, making significant changes to the budget, cutting or adding programs, or reviewing and updating a mission statement.

Leadership and authority, although not the same thing, are very important to each other, mainly because the resources that accompany roles of authority provide the opportunity to exercise leadership and effectively do transitional work. Often, those in authority have the power to make decisions or have access to budget and financial resources, making roles of an authority a critical and opportune place for leadership to occur.

Nonprofit Sector's Unique Challenges

The nonprofit sector has its own challenges, which make it different from businesses and organizations. Those hoping to exercise leadership or hold an authority role within a nonprofit organization should be prepared for those challenges and have an understanding of the leadership skills and strategies necessary for addressing those challenges.

While not all nonprofit organizations face the same issues, some common concerns are likely to surface at some point in a nonprofit organization's lifetime. These concerns create tension within nonprofits. Tension is psychological and emotional strain that results from a polarization of conflicting thoughts or ideas. It can occur at the organizational level, the group level, or the individual level.

For example, an executive director might experience tension when he or she detects a growing resentment from staff as a result of cutting costs and managing the budget. The staff's growing unrest results from the board of directors' increasing pressure to eliminate more programs and services based on the struggling economy and the lack of donations. The staff feels that the board does not understand the day-to-day operations of the nonprofit and has unrealistic expectations that will negatively affect the people the organization serves. The executive director hears the feedback from staff at the same time as receiving pressure from the board. Not wanting to disrupt either group too significantly, the director's tension continues to mount, making the situation stressful and the solution uncertain.

While the above example demonstrates the director's individual tension, it also exemplifies an organizational tension felt from the financial pressure that occurs during a struggling economy. This tension—the desire to offer robust programs and services and the reality that funds are not available to support those services—creates emotional and psychological stress.

Tension can create uncertainty, anxiety, fear, or distress. Yet, tension is also a sign that transitional leadership is needed. Being able to detect tension in yourself and in others is a way to distinguish if there is a significant issue needing to be addressed in more than just a procedural manner. Often, issues that create tension are issues that are significant and critical for the organization and the people involved. Learning how to recognize tension and how to best address it is a critical skill for those hoping to exercise leadership.

Within the nonprofit sector, many different situations commonly arise, resulting in tension. The following are examples of issues that are likely to create tension for those working within nonprofit organizations.

High Board-Member Turnover

Often, board members hold a term for a short period of time, making turnover a frequent occurrence. Some possible reasons for this may be the tendency for people to join boards based on interest in the organization without any experience or idea of the workload involved or expectations of board members. Also, nonprofit board members are often people who hold full-time jobs elsewhere and may not be able to balance their career with the role of board member.

High board-member turnover creates both procedural and transitional work. The procedural process of selecting new board members is time consuming and may distract and deter both the board and the staff from other more pressing issues. Also, committees might need to be filled or adjusted due to board members' coming and going.

At the same time, replacing board members may require transitional work if the selection process is aimed at changing the culture of the board by soliciting a different type of board member or by adding people with differing perspectives. A frequently changing board with constant new members might meet resistance from staff or current board members.

Balancing a Social Mission With Fiscal Development

At their core, nonprofits have a socially conscious mission based on improving conditions for both individuals and groups, often, offering a needed social service. While the purpose and mission are genuinely aimed at bettering society and not making money, the need to secure funding is critically present at all times.

Often, the programs and services don't generate enough revenue for self-sustainability, so in addition to the work of upholding a social mission, board members and staff must also solicit donations, hold development campaigns, and find creative ways to make money.

Often, good works and making the world a better place do not pay the bills. There is little to no income from most nonprofit programs and services. This reality—the desire to work toward a social mission while faced with the reality that money must somehow be generated—creates considerable tension for non-profit organizations.

Losing the Largest Donors

Especially in times of economic distress and hardship, finding and securing donors is a challenge. Perhaps one of the biggest challenges faced by both nonprofit boards and staff is losing a large, long-term donor. This creates an abundance of transitional work, especially if the donor is not readily replaceable. With a decrease in revenue from gifts, often programs and services need to be cut, and those decisions are never clear and easy.

