

# Understanding the Application of Knowledge Management in a Technology Driven Industry

**Lyle N. Long**, Professor of Aerospace Engineering, Professor of Acoustics, The Pennsylvania State University

**Lynette Marling**, former Manager, Knowledge Management Strategies, Rockwell Collins, Inc.

**Mike Bailey**, Business Projects Manager, GE Aircraft Engines

**Richard DeLoach**, Senior Research Scientist, NASA Langley Research Center

**Deborah Secor**, Knowledge Management Strategies, Rockwell Collins, Inc.

Presentation to American Institute of Aeronautics and Astronautics  
Sept 27, 2005

## Why Knowledge Management ?

- The benefits of Knowledge Management are traditionally focused on:
  - Reducing cost and risk
  - Leveraging existing assets to reduce cost, risk & cycle time
  - Improved Decision Making
  - Improved Strategic Planning,
  - Faster Development of New Technical Approaches
  - Faster more Robust Problem Solving
  - Reduced Cost of Employee Training
  - Increased Versatility of the Workforce

***These can benefit almost any business, but there are additional benefits in a technology driven industry like Aerospace or Computing.***

# Why Knowledge Management for the AIAA?

---

- The AIAA has over 30,000 members.
- The AIAA publishes 8 peer-reviewed technical journals
- The AIAA hosts over 20 technical conferences a year.
- The technical work of the AIAA is performed through 69 Technical Committees (TC) arranged in seven disciplines:
  - Aerospace Sciences
  - Aircraft and Air Transportation Systems
  - Engineering & Technology Management
  - Information Systems
  - Propulsion and Energy
  - Space and Missiles
  - Structures, Design and Test

***There are many potential benefits to be derived from efficient knowledge sharing among these diverse elements of AIAA.***

3

## Information and Knowledge

---

- **Information** is not **knowledge**
- **Information** is usually simply “**data**” in some sort of formation (numbers, text, images, sound, ...)
- **Knowledge** is:
  - “... a fluid mix of framed experience, values, contextual information, and expert insight that provides a framework for evaluating and incorporating new experiences and information”
- And **Wisdom** is more than just **Knowledge**

---

(Davenport and Prusak)

4

# Exploiting the Difference Between “Data” and “Knowledge”

## *A specific example from experimental aeronautics*

- Quality and productivity in experimental aeronautics have traditionally focused on **data** as the primary product of an empirical study.
  - **A productive test** maximizes the volume of **data**
  - **A high-quality result** generates **data** with a minimum of unexplained variance
- NASA Langley Research Center has introduced a testing process called the **Modern Design of Experiments (MDOE)** that focuses on **knowledge** as the product of experimentation rather than **data**.
  - Tactical objectives change from data collection to enhancing knowledge of the system under study
  - This radically changes how we assess productivity and quality.

5

## The Modern Design of Experiments

### *A Knowledge Management Approach to Scientific Experimentation*

- **Knowledge** of a system is said to be attained in an MDOE test when all system responses of interest can be adequately predicted
  - “Adequately” implies acceptable precision over the full range of independent variables of interest (not limited only to variable combinations measured.)
  - **Example:** When the drag coefficient of a commercial jet transport can be estimated within  $\pm 0.00005$  with 95% confidence for any Mach number between 0.70 and 0.96, and any angle of attack between  $-4^\circ$  and  $+10^\circ$ .
- **A productive MDOE test** *minimizes* the data volume required to adequately predict system responses.
  - This minimizes cycle time and direct operating costs
  - Opposite of traditional productivity metrics that promote high data volume.
- **A high-quality MDOE result** features high precision in the system response predictions
  - **Data quality is only a cost issue:** high variability simply requires more data
  - Quality results can be achieved no matter how much variability in the data

*Savings of a factor of two in cost and cycle time are not uncommon with this change in focus from high-volume data collection to low-cost knowledge enhancement.*

6

# Representative MDOE Resource Savings

*Focusing on Knowledge rather than Data*

- Independent comparisons of MDOE and conventional test processes were conducted over a 12-month period
- Wind tunnel tests were conducted in multiple facilities
- Subsonic, transonic, supersonic flight regimes
- Resource comparisons were made for wind-on minutes, megawatt hours, and total data volume.

