Also note that Microsoft's cash from operations of $19 billion exceeds its 2009 net income of $14.6 billion. This lends additional credibility to Microsoft's income number as an indicator of potential future performance. If anything, Microsoft's net income might understate its actual performance.

Oracle Corporation is one of the world's largest sellers of database software and information management services. Like Microsoft, its success depends on continuing to improve its existing products while developing new products to keep pace with rapid changes in technology. Oracle's free cash flow for 2009 was $7.5 billion. This is impressive but significantly less than Microsoft's amazing ability to generate cash.

before you go on...

FREE CASH FLOW

Chicago Corporation issued the following statement of cash flows for 2012.

CHICAGO CORPORATION
Statement of Cash Flows—Indirect Method
For the Year Ended December 31, 2012

Cash flows from operating activities		
Net income		$19,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	$ 8,100	
Loss on sale of equipment	1,300	
Decrease in accounts receivable	6,900	
Increase in inventory	(4,000)	
Decrease in accounts payable	(2,000)	10,300
Net cash provided by operating activities		29,300
Cash flows from investing activities		
Sale of investments	1,100	
Purchase of equipment	(19,000)	
Net cash used by investing activities		(17,900)
Cash flows from financing activities		
Issuance of stock	10,000	
Payment on long-term note payable	(5,000)	
Payment for dividends	(9,000)	
Net cash used by financing activities		(4,000)
Net increase in cash		7,400
Cash at beginning of year		10,000
Cash at end of year		$17,400

(a) Compute free cash flow for Chicago Corporation. (b) Explain why free cash flow often provides better information than "Net cash provided by operating activities."

Solution

(a) Free cash flow = $29,300 − $19,000 − $9,000 = $1,300
(b) Cash provided by operating activities fails to take into account that a company must invest in new plant assets just to maintain the current level of operation. Companies must also maintain dividends at current levels to satisfy investors. The measurement of free cash flow provides additional insight regarding a company's cash-generating ability.

Related exercise material: **BE12-9, BE12-10, BE12-11, BE12-12, Do it! 12-3, E12-9,** and **E12-10.**

Action Plan

- Compute free cash flow as: Cash provided by operating activities − Capital expenditures − Cash dividends.

DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
How much cash did the company generate to either expand operations or pay dividends?	Cash provided by operating activities, cash spent on fixed assets, and cash dividends	Free cash flow = Cash provided by operations − Capital expenditures − Cash dividends	Significant free cash flow indicates greater potential to finance new investment and pay additional dividends.

KEEPING AN EYE ON CASH

Cash flow is closely monitored by analysts and investors for many reasons and in a variety of ways. One measure that is gaining increased attention is "price to cash flow." This is a variant of the price to earnings (P-E) ratio, which has been a staple of analysts for a long time. The difference is that rather than divide the company's stock price by its earnings per share (an accrual-accounting–based number), the price to cash flow ratio divides the company's stock price by its cash flow per share. A high measure suggests that the stock price is high relative to the company's ability to generate cash. A low measure indicates that the company's stock might be a bargain.

The average price to cash flow ratio for companies in the Standard and Poor's 500-stock index was recently 13.6, when the average price-earnings ratio was 21.9. The following table provides values for some well-known companies. While you should not use this measure as the sole factor in choosing a stock, it can serve as a useful screen by which to identify companies that merit further investigation.

Company	Price/Cash Flow	Price/EPS
Microsoft	11.9	14.0
Kellogg	12.1	15.8
Nike	16.5	20.0
Wal-Mart	8.5	13.4
Ford	2.8	7.1
AirTran	4.4	7.7

ASSESSING LIQUIDITY AND SOLVENCY USING CASH FLOWS

Previous chapters have presented ratios used to analyze a company's liquidity and solvency. Many of those ratios used accrual-based numbers from the income statement and balance sheet. In this section, we focus on ratios that are

cash-based rather than accrual-based. That is, instead of using numbers from the income statement, these ratios use numbers from the statement of cash flows.

As discussed earlier, many analysts are critical of accrual-based numbers because they feel that the adjustment process allows too much management discretion. These analysts like to supplement accrual-based analysis with measures that use the cash flow statement. One disadvantage of these cash-based measures is that, unlike the more commonly employed accrual-based measures, there are no readily available industry averages for comparison. In the following discussion, we use cash flow-based ratios to analyze Microsoft. In addition to the cash flow information provided in Illustration 12-16 (page 639), we need the following information related to Microsoft.

($ in millions)	2009	2008
Current liabilities	$27,034	$29,886
Total liabilities	38,330	36,507

Liquidity

Liquidity is the ability to pay obligations expected to become due within the next year. In Chapter 2, you learned that one measure of liquidity is the *current ratio*: current assets divided by current liabilities. A disadvantage of the current ratio is that it uses year-end balances of current asset and current liability accounts. These year-end balances may not be representative of the company's position during most of the year.

A ratio that partially corrects this problem is the **current cash debt coverage ratio**. It is computed as cash provided by operating activities divided by average current liabilities. Because cash provided by operating activities involves the entire year rather than a balance at one point in time, this ratio is often considered a better representation of liquidity on the average day. In general, a value below .40 times is cause for additional investigation of a company's liquidity. Illustration 12-18 shows the current cash debt coverage ratio for Microsoft, with comparative numbers for Oracle. For comparative purposes, we have also provided each company's current ratio.

Illustration 12-18
Current cash debt coverage ratio

$$\text{Current Cash Debt Coverage Ratio} = \frac{\text{Cash Provided by Operations}}{\text{Average Current Liabilities}}$$

	Current cash debt coverage ratio	Current ratio
Microsoft ($ in millions)	$\frac{\$19,037}{(\$27,034 + \$29,886)/2}$ = .67 times	1.82:1
Oracle	.86 times	2.03:1

Microsoft's net cash provided by operating activities is .67 times its average current liabilities. Oracle's ratio of .86 times is even stronger than that of Microsoft. Both companies far exceed the threshold of .40 times. Keep in mind that Microsoft's cash position is extraordinary. For example, many large companies now have current ratios in the range of 1.0. By this standard, Oracle's current ratio of 2.03:1 and Microsoft's current ratio of 1.82:1 are both strong.

DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
Is the company generating sufficient cash provided by operating activities to meet its current obligations?	Cash provided by operating activities and average current liabilities	Current cash debt coverage ratio = $\frac{\text{Cash provided by operations}}{\text{Average current liabilities}}$	A high value suggests good liquidity. Since the numerator contains a "flow" measure, it provides a good supplement to the current ratio.

Solvency

Solvency is the ability of a company to survive over the long term. A measure of solvency that uses cash figures is the **cash debt coverage ratio**. It is computed as the ratio of cash provided by operating activities to total debt as represented by average total liabilities. This ratio indicates a company's ability to repay its liabilities from cash generated from operations—that is, without having to liquidate productive assets such as property, plant, and equipment. A general rule of thumb is that a cash debt coverage ratio below .20 times is cause for additional investigation.

Illustration 12-19 shows the cash debt coverage ratios for Microsoft and Oracle for 2009. For comparative purposes, we have also provided the debt to total assets ratios for each company.

Illustration 12-19 Cash debt coverage ratio

$$\text{Cash Debt Coverage Ratio} = \frac{\text{Cash Provided by Operations}}{\text{Average Total Liabilities}}$$

	Cash debt coverage ratio	Debt to total assets ratio
Microsoft ($ in millions)	$\frac{\$19,037}{(\$38,330 + \$36,507)/2}$ = .51 times	50%
Oracle	.30 times	47%

Because Microsoft has long-term obligations, its cash debt coverage ratio is lower than its current cash debt coverage ratio. Obviously, Microsoft is very solvent. Oracle's cash debt coverage ratio of .30 times is not as strong as Microsoft's but still exceeds the .20 threshold. Neither the cash nor accrual measures suggest any cause for concern regarding the solvency of either company.

DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
Is the company generating sufficient cash provided by operating activities to meet its long-term obligations?	Cash provided by operating activities and average total liabilities	Cash debt coverage ratio = $\frac{\text{Cash provided by operations}}{\text{Average total liabilities}}$	A high value suggests the company is solvent; that is, it will meet its obligations in the long term.

USING THE DECISION TOOLKIT

Intel Corporation is the leading producer of computer chips for personal computers. Its primary competitor is AMD. The two are vicious competitors, with frequent lawsuits filed between them. Financial statement data for Intel are provided below.

Instructions

Calculate the following cash-based measures for Intel and compare them with the comparative data for AMD provided on page 645.

1. Free cash flow.
2. Current cash debt coverage ratio.
3. Cash debt coverage ratio.

INTEL CORPORATION
Balance Sheets
December 31, 2009 and 2008
(in millions)

Assets	**2009**	**2008**
Current assets	$21,157	$19,871
Noncurrent assets	31,938	30,601
Total assets	$53,095	$50,472
Liabilities and Stockholders' Equity		
Current liabilities	$ 7,591	$ 7,818
Long-term liabilities	3,800	3,108
Total liabilities	11,391	10,926
Stockholders' equity	41,704	39,546
Total liabilities and stockholders' equity	$53,095	$50,472

INTEL CORPORATION
Income Statements
For the Years Ended December 31, 2009 and 2008
(in millions)

	2009	**2008**
Net revenues	$35,127	$37,586
Expenses	30,758	32,294
Net income	$ 4,369	$ 5,292

INTEL CORPORATION
Statements of Cash Flows
For the Years Ended December 31, 2009 and 2008
(in millions)

	2009	2008
Net cash provided by operating activities	$11,170	$10,926
Net cash used for investing activities	(7,965)	(5,865)
Net cash used for financing activities	(2,568)	(9,018)
Net increase (decrease) in cash and cash equivalents	$ 637	$ (3,957)

Note. Cash spent on property, plant, and equipment in 2009 was $4,515. Cash paid for dividends was $3,108.

Comparative data for AMD:

1. Free cash flow	$7 million
2. Current cash debt coverage ratio	.21 times
3. Cash debt coverage ratio	.06 times

Solution

1. Intel's free cash flow is $3,547 million ($11,170 − $4,515 − $3,108). AMD's is only $7 million. This gives Intel a huge advantage in the ability to move quickly to invest in new projects.
2. The current cash debt coverage ratio for Intel is calculated as follows.

$$\frac{\$11{,}170}{(\$7{,}591 + \$7{,}818)/2} = 1.45 \text{ times}$$

Compared to AMD's value of .21 times, Intel is significantly more liquid.

3. The cash debt coverage ratio for Intel is calculated as follows.

$$\frac{\$11{,}170}{(\$11{,}391 + \$10{,}926)/2} = 1.00 \text{ times}$$

Compared to AMD's value of .06 times, Intel appears to be significantly more solvent.

Summary of Study Objectives

1 Indicate the usefulness of the statement of cash flows. The statement of cash flows provides information about the cash receipts, cash payments, and net change in cash resulting from the operating, investing, and financing activities of a company during the period.

2 Distinguish among operating, investing, and financing activities. Operating activities include the cash effects of transactions that enter into the determination of net income. Investing activities involve cash flows resulting from changes in investments and long-term asset items. Financing activities involve cash flows resulting from changes in long-term liability and stockholders' equity items.

3 Explain the impact of the product life cycle on a company's cash flows. During the introductory stage, cash provided by operating activities and cash from investing are negative, and cash from financing is positive.

During the growth stage, cash provided by operating activities becomes positive but is still not sufficient to meet investing needs. During the maturity stage, cash provided by operating activities exceeds investing needs, so the company begins to retire debt. During the decline stage, cash provided by operating activities is reduced, cash from investing becomes positive (from selling off assets), and cash from financing becomes more negative.

4 Prepare a statement of cash flows using the indirect method. The preparation of a statement of cash flows involves three major steps: (1) Determine net cash provided/used by operating activities by converting net income from an accrual basis to a cash basis. (2) Analyze changes in noncurrent asset and liability accounts and record as investing and financing activities, or disclose as noncash transactions. (3) Compare the net change in cash on the statement of cash flows with the change in the cash account reported on the balance sheet to make sure the amounts agree.

5 Use the statement of cash flows to evaluate a company. A number of measures can be derived by using information from the statement of cash flows as well as the other required financial statements. Free cash flow indicates the amount of cash a company generated during the current year that is available for the payment of dividends or for expansion. Liquidity can be measured with the current cash debt coverage ratio (cash provided by operating activities divided by average current liabilities). Solvency can be measured by the cash debt coverage ratio (cash provided by operating activities divided by average total liabilities).

DECISION TOOLKIT A SUMMARY

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
How much cash did the company generate to either expand operations or pay dividends?	Cash provided by operating activities, cash spent on fixed assets, and cash dividends	Free cash flow = Cash provided by operations − Capital expenditures − Cash dividends	Significant free cash flow indicates greater potential to finance new investment and pay additional dividends.
Is the company generating sufficient cash provided by operating activities to meet its current obligations?	Cash provided by operating activities and average current liabilities	Current cash debt coverage ratio = $\frac{\text{Cash provided by operations}}{\text{Average current liabilities}}$	A high value suggests good liquidity. Since the numerator contains a “flow” measure, it provides a good supplement to the current ratio.
Is the company generating sufficient cash provided by operating activities to meet its long-term obligations?	Cash provided by operating activities and average total liabilities	Cash debt coverage ratio = $\frac{\text{Cash provided by operations}}{\text{Average total liabilities}}$	A high value suggests the company is solvent; that is, it will meet its obligations in the long term.

appendix 12A

Statement of Cash Flows—Direct Method

study objective

Prepare a statement of cash flows using the direct method.

To explain and illustrate the direct method, we will use the transactions of Computer Services Company for 2012, to prepare a statement of cash flows. Illustration 12A-1 presents information related to 2012 for Computer Services Company.

Illustration 12A-1
Comparative balance sheets, income statement, and additional information for Computer Services Company

COMPUTER SERVICES COMPANY
Comparative Balance Sheets
December 31

Assets	2012	2011	Change in Account Balance Increase/Decrease
Current assets			
Cash	$ 55,000	$ 33,000	$ 22,000 Increase

Retained earnings	164,000	48,000	116,000 Increase
Total liabilities and stockholders' equity	$398,000	$138,000	

COMPUTER SERVICES COMPANY
Income Statement
For the Year Ended December 31, 2012

Revenues		$507,000
Cost of goods sold	$150,000	
Operating expenses (excluding depreciation)	111,000	
Depreciation expense	9,000	
Loss on sale of equipment	3,000	
Interest expense	42,000	315,000
Income before income tax		192,000
Income tax expense		47,000
Net income		$145,000

Additional information for 2012:

1. Depreciation expense was comprised of $6,000 for building and $3,000 for equipment.
2. The company sold equipment with a book value of $7,000 (cost $8,000, less accumulated depreciation $1,000) for $4,000 cash.
3. Issued $110,000 of long-term bonds in direct exchange for land.
4. A building costing $120,000 was purchased for cash. Equipment costing $25,000 was also purchased for cash.
5. Issued common stock for $20,000 cash.
6. The company declared and paid a $29,000 cash dividend.

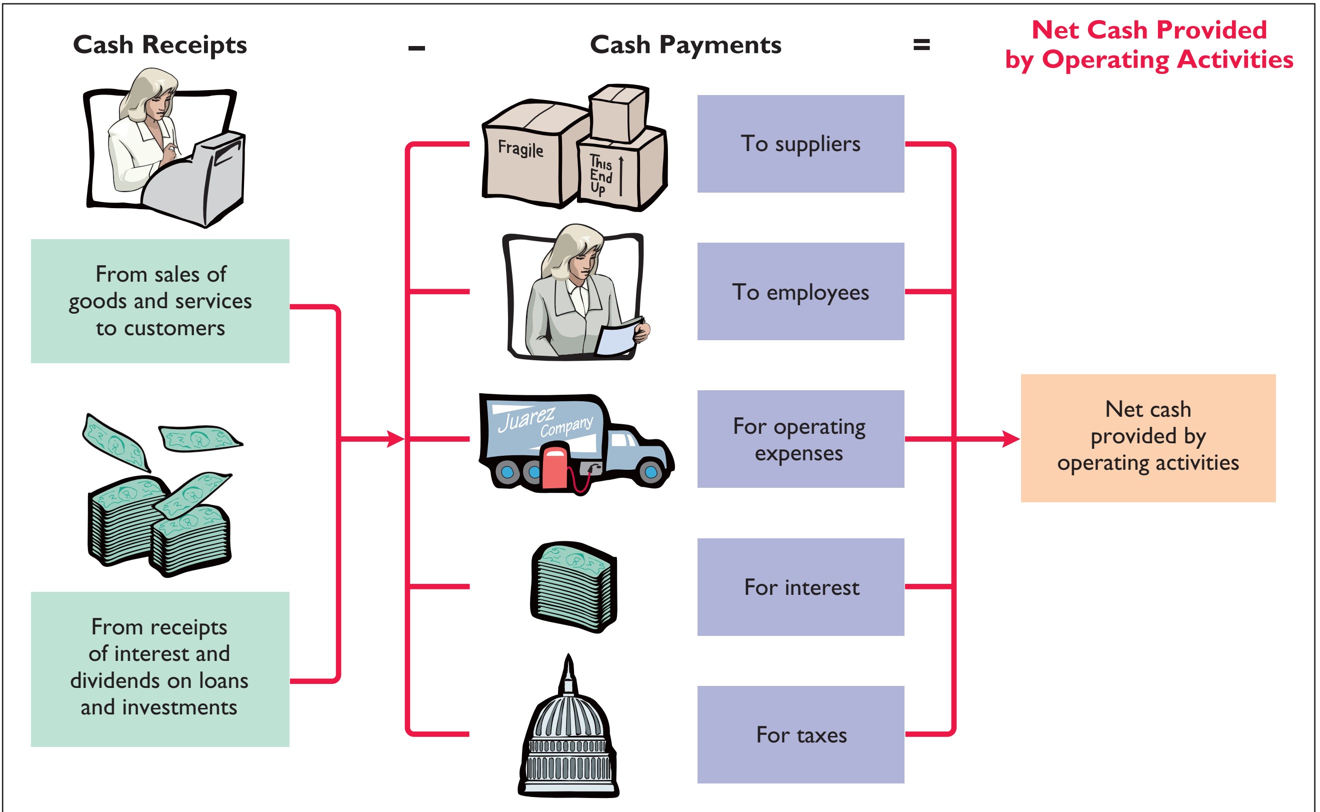
To prepare a statement of cash flows under the direct approach, we will apply the three steps outlined in Illustration 12-4 (page 630).

STEP 1: OPERATING ACTIVITIES

DETERMINE NET CASH PROVIDED/USED BY OPERATING ACTIVITIES BY CONVERTING NET INCOME FROM AN ACCRUAL BASIS TO A CASH BASIS

Under the **direct method**, companies compute net cash provided by operating activities by **adjusting each item in the income statement** from the accrual basis to the cash basis. To simplify and condense the operating activities section, companies **report only major classes of operating cash receipts and cash payments**. For these major classes, the difference between cash receipts and cash payments is the net cash provided by operating activities. These relationships are as shown in Illustration 12A-2.

Illustration 12A-2 Major classes of cash receipts and payments



An efficient way to apply the direct method is to analyze the items reported in the income statement in the order in which they are listed. We then determine cash receipts and cash payments related to these revenues and expenses. The following pages present the adjustments required to prepare a statement of cash flows for Computer Services Company using the direct approach.

CASH RECEIPTS FROM CUSTOMERS. The income statement for Computer Services Company reported revenues from customers of $507,000. How much of that was cash receipts? To answer that, companies need to consider the change in accounts receivable during the year. When accounts receivable increase during the year, revenues on an accrual basis are higher than cash receipts from customers. Operations led to revenues, but not all of these revenues resulted in cash receipts.

To determine the amount of cash receipts, the company deducts from sales revenues the increase in accounts receivable. On the other hand, there may be a decrease in accounts receivable. That would occur if cash receipts from customers exceeded sales revenues. In that case, the company adds to sales revenues the decrease in accounts receivable. For Computer Services Company, accounts receivable decreased $10,000. Thus, cash receipts from customers were $517,000, computed as shown in Illustration 12A-3.

Illustration 12A-3
Computation of cash receipts from customers

Revenues from sales	$ 507,000
Add: Decrease in accounts receivable	10,000
Cash receipts from customers	**$517,000**

Computer Services can also determine cash receipts from customers from an analysis of the Accounts Receivable account, as shown in Illustration 12A-4.

Illustration 12A-4
Analysis of accounts receivable

Accounts Receivable				
1/1/12	Balance	30,000	**Receipts from customers**	**517,000**
	Revenues from sales	507,000		
12/31/12	Balance	20,000		

Helpful Hint The T account shows that revenue plus decrease in receivables equals cash receipts.

Illustration 12A-5 shows the relationships among cash receipts from customers, revenues from sales, and changes in accounts receivable.

Illustration 12A-5
Formula to compute cash receipts from customers–direct method

Cash Receipts from Customers	=	**Revenues from Sales**	**+ Decrease in Accounts Receivable** or **– Increase in Accounts Receivable**

CASH PAYMENTS TO SUPPLIERS. Computer Services Company reported cost of goods sold of $150,000 on its income statement. How much of that was cash payments to suppliers? To answer that, it is first necessary to find purchases for the year. To find purchases, companies adjust cost of goods sold for the change in inventory. When inventory increases during the year, purchases for the year have exceeded cost of goods sold. As a result, to determine the amount of purchases, the company adds to cost of goods sold the increase in inventory.

In 2012, Computer Services Company's inventory increased $5,000. It computes purchases as follows.

Illustration 12A-6
Computation of purchases

Cost of goods sold	$ 150,000
Add: Increase in inventory	5,000
Purchases	**$155,000**

After computing purchases, a company can determine cash payments to suppliers. This is done by adjusting purchases for the change in accounts payable. When accounts payable increase during the year, purchases on an accrual basis are higher than they are on a cash basis. As a result, to determine cash payments to suppliers, a company deducts from purchases the increase in accounts payable. On the other hand, if cash payments to suppliers exceed purchases, there may be a decrease in accounts payable. In that case, a company adds to

purchases the decrease in accounts payable. For Computer Services Company, cash payments to suppliers were $139,000, computed as follows.

Illustration 12A-7
Computation of cash payments to suppliers

Purchases	$ 155,000
Deduct: Increase in accounts payable	16,000
Cash payments to suppliers	**$139,000**

Computer Services also can determine cash payments to suppliers from an analysis of the Accounts Payable account, as shown in Illustration 12A-8.

Illustration 12A-8
Analysis of accounts payable

Accounts Payable				
Payments to suppliers	**139,000**	1/1/12	Balance	12,000
			Purchases	155,000
		12/31/12	Balance	28,000

Helpful Hint The T account shows that purchases less increase in accounts payable equals payments to suppliers.

Illustration 12A-9 shows the relationships among cash payments to suppliers, cost of goods sold, changes in inventory, and changes in accounts payable.

Illustration 12A-9
Formula to compute cash payments to suppliers–direct method

Cash Payments to Suppliers = **Cost of Goods Sold** { **+ Increase in Inventory or − Decrease in Inventory** } { **+ Decrease in Accounts Payable or − Increase in Accounts Payable** }

CASH PAYMENTS FOR OPERATING EXPENSES. Computer Services reported on its income statement operating expenses of $111,000. How much of that amount was cash paid for operating expenses? To answer that, we need to adjust this amount for any changes in prepaid expenses and accrued expenses payable. For example, if prepaid expenses increased during the year, cash paid for operating expenses is higher than operating expenses reported on the income statement. To convert operating expenses to cash payments for operating expenses, a company adds the increase in prepaid expenses to operating expenses. On the other hand, if prepaid expenses decrease during the year, it deducts the decrease from operating expenses.

Companies must also adjust operating expenses for changes in accrued expenses payable. When accrued expenses payable increase during the year, operating expenses on an accrual basis are higher than they are in a cash basis. As a result, to determine cash payments for operating expenses, a company deducts from operating expenses an increase in accrued expenses payable. On the other hand, a company adds to operating expenses a decrease in accrued expenses payable because cash payments exceed operating expenses.

Computer Services Company's cash payments for operating expenses were $115,000, computed as follows.

Illustration 12A-10
Computation of cash payments for operating expenses

Operating expenses	$ 111,000
Add: Increase in prepaid expenses	4,000
Cash payments for operating expenses	**$115,000**

Illustration 12A-11 shows the relationships among cash payments for operating expenses, changes in prepaid expenses, and changes in accrued expenses payable.

Cash Payments for Operating Expenses	=	Operating Expenses	+ Increase in Prepaid Expense or − Decrease in Prepaid Expense	+ Decrease in Accrued Expenses Payable or − Increase in Accrued Expenses Payable

Illustration 12A-11
Formula to compute cash payments for operating expenses—direct method

DEPRECIATION EXPENSE AND LOSS ON SALE OF EQUIPMENT. Computer Services' depreciation expense in 2012 was $9,000. Depreciation expense is not shown on a statement of cash flows under the direct method because it is a noncash charge. If the amount for operating expenses includes depreciation expense, operating expenses must be reduced by the amount of depreciation to determine cash payments for operating expenses.

The loss on sale of equipment of $3,000 is also a noncash charge. The loss on sale of equipment reduces net income, but it does not reduce cash. Thus, the loss on sale of equipment is not shown on the statement of cash flows under the direct method.

Other charges to expense that do not require the use of cash, such as the amortization of intangible assets, depletion expense, and bad debts expense, are treated in the same manner as depreciation.

CASH PAYMENTS FOR INTEREST. Computer Services reported on the income statement interest expense of $42,000. Since the balance sheet did not include an accrual for interest payable for 2011 or 2012, the amount reported as expense is the same as the amount of interest paid.

CASH PAYMENTS FOR INCOME TAXES. Computer Services reported income tax expense of $47,000 on the income statement. Income taxes payable, however, decreased $2,000. This decrease means that income taxes paid were more than income taxes reported in the income statement. Cash payments for income taxes were, therefore, $49,000 as shown below.

Income tax expense	$ 47,000
Add: Decrease in income taxes payable	2,000
Cash payments for income taxes	**$49,000**

Illustration 12A-12
Computation of cash payments for income taxes

Illustration 12A-13 shows the relationships among cash payments for income taxes, income tax expense, and changes in income taxes payable.

Cash Payments for Income Taxes	=	Income Tax Expense	+ Decrease in Income Taxes Payable or − Increase in Income Taxes Payable

Illustration 12A-13
Formula to compute cash payments for income taxes—direct method

The operating activities section of the statement of cash flows of Computer Services Company is shown in Illustration 12A-14.

Cash flows from operating activities		
Cash receipts from customers		$517,000
Less: Cash payments:		
To suppliers	$139,000	
For operating expenses	115,000	
For interest expense	42,000	
For income taxes	49,000	345,000
Net cash provided by operating activities		$172,000

Illustration 12A-14
Operating activities section of the statement of cash flows

When a company uses the direct method, it must also provide in a **separate schedule** (not shown here) the net cash flows from operating activities as computed under the indirect method.

STEP 2: INVESTING AND FINANCING ACTIVITIES

ANALYZE CHANGES IN NONCURRENT ASSET AND LIABILITY ACCOUNTS AND RECORD AS INVESTING AND FINANCING ACTIVITIES, OR DISCLOSE AS NONCASH TRANSACTIONS

Helpful Hint The investing and financing activities are measured and reported the same under both the direct and indirect methods.

INCREASE IN LAND. As indicated from the change in the Land account and the additional information, the company purchased land of $110,000 by directly exchanging bonds for land. The exchange of bonds payable for land has no effect on cash. But it is a significant noncash investing and financing activity that merits disclosure in a separate schedule. (See Illustration 12A-16.)

INCREASE IN BUILDINGS. As the additional data indicate, Computer Services Company acquired an office building for $120,000 cash. This is a cash outflow reported in the investing section. (See Illustration 12A-16.)

INCREASE IN EQUIPMENT. The Equipment account increased $17,000. The additional information explains that this was a net increase that resulted from two transactions: (1) a purchase of equipment of $25,000, and (2) the sale for $4,000 of equipment costing $8,000. These transactions are investing activities. The company should report each transaction separately. The statement in Illustration 12A-16 reports the purchase of equipment as an outflow of cash for $25,000. It reports the sale as an inflow of cash for $4,000. The T account below shows the reasons for the change in this account during the year.

Illustration 12A-15

Account	Debit	Credit
Cash	4,000	
Accumulated Depreciation	1,000	
Loss on Disposal of Plant Assets	3,000	
Equipment		8,000

INCREASE IN BONDS PAYABLE. The Bonds Payable account increased $110,000. As indicated in the additional information, the company acquired land by directly exchanging bonds for land. Illustration 12A-16 reports this noncash transaction in a separate schedule at the bottom of the statement.

Helpful Hint When companies issue stocks or bonds for cash, the actual proceeds will appear in the statement of cash flows as a financing inflow (rather than the par value of the stocks or face value of bonds).

INCREASE IN COMMON STOCK. The balance sheet reports an increase in Common Stock of $20,000. The additional information section notes that this increase resulted from the issuance of new shares of stock. This is a cash inflow reported in the financing section in Illustration 12A-16.

INCREASE IN RETAINED EARNINGS. Retained earnings increased $116,000 during the year. This increase can be explained by two factors: (1) Net income of $145,000 increased retained earnings and (2) dividends of $29,000 decreased

retained earnings. The company adjusts net income to net cash provided by operating activities in the operating activities section. **Payment** of the dividends (not the declaration) is a **cash outflow that the company reports as a financing activity in Illustration 12A-16**.

Statement of Cash Flows—2012

Illustration 12A-16 shows the statement of cash flows for Computer Services Company.

Illustration 12A-16
Statement of cash flows, 2012—direct method

COMPUTER SERVICES COMPANY Statement of Cash Flows—Direct Method For the Year Ended December 31, 2012		
Cash flows from operating activities		
Cash receipts from customers		$ 517,000
Less: Cash payments:		
To suppliers	$ 139,000	
For operating expenses	115,000	
For income taxes	49,000	
For interest expense	42,000	345,000
Net cash provided by operating activities		172,000
Cash flows from investing activities		
Sale of equipment	4,000	
Purchase of building	(120,000)	
Purchase of equipment	(25,000)	
Net cash used by investing activities		(141,000)
Cash flows from financing activities		
Issuance of common stock	20,000	
Payment of cash dividends	(29,000)	
Net cash used by financing activities		(9,000)
Net increase in cash		22,000
Cash at beginning of period		33,000
Cash at end of period		$ 55,000
Noncash investing and financing activities		
Issuance of bonds payable to purchase land		$ 110,000

STEP 3: NET CHANGE IN CASH

COMPARE THE NET CHANGE IN CASH ON THE STATEMENT OF CASH FLOWS WITH THE CHANGE IN THE CASH ACCOUNT REPORTED ON THE BALANCE SHEET TO MAKE SURE THE AMOUNTS AGREE

Illustration 12A-16 indicates that the net change in cash during the period was an increase of $22,000. This agrees with the change in balances in the cash account reported on the balance sheets in Illustration 12A-1 (page 647).

Summary of Study Objective for Appendix 12A

6 Prepare a statement of cash flows using the direct method. The preparation of the statement of cash flows involves three major steps: (1) Determine net cash provided/used by operating activities by converting net income from an accrual basis to a cash basis. (2) Analyze changes in noncurrent asset and liability accounts and record as investing and financing activities, or disclose as noncash transactions. (3) Compare the net change in cash on the statement of cash flows with the change in the cash account reported on the balance sheet to make sure the amounts agree. The direct method reports cash receipts less cash payments to arrive at net cash provided by operating activities.

appendix 12B

Statement of Cash Flows—T-Account Approach

Many people like to use T accounts to provide structure to the preparation of a statement of cash flows. The use of T accounts is based on the accounting equation that you learned in Chapter 1. The basic equation is:

Assets = Liabilities + Equity

Now, let's rewrite the left-hand side as:

Cash + Noncash Assets = Liabilities + Equity

Next, rewrite the equation by subtracting Noncash Assets from each side to isolate Cash on the left-hand side:

Cash = Liabilities + Equity − Noncash Assets

Finally, if we insert the Δ symbol (which means "change in"), we have:

Δ Cash = Δ Liabilities + Δ Equity − Δ Noncash Assets

What this means is that the change in cash is equal to the change in all of the other balance sheet accounts. Another way to think about this is that if we analyze the changes in all of the noncash balance sheet accounts, we will explain the change in the cash account. This, of course, is exactly what we are trying to do with the statement of cash flows.

To implement this approach, first prepare a large Cash T account, with sections for operating, investing, and financing activities. Then, prepare smaller T accounts for all of the other noncash balance sheet accounts. Insert the beginning and ending balances for each of these accounts. Once you have done this, then walk through the steps outlined on page 630. As you walk through the steps, enter debit and credit amounts into the affected accounts. When all of the changes in the T accounts have been explained, you are done. To demonstrate, we will apply this approach to the example of Computer Services Company that is presented in the chapter. Each of the adjustments in Illustration 12B-1 is numbered so you can follow them through the T accounts.

1. Post net income as a debit to the operating section of the Cash T account and a credit to Retained Earnings. Make sure to label all adjustments to the Cash T account. It also helps to number each adjustment so you can trace all of them if you make an error.
2. Post depreciation expense as a debit to the operating section of Cash and a credit to each of the appropriate accumulated depreciation accounts.
3. Post any gains or losses on the sale of property, plant, and equipment. To do this, it is best to first prepare the journal entry that was recorded at the time of the sale and then post each element of the journal entry. For example, for Computer Services the entry was:

Cash	4,000	
Accumulated Depreciation—Equipment	1,000	
Loss on Disposal of Plant Assets	3,000	
Equipment		8,000

The $4,000 cash entry is a source of cash in the investing section of the Cash account. Accumulated Depreciation—Equipment is debited for $1,000. The Loss on Disposal of Plant Assets is a debit to the operating section of the Cash T account. Finally, Equipment is credited for $8,000.

4–8. Next, post each of the changes to the noncash current asset and current liability accounts. For example, to explain the $10,000 decline in Computer Services' Accounts Receivable, credit Accounts Receivable for $10,000 and debit the operating section of the Cash T account for $10,000.

9. Analyze the changes in the noncurrent accounts. Land was purchased by issuing Bonds Payable. This requires a debit to Land for $110,000 and a credit to Bonds Payable for $110,000. Note that this is a significant noncash event that requires disclosure at the bottom of the statement of cash flows.

10. Buildings is debited for $120,000, and the investing section of the Cash T account is credited for $120,000 as a use of cash from investing.

11. Equipment is debited for $25,000 and the investing section of the Cash T account is credited for $25,000 as a use of cash from investing.

12. Common Stock is credited for $20,000 for the issuance of shares of stock, and the financing section of the Cash T account is debited for $20,000.

13. Retained Earnings is debited to reflect the payment of the $29,000 dividend, and the financing section of the Cash T account is credited to reflect the use of Cash.

Illustration 12B-1
T-account approach

Cash

	Debit	Credit	
Operating			
(1) Net income	145,000	5,000	Inventory (5)
(2) Depreciation expense	9,000	4,000	Prepaid expenses (6)
(3) Loss on equipment	3,000	2,000	Income taxes payable (8)
(4) Accounts receivable	10,000		
(7) Accounts payable	16,000		
Net cash provided by operating activities	172,000		
Investing			
(3) Sold equipment	4,000	120,000	Purchased building (10)
		25,000	Purchased equipment (11)
		141,000	Net cash used by investing activities
Financing			
(12) Issued common stock	20,000	29,000	Dividend paid (13)
		9,000	Net cash used by financing activities
	22,000		

Accounts Receivable

Debit	Credit
30,000	
	10,000 (4)
20,000	

Inventory

Debit	Credit
10,000	
(5) 5,000	
15,000	

Prepaid Expenses

Debit	Credit
1,000	
(6) 4,000	
5,000	

Land

Debit	Credit
20,000	
(9) 110,000	
130,000	

Buildings

Debit	Credit
40,000	
(10) 120,000	
160,000	

Accumulated Depreciation—Buildings

Debit	Credit
	5,000
	6,000 (2)
	11,000

Equipment

Debit	Credit
10,000	
(11) 25,000	8,000 (3)
27,000	

Accumulated Depreciation—Equipment

Debit	Credit
	1,000
(3) 1,000	3,000 (2)
	3,000

Accounts Payable

Debit	Credit
	12,000
	16,000 (7)
	28,000

Income Taxes Payable

Debit	Credit
	8,000
(8) 2,000	
	6,000

Bonds Payable

Debit	Credit
	20,000
	110,000 (9)
	130,000

Common Stock

Debit	Credit
	50,000
	20,000 (12)
	70,000

Retained Earnings

Debit	Credit
	48,000
	145,000 (1)
(13) 29,000	
	164,000

At this point, all of the changes in the noncash accounts have been explained. All that remains is to subtotal each section of the Cash T account and agree the total change in cash with the change shown on the balance sheet. Once this is done, the information in the Cash T account can be used to prepare a statement of cash flows.

Glossary

Cash debt coverage ratio *(p. 643)* A cash-based ratio used to evaluate solvency, calculated as cash provided by operating activities divided by average total liabilities.

Current cash debt coverage ratio *(p. 642)* A cash-based ratio used to evaluate liquidity, calculated as cash provided by operating activities divided by average current liabilities.

Direct method *(p. 630)* A method of determining net cash provided by operating activities by adjusting each item in the income statement from the accrual basis to the cash basis. The direct method shows operating cash receipts and payments.

Financing activities *(p. 625)* Cash flow activities that include (a) obtaining cash from issuing debt and repaying the amounts borrowed and (b) obtaining cash from stockholders, repurchasing shares, and paying dividends.

Free cash flow *(p. 639)* Cash remaining from operating activities after adjusting for capital expenditures and dividends paid.

Indirect method *(p. 630)* A method of preparing a statement of cash flows in which net income is adjusted for items that do not affect cash, to determine net cash provided by operating activities.

Investing activities *(p. 625)* Cash flow activities that include (a) cash transactions that involve the purchase or disposal of investments and property, plant, and equipment using cash and (b) lending money and collecting the loans.

Operating activities *(p. 625)* Cash flow activities that include the cash effects of transactions that create revenues and expenses and thus enter into the determination of net income.

Product life cycle *(p. 628)* A series of phases in a product's sales and cash flows over time; these phases, in order of occurrence, are introductory, growth, maturity, and decline.

Statement of cash flows *(p. 624)* A basic financial statement that provides information about the cash receipts and cash payments of an entity during a period, classified as operating, investing, and financing activities, in a format that reconciles the beginning and ending cash balances.

Comprehensive Do it!

The income statement for Kosinski Manufacturing Company contains the following condensed information.

KOSINSKI MANUFACTURING COMPANY
Income Statement
For the Year Ended December 31, 2012

Revenues		$6,583,000
Operating expenses, excluding depreciation	$4,920,000	
Depreciation expense	880,000	5,800,000
Income before income taxes		783,000
Income tax expense		353,000
Net income		$ 430,000

Included in operating expenses is a $24,000 loss resulting from the sale of machinery for $270,000 cash. Machinery was purchased at a cost of $750,000. The following balances are reported on Kosinski's comparative balance sheet at December 31.

	2012	2011
Cash	$672,000	$130,000
Accounts receivable	775,000	610,000
Inventory	834,000	867,000
Accounts payable	521,000	501,000

Income tax expense of $353,000 represents the amount paid in 2012. Dividends declared and paid in 2012 totaled $200,000.

Instructions

(a) Prepare the statement of cash flows using the indirect method.
*(b) Prepare the statement of cash flows using the direct method.

Solution to Comprehensive *Do it!*

(a)

KOSINSKI MANUFACTURING COMPANY
Statement of Cash Flows—Indirect Method
For the Year Ended December 31, 2012

Cash flows from operating activities		
Net income		$ 430,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	$ 880,000	
Loss on sale of machinery	24,000	
Increase in accounts receivable	(165,000)	
Decrease in inventory	33,000	
Increase in accounts payable	20,000	792,000
Net cash provided by operating activities		1,222,000
Cash flows from investing activities		
Sale of machinery	270,000	
Purchase of machinery	(750,000)	
Net cash used by investing activities		(480,000)
Cash flows from financing activities		
Payment of cash dividends	(200,000)	
Net cash used by financing activities		(200,000)
Net increase in cash		542,000
Cash at beginning of period		130,000
Cash at end of period		$ 672,000

*(b)

KOSINSKI MANUFACTURING COMPANY
Statement of Cash Flows—Direct Method
For the Year Ended December 31, 2012

Cash flows from operating activities		
Cash collections from customers		$6,418,000*
Cash payments:		
For operating expenses	$(4,843,000)**	
For income taxes	(353,000)	(5,196,000)
Net cash provided by operating activities		1,222,000
Cash flows from investing activities		
Sale of machinery	270,000	
Purchase of machinery	(750,000)	
Net cash used by investing activities		(480,000)
Cash flows from financing activities		
Payment of cash dividends	(200,000)	
Net cash used by financing activities		(200,000)
Net increase in cash		542,000
Cash at beginning of period		130,000
Cash at end of period		$ 672,000

Direct-Method Computations:

*Computation of cash collections from customers:	
Revenues per the income statement	$6,583,000
Deduct: Increase in accounts receivable	(165,000)
Cash collections from customers	$6,418,000
**Computation of cash payments for operating expenses:	
Operating expenses per the income statement	$4,920,000
Deduct: Loss from sale of machinery	(24,000)
Deduct: Decrease in inventories	(33,000)
Deduct: Increase in accounts payable	(20,000)
Cash payments for operating expenses	$4,843,000

Action Plan

- Apply the same data to the preparation of a statement of cash flows under both the indirect and direct methods.
- Note the similarities of the two methods: Both methods report the same information in the investing and financing sections.
- Note the differences between the two methods: The cash flows from operating activities sections report different information, but the amount of net cash provided by operating activities is the same for both methods.

Note: All Questions, Exercises, and Problems marked with an asterisk relate to material in the appendices to the chapter.

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more resources are available for practice in WileyPLUS

Self-Test Questions

Answers are on page 680.

(SO 1) **1.** Which of the following is *incorrect* about the statement of cash flows?
(a) It is a fourth basic financial statement.
(b) It provides information about cash receipts and cash payments of an entity during a period.
(c) It reconciles the ending cash account balance to the balance per the bank statement.
(d) It provides information about the operating, investing, and financing activities of the business.

(SO 1, 2) **2.** Which of the following will *not* be reported in the statement of cash flows?
(a) The net change in plant assets during the year.
(b) Cash payments for plant assets during the year.
(c) Cash receipts from sales of plant assets during the year.
(d) Sources of financing during the period.

(SO 2) **3.** The statement of cash flows classifies cash receipts and cash payments by these activities:
(a) operating and nonoperating.
(b) operating, investing, and financing.
(c) financing, operating, and nonoperating.
(d) investing, financing, and nonoperating.

(SO 2) **4.** Which is an example of a cash flow from an operating activity?
(a) Payment of cash to lenders for interest.
(b) Receipt of cash from the sale of capital stock.
(c) Payment of cash dividends to the company's stockholders.
(d) None of the above.

(SO 2) **5.** Which is an example of a cash flow from an investing activity?
(a) Receipt of cash from the issuance of bonds payable.
(b) Payment of cash to repurchase outstanding capital stock.
(c) Receipt of cash from the sale of equipment.
(d) Payment of cash to suppliers for inventory.

(SO 2) **6.** Cash dividends paid to stockholders are classified on the statement of cash flows as:
(a) operating activities.
(b) investing activities.
(c) a combination of (a) and (b).
(d) financing activities.

(SO 2) **7.** Which is an example of a cash flow from a financing activity?
(a) Receipt of cash from sale of land.
(b) Issuance of debt for cash.
(c) Purchase of equipment for cash.
(d) None of the above

8. Which of the following is *incorrect* about the statement of cash flows? (SO 2)
(a) The direct method may be used to report cash provided by operating activities.
(b) The statement shows the cash provided (used) for three categories of activity.
(c) The operating section is the last section of the statement.
(d) The indirect method may be used to report cash provided by operating activities.

9. During the introductory phase of a company's life cycle, one would normally expect to see: (SO 3)
(a) negative cash from operations, negative cash from investing, and positive cash from financing.
(b) negative cash from operations, positive cash from investing, and positive cash from financing.
(c) positive cash from operations, negative cash from investing, and negative cash from financing.
(d) positive cash from operations, negative cash from investing, and positive cash from financing.

Questions 10 through 12 apply only to the indirect method.

10. Net income is $132,000, accounts payable increased $10,000 during the year, inventory decreased $6,000 during the year, and accounts receivable increased $12,000 during the year. Under the indirect method, what is net cash provided by operations? (SO 4)
(a) $102,000. (c) $124,000.
(b) $112,000. (d) $136,000.

11. Items that are added back to net income in determining cash provided by operating activities under the indirect method do *not* include: (SO 4)
(a) depreciation expense.
(b) an increase in inventory.
(c) amortization expense.
(d) loss on sale of equipment.

12. The following data are available for Bill Mack Corporation. (SO 4)

Net income	$200,000
Depreciation expense	40,000
Dividends paid	60,000
Gain on sale of land	10,000
Decrease in accounts receivable	20,000
Decrease in accounts payable	30,000

Net cash provided by operating activities is:
(a) $160,000. (c) $240,000.
(b) $220,000. (d) $280,000.

(SO 4, 6) **13.** The following are data concerning cash received or paid from various transactions for Orange Peels Corporation.

Sale of land	$100,000
Sale of equipment	50,000
Issuance of common stock	70,000
Purchase of equipment	30,000
Payment of cash dividends	60,000

Net cash provided by investing activities is:
(a) $120,000. (c) $150,000.
(b) $130,000. (d) $190,000.

(SO 4, 6) **14.** The following data are available for Retique!

Increase in bonds payable	$100,000
Sale of investment	50,000
Issuance of common stock	60,000
Payment of cash dividends	30,000

Net cash provided by financing activities is:
(a) $90,000. (c) $160,000.
(b) $130,000. (d) $170,000.

(SO 5) **15.** The cash debt coverage ratio is:
(a) a measure of liquidity.
(b) a measure of profitability.
(c) net income divided by average total liabilities.
(d) a measure of solvency.

16. Free cash flow provides an indication of a company's ability to: (SO 5)
(a) generate net income.
(b) generate cash to pay dividends.
(c) generate cash to invest in new capital expenditures.
(d) Both (b) and (c).

Questions 17 and 18 apply only to the direct method.

***17.** The beginning balance in accounts receivable is $44,000, the ending balance is $42,000, and sales during the period are $129,000. What are cash receipts from customers? (SO 6)
(a) $127,000. (c) $131,000.
(b) $129,000. (d) $141,000.

***18.** Which of the following items is reported on a cash flow statement prepared by the direct method? (SO 6)
(a) Loss on sale of building.
(b) Increase in accounts receivable.
(c) Depreciation expense.
(d) Cash payments to suppliers.

Go to the book's companion website, **www.wiley.com/college/kimmel**, to access additional Self-Test Questions.

Questions

1. (a) What is a statement of cash flows?
(b) Brad Strath maintains that the statement of cash flows is an optional financial statement. Do you agree? Explain.

2. What questions about cash are answered by the statement of cash flows?

3. Distinguish among the three activities reported in the statement of cash flows.

4. (a) What are the sources (inflows) of cash in a statement of cash flows?
(b) What are the uses (outflows) of cash?

5. Why is it important to disclose certain noncash transactions? How should they be disclosed?

6. Wilma Flintstone and Barny Rubblestone were discussing the format of the statement of cash flows of Primo Pebble Co. At the bottom of Primo Pebble's statement of cash flows was a separate section entitled "Noncash investing and financing activities." Give three examples of significant noncash transactions that would be reported in this section.

7. Why is it necessary to use comparative balance sheets, a current income statement, and certain transaction data in preparing a statement of cash flows?

8.
(a) What are the phases of the corporate life cycle?
(b) What effect does each phase have on the numbers reported in a statement of cash flows?

9. Based on its statement of cash flows, in what stage of the product life cycle is Tootsie Roll Industries?

10. Contrast the advantages and disadvantages of the direct and indirect methods of preparing the statement of cash flows. Are both methods acceptable? Which method is preferred by the FASB? Which method is more popular?

11. When the total cash inflows exceed the total cash outflows in the statement of cash flows, how and where is this excess identified?

12. Describe the indirect method for determining net cash provided (used) by operating activities.

13. Why is it necessary to convert accrual basis net income to cash basis income when preparing a statement of cash flows?

14. The president of Pratt Company is puzzled. During the last year, the company experienced a net loss of $800,000, yet its cash increased $300,000 during the same period of time. Explain to the president how this could occur.

15. Identify five items that are adjustments to convert net income to net cash provided by operating activities under the indirect method.

16. Why and how is depreciation expense reported in a statement prepared using the indirect method?

17. Why is the statement of cash flows useful?

18. During 2012, Rusmussen Company exchanged $1,700,000 of its common stock for land. Indicate how the transaction would be reported on a statement of cash flows, if at all.

19. Give examples of accrual-based and cash-based ratios to measure each of these characteristics of a company:
(a) Liquidity. (b) Solvency.

***20.** Describe the direct method for determining net cash provided by operating activities.

***21.** Give the formulas under the direct method for computing (a) cash receipts from customers and (b) cash payments to suppliers.

***22.** Ambrosia Inc. reported sales of $2 million for 2012. Accounts receivable decreased $150,000 and accounts payable increased $300,000. Compute cash receipts from customers, assuming that the receivable and payable transactions are related to operations.

***23.** In the direct method, why is depreciation expense not reported in the cash flows from operating activities section?

Brief Exercises

Indicate statement presentation of selected transactions.
(SO 2), **K**

BE12-1 Each of these items must be considered in preparing a statement of cash flows for Nemke Co. for the year ended December 31, 2012. For each item, state how it should be shown in the statement of cash flows for 2012.
(a) Issued bonds for $200,000 cash.
(b) Purchased equipment for $180,000 cash.
(c) Sold land costing $20,000 for $20,000 cash.
(d) Declared and paid a $50,000 cash dividend.

Classify items by activities.
(SO 2), **C**

BE12-2 Classify each item as an operating, investing, or financing activity. Assume all items involve cash unless there is information to the contrary.
(a) Purchase of equipment.
(b) Sale of building.
(c) Redemption of bonds.
(d) Depreciation.
(e) Payment of dividends.
(f) Issuance of capital stock.

Identify financing activity transactions.
(SO 2), **AP**

BE12-3 The following T account is a summary of the cash account of Holmes Company.

Cash (Summary Form)

Balance, Jan. 1	8,000		
Receipts from customers	364,000	Payments for goods	200,000
Dividends on stock investments	6,000	Payments for operating expenses	140,000
Proceeds from sale of equipment	36,000	Interest paid	10,000
Proceeds from issuance of		Taxes paid	8,000
bonds payable	300,000	Dividends paid	40,000
Balance, Dec. 31	316,000		

What amount of net cash provided (used) by financing activities should be reported in the statement of cash flows?

Answer questions related to the phases of product life cycle.
(SO 3), **C**

BE12-4
(a) Why is cash from operations likely to be lower than reported net income during the growth phase?
(b) Why is cash from investing often positive during the late maturity phase and during the decline phase?

Compute cash provided by operating activities—indirect method.
(SO 4), **AP**

BE12-5 Jeremy, Inc. reported net income of $2.5 million in 2012. Depreciation for the year was $160,000, accounts receivable decreased $350,000, and accounts payable decreased $280,000. Compute net cash provided by operating activities using the indirect approach.

Compute cash provided by operating activities—indirect method.
(SO 4), **AP**

BE12-6 The net income for Bohnert Co. for 2012 was $280,000. For 2012, depreciation on plant assets was $70,000, and the company incurred a loss on sale of plant assets of $28,000. Compute net cash provided by operating activities under the indirect method.

Compute net cash provided by operating activities—indirect method.
(SO 4), **AP**

BE12-7 The comparative balance sheets for Howell Company show these changes in noncash current asset accounts: accounts receivable decrease $80,000, prepaid expenses increase $28,000, and inventories increase $40,000. Compute net cash provided by operating activities using the indirect method, assuming that net income is $186,000.

BE12-8 The T accounts for Equipment and the related Accumulated Depreciation for Anastacia Company at the end of 2012 are shown here.

Determine cash received from sale of equipment.
(SO 4), **AN**

Equipment				**Accumulated Depreciation**			
Beg. bal.	80,000	Disposals	22,000	Disposals	5,100	Beg. bal.	44,500
Acquisitions	41,600					Depr. exp.	12,000
End. bal.	99,600					End. bal.	51,400

In addition, Anastacia Company's income statement reported a loss on the sale of equipment of $3,500. What amount was reported on the statement of cash flows as "cash flow from sale of equipment"?

BE12-9 During 2009, Cypress Semiconductor Corporation reported cash provided by operations of $89,303,000, cash used in investing of $43,126,000, and cash used in financing of $7,368,000. In addition, cash spent for fixed assets during the period was $25,823,000. Average current liabilities were $251,522,000, and average total liabilities were $286,214,500. No dividends were paid. Calculate these values:
(a) Free cash flow.
(b) Current cash debt coverage ratio.
(c) Cash debt coverage ratio.

Calculate cash-based ratios.
(SO 5), **AP**

BE12-10 Colburn Corporation reported cash provided by operating activities of $412,000, cash used by investing activities of $250,000, and cash provided by financing activities of $70,000. In addition, cash spent for capital assets during the period was $200,000. Average current liabilities were $150,000, and average total liabilities were $225,000. No dividends were paid. Calculate these values:
(a) Free cash flow.
(b) Current cash debt coverage ratio.
(c) Cash debt coverage ratio.

Calculate cash-based ratios.
(SO 5), **AP**

BE12-11 Canwest Global Communications Corp. reported cash used by operating activities of $104,539,000 and revenues of $2,867,459,000 during 2009. Cash spent on plant asset additions during the year was $79,330,000. Calculate free cash flow.

Calculate cash-based ratios.
(SO 5), **AP**

BE12-12 The management of Riggs Inc. is trying to decide whether it can increase its dividend. During the current year, it reported net income of $875,000. It had cash provided by operating activities of $734,000, paid cash dividends of $92,000, and had capital expenditures of $310,000. Compute the company's free cash flow, and discuss whether an increase in the dividend appears warranted. What other factors should be considered?

Calculate and analyze free cash flow.
(SO 5), **AN**

***BE12-13** Columbia Sportswear Company had accounts receivable of $299,585,000 at January 1, 2009, and $226,548,000 at December 31, 2009. Sales revenues were $1,244,023,000 for the year 2009. What is the amount of cash receipts from customers in 2009?

Compute receipts from customers—direct method.
(SO 6), **AP**

***BE12-14** Garvey Corporation reported income taxes of $370,000,000 on its 2012 income statement and income taxes payable of $277,000,000 at December 31, 2011, and $528,000,000 at December 31, 2012. What amount of cash payments were made for income taxes during 2012?

Compute cash payments for income taxes—direct method.
(SO 6), **AP**

***BE12-15** Yandell Corporation reports operating expenses of $90,000, excluding depreciation expense of $15,000 for 2012. During the year, prepaid expenses decreased $7,200 and accrued expenses payable increased $4,400. Compute the cash payments for operating expenses in 2012.

Compute cash payments for operating expenses—direct method.
(SO 6), **AP**

Do it! Review

Do it! 12-1 Kirby Corporation had the following transactions.

Classify transactions by type of cash flow activity.
(SO 2), **C**

1. Issued $160,000 of bonds payable.
2. Paid utilities expense.
3. Issued 500 shares of preferred stock for $45,000.
4. Sold land and a building for $250,000.
5. Lent $30,000 to Dead End Corporation, receiving Dead End's 1-year, 12% note.

Classify each of these transactions by type of cash flow activity (operating, investing, or financing).

Calculate net cash from operating activities.
(SO 4), **AP**

Do it! 12-2 GW Photography reported net income of $100,000 for 2012. Included in the income statement were depreciation expense of $6,300, patent amortization expense of $4,000, and a gain on sale of equipment of $3,600. GW's comparative balance sheets show the following balances.

	12/31/12	12/31/11
Accounts receivable	$21,000	$27,000
Accounts payable	9,200	6,000

Calculate net cash provided by operating activities for GW Photography.

Compute and discuss free cash flow.
(SO 5), **AP**

Do it! 12-3 Barnish Corporation issued the following statement of cash flows for 2012.

BARNISH CORPORATION
Statement of Cash Flows—Indirect Method
For the Year Ended December 31, 2012

Cash flows from operating activities		
Net income		$59,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	$ 9,100	
Decrease in accounts receivable	9,500	
Increase in inventory	(5,000)	
Decrease in accounts payable	(2,200)	
Loss on sale of equipment	3,300	14,700
Net cash provided by operating activities		73,700
Cash flows from investing activities		
Sale of investments	3,100	
Purchase of equipment	(24,200)	
Net cash used by investing activities		(21,100)
Cash flows from financing activities		
Issuance of stock	20,000	
Payment on long-term note payable	(10,000)	
Payment for dividends	(13,000)	
Net cash used by financing activities		(3,000)
Net increase in cash		49,600
Cash at beginning of year		13,000
Cash at end of year		$62,600

(a) Compute free cash flow for Barnish Corporation.
(b) Explain why free cash flow often provides better information than "Net cash provided by operating activities."

Exercises

Classify transactions by type of activity.
(SO 2), **C**

E12-1 Strawn Corporation had these transactions during 2012.
(a) Purchased a machine for $30,000, giving a long-term note in exchange.
(b) Issued $50,000 par value common stock for cash.
(c) Issued $200,000 par value common stock upon conversion of bonds having a face value of $200,000.
(d) Declared and paid a cash dividend of $13,000.
(e) Sold a long-term investment with a cost of $15,000 for $15,000 cash.
(f) Collected $16,000 of accounts receivable.
(g) Paid $18,000 on accounts payable.

Instructions
Analyze the transactions and indicate whether each transaction resulted in a cash flow from operating activities, investing activities, financing activities, or noncash investing and financing activities.

E12-2 An analysis of comparative balance sheets, the current year's income statement, and the general ledger accounts of Gygi Corp. uncovered the following items. Assume all items involve cash unless there is information to the contrary.

Classify transactions by type of activity.
(SO 2), **C**

(a) Payment of interest on notes payable.
(b) Exchange of land for patent.
(c) Sale of building at book value.
(d) Payment of dividends.
(e) Depreciation.
(f) Conversion of bonds into common stock.
(g) Receipt of interest on notes receivable.
(h) Issuance of capital stock.
(i) Amortization of patent.
(j) Issuance of bonds for land.
(k) Purchase of land.
(l) Receipt of dividends on investment in stock.
(m) Loss on sale of land.
(n) Retirement of bonds.

Instructions
Indicate how each item should be classified in the statement of cash flows using these four major classifications: operating activity (indirect method), investing activity, financing activity, and significant noncash investing and financing activity.

E12-3 The information in the table is from the statement of cash flows for a company at four different points in time (A, B, C, and D). Negative values are presented in parentheses.

Identify phases of product life cycle.
(SO 3), **C**

	Point in Time			
	A	**B**	**C**	**D**
Cash provided by operations	$ (60,000)	$ 30,000	$120,000	$(10,000)
Cash provided by investing	(100,000)	25,000	30,000	(40,000)
Cash provided by financing	70,000	(90,000)	(50,000)	120,000
Net income	(38,000)	10,000	100,000	(5,000)

Instructions
For each point in time, state whether the company is most likely in the introductory phase, growth phase, maturity phase, or decline phase. In each case, explain your choice.

E12-4 Azen Company reported net income of $190,000 for 2012. Azen also reported depreciation expense of $35,000 and a loss of $5,000 on the sale of equipment. The comparative balance sheet shows an increase in accounts receivable of $15,000 for the year, a $17,000 increase in accounts payable, and a $4,000 increase in prepaid expenses.

Prepare the operating activities section—indirect method.
(SO 4), **AP**

Instructions
Prepare the operating activities section of the statement of cash flows for 2012. Use the indirect method.

E12-5 The current sections of Putzier Inc.'s balance sheets at December 31, 2011 and 2012, are presented here. Putzier's net income for 2012 was $153,000. Depreciation expense was $27,000.

Prepare the operating activities section—indirect method.
(SO 4), **AP**

	2012	**2011**
Current assets		
Cash	$105,000	$ 99,000
Accounts receivable	80,000	89,000
Inventory	168,000	172,000
Prepaid expenses	27,000	22,000
Total current assets	$380,000	$382,000
Current liabilities		
Accrued expenses payable	$ 15,000	$ 5,000
Accounts payable	85,000	92,000
Total current liabilities	$100,000	$ 97,000

Instructions
Prepare the net cash provided by operating activities section of the company's statement of cash flows for the year ended December 31, 2012, using the indirect method.

Prepare statement of cash flows—indirect method.
(SO 4), AP

E12-6 The following information is available for Oscar Corporation for the year ended December 31, 2012.

Beginning cash balance	$ 45,000
Accounts payable decrease	3,700
Depreciation expense	162,000
Accounts receivable increase	8,200
Inventory increase	11,000
Net income	284,100
Cash received for sale of land at book value	35,000
Cash dividends paid	12,000
Income taxes payable increase	4,700
Cash used to purchase building	289,000
Cash used to purchase treasury stock	26,000
Cash received from issuing bonds	200,000

Instructions

Prepare a statement of cash flows using the indirect method.

Prepare partial statement of cash flows—indirect method.
(SO 4), AN

E12-7 The three accounts shown below appear in the general ledger of Jurena Corp. during 2012.

Equipment

Date		Debit	Credit	Balance
Jan. 1	Balance			160,000
July 31	Purchase of equipment	70,000		230,000
Sept. 2	Cost of equipment constructed	53,000		283,000
Nov. 10	Cost of equipment sold		49,000	234,000

Accumulated Depreciation—Equipment

Date		Debit	Credit	Balance
Jan. 1	Balance			71,000
Nov. 10	Accumulated depreciation on equipment sold	16,000		55,000
Dec. 31	Depreciation for year		28,000	83,000

Retained Earnings

Date		Debit	Credit	Balance
Jan. 1	Balance			105,000
Aug. 23	Dividends (cash)	14,000		91,000
Dec. 31	Net income		72,000	163,000

Instructions

From the postings in the accounts, indicate how the information is reported on a statement of cash flows using the indirect method. The loss on sale of equipment was $8,000. (*Hint:* Cost of equipment constructed is reported in the investing activities section as a decrease in cash of $53,000.)

Prepare a statement of cash flows—indirect method, and compute cash-based ratios.
(SO 4, 5), AP

E12-8 Shown below and on the next page are comparative balance sheets for Padgett Company.

PADGETT COMPANY
Comparative Balance Sheets
December 31

Assets	2012	2011
Cash	$ 68,000	$ 22,000
Accounts receivable	88,000	76,000
Inventory	167,000	189,000
Land	80,000	100,000
Equipment	260,000	200,000
Accumulated depreciation—equipment	(66,000)	(32,000)
Total	$597,000	$555,000

Liabilities and Stockholders' Equity	2012	2011
Accounts payable	$ 39,000	$ 43,000
Bonds payable	150,000	200,000
Common stock ($1 par)	216,000	174,000
Retained earnings	192,000	138,000
Total	$597,000	$555,000

Additional information:

1. Net income for 2012 was $93,000.
2. Depreciation expense was $34,000.
3. Cash dividends of $39,000 were declared and paid.
4. Bonds payable amounting to $50,000 were redeemed for cash $50,000.
5. Common stock was issued for $42,000 cash.
6. No equipment was sold during 2012.
7. Land was sold for its book value.

Instructions

(a) Prepare a statement of cash flows for 2012 using the indirect method.
(b) Compute these cash-based ratios:
    (1) Current cash debt coverage.
    (2) Cash debt coverage.

E12-9 Presented below is 2009 information for PepsiCo, Inc. and The Coca-Cola Company.

Compare two companies by using cash-based ratios.
(SO 5), **AN**

($ in millions)	PepsiCo	Coca-Cola
Cash provided by operations	$ 6,796	$ 8,186
Average current liabilities	8,772	13,355
Average total liabilities	22,909	21,491
Net income	5,979	6,906
Sales	43,232	30,990
Capital expenditures	2,128	1,993
Dividends paid	2,732	3,800

Instructions

Using the cash-based measures presented in this chapter, compare the (a) liquidity and (b) solvency of the two companies.

E12-10 Information for two companies in the same industry, Meadow Corporation and Plain Corporation, is presented here.

Compare two companies by using cash-based ratios.
(SO 5), **AN**

	Meadow Corporation	Plain Corporation
Cash provided by operating activities	$ 80,000	$100,000
Average current liabilities	50,000	100,000
Average total liabilities	180,000	250,000
Net income	200,000	200,000
Capital expenditures	40,000	70,000
Dividends paid	5,000	10,000

Instructions

Using the cash-based measures presented in this chapter, compare the (a) liquidity and (b) solvency of the two companies.

***E12-11** Orchard Company completed its first year of operations on December 31, 2012. Its initial income statement showed that Orchard had revenues of $198,000 and operating expenses of $83,000. Accounts receivable and accounts payable at year-end were $60,000 and $23,000, respectively. Assume that accounts payable related to operating expenses. Ignore income taxes.

Compute cash provided by operating activities—direct method.
(SO 6), **AP**

Instructions
Compute net cash provided by operating activities using the direct method.

Compute cash payments—direct method.
(SO 6), **AP**

***E12-12** The 2009 income statement for McDonald's Corporation shows cost of goods sold $5,178.0 million and operating expenses (including depreciation expense of $1,216.2 million) $10,725.7 million. The comparative balance sheet for the year shows that inventory decreased $5.3 million, prepaid expenses increased $42.2 million, accounts payable (merchandise suppliers) increased $15.6 million, and accrued expenses payable increased $199.8 million.

Instructions
Using the direct method, compute (a) cash payments to suppliers and (b) cash payments for operating expenses.

Compute cash flow from operating activities—direct method.
(SO 6), **AP**

***E12-13** The 2012 accounting records of Pape Transport reveal these transactions and events.

Payment of interest	$ 10,000	Payment of salaries and wages	$ 53,000
Cash sales	48,000	Depreciation expense	16,000
Receipt of dividend revenue	18,000	Proceeds from sale of vehicles	812,000
Payment of income taxes	12,000	Purchase of equipment for cash	22,000
Net income	38,000	Loss on sale of vehicles	3,000
Payment for merchandise	97,000	Payment of dividends	14,000
Payment for land	74,000	Payment of operating expenses	28,000
Collection of accounts receivable	195,000		

Instructions
Prepare the cash flows from operating activities section using the direct method.

Prepare statement of cash flows—direct method.
(SO 6), **AP**

***E12-14** The following information is available for Washington Mills Corp. for 2012.

Cash used to purchase treasury stock	$ 48,100
Cash dividends paid	21,800
Cash paid for interest	22,400
Net income	464,300
Sales	802,000
Cash paid for taxes	99,000
Cash received from customers	566,100
Cash received from sale of building (at book value)	197,600
Cash paid for operating expenses	77,000
Beginning cash balance	11,000
Cash paid for goods and services	279,100
Cash received from issuing common stock	355,000
Cash paid to redeem bonds at maturity	200,000
Cash paid to purchase equipment	113,200

Instructions

Prepare a statement of cash flows using the direct method.

Calculate cash flows—direct method.
(SO 6), **AN**

***E12-15** The following information is taken from the 2012 general ledger of Mathias Company.

Rent	Rent expense	$ 30,000
	Prepaid rent, January 1	5,900
	Prepaid rent, December 31	7,400
Salaries	Salaries expense	$ 54,000
	Salaries payable, January 1	2,000
	Salaries payable, December 31	8,000
Sales	Revenue from sales	$160,000
	Accounts receivable, January 1	16,000
	Accounts receivable, December 31	7,000

Instructions
In each case, compute the amount that should be reported in the operating activities section of the statement of cash flows under the direct method.

Exercises: Set B and Challenge Exercises

Visit the book's companion website, at **www.wiley.com/college/kimmel,** and choose the Student Companion site to access Exercise Set B and Challenge Exercises.

Problems: Set A

P12-1A You are provided with the following transactions that took place during a recent fiscal year.

Distinguish among operating, investing, and financing activities.
(SO 2), **C**

Transaction	Where Reported on Statement	Cash Inflow, Outflow, or No Effect?
(a) Recorded depreciation expense on the plant assets.		
(b) Recorded and paid interest expense.		
(c) Recorded cash proceeds from a sale of plant assets.		
(d) Acquired land by issuing common stock.		
(e) Paid a cash dividend to preferred stockholders.		
(f) Distributed a stock dividend to common stockholders.		
(g) Recorded cash sales.		
(h) Recorded sales on account.		
(i) Purchased inventory for cash.		
(j) Purchased inventory on account.		

Instructions
Complete the table, indicating whether each item (1) should be reported as an operating (O) activity, investing (I) activity, financing (F) activity, or as a noncash (NC) transaction reported in a separate schedule, and (2) represents a cash inflow or cash outflow or has no cash flow effect. Assume use of the indirect approach.

P12-2A The following account balances relate to the stockholders' equity accounts of Patil Corp. at year-end.

Determine cash flow effects of changes in equity accounts.
(SO 4), **AN**

	2012	2011
Common stock, 10,500 and 10,000 shares, respectively, for 2012 and 2011	$160,800	$140,000
Preferred stock, 5,000 shares	125,000	125,000
Retained earnings	300,000	270,000

A small stock dividend was declared and issued in 2012. The market value of the shares was $8,800. Cash dividends were $20,000 in both 2012 and 2011. The common stock has no par or stated value.

Instructions
(a) What was the amount of net income reported by Patil Corp. in 2012?
(b) Determine the amounts of any cash inflows or outflows related to the common stock and dividend accounts in 2012.
(c) Indicate where each of the cash inflows or outflows identified in (b) would be classified on the statement of cash flows.

(a) Net income $58,800

Prepare the operating activities section—indirect method.
(SO 4), AP

P12-3A The income statement of Mazor Company is presented here.

MAZOR COMPANY
Income Statement
For the Year Ended November 30, 2012

Sales		$7,600,000
Cost of goods sold		
Beginning inventory	$1,900,000	
Purchases	4,400,000	
Goods available for sale	6,300,000	
Ending inventory	1,600,000	
Total cost of goods sold		4,700,000
Gross profit		2,900,000
Operating expenses		
Selling expenses	450,000	
Administrative expenses	700,000	1,150,000
Net income		$1,750,000

Additional information:

1. Accounts receivable decreased $380,000 during the year, and inventory decreased $300,000.
2. Prepaid expenses increased $150,000 during the year.
3. Accounts payable to suppliers of merchandise decreased $350,000 during the year.
4. Accrued expenses payable decreased $100,000 during the year.
5. Administrative expenses include depreciation expense of $110,000.

Instructions

Prepare the operating activities section of the statement of cash flows for the year ended November 30, 2012, for Mazor Company, using the indirect method.

Cash from operations $1,940,000

Prepare the operating activities section—direct method.
(SO 6), AP

***P12-4A** Data for Mazor Company are presented in P12-3A.

Instructions

Prepare the operating activities section of the statement of cash flows using the direct method.

Cash from operations $1,940,000

Prepare the operating activities section—indirect method.
(SO 4), AP

P12-5A Retzlaff Company's income statement contained the condensed information below.

RETZLAFF COMPANY
Income Statement
For the Year Ended December 31, 2012

Revenues		$970,000
Operating expenses, excluding depreciation	$614,000	
Depreciation expense	55,000	
Loss on sale of equipment	16,000	685,000
Income before income taxes		285,000
Income tax expense		56,000
Net income		$229,000

Retzlaff's balance sheet contained the comparative data at December 31.

	2012	2011
Accounts receivable	$70,000	$60,000
Accounts payable	41,000	32,000
Income taxes payable	13,000	7,000

Accounts payable pertain to operating expenses.

Instructions

Prepare the operating activities section of the statement of cash flows using the indirect method.

Cash from operations $305,000

***P12-6A** Data for Retzlaff Company are presented in P12-5A.

Prepare the operating activities section—direct method.
(SO 6), **AP**

Cash from operations $305,000

Instructions
Prepare the operating activities section of the statement of cash flows using the direct method.

P12-7A Presented below are the financial statements of Helwany Company.

Prepare a statement of cash flows—indirect method, and compute cash-based ratios.
(SO 4, 5), **AP**

HELWANY COMPANY
Comparative Balance Sheets
December 31

Assets	**2012**	**2011**
Cash	$ 35,000	$ 20,000
Accounts receivable	20,000	14,000
Inventory	28,000	20,000
Property, plant, and equipment	60,000	78,000
Accumulated depreciation	(32,000)	(24,000)
Total	$111,000	$108,000
Liabilities and Stockholders' Equity		
Accounts payable	$ 19,000	$ 15,000
Income taxes payable	7,000	8,000
Bonds payable	17,000	33,000
Common stock	18,000	14,000
Retained earnings	50,000	38,000
Total	$111,000	$108,000

HELWANY COMPANY
Income Statement
For the Year Ended December 31, 2012

Sales		$242,000
Cost of goods sold		175,000
Gross profit		67,000
Selling expenses	$18,000	
Administrative expenses	6,000	24,000
Income from operations		43,000
Interest expense		3,000
Income before income taxes		40,000
Income tax expense		8,000
Net income		$ 32,000

Additional data:

1. Depreciation expense was $17,500.
2. Dividends declared and paid were $20,000.
3. During the year equipment was sold for $8,500 cash. This equipment cost $18,000 originally and had accumulated depreciation of $9,500 at the time of sale.

Instructions
(a) Prepare a statement of cash flows using the indirect method.
(b) Compute these cash-based measures:
    (1) Current cash debt coverage ratio.
    (2) Cash debt coverage ratio.
    (3) Free cash flow.

(a) Cash from operations $38,500

***P12-8A** Data for Helwany Company are presented in P12-7A. Further analysis reveals the following.

Prepare a statement of cash flows—direct method, and compute cash-based ratios.
(SO 5, 6), **AP**

1. Accounts payable pertain to merchandise suppliers.
2. All operating expenses except for depreciation were paid in cash.
3. All depreciation expense is in the selling expense category.
4. All sales and purchases are on account.

(a) Cash from operations $38,500

Instructions

(a) Prepare a statement of cash flows for Helwany Company using the direct method.
(b) Compute these cash-based measures:
    (1) Current cash debt coverage ratio.
    (2) Cash debt coverage ratio.
    (3) Free cash flow.

Prepare a statement of cash flows—indirect method.
(SO 4), AP

P12-9A Condensed financial data of Lemere Inc. follow.

LEMERE INC.
Comparative Balance Sheets
December 31

Assets	**2012**	**2011**
Cash	$ 80,800	$ 48,400
Accounts receivable	87,800	38,000
Inventory	112,500	102,850
Prepaid expenses	28,400	26,000
Long-term investments	138,000	109,000
Plant assets	285,000	242,500

Accrued expenses payable	16,500	21,000
Bonds payable	110,000	146,000
Common stock	220,000	175,000
Retained earnings	234,000	105,450
Total	$682,500	$514,750

LEMERE INC.
Income Statement Data
For the Year Ended December 31, 2012

Sales		$388,460
Less:		
Cost of goods sold	$135,460	
Operating expenses, excluding depreciation	12,410	
Depreciation expense	46,500	
Income taxes	27,280	
Interest expense	4,730	
Loss on sale of plant assets	7,500	233,880
Net income		$154,580

Additional information:

1. New plant assets costing $100,000 were purchased for cash during the year.
2. Old plant assets having an original cost of $57,500 and accumulated depreciation of $48,500 were sold for $1,500 cash.
3. Bonds payable matured and were paid off at face value for cash.
4. A cash dividend of $26,030 was declared and paid during the year.

Cash from operations $176,930

Instructions

Prepare a statement of cash flows using the indirect method.

Prepare a statement of cash flows—direct method.
(SO 6), AP

***P12-10A** Data for Lemere Inc. are presented in P12-9A. Further analysis reveals that accounts payable pertain to merchandise creditors.

Cash from operations $176,930

Instructions

Prepare a statement of cash flows for Lemere Inc. using the direct method.

P12-11A The comparative balance sheets for Vanco Company as of December 31 are presented below.

Prepare a statement of cash flows—indirect method.
(SO 4), **AP**

VANCO COMPANY
Comparative Balance Sheets
December 31

Assets	**2012**	**2011**
Cash	$ 68,000	$ 45,000
Accounts receivable	50,000	58,000
Inventory	151,450	142,000
Prepaid expenses	15,280	21,000
Land	145,000	130,000
Equipment	225,000	155,000
Accumulated depreciation—equipment	(45,000)	(35,000)
Buildings	200,000	200,000
Accumulated depreciation—buildings	(60,000)	(40,000)
Total	$749,730	$676,000
Liabilities and Stockholders' Equity		
Accounts payable	$ 44,730	$ 36,000
Bonds payable	300,000	300,000
Common stock, $1 par	200,000	160,000
Retained earnings	205,000	180,000
Total	$749,730	$676,000

Additional information:

1. Operating expenses include depreciation expense of $42,000.
2. Land was sold for cash at book value.
3. Cash dividends of $12,000 were paid.
4. Net income for 2012 was $37,000.
5. Equipment was purchased for $92,000 cash. In addition, equipment costing $22,000 with a book value of $10,000 was sold for $8,000 cash.
6. 40,000 shares of $1 par value common stock were issued in exchange for land with a fair value of $40,000.

Instructions

Prepare a statement of cash flows for the year ended December 31, 2012, using the indirect method.

Cash from operations $94,000

P12-12A You are provided with the following transactions that took place during the year.

Identify the impact of transactions on ratios.
(SO 5), **C**

Transactions	**Free Cash Flow ($125,000)**	**Current Cash Debt Coverage Ratio (0.5 times)**	**Cash Debt Coverage Ratio (0.3 times)**
(a) Recorded credit sales $2,500.			
(b) Collected $1,900 owed by customers.			
(c) Paid amount owed to suppliers $2,750.			
(d) Recorded sales returns of $500 and credited the customer's account.			
(e) Purchased new equipment $5,000; signed a long-term note payable for the cost of the equipment.			
(f) Purchased a patent and paid $65,000 cash for the asset.			

Instructions

For each transaction listed above, indicate whether it will increase (I), decrease (D), or have no effect (NE) on the ratios.

Problems: Set B

Distinguish among operating, investing, and financing activities.
(SO 2), C

P12-1B You are provided with the following transactions that took place during a recent fiscal year.

Transaction	Where Reported on Statement	Cash Inflow, Outflow, or No Effect?
(a) Recorded depreciation expense on the plant assets.		
(b) Incurred a loss on disposal of plant assets.		
(c) Acquired a building by paying cash.		
(d) Made principal repayments on a mortgage.		
(e) Issued common stock.		
(f) Purchased shares of another company to be held as a long-term equity investment.		
(g) Paid dividends to common stockholders.		
(h) Sold inventory on credit. The company uses a perpetual inventory system.		
(i) Purchased inventory on credit.		
(j) Paid wages to employees.		

Instructions

Complete the table indicating whether each item (1) should be reported as an operating (O) activity, investing (I) activity, financing (F) activity, or as a noncash (NC) transaction reported in a separate schedule, and (2) represents a cash inflow or cash outflow or has no cash flow effect. Assume use of the indirect approach.

Determine cash flow effects of changes in plant asset accounts.
(SO 4), AN

P12-2B The following selected account balances relate to the plant asset accounts of Karas Inc. at year-end.

	2012	2011
Accumulated depreciation—buildings	$337,500	$300,000
Accumulated depreciation—equipment	144,000	96,000
Buildings	750,000	750,000
Depreciation expense	99,500	85,500
Equipment	300,000	240,000
Land	100,000	70,000
Loss on sale of plant assets	6,000	0

Additional information:

1. Karas purchased $85,000 of equipment and $30,000 of land for cash in 2012.
2. Karas also sold equipment in 2012.
3. Depreciation expense in 2012 was $37,500 on building and $62,000 on equipment.

Instructions

(a) Cash proceeds $5,000

(a) Determine the amounts of any cash inflows or outflows related to the plant asset accounts in 2012.

(b) Indicate where each of the cash inflows or outflows identified in (a) would be classified on the statement of cash flows.

Prepare the operating activities section—indirect method.
(SO 4), AP

P12-3B The income statement of Hauser Company is presented on the next page.

Additional information:

1. Accounts receivable decreased $290,000 during the year, and inventory increased $140,000.
2. Prepaid expenses increased $175,000 during the year.
3. Accounts payable to merchandise suppliers increased $63,000 during the year.
4. Accrued expenses payable increased $145,000 during the year.

HAUSER COMPANY
Income Statement
For the Year Ended December 31, 2012

Sales		$5,200,000
Cost of goods sold		
Beginning inventory	$1,780,000	
Purchases	3,430,000	
Goods available for sale	5,210,000	
Ending inventory	1,920,000	
Total cost of goods sold		3,290,000
Gross profit		1,910,000
Operating expenses		
Selling expenses	420,000	
Administrative expense	525,000	
Depreciation expense	105,000	
Amortization expense	15,000	1,065,000
Net income		$ 845,000

Instructions
Prepare the operating activities section of the statement of cash flows for the year ended December 31, 2012, for Hauser Company, using the indirect method.

Cash from operations $1,148,000

***P12-4B** Data for Hauser Company are presented in P12-3B.

Prepare the operating activities section—direct method.
(SO 6), **AP**

Instructions
Prepare the operating activities section of the statement of cash flows using the direct method.

Cash from operations $1,148,000

P12-5B The income statement of Zamora Inc. reported the following condensed information.

Prepare the operating activities section—indirect method.
(SO 4), **AP**

ZAMORA INC.
Income Statement
For the Year Ended December 31, 2012

Revenues	$560,000
Operating expenses	400,000
Income from operations	160,000
Income tax expense	47,000
Net income	$113,000

Zamora's balance sheet contained these comparative data at December 31.

	2012	2011
Accounts receivable	$60,000	$75,000
Accounts payable	35,000	48,000
Income taxes payable	14,000	6,000

Zamora has no depreciable assets. Accounts payable pertain to operating expenses.

Instructions
Prepare the operating activities section of the statement of cash flows using the indirect method.

Cash from operations $123,000

***P12-6B** Data for Zamora Inc. are presented in P12-5B.

Prepare the operating activities section—direct method.
(SO 6), **AP**

Instructions
Prepare the operating activities section of the statement of cash flows using the direct method.

Cash from operations $123,000

P12-7B Shown on the next page are the financial statements of Klemmer Company.

Prepare a statement of cash flows—indirect method, and compute cash-based ratios.
(SO 4, 5), AP

KLEMMER COMPANY
Comparative Balance Sheets
December 31

Assets		**2012**		**2011**
Cash		$ 25,000		$ 33,000
Accounts receivable		23,000		14,000
Inventory		41,000		25,000
Property, plant, and equipment	$ 73,000		$ 78,000	
Less: Accumulated depreciation	(27,000)	46,000	(24,000)	54,000
Total		$135,000		$126,000
Liabilities and Stockholders' Equity				
Accounts payable		$ 23,000		$ 46,000
Income taxes payable		26,000		23,000
Bonds payable		20,000		10,000
Common stock		25,000		25,000
Retained earnings		41,000		22,000
Total		$135,000		$126,000

KLEMMER COMPANY
Income Statement
For the Year Ended December 31, 2012

Sales		$295,000
Cost of goods sold		194,000
Gross profit		101,000
Selling expenses	$28,000	
Administrative expenses	9,000	37,000
Income from operations		64,000
Interest expense		7,000
Income before income taxes		57,000
Income tax expense		13,000
Net income		$ 44,000

Additional data:

1. Depreciation expense was $6,000.
2. Dividends of $25,000 were declared and paid.
3. During the year, equipment was sold for $10,000 cash. This equipment cost $13,000 originally and had accumulated depreciation of $3,000 at the time of sale.
4. Additional equipment was purchased for $8,000 cash.

Instructions

(a) Cash from operations $5,000

(a) Prepare a statement of cash flows using the indirect method.
(b) Compute these cash-based measures:
 (1) Current cash debt coverage ratio.
 (2) Cash debt coverage ratio.
 (3) Free cash flow.

Prepare a statement of cash flows—direct method, and compute cash-based ratios.
(SO 5, 6), AP

***P12-8B** Data for Klemmer Company are presented in P12-7B. Further analysis reveals the following.

1. Accounts payable pertains to merchandise creditors.
2. All operating expenses except for depreciation are paid in cash.
3. All depreciation expense is in the selling expense category.
4. All sales and purchases are on account.

Instructions

(a) Cash from operations $5,000

(a) Prepare a statement of cash flows using the direct method.
(b) Compute these cash-based measures:
 (1) Current cash debt coverage ratio.
 (2) Cash debt coverage ratio.
 (3) Free cash flow.

P12-9B Condensed financial data of Cadet Company are shown below.

Prepare a statement of cash flows—indirect method.
(SO 4), **AP**

CADET COMPANY
Comparative Balance Sheets
December 31

Assets	**2012**	**2011**
Cash	$ 78,700	$ 33,400
Accounts receivable	72,970	37,000
Inventory	121,900	102,650
Long-term investments	89,500	107,000
Plant assets	320,000	205,000
Accumulated depreciation	(49,500)	(40,000)
Total	$633,570	$445,050
Liabilities and Stockholders' Equity		
Accounts payable	$ 57,700	$ 48,280

Financial Reporting and Analysis

FINANCIAL REPORTING PROBLEM: *Tootsie Roll Industries, Inc.*

BYP12-1 The financial statements of Tootsie Roll Industries are presented in Appendix A.

Instructions

Answer the following questions.

(a) What was the amount of net cash provided by operating activities for 2009? For 2008?
(b) What was the amount of increase or decrease in cash and cash equivalents for the year ended December 31, 2009?
(c) Which method of computing net cash provided by operating activities does Tootsie Roll use?
(d) From your analysis of the 2009 statement of cash flows, was the change in accounts receivable a decrease or an increase? Was the change in inventories a decrease or an increase? Was the change in accounts payable a decrease or an increase?
(e) What was the net cash used by investing activities for 2009?
(f) What was the amount of interest paid in 2009? What was the amount of income taxes paid in 2009?

COMPARATIVE ANALYSIS PROBLEM: *Tootsie Roll vs. Hershey*

BYP12-2 The financial statements of The Hershey Company are presented in Appendix B, following the financial statements for Tootsie Roll Industries in Appendix A.

Instructions

(a) Based on the information in these financial statements, compute these 2009 ratios for each company:
    (1) Current cash debt coverage.
    (2) Cash debt coverage.
(b) What conclusions about the management of cash can you draw from these data?

RESEARCH CASE

BYP12-3 The March 4, 2010, edition of the *Wall Street Journal Online* contains an article by Jeffrey McCracken and Tom McGinty entitled "With Fistfuls of Cash, Firms on Hunt."

Instructions

Read the article and answer the following questions.

(a) How much cash did the nonfinancial (that is, nonbank-like) firms in the Standard and Poor's 500 have at the end of 2009? How big an increase in cash did this represent over the prior year?
(b) What reasons are given in the article for why companies might not want to keep hoarding cash?
(c) What steps did Alcoa take to try to increase the company's cash? Were these efforts successful?
(d) Often, companies issue shares of stock to acquire other companies. This represents a significant noncash transaction. At the time the article was written, why were many companies using cash rather than stock to acquire other companies?
(e) In addition to acquisitions, what other steps can companies take to reduce their cash balances?

INTERPRETING FINANCIAL STATEMENTS

BYP12-4 The incredible growth of Amazon.com has put fear into the hearts of traditional retailers. Its stock price has soared to amazing levels. However, in 2001 many investors were very concerned about whether Amazon would survive since it had never earned a profit, and it was burning through cash. Some investors sold, but others decided to hold on to their investment in the company's stock. The following information is taken from the 2001 and 2004 financial statements of Amazon.com.

($ in millions)	2001	2004
Current assets	$1,207.9	$2,539.4
Total assets	1,637.5	3,248.5
Current liabilities	921.4	1,620.4
Total liabilities	3,077.5	5,096.1
Cash provided by operations	(119.8)	566.6
Capital expenditures	50.3	89.1
Dividends paid	0	0
Net income (loss)	(567.3)	588.5
Average current liabilities	948.2	1,436.6
Average total liabilities	3,090.0	4,773.4

Instructions

(a) Calculate the current ratio and current cash debt coverage ratio for Amazon.com for 2001 and 2004, and discuss its comparative liquidity.

(b) Calculate the cash debt coverage ratio and the debt to total assets ratio for Amazon.com for 2001 and 2004, and discuss its comparative solvency.

(c) Amazon.com has avoided purchasing large warehouses. Instead, it has used those of others. In order to increase customer satisfaction Amazon may have to build its own warehouses. Calculate free cash flow for Amazon.com for 2001 and 2004, and discuss its ability to purchase warehouses and to finance expansion from internally generated cash.

(d) Based on your findings in parts (a) through (c), can you conclude whether or not Amazon.com's amazing stock price is justified?

FINANCIAL ANALYSIS ON THE WEB

BYP12-5 ***Purpose:*** Use the Internet to view SEC filings.

Address: **biz.yahoo.com/i**, or go to **www.wiley.com/college/kimmel**

Steps

1. Enter a company's name.
2. Choose **Quote**. Answer questions (a) and (b).
3. Choose **Profile**; then choose **SEC**. Answer questions (c) and (d).

Instructions

Answer the following questions.

(a) What company did you select?

(b) What is its stock symbol? What is its selling price?

(c) What recent SEC filings are available for your viewing?

(d) Which filing is the most recent? What is the date?

Critical Thinking

DECISION MAKING ACROSS THE ORGANIZATION

BYP12-6 Bob Soakup and Clare Karr are examining the following statement of cash flows for Baldwin Company for the year ended January 31, 2012.

BALDWIN COMPANY
Statement of Cash Flows
For the Year Ended January 31, 2012

Sources of cash	
From sales of merchandise	$385,000
From sale of capital stock	405,000
From sale of investment (purchased below)	80,000
From depreciation	55,000
From issuance of note for truck	20,000
From interest on investments	6,000
Total sources of cash	951,000

(continues on next page)

Uses of cash	
For purchase of fixtures and equipment	320,000
For merchandise purchased for resale	258,000
For operating expenses (including depreciation)	170,000
For purchase of investment	75,000
For purchase of truck by issuance of note	20,000
For purchase of treasury stock	10,000
For interest on note payable	3,000
Total uses of cash	856,000
Net increase in cash	$ 95,000

Bob claims that Baldwin's statement of cash flows is an excellent portrayal of a superb first year with cash increasing $95,000. Clare replies that it was not a superb first year. Rather, she says, the year was an operating failure, that the statement is presented incorrectly, and that $95,000 is not the actual increase in cash. The cash balance at the beginning of the year was $140,000.

Instructions
With the class divided into groups, answer the following.
(a) Using the data provided, prepare a statement of cash flows in proper form using the indirect method. The only noncash items in the income statement are depreciation and the gain from the sale of the investment.
(b) With whom do you agree, Bob or Clare? Explain your position.

COMMUNICATION ACTIVITY

BYP12-7 Alex Mabry, the owner-president of Computer Services Company, is unfamiliar with the statement of cash flows that you, as his accountant, prepared. He asks for further explanation.

Instructions
Write him a brief memo explaining the form and content of the statement of cash flows as shown in Illustration 12-14 (page 638).

ETHICS CASE

BYP12-8 Riverside Automotive Corp. is a medium-sized wholesaler of automotive parts. It has 10 stockholders who have been paid a total of $1 million in cash dividends for 8 consecutive years. The board's policy requires that, for this dividend to be declared, net cash provided by operating activities as reported in Riverside Automotive's current year's statement of cash flows must exceed $1 million. President and CEO Carl Stewart's job is secure so long as he produces annual operating cash flows to support the usual dividend.

At the end of the current year, controller Mark Heger presents president Carl Stewart with some disappointing news: The net cash provided by operating activities is calculated by the indirect method to be only $970,000. The president says to Mark, "We must get that amount above $1 million. Isn't there some way to increase operating cash flow by another $30,000?" Mark answers, "These figures were prepared by my assistant. I'll go back to my office and see what I can do." The president replies, "I know you won't let me down, Mark."

Upon close scrutiny of the statement of cash flows, Mark concludes that he can get the operating cash flows above $1 million by reclassifying a $60,000, 2-year note payable listed in the financing activities section as "Proceeds from bank loan—$60,000." He will report the note instead as "Increase in payables—$60,000" and treat it as an adjustment of net income in the operating activities section. He returns to the president, saying, "You can tell the board to declare their usual dividend. Our net cash flow provided by operating activities is $1,030,000." "Good man, Mark! I knew I could count on you," exults the president.

Instructions
(a) Who are the stakeholders in this situation?
(b) Was there anything unethical about the president's actions? Was there anything unethical about the controller's actions?
(c) Are the board members or anyone else likely to discover the misclassification?

"ALL ABOUT YOU" ACTIVITY

BYP12-9 In this chapter, you learned that companies prepare a statement of cash flows in order to keep track of their sources and uses of cash and to help them plan for their future cash needs. Planning for your own short- and long-term cash needs is every bit as important as it is for a company.

Instructions

Read the article "Financial 'Uh-oh'? No Problem," at **www.fool.com/savings/shortterm/02.htm**, and answer the following questions.

(a) Describe the three factors that determine how much money you should set aside for short-term needs.

(b) How many months of living expenses does the article suggest to set aside?

(c) Estimate how much you should set aside based upon your current situation. Are you closer to Cliff's scenario or to Prudence's?

FASB CODIFICATION ACTIVITY

BYP12-10 If your school has a subscription to the FASB Codification, go to **http://aaahq.org/ascLogin.cfm** to log in and prepare responses to the following. Use the Master Glossary to determine the proper definitions.

(a) What are cash equivalents?

(b) What are financing activities?

(c) What are investing activities?

(d) What are operating activities?

(e) What is the primary objective for the statement of cash flow? Is working capital the basis for meeting this objective?

(f) Do companies need to disclose information about investing and financing activities that do not affect cash receipts or cash payments? If so, how should such information be disclosed?

Answers to Insight and Accounting Across the Organization Questions

p. 626 Net *What*? Q: In general, why do differences exist between net income and net cash provided by operating activities? **A:** The differences are explained by differences in the timing of the reporting of revenues and expenses under accrual accounting versus cash. Under accrual accounting, companies report revenues when earned, even if cash hasn't been received, and they report expenses when incurred, even if cash hasn't been paid.

p. 629 Operating with Negative Cash Q: Why do companies have negative cash from operations during the introductory phase? **A:** During the introductory phase, companies usually spend more on inventory than the amount expensed for cost of goods sold because they are building up inventory and their cash collections frequently lag the amount reported for sales. Therefore, even if companies are reporting positive net income, they frequently report negative cash from operations.

Answers to Self-Test Questions

IFRS A Look at IFRS

As in GAAP, the statement of cash flows is a required statement for IFRS. In addition, the content and presentation of an IFRS statement of cash flows is similar to the one used for GAAP. However, the disclosure requirements related to the statement of cash flows are more extensive under GAAP. *IAS 7* ("Cash Flow Statements") provides the overall IFRS requirements for cash flow information.

KEY POINTS

- Companies preparing financial statements under IFRS must prepare a statement of cash flows as an integral part of the financial statements.
- Both IFRS and GAAP require that the statement of cash flows should have three major sections—operating, investing, and financing—along with changes in cash and cash equivalents.

- Similar to GAAP, the cash flow statement can be prepared using either the indirect or direct method under IFRS. In both U.S. and international settings, companies choose for the most part to use the indirect method for reporting net cash flows from operating activities.
- The definition of cash equivalents used in IFRS is similar to that used in GAAP. A major difference is that in certain situations, bank overdrafts are considered part of cash and cash equivalents under IFRS (which is not the case in GAAP). Under GAAP, bank overdrafts are classified as financing activities in the statement of cash flows and are reported as liabilities on the balance sheet.
- IFRS requires that noncash investing and financing activities be excluded from the statement of cash flows. Instead, these noncash activities should be reported elsewhere. This requirement is interpreted to mean that noncash investing and financing activities should be disclosed in the notes to the financial statements instead of in the financial statements. Under GAAP, companies may present this information on the face of the cash flow statement.
- One area where there can be substantial differences between IFRS and GAAP relates to the classification of interest, dividends, and taxes. The following table indicates the differences between the two approaches.

Item	IFRS	GAAP
Interest paid	Operating or financing	Operating
Interest received	Operating or investing	Operating
Dividends paid	Operating or financing	Financing
Dividends received	Operating or investing	Operating
Taxes paid	Operating—unless specific identification with financing or investing activity	Operating

- Under IFRS, some companies present the operating section in a single line item, with a full reconciliation provided in the notes to the financial statements. This presentation is not seen under GAAP.
- Similar to GAAP, under IFRS companies must disclose the amount of taxes and interest paid. Under GAAP, companies disclose this in the notes to the financial statements. Under IFRS, some companies disclose this information in the notes, but others provide individual line items on the face of the statement. In order to provide this information on the face of the statement, companies first add back the amount of interest expense and tax expense (similar to adding back depreciation expense) and then further down the statement they subtract the cash amount paid for interest and taxes. This treatment can be seen in the statement of cash flows provided for Zetar in Appendix C.

LOOKING TO THE FUTURE

Presently, the FASB and the IASB are involved in a joint project on the presentation and organization of information in the financial statements. One interesting approach, revealed in a published proposal from that project, is that in the future the income statement and balance sheet would adopt headings similar to those of the statement of cash flows. That is, the income statement and balance sheet would be broken into operating, investing, and financing sections.

With respect to the cash flow statement specifically, the notion of *cash equivalents* will probably not be retained. That is, cash equivalents will not be combined with cash but instead will be reported as a form of highly liquid, low-risk investment. The definition of cash in the existing literature would be retained, and the statement of cash flows would present information on changes in cash only. In addition, the FASB favors presentation of operating cash flows using the direct method only. However, the majority of IASB members express a preference for not requiring use of the direct method of reporting operating cash flows. The two Boards will have to resolve their differences in this area in order to issue a converged standard for the statement of cash flows.

IFRS Self-Test Questions

1. Under IFRS, interest paid can be reported as:
(a) only a financing element.
(b) a financing element or an investing element.
(c) a financing element or an operating element.
(d) only an operating element.

2. IFRS requires that noncash items:
   (a) be reported in the section to which they relate, that is, a noncash investing activity would be reported in the investing section.
   (b) be disclosed in the notes to the financial statements.
   (c) do not need to be reported.
   (d) be treated in a fashion similar to cash equivalents.

3. In the future, it appears likely that:
   (a) the income statement and balance sheet will have headings of operating, investing, and financing, much like the statement of cash flows.
   (b) cash and cash equivalents will be combined in a single line item.
   (c) the IASB will not allow companies to use the direct approach to the statement of cash flows.
   (d) None of the above.

4. Under IFRS:
   (a) taxes are always treated as an operating item.
   (b) the income statement uses the headings operating, investing, and financing.
   (c) dividends received can be either an operating or investing item.
   (d) dividends paid can be either an operating or investing item.

5. Which of the following is *correct*?
   (a) Under IFRS, the statement of cash flows is optional.
   (b) IFRS requires use of the direct approach in preparing the statement of cash flows.
   (c) The majority of companies following GAAP and the majority following IFRS employ the indirect approach to the statement of cash flows.
   (d) Cash and cash equivalents are reported as separate line items under IFRS.

IFRS Concepts and Application

IFRS 12-1 Discuss the differences that exist in the treatment of bank overdrafts under GAAP and IFRS.

IFRS12-2 Describe the treatment of each of the following items under IFRS versus GAAP.
   (a) Interest paid.
   (b) Interest received.
   (c) Dividends paid.
   (d) Dividends received.

IFRS 12-3 Explain how the treatment of cash equivalents will probably change in the future.

INTERNATIONAL FINANCIAL REPORTING PROBLEM: *Zetar plc*

IFRS12-4 The financial statements of Zetar plc are presented in Appendix C. The company's complete annual report, including the notes to its financial statements, is available at **www.zetarplc.com**.

Instructions
Use the company's annual report to answer the following questions.
   (a) In which section (operating, investing, or financing) does Zetar report interest paid?
   (b) Explain why the amount that Zetar reports for cash and cash equivalents in its statement of cash flows is negative.
   (c) If Zetar reported under GAAP rather than IFRS, how would its treatment of bank overdrafts differ?
   (d) Zetar's statement of cash flows reports negative "net movement in working capital" in 2009 of £2,469 (in thousands). According to the statement of cash flows, what were the components of this "net movement"?

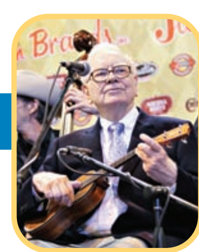
study objectives

After studying this chapter, you should be able to:

1. Understand the concept of sustainable income.
2. Indicate how irregular items are presented.
3. Explain the concept of comprehensive income.
4. Describe and apply horizontal analysis.
5. Describe and apply vertical analysis.
6. Identify and compute ratios used in analyzing a company's liquidity, solvency, and profitability.
7. Understand the concept of quality of earnings.

the navigator

feature story



IT PAYS TO BE PATIENT

A recent issue of *Forbes* magazine listed Warren Buffett as the richest person in the world. His estimated wealth was $62 billion, give or take a few million. How much is $62 billion? If you invested $62 billion in an investment earning just 4%, you could spend $6.8 million per day—every day—forever. How did Mr. Buffett amass this wealth? Through careful investing.

However, if you think you might want to follow Mr. Buffett's example and transform your humble nest egg into a mountain of cash, be warned: His techniques have been widely circulated and emulated, but never practiced with the same degree of success.

Mr. Buffett epitomizes a "value investor." To this day, he applies the same basic techniques he learned in the 1950s from the great value investor Benjamin Graham. That means he spends his time looking for companies that have good long-term potential but are currently underpriced. He invests in companies that have low exposure to debt and that reinvest their earnings for future growth. He does not get caught up in fads or the latest trends. Instead, he looks for companies in industries with sound economics and ones that have high returns on stockholders' equity. He looks for steady earnings trends and high margins.

Mr. Buffett sat out on the dot-com mania in the 1990s. When other investors put lots of money into fledgling high-tech firms, Mr. Buffett didn't bite because he did not find dot-com companies that met his criteria. He didn't get to enjoy the stock price boom on the way up, but on the other hand, he didn't have to ride the price back down to Earth. Instead, when the dot-com bubble burst and nearly everyone else was suffering from investment shock, Mr. Buffett swooped in and scooped up deals on companies that he had been following for years.

So, how does Mr. Buffett spend his money? Basically, he doesn't! He still lives in the same house that he purchased in Omaha, Nebraska, in 1958 for $31,500. He still drives his own car (a Cadillac DTS). And, in case you were thinking that his kids are riding the road to Easy Street, think again. Mr. Buffett has committed to giving virtually all of his money to charity before he dies.

Given that neither you nor anyone else will be inheriting Mr. Buffett's riches, you should probably start honing your financial analysis skills. A good way for you to begin your career as a successful investor is to master the fundamentals of financial analysis discussed in this chapter.

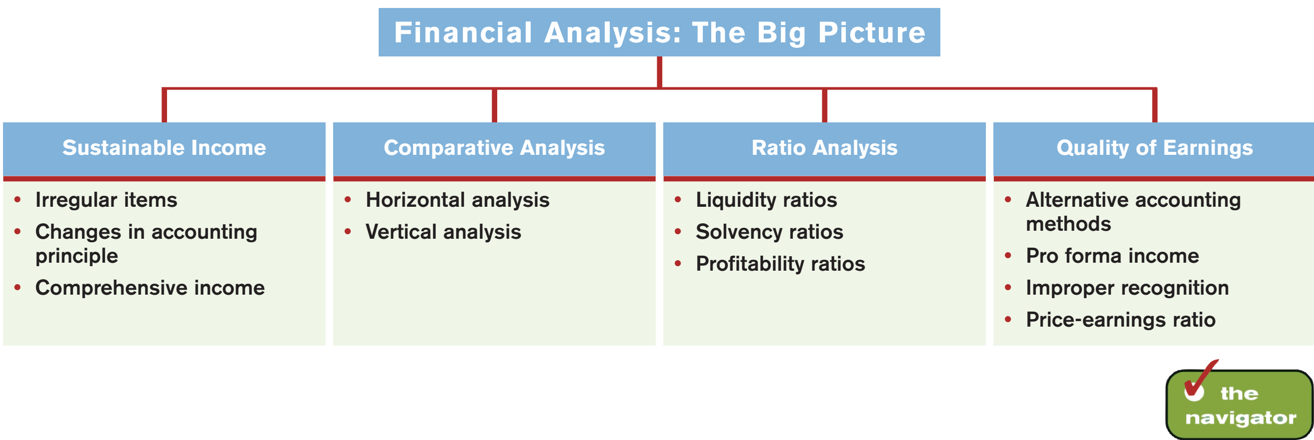
- **High Ratings Can Bring Low Returns** *(p. 701)*
- **Are Annual Reports Worth Their Weight?** *(p. 704)*

preview of chapter 13

We can all learn an important lesson from Warren Buffett: Study companies carefully if you wish to invest. Do not get caught up in fads but instead find companies that are financially healthy. Using some of the basic decision tools presented in this book, you can perform a rudimentary analysis on any U.S. company and draw basic conclusions about its financial health. Although it would not be wise for you to bet your life savings on a company's stock, relying solely on your current level of knowledge, we strongly encourage you to practice your new skills wherever possible. Only with practice will you improve your ability to interpret financial numbers.

Before unleashing you on the world of high finance, we will present a few more important concepts and techniques, as well as provide you with one more comprehensive review of corporate financial statements. We use all of the decision tools presented in this textbook to analyze a single company, with comparisons to a competitor and industry averages.

The content and organization of Chapter 13 are as follows.



the navigator

Sustainable Income

study objective 1

Understand the concept of sustainable income.

Ultimately, the value of a company is a function of its future cash flows. When analysts use this year's net income to estimate future cash flows, they must make sure that this year's net income does not include irregular (i.e., out of the ordinary) revenues, expenses, gains, or losses. Net income adjusted for irregular items is referred to as **sustainable income**. **Sustainable income is the most likely level of income to be obtained in the future.** Sustainable income differs from actual net income by the amount of irregular revenues, expenses, gains, and losses included in this year's net income.

Users are interested in sustainable income because it helps them derive an estimate of future earnings without the "noise" of irregular items. For example, suppose Rye Corporation reports that this year's net income is $500,000 but included in that amount is a once-in-a-lifetime gain of $400,000. In estimating next year's net income for Rye Corporation, we would likely ignore this $400,000 gain and estimate that next year's net income will be in the neighborhood of $100,000. That is, based on this year's results, the company's sustainable income is roughly $100,000. Therefore, identifying irregular items is important if you are going to use reported earnings to estimate a company's value.

In earlier chapters, you learned how to prepare and use a basic multiple-step income statement. In this chapter, we will explain additional components of the income statement as well as a broader measure of performance called *comprehensive income*. Illustration 13-1 presents the components of the income statement and comprehensive income; new items are presented in red. When estimating future cash flows, analysts must consider the implications that each of these components has for future cash flows.

Illustration 13-1
Components of the income statement

Income Statement	
Sales	$XX
Cost of goods sold	XX
Gross profit	XX
Operating expenses	XX
Income from operations	XX
Other revenues (expenses) and gains (losses)	XX
Income before income taxes	XX
Income tax expense	XX
Income before irregular items	XX
Discontinued operations (net of tax)	XX
Extraordinary items (net of tax)	XX
Net income	XX
Other comprehensive income items (net of tax)	XX
Comprehensive income	$XX

IRREGULAR ITEMS

study objective 2
Indicate how irregular items are presented.

As an aid in determining sustainable income, we identify irregular items by type on the income statement. There, companies report two types of irregular items:

1. Discontinued operations
2. Extraordinary items

Irregular items are reported net of income taxes. That is, a company first calculates income tax expense for the income before irregular items. Then, it calculates income tax expense for each individual irregular item. The general concept is, "Let the tax follow the income or loss."

Discontinued Operations

To downsize its operations, General Dynamics Corp. sold its missile business to Hughes Aircraft Co. for $450 million. In its income statement, General Dynamics reported the sale in a separate section entitled "Discontinued operations." **Discontinued operations** refers to the disposal of a significant component of a business, such as the elimination of a major class of customers or an entire activity. When the disposal of a significant component occurs, the income statement should report the gain (or loss) from discontinued operations, net of tax.

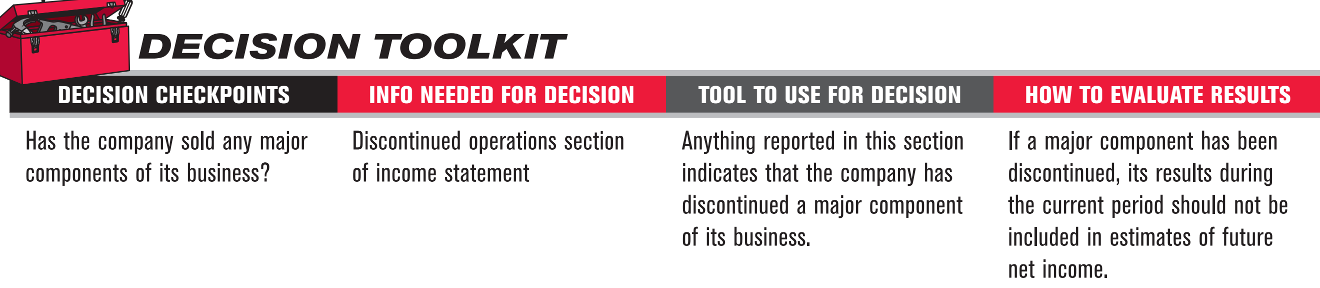
To illustrate, assume that Rozek Inc. has revenues of $2.5 million and expenses of $1.7 million from continuing operations in 2012. The company therefore has income before income taxes of $800,000. During 2012, the company discontinued and sold its unprofitable chemical division. The loss on disposal of the chemical division (net of $90,000 tax savings) was $210,000. Illustration 13-2 shows the income statement presentation, assuming a 30% tax rate on income before income taxes.

Illustration 13-2
Statement presentation of discontinued operations

ROZEK INC.
Income Statement (partial)
For the Year Ended December 31, 2012

Income before income taxes	$ 800,000
Income tax expense	240,000
Income before irregular items	560,000
Discontinued operations	
Loss from disposal of chemical division, net of $90,000 income tax savings	**(210,000)**
Net income	$ 350,000

This presentation clearly indicates the separate effects of continuing operations and discontinued operations on net income.



DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
Has the company sold any major components of its business?	Discontinued operations section of income statement	Anything reported in this section indicates that the company has discontinued a major component of its business.	If a major component has been discontinued, its results during the current period should not be included in estimates of future net income.

Extraordinary Items

Extraordinary items are events and transactions that meet two conditions: They are **unusual in nature** and **infrequent in occurrence**. To be considered *unusual*, the item should be abnormal and only incidentally related to the customary activities of the entity. To be regarded as *infrequent*, the event or transaction should not be reasonably expected to recur in the foreseeable future.

A company must evaluate both criteria in terms of the environment in which it operates. Thus, Weyerhaeuser Co. reported the $36 million in damages to its timberland caused by the eruption of Mount St. Helens as an extraordinary item because the event was both unusual and infrequent. In contrast, Florida Citrus Company does not report frost damage to its citrus crop as an extraordinary item because frost damage is not viewed as infrequent.

Helpful Hint Ordinary gains and losses are reported at pretax amounts in arriving at income before income taxes.

Companies report extraordinary items net of taxes in a separate section of the income statement, immediately below discontinued operations. To illustrate, assume that in 2012 a revolutionary foreign government expropriated property held as an investment by Rozek Inc. If the loss is $70,000 before applicable income tax savings of $21,000, the income statement presentation will show a deduction of $49,000, as in Illustration 13-3.

Illustration 13-3
Statement presentation of extraordinary items

ROZEK INC.
Income Statement (partial)
For the Year Ended December 31, 2012

Income before income taxes	$ 800,000
Income tax expense	240,000
Income before irregular items	560,000
Discontinued operations: Loss from disposal of chemical division, net of $90,000 income tax savings	(210,000)
Extraordinary item: Expropriation of investment, net of $21,000 income tax savings	**(49,000)**
Net income	$ 301,000

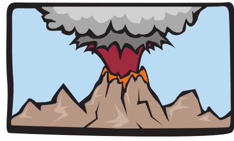
If a transaction or event meets one but not both of the criteria for an extraordinary item, a company should report it as a separate line item in the upper portion of the income statement, rather than in the bottom portion as an extraordinary item. Usually, companies report these items under either "Other revenues and gains" or "Other expenses and losses" at their gross amount (not net of tax). This is true, for example, of gains (losses) resulting from the sale of property,

plant, and equipment, as explained in Chapter 9. Illustration 13-4 shows the appropriate classification of extraordinary and ordinary items.

Illustration 13-4
Classification of extraordinary and ordinary items

Extraordinary items

1. Effects of major natural casualties, if rare in the area.

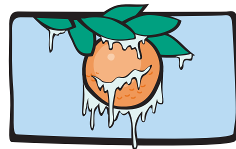


2. Expropriation (takeover) of property by a foreign government.

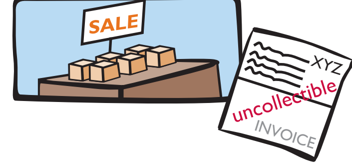
3. Effects of a newly enacted law or regulation, such as a condemnation action.

Ordinary items

1. Effects of major natural casualties, not uncommon in the area.



2. Write-down of inventories or write-off of receivables.



3. Losses attributable to labor strikes.

4. Gains or losses from sales of property, plant, or equipment.

In summary, in evaluating a company, it generally makes sense to eliminate all irregular items in estimating future sustainable income.

Investor Insight

What Does "Non-Recurring" Really Mean?

Many companies incur restructuring charges as they attempt to reduce costs. They often label these items in the income statement as "non-recurring" charges, to suggest that they are isolated events, unlikely to occur in future periods. The question for analysts is, are these costs really one-time, "non-recurring events," or do they reflect problems that the company will be facing for many periods in the future? If they are one-time events, then they can be largely ignored when trying to predict future earnings.

But, some companies report "one-time" restructuring charges over and over again. For example, Procter and Gamble Co. reported a restructuring charge in 12 consecutive quarters, and Motorola had "special" charges in 14 consecutive quarters. On the other hand, other companies have a restructuring charge only once in a 5- or 10-year period. There appears to be no substitute for careful analysis of the numbers that comprise net income.

If a company takes a large restructuring charge, what is the effect on the company's current income statement versus future ones? (See page 742.)

DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
Has the company experienced any extraordinary events or transactions?	Extraordinary item section of income statement	Anything reported in this section indicates that the company experienced an event that was both unusual and infrequent.	These items should usually be ignored in estimating future net income.

Ethics Note Changes in accounting principle should result in financial statements that are more informative for statement users. They should not be used to artificially improve the reported performance or financial position of the corporation.

CHANGES IN ACCOUNTING PRINCIPLE

For ease of comparison, users of financial statements expect companies to prepare their statements on a basis **consistent** with the preceding period. A **change in accounting principle** occurs when the principle used in the current year is different from the one used in the preceding year. An example is a change in inventory costing methods (such as FIFO to average-cost). Accounting rules permit a change when management can show that the new principle is preferable to the old principle.

Companies report most changes in accounting principle retroactively.[1] That is, they report both the current period and previous periods using the new principle. As a result, the same principle applies in all periods. This treatment improves the ability to compare results across years.

DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
Has the company changed any of its accounting principles?	Effect of change in accounting principle on current and prior periods.	Management indicates that the new principle is preferable to the old principle.	Examine current and prior years' reported income, using new-principle basis to assess trends for estimating future income.

COMPREHENSIVE INCOME

study objective 3
Explain the concept of comprehensive income.

Most revenues, expenses, gains, and losses are included in net income. However, certain gains and losses bypass net income. Instead, companies record these items as direct adjustments to stockholders' equity. Many analysts have expressed concern about this practice because they believe it reduces the usefulness of the income statement. To address this concern, the FASB requires companies to report not only net income but also comprehensive income. **Comprehensive income** includes all changes in stockholders' equity during a period except those changes resulting from investments by stockholders and distributions to stockholders.

Illustration of Comprehensive Income

Accounting standards require that companies adjust most investments in stocks and bonds up or down to their market value at the end of each accounting period. For example, assume that during 2012 Stassi Company purchased IBM stock for $10,000 as an investment. At the end of 2012, Stassi was still holding the investment, but the stock's market value was now $8,000. In this case, Stassi is required to reduce the recorded value of its IBM investment by $2,000. The $2,000 difference is an unrealized loss.

[1]An exception to the general rule is a change in depreciation methods. The effects of this change are reported in current and future periods. Discussion of this approach is left for more advanced courses.

Should Stassi include this $2,000 unrealized loss in net income? It depends on whether Stassi classifies the IBM stock as a trading security or an available-for-sale security. A **trading security** is bought and held primarily for sale in the near term to generate income on short-term price differences. Companies report unrealized losses on trading securities in the "Other expenses and losses" section of the income statement. The rationale: It is likely that the company will realize the unrealized loss (or an unrealized gain), so the company should report the loss (gain) as part of net income.

If Stassi did not purchase the investment for trading purposes, it is classified as available-for-sale. **Available-for-sale securities** are held with the intent of selling them sometime in the future. Companies do not include unrealized gains or losses on available-for-sale securities in net income. Instead, they report them as part of "Other comprehensive income." Other comprehensive income is not included in net income. It bypasses net income and is recorded as a direct adjustment to stockholders' equity.

Format

One format for reporting comprehensive income is to report a combined statement of income and comprehensive income.[2] For example, assuming that Stassi Company has a net income of $300,000, the unrealized loss would be reported below net income as follows.

Illustration 13-5 Lower portion of combined statement of income and comprehensive income

STASSI CORPORATION
Combined Statement of Income and
Comprehensive Income (partial)

Net income	$300,000
Unrealized loss on available-for-sale securities	2,000
Comprehensive income	$298,000

Companies also report the unrealized loss on available-for-sale securities as a separate component of stockholders' equity. To illustrate, assume Stassi Corporation has common stock of $3,000,000, retained earnings of $1,500,000, and an unrealized loss on available-for-sale securities of $2,000. Illustration 13-6 shows the balance sheet presentation of the unrealized loss.

Illustration 13-6 Unrealized loss in stockholders' equity section

STASSI CORPORATION
Balance Sheet (partial)

Stockholders' equity	
Common stock	$3,000,000
Retained earnings	1,500,000
Total paid-in capital and retained earnings	4,500,000
Less: Unrealized loss on available-for-sale securities	**(2,000)**
Total stockholders' equity	$4,498,000

[2]Computation of comprehensive income is sometimes shown in a separate statement of comprehensive income or as a section in the stockholders' equity statement.

Note that the presentation of the loss is similar to the presentation of the cost of treasury stock in the stockholders' equity section. (An unrealized gain would be added in this section of the balance sheet.) Reporting the unrealized gain or loss in the stockholders' equity section serves two important purposes: (1) It reduces the volatility of net income due to fluctuations in fair value, and (2) it informs the financial statement user of the gain or loss that would occur if the company sold the securities at fair value.

Complete Income Statement

The income statement for Pace Corporation in Illustration 13-7 presents the types of items found on this statement, such as net sales, cost of goods sold, operating expenses, and income taxes. In addition, it shows how companies report irregular items and comprehensive income (highlighted in red).

Illustration 13-7
Complete income statement

PACE CORPORATION
Income Statement and
Statement of Comprehensive Income
For the Year Ended December 31, 2012

Net sales		$440,000
Cost of goods sold		260,000
Gross profit		180,000
Operating expenses		110,000
Income from operations		70,000
Other revenues and gains	$ 5,600	
Other expenses and losses	(9,600)	(4,000)
Income before income taxes		66,000
Income tax expense ($66,000 × 30%)		19,800
Income before irregular items		46,200
Discontinued operations: Gain on disposal of Plastics Division, net of $15,000 income taxes ($50,000 × 30%)		**35,000**
Extraordinary item: Tornado loss, net of income tax savings $18,000 ($60,000 × 30%)		**(42,000)**
Net income		**39,200**
Add: Unrealized gain on available-for-sale securities		**10,000**
Comprehensive income		**$ 49,200**

CONCLUDING REMARKS

We have shown that the computation of the correct net income number can be elusive. In assessing the future prospects of a company, some investors focus on income from operations and therefore ignore all irregular and other items. Others use measures such as net income, comprehensive income, or some modified version of one of these amounts.

before you go on...

IRREGULAR ITEMS

Do it! In its draft 2012 income statement, AIR Corporation reports income before income taxes $400,000, extraordinary loss due to earthquake $100,000, income taxes $120,000 (not including irregular items), and loss on disposal of discontinued flower division $140,000. The income tax rate is 30%. Prepare a correct income statement, beginning with income before income taxes.

Solution

AIR CORPORATION Income Statement (partial)	
Income before income taxes	$400,000
Income tax expense	120,000
Income before irregular items	280,000
Discontinued operations	
Loss on disposal of discontinued flower division, net of $42,000 tax savings	(98,000)
Extraordinary earthquake loss net of $30,000 tax savings	(70,000)
Net income	$112,000

Related exercise material: **BE13-1, BE13-2, BE13-3, Do it! 13-1,** and **E13-1.**

Action Plan

- Recall that a loss is extraordinary if it is both unusual and infrequent.
- Disclose the income tax effect of each component of income, beginning with income before any irregular items.
- Show discontinued operations before extraordinary items.

Comparative Analysis

As indicated, in assessing the financial performance of a company, investors are interested in the core or sustainable earnings of a company. In addition, investors are interested in making comparisons from period to period. Throughout this book, we have relied on three types of comparisons to improve the decision usefulness of financial information:

1. **Intracompany basis.** Comparisons within a company are often useful to detect changes in financial relationships and significant trends. For example, a comparison of Kellogg's current year's cash amount with the prior year's cash amount shows either an increase or a decrease. Likewise, a comparison of Kellogg's year-end cash amount with the amount of its total assets at year-end shows the proportion of total assets in the form of cash.
2. **Intercompany basis.** Comparisons with other companies provide insight into a company's competitive position. For example, investors can compare Kellogg's total sales for the year with the total sales of its competitors in the breakfast cereal area, such as General Mills.
3. **Industry averages.** Comparisons with industry averages provide information about a company's relative position within the industry. For example, financial statement readers can compare Kellogg's financial data with the averages for its industry compiled by financial rating organizations such as Dun & Bradstreet, Moody's, and Standard & Poor's, or with information provided on the Internet by organizations such as Yahoo! on its financial site.

International Note As more countries adopt international accounting standards, the ability of analysts to compare companies from different countries should improve. However, international standards are open to widely varying interpretations. In addition, some countries adopt international standards "with modifications." As a consequence, most cross-country comparisons are still not as transparent as within-country comparisons.

We use three basic tools in financial statement analysis to highlight the significance of financial statement data:

1. Horizontal analysis
2. Vertical analysis
3. Ratio analysis

In previous chapters, we relied primarily on ratio analysis, supplemented with some basic horizontal and vertical analysis. In the remainder of this section, we introduce more formal forms of horizontal and vertical analysis. In the next section, we review ratio analysis in some detail.

HORIZONTAL ANALYSIS

study objective 4
Describe and apply horizontal analysis.

Horizontal analysis, also known as trend analysis, is a technique for evaluating a series of financial statement data over a period of time. Its purpose is to determine the increase or decrease that has taken place, expressed as either an amount or a percentage. For example, here are recent net sales figures (in thousands) of Chicago Cereal Company:

2009	2008	2007	2006	2005
$11,776	$10,907	$10,177	$9,614	$8,812

If we assume that 2005 is the base year, we can measure all percentage increases or decreases relative to this base-period amount with the formula shown in Illustration 13-8.

Illustration 13-8
Horizontal analysis—computation of changes since base period

$$\text{Change Since Base Period} = \frac{\text{Current-Year Amount} - \text{Base-Year Amount}}{\text{Base-Year Amount}}$$

For example, we can determine that net sales for Chicago Cereal increased approximately 9.1% [($9,614 − $8,812) ÷ $8,812] from 2005 to 2006. Similarly, we can also determine that net sales increased by 33.6% [($11,776 − $8,812) ÷ $8,812] from 2005 to 2009.

Alternatively, we can express current-year sales as a percentage of the base period. To do so, we would divide the current-year amount by the base-year amount, as shown in Illustration 13-9.

Illustration 13-9
Horizontal analysis—computation of current year in relation to base year

$$\text{Current Results in Relation to Base Period} = \frac{\text{Current-Year Amount}}{\text{Base-Year Amount}}$$

Current-period sales expressed as a percentage of the base period for each of the five years, using 2005 as the base period, are shown in Illustration 13-10.

Illustration 13-10
Horizontal analysis of net sales

CHICAGO CEREAL COMPANY
Net Sales (in thousands)
Base Period 2005

2009	2008	2007	2006	2005
$11,776	$10,907	$10,177	$9,614	$8,812
133.6%	123.8%	115.5%	109.1%	100%

The large increase in net sales during 2006 would raise questions regarding possible reasons for such a significant change. Chicago Cereal's 2006 notes to the financial statements explain that the company completed an acquisition of Elf Foods Company during 2006. This major acquisition would help explain the increase in sales highlighted by horizontal analysis.

To further illustrate horizontal analysis, we use the financial statements of Chicago Cereal Company. Its two-year condensed balance sheets for 2009 and 2008, showing dollar and percentage changes, are presented in Illustration 13-11.

Illustration 13-11
Horizontal analysis of balance sheets

CHICAGO CEREAL COMPANY
Condensed Balance Sheets
December 31 (in thousands)

			Increase (Decrease) during 2009	
Assets	**2009**	**2008**	**Amount**	**Percent**
Current assets	$ 2,717	$ 2,427	$ 290	11.9
Property assets (net)	2,990	2,816	174	6.2
Other assets	5,690	5,471	219	4.0
Total assets	$11,397	$10,714	$ 683	6.4
Liabilities and Stockholders' Equity				
Current liabilities	$ 4,044	$ 4,020	$ 24	.6
Long-term liabilities	4,827	4,625	202	4.4
Total liabilities	8,871	8,645	226	2.6
Stockholders' equity				
Common stock	493	397	96	24.2
Retained earnings	3,390	2,584	806	31.2
Treasury stock (cost)	(1,357)	(912)	(445)	48.8
Total stockholders' equity	2,526	2,069	457	22.1
Total liabilities and stockholders' equity	$11,397	$10,714	$ 683	6.4

Helpful Hint When using horizontal analysis, be sure to examine both dollar amount changes and percentage changes. It is not necessarily bad if a company's earnings are growing at a declining rate. The **amount** of increase may be the same as or more than the base year, but the **percentage** change may be less because the base is greater each year.

The comparative balance sheets show that a number of changes occurred in Chicago Cereal's financial position from 2008 to 2009. In the assets section, current assets increased $290,000, or 11.9% ($290 ÷ $2,427), and property assets (net) increased $174,000, or 6.2%. Other assets increased $219,000, or 4.0%. In the liabilities section, current liabilities increased $24,000, or 0.6%, while long-term liabilities increased $202,000, or 4.4%. In the stockholders' equity section, we find that retained earnings increased $806,000, or 31.2%.

Illustration 13-12 presents two-year comparative income statements of Chicago Cereal Company for 2009 and 2008, showing dollar and percentage changes.

Illustration 13-12
Horizontal analysis of income statements

CHICAGO CEREAL COMPANY
Condensed Income Statements
For the Years Ended December 31 (in thousands)

			Increase (Decrease) during 2009	
	2009	**2008**	**Amount**	**Percent**
Net sales	$11,776	$10,907	$869	8.0
Cost of goods sold	6,597	6,082	515	8.5
Gross profit	5,179	4,825	354	7.3
Selling and administrative expenses	3,311	3,059	252	8.2
Income from operations	1,868	1,766	102	5.8
Interest expense	319	307	12	3.9
Other income (expense), net	(2)	13	(15)	(115.4)
Income before income taxes	1,547	1,472	75	5.1
Income tax expense	444	468	(24)	(5.1)
Net income	$ 1,103	$ 1,004	$ 99	9.9

Helpful Hint Note that, in a horizontal analysis, while the amount column is additive (the total is $99,000), the percentage column is not additive (9.9% is **not a total**).

Horizontal analysis of the income statements shows the following changes: Net sales increased $869,000, or 8.0% ($869 ÷ $10,907). Cost of goods sold increased $515,000, or 8.5% ($515 ÷ $6,082). Selling and administrative expenses increased $252,000, or 8.2% ($252 ÷ $3,059). Overall, gross profit increased 7.3% and net income increased 9.9%. The increase in net income can be attributed to the increase in net sales and a decrease in income tax expense.

The measurement of changes from period to period in percentages is relatively straightforward and quite useful. However, complications can result in making the computations. If an item has no value in a base year or preceding year and a value in the next year, no percentage change can be computed. Likewise, no percentage change can be computed if a negative amount appears in the base or preceding period and a positive amount exists the following year.

DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
How do the company's financial position and operating results compare with those of the previous period?	Income statement and balance sheet	Comparative financial statements should be prepared over at least two years, with the first year reported being the base year. Changes in each line item relative to the base year should be presented both by amount and by percentage. This is called horizontal analysis.	Significant changes should be investigated to determine the reason for the change.

before you go on...

HORIZONTAL ANALYSIS

Summary financial information for Rosepatch Company is as follows.

	December 31, 2012	December 31, 2011
Current assets	$234,000	$180,000
Plant assets (net)	756,000	420,000
Total assets	$990,000	$600,000

Compute the amount and percentage changes in 2012 using horizontal analysis, assuming 2011 is the base year.

Action Plan

- Find the percentage change by dividing the amount of the increase by the 2011 amount (base year).

Solution

	Increase in 2012	
	Amount	Percent
Current assets	$ 54,000	30% [($234,000 − $180,000) ÷ $180,000]
Plant assets (net)	336,000	80% [($756,000 − $420,000) ÷ $420,000]
Total assets	$390,000	65% [($990,000 − $600,000) ÷ $600,000]

VERTICAL ANALYSIS

study objective 5

Describe and apply vertical analysis.

Vertical analysis, also called common-size analysis, is a technique for evaluating financial statement data that expresses each item in a financial statement as a **percentage of a base amount**. For example, on a balance sheet we might say that current assets are 22% of total assets (total assets being the base amount). Or, on an income statement we might say that selling expenses are 16% of net sales (net sales being the base amount).

Presented in Illustration 13-13 are the comparative balance sheets of Chicago Cereal for 2009 and 2008, analyzed vertically. The base for the asset items is **total assets**, and the base for the liability and stockholders' equity items is **total liabilities and stockholders' equity**.

Illustration 13-13
Vertical analysis of balance sheets

CHICAGO CEREAL COMPANY
Condensed Balance Sheets
December 31 (in thousands)

	2009		2008	
Assets	**Amount**	**Percent***	**Amount**	**Percent***
Current assets	$ 2,717	**23.8**	$ 2,427	**22.6**
Property assets (net)	2,990	**26.2**	2,816	**26.3**
Other assets	5,690	**50.0**	5,471	**51.1**
Total assets	$11,397	**100.0**	$10,714	**100.0**
Liabilities and Stockholders' Equity				
Current liabilities	$ 4,044	**35.5**	$ 4,020	**37.5**
Long-term liabilities	4,827	**42.4**	4,625	**43.2**
Total liabilities	8,871	**77.9**	8,645	**80.7**
Stockholders' equity				
Common stock	493	**4.3**	397	**3.7**
Retained earnings	3,390	**29.7**	2,584	**24.1**
Treasury stock (cost)	(1,357)	**(11.9)**	(912)	**(8.5)**
Total stockholders' equity	2,526	**22.1**	2,069	**19.3**
Total liabilities and stockholders' equity	$11,397	**100.0**	$10,714	**100.0**

*Numbers have been rounded to total 100%.

In addition to showing the relative size of each category on the balance sheets, vertical analysis can show the percentage change in the individual asset, liability, and stockholders' equity items. In this case, current assets increased $290,000 from 2008 to 2009, and they increased from 22.6% to 23.8% of total assets. Property assets (net) decreased from 26.3% to 26.2% of total assets. Other assets decreased from 51.1% to 50.0% of total assets. Also, retained earnings increased by $806,000 from 2008 to 2009, and total stockholders' equity increased from 19.3% to 22.1% of total liabilities and stockholders' equity. This switch to a higher percentage of equity financing has two causes: First, while total liabilities increased by $226,000, the percentage of liabilities declined from 80.7% to 77.9% of total liabilities and stockholders' equity. Second, retained earnings increased by $806,000, going from 24.1% to 29.7% of total liabilities and stockholders' equity. Thus, the company shifted toward equity financing by relying less on debt and by increasing the amount of retained earnings.

Vertical analysis of the comparative income statements of Chicago Cereal, shown in Illustration 13-14 (page 698), reveals that cost of goods sold **as a percentage of net sales** increased from 55.8% to 56.0%, and selling and administrative expenses increased from 28.0% to 28.1%. Net income as a percentage of net sales increased from 9.1% to 9.4%. Chicago Cereal's increase in net income as a percentage of sales is due primarily to the decrease in interest expense and income tax expense as a percentage of sales.

Illustration 13-14
Vertical analysis of income statements

CHICAGO CEREAL COMPANY
Condensed Income Statements
For the Years Ended December 31 (in thousands)

	2009		2008	
	Amount	**Percent***	**Amount**	**Percent***
Net sales	$11,776	**100.0**	$10,907	**100.0**
Cost of goods sold	6,597	**56.0**	6,082	**55.8**
Gross profit	5,179	**44.0**	4,825	**44.2**
Selling and administrative expenses	3,311	**28.1**	3,059	**28.0**
Income from operations	1,868	**15.9**	1,766	**16.2**
Interest expense	319	**2.7**	307	**2.8**
Other income (expense), net	(2)	**.0**	13	**.0**
Income before income taxes	1,547	**13.2**	1,472	**13.4**
Income tax expense	444	**3.8**	468	**4.3**
Net income	$ 1,103	**9.4**	$ 1,004	**9.1**

*Numbers have been rounded to total 100%.

Vertical analysis also enables you to compare companies of different sizes. For example, one of Chicago Cereal's competitors is General Mills. General Mills has sales that are 1,000 times larger than those of Chicago Cereal. Using vertical analysis, we can more meaningfully compare the condensed income statements of Chicago Cereal and General Mills, as shown in Illustration 13-15.

Illustration 13-15
Intercompany comparison by vertical analysis

CONDENSED INCOME STATEMENTS
For the Year Ended December 31, 2009

	Chicago Cereal (in thousands)		General Mills, Inc. (in millions)	
	Amount	**Percent***	**Amount**	**Percent***
Net sales	$11,776	**100.0**	$14,691	**100.0**
Cost of goods sold	6,597	**56.0**	9,458	**64.4**
Gross profit	5,179	**44.0**	5,233	**35.6**
Selling and administrative expenses	3,311	**28.1**	2,954	**20.1**
Non-recurring charges and (gains)	0	**—**	(43)	**0.3**
Income from operations	1,868	**15.9**	2,322	**15.8**
Other expenses and revenues (including income taxes)	765	**6.5**	1,018	**6.9**
Net income	$ 1,103	**9.4**	$ 1,304	**8.9**

*Numbers have been rounded to total 100%.

Although Chicago Cereal's net sales are much less than those of General Mills, vertical analysis eliminates the impact of this size difference for our analysis. Chicago Cereal has a higher gross profit percentage 44.0%, compared to 35.6% for General Mills, but Chicago Cereal's selling and administrative expenses are 28.1% of net sales, while those of General Mills are 20.1% of net sales. Looking at net income, we see that the companies report similar percentages: Chicago Cereal's net income as a percentage of net sales is 9.4%, compared to 8.9% for General Mills.

ANATOMY OF A FRAUD

This final *Anatomy of a Fraud* box demonstrates that sometimes relationships between numbers can be used by companies to detect fraud. The numeric relationships that can reveal fraud can be such things as financial ratios that appear abnormal, or statistical abnormalities in the numbers themselves. For example, the fact that WorldCom's line costs, as a percentage of either total expenses or revenues, differed very significantly from its competitors should have alerted people to the possibility of fraud. Or, consider the case of a bank manager, who cooperated with a group of his friends to defraud the bank's credit card department. The manager's friends would apply for credit cards and then run up balances of slightly less than $5,000. The bank had a policy of allowing bank personnel to write-off balances of less than $5,000 without seeking supervisor approval. The fraud was detected by applying statistical analysis based on Benford's Law. Benford's Law states that in a random collection of numbers, the frequency of lower digits (e.g., 1, 2, or 3) should be much higher than higher digits (e.g., 7, 8, or 9). In this case, bank auditors analyzed the first two digits of amounts written off. There was a spike at 48 and 49, which was not consistent with what would be expected if the numbers were random.

Total take: Thousands of dollars

THE MISSING CONTROL

Independent internal verification. While it might be efficient to allow employees to write off accounts below a certain level, it is important that these write-offs be reviewed and verified periodically. Such a review would likely call attention to an employee with large amounts of write-offs, or in this case, write-offs that were frequently very close to the approval threshold.

Source: Mark J. Nigrini, "I've Got Your Number," *Journal of Accountancy Online* (May 1999).

DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
How do the relationships between items in this year's financial statements compare with those of last year or those of competitors?	Income statement and balance sheet	Each line item on the income statement should be presented as a percentage of net sales, and each line item on the balance sheet should be presented as a percentage of total assets or total liabilities and stockholders' equity. These percentages should be investigated for differences either across years in the same company or in the same year across different companies. This is called vertical analysis.	Any significant differences either across years or between companies should be investigated to determine the cause.

Ratio Analysis

study objective

Identify and compute ratios used in analyzing a company's liquidity, solvency, and profitability.

In previous chapters, we presented many ratios used for evaluating the financial health and performance of a company. Here, we provide a summary listing of those ratios. (Page references to prior discussions are provided if you feel you need to review any individual ratios.) Appendix 13A provides an example of a comprehensive financial analysis employing these ratios.

LIQUIDITY RATIOS

Liquidity ratios (Illustration 13-16) measure the short-term ability of the company to pay its maturing obligations and to meet unexpected needs for cash. Short-term creditors such as bankers and suppliers are particularly interested in assessing liquidity.

Illustration 13-16
Summary of liquidity ratios

Liquidity Ratios		
Working capital	Current assets − Current liabilities	p. 59
Current ratio	$\frac{\text{Current assets}}{\text{Current liabilities}}$	p. 59
Current cash debt coverage ratio	$\frac{\text{Cash provided by operations}}{\text{Average current liabilities}}$	p. 643
Inventory turnover ratio	$\frac{\text{Cost of goods sold}}{\text{Average inventory}}$	p. 297
Days in inventory	$\frac{\text{365 days}}{\text{Inventory turnover ratio}}$	p. 297
Receivables turnover ratio	$\frac{\text{Net credit sales}}{\text{Average net receivables}}$	p. 415
Average collection period	$\frac{\text{365 days}}{\text{Receivables turnover ratio}}$	p. 415

Investor Insight

How to Manage the Current Ratio

The apparent simplicity of the current ratio can have real-world limitations because adding equal amounts to both the numerator and the denominator causes the ratio to decrease.

Assume, for example, that a company has $2,000,000 of current assets and $1,000,000 of current liabilities; its current ratio is 2:1. If it purchases $1,000,000 of inventory on account, it will have $3,000,000 of current assets and $2,000,000 of current liabilities; its current ratio decreases to 1.5:1. If, instead, the company pays off $500,000 of its current liabilities, it will have $1,500,000 of current assets and $500,000 of current liabilities; its current ratio increases to 3:1. Thus, any trend analysis should be done with care because the ratio is susceptible to quick changes and is easily influenced by management.

? How might management influence a company's current ratio? (See page 743.)

SOLVENCY RATIOS

Solvency ratios (Illustration 13-17) measure the ability of the company to survive over a long period of time. Long-term creditors and stockholders are interested in a company's long-run solvency, particularly its ability to pay interest as it comes due and to repay the balance of debt at its maturity.

Illustration 13-17
Summary of solvency ratios

Solvency Ratios		
Debt to total assets ratio	$\frac{\text{Total liabilities}}{\text{Total assets}}$	p. 60
Cash debt coverage ratio	$\frac{\text{Cash provided by operations}}{\text{Average total liabilities}}$	p. 644
Times interest earned ratio	$\frac{\text{Net income + Interest expense + Tax expense}}{\text{Interest expense}}$	p. 529
Free cash flow	Cash provided by operations − Capital expenditures − Cash dividends	p. 62

PROFITABILITY RATIOS

Profitability ratios (Illustration 13-18) measure the income or operating success of a company for a given period of time. A company's income, or lack of it, affects its ability to obtain debt and equity financing, its liquidity position, and its ability to grow. As a consequence, creditors and investors alike are interested in evaluating profitability. Profitability is frequently used as the ultimate test of management's operating effectiveness.

Illustration 13-18
Summary of profitability ratios

Profitability Ratios		
Earnings per share	$\frac{\text{Net income} - \text{Preferred stock dividends}}{\text{Average common shares outstanding}}$	p. 56
Price-earnings ratio	$\frac{\text{Stock price per share}}{\text{Earnings per share}}$	p. 703
Gross profit rate	$\frac{\text{Gross profit}}{\text{Net sales}}$	p. 246
Profit margin ratio	$\frac{\text{Net income}}{\text{Net sales}}$	p. 247
Return on assets ratio	$\frac{\text{Net income}}{\text{Average total assets}}$	p. 467
Asset turnover ratio	$\frac{\text{Net sales}}{\text{Average total assets}}$	p. 468
Payout ratio	$\frac{\text{Cash dividends declared on common stock}}{\text{Net income}}$	p. 593
Return on common stockholders' equity ratio	$\frac{\text{Net income} - \text{Preferred stock dividends}}{\text{Average common stockholders' equity}}$	p. 594

Investor Insight

High Ratings Can Bring Low Returns

Moody's, Standard and Poor's, and Fitch are three big firms that perform financial analysis on publicly traded companies and then publish ratings of the companies' creditworthiness. Investors and lenders rely heavily on these ratings in making investment and lending decisions. Some people feel that the collapse of the financial markets was worsened by inadequate research reports and ratings provided by the financial rating agencies. Critics contend that the rating agencies were reluctant to give large companies low ratings because they feared that by offending them they would lose out on business opportunities. For example, the rating agencies gave many so-called mortgage-backed securities ratings that suggested that they were low risk. Later, many of these very securities became completely worthless. Steps have been taken to reduce the conflicts of interest that lead to these faulty ratings.

Source: Aaron Lucchetti and Judith Burns, "Moody's CEO Warned Profit Push Posed a Risk to Quality of Ratings," *Wall Street Journal Online* (October 23, 2008).

Why are credit rating agencies important to the financial markets? (See page 743.)

Quality of Earnings

study objective 7
Understand the concept of quality of earnings.

In evaluating the financial performance of a company, the quality of a company's earnings is of extreme importance to analysts. A company that has a high **quality of earnings** provides full and transparent information that will not confuse or mislead users of the financial statements.

The issue of quality of earnings has taken on increasing importance because recent accounting scandals suggest that some companies are spending too much time managing their income and not enough time managing their business. Here are some of the factors affecting quality of earnings.

ALTERNATIVE ACCOUNTING METHODS

Variations among companies in the application of generally accepted accounting principles may hamper comparability and reduce quality of earnings. For example, one company may use the FIFO method of inventory costing, while another company in the same industry may use LIFO. If inventory is a significant asset to both companies, it is unlikely that their current ratios are comparable. For example, if General Motors Corporation had used FIFO instead of LIFO for inventory valuation, its inventories in a recent year would have been 26% higher, which significantly affects the current ratio (and other ratios as well).

In addition to differences in inventory costing methods, differences also exist in reporting such items as depreciation and amortization. Although these differences in accounting methods might be detectable from reading the notes to the financial statements, adjusting the financial data to compensate for the different methods is often difficult, if not impossible.

PRO FORMA INCOME

Companies whose stock is publicly traded are required to present their income statement following generally accepted accounting principles (GAAP). In recent years, many companies have been also reporting a second measure of income, called pro forma income. **Pro forma income** usually excludes items that the company thinks are unusual or non-recurring. For example, in a recent year, Cisco Systems (a high-tech company) reported a quarterly net loss under GAAP of $2.7 billion. Cisco reported pro forma income for the same quarter as a profit of $230 million. This large difference in profits between GAAP income numbers and pro forma income is not unusual. For example, during one 9-month period, the 100 largest companies on the Nasdaq stock exchange reported a total pro forma income of $19.1 billion but a total loss as measured by GAAP of $82.3 billion—a difference of about $100 billion!

To compute pro forma income, companies generally can exclude any items they deem inappropriate for measuring their performance. Many analysts and investors are critical of the practice of using pro forma income because these numbers often make companies look better than they really are. As the financial press noted, pro forma numbers might be called "earnings before bad stuff." Companies, on the other hand, argue that pro forma numbers more clearly indicate sustainable income because they exclude unusual and non-recurring expenses. "Cisco's technique gives readers of financial statements a clear picture of Cisco's normal business activities," the company said in a statement issued in response to questions about its pro forma income accounting.

Recently, the SEC provided some guidance on how companies should present pro forma information. Stay tuned: Everyone seems to agree that pro forma numbers can be useful if they provide insights into determining a company's sustainable income. However, many companies have abused the flexibility that pro forma numbers allow and have used the measure as a way to put their companies in a more favorable light.

IMPROPER RECOGNITION

Because some managers have felt pressure from Wall Street to continually increase earnings, they have manipulated the earnings numbers to meet these expectations. The most common abuse is the improper recognition of revenue. One

practice that some companies use is called *channel stuffing*: Offering deep discounts on their products to customers, companies encourage their customers to buy early (stuff the channel) rather than later. This lets the company report good earnings in the current period, but it often leads to a disaster in subsequent periods because customers have no need for additional goods. To illustrate, Bristol-Myers Squibb at one time indicated that it used sales incentives to encourage wholesalers to buy more drugs than needed to meet patients' demands. As a result, the company had to issue revised financial statements showing corrected revenues and income.

Another practice is the improper capitalization of operating expenses. The classic case is WorldCom. It capitalized over $7 billion of operating expenses so that it would report positive net income. In other situations, companies fail to report all their liabilities. Enron had promised to make payments on certain contracts if financial difficulty developed, but these guarantees were not reported as liabilities. In addition, disclosure was so lacking in transparency that it was impossible to understand what was happening at the company.

PRICE-EARNINGS RATIO

Earnings per share is net income available to common stockholders divided by the average number of common shares outstanding. The market value of a company's stock changes based on investors' expectations about a company's future earnings per share. In order to make a meaningful comparison of market values and earnings across firms, investors calculate the **price-earnings (P-E) ratio**. The P-E ratio divides the market price of a share of common stock by earnings per share.

Illustration 13-19
Formula for price-earnings (P-E) ratio

$$\text{Price-Earnings (P-E) Ratio} = \frac{\text{Stock Price per Share}}{\text{Earnings per Share}}$$

The P-E ratio reflects investors' assessment of a company's future earnings. The ratio of price to earnings will be higher if investors think that earnings will increase substantially in the future and therefore are willing to pay more per share of stock. A low price-earnings ratio often signifies that investors think the company's future earnings will not be strong. In addition, sometimes a low P-E ratio reflects the market's belief that a company has poor-quality earnings.

To illustrate, assume that two identical companies each have earnings per share of $5, but that one of the companies manipulated its accounting numbers to achieve the $5 figure. If investors perceive that one firm has lower-quality earnings, this perception will be reflected in a lower stock price and, consequently, a lower P-E.

Illustration 13-20 shows earnings per share and P-E ratios for five companies for a recent year. Note the difference in the P-E ratio of General Electric versus Google Inc.

Illustration 13-20
Earnings per share and P-E ratios of various companies

Company	Earnings per Share	Price-Earnings Ratio
Southwest Airlines	$ 0.44	18.6
Google Inc.	13.30	30.8
General Electric	2.17	13.2
Merck	1.49	14.6
Nike	3.70	15.9

Accounting Across the Organization

Are Annual Reports Worth Their Weight?

Many company managers preparing their annual reports are piling on the paper in order to ease Enron-type worries on the part of investors. Natural-gas producer Williams Companies, Inc. turned out an eye-glazing annual report 1,234 pages in length. Nortel Networks Corporation added an extra two dozen pages to its annual report. Other companies have followed suit.

The trend to fuller disclosure has been a long time coming, observers say. But, they caution that more paper does not necessarily mean more information that the average investor will understand. In addition, it is important to remember that annual reports are just one piece of the puzzle as to how companies present information to decision makers.

Source: Elizabeth Church, "No Item Too Small as Firms Cave to Enron Disclosure Craze," *The (Toronto) Globe and Mail* (April 1, 2002), p. B1.

? Why might adding extra pages to the annual report not be beneficial to investors and analysts? What should be management's overriding objective in financial reporting? (See page 743.)

QUALITY OF EARNINGS, FINANCIAL STATEMENT ANALYSIS

Do it!

Match each of the following terms with the phrase that it best matches.

Comprehensive income	Vertical analysis
Quality of earnings	Pro forma income
Solvency ratio	Extraordinary items

1. Measures the ability of the company to survive over a long period of time.
2. Usually excludes items that a company thinks are unusual or non-recurring.
3. Includes all changes in stockholders' equity during a period except those resulting from investments by stockholders and distributions to stockholders.
4. Indicates the level of full and transparent information provided to users of the financial statements.
5. Describes events and transactions that are unusual in nature and infrequent in occurrence.
6. Expresses each item within a financial statement as a percentage of a base amount.

Action Plan

- Develop a sound understanding of basic methods used for financial reporting.
- Understand the use of fundamental analysis techniques.

Solution

1. Solvency ratio: Measures the ability of the company to survive over a long period of time.
2. Pro forma income: Usually excludes items that a company thinks are unusual or non-recurring.
3. Comprehensive income: Includes all changes in stockholders' equity during a period except those resulting from investments by stockholders and distributions to stockholders.
4. Quality of earnings: Indicates the level of full and transparent information provided to users of the financial statements.
5. Extraordinary items: Describes events and transactions that are unusual in nature and infrequent in occurrence.
6. Vertical analysis: Expresses each item within a financial statement as a percentage of a base amount.

USING THE DECISION TOOLKIT

In analyzing a company, you should always investigate an extended period of time in order to determine whether the condition and performance of the company are changing. The condensed financial statements of Kellogg Company for 2009 and 2008 are presented here.

KELLOGG COMPANY, INC.
Balance Sheets
December 31 (in millions)

Assets	**2009**	**2008**
Current assets		
Cash	$ 334	$ 255
Accounts receivable (net)	1,093	1,100
Inventories	910	897
Other current assets	221	269
Total current assets	2,558	2,521
Property (net)	3,010	2,933
Other assets	5,632	5,492
Total assets	$11,200	$10,946
Liabilities and Stockholders' Equity		
Current liabilities	$ 2,288	$ 3,552
Long-term liabilities	6,637	5,939
Stockholders' equity—common	2,275	1,455
Total liabilities and stockholders' equity	$11,200	$10,946

KELLOGG COMPANY, INC.
Condensed Income Statements
For the Years Ended December 31
(in millions)

	2009	**2008**
Net sales	$12,575	$12,822
Cost of goods sold	7,184	7,455
Gross profit	5,391	5,367
Selling and administrative expenses	3,390	3,414
Income from operations	2,001	1,953
Interest expense	295	308
Other (income) expense, net	18	12
Income before income taxes	1,688	1,633
Income tax expense	476	485
Net income	$ 1,212	$ 1,148

Instructions

Compute the following ratios for Kellogg for 2009 and discuss your findings (2008 values are provided for comparison).

1. Liquidity:
   (a) Current ratio (2008: .71:1).
   (b) Inventory turnover ratio (2008: 8.2 times).
2. Solvency:
   (a) Debt to total assets ratio (2008: 87%).
   (b) Times interest earned ratio (2008: 6.3 times).

3. Profitability:
   (a) Return on assets ratio (2008: 10.6%).
   (b) Profit margin ratio (2008: 9.0%).
   (c) Return on common stockholders' equity ratio (2008: 65%).

Solution

1. Liquidity
   (a) Current ratio:

$$2009: \frac{\$2{,}558}{\$2{,}288} = 1.12{:}1 \qquad 2008: \ .71{:}1$$

   (b) Inventory turnover ratio:

$$2009: \frac{\$7{,}184}{(\$910 + \$897)/2} = 8.0 \text{ times} \qquad 2008: \ 8.2 \text{ times}$$

We see that between 2008 and 2009, the current ratio increased substantially. The inventory turnover ratio decreased slightly. The current ratio indicates that the company was more liquid in 2009.

2. Solvency
   (a) Debt to total assets ratio:

$$2009: \frac{\$2{,}288 + \$6{,}637}{\$11{,}200} = 80\% \qquad 2008: \ 87\%$$

   (b) Times interest earned ratio:

$$2009: \frac{\$1{,}212 + \$476 + \$295}{\$295} = 6.7 \text{ times} \qquad 2008: \ 6.3 \text{ times}$$

Kellogg's solvency as measured by the debt to total assets ratio improved slightly in 2009. We also can see that the times interest earned ratio improved.

3. Profitability
   (a) Return on assets ratio:

$$2009: \frac{\$1{,}212}{(\$11{,}200 + \$10{,}946)/2} = 10.9\% \qquad 2008: \ 10.6\%$$

   (b) Profit margin ratio:

$$2009: \frac{\$1{,}212}{\$12{,}575} = 9.6\% \qquad 2008: \ 9.0\%$$

   (c) Return on common stockholders' equity ratio:

$$2009: \frac{\$1{,}212}{(\$2{,}275 + \$1{,}455)/2} = 65\% \qquad 2008: \ 65\%$$

Kellogg's return on assets ratio increased. Its profit margin ratio also increased, but its return on stockholders' equity held constant.

Summary of Study Objectives

1 Understand the concept of sustainable income. Sustainable income refers to a company's ability to sustain its profits from operations.

2 Indicate how irregular items are presented. Irregular items—discontinued operations and extraordinary items—are presented on the income statement net of tax below "Income before irregular items" to highlight their unusual nature. Changes in accounting principle are reported retroactively.

3 Explain the concept of comprehensive income. Comprehensive income includes all changes in stockholders' equity during a period except those resulting from investments by stockholders and distributions to stockholders. "Other comprehensive income" is added to or subtracted from net income to arrive at comprehensive income.

4 Describe and apply horizontal analysis. Horizontal analysis is a technique for evaluating a series of data

over a period of time to determine the increase or decrease that has taken place, expressed as either an amount or a percentage.

5 **Describe and apply vertical analysis.** Vertical analysis is a technique that expresses each item in a financial statement as a percentage of a relevant total or a base amount.

6 **Identify and compute ratios used in analyzing a company's liquidity, solvency, and profitability.** Financial ratios are provided in Illustration 13-16 (liquidity), Illustration 13-17 (solvency), and Illustration 13-18 (profitability).

7 **Understand the concept of quality of earnings.** A high quality of earnings provides full and transparent information that will not confuse or mislead users of the financial statements. Issues related to quality of earnings are (1) alternative accounting methods, (2) pro forma income, and (3) improper recognition. The price-earnings (P-E) ratio reflects investors' assessment of a company's future earnings potential.

the navigator

DECISION TOOLKIT A SUMMARY

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
Has the company sold any major components of its business?	Discontinued operations section of income statement	Anything reported in this section indicates that the company has discontinued a major component of its business.	If a major component has been discontinued, its results during the current period should not be included in estimates of future net income.
Has the company experienced any extraordinary events or transactions?	Extraordinary item section of income statement	Anything reported in this section indicates that the company experienced an event that was both unusual and infrequent.	These items should usually be ignored in estimating future net income.
Has the company changed any of its accounting principles?	Effect of change in accounting principle on current and prior periods.	Management indicates that the new principle is preferable to the old principle.	Examine current and prior years' reported income, using new-principle basis to assess trends for estimating future income.
How do the company's financial position and operating results compare with those of the previous period?	Income statement and balance sheet	Comparative financial statements should be prepared over at least two years, with the first year reported being the base year. Changes in each line item relative to the base year should be presented both by amount and by percentage. This is called horizontal analysis.	Significant changes should be investigated to determine the reason for the change.
How do the relationships between items in this year's financial statements compare with those of last year or those of competitors?	Income statement and balance sheet	Each line item on the income statement should be presented as a percentage of net sales, and each line item on the balance sheet should be presented as a percentage of total assets or total liabilities and stockholders' equity. These percentages should be investigated for differences either across years in the same company or in the same year across different companies. This is called vertical analysis.	Any significant differences either across years or between companies should be investigated to determine the cause.

appendix 13A

Comprehensive Illustration of Ratio Analysis

In previous chapters, we presented many ratios used for evaluating the financial health and performance of a company. In this appendix, we provide a comprehensive review of those ratios and discuss some important relationships among them. Since earlier chapters demonstrated the calculation of each of these ratios, in this chapter we instead focus on their interpretation. Page references to prior discussions point you to any individual ratios you feel you need to review.

We used the financial information in Illustrations 13A-1 through 13A-4 to calculate Chicago Cereal Company's 2009 ratios. You can use these data to review the computations.

Additional information	2009	2008
Average number of shares (thousands)	418.7	418.5
Stock price at year-end	$52.92	$50.06

As indicated in the chapter, we can classify ratios into three types for analysis of the primary financial statements:

1. **Liquidity ratios.** Measures of the short-term ability of the company to pay its maturing obligations and to meet unexpected needs for cash.
2. **Solvency ratios.** Measures of the ability of the company to survive over a long period of time.
3. **Profitability ratios.** Measures of the income or operating success of a company for a given period of time.

As a tool of analysis, ratios can provide clues to underlying conditions that may not be apparent from an inspection of the individual components of a particular ratio. But, a single ratio by itself is not very meaningful. Accordingly, in this discussion we use the three comparisons listed below and on page 710.

1. **Intracompany comparisons** covering two years for Chicago Cereal Company (using comparative financial information from Illustrations 13A-1 through 13A-4).
2. **Intercompany comparisons** using General Mills as one of Chicago Cereal's competitors.

3. **Industry average comparisons** based on MSN.com median ratios for manufacturers of flour and other grain mill products and comparisons with other sources. For some of the ratios that we use, industry comparisons are not available. (These are denoted "na.")

LIQUIDITY RATIOS

Liquidity ratios measure the short-term ability of the company to pay its maturing obligations and to meet unexpected needs for cash. Short-term creditors such as bankers and suppliers are particularly interested in assessing liquidity. The measures used to determine the company's short-term debt-paying ability are the current ratio, the current cash debt coverage ratio, the receivables turnover ratio, the average collection period, the inventory turnover ratio, and average days in inventory.

1. **Current ratio.** The **current ratio** expresses the relationship of current assets to current liabilities, computed by dividing current assets by current liabilities. It is widely used for evaluating a company's liquidity and short-term debt-paying ability. The 2009 and 2008 current ratios for Chicago Cereal and comparative data are shown in Illustration 13A-5.

Illustration 13A-5
Current ratio

Ratio	Formula	Indicates:	Chicago Cereal 2009	Chicago Cereal 2008	General Mills 2009	Industry 2009	Page in book
Current ratio	Current assets / Current liabilities	Short-term debt-paying ability	.67	.60	1.20	1.20	59

What do the measures tell us? Chicago Cereal's 2009 current ratio of .67 means that for every dollar of current liabilities, it has $0.67 of current assets. We sometimes state such ratios as .67:1 to reinforce this interpretation. Its current ratio—and therefore its liquidity—increased significantly in 2009. It is well below the industry average and that of General Mills.

2. **Current cash debt coverage ratio.** A disadvantage of the current ratio is that it uses year-end balances of current asset and current liability accounts. These year-end balances may not represent the company's current position during most of the year. The **current cash debt coverage ratio** partially corrects for this problem. It is the ratio of cash provided by operating activities to average current liabilities. Because it uses cash provided by operating activities rather than a balance at one point in time, it may provide a better representation of liquidity. Chicago Cereal's current cash debt coverage ratio is shown in Illustration 13A-6.

Illustration 13A-6
Current cash debt coverage ratio

Ratio	Formula	Indicates:	Chicago Cereal 2009	Chicago Cereal 2008	General Mills 2009	Industry 2009	Page in book
Current cash debt coverage ratio	Cash provided by operations / Average current liabilities	Short-term debt-paying ability (cash basis)	.37	.39	.43	na	643

This ratio decreased slightly in 2009 for Chicago Cereal. Is the coverage adequate? Probably so. Its operating cash flow coverage of average current liabilities is similar to that of General Mills, and it approximates a commonly accepted threshold of .40. No industry comparison is available.

3. **Receivables turnover ratio.** Analysts can measure liquidity by how quickly a company converts certain assets to cash. Low values of the previous ratios can sometimes be compensated for if some of the company's current assets are highly liquid.

   How liquid, for example, are the receivables? The ratio used to assess the liquidity of the receivables is the **receivables turnover ratio**, which measures the number of times, on average, a company collects receivables during the period. The receivables turnover ratio is computed by dividing net credit sales (net sales less cash sales) by average net receivables during the year. The receivables turnover ratio for Chicago Cereal is shown in Illustration 13A-7.

Illustration 13A-7
Receivables turnover ratio

Ratio	Formula	Indicates:	Chicago Cereal 2009	Chicago Cereal 2008	General Mills 2009	Industry 2009	Page in book
Receivables turnover ratio	$\frac{\text{Net credit sales}}{\text{Average net receivables}}$	Liquidity of receivables	11.9	12.0	12.8	14.0	415

   We have assumed that all Chicago Cereal's sales are credit sales. Its receivables turnover ratio declined slightly in 2009. The turnover of 11.9 times is lower than the industry average of 14.0 times, and slightly lower than General Mills's turnover of 12.8 times.

4. **Average collection period.** A popular variant of the receivables turnover ratio converts it into an **average collection period** in days. This is done by dividing the receivables turnover ratio into 365 days. The average collection period for Chicago Cereal is shown in Illustration 13A-8.

Illustration 13A-8
Average collection period

Ratio	Formula	Indicates:	Chicago Cereal 2009	Chicago Cereal 2008	General Mills 2009	Industry 2009	Page in book
Average collection period	$\frac{\text{365 days}}{\text{Receivables turnover ratio}}$	Liquidity of receivables and collection success	30.7	30.4	28.5	26.1	415

   Chicago Cereal's 2009 receivables turnover of 11.9 times is divided into 365 days to obtain approximately 31 days. This means that the average collection period for receivables is about 31 days. Its average collection period is slightly longer than those of General Mills and the industry.

   Analysts frequently use the average collection period to assess the effectiveness of a company's credit and collection policies. The general rule is that the collection period should not greatly exceed the credit term period (i.e., the time allowed for payment).

5. **Inventory turnover ratio.** The **inventory turnover ratio** measures the number of times average inventory was sold during the period. Its purpose is to measure the liquidity of the inventory. A high measure indicates that inventory is being sold and replenished frequently. The inventory turnover ratio is computed by dividing the cost of goods sold by the average inventory during the period. Unless seasonal factors are significant, average inventory can

be computed from the beginning and ending inventory balances. Chicago Cereal's inventory turnover ratio is shown in Illustration 13A-9.

Illustration 13A-9
Inventory turnover ratio

Ratio	Formula	Indicates:	Chicago Cereal 2009	Chicago Cereal 2008	General Mills 2009	Industry 2009	Page in book
Inventory turnover ratio	Cost of goods sold / Average inventory	Liquidity of inventory	7.5	7.9	6.2	6.9	297

Chicago Cereal's inventory turnover ratio decreased slightly in 2009. The turnover ratio of 7.5 times is higher than the industry average of 6.9 times and better than General Mills's 6.2 times. Generally, the faster the inventory turnover, the less cash is tied up in inventory and the less the chance of inventory becoming obsolete. Of course, a downside of high inventory turnover is that it sometimes results in lost sales because if a company keeps less inventory on hand, it is more likely to run out of inventory when it is needed.

6. **Days in inventory.** A variant of the inventory turnover ratio is the **days in inventory**, which measures the average number of days inventory is held. The days in inventory for Chicago Cereal is shown in Illustration 13A-10.

Illustration 13A-10
Days in inventory

Ratio	Formula	Indicates:	Chicago Cereal 2009	Chicago Cereal 2008	General Mills 2009	Industry 2009	Page in book
Days in inventory	365 days / Inventory turnover ratio	Liquidity of inventory and inventory management	48.7	46.2	58.9	52.9	297

Chicago Cereal's 2009 inventory turnover ratio of 7.5 divided into 365 is approximately 49 days. An average selling time of 49 days is faster than the industry average and faster than that of General Mills. Some of this difference might be explained by differences in product lines across the two companies, although in many ways the types of products of these two companies are quite similar.

Inventory turnover ratios vary considerably among industries. For example, grocery store chains have a turnover of 10 times and an average selling period of 37 days. In contrast, jewelry stores have an average turnover of 1.3 times and an average selling period of 281 days. Within a company, there may even be significant differences in inventory turnover among different types of products. Thus, in a grocery store the turnover of perishable items such as produce, meats, and dairy products is faster than the turnover of soaps and detergents.

To conclude, nearly all of these liquidity measures suggest that Chicago Cereal's liquidity changed little during 2009. Its liquidity appears acceptable when compared to the industry as a whole and when compared to General Mills.

SOLVENCY RATIOS

Solvency ratios measure the ability of the company to survive over a long period of time. Long-term creditors and stockholders are interested in a company's long-run solvency, particularly its ability to pay interest as it comes due and to repay the face value of debt at maturity. The debt to total assets ratio, the times interest earned ratio, and the cash debt coverage ratio provide information about debt-paying ability. In addition, free cash flow provides information about the company's solvency and its ability to pay additional dividends or invest in new projects.

7. **Debt to total assets ratio.** The **debt to total assets ratio** measures the percentage of total financing provided by creditors. It is computed by dividing total debt (both current and long-term) by total assets. This ratio indicates the degree of financial leveraging. It also provides some indication of the company's ability to withstand losses without impairing the interests of its creditors. The higher the percentage of debt to total assets, the greater the risk that the company may be unable to meet its maturing obligations. The lower the ratio, the more equity "buffer" is available to creditors if the company becomes insolvent. Thus, from the creditors' point of view, a low ratio of debt to total assets is desirable. Chicago Cereal's debt to total assets ratio is shown in Illustration 13A-11.

Illustration 13A-11
Debt to total assets ratio

Ratio	Formula	Indicates:	Chicago Cereal 2009	Chicago Cereal 2008	General Mills 2009	Industry 2009	Page in book
Debt to total assets ratio	Total liabilities / Total assets	Percentage of total assets provided by creditors	78%	81%	71%	48%	60

Chicago Cereal's 2009 ratio of 78% means that creditors have provided financing sufficient to cover 78% of the company's total assets. Alternatively, it says that it would have to liquidate 78% of its assets at their book value in order to pay off all of its debts. Its ratio is above the industry average of 48%, as well as that of General Mills. This suggests that it is less solvent than the industry average and General Mills. Chicago Cereal's solvency improved slightly during the year.

The adequacy of this ratio is often judged in light of the company's earnings. Generally, companies with relatively stable earnings, such as public utilities, have higher debt to total assets ratios than cyclical companies with widely fluctuating earnings, such as many high-tech companies.

Another ratio with a similar meaning is the **debt to equity ratio**. It shows the relative use of borrowed funds (total liabilities) compared with resources invested by the owners. Because this ratio can be computed in several ways, be careful when making comparisons with it. Debt may be defined to include only the noncurrent portion of liabilities, and intangible assets may be excluded from stockholders' equity (which would equal tangible net worth). If debt and assets are defined as above (all liabilities and all assets), then when the debt to total assets ratio equals 50%, the debt to equity ratio is 1:1.

8. **Times interest earned ratio.** The **times interest earned ratio** (also called interest coverage) indicates the company's ability to meet interest payments as they come due. It is computed by dividing income before interest expense and income taxes by interest expense. Note that this ratio uses income before interest expense and income taxes because this amount represents what is available to cover interest. Chicago Cereal's times interest earned ratio is shown in Illustration 13A-12.

Illustration 13A-12
Times interest earned ratio

Ratio	Formula	Indicates:	Chicago Cereal 2009	Chicago Cereal 2008	General Mills 2009	Industry 2009	Page in book
Times interest earned ratio	(Net Income + Interest expense + Tax expense) / Interest expense	Ability to meet interest payments as they come due	5.8	5.8	7.3	5.9	529

For Chicago Cereal, the 2009 interest coverage was 5.8, which indicates that income before interest and taxes was 5.8 times the amount needed for interest expense. This is less than the rate for General Mills, and it is slightly less than the average rate for the industry. The debt to total assets ratio decreased for Chicago Cereal during 2009, and its times interest earned ratio held constant.

9. **Cash debt coverage ratio.** The ratio of cash provided by operating activities to average total liabilities, called the **cash debt coverage ratio**, is a cash-basis measure of solvency. This ratio indicates a company's ability to repay its liabilities from cash generated from operating activities without having to liquidate the assets used in its operations. Illustration 13A-13 shows Chicago Cereal's cash debt coverage ratio.

Illustration 13A-13
Cash debt coverage ratio

Ratio	Formula	Indicates:	Chicago Cereal 2009	Chicago Cereal 2008	General Mills 2009	Industry 2009	Page in book
Cash debt coverage ratio	Cash provided by operations / Average total liabilities	Long-term debt-paying ability (cash basis)	.17	.17	.14	na	644

An industry average for this measure is not available. Chicago Cereal's .17 is higher than General Mills's .14, and it remained unchanged from 2009. One way of interpreting this ratio is to say that net cash generated from one year of operations would be sufficient to pay off 17% of its total liabilities. If 17% of this year's liabilities were retired each year, it would take approximately 5.9 years to retire all of its debt. It would take General Mills approximately 7.1 years to do so. A general rule of thumb is that a cash debt coverage ratio above .20 is acceptable.

10. **Free cash flow.** One indication of a company's solvency, as well as of its ability to pay dividends or expand operations, is the amount of excess cash it generated after investing in capital expenditures and paying dividends. This amount is referred to as **free cash flow**. For example, if you generate $100,000 of cash from operations but you spend $30,000 on capital expenditures and pay $10,000 in dividends, you have $60,000 ($100,000 − $30,000 − $10,000) to use either to expand operations, pay additional dividends, or pay down debt. Chicago Cereal's free cash flow is shown in Illustration 13A-14.

Illustration 13A-14
Free cash flow

Ratio	Formula	Indicates:	Chicago Cereal 2009	Chicago Cereal 2008	General Mills 2009	Industry 2009	Page in book
Free cash flow	Cash provided by operations − Capital expenditures − Cash dividends	Cash available for paying dividends or expanding operations	$556 (in thousands)	$507 (in thousands)	$686 (in millions)	na	62

Chicago Cereal's free cash flow increased slightly from 2008 to 2009. During both years, the cash provided by operations was more than enough to allow it to acquire additional productive assets and maintain dividend payments. It could have used the remaining cash to reduce debt if necessary. Given that Chicago Cereal is much smaller than General Mills, we would expect its free cash flow to be substantially smaller, which it is.

PROFITABILITY RATIOS

Profitability ratios measure the income or operating success of a company for a given period of time. A company's income, or the lack of it, affects its ability to obtain debt and equity financing, its liquidity position, and its ability to grow. As a consequence, creditors and investors alike are interested in evaluating profitability. Analysts frequently use profitability as the ultimate test of management's operating effectiveness.

Throughout this book, we have introduced numerous measures of profitability. The relationships among measures of profitability are very important. Understanding them can help management determine where to focus its efforts to improve profitability. Illustration 13A-15 diagrams these relationships. Our discussion of Chicago Cereal's profitability is structured around this diagram.

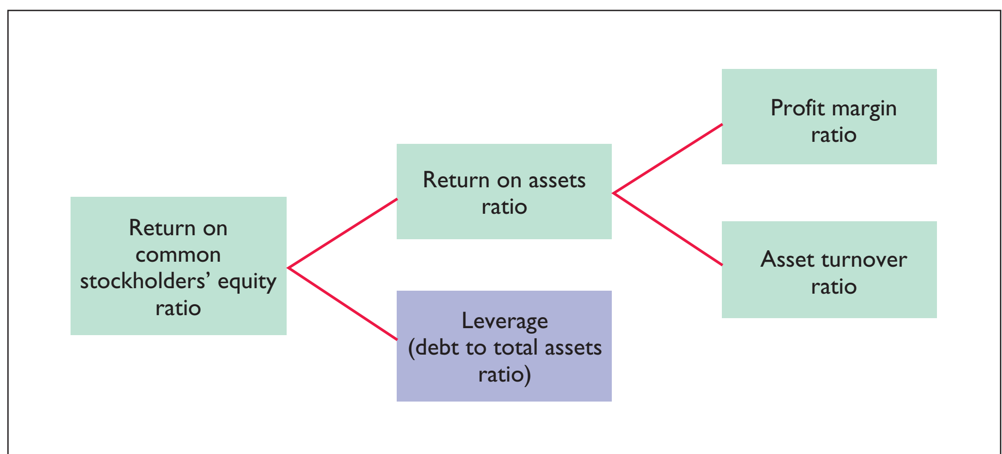

Illustration 13A-15
Relationships among profitability measures

11. **Return on common stockholders' equity ratio.** A widely used measure of profitability from the common stockholder's viewpoint is the **return on common stockholders' equity ratio**. This ratio shows how many dollars of net income the company earned for each dollar invested by the owners. It is computed by dividing net income minus any preferred stock dividends—that is, income available to common stockholders—by average common stockholders' equity. The return on common stockholders' equity for Chicago Cereal is shown in Illustration 13A-16.

Illustration 13A-16
Return on common stockholders' equity ratio

Ratio	Formula	Indicates:	Chicago Cereal 2009	Chicago Cereal 2008	General Mills 2009	Industry 2009	Page in book
Return on common stockholders' equity ratio	$\frac{\text{Net income} - \text{Preferred stock dividends}}{\text{Average common stockholders' equity}}$	Profitability of common stockholders' investment	48%	46%	29%	30%	594

Chicago Cereal's 2009 rate of return on common stockholders' equity is unusually high at 48%, considering an industry average of 30% and General Mills's return of 29%. In the subsequent sections, we investigate the causes of this high return.

12. **Return on assets ratio.** The return on common stockholders' equity ratio is affected by two factors: the **return on assets ratio** and the degree of leverage. The return on assets ratio measures the overall profitability of assets in

terms of the income earned on each dollar invested in assets. It is computed by dividing net income by average total assets. Chicago Cereal's return on assets ratio is shown in Illustration 13A-17.

Illustration 13A-17
Return on assets ratio

Ratio	Formula	Indicates:	Chicago Cereal 2009	Chicago Cereal 2008	General Mills 2009	Industry 2009	Page in book
Return on assets ratio	Net income / Average total assets	Overall profitability of assets	10.0%	9.4%	8.5%	6.7%	467

Chicago Cereal had a 10.0% return on assets in 2009. This rate is significantly higher than that of General Mills and the industry average.

Note that its rate of return on common stockholders' equity (48%) is substantially higher than its rate of return on assets (10%). The reason is that it has made effective use of **leverage**. **Leveraging** or **trading on the equity** at a gain means that the company has borrowed money at a lower rate of interest than the rate of return it earns on the assets it purchased with the borrowed funds. Leverage enables management to use money supplied by nonowners to increase the return to owners.

A comparison of the rate of return on assets with the rate of interest paid for borrowed money indicates the profitability of trading on the equity. If you borrow money at 8% and your rate of return on assets is 11%, you are trading on the equity at a gain. Note, however, that trading on the equity is a two-way street: For example, if you borrow money at 11% and earn only 8% on it, you are trading on the equity at a loss.

Chicago Cereal earns more on its borrowed funds than it has to pay in interest. Thus, the return to stockholders exceeds the return on the assets because of the positive benefit of leverage. Recall from our earlier discussion that Chicago Cereal's percentage of debt financing, as measured by the ratio of debt to total assets (or debt to equity), was higher than General Mills's and the industry average. It appears that Chicago Cereal's high return on common stockholders' equity is due in part to its use of leverage.

13. **Profit margin ratio.** The return on assets ratio is affected by two factors, the first of which is the profit margin ratio. The **profit margin ratio**, or rate of return on sales, is a measure of the percentage of each dollar of sales that results in net income. It is computed by dividing net income by net sales for the period. Chicago Cereal's profit margin ratio is shown in Illustration 13A-18.

Illustration 13A-18
Profit margin ratio

Ratio	Formula	Indicates:	Chicago Cereal 2009	Chicago Cereal 2008	General Mills 2009	Industry 2009	Page in book
Profit margin ratio	Net income / Net sales	Net income generated by each dollar of sales	9.4%	9.2%	10.6%	10.4%	247

Chicago Cereal experienced a slight increase in its profit margin ratio from 2008 to 2009 of 9.2% to 9.4%. Its profit margin ratio was lower than the industry average and that of General Mills.

High-volume (high inventory turnover) businesses such as grocery stores and pharmacy chains generally have low profit margins. Low-volume businesses such as jewelry stores and airplane manufacturers have high profit margins.

14. **Asset turnover ratio.** The other factor that affects the return on assets ratio is the asset turnover ratio. The **asset turnover ratio** measures how efficiently a company uses its assets to generate sales. It is determined by dividing net sales by average total assets for the period. The resulting number shows the dollars of sales produced by each dollar invested in assets. Illustration 13A-19 shows the asset turnover ratio for Chicago Cereal.

Illustration 13A-19
Asset turnover ratio

Ratio	Formula	Indicates:	Chicago Cereal 2009	Chicago Cereal 2008	General Mills 2009	Industry 2009	Page in book
Asset turnover ratio	Net sales / Average total assets	How efficiently assets are used to generate sales	1.07	1.02	.80	1.00	468

The asset turnover ratio shows that in 2009, Chicago Cereal generated sales of $1.07 for each dollar it had invested in assets. The ratio rose from 2008 to 2009. Its asset turnover ratio is above the industry average and that of General Mills.

Asset turnover ratios vary considerably among industries. The average asset turnover for utility companies is .45, for example, while the grocery store industry has an average asset turnover of 3.49.

In summary, Chicago Cereal's return on assets ratio increased from 9.4% in 2008 to 10.0% in 2009. Underlying this increase was an increased profitability on each dollar of sales (as measured by the profit margin ratio) and a rise in the sales-generating efficiency of its assets (as measured by the asset turnover ratio). We can analyze the combined effects of profit margin and asset turnover on return on assets for Chicago Cereal as shown in Illustration 13A-20.

Illustration 13A-20
Composition of return on assets ratio

	Profit Margin	×	Asset Turnover	=	Return on Assets
Ratios:	Net Income / Net Sales	×	Net Sales / Average Total Assets	=	Net Income / Average Total Assets
Chicago Cereal					
2009	9.4%	×	1.07 times	=	10.1%*
2008	9.2%	×	1.02 times	=	9.4%

*Difference from value on page 716 due to rounding.

15. **Gross profit rate.** One factor that strongly influences the profit margin ratio is the gross profit rate. The **gross profit rate** is determined by dividing gross profit (net sales less cost of goods sold) by net sales. This rate indicates a company's ability to maintain an adequate selling price above its cost of goods sold.

As an industry becomes more competitive, this ratio declines. For example, in the early years of the personal computer industry, gross profit rates were quite high. Today, because of increased competition and a belief that most brands of personal computers are similar in quality, gross profit rates

have become thin. Analysts should closely monitor gross profit rates over time. Illustration 13A-21 shows Chicago Cereal's gross profit rate.

Illustration 13A-21
Gross profit rate

Ratio	Formula	Indicates:	Chicago Cereal 2009	Chicago Cereal 2008	General Mills 2009	Industry 2009	Page in book
Gross profit rate	$\frac{\text{Gross profit}}{\text{Net sales}}$	Margin between selling price and cost of goods sold	44%	44%	41%	32%	246

Chicago Cereal's gross profit rate remained constant from 2008 to 2009.

16. **Earnings per share (EPS).** Stockholders usually think in terms of the number of shares they own or plan to buy or sell. Expressing net income earned on a per share basis provides a useful perspective for determining profitability. **Earnings per share** is a measure of the net income earned on each share of common stock. It is computed by dividing net income by the average number of common shares outstanding during the year.

    The terms "net income per share" or "earnings per share" refer to the amount of net income applicable to each share of *common stock*. Therefore, when we compute earnings per share, if there are preferred dividends declared for the period, we must deduct them from net income to arrive at income available to the common stockholders. Chicago Cereal's earnings per share is shown in Illustration 13A-22.

Illustration 13A-22
Earnings per share

Ratio	Formula	Indicates:	Chicago Cereal 2009	Chicago Cereal 2008	General Mills 2009	Industry 2009	Page in book
Earnings per share (EPS)	$\frac{\text{Net income} - \text{Preferred stock dividends}}{\text{Average common shares outstanding}}$	Net income earned on each share of common stock	\$2.63	\$2.40	\$3.93	na	56

Note that no industry average is presented in Illustration 13A-22. Industry data for earnings per share are not reported, and in fact the Chicago Cereal and General Mills ratios should not be compared. Such comparisons are not meaningful because of the wide variations in the number of shares of outstanding stock among companies. Chicago Cereal's earnings per share increased 23 cents per share in 2009. This represents a 9.6% increase from the 2008 EPS of \$2.40.

17. **Price-earnings ratio.** The **price-earnings ratio** is an oft-quoted statistic that measures the ratio of the market price of each share of common stock to the earnings per share. The price-earnings (P-E) ratio reflects investors' assessments of a company's future earnings. It is computed by dividing the market price per share of the stock by earnings per share. Chicago Cereal's price-earnings ratio is shown in Illustration 13A-23.

Illustration 13A-23
Price-earnings ratio

Ratio	Formula	Indicates:	Chicago Cereal 2009	Chicago Cereal 2008	General Mills 2009	Industry 2009	Page in book
Price-earnings ratio	$\frac{\text{Stock price per share}}{\text{Earnings per share}}$	Relationship between market price per share and earnings per share	20.1	20.9	14.5	17.0	703

At the end of 2009 and 2008, the market price of Chicago Cereal's stock was $52.92 and $50.06, respectively.

In 2009, each share of Chicago Cereal's stock sold for 20.1 times the amount that was earned on each share. Chicago Cereal's price-earnings ratio is higher than General Mills's ratio of 14.5 and higher than the industry average of 17.0 times. Its higher P-E ratio suggests that the market is more optimistic about Chicago Cereal than about General Mills. However, it might also signal that Chicago Cereal's stock is overpriced. That is a matter for the analyst to determine.

18. **Payout ratio.** The **payout ratio** measures the percentage of earnings distributed in the form of cash dividends. It is computed by dividing cash dividends declared on common stock by net income. Companies that have high growth rates are characterized by low payout ratios because they reinvest most of their net income in the business. The payout ratio for Chicago Cereal is shown in Illustration 13A-24.

Illustration 13A-24
Payout ratio

Ratio	Formula	Indicates:	Chicago Cereal 2009	Chicago Cereal 2008	General Mills 2009	Industry 2009	Page in book
Payout ratio	Cash dividends declared on common stock / Net income	Percentage of earnings distributed in the form of cash dividends	43%	45%	44%	37%	593

The 2009 and 2008 payout ratios for Chicago Cereal are about the same as that of General Mills (44%) but higher than the industry average (37%).

Management has some control over the amount of dividends paid each year, and companies are generally reluctant to reduce a dividend below the amount paid in a previous year. Therefore, the payout ratio will actually increase if a company's net income declines but the company keeps its total dividend payment the same. Of course, unless the company returns to its previous level of profitability, maintaining this higher dividend payout ratio is probably not possible over the long run.

Before drawing any conclusions regarding Chicago Cereal's dividend payout ratio, we should calculate this ratio over a longer period of time to evaluate any trends and also try to find out whether management's philosophy regarding dividends has changed recently. The "Selected Financial Data" section of Chicago Cereal's Management Discussion and Analysis shows that over a 5-year period, earnings per share rose 45%, while dividends per share grew only 19%.

In terms of the types of financial information available and the ratios used by various industries, what can be practically covered in this textbook gives you only the "Titanic approach": That is, you are seeing only the tip of the iceberg compared to the vast databases and types of ratio analysis that are available on computers. The availability of information is not a problem. The real trick is to be discriminating enough to perform relevant analysis and select pertinent comparative data.

Glossary

Asset turnover ratio *(p. 717)* A measure of how efficiently a company uses its assets to generate sales; computed as net sales divided by average total assets.

Available-for-sale securities *(p. 691)* Securities that are held with the intent of selling them sometime in the future.

Average collection period *(p. 711)* The average number of days that receivables are outstanding; calculated as receivables turnover divided into 365 days.

Cash debt coverage ratio *(p. 714)* A cash-basis measure used to evaluate solvency, computed as cash from operations divided by average total liabilities.

Change in accounting principle *(p. 690)* Use of an accounting principle in the current year different from the one used in the preceding year.

Comprehensive income *(p. 690)* A measure of income that includes all changes in stockholders' equity during a period except those resulting from investments by stockholders and distributions to stockholders.

Current cash debt coverage ratio *(p. 710)* A cash-basis measure of liquidity; computed as cash provided by operations divided by average current liabilities.

Current ratio *(p. 710)* A measure used to evaluate a company's liquidity and short-term debt-paying ability; calculated as current assets divided by current liabilities.

Days in inventory *(p. 712)* A measure of the average number of days inventory is held; computed as inventory turnover divided into 365 days.

Debt to total assets ratio *(p. 713)* A measure of the percentage of total financing provided by creditors; computed as total debt divided by total assets.

Discontinued operations *(p. 687)* The disposal of a significant component of a business.

Earnings per share *(p. 718)* The net income earned by each share of common stock; computed as net income less dividends on preferred stock divided by the average common shares outstanding.

Extraordinary items *(p. 688)* Events and transactions that meet two conditions: (1) unusual in nature and (2) infrequent in occurrence.

Free cash flow *(p. 714)* A measure of solvency. Cash remaining from operating activities after adjusting for capital expenditures and dividends paid.

Gross profit rate *(p. 717)* Gross profit expressed as a percentage of sales; computed as gross profit divided by net sales.

Horizontal analysis *(p. 694)* A technique for evaluating a series of financial statement data over a period of time to determine the increase (decrease) that has taken place, expressed as either an amount or a percentage.

Inventory turnover ratio *(p. 711)* A measure of the liquidity of inventory. Measures the number of times average inventory was sold during the period; computed as cost of goods sold divided by average inventory.

Leveraging *(p. 716)* Borrowing money at a lower rate of interest than can be earned by using the borrowed money; also referred to as trading on the equity.

Liquidity ratios *(p. 700)* Measures of the short-term ability of the company to pay its maturing obligations and to meet unexpected needs for cash.

Payout ratio *(p. 719)* A measure of the percentage of earnings distributed in the form of cash dividends; calculated as cash dividends declared on common stock divided by net income.

Price-earnings (P-E) ratio *(pp. 703, 718)* A comparison of the market price of each share of common stock to the earnings per share; computed as the market price of the stock divided by earnings per share.

Pro forma income *(p. 702)* A measure of income that usually excludes items that a company thinks are unusual or non-recurring.

Profit margin ratio *(p. 716)* A measure of the net income generated by each dollar of sales; computed as net income divided by net sales.

Profitability ratios *(p. 701)* Measures of the income or operating success of a company for a given period of time.

Quality of earnings *(p. 701)* Indicates the level of full and transparent information that is provided to users of the financial statements.

Receivables turnover ratio *(p. 711)* A measure of the liquidity of receivables; computed as net credit sales divided by average net receivables.

Return on assets ratio *(p. 715)* A profitability measure that indicates the amount of net income generated by each dollar of assets; calculated as net income divided by average total assets.

Return on common stockholders' equity ratio *(p. 715)* A measure of the dollars of net income earned for each dollar invested by the owners; computed as income available to common stockholders divided by average common stockholders' equity.

Solvency ratios *(p. 700)* Measures of the ability of a company to survive over a long period of time, particularly to pay interest as it comes due and to repay the balance of debt at its maturity.

Sustainable income *(p. 686)* The most likely level of income to be obtained in the future; calculated as net income adjusted for irregular items.

Times interest earned ratio *(p. 713)* A measure of a company's solvency and ability to meet interest payments as they come due; calculated as income before interest expense and income taxes divided by interest expense.

Trading on the equity *(p. 716)* Same as leveraging.

Trading securities *(p. 691)* Securities bought and held primarily for sale in the near term to generate income on short-term price differences.

Vertical analysis *(p. 696)* A technique for evaluating financial statement data that expresses each item in a financial statement as a percentage of a base amount.

Comprehensive Do it!

The events and transactions of Dever Corporation for the year ending December 31, 2012, resulted in these data.

Cost of goods sold	$2,600,000
Net sales	4,400,000
Other expenses and losses	9,600
Other revenues and gains	5,600
Selling and administrative expenses	1,100,000
Gain from discontinued division	570,000
Loss from tornado disaster (extraordinary loss)	600,000

Analysis reveals the following.

1. All items are before the applicable income tax rate of 30%.
2. The plastics division was sold on July 1.

Instructions

Prepare an income statement for the year.

Action Plan

- Remember that material items not typical of operations are reported in separate sections net of taxes.
- Associate income taxes with the item that affects the taxes.
- On a corporation income statement, report income tax expense when there is income before income tax.

Solution to Comprehensive Do it!

DEVER CORPORATION
Income Statement
For the Year Ended December 31, 2012

Net sales		$ 4,400,000
Cost of goods sold		2,600,000
Gross profit		1,800,000
Selling and administrative expenses		1,100,000
Income from operations		700,000
Other revenues and gains	$ 5,600	
Other expenses and losses	(9,600)	(4,000)
Income before income taxes		696,000
Income tax expense ($696,000 × 30%)		208,800
Income before irregular items		487,200
Discontinued operations: Gain from discontinued division, net of taxes of $171,000 ($570,000 × 30%)		399,000
Extraordinary item: Tornado loss, net of income tax savings $180,000 ($600,000 × 30%)		(420,000)
Net income		$ 466,200

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more resources are available for practice in WileyPLUS

Self-Test Questions

Answers are on page 743.

All of the Self-Test Questions in this chapter employ decision tools.

(SO 2) **1.** In reporting discontinued operations, the income statement should show in a special section:

(a) gains on the disposal of the discontinued component.
(b) losses on the disposal of the discontinued component.
(c) Neither (a) nor (b).
(d) Both (a) and (b).

(SO 2) **2.** Cool Stools Corporation has income before taxes of $400,000 and an extraordinary loss of $100,000. If the income tax rate is 25% on all items, the income statement should show income before irregular items and an extraordinary loss, respectively, of
(a) $325,000 and $100,000.
(b) $325,000 and $75,000.
(c) $300,000 and $100,000.
(d) $300,000 and $75,000.

(SO 3) **3.** Which of the following would be considered an "Other comprehensive income" item?
(a) Gain on disposal of discontinued operations.
(b) Unrealized loss on available-for-sale securities.
(c) Extraordinary loss related to flood.
(d) Net income.

(SO 4) **4.** In horizontal analysis, each item is expressed as a percentage of the:
(a) net income amount.
(b) stockholders' equity amount.
(c) total assets amount.
(d) base-year amount.

(SO 4) **5.** Adams Corporation reported net sales of $300,000, $330,000, and $360,000 in the years 2010, 2011, and 2012, respectively. If 2010 is the base year, what percentage do 2012 sales represent of the base?
(a) 77%. (c) 120%.
(b) 108%. (d) 130%.

(SO 5) **6.** The following schedule is a display of what type of analysis?

	Amount	Percent
Current assets	$200,000	25%
Property, plant, and equipment	600,000	75%
Total assets	$800,000	

(a) Horizontal analysis. (c) Vertical analysis.
(b) Differential analysis. (d) Ratio analysis.

(SO 5) **7.** In vertical analysis, the base amount for depreciation expense is generally:
(a) net sales.
(b) depreciation expense in a previous year.
(c) gross profit.
(d) fixed assets.

(SO 6) **8.** Which measure is an evaluation of a company's ability to pay current liabilities?
(a) Current cash debt coverage ratio.
(b) Current ratio.
(c) Both (a) and (b).
(d) None of the above.

(SO 6) **9.** Which measure is useful in evaluating the efficiency in managing inventories?
(a) Inventory turnover ratio.
(b) Days in inventory.
(c) Both (a) and (b).
(d) None of the above.

(SO 6) **10.** Which of these is *not* a liquidity ratio?
(a) Current ratio.
(b) Asset turnover ratio.
(c) Inventory turnover ratio.
(d) Receivables turnover ratio.

11. Plano Corporation reported net income $24,000; net sales $400,000; and average assets $600,000 for 2012. What is the 2012 profit margin ratio? (SO 6)
(a) 6%. (c) 40%.
(b) 12%. (d) 200%.

Use the following financial statement information as of the end of each year to answer Self-Test Questions 12–16.

	2012	2011
Inventory	$ 54,000	$ 48,000
Current assets	81,000	106,000
Total assets	382,000	326,000
Current liabilities	27,000	36,000
Total liabilities	102,000	88,000
Common stockholders' equity	240,000	198,000
Net sales	784,000	697,000
Cost of goods sold	306,000	277,000
Net income	134,000	90,000
Tax expense	22,000	18,000
Interest expense	12,000	12,000
Dividends paid to preferred stockholders	4,000	4,000
Dividends paid to common stockholders	15,000	10,000

12. Compute the days in inventory for 2012. (SO 6)
(a) 64.4 days. (c) 6 days.
(b) 60.8 days. (d) 24 days.

13. Compute the current ratio for 2012. (SO 6)
(a) 1.26:1. (c) 0.80:1.
(b) 3.0:1. (d) 3.75:1.

14. Compute the profit margin ratio for 2012. (SO 6)
(a) 17.1%. (c) 37.9%.
(b) 18.1%. (d) 5.9%.

15. Compute the return on common stockholders' equity for 2012. (SO 6)
(a) 54.2%. (c) 61.2%.
(b) 52.5%. (d) 59.4%.

16. Compute the times interest earned for 2012. (SO 6)
(a) 11.2 times. (c) 14.0 times.
(b) 65.3 times. (d) 13.0 times.

17. Which situation below might indicate a company has a low quality of earnings? (SO 7)
(a) The same accounting principles are used each year.
(b) Revenue is recognized when earned.
(c) Maintenance costs are capitalized and then depreciated.
(d) The company's P-E ratio is high relative to competitors.

Go to the book's companion website, **www.wiley.com/college/kimmel**, to access additional Self-Test Questions.

Questions

All of the Questions in this chapter employ decision tools.

1. Explain sustainable income. What relationship does this concept have to the treatment of irregular items on the income statement?

2. Indicate which of the following items would be reported as an extraordinary item on Stillwell Corporation's income statement.
(a) Loss from damages caused by a volcano eruption in Iona.
(b) Loss from the sale of short-term investments.
(c) Loss attributable to a labor strike.
(d) Loss of inventory from flood damage because a warehouse is located on a flood plain that floods every 5 to 10 years.
(e) Loss on the write-down of outdated inventory.
(f) Loss from a foreign government's expropriation of a production facility.
(g) Loss from damage to a warehouse in southern California from a minor earthquake.

3. Duncan Inc. reported 2011 earnings per share of $3.26 and had no extraordinary items. In 2012, earnings per share on income before extraordinary items was $2.99, and earnings per share on net income was $3.49. Do you consider this trend to be favorable? Why or why not?

4. Sandran Inc. has been in operation for 3 years and uses the FIFO method of pricing inventory. During the fourth year, Sandran changes to the average-cost method for all its inventory. How will Sandran report this change?

5. What amount did Tootsie Roll Industries report as "Other comprehensive earnings" in 2009? By what percentage did Tootsie Roll's "Comprehensive earnings" differ from its "Net earnings"?

6. (a) Kristina Desmet believes that the analysis of financial statements is directed at two characteristics of a company: liquidity and profitability. Is Kristina correct? Explain.
(b) Are short-term creditors, long-term creditors, and stockholders interested in primarily the same characteristics of a company? Explain.

7. (a) Distinguish among the following bases of comparison: intracompany, intercompany and industry averages.
(b) Give the principal value of using each of the three bases of comparison.

8. Two popular methods of financial statement analysis are horizontal analysis and vertical analysis. Explain the difference between these two methods.

9. (a) If Lind Company had net income of $300,000 in 2011 and it experienced a 24.5% increase in net income for 2012, what is its net income for 2012?
(b) If 6 cents of every dollar of Lind's revenue is net income in 2011, what is the dollar amount of 2011 revenue?

10. Name the major ratios useful in assessing (a) liquidity and (b) solvency.

11. Ron Singer is puzzled. His company had a profit margin of 10% in 2012. He feels that this is an indication that the company is doing well. Teresa Ridley, his accountant, says that more information is needed to determine the company's financial well-being. Who is correct? Why?

12. What does each type of ratio measure?
(a) Liquidity ratios.
(b) Solvency ratios.
(c) Profitability ratios.

13. What is the difference between the current ratio and working capital?

14. Smart Mart, a retail store, has a receivables turnover ratio of 4.5 times. The industry average is 12.5 times. Does Smart Mart have a collection problem with its receivables?

15. Which ratios should be used to help answer each of these questions?
(a) How efficient is a company in using its assets to produce sales?
(b) How near to sale is the inventory on hand?
(c) How many dollars of net income were earned for each dollar invested by the owners?
(d) How able is a company to meet interest charges as they fall due?

16. At year-end, the price-earnings ratio of General Motors was 11.3, and the price-earnings ratio of Microsoft was 28.14. Which company did the stock market favor? Explain.

17. What is the formula for computing the payout ratio? Do you expect this ratio to be high or low for a growth company?

18. Holding all other factors constant, indicate whether each of the following changes generally signals good or bad news about a company.
(a) Increase in profit margin ratio.
(b) Decrease in inventory turnover ratio.
(c) Increase in current ratio.
(d) Decrease in earnings per share.
(e) Increase in price-earnings ratio.
(f) Increase in debt to total assets ratio.
(g) Decrease in times interest earned ratio.

19. The return on assets for Corwin Corporation is 7.6%. During the same year, Corwin's return on common stockholders' equity is 12.8%. What is the explanation for the difference in the two rates?

20. Which two ratios do you think should be of greatest interest in each of the following cases?
(a) A pension fund considering the purchase of 20-year bonds.
(b) A bank contemplating a short-term loan.
(c) A common stockholder.

21. Hawi Inc. has net income of $200,000, average shares of common stock outstanding of 40,000,

and preferred dividends for the period of $20,000. What is Hawi's earnings per share of common stock? Sid Brey, the president of Hawi, believes that the computed EPS of the company is high. Comment.

22. Identify and explain factors that affect quality of earnings.

23. Explain how the choice of one of the following accounting methods over the other raises or lowers a company's net income during a period of continuing inflation.
(a) Use of FIFO instead of LIFO for inventory costing.
(b) Use of a 6-year life for machinery instead of a 9-year life.
(c) Use of straight-line depreciation instead of declining-balance depreciation.

Brief Exercises

All of the Brief Exercises in this chapter employ decision tools.

Prepare a discontinued operations section of an income statement.
(SO 2), AP

BE13-1 On June 30, Amano Corporation discontinued its operations in Mexico. On September 1, Amano disposed of the Mexico facility at a pretax loss of $640,000. The applicable tax rate is 25%. Show the discontinued operations section of Amano's income statement.

Prepare a corrected income statement with an extraordinary item.
(SO 2), AP

BE13-2 An inexperienced accountant for Corfeld Corporation showed the following in Corfeld's 2012 income statement: Income before income taxes $300,000; Income tax expense $72,000; Extraordinary loss from flood (before taxes) $80,000; and Net income $168,000. The extraordinary loss and taxable income are both subject to a 30% tax rate. Prepare a corrected income statement beginning with "Income before income taxes."

Indicate how a change in accounting principle is reported.
(SO 2), C

BE13-3 On January 1, 2012, Gustin Inc. changed from the LIFO method of inventory pricing to the FIFO method. Explain how this change in accounting principle should be treated in the company's financial statements.

Prepare horizontal analysis.
(SO 4), AP

BE13-4 Using these data from the comparative balance sheet of Rosalez Company, perform horizontal analysis.

	December 31, 2012	December 31, 2011
Accounts receivable	$ 460,000	$ 400,000
Inventory	780,000	650,000
Total assets	3,164,000	2,800,000

Prepare vertical analysis.
(SO 5), AP

BE13-5 Using the data presented in BE13-4 for Rosalez Company, perform vertical analysis.

Calculate percentage of change.
(SO 4), AP

BE13-6 Net income was $500,000 in 2010, $485,000 in 2011, and $518,400 in 2012. What is the percentage of change from (a) 2010 to 2011, and (b) from 2011 to 2012? Is the change an increase or a decrease?

Calculate net income.
(SO 4), AP

BE13-7 If Carolina Company had net income of $382,800 in 2012 and it experienced a 16% increase in net income over 2011, what was its 2011 net income?

Analyze change in net income.
(SO 5), AP

BE13-8 Vertical analysis (common-size) percentages for Vallejo Company's sales, cost of goods sold, and expenses are listed here.

Vertical Analysis	2012	2011	2010
Sales	100.0%	100.0%	100.0%
Cost of goods sold	60.5	62.9	64.8
Expenses	26.0	26.6	27.5

Did Vallejo's net income as a percent of sales increase, decrease, or remain unchanged over the 3-year period? Provide numerical support for your answer.

Analyze change in net income.
(SO 4), AP

BE13-9 Horizontal analysis (trend analysis) percentages for Spartan Company's sales, cost of goods sold, and expenses are listed here.

Horizontal Analysis	2012	2011	2010
Sales	96.2%	104.8%	100.0%
Cost of goods sold	101.0	98.0	100.0
Expenses	105.6	95.4	100.0

Explain whether Spartan's net income increased, decreased, or remained unchanged over the 3-year period.

BE13-10 These selected condensed data are taken from recent balance sheets of Bob Evans Farms (in thousands).

Calculate current ratio. (SO 6), AP

	2009	2008
Cash	$ 13,606	$ 7,669
Accounts receivable	23,045	19,951
Inventories	31,087	31,345
Other current assets	12,522	11,909
Total current assets	$ 80,260	$ 70,874
Total current liabilities	$245,805	$326,203

Compute the current ratio for each year and comment on your results.

BE13-11 The following data are taken from the financial statements of Caprice Company.

Evaluate collection of accounts receivable. (SO 6), AN

	2012	2011
Accounts receivable (net), end of year	$ 550,000	$ 540,000
Net sales on account	4,300,000	4,000,000
Terms for all sales are 1/10, n/45.		

Compute for each year (a) the receivables turnover ratio and (b) the average collection period. What conclusions about the management of accounts receivable can be drawn from these data? At the end of 2010, accounts receivable was $520,000.

BE13-12 The following data were taken from the income statements of Merlot Company.

Evaluate management of inventory. (SO 6), AN

	2012	2011
Sales revenue	$6,420,000	$6,240,000
Beginning inventory	960,000	840,000
Purchases	4,840,000	4,661,000
Ending inventory	1,020,000	960,000

Compute for each year (a) the inventory turnover ratio and (b) days in inventory. What conclusions concerning the management of the inventory can be drawn from these data?

BE13-13 Staples, Inc. is one of the largest suppliers of office products in the United States. It had net income of $738.7 million and sales of $24,275.5 million in 2009. Its total assets were $13,073.1 million at the beginning of the year and $13,717.3 million at the end of the year. What is Staples, Inc.'s (a) asset turnover ratio and (b) profit margin ratio? (Round to two decimals.) Provide a brief interpretation of your results.

Calculate profitability ratios. (SO 6), AN

BE13-14 Schiller Company has stockholders' equity of $400,000 and net income of $72,000. It has a payout ratio of 18% and a return on assets ratio of 20%. How much did Schiller pay in cash dividends, and what were its average total assets?

Calculate profitability ratios. (SO 6), AN

BE13-15 Selected data taken from a recent year's financial statements of trading card company Topps Company, Inc. are as follows (in millions).

Calculate cash-basis liquidity and solvency ratios. (SO 6), AN

Net sales	$326.7
Current liabilities, beginning of year	41.1
Current liabilities, end of year	62.4
Net cash provided by operating activities	10.4
Total liabilities, beginning of year	65.2
Total liabilities, end of year	73.2
Capital expenditures	3.7
Cash dividends	6.2

Compute these ratios: (a) current cash debt coverage ratio, (b) cash debt coverage ratio, and (c) free cash flow. Provide a brief interpretation of your results.

Do it! Review

Prepare income statement, including irregular items.
(SO 2), AP

Do it! 13-1 In its draft 2012 income statement, Provision Corporation reports income before income taxes $500,000, extraordinary loss due to earthquake $180,000, income taxes $200,000 (not including irregular items), and loss on disposal of discontinued music division $24,000. The income tax rate is 40%. Prepare a correct income statement, beginning with income before income taxes.

Prepare horizontal analysis.
(SO 3), AP

Do it! 13-2 Summary financial information for Newburg Company is as follows.

	Dec. 31, 2013	Dec. 31, 2012
Current assets	$ 200,000	$ 220,000
Plant assets	1,040,000	780,000
Total assets	$1,240,000	$1,000,000

Compute the amount and percentage changes in 2013 using horizontal analysis, assuming 2012 is the base year.

Compute ratios.
(SO 5), AP

Do it! 13-3 The condensed financial statements of Blondell Company for the years 2011 and 2012 are presented below.

BLONDELL COMPANY
Balance Sheets
December 31 (in thousands)

	2012	2011
Current assets		
Cash and cash equivalents	$ 330	$ 360
Accounts receivable (net)	470	400
Inventories	460	390
Prepaid expenses	130	160
Total current assets	1,390	1,310
Property, plant, and equipment (net)	410	380
Investments	10	10
Intangibles and other assets	530	510
Total assets	$2,340	$2,210
Current liabilities	$ 820	$ 790
Long-term liabilities	480	380
Stockholders' equity—common	1,040	1,040
Total liabilities and stockholders' equity	$2,340	$2,210

BLONDELL COMPANY
Income Statements
For the Year Ended December 31 (in thousands)

	2012	2011
Revenues	$3,800	$3,460
Costs and expenses		
Cost of goods sold	970	890
Selling & administrative expenses	2,400	2,330
Interest expense	10	20
Total costs and expenses	3,380	3,240
Income before income taxes	420	220
Income tax expense	168	88
Net income	$ 252	$ 132

Compute the following ratios for 2012 and 2011.
(a) Current ratio.
(b) Inventory turnover. (Inventory on December 31, 2010, was $340.)
(c) Profit margin ratio.
(d) Return on assets. (Assets on December 31, 2010, were $1,900.)
(e) Return on common stockholders' equity. (Equity on December 31, 2010, was $900.)

(f) Debt to total assets ratio.
(g) Times interest earned.

Do it! 13-4 Match each of the following terms with the phrase that best describes it.

Match terms relating to quality of earnings and financial statement analysis.
(SO 3, 4, 5, 6, 7), **K**

Quality of earnings	Pro forma income
Current ratio	Discontinued operations
Horizontal analysis	Comprehensive income

1. A measure used to evaluate a company's liquidity.
2. Usually excludes items that a company thinks are unusual or non-recurring.
3. Indicates the level of full and transparent information provided to users of the financial statements.
4. The disposal of a significant segment of a business.
5. Determines increases or decreases in a series of financial statement data.
6. Includes all changes in stockholders' equity during a period except those resulting from investments by stockholders and distributions to stockholders.

Exercises

All of the Exercises in this chapter employ decision tools.

E13-1 Tulsa Company has income before irregular items of $310,000 for the year ended December 31, 2012. It also has the following items (before considering income taxes): (1) an extraordinary fire loss of $60,000 and (2) a gain of $30,000 from the disposal of a division. Assume all items are subject to income taxes at a 30% tax rate.

Prepare irregular items portion of an income statement.
(SO 2), **AP**

Instructions
Prepare Tulsa Company's income statement for 2012, beginning with "Income before irregular items."

E13-2 The *Wall Street Journal* routinely publishes summaries of corporate quarterly and annual earnings reports in a feature called the "Earnings Digest." A typical "digest" report takes the following form.

Evaluate the effects of unusual or irregular items.
(SO 1, 2, 6), **C**

ENERGY ENTERPRISES (A)

	Quarter ending July 31	
	2012	**2011**
Revenues	$2,049,000,000	$1,754,000,000
Net income	97,000,000	(a) 68,750,000
EPS: Net income	1.28	0.93
	12 months ending July 31	
	2012	**2011**
Revenues	$5,578,500,000	$5,065,300,000
Extraordinary item	(b) 1,900,000	
Net income	102,700,000	(a) 33,250,000
EPS: Net income	1.36	0.48

(a) Includes a net charge of $26,000,000 from loss on the sale of electrical equipment
(b) Extraordinary gain on Middle East property expropriation

The letter in parentheses following the company name indicates the exchange on which Energy Enterprises' stock is traded—in this case, the American Stock Exchange.

Instructions
Answer the following questions.
(a) How was the loss on the electrical equipment reported on the income statement? Was it reported in the fourth quarter of 2011? How can you tell?
(b) Why did the *Wall Street Journal* list the extraordinary item separately?
(c) What is the extraordinary item? Was it included in income for the fourth quarter? How can you tell?
(d) Did Energy Enterprises have an operating loss in any quarter of 2011? Of 2012? How do you know?
(e) Approximately how many shares of stock were outstanding in 2012? Did the number of outstanding shares change from July 31, 2011 to July 31, 2012?

(f) As an investor, what numbers should you use to determine Energy Enterprises' profit margin ratio? Calculate the profit margin ratio for 2011 and 2012 that you consider most useful. Explain your decision.

Prepare horizontal analysis.
(SO 4), AP

E13-3 Here is financial information for Pauletti Inc.

	December 31, 2012	December 31, 2011
Current assets	$106,000	$ 90,000
Plant assets (net)	400,000	350,000
Current liabilities	99,000	65,000
Long-term liabilities	122,000	90,000
Common stock, $1 par	130,000	115,000
Retained earnings	155,000	170,000

Instructions
Prepare a schedule showing a horizontal analysis for 2012, using 2011 as the base year.

Prepare vertical analysis.
(SO 5), AP

E13-4 Operating data for Gladow Corporation are presented below.

	2012	2011
Sales	$800,000	$600,000
Cost of goods sold	520,000	408,000
Selling expenses	120,000	72,000
Administrative expenses	60,000	48,000
Income tax expense	30,000	24,000
Net income	70,000	48,000

Instructions
Prepare a schedule showing a vertical analysis for 2012 and 2011.

Prepare horizontal and vertical analyses.
(SO 4, 5), AP

E13-5 The comparative balance sheets of Nike, Inc. are presented here.