In addition, if a high-profile donor opts out of a gift they have traditionally given, other donors may become suspicious and question their own involvement. This ripple effect may occur despite valiant efforts by the organization to maintain most donors. Again, the nonprofit is in a unique situation in having to raise money to support its mission, unlike organizations in the for-profit sector. The tension caused by those two agenda items makes losing a significant donor a very critical issue.

Agenda Pushed by Donors

It is equally challenging for both the board and staff when a donor pushes his or her personal agenda and feels justified in doing so based on the fact that he or she contributes a substantial amount of money to the organization. Dollars should not equate to the right to influence the work, especially if the influence compromises the organization's mission and philosophy. However, those leading the organization recognize the value of donations and often walk a difficult line when creating boundaries with the largest givers.

The relationship among donors, board members, and staff is complicated and needs open and authentic communication and attention to interpersonal relations. Nurturing and cultivating these relationships are a key component of transitional leadership.

Board Members With Giving Capacity but No Real Leadership Skill

Perhaps the most frustrating for a director and the staff are board members who are selected based on their giving capacity despite their lack of any leadership skill. Board members who have a limited capacity for leadership can create roadblocks and frustration. This challenge goes back to the issue of having a social mission with a need for financial giving—and balancing the desire to operate a socially conscious organization with limited funding and revenue-generating programs.

Transitional Leadership

The transitional leadership model is an approach to the development and practice of effective leadership that is based on years of organizational and leadership development research (Figure 43.2). Transitional leadership can assist with the challenges described above. The transitional leadership model provides a framework and a philosophy for a leadership process that will help everyone involved in nonprofit organizations to address challenges and navigate change with a successful transition.

The model is founded on the principle that the exercise of leadership is about mobilizing people toward change—in essence, leadership is about dealing with and managing transitions in the face of the many tensions that arise. At the core of transitional leadership is a focus on purpose, the driving force that creates meaningful actions and outcomes. Many organizations suffer from problems and conflicts because the people involved have lost sight of purpose. In this way, purpose helps keep organizations on track and helps provide direction and focus for everyone involved.

When purpose is kept front and center, people can determine when the purpose should be adjusted or adapted. Often, the purpose changes or evolves over time. In some cases, a purpose may need to be fine-tuned to be more reflective of the organization's philosophy. Purpose is seldom static and often grows as an organization grows, however, whether old or new, purpose is the center focus for transitional leadership.

The model includes six different skills critical for addressing change successfully. Each of these elements relies on the others and reflects a process for the exercise of leadership (see Table 43.1). Many of them contribute to the effectiveness of others. For example, effective