7

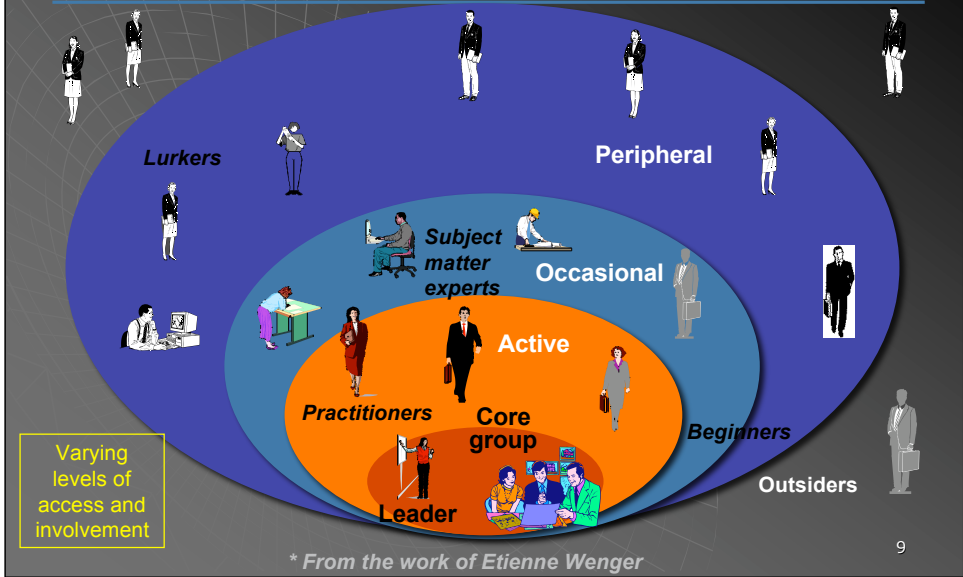

# Communities of Practice (CoP)

*A structure for managing knowledge*

- **"Communities of Practice** are groups of people who share a concern, a set of problems, or a passion about a topic, and who deepen their knowledge and expertise in this area by interacting on an ongoing basis." (Wenger)
- "CoP's are not just a web site, a database, or a collection of best practices. It is a **group of people who interact, learn together, build relationships, and in the process develop a sense of belonging, and mutual commitment.**" (Wenger)
- **"Without Communities of Practice, there can be no knowledge management."** (Wenger)
- In the last 10 years electronic CoP's have been developed that are very effective (e.g. **companycommand.army.mil** with 20,000 members) ("CompanyCommand: Unleashing the Power of the Army Profession" by Nancy M. Dixon, Nate Allen, Tony Burgess, Pete Kilner, Steve Schweitzer)

8

# CoP Model: Participation & Roles

## Rockwell Collins

*An example of Communities of Practice in action*

- Rockwell Collins is a global company providing aviation electronics for the world's aircraft manufacturers and more than 400 airline customers, as well as a major share of the world's military forces.
  - Global company- 17,000 employees in 27 countries
- Communities of Practice began Jan 2002
  - Today:
    - 8 Major Knowledge Boards
      - Electrical, Enterprise, Factory Transition, Financial Practices, Mechanical, Project Mgmt, Software, and Systems
    - 80 CoPs (*and growing!*)
- The RCI KM structure is centered around the **PEOPLE** and their "**Problems**" – their work
- Practitioners Role:
  - "Practitioner driven and Practitioner Led"
  - Launch, Lead, and Learn

# Return on Intellectual Capital

You don't have to teach everyone everything. The goal isn't to stuff the same knowledge into as many heads as possible, but to improve your return on intellectual capital. You can reduce the efforts of many by leveraging the knowledge of a few.

- Thomas A. Stewart

11

## Most Admired Knowledge Enterprise (MAKE Award)

### Most Admired Knowledge Enterprise Studies

- Global, North American, European, Asia and Japan  
MAKE  
awards annually
- Part of Teleos' MAKE Research Program
- Based on the Delphi Methodology
  - Developed in the 1950's by the Rand Corporation as a long range forecasting tool
  - Expert panel's perceptual knowledge to identify critical issues
  - Identify those organizations which are leaders in creating organizational **intellectual capital and wealth** through the transformation of individual enterprise knowledge into world class products/services /solutions
- Further details
  - <http://www.knowledgebusiness.com>

12

# Toyota Motor Corporation

- MAKE winner Global (3 times), Asia (3 times) and Japan (5 times)
- Toyota is the second largest automobile manufacturer by volume
- Annual sales of \$153 billion and employs over 260,000 people
- Toyota Production System is well known (The Machine that Changed the World – Womak et al.)
  - JIT (Just-in-Time)
  - Kaizen (Continuous Incremental Improvement)
  - Pull system (Tasks based on downstream pull)
- Toyota Product Development System is less well known
  - Focus on business performance
    - Apply technologies that sell cars
  - Value customer's opinion
    - Multiple choice systems design (performance/cost tradeoffs)
  - Standardized development milestones
    - Similar program structure across all vehicle programs
    - Schedule customized by chief engineer
    - No standard development process
  - Prioritize and reuse
    - 60-70% of vehicle parts are common
    - Toyota Production System Principles