NIKE, INC.
Comparative Balance Sheets
May 31
($ in millions)

Assets	2009	2008
Current assets	$ 9,734	$ 8,839
Property, plant, and equipment (net)	1,958	1,891
Other assets	1,558	1,713
Total assets	$13,250	$12,443
Liabilities and Stockholders' Equity		
Current liabilities	$ 3,277	$ 3,322
Long-term liabilities	1,280	1,296
Stockholders' equity	8,693	7,825
Total liabilities and stockholders' equity	$13,250	$12,443

Instructions
(a) Prepare a horizontal analysis of the balance sheet data for Nike, using 2008 as a base. (Show the amount of increase or decrease as well.)
(b) Prepare a vertical analysis of the balance sheet data for Nike for 2009.

Prepare horizontal and vertical analyses.
(SO 4, 5), AP

E13-6 Here are the comparative income statements of Blevins Corporation.

BLEVINS CORPORATION
Comparative Income Statements
For the Years Ended December 31

	2012	2011
Net sales	$598,000	$500,000
Cost of goods sold	477,000	420,000
Gross profit	$121,000	$ 80,000
Operating expenses	80,000	44,000
Net income	$ 41,000	$ 36,000

Instructions

(a) Prepare a horizontal analysis of the income statement data for Blevins Corporation, using 2011 as a base. (Show the amounts of increase or decrease.)

(b) Prepare a vertical analysis of the income statement data for Blevins Corporation for both years.

Compute liquidity ratios. (SO 6), **AP**

E13-7 Nordstrom, Inc. operates department stores in numerous states. Selected financial statement data (in millions) for 2009 are presented below.

	End of Year	Beginning of Year
Cash and cash equivalents	$ 795	$ 72
Receivables (net)	2,035	1,942
Merchandise inventory	898	900
Other current assets	326	303
Total current assets	$4,054	$3,217
Total current liabilities	$2,014	$1,601

For the year, net credit sales were $8,258 million, cost of goods sold was $5,328 million, and cash from operations was $1,251 million.

Instructions

Compute the current ratio, current cash debt coverage ratio, receivables turnover ratio, average collection period, inventory turnover ratio, and days in inventory at the end of the current year.

Perform current ratio analysis. (SO 6), **AP**

E13-8 Skie Incorporated had the following transactions involving current assets and current liabilities during February 2012.

Feb.	3	Collected accounts receivable of $15,000.
	7	Purchased equipment for $23,000 cash.
	11	Paid $3,000 for a 3-year insurance policy.
	14	Paid accounts payable of $12,000.
	18	Declared cash dividends, $4,000.

Additional information:
As of February 1, 2012, current assets were $120,000 and current liabilities were $40,000.

Instructions

Compute the current ratio as of the beginning of the month and after each transaction.

Compute selected ratios. (SO 6), **AP**

E13-9 Hendi Company has these comparative balance sheet data:

HENDI COMPANY
Balance Sheets
December 31

	2012	2011
Cash	$ 15,000	$ 30,000
Receivables (net)	70,000	60,000
Inventories	60,000	50,000
Plant assets (net)	200,000	180,000
	$345,000	$320,000
Accounts payable	$ 50,000	$ 60,000
Mortgage payable (15%)	100,000	100,000
Common stock, $10 par	140,000	120,000
Retained earnings	55,000	40,000
	$345,000	$320,000

Additional information for 2012:

1. Net income was $25,000.
2. Sales on account were $375,000. Sales returns and allowances amounted to $25,000.
3. Cost of goods sold was $198,000.
4. Net cash provided by operating activities was $48,000.
5. Capital expenditures were $25,000, and cash dividends were $10,000.

Instructions
Compute the following ratios at December 31, 2012.

(a) Current.
(b) Receivables turnover.
(c) Average collection period.
(d) Inventory turnover.
(e) Days in inventory.
(f) Cash debt coverage.
(g) Current cash debt coverage.
(h) Free cash flow.

Compute selected ratios.
(SO 6), **AP**

E13-10 Selected comparative statement data for the giant bookseller Barnes & Noble are presented here. All balance sheet data are as of the end of the fiscal year (in millions).

	2008	2007
Net sales	$5,121.8	$5,286.7
Cost of goods sold	3,540.6	3,679.8
Net income	75.9	135.8
Accounts receivable	81.0	107.1
Inventory	1,203.5	1,358.2
Total assets	2,993.9	3,249.8
Total common stockholders' equity	921.6	1,074.7

Instructions
Compute the following ratios for 2008.

(a) Profit margin.
(b) Asset turnover.
(c) Return on assets.
(d) Return on common stockholders' equity.
(e) Gross profit rate.

Compute selected ratios.
(SO 6), **AP**

E13-11 Here is the income statement for Bachus, Inc.

BACHUS, INC.
Income Statement
For the Year Ended December 31, 2012

Sales	$400,000
Cost of goods sold	230,000
Gross profit	170,000
Expenses (including $16,000 interest and $24,000 income taxes)	98,000
Net income	$ 72,000

Additional information:

1. Common stock outstanding January 1, 2012, was 32,000 shares, and 40,000 shares were outstanding at December 31, 2012.
2. The market price of Bachus, Inc., stock was $14 in 2012.
3. Cash dividends of $21,000 were paid, $5,000 of which were to preferred stockholders.

Instructions
Compute the following measures for 2012.

(a) Earnings per share.
(b) Price-earnings ratio.
(c) Payout ratio.
(d) Times interest earned ratio.

Compute amounts from ratios.
(SO 6), **AP**

E13-12 Lacey Corporation experienced a fire on December 31, 2012 in which its financial records were partially destroyed. It has been able to salvage some of the records and has ascertained the following balances.

	December 31, 2012	December 31, 2011
Cash	$ 30,000	$ 10,000
Receivables (net)	72,500	126,000
Inventory	200,000	180,000
Accounts payable	50,000	90,000
Notes payable	30,000	60,000
Common stock, $100 par	400,000	400,000
Retained earnings	113,500	101,000

Additional information:

1. The inventory turnover is 3.8 times.
2. The return on common stockholders' equity is 22%. The company had no additional paid-in capital.

3. The receivables turnover is 11.2 times.
4. The return on assets is 18%.
5. Total assets at December 31, 2011, were $605,000.

Instructions

Compute the following for Lacey Corporation.

(a) Cost of goods sold for 2012.
(b) Net credit sales for 2012.
(c) Net income for 2012.
(d) Total assets at December 31, 2012.

Exercises: Set B and Challenge Exercises

Visit the book's companion website, at **www.wiley.com/college/kimmel**, and choose the Student Companion site to access Exercise Set B and Challenge Exercises.

Problems: Set A

All of the Problems in this chapter employ decision tools.

P13-1A Here are comparative statement data for Silver Company and Gold Company, two competitors. All balance sheet data are as of December 31, 2012, and December 31, 2011.

Prepare vertical analysis and comment on profitability.
(SO 5, 6), **AN**

	Silver Company		Gold Company	
	2012	**2011**	**2012**	**2011**
Net sales	$1,849,000		$546,000	
Cost of goods sold	1,063,200		289,000	
Operating expenses	240,000		82,000	
Interest expense	6,800		3,600	
Income tax expense	62,000		28,000	
Current assets	325,975	$312,410	83,336	$ 79,467
Plant assets (net)	526,800	500,000	139,728	125,812
Current liabilities	66,325	75,815	35,348	30,281
Long-term liabilities	113,990	90,000	29,620	25,000
Common stock, $10 par	500,000	500,000	120,000	120,000
Retained earnings	172,460	146,595	38,096	29,998

Instructions

(a) Prepare a vertical analysis of the 2012 income statement data for Silver Company and Gold Company.
(b) Comment on the relative profitability of the companies by computing the 2012 return on assets and the return on common stockholders' equity ratios for both companies.

P13-2A The comparative statements of Lucille Company are presented here.

Compute ratios from balance sheets and income statements.
(SO 6), **AP**

LUCILLE COMPANY
Income Statements
For the Years Ended December 31

	2012	**2011**
Net sales	$1,890,540	$1,750,500
Cost of goods sold	1,058,540	1,006,000
Gross profit	832,000	744,500
Selling and administrative expenses	500,000	479,000
Income from operations	332,000	265,500
Other expenses and losses		
Interest expense	22,000	20,000
Income before income taxes	310,000	245,500
Income tax expense	92,000	73,000
Net income	$ 218,000	$ 172,500

LUCILLE COMPANY
Balance Sheets
December 31

Assets	**2012**	**2011**
Current assets		
Cash	$ 60,100	$ 64,200
Short-term investments	74,000	50,000
Accounts receivable	117,800	102,800
Inventory	126,000	115,500
Total current assets	377,900	332,500
Plant assets (net)	649,000	520,300
Total assets	$1,026,900	$852,800
Liabilities and Stockholders' Equity		
Current liabilities		
Accounts payable	$ 160,000	$145,400
Income taxes payable	43,500	42,000
Total current liabilities	203,500	187,400
Bonds payable	220,000	200,000
Total liabilities	423,500	387,400
Stockholders' equity		
Common stock ($5 par)	290,000	300,000
Retained earnings	313,400	165,400
Total stockholders' equity	603,400	465,400
Total liabilities and stockholders' equity	$1,026,900	$852,800

All sales were on account. Net cash provided by operating activities for 2012 was $220,000. Capital expenditures were $136,000, and cash dividends were $70,000.

Instructions

Compute the following ratios for 2012.

(a) Earnings per share.
(b) Return on common stockholders' equity.
(c) Return on assets.
(d) Current ratio.
(e) Receivables turnover.
(f) Average collection period.
(g) Inventory turnover.
(h) Days in inventory.
(i) Times interest earned.
(j) Asset turnover.
(k) Debt to total assets.
(l) Current cash debt coverage.
(m) Cash debt coverage.
(n) Free cash flow.

Perform ratio analysis, and discuss change in financial position and operating results.
(SO 6), AN

P13-3A Condensed balance sheet and income statement data for Glassgow Corporation are presented here.

GLASSGOW CORPORATION
Balance Sheets
December 31

	2012	**2011**	**2010**
Cash	$ 30,000	$ 20,000	$ 18,000
Receivables (net)	50,000	45,000	48,000
Other current assets	90,000	95,000	64,000
Investments	55,000	70,000	45,000
Plant and equipment (net)	500,000	370,000	358,000
	$725,000	$600,000	$533,000
Current liabilities	$ 85,000	$ 80,000	$ 70,000
Long-term debt	145,000	85,000	50,000
Common stock, $10 par	320,000	310,000	300,000
Retained earnings	175,000	125,000	113,000
	$725,000	$600,000	$533,000

GLASSGOW CORPORATION
Income Statements
For the Years Ended December 31

	2012	2011
Sales	$740,000	$600,000
Less: Sales returns and allowances	40,000	30,000
Net sales	700,000	570,000
Cost of goods sold	425,000	350,000
Gross profit	275,000	220,000
Operating expenses (including income taxes)	180,000	150,000
Net income	$ 95,000	$ 70,000

Additional information:

1. The market price of Glassgow's common stock was $7.00, $7.50, and $8.50 for 2010, 2011, and 2012, respectively.
2. You must compute dividends paid. All dividends were paid in cash.

Instructions

(a) Compute the following ratios for 2011 and 2012.
(1) Profit margin.
(2) Gross profit rate.
(3) Asset turnover.
(4) Earnings per share.
(5) Price-earnings.
(6) Payout.
(7) Debt to total assets.

(b) Based on the ratios calculated, discuss briefly the improvement or lack thereof in the financial position and operating results from 2011 to 2012 of Glassgow Corporation.

P13-4A The following financial information is for Cheaney Company.

Compute ratios; comment on overall liquidity and profitability.
(SO 6), **AN**

CHEANEY COMPANY
Balance Sheets
December 31

Assets	2012	2011
Cash	$ 70,000	$ 65,000
Short-term investments	55,000	40,000
Receivables	104,000	90,000
Inventories	230,000	165,000
Prepaid expenses	25,000	23,000
Land	130,000	130,000
Building and equipment (net)	260,000	185,000
Total assets	$874,000	$698,000
Liabilities and Stockholders' Equity		
Notes payable	$170,000	$120,000
Accounts payable	65,000	52,000
Accrued liabilities	40,000	40,000
Bonds payable, due 2015	250,000	170,000
Common stock, $10 par	200,000	200,000
Retained earnings	149,000	116,000
Total liabilities and stockholders' equity	$874,000	$698,000

CHEANEY COMPANY
Income Statements
For the Years Ended December 31

	2012	2011
Sales	$882,000	$790,000
Cost of goods sold	640,000	575,000
Gross profit	242,000	215,000
Operating expenses	190,000	167,000
Net income	$ 52,000	$ 48,000

Additional information:

1. Inventory at the beginning of 2011 was $115,000.
2. Receivables (net) at the beginning of 2011 were $86,000.
3. Total assets at the beginning of 2011 were $660,000.
4. No common stock transactions occurred during 2011 or 2012.
5. All sales were on account.

Instructions

(a) Indicate, by using ratios, the change in liquidity and profitability of Cheaney Company from 2011 to 2012. (*Note:* Not all profitability ratios can be computed nor can cash-basis ratios be computed.)

(b) Given below are three independent situations and a ratio that may be affected. For each situation, compute the affected ratio (1) as of December 31, 2012, and (2) as of December 31, 2013, after giving effect to the situation. Net income for 2013 was $54,000. Total assets on December 31, 2013, were $900,000.

Situation	Ratio
1. 18,000 shares of common stock were sold at par on July 1, 2013.	Return on common stockholders' equity
2. All of the notes payable were paid in 2013.	Debt to total assets
3. The market price of common stock was $9 and $12 on December 31, 2012 and 2013, respectively.	Price-earnings

Compute selected ratios, and compare liquidity, profitability, and solvency for two companies.
(SO 6), E

P13-5A Selected financial data of Target and Wal-Mart for 2009 are presented here (in millions).

	Target Corporation	Wal-Mart Stores, Inc.
	Income Statement Data for Year	
Net sales	$65,357	$408,214
Cost of goods sold	45,583	304,657
Selling and administrative expenses	15,101	79,607
Interest expense	707	2,065
Other income (expense)	(94)	(411)
Income tax expense	1,384	7,139
Net income	$ 2,488	$ 14,335
	Balance Sheet Data (End of Year)	
Current assets	$18,424	$ 48,331
Noncurrent assets	26,109	122,375
Total assets	$44,533	$170,706
Current liabilities	$11,327	$ 55,561
Long-term debt	17,859	44,089
Total stockholders' equity	15,347	71,056
Total liabilities and stockholders' equity	$44,533	$170,706
	Beginning-of-Year Balances	
Total assets	$44,106	$163,429
Total stockholders' equity	13,712	65,682
Current liabilities	10,512	55,390
Total liabilities	30,394	97,747
	Other Data	
Average net receivables	$7,525	$ 4,025
Average inventory	6,942	33,836
Net cash provided by operating activities	5,881	26,249
Capital expenditures	1,729	12,184
Dividends	496	4,217

Instructions

(a) For each company, compute the following ratios.

(1) Current.
(2) Receivables turnover.
(3) Average collection period.
(4) Inventory turnover.
(5) Days in inventory.
(6) Profit margin.
(7) Asset turnover.
(8) Return on assets.
(9) Return on common stockholders' equity.
(10) Debt to total assets.
(11) Times interest earned.
(12) Current cash debt coverage.
(13) Cash debt coverage.
(14) Free cash flow.

(b) Compare the liquidity, solvency, and profitability of the two companies.

Problems: Set B

All of the Problems in this chapter employ decision tools.

P13-1B Here are comparative statement data for Martin Company and Lewis Company, two competitors. All balance sheet data are as of December 31, 2012, and December 31, 2011.

Prepare vertical analysis and comment on profitability.
(SO 5, 6), **AN**

	Martin Company		Lewis Company	
	2012	**2011**	**2012**	**2011**
Net sales	$350,000		$1,200,000	
Cost of goods sold	180,000		648,000	
Operating expenses	72,000		266,000	
Interest expense	5,000		10,000	
Income tax expense	17,000		54,000	
Current assets	130,000	$100,000	700,000	$650,000
Plant assets (net)	400,000	270,000	1,000,000	750,000
Current liabilities	60,000	58,000	250,000	275,000
Long-term liabilities	50,000	72,000	200,000	150,000
Common stock	340,000	200,000	950,000	700,000
Retained earnings	80,000	40,000	300,000	275,000

Instructions

(a) Prepare a vertical analysis of the 2012 income statement data for Martin Company and Lewis Company.

(b) Comment on the relative profitability of the companies by computing the return on assets and the return on common stockholders' equity ratios for both companies.

P13-2B The comparative statements of Jetson Company are shown below.

Compute ratios from balance sheets and income statements.
(SO 6), **AP**

JETSON COMPANY
Income Statements
For the Years Ended December 31

	2012	**2011**
Net sales	$780,000	$624,000
Cost of goods sold	440,000	405,600
Gross profit	340,000	218,400
Selling and administrative expense	176,880	149,760
Income from operations	163,120	68,640
Other expenses and losses		
Interest expense	9,920	7,200
Income before income taxes	153,200	61,440
Income tax expense	38,000	14,000
Net income	$115,200	$ 47,440

JETSON COMPANY
Balance Sheets
December 31

Assets	**2012**	**2011**
Current assets		
Cash	$ 23,100	$ 21,600
Short-term investments	44,800	33,000
Accounts receivable	106,200	83,800
Inventory	116,400	74,000
Total current assets	290,500	212,400
Plant assets (net)	485,300	439,600
Total assets	$775,800	$652,000
Liabilities and Stockholders' Equity		
Current liabilities		
Accounts payable	$138,200	$132,000
Income taxes payable	25,300	24,000
Total current liabilities	163,500	156,000
Bonds payable	132,000	120,000
Total liabilities	295,500	276,000
Stockholders' equity		
Common stock ($10 par)	150,000	130,000
Retained earnings	330,300	246,000
Total stockholders' equity	480,300	376,000
Total liabilities and stockholders' equity	$775,800	$652,000

All sales were on account. Net cash provided by operating activities was $108,000. Capital expenditures were $47,000, and cash dividends were $30,900.

Instructions

Compute the following ratios for 2012.

(a) Earnings per share.
(b) Return on common stockholders' equity.
(c) Return on assets.
(d) Current.
(e) Receivables turnover.
(f) Average collection period.
(g) Inventory turnover.
(h) Days in inventory.
(i) Times interest earned.
(j) Asset turnover.
(k) Debt to total assets.
(l) Current cash debt coverage.
(m) Cash debt coverage.
(n) Free cash flow.

Perform ratio analysis, and discuss change in financial position and operating results.
(SO 6), AN

P13-3B The condensed balance sheet and income statement data for Finch Corporation are presented below.

FINCH CORPORATION
Balance Sheets
December 31

	2012	**2011**	**2010**
Cash	$ 30,000	$ 24,000	$ 20,000
Receivables (net)	110,000	48,000	48,000
Other current assets	80,000	78,000	62,000
Investments	90,000	70,000	50,000
Plant and equipment (net)	503,000	400,000	360,000
	$813,000	$620,000	$540,000
Current liabilities	$ 98,000	$ 75,000	$ 70,000

  (12) Current cash debt coverage.
  (13) Cash debt coverage.
  (14) Free cash flow.

(b) Compare the liquidity, solvency, and profitability of the two companies.

Problems: Set C

Visit the book's companion website, at **www.wiley.com/college/kimmel**, and choose the Student Companion site to access Problem Set C.

Continuing Cookie Chronicle

(*Note:* This is a continuation of the Cookie Chronicle from Chapters 1 through 12.)

CCC13 Natalie and Curtis have comparative balance sheets and income statements for Cookie & Coffee Creations Inc. They have been told that they can use these financial statements to prepare horizontal and vertical analyses, and to calculate financial ratios, to analyze how their business is doing and to make some decisions they have been considering.

Go to the book's companion website, at **www.wiley.com/college/kimmel**, to find the completion of this problem.

broadening your perspective

Financial Reporting and Analysis

FINANCIAL REPORTING PROBLEM: *Tootsie Roll Industries, Inc.*

BYP13-1 Your parents are considering investing in Tootsie Roll Industries common stock. They ask you, as an accounting expert, to make an analysis of the company for them. Fortunately, excerpts from a recent annual report of Tootsie Roll are presented in Appendix A of this textbook.

Instructions

(a) Make a 5-year trend analysis, using 2005 as the base year, of (1) net sales and (2) net earnings. Comment on the significance of the trend results.

(b) Compute for 2009 and 2008 the (1) debt to total assets ratio and (2) times interest earned ratio. (See Note 6 for interest expense.) How would you evaluate Tootsie Roll's long-term solvency?

(c) Compute for 2009 and 2008 the (1) profit margin ratio, (2) asset turnover ratio, (3) return on assets ratio, and (4) return on common stockholders' equity ratio. How would you evaluate Tootsie Roll's profitability? Total assets at December 31, 2007, were $812,725,000, and total stockholders' equity at December 31, 2007, was $638,230,000.

(d) What information outside the annual report may also be useful to your parents in making a decision about Tootsie Roll?

COMPARATIVE ANALYSIS PROBLEM: *Tootsie Roll vs. Hershey*

BYP13-2 The financial statements of The Hershey Company are presented in Appendix B, following the financial statements for Tootsie Roll Industries in Appendix A.

Instructions

(a) Based on the information in the financial statements, determine each of the following for each company:
  (1) The percentage increase (i) in net sales and (ii) in net income from 2008 to 2009.
  (2) The percentage increase (i) in total assets and (ii) in total stockholders' equity from 2008 to 2009.
  (3) The earnings per share for 2009.

(b) What conclusions concerning the two companies can be drawn from these data?

RESEARCH CASE

BYP13-3 The April 21, 2008, issue of the *Wall Street Journal Online* included an article by David Reilly entitled "A Way Charges Stay off Bottom Line."

Instructions

Read the article and answer the following questions.

(a) According to the article, how do companies avoid reporting losses on certain types of investment securities in net income?
(b) At what point would these losses be reported in net income?
(c) At the time of the article, what was the total estimated amount of unrealized losses that companies in the Standard and Poor's 500 Stock Index were reporting in equity?
(d) Does the article suggest that these companies are violating accounting standards?
(e) What are the implications of this accounting practice for investors?

INTERPRETING FINANCIAL STATEMENTS

BYP13-4 The Coca-Cola Company and PepsiCo, Inc. provide refreshments to every corner of the world. Selected data from the 2009 consolidated financial statements for The Coca-Cola Company and for PepsiCo, Inc. are presented here (in millions).

	Coca-Cola	PepsiCo
Total current assets	$17,551	$12,571
Total current liabilities	13,721	8,756
Net sales	30,990	43,232
Cost of goods sold	11,088	20,099
Net income	6,824	5,946
Average (net) receivables for the year	3,424	4,654
Average inventories for the year	2,271	2,570
Average total assets	44,595	37,921
Average common stockholders' equity	22,636	14,556
Average current liabilities	13,355	8,772
Average total liabilities	21,960	23,466
Total assets	48,671	39,848
Total liabilities	23,872	23,044
Income taxes	2,040	2,100
Interest expense	355	397
Cash provided by operating activities	8,186	6,796
Capital expenditures	1,993	2,128
Cash dividends	3,800	2,732

Instructions

(a) Compute the following liquidity ratios for 2009 for Coca-Cola and for PepsiCo and comment on the relative liquidity of the two competitors.
  (1) Current ratio.
  (2) Receivables turnover.
  (3) Average collection period.
  (4) Inventory turnover.
  (5) Days in inventory.
  (6) Current cash debt coverage.

(b) Compute the following solvency ratios for the two companies and comment on the relative solvency of the two competitors.
  (1) Debt to total assets ratio.
  (2) Times interest earned.
  (3) Cash debt coverage ratio.
  (4) Free cash flow.

(c) Compute the following profitability ratios for the two companies and comment on the relative profitability of the two competitors.
  (1) Profit margin.
  (2) Asset turnover.
  (3) Return on assets.
  (4) Return on common stockholders' equity.

FINANCIAL ANALYSIS ON THE WEB

BYP13-5 ***Purpose:*** To employ comparative data and industry data to evaluate a company's performance and financial position.

Address: **http://www.moneycentral.msn.com/investor/invsub/results/compare.asp**, or go to **www.wiley.com/college/kimmel**

Steps
(1) Identify two competing companies.
(2) Go to the above address.
(3) Type in the first company's stock symbol. (Use "symbol look-up.").
(4) Choose **Ratios**.
(5) Print out the results.
(6) Repeat steps 3–5 for the competitor.

Instructions
(a) Evaluate the company's liquidity relative to the industry averages and to the competitor that you chose.
(b) Evaluate the company's solvency relative to the industry averages and to the competitor that you chose.
(c) Evaluate the company's profitability relative to the industry averages and to the competitor that you chose.

Critical Thinking

DECISION MAKING ACROSS THE ORGANIZATION

BYP13-6 You are a loan officer for Great Plains Bank of Davenport. David Miller, president of D. Miller Corporation, has just left your office. He is interested in an 8-year loan to expand the company's operations. The borrowed funds would be used to purchase new equipment. As evidence of the company's debt-worthiness, Miller provided you with the following facts.

	2012	2011
Current ratio	3.1	2.1
Asset turnover ratio	2.8	2.2
Cash debt coverage ratio	.1	.2
Net income	Up 32%	Down 8%
Earnings per share	$3.30	$2.50

Miller is a very insistent (some would say pushy) man. When you told him that you would need additional information before making your decision, he acted offended and said, "What more could you possibly want to know?" You responded that, at a minimum, you would need complete, audited financial statements.

Instructions
With the class divided into groups, answer the following.
(a) Explain why you would want the financial statements to be audited.
(b) Discuss the implications of the ratios provided for the lending decision you are to make. That is, does the information paint a favorable picture? Are these ratios relevant to the decision?
(c) List three other ratios that you would want to calculate for this company, and explain why you would use each.

COMMUNICATION ACTIVITY

BYP13-7 Kevin Halen is the chief executive officer of Brenna Electronics. Halen is an expert engineer but a novice in accounting. Halen asks you, as an accounting student, to explain (a) the bases for comparison in analyzing Brenna's financial statements and (b) the limitations, if any, in financial statement analysis.

Instructions

Write a memo to Kevin Halen that explains the basis for comparison and the factors affecting quality of earnings.

ETHICS CASE

BYP13-8 Ellen Toth, president of RF Industries, wishes to issue a press release to bolster her company's image and maybe even its stock price, which has been gradually falling. As controller, you have been asked to provide a list of 20 financial ratios and other operating statistics for RF Industries' first-quarter financials and operations.

Two days after you provide the data requested, Marian Lyons, the public relations director of RF, asks you to prove the accuracy of the financial and operating data contained in the press release written by the president and edited by Marian. In the news release, the president highlights the sales increase of 25% over last year's first quarter and the positive change in the current ratio from 1.5:1 last year to 3:1 this year. She also emphasizes that production was up 50% over the prior year's first quarter.

You note that the release contains only positive or improved ratios and none of the negative or deteriorated ratios. For instance, no mention is made that the debt to total assets ratio has increased from 35% to 55%, that inventories are up 89%, and that although the current ratio improved, the current cash debt coverage ratio fell from .15 to .05. Nor is there any mention that the reported profit for the quarter would have been a loss had not the estimated lives of RF plant and machinery been increased by 30%. Marian emphasized, "The Pres wants this release by early this afternoon."

Instructions

(a) Who are the stakeholders in this situation?
(b) Is there anything unethical in the president's actions?
(c) Should you as controller remain silent? Does Marian have any responsibility?

"ALL ABOUT YOU" ACTIVITY

BYP13-9 In this chapter, you learned how to use many tools for performing a financial analysis of a company. When making personal investments, however, it is most likely that you won't be buying stocks and bonds in individual companies. Instead, when most people want to invest in stock, they buy mutual funds. By investing in a mutual fund, you reduce your risk because the fund diversifies by buying the stock of a variety of different companies, bonds, and other investments, depending on the stated goals of the fund.

Before you invest in a fund, you will need to decide what type of fund you want. For example, do you want a fund that has the potential of high growth (but also high risk), or are you looking for lower risk and a steady steam of income? Do you want a fund that invests only in U.S. companies, or do you want one that invests globally? Many resources are available to help you with these types of decisions.

Instructions

Go to **http://web.archive.org/web/20050210200843/http://www.cnb1.com/invallocmdl.htm** and complete the investment allocation questionnaire. Add up your total points to determine the type of investment fund that would be appropriate for you.

FASB CODIFICATION ACTIVITY

BYP13-10 If your school has a subscription to the FASB Codification, go to **http://aaahq.org/ascLogin.cfm** to log in and prepare responses to the following. Use the Master Glossary for determining the proper definitions.

(a) Discontinued operations.
(b) Extraordinary items.
(c) Comprehensive income.

Answers to Insight and Accounting Across the Organization Questions

p. 689 What Does "Non-Recurring" Really Mean? Q: If a company takes a large restructuring charge, what is the effect on the company's current income statement versus future ones? **A:** The current period's net income can be greatly diminished by a large restructuring charge. The net incomes in future periods can be enhanced because they are relieved of costs (i.e., depreciation and labor expenses) that would have been charged to them.

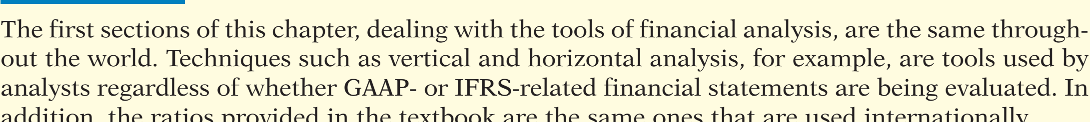
p. 700 How to Manage the Current Ratio **Q:** How might management influence a company's current ratio? **A:** Management can affect the current ratio by speeding up or withholding payments on accounts payable just before the balance sheet date. Management can alter the cash balance by increasing or decreasing long-term assets or long-term debt, or by issuing or purchasing common stock.

p. 701 High Ratings Can Bring Low Returns **Q:** Why are credit rating agencies important to the financial markets? **A:** Credit rating agencies perform financial analysis on publicly traded companies and then publish research reports and credit ratings. Investors and creditors rely on the information provided by credit rating agencies in making investment and lending decisions.

p. 704 Are Annual Reports Worth Their Weight? **Q:** Why might adding extra pages to the annual report not be beneficial to investors and analysts? What should be management's overriding objective in financial reporting? **A:** When given too much information, investors may suffer from "information overload"—they may have a hard time sorting out what is important from what is not. Management's overriding financial reporting objective should be to provide an accurate depiction of the company's financial position and operating results in a clear and concise fashion. It should provide as much detail as is necessary to accomplish that.

Answers to Self-Test Questions

1. d **2.** d ($400,000 × .75); ($100,000 × .75) **3.** b **4.** d **5.** c ($360,000 ÷ $300,000) **6.** c **7.** a **8.** c **9.** c **10.** b **11.** a ($24,000 ÷ $400,000) **12.** b ($306,000 ÷ (($54,000 + $48,000)/2)) = 6; 365 ÷ 6 **13.** b ($81,000 ÷ $27,000) **14.** a ($134,000 ÷ $784,000) **15.** d ($134,000 − $4,000) ÷ (($240,000 + $198,000)/2)) **16.** c ($134,000 + $22,000 + $12,000) ÷ $12,000 **17.** c



IFRS A Look at IFRS

The first sections of this chapter, dealing with the tools of financial analysis, are the same throughout the world. Techniques such as vertical and horizontal analysis, for example, are tools used by analysts regardless of whether GAAP- or IFRS-related financial statements are being evaluated. In addition, the ratios provided in the textbook are the same ones that are used internationally.

The latter part of this chapter relates to the income statement and irregular items. As in GAAP, the income statement is a required statement under IFRS. In addition, the content and presentation of an IFRS income statement is similar to the one used for GAAP. *IAS 1* (revised), "Presentation of Financial Statements," provides general guidelines for the reporting of income statement information. In general, the differences in the presentation of financial statement information are relatively minor.

IFRS ADDITIONS TO THE TEXTBOOK

- The tools of financial statement analysis covered in this chapter are universal and therefore no significant differences exist in the analysis methods used.
- The basic objectives of the income statement are the same under both GAAP and IFRS. As indicated in the textbook, a very important objective is to ensure that users of the income statement can evaluate the earning power of the company. Earning power is the normal level of income to be obtained in the future. Thus, both the IASB and the FASB are interested in distinguishing normal levels of income from irregular items in order to better predict a company's future profitability.
- The basic accounting for discontinued operations is the same under IFRS and GAAP.
- Under IFRS, there is no classification for extraordinary items. In other words, extraordinary item treatment is prohibited under IFRS. All revenue and expense items are considered ordinary in nature. Disclosure, however, is extensive for items that are considered material to the financial results. Examples are write-downs of inventory or plant assets, or gains and losses on the sale of plant assets.
- The accounting for changes in accounting principles and changes in accounting estimates are the same for both GAAP and IFRS.
- The income statement under IFRS is referred to as a *statement of comprehensive income*. The statement of comprehensive income can be prepared under the one-statement approach or the two-statement approach.

Under the one-statement approach, all components of revenue and expense are reported in the income statement. This combined statement of comprehensive income first computes net income or loss, which is then followed by components of other comprehensive income or loss items to arrive at comprehensive income. An example appears below.

WALTER COMPANY
Statement of Comprehensive Income
For the Year Ended December 31, 2012

Sales revenue	$5,100,000
Cost of goods sold	3,800,000
Gross profit	1,300,000
Operating expenses	700,000
Net income	600,000
Other comprehensive income	
Unrealized gain on available-for-sale securities	75,000
Comprehensive income	$ 675,000

Under the two-statement approach, all the components of revenues and expenses are reported in a traditional income statement *except* for other comprehensive income or loss. In addition, a second statement (the statement of comprehensive income) is then prepared, starting with net income and followed by other comprehensive income or loss items to arrive at comprehensive income. An example of the two-statement approach, using the same data as that used above for Walter Company, appears below.

WALTER COMPANY
Income Statement
For the Year Ended December 31, 2012

Sales revenue	$5,100,000
Cost of goods sold	3,800,000
Gross profit	1,300,000
Operating expenses	700,000
Net income	$ 600,000

WALTER COMPANY
Statement of Comprehensive Income
For the Year Ended December 31, 2012

Net income	$600,000
Other comprehensive income	
Unrealized gain on available-for-sale securities	75,000
Comprehensive income	$675,000

- GAAP also permits the one-statement or two-statement approach. In addition, GAAP permits a third alternative, which is to show the computation of comprehensive income in the statement of stockholders' equity.
- The issues related to quality of earnings are the same under both GAAP and IFRS. It is hoped that by adopting a more principles-based approach, as found in IFRS, many of the earnings' quality issues will disappear.

LOOKING TO THE FUTURE

The FASB and the IASB are working on a project that would rework the structure of financial statements. Recently, the IASB decided to require a statement of comprehensive income, similar to what was required under GAAP. In addition, another part of this project addresses the issue of how to classify various items in the income statement. A main goal of this new approach is to provide information that better represents how businesses are run. In addition, the approach draws attention away from one number—net income.

IFRS Self-Test Questions

1. The basic tools of financial analysis are the same under both GAAP and IFRS *except* that:
(a) horizontal analysis cannot be done because the format of the statements is sometimes different.
(b) analysis is different because vertical analysis cannot be done under IFRS.
(c) the current ratio cannot be computed because current liabilities are often reported before current assets in IFRS statements of position.
(d) None of the above.

2. Under IFRS:
(a) the reporting of discontinued items is different than GAAP.
(b) the reporting of extraordinary items is prohibited.
(c) the reporting of changes in accounting principles is different than under GAAP.
(d) None of the above.

3. Presentation of comprehensive income must be reported under IFRS in:
(a) the statement of stockholders' equity.
(b) the income statement ending with net income.
(c) the notes to the financial statements.
(d) a statement of comprehensive income.

4. Parmalane reports the following information:

Sales	$500,000
Cost of goods sold	200,000
Operating expense	40,000
Unrealized loss on available-for-sale securities	10,000

Parmalane should report the following under the two-statement approach using IFRS:
(a) net income of $260,000 and comprehensive income of $270,000.
(b) net income of $270,000 and comprehensive income of $260,000.
(c) other comprehensive income of $10,000 and comprehensive income of $270,000.
(d) other comprehensive loss of $10,000 and comprehensive income of 250,000.

5. Assuming the same information as in question 4, Parmalane should report the following using a one-statement approach under IFRS:
(a) net income of $260,000 and comprehensive income of $270,000.
(b) net income of $270,000 and comprehensive income of $260,000.
(c) other comprehensive income of $10,000 and comprehensive income of $270,000.
(d) other comprehensive loss of $10,000 and comprehensive income of $250,000.

IFRS Concepts and Application

IFRS13–1 Chen Company reports the following information for the year ended December 31, 2012: sales revenue $1,000,000, cost of goods sold $700,000, operating expenses $200,000, and an unrealized gain on available-for-sale securities of $75,000. Prepare a statement of comprehensive income using the one-statement approach.

IFRS13–2 Assume the same information for Chen Company as in IFRS13-1. Prepare the income statement using the two-statement approach.

INTERNATIONAL FINANCIAL REPORTING PROBLEM: *Zetar plc*

IFRS13–3 The financial statements of Zetar plc are presented in Appendix C. The company's complete annual report, including the notes to its financial statements, is available at **www.zetarplc.com**.

Instructions

Use the company's annual report to answer the following questions.
(a) The company's income statement reports a loss on discontinued operations. What business did the company discontinue, and why did it choose to discontinue the business?
(b) For the year ended April 30, 2009, what amount did the company lose on the operation of the discontinued business, and what amount did it lose on disposal?
(c) What was the total recorded value of the net assets at the date of disposal, and what was the amount of costs incurred to dispose of the business?

study objectives

After studying this chapter, you should be able to:

1. Explain the distinguishing features of managerial accounting.
2. Identify the three broad functions of management.
3. Define the three classes of manufacturing costs.
4. Distinguish between product and period costs.
5. Explain the difference between a merchandising and a manufacturing income statement.
6. Indicate how cost of goods manufactured is determined.
7. Explain the difference between a merchandising and a manufacturing balance sheet.
8. Identify trends in managerial accounting.

feature story

The business world changes rapidly. To survive, you must make well-informed, quick decisions. Consider this. In January of 1998, Compaq Computer was the largest seller of personal computers and *Forbes* magazine's "company of the year." During the next two years, it lost $2 billion and its CEO was out of a job.

Compaq fell victim to Dell Computer. Dell pioneered a new way of making and selling computers. It reengineered its supply chain so that it could produce computers with the exact features that customers ordered, ship them within 24 hours of taking the order, and invest almost no money in inventory. Compaq was not able to respond quickly enough. Ultimately, it merged with Hewlett-Packard (HP).

After the merger of HP and Compaq, HP lost significant market share in the PC market to Dell because its cost structure made it hard to compete with Dell on price. To make matters worse for HP, Dell then began selling computer printers, a business that HP had always dominated. Many people predicted that Dell would soon reign supreme over the printer business as well.

THINK FAST

Just when it appeared that Dell could not be beat, HP regained its footing and Dell stumbled. By June 2008, HP had accomplished a remarkable three-year turnaround. With more than $100 billion in sales, HP had become the biggest technology company in the world. How did it do it? HP adopted "lean" manufacturing practices so it could compete with Dell on price. In addition, it developed exciting design innovations that it marketed successfully in retail stores, as compared to Dell's online sales approach.

Perhaps most importantly, HP has expanded its consulting and data storage services. You can only sell a piece of equipment once. But, consulting services provide ongoing, high-margin revenue that frequently results in additional hardware sales. To further expand its service revenue opportunities, in 2008 HP acquired Electronic Data Services (EDS) for $13.9 billion. Although many industry analysts questioned the decision, HP says the move was based on a sound strategy. Now management must prove that it was the correct decision for the future.

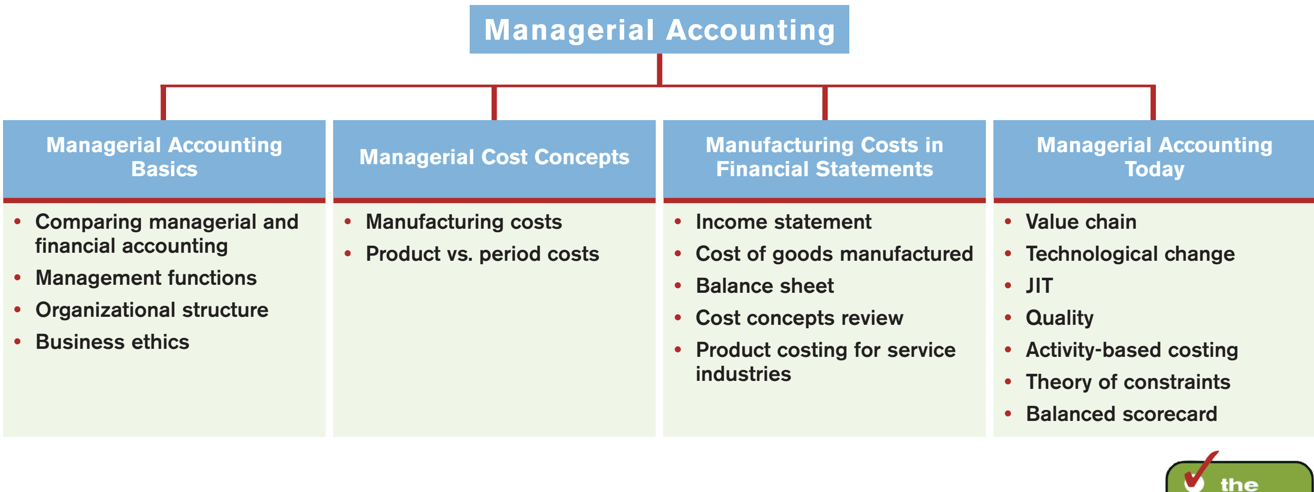
preview of chapter 14

This chapter focuses on issues illustrated in the Feature Story about Compaq Computer, Hewlett-Packard, and Dell. These include determining and controlling the costs of material, labor, and overhead and the relationship between costs and profits. In a financial accounting course, you learned about the form and content of **financial statements for external users** of financial information, such as stockholders and creditors. These financial statements represent the principal product of financial accounting. Managerial accounting focuses primarily on the preparation of **reports for internal users** of financial information, such as the managers and officers of a company. In today's rapidly changing global environment, managers often make decisions that determine their company's fate—and their own. Managers are evaluated on the results of their decisions. Managerial accounting provides tools for assisting management in making decisions and for evaluating the effectiveness of those decisions.

The content and organization of this chapter are as follows.



Managerial Accounting Basics

study objective 1

Explain the distinguishing features of managerial accounting.

Managerial accounting, also called **management accounting**, is a field of accounting that provides economic and financial information for managers and other internal users. The activities that are part of managerial accounting (and the chapters in which they are discussed in this textbook) are as follows.

1. Explaining manufacturing and nonmanufacturing costs and how they are reported in the financial statements (Chapter 14).
2. Computing the cost of providing a service or manufacturing a product (Chapters 15, 16, and 17).
3. Determining the behavior of costs and expenses as activity levels change and analyzing cost–volume–profit relationships within a company (Chapters 18 and 19).
4. Assisting management in profit planning and formalizing these plans in the form of budgets (Chapter 20).
5. Providing a basis for controlling costs and expenses by comparing actual results with planned objectives and standard costs (Chapters 21 and 22).
6. Accumulating and presenting data for management decision making and capital expenditure decisions (Chapter 23).

Managerial accounting applies to all types of businesses—service, merchandising, and manufacturing. It also applies to all forms of business organizations—

proprietorships, partnerships, and corporations. Not-for-profit entities as well as profit-oriented enterprises need managerial accounting.

In the past, managerial accountants were primarily engaged in cost accounting—collecting and reporting costs to management. Recently that role has changed significantly. First, as the business environment has become more automated, methods to determine the amount and type of cost in a product have changed. Second, managerial accountants are now held responsible for strategic cost management; that is, they assist in evaluating how well the company is employing its resources. As a result, managerial accountants now serve as team members alongside personnel from production, marketing, and engineering when the company makes critical strategic decisions.

Opportunities for managerial accountants to advance within the company are considerable. Financial executives must have a background that includes an understanding of managerial accounting concepts. Whatever your position in the company—marketing, sales, or production, knowledge of managerial accounting greatly improves your opportunities for advancement. As the CEO of Microsoft noted: "If you're supposed to be making money in business and supposed to be satisfying customers and building market share, there are numbers that characterize those things. And if somebody can't sort of speak to me quantitatively about it, then I'm nervous."

COMPARING MANAGERIAL AND FINANCIAL ACCOUNTING

There are both similarities and differences between managerial and financial accounting. First, each field of accounting deals with the economic events of a business. Thus, their interests overlap. For example, *determining* the unit cost of manufacturing a product is part of managerial accounting. *Reporting* the total cost of goods manufactured and sold is part of financial accounting. In addition, both managerial and financial accounting require that a company's economic events be quantified and communicated to interested parties.

Illustration 14-1 summarizes the principal differences between financial accounting and managerial accounting. The need for various types of economic data is responsible for many of the differences.

Illustration 14-1
Differences between financial and managerial accounting

Financial Accounting		Managerial Accounting
• External users: stockholders, creditors, and regulators.	**Primary Users of Reports**	• Internal users: officers and managers.
• Financial statements. • Quarterly and annually.	**Types and Frequency of Reports**	• Internal reports. • As frequently as needed.
• General-purpose.	**Purpose of Reports**	• Special-purpose for specific decisions.
• Pertains to business as a whole. • Highly aggregated (condensed). • Limited to double-entry accounting and cost data. • Generally accepted accounting principles.	**Content of Reports**	• Pertains to subunits of the business. • Very detailed. • Extends beyond double-entry accounting to any relevant data. • Standard is relevance to decisions.
• Audited by CPA.	**Verification Process**	• No independent audits.

MANAGEMENT FUNCTIONS

study objective 2

Identify the three broad functions of management.

Managers' activities and responsibilities can be classified into three broad functions:

1. Planning.
2. Directing.
3. Controlling.

In performing these functions, managers make decisions that have a significant impact on the organization.

Planning requires managers to look ahead and to establish objectives. These objectives are often diverse: maximizing short-term profits and market share, maintaining a commitment to environmental protection, and contributing to social programs. For example, Hewlett-Packard, in an attempt to gain a stronger foothold in the computer industry, has greatly reduced its prices to compete with Dell. A key objective of management is to **add value** to the business under its control. Value is usually measured by the trading price of the company's stock and by the potential selling price of the company.

Directing involves coordinating a company's diverse activities and human resources to produce a smooth-running operation. This function relates to implementing planned objectives and providing necessary incentives to motivate employees. For example, manufacturers such as Campbell Soup Company, General Motors, and Dell must coordinate purchasing, manufacturing, warehousing, and selling. Service corporations such as American Airlines, Federal Express, and AT&T must coordinate scheduling, sales, service, and acquisitions of equipment and supplies. Directing also involves selecting executives, appointing managers and supervisors, and hiring and training employees.

The third management function, **controlling**, is the process of keeping the company's activities on track. In controlling operations, managers determine

Management Insight

Even the Best Have to Get Better

Louis Vuitton is a French manufacturer of high-end handbags, wallets, and suitcases. Its reputation for quality and style allows it to charge extremely high prices—for example, $700 for a tote bag. But often in the past, when demand was hot, supply was nonexistent—shelves were empty, and would-be buyers left empty-handed.

Luxury-goods manufacturers used to consider stock-outs to be a good thing, but recently Louis Vuitton changed its attitude. The company adopted "lean" processes used by car manufacturers and electronics companies to speed up production of "hot" products. Work is done by flexible teams, with jobs organized based on how long a task takes. By reducing wasted time and eliminating bottlenecks, what used to take 20 to 30 workers eight days to do now takes 6 to 12 workers one day. Also, production employees who used to specialize on a single task on a single product are now multiskilled. This allows them to quickly switch products to meet demand.

To make sure that the factory is making the right products, within a week of a product launch, Louis Vuitton stores around the world feed sales information to the headquarters in France, and production is adjusted accordingly. Finally, the new production processes have also improved quality. Returns of some products are down by two-thirds, which makes quite a difference to the bottom line when the products are pricey.

Source: Christina Passariello, "Louis Vuitton Tries Modern Methods on Factory Lines," *Wall Street Journal* (October 9, 2006).

What are some of the steps that this company has taken in order to ensure that production meets demand? (See page 795.)

whether planned goals are being met. When there are deviations from targeted objectives, managers must decide what changes are needed to get back on track. Recent scandals at companies like Enron, Lucent, and Xerox attest to the fact that companies must have adequate controls to ensure that the company develops and distributes accurate information.

How do managers achieve control? A smart manager in a small operation can make personal observations, ask good questions, and know how to evaluate the answers. But using this approach in a large organization would result in chaos. Imagine the president of Dell attempting to determine whether the company is meeting its planned objectives, without some record of what has happened and what is expected to occur. Thus, large businesses typically use a formal system of evaluation. These systems include such features as budgets, responsibility centers, and performance evaluation reports—all of which are features of managerial accounting.

Decision making is not a separate management function. Rather, it is the outcome of the exercise of good judgment in planning, directing, and controlling.

ORGANIZATIONAL STRUCTURE

In order to assist in carrying out management functions, most companies prepare **organization charts** to show the interrelationships of activities and the delegation of authority and responsibility within the company. Illustration 14-2 shows a typical organization chart, which outlines the delegation of responsibility.

Stockholders own the corporation, but they manage it indirectly through a **board of directors** they elect. Even not-for-profit organizations have boards of directors. The board formulates the operating policies for the company or organization. The board also selects officers, such as a president and one or more vice presidents, to execute policy and to perform daily management functions.

The **chief executive officer (CEO)** has overall responsibility for managing the business. Obviously, even in a small business, in order to accomplish organizational

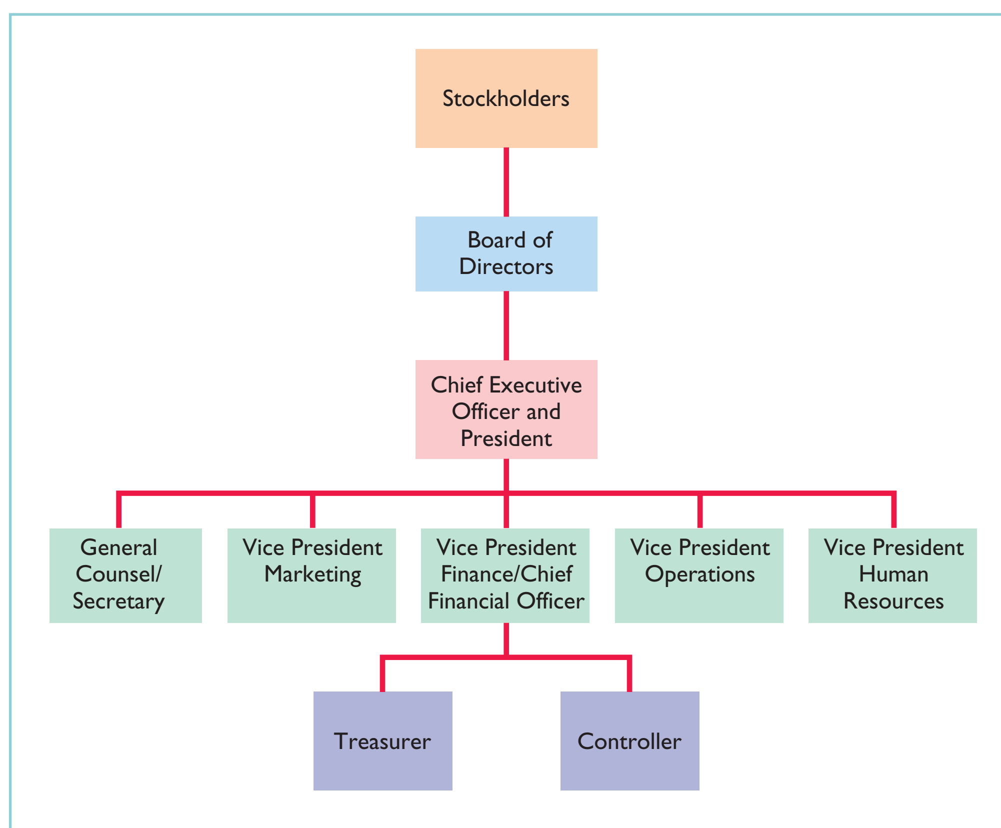


Illustration 14-2
Corporation's organization chart

objectives, the company relies on delegation of responsibilities. As the organization chart on page 751 shows, the CEO delegates responsibilities to other officers. Each member of the organization has a clearly defined role to play.

Responsibilities within the company are frequently classified as either line or staff positions. Employees with **line positions** are directly involved in the company's primary revenue-generating operating activities. Examples of line positions include the vice president of operations, vice president of marketing, plant managers, supervisors, and production personnel. Employees with **staff positions** are involved in activities that support the efforts of the line employees. In a firm like General Electric or ExxonMobil, employees in finance, legal, and human resources have staff positions. While activities of staff employees are vital to the company, these employees are nonetheless there to serve the line employees who engage in the company's primary operations.

The **chief financial officer (CFO)** is responsible for all of the accounting and finance issues the company faces. The CFO is supported by the **controller** and the **treasurer**. The controller's responsibilities include (1) maintaining the accounting records, (2) maintaining an adequate system of internal control, and (3) preparing financial statements, tax returns, and internal reports. The treasurer has custody of the corporation's funds and is responsible for maintaining the company's cash position.

Also serving the CFO is the internal audit staff. The staff's responsibilities include reviewing the reliability and integrity of financial information provided by the controller and treasurer. Staff members also ensure that internal control systems are functioning properly to safeguard corporate assets. In addition, they investigate compliance with policies and regulations, and in many companies they determine whether resources are being used in the most economical and efficient fashion.

The vice president of operations oversees employees with line positions. For example, the company might have multiple plant managers, each of whom would report to the vice president of operations. Each plant would also have department managers, such as fabricating, painting, and shipping, each of whom would report to the plant manager.

BUSINESS ETHICS

All employees within an organization are expected to act ethically in their business activities. Given the importance of ethical behavior to corporations and their owners (stockholders), an increasing number of organizations provide codes of business ethics for their employees.

Despite these efforts, recent business scandals resulted in massive investment losses and numerous employee layoffs. A recent survey of fraud by international accounting firm KPMG reported a 13% increase in instances of corporate fraud compared to five years earlier. It noted that while employee fraud (such things as expense-account abuse, payroll fraud, and theft of assets) represented 60% of all instances of fraud, financial reporting fraud (the intentional misstatement of financial reports) was the most costly to companies. That should not be surprising given the long list of companies, such as Enron, Global Crossing, WorldCom, and others, that engaged in massive financial frauds, which led to huge financial losses and thousands of lost jobs.

Creating Proper Incentives

Companies like Motorola, IBM, and Nike use complex systems to control and evaluate the actions of managers. They dedicate substantial resources to monitor and effectively evaluate the actions of employees. Unfortunately, these systems and controls sometimes unwittingly create incentives for managers to take unethical actions. For example, companies prepare budgets to provide direction. Because the budget is also used as an evaluation tool, some managers try to "game" the budgeting process

by underestimating their division's predicted performance so that it will be easier to meet their performance targets. On the other hand, if the budget is set at unattainable levels, managers sometimes take unethical actions to meet the targets in order to receive higher compensation or, in some cases, to keep their jobs.

For example, in recent years, airline manufacturer Boeing was plagued by a series of scandals including charges of over-billing, corporate espionage, and illegal conflicts of interest. Some long-time employees of Boeing blame the decline in ethics on a change in the corporate culture that took place after Boeing merged with McDonnell Douglas. They suggest that evaluation systems implemented after the merger to monitor results and evaluate employee performance made employees believe they needed to succeed no matter what actions were required to do so.

As another example, manufacturing companies need to establish production goals for their processes. Again, if controls are not effective and realistic, problems develop. To illustrate, Schering-Plough, a pharmaceutical manufacturer, found that employees were so concerned with meeting production standards that they failed to monitor the quality of the product, and as a result the dosages were often wrong.

Code of Ethical Standards

In response to corporate scandals in 2000 and 2001, the U.S. Congress enacted legislation to help prevent lapses in internal control. This legislation, referred to as the **Sarbanes-Oxley Act of 2002 (SOX)** has important implications for the financial community. One result of SOX was to clarify top management's responsibility for the company's financial statements. CEOs and CFOs must now certify that financial statements give a fair presentation of the company's operating results and its financial condition. In addition, top managers must certify that the company maintains an adequate system of internal controls to safeguard the company's assets and ensure accurate financial reports.

Another result of SOX is that companies now pay more attention to the composition of the board of directors. In particular, the audit committee of the board of directors must be comprised entirely of independent members (that is, nonemployees) and must contain at least one financial expert.

Finally, to increase the likelihood of compliance with the rules that are part of the new legislation, the law substantially increases the penalties for misconduct.

To provide guidance for managerial accountants, the Institute of Management Accountants (IMA) has developed a code of ethical standards, entitled *IMA Statement of Ethical Professional Practice*. Management accountants should not commit acts in violation of these standards. Nor should they condone such acts by others within their organizations. In the remaining chapters, we will address various ethical issues managers face.

before you go on...

Do it!

MANAGERIAL ACCOUNTING CONCEPTS

Indicate whether the following statements are true or false.

1. Managerial accountants have a single role within an organization, collecting and reporting costs to management.
2. Financial accounting reports are general-purpose and intended for external users.
3. Managerial accounting reports are special-purpose and issued as frequently as needed.
4. Managers' activities and responsibilities can be classified into three broad functions: cost accounting, budgeting, and internal control.
5. As a result of the Sarbanes-Oxley Act of 2002, managerial accounting reports must now comply with generally accepted accounting principles (GAAP).
6. Top managers must certify that a company maintains an adequate system of internal controls.

Action Plan

- Understand that managerial accounting is a field of accounting that provides economic and financial information for managers and other internal users.
- Understand that financial accounting provides information for external users.
- Analyze which users require which different types of information.

Solution

1. False. Managerial accountants determine product costs. In addition, managerial accountants are now held responsible for evaluating how well the company is employing its resources. As a result, when the company makes critical strategic decisions, managerial accountants serve as team members alongside personnel from production, marketing, and engineering.
2. True.
3. True.
4. False. Managers' activities are classified into three broad functions: planning, directing, and controlling. Planning requires managers to look ahead to establish objectives. Directing involves coordinating a company's diverse activities and human resources to produce a smooth-running operation. Controlling is keeping the company's activities on track.
5. False. SOX clarifies top management's responsibility for the company's financial statements. In addition, top managers must certify that the company maintains an adequate system of internal control to safeguard the company's assets and ensure accurate financial reports.
6. True.

Managerial Cost Concepts

In order for managers at companies like Dell or Hewlett-Packard to plan, direct, and control operations effectively, they need good information. One very important type of information is related to costs. Managers should ask questions such as the following.

1. What costs are involved in making a product or providing a service?
2. If we decrease production volume, will costs decrease?
3. What impact will automation have on total costs?
4. How can we best control costs?

To answer these questions, managers need reliable and relevant cost information. We now explain and illustrate the various cost categories that companies use.

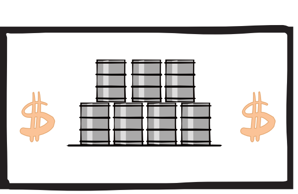
study objective 3
Define the three classes of manufacturing costs.

MANUFACTURING COSTS

Manufacturing consists of activities and processes that convert raw materials into finished goods. Contrast this type of operation with merchandising, which sells merchandise in the form in which it is purchased. Manufacturing costs are typically classified as shown in Illustration 14-3.

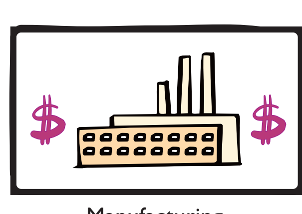
Illustration 14-3
Classifications of manufacturing costs

Manufacturing Costs



Direct Materials

Direct Labor

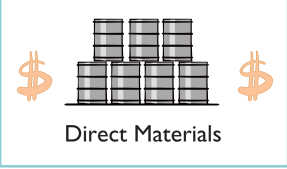


Manufacturing Overhead

Direct Materials

To obtain the materials that will be converted into the finished product, the manufacturer purchases raw materials. **Raw materials** are the basic materials and parts used in the manufacturing process. For example, auto manufacturers such as General Motors, Ford, and Toyota use steel, plastic, and tires as raw materials in making cars.

Raw materials that can be physically and directly associated with the finished product during the manufacturing process are **direct materials**. Examples include flour in the baking of bread, syrup in the bottling of soft drinks, and steel in the making of automobiles. Direct materials for Hewlett-Packard and Dell Computer (in the Feature Story) include plastic, glass, hard drives, and processing chips.



Some raw materials cannot be easily associated with the finished product. These are called indirect materials. **Indirect materials** have one of two characteristics: (1) They do not physically become part of the finished product (such as lubricants and polishing compounds). Or, (2) they cannot be traced because their physical association with the finished product is too small in terms of cost (such as cotter pins and lock washers). Companies account for indirect materials as part of **manufacturing overhead**.

Direct Labor

The work of factory employees that can be physically and directly associated with converting raw materials into finished goods is **direct labor**. Bottlers at Coca-Cola, bakers at Sara Lee, and typesetters at Aptara Corp. are employees whose activities are usually classified as direct labor. **Indirect labor** refers to the work of employees that has no physical association with the finished product, or for which it is impractical to trace costs to the goods produced. Examples include wages of maintenance people, time-keepers, and supervisors. Like indirect materials, companies classify indirect labor as **manufacturing overhead**.

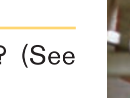
Management Insight

How Many Labor Hours to Build a Car?

Nissan and Toyota were number 1 and 2 in a recent annual study of labor productivity in the auto industry. But U.S. auto manufacturers showed improvements. Labor represents about 15% of the total cost to make a vehicle. Since Nissan required only 28.46 labor hours per vehicle, it saves about $300 to $450 in labor costs to build a car relative to Ford, the least-efficient manufacturer. General Motors (GM) has shown steady improvement over the years. At one point, it needed almost 17 more hours of labor than Toyota to build a car; it now needs only 4 more hours than Toyota. Chrysler says that much of its improvement in labor productivity has come from designing cars that are easier to build.

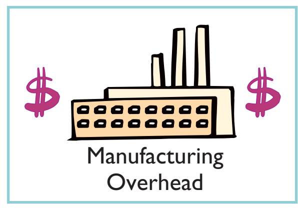
Source: Rick Popely, "Japanese Automakers Lead Big Three in Productivity Review," *Knight Ridder Tribune News Service* (June 1, 2006), p. 1.

Why might Nissan production require significantly fewer labor hours? (See page 795.)



Manufacturing Overhead

Manufacturing overhead consists of costs that are indirectly associated with the manufacture of the finished product. These costs may also be manufacturing costs that cannot be classified as direct materials or direct labor. Manufacturing overhead includes indirect materials, indirect labor, depreciation on factory buildings and machines, and insurance, taxes, and maintenance on factory facilities.



One study found the following magnitudes of the three different product costs as a percentage of the total product cost: direct materials 54%, direct labor

Alternative Terminology
Some companies use terms such as *factory overhead*, *indirect manufacturing costs*, and *burden* instead of manufacturing overhead.

13%, and manufacturing overhead 33%. Note that the direct labor component is the smallest. This component of product cost is dropping substantially because of automation. Companies are working hard to increase productivity by decreasing labor. A Nissan Motor plant in Tennessee produces Altima automobiles using only 15.74 labor hours per vehicle, compared to 26 to 28 hours per vehicle at Ford and Daimler plants, for example. In some companies, direct labor has become as little as 5% of the total cost.

Allocating materials and labor costs to specific products is fairly straightforward. Good record keeping can tell a company how much plastic it used in making each type of gear, or how many hours of factory labor it took to assemble a part. But allocating overhead costs to specific products presents problems. How much of the purchasing agent's salary is attributable to the hundreds of different products made in the same plant? What about the grease that keeps the machines humming, or the computers that make sure paychecks come out on time? Boiled down to its simplest form, the question becomes: Which products cause the incurrence of which costs? In subsequent chapters, we show various methods of allocating overhead to products.

PRODUCT VERSUS PERIOD COSTS

Distinguish between product and period costs.

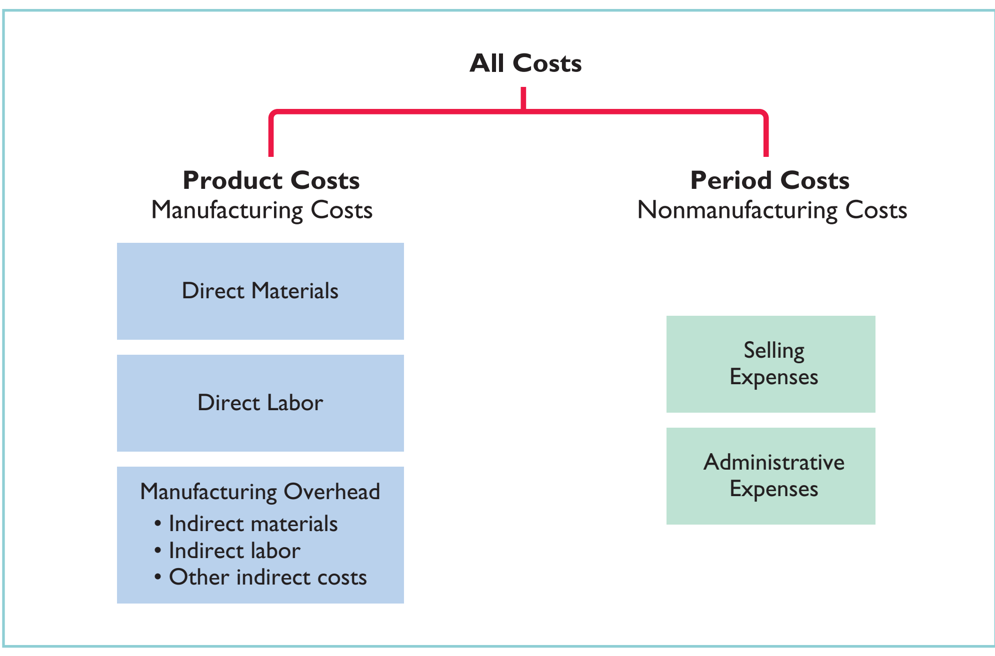
Alternative Terminology
Product costs are also called *inventoriable costs.*

Each of the manufacturing cost components—direct materials, direct labor, and manufacturing overhead—are product costs. As the term suggests, **product costs** are costs that are a necessary and integral part of producing the finished product. Companies record product costs, when incurred, as inventory. Under the matching principle, these costs do not become expenses until the company sells the finished goods inventory. At that point, the company records the expense as cost of goods sold.

Period costs are costs that are matched with the revenue of a specific time period rather than included as part of the cost of a salable product. These are nonmanufacturing costs. Period costs include selling and administrative expenses. In order to determine net income, companies deduct these costs from revenues in the period in which they are incurred.

Illustration 14-4 summarizes these relationships and cost terms. Our main concern in this chapter is with product costs.

Illustration 14-4 Product versus period costs



before you go on...

Do it! A bicycle company has these costs: tires, salaries of employees who put tires on the wheels, factory building depreciation, lubricants, spokes, salary of factory manager, handlebars, and salaries of factory maintenance employees. Classify each cost as direct materials, direct labor, or overhead.

MANAGERIAL COST CONCEPTS

Action Plan

- Classify as direct materials any raw materials that can be physically and directly associated with the finished product.
- Classify as direct labor the work of factory employees that can be physically and directly associated with the finished product.
- Classify as manufacturing overhead any costs that are indirectly associated with the finished product.

Solution

Tires, spokes, and handlebars are direct materials. Salaries of employees who put tires on the wheels are direct labor. All of the other costs are manufacturing overhead.

Manufacturing Costs in Financial Statements

The financial statements of a manufacturer are very similar to those of a merchandiser. For example, you will find many of the same sections and same accounts in the financial statements of Procter & Gamble that you find in the financial statements of Dick's Sporting Goods. The principal differences between their financial statements occur in two places: the cost of goods sold section in the income statement and the current assets section in the balance sheet.

INCOME STATEMENT

study objective 5

Explain the difference between a merchandising and a manufacturing income statement.

Under a periodic inventory system, the income statements of a merchandiser and a manufacturer differ in the cost of goods sold section. Merchandisers compute cost of goods sold by adding the beginning merchandise inventory to the **cost of goods purchased** and subtracting the ending merchandise inventory. Manufacturers compute cost of goods sold by adding the beginning finished goods inventory to the **cost of goods manufactured** and subtracting the ending finished goods inventory. Illustration 14-5 shows these different methods.

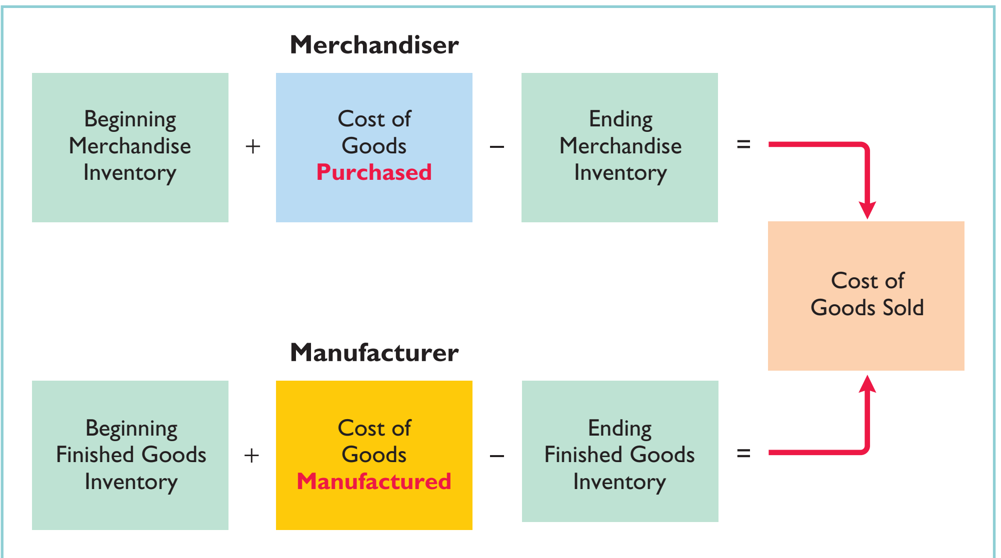

Illustration 14-5 Cost of goods sold components

Helpful Hint We assume a periodic inventory system in this illustration.

A number of accounts are involved in determining the cost of goods manufactured. To eliminate excessive detail, income statements typically show only the total cost of goods manufactured. A separate statement, called a Cost of Goods Manufactured Schedule, presents the details. (For more information, see the discussion on page 759 and Illustration 14-8.)

Illustration 14-6 shows the different presentations of the cost of goods sold sections for merchandising and manufacturing companies. The other sections of an income statement are similar for merchandisers and manufacturers.

Illustration 14-6 Cost of goods sold sections of merchandising and manufacturing income statements

MERCHANDISING COMPANY Income Statement (partial) For the Year Ended December 31, 2012		MANUFACTURING COMPANY Income Statement (partial) For the Year Ended December 31, 2012	
Cost of goods sold		Cost of goods sold	
Merchandise inventory, January 1	**$ 70,000**	**Finished goods inventory, January 1**	**$ 90,000**
Cost of goods purchased	**650,000**	**Cost of goods manufactured (see Illustration 14-8)**	**370,000**
Cost of goods available for sale	720,000	Cost of goods available for sale	460,000
Merchandise inventory, December 31	**400,000**	**Finished goods inventory, December 31**	**80,000**
Cost of goods sold	$ 320,000	Cost of goods sold	$380,000

Cost of Goods Manufactured

Indicate how cost of goods manufactured is determined.

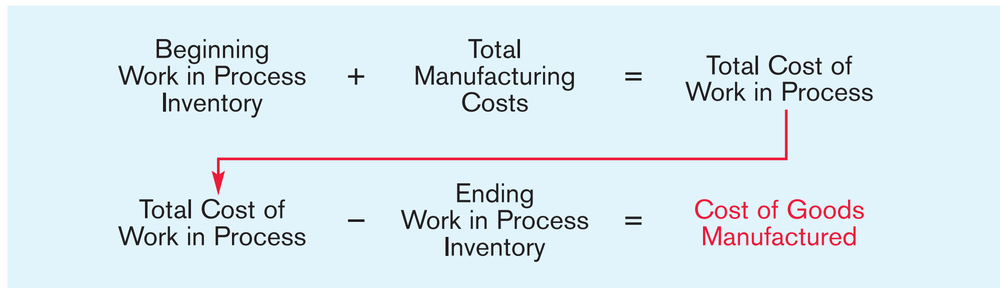
An example may help show how companies determine the cost of goods manufactured. Assume that on January 1, HP has a number of computers in various stages of production. In total, these partially completed units are called **beginning work in process inventory**. The costs the company assigns to beginning work in process inventory are based on the **manufacturing costs incurred in the prior period**.

HP first uses the manufacturing costs incurred in the current year to complete the work that was in process on January 1. It then incurs manufacturing costs for production of new orders. The sum of the direct materials costs, direct labor costs, and manufacturing overhead incurred in the current year is the **total manufacturing costs** for the current period.

We now have two cost amounts: (1) the cost of the beginning work in process and (2) the total manufacturing costs for the current period. The sum of these costs is the **total cost of work in process** for the year.

At the end of the year, HP may have some computers that are only partially completed. The costs of these units become the cost of the **ending work in process inventory**. To find the **cost of goods manufactured**, we subtract this cost from the total cost of work in process. Illustration 14-7 shows the formula for determining the cost of goods manufactured.

Illustration 14-7 Cost of goods manufactured formula



Cost of Goods Manufactured Schedule

The **cost of goods manufactured schedule** reports cost elements used in calculating cost of goods manufactured. Illustration 14-8 shows the schedule for Olsen Manufacturing Company (using assumed data). The schedule presents detailed data for direct materials and for manufacturing overhead.

Review Illustration 14-7 and then examine the cost of goods manufactured schedule in Illustration 14-8. You should be able to distinguish between "Total manufacturing costs" and "Cost of goods manufactured." The difference is the effect of the change in work in process during the period.

Illustration 14-8 Cost of goods manufactured schedule

OLSEN MANUFACTURING COMPANY
Cost of Goods Manufactured Schedule
For the Year Ended December 31, 2012

Work in process, January 1			$ 18,400
Direct materials			
Raw materials inventory, January 1	$ 16,700		
Raw materials purchases	152,500		
Total raw materials available for use	169,200		
Less: Raw materials inventory, December 31	22,800		
Direct materials used		$146,400	
Direct labor		175,600	
Manufacturing overhead			
Indirect labor	14,300		
Factory repairs	12,600		
Factory utilities	10,100		
Factory depreciation	9,440		
Factory insurance	8,360		
Total manufacturing overhead		54,800	
Total manufacturing costs			376,800
Total cost of work in process			395,200
Less: Work in process, December 31			25,200
Cost of goods manufactured			$370,000

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
Is the company maintaining control over the costs of production?	Cost of material, labor, and overhead	Cost of goods manufactured schedule	Compare the cost of goods manufactured to revenue expected from product sales.

before you go on...

COST OF GOODS MANUFACTURED

The following information is available for Keystone Manufacturing Company.

		March 1	March 31
Raw material inventory		$12,000	$10,000
Work in process inventory		2,500	4,000
Materials purchased in March	$ 90,000		
Direct labor in March	75,000		
Manufacturing overhead in March	220,000		

Prepare the cost of goods manufactured schedule for the month of March.

Action Plan

- Start with beginning work in process as the first item in the cost of goods manufactured schedule.
- Sum direct materials used, direct labor, and total manufacturing overhead to determine total manufacturing costs.
- Sum beginning work in process and total manufacturing costs to determine total cost of work in process.
- Cost of goods manufactured is the total cost of work in process less ending work in process.

Solution

KEYSTONE MANUFACTURING COMPANY
Cost of Goods Manufactured Schedule
For the Month Ended March 31

Work in process, March 1			$ 2,500
Direct materials			
Raw materials, March 1	$ 12,000		
Raw material purchases	90,000		
Total raw materials available for use	102,000		
Less: Raw materials, March 31	10,000		
Direct materials used		$ 92,000	
Direct labor		75,000	
Manufacturing overhead		220,000	
Total manufacturing costs			387,000
Total cost of work in process			389,500
Less: Work in process, March 31			4,000
Cost of goods manufactured			$385,500

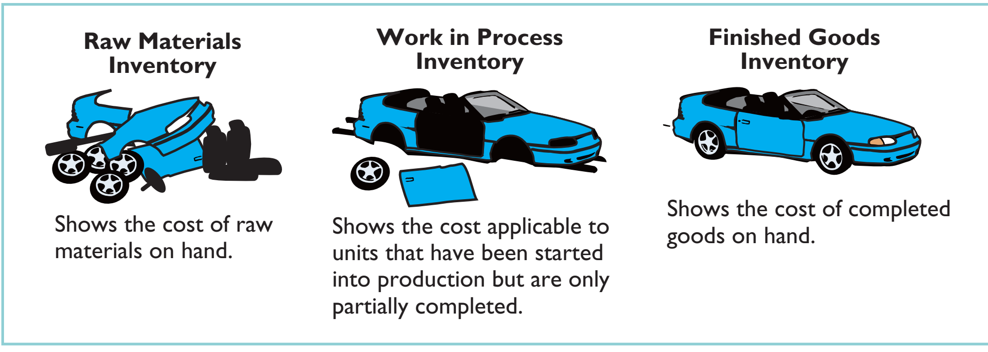
BALANCE SHEET

study objective 7
Explain the difference between a merchandising and a manufacturing balance sheet.

The balance sheet for a merchandising company shows just one category of inventory. In contrast, the balance sheet for a manufacturer may have three inventory accounts, as shown in Illustration 14-9.

Illustration 14-9
Inventory accounts for a manufacturer



Finished Goods Inventory is to a manufacturer what Merchandise Inventory is to a merchandiser. Each of these classifications represents the goods that the company has available for sale.

The current assets sections presented in Illustration 14-10 contrast the presentations of inventories for merchandising and manufacturing companies. Manufacturing companies generally list their inventories in the order of their liquidity—the order in which they are expected to be realized in cash. Thus, finished goods inventory comes first. The remainder of the balance sheet is similar for the two types of companies.

MERCHANDISING COMPANY Balance Sheet December 31, 2012	
Current assets	
Cash	$100,000
Receivables (net)	210,000
Merchandise inventory	**400,000**
Prepaid expenses	22,000
Total current assets	$732,000

MANUFACTURING COMPANY Balance Sheet December 31, 2012		
Current assets		
Cash		$180,000
Receivables (net)		210,000
Inventories		
Finished goods	**$80,000**	
Work in process	**25,200**	
Raw materials	**22,800**	**128,000**
Prepaid expenses		18,000
Total current assets		$536,000

Illustration 14-10
Current assets sections of merchandising and manufacturing balance sheets

Each step in the accounting cycle for a merchandiser applies to a manufacturer. For example, prior to preparing financial statements, manufacturers make adjusting entries. The adjusting entries are essentially the same as those of a merchandiser. The closing entries are also similar for manufacturers and merchandisers. *For expanded coverage, see Appendix 14A.*

DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS

COST CONCEPTS–A REVIEW

You have learned a number of cost concepts in this chapter. Because many of these concepts are new, we provide here an extended example for review. Suppose you started your own snowboard factory, Terrain Park Boards. Think that's impossible? Burton Snowboards was started by Jake Burton Carpenter, when he was only 23 years old. Jake initially experimented with 100 different prototype designs before settling on a final design. Then Jake, along with two relatives and a friend, started making 50 boards per day in Londonderry, Vermont. Unfortunately, while they made a lot of boards in their first year, they were only able to sell 300 of them. To get by during those early years, Jake taught tennis and tended bar to pay the bills.

Here are some of the costs that your snowboard factory would incur.

1. The materials cost of each snowboard (wood cores, fiberglass, resins, metal screw holes, metal edges, and ink) is $30.
2. The labor costs (for example, to trim and shape each board using jig saws and band saws) are $40.
3. Depreciation on the factory building and equipment (for example, presses, grinding machines, and lacquer machines) used to make the snowboards is $25,000 per year.

4. Property taxes on the factory building (where the snowboards are made) are $6,000 per year.
5. Advertising costs (mostly online and catalogue) are $60,000 per year.
6. Sales commissions related to snowboard sales are $20 per snowboard.
7. Salaries for maintenance employees are $45,000 per year.
8. The salary of the plant manager is $70,000.
9. The cost of shipping is $8 per snowboard.

Illustration 14-11 shows how Terrain Park Boards would assign these manufacturing and selling costs to the various categories.

Illustration 14-11
Assignment of costs to cost categories

Cost Item	Product Costs			Period Costs
	Direct Materials	Direct Labor	Manufacturing Overhead	
1. Material cost ($30) per board	X			
2. Labor costs ($40) per board		X		
3. Depreciation on factory equipment ($25,000 per year)			X	
4. Property taxes on factory building ($6,000 per year)			X	
5. Advertising costs ($60,000 per year)				X
6. Sales commissions ($20 per board)				X
7. Maintenance salaries (factory facilities) ($45,000 per year)			X	
8. Salary of plant manager ($70,000)			X	
9. Cost of shipping boards ($8 per board)				X

Remember that total manufacturing costs are the sum of the **product costs—** direct materials, direct labor, and manufacturing overhead. If Terrain Park Boards produces 10,000 snowboards the first year, the total manufacturing costs would be $846,000 as shown in Illustration 14-12.

Illustration 14-12
Computation of total manufacturing costs

Cost Number and Item	Manufacturing Cost
1. Material cost ($30 × 10,000)	$300,000
2. Labor cost ($40 × 10,000)	400,000
3. Depreciation on factory equipment	25,000
4. Property taxes on factory building	6,000
7. Maintenance salaries (factory facilities)	45,000
8. Salary of plant manager	70,000
Total manufacturing costs	**$846,000**

Knowing the total manufacturing costs, Terrain Park Boards can compute the manufacturing cost per unit. Assuming 10,000 units, the cost to produce one snowboard is $84.60 ($846,000 ÷ 10,000 units).

In subsequent chapters, we will use extensively the cost concepts discussed in this chapter. Study Illustration 14-11 carefully. If you do not understand any of these classifications, go back and reread the appropriate section in this chapter.

PRODUCT COSTING FOR SERVICE INDUSTRIES

The Feature Story notes HP's belief that its greatest opportunities for growth are in technology services, not hardware. In fact, much of the U.S. economy has shifted toward an emphasis on services. Today, more than 50% of U.S. workers are employed by service companies. Airlines, marketing agencies, cable companies, and governmental agencies are just a few examples of service companies. How do service companies differ from manufacturing companies? One good way to differentiate these two different types of companies is by how quickly the product is used or consumed by the customer—services are consumed immediately. For example, when a restaurant produces a meal, that meal is not put in inventory, but it is instead consumed immediately. An airline uses special equipment to provide its product, but again, the output of that equipment is consumed immediately by the customer in the form of a flight. And a marketing agency performs services for its clients that are immediately consumed by the customer in the form of a marketing plan. For a manufacturing company, like Boeing, it often has a long lead time before its airplane is used or consumed by the customer.

Ethics Note Do telecommunications companies have an obligation to provide service to remote or low-user areas for a fee that may be less than the cost of the service?

In presenting our initial examples, we used manufacturing companies because accounting for the manufacturing environment requires the use of the broadest range of accounts. That is, the accounts used by service companies represent a subset of those used by manufacturers because service companies are not producing inventory. Neither the restaurant, the airline, or the marketing agency discussed above produces an inventoriable product. However, just like a manufacturer, each needs to keep track of the costs of its services in order to know whether it is generating a profit. A successful restaurateur needs to know the cost of each offering on the menu, an airline needs to know the cost of flight service to each destination, and a marketing agency needs to know the cost to develop a marketing plan. Thus, the techniques shown in this chapter, to accumulate manufacturing costs to determine manufacturing inventory, are equally useful for determining the costs of providing services.

For example, let's consider the costs that HP might incur on a consulting engagement. A significant portion of its costs would be salaries of consulting personnel. It might also incur travel costs, materials, software costs, and depreciation charges on equipment used by the employees to provide the consulting service. In the same way that it needs to keep track of the cost of manufacturing its computers and printers, HP needs to know what its costs are on each consulting job. It could prepare a cost of services provided schedule similar to the cost of goods manufactured schedule in Illustration 14-8 (page 759). The structure would be essentially the same as the cost of goods manufactured schedule, but section headings would be reflective of the costs of the particular service organization.

Managers of service companies look to managerial accounting to answer many questions. In some instances, the managerial accountant may need to develop new systems for measuring the cost of serving individual customers. In others, companies may need new operating controls to improve the quality and efficiency of specific services. Many of the examples we present in subsequent chapters will be based on service companies. To highlight the relevance of the techniques used in this course for service companies, we have placed a service

company icon next to those items in the text and end-of-chapter materials that relate to nonmanufacturing companies.

Service Company Insight

Low Fares but Decent Profits

During 2008, when other airlines were cutting flight service due to the recession, Allegiant Airlines increased capacity by 21%. Sounds crazy, doesn't it? But it must know something, because while the other airlines were losing money, it was generating profits. Consider also that its average one-way fare is only $83. So how does it make money? As a low-budget airline, it focuses on controlling costs. It purchases used planes for $4 million each rather than new planes for $40 million. It flies out of small towns, so wages are low and competition is nonexistent. It only flies a route if its 150-passenger planes are nearly full (it averages about 90% of capacity). If a route isn't filling up, it quits flying it as often or cancels it altogether. It adjusts its prices weekly. The bottom line is that it knows its costs to the penny. Knowing what your costs are might not be glamorous, but it sure beats losing money.

Source: Susan Carey, "For Allegiant, Getaways Mean Profits," *Wall Street Journal Online* (February 18, 2009).

? What are some of the line items that would appear in the cost of services provided schedule of an airline? (See page 795.)

Managerial Accounting Today

study objective 8

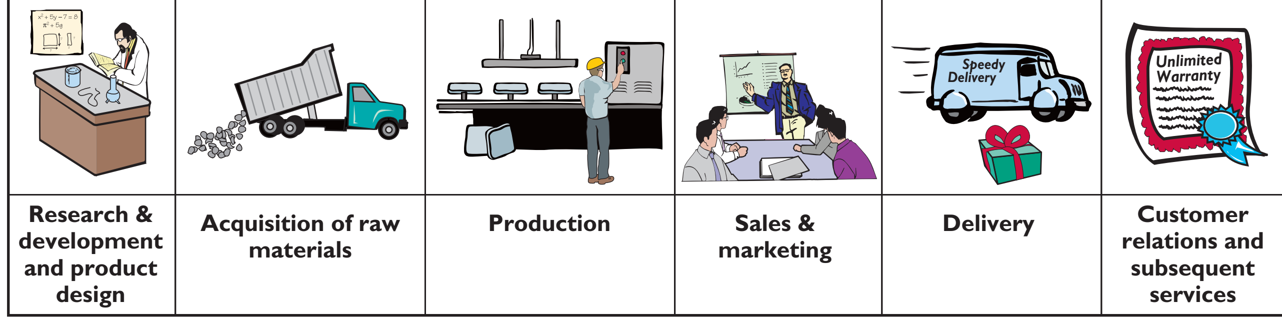
Identify trends in managerial accounting.

In recent years, the competitive environment for U.S. business has changed significantly. For example, the airline, financial services, and telecommunications industries have been deregulated. Global competition has intensified. The world economy now has the European Union, NAFTA, and ASEAN. Countries like China and India are becoming economic powerhouses. As indicated earlier, managerial accountants must be forward-looking, acting as advisors and information providers to different members of the organization. Some of the issues they face are discussed below.

THE VALUE CHAIN

The **value chain** refers to all activities associated with providing a product or service. For a manufacturer these include research and development, product design, acquisition of raw materials, production, sales and marketing, delivery, customer relations, and subsequent service. Illustration 14-13 depicts the value chain for a manufacturer. In recent years, companies have made huge strides in analyzing all stages of the value chain in an effort to improve productivity and eliminate waste. Japanese automobile manufacturer Toyota pioneered many of these innovations.

Illustration 14-13 A manufacturer's value chain



In the 1980s, many companies purchased giant machines to replace humans in the manufacturing process. These machines were designed to produce large batches of products. In recent years these large-batch manufacturing processes have been recognized as very wasteful. They require vast amounts of inventory storage capacity and considerable movement of materials. Consequently, many companies have reengineered their manufacturing processes. As one example, the manufacturing company Pratt and Whitney replaced many large machines with smaller, more flexible ones and reorganized its plants for more efficient flow of goods. Pratt and Whitney reduced the time that its turbine engine blades spend in the grinding section of its factory from 10 days down to 2 hours. It cut the total amount of time spent making a blade from 22 days to 7 days. Analysis of the value chain has made companies far more responsive to customer needs and has improved profitability.

TECHNOLOGICAL CHANGE

Technology has played a large role in the value chain. Computerization and automation have permitted companies to be more effective in streamlining production and thus enhancing the value chain. For example, many companies now employ **enterprise resource planning (ERP)** software systems to manage their value chain. ERP systems provide a comprehensive, centralized, integrated source of information that companies can use to manage all major business processes, from purchasing to manufacturing to human resources.

In large companies, an ERP system might replace as many as 200 individual software packages. For example, an ERP system can eliminate the need for individual software packages for personnel, inventory management, receivables, and payroll. Because the value chain extends beyond the walls of the company, ERP systems enable a two-way flow of information between a company and its major suppliers, customers, and business partners. Such systems both collect and disperse information throughout the value chain. The largest ERP provider, German corporation SAP AG, has more than 36,000 customers worldwide.

Another example of technological change is **computer-integrated manufacturing (CIM)**. Using CIM, many companies can now manufacture products that are untouched by human hands. An example is the use of robotic equipment in the steel and automobile industries. Workers monitor the manufacturing process by watching instrument panels. Automation significantly reduces direct labor costs in many cases.

Also, the widespread use of computers has greatly reduced the cost of accumulating, storing, and reporting managerial accounting information. Computers now make it possible to do more detailed costing of products, processes, and services than was possible under manual processing.

Technology is also affecting the value chain through business-to-business (B2B) e-commerce on the Internet. The Internet has dramatically changed the way corporations do business with one another. Interorganizational information systems connected over the Internet enable suppliers to share information nearly instantaneously. The Internet has also changed the marketplace, often cutting out intermediaries. Industries such as the automobile, airline, hotel, and electronics industries have made commitments to purchase some or all of their supplies and raw materials in the huge B2B electronic marketplaces. For example, Hilton Hotels recently agreed to purchase as much as $1.5 billion of bed sheets, pest control services, and other items from an online supplier, PurchasePro.com.

JUST-IN-TIME INVENTORY METHODS

Many companies have significantly lowered inventory levels and costs using **just-in-time (JIT) inventory** methods. Under a just-in-time method, goods are manufactured or purchased just in time for sale. As noted in the Feature Story, Dell

Ethics Note Does just-in-time inventory justify "just-in-time" employees obtained through temporary employment services?

is famous for having developed a system for making computers in response to individual customer requests. Even though each computer is custom-made to meet each customer's particular specifications, it takes Dell less than 48 hours to assemble the computer and put it on a truck. By integrating its information systems with those of its suppliers, Dell reduced its inventories to nearly zero. This is a huge advantage in an industry where products become obsolete nearly overnight.

QUALITY

JIT inventory systems require an increased emphasis on product quality. If products are produced only as they are needed, it is very costly for the company to stop production because of defects or machine breakdowns. Many companies have installed **total quality management (TQM)** systems to reduce defects in finished products. The goal is to achieve zero defects. These systems require timely data on defective products, rework costs, and the cost of honoring warranty contracts. Often, companies use this information to help redesign the product in a way that makes it less prone to defects. Or they may use the information to reengineer the production process to reduce setup time and decrease the potential for error. TQM systems also provide information on nonfinancial measures such as customer satisfaction, number of service calls, and time to generate reports. Attention to these measures, which employees can control, leads to increased profitability.

ACTIVITY-BASED COSTING

As discussed earlier, overhead costs have become an increasingly large component of product and service costs. By definition, overhead costs cannot be directly traced to individual products. But to determine each product's cost, overhead must be **allocated** to the various products. In order to obtain more accurate product costs, many companies now allocate overhead using **activity-based costing (ABC)**. Under ABC, companies allocate overhead based on each product's use of activities in making the product. For example, companies can keep track of their cost of setting up machines for each batch of a production process. Then companies can allocate part of the total set-up cost to a particular product based on the number of set-ups that product required.

Activity-based costing is beneficial because it results in more accurate product costing and in more careful scrutiny of all activities in the value chain. For example, if a product's cost is high because it requires a high number of set-ups, management will be motivated to determine how to produce the product using the optimal number of machine set-ups. Both manufacturing and service companies now widely use ABC. Allied Signal and Coca-Cola have both enjoyed improved results from ABC. Fidelity Investments uses ABC to identify which customers cost the most to serve.

THEORY OF CONSTRAINTS

All companies have certain aspects of their business that create "bottlenecks"—constraints that limit the company's potential profitability. An important aspect of managing the value chain is identifying these constraints. The **theory of constraints** is a specific approach used to identify and manage constraints in order to achieve the company's goals. Automobile manufacturer General Motors has implemented the theory of constraints in all of its North American plants. GM has found that it is most profitable when it focuses on fixing bottlenecks, rather than worrying about whether all aspects of the company are functioning at full capacity. It has greatly improved the company's ability to effectively use overtime labor while meeting customer demand. Chapter 19 discusses an application of the theory of constraints.

BALANCED SCORECARD

As companies implement various business practice innovations, managers sometimes focus too enthusiastically on the latest innovation, to the detriment of other areas of the business. For example, in focusing on improving quality, companies sometimes have lost sight of cost/benefit considerations. Similarly, in focusing on reducing inventory levels through just-in-time, companies sometimes have lost sales due to inventory shortages. The **balanced scorecard** is a performance-measurement approach that uses both financial and nonfinancial measures to evaluate all aspects of a company's operations in an **integrated** fashion. The performance measures are linked in a cause-and-effect fashion to ensure that they all tie to the company's overall objectives.

For example, the company may desire to increase its return on assets, a common financial performance measure (calculated as net income divided by average total assets). It will then identify a series of linked goals. If the company accomplishes each goal, the ultimate result will be an increase in return on assets. For example, in order to increase return on assets, sales must increase. In order to increase sales, customer satisfaction must be increased. In order to increase customer satisfaction, product defects must be reduced. In order to reduce product defects, employee training must be increased. Note the linkage, which starts with employee training and ends with return on assets. Each objective will have associated performance measures.

The use of the balanced scorecard is widespread among well-known and respected companies. For example, Hilton Hotels Corporation uses the balanced scorecard to evaluate the performance of employees at all of its hotel chains. Wal-Mart employs the balanced scorecard, and actually extends its use to evaluation of its suppliers. For example, Wal-Mart recently awarded Welch Company the "Dry Grocery Division Supplier of the Year Award" for its balanced scorecard results. We discuss the balanced scorecard further in Chapter 22.

USING THE DECISION TOOLKIT

Giant Manufacturing Co. Ltd. specializes in manufacturing many different models of bicycles. Assume that the market has responded enthusiastically to a new model, the Jaguar. As a result, the company has established a separate manufacturing facility to produce these bicycles. The company produces 1,000 bicycles per month. Giant's monthly manufacturing cost and other expenses data related to these bicycles are as follows.

1.	Rent on manufacturing equipment (lease cost)	$2,000/month
2.	Insurance on manufacturing building	$750/month
3.	Raw materials (frames, tires, etc.)	$80/bicycle
4.	Utility costs for manufacturing facility	$1,000/month
5.	Supplies for administrative office	$800/month
6.	Wages for assembly line workers in manufacturing facility	$30/bicycle
7.	Depreciation on office equipment	$650/month
8.	Miscellaneous manufacturing materials (lubricants, solders, etc.)	$1.20/bicycle
9.	Property taxes on manufacturing building	$2,400/year
10.	Manufacturing supervisor's salary	$3,000/month
11.	Advertising for bicycles	$30,000/year
12.	Sales commissions	$10/bicycle
13.	Depreciation on manufacturing building	$1,500/month

Instructions

(a) Prepare an answer sheet with the following column headings.

	Product Costs			
Cost Item	**Direct Materials**	**Direct Labor**	**Manufacturing Overhead**	**Period Costs**

Enter each cost item on your answer sheet, placing an "X" mark under the appropriate headings.

(b) Compute total manufacturing costs for the month.

Solution

(a)

	Product Costs			
Cost Item	**Direct Materials**	**Direct Labor**	**Manufacturing Overhead**	**Period Costs**
1. Rent on manufacturing equipment ($2,000/month)			X	
2. Insurance on manufacturing building ($750/month)			X	
3. Raw materials ($80/bicycle)	X			
4. Manufacturing utilities ($1,000/month)			X	
5. Office supplies ($800/month)				X

Cost Item	Direct Materials	Direct Labor	Manufacturing Overhead	Period Costs
	Product Costs			
6. Wages for workers ($30/bicycle)		X		
7. Depreciation on office equipment ($650/month)				X
8. Miscellaneous manufacturing materials ($1.20/bicycle)			X	
9. Property taxes on manufacturing building ($2,400/year)			X	
10. Manufacturing supervisor's salary ($3,000/month)			X	
11. Advertising cost ($30,000/year)				X
12. Sales commissions ($10/bicycle)				X
13. Depreciation on manufacturing building ($1,500/month)			X	

(b)

Cost Item	Manufacturing Cost
Rent on manufacturing equipment	$ 2,000
Insurance on manufacturing building	750
Raw materials ($80 × 1,000)	80,000
Manufacturing utilities	1,000
Labor ($30 × 1,000)	30,000
Miscellaneous materials ($1.20 × 1,000)	1,200
Property taxes on manufacturing building ($2,400 ÷ 12)	200
Manufacturing supervisor's salary	3,000
Depreciation on manufacturing building	1,500
Total manufacturing costs	$119,650

Summary of Study Objectives

1 Explain the distinguishing features of managerial accounting. The *primary users* of managerial accounting reports are internal users, who are officers, department heads, managers, and supervisors in the company. Managerial accounting issues internal reports as frequently as the need arises. The purpose of these reports is to provide special-purpose information for a particular user for a specific decision. The content of managerial accounting reports pertains to subunits of the business, may be very detailed, and may extend beyond the double-entry accounting system. The reporting standard is relevance to the decision being made. No independent audits are required in managerial accounting.

2 Identify the three broad functions of management. The three functions are planning, directing, and controlling. Planning requires management to look ahead and to establish objectives. Directing involves coordinating the diverse activities and human resources of a company to produce a smooth-running operation. Controlling is the process of keeping the activities on track.

3 Define the three classes of manufacturing costs. Manufacturing costs are typically classified as either (1) direct materials, (2) direct labor, or (3) manufacturing overhead. Raw materials that can be physically and directly associated with the finished product during the manufacturing process are called direct materials. The

work of factory employees that can be physically and directly associated with converting raw materials into finished goods is considered direct labor. Manufacturing overhead consists of costs that are indirectly associated with the manufacture of the finished product.

4 Distinguish between product and period costs. Product costs are costs that are a necessary and integral part of producing the finished product. Product costs are also called inventoriable costs. Under the matching principle, these costs do not become expenses until the company sells the finished goods inventory. Period costs are costs that are identified with a specific time period rather than with a salable product. These costs relate to nonmanufacturing costs and therefore are not inventoriable costs.

5 Explain the difference between a merchandising and a manufacturing income statement. The difference between a merchandising and a manufacturing income statement is in the cost of goods sold section. A manufacturing cost of goods sold section shows beginning and ending finished goods inventories and the cost of goods manufactured.

6 Indicate how cost of goods manufactured is determined. Companies add the cost of the beginning work in process to the total manufacturing costs for the current year to arrive at the total cost of work in process for the year. They then subtract the ending work in process from the total cost of work in process to arrive at the cost of goods manufactured.

7 Explain the difference between a merchandising and a manufacturing balance sheet. The difference between a merchandising and a manufacturing balance sheet is in the current assets section. The current assets section of a manufacturing company's balance sheet presents three inventory accounts: finished goods inventory, work in process inventory, and raw materials inventory.

8 Identify trends in managerial accounting. Managerial accounting has experienced many changes in recent years. Among these are a shift toward addressing the needs of service companies and improving practices to better meet the needs of managers. Improved practices include a focus on managing the value chain through techniques such as just-in-time inventory and technological applications such as enterprise resource management, computer-integrated manufacturing, and B2B e-commerce. In addition, techniques such as just-in-time inventory, total quality management, activity-based costing, and theory of constraints are improving decision making. Finally, the balanced scorecard is now used by many companies in order to attain a more comprehensive view of the company's operations.

DECISION TOOLKIT A SUMMARY

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
Is the company maintaining control over the costs of production?	Cost of material, labor, and overhead	Cost of goods manufactured schedule	Compare the cost of goods manufactured to revenue expected from product sales.
What is the composition of a manufacturing company's inventory?	Amount of raw materials, work in process, and finished goods inventories	Balance sheet	Determine whether there are sufficient finished goods, raw materials, and work in process inventories to meet forecasted demand.

appendix 14A

Accounting Cycle for a Manufacturing Company

study objective 9

Prepare a worksheet and closing entries for a manufacturing company.

The accounting cycle for a manufacturing company is the same as for a merchandising company when companies use a periodic inventory system. The journalizing and posting of transactions is the same, except for the additional manufacturing inventories and manufacturing cost accounts. Similarly, the preparation of a trial balance and the journalizing and posting of adjusting entries are the

same. Some changes, however, occur in using a worksheet and in preparing closing entries.

To illustrate the changes in the worksheet, we will use the cost of goods manufactured schedule for Olsen Manufacturing presented in Illustration 14-8 (page 759), along with other assumed data. For convenience, we reproduce the cost of goods manufactured schedule in Illustration 14A-1.

Illustration 14A-1 Cost of goods manufactured schedule

OLSEN MANUFACTURING COMPANY
Cost of Goods Manufactured Schedule
For the Year Ended December 31, 2012

Work in process, January 1			$ 18,400
Direct materials			
Raw materials inventory, January 1	$ 16,700		
Raw materials purchases	152,500		
Total raw materials available for use	169,200		
Less: Raw materials inventory, December 31	22,800		
Direct materials used		$146,400	
Direct labor		175,600	
Manufacturing overhead			
Indirect labor	14,300		
Factory repairs	12,600		
Factory utilities	10,100		
Factory depreciation	9,440		
Factory insurance	8,360		
Total manufacturing overhead		54,800	
Total manufacturing costs			376,800
Total cost of work in process			395,200
Less: Work in process, December 31			25,200
Cost of goods manufactured			$370,000

WORKSHEET

When a company uses a worksheet in preparing financial statements, it needs two additional columns for the cost of goods manufactured schedule. As illustrated in the worksheet in Illustration 14A-2 (page 772), we insert debit and credit columns for this schedule before the income statement columns.

In completing the cost of goods manufactured columns, you would enter the beginning inventories of raw materials and work in process as debits. In addition, you would enter all of the manufacturing costs as debits. The reason is that each of these amounts increases cost of goods manufactured. In contrast, you would enter ending inventories for raw materials and work in process as credits in the cost of goods manufactured columns because they have the opposite effect—they decrease cost of goods manufactured. The balancing amount for these columns is the cost of goods manufactured. Note that the amount ($370,000) agrees with the amount reported for cost of goods manufactured in Illustration 14A-1. This amount is also entered in the income statement debit column.

The income statement and balance sheet columns for a manufacturing company are basically the same as for a merchandising company. For example, the treatment of the finished goods inventories is identical with the treatment of merchandise inventory: The beginning inventory appears in the debit column of the income statement, and the ending finished goods inventory appears in the income statement credit column as well as in the balance sheet debit column.

Illustration 14A-2 Partial worksheet

As in the case of a merchandising company, manufacturing companies can prepare financial statements from the statement columns of the worksheet. They also can prepare the cost of goods manufactured schedule directly from the worksheet.

CLOSING ENTRIES

The closing entries are different for manufacturing and merchandising companies. Manufacturing companies use a Manufacturing Summary account to close all accounts that appear in the cost of goods manufactured schedule. The balance of the Manufacturing Summary account is the Cost of Goods Manufactured for the period. Manufacturing Summary is then closed to Income Summary.

Companies can prepare the closing entries from the worksheet. As illustrated below, they first prepare the closing entries for the manufacturing accounts. The closing entries for Olsen Manufacturing are as follows.

Dec. 31	Work in Process Inventory (Dec. 31)	25,200	
	Raw Materials Inventory (Dec. 31)	22,800	
	Manufacturing Summary		**48,000**
	(To record ending raw materials and work in process inventories)		

Date	Account Titles and Explanation	Debit	Credit
Dec. 31	**Manufacturing Summary**	**418,000**	
	Work in Process Inventory (Jan. 1)		18,400
	Raw Materials Inventory (Jan. 1)		16,700
	Raw Materials Purchases		152,500
	Direct Labor		175,600
	Indirect Labor		14,300
	Factory Repairs		12,600
	Factory Utilities		10,100
	Factory Depreciation		9,440
	Factory Insurance		8,360
	(To close beginning raw materials and work in process inventories and manufacturing cost accounts)		
31	Finished Goods Inventory (Dec. 31)	19,500	
	Sales	680,000	
	Income Summary		699,500
	(To record ending finished goods inventory and close sales account)		
31	Income Summary	622,100	
	Finished Goods Inventory (Jan. 1)		24,600
	Manufacturing Summary		**370,000**
	Selling Expenses		114,900
	Administrative Expenses		92,600
	Income Tax Expense		20,000
	(To close beginning finished goods inventory, manufacturing summary, and expense accounts)		
31	Income Summary	77,400	
	Retained Earnings		77,400
	(To close net income to retained earnings)		

After posting, the summary accounts will show the following.

Illustration 14A-3
Summary accounts for a manufacturing company, after posting

Manufacturing Summary

Date		Debit	Date		Credit
Dec. 31	Close	418,000	Dec. 31	Close	48,000
			31	Close	370,000

Income Summary

Date		Debit	Date		Credit
Dec. 31	Close	622,100	Dec. 31	Close	699,500
31	Close	77,400			

Summary of Study Objective for Appendix 14A

9 Prepare a worksheet and closing entries for a manufacturing company. The worksheet for the cost of goods manufactured needs two additional columns. In these columns, manufacturing companies enter the beginning inventories of raw materials and work in process as debits, and the ending inventories as credits. All manufacturing costs are entered as debits. To close all of the accounts that appear in the cost of goods manufactured schedule, manufacturers use a Manufacturing Summary account.

Glossary

Activity-based costing (ABC) *(p. 766)* A method of allocating overhead based on each product's use of activities in making the product.

Balanced scorecard *(p. 767)* A performance-measurement approach that uses both financial and nonfinancial measures, tied to company objectives, to evaluate a company's operations in an integrated fashion.

Board of directors *(p. 751)* The group of officials elected by the stockholders of a corporation to formulate operating policies, select officers, and otherwise manage the company.

Chief executive officer (CEO) *(p. 751)* Corporate officer who has overall responsibility for managing the business and delegates responsibilities to other corporate officers.

Chief financial officer (CFO) *(p. 752)* Corporate officer who is responsible for all of the accounting and finance issues of the company.

Controller *(p. 752)* Financial officer responsible for a company's accounting records, system of internal control, and preparation of financial statements, tax returns, and internal reports.

Cost of goods manufactured *(p. 758)* Total cost of work in process less the cost of the ending work in process inventory.

Direct labor *(p. 755)* The work of factory employees that can be physically and directly associated with converting raw materials into finished goods.

Direct materials *(p. 755)* Raw materials that can be physically and directly associated with manufacturing the finished product.

Enterprise resource planning (ERP) system *(p. 765)* Software that provides a comprehensive, centralized, integrated source of information used to manage all major business processes.

Indirect labor *(p. 755)* Work of factory employees that has no physical association with the finished product, or for which it is impractical to trace the costs to the goods produced.

Indirect materials *(p. 755)* Raw materials that do not physically become part of the finished product or cannot be traced because their physical association with the finished product is too small.

Just-in-time (JIT) inventory *(p. 765)* Inventory system in which goods are manufactured or purchased just in time for sale.

Line positions *(p. 752)* Jobs that are directly involved in a company's primary revenue-generating operating activities.

Managerial accounting *(p. 748)* A field of accounting that provides economic and financial information for managers and other internal users.

Manufacturing overhead *(p. 755)* Manufacturing costs that are indirectly associated with the manufacture of the finished product.

Period costs *(p. 756)* Costs that are matched with the revenue of a specific time period and charged to expense as incurred.

Product costs *(p. 756)* Costs that are a necessary and integral part of producing the finished product.

Sarbanes-Oxley Act of 2002 (SOX) *(p. 753)* Law passed by Congress in 2002 intended to reduce unethical corporate behavior.

Staff positions *(p. 752)* Jobs that support the efforts of line employees.

Theory of constraints *(p. 766)* A specific approach used to identify and manage constraints in order to achieve the company's goals.

Total cost of work in process *(p. 758)* Cost of the beginning work in process plus total manufacturing costs for the current period.

Total manufacturing costs *(p. 758)* The sum of direct materials, direct labor, and manufacturing overhead incurred in the current period.

Total quality management (TQM) *(p. 766)* Systems implemented to reduce defects in finished products with the goal of achieving zero defects.

Treasurer *(p. 752)* Financial officer responsible for custody of a company's funds and for maintaining its cash position.

Value chain *(p. 764)* All activities associated with providing a product or service.

Comprehensive Do it!

Superior Manufacturing Company has the following cost and expense data for the year ending December 31, 2012.

Raw materials, 1/1/12	$ 30,000	Insurance, factory	$ 14,000
Raw materials, 12/31/12	20,000	Property taxes, factory building	6,000
Raw materials purchases	205,000	Sales (net)	1,500,000
Indirect materials	15,000	Delivery expenses	100,000
Work in process, 1/1/12	80,000	Sales commissions	150,000
Work in process, 12/31/12	50,000	Indirect labor	90,000
Finished goods, 1/1/12	110,000	Factory machinery rent	40,000
Finished goods, 12/31/12	120,000	Factory utilities	65,000
Direct labor	350,000	Depreciation, factory building	24,000
Factory manager's salary	35,000	Administrative expenses	300,000

Instructions

(a) Prepare a cost of goods manufactured schedule for Superior Company for 2012.
(b) Prepare an income statement for Superior Company for 2012.
(c) Assume that Superior Company's accounting records show the balances of the following current asset accounts: Cash $17,000, Accounts Receivable (net) $120,000, Prepaid Expenses $13,000, and Short-term Investments $26,000. Prepare the current assets section of the balance sheet for Superior Company as of December 31, 2012.

Solution to Comprehensive Do it!

(a)

SUPERIOR MANUFACTURING COMPANY
Cost of Goods Manufactured Schedule
For the Year Ended December 31, 2012

Work in process, 1/1			$ 80,000
Direct materials			
Raw materials inventory, 1/1	$ 30,000		
Raw materials purchases	205,000		
Total raw materials available for use	235,000		
Less: Raw materials inventory, 12/31	20,000		
Direct materials used		$215,000	
Direct labor		350,000	
Manufacturing overhead			
Indirect labor	90,000		
Factory utilities	65,000		
Factory machinery rent	40,000		
Factory manager's salary	35,000		
Depreciation, factory building	24,000		
Indirect materials	15,000		
Insurance, factory	14,000		
Property taxes, factory building	6,000		
Total manufacturing overhead		289,000	
Total manufacturing costs			854,000
Total cost of work in process			934,000
Less: Work in process, 12/31			50,000
Cost of goods manufactured			$ 884,000

(b)

SUPERIOR MANUFACTURING COMPANY
Income Statement
For the Year Ended December 31, 2012

Sales (net)		$1,500,000
Cost of goods sold		
Finished goods inventory, January 1	$110,000	
Cost of goods manufactured	884,000	
Cost of goods available for sale	994,000	
Less: Finished goods inventory, December 31	120,000	
Cost of goods sold		874,000
Gross profit		626,000
Operating expenses		
Administrative expenses	300,000	
Sales commissions	150,000	
Delivery expenses	100,000	
Total operating expenses		550,000
Net income		$ 76,000

Action Plan

- Start with beginning work in process as the first item in the cost of goods manufactured schedule.
- Sum direct materials used, direct labor, and total manufacturing overhead to determine total manufacturing costs.
- Sum beginning work in process and total manufacturing costs to determine total cost of work in process.
- Cost of goods manufactured is the total cost of work in process less ending work in process.
- In the cost of goods sold section of the income statement, show beginning and ending finished goods inventory and cost of goods manufactured.
- In the balance sheet, list manufacturing inventories in the order of their expected realization in cash, with finished goods first.

(c)

SUPERIOR MANUFACTURING COMPANY
Balance Sheet (partial)
December 31, 2012

Current assets		
Cash		$ 17,000
Short-term investments		26,000
Accounts receivable (net)		120,000
Inventories		
Finished goods	$120,000	
Work in process	50,000	
Raw materials	20,000	190,000
Prepaid expenses		13,000
Total current assets		$366,000

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more resources are available for practice in WileyPLUS

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

Self-Test Questions

Answers are on page 795.

(SO 1) **1.** Managerial accounting:
(a) is governed by generally accepted accounting principles.
(b) places emphasis on special-purpose information.
(c) pertains to the entity as a whole and is highly aggregated.
(d) is limited to cost data.

(SO 2) **2.** The management of an organization performs several broad functions. They are:
(a) planning, directing, and selling.
(b) planning, directing, and controlling.
(c) planning, manufacturing, and controlling.
(d) directing, manufacturing, and controlling.

(SO 2) **3.** After passage of the Sarbanes-Oxley Act of 2002:
(a) reports prepared by managerial accountants must by audited by CPAs.
(b) CEOs and CFOs must certify that financial statements give a fair presentation of the company's operating results.
(c) the audit committee, rather than top management, is responsible for the company's financial statements.
(d) reports prepared by managerial accountants must comply with generally accepted accounting principles (GAAP).

(SO 3) **4.** Direct materials are a:

	Product Cost	Manufacturing Overhead	Period Cost
(a)	Yes	Yes	No
(b)	Yes	No	No
(c)	Yes	Yes	Yes
(d)	No	No	No

(SO 3) **5.** Which of the following costs would a computer manufacturer include in manufacturing overhead?
(a) The cost of the disk drives.
(b) The wages earned by computer assemblers.
(c) The cost of the memory chips.
(d) Depreciation on testing equipment.

(SO 3) **6.** Which of the following is *not* an element of manufacturing overhead?
(a) Sales manager's salary.
(b) Plant manager's salary.
(c) Factory repairman's wages.
(d) Product inspector's salary.

(SO 4) **7.** Indirect labor is a:
(a) nonmanufacturing cost.
(b) raw material cost.
(c) product cost.
(d) period cost.

(SO 4) **8.** Which of the following costs are classified as a period cost?
(a) Wages paid to a factory custodian.
(b) Wages paid to a production department supervisor.
(c) Wages paid to a cost accounting department supervisor.
(d) Wages paid to an assembly worker.

(SO 5) **9.** For the year, Redder Company has cost of goods manufactured of $600,000, beginning finished goods inventory of $200,000, and ending finished goods inventory of $250,000. The cost of goods sold is:
(a) $450,000.
(b) $500,000.
(c) $550,000.
(d) $600,000.

(SO 5) **10.** Cost of goods available for sale is a step in the calculation of cost of goods sold of:
(a) a merchandising company but not a manufacturing company.
(b) a manufacturing company but not a merchandising company.
(c) a merchandising company and a manufacturing company.
(d) neither a manufacturing company nor a merchandising company.

(SO 6) **11.** A cost of goods manufactured schedule shows beginning and ending inventories for:
(a) raw materials and work in process only.
(b) work in process only.
(c) raw materials only.
(d) raw materials, work in process, and finished goods.

(SO 6) **12.** The formula to determine the cost of goods manufactured is:
(a) Beginning raw materials inventory + Total manufacturing costs − Ending work in process inventory.
(b) Beginning work in process inventory + Total manufacturing costs − Ending finished goods inventory.
(c) Beginning finished good inventory + Total manufacturing costs − Ending finished goods inventory.
(d) Beginning work in process inventory + Total manufacturing costs − Ending work in process inventory.

(SO 7) **13.** A manufacturer may report three inventories on its balance sheet: (1) raw materials, (2) work in process, and (3) finished goods. Indicate in what sequence these inventories generally appear on a balance sheet.
(a) (1), (2), (3)
(b) (2), (3), (1)
(c) (3), (1), (2)
(d) (3), (2), (1)

14. Which of the following managerial accounting techniques attempts to allocate manufacturing overhead in a more meaningful fashion? (SO 8)
(a) Just-in-time inventory.
(b) Total-quality management.
(c) Balanced scorecard.
(d) Activity-based costing.

15. Examples of recent trends in the economic environment of U.S. businesses are: (SO 8)
(a) increasing deregulation, decreasing global competition, and a shift toward providing services rather than goods.
(b) increasing deregulation, increasing global competition, and a shift toward providing goods rather than services.
(c) decreasing deregulation, decreasing global competition, and a shift toward providing services rather than goods.
(d) increasing deregulation, increasing global competition, and a shift toward providing services rather than goods.

Go to the book's companion website, **www.wiley.com/college/kimmel**, for additional Self-Test Questions.

Questions

1. (a) "Managerial accounting is a field of accounting that provides economic information for all interested parties." Do you agree? Explain.
(b) Joe Delong believes that managerial accounting serves only manufacturing firms. Is Joe correct? Explain.

2. Distinguish between managerial and financial accounting as to (a) primary users of reports, (b) types and frequency of reports, and (c) purpose of reports.

3. How does the content of reports and the verification of reports differ between managerial and financial accounting?

4. In what ways can the budgeting process create incentives for unethical behavior?

5. Linda Olsen is studying for the next accounting midterm examination. Summarize for Linda what she should know about management functions.

6. "Decision making is management's most important function." Do you agree? Why or why not?

7. Explain the primary difference between line positions and staff positions, and give examples of each.

8. What new rules were enacted under the Sarbanes-Oxley Act to address unethical accounting practices?

9. Tony Andres is studying for his next accounting examination. Explain to Tony what he should know about the differences between the income statements for a manufacturing and for a merchandising company.

10. Jerry Lang is unclear as to the difference between the balance sheets of a merchandising company and a manufacturing company. Explain the difference to Jerry.

11. How are manufacturing costs classified?

12. Mel Finney claims that the distinction between direct and indirect materials is based entirely on physical association with the product. Is Mel correct? Why?

13. Tina Burke is confused about the differences between a product cost and a period cost. Explain the differences to Tina.

14. Identify the differences in the cost of goods sold section of an income statement between a merchandising company and a manufacturing company.

15. The determination of the cost of goods manufactured involves the following factors: (A) beginning work in process inventory, (B) total manufacturing costs, and (C) ending work in process inventory. Identify the meaning of x in the following formulas:

(a) $A + B = x$
(b) $A + B - C = x$

16. Sealy Manufacturing has beginning raw materials inventory $12,000, ending raw materials inventory $15,000, and raw materials purchases $170,000. What is the cost of direct materials used?
17. Tate Manufacturing Inc. has beginning work in process $26,000, direct materials used $240,000, direct labor $220,000, total manufacturing overhead $180,000, and ending work in process $32,000. What are the total manufacturing costs?
18. Using the data in Question 17, what are (a) the total cost of work in process and (b) the cost of goods manufactured?
19. In what order should manufacturing inventories be listed in a balance sheet?
20. How does the output of manufacturing operations differ from that of service operations?
21. Discuss whether the product costing techniques discussed in this chapter apply equally well to manufacturers and service companies.
22. What is the value chain? Describe, in sequence, the main components of a manufacturer's value chain.
23. What is an enterprise resource planning (ERP) system? What are its primary benefits?
24. Why is product quality important for companies that implement a just-in-time inventory system?
25. Explain what is meant by "balanced" in the balanced scorecard approach.
26. What is activity-based costing, and what are its potential benefits?
*27. How, if at all, does the accounting cycle differ between a manufacturing company and a merchandising company?
*28. What typical account balances are carried into the cost of goods manufactured columns of the manufacturing worksheet?
*29. Prepare the closing entries for (a) ending work in process and raw materials inventories and (b) manufacturing summary. Use XXXs for amounts.

Brief Exercises

Distinguish between managerial and financial accounting.
(SO 1), C

BE14-1 Complete the following comparison table between managerial and financial accounting.

	Financial Accounting	Managerial Accounting
Primary users of reports		
Types of reports		
Frequency of reports		
Purpose of reports		
Content of reports		
Verification process		

Identify important regulatory changes.
(SO 2), C

BE14-2 The Sarbanes-Oxley Act of 2002 (SOX) has important implications for the financial community. Explain two implications of SOX.

Identify the three management functions.
(SO 2), C

BE14-3 Listed below are the three functions of the management of an organization.
1. Planning 2. Directing 3. Controlling

Identify which of the following statements best describes each of the above functions.
(a) ____ requires management to look ahead and to establish objectives. A key objective of management is to add value to the business.
(b) ____ involves coordinating the diverse activities and human resources of a company to produce a smooth-running operation. This function relates to the implementation of planned objectives.
(c) ____ is the process of keeping the activities on track. Management must determine whether goals are being met and what changes are necessary when there are deviations.

Classify manufacturing costs.
(SO 3), C

BE14-4 Determine whether each of the following costs should be classified as direct materials (DM), direct labor (DL), or manufacturing overhead (MO).
(a) ____Frames and tires used in manufacturing bicycles.
(b) ____Wages paid to production workers.
(c) ____Insurance on factory equipment and machinery.
(d) ____Depreciation on factory equipment.

Classify manufacturing costs.
(SO 3), C

BE14-5 Indicate whether each of the following costs of an automobile manufacturer would be classified as direct materials, direct labor, or manufacturing overhead.
(a) ____Windshield.
(b) ____Engine.
(c) ____Wages of assembly line worker.
(d) ____Depreciation of factory machinery.
(e) ____Factory machinery lubricants.
(f) ____Tires.
(g) ____Steering wheel.
(h) ____Salary of painting supervisor.

BE14-6 Identify whether each of the following costs should be classified as product costs or period costs.

Identify product and period costs.
(SO 4), **C**

(a) ____Manufacturing overhead.
(b) ____Selling expenses.
(c) ____Administrative expenses.
(d) ____Advertising expenses.
(e) ____Direct labor.
(f) ____Direct material.

BE14-7 Presented below are Dieker Company's monthly manufacturing cost data related to its personal computer products.

Classify manufacturing costs.
(SO 3), **C**

(a)	Utilities for manufacturing equipment	$116,000
(b)	Raw material (CPU, chips, etc.)	$ 85,000
(c)	Depreciation on manufacturing building	$880,000
(d)	Wages for production workers	$191,000

Enter each cost item in the following table, placing an "X" under the appropriate headings.

	Product Costs		
	Direct Materials	**Direct Labor**	**Factory Overhead**
(a)			
(b)			
(c)			
(d)			

BE14-8 Francum Manufacturing Company has the following data: direct labor $209,000, direct materials used $180,000, total manufacturing overhead $208,000, and beginning work in process $25,000. Compute (a) total manufacturing costs and (b) total cost of work in process.

Compute total manufacturing costs and total cost of work in process.
(SO 6), **AP**

BE14-9 In alphabetical order below are current asset items for Ruiz Company's balance sheet at December 31, 2012. Prepare the current assets section (including a complete heading).

Prepare current assets section.
(SO 7), **AP**

Accounts receivable	$200,000
Cash	62,000
Finished goods	91,000
Prepaid expenses	38,000
Raw materials	73,000
Work in process	87,000

BE14-10 Presented below are incomplete manufacturing cost data. Determine the missing amounts for three different situations.

Determine missing amounts in computing total manufacturing costs.
(SO 6), **AP**

	Direct Materials Used	Direct Labor Used	Factory Overhead	Total Manufacturing Costs
(1)	$40,000	$61,000	$ 50,000	?
(2)	?	$75,000	$140,000	$296,000
(3)	$55,000	?	$111,000	$310,000

BE14-11 Use the same data from BE14–10 above and the data below. Determine the missing amounts.

Determine missing amounts in computing cost of goods manufactured.
(SO 6), **AP**

	Total Manufacturing Costs	Work in Process (1/1)	Work in Process (12/31)	Cost of Goods Manufactured
(1)	?	$120,000	$82,000	?
(2)	$296,000	?	$98,000	$321,000
(3)	$410,000	$463,000	?	$715,000

***BE14-12** Kline Manufacturing Company uses a worksheet in preparing financial statements. The following accounts are included in the adjusted trial balance: Finished Goods Inventory $28,000, Work in Process Inventory $21,600, Raw Materials Purchases $175,000, and Direct Labor $140,000. Indicate the worksheet column(s) to which each account should be extended.

Identify worksheet columns for selected accounts.
(SO 9), **C**

Do it! Review

Identify managerial accounting concepts.
(SO 1, 2), C

Do it! 14-1 Indicate whether the following statements are true or false.

1. Managerial accountants explain and report manufacturing and nonmanufacturing costs, determine cost behaviors, and perform cost-volume-profit analysis, but are not involved in the budget process.
2. Financial accounting reports pertain to subunits of the business and are very detailed.
3. Managerial accounting reports must follow GAAP and are audited by CPAs.
4. Managers' activities and responsibilities can be classified into three broad functions: planning, directing, and controlling.
5. As a result of the Sarbanes-Oxley Act of 2002 (SOX), top managers must certify that the company maintains an adequate system of internal control.
6. Management accountants follow a code of ethics developed by the Institute of Management Accountants.

Identify managerial cost concepts.
(SO 3, 4), C

Do it! 14-2 A music company has these costs:

Advertising	Paper inserts for CD cases
Blank CDs	CD plastic cases
Depreciation of CD image burner	Salaries of sales representatives
Salary of factory manager	Salaries of factory maintenance employees
Factory supplies used	Salaries of employees who burn music onto CDs

Classify each cost as a period or a product cost. Within the product cost category, indicate if the cost is part of direct materials (DM), direct labor (DL), or manufacturing overhead (MO).

Prepare cost of goods manufactured schedule.
(SO 6), AP

Do it! 14-3 The following information is available for Fishel Manufacturing Company.

	April 1	April 30
Raw material inventory	$10,000	$14,000
Work in process inventory	5,000	3,500

Materials purchased in April	$98,000
Direct labor in April	80,000
Manufacturing overhead in April	180,000

Prepare the cost of goods manufactured schedule for the month of April.

Identify trends in managerial accounting.
(SO 8), C

Do it! 14-4 Match the descriptions that follow with the corresponding terms.

Descriptions:

1. ______ Inventory system in which goods are manufactured or purchased just as they are needed for sale.
2. ______ A method of allocating overhead based on each product's use of activities in making the product.
3. ______ Systems that are especially important to firms adopting just-in-time inventory methods.
4. ______ One part of the value chain for a manufacturing company.
5. ______ The U.S. economy is trending toward this.
6. ______ A performance-measurement approach that uses both financial and nonfinancial measures, tied to company objectives, to evaluate a company's operations in an integrated fashion.

Terms:

(a) Activity-based costing
(b) Balanced scorecard
(c) Total quality management (TQM)
(d) Research and development, and product design
(e) Service industries
(f) Just-in-time (JIT) inventory

Exercises

E14-1 Richard Larkin has prepared the following list of statements about managerial accounting and financial accounting.

Identify distinguishing features of managerial accounting.
(SO 1), **C**

1. Financial accounting focuses on providing information to internal users.
2. Analyzing cost-volume-profit relationships is part of managerial accounting.
3. Preparation of budgets is part of financial accounting.
4. Managerial accounting applies only to merchandising and manufacturing companies.
5. Both managerial accounting and financial accounting deal with many of the same economic events.
6. Managerial accounting reports are prepared only quarterly and annually.
7. Financial accounting reports are general-purpose reports.
8. Managerial accounting reports pertain to subunits of the business.
9. Managerial accounting reports must comply with generally accepted accounting principles.
10. Although managerial accountants are expected to behave ethically, there is no code of ethical standards for managerial accountants.

Instructions
Identify each statement as true or false. If false, indicate how to correct the statement.

E14-2 Presented below is a list of costs and expenses usually incurred by Barnum Corporation, a manufacturer of furniture, in its factory.

Classify costs into three classes of manufacturing costs.
(SO 3), **C**

1. Salaries for assembly line inspectors.
2. Insurance on factory machines.
3. Property taxes on the factory building.
4. Factory repairs.
5. Upholstery used in manufacturing furniture.
6. Wages paid to assembly line workers.
7. Factory machinery depreciation.
8. Glue, nails, paint, and other small parts used in production.
9. Factory supervisors' salaries.
10. Wood used in manufacturing furniture.

Instructions
Classify the above items into the following categories: (a) direct materials, (b) direct labor, and (c) manufacturing overhead.

E14-3 Ryan Corporation incurred the following costs while manufacturing its product.

Identify types of cost and explain their accounting.
(SO 3, 4), **C**

Materials used in product	$100,000	Advertising expense	$45,000
Depreciation on plant	60,000	Property taxes on plant	14,000
Property taxes on store	7,500	Delivery expense	21,000
Labor costs of assembly-line workers	110,000	Sales commissions	35,000
Factory supplies used	13,000	Salaries paid to sales clerks	50,000

Instructions
(a) Identify each of the above costs as direct materials, direct labor, manufacturing overhead, or period costs.
(b) Explain the basic difference in accounting for product costs and period costs.

E14-4 Knight Company reports the following costs and expenses in May.

Determine the total amount of various types of costs.
(SO 3, 4), **AP**

Factory utilities	$ 15,500	Direct labor	$69,100
Depreciation on factory equipment	12,650	Sales salaries	46,400
Depreciation on delivery trucks	3,800	Property taxes on factory building	2,500
Indirect factory labor	48,900	Repairs to office equipment	1,300
Indirect materials	80,800	Factory repairs	2,000
Direct materials used	137,600	Advertising	15,000
Factory manager's salary	8,000	Office supplies used	2,640

Instructions

From the information, determine the total amount of:

(a) Manufacturing overhead.
(b) Product costs.
(c) Period costs.

Classify various costs into different cost categories.
(SO 3, 4), **C**

E14-5 Ikerd Company is a manufacturer of personal computers. Various costs and expenses associated with its operations are as follows.

1. Property taxes on the factory building.
2. Production superintendents' salaries.
3. Memory boards and chips used in assembling computers.
4. Depreciation on the factory equipment.
5. Salaries for assembly line quality control inspectors.
6. Sales commissions paid to sell personal computers.
7. Electrical components used in assembling computers.
8. Wages of workers assembling personal computers.
9. Soldering materials used on factory assembly lines.
10. Salaries for the night security guards for the factory building.

The company intends to classify these costs and expenses into the following categories: (a) direct materials, (b) direct labor, (c) manufacturing overhead, and (d) period costs.

Instructions

List the items (1) through (10). For each item, indicate the cost category to which it belongs.

Classify various costs into different cost categories.
(SO 3), **C**

Homework materials related to service companies are indicated by this icon.

E14-6 The administrators of Crawford County's Memorial Hospital are interested in identifying the various costs and expenses that are incurred in producing a patient's X-ray. A list of such costs and expenses is presented below.

1. Salaries for the X-ray machine technicians.
2. Wages for the hospital janitorial personnel.
3. Film costs for the X-ray machines.
4. Property taxes on the hospital building.
5. Salary of the X-ray technicians' supervisor.
6. Electricity costs for the X-ray department.
7. Maintenance and repairs on the X-ray machines.
8. X-ray department supplies.
9. Depreciation on the X-ray department equipment.
10. Depreciation on the hospital building.

The administrators want these costs and expenses classified as: (a) direct materials, (b) direct labor, or (c) service overhead.

Instructions

List the items (1) through (10). For each item, indicate the cost category to which the item belongs.

Classify various costs into different cost categories.
(SO 4), **AP**

E14-7 Kwik Delivery Service reports the following costs and expenses in June 2012.

Indirect materials	$ 5,400	Drivers' salaries	$16,000
Depreciation on delivery equipment	11,200	Advertising	3,600
Dispatcher's salary	5,000	Delivery equipment repairs	300
Property taxes on office building	870	Office supplies	650
CEO's salary	12,000	Office utilities	990
Gas and oil for delivery trucks	2,200	Repairs on office equipment	180

Instructions

Determine the total amount of (a) delivery service (product) costs and (b) period costs.

Compute cost of goods manufactured and sold.
(SO 5, 6), **AP**

E14-8 Lopez Corporation incurred the following costs while manufacturing its product.

Materials used in product	$120,000	Advertising expense	$45,000
Depreciation on plant	60,000	Property taxes on plant	14,000
Property taxes on store	7,500	Delivery expense	21,000
Labor costs of assembly-line workers	110,000	Sales commissions	35,000
Factory supplies used	23,000	Salaries paid to sales clerks	50,000

Work in process inventory was $12,000 at January 1 and $15,500 at December 31. Finished goods inventory was $60,000 at January 1 and $45,600 at December 31.

Instructions

(a) Compute cost of goods manufactured.
(b) Compute cost of goods sold.

E14-9 An incomplete cost of goods manufactured schedule is presented below.

Determine missing amounts in cost of goods manufactured schedule.
(SO 6), AP

MOLINA MANUFACTURING COMPANY
Cost of Goods Manufactured Schedule
For the Year Ended December 31, 2012

Work in process (1/1)			$210,000
Direct materials			
Raw materials inventory (1/1)	$?		
Add: Raw materials purchases	158,000		
Total raw materials available for use	?		
Less: Raw materials inventory (12/31)	22,500		
Direct materials used		$190,000	
Direct labor		?	
Manufacturing overhead			
Indirect labor	18,000		
Factory depreciation	36,000		
Factory utilities	68,000		
Total overhead		122,000	
Total manufacturing costs			?
Total cost of work in process			?
Less: Work in process (12/31)			81,000
Cost of goods manufactured			$530,000

Instructions

Complete the cost of goods manufactured schedule for Molina Manufacturing Company.

E14-10 Manufacturing cost data for Copa Company are presented below.

Determine the missing amount of different cost items.
(SO 6), AN

	Case A	Case B	Case C
Direct materials used	(a)	$68,400	$130,000
Direct labor	$ 57,000	86,000	(g)
Manufacturing overhead	46,500	81,600	102,000
Total manufacturing costs	195,650	(d)	253,700
Work in process 1/1/12	(b)	16,500	(h)
Total cost of work in process	221,500	(e)	337,000
Work in process 12/31/12	(c)	11,000	70,000
Cost of goods manufactured	185,275	(f)	(i)

Instructions

Indicate the missing amount for each letter (a) through (i).

E14-11 Incomplete manufacturing cost data for Colaw Company for 2012 are presented as follows for four different situations.

Determine the missing amount of different cost items, and prepare a condensed cost of goods manufactured schedule.
(SO 6), AN

	Direct Materials Used	Direct Labor Used	Manufacturing Overhead	Total Manufacturing Costs	Work in Process 1/1	Work in Process 12/31	Cost of Goods Manufactured
(1)	$127,000	$140,000	$ 87,000	(a)	$33,000	(b)	$360,000
(2)	(c)	200,000	132,000	$450,000	(d)	$40,000	470,000
(3)	80,000	100,000	(e)	255,000	60,000	80,000	(f)
(4)	70,000	(g)	75,000	288,000	45,000	(h)	270,000

Instructions

(a) Indicate the missing amount for each letter.
(b) Prepare a condensed cost of goods manufactured schedule for situation (1) for the year ended December 31, 2012.

Prepare a cost of goods manufactured schedule and a partial income statement.
(SO 5, 6), **AP**

E14-12 Cepeda Corporation has the following cost records for June 2012.

Indirect factory labor	$ 4,500	Factory utilities	$ 400
Direct materials used	20,000	Depreciation, factory equipment	1,400
Work in process, 6/1/12	3,000	Direct labor	40,000
Work in process, 6/30/12	3,800	Maintenance, factory equipment	1,800
Finished goods, 6/1/12	5,000	Indirect materials	2,200
Finished goods, 6/30/12	7,500	Factory manager's salary	3,000

Instructions

(a) Prepare a cost of goods manufactured schedule for June 2012.
(b) Prepare an income statement through gross profit for June 2012 assuming net sales are $92,100.

Classify various costs into different categories and prepare cost of services provided schedule.
(SO 4, 5, 6), **AN**

E14-13 Joyce Tombert, the bookkeeper for Marks Consulting, a political consulting firm, has recently completed a managerial accounting course at her local college. One of the topics covered in the course was the cost of goods manufactured schedule. Joyce wondered if such a schedule could be prepared for her firm. She realized that, as a service-oriented company, it would have no Work in Process inventory to consider.

Listed below are the costs her firm incurred for the month ended August 31, 2012.

Supplies used on consulting contracts	$ 1,200
Supplies used in the administrative offices	1,500
Depreciation on equipment used for contract work	900
Depreciation used on administrative office equipment	1,050
Salaries of professionals working on contracts	15,600
Salaries of administrative office personnel	7,700
Janitorial services for professional offices	400
Janitorial services for administrative offices	500
Insurance on contract operations	800
Insurance on administrative operations	900
Utilities for contract operations	1,400
Utilities for administrative offices	1,300

Instructions

(a) Prepare a schedule of cost of contract services provided (similar to a cost of goods manufactured schedule) for the month.
(b) For those costs not included in (a), explain how they would be classified and reported in the financial statements.

Prepare a cost of goods manufactured schedule and a partial income statement.
(SO 5, 6, 7), **AP**

E14-14 The following information is available for Aikman Company.

	January 1, 2012	2012	December 31, 2012
Raw materials inventory	$21,000		$30,000
Work in process inventory	13,500		17,200
Finished goods inventory	27,000		21,000
Materials purchased		$150,000	
Direct labor		220,000	
Manufacturing overhead		180,000	
Sales		910,000	

Instructions

(a) Compute cost of goods manufactured.
(b) Prepare an income statement through gross profit.
(c) Show the presentation of the ending inventories on the December 31, 2012, balance sheet.
(d) How would the income statement and balance sheet of a merchandising company be different from Aikman's financial statements?

Indicate in which schedule or financial statement(s) different cost items will appear. (SO 5, 6, 7), **C**

E14-15 Chambers Manufacturing Company produces blankets. From its accounting records, it prepares the following schedule and financial statements on a yearly basis.
(a) Cost of goods manufactured schedule.

(b) Income statement.
(c) Balance sheet.

The following items are found in its ledger and accompanying data.

1. Direct labor
2. Raw materials inventory, 1/1
3. Work in process inventory, 12/31
4. Finished goods inventory, 1/1
5. Indirect labor
6. Depreciation on factory machinery
7. Work in process, 1/1
8. Finished goods inventory, 12/31
9. Factory maintenance salaries
10. Cost of goods manufactured
11. Depreciation on delivery equipment
12. Cost of goods available for sale
13. Direct materials used
14. Heat and electricity for factory
15. Repairs to roof of factory building
16. Cost of raw materials purchases

Instructions
List the items (1)–(16). For each item, indicate by using the appropriate letter or letters, the schedule and/or financial statement(s) in which the item will appear.

E14-16 An analysis of the accounts of Roberts Manufacturing reveals the following manufacturing cost data for the month ended June 30, 2012.

Prepare a cost of goods manufactured schedule, and present the ending inventories on the balance sheet.
(SO 6, 7), **AP**

Inventories	Beginning	Ending
Raw materials	$9,000	$13,100
Work in process	5,000	7,000
Finished goods	9,000	8,000

Costs incurred: Raw materials purchases $54,000, direct labor $47,000, manufacturing overhead $19,900. The specific overhead costs were: indirect labor $5,500, factory insurance $4,000, machinery depreciation $4,000, machinery repairs $1,800, factory utilities $3,100, miscellaneous factory costs $1,500. Assume that all raw materials used were direct materials.

Instructions
(a) Prepare the cost of goods manufactured schedule for the month ended June 30, 2012.
(b) Show the presentation of the ending inventories on the June 30, 2012, balance sheet.

E14-17 Buhler Motor Company manufactures automobiles. During September 2012, the company purchased 5,000 head lamps at a cost of $10 per lamp. Buhler withdrew 4,650 lamps from the warehouse during the month. Fifty of these lamps were used to replace the head lamps in autos used by traveling sales staff. The remaining 4,600 lamps were put in autos manufactured during the month.

Determine the amount of cost to appear in various accounts, and indicate in which financial statements these accounts would appear.
(SO 5, 6, 7), **AP**

Of the autos put into production during September 2012, 90% were completed and transferred to the company's storage lot. Of the cars completed during the month, 70% were sold by September 30.

Instructions
(a) Determine the cost of head lamps that would appear in each of the following accounts at September 30, 2012: Raw Materials, Work in Process, Finished Goods, Cost of Goods Sold, and Selling Expenses.
(b) Write a short memo to the chief accountant, indicating whether and where each of the accounts in (a) would appear on the income statement or on the balance sheet at September 30, 2012.

E14-18 The following is a list of terms related to managerial accounting practices.

Identify various managerial accounting practices.
(SO 8), **C**

1. Activity-based costing.
2. Just-in-time inventory.
3. Balanced scorecard.
4. Value chain.

Instructions
Match each of the terms with the statement below that best describes the term.
(a) ____ A performance-measurement technique that attempts to consider and evaluate all aspects of performance using financial and nonfinancial measures in an integrated fashion.
(b) ____ The group of activities associated with providing a product or service.

(c) ____ An approach used to reduce the cost associated with handling and holding inventory by reducing the amount of inventory on hand.
(d) ____ A method used to allocate overhead to products based on each product's use of the activities that cause the incurrence of the overhead cost.

Prepare a partial worksheet for a manufacturing firm.
(SO 9), **AP**

***E14-19** Data for Roberts Manufacturing are presented in E14-16.

Instructions
Beginning with the adjusted trial balance, prepare a partial worksheet for Roberts Manufacturing using the format shown in Illustration 14A-2.

Exercises: Set B and Challenge Exercises

Visit the book's companion website, at **www.wiley.com/college/kimmel**, and choose the Student Companion site to access Exercise Set B and Challenge Exercises.

Problems: Set A

Classify manufacturing costs into different categories and compute the unit cost.
(SO 3, 4), **AP**

P14-1A Lott Company specializes in manufacturing a unique model of bicycle helmet. The model is well accepted by consumers, and the company has enough orders to keep the factory production at 10,000 helmets per month (80% of its full capacity). Lott's monthly manufacturing cost and other expense data are as follows.

Rent on factory equipment	$ 9,000
Insurance on factory building	1,500
Raw materials (plastics, polystyrene, etc.)	75,000
Utility costs for factory	900
Supplies for general office	300
Wages for assembly line workers	53,000
Depreciation on office equipment	800
Miscellaneous materials (glue, thread, etc.)	1,100
Factory manager's salary	5,700
Property taxes on factory building	400
Advertising for helmets	14,000
Sales commissions	10,000
Depreciation on factory building	1,500

Instructions

(a) DM $75,000
DL $53,000
MO $20,100
PC $25,100

(a) Prepare an answer sheet with the following column headings.

	Product Costs			
Cost Item	**Direct Materials**	**Direct Labor**	**Manufacturing Overhead**	**Period Costs**

Enter each cost item on your answer sheet, placing the dollar amount under the appropriate headings. Total the dollar amounts in each of the columns.
(b) Compute the cost to produce one helmet.

Classify manufacturing costs into different categories and compute the unit cost.
(SO 3, 4), **AP**

P14-2A Bell Company, a manufacturer of audio systems, started its production in October 2012. For the preceding 3 years, Bell had been a retailer of audio systems. After a thorough survey of audio system markets, Bell decided to turn its retail store into an audio equipment factory.

Raw materials cost for an audio system will total $74 per unit. Workers on the production lines are on average paid $12 per hour. An audio system usually takes 5 hours to complete. In addition, the rent on the equipment used to assemble audio systems amounts to $4,900 per month. Indirect materials cost $5 per system. A supervisor was hired to oversee production; her monthly salary is $3,000.

Factory janitorial costs are $1,300 monthly. Advertising costs for the audio system will be $9,500 per month. The factory building depreciation expense is $7,800 per year. Property taxes on the factory building will be $9,000 per year.

Instructions

(a) Prepare an answer sheet with the following column headings.

	Product Costs			
Cost Item	**Direct Materials**	**Direct Labor**	**Manufacturing Overhead**	**Period Costs**

Assuming that Bell manufactures, on average, 1,500 audio systems per month, enter each cost item on your answer sheet, placing the dollar amount per month under the appropriate headings. Total the dollar amounts in each of the columns.

(b) Compute the cost to produce one audio system.

(a) DM $111,000
DL $90,000
MO $ 18,100
PC $ 9,500

P14-3A Incomplete manufacturing costs, expenses, and selling data for two different cases are as follows.

Indicate the missing amount of different cost items, and prepare a condensed cost of goods manufactured schedule, an income statement, and a partial balance sheet.

(SO 5, 6, 7), **AN**

	Case 1	Case 2
Direct materials used	$ 9,600	$ (g)
Direct labor	5,000	8,000
Manufacturing overhead	8,000	4,000
Total manufacturing costs	(a)	16,000
Beginning work in process inventory	1,000	(h)
Ending work in process inventory	(b)	3,000
Sales	24,500	(i)
Sales discounts	2,500	1,400
Cost of goods manufactured	17,000	22,000
Beginning finished goods inventory	(c)	3,300
Goods available for sale	20,000	(j)
Cost of goods sold	(d)	(k)
Ending finished goods inventory	3,400	2,500
Gross profit	(e)	7,000
Operating expenses	2,500	(l)
Net income	(f)	5,000

Instructions

(a) Indicate the missing amount for each letter.

(b) Prepare a condensed cost of goods manufactured schedule for Case 1.

(c) Prepare an income statement and the current assets section of the balance sheet for Case 1. Assume that in Case 1 the other items in the current assets section are as follows: Cash $4,000, Receivables (net) $15,000, Raw Materials $600, and Prepaid Expenses $400.

(b) Ending WIP $ 6,600
(c) Current assets $30,000

P14-4A The following data were taken from the records of Clarkson Manufacturing Company for the fiscal year ended June 30, 2012.

Prepare a cost of goods manufactured schedule, a partial income statement, and a partial balance sheet.

(SO 5, 6, 7), **AP**

Raw Materials Inventory 7/1/11	$ 48,000	Factory Insurance	$ 4,600
Raw Materials Inventory 6/30/12	39,600	Factory Machinery Depreciation	16,000
Finished Goods Inventory 7/1/11	96,000	Factory Utilities	27,600
Finished Goods Inventory 6/30/12	75,900	Office Utilities Expense	8,650
Work in Process Inventory 7/1/11	19,800	Sales	534,000
Work in Process Inventory 6/30/12	18,600	Sales Discounts	4,200
Direct Labor	139,250	Plant Manager's Salary	58,000
Indirect Labor	24,460	Factory Property Taxes	9,600
Accounts Receivable	27,000	Factory Repairs	1,400
		Raw Materials Purchases	96,400
		Cash	32,000

Instructions

(a) Prepare a cost of goods manufactured schedule. (Assume all raw materials used were direct materials.)

(b) Prepare an income statement through gross profit.

(c) Prepare the current assets section of the balance sheet at June 30, 2012.

(a) CGM $386,910
(b) Gross profit $122,790
(c) Current assets $193,100

Prepare a cost of goods manufactured schedule and a correct income statement.
(SO 5, 6), AN

P14-5A Phillips Company is a manufacturer of computers. Its controller resigned in October 2012. An inexperienced assistant accountant has prepared the following income statement for the month of October 2012.

PHILLIPS COMPANY
Income Statement
For the Month Ended October 31, 2012

Sales (net)		$780,000
Less: Operating expenses		
Raw materials purchases	$264,000	
Direct labor cost	190,000	
Advertising expense	90,000	
Selling and administrative salaries	75,000	
Rent on factory facilities	60,000	
Depreciation on sales equipment	45,000	
Depreciation on factory equipment	31,000	
Indirect labor cost	28,000	
Utilities expense	12,000	
Insurance expense	8,000	803,000
Net loss		$(23,000)

Prior to October 2012, the company had been profitable every month. The company's president is concerned about the accuracy of the income statement. As her friend, you have been asked to review the income statement and make necessary corrections. After examining other manufacturing cost data, you have acquired additional information as follows.

1. Inventory balances at the beginning and end of October were:

	October 1	October 31
Raw materials	$18,000	$29,000
Work in process	16,000	14,000
Finished goods	30,000	45,000

2. Only 75% of the utilities expense and 60% of the insurance expense apply to factory operations. The remaining amounts should be charged to selling and administrative activities.

Instructions

(a) Prepare a schedule of cost of goods manufactured for October 2012.
(b) Prepare a correct income statement for October 2012.

(a) CGM $577,800
(b) NI $ 1,000

Complete a worksheet; prepare a cost of goods manufactured schedule, an income statement, and a balance sheet; journalize and post the closing entries.
(SO 9), AP

***P14-6A** Garrett Manufacturing Company uses a simple manufacturing accounting system. At the end of its fiscal year on August 31, 2012, the adjusted trial balance contains the following accounts.

Debits		Credits	
Cash	$ 16,700	Accumulated Depreciation	$ 353,000
Accounts Receivable (net)	62,900	Notes Payable	45,000
Finished Goods Inventory	56,000	Accounts Payable	36,200
Work in Process Inventory	27,800	Income Taxes Payable	9,000
Raw Materials Inventory	37,200	Common Stock	352,000
Plant Assets	870,000	Retained Earnings	215,300
Raw Materials Purchases	236,500	Sales	988,000
Direct Labor	283,900		$1,998,500
Indirect Labor	27,400		
Factory Repairs	17,200		
Factory Depreciation	16,000		
Factory Manager's Salary	60,000		
Factory Insurance	11,000		
Factory Property Taxes	14,900		
Factory Utilities	13,300		
Selling Expenses	96,500		
Administrative Expenses	115,200		
Income Tax Expense	36,000		
	$1,998,500		

Physical inventory accounts on August 31, 2012, show the following inventory amounts: Finished Goods $50,600, Work in Process $23,400, and Raw Materials $44,500.

Instructions

(a) Enter the adjusted trial balance data on a worksheet in financial statement order and complete the worksheet.
(b) Prepare a cost of goods manufactured schedule for the year.
(c) Prepare an income statement for the year and a balance sheet at August 31, 2012.
(d) Journalize the closing entries.
(e) Post the closing entries to Manufacturing Summary and to Income Summary.

(b) CGM $677,300
(c) NI $ 57,600

Problems: Set B

Classify manufacturing costs into different categories and compute the unit cost.
(SO 3, 4), **AP**

P14-1B Agler Company specializes in manufacturing motorcycle helmets. The company has enough orders to keep the factory production at 1,000 motorcycle helmets per month. Agler's monthly manufacturing cost and other expense data are as follows.

Maintenance costs on factory building	$ 1,500
Factory manager's salary	5,500
Advertising for helmets	8,000
Sales commissions	4,000
Depreciation on factory building	700
Rent on factory equipment	6,000
Insurance on factory building	3,000
Raw materials (plastic, polystyrene, etc.)	25,000
Utility costs for factory	800
Supplies for general office	200
Wages for assembly line workers	54,000
Depreciation on office equipment	500
Miscellaneous materials (glue, thread, etc.)	2,000

Instructions

(a) Prepare an answer sheet with the following column headings.

	Product Costs			
Cost Item	**Direct Materials**	**Direct Labor**	**Manufacturing Overhead**	**Period Costs**

Enter each cost item on your answer sheet, placing the dollar amount under the appropriate headings. Total the dollar amounts in each of the columns.
(b) Compute the cost to produce one motorcycle helmet.

(a) DM $25,000
DL $54,000
MO $19,500
PC $12,700

Classify manufacturing costs into different categories and compute the unit cost.
(SO 3, 4), **AP**

P14-2B Elliott Company, a manufacturer of tennis rackets, started production in November 2011. For the preceding 5 years, Elliott had been a retailer of sports equipment. After a thorough survey of tennis racket markets, Elliott decided to turn its retail store into a tennis racket factory.

Raw materials cost for a tennis racket will total $23 per racket. Workers on the production lines are paid on average $15 per hour. A racket usually takes 2 hours to complete. In addition, the rent on the equipment used to produce rackets amounts to $1,300 per month. Indirect materials cost $3 per racket. A supervisor was hired to oversee production; her monthly salary is $3,500.

Janitorial costs are $1,400 monthly. Advertising costs for the rackets will be $8,000 per month. The factory building depreciation expense is $8,400 per year. Property taxes on the factory building will be $9,600 per year.

Instructions

(a) Prepare an answer sheet with the following column headings.

	Product Costs			
Cost Item	**Direct Materials**	**Direct Labor**	**Manufacturing Overhead**	**Period Costs**

(a) DM $57,500
DL $75,000
MO $15,200
PC $ 8,000

Assuming that Elliott manufactures, on average, 2,500 tennis rackets per month, enter each cost item on your answer sheet, placing the dollar amount per month under the appropriate headings. Total the dollar amounts in each of the columns.

(b) Compute the cost to produce one racket.

Indicate the missing amount of different cost items, and prepare a condensed cost of goods manufactured schedule, an income statement, and a partial balance sheet.
(SO 5, 6, 7), **AN**

P14-3B Incomplete manufacturing costs, expenses, and selling data for two different cases are as follows.

	Case	
	A	**B**
Direct materials used	$ 6,300	$ (g)
Direct labor	3,000	4,000
Manufacturing overhead	6,000	5,000
Total manufacturing costs	(a)	16,000
Beginning work in process inventory	1,000	(h)
Ending work in process inventory	(b)	2,000
Sales	22,500	(i)
Sales discounts	1,500	1,200
Cost of goods manufactured	15,800	20,000
Beginning finished goods inventory	(c)	5,000
Goods available for sale	18,300	(j)
Cost of goods sold	(d)	(k)
Ending finished goods inventory	1,200	2,500
Gross profit	(e)	6,000
Operating expenses	2,700	(l)
Net income	(f)	2,200

Instructions

(a) Indicate the missing amount for each letter.

(b) Prepare a condensed cost of goods manufactured schedule for Case A.

(c) Prepare an income statement and the current assets section of the balance sheet for Case A. Assume that in Case A the other items in the current assets section are as follows: Cash $3,000, Receivables (net) $10,000, Raw Materials $700, and Prepaid Expenses $200.

(c) Current assets $15,600

Prepare a cost of goods manufactured schedule, a partial income statement, and a partial balance sheet.
(SO 5, 6, 7), **AP**

P14-4B The following data were taken from the records of Moxie Manufacturing Company for the year ended December 31, 2012.

Raw Materials Inventory 1/1/12	$ 47,000	Factory Insurance	$ 7,400
Raw Materials Inventory 12/31/12	44,200	Factory Machinery Depreciation	7,700
Finished Goods Inventory 1/1/12	85,000	Factory Utilities	12,900
Finished Goods Inventory 12/31/12	57,800	Office Utilities Expense	8,600
Work in Process Inventory 1/1/12	9,500	Sales	465,000
Work in Process Inventory 12/31/12	8,000	Sales Discounts	2,500
Direct Labor	145,100	Plant Manager's Salary	60,000
Indirect Labor	18,100	Factory Property Taxes	6,100
Accounts Receivable	27,000	Factory Repairs	800
		Raw Materials Purchases	62,500
		Cash	18,000

Instructions

(a) Prepare a cost of goods manufactured schedule. (Assume all raw materials used were direct materials.)

(b) Prepare an income statement through gross profit.

(c) Prepare the current assets section of the balance sheet at December 31.

(a) CGM $324,900
(b) Gross profit $110,400
(c) Current assets $155,000

P14-5B Ortiz Company is a manufacturer of toys. Its controller resigned in August 2012. An inexperienced assistant accountant has prepared the following income statement for the month of August 2012.

Prepare a cost of goods manufactured schedule and a correct income statement.
(SO 5, 6), **AN**

ORTIZ COMPANY
Income Statement
For the Month Ended August 31, 2012

Sales (net)		$675,000
Less: Operating expenses		
Raw materials purchases	$220,000	
Direct labor cost	160,000	
Advertising expense	75,000	
Selling and administrative salaries	70,000	
Rent on factory facilities	60,000	
Depreciation on sales equipment	50,000	
Depreciation on factory equipment	35,000	
Indirect labor cost	20,000	
Utilities expense	10,000	
Insurance expense	5,000	705,000
Net loss		$ (30,000)

Prior to August 2012, the company had been profitable every month. The company's president is concerned about the accuracy of the income statement. As her friend, you have been asked to review the income statement and make necessary corrections. After examining other manufacturing cost data, you have acquired additional information as follows.

1. Inventory balances at the beginning and end of August were:

	August 1	August 31
Raw materials	$19,500	$35,000
Work in process	25,000	21,000
Finished goods	40,000	52,000

2. Only 60% of the utilities expense and 70% of the insurance expense apply to factory operations; the remaining amounts should be charged to selling and administrative activities.

Instructions

(a) Prepare a cost of goods manufactured schedule for August 2012.
(b) Prepare a correct income statement for August 2012.

(a) CGM $493,000
(b) NL $ (6,500)

Problems: Set C

Visit the book's companion website, at **www.wiley.com/college/kimmel**, and choose the Student Companion site to access Problem Set C.

Waterways Continuing Problem

(*Note:* The Waterways Problem begins in Chapter 14 and continues in the remaining chapters. You can also find this problem at the book's Student Companion site.)

WCP14 Waterways Corporation is a private corporation formed for the purpose of providing the products and the services needed to irrigate farms, parks, commercial projects, and private lawns. It has a centrally located factory in a U.S. city that manufactures the products it markets to retail outlets across the nation. It also maintains a division that provides installation and warranty servicing in six metropolitan areas.

The mission of Waterways is to manufacture quality parts that can be used for effective irrigation projects that also conserve water. By that effort, the company hopes to satisfy its customers, provide rapid and responsible service, and serve the community and the employees who represent them in each community.

The company has been growing rapidly, so management is considering new ideas to help the company continue its growth and maintain the high quality of its products.

Waterways was founded by Will Winkman, who is the company president and chief executive officer (CEO). Working with him from the company's inception was Will's brother, Ben, whose sprinkler designs and ideas about the installation of proper systems have been a major basis of the company's success. Ben is the vice president who oversees all aspects of design and production in the company.

The factory itself is managed by Todd Senter who hires his line managers to supervise the factory employees. The factory makes all of the parts for the irrigation systems. The purchasing department is managed by Hector Hines.

The installation and training division is overseen by vice president Henry Writer, who supervises the managers of the six local installation operations. Each of these local managers hires his or her own local service people. These service employees are trained by the home office under Henry Writer's direction because of the uniqueness of the company's products.

There is a small human resources department under the direction of Sally Fenton, a vice president who handles the employee paperwork, though hiring is actually performed by the separate departments. Sam Totter is the vice president who heads the sales and marketing area; he oversees 10 well-trained salespeople.

The accounting and finance division of the company is headed by Abe Headman, who is the chief financial officer (CFO) and a company vice president; he is a member of the Institute of Management Accountants and holds a certificate in management accounting. He has a small staff of Certified Public Accountants, including a controller and a treasurer, and a staff of accounting input operators who maintain the financial records.

A partial list of Waterway's accounts and their balances for the month of November follows.

Accounts Receivable	$275,000
Advertising Expenses	54,000
Cash	260,000
Depreciation—Factory Equipment	16,800
Depreciation—Office Equipment	2,400
Direct Labor	42,000
Factory Supplies Used	16,800
Factory Utilities	10,200
Finished Goods Inventory, November 30	68,800
Finished Goods Inventory, October 31	72,550
Indirect Labor	48,000
Office Supplies Expense	1,600
Other Administrative Expenses	72,000
Prepaid Expenses	41,250
Raw Materials Inventory, November 30	52,700
Raw Materials Inventory, October 31	38,000
Raw Materials Purchases	184,500
Rent—Factory Equipment	47,000
Repairs—Factory Equipment	4,500
Salaries	325,000
Sales	1,350,000
Sales Commissions	40,500
Work in Process Inventory, October 31	52,700
Work in Process Inventory, November 30	42,000

Instructions

(a) Based on the information given, construct an organizational chart of Waterways Corporation.

(b) A list of accounts and their values are given above. From this information, prepare a cost of goods manufactured schedule, an income statement, and a partial balance sheet for Waterways Corporation for the month of November.

broadening your perspective

DECISION MAKING ACROSS THE ORGANIZATION

BYP14-1 Wendall Manufacturing Company specializes in producing fashion outfits. On July 31, 2012, a tornado touched down at its factory and general office. The inventories in the warehouse and the factory were completely destroyed as was the general office nearby. Next morning, through a careful search of the disaster site, however, Bill Francis, the company's controller, and Elizabeth Walton, the cost accountant, were able to recover a small part of manufacturing cost data for the current month.

"What a horrible experience," sighed Bill "And the worst part is that we may not have enough records to use in filing an insurance claim."

"It was terrible," replied Elizabeth. "However, I managed to recover some of the manufacturing cost data that I was working on yesterday afternoon. The data indicate that our direct labor cost in July totaled $250,000 and that we had purchased $365,000 of raw materials. Also, I recall that the amount of raw materials used for July was $350,000. But I'm not sure this information will help. The rest of our records are blown away."

"Well, not exactly," said Bill. "I was working on the year-to-date income statement when the tornado warning was announced. My recollection is that our sales in July were $1,240,000 and our gross profit ratio has been 40% of sales. Also, I can remember that our cost of goods available for sale was $770,000 for July."

"Maybe we can work something out from this information!" exclaimed Elizabeth. "My experience tells me that our manufacturing overhead is usually 60% of direct labor."

"Hey, look what I just found," cried Elizabeth. "It's a copy of this June's balance sheet, and it shows that our inventories as of June 30 are Finished goods $38,000, Work in process $25,000, and Raw materials $19,000."

"Super," yelled Bill. "Let's go work something out."

In order to file an insurance claim, Wendall Company must determine the amount of its inventories as of July 31, 2012, the date of the tornado touchdown.

Instructions

With the class divided into groups, determine the amount of cost in the Raw Materials, Work in Process, and Finished Goods inventory accounts as of the date of the tornado touchdown.

MANAGERIAL ANALYSIS

BYP14-2 Tenrack is a fairly large manufacturing company located in the southern United States. The company manufactures tennis rackets, tennis balls, tennis clothing, and tennis shoes, all bearing the company's distinctive logo, a large green question mark on a white flocked tennis ball. The company's sales have been increasing over the past 10 years.

The tennis racket division has recently implemented several advanced manufacturing techniques. Robot arms hold the tennis rackets in place while glue dries, and machine vision systems check for defects. The engineering and design team uses computerized drafting and testing of new products. The following managers work in the tennis racket division.

Jason Dennis, sales manager (supervises all sales representatives).
Peggy Groneman, technical specialist (supervises computer programmers).
Dave Marley, cost accounting manager (supervises cost accountants).
Kevin Carson, production supervisor (supervises all manufacturing employees).
Sally Renner, engineer (supervises all new-product design teams).

Instructions

(a) What are the primary information needs of each manager?
(b) Which, if any, financial accounting report(s) is each likely to use?
(c) Name one special-purpose management accounting report that could be designed for each manager. Include the name of the report, the information it would contain, and how frequently it should be issued.

REAL-WORLD FOCUS

BYP14-3 Anchor Glass Container Corporation, the third largest manufacturer of glass containers in the United States, supplies beverage and food producers and consumer products manufacturers nationwide. Parent company Consumers Packaging Inc. (*Toronto Stock Exchange:* CGC) is a leading international designer and manufacturer of glass containers.

The following management discussion appeared in a recent annual report of Anchor Glass.

ANCHOR GLASS CONTAINER CORPORATION
Management Discussion

Cost of Products Sold Cost of products sold as a percentage of net sales was 89.3% in the current year compared to 87.6% in the prior year. The increase in cost of products sold as a percentage of net sales principally reflected the impact of operational problems during the second quarter of the current year at a major furnace at one of the Company's plants, higher downtime, and costs and expenses associated with an increased number of scheduled capital improvement projects, increases in labor, and certain other manufacturing costs (with no corresponding selling price increases in the current year). Reduced fixed costs from the closing of the Streator, Illinois, plant in June of the current year and productivity and efficiency gains partially offset these cost increases.

Instructions
What factors affect the costs of products sold at Anchor Glass Container Corporation?

MANAGERIAL ACCOUNTING ON THE WEB

BYP14-4 The Institute of Management Accountants (IMA) is an organization dedicated to excellence in the practice of management accounting and financial management.

Address: **www.imanet.org,** or go to **www.wiley.com/college/kimmel**

Instructions
At the IMA's home page, locate the answers to the following questions.
(a) How many members does the IMA have, and what are their job titles?
(b) What are some of the benefits of joining the IMA as a student?
(c) Use the chapter locator function to locate the IMA chapter nearest you, and find the name of the chapter president.

COMMUNICATION ACTIVITY

BYP14-5 Refer to Problem 14–5A and add the following requirement.

Prepare a letter to the president of the company, Shelly Phillips, describing the changes you made. Explain clearly why net income is different after the changes. Keep the following points in mind as you compose your letter.

1. This is a letter to the president of a company, who is your friend. The style should be generally formal, but you may relax some requirements. For example, you may call the president by her first name.
2. Executives are very busy. Your letter should tell the president your main results first (for example, the amount of net income).
3. You should include brief explanations so that the president can understand the changes you made in the calculations.

ETHICS CASE

BYP14-6 Steve Morgan, controller for Newton Industries, was reviewing production cost reports for the year. One amount in these reports continued to bother him—advertising. During the year, the company had instituted an expensive advertising campaign to sell some of its slower-moving products. It was still too early to tell whether the advertising campaign was successful.

There had been much internal debate as how to report advertising cost. The vice president of finance argued that advertising costs should be reported as a cost of production, just like direct materials and direct labor. He therefore recommended that this cost be identified as manufacturing overhead and reported as part of inventory costs until sold. Others disagreed. Morgan believed

that this cost should be reported as an expense of the current period, based on the conservatism principle. Others argued that it should be reported as Prepaid Advertising and reported as a current asset.

The president finally had to decide the issue. He argued that these costs should be reported as inventory. His arguments were practical ones. He noted that the company was experiencing financial difficulty and expensing this amount in the current period might jeopardize a planned bond offering. Also, by reporting the advertising costs as inventory rather than as prepaid advertising, less attention would be directed to it by the financial community.

Instructions

(a) Who are the stakeholders in this situation?
(b) What are the ethical issues involved in this situation?
(c) What would you do if you were Steve Morgan?

"ALL ABOUT YOU" ACTIVITY

BYP14-7 The primary purpose of managerial accounting is to provide information useful for management decisions. Many of the managerial accounting techniques that you learn in this course will be useful for decisions you make in your everyday life.

Instructions

For each of the following managerial accounting techniques, read the definition provided and then provide an example of a personal situation that would benefit from use of this technique.

(a) Break-even point (page 951).
(b) Budget (page 1032).
(c) Balanced scorecard (page 1153).
(d) Capital budgeting (page 1198).

Answers to Insight and Accounting Across the Organization Questions

p. 750 Even the Best Have to Get Better Q: What are some of the steps that this company has taken in order to ensure that production meets demand? **A:** The company has organized flexible teams, with jobs arranged by the amount of time a task takes. Employees now are multiskilled, so they can switch between tasks and products. Also, the stores now provide sales data more quickly to the manufacturing facility, so that production levels can be changed more quickly to respond to demand.

p. 755 How Many Labor Hours to Build a Car? Q: Why might Nissan production require significantly fewer labor hours? **A:** Nissan's U.S. factories are probably newer than those of DaimlerChrysler and Ford. Newer factories tend to be more highly automated, with less reliance on production-line employees.

p. 764 Low Fares but Decent Profits Q: What are some of the cost items that would appear in the cost of services provided schedule of an airline? **A:** Some of the cost items that would appear in the cost of services provided schedule of an airline would be fuel, flight crew salaries, maintenance wages, depreciation on equipment, airport gate fees, and food-service costs.

study objectives

After studying this chapter, you should be able to:

1. Explain the characteristics and purposes of cost accounting.
2. Describe the flow of costs in a job order costing system.
3. Explain the nature and importance of a job cost sheet.
4. Indicate how the predetermined overhead rate is determined and used.
5. Prepare entries for jobs completed and sold.
6. Distinguish between under- and overapplied manufacturing overhead.

the navigator

feature story

"... AND WE'D LIKE IT IN RED"

Western States Fire Apparatus, Inc., of Cornelius, Oregon, is one of the few U.S. companies that makes fire trucks. The company builds about 25 trucks per year. Founded in 1941, the company is run by the children and grandchildren of the original founder.

"We buy the chassis, which is the cab and the frame," says Susan Scott, the company's bookkeeper. "In our computer, we set up an account into which all of the direct material that is purchased for that particular job is charged." Other direct materials include the water pump—which can cost $10,000—the lights, the siren, ladders, and hoses.

As for direct labor, the production workers fill out time tickets that tell what jobs they worked on. Usually, the company is building four trucks at any one time. On payday, the controller allocates the payroll to the appropriate job record. The company allocates indirect materials, such as nuts and bolts, wiring, lubricants, and abrasives, to each job in proportion to direct material dollars. It allocates other costs, such as insurance and supervisors' salaries, based on direct labor hours. "We need to allocate overhead in order to know what kind of price we have to charge when we submit our bids," she says.

Western gets orders through a "blind-bidding" process. That is, Western submits its bid without knowing the bid prices made by its competitors. "If we bid too low, we won't make a profit. If we bid too high, we don't get the job."

Regardless of the final price for the truck, the quality had better be first-rate. "The fire departments let you know if they don't like what you did, and you usually end up fixing it."

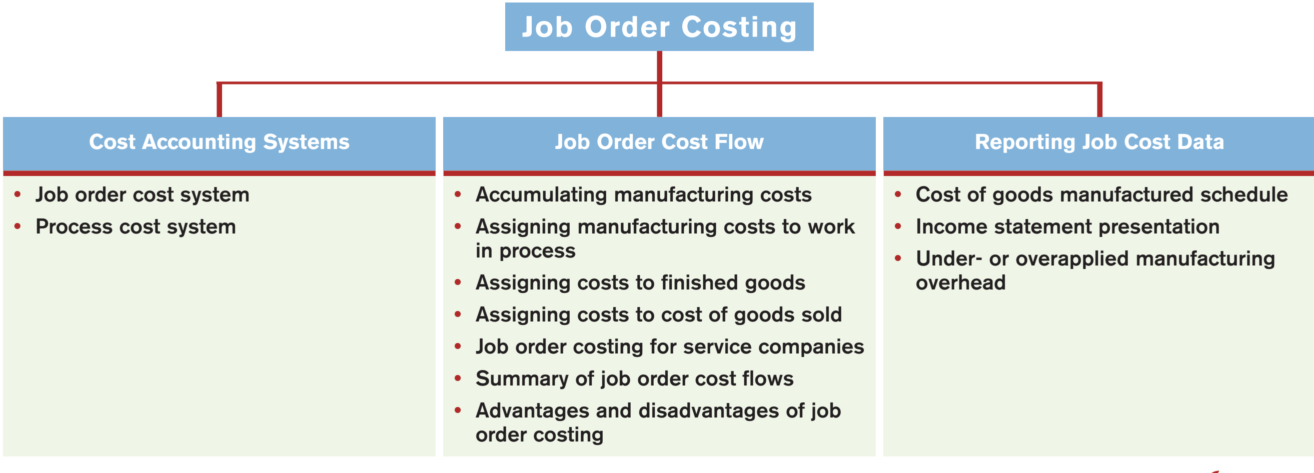
- **Sales Are Nice, but Service Revenue Pays the Bills** *(p. 811)*

preview of chapter 15

The Feature Story about Western States Fire Apparatus describes the manufacturing costs used in making a fire truck. It demonstrates that accurate costing is critical to the company's success. For example, in order to submit accurate bids on new jobs and to know whether it profited from past jobs, the company needs a good costing system. This chapter illustrates how these manufacturing costs are assigned to specific jobs, such as the manufacture of individual fire trucks. We begin the discussion in this chapter with an overview of the flow of costs in a job order cost accounting system. We then use a case study to explain and illustrate the documents, entries, and accounts in this type of cost accounting system.

The content and organization of Chapter 15 are as follows.



Cost Accounting Systems

study objective 1

Explain the characteristics and purposes of cost accounting.

Cost accounting involves the measuring, recording, and reporting of product costs. From the data accumulated, companies determine both the total cost and the unit cost of each product. The accuracy of the product cost information produced by the cost accounting system is critical to the success of the company. Companies use this information to determine which products to produce, what price to charge, and the amounts to produce. Accurate product cost information is also vital for effective evaluation of employee performance.

A **cost accounting system** consists of accounts for the various manufacturing costs. These accounts are fully integrated into the general ledger of a company. An important feature of a cost accounting system is the use of **a perpetual inventory system**. Such a system **provides immediate, up-to-date information on the cost of a product**.

There are two basic types of cost accounting systems: (1) a job order cost system and (2) a process cost system. Although cost accounting systems differ widely from company to company, most involve one of these two traditional product costing systems.

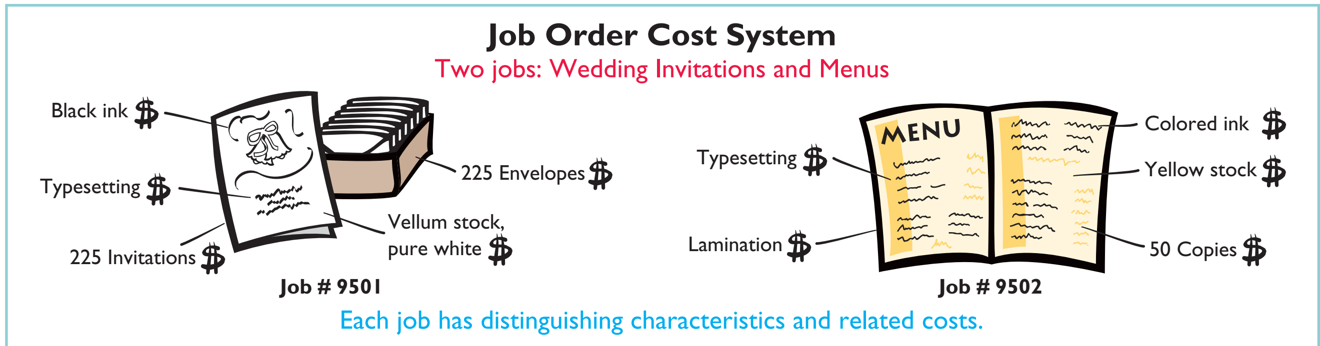
JOB ORDER COST SYSTEM

Under a **job order cost system**, the company assigns costs to each **job** or to each **batch** of goods. An example of a job is the manufacture of a mainframe computer by IBM, the production of a movie by Disney, or the making of a fire truck by Western States. An example of a batch is the printing of 225 wedding invitations by a local print shop, or the printing of a weekly issue of *Fortune*

magazine by a high-tech printer such as Quad Graphics. Companies may complete jobs or batches to fill a specific customer order or to replenish inventory.

An important feature of job order costing is that each job or batch has its own distinguishing characteristics. For example, each house is custom built, each consulting engagement by a CPA firm is unique, and each printing job is different. **The objective is to compute the cost per job.** At each point in manufacturing a product or providing a service, the company can identify the job and its associated costs. A job order cost system measures costs for each completed job, rather than for set time periods. Illustration 15-1 shows the recording of costs in a job order cost system.

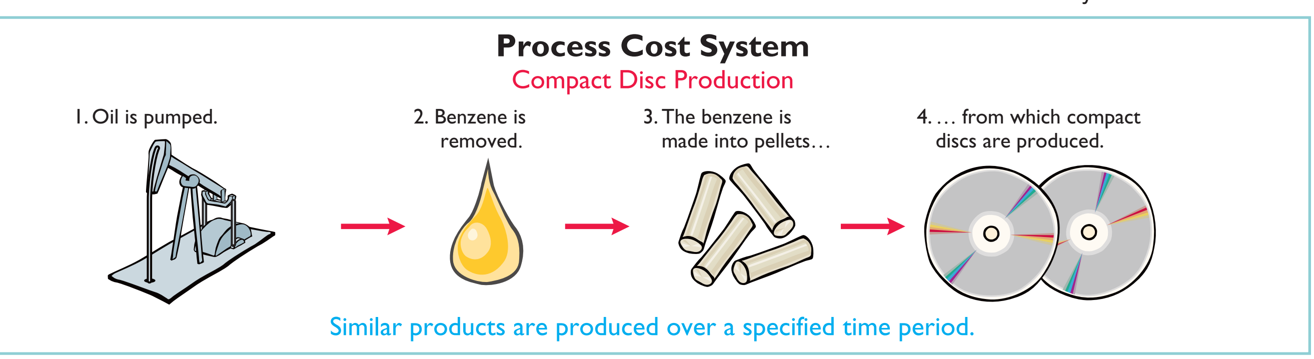
Illustration 15-1 Job order cost system



PROCESS COST SYSTEM

A company uses a **process cost system** when it manufactures a large volume of similar products. Production is continuous. Examples of a process cost system are the manufacture of cereal by Kellogg, the refining of petroleum by ExxonMobil, and the production of automobiles by General Motors. Process costing accumulates product-related costs **for a period of time** (such as a week or a month) instead of assigning costs to specific products or job orders. In process costing, companies assign the costs to departments or processes for the specified period of time. Illustration 15-2 shows examples of the use of a process cost system. We will discuss the process cost system further in Chapter 16.

Illustration 15-2 Process cost system



Can a company use both types of cost systems? Yes. For example, General Motors uses process cost accounting for its standard model cars, such as Saturns and Corvettes, and job order cost accounting for a custom-made limousine for the President of the United States.

The objective of both cost accounting systems is to provide unit cost information for product pricing, cost control, inventory valuation, and financial statement presentation.

Management Insight

Jobs Won, Money Lost

Many companies suffer from poor cost accounting. As a result, they sometimes make products they should not be selling at all, or they buy other products that they could more profitably make themselves. Also, inaccurate cost data leads companies to misallocate capital and frustrates efforts by plant managers to improve efficiency.

For example, consider the case of a diversified company in the business of rebuilding diesel locomotives. The managers thought they were making money, but a consulting firm found that the company had seriously underestimated costs. The company bailed out of the business, and not a moment too soon. Says the consultant who advised the company, "The more contracts it won, the more money it lost." Given that situation, a company cannot stay in business very long!

? What type of costs do you think the company had been underestimating? (See page 837.)

Job Order Cost Flow

study objective 2
Describe the flow of costs in a job order costing system.

The flow of costs (direct materials, direct labor, and manufacturing overhead) in job order cost accounting parallels the physical flow of the materials as they are converted into finished goods. As shown in Illustration 15-3, companies assign manufacturing costs to the Work in Process Inventory account. When a job is completed, the company transfers the cost of the job to Finished Goods Inventory. Later when the goods are sold, the company transfers their cost to Cost of Goods Sold.

Illustration 15-3 Flow of costs in job order costing

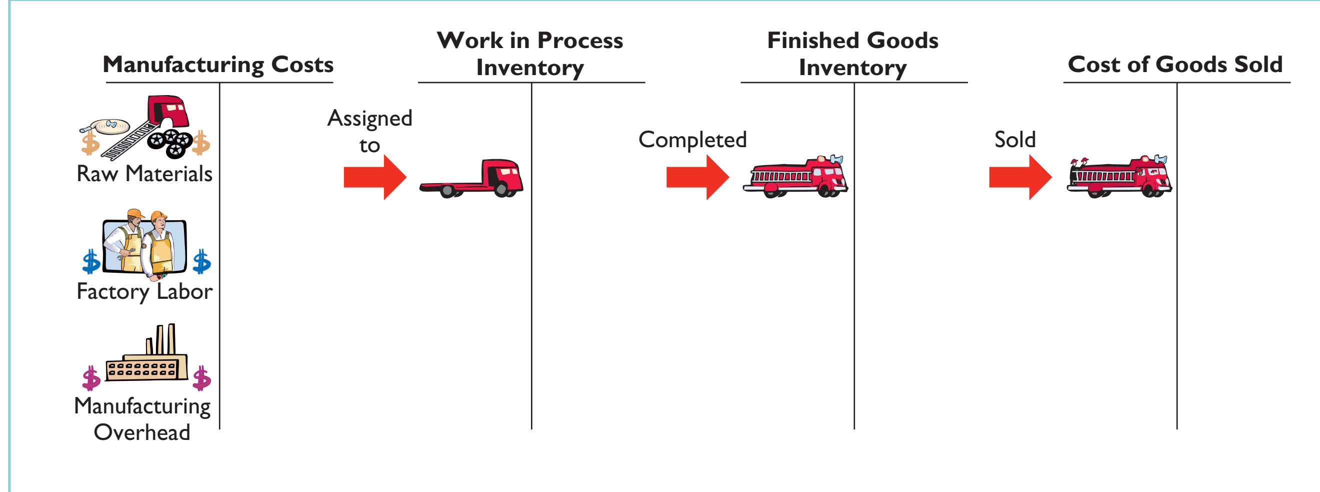


Illustration 15-3 provides a basic overview of the flow of costs in a manufacturing setting. A more detailed presentation of the flow of costs is shown in Illustration 15-4. The box in its lower-right corner indicates two major steps in the flow of costs: (1) *accumulating* the manufacturing costs incurred, and (2) *assigning* the accumulated costs to the work done. As shown, the company accumulates manufacturing costs incurred in entries 1–3 by debits to Raw Materials Inventory, Factory Labor, and Manufacturing Overhead. When the company incurs these costs, it does not attempt to associate the costs with specific jobs. The remaining entries (entries 4–8) assign manufacturing costs incurred. In the remainder of this chapter, we will use a case study to explain how a job order cost system operates.

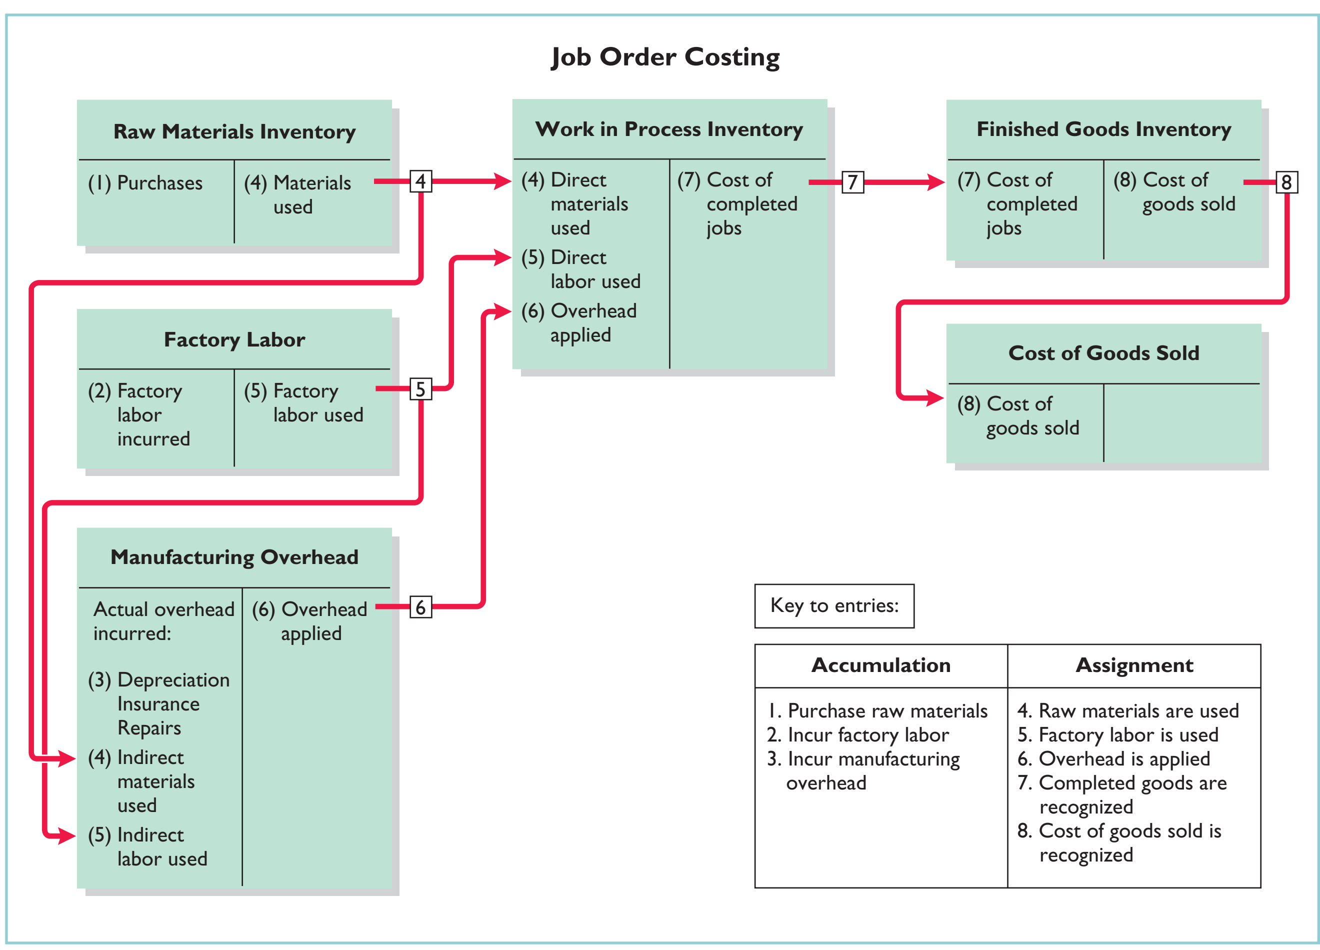

Illustration 15-4 Job order costing system

ACCUMULATING MANUFACTURING COSTS

To illustrate a job order cost system, we will use the January transactions of Wallace Manufacturing Company, which makes machine tools.

Raw Materials Costs

When Wallace receives the raw materials it has purchased, **it debits the cost of the materials to Raw Materials Inventory**. The company would debit this account for the invoice cost of the raw materials and freight costs chargeable to the purchaser. It would credit the account for purchase discounts taken and purchase returns and allowances. Wallace makes **no effort at this point to associate the cost of materials with specific jobs or orders**.

To illustrate, assume that Wallace Manufacturing purchases 2,000 handles (Stock No. AA2746) at $5 per unit ($10,000) and 800 modules (Stock No. AA2850) at $40 per unit ($32,000) for a total cost of $42,000 ($10,000 + $32,000). The entry to record this purchase on January 4 is:

	(1)		
Jan. 4	Raw Materials Inventory	42,000	
	Accounts Payable		42,000
	(Purchase of raw materials on account)		

As we will explain later in the chapter, the company subsequently assigns raw materials inventory to work in process and manufacturing overhead.

Factory Labor Costs

In a manufacturing company, the cost of factory labor consists of three costs: (1) gross earnings of factory workers, (2) employer payroll taxes on these earnings, and (3) fringe benefits (such as sick pay, pensions, and vacation pay) incurred by the employer. **Companies debit labor costs to Factory Labor as they incur those costs.**

To illustrate, assume that Wallace Manufacturing incurs $32,000 of factory labor costs. Of that amount, $27,000 relates to wages payable and $5,000 relates to payroll taxes payable in February. The entry to record factory labor for the month is:

	(2)		
Jan. 31	Factory Labor	32,000	
	Factory Wages Payable		27,000
	Employer Payroll Taxes Payable		5,000
	(To record factory labor costs)		

The company subsequently assigns factory labor to work in process and manufacturing overhead.

Manufacturing Overhead Costs

A company has many types of overhead costs. It may recognize these costs **daily**, as in the case of machinery repairs and the use of indirect materials and indirect labor. Or, it may record overhead costs **periodically** through adjusting entries. Companies record property taxes, depreciation, and insurance periodically, for example. This is done using a **summary entry**, which summarizes the totals from multiple transactions.

Using assumed data, the summary entry for manufacturing overhead in Wallace Manufacturing Company is:

	(3)		
Jan. 31	Manufacturing Overhead	13,800	
	Utilities Payable		4,800
	Prepaid Insurance		2,000
	Accounts Payable (for repairs)		2,600
	Accumulated Depreciation		3,000
	Property Taxes Payable		1,400
	(To record overhead costs)		

The company subsequently assigns manufacturing overhead to work in process.

before you go on...

MANUFACTURING COSTS

Do it! During the current month, Ringling Company incurs the following manufacturing costs:

(a) Raw material purchases of $4,200 on account.
(b) Incurs factory labor of $18,000. Of that amount, $15,000 relates to wages payable and $3,000 relates to payroll taxes payable.
(c) Factory utilities of $2,200 are payable, prepaid factory insurance of $1,800 has expired, and depreciation on the factory building is $3,500.

Prepare journal entries for each type of manufacturing cost.

Solution

		Debit	Credit
(a)	Raw Materials Inventory	4,200	
	Accounts Payable		4,200
	(Purchases of raw materials on account)		
(b)	Factory Labor	18,000	
	Factory Wages Payable		15,000
	Employer Payroll Taxes Payable		3,000
	(To record factory labor costs)		
(c)	Manufacturing Overhead	7,500	
	Utilities Payable		2,200
	Prepaid Insurance		1,800
	Accumulated Depreciation		3,500
	(To record overhead costs)		

Related exercise material: **BE15-1, BE15-2, Do it! 15-1, E15-1, E15-7, E15-8,** and **E15-11.**

Action Plan

- In accumulating manufacturing costs, debit at least one of three accounts: Raw Materials Inventory, Factory Labor, and Manufacturing Overhead.
- Manufacturing overhead costs may be recognized daily. Or manufacturing overhead may be recorded periodically through a summary entry.

ASSIGNING MANUFACTURING COSTS TO WORK IN PROCESS

study objective 3

Explain the nature and importance of a job cost sheet.

As Illustration 15-4 (page 801) shows, assigning manufacturing costs to work in process results in the following entries:

1. **Debits** made to Work in Process Inventory.
2. **Credits** made to Raw Materials Inventory, Factory Labor, and Manufacturing Overhead.

An essential accounting record in assigning costs to jobs is a **job cost sheet**, as shown in Illustration 15-5. A **job cost sheet** is a form used to record the costs chargeable to a specific job and to determine the total and unit costs of the completed job.

Illustration 15-5 Job cost sheet

Job Cost Sheet

Job No. ________ Quantity ________
Item ________ Date Requested ________
For ________ Date Completed ________

Date	Direct Materials	Direct Labor	Manufacturing Overhead

Cost of completed job	
Direct materials	$ ________
Direct labor	________
Manufacturing overhead	________
Total cost	$ ________
Unit cost (total dollars ÷ quantity)	$ ________

Helpful Hint In today's electronic environment, companies typically maintain job cost sheets as computer files.

Companies keep a separate job cost sheet for each job. The job cost sheets constitute the subsidiary ledger for the Work in Process Inventory account. A **subsidiary ledger** consists of individual records for each individual item—in this

case, each job. The Work in Process account is referred to as a **control account** because it summarizes the detailed data regarding specific jobs contained in the job cost sheets. **Each entry to Work in Process Inventory must be accompanied by a corresponding posting to one or more job cost sheets.**

Raw Materials Costs

Helpful Hint Approvals are an important part of a materials requisition slip because they help to establish individual accountability over inventory.

Companies assign raw materials costs when their materials storeroom issues the materials. Requests for issuing raw materials are made on a prenumbered **materials requisition slip**. The materials issued may be used directly on a job, or they may be considered indirect materials. As Illustration 15-6 shows, the requisition should indicate the quantity and type of materials withdrawn and the account to be charged. The company will charge direct materials to Work in Process Inventory, and indirect materials to Manufacturing Overhead.

Illustration 15-6
Materials requisition slip

Wallace Manufacturing Company
Materials Requisition Slip

Deliver to: Assembly Department   Req. No. R247
Charge to: Work in Process—Job No. 101   Date: 1/6/12

Quantity	Description	Stock No.	Cost per Unit	Total
200	Handles	AA2746	$5.00	$1,000

Requested by Bruce Howart   Received by Herb Crowley
Approved by Kap Shin   Costed by Heather Remmers

Ethics Note The internal control principle of documentation includes prenumbering to enhance accountability.

The company may use any of the inventory costing methods (FIFO, LIFO, or average-cost) in costing the requisitions **to the individual job cost sheets**.

Periodically, the company journalizes the requisitions. For example, if Wallace Manufacturing uses $24,000 of direct materials and $6,000 of indirect materials in January, the entry is:

	(4)		
Jan. 31	Work in Process Inventory	24,000	
	Manufacturing Overhead	6,000	
	Raw Materials Inventory		30,000
	(To assign materials to jobs and overhead)		

Illustration 15-7 shows the posting of requisition slip R247 to Job No. 101 and other assumed postings to the job cost sheets for materials. The requisition slips provide the basis for total direct materials costs of $12,000 for Job No. 101, $7,000 for Job No. 102, and $5,000 for Job No. 103. After the company has completed all postings, the sum of the direct materials columns of the job cost sheets (the subsidiary accounts) should equal the direct materials debited to Work in Process Inventory (the control account).

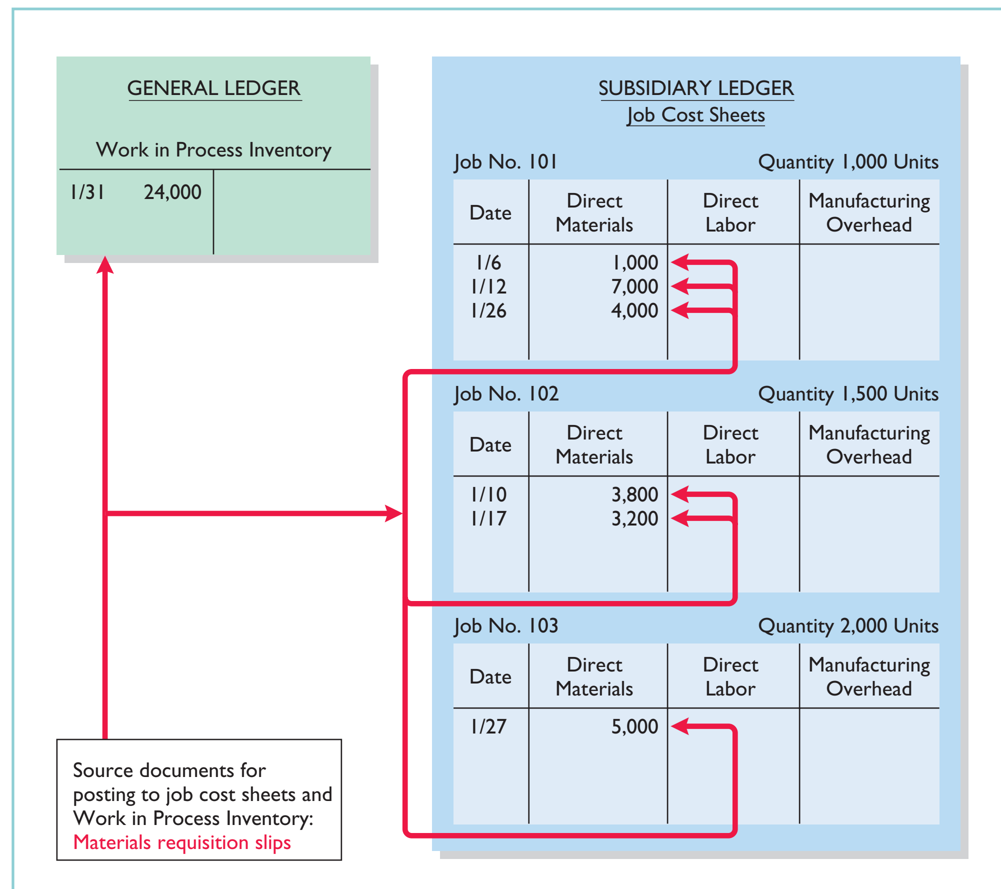

Illustration 15-7 Job cost sheets—direct materials

Helpful Hint Companies post to control accounts monthly, and post to job cost sheets daily.

Factory Labor Costs

Companies assign factory labor costs to jobs on the basis of time tickets prepared when the work is performed. The **time ticket** indicates the employee, the hours worked, the account and job to be charged, and the total labor cost. Many companies accumulate these data through the use of bar coding and scanning devices. When they start and end work, employees scan bar codes on their identification badges and bar codes associated with each job they work on. When direct labor is involved, the time ticket must indicate the job number, as shown in Illustration 15-8 (page 806). The employee's supervisor should approve all time tickets.

The time tickets are later sent to the payroll department, which applies the employee's hourly wage rate and computes the total labor cost. Finally, the company journalizes the time tickets. It debits the account Work in Process Inventory for direct labor and debits Manufacturing Overhead for indirect labor. For example, if the $32,000 total factory labor cost consists of $28,000 of direct labor and $4,000 of indirect labor, the entry is:

	(5)		
Jan. 31	Work in Process Inventory	28,000	
	Manufacturing Overhead	4,000	
	Factory Labor		32,000
	(To assign labor to jobs and overhead)		

As a result of this entry, Factory Labor has a zero balance, and gross earnings are assigned to the appropriate manufacturing accounts.

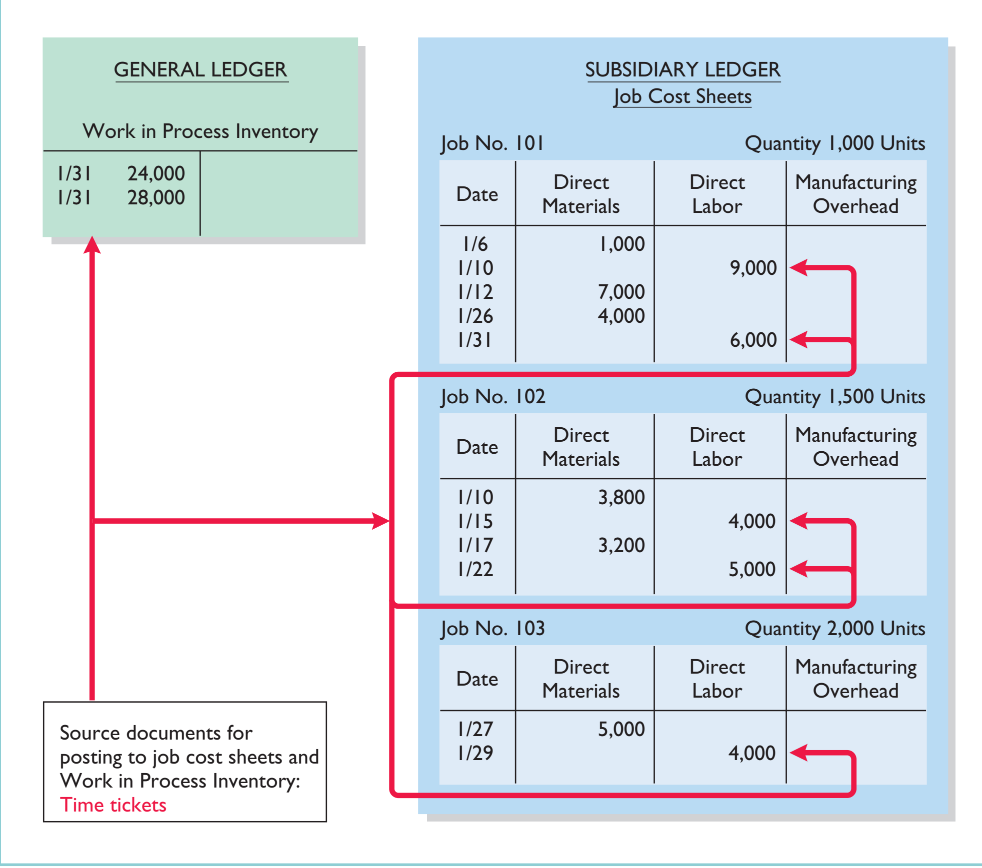
Let's assume that the labor costs chargeable to Wallace's three jobs are $15,000, $9,000, and $4,000. Illustration 15-9 shows the Work in Process Inventory and job cost sheets after posting. As in the case of direct materials, the postings to the direct labor columns of the job cost sheets should equal the posting of direct labor to Work in Process Inventory.

Illustration 15-9 Job cost sheets–direct labor

Helpful Hint Prove the $28,000 direct labor charge to Work in Process Inventory by totaling the charges by jobs:

101	$15,000
102	9,000
103	4,000
	$28,000



Manufacturing Overhead Costs

study objective 4

Indicate how the predetermined overhead rate is determined and used.

Companies charge the actual costs of direct materials and direct labor to specific jobs. In contrast, manufacturing **overhead** relates to production operations **as a whole**. As a result, overhead costs cannot be assigned to specific jobs on the basis of actual costs incurred. Instead, companies assign manufacturing overhead to work in process and to specific jobs **on an estimated basis through the use of a predetermined overhead rate**.

The **predetermined overhead rate** is based on the relationship between estimated annual overhead costs and expected annual operating activity, expressed in terms of a common **activity base**. The company may state the activity in terms of direct labor costs, direct labor hours, machine hours, or any other measure that will provide an equitable basis for applying overhead costs to jobs. Companies establish the predetermined overhead rate at the beginning of the year. Small companies often use a single, company-wide predetermined overhead rate. Large companies often use rates that vary from department to department. The formula for a predetermined overhead rate is as follows.

Estimated Annual Overhead Costs ÷ **Expected Annual Operating Activity** = **Predetermined Overhead Rate**

Illustration 15-10 Formula for predetermined overhead rate

Overhead relates to production operations as a whole. To know what "the whole" is, the logical thing is to wait until the end of the year's operations. At that time the company knows all of its costs for the period. As a practical matter, though, managers cannot wait until the end of the year. To price products accurately, they need information about product costs of specific jobs completed during the year. Using a predetermined overhead rate enables a cost to be determined for the job immediately. Illustration 15-11 indicates how manufacturing overhead is assigned to work in process.

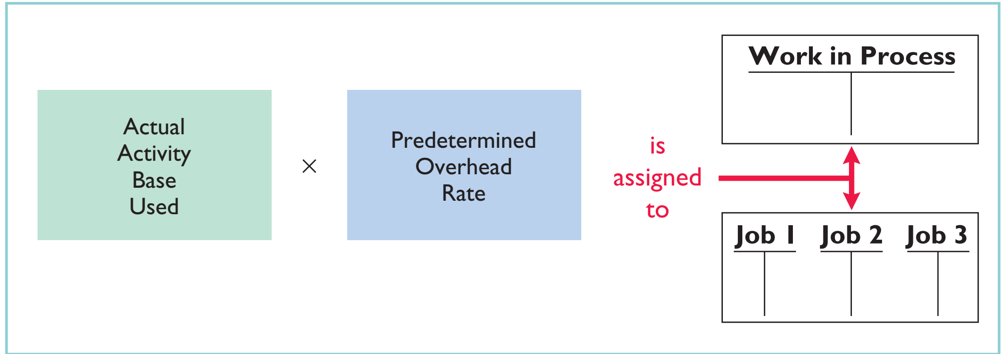


Illustration 15-11 Using predetermined overhead rates

Wallace Manufacturing uses direct labor cost as the activity base. Assuming that the company expects annual overhead costs to be \$280,000 and direct labor costs for the year to be \$350,000, the overhead rate is 80%, computed as follows.

$$\$280,000 \div \$350,000 = 80\%$$

This means that for every dollar of direct labor, Wallace will assign 80 cents of manufacturing overhead to a job. The use of a predetermined overhead rate enables the company to determine the approximate total cost of each job **when it completes the job**.

Historically, companies used direct labor costs or direct labor hours as the activity base. The reason was the relatively high correlation between direct labor

and manufacturing overhead. Today, more companies are using **machine hours as the activity base, due to increased reliance on automation in manufacturing operations**. Or, as mentioned in Chapter 14 (and discussed more fully in Chapter 17), many companies now use activity-based costing to more accurately allocate overhead costs based on the activities that give rise to the costs.

A company may use more than one activity base. For example, if a job is manufactured in more than one factory department, each department may have its own overhead rate. In the Feature Story about fire trucks, Western States Fire Apparatus uses two bases in assigning overhead to jobs: direct materials dollars for indirect materials, and direct labor hours for such costs as insurance and supervisors' salaries.

Wallace Manufacturing applies manufacturing overhead to work in process when it assigns direct labor costs. It also applies manufacturing overhead to specific jobs at the same time. For January, Wallace applied overhead of $22,400 (direct labor cost of $28,000 × 80%). The following entry records this application.

	(6)		
Jan. 31	Work in Process Inventory	22,400	
	Manufacturing Overhead		22,400
	(To assign overhead to jobs)		

The overhead that Wallace applies to each job will be 80% of the direct labor cost of the job for the month. Illustration 15-12 shows the Work in Process Inventory account and the job cost sheets after posting. Note that the debit of $22,400 to Work in Process Inventory equals the sum of the overhead applied to jobs: Job 101 $12,000 + Job 102 $7,200 + Job 103 $3,200.

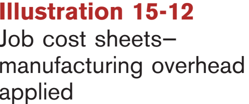

Illustration 15-12
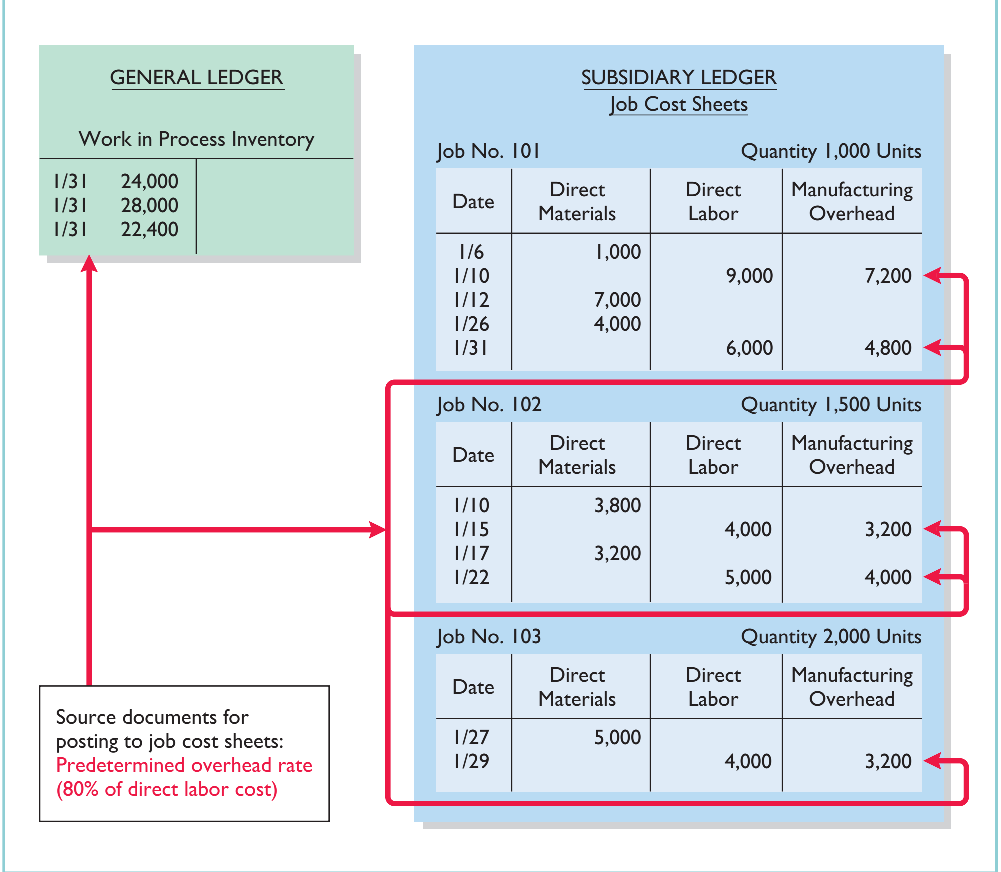
Job cost sheets–manufacturing overhead applied



At the end of each month, **the balance in Work in Process Inventory should equal the sum of the costs shown on the job cost sheets of unfinished jobs**. Illustration 15-13 presents proof of the agreement of the control and subsidiary accounts in Wallace Manufacturing. (It assumes that all jobs are still in process.)

Illustration 15-13 Proof of job cost sheets to work in process inventory

Work in Process Inventory			Job Cost Sheets	
Jan. 31	24,000		No. 101	$ 39,000
31	28,000		102	23,200
31	22,400		103	12,200
	74,400	←		**$74,400**

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
What is the cost of a job?	Cost of material, labor, and overhead assigned to a specific job	Job cost sheet	Compare costs to those of previous periods and to those of competitors to ensure that costs are in line. Compare costs to expected selling price or service fees charged to determine overall profitability.

before you go on...

Do it! Danielle Company is working on two job orders. The job cost sheets show the following:

Work in Process

Direct materials—Job 120 $6,000; Job 121 $3,600
Direct labor—Job 120 $4,000; Job 121 $2,000
Manufacturing overhead—Job 120 $5,000; Job 121 $2,500

Prepare the three summary entries to record the assignment of costs to Work in Process from the data on the job cost sheets.

Action Plan

- Recognize that Work in Process Inventory is the control account for all unfinished job cost sheets.
- Debit Work in Process Inventory for the materials, labor, and overhead charged to the job cost sheets.
- Credit the accounts that were debited when the manufacturing costs were accumulated.

Solution

The three summary entries are:

	Debit	Credit
Work in Process Inventory ($6,000 + $3,600)	9,600	
Raw Materials Inventory		9,600
(To assign materials to jobs)		
Work in Process Inventory ($4,000 + $2,000)	6,000	
Factory Labor		6,000
(To assign labor to jobs)		
Work in Process Inventory ($5,000 + $2,500)	7,500	
Manufacturing Overhead		7,500
(To assign overhead to jobs)

ASSIGNING COSTS TO FINISHED GOODS

Prepare entries for jobs completed and sold.

When a job is completed, Wallace summarizes the costs and completes the lower portion of the applicable job cost sheet. For example, if we assume that Wallace completes Job No. 101 on January 31, the job cost sheet appears as shown in Illustration 15-14 (page 810).

Illustration 15-14
Completed job cost sheet

Job Cost Sheet

Job No. 101 — Quantity 1,000
Item Magnetic Sensors — Date Requested February 5
For Tanner Company — Date Completed January 31

Date	Direct Materials	Direct Labor	Manufacturing Overhead
1/6	$ 1,000		
1/10		$ 9,000	$ 7,200
1/12	7,000		
1/26	4,000		
1/31		6,000	4,800
	$12,000	$15,000	$12,000

Cost of completed job	
Direct materials	$ 12,000
Direct labor	15,000
Manufacturing overhead	12,000
Total cost	$ 39,000
Unit cost ($39,000 ÷ 1,000)	$ 39.00

When a job is finished, Wallace makes an entry to transfer its total cost to finished goods inventory. The entry is as follows.