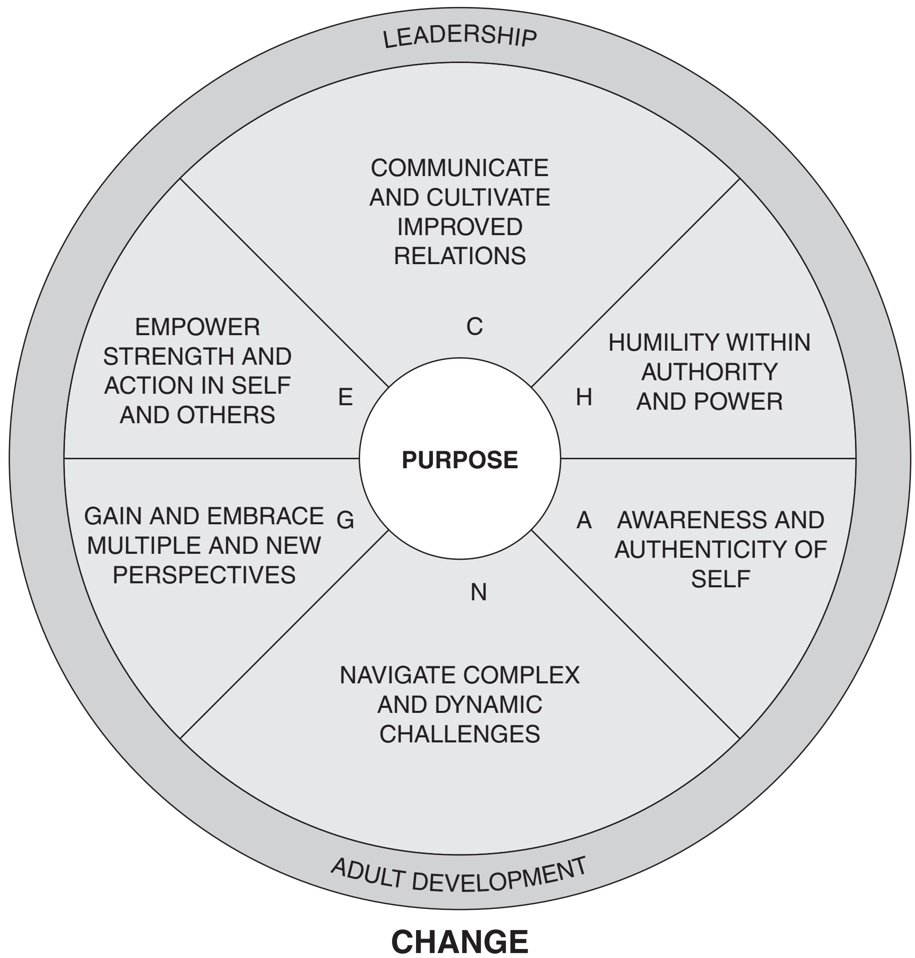

Figure 43.2 Transitional Leadership Model

communication often leads to the ability to gain and embrace multiple and new perspectives.

It is important to understand that these skills should not occur exclusively or one at a time. Rather, they all must be constantly present during the exercise of leadership. One or two possibly may be more active at any particular time, based on the context of the situation and the people involved. Each of these skills will be detailed and explained in the next section.

C—Communicate and cultivate improved relations
H—Humility within authority and power
A—Awareness and authenticity of self and others
N—Navigate complex and dynamic challenges
G—Gain and embrace multiple and new perspectives
E—Empower strength and action in self and others

Table 43.1 Transitional Leadership: Skills for the Exercise of Effective Leadership

In addition, the transitional leadership model includes personal growth as well as growth in leadership capacity. In this way, the philosophy of transitional leadership integrates adult development with leadership development and suggests that to improve our capacity for leadership, we must also improve and develop ourselves.

Transitional Leadership and Adult Development

The transitional leadership model is founded on the twin beliefs that to improve your capacity for exercising leadership, you must develop the self. In other words, if people seek to further their adult development, they will in turn further their capacity to exercise leadership. This belief is grounded in extensive academic theory and research. Understanding how the self can continually be developed as people move through their adult life can improve people's ability to manage the complexities of organizational life. A positive result of adult development is the ability to demonstrate adaptive, flexible leadership that remains true to purpose, even during tumultuous times.

One aspect of the relationship between leadership and adult development is what Donald Schön (1983) termed the *reflective practitioner,* which means the individual takes a larger view and looks at the underlying assumptions that drive actions. The person begins to understand how they relate to others, to the organization, and to a larger system. Reflective practice begins with reframing problems, listening with a neutral ear, engaging in dialogue with others, and trying again to understand how one is perceived. These aspects of adult development surface in the transitional leadership model, providing a process for the exercise of leadership that helps people recognize the importance of a deeper understanding of self in the practice of effective leadership.

Another aspect of adult development is changing behavior to a higher level of moral and cognitive thinking. This often means moving from an individual-centered point of view to a more collective approach. Leadership is about moving people toward change. The ability of the leader to move to an understanding of more complex issues and relationships will assist them in leading effectively in the nonprofit sector.

Communicate and Cultivate Improved Relations

Interpersonal relations are at the core of organizational life and the exercise of leadership. For example, the relationship between a nonprofit staff and the nonprofit board is an ongoing relationship that needs continual communication and cultivation. Often, an inability to communicate effectively creates strained relationships and built-up resentment and tension.

Listening becomes a large piece of effective communication and improved relations. It allows voices to be heard, and when people feel listened to, they feel respected and validated. It is important for everyone, from the president of the board to an assistant for development, to feel like he or she is a viable member of the organization and has a voice that is heard.

Communication also requires an ability to suspend judgment and bias to allow for a dialogue among people. Effective dialogue implies that all involved parties are participating in the conversation and having the opportunity to speak.