13

# Toyota Motor Corporation

- Functional teams
  - Highly skilled core knowledge
  - Value learning/knowledge gathering
  - Mentor/apprenticeship system is managers responsibility/job function
  - Maintain lessons learned books
- Set Based Concurrent Engineering
  - Parallel evaluation of multiple alternatives
  - Impose minimal constraints on design requirements
  - Efficient Documentation using 8.5" x 11" pages with standard format
  - Focused discussion meetings
- Supplier Involvement in the Process
  - Long term relationships
  - Toyota keeps current on suppliers design and manufacturing capabilities
    - New technology and innovation
    - Works with suppliers to improve suppliers' capabilities if required
- Chief Engineer System
  - Reports back after launch with results and lessons learned
  - Designs and orchestrates all aspects of the vehicle development
  - Highly skilled in one or more functional areas with 20+ years of experience
  - Respected for expertise

**Car Development in 18 mo is half US competitors with 150 vs 600 people  
US competitors productivity is estimated to be 20% vs Toyota at 80%**

14

# AIAA Knowledge Management- Strategic Plan

---

The AIAA Knowledge Management strategic plan lists eight goals:

1. Focus AIAA Activities on Critical and Emerging Technologies, Capabilities, and Programs
2. Strengthen Internal and External Communications
3. Improve and Expand Services and Benefits to AIAA Members
4. Increase the Depth and Breadth of AIAA Membership
5. Establish AIAA as the Voice and Advocate of/ for the Profession
6. Stimulate Workforce Development and Retention
7. Fully Utilize Information Technology
8. Communicate and Involve our Stakeholders in the Implementation of the Strategic Plan

15

# AIAA KM Committee Recommendations

---

1. Establish virtual (online) Communities of Practice (VCoP's) to allow the members to communicate easily and continuously. AIAA would enable every TC, every journal, and every conference organizing committee to create and manage (on their own) online community. These online communities will increase the value of being an AIAA member, increase the interest in the AIAA digital library, and make it easier for the TCs and journals to function.

*Research shows that 1 in 3 CoPs may fail- even VCoPs will require KM Staff to nurture and support*

16

## AIAA KM Committee Recommendations

---

2. Create several (3 – 5) key online communities as initial deployments or pilots, with teams of people willing and able to help make it a success. Starting with VCoPs that we believe to have a high success rate will continue to improve the model and the process as VCoPs are extended to other areas of the AIAA. Incremental development, careful deployment, and selection of areas for rich opportunity would allow for a 3-5 AIAA communities to launch in 2006, with another 3-5 communities launching in 2007.

17

## AIAA KM Committee Recommendations

---

3. We recommend launching the pilot VCoPs for the following AIAA communities:
  - The Journal of Aerospace Computing, Information, and Communication (JACIC) community
  - Software Systems and Computer Systems Technical Committees
  - 2007 InfoTech Conference

18

## Conclusion

---

Success criteria for the proposed start-up AIAA VCoPs should be assessed using metrics such as papers submitted, web hits, assessments, and user surveys. The AIAA KM Committee would support the members, assist with the tool selection, and monitor the metrics.

A Change Management Plan and a strong support structure needs to be incorporated with this KM plan. Make no mistake- it is not easy to change culture.

*The tacit knowledge resides in people, and there must be a priority to begin transferring and sharing that knowledge now. Knowledge reuse is an important part of retaining the US competitive position in aerospace.*

19

## Backup Data

---

20

# CoP Software

- The most difficult thing for most people to understand is that most CoP sites let ALL MEMBERS modify the website content (and very easily).

## Traditional Webpage CoP

The  
"Webmaster"

This causes tension because people don't have control anymore... but this is good.