(7)

		Debit	Credit
Jan. 31	Finished Goods Inventory	39,000	
	Work in Process Inventory		39,000
	(To record completion of Job No. 101)		

Finished Goods Inventory is a control account. It controls individual finished goods records in a finished goods subsidiary ledger. The company posts directly from completed job cost sheets to the receipts columns. Illustration 15-15 shows the finished goods inventory record for Job No. 101.

ASSIGNING COSTS TO COST OF GOODS SOLD

Companies recognize cost of goods sold when each sale occurs. To illustrate the entries a company makes when it sells a completed job, assume that on January 31 Wallace Manufacturing sells on account Job 101. The job cost $39,000, and it sold for $50,000. The entries to record the sale and recognize cost of goods sold are:

(8)

		Debit	Credit
Jan. 31	Accounts Receivable	50,000	
	Sales		50,000
	(To record sale of Job No. 101)		
31	Cost of Goods Sold	39,000	
	Finished Goods Inventory		39,000
	(To record cost of Job No. 101)		

As Illustration 15-15 shows, Wallace records, in the issues section of the finished goods record, the units sold, the cost per unit, and the total cost of goods sold for each job sold.

JOB ORDER COSTING FOR SERVICE COMPANIES

Our extended job order costing example focuses on a manufacturer so that you see the flow of costs through the inventory accounts. It is important to understand,

Illustration 15-15
Finished goods record

7										

however, that job order costing is also commonly used by service companies. While service companies do not have inventory, the techniques of job order costing are still quite useful in many service-industry environments. Consider, for example, the Mayo Clinic (health care), PriceWaterhouseCoopers (accounting firm), and Goldman Sachs (financial services firm). These companies need to keep track of the cost of jobs performed for specific customers to evaluate the profitability of medical treatments, audits, or consulting engagements.

Many service organizations bill their customers using cost-plus contracts. Cost-plus contracts mean that the customer's bill is the sum of the costs incurred on the job, plus a profit amount that is calculated as a percentage of the costs incurred. In order to minimize conflict with customers and reduce potential contract disputes, service companies that use cost-plus contracts must maintain accurate and up-to-date costing records. Up-to-date cost records enable a service company to immediately notify a customer of cost overruns due to customer requests for changes to the original plan or unexpected complications. Timely recordkeeping allows the contractor and customer to consider alternatives before it is too late.

A service company that uses a job order costing system does not have inventory accounts. It does, however, use an account (often called Service Contracts in Process) to record job costs prior to completion. Job cost sheets for a service company keep track of the materials, labor, and overhead used on a particular job similar to a manufacturer. A number of the exercises at the end of this chapter apply job order costing to service companies.

Service Company Insight

Sales Are Nice, but Service Revenue Pays the Bills

Jet engines are one of the many products made by the industrial operations division of General Electric (GE). At prices as high as $30 million per engine, you can bet that GE does its best to keep track of costs. It might surprise you that GE doesn't make much profit on the sale of each engine. So why does it bother making them? Service revenue—during one recent year, about 75% of the division's revenues came from servicing its own products. One estimate is that the $13 billion in aircraft engines sold during a recent three-year period will generate about $90 billion in service revenue over the 30-year life of the engines. Because of the high product costs, both the engines themselves and the subsequent service are most likely accounted for using job order costing. Accurate service cost records are important because GE needs to generate high profit margins on its service jobs to make up for the low margins on the original sale. It also needs good cost records for its service jobs in order to control its costs. Otherwise, a competitor, such as Pratt and Whitney, might submit lower bids for service contracts and take lucrative service jobs away from GE.

Source: Paul Glader, "GE's Focus on Services Faces Test," *Wall Street Journal Online* (March 3, 2009).

? Explain why GE would use job order costing to keep track of the cost of repairing a malfunctioning engine for a major airline. (See page 837.)

SUMMARY OF JOB ORDER COST FLOWS

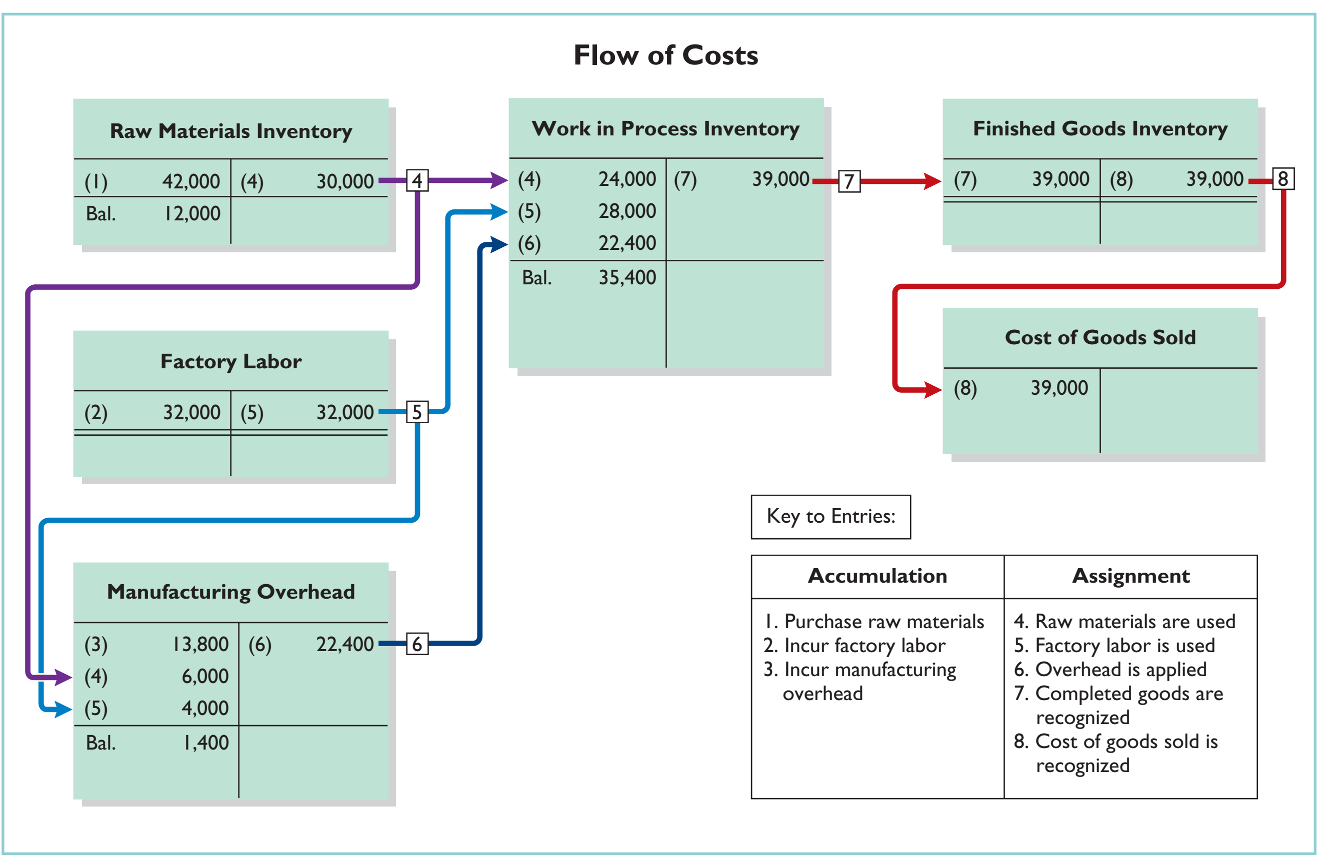
Illustration 15-16 (below) shows a completed flowchart for a job order cost accounting system. All postings are keyed to entries 1–8 in Wallace Manufacturing's accounts presented in the cost flow graphic in Illustration 15-4 (page 801).

The cost flows in the diagram can be categorized as one of four types:

- **Accumulation:** The company first accumulates costs by (1) purchasing raw materials, (2) incurring labor costs, and (3) incurring manufacturing overhead costs.
- **Assignment to Jobs:** Once the company has incurred manufacturing costs, it must assign them to specific jobs. For example, as it uses raw materials on specific jobs (4), it assigns them to work in process, or treats them as manufacturing overhead if the raw materials cannot be associated with a specific job. Similarly, it either assigns factory labor (5) to work in process, or treats it as manufacturing overhead if the factory labor cannot be associated with a specific job. Finally it assigns manufacturing overhead (6) to work in process using a *predetermined overhead rate*. This deserves emphasis: **Do not assign overhead using actual overhead costs, but instead use a predetermined rate**.
- **Completed Jobs:** As jobs are completed (7), the company transfers the cost of the completed job out of work in process inventory into finished goods inventory.
- **When Goods Are Sold:** As specific items are sold (8), the company transfers their cost out of finished goods inventory into cost of goods sold.

Illustration 15-17 (next page) summarizes the flow of documents in a job order cost system.

Illustration 15-16
Flow of costs in a job order cost system



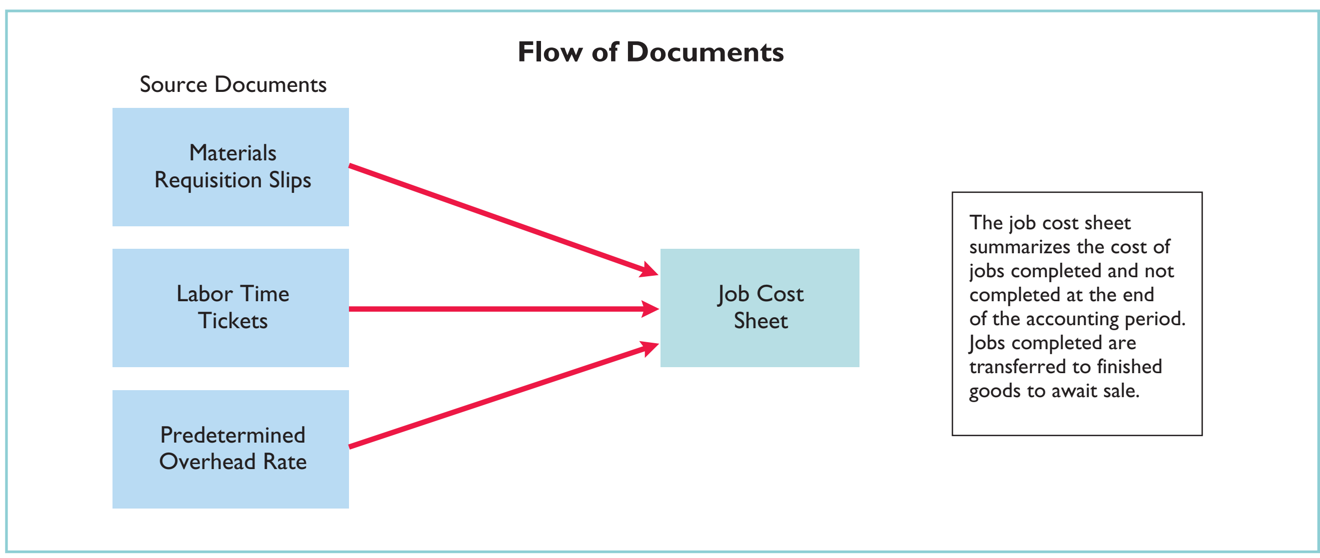


Illustration 15-17 Flow of documents in a job order cost system

before you go on...

Do it! During the current month, Onyx Corporation completed Job 109 and Job 112. Job 109 cost $19,000 and Job 112 cost $27,000. Job 112 was sold on account for $42,000. Journalize the entries for the completion of the two jobs and the sale of Job 112.

COMPLETION AND SALE OF JOBS

Action Plan

- Debit Finished Goods for the cost of completed jobs.
- Debit Cost of Goods Sold for the cost of jobs sold.

Solution

Account	Debit	Credit
Finished Goods Inventory	46,000	
Work in Process Inventory		46,000
(To record completion of Job 109, costing $19,000 and Job 112, costing $27,000)		
Accounts Receivable	42,000	
Sales		42,000
(To record sale of Job 112)		
Cost of Goods Sold	27,000	
Finished Goods Inventory		27,000
(To record cost of goods sold for Job 112)

ADVANTAGES AND DISADVANTAGES OF JOB ORDER COSTING

An advantage of job order costing is it is more precise in assignment of costs to projects than process costing. For example, assume that Juan Company (home manufacturer) builds 10 custom homes a year at a total cost of $2,000,000. One way to determine the cost of the homes is to divide the total construction cost incurred during the year by the number of homes produced during the year. For Juan Company, an average cost of $200,000 ($2,000,000 ÷ 10) is computed. If the homes are identical, then this approach is adequate for purposes of determining profit per home. But if the homes vary in terms of size, style, and material types, using the average cost of $200,000 to determine profit per home is inappropriate. Instead, Juan Company should use a job order costing system to

determine the specific cost incurred to build each home and the amount of profit made on each. Thus, job order costing provides more useful information for determining the profitability of particular projects and for estimating costs when preparing bids on future jobs.

One disadvantage of job order costing is that it requires a significant amount of data entry. For Juan Company, it is much easier to simply keep track of total costs incurred during the year than it is to keep track of the costs incurred on each job (home built). Recording this information is time-consuming, and if the data is not entered accurately, then the product costs are not accurate. In recent years, technological advances, such as bar-coding devices for both labor costs and materials, have increased the accuracy and reduced the effort needed to record costs on specific jobs. These innovations expand the opportunities to apply job order costing in a wider variety of business settings, thus improving management's ability to control costs and make better informed decisions.

A common problem of all costing systems is how to allocate overhead to the finished product. Overhead often represents more than 50 percent of a product's cost, and this cost is often difficult to allocate meaningfully to the product. How, for example, is the salary of Juan Company's president allocated to the various homes that may differ in size, style, and materials used? The accuracy of the job order costing system is largely dependent on the accuracy of the overhead allocation process. Even if the company does a good job of keeping track of the specific amounts of materials and labor used on each job, if the overhead costs are not allocated to individual jobs in a meaningful way, the product costing information is not useful. This issue will be addressed in more detail in Chapter 17.

Reporting Job Cost Data

At the end of a period, companies prepare financial statements that present aggregate data on all jobs manufactured and sold. The cost of goods manufactured schedule in job order costing is the same as in Chapter 14 with one exception: **The schedule shows manufacturing overhead applied, rather than actual overhead costs. The company adds this amount to direct materials and direct labor to determine total manufacturing costs.**

Helpful Hint Companies usually prepare monthly financial statements for management use only.

Companies prepare the cost of goods manufactured schedule directly from the Work in Process Inventory account. Illustration 15-18 shows a condensed schedule for Wallace Manufacturing Company for January.

Illustration 15-18
Cost of goods manufactured schedule

WALLACE MANUFACTURING COMPANY
Cost of Goods Manufactured Schedule
For the Month Ending January 31, 2012

Work in process, January 1		$ –0–
Direct materials used	$24,000	
Direct labor	28,000	
Manufacturing overhead applied	**22,400**	
Total manufacturing costs		74,400
Total cost of work in process		74,400
Less: Work in process, January 31		35,400
Cost of goods manufactured		$39,000

Note that the cost of goods manufactured ($39,000) agrees with the amount transferred from Work in Process Inventory to Finished Goods Inventory in journal entry No. 7 in Illustration 15-16 (page 812).

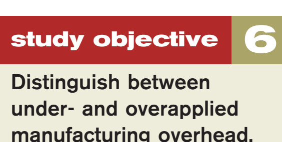
The income statement and balance sheet are the same as those illustrated in Chapter 14. For example, Illustration 15-19 shows the partial income statement for Wallace Manufacturing for the month of January.

Illustration 15-19 Partial income statement

WALLACE MANUFACTURING COMPANY
Income Statement (partial)
For the Month Ending January 31, 2012

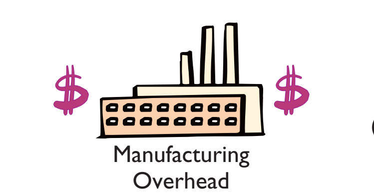
Sales		$50,000
Cost of goods sold		
Finished goods inventory, January 1	$ –0–	
Cost of goods manufactured (see Illustration 15-18)	**39,000**	
Cost of goods available for sale	39,000	
Less: Finished goods inventory, January 31	–0–	
Cost of goods sold		39,000
Gross profit		$11,000

UNDER- OR OVERAPPLIED MANUFACTURING OVERHEAD



When Manufacturing Overhead has a **debit balance**, overhead is said to be underapplied. **Underapplied overhead** means that the overhead assigned to work in process is less than the overhead incurred. Conversely, when manufacturing overhead has a **credit balance**, overhead is overapplied. **Overapplied overhead** means that the overhead assigned to work in process is greater than the overhead incurred. Illustration 15-20 shows these concepts.

Illustration 15-20 Under- and overapplied overhead



Manufacturing Overhead	
Actual (Costs incurred)	Applied (Costs assigned)

If actual is ***greater*** than applied, manufacturing overhead is underapplied.

If actual is ***less*** than applied, manufacturing overhead is overapplied.

Year-End Balance

At the end of the year, all manufacturing overhead transactions are complete. There is no further opportunity for offsetting events to occur. At this point, Wallace eliminates any balance in Manufacturing Overhead by an adjusting entry. It considers under- or overapplied overhead to be an **adjustment to cost of goods sold**. Thus, Wallace **debits underapplied overhead to Cost of Goods Sold**. It **credits overapplied overhead to Cost of Goods Sold**.

To illustrate, assume that Wallace Manufacturing has a $2,500 credit balance in Manufacturing Overhead at December 31. The adjusting entry for the overapplied overhead is:

Dec. 31	Manufacturing Overhead	2,500	
	Cost of Goods Sold		2,500
	(To transfer overapplied overhead to cost of goods sold)		

After Wallace posts this entry, Manufacturing Overhead has a zero balance. In preparing an income statement for the year, Wallace reports cost of goods sold **after adjusting it** for either under- or overapplied overhead.

Conceptually, some argue, under- or overapplied overhead at the end of the year should be allocated among ending work in process, finished goods, and cost of goods sold. The discussion of this possible allocation approach is left to more advanced courses.

DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
Has the company over- or underapplied overhead for the period?	Actual overhead costs and overhead applied	Manufacturing overhead account	If the account balance is a credit, overhead applied exceeded actual overhead costs. If the account balance is a debit, overhead applied was less than actual overhead costs.

before you go on...

APPLIED MANUFACTURING OVERHEAD

Action Plan

- Calculate the amount of overhead applied by multiplying the predetermined overhead rate by actual activity.
- If actual manufacturing overhead is greater than applied, manufacturing overhead is underapplied.
- If actual manufacturing overhead is less than applied, manufacturing overhead is overapplied.

Do it! For Karr Company, the predetermined overhead rate is 140% of direct labor cost. During the month, Karr incurred $90,000 of factory labor costs, of which $80,000 is direct labor and $10,000 is indirect labor. Actual overhead incurred was $119,000.

Compute the amount of manufacturing overhead applied during the month. Determine the amount of under- or overapplied manufacturing overhead.

Solution

Manufacturing overhead applied = (140% × $80,000) = $112,000
Underapplied manufacturing overhead = ($119,000 − $112,000) = $7,000

Related exercise material: **BE15-9, Do it! 15-4, E15-5, E15-12,** and **E15-13.**

USING THE DECISION TOOLKIT

Martinez Building Products Company is one of the largest manufacturers and marketers of unique, custom-made residential garage doors in the United States. It also is a major supplier of industrial and commercial doors, grills, and counter shutters for the new-construction, repair, and remodel markets. Martinez has developed plans for continued expansion of a network of service operations that sell, install, and service manufactured fireplaces, garage doors, and related products.

Martinez uses a job order cost system and applies overhead to production on the basis of direct labor cost. In computing a predetermined overhead rate for the year 2012, the company estimated manufacturing overhead to be $24 million and direct labor costs to be $20 million. In addition, it developed the following information.

Actual Costs Incurred During 2012	
Direct materials used	$30,000,000
Direct labor cost incurred	21,000,000
Insurance, factory	500,000
Indirect labor	7,500,000
Factory maintenance	1,000,000
Rent on factory building	11,000,000
Depreciation on factory equipment	2,000,000

Instructions

Answer each of the following.

(a) Why is Martinez Building Products Company using a job order costing system?
(b) On what basis does Martinez allocate its manufacturing overhead? Compute the predetermined overhead rate for 2012.
(c) Compute the amount of the under- or overapplied overhead for 2012.
(d) Martinez had balances in the beginning and ending work in process and finished goods accounts as follows.

	1/1/12	12/31/12
Work in process	$ 5,000,000	$ 4,000,000
Finished goods	13,000,000	11,000,000

Determine the (1) cost of goods manufactured and (2) cost of goods sold for Martinez during 2012. Assume that any under- or overapplied overhead should be included in the cost of goods sold.

(e) During 2012, Job G408 was started and completed. Its cost sheet showed a total cost of $100,000, and the company prices its product at 50% above its cost. What is the price to the customer if the company follows this pricing strategy?

Solution

(a) The company is using a job order cost system because it custom-makes garage doors. Each job has its own distinguishing characteristics. For example, each garage door would be different, and therefore a different cost per garage door can be assigned.
(b) The company allocates its overhead on the basis of direct labor cost. The predetermined overhead rate is 120%, computed as follows.

$$\$24{,}000{,}000 \div 20{,}000{,}000 = 120\%$$

(c)

Actual manufacturing overhead	$22,000,000
Applied overhead cost ($21,000,000 × 120%)	25,200,000
Overapplied overhead	$ 3,200,000

(d)	(1)	Work in process, 1/1/12		$ 5,000,000
		Direct materials used	$30,000,000	
		Direct labor	21,000,000	
		Manufacturing overhead applied	25,200,000	
		Total manufacturing costs		76,200,000
		Total cost of work in process		81,200,000
		Less: Work in process, 12/31/12		4,000,000
		Cost of goods manufactured		$77,200,000
	(2)	Finished goods inventory, 1/1/12	$13,000,000	
		Cost of goods manufactured (see above)	77,200,000	
		Cost of goods available for sale	90,200,000	
		Finished goods inventory, 12/31/12	11,000,000	
		Cost of goods sold (unadjusted)	79,200,000	
		Less: Overapplied overhead	3,200,000	
		Cost of goods sold	$76,000,000	
(e)		G408 cost	$ 100,000	
		Markup percentage	× 50%	
		Profit	$ 50,000	
		Price to customer: $150,000 ($100,000 + $50,000)		

Summary of Study Objectives

1 Explain the characteristics and purposes of cost accounting. Cost accounting involves the procedures for measuring, recording, and reporting product costs. From the data accumulated, companies determine the total cost and the unit cost of each product. The two basic types of cost accounting systems are job order cost and process cost.

2 Describe the flow of costs in a job order costing system. In job order costing, companies first accumulate manufacturing costs in three accounts: Raw Materials Inventory, Factory Labor, and Manufacturing Overhead. They then assign the accumulated costs to Work in Process Inventory and eventually to Finished Goods Inventory and Cost of Goods Sold.

3 Explain the nature and importance of a job cost sheet. A job cost sheet is a form used to record the costs chargeable to a specific job and to determine the total and unit costs of the completed job. Job cost sheets constitute the subsidiary ledger for the Work in Process Inventory control account.

4 Indicate how the predetermined overhead rate is determined and used. The predetermined overhead rate is based on the relationship between estimated annual overhead costs and expected annual operating activity. This is expressed in terms of a common activity base, such as direct labor cost. Companies use this rate to assign overhead costs to work in process and to specific jobs.

5 Prepare entries for jobs completed and sold. When jobs are completed, companies debit the cost to Finished Goods Inventory and credit it to Work in Process Inventory. When a job is sold, the entries are: (a) Debit Cash or Accounts Receivable and credit Sales for the selling price; and (b) debit Cost of Goods Sold and credit Finished Goods Inventory for the cost of the goods.

6 Distinguish between under- and overapplied manufacturing overhead. Underapplied manufacturing overhead indicates that the overhead assigned to work in process is less than the overhead incurred. Overapplied overhead indicates that the overhead assigned to work in process is greater than the overhead incurred.

DECISION TOOLKIT A SUMMARY

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
What is the cost of a job?	Cost of material, labor, and overhead assigned to a specific job	Job cost sheet	Compare costs to those of previous periods and to those of competitors to ensure that costs are in line. Compare costs to expected selling price or service fees charged to determine overall profitability.
Has the company over- or underapplied overhead for the period? If the account balance is a debit, overhead applied was less than actual overhead costs.

Glossary

Cost accounting *(p. 798)* An area of accounting that involves measuring, recording, and reporting product costs.

Cost accounting system *(p. 798)* Manufacturing-cost accounts that are fully integrated into the general ledger of a company.

Job cost sheet *(p. 803)* A form used to record the costs chargeable to a specific job and to determine the total and unit costs of the completed job.

Job order cost system *(p. 798)* A cost accounting system in which costs are assigned to each job or batch.

Materials requisition slip *(p. 804)* A document authorizing the issuance of raw materials from the storeroom to production.

Overapplied overhead *(p. 815)* A situation in which overhead assigned to work in process is greater than the overhead incurred.

Predetermined overhead rate *(p. 807)* A rate based on the relationship between estimated annual overhead costs and expected annual operating activity, expressed in terms of a common activity base.

Process cost system *(p. 799)* A cost accounting system used when a company manufactures a large volume of similar products.

Summary entry *(p. 802)* A journal entry that summarizes the totals from multiple transactions.

Time ticket *(p. 805)* A document that indicates the employee, the hours worked, the account and job to be charged, and the total labor cost.

Underapplied overhead *(p. 815)* A situation in which overhead assigned to work in process is less than the overhead incurred.

Comprehensive Do it!

Cardella Manufacturing applies overhead on the basis of direct labor costs. The company estimates annual overhead costs will be $760,000 and annual direct labor costs will be $950,000. During February, Cardella Manufacturing works on two jobs: A16 and B17. Summary data concerning these jobs are as follows.

Manufacturing Costs Incurred

Purchased $54,000 of raw materials on account.
Factory labor $76,000, plus $4,000 employer payroll taxes.
Manufacturing overhead exclusive of indirect materials and indirect labor $59,800.

Assignment of Costs

Direct materials:	Job A16 $27,000, Job B17 $21,000
Indirect materials:	$3,000
Direct labor:	Job A16 $52,000, Job B17 $26,000
Indirect labor:	$2,000

The company completed Job A16 and sold it on account for $150,000. Job B17 was only partially completed.

Instructions

(a) Compute the predetermined overhead rate.
(b) Journalize the February transactions in the sequence followed in the chapter.
(c) What was the amount of under- or overapplied manufacturing overhead?

Action Plan

- Predetermined overhead rate = Estimated annual overhead cost ÷ Expected annual operating activity.
- In accumulating costs, debit three accounts: Raw Materials Inventory, Factory Labor, and Manufacturing Overhead.
- When Work in Process Inventory is debited, credit one of the three accounts listed above.
- Debit Finished Goods Inventory for the cost of completed jobs. Debit Cost of Goods Sold for the cost of jobs sold.
- Overhead is underapplied when Manufacturing Overhead has a debit balance.

Solution to Comprehensive Do it!

(a) Estimated annual overhead costs	÷	Expected annual operating activity	=	Predetermined overhead rate
$760,000	÷	$950,000	=	80%

(b)

Date	Account	Debit	Credit
	1.		
Feb. 28	Raw Materials Inventory	54,000	
	Accounts Payable		54,000
	(Purchase of raw materials on account)		
	2.		
28	Factory Labor	80,000	
	Factory Wages Payable		76,000
	Employer Payroll Taxes Payable		4,000
	(To record factory labor costs)		
	3.		
28	Manufacturing Overhead	59,800	
	Accounts Payable, Accumulated Depreciation, and Prepaid Insurance		59,800
	(To record overhead costs)		
	4.		
28	Work in Process Inventory	48,000	
	Manufacturing Overhead	3,000	
	Raw Materials Inventory		51,000
	(To assign raw materials to production)		
	5.		
28	Work in Process Inventory	78,000	
	Manufacturing Overhead	2,000	
	Factory Labor		80,000
	(To assign factory labor to production)		
	6.		
28	Work in Process Inventory	62,400	
	Manufacturing Overhead		62,400
	(To assign overhead to jobs— 80% × $78,000)		
	7.		
28	Finished Goods Inventory	120,600	
	Work in Process Inventory		120,600
	(To record completion of Job A16: direct materials $27,000, direct labor $52,000, and manufacturing overhead $41,600)		
	8.		
28	Accounts Receivable	150,000	
	Sales		150,000
	(To record sale of Job A16)		
28	Cost of Goods Sold	120,600	
	Finished Goods Inventory		120,600
	(To record cost of sale for Job A16)		

(c) Manufacturing Overhead has a debit balance of $2,400 as shown below.

Manufacturing Overhead

(3)	59,800	(6)	62,400
(4)	3,000		
(5)	2,000		
Bal.	2,400		

Thus, manufacturing overhead is underapplied for the month.

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more resources are available for practice in WileyPLUS

Self-Test Questions

Answers are on page 837.

(SO 1) **1.** Cost accounting involves the measuring, recording, and reporting of:
(a) product costs.
(b) future costs.
(c) manufacturing processes.
(d) managerial accounting decisions.

(SO 1) **2.** A company is more likely to use a job order costing system if:
(a) it manufactures a large volume of similar products.
(b) its production is continuous.
(c) it manufactures products with unique characteristics.
(d) it uses a periodic inventory system.

(SO 2) **3.** In accumulating raw materials costs, companies debit the cost of raw materials purchased in a perpetual system to:
(a) Raw Materials Purchases.
(b) Raw Materials Inventory.
(c) Purchases.
(d) Work in Process.

(SO 2) **4.** When incurred, factory labor costs are debited to:
(a) Work in Process.
(b) Factory Wages Expense.
(c) Factory Labor.
(d) Factory Wages Payable.

(SO 2) **5.** The flow of costs in job order costing:
(a) begins with work in process inventory and ends with finished goods inventory.
(b) begins as soon as a sale occurs.
(c) parallels the physical flow of materials as they are converted into finished goods.
(d) is necessary to prepare the cost of goods manufactured schedule.

(SO 3) **6.** Raw materials are assigned to a job when:
(a) the job is sold.
(b) the materials are purchased.
(c) the materials are received from the vendor.
(d) the materials are issued by the materials storeroom.

(SO 3) **7.** The source documents for assigning costs to job cost sheets are:
(a) invoices, time tickets, and the predetermined overhead rate.
(b) materials requisition slips, time tickets, and the actual overhead costs.
(c) materials requisition slips, payroll register, and the predetermined overhead rate.
(d) materials requisition slips, time tickets, and the predetermined overhead rate.

(SO 3) **8.** In recording the issuance of raw materials in a job order cost system, it would be *incorrect* to:
(a) debit Work in Process Inventory.
(b) debit Finished Goods Inventory.
(c) debit Manufacturing Overhead.
(d) credit Raw Materials Inventory.

(SO 3) **9.** The entry when direct factory labor is assigned to jobs is a debit to:
(a) Work in Process Inventory and a credit to Factory Labor.
(b) Manufacturing Overhead and a credit to Factory Labor.
(c) Factory Labor and a credit to Manufacturing Overhead.
(d) Factory Labor and a credit to Work in Process Inventory.

(SO 4) **10.** The formula for computing the predetermined manufacturing overhead rate is estimated annual overhead costs divided by an expected annual operating activity, expressed as:
(a) direct labor cost.
(b) direct labor hours.
(c) machine hours.
(d) Any of the above.

(SO 4) **11.** In Crawford Company, the predetermined overhead rate is 80% of direct labor cost. During the month, Crawford incurs $210,000 of factory labor costs, of which $180,000 is direct labor and $30,000 is indirect labor. Actual overhead incurred was $200,000. The amount of overhead debited to Work in Process Inventory should be:
(a) $200,000. (c) $168,000.
(b) $144,000. (d) $160,000.

(SO 5) **12.** Mynex Company completes Job No. 26 at a cost of $4,500 and later sells it for $7,000 cash. A correct entry is:
(a) Debit Finished Goods Inventory $7,000 and credit Work in Process Inventory $7,000.
(b) Debit Cost of Goods Sold $7,000 and credit Finished Goods Inventory $7,000.
(c) Debit Finished Goods Inventory $4,500 and credit Work in Process Inventory $4,500.
(d) Debit Accounts Receivable $7,000 and credit Sales $7,000.

(SO 5) **13.** At the end of an accounting period, a company using a job order costing system prepares the cost of goods manufactured:
(a) from the job cost sheet.
(b) from the Work in Process Inventory account.
(c) by adding direct materials used, direct labor incurred, and manufacturing overhead incurred.
(d) from the Cost of Goods Sold account.

(SO 6) **14.** At end of the year, a company has a $1,200 debit balance in Manufacturing Overhead. The company:
(a) makes an adjusting entry by debiting Manufacturing Overhead Applied for $1,200 and crediting Manufacturing Overhead for $1,200.
(b) makes an adjusting entry by debiting Manufacturing Overhead Expense for $1,200 and crediting Manufacturing Overhead for $1,200.
(c) makes an adjusting entry by debiting Cost of Goods Sold for $1,200 and crediting Manufacturing Overhead for $1,200.
(d) makes no adjusting entry because differences between actual overhead and the amount applied are a normal part of job order costing and will average out over the next year.

15. Manufacturing overhead is underapplied if: (SO 6)
(a) actual overhead is less than applied.
(b) actual overhead is greater than applied.
(c) the predetermined rate equals the actual rate.
(d) actual overhead equals applied overhead.

Go to the book's companion website, **www.wiley.com/college/kimmel**, for additional Self-Test Questions.

Questions

1. (a) Mary Barett is not sure about the difference between cost accounting and a cost accounting system. Explain the difference to Mary. (b) What is an important feature of a cost accounting system?

2. (a) Distinguish between the two types of cost accounting systems. (b) May a company use both types of cost accounting systems?

3. What type of industry is likely to use a job order cost system? Give some examples.

4. What type of industry is likely to use a process cost system? Give some examples.

5. Your roommate asks your help in understanding the major steps in the flow of costs in a job order cost system. Identify the steps for your roommate.

6. There are three inventory control accounts in a job order system. Identify the control accounts and their subsidiary ledgers.

7. What source documents are used in accumulating direct labor costs?

8. "Entries to Manufacturing Overhead normally are only made daily." Do you agree? Explain.

9. Stan Kaiser is confused about the source documents used in assigning materials and labor costs. Identify the documents and give the entry for each document.

10. What is the purpose of a job cost sheet?

11. Indicate the source documents that are used in charging costs to specific jobs.

12. Explain the purpose and use of a "materials requisition slip" as used in a job order cost system.

13. Sam Bowden believes actual manufacturing overhead should be charged to jobs. Do you agree? Why or why not?

14. What elements are involved in computing a predetermined overhead rate?

15. How can the agreement of Work in Process Inventory and job cost sheets be verified?

16. Jane Neff believes that the cost of goods manufactured schedule in job order cost accounting is the same as shown in Chapter 14. Is Jane correct? Explain.

17. Matt Litkee is confused about under- and overapplied manufacturing overhead. Define the terms for Matt, and indicate the balance in the manufacturing overhead account applicable to each term.

18. "At the end of the year, under- or overapplied overhead is closed to Income Summary." Is this correct? If not, indicate the customary treatment of this amount.

Brief Exercises

BE15-1 Knox Tool & Die begins operations on January 1. Because all work is done to customer specifications, the company decides to use a job order costing system. Prepare a flowchart of a typical job order system with arrows showing the flow of costs. Identify the eight transactions.

Prepare a flowchart of a job order cost accounting system, and identify transactions.
(SO 2), **C**

BE15-2 During January, its first month of operations, Knox Tool & Die accumulated the following manufacturing costs: raw materials $4,000 on account, factory labor $6,000 of which $5,200 relates to factory wages payable and $800 relates to payroll taxes payable, and utilities payable $2,000. Prepare separate journal entries for each type of manufacturing cost.

Prepare entries in accumulating manufacturing costs.
(SO 2), **AP**

BE15-3 In January, Knox Tool & Die requisitions raw materials for production as follows: Job 1 $900, Job 2 $1,400, Job 3 $700, and general factory use $600. Prepare a summary journal entry to record raw materials used.

Prepare entry for the assignment of raw materials costs.
(SO 3), **AP**

BE15-4 Factory labor data for Knox Tool & Die is given in BE15-2. During January, time tickets show that the factory labor of $6,000 was used as follows: Job 1 $2,200, Job 2 $1,600, Job 3 $1,400, and general factory use $800. Prepare a summary journal entry to record factory labor used.

Prepare entry for the assignment of factory labor costs.
(SO 3), **AP**

BE15-5 Data pertaining to job cost sheets for Knox Tool & Die are given in BE15-3 and BE15-4. Prepare the job cost sheets for each of the three jobs. (*Note*: You may omit the column for Manufacturing Overhead.)

Prepare job cost sheets.
(SO 3), **AP**

BE15-6 Marquis Company estimates that annual manufacturing overhead costs will be $900,000. Estimated annual operating activity bases are: direct labor cost $500,000, direct labor hours 50,000, and machine hours 100,000. Compute the predetermined overhead rate for each activity base.

Compute predetermined overhead rates.
(SO 4), **AP**

BE15-7 During the first quarter, Roland Company incurs the following direct labor costs: January $40,000, February $30,000, and March $50,000. For each month, prepare the entry to assign overhead to production using a predetermined rate of 80% of direct labor cost.

Assign manufacturing overhead to production.
(SO 4), **AP**

BE15-8 In March, Stinson Company completes Jobs 10 and 11. Job 10 cost $20,000 and Job 11 $30,000. On March 31, Job 10 is sold to the customer for $35,000 in cash. Journalize the entries for the completion of the two jobs and the sale of Job 10.

Prepare entries for completion and sale of completed jobs.
(SO 5), **AP**

BE15-9 At December 31, balances in Manufacturing Overhead are: Shimeca Company—debit $1,200, Garcia Company—credit $900. Prepare the adjusting entry for each company at December 31, assuming the adjustment is made to cost of goods sold.

Prepare adjusting entries for under- and overapplied overhead.
(SO 6), **C**

Do it! Review

Do it! 15-1 During the current month, Tomlin Company incurs the following manufacturing costs:

(a) Purchased raw materials of $16,000 on account.
(b) Incurred factory labor of $40,000. Of that amount, $31,000 relates to wages payable and $9,000 relates to payroll taxes payable.
(c) Factory utilities of $3,100 are payable, prepaid factory property taxes of $2,400 have expired, and depreciation on the factory building is $9,500.

Prepare journal entries for each type of manufacturing cost. (Use a summary entry to record manufacturing overhead.)

Prepare journal entries for manufacturing costs.
(SO 2), **AP**

Do it! 15-2 Milner Company is working on two job orders. The job cost sheets show the following.

	Job 201	**Job 202**
Direct materials	$7,200	$9,000
Direct labor	4,000	8,000
Manufacturing overhead	5,200	9,800

Prepare the three summary entries to record the assignment of costs to Work in Process from the data on the job cost sheets.

Assign costs to work in process.
(SO 3, 4), **AP**

Do it! 15-3 During the current month, Reyes Corporation completed Job 310 and Job 312. Job 310 cost $60,000 and Job 312 cost $50,000. Job 312 was sold on account for $90,000. Journalize the entries for the completion of the two jobs and the sale of Job 312.

Prepare entries for completion and sale of jobs.
(SO 5), **AP**

Do it! 15-4 For Eckstein Company, the predetermined overhead rate is 130% of direct labor cost. During the month, Eckstein incurred $100,000 of factory labor costs, of which $85,000 is direct labor and $15,000 is indirect labor. Actual overhead incurred was $115,000. Compute the amount of manufacturing overhead applied during the month. Determine the amount of under- or overapplied manufacturing overhead.

Apply manufacturing overhead and determine under- or overapplication.
(SO 6), **AN**

Exercises

Prepare entries for factory labor.
(SO 2, 3), AP

E15-1 The gross earnings of the factory workers for Vargas Company during the month of January are $66,000. The employer's payroll taxes for the factory payroll are $8,000. The fringe benefits to be paid by the employer on this payroll are $6,000. Of the total accumulated cost of factory labor, 85% is related to direct labor and 15% is attributable to indirect labor.

Instructions

(a) Prepare the entry to record the factory labor costs for the month of January.
(b) Prepare the entry to assign factory labor to production.

Prepare journal entries for manufacturing costs.
(SO 2, 3, 4, 5), AP

E15-2 Stine Manufacturing uses a job order costing system. On May 1, the company has a balance in Work in Process Inventory of $3,500 and two jobs in process: Job No. 429 $2,000, and Job No. 430 $1,500. During May, a summary of source documents reveals the following.

Job Number	Materials Requisition Slips		Labor Time Tickets	
429	$2,500		$1,900	
430	3,500		3,000	
431	4,400	$10,400	7,600	$12,500
General use		800		1,200
		$11,200		$13,700

Stine Manufacturing applies manufacturing overhead to jobs at an overhead rate of 60% of direct labor cost. Job No. 429 is completed during the month.

Instructions

(a) Prepare summary journal entries to record: (i) the requisition slips, (ii) the time tickets, (iii) the assignment of manufacturing overhead to jobs, and (iv) the completion of Job No. 429.
(b) Post the entries to Work in Process Inventory, and prove the agreement of the control account with the job cost sheets. (Use a T account.)

Analyze a job cost sheet and prepare entries for manufacturing costs.
(SO 2, 3, 4, 5), AP

E15-3 A job order cost sheet for Lowry Company is shown below.

Job No. 92			**For 2,000 Units**
Date	Direct Materials	Direct Labor	Manufacturing Overhead
Beg. bal. Jan. 1	5,000	6,000	5,100
8	6,000		
12		8,000	6,400
25	2,000		
27		4,000	3,200
	13,000	18,000	14,700
Cost of completed job:			
Direct materials			$13,000
Direct labor			18,000
Manufacturing overhead			14,700
Total cost			$45,700
Unit cost ($45,700 ÷ 2,000)			$22.85

Instructions

(a) On the basis of the foregoing data, answer the following questions.
   (1) What was the balance in Work in Process Inventory on January 1 if this was the only unfinished job?
   (2) If manufacturing overhead is applied on the basis of direct labor cost, what overhead rate was used in each year?
(b) Prepare summary entries at January 31 to record the current year's transactions pertaining to Job No. 92.

E15-4 Manufacturing cost data for Orlando Company, which uses a job order cost system, are presented below.

Analyze costs of manufacturing and determine missing amounts.
(SO 2, 5), AN

	Case A	Case B	Case C
Direct materials used	$ (a)	$ 83,000	$ 63,150
Direct labor	50,000	140,000	(h)
Manufacturing overhead applied	42,500	(d)	(i)
Total manufacturing costs	145,650	(e)	213,000
Work in process 1/1/12	(b)	15,500	18,000
Total cost of work in process	201,500	(f)	(j)
Work in process 12/31/12	(c)	11,800	(k)
Cost of goods manufactured	192,300	(g)	222,000

Instructions

Indicate the missing amount for each letter. Assume that in all cases manufacturing overhead is applied on the basis of direct labor cost and the rate is the same.

E15-5 Duggan Company applies manufacturing overhead to jobs on the basis of machine hours used. Overhead costs are expected to total $325,000 for the year, and machine usage is estimated at 125,000 hours.

For the year, $342,000 of overhead costs are incurred and 130,000 hours are used.

Compute the manufacturing overhead rate and under- or overapplied overhead.
(SO 4, 6), AN

Instructions

(a) Compute the manufacturing overhead rate for the year.
(b) What is the amount of under- or overapplied overhead at December 31?
(c) Prepare the adjusting entry to assign the under- or overapplied overhead for the year to cost of goods sold.

E15-6 A job cost sheet of Sandoval Company is given below.

Analyze job cost sheet and prepare entry for completed job.
(SO 2, 3, 4, 5), AP

Job Cost Sheet

JOB NO. 469 — Quantity 2,500
ITEM White Lion Cages — Date Requested 7/2
FOR Todd Company — Date Completed 7/31

Date	Direct Materials	Direct Labor	Manufacturing Overhead
7/10	700		
12	900		
15		440	550
22		380	475
24	1,600		
27	1,500		
31		540	675

Cost of completed job:
Direct materials ____
Direct labor ____
Manufacturing overhead ____
Total cost ____
Unit cost ____

Instructions

(a) Answer the following questions.
(1) What are the source documents for direct materials, direct labor, and manufacturing overhead costs assigned to this job?
(2) What is the predetermined manufacturing overhead rate?
(3) What are the total cost and the unit cost of the completed job? (Round unit cost to nearest cent.)
(b) Prepare the entry to record the completion of the job.

Prepare entries for manufacturing costs.
(SO 2, 3, 4, 5), **AP**

E15-7 Torre Corporation incurred the following transactions.

1. Purchased raw materials on account $46,300.
2. Raw Materials of $36,000 were requisitioned to the factory. An analysis of the materials requisition slips indicated that $6,800 was classified as indirect materials.
3. Factory labor costs incurred were $55,900, of which $51,000 pertained to factory wages payable and $4,900 pertained to employer payroll taxes payable.
4. Time tickets indicated that $50,000 was direct labor and $5,900 was indirect labor.
5. Overhead costs incurred on account were $80,500.
6. Manufacturing overhead was applied at the rate of 150% of direct labor cost.
7. Goods costing $88,000 were completed and transferred to finished goods.
8. Finished goods costing $75,000 to manufacture were sold on account for $103,000.

Instructions
Journalize the transactions. (Omit explanations.)

Prepare entries for manufacturing costs.
(SO 2, 3, 4, 5), **AP**

E15-8 Enos Printing Corp. uses a job order cost system. The following data summarize the operations related to the first quarter's production.

1. Materials purchased on account $192,000, and factory wages incurred $87,300.
2. Materials requisitioned and factory labor used by job:

Job Number	Materials	Factory Labor
A20	$ 35,240	$18,000
A21	42,920	22,000
A22	36,100	15,000
A23	39,270	25,000
General factory use	4,470	7,300
	$158,000	$87,300

3. Manufacturing overhead costs incurred on account $49,500.
4. Depreciation on equipment $14,550.
5. Manufacturing overhead rate is 90% of direct labor cost.
6. Jobs completed during the quarter: A20, A21, and A23.

Instructions
Prepare entries to record the operations summarized above. (Prepare a schedule showing the individual cost elements and total cost for each job in item 6.)

Prepare a cost of goods manufactured schedule and partial financial statements.
(SO 2, 5), **AP**

E15-9 At May 31, 2012, the accounts of Mantle Manufacturing Company show the following.

1. May 1 inventories—finished goods $12,600, work in process $14,700, and raw materials $8,200.
2. May 31 inventories—finished goods $9,500, work in process $17,900, and raw materials $7,100.
3. Debit postings to work in process were: direct materials $62,400, direct labor $50,000, and manufacturing overhead applied $40,000.
4. Sales totaled $210,000.

Instructions
(a) Prepare a condensed cost of goods manufactured schedule.
(b) Prepare an income statement for May through gross profit.
(c) Indicate the balance sheet presentation of the manufacturing inventories at May 31, 2012.

Compute work in process and finished goods from job cost sheets.
(SO 3, 5), **AP**

E15-10 Tierney Company begins operations on April 1. Information from job cost sheets shows the following.

Job Number	Manufacturing Costs Assigned			Month Completed
	April	May	June	
10	$5,200	$4,400		May
11	4,100	3,900	$2,000	June
12	1,200			April
13		4,700	4,500	June
14		5,900	3,600	Not complete

Job 12 was completed in April. Job 10 was completed in May. Jobs 11 and 13 were completed in June. Each job was sold for 25% above its cost in the month following completion.

Instructions

(a) What is the balance in Work in Process Inventory at the end of each month?
(b) What is the balance in Finished Goods Inventory at the end of each month?
(c) What is the gross profit for May, June, and July?

Prepare entries for costs of services provided.
(SO 2, 4, 5), **AP**

E15-11 Shown below are the job cost related accounts for the law firm of Jack, Bob, and Will and their manufacturing equivalents:

Law Firm Accounts	Manufacturing Firm Accounts
Supplies	Raw Materials
Salaries and Wages Payable	Factory Wages Payable
Operating Overhead	Manufacturing Overhead
Service Contracts in Process	Work in Process
Cost of Completed Service Contracts	Cost of Goods Sold

Cost data for the month of March follow.

1. Purchased supplies on account $1,500.
2. Issued supplies $1,200 (60% direct and 40% indirect).
3. Time cards for the month indicated labor costs of $60,000 (80% direct and 20% indirect).
4. Operating overhead costs incurred for cash totaled $40,000.
5. Operating overhead is applied at a rate of 90% of direct attorney cost.
6. Work completed totaled $75,000.

Instructions

(a) Journalize the transactions for March. Omit explanations.
(b) Determine the balance of the Work in Process account. Use a T account.

Determine cost of jobs and ending balance in work in process and overhead accounts.
(SO 3, 4, 6), **AP**

E15-12 Don Lieberman and Associates, a CPA firm, uses job order costing to capture the costs of its audit jobs. There were no audit jobs in process at the beginning of November. Listed below are data concerning the three audit jobs conducted during November.

	Lynn	Brian	Mike
Direct materials	$600	$400	$200
Auditor labor costs	$5,400	$6,600	$3,375
Auditor hours	72	88	45

Overhead costs are applied to jobs on the basis of auditor hours, and the predetermined overhead rate is $50 per auditor hour. The Lynn job is the only incomplete job at the end of November. Actual overhead for the month was $11,000.

Instructions

(a) Determine the cost of each job.
(b) Indicate the balance of the Work in Process account at the end of November.
(c) Calculate the ending balance of the Manufacturing Overhead account for November.

Determine predetermined overhead rate, apply overhead and determine whether balance under- or overapplied.
(SO 4, 6), **AP**

E15-13 Pure Decorating uses a job order costing system to collect the costs of its interior decorating business. Each client's consultation is treated as a separate job. Overhead is applied to each job based on the number of decorator hours incurred. Listed below are data for the current year.

Estimated overhead	$920,000
Actual overhead	$942,800
Estimated decorator hours	40,000
Actual decorator hours	40,500

The company uses Operating Overhead in place of Manufacturing Overhead.

Instructions

(a) Compute the predetermined overhead rate.
(b) Prepare the entry to apply the overhead for the year.
(c) Determine whether the overhead was under- or overapplied and by how much.

Exercises: Set B and Challenge Exercises

Visit the book's companion website, at **www.wiley.com/college/kimmel**, and choose the Student Companion site to access Exercise Set B and Challenge Exercises.

Problems: Set A

Prepare entries in a job order cost system and job cost sheets.
(SO 2, 3, 4, 5, 6), **AP**

P15-1A Deglman Manufacturing uses a job order cost system and applies overhead to production on the basis of direct labor costs. On January 1, 2012, Job No. 50 was the only job in process. The costs incurred prior to January 1 on this job were as follows: direct materials $20,000, direct labor $12,000, and manufacturing overhead $16,000. As of January 1, Job No. 49 had been completed at a cost of $90,000 and was part of finished goods inventory. There was a $15,000 balance in the Raw Materials Inventory account.

During the month of January, Deglman Manufacturing began production on Jobs 51 and 52, and completed Jobs 50 and 51. Jobs 49 and 50 were also sold on account during the month for $122,000 and $158,000, respectively. The following additional events occurred during the month.

1. Purchased additional raw materials of $90,000 on account.
2. Incurred factory labor costs of $70,000. Of this amount $16,000 related to employer payroll taxes.
3. Incurred manufacturing overhead costs as follows: indirect materials $17,000; indirect labor $20,000; depreciation expense on equipment $19,000; and various other manufacturing overhead costs on account $16,000.
4. Assigned direct materials and direct labor to jobs as follows.

Job No.	Direct Materials	Direct Labor
50	$10,000	$ 5,000
51	39,000	25,000
52	30,000	20,000

Instructions

(a) Calculate the predetermined overhead rate for 2012, assuming Deglman Manufacturing estimates total manufacturing overhead costs of $980,000, direct labor costs of $700,000, and direct labor hours of 20,000 for the year.

(b) Open job cost sheets for Jobs 50, 51, and 52. Enter the January 1 balances on the job cost sheet for Job No. 50.

(c) Prepare the journal entries to record the purchase of raw materials, the factory labor costs incurred, and the manufacturing overhead costs incurred during the month of January.

(d) Prepare the journal entries to record the assignment of direct materials, direct labor, and manufacturing overhead costs to production. In assigning manufacturing overhead costs, use the overhead rate calculated in (a). Post all costs to the job cost sheets as necessary.

(e) Job 50, $70,000
Job 51, $99,000

(e) Total the job cost sheets for any job(s) completed during the month. Prepare the journal entry (or entries) to record the completion of any job(s) during the month.

(f) Prepare the journal entry (or entries) to record the sale of any job(s) during the month.

(g) What is the balance in the Finished Goods Inventory account at the end of the month? What does this balance consist of?

(h) What is the amount of over- or underapplied overhead?

Prepare entries in a job order cost system and partial income statement.
(SO 2, 3, 4, 5, 6), **AN**

P15-2A For the year ended December 31, 2012, the job cost sheets of Cinta Company contained the following data.

Job Number	Explanation	Direct Materials	Direct Labor	Manufacturing Overhead	Total Costs
7640	Balance 1/1	$25,000	$24,000	$28,800	$ 77,800
	Current year's costs	30,000	36,000	43,200	109,200
7641	Balance 1/1	11,000	18,000	21,600	50,600
	Current year's costs	43,000	48,000	57,600	148,600
7642	Current year's costs	58,000	55,000	66,000	179,000

Other data:

1. Raw materials inventory totaled $15,000 on January 1. During the year, $140,000 of raw materials were purchased on account.
2. Finished goods on January 1 consisted of Job No. 7638 for $87,000 and Job No. 7639 for $92,000.
3. Job No. 7640 and Job No. 7641 were completed during the year.
4. Job Nos. 7638, 7639, and 7641 were sold on account for $530,000.
5. Manufacturing overhead incurred on account totaled $120,000.
6. Other manufacturing overhead consisted of indirect materials $14,000, indirect labor $18,000, and depreciation on factory machinery $8,000.

Instructions

(a) Prove the agreement of Work in Process Inventory with job cost sheets pertaining to unfinished work. (*Hint:* Use a single T account for Work in Process Inventory.) Calculate each of the following, then post each to the T account: (1) beginning balance, (2) direct materials, (3) direct labor, (4) manufacturing overhead, and (5) completed jobs.

(a) $179,000; Job 7642: $179,000

(b) Prepare the adjusting entry for manufacturing overhead, assuming the balance is allocated entirely to Cost of Goods Sold.

(b) Amount = $6,800

(c) Determine the gross profit to be reported for 2012.

(c) $158,600

Prepare entries in a job order cost system and cost of goods manufactured schedule.

(SO 2, 3, 4, 5), **AP**

P15-3A Stellar Inc. is a construction company specializing in custom patios. The patios are constructed of concrete, brick, fiberglass, and lumber, depending upon customer preference. On June 1, 2012, the general ledger for Stellar Inc. contains the following data.

Raw Materials Inventory	$4,200	Manufacturing Overhead Applied	$32,640
Work in Process Inventory	$5,540	Manufacturing Overhead Incurred	$31,650

Subsidiary data for Work in Process Inventory on June 1 are as follows.

Job Cost Sheets

	Customer Job		
Cost Element	**Gannon**	**Rosenthal**	**Linton**
Direct materials	$ 600	$ 800	$ 900
Direct labor	320	540	580
Manufacturing overhead	400	675	725
	$1,320	$2,015	$2,205

During June, raw materials purchased on account were $4,900, and all wages were paid. Additional overhead costs consisted of depreciation on equipment $700 and miscellaneous costs of $400 incurred on account.

A summary of materials requisition slips and time tickets for June shows the following.

Customer Job	Materials Requisition Slips	Time Tickets
Gannon	$ 800	$ 450
Koss	2,000	800
Rosenthal	500	360
Linton	1,300	1,200
Gannon	300	390
	4,900	3,200
General use	1,500	1,200
	$6,400	$4,400

Overhead was charged to jobs at the same rate of $1.25 per dollar of direct labor cost. The patios for customers Gannon, Rosenthal, and Linton were completed during June and sold for a total of $18,900. Each customer paid in full.

Instructions

(a) Journalize the June transactions: (i) for purchase of raw materials, factory labor costs incurred, and manufacturing overhead costs incurred; (ii) assignment of direct materials, labor, and overhead to production; and (iii) completion of jobs and sale of goods.
(b) Post the entries to Work in Process Inventory.
(c) Reconcile the balance in Work in Process Inventory with the costs of unfinished jobs.
(d) Prepare a cost of goods manufactured schedule for June.

(d) Cost of goods manufactured $13,840

Compute predetermined overhead rates, apply overhead, and calculate under- or overapplied overhead.
(SO 4, 6), **AP**

P15-4A Agassi Manufacturing Company uses a job order cost system in each of its three manufacturing departments. Manufacturing overhead is applied to jobs on the basis of direct labor cost in Department D, direct labor hours in Department E, and machine hours in Department K.

In establishing the predetermined overhead rates for 2012, the following estimates were made for the year.

	Department		
	D	**E**	**K**
Manufacturing overhead	$1,200,000	$1,500,000	$900,000
Direct labor costs	$1,500,000	$1,250,000	$450,000
Direct labor hours	100,000	125,000	40,000
Machine hours	400,000	500,000	120,000

During January, the job cost sheets showed the following costs and production data.

	Department		
	D	**E**	**K**
Direct materials used	$140,000	$126,000	$78,000
Direct labor costs	$120,000	$110,000	$37,500
Manufacturing overhead incurred	$ 99,000	$124,000	$79,000
Direct labor hours	8,000	11,000	3,500
Machine hours	34,000	45,000	10,400

Instructions

(a) 80%, $12, $7.50
(b) $356,000, $368,000, $193,500
(c) $3,000, $(8,000), $1,000

(a) Compute the predetermined overhead rate for each department.
(b) Compute the total manufacturing costs assigned to jobs in January in each department.
(c) Compute the under- or overapplied overhead for each department at January 31.

Analyze manufacturing accounts and determine missing amounts.
(SO 2, 3, 4, 5, 6), **AN**

P15-5A Rodman Corporation's fiscal year ends on November 30. The following accounts are found in its job order cost accounting system for the first month of the new fiscal year.

Raw Materials Inventory

Dec. 1	Beginning balance	(a)	Dec. 31	Requisitions	16,850
31	Purchases	19,225			
Dec. 31	Ending balance	7,975			

Work in Process Inventory

Dec. 1	Beginning balance	(b)	Dec. 31	Jobs completed	(f)
31	Direct materials	(c)			
31	Direct labor	8,800			
31	Overhead	(d)			
Dec. 31	Ending balance	(e)			

Finished Goods Inventory

Dec. 1	Beginning balance	(g)	Dec. 31	Cost of goods sold	(i)
31	Completed jobs	(h)			
Dec. 31	Ending balance	(j)			

Factory Labor

Dec. 31	Factory wages	12,025	Dec. 31	Wages assigned	(k)

Manufacturing Overhead

Dec. 31	Indirect materials	1,900	Dec. 31	Overhead applied	(m)
31	Indirect labor	(l)			
31	Other overhead	1,245			

Other data:

1. On December 1, two jobs were in process: Job No. 154 and Job No. 155. These jobs had combined direct materials costs of $9,750 and direct labor costs of $15,000. Overhead was applied at a rate that was 75% of direct labor cost.

2. During December, Job Nos. 156, 157, and 158 were started. On December 31, Job No. 158 was unfinished. This job had charges for direct materials $3,800 and direct labor $4,800, plus manufacturing overhead. All jobs, except for Job No. 158, were completed in December.
3. On December 1, Job No. 153 was in the finished goods warehouse. It had a total cost of $5,000. On December 31, Job No. 157 was the only job finished that was not sold. It had a cost of $4,000.
4. Manufacturing overhead was $230 overapplied in December.

Instructions

List the letters (a) through (m) and indicate the amount pertaining to each letter.

(c) $14,950
(f) $54,150
(i) $55,150

Problems: Set B

Prepare entries in a job order cost system and job cost sheets.
(SO 2, 3, 4, 5, 6), **AP**

P15-1B Pedriani Manufacturing uses a job order cost system and applies overhead to production on the basis of direct labor hours. On January 1, 2012, Job No. 25 was the only job in process. The costs incurred prior to January 1 on this job were as follows: direct materials $10,000; direct labor $6,000; and manufacturing overhead $9,000. Job No. 23 had been completed at a cost of $42,000 and was part of finished goods inventory. There was a $5,000 balance in the Raw Materials Inventory account.

During the month of January, the company began production on Jobs 26 and 27, and completed Jobs 25 and 26. Jobs 23 and 25 were sold on account during the month for $63,000 and $74,000, respectively. The following additional events occurred during the month.

1. Purchased additional raw materials of $45,000 on account.
2. Incurred factory labor costs of $33,500. Of this amount, $7,500 related to employer payroll taxes.
3. Incurred manufacturing overhead costs as follows: indirect materials $10,000; indirect labor $9,500; depreciation expense on equipment $12,000; and various other manufacturing overhead costs on account $11,000.
4. Assigned direct materials and direct labor to jobs as follows.

Job No.	Direct Materials	Direct Labor
25	$ 5,000	$ 3,000
26	17,000	12,000
27	13,000	9,000

5. The company uses direct labor hours as the activity base to assign overhead. Direct labor hours incurred on each job were as follows: Job No. 25, 200; Job No. 26, 800; and Job No. 27, 600.

Instructions

(a) Calculate the predetermined overhead rate for the year 2012, assuming Pedriani Manufacturing estimates total manufacturing overhead costs of $440,000, direct labor costs of $300,000, and direct labor hours of 20,000 for the year.
(b) Open job cost sheets for Jobs 25, 26, and 27. Enter the January 1 balances on the job cost sheet for Job No. 25.
(c) Prepare the journal entries to record the purchase of raw materials, the factory labor costs incurred, and the manufacturing overhead costs incurred during the month of January.
(d) Prepare the journal entries to record the assignment of direct materials, direct labor, and manufacturing overhead costs to production. In assigning manufacturing overhead costs, use the overhead rate calculated in (a). Post all costs to the job cost sheets as necessary.
(e) Total the job cost sheets for any job(s) completed during the month. Prepare the journal entry (or entries) to record the completion of any job(s) during the month.
(f) Prepare the journal entry (or entries) to record the sale of any job(s) during the month.
(g) What is the balance in the Work in Process Inventory account at the end of the month? What does this balance consist of?
(h) What is the amount of over- or underapplied overhead?

(e) Job 25, $37,400
Job 26, $46,600

Prepare entries in a job order cost system and partial income statement.
(SO 2, 3, 4, 5, 6), **AN**

P15-2B For the year ended December 31, 2012, the job cost sheets of Dosey Company contained the following data.

Job Number	Explanation	Direct Materials	Direct Labor	Manufacturing Overhead	Total Costs
7650	Balance 1/1	$18,000	$20,000	$25,000	$ 63,000
	Current year's costs	32,000	36,000	45,000	113,000
7651	Balance 1/1	12,000	16,000	20,000	48,000
	Current year's costs	30,000	40,000	50,000	120,000
7652	Current year's costs	35,000	68,000	85,000	188,000

Other data:

1. Raw materials inventory totaled $20,000 on January 1. During the year, $100,000 of raw materials were purchased on account.
2. Finished goods on January 1 consisted of Job No. 7648 for $93,000 and Job No. 7649 for $62,000.
3. Job No. 7650 and Job No. 7651 were completed during the year.
4. Job Nos. 7648, 7649, and 7650 were sold on account for $490,000.
5. Manufacturing overhead incurred on account totaled $135,000.
6. Other manufacturing overhead consisted of indirect materials $12,000, indirect labor $16,000 and depreciation on factory machinery $19,500.

Instructions

(a) (1) $111,000
(4) $180,000
Unfinished job 7652, $188,000

(a) Prove the agreement of Work in Process Inventory with job cost sheets pertaining to unfinished work. (*Hint:* Use a single T account for Work in Process Inventory.) Calculate each of the following, then post each to the T account: (1) beginning balance, (2) direct materials, (3) direct labor, (4) manufacturing overhead, and (5) completed jobs.

(b) Amount = $2,500

(b) Prepare the adjusting entry for manufacturing overhead, assuming the balance is allocated entirely to cost of goods sold.

(c) $156,500

(c) Determine the gross profit to be reported for 2012.

Prepare entries in a job order cost system and cost of goods manufactured schedule.
(SO 2, 3, 4, 5), **AP**

P15-3B Robert Perez is a contractor specializing in custom-built jacuzzis. On May 1, 2012, his ledger contains the following data.

Raw Materials Inventory	$30,000
Work in Process Inventory	12,200
Manufacturing Overhead	2,500 (dr.)

The Manufacturing Overhead account has debit totals of $12,500 and credit totals of $10,000. Subsidiary data for Work in Process Inventory on May 1 include:

Job Cost Sheets

Job by Customer	Direct Materials	Direct Labor	Manufacturing Overhead
Stiner	$2,500	$2,000	$1,400
Alton	2,000	1,200	840
Herman	900	800	560
	$5,400	$4,000	$2,800

During May, the following costs were incurred: raw materials purchased on account $4,000, labor paid $7,000, and manufacturing overhead paid $1,400.

A summary of materials requisition slips and time tickets for the month of May reveals the following.

Job by Customer	Materials Requisition Slips	Time Tickets
Stiner	$ 500	$ 400
Alton	600	1,000
Herman	2,300	1,300
Smith	1,900	2,300
	5,300	5,000
General use	1,500	2,000
	$6,800	$7,000

Overhead was charged to jobs on the basis of $0.70 per dollar of direct labor cost. The jacuzzis for customers Stiner, Alton, and Herman were completed during May. The three jacuzzis were sold for a total of $36,000.

Instructions

(a) Prepare journal entries for the May transactions: (i) for purchase of raw materials, factory labor costs incurred, and manufacturing overhead costs incurred; (ii) assignment of raw materials, labor, and overhead to production; and (iii) completion of jobs and sale of goods.
(b) Post the entries to Work in Process Inventory.
(c) Reconcile the balance in Work in Process Inventory with the costs of unfinished jobs.
(d) Prepare a cost of goods manufactured schedule for May.

(d) Cost of goods manufactured $20,190

P15-4B Net Play Manufacturing uses a job order cost system in each of its three manufacturing departments. Manufacturing overhead is applied to jobs on the basis of direct labor cost in Department A, direct labor hours in Department B, and machine hours in Department C.

Compute predetermined overhead rates, apply overhead, and calculate under- or overapplied overhead.
(SO 4, 6), **AP**

In establishing the predetermined overhead rates for 2012, the following estimates were made for the year.

	Department		
	A	**B**	**C**
Manufacturing overhead	$720,000	$640,000	$900,000
Direct labor cost	$600,000	$100,000	$600,000
Direct labor hours	50,000	40,000	40,000
Machine hours	100,000	120,000	150,000

During January, the job cost sheets showed the following costs and production data.

	Department		
	A	**B**	**C**
Direct materials used	$92,000	$86,000	$64,000
Direct labor cost	$48,000	$35,000	$50,400
Manufacturing overhead incurred	$60,000	$60,000	$72,100
Direct labor hours	4,000	3,500	4,200
Machine hours	8,000	10,500	12,600

Instructions

(a) Compute the predetermined overhead rate for each department.
(b) Compute the total manufacturing costs assigned to jobs in January in each department.
(c) Compute the under- or overapplied overhead for each department at January 31.

(a) 120%, $16, $6
(b) $197,600, $177,000, $190,000
(c) $2,400 $4,000, $(3,500)

P15-5B Bell Company's fiscal year ends on June 30. The following accounts are found in its job order cost accounting system for the first month of the new fiscal year.

Analyze manufacturing accounts and determine missing amounts.
(SO 2, 3, 4, 5, 6), **AN**

Raw Materials Inventory

July 1	Beginning balance	19,000	July 31	Requisitions	(a)
31	Purchases	90,400			
July 31	Ending balance	(b)			

Work in Process Inventory

July 1	Beginning balance	(c)	July 31	Jobs completed	(f)
31	Direct materials	80,000			
31	Direct labor	(d)			
31	Overhead	(e)			
July 31	Ending balance	(g)			

Finished Goods Inventory

July 1	Beginning balance	(h)	July 31	Cost of goods sold	(j)
31	Completed jobs	(i)			
July 31	Ending balance	(k)			

Factory Labor

July 31	Factory wages	(l)	July 31	Wages assigned	(m)

Manufacturing Overhead

July 31	Indirect materials	8,900	July 31	Overhead applied	117,000
31	Indirect labor	16,000			
31	Other overhead	(n)			

Other data:

1. On July 1, two jobs were in process: Job No. 4085 and Job No. 4086, with costs of $19,000 and $8,200, respectively.
2. During July, Job Nos. 4087, 4088, and 4089 were started. On July 31, only Job No. 4089 was unfinished. This job had charges for direct materials $2,000 and direct labor $1,500, plus manufacturing overhead. Manufacturing overhead was applied at the rate of 130% of direct labor cost.
3. On July 1, Job No. 4084, costing $145,000, was in the finished goods warehouse. On July 31, Job No. 4088, costing $138,000, was in finished goods.
4. Overhead was $3,000 underapplied in July.

(d) $ 90,000
(f) $308,750
(l) $106,000

Instructions

List the letters (a) through (n) and indicate the amount pertaining to each letter. Show computations.

Problems: Set C

Visit the book's companion website, at **www.wiley.com/college/kimmel**, and choose the Student Companion site to access Problem Set C.

Waterways Continuing Problem

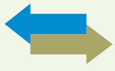
(*Note:* This is a continuation of the Waterways Problem from Chapter 14.)

WCP15 Waterways has two major public-park projects to provide with comprehensive irrigation in one of its service locations this month. Job J57 and Job K52 involve 15 acres of landscaped terrain which will require special-order sprinkler heads to meet the specifications of the project. This problem asks you to help Waterways use a job order cost system to account for production of these parts.

Go to the book's companion website, at **www.wiley.com/college/kimmel**, to find the completion of this problem.

broadening your perspective

DECISION MAKING ACROSS THE ORGANIZATION



BYP15-1 Khan Products Company uses a job order cost system. For a number of months, there has been an ongoing rift between the sales department and the production department concerning a special-order product, TC-1. TC-1 is a seasonal product that is manufactured in batches of 1,000 units. TC-1 is sold at cost plus a markup of 40% of cost.

The sales department is unhappy because fluctuating unit production costs significantly affect selling prices. Sales personnel complain that this has caused excessive customer complaints and the loss of considerable orders for TC-1.

The production department maintains that each job order must be fully costed on the basis of the costs incurred during the period in which the goods are produced. Production personnel maintain that the only real solution to the problem is for the sales department to increase sales in the slack periods.

Andrea Parley, president of the company, asks you as the company accountant to collect quarterly data for the past year on TC-1. From the cost accounting system, you accumulate the following production quantity and cost data.

Costs	Quarter 1	Quarter 2	Quarter 3	Quarter 4
Direct materials	$100,000	$220,000	$ 80,000	$200,000
Direct labor	60,000	132,000	48,000	120,000
Manufacturing overhead	105,000	153,000	97,000	125,000
Total	$265,000	$505,000	$225,000	$445,000
Production in batches	5	11	4	10
Unit cost (per batch)	$ 53,000	$ 45,909	$ 56,250	$ 44,500

Instructions

With the class divided into groups, answer the following questions.

(a) What manufacturing cost element is responsible for the fluctuating unit costs? Why?
(b) What is your recommended solution to the problem of fluctuating unit cost?
(c) Restate the quarterly data on the basis of your recommended solution.

MANAGERIAL ANALYSIS

BYP15-2 In the course of routine checking of all journal entries prior to preparing year-end reports, Betty Eller discovered several strange entries. She recalled that the president's son Joe had come in to help out during an especially busy time and that he had recorded some journal entries. She was relieved that there were only a few of his entries, and even more relieved that he had included rather lengthy explanations. The entries Joe made were:

1.

	Debit	Credit
Work in Process Inventory	25,000	
Cash		25,000

(This is for materials put into process. I don't find the record that we paid for these, so I'm crediting Cash, because I know we'll have to pay for them sooner or later.)

2.

	Debit	Credit
Manufacturing Overhead	12,000	
Cash		12,000

(This is for bonuses paid to salespeople. I know they're part of overhead, and I can't find an account called "Non-factory Overhead" or "Other Overhead" so I'm putting it in Manufacturing Overhead. I have the check stubs, so I know we paid these.)

3.

	Debit	Credit
Wages Expense	120,000	
Cash		120,000

(This is for the factory workers' wages. I have a note that payroll taxes are $18,000. I still think that's part of wages expense, and that we'll have to pay it all in cash sooner or later, so I credited Cash for the wages and the taxes.)

4.

	Debit	Credit
Work in Process Inventory	3,000	
Raw Materials Inventory		3,000

(This is for the glue used in the factory. I know we used this to make the products, even though we didn't use very much on any one of the products. I got it out of inventory, so I credited an inventory account.)

Instructions

(a) How should Joe have recorded each of the four events?
(b) If the entry was not corrected, which financial statements (income statement or balance sheet) would be affected? What balances would be overstated or understated?

REAL-WORLD FOCUS

BYP15-3 Founded in 1970, Parlex Corporation is a world leader in the design and manufacture of flexible interconnect products. Utilizing proprietary and patented technologies, Parlex produces custom flexible interconnects including flexible circuits, polymer thick film, laminated cables, and value-added assemblies for sophisticated electronics used in automotive, telecommunications, computer, diversified electronics, and aerospace applications. In addition to manufacturing sites in Methuen, Massachusetts; Salem, New Hampshire; Cranston, Rhode Island; San Jose, California; Shanghai, China; Isle of Wight, UK; and Empalme, Mexico, Parlex has logistic support centers and strategic alliances throughout North America, Asia, and Europe.

The following information was provided in the company's annual report.

PARLEX COMPANY
Notes to the Financial Statements

The Company's products are manufactured on a job order basis to customers' specifications. Customers submit requests for quotations on each job, and the Company prepares bids based on its own cost estimates. The Company attempts to reflect the impact of changing costs when establishing prices. However, during the past several years, the market conditions for flexible circuits and the resulting price sensitivity haven't always allowed this to transpire. Although still not satisfactory, the Company was able to reduce the cost of products sold as a percentage of sales to 85% this year versus 87% that was experienced in the two immediately preceding years. Management continues to focus on improving operational efficiency and further reducing costs.

Instructions

(a) Parlex management discusses the job order cost system employed by their company. What are several advantages of using the job order approach to costing?
(b) Contrast the products produced in a job order environment, like Parlex, to those produced when process cost systems are used.

MANAGERIAL ACCOUNTING ON THE WEB

BYP15-4 The Institute of Management Accountants sponsors a certification for management accountants, allowing them to obtain the title of Certified Management Accountant.

Address: **www.imanet.org**, or go to **www.wiley.com/college/kimmel**

Steps

1. Go to the site shown above.
2. Choose **CMA Certification**, and then, **Earning & Maintaining Your Credential**.

Instructions

(a) What is the experience qualification requirement?
(b) How many hours of continuing education are required, and what types of courses qualify?

COMMUNICATION ACTIVITY

BYP15-5 You are the management accountant for Williams Manufacturing. Your company does custom carpentry work and uses a job order costing system. Williams sends detailed job cost sheets to its customers, along with an invoice. The job cost sheets show the date materials were used, the dollar cost of materials, and the hours and cost of labor. A predetermined overhead application rate is used, and the total overhead applied is also listed.

Nancy Kopay is a customer who recently had custom cabinets installed. Along with her check in payment for the work done, she included a letter. She thanked the company for including the detailed cost information but questioned why overhead was estimated. She stated that she would be interested in knowing exactly what costs were included in overhead, and she thought that other customers would, too.

Instructions

Prepare a letter to Ms. Kopay (address: 123 Cedar Lane, Altoona, KS 66651) and tell her why you did not send her information on exact costs of overhead included in her job. Respond to her suggestion that you provide this information.

ETHICS CASE

BYP15-6 LRF Printing provides printing services to many different corporate clients. Although LRF bids most jobs, some jobs, particularly new ones, are negotiated on a "cost-plus" basis. Cost-plus means that the buyer is willing to pay the actual cost plus a return (profit) on these costs to LRF.

Alice Reiley, controller for LRF, has recently returned from a meeting where LRF's president stated that he wanted her to find a way to charge more costs to any project that was on a cost-plus basis. The president noted that the company needed more profits to meet its stated goals this period. By charging more costs to the cost-plus projects and therefore fewer costs to the jobs that were bid, the company should be able to increase its profit for the current year.

Alice knew why the president wanted to take this action. Rumors were that he was looking for a new position and if the company reported strong profits, the president's opportunities would be enhanced. Alice also recognized that she could probably increase the cost of certain jobs by changing the basis used to allocate manufacturing overhead.

Instructions

(a) Who are the stakeholders in this situation?
(b) What are the ethical issues in this situation?
(c) What would you do if you were Alice Reiley?

"ALL ABOUT YOU" ACTIVITY

BYP15-7 Many of you will work for a small business. Some of you will even own your own business. In order to operate a small business, you will need a good understanding of managerial accounting, as well as many other skills. Much information is available to assist people who are interested in starting a new business. A great place to start is the website provided by the Small Business Administration, which is an agency of the federal government whose purpose is to support small business.

Instructions

Go to **www.sba.gov** and in the Small Business Planner, Plan Your Business link, review the material under "Get Ready." Answer the following questions.
(a) What are some of the characteristics required of a small business owner?
(b) What are the top 10 reasons given for business failure?

Answers to Insight and Accounting Across the Organization Questions

p. 800 Jobs Won, Money Lost Q: What type of costs do you think the company had been underestimating? **A:** It is most likely that the company failed to estimate and track overhead. In a highly diversified company, overhead associated with the diesel locomotive jobs may have been "lost" in the total overhead pool for the entire company.

p. 811 Sales Are Nice, but Service Revenue Pays the Bills Q: Explain why GE would use job order costing to keep track of the cost of repairing a malfunctioning engine for a major airline. **A:** GE operates in a competitive environment. Other companies offer competing bids to win service contracts on GE's airplane engines. GE needs to know what it costs to repair engines, so that it can present competitive bids while still generating a reasonable profit.

study objectives

After studying this chapter, you should be able to:

1. Understand who uses process cost systems.
2. Explain the similarities and differences between job order cost and process cost systems.
3. Explain the flow of costs in a process cost system.
4. Make the journal entries to assign manufacturing costs in a process cost system.
5. Compute equivalent units.
6. Explain the four steps necessary to prepare a production cost report.
7. Prepare a production cost report.

feature story

BEN & JERRY'S TRACKS ITS MIX-UPS

Ben & Jerry's Homemade, Inc. (*www.benjerry.com*) is one of the "hottest" and "coolest" U.S. companies. Based in Waterbury, Vermont, the ice cream company that started out of a garage in 1978 is now a public company.

Making ice cream is a process—a movement of product from a mixing department to a prepping department to a pint department. The mixing department is where the ice cream is created. In the prep area, the production process adds extras such as cherries and walnuts to make plain ice cream into "Cherry Garcia," Ben & Jerry's most popular flavor, or fudge-covered waffle cone pieces and a swirl of caramel for "Stephen Colbert's Americone Dream." The pint department is where the ice cream is actually put into containers. As the product is processed from one department to the next, the appropriate materials, labor, and overhead are added to it.

"The incoming ingredients from the shipping and receiving departments are stored in certain locations, either in a freezer or dry warehouse," says Beecher Eurich, staff accountant. "As ingredients get added, so do the costs associated with them." How much ice cream is produced? Running plants around the clock, the company produces 18 million gallons a year.

With the company's process costing system, Eurich can tell you how much a certain batch of ice cream costs to make—its materials, labor, and overhead in each of the production departments. She generates reports for the production department heads, but makes sure not to overdo it. "You can get bogged down in numbers," says Eurich. "If you're generating a report that no one can use, then that's a waste of time."

It's more likely, though, that Ben & Jerry's production people want to know how efficient they are. Why? Many own stock in the company.

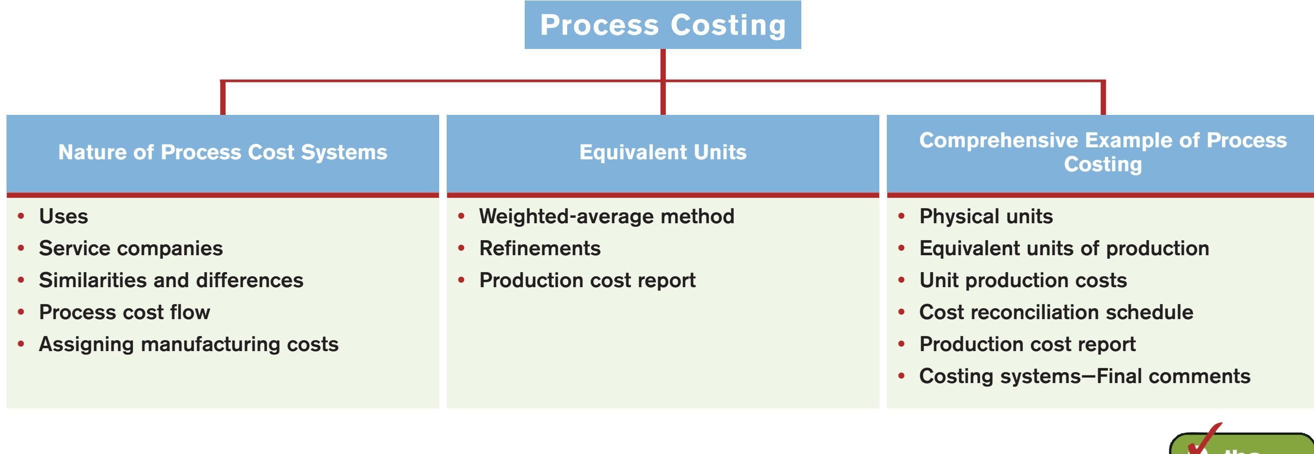
INSIDE CHAPTER 16 . . .

- **Choosing a Cost Driver** *(p. 845)*
- **Keeping Score for the Xbox** *(p. 849)*

preview of chapter 16

The cost accounting system used by companies such as *Ben & Jerry's* is **process cost accounting**. In contrast to job order cost accounting, which focuses on the individual job, process cost accounting focuses on the *processes* involved in mass-producing products that are identical or very similar in nature. The primary objective of the chapter is to explain and illustrate process costing.

The content and organization of this chapter are as follows.



the navigator

The Nature of Process Cost Systems

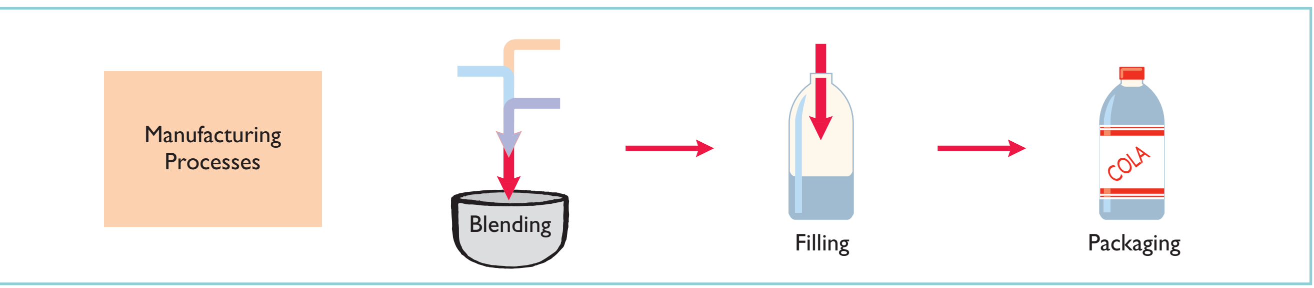
USES OF PROCESS COST SYSTEMS

study objective 1
Understand who uses process cost systems.

Companies use **process cost systems** to apply costs to similar products that are mass-produced in a continuous fashion. Ben & Jerry's uses a process cost system: Production of the ice cream, once it begins, continues until the ice cream emerges, and the processing is the same for the entire run—with precisely the same amount of materials, labor, and overhead. Each finished pint of ice cream is indistinguishable from another.

A company such as USX uses process costing in the manufacturing of steel. Kellogg and General Mills use process costing for cereal production; ExxonMobil uses process costing for its oil refining. Sherwin Williams uses process costing for its paint products. At a bottling company like Coca-Cola, the manufacturing process begins with the blending of ingredients. Next, automated machinery moves the bottles into position and fills them. The production process then caps, packages, and forwards the bottles to the finished goods warehouse. Illustration 16-1 shows this process.

Illustration 16-1
Manufacturing processes



For Coca-Cola, as well as the other companies just mentioned, once production begins, it continues until the finished product emerges, and each unit of finished product is like every other unit.

In comparison, a job order cost system assigns costs to a *specific job*. Examples are the construction of a customized home, the making of a motion picture, or the manufacturing of a specialized machine. Illustration 16-2 provides examples of companies that primarily use either a process cost system or a job order cost system.

Illustration 16-2 Process cost and job order cost companies and products

Process Cost System Company	Product	Job Order Cost System Company	Product
Coca-Cola, PepsiCo	Soft drinks	Young & Rubicam, J. Walter Thompson	Advertising
ExxonMobil, Royal Dutch Shell	Oil	Walt Disney, Warner Brothers	Motion pictures
Intel, Advanced Micro Devices	Computer chips	Center Ice Consultants, Ice Pro	Ice rinks
Dow Chemical, DuPont	Chemicals	Kaiser, Mayo Clinic	Patient health care

PROCESS COSTING FOR SERVICE COMPANIES

Frequently, when we think of service companies, we think of specific, nonroutine tasks, such as rebuilding an automobile engine, providing consulting services on a business acquisition, or working on a major lawsuit. However, many service companies specialize in performing repetitive, routine aspects of a particular business. For example, auto-care vendors such as Jiffy Lube focus on the routine aspects of car care. H&R Block focuses on the routine aspects of basic tax practice, and many large law firms focus on routine legal services, such as uncomplicated divorces. Service companies that provide specific, nonroutine services will probably benefit from using a job order cost system. Those that perform routine, repetitive services will probably be better off with a process cost system.

SIMILARITIES AND DIFFERENCES BETWEEN JOB ORDER COST AND PROCESS COST SYSTEMS

study objective 2
Explain the similarities and differences between job order cost and process cost systems.

In a job order cost system, companies assign costs to each job. In a process cost system, companies track costs through a series of connected manufacturing processes or departments, rather than by individual jobs. Thus, companies use process cost systems when they produce a large volume of uniform or relatively homogeneous products. Illustration 16-3 (page 842) shows the basic flow of costs in these two systems.

The following analysis highlights the basic similarities and differences between these two systems.

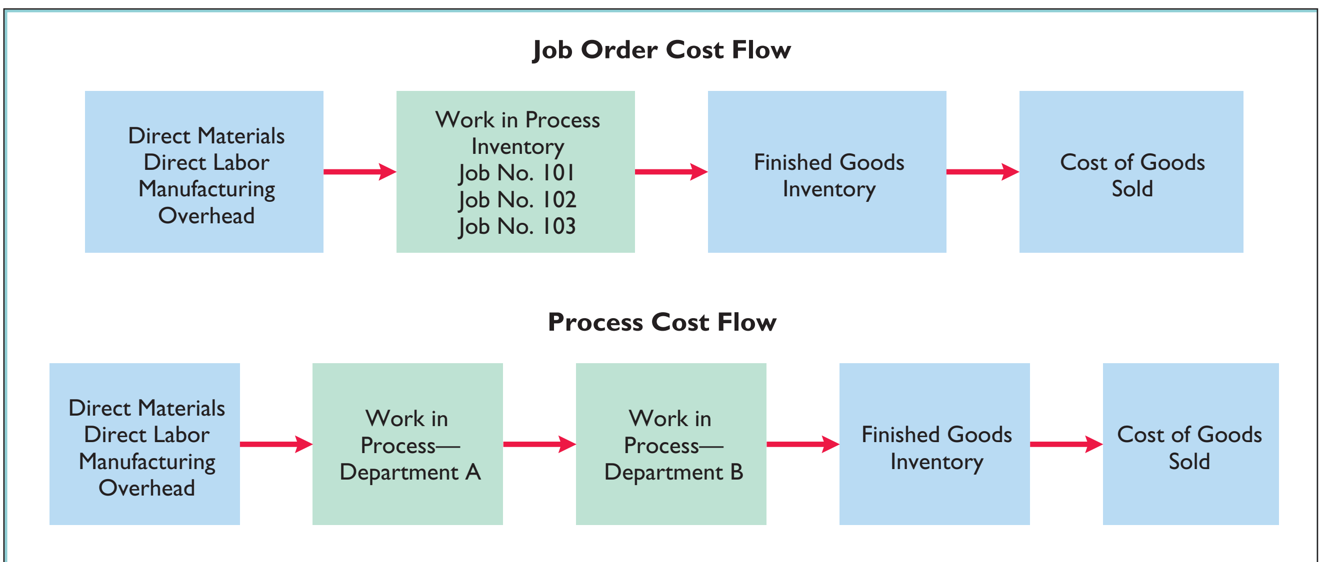


Illustration 16-3 Job order cost and process cost flow

Similarities

Job order cost and process cost systems are similar in three ways:

1. **The manufacturing cost elements.** Both costing systems track three manufacturing cost elements—direct materials, direct labor, and manufacturing overhead.
2. **The accumulation of the costs of materials, labor, and overhead.** Both costing systems debit raw materials to Raw Materials Inventory; factory labor to Factory Labor; and manufacturing overhead costs to Manufacturing Overhead.
3. **The flow of costs.** As noted above, both systems accumulate all manufacturing costs by debits to Raw Materials Inventory, Factory Labor, and Manufacturing Overhead. Both systems then assign these costs to the same accounts—Work in Process, Finished Goods Inventory, and Cost of Goods Sold. **The methods of assigning costs, however, differ significantly.** These differences are explained and illustrated later in the chapter.

Differences

The differences between a job order cost and a process cost system are as follows.

1. **The number of work in process accounts used.** A job order cost system uses only one work in process account. A process cost system uses multiple work in process accounts.
2. **Documents used to track costs.** A job order cost system charges costs to individual jobs and summarizes them in a job cost sheet. A process cost system summarizes costs in a production cost report for each department.
3. **The point at which costs are totaled.** A job order cost system totals costs when the job is completed. A process cost system totals costs at the end of a period of time.
4. **Unit cost computations.** In a job order cost system, the unit cost is the total cost per job divided by the units produced. In a process cost system, the unit cost is total manufacturing costs for the period divided by the units produced during the period.

Illustration 16-4 summarizes the major differences between a job order cost and a process cost system.

Features	Job Order Cost System	Process Cost System
Work in process accounts	• One work in process account	• Multiple work in process accounts
Documents used	• Job cost sheets	• Production cost reports
Determination of total manufacturing costs	• Each job	• Each period
Unit-cost computations	• Cost of each job ÷ Units produced for the job	• Total manufacturing costs ÷ Units produced during the period

Illustration 16-4 Job order versus process cost systems

before you go on...

Do it! Indicate whether each of the following statements is true or false.

1. A law firm is likely to use process costing for major lawsuits.
2. A manufacturer of paintballs is likely to use process costing.
3. Both job order and process costing determine total costs at the end of a period of time.
4. Process costing does not keep track of manufacturing overhead.

Solution

1. false. 2. true. 3. false. 4. false.

Related exercise material: **Do it!** **16-1** and **E16-1.**

COMPARE JOB ORDER AND PROCESS COST SYSTEMS

Action Plan

- Use job order costing in situations where unit costs are high, unit volume is low, and products are unique.
- Use process costing when there is a large volume of relatively homogeneous products.

PROCESS COST FLOW

Illustration 16-5 shows the flow of costs in the process cost system for Tyler Company. Tyler Company manufactures automatic can openers that it sells to retail outlets. Manufacturing consists of two processes: machining and assembly. The Machining Department shapes, hones, and drills the raw materials. The Assembly Department assembles and packages the parts.

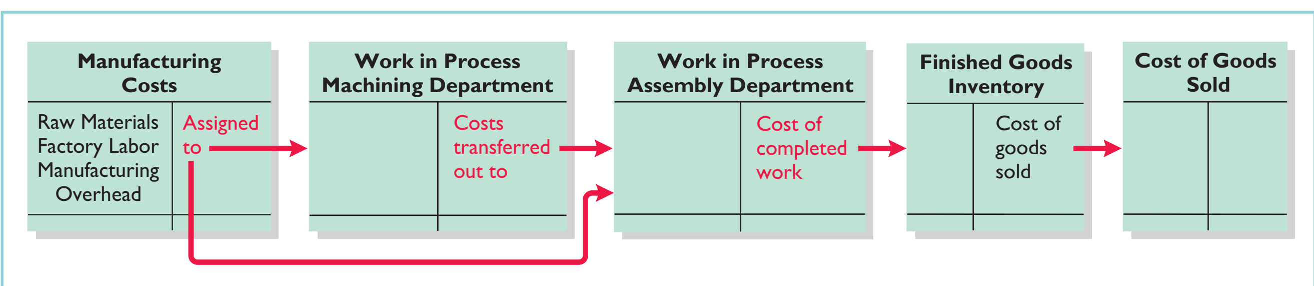

Illustration 16-5 Flow of costs in process cost system

As the flow of costs indicates, the company can add materials, labor, and manufacturing overhead in both the Machining and Assembly departments. When it finishes its work, the Machining Department transfers the partially

completed units to the Assembly Department. The Assembly Department finishes the goods and then transfers them to the finished goods inventory. Upon sale, Tyler removes the goods from the finished goods inventory. Within each department, a similar set of activities is performed on each unit processed.

ASSIGNING MANUFACTURING COSTS–JOURNAL ENTRIES

study objective 4

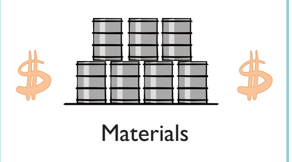
Make the journal entries to assign manufacturing costs in a process cost system.

As indicated, the accumulation of the costs of materials, labor, and manufacturing overhead is the same in a process cost system as in a job order cost system. That is, both systems follow these procedures:

- Companies debit all raw materials to Raw Materials Inventory at the time of purchase.
- They debit all factory labor to Factory Labor as the labor costs are incurred.
- They debit overhead costs to Manufacturing Overhead as these costs are incurred.

However, the assignment of the three manufacturing cost elements to Work in Process in a process cost system is different from a job order cost system. Here we'll look at how companies assign these manufacturing cost elements in a process cost system.

Materials Costs



All raw materials issued for production are a materials cost to the producing department. A process cost system may use materials requisition slips, but **it generally requires fewer requisitions than in a job order cost system, because the materials are used for processes rather than for specific jobs** and therefore typically are for larger quantities.

At the beginning of the first process, a company usually adds most of the materials needed for production. However, other materials may be added at various points. For example, in the manufacture of Hershey candy bars, the chocolate and other ingredients are added at the beginning of the first process, and the wrappers and cartons are added at the end of the packaging process. Tyler Company adds materials at the beginning of each process. Tyler makes the following entry to record the materials used:

Work in Process—Machining	XXXX	
Work in Process—Assembly	XXXX	
Raw Materials Inventory		XXXX
(To record materials used)		

Ice cream maker Ben & Jerry's adds materials in three departments: milk and flavoring in the mixing department, extras such as cherries and walnuts in the prepping department, and cardboard containers in the pinting (packaging) department.

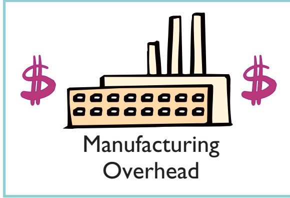
Factory Labor Costs

In a process cost system, as in a job order cost system, companies may use time tickets to determine the cost of labor assignable to production departments. Since they assign labor costs to a process rather than a job, they can obtain, from the payroll register or departmental payroll summaries, the labor cost chargeable to a process.

Labor costs for the Machining Department will include the wages of employees who shape, hone, and drill the raw materials. The entry to assign these costs for Tyler Company is:

Work in Process—Machining	XXXX	
Work in Process—Assembly	XXXX	
Factory Labor		XXXX
(To assign factory labor to production)		

Manufacturing Overhead Costs



The objective in assigning overhead in a process cost system is to allocate the overhead costs to the production departments on an objective and equitable basis. That basis is the activity that "drives" or causes the costs. A primary driver of overhead costs in continuous manufacturing operations is **machine time used**, not direct labor. Thus, companies **widely use machine hours** in allocating manufacturing overhead costs using predetermined overhead rates. Tyler's entry to allocate overhead to the two processes is:

Work in Process—Machining	XXXX	
Work in Process—Assembly	XXXX	
Manufacturing Overhead		XXXX
(To assign overhead to production)		

Management Insight

Choosing a Cost Driver

In one of its automated cost centers, Caterpillar feeds work into the cost center, where robotic machines process it and transfer the finished job to the next cost center without human intervention. One person tends all of the machines and spends more time maintaining machines than operating them. In such cases, overhead rates based on direct labor hours may be misleading. Surprisingly, some companies continue to assign manufacturing overhead on the basis of direct labor despite the fact that there is no cause-and-effect relationship between labor and overhead.

What is the result if a company uses the wrong "cost driver" to assign manufacturing overhead? (See page 887.)

Transfer to Next Department

At the end of the month, Tyler needs an entry to record the cost of the goods transferred out of the Machining Department. In this case, the transfer is to the Assembly Department, and Tyler makes the following entry.

Work in Process—Assembly	XXXXX	
Work in Process—Machining		XXXXX
(To record transfer of units to the Assembly Department)		

Transfer to Finished Goods

When the Assembly Department completes the units, it transfers them to the finished goods warehouse. The entry for this transfer is as follows.

Finished Goods Inventory	XXXXX	
Work in Process—Assembly		XXXXX
(To record transfer of units to finished goods)		

Transfer to Cost of Goods Sold

When Tyler sells the finished goods, it records the cost of goods sold as follows.

Cost of Goods Sold	XXXXX	
Finished Goods Inventory		XXXXX
(To record cost of units sold)		

before you go on...

MANUFACTURING COSTS IN PROCESS COSTING

Do it! Ruth Company manufactures ZEBO through two processes: blending and bottling. In June, raw materials used were Blending $18,000 and Bottling $4,000. Factory labor costs were Blending $12,000 and Bottling $5,000. Manufacturing overhead costs were Blending $6,000 and Bottling $2,500. The company transfers units completed at a cost of $19,000 in the Blending Department to the Bottling Department. The Bottling Department transfers units completed at a cost of $11,000 to Finished Goods. Journalize the assignment of these costs to the two processes and the transfer of units as appropriate.

Action Plan

- In process cost accounting, keep separate work in process accounts for each process.
- When the costs are assigned to production, debit the separate work in process accounts.
- Transfer cost of completed units to the next process or to Finished Goods.

Solution

The entries are:

Work in Process—Blending	18,000	
Work in Process—Bottling	4,000	
Raw Materials Inventory		22,000
(To record materials used)		
Work in Process—Blending	12,000	
Work in Process—Bottling	5,000	
Factory Labor		17,000
(To assign factory labor to production)		
Work in Process—Blending	6,000	
Work in Process—Bottling	2,500	
Manufacturing Overhead		8,500
(To assign overhead to production)		
Work in Process—Bottling	19,000	
Work in Process—Blending		19,000
(To record transfer of units to the Bottling Department)		
Finished Goods Inventory	11,000	
Work in Process—Bottling		11,000
(To record transfer of units to finished goods)

Equivalent Units

Compute equivalent units.

Suppose you have a work-study job in the office of your college's president, and she asks you to compute the cost of instruction per full-time equivalent student at your college. The college's vice president for finance provides the following information.

Illustration 16-6
Information for full-time student example

Costs:	
Total cost of instruction	$9,000,000
Student population:	
Full-time students	900
Part-time students	1,000

Part-time students take 60% of the classes of a full-time student during the year. To compute the number of full-time equivalent students per year, you would make the following computation.

Illustration 16-7
Full-time equivalent unit computation

Full-time Students	+	Equivalent Units of Part-time Students	=	Full-time Equivalent Students
900	+	(60% × 1,000)	=	1,500

The cost of instruction per full-time equivalent student is therefore the total cost of instruction ($9,000,000) divided by the number of full-time equivalent students (1,500), which is $6,000 ($9,000,000 ÷ 1,500).

A process cost system uses the same idea, called equivalent units of production. **Equivalent units of production** measure the work done during the period, expressed in fully completed units. Companies use this measure to determine the cost per unit of completed product.

WEIGHTED-AVERAGE METHOD

The formula to compute equivalent units of production is as follows.

Illustration 16-8
Equivalent units of production formula

Units Completed and Transferred Out	+	Equivalent Units of Ending Work in Process	=	Equivalent Units of Production

To better understand this concept of equivalent units, consider the following two separate examples.

Example 1: In a specific period the entire output of Sullivan Company's Blending Department consists of ending work in process of 4,000 units which are 60% complete as to materials, labor, and overhead. The equivalent units of production for the Blending Department are therefore 2,400 units (4,000 × 60%).

Example 2: The output of Kori Company's Packaging Department during the period consists of 10,000 units completed and transferred out, and 5,000 units in ending work in process which are 70% completed. The equivalent units of production are therefore 13,500 [10,000 + (5,000 × 70%)].

This method of computing equivalent units is referred to as the **weighted-average method**. It considers the degree of completion (weighting) of the units completed and transferred out and the ending work in process.

REFINEMENTS ON THE WEIGHTED-AVERAGE METHOD

Kellogg Company has produced Eggo® Waffles since 1970. Three departments produce these waffles: Mixing, Baking, and Freezing/Packaging. The Mixing Department combines dry ingredients, including flour, salt, and baking powder, with liquid ingredients, including eggs and vegetable oil, to make waffle batter. Illustration 16-9 provides information related to the Mixing Department at the end of June.

Illustration 16-9
Information for Mixing Department

MIXING DEPARTMENT

		Percentage Complete	
	Physical Units	**Materials**	**Conversion Costs**
Work in process, June 1	100,000	100%	70%
Started into production	800,000		
Total units	900,000		
Units transferred out	700,000		
Work in process, June 30	200,000	100%	60%
Total units	900,000		

Helpful Hint When are separate unit cost computations needed for materials and conversion costs? Answer: Whenever the two types of costs do not occur in the process at the same time.

Illustration 16-9 indicates that the beginning work in process is 100% complete as to materials cost and 70% complete as to conversion costs. **Conversion costs are the sum of labor costs and overhead costs.** In other words, Kellogg adds both the dry and liquid ingredients (materials) at the beginning of the waffle-making process, and the conversion costs (labor and overhead) related to the mixing of these ingredients are incurred uniformly and are 70% complete. The ending work in process is 100% complete as to materials cost and 60% complete as to conversion costs.

We then use the Mixing Department information to determine equivalent units. **In computing equivalent units, the beginning work in process is not part of the equivalent-units-of-production formula.** The units transferred out to the Baking Department are fully complete as to both materials and conversion costs. The ending work in process is fully complete as to materials, but only 60% complete as to conversion costs. We therefore need to make **two equivalent unit computations**: one for materials, and the other for conversion costs. Illustration 16-10 shows these computations.

Illustration 16-10
Computation of equivalent units—Mixing Department

Ethics Note An unethical manager might use incorrect completion percentages when determining equivalent units. This results in either raising or lowering costs. Since completion percentages are somewhat subjective, this form of income manipulation can be difficult to detect.

MIXING DEPARTMENT

	Equivalent Units	
	Materials	**Conversion Costs**
Units transferred out	700,000	700,000
Work in process, June 30		
200,000 × 100%	200,000	
200,000 × 60%		120,000
Total equivalent units	900,000	820,000

We can refine the earlier formula used to compute equivalent units of production (Illustration 16-8, page 847) to show the computations for materials and for conversion costs, as follows.

Units Completed and Transferred Out–Materials	+	Equivalent Units of Ending Work in Process–Materials	=	Equivalent Units of Production–Materials
Units Completed and Transferred Out–Conversion Costs	+	Equivalent Units of Ending Work in Process–Conversion Costs	=	Equivalent Units of Production–Conversion Costs

Illustration 16-11
Refined equivalent units of production formula

Management Insight

Keeping Score for the Xbox

When you are as big and as profitable as Microsoft, you get to a point where continued rapid growth is very difficult. For example, many believe it is unlikely that Microsoft will see much growth in software sales. As a result, the company is looking for new markets, such as the video game market with its Xbox player.

Profitability in the video-game hardware market has been elusive. Microsoft has struggled to control the costs of both manufacturing and distribution. One analyst predicted that Microsoft's "snowballing" costs in the next period could exceed budget by $2.4 billion. Microsoft's Chief Financial Officer blamed the high costs on unexpectedly high volumes, saying, "We pushed market volumes very high in the Xbox business. As a result of that we incurred some costs in the supply chain." Given these issues, and despite its incredible success as a software company, some observers question whether Microsoft will be able to make the changes that are required to become a successful hardware manufacturer.

Source: Rober A. Guth, "Microsoft Net Rises 16%, but Costs Damp Results," *Wall Street Journal* (April 28, 2006).

? In what ways has cost accounting probably become more critical for Microsoft in recent years? (See page 887.)

before you go on...

Do it! The fabricating department has the following production and cost data for the current month.

EQUIVALENT UNITS

Beginning Work in Process	Units Transferred Out	Ending Work in Process
–0–	15,000	10,000

Materials are entered at the beginning of the process. The ending work in process units are 30% complete as to conversion costs. Compute the equivalent units of production for (a) materials and (b) conversion costs.

Action Plan

- To measure the work done during the period, expressed in fully completed units, compute equivalent units of production.
- Use the appropriate formula: Units completed and transferred out + Equivalent units of ending work in process = Equivalent units of production.

Solution

(a) Since materials are entered at the beginning of the process, the equivalent units of ending work in process are 10,000. Thus, 15,000 units + 10,000 units = 25,000 equivalent units of production for materials.

(b) Since ending work in process is only 30% complete as to conversion costs, the equivalent units of ending work in process are 3,000 (30% × 10,000 units). Thus, 15,000 units + 3,000 units = 18,000 equivalent units of production for conversion costs.

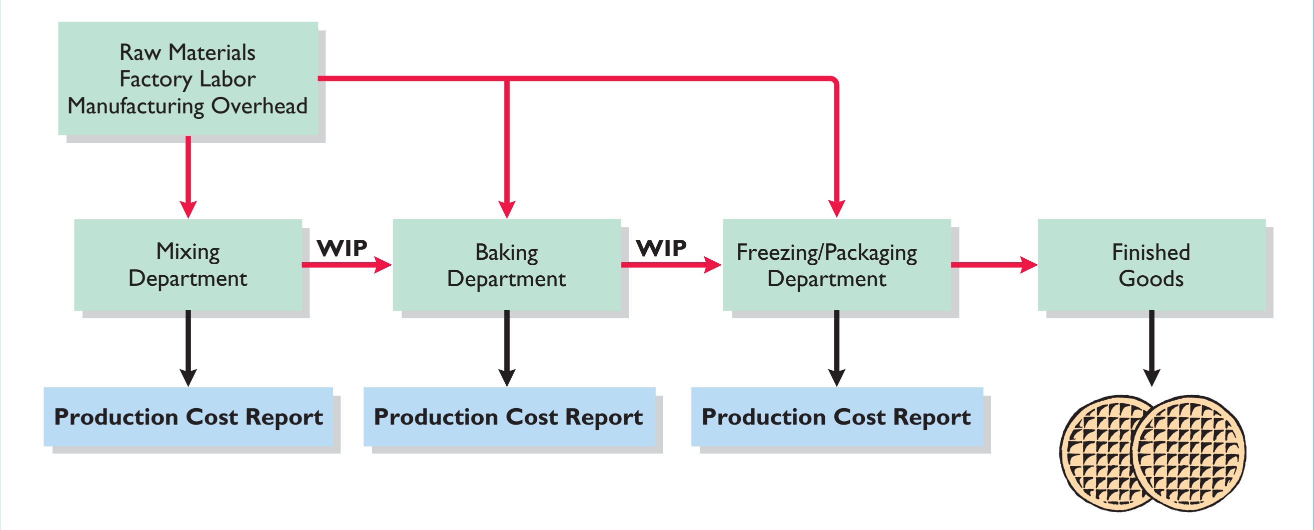
PRODUCTION COST REPORT

study objective 6

Explain the four steps necessary to prepare a production cost report.

As mentioned earlier, companies prepare a production cost report for each department. A **production cost report** is the key document that management uses to understand the activities in a department; it shows the production quantity and cost data related to that department. For example, in producing Eggo® Waffles, Kellogg Company uses three production cost reports: Mixing, Baking, and Freezing/Packaging. Illustration 16-12 shows the flow of costs to make an Eggo® Waffle and the related production cost reports for each department.

Illustration 16-12
Flow of costs in making Eggo® Waffles



In order to complete a production cost report, the company must perform four steps, which, as a whole, make up the process costing system.

1. Compute the physical unit flow.
2. Compute the equivalent units of production.
3. Compute unit production costs.
4. Prepare a cost reconciliation schedule.

The next section explores these steps in an extended example.

Comprehensive Example of Process Costing

Illustration 16-13 shows assumed data for the Mixing Department at Kellogg Company for the month of June. We will use this information to complete a production cost report for the Mixing Department.

COMPUTE THE PHYSICAL UNIT FLOW (STEP 1)

Physical units are the actual units to be accounted for during a period, irrespective of any work performed. To keep track of these units, add the units started (or transferred) into production during the period to the units in process at the beginning of the period. This amount is referred to as the **total units to be accounted for**.

Illustration 16-13
Unit and cost data—Mixing Department

MIXING DEPARTMENT	
Units	
Work in process, June 1	100,000
Direct materials: 100% complete	
Conversion costs: 70% complete	
Units started into production during June	800,000
Units completed and transferred out to Baking Department	700,000
Work in process, June 30	200,000
Direct materials: 100% complete	
Conversion costs: 60% complete	
Costs	
Work in process, June 1	
Direct materials: 100% complete	$ 50,000
Conversion costs: 70% complete	35,000
Cost of work in process, June 1	$ 85,000
Costs incurred during production in June	
Direct materials	$400,000
Conversion costs	170,000
Costs incurred in June	$570,000

The total units then are accounted for by the output of the period. The output consists of units transferred out during the period and any units in process at the end of the period. This amount is referred to as the **total units accounted for**. Illustration 16-14 shows the flow of physical units for Kellogg's Mixing Department for the month of June.

Illustration 16-14
Physical unit flow—Mixing Department

MIXING DEPARTMENT	**Physical Units**
Units to be accounted for	
Work in process, June 1	100,000
Started (transferred) into production	800,000
Total units	**900,000**
Units accounted for	
Completed and transferred out	700,000
Work in process, June 30	200,000
Total units	**900,000**

The records indicate that the Mixing Department must account for 900,000 units. Of this sum, 700,000 units were transferred to the Baking Department and 200,000 units were still in process.

COMPUTE EQUIVALENT UNITS OF PRODUCTION (STEP 2)

Once the physical flow of the units is established, Kellogg must measure the Mixing Department's productivity in terms of equivalent units of production. The Mixing Department adds materials at the beginning of the process, and it incurs conversion costs uniformly during the process. Thus, we need two computations of equivalent units: one for materials and one for conversion costs. The equivalent unit computation is as follows.

Helpful Hint Materials are not always added at the beginning of the process. For example, materials are sometimes added uniformly during the process.

Illustration 16-15
Computation of equivalent units—Mixing Department

Helpful Hint Remember that we ignore the beginning work in process in this computation.

	Equivalent Units	
	Materials	**Conversion Costs**
Units transferred out	700,000	700,000
Work in process, June 30		
200,000 × 100%	200,000	
200,000 × 60%		120,000
Total equivalent units	900,000	820,000

COMPUTE UNIT PRODUCTION COSTS (STEP 3)

Armed with the knowledge of the equivalent units of production, we can now compute the unit production costs. **Unit production costs** are costs expressed in terms of equivalent units of production. When equivalent units of production are different for materials and conversion costs, we compute three unit costs: (1) materials, (2) conversion, and (3) total manufacturing.

The computation of total materials cost related to Eggo® Waffles is as follows.

Illustration 16-16
Total materials cost computation

Work in process, June 1	
Direct materials cost	$ 50,000
Costs added to production during June	
Direct materials cost	400,000
Total materials cost	$450,000

The computation of unit materials cost is as follows.

Illustration 16-17
Unit materials cost computation

Total Materials Cost	÷	Equivalent Units of Materials	=	Unit Materials Cost
$450,000	÷	900,000	=	$0.50

Illustration 16-18 shows the computation of total conversion costs.

Illustration 16-18
Total conversion costs computation

Work in process, June 1	
Conversion costs	$ 35,000
Costs added to production during June	
Conversion costs	170,000
Total conversion costs	$205,000

The computation of unit conversion cost is as follows.

Illustration 16-19
Unit conversion cost computation

Total Conversion Costs	÷	Equivalent Units of Conversion Costs	=	Unit Conversion Cost
$205,000	÷	820,000	=	$0.25

Total manufacturing cost per unit is therefore computed as shown in Illustration 16-20.

Unit Materials Cost	+	Unit Conversion Cost	=	Total Manufacturing Cost per Unit
$0.50	+	$0.25	=	$0.75

Illustration 16-20 Total manufacturing cost per unit

PREPARE A COST RECONCILIATION SCHEDULE (STEP 4)

We are now ready to determine the cost of goods transferred out of the Mixing Department to the Baking Department and the costs in ending work in process. Kellogg charged total costs of $655,000 to the Mixing Department in June, calculated as follows.

Costs to be accounted for	
Work in process, June 1	$ 85,000
Started into production	570,000
Total costs	**$655,000**

Illustration 16-21 Costs charged to Mixing Department

The company then prepares a cost reconciliation schedule to assign these costs to (a) units transferred out to the Baking Department and (b) ending work in process.

MIXING DEPARTMENT
Cost Reconciliation Schedule

Costs accounted for		
Transferred out (700,000 × $0.75)		$ 525,000
Work in process, June 30		
Materials (200,000 × $0.50)	$100,000	
Conversion costs (120,000 × $0.25)	30,000	130,000
Total costs		**$655,000**

Illustration 16-22 Cost reconciliation schedule—Mixing Department

Kellogg uses the total manufacturing cost per unit, $0.75, in costing the **units completed** and transferred to the Baking Department. In contrast, the unit cost of materials and the unit cost of conversion are needed in costing **units in process**. The **cost reconciliation schedule** shows that the **total costs accounted for** (Illustration 16-22) equal the **total costs to be accounted for** (Illustration 16-21).

PREPARING THE PRODUCTION COST REPORT

study objective 7 Prepare a production cost report.

At this point, Kellogg is ready to prepare the production cost report for the Mixing Department. As indicated earlier, this report is an internal document for management that shows production quantity and cost data for a production department.

There are four steps in preparing a production cost report. They are:

1. Compute the physical unit flow.
2. Compute the equivalent units of production.
3. Compute unit production costs.
4. Prepare a cost reconciliation schedule.

Illustration 16-23 (page 854) shows the production cost report for the Mixing Department. The report identifies the four steps.

Illustration 16-23
Production cost report

16	Costs in June	(a)	$450,000	$205,000	$655,000
17	Equivalent units	(b)	900,000	820,000	
18	Unit costs [(a) ÷ (b)]		$0.50	$0.25	$0.75
19	Costs to be accounted for				
20	Work in process, June 1				$85,000
21	Started into production				570,000
22	Total costs				$655,000
23	**Cost Reconciliation Schedule** **Step 4**				
24	Costs accounted for				
25	Transferred out (700,000 × $0.75)				$525,000
26	Work in process, June 30				
27	Materials (200,000 × $0.50)			$100,000	
28	Conversion costs (120,000 × $0.25)			30,000	130,000
29	Total costs				$655,000

Production cost reports provide a basis for evaluating the productivity of a department. In addition, managers can use the cost data to assess whether unit costs and total costs are reasonable. By comparing the quantity and cost data with predetermined goals, top management can also judge whether current performance is meeting planned objectives.

DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
What is the cost of a product?	Cost of materials, labor, and overhead assigned to processes used to make the product	Production cost report	Compare costs to previous periods, to competitors, and to expected selling price to evaluate overall profitability.

before you go on...

COST RECONCILIATION SCHEDULE

Do it! In March, Rodayo Manufacturing had the following unit production costs: materials $6 and conversion costs $9. On March 1, it had zero work in process. During March, Rodayo transferred out 12,000 units. As of March 31, 800 units that were 25 percent complete as to conversion costs and 100 percent complete as to materials were in ending work in process. Assign the costs to the units transferred out and in process.

Solution

The assignment of costs is as follows.

Costs accounted for		
Transferred out (12,000 × $15)		$180,000
Work in process, March 31		
Materials (800 × $6)	$4,800	
Conversion costs (200[a] × $9)	1,800	6,600
Total costs		$186,600

[a]800 × 25%

Action Plan

- Assign the total manufacturing cost of $15 per unit to the 12,000 units transferred out.
- Assign the materials cost and conversion costs based on equivalent units of production to units in ending work in process.

COSTING SYSTEMS–FINAL COMMENTS

Companies often use a combination of a process cost and a job order cost system. Called **operations costing**, this hybrid system is similar to process costing in its assumption that standardized methods are used to manufacture the product. At the same time, the product may have some customized, individual features that require the use of a job order cost system.

Consider, for example, the automobile manufacturer Ford Motor Company. Each vehicle at a given plant goes through the same assembly line, but Ford uses different materials (such as seat coverings, paint, and tinted glass) for different vehicles. Similarly, Kellogg's Pop-Tarts® toaster pastries go through numerous standardized processes—mixing, filling, baking, frosting, and packaging. The pastry dough, though, comes in different flavors—plain, chocolate, and graham—and fillings include Smucker's® real fruit, chocolate fudge, vanilla creme, brown sugar cinnamon, and s'mores.

A cost-benefit tradeoff occurs as a company decides which costing system to use. A job order cost system, for example, provides detailed information related to the cost of the product. Because each job has its own distinguishing characteristics, the system can provide an accurate cost per job. This information is useful in controlling costs and pricing products. However, the cost of implementing a job order cost system is often expensive because of the accounting costs involved.

On the other hand, for a company like Intel, which makes computer chips, is there a benefit in knowing whether the cost of the one hundredth chip produced is different from the one thousandth chip produced? Probably not. An average cost of the product will suffice for control and pricing purposes.

In summary, when deciding to use one of these systems, or a combination system, a company must weigh the costs of implementing the system against the benefits from the additional information provided.

DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
What costing method should be used?	Type of product or service produced	Cost of accounting system; benefits of additional information	The benefits of providing the additional information should exceed the costs of the accounting system needed to develop the information.

USING THE DECISION TOOLKIT

Essence Company manufactures a high-end after-shave lotion, called Eternity, in 10-ounce plastic bottles. Because the market for after-shave lotion is highly competitive, the company is very concerned about keeping its costs under control. Eternity is manufactured through three processes: mixing, filling, and corking. Materials are added at the beginning of the process, and labor and overhead are incurred uniformly throughout each process. The company uses a weighted-average method to cost its product. A partially completed production cost report for the month of May for the Mixing Department is shown below.

ESSENCE COMPANY

Work in process, May 31, 800 units, 100% complete as to materials and 50% complete as to conversion costs.				

Instructions

(a) Prepare a production cost report for the Mixing Department for the month of May.
(b) Prepare the journal entry to record the transfer of goods from the Mixing Department to the Filling Department.
(c) Explain why Essence Company is using a process cost system to account for its costs.

Action Plan

- Compute the physical unit flow—that is, the total units to be accounted for.
- Compute the equivalent units of production.
- Compute the unit production costs, expressed in terms of equivalent units of production.
- Prepare a cost reconciliation schedule, which shows that the total costs accounted for equal the total costs to be accounted for.

Solution

(a) A completed production cost report for the Mixing Department is shown below. Computations to support the amounts reported follow the report.

ESSENCE COMPANY
Mixing Department
Production Cost Report
For the Month Ended May 31, 2012

		Equivalent Units		
Quantities	**Physical Units**	**Materials**	**Conversion Costs**	
Units to be accounted for	Step 1	Step 2		
Work in process, May 1	1,000			
Started into production	2,000			
Total units	3,000			
Units accounted for				
Transferred out	2,200	2,200	2,200	
Work in process, May 31	800	800	400 (800 × 50%)	
Total units	3,000	3,000	2,600	

Costs		**Materials**	**Conversion Costs**	**Total**
Unit costs Step 3				
Costs in May*	(a)	$149,100	$26,520	$175,620
Equivalent units	(b)	3,000	2,600	
Unit costs [(a) ÷ (b)]		$49.70	$10.20	$59.90
Costs to be accounted for				
Work in process, May 1				$ 56,300
Started into production				119,320
Total costs				$175,620

*Additional computations to support production cost report data:
Materials cost—$49,100 + $100,000
Conversion costs—$7,200 + $19,320 ($119,320 − $100,000)

Cost Reconciliation Schedule Step 4		
Costs accounted for		
Transferred out (2,200 × $59.90)		$131,780
Work in process, May 31		
Materials (800 × $49.70)	$39,760	
Conversion costs (400 × $10.20)	4,080	43,840
Total costs		$175,620

(b)		
Work in Process—Filling	131,780	
Work in Process—Mixing		131,780

(c) Companies use process cost systems to apply costs to similar products that are mass-produced in a continuous fashion. Essence Company uses a process cost system because production of the after-shave lotion, once it begins, continues until the after-shave lotion emerges. The processing is the same for the entire run—with precisely the same amount of materials, labor, and overhead. Each bottle of Eternity after-shave lotion is indistinguishable from another.

Summary of Study Objectives

1 Understand who uses process cost systems. Companies that mass-produce similar products in a continuous fashion use process cost systems. Once production begins, it continues until the finished product emerges. Each unit of finished product is indistinguishable from every other unit.

2 Explain the similarities and differences between job order cost and process cost systems. Job order cost systems are similar to process cost systems in three ways: (1) Both systems track the same cost elements—direct materials, direct labor, and manufacturing overhead. (2) Both accumulate costs in the same accounts—Raw Materials Inventory, Factory Labor, and Manufacturing Overhead. (3) Both assign accumulated costs to the same accounts—Work in Process, Finished Goods Inventory, and Cost of Goods Sold. However, the method of assigning costs differs significantly.

There are four main differences between the two cost systems: (1) A process cost system uses separate accounts for each department or manufacturing process, rather than only one work in process account used in a job order cost system. (2) A process cost system summarizes costs in a production cost report for each department. A job order cost system charges costs to individual jobs and summarizes them in a job cost sheet. (3) Costs are totaled at the end of a time period in a process cost system, but at the completion of a job in a job order cost system. (4) A process cost system calculates unit cost as: Total manufacturing costs for the period ÷ Units produced during the period. A job order cost system calculates unit cost as: Total cost per job ÷ Units produced.

3 Explain the flow of costs in a process cost system. A process cost system assigns manufacturing costs for raw materials, labor, and overhead to work in process accounts for various departments or manufacturing processes. It transfers the costs of partially completed units from one department to another as those units move through the manufacturing process. The system transfers the costs of completed work to Finished Goods Inventory. Finally, when inventory is sold, the system transfers the costs to Cost of Goods Sold.

4 Make the journal entries to assign manufacturing costs in a process cost system. Entries to assign the costs of raw materials, labor, and overhead consist of a credit to Raw Materials Inventory, Factory Labor, and Manufacturing Overhead, and a debit to Work in Process for each department. Entries to record the cost of goods transferred to another department are a credit to Work in Process for the department whose work is finished and a debit to the department to which the goods are transferred. The entry to record units completed and transferred to the warehouse is a credit to Work in Process for the department whose work is finished and a debit to Finished Goods Inventory. The entry to record the sale of goods is a credit to Finished Goods Inventory and a debit to Cost of Goods Sold.

5 Compute equivalent units. Equivalent units of production measure work done during a period, expressed in fully completed units. Companies use this measure to determine the cost per unit of completed product. Equivalent units are the sum of units completed and transferred out plus equivalent units of ending work in process.

6 Explain the four steps necessary to prepare a production cost report. The four steps to complete a production cost report are: (1) Compute the physical unit flow—that is, the total units to be accounted for. (2) Compute the equivalent units of production. (3) Compute the unit production costs, expressed in terms of equivalent units of production. (4) Prepare a cost reconciliation schedule, which shows that the total costs accounted for equal the total costs to be accounted for.

7 Prepare a production cost report. The production cost report contains both quantity and cost data for a production department. There are four sections in the report: (1) number of physical units, (2) equivalent units determination, (3) unit costs, and (4) cost reconciliation schedule.

appendix 16A

FIFO Method

In this chapter, we demonstrated the weighted-average method of computing equivalent units. Some companies use a different method, referred to as the **first-in, first-out (FIFO) method**, to compute equivalent units. The purpose of this appendix is to illustrate how companies use the FIFO method to prepare a production cost report.

EQUIVALENT UNITS UNDER FIFO

study objective 8
Compute equivalent units using the FIFO method.

Under the FIFO method, companies compute equivalent units on a first-in, first-out basis. Some companies favor the FIFO method because the FIFO cost assumption usually corresponds to the actual physical flow of the goods. Under the FIFO method, companies therefore assume that the beginning work in process is completed before new work is started.

Using the FIFO method, equivalent units are the sum of the work performed to:

1. Finish the units of beginning work in process inventory.
2. Complete the units started into production during the period (referred to as the **units started and completed**).
3. Start, but only partially complete, the units in ending work in process inventory.

Normally, in a process costing system, some units will always be in process at both the beginning and end of the period.

Illustration

Illustration 16A-1 (page 860) shows the physical flow of units for the Assembly Department of Shutters Inc. In addition, it indicates the degree of completion of the work in process accounts in regard to conversion costs.

Illustration 16A-1
Physical unit flow—Assembly Department

ASSEMBLY DEPARTMENT

	Physical Units
Units to be accounted for	
Work in process, June 1 (40% complete)	500
Started (transferred) into production	8,000
Total units	8,500
Units accounted for	
Completed and transferred out	8,100
Work in process, June 30 (75% complete)	400
Total units	8,500

In Illustration 16A-1, the units completed and transferred out (8,100) plus the units in ending work in process (400) equal the total units to be accounted for (8,500). Using FIFO, we then compute equivalent units as follows.

1. The 500 units of beginning work in process were 40 percent complete. Thus, 300 equivalent units (60% × 500 units) were required to complete the beginning inventory.
2. The units started and completed during the current month are the units transferred out minus the units in beginning work in process. For the Assembly Department, units started and completed are 7,600 (8,100 − 500).
3. The 400 units of ending work in process were 75 percent complete. Thus, equivalent units were 300 (400 × 75%).

Equivalent units for the Assembly Department are 8,200, computed as follows.

Illustration 16A-2
Computation of equivalent units—FIFO method

ASSEMBLY DEPARTMENT

Production Data	Physical Units	Work Added This Period	Equivalent Units
Work in process, June 1	500	60%	300
Started and completed	7,600	100%	7,600
Work in process, June 30	400	75%	300
Total	8,500		8,200

COMPREHENSIVE EXAMPLE

To provide a complete illustration of the FIFO method, we will use the data for the Mixing Department at Kellogg Company for the month of June, as shown in Illustration 16A-3 (page 861).

Compute the Physical Unit Flow (Step 1)

Illustration 16A-4 (page 861) shows the physical flow of units for Kellogg for the month of June for the Mixing Department.

Under the FIFO method, companies often expand the physical units schedule, as shown in Illustration 16A-5 (page 861) to explain the transferred-out section. As a result, this section reports the beginning work in process and the units started and completed. These two items further explain the completed and transferred-out section.

Illustration 16A-3

Work in process, June 1	100,000
Started (transferred) into production	800,000
Total units	900,000
Units accounted for	
Completed and transferred out	
Work in process, June 1	100,000
Started and completed	600,000
	700,000
Work in process, June 30	200,000
Total units	900,000

The records indicate that the Mixing Department must account for 900,000 units. Of this sum, 700,000 units were transferred to the Baking Department and 200,000 units were still in process.

Compute Equivalent Units of Production (Step 2)

Helpful Hint Materials are not always added at the beginning of the process. For example, companies sometimes add materials uniformly during the process.

As with the method presented in the chapter, once they determine the physical flow of the units, companies need to determine equivalent units of production. The Mixing Department adds materials at the beginning of the process, and it incurs conversion costs uniformly during the process. Thus, Kellogg must make two computations of equivalent units: one for materials and one for conversion costs.

EQUIVALENT UNITS FOR MATERIALS Since Kellogg adds materials at the beginning of the process, no additional materials costs are required to complete the beginning work in process. In addition, 100 percent of the materials costs has been incurred on the ending work in process. Thus, the computation of equivalent units for materials is as follows.

Illustration 16A-6
Computation of equivalent units—materials

MIXING DEPARTMENT—MATERIALS

Production Data	Physical Units	Materials Added This Period	Equivalent Units
Work in process, June 1	100,000	–0–	–0–
Started and finished	600,000	100%	600,000
Work in process, June 30	200,000	100%	200,000
Total	900,000		800,000

EQUIVALENT UNITS FOR CONVERSION COSTS The 100,000 units of beginning work in process were 70 percent complete in terms of conversion costs. Thus, the Mixing Department required 30,000 equivalent units (30% × 100,000 units) of conversion costs to complete the beginning inventory. In addition, the 200,000 units of ending work in process were 60 percent complete in terms of conversion costs. Thus, the equivalent units for conversion costs is 750,000, computed as follows.

Illustration 16A-7
Computation of equivalent units—conversion costs

MIXING DEPARTMENT—CONVERSION COSTS

Production Data	Physical Units	Work Added This Period	Equivalent Units
Work in process, June 1	100,000	30%	30,000
Started and finished	600,000	100%	600,000
Work in process, June 30	200,000	60%	120,000
Total	900,000		750,000

Compute Unit Production Costs (Step 3)

Armed with the knowledge of the equivalent units of production, Kellogg can now compute the unit production costs. Unit production costs are costs expressed in terms of equivalent units of production. When equivalent units of production are different for materials and conversion costs, companies compute three unit costs: (1) materials, (2) conversion, and (3) total manufacturing.

Under the FIFO method, the unit costs of production are based entirely on the production costs incurred during the month. Thus, the costs in the beginning work in process are not relevant, because they were incurred on work done in the preceding month. As Illustration 16A-3 (page 861) indicated, the costs incurred during production in June were:

Direct materials	$400,000
Conversion costs	170,000
Total costs	$570,000

Illustration 16A-8
Costs incurred during production in June

Illustration 16A-9 shows the computation of unit materials cost, unit conversion costs, and total unit cost related to Eggo® Waffles.

(1)	**Total Materials Cost**	÷	**Equivalent Units of Materials**	=	**Unit Materials Cost**
	$400,000	÷	800,000	=	$0.50
(2)	**Total Conversion Costs**	÷	**Equivalent Units of Conversion Costs**	=	**Unit Conversion Cost**
	$170,000	÷	750,000	=	$0.227 (rounded)*
(3)	**Unit Materials Cost**	+	**Unit Conversion Cost**	=	**Total Manufacturing Cost per Unit**
	$0.50	+	$0.227	=	$0.727

**For homework problems, round unit costs to three decimal places.*

Illustration 16A-9
Unit cost formulas and computations—Mixing Department

As shown, the unit costs are $0.50 for materials, $0.227 for conversion costs, and $0.727 for total manufacturing costs.

Prepare a Cost Reconciliation Schedule (Step 4)

Kellogg is now ready to determine the cost of goods transferred out of the Mixing Department to the Baking Department and the costs in ending work in process. The total costs charged to the Mixing Department in June are $655,000, calculated as follows.

Costs to be accounted for	
Work in process, June 1	$ 85,000
Started into production	570,000
Total costs	$655,000

Illustration 16A-10
Costs charged to Mixing Department

Kellogg next prepares a cost reconciliation to assign these costs to (1) units transferred out to the Baking Department and (2) ending work in process. Under the FIFO method, the first goods to be completed during the period are the units in beginning work in process. Thus, the cost of the beginning work in process is always assigned to the goods transferred to the next department (or finished goods, if processing is complete). Under the FIFO method, ending work in process also

will be assigned only the production costs incurred in the current period. Illustration 16A-11 shows a cost reconciliation schedule for the Mixing Department.

Illustration 16A-11
Cost reconciliation report

MIXING DEPARTMENT Cost Reconciliation Schedule		
Costs accounted for		
Transferred out		
Work in process, June 1		$ 85,000
Costs to complete beginning work in process		
Conversion costs (30,000 × $0.227)		6,810
Total costs		91,810
Units started and completed (600,000 × $0.727)		435,950*
Total costs transferred out		527,760
Work in process, June 30		
Materials (200,000 × $0.50)	$100,000	
Conversion costs (120,000 × $0.227)	27,240	127,240
Total costs		$655,000

*Any rounding errors should be adjusted in the "Units started and completed" calculation.

As you can see, the total costs accounted for ($655,000 from Illustration 16A-11) equal the total costs to be accounted for ($655,000 from Illustration 16A-10).

Preparing the Production Cost Report

At this point, Kellogg is ready to prepare the production cost report for the Mixing Department. This report is an internal document for management that shows production quantity and cost data for a production department.

As discussed on page 850, there are four steps in preparing a production cost report:

1. Compute the physical unit flow.
2. Compute the equivalent units of production.
3. Compute unit production costs.
4. Prepare a cost reconciliation schedule.

Illustration 16A-12 (page 865) shows the production cost report for the Mixing Department, with the four steps identified in the report.

As indicated in the chapter, production cost reports provide a basis for evaluating the productivity of a department. In addition, managers can use the cost data to assess whether unit costs and total costs are reasonable. By comparing the quantity and cost data with predetermined goals, top management can also judge whether current performance is meeting planned objectives.

FIFO AND WEIGHTED-AVERAGE

The weighted-average method of computing equivalent units has **one major advantage**: It is simple to understand and apply. In cases where prices do not fluctuate significantly from period to period, the weighted-average method will be very similar to the FIFO method. In addition, companies that have been using just-in-time procedures effectively for inventory control purposes will have minimal inventory balances, and therefore differences between the weighted-average and the FIFO methods will not be material.

Conceptually, the FIFO method is superior to the weighted-average method because it measures **current performance** using only costs incurred in the current

Illustration 16A-12
Production cost report–FIFO method

period. Managers are, therefore, not held responsible for costs from prior periods over which they may not have had control. In addition, the FIFO method **provides current cost information**, which the company can use to establish **more accurate pricing strategies** for goods manufactured and sold in the current period.

Helpful Hint What are the two self-checks in the report? Answer: (1) Total physical units accounted for must equal the total units to be accounted for. (2) Total costs accounted for must equal the total costs to be accounted for.

Summary of Study Objective for Appendix 16A

8 Compute equivalent units using the FIFO method. Equivalent units under the FIFO method are the sum of the work performed to: (1) Finish the units of beginning work in process inventory, if any; (2) complete the units started into production during the period; and (3) start, but only partially complete, the units in ending work in process inventory.

Glossary

Conversion costs *(p. 848)* The sum of labor costs and overhead costs.

Cost reconciliation schedule *(p. 853)* A schedule that shows that the total costs accounted for equal the total costs to be accounted for.

Equivalent units of production *(p. 847)* A measure of the work done during the period, expressed in fully completed units.

Operations costing *(p. 855)* A combination of a process cost and a job order cost system, in which products are manufactured primarily by standardized methods, with some customization.

Physical units *(p. 850)* Actual units to be accounted for during a period, irrespective of any work performed.

Process cost system *(p. 840)* An accounting system used to apply costs to similar products that are mass-produced in a continuous fashion.

Production cost report *(p. 850)* An internal report for management that shows both production quantity and cost data for a production department.

Total units (costs) accounted for *(pp. 851, 853)* The sum of the units (costs) transferred out during the period plus the units (costs) in process at the end of the period.

Total units (costs) to be accounted for *(pp. 850, 853)* The sum of the units (costs) started (or transferred) into production during the period plus the units (costs) in process at the beginning of the period.

Unit production costs *(p. 852)* Costs expressed in terms of equivalent units of production.

Weighted-average method *(p. 847)* Method of computing equivalent units of production which considers the degree of completion (weighting) of the units completed and transferred out and the ending work in process.

Comprehensive Do it!

Karlene Industries produces plastic ice cube trays in two processes: heating and stamping. All materials are added at the beginning of the Heating Department process. Karlene uses the weighted-average method to compute equivalent units.

On November 1, the Heating Department had in process 1,000 trays that were 70% complete. During November, it started into production 12,000 trays. On November 30, 2012, 2,000 trays that were 60% complete were in process.

The following cost information for the Heating Department was also available.

Work in process, November 1:		Costs incurred in November:	
Materials	$ 640	Material	$3,000
Conversion costs	360	Labor	2,300
Cost of work in process, Nov. 1	$1,000	Overhead	4,050

Instructions

(a) Prepare a production cost report for the Heating Department for the month of November 2012, using the weighted-average method.

(b) Journalize the transfer of costs to the Stamping Department.

Solution to Comprehensive *Do it!*

Conversion costs (1,200 × $0.55)	660	1,220
Total costs		$10,350

(b)	Debit	Credit
Work in Process—Stamping	9,130	
Work in Process—Heating		9,130
(To record transfer of units to the Stamping Department)		

Action Plan

- Compute the physical unit flow—that is, the total units to be accounted for.
- Compute the equivalent units of production.
- Compute the unit production costs, expressed in terms of equivalent units of production.
- Prepare a cost reconciliation schedule, which shows that the total costs accounted for equal the total costs to be accounted for.

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more resources are available for practice in WileyPLUS

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

Self-Test Questions

Answers are on page 887.

(SO 1) **1.** Which of the following items is *not* characteristic of a process cost system?
(a) Once production begins, it continues until the finished product emerges.
(b) The products produced are heterogeneous in nature.
(c) The focus is on continually producing homogeneous products.

(d) When the finished product emerges, all units have precisely the same amount of materials, labor, and overhead.

(SO 2) **2.** Indicate which of the following statements is *not* correct.
(a) Both a job order and a process cost system track the same three manufacturing cost elements—direct materials, direct labor, and manufacturing overhead.
(b) A job order cost system uses only one work in process account, whereas a process cost system uses multiple work in process accounts.
(c) Manufacturing costs are accumulated the same way in a job order and in a process cost system.
(d) Manufacturing costs are assigned the same way in a job order and in a process cost system.

(SO 3) **3.** In a process cost system, the flow of costs is:
(a) work in process, cost of goods sold, finished goods.
(b) finished goods, work in process, cost of goods sold.
(c) finished goods, cost of goods sold, work in process.
(d) work in process, finished goods, cost of goods sold.

(SO 4) **4.** In making journal entries to assign raw materials costs, a company using process costing:
(a) debits Finished Goods Inventory.
(b) often debits two or more work in process accounts.
(c) generally credits two or more work in process accounts.
(d) credits Finished Goods Inventory.

(SO 4) **5.** In a process cost system, manufacturing overhead:
(a) is assigned to finished goods at the end of each accounting period.
(b) is assigned to a work in process account for each job as the job is completed.
(c) is assigned to a work in process account for each production department on the basis of a predetermined overhead rate.
(d) is assigned to a work in process account for each production department as overhead costs are incurred.

(SO 5) **6.** Conversion costs are the sum of:
(a) fixed and variable overhead costs.
(b) labor costs and overhead costs.
(c) direct material costs and overhead costs.
(d) direct labor and indirect labor costs.

(SO 5) **7.** The Mixing Department's output during the period consists of 20,000 units completed and transferred out, and 5,000 units in ending work in process 60% complete as to materials and conversion costs. Beginning inventory is 1,000 units, 40% complete as to materials and conversion costs. The equivalent units of production are:
(a) 22,600. (c) 24,000.
(b) 23,000. (d) 25,000.

8. In RYZ Company, there are zero units in beginning work in process, 7,000 units started into production, and 500 units in ending work in process 20% completed. The physical units to be accounted for are: (SO 6)
(a) 7,000. (c) 7,500.
(b) 7,360. (d) 7,340.

9. Mora Company has 2,000 units in beginning work in process, 20% complete as to conversion costs, 23,000 units transferred out to finished goods, and 3,000 units in ending work in process $33\frac{1}{3}\%$ complete as to conversion costs. (SO 6)

The beginning and ending inventory is fully complete as to materials costs. Equivalent units for materials and conversion costs are, respectively:
(a) 22,000, 24,000.
(b) 24,000, 26,000.
(c) 26,000, 24,000.
(d) 26,000, 26,000.

10. Fortner Company has no beginning work in process; 9,000 units are transferred out and 3,000 units in ending work in process are one-third finished as to conversion costs and fully complete as to materials cost. If total materials cost is $60,000, the unit materials cost is: (SO 6)
(a) $5.00.
(b) $5.45 rounded.
(c) $6.00.
(d) No correct answer is given.

11. Largo Company has unit costs of $10 for materials and $30 for conversion costs. If there are 2,500 units in ending work in process, 40% complete as to conversion costs, and fully complete as to materials cost, the total cost assignable to the ending work in process inventory is: (SO 6)
(a) $45,000.
(b) $55,000.
(c) $75,000.
(d) $100,000.

12. A production cost report: (SO 7)
(a) is an external report.
(b) shows both the production quantity and cost data related to a department.
(c) shows equivalent units of production but not physical units.
(d) contains six sections.

13. In a production cost report, units to be accounted for are calculated as: (SO 7)
(a) Units started into production + Units in ending work in process.
(b) Units started into production − Units in beginning work in process.
(c) Units transferred out + Units in beginning work in process.
(d) Units started into production + Units in beginning work in process.

(SO 8) *14. Hollins Company uses the FIFO method to compute equivalent units. It has 2,000 units in beginning work in process, 20% complete as to conversion costs, 25,000 units started and completed, and 3,000 units in ending work in process, 30% complete as to conversion costs. All units are 100% complete as to materials. Equivalent units for materials and conversion costs are, respectively:
(a) 28,000 and 26,600.
(b) 28,000 and 27,500.
(c) 27,000 and 26,200.
(d) 27,000 and 29,600.

(SO 8) *15. KLM Company uses the FIFO method to compute equivalent units. It has no beginning work in process; 9,000 units are started and completed and 3,000 units in ending work in process are one-third completed. All material is added at the beginning of the process. If total materials cost is $60,000, the unit materials cost is:
(a) $5.00.
(b) $6.00.
(c) $6.67 (rounded).
(d) No correct answer given.

*16. Toney Company uses the FIFO method to compute equivalent units. It has unit costs of $10 for materials and $30 for conversion costs. If there are 2,500 units in ending work in process, 100% complete as to materials and 40% complete as to conversion costs, the total cost assignable to the ending work in process inventory is: (SO 3)
(a) $45,000.
(b) $55,000.
(c) $75,000.
(d) $100,000.

Go to the book's companion website, **www.wiley.com/college/kimmel**, for additional Self-Test Questions.

Questions

1. Identify which costing system—job order or process cost—the following companies would primarily use: (a) Quaker Oats, (b) Ford Motor Company, (c) Kinko's Print Shop, and (d) Warner Bros. Motion Pictures.
2. Contrast the primary focus of job order cost accounting and of process cost accounting.
3. What are the similarities between a job order and a process cost system?
4. Your roommate is confused about the features of process cost accounting. Identify and explain the distinctive features for your roommate.
5. Sam Bowyer believes there are no significant differences in the flow of costs between job order cost accounting and process cost accounting. Is Bowyer correct? Explain.
6. (a) What source documents are used in assigning (1) materials and (2) labor to production in a process cost system?
   (b) What criterion and basis are commonly used in allocating overhead to processes?
7. At Ely Company, overhead is assigned to production departments at the rate of $5 per machine hour. In July, machine hours were 3,000 in the Machining Department and 2,400 in the Assembly Department. Prepare the entry to assign overhead to production.
8. Mark Haley is uncertain about the steps used to prepare a production cost report. State the procedures that are required in the sequence in which they are performed.
9. John Harbeck is confused about computing physical units. Explain to John how physical units to be accounted for and physical units accounted for are determined.
10. What is meant by the term "equivalent units of production"?
11. How are equivalent units of production computed?
12. Coats Company had zero units of beginning work in process. During the period, 9,000 units were completed, and there were 600 units of ending work in process. What were the units started into production?
13. Sanchez Co. has zero units of beginning work in process. During the period, 12,000 units were completed, and there were 500 units of ending work in process one-fifth complete as to conversion cost and 100% complete as to materials cost. What were the equivalent units of production for (a) materials and (b) conversion costs?
14. Hindi Co. started 3,000 units for the period. Its beginning inventory is 500 units one-fourth complete as to conversion costs and 100% complete as to materials costs. Its ending inventory is 300 units one-fifth complete as to conversion costs and 100% complete as to materials costs. How many units were transferred out this period?
15. Clauss Company transfers out 14,000 units and has 2,000 units of ending work in process that are 25% complete. Materials are entered at the beginning of the process and there is no beginning work in process.

Assuming unit materials costs of $3 and unit conversion costs of $5, what are the costs to be assigned to units (a) transferred out and (b) in ending work in process?

16. (a) Ann Quinn believes the production cost report is an external report for stockholders. Is Ann correct? Explain.
(b) Identify the sections in a production cost report.

17. What purposes are served by a production cost report?

18. At Trent Company, there are 800 units of ending work in process that are 100% complete as to materials and 40% complete as to conversion costs. If the unit cost of materials is $3 and the costs assigned to the 800 units is $6,000, what is the per unit conversion cost?

19. What is the difference between operations costing and a process costing system?

20. How does a company decide whether to use a job order or a process cost system?

***21.** Soria Co. started and completed 2,000 units for the period. Its beginning inventory is 800 units 25% complete and its ending inventory is 400 units 20% complete. Soria uses the FIFO method to compute equivalent units. How many units were transferred out this period?

***22.** Reyes Company transfers out 12,000 units and has 2,000 units of ending work in process that are 25% complete. Materials are entered at the beginning of the process and there is no beginning work in process. Reyes uses the FIFO method to compute equivalent units. Assuming unit materials costs of $3 and unit conversion costs of $7, what are the costs to be assigned to units (a) transferred out and (b) in ending work in process?

Brief Exercises

Journalize entries for accumulating costs.
(SO 4), AP

BE16-1 Weber Manufacturing purchases $45,000 of raw materials on account, and it incurs $60,000 of factory labor costs. Journalize the two transactions on March 31 assuming the labor costs are not paid until April.

Journalize the assignment of materials and labor costs.
(SO 4), AP

BE16-2 Data for Weber Manufacturing are given in BE16-1. Supporting records show that (a) the Assembly Department used $24,000 of raw materials and $35,000 of the factory labor, and (b) the Finishing Department used the remainder. Journalize the assignment of the costs to the processing departments on March 31.

Journalize the assignment of overhead costs.
(SO 4), AP

BE16-3 Factory labor data for Weber Manufacturing are given in BE16-2. Manufacturing overhead is assigned to departments on the basis of 200% of labor costs. Journalize the assignment of overhead to the Assembly and Finishing Departments.

Compute physical units of production.
(SO 6), AP

BE16-4 Goode Manufacturing Company has the following production data for selected months.

			Ending Work in Process	
Month	**Beginning Work in Process**	**Units Transferred Out**	**Units**	**% Complete as to Conversion Cost**
January	–0–	35,000	10,000	40%
March	–0–	40,000	8,000	75
July	–0–	45,000	16,000	25

Compute the physical units for each month.

Compute equivalent units of production.
(SO 5), AP

BE16-5 Using the data in BE16-4, compute equivalent units of production for materials and conversion costs, assuming materials are entered at the beginning of the process.

Compute unit costs of production.
(SO 6), AP

BE16-6 In Lopez Company, total material costs are $36,000, and total conversion costs are $54,000. Equivalent units of production are materials 10,000 and conversion costs 12,000. Compute the unit costs for materials, conversion costs, and total manufacturing costs.

Assign costs to units transferred out and in process.
(SO 6), AP

BE16-7 Trek Company has the following production data for April: units transferred out 40,000, and ending work in process 5,000 units that are 100% complete for materials and 40% complete for conversion costs. If unit materials cost is $4 and unit conversion cost is $7, determine the costs to be assigned to the units transferred out and the units in ending work in process.

BE16-8 Production costs chargeable to the Finishing Department in June in Cascio Company are materials $16,000, labor $29,500, overhead $18,000. Equivalent units of production are materials 20,000 and conversion costs 19,000. Compute the unit costs for materials and conversion costs.

Compute unit costs.
(SO 6), AP

BE16-9 Data for Cascio Company are given in BE16-8. Production records indicate that 18,000 units were transferred out, and 2,000 units in ending work in process were 50% complete as to conversion cost and 100% complete as to materials. Prepare a cost reconciliation schedule.

Prepare cost reconciliation schedule.
(SO 6), AP

BE16-10 The Smelting Department of Mathews Manufacturing Company has the following production and cost data for November.

> Production: Beginning work in process 2,000 units that are 100% complete as to materials and 20% complete as to conversion costs; units transferred out 8,000 units; and ending work in process 7,000 units that are 100% complete as to materials and 40% complete as to conversion costs.

Compute the equivalent units of production for (a) materials and (b) conversion costs for the month of November.

Compute equivalent units of production.
(SO 5), AP

***BE16-11** Sanderson Company has the following production data for March: no beginning work in process, units started and completed 30,000, and ending work in process 5,000 units that are 100% complete for materials and 40% complete for conversion costs. Sanderson uses the FIFO method to compute equivalent units. If unit materials cost is $6 and unit conversion cost is $12, determine the costs to be assigned to the units transferred out and the units in ending work in process. The total costs to be assigned are $594,000.

Assign costs to units transferred out and in process.
(SO 8), AP

***BE16-12** Using the data in BE16-11, prepare the cost section of the production cost report for Sanderson Company.

Prepare a partial production cost report.
(SO 7, 8), AP

***BE16-13** Production costs chargeable to the Finishing Department in May at Kim Company are materials $8,000, labor $20,000, overhead $18,000, and transferred-in costs $67,000. Equivalent units of production are materials 20,000 and conversion costs 19,000. Kim uses the FIFO method to compute equivalent units. Compute the unit costs for materials and conversion costs. Transferred-in costs are considered materials costs.

Compute unit costs.
(SO 8), AP

Do it! Review

Do it! 16-1 Indicate whether each of the following statements is true or false.

1. Many hospitals use job order costing for small, routine medical procedures.
2. A manufacturer of computer flash drives would use a job order cost system.
3. A process cost system uses multiple work in process accounts.
4. A process cost system keeps track of costs on job cost sheets.

Compare job order and process cost systems.
(SO 1, 2), C

Do it! 16-2 Kopa Company manufactures CH-21 through two processes: Mixing and Packaging. In July, the following costs were incurred.

	Mixing	Packaging
Raw materials used	$10,000	$28,000
Factory labor costs	8,000	36,000
Manufacturing overhead costs	12,000	54,000

Units completed at a cost of $21,000 in the Mixing Department are transferred to the Packaging Department. Units completed at a cost of $106,000 in the Packaging Department are transferred to Finished Goods. Journalize the assignment of these costs to the two processes and the transfer of units as appropriate.

Assign and journalize manufacturing costs.
(SO 4), AP

Do it! 16-3 The assembly department has the following production and cost data for the current month.

Beginning Work in Process	Units Transferred Out	Ending Work in Process
–0–	20,000	12,000

Materials are entered at the beginning of the process. The ending work in process units are 70% complete as to conversion costs. Compute the equivalent units of production for (a) materials and (b) conversion costs.

Compute equivalent units.
(SO 5), AP

Prepare cost reconciliation schedule.
(SO 6, 7), **AP**

Do it! **16-4** In March, Kelly Manufacturing had the following unit production costs: materials $10 and conversion costs $8. On March 1, it had zero work in process. During March, Kelly transferred out 22,000 units. As of March 31, 4,000 units that were 40% complete as to conversion costs and 100% complete as to materials were in ending work in process.

(a) Compute the total units to be accounted for.
(b) Compute the equivalent units of production.
(c) Prepare a cost reconciliation schedule, including the costs of materials transferred out and the costs of materials in process.

Exercises

Understand process cost accounting.
(SO 1, 2), **C**

E16-1 Robert Mallory has prepared the following list of statements about process cost accounting.

1. Process cost systems are used to apply costs to similar products that are mass-produced in a continuous fashion.
2. A process cost system is used when each finished unit is indistinguishable from another.
3. Companies that produce soft drinks, motion pictures, and computer chips would all use process cost accounting.
4. In a process cost system, costs are tracked by individual jobs.
5. Job order costing and process costing track different manufacturing cost elements.
6. Both job order costing and process costing account for direct materials, direct labor, and manufacturing overhead.
7. Costs flow through the accounts in the same basic way for both job order costing and process costing.
8. In a process cost system, only one work in process account is used.
9. In a process cost system, costs are summarized in a job cost sheet.
10. In a process cost system, the unit cost is total manufacturing costs for the period divided by the units produced during the period.

Instructions
Identify each statement as true or false. If false, indicate how to correct the statement.

Journalize transactions.
(SO 4), **AP**

E16-2 Harrelson Company manufactures pizza sauce through two production departments: Cooking and Canning. In each process, materials and conversion costs are incurred evenly throughout the process. For the month of April, the work in process accounts show the following debits.

	Cooking	Canning
Beginning work in process	$ –0–	$ 4,000
Materials	21,000	9,000
Labor	8,500	7,000
Overhead	31,500	25,800
Costs transferred in		53,000

Instructions
Journalize the April transactions.

Answer questions on costs and production.
(SO 3, 5, 6), **AP**

E16-3 The ledger of Custer Company has the following work in process account.

Work in Process—Painting

5/1	Balance	3,590	5/31	Transferred out	?
5/31	Materials	5,160			
5/31	Labor	2,740			
5/31	Overhead	1,380			
5/31	Balance	?			

Production records show that there were 400 units in the beginning inventory, 30% complete, 1,400 units started, and 1,500 units transferred out. The beginning work in process had materials cost of $2,040 and conversion costs of $1,550. The units in ending inventory were 40% complete. Materials are entered at the beginning of the painting process.

Instructions

(a) How many units are in process at May 31?
(b) What is the unit materials cost for May?
(c) What is the unit conversion cost for May?
(d) What is the total cost of units transferred out in May?
(e) What is the cost of the May 31 inventory?

Journalize transactions for two processes.
(SO 4), **AP**

E16-4 Schrager Manufacturing Company has two production departments: Cutting and Assembly. July 1 inventories are Raw Materials $4,200, Work in Process—Cutting $2,900, Work in Process—Assembly $10,600, and Finished Goods $31,000. During July, the following transactions occurred.

1. Purchased $62,500 of raw materials on account.
2. Incurred $60,000 of factory labor. (Credit Wages Payable.)
3. Incurred $70,000 of manufacturing overhead; $40,000 was paid and the remainder is unpaid.
4. Requisitioned materials for Cutting $15,700 and Assembly $8,900.
5. Used factory labor for Cutting $33,000 and Assembly $27,000.
6. Applied overhead at the rate of $18 per machine hour. Machine hours were Cutting 1,680 and Assembly 1,720.
7. Transferred goods costing $67,600 from the Cutting Department to the Assembly Department.
8. Transferred goods costing $134,900 from Assembly to Finished Goods.
9. Sold goods costing $150,000 for $200,000 on account.

Instructions

Journalize the transactions. (Omit explanations.)

Compute physical units and equivalent units of production.
(SO 5, 6), **AP**

E16-5 In Wayne Company, materials are entered at the beginning of each process. Work in process inventories, with the percentage of work done on conversion costs, and production data for its Sterilizing Department in selected months during 2012 are as follows.

	Beginning Work in Process			Ending Work in Process	
Month	**Units**	**Conversion Cost%**	**Units Transferred Out**	**Units**	**Conversion Cost%**
January	–0–	—	9,000	2,000	60
March	–0–	—	12,000	3,000	30
May	–0–	—	16,000	7,000	80
July	–0–	—	10,000	1,500	40

Instructions

(a) Compute the physical units for January and May.
(b) Compute the equivalent units of production for (1) materials and (2) conversion costs for each month.

Determine equivalent units, unit costs, and assignment of costs.
(SO 5, 6), **AP**

E16-6 The Cutting Department of Cassel Manufacturing has the following production and cost data for July.

Production

1. Transferred out 12,000 units.
2. Started 3,000 units that are 60% complete as to conversion costs and 100% complete as to materials at July 31.

Costs

Beginning work in process	$ –0–
Materials	45,000
Labor	16,200
Manufacturing overhead	18,300

Materials are entered at the beginning of the process. Conversion costs are incurred uniformly during the process.

Instructions
(a) Determine the equivalent units of production for (1) materials and (2) conversion costs.
(b) Compute unit costs and prepare a cost reconciliation schedule.

Prepare a production cost report.
(SO 5, 6, 7), **AP**

E16-7 The Sanding Department of Richards Furniture Company has the following production and manufacturing cost data for March 2012, the first month of operation.

Production: 9,000 units finished and transferred out; 3,000 units started that are 100% complete as to materials and 20% complete as to conversion costs.

Manufacturing costs: Materials $33,000; labor $24,000; overhead $36,000.

Instructions
Prepare a production cost report.

Determine equivalent units, unit costs, and assignment of costs.
(SO 5, 6), **AP**

E16-8 The Blending Department of Luongo Company has the following cost and production data for the month of April.

Costs:	
Work in process, April 1	
Direct materials: 100% complete	$100,000
Conversion costs: 20% complete	70,000
Cost of work in process, April 1	$170,000
Costs incurred during production in April	
Direct materials	$ 800,000
Conversion costs	365,000
Costs incurred in April	$1,165,000

Units transferred out totaled 17,000. Ending work in process was 1,000 units that are 100% complete as to materials and 40% complete as to conversion costs.

Instructions
(a) Compute the equivalent units of production for (1) materials and (2) conversion costs for the month of April.
(b) Compute the unit costs for the month.
(c) Determine the costs to be assigned to the units transferred out and in ending work in process.

Determine equivalent units, unit costs, and assignment of costs.
(SO 5, 6), **AP**

E16-9 Kostrivas Company has gathered the following information.

Units in beginning work in process	−0−
Units started into production	40,000
Units in ending work in process	6,000
Percent complete in ending work in process:	
Conversion costs	40%
Materials	100%
Costs incurred:	
Direct materials	$72,000
Direct labor	$81,000
Overhead	$101,000

Instructions
(a) Compute equivalent units of production for materials and for conversion costs.
(b) Determine the unit costs of production.
(c) Show the assignment of costs to units transferred out and in process.

E16-10 Overton Company has gathered the following information.

Determine equivalent units, unit costs, and assignment of costs.
(SO 5, 6), **AP**

Units in beginning work in process	20,000
Units started into production	164,000
Units in ending work in process	24,000
Percent complete in ending work in process:	
Conversion costs	60%
Materials	100%
Costs incurred:	
Direct materials	$101,200
Direct labor	$164,800
Overhead	$184,000

Instructions

(a) Compute equivalent units of production for materials and for conversion costs.
(b) Determine the unit costs of production.
(c) Show the assignment of costs to units transferred out and in process.

E16-11 The Polishing Department of Harbin Manufacturing Company has the following production and manufacturing cost data for September. Materials are entered at the beginning of the process.

Compute equivalent units, unit costs, and costs assigned.
(SO 5, 6), **AP**

Production: Beginning inventory 1,600 units that are 100% complete as to materials and 30% complete as to conversion costs; units started during the period are 38,400; ending inventory of 5,000 units 10% complete as to conversion costs.

Manufacturing costs: Beginning inventory costs, comprised of $20,000 of materials and $43,180 of conversion costs; materials costs added in Polishing during the month, $177,200; labor and overhead applied in Polishing during the month, $125,680 and $257,140, respectively.

Instructions

(a) Compute the equivalent units of production for materials and conversion costs for the month of September.
(b) Compute the unit costs for materials and conversion costs for the month.
(c) Determine the costs to be assigned to the units transferred out and in process.

E16-12 David Skaros has recently been promoted to production manager, and so he has just started to receive various managerial reports. One of the reports he has received is the production cost report that you prepared. It showed that his department had 2,000 equivalent units in ending inventory. His department has had a history of not keeping enough inventory on hand to meet demand. He has come to you, very angry, and wants to know why you credited him with only 2,000 units when he knows he had at least twice that many on hand.

Explain the production cost report.
(SO 7), **S**

Instructions

Explain to him why his production cost report showed only 2,000 equivalent units in ending inventory. Write an informal memo. Be kind and explain very clearly why he is mistaken.

E16-13 The Welding Department of Thorpe Manufacturing Company has the following production and manufacturing cost data for February 2012. All materials are added at the beginning of the process.

Prepare a production cost report.
(SO 5, 6, 7), **AP**

Manufacturing Costs			**Production Data**	
Beginning work in process			Beginning work in process	15,000 units
Materials	$18,000			1/10 complete
Conversion costs	14,175	$ 32,175	Units transferred out	49,000
Materials		180,000	Units started	45,000
Labor		52,380	Ending work in process	11,000 units
Overhead		61,445		1/5 complete

Instructions

Prepare a production cost report for the Welding Department for the month of February.

Compute physical units and equivalent units of production.
(SO 5, 6), AP

E16-14 Remington Shipping, Inc. is contemplating the use of process costing to track the costs of its operations. The operation consists of three segments (departments): receiving, shipping, and delivery. Containers are received at Remington's docks and sorted according to the ship they will be carried on. The containers are loaded onto a ship, which carries them to the appropriate port of destination. The containers are then off-loaded and delivered to the receiving company.

Remington Shipping wants to begin using process costing in the shipping department. Direct materials represent the fuel costs to run the ship, and "Containers in transit" represents work in process. Listed below is information about the shipping department's first month's activity.

Containers in transit, April 1	0
Containers loaded	1,200
Containers in transit, April 30	350, 40% of direct materials and 20% of conversion costs

Instructions

(a) Determine the physical flow of containers for the month.
(b) Calculate the equivalent units for direct materials and conversion costs.

Determine equivalent units, unit costs, and assignment of costs.
(SO 5, 6), AP

E16-15 Royale Mortgage Company uses a process costing system to accumulate costs in its loan application department. When an application is completed, it is forwarded to the loan department for final processing. The following processing and cost data pertain to September.

1. Applications in process on September 1, 100
2. Applications started in September, 900
3. Completed applications during September, 800
4. Applications still in process at September 30 were 100% complete as to materials (forms) and 60% complete as to conversion costs.

Beginning WIP:	
Direct materials	$ 1,000
Conversion costs	3,960
September costs:	
Direct materials	$ 4,500
Direct labor	12,000
Overhead	9,340

Materials are the forms used in the application process, and these costs are incurred at the beginning of the process. Conversion costs are incurred uniformly during the process.

Instructions

(a) Determine the equivalent units of service (production) for materials and conversion costs.
(b) Compute the unit costs and prepare a cost reconciliation schedule.

Compute equivalent units, unit costs, and costs assigned.
(SO 6, 8), AP

***E16-16** Using the data in E16-15, assume Royale Mortgage Company uses the FIFO method. Also assume that the applications in process on September 1 were 100% complete as to materials (forms) and 40% complete as to conversion costs.

Instructions

(a) Determine the equivalent units of service (production) for materials and conversion costs.
(b) Compute the unit costs and prepare a cost reconciliation schedule.

Determine equivalent units, unit costs, and assignment of costs.
(SO 6, 8), AP

***E16-17** The Cutting Department of Keigi Manufacturing has the following production and cost data for August.

Production

1. Started and completed 8,000 units.
2. Started 2,000 units that are 40% completed at August 31.

Costs	
Beginning work in process	$ –0–
Materials	45,000
Labor	14,700
Manufacturing overhead	16,100

Materials are entered at the beginning of the process. Conversion costs are incurred uniformly during the process. Keigi Manufacturing uses the FIFO method to compute equivalent units.

Instructions

(a) Determine the equivalent units of production for (1) materials and (2) conversion costs.
(b) Compute unit costs and show the assignment of manufacturing costs to units transferred out and in work in process.

***E16-18** The Smelting Department of Polzin Manufacturing Company has the following production and cost data for September.

Compute equivalent units, unit costs, and costs assigned.
(SO 6, 8), **AP**

Production: Beginning work in process 2,000 units that are 100% complete as to materials and 20% complete as to conversion costs; units started and finished 9,000 units; and ending work in process 1,000 units that are 100% complete as to materials and 40% complete as to conversion costs.

Manufacturing costs: Work in process, September 1, $15,200; materials added $60,000; labor and overhead $132,000.

Polzin uses the FIFO method to compute equivalent units.

Instructions

(a) Compute the equivalent units of production for (1) materials and (2) conversion costs for the month of September.
(b) Compute the unit costs for the month.
(c) Determine the costs to be assigned to the units transferred out and in process.

***E16-19** The ledger of Hannon Company has the following work in process account.

Answer questions on costs and production.
(SO 6, 8), **AP**

Work in Process—Painting

3/1	Balance	3,680	3/31	Transferred out	?
3/31	Materials	6,600			
3/31	Labor	2,500			
3/31	Overhead	1,150			
3/31	Balance	?			

Production records show that there were 800 units in the beginning inventory, 30% complete, 1,200 units started, and 1,500 units transferred out. The units in ending inventory were 40% complete. Materials are entered at the beginning of the painting process. Hannon uses the FIFO method to compute equivalent units.

Instructions

Answer the following questions.

(a) How many units are in process at March 31?
(b) What is the unit materials cost for March?
(c) What is the unit conversion cost for March?
(d) What is the total cost of units started in February and completed in March?
(e) What is the total cost of units started and finished in March?
(f) What is the cost of the March 31 inventory?

***E16-20** The Welding Department of Majestic Manufacturing Company has the following production and manufacturing cost data for February 2012. All materials are added at the beginning of the process. Majestic uses the FIFO method to compute equivalent units.

Prepare a production cost report for a second process.
(SO 8), **AP**

Manufacturing Costs		Production Data	
Beginning work in process	$ 32,175	Beginning work in process	15,000 units, 10% complete
Costs transferred in	135,000		
Materials	57,000	Units transferred out	50,000
Labor	35,100	Units transferred in	64,000
Overhead	68,400	Ending work in process	25,000, 20% complete

Instructions

Prepare a production cost report for the Welding Department for the month of February. Transferred-in costs are considered materials costs.

Exercises: Set B and Challenge Exercises

Visit the book's companion website, at **www.wiley.com/college/kimmel**, and choose the Student Companion site to access Exercise Set B and Challenge Exercises.

Problems: Set A

Journalize transactions.
(SO 3, 4), **AP**

P16-1A Conwell Company manufactures its product, Vitadrink, through two manufacturing processes: Mixing and Packaging. All materials are entered at the beginning of each process. On October 1, 2012, inventories consisted of Raw Materials $26,000, Work in Process—Mixing $0, Work in Process—Packaging $250,000, and Finished Goods $289,000. The beginning inventory for Packaging consisted of 10,000 units that were 50% complete as to conversion costs and fully complete as to materials. During October, 50,000 units were started into production in the Mixing Department and the following transactions were completed.

1. Purchased $300,000 of raw materials on account.
2. Issued raw materials for production: Mixing $210,000 and Packaging $45,000.
3. Incurred labor costs of $258,900.
4. Used factory labor: Mixing $182,500 and Packaging $76,400.
5. Incurred $810,000 of manufacturing overhead on account.
6. Applied manufacturing overhead on the basis of $24 per machine hour. Machine hours were 28,000 in Mixing and 6,000 in Packaging.
7. Transferred 45,000 units from Mixing to Packaging at a cost of $979,000.
8. Transferred 53,000 units from Packaging to Finished Goods at a cost of $1,315,000.
9. Sold goods costing $1,604,000 for $2,500,000 on account.

Instructions

Journalize the October transactions.

Complete four steps necessary to prepare a production cost report.
(SO 5, 6, 7), **AP**

P16-2A Rosenthal Company manufactures bowling balls through two processes: Molding and Packaging. In the Molding Department, the urethane, rubber, plastics, and other materials are molded into bowling balls. In the Packaging Department, the balls are placed in cartons and sent to the finished goods warehouse. All materials are entered at the beginning of each process. Labor and manufacturing overhead are incurred uniformly throughout each process. Production and cost data for the Molding Department during June 2012 are presented below.

Production Data	**June**
Beginning work in process units	–0–
Units started into production	22,000
Ending work in process units	2,000
Percent complete—ending inventory	40%
Cost Data	
Materials	$198,000
Labor	53,600
Overhead	112,800
Total	$364,400

Instructions

(c) Materials $9.00
CC $8.00
(d) Transferred out $340,000
WIP $ 24,400

(a) Prepare a schedule showing physical units of production.
(b) Determine the equivalent units of production for materials and conversion costs.
(c) Compute the unit costs of production.
(d) Determine the costs to be assigned to the units transferred and in process for June.
(e) Prepare a production cost report for the Molding Department for the month of June.

Complete four steps necessary to prepare a production cost report.
(SO 5, 6, 7), **AP**

P16-3A Seagren Industries Inc. manufactures in separate processes furniture for homes. In each process, materials are entered at the beginning, and conversion costs are incurred uniformly. Production and cost data for the first process in making two products in two different manufacturing plants are as follows.

Production Data—July	Cutting Department Plant 1 T12-Tables	Plant 2 C10-Chairs
Work in process units, July 1	–0–	–0–
Units started into production	19,000	16,000
Work in process units, July 31	3,000	500
Work in process percent complete	60	80
Cost Data—July		
Work in process, July 1	$ –0–	$ –0–
Materials	380,000	288,000
Labor	234,200	110,000
Overhead	104,000	96,700
Total	$718,200	$494,700

Instructions

(a) For each plant:

(1) Compute the physical units of production.

(2) Compute equivalent units of production for materials and for conversion costs.

(3) Determine the unit costs of production.

(4) Show the assignment of costs to units transferred out and in process.

(b) Prepare the production cost report for Plant 1 for July 2012.

(a) (3) T12: Materials $20; CC $19
(4) T12: Transferred out $624,000; WIP $ 94,200

P16-4A Rivera Company has several processing departments. Costs charged to the Assembly Department for November 2012 totaled $2,280,000 as follows.

Assign costs and prepare production cost report.
(SO 5, 6, 7), **AP**

Work in process, November 1		
Materials	$79,000	
Conversion costs	48,150	$ 127,150
Materials added		1,589,000
Labor		225,920
Overhead		337,930

Production records show that 35,000 units were in beginning work in process 30% complete as to conversion costs, 660,000 units were started into production, and 25,000 units were in ending work in process 40% complete as to conversion costs. Materials are entered at the beginning of each process.

Instructions

(a) Determine the equivalent units of production and the unit production costs for the Assembly Department.

(b) Determine the assignment of costs to goods transferred out and in process.

(c) Prepare a production cost report for the Assembly Department.

(b) Transferred out $2,211,000; WIP $ 69,000

P16-5A Morse Company manufactures basketballs. Materials are added at the beginning of the production process and conversion costs are incurred uniformly. Production and cost data for the month of July 2012 are as follows.

Determine equivalent units and unit costs and assign costs.
(SO 5, 6, 7), **AP**

Production Data—Basketballs	Units	Percent Complete
Work in process units, July 1	500	60%
Units started into production	1,250	
Work in process units, July 31	600	40%

Cost Data—Basketballs		
Work in process, July 1		
Materials	$750	
Conversion costs	600	$1,350
Direct materials		2,400
Direct labor		1,580
Manufacturing overhead		1,295

(a) (2) Materials $1.80
(3) Transferred out $4,945
WIP $1,680

Instructions

(a) Calculate the following.
   (1) The equivalent units of production for materials and conversion costs.
   (2) The unit costs of production for materials and conversion costs.
   (3) The assignment of costs to units transferred out and in process at the end of the accounting period.

(b) Prepare a production cost report for the month of July for the basketballs.

Compute equivalent units and complete production cost report.
(SO 5, 7), **AP**

P16-6A Hamilton Processing Company uses a weighted-average process costing system and manufactures a single product—a premium rug shampoo and cleaner. The manufacturing activity for the month of October has just been completed. A partially completed production cost report for the month of October for the mixing and cooking department is shown below.

(a) Materials $1.60
(b) Transferred out $282,000
WIP $ 63,000

Instructions

(a) Prepare a schedule that shows how the equivalent units were computed so that you can complete the "Quantities: Units accounted for" equivalent units section shown in the production cost report, and compute October unit costs.

(b) Complete the "Cost Reconciliation Schedule" part of the production cost report below.

HAMILTON PROCESSING COMPANY
Mixing and Cooking Department
Production Cost Report
For the Month Ended October 31

		Equivalent Units	
Quantities	**Physical Units**	**Materials**	**Conversion Costs**
Units to be accounted for			
Work in process, October 1 (all materials, 70% conversion costs)	20,000		
Started into production	150,000		
Total units	170,000		
Units accounted for			
Transferred out	120,000	?	?
Work in process, October 31 (60% materials, 40% conversion costs)	50,000	?	?
Total units accounted for	170,000	?	?

Costs					
Unit costs	**Materials**		**Conversion Costs**		**Total**
Costs in October	$240,000		$105,000		$345,000
Equivalent units	?		?		
Unit costs	$?	+	$?	=	$?
Costs to be accounted for					
Work in process, October 1					$ 30,000
Started into production					315,000
Total costs					$345,000

Cost Reconciliation Schedule		
Costs accounted for

Conversion costs	?	?
Total costs		?

***P16-7A** Rondeli Company manufactures bicycles and tricycles. For both products, materials are added at the beginning of the production process, and conversion costs are incurred uniformly. Rondeli Company uses the FIFO method to compute equivalent units. Production and cost data for the month of March are as follows.

Determine equivalent units and unit costs and assign costs for processes; prepare production cost report.
(SO 8), **AP**

Production Data—Bicycles	Units	Percent Complete
Work in process units, March 1	200	80%
Units started into production	1,250	
Work in process units, March 31	300	40%

Cost Data—Bicycles	Units	Percent Complete
Work in process, March 1	$19,280	
Direct materials	50,000	
Direct labor	25,500	
Manufacturing overhead	30,000	

Production Data—Tricycles	Units	Percent Complete
Work in process units, March 1	100	75%
Units started into production	800	
Work in process units, March 31	60	25%

Cost Data—Tricycles	
Work in process, March 1	$ 6,125
Direct materials	30,400
Direct labor	15,100
Manufacturing overhead	20,000

Instructions

(a) Calculate the following for both the bicycles and the tricycles.
  (1) The equivalent units of production for materials and conversion costs.
  (2) The unit costs of production for materials and conversion costs.
  (3) The assignment of costs to units transferred out and in process at the end of the accounting period.

(b) Prepare a production cost report for the month of March for the bicycles only.

(a) Bicycles:
(1) Materials 1,250
(2) Materials $40
(3) Transferred out $106,780
WIP $ 18,000

Problems: Set B

P16-1B Wilbury Company manufactures a nutrient, Everlife, through two manufacturing processes: Blending and Packaging. All materials are entered at the beginning of each process. On August 1, 2012, inventories consisted of Raw Materials $5,000, Work in Process—Blending $0, Work in Process—Packaging $3,945, and Finished Goods $7,500. The beginning inventory for Packaging consisted of 500 units, two-fifths complete as to conversion costs and fully complete as to materials. During August, 9,000 units were started into production in Blending, and the following transactions were completed.

Journalize transactions.
(SO 3, 4), **AP**

1. Purchased $25,000 of raw materials on account.
2. Issued raw materials for production: Blending $18,930 and Packaging $9,140.
3. Incurred labor costs of $25,770.
4. Used factory labor: Blending $15,320 and Packaging $10,450.
5. Incurred $36,500 of manufacturing overhead on account.

6. Applied manufacturing overhead at the rate of $28 per machine hour. Machine hours were Blending 900 and Packaging 300.
7. Transferred 8,200 units from Blending to Packaging at a cost of $44,940.
8. Transferred 8,600 units from Packaging to Finished Goods at a cost of $67,490.
9. Sold goods costing $62,000 for $90,000 on account.

Instructions

Journalize the August transactions.

Complete four steps necessary to prepare a production cost report.
(SO 5, 6, 7), **AP**

P16-2B Steiner Corporation manufactures water skis through two processes: Molding and Packaging. In the Molding Department, fiberglass is heated and shaped into the form of a ski. In the Packaging Department, the skis are placed in cartons and sent to the finished goods warehouse. Materials are entered at the beginning of both processes. Labor and manufacturing overhead are incurred uniformly throughout each process. Production and cost data for the Molding Department for January 2012 are presented below.

Production Data	**January**
Beginning work in process units	–0–
Units started into production	50,000
Ending work in process units	2,500
Percent complete—ending inventory	40%
Cost Data	
Materials	$510,000
Labor	92,500
Overhead	150,000
Total	$752,500

Instructions

(a) Compute the physical units of production.
(b) Determine the equivalent units of production for materials and conversion costs.
(c) Compute the unit costs of production.
(d) Determine the costs to be assigned to the units transferred out and in process.
(e) Prepare a production cost report for the Molding Department for the month of January.

(c) Materials $10.20
CC $5
(d) Transferred out $722,000
WIP $ 30,500

Complete four steps necessary to prepare a production cost report.
(SO 5, 6, 7), **AP**

P16-3B Borman Corporation manufactures in separate processes refrigerators and freezers for homes. In each process, materials are entered at the beginning and conversion costs are incurred uniformly. Production and cost data for the first process in making two products in two different manufacturing plants are as follows.

	Stamping Department	
Production Data—June	**Plant A R12 Refrigerators**	**Plant B F24 Freezers**
Work in process units, June 1	–0–	–0–
Units started into production	20,000	20,000
Work in process units, June 30	4,000	2,500
Work in process percent complete	75	60
Cost Data—June		
Work in process, June 1	$ –0–	$ –0–
Materials	840,000	720,000
Labor	245,000	259,000
Overhead	420,000	292,000
Total	$1,505,000	$1,271,000

Instructions

(a) For each plant:
  (1) Compute the physical units of production.
  (2) Compute equivalent units of production for materials and for conversion costs.
  (3) Determine the unit costs of production.
  (4) Show the assignment of costs to units transferred out and in process.
(b) Prepare the production cost report for Plant A for June 2012.

(a) (3) R12:
Materials $42
CC $35
(4) R12:
Transferred out $1,232,000
WIP $ 273,000

P16-4B Luxman Company has several processing departments. Costs charged to the Assembly Department for October 2012 totaled $1,298,400 as follows.

Assign costs and prepare production cost report.
(SO 5, 6, 7), **AP**

Work in process, October 1		
Materials	$29,000	
Conversion costs	16,500	$ 45,500
Materials added		1,006,000
Labor		138,900
Overhead		108,000

Production records show that 25,000 units were in beginning work in process 40% complete as to conversion cost, 435,000 units were started into production, and 35,000 units were in ending work in process 40% complete as to conversion costs. Materials are entered at the beginning of each process.

Instructions

(a) Determine the equivalent units of production and the unit production costs for the Assembly Department.
(b) Determine the assignment of costs to goods transferred out and in process.
(c) Prepare a production cost report for the Assembly Department.

(b) Transferred out $1,211,250
WIP $ 87,150

P16-5B Swinn Company manufactures bicycles. Materials are added at the beginning of the production process, and conversion costs are incurred uniformly. Production and cost data for the month of May are as follows.

Determine equivalent units and unit costs and assign costs.
(SO 5, 6, 7), **AP**

Production Data—Bicycles	**Units**	**Percent Complete**
Work in process units, May 1	500	80%
Units started in production	2,000	
Work in process units, May 31	800	40%
Cost Data—Bicycles		
Work in process, May 1		
Materials	$15,000	
Conversion costs	18,000	$33,000
Direct materials		50,000
Direct labor		19,020
Manufacturing overhead		33,680

Instructions

(a) Calculate the following.
  (1) The equivalent units of production for materials and conversion.
  (2) The unit costs of production for materials and conversion costs.
  (3) The assignment of costs to units transferred out and in process at the end of the accounting period.
(b) Prepare a production cost report for the month of May for the bicycles.

(2) Materials $26
CC $35
(3) Transferred out $103,700
WIP $ 32,000

Compute equivalent units and complete production cost report.
(SO 5, 7), **AP**

P16-6B Venuchi Cleaner Company uses a weighted-average process costing system and manufactures a single product—an all-purpose liquid cleaner. The manufacturing activity for the month of March has just been completed. A partially completed production cost report for the month of March for the mixing and blending department is shown below.

VENUCHI CLEANER COMPANY
Mixing and Blending Department
Production Cost Report
For the Month Ended March 31

QUANTITIES	Physical Units	Equivalent Units: Materials	Equivalent Units: Conversion Costs
Units to be accounted for			
Work in process, March 1	10,000		
Started into production	76,000		
Total units	86,000		
Units accounted for			
Transferred out	66,000	?	?
Work in process, March 31 (60% materials, 20% conversion costs)	20,000	?	?
Total units	86,000	?	?

COSTS	Materials		Conversion Costs		Total
Unit costs					
Costs in March	$156,000		$98,000		$254,000
Equivalent units	?		?		
Unit costs	$?	+	$?	=	$?
Costs to be accounted for					
Work in process, March 1					$ 8,700
Started into production					245,300
Total costs					$254,000

COST RECONCILIATION SCHEDULE		
Costs accounted for		
Transferred out		$?
Work in process, March 31		
Materials	?	
Conversion costs	?	?
Total costs		?

Instructions

(a) Materials $2.00

(b) Transferred out $224,400
WIP $ 29,600

(a) Prepare a schedule that shows how the equivalent units were computed so that you can complete the "Quantities: Units accounted for" equivalent units section shown in the production cost report above, and compute March unit costs.

(b) Complete the "Cost Reconciliation Schedule" part of the production cost report above.

Determine equivalent units and unit costs and assign costs for processes; prepare production cost report.
(SO 8), **AP**

***P16-7B** Holiday Company manufactures basketballs and soccer balls. For both products, materials are added at the beginning of the production process and conversion costs are incurred uniformly. Holiday uses the FIFO method to compute equivalent units. Production and cost data for the month of August are shown on the next page.

Production Data—Basketballs	Units	Percent Complete
Work in process units, August 1	500	60%
Units started into production	2,000	
Work in process units, August 31	600	50%
Cost Data—Basketballs		
Work in process, August 1	$1,125	
Direct materials	1,600	
Direct labor	1,280	
Manufacturing overhead	1,000	

Production Data—Soccer Balls	Units	Percent Complete
Work in process units, August 1	200	80%
Units started into production	2,000	
Work in process units, August 31	150	70%
Cost Data—Soccer Balls		
Work in process, August 1	$ 450	
Direct materials	2,800	
Direct labor	1,000	
Manufacturing overhead	1,394	

Instructions

(a) Calculate the following for both the basketballs and the soccer balls.
  (1) The equivalent units of production for materials and conversion costs.
  (2) The unit costs of production for materials and conversion costs.
  (3) The assignment of costs to units transferred out and in process at the end of the accounting period.
(b) Prepare a production cost report for the month of August for the basketballs only.

(a) Basketballs:
(1) Materials 2,000
(2) Materials $.80
(3) Transferred out $4,165
WIP $840

Problems: Set C

Visit the book's companion website, at **www.wiley.com/college/kimmel**, and choose the Student Companion site to access Problem Set C.

Waterways Continuing Problem

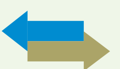
(*Note:* This is a continuation of the Waterways Problem from Chapters 14 and 15.)

WCP16 Because most of the parts for its irrigation systems are standard, Waterways handles the majority of its manufacturing as a process cost system. There are multiple process departments. Three of these departments are the Molding, Cutting, and Welding departments. All items eventually end up in the Packaging department which prepares items for sale in kits or individually. This problem asks you to help Waterways calculate equivalent units and prepare a production cost report.

Go to the book's companion website, at **www.wiley.com/college/kimmel**, to see the completion of this problem.

broadening your perspective

DECISION MAKING ACROSS THE ORGANIZATION



BYP16-1 Florida Beach Company manufactures suntan lotion, called Surtan, in 11-ounce plastic bottles. Surtan is sold in a competitive market. As a result, management is very cost-conscious. Surtan is manufactured through two processes: mixing and filling. Materials are entered at the beginning of each process, and labor and manufacturing overhead occur uniformly throughout each process. Unit costs are based on the cost per gallon of Surtan using the weighted-average costing approach.

On June 30, 2012, Mary Ritzman, the chief accountant for the past 20 years, opted to take early retirement. Her replacement, Joe Benili, had extensive accounting experience with motels in the area but only limited contact with manufacturing accounting. During July, Joe correctly accumulated the following production quantity and cost data for the Mixing Department.

Production quantities: Work in process, July 1, 8,000 gallons 75% complete; started into production 100,000 gallons; work in process, July 31, 5,000 gallons 20% complete. Materials are added at the beginning of the process.

Production costs: Beginning work in process $88,000, comprised of $21,000 of materials costs and $67,000 of conversion costs; incurred in July: materials $573,000, conversion costs $765,000.

Joe then prepared a production cost report on the basis of physical units started into production. His report showed a production cost of $14.26 per gallon of Surtan. The management of Florida Beach was surprised at the high unit cost. The president comes to you, as Mary's top assistant, to review Joe's report and prepare a correct report if necessary.

Instructions

With the class divided into groups, answer the following questions.

(a) Show how Joe arrived at the unit cost of $14.26 per gallon of Surtan.
(b) What error(s) did Joe make in preparing his production cost report?
(c) Prepare a correct production cost report for July.

MANAGERIAL ANALYSIS

BYP16-2 Harris Furniture Company manufactures living room furniture through two departments: Framing and Upholstering. Materials are entered at the beginning of each process. For May, the following cost data are obtained from the two work in process accounts.

	Framing	Upholstering
Work in process, May 1	$ –0–	$?
Materials	450,000	?
Conversion costs	261,000	330,000
Costs transferred in	–0–	600,000
Costs transferred out	600,000	?
Work in process, May 31	100,000	?

Instructions

Answer the following questions.

(a) If 3,000 sofas were started into production on May 1 and 2,500 sofas were transferred to Upholstering, what was the unit cost of materials for May in the Framing Department?
(b) Using the data in (a) above, what was the per unit conversion cost of the sofas transferred to Upholstering?
(c) Continuing the assumptions in (a) above, what is the percentage of completion of the units in process at May 31 in the Framing Department?

REAL-WORLD FOCUS

BYP16-3 The May 10, 2004, edition of the *Wall Street Journal* includes an article by Evan Ramstad entitled "A Tight Squeeze" (page R9).

Instructions

Read the article and answer the following questions.

(a) What is **Proview**'s profit margin on computer monitors? Why is the profit margin so thin on computer monitors?
(b) What are some of the steps that Proview International has taken to control costs?
(c) Why does the company continue to build tube-based monitors even as many consumers are moving away from them?
(d) Mr. Wang's final comment is, "Every aspect of the business is important, but the most important is cost." Why does he feel this way?

MANAGERIAL ACCOUNTING ON THE WEB

BYP16-4 Paintball is now played around the world. The process of making paintballs is actually quite similar to the process used to make certain medical pills. In fact, paintballs were previously often made at the same factories that made pharmaceuticals.

Address: **http://video.google.com/videoplay?docid=6864066340713942400**, or go to **www.wiley.com/college/kimmel**

Instructions

View that video at the site listed above and then answer the following questions.

(a) Describe in sequence the primary steps used to manufacture paintballs.
(b) Explain the costs incurred by the company that would fall into each of the following categories: materials, labor, and overhead. Of these categories, which do you think would be the greatest cost in making paintballs?
(c) Discuss whether a paintball manufacturer would use job order costing or process costing.

COMMUNICATION ACTIVITY

BYP16-5 Diane Barone was a good friend of yours in high school and is from your home town. While you chose to major in accounting when you both went away to college, she majored in marketing and management. You have recently been promoted to accounting manager for the Snack Foods Division of Melton Enterprises, and your friend was promoted to regional sales manager for the same division of Melton. Diane recently telephoned you. She explained that she was familiar with job cost sheets, which had been used by the Special Projects division where she had formerly worked. She was, however, very uncomfortable with the production cost reports prepared by your division. She emailed you a list of her particular questions:

1. Since Melton occasionally prepares snack foods for special orders in the Snack Foods Division, why don't we track costs of the orders separately?
2. What is an equivalent unit?
3. Why am I getting four production cost reports? Isn't there one Work in Process account?

Instructions

Prepare a memo to Diane. Answer her questions, and include any additional information you think would be helpful. You may write informally, but do use proper grammar and punctuation.

ETHICS CASE

BYP16-6 R. B. Dillman Company manufactures a high-tech component that passes through two production processing departments, Molding and Assembly. Department managers are partially compensated on the basis of units of products completed and transferred out relative to units of product put into production. This was intended as encouragement to be efficient and to minimize waste.

Jan Wooten is the department head in the Molding Department, and Tony Ferneti is her quality control inspector. During the month of June, Jan had three new employees who were not yet technically skilled. As a result, many of the units produced in June had minor molding defects. In order to maintain the department's normal high rate of completion, Jan told Tony to pass through inspection and on to the Assembly Department all units that had defects nondetectable to the human eye. "Company and industry tolerances on this product are too high anyway," says Jan. "Less than 2% of the units we produce are subjected in the market to the stress tolerance we've designed into them. The odds of those 2% being any of this month's units are even less. Anyway, we're saving the company money."

Instructions

(a) Who are the potential stakeholders involved in this situation?
(b) What alternatives does Tony have in this situation? What might the company do to prevent this situation from occurring?

Answers to Insight and Accounting Across the Organization Questions

p. 845 Choosing a Cost Driver Q: What is the result if a company uses the wrong "cost driver" to assign manufacturing overhead? **A:** Incorrect assignment of manufacturing overhead will result in some products receiving too much overhead and others receiving too little.

p. 849 Keeping Score for the Xbox Q: In what ways has cost accounting probably become more critical for Microsoft in recent years? **A:** In the past, Microsoft enjoyed very high profit margins on its software sales. As a consequence, it could afford to be less cost-conscious than most companies. In addition, in producing software, manufacturing costs represented a very small part of its total product cost. But the video-game hardware market is very competitive. As a result, to achieve its profitability goals, Microsoft will have to manufacture its product efficiently in order to meet its cost targets to ensure adequate margins. The information provided by process cost accounting will be critical to its efforts.

study objectives

After studying this chapter, you should be able to:

1. Recognize the difference between traditional costing and activity-based costing.
2. Identify the steps in the development of an activity-based costing system.
3. Know how companies identify the activity cost pools used in activity-based costing.
4. Know how companies identify and use cost drivers in activity-based costing.
5. Understand the benefits and limitations of activity-based costing.
6. Differentiate between value-added and non–value-added activities.
7. Understand the value of using activity levels in activity-based costing.
8. Apply activity-based costing to service industries.

feature story

THE ABCs OF DOUGHNUT MAKING—VIRTUAL-REALITY STYLE

Super Bakery, Inc., created in 1990 by former Pittsburgh Steelers' running back Franco Harris, is a nationwide supplier of mineral-, vitamin-, and protein-enriched doughnuts and other baked goods to the institutional food market, primarily school systems. Super Bakery is a *virtual corporation,* in which only the core, strategic functions of the business are performed inside the company. The remaining activities—selling, manufacturing, warehousing, and shipping—are outsourced to a network of external companies.

Super Bakery draws these cooperating companies together and organizes the work flow. The goal is to add maximum value to the company while making the minimum investment in permanent staff, fixed assets, and working capital. The results are notable: Super Bakery's sales have grown at an average annual rate of approximately 20% during much of its existence.

One of Super Bakery's challenges has been to control the cost of the outsourced activities. Management suspected a wide variation in the cost of serving customers in different parts of the country. Yet its traditional costing methods were spreading costs over the entire customer base. Each customer's order *appeared* to cost the same amount to complete. In actuality, orders with high profit margins were subsidizing orders with low profit margins. Super Bakery desired a system that would more accurately assign the costs of each order. With such a system, pricing could be improved.

The company looked at and eventually changed to a system that could identify the costs associated with the *activities* performed in the business—manufacturing, sales, warehousing, and shipping. The new activity-based costing system showed that the costs and profit margins on each sale vary significantly. Super Bakery is now able to track the profitability of each customer's account and the performance of outsourced activities. This doughnut maker, as a result, even knows the cost of the doughnut holes!

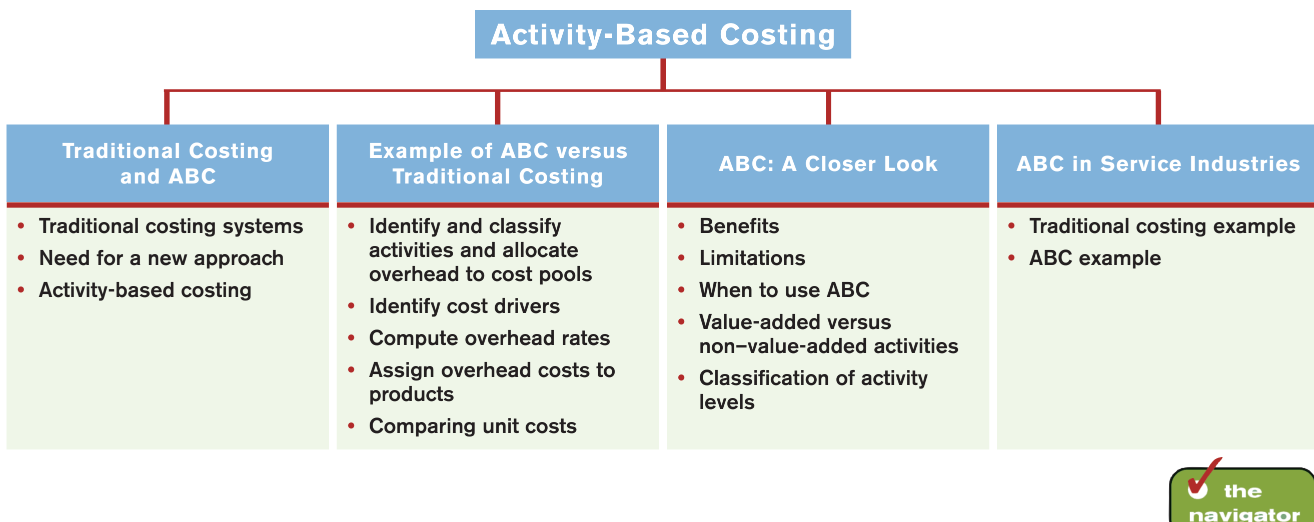
preview of chapter 17

As indicated in the Feature Story about Super Bakery, Inc., the traditional costing systems described in earlier chapters are not the best answer for every company. Because Super Bakery suspected that the traditional system was masking significant differences in its real cost structure, it sought a new method of assigning costs. Similar searches by other companies for ways to improve operations and gather more accurate data for decision making have resulted in the development of powerful new management tools, including **activity-based costing (ABC).** The primary objective of this chapter is to explain and illustrate this concept.

The content and organization of this chapter are as follows.



the navigator

Traditional Costing and Activity-Based Costing

study objective 1

Recognize the difference between traditional costing and activity-based costing.

TRADITIONAL COSTING SYSTEMS

It is probably impossible to determine the *exact* cost of a product or service. However, in order to achieve improved management decisions, companies strive to provide decision makers with the most accurate cost estimates they can. The most accurate estimate of product cost occurs when the costs are traceable directly to the product produced or the service provided. Direct material and direct labor costs are the easiest to trace directly to the product through the use of material requisition forms and payroll time sheets. Overhead costs, on the other hand, are an indirect or common cost that generally cannot be easily or directly traced to individual products or services. Instead, companies use estimates to assign overhead costs to products and services.

Often, the most difficult part of computing accurate unit costs is determining the proper amount of **overhead cost** to assign to each product, service, or job. In our coverage of job order costing in Chapter 15 and of process costing in Chapter 16, we used a single or plantwide overhead rate throughout the year for the entire factory operation. That rate was called the **predetermined overhead rate**. For job order costing, we assumed that **direct labor cost** was the relevant activity base for assigning all overhead costs to jobs. For process costing, we assumed that **machine hours** was the relevant activity base for assigning all overhead to the process or department.

The use of direct labor as the activity base made sense when overhead cost allocation systems were first developed. At that time, direct labor made up a large portion of total manufacturing cost. Therefore, it was widely accepted that

there was a high correlation between direct labor and the incurrence of overhead cost. As a result, direct labor became the most popular basis for allocating overhead.

Even in today's increasingly automated environment, direct labor is sometimes the appropriate basis for assigning overhead cost to products. It is appropriate to use direct labor when (a) direct labor constitutes a significant part of total product cost, and (b) a high correlation exists between direct labor and changes in the amount of overhead costs. Illustration 17-1 displays a simplified (one-stage) traditional costing system relying on direct labor to assign overhead.

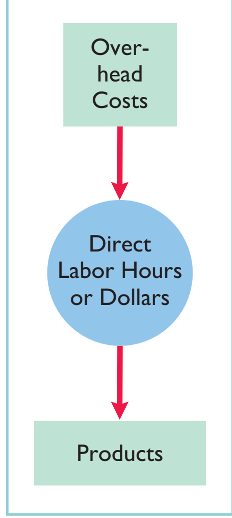


Illustration 17-1
Traditional one-stage costing system

THE NEED FOR A NEW APPROACH

In recent years, manufacturers and service providers have experienced tremendous change. Advances in computerized systems, technological innovation, global competition, and automation have changed the manufacturing environment drastically. As a result, the amount of direct labor used in many industries has greatly decreased, and total overhead costs resulting from depreciation on expensive equipment and machinery, utilities, repairs, and maintenance have significantly increased. When there is not a correlation between direct labor and overhead, it is inappropriate to use plantwide predetermined overhead rates based on direct labor. Companies that use overhead rates based on direct labor, even though this correlation does not exist, experience significant product-cost distortions.

To avoid such distortions, many companies now use machine hours as the basis on which to allocate overhead in an automated manufacturing environment. But even machine hours may not suffice as the only plantwide basis for allocating all overhead. If the manufacturing process is complex, then only multiple allocation bases can result in more accurate product-cost computations. In such situations, managers need to consider an overhead cost allocation method that uses *multiple* bases. That method is **activity-based costing**.

ACTIVITY-BASED COSTING

Broadly, **activity-based costing (ABC)** is an approach for allocating overhead costs. More specifically, ABC allocates overhead to multiple activity cost pools, and it then assigns the activity cost pools to products and services by means of cost drivers. To understand this more clearly, you need to apply some new meanings to the rather common-sounding words that make up the definition: In activity-based costing, an **activity** is any event, action, transaction, or work sequence that incurs cost when producing a product or providing a service. An **activity cost pool** is the overhead cost attributed to a distinct type of activity (e.g., ordering materials or setting up machines). A **cost driver** is any factor or activity that has a direct cause-effect relationship with the resources consumed. The reasoning behind ABC cost allocation is simple: **Products consume activities, and activities consume resources**.

These definitions of terms will become clearer as we look more closely at how ABC works. ABC allocates overhead in a two-stage process. The first stage allocates overhead costs to activity cost pools. (Traditional costing systems, in contrast, allocate these costs to departments or to jobs.) Examples of overhead cost pools are ordering materials, setting up machines, assembling products, and inspecting products.

The second stage assigns the overhead allocated to the activity cost pools to products, using cost drivers. The cost drivers measure the number of individual activities undertaken or performed to produce products or provide services.

Examples are number of purchase orders, number of setups, labor hours, and number of inspections. Illustration 17-2 shows examples of activities, and possible cost drivers to measure them, for a company that manufactures two products—axles and steering wheels.

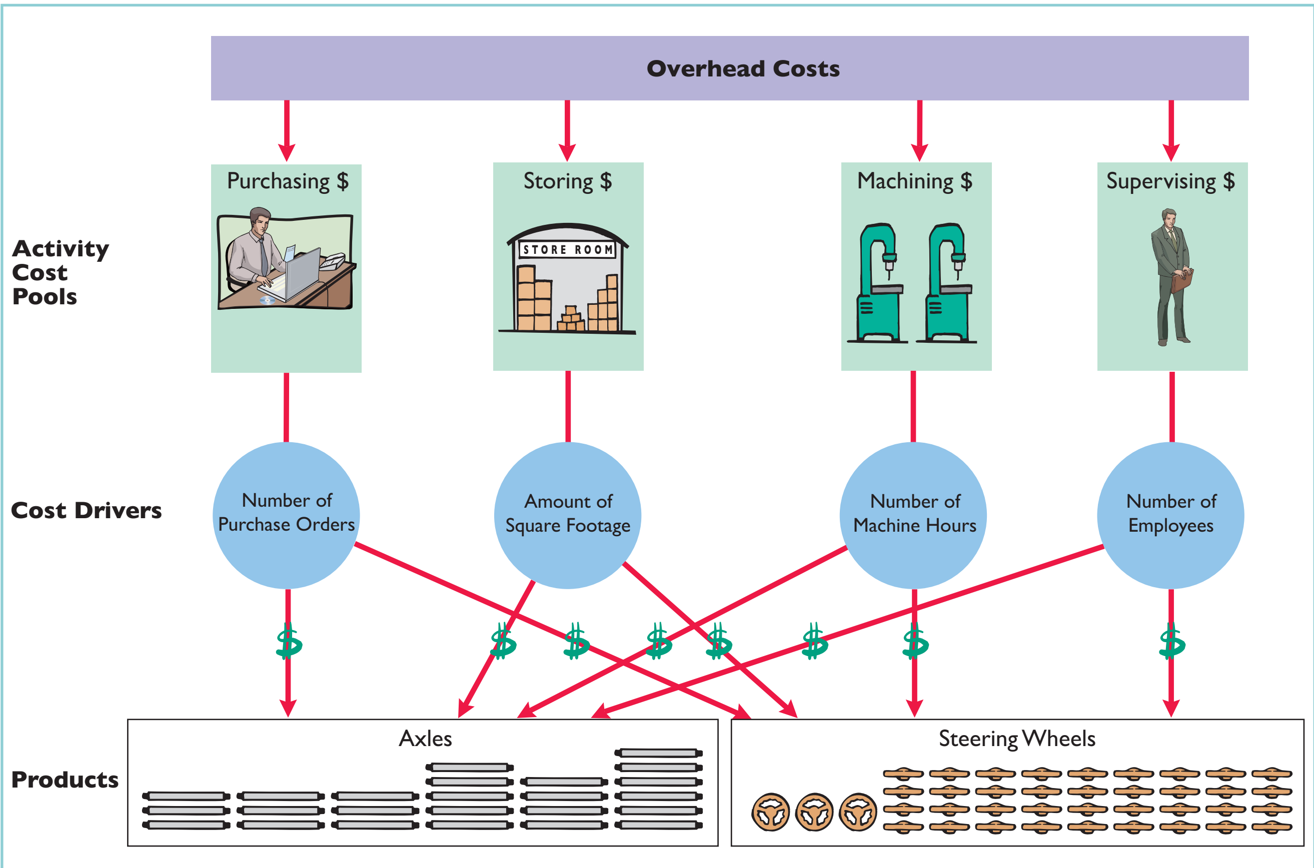

Illustration 17-2
Activities and related cost drivers

In the first step (as shown at the top of Illustration 17-2), the company allocates overhead costs to activity cost pools. In this simplified example, the company has identified four activity cost pools: purchasing, storing, machining, and supervising. After the costs are allocated to the activity cost pools, the company uses cost drivers to determine the costs to assign to the individual products (either axles or steering wheels) based on each product's use of each activity. For example, if axles require more activity by the purchasing department, as measured by the number of required purchase orders, then more of the overhead cost from the purchasing pool will be allocated to the axles.

The more complex a product's manufacturing operation, the more activities and cost drivers it is likely to have. If there is little or no correlation between changes in the cost driver and consumption of the overhead cost, inaccurate product costs are inevitable.

Illustration 17-3 shows the design of a more complex activity-based costing system with seven activity cost pools for Lift Jack Company. Lift Jack Company manufactures two automotive jacks—an automobile scissors jack and a truck hydraulic jack.

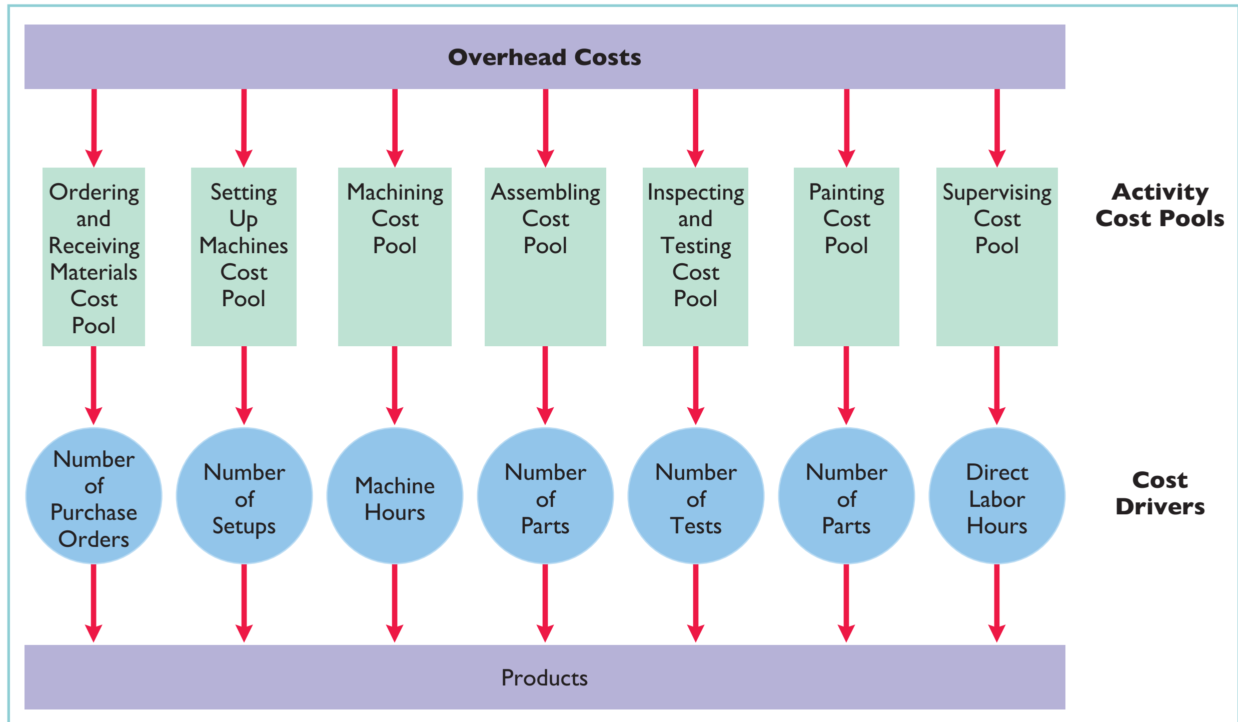

Illustration 17-3
ABC system design—Lift Jack Company

The Lift Jack Company illustration contains seven activity cost pools. In some companies the number of activities can be substantial. For example, Clark-Hurth (a division of Clark Equipment Company), a manufacturer of axles and transmissions, identified over 170 activities. Compumotor (a division of Parker Hannifin) identified over 80 activities in just the procurement function of its Material Control Department.

before you go on...

Do it! Indicate whether the following statements are true or false.

1. A traditional costing system allocates overhead by means of multiple overhead rates.
2. Activity-based costing allocates overhead costs in a two-stage process.
3. Direct material and direct labor costs are easier to trace to products than overhead.
4. As manufacturing processes have become more automated, more companies have chosen to allocate overhead on the basis of direct labor costs.
5. In activity-based costing, an activity is any event, action, transaction, or work sequence that incurs cost when producing a product.

COSTING SYSTEMS

Action Plan

- Understand that a traditional costing system allocates overhead on the basis of a single predetermined overhead rate.
- Understand that an ABC system allocates overhead to identified activity cost pools, and then assigns costs to products using related cost drivers that measure the resources consumed.

Solution

1. false. 2. true. 3. true. 4. false. 5. true.

Example of ABC versus Traditional Costing

study objective 2
Identify the steps in the development of an activity-based costing system.

In this section, we present a simple case example that compares activity-based costing with traditional costing. It illustrates how ABC eliminates the distortion that can occur in traditional overhead cost allocation. As you study this example,

you should understand that ABC does not *replace* an existing job order or process costing system. What ABC does is to segregate overhead into various cost pools in an effort to provide more accurate cost information. As a result, ABC supplements—rather than replaces—these cost systems.

Assume that Atlas Company produces two automobile antitheft devices, The Boot and The Club. The Boot is a high-volume item totaling 25,000 units annually. The Club is a low-volume item totaling only 5,000 units per year. The direct materials cost per unit is $40 for The Boot and $30 for The Club. The direct labor cost is $12 per unit for each product. Each product requires one hour of direct labor for completion. Therefore, total annual direct labor hours are 30,000 (25,000 + 5,000). Expected annual manufacturing overhead costs are $900,000. Thus, the predetermined overhead rate under traditional costing, using direct labor hours, is $30 ($900,000 ÷ 30,000) per direct labor hour. Since both products require one direct labor hour per unit, both products are allocated overhead costs of **$30 per unit under traditional costing**.

Let's now calculate unit costs under ABC. Activity-based costing involves the following four steps.

1. Identify and classify the major activities involved in the manufacture of specific products, and allocate manufacturing overhead costs to cost pools.
2. Identify the cost driver that has a strong correlation to the costs accumulated in the cost pool.
3. Compute the overhead rate for each cost driver.
4. Assign manufacturing overhead costs for each cost pool to products, using the overhead rates (cost per driver).

IDENTIFY AND CLASSIFY ACTIVITIES AND ALLOCATE OVERHEAD TO COST POOLS (STEP 1)

study objective 3

Know how companies identify the activity cost pools used in activity-based costing.

A well-designed activity-based costing system starts with an analysis of the activities performed to manufacture a product or provide a service. This analysis should identify all resource-consuming activities. It requires documenting every activity undertaken to accomplish a task. Atlas Company identified three activity-cost pools: setting up machines, machining, and inspecting.

Next, the system assigns overhead costs directly to the appropriate activity cost pool. For example, all overhead costs directly associated with Atlas Company's machine setups (such as salaries, supplies, and depreciation) would be assigned to the machine setup cost pool. Illustration 17-4 shows the three cost pools, along with the estimated overhead allocated to each cost pool.