Humility Within Authority and Power

Humility in transitional leadership, or the act of being humble, includes an individual's understanding of their role as simply one participant in a group and to merge themselves into the group and the larger purpose. Within an authority role, where power is a factor, humility distills arrogance, promotes dignity, and creates strong interpersonal connections while earning respect from others. Collins (2001) provided extensive research on the differences between a "good" organization and a "great" organization and provided evidence for the utility of humility in leadership. Humility may offer a new lens through which to understand leadership, authority, and power.

Because authority roles are accompanied by greater resources than other roles, it is easy for those in authority to abuse their power and their resources, losing the trust and respect of those they are hoping to lead. Humility is a way for those in authority to acknowledge the collaborative process of organizational life and honor and validate those at all levels who work hard for the organization. People want leadership, not domination. People want to be encouraged and empowered, not controlled or coerced. Humility for those in authority is essential to effective transitional leadership.

Awareness and Authenticity of Self and Others

Perhaps the most difficult of the six skills, self-awareness and authenticity require an intense and ongoing personal commitment. Self-awareness is more than just knowing who you are. Self-awareness is the willingness to see yourself—your behaviors, thoughts, and actions—and reflect on and own both the positive and negatives aspects of your self.

Self-understanding as both a social and organizational imperative helps individuals understand how to relate to others more effectively, to build commitments, and to develop extended social relationships. Understanding the self and how a person is perceived by others is considered to be the first step in many leadership efforts. Over the past 15 years, there has been an increasing amount of attention given to self-awareness among management and leadership researchers and to its effect on organizational and individual performance. Self-awareness is connected to the idea that if we know ourselves and are more cognizant of how we are perceived by others, we can incorporate the information from others into our own self-appraisals and behavior (Moshavi, Brown, & Dodd, 2003).

Authenticity occurs when people act in ways consistent with their values and beliefs. In short, authenticity is a willingness and ability to be real and genuine. Authenticity creates patterns of behavior that foster both greater self-awareness and transparency in relationships. Both awareness and authenticity include acknowledging and accepting both positive and negative aspects of oneself. This honest understanding is important for leadership as it encourages humility, leads to improved and genuine interpersonal connection and relationships, and allows a person to learn from multiple perspectives. Authenticity and awareness include an openness to people and ideas, and a willingness to learn, change, and adapt.

Navigate Complex and Dynamic Challenges

More than ever, today's challenges are complex and dynamic. Organizations do not operate in simple, static environments, and nonprofit organizations are no exception. With the rise of technology and Internet capabilities, nonprofits have more resources than ever to reach out to people, market, campaign, and fulfill their mission. With these increased resources come increased tensions and new challenges. Those in authority, such as board members and program directors, have increasing demands and expectations from stakeholders. The ability to navigate these complex problems and address the dynamic challenges facing nonprofits is a necessary skill for those hoping to provide leadership to their organization.

Gain and Embrace Multiple and New Perspectives

The ability to learn, adjust, and adapt comes from a willingness to embrace new perspectives. A benefit of personal humility is in gaining and embracing new perspectives. Those who can let go of their own ideas and thoughts long enough to understand the ideas and thoughts of others demonstrate not only a strong sense of self, but also a strong sense of purpose. This dual insight into self and also understanding of purpose embodies the transitional leadership model. The model brings together both adult and the leadership development necessary for transitional leadership.

Often, people get stuck conducting business as usual and fail to recognize when a change is necessary. By embracing new and different perspectives more ideas are available to inform the change. Innovation and cutting-edge approaches have defined the 21st-century organization. For success and sustainability, the exercise of leadership must include the ability to embrace new and multiple perspectives.

Empower Strength and Action in Self and Others

Facing change requires strength. Dealing with change requires action. Those who wish to exercise leadership and navigate people through the transitional process must empower strength and action in both themselves and others. People often make the mistake of confusing action with making quick decisions. In many cases, action might include reflection or gathering information before making a quick decision. Action might include collaboration with others or soliciting help from an outside source. Taking action could be an internal process such as a board retreat to strengthen membership and develop leadership or an external event such as holding a large gala.

Whatever the action, dealing with change requires strength—the strength to act and think authentically, the strength to embrace new perspectives and communicate in a way that cultivates relationship, and the strength to be humble even in the most trying situations.