Web Browsers

The Community  
IS the  
Expert

## CoP

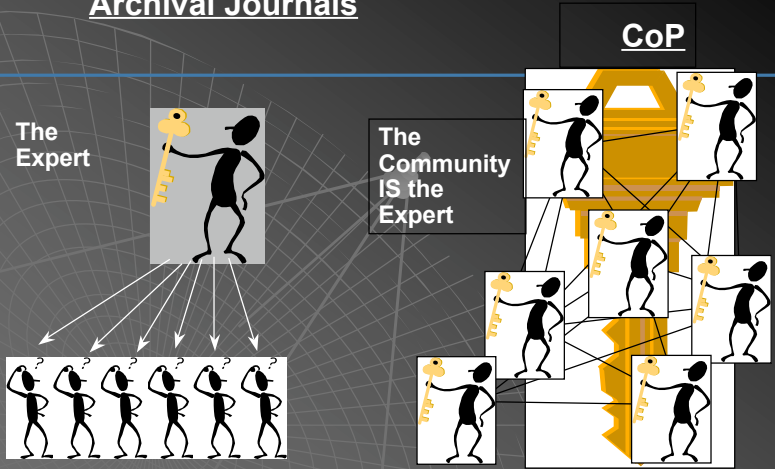

Everyone can *easily* change content<sub>21</sub>  
thru web browsers

# Archival Journals

- The foundation of science and engineering
- Paper versions are expensive to produce, distribute, and store
- Information that is not on-line will be used and referenced less and less ("if it isn't online, it doesn't exist")
- The American Institute of Aeronautics and Astronautics (AIAA) has its *entire archive* of conference and journal papers scanned and available on-line (40 years of technical papers) ([www.aiaa.org](http://www.aiaa.org))
- NASA has begun to convert both NACA and NASA papers to electronic form
  - <http://techreports.larc.nasa.gov/ltrs/ltrs.html>
  - <http://ntrs.nasa.gov>
  - <http://naca.larc.nasa.gov>

# Archival Journals

The merging of Journals and CoPs will create a system for creating new knowledge while balancing that knowledge with a validation scheme. The CoP and the journal should meet through a multi-tiered validation system that transports CoP style informal conversational knowledge into fully validated explicit knowledge

www.aaaa-cstc.org

CoP for AIAA CS TC, Webpace purchased from: <http://www.acmeinternet.com> for \$600/year

**Daily Quote**

*"The essential thing is action. Action has three stages. The decision born of thought, the order or preparation for execution, and the execution itself. All three stages are governed by will. The will is rooted in character, and for the man of action character is of more critical importance than intellect. Intellect without will is worthless. Will without intellect is dangerous."*

- Largest and most successful CoP in the DOD
- Created to help army captains share information and knowledge
- ~80,000 hits/month & 20,000 regular members
- Enormous amounts of information available (not open to public anymore)
- Run by four Army Majors (all West Point professors)
- Often the Generals do not have all the knowledge that the soldiers need (e.g. soldiers returning from Iraq can transfer their knowledge to new soldiers)
- On-line video interviews of soldiers in Iraq and Afghanistan
- Began with PHP/mySQL but now uses Tomoye Simplify

# Acronyms

- KM = Knowledge Management
- CoP = Community of Practice
- CoI = Community of Interest (often made up of numerous communities of practice, ie community of communities, Knowledge Boards)
- EIP = Enterprise Information Portal
- CMS = Content Management System
- CIC = Computing, Information, and Communication
- JACIC = Journal of Aerospace Computing, Information, and Communication

29

# Knowledge

- There are (at least) two types of knowledge:
  - **Tacit** and **Explicit**
- **Tacit knowledge** is part of people's assumptions and experiences- such as- *how to ride a bike- perform brain surgery-* the intuition you get after doing something for years- "the expert"
- **Explicit knowledge** is represented by papers, videos, procedures, etc.
- Perspective is important, one persons "explicit knowledge" is another persons "information"
- Conference papers and archival papers are an *attempt* to transfer tacit knowledge from one person to another
  - Human-human interactions are crucial to effective and efficient knowledge transfer- i.e. "story telling"*

30

## Why Knowledge Management ?

- KM is crucial for corporations, the defense department, Universities, and any other large organization
- KM is 95% culture-people-politics-process and 5% Technology
- How do we get people to join an on-line community and share information, which leads to increased productivity and innovation? What's In It For Me (WIIFM)?

31

## What's In It For Me (WIIFM)?

People want to:

- Be efficient
- Have access and leverage of others' knowledge Be integrated into the industry direction
- Be mentored and trained

**"Because wealth creation is now in people's heads rather than in their hands, your success will depend not only on your ability in managing workflow but on your talent in enticing from each person his best ideas, judgments, and effort."**

**Frances Horibe**

32

# Access Control Lists

- ACL's are crucial to making it all work in a virtual environment
- In a CoP, the various levels of users require different levels of access (none, read, edit, delete)
- This refers to more than just file access, it also refers to the layout of the website, user accounts, access to various portions of website,
- Portions of VCoP might be open to world, and portions might require high security