Illustration 17-4 Activity cost pools and estimated overhead

Activity Cost Pools	Estimated Overhead
Setting up machines	$300,000
Machining	500,000
Inspecting	100,000
Total	$ 900,000

IDENTIFY COST DRIVERS (STEP 2)

study objective 4

Know how companies identify and use cost drivers in activity-based costing.

After costs are allocated to the activity cost pools, the company must identify the cost drivers for each cost pool. The cost driver must accurately measure the actual consumption of the activity by the various products. To achieve accurate costing, a **high degree of correlation** must exist between the cost driver and the actual consumption of the overhead costs in the cost pool.

Illustration 17-5 shows the cost drivers identified by Atlas and their total expected use per activity cost pool.

Illustration 17-5 Cost drivers and their expected use

Activity Cost Pools	Cost Drivers	Expected Use of Cost Drivers per Activity
Setting up machines	Number of setups	**1,500** setups
Machining	Machine hours	**50,000** machine hours
Inspecting	Number of inspections	**2,000** inspections

Availability and ease of obtaining data relating to the cost driver is an important factor that must be considered in its selection.

COMPUTE OVERHEAD RATES (STEP 3)

Next, the company computes an **activity-based overhead rate** per cost driver by dividing the estimated overhead per activity by the number of cost drivers expected to be used per activity. Illustration 17-6 shows the formula for this computation.

Illustration 17-6 Formula for computing activity-based overhead rate

$$\frac{\text{Estimated Overhead per Activity}}{\text{Expected Use of Cost Drivers per Activity}} = \text{Activity-Based Overhead Rate}$$

Atlas Company computes its activity-based overhead rates by using estimated overhead per activity cost pool, shown in Illustration 17-4, and the expected use of cost drivers per activity, shown in Illustration 17-5. These computations are presented in Illustration 17-7.

Illustration 17-7 Computation of activity-based overhead rates

Activity Cost Pools	Estimated Overhead	÷	Expected Use of Cost Drivers per Activity	=	Activity-Based Overhead Rates
Setting up machines	$300,000		1,500 setups		**$200** per setup
Machining	500,000		50,000 machine hours		**$10** per machine hour
Inspecting	100,000		2,000 inspections		**$50** per inspection
Total	$900,000				

ASSIGN OVERHEAD COSTS TO PRODUCTS (STEP 4)

In assigning overhead costs, it is necessary to know the expected use of cost drivers **for each product**. Because of its low volume, The Club requires more setups and inspections than The Boot. Illustration 17-8 shows the expected use of cost drivers per product for each of Atlas's products.

Illustration 17-8 Expected use of cost drivers per product

Activity Cost Pools	Cost Drivers	Expected Use of Cost Drivers per Activity	Expected Use of Cost Drivers per Product	
			The Boot	The Club
Setting up machines	Number of setups	1,500 setups	**500**	**1,000**
Machining	Machine hours	50,000 machine hours	**30,000**	**20,000**
Inspecting	Number of inspections	2,000 inspections	**500**	**1,500**

To assign overhead costs to each product, Atlas multiplies the activity-based overhead rates per cost driver (Illustration 17-7, page 895) by the number of cost drivers expected to be used per product (Illustration 17-8, page 895). Illustration 17-9 shows the overhead cost assigned to each product.

Illustration 17-9
Assignment of activity cost pools to products

Atlas Company.xls

	A	B	C	D	E	F	G	H	I	J	K	L
1		ATLAS COMPANY										
2		The Boot						The Club				
3	Activity Cost Pools	Expected Use of Cost Drivers per Product	×	Activity-Based Overhead Rates	=	Cost Assigned		Expected Use of Cost Drivers per Product	×	Activity-Based Overhead Rates	=	Cost Assigned
4	Setting up machines	500		$200		$100,000		1,000		$200		$200,000
5	Machining	30,000		$10		300,000		20,000		$10		200,000
6	Inspecting	500		$50		25,000		1,500		$50		75,000
7	Total costs assigned [(a)]					$425,000						$475,000
8	Units produced [(b)]					25,000						5,000
9	Overhead cost per unit [(a) ÷ (b)]					$17						$95
10												

Under ABC, the overhead cost per unit is $17 for The Boot and $95 for The Club. When compared to the $30 per unit overhead charge under traditional costing, ABC shifts costs from the high-volume product (The Boot) to the low-volume product (The Club). This shift occurs because low-volume products often require more special handling, such as machine setups and inspections. This is true for Atlas Company. Thus, the low-volume product frequently is responsible for more overhead costs per unit than is a high-volume product.[1] Assigning overhead using ABC will usually increase the cost per unit for low-volume products as compared to a traditional overhead allocation. Therefore, traditional cost drivers such as direct labor hours are usually not appropriate for assigning overhead costs to low-volume products.

COMPARING UNIT COSTS

Illustration 17-10 shows the unit cost for each product under traditional costing.

Illustration 17-10
Computation of unit costs–traditional costing

	Products	
Manufacturing Costs	**The Boot**	**The Club**
Direct materials	$40	$30
Direct labor	12	12
Overhead	30*	30*
Total unit cost	$82	$72

*Predetermined overhead rate × Direct labor hours = $30 × 1 hr. = $30

A comparison of unit manufacturing costs under traditional costing and ABC shows the following significant differences.

[1]Robin Cooper and Robert S. Kaplan, "How Cost Accounting Distorts Product Costs," *Management Accounting* 69, No. 10 (April 1988), pp. 20–27.

Illustration 17-11
Comparison of unit product costs

Manufacturing Costs	The Boot: Traditional Costing	The Boot: ABC	The Club: Traditional Costing	The Club: ABC
Direct materials	$40	$40	$30	$ 30
Direct labor	12	12	12	12
Overhead	30	17	30	95
Total cost per unit	**$82**	**$69**	**$72**	**$137**
	Overstated $13		Understated $65	

The comparison shows that unit costs under traditional costing are significantly distorted. The cost of producing The Boot is overstated by $13 per unit ($82 − $69), and the cost of producing The Club is understated by $65 per unit ($137 − $72). These differences are attributable entirely to how Atlas Company assigns manufacturing overhead. A likely consequence of the differences in assigning overhead is that Atlas has been overpricing The Boot and possibly losing market share to competitors. It also has been sacrificing profitability by underpricing The Club.

Activity-based costing was pioneered in the United States: John Deere Company coined the term about 25 years ago. Numerous well-known U.S. companies, including IBM, AT&T, Hewlett-Packard, Procter & Gamble, Tektronix, Hughes Aircraft, Caterpillar, and American Express, have adopted ABC. Its use outside the United States, however, is limited. The cost of implementation may discourage some foreign companies.

In Japan, where activity-based costing is less widely used, companies prefer volume measures such as direct labor hours to assign overhead cost to products. Japanese managers are convinced that reducing direct labor is essential to continuous cost reduction. Using direct labor as the basis for overhead allocation forces Japanese companies to watch direct labor more closely. Possibly, Japanese management believes that labor cost reduction is more of a priority than developing more accurate product costs.

Service Company Insight

Traveling Light

Have you flown on an airplane since baggage fees have been implemented? Did the fee make you so mad that you swore that the next time you flew, you would pack fewer clothes so you could use a carry-on bag instead? That is exactly how the airlines hoped that you would react. Baggage handling is extremely labor-intensive. All that tagging, sorting, loading on carts, loading in planes, unloading, and sorting again add up to about $9 per bag. They also have equipment costs: sorters, carts, conveyors, tractors, and storage facilities. That's about another $4 per bag. Finally, there is additional fuel cost of a 40 pound item—about $2 in fuel for a 3-hour flight. These costs add up to $15 ($9 + $4 + $2). Since airlines have implemented their baggage fees, fewer customers are checking bags. Not only does this save the airlines money, it also increases the amount of space available for hauling cargo. An airline can charge at least $80 for hauling a small parcel for same-day delivery service.

Source: Scott McCartney, "What It Costs an Airline to Fly Your Luggage," *Wall Street Journal Online* (November 25, 2008).

Why do airlines charge even higher rates for heavier bags, bags that are odd shapes (e.g., ski bags), and bags with hazardous materials in them? (See page 937.)

before you go on...

APPLY ABC

Do it! Lift Jack Company, as shown in Illustration 17-3 (page 893) has seven activity cost pools and two products. It expects to produce 200,000 units of its automobile scissors jack and 80,000 units of its truck hydraulic jack. Having identified its activity cost pools and the cost drivers for each cost pool, Lift Jack Company accumulated the following data relative to those activity cost pools and cost drivers.

Annual Overhead Data				Expected Use of Cost Drivers per Product	
Activity Cost Pools	**Cost Drivers**	**Estimated Overhead**	**Expected Use of Cost Drivers per Activity**	**Scissors Jacks**	**Hydraulic Jacks**
Ordering and receiving	Purchase orders	$ 200,000	2,500 orders	1,000	1,500
Machine setup	Setups	600,000	1,200 setups	500	700
Machining	Machine hours	2,000,000	800,000 hours	300,000	500,000
Assembling	Parts	1,800,000	3,000,000 parts	1,800,000	1,200,000
Inspecting and testing	Tests	700,000	35,000 tests	20,000	15,000
Painting	Parts	300,000	3,000,000 parts	1,800,000	1,200,000
Supervising	Direct labor hours	1,200,000	200,000 hours	130,000	70,000
		$6,800,000			

Using the above data, do the following:

(a) Prepare a schedule showing the computations of the activity-based overhead rates per cost driver.

(b) Prepare a schedule assigning each activity's overhead cost to the two products.

(c) Compute the overhead cost per unit for each product.

(d) Comment on the comparative overhead cost per unit.

Solution

(a) Computations of activity-based overhead rates per cost driver:

Activity Cost Pools	**Estimated Overhead**	÷	**Expected Use of Cost Drivers per Activity**	=	**Activity-Based Overhead Rates**
Ordering and receiving	$ 200,000		2,500 purchase orders		$80 per order
Machine setup	600,000		1,200 setups		$500 per setup
Machining	2,000,000		800,000 machine hours		$2.50 per machine hour
Assembling	1,800,000		3,000,000 parts		$0.60 per part
Inspecting and testing	700,000		35,000 tests		$20 per test
Painting	300,000		3,000,000 parts		$0.10 per part
Supervising	1,200,000		200,000 direct labor hours		$6 per direct labor hour
	$6,800,000				

(b) Assignment of each activity's overhead cost to products using ABC:

	Scissors Jacks					Hydraulic Jacks				
Activity Cost Pools	**Expected Use of Cost Drivers per Product**	×	**Activity-Based Overhead Rates**	=	**Cost Assigned**	**Expected Use of Cost Drivers per Product**	×	**Activity-Based Overhead Rates**	=	**Cost Assigned**
Ordering and receiving	1,000		$80		$ 80,000	1,500		$80		$ 120,000
Machine setup	500		$500		250,000	700		$500		350,000
Machining	300,000		$2.50		750,000	500,000		$2.50		1,250,000
Assembling	1,800,000		$0.60		1,080,000	1,200,000		$0.60		720,000
Inspecting and testing	20,000		$20		400,000	15,000		$20		300,000
Painting	1,800,000		$0.10		180,000	1,200,000		$0.10		120,000
Supervising	130,000		$6		780,000	70,000		$6		420,000
Total assigned costs					$3,520,000					$3,280,000

(c) Computation of overhead cost per unit:

	Scissors Jack	Hydraulic Jack
Total costs assigned	$3,520,000	$3,280,000
Total units produced	200,000	80,000
Overhead cost per unit	$17.60	$41.00

(d) These data show that the total overhead assigned to 80,000 hydraulic jacks is nearly as great as the overhead assigned to 200,000 scissors jacks. The overhead cost per hydraulic jack is $41, but it is only $17.60 per scissors jack.

Related exercise material: **BE17-5, BE17-6, BE17-7, *Do it!* 17-2, E17-1, E17-2, E17-3, E17-4, E17-5, E17-6,** and **E17-11.**

Action Plan

- Determine the activity-based overhead rate by dividing the estimated overhead per activity by the expected use of cost drivers per activity.
- Assign the overhead of each activity cost pool to the individual products by multiplying the expected use of cost driver per product times the activity-based overhead rate.
- Determine overhead cost per unit by dividing the overhead assigned to each product by the number of units of that product.

Activity-Based Costing: A Closer Look

study objective 5

Understand the benefits and limitations of activity-based costing.

As the use of activity-based costing has grown, both its practical benefits and its limitations have become apparent.

BENEFITS OF ABC

The primary benefit of ABC is **more accurate product costing**. Here's why:

1. **ABC leads to more cost pools** being used to assign overhead costs to products. Instead of one plantwide pool (or even departmental pools) and a single cost driver, companies use numerous activity cost pools with more relevant cost drivers. Costs are assigned more directly on the basis of the cost drivers used to produce each product.
2. **ABC leads to enhanced control over overhead costs.** Under ABC, companies can trace many overhead costs directly to activities—allowing some indirect costs to be identified as direct costs. Thus, managers have become more aware of their responsibility to control the activities that generate those costs.
3. **ABC leads to better management decisions.** More accurate product costing should contribute to setting selling prices that can help achieve desired product profitability levels. In addition, more accurate cost data could be helpful in deciding whether to make or buy a product part or component, and sometimes even whether to eliminate a product.

Activity-based costing does not change the amount of overhead costs. What it does do is allocate those overhead costs in a more accurate manner. Furthermore, if the scorekeeping is more realistic and more accurate, managers should be able to better understand cost behavior and overall profitability.

LIMITATIONS OF ABC

Although ABC systems often provide better product cost data than traditional volume-based systems, there are limitations:

1. **ABC can be expensive to use.** The increased cost of identifying multiple activities and applying numerous cost drivers discourages many companies

from using ABC. Activity-based costing systems are more complex than traditional costing systems—sometimes significantly more complex. So companies must ask, is the cost of implementation greater than the benefits of greater accuracy? Sometimes it may be. For some companies there may be no need to consider ABC at all because their existing system is sufficient. If the costs of ABC outweigh the benefits, then the company should not implement ABC.

2. **Some arbitrary allocations continue.** Even though more overhead costs can be assigned directly to products through ABC's multiple activity cost pools, certain overhead costs remain to be allocated by means of some arbitrary volume-based cost driver such as labor or machine hours.

SERVICE

Service Company Insight

Using ABC to Aid in Employee Evaluation

Although most publicized ABC applications are in manufacturing companies or large service firms, very small service businesses can apply it also. Mahany Welding Supply, a small family-run welding service business in Rochester, New York, used ABC to determine the cost of servicing customers and to identify feasible cost-reduction opportunities.

Application of ABC at Mahany Welding's operations provided information about the five employees who were involved in different activities of revenue generation–i.e., delivery of supplies (rural versus city), welding services, repairs, telephone sales, field or door-to-door sales, repeat business sales, and cold-call sales. Managers applied activity cost pools to the five revenue-producing employees using relevant cost drivers. ABC revealed annual net income (loss) by employee as follows:

Employee #1	$65,431	Employee #4	$(10,957)
Employee #2	$35,154	Employee #5	$(46,180)
Employee #3	$13,731		

This comparative information was an eye-opener to the owner of Mahany Welding–who was Employee #5!

Source: Michael Krupnicki and Thomas Tyson, "Using ABC to Determine the Cost of Servicing Customers," *Management Accounting* (December 31, 1997), pp. 40–46.

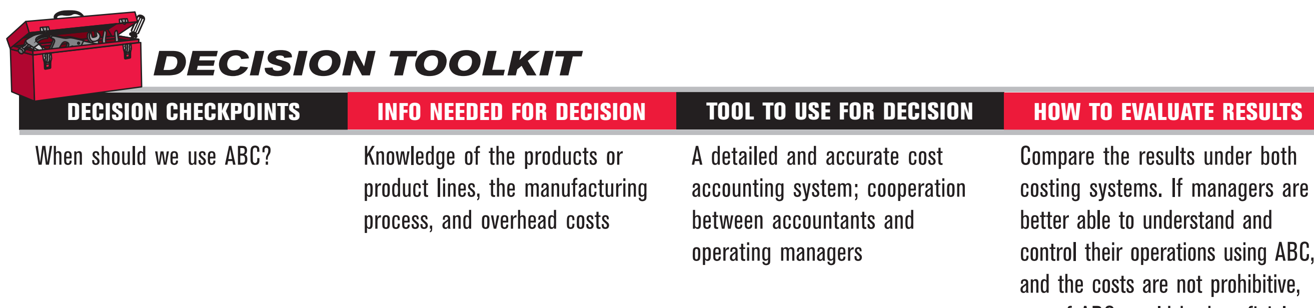
What positive implications does application of ABC have for the employees of this company? (See page 937.)

WHEN TO USE ABC

How does a company know when to use ABC? The presence of one or more of the following factors would point to its possible use:

1. Product lines differ greatly in volume and manufacturing complexity.
2. Product lines are numerous and diverse, and they require differing degrees of support services.
3. Overhead costs constitute a significant portion of total costs.
4. The manufacturing process or the number of products has changed significantly—for example, from labor-intensive to capital-intensive due to automation.
5. Production or marketing managers are ignoring data provided by the existing system and are instead using "bootleg" costing data or other alternative data when pricing or making other product decisions.

The redesign and installation of a product costing system is a significant decision that requires considerable cost and a major effort to accomplish. Therefore, financial managers need to be very cautious and deliberate when initiating changes in costing systems. A key factor in implementing a successful ABC system is the support of top management.



DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
When should we use ABC?	Knowledge of the products or product lines, the manufacturing process, and overhead costs	A detailed and accurate cost accounting system; cooperation between accountants and operating managers	Compare the results under both costing systems. If managers are better able to understand and control their operations using ABC, and the costs are not prohibitive, use of ABC would be beneficial.

VALUE-ADDED VERSUS NON–VALUE-ADDED ACTIVITIES

study objective 6
Differentiate between value-added and non–value-added activities.

Some companies that have experienced the benefits of activity-based costing have applied it to a broader range of management activities. **Activity-based management (ABM)** extends the use of ABC from product costing to a comprehensive management tool that focuses on reducing costs and improving processes and decision making. A refinement of activity-based costing used in ABM is the classification of activities as either value-added or non–value-added.

Value-added activities **increase the worth of a product or service** to customers. Such activities involve resource usage and related costs that customers are willing to pay for. Value-added activities are the activities of actually manufacturing a product or performing a service. Examples of value-added activities in a manufacturing operation are engineering design, machining, assembly, painting, and packaging. Examples of value-added activities in a service company would be performing surgery, providing legal research for legal services, or delivering packages by a delivery service.

Non–value-added activities are production- or service-related activities that simply **add cost to or increase the time spent on a product or service without increasing its market value**. Examples of non–value-added activities in a manufacturing operation include the repair of machines; the storage of inventory; the moving of raw materials, assemblies, and finished product within the factory; building maintenance; inspections; and inventory control. Examples of non–value-added activities in service enterprises might include taking appointments, reception, bookkeeping, billing, traveling, ordering supplies, advertising, cleaning, and computer repair.

Companies often use **activity flowcharts** to help identify the ABC activities. Illustration 17-12 (page 902) shows an activity flowchart. The top part of this flowchart identifies activities as value-added or non–value-added. The value-added activities are highlighted in red. Two rows in the lower part of the flowchart show the number of days spent on each activity. The first row shows the number of days spent on each activity under the current manufacturing process. The second row shows the number of days expected to be spent on each activity under management's proposed reengineered manufacturing process.

The proposed changes would reduce time spent on non–value-added activities by 17 days. This 17-day improvement would be due entirely to moving

Illustration 17-12
Flowchart showing value-added and non–value-added activities

inventory more quickly through the non–value-added processes—that is, by reducing inventory time in moving, storage, and waiting. The appendix at the end of this chapter discusses a just-in-time inventory system, which some companies use to eliminate non–value-added activities related to inventory.

Not all activities labeled non–value-added are totally wasteful, nor can they be totally eliminated. For example, although inspection time is a non–value-added activity from a customer's perspective, few companies would eliminate their quality control functions. Similarly, moving and waiting time is non–value-added, but it would be impossible to completely eliminate. Nevertheless, when managers recognize the non–value-added characteristic of these activities, they are motivated to minimize them as much as possible. Attention to such matters is part of the growing practice of activity-based management, which helps managers concentrate on **continuous improvement** of operations and activities.

before you go on...

VALUE-ADDED ACTIVITIES

Action Plan

- Recognize that value-added activities increase the worth of a product or service to customers.
- Understand that non–value-added activities simply add cost to or increase the time spent on a product or service without increasing its market value.

Do it! Classify each of the following activities within a dental practice as value-added (VA) or non–value-added (NVA).

1. Ordering supplies.
2. Taking appointments.
3. Completing continuing education requirements.
4. Explaining dental-hygiene techniques to patients.
5. Completing insurance documents.
6. Examining patients.

Solution

1. NVA. 2. NVA. 3. VA. 4. VA. 5. NVA. 6. VA.

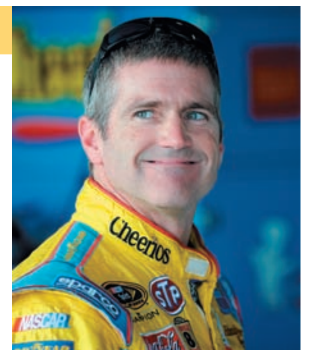
Management Insight

What Does NASCAR Have to Do with Breakfast Cereal?



Often the best way to improve a process is to learn from observing a different process. Production-line technicians from giant food producer General Mills were flown to North Carolina to observe first-hand how race-car pit crews operate. In a NASCAR race, the value-added activity is driving toward the finish line; any time spent in the pit is non–value-added. Every split second saved in the pit increases the chances of winning. From what the General Mills technicians learned at the car race, as well as other efforts, they were able to reduce setup time from 5 hours to just 20 minutes.

? What are the benefits of reducing setup time? (See page 937.)

DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
How can activity-based management help managers manage the business?	Activities classified as value-added and non-value-added	Activity flowchart	The flowchart should motivate managers to minimize non–value-added activities. Managers should better understand the relationship between activities and the resources they consume.

CLASSIFICATION OF ACTIVITY LEVELS

study objective

Understand the value of using activity levels in activity-based costing.

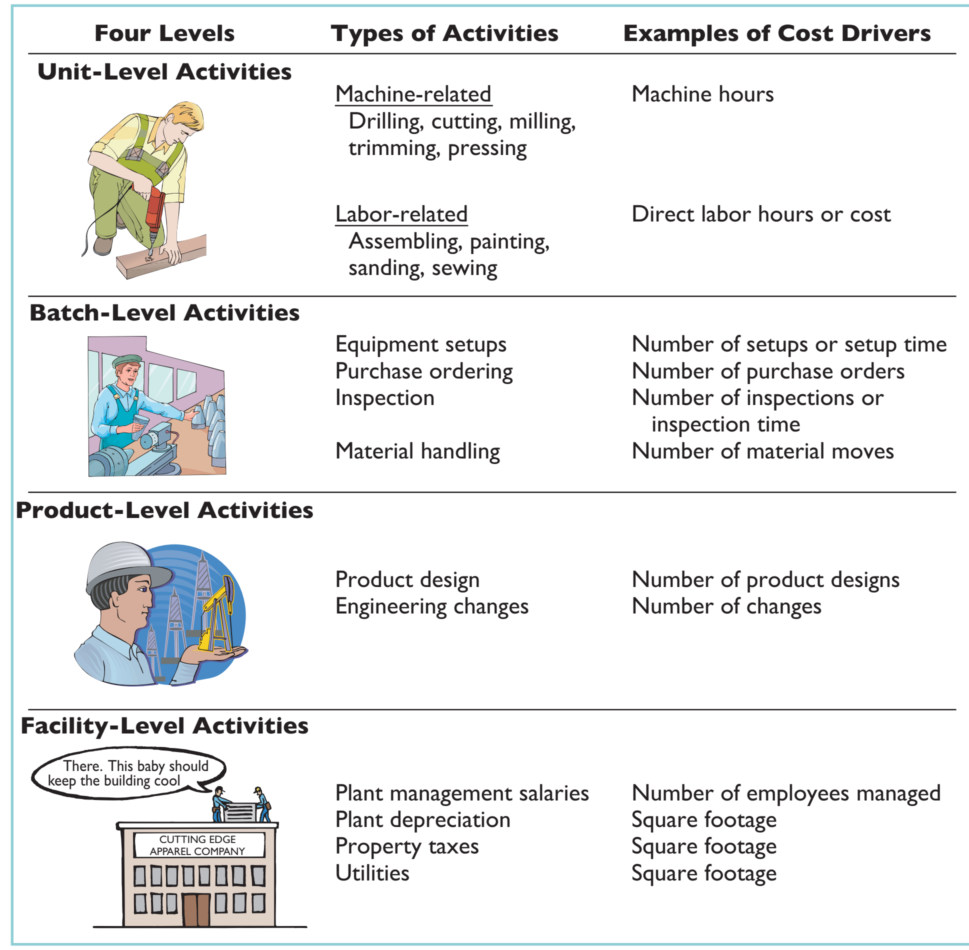
As mentioned earlier, traditional costing systems are volume-driven—driven by unit-based cost drivers such as direct labor or machine hours. Some activity costs are strictly variable and are caused by the production or acquisition of a single unit of product or the performance of a single unit of service. However, the recognition that other activity costs are not driven by unit-based cost drivers has led to the development of a classification of ABC activities consisting of four levels, as follows:

1. **Unit-level activities**. Activities performed for each unit of production.
2. **Batch-level activities**. Activities performed for each batch of products rather than each unit.
3. **Product-level activities**. Activities performed in support of an entire product line, but not always performed every time a new unit or batch of products is produced.
4. **Facility-level activities**. Activities required to support or sustain an entire production process.

Companies may achieve greater accuracy in overhead cost allocation by recognizing these four different levels of activities and, from them, developing specific activity cost pools and their related cost drivers. Illustration 17-13 (page 904) graphically displays this four-level activity hierarchy, along with the types of activities and examples of cost drivers for those activities at each level.

This classification provides managers a structured way of thinking about the relationships between activities and the resources they consume. In contrast, traditional volume-based costing recognizes only unit-level costs. **Failure to recognize this classification of activities is one of the reasons that volume-based cost allocation causes distortions in product costing.**

Illustration 17-13
Hierarchy of activity levels



Four Levels	Types of Activities	Examples of Cost Drivers
Unit-Level Activities	Machine-related Drilling, cutting, milling, trimming, pressing	Machine hours
	Labor-related Assembling, painting, sanding, sewing	Direct labor hours or cost
Batch-Level Activities	Equipment setups	Number of setups or setup time
	Purchase ordering	Number of purchase orders
	Inspection	Number of inspections or inspection time
	Material handling	Number of material moves
Product-Level Activities	Product design	Number of product designs
	Engineering changes	Number of changes
Facility-Level Activities	Plant management salaries	Number of employees managed
	Plant depreciation	Square footage
	Property taxes	Square footage
	Utilities	Square footage

As indicated earlier, allocating all overhead costs by unit-based cost drivers can send false signals to managers: Dividing batch-, product-, or facility-level costs by the number of units produced gives the mistaken impression that these costs vary with the number of units. **The resources consumed by batch-, product-, and facility-level supporting activities do not vary at the unit level**, nor can managers control them at the unit level. The number of activities performed at the batch level goes up as the *number of batches* rises—not as the number of units within the batches changes. Similarly, the number of product-level activities performed depends on the *number of different products*—not on how many units or batches are produced. Furthermore facility-sustaining activity costs are not dependent upon the number of products, batches, or units produced. Companies can control batch-, product-, and facility-level costs only by modifying batch-, product-, and facility-level activities.

before you go on...

CLASSIFY ACTIVITY LEVELS

Do it! Morgan Toy Company manufactures six primary product lines in its Morganville plant. As a result of an activity analysis, the accounting department has identified eight activity cost pools. Each of the toy products is produced in large batches, with the whole plant devoted to one product at a time. Classify each of the following activities as either unit-level, batch-level, product-level, or facility-level: (a) engineering design,

(b) machine setup, (c) toy design, (d) plant cafeteria, (e) inspections after each setup, (f) polishing parts, (g) assembling parts, (h) health and safety.

Solution

(a) product-level. (b) batch-level. (c) product-level. (d) facility-level. (e) batch-level. (f) unit-level. (g) unit-level. (h) facility-level.

Related exercise material: **BE17-10, BE17-11, BE17-12, Do it! 17-4, E17-17,** and **E17-18.**

Action Plan

- You should use: **unit-level** activities for each unit of product; **batch-level** activities for each batch of product; **product-level** activities for an entire product line; and **facility-level** activities for across the entire range of products.

Activity-Based Costing in Service Industries

study objective

Apply activity-based costing to service industries.

Although initially developed and implemented by manufacturers, activity-based costing has been widely adopted in service industries as well. ABC has been a useful tool in such diverse industries as airlines, railroads, hotels, hospitals, banks, insurance companies, telephone companies, and financial services firms. The overall objective of ABC in service firms is no different than it is in a manufacturing company. That objective is to identify the key activities that generate costs and to keep track of how many of those activities are performed for each service provided (by job, service, contract, or customer).

The general approach to identifying activities, activity cost pools, and cost drivers is the same for service companies and for manufacturers. Also, the labeling of activities as value-added and non–value-added, and the attempt to reduce or eliminate non–value-added activities as much as possible, is just as valid in service industries as in manufacturing operations. What sometimes makes implementation of activity-based costing difficult in service industries is that **a larger proportion of overhead costs are company-wide costs** that cannot be directly traced to specific services provided by the company.

To illustrate the application of activity-based costing to a service enterprise, contrasted to traditional costing, we use a public accounting firm. This illustration is equally applicable to a law firm, consulting firm, architect, or any service firm that performs numerous services for a client as part of a job.

TRADITIONAL COSTING EXAMPLE

Assume that the public accounting firm of Check and Doublecheck prepares the condensed annual budget shown in Illustration 17-14.

Illustration 17-14
Condensed annual budget of a service firm under traditional costing

CHECK AND DOUBLECHECK, CPAs
Annual Budget

Revenue		$2,000,000
Direct labor	$ 600,000	
Overhead (expected)	1,200,000	
Total costs		1,800,000
Operating income		$ 200,000

$$\frac{\text{Estimated overhead}}{\text{Direct labor cost}} = \text{Predetermined overhead rate}$$

$$\frac{\$1{,}200{,}000}{\$600{,}000} = 200\%$$

Under *traditional costing,* direct labor is the professional service performed, and it is the basis for overhead application to each audit job. To determine the operating income earned on any job, Check and Doublecheck applies overhead at the rate of 200% of actual direct professional labor costs incurred. For example, assume that Check and Doublecheck records $70,000 of actual direct professional labor cost during its audit of Plano Molding Company, which was billed an audit fee of $260,000. Under traditional costing, using 200% as the rate for applying overhead to the job, Check and Doublecheck would compute applied overhead and operating income related to the Plano Molding Company audit, as shown in Illustration 17-15.

Illustration 17-15
Overhead applied under traditional costing system

CHECK AND DOUBLECHECK, CPAs
Plano Molding Company Audit

Revenue		$260,000
Less: Direct professional labor	$ 70,000	
Applied overhead (200% × $70,000)	140,000	210,000
Operating income		$ 50,000

This example, under traditional costing, uses only one direct cost item and one overhead application rate.

ACTIVITY-BASED COSTING EXAMPLE

Under *activity-based costing,* Check and Doublecheck distributes its estimated annual overhead costs of $1,200,000 to several activity cost pools. The firm computes activity-based overhead rates per cost driver by dividing each activity overhead cost pool by the expected number of cost drivers used per activity. Illustration 17-16 shows an annual overhead budget using an ABC system.

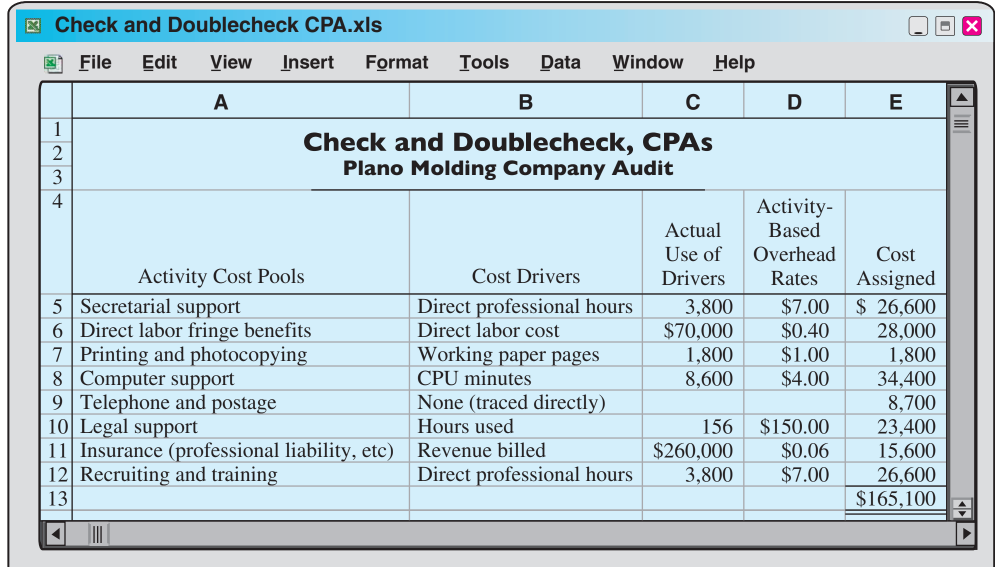
Illustration 17-16
Condensed annual budget of a service firm under activity-based costing

CHECK AND DOUBLECHECK, CPAs
Annual Overhead Budget

Activity Cost Pools	Cost Drivers	Estimated Overhead	÷	Expected Use of Cost Drivers per Activity	=	Activity-Based Overhead Rates
Secretarial support	Direct professional hours	$210,000		30,000		$7 per hour
Direct labor fringe benefits	Direct labor cost	240,000		$600,000		$0.40 per $1 of labor cost
Printing and photocopying	Working paper pages	20,000		20,000		$1 per page
Computer support	CPU minutes	200,000		50,000		$4 per minute
Telephone and postage	None (traced directly)	71,000		N/A		Based on usage
Legal support	Hours used	129,000		860		$150 per hour
Insurance (professional liability, etc.)	Revenue billed	120,000		$2,000,000		$0.06 per $1 of revenue
Recruiting and training	Direct professional hours	210,000		30,000		$7 per hour
		$1,200,000				

Note that some of the overhead costs can be directly assigned (see telephone and postage).

The assignment of the individual overhead activity rates to the actual number of activities used in the performance of the Plano Molding Company audit results in total overhead assigned of $165,100, as shown in Illustration 17-17.



Check and Doublecheck CPA.xls

Check and Doublecheck, CPAs
Plano Molding Company Audit

Activity Cost Pools	Cost Drivers	Actual Use of Drivers	Activity-Based Overhead Rates	Cost Assigned
Secretarial support	Direct professional hours	3,800	$7.00	$ 26,600
Direct labor fringe benefits	Direct labor cost	$70,000	$0.40	28,000
Printing and photocopying	Working paper pages	1,800	$1.00	1,800
Computer support	CPU minutes	8,600	$4.00	34,400
Telephone and postage	None (traced directly)			8,700
Legal support	Hours used	156	$150.00	23,400
Insurance (professional liability, etc)	Revenue billed	$260,000	$0.06	15,600
Recruiting and training	Direct professional hours	3,800	$7.00	26,600
				$165,100

Illustration 17-17
Assigning overhead in a service company

Under activity-based costing, Check and Doublecheck assigns overhead costs of $165,100 to the Plano Molding Company audit, as compared to $140,000 under traditional costing. Illustration 17-18 compares total costs and operating margins under the two costing systems.

Illustration 17-18
Comparison of traditional costing with ABC in a service company

CHECK AND DOUBLECHECK, CPAs
Plano Molding Company Audit

	Traditional Costing		ABC	
Revenue		$260,000		$260,000
Expenses				
Direct professional labor	$ 70,000		$ 70,000	
Applied overhead	140,000		165,100	
Total expenses		210,000		235,100
Operating income		**$ 50,000**		**$ 24,900**
Profit margin		**19.2%**		**9.6%**

The comparison shows that the assignment of overhead costs under traditional costing is distorted. The total cost assigned to performing the audit of Plano Molding Company is greater under activity-based costing by $25,100, and the profit margin is only half as great. Traditional costing gives the false impression of an operating profit of $50,000. This is more than double the operating income of $24,900 using ABC.

Service Company Insight

Wasted Effort

Many times, good ideas for new businesses result from identifying non–value-added activities in everyday processes. Said differently, figure out how to make somebody else's life easier, and they will be happy to pay you for your trouble. Think about the last time you moved your belongings. The primary essential activity is getting your stuff from point A to point B. What is one non–value-added activity that you probably engaged in? Did you buy boxes and (expensive) packaging tape, assemble and tape boxes, cut open boxes, and then crush and dispose of boxes? Because all of that effort contributed very little toward getting your stuff moved, some creative entrepreneurs have recently started renting reusable plastic bins. They deliver the bins, customers pack them and move them, and then the company comes and picks them up—all for about the same cost as buying a bunch of cardboard boxes, without all the hassle.

Source: Emily B. Hager, "Moving Day Without All the Waste," *The New York Times Online* (January 22, 2009).

? Suppose a moving company has historically sold cardboard boxes and tape to its customers. What relevant costs would it consider in deciding whether to provide plastic bins rather than boxes and tape? (See page 937.)

USING THE DECISION TOOLKIT

Precor Company manufactures a line of high-end exercise equipment of commercial quality. Assume that the chief accountant has proposed changing from a traditional costing system to an activity-based costing system. The financial vice president is not convinced, so she requests that the next large order for equipment be costed under both systems for purposes of comparison and analysis. An order from Slim-Way Salons, Inc., for 150 low-impact treadmills is received and is identified as the order to be subjected to dual costing. The following cost data relate to the Slim-Way order.

Data relevant to both costing systems

Direct materials	$55,500
Direct labor hours	820
Direct labor rate per hour	$ 18.00

Data relevant to the traditional costing system

Predetermined overhead rate is 300% of direct labor cost.

Data relevant to the activity-based costing system

Activity Cost Pools	Cost Drivers	Activity-Based Overhead Rate	Expected Use of Cost Drivers for Treadmill Order
Engineering design	Engineering hours	$30 per hour	330
Machine setup	Setups	$200 per setup	22
Machining	Machine hours	$25 per hour	732
Assembly	Number of subassemblies	$8 per subassembly	1,500
Packaging and shipping	Packaging/shipping hours	$15 per hour	152
Building occupancy	Machine hours	$6 per hour	732

Instructions

Compute the total cost of the Slim-Way Salons, Inc. order under (a) the traditional costing system and (b) the activity-based costing system. (c) As a result of this comparison, which costing system is Precor likely to adopt? Why?

Solution

(a) Traditional costing system:

Direct materials	$ 55,500
Direct labor (820 × $18)	14,760
Overhead assigned ($14,760 × 300%)	44,280
Total costs assigned to Slim-Way order	$114,540
Number of low-impact treadmills	150
Cost per unit	$763.60

(b) Activity-based costing system:

Direct materials		$ 55,500
Direct labor (820 × $18)		14,760
Overhead activities costs:		
Engineering design (330 hours @ $30)	$ 9,900	
Machine setup (22 setups @ $200)	4,400	
Machining (732 machine hours @ $25)	18,300	
Assembly (1,500 subassemblies @ $8)	12,000	
Packaging and shipping (152 hours @ $15)	2,280	
Building occupancy (732 hours @ $6)	4,392	51,272
Total costs assigned to Slim-Way order		$121,532
Number of low-impact treadmills		150
Cost per unit		$810.21

(c) Precor Company will likely adopt ABC because of the difference in the cost per unit (which ABC found to be higher). More importantly, ABC provides greater insight into the sources and causes of the cost per unit. Managers are given greater insight into which activities to control in order to reduce costs. ABC will provide better product costing and greater profitability for the company.

the navigator

Summary of Study Objectives

1 Recognize the difference between traditional costing and activity-based costing. A traditional costing system allocates overhead to products on the basis of predetermined plantwide or departmentwide rates such as direct labor or machine hours. An ABC system allocates overhead to identified activity cost pools, and then assigns costs to products using related cost drivers that measure the activities (resources) consumed.

2 Identify the steps in the development of an activity-based costing system. The development of an activity-based costing system involves four steps: (1) Identify and classify the major activities involved in the manufacture of specific products, and allocate manufacturing overhead costs to the appropriate cost pools. (2) Identify the cost driver that has a strong correlation to the costs accumulated in the cost pool. (3) Compute the overhead rate per cost driver. (4) Assign manufacturing overhead costs for each cost pool to products or services using the overhead rates.

3 Know how companies identify the activity cost pools used in activity-based costing. To identify activity cost pools, a company must perform an analysis of each operation or process, documenting and timing every task, action, or transaction.

4 Know how companies identify and use cost drivers in activity-based costing. Cost drivers identified for assigning activity cost pools must (a) accurately measure the actual consumption of the activity by the various products and (b) have related data easily available.

5 Understand the benefits and limitations of activity-based costing. Features of ABC that make it a more accurate product costing system include: (1) the increased number of cost pools used to assign overhead, (2) the enhanced control over overhead costs, and (3) the better management decisions it makes possible. The limitations of ABC are: (1) the higher analysis and measurement costs that accompany multiple activity centers and cost drivers, and (2) the necessity still to allocate some costs arbitrarily.

6 Differentiate between value-added and non–value-added activities. Value-added activities increase the worth of a product or service. Non–value-added activities simply add cost to or increase the time spent on a product or service without increasing its market value. Awareness of these classifications encourages managers to reduce or eliminate the time spent on non–value-added activities.

7 Understand the value of using activity levels in activity-based costing. Activities may be classified as unit-level, batch-level, product-level, and facility-level. Companies control overhead costs at unit-, batch-, product-, and facility-levels by modifying unit-, batch-, product-, and facility-level activities, respectively. Failure to recognize this classification of levels can result in distorted product costing.

8 Apply activity-based costing to service industries. The overall objective of using ABC in service industries is no different than for manufacturing industries—that is, improved costing of services provided (by job, service, contract, or customer). The general approach to costing is the same: analyze operations, identify activities, accumulate overhead costs by activity cost pools, and identify and use cost drivers to assign the cost pools to the services.

DECISION TOOLKIT A SUMMARY

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
When should we use ABC?	Knowledge of the products or product lines, the manufacturing process, and overhead costs	A detailed and accurate cost accounting system; cooperation between accountants and operating managers	Compare the results under both costing systems. If managers are better able to understand and control their operations using ABC, and the costs are not prohibitive, the use of ABC would be beneficial.
How can activity-based management help managers manage the business?	Activities classified as value-added and non–value-added	Activity flowchart	The flowchart should motivate managers to minimize non–value-added activities. Managers should better understand the relationship between activities and the resources they consume.

appendix 17A

Just-in-Time Processing

study objective 9

Explain just-in-time (JIT) processing.

Traditionally, continuous process manufacturing has been based on a **just-in-case** philosophy: Inventories of raw materials are maintained *just in case* some items are of poor quality or a key supplier is shut down by a strike. Similarly, subassembly parts are manufactured and stored *just in case* they are needed later in the manufacturing process. Finished goods are completed and stored *just in case* unexpected and rush customer orders are received. This philosophy often results in a "**push approach**," in which raw materials and subassembly parts are pushed through each process. Traditional processing often results in the buildup of extensive manufacturing inventories.

Primarily in response to foreign competition, many U.S. firms have switched to **just-in-time (JIT) processing**. JIT manufacturing is dedicated to having the right amount of materials, parts, or products just as they are needed. JIT first hit the United States in the early 1980s when automobile companies adopted it to compete with foreign automakers. Many companies, including Dell, Caterpillar, and Harley-Davidson, now successfully use JIT. Under JIT processing, companies receive raw materials **just in time** for use in production, they complete subassembly parts **just in time** for use in finished goods, and they complete finished goods **just in time** to be sold. Illustration 17A-1 shows the sequence of activities in just-in-time processing.

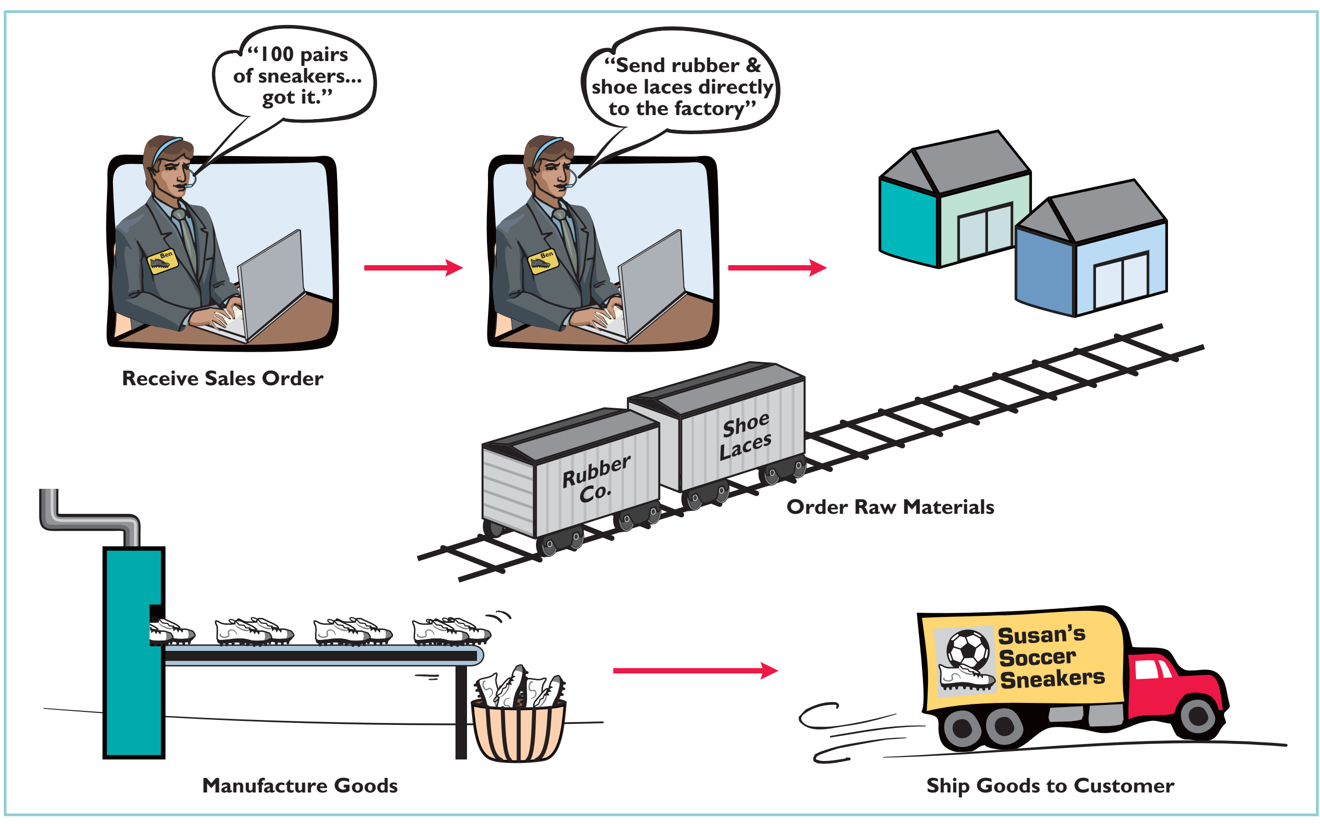

Illustration 17A-1
Just-in-time processing

OBJECTIVE OF JIT PROCESSING

A primary objective of JIT is to eliminate all manufacturing inventories. Inventories have an adverse effect on net income because they tie up funds and storage space that could be put to more productive uses. JIT strives to eliminate inventories by using a "**pull approach**" in manufacturing. This approach begins with the customer placing an order with the company, which starts the process of pulling the product through the manufacturing process. A computer at the final work station sends a signal to the preceding work station. This signal indicates the exact materials (parts and subassemblies) needed to complete the production of a specified product for a specified time period, such as an eight-hour shift. The next-preceding process, in turn, sends its signal to other processes back up the line. The goal is a smooth continuous flow in the manufacturing process, with no buildup of inventories at any point.

ELEMENTS OF JIT PROCESSING

There are three important elements in JIT processing:

Helpful Hint Buyer leverage is important in finding dependable suppliers. Companies like **GM** and **GE** have more success than smaller companies.

1. **Dependable suppliers.** Suppliers must be willing to deliver on short notice exact quantities of raw materials according to precise quality specifications (even including multiple deliveries within the same day). Suppliers must also be willing to deliver the raw materials at specified work stations rather than at a central receiving department. This type of purchasing requires constant and direct communication. Such communication is facilitated by an online computer linkage between the company and its suppliers.
2. A **multiskilled work force**. Under JIT, machines are often strategically grouped into work cells or work stations. Much of the work is automated. As a result, one worker may operate and maintain several different types of machines.

Helpful Hint Without its emphasis on quality control, JIT would be impractical or even impossible. In JIT, quality is engineered into the production process.

3. A **total quality control system**. The company must establish total quality control throughout the manufacturing operations. Total quality control means **no defects**. Since the pull approach signals only required quantities, any defects at any work station will shut down operations at subsequent work stations. Total quality control requires continuous monitoring by both line employees and supervisors at each work station.

BENEFITS OF JIT PROCESSING

The major benefits of implementing JIT processing are:

1. Significant reduction or elimination of manufacturing inventories.
2. Enhanced product quality.
3. Reduction or elimination of rework costs and inventory storage costs.
4. Production cost savings from the improved flow of goods through the processes.

The effects in many cases have been dramatic. For example, after using JIT for two years, a major division of Hewlett-Packard found that work in process inventories (in dollars) were down 82%, scrap/rework costs were down 30%, space utilization improved by 40%, and labor efficiency improved 50%. As indicated, JIT not only reduces inventory but also enables a manufacturer to produce a better product faster and with less waste.

One of the major accounting benefits of JIT is the elimination of separate raw materials and work in process inventory accounts. These accounts are replaced by **one account**, Raw and In-Process Inventory. All materials and conversion costs are charged to this account. The reduction (or elimination) of in-process inventories results in a simpler computation of equivalent units of production.

Summary of Study Objective for Appendix 17A

9 Explain just-in-time (JIT) processing. JIT is a processing system dedicated to having on hand the right materials and products just at the time they are needed, thereby reducing the amount of inventory and the time inventory is held. One of the principal accounting effects is that one account, Raw and In-Process Inventory, replaces both the raw materials and work-in-process inventory accounts.

the navigator

Glossary

Activity *(p. 891)* Any event, action, transaction, or work sequence that incurs cost when producing a product or providing a service.

Activity-based costing (ABC) *(p. 891)* An overhead cost-allocation system that allocates overhead to multiple activity cost pools and assigns the activity cost pools to products or services by means of cost drivers that represent the activities used.

Activity-based management (ABM) *(p. 901)* Extends ABC from product costing to a comprehensive management tool that focuses on reducing costs and improving processes and decision making.

Activity cost pool *(p. 891)* The overhead cost attributed to a distinct type of activity or related activities.

Batch-level activities *(p. 903)* Activities performed for each batch of products rather than for each unit.

Cost driver *(p. 891)* Any factor or activity that has a direct cause–effect relationship with the resources consumed. In ABC, cost drivers are used to assign activity cost pools to products or services.

Facility-level activities *(p. 903)* Activities required to support or sustain an entire production process.

Just-in-time (JIT) processing *(p. 910)* A processing system dedicated to having the right amount of materials, parts, or products arrive as they are needed, thereby reducing the amount of inventory.

Non–value-added activity *(p. 901)* An activity that adds cost to or increases the time spent on a product or service without increasing its market value.

Product-level activities *(p. 903)* Activities performed in support of an entire product line, but not always performed every time a new unit or batch of products is produced.

Unit-level activities *(p. 903)* Activities performed for each unit of production.

Value-added activity *(p. 901)* An activity that increases the worth of a product or service.

Comprehensive Do it!

Spreadwell Paint Company manufactures two high-quality base paints: an *oil-based* paint and a *latex* paint. Both are housepaints and are manufactured in neutral white color only. Spreadwell sells the white base paints to franchised retail paint and decorating stores where pigments are added to tint (color) the paint as the customer desires. The oil-based paint is made from, thinned, and cleaned with organic solvents (petroleum products) such as mineral spirits or turpentine. The latex paint is made from, thinned, and cleaned with water; synthetic resin particles are suspended in the water and dry and harden when exposed to the air.

Spreadwell uses the same processing equipment to produce both paints in different production runs. Between batches, the vats and other processing equipment must be washed and cleaned.

After analyzing the company's entire operations, Spreadwell's accountants and production managers have identified activity cost pools and accumulated annual budgeted overhead costs by pool as follows.

Activity Cost Pools	Estimated Overhead
Purchasing	$ 240,000
Processing (weighing and mixing, grinding, thinning and drying, straining)	1,400,000
Packaging (quarts, gallons, and 5-gallons)	580,000
Testing	240,000
Storage and inventory control	180,000
Washing and cleaning equipment	560,000
Total annual budgeted overhead	$3,200,000

Following further analysis, activity cost drivers were identified and their expected use by product and activity were scheduled as follows.

Activity Cost Pools	Cost Drivers	Expected Cost Drivers per Activity	Expected Use of Drivers per Product	
			Oil-Based	Latex
Purchasing	Purchase orders	1,500 orders	800	700
Processing	Gallons processed	1,000,000 gals.	400,000	600,000
Packaging	Containers filled	400,000 containers	180,000	220,000
Testing	Number of tests	4,000 tests	2,100	1,900
Storing	Avg. gals. on hand	18,000 gals.	10,400	7,600
Washing	Number of batches	800 batches	350	450

Spreadwell has budgeted 400,000 gallons of oil-based paint and 600,000 gallons of latex paint for processing during the year.

Instructions

(a) Prepare a schedule showing the computations of the activity-based overhead rates.
(b) Prepare a schedule assigning each activity's overhead cost pool to each product.
(c) Compute the overhead cost per unit for each product.
(d) Classify each activity cost pool as value-added or non–value-added.

Action Plan

- Identify the major activities that pertain to the manufacture of specific products and allocate manufacturing overhead costs to activity cost pools.
- Identify the cost drivers that accurately measure each activity's contribution to the finished product.
- Compute the activity-based overhead rates.
- Assign manufacturing overhead costs for each activity cost pool to products, using the activity-based overhead rates.

Solution to Comprehensive Do it!

(a) Computations of activity-based overhead rates:

Activity Cost Pools	Estimated Overhead	÷	Expected Use of Cost Drivers	=	Activity-Based Overhead Rates
Purchasing	$ 240,000		1,500 orders		$160 per order
Processing	1,400,000		1,000,000 gallons		$1.40 per gallon
Packaging	580,000		400,000 containers		$1.45 per container
Testing	240,000		4,000 tests		$60 per test
Storing	180,000		18,000 gallons		$10 per gallon
Washing	560,000		800 batches		$700 per batch
	$3,200,000				

(b) Assignment of activity cost pools to products:

	Oil-Based Paint			Latex Paint		
Activity Cost Pools	Expected Use of Drivers	Overhead Rates	Cost Assigned	Expected Use of Drivers	Overhead Rates	Cost Assigned
Purchasing	800	$160	$ 128,000	700	$160	$ 112,000
Processing	400,000	$1.40	560,000	600,000	$1.40	840,000
Packaging	180,000	$1.45	261,000	220,000	$1.45	319,000
Testing	2,100	$60	126,000	1,900	$60	114,000
Storing	10,400	$10	104,000	7,600	$10	76,000
Washing	350	$700	245,000	450	$700	315,000
Total overhead assigned			$1,424,000			$1,776,000

(c) Computation of overhead cost assigned per unit:

	Oil-Based Paint	Latex Paint
Total overhead cost assigned	$1,424,000	$1,776,000
Total gallons produced	400,000	600,000
Overhead cost per gallon	$3.56	$2.96

(d) Value-added activities: processing and packaging.
Non–value-added activities: purchasing, testing, storing, and washing.

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more resources are available for practice in WileyPLUS

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

Self-Test Questions

Answers are on page 937.

(SO 1) **1.** Activity-based costing (ABC):
- (a) can be used only in a process cost system.
- (b) focuses on units of production.
- (c) focuses on activities performed to produce a product.
- (d) uses only a single basis of allocation.

(SO 1) **2.** Activity-based costing:
- (a) is the initial phase of converting to a just-in-time operating environment.
- (b) can be used only in a job order costing system.
- (c) is a two-stage overhead cost allocation system that identifies activity cost pools and cost drivers.
- (d) uses direct labor as its primary cost driver.

(SO 1, 4) **3.** Any activity that causes resources to be consumed is called a:
(a) just-in-time activity.
(b) facility-level activity.
(c) cost driver.
(d) non–value-added activity.

(SO 2) **4.** The first step in the development of an activity-based costing system is:
(a) identify and classify activities and allocate overhead to cost pools.
(b) assign overhead costs to products.
(c) identify cost drivers.
(d) compute overhead rates.

(SO 4) **5.** Which of the following would be the best cost driver for the assembling cost pool?
(a) Number of product lines.
(b) Number of parts.
(c) Number of orders.
(d) Amount of square footage.

(SO 4) **6.** The overhead rate for Machine Setups is $100 per setup. Products A and B have 80 and 60 setups, respectively. The overhead assigned to each product is:
(a) Product A $8,000, Product B $8,000.
(b) Product A $8,000, Product B $6,000.
(c) Product A $6,000, Product B $6,000.
(d) Product A $6,000, Product B $8,000.

(SO 4) **7.** Donna Crawford Co. has identified an activity cost pool to which it has allocated estimated overhead of $1,920,000. It has determined the expected use of cost drivers for that activity to be 160,000 inspections. Widgets require 40,000 inspections, Gadgets 30,000 inspections, and Targets 90,000 inspections. The overhead assigned to each product is:
(a) Widgets $40,000, Gadgets $30,000, Targets $90,000.
(b) Widgets $640,000, Gadgets $640,000, Targets $640,000.
(c) Widgets $360,000, Gadgets $480,000, Targets $1,080,000.
(d) Widgets $480,000, Gadgets $360,000, Targets $1,080,000.

(SO 5) **8.** A frequently cited limitation of activity-based costing is:
(a) ABC results in more cost pools being used to assign overhead costs to products.
(b) Certain overhead costs remain to be allocated by means of some arbitrary volume-based cost driver such as labor or machine hours.
(c) ABC leads to poorer management decisions.
(d) ABC results in less control over overhead costs.

9. A company should consider using ABC if: (SO 5)
(a) overhead costs constitute a small portion of total product costs.
(b) it has only a few product lines that require similar degrees of support services.
(c) direct labor constitutes a significant part of the total product cost and a high correlation exists between direct labor and changes in overhead costs.
(d) its product lines differ greatly in volume and manufacturing complexity.

10. An activity that adds costs to the product but does not increase its market value is a: (SO 6)
(a) value-added activity.
(b) cost driver.
(c) cost–benefit activity.
(d) non–value-added activity.

11. The following activity is value-added: (SO 6)
(a) Storage of raw materials.
(b) Moving parts from machine to machine.
(c) Shaping a piece of metal on a lathe.
(d) All of the above.

12. A relevant facility-level cost driver for heating costs is: (SO 7)
(a) machine hours.
(b) direct material.
(c) floor space.
(d) direct labor cost.

***13.** Under just-in-time processing: (SO 9)
(a) raw materials are received just in time for use in production.
(b) subassembly parts are completed just in time for use in assembling finished goods.
(c) finished goods are completed just in time to be sold.
(d) All of the above.

***14.** The primary objective of just-in-time processing is to: (SO 9)
(a) accumulate overhead in activity cost pools.
(b) eliminate or reduce all manufacturing inventories.
(c) identify relevant activity cost drivers.
(d) identify value-added activities.

Go to the book's companion website, **www.wiley.com/college/kimmel**, for additional Self-Test Questions.

Questions

1. Under what conditions is direct labor a valid basis for allocating overhead?

2. What has happened in recent industrial history to reduce the usefulness of direct labor as the primary basis for allocating overhead to products?

3. In an automated manufacturing environment, what basis of overhead allocation is frequently more relevant than direct labor hours?

4. What is generally true about overhead allocation to high-volume products versus low-volume products under a traditional costing system?

5. (a) What are the principal differences between activity-based costing (ABC) and traditional product costing?
(b) What assumptions must be met for ABC costing to be useful?

6. What is the formula for computing activity-based overhead rates?
7. What steps are involved in developing an activity-based costing system?
8. Explain the preparation and use of a value-added/non–value-added activity flowchart in an ABC system.
9. What is an activity cost pool?
10. What is a cost driver?
11. What makes a cost driver accurate and appropriate?
12. What is the formula for assigning activity cost pools to products?
13. What are the benefits of activity-based costing?
14. What are the limitations of activity-based costing?
15. Under what conditions is ABC generally the superior overhead costing system?
16. What refinement has been made to enhance the efficiency and effectiveness of ABC for use in managing costs?
17. Of what benefit is classifying activities as value-added and non–value-added?
18. In what ways is the application of ABC to service industries the same as its application to manufacturing companies?
19. What is the relevance of the classification of levels of activity to ABC?
*20. (a) Describe the philosophy and approach of just-in-time processing.
(b) Identify the major elements of JIT processing.

Brief Exercises

Identify differences between costing systems.
(SO 1), AP

SERVICE

BE17-1 Warner Inc. sells a high-speed retrieval system for mining information. It provides the following information for the year.

	Budgeted	Actual
Overhead cost	$1,000,000	$950,000
Machine hours	50,000	45,000
Direct labor hours	100,000	92,000

Overhead is applied on the basis of direct labor hours. (a) Compute the predetermined overhead rate. (b) Determine the amount of overhead applied for the year. (c) Explain how an activity-based costing system might differ in terms of computing a predetermined overhead rate.

Identify differences between costing systems.
(SO 1), AP

BE17-2 Finney Inc. has conducted an analysis of overhead costs related to one of its product lines using a traditional costing system (volume-based) and an activity-based costing system. Here are its results.

	Traditional Costing	ABC
Sales revenues	$600,000	$600,000
Overhead costs:		
Product RX3	$ 34,000	$ 50,000
Product Y12	36,000	20,000
	$ 70,000	$ 70,000

Explain how a difference in the overhead costs between the two systems may have occurred.

Identify cost drivers.
(SO 4), AP

BE17-3 Storrer Co. identifies the following activities that pertain to manufacturing overhead: materials handling, machine setups, factory machine maintenance, factory supervision, and quality control. For each activity, identify an appropriate cost driver.

Identify cost drivers.
(SO 4), AP

BE17-4 Mason Company manufactures four products in a single production facility. The company uses activity-based costing. The following activities have been identified through the company's activity analysis: (a) inventory control, (b) machine setups, (c) employee training, (d) quality inspections, (e) material ordering, (f) drilling operations, and (g) building maintenance.

For each activity, name a cost driver that might be used to assign overhead costs to products.

BE17-5 Mordica Company identifies three activities in its manufacturing process: machine setups, machining, and inspections. Estimated annual overhead cost for each activity is $150,000, $325,000, and $87,500, respectively. The cost driver for each activity and the expected annual usage are: number of setups 2,500, machine hours 25,000, and number of inspections 1,750. Compute the overhead rate for each activity.

Compute activity-based overhead rates.
(SO 4), **AP**

BE17-6 Weisman, Inc. uses activity-based costing as the basis for information to set prices for its six lines of seasonal coats. Compute the activity-based overhead rates using the following budgeted data for each of the activity cost pools.

Compute activity-based overhead rates.
(SO 4), **AP**

Activity Cost Pools	Estimated Overhead	Expected Use of Cost Drivers per Activity
Designing	$ 450,000	10,000 designer hours
Sizing and cutting	4,000,000	160,000 machine hours
Stitching and trimming	1,440,000	80,000 labor hours
Wrapping and packing	336,000	32,000 finished units

BE17-7 Hollins, Inc., a manufacturer of computer chips, employs activity-based costing. The budgeted data for each of the activity cost pools is provided below for the year 2012.

Compute activity-based overhead rates.
(SO 4), **AP**

Activity Cost Pools	Estimated Overhead	Expected Use of Cost Drivers per Activity
Ordering and receiving	$ 90,000	12,000 orders
Etching	480,000	60,000 machine hours
Soldering	1,760,000	440,000 labor hours

For 2012, the company had 11,000 orders and used 50,000 machine hours, and labor hours totaled 500,000. What is the total overhead applied?

BE17-8 Rich Novelty Company identified the following activities in its production and support operations. Classify each of these activities as either value-added or non–value-added.

Classify activities as value- or non–value-added.
(SO 6), **AN**

(a) Purchasing.
(b) Receiving.
(c) Design engineering.
(d) Storing inventory.
(e) Cost accounting.
(f) Moving work in process.
(g) Inspecting and testing.
(h) Painting and packing.

BE17-9 Mendle and Kiner is an architectural firm that is contemplating the installation of activity-based costing. The following activities are performed daily by staff architects. Classify these activities as value-added or non–value-added: (1) designing and drafting, 2.5 hours; (2) staff meetings, 1 hour; (3) on-site supervision, 2 hours; (4) lunch, 1 hour; (5) consultation with client on specifications, 1.5 hours; (6) entertaining a prospective client for dinner, 2 hours.

Classify service company activities as value- or non–value-added.
(SO 6, 8), **AN**

BE17-10 Kwik Pix is a large digital processing center that serves 130 outlets in grocery stores, service stations, camera and photo shops, and drug stores in 16 nearby towns. Kwik Pix operates 24 hours a day, 6 days a week. Classify each of the following activity costs of Kwik Pix as either unit-level, batch-level, product-level, or facility-level.

Classify activities according to level.
(SO 7, 8), **AN**

(a) Color printing materials.
(b) Photocopy paper.
(c) Depreciation of machinery.
(d) Setups for enlargements.
(e) Supervisor's salary.
(f) Ordering materials.
(g) Pickup and delivery.
(h) Commission to dealers.
(i) Insurance on building.
(j) Loading developing machines.

Classify activities according to level.
(SO 7), AP

BE17-11 Trammell, Inc. operates 20 injection molding machines in the production of tool boxes of four different sizes, named the Apprentice, the Handyman, the Journeyman, and the Professional. Classify each of the following costs as unit-level, batch-level, product-level, or facility-level.

(a) First-shift supervisor's salary.
(b) Powdered raw plastic.
(c) Dies for casting plastic components.
(d) Depreciation on injection molding machines.
(e) Changing dies on machines.
(f) Moving components to assembly department.
(g) Engineering design.
(h) Employee health and medical insurance coverage.

Compute rates and activity levels.
(SO 4, 7), AP

BE17-12 Spin Cycle Company uses three activity pools to apply overhead to its products. Each activity has a cost driver used to allocate the overhead costs to the product. The activities and related overhead costs are as follows: Product design $40,000; Machining $300,000; and Material handling $100,000. The cost drivers and expected use are as follows.

Activities	Cost Drivers	Expected Use of Cost Drivers per Activity
Product design	Number of product changes	10
Machining	Machine hours	150,000
Material handling	Number of set ups	100

(a) Compute the predetermined overhead rate for each activity. (b) Classify each of these activities as unit-level, batch-level, product-level, or facility-level.

Do it! Review

Identify characteristics of traditional and ABC costing systems.
(SO 1, 2), K

Do it! 17-1 Indicate whether the following statements are true or false.

1. The reasoning behind ABC cost allocation is that products consume activities and activities consume resources.
2. Activity-based costing is an approach for allocating direct labor to products.
3. In today's increasingly automated environment, direct labor is never an appropriate basis for allocating costs to products.
4. A cost driver is any factor or activity that has a direct cause-effect relationship with resources consumed.
5. Activity-based costing segregates overhead into various cost pools in an effort to provide more accurate cost information.

Compute activity-based overhead rates and assign overhead using ABC.
(SO 4), AP

Do it! 17-2 Flynn Industries has three activity cost pools and two products. It expects to produce 3,000 units of Product BC113 and 1,500 of Product AD908. Having identified its activity cost pools and the cost drivers for each pool, Flynn accumulated the following data relative to those activity cost pools and cost drivers.

Annual Overhead Data			Expected Use of Cost Drivers per Product		
Activity Cost Pool	Cost Drivers	Estimated Overhead	Expected Use of Cost Drivers per Activity	Product BC113	Product AD908
Machine setup	Setups	$ 16,000	40	25	15
Machining	Machine hours	110,000	5,000	1,000	4,000
Packing	Orders	30,000	500	150	350

Using the above data, do the following:

(a) Prepare a schedule showing the computations of the activity-based overhead rates per cost driver.
(b) Prepare a schedule assigning each activity's overhead cost to the two products.
(c) Compute the overhead cost per unit for each product. (Round to nearest cent.)
(d) Comment on the comparative overhead cost per product.

Do it! **17-3** Classify each of the following activities within a tax-preparation business as value-added (VA) or non–value-added (NVA).

Classify activities as value- or non–value-added.
(SO 6, 8), **AP**

1. Advertising.
2. Completing tax returns.
3. Cleaning the office.
4. Billing clients.
5. Answering client questions.
6. Accompanying clients to audit proceedings.

Do it! **17-4** Adamson Company manufactures four lines of garden tools. As a result of an activity analysis, the accounting department has identified eight activity cost pools. Each of the product lines is produced in large batches, with the whole plant devoted to one product at a time. Classify each of the following activities or costs as either unit-level, batch level, product-level, or facility-level.

Classify activities according to level.
(SO 7), **C**

(a) Machining parts.
(b) Product design.
(c) Plant maintenance.
(d) Machine setup.
(e) Assembling parts.
(f) Purchasing raw materials.
(g) Property taxes.
(h) Painting.

Exercises

E17-1 Wilkins Inc. has two types of handbags: standard and custom. The controller has decided to use a plantwide overhead rate based on direct labor costs. The president has heard of activity-based costing and wants to see how the results would differ if this system were used. Two activity cost pools were developed: machining and machine setup. Presented below is information related to the company's operations.

Assign overhead using traditional costing and ABC.
(SO 1, 4), **AP**

	Standard	**Custom**
Direct labor costs	$50,000	$100,000
Machine hours	1,000	1,000
Setup hours	100	400

Total estimated overhead costs are $270,000. Overhead cost allocated to the machining activity cost pool is $170,000, and $100,000 is allocated to the machine setup activity cost pool.

Instructions

(a) Compute the overhead rate using the traditional (plantwide) approach.
(b) Compute the overhead rates using the activity-based costing approach.
(c) Determine the difference in allocation between the two approaches.

E17-2 Ayala Inc. has conducted the following analysis related to its product lines, using a traditional costing system (volume-based) and an activity-based costing system. Both the traditional and the activity-based costing systems include direct materials and direct labor costs.

Explain difference between traditional and activity-based costing.
(SO 1), **AP**

		Total Costs	
Products	**Sales Revenue**	**Traditional**	**ABC**
Product 540X	$180,000	$55,000	$50,000
Product 137Y	160,000	50,000	35,000
Product 249S	70,000	15,000	35,000

Instructions

(a) For each product line, compute operating income using the traditional costing system.
(b) For each product line, compute operating income using the activity-based costing system.

(c) Using the following formula, compute the percentage difference in operating income for each of the product lines of Ayala: [Operating Income (ABC) − Operating Income (traditional cost)] ÷ Operating Income (traditional cost). (Round the percentage to two decimals.)

(d) Provide a rationale as to why the costs for Product 540X are approximately the same using either the traditional or activity-based costing system.

Assign overhead using traditional costing and ABC.
(SO 1, 4), AN

E17-3 American Fabrics has budgeted overhead costs of $990,000. It has allocated overhead on a plantwide basis to its two products (wool and cotton) using direct labor hours which are estimated to be 450,000 for the current year. The company has decided to experiment with activity-based costing and has created two activity cost pools and related activity cost drivers. These two cost pools are: Cutting (cost driver is machine hours) and Design (cost driver is number of setups). Overhead allocated to the Cutting cost pool is $360,000 and $630,000 is allocated to the Design cost pool. Additional information related to these pools is as follows.

	Wool	Cotton	Total
Machine hours	100,000	100,000	200,000
Number of setups	1,000	500	1,500

Instructions

(a) Determine the amount of overhead allocated to the wool product line and the cotton product line using activity-based costing.

(b) What amount of overhead would be allocated to the wool and cotton product lines using the traditional approach, assuming direct labor hours were incurred evenly between the wool and cotton? How does this compare with the amount allocated using ABC in part (a)?

Assign overhead using traditional costing and ABC.
(SO 1, 4), AN

E17-4 Altex Inc. manufactures two products: car wheels and truck wheels. To determine the amount of overhead to assign to each product line, the controller, Robert Hermann, has developed the following information.

	Car	Truck
Estimated wheels produced	40,000	10,000
Direct labor hours per wheel	1	3

Total estimated overhead costs for the two product lines are $770,000.

Instructions

(a) Compute the overhead cost assigned to the car wheels and truck wheels, assuming that direct labor hours is used to allocate overhead costs.

(b) Hermann is not satisfied with the traditional method of allocating overhead because he believes that most of the overhead costs relate to the truck wheel product line because of its complexity. He therefore develops the following three activity cost pools and related cost drivers to better understand these costs.

Activity Cost Pools	Expected Use of Cost Drivers	Estimated Overhead Costs
Setting up machines	1,000 setups	$220,000
Assembling	70,000 labor hours	280,000
Inspection	1,200 inspections	270,000

Compute the activity-based overhead rates for these three cost pools.

(c) Compute the cost that is assigned to the car wheels and truck wheels product lines using an activity-based costing system, given the following information.

Expected Use of Cost Drivers per Product		
	Car	**Truck**
Number of setups	200	800
Direct labor hours	40,000	30,000
Number of inspections	100	1,100

(d) What do you believe Hermann should do?

E17-5 Shady Lady sells window coverings to both commercial and residential customers. The following information relates to its budgeted operations for the current year.

Assign overhead using traditional costing and ABC.
(SO 1, 4), **AP**

		Commercial		**Residential**
Revenues		$300,000		$480,000
Direct material costs	$ 30,000		$ 50,000	
Direct labor costs	100,000		300,000	
Overhead costs	85,000	215,000	150,000	500,000
Operating income (loss)		$ 85,000		($ 20,000)

The controller, Peggy Kingman, is concerned about the residential product line. She cannot understand why this line is not more profitable given that the installations of window coverings are less complex for residential customers. In addition, the residential client base resides in close proximity to the company office, so travel costs are not as expensive on a per client visit for residential customers. As a result, she has decided to take a closer look at the overhead costs assigned to the two product lines to determine whether a more accurate product costing model can be developed. Here are the three activity cost pools and related information she developed:

Activity Cost Pools	Estimated Overhead	Cost Drivers
Scheduling and travel	$105,000	Hours of travel
Setup time	70,000	Number of setups
Supervision	60,000	Direct labor cost

Expected Use of Cost Drivers per Product		
	Commercial	**Residential**
Scheduling and travel	1,000	500
Setup time	450	250

Instructions

(a) Compute the activity-based overhead rates for each of the three cost pools, and determine the overhead cost assigned to each product line.

(b) Compute the operating income for each product line, using the activity-based overhead rates.

(c) What do you believe Peggy Kingman should do?

E17-6 Perdon Corporation manufactures safes—large mobile safes, and large walk-in stationary bank safes. As part of its annual budgeting process, Perdon is analyzing the profitability of its two products. Part of this analysis involves estimating the amount of overhead to be allocated to each product line. The information shown on page 922 relates to overhead.

Assign overhead using traditional costing and ABC.
(SO 1, 4), **AN**

	Mobile Safes	Walk-in Safes
Units planned for production	200	50
Material moves per product line	300	200
Purchase orders per product line	450	350
Direct labor hours per product line	800	1,700

Instructions

(a) The total estimated manufacturing overhead was $260,000. Under traditional costing (which assigns overhead on the basis of direct-labor hours), what amount of manufacturing overhead costs are assigned to:
   (1) One mobile safe?
   (2) One walk-in safe?

(b) The total estimated manufacturing overhead of $260,000 was comprised of $160,000 for material-handling costs and $100,000 for purchasing activity costs. Under activity-based costing (ABC):
   (1) What amount of material handling costs are assigned to:
      (a) One mobile safe?
      (b) One walk-in safe?
   (2) What amount of purchasing activity costs are assigned to:
      (a) One mobile safe?
      (b) One walk-in safe?

(c) Compare the amount of overhead allocated to one mobile safe and to one walk-in safe under the traditional costing approach versus under ABC.

Identify activity cost pools.
(SO 3), AP

SERVICE

E17-7 Quik Prints Company is a small printing and copying firm with three high-speed offset printing presses, five copiers (two color and three black and white), one collator, one cutting and folding machine, and one fax machine. To improve its pricing practices, owner-manager Terry Morton is installing activity-based accounting. Additionally, Terry employs five employees: two printers/designers, one receptionist/bookkeeper, one sales person/copy-machine operator, and one janitor/delivery clerk. Terry can operate any of the machines and, in addition to managing the entire operation, he performs the training, designing, selling, and marketing functions.

Instructions

As Quik Prints' independent accountant who prepares tax forms and quarterly financial statements, you have been asked to identify the activities that would be used to accumulate overhead costs for assignment to jobs and customers. Using your knowledge of a small printing and copying firm (and some imagination), identify at least twelve activity cost pools as the start of an activity-based costing system for Quik Prints Company.

Identify activity cost pools and cost drivers.
(SO 3, 4), AN

E17-8 Santana Corporation manufactures snowmobiles in its Blue Mountain, Wisconsin, plant. The following costs are budgeted for the first quarter's operations.

Machine setup, indirect materials	$ 4,000
Inspections	16,000
Tests	4,000
Insurance, plant	110,000
Engineering design	140,000
Depreciation, machinery	520,000
Machine setup, indirect labor	20,000
Property taxes	29,000
Oil, heating	19,000
Electricity, plant lighting	21,000
Engineering prototypes	60,000
Depreciation, plant	210,000
Electricity, machinery	36,000
Machine maintenance wages	19,000

Instructions
Classify the above costs of Santana Corporation into activity cost pools using the following: engineering, machinery, machine setup, quality control, factory utilities, maintenance. Next, identify a cost driver that may be used to assign each cost pool to each line of snowmobiles.

E17-9 Danny Baden's Verde Vineyards in Oakville, California, produces three varieties of wine: Merlot, Viognier, and Pinot Noir. His winemaster, Russel Hansen, has identified the following activities as cost pools for accumulating overhead and assigning it to products.

Identify activity cost drivers.
(SO 4), **AN**

1. Culling and replanting. Dead or overcrowded vines are culled, and new vines are planted or relocated. (Separate vineyards by variety.)
2. Tying. The posts and wires are reset, and vines are tied to the wires for the dormant season.
3. Trimming. At the end of the harvest the vines are cut and trimmed back in preparation for the next season.
4. Spraying. The vines are sprayed with chemicals for protection against insects and fungi.
5. Harvesting. The grapes are hand-picked, placed in carts, and transported to the crushers.
6. Stemming and crushing. Cartfuls of bunches of grapes of each variety are separately loaded into machines which remove stems and gently crush the grapes.
7. Pressing and filtering. The crushed grapes are transferred to presses which mechanically remove the juices and filter out bulk and impurities.
8. Fermentation. The grape juice, by variety, is fermented in either stainless-steel tanks or oak barrels.
9. Aging. The wines are aged in either stainless-steel tanks or oak barrels for one to three years depending on variety.
10. Bottling and corking. Bottles are machine-filled and corked.
11. Labeling and boxing. Each bottle is labeled, as is each nine-bottle case, with the name of the vintner, vintage, and variety.
12. Storing. Packaged and boxed bottles are stored awaiting shipment.
13. Shipping. The wine is shipped to distributors and private retailers.
14. Heating and air-conditioning of plant and offices.
15. Maintenance of buildings and equipment. Printing, repairs, replacements, and general maintenance are performed in the off-season.

Instructions
For each of Verde's fifteen activity cost pools, identify a probable cost driver that might be used to assign overhead costs to its three wine varieties.

E17-10 Wilmington, Inc. manufactures five models of kitchen appliances at its Mesa plant. The company is installing activity-based costing and has identified the following activities performed at its Mesa plant.

Identify activity cost drivers.
(SO 4), **AN**

1. Designing new models.
2. Purchasing raw materials and parts.
3. Storing and managing inventory.
4. Receiving and inspecting raw materials and parts.
5. Interviewing and hiring new personnel.
6. Machine forming sheet steel into appliance parts.
7. Manually assembling parts into appliances.
8. Training all employees of the company.
9. Insuring all tangible fixed assets.
10. Supervising production.
11. Maintaining and repairing machinery and equipment.
12. Painting and packaging finished appliances.

Having analyzed its Mesa plant operations for purposes of installing activity-based costing, Wilmington, Inc. identified its activity cost centers. It now needs to identify relevant activity cost drivers in order to assign overhead costs to its products.

Instructions
Using the activities listed above, identify for each activity one or more cost drivers that might be used to assign overhead to Wilmington's five products.

Compute overhead rates and assign overhead using ABC.
(SO 4, 5), AP

E17-11 Major Instrument, Inc. manufactures two products: missile range instruments and space pressure gauges. During April, 50 range instruments and 300 pressure gauges were produced, and overhead costs of $94,500 were estimated. An analysis of estimated overhead costs reveals the following activities.

Activities	Cost Drivers	Total Cost
1. Materials handling	Number of requisitions	$40,000
2. Machine setups	Number of setups	27,500
3. Quality inspections	Number of inspections	27,000
		$94,500

The cost driver volume for each product was as follows.

Cost Drivers	Instruments	Gauges	Total
Number of requisitions	400	600	1,000
Number of setups	200	300	500
Number of inspections	200	400	600

Instructions

(a) Determine the overhead rate for each activity.
(b) Assign the manufacturing overhead costs for April to the two products using activity-based costing.
(c) Write a memorandum to the president of Major Instrument explaining the benefits of activity-based costing.

Assign overhead using traditional costing and ABC; classify activities as value- or non–value-added.
(SO 1, 4, 6), AP

E17-12 Kragan Clothing Company manufactures its own designed and labeled sports attire and sells its products through catalog sales and retail outlets. While Kragan has for years used activity-based costing in its manufacturing activities, it has always used traditional costing in assigning its selling costs to its product lines. Selling costs have traditionally been assigned to Kragan's product lines at a rate of 70% of direct material costs. Its direct material costs for the month of March for Kragan's "high intensity" line of attire are $400,000. The company has decided to extend activity-based costing to its selling costs. Data relating to the "high intensity" line of products for the month of March are as follows.

Activity Cost Pools	Cost Drivers	Overhead Rate	Number of Cost Drivers Used per Activity
Sales commissions	Dollar sales	$0.05 per dollar sales	$900,000
Advertising—TV/Radio	Minutes	$300 per minute	250
Advertising—Newspaper	Column inches	$10 per column inch	2,000
Catalogs	Catalogs mailed	$2.50 per catalog	60,000
Cost of catalog sales	Catalog orders	$1 per catalog order	9,000
Credit and collection	Dollar sales	$0.03 per dollar sales	$900,000

Instructions

(a) Compute the selling costs to be assigned to the "high-intensity" line of attire for the month of March: (1) using the traditional product costing system (direct material cost is the cost driver), and (2) using activity-based costing.
(b) By what amount does the traditional product costing system undercost or overcost the "high-intensity" product line?
(c) Classify each of the activities as value-added or non–value-added.

Assign overhead using traditional costing and ABC; classify activities as value- or non–value-added.
(SO 1, 4, 6), AP

E17-13 Healthy Products, Inc., uses a traditional product costing system to assign overhead costs uniformly to all products. To meet Food and Drug Administration requirements and to assure its customers of safe, sanitary, and nutritious food, Healthy engages in a high level of quality control. Healthy assigns its quality-control overhead costs to all products at a rate of 17% of direct labor costs. Its direct labor cost for the month of June

for its low-calorie dessert line is $65,000. In response to repeated requests from its financial vice president, Healthy's management agrees to adopt activity-based costing. Data relating to the low-calorie dessert line for the month of June are as follows.

Activity Cost Pools	Cost Drivers	Overhead Rate	Number of Cost Drivers Used per Activity
Inspections of material received	Number of pounds	$0.80 per pound	6,000 pounds
In-process inspections	Number of servings	$0.33 per serving	10,000 servings
FDA certification	Customer orders	$12.00 per order	420 orders

Instructions

(a) Compute the quality-control overhead cost to be assigned to the low-calorie dessert product line for the month of June: (1) using the traditional product costing system (direct labor cost is the cost driver), and (2) using activity-based costing.

(b) By what amount does the traditional product costing system undercost or overcost the low-calorie dessert line?

(c) Classify each of the activities as value-added or non–value-added.

Classify activities as value-added or non–value-added.
(SO 6), **AN**

E17-14 In an effort to expand the usefulness of its activity-based costing system, Danny Baden's Verde Vineyards decides to adopt activity-based management techniques. One of these ABM techniques is classifying its activities as either value-added or non–value-added.

Instructions

Using Verde's list of fifteen activity cost pools in E17-9, classify each of the activities as either value-added or non–value-added.

Classify activities as value-added or non–value-added.
(SO 6), **AN**

E17-15 Wilmington, Inc. is interested in using its activity-based costing system to improve its operating efficiency and its profit margins by applying activity-based management techniques. As part of this undertaking, you have been asked to classify its Mesa plant activities as value-added or non–value-added.

Instructions

Using the list of activities identified in E17-10, classify each activity as either value-added or non–value-added.

Classify service company activities as value-added or non–value-added.
(SO 6), **AN**

E17-16 Lasso and Markowitz is a law firm that is initiating an activity-based costing system. Sam Lasso, the senior partner and strong supporter of ABC, has prepared the following list of activities performed by a typical attorney in a day at the firm.

Activities	Hours
Writing contracts and letters	1.5
Attending staff meetings	0.5
Taking depositions	1.0
Doing research	1.0
Traveling to/from court	1.0
Contemplating legal strategy	1.0
Eating lunch	1.0
Litigating a case in court	2.5
Entertaining a prospective client	1.5

Instructions

Classify each of the activities listed by Sam Lasso as value-added or non–value-added and defend your classification. How much was value-added time and how much was non–value-added?

Classify activities by level.
(SO 7), **AN**

E17-17 Having itemized its costs for the first quarter of next year's budget, Santana Corporation desires to install an activity-based costing system. First, it identified the activity cost pools in which to accumulate factory overhead; second, it identified the relevant cost drivers. (This was done in E17-8.)

Instructions

Using the activity cost pools identified in E17-8, classify each of those cost pools as either unit-level, batch-level, product-level, or facility-level.

Classify activities by level.
(SO 7), AN

E17-18 William Mendel & Sons, Inc. is a small manufacturing company in La Jolla that uses activity-based costing. Mendel & Sons accumulates overhead in the following activity cost pools.

1. Hiring personnel.
2. Managing parts inventory.
3. Purchasing.
4. Testing prototypes.
5. Designing products.
6. Setting up equipment.
7. Training employees.
8. Inspecting machined parts.
9. Machining.
10. Assembling.

Instructions

For each activity cost pool, indicate whether the activity cost pool would be unit-level, batch-level, product-level, or facility-level.

Exercises: Set B and Challenge Exercises

Visit the book's companion website, at **www.wiley.com/college/kimmel**, and choose the Student Companion site to access Exercise Set B and Challenge Exercises.

Problems: Set A

Assign overhead using traditional costing and ABC; compute unit costs; classify activities as value- or non–value-added.
(SO 1, 4, 6), AP

P17-1A FireOut, Inc. manufactures steel cylinders and nozzles for two models of fire extinguishers: (1) a home fire extinguisher and (2) a commercial fire extinguisher. The *home model* is a high-volume (54,000 units), half-gallon cylinder that holds 2 1/2 pounds of multipurpose dry chemical at 480 PSI. The *commercial model* is a low-volume (10,200 units), two-gallon cylinder that holds 10 pounds of multi-purpose dry chemical at 390 PSI. Both products require 1.5 hours of direct labor for completion. Therefore, total annual direct labor hours are 96,300 or [1.5 hrs. × (54,000 + 10,200)]. Expected annual manufacturing overhead is $1,557,480. Thus, the predetermined overhead rate is $16.17 or ($1,557,480 ÷ 96,300) per direct labor hour. The direct materials cost per unit is $18.50 for the home model and $26.50 for the commercial model. The direct labor cost is $19 per unit for both the home and the commercial models.

The company's managers identified six activity cost pools and related cost drivers and accumulated overhead by cost pool as follows.

Activity Cost Pools	Cost Drivers	Estimated Overhead	Expected Use of Cost Drivers	Expected Use of Drivers by Product: Home	Expected Use of Drivers by Product: Commercial
Receiving	Pounds	$ 70,350	335,000	215,000	120,000
Forming	Machine hours	150,500	35,000	27,000	8,000
Assembling	Number of parts	412,300	217,000	165,000	52,000
Testing	Number of tests	51,000	25,500	15,500	10,000
Painting	Gallons	52,580	5,258	3,680	1,578
Packing and shipping	Pounds	820,750	335,000	215,000	120,000
		$1,557,480			

Instructions

(a) Under traditional product costing, compute the total unit cost of each product. Prepare a simple comparative schedule of the individual costs by product (similar to Illustration 17-10 on page 896).

(a) Unit cost–H.M. $61.76

(b) Under ABC, prepare a schedule showing the computations of the activity-based overhead rates (per cost driver).

(c) Prepare a schedule assigning each activity's overhead cost pool to each product based on the use of cost drivers. (Include a computation of overhead cost per unit, rounding to the nearest cent.)

(c) Cost assigned–H.M. $1,069,300

(d) Compute the total cost per unit for each product under ABC.

(d) Cost/unit–H.M. $57.30

(e) Classify each of the activities as a value-added activity or a non–value-added activity.

(f) Comment on (1) the comparative overhead cost per unit for the two products under ABC, and (2) the comparative total costs per unit under traditional costing and ABC.

Assign overhead to products using ABC and evaluate decision.

(SO 4), **AP**

P17-2A Schultz Electronics manufactures two large-screen television models: the Royale which sells for $1,600, and a new model, the Majestic, which sells for $1,300. The production cost computed per unit under traditional costing for each model in 2012 was as follows.

Traditional Costing	Royale	Majestic
Direct materials	$ 700	$420
Direct labor ($20 per hour)	120	100
Manufacturing overhead ($38 per DLH)	228	190
Total per unit cost	$1,048	$710

In 2012, Schultz manufactured 25,000 units of the Royale and 10,000 units of the Majestic. The overhead rate of $38 per direct labor hour was determined by dividing total expected manufacturing overhead of $7,600,000 by the total direct labor hours (200,000) for the two models.

Under traditional costing, the gross profit on the models was: Royale $552 or ($1,600 − $1,048), and Majestic $590 or ($1,300 − $710). Because of this difference, management is considering phasing out the Royale model and increasing the production of the Majestic model.

Before finalizing its decision, management asks Schultz's controller to prepare an analysis using activity-based costing (ABC). The controller accumulates the following information about overhead for the year ended December 31, 2012.

Activities	Cost Drivers	Estimated Overhead	Expected Use of Cost Drivers	Activity-Based Overhead Rate
Purchasing	Number of orders	$1,200,000	40,000	$30/order
Machine setups	Number of setups	900,000	18,000	50/setup
Machining	Machine hours	4,800,000	120,000	40/hour
Quality control	Number of inspections	700,000	28,000	25/inspection

The cost drivers used for each product were:

Cost Drivers	Royale	Majestic	Total
Purchase orders	17,000	23,000	40,000
Machine setups	5,000	13,000	18,000
Machine hours	75,000	45,000	120,000
Inspections	11,000	17,000	28,000

Instructions

(a) Assign the total 2012 manufacturing overhead costs to the two products using activity-based costing (ABC).

(a) Royale $4,035,000

(b) What was the cost per unit and gross profit of each model using ABC costing?

(b) Cost/unit–Royale $981.40

(c) Are management's future plans for the two models sound? Explain.

Assign overhead costs using traditional costing and ABC; compare results.
(SO 1, 4), AN

P17-3A Thakin Stairs Co. of Moore designs and builds factory-made premium wooden stairways for homes. The manufactured stairway components (spindles, risers, hangers, hand rails) permit installation of stairways of varying lengths and widths. All are of white oak wood. Budgeted manufacturing overhead costs for the year 2012 are as follows.

Overhead Cost Pools	Amount
Purchasing	$ 69,000
Handling materials	82,000
Production (cutting, milling, finishing)	210,000
Setting up machines	95,000
Inspecting	90,000
Inventory control (raw materials and finished goods)	126,000
Utilities	180,000
Total budget overhead costs	$852,000

For the last 4 years, Thakin Stairs Co. has been charging overhead to products on the basis of machine hours. For the year 2012, 100,000 machine hours are budgeted.

Jeremy Nolan, owner-manager of Thakin Stairs Co., recently directed his accountant, Bill Seagren, to implement the activity-based costing system that he has repeatedly proposed. At Jeremy Nolan's request, Bill and the production foreman identify the following cost drivers and their usage for the previously budgeted overhead cost pools.

Activity Cost Pools	Cost Drivers	Expected Use of Cost Drivers
Purchasing	Number of orders	600
Handling materials	Number of moves	8,000
Production (cutting, milling, finishing)	Direct labor hours	100,000
Setting up machines	Number of setups	1,250
Inspecting	Number of inspections	6,000
Inventory control (raw materials and finished goods)	Number of components	168,000
Utilities	Square feet occupied	90,000

Steve Hannon, sales manager, has received an order for 250 stairways from Community Builders, Inc., a large housing development contractor. At Steve's request, Bill prepares cost estimates for producing components for 250 stairways so Steve can submit a contract price per stairway to Community Builders. He accumulates the following data for the production of 250 stairways.

Direct materials	$103,600
Direct labor	$112,000
Machine hours	14,500
Direct labor hours	5,000
Number of purchase orders	60
Number of material moves	800
Number of machine setups	100
Number of inspections	450
Number of components	16,000
Number of square feet occupied	8,000

Instructions

(a) Compute the predetermined overhead rate using traditional costing with machine hours as the basis.

(b) Cost/stairway $1,356.56

(b) What is the manufacturing cost per stairway under traditional costing? (Round to the nearest cent.)

(c) What is the manufacturing cost per stairway under the proposed activity-based costing? (Round to the nearest cent. Prepare all of the necessary schedules.)

(c) Cost/stairway $1,134.20

(d) Which of the two costing systems is preferable in pricing decisions and why?

P17-4A Benton Corporation produces two grades of wine from grapes that it buys from California growers. It produces and sells roughly 3,000,000 liters per year of a low-cost, high-volume product called CoolDay. It sells this in 600,000 5-liter jugs. Benton also produces and sells roughly 300,000 liters per year of a low-volume, high-cost product called LiteMist. LiteMist is sold in 1-liter bottles. Based on recent data, the CoolDay product has not been as profitable as LiteMist. Management is considering dropping the inexpensive CoolDay line so it can focus more attention on the LiteMist product. The LiteMist product already demands considerably more attention than the CoolDay line.

Assign overhead costs using traditional costing and ABC; compare results.

(SO 1, 4), AN

Jack Eller, president and founder of Benton, is skeptical about this idea. He points out that for many decades the company produced only the CoolDay line, and that it was always quite profitable. It wasn't until the company started producing the more complicated LiteMist wine that the profitability of CoolDay declined. Prior to the introduction of LiteMist, the company had simple equipment, simple growing and production procedures, and virtually no need for quality control. Because LiteMist is bottled in 1-liter bottles, it requires considerably more time and effort, both to bottle and to label and box than does CoolDay. The company must bottle and handle 5 times as many bottles of LiteMist to sell the same quantity as CoolDay. CoolDay requires 1 month of aging; LiteMist requires 1 year. CoolDay requires cleaning and inspection of equipment every 10,000 liters; LiteMist requires such maintenance every 600 liters.

Jack has asked the accounting department to prepare an analysis of the cost per liter using the traditional costing approach and using activity-based costing. The following information was collected.

	CoolDay	LiteMist
Direct materials per liter	$0.40	$1.20
Direct labor cost per liter	$0.25	$0.50
Direct labor hours per liter	0.05	0.09
Total direct labor hours	150,000	27,000

Activity Cost Pools	Cost Drivers	Estimated Overhead	Expected Use of Cost Drivers	Expected Use of Cost Drivers per Product: CoolDay	Expected Use of Cost Drivers per Product: LiteMist
Grape processing	Cart of grapes	$ 145,860	6,600	6,000	600
Aging	Total months	396,000	6,600,000	3,000,000	3,600,000
Bottling and corking	Number of bottles	270,000	900,000	600,000	300,000
Labeling and boxing	Number of bottles	189,000	900,000	600,000	300,000
Maintain and inspect equipment	Number of inspections	240,800	800	350	450
		$1,241,660			

Instructions

Answer each of the following questions. (Round all calculations to three decimal places.)

(a) Under traditional product costing using direct labor hours, compute the total manufacturing cost per **liter** of both products.

(a) Cost/liter–C.D. $1.001

(b) Under ABC, prepare a schedule showing the computation of the activity-based overhead rates (per cost driver).

(c) Prepare a schedule assigning each activity's overhead cost pool to each product, based on the use of cost drivers. Include a computation of overhead cost per liter.

(c) Cost/liter–C.D. $.241

(d) Compute the total manufacturing cost per liter for both products under ABC.

(e) Write a memo to Jack Eller discussing the implications of your analysis for the company's plans. In this memo, provide a brief description of ABC as well as an explanation of how the traditional approach can result in distortions.

Assign overhead costs to services using traditional costing and ABC; compute overhead rates and unit costs; compare results.
(SO 1, 4, 6, 8), **AN**

P17-5A Polk and Stoneman is a public accounting firm that offers two primary services, auditing and tax return preparation. A controversy has developed between the partners of the two service lines as to who is contributing the greater amount to the bottom line. The area of contention is the assignment of overhead. The tax partners argue for assigning overhead on the basis of 40% of direct labor dollars, while the audit partners argue for implementing activity-based costing. The partners agree to use next year's budgeted data for purposes of analysis and comparison. The following overhead data are collected to develop the comparison.

Activity Cost Pools	Cost Drivers	Estimated Overhead	Expected Use of Cost Drivers	Expected Use of Cost Drivers per Service: Audit	Expected Use of Cost Drivers per Service: Tax
Employee training	Direct labor dollars	$216,000	$1,800,000	$1,050,000	$750,000
Typing and secretarial	Number of reports/ forms	76,200	2,500	800	1,700
Computing	Number of minutes	204,000	60,000	25,000	35,000
Facility rental	Number of employees	142,500	40	22	18
Travel	Per expense reports	81,300	Direct	56,000	25,300
		$720,000			

Instructions

(a) Using traditional product costing as proposed by the tax partners, compute the total overhead cost assigned to both services (audit and tax) of Polk and Stoneman.

(b) (2) Cost assigned–Tax $350,241

(b) (1) Using activity-based costing, prepare a schedule showing the computations of the activity-based overhead rates (per cost driver).
(2) Prepare a schedule assigning each activity's overhead cost pool to each service based on the use of the cost drivers.

(c) Classify each of the activities as a value-added activity or a non–value-added activity.

(d) Difference–Audit $50,241

(d) Comment on the comparative overhead cost for the two services under both traditional costing and ABC.

Problems: Set B

Assign overhead using traditional costing and ABC; compute unit costs; classify activities as value- or non–value-added.
(SO 1, 4, 6), **AP**

P17-1B VideoPlus, Inc. manufactures two types of DVD players, a deluxe model and a standard model. The deluxe model is a multi-format progressive-scan DVD player with networking capability, Dolby digital, and DTS decoder. The standard model's primary feature is progressive-scan. Annual production is 50,000 units for the deluxe and 20,000 units for the standard.

Both products require 2 hours of direct labor for completion. Therefore, total annual direct labor hours are 140,000 [2 hrs. × (20,000 + 50,000)]. Expected annual manufacturing overhead is $1,050,000. Thus, the predetermined overhead rate is $7.50 ($1,050,000 ÷ 140,000) per direct labor hour. The direct materials cost per unit is $42 for the deluxe model and $11 for the standard model. The direct labor cost is $18 per unit for both the deluxe and the standard models.

The company's managers identified six activity cost pools and related cost drivers and accumulated overhead by cost pool as follows.

Activity Cost Pool	Cost Driver	Estimated Overhead	Expected Use of Cost Drivers	Expected Use of Drivers by Product: Standard	Expected Use of Drivers by Product: Deluxe
Purchasing	Orders	$ 126,000	400	100	300
Receiving	Pounds	30,000	20,000	4,000	16,000
Assembling	Number of parts	444,000	74,000	20,000	54,000
Testing	Number of tests	115,000	23,000	10,000	13,000
Finishing	Units	140,000	70,000	20,000	50,000
Packing and shipping	Pounds	195,000	80,000	18,000	62,000
		$1,050,000			

Instructions

(a) Under traditional product costing, compute the total unit cost of both products. Prepare a simple comparative schedule of the individual costs by product (similar to Illustration 17-10 on page 896).

(a) Unit cost–Standard $44

(b) Under ABC, prepare a schedule showing the computations of the activity-based overhead rates (per cost driver).

(c) Prepare a schedule assigning each activity's overhead cost pool to each product based on the use of cost drivers. (Include a computation of overhead cost per unit, rounding to the nearest cent.)

(c) Cost assigned–Standard $291,375

(d) Compute the total cost per unit for each product under ABC.

(d) Cost/unit–Standard $43.57

(e) Classify each of the activities as a value-added activity or a non–value-added activity.

(f) Comment on (1) the comparative overhead cost per unit for the two products under ABC, and (2) the comparative total costs per unit under traditional costing and ABC.

Assign overhead to products using ABC and evaluate decision.

(SO 4), **AP**

P17-2B Kinnard Electronics manufactures two home theater systems: the Elite which sells for $1,400, and a new model, the Preferred, which sells for $1,100. The production cost computed per unit under traditional costing for each model in 2012 was as follows.

Traditional Costing	Elite	Preferred
Direct materials	$600	$320
Direct labor ($20 per hour)	100	80
Manufacturing overhead ($35 per DLH)	175	140
Total per unit cost	$875	$540

In 2012, Kinnard manufactured 20,000 units of the Elite and 10,000 units of the Preferred. The overhead rate of $35 per direct labor hour was determined by dividing total expected manufacturing overhead of $4,900,000 by the total direct labor hours (140,000) for the two models.

Under traditional costing, the gross profit on the models was: Elite $525 ($1,400 − $875), and Preferred $560 ($1,100 − $540). Because of this difference, management is considering phasing out the Elite model and increasing the production of the Preferred model.

Before finalizing its decision, management asks Kinnard's controller to prepare an analysis using activity-based costing (ABC). The controller accumulates the following information about overhead for the year ended December 31, 2012.

Activity	Cost Driver	Estimated Overhead	Expected Use of Cost Drivers	Activity-Based Overhead Rate
Purchasing	Number of orders	$ 775,000	25,000	$31
Machine setups	Number of setups	580,000	20,000	29
Machining	Machine hours	3,100,000	100,000	31
Quality control	Number of inspections	445,000	5,000	89

The cost drivers used for each product were:

Cost Driver	Elite	Preferred	Total
Purchase orders	11,250	13,750	25,000
Machine setups	11,000	9,000	20,000
Machine hours	40,000	60,000	100,000
Inspections	2,750	2,250	5,000

Instructions

(a) Assign the total 2012 manufacturing overhead costs to the two products using activity-based costing (ABC).

(a) Elite $2,152,500

(b) What was the cost per unit and gross profit of each model using ABC costing?

(b) Cost/unit–Elite $807.63

(c) Are management's future plans for the two models sound? Explain.

Assign overhead costs using traditional costing and ABC; compare results.

(SO 1, 4), AN

P17-3B Luxury Furniture designs and builds factory-made, premium, wood armoires for homes. All are of white oak. Its budgeted manufacturing overhead costs for the year 2012 are as follows.

Overhead Cost Pools	Amount
Purchasing	$ 45,000
Handling materials	50,000
Production (cutting, milling, finishing)	130,000
Setting up machines	85,000
Inspecting	60,000
Inventory control (raw materials and finished goods)	80,000
Utilities	100,000
Total budget overhead costs	$550,000

For the last 4 years, Luxury Furniture has been charging overhead to products on the basis of materials cost. For the year 2012, materials cost of $500,000 were budgeted.

Jim Brigham, owner-manager of Luxury Furniture, recently directed his accountant, Bob Borke, to implement the activity-based costing system that he has repeatedly proposed. At Jim Brigham's request, Bob and the production foreman identify the following cost drivers and their usage for the previously budgeted overhead cost pools.

Overhead Cost Pools	Activity Cost Drivers	Expected Use of Cost Drivers
Purchasing	Number of orders	500
Handling materials	Number of moves	5,000
Production (cutting, milling, finishing)	Direct labor hours	65,000
Setting up machines	Number of setups	1,000
Inspecting	Number of inspections	4,000
Inventory control (raw materials and finished goods)	Number of components	40,000
Utilities	Square feet occupied	50,000

Debbie Steiner, sales manager, has received an order for 12 luxury armoires from Thom's Interior Design. At Debbie's request, Bob prepares cost estimates for producing 12 armoires so Debbie can submit a contract price per armoire to Thom's. He accumulates the following data for the production of 12 armoires.

Direct materials	$5,200
Direct labor	$3,500
Direct labor hours	200
Number of purchase orders	3
Number of material moves	32
Number of machine setups	4
Number of inspections	20
Number of components	640
Number of square feet occupied	320

Instructions

(a) Compute the predetermined overhead rate using traditional costing with materials cost as the basis.

(b) Cost/armoire $1,201.67

(c) Cost/armoire $1,020.83

(b) What is the manufacturing cost per armoire under traditional costing?

(c) What is the manufacturing cost per armoire under the proposed activity-based costing? (Prepare all of the necessary schedules.)

(d) Which of the two costing systems is preferable in pricing decisions and why?

Assign overhead costs using traditional costing and ABC; compare results.
(SO 1, 4), AN

P17-4B Merando Corporation produces two grades of wine from grapes that it buys from California growers. It produces and sells roughly 600,000 gallon jugs per year of a low-cost, high-volume product called Valley Fresh. Merando also produces and sells roughly 200,000 gallons per year of a low-volume, high-cost product called Merando Valley. Merando Valley is sold in 1-liter bottles. Based on recent data, the Valley Fresh product has not been as profitable as Merando Valley. Management is considering dropping the inexpensive Valley Fresh line so it can focus more attention on the Merando Valley product. The Merando Valley product already demands considerably more attention than the Valley Fresh line.

Frankie Merando, president and founder of Merando, is skeptical about this idea. He points out that for many decades the company produced only the Valley Fresh line, and that it was always quite profitable. It wasn't until the company started producing the more complicated Merando Valley wine that the profitability of Valley Fresh declined. Prior to the introduction of Merando Valley, the company had simple equipment, simple growing and production procedures, and virtually no need for quality control. Because Merando Valley is bottled in 1-liter bottles, it requires considerably more time and effort, both to bottle and to label and box, than does Valley Fresh. The company must bottle and handle 4 times as many bottles of Merando Valley to sell the same quantity as Valley Fresh, since there are approximately 4 liters in a gallon. Valley Fresh requires 1 month of aging; Merando Valley requires 1 year. Valley Fresh requires cleaning and inspection of equipment every 2,500 gallons; Merando Valley requires such maintenance every 250 gallons.

Frankie has asked the accounting department to prepare an analysis of the cost per gallon using the traditional costing approach and using activity-based costing. The following information was collected.

	Valley Fresh	Merando Valley
Direct materials per gallon	$1.35	$3.60
Direct labor cost per gallon	$0.75	$1.50
Direct labor hours per gallon	0.05	0.10
Total direct labor hours	30,000	20,000

Activity Cost Pool	Cost Driver	Estimated Overhead	Expected Use of Cost Drivers	Expected Use of Cost Drivers per Product: Valley Fresh	Expected Use of Cost Drivers per Product: Merando Valley
Grape processing	Cart of grapes	$ 146,000	8,000	6,000	2,000
Aging	Total months	420,000	3,000,000	600,000	2,400,000
Bottling and corking	Number of bottles	210,000	1,400,000	600,000	800,000
Labeling and boxing	Number of bottles	140,000	1,400,000	600,000	800,000
Maintain and inspect equipment	Number of inspections	234,000	1,040	240	800
		$1,150,000			

Instructions

Answer each of the following questions. (Round all calculations to three decimal places.)

(a) Under traditional product costing using direct labor hours, compute the total manufacturing cost per **gallon** of both products.

(a) Cost/gallon–V.F. $3.25

(b) Under ABC, prepare a schedule showing the computation of the activity-based overhead rates (per cost driver).

(c) Prepare a schedule assigning each activity's overhead cost pool to each product, based on the use of cost drivers. Include a computation of overhead cost per gallon.

(c) Cost/gallon–V.F. $0.663

(d) Compute the total manufacturing cost per gallon for both products under ABC.

(e) Write a memo to Frankie Merando discussing the implications of your analysis for the company's plans. In this memo, provide a brief description of ABC as well as an explanation of how the traditional approach can result in distortions.

Assign overhead costs to services using traditional costing and ABC; compute overhead rates and unit costs; compare results.
(SO 1, 4, 6, 8), AN

P17-5B Smith and Jones is a law firm that serves both individuals and corporations. A controversy has developed between the partners of the two service lines as to who is contributing the greater amount to the bottom line. The area of contention is the assignment of overhead. The individual partners argue for assigning overhead on the basis of 30% of direct labor dollars, while the corporate partners argue for implementing activity-based costing. The partners agree to use next year's budgeted data for purposes of analysis and comparison. The following overhead data are collected to develop the comparison.

Activity Cost Pool	Cost Driver	Estimated Overhead	Expected Use of Cost Drivers	Expected Use of Cost Drivers per Service	
				Corporate	Individual
Employee training	Direct labor dollars	$120,000	$1,600,000	$900,000	$700,000
Typing and secretarial	Number of reports/ forms	60,000	2,000	500	1,500
Computing	Number of minutes	130,000	40,000	17,000	23,000
Facility rental	Number of employees	100,000	25	14	11
Travel	Per expense reports	70,000	Direct	48,000	22,000
		$480,000			

Instructions

(a) Using traditional product costing, compute the total overhead cost assigned to both services (individual and corporate) of Smith and Jones.

(b) (1) Using activity-based costing, prepare a schedule showing the computations of the activity-based overhead rates (per cost driver).

(2) Prepare a schedule assigning each activity's overhead cost pool to each service based on the use of the cost drivers.

(c) Classify each of the activities as a value-added activity or a non–value-added activity.

(d) Comment on the comparative overhead for the two service lines under both traditional costing and ABC.

(b) (2) Cost assigned–Individual $238,250

(d) Difference–Corporate $28,250

Problems: Set C

Visit the book's companion website, at **www.wiley.com/college/kimmel**, and choose the Student Companion site to access Problem Set C.

Waterways Continuing Problem

(*Note:* This is a continuation of the Waterways Problem from Chapters 14 through 16.)

WCP17 Waterways looked into ABC as a method of costing because of the variety of items it produces and the many different activities in which it is involved. This problem asks you to help Waterways use an activity-based costing system to account for its production activities.

Go to the book's companion website, at **www.wiley.com/college/kimmel**, to find the completion of this problem.

broadening your perspective

DECISION MAKING ACROSS THE ORGANIZATION

BYP17-1 East Valley Hospital is a primary medical care facility and trauma center that serves 11 small, rural midwestern communities within a 40-mile radius. The hospital offers all the medical/surgical services of a typical small hospital. It has a staff of 18 full-time doctors and 20 part-time visiting specialists. East Valley has a payroll of 150 employees consisting of technicians, nurses, therapists, managers, directors, administrators, dieticians, secretaries, data processors, and janitors.

Instructions

With the class divided into groups, discuss and answer the following.

(a) Using your (limited, moderate, or in-depth) knowledge of a hospital's operations, identify as many **activities** as you can that would serve as the basis for implementing an activity-based costing system.

(b) For each of the activities listed in (a), identify a **cost driver** that would serve as a valid measure of the resources consumed by the activity.

MANAGERIAL ANALYSIS

BYP17-2 Ideal Manufacturing Company of Sycamore, Illinois, has supported a research and development (R&D) department that has for many years been the sole contributor to the company's new farm machinery products. The R&D activity is an overhead cost center that provides services only to in-house manufacturing departments (four different product lines), all of which produce agricultural/farm/ranch related machinery products.

The department has never sold its services outside, but because of its long history of success, larger manufacturers of agricultural products have approached Ideal to hire its R&D department for special projects. Because the costs of operating the R&D department have been spiraling uncontrollably, Ideal's management is considering entertaining these outside approaches to absorb the increasing costs. But, (1) management doesn't have any cost basis for charging R&D services to outsiders, and (2) it needs to gain control of its R&D costs. Management decides to implement an activity-based costing system in order to determine the charges for both outsiders and the in-house users of the department's services.

R&D activities fall into four pools with the following annual costs.

Market analysis	$1,050,000
Product design	2,350,000
Product development	3,600,000
Prototype testing	1,400,000

Activity analysis determines that the appropriate cost drivers and their usage for the four activities are:

Activities	Cost Drivers	Total Estimated Drivers
Market analysis	Hours of analysis	15,000 hours
Product design	Number of designs	2,500 designs
Product development	Number of products	90 products
Prototype testing	Number of tests	500 tests

Instructions

(a) Compute the activity-based overhead rate for each activity cost pool.

(b) How much cost would be charged to an in-house manufacturing department that consumed 1,800 hours of market analysis time, was provided 280 designs relating to 10 products, and requested 92 engineering tests?

(c) How much cost would serve as the basis for pricing an R&D bid with an outside company on a contract that would consume 800 hours of analysis time, require 178 designs relating to 3 products, and result in 70 engineering tests?

(d) What is the benefit to Ideal Manufacturing of applying activity-based costing to its R&D activity for both in-house and outside charging purposes?

REAL-WORLD FOCUS

BYP17-3 Hewlett-Packard (HP) is considered one of the best-managed and most innovative companies in the world. It continually has shown an ability to adapt to global competitive challenges through technical innovation and continual reassessment of its management and control mechanisms. Most applications of activity-based costing by Hewlett-Packard have been successful.

But, over the period August 1988 to August 1989, the Colorado Springs Division of Hewlett-Packard designed an activity-based costing system with the goal of providing for better product costing and inventory valuation. It began implementation in November 1989 but halted the process in the summer of 1992. Since then, the Colorado Springs Division has made no further attempts to re-implement a more expansive ABC approach.

Instructions

The March 1997 issue of *Management Accounting* contains an article by Steven P. Landry, Larry M. Wood, and Tim M. Lindquist about the Colorado Springs Division entitled "Can ABC Bring Mixed Results?" Read the article and answer the following questions.

(a) What went wrong at HP's Colorado Springs Division in the design, development, and implementation of its activity-based costing system?

(b) What conclusions were drawn from HP's Colorado Springs Division experience? What does successful ABC implementation require?

MANAGERIAL ACCOUNTING ON THE WEB

BYP17-4 Activity-based costing methods are constantly being improved upon, and many websites discuss suggestions for improvement. The article in this activity outlines an alternative perspective on activity-based costing.

Address: **http://hbswk.hbs.edu/item/4587.html**, or go to **www.wiley.com/college/kimmel**

Instructions

Read the article provided at the site and answer the following questions.

(a) What concerns do the authors say are raised by "real-world use" of ABC? According to the authors, what benefits have companies enjoyed from the use of ABC?

(b) What method do the authors suggest for estimating practical capacity? How important is it to be precise in this estimate?

(c) Describe the steps that are taken after practical capacity has been estimated.

(d) What is one of the primary benefits obtained by management in the report entitled "ABC, the Time-Driven Way"? What is an example of how this worked for a real company?

COMMUNICATION ACTIVITY

BYP17-5 In our Feature Story about Super Bakery, Inc., we described a virtual corporation as one that consists of a core unit that is supported by a network of outsourced activities. A virtual corporation minimizes investment in human resources, fixed assets, and working capital. The application of ABC to Super Bakery, Inc. is described in an article entitled "ABC in a Virtual Corporation" by Tim Davis and Bruce Darling, in the October 1996 issue of *Management Accounting*.

Instructions

Assume you are the controller of a virtual corporation. Using the article as a basis for your communication, write a summary that answers the following questions.

(a) What unique strategies and tactics did Super Bakery's management implement that caused sales to take off and continue to grow at an average rate of 20%?

(b) Why did Super Bakery's management feel that it was necessary to install an ABC system?

(c) What is the main difference between Super Bakery's ABC system and other manufacturers' ABC systems?

ETHICS CASE

BYP17-6 Curtis Rich, the cost accountant for Hi-Power Mower Company, recently installed activity-based costing at Hi-Power's St. Louis lawn tractor (riding mower) plant where three models—the 8-horsepower Bladerunner, the 12-horsepower Quickcut, and the 18-horsepower Supercut—are manufactured. Curtis's new product costs for these three models show that the company's traditional costing system had been significantly undercosting the 18-horsepower Supercut. This was due primarily to the lower sales volume of the Supercut compared to the Bladerunner and the Quickcut.

Before completing his analysis and reporting these results to management, Curtis is approached by his friend Ed Gray, who is the production manager for the 18-horsepower Supercut model. Ed has heard from one of Curtis's staff about the new product costs and is upset and worried for his job because the new costs show the Supercut to be losing, rather than making, money.

At first, Ed condemns the new cost system, whereupon Curtis explains the practice of activity-based costing and why it is more accurate than the company's present system. Even more worried now, Ed begs Curtis, "Massage the figures just enough to save the line from being discontinued. You don't want me to lose my job, do you? Anyway, nobody will know."

Curtis holds firm but agrees to recompute all his calculations for accuracy before submitting his costs to management.

Instructions

(a) Who are the stakeholders in this situation?
(b) What, if any, are the ethical considerations in this situation?
(c) What are Curtis's ethical obligations to the company? To his friend?

"ALL ABOUT YOU" ACTIVITY

BYP17-7 There are many resources available on the Web to assist people in time management. Some of these resources are designed specifically for college students.

Instructions

Go to **http://www.dartmouth.edu/~acskills/videos/video_tm.html** (or do an Internet search of Dartmouth's time-management video). Watch the video and then answer the following questions.

(a) What are the main tools of time management for students, and what is each used for?
(b) At what time of day are students most inclined to waste time? What time of day is the best for studying complex topics?
(c) How can employing time-management practices be a "liberating" experience?
(d) Why is goal-setting important? What are the characteristics of good goals, and what steps should you take to help you develop your goals?

Answers to Insight and Accounting Across the Organization Questions

p. 897 Traveling Light Q: Why do airlines charge even higher rates for heavier bags, bags that are odd shapes (e.g., ski bags), and bags with hazardous materials in them? **A:** Each of these factors increases the costs to the airlines. Heavier baggage is more difficult to handle, thus increasing labor costs. It also uses up more fuel. Bags that are odd shapes complicate handling both for humans and machines. In addition, odd shapes take up more space in the cargo area. Finally, hazardous materials require special handling and storage procedures. All of these factors should be considered by an airline when it decides how much to charge for special baggage.

p. 900 Using ABC to Aid in Employee Evaluation Q: What positive implications does application of ABC have for the employees of this company? **A:** ABC will make these employees more aware of which activities cost the company more money. They will be motivated to reduce their use of these activities in order to improve their individual performance.

p. 903 What Does NASCAR Have to Do with Breakfast Cereal? Q: What are the benefits of reducing setup time? **A:** Setup time is a non–value-added activity. Customers are not willing to pay extra for more setup time. By reducing the time spent on setups, the company can reduce non–value-added costs. Also, by reducing setup time the company can switch from producing one product to producing a different product more quickly. This enables it to respond to customers' demands more quickly, thus avoiding stock-outs.

p. 908 Wasted Effort Q: Suppose a moving company has historically sold cardboard boxes and tape to its customers. What relevant costs would it consider in deciding whether to provide plastic bins rather than boxes and tape? **A:** In deciding whether to provide reusable plastic bins, the moving company would consider the following relevant costs: the cost of the bins (and the number of expected uses), the incremental revenue from boxes versus plastic bins, the lost tape revenue, and the cost of driving out to pick up the bins (they don't have to drive out and pick up the boxes). A potential intangible benefit would be the positive public relations benefit of saying that the company was switching to a more environmentally friendly packaging option.

study objectives

After studying this chapter, you should be able to:

1. Distinguish between variable and fixed costs.
2. Explain the significance of the relevant range.
3. Explain the concept of mixed costs.
4. List the five components of cost-volume-profit analysis.
5. Indicate what contribution margin is and how it can be expressed.
6. Identify the three ways to determine the break-even point.
7. Give the formulas for determining sales required to earn target net income.
8. Define margin of safety, and give the formulas for computing it.

feature story

UNDERSTANDING MEDICAL COSTS MIGHT LEAD TO BETTER HEALTH CARE

Dr. Brian Forrest was frustrated with the standard approach to the practice of medicine. He was forced to see too many patients for too few minutes per patient—so he did something about it. He started a small medical practice that flew directly in the face of virtually every accepted assumption of modern medicine. Today, his practice can break even on 4 patients per day.

How did he do it? First, he identified all non–value-adding expenditures. A normal medical practice needs lots of employees to collect money from insurance companies or from past-due accounts. Dr. Forrest completely eliminated the need for these employees (and thus eliminated these costs) by requiring patients to pay cash at the time of service.

Dr. Forrest's fees are significantly lower than a standard clinic. He charges a flat $45 office visit fee (no matter how long he is with a patient), plus patients pay for lab and supply costs, which average $37 per visit. To keep his rate so low and still spend a lot of time with patients, he has to keep tight control of his costs. That is, to lower his break-even point, he needs to keep his fixed costs down. His overhead costs average just 25 percent of revenue, compared to 40 to 60 percent of revenue for a standard practice. He buys his equipment from a hospital surplus store (e.g., $100 for an exam table versus $1,500 new) and tries to keep his office space to a minimum. Dr. Forrest saves about $10,000 per year by not hiring a janitorial service. Instead, he and the other two employees share the cleaning tasks, and he takes out his own trash.

To increase his ability to service more patients, Dr. Forrest hired a nurse-practitioner. To keep his fixed costs down, she was hired on a "productivity basis," that is, she is paid per patient. Thus, her cost to the practice represents a variable cost, as her wages are paid out of the incremental revenue that she produces. Interestingly, the nurse-practitioner has found that under this approach, she is able to spend more time with her patients than she did in other practices. Yet, she actually makes more money. This is an unusual approach because in most medical practices, nearly all of the labor costs are fixed.

Dr. Forrest originally anticipated that most of his patients would be people without insurance, since he is unwilling to accept payments from insurance companies. He expected that people with insurance would not be willing to incur out-of-pocket expenses for health care. However, because his patients appreciate that he spends much more time with them than a traditional doctor, more than 50% of his patients have insurance. He is happy, and so are his patients.

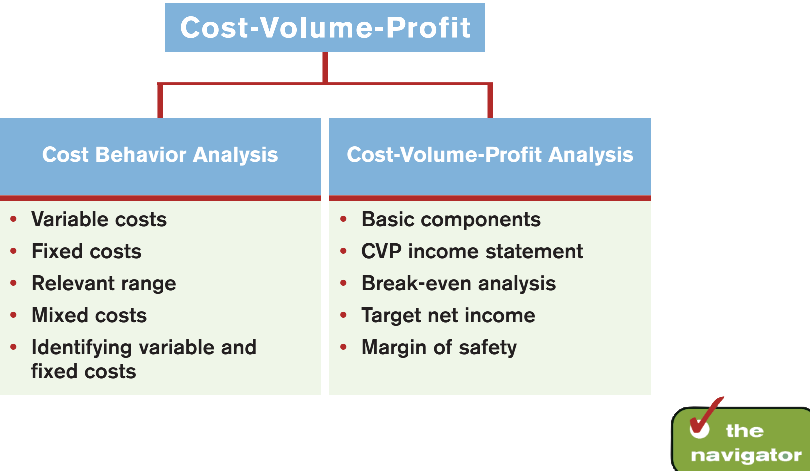
preview of chapter 18

As the Feature Story indicates, to manage any size business you must understand how costs respond to changes in sales volume and the effect of costs and revenues on profits. A prerequisite to understanding cost-volume-profit (CVP) relationships is knowledge of how costs behave. In this chapter, we first explain the considerations involved in cost behavior analysis. Then, we discuss and illustrate CVP analysis.

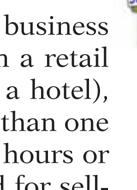
The content and organization of Chapter 18 are as follows.



the navigator

Cost Behavior Analysis

Cost behavior analysis is the study of how specific costs respond to changes in the level of business activity. As you might expect, some costs change, and others remain the same. For example, for an airline company such as Southwest or United, the longer the flight the higher the fuel costs. On the other hand, Massachusetts General Hospital's costs to staff the emergency room on any given night are relatively constant regardless of the number of patients treated. A knowledge of cost behavior helps management plan operations and decide between alternative courses of action. Cost behavior analysis applies to all types of entities, as the Feature Story about Dr. Forrest's clinic indicates.



The starting point in cost behavior analysis is measuring the key business activities. Activity levels may be expressed in terms of sales dollars (in a retail company), miles driven (in a trucking company), room occupancy (in a hotel), or dance classes taught (by a dance studio). Many companies use more than one measurement base. A manufacturer, for example, may use direct labor hours or units of output for manufacturing costs and sales revenue or units sold for selling expenses.

For an activity level to be useful in cost behavior analysis, changes in the level or volume of activity should be correlated with changes in costs. The activity level selected is referred to as the activity (or volume) index. The **activity index** identifies the activity that causes changes in the behavior of costs. With an appropriate activity index, companies can classify the behavior of costs in response to changes in activity levels into three categories: variable, fixed, or mixed.

study objective 1
Distinguish between variable and fixed costs.

VARIABLE COSTS

Variable costs are costs that vary **in total** directly and proportionately with changes in the activity level. If the level increases 10%, total variable costs will

increase 10%. If the level of activity decreases by 25%, variable costs will decrease 25%. Examples of variable costs include direct materials and direct labor for a manufacturer; cost of goods sold, sales commissions, and freight-out for a merchandiser; and gasoline in airline and trucking companies. A variable cost may also be defined as a cost that **remains the same *per unit* at every level of activity**.

To illustrate the behavior of a variable cost, assume that Damon Company manufactures radios that contain a $10 digital clock. The activity index is the number of radios produced. As Damon manufactures each radio, the total cost of the clocks increases by $10. As part (a) of Illustration 18-1 shows, total cost of the clocks will be $20,000 if Damon produces 2,000 radios, and $100,000 when it produces 10,000 radios. We also can see that a variable cost remains the same per unit as the level of activity changes. As part (b) of Illustration 18-1 shows, the unit cost of $10 for the clocks is the same whether Damon produces 2,000 or 10,000 radios.

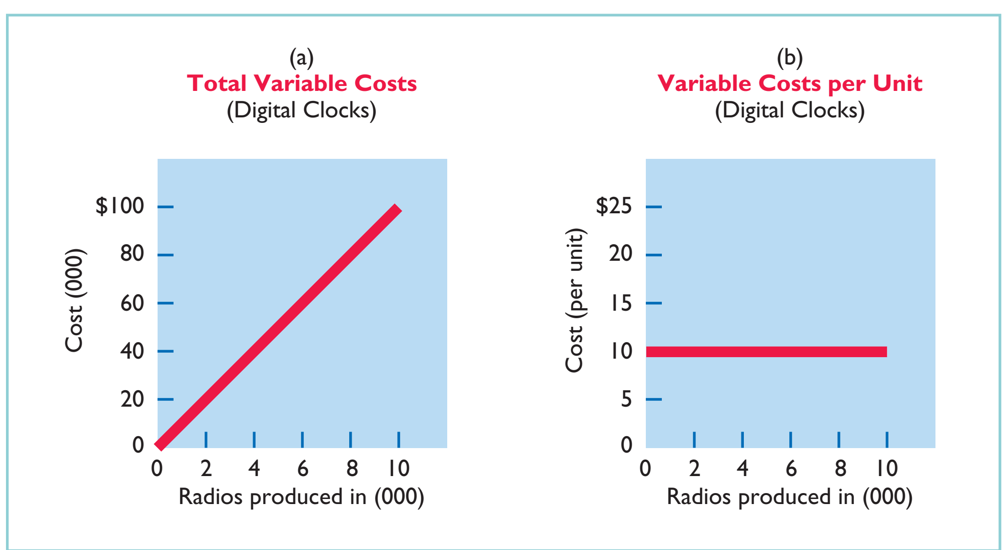


Illustration 18-1
Behavior of total and unit variable costs

Helpful Hint *True or false:* Variable cost per unit changes directly and proportionately with changes in activity.
Answer: False. Per unit cost remains constant at all levels of activity.

Companies that rely heavily on labor to manufacture a product, such as Nike or Reebok, or to provide a service, such as Hilton or Marriott, are likely to have many variable costs. In contrast, companies that use a high proportion of machinery and equipment in producing revenue, such as AT&T or Duke Energy Co., may have few variable costs.

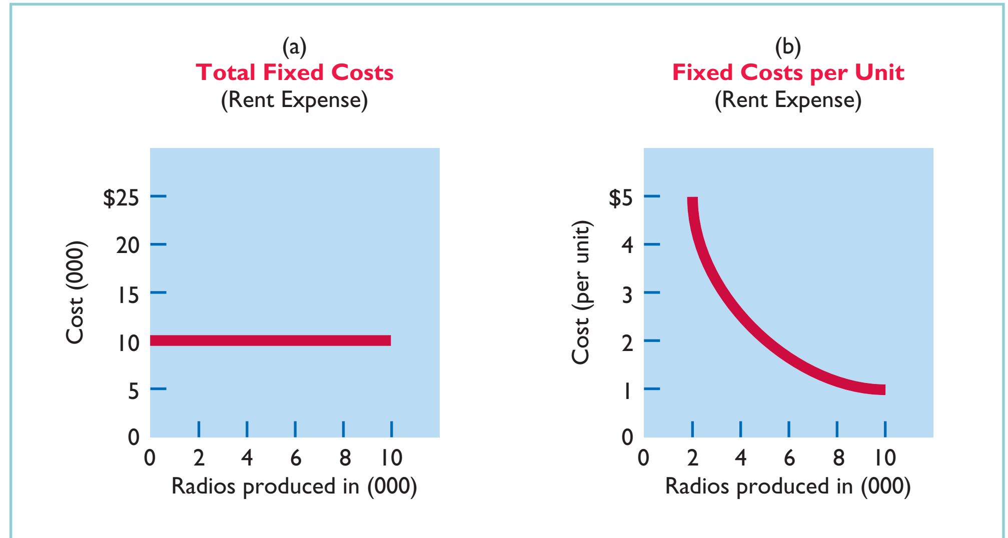
FIXED COSTS

Fixed costs are costs that **remain the same in total** regardless of changes in the activity level. Examples include property taxes, insurance, rent, supervisory salaries, and depreciation on buildings and equipment. Because total fixed costs remain constant as activity changes, it follows that **fixed costs *per unit* vary inversely with activity: As volume increases, unit cost declines, and vice versa**.

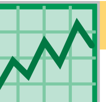
To illustrate the behavior of fixed costs, assume that Damon Company leases its productive facilities at a cost of $10,000 per month. Total fixed costs of the facilities will remain constant at every level of activity, as part (a) of Illustration 18-2 (page 942) shows. But, on a per unit basis, the cost of rent will decline as

activity increases, as part (b) of Illustration 18-2 shows. At 2,000 units, the unit cost is \$5 (\$10,000 ÷ 2,000). When Damon produces 10,000 radios, the unit cost is only \$1 (\$10,000 ÷ 10,000).

Illustration 18-2
Behavior of total and unit fixed costs



The trend for many manufacturers is to have more fixed costs and fewer variable costs. This trend is the result of increased use of automation and less use of employee labor. As a result, depreciation and lease charges (fixed costs) increase, whereas direct labor costs (variable costs) decrease.



Management Insight

Woodworker Runs an Efficient Operation for Producing Furniture

When Thomas Moser quit teaching communications at Bates College 25 years ago, he turned to what he loved doing–furniture woodworking. Today he has over 120 employees. In a business where profit margins are seldom thicker than wood shavings, cost control is everything. Moser keeps no inventory; he uses customers' 50% deposits on orders to buy the wood. Because computer-driven machines cut most of the standardized parts and joints, "we're free to be inefficient in assembly and finishing work, where the craft is most obviously expressed," says Moser. Direct labor costs are a manageable 30% of revenues. By keeping a tight lid on costs and running an efficient operation, Moser is free to spend most of his time doing what he enjoys most–designing furniture.

Source: Excerpts from "Out of the Woods" *Forbes* (April 5, 1999), p. 74.

Are the costs associated with use of the computer-driven cutting machines fixed or variable? (See page 974.)

study objective 2
Explain the significance of the relevant range.

RELEVANT RANGE

In Illustration 18-1, part (a) (page 941), a straight line is drawn throughout the entire range of the activity index for total variable costs. In essence, the assumption is that the costs are **linear**. If a relationship is linear (that is,

straight-line), then changes in the activity index will result in a direct, proportional change in the variable cost. For example, if the activity level doubles, the cost doubles.

It is now necessary to ask: Is the straight-line relationship realistic? Does the linear assumption produce useful data for CVP analysis?

In most business situations, a straight-line relationship **does not exist** for variable costs throughout the entire range of possible activity. At abnormally low levels of activity, it may be impossible to be cost-efficient. Small-scale operations may not allow the company to obtain quantity discounts for raw materials or to use specialized labor. In contrast, at abnormally high levels of activity, labor costs may increase sharply because of overtime pay. Also at high activity levels, materials costs may jump significantly because of excess spoilage caused by worker fatigue.

As a result, in the real world, the relationship between the behavior of a variable cost and changes in the activity level is often **curvilinear**, as shown in part (a) of Illustration 18-3. In the curved sections of the line, a change in the activity index will not result in a direct, proportional change in the variable cost. That is, a doubling of the activity index will not result in an exact doubling of the variable cost. The variable cost may more than double, or it may be less than double.

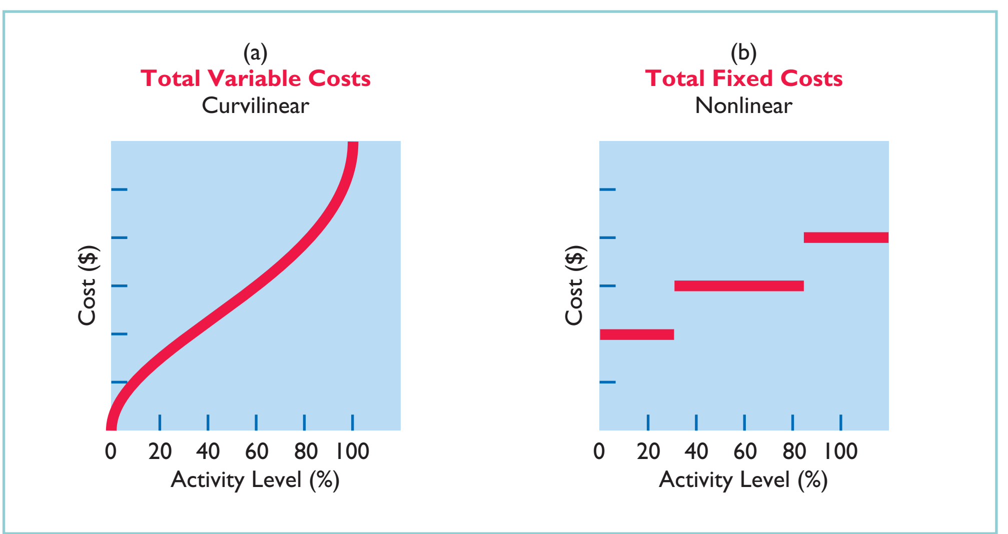


Illustration 18-3
Nonlinear behavior of variable and fixed costs

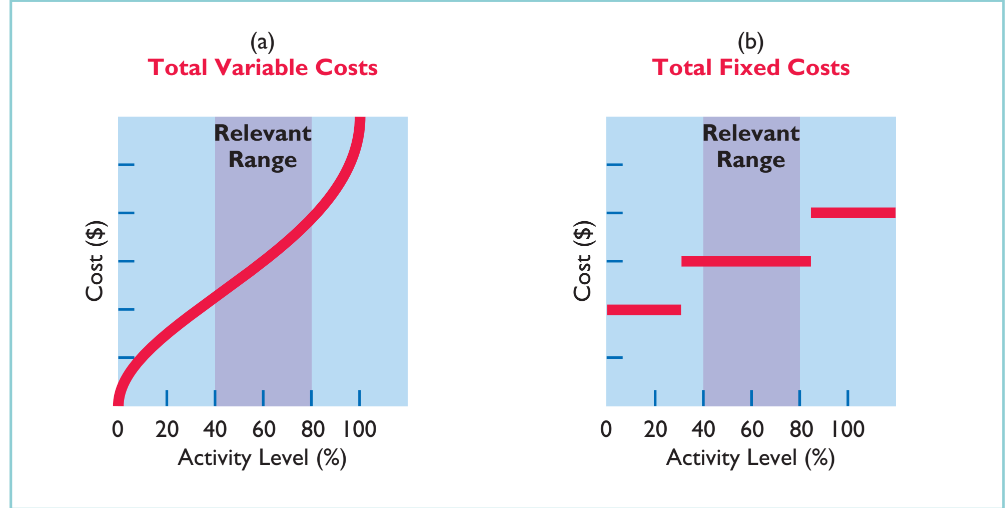
Total fixed costs also do not have a straight-line relationship over the entire range of activity. Some fixed costs will not change. But it is possible for management to change other fixed costs. For example, in the Feature Story Dr. Forrest changed the nurse-practitioner's pay from a fixed cost to a variable cost. Illustration 18-3, part (b), shows an example of the behavior of total fixed costs through all potential levels of activity.

Helpful Hint Fixed costs that may be changeable include research, such as new product development, and management training programs.

For most companies, operating at almost zero or at 100% capacity is the exception rather than the rule. Instead, companies often operate over a somewhat narrower range, such as 40–80% of capacity. The range over which a company expects to operate during a year is called the **relevant range** of the activity index. Within the relevant range, as both diagrams in Illustration 18-4 (page 944) show, a straight-line relationship generally exists for both variable and fixed costs.

Alternative Terminology The relevant range is also called the *normal* or *practical range*.

Illustration 18-4
Linear behavior within relevant range



As you can see, although the linear (straight-line) relationship may not be completely realistic, **the linear assumption produces useful data for CVP analysis as long as the level of activity remains within the relevant range.**

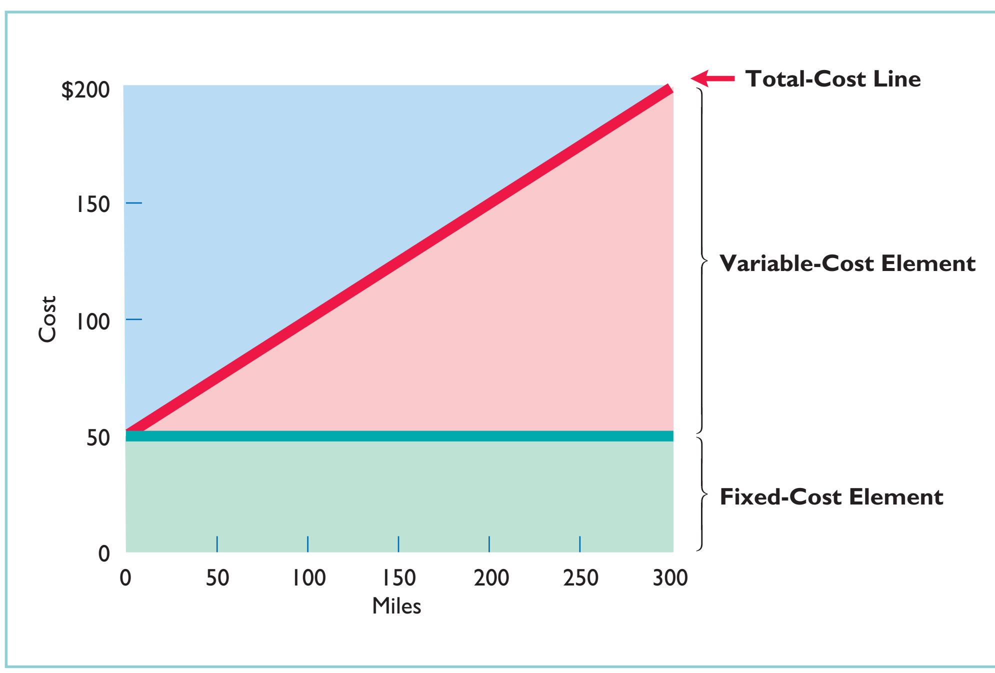
MIXED COSTS

study objective 3
Explain the concept of mixed costs.

Mixed costs are costs that contain both a variable element and a fixed element. **Mixed costs, therefore, change in total but not proportionately with changes in the activity level.**

The rental of a U-Haul truck is a good example of a mixed cost. Assume that local rental terms for a 17-foot truck, including insurance, are $50 per day plus 50 cents per mile. When determining the cost of a one-day rental, the per day charge is a fixed cost (with respect to miles driven), whereas the mileage charge is a variable cost. The graphic presentation of the rental cost for a one-day rental is as follows.

Illustration 18-5
Behavior of a mixed cost



In this case, the fixed-cost element is the cost of having the service available. The variable-cost element is the cost of actually using the service. Another

example of a mixed cost is utility costs (electric, telephone, and so on), where there is a flat service fee plus a usage charge.

For purposes of CVP analysis, **mixed costs must be classified into their fixed and variable elements**. How does management make the classification? One possibility is to determine the variable and fixed components each time a mixed cost is incurred. But because of time and cost constraints, this approach is rarely followed. Instead, the usual approach is to collect data on the behavior of the mixed costs at various levels of activity. Analysts then identify the fixed and variable cost components. Companies use various types of analysis. One type of analysis, called the **high-low method**, is discussed below. Other methods, such as the scatter diagram method and least squares regression analysis, are more appropriately explained in cost accounting courses.

before you go on...

Do it! Helena Company reports the following total costs at two levels of production.

	10,000 Units	20,000 Units
Direct materials	$20,000	$40,000
Maintenance	8,000	10,000
Direct labor	17,000	34,000
Indirect materials	1,000	2,000
Depreciation	4,000	4,000
Utilities	3,000	5,000
Rent	6,000	6,000

Classify each cost as variable, fixed, or mixed.

TYPES OF COSTS

Action Plan

- Recall that a variable cost varies in total directly and proportionately with each change in activity level.
- Recall that a fixed cost remains the same in total with each change in activity level.
- Recall that a mixed cost changes in total but not proportionately with each change in activity level.

Solution

Direct materials, direct labor, and indirect materials are variable costs.
Depreciation and rent are fixed costs.
Maintenance and utilities are mixed costs.

Related exercise material: **BE18-1, BE18-2, Do it! 18-1, E18-1, E18-2,** and **E18-4**

High-Low Method

The **high-low method** uses the total costs incurred at the high and low levels of activity to classify mixed costs into fixed and variable components. The difference in costs between the high and low levels represents variable costs, since only the variable cost element can change as activity levels change.

The steps in computing fixed and variable costs under this method are as follows.

1. **Determine variable cost per unit from the following formula.**

Change in Total Costs	÷	High minus Low Activity Level	=	Variable Cost per Unit

Illustration 18-6
Formula for variable cost per unit using high-low method

To illustrate, assume that Metro Transit Company has the following maintenance costs and mileage data for its fleet of buses over a 4-month period.

Month	Miles Driven	Total Cost	Month	Miles Driven	Total Cost
January	**20,000**	**$30,000**	March	35,000	$49,000
February	40,000	48,000	April	**50,000**	**63,000**

Illustration 18-7
Assumed maintenance costs and mileage data

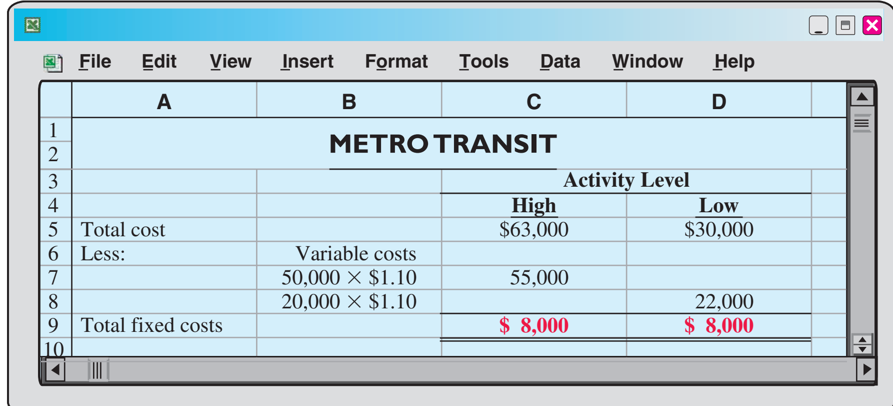
The high and low levels of activity are 50,000 miles in April and 20,000 miles in January. The maintenance costs at these two levels are $63,000 and $30,000, respectively. The difference in maintenance costs is $33,000 ($63,000 − $30,000), and the difference in miles is 30,000 (50,000 − 20,000). Therefore, for Metro Transit, variable cost per unit is $1.10, computed as follows.

$$\$33{,}000 \div 30{,}000 = \$1.10$$

2. **Determine the fixed cost by subtracting the total variable cost at either the high or the low activity level from the total cost at that activity level.**

   For Metro Transit, the computations are shown in Illustration 18-8.

Illustration 18-8
High-low method computation of fixed costs



METRO TRANSIT

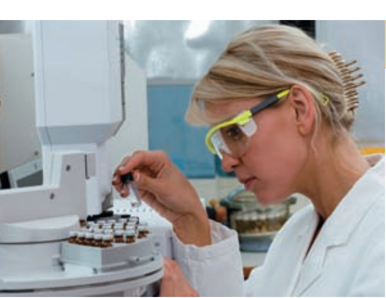
		Activity Level	
		High	**Low**
Total cost		$63,000	$30,000
Less:	Variable costs		
	50,000 × $1.10	55,000	
	20,000 × $1.10		22,000
Total fixed costs		$ 8,000	$ 8,000

Maintenance costs are therefore $8,000 per month plus $1.10 per mile. This is represented by the following formula:

$$\text{Maintenance costs} = \text{Fixed costs} + (\$1.10 \times \text{Miles driven})$$

For example, at 45,000 miles, estimated maintenance costs would be $8,000 fixed and $49,500 variable ($1.10 × 45,000) for a total of $57,500.

The high-low method generally produces a reasonable estimate for analysis. However, it does not produce a precise measurement of the fixed and variable elements in a mixed cost because it ignores other activity levels in the computation.



Management Insight

Skilled Labor Is Truly Essential

The recession that started in 2008 had devastating implications for employment. But one surprise was that for some manufacturers, the number of jobs lost was actually lower than in previous recessions. One of the main explanations for this was that between 2000 and 2008, many factories adopted lean manufacturing practices. This meant that production relied less on large numbers of low-skilled workers, and more on machines and a few highly skilled workers. As a result of this approach, a single employee was supporting far more dollars in sales. Thus, it would require a larger decline in sales before an employee would need to be laid-off in order to continue to break even. Also, because the employees are highly skilled, employers are reluctant to lose them. Instead of lay-offs, many manufacturers have resorted to cutting employees hours.

Source: Timothy Aeppel and Justin Lahart, "Lean Factories Find It Hard to Cut Jobs Even in a Slump," *Wall Street Journal Online* (March 9, 2009).

Would you characterize labor costs as being a fixed cost, a variable cost, or something else in this situation? (See page 974.)

IMPORTANCE OF IDENTIFYING VARIABLE AND FIXED COSTS

Why is it important to segregate costs into variable and fixed elements? The answer may become apparent if we look at the following four business decisions.

1. If American Airlines is to make a profit when it reduces all domestic fares by 30%, what reduction in costs or increase in passengers will be required?
   Answer: To make a profit when it cuts domestic fares by 30%, American Airlines will have to increase the number of passengers or cut its variable costs for those flights. Its fixed costs will not change.
2. If Ford Motor Company meets workers' demands for higher wages, what increase in sales revenue will be needed to maintain current profit levels?
   Answer: Higher wages at Ford Motor Company will increase the variable costs of manufacturing automobiles. To maintain present profit levels, Ford will have to cut other variable costs or increase the price of its automobiles.
3. If United States Steel Corp.'s program to modernize plant facilities through significant equipment purchases reduces the work force by 50%, what will be the effect on the cost of producing one ton of steel?
   Answer: The modernizing of plant facilities at United States Steel Corp. changes the proportion of fixed and variable costs of producing one ton of steel. Fixed costs increase because of higher depreciation charges, whereas variable costs decrease due to the reduction in the number of steelworkers.
4. What happens if Kellogg Company increases its advertising expenses but cannot increase prices because of competitive pressure?
   Answer: Sales volume must be increased to cover the increase in fixed advertising costs.

before you go on...

Do it!

HIGH-LOW METHOD

Byrnes Company accumulates the following data concerning a mixed cost, using units produced as the activity level.

	Units Produced	Total Cost
March	9,800	$14,740
April	8,500	13,250
May	7,000	11,100
June	7,600	12,000
July	8,100	12,460

(a) Compute the variable and fixed cost elements using the high-low method.
(b) Estimate the total cost if the company produces 6,000 units.

Action Plan

- Determine the highest and lowest levels of activity.
- Compute variable cost per unit as: Change in total costs ÷ (High − low activity level) = Variable cost per unit.
- Compute fixed cost as: Total cost − (Variable cost per unit × Units produced) = Fixed cost.

Solution

(a) Variable cost: ($14,740 − $11,100) ÷ (9,800 − 7,000) = $1.30 per unit
Fixed cost: $14,740 − $12,740 ($1.30 × 9,800 units) = $2,000
or $11,100 − $9,100 ($1.30 × 7,000) = $2,000
(b) Total cost to produce 6,000 units: $2,000 + $7,800 ($1.30 × 6,000) = $9,800

Cost-Volume-Profit Analysis

study objective 4
List the five components of cost-volume-profit analysis.

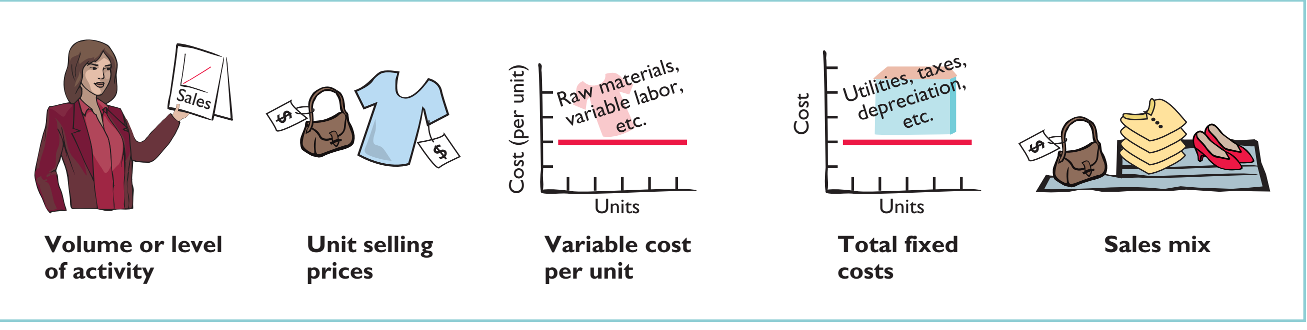
Cost-volume-profit (CVP) analysis is the study of the effects of changes in costs and volume on a company's profits. CVP analysis is important in profit planning. It also is a critical factor in such management decisions as setting

selling prices, determining product mix, and maximizing use of production facilities.

BASIC COMPONENTS

CVP analysis considers the interrelationships among the components shown in Illustration 18-9.

Illustration 18-9
Components of CVP analysis



The following assumptions underlie each CVP analysis.

1. The behavior of both costs and revenues is linear throughout the relevant range of the activity index.
2. Costs can be classified accurately as either variable or fixed.
3. Changes in activity are the only factors that affect costs.
4. All units produced are sold.
5. When more than one type of product is sold, the sales mix will remain constant. That is, the percentage that each product represents of total sales will stay the same. Sales mix complicates CVP analysis because different products will have different cost relationships. In this chapter we assume a single product.

When these assumptions are not valid, the CVP analysis may be inaccurate.

CVP INCOME STATEMENT

study objective 5
Indicate what contribution margin is and how it can be expressed.

Because CVP is so important for decision making, management often wants this information reported in a **CVP income statement** format for internal use. The CVP income statement classifies costs as variable or fixed and computes a contribution margin. **Contribution margin (CM)** is the amount of revenue remaining after deducting variable costs. It is often stated both as a total amount and on a per unit basis.

We will use Vargo Video Company to illustrate a CVP income statement. Vargo Video produces a high-definition digital camcorder with 15× optical zoom and a wide-screen, high-resolution LCD monitor. Relevant data for the camcorders sold by this company in June 2012 are as follows.

Illustration 18-10
Assumed selling and cost data for Vargo Video

Unit selling price of camcorder	$500
Unit variable costs	$300
Total monthly fixed costs	$200,000
Units sold	1,600

The CVP income statement for Vargo Video therefore would be reported as follows.

Illustration 18-11
CVP income statement, with net income

VARGO VIDEO COMPANY
CVP Income Statement
For the Month Ended June 30, 2012

	Total	Per Unit
Sales (1,600 camcorders)	$ 800,000	$ 500
Variable costs	480,000	300
Contribution margin	**320,000**	**$200**
Fixed costs	200,000	
Net income	**$120,000**	

A traditional income statement and a CVP income statement both report the same net income of $120,000. However a traditional income statement does not classify costs as variable or fixed, and therefore it does not report a contribution margin. In addition, both a total and a per unit amount are often shown on a CVP income statement to facilitate CVP analysis.

In the applications of CVP analysis that follow, we assume that the term "cost" includes all costs and expenses related to production and sale of the product. That is, cost includes manufacturing costs plus selling and administrative expenses.

Contribution Margin per Unit

Vargo Video's CVP income statement shows a contribution margin of $320,000, and a contribution margin per unit of $200 ($500 − $300). The formula for **contribution margin per unit** and the computation for Vargo Video are:

Illustration 18-12
Formula for contribution margin per unit

Unit Selling Price	−	Unit Variable Costs	=	Contribution Margin per Unit
$500	−	$300	=	**$200**

Contribution margin per unit indicates that for every camcorder sold, Vargo has $200 to cover fixed costs and contribute to net income. Because Vargo Video has fixed costs of $200,000, it must sell 1,000 camcorders ($200,000 ÷ $200) before it earns any net income. Vargo's CVP income statement, assuming a zero net income, is as follows.

Illustration 18-13
CVP income statement, with zero net income

VARGO VIDEO COMPANY
CVP Income Statement
For the Month Ended June 30, 2012

	Total	Per Unit
Sales (1,000 camcorders)	$500,000	$ 500
Variable costs	300,000	300
Contribution margin	**200,000**	**$200**
Fixed costs	200,000	
Net income	**$ –0–**	

It follows that for every camcorder sold above 1,000 units, net income increases by the amount of the contribution margin per unit, $200. For example, assume that Vargo sold one more camcorder, for a total of 1,001 camcorders sold. In this case, Vargo reports net income of $200 as shown in Illustration 18-14.

Illustration 18-14
CVP income statement, with net income

VARGO VIDEO COMPANY
CVP Income Statement
For the Month Ended June 30, 2012

	Total	Per Unit
Sales (1,001 camcorders)	$500,500	$ 500
Variable costs	300,300	300
Contribution margin	**200,200**	**$200**
Fixed costs	200,000	
Net income	**$ 200**	

Contribution Margin Ratio

Some managers prefer to use a contribution margin ratio in CVP analysis. The **contribution margin ratio** is the contribution margin per unit divided by the unit selling price. For Vargo Video, the ratio is as follows.

Illustration 18-15
Formula for contribution margin ratio

Contribution Margin per Unit	÷	Unit Selling Price	=	Contribution Margin Ratio
$200	÷	$500	=	40%

The contribution margin ratio of 40% means that $0.40 of each sales dollar ($1 × 40%) is available to apply to fixed costs and to contribute to net income.

This expression of contribution margin is very helpful in determining the effect of changes in sales on net income. For example, if sales increase $100,000, net income will increase $40,000 (40% × $100,000). Thus, by using the contribution margin ratio, managers can quickly determine increases in net income from any change in sales.

We can also see this effect through a CVP income statement. Assume that Vargo Video's current sales are $500,000 and it wants to know the effect of a $100,000 (200-unit) increase in sales. Vargo prepares a comparative CVP income statement analysis as follows.

Illustration 18-16
Comparative CVP income statements

VARGO VIDEO COMPANY
CVP Income Statements
For the Month Ended June 30, 2012

	No Change		With Change	
	Total	Per Unit	Total	Per Unit
Sales	$500,000	$ 500	$600,000	$ 500
Variable costs	300,000	300	360,000	300
Contribution margin	**200,000**	**$200**	**240,000**	**$200**
Fixed costs	200,000		200,000	
Net income	**$ –0–**		**$ 40,000**	

Study these CVP income statements carefully. The concepts presented in these statements are used extensively in this and later chapters.

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
What was the contribution toward fixed costs and income from each unit sold?	Selling price per unit and variable cost per unit	Contribution margin per unit = Unit selling price − Unit variable cost	Every unit sold will increase income by the contribution margin.
What was the increase in income as a result of an increase in sales?	Contribution margin per unit and unit selling price	Contribution margin ratio = Contribution margin per unit ÷ Unit selling price	Every dollar of sales will increase income by the contribution margin ratio.

BREAK-EVEN ANALYSIS

study objective 6
Identify the three ways to determine the break-even point.

A key relationship in CVP analysis is the level of activity at which total revenues equal total costs (both fixed and variable). This level of activity is called the **break-even point**. At this volume of sales, the company will realize no income but will suffer no loss. The process of finding the break-even point is called **break-even analysis**. Knowledge of the break-even point is useful to management when it decides whether to introduce new product lines, change sales prices on established products, or enter new market areas.

The break-even point can be:

1. Computed from a mathematical equation.
2. Computed by using contribution margin.
3. Derived from a cost-volume-profit (CVP) graph.

The break-even point can be expressed either in **sales units** or **sales dollars**.

Mathematical Equation

Illustration 18-17 shows a common equation used for CVP analysis.

Sales = **Variable Costs** + **Fixed Costs** + **Net Income**

Illustration 18-17
Basic CVP equation

Identifying the break-even point is a special case of CVP analysis. Because at the break-even point net income is zero, **break-even occurs where total sales equal variable costs plus fixed costs**.

We can compute the break-even point **in units** directly from the equation by **using unit selling prices** and **unit variable costs**. The computation for Vargo Video is:

Sales	=	Variable Costs	+	Fixed Costs	+	Net Income
\$500Q	=	\$300Q	+	\$200,000	+	\$0

$200Q = $200,000
Q = 1,000 units

where

Q = sales volume in units
\$500 = selling price
\$300 = variable cost per unit
\$200,000 = total fixed costs

Illustration 18-18
Computation of break-even point in units

Thus, Vargo Video must sell 1,000 units to break even.

To find **sales dollars** required to break even, we multiply the units sold at the break-even point times the selling price per unit, as shown below.

$$1{,}000 \times \$500 = \$500{,}000 \text{ (break-even sales dollars)}$$

Contribution Margin Technique

We know that contribution margin equals total revenues less variable costs. It follows that at the break-even point, **contribution margin must equal total fixed costs**. On the basis of this relationship, we can compute the break-even point using either the contribution margin per unit or the contribution margin ratio.

When a company uses the contribution margin per unit, the formula to compute break-even point in units is fixed costs divided by contribution margin per unit. For Vargo Video, the computation is as follows.

Illustration 18-19
Formula for break-even point in units using contribution margin

Fixed Costs	÷	Contribution Margin per Unit	=	Break-even Point in Units
$200,000	÷	$200	=	1,000 units

One way to interpret this formula is that Vargo Video generates $200 of contribution margin with each unit that it sells. This $200 goes to pay off fixed costs. Therefore, the company must sell 1,000 units to pay off $200,000 in fixed costs.

When a company uses the contribution margin ratio, the formula to compute break-even point in dollars is fixed costs divided by the contribution margin ratio. We know that the contribution margin ratio for Vargo Video is 40% ($200 ÷ $500), which means that every dollar of sales generates 40 cents to pay off fixed costs. Thus, the break-even point in dollars is:

Illustration 18-20
Formula for break-even point in dollars using contribution margin ratio

Fixed Costs	÷	Contribution Margin Ratio	=	Break-even Point in Dollars
$200,000	÷	40%	=	$500,000

Service Company Insight

Charter Flights Offer a Good Deal

The Internet is wringing inefficiencies out of nearly every industry. While commercial aircraft spend roughly 4,000 hours a year in the air, chartered aircraft spend only 500 hours flying. That means that they are sitting on the ground—not making any money—about 90% of the time. One company, FlightServe, saw a business opportunity in that fact. For about the same cost as a first-class ticket, FlightServe decided to match up executives with charter flights in small "private jets." The executive would get a more comfortable ride and could avoid the hassle of big airports. FlightServe noted that the average charter jet has eight seats. When all eight seats were full, the company would have an 80% profit margin. It would break even at an average of 3.3 full seats per flight.

Source: "Jet Set Go," *The Economist* (March 18, 2000), p. 68.

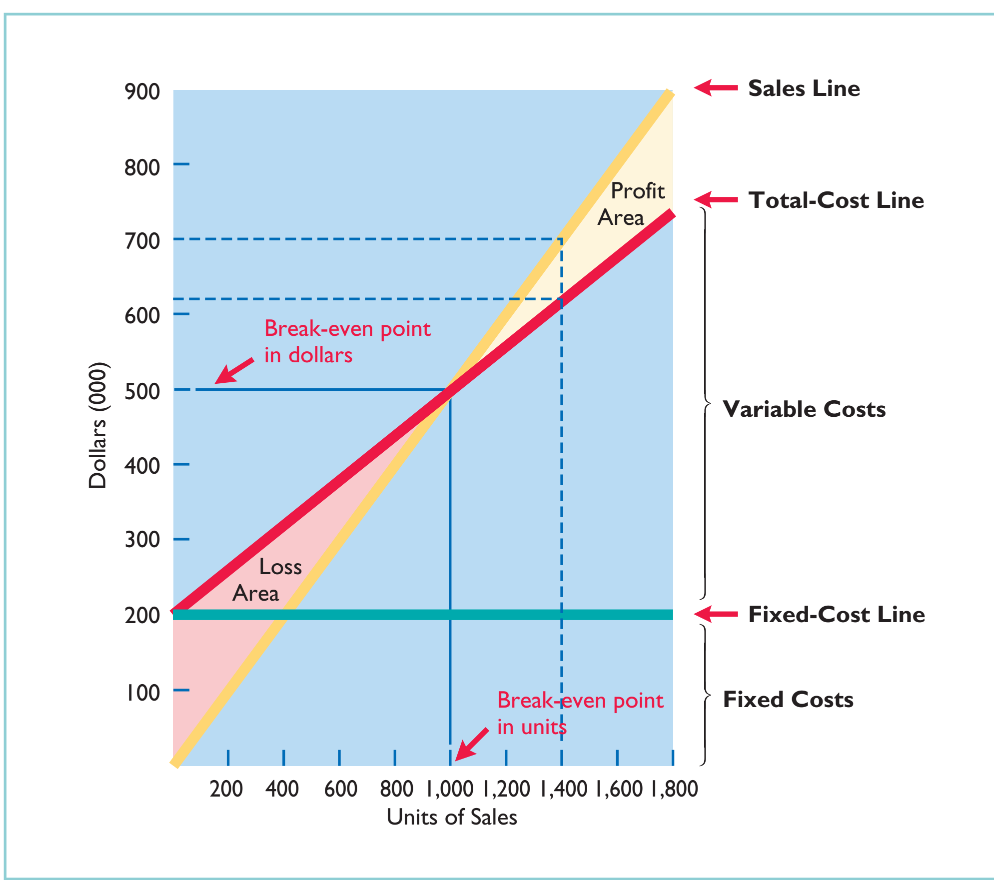
? How did FlightServe determine that it would break even with 3.3 seats full per flight? (See page 975.)

Graphic Presentation

An effective way to find the break-even point is to prepare a break-even graph. Because this graph also shows costs, volume, and profits, it is referred to as a **cost-volume-profit (CVP) graph**.

As the CVP graph in Illustration 18-21 shows, sales volume is recorded along the horizontal axis. This axis should extend to the maximum level of expected sales. Both total revenues (sales) and total costs (fixed plus variable) are recorded on the vertical axis.

Illustration 18-21
CVP graph



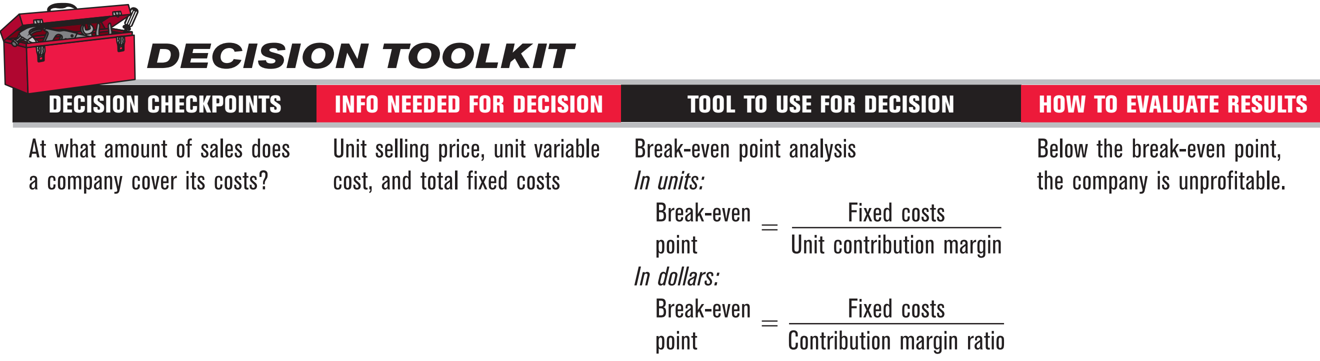
The construction of the graph, using the data for Vargo Video, is as follows.

1. Plot the total-sales line, starting at the zero activity level. For every camcorder sold, total revenue increases by \$500. For example, at 200 units, sales are \$100,000. At the upper level of activity (1,800 units), sales are \$900,000. The revenue line is assumed to be linear through the full range of activity.
2. Plot the total fixed cost using a horizontal line. For the camcorders, this line is plotted at \$200,000. The fixed cost is the same at every level of activity.
3. Plot the total-cost line. This starts at the fixed-cost line at zero activity. It increases by the variable cost at each level of activity. For each camcorder, variable costs are \$300. Thus, at 200 units, total variable cost is \$60,000, and the total cost is \$260,000. At 1,800 units total variable cost is \$540,000, and total cost is \$740,000. On the graph, the amount of the variable cost can be derived from the difference between the total cost and fixed cost lines at each level of activity.
4. Determine the break-even point from the intersection of the total-cost line and the total-revenue line. The break-even point in dollars is found by drawing a horizontal line from the break-even point to the vertical axis. The

break-even point in units is found by drawing a vertical line from the break-even point to the horizontal axis. For the camcorders, the break-even point is $500,000 of sales, or 1,000 units. At this sales level, Vargo Video will cover costs but make no profit.

The CVP graph also shows both the net income and net loss areas. Thus, the amount of income or loss at each level of sales can be derived from the total sales and total cost lines.

A CVP graph is useful because the effects of a change in any element in the CVP analysis can be quickly seen. For example, a 10% increase in selling price will change the location of the total revenue line. Likewise, the effects on total costs of wage increases can be quickly observed.



DECISION TOOLKIT

before you go on...

BREAK-EVEN ANALYSIS

Action Plan

- Apply the formula: Sales = Variable costs + Fixed costs + Net income.
- Apply the formula: Fixed costs ÷ Contribution margin per unit = Break-even point in units.

Do it! Lombardi Company has a unit selling price of $400, variable costs per unit of $240, and fixed costs of $180,000. Compute the break-even point in units using (a) a mathematical equation and (b) contribution margin per unit.

Solution

(a) The equation is $400Q = $240Q + $180,000. The break-even point in units is 1,125 ($180,000 ÷ $160). (b) The contribution margin per unit is $160 ($400 − $240). The formula therefore is $180,000 ÷ $160, and the break-even point in units is 1,125.

Related exercise material: **BE18-6, BE18-7, BE18-8, BE18-9, Do it! 18-3, E18-8, E18-9, E18-10, E18-11, E18-12,** and **E18-13.**

TARGET NET INCOME

study objective 7
Give the formulas for determining sales required to earn target net income.

Rather than simply "breaking even," management usually sets an income objective often called **target net income**. It indicates the sales necessary to achieve a specified level of income. Companies determine the sales necessary to achieve target net income by using one of the three approaches discussed earlier.

Mathematical Equation

We know that at the break-even point no profit or loss results for the company. By adding an amount for target net income to the same basic equation, we obtain the following formula for determining required sales.

Illustration 18-22
Formula for required sales to meet target net income

$$\text{Required Sales} = \text{Variable Costs} + \text{Fixed Costs} + \text{Target Net Income}$$

Required sales may be expressed in either **sales units** or **sales dollars**. Assuming that target net income is $120,000 for Vargo Video, the computation of required sales in units is as follows.

Required Sales	=	Variable Costs	+	Fixed Costs	+	Target Net Income
$500Q	=	$300Q	+	$200,000	+	$120,000

$200Q = $320,000
Q = 1,600

where

Q = sales volume
$500 = selling price
$300 = variable costs per unit
$200,000 = total fixed costs
$120,000 = target net income

Illustration 18-23
Computation of required sales

The sales dollars required to achieve the target net income is found by multiplying the units sold by the unit selling price [(1,600 × $500) = $800,000].

Contribution Margin Technique

As in the case of break-even sales, we can compute in either units or dollars the sales required to meet a target net income. The formula to compute required sales in units for Vargo Video using the contribution margin per unit of $200 ($500 − $300) is as follows.

Fixed Costs + Target Net Income	÷	Contribution Margin per Unit	=	Required Sales in Units
($200,000 + $120,000)	÷	$200	=	1,600 units

Illustration 18-24
Formula for required sales in units using contribution margin per unit

This computation tells Vargo that to achieve its desired target net income of $120,000, it must sell 1,600 camcorders.

The formula to compute the required sales in dollars for Vargo Video using the contribution margin ratio of 40% ($200 ÷ $500) is shown below.

Fixed Costs + Target Net Income	÷	Contribution Margin Ratio	=	Required Sales in Dollars
($200,000 + $120,000)	÷	40%	=	$800,000

Illustration 18-25
Formula for required sales in dollars using contribution margin ratio

This computation tells Vargo that to achieve its desired target net income of $120,000, it must generate sales of $800,000.

Graphic Presentation

We also can use the CVP graph in Illustration 18-21 (on page 953) to find the sales required to meet target net income. In the profit area of the graph, the distance between the sales line and the total cost line at any point equals net income. We can find required sales by analyzing the differences between the two lines until the desired net income is found.

For example, suppose Vargo Video sells 1,400 camcorders. Illustration 18-21 shows that a vertical line drawn at 1,400 units intersects the sales line at $700,000 and the total cost line at $620,000. The difference between the two amounts represents the net income (profit) of $80,000.

MARGIN OF SAFETY

study objective 8

Define margin of safety, and give the formulas for computing it.

The margin of safety is another relationship used in CVP analysis. **Margin of safety** is the difference between actual or expected sales and sales at the break-even point. This relationship measures the "cushion" that management has, allowing it to break even if expected sales fail to materialize. The margin of safety is expressed in dollars or as a ratio.

The formula for stating the **margin of safety in dollars** is actual (or expected) sales minus break-even sales. Assuming that actual (expected) sales for Vargo Video are $750,000, the computation is:

Illustration 18-26 Formula for margin of safety in dollars

Actual (Expected) Sales	−	Break-even Sales	=	Margin of Safety in Dollars
$750,000	−	$500,000	=	$250,000

Vargo's margin of safety is $250,000. Its sales must fall $250,000 before it operates at a loss.

The **margin of safety ratio** is the margin of safety in dollars divided by actual (or expected) sales. The formula and computation for determining the margin of safety ratio are:

Illustration 18-27 Formula for margin of safety ratio

Margin of Safety in Dollars	÷	Actual (Expected) Sales	=	Margin of Safety Ratio
$250,000	÷	$750,000	=	33%

This means that the company's sales could fall by 33% before it would be operating at a loss.

The higher the dollars or the percentage, the greater the margin of safety. Management continuously evaluates the adequacy of the margin of safety in terms of such factors as the vulnerability of the product to competitive pressures and to downturns in the economy.

Service Company Insight

How a Rolling Stones' Tour Makes Money

Computation of break-even and margin of safety is important for service companies. Consider how the promoter for the Rolling Stones' tour used the break-even point and margin of safety. For example, one outdoor show should bring 70,000 individuals for a gross of $2.45 million. The promoter guarantees $1.2 million to the Rolling Stones. In addition, 20% of gross goes to the stadium in which the performance is staged. Add another $400,000 for other expenses such as ticket takers, parking attendants, advertising, and so on. The promoter also shares in sales of T-shirts and memorabilia for which the promoter will net over $7 million during the tour. From a successful Rolling Stones' tour, the promoter could make $35 million!

? What amount of sales dollars are required for the promoter to break even? (See page 975.)

before you go on...

Do it! Zootsuit Inc. makes travel bags that sell for $56 each. For the coming year, management expects fixed costs to total $320,000 and variable costs to be $42 per unit. Compute the following: (a) break-even point in dollars using the contribution margin (CM) ratio; (b) the margin of safety assuming actual sales are $1,382,400; and (c) the sales dollars required to earn net income of $410,000.

BREAK-EVEN, MARGIN OF SAFETY, TARGET NET INCOME

Action Plan

- Apply the formula for the break-even point in dollars.
- Apply the formulas for the margin of safety in dollars and the margin of safety ratio.
- Apply the formula for the required sales in dollars.

Solution

Contribution margin ratio = [($56 − $42) ÷ $56] = 25%
Break-even sales in dollars = $320,000 ÷ 25% = $1,280,000
Margin of safety = $1,382,400 − $1,280,000 = $102,400
Margin of safety ratio = $102,400 ÷ $1,382,400 = 7.4%
Required sales in dollars = ($320,000 + $410,000) ÷ 25% = $2,920,000

USING THE DECISION TOOLKIT

B.T. Hernandez Company, maker of high-quality flashlights, has experienced steady growth over the last 6 years. However, increased competition has led Mr. Hernandez, the president, to believe that an aggressive campaign is needed next year to maintain the company's present growth. The company's accountant has presented Mr. Hernandez with the following data for the current year, 2011, for use in preparing next year's advertising campaign.

COST SCHEDULES

Variable costs	
Direct labor per flashlight	$ 8.00
Direct materials	4.00
Variable overhead	3.00
Variable cost per flashlight	$15.00
Fixed costs	
Manufacturing	$ 25,000
Selling	40,000
Administrative	70,000
Total fixed costs	$135,000
Selling price per flashlight	$25.00
Expected sales, 2011 (20,000 flashlights)	$500,000

Mr. Hernandez has set the sales target for the year 2012 at a level of $550,000 (22,000 flashlights).

Instructions

(Ignore any income tax considerations.)

(a) What is the projected operating income for 2011?
(b) What is the contribution margin per unit for 2011?
(c) What is the break-even point in units for 2012?
(d) Mr. Hernandez believes that to attain the sales target in the year 2012, the company must incur an additional selling expense of $10,000 for advertising in 2012, with all other costs remaining constant. What will be the break-even point in sales dollars for 2012 if the company spends the additional $10,000?
(e) If the company spends the additional $10,000 for advertising in 2012, what is the sales level in dollars required to equal 2011 operating income?

Solution

(a)

Expected sales		$500,000
Less:		
Variable cost (20,000 flashlights × $15)		300,000
Fixed costs		135,000
Projected operating income		$ 65,000

(b)

Selling price per flashlight	$25
Variable cost per flashlight	15
Contribution margin per unit	$10

(c) Fixed costs ÷ Contribution margin per unit = Break-even point in units
$135,000 ÷ $10 = 13,500 units

(d) Fixed costs ÷ Contribution margin ratio = Break-even point in dollars
$145,000* ÷ 40%** = $362,500

*Fixed costs (from 2011)	$135,000
Additional advertising expense	10,000
Fixed costs (2012)	$145,000

**Contribution margin ratio = Contribution margin per unit ÷ Unit selling price
40% = $10 ÷ $25

(e) Required sales = (Fixed costs + Target net income) ÷ Contribution margin ratio

$525,000 = ($145,000 + $65,000) ÷ 40%

Summary of Study Objectives

1 Distinguish between variable and fixed costs. Variable costs are costs that vary in total directly and proportionately with changes in the activity index. Fixed costs are costs that remain the same in total regardless of changes in the activity index.

2 Explain the significance of the relevant range. The relevant range is the range of activity in which a company expects to operate during a year. It is important in CVP analysis because the behavior of costs is assumed to be linear throughout the relevant range.

3 Explain the concept of mixed costs. Mixed costs increase in total but not proportionately with changes in the activity level. For purposes of CVP analysis, mixed costs must be classified into their fixed and variable elements. One method that management may use to classify these costs is the high-low method.

4 List the five components of cost-volume-profit analysis. The five components of CVP analysis are (a) volume or level of activity, (b) unit selling prices, (c) variable cost per unit, (d) total fixed costs, and (e) sales mix.

5 Indicate what contribution margin is and how it can be expressed. Contribution margin is the amount of revenue remaining after deducting variable costs. It is identified in a CVP income statement, which classifies costs as variable or fixed. It can be expressed as a total amount, as a per unit amount, or as a ratio.

6 Identify the three ways to determine the break-even point. The break-even point can be (a) computed from a mathematical equation, (b) computed by using a contribution margin technique, and (c) derived from a CVP graph.

7 Give the formulas for determining sales required to earn target net income. The general formula for required sales is: Required sales = Variable costs + Fixed costs + Target net income. Two other formulas are: Required sales in units = (Fixed costs + Target net income) ÷ Contribution margin per unit, and Required sales in dollars = (Fixed costs + Target net income) ÷ Contribution margin ratio.

8 Define margin of safety, and give the formulas for computing it. Margin of safety is the difference between actual or expected sales and sales at the break-even point. The formulas for margin of safety are: Actual (expected) sales − Break-even sales = Margin of safety in dollars; Margin of safety in dollars ÷ Actual (expected) sales = Margin of safety ratio.

DECISION TOOLKIT A SUMMARY

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
What was the contribution toward fixed costs and income from each unit sold?	Selling price per unit and variable cost per unit	Contribution margin per unit = Unit selling price − Unit variable cost	Every unit sold will increase income by the contribution margin.
What was the increase in income as a result of an increase in sales?	Contribution margin per unit and unit selling price	Contribution margin ratio = Contribution margin per unit ÷ Unit selling price	Every dollar of sales will increase income by the contribution margin ratio.
At what amount of sales does a company cover its costs?	Unit selling price, unit variable cost, and total fixed costs	Break-even point analysis *In units:* $\text{Break-even point} = \dfrac{\text{Fixed costs}}{\text{Unit contribution margin}}$ *In dollars:* $\text{Break-even point} = \dfrac{\text{Fixed costs}}{\text{Contribution margin ratio}}$	Below the break-even point, the company is unprofitable.

Glossary

Activity index *(p. 940)* The activity that causes changes in the behavior of costs.

Break-even point *(p. 951)* The level of activity at which total revenues equal total costs.

Contribution margin (CM) *(p. 948)* The amount of revenue remaining after deducting variable costs.

Contribution margin per unit *(p. 949)* The amount of revenue remaining per unit after deducting variable costs; calculated as unit selling price minus unit variable cost.

Contribution margin ratio *(p. 950)* The percentage of each dollar of sales that is available to apply to fixed costs and contribute to net income; calculated as contribution margin per unit divided by unit selling price.

Cost behavior analysis *(p. 940)* The study of how specific costs respond to changes in the level of business activity.

Cost-volume-profit (CVP) analysis *(p. 947)* The study of the effects of changes in costs and volume on a company's profits.

Cost-volume-profit (CVP) graph *(p. 953)* A graph showing the relationship between costs, volume, and profits.

Cost-volume-profit (CVP) income statement *(p. 948)* A statement for internal use that classifies costs as fixed or variable and reports contribution margin in the body of the statement.

Fixed costs *(p. 941)* Costs that remain the same in total regardless of changes in the activity level.

High-low method *(p. 945)* A mathematical method that uses the total costs incurred at the high and low levels of activity to classify mixed costs into fixed and variable components.

Margin of safety *(p. 956)* The difference between actual or expected sales and sales at the break-even point.

Mixed costs *(p. 944)* Costs that contain both a variable and a fixed cost element and change in total but not proportionately with changes in the activity level.

Relevant range *(p. 943)* The range of the activity index over which the company expects to operate during the year.

Target net income *(p. 954)* The income objective set by management.

Variable costs *(p. 940)* Costs that vary in total directly and proportionately with changes in the activity level.

Comprehensive *Do it!*

Mabo Company makes calculators that sell for $20 each. For the coming year, management expects fixed costs to total $220,000 and variable costs to be $9 per unit.

Instructions

(a) Compute break-even point in units using the mathematical equation.
(b) Compute break-even point in dollars using the contribution margin (CM) ratio.
(c) Compute the margin of safety percentage assuming actual sales are $500,000.
(d) Compute the sales required in dollars to earn net income of $165,000.

Action Plan

- Know the formulas.
- Recognize that variable costs change with sales volume; fixed costs do not.
- Avoid computational errors.

Solution to Comprehensive Do it!

(a) Sales = Variable costs + Fixed costs + Net income
$20Q = $9Q + $220,000 + $0
$11Q = $220,000
Q = 20,000 units

(b) Contribution margin per unit = Unit selling price − Unit variable costs
$11 = $20 − $9
Contribution margin ratio = Contribution margin per unit ÷ Unit selling price
55% = $11 ÷ $20
Break-even point in dollars = Fixed cost ÷ Contribution margin ratio
= $220,000 ÷ 55%
= $400,000

(c) Margin of safety = $\frac{\text{Actual sales} - \text{Break-even sales}}{\text{Actual sales}}$
= $\frac{\$500,000 - \$400,000}{\$500,000}$
= 20%

(d) Required sales = Variable costs + Fixed costs + Net income
$20Q = $9Q + $220,000 + $165,000
$11Q = $385,000
Q = 35,000 units
35,000 units × $20 = $700,000 required sales

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more resources are available for practice in WileyPLUS

Self-Test Questions

Answers are on page 975.

(SO 1) **1.** Variable costs are costs that:
(a) vary in total directly and proportionately with changes in the activity level.
(b) remain the same per unit at every activity level.
(c) Neither of the above.
(d) Both (a) and (b) above.

(SO 2) **2.** The relevant range is:
(a) the range of activity in which variable costs will be curvilinear.
(b) the range of activity in which fixed costs will be curvilinear.
(c) the range over which the company expects to operate during a year.
(d) usually from zero to 100% of operating capacity.

(SO 3) **3.** Mixed costs consist of a:
(a) variable cost element and a fixed cost element.
(b) fixed cost element and a controllable cost element.
(c) relevant cost element and a controllable cost element.
(d) variable cost element and a relevant cost element.

(SO 3) **4.** Your phone service provider offers a plan that is classified as a mixed cost. The cost per month for 1,000 minutes is $50. If you use 2,000 minutes this month, your cost will be:
(a) $50.
(b) $100.
(c) more than $100.
(d) between $50 and $100.

(SO 3) **5.** Kendra Corporation's total utility costs during the past year were $1,200 during its highest month and $600 during its lowest month. These costs corresponded with 10,000 units of production during the high month and 2,000 units during the low month. What are the fixed and variable components of its utility costs using the high-low method?
(a) $0.075 variable and $450 fixed.
(b) $0.120 variable and $0 fixed.
(c) $0.300 variable and $0 fixed.
(d) $0.060 variable and $600 fixed.

(SO 4) **6.** Which of the following is *not* involved in CVP analysis?
(a) Sales mix.
(b) Unit selling prices.
(c) Fixed costs per unit.
(d) Volume or level of activity.

(SO 5) **7.** When comparing a traditional income statement to a CVP income statement:
(a) net income will always be greater on the traditional statement.
(b) net income will always be less on the traditional statement.
(c) net income will always be identical on both.
(d) net income will be greater or less depending on the sales volume.

(SO 5) **8.** Contribution margin:
(a) is revenue remaining after deducting variable costs.
(b) may be expressed as contribution margin per unit.
(c) is selling price less cost of goods sold.
(d) Both (a) and (b) above.

(SO 5) **9.** Cournot Company sells 100,000 wrenches for $12 a unit. Fixed costs are $300,000, and net income is $200,000. What should be reported as variable expenses in the CVP income statement?
(a) $700,000. (c) $500,000.
(b) $900,000. (d) $1,000,000.

(SO 6) **10.** Gossen Company is planning to sell 200,000 pliers for $4 per unit. The contribution margin ratio is 25%. If Gossen will break even at this level of sales, what are the fixed costs?
(a) $100,000. (c) $200,000.
(b) $160,000. (d) $300,000.

11. Brownstone Company's contribution margin ratio is 30%. If Brownstone's sales revenue is $100 greater than its break-even sales in dollars, its net income: (SO 6)
(a) will be $100.
(b) will be $70.
(c) will be $30.
(d) cannot be determined without knowing fixed costs.

12. The mathematical equation for computing required sales to obtain target net income is: Required sales = (SO 7)
(a) Variable costs + Target net income.
(b) Variable costs + Fixed costs + Target net income.
(c) Fixed costs + Target net income.
(d) No correct answer is given.

13. Margin of safety is computed as: (SO 8)
(a) Actual sales − Break-even sales.
(b) Contribution margin − Fixed costs.
(c) Break-even sales − Variable costs.
(d) Actual sales − Contribution margin.

14. Marshall Company had actual sales of $600,000 when break-even sales were $420,000. What is the margin of safety ratio? (SO 8)
(a) 25%. (c) 33⅓%.
(b) 30%. (d) 45%.

Go to the book's companion website, **www.wiley.com/college/kimmel**, for additional Self-Test Questions.

Questions

1. (a) What is cost behavior analysis?
(b) Why is cost behavior analysis important to management?

2. (a) Alice Kent asks your help in understanding the term "activity index." Explain the meaning and importance of this term for Alice.
(b) State the two ways that variable costs may be defined.

3. Contrast the effects of changes in the activity level on total fixed costs and on unit fixed costs.

4. B. K. Fernandez claims that the relevant range concept is important only for variable costs.
(a) Explain the relevant range concept.
(b) Do you agree with B. K.'s claim? Explain.

5. "The relevant range is indispensable in cost behavior analysis." Is this true? Why or why not?

6. Todd Ricketts is confused. He does not understand why rent on his apartment is a fixed cost and rent on a Hertz rental truck is a mixed cost. Explain the difference to Todd.

7. How should mixed costs be classified in CVP analysis? What approach is used to effect the appropriate classification?

8. At the high and low levels of activity during the month, direct labor hours are 90,000 and 40,000, respectively. The related costs are $160,000 and $100,000. What are the fixed and variable costs at any level of activity?

9. "Cost-volume-profit (CVP) analysis is based entirely on unit costs." Do you agree? Explain.

10. Sara Lang defines contribution margin as the amount of profit available to cover operating expenses. Is there any truth in this definition? Discuss.

11. Agler Company's Speedo calculator sells for $40. Variable costs per unit are estimated to be $28. What are the contribution margin per unit and the contribution margin ratio?

12. "Break-even analysis is of limited use to management because a company cannot survive by just breaking even." Do you agree? Explain.

13. Total fixed costs are $25,000 for Oaks Inc. It has a contribution margin per unit of $15, and a contribution margin ratio of 25%. Compute the break-even sales in dollars.

14. Susie Tobias asks your help in constructing a CVP graph. Explain to Susie (a) how the break-even point is plotted, and (b) how the level of activity and dollar sales at the break-even point are determined.

15. Define the term "margin of safety." If Stine Company expects to sell 1,250 units of its product at $12 per unit,

and break-even sales for the product are $12,000, what is the margin of safety ratio?

16. Molena Company's break-even sales are $600,000. Assuming fixed costs are $180,000, what sales volume is needed to achieve a target net income of $60,000?

17. The traditional income statement for Renfro Company shows sales $900,000, cost of goods sold $500,000, and operating expenses $200,000. Assuming all costs and expenses are 70% variable and 30% fixed, prepare a CVP income statement through contribution margin.

Brief Exercises

Classify costs as variable, fixed, or mixed.
(SO 1, 3), C

BE18-1 Monthly production costs in Loder Company for two levels of production are as follows.

Cost	3,000 units	6,000 units
Indirect labor	$10,000	$20,000
Supervisory salaries	5,000	5,000
Maintenance	4,000	7,000

Indicate which costs are variable, fixed, and mixed, and give the reason for each answer.

Diagram the behavior of costs within the relevant range.
(SO 2), AN

BE18-2 For Bruno Company, the relevant range of production is 40–80% of capacity. At 40% of capacity, a variable cost is $4,000 and a fixed cost is $6,000. Diagram the behavior of each cost within the relevant range assuming the behavior is linear.

Diagram the behavior of a mixed cost.
(SO 3), AN

BE18-3 For Larissa Company, a mixed cost is $20,000 plus $16 per direct labor hour. Diagram the behavior of the cost using increments of 500 hours up to 2,500 hours on the horizontal axis and increments of $20,000 up to $80,000 on the vertical axis.

Determine variable and fixed cost elements using the high-low method.
(SO 3), AP

BE18-4 Pesaveno Company accumulates the following data concerning a mixed cost, using miles as the activity level.

	Miles Driven	Total Cost		Miles Driven	Total Cost
January	8,000	$14,150	March	8,500	$15,000
February	7,500	13,600	April	8,200	14,490

Compute the variable and fixed cost elements using the high-low method.

Determine variable and fixed cost elements using the high-low method.
(SO 3), AP

BE18-5 Presto Corp. has collected the following data concerning its maintenance costs for the past 6 months.

	Units Produced	Total Cost
July	18,000	$32,000
August	32,000	48,000
September	36,000	55,000
October	22,000	38,000
November	40,000	65,000
December	38,000	62,000

Compute the variable and fixed cost elements using the high-low method.

Determine missing amounts for contribution margin.
(SO 5), AN

BE18-6 Determine the missing amounts.

	Unit Selling Price	Unit Variable Costs	Contribution Margin per Unit	Contribution Margin Ratio
1.	$640	$384	(a)	(b)
2.	$300	(c)	$90	(d)
3.	(e)	(f)	$320	25%

Prepare CVP income statement.
(SO 5), AP

BE18-7 Radial Manufacturing Inc. had sales of $2,200,000 for the first quarter of 2012. In making the sales, the company incurred the following costs and expenses.

	Variable	Fixed
Cost of goods sold	$920,000	$440,000
Selling expenses	70,000	45,000
Administrative expenses	86,000	98,000

Prepare a CVP income statement for the quarter ended March 31, 2012.

BE18-8 Meriden Company has a unit selling price of $520, variable costs per unit of $286, and fixed costs of $187,200. Compute the break-even point in units using (a) the mathematical equation and (b) contribution margin per unit.

Compute the break-even point.
(SO 6), **AP**

BE18-9 Dugan Corp. had total variable costs of $180,000, total fixed costs of $160,000, and total revenues of $300,000. Compute the required sales in dollars to break even.

Compute the break-even point.
(SO 6), **AP**

BE18-10 For Turgo Company, variable costs are 60% of sales, and fixed costs are $195,000. Management's net income goal is $75,000. Compute the required sales in dollars needed to achieve management's target net income of $75,000. (Use the contribution margin approach.)

Compute sales for target net income.
(SO 7), **AP**

BE18-11 For Kozy Company, actual sales are $1,200,000 and break-even sales are $840,000. Compute (a) the margin of safety in dollars and (b) the margin of safety ratio.

Compute the margin of safety and the margin of safety ratio.
(SO 8), **AP**

BE18-12 Dye Corporation has fixed costs of $480,000. It has a unit selling price of $6, unit variable cost of $4.50, and a target net income of $1,500,000. Compute the required sales in units to achieve its target net income.

Compute the required sales in units for target net income.
(SO 7), **AP**

Do it! Review

Do it! 18-1 Dousman Company reports the following total costs at two levels of production.

Classify types of costs.
(SO 1, 3), **C**

	5,000 Units	10,000 Units
Indirect labor	$ 3,000	$ 6,000
Property taxes	7,000	7,000
Direct labor	27,000	54,000
Direct materials	22,000	44,000
Depreciation	4,000	4,000
Utilities	3,000	5,000
Maintenance	9,000	11,000

Classify each cost as variable, fixed, or mixed.

Do it! 18-2 Colter Company accumulates the following data concerning a mixed cost, using units produced as the activity level.

Compute costs using high-low method and estimate total cost.
(SO 3), **AP**

	Units Produced	Total Cost
March	10,000	$18,000
April	9,000	16,650
May	10,500	18,750
June	8,800	16,200
July	9,500	17,100

(a) Compute the variable and fixed cost elements using the high-low method.
(b) Estimate the total cost if the company produces 8,500 units.

Do it! 18-3 Lance Company has a unit selling price of $250, variable cost per unit of $160, and fixed costs of $135,000. Compute the break-even point in units using (a) the mathematical equation and (b) contribution margin per unit.

Compute break-even point in units.
(SO 6), **AP**

Do it! 18-4 Sandoval Company makes radios that sell for $30 each. For the coming year, management expects fixed costs to total $200,000 and variable costs to be $20 per unit.
(a) Compute the break-even point in dollars using the contribution margin (CM) ratio.
(b) Compute the margin of safety ratio assuming actual sales are $750,000.
(c) Compute the sales dollars required to earn net income of $120,000.

Compute break-even point, margin of safety ratio, and sales for target net income.
(SO 6, 7, 8), **AP**

Exercises

Define and classify variable, fixed, and mixed costs.
(SO 1, 3), C

E18-1 King Company manufactures a single product. Annual production costs incurred in the manufacturing process are shown below for two levels of production.

Production in Units	Costs Incurred 5,000		10,000	
Production Costs	**Total Cost**	**Cost/ Unit**	**Total Cost**	**Cost/ Unit**
Direct materials	$8,250	$1.65	$16,500	$1.65
Direct labor	9,500	1.90	19,000	1.90
Utilities	1,500	0.30	2,500	0.25
Rent	4,000	0.80	4,000	0.40
Maintenance	800	0.16	1,100	0.11
Supervisory salaries	1,000	0.20	1,000	0.10

Instructions

(a) Define the terms variable costs, fixed costs, and mixed costs.
(b) Classify each cost above as either variable, fixed, or mixed.

Diagram cost behavior, determine relevant range, and classify costs.
(SO 1, 2), C

E18-2 Glacial Enterprises is considering manufacturing a new product. It projects the cost of direct materials and rent for a range of output as shown below.

Output in Units	Rent Expense	Direct Materials
1,000	$ 5,000	$ 4,000
2,000	5,000	6,000
3,000	5,000	7,800
4,000	7,000	8,000
5,000	7,000	10,000
6,000	7,000	12,000
7,000	7,000	14,000
8,000	7,000	16,000
9,000	7,000	18,000
10,000	10,000	23,000
11,000	10,000	28,000
12,000	10,000	36,000

Instructions

(a) Diagram the behavior of each cost for output ranging from 1,000 to 12,000 units.
(b) Determine the relevant range of activity for this product.
(c) Calculate the variable cost per unit within the relevant range.
(d) Indicate the fixed cost within the relevant range.

Determine fixed and variable costs using the high-low method and prepare graph.
(SO 1, 3), AN

E18-3 The controller of Capital Industries has collected the following monthly expense data for use in analyzing the cost behavior of maintenance costs.

Month	Total Maintenance Costs	Total Machine Hours
January	$2,400	300
February	3,000	400
March	3,600	600
April	4,500	790
May	3,200	500
June	4,900	800

Instructions

(a) Determine the fixed and variable cost components using the high-low method.
(b) Prepare a graph showing the behavior of maintenance costs, and identify the fixed and variable cost elements. Use 200-hour increments and $1,000 cost increments.

E18-4 Cottonwood Furniture Corporation incurred the following costs.

Classify variable, fixed, and mixed costs.
(SO 1, 3), **C**

1. Wood used in the production of furniture.
2. Fuel used in delivery trucks.
3. Straight-line depreciation on factory building.
4. Screws used in the production of furniture.
5. Sales staff salaries.
6. Sales commissions.
7. Property taxes.
8. Insurance on buildings.
9. Hourly wages of furniture craftsmen.
10. Salaries of factory supervisors.
11. Utilities expense.
12. Telephone bill.

Instructions
Identify the costs above as variable, fixed, or mixed.

E18-5 The controller of Sedgwick Industries has collected the following monthly expense data for use in analyzing the cost behavior of maintenance costs.

Determine fixed and variable costs using the high-low method and prepare graph.
(SO 1, 3), **AP**

Month	Total Maintenance Costs	Total Machine Hours
January	$2,800	3,000
February	3,000	4,000
March	3,600	6,000
April	4,500	7,900
May	3,200	5,000
June	5,000	8,000

Instructions
(a) Determine the fixed and variable cost components using the high-low method.
(b) Prepare a graph showing the behavior of maintenance costs, and identify the fixed and variable cost elements. Use 2,000-hour increments and $1,000 cost increments.

E18-6 Hadicke Corporation manufactures a single product. Monthly production costs incurred in the manufacturing process are shown below for the production of 3,000 units. The utilities and maintenance costs are mixed costs. The fixed portions of these costs are $300 and $200, respectively.

Determine fixed, variable, and mixed costs.
(SO 1, 3), **AP**

Production in Units	3,000
Production Costs	
Direct materials	$ 7,500
Direct labor	15,000
Utilities	1,800
Property taxes	1,000
Indirect labor	4,500
Supervisory salaries	1,800
Maintenance	1,100
Depreciation	2,400

Instructions
(a) Identify the above costs as variable, fixed, or mixed.
(b) Calculate the expected costs when production is 5,000 units.

E18-7 Kenny Deines wants Deines Company to use CVP analysis to study the effects of changes in costs and volume on the company. Deines has heard that certain assumptions must be valid in order for CVP analysis to be useful.

Explain assumptions underlying CVP analysis.
(SO 4), **K**

Instructions
Prepare a memo to Kenny Deines concerning the assumptions that underlie CVP analysis.

Compute break-even point in units and dollars.
(SO 5, 6), **AP**

E18-8 Green Forever provides environmentally friendly lawn services for homeowners. Its operating costs are as follows.

Depreciation	$1,500 per month
Advertising	$200 per month
Insurance	$2,000 per month
Weed and feed materials	$13 per lawn
Direct labor	$12 per lawn
Fuel	$2 per lawn

Green Forever charges $60 per treatment for the average single-family lawn.

Instructions

Determine the company's break-even point in (a) number of lawns serviced per month and (b) dollars.

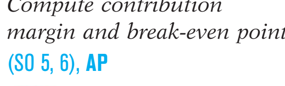
Compute break-even point.
(SO 5, 6), **AP**

E18-9 The San Marcos Inn is trying to determine its break-even point. The inn has 50 rooms that it rents at $60 a night. Operating costs are as follows.

Salaries	$7,200 per month
Utilities	$1,500 per month
Depreciation	$1,200 per month
Maintenance	$300 per month
Maid service	$8 per room
Other costs	$28 per room

Instructions

Determine the inn's break-even point in (1) number of rented rooms per month and (2) dollars.



Compute contribution margin and break-even point.
(SO 5, 6), **AP**

E18-10 In the month of March, Trendy Spa services 570 clients at an average price of $120. During the month, fixed costs were $21,000 and variable costs were 65% of sales.

Instructions

(a) Determine the contribution margin in dollars, per unit, and as a ratio.
(b) Using the contribution margin technique, compute the break-even point in dollars and in units.

Compute break-even point.
(SO 5, 6), **AP**

E18-11 Airport Connection provides shuttle service between four hotels near a medical center and an international airport. Airport Connection uses two 10-passenger vans to offer 12 round trips per day. A recent month's activity in the form of a cost-volume-profit income statement is shown below.

Fare revenues (1,440 fares)		$36,000
Variable costs		
Fuel	$ 5,040	
Tolls and parking	3,100	
Maintenance	500	8,640
Contribution margin		27,360
Fixed costs		
Salaries	13,000	
Depreciation	1,300	
Insurance	1,128	15,428
Net income		$11,932

Instructions

(a) Calculate the break-even point in (1) dollars and (2) number of fares.
(b) Without calculations, determine the contribution margin at the break-even point.

Compute variable cost per unit, contribution margin ratio, and increase in fixed costs.
(SO 5, 6), **AP**

E18-12 In 2012, Grissom Company had a break-even point of $350,000 based on a selling price of $7 per unit and fixed costs of $105,000. In 2013, the selling price and the variable cost per unit did not change, but the break-even point increased to $420,000.

Instructions

(a) Compute the variable cost per unit and the contribution margin ratio for 2012.
(b) Compute the increase in fixed costs for 2013.

E18-13 Naylor Company has the following information available for September 2012.

Prepare CVP income statements.
(SO 5, 6), **AP**

Unit selling price of video game consoles	$ 400
Unit variable costs	$ 270
Total fixed costs	$52,000
Units sold	620

Instructions

(a) Prepare a CVP income statement that shows both total and per unit amounts.
(b) Compute Naylor's break-even point in units.
(c) Prepare a CVP income statement for the break-even point that shows both total and per unit amounts.

E18-14 Moran Company had $150,000 of net income in 2012 when the selling price per unit was $150, the variable costs per unit were $90, and the fixed costs were $570,000. Management expects per unit data and total fixed costs to remain the same in 2013. The president of Moran Company is under pressure from stockholders to increase net income by $60,000 in 2013.

Compute various components to derive target net income under different assumptions.
(SO 6, 7), **AP**

Instructions

(a) Compute the number of units sold in 2012.
(b) Compute the number of units that would have to be sold in 2013 to reach the stockholders' desired profit level.
(c) Assume that Moran Company sells the same number of units in 2013 as it did in 2012. What would the selling price have to be in order to reach the stockholders' desired profit level?

E18-15 Ogilvie Company reports the following operating results for the month of August: Sales $350,000 (units 5,000); variable costs $210,000; and fixed costs $90,000. Management is considering the following independent courses of action to increase net income.

Compute net income under different alternatives.
(SO 7), **AP**

1. Increase selling price by 10% with no change in total variable costs or units sold.
2. Reduce variable costs to 55% of sales.

Instructions

Compute the net income to be earned under each alternative. Which course of action will produce the highest net income?

E18-16 Stiever Company estimates that variable costs will be 60% of sales, and fixed costs will total $800,000. The selling price of the product is $4.

Prepare a CVP graph and compute break-even point and margin of safety.
(SO 6, 8), **AP**

Instructions

(a) Prepare a CVP graph, assuming maximum sales of $3,200,000. (*Note:* Use $400,000 increments for sales and costs and 100,000 increments for units.)
(b) Compute the break-even point in (1) units and (2) dollars.
(c) Compute the margin of safety in (1) dollars and (2) as a ratio, assuming actual sales are $2.5 million.

E18-17 Hardwood Seating Co., a manufacturer of chairs, had the following data for 2012.

Determine contribution margin ratio, break-even point in dollars, and margin of safety.
(SO 5, 6, 7, 8), **AP**

Sales	2,400 units
Sales price	$40 per unit
Variable costs	$14 per unit
Fixed costs	$19,500

Instructions

(a) What is the contribution margin ratio?
(b) What is the break-even point in dollars?
(c) What is the margin of safety in dollars and as a ratio?
(d) If the company wishes to increase its total dollar contribution margin by 40% in 2013, by how much will it need to increase its sales if all other factors remain constant?

(CGA adapted)

Exercises: Set B and Challenge Exercises

Visit the book's companion website, at **www.wiley.com/college/kimmel**, and choose the Student Companion site to access Exercise Set B and Challenge Exercises.

Problems: Set A

Determine variable and fixed costs, compute break-even point, prepare a CVP graph, and determine net income.
(SO 1, 3, 5, 6), **AN**

P18-1A Stephen Thorne owns the Fredonia Barber Shop. He employs five barbers and pays each a base rate of $1,000 per month. One of the barbers serves as the manager and receives an extra $500 per month. In addition to the base rate, each barber also receives a commission of $5.50 per haircut.

Other costs are as follows.

Advertising	$200 per month
Rent	$900 per month
Barber supplies	$0.30 per haircut
Utilities	$175 per month plus $0.20 per haircut
Magazines	$25 per month

Stephen currently charges $10 per haircut.

Instructions

(a) VC $6

(a) Determine the variable cost per haircut and the total monthly fixed costs.
(b) Compute the break-even point in units and dollars.
(c) Prepare a CVP graph, assuming a maximum of 1,800 haircuts in a month. Use increments of 300 haircuts on the horizontal axis and $3,000 on the vertical axis.
(d) Determine net income, assuming 1,900 haircuts are given in a month.

Prepare a CVP income statement, compute break-even point, contribution margin ratio, margin of safety ratio, and sales for target net income.
(SO 5, 6, 7, 8), **AN**

P18-2A Lyman Company bottles and distributes Livit, a diet soft drink. The beverage is sold for 50 cents per 16-ounce bottle to retailers, who charge customers 75 cents per bottle. For the year 2012, management estimates the following revenues and costs.

Net sales	$1,800,000	Selling expenses—variable	$70,000
Direct materials	430,000	Selling expenses—fixed	65,000
Direct labor	352,000	Administrative expenses—variable	20,000
Manufacturing overhead—variable	316,000	Administrative expenses—fixed	60,000
Manufacturing overhead—fixed	283,000		

Instructions

(b) (1) 2,400,000 units
(c) CM ratio 34%

(a) Prepare a CVP income statement for 2012 based on management's estimates.
(b) Compute the break-even point in (1) units and (2) dollars.
(c) Compute the contribution margin ratio and the margin of safety ratio. (Round to nearest full percent.)
(d) Determine the sales dollars required to earn net income of $238,000.

Compute break-even point under alternative courses of action.
(SO 5, 6), **E**

P18-3A Giere Manufacturing's sales slumped badly in 2012. For the first time in its history, it operated at a loss. The company's income statement showed the following results from selling 600,000 units of product: Net sales $2,400,000; total costs and expenses $2,540,000; and net loss $140,000. Costs and expenses consisted of the amounts shown below.

	Total	Variable	Fixed
Cost of goods sold	$2,100,000	$1,440,000	$660,000
Selling expenses	240,000	72,000	168,000
Administrative expenses	200,000	48,000	152,000
	$2,540,000	$1,560,000	$980,000

Management is considering the following independent alternatives for 2013.

1. Increase unit selling price 20% with no change in costs, expenses, and sales volume.
2. Change the compensation of salespersons from fixed annual salaries totaling $150,000 to total salaries of $60,000 plus a 5% commission on net sales.

Instructions

(a) Compute the break-even point in dollars for 2012.

(b) Compute the break-even point in dollars under each of the alternative courses of action. (Round all ratios to nearest full percent.) Which course of action do you recommend?

(b) Alternative 1 $2,130,435

P18-4A Julie Milroy is the advertising manager for Value Shoe Store. She is currently working on a major promotional campaign. Her ideas include the installation of a new lighting system and increased display space that will add $34,000 in fixed costs to the $270,000 currently spent. In addition, Julie is proposing that a 5% price decrease ($40 to $38) will produce a 20% increase in sales volume (20,000 to 24,000). Variable costs will remain at $22 per pair of shoes. Management is impressed with Julie's ideas but concerned about the effects that these changes will have on the break-even point and the margin of safety.

Compute break-even point and margin of safety ratio, and prepare a CVP income statement before and after changes in business environment.
(SO 5, 6, 8), **E**

Instructions

(a) Compute the current break-even point in units, and compare it to the break-even point in units if Julie's ideas are used.

(b) Compute the margin of safety ratio for current operations and after Julie's changes are introduced. (Round to nearest full percent.)

(c) Prepare a CVP income statement for current operations and after Julie's changes are introduced. Would you make the changes suggested?

(b) Current margin of safety ratio 25%

P18-5A Marotta Corporation has collected the following information after its first year of sales. Net sales were $1,600,000 on 100,000 units; selling expenses $240,000 (40% variable and 60% fixed); direct materials $511,000; direct labor $285,000; administrative expenses $280,000 (20% variable and 80% fixed); manufacturing overhead $360,000 (70% variable and 30% fixed). Top management has asked you to do a CVP analysis so that it can make plans for the coming year. It has projected that unit sales will increase by 10% next year.

Compute contribution margin, fixed costs, break-even point, sales for target net income, and margin of safety ratio.
(SO 5, 6, 7, 8), **AN**

Instructions

(a) Compute (1) the contribution margin for the current year and the projected year, and (2) the fixed costs for the current year. (Assume that fixed costs will remain the same in the projected year.)

(b) Compute the break-even point in units and sales dollars for the current year.

(c) The company has a target net income of $310,000. What is the required sales in dollars for the company to meet its target?

(d) If the company meets its target net income number, by what percentage could its sales fall before it is operating at a loss? That is, what is its margin of safety ratio?

(b) 119,000 units

P18-6A Lankford Manufacturing carries no inventories. Its product is manufactured only when a customer's order is received. It is then shipped immediately after it is made. For its fiscal year ended October 31, 2012, Lankford's break-even point was $1.35 million. On sales of $1.2 million, its income statement showed a gross profit of $100,000, direct materials cost of $400,000, and direct labor costs of $500,000. The contribution margin was $100,000, and variable manufacturing overhead was $100,000.

Determine contribution margin ratio, break-even point, and margin of safety.
(SO 1, 5, 7, 8), **E**

Instructions

(a) Calculate the following:
 1. Variable selling and administrative expenses.
 2. Fixed manufacturing overhead.
 3. Fixed selling and administrative expenses.

(b) Ignoring your answer to part (a), assume that fixed manufacturing overhead was $100,000 and the fixed selling and administrative expenses were $80,000. The marketing vice president feels that if the company increased its advertising, sales could be increased by 20%. What is the maximum increased advertising cost the company can incur and still report the same income as before the advertising expenditure?