Practicing these six skills and becoming an effective transitional leader takes a willingness to learn and unlearn. Transitional leadership requires not only leadership development and organizational understanding, but individual adult development as well.

Key Terms

Authenticity: A pattern of behavior that fosters greater self-awareness and relational transparency; when a person acts in ways consistent with her or his values and beliefs.

Authority: Power that is earned or assigned by others and is accompanied by an expectation and right to perform work or a service.

Assigned Authority: Power that results from a positional role within a group or organization; assigned authority can result from being hired into a position, being voted into a position, or being appointed into a position.

Earned Authority: Power that is gained through trust, respect, expertise, or behavior; earned authority is exemplified by people such as Martin Luther King Jr. and Gandhi.

Tension: Tension is psychological and emotional strain that results from a polarization of conflicting thoughts or ideas.

Purpose: The foundation for meaningful action and outcomes.

Procedural Work: Routine tasks that are driven by procedures, such as payroll or scheduling appointments.

Transitional Leadership: Mobilizing a person or group of people to acknowledge, confront, and address a challenge in a way that effectively facilitates change and manages the transitional process.

Transitional Work: Work that is defined by change or movement from one place or position to the next. For example, job training for a new position and moving to a new city are both transitional work.

In the next section, the transitional leadership model will be applied to an actual nonprofit organization as a descriptive case. The example provided illustrates how and why transitional leadership can effectively address even the most challenging issues facing nonprofit organizations.

Exploring the Application of Transitional Leadership: A Case Study

Healthcare Foundation is a philanthropic foundation with a stated mission to promote quality health care focusing on the medically underserved, through development and education. The foundation is dedicated to improving access to basic health care, preventing violence and substance abuse, and controlling communicable diseases. One of the most controversial projects it has funded, the Clean Syringe Exchange Program (CSEP), aims to curb the spread of HIV, Hepatitis C virus (HCV), and other communicable diseases by distributing clean syringes in communities with high rates of drug-related arrests or sexually transmitted diseases. This program is controversial because some believe that CSEP increases crime in the areas where it is located, sends the wrong message to children, is immoral, or leads to further drug abuse.

Over 9 years, the foundation has exercised leadership and faced many adaptive challenges regarding this controversial project. In adaptive challenges, as described by Ronald Heifetz (1994), people need to tackle problems—problems that often necessitate changing values. The primary challenge of trying to reduce the spread of HIV, HCV, and other communicable diseases has, by far, been the most difficult adaptive challenge for the foundation. Other challenges include changing the public's cultural perspectives on injected drug users, facing political bias from the city's leadership, dealing with issues of legality for a needle exchange program, and getting other stakeholders on board to confront the issue of how to stop the spread of HIV and HCV.

The transitional leadership model was applied to help the Healthcare Foundation accomplish its mission and address these adaptive challenges of establishing a CSEP. The model suggests how an integral approach in the application of transitional leadership to the various challenges facing CSEPs and substance abuse can maximize leadership in practice. The challenge for organizations that are in favor of CSEPs is not easily fixed with technical solutions. Those who support CSEPs must lead the general population to accept, or at least tolerate the program, despite the fact that many disagree with it. The next section applies the six skills of the transitional leadership model to aid the Healthcare Foundation in accomplishing its mission.

C: Communicate and Cultivate Improved Relations

The first skill of the transitional leadership model is to communicate and cultivate improved relations. One of the first methods to develop these skills is to identify all of the stakeholders affected by and involved in the implementation of a CSEP through communication. The key stakeholders that the foundation identified were the general public, influential political legislatures, and medical professionals dedicated to reducing the spread of HIV and other communicable diseases. The foundation exercised leadership by initially financing a study to see if the general public would tolerate a needle exchange program even if it were currently illegal. They knew that they could not get a CSEP approved without the acceptance of the general public, specifically registered voters. The results from the study found that 85% of the 1,015 survey respondents were in favor of a CSEP as long as it was not in their back yard. The foundation worked to cultivate relationships with the general public, the health care community, and government to understand their feelings, positions, and agendas. The foundation knew that all three stakeholder categories had to be involved in the decision, and so staff and leaders had to know what each constituency was thinking.