(CGA adapted)

(a) 2. $100,000

Problems: Set B

P18-1B The Ottawa Barber Shop employs four barbers. One barber, who also serves as the manager, is paid a salary of $3,900 per month. The other barbers are paid $1,900 per month. In addition, each barber is paid a commission of $2 per haircut. Other monthly costs are: store rent $700 plus 60 cents per haircut, depreciation on equipment $500,

Determine variable and fixed costs, compute break-even point, prepare a CVP graph, and determine net income.
(SO 1, 3, 5, 6), **AN**

barber supplies 40 cents per haircut, utilities $300, and advertising $100. The price of a haircut is $10.

Instructions

(a) VC $3

(a) Determine the variable cost per haircut and the total monthly fixed costs.
(b) Compute the break-even point in units and dollars.
(c) Prepare a CVP graph, assuming a maximum of 1,800 haircuts in a month. Use increments of 300 haircuts on the horizontal axis and $3,000 increments on the vertical axis.
(d) Determine the net income, assuming 1,700 haircuts are given in a month.

Prepare a CVP income statement, compute break-even point, contribution margin ratio, margin of safety ratio, and sales for target net income.
(SO 5, 6, 7, 8), **AN**

P18-2B Colaw Company bottles and distributes No-FIZZ, a fruit drink. The beverage is sold for 50 cents per 16-ounce bottle to retailers, who charge customers 70 cents per bottle. For the year 2012, management estimates the following revenues and costs.

Net sales	$2,000,000	Selling expenses—variable	$ 80,000
Direct materials	360,000	Selling expenses—fixed	150,000
Direct labor	450,000	Administrative expenses—variable	40,000
Manufacturing overhead—variable	270,000	Administrative expenses—fixed	70,000
Manufacturing overhead—fixed	280,000		

Instructions

(b) (1) 2,500,000 units
(c) CM ratio 40%

(a) Prepare a CVP income statement for 2012 based on management's estimates.
(b) Compute the break-even point in (1) units and (2) dollars.
(c) Compute the contribution margin ratio and the margin of safety ratio.
(d) Determine the sales dollars required to earn net income of $390,000.

Compute break-even point under alternative courses of action.
(SO 5, 6), **E**

P18-3B Denton Manufacturing had a bad year in 2011. For the first time in its history, it operated at a loss. The company's income statement showed the following results from selling 60,000 units of product: Net sales $1,500,000; total costs and expenses $1,890,000; and net loss $390,000. Costs and expenses consisted of the amounts shown below.

	Total	Variable	Fixed
Cost of goods sold	$1,350,000	$930,000	$420,000
Selling expenses	420,000	65,000	355,000
Administrative expenses	120,000	55,000	65,000
	$1,890,000	$1,050,000	$840,000

Management is considering the following independent alternatives for 2012.

1. Increase unit selling price 40% with no change in costs, expenses, and sales volume.
2. Change the compensation of salespersons from fixed annual salaries totaling $200,000 to total salaries of $30,000 plus a 4% commission on net sales.
3. Purchase new high-tech factory machinery that will change the proportion between variable and fixed cost of goods sold to 50:50.

Instructions

(b) Alternative 1, $1,680,000

(a) Compute the break-even point in dollars for 2012.
(b) Compute the break-even point in dollars under each of the alternative courses of action. Which course of action do you recommend?

Compute break-even point and margin of safety ratio, and prepare a CVP income statement before and after changes in business environment.
(SO 5, 6, 8), **E**

P18-4B Beth Howard is the advertising manager for Payless Shoe Store. She is currently working on a major promotional campaign. Her ideas include the installation of a new lighting system and increased display space that will add $24,000 in fixed costs to the $210,000 currently spent. In addition, Beth is proposing that a 6⅔% price decrease (from $30 to $28) will produce an increase in sales volume from 16,000 to 20,000 units. Variable costs will remain at $15 per pair of shoes. Management is impressed with Beth's ideas but concerned about the effects that these changes will have on the break-even point and the margin of safety.

Instructions

(b) Current margin of safety ratio 12.5%

(a) Compute the current break-even point in units, and compare it to the break-even point in units if Beth's ideas are used.
(b) Compute the margin of safety ratio for current operations and after Beth's changes are introduced. (Round to nearest full percent.)
(c) Prepare a CVP income statement for current operations and after Beth's changes are introduced. Would you make the changes suggested?

P18-5B Tomorrow Corporation has collected the following information after its first year of sales. Net sales were $2,000,000 on 100,000 units; selling expenses $400,000 (30% variable and 70% fixed); direct materials $600,000; direct labor $340,000; administrative expenses $500,000 (30% variable and 70% fixed); manufacturing overhead $480,000 (20% variable and 80% fixed). Top management has asked you to do a CVP analysis so that it can make plans for the coming year. It has projected that unit sales will increase by 20% next year.

Compute break-even point and margin of safety ratio, and prepare a CVP income statement before and after changes in business environment.

(SO 5, 6, 7, 8), **AN**

Instructions

(a) Compute (1) the contribution margin for the current year and the projected year, and (2) the fixed costs for the current year. (Assume that fixed costs will remain the same in the projected year.)

(b) Compute the break-even point in units and sales dollars.

(b) 146,110 units

(c) The company has a target net income of $374,000. What is the required sales in dollars for the company to meet its target?

(d) If the company meets its target net income number, by what percentage could its sales fall before it is operating at a loss? That is, what is its margin of safety ratio?

(e) The company is considering a purchase of equipment that would reduce its direct labor costs by $140,000 and would change its manufacturing overhead costs to 10% variable and 90% fixed (assume total manufacturing overhead cost is $480,000, as above). It is also considering switching to a pure commission basis for its sales staff. This would change selling expenses to 80% variable and 20% fixed (assume total selling expense is $400,000, as above). Compute (1) the contribution margin and (2) the contribution margin ratio, and recompute (3) the break-even point in sales dollars. Comment on the effect each of management's proposed changes has on the break-even point.

P18-6B Apple Manufacturing carries no inventories. Its product is manufactured only when a customer's order is received. It is then shipped immediately after it is made. For its fiscal year ended October 31, 2012, Apple's break-even point was $2.2 million. On sales of $1.9 million, its income statement showed a gross profit of $300,000, direct materials cost of $600,000, and direct labor costs of $700,000. The contribution margin was $150,000, and variable manufacturing overhead was $200,000.

Determine contribution margin ratio, break-even point, and margin of safety.

(SO 1, 5, 7, 8), **E**

Instructions

(a) Calculate the following:
   1. Variable selling and administrative expenses.
   2. Fixed manufacturing overhead.
   3. Fixed selling and administrative expenses.

(a) 2. $100,000

(b) Ignoring your answer to part (a), assume that fixed manufacturing overhead was $100,000 and the fixed selling and administrative expenses were $80,000. The marketing vice president feels that if the company increased its advertising, sales could be increased by 20%. What is the maximum increased advertising cost the company can incur and still report the same income as before the advertising expenditure?

Problems: Set C

Visit the book's companion website, at **www.wiley.com/college/kimmel**, and choose the Student Companion site to access Problem Set C.

Waterways Continuing Problem

(*Note:* This is a continuation of the Waterways Problem from Chapters 14 through 17.)

WCP18 The Vice President for Sales and Marketing at Waterways Corporation is planning for production needs to meet sales demand in the coming year. He is also trying to determine how the company's profits might be increased in the coming year. This problem asks you to use cost-volume-profit concepts to help Waterways understand contribution margins of some of its products and to decide whether to mass-produce certain products.

Go to the book's companion website, at **www.wiley.com/college/kimmel**, to find the completion of this problem.

broadening your perspective

DECISION MAKING ACROSS THE ORGANIZATION

BYP18-1 Martinez Company has decided to introduce a new product. The new product can be manufactured by either a capital-intensive method or a labor-intensive method. The manufacturing method will not affect the quality of the product. The estimated manufacturing costs by the two methods are as follows.

	Capital-Intensive	Labor-Intensive
Direct materials	$5 per unit	$5.50 per unit
Direct labor	$6 per unit	$8.00 per unit
Variable overhead	$3 per unit	$4.50 per unit
Fixed manufacturing costs	$2,508,000	$1,538,000

Martinez's market research department has recommended an introductory unit sales price of $30. The incremental selling expenses are estimated to be $502,000 annually plus $2 for each unit sold, regardless of manufacturing method.

Instructions
With the class divided into groups, answer the following.

(a) Calculate the estimated break-even point in annual unit sales of the new product if Martinez Company uses the:
  (1) Capital-intensive manufacturing method.
  (2) Labor-intensive manufacturing method.

(b) Determine the annual unit sales volume at which Martinez Company would be indifferent between the two manufacturing methods.

(c) Explain the circumstance under which Martinez should employ each of the two manufacturing methods.

(CMA adapted)

MANAGERIAL ANALYSIS

BYP18-2 The condensed income statement for the Sally and Terry partnership for 2012 is as follows.

SALLY AND TERRY COMPANY
Income Statement
For the Year Ended December 31, 2012

Sales (200,000 units)		$1,200,000
Cost of goods sold		800,000
Gross profit		400,000
Operating expenses		
Selling	$280,000	
Administrative	160,000	440,000
Net loss		($40,000)

A cost behavior analysis indicates that 75% of the cost of goods sold are variable, 50% of the selling expenses are variable, and 25% of the administrative expenses are variable.

Instructions
(Round to nearest unit, dollar, and percentage, where necessary. Use the CVP income statement format in computing profits.)

(a) Compute the break-even point in total sales dollars and in units for 2012.

(b) Sally has proposed a plan to get the partnership "out of the red" and improve its profitability. She feels that the quality of the product could be substantially improved by spending $0.25 more per unit on better raw materials. The selling price per unit could be increased to only $6.25 because of competitive pressures. Sally estimates that sales volume will increase by

30%. What effect would Sally's plan have on the profits and the break-even point in dollars of the partnership? (Round the contribution margin ratio to two decimal places.)

(c) Terry was a marketing major in college. He believes that sales volume can be increased only by intensive advertising and promotional campaigns. He therefore proposed the following plan as an alternative to Sally's: (1) Increase variable selling expenses to $0.79 per unit, (2) lower the selling price per unit by $0.30, and (3) increase fixed selling expenses by $35,000. Terry quoted an old marketing research report that said that sales volume would increase by 60% if these changes were made. What effect would Terry's plan have on the profits and the break-even point in dollars of the partnership?

(d) Which plan should be accepted? Explain your answer.

REAL-WORLD FOCUS

BYP18-3 The Coca-Cola Company hardly needs an introduction. A line taken from the cover of a recent annual report says it all: If you measured time in servings of Coca-Cola, "a billion Coca-Cola's ago was yesterday morning." On average, every U.S. citizen drinks 363 8-ounce servings of Coca-Cola products each year. Coca-Cola's primary line of business is the making and selling of syrup to bottlers. These bottlers then sell the finished bottles and cans of Coca-Cola to the consumer.

In the annual report of Coca-Cola, the information shown below was provided.

THE COCA-COLA COMPANY
Management Discussion

Our gross margin declined to 61 percent this year from 62 percent in the prior year, primarily due to costs for materials such as sweeteners and packaging.

The increases [in selling expenses] in the last two years were primarily due to higher marketing expenditures in support of our Company's volume growth.

We measure our sales volume in two ways: (1) gallon shipments of concentrates and syrups and (2) unit cases of finished product (bottles and cans of Coke sold by bottlers).

Instructions

Answer the following questions.

(a) Are sweeteners and packaging a variable cost or a fixed cost? What is the impact on the contribution margin of an increase in the per unit cost of sweeteners or packaging? What are the implications for profitability?

(b) In your opinion, are marketing expenditures a fixed cost, variable cost, or mixed cost to The Coca-Cola Company? Give justification for your answer.

(c) Which of the two measures cited for measuring volume represents the activity index as defined in this chapter? Why might Coca-Cola use two different measures?

MANAGERIAL ACCOUNTING ON THE WEB

BYP18-4 Ganong Bros. Ltd., located in St. Stephen, New Brunswick, is Canada's oldest independent candy company. Its products are distributed worldwide. In 1885, Ganong invented the popular "chicken bone," a cinnamon flavored, pink, hard candy jacket over a chocolate center. The home page of Ganong, listed below, includes information about the company and its products.

Address: **www.ganong.com/retail/chicken_bones.html**, or go to **www.wiley.com/college/kimmel**

Instructions

Read the description of "chicken bones" and answer the following.

(a) Describe the steps in making "chicken bones."

(b) Identify at least two variable and two fixed costs that are likely to affect the production of "chicken bones."

COMMUNICATION ACTIVITY

BYP18-5 Your roommate asks your help on the following questions about CVP analysis formulas.

(a) How can the mathematical equation for break-even sales show both sales units and sales dollars?
(b) How do the formulas differ for contribution margin per unit and contribution margin ratio?
(c) How can contribution margin be used to determine break-even sales in units and in dollars?

Instructions

Write a memo to your roommate stating the relevant formulas and answering each question.

ETHICS CASE

BYP18-6 Jimmy Hester is an accountant for Advanced Company. Early this year, Jimmy made a highly favorable projection of sales and profits over the next 3 years for Advanced Company's hot-selling computer PLEX. As a result of the projections Jimmy presented to senior management, the company decided to expand production in this area. This decision led to dislocations of some plant personnel who were reassigned to one of the company's newer plants in another state. However, no one was fired, and in fact the company expanded its work force slightly.

Unfortunately, Jimmy rechecked his computations on the projections a few months later and found that he had made an error that would have reduced his projections substantially. Luckily, sales of PLEX have exceeded projections so far, and management is satisfied with its decision. Jimmy, however, is not sure what to do. Should he confess his honest mistake and jeopardize his possible promotion? He suspects that no one will catch the error because sales of PLEX have exceeded his projections, and it appears that profits will materialize close to his projections.

Instructions

(a) Who are the stakeholders in this situation?
(b) Identify the ethical issues involved in this situation.
(c) What are the possible alternative actions for Jimmy? What would you do in Jimmy's position?

"ALL ABOUT YOU" ACTIVITY

BYP18-7 The purchase of a new car is one of your biggest personal expenditures. It is important that you carefully analyze your options.

Suppose that you are considering the purchase of a hybrid vehicle. Let's assume the following facts: The hybrid will initially cost an additional $3,000 above the cost of a traditional vehicle. The hybrid will get 40 miles per gallon of gas, and the traditional car will get 30 miles per gallon. Also, assume that the cost of gas is $3 per gallon.

Instructions

Using the facts above, answer the following questions.

(a) What is the variable gasoline cost of going one mile in the hybrid car? What is the variable cost of going one mile in the traditional car?
(b) Using the information in part (a), if "miles" is your unit of measure, what is the "contribution margin" of the hybrid vehicle relative to the traditional vehicle? That is, express the variable cost savings on a per-mile basis.
(c) How many miles would you have to drive in order to break even on your investment in the hybrid car?
(d) What other factors might you want to consider?

Answers to Insight and Accounting Across the Organization Questions

p. 942 Woodworker Runs an Efficient Operation for Producing Furniture **Q:** Are the costs associated with use of the computer-driven cutting machines fixed or variable? **A:** The cost of the cutting machine that is recognized through depreciation expense is a fixed cost. The costs of operating (electricity) and maintaining the machine are variable.

p. 946 Skilled Labor Is Truly Essential **Q:** Would you characterize labor costs as being a fixed cost, a variable cost, or something else in this situation? **A:** Because these labor costs are essentially unchanged for most levels of production, they are primarily fixed. However, it could be described as being a "step function." If production gets too far outside the normal range, workers' hours will change. If production goes too low, hours are cut, and if it goes too high, overtime hours are needed.

p. 952 Charter Flights Offer a Good Deal **Q:** How did FlightServe determine that it would break even with 3.3 seats full per flight? **A:** FlightServe determined its break-even point with the following formula: Fixed costs ÷ Contribution margin per seat occupied = Break-even point in seats.

p. 956 How a Rolling Stones' Tour Makes Money **Q:** What amount of sales dollars are required for the promoter to break even? **A:** Fixed costs = $1,200,000 + $400,000 = $1,600,000; contribution margin ratio = 80%; and break-even sales = $1,600,000 ÷ .80 = $2,000,000.

study objectives

After studying this chapter, you should be able to:

1. Describe the essential features of a cost-volume-profit income statement.
2. Apply basic CVP concepts.
3. Explain the term sales mix and its effects on break-even sales.
4. Determine sales mix when a company has limited resources.
5. Understand how operating leverage affects profitability.

feature story

WHAT GOES UP (FAST), MUST COME DOWN (FAST)

During the late 1990s, many people marveled at the efficiency of the so-called "New Economy," which uses digital technologies to improve business processes. Some managers were actually startled by their own success. The New Economy had created a new formula for profit. For example, David Peterschmidt, chief executive at software developer Inktomi, noted that the company had incurred considerable fixed costs in developing new software, but its variable costs were minor. As a consequence, once sales had covered the fixed costs, every additional sale was basically pure profit. When sales were booming, he happily stated, "Next to the federal government, this is the only business that's allowed to print money." But that was then. When the economy lagged, the new profit formula went sour. The company's sales disappeared, but its fixed costs did not. In no time, Inktomi went from record profits to staggering losses.

Many other companies have had similar experiences. As their manufacturing plants have become more automated, their fixed costs have become increasingly high. For example, during a five-year period, the average cost of a typical Intel semiconductor plant rose from $500 million to $2 billion as its manufacturing processes became increasingly sophisticated. These high fixed costs have made Intel very dependent on producing a high volume of computer chips. It needs high volume so that it can spread its fixed costs across a lot of units, thereby reducing the fixed cost per unit. As one Intel employee put it, "You have high fixed costs, so you want to minimize those fixed costs and keep factories running 24 hours a day."

However, when management focuses too heavily on keeping volume high to reduce fixed costs per unit, it sometimes produces more inventory than the market wants. When this happens, companies have to cut prices sharply. High-tech firms, like Intel, whose products rapidly become obsolete, have occasionally been stuck with inventory that nobody wanted. Thus, while the huge outlays for new equipment have made these companies exceptionally efficient, such outlays have also increased their exposure to economic swings. In fact, because so many companies now have cost structures that rely heavily on fixed costs, many economists worry that swings in the entire economy will be more volatile than in the past.

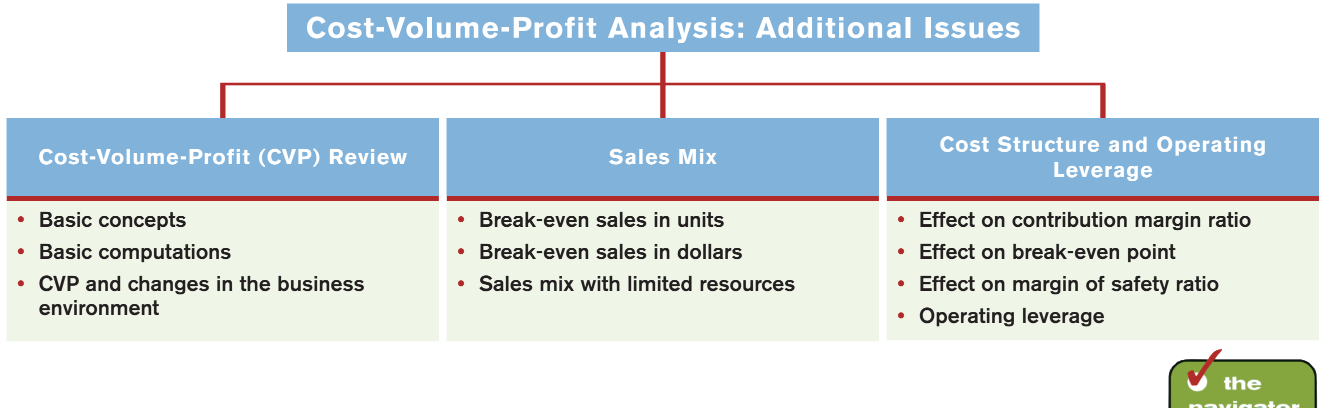
preview of chapter 19

As the Feature Story about Inktomi and Intel suggests, the relationship between a company's fixed and variable costs can have a huge impact on its profitability. In particular, the trend toward cost structures dominated by fixed costs has significantly increased the volatility of many companies' net income. The purpose of this chapter is to demonstrate additional uses of cost-volume-profit analysis in making sound business decisions. The content and organization of this chapter are as follows.



Cost-Volume-Profit (CVP) Review

As indicated in Chapter 18, cost-volume-profit (CVP) analysis is the study of the effects of changes in costs and volume on a company's profit. CVP analysis is important to profit planning. It is also a critical factor in such management decisions as determining product mix, maximizing use of production facilities, and setting selling prices.

BASIC CONCEPTS

study objective 1

Describe the essential features of a cost-volume-profit income statement.

Because CVP is so important for decision making, management often wants this information reported in a CVP income statement format for internal use. The CVP income statement classifies costs as *variable* or *fixed* and computes a contribution margin. **Contribution margin** is the amount of revenue remaining after deducting variable costs. It is often stated both as a total amount and on a per unit basis.

Illustration 19-1 presents the CVP income statement for Vargo Video (which was shown in Illustration 18-11, on page 949). Note that Vargo's sales included 1,600 camcorders at $500 per unit.

Illustration 19-1 Basic CVP income statement

VARGO VIDEO COMPANY
CVP Income Statement
For the Month Ended June 30, 2012

	Total	Per Unit
Sales (1,600 camcorders)	$ 800,000	$ 500
Variable costs	480,000	300
Contribution margin	**320,000**	**$200**
Fixed costs	200,000	
Net income	**$120,000**	

Companies often prepare detailed CVP income statements. To illustrate, we use the same base information in Illustration 19-2 as that presented in Illustration 19-1.

Illustration 19-2
Detailed CVP income statement

VARGO VIDEO COMPANY
CVP Income Statement
For the Month Ended June 30, 2012

		Total	Per Unit
Sales		$ 800,000	$ 500
Variable expenses			
Cost of goods sold	$400,000		
Selling expenses	60,000		
Administrative expenses	20,000		
Total variable expenses		480,000	300
Contribution margin		**320,000**	**$200**
Fixed expenses			
Cost of goods sold	120,000		
Selling expenses	40,000		
Administrative expenses	40,000		
Total fixed expenses		200,000	
Net income		**$120,000**	

Helpful Hint The appendix to this chapter provides additional discussion of income statements used for decision making.

In the applications of CVP analysis that follow, we assume that the term "cost" includes all costs and expenses related to production and sale of the product. That is, cost includes manufacturing costs plus selling and administrative expenses.

before you go on...

Do it!

CVP INCOME STATEMENT

Garner Manufacturing Inc. sold 20,000 units and recorded sales of $800,000 for the first quarter of 2012. In making the sales, the company incurred the following costs and expenses.

	Variable	Fixed
Cost of goods sold	$250,000	$110,000
Selling expenses	100,000	25,000
Administrative expenses	82,000	73,000

(a) Prepare a CVP income statement for the quarter ended March 31, 2012.
(b) Compute the contribution margin per unit.
(c) Compute the contribution margin ratio.

Action Plan

- Use the CVP income statement format.
- Use the formula for contribution margin per unit.
- Use the formula for the contribution margin ratio.

Solution

(a)

GARNER MANUFACTURING INC.
Income Statement
For the Quarter Ended March 31, 2012

Sales (20,000 units)		$800,000
Variable expenses		
Cost of goods sold	$250,000	
Selling expenses	100,000	
Administrative expenses	82,000	
Total variable expenses		432,000
Contribution margin		368,000
Fixed expenses		
Cost of goods sold	110,000	
Selling expenses	25,000	
Administrative expenses	73,000	
Total fixed expenses		208,000
Net income		$160,000

(b) Contribution margin per unit:
$40 ($800,000 ÷ 20,000 units) − $21.60 ($432,000 ÷ 20,000 units) = $18.40 per unit.
(c) Contribution margin ratio:
$368,000 ÷ $800,000 = 46% (or $18.40 ÷ $40 = 46%).

Related exercise material: **BE19-1, BE19-2,** and **Do it! 19-1**.

BASIC COMPUTATIONS

Apply basic CVP concepts.

Before we introduce additional issues of CVP analysis, let's review some of the basic concepts that you learned in Chapter 18, specifically break-even analysis, target net income, and margin of safety.

Break-even Analysis

Vargo Video's CVP income statement (Illustration 19-2) shows that total contribution margin (sales minus variable expenses) is $320,000, and the company's contribution margin per unit is $200. Recall that contribution margin can also be expressed in the form of the **contribution margin ratio** (contribution margin divided by sales), which in the case of Vargo is 40% ($200 ÷ $500).

Illustration 19-3 demonstrates how to compute Vargo's break-even point in units (using contribution margin per unit) or in dollars (using contribution margin ratio).

Illustration 19-3
Break-even point

Fixed Costs	÷	Contribution Margin per Unit	=	Break-even Point in Units
$200,000	÷	$200	=	1,000 units
Fixed Costs	**÷**	**Contribution Margin Ratio**	**=**	**Break-even Point in Dollars**
$200,000	÷	.40	=	$500,000

When a company is in its early stages of operation, its primary goal is to break even. Failure to break even will lead eventually to financial failure.

Target Net Income

Once a company achieves break-even, it then sets a sales goal that will generate a target net income. For example, assume that Vargo's management has a target net income of $250,000. Illustration 19-4 shows the required sales in units and dollars to achieve its target net income.

Illustration 19-4
Target net income

(Fixed Costs + Target Net Income)	÷	Contribution Margin per Unit	=	Required Sales in Units
($200,000 + $250,000)	÷	$200	=	2,250 units
(Fixed Costs + Target Net Income)	**÷**	**Contribution Margin Ratio**	**=**	**Required Sales in Dollars**
($200,000 + $250,000)	÷	.40	=	$1,125,000

In order to achieve net income of $250,000, Vargo has to sell 2,250 camcorders, for a total price of $1,125,000.

Margin of Safety

Another measure managers use to assess profitability is the margin of safety. The **margin of safety** tells us **how far sales can drop** before the company will be operating at a loss. Managers like to have a sense of how much cushion they have between their current situation and operating at a loss. This can be expressed in

dollars or as a ratio. In Illustration 19-2, for example, Vargo reported sales of $800,000. At that sales level, its margin of safety in dollars and as a ratio are as follows.

Illustration 19-5
Margin of safety

Actual (Expected) Sales	–	Break-even Sales	=	Margin of Safety in Dollars
$800,000	–	$500,000	=	$300,000
Margin of Safety in Dollars	÷	**Actual (Expected) Sales**	=	**Margin of Safety Ratio**
$300,000	÷	$800,000	=	37.5%

Thus, Vargo's sales could drop by $300,000, or 37.5%, before the company would operate at a loss.

CVP AND CHANGES IN THE BUSINESS ENVIRONMENT

To better understand how CVP analysis works, let's look at three independent situations that might occur at Vargo Video. Each case uses the original camcorder sales and cost data, which were:

Illustration 19-6
Original camcorder sales and cost data

Unit selling price	$500
Unit variable cost	$300
Total fixed costs	$200,000
Break-even sales	$500,000 or 1,000 units

Case I. A competitor is offering a 10% discount on the selling price of its camcorders. Management must decide whether to offer a similar discount.

Question: What effect will a 10% discount on selling price have on the break-even point for camcorders?

Answer: A 10% discount on selling price reduces the selling price per unit to $450 [$500 − ($500 × 10%)]. Variable costs per unit remain unchanged at $300. Thus, the contribution margin per unit is $150. Assuming no change in fixed costs, break-even sales are 1,333 units, computed as follows.

Illustration 19-7
Computation of break-even sales in units

Fixed Costs	÷	Contribution Margin per Unit	=	Break-even Sales
$200,000	÷	$150	=	1,333 units (rounded)

For Vargo Video, this change requires monthly sales to increase by 333 units, or 33⅓%, in order to break even. In reaching a conclusion about offering a 10% discount to customers, management must determine how likely it is to achieve the increased sales. Also, management should estimate the possible loss of sales if the competitor's discount price is not matched.

Case II. To meet the threat of foreign competition, management invests in new robotic equipment that will lower the amount of direct labor required to make camcorders. The company estimates that total fixed costs will increase 30% and that variable cost per unit will decrease 30%.

Question: What effect will the new equipment have on the sales volume required to break even?

Answer: Total fixed costs become $260,000 [$200,000 + (30% × $200,000)]. The variable cost per unit becomes $210 [$300 − (30% × $300)]. The new break-even point is approximately 897 units, computed as shown on the next page.

Illustration 19-8
Computation of break-even sales in units

Fixed Costs	÷	Contribution Margin per Unit	=	Break-even Sales
$260,000	÷	($500 − $210)	=	897 units (rounded)

These changes appear to be advantageous for Vargo Video. The break-even point is reduced by 10%, or 100 units.

Case III. Vargo's principal supplier of raw materials has just announced a price increase. The higher cost is expected to increase the variable cost of camcorders by $25 per unit. Management decides to hold the line on the selling price of the camcorders. It plans a cost-cutting program that will save $17,500 in fixed costs per month. Vargo is currently realizing monthly net income of $80,000 on sales of 1,400 camcorders.

Question: What increase in units sold will be needed to maintain the same level of net income?

Answer: The variable cost per unit increases to $325 ($300 + $25). Fixed costs are reduced to $182,500 ($200,000 − $17,500). Because of the change in variable cost, the contribution margin per unit becomes $175 ($500 − $325). The required number of units sold to achieve the target net income is computed as follows.

Illustration 19-9
Computation of required sales

Fixed Costs + Target Net Income	÷	Contribution Margin per Unit	=	Required Sales in Units
($182,500 + $80,000)	÷	$175	=	1,500

To achieve the required sales, Vargo Video will have to sell 1,500 camcorders, an increase of 100 units. If this does not seem to be a reasonable expectation, management will either have to make further cost reductions or accept less net income if the selling price remains unchanged.

We hope that the concepts reviewed in this section are now familiar to you. We are now ready to examine additional ways that companies use CVP analysis to assess profitability and to help in making effective business decisions.

Management Insight

Don't Just Look–Buy Something

When analyzing an Internet business, analysts closely watch the so-called "conversion rate." This rate is calculated by dividing the number of people who actually take action at an Internet site (buy something) by the total number of people who visit the site. Average conversion rates are from 3% to 5%. A rate below 2% is poor, while a rate above 10% is great.

Conversion rates have an obvious effect on the break-even point. Suppose you spend $10,000 on your site, and you attract 5,000 visitors. If you get a 2% conversion rate (100 purchases), your site costs $100 per purchase ($10,000 ÷ 100). A 4% conversion rate gets you down to a cost of $50 per transaction, and an 8% conversion rate gets you down to $25. Studies show that conversion rates increase if the site has an easy-to-use interface, fast-performing screens, a convenient ordering process, and advertising that is both clever and clear.

Source: J. William Gurley, "The One Internet Metric That Really Counts" *Fortune* (March 6, 2000), p. 392.

Besides increasing their conversion rates, what steps can online merchants use to lower their break-even points? (See page 1027.)

DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
How can a company use CVP analysis to improve profitability?	Data on what effect a price change, a fixed-cost change, or a trade-off between fixed and variable costs would have on volume and costs	Measurement of income at new volume levels	If profitability increases under proposed change, adopt change.

before you go on...

Krisanne Company reports the following operating results for the month of June.

CVP ANALYSIS

KRISANNE COMPANY
CVP Income Statement
For the Month Ended June 30, 2012

	Total	Per Unit
Sales (5,000 units)	$300,000	$60
Variable costs	180,000	36
Contribution margin	120,000	$24
Fixed expenses	100,000	
Net income	$ 20,000	

To increase net income, management is considering reducing the selling price by 10%, with no changes to unit variable costs or fixed costs. Management is confident that this change will increase unit sales by 25%.

Using the contribution margin technique, compute the break-even point in units and dollars and margin of safety in dollars, (a) assuming no changes to sales price or costs, and (b) assuming changes to sales price and volume as described above. (c) Comment on your findings.

Action Plan

- Apply the formula for the break-even point in units.
- Apply the formula for the break-even point in dollars.
- Apply the formula for the margin of safety in dollars.

Solution

(a) Assuming no changes to sales price or costs:
Break-even point in units = 4,167 units (rounded) ($100,000 ÷ $24).
Break-even point in sales dollars = $250,000 ($100,000 ÷ .40[a]).
Margin of safety in dollars = $50,000 ($300,000 − $250,000).
[a]$24 ÷ $60.

(b) Assuming changes to sales price and volume:
Break-even point in units = 5,556 units (rounded) ($100,000 ÷ $18[b]).
Break-even point in sales dollars = $300,000 ($100,000 ÷ ($18 ÷ $54)).
Margin of safety in dollars = $37,500 ($337,500[c] − $300,000).
[b]$60 − (.10 × $60) − 36 = $18.
[c]5,000 + (.25 × 5,000) = 6,250 units, 6,250 units × $54 = $337,500.

(c) The increase in the break-even point and the decrease in the margin of safety indicate that management should not implement the proposed change. The increase in sales volume will result in contribution margin of $112,500 (6,250 × $18), which is $7,500 less than the current amount.

Sales Mix

study objective 3

Explain the term sales mix and its effects on break-even sales.

To this point, our discussion of CVP analysis has assumed that a company sells only one product. However, most companies sell multiple products. When a company sells many products, it is important that management understand its sales mix.

Sales mix is the relative percentage in which a company sells its multiple products. For example, if 80% of Hewlett Packard's unit sales are printers and the other 20% are PCs, its sales mix is 80% to 20%.

Sales mix is important to managers because different products often have substantially different contribution margins. For example, Ford's SUVs and F150 pickup trucks have higher contribution margins compared to its economy cars. Similarly, first-class tickets sold by United Airlines provide substantially higher contribution margins than coach-class tickets.

BREAK-EVEN SALES IN UNITS

Companies can compute break-even sales for a mix of two or more products by determining the **weighted-average unit contribution margin of all the products**. To illustrate, assume that Vargo Video sells not only camcorders but high-definition TV sets as well. Vargo sells its two products in the following amounts: 1,500 camcorders and 500 TVs. The sales mix, expressed as a function of total units sold, is as follows.

Illustration 19-10
Sales mix as a function of units sold

Camcorders	TVs
1,500 units ÷ 2,000 units = 75%	500 units ÷ 2,000 units = 25%

That is, 75% of the units sold are camcorders, and 25% of the units sold are TVs.

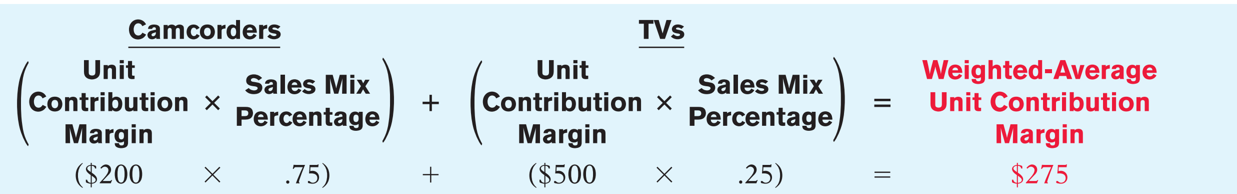
Illustration 19-11 shows additional information related to Vargo Video. The unit contribution margin for camcorders is $200, and for TVs it is $500. Vargo's fixed costs total $275,000.

Illustration 19-11
Per unit data—sales mix

Unit Data	Camcorders	TVs
Selling price	$500	$1,000
Variable costs	300	500
Contribution margin	$200	$500
Sales mix—units	75%	25%
Fixed costs = $275,000		

To compute break-even for Vargo, we then determine the weighted-average unit contribution margin for the two products. We use the weighted-average contribution margin because Vargo sells three times as many camcorders as TV sets, and therefore the camcorders must be counted three times for every TV set sold. The weighted-average contribution margin for a sales mix of 75% camcorders and 25% TVs is $275, which is computed as follows.

Illustration 19-12
Weighted-average unit contribution margin



Camcorders				TVs				
(Unit Contribution Margin	×	Sales Mix Percentage)	+	(Unit Contribution Margin	×	Sales Mix Percentage)	=	Weighted-Average Unit Contribution Margin
($200	×	.75)	+	($500	×	.25)	=	$275

We then use the weighted-average unit contribution margin of $275 to compute the break-even point in unit sales. The computation of break-even sales in units for Vargo Video, assuming $275,000 of fixed costs, is as follows.

Illustration 19-13
Break-even point in units

Fixed Costs	÷	Weighted-Average Unit Contribution Margin	=	Break-even Point in Units
$275,000	÷	$275	=	1,000 units

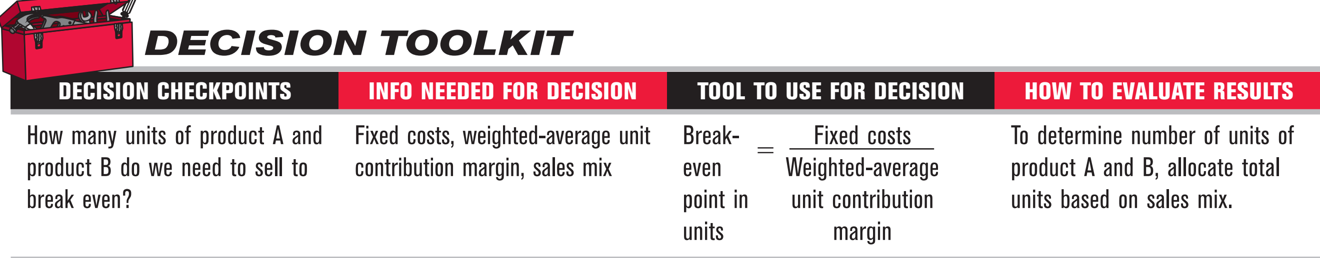
Illustration 19-13 shows the break-even point for Vargo Video is 1,000 units (camcorders and TVs combined). These 1,000 units would be comprised of 750 camcorders (.75 × 1,000 units) and 250 TVs (.25 × 1,000). This can be verified by the computations in Illustration 19-14, which shows that the total contribution margin is $275,000 when 1,000 units are sold, which equals the fixed costs of $275,000.

Illustration 19-14
Break-even proof–sales units

Product	Unit Sales	×	Unit Contribution Margin	=	Total Contribution Margin
Camcorders	750	×	$200	=	$ 150,000
TVs	250	×	500	=	125,000
	1,000				$275,000

Management should continually review the company's sales mix. At any level of units sold, **net income will be greater if higher contribution margin units are sold, rather than lower contribution margin units**. For Vargo Video, the television sets produce the higher contribution margin. Consequently, if Vargo sells 300 TVs and 700 camcorders, net income would be higher than in the current sales mix, even though total units sold are the same.

An analysis of these relationships shows that a shift from low-margin sales to high-margin sales may increase net income, even though there is a decline in total units sold. Likewise, a shift from high- to low-margin sales may result in a decrease in net income, even though there is an increase in total units sold.



DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
How many units of product A and product B do we need to sell to break even?	Fixed costs, weighted-average unit contribution margin, sales mix	Break-even point in units = Fixed costs / Weighted-average unit contribution margin	To determine number of units of product A and B, allocate total units based on sales mix.

BREAK-EVEN SALES IN DOLLARS

The calculation of the break-even point presented for Vargo Video in the previous section works well if a company has only a *small number* of products. In contrast, consider 3M, the maker of Post-it Notes, which has more than 30,000 products. In order to calculate the break-even point for 3M using a weighted-average unit contribution margin, we would need to calculate 30,000 different unit contribution margins. That is not realistic.

Therefore, for a company like 3M, we calculate the break-even point in terms of sales dollars (rather than units sold), using sales information for divisions or product lines (rather than individual products). This approach requires that we compute sales mix as a percentage of total dollars sales (rather than units sold) and that we compute the contribution margin ratio (rather than contribution margin per unit).

To illustrate, suppose that Kale Garden Supply Company has two divisions—Indoor Plants and Outdoor Plants. Each division has hundreds of different types of plants and plant-care products. Illustration 19-15 provides information necessary for performing cost-volume-profit analysis for the two divisions of Kale Garden Supply.

Illustration 19-15
Cost-volume-profit data for Kale Garden Supply

	Indoor Plant Division		Outdoor Plant Division		Total	
Sales	$ 200,000		$ 800,000		$1,000,000	
Variable costs	120,000		560,000		680,000	
Contribution margin	$ 80,000		$ 240,000		$ 320,000	
Sales-mix percentage (Division sales ÷ Total sales)	$ 200,000 / $1,000,000	= .20	$ 800,000 / $1,000,000	= .80		
Contribution margin ratio (Contribution margin ÷ Sales)	$ 80,000 / $ 200,000	= .40	$ 240,000 / $ 800,000	= .30	$ 320,000 / $1,000,000	= .32
Total fixed costs = $300,000						

As shown in Illustration 19-15, the contribution margin ratio for the combined company is 32%, which is computed by dividing the total contribution margin by total sales. It is useful to note that the contribution margin ratio of 32% is a weighted average of the individual contribution margin ratios of the two divisions (40% and 30%). To illustrate, in Illustration 19-16 we multiply each division's contribution margin ratio by its sale-mix percentage, based on dollar sales, and then sum these amounts. As shown later, the calculation in Illustration 19-16 is useful because it enables us to determine how the break-even point changes when the sales mix changes.

Illustration 19-16
Calculation of weighted-average contribution margin

Indoor Plant Division | **Outdoor Plant Division**

$$\left(\text{Contribution Margin Ratio} \times \text{Sales Mix Percentage}\right) + \left(\text{Contribution Margin Ratio} \times \text{Sales Mix Percentage}\right) = \text{Weighted-Average Contribution Margin Ratio}$$

$$(.40 \times .20) + (.30 \times .80) = .32$$

Kale Garden Supply's break-even point in dollars is then computed by dividing fixed costs by the weighted-average contribution margin ratio of 32%, as shown in Illustration 19-17.

Illustration 19-17
Calculation of break-even point in dollars

$$\text{Fixed Costs} \div \text{Weighted-Average Contribution Margin Ratio} = \text{Break-even Point in Dollars}$$

$$\$300,000 \div .32 = \$937,500$$

The break-even point is based on the sales mix of 20% to 80%. Of the company's total break-even sales of \$937,500, a total of \$187,500 (.20 × \$937,500) will come from the Indoor Plant Division, and \$750,000 (.80 × \$937,500) will come from the Outdoor Plant Division.

What would be the impact on the break-even point if a higher percentage of Kale Garden Supply's sales were to come from the Indoor Plant Division? Because the Indoor Plant Division enjoys a higher contribution margin ratio, this change in the sales mix would result in a higher weighted-average contribution margin ratio, and consequently a lower break-even point in dollars. For example, if the sales mix changes to 50% for the Indoor Plant Division and 50% for the Outdoor Plant Division, the weighted-average contribution margin ratio would be 35% [(.40 × .50) + (.30 × .50)]. The new, lower, break-even point is \$857,143 (\$300,000 ÷ .35). The opposite would occur if a higher percentage of sales were expected from the Outdoor Plant Division. As you can see, the information provided using CVP analysis can help managers better understand the impact of sales mix on profitability.

Service Company Insight

Healthy for You, and Great for the Bottom Line

Zoom Kitchen, a chain of four restaurants in the Chicago area, is known for serving sizable portions of meat and potatoes. But the company's management is quite pleased with the fact that during the past four years salad sales have increased from 18% of its sales mix to 40%. Why are they pleased? Because the contribution margin on salads is much higher than on meat. The restaurant made a conscious effort to encourage people to buy more salads by offering an interesting assortment of salad ingredients including jicama, beets, marinated mushrooms, grilled tuna, and carved turkey. Management has to be very sensitive to contribution margin–it costs about \$600,000 to open up a new Zoom Kitchen restaurant.

Source: Amy Zuber, "Salad Sales 'Zoom' at Meat-and-Potatoes Specialist," *Nation's Restaurant News* (November 12, 2001), p. 26.

Why do you suppose restaurants are so eager to sell beverages and desserts? (See page 1028.)

DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
How many dollars of sales are required from each division in order to break even?	Fixed costs, weighted-average contribution margin ratio, sales mix	Break-even point in dollars = Fixed costs / Weighted-average contribution margin ratio	To determine the sales dollars required from each division, allocate the total break-even sales using the sales mix.

Do it!

SALES MIX BREAK-EVEN

Manzeck Bicycles International produces and sells three different types of mountain bikes. Information regarding the three models is shown below.

	Pro	Intermediate	Standard	Total
Units sold	5,000	10,000	25,000	40,000
Selling price	\$800	\$500	\$350	
Variable cost	\$500	\$300	\$250	

The company's total fixed costs to produce the bicycles are $7,500,000.

(a) Determine the sales mix as a function of units sold for the three products.
(b) Determine the weighted-average unit contribution margin.
(c) Determine the total number of units that the company must produce to break even.
(d) Determine the number of units of each model that the company must produce to break even.

Action Plan

- The sales mix is the relative percentage of each product sold in units.
- The weighted-average unit contribution margin is the sum of the per unit contribution margins multiplied by the respective sales mix percentage.
- Determine the break-even point in units by dividing the fixed costs by the weighted-average unit contribution margin.
- Determine the number of units of each model to produce by multiplying the total break-even units by the respective sales mix percentage for each product.

Solution

(a) The sales mix percentages as a function of units sold is:

Pro	Intermediate	Standard
5,000/40,000 = 12.5%	10,000/40,000 = 25%	25,000/40,000 = 62.5%

(b) The weighted-average unit contribution margin is:

[.125 × ($800 − $500)] + [.25 × ($500 − $300)] + [.625 × ($350 − $250)] = $150

(c) The break-even point in units is:

$7,500,000 ÷ $150 = 50,000 units

(d) The break-even units to produce for each product are:

Pro:	50,000 units × 12.5% =	6,250 units
Intermediate:	50,000 units × 25% =	12,500 units
Standard:	50,000 units × 62.5% =	31,250 units
		50,000 units

DETERMINING SALES MIX WITH LIMITED RESOURCES

study objective 4
Determine sales mix when a company has limited resources.

In the previous discussion, we assumed a certain sales mix and then determined the break-even point given that sales mix. We now discuss how limited resources influence the sales-mix decision.

Everyone's resources are limited. For a company, the limited resource may be floor space in a retail department store, or raw materials, direct labor hours, or machine capacity in a manufacturing company. When a company has limited resources, management must decide which products to make and sell in order to maximize net income.

To illustrate, recall that Vargo manufactures camcorders and TVs. The limiting resource is machine capacity, which is 3,600 hours per month. Relevant data consist of the following.

Illustration 19-18
Contribution margin and machine hours

	Camcorders	TVs
Contribution margin per unit	$200	$500
Machine hours required per unit	.2	.625

Helpful Hint CM alone is not enough to make this decision. The key factor is CM per unit of limited resource.

The TV sets may appear to be more profitable since they have a higher contribution margin per unit ($500) than the camcorders ($200). However, the camcorders take fewer machine hours to produce than the TV sets. Therefore, it is necessary to find the **contribution margin per unit of limited resource**—in this case, contribution margin per machine hour. This is obtained by dividing the contribution margin per unit of each product by the number of units of the limited resource required for each product, as shown in Illustration 19-19.

	Camcorders	TVs
Contribution margin per unit (a)	$200	$500
Machine hours required (b)	0.2	0.625
Contribution margin per unit of limited resource [(a) ÷ (b)]	**$1,000**	**$800**

Illustration 19-19
Contribution margin per unit of limited resource

The computation shows that the camcorders have a higher contribution margin per unit of limited resource. This would suggest that, given sufficient demand for camcorders, Vargo should shift the sales mix to produce more camcorders or increase machine capacity.

As indicated in Illustration 19-19, the constraint for the production of the TVs is the larger number of machine hours needed to produce them. In addressing this problem, we have taken the limited number of machine hours as a given, and have attempted to maximize the contribution margin given the constraint. One question that Vargo should ask, however, is whether this constraint can be reduced or eliminated. If Vargo is able to increase machine capacity from 3,600 hours to 4,200 hours, the additional 600 hours could be used to produce either the camcorders or TVs. The total contribution margin under each alternative is found by multiplying the machine hours by the contribution margin per unit of limited resource, as shown below.

	Camcorders	TVs
Machine hours (a)	600	600
Contribution margin per unit of limited resource (b)	$ 1,000	$ 800
Contribution margin [(a) × (b)]	**$600,000**	**$480,000**

Illustration 19-20
Incremental analysis–computation of total contribution margin

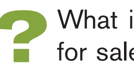
From this analysis, we can see that to maximize net income, all of the increased capacity should be used to make and sell the camcorders.

Vargo's manufacturing constraint might be due to a bottleneck in production or to poorly trained machine operators. In addition to finding ways to solve those problems, the company should consider other possible solutions, such as outsourcing part of the production, acquiring additional new equipment (discussed in Chapter 23), or striving to eliminate any non–value-added activities (see Chapter 17). As discussed in Chapter 14, this approach to evaluating constraints is referred to as the theory of constraints. The **theory of constraints** is a specific approach used to identify and manage constraints in order to achieve the company's goals. According to this theory, a company must continually identify its constraints and find ways to reduce or eliminate them, where appropriate.

Management Insight

Something Smells

When fragrance sales went flat, retailers turned up the heat on fragrance manufacturers. They reduced the amount of floor space devoted to fragrances, leaving fragrance manufacturers fighting each other for the smaller space. The retailer doesn't just choose the fragrance with the highest contribution margin. Instead, it chooses the fragrance with the highest contribution margin per square foot for a given period of time. In this game, a product with a lower contribution margin, but a higher turnover, could well be the winner.



What is the limited resource for a retailer, and what implications does this have for sales mix? (See page 1028.)

DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
How many units of product A and B should we produce in light of a limited resource?	Contribution margin per unit, limited resource required per unit	Contribution margin per unit of limited resource = $\frac{\text{Contribution margin per unit}}{\text{Limited resource per unit}}$	Any additional capacity of limited resource should be applied toward the product with higher contribution margin per unit of limited resource.

before you go on...

SALES MIX WITH LIMITED RESOURCES

Do it! Carolina Corporation manufactures and sells three different types of high-quality sealed ball bearings. The bearings vary in terms of their quality specifications—primarily with respect to their smoothness and roundness. They are referred to as Fine, Extra-Fine, and Super-Fine bearings. Machine time is limited. More machine time is required to manufacture the Extra-Fine and Super-Fine bearings. Additional information is provided below.

	Product		
	Fine	**Extra-Fine**	**Super-Fine**
Selling price	$6.00	$10.00	$16.00
Variable costs and expenses	4.00	6.50	11.00
Contribution margin	$2.00	$ 3.50	$ 5.00
Machine hours required	0.02	0.04	0.08

(a) Ignoring the machine time constraint, what strategy would appear optimal?
(b) What is the contribution margin per unit of limited resource for each type of bearing?
(c) If additional machine time could be obtained, how should the additional capacity be used?

Action Plan

- Calculate the contribution margin per unit of limited resource for each product.
- Apply the formula for the contribution margin per unit of limited resource.
- To maximize net income, shift sales mix to the product with the highest contribution margin per unit of limited resource.

Solution

(a) The Super-Fine bearings have the highest contribution margin per unit. Thus, ignoring any manufacturing constraints, it would appear that the company should shift toward production of more Super-Fine units.

(b) The contribution margin per unit of limited resource (machine hours) is calculated as:

	Fine	Extra-Fine	Super-Fine
$\frac{\text{Contribution margin per unit}}{\text{Limited resource consumed per unit}}$	$\frac{\$2}{.02} = \$100$	$\frac{\$3.5}{.04} = \$87.50$	$\frac{\$5}{.08} = \$62.50$

(c) The Fine bearings have the highest contribution margin per unit of limited resource, even though they have the lowest contribution margin per unit. Given the resource constraint, any additional capacity should be used to make Fine bearings.

Related exercise material: **BE19-11, Do it! 19-4, E19-11, E19-12,** and **E19-13**.

Cost Structure and Operating Leverage

study objective 5
Understand how operating leverage affects profitability.

Cost structure refers to the relative proportion of fixed versus variable costs that a company incurs. Cost structure can have a significant effect on profitability. For example, computer equipment manufacturer Cisco Systems has substantially reduced its fixed costs by choosing to outsource much of its production. While this makes Cisco less susceptible to economic swings, it has also reduced its ability to experience the incredible profitability that it used to have during economic booms.

The choice of cost structure must be carefully considered. There are many ways that companies can influence their cost structure. For example, by acquiring sophisticated robotic equipment, many companies have reduced their use of manual labor. Similarly, some brokerage firms, such as E*Trade, have reduced their reliance on human brokers and have instead invested heavily in computers and online technology. In so doing, they have increased their reliance on fixed costs (through depreciation on the robotic equipment or computer equipment) and reduced their reliance on variable costs (the variable employee labor cost). Alternatively, some companies have reduced their fixed costs and increased their variable costs by outsourcing their production. Nike, for example, does very little manufacturing, but instead outsources the manufacture of nearly all of its shoes. It has consequently converted many of its fixed costs into variable costs and therefore changed its cost structure.

Consider the following example of Vargo Video and one of its competitors, New Wave Company. Both make camcorders. Vargo Video uses a traditional, labor-intensive manufacturing process. New Wave Company has invested in a completely automated system. The factory employees are involved only in setting up, adjusting, and maintaining the machinery. Illustration 19-21 shows CVP income statements for each company.

Illustration 19-21
CVP income statements for two companies

	Vargo Video	New Wave Company
Sales	$800,000	$800,000
Variable costs	480,000	160,000
Contribution margin	320,000	640,000
Fixed costs	200,000	520,000
Net income	$120,000	$120,000

Both companies have the same sales and the same net income. However, because of the differences in their cost structures, they differ greatly in the risks and rewards related to increasing or decreasing sales. Let's evaluate the impact of cost structure on the profitability of the two companies.

EFFECT ON CONTRIBUTION MARGIN RATIO

First let's look at the contribution margin ratio. Illustration 19-22 shows the computation of the contribution margin ratio for each company.

Illustration 19-22
Contribution margin ratio for two companies

	Contribution Margin	÷	Sales	=	Contribution Margin Ratio
Vargo Video	$320,000	÷	$800,000	=	.40
New Wave	$640,000	÷	$800,000	=	.80

New Wave has a contribution margin ratio of 80% versus only 40% for Vargo. That means that with every dollar of sales, New Wave generates 80 cents of contribution margin (and thus an 80 cent increase in net income), versus only 40 cents for Vargo. However, it also means that for every dollar that sales decline, New Wave loses 80 cents in net income, whereas Vargo will lose only 40 cents. New Wave's cost structure, which relies more heavily on fixed costs, makes it more sensitive to changes in sales revenue.

EFFECT ON BREAK-EVEN POINT

The difference in cost structure also affects the break-even point. The break-even point for each company is calculated in Illustration 19-23.

Illustration 19-23
Computation of break-even point for two companies

	Fixed Costs	÷	Contribution Margin Ratio	=	Break-even Point in Dollars
Vargo Video	$200,000	÷	.40	=	$500,000
New Wave	$520,000	÷	.80	=	$650,000

New Wave needs to generate $150,000 ($650,000 − $500,000) more in sales than Vargo before it breaks even. This makes New Wave riskier than Vargo because a company cannot survive for very long unless it at least breaks even.

EFFECT ON MARGIN OF SAFETY RATIO

We can also evaluate the relative impact that changes in sales would have on the two companies by computing the margin of safety ratio. Illustration 19-24 shows the computation of the **margin of safety ratio** for the two companies.

Illustration 19-24
Computation of margin of safety ratio for two companies

	(Actual Sales	−	Break-even Sales)	÷	Actual Sales	=	Margin of Safety Ratio
Vargo Video	($800,000	−	$500,000)	÷	$800,000	=	.38
New Wave	($800,000	−	$650,000)	÷	$800,000	=	.19

The difference in the margin of safety ratio also reflects the difference in risk between the two companies. Vargo could sustain a 38% decline in sales before it would be operating at a loss. New Wave could sustain only a 19% decline in sales before it would be "in the red."

OPERATING LEVERAGE

Operating leverage refers to the extent to which a company's net income reacts to a given change in sales. Companies that have higher fixed costs relative to variable costs have higher operating leverage. When a company's sales revenue is increasing, high operating leverage is a good thing because it means that profits will increase rapidly. But when sales are declining, too much operating leverage can have devastating consequences.

Degree of Operating Leverage

How can we compare operating leverage between two companies? The **degree of operating leverage** provides a measure of a company's earnings volatility and can be used to compare companies. Degree of operating leverage is computed by dividing contribution margin by net income. This formula is presented in Illustration 19-25 and applied to our two manufacturers of camcorders.

Illustration 19-25
Computation of degree of operating leverage

	Contribution Margin	÷	Net Income	=	Degree of Operating Leverage
Vargo Video	$320,000	÷	$120,000	=	2.67
New Wave	$640,000	÷	$120,000	=	5.33

New Wave's earnings would go up (or down) by about two times (5.33 ÷ 2.67 = 1.99) as much as Vargo's with an equal increase (or decrease) in sales. For example, suppose both companies experience a 10% decrease in sales. Vargo's net income will decrease by 26.7% (2.67 × 10%), while New Wave's will decrease by 53.3% (5.33 × 10%). Thus, New Wave's higher operating leverage exposes it to greater earnings volatility risk.

You should be careful not to conclude from this analysis that a cost structure that relies on higher fixed costs, and consequently has higher operating leverage, is necessarily bad. When used carefully, operating leverage can add considerably to a company's profitability. For example, computer equipment manufacturer Komag enjoyed a 66% increase in net income when its sales increased by only 8%. As one commentator noted, "Komag's fourth quarter illustrates the company's significant operating leverage; a small increase in sales leads to a big profit rise." However, as our illustration demonstrates, increased reliance on fixed costs increases a company's risk.

Service Company Insight

The Cost of Experience

Cost structures vary considerably across industries, but they also vary considerably across companies within industries. For example, the airline industry is characterized by two types of companies—low-cost, low-fare airlines such as Southwest Airlines and JetBlue Airways, and the high-cost, high-fare airline giants such as United Airlines and American Airlines. One reason that airline giants have higher costs is that they are somewhat trapped in a flight system that they invented—the hub-and-spoke approach. Under this approach, passengers are flown from their city of origination to centralized hub cities and then flown to their ultimate destination. This results in high fixed costs and high operating leverage. When air traffic was at peak volumes during the late 1990s, the large carriers enjoyed record profits. But when travel volume declined, this same cost structure resulted in massive losses and a series of bankruptcy declarations.

? As a result of being in business for a long time, the established airline giants also must pay very large retirement payments, a cost the newer airlines do not face. What impact do these payments have on the break-even equation? (See page 1028.)

DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
How sensitive is the company's net income to changes in sales?	Contribution margin and net income	$\text{Degree of operating leverage} = \frac{\text{Contribution margin}}{\text{Net income}}$	Reports the change in net income that will occur with a given change in sales. A high degree of operating leverage means that the company's net income is very sensitive to changes in sales.

USING THE DECISION TOOLKIT

Rexfield Corp. is contemplating a huge investment in automated mass-spectrometers for its medical laboratory testing services. Its current process relies heavily on the expertise of a high number of lab technicians. The new equipment would employ a computer expert system that integrates much of the decision process and knowledge base that is used by a skilled lab technician.

Rex Field, the company's CEO, has requested that an analysis of projected results using the old technology versus the new technology be done for the coming year. The accounting department has prepared the following CVP income statements for use in your analysis.

	Old	New
Sales revenue	$2,000,000	$2,000,000
Variable costs	1,400,000	600,000
Contribution margin	600,000	1,400,000
Fixed costs	400,000	1,200,000
Net income	$ 200,000	$ 200,000

Instructions

Use the information provided above to do the following.

(a) Compute the degree of operating leverage for the company under each scenario, and discuss your results.
(b) Compute the break-even point in dollars and margin of safety ratio for the company under each scenario, and discuss your results.

Solution

(a)

	Contribution Margin	÷	Net Income	=	Degree of Operating Leverage
Old	$600,000	÷	$200,000	=	3
New	$1,400,000	÷	$200,000	=	7

The degree of operating leverage measures the company's sensitivity to changes in sales. By switching to a cost structure dominated by fixed costs, the company would significantly increase its operating leverage. As a result, with a percentage change in sales, its percentage change in net income would be 2.33 times as much (7 ÷ 3) under the new structure as it would under the old.

(b) To compute the break-even point in sales dollars, we need first to compute the contribution margin ratio under each scenario. Under the old structure, the contribution margin ratio would be .30 ($600,000 ÷ $2,000,000), and under the new it would be .70 ($1,400,000 ÷ $2,000,000).

	Fixed Costs	÷	Contribution Margin Ratio	=	Break-even Point in Dollars
Old	$400,000	÷	.30	=	$1,333,333
New	$1,200,000	÷	.70	=	$1,714,286

Because the company's fixed costs would be substantially higher under the new cost structure, its break-even point would increase significantly, from $1,333,333 to $1,714,286. A higher break-even point is riskier because it means that the company must generate higher sales to be profitable.

The margin of safety ratio tells how far sales can fall before the company is operating at a loss.

	(Actual Sales	−	Break-even Sales)	÷	Actual Sales	=	Margin of Safety Ratio
Old	($2,000,000	−	$1,333,333)	÷	$2,000,000	=	.33
New	($2,000,000	−	$1,714,286)	÷	$2,000,000	=	.14

Under the old structure, sales could fall by 33% before the company would be operating at a loss. Under the new structure, sales could fall by only 14%.

Summary of Study Objectives

1 Describe the essential features of a cost-volume-profit income statement. The CVP income statement classifies costs and expenses as variable or fixed and reports contribution margin in the body of the statement.

2 Apply basic CVP concepts. Contribution margin is the amount of revenue remaining after deducting variable costs. It can be expressed as a per unit amount or as a ratio. The break-even point in units is fixed costs divided by contribution margin per unit. The break-even point in dollars is fixed costs divided by the contribution margin ratio. These formulas can also be used to determine units or sales dollars needed to achieve target net income, simply by adding target net income to fixed costs before dividing by the contribution margin. Margin of safety indicates how much sales can decline before the company is operating at a loss. It can be expressed in dollar terms or as a percentage.

3 Explain the term sales mix and its effects on break-even sales. Sales mix is the relative proportion in which each product is sold when a company sells more than one product. For a company with a small number of products, break-even sales in units is determined by using the weighted-average unit contribution margin of all the products. If the company sells many different products, then calculating the break-even point using unit information is not practical. Instead, in a company with many products, break-even sales in dollars is calculated using the weighted-average contribution margin ratio.

4 Determine sales mix when a company has limited resources. When a company has limited resources, it is necessary to find the contribution margin per unit of limited resource. This amount is then multiplied by the units of limited resource to determine which product maximizes net income.

5 Understand how operating leverage affects profitability. Operating leverage refers to the degree to which a company's net income reacts to a change in sales. Operating leverage is determined by a company's relative use of fixed versus variable costs. Companies with high fixed costs relative to variable costs have high operating leverage. A company with high operating leverage will experience a sharp increase (decrease) in net income with a given increase (decrease) in sales. The degree of operating leverage can be measured by dividing contribution margin by net income.

DECISION TOOLKIT A SUMMARY

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
How can a company use CVP analysis to improve profitability?	Data on what effect a price change, a fixed-cost change, or a trade-off between fixed and variable costs would have on volume and costs	Measurement of income at new volume levels	If profitability increases under proposed change, adopt change.
How many units of product A and product B do we need to sell to break even?	Fixed costs, weighted-average unit contribution margin, sales mix	Break-even point in units = Fixed costs / Weighted-average unit contribution margin	To determine number of units of product A and B, allocate total units based on sales mix.
How many dollars of sales are required from each division in order to break even?	Fixed costs, weighted-average contribution margin ratio, sales mix	Break-even point in dollars = Fixed costs / Weighted-average contribution margin ratio	To determine the sales dollars required from each division, allocate the total break-even sales using the sales mix.

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
How many units of product A and B should we produce in light of a limited resource?	Contribution margin per unit, limited resource required per unit	Contribution margin per unit of limited resource = Contribution margin per unit / Limited resource per unit	Any additional capacity of limited resource should be applied toward the product with higher contribution margin per unit of limited resource.
How sensitive is the company's net income to changes in sales?	Contribution margin and net income	Degree of operating leverage = Contribution margin / Net income	Reports the change in net income that will occur with a given change in sales. A high degree of operating leverage means that the company's net income is very sensitive to changes in sales.

appendix 19A

Absorption Costing versus Variable Costing

study objective 6
Explain the difference between absorption costing and variable costing.

In the earlier chapters, we classified both variable and fixed manufacturing costs as product costs. In job order costing, for example, a job is assigned the costs of direct materials, direct labor, and **both** variable and fixed manufacturing overhead. This costing approach is referred to as **full** or **absorption costing**. It is so named because all manufacturing costs are charged to, or absorbed by, the product. Absorption costing is the approach used for external reporting under generally accepted accounting principles.

An alternative approach is to use **variable costing**. Under variable costing, only direct materials, direct labor, and variable manufacturing overhead costs are considered product costs. Companies recognize fixed manufacturing overhead costs as period costs (expenses) when incurred. The difference between absorption costing and variable costing is shown graphically as follows.

Illustration 19A-1
Difference between absorption costing and variable costing

Under both absorption and variable costing, selling and administrative expenses are period costs.

Companies may not use variable costing for external financial reports because generally accepted accounting principles require that fixed manufacturing overhead be accounted for as a product cost.

EXAMPLE COMPARING ABSORPTION COSTING WITH VARIABLE COSTING

To illustrate absorption and variable costing, assume that Premium Products Corporation manufactures a polyurethane sealant, called Fix-It, for car windshields. Relevant data for Fix-It in January 2012, the first month of production, are as shown on the next page.

Illustration 19A-2
Sealant sales and cost data for Premium Products Corporation

Selling price	$20 per unit.
Units	Produced 30,000; sold 20,000; beginning inventory zero.
Variable unit costs	Manufacturing $9 (direct materials $5, direct labor $3, and variable overhead $1).
	Selling and administrative expenses $2.
Fixed costs	Manufacturing overhead $120,000.
	Selling and administrative expenses $15,000.

The per unit manufacturing cost under each costing approach is computed in Illustration 19A-3.

Illustration 19A-3
Computation of per unit manufacturing cost

Type of Cost	Absorption Costing	Variable Costing
Direct materials	$ 5	$5
Direct labor	3	3
Variable manufacturing overhead	1	1
Fixed manufacturing overhead ($120,000 ÷ 30,000 units produced)	**4**	**0**
Manufacturing cost per unit	**$13**	**$9**

The manufacturing cost per unit is $4 higher ($13 − $9) for absorption costing. This occurs because fixed manufacturing overhead costs are a product cost under absorption costing. Under variable costing, they are, instead, a period cost, and so they are expensed. Based on these data, each unit sold and each unit remaining in inventory is costed under absorption costing at $13 and under variable costing at $9.

Absorption Costing Example

Illustration 19A-4 shows the income statement for Premium Products using absorption costing. It shows that cost of goods manufactured is $390,000, computed by multiplying the 30,000 units produced times the manufacturing cost per unit of $13 (see Illustration 19A-3). Cost of goods sold is $260,000, after

Illustration 19A-4
Absorption costing income statement

PREMIUM PRODUCTS CORPORATION
Income Statement
For the Month Ended January 31, 2012
Absorption Costing

Sales (20,000 units × $20)		$400,000
Cost of goods sold		
Inventory, January 1	$ –0–	
Cost of goods manufactured (30,000 units × $13)	390,000	
Cost of goods available for sale	390,000	
Inventory, January 31 (10,000 units × $13)	**130,000**	
Cost of goods sold (20,000 units × $13)		260,000
Gross profit		140,000
Variable selling and administrative expenses (20,000 × $2)	40,000	
Fixed selling and administrative expenses	15,000	55,000
Net income		**$ 85,000**

Helpful Hint The income statement format in Illustration 19A-4 is the same as that used under generally accepted accounting principles.

subtracting ending inventory of $130,000. Under absorption costing, $40,000 of the fixed overhead (10,000 units × $4) is deferred to a future period as part of the cost of ending inventory.

Variable Costing Example

As Illustration 19A-5 shows, companies use the cost-volume-profit format in preparing a variable costing income statement. The variable manufacturing cost of $270,000 is computed by multiplying the 30,000 units produced times variable manufacturing cost of $9 per unit (see Illustration 19A-3). As in absorption costing, both variable and fixed selling and administrative expenses are treated as period costs.

Illustration 19A-5
Variable costing income statement

Helpful Hint Note the difference in the computation of the ending inventory: $9 per unit here, $13 per unit in Illustration 19A-4.

PREMIUM PRODUCTS CORPORATION
Income Statement
For the Month Ended January 31, 2012
Variable Costing

Sales (20,000 units × $20)		$400,000
Variable cost of goods sold		
Inventory, January 1	$ –0–	
Variable cost of goods manufactured (30,000 units × $9)	270,000	
Variable cost of goods available for sale	270,000	
Inventory, January 31 (10,000 units × $9)	**90,000**	
Variable cost of goods sold	180,000	
Variable selling and administrative expenses (20,000 units × $2)	40,000	220,000
Contribution margin		180,000
Fixed manufacturing overhead	120,000	
Fixed selling and administrative expenses	15,000	135,000
Net income		**$ 45,000**

There is one primary difference between variable and absorption costing: Under variable costing, companies charge the fixed manufacturing overhead as an expense in the current period. Fixed manufacturing overhead costs of the current period, therefore, are not deferred to future periods through the ending inventory. As a result, absorption costing will show a **higher net income number** than variable costing **whenever units produced exceed units sold**. This difference can be seen in the income statements in Illustrations 19A-4 and 19A-5. There is a $40,000 difference in the ending inventories ($130,000 under absorption costing versus $90,000 under variable costing). Under absorption costing, $40,000 of the fixed overhead costs (10,000 units × $4) has been deferred to a future period as part of inventory. In contrast, under variable costing, all fixed manufacturing costs are expensed in the current period.

As shown, when units produced exceed units sold, income under absorption costing is *higher*. When units produced are less than units sold, income under absorption costing is *lower*. When units produced and sold are the same, net income will be *equal* under the two costing approaches. In this case, there is no increase in ending inventory. So fixed overhead costs of the current period are not deferred to future periods through the ending inventory.

AN EXTENDED EXAMPLE

study objective 7

Discuss net income effects under absorption costing versus variable costing.

To further illustrate the concepts underlying absorption and variable costing, we will look at an extended example using Overbay Inc., a manufacturer of small airplane drones. We assume that production volume stays the same each year over the three-year period, but the number of units sold varies each year.

2012 Results

As indicated in Illustration 19A-6 below, the variable manufacturing cost per drone is $240,000, and the fixed manufacturing overhead cost per drone is $60,000 (assuming 10 drones). Total manufacturing cost per drone under absorption costing is therefore $300,000 ($240,000 + $60,000). Overbay also has variable selling and administrative expenses of $5,000 per drone. The fixed selling and administrative expenses are $80,000.

Illustration 19A-6
Information for Overbay Inc.

	2012	2013	2014
Volume information			
Drones in beginning inventory	0	0	2
Drones produced	10	10	10
Drones sold	10	8	12
Drones in ending inventory	0	2	0
Financial information			
Selling price per drone	$400,000		
Variable manufacturing cost per drone	$240,000		
Fixed manufacturing overhead for the year	$600,000		
Fixed manufacturing overhead per drone	$ 60,000 ($600,000 ÷ 10)		
Variable selling and administrative expenses per drone	$ 5,000		
Fixed selling and administrative expenses	$ 80,000		

An absorption costing income statement for 2012 for Overbay Inc. is shown in Illustration 19A-7.

Illustration 19A-7
Absorption costing income statement—2012

OVERBAY INC.
Income Statement
For the Year Ended December 31, 2012
Absorption Costing

Sales (10 drones × $400,000)		$4,000,000
Cost of goods sold (10 drones × $300,000)		3,000,000
Gross profit		1,000,000
Variable selling and administrative expenses (10 drones × $5,000)	$50,000	
Fixed selling and administrative expenses	80,000	130,000
Net income		$ 870,000

Overbay reports net income of $870,000 under absorption costing.

Under a variable costing system the income statement follows a cost-volume-profit (CVP) format. In this case, the manufacturing cost is comprised solely of

the variable manufacturing costs of $240,000 per drone. The fixed manufacturing overhead costs of $600,000 for the year are expensed in 2012. As in absorption costing, the fixed and variable selling and administrative expenses are period costs expensed in 2012. A variable costing income statement for Overbay Inc. for 2012 is shown in Illustration 19A-8.

Illustration 19A-8
Variable costing income statement—2012

OVERBAY INC.
Income Statement
For the Year Ended December 31, 2012
Variable Costing

Sales (10 drones × $400,000)		$4,000,000
Variable cost of goods sold		
(10 drones × $240,000)	$2,400,000	
Variable selling and administrative expenses		
(10 drones × $5,000)	50,000	2,450,000
Contribution margin		1,550,000
Fixed manufacturing overhead	600,000	
Fixed selling and administrative expenses	80,000	680,000
Net income		$ 870,000

As shown in Illustration 19A-8, the variable costing net income of $870,000 is the same as the absorption costing net income computed in Illustration 19A-7. **When the numbers of units produced and sold are the same, net income is equal under the two costing approaches.** Because no increase in ending inventory occurs, no fixed manufacturing overhead costs incurred in 2012 are deferred to future periods using absorption costing.

2013 Results

In 2013, Overbay produced ten drones but sold only eight drones. As a result, there are two drones in ending inventory. The absorption costing income statement for 2013 is shown in Illustration 19A-9.

Illustration 19A-9
Absorption costing income statement—2013

OVERBAY INC.
Income Statement
For the Year Ended December 31, 2013
Absorption Costing

Sales (8 drones × $400,000)		$3,200,000
Cost of goods sold (8 drones × $300,000)		2,400,000
Gross profit		800,000
Variable selling and administrative expenses		
(8 drones × $5,000)	$40,000	
Fixed selling and administrative expenses	80,000	120,000
Net income		$ 680,000

Under absorption costing, the ending inventory of two drones is $600,000 ($300,000 × 2). Each unit of ending inventory includes $60,000 of fixed manufacturing overhead. Therefore, fixed manufacturing overhead costs of $120,000 ($60,000 × 2 drones) are deferred until a future period.

The variable costing income statement for 2013 is shown in Illustration 19A-10.

Illustration 19A-10
Variable costing income statement—2013

OVERBAY INC. Income Statement For the Year Ended December 31, 2013 Variable Costing		
Sales (8 drones × $400,000)		$3,200,000
Variable cost of goods sold		
(8 drones × $240,000)	$1,920,000	
Variable selling and administrative expenses		
(8 drones × $5,000)	40,000	1,960,000
Contribution margin		1,240,000
Fixed manufacturing overhead	600,000	
Fixed selling and administrative expenses	80,000	680,000
Net income		$ 560,000

As shown, when units produced (10) exceeds units sold (8), net income under absorption costing ($680,000) is higher than net income under variable costing ($560,000). The reason: The cost of the ending inventory is higher under absorption costing than under variable costing. In 2013, under absorption costing, fixed manufacturing overhead of $120,000 is deferred and carried to future periods as part of inventory. Under variable costing, the $120,000 is expensed in the current period and, therefore the difference in the two net income numbers is $120,000 ($680,000 − $560,000).

2014 Results

In 2014, Overbay produced 10 drones and sold 12 (10 drones from the current year's production and 2 drones from the beginning inventory). As a result, there are no drones in ending inventory. The absorption costing income statement for 2014 is shown in Illustration 19A-11.

Illustration 19A-11
Absorption costing income statement—2014

OVERBAY INC. Income Statement For the Year Ended December 31, 2014 Absorption Costing		
Sales (12 drones × $400,000)		$4,800,000
Cost of goods sold (12 drones × $300,000)		3,600,000
Gross profit		1,200,000
Variable selling and administrative expenses		
(12 drones × $5,000)	$60,000	
Fixed selling and administrative expenses	80,000	140,000
Net income		$1,060,000

Fixed manufacturing costs of $720,000 are expensed as part of cost of goods sold in 2014. This $720,000 includes $120,000 of fixed manufacturing costs incurred during 2013 and included in beginning inventory, plus $600,000 of fixed manufacturing costs incurred during 2014. Given this result for the absorption costing statement, what would you now expect the result to be under variable costing? Let's take a look.

The variable costing income statement for 2014 is shown in Illustration 19A-12

Illustration 19A-12
Variable costing income statement—2014

OVERBAY INC.
Income Statement
For the Year Ended December 31, 2014
Variable Costing

Sales (12 drones × $400,000)		$4,800,000
Variable cost of goods sold		
(12 drones × $240,000)	$2,880,000	
Variable selling and administrative expenses		
(12 drones × $5,000)	60,000	2,940,000
Contribution margin		1,860,000
Fixed manufacturing overhead	600,000	
Fixed selling and administrative expenses	80,000	680,000
Net income		$1,180,000

When Drones produced (10) are less than Drones sold (12), net income under absorption costing ($1,060,000) is less than net income under variable costing ($1,180,000). This difference of $120,000 ($1,180,000 − $1,060,000) results because $120,000 of fixed manufacturing overhead costs in beginning inventory are charged to 2014 under absorption costing. Under variable costing, there is no fixed manufacturing overhead cost in beginning inventory.

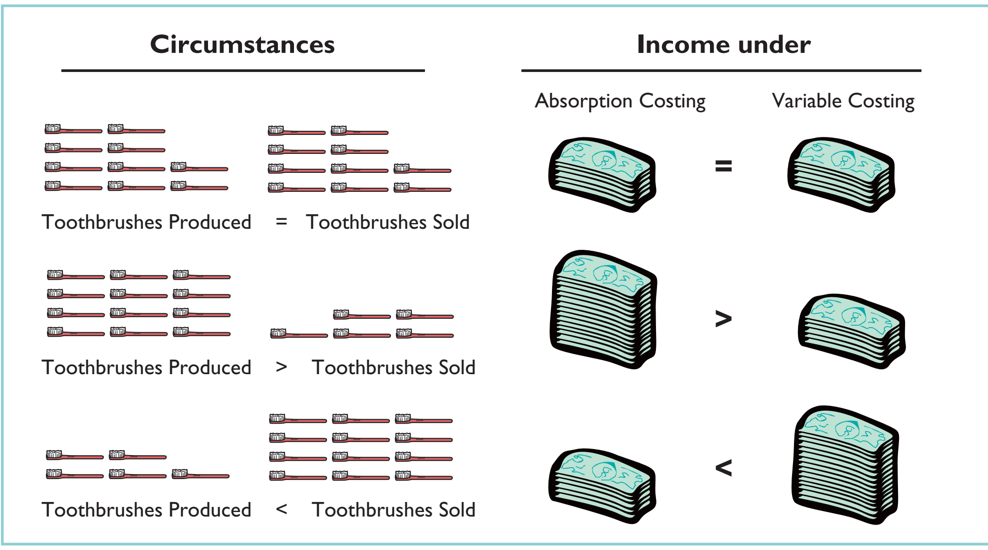
Illustration 19A-13 summarizes the results of the three years.

Illustration 19A-13
Comparison of net income under two costing approaches

	Net Income under Two Costing Approaches		
	2012	**2013**	**2014**
	Production = Sales	**Production > Sales**	**Production < Sales**
Absorption costing	$870,000	$ 680,000	$1,060,000
Variable costing	870,000	560,000	1,180,000
Difference	$ –0–	$120,000	$(120,000)

This relationship between production and sales and its effect on net income under the two costing approaches is shown graphically in Illustration 19A-14.

Illustration 19A-14
Summary of income effects under absorption costing and variable costing



DECISION-MAKING CONCERNS

study objective 8

Discuss the merits of absorption versus variable costing for management decision making.

Generally accepted accounting principles require that absorption costing be used for the costing of inventory for external reporting purposes. Net income measured under GAAP (absorption costing) is often used internally to evaluate performance, justify cost reductions, or evaluate new projects. Some companies, however, have recognized that net income calculated using GAAP does not highlight differences between variable and fixed costs and may lead to poor business decisions. Consequently, these companies use variable costing for internal reporting purposes. The following discussion and example highlight a significant problem related to the use of absorption costing for decision-making purposes.

When production exceeds sales, absorption costing reports a higher net income than variable costing. The reason is that some fixed manufacturing costs are not expensed in the current period, but are deferred to future periods as part of inventory. As a result, management may be tempted to overproduce in a given period in order to increase net income. Although net income will increase, this decision to overproduce may not be in the company's best interest.

Suppose, for example, a division manager's compensation is based upon the division's net income. In such a case the manager may decide to meet the net income targets by increasing production. While this overproduction may increase the manager's compensation, the buildup of inventories in the long run will lead to additional costs to the company. Variable costing avoids this situation, because net income under variable costing is unaffected by changes in production levels, as the following illustration shows.

Warren Lund, a division manager of Walker Enterprises, is under pressure to boost the performance of the Lighting Division in 2012. Unfortunately, recent profits have not met expectations. The expected sales for this year are 20,000 units. As he plans for the year, Warren has to decide whether to produce 20,000 or 30,000 units. The following facts are available for the division.

Illustration 19A-15
Facts for Lighting Division—2012

Beginning inventory	0
Expected sales in units	20,000
Selling price per unit	$15
Variable manufacturing cost per unit	$6
Fixed manufacturing overhead cost (total)	$60,000
Fixed manufacturing overhead costs per unit	
Based on 20,000 units	$3 per unit ($60,000 ÷ 20,000 units)
Based on 30,000 units	$2 per unit ($60,000 ÷ 30,000 units)
Total manufacturing cost per unit	
Based on 20,000 units	$9 per unit ($6 variable + $3 fixed)
Based on 30,000 units	$8 per unit ($6 variable + $2 fixed)
Variable selling and administrative expenses per unit	$1
Fixed selling and administrative expenses	$15,000

Illustration 19A-16 presents the division's results based upon the two possible levels of output under absorption costing.

If the Lighting Division produces 20,000 units, its net income under absorption costing is $85,000. If it produces 30,000 units, its net income is $105,000. By producing 30,000 units, the division has inventory of 10,000 units. This excess inventory causes net income to increase $20,000 because $20,000 of fixed costs (10,000 units × $2) are not charged to the current year, but are deferred to future periods.

What do you think Warren Lund might do in this situation? Given his concern about the profit numbers of the Lighting Division, he may be tempted to increase production. Although this increased production will increase 2012 net income, it may be costly to the company in the long run.

Illustration 19A-16
Absorption costing income statement—2012

LIGHTING DIVISION
Income Statement
For the Year Ended December 31, 2012
Absorption Costing

	20,000 Produced	30,000 Produced
Sales (20,000 units × $15)	$300,000	$ 300,000
Cost of goods sold	180,000*	160,000**
Gross profit	120,000	140,000
Variable selling and administrative expenses		
(20,000 units × $1)	20,000	20,000
Fixed selling and administrative expenses	15,000	15,000
Net income	$ 85,000	$105,000

*20,000 units × $9
**20,000 units × $8

Now let's evaluate the same situation under variable costing. A variable costing income statement is shown for production at both 20,000 and 30,000 units, using the information from Illustration 19A-15.

Illustration 19A-17
Variable costing income statement—2012

LIGHTING DIVISION
Income Statement
For the Year Ended December 31, 2012
Variable Costing

	20,000 Produced	30,000 Produced
Sales (20,000 units × $15)	$300,000	$300,000
Variable cost of goods sold (20,000 units × $6)	120,000	120,000
Variable selling and administrative expenses		
(20,000 units × $1)	20,000	20,000
Contribution margin	160,000	160,000
Fixed manufacturing overhead	60,000	60,000
Fixed selling and administrative expenses	15,000	15,000
Net income	$ 85,000	$ 85,000

From this example, we see that under variable costing, net income is not affected by the number of units produced. Net income is $85,000 whether the division produces 20,000 or 30,000 units. Why? Because fixed manufacturing overhead is treated as a period expense. Unlike absorption costing, no fixed manufacturing overhead is deferred through inventory buildup. Therefore, under variable costing, production does not increase income; sales do. As a result, if the company uses variable costing, managers like Warren Lund cannot affect profitability by increasing production.

POTENTIAL ADVANTAGES OF VARIABLE COSTING

Variable costing has a number of potential advantages relative to absorption costing:

1. Net income computed under variable costing is unaffected by changes in production levels. As a result, it is much easier to understand the impact of fixed and variable costs on the computation of net income when variable costing is used.
2. The use of variable costing is consistent with the cost-volume-profit material presented in Chapters 18 and 19.

3. Net income computed under variable costing is closely tied to changes in sales levels (not production levels), and therefore provides a more realistic assessment of the company's success or failure during a period.
4. The presentation of fixed and variable cost components on the face of the variable costing income statement makes it easier to identify these costs and understand their effect on the business. Under absorption costing, the allocation of fixed costs to inventory makes it difficult to evaluate the impact of fixed costs on the company's results.

Companies that use just-in-time processing techniques to minimize their inventories will not have significant differences between absorption and variable costing net income.

before you go on...

Do it!

VARIABLE COSTING

Justin and Andrea Doll Company produces and sells tennis balls. The following costs are available for the year ended December 31, 2012. The company has no beginning inventory. In 2012, 8,000,000 units were produced, but only 7,500,000 units were sold. The unit selling price was $0.50 per ball. Costs and expenses were:

Variable costs per unit	
Direct materials	$0.10
Direct labor	0.05
Variable manufacturing overhead	0.08
Variable selling and administrative expenses	0.02
Annual fixed costs and expenses	
Manufacturing overhead	$500,000
Selling and administrative expenses	100,000

(a) Compute the manufacturing cost of one unit of product using variable costing.
(b) Prepare a 2012 income statement for Justin and Andrea Doll Company using variable costing.

Action Plan

- Recall that under variable costing, only variable manufacturing costs are treated as manufacturing (product) costs.
- Subtract all fixed costs, both manufacturing overhead and selling and administrative expenses, as period costs.

Solution

(a) The cost of one unit of product under variable costing would be:

Direct materials	$0.10
Direct labor	0.05
Variable manufacturing overhead	0.08
	$0.23

(b) The variable costing income statement would be as follows.

JUSTIN AND ANDREA DOLL COMPANY
Income Statement
For the Year Ended December 31, 2012
Variable Costing

Sales (7,500,000 × $0.50)		$3,750,000
Variable cost of goods sold (7,500,000 × $0.23)	$1,725,000	
Variable selling and administrative expenses (7,500,000 × .02)	150,000	1,875,000
Contribution margin		1,875,000
Fixed manufacturing overhead	500,000	
Fixed selling and administrative expenses	100,000	600,000
Net income		$1,275,000

Summary of Study Objectives for Appendix 19A

6 Explain the difference between absorption costing and variable costing. Under absorption costing, fixed manufacturing costs are product costs. Under variable costing, fixed manufacturing costs are period costs.

7 Discuss net income effects under absorption costing versus variable costing. If production volume exceeds sales volume, net income under absorption costing will exceed net income under variable costing by the amount of fixed manufacturing costs included in ending inventory that results from units produced but not sold during the period. If production volume is less than sales volume, net income under absorption costing will be less than under variable costing by the amount of fixed manufacturing costs included in the units sold during the period that were not produced during the period.

8 Discuss the merits of absorption versus variable costing for management decision making. The use of variable costing is consistent with cost–volume–profit analysis. Net income under variable costing is unaffected by changes in production levels. Instead, it is closely tied to changes in sales. The presentation of fixed costs in the variable costing approach makes it easier to identify fixed costs and to evaluate their impact on the company's profitability.

the navigator

Glossary

Absorption costing *(p. 996)* A costing approach in which all manufacturing costs are charged to the product.

Cost structure *(p. 990)* The relative proportion of fixed versus variable costs that a company incurs.

Degree of operating leverage *(p. 992)* A measure of the extent to which a company's net income reacts to a change in sales. It is calculated by dividing contribution margin by net income.

Operating leverage *(p. 992)* The extent to which a company's net income reacts to a change in sales. Operating leverage is determined by a company's relative use of fixed versus variable costs.

Sales mix *(p. 984)* The relative percentage in which a company sells its multiple products.

Theory of constraints *(p. 989)* A specific approach used to identify and manage constraints in order to achieve the company's goals.

Variable costing *(p. 996)* A costing approach in which only variable manufacturing costs are product costs, and fixed manufacturing costs are period costs (expenses).

Comprehensive Do it!

Francis Corporation manufactures and sells three different types of water-sport wakeboards. The boards vary in terms of their quality specifications—primarily with respect to their smoothness and finish. They are referred to as Smooth, Extra-Smooth, and Super-Smooth boards. Machine time is limited. More machine time is required to manufacture the Extra-Smooth and Super-Smooth boards. Additional information is provided below.

	Product		
	Smooth	**Extra-Smooth**	**Super-Smooth**
Selling price	$60	$100	$160
Variable costs and expenses	50	75	130
Contribution margin	$10	$ 25	$ 30
Machine hours required	0.25	0.40	0.60

Total fixed costs: $234,000

Instructions

Answer each of the following questions.

(a) Ignoring the machine time constraint, what strategy would appear optimal?
(b) What is the contribution margin per unit of limited resource for each type of board?
(c) If additional machine time could be obtained, how should the additional capacity be used?

Solution to Comprehensive Do it!

(a) The Super-Smooth boards have the highest contribution margin per unit. Thus, ignoring any manufacturing constraints, it would appear that the company should shift toward production of more Super-Smooth units.

(b) The contribution margin per unit of limited resource is calculated as:

	Smooth	Extra-Smooth	Super-Smooth
$\frac{\text{Contribution margin per unit}}{\text{Limited resource consumed per unit}}$	$\frac{\$10}{.25} = \$40$	$\frac{\$25}{.40} = \$62.50$	$\frac{\$30}{.60} = \$50$

(c) The Extra-Smooth boards have the highest contribution margin per unit of limited resource. Given the resource constraint, any additional capacity should be used to make Extra-Smooth boards.

Action Plan

- To determine how best to use a limited resource, calculate the contribution margin per unit of limited resource for each product type.

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more resources are available for practice in WileyPLUS

Note: All asterisked Questions, Exercises, and Problems relate to material contained in the appendix to the chapter.

Self-Test Questions

Answers are on page 1028.

(SO 1) **1.** Which one of the following is the format of a CVP income statement?
(a) Sales − Variable costs = Fixed costs + Net income.
(b) Sales − Fixed costs − Variable costs − Operating expenses = Net income.
(c) Sales − Cost of goods sold − Operating expenses = Net income.
(d) Sales − Variable costs − Fixed costs = Net income.

(SO 1, 2) **2.** Croc Catchers calculates its contribution margin to be less than zero. Which statement is true?
(a) Its fixed costs are less than the variable cost per unit.
(b) Its profits are greater than its total costs.
(c) The company should sell more units.
(d) Its selling price is less than its variable costs.

(SO 2) **3.** Which one of the following describes the break-even point?
(a) It is the point where total sales equals total variable plus total fixed costs.
(b) It is the point where the contribution margin equals zero.
(c) It is the point where total variable costs equal total fixed costs.
(d) It is the point where total sales equals total fixed costs.

(SO 1) **4.** The following information is available for Chap Company.

Sales	$350,000
Cost of goods sold	$120,000
Total fixed expenses	$60,000
Total variable expenses	$100,000

Which amount would you find on Chap's CVP income statement?
(a) Contribution margin of $250,000.
(b) Contribution margin of $190,000.
(c) Gross profit of $230,000.
(d) Gross profit of $190,000.

(SO 2) **5.** Gabriel Corporation has fixed costs of $180,000 and variable costs of $8.50 per unit. It has a target income of $268,000. How many units must it sell at $12 per unit to achieve its target net income?
(a) 51,429 units.
(b) 128,000 units.
(c) 76,571 units.
(d) 21,176 units.

(SO 2) **6.** Mackey Corporation has fixed costs of $150,000 and variable costs of $9 per unit. If sales price per unit is $12, what is break-even sales in dollars?
(a) $200,000.
(b) $450,000.
(c) $480,000.
(d) $600,000.

(SO 3) **7.** Sales mix is:
(a) important to sales managers but not to accountants.
(b) easier to analyze on absorption costing income statements.
(c) a measure of the relative percentage of a company's variable costs to its fixed costs.
(d) a measure of the relative percentage in which a company's products are sold.

(SO 3) **8.** Net income will be:
(a) greater if more higher-contribution margin units are sold than lower-contribution margin units.

(b) greater if more lower-contribution margin units are sold than higher-contribution margin units.
(c) equal as long as total sales remain equal, regardless of which products are sold.
(d) unaffected by changes in the mix of products sold.

(SO 4) **9.** If the contribution margin per unit is $15 and it takes 3.0 machine hours to produce the unit, the contribution margin per unit of limited resource is:
(a) $25.
(b) $5.
(c) $4.
(d) No correct answer is given.

(SO 4) **10.** MEM manufactures two products. Product X has a contribution margin of $26 and requires 4 hours of machine time. Product Y has a contribution margin of $14 and requires 2 hours of machine time. Assuming that machine time is limited to 3,000 hours, how should it allocate the machine time to maximize its income?
(a) Use 1,500 hours to produce X and 1,500 hours to produce Y.
(b) Use 2,250 hours to produce X and 750 hours to produce Y.
(c) Use 3,000 hours to produce only X.
(d) Use 3,000 hours to produce only Y.

(SO 4) **11.** When a company has a limited resource, it should apply additional capacity of that resource to providing more units of the product or service:
(a) that has the highest contribution margin.
(b) that has the highest selling price.
(c) that has the highest gross profit.
(d) that has the highest contribution margin per unit of that limited resource.

(SO 5) **12.** The degree of operating leverage:
(a) can be computed by dividing total contribution margin by net income.
(b) provides a measure of the company's earnings volatility.
(c) affects a company's break-even point.
(d) All of the above.

13. A high degree of operating leverage: (SO 5)
(a) indicates that a company has a larger percentage of variable costs relative to its fixed costs.
(b) is computed by dividing fixed costs by contribution margin.
(c) exposes a company to greater earnings volatility risk.
(d) exposes a company to less earnings volatility risk.

14. Stevens Company has a degree of operating leverage of 3.5 at a sales level of $1,200,000 and net income of $200,000. If Stevens' sales fall by 10%, Stevens can be expected to experience a: (SO 5)
(a) decrease in net income of $70,000.
(b) decrease in contribution margin of $7,000.
(c) decrease in operating leverage of 35%.
(d) decrease in net income of $175,000.

***15.** Fixed manufacturing overhead costs are recognized as: (SO 6)
(a) period costs under absorption costing.
(b) product costs under absorption costs.
(c) product costs under variable costing.
(d) part of ending inventory costs under both absorption and variable costing.

***16.** Net income computed under absorption costing will be: (SO 6)
(a) higher than net income under variable costing in all cases.
(b) equal to net income under variable costing in all cases.
(c) higher than net income under variable costing when units produced are greater than units sold.
(d) higher than net income under variable costing when units produced are less than units sold.

Go to the book's companion website, **www.wiley.com/college/kimmel**, for additional Self-Test Questions.

Questions

1. What is meant by CVP analysis?

2. Provide three examples of management decisions that benefit from CVP analysis.

3. Distinguish between a traditional income statement and a CVP income statement.

4. Describe the features of a CVP income statement that make it more useful for management decision making than the traditional income statement that is prepared for external users.

5. The traditional income statement for Kent Company shows sales $900,000, cost of goods sold $500,000, and operating expenses $200,000. Assuming all costs and expenses are 70% variable and 30% fixed, prepare a CVP income statement through contribution margin.

6. If management chooses to reduce its selling price to match that of a competitor, how will the break-even point be affected?

7. What is meant by the term sales mix? How does sales mix affect the calculation of the break-even point?

8. Tobias Company sells two types of radial tires. The lower-priced model is guaranteed for only 40,000 miles; the higher-priced model is guaranteed for 100,000 miles. The unit contribution margin on the higher-priced tire is twice as high as that of the lower-priced tire. If the sales mix shifts so that the company begins to sell more units of the lower-priced tire, explain how the company's break-even point in units will change.

9. What approach should be used to calculate the break-even point of a company that has many products?

10. How is the contribution margin per unit of limited resource computed?

11. What is the theory of constraints? Provide some examples of possible constraints for a manufacturer.

12. What is meant by "cost structure?" Explain how a company's cost structure affects its break-even point.

13. What is operating leverage? How does a company increase its operating leverage?

14. How does the replacement of manual labor with automated equipment affect a company's cost structure? What implications does this have for its operating leverage and break-even point?

15. What is a measure of operating leverage, and how is it calculated?

16. Kosko Company has a degree of operating leverage of 8. Ace Company has a degree of operating leverage of 4. Interpret these measures.

***17.** Distinguish between absorption costing and variable costing.

***18.** (a) What is the major rationale for the use of variable costing?
(b) Discuss why variable costing may not be used for financial reporting purposes.

***19.** Knott Corporation sells one product, its waterproof hiking boot. It began operations in the current year and had an ending inventory of 10,500 units. The company sold 20,000 units throughout the year. Fixed manufacturing overhead is $5 per unit, and total manufacturing cost per unit is $20 (including fixed manufacturing overhead costs). What is the difference in net income between absorption and variable costing?

***20.** If production equals sales, what, if any, is the difference between net income under absorption costing versus under variable costing?

***21.** If production is greater than sales, how does absorption costing net income differ from variable costing net income?

***22.** In the long run, will net income be higher or lower under variable costing compared to absorption costing?

Brief Exercises

BE19-1 Determine the missing amounts.

Determine missing amounts for contribution margin. (SO 1, 2), **AN**

	Unit Selling Price	Unit Variable Costs	Contribution Margin per Unit	Contribution Margin Ratio
1.	$250	$170	(a)	(b)
2.	$500	(c)	$200	(d)
3.	(e)	(f)	$300	30%

BE19-2 Hernandez Manufacturing Inc. has sales of $1,800,000 for the first quarter of 2012. In making the sales, the company incurred the following costs and expenses.

Prepare CVP income statement. (SO 1, 2), **AP**

	Variable	Fixed
Cost of goods sold	$760,000	$540,000
Selling expenses	95,000	60,000
Administrative expenses	79,000	66,000

Prepare a CVP income statement for the quarter ended March 31, 2012.

BE19-3 Molle Corp. had total variable costs of $170,000, total fixed costs of $120,000, and total revenues of $250,000. Compute the required sales in dollars to break even.

Compute the break-even point. (SO 1, 2), **AP**

BE19-4 Haag Company has a unit selling price of $400, variable costs per unit of $260, and fixed costs of $210,000. Compute the break-even point in units using (a) the mathematical equation and (b) contribution margin per unit.

Compute the break-even point. (SO 1, 2), **AP**

BE19-5 For Ortega Company, variable costs are 70% of sales, and fixed costs are $210,000. Management's net income goal is $60,000. Compute the required sales needed to achieve management's target net income of $60,000. (Use the mathematical equation approach.)

Compute sales for target net income. (SO 1, 2), **AP**

BE19-6 For Markowitz Company, actual sales are $1,200,000 and break-even sales are $900,000. Compute (a) the margin of safety in dollars and (b) the margin of safety ratio.

Compute the margin of safety and the margin of safety ratio. (SO 1, 2), **AP**

BE19-7 Dilts Corporation sells three different models of mosquito "zapper." Model A12 sells for $50 and has variable costs of $40. Model B22 sells for $100 and has variable costs of $70. Model C124 sells for $400 and has variable costs of $300. The sales mix of the three models is: A12, 60%; B22, 25%; and C124, 15%. What is the weighted-average unit contribution margin?

Compute weighted-average unit contribution margin based on sales mix. (SO 3), **AP**

Compute break-even point in units for company with multiple products.
(SO 3), AP

BE19-8 Information for Dilts Corporation is given in BE19-7. If the company has fixed costs of $199,500, how many units of each model must the company sell in order to break even?

Compute break-even point in dollars for company with multiple product lines.
(SO 3), AP

BE19-9 Briggs Candle Supply makes candles. The sales mix (as a percent of total dollar sales) of its three product lines is: birthday candles 30%, standard tapered candles 50%, and large scented candles 20%. The contribution margin ratio of each candle type is shown below.

Candle Type	Contribution Margin Ratio
Birthday	10%
Standard tapered	20%
Large scented	45%

(a) What is the weighted-average contribution margin ratio?
(b) If the company's fixed costs are $440,000 per year, what is the dollar amount of each type of candle that must be sold to break even?

Determine weighted-average contribution margin.
(SO 3), AP

BE19-10 Quality Furniture Co. consists of two divisions, Bedroom Division and Dining Room Division. The results of operations for the most recent quarter are:

	Bedroom Division	Dining Room Division	Total
Sales	$500,000	$750,000	$1,250,000
Variable costs	250,000	450,000	700,000
Contribution margin	$250,000	$300,000	$ 550,000

(a) Determine the company's sales mix.
(b) Determine the company's weighted-average contribution margin ratio.

Show allocation of limited resources.
(SO 4), AP

BE19-11 In Wesland Company, data concerning two products are: Contribution margin per unit—Product A $10, Product B $12; machine hours required for one unit—Product A requires 2 hours, Product B requires 3 hours. Compute the contribution margin per unit of limited resource for each product.

Compute degree of operating leverage.
(SO 5), AP

BE19-12 Mark's Shingle Corporation is considering the purchase of a new automated shingle-cutting machine. The new machine will reduce variable labor costs but will increase depreciation expense. Contribution margin is expected to increase from $160,000 to $240,000. Net income is expected to be the same at $40,000. Compute the degree of operating leverage before and after the purchase of the new equipment. Interpret your results.

Compute break-even point with change in operating leverage.
(SO 5), AP

BE19-13 Presented below are variable costing income statements for Mallon Company and Russell Company. They are in the same industry, with the same net incomes, but different cost structures.

	Mallon Co.	Russell Co.
Sales	$150,000	$150,000
Variable costs	60,000	15,000
Contribution margin	90,000	135,000
Fixed costs	50,000	95,000
Net income	$ 40,000	$ 40,000

Compute the break-even point in dollars for each company and comment on your findings.

Determine contribution margin from degree of operating leverage.
(SO 5), AP

BE19-14 The degree of operating leverage for Astoria Corp. and STL Co. are 1.4 and 5.6, respectively. Both have net incomes of $50,000. Determine their respective contribution margins.

Show allocation of limited resources.
(SO 4), AP

BE19-15 Fry Corporation manufactures two products with the following characteristics.

	Contribution Margin per Unit	Machine Hours Required for Production
Product 1	$42	.14 hours
Product 2	$36	.10 hours

If Fry's machine hours are limited to 2,000 per month, determine which product it should produce.

*BE19-16 Montana Company produces basketballs. It incurred the following costs during the year.

Compute product costs under variable costing. (SO 6), AP

Direct materials	$14,490
Direct labor	$25,530
Fixed manufacturing overhead	$10,000
Variable manufacturing overhead	$32,420
Selling costs	$21,000

What are the total product costs for the company under variable costing?

*BE19-17 Information concerning Montana Company is provided in BE19-16. What are the total product costs for the company under absorption costing?

Compute product costs under absorption costing. (SO 6), AP

*BE19-18 Gore Manufacturing incurred the following costs during the year: direct materials $20 per unit; direct labor $12 per unit; variable manufacturing overhead $15 per unit; variable selling and administrative costs $8 per unit; fixed manufacturing overhead $120,000; and fixed selling and administrative costs $10,000. Gore produced 12,000 units and sold 10,000 units. Determine the manufacturing cost per unit under (a) absorption costing and (b) variable costing.

Determine manufacturing cost per unit under absorption and variable costing. (SO 6), AP

*BE19-19 Logan Company's fixed overhead costs are $3 per unit, and its variable overhead costs are $8 per unit. In the first month of operations, 50,000 units are produced, and 47,000 units are sold. Write a short memo to the chief financial officer explaining which costing approach will produce the higher income and what the difference will be.

Compute net income under absorption and variable costing. (SO 7), AP

Do it! Review

Do it! 19-1 Burham Manufacturing Inc. sold 8,000 units and recorded sales of $400,000 for the first month of 2012. In making the sales, the company incurred the following costs and expenses.

Prepare CVP income statement and compute contribution margin. (SO 1), AP

	Variable	Fixed
Cost of goods sold	$184,000	$70,000
Selling expenses	40,000	30,000
Administrative expenses	16,000	40,000

(a) Prepare a CVP income statement for the month ended January 31, 2012.
(b) Compute the contribution margin per unit.
(c) Compute the contribution margin ratio.

Do it! 19-2 Queensland Company reports the following operating results for the month of April.

Compute the break-even point and margin of safety under different alternatives. (SO 2), AP

QUEENSLAND COMPANY
CVP Income Statement
For the Month Ended April 30, 2012

	Total	Per Unit
Sales (9,000 units)	$450,000	$50.00
Variable costs	247,500	27.50
Contribution margin	202,500	$22.50
Fixed expenses	150,000	
Net income	$ 52,500	

Management is considering the following course of action to increase net income: Reduce the selling price by 10%, with no changes to unit variable costs or fixed costs. Management is confident that this change will increase unit sales by 30%.

Using the contribution margin technique, compute the break-even point in units and dollars and margin of safety in dollars:
(a) Assuming no changes to selling price or costs.
(b) Assuming changes to sales price and volume as described above.

Comment on your findings.

Compute sales mix, weighted-average contribution margin, and break-even point.
(SO 3), **AP**

Do it! 19-3 Mountain Springs produces and sells water filtration systems for homeowners. Information regarding its three models is shown below.

	Basic	Basic Plus	Premium	Total
Units sold	840	350	210	1,400
Selling price	$250	$400	$800	
Variable cost	$195	$288	$416	

The company's total fixed costs to produce the filtration systems are $140,000.

(a) Determine the sales mix as a function of units sold for the three products.
(b) Determine the weighted-average unit contribution margin.
(c) Determine the total number of units that the company must produce to break even.
(d) Determine the number of units of each model that the company must produce to break even.

Determine sales mix with limited resources.
(SO 4), **AP**

Do it! 19-4 Spencer Corporation manufactures and sells three different types of binoculars. They are referred to as Good, Better, and Best binoculars. Grinding and polishing time is limited. More time is required to grind and polish the lenses used in the Better and Best binoculars. Additional information is provided below.

	Product		
	Good	Better	Best
Selling price	$80.00	$300.00	$900.00
Variable costs and expenses	50.00	180.00	450.00
Contribution margin	$30.00	$120.00	$450.00
Grinding and polishing time required	0.5 hrs	1.5 hrs	6 hrs

(a) Ignoring the time constraint, what strategy would appear to be optimal?
(b) What is the contribution margin per unit of limited resource for each type of binocular?
(c) If additional grinding and polishing time could be obtained, how should the additional capacity be used?

Exercises

Compute break-even point and margin of safety.
(SO 2), **AP**

E19-1 The Bozeman Inn is trying to determine its break-even point. The inn has 75 rooms that are rented at $50 a night. Operating costs are as follows.

Salaries	$8,500 per month
Utilities	2,000 per month
Depreciation	1,000 per month
Maintenance	500 per month
Maid service	5 per room
Other costs	33 per room

Instructions

(a) Determine the inn's break-even point in (1) number of rented rooms per month and (2) dollars.
(b) If the inn plans on renting an average of 50 rooms per day (assuming a 30-day month), what is (1) the monthly margin of safety in dollars and (2) the margin of safety ratio?

Compute contribution margin, break-even point, and margin of safety.
(SO 2), **AP**

E19-2 In the month of June, Kathy's Beauty Salon gave 3,500 haircuts, shampoos, and permanents at an average price of $30. During the month, fixed costs were $16,800 and variable costs were 80% of sales.

Instructions

(a) Determine the contribution margin in dollars, per unit and as a ratio.
(b) Using the contribution margin technique, compute the break-even point in dollars and in units.
(c) Compute the margin of safety in dollars and as a ratio.

Compute net income under different alternatives.
(SO 2), **AP**

E19-3 Dalton Company reports the following operating results for the month of August: Sales $300,000 (units 5,000); variable costs $210,000; and fixed costs $70,000.

Management is considering the following independent courses of action to increase net income.

1. Increase selling price by 10% with no change in total variable costs or sales volume.
2. Reduce variable costs to 58% of sales.
3. Reduce fixed costs by $20,000.

Instructions
Compute the net income to be earned under each alternative. Which course of action will produce the highest net income?

E19-4 Mideast Airways, Inc., a small two-plane passenger airline, has asked for your assistance in some basic analysis of its operations. Both planes seat 10 passengers each, and they fly commuters from Mideast's base airport to the major city in the state, Metropolis. Each month 40 round-trip flights are made. Shown below is a recent month's activity in the form of a cost-volume-profit income statement.

Compute break-even point and prepare CVP income statement.
(SO 2), **AP**

Fare revenues (300 fares)		$45,000
Variable costs		
Fuel	$14,000	
Snacks and drinks	800	
Landing fees	2,000	
Supplies and forms	1,200	18,000
Contribution margin		27,000
Fixed costs		
Depreciation	3,000	
Salaries	15,000	
Advertising	500	
Airport hanger fees	1,750	20,250
Net income		$ 6,750

Instructions
(a) Calculate the break-even point in (1) dollars and (2) number of fares.
(b) Without calculations, determine the contribution margin at the break-even point.
(c) If fares were decreased by 10%, an additional 100 fares could be generated. However, total variable costs would increase by 35%. Should the fare decrease be adopted?

E19-5 Vancey Company had sales in 2012 of $1,500,000 on 60,000 units. Variable costs totaled $720,000, and fixed costs totaled $400,000.

Prepare a CVP income statement before and after changes in business environment.
(SO 2), **AP**

A new raw material is available that will decrease the variable costs per unit by 25% (or $3.00). However, to process the new raw material, fixed operating costs will increase by $150,000. Management feels that one-half of the decline in the variable costs per unit should be passed on to customers in the form of a sales price reduction. The marketing department expects that this sales price reduction will result in a 5% increase in the number of units sold.

Instructions
Prepare a CVP income statement for 2012, (a) assuming the changes have not been made, and (b) assuming that changes are made as described.

E19-6 Crown Turf manufactures lawnmowers, weed-trimmers, and chainsaws. Its sales mix and contribution margin per unit are as follows.

Compute break-even point in units for a company with more than one product.
(SO 3), **AP**

	Sales Mix	Contribution Margin per Unit
Lawnmowers	30%	$30
Weed-trimmers	50%	$20
Chainsaws	20%	$40

Crown Turf has fixed costs of $4,600,000.

Instructions
Compute the number of units of each product that Crown Turf must sell in order to break even under this product mix.

Compute service line break-even point and target net income in dollars for a company with more than one service.
(SO 3), AN

E19-7 Quick Auto has over 200 auto-maintenance service outlets nationwide. It provides primarily two lines of service: oil changes and brake repair. Oil change–related services represent 65% of its sales and provide a contribution margin ratio of 20%. Brake repair represents 35% of its sales and provides a 60% contribution margin ratio. The company's fixed costs are $16,000,000 (that is, $80,000 per service outlet).

Instructions

(a) Calculate the dollar amount of each type of service that the company must provide in order to break even.
(b) The company has a desired net income of $60,000 per service outlet. What is the dollar amount of each type of service that must be provided by each service outlet to meet its target net income per outlet?

Compute break-even point in dollars for a company with more than one service.
(SO 3), AN

E19-8 Rathke Delivery is a rapidly growing delivery service. Last year, 80% of its revenue came from the delivery of mailing "pouches" and small, standardized delivery boxes (which provides a 10% contribution margin). The other 20% of its revenue came from delivering non-standardized boxes (which provides a 60% contribution margin). With the rapid growth of Internet retail sales, Rathke believes that there are great opportunities for growth in the delivery of non-standardized boxes. The company has fixed costs of $12,000,000.

Instructions

(a) What is the company's break-even point in total sales dollars? At the break-even point, how much of the company's sales are provided by each type of service?
(b) The company's management would like to hold its fixed costs constant, but shift its sales mix so that 60% of its revenue comes from the delivery of non-standardized boxes and the remainder from pouches and small boxes. If this were to occur, what would be the company's break-even sales, and what amount of sales would be provided by each service type?

Compute break-even point in units for a company with multiple products.
(SO 3), AP

E19-9 Green Golf Accessories sells golf shoes, gloves, and a laser-guided range-finder that measures distance. Shown below are unit cost and sales data.

	Pairs of Shoes	Pairs of Gloves	Range-Finder
Unit sales price	$100	$30	$250
Unit variable costs	60	10	200
Unit contribution margin	$ 40	$20	$ 50
Sales mix	40%	50%	10%

Fixed costs are $620,000.

Instructions

(a) Compute the break-even point in units for the company.
(b) Determine the number of units to be sold at the break-even point for each product line.
(c) Verify that the mix of sales units determined in (b) will generate a zero net income.

Determine break-even point in dollars for two divisions.
(SO 3), AP

E19-10 Lake Electronix sells television sets and DVD players. The business is divided into two divisions along product lines. CVP income statements for a recent quarter's activity are presented below.

	TV Division	DVD Division	Total
Sales	$600,000	$400,000	$1,000,000
Variable costs	450,000	240,000	690,000
Contribution margin	$150,000	$160,000	310,000
Fixed costs			124,000
Net income			$ 186,000

Instructions

(a) Determine sales mix percentage and contribution margin ratio for each division.
(b) Calculate the company's weighted-average contribution margin ratio.
(c) Calculate the company's break-even point in dollars.
(d) Determine the sales level in dollars for each division at the break-even point.

E19-11 Shore Company manufactures and sells three products. Relevant per unit data concerning each product are given below.

Compute contribution margin and determine the product to be manufactured.
(SO 4), AN

	Product		
	A	**B**	**C**
Selling price	$9	$ 12	$14
Variable costs and expenses	$3	$9.50	$12
Machine hours to produce	2	1	2

Instructions

(a) Compute the contribution margin per unit of the limited resource (machine hours) for each product.
(b) Assuming 1,500 additional machine hours are available, which product should be manufactured?
(c) Prepare an analysis showing the total contribution margin if the additional hours are (1) divided equally among the products, and (2) allocated entirely to the product identified in (b) above.

E19-12 Billings Inc. produces and sells three products. Unit data concerning each product is shown below.

Compute contribution margin and determine the products to be manufactured.
(SO 4), AN

	Product		
	D	**E**	**F**
Selling price	$200	$300	$250
Direct labor costs	25	75	30
Other variable costs	105	90	148

The company has 2,000 hours of labor available to build inventory in anticipation of the company's peak season. Management is trying to decide which product should be produced. The direct labor hourly rate is $10.

Instructions

(a) Determine the number of direct labor hours per unit.
(b) Determine the contribution margin per direct labor hour.
(c) Determine which product should be produced and the total contribution margin for that product.

E19-13 Feld Company manufactures and sells two products. Relevant per unit data concerning each product follow.

Compute contribution margin and determine the products to be manufactured.
(SO 4), AN

	Product	
	Basic	**Deluxe**
Selling price	$40	$52
Variable costs	$18	$24
Machine hours	.5	.7

Instructions

(a) Compute the contribution margin per machine hour for each product.
(b) If 1,000 additional machine hours are available, which product should Feld manufacture?
(c) Prepare an analysis showing the total contribution margin if the additional hours are:
 (1) Divided equally between the products.
 (2) Allocated entirely to the product identified in part (b).

E19-14 The CVP income statements shown below are available for Hoffman Company and Tolan Company.

Compute degree of operating leverage and evaluate impact of alternative cost structures on net income.
(SO 5), AN

	Hoffman Co.	**Tolan Co.**
Sales revenue	$600,000	$600,000
Variable costs	280,000	80,000
Contribution margin	320,000	520,000
Fixed costs	170,000	370,000
Net income	$150,000	$150,000

Instructions

(a) Compute the degree of operating leverage for each company and interpret your results.
(b) Assuming that sales revenue increases by 10%, prepare a variable costing income statement for each company.
(c) Discuss how the cost structure of these two companies affects their operating leverage and profitability.

Compute degree of operating leverage and evaluate impact of alternative cost structures on net income and margin of safety.
(SO 5), AN

E19-15 Imagen Arquitectonica of Tijuana, Mexico, is contemplating a major change in its cost structure. Currently, all of its drafting work is performed by skilled draftsmen. Alfredo Ayala, Imagen's owner, is considering replacing the draftsmen with a computerized drafting system. However, before making the change Alfredo would like to know the consequences of the change, since the volume of business varies significantly from year to year. Shown below are CVP income statements for each alternative.

	Manual System	Computerized System
Sales	$1,500,000	$1,500,000
Variable costs	1,200,000	600,000
Contribution margin	300,000	900,000
Fixed costs	60,000	660,000
Net income	$ 240,000	$ 240,000

Instructions

(a) Determine the degree of operating leverage for each alternative.
(b) Which alternative would produce the higher net income if sales increased by $100,000?
(c) Using the margin of safety ratio, determine which alternative could sustain the greater decline in sales before operating at a loss.

Compute degree of operating leverage and impact on net income of alternative cost structures.
(SO 5), AN

E19-16 An investment banker is analyzing two companies that specialize in the production and sale of candied apples. Old-Fashion Apples uses a labor-intensive approach, and Mech-Apple uses a mechanized system. CVP income statements for the two companies are shown below.

	Old-Fashion Apples	Mech-Apple
Sales	$400,000	$400,000
Variable costs	320,000	160,000
Contribution margin	80,000	240,000
Fixed costs	20,000	180,000
Net income	$ 60,000	$ 60,000

The investment banker is interested in acquiring one of these companies. However, she is concerned about the impact that each company's cost structure might have on its profitability.

Instructions

(a) Calculate each company's degree of operating leverage. Determine which company's cost structure makes it more sensitive to changes in sales volume.
(b) Determine the effect on each company's net income if sales decrease by 10% and if sales increase by 5%. Do not prepare income statements.
(c) Which company should the investment banker acquire? Discuss.

Compute product cost and prepare an income statement under variable and absorption costing.
(SO 6), AP

***E19-17** Polk Company builds custom fishing lures for sporting goods stores. In its first year of operations, 2012, the company incurred the following costs.

Variable Cost per Unit	
Direct materials	$7.50
Direct labor	$2.45
Variable manufacturing overhead	$5.75
Variable selling and administrative expenses	$3.90

Fixed Costs per Year	
Fixed manufacturing overhead	$234,650
Fixed selling and administrative expenses	$240,100

Polk Company sells the fishing lures for $25. During 2012, the company sold 80,000 lures and produced 95,000 lures.

Instructions

(a) Assuming the company uses variable costing, calculate Polk's manufacturing cost per unit for 2012.
(b) Prepare a variable costing income statement for 2012.
(c) Assuming the company uses absorption costing, calculate Polk's manufacturing cost per unit for 2012.
(d) Prepare an absorption costing income statement for 2012.

***E19-18** Langdon Company produced 10,000 units during the past year, but only 9,000 of the units were sold. The following additional information is also available.

Determine ending inventory under variable costing and determine whether absorption or variable costing would result in higher net income.
(SO 6, 7), **AN**

Direct materials used	$90,000
Direct labor incurred	$30,000
Variable manufacturing overhead	$24,000
Fixed manufacturing overhead	$50,000
Fixed selling and administrative expenses	$70,000
Variable selling and administrative expenses	$10,000

There was no work in process inventory at the beginning of the year, nor did Langdon have any beginning finished goods inventory.

Instructions

(a) What would be Langdon Company's finished goods inventory cost on December 31 under variable costing?
(b) Which costing method, absorption or variable costing, would show a higher net income for the year? By what amount?

***E19-19** Pearson Inc. produces wooden crates used for shipping products by ocean liner. In 2012, Pearson incurred the following costs.

Compute manufacturing cost under absorption and variable costing and explain difference.
(SO 6), **AN**

Wood used in crate production	$54,000
Nails (considered insignificant and a variable expense)	$ 340
Direct labor	$37,000
Utilities for the plant:	
$2,000 each month,	
plus $0.45 for each kilowatt-hour used each month	
Rent expense for the plant for the year	$21,400

Assume Pearson used an average 500 kilowatt-hours each month over the past year.

Instructions

(a) What is Pearson's total manufacturing cost if it uses a variable costing approach?
(b) What is Pearson's total manufacturing cost if it uses an absorption costing approach?
(c) What accounts for the difference in manufacturing costs between these two costing approaches?

Exercises: Set B and Challenge Exercises

Visit the book's companion website, at **www.wiley.com/college/kimmel**, and choose the Student Companion site to access Exercise Set B and Challenge Exercises.

Problems: Set A

P19-1A Denny Manufacturing had a bad year in 2012. For the first time in its history, it operated at a loss. The company's income statement showed the following results from selling 80,000 units of product: Net sales $1,600,000; total costs and expenses $1,740,000; and net loss $140,000. Costs and expenses consisted of the following.

Compute break-even point under alternative courses of action.
(SO 1, 2), **AN**

	Total	Variable	Fixed
Cost of goods sold	$1,200,000	$780,000	$420,000
Selling expenses	420,000	75,000	345,000
Administrative expenses	120,000	45,000	75,000
	$1,740,000	$900,000	$840,000

Management is considering the following independent alternatives for 2013.

1. Increase unit selling price 25% with no change in costs and expenses.
2. Change the compensation of salespersons from fixed annual salaries totaling $200,000 to total salaries of $40,000 plus a 5% commission on net sales.
3. Purchase new high-tech factory machinery that will change the proportion between variable and fixed cost of goods sold to 50:50.

Instructions

(a) Compute the break-even point in dollars for 2012.

(b) (2) $1,754,839

(b) Compute the break-even point in dollars under each of the alternative courses of action. (Round to the nearest dollar.) Which course of action do you recommend?

Compute break-even point and margin of safety ratio, and prepare a CVP income statement before and after changes in business environment.

(SO 1, 2), **AN**

P19-2A Casper Corporation has collected the following information after its first year of sales. Net sales were $1,600,000 on 100,000 units; selling expenses $240,000 (40% variable and 60% fixed); direct materials $511,000; direct labor $285,000; administrative expenses $280,000 (20% variable and 80% fixed); manufacturing overhead $360,000 (70% variable and 30% fixed). Top management has asked you to do a CVP analysis so that it can make plans for the coming year. It has projected that unit sales will increase by 10% next year.

Instructions

(a) Compute (1) the contribution margin for the current year and the projected year, and (2) the fixed costs for the current year. (Assume that fixed costs will remain the same in the projected year.)

(b) 119,000 units

(b) Compute the break-even point in units and sales dollars for the first year.

(c) The company has a target net income of $310,000. What is the required sales in dollars for the company to meet its target?

(d) If the company meets its target net income number, by what percentage could its sales fall before it is operating at a loss? That is, what is its margin of safety ratio?

(e) (3) $1,515,152

(e) The company is considering a purchase of equipment that would reduce its direct labor costs by $104,000 and would change its manufacturing overhead costs to 30% variable and 70% fixed (assume total manufacturing overhead cost is $360,000, as above). It is also considering switching to a pure commission basis for its sales staff. This would change selling expenses to 90% variable and 10% fixed (assume total selling expense is $240,000, as above). Compute (1) the contribution margin and (2) the contribution margin ratio, and recompute (3) the break-even point in sales dollars. Comment on the effect each of management's proposed changes has on the break-even point.

Determine sales mix with limited resources.

(SO 4), **AN**

P19-3A Gardner Industries manufactures and sells three different models of wet-dry shop vacuum cleaners. Although the shop vacs vary in terms of quality and features, all are good sellers. Gardner is currently operating at full capacity with limited machine time.

Sales and production information relevant to each model follows.

	Product		
	Economy	**Standard**	**Deluxe**
Selling price	$30	$50	$100
Variable costs and expenses	$12	$18	$42
Machine hours required	.5	.8	1.6

Instructions

(a) Ignoring the machine time constraint, which single product should Gardner Industries produce?

(b) Economy $36

(b) What is the contribution margin per unit of limited resource for each product?

(c) If additional machine time could be obtained, how should the additional time be used?

Determine break-even sales under alternative sales strategies and evaluate results.

(SO 2, 3), **AN**

P19-4A The Desert Inn is a restaurant in Tucson, Arizona. It specializes in southwestern-style meals in a moderate price range. Jack Feld, the manager of Desert Inn, has determined that during the last 2 years the sales mix and contribution margin ratio of its offerings are as follows.

	Percent of Total Sales	**Contribution Margin Ratio**
Appetizers	10%	60%
Main entrees	60%	30%
Desserts	10%	50%
Beverages	20%	80%

Jack is considering a variety of options to try to improve the profitability of the restaurant. His goal is to generate a target net income of $150,000. The company has fixed costs of $1,200,000 per year.

Instructions

(a) Calculate the total restaurant sales and the sales of each product line that would be necessary to achieve the desired target net income.

(a) Total sales $3,000,000

(b) Jack believes the restaurant could greatly improve its profitability by reducing the complexity and selling price of its entrees to increase the number of clients that it serves. It would then more heavily market its appetizers and beverages. He is proposing to reduce the contribution margin ratio on the main entrees to 10% by dropping the average selling price. He envisions an expansion of the restaurant that would increase fixed costs by 50%. At the same time, he is proposing to change the sales mix to the following.

(b) Total sales $3,750,000

	Percent of Total Sales	Contribution Margin Ratio
Appetizers	20%	60%
Main entrees	30%	10%
Desserts	10%	50%
Beverages	40%	80%

Compute the total restaurant sales, and the sales of each product line that would be necessary to achieve the desired target net income.

(c) Suppose that Jack reduces the selling price on entrees and increases fixed costs as proposed in part (b), but customers are not swayed by the marketing efforts and the sales mix remains what it was in part (a). Compute the total restaurant sales and the sales of each product line that would be necessary to achieve the desired target net income. Comment on the potential risks and benefits of this strategy.

P19-5A The following CVP income statements are available for Red Company and Blue Company.

Compute degree of operating leverage and evaluate impact of operating leverage on financial results.

(SO 5), **AN**

	Red Company	Blue Company
Sales	$400,000	$400,000
Variable costs	180,000	80,000
Contribution margin	220,000	320,000
Fixed costs	170,000	270,000
Net income	$ 50,000	$ 50,000

Instructions

(a) Compute the break-even point in dollars and the margin of safety ratio for each company.

(b) Compute the degree of operating leverage for each company and interpret your results.

(c) Assuming that sales revenue increases by 20%, prepare a CVP income statement for each company.

(d) Assuming that sales revenue decreases by 20%, prepare a CVP income statement for each company.

(e) Discuss how the cost structure of these two companies affects their operating leverage and profitability.

(a) BE, Red $309,091
BE, Blue $337,500

(b) DOL, Red 4.4
DOL, Blue 6.4

P19-6A Long Beauty Corporation manufactures cosmetic products that are sold through a network of sales agents. The agents are paid a commission of 18% of sales. The income statement for the year ending December 31, 2012, is as follows.

Determine contribution margin, break-even point, target sales, and degree of operating leverage.

(SO 2, 5), **AN**

LONG BEAUTY CORPORATION
Income Statement
For the Year Ended December 31, 2012

Sales		$78,000,000
Cost of goods sold		
Variable	$35,100,000	
Fixed	8,610,000	43,710,000
Gross margin		$34,290,000
Selling and marketing expenses		
Commissions	$14,040,000	
Fixed costs	10,260,000	24,300,000
Operating income		$ 9,990,000

The company is considering hiring its own sales staff to replace the network of agents. It will pay its salespeople a commission of 8% and incur additional fixed costs of $7.8 million.

Instructions

(a) $51,000

(c) (2) 3.67

(a) Under the current policy of using a network of sales agents, calculate the Long Beauty Corporation's break-even point in sales dollars for the year 2012.
(b) Calculate the company's break-even point in sales dollars for the year 2012 if it hires its own sales force to replace the network of agents.
(c) Calculate the degree of operating leverage at sales of $78 million if (1) Long Beauty uses sales agents, and (2) Long Beauty employs its own sales staff. Describe the advantages and disadvantages of each alternative.
(d) Calculate the estimated sales volume in sales dollars that would generate an identical net income for the year ending December 31, 2012, regardless of whether Long Beauty Corporation employs its own sales staff and pays them an 8% commission or continues to use the independent network of agents.

(CMA-Canada adapted)

Prepare income statements under absorption costing and variable costing for a company with beginning inventory, and reconcile differences.
(SO 6, 7), **AN**

***P19-7A** Coswell Company produces plastic that is used for injection-molding applications such as gears for small motors. In 2011, the first year of operations, Coswell produced 4,000 tons of plastic and sold 3,000 tons. In 2012, the production and sales results were exactly reversed. In each year, the selling price per ton was $2,000, variable manufacturing costs were 15% of the sales price of units produced, variable selling expenses were 10% of the selling price of units sold, fixed manufacturing costs were $2,400,000, and fixed administrative expenses were $600,000.

Instructions

(a) 2012 $3,000,000

(b) 2012 $2,400,000

(a) Prepare income statements for each year using variable costing. (Use the format from Illustration 19A-5.)
(b) Prepare income statements for each year using absorption costing. (Use the format from Illustration 19A-4.)
(c) Reconcile the differences each year in net income under the two costing approaches.
(d) Comment on the effects of production and sales on net income under the two costing approaches.

Prepare absorption and variable costing income statements and reconcile differences between absorption and variable costing income statements when sales level and production level change. Discuss relative usefulness of absorption costing versus variable costing.
(SO 6, 7, 8), **AN**

***P19-8A** Tanck Electric Motors is a division of Tanck Electric Products Corporation. The division manufactures and sells an electric motor used in a wide variety of applications. During the coming year it expects to sell 50,000 units for $30 per unit. Kerry Starr is the division manager. She is considering producing either 50,000 or 80,000 units during the period. Other information is presented in the schedule.

Division Information for 2012		
Beginning inventory	0	
Expected sales in units	50,000	
Selling price per unit	$30	
Variable manufacturing costs per unit	$12	
Fixed manufacturing overhead costs (total)	$400,000	
Fixed manufacturing overhead costs per unit:		
Based on 50,000 units		$8 per unit ($400,000 ÷ 50,000)
Based on 80,000 units		$5 per unit ($400,000 ÷ 80,000)
Manufacturing cost per unit:		
Based on 50,000 units		$20 per unit ($12 variable + $8 fixed)
Based on 80,000 units		$17 per unit ($12 variable + $5 fixed)
Variable selling and administrative expenses		$2
Fixed selling and administrative expenses (total)		$40,000

Instructions

(a) 80,000 units: NI $510,000

(b) 80,000 units: NI $360,000

(a) Prepare an absorption costing income statement, with one column showing the results if 50,000 units are produced and one column showing the results if 80,000 units are produced.
(b) Prepare a variable costing income statement, with one column showing the results if 50,000 units are produced and one column showing the results if 80,000 units are produced.
(c) Reconcile the difference in net incomes under the two approaches and explain what accounts for this difference.

(d) Discuss the relative usefulness of the variable costing income statements versus the absorption costing income statements for decision making and for evaluating the manager's performance.

Problems: Set B

Compute break-even point under alternative courses of action.
(SO 1, 2), **AN**

P19-1B Keppel Manufacturing had a bad year in 2012, operating at a loss for the first time in its history. The company's income statement showed the following results from selling 200,000 units of product: net sales $2,000,000; total costs and expenses $2,120,000; and net loss $120,000. Costs and expenses consisted of the following.

	Total	Variable	Fixed
Cost of goods sold	$1,295,000	$ 975,000	$320,000
Selling expenses	575,000	325,000	250,000
Administrative expenses	250,000	100,000	150,000
	$2,120,000	$1,400,000	$720,000

Management is considering the following independent alternatives for 2013.

1. Increase unit selling price 30% with no change in costs and expenses.
2. Change the compensation of salespersons from fixed annual salaries totaling $170,000 to total salaries of $50,000 plus a 6% commission on net sales.
3. Purchase new high-tech factory machinery that will change the proportion between variable and fixed cost of goods sold to 40:60.

Instructions

(a) Compute the break-even point in dollars for 2012.
(b) Compute the break-even point in dollars under each of the alternative courses of action. Which course of action do you recommend? (Round to the nearest dollar.)

(b) (2) $2,500,000

Compute break-even point and margin of safety ratio, and prepare a CVP income statement before and after changes in business environment.
(SO 1, 2), **AN**

P19-2B McCune Corporation has collected the following information after its first year of sales. Net sales were $1,000,000 on 50,000 units; selling expenses $200,000 (30% variable and 70% fixed); direct materials $300,000; direct labor $170,000; administrative expenses $250,000 (30% variable and 70% fixed); manufacturing overhead $240,000 (20% variable and 80% fixed). Top management has asked you to do a CVP analysis so that it can make plans for the coming year. It has projected that unit sales will increase by 20% next year.

Instructions

(a) Compute (1) the contribution margin for the current year and the projected year, and (2) the fixed costs for the current year. (Assume that fixed costs will remain the same in the projected year.)
(b) Compute the break-even point in units and sales dollars for the current year.

(b) 73,055 units

(c) The company has a target net income of $187,000. What is the required sales in dollars for the company to meet its target?
(d) If the company meets its target net income number, by what percentage could its sales fall before it is operating at a loss? That is, what is its margin of safety ratio?
(e) The company is considering a purchase of equipment that would reduce its direct labor costs by $70,000 and would change its manufacturing overhead costs to 10% variable and 90% fixed (assume total manufacturing overhead cost is $240,000, as above). It is also considering switching to a pure commission basis for its sales staff. This would change selling expenses to 80% variable and 20% fixed (assume total selling expense is $200,000, as above). Compute (1) the contribution margin and (2) the contribution margin ratio, and (3) recompute the break-even point in sales dollars. Comment on the effect each of management's proposed changes has on the break-even point.

(e) (3) $1,263,930

Determine sales mix with limited resources.
(SO 4), **AN**

P19-3B Lorge Corporation manufactures and sells three different models of exterior doors. Although the doors vary in terms of quality and features, all are good sellers. Lorge is currently operating at full capacity with limited machine time.

Sales and production information relevant to each model is shown on the next page.

	Product		
	Economy	Standard	Deluxe
Selling price	$270	$450	$650
Variable costs and expenses	$150	$261	$425
Machine hours required	.6	.9	1.2

Instructions

(a) Ignoring the machine time constraint, which single product should Lorge produce?

(b) Economy $200

(b) What is the contribution margin per unit of limited resource for each product?

(c) If additional machine time could be obtained, how should the additional time be used?

Determine break-even sales under alternative sales strategies and evaluate results.

(SO 4), **AN**

P19-4B The Cubbie Inn is a restaurant in DeKalb, Illinois. It specializes in deluxe sandwiches in a moderate price range. Bill Michael, the manager of Cubbie Inn, has determined that during the last 2 years the sales mix and contribution margin ratio of its offerings are as follows.

	Percent of Total Sales	Contribution Margin Ratio
Appetizers	15%	60%
Main entrees	60%	25%
Desserts	10%	60%
Beverages	15%	80%

Bill is considering a variety of options to try to improve the profitability of the restaurant. His goal is to generate a target net income of $120,000. The company has fixed costs of $300,000 per year.

Instructions

(a) Total sales, $1,000,000

(a) Calculate the total restaurant sales and the sales of each product line that would be necessary to achieve the desired target net income.

(b) Total sales, $1,200,000

(b) Bill believes the restaurant could greatly improve its profitability by reducing the complexity and selling price of its entrees to increase the number of clients that it serves. It would then more heavily market its appetizers and beverages. He is proposing to reduce the contribution margin ratio on the main entrees to 10% by dropping the average selling price. He envisions an expansion of the restaurant that would increase fixed costs by 40%. At the same time, he is proposing to change the sales mix to the following.

	Percent of Total Sales	Contribution Margin Ratio
Appetizers	25%	60%
Main entrees	40%	10%
Desserts	10%	60%
Beverages	25%	80%

Compute the total restaurant sales, and the sales of each product line that would be necessary to achieve the desired target net income.

(c) Total sales, $1,636,364

(c) Suppose that Bill reduces the selling price on entrees and increases fixed costs as proposed in part (b), but customers are not swayed by the marketing efforts and the sales mix remains what it was in part (a). Compute the total restaurant sales and the sales of each product line that would be necessary to achieve the desired target net income. Comment on the potential risks and benefits of this strategy.

Compute degree of operating leverage and evaluate impact of operating leverage on financial results.

(SO 4, 5), **AN**

P19-5B The following variable costing income statements are available for American Company and National Company.

	American Company	National Company
Sales	$1,000,000	$1,000,000
Variable costs	500,000	150,000
Contribution margin	500,000	850,000
Fixed costs	300,000	650,000
Net income	$ 200,000	$ 200,000

Instructions

(a) BE American $600,000
BE National $764,706

(a) Compute the break-even point in dollars and the margin of safety ratio for each company.

(b) Compute the degree of operating leverage for each company and interpret your results.

(b) DOL, American 2.50
DOL, National 4.25

(c) Assuming that sales revenue increases by 30%, prepare a variable costing income statement for each company.

(d) Assuming that sales revenue decreases by 30%, prepare a variable costing income statement for each company.

(e) Discuss how the cost structure of these two companies affects their operating leverage and profitability.

P19-6B Huber Beauty Corporation manufactures cosmetic products that are sold through a network of sales agents. The agents are paid a commission of 15% of sales. The income statement for the year ending December 31, 2012, is as follows.

Determine contribution margin, break-even point, target sales, and degree of operating leverage.

(SO 2, 5), **AN**

HUBER BEAUTY CORPORATION
Income Statement
For the Year Ended December 31, 2012

Sales		$117,000,000
Cost of goods sold		
Variable	$52,650,000	
Fixed	12,915,000	65,565,000
Gross margin		51,435,000
Selling and marketing expenses		
Commissions	$17,550,000	
Fixed costs	12,825,000	30,375,000
Operating income		$ 21,060,000

The company is considering hiring its own sales staff to replace the network of agents. It will pay its salespeople a commission of 10% and incur additional fixed costs of $11.7 million.

Instructions

(a) Under the current policy of using a network of sales agents, calculate the Huber Beauty Corporation's break-even point in sales dollars for the year 2012.

(a) $64,350

(b) Calculate the company's break-even point in sales dollars for the year 2012 if it hires its own sales force to replace the network of agents.

(c) Calculate the degree of operating leverage at sales of $78 million if (1) Huber Beauty uses sales agents, and (2) Huber Beauty employs its own sales staff. Describe the advantages and disadvantages of each alternative.

(c) (2) 3.46

(d) Calculate the estimated sales volume in sales dollars that would generate an identical net income for the year ending December 31, 2012, regardless of whether Huber Beauty Corporation employs its own sales staff and pays them a 10% commission as well as incurring additional fixed costs of $11.7 million, or continues to use the independent network of agents.

(CMA Canada-adapted)

***P19-7B** WKU produces fabrics that are used for clothing and other applications. In 2012, the first year of operations, WKU produced 500,000 yards of fabric and sold 400,000 yards. In 2013, the production and sales results were exactly reversed. In each year, selling price per yard was $2, variable manufacturing costs were 25% of the sales price of units produced, variable selling expenses were 10% of the selling price of units sold, fixed manufacturing costs were $300,000, and fixed administrative expenses were $100,000.

Prepare income statements under absorption costing and variable costing for a company with beginning inventory, and reconcile differences.

(SO 6, 7, 8), **AN**

Instructions

(a) Prepare income statements for each year using variable costing. (Use the format from Illustration 19A-10.)

(a) 2012 Net income $120,000

(b) Prepare income statements for each year using absorption costing. (Use the format from Illustration 19A-11.)

(b) 2012 Net income $180,000

(c) Reconcile the differences each year in income from operations under the two costing approaches.

(d) Comment on the effects of production and sales on net income under the two costing approaches.

P19-8B Electricswitch is a division of Harclerode Products Corporation. The division manufactures and sells an electric switch used in a wide variety of applications. During the coming year it expects to sell 200,000 units for $8 per unit. Mike Short is the division

Prepare absorption and variable costing income statements and reconcile differences between absorption and variable costing income statements when sales level and production level change. Discuss relative usefulness of absorption costing versus variable costing.
(SO 6, 7, 8), **AN**

manager. He is considering producing either 200,000 or 250,000 units during the period. Other information is presented in the schedule.

Division Information for 2012

Beginning inventory	0
Expected sales in units	200,000
Selling price per unit	$8
Variable manufacturing cost per unit	$3
Fixed manufacturing overhead cost (total)	$480,000

Fixed manufacturing overhead costs per unit:	
Based on 200,000 units	$2.40 per unit ($480,000 ÷ 200,000)
Based on 250,000 units	$1.92 per unit ($480,000 ÷ 250,000)
Manufacturing cost per unit:	
Based on 200,000 units	$5.40 per unit ($3 variable + $2.40 fixed)
Based on 250,000 units	$4.92 per unit ($3 variable + $1.92 fixed)
Variable selling and administrative expense	$0.50
Fixed selling and administrative expense (total)	$12,000

Instructions

(a) 250,000 produced NI, $504,000

(b) 250,000 produced NI, $408,000

(a) Prepare an absorption costing income statement, with one column showing the results if 200,000 units are produced and one column showing the results if 250,000 units are produced.

(b) Prepare a variable costing income statement, with one column showing the results if 200,000 units are produced and one column showing the results if 250,000 units are produced.

(c) Reconcile the difference in net incomes under the two approaches and explain what accounts for this difference.

(d) Discuss the relative usefulness of the variable costing income statements versus the absorption costing income statements for decision making and for evaluating the manager's performance.

Problems: Set C

Visit the book's companion website, at **www.wiley.com/college/kimmel**, and choose the Student Companion site to access Problem Set C.

Waterways Continuing Problem

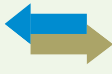
(*Note:* This is a continuation of the Waterways Problem from Chapters 14 through 18.)

WCP19 This problem asks you to perform break-even analysis based on Waterways' sales mix and to make sales mix decisions related to Waterways' use of its productive facilities. An optional extension of the problem (related to the chapter appendix) also asks you to prepare a variable costing income statement and an absorption costing income statement.

Go to the book's companion website, at **www.wiley.com/college/kimmel**, to find the completion of this problem.

broadening your perspective

DECISION MAKING ACROSS THE ORGANIZATION



BYP19-1 ComfortCraft manufactures swivel seats for customized vans. It currently manufactures 10,000 seats per year, which it sells for $480 per seat. It incurs variable costs of $180 per seat and fixed costs of $2,200,000. It is considering automating the upholstery process, which is now largely manual. It estimates that if it does so, its fixed costs will be $3,200,000, and its variable costs will decline to $80 per seat.

Instructions

With the class divided into groups, answer the following questions.

(a) Prepare a CVP income statement based on current activity.
(b) Compute contribution margin ratio, break-even point in dollars, margin of safety ratio, and degree of operating leverage based on current activity.
(c) Prepare a CVP income statement assuming that the company invests in the automated upholstery system.
(d) Compute contribution margin ratio, break-even point in dollars, margin of safety ratio, and degree of operating leverage assuming the new upholstery system is implemented.
(e) Discuss the implications of adopting the new system.

MANAGERIAL ANALYSIS

BYP19-2 For nearly 20 years, Grenke Coatings has provided painting and galvanizing services for manufacturers in its region. Manufacturers of various metal products have relied on the quality and quick turnaround time provided by Grenke Coatings and its 20 skilled employees. During the last year, as a result of a sharp upturn in the economy, the company's sales have increased by 30% relative to the previous year. The company has not been able to increase its capacity fast enough, so Grenke Coatings has had to turn work away because it cannot keep up with customer requests.

Top management is considering the purchase of a sophisticated robotic painting booth. The booth would represent a considerable move in the direction of automation versus manual labor. If Grenke Coatings purchases the booth, it would most likely lay off 15 of its skilled painters. To analyze the decision, the company compiled production information from the most recent year and then prepared a parallel compilation assuming that the company would purchase the new equipment and lay off the workers. Those data are shown below. As you can see, the company projects that during the last year it would have been far more profitable if it had used the automated approach.

	Current Approach	Automated Approach
Sales	$2,000,000	$2,000,000
Variable costs	1,200,000	400,000
Contribution margin	800,000	1,600,000
Fixed costs	200,000	600,000
Net income	$ 600,000	$1,000,000

Instructions

(a) Compute and interpret the contribution margin ratio under each approach.
(b) Compute the break-even point in sales dollars under each approach. Discuss the implications of your findings.
(c) Using the current level of sales, compute the margin of safety ratio under each approach and interpret your findings.
(d) Determine the degree of operating leverage for each approach at current sales levels. How much would the company's net income decline under each approach with a 10% decline in sales?
(e) At what level of sales would the company's net income be the same under either approach?
(f) Discuss the issues that the company must consider in making this decision.

REAL-WORLD FOCUS

BYP19-3 In a recent report, the Del Monte Foods Company reported three separate operating segments: consumer products (which includes a variety of canned foods including tuna, fruit, and vegetables); pet products (which includes pet food and snacks and veterinary products); and soup and infant-feeding products (which includes soup, broth, and infant feeding and pureed products).

In its annual report, Del Monte uses absorption costing. As a result, information regarding the relative composition of its fixed and variable costs is not available. We have assumed that $860.3 million of its total operating expenses of $1,920.3 million are fixed and have allocated the remaining variable costs across the three divisions. Sales data, along with assumed expense data, are provided on the next page.

	(in millions)	
	Sales	Variable Costs
Consumer products	$1,031.8	$ 610
Pet products	837.3	350
Soup and infant-feeding products	302.0	100
	$2,171.1	$1,060

Instructions

(a) Compute each segment's contribution margin ratio and the sales mix.
(b) Using the information computed in part (a), compute the company's break-even point in dollars, and then determine the amount of sales that would be generated by each division at the break-even point.

MANAGERIAL ACCOUNTING ON THE WEB

BYP19-4 The external financial statements published by publicly traded companies are based on absorption cost accounting. As a consequence, it is very difficult to gain an understanding of the relative composition of the companies' fixed and variable costs. It is possible, however, to learn about a company's sales mix and the relative profitability of its various divisions. This exercise looks at the financial statements of FedEx Corporation.

Address: **www.fedex.com/us/investorrelations,** or go to **www.wiley.com/college/kimmel**

Steps

1. Go to the site above.
2. Under "Financial Documents," choose "Annual Reports."
3. Choose "2008 Annual Report."

Instructions

(a) Read page 25 of the report under the heading "Description of Business." What are the three primary product lines of the company? What does the company identify as the key factors affecting operating results?
(b) Page 36 of the report lists the operating expenses of FedEx Ground. Assuming that rentals, depreciation, and "other" are all fixed costs, prepare a variable costing income statement for 2008, and compute the division's contribution margin ratio and the break-even point in dollars.
(c) Page 73, Note 13 ("Business segment information") provides additional information regarding the relative profitability of the three business segments.
  (i) Calculate the sales mix for 2006 and 2008. (*Note:* Exclude "other" when you calculate total revenue.)
  (ii) The company does not provide the contribution margin for each division, but it does provide "operating margin" (operating income divided by revenues) on pages 34, 36, and 37. List these for each division for 2006 and 2008.
  (iii) Assuming that the "operating margin" (operating income divided by revenues) moves in parallel with each division's contribution margin, how has the shift in sales mix affected the company's profitability from 2006 to 2008?

COMMUNICATION ACTIVITY

BYP19-5 Mortonson Corporation makes two different boat anchors—a traditional fishing anchor and a high-end yacht anchor—using the same production machinery. The contribution margin of the yacht anchor is three times as high as that of the other product. The company is currently operating at full capacity and has been doing so for nearly two years. Steve Gantner, the company's CEO, wants to cut back on production of the fishing anchor so that the company can make more yacht anchors. He says that this is a "no-brainer" because the contribution margin of the yacht anchor is so much higher.

Instructions

Write a short memo to Steve Gantner describing the analysis that the company should do before it makes this decision and any other considerations that would affect the decision.

ETHICS CASE

***BYP19-6** Jerry Cooper was hired during January 2012 to manage the home products division of Advanced Techno. As part of his employment contract, he was told that he would get $5,000

of additional bonus for every 1% increase that the division's profits exceeded those of the previous year.

Soon after coming on board, Jerry met with his plant managers and explained that he wanted the plants to be run at full capacity. Previously, the plant had employed just-in-time inventory practices and had consequently produced units only as they were needed. Jerry stated that under previous management the company had missed out on too many sales opportunities because it didn't have enough inventory on hand. Because previous management had employed just-in-time inventory practices, when Jerry came on board there was virtually no beginning inventory. The selling price and variable cost per unit remained the same from 2011 to 2012. Additional information is provided below.

	2011	2012
Net income	$ 400,000	$ 600,000
Units produced	20,000	25,000
Units sold	20,000	20,000
Fixed manufacturing overhead costs	$1,000,000	$1,000,000
Fixed manufacturing overhead costs per unit	$ 50	$ 40

Instructions

(a) Calculate Jerry's bonus based upon the net income shown above.
(b) Recompute the 2011 and 2012 results using variable costing.
(c) Recompute Jerry's 2012 bonus under variable costing.
(d) Were Jerry's actions unethical? Do you think any actions need to be taken by the company?

"ALL ABOUT YOU" ACTIVITY

BYP19-7 Many of you will some day own your own business. One rapidly growing opportunity is no-frills workout centers. Such centers attract customers who want to take advantage of state-of-the-art fitness equipment but do not need the other amenities of full-service health clubs. One way to own your own fitness business is to buy a franchise. Snap Fitness is a Minnesota-based business that offers franchise opportunities. For a very low monthly fee ($26, without an annual contract) customers can access a Snap Fitness center 24 hours a day.

The Snap Fitness website (*www.snapfitness.com*) indicates that start-up costs range from $60,000 to $184,000. This initial investment covers the following pre-opening costs: franchise fee, grand opening marketing, leasehold improvements, utility/rent deposits, and training.

Instructions

(a) Suppose that Snap Fitness estimates that each location incurs $4,000 per month in fixed operating expenses plus $2,000 to lease equipment. A recent newspaper article describing no-frills fitness centers indicated that a Snap Fitness site might require only 300 members to break even. Using the information provided above, and your knowledge of CVP analysis, estimate the amount of variable costs. (When performing your analysis, assume that the only fixed costs are the estimated monthly operating expenses and the equipment lease.)
(b) Using the information from part (a), what would monthly sales in members and dollars have to be to achieve a target net income of $10,000 for the month?
(c) Provide five examples of variable costs for a fitness center.
(d) Go to a fitness-business website such as Curves, Snap Fitness, or Anytime Fitness and find information about purchasing a franchise. Summarize the franchise information needed to decide whether entering into a franchise agreement would be a good idea.

Answers to Insight and Accounting Across the Organization Questions

p. 982 Don't Just Look–Buy Something Q: Besides increasing their conversion rates, what steps can online merchants use to lower their break-even points? **A:** In theory, one of the principal advantages of online retailers is that they can minimize their investment in "bricks and mortar" and thus minimize their fixed costs. Some online merchants never even handle the merchandise they sell. Instead, they simply provide a centralized location for customers to view merchandise and to place orders. The online retailer then forwards the order to the supplier, and the supplier ships it directly to the customer.

However, some online merchants who originally planned on employing this model have since found it necessary to build their own warehouses and distribution centers to ensure timely and

dependable product delivery. This increases their fixed costs, and consequently increases their break-even point.

p. 987 Healthy for You, and Great for the Bottom Line Q: Why do you suppose restaurants are so eager to sell beverages and desserts? **A:** There is a reason why servers at restaurants keep your beverage glass full, and why they wave the dessert tray in your face at the end of the meal. Both of these items traditionally have very high contribution margins and require very minimal investments in fixed costs. As a consequence they are a great mechanism by which a company can hit its break-even point.

p. 989 Something Smells Q: What is the limited resource for a retailer, and what implications does this have for sales mix? **A:** For retailers, the limited resource is not just shelf space, but shelf space per day. At first you might think that a product that is small and has a high contribution margin would be the product of choice. But you also have to factor in the amount of time that a product sits on the shelf.

For example, suppose the following: Product A and B are the same size; product A has twice the contribution margin as product B, but product A sits on the shelf five times as long as product B. In this case, once time spent on the shelf is taken into account, product B's superior turnover more than makes up for its lower contribution margin.

p. 993 The Cost of Experience Q: As a result of being in business for a long time, the established airline giants also must pay very large retirement payments, a cost the newer airlines do not face. What impact do these payments have on the break-even equation? **A:** The ongoing costs of retirement and health-care packages for retired employees represent a type of fixed cost. These so-called "legacy" costs can dramatically change the break-even equation. To cover these costs, an old-line airline must fly many more passengers than a newer airline.

study objectives

After studying this chapter, you should be able to:

1. Indicate the benefits of budgeting.
2. State the essentials of effective budgeting.
3. Identify the budgets that comprise the master budget.
4. Describe the sources for preparing the budgeted income statement.
5. Explain the principal sections of a cash budget.
6. Indicate the applicability of budgeting in non-manufacturing companies.

feature story

THE NEXT AMAZON.COM? NOT QUITE

The bursting of the dot-com bubble resulted in countless stories of dot-com failures. Many of these ventures were half-baked, get-rich-quick schemes, rarely based on sound business practices. Initially, they saw money flowing in faster than they knew what to do with—which was precisely the problem. Without proper planning and budgeting, much of the money went to waste. In some cases, failure was actually brought on by rapid, uncontrolled growth.

One such example was online discount bookseller, www.Positively-You.com. One of the website's co-founders, Lyle Bowline, had never run a business. However, his experience as an assistant director of an entrepreneurial center had provided him with knowledge about the do's and don'ts of small business. To minimize costs, he started the company small and simple. He invested $5,000 in computer equipment and ran the business out of his basement. In the early months, even though sales were only about $2,000 a month, the company actually made a profit because it kept its costs low (a feat few other dot-coms could boast of).

Things changed dramatically when the company received national publicity in the financial press. Suddenly the company's sales increased to $50,000 a month—fully 25 times the previous level. The "simple" little business suddenly needed a business plan, a strategic plan, and a budget. It needed to rent office space and to hire employees.

Initially, members of a local book club donated time to help meet the sudden demand. Some put in so much time that eventually the company hired them. Quickly, the number of paid employees ballooned. The sudden growth necessitated detailed planning and budgeting. The need for a proper budget was accentuated by the fact that the company's gross profit was only 16 cents on each dollar of goods sold. This meant that after paying for its inventory, the company had only 16 cents of every dollar to cover its remaining operating costs.

Unfortunately, the company never got things under control. Within a few months, sales had plummeted to $12,000 per month. At this level of sales the company could not meet the mountain of monthly expenses that it had accumulated in trying to grow. Ironically, the company's sudden success, and the turmoil it created, appears to have been what eventually caused the company to fail.

INSIDE CHAPTER 20 . . .

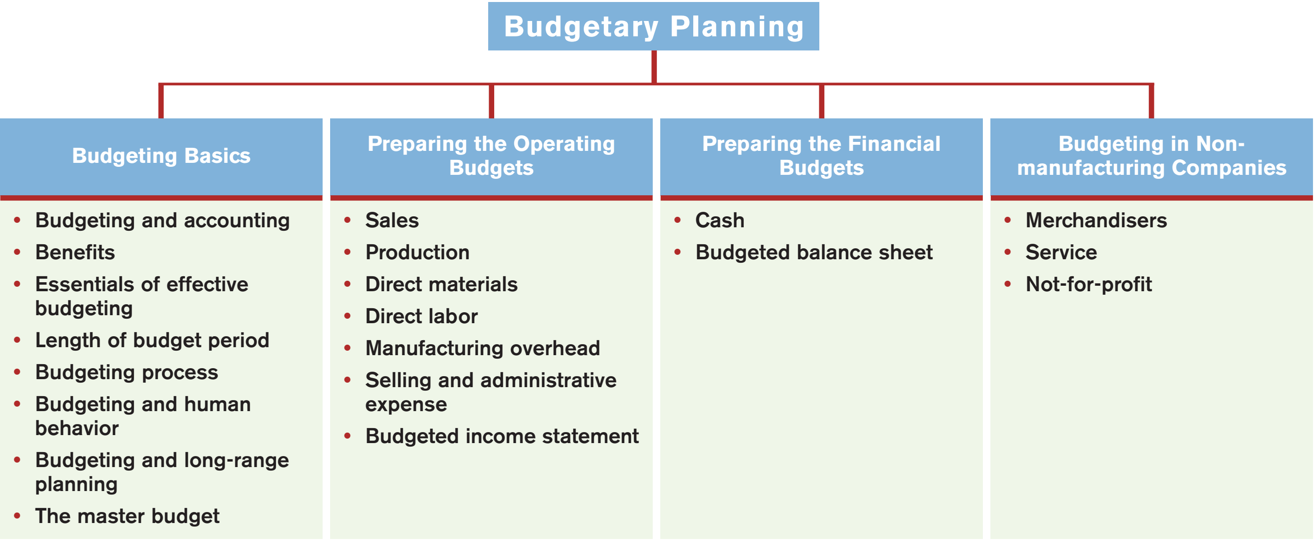
- **Businesses Often Feel Too Busy to Plan for the Future** *(p. 1034)*
- **Which Budget Approach Do You Prefer?** *(p. 1036)*
- **Without a Budget, Can the Games Begin?** *(p. 1049)*
- **Budget Shortfalls as Far as the Eye Can See** *(p. 1053)*

preview of chapter 20

As the Feature Story about Positively-You.com indicates, budgeting is critical to financial well-being. As a student, you budget your study time and your money. Families budget income and expenses. Governmental agencies budget revenues and expenditures. Businesses use budgets in planning and controlling their operations.

Our primary focus in this chapter is budgeting—specifically, how budgeting is used as a *planning tool* by management. Through budgeting, it should be possible for management to maintain enough cash to pay creditors, to have sufficient raw materials to meet production requirements, and to have adequate finished goods to meet expected sales.

The content and organization of Chapter 20 are as follows.



Budgeting Basics

One of management's major responsibilities is planning. As explained in Chapter 14, **planning** is the process of establishing company-wide objectives. A successful organization makes both long-term and short-term plans. These plans set forth the objectives of the company and the proposed way of accomplishing them.

A **budget** is a formal written statement of management's plans for a specified future time period, expressed in financial terms. It normally represents the primary method of communicating agreed-upon objectives throughout the organization. Once adopted, a budget becomes an important basis for evaluating performance. It promotes efficiency and serves as a deterrent to waste and inefficiency. We consider the role of budgeting as a **control device** in Chapter 21.

BUDGETING AND ACCOUNTING

Accounting information makes major contributions to the budgeting process. From the accounting records, companies can obtain historical data on revenues, costs, and expenses. These data are helpful in formulating future budget goals.

Normally, accountants have the responsibility for presenting management's budgeting goals in financial terms. In this role, they translate management's plans and communicate the budget to employees throughout the company. They

prepare periodic budget reports that provide the basis for measuring performance and comparing actual results with planned objectives. The budget itself, and the administration of the budget, however, are entirely management responsibilities.

THE BENEFITS OF BUDGETING

study objective 1
Indicate the benefits of budgeting.

The primary benefits of budgeting are:

1. It requires all levels of management to **plan ahead** and to formalize goals on a recurring basis.
2. It provides **definite objectives** for evaluating performance at each level of responsibility.
3. It creates an **early warning system** for potential problems so that management can make changes before things get out of hand.
4. It facilitates the **coordination of activities** within the business. It does this by correlating the goals of each segment with overall company objectives. Thus, the company can integrate production and sales promotion with expected sales.
5. It results in greater **management awareness** of the entity's overall operations and the impact on operations of external factors, such as economic trends.
6. It **motivates personnel** throughout the organization to meet planned objectives.

A budget is an aid to management; it is not a *substitute* for management. A budget cannot operate or enforce itself. Companies can realize the benefits of budgeting only when managers carefully administer budgets.

ESSENTIALS OF EFFECTIVE BUDGETING

study objective 2
State the essentials of effective budgeting.

Effective budgeting depends on a **sound organizational structure**. In such a structure, authority and responsibility for all phases of operations are clearly defined. Budgets based on **research and analysis** should result in realistic goals that will contribute to the growth and profitability of a company. And, the effectiveness of a budget program is directly related to its **acceptance by all levels of management**.

Once adopted, the budget is an important tool for evaluating performance. Managers should systematically and periodically review variations between actual and expected results to determine their cause(s). However, individuals should not be held responsible for variations that are beyond their control.

LENGTH OF THE BUDGET PERIOD

The budget period is not necessarily one year in length. **A budget may be prepared for any period of time.** Various factors influence the length of the budget period. These factors include the type of budget, the nature of the organization, the need for periodic appraisal, and prevailing business conditions. For example, cash may be budgeted monthly, whereas a plant expansion budget may cover a 10-year period.

The budget period should be long enough to provide an attainable goal under normal business conditions. Ideally, the time period should minimize the impact of seasonal or cyclical fluctuations. On the other hand, the budget period should not be so long that reliable estimates are impossible.

The **most common budget period is one year**. The annual budget, in turn, is often supplemented by monthly and quarterly budgets. Many companies use **continuous 12-month budgets**. These budgets drop the month just ended and

add a future month. One advantage of continuous budgeting is that it keeps management planning a full year ahead.

THE BUDGETING PROCESS

The development of the budget for the coming year generally starts several months before the end of the current year. The budgeting process usually begins with the collection of data from each organizational unit of the company. Past performance is often the starting point from which future budget goals are formulated.

The budget is developed within the framework of a **sales forecast**. This forecast shows potential sales for the industry and the company's expected share of such sales. Sales forecasting involves a consideration of various factors: (1) general economic conditions, (2) industry trends, (3) market research studies, (4) anticipated advertising and promotion, (5) previous market share, (6) changes in prices, and (7) technological developments. The input of sales personnel and top management is essential to the sales forecast.

In small companies like Positively-You.com, the budgeting process is often informal. In larger companies, a **budget committee** has responsibility for coordinating the preparation of the budget. The committee ordinarily includes the president, treasurer, chief accountant (controller), and management personnel from each of the major areas of the company, such as sales, production, and research. The budget committee serves as a review board where managers can defend their budget goals and requests. Differences are reviewed, modified if necessary, and reconciled. The budget is then put in its final form by the budget committee, approved, and distributed.

Accounting Across the Organization

Businesses Often Feel Too Busy to Plan for the Future

A study by Willard & Shullman Group Ltd. found that fewer than 14% of businesses with less than 500 employees do an annual budget or have a written business plan. For many small businesses the basic assumption is that, "As long as I sell as much as I can, and keep my employees paid, I'm doing OK." A few small business owners even say that they see no need for budgeting and planning. Most small business owners, though, say that they understand that budgeting and planning are critical for survival and growth. But given the long hours that they already work addressing day-to-day challenges, they also say that they are "just too busy to plan for the future."

Describe a situation in which a business "sells as much as it can" but cannot "keep its employees paid." (See page 1076.)

BUDGETING AND HUMAN BEHAVIOR

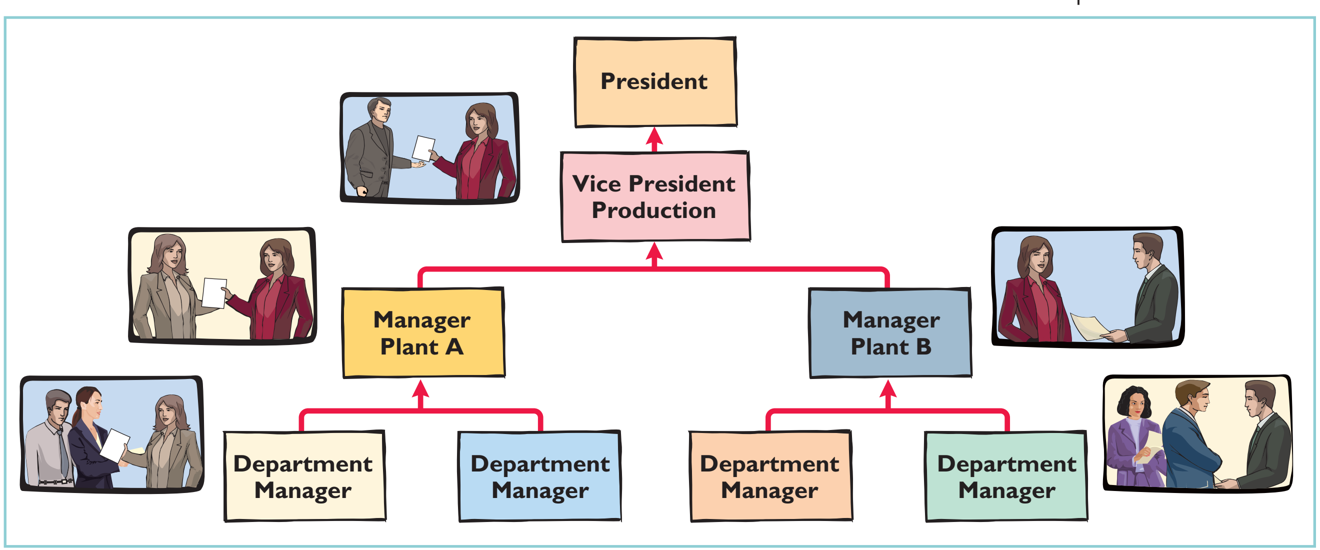
A budget can have a significant impact on human behavior. It may inspire a manager to higher levels of performance. Or, it may discourage additional effort and pull down the morale of a manager. Why do these diverse effects occur? The answer is found in how the budget is developed and administered.

In developing the budget, each level of management should be invited to participate. This "bottom-to-top" approach is referred to as **participative budgeting**.

The advantages of participative budgeting are, first, that lower-level managers have more detailed knowledge of their specific area and thus are able to provide more accurate budgetary estimates. Second, when lower-level managers participate in the budgeting process, they are more likely to perceive the resulting budget as fair. The overall goal is to reach agreement on a budget that the managers consider fair and achievable, but which also meets the corporate goals set by top management. When this goal is met, the budget will provide positive motivation for the managers. In contrast, if the managers view the budget as being unfair and unrealistic, they may feel discouraged and uncommitted to budget goals. The risk of having unrealistic budgets is generally greater when the budget is developed from top management down to lower management than vice versa.

Participative budgeting does, however, have potential disadvantages. First, it is more time-consuming (and thus more costly) than a "top-down" approach, in which the budget is simply dictated to lower-level managers. A second disadvantage is that participative budgeting can foster budgetary "gaming" through budgetary slack. **Budgetary slack** occurs when managers intentionally underestimate budgeted revenues or overestimate budgeted expenses in order to make it easier to achieve budgetary goals. To minimize budgetary slack, higher-level managers must carefully review and thoroughly question the budget projections provided to them by employees whom they supervise. Illustration 20-1 graphically displays the appropriate flow of budget data from bottom to top in an organization.

Illustration 20-1
Flow of budget data from lower levels of management to top levels



For the budget to be effective, top management must completely support the budget. The budget is an important basis for evaluating performance. It also can be used as a positive aid in achieving projected goals. The effect of an evaluation is positive when top management tempers criticism with advice and assistance. In contrast, a manager is likely to respond negatively if top management uses the budget exclusively to assess blame. A budget should not be used as a pressure device to force improved performance. In sum, a budget can be a manager's friend or a foe.

Ethics Note Unrealistic budgets can lead to unethical employee behavior such as cutting corners on the job or distorting internal financial reports.

Accounting Across the Organization

Which Budget Approach Do You Prefer?

At one time, in an effort to revive its plummeting stock, Time Warner's top management determined and publicly announced bold new financial goals for the coming year. Unfortunately, these goals were not reached.

The next year, the company got a new CEO who promised, "We will not over promise, and we will deliver." The new budgets were developed with each operating unit setting what it felt were optimistic but attainable goals. In the words of one manager, using this approach created a sense of teamwork: "We're all going forward with our arms locked together."

Source: Carol J. Loomis, "AOL Time Warner's New Math," *Fortune* (February 4, 2002), pp. 98–102.

What approach did Time Warner use to prepare the old budget? What approach did it use to prepare the new budget? (See page 1076.)

BUDGETING AND LONG-RANGE PLANNING

Budgeting and long-range planning are not the same. One important difference is the **time period involved**. The maximum length of a budget is usually one year, and budgets are often prepared for shorter periods of time, such as a month or a quarter. In contrast, long-range planning usually encompasses a period of at least five years.

Helpful Hint In comparing a budget with a long-range plan: (1) Which has more detail? (2) Which is done for a longer period of time? (3) Which is more concerned with short-term goals? Answers: (1) Budget. (2) Long-range plan. (3) Budget.

A second significant difference is in **emphasis**. Budgeting focuses on achieving specific short-term goals, such as meeting annual profit objectives. **Long-range planning**, on the other hand, identifies long-term goals, selects strategies to achieve those goals, and develops policies and plans to implement the strategies. In long-range planning, management also considers anticipated trends in the economic and political environment and how the company should cope with them.

The final difference between budgeting and long-range planning relates to the **amount of detail presented**. Budgets, as you will see in this chapter, can be very detailed. Long-range plans contain considerably less detail. The data in long-range plans are intended more for a review of progress toward long-term goals than as a basis of control for achieving specific results. The primary objective of long-range planning is to develop the best strategy to maximize the company's performance over an extended future period.

THE MASTER BUDGET

study objective 3
Identify the budgets that comprise the master budget.

The term "budget" is actually a shorthand term to describe a variety of budget documents. All of these documents are combined into a master budget. The **master budget** is a set of interrelated budgets that constitutes a plan of action for a specified time period.

The master budget contains two classes of budgets. **Operating budgets** are the individual budgets that result in the preparation of the budgeted income statement. These budgets establish goals for the company's sales and production personnel. In contrast, **financial budgets** are the capital expenditure budget, the cash budget, and the budgeted balance sheet. These budgets focus primarily on the cash resources needed to fund expected operations and planned capital expenditures.

Illustration 20-2 pictures the individual budgets included in a master budget, and the sequence in which they are prepared. The company first develops the operating budgets, beginning with the sales budget. Then it prepares the financial budgets. We will explain and illustrate each budget shown in Illustration 20-2 except the capital expenditure budget. That budget is discussed under the topic of capital budgeting in Chapter 23.

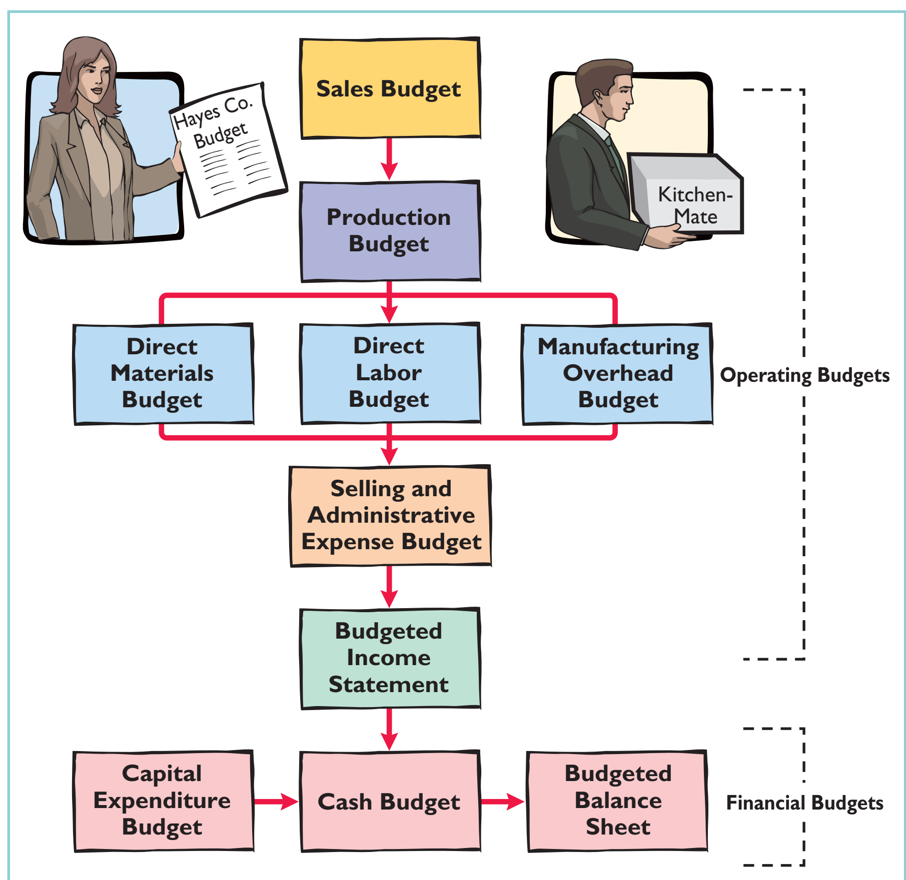


Illustration 20-2
Components of the master budget

before you go on...

BUDGET TERMINOLOGY

Use this list of terms to complete the sentences that follow.

Long-range planning	Participative budgeting
Sales forecast	Operating budgets
Master budget	Financial budgets

1. A _______________ shows potential sales for the industry and a company's expected share of such sales.
2. _______________ are used as the basis for the preparation of the budgeted income statement.
3. The _______________ is a set of interrelated budgets that constitutes a plan of action for a specified time period.
4. _________________ identifies long-term goals, selects strategies to achieve these goals, and develops policies and plans to implement the strategies.
5. Lower-level managers are more likely to perceive results as fair and achievable under a _______________ approach.
6. _________________ focus primarily on the cash resources needed to fund expected operations and planned capital expenditures.

Action Plan

- Understand the budgeting process, including the importance of the sales forecast.
- Understand the difference between an operating budget and a financial budget.
- Differentiate budgeting from long-range planning.
- Realize that the master budget is a set of interrelated budgets.

Solution

1. Sales forecast.
2. Operating budgets.
3. Master budget.
4. Long-range planning.
5. Participative budgeting.
6. Financial budgets.

Related exercise material: **BE20-1, Do it! 20-1,** and **E20-1.**

Preparing the Operating Budgets

We use a case study of Hayes Company in preparing the operating budgets. Hayes manufactures and sells a single product, Kitchen-Mate. The budgets are prepared by quarters for the year ending December 31, 2012. Hayes Company begins its annual budgeting process on September 1, 2011, and it completes the budget for 2012 by December 1, 2011.

SALES BUDGET

Helpful Hint For a retail or manufacturing company, what is the starting point in preparing the master budget, and why? Answer: The sales budget is the starting point for the master budget. It sets the level of activity for other functions such as production and purchasing.

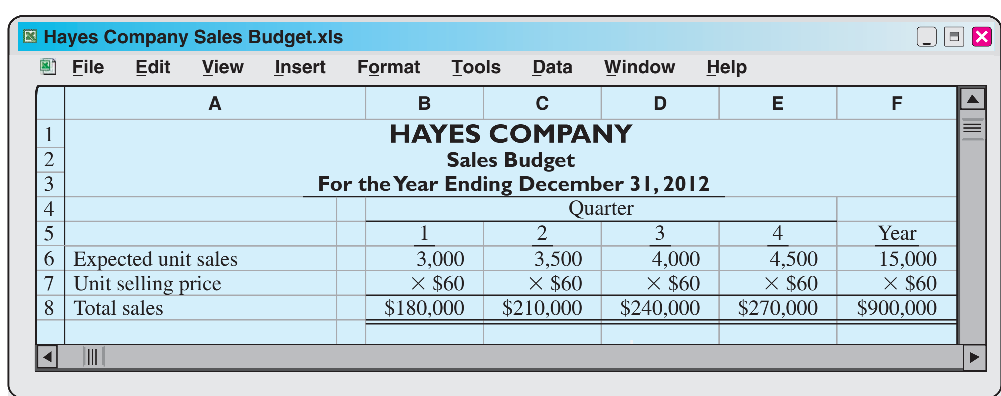
As shown in the master budget in Illustration 20-2, **the sales budget is the first budget prepared**. Each of the other budgets depends on the sales budget. The **sales budget** is derived from the sales forecast. It represents management's best estimate of sales revenue for the budget period. An inaccurate sales budget may adversely affect net income. For example, an overly optimistic sales budget may result in excessive inventories that may have to be sold at reduced prices. In contrast, an unduly conservative budget may result in loss of sales revenue due to inventory shortages.

For example, at one time Amazon significantly underestimated demand for its e-book reader, the Kindle. As a consequence, it did not produce enough units and was completely sold out well before the holiday shopping season. Not only did this represent a huge lost opportunity for Amazon, but it exposed it to potential competitors, who were eager to provide customers with alternatives to the Kindle.

Forecasting sales is challenging. For example, consider the forecasting challenges faced by major sports arenas, whose revenues depend on the success of the home team. Madison Square Garden's revenues from April to June were $193 million when the Knicks made the NBA playoffs. But revenues were only $133.2 million a couple of years later when the team did not make the playoffs. Or consider the challenges faced by Hollywood movie producers in predicting the complicated revenue stream produced by a new movie. Movie theater ticket sales represent only 20% of total revenue. The bulk of revenue comes from global sales, DVDs, video-on-demand, merchandising products, and videogames, all of which are difficult to forecast.

The sales budget is prepared by multiplying the expected unit sales volume for each product by its anticipated unit selling price. Hayes Company expects sales volume to be 3,000 units in the first quarter, with 500-unit increases in each succeeding quarter. Illustration 20-3 shows the sales budget for the year, by quarters, based on a sales price of $60 per unit.

Illustration 20-3
Sales budget



Hayes Company Sales Budget.xls

HAYES COMPANY
Sales Budget
For the Year Ending December 31, 2012

	Quarter				
	1	2	3	4	Year
Expected unit sales	3,000	3,500	4,000	4,500	15,000
Unit selling price	× $60	× $60	× $60	× $60	× $60
Total sales	$180,000	$210,000	$240,000	$270,000	$900,000

Some companies classify the anticipated sales revenue as cash or credit sales and by geographical regions, territories, or salespersons.

PRODUCTION BUDGET

The **production budget** shows the units to produce to meet anticipated sales. Production requirements are determined from the following formula.[1]

Budgeted Sales Units	+	Desired Ending Finished Goods Units	−	Beginning Finished Goods Units	=	Required Production Units

Illustration 20-4
Production requirements formula

A realistic estimate of ending inventory is essential in scheduling production requirements. Excessive inventories in one quarter may lead to cutbacks in production and employee layoffs in a subsequent quarter. On the other hand, inadequate inventories may result either in added costs for overtime work or in lost sales. Hayes Company believes it can meet future sales requirements by maintaining an ending inventory equal to 20% of the next quarter's budgeted sales volume. For example, the ending finished goods inventory for the first quarter is 700 units (20% × anticipated second-quarter sales of 3,500 units). Illustration 20-5 shows the production budget.

Illustration 20-5
Production budget

Hayes Company Production Budget.xls

HAYES COMPANY
Production Budget
For the Year Ending December 31, 2012

	Quarter 1	Quarter 2	Quarter 3	Quarter 4	Year
Expected unit sales (Illustration 20-3)	3,000	3,500	4,000	4,500	
Add: Desired ending finished goods units[a]	700	800	900	1,000[b]	
Total required units	3,700	4,300	4,900	5,500	
Less: Beginning finished goods units	600[c]	700	800	900	
Required production units	**3,100**	**3,600**	**4,100**	**4,600**	**15,400**

[a]20% of next quarter's sales
[b]Expected 2013 first-quarter sales, 5,000 units × 20%
[c]20% of estimated first-quarter 2012 sales units

The production budget, in turn, provides the basis for the budgeted costs for each manufacturing cost element, as explained in the following pages.

[1]This formula ignores any work in process inventories, which are assumed to be nonexistent in Hayes Company.

before you go on...

PRODUCTION BUDGET

Do it! Becker Company estimates that 2012 unit sales will be 12,000 in quarter 1, 16,000 in quarter 2, and 20,000 in quarter 3, at a unit selling price of $30. Management desires to have ending finished goods inventory equal to 15% of the next quarter's expected unit sales. Prepare a production budget by quarter for the first 6 months of 2012.

Action Plan

- Begin with budgeted sales in units.
- Add desired ending finished goods inventory.
- Subtract beginning finished goods inventory.

Solution

BECKER COMPANY
Production Budget
For the Six Months Ending June 30, 2012

	Quarter		Six
	1	2	Months
Expected unit sales	12,000	16,000	
Add: Desired ending finished goods	2,400	3,000	
Total required units	14,400	19,000	
Less: Beginning finished goods inventory	1,800*	2,400**	
Required production units	12,600	16,600	29,200

*12,000 × .15
**16,000 × .15

Related exercise material: **BE20-3, Do it! 20-2, E20-4,** and **E20-6.**

DIRECT MATERIALS BUDGET

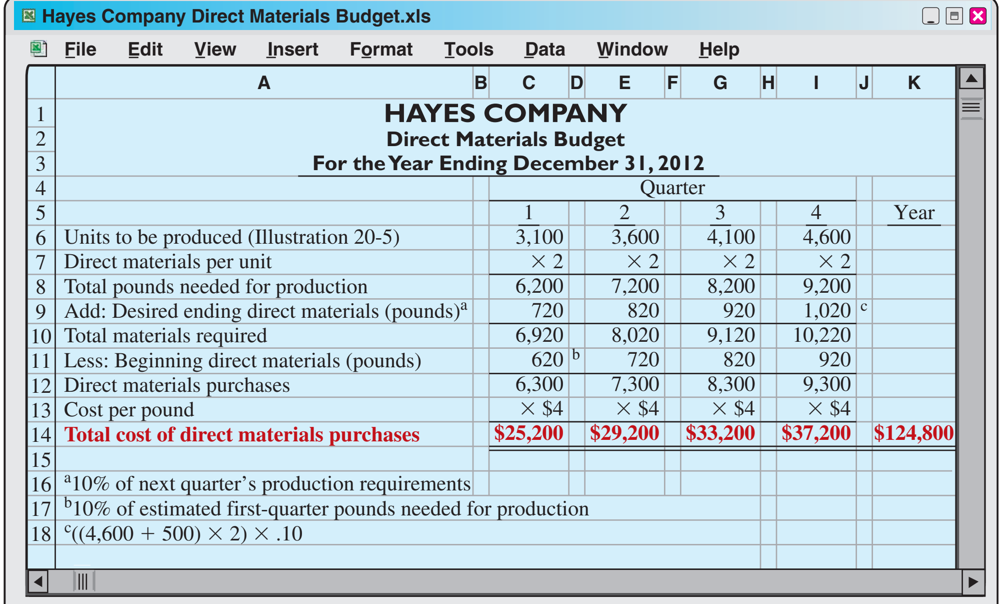
The **direct materials budget** shows both the quantity and cost of direct materials to be purchased. The quantities of direct materials are derived from the following formula.

Illustration 20-6
Formula for direct materials quantities

Direct Materials Units Required for Production	+	Desired Ending Direct Materials Units	−	Beginning Direct Materials Units	=	Required Direct Materials Units to Be Purchased

The company then computes the budgeted cost of direct materials to be purchased by multiplying the required units of direct materials by the anticipated cost per unit.

The desired ending inventory is again a key component in the budgeting process. For example, inadequate inventories could result in temporary shutdowns of production. Because of its close proximity to suppliers, Hayes Company maintains an ending inventory of raw materials equal to 10% of the next quarter's production requirements. The manufacture of each Kitchen-Mate requires 2 pounds of raw materials, and the expected cost per pound is $4. Illustration 20-7 shows the direct materials budget. Assume that the desired ending direct materials amount is 1,020 pounds for the fourth quarter of 2012.



Hayes Company Direct Materials Budget.xls

HAYES COMPANY
Direct Materials Budget
For the Year Ending December 31, 2012

MASTER BUDGET

Soriano Company is preparing its master budget for 2012. Relevant data pertaining to its sales, production, and direct materials budgets are as follows:

Sales: Sales for the year are expected to total 1,200,000 units. Quarterly sales, as a percent of total sales, are 20%, 25%, 30%, and 25%, respectively. The sales price is expected to be $50 per unit for the first three quarters and $55 per unit beginning in the fourth quarter. Sales in the first quarter of 2013 are expected to be 10% higher than the budgeted sales for the first quarter of 2012.

Production: Management desires to maintain the ending finished goods inventories at 25% of the next quarter's budgeted sales volume.

Direct materials: Each unit requires 3 pounds of raw materials at a cost of $5 per pound. Management desires to maintain raw materials inventories at 5% of the next quarter's production requirements. Assume the production requirements for the first quarter of 2013 are 810,000 pounds.

Prepare the sales, production, and direct materials budgets by quarters for 2012.

Action Plan

- Know the form and content of the sales budget.
- Prepare the sales budget first, as the basis for the other budgets.
- Determine the units that must be produced to meet anticipated sales.
- Know how to compute the beginning and ending finished goods units.
- Determine the materials required to meet production needs.
- Know how to compute the beginning and ending direct materials units.

the navigator

DIRECT LABOR BUDGET

Like the direct materials budget, the **direct labor budget** contains the quantity (hours) and cost of direct labor necessary to meet production requirements. The total direct labor cost is derived from the following formula.

Illustration 20-8
Formula for direct labor cost

Units to Be Produced × **Direct Labor Time per Unit** × **Direct Labor Cost per Hour** = **Total Direct Labor Cost**

Direct labor hours are determined from the production budget. At Hayes Company, two hours of direct labor are required to produce each unit of finished goods. The anticipated hourly wage rate is $10. Illustration 20-9 shows these data.

Illustration 20-9
Direct labor budget

Hayes Company Direct Labor Budget.xls

File Edit View Insert Format Tools Data Window Help

HAYES COMPANY
Direct Labor Budget
For the Year Ending December 31, 2012

	Quarter				
	1	2	3	4	Year
Units to be produced (Illustration 20-5)	3,100	3,600	4,100	4,600	
Direct labor time (hours) per unit	× 2	× 2	× 2	× 2	
Total required direct labor hours	6,200	7,200	8,200	9,200	
Direct labor cost per hour	× $10	× $10	× $10	× $10	
Total direct labor cost	**$62,000**	**$72,000**	**$82,000**	**$92,000**	**$308,000**

Helpful Hint An important assumption in Illustration 20-9 is that the company can add to and subtract from its work force as needed so that the $10 per hour labor cost applies to a wide range of possible production activity.

The direct labor budget is critical in maintaining a labor force that can meet the expected levels of production.

MANUFACTURING OVERHEAD BUDGET

The **manufacturing overhead budget** shows the expected manufacturing overhead costs for the budget period. As Illustration 20-10 shows, **this budget distinguishes between variable and fixed overhead costs**. Hayes Company expects variable costs to fluctuate with production volume on the basis of the following rates per direct labor hour: indirect materials $1.00, indirect labor $1.40, utilities $0.40, and maintenance $0.20. Thus, for the 6,200 direct labor

Indirect labor ($1.40/hour)	8,680	10,080	11,480	12,880	43,120
Utilities ($0.40/hour)	2,480	2,880	3,280	3,680	12,320
Maintenance ($0.20/hour)	1,240	1,440	1,640	1,840	6,160
Total variable costs	18,600	21,600	24,600	27,600	92,400
Fixed costs					
Supervisory salaries	20,000	20,000	20,000	20,000	80,000
Depreciation	3,800	3,800	3,800	3,800	15,200
Property taxes and insurance	9,000	9,000	9,000	9,000	36,000
Maintenance	5,700	5,700	5,700	5,700	22,800
Total fixed costs	38,500	38,500	38,500	38,500	154,000
Total manufacturing overhead	**$57,100**	**$60,100**	**$63,100**	**$66,100**	**$246,400**
Direct labor hours (Illustration 20-9)	**6,200**	**7,200**	**8,200**	**9,200**	**30,800**
Manufacturing overhead rate per direct labor hour ($246,400 ÷ 30,800)					**$8**

hours to produce 3,100 units, budgeted indirect materials are $6,200 (6,200 × $1), and budgeted indirect labor is $8,680 (6,200 × $1.40). Hayes also recognizes that some maintenance is fixed. The amounts reported for fixed costs are assumed for our example. The accuracy of budgeted overhead cost estimates can be greatly improved by employing activity-based costing.

At Hayes Company, overhead is applied to production on the basis of direct labor hours. Thus, as Illustration 20-10 shows, the budgeted annual rate is $8 per hour ($246,400 ÷ 30,800).

SELLING AND ADMINISTRATIVE EXPENSE BUDGET

Hayes Company combines its operating expenses into one budget, the **selling and administrative expense budget**. This budget projects anticipated selling and administrative expenses for the budget period. This budget (Illustration 20-11) also classifies expenses as either variable or fixed. In this case, the variable expense rates per unit of sales are sales commissions $3 and freight-out $1. Variable expenses per quarter are based on the unit sales from the sales budget (Illustration 20-3, page 1038). For example, Hayes expects sales in the first quarter to be 3,000 units. Thus, Sales Commissions Expense is $9,000 (3,000 × $3), and Freight-out is $3,000 (3,000 × $1). Fixed expenses are based on assumed data. Illustration 20-11 shows the selling and administrative expense budget.

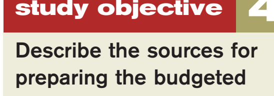
Total selling and administrative expenses	**$42,000**	**$44,000**	**$46,000**	**$48,000**	**$180,000**

BUDGETED INCOME STATEMENT



Describe the sources for preparing the budgeted income statement.

The **budgeted income statement** is the important end-product of the operating budgets. This budget indicates the expected profitability of operations for the budget period. The budgeted income statement provides the basis for evaluating company performance. Budgeted income statements often act as a call to action. For example, a board member at XM Satellite Radio Holdings felt that budgeted costs were too high relative to budgeted revenues. When management refused to cut its marketing and programming costs, the board member resigned; he felt that without the cuts, the company risked financial crisis.

As you would expect, the budgeted income statement is prepared from the various operating budgets. For example, to find the cost of goods sold, it is first necessary to determine the total unit cost of producing one Kitchen-Mate, as follows.

Illustration 20-12
Computation of total unit cost

	Cost of One Kitchen-Mate			
Cost Element	**Illustration**	**Quantity**	**Unit Cost**	**Total**
Direct materials	20-7	2 pounds	$ 4.00	$ 8.00
Direct labor	20-9	2 hours	$10.00	20.00
Manufacturing overhead	20-10	2 hours	$ 8.00	16.00
Total unit cost				**$44.00**

Hayes Company then determines cost of goods sold by multiplying the units sold by the unit cost. Its budgeted cost of goods sold is $660,000 (15,000 × $44). All data for the income statement come from the individual operating budgets except the following: (1) interest expense is expected to be $100, and (2) income taxes are estimated to be $12,000. Illustration 20-13 shows the budgeted income statement.

Illustration 20-13
Budgeted income statement

HAYES COMPANY
Budgeted Income Statement
For the Year Ending December 31, 2012

Sales (Illustration 20-3)	$900,000
Cost of goods sold (15,000 × $44)	660,000
Gross profit	240,000
Selling and administrative expenses (Illustration 20-11)	180,000
Income from operations	60,000
Interest expense	100
Income before income taxes	59,900
Income tax expense	12,000
Net income	$ 47,900

before you go on...

Do it!

BUDGETED INCOME STATEMENT

Soriano Company is preparing its budgeted income statement for 2012. Relevant data pertaining to its sales, production, and direct materials budgets can be found in the **Do it!** exercise on page 1041.

In addition, Soriano budgets 0.5 hours of direct labor per unit, labor costs at $15 per hour, and manufacturing overhead at $25 per direct labor hour. Its budgeted selling and administrative expenses for 2012 are $12,000,000.

(a) Calculate the budgeted total unit cost. (b) Prepare the budgeted income statement for 2012.

Action Plan

- Recall that total unit cost consists of direct materials, direct labor, and manufacturing overhead.
- Recall that direct materials costs are included in the direct materials budget.
- Know the form and content of the income statement.
- Use the total unit sales information from the sales budget to compute annual sales and cost of goods sold.

Solution

(a)

Cost Element	Quantity	Unit Cost	Total
Direct materials	3.0 pounds	$ 5	$ 15.00
Direct labor	0.5 hours	$15	7.50
Manufacturing overhead	0.5 hours	$25	12.50
Total unit cost			**$35.00**

(b)

SORIANO COMPANY
Budgeted Income Statement
For the Year Ending December 31, 2012

Sales (1,200,000 units from sales budget, page 1041)	$61,500,000
Cost of goods sold (1,200,000 × $35.00/unit)	42,000,000
Gross profit	19,500,000
Selling and administrative expenses	12,000,000
Net income	$ 7,500,000

Preparing the Financial Budgets

As shown in Illustration 20-2 (page 1037), the financial budgets consist of the capital expenditure budget, the cash budget, and the budgeted balance sheet. We will discuss the capital expenditure budget in Chapter 23; the other budgets are explained in the following sections.

CASH BUDGET

study objective 5
Explain the principal sections of a cash budget.

The **cash budget** shows anticipated cash flows. Because cash is so vital, this budget is often considered to be the most important financial budget.

The cash budget contains three sections (cash receipts, cash disbursements, and financing) and the beginning and ending cash balances, as shown in Illustration 20-14.

Illustration 20-14
Basic form of a cash budget

ANY COMPANY
Cash Budget

Beginning cash balance	$X,XXX
Add: Cash receipts (Itemized)	X,XXX
Total available cash	X,XXX
Less: Cash disbursements (Itemized)	X,XXX
Excess (deficiency) of available cash over cash disbursements	X,XXX
Financing	X,XXX
Ending cash balance	$X,XXX

Helpful Hint Why is the cash budget prepared after the other budgets are prepared? Answer: Because the information generated by the other budgets dictates the expected inflows and outflows of cash.

The **cash receipts section** includes expected receipts from the company's principal source(s) of revenue. These are usually cash sales and collections from customers on credit sales. This section also shows anticipated receipts of interest and

dividends, and proceeds from planned sales of investments, plant assets, and the company's capital stock.

The **cash disbursements section** shows expected cash payments. Such payments include direct materials, direct labor, manufacturing overhead, and selling and administrative expenses. This section also includes projected payments for income taxes, dividends, investments, and plant assets.

The **financing section** shows expected borrowings and the repayment of the borrowed funds plus interest. Companies need this section when there is a cash deficiency or when the cash balance is below management's minimum required balance.

Data in the cash budget are prepared in sequence. The ending cash balance of one period becomes the beginning cash balance for the next period. Companies obtain data for preparing the cash budget from other budgets and from information provided by management. In practice, cash budgets are often prepared for the year on a monthly basis.

To minimize detail, we will assume that Hayes Company prepares an annual cash budget by quarters. Its cash budget is based on the following assumptions.

1. The January 1, 2012, cash balance is expected to be $38,000. Hayes wishes to maintain a balance of at least $15,000.
2. Sales (Illustration 20-3, page 1038): 60% are collected in the quarter sold and 40% are collected in the following quarter. Accounts receivable of $60,000 at December 31, 2011, are expected to be collected in full in the first quarter of 2012.
3. Short-term investments are expected to be sold for $2,000 cash in the first quarter.
4. Direct materials (Illustration 20-7, page 1041): 50% are paid in the quarter purchased and 50% are paid in the following quarter. Accounts payable of $10,600 at December 31, 2011, are expected to be paid in full in the first quarter of 2012.
5. Direct labor (Illustration 20-9, page 1043): 100% is paid in the quarter incurred.
6. Manufacturing overhead (Illustration 20-10, page 1043) and selling and administrative expenses (Illustration 20-11, page 1044): All items except depreciation are paid in the quarter incurred.
7. Management plans to purchase a truck in the second quarter for $10,000 cash.
8. Hayes makes equal quarterly payments of its estimated annual income taxes.
9. Loans are repaid in the earliest quarter in which there is sufficient cash (that is, when the cash on hand exceeds the $15,000 minimum required balance).

In preparing the cash budget, it is useful to prepare schedules for collections from customers (assumption No. 2) and cash payments for direct materials (assumption No. 4). These schedules are shown in Illustrations 20-15 and 20-16 (below and on the next page).

Illustration 20-15
Collections from customers

HAYES COMPANY
Schedule of Expected Collections from Customers

	Quarter			
	1	2	3	4
Accounts receivable, 12/31/11	$ 60,000			
First quarter ($180,000)	108,000	$ 72,000		
Second quarter ($210,000)		126,000	$ 84,000	
Third quarter ($240,000)			144,000	$ 96,000
Fourth quarter ($270,000)				162,000
Total collections	$168,000	$198,000	$228,000	$258,000

Illustration 20-16
Payments for direct materials

HAYES COMPANY
Schedule of Expected Payments for Direct Materials

	Quarter			
	1	2	3	4
Accounts payable, 12/31/11	$10,600			
First quarter ($25,200)	12,600	$12,600		
Second quarter ($29,200)		14,600	$14,600	
Third quarter ($33,200)			16,600	$16,600
Fourth quarter ($37,200)				18,600
Total payments	$23,200	$27,200	$31,200	$35,200

Illustration 20-17 shows the cash budget for Hayes Company. The budget indicates that Hayes will need $3,000 of financing in the second quarter to maintain a minimum cash balance of $15,000. Since there is an excess of available cash over disbursements of $22,500 at the end of the third quarter, the borrowing, plus $100 interest, is repaid in this quarter.

Service Company Insight

Without a Budget, Can the Games Begin?

Behind the grandeur of the Olympic Games lies a huge financial challenge–how to keep budgeted costs in line with revenues. For example, the 2006 Winter Olympics in Turin, Italy, narrowly avoided going into bankruptcy before the Games even started. In order for the event to remain solvent, organizers cancelled glitzy celebrations and shifted promotional responsibilities to an Italian state-run agency. Despite these efforts, after the Games were over, the Italian government created a lottery game to cover its financial losses.

As another example, organizers of the 2002 Winter Olympics in Salt Lake City cut budgeted costs by $200 million shortly before the events began. According to the chief operating and financial officer, the organizers went through every line item in the budget, sorting each one into "must have" versus "nice to have." As a result, the Salt Lake City Games produced a surplus of $100 million.

Source: Gabriel Kahn and Roger Thurow, "In Turin, Paying for Games Went Down to the Wire," *Wall Street Journal* (February 10, 2006).

Why does it matter whether the Olympic Games exceed their budget? (See page 1076.)

A cash budget contributes to more effective cash management. It shows managers when additional financing is necessary well before the actual need arises. And, it indicates when excess cash is available for investments or other purposes.

DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
Is the company going to need to borrow funds in the coming quarter?	Beginning cash balance, cash receipts, cash disbursements, and desired cash balance	Cash budget	The company will need to borrow money if the cash budget indicates a projected cash deficiency of available cash over cash disbursements for the quarter.

BUDGETED BALANCE SHEET

The **budgeted balance sheet** is a projection of financial position at the end of the budget period. This budget is developed from the budgeted balance sheet for the preceding year and the budgets for the current year. Pertinent data from the budgeted balance sheet at December 31, 2011, are as follows.

Buildings and equipment	$182,000	Common stock	$225,000
Accumulated depreciation	$ 28,800	Retained earnings	$ 46,480

Illustration 20-18 shows Hayes Company's budgeted balance sheet at December 31, 2012.

Illustration 20-18
Budgeted balance sheet

HAYES COMPANY Budgeted Balance Sheet December 31, 2012		
Assets		
Cash		$ 37,900
Accounts receivable		108,000
Finished goods inventory		44,000
Raw materials inventory		4,080
Buildings and equipment	$192,000	
Less: Accumulated depreciation	48,000	144,000
Total assets		$337,980
Liabilities and Stockholders' Equity		
Accounts payable		$ 18,600
Common stock		225,000
Retained earnings		94,380
Total liabilities and stockholders' equity		$337,980

The computations and sources of the amounts are explained below.

Cash: Ending cash balance $37,900, shown in the cash budget (Illustration 20-17, page 1048).

Accounts receivable: 40% of fourth-quarter sales $270,000, shown in the schedule of expected collections from customers (Illustration 20-15, page 1047).

Finished goods inventory: Desired ending inventory 1,000 units, shown in the production budget (Illustration 20-5, page 1039) times the total unit cost $44 (shown in Illustration 20-12, page 1045).

Raw materials inventory: Desired ending inventory 1,020 pounds, times the cost per pound $4, shown in the direct materials budget (Illustration 20-7, page 1041).

Buildings and equipment: December 31, 2011, balance $182,000, plus purchase of truck for $10,000 (Illustration 20-17, page 1048).

Accumulated depreciation: December 31, 2011, balance $28,800, plus $15,200 depreciation shown in manufacturing overhead budget (Illustration 20-10, page 1043) and $4,000 depreciation shown in selling and administrative expense budget (Illustration 20-11, page 1044).

Accounts payable: 50% of fourth-quarter purchases $37,200, shown in schedule of expected payments for direct materials (Illustration 20-16, page 1048).

Common stock: Unchanged from the beginning of the year.

Retained earnings: December 31, 2011, balance $46,480, plus net income $47,900, shown in budgeted income statement (Illustration 20-13, page 1045).

After budget data are entered into the computer, Hayes prepares the various budgets (sales, cash, etc.), as well as the budgeted financial statements. Using spreadsheets, management can also perform "what if" (sensitivity) analyses based on different hypothetical assumptions. For example, suppose that sales managers project that sales will be 10% higher in the coming quarter. What impact

does this change have on the rest of the budgeting process and the financing needs of the business? The impact of the various assumptions on the budget is quickly determined by the spreadsheet. Armed with these analyses, managers make more informed decisions about the impact of various projects. They also anticipate future problems and business opportunities. As seen in this chapter, budgeting is an excellent use of electronic spreadsheets.

before you go on...

Do it! Martian Company management wants to maintain a minimum monthly cash balance of $15,000. At the beginning of March, the cash balance is $16,500, expected cash receipts for March are $210,000, and cash disbursements are expected to be $220,000. How much cash, if any, must be borrowed to maintain the desired minimum monthly balance?

CASH BUDGET

Action Plan

- Write down the basic form of the cash budget, starting with the beginning cash balance, adding cash receipts for the period, deducting cash disbursements, and identifying the needed financing to achieve the desired minimum ending cash balance.
- Insert the data given into the outlined form of the cash budget.

Solution

MARTIAN COMPANY
Cash Budget
For the Month Ending March 31, 2012

Beginning cash balance	$ 16,500
Add: Cash receipts for March	210,000
Total available cash	226,500
Less: Cash disbursements for March	220,000
Excess of available cash over cash disbursements	6,500
Financing	8,500
Ending cash balance	$ 15,000

To maintain the desired minimum cash balance of $15,000, Martian Company must borrow $8,500 of cash.

Budgeting in Nonmanufacturing Companies

study objective 6

Indicate the applicability of budgeting in nonmanufacturing companies.

Budgeting is not limited to manufacturers. Budgets are also used by merchandisers, service companies, and not-for-profit organizations.

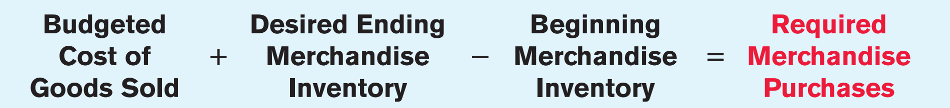
MERCHANDISERS

As in manufacturing operations, the sales budget for a merchandiser is both the starting point and the key factor in the development of the master budget. The major differences between the master budgets of a merchandiser and a manufacturer are these:

1. A merchandiser **uses a merchandise purchases budget instead of a production budget**.
2. A merchandiser **does not use the manufacturing budgets (direct materials, direct labor, and manufacturing overhead)**.

The **merchandise purchases budget** shows the estimated cost of goods to be purchased to meet expected sales. The formula for determining budgeted merchandise purchases is:

Illustration 20-19
Merchandise purchases formula

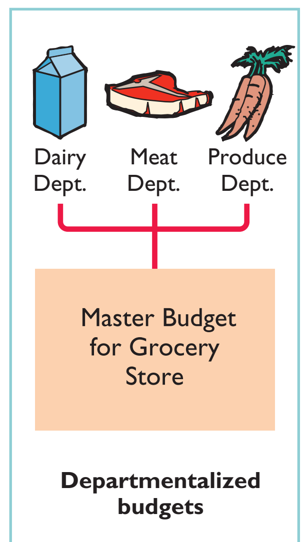


To illustrate, assume that the budget committee of Lima Company is preparing the merchandise purchases budget for July 2012. It estimates that budgeted sales will be $300,000 in July and $320,000 in August. Cost of goods sold is expected to be 70% of sales—that is, $210,000 in July (.70 × $300,000) and $224,000 in August (.70 × $320,000). The company's desired ending inventory is 30% of the following month's cost of goods sold. Required merchandise purchases for July are $214,200, computed as follows.

Illustration 20-20
Merchandise purchases budget

LIMA COMPANY
Merchandise Purchases Budget
For the Month Ending July 31, 2012

Budgeted cost of goods sold ($300,000 × 70%)	$ 210,000
Add: Desired ending merchandise inventory ($224,000 × 30%)	67,200
Total	277,200
Less: Beginning merchandise inventory ($210,000 × 30%)	63,000
Required merchandise purchases for July	**$214,200**



Departmentalized budgets

When a merchandiser is departmentalized, it prepares separate budgets for each department. For example, a grocery store prepares sales budgets and purchases budgets for each of its major departments, such as meats, dairy, and produce. The store then combines these budgets into a master budget for the store. When a retailer has branch stores, it prepares separate master budgets for each store. Then it incorporates these budgets into master budgets for the company as a whole.

SERVICE COMPANIES

In a service company, such as a public accounting firm, a law office, or a medical practice, the critical factor in budgeting is **coordinating professional staff needs with anticipated services**. If a firm is overstaffed, several problems may result: Labor costs are disproportionately high. Profits are lower because of the additional salaries. Staff turnover sometimes increases because of lack of challenging work. In contrast, if a service company is understaffed, it may lose revenue because existing and prospective client needs for service cannot be met. Also, professional staff may seek other jobs because of excessive work loads.

Service companies can obtain budget data for service revenue from **expected output** or **expected input**. When output is used, it is necessary to determine the expected billings of clients for services provided. In a public accounting firm, for example, output is the sum of its billings in auditing, tax, and consulting services. When input data are used, each professional staff member projects his

or her billable time. The firm then applies billing rates to billable time to produce expected service revenue.

NOT-FOR-PROFIT ORGANIZATIONS

Budgeting is just as important for not-for-profit organizations as for profit-oriented businesses. The budget process, however, is different. In most cases, not-for-profit entities budget **on the basis of cash flows (expenditures and receipts), rather than on a revenue and expense basis**. Further, the starting point in the process is usually expenditures, not receipts. For the not-for-profit entity, management's task generally is to find the receipts needed to support the planned expenditures. The activity index is also likely to be significantly different. For example, in a not-for-profit entity, such as a university, budgeted faculty positions may be based on full-time equivalent students or credit hours expected to be taught in a department.

For some governmental units, voters approve the budget. In other cases, such as state governments and the federal government, legislative approval is required. After the budget is adopted, it must be followed. Overspending is often illegal. In governmental budgets, authorizations tend to be on a line-by-line basis. That is, the budget for a municipality may have a specified authorization for police and fire protection, garbage collection, street paving, and so on. The line-item authorization of governmental budgets significantly limits the amount of discretion management can exercise. The city manager often cannot use savings from one line item, such as street paving, to cover increased spending in another line item, such as snow removal.

Service Company Insight

Budget Shortfalls as Far as the Eye Can See

All organizations need to stick to budgets. The Museum of Contemporary Art in Los Angeles learned this the hard way. Over a 10-year period, its endowment shrunk from $50 million to $6 million as its newly hired director strove to build the museum's reputation through spending. The director consistently ran budget deficits, which eventually threatened the museum's survival.

The most recent recession has created budgeting challenges for nearly all governmental agencies. Tax revenues dropped rapidly as earnings declined and unemployment skyrocketed. At the same time, sources of debt financing dried up. To meet a projected shortfall of nearly $50 billion, California proposed to cut the school year by five days, give state workers two unpaid days off per month, and raise the state's sales tax percentage. Even Princeton University, with the largest endowment per student of any U.S. university ($2 million per student), experienced a 25% drop in the value of its endowment when the financial markets plunged. Because the endowment supports 45% of the university's $1.25 billion budget, when the endowment fell the university had to make cuts. Many raises were capped at $2,000, administrative budgets were cut by 5%, and major construction projects were put on hold.

Sources: Edward Wyatt and Jori Finkel, "Soaring in Art, Museum Trips Over Finances," *Wall Street Journal Online* (December 4, 2008); Stu Woo, "California's Plans to Close Gap Become More Drastic," *Wall Street Journal Online* (January 8, 2009); John Hechinger, "Princeton Cuts Budget as Endowment Slides," *Wall Street Journal Online* (January 9, 2009).

Why would a university's budgeted scholarships probably fall when the stock market suffers a serious drop? (See page 1076.)

USING THE DECISION TOOLKIT

The University of Wisconsin and its subunits must prepare budgets. One unique subunit of the University of Wisconsin is Babcock Ice Cream, a functioning producer of dairy products (and famous, at least on campus, for its delicious ice cream).

Assume that Babcock Ice Cream prepares monthly cash budgets. Relevant data from assumed operating budgets for 2012 are:

	January	February
Sales	$460,000	$412,000
Direct materials purchases	185,000	210,000
Direct labor	70,000	85,000
Manufacturing overhead	50,000	65,000
Selling and administrative expenses	85,000	95,000

Babcock sells its ice cream in shops on campus, as well as to local stores. Collections are expected to be 75% in the month of sale, and 25% in the month following sale. Babcock pays 60% of direct materials purchases in cash in the month of purchase, and the balance due in the month following the purchase. All other items above are paid in the month incurred. (Depreciation has been excluded from manufacturing overhead and selling and administrative expenses.)

Other data:

(1) Sales: December 2011, $320,000
(2) Purchases of direct materials: December 2011, $175,000
(3) Other receipts: January—Donation received, $2,000
February—Sale of used equipment, $4,000
(4) Other disbursements: February—Purchased equipment, $10,000
(5) Repaid debt: January, $30,000

The company's cash balance on January 1, 2012, is expected to be $50,000. The company wants to maintain a minimum cash balance of $45,000.

Instructions

(a) Prepare schedules for (1) expected collections from customers and (2) expected payments for direct materials purchases.
(b) Prepare a cash budget for January and February in columnar form.

Solution

(a) (1) **Expected Collections from Customers**

	January	February
December ($320,000)	$ 80,000	$ 0
January ($460,000)	345,000	115,000
February ($412,000)	0	309,000
Totals	$425,000	$424,000

(2) **Expected Payments for Direct Materials**

	January	February
December ($175,000)	$ 70,000	$ 0
January ($185,000)	111,000	74,000
February ($210,000)	0	126,000
Totals	$181,000	$200,000

(b)

BABCOCK ICE CREAM
Cash Budget
For the Two Months Ending February 28, 2012

	January	February
Beginning cash balance	$ 50,000	$ 61,000
Add: Receipts		
Collections from customers	425,000	424,000
Donations received	2,000	0
Sale of used equipment	0	4,000
Total receipts	427,000	428,000
Total available cash	477,000	489,000
Less: Disbursements		
Direct materials	181,000	200,000
Direct labor	70,000	85,000
Manufacturing overhead	50,000	65,000
Selling and administrative expenses	85,000	95,000
Purchase of equipment	0	10,000
Total disbursements	386,000	455,000
Excess (deficiency) of available cash over cash disbursements	91,000	34,000
Financing		
Borrowings	0	11,000
Repayments	30,000	0
Ending cash balance	$ 61,000	$ 45,000

Summary of Study Objectives

1 Indicate the benefits of budgeting. The primary advantages of budgeting are that it (a) requires management to plan ahead, (b) provides definite objectives for evaluating performance, (c) creates an early warning system for potential problems, (d) facilitates coordination of activities, (e) results in greater management awareness, and (f) motivates personnel to meet planned objectives.

2 State the essentials of effective budgeting. The essentials of effective budgeting are (a) sound organizational structure, (b) research and analysis, and (c) acceptance by all levels of management.

3 Identify the budgets that comprise the master budget. The master budget consists of the following budgets: (a) sales, (b) production, (c) direct materials, (d) direct labor, (e) manufacturing overhead, (f) selling and administrative expense, (g) budgeted income statement, (h) capital expenditure budget, (i) cash budget, and (j) budgeted balance sheet.

4 Describe the sources for preparing the budgeted income statement. The budgeted income statement is prepared from (a) the sales budget; (b) the budgets for direct materials, direct labor, and manufacturing overhead; and (c) the selling and administrative expense budget.

5 Explain the principal sections of a cash budget. The cash budget has three sections (receipts, disbursements, and financing) and the beginning and ending cash balances.

6 Indicate the applicability of budgeting in nonmanufacturing companies. Budgeting may be used by merchandisers for development of a merchandise purchases budget. In service companies, budgeting is a critical factor in coordinating staff needs with anticipated services. In not-for-profit organizations, the starting point in budgeting is usually expenditures, not receipts.

DECISION TOOLKIT A SUMMARY

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
Has the company met its targets for sales, production expenses, selling and administrative expenses, and net income?	Sales forecasts, inventory levels, projected materials, labor, overhead, and selling and administrative requirements	Master budget–a set of interrelated budgets including sales, production, materials, labor, overhead, and selling and administrative budgets	Results are favorable if revenues exceed budgeted amounts, or if expenses are less than budgeted amounts.
Is the company going to need to borrow funds in the coming quarter?	Beginning cash balance, cash receipts, cash disbursements, and desired cash balance	Cash budget	The company will need to borrow money if the cash budget indicates a projected cash deficiency of available cash over cash disbursements for the quarter.

Glossary

Budget *(p. 1032)* A formal written statement of management's plans for a specified future time period, expressed in financial terms.

Budget committee *(p. 1034)* A group responsible for coordinating the preparation of the budget.

Budgetary slack *(p. 1035)* The amount by which a manager intentionally underestimates budgeted revenues or overestimates budgeted expenses in order to make it easier to achieve budgetary goals.

Budgeted balance sheet *(p. 1049)* A projection of financial position at the end of the budget period.

Budgeted income statement *(p. 1044)* An estimate of the expected profitability of operations for the budget period.

Cash budget *(p. 1046)* A projection of anticipated cash flows.

Direct labor budget *(p. 1042)* A projection of the quantity and cost of direct labor necessary to meet production requirements.

Direct materials budget *(p. 1040)* An estimate of the quantity and cost of direct materials to be purchased.

Financial budgets *(p. 1036)* Individual budgets that focus primarily on the cash resources needed to fund expected operations and planned capital expenditures.

Long-range planning *(p. 1036)* A formalized process of selecting strategies to achieve long-term goals and developing policies and plans to implement the strategies.

Manufacturing overhead budget *(p. 1043)* An estimate of expected manufacturing overhead costs for the budget period.

Master budget *(p. 1036)* A set of interrelated budgets that constitutes a plan of action for a specific time period.

Merchandise purchases budget *(p. 1052)* The estimated cost of goods to be purchased by a merchandiser to meet expected sales.

Operating budgets *(p. 1036)* Individual budgets that result in a budgeted income statement.

Participative budgeting *(p. 1034)* A budgetary approach that starts with input from lower-level managers and works upward so that managers at all levels participate.

Production budget *(p. 1039)* A projection of the units that must be produced to meet anticipated sales.

Sales budget *(p. 1038)* An estimate of expected sales revenue for the budget period.

Sales forecast *(p. 1034)* The projection of potential sales for the industry and the company's expected share of such sales.

Selling and administrative expense budget *(p. 1044)* A projection of anticipated selling and administrative expenses for the budget period.

Comprehensive Do it!

Asheville Company is preparing its master budget for 2012. Relevant data pertaining to its sales and production budgets are as follows.

Sales: Sales for the year are expected to total 2,100,000 units. Quarterly sales, as a percentage of total sales, are 15%, 25%, 35%, and 25%, respectively. The sales price is expected to be $70 per unit for the first three quarters and $75 per unit beginning in

the fourth quarter. Sales in the first quarter of 2013 are expected to be 10% higher than the budgeted sales volume for the first quarter of 2012.

Production: Management desires to maintain ending finished goods inventories at 20% of the next quarter's budgeted sales volume.

Instructions

Prepare the sales budget and production budget by quarters for 2012.

Solution to Comprehensive Do it!

ASHEVILLE COMPANY
Sales Budget
For the Year Ending December 31, 2012

	Quarter				
	1	2	3	4	Year
Expected unit sales	315,000	525,000	735,000	525,000	2,100,000
Unit selling price	× $70	× $70	× $70	× $75	—
Total sales	$22,050,000	$36,750,000	$51,450,000	$39,375,000	$149,625,000

ASHEVILLE COMPANY
Production Budget
For the Year Ending December 31, 2012

	Quarter				
	1	2	3	4	Year
Expected unit sales	315,000	525,000	735,000	525,000	
Add: Desired ending finished goods units	105,000	147,000	105,000	69,300[1]	
Total required units	420,000	672,000	840,000	594,300	
Less: Beginning finished goods units	63,000[2]	105,000	147,000	105,000	
Required production units	357,000	567,000	693,000	489,300	2,106,300

[1]Estimated first-quarter 2013 sales volume 315,000 + (315,000 × 10%) = 346,500; 346,500 × 20%.
[2]20% of estimated first-quarter 2012 sales units (315,000 × 20%).

Action Plan
- Know the form and content of the sales budget.
- Prepare the sales budget first as the basis for the other budgets.
- Determine the units that must be produced to meet anticipated sales.
- Know how to compute the beginning and ending finished goods units.

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more resources are available for practice in WileyPLUS

Self-Test Questions

Answers are on page 1076.

(SO 1) **1.** Which of the following is *not* a benefit of budgeting?
(a) Management can plan ahead.
(b) An early warning system is provided for potential problems.
(c) It enables disciplinary action to be taken at every level of responsibility.
(d) The coordination of activities is facilitated.

(SO 1) **2.** A budget:
(a) is the responsibility of management accountants.
(b) is the primary method of communicating agreed-upon objectives throughout an organization.
(c) ignores past performance because it represents management's plans for a future time period.
(d) may promote efficiency but has no role in evaluating performance.

(SO 2) **3.** The essentials of effective budgeting do *not* include:
(a) top-down budgeting.
(b) management acceptance.
(c) research and analysis.
(d) sound organizational structure.

(SO 2) **4.** Compared to budgeting, long-range planning generally has the:
(a) same amount of detail.
(b) longer time period.
(c) same emphasis.
(d) same time period.

(SO 3) **5.** A sales budget is:
(a) derived from the production budget.
(b) management's best estimate of sales revenue for the year.
(c) not the starting point for the master budget.
(d) prepared only for credit sales.

(SO 3) **6.** The formula for the production budget is budgeted sales in units plus:
(a) desired ending merchandise inventory less beginning merchandise inventory.
(b) beginning finished goods units less desired ending finished goods units.
(c) desired ending direct materials units less beginning direct materials units.
(d) desired ending finished goods units less beginning finished goods units.

(SO 3) **7.** Direct materials inventories are kept in pounds in Byrd Company, and the total pounds of direct materials needed for production is 9,500. If the beginning inventory is 1,000 pounds and the desired ending inventory is 2,200 pounds, the total pounds to be purchased is:
(a) 9,400.
(b) 9,500.
(c) 9,700.
(d) 10,700.

(SO 3) **8.** The formula for computing the direct labor budget is to multiply the direct labor cost per hour by the:
(a) total required direct labor hours.
(b) physical units to be produced.
(c) equivalent units to be produced.
(d) No correct answer is given.

(SO 4) **9.** Each of the following budgets is used in preparing the budgeted income statement *except* the:
(a) sales budget.
(b) selling and administrative budget.
(c) capital expenditure budget.
(d) direct labor budget.

(SO 4) **10.** The budgeted income statement is:
(a) the end-product of the operating budgets.
(b) the end-product of the financial budgets.
(c) the starting point of the master budget.
(d) dependent on cash receipts and cash disbursements.

11. The budgeted balance sheet is: (SO 5)

(a) developed from the budgeted balance sheet for the preceding year and the budgets for the current year.
(b) the last operating budget prepared.
(c) used to prepare the cash budget.
(d) All of the above.

12. The format of a cash budget is: (SO 5)
(a) Beginning cash balance + Cash receipts + Cash from financing − Cash disbursements = Ending cash balance.
(b) Beginning cash balance + Cash receipts − Cash disbursements +/− Financing = Ending cash balance.
(c) Beginning cash balance + Net income − Cash dividends = Ending cash balance.
(d) Beginning cash balance + Cash revenues − Cash expenses = Ending cash balance.

13. Expected direct materials purchases in Read Company are $70,000 in the first quarter and $90,000 in the second quarter. Forty percent of the purchases are paid in cash as incurred, and the balance is paid in the following quarter. The budgeted cash payments for purchases in the second quarter are: (SO 5)
(a) $96,000.
(b) $90,000.
(c) $78,000.
(d) $72,000.

14. The budget for a merchandiser differs from a budget for a manufacturer because: (SO 6)
(a) a merchandise purchases budget replaces the production budget.
(b) the manufacturing budgets are not applicable.
(c) None of the above.
(d) Both (a) and (b) above.

15. In most cases, not-for-profit entities: (SO 6)
(a) prepare budgets using the same steps as those used by profit-oriented businesses.
(b) know budgeted cash receipts at the beginning of a time period, so they budget only for expenditures.
(c) begin the budgeting process by budgeting expenditures rather than receipts.
(d) can ignore budgets because they are not expected to generate net income.

Go to the book's companion website, **www.wiley.com/college/kimmel**, for additional Self-Test Questions.

Questions

1. (a) What is a budget?
(b) How does a budget contribute to good management?

2. Kate Cey and Joe Coulter are discussing the benefits of budgeting. They ask you to identify the primary advantages of budgeting. Comply with their request.

3. Jane Gilligan asks your help in understanding the essentials of effective budgeting. Identify the essentials for Jane.

4. (a) "Accounting plays a relatively unimportant role in budgeting." Do you agree? Explain.
(b) What responsibilities does management have in budgeting?

5. What criteria are helpful in determining the length of the budget period? What is the most common budget period?

6. Lori Wilkins maintains that the only difference between budgeting and long-range planning is time. Do you agree? Why or why not?

7. What is participative budgeting? What are its potential benefits? What are its potential disadvantages?

8. What is budgetary slack? What incentive do managers have to create budgetary slack?
9. Distinguish between a master budget and a sales forecast.
10. What budget is the starting point in preparing the master budget? What may result if this budget is inaccurate?
11. "The production budget shows both unit production data and unit cost data." Is this true? Explain.
12. Alou Company has 15,000 beginning finished goods units. Budgeted sales units are 160,000. If management desires 20,000 ending finished goods units, what are the required units of production?
13. In preparing the direct materials budget for Quan Company, management concludes that required purchases are 64,000 units. If 52,000 direct materials units are required in production and there are 7,000 units of beginning direct materials, what is the desired units of ending direct materials?
14. The production budget of Justus Company calls for 80,000 units to be produced. If it takes 30 minutes to make one unit and the direct labor rate is $16 per hour, what is the total budgeted direct labor cost?
15. Ortiz Company's manufacturing overhead budget shows total variable costs of $198,000 and total fixed costs of $162,000. Total production in units is expected to be 160,000. It takes 15 minutes to make one unit, and the direct labor rate is $15 per hour. Express the manufacturing overhead rate as (a) a percentage of direct labor cost, and (b) an amount per direct labor hour.
16. Everly Company's variable selling and administrative expenses are 10% of net sales. Fixed expenses are $50,000 per quarter. The sales budget shows expected sales of $200,000 and $250,000 in the first and second quarters, respectively. What are the total budgeted selling and administrative expenses for each quarter?
17. For Goody Company, the budgeted cost for one unit of product is direct materials $10, direct labor $20, and manufacturing overhead 90% of direct labor cost. If 25,000 units are expected to be sold at $69 each, what is the budgeted gross profit?
18. Indicate the supporting schedules used in preparing a budgeted income statement through gross profit for a manufacturer.
19. Identify the three sections of a cash budget. What balances are also shown in this budget?
20. Noterman Company has credit sales of $500,000 in January. Past experience suggests that 45% is collected in the month of sale, 50% in the month following the sale, and 5% in the second month following the sale. Compute the cash collections from January sales in January, February, and March.
21. What is the formula for determining required merchandise purchases for a merchandiser?
22. How may expected revenues in a service company be computed?

Brief Exercises

BE20-1 Chicksaw Manufacturing Company uses the following budgets: Balance Sheet, Capital Expenditure, Cash, Direct Labor, Direct Materials, Income Statement, Manufacturing Overhead, Production, Sales, and Selling and Administrative. Prepare a diagram of the interrelationships of the budgets in the master budget. Indicate whether each budget is an operating or a financial budget.

Prepare a diagram of a master budget.
(SO 3), AN

BE20-2 Palermo Company estimates that unit sales will be 10,000 in quarter 1; 12,000 in quarter 2; 14,000 in quarter 3; and 18,000 in quarter 4. Using a sales price of $80 per unit, prepare the sales budget by quarters for the year ending December 31, 2012.

Prepare a sales budget.
(SO 3), AP

BE20-3 Sales budget data for Palermo Company are given in BE20-2. Management desires to have an ending finished goods inventory equal to 20% of the next quarter's expected unit sales. Prepare a production budget by quarters for the first 6 months of 2012.

Prepare a production budget for 2 quarters.
(SO 3), AP

BE20-4 Perine Company has 1,600 pounds of raw materials in its December 31, 2012, ending inventory. Required production for January and February of 2013 are 4,000 and 5,500 units, respectively. Two pounds of raw materials are needed for each unit, and the estimated cost per pound is $6. Management desires an ending inventory equal to 20% of next month's materials requirements. Prepare the direct materials budget for January.

Prepare a direct materials budget for 1 month.
(SO 3), AP

BE20-5 For Mize Company, units to be produced are 5,000 in quarter 1 and 6,000 in quarter 2. It takes 1.5 hours to make a finished unit, and the expected hourly wage rate is $14 per hour. Prepare a direct labor budget by quarters for the 6 months ending June 30, 2012.

Prepare a direct labor budget for 2 quarters.
(SO 3), AP

BE20-6 For Roche Inc., variable manufacturing overhead costs are expected to be $20,000 in the first quarter of 2012, with $4,000 increments in each of the remaining three quarters. Fixed overhead costs are estimated to be $35,000 in each quarter. Prepare the manufacturing overhead budget by quarters and in total for the year.

Prepare a manufacturing overhead budget.
(SO 3), AP

Prepare a selling and administrative expense budget. (SO 3), AP

BE20-7 Noble Company classifies its selling and administrative expense budget into variable and fixed components. Variable expenses are expected to be $25,000 in the first quarter, and $5,000 increments are expected in the remaining quarters of 2012. Fixed expenses are expected to be $40,000 in each quarter. Prepare the selling and administrative expense budget by quarters and in total for 2012.

Prepare a budgeted income statement for the year. (SO 4), AP

BE20-8 North Company has completed all of its operating budgets. The sales budget for the year shows 50,000 units and total sales of $2,000,000. The total unit cost of making one unit of sales is $22. Selling and administrative expenses are expected to be $300,000. Income taxes are estimated to be $150,000. Prepare a budgeted income statement for the year ending December 31, 2012.

Prepare data for a cash budget. (SO 5), AP

BE20-9 Bruno Industries expects credit sales for January, February, and March to be $200,000, $260,000, and $310,000, respectively. It is expected that 70% of the sales will be collected in the month of sale, and 30% will be collected in the following month. Compute cash collections from customers for each month.

Determine required merchandise purchases for 1 month. (SO 6), AP

BE20-10 Moore Wholesalers is preparing its merchandise purchases budget. Budgeted sales are $400,000 for April and $475,000 for May. Cost of goods sold is expected to be 60% of sales. The company's desired ending inventory is 20% of the following month's cost of goods sold. Compute the required purchases for April.

Do it! Review

Identify budget terminology. (SO 2, 3), K

Do it! 20-1 Use this list of terms to complete the sentences that follow.

Long-range plans	Participative budgeting
Sales forecast	Operating budgets
Master budget	Financial budgets

1. _______________ establish goals for the company's sales and production personnel.
2. The _______________ is a set of interrelated budgets that constitutes a plan of action for a specified time period.
3. _______________ reduces the risk of having unrealistic budgets.
4. _______________ include the cash budget and the budgeted balance sheet.
5. The budget is formed within the framework of a _______________.
6. _______________ contain considerably less detail than budgets.

Production budget. (SO 3), AP

Do it! 20-2 Zeller Company estimates that 2012 unit sales will be 18,000 in quarter 1, 24,000 in quarter 2, and 30,000 in quarter 3, at a unit selling price of $20. Management desires to have ending finished goods inventory equal to 10% of the next quarter's expected unit sales. Prepare a production budget by quarter for the first 6 months of 2012.

Prepare sales, production, and direct materials budgets. (SO 3), AP

Do it! 20-3 Ash Creek Company is preparing its master budget for 2012. Relevant data pertaining to its sales, production, and direct materials budgets are as follows.

Sales: Sales for the year are expected to total 1,000,000 units. Quarterly sales are 20%, 25%, 25%, and 30%, respectively. The sales price is expected to be $40 per unit for the first three quarters and $45 per unit beginning in the fourth quarter. Sales in the first quarter of 2013 are expected to be 10% higher than the budgeted sales for the first quarter of 2012.

Production: Management desires to maintain the ending finished goods inventories at 20% of the next quarter's budgeted sales volume.

Direct materials: Each unit requires 2 pounds of raw materials at a cost of $10 per pound. Management desires to maintain raw materials inventories at 10% of the next quarter's production requirements. Assume the production requirements for first quarter of 2013 are 500,000 pounds.

Prepare the sales, production, and direct materials budgets by quarters for 2012.

Calculate budgeted total unit cost and prepare budgeted income statement. (SO 4), AP

Do it! 20-4 Ash Creek Company is preparing its budgeted income statement for 2012. Relevant data pertaining to its sales, production, and direct materials budgets can be found in Do it! 20-3.

In addition, Ash Creek budgets 0.3 hours of direct labor per unit, labor costs at $14 per hour, and manufacturing overhead at $20 per direct labor hour. Its budgeted selling and administrative expenses for 2012 are $7,000,000.

(a) Calculate the budgeted total unit cost.
(b) Prepare the budgeted income statement for 2012.

Do it! 20-5 Batista Company management wants to maintain a minimum monthly cash balance of $20,000. At the beginning of April, the cash balance is $22,000, expected cash receipts for April are $245,000, and cash disbursements are expected to be $256,000. How much cash, if any, must be borrowed to maintain the desired minimum monthly balance?

Determine amount of financing needed.
(SO 5), AP

Exercises

E20-1 Adler Company has always done some planning for the future, but the company has never prepared a formal budget. Now that the company is growing larger, it is considering preparing a budget.

Explain the concept of budgeting.
(SO 1, 2, 3), C

Instructions
Write a memo to Jim Dixon, the president of Adler Company, in which you define budgeting, identify the budgets that comprise the master budget, identify the primary benefits of budgeting, and discuss the essentials of effective budgeting.

E20-2 Edington Electronics Inc. produces and sells two models of pocket calculators, XQ-103 and XQ-104. The calculators sell for $12 and $25, respectively. Because of the intense competition Edington faces, management budgets sales semiannually. Its projections for the first 2 quarters of 2012 are as follows.

Prepare a sales budget for 2 quarters.
(SO 3), AP

	Unit Sales	
Product	**Quarter 1**	**Quarter 2**
XQ-103	20,000	25,000
XQ-104	12,000	15,000

No changes in selling prices are anticipated.

Instructions
Prepare a sales budget for the 2 quarters ending June 30, 2012. List the products and show for each quarter and for the 6 months, units, selling price, and total sales by product and in total.

E20-3 Garza and Neely, CPAs, are preparing their service revenue (sales) budget for the coming year (2012). The practice is divided into three departments: auditing, tax, and consulting. Billable hours for each department, by quarter, are provided below.

Prepare a sales budget for four quarters.
(SO 3, 6), AP

Department	Quarter 1	Quarter 2	Quarter 3	Quarter 4
Auditing	2,200	1,600	2,000	2,400
Tax	3,000	2,400	2,000	2,500
Consulting	1,500	1,500	1,500	1,500

Average hourly billing rates are: auditing $80, tax $90, and consulting $100.

Instructions
Prepare the service revenue (sales) budget for 2012 by listing the departments and showing for each quarter and the year in total, billable hours, billable rate, and total revenue.

E20-4 Turney Company produces and sells automobile batteries, the heavy-duty HD-240. The 2012 sales forecast is as follows.

Prepare quarterly production budgets.
(SO 3), AP

Quarter	HD-240
1	5,000
2	7,000
3	8,000
4	10,000

The January 1, 2012, inventory of HD-240 is 2,500 units. Management desires an ending inventory each quarter equal to 50% of the next quarter's sales. Sales in the first quarter of 2013 are expected to be 30% higher than sales in the same quarter in 2012.

Instructions
Prepare quarterly production budgets for each quarter and in total for 2012.

Prepare a direct materials purchases budget.
(SO 3), AP

E20-5 Dallas Industries has adopted the following production budget for the first 4 months of 2013.

Month	Units	Month	Units
January	10,000	March	5,000
February	8,000	April	4,000

Each unit requires 3 pounds of raw materials costing $2 per pound. On December 31, 2012, the ending raw materials inventory was 9,000 pounds. Management wants to have a raw materials inventory at the end of the month equal to 30% of next month's production requirements.

Instructions
Prepare a direct materials purchases budget by month for the first quarter.

Prepare production and direct materials budgets by quarters for 6 months.
(SO 3), AP

E20-6 On January 1, 2013, the Hardin Company budget committee has reached agreement on the following data for the 6 months ending June 30, 2013.

Sales units:	First quarter 5,000; second quarter 6,000; third quarter 7,000
Ending raw materials inventory:	50% of the next quarter's production requirements
Ending finished goods inventory:	30% of the next quarter's expected sales units
Third-quarter production:	7,250 units

The ending raw materials and finished goods inventories at December 31, 2012, follow the same percentage relationships to production and sales that occur in 2013. Three pounds of raw materials are required to make each unit of finished goods. Raw materials purchased are expected to cost $4 per pound.

Instructions
(a) Prepare a production budget by quarters for the 6-month period ended June 30, 2013.
(b) Prepare a direct materials budget by quarters for the 6-month period ended June 30, 2013.

Prepare raw materials purchase budget in dollars.
(SO 3), AP

E20-7 Chandler Ltd. estimates sales for the second quarter of 2012 will be as follows.

Month	Units
April	2,550
May	2,475
June	2,390

The target ending inventory of finished products is as follows.

March 31	2,000
April 30	2,230
May 31	2,190
June 30	2,310

Two units of material are required for each unit of finished product. Production for July is estimated at 2,700 units to start building inventory for the fall sales period. Chandler's policy is to have an inventory of raw materials at the end of each month equal to 60% of the following month's production requirements.

Raw materials are expected to cost $4 per unit throughout the period.

Instructions
Calculate the May raw materials purchases in dollars.

(CGA adapted)

Prepare a direct labor budget.
(SO 3), AP

E20-8 Rodriguez, Inc., is preparing its direct labor budget for 2012 from the following production budget based on a calendar year.

Quarter	Units	Quarter	Units
1	20,000	3	35,000
2	25,000	4	30,000

Each unit requires 1.6 hours of direct labor.

Instructions
Prepare a direct labor budget for 2012. Wage rates are expected to be $15 for the first 2 quarters and $16 for quarters 3 and 4.

E20-9 Donnegal Company makes and sells artistic frames for pictures. The controller is responsible for preparing the master budget and has accumulated the following information for 2012.

Prepare production and direct labor budgets.
(SO 3), **AP**

	January	February	March	April	May
Estimated unit sales	10,000	12,000	8,000	9,000	9,000
Sales price per unit	$50.00	$47.50	$47.50	$47.50	$47.50
Direct labor hours per unit	2.0	2.0	1.5	1.5	1.5
Wage per direct labor hour	$8.00	$8.00	$8.00	$9.00	$9.00

Donnegal has a labor contract that calls for a wage increase to $9.00 per hour on April 1. New labor-saving machinery has been installed and will be fully operational by March 1.

Donnegal expects to begin the year with 16,000 frames on hand and has a policy of carrying an end-of-month inventory of 100% of the following month's sales, plus 50% of the second following month's sales.

Instructions
Prepare a production budget and a direct labor budget for Donnegal Company by month and for the first quarter of the year. The direct labor budget should include direct labor hours.

(CMA-Canada adapted)

E20-10 Atlanta Company is preparing its manufacturing overhead budget for 2012. Relevant data consist of the following.

Prepare a manufacturing overhead budget for the year.
(SO 3), **AP**

Units to be produced (by quarters): 10,000, 12,000, 14,000, 16,000.
Direct labor: Time is 1.5 hours per unit.
Variable overhead costs per direct labor hour: Indirect materials $0.70; indirect labor $1.20; and maintenance $0.50.
Fixed overhead costs per quarter: Supervisory salaries $35,000; depreciation $16,000; and maintenance $12,000.

Instructions
Prepare the manufacturing overhead budget for the year, showing quarterly data.

E20-11 Duncan Company combines its operating expenses for budget purposes in a selling and administrative expense budget. For the first 6 months of 2012, the following data are available.

Prepare a selling and administrative expense budget for 2 quarters.
(SO 3), **AP**

1. Sales: 20,000 units quarter 1; 22,000 units quarter 2.
2. Variable costs per dollar of sales: Sales commissions 5%, delivery expense 2%, and advertising 3%.
3. Fixed costs per quarter: Sales salaries $10,000, office salaries $6,000, depreciation $4,200, insurance $1,500, utilities $800, and repairs expense $600.
4. Unit selling price: $20.

Instructions
Prepare a selling and administrative expense budget by quarters for the first 6 months of 2012.

E20-12 Fuqua Company's sales budget projects unit sales of part 198Z of 10,000 units in January, 12,000 units in February, and 13,000 units in March. Each unit of part 198Z requires 2 pounds of materials, which cost $3 per pound. Fuqua Company desires its ending raw materials inventory to equal 40% of the next month's production requirements, and its ending finished goods inventory to equal 25% of the next month's expected unit sales. These goals were met at December 31, 2011.

Prepare a production and a direct materials budget.
(SO 3), **AP**

Instructions
(a) Prepare a production budget for January and February 2012.
(b) Prepare a direct materials budget for January 2012.

E20-13 Dalby Company has accumulated the following budget data for the year 2012.

Prepare a budgeted income statement for the year.
(SO 3, 4), **AP**

1. Sales: 30,000 units, unit selling price $80.
2. Cost of one unit of finished goods: Direct materials 2 pounds at $5 per pound, direct labor 3 hours at $12 per hour, and manufacturing overhead $6 per direct labor hour.

3. Inventories (raw materials only): Beginning, 10,000 pounds; ending, 15,000 pounds.
4. Raw materials cost: $5 per pound.
5. Selling and administrative expenses: $200,000.
6. Income taxes: 30% of income before income taxes.

Instructions

(a) Prepare a schedule showing the computation of cost of goods sold for 2012.
(b) Prepare a budgeted income statement for 2012.

Prepare a cash budget for 2 months.
(SO 5), **AP**

E20-14 Danner Company expects to have a cash balance of $46,000 on January 1, 2012. Relevant monthly budget data for the first 2 months of 2012 are as follows.

Collections from customers: January $85,000, February $150,000.

Payments for direct materials: January $50,000, February $70,000.

Direct labor: January $30,000, February $45,000. Wages are paid in the month they are incurred.

Manufacturing overhead: January $21,000, February $25,000. These costs include depreciation of $1,000 per month. All other overhead costs are paid as incurred.

Selling and administrative expenses: January $15,000, February $20,000. These costs are exclusive of depreciation. They are paid as incurred.

Sales of marketable securities in January are expected to realize $10,000 in cash. Danner Company has a line of credit at a local bank that enables it to borrow up to $25,000. The company wants to maintain a minimum monthly cash balance of $20,000.

Instructions

Prepare a cash budget for January and February.

Prepare a cash budget.
(SO 5), **AP**

E20-15 Aaron Corporation is projecting a cash balance of $31,000 in its December 31, 2011, balance sheet. Aaron's schedule of expected collections from customers for the first quarter of 2012 shows total collections of $180,000. The schedule of expected payments for direct materials for the first quarter of 2012 shows total payments of $41,000. Other information gathered for the first quarter of 2012 is: sale of equipment $3,500; direct labor $70,000, manufacturing overhead $35,000, selling and administrative expenses $45,000; and purchase of securities $12,000. Aaron wants to maintain a balance of at least $25,000 cash at the end of each quarter.

Instructions

Prepare a cash budget for the first quarter.

Prepare cash budget for a month.
(SO 5), **AN**

E20-16 The controller of Trenshaw Company wants to improve the company's control system by preparing a month-by-month cash budget. The following information is for the month ending July 31, 2012.

June 30, 2012, cash balance	$45,000
Dividends to be declared on July 15*	12,000
Cash expenditures to be paid in July for operating expenses	36,800
Amortization expense in July	4,500
Cash collections to be received in July	89,000
Merchandise purchases to be paid in cash in July	56,200
Equipment to be purchased for cash in July	20,500

*Dividends are payable 30 days after declaration to shareholders of record on the declaration date.

Trenshaw Company wants to keep a minimum cash balance of $25,000.

Instructions

(a) Prepare a cash budget for the month ended July 31, 2012, and indicate how much money, if any, Trenshaw Company will need to borrow to meet its minimum cash requirement.
(b) Explain how cash budgeting can reduce the cost of short-term borrowing.

(CGA adapted)

Prepare schedules of expected collections and payments.
(SO 5), **AP**

E20-17 LRF Company's budgeted sales and direct materials purchases are as follows.

	Budgeted Sales	Budgeted D.M. Purchases
January	$200,000	$30,000
February	220,000	35,000
March	270,000	41,000

LRF's sales are 40% cash and 60% credit. Credit sales are collected 10% in the month of sale, 50% in the month following sale, and 36% in the second month following sale; 4% are uncollectible. LRF's purchases are 50% cash and 50% on account. Purchases on account are paid 40% in the month of purchase, and 60% in the month following purchase.

Instructions

(a) Prepare a schedule of expected collections from customers for March.
(b) Prepare a schedule of expected payments for direct materials for March.

Prepare schedules for cash receipts and cash payments, and determine ending balances for balance sheet.
(SO 5, 6), **AP**

E20-18 Green Landscaping Inc. is preparing its budget for the first quarter of 2012. The next step in the budgeting process is to prepare a cash receipts schedule and a cash payments schedule. To that end the following information has been collected.

Clients usually pay 60% of their fee in the month that service is provided, 30% the month after, and 10% the second month after receiving service.

Actual service revenue for 2011 and expected service revenues for 2012 are: November 2011, $90,000; December 2011, $80,000; January 2012, $100,000; February 2012, $120,000; March 2012, $130,000.

Purchases of landscaping supplies (direct materials) are paid 40% in the month of purchase and 60% the following month. Actual purchases for 2011 and expected purchases for 2012 are: December 2011, $14,000; January 2012, $12,000; February 2012, $15,000; March 2012, $18,000.

Instructions

(a) Prepare the following schedules for each month in the first quarter of 2012 and for the quarter in total:
  (1) Expected collections from clients.
  (2) Expected payments for landscaping supplies.
(b) Determine the following balances at March 31, 2012:
  (1) Accounts receivable.
  (2) Accounts payable.

Prepare a cash budget for two quarters.
(SO 5, 6), **AP**

E20-19 Lager Dental Clinic is a medium-sized dental service specializing in family dental care. The clinic is currently preparing the master budget for the first 2 quarters of 2012. All that remains in this process is the cash budget. The following information has been collected from other portions of the master budget and elsewhere.

Beginning cash balance	$ 30,000
Required minimum cash balance	25,000
Payment of income taxes (2nd quarter)	4,000
Professional salaries:	
1st quarter	140,000
2nd quarter	140,000
Interest from investments (2nd quarter)	5,000
Overhead costs:	
1st quarter	75,000
2nd quarter	100,000
Selling and administrative costs, including $3,000 depreciation:	
1st quarter	50,000
2nd quarter	70,000
Purchase of equipment (2nd quarter)	50,000
Sale of equipment (1st quarter)	15,000
Collections from clients:	
1st quarter	230,000
2nd quarter	380,000
Interest payments (2nd quarter)	300

Instructions

Prepare a cash budget for each of the first two quarters of 2012.

Prepare a purchases budget and budgeted income statement for a merchandiser.
(SO 6), **AP**

E20-20 In May 2012, the budget committee of Grand Stores assembles the following data in preparation of budgeted merchandise purchases for the month of June.

1. Expected sales: June $500,000, July $600,000.
2. Cost of goods sold is expected to be 70% of sales.

3. Desired ending merchandise inventory is 40% of the following (next) month's cost of goods sold.
4. The beginning inventory at June 1 will be the desired amount.

Instructions

(a) Compute the budgeted merchandise purchases for June.
(b) Prepare the budgeted income statement for June through gross profit.

Problems: Set A

Prepare budgeted income statement and supporting budgets.
(SO 3, 4), **AP**

P20-1A Glendo Farm Supply Company manufactures and sells a pesticide called Snare. The following data are available for preparing budgets for Snare for the first 2 quarters of 2013.

1. Sales: Quarter 1, 28,000 bags; quarter 2, 42,000 bags. Selling price is $60 per bag.
2. Direct materials: Each bag of Snare requires 4 pounds of Gumm at a cost of $4 per pound and 6 pounds of Tarr at $1.50 per pound.
3. Desired inventory levels:

Type of Inventory	January 1	April 1	July 1
Snare (bags)	8,000	12,000	18,000
Gumm (pounds)	9,000	10,000	13,000
Tarr (pounds)	14,000	20,000	25,000

4. Direct labor: Direct labor time is 15 minutes per bag at an hourly rate of $14 per hour.
5. Selling and administrative expenses are expected to be 15% of sales plus $175,000 per quarter.
6. Income taxes are expected to be 30% of income from operations.

Your assistant has prepared two budgets: (1) The manufacturing overhead budget shows expected costs to be 150% of direct labor cost. (2) The direct materials budget for Tarr shows the cost of Tarr purchases to be $297,000 in quarter 1 and $439,500 in quarter 2.

Instructions

Prepare the budgeted income statement for the first 6 months and all required operating budgets by quarters. (*Note:* Use variable and fixed in the selling and administrative expense budget.) Do not prepare the manufacturing overhead budget or the direct materials budget for Tarr.

Net income $600,250
Cost per bag $33.75

Prepare sales, production, direct materials, direct labor, and income statement budgets.
(SO 3, 4), **AP**

P20-2A Deleon Inc. is preparing its annual budgets for the year ending December 31, 2013. Accounting assistants furnish the data shown below.

	Product JB 50	Product JB 60
Sales budget:		
Anticipated volume in units	400,000	200,000
Unit selling price	$20	$25
Production budget:		
Desired ending finished goods units	25,000	15,000
Beginning finished goods units	30,000	10,000
Direct materials budget:		
Direct materials per unit (pounds)	2	3
Desired ending direct materials pounds	30,000	15,000
Beginning direct materials pounds	40,000	10,000
Cost per pound	$3	$4
Direct labor budget:		
Direct labor time per unit	0.4	0.6
Direct labor rate per hour	$12	$12
Budgeted income statement:		
Total unit cost	$12	$21

An accounting assistant has prepared the detailed manufacturing overhead budget and the selling and administrative expense budget. The latter shows selling expenses of $660,000 for product JB 50 and $360,000 for product JB 60, and administrative expenses of $540,000 for product JB 50 and $340,000 for product JB 60. Income taxes are expected to be 30%.

(a) Total sales $13,000,000
(b) Required production units: JB 50, 395,000 JB 60, 205,000
(c) Total cost of direct materials purchases $4,820,000
(d) Total direct labor cost $3,372,000
(e) Net income $1,470,000

Instructions

Prepare the following budgets for the year. Show data for each product. Quarterly budgets should not be prepared.

(a) Sales
(b) Production
(c) Direct materials
(d) Direct labor
(e) Income statement (*Note:* Income taxes are not allocated to the products.)

Prepare sales and production budgets and compute cost per unit under two plans.
(SO 3, 4), **E**

P20-3A Marsh Industries had sales in 2012 of $6,400,000 and gross profit of $1,100,000. Management is considering two alternative budget plans to increase its gross profit in 2013.

Plan A would increase the selling price per unit from $8.00 to $8.40. Sales volume would decrease by 5% from its 2012 level. Plan B would decrease the selling price per unit by $0.50. The marketing department expects that the sales volume would increase by 150,000 units.

At the end of 2012, Marsh has 40,000 units of inventory on hand. If Plan A is accepted, the 2013 ending inventory should be equal to 5% of the 2013 sales. If Plan B is accepted, the ending inventory should be equal to 50,000 units. Each unit produced will cost $1.80 in direct labor, $1.25 in direct materials, and $1.20 in variable overhead. The fixed overhead for 2013 should be $1,895,000.

Instructions

(a) Prepare a sales budget for 2013 under each plan.
(b) Prepare a production budget for 2013 under each plan.
(c) Compute the production cost per unit under each plan. Why is the cost per unit different for each of the two plans? (Round to two decimals.)
(d) Which plan should be accepted? (*Hint:* Compute the gross profit under each plan.)

(c) Unit cost: Plan A $6.75 Plan B $6.22
(d) Gross profit: Plan A $1,254,000 Plan B $1,216,000

Prepare cash budget for 2 months.
(SO 5), **AP**

P20-4A Colter Company prepares monthly cash budgets. Relevant data from operating budgets for 2013 are:

	January	February
Sales	$350,000	$400,000
Direct materials purchases	110,000	130,000
Direct labor	90,000	100,000
Manufacturing overhead	70,000	75,000
Selling and administrative expenses	79,000	86,000

All sales are on account. Collections are expected to be 50% in the month of sale, 30% in the first month following the sale, and 20% in the second month following the sale. Sixty percent (60%) of direct materials purchases are paid in cash in the month of purchase, and the balance due is paid in the month following the purchase. All other items above are paid in the month incurred except for selling and administrative expenses that include $1,000 of depreciation per month.

Other data:

1. Credit sales: November 2012, $260,000; December 2012, $320,000.
2. Purchases of direct materials: December 2012, $100,000.
3. Other receipts: January—Collection of December 31, 2012, notes receivable $15,000; February—Proceeds from sale of securities $6,000.
4. Other disbursements: February—Withdrawal of $5,000 cash for personal use of owner, Nick Haniwall.

The company's cash balance on January 1, 2013, is expected to be $60,000. The company wants to maintain a minimum cash balance of $50,000.

Instructions

(a) Prepare schedules for (1) expected collections from customers and (2) expected payments for direct materials purchases.
(b) Prepare a cash budget for January and February in columnar form.

(a) January: collections $323,000 payments $106,000
(b) Ending cash balance: January $54,000 February $50,000

Prepare purchases and income statement budgets for a merchandiser.
(SO 6), **AP**

P20-5A The budget committee of Litwin Company collects the following data for its San Miguel Store in preparing budgeted income statements for May and June 2013.

1. Sales for May are expected to be $800,000. Sales in June and July are expected to be 10% higher than the preceding month.

2. Cost of goods sold is expected to be 75% of sales.
3. Company policy is to maintain ending merchandise inventory at 20% of the following month's cost of goods sold.
4. Operating expenses are estimated to be:

Sales salaries	$30,000 per month
Advertising	5% of monthly sales
Delivery expense	3% of monthly sales
Sales commissions	4% of monthly sales
Rent expense	$5,000 per month
Depreciation	$800 per month
Utilities	$600 per month
Insurance	$500 per month

(a) Purchases:
May $612,000
June $673,200
(b) Net income:
May $46,970
June $54,250

5. Income taxes are estimated to be 30% of income from operations.

Instructions

(a) Prepare the merchandise purchases budget for each month in columnar form.
(b) Prepare budgeted income statements for each month in columnar form. Show in the statements the details of cost of goods sold.

Prepare budgeted income statement and balance sheet.
(SO 4, 5), **AP**

P20-6A Krause Industries' balance sheet at December 31, 2012, is presented below.

KRAUSE INDUSTRIES
Balance Sheet
December 31, 2012

Assets

Current assets		
Cash		$ 7,500
Accounts receivable		82,500
Finished goods inventory (2,000 units)		30,000
Total current assets		120,000
Property, plant, and equipment		
Equipment	$40,000	
Less: Accumulated depreciation	10,000	30,000
Total assets		$150,000

Liabilities and Stockholders' Equity

Liabilities		
Notes payable		$ 25,000
Accounts payable		45,000
Total liabilities		70,000
Stockholders' equity		
Common stock	$50,000	
Retained earnings	30,000	
Total stockholders' equity		80,000
Total liabilities and stockholders' equity		$150,000

Additional information accumulated for the budgeting process is as follows.

Budgeted data for the year 2013 include the following.

	4th Qtr. of 2013	Year 2013 Total
Sales budget (8,000 units at $35)	$84,000	$280,000
Direct materials used	17,000	69,400
Direct labor	12,500	56,600
Manufacturing overhead applied	10,000	54,000
Selling and administrative expenses	18,000	76,000

To meet sales requirements and to have 3,000 units of finished goods on hand at December 31, 2013, the production budget shows 9,000 required units of output. The total unit cost of production is expected to be $20. Krause Industries uses the first-in, first-out (FIFO) inventory costing method. Selling and administrative expenses include $4,000 for depreciation on equipment. Interest expense is expected to be $3,500 for the year. Income taxes are expected to be 30% of income before income taxes.

All sales and purchases are on account. It is expected that 60% of quarterly sales are collected in cash within the quarter and the remainder is collected in the following quarter. Direct materials purchased from suppliers are paid 50% in the quarter incurred and the remainder in the following quarter. Purchases in the fourth quarter were the same as the materials used. In 2013, the company expects to purchase additional equipment costing $19,000. It expects to pay $8,000 on notes payable plus all interest due and payable to December 31 (included in interest expense $3,500, above). Accounts payable at December 31, 2013, includes amounts due suppliers (see above) plus other accounts payable of $5,700. In 2013, the company expects to declare and pay a $5,000 cash dividend. Unpaid income taxes at December 31 will be $5,000. The company's cash budget shows an expected cash balance of $7,950 at December 31, 2013.

Instructions

Prepare a budgeted income statement for 2013 and a budgeted balance sheet at December 31, 2013. In preparing the income statement, you will need to compute cost of goods manufactured (direct materials + direct labor + manufacturing overhead) and finished goods inventory (December 31, 2013).

Net income $35,350
Total assets $146,550

Problems: Set B

Prepare budgeted income statement and supporting budgets.
(SO 3, 4), **AP**

P20-1B Mercer Farm Supply Company manufactures and sells a fertilizer called Basic II. The following data are available for preparing budgets for Basic II for the first 2 quarters of 2012.

1. Sales: Quarter 1, 40,000 bags; quarter 2, 50,000 bags. Selling price is $65 per bag.
2. Direct materials: Each bag of Basic II requires 6 pounds of Crup at a cost of $4 per pound and 10 pounds of Dert at $1.50 per pound.
3. Desired inventory levels:

Type of Inventory	January 1	April 1	July 1
Basic II (bags)	10,000	15,000	20,000
Crup (pounds)	9,000	12,000	15,000
Dert (pounds)	15,000	20,000	25,000

4. Direct labor: Direct labor time is 15 minutes per bag at an hourly rate of $10 per hour.
5. Selling and administrative expenses are expected to be 10% of sales plus $160,000 per quarter.
6. Income taxes are expected to be 30% of income from operations.

Your assistant has prepared two budgets: (1) The manufacturing overhead budget shows expected costs to be 100% of direct labor cost. (2) The direct materials budget for Dert which shows the cost of Dert to be $682,500 in quarter 1 and $832,500 in quarter 2.

Instructions

Prepare the budgeted income statement for the first 6 months of 2012 and all required supporting budgets by quarters. (*Note:* Use variable and fixed in the selling and administrative expense budget.) Do not prepare the manufacturing overhead budget or the direct materials budget for Dert.

Net income $689,500
Cost per bag $44.00

Prepare sales, production, direct materials, direct labor, and income statement budgets.
(SO 3, 4), **AP**

P20-2B Urbina Inc. is preparing its annual budgets for the year ending December 31, 2012. Accounting assistants furnish the following data.

	Product LN 35	Product LN 40
Sales budget:		
Anticipated volume in units	400,000	240,000
Unit selling price	$25	$35
Production budget:		
Desired ending finished goods units	30,000	25,000
Beginning finished goods units	20,000	15,000
Direct materials budget:		
Direct materials per unit (pounds)	2	3
Desired ending direct materials pounds	50,000	20,000
Beginning direct materials pounds	40,000	10,000
Cost per pound	$2	$3
Direct labor budget:		
Direct labor time per unit	0.5	0.75
Direct labor rate per hour	$12	$12
Budgeted income statement:		
Total unit cost	$11	$20

An accounting assistant has prepared the detailed manufacturing overhead budget and the selling and administrative expense budget. The latter shows selling expenses of $750,000 for product LN 35 and $590,000 for product LN 40, and administrative expenses of $420,000 for product LN 35 and $380,000 for product LN 40. Income taxes are expected to be 30%.

(a) Total sales $18,400,000
(b) Required production units: LN 35, 410,000
(c) Total cost of direct materials purchases $3,940,000
(d) Total direct labor cost $4,710,000
(e) Net income $4,942,000

Instructions

Prepare the following budgets for the year. Show data for each product. You do not need to prepare quarterly budgets.

(a) Sales
(b) Production
(c) Direct materials
(d) Direct labor
(e) Income statement (*Note:* Income taxes are not allocated to the products.)

Prepare sales and production budgets and compute cost per unit under two plans.
(SO 3, 4), **E**

P20-3B Ogleby Industries has sales in 2012 of $5,600,000 (800,000 units) and gross profit of $1,344,000. Management is considering two alternative budget plans to increase its gross profit in 2013.

Plan A would increase the selling price per unit from $7.00 to $7.60. Sales volume would decrease by 10% from its 2012 level. Plan B would decrease the selling price per unit by 5%. The marketing department expects that the sales volume would increase by 100,000 units.

At the end of 2012, Ogleby has 70,000 units on hand. If Plan A is accepted, the 2013 ending inventory should be equal to 90,000 units. If Plan B is accepted, the ending inventory should be equal to 100,000 units. Each unit produced will cost $2.00 in direct materials, $1.50 in direct labor, and $0.50 in variable overhead. The fixed overhead for 2013 should be $925,000.

Instructions

(a) Prepare a sales budget for 2013 under (1) Plan A and (2) Plan B.
(b) Prepare a production budget for 2013 under (1) Plan A and (2) Plan B.
(c) Compute the cost per unit under (1) Plan A and (2) Plan B. Explain why the cost per unit is different for each of the two plans. (Round to two decimals.)
(d) Which plan should be accepted? (*Hint:* Compute the gross profit under each plan.)

(c) Unit cost: Plan A $5.25
Plan B $4.99
(d) Gross profit: Plan A $1,692,000
Plan B $1,494,000

Prepare cash budget for 2 months.
(SO 5), **AP**

P20-4B Derby Company prepares monthly cash budgets. Relevant data from operating budgets for 2013 are:

	January	February
Sales	$350,000	$400,000
Direct materials purchases	120,000	110,000
Direct labor	85,000	115,000
Manufacturing overhead	60,000	75,000
Selling and administrative expenses	75,000	80,000

All sales are on account. Collections are expected to be 60% in the month of sale, 30% in the first month following the sale, and 10% in the second month following the sale.

Thirty percent (30%) of direct materials purchases are paid in cash in the month of purchase, and the balance due is paid in the month following the purchase. All other items above are paid in the month incurred. Depreciation has been excluded from manufacturing overhead and selling and administrative expenses.

Other data:

1. Credit sales: November 2012, $200,000; December 2012, $280,000.
2. Purchases of direct materials: December 2012, $90,000.
3. Other receipts: January—Collection of December 31, 2012, interest receivable $3,000; February—Proceeds from sale of securities $5,000.
4. Other disbursements: February—payment of $20,000 for land.

The company's cash balance on January 1, 2013, is expected to be $50,000. The company wants to maintain a minimum cash balance of $40,000.

Instructions

(a) Prepare schedules for (1) expected collections from customers and (2) expected payments for direct materials purchases.

(b) Prepare a cash budget for January and February in columnar form.

(a) January: collections $314,000
payments $99,000
(b) Ending cash balance:
January $48,000
February $40,000

P20-5B The budget committee of Widner Company collects the following data for its Westwood Store in preparing budgeted income statements for July and August 2012.

Prepare purchases and income statement budgets for a merchandiser.

(SO 6), **AP**

1. Expected sales: July $400,000, August $450,000, September $500,000.
2. Cost of goods sold is expected to be 60% of sales.
3. Company policy is to maintain ending merchandise inventory at 20% of the following month's cost of goods sold.
4. Operating expenses are estimated to be:

Sales salaries	$50,000 per month
Advertising	4% of monthly sales
Delivery expense	2% of monthly sales
Sales commissions	3% of monthly sales
Rent expense	$3,000 per month
Depreciation	$700 per month
Utilities	$500 per month
Insurance	$300 per month

5. Income taxes are estimated to be 30% of income from operations.

Instructions

(a) Prepare the merchandise purchases budget for each month in columnar form.

(b) Prepare budgeted income statements for each month in columnar form. Show the details of cost of goods sold in the statements.

(a) Purchases: July $246,000
August $276,000
(b) Net income: July $48,650
August $59,500

Problems: Set C

Visit the book's companion website, at **www.wiley.com/college/kimmel**, and choose the Student Companion site to access Problem Set C.

Waterways Continuing Problem

(This is a continuation of the Waterways Problem from Chapters 14 through 19.)

WCP20 Waterways Corporation is preparing its budget for the coming year, 2013. The first step is to plan for the first quarter of that coming year. The company has gathered information from its managers in preparation of the budgeting process. This problem asks you to prepare the various budgets that comprise the master budget for 2013.

Go to the book's companion website, at **www.wiley.com/college/kimmel**, to see the completion of this problem.

broadening your perspective

DECISION MAKING ACROSS THE ORGANIZATION

BYP20-1 Palmer Corporation operates on a calendar-year basis. It begins the annual budgeting process in late August when the president establishes targets for the total dollar sales and net income before taxes for the next year.

The sales target is given first to the marketing department. The marketing manager formulates a sales budget by product line in both units and dollars. From this budget, sales quotas by product line in units and dollars are established for each of the corporation's sales districts. The marketing manager also estimates the cost of the marketing activities required to support the target sales volume and prepares a tentative marketing expense budget.

The executive vice president uses the sales and profit targets, the sales budget by product line, and the tentative marketing expense budget to determine the dollar amounts that can be devoted to manufacturing and corporate office expense. The executive vice president prepares the budget for corporate expenses. She then forwards to the production department the product-line sales budget in units and the total dollar amount that can be devoted to manufacturing.

The production manager meets with the factory managers to develop a manufacturing plan that will produce the required units when needed within the cost constraints set by the executive vice president. The budgeting process usually comes to a halt at this point because the production department does not consider the financial resources allocated to be adequate.

When this standstill occurs, the vice president of finance, the executive vice president, the marketing manager, and the production manager meet together to determine the final budgets for each of the areas. This normally results in a modest increase in the total amount available for manufacturing costs and cuts in the marketing expense and corporate office expense budgets. The total sales and net income figures proposed by the president are seldom changed. Although the participants are seldom pleased with the compromise, these budgets are final. Each executive then develops a new detailed budget for the operations in his or her area.

None of the areas has achieved its budget in recent years. Sales often run below the target. When budgeted sales are not achieved, each area is expected to cut costs so that the president's profit target can be met. However, the profit target is seldom met because costs are not cut enough. In fact, costs often run above the original budget in all functional areas (marketing, production, and corporate office).

The president is disturbed that Palmer has not been able to meet the sales and profit targets. He hired a consultant with considerable experience with companies in Palmer's industry. The consultant reviewed the budgets for the past 4 years. He concluded that the product line sales budgets were reasonable and that the cost and expense budgets were adequate for the budgeted sales and production levels.

Instructions

With the class divided into groups, answer the following.

(a) Discuss how the budgeting process employed by Palmer Corporation contributes to the failure to achieve the president's sales and profit targets.

(b) Suggest how Palmer Corporation's budgeting process could be revised to correct the problems.

(c) Should the functional areas be expected to cut their costs when sales volume falls below budget? Explain your answer. (CMA adapted)

MANAGERIAL ANALYSIS

BYP20-2 Elliot & Hesse Inc. manufactures ergonomic devices for computer users. Some of its more popular products include glare screens (for computer monitors), keyboard stands with wrist rests, and carousels that allow easy access to discs. Over the past 5 years, it experienced rapid growth, with sales of all products increasing 20% to 50% each year.

Last year, some of the primary manufacturers of computers began introducing new products with some of the ergonomic designs, such as glare screens and wrist rests, already built in. As a result, sales of Elliot & Hesse's accessory devices have declined somewhat. The company believes that the disc carousels will probably continue to show growth, but that the other products will probably continue to decline. When the next year's budget was prepared, increases were built into research and development so that replacement products could be developed or the company could

expand into some other product line. Some product lines being considered are general-purpose ergonomic devices including back supports, foot rests, and sloped writing pads.

The most recent results have shown that sales decreased more than was expected for the glare screens. As a result, the company may have a shortage of funds. Top management has therefore asked that all expenses be reduced 10% to compensate for these reduced sales. Summary budget information is as follows.

Direct materials	$240,000
Direct labor	110,000
Insurance	50,000
Depreciation	90,000
Machine repairs	30,000
Sales salaries	50,000
Office salaries	80,000
Factory salaries (indirect labor)	50,000
Total	$700,000

Instructions

Using the information above, answer the following questions.

(a) What are the implications of reducing each of the costs? For example, if the company reduces direct materials costs, it may have to do so by purchasing lower-quality materials. This may affect sales in the long run.

(b) Based on your analysis in (a), what do you think is the best way to obtain the $70,000 in cost savings requested? Be specific. Are there any costs that cannot or should not be reduced? Why?

REAL-WORLD FOCUS

BYP20-3 Network Computing Devices, Inc. was founded in 1988 in Mountain View, California. The company develops software products such as X-terminals, Z-mail, PC X-ware, and related hardware products. Presented below is a discussion by management in its annual report.

NETWORK COMPUTING DEVICES, INC.
Management Discussion

The Company's operating results have varied significantly, particularly on a quarterly basis, as a result of a number of factors, including general economic conditions affecting industry demand for computer products, the timing and market acceptance of new product introductions by the Company and its competitors, the timing of significant orders from large customers, periodic changes in product pricing and discounting due to competitive factors, and the availability of key components, such as video monitors and electronic subassemblies, some of which require substantial order lead times. The Company's operating results may fluctuate in the future as a result of these and other factors, including the Company's success in developing and introducing new products, its product and customer mix, and the level of competition which it experiences. The Company operates with a small backlog. Sales and operating results, therefore, generally depend on the volume and timing of orders received, which are difficult to forecast. The Company has experienced slowness in orders from some customers during the first quarter of each calendar year due to budgeting cycles common in the computer industry. In addition, sales in Europe typically are adversely affected in the third calendar quarter as many European customers reduce their business activities during the month of August.

Due to the Company's rapid growth rate and the effect of new product introductions on quarterly revenues, these seasonal trends have not materially impacted the Company's results of operations to date. However, as the Company's product lines mature and its rate of revenue growth declines, these seasonal factors may become more evident. Additionally, the Company's international sales are denominated in U.S. dollars, and an increase or decrease in the value of the U.S. dollar relative to foreign currencies could make the Company's products less or more competitive in those markets.

Instructions

(a) Identify the factors that affect the budgeting process at Network Computing Devices, Inc.
(b) Explain the additional budgeting concerns created by the international operations of the company.

MANAGERIAL ACCOUNTING ON THE WEB

BYP20-4 Information regarding many approaches to budgeting can be found on the Web. The following activity investigates the merits of "zero-based" budgeting, as discussed by Michael LaFaive, Director of Financial Policy of the Mackinac Center for Public Policy.

Address: **www.mackinac.org/article.aspx?ID=5928,** or go to **www.wiley.com/college/kimmel**

Instructions

Read the article at the website and answer the following questions.

(a) How does zero-based budgeting differ from standard budgeting procedures?
(b) What are some potential advantages of zero-based budgeting?
(c) What are some potential disadvantages of zero-based budgeting?
(d) How often do departments in Oklahoma undergo zero-based budgeting?

COMMUNICATION ACTIVITY

BYP20-5 In order to better serve their rural patients, Drs. Joe and Rick Parcells (brothers) began giving safety seminars. Especially popular were their "emergency-preparedness" talks given to farmers. Many people asked whether the "kit" of materials the doctors recommended for common farm emergencies was commercially available.

After checking with several suppliers, the doctors realized that no other company offered the supplies they recommended in their seminars, packaged in the way they described. Their wives, Megan and Sue, agreed to make a test package by ordering supplies from various medical supply companies and assembling them into a "kit" that could be sold at the seminars. When these kits proved a runaway success, the sisters-in-law decided to market them. At the advice of their accountant, they organized this venture as a separate company, called Life Protection Products (LPP), with Megan Parcells as CEO and Sue Parcells as Secretary-Treasurer.

LPP soon started receiving requests for the kits from all over the country, as word spread about their availability. Even without advertising, LPP was able to sell its full inventory every month. However, the company was becoming financially strained. Megan and Sue had about $100,000 in savings, and they invested about half that amount initially. They believed that this venture would allow them to make money. However, at the present time, only about $30,000 of the cash remains, and the company is constantly short of cash.

Megan has come to you for advice. She does not understand why the company is having cash flow problems. She and Sue have not even been withdrawing salaries. However, they have rented a local building and have hired two more full-time workers to help them cope with the increasing demand. They do not think they could handle the demand without this additional help.

Megan is also worried that the cash problems mean that the company may not be able to support itself. She has prepared the cash budget shown on page 1075. All seminar customers pay for their products in full at the time of purchase. In addition, several large companies have ordered the kits for use by employees who work in remote sites. They have requested credit terms and have been allowed to pay in the month following the sale. These large purchasers amount to about 25% of the sales at the present time. LPP purchases the materials for the kits about 2 months ahead of time. Megan and Sue are considering slowing the growth of the company by simply purchasing less materials, which will mean selling fewer kits.

The workers are paid weekly. Megan and Sue need about $15,000 cash on hand at the beginning of the month to pay for purchases of raw materials. Right now they have been using cash from their savings, but as noted, only $30,000 is left.

Instructions

Write a response to Megan Parcells. Explain why LPP is short of cash. Will this company be able to support itself? Explain your answer. Make any recommendations you deem appropriate.

LIFE PROTECTION PRODUCTS
Cash Budget
For the Quarter Ending June 30, 2013

	April	May	June
Cash balance, beginning	$15,000	$15,000	$15,000
Cash received			
From prior month sales	5,000	7,500	12,500
From current sales	15,000	22,500	37,500
Total cash on hand	35,000	45,000	65,000
Cash payments			
To employees	3,000	3,000	3,000

Borrow from bank?	$ 0	$ 0	$ 5,000

ETHICS CASE

BYP20-6 You are an accountant in the budgetary, projections, and special projects department of Fernetti Conductor, Inc., a large manufacturing company. The president, Richard Brown, asks you on very short notice to prepare some sales and income projections covering the next 2 years of the company's much heralded new product lines. He wants these projections for a series of speeches he is making while on a 2-week trip to eight East Coast brokerage firms. The president hopes to bolster Fernetti's stock sales and price.

You work 23 hours in 2 days to compile the projections, hand deliver them to the president, and are swiftly but graciously thanked as he departs. A week later, you find time to go over some of your computations and discover a miscalculation that makes the projections grossly overstated. You quickly inquire about the president's itinerary and learn that he has made half of his speeches and has half yet to make. You are in a quandary as to what to do.

Instructions

(a) What are the consequences of telling the president of your gross miscalculations?
(b) What are the consequences of *not* telling the president of your gross miscalculations?
(c) What are the ethical considerations to you and the president in this situation?

"ALL ABOUT YOU" ACTIVITY

BYP20-7 In order to get your personal finances under control, you need to prepare a personal budget. Assume that you have compiled the following information regarding your expected cash flows for a typical month.

Rent payment	$ 400	Miscellaneous costs	$110
Interest income	50	Savings	50
Income tax withheld	300	Eating out	150
Electricity bill	22	Telephone and Internet costs	90
Groceries	80	Student loan payments	275
Wages earned	2,000	Entertainment costs	250
Insurance	100	Transportation costs	150

Instructions

Using the information above, prepare a personal budget. In preparing this budget, use the format found at *http://financialplan.about.com/cs/budgeting/l/blbudget.htm*. Just skip any unused line items.

Answers to Insight and Accounting Across the Organization Questions

p. 1034 Businesses Often Feel Too Busy to Plan for the Future **Q:** Describe a situation in which a business "sells as much as it can" but cannot "keep its employees paid." **A:** If sales are made to customers on credit and collection is slow, the company may find that it does not have enough cash to pay employees or suppliers. Without these resources, the company will fail to survive.

p. 1036 Which Budget Approach Do You Prefer? **Q:** What approach did Time Warner use to prepare the old budget? What approach did it use to prepare the new budget? **A:** Time Warner used a "top-down" approach to prepare the old budget since its goals were determined by top management. It used a participative approach to prepare the new budget since each operating unit set goals.

p. 1049 Without a Budget, Can the Games Begin? **Q:** Why does it matter whether the Olympic Games exceed their budget? **A:** If the Olympic Games exceed their budget, taxpayers of the sponsoring community and country will end up footing the bill. Depending on the size of the losses, and the resources of the community, this could produce a substantial burden. As a result, other communities might be reluctant to host the Olympics in the future.

p. 1053 Budget Shortfalls as Far as the Eye Can See **Q:** Why would a university's budgeted scholarships probably fall when the stock market suffers a serious drop? **A:** Scholarships typically cannot be paid out of the "principal" portion of donations made to scholarship endowment funds. Instead, scholarships are usually funded through earnings generated by endowment investments. Any excess earnings above current-year scholarship needs can be used for scholarships in subsequent years. But a serious drop in the value of endowment investments can wipe out previous earnings, in some cases completely eliminating funds available for scholarships.

study objectives

After studying this chapter, you should be able to:

1. Describe the concept of budgetary control.
2. Evaluate the usefulness of static budget reports.
3. Explain the development of flexible budgets and the usefulness of flexible budget reports.
4. Describe the concept of responsibility accounting.
5. Indicate the features of responsibility reports for cost centers.
6. Identify the content of responsibility reports for profit centers.
7. Explain the basis and formula used in evaluating performance in investment centers.

feature story

TURNING TRASH INTO TREASURE

Vancouver teenager Brian Scudamore needed to raise money to pay his way through college. With $700 and a strong desire to do it on his own, he established his own junk-removal company. Fifteen years later, 1-800-GOT-JUNK? had 113 franchise partners across Canada and the United States, and projected revenues of more than $60 million.

"It was a high-school business project that was out of control," says Cameron Herold, vice president of operations.

While the exponential growth of 1-800-GOT-JUNK? may seem unwieldy (at one point it had five consecutive years of 100-percent compounded growth), it has in fact involved sound financial planning, budgeting, and cash management. The company follows a "zero-based budget," says Mr. Herold. That is, it only spends money it has; it has no outside investors or debt.

Managing this growth involves forecasting everything by creating a "painted picture" of what the company will look like in three years. The company knows its staffing plans, training requirements, and overhead and office-space needs well in advance. "That filters back to our budgeting process," Mr. Herold says. "We'll sit down and say, 'If this is where we're going, what are all the components of that?' . . . Then we bring it back to zero and say, 'What's it going to cost us? Where does it fit into the budget?'"

Key to the company's growth management was the introduction of franchising. "We chose franchising because our franchise partners would actually finance our growth," Mr. Herold says. In addition to the initial franchise fee, franchisees pay the head office 8 percent of their sales, plus another 7 percent to run the centralized call center.

While the company has used franchising to manage growth, a frugal approach to day-to-day costs has also been integral to its budgeting success. "We're always looking for ways to cut costs," Mr. Herold says. This includes establishing strategic relationships with the local coffee shop, doing regular cost analyses of office equipment and changing suppliers when needed, and buying office furniture in bulk from liquidators at 10 cents on the dollar. "All those little things start to really add up," he says.

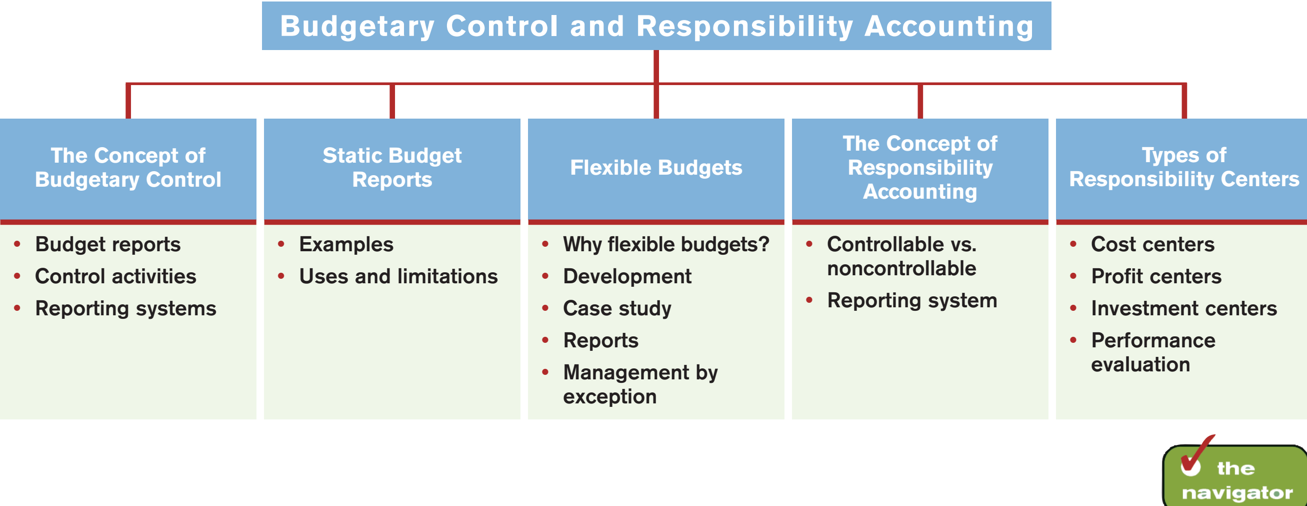
preview of chapter 21

In contrast to Chapter 20, we now consider how budgets are used by management to control operations. In the Feature Story on 1-800-GOT-JUNK?, we saw that management tries to use the budget to adapt to the business environment. This chapter focuses on two aspects of management control: (1) budgetary control and (2) responsibility accounting.

The content and organization of Chapter 21 are as follows.



the navigator

The Concept of Budgetary Control

study objective 1

Describe the concept of budgetary control.

One of management's major functions is to control company operations. Control consists of the steps taken by management to see that planned objectives are met. We now ask: How do budgets contribute to control of operations?

The use of budgets in controlling operations is known as **budgetary control**. Such control takes place by means of **budget reports** that compare actual results with planned objectives. The use of budget reports is based on the belief that planned objectives lose much of their potential value without some monitoring of progress along the way. Just as your professors give midterm exams to evaluate your progress, top management requires periodic reports on the progress of department managers toward their planned objectives.

Budget reports provide management with feedback on operations. The feedback for a crucial objective, such as having enough cash on hand to pay bills, may be made daily. For other objectives, such as meeting budgeted annual sales and operating expenses, monthly budget reports may suffice. Budget reports are prepared as frequently as needed. From these reports, management analyzes any differences between actual and planned results and determines their causes. Management then takes corrective action, or it decides to modify future plans.

Budgetary control involves the activities shown in Illustration 21-1.

Budgetary control works best when a company has a formalized reporting system. The system does the following:

1. Identifies the name of the budget report, such as the sales budget or the manufacturing overhead budget.
2. States the frequency of the report, such as weekly or monthly.
3. Specifies the purpose of the report.
4. Indicates the primary recipient(s) of the report.

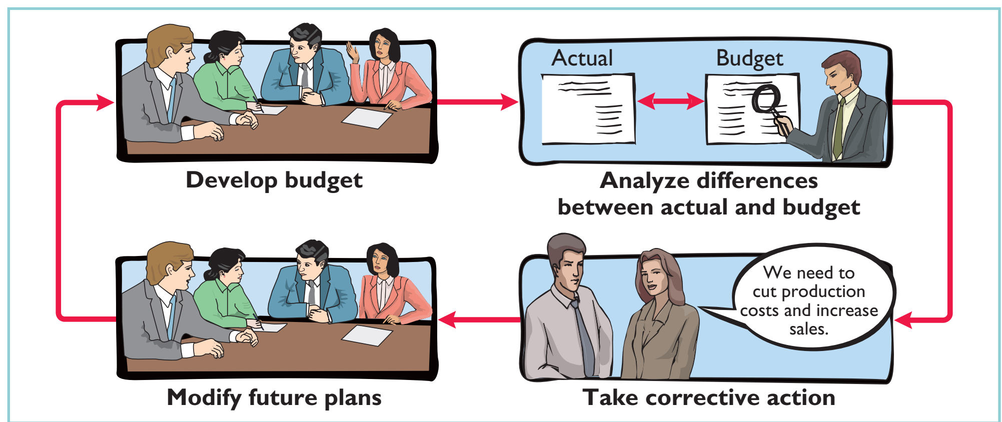


Illustration 21-1 Budgetary control activities

Illustration 21-2 provides a partial budgetary control system for a manufacturing company. Note the frequency of the reports and their emphasis on control. For example, there is a daily report on scrap and a weekly report on labor.

Illustration 21-2 Budgetary control reporting system

Name of Report	Frequency	Purpose	Primary Recipient(s)
Sales	Weekly	Determine whether sales goals are being met	Top management and sales manager
Labor	Weekly	Control direct and indirect labor costs	Vice president of production and production department managers
Scrap	Daily	Determine efficient use of materials	Production manager
Departmental overhead costs	Monthly	Control overhead costs	Department manager
Selling expenses	Monthly	Control selling expenses	Sales manager
Income statement	Monthly and quarterly	Determine whether income objectives are being met	Top management

Static Budget Reports

study objective 2
Evaluate the usefulness of static budget reports.

You learned in Chapter 20 that the master budget formalizes management's planned objectives for the coming year. When used in budgetary control, each budget included in the master budget is considered to be static. A **static budget** is a projection of budget data **at one level of activity**. These budgets do not consider data for different levels of activity. As a result, companies always compare actual results with budget data at the activity level that was used in developing the master budget.

EXAMPLES

To illustrate the role of a static budget in budgetary control, we will use selected data prepared for Hayes Company in Chapter 20. Budget and actual sales data for the Kitchen-Mate product in the first and second quarters of 2012 are as follows.

Illustration 21-3 Budget and actual sales data

Sales	First Quarter	Second Quarter	Total
Budgeted	$180,000	$210,000	$390,000
Actual	179,000	199,500	378,500
Difference	$ 1,000	$ 10,500	$ 11,500

The sales budget report for Hayes Company's first quarter is shown below. The right-most column reports the difference between the budgeted and actual amounts.

Illustration 21-4 Sales budget report—first quarter

HAYES COMPANY
Sales Budget Report
For the Quarter Ended March 31, 2012

Product Line	Budget	Actual	Difference Favorable F Unfavorable U
Kitchen-Mate[a]	$180,000	$179,000	**$1,000 U**

[a]In practice, each product line would be included in the report.

Alternative Terminology The difference between budget and actual is sometimes called a *budget variance*.

The report shows that sales are $1,000 under budget—an unfavorable result. This difference is less than 1% of budgeted sales ($1,000 ÷ $180,000 =.0056). Top management's reaction to unfavorable differences is often influenced by the materiality (significance) of the difference. Since the difference of $1,000 is immaterial in this case, we assume that Hayes Company management takes no specific corrective action.

Illustration 21-5 shows the budget report for the second quarter. It contains one new feature: cumulative year-to-date information. This report indicates that sales for the second quarter are $10,500 below budget. This is 5% of budgeted sales ($10,500 ÷ $210,000). Top management may now conclude that the difference between budgeted and actual sales requires investigation.

Illustration 21-5 Sales budget report—second quarter

HAYES COMPANY
Sales Budget Report
For the Quarter Ended June 30, 2012

	Second Quarter			Year-to-Date		
Product Line	Budget	Actual	Difference Favorable F Unfavorable U	Budget	Actual	Difference Favorable F Unfavorable U
Kitchen-Mate	$210,000	$199,500	**$10,500 U**	$390,000	$378,500	**$11,500 U**

Management's analysis should start by asking the sales manager the cause(s) of the shortfall. Managers should consider the need for corrective action. For example, management may decide to spur sales by offering sales incentives to customers or by increasing the advertising of Kitchen-Mates. Or, if management concludes that a downturn in the economy is responsible for the lower sales, it may modify planned sales and profit goals for the remainder of the year.

USES AND LIMITATIONS

From these examples, you can see that a master sales budget is useful in evaluating the performance of a sales manager. It is now necessary to ask: Is the master budget appropriate for evaluating a manager's performance in controlling costs? Recall that in a static budget, data are not modified or adjusted, regardless of

changes in activity. It follows, then, that a static budget is appropriate in evaluating a manager's effectiveness in controlling costs when:

1. The actual level of activity closely approximates the master budget activity level, and/or
2. The behavior of the costs in response to changes in activity is fixed.

A static budget report is, therefore, appropriate for **fixed manufacturing costs** and for **fixed selling and administrative expenses**. But, as you will see shortly, static budget reports may not be a proper basis for evaluating a manager's performance in controlling variable costs.

Costs

Units

Static budgets report a single level of activity

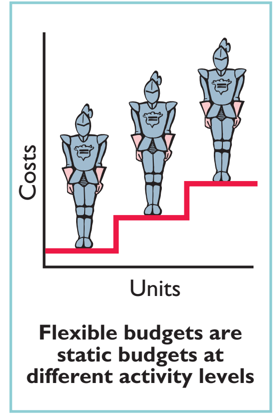
Flexible Budgets

study objective 3

Explain the development of flexible budgets and the usefulness of flexible budget reports.

In contrast to a static budget, which is based on one level of activity, a **flexible budget** projects budget data for various levels of activity. In essence, **the flexible budget is a series of static budgets at different levels of activity**. The flexible budget recognizes that the budgetary process is more useful if it is adaptable to changed operating conditions.

Flexible budgets can be prepared for each of the types of budgets included in the master budget. For example, Marriott Hotels can budget revenues and net income on the basis of 60%, 80%, and 100% of room occupancy. Similarly, American Van Lines can budget its operating expenses on the basis of various levels of truck miles driven. Duke Energy can budget revenue and net income on the basis of estimated billions of kwh (kilowatt hours) of residential, commercial, and industrial electricity generated. In the following pages, we will illustrate a flexible budget for manufacturing overhead.



Flexible budgets are static budgets at different activity levels

WHY FLEXIBLE BUDGETS?

Assume that you are the manager in charge of manufacturing overhead in the Forging Department of Barton Steel. In preparing the manufacturing overhead budget for 2012, you prepare the following static budget based on a production volume of 10,000 units of steel ingots.

Illustration 21-6 Static overhead budget

BARTON STEEL
Manufacturing Overhead Budget (Static)
Forging Department
For the Year Ended December 31, 2012

Budgeted production in units (steel ingots)	10,000
Budgeted costs	
Indirect materials	$ 250,000
Indirect labor	260,000
Utilities	190,000
Depreciation	280,000
Property taxes	70,000
Supervision	50,000
	$1,100,000

Helpful Hint The master budget described in Chapter 20 is based on a static budget.

Fortunately for the company, the demand for steel ingots has increased, and Barton produces and sells 12,000 units during the year, rather than 10,000. You are elated: Increased sales means increased profitability, which should mean a bonus or a raise for you and the employees in your department. Unfortunately,

a comparison of Forging Department actual and budgeted costs has put you on the spot. The budget report is shown below.

Illustration 21-7
Overhead static budget report

Barton Steel.xls

File Edit View Insert Format Tools Data Window Help

BARTON STEEL
Manufacturing Overhead Static Budget Report
For the Year Ended December 31, 2012

	Budget	Actual	Difference Favorable - F Unfavorable - U	
Production in units	10,000	12,000		
Costs				
Indirect materials	$ 250,000	$ 295,000	**$ 45,000**	**U**
Indirect labor	260,000	312,000	**52,000**	**U**
Utilities	190,000	225,000	**35,000**	**U**
Depreciation	280,000	280,000	**0**	
Property taxes	70,000	70,000	**0**	
Supervision	50,000	50,000	**0**	
	$1,100,000	$1,232,000	**$132,000**	**U**

Helpful Hint A static budget is not useful for performance evaluation if a company has substantial variable costs.

This comparison uses budget data based on the original activity level (10,000 steel ingots). It indicates that the Forging Department is significantly **over budget** for three of the six overhead costs. And, there is a total unfavorable difference of $132,000, which is 12% over budget ($132,000 ÷ $1,100,000). Your supervisor is very unhappy! Instead of sharing in the company's success, you may find yourself looking for another job. What went wrong?

When you calm down and carefully examine the manufacturing overhead budget, you identify the problem: The budget data are not relevant! At the time the budget was developed, the company anticipated that only 10,000 units of steel ingots would be produced, **not** 12,000. Comparing actual with budgeted variable costs is meaningless. As production increases, the budget allowances for variable costs should increase proportionately. The variable costs in this example are indirect materials, indirect labor, and utilities.

Analyzing the budget data for these costs at 10,000 units, you arrive at the following per unit results.

Illustration 21-8
Variable costs per unit

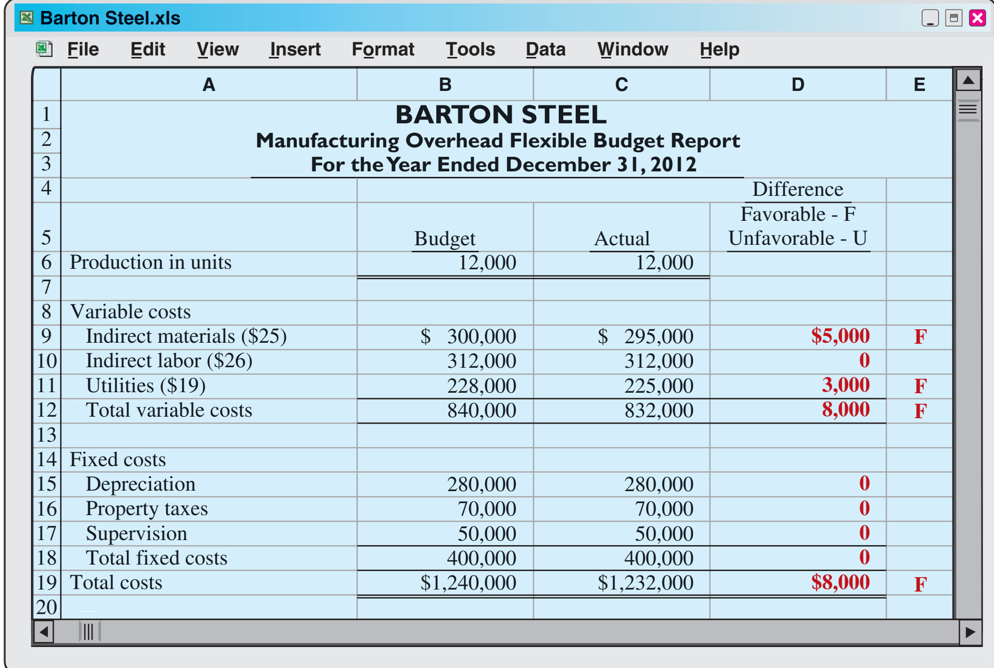
Item	Total Cost	Per Unit
Indirect materials	$250,000	$25
Indirect labor	260,000	26
Utilities	190,000	19
	$700,000	$70

Illustration 21-9 calculates the budgeted variable costs at 12,000 units.

Illustration 21-9
Budgeted variable costs, 12,000 units

Item	Computation	Total
Indirect materials	$25 × 12,000	$300,000
Indirect labor	26 × 12,000	312,000
Utilities	19 × 12,000	228,000
		$840,000

Because fixed costs do not change in total as activity changes, the budgeted amounts for these costs remain the same. Illustration 21-10 shows the budget report based on the flexible budget for **12,000 units** of production. (Compare this with Illustration 21-7.)



Barton Steel.xls

BARTON STEEL
Manufacturing Overhead Flexible Budget Report
For the Year Ended December 31, 2012

	Budget	Actual	Difference Favorable - F Unfavorable - U	
Production in units	12,000	12,000		
Variable costs				
Indirect materials ($25)	$ 300,000	$ 295,000	$5,000	F
Indirect labor ($26)	312,000	312,000	0	
Utilities ($19)	228,000	225,000	3,000	F
Total variable costs	840,000	832,000	8,000	F
Fixed costs				
Depreciation	280,000	280,000	0	
Property taxes	70,000	70,000	0	
Supervision	50,000	50,000	0	
Total fixed costs	400,000	400,000	0	
Total costs	$1,240,000	$1,232,000	$8,000	F

Illustration 21-10
Overhead flexible budget report

This report indicates that the Forging Department's costs are *under budget*—a favorable difference. Instead of worrying about being fired, you may be in line for a bonus or a raise after all! As this analysis shows, the only appropriate comparison is between actual costs at 12,000 units of production and budgeted costs at 12,000 units. Flexible budget reports provide this comparison.

DEVELOPING THE FLEXIBLE BUDGET

The flexible budget uses the master budget as its basis. To develop the flexible budget, management uses the following steps.

1. Identify the activity index and the relevant range of activity.
2. Identify the variable costs, and determine the budgeted variable cost per unit of activity for each cost.
3. Identify the fixed costs, and determine the budgeted amount for each cost.
4. Prepare the budget for selected increments of activity within the relevant range.

The activity index chosen should significantly influence the costs being budgeted. For manufacturing overhead costs, for example, the activity index is usually the same as the index used in developing the predetermined overhead rate—that is, direct labor hours or machine hours. For selling and administrative expenses, the activity index usually is sales or net sales.

The choice of the increment of activity is largely a matter of judgment. For example, if the relevant range is 8,000 to 12,000 direct labor hours, increments of 1,000 hours may be selected. The flexible budget is then prepared for each increment within the relevant range.

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
Are the increased costs resulting from increased production reasonable?	Variable costs projected at different levels of production	Flexible budget	After taking into account different production levels, results are favorable if expenses are less than budgeted amounts.

FLEXIBLE BUDGET–A CASE STUDY

To illustrate the flexible budget, we use Fox Manufacturing Company. Fox's management uses a **flexible budget for monthly comparisons** of actual and budgeted manufacturing overhead costs of the Finishing Department. The master budget for the year ending December 31, 2012, shows expected annual operating capacity of 120,000 direct labor hours and the following overhead costs.

Illustration 21-11
Master budget data

Variable Costs		Fixed Costs	
Indirect materials	$180,000	Depreciation	$180,000
Indirect labor	240,000	Supervision	120,000
Utilities	60,000	Property taxes	60,000
Total	$480,000	Total	$360,000

The four steps for developing the flexible budget are applied as follows.

STEP 1. **Identify the activity index and the relevant range of activity.** The activity index is direct labor hours. The relevant range is 8,000–12,000 direct labor hours per month.

STEP 2. **Identify the variable costs, and determine the budgeted variable cost per unit of activity for each cost.** There are three variable costs. The variable cost per unit is found by dividing each total budgeted cost by the direct labor hours used in preparing the master budget (120,000 hours). For Fox Manufacturing, the computations are:

Illustration 21-12
Computation of variable cost per direct labor hour

Variable Cost	Computation	Variable Cost per Direct Labor Hour
Indirect materials	$180,000 ÷ 120,000	$1.50
Indirect labor	$240,000 ÷ 120,000	2.00
Utilities	$ 60,000 ÷ 120,000	0.50
Total		$4.00

STEP 3. **Identify the fixed costs, and determine the budgeted amount for each cost.** There are three fixed costs. Since Fox desires **monthly budget data**, it divides each annual budgeted cost by 12 to find the monthly amounts. For Fox Manufacturing, the monthly budgeted fixed costs are: depreciation $15,000, supervision $10,000, and property taxes $5,000.

STEP 4. **Prepare the budget for selected increments of activity within the relevant range.** Management prepares the budget in increments of 1,000 direct labor hours.

Illustration 21-13 shows Fox's flexible budget.

Illustration 21-13 Monthly overhead flexible budget

15	Property taxes	5,000	5,000	5,000	5,000	5,000
16	Total fixed costs	30,000	30,000	30,000	30,000	30,000
17	Total costs	$62,000	$66,000	$70,000	$74,000	$78,000
18						

Fox uses the formula below to determine total budgeted costs at any level of activity.

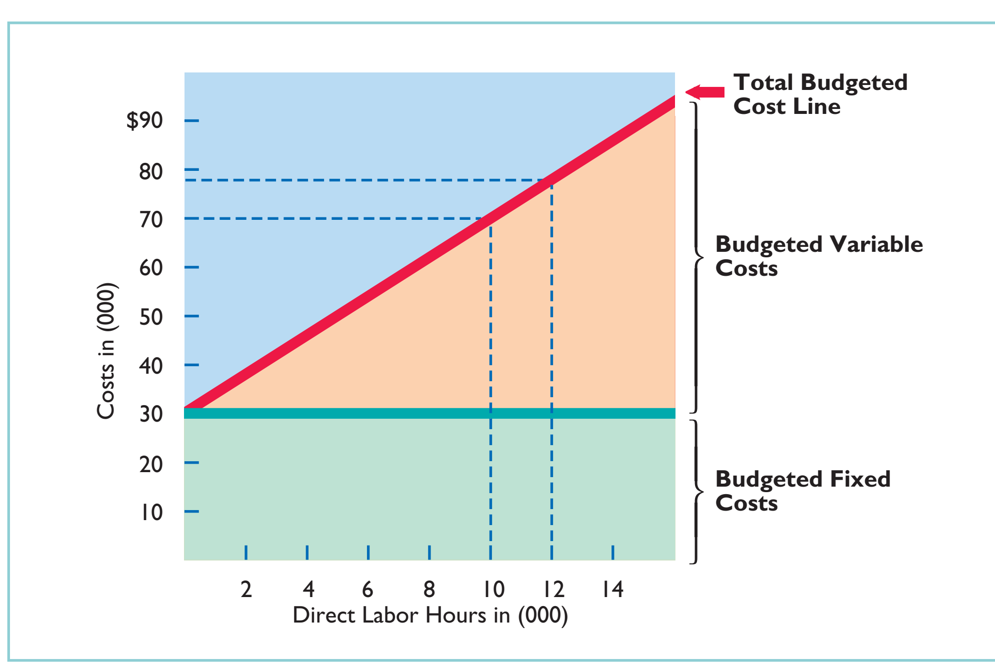
Illustration 21-14 Formula for total budgeted costs

Helpful Hint Using the data given for Fox, what amount of total costs would be budgeted for 10,600 direct labor hours? Answer: $30,000 fixed + $42,400 variable (i.e, 10,600 × $4) = $72,400 total.

For Fox, fixed costs are $30,000, and total variable cost per direct labor hour is $4. At 9,000 direct labor hours, total budgeted costs are $66,000 [$30,000 + ($4 × 9,000)]. At 8,622 direct labor hours, total budgeted costs are $64,488 [$30,000 + ($4 × 8,622)].

Total budgeted costs can also be shown graphically, as in Illustration 21-15. In the graph, the horizontal axis represents the activity index, and costs are

Illustration 21-15 Graphic flexible budget data highlighting 10,000 and 12,000 activity levels



indicated on the vertical axis. The graph highlights two activity levels (10,000 and 12,000). As shown, total budgeted costs at these activity levels are $70,000 [$30,000 + ($4 × 10,000)] and $78,000 [$30,000 + ($4 × 12,000)], respectively.

before you go on...

FLEXIBLE BUDGETS

Do it! In Strassel Company's flexible budget graph, the fixed cost line and the total budgeted cost line intersect the vertical axis at $36,000. The total budgeted cost line is $186,000 at an activity level of 50,000 direct labor hours. Compute total budgeted costs at 30,000 direct labor hours.

Action Plan

- Apply the formula: Fixed costs + Variable costs (Total variable cost per unit × Activity level) = Total budgeted costs.

Solution

Using the graph, fixed costs are $36,000, and variable costs are $3 per direct labor hour [($186,000 − $36,000) ÷ 50,000]. Thus, at 30,000 direct labor hours, total budgeted costs are $126,000 [$36,000 + ($3 × 30,000)].

Related exercise material: **BE21-4, Do it! 21-1, E21-3,** and **E21-5.**

FLEXIBLE BUDGET REPORTS

Flexible budget reports are another type of internal report. The flexible budget report consists of two sections: (1) production data for a selected activity index, such as direct labor hours, and (2) cost data for variable and fixed costs. The report provides a basis for evaluating a manager's performance in two areas: production control and cost control. Flexible budget reports are widely used in production and service departments.

Illustration 21-16 shows a budget report for the Finishing Department of Fox Company for the month of January. In this month, 9,000 hours are worked. The

18	Property taxes	5,000	5,000	0	
19	Total fixed costs	30,000	30,000	0	
20	Total costs	$66,000	$65,600	$ 400	F
21					

budget data are therefore based on the flexible budget for 9,000 hours in Illustration 21-13 (page 1087). The actual cost data are assumed.

How appropriate is this report in evaluating the Finishing Department manager's performance in controlling overhead costs? The report clearly provides a reliable basis. Both actual and budget costs are based on the activity level worked during January. Since variable costs generally are incurred directly by the department, the difference between the budget allowance for those hours and the actual costs is the responsibility of the department manager.

In subsequent months, Fox Manufacturing will prepare other flexible budget reports. For each month, the budget data are based on the actual activity level attained. In February that level may be 11,000 direct labor hours, in July 10,000, and so on.

Note that this flexible budget is based on a single cost driver. A more accurate budget often can be developed using the activity-based costing concepts explained in Chapter 17.

Service Company Insight

Budgets and the Exotic Newcastle Disease

Exotic Newcastle Disease, one of the most infectious bird diseases in the world, kills so swiftly that many victims die before any symptoms appear. When it broke out in Southern California in 2003, it could have spelled disaster for the San Diego Zoo. "We have one of the most valuable collections of birds in the world, if not *the* most valuable," says Paula Brock, CFO of the Zoological Society of San Diego, which operates the zoo.

Bird exhibits were closed to the public for several months (the disease, which is harmless to humans, can be carried on clothes and shoes). The tires of arriving delivery trucks were sanitized, as were the shoes of anyone visiting the zoo's nonpublic areas. Zookeeper uniforms had to be changed and cleaned daily. And ultimately, the zoo, with $150 million in revenues, spent almost half a million dollars on quarantine measures in 2003.

It worked: No birds got sick. Better yet, the damage to the rest of the zoo's budget was minimized by another protective measure: the monthly budget reforecast. "When we get a hit like this, we still have to find a way to make our bottom line," says Brock. Thanks to a new planning process Brock had introduced a year earlier, the zoo's scientists were able to raise the financial alarm as they redirected resources to ward off the disease. "Because we had timely awareness," she says, "we were able to make adjustments to weather the storm."

Budget reforecasting is nothing new. (The San Diego Zoo's annual static budget was behind the times before Brock took over as CFO in 2001.) But the reaction of the zoo's staff shows the benefits of Brock's immediate efforts to link strategy to the process. It's a move long touted by consultants as a key way to improve people's involvement in budgeting.

"To keep your company on a path, it has to have some kind of map," says Brock. "The budgeting-and-planning process is that map. I cannot imagine an organization feeling in control if it didn't have that sort of discipline."

? What is the major benefit of tying a budget to the overall goals of the company? (See page 1134.)

MANAGEMENT BY EXCEPTION

Management by exception means that top management's review of a budget report is focused either entirely or primarily on differences between actual results and planned objectives. This approach enables top management to focus on problem areas. For example, many companies now use online reporting systems for employees to file their travel and entertainment expense reports. In addition to cutting reporting time in half, the online system enables managers to quickly analyze variances from travel budgets. This enables companies to cut down on expense account "padding" such as spending too much on meals or falsifying documents for costs that were never actually incurred.

Management by exception does not mean that top management will investigate every difference. For this approach to be effective, there must be guidelines for identifying an exception. The usual criteria are materiality and controllability.

Materiality

Without quantitative guidelines, management would have to investigate every budget difference regardless of the amount. Materiality is usually expressed as a percentage difference from budget. For example, management may set the percentage difference at 5% for important items and 10% for other items. Managers will investigate all differences either over or under budget by the specified percentage. Costs over budget warrant investigation to determine why they were not controlled. Likewise, costs under budget merit investigation to determine whether costs critical to profitability are being curtailed. For example, if maintenance costs are budgeted at $80,000 but only $40,000 is spent, major unexpected breakdowns in productive facilities may occur in the future.

Alternatively, a company may specify a single percentage difference from budget for all items and supplement this guideline with a minimum dollar limit. For example, the exception criteria may be stated at 5% of budget or more than $10,000.

Controllability of the Item

Exception guidelines are more restrictive for controllable items than for items the manager cannot control. In fact, there may be no guidelines for noncontrollable items. For example, a large unfavorable difference between actual and budgeted property tax expense may not be flagged for investigation because the only possible causes are an unexpected increase in the tax rate or in the assessed value of the property. An investigation into the difference would be useless: The manager cannot control either cause.

before you go on...

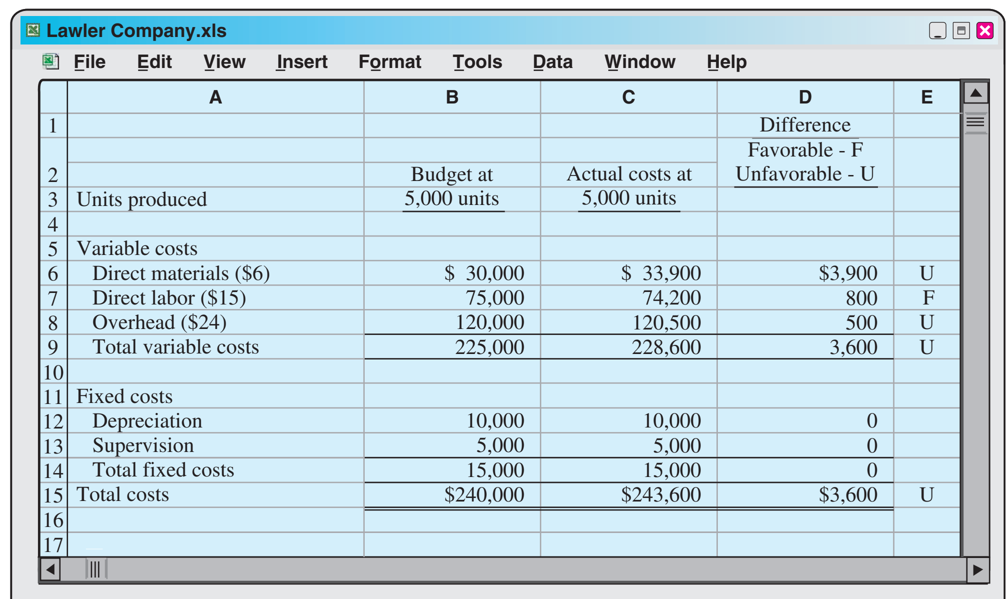
FLEXIBLE BUDGET REPORTS

Do it! Lawler Company expects to produce 40,000 units of product CV93 during the current year. Budgeted variable manufacturing costs per unit are direct materials $6, direct labor $15, and overhead $24. Annual budgeted fixed manufacturing overhead costs are $120,000 for depreciation and $60,000 for supervision.

In the current month, Lawler produced 5,000 units and incurred the following costs: direct materials $33,900, direct labor $74,200, variable overhead $120,500, depreciation $10,000, and supervision $5,000.

Prepare a flexible budget report. (*Note:* You do not have to prepare the heading.) Were costs controlled?

Solution



Lawler Company.xls

	A	B	C	D	E
1				Difference	
2		Budget at	Actual costs at	Favorable - F Unfavorable - U	
3	Units produced	5,000 units	5,000 units		
4					
5	Variable costs				
6	Direct materials ($6)	$ 30,000	$ 33,900	$3,900	U
7	Direct labor ($15)	75,000	74,200	800	F
8	Overhead ($24)	120,000	120,500	500	U
9	Total variable costs	225,000	228,600	3,600	U
10					
11	Fixed costs				
12	Depreciation	10,000	10,000	0	
13	Supervision	5,000	5,000	0	
14	Total fixed costs	15,000	15,000	0	
15	Total costs	$240,000	$243,600	$3,600	U
16					
17					

The responsibility report indicates that actual direct labor was only about 1% different from the budget, and overhead was less than half a percent different. Both appear to have been well-controlled.

This was not the case for direct materials. Its 13% unfavorable difference should probably be investigated.

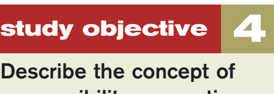
Actual fixed costs had no difference from budget and were well-controlled.

Action Plan

- Use budget for actual units produced.
- Classify each cost as variable or fixed.
- Determine monthly fixed costs by dividing annual amounts by 12.
- Determine the difference as favorable or unfavorable.
- Determine the difference in total variable costs, total fixed costs, and total costs.

Related exercise material: **BE21-5, Do it! 21-2, E21-4, E21-6, E21-7, E21-8,** and **E21-10.**

The Concept of Responsibility Accounting



Describe the concept of responsibility accounting.

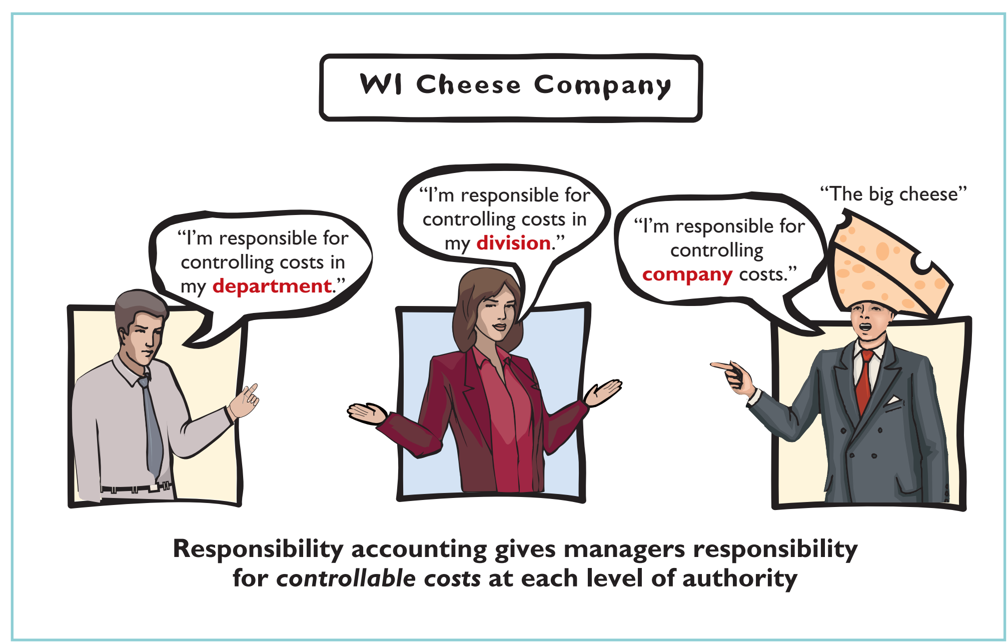
Like budgeting, responsibility accounting is an important part of management accounting. **Responsibility accounting** involves accumulating and reporting costs (and revenues, where relevant) on the basis of the manager who has the authority to make the day-to-day decisions about the items. Under responsibility accounting, a manager's performance is evaluated on matters directly under that manager's control. Responsibility accounting can be used at every level of management in which the following conditions exist.

1. Costs and revenues can be directly associated with the specific level of management responsibility.
2. The costs and revenues can be controlled by employees at the level of responsibility with which they are associated.

3. Budget data can be developed for evaluating the manager's effectiveness in controlling the costs and revenues.

Illustration 21-17 depicts levels of responsibility for controlling costs.

Illustration 21-17
Responsibility for controllable costs at varying levels of management



Helpful Hint All companies use responsibility accounting. Without some form of responsibility accounting, there would be chaos in discharging management's control function.

Under responsibility accounting, any individual who controls a specified set of activities can be a responsibility center. Thus, responsibility accounting may extend from the lowest level of control to the top strata of management. Once responsibility is established, the company first measures and reports the effectiveness of the individual's performance for the specified activity. It then reports that measure upward throughout the organization.

Responsibility accounting is especially valuable in a decentralized company. **Decentralization** means that the control of operations is delegated to many managers throughout the organization. The term **segment** is sometimes used to identify an area of responsibility in decentralized operations. Under responsibility accounting, companies prepare segment reports periodically, such as monthly, quarterly, and annually, to evaluate managers' performance.

Responsibility accounting is an essential part of any effective system of budgetary control. The reporting of costs and revenues under responsibility accounting differs from budgeting in two respects:

1. A distinction is made between controllable and noncontrollable items.
2. Performance reports either emphasize or include only items controllable by the individual manager.

Responsibility accounting applies to both profit and not-for-profit entities. For-profit entities seek to maximize net income. Not-for-profit entities wish to provide services as efficiently as possible.

Management Insight

Competition versus Collaboration

Many compensation and promotion programs encourage competition among employees for pay raises. To get ahead you have to perform better than your fellow employees. While this may encourage hard work, it does not foster collaboration, and it can lead to distrust and disloyalty. Such results have led some companies to believe that cooperation and collaboration are essential in order to succeed in today's environment. For example, division managers might increase collaboration (and reduce costs) by sharing design and marketing resources or by jointly negotiating with suppliers. In addition, companies can reduce the need to hire and lay off employees by sharing employees across divisions as human resource needs increase and decrease.

As a consequence, many companies now explicitly include measures of collaboration in their performance measures. For example, Procter & Gamble measures collaboration in employees' annual performance reviews. At Cisco Systems the assessment of an employee's teamwork can affect the annual bonus by as much as 20%.

Source: Carol Hymowitz, "Rewarding Competitors Over Collaboration No Longer Makes Sense," *Wall Street Journal* (February 13, 2006).

How might managers of separate divisions be able to reduce division costs through collaboration? (See page 1134.)

CONTROLLABLE VERSUS NONCONTROLLABLE REVENUES AND COSTS

All costs and revenues are controllable at some level of responsibility within a company. This truth underscores the adage by the CEO of any organization that "the buck stops here." Under responsibility accounting, the critical issue is **whether the cost or revenue is controllable at the level of responsibility with which it is associated**. A cost over which a manager has control is called a **controllable cost**. From this definition, it follows that:

Helpful Hint Are there more or fewer controllable costs as you move to higher levels of management?
Answer: More.

1. All costs are controllable by top management because of the broad range of its authority.
2. Fewer costs are controllable as one moves down to each lower level of managerial responsibility because of the manager's decreasing authority.

In general, **costs incurred directly by a level of responsibility are controllable at that level**. In contrast, costs incurred indirectly and allocated to a responsibility level are **noncontrollable costs** at that level.

Helpful Hint The longer the time span, the more likely that the cost becomes controllable.

RESPONSIBILITY REPORTING SYSTEM

A **responsibility reporting system** involves the preparation of a report for each level of responsibility in the company's organization chart. To illustrate such a system, we use the partial organization chart and production departments of Francis Chair Company in Illustration 21-18 (page 1094).

The responsibility reporting system begins with the lowest level of responsibility for controlling costs and moves upward to each higher level. Illustration 21-19 (page 1095) details the connections between levels.

A brief description of the four reports for Francis Chair Company is as follows.

1. **Report D** is typical of reports that go to department managers. Similar reports are prepared for the managers of the Fabricating, Assembly, and Enameling Departments.

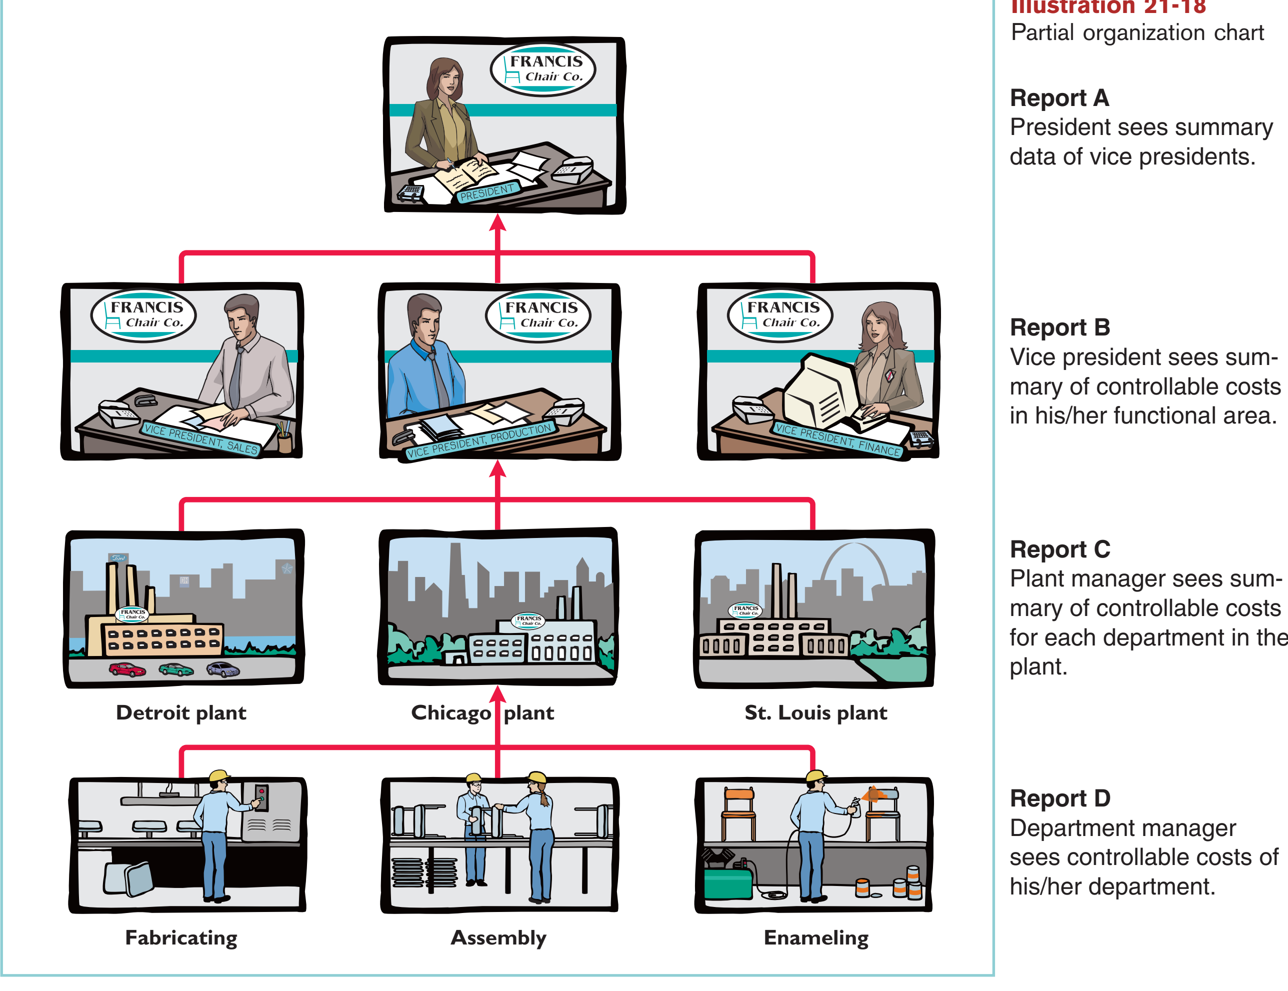


Illustration 21-18
Partial organization chart

Report A
President sees summary data of vice presidents.

Report B
Vice president sees summary of controllable costs in his/her functional area.

Report C
Plant manager sees summary of controllable costs for each department in the plant.

Report D
Department manager sees controllable costs of his/her department.

2. **Report C** is an example of reports that are sent to plant managers. It shows the costs of the Chicago plant that are controllable at the second level of responsibility. In addition, Report C shows summary data for each department that is controlled by the plant manager. Similar reports are prepared for the Detroit and St. Louis plant managers.
3. **Report B** illustrates the reports at the third level of responsibility. It shows the controllable costs of the vice president of production and summary data on the three assembly plants for which this officer is responsible. Similar reports are prepared for the vice presidents of sales and finance.
4. **Report A** is typical of reports that go to the top level of responsibility—the president. It shows the controllable costs and expenses of this office and summary data on the vice presidents that are accountable to the president.

A responsibility reporting system permits management by exception at each level of responsibility. And, each higher level of responsibility can obtain the detailed report for each lower level of responsibility. For example, the vice president of production in the Francis Chair Company may request the Chicago plant manager's report because this plant is $5,300 over budget.

This type of reporting system also permits comparative evaluations. In Illustration 21-19, the Chicago plant manager can easily rank the department managers' effectiveness in controlling manufacturing costs. Comparative rankings provide further incentive for a manager to control costs.

Overhead	24,000	23,800	200	F
Total	$84,000	$85,300	$1,300	U

Types of Responsibility Centers

There are three basic types of responsibility centers: cost centers, profit centers, and investment centers. These classifications indicate the degree of responsibility the manager has for the performance of the center.

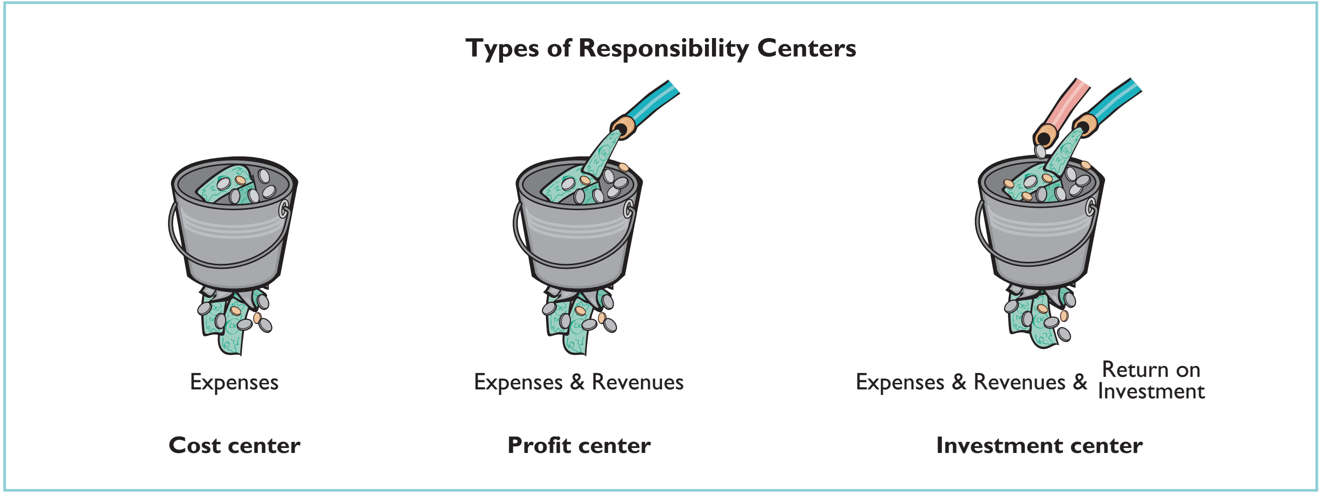
A **cost center** incurs costs (and expenses) but does not directly generate revenues. Managers of cost centers have the authority to incur costs. They are evaluated on their ability to control costs. **Cost centers are usually either production departments or service departments.** Production departments participate directly in making the product. Service departments provide only support services. In a Ford Motor Company automobile plant, the welding, painting, and assembling departments are production departments. Ford's maintenance, cafeteria, and human resources departments are service departments. All of them are cost centers.

Helpful Hint (1) Is the jewelry department of Macy's department store a profit center or a cost center? (2) Is the props department of a movie studio a profit center or a cost center? Answers: (1) Profit center. (2) Cost center.

A **profit center** incurs costs (and expenses) and also generates revenues. Managers of profit centers are judged on the profitability of their centers. Examples of profit centers include the individual departments of a retail store, such as clothing, furniture, and automotive products, and branch offices of banks.

Like a profit center, an **investment center** incurs costs (and expenses) and generates revenues. In addition, an investment center has control over decisions regarding the assets available for use. Investment center managers are evaluated on both the profitability of the center and the rate of return earned on the funds invested. Investment centers are often associated with subsidiary companies. Utility Duke Energy has operating divisions such as electric utility, energy trading, and natural gas. Investment center managers control or significantly influence investment decisions related to such matters as plant expansion and entry into new market areas. Illustration 21-20 depicts the three types of responsibility centers.

Illustration 21-20
Types of responsibility centers



RESPONSIBILITY ACCOUNTING FOR COST CENTERS

study objective 5
Indicate the features of responsibility reports for cost centers.

The evaluation of a manager's performance for cost centers is based on his or her ability to meet budgeted goals for controllable costs. **Responsibility reports for cost centers compare actual controllable costs with flexible budget data.**

Illustration 21-21 shows a responsibility report. The report is adapted from the flexible budget report for Fox Manufacturing Company in Illustration 21-16 (page 1088). It assumes that the Finishing Department manager is able to con-

FOX MANUFACTURING COMPANY
Finishing Department
Responsibility Report
For the Month Ended January 31, 2012

Controllable Cost	Budget	Actual	Difference Favorable - F Unfavorable - U	
Indirect materials	$13,500	$14,000	$ 500	U
Indirect labor	18,000	17,000	$1,000	F
Utilities	4,500	4,600	100	U
Supervision	4,000	4,000	0	
	$40,000	$39,600	$ 400	F

Illustration 21-21
Responsibility report for a cost center

trol all manufacturing overhead costs except depreciation, property taxes, and his own monthly salary of $6,000. The remaining $4,000 ($10,000 − $6,000) of supervision costs are assumed to apply to other supervisory personnel within the Finishing Department, whose salaries are controllable by the manager.

The report in Illustration 21-21 includes **only controllable costs**, and no distinction is made between variable and fixed costs. The responsibility report continues the concept of management by exception. In this case, top management may request an explanation of the $1,000 favorable difference in indirect labor and/or the $500 unfavorable difference in indirect materials.

RESPONSIBILITY ACCOUNTING FOR PROFIT CENTERS

study objective 6
Identify the content of responsibility reports for profit centers.

To evaluate the performance of a profit center manager, upper management needs detailed information about both controllable revenues and controllable costs. The operating revenues earned by a profit center, such as sales, are controllable by the manager. All variable costs (and expenses) incurred by the center are also controllable by the manager because they vary with sales. However, to determine the controllability of fixed costs, it is necessary to distinguish between direct and indirect fixed costs.

Direct and Indirect Fixed Costs

A profit center may have both direct and indirect fixed costs. **Direct fixed costs** relate specifically to one center and are incurred for the sole benefit of that center. Examples of such costs include the salaries established by the profit center manager for supervisory personnel and the cost of a timekeeping department for the center's employees. Since these fixed costs can be traced directly to a center, they are also called **traceable costs**. **Most direct fixed costs are controllable by the profit center manager.**

In contrast, **indirect fixed costs** pertain to a company's overall operating activities and are incurred for the benefit of more than one profit center. Management allocates indirect fixed costs to profit centers on some type of equitable basis. For example, property taxes on a building occupied by more than one center may be allocated on the basis of square feet of floor space used by each center. Or, the costs of a company's human resources department may be allocated to profit centers on the basis of the number of employees in each center. Because these fixed costs apply to more than one center, they are also called **common costs**. **Most indirect fixed costs are not controllable by the profit center manager.**

Responsibility Report

The responsibility report for a profit center shows budgeted and actual **controllable revenues and costs**. The report is prepared using the cost-volume-profit income statement explained in Chapter 18. In the report:

Helpful Hint Recognize that we are emphasizing *financial* measures of performance. These days companies are also making an effort to stress *nonfinancial* performance measures such as product quality, labor productivity, market growth, materials' yield, manufacturing flexibility, and technological capability.

1. Controllable fixed costs are deducted from contribution margin.
2. The excess of contribution margin over controllable fixed costs is identified as **controllable margin**.
3. Noncontrollable fixed costs are not reported.

Illustration 21-22 shows the responsibility report for the manager of the Marine Division, a profit center of Mantle Manufacturing Company. For the year, the Marine Division also had $60,000 of indirect fixed costs that were not controllable by the profit center manager.

Illustration 21-22
Responsibility report for profit center

MANTLE MANUFACTURING COMPANY
Marine Division
Responsibility Report
For the Year Ended December 31, 2012

	Budget	Actual	Difference Favorable - F Unfavorable - U	
Sales	$1,200,000	$1,150,000	$50,000	U
Variable costs				
Cost of goods sold	500,000	490,000	10,000	F
Selling and administrative	160,000	156,000	4,000	F
Total	660,000	646,000	14,000	F
Contribution margin	540,000	504,000	36,000	U
Controllable fixed costs				
Cost of goods sold	100,000	100,000	0	
Selling and administrative	80,000	80,000	0	
Total	180,000	180,000	0	
Controllable margin	**$ 360,000**	**$ 324,000**	**$36,000**	**U**

Controllable margin is considered to be the best measure of the manager's performance **in controlling revenues and costs**. The report in Illustration 21-22 shows that the manager's performance was below budgeted expectations by 10% ($36,000 ÷ $360,000). Top management would likely investigate the causes of this unfavorable result. Note that the report does not show the Marine Division's noncontrollable fixed costs of $60,000. These costs would be included in a report on the profitability of the profit center.

Management also may choose to see **monthly** responsibility reports for profit centers. In addition, responsibility reports may include cumulative year-to-date results.

Midwest Division operates as a profit center. It reports the following for the year:

PROFIT CENTER RESPONSIBILITY REPORT

	Budgeted	Actual
Sales	$1,500,000	$1,700,000
Variable costs	700,000	800,000
Controllable fixed costs	400,000	400,000
Noncontrollable fixed costs	200,000	200,000

Prepare a responsibility report for the Midwest Division for December 31, 2012.

Action Plan

- Deduct variable costs from sales to show contribution margin.
- Deduct controllable fixed costs from the contribution margin to show controllable margin.
- Do not report noncontrollable fixed costs.

Solution

MIDWEST DIVISION
Responsibility Report
For the Year Ended December 31, 2012

	Budget	Actual	Difference Favorable F Unfavorable U
Sales	$1,500,000	$1,700,000	$200,000 F
Variable costs	700,000	800,000	100,000 U
Contribution margin	800,000	900,000	100,000 F
Controllable fixed costs	400,000	400,000	–0–
Controllable margin	$ 400,000	$ 500,000	$100,000 F

RESPONSIBILITY ACCOUNTING FOR INVESTMENT CENTERS

study objective 7

Explain the basis and formula used in evaluating performance in investment centers.

As explained earlier, an investment center manager can control or significantly influence the investment funds available for use. Thus, the primary basis for evaluating the performance of a manager of an investment center is **return on investment (ROI)**. The return on investment is considered to be a useful performance measurement because it shows the **effectiveness of the manager in utilizing the assets at his or her disposal**.

Return on Investment (ROI)

The formula for computing ROI for an investment center, together with assumed illustrative data, is shown in Illustration 21-23.

Illustration 21-23
ROI formula

Controllable Margin	÷	Average Operating Assets	=	Return on Investment (ROI)
$1,000,000	÷	$5,000,000	=	20%

Both factors in the formula are controllable by the investment center manager. Operating assets consist of current assets and plant assets used in operations by the center and controlled by the manager. Nonoperating assets such as idle plant assets and land held for future use are excluded. Average operating assets are usually based on the cost or book value of the assets at the beginning and end of the year.

Responsibility Report

The scope of the investment center manager's responsibility significantly affects the content of the performance report. Since an investment center is an independent entity for operating purposes, **all fixed costs are controllable by its manager**. For example, the manager is responsible for depreciation on investment center assets. Therefore, more fixed costs are identified as controllable in the performance report for an investment center manager than in a performance report for a profit center manager. The report also shows budgeted and actual ROI below controllable margin.

To illustrate this responsibility report, we will now assume that the Marine Division of Mantle Manufacturing Company is an investment center. It has budgeted and actual average operating assets of $2,000,000. The manager can control $60,000 of fixed costs that were not controllable when the division was a profit center. Illustration 21-24 shows the division's responsibility report.

Illustration 21-24
Responsibility report for investment center

MANTLE MANUFACTURING COMPANY
Marine Division
Responsibility Report
For the Year Ended December 31, 2012

	Budget	Actual	Difference Favorable - F Unfavorable - U	
Sales	$1,200,000	$1,150,000	$ 50,000	U
Variable costs				
Cost of goods sold	500,000	490,000	10,000	F
Selling and administrative	160,000	156,000	4,000	F
Total	660,000	646,000	14,000	F
Contribution margin	540,000	504,000	36,000	U
Controllable fixed costs				
Cost of goods sold	100,000	100,000	0	
Selling and administrative	80,000	80,000	0	
Other fixed costs	**60,000**	**60,000**	**0**	
Total	240,000	240,000	0	
Controllable margin	**$ 300,000**	**$ 264,000**	**$ 36,000**	**U**
Return on investment	**15.0%**	**13.2%**	**1.8%**	**U**
	(a)	(b)	(c)	
	(a) $\frac{\$300,000}{\$2,000,000}$	(b) $\frac{\$264,000}{\$2,000,000}$	(c) $\frac{\$36,000}{\$2,000,000}$	

The report shows that the manager's performance based on ROI was below budget expectations by 1.8% (15.0% versus 13.2%). Top management would likely want an explanation of the reasons for this unfavorable result.

Judgmental Factors in ROI

The return on investment approach includes two judgmental factors:

1. **Valuation of operating assets.** Operating assets may be valued at acquisition cost, book value, appraised value, or fair value. The first two bases are readily available from the accounting records.
2. **Margin (income) measure.** This measure may be controllable margin, income from operations, or net income.

Each of the alternative values for operating assets can provide a reliable basis for evaluating a manager's performance as long as it is consistently applied between reporting periods. However, the use of income measures other than

controllable margin will not result in a valid basis for evaluating the performance of an investment center manager.

Improving ROI

The manager of an investment center can improve ROI by increasing controllable margin, and/or reducing average operating assets. To illustrate, we will use the following assumed data for the Laser Division of Berra Manufacturing.

Illustration 21-25
Assumed data for Laser Division

Sales	$2,000,000
Variable cost	1,100,000
Contribution margin (45%)	900,000
Controllable fixed costs	300,000
Controllable margin (a)	$ 600,000
Average operating assets (b)	$5,000,000
Return on investment (a) ÷ (b)	**12%**

INCREASING CONTROLLABLE MARGIN Controllable margin can be increased by increasing sales or by reducing variable and controllable fixed costs as follows.

1. **Increase sales 10%.** Sales will increase $200,000 ($2,000,000 × .10). Assuming no change in the contribution margin percentage of 45%, contribution margin will increase $90,000 ($200,000 × .45). Controllable margin will increase by the same amount because controllable fixed costs will not change. Thus, controllable margin becomes $690,000 ($600,000 + $90,000). The new ROI is 13.8%, computed as follows.

Illustration 21-26
ROI computation—increase in sales

$$\text{ROI} = \frac{\text{Controllable margin}}{\text{Average operating assets}} = \frac{\$690{,}000}{\$5{,}000{,}000} = \mathbf{13.8\%}$$

   An increase in sales benefits both the investment center and the company if it results in new business. It would not benefit the company if the increase was achieved at the expense of other investment centers.

2. **Decrease variable and fixed costs 10%.** Total costs decrease $140,000 [($1,100,000 + $300,000) × .10]. This reduction results in a corresponding increase in controllable margin. Thus, controllable margin becomes $740,000 ($600,000 + $140,000). The new ROI is 14.8%, computed as follows.

Illustration 21-27
ROI computation—decrease in costs

$$\text{ROI} = \frac{\text{Controllable margin}}{\text{Average operating assets}} = \frac{\$740{,}000}{\$5{,}000{,}000} = \mathbf{14.8\%}$$

   This course of action is clearly beneficial when waste and inefficiencies are eliminated. But, a reduction in vital costs such as required maintenance and inspections is not likely to be acceptable to top management.

REDUCING AVERAGE OPERATING ASSETS Assume that average operating assets are reduced 10% or $500,000 ($5,000,000 × .10). Average operating assets become $4,500,000 ($5,000,000 − $500,000). Since controllable margin remains unchanged at $600,000, the new ROI is 13.3%, computed as follows.

Illustration 21-28
ROI computation—decrease in operating assets

$$\text{ROI} = \frac{\text{Controllable margin}}{\text{Average operating assets}} = \frac{\$600{,}000}{\$4{,}500{,}000} = \mathbf{13.3\%}$$

Reductions in operating assets may or may not be prudent. It is beneficial to eliminate overinvestment in inventories and to dispose of excessive plant assets.

However, it is unwise to reduce inventories below expected needs or to dispose of essential plant assets.

Accounting Across the Organization

Does Hollywood Look at ROI?

If Hollywood were run like a real business, where things like return on investment mattered, there would be one unchallenged, sacred principle that studio chieftains would never violate: Make lots of G-rated movies.

No matter how you slice the movie business—by star vehicles, by budget levels, or by sequels or franchises—by far the best return on investment comes from the not-so-glamorous world of G-rated films. The problem is, these movies represent only 3% of the total films made in a typical year.

Take 2003: According to Motion Picture Association of America statistics, of the 940 movies released that year, only 29 were G-rated. Yet the highest-grossing movie of the year, *Finding Nemo*, was G-rated. . . . On the flip side are the R-rated films, which dominate the total releases and yet yield the worst return on investment. A whopping 646 R-rated films were released in 2003—69% of the total output—but only four of the top-20 grossing movies of the year were R-rated films.

This trend—G-rated movies are good for business but underproduced; R-rated movies are bad for business, and yet overdone—is something that has been driving economists batty for the past several years.

Source: David Grainger, "The Dysfunctional Family-Film Business," *Fortune* (January 10, 2005), pp. 20–21.

What might be the reason that movie studios do not produce G-rated movies as much as R-rated ones? (See page 1134.)

DECISION TOOLKIT

Has the investment center performed up to expectations?	Controllable margin (contribution margin minus controllable fixed costs), and average investment center operating assets	Return on investment	Compare actual ROI to expected ROI.

PRINCIPLES OF PERFORMANCE EVALUATION

Performance evaluation is at the center of responsibility accounting. **Performance evaluation** is a management function that compares actual results with budget goals. It involves both behavioral and reporting principles.

Behavioral Principles

The human factor is critical in evaluating performance. Behavioral principles include the following.

1. **Managers of responsibility centers should have direct input into the process of establishing budget goals of their area of responsibility.** Without such input, managers may view the goals as unrealistic or arbitrarily set by top management. Such views adversely affect the managers' motivation to meet the targeted objectives.
2. **The evaluation of performance should be based entirely on matters that are controllable by the manager being evaluated.** Criticism of a manager on matters outside his or her control reduces the effectiveness of the evaluation process. It leads to negative reactions by a manager and to doubts about the fairness of the company's evaluation policies.

3. **Top management should support the evaluation process.** As explained earlier, the evaluation process begins at the lowest level of responsibility and extends upward to the highest level of management. Managers quickly lose faith in the process when top management ignores, overrules, or bypasses established procedures for evaluating a manager's performance.
4. **The evaluation process must allow managers to respond to their evaluations.** Evaluation is not a one-way street. Managers should have the opportunity to defend their performance. Evaluation without feedback is both impersonal and ineffective.
5. **The evaluation should identify both good and poor performance.** Praise for good performance is a powerful motivating factor for a manager. This is especially true when a manager's compensation includes rewards for meeting budget goals.

Reporting Principles

Performance evaluation under responsibility accounting should be based on certain reporting principles. These principles pertain primarily to the internal reports that provide the basis for evaluating performance. Performance reports should:

1. Contain only data that are controllable by the manager of the responsibility center.
2. Provide accurate and reliable budget data to measure performance.
3. Highlight significant differences between actual results and budget goals.
4. Be tailor-made for the intended evaluation.
5. Be prepared at reasonable intervals.

In recent years, companies have come under increasing pressure from influential shareholder groups to do a better job of linking executive pay to corporate performance. For example, software maker Siebel Systems unveiled a new incentive plan after lengthy discussions with the California Public Employees' Retirement System. One unique feature of the plan is that managers' targets will be publicly disclosed at the beginning of each year for investors to evaluate.

Management Insight

Flexible Manufacturing Requires Flexible Accounting

Flexible budgeting is useful because it enables managers to evaluate performance in light of changing conditions. But the ability to react quickly to changing conditions is even more important. Among automobile manufacturing facilities in the U.S., nobody has more flexible plants than Honda. The manufacturing facilities of some auto companies can make slight alterations to the features of a vehicle in response to changes in demand for particular features. But for most plants, to switch from production of one type of vehicle to a completely different type of vehicle, when demand for types of vehicles shifts, typically takes months and costs hundreds of millions of dollars. But at the Honda plant, the switch takes minutes. For example, it takes about five minutes to install different hand-like parts on the robots so they can switch from making Civic compacts to the longer, taller CR-V crossover. This ability to adjust quickly to changing demand gave Honda a huge advantage when gas prices surged and demand for more fuel-efficient cars increased quickly.

Source: Kate Linebaugh, "Honda's Flexible Plants Provide Edge," *Wall Street Journal Online* (September 23, 2008).

What implications do these improvements in production capabilities have for management accounting information and performance evaluation within the organization? (See page 1134.)

before you go on...

PERFORMANCE EVALUATION

Do it! The service division of Metro Industries reported the following results for 2012.

Sales	$400,000
Variable costs	320,000
Controllable fixed costs	40,800
Average operating assets	280,000

Management is considering the following independent courses of action in 2013 in order to maximize the return on investment for this division.

1. Reduce average operating assets by $80,000, with no change in controllable margin.
2. Increase sales $80,000, with no change in the contribution margin percentage.

(a) Compute the controllable margin and the return on investment for 2012.
(b) Compute the controllable margin and the expected return on investment for each proposed alternative.

Action Plan

- Recall key formulas: Sales − Variable costs = Contribution margin.
- Contribution margin ÷ Sales = Contribution margin percentage.
- Contribution margin − Controllable fixed costs = Controllable margin.
- Return on investment = Controllable margin ÷ Average operating assets.

Solution

(a) Return on investment for 2012

Sales	$400,000
Variable costs	320,000
Contribution margin	80,000
Controllable fixed costs	40,800
Controllable margin	$ 39,200

Return on investment $\frac{\$39,200}{\$280,000} = 14\%$

(b) Expected return on investment for alternative 1:

$$\frac{\$39,200}{\$280,000 - \$80,000} = 19.6\%$$

Expected return on investment for alternative 2:

Sales ($400,000 + $80,000)	$480,000
Variable costs ($320,000/$400,000 × $480,000)	384,000
Contribution margin	96,000
Controllable fixed costs	40,800
Controllable margin	$ 55,200

Return on investment $\frac{\$55,200}{\$280,000} = 19.7\%$

USING THE DECISION TOOLKIT

The manufacturing overhead budget for Reebles Company contains the following items.

Variable costs	
Indirect materials	$25,000
Indirect labor	12,000
Maintenance expenses	10,000
Manufacturing supplies	6,000
Total variable	$53,000
Fixed costs	
Supervision	$17,000
Inspection costs	1,000
Insurance expenses	2,000
Depreciation	15,000
Total fixed	$35,000

The budget was based on an estimated 2,000 units being produced. During November, 1,500 units were produced, and the following costs incurred.

Variable costs	
Indirect materials	$25,200
Indirect labor	13,500
Maintenance expenses	8,200
Manufacturing supplies	5,100
Total variable	$52,000
Fixed costs	
Supervision	$19,300
Inspection costs	1,200
Insurance expenses	2,200
Depreciation	14,700
Total fixed	$37,400

Instructions

(a) Determine which items would be controllable by Ed Lopat, the production manager. (Assume "supervision" excludes Lopat's own salary.)

(b) How much should have been spent during the month for the manufacture of the 1,500 units?

(c) Prepare a flexible manufacturing overhead budget report for Mr. Lopat.

(d) Prepare a responsibility report. Include only the costs that would have been controllable by Mr. Lopat. In an attached memo, describe clearly for Mr. Lopat the areas in which his performance needs to be improved.

Solution

(a) Ed Lopat should be able to control all the variable costs and the fixed costs of supervision and inspection. Insurance and depreciation ordinarily are not the responsibility of the department manager.

(b) The total variable cost per unit is $26.50 ($53,000 ÷ 2,000). The total budgeted cost during the month to manufacture 1,500 units is variable costs $39,750 (1,500 × $26.50) plus fixed costs ($35,000), for a total of $74,750 ($39,750 + $35,000).

(c)

REEBLES COMPANY
Production Department
Manufacturing Overhead Budget Report (Flexible)
For the Month Ended November 30, 2012

	Budget at 1,500 Units	Actual at 1,500 Units	Difference Favorable F Unfavorable U
Variable costs			
Indirect materials ($12.50)	$18,750	$25,200	$ 6,450 U
Indirect labor ($6)	9,000	13,500	4,500 U
Maintenance ($5)	7,500	8,200	700 U
Manufacturing supplies ($3)	4,500	5,100	600 U
Total variable	39,750	52,000	12,250 U
Fixed costs			
Supervision	17,000	19,300	2,300 U
Inspection	1,000	1,200	200 U
Insurance	2,000	2,200	200 U
Depreciation	15,000	14,700	300 F
Total fixed	35,000	37,400	2,400 U
Total costs	$74,750	$89,400	$14,650 U

(d) Because a production department is a cost center, the responsibility report should include only the costs that are controllable by the production manager. In this type of report, no distinction is made between variable and fixed costs. Budget data in the report should be based on the units actually produced.

REEBLES COMPANY
Production Department
Manufacturing Overhead Responsibility Report
For the Month Ended November 30, 2012

Controllable Cost	Budget	Actual	Difference Favorable F Unfavorable U
Indirect materials	$18,750	$25,200	$ 6,450 U
Indirect labor	9,000	13,500	4,500 U
Maintenance	7,500	8,200	700 U
Manufacturing supplies	4,500	5,100	600 U
Supervision	17,000	19,300	2,300 U
Inspection	1,000	1,200	200 U
Total	$57,750	$72,500	$14,750 U

To: Mr. Ed Lopat, Production Manager

From: ______________________, Vice President of Production

Subject: Performance Evaluation for the Month of November

Your performance in controlling costs that are your responsibility was very disappointing in the month of November. As indicated in the accompanying responsibility report, total costs were $14,750 over budget. On a percentage basis, costs were 26% over budget. As you can see, actual costs were over budget for every cost item. In three instances, costs were significantly over budget (indirect materials 34%, indirect labor 50%, and supervision 14%).

Ed, it is imperative that you get costs under control in your department as soon as possible.

I think we need to talk about ways to implement more effective cost control measures. I would like to meet with you in my office at 9 a.m. on Wednesday to discuss possible alternatives.

Summary of Study Objectives

1 Describe the concept of budgetary control. Budgetary control consists of (a) preparing periodic budget reports that compare actual results with planned objectives, (b) analyzing the differences to determine their causes, (c) taking appropriate corrective action, and (d) modifying future plans, if necessary.

2 Evaluate the usefulness of static budget reports. Static budget reports are useful in evaluating the progress toward planned sales and profit goals. They are also appropriate in assessing a manager's effectiveness in controlling costs when (a) actual activity closely approximates the master budget activity level, and/or (b) the behavior of the costs in response to changes in activity is fixed.

3 Explain the development of flexible budgets and the usefulness of flexible budget reports. To develop the flexible budget it is necessary to: (a) Identify the activity index and the relevant range of activity. (b) Identify the variable costs, and determine the budgeted variable cost per unit of activity for each cost. (c) Identify the fixed costs, and determine the budgeted amount for each cost. (d) Prepare the budget for selected increments of activity within the relevant range. Flexible budget reports permit an evaluation of a manager's performance in controlling production and costs.

4 Describe the concept of responsibility accounting. Responsibility accounting involves accumulating and reporting revenues and costs on the basis of the individual manager who has the authority to make the day-to-day decisions about the items. The evaluation of a manager's performance is based on the matters directly under the manager's control. In responsibility accounting, it is necessary to distinguish between controllable and noncontrollable fixed costs and to identify three types of responsibility centers: cost, profit, and investment.

5 Indicate the features of responsibility reports for cost centers. Responsibility reports for cost centers compare actual costs with flexible budget data. The reports show only controllable costs, and no distinction is made between variable and fixed costs.

6 Identify the content of responsibility reports for profit centers. Responsibility reports show contribution margin, controllable fixed costs, and controllable margin for each profit center.

7 Explain the basis and formula used in evaluating performance in investment centers. The primary basis for evaluating performance in investment centers is return on investment (ROI). The formula for computing ROI for investment centers is: Controllable margin ÷ Average operating assets.

DECISION TOOLKIT *A SUMMARY*

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
Are the increased costs resulting from increased production reasonable?	Variable costs projected at different levels of production	Flexible budget	After taking into account different production levels, results are favorable if expenses are less than budgeted amounts.
Have the individual managers been held accountable for the costs and revenues under their control?	Relevant costs and revenues, where the individual manager has authority to make day-to-day decisions about the items	Responsibility reports focused on cost centers, profit centers, and investment centers as appropriate	Compare budget to actual costs and revenues for controllable items.
Has the investment center performed up to expectations?	Controllable margin (contribution margin minus controllable fixed costs), and average investment center operating assets	Return on investment	Compare actual ROI to expected ROI.

appendix 21A

Residual Income—Another Performance Measurement

study objective 8

Explain the difference between ROI and residual income.

Although most companies use ROI in evaluating their investment performance, ROI has a significant disadvantage. To illustrate, let's look at the Electronics Division of Pujols Manufacturing Company. It has an ROI of 20% computed as follows.

Illustration 21A-1
ROI formula

Controllable Margin	÷	Average Operating Assets	=	Return on Investment (ROI)
$1,000,000	÷	$5,000,000	=	20%

The Electronics Division is considering producing a new product, a GPS satellite tracker (hereafter referred to as Tracker), for its boats. To produce Tracker, operating assets will have to increase $2,000,000. Tracker is expected to generate an additional $260,000 of controllable margin. Illustration 21A-2 shows how Tracker will effect ROI.

Illustration 21A-2
ROI comparison

	Without Tracker	Tracker	With Tracker
Controllable margin (a)	$1,000,000	$ 260,000	$1,260,000
Average operating assets (b)	$5,000,000	$2,000,000	$7,000,000
Return on investment [(a) ÷ (b)]	**20%**	**13%**	**18%**

The investment in Tracker reduces ROI from 20% to 18%.

Let's suppose that you are the manager of the Electronics Division and must make the decision to produce or not produce Tracker. If you were evaluated using ROI, you probably would not produce Tracker because your ROI would drop from 20% to 18%. The problem with this ROI analysis is that it ignores an important variable, the minimum rate of return on a company's operating assets. The **minimum rate of return** is the rate at which the Electronics Division can cover its costs and earn a profit. Assuming that the Electronics Division has a minimum rate of return of 10%, it should invest in Tracker because its ROI of 13% is greater than 10%.

RESIDUAL INCOME COMPARED TO ROI

To evaluate performance using the minimum rate of return, companies use the residual income approach. **Residual income** is the income that remains after subtracting from the controllable margin the minimum rate of return on a company's average operating assets. The residual income for Tracker would be computed as follows.

Illustration 21A-3
Residual income formula

Controllable Margin	−	Minimum Rate of Return × Average Operating Assets	=	Residual Income
$260,000	−	10% × $2,000,000	=	$60,000

As shown, the residual income related to the Tracker investment is $60,000. Illustration 21A-4 indicates how residual income changes as the additional investment is made.

Illustration 21A-4
Residual income comparison

	Without Tracker	Tracker	With Tracker
Controllable margin (a)	$1,000,000	$260,000	$1,260,000
Average operating assets × 10% (b)	500,000	200,000	700,000
Residual income [(a) − (b)]	$ 500,000	$ 60,000	**$ 560,000**

This example illustrates how performance evaluation based on ROI can be misleading and can even cause managers to reject projects that would actually increase income for the company. As a result, many companies such as Coca-Cola, Briggs and Stratton, Eli Lilly, and Siemens AG use residual income (or a variant often referred to as economic value added) to evaluate investment alternatives and measure company performance.

RESIDUAL INCOME WEAKNESS

It might appear from the above discussion that the goal of any company should be to maximize the total amount of residual income in each division. This goal, however, ignores the fact that one division might use substantially fewer assets to attain the same level of residual income as another division. For example, we know that to produce Tracker, the Electronics Division of Pujols Manufacturing used $2,000,000 of average operating assets to generate $260,000 of controllable margin. Now let's say a different division produced a product called SeaDog, which used $4,000,000 to generate $460,000 of controllable margin, as shown in Illustration 21A-5.

Illustration 21A-5
Comparison of two products

	Tracker	SeaDog
Controllable margin (a)	$260,000	$460,000
Average operating assets × 10% (b)	200,000	400,000
Residual income [(a) − (b)]	**$ 60,000**	**$ 60,000**

If the performance of these two investments were evaluated using residual income, they would be considered equal: Both products have the same total residual income. This ignores, however, the fact that SeaDog required **twice** as many operating assets to achieve the same level of residual income.

Summary of Study Objective for Appendix 21A

8 Explain the difference between ROI and residual income. ROI is controllable margin divided by average operating assets. Residual income is the income that remains after subtracting the minimum rate of return on a company's average operating assets. ROI sometimes provides misleading results because profitable investments are often rejected when the investment reduces ROI but increases overall profitability.

Glossary

Budgetary control *(p. 1080)* The use of budgets to control operations.

Controllable cost *(p. 1093)* A cost over which a manager has control.

Controllable margin *(p. 1098)* Contribution margin less controllable fixed costs.

Cost center *(p. 1096)* A responsibility center that incurs costs but does not directly generate revenues.

Decentralization *(p. 1093)* Control of operations is delegated to many managers throughout the organization.

Direct fixed costs *(p. 1097)* Costs that relate specifically to a responsibility center and are incurred for the sole benefit of the center.

Flexible budget *(p. 1083)* A projection of budget data for various levels of activity.

Indirect fixed costs *(p. 1097)* Costs that are incurred for the benefit of more than one profit center.

Investment center *(p. 1096)* A responsibility center that incurs costs, generates revenues, and has control over decisions regarding the assets available for use.

Management by exception *(p. 1090)* The review of budget reports by top management focused entirely or primarily on differences between actual results and planned objectives.

Noncontrollable costs *(p. 1093)* Costs incurred indirectly and allocated to a responsibility center that are not controllable at that level.

Profit center *(p. 1096)* A responsibility center that incurs costs and also generates revenues.

Residual income *(p. 1108)* The income that remains after subtracting from the controllable margin the minimum rate of return on a company's average operating assets.

Responsibility accounting *(p. 1091)* A part of management accounting that involves accumulating and reporting revenues and costs on the basis of the manager who has the authority to make the day-to-day decisions about the items.

Responsibility reporting system *(p. 1093)* The preparation of reports for each level of responsibility in the company's organization chart.

Return on investment (ROI) *(p. 1099)* A measure of management's effectiveness in utilizing assets at its disposal in an investment center.

Segment *(p. 1092)* An area of responsibility in decentralized operations.

Static budget *(p. 1081)* A projection of budget data at one level of activity.

Comprehensive *Do it!*

Glenda Company uses a flexible budget for manufacturing overhead based on direct labor hours. For 2012, the master overhead budget for the Packaging Department based on 300,000 direct labor hours was as follows.

Variable Costs		Fixed Costs	
Indirect labor	$360,000	Supervision	$ 60,000
Supplies and lubricants	150,000	Depreciation	24,000
Maintenance	210,000	Property taxes	18,000
Utilities	120,000	Insurance	12,000
	$840,000		$114,000

During July, 24,000 direct labor hours were worked. The company incurred the following variable costs in July: indirect labor $30,200, supplies and lubricants $11,600, maintenance $17,500, and utilities $9,200. Actual fixed overhead costs were the same as monthly budgeted fixed costs.

Instructions

Prepare a flexible budget report for the Packaging Department for July.

Solution to Comprehensive Do it!

GLENDA COMPANY
Manufacturing Overhead Budget Report (Flexible)
Packaging Department
For the Month Ended July 31, 2012

Direct labor hours (DLH)	Budget 24,000 DLH	Actual Costs 24,000 DLH	Difference Favorable F Unfavorable U
Variable costs			
Indirect labor ($1.20[a])	$28,800	$30,200	$1,400 U
Supplies and lubricants ($0.50[a])	12,000	11,600	400 F
Maintenance ($0.70[a])	16,800	17,500	700 U
Utilities ($0.40[a])	9,600	9,200	400 F
Total variable	67,200	68,500	1,300 U
Fixed costs			
Supervision	$ 5,000[b]	$ 5,000	–0–
Depreciation	2,000[b]	2,000	–0–
Property taxes	1,500[b]	1,500	–0–
Insurance	1,000[b]	1,000	–0–
Total fixed	9,500	9,500	–0–
Total costs	$76,700	$78,000	$1,300 U

[a]($360,000 ÷ 300,000; $150,000 ÷ 300,000; $210,000 ÷ 300,000; $120,000 ÷ 300,000).
[b]Annual cost divided by 12.

Action Plan

- Classify each cost as variable or fixed.
- Compute the budgeted cost per direct labor hour for all variable costs.
- Use budget data for actual direct labor hours worked.
- Determine the difference between budgeted and actual costs.
- Identify the difference as favorable or unfavorable.
- Determine the difference in total variable costs, total fixed costs, and total costs.

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more resources are available for practice in WileyPLUS

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

Self-Test Questions

Answers are on page 1134.

(SO 1) **1.** Budgetary control involves all **but one** of the following:
(a) modifying future plans.
(b) analyzing differences.
(c) using static budgets.
(d) determining differences between actual and planned results.

(SO 1) **2.** Budget reports are prepared:
(a) daily.
(b) weekly.
(c) monthly.
(d) All of the above.

(SO 1) **3.** A production manager in a manufacturing company would most likely receive a:
(a) sales report.
(b) income statement.
(c) scrap report.
(d) shipping department overhead report.

(SO 2) **4.** A static budget is:
(a) a projection of budget data at several levels of activity within the relevant range of activity.
(b) a projection of budget data at a single level of activity.
(c) compared to a flexible budget in a budget report.
(d) never appropriate in evaluating a manager's effectiveness in controlling costs.

(SO 2) **5.** A static budget is useful in controlling costs when cost behavior is:
(a) mixed.
(b) fixed.
(c) variable.
(d) linear.

(SO 3) **6.** At zero direct labor hours in a flexible budget graph, the total budgeted cost line intersects the vertical axis at $30,000. At 10,000 direct labor hours, a horizontal line drawn from the total budgeted cost line intersects the vertical axis at $90,000. Fixed and variable costs may be expressed as:
(a) $30,000 fixed plus $6 per direct labor hour variable.
(b) $30,000 fixed plus $9 per direct labor hour variable.
(c) $60,000 fixed plus $3 per direct labor hour variable.
(d) $60,000 fixed plus $6 per direct labor hour variable.

(SO 3) **7.** At 9,000 direct labor hours, the flexible budget for indirect materials is $27,000. If $28,000 of indirect materials costs are incurred at 9,200 direct labor hours, the flexible budget report should show the following difference for indirect materials:
(a) $1,000 unfavorable.
(b) $1,000 favorable.
(c) $400 favorable.
(d) $400 unfavorable.

(SO 4) **8.** Under responsibility accounting, the evaluation of a manager's performance is based on matters that the manager:
(a) directly controls.
(b) directly and indirectly controls.
(c) indirectly controls.
(d) has shared responsibility for with another manager.

(SO 4) **9.** Responsibility centers include:
(a) cost centers.
(b) profit centers.
(c) investment centers.
(d) All of the above.

(SO 5) **10.** Responsibility reports for cost centers:
(a) distinguish between fixed and variable costs.
(b) use static budget data.
(c) include both controllable and noncontrollable costs.
(d) include only controllable costs.

(SO 5) **11.** The accounting department of a manufacturing company is an example of:
(a) a cost center.
(b) a profit center.
(c) an investment center.
(d) a contribution center.

(SO 6) **12.** To evaluate the performance of a profit center manager, upper management needs detailed information about:
(a) controllable costs.
(b) controllable revenues.
(c) controllable costs and revenues.
(d) controllable costs and revenues and average operating assets.

(SO 6) **13.** In a responsibility report for a profit center, controllable fixed costs are deducted from contribution margin to show:
(a) profit center margin.
(b) controllable margin.
(c) net income.
(d) income from operations.

(SO 7) **14.** In the formula for return on investment (ROI), the factors for controllable margin and operating assets are, respectively:
(a) controllable margin percentage and total operating assets.
(b) controllable margin dollars and average operating assets.
(c) controllable margin dollars and total assets.
(d) controllable margin percentage and average operating assets.

(SO 7) **15.** A manager of an investment center can improve ROI by:
(a) increasing average operating assets.
(b) reducing sales.
(c) increasing variable costs.
(d) reducing variable and/or controllable fixed costs.

Go to the book's companion website, **www.wiley.com/college/kimmel**, for additional Self-Test Questions.

Questions

1. (a) What is budgetary control?
(b) Fred Barone is describing budgetary control. What steps should be included in Fred's description?

2. The following purposes are part of a budgetary reporting system: (a) Determine efficient use of materials. (b) Control overhead costs. (c) Determine whether income objectives are being met. For each purpose, indicate the name of the report, the frequency of the report, and the primary recipient(s) of the report.

3. How may a budget report for the second quarter differ from a budget report for the first quarter?

4. Ken Bay questions the usefulness of a master sales budget in evaluating sales performance. Is there justification for Ken's concern? Explain.

5. Under what circumstances may a static budget be an appropriate basis for evaluating a manager's effectiveness in controlling costs?

6. "A flexible budget is really a series of static budgets." Is this true? Why?

7. The static manufacturing overhead budget based on 40,000 direct labor hours shows budgeted indirect labor costs of $54,000. During March, the department incurs $65,000 of indirect labor while working 45,000 direct labor hours. Is this a favorable or unfavorable performance? Why?

8. A static overhead budget based on 40,000 direct labor hours shows Factory Insurance $6,500 as a fixed cost. At the 50,000 direct labor hours worked in March, factory insurance costs were $6,200. Is this a favorable or unfavorable performance? Why?

9. Megan Pedigo is confused about how a flexible budget is prepared. Identify the steps for Megan.

10. Cali Company has prepared a graph of flexible budget data. At zero direct labor hours, the total budgeted cost line intersects the vertical axis at $25,000. At 10,000 direct labor hours, the line drawn from the total budgeted cost line intersects the vertical axis at $85,000. How may the fixed and variable costs be expressed?

11. The flexible budget formula is fixed costs $40,000 plus variable costs of $4 per direct labor hour. What

is the total budgeted cost at (a) 9,000 hours and (b) 12,345 hours?

12. What is management by exception? What criteria may be used in identifying exceptions?

13. What is responsibility accounting? Explain the purpose of responsibility accounting.

14. Eve Rooney is studying for an accounting examination. Describe for Eve what conditions are necessary for responsibility accounting to be used effectively.

15. Distinguish between controllable and noncontrollable costs.

16. How do responsibility reports differ from budget reports?

17. What is the relationship, if any, between a responsibility reporting system and a company's organization chart?

18. Distinguish among the three types of responsibility centers.

19. (a) What costs are included in a performance report for a cost center? (b) In the report, are variable and fixed costs identified?

20. How do direct fixed costs differ from indirect fixed costs? Are both types of fixed costs controllable?

21. Jane Nott is confused about controllable margin reported in an income statement for a profit center. How is this margin computed, and what is its primary purpose?

22. What is the primary basis for evaluating the performance of the manager of an investment center? Indicate the formula for this basis.

23. Explain the ways that ROI can be improved.

24. Indicate two behavioral principles that pertain to (a) the manager being evaluated and (b) top management.

***25.** What is a major disadvantage of using ROI to evaluate investment and company performance?

***26.** What is residual income, and what is one of its major weaknesses?

Brief Exercises

BE21-1 For the quarter ended March 31, 2012, Maris Company accumulates the following sales data for its product, Garden-Tools: $310,000 budget; $304,000 actual. Prepare a static budget report for the quarter.

Prepare static budget report.
(SO 2), **AP**

BE21-2 Data for Maris Company are given in BE21-1. In the second quarter, budgeted sales were $380,000, and actual sales were $383,000. Prepare a static budget report for the second quarter and for the year to date.

Prepare static budget report for 2 quarters.
(SO 2), **AP**

BE21-3 In Paige Company, direct labor is $20 per hour. The company expects to operate at 10,000 direct labor hours each month. In January 2012, direct labor totaling $203,000 is incurred in working 10,400 hours. Prepare (a) a static budget report and (b) a flexible budget report. Evaluate the usefulness of each report.

Show usefulness of flexible budgets in evaluating performance.
(SO 3), **E**

BE21-4 Gundy Company expects to produce 1,200,000 units of Product XX in 2012. Monthly production is expected to range from 80,000 to 120,000 units. Budgeted variable manufacturing costs per unit are: direct materials $4, direct labor $6, and overhead $8. Budgeted fixed manufacturing costs per unit for depreciation are $2 and for supervision are $1. Prepare a flexible manufacturing budget for the relevant range value using 20,000 unit increments.

Prepare a flexible budget for variable costs.
(SO 3), **AP**

BE21-5 Data for Gundy Company are given in BE21-4. In March 2012, the company incurs the following costs in producing 100,000 units: direct materials $425,000, direct labor $590,000, and variable overhead $805,000. Actual fixed costs were equal to budgeted fixed costs. Prepare a flexible budget report for March. Were costs controlled?

Prepare flexible budget report.
(SO 3), **AN**

BE21-6 In the Assembly Department of Hannon Company, budgeted and actual manufacturing overhead costs for the month of April 2012 were as follows.

Prepare a responsibility report for a cost center.
(SO 5), **AP**

	Budget	Actual
Indirect materials	$15,000	$14,300
Indirect labor	20,000	20,600
Utilities	10,000	10,750
Supervision	5,000	5,000

All costs are controllable by the department manager. Prepare a responsibility report for April for the cost center.

BE21-7 Elbert Manufacturing Company accumulates the following summary data for the year ending December 31, 2012, for its Water Division which it operates as a profit center: sales—$2,000,000 budget, $2,080,000 actual; variable costs—$1,000,000 budget,

Prepare a responsibility report for a profit center.
(SO 6), **AP**

$1,050,000 actual; and controllable fixed costs—$300,000 budget, $310,000 actual. Prepare a responsibility report for the Water Division.

Prepare a responsibility report for an investment center.
(SO 7), AP

BE21-8 For the year ending December 31, 2012, Cobb Company accumulates the following data for the Plastics Division which it operates as an investment center: contribution margin—$700,000 budget, $715,000 actual; controllable fixed costs—$300,000 budget, $309,000 actual. Average operating assets for the year were $2,000,000. Prepare a responsibility report for the Plastics Division beginning with contribution margin.

Compute return on investment using the ROI formula.
(SO 7), AP

BE21-9 For its three investment centers, Kaspar Company accumulates the following data:

	I	II	III
Sales	$2,000,000	$3,000,000	$ 4,000,000
Controllable margin	1,200,000	2,000,000	3,200,000
Average operating assets	5,000,000	8,000,000	10,000,000

Compute the return on investment (ROI) for each center.

Compute return on investment under changed conditions.
(SO 7), AP

BE21-10 Data for the investment centers for Kaspar Company are given in BE21-9. The centers expect the following changes in the next year: (I) increase sales 15%; (II) decrease costs $200,000; (III) decrease average operating assets $400,000. Compute the expected return on investment (ROI) for each center. Assume center I has a contribution margin percentage of 75%.

Compute ROI and residual income.
(SO 8), AP

***BE21-11** Voorhees, Inc. reports the following financial information.

Average operating assets	$3,000,000
Controllable margin	$ 600,000
Minimum rate of return	9%

Compute the return on investment and the residual income.

Compute ROI and residual income.
(SO 8), AP

***BE21-12** Presented below is information related to the Southern Division of Lumber, Inc.

Contribution margin	$1,200,000
Controllable margin	$ 800,000
Average operating assets	$3,200,000
Minimum rate of return	16%

Compute the Southern Division's return on investment and residual income.

Do it! Review

Compute total budgeted costs in flexible budget.
(SO 3), AP

Do it! 21-1 In Pargo Company's flexible budget graph, the fixed cost line and the total budgeted cost line intersect the vertical axis at $90,000. The total budgeted cost line is $330,000 at an activity level of 60,000 direct labor hours. Compute total budgeted costs at 70,000 direct labor hours.

Prepare and evaluate a flexible budget report.
(SO 3), AP

Do it! 21-2 Mussatto Company expects to produce 50,000 units of product IOA during the current year. Budgeted variable manufacturing costs per unit are direct materials $7, direct labor $12, and overhead $18. Annual budgeted fixed manufacturing overhead costs are $96,000 for depreciation and $45,000 for supervision.

In the current month, Mussatto produced 6,000 units and incurred the following costs: direct materials $38,900, direct labor $70,200, variable overhead $116,500, depreciation $8,000, and supervision $4,000.

Prepare a flexible budget report. (*Note:* You do not need to prepare the heading.) Were costs controlled?

Prepare a responsibility report.
(SO 6), AP

Do it! 21-3 The Wellstone Division operates as a profit center. It reports the following for the year.

	Budgeted	Actual
Sales	$2,000,000	$1,800,000
Variable costs	800,000	750,000
Controllable fixed costs	550,000	550,000
Noncontrollable fixed costs	250,000	250,000

Prepare a responsibility report for the Wellstone Division at December 31, 2012.

Do it! **21-4** The service division of Raney Industries reported the following results for 2012.

Compute ROI and expected return on investments.
(SO 7), **AP**

Sales	$500,000
Variable costs	300,000
Controllable fixed costs	75,000
Average operating assets	450,000

Management is considering the following independent courses of action in 2013 in order to maximize the return on investment for this division.

1. Reduce average operating assets by $50,000, with no change in controllable margin.
2. Increase sales $100,000, with no change in the contribution margin percentage.

(a) Compute the controllable margin and the return on investment for 2012. (b) Compute the controllable margin and the expected return on investment for each proposed alternative.

Exercises

E21-1 Mike Trusler has prepared the following list of statements about budgetary control.

Understand the concept of budgetary control.
(SO 1, 2, 3), **K**

1. Budget reports compare actual results with planned objectives.
2. All budget reports are prepared on a weekly basis.
3. Management uses budget reports to analyze differences between actual and planned results and determine their causes.
4. As a result of analyzing budget reports, management may either take corrective action or modify future plans.
5. Budgetary control works best when a company has an informal reporting system.
6. The primary recipients of the sales report are the sales manager and the vice president of production.
7. The primary recipient of the scrap report is the production manager.
8. A static budget is a projection of budget data at one level of activity.
9. Top management's reaction to unfavorable differences is not influenced by the materiality of the difference.
10. A static budget is not appropriate in evaluating a manager's effectiveness in controlling costs unless the actual activity level approximates the static budget activity level or the behavior of the costs is fixed.

Instructions
Identify each statement as true or false. If false, indicate how to correct the statement.

E21-2 Crede Company budgeted selling expenses of $30,000 in January, $35,000 in February, and $40,000 in March. Actual selling expenses were $31,000 in January, $34,500 in February, and $47,000 in March.

Prepare and evaluate static budget report.
(SO 2), **AN**

Instructions
(a) Prepare a selling expense report that compares budgeted and actual amounts by month and for the year to date.
(b) What is the purpose of the report prepared in (a), and who would be the primary recipient?
(c) What would be the likely result of management's analysis of the report?

E21-3 Thome Company uses a flexible budget for manufacturing overhead based on direct labor hours. Variable manufacturing overhead costs per direct labor hour are as follows.

Prepare flexible manufacturing overhead budget.
(SO 3), **AP**

Indirect labor	$1.00
Indirect materials	0.50
Utilities	0.40

Fixed overhead costs per month are: Supervision $4,000, Depreciation $1,500, and Property Taxes $800. The company believes it will normally operate in a range of 7,000–10,000 direct labor hours per month.

Instructions

Prepare a monthly manufacturing overhead flexible budget for 2012 for the expected range of activity, using increments of 1,000 direct labor hours.

Prepare flexible budget reports for manufacturing overhead costs, and comment on findings.
(SO 3), **AN**

E21-4 Using the information in E21-3, assume that in July 2012, Thome Company incurs the following manufacturing overhead costs.

Variable Costs		Fixed Costs	
Indirect labor	$8,700	Supervision	$4,000
Indirect materials	4,300	Depreciation	1,500
Utilities	3,200	Property taxes	800

Instructions

(a) Prepare a flexible budget performance report, assuming that the company worked 9,000 direct labor hours during the month.
(b) Prepare a flexible budget performance report, assuming that the company worked 8,500 direct labor hours during the month.
(c) Comment on your findings.

Prepare flexible selling expense budget.
(SO 3), **AP**

E21-5 DeWitt Company uses flexible budgets to control its selling expenses. Monthly sales are expected to range from $170,000 to $200,000. Variable costs and their percentage relationship to sales are: Sales Commissions 5%, Advertising 4%, Traveling 3%, and Delivery 2%. Fixed selling expenses will consist of Sales Salaries $34,000, Depreciation on Delivery Equipment $7,000, and Insurance on Delivery Equipment $1,000.

Instructions

Prepare a monthly flexible budget for each $10,000 increment of sales within the relevant range for the year ending December 31, 2012.

Prepare flexible budget reports for selling expenses.
(SO 3), **AN**

E21-6 The actual selling expenses incurred in March 2012 by DeWitt Company are as follows.

Variable Expenses		Fixed Expenses	
Sales commissions	$9,200	Sales salaries	$34,000
Advertising	7,000	Depreciation	7,000
Travel	5,100	Insurance	1,000
Delivery	3,500		

Instructions

(a) Prepare a flexible budget performance report for March using the budget data in E21-5, assuming that March sales were $170,000. Expected and actual sales are the same.
(b) Prepare a flexible budget performance report, assuming that March sales were $180,000. Expected sales and actual sales are the same.
(c) Comment on the importance of using flexible budgets in evaluating the performance of the sales manager.

Prepare flexible budget report for cost center.
(SO 3), **AP**

E21-7 Kitchen Help Inc. (KHI) is a manufacturer of toaster ovens. To improve control over operations, the president of KHI wants to begin using a flexible budgeting system, rather than use only the current master budget. The following data are available for KHI's expected costs at production levels of 90,000, 100,000, and 110,000 units.

Variable costs	
Manufacturing	$6 per unit
Administrative	$3 per unit
Selling	$1 per unit
Fixed costs	
Manufacturing	$150,000
Administrative	$ 80,000

Instructions

(a) Prepare a flexible budget for each of the possible production levels: 90,000, 100,000, and 110,000 units.
(b) If KHI sells the toaster ovens for $15 each, how many units will it have to sell to make a profit of $250,000 before taxes?

(CGA adapted)

E21-8 Rensing Groomers is in the dog-grooming business. Its operating costs are described by the following formulas:

Prepare flexible budget report; compare flexible and static budgets.
(SO 2, 3), E

Grooming supplies (variable)	y = \$0 + \$4x
Direct labor (variable)	y = \$0 + \$12x
Overhead (mixed)	y = \$8,000 + \$1x

Milo, the owner, has determined that direct labor is the cost driver for all three categories of costs.

Instructions

(a) Prepare a flexible budget for activity levels of 550, 600, and 700 direct labor hours.
(b) Explain why the flexible budget is more informative than the static budget.
(c) Calculate the total cost per direct labor hour at each of the activity levels specified in part (a).
(d) The groomers at Rensing normally work a total of 650 direct labor hours during each month. Each grooming job normally takes a groomer $1\frac{1}{4}$ hours. Milo wants to earn a profit equal to 40% of the costs incurred. Determine what he should charge each pet owner for grooming.

(CGA adapted)

E21-9 Lowell Company's manufacturing overhead budget for the first quarter of 2012 contained the following data.

Prepare flexible budget and responsibility report for manufacturing overhead.
(SO 3, 5), AP

Variable Costs		Fixed Costs	
Indirect materials	\$12,000	Supervisory salaries	\$36,000
Indirect labor	10,000	Depreciation	7,000
Utilities	8,000	Property taxes and insurance	8,000
Maintenance	6,000	Maintenance	5,000

Actual variable costs were: indirect materials \$13,800, indirect labor \$9,600, utilities \$8,700, and maintenance \$4,900. Actual fixed costs equaled budgeted costs except for property taxes and insurance, which were \$8,200. The actual activity level equaled the budgeted level.

All costs are considered controllable by the production department manager except for depreciation, and property taxes and insurance.

Instructions

(a) Prepare a manufacturing overhead flexible budget report for the first quarter.
(b) Prepare a responsibility report for the first quarter.

E21-10 As sales manager, Joe Batista was given the following static budget report for selling expenses in the Clothing Department of Soria Company for the month of October.

Prepare flexible budget report, and answer question.
(SO 2, 3), E

SORIA COMPANY
Clothing Department
Budget Report
For the Month Ended October 31, 2012

	Budget	Actual	Difference Favorable F Unfavorable U
Sales in units	8,000	10,000	2,000 F
Variable expenses			
Sales commissions	\$ 2,000	\$ 2,600	\$ 600 U
Advertising expense	800	850	50 U
Travel expense	3,600	4,000	400 U
Free samples given out	1,600	1,300	300 F
Total variable	8,000	8,750	750 U
Fixed expenses			
Rent	1,500	1,500	–0–
Sales salaries	1,200	1,200	–0–
Office salaries	800	800	–0–
Depreciation—autos (sales staff)	500	500	–0–
Total fixed	4,000	4,000	–0–
Total expenses	\$12,000	\$12,750	\$ 750 U

As a result of this budget report, Joe was called into the president's office and congratulated on his fine sales performance. He was reprimanded, however, for allowing his costs to get out of control. Joe knew something was wrong with the performance report that he had been given. However, he was not sure what to do, and comes to you for advice.

Instructions

(a) Prepare a budget report based on flexible budget data to help Joe.

(b) Should Joe have been reprimanded? Explain.

Prepare and discuss a responsibility report.
(SO 3, 5), **AP**

E21-11 Kirkland Plumbing Company is a newly formed company specializing in plumbing services for home and business. The owner, Lenny Kirkland, had divided the company into two segments: Home Plumbing Services and Business Plumbing Services. Each segment is run by its own supervisor, while basic selling and administrative services are shared by both segments.

Lenny has asked you to help him create a performance reporting system that will allow him to measure each segment's performance in terms of its profitability. To that end, the following information has been collected on the Home Plumbing Services segment for the first quarter of 2012.

	Budgeted	Actual
Service revenue	$25,000	$26,000
Allocated portion of:		
Building depreciation	11,000	11,000
Advertising	5,000	4,200
Billing	3,500	3,000
Property taxes	1,200	1,000
Material and supplies	1,500	1,200
Supervisory salaries	9,000	9,400
Insurance	4,000	3,500
Wages	3,000	3,300
Gas and oil	2,700	3,400
Equipment depreciation	1,600	1,300

Instructions

(a) Prepare a responsibility report for the first quarter of 2012 for the Home Plumbing Services segment.

(b) Write a memo to Lenny Kirkland discussing the principles that should be used when preparing performance reports.

State total budgeted cost formulas, and prepare flexible budget graph.
(SO 3), **AP**

E21-12 Venetian Company has two production departments, Fabricating and Assembling. At a department managers' meeting, the controller uses flexible budget graphs to explain total budgeted costs. Separate graphs based on direct labor hours are used for each department. The graphs show the following.

1. At zero direct labor hours, the total budgeted cost line and the fixed cost line intersect the vertical axis at $40,000 in the Fabricating Department and $30,000 in the Assembling Department.
2. At normal capacity of 50,000 direct labor hours, the line drawn from the total budgeted cost line intersects the vertical axis at $150,000 in the Fabricating Department, and $110,000 in the Assembling Department.

Instructions

(a) State the total budgeted cost formula for each department.

(b) Compute the total budgeted cost for each department, assuming actual direct labor hours worked were 53,000 and 47,000, in the Fabricating and Assembling Departments, respectively.

(c) Prepare the flexible budget graph for the Fabricating Department, assuming the maximum direct labor hours in the relevant range is 100,000. Use increments of 10,000 direct labor hours on the horizontal axis and increments of $50,000 on the vertical axis.

Prepare reports in a responsibility reporting system.
(SO 4, 5), **AP**

E21-13 Fultz Company's organization chart includes the president; the vice president of production; three assembly plants—Dallas, Atlanta, and Tucson; and two departments within each plant—Machining and Finishing. Budget and actual manufacturing cost data for July 2012 are as follows.

Finishing Department—Dallas: Direct materials $41,500 actual, $45,000 budget; direct labor $83,000 actual, $82,000 budget; manufacturing overhead $51,000 actual, $49,200 budget.

Machining Department—Dallas: Total manufacturing costs $220,000 actual, $216,000 budget.

Atlanta Plant: Total manufacturing costs $424,000 actual, $421,000 budget.

Tucson Plant: Total manufacturing costs $494,000 actual, $496,500 budget.

The Dallas plant manager's office costs were $95,000 actual and $92,000 budget. The vice president of production's office costs were $132,000 actual and $130,000 budget. Office costs are not allocated to departments and plants.

Instructions

Using the format on page 1095, prepare the reports in a responsibility system for:

(a) The Finishing Department—Dallas.
(b) The plant manager—Dallas.
(c) The vice president of production.

Prepare a responsibility report for a cost center.
(SO 5), **AN**

E21-14 The Mixing Department manager of Malone Company is able to control all overhead costs except rent, property taxes, and salaries. Budgeted monthly overhead costs for the Mixing Department, in alphabetical order, are:

Indirect labor	$12,000	Property taxes	$ 1,000
Indirect materials	7,500	Rent	1,800
Lubricants	1,700	Salaries	10,000
Maintenance	3,500	Utilities	5,000

Actual costs incurred for January 2012 are indirect labor $12,200; indirect materials $10,200; lubricants $1,650; maintenance $3,500; property taxes $1,100; rent $1,800; salaries $10,000; and utilities $6,500.

Instructions

(a) Prepare a responsibility report for January 2012.
(b) What would be the likely result of management's analysis of the report?

Compute missing amounts in responsibility reports for three profit centers, and prepare a report.
(SO 6), **AN**

E21-15 Deitz Manufacturing Inc. has three divisions which are operated as profit centers. Actual operating data for the divisions listed alphabetically are as follows.

Operating Data	Women's Shoes	Men's Shoes	Children's Shoes
Contribution margin	$240,000	(3)	$180,000
Controllable fixed costs	100,000	(4)	(5)
Controllable margin	(1)	$ 90,000	96,000
Sales	600,000	450,000	(6)
Variable costs	(2)	330,000	250,000

Instructions

(a) Compute the missing amounts. Show computations.
(b) Prepare a responsibility report for the Women's Shoes Division assuming (1) the data are for the month ended June 30, 2012, and (2) all data equal budget except variable costs which are $10,000 over budget.

Prepare a responsibility report for a profit center, and compute ROI.
(SO 6, 7), **AP**

E21-16 The Sports Equipment Division of Harrington Company is operated as a profit center. Sales for the division were budgeted for 2012 at $900,000. The only variable costs budgeted for the division were cost of goods sold ($440,000) and selling and administrative ($60,000). Fixed costs were budgeted at $100,000 for cost of goods sold, $90,000 for selling and administrative and $70,000 for noncontrollable fixed costs. Actual results for these items were:

Sales	$880,000
Cost of goods sold	
Variable	409,000
Fixed	105,000
Selling and administrative	
Variable	61,000
Fixed	67,000
Noncontrollable fixed	80,000

Instructions

(a) Prepare a responsibility report for the Sports Equipment Division for 2012.
(b) Assume the division is an investment center, and average operating assets were $1,000,000. The noncontrollable fixed costs are controllable at the investment center level. Compute ROI.

Compute ROI for current year and for possible future changes.
(SO 7), **AP**

E21-17 The West Division of Nieto Company reported the following data for the current year.

Sales	$3,000,000
Variable costs	1,950,000
Controllable fixed costs	600,000
Average operating assets	5,000,000

Top management is unhappy with the investment center's return on investment (ROI). It asks the manager of the West Division to submit plans to improve ROI in the next year. The manager believes it is feasible to consider the following independent courses of action.

1. Increase sales by $320,000 with no change in the contribution margin percentage.
2. Reduce variable costs by $100,000.
3. Reduce average operating assets by 4%.

Instructions

(a) Compute the return on investment (ROI) for the current year.
(b) Using the ROI formula, compute the ROI under each of the proposed courses of action. (Round to one decimal.)

Prepare a responsibility report for an investment center.
(SO 7), **AP**

E21-18 The Dinkle and Frizell Dental Clinic provides both preventive and orthodontic dental services. The two owners, Reese Dinkle and Anita Frizell, operate the clinic as two separate investment centers: Preventive Services and Orthodontic Services. Each of them is in charge of one of the centers: Reese for Preventive Services and Anita for Orthodontic Services. Each month they prepare an income statement for the two centers to evaluate performance and make decisions about how to improve the operational efficiency and profitability of the clinic.

Recently, they have been concerned about the profitability of the Preventive Services operations. For several months, it has been reporting a loss. Shown below is the responsibility report for the month of May 2012.

	Actual	Difference from Budget
Service revenue	$ 40,000	$1,000 F
Variable costs:		
Filling materials	5,000	100 U
Novocain	4,000	200 U
Supplies	2,000	250 F
Dental assistant wages	2,500	–0–
Utilities	500	50 U
Total variable costs	14,000	100 U
Fixed costs:		
Allocated portion of receptionist's salary	3,000	200 U
Dentist salary	10,000	500 U
Equipment depreciation	6,000	–0–
Allocated portion of building depreciation	15,000	1,000 U
Total fixed costs	34,000	1,700 U
Operating income (loss)	$ (8,000)	$ 800 U

In addition, the owners know that the investment in operating assets at the beginning of the month was $82,400, and it was $77,600 at the end of the month. They have asked for your assistance in evaluating their current performance reporting system.

Instructions

(a) Prepare a responsibility report for an investment center as illustrated in the chapter.
(b) Write a memo to the owners discussing the deficiencies of their current reporting system.

Prepare missing amounts in responsibility reports for three investment centers.
(SO 7), **AN**

E21-19 The Pletcher Transportation Company uses a responsibility reporting system to measure the performance of its three investment centers: Planes, Taxis, and Limos.

Segment performance is measured using a system of responsibility reports and return on investment calculations. The allocation of resources within the company and the segment managers' bonuses are based in part on the results shown in these reports.

Recently, the company was the victim of a computer virus that deleted portions of the company's accounting records. This was discovered when the current period's responsibility reports were being prepared. The printout of the actual operating results appeared as follows.

	Planes	Taxis	Limos
Service revenue	$?	$500,000	$?
Variable costs	5,500,000	?	320,000
Contribution margin	?	200,000	480,000
Controllable fixed costs	1,500,000	?	?
Controllable margin	?	80,000	240,000
Average operating assets	25,000,000	?	1,600,000
Return on investment	12%	10%	?

Instructions

Determine the missing pieces of information above.

***E21-20** Presented below is selected information for three regional divisions of Medina Company.

Compare ROI and residual income.

(SO 8), **AN**

	Divisions		
	North	West	South
Contribution margin	$ 300,000	$ 500,000	$ 400,000
Controllable margin	$ 150,000	$ 400,000	$ 225,000
Average operating assets	$1,000,000	$2,000,000	$1,500,000
Minimum rate of return	13%	16%	10%

Instructions

(a) Compute the return on investment for each division.
(b) Compute the residual income for each division.
(c) Assume that each division has an investment opportunity that would provide a rate of return of 19%.
   (1) If ROI is used to measure performance, which division or divisions will probably make the additional investment?
   (2) If residual income is used to measure performance, which division or divisions will probably make the additional investment?

***E21-21** Presented below is selected financial information for two divisions of Yono Brewing.

Fill in information related to ROI and residual income.

(SO 8), **AN**

	Lager	Lite Lager
Contribution margin	$500,000	$ 300,000
Controllable margin	200,000	(c)
Average operating assets	(a)	$1,000,000
Minimum rate of return	(b)	13%
Return on investment	25%	(d)
Residual income	$ 90,000	$ 200,000

Instructions

Supply the missing information for the lettered items.

Exercises: Set B and Challenge Exercises

Visit the book's companion website, at **www.wiley.com/college/kimmel**, and choose the Student Companion site to access Exercise Set B and Challenge Exercises.

Problems: Set A

P21-1A Cook Company estimates that 360,000 direct labor hours will be worked during the coming year, 2012, in the Packaging Department. On this basis, the budgeted manufacturing overhead cost data, shown on the next page, are computed for the year.

Prepare flexible budget and budget report for manufacturing overhead.

(SO 3), **AN**

Fixed Overhead Costs		Variable Overhead Costs	
Supervision	$ 90,000	Indirect labor	$126,000
Depreciation	60,000	Indirect materials	90,000
Insurance	30,000	Repairs	54,000
Rent	24,000	Utilities	72,000
Property taxes	18,000	Lubricants	18,000
	$222,000		$360,000

It is estimated that direct labor hours worked each month will range from 27,000 to 36,000 hours.

During October, 27,000 direct labor hours were worked and the following overhead costs were incurred.

Fixed overhead costs: Supervision $7,500, Depreciation $5,000, Insurance $2,470, Rent $2,000, and Property taxes $1,500.

Variable overhead costs: Indirect labor $10,360, Indirect materials, $6,400, Repairs $4,000, Utilities $5,700, and Lubricants $1,640.

Instructions

(a) Total costs: DLH 27,000, $45,500; DLH 36,000, $54,500

(b) Total $1,070 U

(a) Prepare a monthly manufacturing overhead flexible budget for each increment of 3,000 direct labor hours over the relevant range for the year ending December 31, 2012.

(b) Prepare a flexible budget report for October.

(c) Comment on management's efficiency in controlling manufacturing overhead costs in October.

Prepare flexible budget, budget report, and graph for manufacturing overhead.
(SO 3), **E**

P21-2A Zelmer Company manufactures tablecloths. Sales have grown rapidly over the past 2 years. As a result, the president has installed a budgetary control system for 2012. The following data were used in developing the master manufacturing overhead budget for the Ironing Department, which is based on an activity index of direct labor hours.

Variable Costs	Rate per Direct Labor Hour	Annual Fixed Costs	
Indirect labor	$0.40	Supervision	$42,000
Indirect materials	0.50	Depreciation	18,000
Factory utilities	0.30	Insurance	12,000
Factory repairs	0.20	Rent	24,000

The master overhead budget was prepared on the expectation that 480,000 direct labor hours will be worked during the year. In June, 42,000 direct labor hours were worked. At that level of activity, actual costs were as shown below.

Variable—per direct labor hour: Indirect labor $0.43, Indirect materials $0.49, Factory utilities $0.32, and Factory repairs $0.24.

Fixed: same as budgeted.

Instructions

(a) Total costs: 35,000 DLH, $57,000; 50,000 DLH, $78,000

(b) Budget $66,800
Actual $70,160

(a) Prepare a monthly manufacturing overhead flexible budget for the year ending December 31, 2012, assuming production levels range from 35,000 to 50,000 direct labor hours. Use increments of 5,000 direct labor hours.

(b) Prepare a budget report for June comparing actual results with budget data based on the flexible budget.

(c) Were costs effectively controlled? Explain.

(d) State the formula for computing the total budgeted costs for the Ironing Department.

(e) Prepare the flexible budget graph, showing total budgeted costs at 35,000 and 45,000 direct labor hours. Use increments of 5,000 direct labor hours on the horizontal axis and increments of $10,000 on the vertical axis.

State total budgeted cost formula, and prepare flexible budget reports for 2 time periods.
(SO 2, 3), **AN**

P21-3A Hill Company uses budgets in controlling costs. The August 2012 budget report for the company's Assembling Department is as follows.

HILL COMPANY
Budget Report
Assembling Department
For the Month Ended August 31, 2012

Manufacturing Costs	Budget	Actual	Difference Favorable F Unfavorable U
Variable costs			
Direct materials	$ 48,000	$ 47,000	$1,000 F
Direct labor	54,000	51,300	2,700 F
Indirect materials	24,000	24,200	200 U
Indirect labor	18,000	17,500	500 F
Utilities	15,000	14,900	100 F
Maintenance	9,000	9,200	200 U
Total variable	168,000	164,100	3,900 F
Fixed costs			
Rent	12,000	12,000	–0–
Supervision	17,000	17,000	–0–
Depreciation	7,000	7,000	–0–
Total fixed	36,000	36,000	–0–
Total costs	$204,000	$200,100	$3,900 F

The monthly budget amounts in the report were based on an expected production of 60,000 units per month or 720,000 units per year. The Assembling Department manager is pleased with the report and expects a raise, or at least praise for a job well done. The company president, however, is unhappy with the results for August because only 58,000 units were produced.

Instructions

(a) State the total monthly budgeted cost formula.

(b) Prepare a budget report for August using flexible budget data. Why does this report provide a better basis for evaluating performance than the report based on static budget data?

(b) Budget $198,400

(c) In September, 64,000 units were produced. Prepare the budget report using flexible budget data, assuming (1) each variable cost was 10% higher than its actual cost in August, and (2) fixed costs were the same in September as in August.

(c) Budget $215,200
Actual $216,510

Prepare responsibility report for a profit center.
(SO 6), **AN**

P21-4A Clarke Manufacturing Inc. operates the Patio Furniture Division as a profit center. Operating data for this division for the year ended December 31, 2012, are as shown below.

	Budget	Difference from Budget
Sales	$2,500,000	$60,000 F
Cost of goods sold		
Variable	1,300,000	41,000 F
Controllable fixed	200,000	6,000 U
Selling and administrative		
Variable	220,000	7,000 U
Controllable fixed	50,000	2,000 U
Noncontrollable fixed costs	70,000	4,000 U

In addition, Clarke Manufacturing incurs $180,000 of indirect fixed costs that were budgeted at $175,000. Twenty percent (20%) of these costs are allocated to the Patio Furniture Division.

Instructions

(a) Prepare a responsibility report for the Patio Furniture Division for the year.

(b) Comment on the manager's performance in controlling revenues and costs.

(c) Identify any costs excluded from the responsibility report and explain why they were excluded.

(a) Contribution margin
$94,000 F
Controllable margin
$86,000 F

Prepare responsibility report for an investment center, and compute ROI.
(SO 7), E

P21-5A Suppan Manufacturing Company manufactures a variety of tools and industrial equipment. The company operates through three divisions. Each division is an investment center. Operating data for the Home Division for the year ended December 31, 2012, and relevant budget data are as follows.

	Actual	Comparison with Budget
Sales	$1,500,000	$100,000 favorable
Variable cost of goods sold	700,000	60,000 unfavorable
Variable selling and administrative expenses	125,000	25,000 unfavorable
Controllable fixed cost of goods sold	170,000	On target
Controllable fixed selling and administrative expenses	80,000	On target

Average operating assets for the year for the Home Division were $2,500,000 which was also the budgeted amount.

Instructions

(a) Controllable margin: Budget $410; Actual $425

(a) Prepare a responsibility report (in thousands of dollars) for the Home Division.
(b) Evaluate the manager's performance. Which items will likely be investigated by top management?
(c) Compute the expected ROI in 2013 for the Home Division, assuming the following independent changes to actual data.
 (1) Variable cost of goods sold is decreased by 6%.
 (2) Average operating assets are decreased by 10%.
 (3) Sales are increased by $200,000, and this increase is expected to increase contribution margin by $90,000.

Prepare reports for cost centers under responsibility accounting, and comment on performance of managers.
(SO 4), AN

P21-6A Durham Company uses a responsibility reporting system. It has divisions in Denver, Seattle, and San Diego. Each division has three production departments: Cutting, Shaping, and Finishing. The responsibility for each department rests with a manager who reports to the division production manager. Each division manager reports to the vice president of production. There are also vice presidents for marketing and finance. All vice presidents report to the president.

In January 2012, controllable actual and budget manufacturing overhead cost data for the departments and divisions were as shown below.

Manufacturing Overhead	Actual	Budget
Individual costs—Cutting Department—Seattle		
Indirect labor	$ 73,000	$ 70,000
Indirect materials	47,700	46,000
Maintenance	20,500	18,000
Utilities	20,100	17,000
Supervision	22,000	20,000
	$183,300	$171,000
Total costs		
Shaping Department—Seattle	$158,000	$148,000
Finishing Department—Seattle	210,000	206,000
Denver division	676,000	673,000
San Diego division	722,000	715,000

Additional overhead costs were incurred as follows: Seattle division production manager—actual costs $52,500, budget $51,000; vice president of production—actual costs $65,000, budget $64,000; president—actual costs $76,400, budget $74,200. These expenses are not allocated.

The vice presidents who report to the president, other than the vice president of production, had the following expenses.

Vice President	Actual	Budget
Marketing	$133,600	$130,000
Finance	109,000	105,000

Instructions

(a) Using the format on page 1095, prepare the following responsibility reports.
  (1) Manufacturing overhead—Cutting Department manager—Seattle division.
  (2) Manufacturing overhead—Seattle division manager.
  (3) Manufacturing overhead—vice president of production.
  (4) Manufacturing overhead and expenses—president.
(b) Comment on the comparative performances of:
  (1) Department managers in the Seattle division.
  (2) Division managers.
  (3) Vice presidents.

(a) (1) $12,300 U
(2) $27,800 U
(3) $38,800 U
(4) $48,600 U

***P21-7A** Delby Industries has manufactured prefabricated houses for over 20 years. The houses are constructed in sections to be assembled on customers' lots. Delby expanded into the precut housing market when it acquired Jensen Company, one of its suppliers. In this market, various types of lumber are precut into the appropriate lengths, banded into packages, and shipped to customers' lots for assembly. Delby designated the Jensen Division as an investment center.

Compare ROI and residual income.
(SO 8), **AN**

Delby uses return on investment (ROI) as a performance measure with investment defined as average operating assets. Management bonuses are based in part on ROI. All investments are expected to earn a minimum rate of return of 16%. Jensen's ROI has ranged from 20.1% to 23.5% since it was acquired. Jensen had an investment opportunity in 2012 that had an estimated ROI of 19%. Jensen management decided against the investment because it believed the investment would decrease the division's overall ROI.

Selected financial information for Jensen are presented below. The division's average operating assets were $12,300,000 for the year 2012.

JENSEN DIVISION
Selected Financial Information
For the Year Ended December 31, 2012

Sales	$26,000,000
Contribution margin	9,100,000
Controllable margin	2,460,000

Instructions

(a) Calculate the following performance measures for 2012 for the Jensen Division.
  (1) Return on investment (ROI).
  (2) Residual income.
(b) Would the management of Jensen Division have been more likely to accept the investment opportunity it had in 2012 if residual income were used as a performance measure instead of ROI? Explain your answer.

(CMA adapted)

Problems: Set B

P21-1B Speier Company estimates that 240,000 direct labor hours will be worked during 2012 in the Assembly Department. On this basis, the following budgeted manufacturing overhead data are computed.

Prepare flexible budget and budget report for manufacturing overhead.
(SO 3), **AN**

Variable Overhead Costs		Fixed Overhead Costs	
Indirect labor	$ 72,000	Supervision	$ 75,000
Indirect materials	48,000	Depreciation	30,000
Repairs	36,000	Insurance	12,000
Utilities	26,400	Rent	9,000
Lubricants	9,600	Property taxes	6,000
	$192,000		$132,000

It is estimated that direct labor hours worked each month will range from 18,000 to 24,000 hours.

During January, 20,000 direct labor hours were worked and the following overhead costs were incurred.

Variable Overhead Costs		Fixed Overhead Costs	
Indirect labor	$ 6,200	Supervision	$ 6,250
Indirect materials	3,600	Depreciation	2,500
Repairs	2,400	Insurance	1,000
Utilities	1,700	Rent	850
Lubricants	830	Property taxes	500
	$14,730		$11,100

(a) Total costs: 18,000 DLH, $25,400; 24,000 DLH, $30,200
(b) Budget $27,000 Actual $25,830

Instructions

(a) Prepare a monthly flexible manufacturing overhead budget for each increment of 2,000 direct labor hours over the relevant range for the year ending December 31, 2012.
(b) Prepare a manufacturing overhead budget report for January.
(c) Comment on management's efficiency in controlling manufacturing overhead costs in January.

Prepare flexible budget, budget report, and graph for manufacturing overhead.
(SO 3), E

P21-2B Gonzalez Manufacturing Company produces one product, Olpe. Because of wide fluctuations in demand for Olpe, the Assembly Department experiences significant variations in monthly production levels.

The annual master manufacturing overhead budget is based on 300,000 direct labor hours. In July, 27,500 labor hours were worked. The master manufacturing overhead budget for the year and the actual overhead costs incurred in July are as follows.

Overhead Costs	Master Budget (annual)	Actual in July
Variable		
Indirect labor	$330,000	$29,000
Indirect materials	180,000	14,000
Utilities	90,000	8,100
Maintenance	60,000	5,400
Fixed		
Supervision	150,000	12,500
Depreciation	96,000	8,000
Insurance and taxes	60,000	5,000
Total	$966,000	$82,000

(a) Total costs: 22,500 DLH, $75,000; 30,000 DLH, $91,500
(b) Budget $86,000 Actual $82,000

Instructions

(a) Prepare a monthly flexible overhead budget for the year ending December 31, 2012, assuming monthly production levels range from 22,500 to 30,000 direct labor hours. Use increments of 2,500 direct labor hours.
(b) Prepare a budget report for the month of July 2012, comparing actual results with budget data based on the flexible budget.
(c) Were costs effectively controlled? Explain.
(d) State the formula for computing the total monthly budgeted costs in the Gonzalez Manufacturing Company.
(e) Prepare the flexible budget graph showing total budgeted costs at 25,000 and 27,500 direct labor hours. Use increments of 5,000 on the horizontal axis and increments of $10,000 on the vertical axis.

State total budgeted cost formula, and prepare flexible budget reports for 2 time periods.
(SO 2, 3), AN

P21-3B Hardesty Company uses budgets in controlling costs. The May 2012 budget report for the company's Packaging Department is as follows.

HARDESTY COMPANY
Budget Report
Packaging Department
For the Month Ended May 31, 2012

Manufacturing Costs	Budget	Actual	Difference Favorable F Unfavorable U
Variable costs			
Direct materials	$ 40,000	$ 41,000	$1,000 U
Direct labor	45,000	47,000	2,000 U
Indirect materials	15,000	15,200	200 U
Indirect labor	12,500	13,000	500 U
Utilities	10,000	9,600	400 F
Maintenance	5,000	5,200	200 U
Total variable	127,500	131,000	3,500 U
Fixed costs			
Rent	10,000	10,000	–0–
Supervision	7,000	7,000	–0–
Depreciation	5,000	5,000	–0–
Total fixed	22,000	22,000	–0–
Total costs	$149,500	$153,000	$3,500 U

The monthly budget amounts in the report were based on an expected production of 50,000 units per month or 600,000 units per year.

The company president was displeased with the department manager's performance. The department manager, who thought he had done a good job, could not understand the unfavorable results. In May, 55,000 units were produced.

Instructions

(a) State the total budgeted cost formula.

(b) Prepare a budget report for May using flexible budget data. Why does this report provide a better basis for evaluating performance than the report based on static budget data?

(b) Budget $162,250

(c) In June, 40,000 units were produced. Prepare the budget report using flexible budget data, assuming (1) each variable cost was 20% less in June than its actual cost in May, and (2) fixed costs were the same in the month of June as in May.

(c) Budget $124,000
Actual $126,800

P21-4B Guzman Manufacturing Inc. operates the Home Appliance Division as a profit center. Operating data for this division for the year ended December 31, 2012, are shown below.

Prepare responsibility report for a profit center.
(SO 6), **AN**

	Budget	Difference from Budget
Sales	$2,400,000	$100,000 U
Cost of goods sold		
Variable	1,200,000	60,000 U
Controllable fixed	200,000	8,000 F
Selling and administrative		
Variable	240,000	8,000 F
Controllable fixed	60,000	4,000 U
Noncontrollable fixed costs	50,000	2,000 U

In addition, Guzman Manufacturing incurs $150,000 of indirect fixed costs that were budgeted at $155,000. Twenty percent (20%) of these costs are allocated to the Home Appliance Division. None of these costs are controllable by the division manager.

Instructions

(a) Prepare a responsibility report for the Home Appliance Division (a profit center) for the year.

(a) Contribution margin
$152,000 U
Controllable margin
$148,000 U

(b) Comment on the manager's performance in controlling revenues and costs.

(c) Identify any costs excluded from the responsibility report and explain why they were excluded.

Prepare responsibility report for an investment center, and compute ROI.
(SO 7), E

P21-5B Strauss Manufacturing Company manufactures a variety of garden and lawn equipment. The company operates through three divisions. Each division is an investment center. Operating data for the Lawnmower Division for the year ended December 31, 2012, and relevant budget data are as follows.

	Actual	Comparison with Budget
Sales	$2,900,000	$120,000 unfavorable
Variable cost of goods sold	1,400,000	90,000 unfavorable
Variable selling and administrative expenses	300,000	50,000 favorable
Controllable fixed cost of goods sold	270,000	On target
Controllable fixed selling and administrative expenses	140,000	On target

Average operating assets for the year for the Lawnmower Division were $5,000,000, which was also the budgeted amount.

Instructions

(a) Controllable margin:
Budget $950
Actual $790

(a) Prepare a responsibility report (in thousands of dollars) for the Lawnmower Division.
(b) Evaluate the manager's performance. Which items will likely be investigated by top management?
(c) Compute the expected ROI in 2013 for the Lawnmower Division, assuming the following independent changes.
  (1) Variable cost of goods sold is decreased by 15%.
  (2) Average operating assets are decreased by 20%.
  (3) Sales are increased by $500,000, and this increase is expected to increase contribution margin by $210,000.

Prepare reports for cost centers under responsibility accounting, and comment on performance of managers.
(SO 4), AN

P21-6B Gore Company uses a responsibility reporting system. It has divisions in San Francisco, Phoenix, and Tulsa. Each division has three production departments: Cutting, Shaping, and Finishing. The responsibility for each department rests with a manager who reports to the division production manager. Each division manager reports to the vice president of production. There are also vice presidents for marketing and finance. All vice presidents report to the president.

In January 2012, controllable actual and budget manufacturing overhead cost data for the departments and divisions were as shown below.

Manufacturing Overhead	Actual	Budget
Individual costs—Cutting Department—Phoenix		
Indirect labor	$ 95,000	$ 90,000
Indirect materials	62,500	61,000
Maintenance	27,400	25,000
Utilities	25,200	20,000
Supervision	31,000	28,000
	$241,100	$224,000
Total costs		
Shaping Department—Phoenix	$190,000	$177,000
Finishing Department—Phoenix	250,000	246,000
San Francisco division	722,000	715,000
Tulsa division	760,000	750,000

Additional overhead costs were incurred as follows: Phoenix division production manager—actual costs $73,100, budget $70,000; vice president of production—actual costs $72,000, budget $70,000; president—actual costs $94,200, budget $91,300. These expenses are not allocated.

The vice presidents, who report to the president (other than the vice president of production), had the following expenses.

Vice President	Actual	Budget
Marketing	$167,200	$160,000
Finance	124,000	120,000

Instructions

(a) Using the format on page 1095, prepare the following responsibility reports.
  (1) Manufacturing overhead—Cutting Department manager—Phoenix division.
  (2) Manufacturing overhead—Phoenix division manager.
  (3) Manufacturing overhead—vice president of production.
  (4) Manufacturing overhead and expenses—president.
(b) Comment on the comparative performances of:
  (1) Department managers in the Phoenix division.
  (2) Division managers.
  (3) Vice presidents.

(a) (1) $17,100 U
(2) $37,200 U
(3) $56,200 U
(4) $70,300 U

***P21-7B** Walton Industries has manufactured prefabricated garages for over 20 years. The garages are constructed in sections to be assembled on customers' lots. Walton expanded into the precut housing market when it acquired Washington Enterprises, one of its suppliers. In this market, various types of lumber are precut into the appropriate lengths, banded into packages, and shipped to customers' lots for assembly. Walton designated the Washington Division as an investment center.

Compare ROI and residual income.

(SO 8), **AN**

Walton uses return on investment (ROI) as a performance measure, with investment defined as average operating assets. Management bonuses are based in part on ROI. All investments are expected to earn a minimum rate of return of 16%. Washington Enterprises's ROI has ranged from 19.9% to 23.3% since it was acquired. Washington had an investment opportunity in 2012 that had an estimated ROI of 19%. Washington's management decided against the investment because it believed the investment would decrease the division's overall ROI.

Selected financial information for Washington Enterprises is presented below. The division's average operating assets were $7,600,000 for the year 2012.

WASHINGTON ENTERPRISES DIVISION
Selected Financial Information
For the Year Ended December 31, 2012

Sales	$16,000,000
Contribution margin	5,600,000
Controllable margin	1,500,000

Instructions

(a) Calculate the following performance measures for 2012 for the Washington Enterprises Division.
  (1) Return on investment (ROI).
  (2) Residual income.
(b) Would the management of Washington Enterprises have been more likely to accept the investment opportunity it had in 2012 if residual income were used as a performance measure instead of ROI? Explain your answer.

Waterways Continuing Problem

(*Note:* This is a continuation of the Waterways Problem from Chapters 13 through 20.)

WCP21 Waterways Corporation is continuing its budget preparations. This problem gives you static budget information as well as actual overhead costs, and asks you to calculate amounts related to budgetary control and responsibility accounting.

Go to the book's companion website, at **www.wiley.com/college/kimmel**, to find the completion of this problem.

broadening your perspective

DECISION MAKING ACROSS THE ORGANIZATION

BYP21-1 Green Pastures is a 400-acre farm on the outskirts of the Kentucky Bluegrass, specializing in the boarding of broodmares and their foals. A recent economic downturn in the thoroughbred industry has led to a decline in breeding activities, and it has made the boarding business extremely competitive. To meet the competition, Green Pastures planned in 2012 to entertain clients, advertise more extensively, and absorb expenses formerly paid by clients such as veterinary and blacksmith fees.

The budget report for 2012 is presented below. As shown, the static income statement budget for the year is based on an expected 21,900 boarding days at $25 per mare. The variable expenses per mare per day were budgeted: Feed $5, Veterinary fees $3, Blacksmith fees $0.30, and Supplies $0.55. All other budgeted expenses were either semifixed or fixed.

During the year, management decided not to replace a worker who quit in March, but it did issue a new advertising brochure and did more entertaining of clients.[1]

GREEN PASTURES
Static Budget Income Statement
For the Year Ended December 31, 2012

	Actual	Master Budget	Difference
Number of mares	52	60	8 U
Number of boarding days	18,980	21,900	2,920 U
Sales	$379,600	$547,500	$167,900 U
Less: Variable expenses			
Feed	104,390	109,500	5,110 F
Veterinary fees	58,838	65,700	6,862 F
Blacksmith fees	6,074	6,570	496 F
Supplies	10,178	12,045	1,867 F
Total variable expenses	179,480	193,815	14,335 F
Contribution margin	200,120	353,685	153,565 U
Less: Fixed expenses			
Depreciation	40,000	40,000	–0–
Insurance	11,000	11,000	–0–
Utilities	12,000	14,000	2,000 F
Repairs and maintenance	10,000	11,000	1,000 F
Labor	88,000	96,000	8,000 F
Advertisement	12,000	8,000	4,000 U
Entertainment	7,000	5,000	2,000 U
Total fixed expenses	180,000	185,000	5,000 F
Net income	$ 20,120	$168,685	$148,565 U

[1] Data for this case are based on Hans Sprohge and John Talbott, "New Applications for Variance Analysis," *Journal of Accountancy* (AICPA, New York), April 1989, pp. 137–141.

Instructions

With the class divided into groups, answer the following.

(a) Based on the static budget report:

(1) What was the primary cause(s) of the loss in net income?

(2) Did management do a good, average, or poor job of controlling expenses?

(3) Were management's decisions to stay competitive sound?

(b) Prepare a flexible budget report for the year.

(c) Based on the flexible budget report, answer the three questions in part (a) above.

(d) What course of action do you recommend for the management of Green Pastures?

MANAGERIAL ANALYSIS

BYP21-2 Lanier Company manufactures expensive watch cases sold as souvenirs. Three of its sales departments are: Retail Sales, Wholesale Sales, and Outlet Sales. The Retail Sales Department is a profit center. The Wholesale Sales Department is a cost center. Its managers merely take orders from customers who purchase through the company's wholesale catalog. The Outlet Sales Department is an investment center because each manager is given full responsibility for an outlet store location. The manager can hire and discharge employees, purchase, maintain, and sell equipment, and in general is fairly independent of company control.

Mary Gammel is a manager in the Retail Sales Department. Stephen Flott manages the Wholesale Sales Department. Jose Gomez manages the Golden Gate Club outlet store in San Francisco. The following are the budget responsibility reports for each of the three departments.

Budget

	Retail Sales	Wholesale Sales	Outlet Sales
Sales	$ 750,000	$ 400,000	$200,000
Variable costs			
Cost of goods sold	150,000	100,000	25,000
Advertising	100,000	30,000	5,000
Sales salaries	75,000	15,000	3,000
Printing	10,000	20,000	5,000
Travel	20,000	30,000	2,000
Fixed costs			
Rent	50,000	30,000	10,000
Insurance	5,000	2,000	1,000
Depreciation	75,000	100,000	40,000
Investment in assets	1,000,000	1,200,000	800,000

Actual Results

	Retail Sales	Wholesale Sales	Outlet Sales
Sales	$ 750,000	$ 400,000	$200,000
Variable costs			
Cost of goods sold	195,000	120,000	26,250
Advertising	100,000	30,000	5,000
Sales salaries	75,000	15,000	3,000
Printing	10,000	20,000	5,000
Travel	15,000	20,000	1,500
Fixed costs			
Rent	40,000	50,000	12,000
Insurance	5,000	2,000	1,000
Depreciation	80,000	90,000	60,000
Investment in assets	1,000,000	1,200,000	800,000

Instructions

(a) Determine which of the items should be included in the responsibility report for each of the three managers.

(b) Compare the budgeted measures with the actual results. Decide which results should be called to the attention of each manager.

REAL-WORLD FOCUS

BYP21-3 Computer Associates International, Inc., the world's leading business software company, delivers the end-to-end infrastructure to enable e-business through innovative technology, services, and education. Computer Associates has 19,000 employees worldwide and recently had revenue of over $6 billion.

Presented below is information from the company's annual report.

COMPUTER ASSOCIATES INTERNATIONAL

Management Discussion

The Company has experienced a pattern of business whereby revenue for its third and fourth fiscal quarters reflects an increase over first- and second-quarter revenue. The Company attributes this increase to clients' increased spending at the end of their calendar year budgetary periods and the culmination of its annual sales plan. Since the Company's costs do not increase proportionately with the third- and fourth-quarters' increase in revenue, the higher revenue in these quarters results in greater profit margins and income. Fourth-quarter profitability is traditionally affected by significant new hirings, training, and education expenditures for the succeeding year.

Instructions

(a) Why don't the company's costs increase proportionately as the revenues increase in the third and fourth quarters?

(b) What type of budgeting seems appropriate for the Computer Associates situation?

MANAGERIAL ACCOUNTING ON THE WEB

BYP21-4 There are many useful resources regarding budgeting available on websites. The following activity investigates the results of a comprehensive budgeting study.

Address: **http://www.accountingweb.com/whitepapers/centage_ioma.pdf**, or go to **www.wiley.com/college/kimmel**

Instructions

Go to the address above and then answer the following questions.

(a) What are cited as the two most common "pain points" of budgeting?

(b) What percentage of companies that participated in the survey said that they prepare annual budgets? Of those that prepare budgets, what percentage say that they start the budgeting process by first generating sales projections?

(c) What is the most common amount of time for the annual budgeting process?

(d) When evaluating variances from budgeted amounts, what was the most commonly defined range of acceptable tolerance levels?

(e) The study defines three types of consequences for varying from budgeted amounts. How does it describe "severe" consequences?

COMMUNICATION ACTIVITY

BYP21-5 The manufacturing overhead budget for Fleming Company contains the following items.

Variable costs		Fixed costs	
Indirect materials	$24,000	Supervision	$18,000
Indirect labor	12,000	Inspection costs	1,000
Maintenance expense	10,000	Insurance expense	2,000
Manufacturing supplies	6,000	Depreciation	15,000
Total variable	$52,000	Total fixed	$36,000

The budget was based on an estimated 2,000 units being produced. During the past month, 1,500 units were produced, and the following costs incurred.

Variable costs		Fixed costs	
Indirect materials	$24,200	Supervision	$19,300
Indirect labor	13,500	Inspection costs	1,200
Maintenance expense	8,200	Insurance expense	2,200
Manufacturing supplies	5,100	Depreciation	14,700
Total variable	$51,000	Total fixed	$37,400

Instructions

(a) Determine which items would be controllable by Fred Bedner, the production manager.
(b) How much should have been spent during the month for the manufacture of the 1,500 units?
(c) Prepare a flexible manufacturing overhead budget report for Mr. Bedner.
(d) Prepare a responsibility report. Include only the costs that would have been controllable by Mr. Bedner. Assume that the supervision cost above includes Mr. Bedner's salary of $10,000, both at budget and actual. In an attached memo, describe clearly for Mr. Bedner the areas in which his performance needs to be improved.

ETHICS CASE

BYP21-6 American Products Corporation participates in a highly competitive industry. In order to meet this competition and achieve profit goals, the company has chosen the decentralized form of organization. Each manager of a decentralized investment center is measured on the basis of profit contribution, market penetration, and return on investment. Failure to meet the objectives established by corporate management for these measures has not been acceptable and usually has resulted in demotion or dismissal of an investment center manager.

An anonymous survey of managers in the company revealed that the managers feel the pressure to compromise their personal ethical standards to achieve the corporate objectives. For example, at certain plant locations there was pressure to reduce quality control to a level which could not assure that all unsafe products would be rejected. Also, sales personnel were encouraged to use questionable sales tactics to obtain orders, including gifts and other incentives to purchasing agents.

The chief executive officer is disturbed by the survey findings. In his opinion, such behavior cannot be condoned by the company. He concludes that the company should do something about this problem.

Instructions

(a) Who are the stakeholders (the affected parties) in this situation?
(b) Identify the ethical implications, conflicts, or dilemmas in the above described situation.
(c) What might the company do to reduce the pressures on managers and decrease the ethical conflicts?

(CMA adapted)

"ALL ABOUT YOU" ACTIVITY

BYP21-7 It is one thing to prepare a personal budget; it is another thing to stick to it. Financial planners have suggested various mechanisms to provide support for enforcing personal budgets. One approach is called "envelope budgeting."

Instructions

Read the article provided at **http://en.wikipedia.org/wiki/Envelope_budgeting**, and answer the following questions.

(a) Summarize the process of envelope budgeting.

(b) Evaluate whether you think you would benefit from envelope budgeting. What do you think are its strengths and weaknesses relative to your situation?

Answers to Insight and Accounting Across the Organization Questions

p. 1089 Budgets and the Exotic Newcastle Disease Q: What is the major benefit of tying a budget to the overall goals of the company? **A:** People working on a budgeting process that is clearly guided and focused by strategic goals spend less time arguing about irrelevant details and more time focusing on the items that matter.

p. 1093 Competition versus Collaboration Q: How might managers of separate divisions be able to reduce division costs through collaboration? **A:** Division managers might reduce costs by sharing design and marketing resources or by jointly negotiating with suppliers. In addition, they can reduce the need to hire and lay off employees by sharing staff across divisions as human resource needs change.

p. 1102 Does Hollywood Look at ROI? Q: What might be the reason that movie studios do not produce G-rated movies as much as R-rated ones? **A:** Perhaps Hollywood believes that big-name stars or large budgets, both of which are typical of R-rated movies, sell movies. However, one study recently concluded, "We can't find evidence that stars help movies, and we can't find evidence that bigger budgets increase return on investment." Some film companies are going out of their way to achieve at least a PG rating.

p. 1103 Flexible Manufacturing Requires Flexible Accounting Q: What implications do these improvements in production capabilities have for management accounting information and performance evaluation within the organization? **A:** In order to maximize the potential of flexible manufacturing facilities, managers need to be supplied with information on a more frequent basis. In turn, the tools used to evaluate performance need to take into account what information management had at its disposal, and what decisions were made in response to this information.

study objectives

After studying this chapter, you should be able to:

1. Distinguish between a standard and a budget.
2. Identify the advantages of standard costs.
3. Describe how companies set standards.
4. State the formulas for determining direct materials and direct labor variances.
5. State the formula for determining the total manufacturing overhead variance.
6. Discuss the reporting of variances.
7. Prepare an income statement for management under a standard costing system.
8. Describe the balanced scorecard approach to performance evaluation.

the navigator

feature story

HIGHLIGHTING PERFORMANCE EFFICIENCY

There's a very good chance that the highlighter you're holding in your hand was made by Sanford (*www.sanfordcorp.com*), a maker of permanent markers and other writing instruments. Sanford, headquartered in Illinois, annually sells hundreds of millions of dollars' worth of Accent® highlighters, fine-point pens, Sharpie permanent markers, Expo dry-erase markers for whiteboards, and other writing instruments.

Since Sanford makes literally billions of writing utensils per year, the company must keep tight control over manufacturing costs. A very important part of Sanford's manufacturing process is determining how much direct materials, labor, and overhead should cost. The company then compares these costs to actual costs to assess performance efficiency. Raw materials for Sanford's markers include a barrel, plug, cap, ink reservoir, and a nib (tip). Machines assemble these parts to produce thousands of units per hour. A major component of manufacturing overhead is machine maintenance—some fixed, some variable.

"Labor costs are associated with material handling and equipment maintenance functions. Although the assembly process is highly automated, labor is still required to move raw materials to the machine and to package the finished product. In addition, highly skilled technicians are required to service and maintain each piece of equipment," says Mike Orr, vice president, operations.

Labor rates are predictable because the hourly workers are covered by a union contract. The story is the same with the fringe benefits and some supervisory salaries. Even volume levels are fairly predictable—demand for the product is high—so fixed overhead is efficiently absorbed. Raw material standard costs are based on the previous year's actual prices plus any anticipated inflation. For several years, though, inflation was so low that the company considered any price increase in raw material to be unfavorable because its standards remained unchanged.

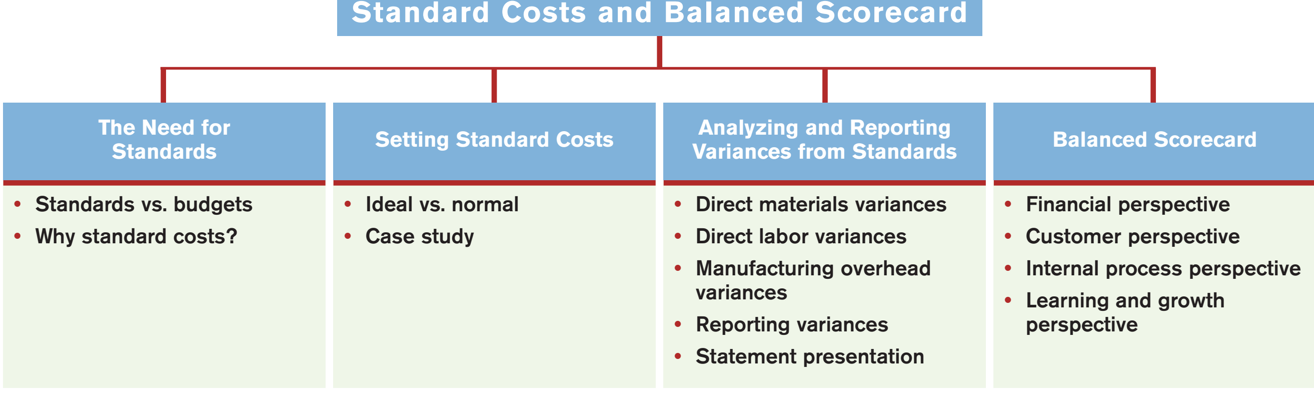
- **How Can We Make Susan's Chili Profitable?** *(p. 1143)*
- **It May Be Time to Fly United Again** *(p. 1156)*

preview of chapter 22

Standards are a fact of life. You met the admission standards for the school you are attending. The vehicle that you drive had to meet certain governmental emissions standards. The hamburgers and salads you eat in a restaurant have to meet certain health and nutritional standards before they can be sold. As described in our Feature Story, Sanford Corp. has standards for the costs of its materials, labor, and overhead. The reason for standards in these cases is very simple: They help to ensure that overall product quality is high while keeping costs under control.

In this chapter, we continue the study of controlling costs. You will learn how to evaluate performance using standard costs and a balanced scorecard.

The content and organization of Chapter 22 are as follows.



The Need for Standards

Standards are common in business. Those imposed by government agencies are often called **regulations**. They include the Fair Labor Standards Act, the Equal Employment Opportunity Act, and a multitude of environmental standards. Standards established internally by a company may extend to personnel matters, such as employee absenteeism and ethical codes of conduct, quality control standards for products, and standard costs for goods and services. In managerial accounting, **standard costs** are predetermined unit costs, which companies use as measures of performance.

We will focus on manufacturing operations in this chapter. But you should also recognize that standard costs also apply to many types of service businesses as well. For example, a fast-food restaurant such as McDonald's knows the price it should pay for pickles, beef, buns, and other ingredients. It also knows how much time it should take an employee to flip hamburgers. If the company pays too much for pickles or if employees take too much time to prepare Big Macs, McDonald's notices the deviations and takes corrective action. Not-for-profit entities, such as universities, charitable organizations, and governmental agencies, also may use standard costs.

DISTINGUISHING BETWEEN STANDARDS AND BUDGETS

study objective 1
Distinguish between a standard and a budget.

Both **standards** and **budgets** are predetermined costs, and both contribute to management planning and control. There is a difference, however, in the way the terms are expressed. A standard is a **unit** amount. A budget is a **total** amount. Thus, it is customary to state that the **standard cost** of direct labor for a unit of product is, say, $10. If the company produces 5,000 units of the product, the $50,000 of direct labor is the **budgeted** labor cost. A standard is the budgeted

cost per unit of product. A standard is therefore concerned with each individual cost component that makes up the entire budget.

There are important accounting differences between budgets and standards. Except in the application of manufacturing overhead to jobs and processes, budget data are not journalized in cost accounting systems. In contrast, as we illustrate in the appendix to this chapter, standard costs may be incorporated into cost accounting systems. Also, a company may report its inventories at standard cost in its financial statements, but it would not report inventories at budgeted costs.

WHY STANDARD COSTS?

study objective 2
Identify the advantages of standard costs.

Standard costs offer a number of advantages to an organization, as shown in Illustration 22-1.

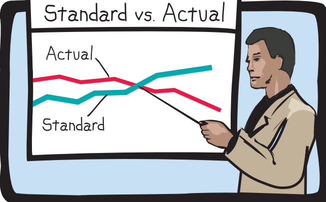
The organization will realize these advantages only when standard costs are carefully established and prudently used. Using standards solely as a way to place blame can have a negative effect on managers and employees. To minimize this effect, many companies offer wage incentives to those who meet the standards.

Advantages of standard costs

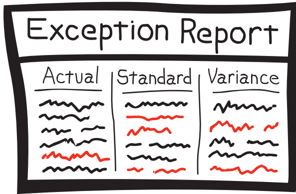
Facilitate management planning

Promote greater economy by making employees more "cost-conscious"

Useful in setting selling prices



Contribute to management control by providing basis for evaluation of cost control



Useful in highlighting variances in management by exception

Simplify costing of inventories and reduce clerical costs

Illustration 22-1
Advantages of standard costs

Setting Standard Costs—A Difficult Task

study objective
Describe how companies set standards.

The setting of standard costs to produce a unit of product is a difficult task. It requires input from all persons who have responsibility for costs and quantities. To determine the standard cost of direct materials, management consults purchasing agents, product managers, quality control engineers, and production supervisors. In setting the cost standard for direct labor, managers obtain pay rate

data from the payroll department. Industrial engineers generally determine the labor time requirements. The managerial accountant provides important input for the standard-setting process by accumulating historical cost data and by knowing how costs respond to changes in activity levels.

To be effective in controlling costs, standard costs need to be current at all times. Thus, standards are under continuous review. They should change whenever managers determine that the existing standard is not a good measure of performance. Circumstances that warrant revision of a standard include changed wage rates resulting from a new union contract, a change in product specifications, or the implementation of a new manufacturing method.

IDEAL VERSUS NORMAL STANDARDS

Companies set standards at one of two levels: ideal or normal. **Ideal standards** represent optimum levels of performance under perfect operating conditions. **Normal standards** represent efficient levels of performance that are attainable under expected operating conditions.

Some managers believe ideal standards will stimulate workers to ever-increasing improvement. However, most managers believe that ideal standards lower the morale of the entire workforce because they are difficult, if not impossible, to meet. Very few companies use ideal standards.

Ethics Note When standards are set too high, employees sometimes feel pressure to consider unethical practices to meet these standards.

Most companies that use standards set them at a normal level. Properly set, normal standards should be **rigorous but attainable**. Normal standards allow for rest periods, machine breakdowns, and other "normal" contingencies in the production process. In the remainder of this chapter we will assume that standard costs are set at a normal level.

Accounting Across the Organization

How Do Standards Help a Business?

Recently a number of organizations, including corporations, consultants, and governmental agencies, agreed to share information regarding performance standards in an effort to create a standard set of measures for thousands of business processes. The group, referred to as the Open Standards Benchmarking Collaborative, includes IBM, Procter and Gamble, the U.S. Navy, and the World Bank. Companies that are interested in participating can go to the group's website and enter their information.

Source: William M. Bulkeley, "Business, Agencies to Standardize Their Benchmarks," *Wall Street Journal* (May 19, 2004).

How will the creation of such standards help a business or organization? (See page 1184.)

A CASE STUDY

To establish the standard cost of producing a product, it is necessary to establish standards for each manufacturing cost element—direct materials, direct labor, and manufacturing overhead. The standard for each element is derived from the standard price to be paid and the standard quantity to be used.

To illustrate, we look at a case study of how standard costs are set. In this extended example, we assume that Xonic, Inc. wishes to use standard costs to measure performance in filling an order for 1,000 gallons of Weed-O, a liquid weed killer.

Direct Materials

The **direct materials price standard** is the cost per unit of direct materials that should be incurred. This standard should be based on the purchasing department's best estimate of the **cost of raw materials**. This cost is frequently based on current purchase prices. The price standard also includes an amount for related costs such as receiving, storing, and handling. The materials price standard per pound of material for Xonic's weed killer is:

Illustration 22-2 Setting direct materials price standard

Item	Price
Purchase price, net of discounts	$ 2.70
Freight	0.20
Receiving and handling	0.10
Standard direct materials price per pound	**$3.00**

The **direct materials quantity standard** is the quantity of direct materials that should be used per unit of finished goods. This standard is expressed as a physical measure, such as pounds, barrels, or board feet. In setting the standard, management considers both the quality and quantity of materials required to manufacture the product. The standard includes allowances for unavoidable waste and normal spoilage. The standard quantity per unit for Xonic, Inc. is as follows.

Illustration 22-3 Setting direct materials quantity standard

Item	Quantity (Pounds)
Required materials	3.5
Allowance for waste	0.4
Allowance for spoilage	0.1
Standard direct materials quantity per unit	**4.0**

The standard direct materials cost per unit is the standard direct materials price times the standard direct materials quantity. For Xonic, Inc., the standard direct materials cost per gallon of Weed-O is $12.00 ($3.00 × 4.0 pounds).

Direct Labor

The **direct labor price standard** is the rate per hour that should be incurred for direct labor. This standard is based on current wage rates, adjusted for anticipated changes such as cost of living adjustments (COLAs). The price standard also generally includes employer payroll taxes and fringe benefits, such as paid holidays and vacations. For Xonic, Inc., the direct labor price standard is as follows.

Alternative Terminology The direct labor price standard is also called the *direct labor rate standard*.

Illustration 22-4 Setting direct labor price standard

Item	Price
Hourly wage rate	$ 7.50
COLA	0.25
Payroll taxes	0.75
Fringe benefits	1.50
Standard direct labor rate per hour	**$10.00**

Alternative Terminology
The direct labor quantity standard is also called the *direct labor efficiency standard*.

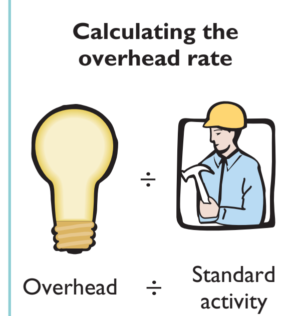
The **direct labor quantity standard** is the time that should be required to make one unit of the product. This standard is especially critical in labor-intensive companies. Allowances should be made in this standard for rest periods, cleanup, machine setup, and machine downtime. For Xonic, Inc., the direct labor quantity standard is as follows.

Illustration 22-5
Setting direct labor quantity standard

Item	Quantity (Hours)
Actual production time	1.5
Rest periods and cleanup	0.2
Setup and downtime	0.3
Standard direct labor hours per unit	**2.0**

The standard direct labor cost per unit is the standard direct labor rate times the standard direct labor hours. For Xonic, Inc., the standard direct labor cost per gallon of Weed-O is $20 ($10.00 × 2.0 hours).

Manufacturing Overhead



For manufacturing overhead, companies use a **standard predetermined overhead rate** in setting the standard. This overhead rate is determined by dividing budgeted overhead costs by an expected standard activity index. For example, the index may be standard direct labor hours or standard machine hours.

As discussed in Chapter 17, many companies employ activity-based costing (ABC) to allocate overhead costs. Because ABC uses multiple activity indices to allocate overhead costs, it results in a better correlation between activities and costs incurred than do other methods. As a result, the use of ABC can significantly improve the usefulness of standard costing for management decision making.

Xonic, Inc. uses standard direct labor hours as the activity index. The company expects to produce 13,200 gallons of Weed-O during the year at normal capacity. **Normal capacity** is the average activity output that a company should experience over the long run. Since it takes two direct labor hours for each gallon, total standard direct labor hours are 26,400 (13,200 gallons × 2 hours).

At normal capacity of 26,400 direct labor hours, overhead costs are expected to be $132,000. Of that amount, $79,200 are variable and $52,800 are fixed. Illustration 22-6 shows computation of the standard predetermined overhead rates for Xonic, Inc.

Illustration 22-6
Computing predetermined overhead rates

Budgeted Overhead Costs	Amount	÷	Standard Direct Labor Hours	=	Overhead Rate per Direct Labor Hour
Variable	$ 79,200		26,400		$ 3.00
Fixed	52,800		26,400		2.00
Total	$132,000		26,400		**$5.00**

The standard manufacturing overhead rate per unit is the predetermined overhead rate times the activity index quantity standard. For Xonic, Inc.,

which uses direct labor hours as its activity index, the standard manufacturing overhead rate per gallon of Weed-O is $10 ($5 × 2 hours).

Total Standard Cost per Unit

After a company has established the standard quantity and price per unit of product, it can determine the total standard cost. The total standard cost per unit is the sum of the standard costs of direct materials, direct labor, and manufacturing overhead. For Xonic, Inc., the total standard cost per gallon of Weed-O is $42, as shown on the following standard cost card.

Illustration 22-7
Standard cost per gallon of Weed-O

Product: Weed-O **Unit Measure: Gallon**

Manufacturing Cost Elements	Standard Quantity	×	Standard Price	=	Standard Cost
Direct materials	4 pounds		$ 3.00		$12.00
Direct labor	2 hours		$10.00		20.00
Manufacturing overhead	2 hours		$ 5.00		10.00
					$42.00

The company prepares a standard cost card for each product. This card provides the basis for determining variances from standards.

Management Insight

How Can We Make Susan's Chili Profitable?

Setting standards can be difficult. Consider Susan's Chili Factory, which manufactures and sells chili. The cost of manufacturing Susan's chili consists of the costs of raw materials, labor to convert the basic ingredients to chili, and overhead. We will use materials cost as an example. Managers need to develop three standards: (1) What should be the formula (mix) of ingredients for one gallon of chili? (2) What should be the normal wastage (or shrinkage) for the individual ingredients? (3) What should be the standard cost for the individual ingredients that go into the chili?

Susan's Chili Factory also illustrates how managers can use standard costs in controlling costs. Suppose that summer droughts have reduced crop yields. As a result, prices have doubled for beans, onions, and peppers. In this case, actual costs will be significantly higher than standard costs, which will cause management to evaluate the situation. Similarly, assume that poor maintenance caused the onion-dicing blades to become dull. As a result, usage of onions to make a gallon of chili tripled. Because this deviation is quickly highlighted through standard costs, managers can take corrective action promptly.

Source: Adapted from David R. Beran, "Cost Reduction Through Control Reporting," *Management Accounting* (April 1982), pp. 29–33.

How might management use this raw material cost information? (See page 1184.)

before you go on...

STANDARD COSTS

Do it! Ridette Inc. accumulated the following standard cost data concerning product Cty31.

Materials per unit: 1.5 pounds at $4 per pound
Labor per unit: 0.25 hours at $13 per hour.
Manufacturing overhead: Predetermined rate is 120% of direct labor cost.

Compute the standard cost of one unit of product Cty31.

Action Plan

- Know that standard costs are predetermined unit costs.
- To establish the standard cost of producing a product, establish the standard for each manufacturing cost element–direct materials, direct labor, and manufacturing overhead.
- Compute the standard cost for each element from the standard price to be paid and the standard quantity to be used.

Solution

Manufacturing Cost Element	Standard Quantity	×	Standard Price	=	Standard Cost
Direct materials	1.5 pounds		$4.00		$6.00
Direct labor	0.25 hours		$13.00		3.25
Manufacturing overhead	120% of direct labor cost		$3.25		3.90
Total					$13.15

Related exercise material: **BE22-2, BE22-3, Do it! 22-1, E22-1, E22-2,** and **E22-3.**

Analyzing and Reporting Variances from Standards

One of the major management uses of standard costs is to identify variances from standards. **Variances** are the differences between total actual costs and total standard costs.

Alternative Terminology
In business, the term *variance* is also used to indicate differences between total budgeted and total actual costs.

To illustrate, we will assume that in producing 1,000 gallons of Weed-O in the month of June, Xonic, Inc. incurred the following costs.

Illustration 22-8
Actual production costs

Direct materials	$13,020
Direct labor	20,580
Variable overhead	6,500
Fixed overhead	4,400
Total actual costs	$44,500

Companies determine total standard costs by multiplying the units produced by the standard cost per unit. The total standard cost of Weed-O is $42,000 (1,000 gallons × $42). Thus, the total variance is $2,500, as shown below.

Illustration 22-9
Computation of total variance

Actual costs	$44,500
Less: Standard costs	42,000
Total variance	**$ 2,500**

Note that the variance is expressed in total dollars, and not on a per unit basis.

When actual costs exceed standard costs, the variance is **unfavorable**. The $2,500 variance in June for Weed-O is unfavorable. An unfavorable variance has a negative connotation. It suggests that the company paid too much for one or more of the manufacturing cost elements or that it used the elements inefficiently.

If actual costs are less than standard costs, the variance is **favorable**. A favorable variance has a positive connotation. It suggests efficiencies in incurring manufacturing costs and in using direct materials, direct labor, and manufacturing overhead.

However, be careful: A favorable variance could be obtained by using inferior materials. In printing wedding invitations, for example, a favorable variance could result from using an inferior grade of paper. Or, a favorable variance might be achieved in installing tires on an automobile assembly line by tightening only half of the lug bolts. A variance is not favorable if the company has sacrificed quality control standards.

DIRECT MATERIALS VARIANCES

study objective 4

State the formulas for determining direct materials and direct labor variances.

In completing the order for 1,000 gallons of Weed-O, Xonic used 4,200 pounds of direct materials. These were purchased at a cost of $3.10 per unit. Illustration 22-10 shows the formula for the **total materials variance** and the calculation for Xonic, Inc.

Illustration 22-10
Formula for total materials variance

Actual Quantity × Actual Price (AQ) × (AP)	−	Standard Quantity × Standard Price (SQ) × (SP)	=	Total Materials Variance (TMV)
(4,200 × $3.10)	−	(4,000 × $3.00)	=	$1,020 U

Thus, for Xonic, the total materials variance is $1,020 ($13,020 − $12,000) unfavorable.

Next, the company analyzes the total variance to determine the amount attributable to price (costs) and to quantity (use). The **materials price variance** for Xonic, Inc. is computed from the following formula.[1]

Illustration 22-11
Formula for materials price variance

Actual Quantity × Actual Price (AQ) × (AP)	−	Actual Quantity × Standard Price (AQ) × (SP)	=	Materials Price Variance (MPV)
(4,200 × $3.10)	−	(4,200 × $3.00)	=	$420 U

For Xonic, the materials price variance is $420 ($13,020 − $12,600) unfavorable.

Helpful Hint The alternative formula is: AQ × AP − SP = MPV

The price variance can also be computed by multiplying the actual quantity purchased by the difference between the actual and standard price per unit. The computation in this case is 4,200 × ($3.10 − $3.00) = $420 U.

Illustration 22-12 shows the formula for the **materials quantity variance** and the calculation for Xonic, Inc.

Illustration 22-12
Formula for materials quantity variance

Actual Quantity × Standard Price (AQ) × (SP)	−	Standard Quantity × Standard Price (SQ) × (SP)	=	Materials Quantity Variance (MQV)
(4,200 × $3.00)	−	(4,000 × $3.00)	=	$600 U

[1]We will assume that all materials purchased during the period are used in production and that no units remain in inventory at the end of the period.

Thus, for Xonic, Inc., the materials quantity variance is $600 ($12,600 − $12,000) unfavorable.

Helpful Hint The alternative formula is:
SP × AQ − SQ = MQV

The materials quantity variance can also be computed by applying the standard price to the difference between actual and standard quantities used. The computation in this example is $3.00 × (4,200 − 4,000) = $600 U.

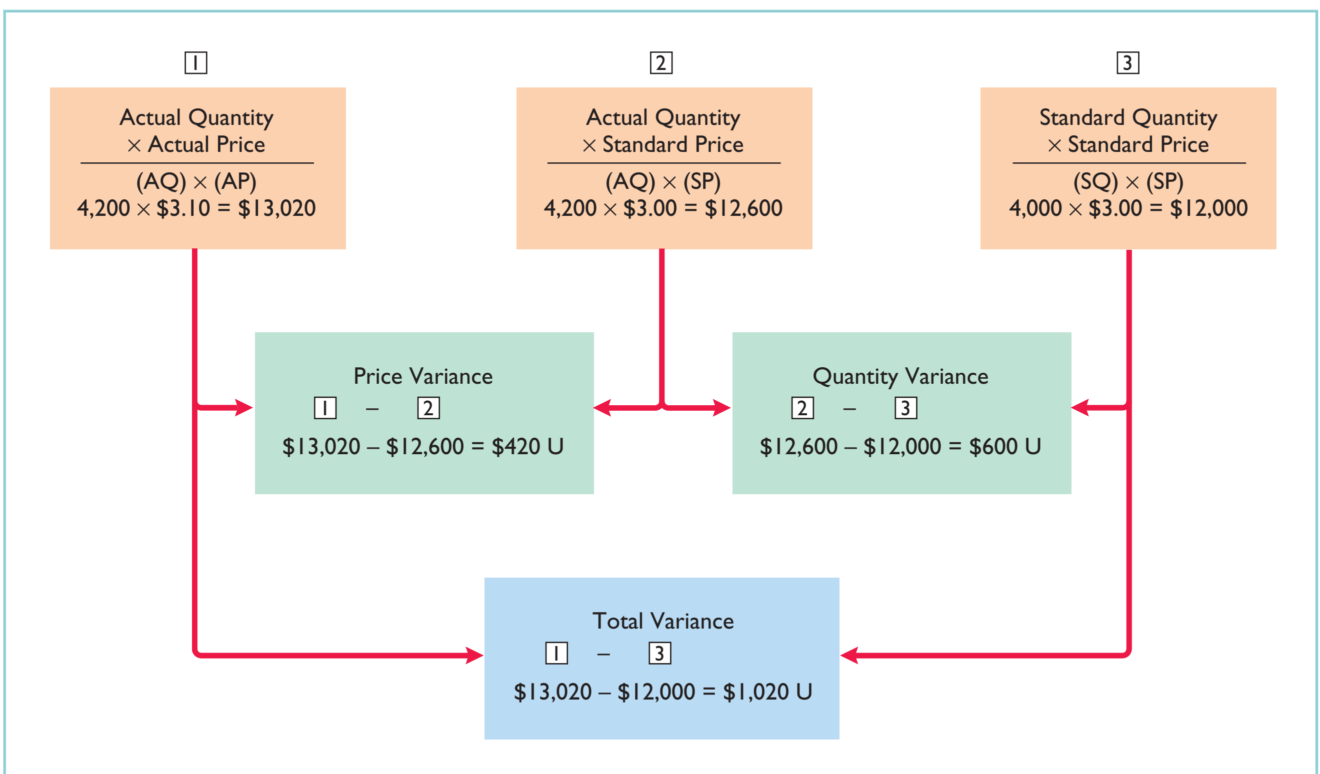
The total materials variance of $1,020 U, therefore, consists of the following.

Illustration 22-13
Summary of materials variances

Materials price variance	$ 420 U
Materials quantity variance	600 U
Total materials variance	**$1,020 U**

Companies sometimes use a matrix to analyze a variance. **When the matrix is used, a company computes the amounts using the formulas for each cost element first and then computes the variances.** Illustration 22-14 shows the completed matrix for the direct materials variance for Xonic, Inc. The matrix provides a convenient structure for determining each variance.

Illustration 22-14
Matrix for direct materials variances

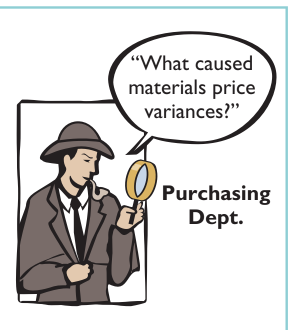


Causes of Materials Variances

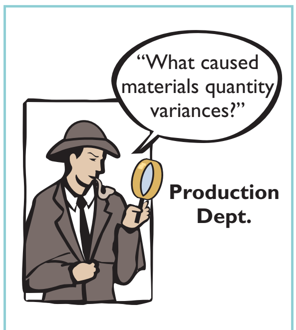
What are the causes of a variance? The causes may relate to both internal and external factors. The investigation of a **materials price variance usually begins in the purchasing department**. Many factors affect the price paid for raw materials. These include availability of quantity and cash discounts, the quality

of the materials requested, and the delivery method used. To the extent that these factors are considered in setting the price standard, the purchasing department is responsible for any variances.

However, a variance may be beyond the control of the purchasing department. Sometimes, for example, prices may rise faster than expected. Moreover, actions by groups over which the company has no control, such as the OPEC nations' oil price increases, may cause an unfavorable variance. For example, during a recent year Kraft Foods and Kellogg Company both experienced unfavorable material price variances when the cost of dairy and wheat products jumped unexpectedly. There are also times when a production department may be responsible for the price variance. This may occur when a rush order forces the company to pay a higher price for the materials.



The starting point for determining the cause(s) of a significant **materials quantity variance is in the production department**. If the variances are due to inexperienced workers, faulty machinery, or carelessness, the production department is responsible. However, if the materials obtained by the purchasing department were of inferior quality, then the purchasing department is responsible.



DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
Has management accomplished its price and quantity objectives regarding materials?	Actual cost and standard cost of materials	Materials price and materials quantity variances	Positive (favorable) variances suggest that price and quantity objectives have been met.

before you go on...

Do it!

The standard cost of Product XX includes two units of direct materials at $8.00 per unit. During July, the company buys 22,000 units of direct materials at $7.50 and uses those materials to produce 10,000 units. Compute the total, price, and quantity variances for materials.

Solution

Standard quantity = 10,000 × 2.
Substituting amounts into the formulas, the variances are:

Total materials variance = (22,000 × $7.50) − (20,000 × $8.00) = $5,000 unfavorable
Materials price variance = (22,000 × $7.50) − (22,000 × $8.00) = $11,000 favorable
Materials quantity variance = (22,000 × $8.00) − (20,000 × $8.00) = $16,000 unfavorable

Related exercise material: **BE22-4, Do it! 22-2,** and **E22-5.**

DIRECT MATERIALS VARIANCES

Action Plan

Use the formulas for computing each of the materials variances:

- Total materials variance = (AQ × AP) − (SQ × SP)
- Materials price variance = (AQ × AP) − (AQ × SP)
- Materials quantity variance = (AQ × SP) − (SQ × SP)

DIRECT LABOR VARIANCES

The process of determining direct labor variances is the same as for determining the direct materials variances. In completing the Weed-O order, Xonic, Inc. incurred 2,100 direct labor hours at an average hourly rate of $9.80. The standard hours allowed for the units produced were 2,000 hours (1,000 gallons × 2 hours).

The standard labor rate was $10 per hour. Illustration 22-15 shows the formula for the **total labor variance** and its calculation for Xonic, Inc.

Illustration 22-15
Formula for total labor variance

Actual Hours × Actual Rate (AH) × (AR)	–	Standard Hours × Standard Rate (SH) × (SR)	=	Total Labor Variance (TLV)
(2,100 × $9.80)	–	(2,000 × $10.00)	=	$580 U

The total labor variance is $580 ($20,580 − $20,000) unfavorable.

The formula for the **labor price variance** and the calculation for Xonic, Inc. are as follows.

Illustration 22-16
Formula for labor price variance

Actual Hours × Actual Rate (AH) × (AR)	–	Actual Hours × Standard Rate (AH) × (SR)	=	Labor Price Variance (LPV)
(2,100 × $9.80)	–	(2,100 × $10.00)	=	$420 F

For Xonic, Inc., the labor price variance is $420 ($20,580 − $21,000) favorable.

Helpful Hint The alternative formula is:
AH × AR − SR = LPV

The labor price variance can also be computed by multiplying actual hours worked by the difference between the actual pay rate and the standard pay rate. The computation in this example is 2,100 × ($10.00 − $9.80) = $420 F.

Illustration 22-17 shows the formula for the **labor quantity variance** and its calculation for Xonic, Inc.

Illustration 22-17
Formula for labor quantity variance

Actual Hours × Standard Rate (AH) × (SR)	–	Standard Hours × Standard Rate (SH) × (SR)	=	Labor Quantity Variance (LQV)
(2,100 × $10.00)	–	(2,000 × $10.00)	=	$1,000 U

Thus, for Xonic, the labor quantity variance is $1,000 ($21,000 − $20,000) unfavorable.

Helpful Hint The alternative formula is:
SR × AH − SH = LQV

The same result can be obtained by multiplying the standard rate by the difference between actual hours worked and standard hours allowed. In this case the computation is $10.00 × (2,100 − 2,000) = $1,000 U.

The total direct labor variance of $580 U, therefore, consists of:

Illustration 22-18
Summary of labor variances

Labor price variance	$ 420 F
Labor quantity variance	1,000 U
Total direct labor variance	**$ 580 U**

These results can also be obtained from the matrix in Illustration 22-19.

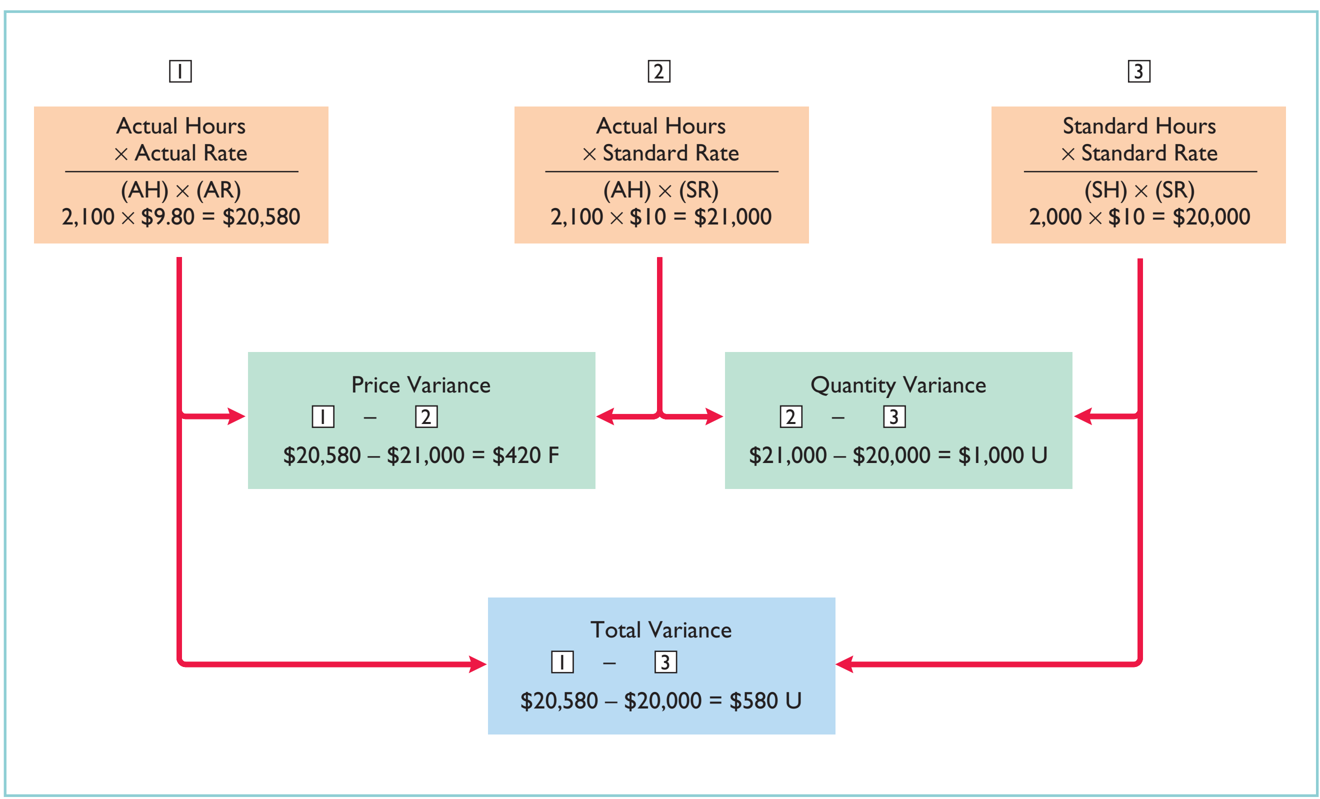


Illustration 22-19 Matrix for direct labor variances

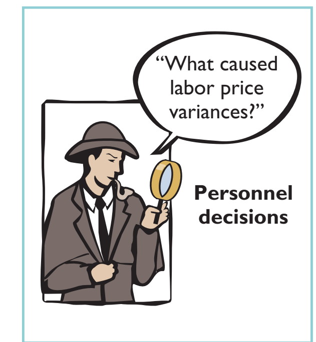
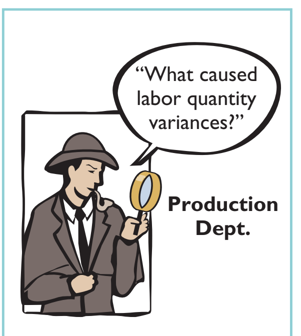
Causes of Labor Variances

Labor price variances usually result from two factors: (1) paying workers **different wages than expected**, and (2) **misallocation of workers**. In companies where pay rates are determined by union contracts, labor price variances should be infrequent. When workers are not unionized, there is a much higher likelihood of such variances. The responsibility for these variances rests with the manager who authorized the wage change.



Misallocation of the workforce refers to using skilled workers in place of unskilled workers and vice versa. The use of an inexperienced worker instead of an experienced one will result in a favorable price variance because of the lower pay rate of the unskilled worker. An unfavorable price variance would result if a skilled worker were substituted for an inexperienced one. The production department generally is responsible for labor price variances resulting from misallocation of the workforce.

Labor quantity variances relate to the **efficiency of workers**. The cause of a quantity variance generally can be traced to the production department. The causes of an unfavorable variance may be poor training, worker fatigue, faulty machinery, or carelessness. These causes are the responsibility of the **production department**. However, if the excess time is due to inferior materials, the responsibility falls outside the production department.



DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
Has management accomplished its price and quantity objectives regarding labor?	Actual cost and standard cost of labor	Labor price and labor quantity variances	Positive (favorable) variances suggest that price and quantity objectives have been met.

MANUFACTURING OVERHEAD VARIANCES

study objective 5

State the formula for determining the total manufacturing overhead variance.

The **total overhead variance** is the difference between the actual overhead costs and overhead costs applied based on standard hours allowed for the amount of goods produced. As indicated in Illustration 22-8, Xonic incurred overhead costs of $10,900 to produce 1,000 gallons of Weed-O in June. The computation of the actual overhead is comprised of a variable and a fixed component. Illustration 22-20 shows this computation.

Illustration 22-20
Actual overhead costs

Variable overhead	$ 6,500
Fixed overhead	4,400
Total actual overhead	**$10,900**

To find the total overhead variance in a standard costing system, we determine the overhead costs applied based on standard hours allowed. **Standard hours allowed** are the hours that *should* have been worked for the units produced. Overhead costs for Weed-O are applied based on direct labor hours. Because it takes two hours of direct labor to produce one gallon of Weed-O, for the 1,000-gallon Weed-O order, the standard hours allowed are 2,000 hours (1,000 gallons × 2 hours). We then apply the predetermined overhead rate to the 2,000 standard hours allowed.

The predetermined rate for Weed-O is $5, comprised of a variable overhead rate of $3 and a fixed rate of $2. Recall from Illustration 22-6 that the amount of budgeted overhead costs at normal capacity of $132,000 was divided by normal capacity of 26,400 direct labor hours, to arrive at a predetermined overhead rate of $5 ($132,000 ÷ 26,400). The predetermined rate of $5 is then multiplied by the 2,000 standard hours allowed, to determine the overhead costs applied.

Illustration 22-21 shows the formula for the total overhead variance and the calculation for Xonic, Inc. for the month of June.

Illustration 22-21
Formula for total overhead variance

Actual Overhead	−	Overhead Applied*	=	Total Overhead Variance
$10,900 ($6,500 + $4,400)	−	$10,000 ($5 × 2,000 hours)	=	$900 U

*Based on standard hours allowed.

Thus, for Xonic, Inc. the total overhead variance is $900 unfavorable.

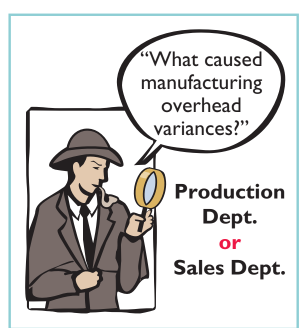
The overhead variance is generally analyzed through a price and a quantity variance. These computations are discussed in more detail in advanced courses. The name usually given to the price variance is the **overhead controllable variance**; the quantity variance is referred to as the **overhead volume variance**. Appendix 22B discusses how the total overhead variance can be broken down into these two variances.

Causes of Manufacturing Overhead Variances

One reason for an overhead variance relates to over- or underspending on overhead items. For example, overhead may include indirect labor for which a company paid wages higher than the standard labor price allowed. Or the price of

electricity to run the company's machines increased, and the company did not anticipate this additional cost. Companies should investigate any spending variances, to determine whether they will continue in the future. Generally, the responsibility for these variances rests with the production department.

The overhead variance can also result from the inefficient use of overhead. For example, because of poor maintenance, a number of the manufacturing machines are experiencing breakdowns on a consistent basis, leading to reduced production. Or the flow of materials through the production process is impeded because of a lack of skilled labor to perform the necessary production tasks, due to a lack of planning. In both of these cases, the production department is responsible for the cause of these variances. On the other hand, overhead can also be underutilized because of a lack of sales orders. When the cause is a lack of sales orders, the responsibility rests outside the production department. For example, at one point Chrysler experienced a very significant unfavorable overhead variance because plant capacity was maintained at excessively high levels, due to overly optimistic sales forecasts.



DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
Has management accomplished its objectives regarding manufacturing overhead?	Actual cost and standard cost of manufacturing overhead	Total manufacturing overhead variance	Positive (favorable) variances suggest that manufacturing overhead objectives have been met.

before you go on...

Do it!

The standard cost of Product YY includes 3 hours of direct labor at $12.00 per hour. The predetermined overhead rate is $20.00 per direct labor hour. During July, the company incurred 3,500 hours of direct labor at an average rate of $12.40 per hour and $71,300 of manufacturing overhead costs. It produced 1,200 units.

(a) Compute the total, price, and quantity variances for labor. (b) Compute the total overhead variance.

LABOR AND MANUFACTURING OVERHEAD VARIANCES

Action Plan

- Use the formulas for computing each of the variances:
  Total labor variance = (AH × AR) − (SH × SR)
  Labor price variance = (AH × AR) − (AH × SR)
  Labor quantity variance = (AH × SR) − (SH × SR)
  Total overhead variance = Actual overhead − Overhead applied*

*Based on standard hours allowed.

Solution

Substituting amounts into the formulas, the variances are:

Total labor variance = (3,500 × $12.40) − (3,600 × $12.00) = $200 unfavorable

Labor price variance = (3,500 × $12.40) − (3,500 × $12.00) = $1,400 unfavorable

Labor quantity variance = (3,500 × $12.00) − (3,600 × $12.00) = $1,200 favorable

Total overhead variance = $71,300 − $72,000* = $700 favorable

*3,600 hours × $20.00

Related exercise material: **BE22-5, BE22-6, Do it! 22-3, E22-4, E22-6, E22-7, E22-8,** and **E22-11.**

REPORTING VARIANCES

study objective 6
Discuss the reporting of variances.

All variances should be reported to appropriate levels of management as soon as possible. The sooner managers are informed, the sooner they can evaluate problems and take corrective action.

The form, content, and frequency of variance reports vary considerably among companies. One approach is to prepare a weekly report for each department that has primary responsibility for cost control. Under this approach, materials price variances are reported to the purchasing department, and all other variances are reported to the production department that did the work. The following report for Xonic, Inc., with the materials for the Weed-O order listed first, illustrates this approach.

Illustration 22-22
Materials price variance report

XONIC, INC.
Variance Report—Purchasing Department
For Week Ended June 8, 2012

Type of Materials	Quantity Purchased	Actual Price	Standard Price	Price Variance	Explanation
X100	4,200 lbs.	$3.10	$3.00	$420 U	Rush order
X142	1,200 units	2.75	2.80	60 F	Quantity discount
A85	600 doz.	5.20	5.10	60 U	Regular supplier on strike
Total price variance				**$420 U**	

The explanation column is completed after consultation with the purchasing department manager.

Variance reports facilitate the principle of "management by exception" explained in Chapter 21. For example, the vice president of purchasing can use the report shown above to evaluate the effectiveness of the purchasing department manager. Or, the vice president of production can use production department variance reports to determine how well each production manager is controlling costs. In using variance reports, top management normally looks for **significant variances**. These may be judged on the basis of some quantitative measure, such as more than 10% of the standard or more than $1,000.

STATEMENT PRESENTATION OF VARIANCES

study objective 7
Prepare an income statement for management under a standard costing system.

In income statements **prepared for management** under a standard cost accounting system, **cost of goods sold is stated at standard cost and the variances are disclosed separately**. Unfavorable variances increase cost of goods sold, while favorable variances decrease cost of goods sold (and are thus shown in parentheses). Illustration 22-23 shows this format. Based entirely on the production and sale of Weed-O, it assumes selling and administrative costs of $3,000. Observe that each variance is shown, as well as the total net variance. In this example, variations from standard costs reduced net income by $2,500.

Standard costs may be used in financial statements prepared for stockholders and other external users. The costing of inventories at standard costs is in accordance with generally accepted accounting principles when there are no significant differences between actual costs and standard costs. Hewlett-Packard and Jostens, Inc., for example, report their inventories at standard costs. However, if there are significant differences between actual and standard costs, the financial statements must report inventories and cost of goods sold at actual costs.

It is also possible to show the variances in an income statement prepared in the variable costing (CVP) format. To do so, it is necessary to analyze the overhead

Illustration 22-23
Variances in income statement for management

XONIC, INC. Income Statement For the Month Ended June 30, 2012		
Sales revenue		$60,000
Cost of goods sold (at standard)		42,000
Gross profit (at standard)		18,000
Variances		
Materials price	**$ 420 U**	
Materials quantity	**600 U**	
Labor price	**420 F**	
Labor quantity	**1,000 U**	
Overhead	**900 U**	
Total variance unfavorable		**2,500**
Gross profit (actual)		15,500
Selling and administrative expenses		3,000
Net income		$12,500

variances into variable and fixed components. This type of analysis is explained in cost accounting textbooks.

Balanced Scorecard

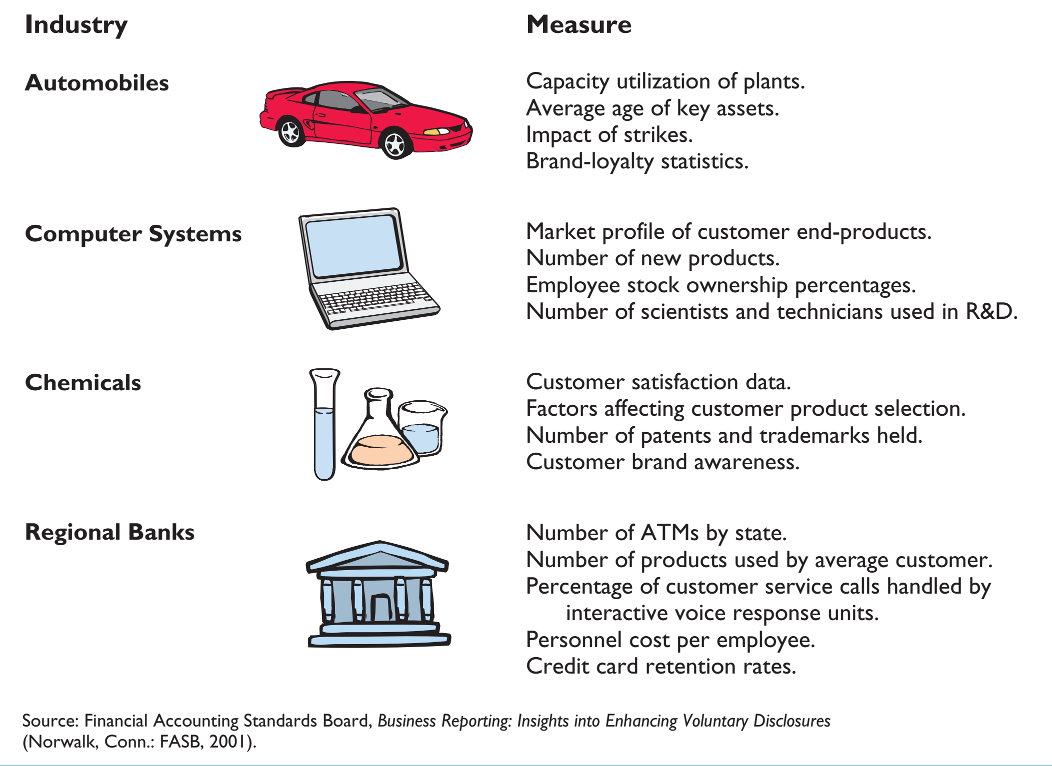
study objective 8
Describe the balanced scorecard approach to performance evaluation.

Financial measures (measurement of dollars), such as variance analysis and return on investment (ROI), are useful tools for evaluating performance. However, many companies now supplement these financial measures with nonfinancial measures to better assess performance and anticipate future results. For example, airlines, like Delta, American, and United, use capacity utilization as an important measure to understand and predict future performance. Newspaper publishers, such as the *New York Times* and the *Chicago Tribune*, use circulation figures as another measure by which to assess performance. Penske Automotive Group, the owner of 300 dealerships, rewards executives for meeting employee retention targets. Illustration 22-24 (page 1154) lists some key nonfinancial measures used in various industries.

Most companies recognize that both financial and nonfinancial measures can provide useful insights into what is happening in the company. As a result, many companies now use a broad-based measurement approach, called the **balanced scorecard**, to evaluate performance. The **balanced scorecard** incorporates financial and nonfinancial measures in an integrated system that links performance measurement and a company's strategic goals. Nearly 50% of the largest companies in the United States, including Unilever, Chase, and Wal-Mart, are using the balanced scorecard approach.

The balanced scorecard evaluates company performance from a series of "perspectives." The four most commonly employed perspectives are as follows.

1. The **financial perspective** is the most traditional view of the company. It employs financial measures of performance used by most firms.
2. The **customer perspective** evaluates how well the company is performing from the viewpoint of those people who buy and use its products or services. This view measures how well the company compares to competitors in terms of price, quality, product innovation, customer service, and other dimensions.



Industry	Measure
Automobiles	Capacity utilization of plants. Average age of key assets. Impact of strikes. Brand-loyalty statistics.
Computer Systems	Market profile of customer end-products. Number of new products. Employee stock ownership percentages. Number of scientists and technicians used in R&D.
Chemicals	Customer satisfaction data. Factors affecting customer product selection. Number of patents and trademarks held. Customer brand awareness.
Regional Banks	Number of ATMs by state. Number of products used by average customer. Percentage of customer service calls handled by interactive voice response units. Personnel cost per employee. Credit card retention rates.

Source: Financial Accounting Standards Board, *Business Reporting: Insights into Enhancing Voluntary Disclosures* (Norwalk, Conn.: FASB, 2001).

Illustration 22-24
Nonfinancial measures used in various industries

3. The **internal process perspective** evaluates the internal operating processes critical to success. All critical aspects of the value chain—including product development, production, delivery, and after-sale service—are evaluated to ensure that the company is operating effectively and efficiently.
4. The **learning and growth perspective** evaluates how well the company develops and retains its employees. This would include evaluation of such things as employee skills, employee satisfaction, training programs, and information dissemination.

Within each perspective, the balanced scorecard identifies objectives that will contribute to attainment of strategic goals. Illustration 22-25 shows examples of objectives within each perspective.

The objectives are linked across perspectives in order to tie performance measurement to company goals. The financial objectives are normally set first, and then objectives are set in the other perspectives in order to accomplish the financial objectives.

For example, within the financial perspective, a common goal is to increase profit per dollars invested as measured by ROI. In order to increase ROI, a customer perspective objective might be to increase customer satisfaction as measured by the percentage of customers who would recommend the product to a friend. In order to increase customer satisfaction, an internal business process perspective objective might be to increase product quality as measured by the percentage of defect-free units. Finally, in order to increase the percentage of defect-free units, the learning and growth perspective objective might be to reduce factory employee turnover as measured by the percentage of employees leaving in under one year.

Illustration 22-25
Examples of objectives within the four perspectives of balanced scorecard

Financial perspective
- Return on assets
- Net income
- Credit rating
- Share price
- Profit per employee

Customer perspective
- Percentage of customers who would recommend product
- Customer retention
- Response time per customer request
- Brand recognition
- Customer service expense per customer

Internal process perspective
- Percentage of defect-free products
- Stockouts
- Labor utilization rates
- Waste reduction
- Planning accuracy

Learning and growth perspective
- Percentage of employees leaving in less than one year
- Number of cross-trained employees
- Ethics violations
- Training hours
- Reportable accidents

Illustration 22-26 illustrates this linkage across perspectives.

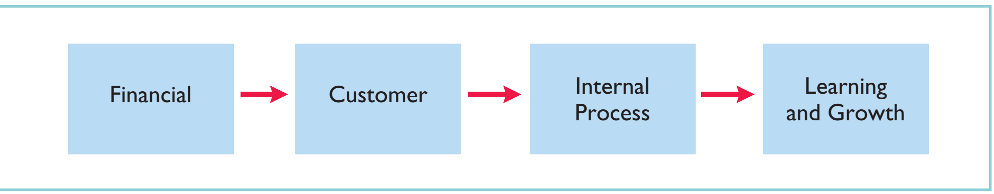


Illustration 22-26
Linked process across balanced scorecard perspectives

Through this linked process, the company can better understand how to achieve its goals and what measures to use to evaluate performance.

In summary, the balanced scorecard does the following:

1. Employs both financial and nonfinancial measures. (For example, ROI is a financial measure; employee turnover is a nonfinancial measure.)
2. Creates linkages so that high-level corporate goals can be communicated all the way down to the shop floor.
3. Provides measurable objectives for such nonfinancial measures as product quality, rather than vague statements such as “We would like to improve quality.”
4. Integrates all of the company’s goals into a single performance measurement system, so that an inappropriate amount of weight will not be placed on any single goal.

Service Company Insight

It May Be Time to Fly United Again

Many of the benefits of a balanced scorecard approach are evident in the improved operations at United Airlines. At the time it filed for bankruptcy in 2002, United had a reputation for some of the worst service in the airline business. But when Glenn Tilton took over as United's Chief Executive Officer in September 2002, he recognized that things had to change.

One thing he did was to implement an incentive program that allows all of United's 63,000 employees to earn a bonus of 2.5% or more of their wages if the company "exceeds its goals for on-time flight departures and for customer intent to fly United again." Since instituting this program the company's on-time departures are among the best, its customer complaints have been reduced considerably, and its number of customers who say that they would fly United again is at its highest level ever. While none of these things guarantees that United will survive, these improvements certainly increase its chances.

Source: Susan Carey, "Friendlier Skies: In Bankruptcy, United Airlines Forges a Path to Better Service," *Wall Street Journal* (June 15, 2004).

Which of the perspectives of a balanced scorecard were the focus of United's CEO? (See page 1184.)

before you go on...

BALANCED SCORECARD

Do it! Indicate which of the four perspectives in the balanced scorecard is most likely associated with the objectives that follow.

1. Percentage of repeat customers.
2. Number of suggestions for improvement from employees.
3. Contribution margin.
4. Market share.
5. Number of cross-trained employees.
6. Amount of setup time.

Action Plan

- The financial perspective employs traditional financial measures of performance.
- The customer perspective evaluates company performance as seen by the people who buy its products or services.
- The internal process perspective evaluates the internal operating processes critical to success.
- The learning and growth perspective evaluates how well the company develops and retains its employees.

Solution

1. Customer perspective.
2. Learning and growth perspective.
3. Financial perspective.
4. Customer perspective.
5. Learning and growth perspective.
6. Internal process perspective.

Related exercise material: **BE22-7, Do it! 22-4,** and **E22-17.**

USING THE DECISION TOOLKIT

Assume that during the past month, Sanford produced 10,000 cartons of Liquid ACCENT® highlighters. Liquid ACCENT® offers a translucent barrel and cap with a visible ink supply for see-through color. The special fluorescent ink is fade- and water-resistant. Each carton contains 100 boxes of markers, and each box contains five markers. The markers come in boxes of one of five fluorescent colors—orange, blue, yellow, green, and pink—and in a five-color set.

Assume the following additional facts: The standard cost for one carton of 500 markers is as follows.

	Standard					
Manufacturing Cost Elements	**Quantity**	×	**Price**	=	**Cost**
Direct materials					
Tips (boxes of 500)	500	×	$ 0.03	=	$ 15.00
Translucent barrels and caps (boxes of 500)	500	×	$ 0.09	=	45.00
Fluorescent ink (100 oz. containers)	100 oz.	×	$ 0.32	=	32.00
Total direct materials					92.00
Direct labor	0.25 hours	×	$ 9.00	=	2.25
Overhead	0.25 hours	×	$48.00	=	12.00
					$106.25

During the month, the following transactions occurred in manufacturing the 10,000 cartons of highlighters.

1. Purchased 10,000 boxes of tips for $148,000 ($14.80 per 500 tips); purchased 10,200 boxes of translucent barrels and caps for $453,900 ($44.50 per 500 barrels and caps); and purchased 9,900 containers of fluorescent ink for $328,185 ($33.15 per 100 ounces).
2. All materials purchased during the period were used to make markers during the period.
3. 2,300 direct labor hours were worked at a total labor cost of $20,240 (an average hourly rate of $8.80).
4. Variable manufacturing overhead incurred was $34,600, and fixed overhead incurred was $84,000.

The manufacturing overhead rate of $48.00 is based on a normal capacity of 2,600 direct labor hours. The total budget at this capacity is $83,980 fixed and $40,820 variable.

Instructions

Determine whether Sanford met its price and quantity objectives relative to materials, labor, and overhead.

Solution

To determine whether Sanford met its price and quantity objectives, compute the total variance and the variances for direct material and direct labor, and calculate the total variance for manufacturing overhead.

Total Variance		
Actual cost incurred:		
Direct materials		
Tips	$148,000	
Translucent barrels and caps	453,900	
Fluorescent ink	328,185	
Total direct materials		$ 930,085
Direct labor		20,240
Overhead ($34,600 + $84,000)		118,600
Total actual costs		1,068,925
Less: Standard cost (10,000 × $106.25)		1,062,500
Total variance		$ 6,425 U

Direct Materials Variances

Total	=	$930,085	−	$920,000 (10,000 × $92)	=	$10,085 U
Price (Tips)	=	$148,000 (10,000 × $14.80)	−	$150,000 (10,000 × $15.00)	=	$ 2,000 F
Price (Barrels and caps)	=	$453,900 (10,200 × $44.50)	−	$459,000 (10,200 × $45.00)	=	$ 5,100 F
Price (Ink)	=	$328,185 (9,900 × $33.15)	−	$316,800 (9,900 × $32.00)	=	$11,385 U
Quantity (Tips)	=	$150,000 (10,000 × $15.00)	−	$150,000 (10,000 × $15.00)	=	$ 0
Quantity (Barrels and caps)	=	$459,000 (10,200 × $45.00)	−	$450,000 (10,000 × $45.00)	=	$ 9,000 U
Quantity (Ink)	=	$316,800 (9,900 × $32.00)	−	$320,000 (10,000 × $32.00)	=	$ 3,200 F

Direct Labor Variances

Total	=	$20,240 (2,300 × $8.80)	−	$22,500 (2,500 × $9.00)	=	$ 2,260 F
Price	=	$20,240 (2,300 × $8.80)	−	$20,700 (2,300 × $9.00)	=	$ 460 F
Quantity	=	$20,700 (2,300 × $9.00)	−	$22,500 (2,500 × $9.00)	=	$ 1,800 F

Overhead Variance

Total	=	$118,600 ($84,000 + $34,600)	−	$120,000 (2,500 × $48)	=	$ 1,400 F

Sanford's total variance was an unfavorable $6,425. The unfavorable materials variance outweighed the favorable labor and overhead variances. The primary determinants were an unfavorable price variance for ink and an unfavorable quantity variance for barrels and caps.

Summary of Study Objectives

1 Distinguish between a standard and a budget. Both standards and budgets are predetermined costs. The primary difference is that a standard is a unit amount, whereas a budget is a total amount. A standard may be regarded as the budgeted cost per unit of product.

2 Identify the advantages of standard costs. Standard costs offer a number of advantages. They (a) facilitate management planning, (b) promote greater economy, (c) are useful in setting selling prices, (d) contribute to management control, (e) permit "management by exception," and (f) simplify the costing of inventories and reduce clerical costs.

3 Describe how companies set standards. The direct materials price standard should be based on the delivered cost of raw materials plus an allowance for receiving and handling. The direct materials quantity standard should establish the required quantity plus an allowance for waste and spoilage.

The direct labor price standard should be based on current wage rates and anticipated adjustments such as COLAs. It also generally includes payroll taxes and fringe benefits. Direct labor quantity standards should be based on required production time plus an allowance for rest periods, cleanup, machine setup, and machine downtime.

For manufacturing overhead, a standard predetermined overhead rate is used. It is based on an expected standard activity index such as standard direct labor hours or standard machine hours.

4 **State the formulas for determining direct materials and direct labor variances.** The formulas for the direct materials variances are:

$$\begin{pmatrix}\text{Actual quantity}\\ \times\text{ Actual price}\end{pmatrix} - \begin{pmatrix}\text{Standard quantity}\\ \times\text{ Standard price}\end{pmatrix} = \begin{matrix}\text{Total}\\ \text{materials}\\ \text{variance}\end{matrix}$$

$$\begin{pmatrix}\text{Actual quantity}\\ \times\text{ Actual price}\end{pmatrix} - \begin{pmatrix}\text{Actual quantity}\\ \times\text{ Standard price}\end{pmatrix} = \begin{matrix}\text{Materials}\\ \text{price}\\ \text{variance}\end{matrix}$$

$$\begin{pmatrix}\text{Actual quantity}\\ \times\text{ Standard price}\end{pmatrix} - \begin{pmatrix}\text{Standard quantity}\\ \times\text{ Standard price}\end{pmatrix} = \begin{matrix}\text{Materials}\\ \text{quantity}\\ \text{variance}\end{matrix}$$

The formulas for the direct labor variances are:

$$\begin{pmatrix}\text{Actual hours}\\ \times\text{ Actual rate}\end{pmatrix} - \begin{pmatrix}\text{Standard hours}\\ \times\text{ Standard rate}\end{pmatrix} = \begin{matrix}\text{Total}\\ \text{labor}\\ \text{variance}\end{matrix}$$

$$\begin{pmatrix}\text{Actual hours}\\ \times\text{ Actual rate}\end{pmatrix} - \begin{pmatrix}\text{Actual hours}\\ \times\text{ Standard rate}\end{pmatrix} = \begin{matrix}\text{Labor}\\ \text{price}\\ \text{variance}\end{matrix}$$

$$\begin{pmatrix}\text{Actual hours}\\ \times\text{ Standard rate}\end{pmatrix} - \begin{pmatrix}\text{Standard hours}\\ \times\text{ Standard rate}\end{pmatrix} = \begin{matrix}\text{Labor}\\ \text{quantity}\\ \text{variance}\end{matrix}$$

5 **State the formula for determining the total manufacturing overhead variance.** The formula for the total manufacturing overhead variance is:

$$\begin{pmatrix}\text{Actual}\\ \text{overhead}\end{pmatrix} - \begin{pmatrix}\text{Overhead}\\ \text{applied at}\\ \text{standard hours}\\ \text{allowed}\end{pmatrix} = \begin{matrix}\text{Total overhead}\\ \text{variance}\end{matrix}$$

6 **Discuss the reporting of variances.** Variances are reported to management in variance reports. The reports facilitate management by exception by highlighting significant differences.

7 **Prepare an income statement for management under a standard costing system.** Under a standard costing system, an income statement prepared for management will report cost of goods sold at standard cost and then disclose each variance separately.

8 **Describe the balanced scorecard approach to performance evaluation.** The balanced scorecard incorporates financial and nonfinancial measures in an integrated system that links performance measurement and a company's strategic goals. It employs four perspectives: financial, customer, internal processes, and learning and growth. Objectives are set within each of these perspectives that link to objectives within the other perspectives.

DECISION TOOLKIT A SUMMARY

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
Has management accomplished its price and quantity objectives regarding materials?	Actual cost and standard cost of materials	Materials price and materials quantity variances	Positive (favorable) variances suggest that price and quantity objectives have been met.
Has management accomplished its price and quantity objectives regarding labor?	Actual cost and standard cost of labor	Labor price and labor quantity variances	Positive (favorable) variances suggest that price and quantity objectives have been met.
Has management accomplished its objectives regarding manufacturing overhead?	Actual cost and standard cost of manufacturing overhead	Total manufacturing overhead variance	Positive (favorable) variances suggest that manufacturing overhead objectives have been met.

appendix 22A

Standard Cost Accounting System

study objective 9

Identify the features of a standard cost accounting system.

A **standard cost accounting system** is a double-entry system of accounting. In this system, companies use standard costs in making entries, and they formally recognize variances in the accounts. Companies may use a standard cost system with either job order or process costing.

In this appendix, we will explain and illustrate a **standard cost, job order cost accounting system**. The system is based on two important assumptions:

1. Variances from standards are recognized at the earliest opportunity.
2. The Work in Process account is maintained exclusively on the basis of standard costs.

In practice, there are many variations among standard cost systems. The system described here should prepare you for systems you see in the "real world."

JOURNAL ENTRIES

We will use the transactions of Xonic, Inc. to illustrate the journal entries. Note as you study the entries that the major difference between the entries here and those for the job order cost accounting system in Chapter 15 is the **variance accounts**.

1. Purchase raw materials on account for $13,020 when the standard cost is $12,600.

Account	Debit	Credit
Raw Materials Inventory	12,600	
Materials Price Variance	420	
Accounts Payable		13,020
(To record purchase of materials)		

Xonic debits the inventory account for actual quantities at standard cost. This enables the perpetual materials records to show actual quantities. Xonic debits the price variance, which is unfavorable, to Materials Price Variance.

2. Incur direct labor costs of $20,580 when the standard labor cost is $21,000.

Account	Debit	Credit
Factory Labor	21,000	
Labor Price Variance		420
Wages Payable		20,580
(To record direct labor costs)		

Like the raw materials inventory account, Xonic debits Factory Labor for actual hours worked at the standard hourly rate of pay. In this case, the labor variance is favorable. Thus, Xonic credits Labor Price Variance.

3. Incur actual manufacturing overhead costs of $10,900.

Account	Debit	Credit
Manufacturing Overhead	10,900	
Accounts Payable/Cash/Acc. Depreciation		10,900
(To record overhead incurred)		

The controllable overhead variance (see Appendix 22B) is not recorded at this time. It depends on standard hours applied to work in process. This amount is not known at the time overhead is incurred.

4. Issue raw materials for production at a cost of $12,600 when the standard cost is $12,000.

Account	Debit	Credit
Work in Process Inventory	12,000	
Materials Quantity Variance	600	
Raw Materials Inventory		12,600
(To record issuance of raw materials)		

Xonic debits Work in Process Inventory for standard materials quantities used at standard prices. It debits the variance account because the variance is unfavorable. The company credits Raw Materials Inventory for actual quantities at standard prices.

5. Assign factory labor to production at a cost of $21,000 when standard cost is $20,000.

Work in Process Inventory	20,000	
Labor Quantity Variance	1,000	
Factory Labor		21,000
(To assign factory labor to jobs)		

Xonic debits Work in Process Inventory for standard labor hours at standard rates. It debits the unfavorable variance to Labor Quantity Variance. The credit to Factory Labor produces a zero balance in this account.

6. Apply manufacturing overhead to production $10,000.

Work in Process Inventory	10,000	
Manufacturing Overhead		10,000
(To assign overhead to jobs)		

Xonic debits Work in Process Inventory for standard hours allowed multiplied by the standard overhead rate.

7. Transfer completed work to finished goods $42,000.

Finished Goods Inventory	42,000	
Work in Process Inventory		42,000
(To record transfer of completed work to finished goods)		

In this example, both inventory accounts are at standard cost.

8. Sell the 1,000 gallons of Weed-O for $60,000.

Accounts Receivable	60,000	
Cost of Goods Sold	42,000	
Sales		60,000
Finished Goods Inventory		42,000
(To record sale of finished goods and the cost of goods sold)		

The company debits Cost of Goods Sold at standard cost. Gross profit, in turn, is the difference between sales and the standard cost of goods sold.

9. Recognize unfavorable total overhead variance:

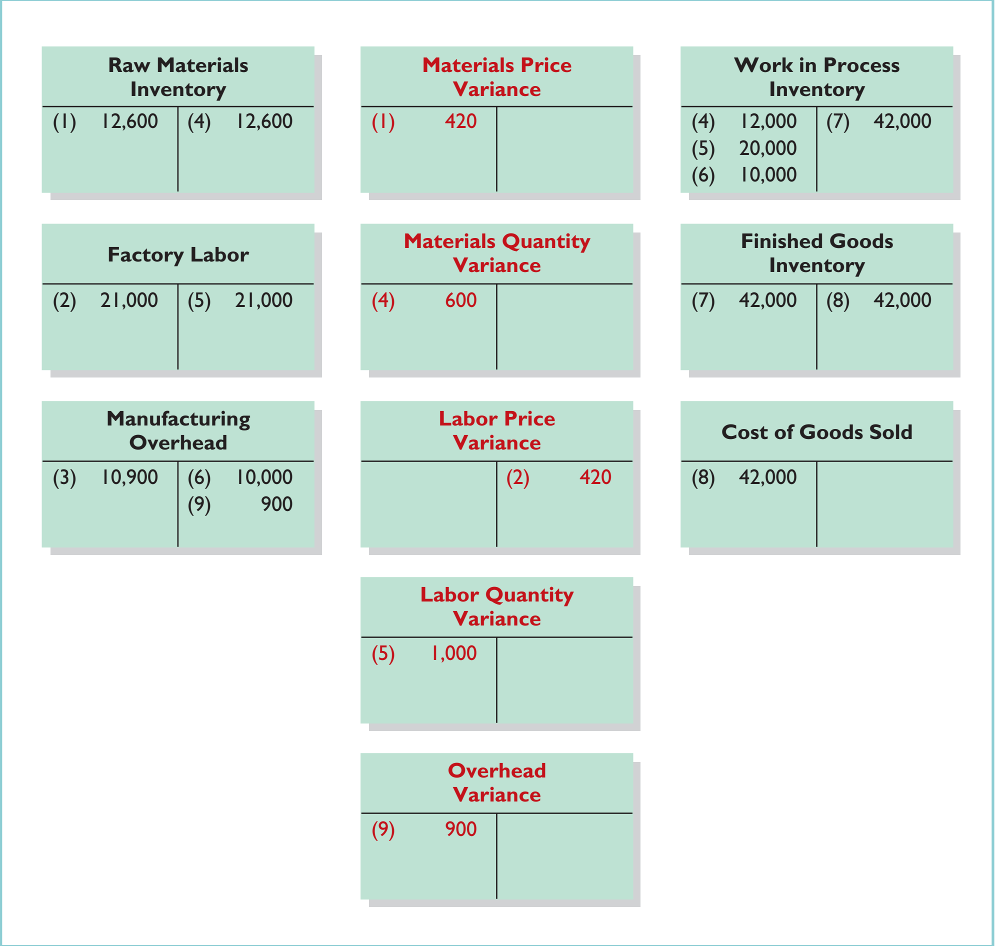
Overhead Variance	900	
Manufacturing Overhead		900
(To recognize overhead variances)		

Prior to this entry, a debit balance of $900 existed in Manufacturing Overhead. This entry therefore produces a zero balance in the Manufacturing Overhead account. The information needed for this entry is often not available until the end of the accounting period.

LEDGER ACCOUNTS

Illustration 22A-1 (page 1162) shows the cost accounts for Xonic, Inc., after posting the entries. Note that five variance accounts are included in the ledger. The remaining accounts are the same as those illustrated for a job order cost system in Chapter 15, in which only actual costs were used.

Illustration 22A-1 Cost accounts with variances



Helpful Hint All debit balances in variance accounts indicate unfavorable variances; all credit balances indicate favorable variances.

Summary of Study Objective for Appendix 22A

9 Identify the features of a standard cost accounting system. In a standard cost accounting system, companies journalize and post standard costs, and they maintain separate variance accounts in the ledger.

appendix 22B

A Closer Look at Overhead Variances

study objective 10

Compute overhead controllable and volume variance.

As indicated in the chapter, the total overhead variance is generally analyzed through a price variance and a quantity variance. The name usually given to the price variance is the **overhead controllable variance**; the quantity variance is referred to as the **overhead volume variance**.

OVERHEAD CONTROLLABLE VARIANCE

The **overhead controllable variance** shows whether overhead costs are effectively controlled. To compute this variance, the company compares actual overhead costs incurred with budgeted costs for the **standard hours allowed**. The budgeted costs are determined from a flexible manufacturing overhead budget. The concepts related to a flexible budget were discussed in Chapter 21.

For Xonic the budget formula for manufacturing overhead is variable manufacturing overhead cost of $3 per hour of labor plus fixed manufacturing overhead costs of $4,400. Illustration 22B-1 shows the monthly flexible budget for Xonic, Inc.

Illustration 22B-1
Flexible budget using standard direct labor hours

Xonic, Inc.xls

	A	B	C	D	E
1	**XONIC, INC**				
2	**Flexible Manufacturing Overhead Monthly Budget**				
3	Activity Index				
4	Standard direct labor hours	1,800	**2,000**	2,200	2,400
5	Costs				
6	Variable costs				
7	Indirect materials	$1,800	**$ 2,000**	$ 2,200	$ 2,400
8	Indirect labor	2,700	**3,000**	3,300	3,600
9	Utilities	900	**1,000**	1,100	1,200
10	Total variable costs	5,400	**6,000**	6,600	7,200
11					
12	Fixed costs				
13	Supervision	3,000	**3,000**	3,000	3,000
14	Depreciation	1,400	**1,400**	1,400	1,400
15	Total fixed costs	4,400	**4,400**	4,400	4,400
16	Total costs	$9,800	**$10,400**	$11,000	$11,600
17					

As shown, the budgeted costs for 2,000 standard hours are $10,400 ($6,000 variable and $4,400 fixed).

Illustration 22B-2 shows the formula for the overhead controllable variance and the calculation for Xonic, Inc. at 1,000 units of output (2,000 standard labor hours).

Illustration 22B-2
Formula for overhead controllable variance

Actual Overhead	−	Overhead Budgeted*	=	Overhead Controllable Variance
$10,900 ($6,500 + $4,400)	−	$10,400 ($6,000 + $4,400)	=	$500 U

***Based on standard hours allowed.**

The overhead controllable variance for Xonic, Inc. is $500 unfavorable.

Most controllable variances are associated with variable costs, which are controllable costs. Fixed costs are often known at the time the budget is prepared and are therefore not as likely to deviate from the budgeted amount. In Xonic's case, all of the overhead controllable variance is due to the difference between the actual variable overhead costs ($6,500) and the budgeted variable costs ($6,000).

Management can compare actual and budgeted overhead for each manufacturing overhead cost that contributes to the controllable variance. In addition, management can develop cost and quantity variances for each overhead cost, such as indirect materials and indirect labor.

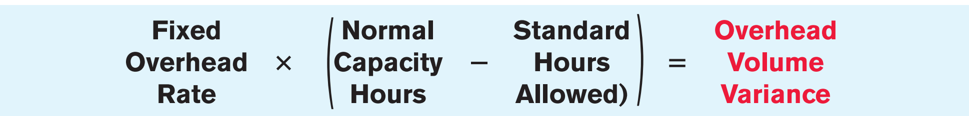
OVERHEAD VOLUME VARIANCE

The **overhead volume variance** is the difference between normal capacity hours and standard hours allowed times the fixed overhead rate. The overhead volume variance relates to whether fixed costs were under- or overapplied during the year.

For example, the overhead volume variance answers the question of whether Xonic effectively used its fixed costs. If Xonic produces less Weed-O than normal capacity would allow, an unfavorable variance results. Conversely, if Xonic produces more Weed-O than what is considered normal capacity, a favorable variance results.

The formula for computing the overhead volume variance is as follows.

Illustration 22B-3
Formula for overhead volume variance



To illustrate the fixed overhead rate computation, recall that Xonic, Inc. budgeted fixed overhead cost for the year of $52,800 (Illustration 22-6 on page 1142). At normal capacity, 26,400 standard direct labor hours are required. The fixed overhead rate is therefore $2 per hour ($52,800 ÷ 26,400 hours).

Xonic produced 1,000 units of Weed-O in June. The standard hours allowed for the 1,000 gallons produced in June is 2,000 (1,000 gallons × 2 hours). For Xonic, normal capacity for June is 1,100, so standard direct labor hours for June at normal capacity is 2,200 (26,400 annual hours ÷ 12 months). The computation of the overhead volume variance in this case is as follows.

Illustration 22B-4
Computation of overhead volume variance for Xonic, Inc.

Fixed Overhead Rate	×	(Normal Capacity Hours	−	Standard Hours Allowed)	=	Overhead Volume Variance
$2	×	(2,200	−	2,000)	=	$400 U

In Xonic's case, a $400 unfavorable volume variance results. The volume variance is unfavorable because Xonic produced only 1,000 gallons rather than the normal capacity of 1,100 gallons in the month of June. As a result, it underapplied fixed overhead for that period.

In computing the overhead variances, it is important to remember the following.

1. Standard hours allowed are used in each of the variances.
2. Budgeted costs for the controllable variance are derived from the flexible budget.
3. The controllable variance generally pertains to variable costs.
4. The volume variance pertains solely to fixed costs.

Summary of Study Objective for Appendix 22B

10 Compute overhead controllable and volume variance. The total overhead variance is generally analyzed through a price variance and a quantity variance. The name usually given to the price variance is the overhead controllable variance. The quantity variance is referred to as the overhead volume variance.

Glossary

Balanced scorecard *(p. 1153)* An approach that incorporates financial and nonfinancial measures in an integrated system that links performance measurement and a company's strategic goals.

Customer perspective *(p. 1153)* A viewpoint employed in the balanced scorecard to evaluate the company from the perspective of those people who buy and use its products or services.

Direct labor price standard *(p. 1141)* The rate per hour that should be incurred for direct labor.

Direct labor quantity standard *(p. 1142)* The time that should be required to make one unit of product.

Direct materials price standard *(p. 1141)* The cost per unit of direct materials that should be incurred.

Direct materials quantity standard *(p. 1141)* The quantity of direct materials that should be used per unit of finished goods.

Financial perspective *(p. 1153)* A viewpoint employed in the balanced scorecard to evaluate a company's performance using financial measures.

Ideal standards *(p. 1140)* Standards based on the optimum level of performance under perfect operating conditions.

Internal process perspective *(p. 1154)* A viewpoint employed in the balanced scorecard to evaluate the effectiveness and efficiency of a company's value chain, including product development, production, delivery, and after-sale service.

Labor price variance *(p. 1148)* The difference between the actual hours times the actual rate and the actual hours times the standard rate for labor.

Labor quantity variance *(p. 1148)* The difference between actual hours times the standard rate and standard hours times the standard rate for labor.

Learning and growth perspective *(p. 1154)* A viewpoint employed in the balanced scorecard to evaluate how well a company develops and retains its employees.

Materials price variance *(p. 1145)* The difference between the actual quantity times the actual price and the actual quantity times the standard price for materials.

Materials quantity variance *(p. 1145)* The difference between the actual quantity times the standard price and the standard quantity times the standard price for materials.

Normal capacity *(p. 1142)* The average activity output that a company should experience over the long run.

Normal standards *(p. 1140)* Standards based on an efficient level of performance that are attainable under expected operating conditions.

Overhead controllable variance *(p. 1162)* The difference between actual overhead incurred and overhead budgeted for the standard hours allowed.

Overhead volume variance *(p. 1163)* The difference between normal capacity hours and standard hours allowed times the fixed overhead rate.

Standard cost accounting system *(p. 1159)* A double-entry system of accounting in which standard costs are used in making entries and variances are recognized in the accounts.

Standard costs *(p. 1138)* Predetermined unit costs which companies use as measures of performance.

Standard hours allowed *(p. 1150)* The hours that should have been worked for the units produced.

Standard predetermined overhead rate *(p. 1142)* An overhead rate determined by dividing budgeted overhead costs by an expected standard activity index.

Total labor variance *(p. 1148)* The difference between actual hours times the actual rate and standard hours times the standard rate for labor.

Total materials variance *(p. 1145)* The difference between the actual quantity times the actual price and the standard quantity times the standard price of materials.

Total overhead variance *(p. 1150)* The difference between actual overhead costs and overhead costs applied to work done, based on standard hours allowed.

Variance *(p. 1144)* The difference between total actual costs and total standard costs.

Comprehensive *Do it!*

Manlow Company makes a cologne called Allure. The standard cost for one bottle of Allure is as follows.

	Standard				
Manufacturing Cost Elements	**Quantity**	×	**Price**	=	**Cost**
Direct materials	6 oz.	×	$ 0.90	=	$ 5.40
Direct labor	0.5 hrs.	×	$12.00	=	6.00
Manufacturing overhead	0.5 hrs.	×	$ 4.80	=	2.40
					$13.80

During the month, the following transactions occurred in manufacturing 10,000 bottles of Allure.

1. 58,000 ounces of materials were purchased at $1.00 per ounce.
2. All the materials purchased were used to produce the 10,000 bottles of Allure.
3. 4,900 direct labor hours were worked at a total labor cost of $56,350.
4. Variable manufacturing overhead incurred was $15,000 and fixed overhead incurred was $10,400.

The manufacturing overhead rate of $4.80 is based on a normal capacity of 5,200 direct labor hours. The total budget at this capacity is $10,400 fixed and $14,560 variable.

Instructions

(a) Compute the total variance and the variances for direct material and direct labor elements.
(b) Compute the total variance for manufacturing overhead.

Action Plan

- Check to make sure the total variance and the sum of the individual variances are equal.
- Find the price variance first, then the quantity variance.
- Base budgeted overhead costs on flexible budget data.
- Base overhead applied on standard hours allowed.
- Ignore actual hours worked in computing overhead variances.

Solution to Comprehensive Do it!

(a) **Total Variance**

Actual costs incurred	
Direct materials	$ 58,000
Direct labor	56,350
Manufacturing overhead ($15,000 + $10,400)	25,400
	139,750
Standard cost (10,000 × $13.80)	138,000
Total variance	$ 1,750 U

Direct Materials Variances

Total	=	$58,000 (58,000 × $1.00)	−	$54,000 (60,000 × $0.90)	=	$4,000 U
Price	=	$58,000 (58,000 × $1.00)	−	$52,200 (58,000 × $0.90)	=	$5,800 U
Quantity	=	$52,200 (58,000 × $0.90)	−	$54,000 (60,000 × $0.90)	=	$1,800 F

Direct Labor Variances

Total	=	$56,350 (4,900 × $11.50)	−	$60,000 (5,000 × $12.00)	=	$3,650 F
Price	=	$56,350 (4,900 × $11.50)	−	$58,800 (4,900 × $12.00)	=	$2,450 F
Quantity	=	$58,800 (4,900 × $12.00)	−	$60,000 (5,000 × $12.00)	=	$1,200 F

(b) **Overhead Variance**

Total	=	$25,400 ($15,000 + $10,400)	−	$24,000 (5,000 × $4.80)	=	$1,400 U

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more resources are available for practice in WileyPLUS

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Self-Test Questions

Answers are on page 1184.

(SO 1) **1.** Standards differ from budgets in that:
(a) budgets but not standards may be used in valuing inventories.
(b) budgets but not standards may be journalized and posted.
(c) budgets are a total amount and standards are a unit amount.
(d) only budgets contribute to management planning and control.

(SO 1) **2.** Standard costs:
(a) are imposed by governmental agencies.
(b) are predetermined unit costs which companies use as measures of performance.
(c) can be used by manufacturing companies but not by service or not-for-profit companies.
(d) All of the above.

(SO 2) **3.** The advantages of standard costs include all of the following *except:*
(a) management by exception may be used.
(b) management planning is facilitated.
(c) they may simplify the costing of inventories.
(d) management must use a static budget.

(SO 3) **4.** Normal standards:
(a) allow for rest periods, machine breakdowns, and setup time.
(b) represent levels of performance under perfect operating conditions.
(c) are rarely used because managers believe they lower workforce morale.
(d) are more likely than ideal standards to result in unethical practices.

(SO 3) **5.** The setting of standards is:
(a) a managerial accounting decision.
(b) a management decision.
(c) a worker decision.
(d) preferably set at the ideal level of performance.

(SO 4) **6.** Each of the following formulas is correct except:
(a) Labor price variance = (Actual hours × Actual rate) − (Actual hours × Standard rate).
(b) Total overhead variance = Actual overhead − Overhead applied.
(c) Materials price variance = (Actual quantity × Actual price) − (Standard quantity × Standard price).
(d) Labor quantity variance = (Actual hours × Standard rate) − (Standard hours × Standard rate).

(SO 4) **7.** In producing product AA, 6,300 pounds of direct materials were used at a cost of $1.10 per pound. The standard was 6,000 pounds at $1.00 per pound. The direct materials quantity variance is:
(a) $330 unfavorable.
(b) $300 unfavorable.
(c) $600 unfavorable.
(d) $630 unfavorable.

(SO 4) **8.** In producing product ZZ, 14,800 direct labor hours were used at a rate of $8.20 per hour. The standard was 15,000 hours at $8.00 per hour. Based on these data, the direct labor:
(a) quantity variance is $1,600 favorable.
(b) quantity variance is $1,600 unfavorable.
(c) price variance is $2,960 favorable.
(d) price variance is $3,000 unfavorable.

(SO 5) **9.** Which of the following is *correct* about the total overhead variance?
(a) Budgeted overhead and budgeted overhead applied are the same.
(b) Total actual overhead is composed of variable overhead, fixed overhead, and period costs.
(c) Standard hours actually worked are used in computing the variance.
(d) Standard hours allowed for the work done is the measure used in computing the variance.

(SO 5) **10.** The formula for computing the total overhead variance is:
(a) actual overhead less overhead applied.
(b) overhead budgeted less overhead applied.
(c) actual overhead less overhead budgeted.
(d) No correct answer is given.

(SO 6) **11.** Which of the following is *incorrect* about variance reports?
(a) They facilitate "management by exception."
(b) They should only be sent to the top level of management.
(c) They should be prepared as soon as possible.
(d) They may vary in form, content, and frequency among companies.

(SO 6) **12.** In using variance reports to evaluate cost control, management normally looks into:
(a) all variances.
(b) favorable variances only.
(c) unfavorable variances only.
(d) both favorable and unfavorable variances that exceed a predetermined quantitative measure such as a percentage or dollar amount.

(SO 7) **13.** Generally accepted accounting principles allow a company to:
(a) report inventory at standard cost but cost of goods sold must be reported at actual cost.
(b) report cost of goods sold at standard cost but inventory must be reported at actual cost.
(c) report inventory and cost of goods sold at standard cost as long as there are no significant differences between actual and standard cost.
(d) report inventory and cost of goods sold only at actual costs; standard costing is never permitted.

(SO 8) **14.** Which of the following would *not* be an objective used in the customer perspective of the balanced scorecard approach?
(a) Percentage of customers who would recommend product to a friend.
(b) Customer retention.
(c) Brand recognition.
(d) Earnings per share.

(SO 9) ***15.** Which of the following is *incorrect* about a standard cost accounting system?
(a) It is applicable to job order costing.
(b) It is applicable to process costing.
(c) It reports only favorable variances.
(d) It keeps separate accounts for each variance.

(SO 10) ***16.** The formula to compute the overhead volume variance is:
(a) Fixed overhead rate × (Standard hours − Actual hours).
(b) Fixed overhead rate × (Normal capacity hours − Actual hours).
(c) Fixed overhead rate × (Normal capacity hours − Standard hours allowed).
(d) (Variable overhead rate + Fixed overhead rate) × (Normal capacity hours − Standard hours allowed).

Go to the book's companion website, **www.wiley.com/college/kimmel**, for additional Self-Test Questions.

Questions

1. (a) "Standard costs are the expected total cost of completing a job." Is this correct? Explain.
   (b) "A standard imposed by a governmental agency is known as a regulation." Do you agree? Explain.
2. (a) Explain the similarities and differences between standards and budgets.
   (b) Contrast the accounting for standards and budgets.
3. Standard costs facilitate management planning. What are the other advantages of standard costs?
4. Contrast the roles of the management accountant and management in setting standard costs.
5. Distinguish between an ideal standard and a normal standard.
6. What factors should be considered in setting (a) the direct materials price standard and (b) the direct materials quantity standard?
7. "The objective in setting the direct labor quantity standard is to determine the aggregate time required to make one unit of product." Do you agree? What allowances should be made in setting this standard?
8. How is the predetermined overhead rate determined when standard costs are used?
9. What is the difference between a favorable cost variance and an unfavorable cost variance?
10. In each of the following formulas, supply the words that should be inserted for each number in parentheses.
    (a) (Actual quantity × (1)) − (Standard quantity × (2)) = Total materials variance
    (b) ((3) × Actual price) − (Actual quantity × (4)) = Materials price variance
    (c) (Actual quantity × (5)) − ((6) × Standard price) = Materials quantity variance
11. In the direct labor variance matrix, there are three factors: (1) Actual hours × Actual rate, (2) Actual hours × Standard rate, and (3) Standard hours × Standard rate. Using the numbers, indicate the formulas for each of the direct labor variances.
12. Mikan Company's standard predetermined overhead rate is $8 per direct labor hour. For the month of June, 26,000 actual hours were worked, and 27,000 standard hours were allowed. How much overhead was applied?
13. How often should variances be reported to management? What principle may be used with variance reports?
14. What circumstances may cause the purchasing department to be responsible for both an unfavorable materials price variance and an unfavorable materials quantity variance?
15. What are the four perspectives used in the balanced scorecard? Discuss the nature of each, and how the perspectives are linked.
16. Jerry Karr says that the balanced scorecard was created to replace financial measures as the primary mechanism for performance evaluation. He says that it uses only nonfinancial measures. Is this true?
17. What are some examples of nonfinancial measures used by companies to evaluate performance?
18. (a) How are variances reported in income statements prepared for management? (b) May standard costs be used in preparing financial statements for stockholders? Explain.

*19. (a) Explain the basic features of a standard cost accounting system. (b) What type of balance will exist in the variance account when (1) the materials price variance is unfavorable and (2) the labor quantity variance is favorable?

*20. If the $8 per hour overhead rate in question 12 includes $5 variable, and actual overhead costs were $218,000, what is the overhead controllable variance for June? The normal capacity hours were 28,000. Is the variance favorable or unfavorable?

*21. What is the purpose of computing the overhead volume variance? What is the basic formula for this variance?

*22. Betty Melton does not understand why the overhead volume variance indicates that fixed overhead costs are under- or overapplied. Clarify this matter for Betty.

*23. Pete Elder is attempting to outline the important points about overhead variances on a class examination. List four points that Pete should include in his outline.

Brief Exercises

Distinguish between a standard and a budget.
(SO 1), AP

BE22-1 Perney Company uses both standards and budgets. For the year, estimated production of Product X is 500,000 units. Total estimated cost for materials and labor are $1,200,000 and $1,600,000. Compute the estimates for (a) a standard cost and (b) a budgeted cost.

Set direct materials standard.
(SO 3), AP

BE22-2 Ming Company accumulates the following data concerning raw materials in making one gallon of finished product: (1) Price—net purchase price $2.20, freight-in $0.20, and receiving and handling $0.10. (2) Quantity—required materials 2.6 pounds, allowance for waste and spoilage 0.4 pounds. Compute the following.
(a) Standard direct materials price per gallon.
(b) Standard direct materials quantity per gallon.
(c) Total standard materials cost per gallon.

BE22-3 Labor data for making one gallon of finished product in Ming Company are as follows: (1) Price—hourly wage rate $12.00, payroll taxes $0.80, and fringe benefits $1.20. (2) Quantity—actual production time 1.2 hours, rest periods and clean up 0.25 hours, and setup and downtime 0.15 hours. Compute the following.

(a) Standard direct labor rate per hour.
(b) Standard direct labor hours per gallon.
(c) Standard labor cost per gallon.

Set direct labor standard.
(SO 3), **AP**

BE22-4 Lion Company's standard materials cost per unit of output is $10 (2 pounds × $5). During July, the company purchases and uses 3,200 pounds of materials costing $16,160 in making 1,500 units of finished product. Compute the total, price, and quantity materials variances.

Compute direct materials variances.
(SO 4), **AP**

BE22-5 Bartley Company's standard labor cost per unit of output is $20 (2 hours × $10 per hour). During August, the company incurs 2,100 hours of direct labor at an hourly cost of $10.50 per hour in making 1,000 units of finished product. Compute the total, price, and quantity labor variances.

Compute direct labor variances.
(SO 4), **AP**

BE22-6 In October, Derby Company reports 21,000 actual direct labor hours, and it incurs $115,000 of manufacturing overhead costs. Standard hours allowed for the work done is 20,000 hours. The predetermined overhead rate is $6 per direct labor hour. Compute the total overhead variance.

Compute total overhead variance.
(SO 5), **AP**

BE22-7 The four perspectives in the balanced scorecard are (1) financial, (2) customer, (3) internal process, and (4) learning and growth. Match each of the following objectives with the perspective it is most likely associated with: (a) Plant capacity utilization. (b) Employee work days missed due to injury. (c) Return on assets. (d) Brand recognition.

Match balanced scorecard perspectives.
(SO 8), **AP**

***BE22-8** Journalize the following transactions for Slocombe Manufacturing.

(a) Purchased 6,000 units of raw materials on account for $11,100. The standard cost was $12,000.
(b) Issued 5,500 units of raw materials for production. The standard units were 5,800.

Journalize materials variances.
(SO 9), **AP**

***BE22-9** Journalize the following transactions for Gillaspie Manufacturing.

(a) Incurred direct labor costs of $24,000 for 3,000 hours. The standard labor cost was $25,200.
(b) Assigned 3,000 direct labor hours costing $24,000 to production. Standard hours were 3,100.

Journalize labor variances.
(SO 9), **AP**

***BE22-10** Some overhead data for Derby Company are given in BE22-6. In addition, the flexible manufacturing overhead budget shows that budgeted costs are $4 variable per direct labor hour and $50,000 fixed. Compute the overhead controllable variance.

Compute the overhead controllable variance.
(SO 10), **AP**

***BE22-11** Using the data in BE22-6 and BE22-10, compute the overhead volume variance. Normal capacity was 25,000 direct labor hours.

Compute overhead volume variance.
(SO 10), **AP**

Do it! Review

Do it! 22-1 Frost Company accumulated the following standard cost data concerning product I-Tal.

Materials per unit: 2 pounds at $5 per pound
Labor per unit: 0.2 hours at $14 per hour
Manufacturing overhead: Predetermined rate is 125% of direct labor cost

Compute the standard cost of one unit of product I-Tal.

Compute standard cost.
(SO 3), **AP**

Do it! 22-2 The standard cost of product 999 includes 2 units of direct materials at $6.00 per unit. During August, the company bought 29,000 units of materials at $6.20 and used those materials to produce 15,000 units. Compute the total, price, and quantity variances for materials.

Compute materials variance.
(SO 4), **AP**

Do it! 22-3 The standard cost of product 2525 includes 2 hours of direct labor at $14.00 per hour. The predetermined overhead rate is $21.00 per direct labor hour. During July, the company incurred 4,100 hours of direct labor at an average rate of $14.40 per hour and $81,300 of manufacturing overhead costs. It produced 2,000 units.

(a) Compute the total, price, and quantity variances for labor. (b) Compute the total overhead variance.

Compute labor and manufacturing overhead variances.
(SO 4, 5), **AP**

Match balance scorecard perspectives and their objectives.
(SO 8), C

Do it! 22-4 Indicate which of the four perspectives in the balanced scorecard is most likely associated with the objectives that follow.

1. Ethics violations.
2. Credit rating.
3. Customer retention.
4. Stockouts.
5. Reportable accidents.
6. Brand recognition.

Exercises

Compute budget and standard.
(SO 1, 2, 3), AP

E22-1 Stanton Company is planning to produce 2,000 units of product in 2012. Each unit requires 3 pounds of materials at $6 per pound and a half-hour of labor at $14 per hour. The overhead rate is 70% of direct labor.

Instructions

(a) Compute the budgeted amounts for 2012 for direct materials to be used, direct labor, and applied overhead.
(b) Compute the standard cost of one unit of product.
(c) What are the potential advantages to a corporation of using standard costs?

Compute standard materials costs.
(SO 3), AP

E22-2 Jim Hetzel manufactures and sells homemade wine, and he wants to develop a standard cost per gallon. The following are required for production of a 50-gallon batch.

3,000 ounces of grape concentrate at $0.04 per ounce
54 pounds of granulated sugar at $0.35 per pound
60 lemons at $0.60 each
50 yeast tablets at $0.25 each
50 nutrient tablets at $0.20 each
2,500 ounces of water at $0.004 per ounce

Jim estimates that 4% of the grape concentrate is wasted, 10% of the sugar is lost, and 20% of the lemons cannot be used.

Instructions

Compute the standard cost of the ingredients for one gallon of wine. (Carry computations to two decimal places.)

Compute standard cost per unit.
(SO 3), AP

E22-3 Karnes Company has gathered the following information about its product.

Direct materials: Each unit of product contains 4.5 pounds of materials. The average waste and spoilage per unit produced under normal conditions is 0.5 pounds. Materials cost $4 per pound, but Karnes always takes the 2% cash discount all of its suppliers offer. Freight costs average $0.25 per pound.
Direct labor: Each unit requires 2 hours of labor. Setup, cleanup, and downtime average 0.2 hours per unit. The average hourly pay rate of Karnes' employees is $12. Payroll taxes and fringe benefits are an additional $3 per hour.
Manufacturing overhead: Overhead is applied at a rate of $6 per direct labor hour.

Instructions

Compute Karnes' total standard cost per unit.

Compute labor cost and labor quantity variance.
(SO 3, 4), AP

E22-4 Feldkamp Services, Inc. is trying to establish the standard labor cost of a typical oil change. The following data have been collected from time and motion studies conducted over the past month.

Actual time spent on the oil change	1.0 hour
Hourly wage rate	$10
Payroll taxes	10% of wage rate
Setup and downtime	10% of actual labor time
Cleanup and rest periods	30% of actual labor time
Fringe benefits	25% of wage rate

Instructions

(a) Determine the standard direct labor hours per oil change.
(b) Determine the standard direct labor hourly rate.
(c) Determine the standard direct labor cost per oil change.
(d) If an oil change took 1.5 hours at the standard hourly rate, what was the direct labor quantity variance?

Compute materials price and quantity variances.
(SO 4), **AP**

E22-5 The standard cost of Product B manufactured by NJF Company includes three units of direct materials at $5.00 per unit. During June, 28,000 units of direct materials are purchased at a cost of $4.70 per unit, and 28,000 units of direct materials are used to produce 9,000 units of Product B.

Instructions

(a) Compute the total materials variance and the price and quantity variances.
(b) Repeat (a), assuming the purchase price is $5.20 and the quantity purchased and used is 26,200 units.

Compute labor price and quantity variances.
(SO 4), **AP**

E22-6 Nevitt Company's standard labor cost of producing one unit of Product DD is 4 hours at the rate of $12.00 per hour. During August, 40,800 hours of labor are incurred at a cost of $12.10 per hour to produce 10,000 units of Product DD.

Instructions

(a) Compute the total labor variance.
(b) Compute the labor price and quantity variances.
(c) Repeat (b), assuming the standard is 4.2 hours of direct labor at $12.25 per hour.

Compute materials and labor variances.
(SO 4), **AP**

E22-7 Shannon Inc., which produces a single product, has prepared the following standard cost sheet for one unit of the product.

Direct materials (8 pounds at $2.50 per pound)	$20
Direct labor (3 hours at $12.00 per hour)	$36

During the month of April, the company manufactures 230 units and incurs the following actual costs.

Direct materials purchased and used (1,900 pounds)	$4,940
Direct labor (700 hours)	$8,120

Instructions

Compute the total, price, and quantity variances for materials and labor.

Compute the materials and labor variances and list reasons for unfavorable variances.
(SO 4), **AN**

E22-8 The following direct materials and direct labor data pertain to the operations of Engles Manufacturing Company for the month of August.

Costs		Quantities	
Actual labor rate	$13 per hour	Actual hours incurred and used	4,200 hours
Actual materials price	$128 per ton	Actual quantity of materials purchased and used	1,225 tons
Standard labor rate	$12 per hour	Standard hours used	4,300 hours
Standard materials price	$130 per ton	Standard quantity of materials used	1,200 tons

Instructions

(a) Compute the total, price, and quantity variances for materials and labor.
(b) Provide two possible explanations for each of the unfavorable variances calculated above, and suggest where responsibility for the unfavorable result might be placed.

Determine amounts from variance report.
(SO 4), **AN**

E22-9 You have been given the following information about the production of Adler Co., and are asked to provide the plant manager with information for a meeting with the vice president of operations.

	Standard Cost Card
Direct materials (6 pounds at $3 per pound)	$18.00
Direct labor (0.8 hours at $5)	4.00
Variable overhead (0.8 hours at $3 per hour)	2.40
Fixed overhead (0.8 hours at $7 per hour)	5.60
	$30.00

The following is a variance report for the most recent period of operations.

Costs	Total Standard Cost	Variances	
		Price	Quantity
Direct materials	$405,000	$6,900 F	$9,000 U
Direct labor	90,000	4,850 U	7,000 U

Instructions

(a) How many units were produced during the period?
(b) How many pounds of raw material were purchased and used during the period?
(c) What was the actual cost per pound of raw materials?
(d) How many actual direct labor hours were worked during the period?
(e) What was the actual rate paid per direct labor hour?

(CGA adapted)

Prepare a variance report for direct labor.
(SO 4, 6), **AP**

E22-10 During March 2012, McGuire Tool & Die Company worked on four jobs. A review of direct labor costs reveals the following summary data.

Job Number	Actual		Standard		Total Variance
	Hours	Costs	Hours	Costs	
A257	220	$4,400	225	$4,500	$ 100 F
A258	450	9,900	430	8,600	1,300 U
A259	300	6,150	300	6,000	150 U
A260	115	2,070	110	2,200	130 F
Total variance					$1,220 U

Analysis reveals that Job A257 was a repeat job. Job A258 was a rush order that required overtime work at premium rates of pay. Job A259 required a more experienced replacement worker on one shift. Work on Job A260 was done for one day by a new trainee when a regular worker was absent.

Instructions

Prepare a report for the plant supervisor on direct labor cost variances for March. The report should have columns for (1) Job No., (2) Actual Hours, (3) Standard Hours, (4) Quantity Variance, (5) Actual Rate, (6) Standard Rate, (7) Price Variance, and (8) Explanation.

Compute overhead variance.
(SO 5), **AN**

E22-11 Manufacturing overhead data for the production of Product H by Felton Company are as follows.

Overhead incurred for 52,000 actual direct labor hours worked	$213,000
Overhead rate (variable $3; fixed $1) at normal capacity of 54,000 direct labor hours	$4
Standard hours allowed for work done	51,000

Instructions

Compute the total overhead variance.

Compute overhead variances.
(SO 5), **AP**

E22-12 Horak Company produces one product, a putter called GO-Putter. Horak uses a standard cost system and determines that it should take one hour of direct labor to produce one GO-Putter. The normal production capacity for this putter is 100,000 units per year. The total budgeted overhead at normal capacity is $800,000 comprised of $200,000 of variable costs and $600,000 of fixed costs. Horak applies overhead on the basis of direct labor hours.

During the current year, Horak produced 90,000 putters, worked 94,000 direct labor hours, and incurred variable overhead costs of $186,000 and fixed overhead costs of $600,000.

Instructions

(a) Compute the predetermined variable overhead rate and the predetermined fixed overhead rate.
(b) Compute the applied overhead for Horak for the year.
(c) Compute the total overhead variance.

Compute variances for materials.
(SO 4), **AP**

E22-13 Cornwell Company purchased (at a cost of $10,900) and used 2,300 pounds of materials during May. Cornwell's standard cost of materials per unit produced is based on 2 pounds per unit at a cost $5 per pound. Production in May was 1,070 units.

Instructions

(a) Compute the total, price, and quantity variances for materials.

(b) Assume Cornwell also had an unfavorable labor quantity variance. What is a possible scenario that would provide one cause for the variances computed in (a) and the unfavorable labor quantity variance?

Prepare a variance report.
(SO 4, 6), **AP**

E22-14 Shatner Landscaping plants grass seed as the basic landscaping for business campuses. During a recent month the company worked on three projects (Remington, Chang, and Wyco). The company is interested in controlling the material costs, namely the grass seed, for these plantings projects.

In order to provide management with useful cost control information, the company uses standard costs and prepares monthly variance reports. Analysis reveals that the purchasing agent mistakenly purchased poor-quality seed for the Remington project. The Chang project, however, received higher-than-standard-quality seed that was on sale. The Wyco project received standard-quality seed; however, the price had increased and a new employee was used to spread the seed.

Shown below are quantity and cost data for each project.

	Actual		Standard		Total
Project	**Quantity**	**Costs**	**Quantity**	**Costs**	**Variance**
Remington	500 lbs.	$1,175	460 lbs.	$1,150	$ 25 U
Chang	400	960	410	1,025	65 F
Wyco	500	1,300	480	1,200	100 U
Total variance					$ 60 U

Instructions

(a) Prepare a variance report for the purchasing department with the following columns: (1) Project, (2) Actual pounds purchased, (3) Actual price, (4) Standard price, (5) Price variance, and (6) Explanation.

(b) Prepare a variance report for the production department with the following columns: (1) Project, (2) Actual pounds, (3) Standard pounds, (4) Standard price, (5) Quantity variance, and (6) Explanation.

Complete variance report.
(SO 6), **AP**

E22-15 Barney Corporation prepared the following variance report.

BARNEY CORPORATION
Variance Report—Purchasing Department
For the Week Ended January 9, 2013

Type of Materials	Quantity Purchased	Actual Price	Standard Price	Price Variance	Explanation
Rogue11	? lbs.	$5.20	$5.00	$5,200 ?	Price increase
Storm17	7,000 oz.	?	3.25	1,050 U	Rush order
Beast29	22,000 units	0.45	?	440 F	Bought larger quantity

Instructions

Fill in the appropriate amounts or letters for the question marks in the report.

Prepare income statement for management.
(SO 7), **AP**

E22-16 Carlton Company uses a standard cost accounting system. During January, the company reported the following manufacturing variances.

Materials price variance	$1,250 U	Labor quantity variance	$725 U
Materials quantity variance	700 F	Overhead variance	800 U
Labor price variance	525 U		

In addition, 8,000 units of product were sold at $8.00 per unit. Each unit sold had a standard cost of $6.00. Selling and administrative expenses were $6,000 for the month.

Instructions

Prepare an income statement for management for the month ended January 31, 2012.

Identify performance evaluation terminology.
(SO 3, 8), **C**

E22-17 The following is a list of terms related to performance evaluation.

(1) Balanced scorecard
(2) Variance
(3) Learning and growth perspective
(4) Nonfinancial measures

(5) Customer perspective
(6) Internal process perspective
(7) Ideal standards
(8) Normal standards

Instructions
Match each of the following descriptions with one of the terms above.

(a) The difference between total actual costs and total standard costs.
(b) An efficient level of performance that is attainable under expected operating conditions.
(c) An approach that incorporates financial and nonfinancial measures in an integrated system that links performance measurement and a company's strategic goals.
(d) A viewpoint employed in the balanced scorecard to evaluate how well a company develops and retains its employees.
(e) An evaluation tool that is not based on dollars.
(f) A viewpoint employed in the balanced scorecard to evaluate the company from the perspective of those people who buy and use its products or services.
(g) An optimum level of performance under perfect operating conditions.
(h) A viewpoint employed in the balanced scorecard to evaluate the efficiency and effectiveness of the company's value chain.

Journalize entries in a standard cost accounting system.
(SO 9), **AP**

***E22-18** Beacon Company installed a standard cost system on January 1. Selected transactions for the month of January are as follows.

1. Purchased 18,000 units of raw materials on account at a cost of $4.50 per unit. Standard cost was $4.30 per unit.
2. Issued 18,000 units of raw materials for jobs that required 17,600 standard units of raw materials.
3. Incurred 15,200 actual hours of direct labor at an actual rate of $4.80 per hour. The standard rate is $5.50 per hour. (Credit Wages Payable.)
4. Performed 15,200 hours of direct labor on jobs when standard hours were 15,400.
5. Applied overhead to jobs at the rate of 100% of direct labor cost for standard hours allowed.

Instructions
Journalize the January transactions.

Answer questions concerning missing entries and balances.
(SO 4, 5, 9), **AN**

***E22-19** Pender Company uses a standard cost accounting system. Some of the ledger accounts have been destroyed in a fire. The controller asks your help in reconstructing some missing entries and balances.

Instructions
Answer the following questions.

(a) Materials Price Variance shows a $2,000 favorable balance. Accounts Payable shows $128,000 of raw materials purchases. What was the amount debited to Raw Materials Inventory for raw materials purchased?
(b) Materials Quantity Variance shows a $3,000 unfavorable balance. Raw Materials Inventory shows a zero balance. What was the amount debited to Work in Process Inventory for direct materials used?
(c) Labor Price Variance shows a $1,500 unfavorable balance. Factory Labor shows a debit of $140,000 for wages incurred. What was the amount credited to Wages Payable?
(d) Factory Labor shows a credit of $140,000 for direct labor used. Labor Quantity Variance shows a $900 unfavorable balance. What was the amount debited to Work in Process for direct labor used?
(e) Overhead applied to Work in Process totaled $165,000. If the total overhead variance was $1,200 unfavorable, what was the amount of overhead costs debited to Manufacturing Overhead?

Journalize entries for materials and labor variances.
(SO 9), **AP**

***E22-20** Data for Shannon Inc. are given in E22-7.

Instructions
Journalize the entries to record the materials and labor variances.

Compute manufacturing overhead variances and interpret findings.
(SO 10), **AN**

***E22-21** The information shown on the next page was taken from the annual manufacturing overhead cost budget of Marantha Company.

Variable manufacturing overhead costs	$33,000
Fixed manufacturing overhead costs	$19,800
Normal production level in labor hours	16,500
Normal production level in units	4,125
Standard labor hours per unit	4

During the year, 4,000 units were produced, 16,100 hours were worked, and the actual manufacturing overhead was $54,000. Actual fixed manufacturing overhead costs equaled budgeted fixed manufacturing overhead costs. Overhead is applied on the basis of direct labor hours.

Instructions

(a) Compute the total, fixed, and variable predetermined manufacturing overhead rates.
(b) Compute the total, controllable, and volume overhead variances.
(c) Briefly interpret the overhead controllable and volume variances computed in (b).

***E22-22** The loan department of Ottawa Bank uses standard costs to determine the overhead cost of processing loan applications. During the current month a fire occurred, and the accounting records for the department were mostly destroyed. The following data were salvaged from the ashes.

Compute overhead variances.
(SO 10), **AN**

Standard variable overhead rate per hour	$9
Standard hours per application	2
Standard hours allowed	2,000
Standard fixed overhead rate per hour	$6
Actual fixed overhead cost	$13,200
Variable overhead budget based on standard hours allowed	$18,000
Fixed overhead budget	$13,200
Overhead controllable variance	$ 1,500 U

Instructions

(a) Determine the following.
  (1) Total actual overhead cost.
  (2) Actual variable overhead cost.
  (3) Variable overhead cost applied.
  (4) Fixed overhead cost applied.
  (5) Overhead volume variance.
(b) Determine how many loans were processed.

***E22-23** Innova Company's overhead rate was based on estimates of $200,000 for overhead costs and 20,000 direct labor hours. Innova's standards allow 2 hours of direct labor per unit produced. Production in May was 900 units, and actual overhead incurred in May was $18,800. The overhead budgeted for 1,800 standard direct labor hours is $17,600 ($5,000 fixed and $12,600 variable).

Compute variances.
(SO 10), **AP**

Instructions

(a) Compute the total, controllable, and volume variances for overhead.
(b) What are possible causes of the variances computed in part (a)?

Exercises: Set B and Challenge Exercises

Visit the book's companion website, at **www.wiley.com/college/kimmel**, and choose the Student Companion site to access Exercise Set B.

Problems: Set A

P22-1A Rondello Corporation manufactures a single product. The standard cost per unit of product is shown below.

Compute variances.
(SO 4, 5), **AP**

Direct materials—1 pound plastic at $7.00 per pound	$ 7.00
Direct labor—1.5 hours at $12.00 per hour	18.00
Variable manufacturing overhead	11.25
Fixed manufacturing overhead	3.75
Total standard cost per unit	$40.00

The predetermined manufacturing overhead rate is $10 per direct labor hour ($15.00 ÷ 1.5). It was computed from a master manufacturing overhead budget based on normal production of 7,500 direct labor hours (5,000 units) for the month. The master budget showed total variable costs of $56,250 ($7.50 per hour) and total fixed overhead costs of $18,750 ($2.50 per hour). Actual costs for October in producing 4,900 units were as follows.

Direct materials (5,100 pounds)	$ 37,230
Direct labor (7,000 hours)	87,500
Variable overhead	56,170
Fixed overhead	19,680
Total manufacturing costs	$200,580

The purchasing department buys the quantities of raw materials that are expected to be used in production each month. Raw materials inventories, therefore, can be ignored.

(a) MPV $1,530 U

Instructions

(a) Compute all of the materials and labor variances.
(b) Compute the total overhead variance.

Compute variances, and prepare income statement.
(SO 4, 5, 7), **AP**

P22-2A Martinez Manufacturing Corporation accumulates the following data relative to jobs started and finished during the month of June 2012.

Costs and Production Data	Actual	Standard
Raw materials unit cost	$2.25	$2.00
Raw materials units used	10,600	10,000
Direct labor payroll	$122,400	$120,000
Direct labor hours worked	14,400	15,000
Manufacturing overhead incurred	$184,500	
Manufacturing overhead applied		$189,000
Machine hours expected to be used at normal capacity		42,500
Budgeted fixed overhead for June		$51,000
Variable overhead rate per machine hour		$3.00
Fixed overhead rate per machine hour		$1.20

Overhead is applied on the basis of standard machine hours. Three hours of machine time are required for each direct labor hour. The jobs were sold for $400,000. Selling and administrative expenses were $40,000. Assume that the amount of raw materials purchased equaled the amount used.

(a) LQV $4,800 F

Instructions

(a) Compute all of the variances for (1) direct materials and (2) direct labor.
(b) Compute the total overhead variance.
(c) Prepare an income statement for management. Ignore income taxes.

Compute and identify significant variances.
(SO 4, 5, 6), **AN**

P22-3A Deskins Clothiers is a small company that manufactures tall-men's suits. The company has used a standard cost accounting system. In May 2012, 11,200 suits were produced. The following standard and actual cost data applied to the month of May when normal capacity was 14,000 direct labor hours. All materials purchased were used.

Cost Element	Standard (per unit)	Actual
Direct materials	8 yards at $4.30 per yard	$371,050 for 90,500 yards ($4.10 per yard)
Direct labor	1.2 hours at $13.50 per hour	$201,630 for 14,300 hours ($14.10 per hour)
Overhead	1.2 hours at $6.00 per hour (fixed $3.50; variable $2.50)	$49,000 fixed overhead $37,000 variable overhead

Overhead is applied on the basis of direct labor hours. At normal capacity, budgeted fixed overhead costs were $49,000, and budgeted variable overhead was $35,000.

(a) MPV $18,100 F

Instructions

(a) Compute the total, price, and quantity variances for (1) materials and (2) labor.
(b) Compute the total overhead variance.
(c) Which of the materials and labor variances should be investigated if management considers a variance of more than 4% from standard to be significant?

Answer questions about variances.
(SO 4, 5), **AN**

P22-4A Oklahoma Manufacturing Company uses a standard cost accounting system. In 2012, the company produced 28,000 units. Each unit took several pounds of direct

materials and 1½ standard hours of direct labor at a standard hourly rate of $12.00. Normal capacity was 50,000 direct labor hours. During the year, 131,000 pounds of raw materials were purchased at $0.92 per pound. All materials purchased were used during the year.

Instructions

(a) If the materials price variance was $2,620 favorable, what was the standard materials price per pound?

(b) If the materials quantity variance was $4,700 unfavorable, what was the standard materials quantity per unit?

(b) 4.5 pounds

(c) What were the standard hours allowed for the units produced?

(d) If the labor quantity variance was $7,200 unfavorable, what were the actual direct labor hours worked?

(e) If the labor price variance was $10,650 favorable, what was the actual rate per hour?

(f) If total budgeted manufacturing overhead was $350,000 at normal capacity, what was the predetermined overhead rate?

(f) $7 per DLH

(g) What was the standard cost per unit of product?

(h) How much overhead was applied to production during the year?

(i) Using one or more answers above, what were the total costs assigned to work in process?

Compute variances, prepare an income statement, and explain unfavorable variances.

(SO 4, 5, 7), **AP**

P22-5A Dillman Labs, Inc. provides mad cow disease testing for both state and federal governmental agricultural agencies. Because the company's customers are governmental agencies, prices are strictly regulated. Therefore, Dillman Labs must constantly monitor and control its testing costs. Shown below are the standard costs for a typical test.

Direct materials (2 test tubes @ $1.50 per tube)	$ 3
Direct labor (1 hour @ $25 per hour)	25
Variable overhead (1 hour @ $5 per hour)	5
Fixed overhead (1 hour @ $10 per hour)	10
Total standard cost per test	$43

The lab does not maintain an inventory of test tubes. Therefore, the tubes purchased each month are used that month. Actual activity for the month of November 2012, when 1,500 tests were conducted, resulted in the following:

Direct materials (3,050 test tubes)	$ 4,270
Direct labor (1,600 hours)	36,800
Variable overhead	7,400
Fixed overhead	14,000

Monthly budgeted fixed overhead is $14,000. Revenues for the month were $75,000, and selling and administrative expenses were $4,000.

Instructions

(a) Compute the price and quantity variances for direct materials and direct labor.

(a) LQV $2,500 U

(b) Compute the total overhead variance.

(c) Prepare an income statement for management.

(d) Provide possible explanations for each unfavorable variance.

Journalize and post standard cost entries, and prepare income statement.

(SO 4, 5, 7, 9), **AP**

***P22-6A** Haslett Corporation uses standard costs with its job order cost accounting system. In January, an order (Job No. 12) for 1,900 units of Product B was received. The standard cost of one unit of Product B is as follows.

Direct materials	3 pounds at $1.00 per pound	$ 3.00
Direct labor	1 hour at $8.00 per hour	8.00
Overhead	2 hours (variable $4.00 per machine hour; fixed $2.25 per machine hour)	12.50
Standard cost per unit		$23.50

Normal capacity for the month was 4,200 machine hours. During January, the following transactions applicable to Job No. 12 occurred.

1. Purchased 6,250 pounds of raw materials on account at $1.06 per pound.
2. Requisitioned 6,250 pounds of raw materials for Job No. 12.
3. Incurred 2,100 hours of direct labor at a rate of $7.75 per hour.
4. Worked 2,100 hours of direct labor on Job No. 12.
5. Incurred manufacturing overhead on account $25,800.
6. Applied overhead to Job No. 12 on basis of standard machine hours allowed.

7. Completed Job No. 12.
8. Billed customer for Job No. 12 at a selling price of $70,000.

Instructions

(a) Journalize the transactions.
(b) Post to the job order cost accounts.
(c) Prepare the entry to recognize the total overhead variance.
(d) Prepare the January 2012 income statement for management. Assume selling and administrative expenses were $2,000.

(d) NI $19,300

Compute overhead controllable and volume variances. (SO 10), **AP**

***P22-7A** Using the information in P22-1A, compute the overhead controllable variance and the overhead volume variance.

Compute overhead controllable and volume variances. (SO 10), **AP**

***P22-8A** Using the information in P22-2A, compute the overhead controllable variance and the overhead volume variance.

Compute overhead controllable and volume variances. (SO 10), **AP**

***P22-9A** Using the information in P22-3A, compute the overhead controllable variance and the overhead volume variance.

Compute overhead controllable and volume variances. (SO 10), **AP**

***P22-10A** Using the information in P22-5A, compute the overhead controllable variance and the overhead volume variance.

Problems: Set B

Compute variances. (SO 4, 5), **AP**

P22-1B Korte Corporation manufactures a single product. The standard cost per unit of product is as follows.

Direct materials—2 pounds of plastic at $5 per pound	$10
Direct labor—2 hours at $12 per hour	24
Variable manufacturing overhead	8
Fixed manufacturing overhead	6
Total standard cost per unit	$48

The master manufacturing overhead budget for the month based on normal productive capacity of 20,000 direct labor hours (10,000 units) shows total variable costs of $80,000 ($4 per labor hour) and total fixed costs of $60,000 ($3 per labor hour). Normal productive capacity is 20,000 direct labor hours. Overhead is applied on the basis of direct labor hours. Actual costs for November in producing 9,700 units were as follows.

Direct materials (20,000 pounds)	$ 98,000
Direct labor (19,600 hours)	239,120
Variable overhead	79,100
Fixed overhead	59,000
Total manufacturing costs	$475,220

The purchasing department normally buys the quantities of raw materials that are expected to be used in production each month. Raw materials inventories, therefore, can be ignored.

Instructions

(a) Compute all of the materials and labor variances.
(b) Compute the total overhead variance.

(a) MPV $2,000 F

Compute variances, and prepare income statement. (SO 4, 5, 7), **AP**

P22-2B Vasquez Manufacturing Company uses a standard cost accounting system to account for the manufacture of exhaust fans. In July 2012, it accumulates the following data relative to 1,800 units started and finished.

Cost and Production Data	Actual	Standard
Raw materials		
Units purchased	21,000	
Units used	21,000	22,000
Unit cost	$3.40	$3.00
Direct labor		
Hours worked	3,450	3,600
Hourly rate	$11.80	$12.50
Manufacturing overhead		
Incurred	$101,500	
Applied		$108,000

Manufacturing overhead was applied on the basis of direct labor hours. Normal capacity for the month was 3,400 direct labor hours. At normal capacity, budgeted overhead costs were $20 per labor hour variable and $10 per labor hour fixed. Total budgeted fixed overhead costs were $34,000.

Jobs finished during the month were sold for $280,000. Selling and administrative expenses were $25,000.

Instructions

(a) Compute all of the variances for (1) direct materials and (2) direct labor.

(a) LQV $1,875 F

(b) Compute the total overhead variance.

(c) Prepare an income statement for management. Ignore income taxes.

Compute and identify significant variances.
(SO 4, 5, 6), **AN**

P22-3B Herzog Clothiers manufactures women's business suits. The company uses a standard cost accounting system. In March 2012, 15,700 suits were made. The following standard and actual cost data applied to the month of March when normal capacity was 20,000 direct labor hours. All materials purchased were used in production.

Cost Element	Standard (per unit)	Actual
Direct materials	5 yards at $6.80 per yard	$547,200 for 76,000 yards ($7.20 per yard)
Direct labor	1.0 hours at $11.50 per hour	$166,880 for 14,900 hours ($11.20 per hour)
Overhead	1.0 hours at $9.30 per hour (fixed $6.30; variable $3.00)	$120,000 fixed overhead $49,000 variable overhead

Overhead is applied on the basis of direct labor hours. At normal capacity, budgeted fixed overhead costs were $126,000, and budgeted variable overhead costs were $60,000.

Instructions

(a) Compute the total, price, and quantity variances for (1) materials and (2) labor.

(a) MPV $30,400 U

(b) Compute the total overhead variance.

(c) Which of the materials and labor variances should be investigated if management considers a variance of more than 5% from standard to be significant?

Answer questions about variances.
(SO 4, 5), **AN**

P22-4B Omega Manufacturing Company uses a standard cost accounting system. In 2012, 50,000 units were produced. Each unit took several pounds of direct materials and 2 standard hours of direct labor at a standard hourly rate of $12.00. Normal capacity was 96,000 direct labor hours. During the year, 200,000 pounds of raw materials were purchased at $1.00 per pound. All materials purchased were used during the year.

Instructions

(a) If the materials price variance was $8,000 unfavorable, what was the standard materials price per pound?

(b) If the materials quantity variance was $24,000 favorable, what was the standard materials quantity per unit?

(b) 4.5 pounds

(c) What were the standard hours allowed for the units produced?

(d) If the labor quantity variance was $10,800 unfavorable, what were the actual direct labor hours worked?

(e) If the labor price variance was $25,225 favorable, what was the actual rate per hour?

(f) If total budgeted manufacturing overhead was $792,000 at normal capacity, what was the predetermined overhead rate per direct labor hour?

(f) $8.25 per DLH

(g) What was the standard cost per unit of product?

(h) How much overhead was applied to production during the year?

(i) Using selected answers above, what were the total costs assigned to work in process?

Compute variances, prepare an income statement, and explain unfavorable variances.
(SO 4, 5, 7), **AP**

P22-5B Crone Labs performs steroid testing services to high schools, colleges, and universities. Because the company deals solely with educational institutions, the price of each test is strictly regulated. Therefore, the costs incurred must be carefully monitored and controlled. Shown below are the standard costs for a typical test.

Direct materials (1 petri dish @ $2 per dish)	$ 2.00
Direct labor (0.5 hours @ $20 per hour)	10.00
Variable overhead (0.5 hours @ $8 per hour)	4.00
Fixed overhead (0.5 hours @ $4 per hour)	2.00
Total standard cost per test	$18.00

The lab does not maintain an inventory of petri dishes. Therefore, the dishes purchased each month are used that month. Actual activity for the month of May 2012, when 2,500 tests were conducted, resulted in the following.

Direct materials (2,530 dishes)	$ 5,313
Direct labor (1,240 hours)	26,040
Variable overhead	10,100
Fixed overhead	5,700

Monthly budgeted fixed overhead is $6,000. Revenues for the month were $58,000, and selling and administrative expenses were $2,000.

(a) LQV $200 F

Instructions

(a) Compute the price and quantity variances for direct materials and direct labor.
(b) Compute the total overhead variance.
(c) Prepare an income statement for management.
(d) Provide possible explanations for each unfavorable variance.

Journalize and post standard cost entries, and prepare income statement.
(SO 4, 5, 7, 9), **AP**

***P22-6B** Freeze Manufacturing Company uses standard costs with its job order cost accounting system. In January, an order (Job No. 84) was received for 5,500 units of Product D. The standard cost of 1 unit of Product D is as follows.

Direct materials—1.4 pounds at $4.00 per pound	$ 5.60
Direct labor—1 hour at $9.00 per hour	9.00
Overhead—1 hour (variable $7.40; fixed $8.00)	15.40
Standard cost per unit	$30.00

Overhead is applied on the basis of direct labor hours. Normal capacity for the month of January was 6,000 direct labor hours. During January, the following transactions applicable to Job No. 84 occurred.

1. Purchased 8,100 pounds of raw materials on account at $3.60 per pound.
2. Requisitioned 8,100 pounds of raw materials for production.
3. Incurred 5,100 hours of direct labor at $9.25 per hour.
4. Worked 5,100 hours of direct labor on Job No. 84.
5. Incurred $87,650 of manufacturing overhead on account.
6. Applied overhead to Job No. 84 on the basis of direct labor hours.
7. Transferred Job No. 84 to finished goods.
8. Billed customer for Job No. 84 at a selling price of $280,000.

Instructions

(a) Journalize the transactions.
(b) Post to the job order cost accounts.
(c) Prepare the entry to recognize the total overhead variance.
(d) Prepare the January 2012 income statement for management. Assume selling and administrative expenses were $61,000.

(d) NI $55,015

Compute overhead controllable and volume variances. (SO 10), **AP**

***P22-7B** Using the information in P22-1B, compute the overhead controllable variance and the overhead volume variance.

Compute overhead controllable and volume variances. (SO 10), **AP**

***P22-8B** Using the information in P22-2B, compute the overhead controllable variance and the overhead volume variance.

Compute overhead controllable and volume variances. (SO 10), **AP**

***P22-9B** Using the information in P22-3B, compute the overhead controllable variance and the overhead volume variance.

Compute overhead controllable and volume variances. (SO 10), **AP**

***P22-10B** Using the information in P22-5B, compute the overhead controllable variance and the overhead volume variance.

Problems: Set C

Visit the book's companion website, at **www.wiley.com/college/kimmel**, and choose the Student Companion site to access Problem Set C.

Waterways Continuing Problem

(This is a continuation of the Waterways Problem from Chapters 14 through 21.)

WCP22 Waterways Corporation uses very stringent standard costs in evaluating its manufacturing efficiency. These standards are not "ideal" at this point, but the management is working toward that as a goal. This problem asks you to calculate and evaluate the company's variances.

Go to the book's companion website, at **www.wiley.com/college/kimmel**, to find the completion of this problem.

broadening your perspective

DECISION MAKING ACROSS THE ORGANIZATION

BYP22-1 Tryon Professionals, a management consulting firm, specializes in strategic planning for financial institutions. Joe Barto and Lori Dobson, partners in the firm, are assembling a new strategic planning model for use by clients. The model is designed for use on most personal computers and replaces a rather lengthy manual model currently marketed by the firm. To market the new model, Joe and Lori will need to provide clients with an estimate of the number of labor hours and computer time needed to operate the model. The model is currently being test-marketed at five small financial institutions. These financial institutions are listed below, along with the number of combined computer/labor hours used by each institution to run the model one time.

Financial Institutions	Computer/Labor Hours Required
Midland National	25
First State	45
Financial Federal	40
Pacific America	30
Lakeview National	30
Total	170
Average	34

Any company that purchases the new model will need to purchase user manuals for the system. User manuals will be sold to clients in cases of 20, at a cost of $300 per case. One manual must be used each time the model is run because each manual includes a nonreusable computer-accessed password for operating the system. Also required are specialized computer forms that are sold only by Tryon. The specialized forms are sold in packages of 250, at a cost of $50 per package. One application of the model requires the use of 50 forms. This amount includes two forms that are generally wasted in each application due to printer alignment errors. The overall cost of the strategic planning model to clients is $12,000. Most clients will use the model four times annually.

Tryon must provide its clients with estimates of ongoing costs incurred in operating the new planning model, and would like to do so in the form of standard costs.

Instructions

With the class divided into groups, answer the following.

(a) What factors should be considered in setting a standard for computer/labor hours?
(b) What alternatives for setting a standard for computer/labor hours might be used?
(c) What standard for computer/labor hours would you select? Justify your answer.
(d) Determine the standard materials cost associated with the user manuals and computer forms for each application of the strategic planning model.

MANAGERIAL ANALYSIS

***BYP22-2** Al Finney and Associates is a medium-sized company located near a large metropolitan area in the Midwest. The company manufactures cabinets of mahogany, oak, and other fine woods for use in expensive homes, restaurants, and hotels. Although some of the work is custom, many of the cabinets are a standard size.

One such non-custom model is called Luxury Base Frame. Normal production is 1,000 units. Each unit has a direct labor hour standard of 5 hours. Overhead is applied to production based on standard direct labor hours. During the most recent month, only 900 units were produced; 4,500 direct labor hours were allowed for standard production, but only 4,000 hours were used. Standard and actual overhead costs were as follows.

	Standard (1,000 units)	Actual (900 units)
Indirect materials	$ 12,000	$ 12,300
Indirect labor	43,000	51,000
(Fixed) Manufacturing supervisors salaries	22,000	22,000
(Fixed) Manufacturing office employees salaries	13,000	11,500
(Fixed) Engineering costs	27,000	25,000
Computer costs	10,000	10,000
Electricity	2,500	2,500
(Fixed) Manufacturing building depreciation	8,000	8,000
(Fixed) Machinery depreciation	3,000	3,000
(Fixed) Trucks and forklift depreciation	1,500	1,500
Small tools	700	1,400
(Fixed) Insurance	500	500
(Fixed) Property taxes	300	300
Total	$143,500	$149,000

Instructions

(a) Determine the overhead application rate.
(b) Determine how much overhead was applied to production.
(c) Calculate the total overhead variance, controllable variance, and volume variance.
(d) Decide which overhead variances should be investigated.
(e) Discuss causes of the overhead variances. What can management do to improve its performance next month?

REAL-WORLD FOCUS

BYP22-3 Glassmaster Co. is organized as two divisions and one subsidiary. One division focuses on the manufacture of filaments such as fishing line and sewing thread; the other division manufactures antennas and specialty fiberglass products. Its subsidiary manufactures flexible steel wire controls and molded control panels.

The annual report of Glassmaster provides the following information.

GLASSMASTER COMPANY
Management Discussion

Gross profit margins for the year improved to 20.9% of sales compared to last year's 18.5%. All operations reported improved margins due in large part to improved operating efficiencies as a result of cost reduction measures implemented during the second and third quarters of the fiscal year and increased manufacturing throughout due to higher unit volume sales. Contributing to the improved margins was a favorable materials price variance due to competitive pricing by suppliers as a result of soft demand for petrochemical-based products. This favorable variance is temporary and will begin to reverse itself as stronger worldwide demand for commodity products improves in tandem with the economy. Partially offsetting these positive effects on profit margins were competitive pressures on sales prices of certain product lines. The company responded with pricing strategies designed to maintain and/or increase market share.

Instructions

(a) Is it apparent from the information whether Glassmaster utilizes standard costs?
(b) Do you think the price variance experienced should lead to changes in standard costs for the next fiscal year?

MANAGERIAL ACCOUNTING ON THE WEB

BYP22-4 The Balanced Scorecard Institute *(www.balancedscorecard.org)* is a great resource for information about implementing the balanced scorecard. One item of interest provided at its website is an example of a balanced scorecard for a regional airline.

Address: **http://www.balancedscorecard.org/portals/0/pdf/regional_airline.pdf**, or go to **www.wiley.com/college/kimmel**

Instructions

Go to the address above and answer the following questions.
(a) What are the objectives identified for the airline for each perspective?
(b) What measures are used for the objectives in the customer perspective?
(c) What initiatives are planned to achieve the objective in the learning perspective?

COMMUNICATION ACTIVITY

BYP22-5 The setting of standards is critical to the effective use of standards in evaluating performance.

Instructions

Explain the following in a memo to your instructor.
(a) The comparative advantages and disadvantages of ideal versus normal standards.
(b) The factors that should be included in setting the price and quantity standards for direct materials, direct labor, and manufacturing overhead.

ETHICS CASE

BYP22-6 At Timmons Manufacturing Company, production workers in the Painting Department are paid on the basis of productivity. The labor time standard for a unit of production is established through periodic time studies conducted by DeVito Management Consultants. In a time study, the actual time required to complete a specific task by a worker is observed. Allowances are then made for preparation time, rest periods, and clean-up time. Don Carmen is one of several veterans in the Painting Department.

Don is informed by DeVito that he will be used in the time study for the painting of a new product. The findings will be the basis for establishing the labor time standard for the next 6 months. During the test, Don deliberately slows his normal work pace in an effort to obtain a labor time standard that will be easy to meet. Because it is a new product, the DeVito representative who conducted the test is unaware that Don did not give the test his best effort.

Instructions

(a) Who was benefited and who was harmed by Don's actions?
(b) Was Don ethical in the way he performed the time study test?
(c) What measure(s) might the company take to obtain valid data for setting the labor time standard?

"ALL ABOUT YOU" ACTIVITY

BYP22-7 From the time you first entered school many years ago, instructors have been measuring and evaluating you by imposing standards. In addition, many of you will pursue professions that administer professional examinations to attain recognized certification. Recently, a federal commission presented proposals suggesting all public colleges and universities should require standardized tests to measure their students' learning.

Instructions

Read the article at **www.signonsandiego.com/uniontrib/20060811/news_1n11colleges.html**, and answer the following questions.
(a) What areas of concern did the panel's recommendations address?
(b) What are possible advantages of standard testing?
(c) What are possible disadvantages of standard testing?
(d) Would you be in favor of standardized tests?

Answers to Insight and Accounting Across the Organization Questions

p. 1140 How Do Standards Help a Business? **Q:** How will the creation of such standards help a business or organization? **A:** A business or organization may use the data to compare its performance relative to others with regard to common practices such as processing a purchase order or filling a sales order. Armed with this information, an organization can determine which areas to focus on with improvement campaigns.

p. 1143 How Can We Make Susan's Chili Profitable? **Q:** How might management use this raw material cost information? **A:** Management might decide to increase the price of its chili. Or, it might revise its recipes to use cheaper ingredients. Or, it might eliminate some products until ingredients are available at costs closer to standard. Regarding the waste due to dull blades, management should reconsider its maintenance policy, to balance the cost of maintenance versus the cost of wasted product.

p. 1156 It May Be Time to Fly United Again **Q:** Which of the perspectives of a balanced scorecard were the focus of United's CEO? **A:** Improving on-time flight departures is an objective within the internal process perspective. Customer intent to fly United again is an objective within the customer perspective.

study objectives

After studying this chapter, you should be able to:

1. Identify the steps in management's decision-making process.
2. Describe the concept of incremental analysis.
3. Identify the relevant costs in accepting an order at a special price.
4. Identify the relevant costs in a make-or-buy decision.
5. Give the decision rule for whether to sell or process materials further.
6. Identify the factors to consider in retaining or replacing equipment.
7. Explain the relevant factors in whether to eliminate an unprofitable segment.
8. Determine which products to make and sell when resources are limited.
9. Contrast annual rate of return and cash payback in capital budgeting.
10. Distinguish between the net present value and internal rate of return methods.

feature story

SOUP IS GOOD FOOD

When you hear the word *Campbell*, what is the first thing that comes to mind? Soup. Campbell *is* soup. It sells 38 percent of all the soup—including homemade—consumed in the United States.

But can a company survive on soup alone? In an effort to expand its operations and to lessen its reliance on soup, Campbell Soup Company (*www.campbellsoup.com*) in 1990 began searching for an additional line of business. Campbell's management believed it saw an opportunity in convenient meals that were low in fat, nutritionally rich, and had therapeutic value for heart patients and diabetics. This venture would require a huge investment—but the rewards were potentially tremendous.

The initial investment required building food labs, hiring nutritional scientists, researching prototype products, constructing new production facilities, and marketing the new products. Management predicted that with an initial investment of roughly $55 million, the company might generate sales of $200 million per year.

By 1994 the company had created 24 meals, and an extensive field-study revealed considerable health benefits from the products. Unfortunately, initial sales of the new product line, called Intelligent Quisine, were less than stellar. In 1997 Campbell hired a consulting firm to evaluate whether to continue the project. Product development of the new line was costing $20 million per year—a sum that some managers felt could be better spent developing new products in other divisions, or expanding overseas operations. In 1998 Campbell discontinued the project.

Campbell was not giving up on growth, but simply had decided to refocus its efforts on soup. The company's annual report stated management's philosophy: "Soup will be our growth engine." Campbell has sold off many of its non-soup businesses and in a recent year introduced 20 new soup products.

Source: Vanessa O'Connell, "Food for Thought: How Campbell Saw a Breakthrough Menu Turn into Leftovers," *Wall Street Journal* (October 6, 1998).

INSIDE CHAPTER 23 . . .

- **The Pressure to Outsource** *(p. 1193)*
- **High Stakes for Large TVs** *(p. 1202)*

preview of chapter 23

An important purpose of management accounting is to provide relevant information for decision making. Examples of these decisions include the following: (1) Campbell Soup's decision to produce "therapeutic meals" rather than some other food product. (2) Boeing's strategic decisions to spend $5 billion to build a plane for the 21st century—the B-777—and to cancel development of a larger version of the B-747. (3) The Coca-Cola Company's decision to spend $750 million to build twelve plants in Russia.

This chapter begins with an explanation of management's decision-making process. It then considers the topics of incremental analysis and capital budgeting. The content and organization of Chapter 23 are as follows.

Incremental Analysis and Capital Budgeting

Incremental Analysis	Capital Budgeting
• Management's decision-making process	• Evaluation process
• Accept special-price order	• Annual rate of return
• Make or buy	• Cash payback
• Sell or process further	• Discounted cash flow: NPV and IRR
• Retain or replace equipment	
• Eliminate unprofitable segment	
• Allocate limited resources	

section one

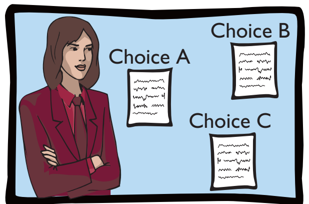
Incremental Analysis

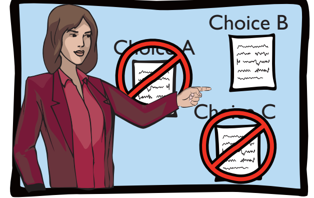
study objective 1

Identify the steps in management's decision-making process.

Management's Decision-Making Process

Making decisions is an important management function. Management's decision-making process does not always follow a set pattern, because decisions vary significantly in their scope, urgency, and importance. It is possible, though, to identify some steps that are frequently involved in the process. These steps are shown in Illustration 23-1.





1. Identify the problem and assign responsibility → 2. Determine and evaluate possible courses of action → 3. Make a decision → 4. Review results of the decision

Illustration 23-1
Management's decision-making process

Accounting's contribution to the decision-making process occurs primarily in Steps 2 and 4—evaluating possible courses of action and reviewing the results. In Step 2, for each possible course of action, accounting provides relevant revenue and cost data. These show the expected overall effect on net income. In Step 4, accounting prepares internal reports that review the actual impact of the decision.

In making business decisions, management ordinarily considers both financial and nonfinancial information. *Financial information* is related to revenues and costs and their effect on the company's overall profitability. *Nonfinancial information* relates to such factors as the effect of the decision on employee turnover, the environment, or the overall image of the company in the community. Although the nonfinancial information can be as important as the financial information, we focus primarily on financial information that is relevant to the decision.

THE INCREMENTAL ANALYSIS APPROACH

study objective 2
Describe the concept of incremental analysis.

Decisions involve a choice among alternative courses of action. Suppose that you were deciding whether to purchase or lease a computer for use in doing your accounting homework. The financial data relate to the cost of leasing versus the cost of purchasing. For example, leasing involves periodic lease payments; purchasing requires "up-front" payment of the purchase price. In other words, the financial data relevant to the decision are the data that vary among the possible alternatives. The process used to identify the financial data that change under alternative courses of action is called **incremental analysis**. In some cases, when you use incremental analysis, both costs **and** revenues will change. In other cases, only costs **or** revenues will change.

Alternative Terminology
Incremental analysis is also called *differential analysis* because the analysis focuses on differences.

Just as your decision to buy or lease a PC affects your future, similar decisions, on a larger scale, affect a company's future. Incremental analysis identifies the probable effects of those decisions on future earnings. Such analysis inevitably involves estimates and uncertainty. Gathering data for incremental analyses may involve market analysts, engineers, and accountants. In quantifying the data, the accountant is expected to produce the most reliable information available at the time the decision must be made.

HOW INCREMENTAL ANALYSIS WORKS

The following example illustrates the basic approach in incremental analysis.

Incremental Analysis.xls

File Edit View Insert Format Tools Data Window Help

	A	B	C	D
1		Alternative A	Alternative B	Net Income Increase (Decrease)
2	Revenues	$125,000	$110,000	$ (15,000)
3	Costs	100,000	80,000	20,000
4	Net income	$ 25,000	$ 30,000	$ 5,000
5				

Illustration 23-2 Basic approach in incremental analysis

This example compares alternative B with alternative A. The net income column shows the differences between the alternatives. In this case, incremental revenue will be $15,000 less under alternative B than under alternative A, but a $20,000 incremental cost saving will be realized.[1] Thus, alternative B will produce $5,000 more net income than alternative A.

Incremental analysis sometimes involves changes that at first glance might seem contrary to your intuition. For example, sometimes variable costs *do not change* under the alternative courses of action. Also, sometimes fixed costs *do change*. For example, direct labor, normally a variable cost, is not an incremental cost in deciding between two new factory machines if each asset requires the

[1]Although income taxes are sometimes important in incremental analysis, they are ignored in the chapter for simplicity's sake.

same amount of direct labor. In contrast, rent expense, normally a fixed cost, is an incremental cost in a decision to continue occupancy of a building or to purchase or lease a new building.

Types of Incremental Analysis

A number of different types of decisions involve incremental analysis. The more common types of decisions are:

1. Accept an order at a special price.
2. Make or buy.
3. Sell or process further.
4. Retain or replace equipment.
5. Eliminate an unprofitable business segment.
6. Allocate limited resources.

We consider each of these types of analysis in the following pages.

ACCEPT AN ORDER AT A SPECIAL PRICE

Identify the relevant costs in accepting an order at a special price.

Sometimes, a company has an opportunity to obtain additional business if it is willing to make a major price concession to a specific customer. To illustrate, assume that Sunbelt Company produces 100,000 automatic blenders per month, which is 80% of plant capacity. Variable manufacturing costs are $8 per unit. Fixed manufacturing costs are $400,000, or $4 per unit. The blenders are normally sold directly to retailers at $20 each. Sunbelt has an offer from Mexico Co. (a foreign wholesaler) to purchase an additional 2,000 blenders at $11 per unit. Acceptance of the offer would not affect normal sales of the product, and the additional units can be manufactured without increasing plant capacity. What should management do?

Helpful Hint This is a good example of different costs for different purposes. In the long-run all costs are relevant, but for this decision only costs that change are relevant.

If management makes its decision on the basis of the total cost per unit of $12 ($8 + $4), the order would be rejected, because costs ($12) would exceed revenues ($11) by $1 per unit. However, since the units can be produced within existing plant capacity, the special order **will not increase fixed costs**. The relevant data for the decision, therefore, are the variable manufacturing costs per unit of $8 and the expected revenue of $11 per unit. Thus, as shown in Illustration 23-3, Sunbelt will increase its net income by $6,000 by accepting this special order.

Illustration 23-3 Incremental analysis–accepting an order at a special price

	A	B	C	D
1		Reject Order	Accept Order	Net Income Increase (Decrease)
2	Revenues	$0	$22,000	$ 22,000
3	Costs	0	16,000	(16,000)
4	Net income	$0	$ 6,000	$ 6,000
5				

Two points should be emphasized: First, we assume that sales of the product in other markets are not affected by this special order. If other sales are affected, then Sunbelt must consider the lost sales in making the decision. Second, if Sunbelt is operating at full capacity, it is likely that the special order

would be rejected. Under such circumstances, the company would have to expand plant capacity. In that case, the special order would have to absorb these additional fixed manufacturing costs, as well as the variable manufacturing costs.

before you go on...

Do it! Cobb Company incurs a cost of $28 per unit, of which $18 is variable, to make a product that normally sells for $42. A foreign wholesaler offers to buy 5,000 units at $25 each. Cobb will incur shipping costs of $1 per unit. Compute the increase or decrease in net income Cobb will realize by accepting the special order, assuming Cobb has excess operating capacity. Should Cobb Company accept the special order?

SPECIAL ORDERS

Action Plan

- Identify all revenues that will change as a result of accepting the order.
- Identify all costs that will change as a result of accepting the order, and net this amount against the change in revenues.

Solution

	Reject	Accept	Net Income Increase (Decrease)
Revenue	$–0–	$125,000	$125,000
Costs	–0–	95,000*	(95,000)
Net income	$–0–	$ 30,000	$ 30,000

*(5,000 × $18) + (5,000 × $1)

Given the result of the analysis, Cobb Company should accept the special order.

Related exercise material: **BE23-3, Do it! 23-1, E23-2,** and **E23-3.**

MAKE OR BUY

study objective 4
Identify the relevant costs in a make-or-buy decision.

When a manufacturer assembles component parts in producing a finished product, management must decide whether to make or buy the components. For example, General Motors Corporation may either make or buy the batteries, tires, and radios used in its cars. Similarly, Hewlett-Packard Corporation may make or buy the electronic circuitry, cases, and printer heads for its printers. Boeing recently sold some of its commercial aircraft factories in an effort to cut production costs and focus instead on engineering and final assembly rather than manufacturing. The decision to make or buy components should be made on the basis of incremental analysis.

To illustrate the analysis, assume that Baron Company incurs the following annual costs in producing 25,000 ignition switches for motor scooters.

Direct materials	$ 50,000
Direct labor	75,000
Variable manufacturing overhead	40,000
Fixed manufacturing overhead	60,000
Total manufacturing costs	$225,000
Total cost per unit ($225,000 ÷ 25,000)	**$ 9.00**

Illustration 23-4 Annual product cost data

Or, instead of making its own switches, Baron Company might purchase the ignition switches from Ignition Inc. at a price of $8 per unit. The question again is, "What should management do?"

At first glance, it appears that management should purchase the ignition switches for $8, rather than make them at a cost of $9. However, a review of operations indicates that if Baron purchases the ignition switches from Ignition Inc., it will eliminate *all* of its variable costs but only $10,000 of its fixed

manufacturing costs. Thus, $50,000 of the fixed manufacturing costs will remain if the ignition switches are purchased. The relevant costs for incremental analysis, therefore, are as follows.

Illustration 23-5
Incremental analysis—make or buy

Incremental Analysis - Make or buy.xls

	A	B	C	D
1		**Make**	**Buy**	**Net Income Increase (Decrease)**
2	Direct materials	$ 50,000	$ 0	**$ 50,000**
3	Direct labor	75,000	0	**75,000**
4	Variable manufacturing costs	40,000	0	**40,000**
5	Fixed manufacturing costs	60,000	50,000	**10,000**
6	Purchase price (25,000 × $8)	0	200,000	**(200,000)**
7	Total annual cost	$225,000	$250,000	**$ (25,000)**
8				

Ethics Note In the make-or-buy decision, it is important for management to take into account the social impact of its choice. For instance, buying may be the most economically feasible solution, but such action could result in the closure of a manufacturing plant that employs many good workers.

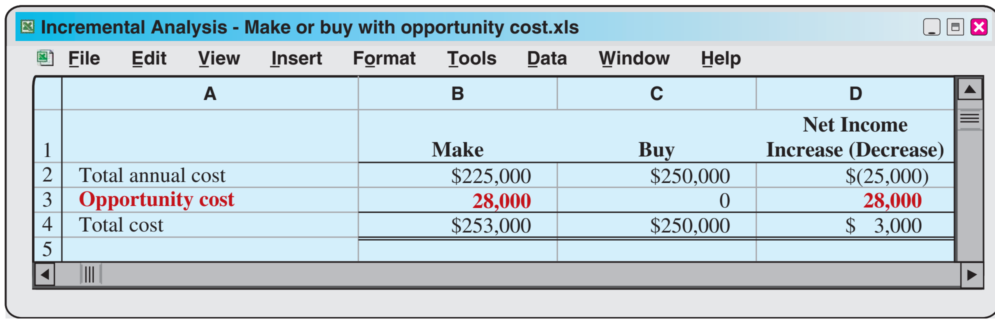
This analysis indicates that Baron Company will incur $25,000 of additional costs by buying the ignition switches. Therefore, Baron should continue to make the ignition switches, even though the total manufacturing cost is $1 higher than the purchase price. The reason is that if the company purchases the ignition switches, it will still have fixed costs of $50,000 to absorb.

Opportunity Cost

The foregoing make-or-buy analysis is complete only if the productive capacity used to make the ignition switches cannot be converted to another purpose. If there is an opportunity to use this productive capacity in some other manner, then this opportunity cost must be considered. **Opportunity cost** is the potential benefit that may be obtained by following an alternative course of action.

To illustrate, assume that through buying the switches, Baron Company can use the released productive capacity to generate additional income of $28,000. This lost income is an additional cost of continuing to make the switches in the make-or-buy decision. This opportunity cost therefore is added to the "Make" column, for comparison. As shown, it is now advantageous to buy the ignition switches.

Illustration 23-6
Incremental analysis—make or buy, with opportunity cost



Incremental Analysis - Make or buy with opportunity cost.xls

	A	B	C	D
1		**Make**	**Buy**	**Net Income Increase (Decrease)**
2	Total annual cost	$225,000	$250,000	$(25,000)
3	**Opportunity cost**	**28,000**	0	**28,000**
4	Total cost	$253,000	$250,000	$ 3,000
5				

The qualitative factors in this decision include the possible loss of jobs for employees who produce the ignition switches. In addition, management must assess how long the supplier will be able to satisfy the company's quality control standards at the quoted price per unit.

before you go on...

Do it! Juanita Company must decide whether to make or buy some of its components. The costs of producing 166,000 electrical cords for its floor lamps are as follows.

MAKE OR BUY

Direct materials	$90,000	Variable overhead	$32,000
Direct labor	$20,000	Fixed overhead	$24,000

Instead of making the electrical cords at an average cost per unit of $1.00 ($166,000 ÷ 166,000), the company has an opportunity to buy the cords at $0.90 per unit. If the company purchases the cords, all variable costs and one-fourth of the fixed costs will be eliminated.

(a) Prepare an incremental analysis showing whether the company should make or buy the electrical cords. (b) Will your answer be different if the released productive capacity will generate additional income of $5,000?

Action Plan

- Look for the costs that change.
- Ignore the costs that do not change.
- Use the format in the chapter for your answer.
- Recognize that opportunity cost can make a difference.

Solution

(a)

	Make	Buy	Net Income Increase (Decrease)
Direct materials	$ 90,000	$ –0–	$ 90,000
Direct labor	20,000	–0–	20,000
Variable manufacturing costs	32,000	–0–	32,000
Fixed manufacturing costs	24,000	18,000	6,000
Purchase price	–0–	149,400	(149,400)
Total cost	$166,000	$167,400	$ (1,400)

This analysis indicates that Juanita Company will incur $1,400 of additional costs if it buys the electrical cords.

(b)

	Make	Buy	Net Income Increase (Decrease)
Total cost	$166,000	$167,400	$ (1,400)
Opportunity cost	5,000		5,000
Total cost	$171,000	$167,400	$ 3,600

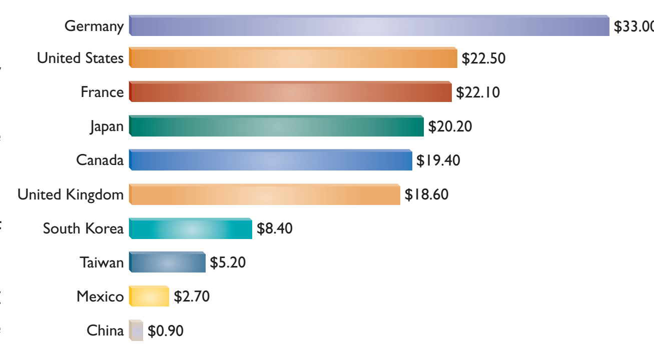
Yes, the answer is different: The analysis shows that net income will be increased by $3,600 if Juanita Company purchases the electrical cords.

Related exercise material: **BE23-4, Do it! 23-2,** and **E23-4.**

Accounting Across the Organization

The Pressure to Outsource

Consider the make-or-buy decision faced by Superior Industries International, Inc., a big aluminum-wheel maker in Van Nuys, California. For years, president Steve Borick had ignored the possibility of Chinese manufacturing. Then Mr. Borick started getting a blunt message from General Motors and Ford, with whom Superior does 85% of its business: Match the prices of Chinese wheel suppliers. Both auto makers said separately that if Superior could not agree to the lower prices, they would go directly to Chinese manufacturers or turn to other North American wheel-makers.



Stories like this, repeated in various industries, illustrate why manufacturers engage in overseas *off-shoring* (outsourcing). For example, compare the relative labor costs in major auto-producing nations, in dollars per hour, to see why incremental analysis often leads to outsourcing production to countries like China.

Source: Norihiko Shirouzu, "Big Three's Outsourcing Plan: Make Parts Suppliers Do It," *Wall Street Journal* (June 10, 2004), p. A1.

What are the disadvantages of outsourcing to a foreign country? (See page 1228.)

SELL OR PROCESS FURTHER

study objective 5

Give the decision rule for whether to sell or process materials further.

Many manufacturers have the option of selling products at a given point in the production cycle or continuing to process with the expectation of selling them at a higher price. For example, a bicycle manufacturer such as Schwinn could sell its 10-speed bicycles to retailers either unassembled or assembled. A furniture manufacturer such as Ethan Allen could sell its dining room sets to furniture stores either unfinished or finished. The sell-or-process-further decision should be made on the basis of incremental analysis. The basic decision rule is: **Process further as long as the incremental revenue from such processing exceeds the incremental processing costs.**

Assume, for example, that Woodmasters Inc. makes tables. The cost to manufacture an unfinished table is $35, computed as follows.

Illustration 23-7
Per unit cost of unfinished table

Direct material	$15
Direct labor	10
Variable manufacturing overhead	6
Fixed manufacturing overhead	4
Manufacturing cost per unit	**$35**

The selling price per unfinished unit is $50. Woodmasters currently has unused productive capacity that is expected to continue indefinitely. Management concludes that some of this capacity can be used to finish the tables and sell them at $60 per unit. For a finished table, direct materials will increase $2 and direct labor costs will increase $4. Variable manufacturing overhead costs will increase by $2.40 (60% of direct labor). No increase is anticipated in fixed manufacturing overhead. Illustration 23-8 shows the incremental analysis on a per unit basis.

Illustration 23-8
Incremental analysis—sell or process further

Incremental Analysis - Sell or process further.xls

File Edit View Insert Format Tools Data Window Help

	A	B	C	D
1		**Sell**	**Process Further**	**Net Income Increase (Decrease)**
2	Sales per unit	$50.00	$60.00	**$10.00**
3	Cost per unit			
4	Direct materials	15.00	17.00	**(2.00)**
5	Direct labor	10.00	14.00	**(4.00)**
6	Variable manufacturing overhead	6.00	8.40	**(2.40)**
7	Fixed manufacturing overhead	4.00	4.00	**0.00**
8	Total	35.00	43.40	**(8.40)**
9	Net income per unit	$15.00	$16.60	**$ 1.60**
10				

Helpful Hint Current net income is known. Net income from processing further is an estimate. In making its decision, management could add a "risk" factor for the estimate.

It is advantageous for Woodmaster to process the tables further. The incremental revenue of $10.00 from the additional processing is $1.60 higher than the incremental processing costs of $8.40.

RETAIN OR REPLACE EQUIPMENT

study objective 6

Identify the factors to consider in retaining or replacing equipment.

Management often has to decide whether to continue using an asset or replace it. To illustrate, assume that Jeffcoat Company has a factory machine with a book value of $40,000 and a remaining useful life of four years. A new machine is available that costs $120,000. It is expected to have zero salvage value at the end of its four-year useful life. If Jeffcoat acquires the new machine, variable manufacturing costs are expected to decrease from $160,000 to $125,000 annually,

and the old unit will be scrapped. The incremental analysis for the four-year period is as follows.

Illustration 23-9 Incremental analysis—retain or replace equipment

Incremental Analysis - Retain or replace equipment.xls

File Edit View Insert Format Tools Data Window Help

	A	B	C	D	E	F
1		Retain Equipment		Replace Equipment		Net Income Increase (Decrease)
2	Variable manufacturing costs	$640,000	a	$500,000	b	$140,000
3	New machine cost			120,000		(120,000)
4	Total	$640,000		$620,000		$ 20,000
5						
6	[a](4 years × $160,000)					
7	[b](4 years × $125,000)					
8						

In this case, it is advantageous to replace the equipment. The lower variable manufacturing costs related to the new equipment more than offset its purchase cost.

One other point about Jeffcoat's decision: **The book value of the old machine does not affect the decision.** Book value is a **sunk cost**, which is a cost that cannot be changed by any present or future decision. Sunk costs **are not relevant in incremental analysis**. In this example, if the company retains the asset, book value is depreciated over its remaining useful life. Or, if the company acquires the new unit, book value is recognized as a loss of the current period. Thus, the effect of book value on current and future earnings is the same regardless of the replacement decision. However, **any trade-in allowance or cash disposal value of the existing asset is relevant** to the decision, because the company will not realize this value if the old asset is continued in use.

ELIMINATE AN UNPROFITABLE SEGMENT

study objective 7
Explain the relevant factors in whether to eliminate an unprofitable segment.

Management sometimes must decide whether to eliminate an unprofitable business segment. For example, in recent years many airlines have quit servicing certain cities or have cut back on the number of flights; and Goodyear recently quit producing several brands in the low-end tire market. Again, the key is to **focus on the relevant costs—the data that change under the alternative courses of action**. To illustrate, assume that Martina Company manufactures tennis racquets in three models: Pro, Master, and Champ. Pro and Master are profitable lines. Champ (highlighted in color in the table) operates at a loss. Condensed income statement data for the three segments are:

Illustration 23-10 Segment income data

	Pro	Master	Champ	Total
Sales	$800,000	$300,000	$100,000	$1,200,000
Variable expenses	520,000	210,000	90,000	820,000
Contribution margin	280,000	90,000	10,000	380,000
Fixed expenses	80,000	50,000	30,000	160,000
Net income	$200,000	$ 40,000	$ (20,000)	$ 220,000

It might be expected that total net income will increase by $20,000 to $240,000 if Martina Company eliminates the unprofitable Champ line of racquets. However, **net income may decrease if that line is discontinued**. The reason is that the other products will have to absorb the fixed expenses allocated to the Champ racquets. To illustrate, assume that the $30,000 of fixed costs

Helpful Hint A decision to discontinue a segment based solely on the bottom line—net loss—is inappropriate.

applicable to the unprofitable segment are allocated ⅔ and ⅓ to the Pro and Master product lines, respectively. Fixed expenses will increase to $100,000 ($80,000 + $20,000) in the Pro line and to $60,000 ($50,000 + $10,000) in the Master line. Illustration 23-11 shows the revised income statements.

Illustration 23-11
Income data after eliminating unprofitable product line

	Pro	Master	Total
Sales	$800,000	$300,000	$1,100,000
Variable expenses	520,000	210,000	730,000
Contribution margin	280,000	90,000	370,000
Fixed expenses	100,000	60,000	160,000
Net Income	$180,000	$ 30,000	$ 210,000

Total net income has decreased $10,000 ($220,000 − $210,000). This result is also obtained in the following incremental analysis of the Champ racquets.

Illustration 23-12
Incremental analysis—eliminating an unprofitable segment

Incremental Analysis - Eliminating an unprofitable segment.xls

File Edit View Insert Format Tools Data Window Help

	A	B	C	D
1		Continue	Eliminate	Net Income Increase (Decrease)
2	Sales	$100,000	$ 0	$(100,000)
3	Variable costs	90,000	0	90,000
4	Contribution margin	10,000	0	(10,000)
5	Fixed costs	30,000	30,000	0
6	Net income	$ (20,000)	$(30,000)	$ (10,000)
7				

The loss in net income is attributable to the contribution margin ($10,000) that the company will not realize if it discontinues the segment.

In deciding on the future status of an unprofitable segment, management should consider the effect of elimination on related product lines. It may be possible for continuing product lines to obtain some or all of the sales lost by the discontinued product line. In some businesses, services or products may be linked—for example, free checking accounts at a bank, or coffee at a donut shop. In addition, management should consider the effect of eliminating the product line on employees who may have to be discharged or retrained.

DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
Which alternative should the company choose?	All relevant costs and opportunity costs	Compare relevant cost of each alternative.	Choose the alternative that maximizes net income.

before you go on...

UNPROFITABLE SEGMENTS

Do it! Lambert, Inc. manufactures several types of accessories. For the year, the knit hats and scarves line had sales of $400,000, variable expenses of $310,000, and fixed expenses of $120,000. Therefore, the knit hats and scarves line had a net loss of $30,000. If Lambert eliminates the knit hats and scarves line, $20,000 of fixed costs will remain. Prepare an analysis showing whether the company should eliminate knit hat and scarves line.

Solution

	Continue	Eliminate	Net Income Increase (Decrease)
Sales	$400,000	$ 0	$(400,000)
Variable costs	310,000	0	310,000
Contribution margin	90,000	0	(90,000)
Fixed costs	120,000	20,000	100,000
Net income	$ (30,000)	$(20,000)	$ 10,000

The analysis indicates that Lambert should eliminate the knit and scarves line because net income will increase $10,000.

Related exercise material: **BE23-7, Do it! 23-3, E23-8,** and **E23-9.**

Action Plan

- Identify the revenues that will change as a result of eliminating a product line.
- Identify all costs that will change as a result of eliminating a product line, and net the amount against the revenues.

ALLOCATE LIMITED RESOURCES

study objective 8
Determine which products to make and sell when resources are limited.

Companies, like individuals, face limited resources. For a retail department store, the limited resource may be floor space. For a manufacturing company, the limited resource may be raw materials, direct labor hours, or machine capacity. As discussed in Chapter 19, when a company has limited resources, management must decide which products to make and sell in order to maximize net income.

To illustrate, assume that Collins Company manufactures deluxe and standard pen and pencil sets. The limiting resource is machine capacity, which is 3,600 hours per month. Relevant data consist of the following.

	Deluxe Sets	Standard Sets
Contribution margin per unit	$8	$6
Machine hours required	0.4	0.2

Illustration 23-13
Contribution margin and machine hours

The deluxe sets may appear to be more profitable: They have a higher contribution margin ($8) than the standard sets ($6). However, the standard sets take fewer machine hours to produce than the deluxe sets. Therefore, Collins needs to find the **contribution margin per unit of limited resource**—in this case, contribution margin per machine hour. This is obtained by dividing the contribution margin per unit of each product by the number of units of the limited resource required for each product, as shown in Illustration 23-14.

Helpful Hint CM alone is not enough in this decision. The key factor is CM per unit of limited resource.

	Deluxe Sets	Standard Sets
Contribution margin per unit (a)	$8	$6
Machine hours required (b)	0.4	0.2
Contribution margin per unit of limited resource [(a) ÷ (b)]	**$20**	**$30**

Illustration 23-14
Contribution margin per unit of limited resource

The computation shows that the standard sets have a higher contribution margin per unit of limited resource. This suggests that, given sufficient demand for standard sets, the company should shift the sales mix to standard sets or should increase machine capacity. If Collins Company is able to increase machine capacity from 3,600 hours to 4,200 hours, the additional 600 hours could be used to produce either the standard or deluxe pen and pencil sets. The total contribution margin under each alternative is found by

multiplying the machine hours by the contribution margin per unit of limited resource, as shown below.

Illustration 23-15
Incremental analysis–computation of total contribution margin

	Produce Deluxe Sets	Produce Standard Sets
Machine hours (a)	600	600
Contribution margin per unit of limited resource (b)	$20	$30
Contribution margin [(a) × (b)]	**$12,000**	**$18,000**

From this analysis, we see that to maximize net income, Collins should use all of the increased capacity to make and sell the standard sets.

DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
How many units of product A and B should we produce in light of a limited resource?	Contribution margin per unit, limited resource required per unit	Contribution margin per unit of limited resource = Contribution margin per unit / Limited resource per unit	Any additional capacity of limited resource should be applied toward the product with higher contribution margin per unit of limited resource.

section two

Capital Budgeting

Individuals make capital expenditures when they buy a new home, car, or television set. Similarly, businesses make capital expenditures when they modernize plant facilities or expand operations. Companies like Campbell Soup must constantly determine how to invest their resources. Other examples: Hollywood studios recently built 25 new sound stage projects to allow for additional filming in future years. Also, Union Pacific Resources Group Inc. announced that it would cut its capital budget by 19% in order to use the funds to reduce its outstanding debt.

In business, as for individuals, the amount of possible capital expenditures usually exceeds the funds available for such expenditures. Thus, the resources available must be allocated (budgeted) among the competing alternatives. The process of making capital expenditure decisions in business is known as **capital budgeting**. Capital budgeting involves choosing among various capital projects to find the one(s) that will maximize a company's return on its financial investment.

Evaluation Process

Many companies follow a standard process in capital budgeting. At least once a year, top management requests proposals for projects from each department. A capital budgeting committee screens the proposals and submits its findings to the officers of the company. The officers, in turn, select the projects they believe to be most worthy of funding. They submit this list to the board of directors. Ultimately, the directors approve the capital expenditure budget for the year.

The involvement of top management and the board of directors in the process demonstrates the importance of capital budgeting decisions. These decisions often have a significant impact on a company's future profitability. In fact, poor capital budgeting decisions have led to the bankruptcy of some companies.

Accounting data are indispensable in assessing the probable effects of capital expenditures. To provide management with relevant data for capital budgeting decisions, you should be familiar with the quantitative techniques that may be used. The three most common techniques are: (1) annual rate of return, (2) cash payback, and (3) discounted cash flow. We demonstrate each of these techniques in the following sections. To illustrate the three quantitative techniques, assume that Tappan Company is considering an investment of $130,000 in new equipment. The new equipment is expected to last 10 years. It will have zero salvage value at the end of its useful life. Tappan uses the straight-line method of depreciation for accounting purposes. The expected annual revenues and costs of the new product that will be produced from the investment are:

Illustration 23-16
Estimated annual net income from capital expenditure

Sales		$200,000
Less: Costs and expenses		
Manufacturing costs (exclusive of depreciation)	$145,000	
Depreciation expenses ($130,000 ÷ 10)	13,000	
Selling and administrative expenses	22,000	180,000
Income before income taxes		20,000
Income tax expense		7,000
Net income		$ 13,000

Annual Rate of Return

study objective 9
Contrast annual rate of return and cash payback in capital budgeting.

The **annual rate of return technique** is based directly on accounting data. It indicates **the profitability of a capital expenditure** by dividing expected annual net income by the average investment. Illustration 23-17 shows the formula for computing annual rate of return.

Illustration 23-17
Annual rate of return formula

$$\text{Expected Annual Net Income} \div \text{Average Investment} = \text{Annual Rate of Return}$$

Expected annual net income is obtained from the projected income statement. Tappan Company's expected annual net income is $13,000. Average investment is derived from the following formula.

Illustration 23-18
Formula for computing average investment

$$\text{Average investment} = \frac{\text{Original Investment} + \text{Value at End of Useful Life}}{2}$$

The "value at the end of useful life" is the asset's salvage value, if any.

For Tappan Company, average investment is $65,000 (($130,000 + $0) ÷ 2). The expected annual rate of return for Tappan Company's investment in new equipment is therefore 20%, computed as follows:

$$\$13,000 \div \$65,000 = 20\%$$

Management then compares this annual rate of return with its required **minimum rate of return** for investments of similar risk. The minimum rate of return is generally based on the company's **cost of capital**. The **cost of capital** is the rate of return that management expects to pay on all borrowed and

Alternative Terminology The minimum rate of return is also called the *hurdle rate* or *cutoff rate.*

Helpful Hint A capital budgeting decision based on only one technique may be misleading. It is often wise to analyze the investment from a number of different perspectives.

equity funds. The cost of capital is a company-wide (or sometimes a division-wide) rate; it does not relate to the cost of funding a specific project.

The annual rate of return decision rule is: **A project is acceptable if its rate of return is greater than management's minimum rate of return. It is unacceptable when the reverse is true.** When companies use the rate of return technique in deciding among several acceptable projects, **the higher the rate of return for a given risk, the more attractive the investment**.

The principal advantages of this technique are simplicity of calculation and management's familiarity with the accounting terms used in the computation. A major limitation of the annual rate of return approach is that it does not consider the time value of money. For example, no consideration is given as to whether cash inflows will occur early or late in the life of the investment. As explained in Appendix D at the back of the book, recognition of the time value of money can make a significant difference between the future value and the present value of an investment.

Cash Payback

The **cash payback technique** identifies the time period required to recover the cost of the capital investment from the annual cash inflow produced by the investment. Illustration 23-19 presents the formula for computing the cash payback period.

Illustration 23-19 Cash payback formula

Cost of Capital Investment	÷	Net Annual Cash Flow	=	Cash Payback Period

Helpful Hint Net annual cash flow can also be approximated by net cash provided by operating activities from the statement of cash flows.

Net annual cash flow is approximated by taking net income and adding back depreciation expense. Depreciation expense is added back because depreciation on the capital expenditure does not involve an annual outflow of cash. Accordingly, the depreciation deducted in determining net income must be added back to determine net annual cash flows.

In the Tappan Company example, net annual cash flow is $26,000, as shown below.

Illustration 23-20 Computation of net annual cash flow

Net income	$ 13,000
Add: Depreciation expense	13,000
Net annual cash flow	**$26,000**

The cash payback period in this example is therefore five years, computed as follows.

$$\$130,000 \div \$26,000 = 5 \text{ years}$$

Evaluation of the payback period is often related to the expected useful life of the asset. For example, assume that at Tappan Company a project is unacceptable if the payback period is longer than 60% of the asset's expected useful life. The five-year payback period in this case is 50% of the project's expected useful life. Thus, the project is acceptable.

It follows that when companies use the payback method to decide among acceptable alternative projects, **the shorter the payback period, the more attractive the investment**. This is true for two reasons: First, the earlier the investment is recovered, the sooner the company can use the cash funds for other purposes. Second, the risk of loss from obsolescence and changed economic conditions is less in a shorter payback period.

The preceding computation of the cash payback period assumes **equal** cash flows in each year of the investment's life. In many cases, this assumption is

not valid. In the case of **uneven** cash flows, the company determines the cash payback period when the cumulative net cash flows from the investment equal the cost of the investment.

To illustrate, assume that Chen Company proposes an investment in a new website that is estimated to cost $300,000. Illustration 23-21 shows the proposed investment cost, net annual cash flows, cumulative net cash flows, and the cash payback period.

Illustration 23-21 Net annual cash flow schedule

Year	Investment	Net Annual Cash Flow	Cumulative Net Cash Flow
0	$300,000		
1		$ 60,000	$ 60,000
2		90,000	150,000
3		90,000	240,000
4		120,000	360,000
5		100,000	460,000

Cash payback period = **3.5 years**

As Illustration 23-21 shows, at the end of year 3, cumulative cash flow of $240,000 is less than the investment cost of $300,000. However, at the end of year 4 the cumulative net cash flow of $360,000 exceeds the investment cost. The net cash flow needed in year 4 to equal the investment cost is $60,000 ($300,000 − $240,000). Assuming the net cash flow occurs evenly during year 4, we then divide this amount by the annual net cash flow in year 4 ($120,000) to determine the point during the year when the cash payback occurs. Thus, we get 0.50 ($60,000/$120,000), or half of the year, and the cash payback period is 3.5 years.

The cash payback method may be useful as an initial screening tool. It may be the most critical factor in the capital budgeting decision for a company that desires a fast turnaround of its investment because of a weak cash position. Like the annual rate of return, cash payback is relatively easy to compute and understand.

However, cash payback is not ordinarily the only basis for the capital budgeting decision because it ignores the expected profitability of the project. To illustrate, assume that Projects X and Y have the same payback period, but Project X's useful life is double the useful life of Project Y's. Project X's earning power, therefore, is twice as long as Project Y's. A further—and major—disadvantage of this technique is that it ignores the time value of money.

before you go on...

Do it! Rochelle Company is considering purchasing new equipment for $250,000. The equipment has a 5-year useful life, and depreciation would be $50,000 (assuming straight-line depreciation and zero salvage value). The purchase of the equipment should increase net income by $25,000 each year for 5 years. (a) Compute the annual rate of return. (b) Compute the cash payback period.

CAPITAL BUDGETING

Action Plan

- Use appropriate formulas:
- Annual rate of return = Expected annual net income ÷ Average investment.
- Average investment = (Original investment + Value at end of useful life) ÷ 2.
- Cash payback period = Cost of capital investment ÷ Net annual cash flow.
- Net annual cash flow = Net income + Depreciation expense.

Solution

(a) Average investment = ($250,000 + 0) ÷ 2 = $125,000
Annual rate of return = $25,000 ÷ $125,000 = 20%

(b) Net annual cash flow = $25,000 + $50,000 = $75,000
Cash payback period = $250,000 ÷ $75,000 = 3.3 years

Management Insight

High Stakes for Large TVs

Building a new factory to produce 50-inch-plus TV screens can cost $4 billion at a time when prices for flat screens are tumbling. Now the makers of those giant liquid-crystal displays are wondering whether such investments are worth the gamble.

If LCD makers decide to hold off on building new factories, price declines for wide-screen TVs could slow in two or three years as production falls behind added consumer demand. Experts also say a slowdown in factory building could also bring welcome relief for the industry by reducing its volatile profit swings.

Since 2000, LCD makers have been on a nonstop construction binge, building new factories to produce the latest generation of screens arriving every 18 months or so. Now, with the eighth generation of screens, the cost to build new factories is higher than ever—running between $3 billion to $4 billion each. And, this generation of factories is optimized for screens measuring 50 inches or more diagonally, which so far is a much smaller potential market than that targeted by previous screen generations.

Source: Evan Ramstad, "The 50-Inch Screen Poses a Gamble," *Wall Street Journal* (June 8, 2006), p. B3.

? In building factories to manufacture 50-inch TV screens, how might companies build risk factors into their financial analyses? (See page 1228.)

Discounted Cash Flow

study objective 10
Distinguish between the net present value and internal rate of return methods.

The **discounted cash flow technique** is generally recognized as the best conceptual approach to making capital budgeting decisions. This technique considers both the estimated total net cash flows from the investment and the time value of money. The expected total net cash flow consists of the sum of the annual net cash flows plus the estimated liquidation proceeds when the asset is sold for salvage at the end of its useful life. But because liquidation proceeds are generally immaterial, we ignore them in subsequent discussions.

Two methods are used with the discounted cash flow technique: (1) net present value, and (2) internal rate of return. **Before we discuss the methods, we recommend that you examine Appendix D if you need a review of present value concepts.**

NET PRESENT VALUE METHOD

The **net present value (NPV) method** involves discounting net cash flows to their present value and then comparing that present value with the capital outlay required by the investment. The difference between these two amounts is referred to as **net present value (NPV)**. Company management determines what interest rate to use in discounting the future net cash flows. This rate, often referred to as the **discount rate** or **required rate of return**, is discussed in a later section.

Ethics Note Discounted future cash flows may not take into account all of the important considerations needed to make an informed capital budgeting decision. Other issues, for example, could include worker safety, product quality, and environmental impact.

The NVP decision rule is this: **A proposal is acceptable when net present value is zero or positive**. At either of those values, the rate of return on the investment equals or exceeds the required rate of return. When net present value is negative, the project is unacceptable. See Illustration 23-22 (next page).

When making a selection among acceptable proposals, **the higher the positive net present value, the more attractive the investment**. The next two sections demonstrate use of this method. In each case, we assume that the investment has no salvage value.

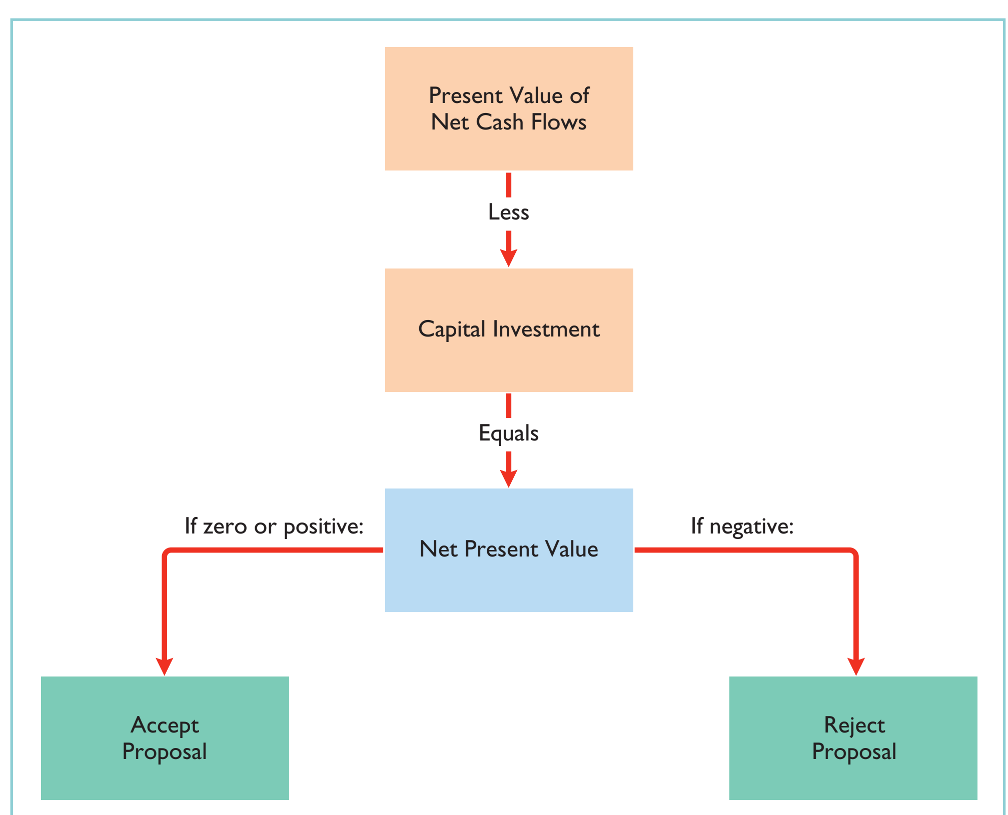

Illustration 23-22 Net present value decision criteria

Equal Net Annual Cash Flows

Tappan Company's net annual cash flows are $26,000. If we assume this amount **is uniform over the asset's useful life**, we can compute the present value of the net annual cash flows by using the present value of an annuity of 1 for 10 periods (in Table 4, Appendix D). The computations at rates of return of 12% and 15%, respectively, are:

Illustration 23-23 Present value of net annual cash flows

	Present Values at Different Discount Rates	
	12%	**15%**
Discount factor for 10 periods	5.65022	5.01877
Present value of net annual cash flows:		
$26,000 × 5.65022	**$146,906**	
$26,000 × 5.01877		**$130,488**

The analysis of the proposal by the net present value method is as follows.

Illustration 23-24 Computations of net present value

	12%	**15%**
Present value of net annual cash flows	$146,906	$130,488
Capital investment	130,000	130,000
Positive (negative) net present value	**$ 16,906**	**$ 488**

Helpful Hint The ABC Co. expects equal cash flows over an asset's 5-year useful life.

What discount factor should it use in determining present values if management wants (1) a 12% return or (2) a 15% return?

Answer: Using Table 4 in Appendix D, the factors are (1) 3.60478 and (2) 3.35216.

The proposed capital expenditure is acceptable at a required rate of return of both 12% and 15% because the net present values are positive.

Unequal Net Annual Cash Flows

When net annual cash flows are unequal, we cannot use annuity tables to calculate their present value. Instead, we use tables showing the **present value of a single future amount for each net annual cash flow**.

To illustrate, assume that Tappan Company management expects the same aggregate net annual cash flow ($260,000) over the life of the investment. But because of a declining market demand for the new product over the life of the equipment, the net annual cash flows are higher in the early years and lower in the later years. The present value of the net annual cash flows is calculated as follows using Table 3 in Appendix D.

Illustration 23-25
Computing present value of unequal annual cash flows

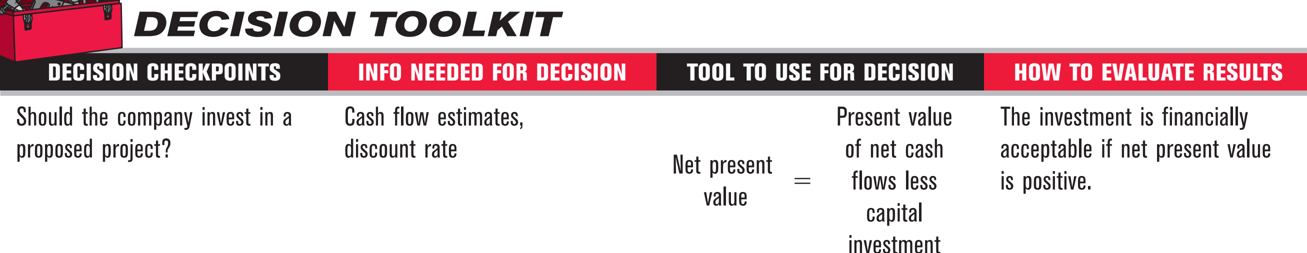
		Discount Factor		Present Value	
Year	**Assumed Net Annual Cash Flows**	**12%**	**15%**	**12%**	**15%**
	(1)	(2)	(3)	(1) × (2)	(1) × (3)
1	$ 36,000	.89286	.86957	$ 32,143	$ 31,305
2	32,000	.79719	.75614	25,510	24,196
3	29,000	.71178	.65752	20,642	19,068
4	27,000	.63552	.57175	17,159	15,437
5	26,000	.56743	.49718	14,753	12,927
6	24,000	.50663	.43233	12,159	10,376
7	23,000	.45235	.37594	10,404	8,647
8	22,000	.40388	.32690	8,885	7,192
9	21,000	.36061	.28426	7,573	5,969
10	20,000	.32197	.24719	6,439	4,944
	$260,000			**$155,667**	**$140,061**

Therefore, the analysis of the proposal by the net present value method is as follows.

Illustration 23-26
Analysis of proposal using net present value method

	12%	**15%**
Present value of net annual cash flows	$155,667	$140,061
Capital investment	130,000	130,000
Positive (negative) net present value	**$ 25,667**	**$ 10,061**

In this example, the present values of the net annual cash flows are greater than the $130,000 capital investment. Thus, the project is acceptable at both a 12% and 15% required rate of return. The difference between the present values using the 12% rate under equal cash flows ($146,906) and unequal net annual cash flows ($155,667) is due to the pattern of the net cash flows.



DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
Should the company invest in a proposed project?	Cash flow estimates, discount rate	Net present value = Present value of net cash flows less capital investment	The investment is financially acceptable if net present value is positive.

INTERNAL RATE OF RETURN METHOD

The **internal rate of return method** differs from the net present value method in that it finds the **interest yield of the potential investment**. The **internal rate of return** (IRR) is the interest rate that will cause the present value of the proposed capital expenditure to equal the present value of the expected net annual cash flows. The determination of the internal rate of return involves two steps.

Step 1. Compute the internal rate of return factor. The formula for this factor is:

Capital Investment	÷	Net Annual Cash Flows	=	Internal Rate of Return Factor

Illustration 23-27
Formula for internal rate of return factor

The computation for the Tappan Company, assuming equal net annual cash flows,[2] is:

$$\$130,000 \div \$26,000 = 5.0$$

Step 2. Use the factor and the present value of an annuity of 1 table to find the internal rate of return. Table 4 of Appendix D is used in this step. The internal rate of return is the discount factor that is closest to the internal rate of return factor for the time period covered by the net annual cash flows.

For Tappan Company, the net annual cash flows are expected to continue for 10 years. Thus, it is necessary to read across the period-10 row in Table 4 to find the discount factor. The row for 10 periods is reproduced below for your convenience.

TABLE 4
PRESENT VALUE OF AN ANNUITY OF 1

(n) Periods	5%	6%	8%	9%	10%	11%	12%	15%
10	7.72173	7.36009	6.71008	6.41766	6.14457	5.88923	5.65022	**5.01877**

In this case, the closest discount factor to 5.0 is 5.01877, which represents an interest rate of approximately 15%. The rate of return can be further determined by interpolation, but since we are using estimated net annual cash flows, such precision is seldom required.

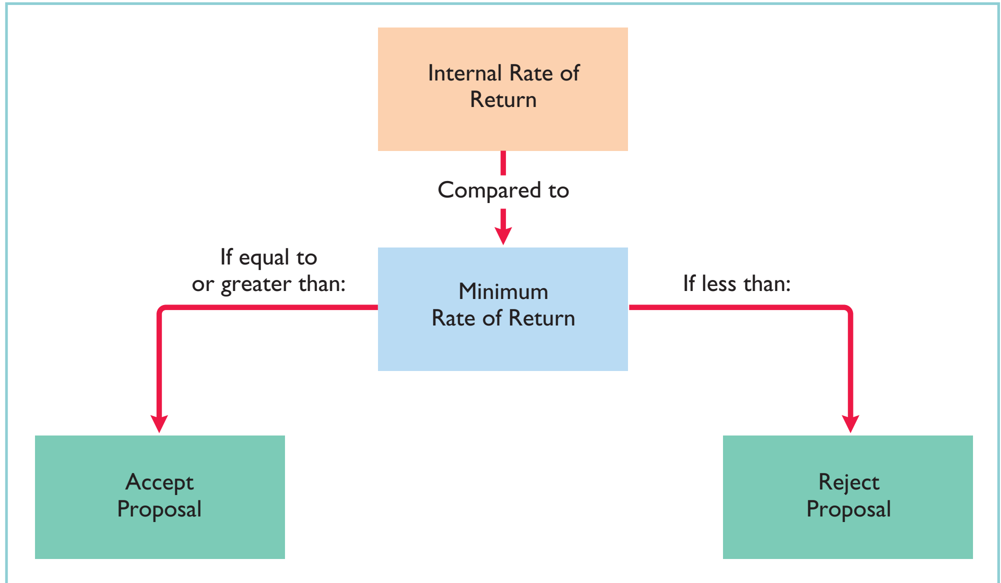
Once managers know the internal rate of return, they compare it to the company's required rate of return (the discount rate). The IRR decision rule is as follows: **Accept the project when the internal rate of return is equal to or greater than the required rate of return. Reject the project when the internal rate of return is less than the required rate of return.** Illustration 23-28 (page 1206) shows these relationships. Assuming the minimum required rate of return is 10% for Tappan Company, the project is acceptable because the 15% internal rate of return is greater than the required rate.

The IRR method is widely used in practice. Most managers find the internal rate of return easy to interpret.

---

[2]When net annual cash flows are equal, the internal rate of return factor is the same as the cash payback period.

Illustration 23-28
Internal rate of return decision criteria



DECISION TOOLKIT

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
Should the company invest in a proposed project?	Estimated cash flows and the required rate of return (hurdle rate)	Internal rate of return = Interest rate that results in a net present value of zero	If the internal rate of return exceeds the required rate of return for the project, then the project is financially acceptable.

COMPARING DISCOUNTED CASH FLOW METHODS

Illustration 23-29 compares the two discounted cash flow methods—net present value and internal rate of return. When properly used, either method provides management with relevant quantitative data for making capital budgeting decisions.

Illustration 23-29
Comparison of discounted cash flow methods

Item	Net Present Value	Internal Rate of Return
1. Objective	Compute net present value (a dollar amount).	Compute internal rate of return (a percentage).
2. Decision rule	If net present value is zero or positive, accept the proposal. If net present value is negative, reject the proposal.	If internal rate of return is equal to or greater than the minimum required rate of return, accept the proposal. If internal rate of return is less than the minimum rate, reject the proposal.

before you go on...

DISCOUNTED CASH FLOW

Do it! Watertown Paper Corporation is considering adding another machine for the manufacture of corrugated cardboard. The machine would cost $900,000. It would have an estimated life of 6 years and no salvage value. The company estimates that annual cash inflows would increase by $400,000 and that annual cash outflows would increase by $190,000. Management has a required rate of return of 9%.

(a) Calculate the net present value on this project, and discuss whether it should be accepted.
(b) Calculate the internal rate of return on this project, and discuss whether it should be accepted.

Solution

(a)		
Estimated annual cash inflows	$400,000	
Estimated annual cash outflows	190,000	
Net annual cash flow	$210,000	

	Cash Flow	9% Discount Factor	Present Value
Present value of net annual cash flows	$210,000	4.48592*	$942,043
Capital investment			900,000
Net present value			$ 42,043

*Table 4, Appendix D

Since the net present value is greater than zero, Watertown should accept the project.

(b) $900,000 ÷ 210,000 = 4.285714. Using Table 4 of Appendix D and the factors that correspond with the six-period row, 4.285714 is between the factors for 10% and 11%. Since the project has an internal rate that is greater than 10% and the required rate of return is only 9%, Watertown should accept the project.

Related exercise material: **BE23-11, BE23-12, BE23-13, Do it! 23-5, E23-12, E23-13, E23-14,** and **E23-15.**

Action Plan

- Compute net annual cash flow: Estimated annual cash inflows – Estimated annual cash outflows.
- Use the NPV technique to calculate the difference between net cash flows and the initial investment.
- Accept the project if the net present value is positive.
- Compute the IRR factor: Capital investment ÷ Net annual cash flows.
- Look up the factor in the present value of an annuity table to find the internal rate of return.
- Accept the project if the internal rate of return is equal to or greater than the required rate of return.

USING THE DECISION TOOLKIT

Suppose Hewlett-Packard Company must decide whether to make or buy some of its components from Solectron Corp. The cost of producing 50,000 electrical connectors for its printers is $110,000, broken down as follows.

Direct materials	$60,000	Variable overhead	$12,000
Direct labor	$30,000	Fixed overhead	$8,000

Instead of making the electrical connectors at an average cost per unit of $2.20 ($110,000 ÷ 50,000), the company has an opportunity to buy the connectors at $2.15 per unit for a total price of $107,500 ($2.15 × 50,000). If the connectors are purchased, all variable costs and one-half of the fixed costs will be eliminated.

Instructions

(a) Prepare an incremental analysis showing whether the company should make or buy the electrical connectors.
(b) Will your answer be different if the released productive capacity resulting from the purchase of the connectors will generate additional income of $25,000?

Solution

(a)

	Make	Buy	Net Income Increase (Decrease)
Direct materials	$ 60,000	$ –0–	$ 60,000
Direct labor	30,000	–0–	30,000
Variable manufacturing costs	12,000	–0–	12,000
Fixed manufacturing costs	8,000	4,000*	4,000
Purchase price	–0–	107,500	(107,500)
Total cost	$110,000	$111,500	$ (1,500)

*(8,000 × ½)

This analysis indicates that Hewlett-Packard will incur $1,500 of additional costs if it buys the electrical connectors. HP therefore would choose to make the connectors.

(b)

	Make	Buy	Net Income Increase (Decrease)
Total cost	$110,000	$111,500	$ (1,500)
Opportunity cost	25,000	–0–	25,000
Total cost	$135,000	$111,500	$23,500

Yes, the answer is different. The analysis shows that if additional capacity is released, net income will be increased by $23,500 if the electrical connectors are purchased. In this case, HP would choose to purchase the connectors.

Summary of Study Objectives

1 Identify the steps in management's decision-making process. Management's decision-making process is: (a) identify the problem and assign responsibility, (b) determine and evaluate possible courses of action, (c) make the decision, and (d) review the results of the decision.

2 Describe the concept of incremental analysis. Incremental analysis identifies financial data that change under alternative courses of action. These data are relevant to the decision because they will vary in the future among the possible alternatives.

3 Identify the relevant costs in accepting an order at a special price. The relevant information in accepting an order at a special price is the difference between the variable costs to produce the special order and expected revenues.

4 Identify the relevant costs in a make-or-buy decision. In a make-or-buy decision, the relevant costs are (a) the manufacturing costs that will be saved, (b) the purchase price, and (c) opportunity costs.

5 Give the decision rule for whether to sell or process materials further. The decision rule for whether to sell or process materials further is: Process further as long as the incremental revenue from processing exceeds the incremental processing costs.

6 Identify the factors to consider in retaining or replacing equipment. The factors to consider in determining whether equipment should be retained or replaced are the effects on variable costs and the cost of the new equipment. Also, any trade-in allowance or cash disposal value of the existing asset must be considered.

7 Explain the relevant factors in whether to eliminate an unprofitable segment. In deciding whether to eliminate an unprofitable segment, determine the contribution margin, if any, produced by the segment and the disposition of the segment's fixed expenses.

8 Determine which products to make and sell when resources are limited. When a company has limited resources, find the contribution margin per unit of limited resource. Then multiply this amount by the units of limited resource to determine which product maximizes net income.

9 Contrast annual rate of return and cash payback in capital budgeting. The *annual rate of return* is obtained by dividing expected annual net income by the average investment. The higher the rate of return, the more attractive the investment. The *cash payback* technique identifies the time period to recover the cost of the investment. The formula is: Cost of capital expenditure divided by estimated net annual cash flow equals cash payback period. The shorter the payback period, the more attractive the investment.

10 Distinguish between the net present value and internal rate of return methods. Under the *net present value* method, compare the present value of future net cash flows with the capital investment to determine net present value. The NPV decision rule is: Accept the project if net present value is zero or positive. Reject the investment if net present value is negative.

Under the *internal rate of return* method, find the interest yield of the potential investment. The IRR decision rule is: Accept the project when the internal rate of return is equal to or greater than the required rate of return. Reject the project when the internal rate of return is less than the required rate.

DECISION TOOLKIT A SUMMARY

DECISION CHECKPOINTS	INFO NEEDED FOR DECISION	TOOL TO USE FOR DECISION	HOW TO EVALUATE RESULTS
Which alternative should the company choose?	All relevant costs and opportunity costs	Compare relevant cost of each alternative.	Choose the alternative that maximizes net income.
How many units of product A and B should we produce in light of a limited resource?	Contribution margin per unit, limited resource required per unit	Contribution margin per unit of limited resource = $\frac{\text{Contribution margin per unit}}{\text{Limited resource per unit}}$	Any additional capacity of limited resource should be applied toward the product with higher contribution margin per unit of limited resource.
Should the company invest in a proposed project?	Cash flow estimates, discount rate	Net present value = Present value of future cash flows less capital investment	The investment is financially acceptable if net present value is positive.
Should the company invest in a proposed project?	Estimated cash flows and the required rate of return (hurdle rate)	Internal rate of return = Interest rate that results in a net present value of zero	If the internal rate of return exceeds the specified discount rate (hurdle rate) for the project, then the project is financially acceptable.

Glossary

Annual rate of return technique *(p. 1199)* Determines the profitability of a capital expenditure by dividing expected annual net income by the average investment.

Capital budgeting *(p. 1198)* The process of making capital expenditure decisions in business.

Cash payback technique *(p. 1200)* Identifies the time period required to recover the cost of a capital investment from the net annual cash flow produced by the investment.

Cost of capital *(p. 1199)* The rate of return that management expects to pay on all borrowed and equity funds.

Discounted cash flow technique *(p. 1202)* Considers both the estimated total net cash flows from the investment and the time value of money.

Incremental analysis *(p. 1189)* The process of identifying the financial data that change under alternative courses of action.

Internal rate of return (IRR) *(p. 1205)* The rate that will cause the present value of the proposed capital expenditure to equal the present value of the expected net annual cash flows.

Internal rate of return method *(p. 1205)* Finds the interest yield of the potential investment.

Net present value (NPV) *(p. 1202)* The difference that results when the original capital outlay is subtracted from the discounted net cash flows.

Net present value method *(p. 1202)* Discounts net cash flows to their present value and then compares that present value to the capital outlay required by the investment.

Opportunity cost *(p. 1192)* The potential benefit that may be obtained from following an alternative course of action.

Sunk cost *(p. 1195)* A cost that cannot be changed by any present or future decision.

Comprehensive Do it!

Sierra Company is considering a long-term capital investment project called ZIP. The project will require an investment of $120,000, and it will have a useful life of 4 years. Annual net income for ZIP is expected to be: Year 1 $12,000; Year 2 $10,000; Year 3 $8,000; and Year 4 $6,000. Depreciation is computed by the straight-line method with no salvage value. The company's cost of capital is 12%.

Instructions

(Round all computations to two decimal places.)

(a) Compute the annual rate of return for the project.
(b) Compute the cash payback period for the project. (Round to two decimals.)
(c) Compute the net present value for the project. (Round to nearest dollar.)
(d) Should the project be accepted? Why?

Action Plan

- To compute annual rate of return, divide expected annual net income by average investment.
- To compute cash payback, divide cost of the investment by net annual cash flows.
- Recall that net annual cash flow equals annual net income plus annual depreciation expense.
- Be careful to use the correct discount factor in using the net present value method.

Solution to Comprehensive Do it!

(a) $9,000 (($12,000 + $10,000 + $8,000 + $6,000) ÷ 4) ÷ ($120,000 ÷ 2) = 15%
(b) Depreciation expense is $120,000 ÷ 4 years = $30,000.
Net annual cash flows are:

Year 1	$12,000 + $30,000 = $42,000
Year 2	$10,000 + $30,000 = $40,000
Year 3	$8,000 + $30,000 = $38,000
Year 4	$6,000 + $30,000 = $36,000

Cumulative net cash flows would be $82,000 ($42,000 + $40,000) at the end of year 2 and $120,000 ($42,000 + $40,000 + $38,000) at the end of year 3. Since the cumulative net cash flows at the end of year 3 exactly equal the initial cash investment of $120,000, the cash payback period is 3 years.

(c)

Year	Discount Factor	Net Annual Cash Flow	Present Value
1	.89286	$42,000	$37,500
2	.79719	40,000	31,888
3	.71178	38,000	27,048
4	.63552	36,000	22,879
			119,315
		Capital investment	120,000
		Negative net present value	$ (685)

(d) The annual rate of return of 15% is good. However, the cash payback period is 75% of the project's useful life, and net present value is negative. The recommendation is to reject the project.

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more resources are available for practice in WileyPLUS

Self-Test Questions

Answers are on page 1228.

(SO 1) **1.** Three of the steps in management's decision-making process are: (1) Review results of decision. (2) Identify the problem. (3) Make the decision. The steps are performed in the following order.
(a) (1), (2), (3).
(b) (3), (2), (1).
(c) (2), (1), (3).
(d) (2), (3), (1).

(SO 2) **2.** Incremental analysis is the process of identifying the financial data that:
(a) do not change under alternative courses of action.
(b) change under alternative courses of action.
(c) are mixed under alternative courses of action.
(d) No correct answer is given.

(SO 3) **3.** It costs a company $14 of variable costs and $6 of fixed costs to produce product A that sells for $30. A foreign buyer offers to purchase 3,000 units at $18 each. If the special offer is accepted and produced with unused capacity, net income will:
(a) decrease $6,000.
(b) increase $6,000.
(c) increase $12,000.
(d) increase $9,000.

(SO 3) **4.** Jobart Company is currently operating at full capacity. It is considering buying a part from an outside supplier rather than making it in-house. If Jobart purchases the part, it can use the released productive capacity to generate additional income of $30,000 from producing a different product. When conducting incremental analysis in this make-or-buy decision, the company should:
(a) ignore the $30,000.
(b) add $30,000 to other costs in the "Make" column.
(c) add $30,000 to other costs in the "Buy" column.
(d) subtract $30,000 from the other costs in the "Make" column.

(SO 4) **5.** In a make-or-buy decision, relevant costs are:
(a) manufacturing costs that will be saved.
(b) the purchase price of the units.
(c) opportunity costs.
(d) All of the above.

(SO 5) **6.** The decision rule in a sell-or-process-further decision is: Process further as long as the incremental revenue from processing exceeds:
(a) incremental processing costs.
(b) variable processing costs.
(c) fixed processing costs.
(d) No correct answer is given.

(SO 5) **7.** Walton, Inc. makes an unassembled product that it currently sells for $55. Production costs are $20. Walton is considering assembling the product and selling it for $68. The cost to assemble the product is estimated at $12. What decision should Walton make?
(a) Sell before assembly; net income per unit will be $12 greater.
(b) Sell before assembly; net income per unit will be $1 greater.
(c) Process further; net income per unit will be $13 greater.
(d) Process further; net income per unit will be $1 greater.

(SO 6) **8.** In a decision to retain or replace equipment, the book value of the old equipment is a(n):
(a) opportunity cost. (c) incremental cost.
(b) sunk cost. (d) marginal cost.

(SO 7) **9.** If an unprofitable segment is eliminated:
(a) net income will always increase.
(b) variable expenses of the eliminated segment will have to be absorbed by other segments.
(c) fixed expenses allocated to the eliminated segment will have to be absorbed by other segments.
(d) net income will always decrease.

(SO 7) **10.** A segment of Hazard Inc. has the following data.

Sales	$200,000
Variable costs	$140,000
Fixed costs	$100,000

If this segment is eliminated, 50% of the fixed costs will be eliminated, and the rest will be allocated to the remaining segments. What should Hazard do?
(a) Eliminate the segment; net income will be $50,000 greater.
(b) Eliminate the segment; net income will be $10,000 greater.
(c) Keep the segment; net income will be $200,000 greater.
(d) Keep the segment; net income will be $10,000 greater.

11. If the contribution margin per unit is $15 and it takes 3.0 machine hours to produce the unit, the contribution margin per unit of limited resource is: (SO 8)
(a) $25. (c) $45.
(b) $5. (d) No correct answer is given.

12. Which of the following is *incorrect* about the annual rate of return technique? (SO 9)
(a) The calculation is simple.
(b) The accounting terms used are familiar to management.
(c) The timing of the net cash flows is not considered.
(d) The time value of money is considered.

13. What is a weakness of the cash payback approach? (SO 9)
(a) It uses accrual-based accounting numbers.
(b) It ignores the time value of money.
(c) It is complicated to compute.
(d) It cannot be used if a project has uneven net annual cash flows.

14. A project should be accepted if its internal rate of return exceeds: (SO 10)
(a) zero.
(b) the rate of return on a government bond.
(c) the company's required rate of return.
(d) the rate the company pays on borrowed funds.

15. A positive net present value means that the: (SO 10)
(a) project's rate of return is less than the cutoff rate.
(b) project's rate of return exceeds the required rate of return.
(c) project's rate of return equals the required rate of return.
(d) project is unacceptable.

Go to the book's companion website, **www.wiley.com/college/kimmel**, for additional Self-Test Questions.

Questions

1. What steps are frequently involved in management's decision-making process?

2. Your roommate, Tom Jones, contends that accounting contributes to most of the steps in management's decision-making process. Is your roommate correct? Explain.

3. "Incremental analysis involves the accumulation of information concerning a single course of action." Do you agree? Why?

4. Mike Greer asks your help concerning the relevance of variable and fixed costs in incremental analysis. Help Mike with his problem.

5. What data are relevant in deciding whether to accept an order at a special price?

6. Finney Company has an opportunity to buy parts at $7 each that currently cost $10 to make. What manufacturing costs are relevant to this make-or-buy decision?

7. Define the term "opportunity cost." How may this cost be relevant in a make-or-buy decision?
8. What is the decision rule in deciding whether to sell a product or process it further?
9. Your roommate, Janet Nelson, is confused about sunk costs. Explain to your roommate the meaning of sunk costs and their relevance to a decision to retain or replace equipment.
10. Marcus Inc. has one product line that is unprofitable. What circumstances may cause overall company net income to be lower if the unprofitable product line is eliminated?
11. How is the contribution margin per unit of limited resources computed?
12. Describe the process a company may use in screening and approving the capital expenditure budget.
13. Your classmate, Susan Menke, is confused about the factors that are included in the annual rate of return technique. What is the formula for this technique?
14. Mario Diaz is trying to understand the term "cost of capital." Define the term, and indicate its relevance to the decision rule under the annual rate of return technique.
15. Jack Nieman claims the formula for the cash payback technique is the same as the formula for the annual rate of return technique. Is Jack correct? What is the formula for the cash payback technique?
16. What are the advantages and disadvantages of the cash payback technique?
17. Two types of present value tables may be used with the discounted cash flow technique. Identify the tables and the circumstance(s) when each table should be used.
18. What is the decision rule under the net present value method?
19. Identify the steps required in using the internal rate of return method.
20. Michener Company uses the internal rate of return method. What is the decision rule for this method?

Brief Exercises

Identify the steps in management's decision-making process.
(SO 1), K

BE23-1 The steps in management's decision-making process are listed in random order below. Indicate the order in which the steps should be executed.

__Make a decision.
__Identify the problem and assign responsibility.
__Review results of the decision.
__Determine and evaluate possible courses of action.

Determine incremental changes.
(SO, 2), AN

BE23-2 Timo Company is considering two alternatives. Alternative A will have sales of $150,000 and costs of $100,000. Alternative B will have sales of $180,000 and costs of $120,000. Compare Alternative A to Alternative B showing incremental revenues, costs, and net income.

Determine whether to accept a special order.
(SO 3), AN

BE23-3 In Harley Company it costs $30 per unit ($20 variable and $10 fixed) to make a product that normally sells for $45. A foreign wholesaler offers to buy 4,000 units at $23 each. Harley will incur special shipping costs of $1 per unit. Assuming that Harley has excess operating capacity, indicate the net income (loss) Harley would realize by accepting the special order.

Determine whether to make or buy a part.
(SO 4), AN

BE23-4 Vintech Manufacturing incurs unit costs of $8 ($5 variable and $3 fixed) in making a subassembly part for its finished product. A supplier offers to make 10,000 of the part at $5.30 per unit. If the offer is accepted, Vintech will save all variable costs but no fixed costs. Prepare an analysis showing the total cost saving, if any, Vintech will realize by buying the part.

Determine whether to sell or process further.
(SO 5), AN

BE23-5 Martell Inc. makes unfinished bookcases that it sells for $60. Production costs are $30 variable and $10 fixed. Because it has unused capacity, Martell is considering finishing the bookcases and selling them for $72. Variable finishing costs are expected to be $8 per unit with no increase in fixed costs. Prepare an analysis on a per unit basis showing whether Martell should sell unfinished or finished bookcases.

Determine whether to retain or replace equipment.
(SO 6), AN

BE23-6 Ridley Company has a factory machine with a book value of $90,000 and a remaining useful life of 4 years. A new machine is available at a cost of $200,000. This machine will have a 4-year useful life with no salvage value. The new machine will lower annual variable manufacturing costs from $600,000 to $440,000. Prepare an analysis showing whether the old machine should be retained or replaced.

BE23-7 Rivto, Inc. manufactures golf clubs in three models. For the year, the Eagle line has a net loss of $20,000 from sales $200,000, variable expenses $180,000, and fixed expenses $40,000. If the Eagle line is eliminated, $34,000 of fixed costs will remain. Prepare an analysis showing whether the Eagle line should be eliminated.

Determine whether to eliminate an unprofitable segment.
(SO 7), **AN**

BE23-8 In Morgan Company, data concerning two products are: Contribution margin per unit—Product A $11, Product B $12; machine hours required for one unit—Product A 2, Product B 2.5. Compute the contribution margin per unit of limited resource for each product.

Show allocation of limited resources.
(SO 8), **AP**

BE23-9 Foley Company is considering purchasing new equipment for $300,000. It is expected that the equipment will produce annual net income of $10,000 over its 10-year useful life. Annual depreciation will be $30,000. Compute the cash payback period.

Compute the cash payback period for a capital investment.
(SO 9), **AP**

BE23-10 Quayle Oil Company is considering investing in a new oil well. It is expected that the oil well will increase annual revenues by $130,000 and will increase annual expenses by $80,000 including depreciation. The oil well will cost $490,000 and will have a $10,000 salvage value at the end of its 10-year useful life. Calculate the annual rate of return.

Compute annual rate of return.
(SO 9), **AP**

BE23-11 Dobbs Company is considering two different, mutually exclusive capital expenditure proposals. Project A will cost $395,000, has an expected useful life of 10 years, a salvage value of zero, and is expected to increase net annual cash flows by $70,000. Project B will cost $270,000, has an expected useful life of 10 years, a salvage value of zero, and is expected to increase net annual cash flows by $50,000. A discount rate of 9% is appropriate for both projects. Compute the net present value of each project. Which project should be accepted?

Compute net present value.
(SO 10), **AN**

BE23-12 Daley Company is evaluating the purchase of a rebuilt spot-welding machine to be used in the manufacture of a new product. The machine will cost $170,000, has an estimated useful life of 7 years, a salvage value of zero, and will increase net annual cash flows by $33,740. What is its approximate internal rate of return?

Calculate internal rate of return.
(SO 10), **AP**

BE23-13 Gamma Company accumulates the following data concerning a proposed capital investment: cash cost $225,000, net annual cash flow $34,000, present value factor of cash inflows for 10 years 6.71 (rounded). Determine the net present value, and indicate whether the investment should be made.

Compute net present value of an investment.
(SO 10), **AN**

Do it! Review

Do it! 23-1 Mann Company incurs a cost of $35 per unit, of which $20 is variable, to make a product that normally sells for $58. A foreign wholesaler offers to buy 6,000 units at $31 each. Mann will incur additional costs of $2 per unit to imprint a logo and to pay for shipping. Compute the increase or decrease in net income Mann will realize by accepting the special order, assuming Mann has sufficient excess operating capacity. Should Mann Company accept the special order?

Evaluate special order.
(SO 3), **AN**

Do it! 23-2 Kendry Company must decide whether to make or buy some of its components. The costs of producing 60,000 switches for its generators are as follows.

Direct materials	$30,000	Variable overhead	$45,000
Direct labor	$42,000	Fixed overhead	$60,000

Instead of making the switches at an average cost of $2.95 ($177,000 ÷ 60,000), the company has an opportunity to buy the switches at $2.75 per unit. If the company purchases the switches, all the variable costs and one-third of the fixed costs will be eliminated.

(a) Prepare an incremental analysis showing whether the company should make or buy the switches. (b) Would your answer be different if the released productive capacity will generate additional income of $30,000?

Evaluate make-or-buy opportunity.
(SO 4), **AN**

Do it! 23-3 Shaw Corporation manufactures several types of accessories. For the year, the gloves and mittens line had sales of $500,000, variable expenses of $375,000, and fixed expenses of $150,000. Therefore, the gloves and mittens line had a net loss of $25,000. If Shaw eliminates the line, $40,000 of fixed costs will remain.

Analyze whether to eliminate unprofitable segment.
(SO 7), **AN**

Prepare an analysis showing whether the company should eliminate the gloves and mittens line.

Compute capital budgeting measures.
(SO 9), **AP**

Do it! 23-4 Bonita Company is considering purchasing new equipment for $350,000. The equipment has a 5-year useful life, and depreciation would be $70,000 (assuming straight-line depreciation and zero salvage value). The purchase of the equipment should increase net income by $40,000 each year for 5 years. (a) Compute the annual rate of return. (b) Compute the cash payback period.

Compute discounted cash flow measures.
(SO 10), **AN**

Do it! 23-5 Benjamin Box Corporation is considering adding another machine for the manufacture of corrugated cardboard. The machine would cost $700,000. It would have an estimated life of 6 years and no salvage value. The company estimates that annual cash inflows would increase by $300,000 and that annual cash outflows would increase by $140,000. Management has a required rate of return of 9%.

(a) Calculate the net present value on this project, and discuss whether it should be accepted. (b) Calculate the internal rate of return on this project, and discuss whether it should be accepted.

Exercises

Analyze statements about decision making and incremental analysis.
(SO 1, 2), **C**

E23-1 Sieber has prepared the following list of statements about decision making and incremental analysis.

1. The first step in management's decision-making process is, "Determine and evaluate possible courses of action."
2. The final step in management's decision-making process is to actually make the decision.
3. Accounting's contribution to management's decision-making process occurs primarily in evaluating possible courses of action and in reviewing the results.
4. In making business decisions, management ordinarily considers only financial information because it is objectively determined.
5. Decisions involve a choice among alternative courses of action.
6. The process used to identify the financial data that change under alternative courses of action is called incremental analysis.
7. Costs that are the same under all alternative courses of action sometimes affect the decision.
8. When using incremental analysis, some costs will always change under alternative courses of action, but revenues will not.
9. Variable costs will change under alternative courses of action, but fixed costs will not.

Instructions
Identify each statement as true or false. If false, indicate how to correct the statement.

Make incremental analysis for special order.
(SO 3), **E**

E23-2 Reid Company manufactures toasters. For the first 8 months of 2012, the company reported the following operating results while operating at 75% of plant capacity.

Sales (400,000 units)	$4,000,000
Cost of goods sold	2,400,000
Gross profit	1,600,000
Operating expenses	900,000
Net income	$ 700,000

Cost of goods sold was 70% variable and 30% fixed. Operating expenses were 60% variable and 40% fixed.

In September, Reid Company receives a special order for 40,000 toasters at $6.00 each from Salono Company of Mexico City. Acceptance of the order would result in $8,000 of shipping costs but no increase in fixed operating expenses.

Instructions
(a) Prepare an incremental analysis for the special order.
(b) Should Reid Company accept the special order? Why or why not?

E23-3 Peters Company produces golf discs which it normally sells to retailers for $7 each. The cost of manufacturing 20,000 golf discs is:

Make incremental analysis for special-order decision.
(SO 3), E

Materials	$ 10,000
Labor	30,000
Variable overhead	20,000
Fixed overhead	40,000
Total	$100,000

Peters also incurs 5% sales commission ($0.35) on each disc sold.

Wade Corporation offers Peters $4.75 per disc for 5,000 discs. Wade would sell the discs under its own brand name in foreign markets not yet served by Peters. If Peters accepts the offer, its fixed overhead will increase from $50,000 to $55,000 due to the purchase of a new imprinting machine. No sales commission will result from the special order.

Instructions

(a) Prepare an incremental analysis for the special order.
(b) Should Peters accept the special order? Why or why not?
(c) What assumptions underlie the decision made in part (b)?

E23-4 Winters Inc. has been manufacturing its own shades for its table lamps. The company is currently operating at 100% of capacity. Variable manufacturing overhead is charged to production at the rate of 50% of direct labor cost. The direct materials and direct labor cost per unit to make the lamp shades are $4.00 and $6.00, respectively. Normal production is 40,000 table lamps per year.

Make incremental analysis for make-or-buy decision.
(SO 4), S

A supplier offers to make the lamp shades at a price of $13.50 per unit. If Winters Inc. accepts the supplier's offer, all variable manufacturing costs will be eliminated, but the $40,000 of fixed manufacturing overhead currently being charged to the lamp shades will have to be absorbed by other products.

Instructions

(a) Prepare the incremental analysis for the decision to make or buy the lamp shades.
(b) Should Winters Inc. buy the lamp shades?
(c) Would your answer be different in (b) if the productive capacity released by not making the lamp shades could be used to produce income of $35,000?

E23-5 Angie Donohue recently opened her own basketweaving studio. She sells finished baskets in addition to the raw materials needed by customers to weave baskets of their own. Angie has put together a variety of raw material kits, each including materials at various stages of completion. Unfortunately, owing to space limitations, Angie is unable to carry all varieties of kits originally assembled and must choose between two basic packages.

Make incremental analysis for further processing of materials.
(SO 5), E

The basic introductory kit includes undyed, uncut reeds (with dye included) for weaving one basket. This basic package costs Angie $12 and sells for $27. The second kit, called Stage 2, includes cut reeds that have already been dyed. With this kit the customer need only soak the reeds and weave the basket. Angie is able to produce the second kit by using the basic materials included in the first kit and adding one hour of her own time (to produce two kits), which she values at $18 per hour. Because she is more efficient at cutting and dying reeds than her average customer, Angie is able to make two kits of the dyed reeds, in one hour, from one kit of undyed reeds. The kit of dyed and cut reeds sells for $33.

Instructions

Determine whether Angie's basketweaving shop should carry the basic introductory kit with undyed and uncut reeds, or the Stage 2 kit with reeds already dyed and cut. Prepare an incremental analysis to support your answer.

E23-6 Bryant Bikes could sell its bicycles to retailers either assembled or unassembled. The cost of an unassembled bike is as follows.

Make incremental analysis for sell-or-process-further decision.
(SO 5), E

Direct materials	$150
Direct labor	70
Variable overhead (70% of direct labor)	49
Fixed overhead (30% of direct labor)	21
Manufacturing cost per unit	$290

The unassembled bikes are sold to retailers at $400 each.

Bryant currently has unused productive capacity that is expected to continue indefinitely; management has concluded that some of this capacity can be used to assemble the bikes and sell them at $450 each. Assembling the bikes will increase direct materials by $5 per bike, and direct labor by $20 per bike. Additional variable overhead will be incurred at the normal rates, but there will be no additional fixed overhead as a result of assembling the bikes.

Instructions

(a) Prepare an incremental analysis for the sell-or-process-further decision.
(b) Should Bryant sell or process further? Why or why not?

Make incremental analysis for retaining or replacing equipment.
(SO 6), E

E23-7 Brown Enterprises uses a word processing computer to handle its sales invoices. Lately, business has been so good that it takes an extra 3 hours per night, plus every third Saturday, to keep up with the volume of sales invoices. Management is considering updating its computer with a faster model that would eliminate all of the overtime processing.

	Current Machine	**New Machine**
Original purchase cost	$15,000	$21,000
Accumulated depreciation	6,000	—
Estimated operating costs	24,000	20,000
Useful life	5 years	5 years

If sold now, the current machine would have a salvage value of $5,000. If operated for the remainder of its useful life, the current machine would have zero salvage value. The new machine is expected to have zero salvage value after 5 years.

Instructions

Should the current machine be replaced? (Ignore the time value of money.)

Make incremental analysis for elimination of division.
(SO 7), E

E23-8 Sara Casper, a recent graduate of Rolling's accounting program, evaluated the operating performance of Klumpe Company's six divisions. Sara made the following presentation to the Klumpe board of directors and suggested the Western Division be eliminated. "If the Western Division is eliminated," she said, "our total profits would increase by $16,870."

	The Other Five Divisions	**Western Division**	**Total**
Sales	$1,664,200	$ 98,200	$1,762,400
Cost of goods sold	978,520	76,470	1,054,990
Gross profit	685,680	21,730	707,410
Operating expenses	527,940	38,600	566,540
Net income	$ 157,740	$(16,870)	$ 140,870

In the Western Division, cost of goods sold is $56,000 variable and $20,470 fixed, and operating expenses are $12,000 variable and $26,600 fixed. None of the Western Division's fixed costs will be eliminated if the division is discontinued.

Instructions

Is Sara right about eliminating the Western Division? Prepare a schedule to support your answer.

Make incremental analysis for elimination of a product line.
(SO 7), E

E23-9 Newton Company makes three models of phasers. Information on the three products is given below.

	Stunner	**Double-Set**	**Mega-Power**
Sales	$300,000	$500,000	$200,000
Variable expenses	150,000	200,000	140,000
Contribution margin	150,000	300,000	60,000
Fixed expenses	120,000	225,000	90,000
Net income	$ 30,000	$75,000	$ (30,000)

Fixed expenses consist of $300,000 of common costs allocated to the three products based on relative sales, and additional fixed expenses of $30,000 (Stunner), $75,000 (Double-Set), and $30,000 (Mega-Power). The common costs will be incurred regardless of how many models are produced. The other fixed expenses would be eliminated if a model is phased out.

Tim Hunt, an executive with the company, feels the Mega-Power line should be discontinued to increase the company's net income.

Instructions

(a) Compute current net income for Newton Company.
(b) Compute net income by product line and in total for Newton Company if the company discontinues the Mega-Power product line. (*Hint:* Allocate the $300,000 common costs to the two remaining product lines based on their relative sales.)
(c) Should Newton eliminate the Mega-Power product line? Why or why not?

Compute contribution margin and determine the product to be manufactured.
(SO 8), E

E23-10 Murphy Company manufactures and sells three products. Relevant per unit data concerning each product are given below.

	Product		
	A	**B**	**C**
Selling price	$11	$12	$15
Variable costs and expenses	$ 4	$ 8	$ 9
Machine hours to produce	2	1	2

Instructions

(a) Compute the contribution margin per unit of the limited resource (machine hour) for each product.
(b) Assuming 3,000 additional machine hours are available, which product should be manufactured?
(c) Prepare an analysis showing the total contribution margin if the additional hours are (1) divided equally among the products, and (2) allocated entirely to the product identified in (b) above.

Compute cash payback period and annual rate of return.
(SO 9), AP

E23-11 Alameda Service Center just purchased an automobile hoist for $15,000. The hoist has a 5-year life and an estimated salvage value of $1,080. Installation costs were $2,900, and freight charges were $820. Alameda uses straight-line depreciation.

The new hoist will be used to replace mufflers and tires on automobiles. Alameda estimates that the new hoist will enable his mechanics to replace four extra mufflers per week. Each muffler sells for $65 installed. The cost of a muffler is $35, and the labor cost to install a muffler is $10.

Instructions

(a) Compute the payback period for the new hoist.
(b) Compute the annual rate of return for the new hoist. (Round to one decimal.)

Compute cash payback period and net present value.
(SO 9, 10), E

E23-12 Buford Manufacturing Company is considering three new projects, each requiring an equipment investment of $22,000. Each project will last for 3 years and produce the following cash inflows.

Year	AA	BB	CC
1	$ 7,000	$ 9,500	$13,000
2	9,000	9,500	10,000
3	15,000	9,500	9,000
Total	$31,000	$28,500	$32,000

The equipment's salvage value is zero. Buford uses straight-line depreciation. Buford will not accept any project with a payback period over 2 years. Buford's minimum required rate of return is 12%.

Instructions

(a) Compute each project's payback period, indicating the most desirable project and the least desirable project using this method. (Round to two decimals.)
(b) Compute the net present value of each project. Does your evaluation change? (Round to nearest dollar.)

Compute annual rate of return, cash payback period, and net present value.
(SO 9, 10), **AP**

E23-13 Stromski Company is considering a capital investment of $150,000 in additional productive facilities. The new machinery is expected to have a useful life of 5 years with no salvage value. Depreciation is by the straight-line method. During the life of the investment, annual net income and cash inflows are expected to be $18,000 and $48,000, respectively. Stromski has a 12% cost of capital rate, which is the minimum acceptable rate of return on the investment.

Instructions

(Round to two decimals.)

(a) Compute (1) the annual rate of return and (2) the cash payback period on the proposed capital expenditure.
(b) Using the discounted cash flow technique, compute the net present value.

Determine internal rate of return.
(SO 10), **E**

E23-14 House Company is considering three capital expenditure projects. Relevant data for the projects are as follows.

Project	Investment	Annual Income	Life of Project
22A	$240,000	$13,300	6 years
23A	270,000	21,000	9 years
24A	288,000	20,000	8 years

Annual income is constant over the life of the project. Each project is expected to have zero salvage value at the end of the project. House Company uses the straight-line method of depreciation.

Instructions

(a) Determine the internal rate of return for each project. Round the internal rate of return factor to three decimals.
(b) If House Company's minimum required rate of return is 11%, which projects are acceptable?

Compute net present value and recommend project.
(SO 10), **E**

E23-15 Pfeifer Corporation is considering investing in two different projects. It could invest in both, neither, or just one of the projects. The forecasts for the projects are as follows.

	Project A	Project B
Capital investment	$200,000	$300,000
Net annual cash flows	$ 50,000	$ 65,000
Length of project	5 years	7 years

The minimum rate of return acceptable to Pfeifer is 10%.

Instructions

(a) Compute the net present value of the two projects.
(b) What capital budgeting decision should Pfeifer make?
(c) Project A could be modified. By spending $20,000 more initially, the net annual cash flows could be increased by $10,000 per year. Would this change Pfeifer's decision?

Exercises: Set B and Challenge Exercises

Visit the book's companion website, at **www.wiley.com/college/kimmel**, and choose the Student Companion site to access Exercise Set B and Challenge Exercises.

Problems: Set A

Make incremental analysis for special order, and identify nonfinancial factors in decision.
(SO 3), **E**

P23-1A Marin Company is currently producing 16,000 units per month, which is 80% of its production capacity. Variable manufacturing costs are currently $8.00 per unit. Fixed manufacturing costs are $56,000 per month. Marin pays a 9% sales commission to its sales people, has $30,000 in fixed administrative expenses per month, and is averaging $320,000 in sales per month.

A special order received from a foreign company would enable Marin Company to operate at 100% capacity. The foreign company offered to pay 75% of Marin's current selling price per unit. If the order is accepted, Marin will have to spend an extra $2.00 per

unit to package the product for overseas shipping. Also, Marin Company would need to lease a new stamping machine to imprint the foreign company's logo on the product, at a monthly cost of $2,500. The special order would require a sales commission of $3,500.

Instructions

(a) Compute the number of units involved in the special order and the foreign company's offered price per unit.

(b) What is the manufacturing cost of producing one unit of Marin's product for regular customers?

(b) Fixed manufacturing cost per unit $3.50

(c) Prepare an incremental analysis of the special order. Should management accept the order?

(d) What is the lowest price that Marin could accept for the special order to earn net income of $1.20 per unit?

(d) Cost per unit $11.50

(e) What nonfinancial factors should management consider in making its decision?

P23-2A The management of Peterson Manufacturing Company has asked for your assistance in deciding whether to continue manufacturing a part or to buy it from an outside supplier. The part, called Tropica, is a component of Peterson's finished product.

Make incremental analysis related to make or buy; consider opportunity cost, and identify nonfinancial factors.

(SO 4), **E**

An analysis of the accounting records and the production data revealed the following information for the year ending December 31, 2012.

1. The Machinery Department produced 36,000 units of Tropica.
2. Each Tropica unit requires 10 minutes to produce. Three people in the Machinery Department work full time (2,000 hours per year) producing Tropica. Each person is paid $11.00 per hour.
3. The cost of materials per Tropica unit is $2.00.
4. Manufacturing costs directly applicable to the production of Tropica are: indirect labor, $5,500; utilities, $1,300; depreciation, $1,600; property taxes and insurance, $1,000. All of the costs will be eliminated if Tropica is purchased.
5. The lowest price for a Tropica from an outside supplier is $3.90 per unit. Freight charges will be $0.30 per unit, and a part-time receiving clerk at $8,500 per year will be required.
6. If Tropica is purchased, the excess space will be used to store Peterson's finished product. Currently, Peterson rents storage space at approximately $0.60 per unit stored per year. Approximately 6,000 units per year are stored in the rented space.

Instructions

(a) Prepare an incremental analysis for the make-or-buy decision. Should Peterson make or buy the part? Why?

(a) Buy = $159,700

(b) Prepare an incremental analysis, assuming the released facilities can be used to produce $10,000 of net income in addition to the savings on the rental of storage space. What decision should now be made?

(c) What nonfinancial factors should be considered in the decision?

P23-3A Johnson Manufacturing Company has four operating divisions. During the first quarter of 2012, the company reported total income from operations of $61,000 and the following results for the divisions.

Compute contribution margin, and prepare incremental analysis concerning elimination of divisions.

(SO 7), **E**

	Division			
	Denver	**Miami**	**San Diego**	**Tacoma**
Sales	$455,000	$730,000	$920,000	$515,000
Cost of goods sold	380,000	480,000	576,000	430,000
Selling and administrative expenses	120,000	207,000	246,000	120,000
Income (loss) from operations	$ (45,000)	$ 43,000	$ 98,000	$ (35,000)

Analysis reveals the following percentages of variable costs in each division.

	Denver	**Miami**	**San Diego**	**Tacoma**
Cost of goods sold	95%	80%	90%	90%
Selling and administrative expenses	80	60	70	60

Discontinuance of any division would save 60% of the fixed costs and expenses for that division.

Top management is deeply concerned about the unprofitable divisions (Denver and Tacoma). The consensus is that one or both of the divisions should be eliminated.

Instructions

(a) Compute the contribution margin for the two unprofitable divisions.

(b) (1) Unavoidable fixed cost $17,200

(b) Prepare an incremental analysis concerning the possible elimination of (1) the Denver Division and (2) the Tacoma Division. What course of action do you recommend for each division?

(c) Prepare a columnar condensed income statement using the CVP format for Johnson Manufacturing Company, assuming (1) the Denver Division is eliminated, and (2) the unavoidable fixed costs and expenses of the Denver Division are allocated 30% to Miami, 50% to San Diego, and 20% to Tacoma.

(d) Compare the total income from operations with the Denver Division ($61,000) to total income from operations without this division.

Compute annual rate of return, cash payback, and net present value.
(SO 9, 10), E

P23-4A Sanchez Corporation is considering three long-term capital investment proposals. Relevant data on each project are as follows.

	Project		
	Brown	**Red**	**Yellow**
Capital investment	$190,000	$220,000	$250,000
Annual net income:			
Year 1	25,000	20,000	26,000
2	16,000	20,000	24,000
3	13,000	20,000	23,000
4	10,000	20,000	17,000
5	8,000	20,000	20,000
Total	$ 72,000	$100,000	$110,000

Salvage value is expected to be zero at the end of each project. Depreciation is computed by the straight-line method. The company's minimum rate of return is the company's cost of capital which is 12%.

Instructions

(a) Red 18.2%

(c) Brown $2,206

(a) Compute the annual rate of return for each project. (Round to one decimal.)

(b) Compute the cash payback period for each project. (Round to two decimals.)

(c) Compute the net present value for each project. (Round to nearest dollar.)

(d) Rank the projects on each of the foregoing bases. Which project do you recommend?

Compute annual rate of return, cash payback, and net present value.
(SO 9, 10), E

P23-5A Cindy Justus is the managing director of the Wichita Day Care Center. Wichita is currently set up as a full-time child care facility for children between the ages of 12 months and 6 years. Cindy is trying to determine whether the center should expand its facilities to incorporate a newborn care room for infants between the ages of 6 weeks and 12 months. The necessary space already exists. An investment of $25,000 would be needed, however, to purchase cribs, high chairs, etc. The equipment purchased for the room would have a 5-year useful life with zero salvage value.

The newborn nursery would be staffed to handle 12 infants on a full-time basis. The parents of each infant would be charged $200 weekly, and the facility would operate 52 weeks of the year. Staffing the nursery would require two full-time specialists and five part-time assistants at an annual cost of $103,800. Food, diapers, and other miscellaneous supplies are expected to total $14,000 annually.

Instructions

(b) (1) 16%

(a) Determine (1) annual net income and (2) net cash flow for the new nursery.

(b) Compute (1) the annual rate of return and (2) the cash payback period for the new nursery. (Round to two decimals.)

(c) Assuming that Wichita can borrow the money needed for expansion at 10%, compute the net present value of the new room. (Round to the nearest dollar.)

(d) What should Wendy conclude from these computations?

Compute net present value and internal rate of return.
(SO 10), E

P23-6A Stratton Testing is considering investing in a new testing device. It has two options: Option A would have an initial lower cost but would require a significant expenditure for rebuilding after 5 years. Option B would require no rebuilding expenditure, but its maintenance costs would be higher. Since the option B machine is of initial higher quality, it is expected to have a salvage value at the end of its useful life. The following estimates were provided. The company's cost of capital is 9%.

	Option A	Option B
Initial cost	$90,000	$170,000
Net annual cash flows	$20,000	$32,000
Cost to rebuild (end of year 5)	$26,500	$0
Salvage value	$0	$27,500
Estimated useful life	8 years	8 years

Instructions

(a) Compute the (1) net present value, and (2) internal rate of return for each option. (*Hint:* To solve for internal rate of return, experiment with alternative discount rates to arrive at a net present value of zero.)

(a) (1) $3,473

(b) Which option should be accepted?

Problems: Set B

Make incremental analysis for special order, and identify nonfinancial factors in decision.
(SO 3), E

P23-1B Sanchez Inc. manufactures basketballs for the National Basketball Association (NBA). For the first 6 months of 2012, the company reported the following operating results while operating at 90% of plant capacity.

	Amount	Per Unit
Sales	$4,500,000	$50.00
Cost of goods sold	3,150,000	35.00
Selling and administrative expenses	360,000	4.00
Net income	$ 990,000	$11.00

Fixed costs for the period were: cost of goods sold $900,000, and selling and administrative expenses $135,000.

In July, normally a slack manufacturing month, Sanchez receives a special order for 9,000 basketballs at $32 each from the European Basketball Association (EBA). Acceptance of the order would increase variable selling and administrative expenses $0.50 per unit because of shipping costs but would not increase fixed costs and expenses.

Instructions

(a) Prepare an incremental analysis for the special order.

(a) Cost of goods sold $225,000

(b) Should Sanchez Inc. accept the special order?

(c) What is the minimum selling price on the special order to produce net income of $5.00 per ball?

(d) What nonfinancial factors should management consider in making its decision?

Make incremental analysis related to make or buy; consider opportunity cost, and identify nonfinancial factors.
(SO 4), E

P23-2B The management of Carpenter Manufacturing Company is trying to decide whether to continue manufacturing a part or to buy it from an outside supplier. The part, called BIZBE, is a component of the company's finished product.

The following information was collected from the accounting records and production data for the year ending December 31, 2012.

1. 6,000 units of BIZBE were produced in the Machining Department.
2. Variable manufacturing costs applicable to the production of each BIZBE unit were: direct materials $4.75, direct labor $4.60, indirect labor $0.45, utilities $0.35.
3. Fixed manufacturing costs applicable to the production of BIZBE were:

Cost Item	Direct	Allocated
Depreciation	$1,100	$ 900
Property taxes	500	200
Insurance	900	600
	$2,500	$1,700

All variable manufacturing and direct fixed costs will be eliminated if BIZBE is purchased. Allocated costs will have to be absorbed by other production departments.

4. The lowest quotation for 6,000 BIZBE units from a supplier is $66,000.
5. If BIZBE units are purchased, freight and inspection costs would be $0.30 per unit, and receiving costs totaling $750 per year would be incurred by the Machining Department.

Instructions

(a) (1) $70,250

(a) Prepare an incremental analysis for BIZBE. Your analysis should have columns for (1) Make BIZBE, (2) Buy BIZBE, and (3) Net Income Increase/Decrease.
(b) Based on your analysis, what decision should management make?
(c) Would the decision be different if Carpenter Manufacturing has the opportunity to produce $6,000 of net income with the facilities currently being used to manufacture BIZBE? Show computations.
(d) What nonfinancial factors should management consider in making its decision?

Compute contribution margin, and prepare incremental analysis concerning elimination of divisions.
(SO 7), E

P23-3B Maris Manufacturing Company has four operating divisions. During the first quarter of 2012, the company reported aggregate income from operations of $135,000 and the divisional results shown below.

	Division			
	I	**II**	**III**	**IV**
Sales	$510,000	$390,000	$ 310,000	$170,000
Cost of goods sold	300,000	250,000	270,000	150,000
Selling and administrative expenses	60,000	80,000	65,000	70,000
Income (loss) from operations	$150,000	$ 60,000	$ (25,000)	$ (50,000)

Analysis reveals the following percentages of variable costs in each division.

	I	**II**	**III**	**IV**
Cost of goods sold	70%	80%	75%	90%
Selling and administrative expenses	40	50	60	70

Discontinuance of any division would save 50% of the fixed costs and expenses for that division.

Top management is very concerned about the unprofitable divisions (III and IV). Consensus is that one or both of the divisions should be discontinued.

Instructions

(b) (2) Unavoidable fixed costs $18,000

(a) Compute the contribution margin for Divisions III and IV.
(b) Prepare an incremental analysis concerning the possible discontinuance of (1) Division III and (2) Division IV. What course of action do you recommend for each division?
(c) Prepare a columnar condensed income statement for Maris Manufacturing, assuming Division IV is eliminated. Use the CVP format. Division IV's unavoidable fixed costs are allocated equally to the continuing divisions.
(d) Reconcile the total income from operations ($135,000) with the total income from operations without Division IV.

Compute annual rate of return, cash payback, and net present value.
(SO 9, 10), E

P23-4B Sadler Corporation is considering three long-term capital investment proposals. Each investment has a useful life of 5 years. Relevant data on each project are as follows.

	Project Ric	**Project Rac**	**Project Roe**
Capital investment	$140,000	$150,000	$180,000
Annual net income:			
Year 1	13,000	18,000	27,000
2	13,000	17,000	22,000
3	13,000	13,000	16,000
4	13,000	12,000	13,000
5	13,000	9,000	12,000
Total	$ 65,000	$ 69,000	$ 90,000

Depreciation is computed by the straight-line method with no salvage value. The company's cost of capital is 15%.

Instructions

(a) Compute the annual rate of return for each project. (Round to one decimal.)
(b) Compute the cash payback period for each project. (Round to two decimals.)
(c) Compute the net present value for each project. (Round to nearest dollar.)
(d) Rank the projects on each of the foregoing bases. Which project do you recommend?

(a) Roe 20%

(c) Ric (2,561)

P23-5B Ellen Jackson is an accounting major at a midwestern state university located approximately 60 miles from a major city. Many of the students attending the university are from the metropolitan area and visit their homes regularly on the weekends. Ellen, an entrepreneur at heart, realizes that few good commuting alternatives are available for students doing weekend travel. She believes that a weekend commuting service could be organized and run profitably from several suburban and downtown shopping mall locations. Ellen has gathered the following investment information.

Compute annual rate of return, cash payback, and net present value.
(SO, 9, 10), **E**

1. Six used vans would cost a total of $96,000 to purchase and would have a 3-year useful life with negligible salvage value. Ellen plans to use straight-line depreciation.
2. Ten drivers would have to be employed at a total payroll expense of $70,000.
3. Other annual out-of-pocket expenses associated with running the commuter service would include Gasoline $28,000, Maintenance $2,800, Repairs $3,500, Insurance $3,200, Advertising $1,500. (Exclude interest expense.)
4. Ellen has visited several financial institutions to discuss funding for her new venture. The best interest rate she has been able to negotiate is 10%. Use this rate for cost of capital.
5. Ellen expects each van to make ten round trips weekly and carry an average of five students each trip. The service is expected to operate 30 weeks each year. Each student will be charged $16.00 for a round-trip ticket.

Instructions

(a) Determine the annual (1) net income, and (2) net cash flow for the commuter service.
(b) Compute (1) the annual rate of return, and (2) the cash payback period. (Round to two decimals.)
(c) Compute the net present value of the commuter service. (Round to the nearest dollar.)
(d) What should Ellen conclude from these computations?

(a) (1) Net income $3,000

(b) (2) 2.74 years

P23-6B Colorado Clinic is considering investing in new heart-monitoring equipment. It has two options: Option A would have an initial lower cost but would require a significant expenditure for rebuilding after 4 years. Option B would require no rebuilding expenditure, but its maintenance costs would be higher. Since the option B machine is of initial higher quality, it is expected to have a salvage value at the end of its useful life. The following estimates were made of the cash flows. The company's cost of capital is 8%.

Compute net present value, and internal rate of return.
(SO 10), **E**

	Option A	**Option B**
Initial cost	$135,000	$203,000
Net annual cash flows	$31,000	$40,000
Cost to rebuild (end of year 4)	$50,000	$0
Salvage value	$0	$10,000
Estimated useful life	8 years	8 years

Instructions

(a) Compute the (1) net present value and (2) internal rate of return for each option. (*Hint:* To solve for internal rate of return, experiment with alternative discount rates to arrive at a net present value of zero.)
(b) Which option should be accepted?

(a) (1) Option B $32,269

Problems: Set C

Visit the book's companion website, at **www.wiley.com/college/kimmel**, and choose the Student Companion site to access Problem Set C.

Comprehensive Problem: Chapters 14 to 23

CP23 You would like to start a business manufacturing a unique model of bicycle helmet. In preparation for an interview with the bank to discuss your financing needs, you develop answers to the following questions. A number of assumptions are required; clearly note all assumptions that you make.

Instructions

(a) Identify the types of costs that would likely be involved in making this product.

(b) Set up five columns as indicated.

	Product Costs			
Item	**Direct Materials**	**Direct Labor**	**Manufacturing Overhead**	**Period Costs**

Classify the costs you identified in (a) into the manufacturing cost classifications of product costs (direct materials, direct labor, and manufacturing overhead) and period costs.

(c) Assign hypothetical monthly dollar figures to the costs you identified in (a) and (b).

(d) Assume you have no raw materials or work in process beginning or ending inventories. Prepare a projected cost of goods manufactured schedule for the first month of operations.

(e) Project the number of helmets you expect to produce the first month of operations. Compute the cost to produce one bicycle helmet. Review the result to ensure it is reasonable; if not, return to part (c) and adjust the monthly dollar figures you assigned accordingly.

(f) What type of cost accounting system will you likely use—job order or process costing?

(g) Explain how you would assign costs in either the job order or process costing system you plan to use.

(h) Classify your costs as either variable or fixed costs. For simplicity, assign all costs to either variable or fixed, assuming there are no mixed costs, using the format shown.

Item	**Variable Costs**	**Fixed Costs**	**Total Costs**

(i) Compute the unit variable cost, using the production number you determined in (e).

(j) Project the number of helmets you anticipate selling the first month of operations. Set a unit selling price, and compute both the contribution margin per unit and the contribution margin ratio.

(k) Determine your break-even point in dollars and in units.

(l) Prepare projected operating budgets (sales, production, direct materials, direct labor, manufacturing overhead, selling and administrative expense, and income statement). You will need to make assumptions for each of the following:

Direct materials budget:	Quantity of direct materials required to produce one helmet; cost per unit of quantity; desired ending direct materials (assume none).
Direct labor budget:	Direct labor time required per helmet; direct labor cost per hour.
Budgeted income statement:	Income tax expense is 45% of income from operations.

(m) Prepare a cash budget for the month. Assume the percentage of sales that will be collected from customers is 75%, and the percentage of direct materials that will be paid in the current month is 75%.

(n) Determine a relevant range of activity, using the number of helmets produced as your activity index. Recast your manufacturing overhead budget into a flexible monthly budget for two additional activity levels.

(o) Identify one potential cause of materials, direct labor, and manufacturing overhead variances for your product.

(p) Assume that you wish to purchase production equipment that costs $720,000. Determine the cash payback period, utilizing the monthly cash flow that you computed in part (m) multiplied by 12 months (for simplicity).

(q) Identify any nonfinancial factors that should be considered before commencing your business venture.

Waterways Continuing Problem

(This is a continuation of the Waterways Problem from Chapters 14 through 22.)

WCP23 Waterways Corporation puts much emphasis on cash flow when it plans for capital investments. The company chose its discount rate of 8% based on the rate of return it must pay its owners and creditors. Using that rate, Waterways then uses different methods to determine the best decisions for making capital outlays. Waterways is considering buying five new backhoes to replace the backhoes it now has. This problem asks you to evaluate that decision, using various capital budgeting techniques.

Go to the book's companion website, at **www.wiley.com/college/kimmel**, to see the completion of this problem.

broadening your perspective

DECISION MAKING ACROSS THE ORGANIZATION

BYP23-1 Shellhammer Company is considering the purchase of a new machine. The invoice price of the machine is $170,000, freight charges are estimated to be $4,000, and installation costs are expected to be $6,000. Salvage value of the new equipment is expected to be zero after a useful life of 4 years. Existing equipment could be retained and used for an additional 4 years if the new machine is not purchased. At that time, the salvage value of the equipment would be zero. If the new machine is purchased now, the existing machine would be scrapped. Shellhammer's accountant, Tracy Greene, has accumulated the following data regarding annual sales and expenses with and without the new machine.

1. Without the new machine, Shellhammer can sell 10,000 units of product annually at a per unit selling price of $100. If the new unit is purchased, the number of units produced and sold would increase by 20%. The selling price would remain the same.
2. The new machine is faster than the old machine, and it is more efficient in its usage of materials. With the old machine, the gross profit rate will be 25% of sales. With the new machine, the rate will be 28% of sales.
3. Annual selling expenses are $135,000 with the current equipment. Because the new equipment would produce a greater number of units to be sold, annual selling expenses are expected to increase by 10% if it is purchased.
4. Annual administrative expenses are expected to be $100,000 with the old machine and $113,000 with the new machine.
5. The current book value of the existing machine is $36,000. Shellhammer uses straight-line depreciation.
6. Shellhammer's management wants a minimum rate of return of 15% on its investment and a payback period of no more than 3 years.

Instructions

With the class divided into groups, answer the following. (Ignore income tax effects.)

(a) Prepare an incremental analysis for the 4 years showing whether Shellhammer should keep the existing machine or buy the new machine.
(b) Calculate the annual rate of return for the new machine. (Round to two decimals.)
(c) Compute the payback period for the new machine. (Round to two decimals.)
(d) Compute the net present value of the new machine. (Round to the nearest dollar.)
(e) On the basis of the foregoing data, would you recommend that Shellhammer buy the machine? Why?

MANAGERIAL ANALYSIS

BYP23-2 Koonce Company manufactures private-label small electronic products, such as alarm clocks, calculators, kitchen timers, stopwatches, and automatic pencil sharpeners. Some of the products are sold as sets, and others are sold individually. Products are studied as to their sales

potential, and then cost estimates are made. The Engineering Department develops production plans, and then production begins. The company has generally had very successful product introduction. Only two products introduced by the company have been discontinued.

One of the products currently sold is a multi-alarm clock. The clock has four alarms that can be programmed to sound at various times and for varying lengths of time. The company has experienced a great deal of difficulty in making the circuit boards for the clocks. The production process has never operated smoothly. The product is unprofitable at the present time, primarily because of warranty repairs and product recalls. Two models of the clocks were recalled, for example, because they sometimes caused an electric shock when the alarms were being shut off. The Engineering Department is attempting to revise the manufacturing process, but the revision will take another 6 months at least.

The clocks were very popular when they were introduced, and since they are private-label, the company has not suffered much from the recalls. Presently, the company has a very large order for several items from Kmart Stores. The order includes 5,000 of the multi-alarm clocks. When the company suggested that Kmart purchase the clocks from another manufacturer, Kmart threatened to rescind the entire order unless the clocks were included.

The company has therefore investigated the possibility of having another company make the clocks for them. The clocks were bid for the Kmart order, based on an estimated $5.50 cost to manufacture, as follows.

Circuit board, 1 each @ $1.00	$1.00
Plastic case, 1 each @ $0.50	0.50
Alarms, 4 @ $0.15 each	0.60
Labor, 15 minutes @ $12/hour	3.00
Overhead, $1.60 per labor hour	0.40

Koonce could purchase clocks to fill the Kmart order for $9 from Silver Star, a Korean manufacturer with a very good quality record. Silver Star has offered to reduce the price to $7.50 after Koonce has been a customer for 6 months, placing an order of at least 1,000 units per month. If Koonce becomes a "preferred customer" by purchasing 15,000 units per year, the price would be reduced still further to $4.50.

Alpha Products, a local manufacturer, has also offered to make clocks for Koonce. It has offered to sell 5,000 clocks for $5 each. However, Alpha Products has been in business for only 6 months. It has experienced significant turnover in its labor force, and the local media have reported that the owner may soon face tax-evasion charges. The owner of Alpha Products is an electronic engineer, however, and the quality of the clocks is likely to be good.

If Koonce decides to purchase the clocks from either Silver Star or Alpha, all the costs to manufacturer could be avoided, except a total of $5,000 in overhead costs for machine depreciation. The machinery is fairly new and has no alternate use.

Instructions

(a) What is the difference in profit under each of the alternatives if the clocks are to be sold for $13.00 each to Kmart?
(b) What are the most important nonfinancial factors that Koonce should consider when making this decision?
(c) What should Koonce do in regard to the Kmart order? What should it do in regard to continuing to manufacture the multi-alarm clocks? Be prepared to defend your answer.

REAL-WORLD FOCUS

BYP23-3 Founded in 1983, the Beverly Hills Fan Company is located in Woodland Hills, California. With 23 employees and sales of less than $10 million, the company is relatively small. Management feels that there is potential for growth in the upscale market for ceiling fans and lighting. They are particularly optimistic about growth in Mexican and Canadian markets.

Presented on the next page is information from the president's letter in the company's annual report.

BEVERLY HILLS FAN COMPANY
President's Letter

An aggressive product development program was initiated during the past year resulting in new ceiling fan models planned for introduction next year. Award-winning industrial designer Ron Rezek created several new fan models for the Beverly Hills Fan and L.A. Fan lines, including a new Showroom Collection, designed specifically for the architectural and designer markets. Each of these models has received critical acclaim, and order commitments for next year have been outstanding. Additionally, our Custom Color and special-order fans continued to enjoy increasing popularity and sales gains as more and more customers desire fans that match their specific interior decors. Currently, Beverly Hills Fan Company offers a product line of over 100 models of contemporary, traditional, and transitional ceiling fans.

Instructions

(a) What points did the company management need to consider before deciding to offer the special-order fans to customers?
(b) How would incremental analysis be employed to assist in this decision?

MANAGERIAL ACCOUNTING ON THE WEB

BYP23-4 Campbell Soup Company is an international provider of soup products. Management is very interested in continuing to grow the company in its core business, while "spinning off" those businesses that are not part of its core operation.

Address: **www.campbellsoups.com,** or go to **www.wiley.com/college/kimmel**

Steps

1. Go to the home page of Campbell Soup Company at the address shown above.
2. Choose **Our Company** and then **Investor Center**.
3. Choose **Financial Reports**.
4. Choose the 2008 annual report, or the current annual report if 2008 is no longer available.

Instructions

Review the financial statements and management's discussion and analysis, and answer the following questions.

(a) What was the total amount reported as "Purchases of Plant Assets" in the 2008 statement of cash flows? How does this amount compare with the previous year?
(b) What range of interest rates does the company report on its long-term liabilities in the notes to its financial statements?
(c) Assume that this year's capital expenditures are expected to increase cash flows by $42 million. What is the expected internal rate of return (IRR) for these capital expenditures? (Assume a 10-year period for the cash flows.)

COMMUNICATION ACTIVITY

BYP23-5 Refer back to E23-11 to address the following.

Instructions

Prepare a memo to Megan Comer, your supervisor. Show your calculations from E23-11, parts (a) and (b). In one or two paragraphs, discuss important nonfinancial considerations. Make any assumptions you believe to be necessary. Make a recommendation, based on your analysis.

ETHICS CASE

BYP23-6 Landon Company operates in a state where corporate taxes and workmen's compensation insurance rates have recently doubled. Landon's president has assigned you the task of preparing an economic analysis and making a recommendation about whether to move the company's entire operation to Missouri. The president is slightly in favor of such a move because Missouri is his boyhood home, and he also owns a fishing lodge there.

You have just completed building your dream house, moved in, and sodded the lawn. Your children are all doing well in school and sports and, along with your spouse, want no part of a

move to Missouri. If the company does move, so will you because your town is a one-industry community, and you and your spouse will have to move to have employment. Moving when everyone else does will cause you to take a big loss on the sale of your house. The same hardships will be suffered by your coworkers, and the town will be devastated.

In compiling the costs of moving versus not moving, you have latitude in the assumptions you make, the estimates you compute, and the discount rates and time periods you project. You are in a position to influence the decision singlehandedly.

Instructions

(a) Who are the stakeholders in this situation?
(b) What are the ethical issues in this situation?
(c) What would you do in this situation?

"ALL ABOUT YOU" ACTIVITY

BYP23-7 Managerial accounting techniques can be used in a wide variety of settings. As we have frequently pointed out, you can use them in many personal situations. They also can be useful in trying to find solutions for societal issues that appear to be hard to solve.

Instructions

Read the *Fortune* article "The Toughest Customers: How Hardheaded Business Metrics Can Help the Hard-core Homeless," by Cait Murphy, available at *http://money.cnn.com/magazines/fortune/fortune_archive/2006/04/03/8373067/index.htm*. Answer the following questions.

(a) How does the article define "chronic" homelessness?
(b) In what ways does homelessness cost a city money? What are the estimated costs of a chronic homeless person to various cities?
(c) What are the steps suggested to address the problem?
(d) What is the estimated cost of implementing this program in New York? What results have been seen?
(e) In terms of incremental analysis, frame the relevant costs in this situation.

Answers to Insight and Accounting Across the Organization Questions

p. 1193 The Pressure to Outsource Q: What are the disadvantages of outsourcing to a foreign country? **A:** Possible disadvantages of outsourcing are that the supplier loses control over the quality of the product, as well as the timing of production. Also, the company exposes itself to price changes caused by changes in the value of the foreign currency. In addition, shipping large, heavy products such as tires is costly, and disruptions in shipping (due to strikes, weather, etc.) can cause delays in the final assembly of vehicles. As a result of the outsourcing, the company will have to reassign, or even lay off, many skilled workers. Not only is this very disruptive to the lives of those employees, it also hurts morale of the remaining employees. As more U.S. employers begin to use robotic automation in their facilities, they are able to reduce the amount of labor required and thus are beginning to be able to compete more favorably with foreign suppliers.

p. 1202 High Stakes for Large TVs Q: In building factories to manufacture 50-inch TV screens, how might companies build risk factors into their financial analyses? **A:** One approach is to use sensitivity analysis. Sensitivity analysis uses a number of outcome estimates to get a sense of the variability among potential returns. In addition, more distant cash flows can be discarded or given a low weighting because of their high uncertainty.

SPECIMEN FINANCIAL STATEMENTS: TOOTSIE ROLL INDUSTRIES, INC.

The Annual Report

Once each year, a corporation communicates to its stockholders and other interested parties by issuing a complete set of audited financial statements. The **annual report**, as this communication is called, summarizes the financial results of the company's operations for the year and its plans for the future. Many annual reports are attractive, multicolored, glossy public relations pieces, containing pictures of corporate officers and directors as well as photos and descriptions of new products and new buildings. Yet the basic function of every annual report is to report financial information, almost all of which is produced by the corporation's accounting system.

Tootsie Roll Annual Report Walkthrough

The content and organization of corporate annual reports have become fairly standardized. Excluding the public relations part of the report (pictures, products, and propaganda), the following items are the traditional financial portions of the annual report:

Financial Highlights
Letter to the Stockholders
Management's Discussion and Analysis
Financial Statements
Notes to the Financial Statements
Management's Report on Internal Control
Management Certification of Financial Statements
Auditor's Report
Supplementary Financial Information

In this appendix, we illustrate current financial reporting with a comprehensive set of corporate financial statements that are prepared in accordance with generally accepted accounting principles and audited by an international independent certified public accounting firm. We are grateful for permission to use the actual financial statements and other accompanying financial information from the annual report of a large, publicly held company, Tootsie Roll Industries, Inc.

Financial Highlights

Companies usually present the financial highlights section inside the front cover of the annual report or on its first two pages. This section generally reports the total or per share amounts for five to ten financial items for the current year and one or more previous years.

The financial information herein is reprinted with permission from the Tootsie Roll Industries, Inc. 2009 Annual Report. The complete financial statements for Tootsie Roll Industries are also available on the book's companion website.

Corporate Profile

Tootsie Roll Industries, Inc. has been engaged in the manufacture and sale of confectionery products for 113 years. Our products are primarily sold under the familiar brand names: Tootsie Roll, Tootsie Roll Pops, Caramel Apple Pops, Child's Play, Charms, Blow Pop, Blue Razz, Cella's chocolate covered cherries, Tootsie Dots, Tootsie Crows, Junior Mints, Junior Caramels, Charleston Chew, Sugar Daddy, Sugar Babies, Andes, Fluffy Stuff cotton candy, Dubble Bubble, Razzles, Cry Baby, Nik-L-Nip and El Bubble.

Ellen R.Gordon, President and Chief Operating Officer and Melvin J.Gordon, Chairman and Chief Executive Officer.

Corporate Principles

We believe that the differences among companies are attributable to the caliber of their people, and therefore we strive to attract and retain superior people for each job.

We believe that an open family atmosphere at work combined with professional management fosters cooperation and enables each individual to maximize his or her contribution to the Company and realize the corresponding rewards.

We do not jeopardize long-term growth for immediate, short-term results.

We maintain a conservative financial posture in the deployment and management of our assets.

We run a trim operation and continually strive to eliminate waste, minimize cost and implement performance improvements.

We invest in the latest and most productive equipment to deliver the best quality product to our customers at the lowest cost.

We seek to outsource functions where appropriate and to vertically integrate operations where it is financially advantageous to do so.

We view our well known brands as prized assets to be aggressively advertised and promoted to each new generation of consumers.

We conduct business with the highest ethical standards and integrity which are codified in the Company's "Code of Business Conduct and Ethics."

Financial items from the income statement and the balance sheet that typically are presented are sales, income from continuing operations, net income, earnings per share, dividends per common share, and the amount of capital expenditures. The financial highlights section from **Tootsie Roll Industries' Annual Report** is shown on page A-3. Above, we have also included Tootsie Roll's discussion of its corporate principles and corporate profile.

Letter to the Stockholders

Nearly every annual report contains a letter to the stockholders from the chairman of the board or the president, or both. This letter typically discusses the company's accomplishments during the past year and highlights significant events such as mergers and acquisitions, new products, operating achievements, business philosophy, changes in officers or directors, financing commitments, expansion plans, and future prospects. The letter to the stockholders signed by Melvin J. Gordon, Chairman of the Board and Chief Executive Officer, and Ellen R. Gordon, President and Chief Operating Officer, of Tootsie Roll Industries is shown on the next pages.

To Our Shareholders

Net product sales in 2009 were $496 million as compared with 2008 net product sales of $492 million. Most of our core brands posted solid results and Halloween was once again our largest selling season of the year.

Net earnings grew to $53 million from $39 million in 2008. The increase in earnings was attributable to margin improvements stemming from selected price increases and product weight adjustments as well as from lower energy and fuel costs and from foreign income tax benefits.

Commodity and packaging costs have risen significantly in recent years. While some of these costs abated during 2009, as a whole they remain at historically high levels. We are challenged to look for every feasible way to keep our operations lean and costs in check so that we can continue to deliver maximum value to our consumers.

We take a long-term view of our business and strive to implement measures that improve our operating results without jeopardizing the long-term strength of the Company and its well known brands. As a value oriented confectioner, we deem it essential to be a low cost producer and actively pursue investments in the latest technology to keep us so.

To that end, capital expenditures in 2009 were $21 million. In addition to new state of the art equipment installations at a number of our plants, a portion of this figure was directed toward the latest phase of implementing our enterprise resource planning system, a comprehensive system of leading edge business software.

During 2009 we paid cash dividends of 32 cents per share and again distributed a 3% stock dividend. This was the sixty-seventh consecutive year the Company has paid cash dividends and the forty-fifth consecutive year that a stock dividend was distributed. We also repurchased 937,956 shares of common stock on the open market for an aggregate cost of $21 million.

We ended 2009 with $158 million in cash and investments and we remain poised to continue investing in our business, improving manufacturing productivity and quality, supporting our brands, paying dividends and repurchasing common stock. We also continue to seek appropriate complementary business acquisitions.

Financial Highlights

	December 31, 2009	December 31, 2008
	(in thousands except per share data)	
Net Product Sales	$495,592	$492,051

Sales and Marketing

During 2009 we again used carefully executed promotions to drive sales. Targeted initiatives, directed to the trade and to consumers, help to move our products into distribution and subsequently to move them off the retail shelf.

Retailers are highly selective as to the products they carry and consumers have many choices in the candy isle. We find that emphasizing high sell-through and attractive profit margins to the trade and high quality at an attractive value to the consumer is a winning strategy.

Our diverse and highly recognizable brand portfolio remains popular across all trade channels. We have a range of offerings suitable for virtually every major consumer group. Our product line undergoes continual refinement in order to retain its appeal to ever-evolving preferences and life styles. The candy marketplace is highly competitive and we are vigilant in keeping our products contemporary even as they remain iconic.

Halloween has long been our largest selling period with third quarter sales nearly double those of any other quarter in the year. We posted strong results in all major trade classes including grocery, mass merchandisers, warehouse clubs, dollar stores and drug chains. Especially popular at Halloween are our large bags of Child's Play and other mixed candy assortments,

which are offered in a variety of merchandising presentations.

Our bagged goods have traditionally been limited to "lay down" format that is commonly found on retailer's shelves. In addition to "lay down" bags, in 2009 we introduced a number of packs in a "vertical" format. These gusseted bags really do "stand up" on the shelf and offer a more visible, billboard-like front panel with room for expanded graphic content while creating an enhanced consumer value perception.

Other traditional merchandising presentations such as pallet packs, off shelf displays and display ready cases also continue to generate high sales volume in our Halloween packaged goods line. We continue to have some of the top selling theater box and home video items. This line was expanded in 2009 with two new Dots items that made trick-or-treating tastier. Candy Corn Dots are the classic Halloween flavor in a new gumdrop format and Bat Dots are black gumdrops with a new, mouth-watering "blood orange" flavor.

Candy Corn and Bat Dots

In addition to full size theater boxes, these two new frightfully good confections were packed in mini-boxes and, together with Ghost Dots, formed the new Dots Halloween Mix. Each bag of this mix features "spook-tacular" Halloween designs, and is metallized to ensure fresh gumdrops for every trick-or-treater.

Halloween Dots Mini Mix

Other additions to our Halloween offerings promoted the apple theme which is so readily associated with the fall season. Apple Orchard is a mix of three mouth watering caramel apple pop flavor profiles: sour green apple, tart red Macintosh and sweet Golden Delicious. All three apple flavored hard candies are blended with luscious caramel.

Another Halloween item, Caramel Apple Sugar Babies in snack size pouches, have a caramel center encased in a tart green apple shell. The caramel apple combination is a delicious hit.

Apple Orchard Pops

Our unique line of wax candy products was expanded with the addition of Nik-L-Nip fruit flavored mini drinks individually wrapped and packed in a 60 count bag for sharing. For fun, we introduced Mr. Stache, a chewable wax candy moustache. These items designed for sharing are perfect for kids parties, trick or treating or anytime.

Mr. Stache Wax Candy

Blow Pop sales were boosted by the introduction of an innovative new Super Blow Pop counter display. This gravity fed dispenser has a small foot print so it can be used as a counter display or it can be attached to a power wing if counter space is not available. Vivid graphics on the prominent display panel increase exposure and promote trial of this classic confection.

Blow Pop Counter Display

Our Andes Crème de Menthe thins have a strong selling history during the Thanksgiving and Christmas holiday seasons. Andes has also had great success selling outside the candy aisle with Andes Crème de

Menthe Baking Chips, which have grown every year since their introduction.

Building on this success, in 2009 we introduced Andes Crème de Menthe Cookies. Rich chocolate mint Andes cookies feature a crunchy cocoa cookie center, covered in a melt-in-your-mouth minty green layer, and enveloped in a rich layer of delicious chocolate. This decadent chocolate mint cookie parallels the iconic Andes Crème de Menthe thins candy, with its rectangular shape, three layers and a green center, for instant consumer recognition. Andes cookies were a sensational seasonal success for Halloween and Christmas.

Andes Crème de Menthe Cookies

Advertising and Public Relations

We again promoted our long-standing "How Many Licks" Tootsie Pop message through campaigns on several children's channels on cable television in 2009. This renowned theme was further reinforced by a How Many Licks Sweepstakes that encouraged entrants to guess the correct number of licks it would take to get to the chewy Tootsie Roll center. Having evaluated thousands of estimates, we can only conclude that the answer to this riddle remains "the world may never know!"

On a whimsical note, in 2009 Tootsie Roll was featured as its own category on the long running game show *Jeopardy*. Also, Tootsie Pops were profiled on the Travel Channel's special interest program *Extreme Mega Factories*. Repeated showing of segments such as these generate extensive exposure and awareness among viewing consumers.

Tootsie Rolls became kosher certified during 2009, making our flagship product available to a whole new group of consumers. This announcement received wide press coverage and we heard positive feedback from many enthusiastic consumers. Also, our Chairman Melvin Gordon was honored with the Kettle Award, the candy industry's highest tribute, in recognition of his lifetime achievements and dedication to the industry.

Purchasing

Although energy costs decreased during 2009 from the record levels of 2008, other commodity prices generally remained at historically high levels. Cost decreases in edible oils, dairy products and corn based sweeteners were largely offset by surging sugar prices. In packaging, decreases in the cost of films and folding cartons were more than offset by increases in corrugated and specialty papers.

Competitive bidding, selective hedging and leveraging our high volume of purchases are some of the means we use to mitigate rising costs to the greatest extent feasible. We also embarked on an extensive internal review of cost drivers during 2009 which is a key element in our ongoing efforts to eliminate waste. A number of cost-saving ideas were identified during this review and have been implemented across all of our plants.

Supply Chain

We continue to invest capital and resources in projects that keep our production and distribution facilities as efficient as possible, support evolving distribution patterns, improve quality and promote growing product lines. Much of this is driven by technology, which offers continuing advancements in automation that we can incorporate on the shop floor.

2009 was also the third year of a multi-year, company-wide enterprise resource planning system upgrade. The scope of this project is comprehensive, affecting nearly every facet of the Company. We are carefully phasing in this implementation to achieve maximum results.

International

Sales and profits in Mexico were lower in 2009 due to the devaluation of the peso. Although we promote our products in many countries throughout the world, our export business continued to be adversely affected by the relative strength of the U.S. dollar, which increases the relative cost of our products in foreign markets. Canadian sales were ahead of 2009 but profits declined due to product mix, higher commodity costs and foreign exchange rates.

In Appreciation

We wish to express our appreciation to our many loyal employees, customers, suppliers, sales brokers and distributors throughout the world for their support in 2009. We also thank our fellow shareholders as we remain committed to the pursuit of excellence in every aspect of our operations and face the increasing challenges of today's business environment.

Management Discussion and Analysis

The management discussion and analysis (MD&A) section covers three financial aspects of a company: its results of operations, its ability to pay near-term obligations, and its ability to fund operations and expansion. Management must highlight favorable or unfavorable trends and identify significant events and uncertainties that affect these three factors. This discussion obviously involves a number of subjective estimates and opinions. The MD&A section of Tootsie Roll's annual report is presented below.

Management's Discussion and Analysis of Financial Condition and Results of Operations

(in thousands except per share, percentage and ratio figures)

FINANCIAL REVIEW

This financial review discusses the Company's financial condition, results of operations, liquidity and capital resources, significant accounting policies and estimates, new accounting pronouncements, market risks and other matters. It should be read in conjunction with the Consolidated Financial Statements and related footnotes that follow this discussion.

FINANCIAL CONDITION

The Company's overall financial position remains very strong as a result of its 2009 net earnings and related cash flows provided by operating activities.

During 2009, the Company's cash flows from operating activities aggregated $75,281 compared to $57,042 in 2008. The Company used its cash flows to pay cash dividends of $17,825, repurchase and retire $20,723 of its outstanding shares, and make capital expenditures of $20,831. In addition, the Company's net working capital increased from $129,967 at December 31, 2008 to $155,812 at December 31, 2009.

As of December 31, 2009, the Company's aggregate cash, cash equivalents and investments, including all long-term investments in marketable securities, was $157,789 compared to $136,680 at December 31, 2008, an increase of $21,109. The 2009 amount reflects a $4,524 appreciation in market value of trading securities. The Company invests in trading securities to provide an economic hedge for its deferred compensation liabilities, as further discussed herein and in Note 7 to the Consolidated Financial Statements.

Shareholders' equity increased from $634,770 at December 31, 2008 to $652,485 as of December 31, 2009, principally reflecting 2009 net earnings of $53,475 less cash dividends and share repurchases of $17,825 and $20,723, respectively.

The Company has a relatively straight-forward financial structure and has historically maintained a conservative financial position. Except for an immaterial amount of operating leases, the Company has no special financing arrangements or "off-balance sheet" special purpose entities. Cash flows from operations plus maturities of short-term investments are expected to be adequate to meet the Company's overall financing needs, including capital expenditures, in 2010. Occasionally, the Company considers possible acquisitions, and if the Company were to pursue and complete such an acquisition, that could result in bank borrowings.

Results of Operations

2009 vs. 2008

Net product sales were $495,592 in 2009 compared to $492,051 in 2008, an increase of $3,541 or 1%. Although the increase in 2009 consolidated sales benefited from higher U.S. domestic sales, they were adversely affected by declines in export sales and sales of the Company's Mexican subsidiary when translated into U.S. dollar sales from a devalued foreign currency.

Product cost of goods sold were $318,645 in 2009 compared to $333,314 in 2008, a decrease of $14,669 or 4.4%. Product cost of

goods sold reflects a $2,876 increase in deferred compensation expense in 2009 compared to 2008. This increase principally results from changes in the market value of investments in trading securities relating to compensation deferred in previous years and is not reflective of current operating results. Adjusting for the aforementioned, product cost of goods sold as a percentage of net product sales favorably decreased from 68.1% in 2008 to 64.1% in 2009, a decrease of 4.0% as a percent of sales. This improvement principally reflects the benefits of selective price increases, product weight declines (indirect price increases) and the favorable effects of foreign currency exchange rates on products manufactured in Canada and principally sold in the United States. Ingredient unit costs favorably decreased by approximately $700 in 2009. However, the Company was adversely affected by approximately $400 of packaging material unit cost increases in 2009 compared to 2008. The Company generally experienced significant cost increases in sugar and cocoa. However, the Company experienced favorable declines in dairy products, corn syrup and edible oils.

Due to the seasonal nature of the Company's business and corresponding variations in product mix, gross margins have historically been lower in the second half of the year, and second half of 2009 and 2008 were consistent with this trend.

Selling, marketing and administrative expenses were $103,755 in 2009 compared to $95,254 in 2008, an increase of $8,501 or 8.9%. Selling, marketing and administrative expenses reflect an $8,982 increase in deferred compensation expense in 2009 compared to 2008. This increase principally results from changes in the market value of investments in trading securities relating to compensation deferred in previous years and is not reflective of current operating results. Adjusting for the aforementioned, selling, marketing and administrative expenses favorably decreased from $100,711 in 2008 to $100,230 in 2009, a decrease of $481 or 0.5%. As a percent of net product sales, these expenses decreased from 20.5% of net product sales in 2008 to 20.2% of product sales in 2009. The favorable decrease in such expenses principally resulted from lower freight, delivery and warehousing and distribution expenses partially offset by higher incentive compensation awards. Such higher incentive awards are due to the substantial improvement in 2009 results compared to 2008.

Selling, marketing and administrative expenses include $38,628 and $45,570 of freight, delivery and warehousing and distribution expenses in 2009 and 2008, respectively. Freight, delivery and warehousing and distribution expenses decreased from 9.3% of net product sales in 2008 to 7.8% of net product sales in 2009, primarily due to lower energy costs including lower freight fuel surcharges.

The Company believes that the carrying values of its trademarks and goodwill have indefinite lives as they are expected to generate cash flows indefinitely. In accordance with current accounting guidance, goodwill and indefinite-lived intangible assets are assessed at least annually for impairment as of December 31 or whenever events or circumstances indicate that the carrying values may not be recoverable from future cash flows. As of December 31, 2009, management ascertained that certain trademarks were impaired, and recorded a pre-tax charge of $14,000. This 2009 impairment charge was principally driven by an increase in the discount rate required by market participants. No impairments of intangibles were recorded in 2008.

The fair values of indefinite lived intangible assets are primarily assessed using the present value of estimated future cash flows. Management believes that all assumptions used for the impairment tests are consistent with those utilized by market participants performing similar valuations. The Company's fair value estimates based on these assumptions were used to prepare projected financial information which it believes to be reasonable. Actual future results may differ from those projections and the differences may be material. Holding all other assumptions constant at the test date, a 100 basis point increase in the discount rate or a 100 basis point decrease in the royalty rate would reduce the fair value of certain trademarks by approximately 14% and 10%, respectively, indicating potential additional impairment of approximately $14,000 and $10,000, respectively, as of December 31, 2009.

Earnings from operations were $62,079 in 2009 compared to $66,527 in 2008, a decrease of $4,448. Earnings from operations includes changes in deferred compensation liabilities relating to corresponding changes in the market value of trading securities that hedge these liabilities as discussed above. Adjusting for the aforementioned deferred compensation charges of $11,858 and excluding the nonrecurring $14,000 non-cash impairment charge in 2009 relating to

trademarks as discussed above, operating earnings were $80,603 and $59,193 in 2009 and 2008, respectively, an increase of $21,410 or 36.2%. Management believes this comparison is more reflective of the underlying operations of the Company. This increase principally reflects the favorable improvement in product cost of goods sold and gross profit margins, and more favorable freight, distribution and warehousing expenses as discussed above.

Other income (expense), net, was $2,100 in 2009 compared to $(10,618) in 2008, an increase of $12,718. This increase principally reflects the $11,858 favorable net change in the fair value of trading securities investments used to hedge deferred compensation liabilities, offset by a pre-tax impairment charge of $4,400 in 2009 to write down to market value the Company's 50% investment in a Spanish joint venture, and a pre-tax charge of $5,140 in prior year 2008 to write down to market value an auction rate security as discussed below.

The Company has a 50% interest in a Spanish joint venture which is accounted for under the equity method. As of December 31, 2009, management determined, based on operating losses and expectations of future results, that the carrying value of this asset was impaired. As a result, the Company recorded a pre-tax impairment charge of $4,400 in the fourth quarter 2009, resulting in an adjusted carrying value of $4,961 as of December 31, 2009. The fair value was primarily assessed using the present value of estimated future cash flows. Other income (expense), net also includes the operating results of the Company's joint venture which was a loss of $233 and $477 in 2009 and 2008, respectively.

As of December 31, 2009 and 2008, the Company's long-term investments include $7,710 and $8,410 ($13,550 original cost), respectively, of Jefferson County Alabama Sewer Revenue Refunding Warrants, originally purchased with an insurance-backed AAA rating. This is an auction rate security (ARS) that is classified as an available for sale security. Due to adverse events related to Jefferson County and its bond insurance carrier, Financial Guaranty Insurance Company (FGIC), as well as events in the credit markets, the auctions for this ARS failed throughout 2008 and 2009 (and subsequent to December 31, 2009). As such, the Company estimated the fair value of this ARS as of December 31, 2009 and 2008 utilizing a valuation model with Level 3 inputs. This valuation model considered, among others items, the credit risk of the collateral underlying the ARS, the credit risk of the bond insurer, interest rates, and the amount and timing of expected future cash flows including assumptions about the market expectation of the next successful auction.

During the prior year fourth quarter of 2008, the Company determined that the market decline in fair value of its Jefferson County ARS became other-than-temporarily impaired, as defined, and recorded a pre-tax impairment of $5,140. During the fourth quarter of 2009, the Company further evaluated this investment and concluded that an additional decline in the market value was temporary because it was not related to further credit impairment and recorded this $700 of additional decline in the market value as a charge to accumulated other comprehensive loss. Notwithstanding, the Company continues to receive all contractual interest payments on its ARS on a timely basis, there has been no default, it is insured by FGIC and the Company has the intent and ability to hold this ARS until recovery of its amortized cost basis.

The Company has classified this ARS as non-current and has included it in long-term investments at December 31, 2009 and 2008 because the Company believes that the current financial conditions of Jefferson County and FGIC, as well as the conditions in the auction rate securities market, may take more than twelve months to resolve. Future evaluations of the fair value of this ARS could also result in additional other-than-temporary classification of declines in market value, and therefore result in additional charges to earnings.

Other income (expenses), net also includes the results of the Company's trading securities which provide an economic hedge to the Company's deferred compensation liabilities. The income (expense), on such trading securities was $4,524 and $(7,334) in 2009 and 2008, respectively. Such income or (expense) was substantially offset by a like amount of (expense) or income in aggregate product cost of goods sold and selling, marketing, and administrative expenses in the respective years as discussed above. The 2009 income principally reflects market appreciation in the equity markets in 2009, and the 2008 (expense) principally reflects the market decline in the equity markets in 2008.

The consolidated effective tax rate was 16.7% and 30.6% in 2009 and 2008, respectively. This favorable decrease in the effective tax rate principally reflects the release of Canadian income tax valuation allowances

in 2009. Prior to fourth quarter 2009, Canadian income tax valuation allowances were recorded against Canadian deferred tax assets as a result of losses generated in 2009 and prior years. These Canadian income tax losses were principally the result of interest expense deductions for income tax purposes relating to an intercompany financing transaction which was eliminated in the Company's consolidated financial statements. Because the realization of such prior net operating loss (NOL) carry-forward benefits were not more-likely-than-not, a full valuation allowance was recorded as of December 31, 2008, and through third quarter 2009. In response to the Fifth Protocol to the Canada-U.S. Income Tax Convention (Treaty), during fourth quarter 2009 the Company decided to restructure its Canadian operations effective January 1, 2010. This restructuring eliminated the inter-company financing structure and related interest deduction for Canadian income taxes effective January 1, 2010. Going forward, management now expects its Canadian operation to report taxable income rather than losses for the foreseeable future. Accordingly, management determined that the Canadian NOL carry-forward benefits were more-likely-than-not realizable as of December 31, 2009. As such, the Company reversed approximately $10,700 of valuation allowances as a credit to income tax expense as of December 31, 2009. Management believes that its assessment is based on reasonable assumptions and is in accordance with accounting guidance regarding the release of valuation allowances on deferred tax assets. See also Note 4 to the Consolidated Financial Statements for further discussion.

The Treaty also provided for the phase-out of Canadian withholding tax rates for interest and allowed the Company to qualify for the 0% withholding rate effective January 1, 2010, resulting in a current tax benefit of $1,500 in 2009.

Net earnings were $53,475 in 2009 compared to $38,777 in 2008, and earnings per share were $.95 and $.68 in 2009 and 2008, respectively, an increase of $.27 or 40%. Earnings per share did benefit from the reduction in average shares outstanding resulting from common stock purchases in the open market by the Company. Average shares outstanding decreased from 56,799 in 2008 to 56,072 in 2009.

2008 vs. 2007

Net product sales were $492,051 in 2008 compared to $492,742 in 2007, a decrease of $691 or 0.1%. Although 2008 domestic sales increased by 0.5%, the reported consolidated net sales reflect declines in sales outside of the U.S., including the effects of a stronger dollar, which offset these domestic sales increases.

Product cost of goods sold were $333,314 in 2008 compared to $327,695 in 2007, an increase of $5,619 or 1.7%. This increase reflects a $1,877 decrease in deferred compensation expense principally resulting from the decline in the market value of investments in trading securities relating to compensation deferred in previous years. Adjusting for the aforementioned, product cost of goods sold as a percentage of net sales increased from 64.5% in 2007 to 68.1% in 2008, an increase of 3.6% as a percent of sales. This increase principally reflects significant cost increases in major ingredients, as well as higher labor and fringe benefits, including health insurance benefits, the adverse effects of foreign currency exchange rates on products manufactured in Canada and principally sold in the United States, and generally higher plant energy costs. In 2008, increases in ingredient costs approximated $9,300, however, the Company benefited from an approximate $1,200 decrease in overall packaging material costs. The Company generally experienced significant cost increases in substantially all of its major ingredients, including sugar, corn syrup, vegetable oils, dextrose, cocoa, chocolate and gum base inputs. The adverse impact of changes in Canadian exchange rates as discussed above approximated $900 in 2008.

Due to the seasonal nature of the Company's business and corresponding variations in product mix, gross margins have historically been lower in the second half of the year, and second half of 2008 and 2007 were consistent with this trend.

Selling, marketing and administrative expenses were $95,254 in 2008 compared to $97,821 in 2007, a decrease of $2,567 or 2.6%. This decrease reflects a $5,457 decrease in deferred compensation expense principally resulting from the decline in the market value of investments in trading securities relating to compensation deferred in previous years. Adjusting for the aforementioned, selling, marketing and administrative expenses increased by $2,890 or 3.0%, and as a percent of net product sales increased from 19.9% of net product sales in 2007 to 20.5% of net product sales in 2008. These expenses include $45,570 and $41,775 of freight, delivery and warehousing and distribution expenses in 2008 and 2007 respectively. Freight, delivery and warehousing and distribution expenses increased from 8.5% of net product sales in 2007 to 9.3% of net product sales

in 2008, primarily due to higher energy costs including higher freight fuel surcharges.

Earnings from operations were $66,527 in 2008 compared to $70,852 in 2007, a decrease of $4,325 or 6.1%. Earnings from operations includes changes in deferred compensation liabilities relating to corresponding changes in the market value of trading securities that hedge these liabilities as discussed above. Adjusting for the aforementioned, operating earnings were $59,193 and $72,850 in 2008 and 2007, respectively, a decrease of $13,657 or 18.7%. This decrease principally reflects the decrease in gross profit resulting from higher input costs, principally ingredients and freight and delivery, as discussed above.

Goodwill and indefinite-lived intangible assets are assessed at least annually for impairment as of December 31 or whenever events or circumstances indicate that the carrying values may not be recoverable from future cash flows. No impairments were recorded in either 2008 or 2007

Other income (expense), net, was $(10,618) in 2008 compared to $6,315 in 2007, a decrease of $16,933. This decrease principally reflects a $5,140 write-down to market value of an investment security and $9,332 relating to changes in the fair value of trading securities investments during 2008 used to hedge deferred compensation liabilities, both of which are discussed below.

As of December 31, 2008, the Company's long-term investments include $8,410 ($13,550 original cost) of Jefferson County Alabama Sewer Revenue Refunding Warrants originally purchased with an AAA rating. As discussed above, the Company estimated the fair value of this ARS utilizing a valuation model with Level 3 inputs. During the fourth quarter 2008, the Company determined that the market decline in fair value of its Jefferson County ARS became other than temporary, as defined, and recorded an after-tax impairment of $3,328 ($5,140 pre-tax charge). Previous to fourth quarter 2008, the Company concluded that the decline in market value was temporary, as defined, and recorded declines in the market value to accumulated other comprehensive income.

Other income (expenses), net includes the results of the Company's trading securities which hedge the Company's deferred compensation liabilities. The income (expense) on such trading securities was $(7,334) and $1,998 in 2008 and 2007, respectively; such income or (expense) was substantially offset by a like amount of (expense) or income in aggregate product cost of goods sold and selling, marketing, and administrative expenses in the respective years. The 2008 (expense) of $(7,334) principally reflects the market declines in the equity markets in 2008.

Other income (expense), net also includes the results of the Company's 50% interest in a Spanish joint venture, accounted for under the equity method, which was a loss of $(477) in 2008 compared to income of $182 in 2007.

The consolidated effective tax rate was 30.6% and 33.1% in 2008 and 2007, respectively. The decrease in the effective tax rate principally reflects approximately $1,400 of reduction in tax positions resulting from the effective settlement of a state income tax audit, and approximately $700 relating to changes in foreign income tax expense due to the favorable effects of certain tax treaty provisions between the U.S. and Canada. In addition, the 2007 effective tax rate was adversely impacted by $1,040 relating to the adoption of an interpretation of accounting guidance relating to uncertain income tax positions. During 2008 and 2007, the Company recorded $3,218 and $3,145 of valuation allowances, respectively, relating to its Canadian subsidiary tax loss carry-forwards to reduce the future income tax benefits to amounts expected to be realized.

Net earnings were $38,777 in 2008 compared to $51,625 in 2007, and earnings per share were $.68 and $.89 in 2008 and 2007, respectively, a decrease of $.21 or 24%. 2008 results were adversely affected by higher input costs, primarily relating to ingredients and freight and delivery, as well as the items discussed above in other income (expense), net. Earnings per share did benefit from the reduction in average shares outstanding resulting from common stock purchases in the open market by the Company. Average shares outstanding decreased from 58,227 in 2007 to 56,799 in 2008.

The Company has taken actions and implemented programs, including selected price increases as well as cost reduction programs, with the objective of recovering some of these higher input costs. However, these actions have not allowed the Company to recover all of these increases in ingredient and other input costs in 2008.

LIQUIDITY AND CAPITAL RESOURCES

Cash flows from operating activities were $75,281, $57,042 and $90,064 in 2009, 2008 and 2007, respectively. The $18,239 increase in cash flows from

operating activities from 2008 to 2009 principally reflects an increase of $14,698 in net income in 2009 compared to 2008, an increase of $13,260 of non-cash pre-tax impairment charges in 2009, changes in deferred income taxes, including the release of $10,700 of Canadian deferred income tax asset valuation allowances, the Company's 2008 investment in a voluntary employee association trust (VEBA) of $16,050 which is controlled solely by the Company as discussed herein, and changes in other current assets and liabilities, principally inventories and accounts receivable.

As discussed above, during 2009 the Company recorded pre-tax non-cash impairment charges of $14,000 and $4,400 relating to certain trademarks and its 50% owned Spanish joint venture, respectively; and during prior year 2008, the Company recorded a pre-tax non-cash impairment charge of $5,140 relating to its Jefferson County ARS investment.

During 2008, the Company contributed $16,050 to a VEBA trust to fund the estimated future costs of certain employee health, welfare and other benefits. The Company used the funds, as well as investment income in this VEBA trust, to pay the actual cost of such benefits during 2009 and will continue to do so through 2011. At December 31, 2009, the VEBA trust holds $12,678 of aggregate cash, cash equivalents and investments; this asset value is included in prepaid expenses in the Company's current and other assets.

Cash flows from investing activities reflect capital expenditures of $20,831, $34,355, and $14,767 in 2009, 2008 and 2007, respectively. Capital expenditures in prior year 2008 reflect $12,400 relating to the purchase of real estate that the Company placed into service as a distribution center in 2009. The 2009 and 2008 capital additions include $2,326 and $4,755, respectively, relating to computer systems and related implementation.

The Company had no bank borrowing or repayments in 2007, 2008, or 2009, and had no outstanding bank borrowings as of December 31, 2008 or 2009.

Financing activities include common stock purchases and retirements of $20,723, $21,109, and $27,300 in 2009, 2008 and 2007, respectively. Cash dividends of $17,825, $17,557, and $17,542 were paid in 2009, 2008 and 2007, respectively. The increase in cash dividends each year reflects the annual 3% stock dividend issued in each of these years less the effects of Company Common Stock purchases and retirements.

SIGNIFICANT ACCOUNTING POLICIES AND ESTIMATES

Preparation of the Company's financial statements involves judgments and estimates due to uncertainties affecting the application of accounting policies, and the likelihood that different amounts would be reported under different conditions or using different assumptions. The Company bases its estimates on historical experience and other assumptions, as discussed herein, that it believes are reasonable. If actual amounts are ultimately different from previous estimates, the revisions are included in the Company's results of operations for the period in which the actual amounts become known. The Company's significant accounting policies are discussed in Note 1 to the Consolidated Financial Statements.

Following is a summary and discussion of the more significant accounting policies which management believes to have a significant impact on the Company's operating results, financial position, cash flows and footnote disclosure.

Revenue recognition

Revenue, net of applicable provisions for discounts, returns, allowances and certain advertising and promotional costs, is recognized when products are delivered to customers based on a customer purchase order, and collectability is reasonably assured. The accounting for promotional costs is discussed under "Customer incentive programs, advertising and marketing" below.

Provisions for bad debts are recorded as selling, marketing and administrative expenses. Write-offs of bad debts did not exceed 0.05% of net product sales in each of 2009, 2008 and 2007, and accordingly, have not been significant to the Company's financial position or results of operations.

Intangible assets

The Company's intangible assets consist primarily of acquired trademarks and related goodwill. In accordance with accounting guidance, goodwill and other indefinite-lived assets are not amortized, but are instead subjected to annual testing for impairment unless certain triggering events or circumstances are noted. The Company performs its annual testing impairment testing as of December 31. The Company may utilize third-party professional valuation firms to assist in the determination of certain intangibles.

The impairment test is performed by comparing the carrying value

of the asset with its estimated fair value, which is calculated using estimates, including discounted projected future cash flows. These projected future cash flows are dependent on a number of factors including the execution of business plans, achievement of projected sales, including but not limited to future price increases, projected operating margins, and projected capital expenditures. Such operating results are also dependent upon future ingredient and packaging material costs, exchange rates for products manufactured or sold in foreign countries, operational efficiencies, cost savings initiatives, and competitive factors. Although the majority of the Company's trademarks relate to well established brands with a long history of consumer acceptance, projected cash flows are inherently uncertain. A change in the assumptions underlying the impairment analysis, including but not limited to a reduction in projected cash flows, the use of a different discount rate to discount future cash flows or a different royalty rate applied to the Company's trademarks, could cause impairment in the future. See above discussion and Note 12 to the Consolidated Financial Statements regarding the impairment of certain trademarks in 2009.

Customer incentive programs, advertising and marketing

Advertising and marketing costs are recorded in the period to which such costs relate. The Company does not defer the recognition of any amounts on its consolidated balance sheet with respect to such costs. Customer incentives and other promotional costs are recorded at the time of sale based upon incentive program terms and historical utilization statistics, which are generally consistent from year to year. The liabilities associated with these programs are reviewed quarterly and adjusted if utilization rates differ from management's original estimates. Such adjustments have not historically been material to the Company's operating results.

Split dollar officer life insurance

The Company provides split dollar life insurance benefits to certain executive officers and records an asset equal to the cumulative premiums paid. The Company will fully recover these premiums in future years under the terms of the plan. The Company retains a collateral assignment of the cash surrender values and policy death benefits payable to insure recovery of these premiums.

Valuation of long-lived assets

Long-lived assets, primarily property, plant and equipment, and investment in joint ventures accounted for under the equity method are reviewed for impairment as events or changes in business circumstances occur indicating that the carrying value of the asset may not be recoverable. The Company may utilize third-party professional valuation firms as necessary to assist in the determination of the fair value of long-lived assets or investments accounted for under the equity method. The estimated cash flows produced by assets, asset groups, or investments accounted for under the equity method result in an estimated fair value and are compared to the asset carrying value to determine whether impairment exists. Such estimates involve considerable management judgment and are based upon assumptions about expected future operating performance, and cash flows in the case of investments accounted for under the equity method. As a result, actual cash flows could differ from management's estimates due to changes in business conditions, operating performance, and economic and competitive conditions. See above discussion and Note 6 regarding the impairment of the Company's Spanish joint venture recorded in 2009.

Income taxes

Deferred income taxes are recognized for future tax effects of temporary differences between financial and income tax reporting using tax rates in effect for the years in which the differences are expected to reverse. The Company records valuation allowances in situations where the realization of deferred tax assets, including those relating to net operating tax losses, is not more-likely-than-not; and the Company adjusts and releases such valuation allowances when realization becomes more-likely-than-not as defined by accounting guidance. The Company periodically reviews assumptions and estimates of the Company's probable tax obligations using informed judgment, projections of income and losses, and historical experience.

Valuation of investments

Investments, primarily municipal bonds and mutual funds, are reviewed for impairment at each reporting period by comparing the carrying value or amortized cost to the fair market value. The Company may utilize third-party professional valuation firms as necessary to assist in the determination of the value of investments using a valuation model with Level 3 inputs as defined. In the event that an investment security's fair value is below carrying value or amortized cost, the Company will record an

other-than-temporary impairment or a temporary impairment based on accounting guidance. See above discussion and Note 10 regarding Jefferson County ARS.

Other matters

In the opinion of management, other than contracts for foreign currency forwards and raw materials, including currency and commodity hedges and outstanding purchase orders for packaging, ingredients, supplies, and operational services, all entered into in the ordinary course of business, the Company does not have any significant contractual obligations or future commitments. The Company's outstanding contractual commitments as of December 31, 2009, all of which are generally normal and generally recurring in nature, are summarized in the chart on page 13.

RECENT ACCOUNTING PRONOUNCEMENTS

In February 2008, the FASB delayed the effective date of guidance for non-financial assets and non-financial liabilities, except for items that are recognized or disclosed at fair value in the financial statements on a recurring basis until fiscal and interim periods beginning after November 15, 2008. The non-financial assets and non-financial liabilities for which the Company has applied the fair value provisions of this guidance include long-lived assets, goodwill and other intangible assets. See Note 10 to the Consolidated Financial Statements.

During the first quarter of 2009, the Company adopted the authoritative guidance for disclosures about derivative instruments and hedging activities. It requires qualitative disclosures about objectives and strategies for using derivatives, quantitative disclosures about fair value amounts of derivative instruments and related gains and losses, and disclosures about credit-risk-related contingent features in derivative agreements. The adoption did not impact the Company's financial condition, results of operations or cash flow.

In April 2009, the FASB issued guidance on (1) estimating the fair value of an asset or liability when the volume and level of activity for the asset or liability have significantly decreased and (2) identifying transactions that are not orderly. It is effective for interim and annual periods ending after June 15, 2009. The Company's adoption of the guidance during second quarter 2009 did not have a material impact on the Company's consolidated financial statements.

In April 2009, the FASB amended the other-than-temporary impairment guidance for debt securities to make the guidance more operational and to improve the presentation and disclosure of other-than-temporary impairments on debt and equity securities. It is effective for interim and annual periods ending after June 15, 2009. The Company's adoption of the guidance during second quarter 2009 did not have a material impact on the Company's consolidated financial statements.

In April 2009, the FASB issued guidance which required disclosures about the fair value of financial instruments in interim reporting periods of publicly traded companies as well as in annual financial statements. It is effective for interim periods ending after June 15, 2009. The Company's adoption of the guidance during second quarter 2009 did not have a material impact on the Company's consolidated financial statements. See Note 10 to the Consolidated Financial Statements.

In May 2009, the FASB issued guidance which established general standards of accounting for, and disclosure of, events that occur after the balance sheet date but before financial statements are issued. It includes a requirement to disclose the date through which subsequent events were evaluated. See Note 1 to the Consolidated Financial Statements.

In June 2009, the FASB issued guidance which establishes the FASB Accounting Standards Codification to become the source of authoritative U.S. generally accepted accounting principles to be applied by non-governmental entities. It is effective for interim or annual financial periods ending after September 15, 2009. The Company adopted this guidance during the third quarter of fiscal year 2009.

MARKET RISKS

The Company is exposed to market risks related to commodity prices, interest rates, investments in marketable securities, equity price and foreign exchange.

The Company's ability to forecast the direction and scope of changes to its major input costs is impacted by significant volatility in crude oil, sugar, corn, soybean and edible oils, cocoa and dairy products markets. The prices of these commodities are influenced by changes in global demand, changes in weather and crop yields, changes in governments' farm policies, including mandates for bio-fuels and environmental matters, including global warming, and fluctuations in the U.S. dollar relative to dollar-denominated commodities in world markets. The Company believes that its competitors face the same or similar challenges.

In order to address the impact of rising input and other costs, the Company periodically reviews each item in its product portfolio to ascertain if price increases, weight declines (indirect price increases) or other actions may be taken. These reviews include an evaluation of the risk factors relating to market place acceptance of such changes and their potential effect on future sales volumes. In addition, the estimated cost of packaging modifications associated with weight changes is evaluated.

The Company also maintains ongoing cost reduction and productivity improvement programs under which cost savings initiatives are encouraged and progress monitored. The Company is not able to accurately predict the outcome of these cost savings initiatives and their effects on its future results.

Commodity future and foreign currency forward contracts

Commodity price risks relate to ingredients, primarily sugar, cocoa, chocolate, corn syrup, dextrose, soybean and edible oils, milk, whey and gum base ingredients. The Company believes its competitors face similar risks, and the industry has historically adjusted prices to compensate for adverse fluctuations in commodity costs. The Company, as well as competitors in the confectionery industry, have taken actions, including price increases and selective product weight declines (indirect price increases) to mitigate rising input costs for ingredients, energy, freight and delivery. Although management seeks to substantially recover cost increases over the long-term, there is risk that price increases and weight declines cannot be fully passed on to customers and, to the extent they are passed on, they could adversely affect customer and consumer acceptance and resulting sales volume.

The Company utilizes commodity futures contracts and options programs as well as annual supply agreements to hedge and plan for anticipated purchases of certain ingredients, including sugar, in order to mitigate commodity cost fluctuation. The Company also purchases forward foreign exchange contracts to hedge its costs of manufacturing certain products in Canada for sale and distribution in the United States, and periodically does so for purchases of equipment or raw materials from foreign suppliers. Such commodity futures and currency forward contracts are cash flow hedges and are effective as hedges as defined by accounting guidance. The unrealized gains and losses on such contracts are deferred as a component of accumulated other comprehensive loss and are recognized as a component of product cost of goods sold when the related inventory is sold. The Company has elected not to apply hedge accounting to commodity options contracts.

The potential change in fair value of commodity and foreign currency derivative instruments held by the Company at December 31, 2009, assuming a 10% change in the underlying contract price, was $3,018. The analysis only includes commodity and foreign currency derivative instruments and, therefore, does not consider the offsetting effect of changes in the price of the underlying commodity or foreign currency. This amount is not significant compared with the net earnings and shareholders' equity of the Company.

Interest rates

Interest rate risks primarily relate to the Company's investments in tax exempt marketable securities, including ARS, with maturities or auction dates of generally up to three years.

The majority of the Company's investments, which are classified as available for sale, have historically been held until they mature, which limits the Company's exposure to interest rate fluctuations. The accompanying chart summarizes the maturities of the Company's investments in debt securities at December 31, 2009.

Less than 1 year	$ 8,607
1–2 years	7,858
2–3 years	10,328
Over 3 years	7,710
Total	$34,503

The Company had no outstanding debt at December 31, 2009 or 2008 other than $7,500 in an industrial revenue bond in which interest rates reset each week based on the current market rate. Therefore, the Company does not believe that it has significant interest rate risk with respect to its interest bearing debt.

Investment in marketable securities

As stated above, the Company invests primarily in tax exempt marketable securities, including ARS, with maturities or auction dates generally up to three years. The Company utilizes professional money managers and maintains investment policy guidelines which emphasize quality and liquidity in order to minimize the potential loss exposures that could result in the event of a default or other adverse event, including failed auctions.

However, given events in the municipal bond and ARS markets, including failed auctions, the

Company continues to monitor these investments and markets, as well as its investment policies. Nonetheless, the financial markets have been experiencing unprecedented events, and future outcomes are less predictable than in the past.

Equity price

Equity price risk relates to the Company's investments in mutual funds which are principally used to fund and hedge the Company's deferred compensation liabilities. At December 31, 2009, the Company has investments in mutual funds, classified as trading securities, of $32,238. Any change in the fair value of these trading securities is completely offset by a corresponding change in the respective hedged deferred compensation liability.

Foreign currency exchange

Foreign currency exchange risk principally relates to the Company's foreign operations in Canada and Mexico, as well as periodic purchase commitments of machinery and equipment from foreign sources.

Certain of the Company's Canadian manufacturing costs, including local payroll and plant operations, and a portion of its packaging and ingredients are sourced in Canadian dollars. The Company purchases Canadian forward contracts to receive Canadian dollars at a specified date in the future and uses its Canadian dollar collections on Canadian sales as a partial hedge of its overall Canadian manufacturing obligations sourced in Canadian dollars. The Company also periodically purchases and holds Canadian dollars to facilitate the risk management of these currency changes.

From time to time the Company may use forward foreign exchange contracts and derivative instruments to mitigate its exposure to foreign exchange risks, as well as those related to firm commitments to purchase equipment from foreign vendors. As of December 31, 2009 the Company held foreign exchange forward contracts with a fair value of $3,674.

RISK FACTORS

The Company's operations and financial results are subject to a number of risks and uncertainties that could adversely affect the Company's operating results and financial condition. Significant risk factors, without limitations that could impact the Company are the following: (i) significant competitive activity, including advertising, promotional and price competition, and changes in consumer demand for the Company's products; (ii) fluctuations in the cost and availability of various ingredients and packaging materials; (iii) inherent risks in the marketplace, including uncertainties about trade and consumer acceptance and seasonal events such as Halloween; (iv) the effect of acquisitions on the Company's results of operations and financial condition; (v) the effect of changes in foreign currencies on the Company's foreign subsidiaries operating results, and the effect of the fluctuation of the Canadian dollar on products manufactured in Canada and marketed and sold in the United States in U.S. dollars; (vi) the Company's reliance on third party vendors for various goods and services; (vii) the Company's ability to successfully implement new production processes and lines; (viii) the effect of changes in assumptions, including discount rates, sales growth and profit margins and the capability to pass along higher ingredient and other input costs through price increases, relating to the Company's impairment testing and analysis of its goodwill and trademarks; (ix) changes in the confectionery marketplace

Open Contractual Commitments as of December 31, 2009

Payable in	Total	Less than 1 year	1 to 3 Years	3 to 5 Years	More than 5 Years
Commodity options	$12,405	$12,405	$ —	$ —	$ —
Foreign currency hedges	17,772	14,200	3,572	—	—
Purchase obligations . . .	18,340	18,340	—	—	—
Interest bearing debt	7,500	—	—	—	7,500
Operating leases	3,281	1,058	1,139	723	361
Total	$59,298	$46,003	$4,711	$723	$7,861

Note: Commodity options and foreign currency hedges reflect the notional amounts. The above amounts exclude deferred income tax liabilities of $44,582, liabilities for uncertain tax positions of $21,101, postretirement health care and life insurance benefits of $16,674 and deferred compensation and other liabilities of $39,839 because the timing of payments relating to these items cannot be reasonably determined.

including actions taken by major retailers and customers; (x) customer, consumer and competitor response to marketing programs and price and product weight adjustments, and new products; (xi) dependence on significant customers, including the volume and timing of their purchases, and availability of shelf space; (xii) increases in energy costs, including freight and delivery, that cannot be passed along to customers through increased prices due to competitive reasons; (xiii) any significant labor stoppages, strikes or production interruptions; (xiv) changes in governmental laws and regulations including taxes and tariffs; (xv) the risk that the market value of Company's investments could decline including being classified as "other-than-temporary" as defined; and (xvi) the potential effects of current and future macroeconomic conditions.

Forward-looking statements

This discussion and certain other sections contain forward-looking statements that are based largely on the Company's current expectations and are made pursuant to the safe harbor provision of the Private Securities Litigation Reform Act of 1995. Forward-looking statements can be identified by the use of the words such as "anticipated," "believe," "expect," "intend," "estimate," "project," and other words of similar meaning in connection with a discussion of future operating or financial performance and are subject to certain factors, risks, trends and uncertainties that could cause actual results and achievements to differ materially from those expressed in the forward-looking statements. Such factors, risks, trends and uncertainties which in some instances are beyond the Company's control, including the overall competitive environment in the Company's industry, changes in assumptions and judgments discussed above under the heading "Significant Accounting Policies and Estimates", and factors identified and referred to above under the heading "Risk Factors."

The risk factors identified and referred to above are believed to be significant factors, but not necessarily all of the significant factors that could cause actual results to differ from those expressed in any forward-looking statement. Readers are cautioned not to place undue reliance on such forward-looking statements, which are made only as of the date of this report. The Company undertakes no obligation to update such forward-looking statements.

Management's Report on Internal Control and Management Certifications of Financial Statements

The Sarbanes-Oxley Act of 2002 requires managers of publicly traded companies to establish and maintain systems of internal control on the company's financial reporting processes. In addition, the act requires the company's top management to provide certifications regarding the accuracy of the financial statements. The reports of Tootsie Roll are shown on page A-17.

Management's Report on Internal Control Over Financial Reporting

The management of Tootsie Roll Industries, Inc. is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in the Securities Exchange Act of 1934 (SEC) Rule 13a-15(f). Our management conducted an evaluation of the effectiveness of the Company's internal control over financial reporting as of December 31, 2009 as required by SEC Rule 13a-15(c). In making this assessment, we used the criteria established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (the COSO criteria). Based on our evaluation under the COSO criteria, our management concluded that our internal control over financial reporting was effective as of December 31, 2009.

The effectiveness of the Company's internal control over financial reporting as of December 31, 2009 has been audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, as stated in their report which appears on page 27.

Tootsie Roll Industries, Inc.

Financial Statements and Accompanying Notes

The standard set of financial statements consists of: (1) a comparative income statement for three years, (2) a comparative balance sheet for two years, (3) a comparative statement of cash flows for three years, (4) a statement of retained earnings (or stockholders' equity) for three years, and (5) a set of accompanying notes that are considered an integral part of the financial statements. The auditor's report, unless stated otherwise, covers the financial statements and the accompanying notes. The financial statements and accompanying notes plus some supplementary data and analyses for Tootsie Roll Industries follow.

(The accompanying notes are an integral part of these statements.)

Notes to Consolidated Financial Statements

TOOTSIE ROLL INDUSTRIES, INC. AND SUBSIDIARIES ($ in thousands except per share data)

NOTE 1—SIGNIFICANT ACCOUNTING POLICIES:

Basis of consolidation:

The consolidated financial statements include the accounts of Tootsie Roll Industries, Inc. and its wholly-owned subsidiaries (the Company), which are primarily engaged in the manufacture and sales of candy products. All significant intercompany transactions have been eliminated.

The preparation of financial statements in conformity with generally accepted accounting principles in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Certain reclassifications have been made to the prior year financial statements to conform to the current year presentation.

Revenue recognition:

Products are sold to customers based on accepted purchase orders which include quantity, sales price and other relevant terms of sale. Revenue, net of applicable provisions for discounts, returns, allowances and certain advertising and promotional costs, is recognized when products are delivered to customers and collectability is reasonably assured. Shipping and handling costs of $38,628, $45,570, and $41,775 in 2009, 2008 and 2007, respectively, are included in selling, marketing and administrative expenses. Accounts receivable are unsecured. Revenues from a major customer aggregated approximately 22.9%, 23.5% and 22.4% of net product sales during the years ended December 31, 2009, 2008 and 2007, respectively.

Cash and cash equivalents:

The Company considers temporary cash investments with an original maturity of three months or less to be cash equivalents.

Investments:

Investments consist of various marketable securities with maturities of generally up to three years. The Company classifies debt and equity securities as either available for sale or trading. Available for sale are not actively traded and are carried at fair value. The Company follows current fair value measurement guidance and unrealized gains and losses on these securities are excluded from earnings and are reported as a separate component of shareholders' equity, net of applicable taxes, until realized. Trading securities relate to deferred compensation arrangements and are carried at fair value. The Company invests in trading securities to economically hedge changes in its deferred compensation liabilities.

The Company regularly reviews its investments to determine whether a decline in fair value below the cost basis is other than temporary. If the decline in fair value is judged to be other than temporary, the cost basis of the security is written down to fair value and the amount of the write-down is included in other income (expense), net. Further information regarding the fair value of the Company's investments is included in Note 10 to the Consolidated Financial Statements.

Derivative instruments and hedging activities:

During the first quarter of 2009, the Company adopted the new authoritative guidance for disclosures about derivative instruments and hedging activities. This guidance requires qualitative disclosures about objectives and strategies for using derivatives, quantitative disclosures about fair value amounts of derivative instruments and related gains and losses, and disclosures about credit-risk-related contingent features in derivative agreements. The adoption of this standard did not impact the Company's consolidated financial statements.

From time to time, the Company enters into futures contracts. Commodity futures are intended and are effective as hedges of market price risks associated with the anticipated purchase of certain raw materials (primarily sugar). Foreign currency forward contracts are intended and are effective as hedges of the Company's exposure to the variability of cash flows, primarily related to the foreign exchange rate changes of products manufactured in Canada and sold in the United States, and periodic equipment purchases from foreign suppliers denominated in a foreign currency. The Company does not engage in trading or other speculative use of derivative instruments.

The Company's foreign currency forward contracts are accounted for as cash flow hedges and are recorded on the balance sheet at fair value. Changes therein are recorded in accumulated other comprehensive loss, net of tax, and are reclassified to earnings in the periods in which earnings are affected by the hedged item. Realized gains/losses are recorded as foreign exchange gains/losses in other income (expense), net.

As of December 31, 2009, the Company had foreign currency forward contracts outstanding with a notional amount of $17,772 that hedged its exposure to changes in foreign currency exchange rates for its costs of manufacturing certain products in Canada for the U.S. market. The fair value of foreign currency forward contracts, using Level 1 inputs, as discussed in Note 10, resulted in an asset of $3,674 as of December 31, 2009 which is included in other receivables. In entering into these contracts, the Company has assumed the risk that might arise from the possible inability of counterparties to meet the terms of their contracts and does not expect any significant losses from counterparty defaults.

During 2009, the Company recorded $3,365 of net derivative gains in accumulated other comprehensive loss which is a component of shareholders' equity in the statement of financial position. The Company also recognized a gain of $989, related to foreign currency contracts settled during 2009. At December 31, 2009, the Company expects to reclassify existing net gains of approximately $1,871 from accumulated other comprehensive loss to net earnings during the next twelve months.

As of December 31, 2009, the Company had commodity options contracts with a notional value of $12,405. These options have not been designated as hedges. The fair value of $1,686 is included in other receivables. In 2009 the Company recorded a gain of $1,562 in cost of goods sold.

Inventories:

Inventories are stated at cost, not to exceed market. The cost of substantially all of the Company's inventories ($53,724 and $53,557 at December 31, 2009 and 2008, respectively) has been determined by the last-in, first-out (LIFO) method. The excess of current cost over LIFO cost of inventories approximates $13,107 and $12,432 at December 31, 2009 and 2008, respectively. The cost of certain foreign inventories ($2,663 and $2,027 at December 31, 2009 and 2008, respectively) has been determined by the first-in, first-out (FIFO) method. Rebates, discounts and other cash consideration received from vendors related to inventory purchases is reflected as a reduction in the cost of the related inventory item, and is therefore reflected in cost of sales when the related inventory item is sold.

Property, plant and equipment:

Depreciation is computed for financial reporting purposes by use of the straight-line method based on useful lives of 20 to 35 years for buildings and 5 to 20 years for machinery and equipment. Depreciation expense was $17,862, $17,036 and $15,859 in 2009, 2008 and 2007, respectively.

Carrying value of long-lived assets:

The Company reviews long-lived assets to determine if there are events or circumstances indicating that the amount of the asset reflected in the Company's balance sheet may not be recoverable. When such indicators are present, the Company compares the carrying value of the long-lived asset, or asset group, to the future undiscounted cash flows of the underlying assets to determine if an impairment exists. If applicable, an impairment charge would be recorded to write down the carrying value to its fair value. The determination of fair value involves the use of estimates of future cash flows that involve considerable management judgment and are based upon assumptions about expected future operating performance. The actual cash flows could differ from management's estimates due to changes in business conditions, operating performance, and economic conditions. No impairment charges of long-lived assets were recorded by the Company during 2009, 2008 and 2007.

Postretirement health care and life insurance benefits:

The Company provides certain postretirement health care and life insurance benefits. The cost of these postretirement benefits is accrued during employees' working careers. The Company also provides split dollar life benefits to certain executive officers. The Company records an asset equal to the cumulative insurance premiums paid that will be recovered upon the death of a covered employee(s) or earlier under the terms of the plan. Split dollar premiums paid were $1,586 in 2007. No premiums were paid in 2009 and 2008.

Goodwill and intangible assets:

In accordance with authoritative guidance, goodwill and intangible assets with indefinite lives are not amortized, but rather tested for impairment at least annually unless certain interim triggering events or circumstances require more frequent testing. All trademarks have been assessed by management to have indefinite lives because they are expected to generate cash flows indefinitely. The Company has completed its annual impairment testing of its goodwill and trademarks at December 31 of each of the years presented. As of December 31, 2009, management ascertained that certain trademarks were impaired, and recorded a pre-tax charge of $14,000. No impairments of intangibles were recorded in 2008 and 2007.

This determination is made by comparing the carrying value of the asset with its estimated fair value, which is calculated using estimates including discounted projected future cash flows. Management believes that all assumptions used for the impairment tests are consistent with those utilized by market participants performing similar valuations.

Income taxes:

Deferred income taxes are recorded and recognized for future tax effects of temporary differences between financial and income tax reporting. The Company records valuation allowances in situations where the realization of deferred tax assets is not more–likely-than-not. Federal income taxes

are provided on the portion of income of foreign subsidiaries that is expected to be remitted to the U.S. and become taxable, but not on the portion that is considered to be permanently invested in the foreign subsidiary.

Foreign currency translation:

The U.S. dollar is used as the functional currency where a substantial portion of the subsidiary's business is indexed to the U.S. dollar or where its manufactured products are principally sold in the U.S. All other foreign subsidiaries use the local currency as their functional currency. Where the U.S. dollar is used as the functional currency, foreign currency remeasurements are recorded as a charge or credit to other income (expense), net in the statement of earnings. Where the foreign local currency is used as the functional currency, translation adjustments are recorded as a separate component of accumulated other comprehensive (loss).

Joint venture:

The Company's 50% interest in two companies is accounted for using the equity method. The Company records an increase in its investment in the joint venture to the extent of its share of the joint venture's earnings, and reduces its investment to the extent of losses and dividends received. A dividend of $861 was paid in 2007 by the joint venture. No dividends were paid in 2009 and 2008.

As of December 31, 2009, management determined that the fair value of the asset was less than the carrying value. As a result, the Company recorded a pre-tax impairment charge $4,400 in the fourth quarter 2009, resulting in an adjusted carrying value of $4,961 as of December 31, 2009. The fair value was primarily assessed using the present value of estimated future cash flows.

Comprehensive earnings:

Comprehensive earnings includes net earnings, foreign currency translation adjustments and unrealized gains/losses on commodity and/or foreign currency hedging contracts, available for sale securities and certain postretirement benefit obligations.

Earnings per share:

A dual presentation of basic and diluted earnings per share is not required due to the lack of potentially dilutive securities under the Company's simple capital structure. Therefore, all earnings per share amounts represent basic earnings per share.

The Class B Common Stock has essentially the same rights as Common Stock, except that each share of Class B Common Stock has ten votes per share (compared to one vote per share of Common Stock), is not traded on any exchange, is restricted as to transfer and is convertible on a share-for-share basis, at any time and at no cost to the holders, into shares of Common Stock which are traded on the New Stock Exchange.

Use of estimates:

The preparation of consolidated financial statements in conformity with accounting principles generally accepted in the U.S. requires management to make estimates and assumptions that affect the amounts reported. Estimates are used when accounting for sales discounts, allowances and incentives, product liabilities, assets recorded at fair value, income taxes, depreciation, amortization, employee benefits, contingencies and intangible asset and liability valuations. For instance, in determining the annual post-employment benefit costs, the Company estimates the cost of future health care benefits. Actual results may or may not differ from those estimates.

Recent accounting pronouncements:

In February 2008, the FASB delayed the effective date of guidance for non-financial assets and non-financial liabilities, except for items that are recognized or disclosed at fair value in the financial statements on a recurring basis until fiscal and interim periods beginning after November 15, 2008. The non-financial assets and non-financial liabilities for which the Company has applied the fair value provisions of this guidance include long lived assets, goodwill and other intangible assets. See Note 10 to the Consolidated Financial Statements.

During the first quarter of 2009 the Company adopted the authoritative guidance for disclosures about derivative instruments and hedging activities. It requires qualitative disclosures about objectives and strategies for using derivatives, quantitative disclosures about fair value amounts of derivative instruments and related gains and losses, and disclosures about credit-risk-related contingent features in derivative agreements. The adoption did not impact the Company's financial condition, results of operations or cash flow.

In April 2009, the FASB issued guidance on (1) estimating the fair value of an asset or liability when the volume and level of activity for the asset or liability have significantly decreased and (2) identifying transactions that are not orderly. It is effective for interim and annual periods ending after June 15, 2009. The Company's adoption of the guidance during second quarter 2009 did not have a material impact on the Company's consolidated financial statements.

In April 2009, the FASB amended the other-than-temporary impairment guidance for debt securities to make the guidance more operational and to improve the presentation and disclosure of other-than-temporary impairments on debt and equity securities. It is effective for interim and annual periods ending after June 15, 2009. The Company's adoption of the guidance during second quarter 2009 did not have a material impact on the Company's consolidated financial statements.

In April 2009, the FASB issued guidance which required disclosures about the fair value of financial instruments in interim reporting periods of publicly traded companies as well as in annual financial statements. It is effective for interim periods ending after June 15, 2009. The Company's adoption of the guidance during second quarter 2009 did not have a material impact on the Company's consolidated financial statements. See Note 10 to the Consolidated Financial Statements.

In May 2009, the FASB issued guidance which established general standards of accounting for, and disclosure of, events that occur after the balance sheet date but before financial statements are issued. It includes a requirement to disclose the date through which subsequent events were evaluated. See Note 1 to the Consolidated Financial Statements.

In June 2009, the FASB issued guidance which establishes the FASB Accounting Standards Codification to become the source of authoritative U.S. generally accepted accounting principles to be applied by non-governmental entities. It is effective for interim or annual financial periods ending after September 15, 2009. The Company adopted this guidance during the third quarter of fiscal year 2009.

NOTE 2—ACCRUED LIABILITIES:

Accrued liabilities are comprised of the following:

	December 31,	
	2009	2008
Compensation	$ 9,254	$11,028
Other employee benefits	2,309	2,552
Taxes, other than income	1,899	1,755
Advertising and promotions	19,350	17,345
Other	9,656	7,655
	$42,468	$40,335

NOTE 3—INDUSTRIAL DEVELOPMENT BONDS:

Industrial development bonds are due in 2027. The average floating interest rate was 0.5% and 2.6% in 2009 and 2008, respectively. See Note 10 to the Consolidated Financial Statements for fair value disclosures.

NOTE 4—INCOME TAXES:

The domestic and foreign components of pretax income are as follows:

	2009	2008	2007
Domestic	$69,779	$50,313	$69,250
Foreign	(5,600)	5,596	7,917
	$64,179	$55,909	$77,167

The provision for income taxes is comprised of the following:

	2009	2008	2007
Current:			
Federal	$22,239	$ 6,856	$21,785
Foreign	500	502	(702)
State	1,665	355	737
	24,404	7,713	21,820
Deferred:			
Federal	(23)	8,733	2,671
Foreign	(12,987)	264	918
State	(690)	422	133
	(13,700)	9,419	3,722
	$10,704	$17,132	$25,542

Significant components of the Company's net deferred tax liability at year end were as follows:

	December 31,	
	2009	2008
Deferred tax assets:		
Accrued customer promotions	$ 4,475	$4,299
Deferred compensation	10,667	9,788
Postretirement benefits	5,983	5,447
Other accrued expenses	5,705	4,785
Foreign subsidiary tax loss carry forward	14,001	6,068
Tax credit carry forward	1,286	2,540
Unrealized capital loss	6,393	1,799
	48,510	34,726
Valuation reserve	(912)	(8,506)
Total deferred tax assets	$47,598	$26,220
Deferred tax liabilities:		
Depreciation	$29,657	$23,696
Deductible goodwill and trademarks	30,585	25,292
Accrued export company commissions	4,179	4,313
Employee benefit plans	4,437	5,614
Inventory reserves	2,311	2,463
Prepaid insurance	363	392
Accounts receivable	57	455
Deferred gain on sale of real estate	7,644	7,972
Total deferred tax liabilities	$79,233	$70,197
Net deferred tax liability	$31,635	$43,977

At December 31, 2009, the tax benefits of foreign subsidiary tax loss carry forwards expiring by year are as follows: $1,083 in 2014, $2,586 in 2015, $354 in 2026, $619 in 2027, $6,365 in 2028, and $2,994 in 2029.

Also at December 31, 2009, the amounts of the foreign subsidiary tax credit carry forwards expiring by year are as follows: $152 in 2010, $152 in 2011, $152 in 2012, $152 in 2013, $152 in 2014, $152 in 2015, $222 in 2016 and $152 in 2017. A valuation allowance has been established for these carry forward credits to reduce the future income tax benefits to amounts expected to be realized.

The effective income tax rate differs from the statutory rate as follows:

	2009	2008	2007
U.S. statutory rate	35.0%	35.0%	35.0%
State income taxes, net	1.7	1.0	0.9
Exempt municipal bond interest	(0.6)	(1.9)	(1.4)
Foreign tax rates	(4.8)	(0.7)	(1.6)
Release of prior period valuation allowances	(13.1)	—	—
Qualified domestic production activities deduction	(2.0)	(1.4)	(1.9)
Tax credits receivable	(0.4)	(1.3)	—
Reserve for uncertain tax benefits	1.9	0.6	1.3
Other, net	(1.0)	(0.7)	0.8
Effective income tax rate	16.7%	30.6%	33.1%

In connection with the acquisition in 2004 of Concord Confections, a Canadian subsidiary, the Company established an inter-company financing structure which included a loan from the U.S. parent to the Canadian subsidiary. By December of 2006, significant operating losses had accumulated in Canada and management determined that the realization of the net operating loss carry forward benefits was not more-likely-than-not, and provided a full tax valuation allowance. Consistent with relevant accounting guidance, these benefits continued to be reserved through 2008 and through the third quarter of 2009.

In December of 2008, a new U.S./Canada income tax treaty (Treaty) was ratified which effectively denies certain inter-company interest benefits to the U.S. shareholder of a Canadian company. Accordingly, in December of 2009, the Company decided to recapitalize its Canadian operations effective January 1, 2010. During the fourth quarter of 2009, the Company considered of all the evidence and relevant accounting guidance related to this recapitalization and based on reasonable assumptions, the Company concluded that it was more-likely-than-not that it would realize substantially all of the deferred tax assets related to the Canadian net operating loss carry forward benefits because it is expected that sufficient levels of income will be generated in the foreseeable future. As a result, the Company released $8.4 million of prior period valuation allowances and $2.3 million of allowances that were provided through the first nine months of 2009.

The Treaty also introduced a phase out of the withholding tax on payments from Canada to the U.S. allowing the Company to qualify for a zero percent withholding rate in 2010 if certain requirements of the Treaty were met. On January 4, 2010, the Canadian subsidiary repaid accrued interest to its U.S. parent in a manner consistent with these requirements. As a result, $1.5 million of withholding taxes accrued for 2007 and 2008 and through the third quarter of 2009 were released in the fourth quarter of 2009.

The Company has not provided for U.S. federal or foreign withholding taxes on $5,294 and $3,445 of foreign subsidiaries' undistributed earnings as of December 31, 2009 and December 31, 2008, respectively, because such earnings are considered to be permanently reinvested. It is not practicable to determine the amount of income taxes that would be payable upon remittance of the undistributed earnings.

The Company adopted the provisions of the authoritative guidance relating to unrecognized tax benefits effective January 1, 2007. The Company recognizes interest and penalties related to unrecognized tax benefits in the provision for income taxes on the Consolidated Statements of Earnings.

At December 31, 2009 and 2008, the Company had unrecognized tax benefits of $16,816 and $15,138, respectively. Included in this balance is $8,819 and $7,727, respectively, of unrecognized tax benefits that, if recognized, would favorably affect the annual effective income tax rate. As of December 31, 2009 and 2008, $4,285 and $4,274, respectively, of interest and penalties were included in the Liability for Uncertain Tax Positions.

A reconciliation of the beginning and ending balances of the total amounts of unrecognized tax benefits is as follows:

	2009	2008	2007
Unrecognized tax benefits at January 1	$15,138	$15,867	$14,987
Increases in tax positions for the current year	3,414	1,404	1,895
Reductions in tax positions for lapse of statute of limitations	(890)	(1,225)	(1,015)
Reductions in tax positions for effective settlements	(846)	(908)	—
Unrecognized tax benefits at December 31	$16,816	$15,138	$15,867

The Company is subject to taxation in the U.S. and various state and foreign jurisdictions. The Company remains subject to examination by U.S. federal and state and foreign tax authorities for the years 2006 through 2008. With few exceptions, the Company is no longer subject to examinations by tax authorities for the year 2005 and prior.

The Company is not currently subject to a U.S. federal examination. The Company's Canadian subsidiary is currently subject to examination by the Canada Revenue Agency for tax years 2005 and 2006. The Company is unable to determine the outcome of the examination at this time. In addition, the Company is currently subject to various state tax examinations. One of those state examinations has been effectively settled and the corresponding liability for unrecognized tax benefits has been reduced. Although the Company is unable to determine the ultimate outcome of the ongoing examinations, the Company believes that its liability for uncertain tax positions relating to these jurisdictions for such years is adequate.

Beginning in 2008, statutory income tax rates in Canada will be reduced five percentage points with the final rate reduction coming in 2014. Accordingly, the Company's Canadian subsidiary has revalued its deferred tax assets and liabilities based on the rate in effect for the year the differences are expected to reverse. Additional deferred tax expense of $1.5 million was recognized during the current period.

NOTE 5—SHARE CAPITAL AND CAPITAL IN EXCESS OF PAR VALUE:

	Common Stock		Class B Common Stock		Treasury Stock		Capital in Excess of Par Value
	Shares	Amount	Shares	Amount	Shares	Amount	
	(000's)		(000's)		(000's)

Conversion of Class B common shares to common shares	18	12	(18)	(12)	—	—	—
Purchase and retirement of common shares	(938)	(651)	—	—	—	—	(20,073)
Balance at December 31, 2009	35,802	$24,862	19,919	$13,833	(67)	$(1,992)	$482,250

Average shares outstanding and all per share amounts included in the financial statements and notes thereto have been adjusted retroactively to reflect annual three percent stock dividends.

While the company does not have a formal or publicly announced stock repurchase program, the Company's board of directors periodically authorizes a dollar amount for share repurchases.

Based upon this policy, shares were purchased and retired as follows:

Year	Total Number of Shares Purchased	Average Price Paid Per Share
2009	938	$22.05
2008	889	$23.71
2007	1,064	$25.61

NOTE 6—OTHER INCOME (EXPENSE), NET:

Other income (expense), net is comprised of the following:

	2009	2008	2007
Interest and dividend income	$1,439	$ 3,451	$3,497
Gains (losses) on trading securities relating to deferred compensation plans	4,524	(7,334)	1,998
Interest expense	(243)	(378)	(535)
Impairment of equity investment in joint venture	(4,400)	—	—
Joint venture income (loss)	(233)	(477)	182
Foreign exchange gains (losses)	951	(963)	656
Other than temporary impairment	—	(5,140)	—
Capital gains (losses)	(38)	88	228
Insurance recovery	—	—	128
Miscellaneous, net	100	135	161
	$2,100	$(10,618)	$6,315

As of December 31, 2009, management determined that the carrying value of an equity investment in a joint venture was impaired as a result of accumulated losses from operations and review of future expectations. The Company recorded a pre-tax impairment charge of $4,400 resulting in an adjusted carrying value of $4,961 as of December 31, 2009. The fair value was primarily assessed using the present value of estimated future cash flows.

NOTE 7—EMPLOYEE BENEFIT PLANS:

Pension plans:

The Company sponsors defined contribution pension plans covering certain non-union employees with over one year of credited service. The Company's policy is to fund pension costs accrued based on compensation levels. Total pension expense for 2009, 2008 and 2007 approximated $4,178, $3,944 and $3,589, respectively. The Company also maintains certain profit sharing and retirement savings-investment plans. Company contributions in 2009, 2008 and 2007 to these plans were $1,011, $1,003 and $873, respectively.

The Company also contributes to multi-employer defined benefit pension plans for its union employees. Such contributions aggregated $1,633, $1,392 and $1,257 in 2009, 2008 and 2007, respectively. Although the Company has been advised that the plan is currently in an underfunded status, the relative position of each employer associated with the multi-employer plan with respect to the actuarial present value of benefits and net plan assets is not determinable by the Company.

Deferred compensation:

The Company sponsors three deferred compensation plans for selected executives and other employees: (i) the Excess Benefit Plan, which restores retirement benefits lost

due to IRS limitations on contributions to tax-qualified plans, (ii) the Supplemental Plan, which allows eligible employees to defer the receipt of eligible compensation until designated future dates and (iii) the Career Achievement Plan, which provides a deferred annual incentive award to selected executives. Participants in these plans earn a return on amounts due them based on several investment options, which mirror returns on underlying investments (primarily mutual funds). The Company economically hedges its obligations under the plans by investing in the actual underlying investments. These investments are classified as trading securities and are carried at fair value. At December 31, 2009 and 2008, these investments totaled $32,238 and $26,001, respectively. All gains and losses in these investments, which are recorded in other income (expense), net, are equally offset by corresponding increases and decreases in the Company's deferred compensation liabilities. The Company recorded a gain of $4,524 in 2009 and a loss of $7,334 in 2008 on these investments.

Postretirement health care and life insurance benefit plans:

The Company provides certain postretirement health care and life insurance benefits for corporate office and management employees. Employees become eligible for these benefits based upon their age, service and date of hire and if they agree to contribute a portion of the cost. The Company has the right to modify or terminate these benefits. The Company does not fund postretirement health care and life insurance benefits in advance of payments for benefit claims.

Amounts recognized in accumulated other comprehensive loss (pre-tax) at December 31, 2009 are as follows:

Prior service credit	$ (877)
Net actuarial loss	2,523
Net amount recognized in accumulated other comprehensive loss	$1,646

The estimated actuarial loss and prior service credit to be amortized from accumulated other comprehensive income into net periodic benefit cost during 2010 are $253 and $(125), respectively.

The changes in the accumulated postretirement benefit obligation at December 31, 2009 and 2008 consist of the following:

	December 31,	
	2009	2008
Benefit obligation, beginning of year	$15,468	$13,214
Service cost	704	646
Interest cost	853	740
Actuarial (gain)/loss	(38)	1,172
Benefits paid	(313)	(304)
Benefit obligation, end of year	$16,674	$15,468

Net periodic postretirement benefit cost included the following components:

	2009	2008	2007
Service cost—benefits attributed to service during the period	$ 704	$ 646	$ 667
Interest cost on the accumulated postretirement benefit obligation	853	740	694
Net amortization	140	33	90
Net periodic postretirement benefit cost	$1,697	$1,419	$1,451

For measurement purposes, the 2010 annual rate of increase in the per capita cost of covered health care benefits was assumed to be 6.0% for pre-age 65 retirees, 7.5% for post 65 retirees and 9.0% for prescription drugs; these rates were assumed to decrease gradually to 5.0% for 2014 and remain at that level thereafter. The health care cost trend rate assumption has a significant effect on the amounts reported. The weighted-average discount rate used in determining the accumulated postretirement benefit obligation was 5.84% and 5.6% at December 31, 2009 and 2008, respectively.

Increasing or decreasing the health care trend rates by one percentage point in each year would have the following effect:

	1% Increase	1% Decrease
Postretirement benefit obligation	$2,337	$(1,930)
Total of service and interest cost components	$ 258	$ (209)

The company estimates future benefit payments will be $539, $584, $693, $782 and $911 in 2010 through 2014, respectively, and a total of $5,976 in 2015 through 2019. The future benefit payments are net of the annual Medicare Part D subsidy of approximately $1,062 beginning in 2010.

NOTE 8—COMMITMENTS:

Rental expense aggregated $1,180, $1,311 and $1,090 in 2009, 2008 and 2007, respectively.

Future operating lease commitments are not significant.

NOTE 9—SEGMENT AND GEOGRAPHIC INFORMATION:

The Company operates as a single reportable segment encompassing the manufacture and sale of confectionery products. Its principal manufacturing operations are located in the United States and Canada, and its principal market is the United States. The company also manufactures and sells confectionery products in Mexico, and exports products to Canada and other countries worldwide.

The following geographic data include net product sales summarized on the basis of the customer location and long-lived assets based on their physical location.

	2009	2008	2007
Net product sales:			
United States	$455,517	$448,268	$445,820
Foreign	40,075	43,783	46,922
	$495,592	$492,051	$492,742
Long-lived assets:			
United States	$176,044	$172,299	$155,340
Foreign	44,677	45,329	46,061
	$220,721	$217,628	$201,401

NOTE 10—FAIR VALUE MEASUREMENTS:

Current accounting guidance defines fair value as the price that would be received in the sale of an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Guidance requires disclosure of the extent to which fair value is used to measure financial assets and liabilities, the inputs utilized in calculating valuation measurements, and the effect of the measurement of significant unobservable inputs on earnings, or changes in net assets, as of the measurement date. Guidance establishes a three-level valuation hierarchy based upon the transparency of inputs utilized in the measurement and valuation of financial assets or liabilities as of the measurement date. Level 1 inputs include quoted prices for identical instruments and are the most observable. Level 2 inputs include quoted prices for similar assets and observable inputs such as interest rates, foreign currency exchange rates, commodity rates and yield curves. Level 3 inputs are not observable in the market and include management's own judgments about the assumptions market participants would use in pricing the asset or liability. The use of observable and unobservable inputs is reflected in the hierarchy assessment disclosed in the table below.

As of December 31, 2009 and 2008, the Company held certain financial assets that are required to be measured at fair value on a recurring basis. These included derivative hedging instruments related to the foreign currency forward contracts and purchase of certain raw materials, investments in trading securities and available for sale securities, including an auction rate security (ARS). The Company's available for sale and trading securities principally consist of municipal bonds and mutual funds that are publicly traded.

The following tables present information about the Company's financial assets measured at fair value as of December 31, 2009 and 2008, and indicate the fair value hierarchy and the valuation techniques utilized by the Company to determine such fair value:

	Estimated Fair Value December 31, 2009			
	Total	Input Levels Used		
	Fair Value	Level 1	Level 2	Level 3
Cash and equivalents	$ 90,990	$ 90,990	$ —	$ —
Auction rate security (ARS)	7,710	—	—	7,710
Available-for-sale securities, excluding ARS	26,851	—	26,851	—
Foreign currency forward contracts	3,674	3,674	—	—
Commodity option contracts	1,686	1,686	—	—
Trading securities	32,238	32,238	—	—
Total assets measured at fair value	$163,149	$128,588	$26,851	$7,710

	Estimated Fair Value December 31, 2008			
	Total	Input Levels Used		
	Fair Value	Level 1	Level 2	Level 3
Cash and equivalents	$ 68,908	$68,908	$ —	$ —
Auction rate security (ARS)	8,410	—	—	8,410
Available-for-sale securities excluding ARS	33,361	—	33,361	—
Foreign currency forward contracts	349	349	—	—
Trading securities	26,001	26,001	—	—
Total assets measured at fair value	$137,029	$95,258	$33,361	$8,410

Available for sale securities which utilize Level 2 inputs consist primarily of municipal bonds, which are valued based on quoted market prices or alternative pricing sources with reasonable levels of price transparency.

A summary of the aggregate fair value, gross unrealized gains, gross unrealized losses, realized losses and amortized cost basis of the Company's investment portfolio by major security type is as follows:

	December 31, 2009				
			Unrealized		
Available for sale:	Amortized Cost	Fair Value	Gains	Losses	Realized Losses
Auction rate security (ARS)	$ 8,410	$ 7,710	$ —	$(700)	$ —
Municipal bonds	26,502	26,793	291	—	—
Mutual funds	56	58	2	—	—
	$34,968	$34,561	$293	$(700)	$ —

	December 31, 2008				
			Unrealized		
Available for sale:	Amortized Cost	Fair Value	Gains	Losses	Realized Losses
Auction rate security (ARS)	$13,550	$ 8,410	$ —	$ —	$(5,140)
Municipal bonds	33,003	33,303	300	—	—
Mutual funds	56	58	2	—	—
	$46,609	$41,771	$302	$ —	$(5,140)

As of December 31, 2008, the Company's long-term investments included an auction rate security (ARS), Jefferson County Alabama Sewer Revenue Refunding Warrants, reported at a fair value of $8,410, after reflecting a $5,140 other-than-temporary impairment against its $13,550 par value. This other-than-temporary impairment was recorded in other income (expense), net in 2008. As of December 31, 2008, this ARS was determined to be other-than-temporarily impaired due to the duration and severity of the decline in fair value. An other-than-temporary impairment must be recorded when a credit loss exists; that is when the present value of the expected cash flows from a debt security is less than the amortized cost basis of the security. The Company determined the 2008 loss to be 100% related to credit loss. The Company estimated the fair value of this ARS utilizing a valuation model with Level 3 inputs as of December 31, 2008. This valuation model considered, among other items, the credit risk of the collateral underlying the ARS, the credit risk of the bond insurer, interest rates, and the amount and timing of expected future cash flows including the Company's assumption about the market expectation of the next successful auction. During the fourth quarter of 2009, the Company further evaluated this investment and concluded that an additional decline in the fair market value was temporary, as defined, and recorded $700 of such additional decline in the fair market value as a charge to accumulated other comprehensive loss. The impairment recorded in 2009 is considered temporary as it relates to liquidity and timing of cash flows and does not represent further credit loss.

The Company classified this ARS as non-current and has included it in long-term investments on the Consolidated Statements of Financial Position at December 31, 2009 and 2008, because the Company believes that the current condition of the ARS market may take more than twelve months to improve and the Company has the ability and intent to hold the security for the foreseeable future.

Based on market conditions, the Company changed its valuation methodology for the ARS to a discounted cash flow analysis during the first quarter of 2008. Accordingly, these securities changed from Level 2 to Level 3 within the accounting guidance hierarchy.

The following tables present additional information about the Company's financial instruments (all ARS) measured at fair value on a recurring basis using Level 3 inputs at December 31, 2009 and 2008:

	2009	2008
Balance at January 1	$8,410	$ —
Transfers to Level 3	—	27,250
Other-than-temporary impairment loss recognized in earnings	—	(5,140)
Unrealized loss recognized in other comprehensive loss	(700)	—
Sales, net	—	(13,700)
Balance at December 31	$7,710	$ 8,410

The $7,500 carrying amount of the Company's industrial revenue development bonds at December 31, 2009 and 2008 approximates its estimated fair value as the bonds have a floating interest rate.

In addition to assets and liabilities that are recorded at fair value on a recurring basis, guidance requires the Company

to record assets and liabilities at fair value on a nonrecurring basis generally as a result of impairment charges. Assets measured at fair value on a nonrecurring basis during 2009 are summarized below:

	Twelve Months Ended December 31, 2009					
				Level Used to Determine New Cost Basis		
	Pre-Impairment Cost Basis	2009 Impairment Charge	New Cost Basis	Level 1	Level 2	Level 3
Investment in joint venture	$ 9,361	$ 4,400	$ 4,961	$—	$—	$ 4,961
Trademarks	189,024	14,000	175,024	—	—	175,024
Total	$198,385	$18,400	$179,985	$—	$—	$179,985

As discussed in Note 6, during the fourth quarter of 2009 the Company recognized an impairment of $4,400 in an equity method investment based on Level 3 inputs.

As discussed in Note 12, during the fourth quarter of 2009 the Company recognized a trademark impairment of $14,000 based on Level 3 inputs.

NOTE 11—COMPREHENSIVE EARNINGS (LOSS):

The following table sets forth information with respect to accumulated other comprehensive earnings (loss):

	Foreign Currency Translation Adjustment	Unrealized Gain (Loss) on			Accumulated Other Comprehensive Earnings (Loss)
		Investments	Derivatives	Postretirement and Pension Benefits	
Balance at January 1, 2007	$(11,224)	$ (149)	$ (271)	$ (893)	$(12,537)
Unrealized gains (losses)	(272)	469	(462)	588	323

Balance at December 31, 2009	$(13,227)	$ (255)	$ 2,314	$(1,228)	$(12,396)

NOTE 12—GOODWILL AND INTANGIBLE ASSETS:

All of the Company's intangible indefinite-lived assets are trademarks.

As of December 31, 2009, management ascertained certain trademarks were impaired, and recorded a pre-tax charge of $14,000. The principal driver of this impairment charge was an increase in the discount rate required by market participants. The fair value of indefinite-lived intangible assets was primarily assessed using the present value of estimated future cash flows. No impairments of intangibles were recorded in 2008.

The changes in the carrying amount of trademarks for 2009 and 2008 were as follows:

	2009	2008
Original cost	$193,767	$193,767
Accumulated impairment losses as of January 1	(4,743)	(4,743)
Balance at January 1	$189,024	$189,024
Current year impairment losses	(14,000)	—
Balance at December 31	$175,024	$189,024
Accumulated impairment losses as of December 31	$(18,743)	$ (4,743)

The Company has no accumulated impairment losses of goodwill.

Auditor's Report

All publicly held corporations, as well as many other businesses and organizations (both profit and not-for-profit, large and small), engage the services of independent certified public accountants (CPAs) for the purpose of obtaining an objective, expert report on their financial statements. Based on a comprehensive examination of the company's accounting system, accounting records, and the financial statements, the outside CPA issues the auditor's report.

The standard auditor's report should identify who and what was audited and indicate the responsibilities of management and the auditor relative to the financial statements. The report should clearly state that the audit was conducted in accordance with generally accepted auditing standards and discusses the nature and limitations of the audit. Finally, the report should express an informed opinion as to (1) the fairness of the financial statements and (2) their conformity with generally accepted accounting principales. The report of PricewaterhouseCoopers LLP appearing in Tootsie Roll's annual report is shown below.

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholders of Tootsie Roll Industries, Inc.:

In our opinion, the accompanying consolidated statements of financial position and the related consolidated statements of earnings, comprehensive earnings and retained earnings, and of cash flows present fairly, in all material respects, the financial position of Tootsie Roll Industries, Inc. and its subsidiaries at December 31, 2009 and December 31, 2008, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2009 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2009, based on criteria established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for these financial statements and financial statement schedules, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in Management's Report on Internal Control

over Financial Reporting on page 14 of the 2009 Annual Report to Shareholders. Our responsibility is to express opinions on these financial statements and on the Company's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

PricewaterhouseCoopers LLP

Supplementary Financial Information

In addition to the financial statements and the accompanying notes, companies often present supplementary financial information. Tootsie Roll has provided stock performance information, quarterly financial data, and a five-year summary of earnings and financial highlights, which are presented on the following pages.

Performance Graph

The following performance graph compares the Company's cumulative total shareholder return on the Company's Common Stock for a five-year period (December 31, 2004 to December 31, 2009) with the cumulative total return of Standard & Poor's 500 Stock Index ("S&P 500") and the Dow Jones Industry Food Index ("Peer Group," which includes the Company), assuming (i) $100 invested on December 31 of the first year of the chart in each of the Company's Common Stock, S&P 500 and the Dow Jones Industry Food Index and (ii) the reinvestment of dividends.

appendix D

TIME VALUE OF MONEY

study objectives

After studying this appendix, you should be able to:

1. Distinguish between simple and compound interest.
2. Solve for future value of a single amount.
3. Solve for future value of an annuity.
4. Identify the variables fundamental to solving present value problems.
5. Solve for present value of a single amount.
6. Solve for present value of an annuity.
7. Compute the present value of notes and bonds.
8. Compute the present values in capital budgeting situations.
9. Use a financial calculator to solve time value of money problems.

Would you rather receive $1,000 today or a year from now? You should prefer to receive the $1,000 today because you can invest the $1,000 and earn interest on it. As a result, you will have more than $1,000 a year from now. What this example illustrates is the concept of the **time value of money**. Everyone prefers to receive money today rather than in the future because of the interest factor.

Nature of Interest

Interest is payment for the use of another person's money. It is the difference between the amount borrowed or invested (called the **principal**) and the amount repaid or collected. The amount of interest to be paid or collected is usually stated as a rate over a specific period of time. The rate of interest is generally stated as an annual rate.

The amount of interest involved in any financing transaction is based on three elements:

1. **Principal (*p*):** The original amount borrowed or invested.
2. **Interest Rate (*i*):** An annual percentage of the principal.
3. **Time (*n*):** The number of years that the principal is borrowed or invested.

SIMPLE INTEREST

study objective 1
Distinguish between simple and compound interest.

Simple interest is computed on the principal amount only. It is the return on the principal for one period. Simple interest is usually expressed as shown in Illustration D-1.

Illustration D-1 Interest computation

Interest	=	Principal *p*	×	Rate *i*	×	Time *n*

For example, if you borrowed $5,000 for 2 years at a simple interest rate of 12% annually, you would pay $1,200 in total interest, computed as follows.

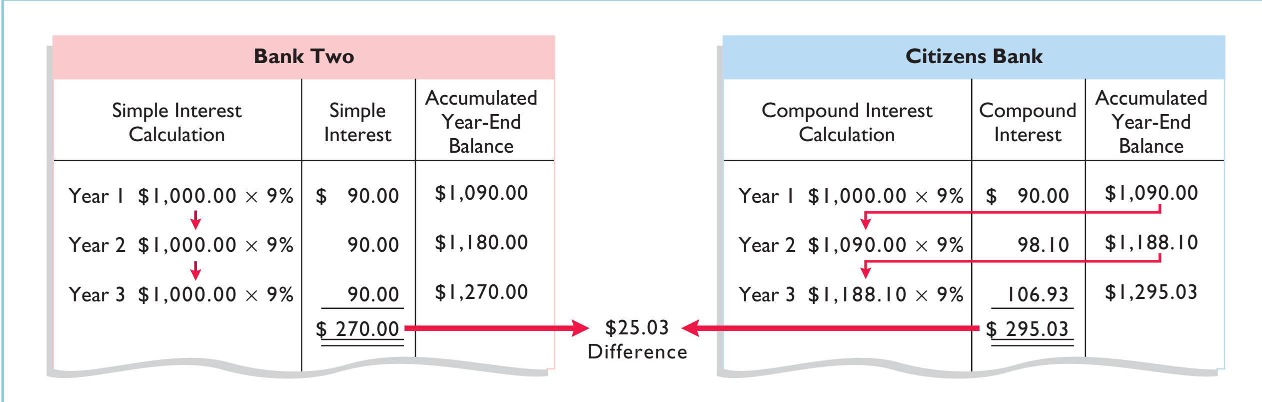
$$\begin{aligned}\text{Interest} &= p \times i \times n \\ &= \$5{,}000 \times .12 \times 2 \\ &= \$1{,}200\end{aligned}$$

COMPOUND INTEREST

Compound interest is computed on principal **and** on any interest earned that has not been paid or withdrawn. It is the return on (or growth of) the principal for two or more time periods. Compounding computes interest not only on the principal but also on the interest earned to date on that principal, assuming the interest is left on deposit.

To illustrate the difference between simple and compound interest, assume that you deposit $1,000 in Bank Two, where it will earn simple interest of 9% per year, and you deposit another $1,000 in Citizens Bank, where it will earn compound interest of 9% per year compounded annually. Also assume that in both cases you will not withdraw any cash until three years from the date of deposit. Illustration D-2 shows the computation of interest to be received and the accumulated year-end balances.

Illustration D-2 Simple versus compound interest



Bank Two

Simple Interest Calculation	Simple Interest	Accumulated Year-End Balance
Year 1 $1,000.00 × 9%	$ 90.00	$1,090.00
Year 2 $1,000.00 × 9%	90.00	$1,180.00
Year 3 $1,000.00 × 9%	90.00	$1,270.00
	$ 270.00	

Citizens Bank

Compound Interest Calculation	Compound Interest	Accumulated Year-End Balance
Year 1 $1,000.00 × 9%	$ 90.00	$1,090.00
Year 2 $1,090.00 × 9%	98.10	$1,188.10
Year 3 $1,188.10 × 9%	106.93	$1,295.03
	$ 295.03	

$25.03 Difference

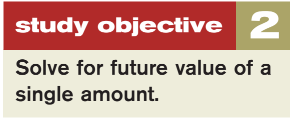
Note in Illustration D-2 that simple interest uses the initial principal of $1,000 to compute the interest in all three years. Compound interest uses the accumulated balance (principal plus interest to date) at each year-end to compute interest in the succeeding year—which explains why your compound interest account is larger.

Obviously, if you had a choice between investing your money at simple interest or at compound interest, you would choose compound interest, all other things—especially risk—being equal. In the example, compounding provides $25.03 of additional interest income. For practical purposes, compounding assumes that unpaid interest earned becomes a part of the principal, and the accumulated balance at the end of each year becomes the new principal on which interest is earned during the next year.

Illustration D-2 indicates that you should invest your money at a bank that compounds interest. Most business situations use compound interest. Simple interest is generally applicable only to short-term situations of one year or less.

section one

Future Value Concepts



Future Value of a Single Amount

The **future value of a single amount** is the value at a future date of a given amount invested, assuming compound interest. For example, in Illustration D-2, $1,295.03 is the future value of the $1,000 investment earning 9% for three

years. The $1,295.03 could be determined more easily by using the following formula.

$$FV = p \times (1 + i)^n$$

Illustration D-3 Formula for future value

where:

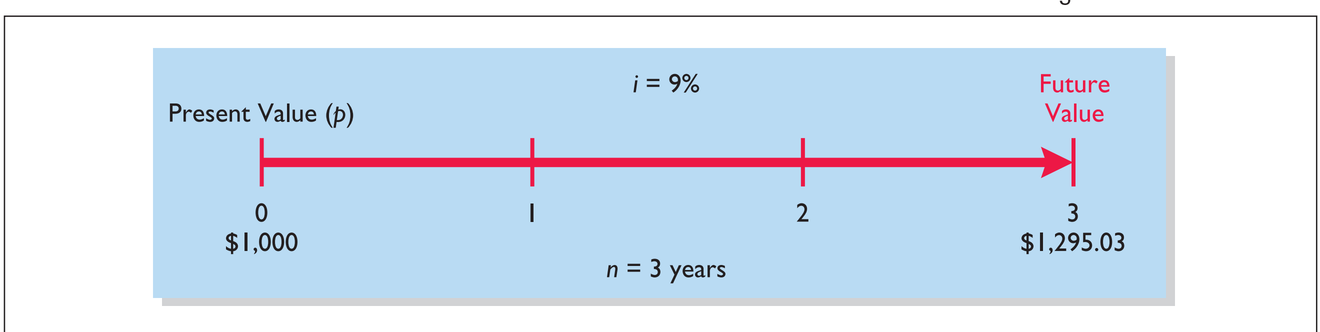
FV = future value of a single amount
p = principal (or present value; the value today)
i = interest rate for one period
n = number of periods

The $1,295.03 is computed as follows.

$$\begin{aligned} FV &= \quad p \quad \times (1 + i)^n \\ &= \$1{,}000 \times (1 + .09)^3 \\ &= \$1{,}000 \times 1.29503 \\ &= \$1{,}295.03 \end{aligned}$$

The 1.29503 is computed by multiplying (1.09 × 1.09 × 1.09). The amounts in this example can be depicted in the time diagram shown in Illustration D-4.

Illustration D-4 Time diagram



Another method used to compute the future value of a single amount involves a compound interest table. This table shows the future value of 1 for n periods. Table 1 on the next page is such a table.

In Table 1, n is the number of compounding periods, the percentages are the periodic interest rates, and the 5-digit decimal numbers in the respective columns are the future value of 1 factors. In using Table 1, you would multiply the principal amount by the future value factor for the specified number of periods and interest rate. For example, the future value factor for two periods at 9% is 1.18810. Multiplying this factor by $1,000 equals $1,188.10—which is the accumulated balance at the end of year 2 in the Citizens Bank example in Illustration D-2. The $1,295.03 accumulated balance at the end of the third year can be calculated from Table 1 by multiplying the future value factor for three periods (1.29503) by the $1,000.

The demonstration problem in Illustration D-5 (page D-4) shows how to use Table 1.

TABLE 1 Future Value of 1

(*n*) Periods	4%	5%	6%	8%	9%	10%	11%	12%	15%
0	1.00000	1.00000	1.00000	1.00000	1.00000	1.00000	1.00000	1.00000	1.00000

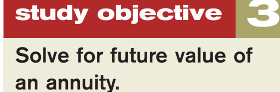
Answer: The future value factor from Table 1 is 2.85434 (18 periods at 6%). The future value of $20,000 earning 6% per year for 18 years is **$57,086.80** ($20,000 × 2.85434).

Illustration D-5
Demonstration problem—Using Table 1 for *FV* of 1

Future Value of an Annuity

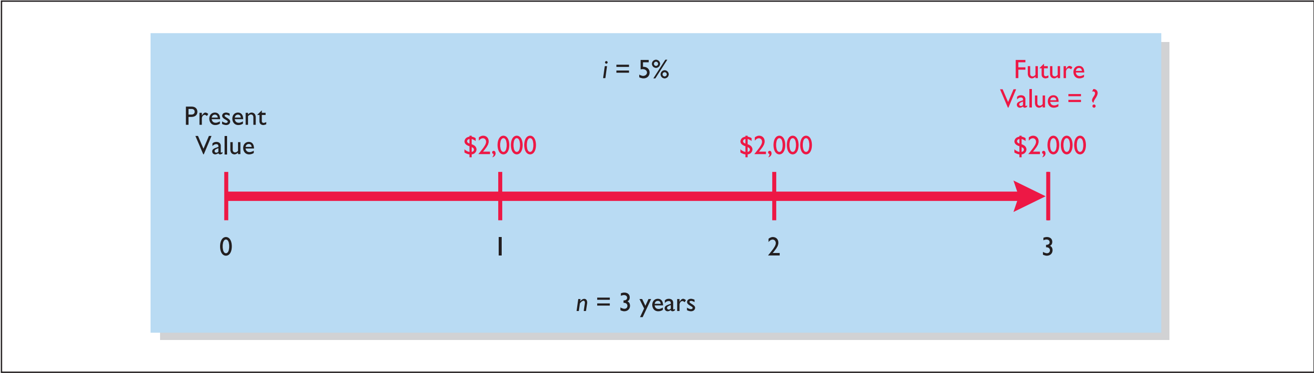


The preceding discussion involved the accumulation of only a single principal sum. Individuals and businesses frequently encounter situations in which a **series** of equal dollar amounts are to be paid or received at evenly spaced time intervals (periodically), such as loans or lease (rental) contracts. Such payments or receipts of equal dollar amounts are referred to as **annuities**.

The **future value of an annuity** is the sum of all the payments (receipts) plus the accumulated compound interest on them. In computing the future value of an annuity, it is necessary to know (1) the interest rate, (2) the number of compounding periods, and (3) the amount of the periodic payments or receipts.

To illustrate the computation of the future value of an annuity, assume that you invest $2,000 at the end of each year for three years at 5% interest compounded annually. This situation is depicted in the time diagram in Illustration D-6.

Illustration D-6 Time diagram for a three-year annuity



The $2,000 invested at the end of year 1 will earn interest for two years (years 2 and 3), and the $2,000 invested at the end of year 2 will earn interest for one year (year 3). However, the last $2,000 investment (made at the end of year 3) will not earn any interest. The future value of these periodic payments could be computed using the future value factors from Table 1, as shown in Illustration D-7.

Illustration D-7 Future value of periodic payment computation

Invested at End of Year	Number of Compounding Periods	Amount Invested	×	Future Value of 1 Factor at 5%	=	Future Value
1	2	$2,000	×	1.10250		$2,205
2	1	$2,000	×	1.05000		2,100
3	0	$2,000	×	1.00000		2,000
				3.15250		**$6,305**

The first $2,000 investment is multiplied by the future value factor for two periods (1.1025) because two years' interest will accumulate on it (in years 2 and 3). The second $2,000 investment will earn only one year's interest (in year 3) and therefore is multiplied by the future value factor for one year (1.0500). The final $2,000 investment is made at the end of the third year and will not earn any interest. Thus $n = 0$ and the future value factor is 1.00000. Consequently, the future value of the last $2,000 invested is only $2,000 since it does not accumulate any interest.

Calculating the future value of each individual cash flow is required when the periodic payments or receipts are not equal in each period. However, when the periodic payments (receipts) are **the same in each period**, the future value can be computed by using a future value of an annuity of 1 table. Table 2 (page D-6) is such a table.

TABLE 2 Future Value of an Annuity of 1

(*n*) Periods	4%	5%	6%	8%	9%	10%	11%	12%	15%

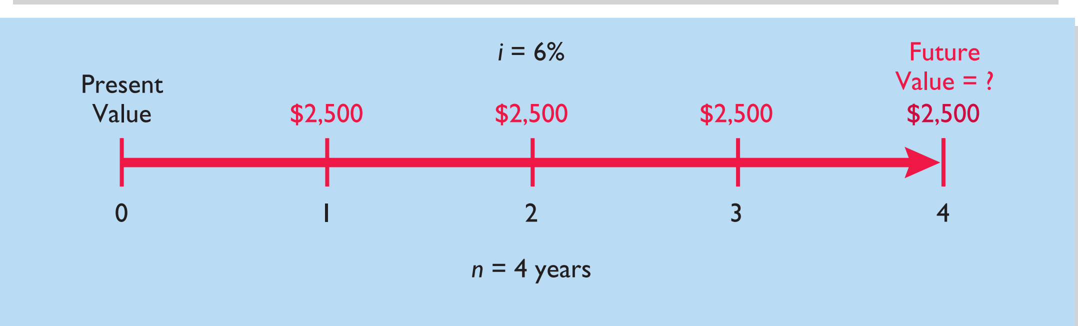
Table 2 shows the future value of 1 to be received periodically for a given number of periods. It assumes that each payment is made at the **end** of each period. We can see from Table 2 that the future value of an annuity of 1 factor for three periods at 5% is 3.15250. The future value factor is the total of the three individual future value factors was shown in Illustration D-7. Multiplying this amount by the annual investment of $2,000 produces a future value of $6,305.

The demonstration problem in Illustration D-8 shows how to use Table 2.

Illustration D-8
Demonstration problem–Using Table 2 for *FV* of an annuity of 1

John and Char Lewis' daughter, Debra, has just started high school. They decide to start a college fund for her and will invest $2,500 in a savings account at the end of each year she is in high school (4 payments total). The account will earn 6% interest compounded annually. How much will be in the college fund at the time Debra graduates from high school?



Answer: The future value factor from Table 2 is 4.37462 (4 periods at 6%). The future value of $2,500 invested each year for 4 years at 6% interest is **$10,936.55** ($2,500 × 4.37462).

section two

Present Value Concepts

Present Value Variables

study objective 4

Identify the variables fundamental to solving present value problems.

The **present value** is the value now of a given amount to be paid or received in the future, assuming compound interest. The present value, like the future value, is based on three variables: (1) the dollar amount to be received (future amount), (2) the length of time until the amount is received (number of periods), and (3) the interest rate (the discount rate). The process of determining the present value is referred to as **discounting the future amount**.

In this textbook, we use present value computations in measuring several items. For example, Chapter 10 computed the present value of the principal and interest payments to determine the market price of a bond. In addition, determining the amount to be reported for notes payable and lease liabilities involves present value computations.

Present Value of a Single Amount

study objective 5

Solve for present value of a single amount.

To illustrate present value, assume that you want to invest a sum of money today that will provide $1,000 at the end of one year. What amount would you need to invest today to have $1,000 one year from now? If you want a 10% rate of return, the investment or present value is $909.09 ($1,000 ÷ 1.10). The formula for calculating present value is shown in Illustration D-9.

Present Value = Future Value ÷ (1 + i)^n

Illustration D-9 Formula for present value

The computation of $1,000 discounted at 10% for one year is as follows.

$$\begin{aligned} PV &= FV \div (1 + i)^n \\ &= \$1{,}000 \div (1 + .10)^1 \\ &= \$1{,}000 \div 1.10 \\ &= \$909.09 \end{aligned}$$

The future amount ($1,000), the discount rate (10%), and the number of periods (1) are known. The variables in this situation can be depicted in the time diagram in Illustration D-10.

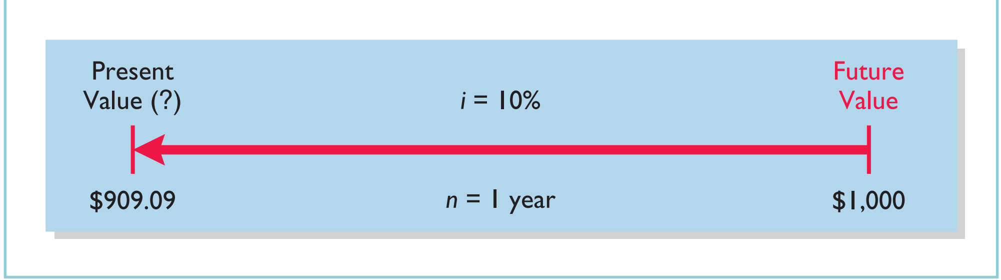


Illustration D-10 Finding present value if discounted for one period

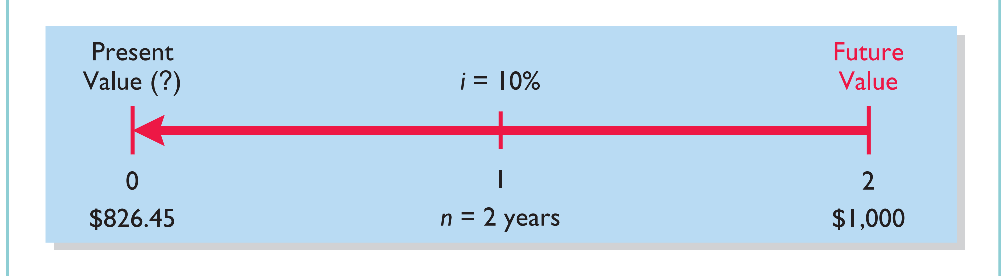
If the single amount of $1,000 is to be received **in two years** and discounted at 10% [PV = $1,000 ÷ (1 +.10)^2], its present value is $826.45 [($1,000 ÷ 1.21), depicted as shown in Illustration D-11 on the next page.

Illustration D-11
Finding present value if discounted for two periods



The present value of 1 may also be determined through tables that show the present value of 1 for n periods. In Table 3 below, n is the number of discounting periods involved. The percentages are the periodic interest rates or discount rates, and the 5-digit decimal numbers in the respective columns are the present value of 1 factors.

When using Table 3, the future value is multiplied by the present value factor specified at the intersection of the number of periods and the discount rate.

TABLE 3 Present Value of 1

(n) Periods	4%	5%	6%	8%	9%	10%	11%	12%	15%

18	.49363	.41552	.35034	.25025	.21199	.17986	.15282	.13004	.08081
19	.47464	.39573	.33051	.23171	.19449	.16351	.13768	.11611	.07027
20	.45639	.37689	.31180	.21455	.17843	.14864	.12403	.10367	.06110

For example, the present value factor for one period at a discount rate of 10% is .90909, which equals the $909.09 ($1,000 × .90909) computed in Illustration D-10. For two periods at a discount rate of 10%, the present value factor is .82645, which equals the $826.45 ($1,000 × .82645) computed previously.

Note that a higher discount rate produces a smaller present value. For example, using a 15% discount rate, the present value of $1,000 due one year from now is $869.57 versus $909.09 at 10%. Also note that the further removed from the present the future value is, the smaller the present value. For example, using the same discount rate of 10%, the present value of $1,000 due in **five years** is $620.92. The present value of $1,000 due in **one year** is $909.09, a difference of $288.17.

The following two demonstration problems (Illustrations D-12 and D-13) illustrate how to use Table 3.

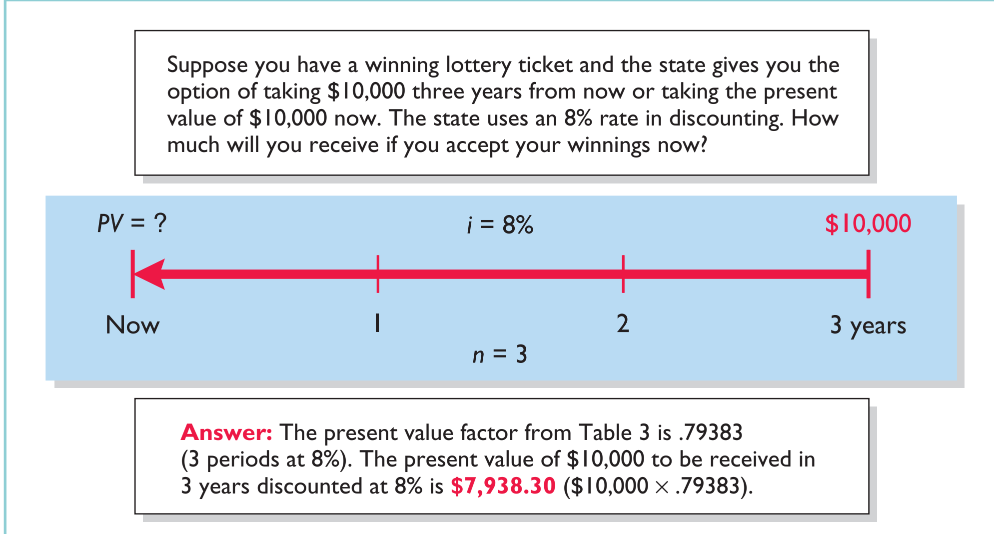

Illustration D-12
Demonstration problem—Using Table 3 for *PV* of 1

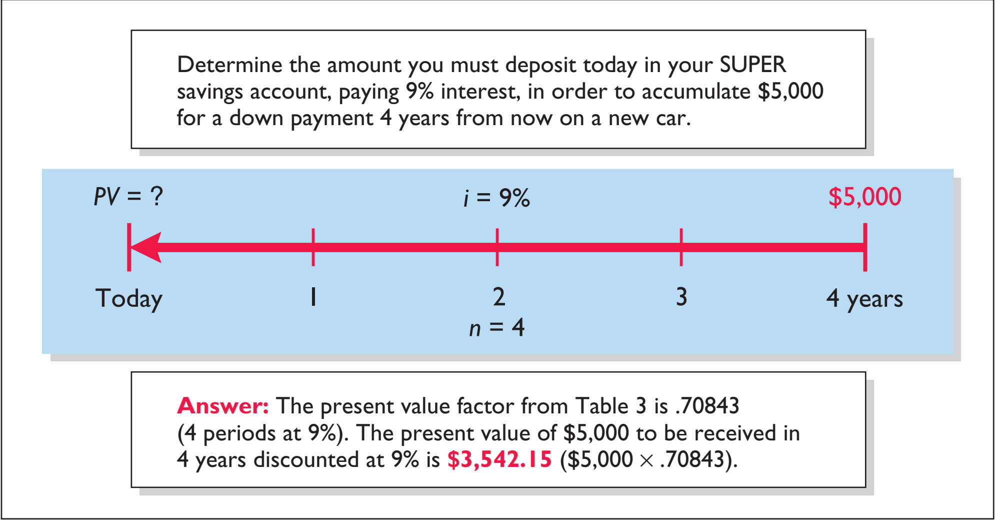

Illustration D-13
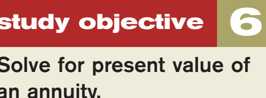
Demonstration problem—Using Table 3 for *PV* of 1

Present Value of an Annuity



Solve for present value of an annuity.

The preceding discussion involved the discounting of only a single future amount. Businesses and individuals frequently engage in transactions in which a series of equal dollar amounts are to be received or paid at evenly spaced time intervals (periodically). Examples of a series of periodic receipts or payments are loan agreements, installment sales, mortgage notes, lease (rental) contracts, and pension obligations. As discussed earlier, these periodic receipts or payments are **annuities**.

The **present value of an annuity** is the value now of a series of future receipts or payments, discounted assuming compound interest. In computing the present value of an annuity, it is necessary to know (1) the discount rate, (2) the number of discount periods, and (3) the amount of the periodic receipts or payments. To illustrate the computation of the present value of an annuity, assume

that you will receive $1,000 cash annually for three years at a time when the discount rate is 10%. This situation is depicted in the time diagram in Illustration D-14. Illustration D-15 shows computation of the present value in this situation.

Illustration D-14 Time diagram for a three-year annuity

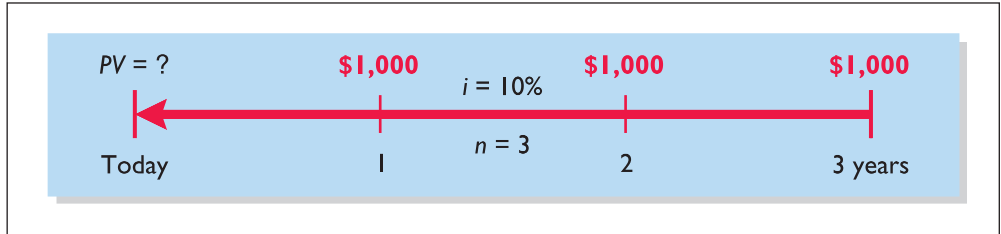


Illustration D-15 Present value of a series of future amounts computation

Future Amount	×	Present Value of 1 Factor at 10%	=	Present Value
$1,000 (one year away)		.90909		$ 909.09
1,000 (two years away)		.82645		826.45
1,000 (three years away)		.75132		751.32
		2.48686		**$2,486.86**

This method of calculation is required when the periodic cash flows are not uniform in each period. However, when the future receipts are the same in each period, an annuity table can be used. As illustrated in Table 4 below, an annuity table shows the present value of 1 to be received periodically for a given number of periods.

TABLE 4 Present Value of an Annuity of 1

(*n*) Periods	4%	5%	6%	8%	9%	10%	11%	12%	15%
1	.96154	.95238	.94340	.92593	.91743	.90909	.90090	.89286	.86957

Table 4 shows that the present value of an annuity of 1 factor for three periods at 10% is 2.48685.[1] This present value factor is the total of the three individual present value factors, as shown in Illustration D-15. Applying this amount to the annual cash flow of $1,000 produces a present value of $2,486.85.

The following demonstration problem (Illustration D-16) illustrates how to use Table 4.

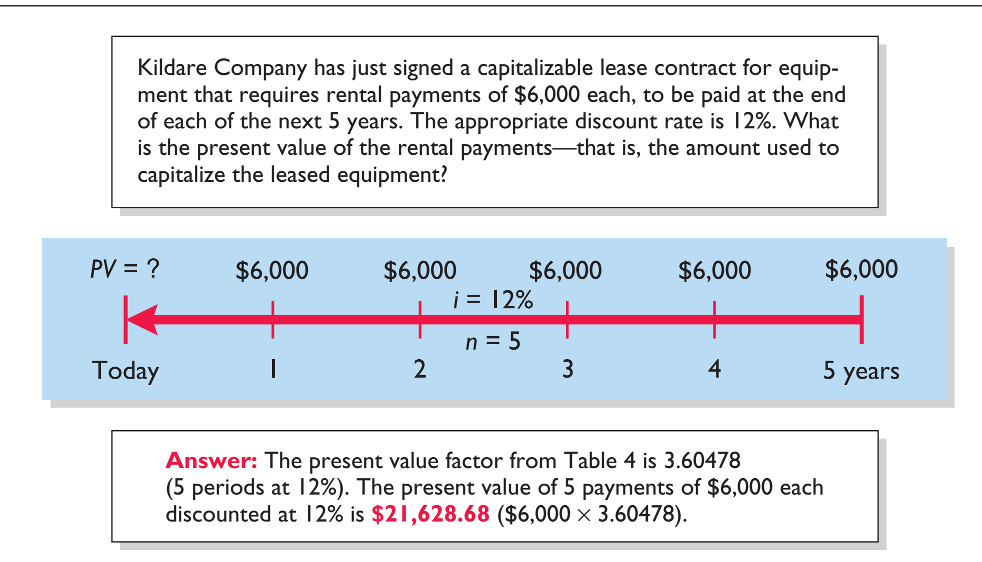

Illustration D-16
Demonstration problem–Using Table 4 for *PV* of an annuity of 1

Time Periods and Discounting

In the preceding calculations, the discounting was done on an annual basis using an annual interest rate. Discounting may also be done over shorter periods of time such as monthly, quarterly, or semiannually.

When the time frame is less than one year, it is necessary to convert the annual interest rate to the applicable time frame. Assume, for example, that the investor in Illustration D-14 received $500 **semiannually** for three years instead of $1,000 annually. In this case, the number of periods becomes six (3 × 2), the discount rate is 5% (10% ÷ 2), the present value factor from Table 4 is 5.07569 (6 periods at 5%), and the present value of the future cash flows is $2,537.85 (5.07569 × $500). This amount is slightly higher than the $2,486.86 computed in Illustration D-15 because interest is computed twice during the same year. That is, during the second half of the year, interest is earned on the first half-year's interest.

Computing the Present Value of a Long-Term Note or Bond

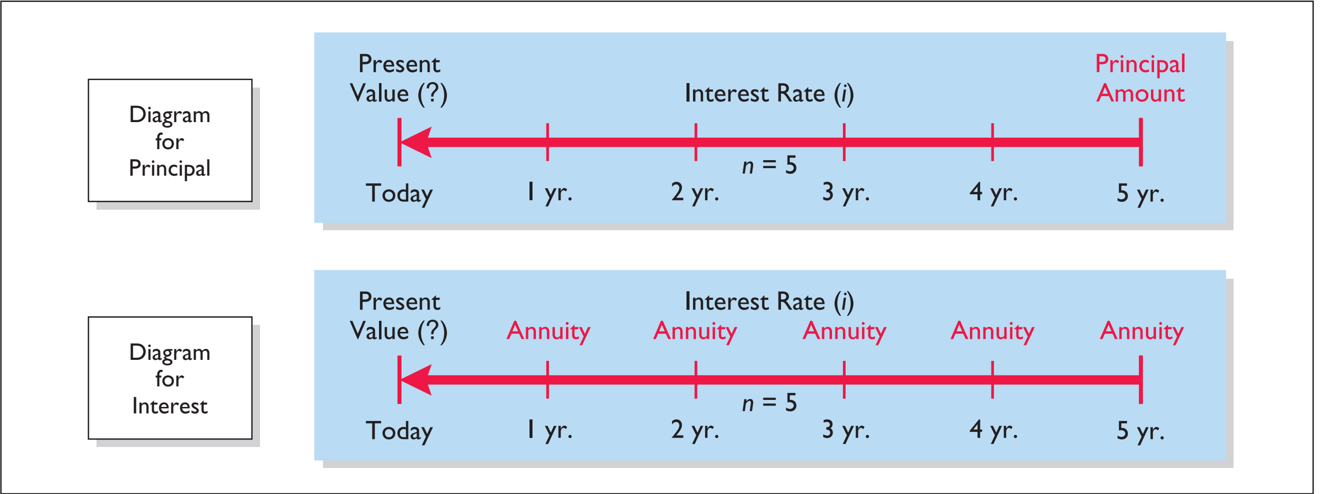
study objective 7
Compute the present value of notes and bonds.

The present value (or market price) of a long-term note or bond is a function of three variables: (1) the payment amounts, (2) the length of time until the amounts are paid, and (3) the discount rate. Our illustration (on the next page) uses a five-year bond issue.

[1]The difference of .00001 between 2.48686 and 2.48685 is due to rounding.

The first variable (dollars to be paid) is made up of two elements: (1) a series of interest payments (an annuity) and (2) the principal amount (a single sum). To compute the present value of the bond, both the interest payments and the principal amount must be discounted—two different computations. The time diagrams for a bond due in five years are shown in Illustration D-17.

Illustration D-17
Present value of a bond time diagram



When the investor's market interest rate is equal to the bond's contractual interest rate, the present value of the bonds will equal the face value of the bonds. To illustrate, assume a bond issue of 10%, five-year bonds with a face value of $100,000 with interest payable **semiannually** on January 1 and July 1. If the discount rate is the same as the contractual rate, the bonds will sell at face value. In this case, the investor will receive (1) $100,000 at maturity and (2) a series of ten $5,000 interest payments [($100,000 × 10%) ÷ 2] over the term of the bonds. The length of time is expressed in terms of interest periods—in this case—10, and the discount rate per interest period, 5%. The following time diagram (Illustration D-18) depicts the variables involved in this discounting situation.

Illustration D-18
Time diagram for present value of a 10%, five-year bond paying interest semiannually

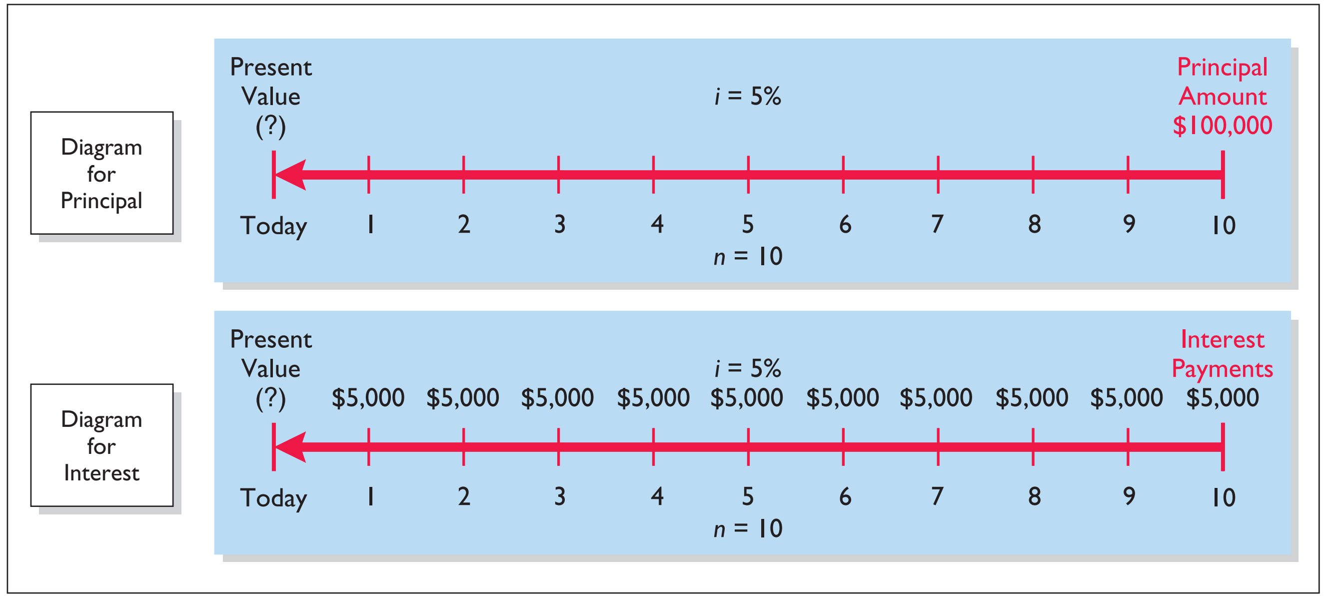


Illustration D-19 shows the computation of the present value of these bonds.

Present value of bonds	**$100,000**

*Rounded

Now assume that the investor's required rate of return is 12%, not 10%. The future amounts are again $100,000 and $5,000, respectively, but now a discount rate of 6% (12% ÷ 2) must be used. The present value of the bonds is $92,639, as computed in Illustration D-20.

Illustration D-20
Present value of principal and interest—discount

10% Contractual Rate—12% Discount Rate	
Present value of principal to be received at maturity	
$100,000 × .55839 (Table 3)	$ 55,839
Present value of interest to be received periodically over the term of the bonds	
$5,000 × 7.36009 (Table 4)	36,800
Present value of bonds	**$92,639**

Conversely, if the discount rate is 8% and the contractual rate is 10%, the present value of the bonds is $108,111, computed as shown in Illustration D-21.

Illustration D-21
Present value of principal and interest—premium

10% Contractual Rate—8% Discount Rate	
Present value of principal to be received at maturity	
$100,000 × .67556 (Table 3)	$ 67,556
Present value of interest to be received periodically over the term of the bonds	
$5,000 × 8.11090 (Table 4)	40,555
Present value of bonds	**$108,111**

The above discussion relied on present value tables in solving present value problems. Calculators may also be used to compute present values without the use of these tables. Many calculators, especially financial calculators, have present value (*PV*) functions that allow you to calculate present values by merely inputting the proper amount, discount rate, periods, and pressing the PV key. We discuss the use of financial calculators in the next section.

Computing the Present Values in a Capital Budgeting Decision

study objective 8

Compute the present values in capital budgeting situations.

The decision to make long-term capital investments is best evaluated using discounting techniques that recognize the time value of money. To do this, many companies calculate the present value of the cash flows involved in a capital investment.

To illustrate, Nagel-Siebert Trucking Company, a cross-country freight carrier in Montgomery, Illinois, is considering adding another truck to its fleet because of a purchasing opportunity. Navistar Inc., Nagel-Siebert's primary supplier of overland rigs, is overstocked and offers to sell its biggest rig for $154,000 cash payable upon delivery. Nagel-Siebert knows that the rig will produce a net cash flow per year of $40,000 for five years (received at the end of each year), at which time it will be sold for an estimated salvage value of $35,000. Nagel-Siebert's discount rate in evaluating capital expenditures is 10%. Should Nagel-Siebert commit to the purchase of this rig?

The cash flows that must be discounted to present value by Nagel-Siebert are as follows.

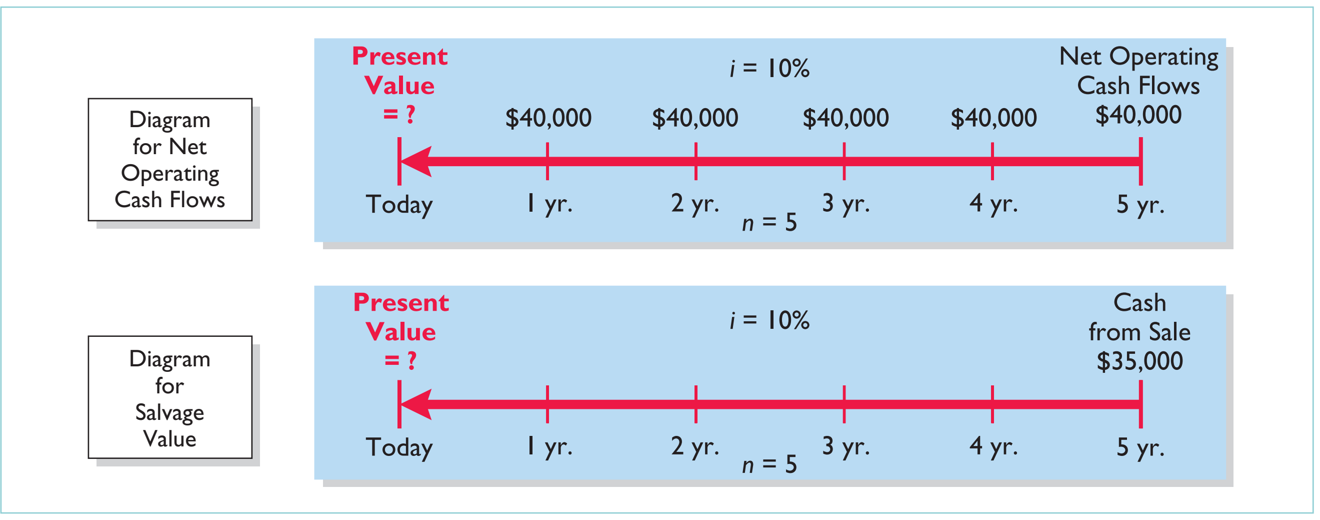
Cash payable on delivery (today): $154,000.

Net cash flow from operating the rig: $40,000 for 5 years (at the end of each year).

Cash received from sale of rig at the end of 5 years: $35,000.

The time diagrams for the latter two cash flows are shown in Illustration D-22.

Illustration D-22
Time diagrams for Nagel-Siebert Trucking Company



Notice from the diagrams that computing the present value of the net operating cash flows ($40,000 at the end of each year) is **discounting an annuity** (Table 4), while computing the present value of the $35,000 salvage value is **discounting a single sum** (Table 3). The computation of these present values is shown in Illustration D-23.

Illustration D-23
Present value computations at 10%

Present Values Using a 10 Percent Discount Rate	
Present value of net operating cash flows received annually over 5 years:	
$40,000 × PV of 1 received annually for 5 years at 10%	
$40,000 × 3.79079 =	$151,631.60
Present value of salvage value (cash) to be received in 5 years	
$35,000 × PV of 1 received in 5 years at 10%	
$35,000 × .62092 =	21,732.20
Present value of cash **inflows**	173,363.80
Present value cash **outflows** (purchase price due today at 10%):	
$154,000 × PV of 1 due today	
$154,000 × 1.00000 =	154,000.00
Net present value	**$ 19,363.80**

Because the present value of the cash receipts (inflows) of $173,363.80 ($151,631.60 + $21,732.20) exceeds the present value of the cash payments (outflows) of $154,000.00, the net present value of $19,363.80 is positive, and **the decision to invest should be accepted**.

Now assume that Nagel-Siebert uses a discount rate of 15%, not 10%, because it wants a greater return on its investments in capital assets. The cash receipts and cash payments by Nagel-Siebert are the same. The present values of these receipts and cash payments discounted at 15% are shown in Illustration D-24.

Illustration D-24
Present value computations at 15 percent

Present Values Using a 15 Percent Discount Rate	
Present value of net operating cash flows received annually over 5 years at 15%:	
$40,000 × 3.35216	$134,086.40
Present value of salvage value (cash) to be received in 5 years at 15%	
$35,000 × .49718	17,401.30
Present value of cash **inflows**	$151,487.70
Present value of cash **outflows** (purchase price due today at 15%):	
$154,000 × 1.00000	154,000.00
Net present value	**$ (2,512.30)**

Because the present value of the cash payments (outflows) of $154,000 exceeds the present value of the cash receipts (inflows) of $151,487.70 ($134,086.40 + $17,401.30), the net present value of $2,512.30 is negative, and **the investment should be rejected**.

The above discussion relied on present value tables in solving present value problems. As we show in the next section, calculators may also be used to compute present values without the use of these tables. Some calculators, especially the "business" or financial calculators, have present value (PV) functions that allow you to calculate present values by merely identifying the proper amount, discount rate, periods, and pressing the PV key.

section three

Using Financial Calculators

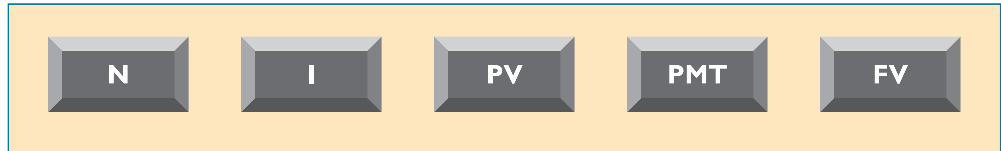
study objective 9

Use a financial calculator to solve time value of money problems.

Business professionals, once they have mastered the underlying concepts in sections 1 and 2, often use a financial calculator to solve time value of money problems. In many cases, they must use calculators if interest rates or time periods do not correspond with the information provided in the compound interest tables.

To use financial calculators, you enter the time value of money variables into the calculator. Illustration D-25 shows the five most common keys used to solve time value of money problems.[2]

Illustration D-25
Financial calculator keys



where:

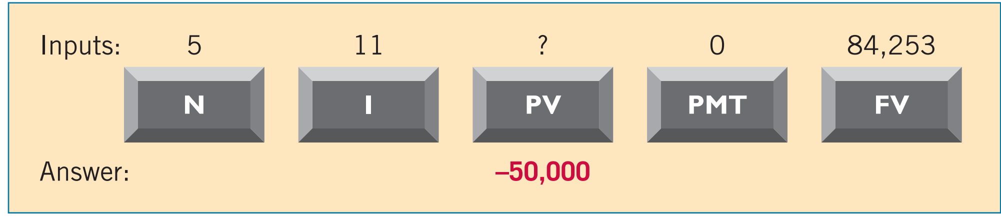
N = number of periods
I = interest rate per period (some calculators use I/YR or i)
PV = present value (occurs at the beginning of the first period)
PMT = payment (all payments are equal, and none are skipped)
FV = future value (occurs at the end of the last period)

In solving time value of money problems in this appendix, you will generally be given three of four variables and will have to solve for the remaining variable. The fifth key (the key not used) is given a value of zero to ensure that this variable is not used in the computation.

Present Value of a Single Sum

To illustrate how to solve a present value problem using a financial calculator, assume that you want to know the present value of $84,253 to be received in five years, discounted at 11% compounded annually. Illustration D-26 depicts this problem.

Illustration D-26
Calculator solution for present value of a single sum



[2]On many calculators, these keys are actual buttons on the face of the calculator; on others, they appear on the display after the user accesses a present value menu.

Illustration D-26 shows you the information (inputs) to enter into the calculator: N = 5, I = 11, PMT = 0, and FV = 84,253. You then press PV for the answer: −$50,000. As indicated, the PMT key was given a value of zero because a series of payments did not occur in this problem.

PLUS AND MINUS

The use of plus and minus signs in time value of money problems with a financial calculator can be confusing. Most financial calculators are programmed so that the positive and negative cash flows in any problem offset each other. In the present value problem above, we identified the $84,253 future value initial investment as a positive (inflow); the answer −$50,000 was shown as a negative amount, reflecting a cash outflow. If the 84,253 were entered as a negative, then the final answer would have been reported as a positive 50,000.

Hopefully, the sign convention will not cause confusion. If you understand what is required in a problem, you should be able to interpret a positive or negative amount in determining the solution to a problem.

COMPOUNDING PERIODS

In the problem above, we assumed that compounding occurs once a year. Some financial calculators have a default setting, which assumes that compounding occurs 12 times a year. You must determine what default period has been programmed into your calculator and change it as necessary to arrive at the proper compounding period.

ROUNDING

Most financial calculators store and calculate using 12 decimal places. As a result, because compound interest tables generally have factors only up to five decimal places, a slight difference in the final answer can result. In most time value of money problems, the final answer will not include more than two decimal places.

Present Value of an Annuity

To illustrate how to solve a present value of an annuity problem using a financial calculator, assume that you are asked to determine the present value of rental receipts of $6,000 each to be received at the end of each of the next five years, when discounted at 12%, as pictured in Illustration D-27.

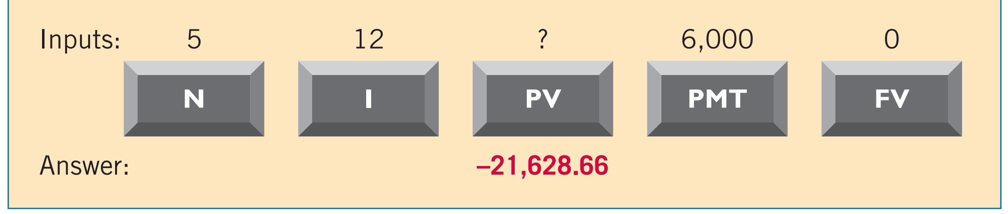


Illustration D-27
Calculator solution for present value of an annuity

In this case, you enter N = 5, I = 12, PMT = 6,000, FV = 0, and then press PV to arrive at the answer of −$21,628.66.

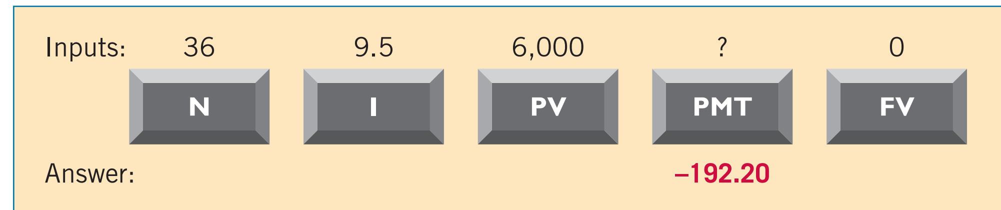
Useful Applications of the Financial Calculator

With a financial calculator, you can solve for any interest rate or for any number of periods in a time value of money problem. Here are some examples of these applications.

AUTO LOAN

Assume you are financing the purchase of a used car with a three-year loan. The loan has a 9.5% stated annual interest rate, compounded monthly. The price of the car is $6,000, and you want to determine the monthly payments, assuming that the payments start one month after the purchase. This problem is pictured in Illustration D-28.

Illustration D-28
Calculator solution for auto loan payments

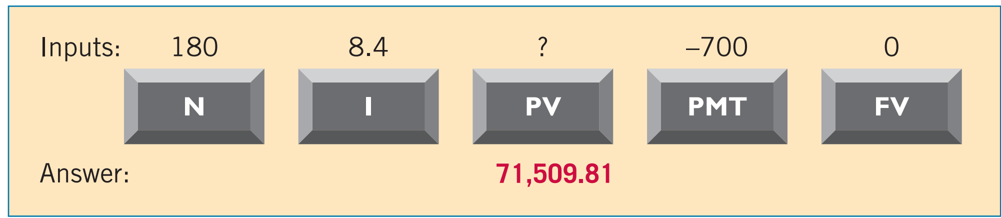


To solve this problem, you enter N = 36 (12 × 3), I = 9.5, PV = 6,000, FV = 0, and then press PMT. You will find that the monthly payments will be $192.20. Note that the payment key is usually programmed for 12 payments per year. Thus, you must change the default (compounding period) if the payments are other than monthly.

MORTGAGE LOAN AMOUNT

Let's say you are evaluating financing options for a loan on a house. You decide that the maximum mortgage payment you can afford is $700 per month. The annual interest rate is 8.4%. If you get a mortgage that requires you to make monthly payments over a 15-year period, what is the maximum home loan you can afford? Illustration D-29 depicts this problem.

Illustration D-29
Calculator solution for mortgage amount



You enter N = 180 (12 × 15 years), I = 8.4, PMT = −700, FV = 0, and press PV. With the payments-per-year key set at 12, you find a present value of $71,509.81—the maximum home loan you can afford, given that you want to keep your mortgage payments at $700. Note that by changing any of the variables, you can quickly conduct "what-if" analyses for different situations.

Summary of Study Objectives

1. **Distinguish between simple and compound interest.** Simple interest is computed on the principal only, while compound interest is computed on the principal and any interest earned that has not been withdrawn.
2. **Solve for future value of a single amount.** Prepare a time diagram of the problem. Identify the principal amount, the number of compounding periods, and the interest rate. Using the future value of 1 table, multiply the principal amount by the future value factor specified at the intersection of the number of periods and the interest rate.
3. **Solve for future value of an annuity.** Prepare a time diagram of the problem. Identify the amount of the periodic payments, the number of compounding periods, and the interest rate. Using the future value of an annuity of 1 table, multiply the amount of the payments by the future value factor specified at the intersection of the number of periods and the interest rate.
4. **Identify the variables fundamental to solving present value problems.** The following three variables are fundamental to solving present value problems: (1) the future amount, (2) the number of periods, and (3) the interest rate (the discount rate).
5. **Solve for present value of a single amount.** Prepare a time diagram of the problem. Identify the future amount, the number of discounting periods, and the discount (interest) rate. Using the present value of a single amount table, multiply the future amount by the present value factor specified at the intersection of the number of periods and the discount rate.
6. **Solve for present value of an annuity.** Prepare a time diagram of the problem. Identify the amount of future periodic receipts or payment (annuities), the number of discounting periods, and the discount (interest) rate. Using the present value of an annuity of 1 table, multiply the amount of the annuity by the present value factor specified at the intersection of the number of periods and the interest rate.
7. **Compute the present value of notes and bonds.** Determine the present value of the principal amount: Multiply the principal amount (a single future amount) by the present value factor (from the present value of 1 table) intersecting at the number of periods (number of interest payments) and the discount rate. Determine the present value of the series of interest payments: Multiply the amount of the interest payment by the present value factor (from the present value of an annuity of 1 table) intersecting at the number of periods (number of interest payments) and the discount rate. Add the present value of the principal amount to the present value of the interest payments to arrive at the present value of the note or bond.
8. **Compute the present values in capital budgeting situations.** Compute the present values of all cash inflows and all cash outflows related to the capital budgeting proposal (an investment-type decision). If the **net** present value is positive, accept the proposal (make the investment). If the **net** present value is negative, reject the proposal (do not make the investment).
9. **Use a financial calculator to solve time value of money problems.** Financial calculators can be used to solve the same and additional problems as those solved with time value of money tables. Enter into the financial calculator the amounts for all of the known elements of a time value of money problem (periods, interest rate, payments, future or present value), and it solves for the unknown element. Particularly useful situations involve interest rates and compounding periods not presented in the tables.

Glossary

Annuity *(p. D-4)* A series of equal dollar amounts to be paid or received at evenly space time intervals (periodically).

Compound interest *(p. D-2)* The interest computed on the principal and any interest earned that has not been paid or withdrawn.

Discounting the future amount(s) *(p. D-7)* The process of determining present value.

Future value of a single amount *(p. D-2)* The value at a future date of a given amount invested, assuming compound interest.

Future value of an annuity *(p. D-5)* The sum of all the payments or receipts plus the accumulated compound interest on them.

Interest *(p. D-1)* Payment for the use of another person's money.

Present value *(p. D-7)* The value now of a given amount to be paid or received in the future assuming compound interest.

Present value of an annuity *(p. D-9)* The value now of a series of future receipts or payments, discounted assuming compound interest.

Principal *(p. D-1)* The amount borrowed or invested.

Simple interest *(p. D-1)* The interest computed on the principal only.

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more resources are available for practice in WileyPLUS

Brief Exercises

(Use tables to solve exercises BED-1 to BED-25.)

Compute the future value of a single amount.
(SO 2), AP

BED-1 Randy Owen invested $8,000 at 5% annual interest, and left the money invested without withdrawing any of the interest for 12 years. At the end of the 12 years, Randy withdrew the accumulated amount of money. (a) What amount did Randy withdraw, assuming the investment earns simple interest? (b) What amount did Randy withdraw, assuming the investment earns interest compounded annually?

Use future value tables.
(SO 2, 3), C

BED-2 For each of the following cases, indicate (a) to what interest rate columns and (b) to what number of periods you would refer in looking up the future value factor.

(1) In Table 1 (future value of 1):

	Annual Rate	Number of Years Invested	Compounded
Case A	6%	3	Annually
Case B	8%	4	Semiannually

(2) In Table 2 (future value of an annuity of 1):

	Annual Rate	Number of Years Invested	Compounded
Case A	5%	8	Annually
Case B	6%	6	Semiannually

Compute the future value of a single amount.
(SO 2), AP

BED-3 Joyce Company signed a lease for an office building for a period of 12 years. Under the lease agreement, a security deposit of $9,200 is made. The deposit will be returned at the expiration of the lease with interest compounded at 4% per year. What amount will Joyce receive at the time the lease expires?

Compute the future value of an annuity.
(SO 3), AP

BED-4 Bates Company issued $1,000,000, 10-year bonds and agreed to make annual sinking fund deposits of $78,000. The deposits are made at the end of each year into an account paying 5% annual interest. What amount will be in the sinking fund at the end of 10 years?

Compute the future value of a single amount and of an annuity.
(SO 2, 3), AP

BED-5 Frank and Maureen Fantazzi invested $6,000 in a savings account paying 4% annual interest when their daughter, Angela, was born. They also deposited $1,000 on each of her birthdays until she was 18 (including her 18th birthday). How much was in the savings account on her 18th birthday (after the last deposit)?

Compute the future value of a single amount.
(SO 2), AP

BED-6 Hugh Curtin borrowed $34,000 on July 1, 2012. This amount plus accrued interest at 9% compounded annually is to be repaid on July 1, 2017. How much will Hugh have to repay on July 1, 2017?

Use present value tables.
(SO 5, 6), C

BED-7 For each of the following cases, indicate (a) to what interest rate columns and (b) to what number of periods you would refer in looking up the discount rate.

(1) In Table 3 (present value of 1):

	Annual Rate	Number of Years Involved	Discounts per Year
Case A	12%	6	Annually
Case B	10%	11	Annually
Case C	6%	9	Semiannually

(2) In Table 4 (present value of an annuity of 1):

	Annual Rate	Number of Years Involved	Number of Payments Involved	Frequency of Payments
Case A	12%	20	20	Annually
Case B	10%	5	5	Annually
Case C	8%	4	8	Semiannually

BED-8 (a) What is the present value of $28,000 due 9 periods from now, discounted at 10%?
(b) What is the present value of $28,000 to be received at the end of each of 6 periods, discounted at 9%?

Determine present values.
(SO 5, 6), **AP**

BED-9 Chaffee Company is considering an investment that will return a lump sum of $750,000 five years from now. What amount should Chaffee Company pay for this investment to earn a 9% return?

Compute the present value of a single amount investment.
(SO 5), **AP**

BED-10 Lloyd Company earns 10% on an investment that will return $480,000 eight years from now. What is the amount Lloyd should invest now to earn this rate of return?

Compute the present value of a single amount investment.
(SO 5), **AP**

BED-11 Arthur Company is considering investing in an annuity contract that will return $45,000 annually at the end of each year for 15 years. What amount should Arthur Company pay for this investment if it earns a 5% return?

Compute the present value of an annuity investment.
(SO 6), **AP**

BED-12 Kaehler Enterprises earns 8% on an investment that pays back $90,000 at the end of each of the next 6 years. What is the amount Kaehler Enterprises invested to earn the 8% rate of return?

Compute the present value of an annuity investment.
(SO 6), **AP**

BED-13 Hanna Railroad Co. is about to issue $300,000 of 10-year bonds paying a 9% interest rate, with interest payable semiannually. The discount rate for such securities is 8%. How much can Hanna expect to receive for the sale of these bonds?

Compute the present value of bonds.
(SO 5, 6, 7), **AP**

BED-14 Assume the same information as BED-13 except that the discount rate was 10% instead of 8%. In this case, how much can Hanna expect to receive from the sale of these bonds?

Compute the present value of bonds.
(SO 5, 6, 7), **AP**

BED-15 Tomas Taco Company receives a $64,000, 6-year note bearing interest of 6% (paid annually) from a customer at a time when the discount rate is 8%. What is the present value of the note received by Tomas?

Compute the present value of a note.
(SO 5, 6, 7), **AP**

BED-16 Gleason Enterprises issued 9%, 8-year, $2,600,000 par value bonds that pay interest semiannually on October 1 and April 1. The bonds are dated April 1, 2012, and are issued on that date. The discount rate of interest for such bonds on April 1, 2012, is 10%. What cash proceeds did Gleason receive from issuance of the bonds?

Compute the present value of bonds.
(SO 5, 6, 7), **AP**

BED-17 Mark Barton owns a garage and is contemplating purchasing a tire retreading machine for $18,000. After estimating costs and revenues, Mark projects a net cash flow from the retreading machine of $3,300 annually for 8 years. Mark hopes to earn a return of 10 percent on such investments. What is the present value of the retreading operation? Should Mark purchase the retreading machine?

Compute the present value of a machine for purposes of making a purchase decision.
(SO 6, 7), **AP**

BED-18 Frazier Company issues an 8%, 5-year mortgage note on January 1, 2012, to obtain financing for new equipment. Land is used as collateral for the note. The terms provide for semiannual installment payments of $46,850. What were the cash proceeds received from the issuance of the note?

Compute the present value of a note.
(SO 6), **AP**

BED-19 Leffler Company is considering purchasing equipment. The equipment will produce the following cash flows: Year 1, $38,000; Year 2, $40,000; and Year 3, $50,000. Leffler requires a minimum rate of return of 10%. What is the maximum price Leffler should pay for this equipment?

Compute the maximum price to pay for a machine.
(SO 6, 7), **AP**

BED-20 If Colleen Mooney invests $4,172.65 now and she will receive $10,000 at the end of 15 years, what annual rate of interest will Colleen earn on her investment? (*Hint:* Use Table 3.)

Compute the interest rate on a single amount.
(SO 5), **AN**

BED-21 Wayne Kurt has been offered the opportunity of investing $25,490 now. The investment will earn 10% per year and at the end of that time will return Wayne $80,000. How many years must Wayne wait to receive $80,000? (*Hint:* Use Table 3.)

Compute the number of periods of a single amount.
(SO 5), **AN**

BED-22 Joanne Quick made an investment of $9,128.55. From this investment, she will receive $1,000 annually for the next 20 years starting one year from now. What rate of interest will Joanne's investment be earning for her? (*Hint:* Use Table 4.)

Compute the interest rate on an annuity.
(SO 6), **AN**

BED-23 Patty Schleis invests $5,146.12 now for a series of $1,000 annual returns beginning one year from now. Patty will earn a return of 11% on the initial investment. How many annual payments of $1,000 will Patty receive? (*Hint:* Use Table 4.)

Compute the number of periods of an annuity.
(SO 6), **AN**

Compute the present value of a machine for purposes of making a purchase decision.
(SO 8), AP

BED-24 Barney Googal owns a garage and is contemplating purchasing a tire retreading machine for $14,280. After estimating costs and revenues, Barney projects a net cash flow from the retreading machine of $2,900 annually for 8 years. Barney hopes to earn a return of 11% on such investments. What is the present value of the retreading operation? Should Barney Googal purchase the retreading machine?

Compute the maximum price to pay for a machine.
(SO 8), AP

BED-25 Ramos Company is considering purchasing equipment. The equipment will produce the following cash flows: Year 1, $30,000; Year 2, $40,000; Year 3, $50,000. Ramos requires a minimum rate of return of 12%. What is the maximum price Ramos should pay for this equipment?

Determine interest rate.
(SO 9), AP

BED-26 Carly Simon wishes to invest $18,000 on July 1, 2012, and have it accumulate to $50,000 by July 1, 2022.

Instructions
Use a financial calculator to determine at what exact annual rate of interest Carly must invest the $18,000.

Determine interest rate.
(SO 9), AP

BED-27 On July 17, 2012, James Taylor borrowed $60,000 from his grandfather to open a clothing store. Starting July 17, 2018, James has to make 10 equal annual payments of $8,860 each to repay the loan.

Instructions
Use a financial calculator to determine what interest rate James is paying.

Determine interest rate.
(SO 9), AP

BED-28 As the purchaser of a new house, Carrie Underwood has signed a mortgage note to pay the Nashville National Bank and Trust Co. $8,400 every 6 months for 20 years, at the end of which time she will own the house. At the date the mortgage is signed, the purchase price was $198,000 and Underwood made a down payment of $20,000. The first payment will be made 6 months after the date the mortgage is signed.

Instructions
Using a financial calculator, compute the exact rate of interest earned on the mortgage by the bank.

Various time value of money situations.
(SO 9), AP

BED-29 Using a financial calculator, solve for the unknowns in each of the following situations.

(a) On June 1, 2012, Holly Golightly purchases lakefront property from her neighbor, George Peppard, and agrees to pay the purchase price in seven payments of $16,000 each, the first payment to be payable June 1, 2013. (Assume that interest compounded at an annual rate of 6.9% is implicit in the payments.) What is the purchase price of the property?
(b) On January 1, 2012, Sammis Corporation purchased 200 of the $1,000 face value, 7% coupon, 10-year bonds of Malone Inc. The bonds mature on January 1, 2020, and pay interest annually beginning January 1, 2013. Sammis purchased the bonds to yield 8.65%. How much did Sammis pay for the bonds?

Various time value of money situations.
(SO 9), AP

BED-30 Using a financial calculator, provide a solution to each of the following situations.

(a) Lynn Anglin owes a debt of $42,000 from the purchase of her new sport utility vehicle. The debt bears annual interest of 7.8% compounded monthly. Lynn wishes to pay the debt and interest in equal monthly payments over 8 years, beginning one month hence. What equal monthly payments will pay off the debt and interest?
(b) On January 1, 2012, Roger Molony offers to buy Dave Feeney's used snowmobile for $8,000, payable in five equal annual installments, which are to include 7.25% interest on the unpaid balance and a portion of the principal. If the first payment is to be made on December 31, 2012, how much will each payment be?

appendix E

REPORTING AND ANALYZING INVESTMENTS

study objectives

After studying this appendix, you should be able to:

1. Identify the reasons corporations invest in stocks and debt securities.
2. Explain the accounting for debt investments.
3. Explain the accounting for stock investments.
4. Describe the purpose and usefulness of consolidated financial statements.
5. Indicate how debt and stock investments are valued and reported in the financial statements.
6. Distinguish between short-term and long-term investments.

Why Corporations Invest

study objective 1

Identify the reasons corporations invest in stocks and debt securities.

Corporations purchase investments in debt or equity securities generally for one of three reasons. First, a corporation may **have excess cash** that it does not need for the immediate purchase of operating assets. For example, many companies experience seasonal fluctuations in sales. A Cape Cod marina has more sales in the spring and summer than in the fall and winter. The reverse is true for an Aspen ski shop. Thus, at the end of an operating cycle, many companies may have cash on hand that is temporarily idle until the start of another operating cycle. These companies may invest the excess funds to earn—through interest and dividends—a greater return than they would get by just holding the funds in the bank. The role that such temporary investments play in the operating cycle is depicted in Illustration E-1.

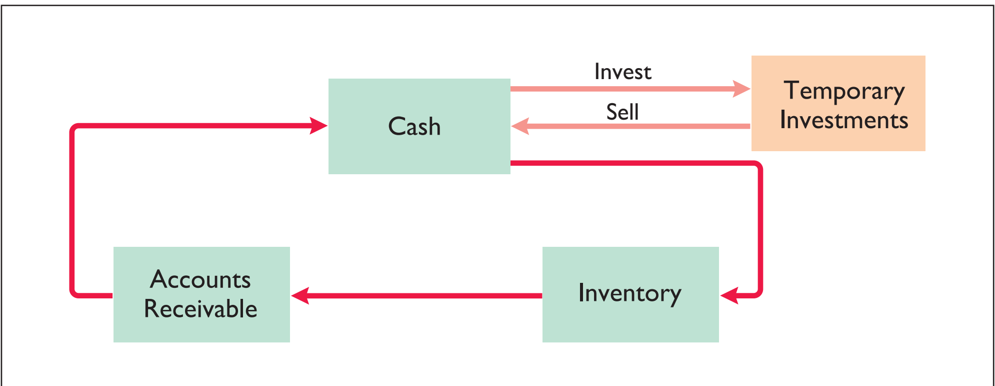


Illustration E-1
Temporary investments and the operating cycle

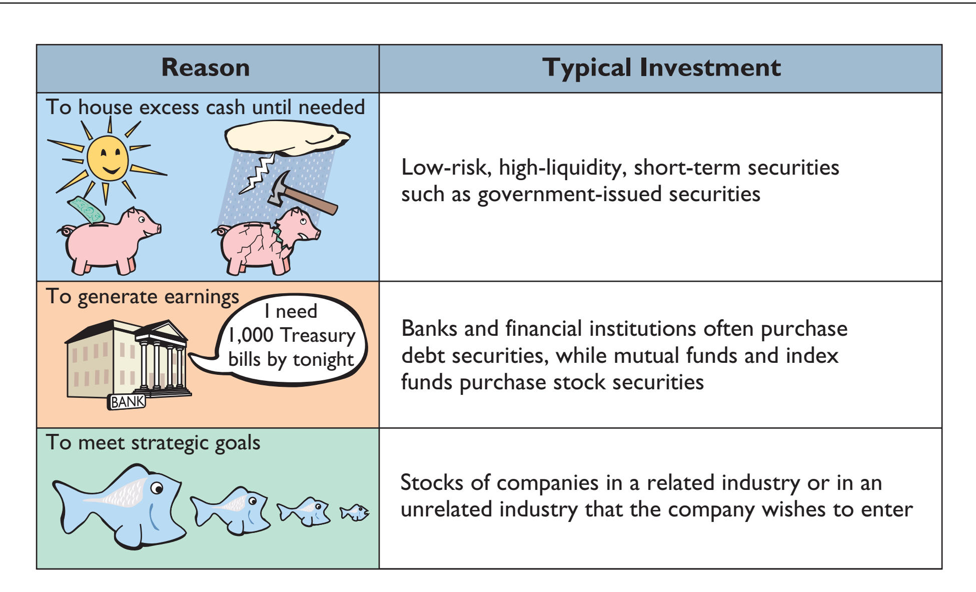
A second reason some companies such as banks purchase investments is to generate **earnings from investment income**. Although banks make most of their earnings by lending money, they also generate earnings by investing in debt and equity securities. Banks purchase investment securities because loan demand varies both seasonally and with changes in the economic climate. Thus, when loan demand is low, a bank must find other uses for its cash.

Pension funds and mutual funds are corporations that also regularly invest to generate earnings. However, they do so for *speculative reasons*. That is, they are speculating that the investment will increase in value and thus result in positive returns. Therefore, they invest primarily in the common stock of other corporations.

Third, companies also invest for **strategic reasons**. A company may purchase a noncontrolling interest in another company in a related industry in which it wishes to establish a presence. Alternatively, a company can exercise some influence over one of its customers or suppliers by purchasing a significant, but not controlling, interest in that company. Or, a corporation may choose to purchase a controlling interest in another company in order to enter a new industry without incurring the costs and risks associated with starting from scratch.

In summary, businesses invest in other companies for the reasons shown in Illustration E-2.

Illustration E-2 Why corporations invest



Reason	Typical Investment
To house excess cash until needed	Low-risk, high-liquidity, short-term securities such as government-issued securities
To generate earnings	Banks and financial institutions often purchase debt securities, while mutual funds and index funds purchase stock securities
To meet strategic goals	Stocks of companies in a related industry or in an unrelated industry that the company wishes to enter

Accounting for Debt Investments

study objective 2
Explain the accounting for debt investments.

Debt investments are investments in government and corporation bonds. In accounting for debt investments, companies must make entries to record (1) the acquisition, (2) the interest revenue, and (3) the sale.

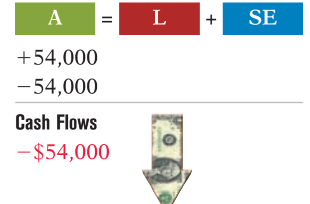
RECORDING ACQUISITION OF BONDS

At acquisition, the cost principle applies. Cost includes all expenditures necessary to acquire these investments, such as the price paid plus brokerage fees (commissions), if any.

For example, assume that Kuhl Corporation acquires 50 Doan Inc. 12%, 10-year, $1,000 bonds on January 1, 2012, for $54,000, including brokerage fees of $1,000. Kuhl records the investment as:

A	=	L	+	SE
+54,000				
−54,000				

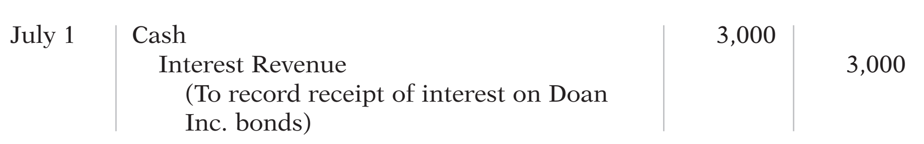
Cash Flows
−$54,000



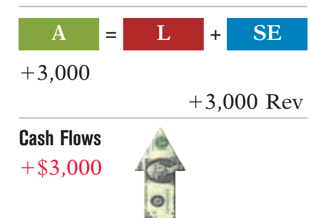
Jan. 1	Debt Investments	54,000	
	Cash		54,000
	(To record purchase of 50 Doan Inc. bonds)		

RECORDING BOND INTEREST

The Doan Inc. bonds pay interest of $3,000 semiannually on July 1 and January 1 ($\$50,000 \times 12\% \times \frac{1}{2}$). The entry for the receipt of interest on July 1 is:

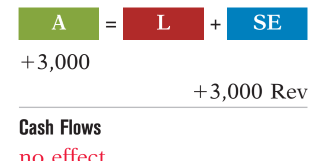


July 1	Cash	3,000	
	Interest Revenue		3,000
	(To record receipt of interest on Doan Inc. bonds)		



If Kuhl Corporation's fiscal year ends on December 31, it accrues the interest of $3,000 earned since July 1. The adjusting entry is:

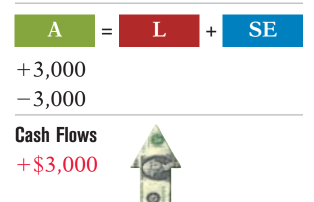
Dec. 31	Interest Receivable	3,000	
	Interest Revenue		3,000
	(To accrue interest on Doan Inc. bonds)		



Kuhl reports Interest Receivable as a current asset in the balance sheet. It reports Interest Revenue under "Other revenues and gains" in the income statement.

Kuhl records receipt of the interest on January 1 as follows.

Jan. 1	Cash	3,000	
	Interest Receivable		3,000
	(To record receipt of accrued interest)		



A credit to Interest Revenue at this time would be incorrect. Why? Because the company earned and accrued the interest revenue in the preceding accounting period.

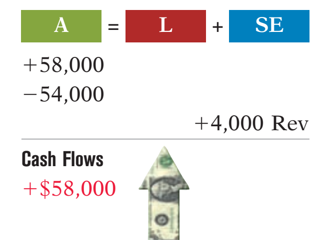
RECORDING SALE OF BONDS

When Kuhl sells the bond investments, it credits the investment account for the cost of the bonds. The company records as a gain or loss any difference between the net proceeds from the sale (sales price less brokerage fees) and the cost of the bonds.

Helpful Hint The accounting for short-term debt investments and long-term debt investments is similar. Any exceptions are discussed in more advanced courses.

Assume, for example, that Kuhl Corporation receives net proceeds of $58,000 on the sale of the Doan Inc. bonds on January 1, 2013, after receiving the interest due. Since the securities cost $54,000, Kuhl has realized a gain of $4,000. It records the sale as follows.

Jan. 1	Cash	58,000	
	Debt Investments		54,000
	Gain on Sale of Debt Investments		4,000
	(To record sale of Doan Inc. bonds)		



Kuhl reports the gain on the sale of debt investments under "Other revenues and gains" in the income statement and reports losses under "Other expenses and losses."

Accounting for Stock Investments

study objective 3

Explain the accounting for stock investments.

Stock investments are investments in the capital stock of corporations. When a company holds stock (and/or debt) of several different corporations, the group of securities is an **investment portfolio**.

The accounting for investments in common stock depends on the extent of the investor's influence over the operating and financial affairs of the issuing corporation (the **investee**). Illustration E-3 shows the general guidelines.

Illustration E-3
Accounting guidelines for stock investments

Investor's Ownership Interest in Investee's Common Stock	Presumed Influence on Investee	Accounting Guidelines
Less than 20%	Insignificant	Cost method
Between 20% and 50%	Significant	Equity method
More than 50%	Controlling	Consolidated financial statements

Companies are required to use judgment instead of blindly following the guidelines.[1] We explain and illustrate the application of each guideline next.

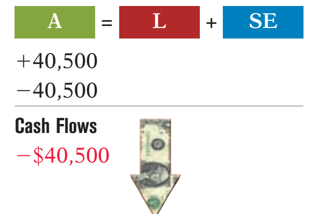
HOLDINGS OF LESS THAN 20%

In the accounting for stock investments of less than 20%, companies use the cost method. Under the **cost method**, companies record the investment at cost and recognize revenue only when cash dividends are received.

Recording Acquisition of Stock

At acquisition, the cost principle applies. Cost includes all expenditures necessary to acquire these investments, such as the price paid plus brokerage fees (commissions), if any.

Assume, for example, that on July 1, 2012, Sanchez Corporation acquires 1,000 shares (10% ownership) of Beal Corporation common stock at $40 per share plus brokerage fees of $500. The entry for the purchase is:

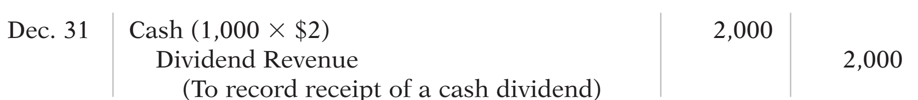


Date	Account	Debit	Credit
July 1	Stock Investments	40,500	
	Cash		40,500
	(To record purchase of 1,000 shares of Beal common stock)		

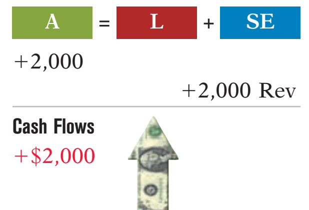
[1]Among the factors that companies should consider in determining an investor's influence are whether (1) the investor has representation on the investee's board of directors, (2) the investor participates in the investee's policy-making process, (3) there are material transactions between the investor and the investee, and (4) the common stock held by other stockholders is concentrated or dispersed.

Recording Dividends

During the time the company holds the stock, it makes entries for any cash dividends received. Thus, if Sanchez Corporation receives a $2 per share dividend on December 31, the entry is:



Dec. 31	Cash (1,000 × $2)	2,000	
	Dividend Revenue		2,000
	(To record receipt of a cash dividend)		



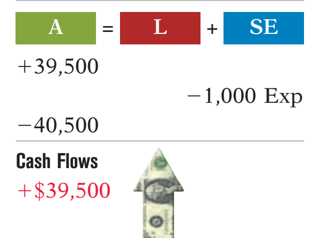
Sanchez reports Dividend Revenue under "Other revenues and gains" in the income statement.

Recording Sale of Stock

When a company sells a stock investment, it recognizes the difference between the net proceeds from the sale (sales price less brokerage fees) and the cost of the stock as a gain or a loss.

Assume, for instance, that Sanchez Corporation receives net proceeds of $39,500 on the sale of its Beal Corporation stock on February 10, 2013. Because the stock cost $40,500, Sanchez has incurred a loss of $1,000. It records the sale as:

Feb. 10	Cash	39,500	
	Loss on Sale of Stock Investments	1,000	
	Stock Investments		40,500
	(To record sale of Beal common stock)		



Sanchez reports the loss account under "Other expenses and losses" in the income statement, and would show a gain on sale under "Other revenues and gains."

HOLDINGS BETWEEN 20% AND 50%

When an investor company owns only a small portion of the shares of stock of another company, the investor cannot exercise control over the investee. But when an investor owns between 20% and 50% of the common stock of a corporation, it is presumed that the investor has significant influence over the financial and operating activities of the investee. The investor probably has a representative on the investee's board of directors. Through that representative, the investor begins to exercise some control over the investee—and the investee company in some sense becomes part of the investor company.

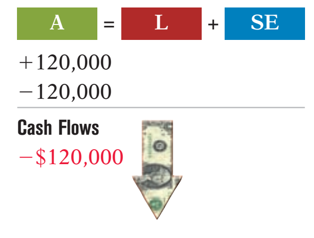
For example, even prior to purchasing all of Turner Broadcasting, Time Warner owned 20% of Turner. Because it exercised significant control over major decisions made by Turner, Time Warner used an approach called the equity method. Under the **equity method, the investor records its share of the net income of the investee in the year when it is earned**. An alternative might be to delay recognizing the investor's share of net income until a cash dividend is declared. But that approach would ignore the fact that the investor and investee are, in some sense, one company, making the investor better off by the investee's earned income.

Under the **equity method**, the company initially records the investment in common stock at cost. After that, it adjusts the investment account **annually** to show the investor's equity in the investee. Each year, the investor does the following: (1) It increases (debits) the investment account and increases (credits)

revenue for its share of the investee's net income.[2] (2) The investor also decreases (credits) the investment account for the amount of dividends received. The investment account is reduced for dividends received because payment of a dividend decreases the net assets of the investee.

Recording Acquisition of Stock

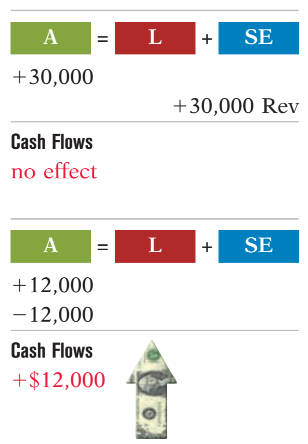
Assume that Milar Corporation acquires 30% of the common stock of Beck Company for $120,000 on January 1, 2012. The entry to record this transaction is:



Date	Account	Debit	Credit
Jan. 1	Stock Investments	120,000	
	Cash		120,000
	(To record purchase of Beck common stock)		

Recording Revenue and Dividends

For 2012, Beck reports net income of $100,000. It declares and pays a $40,000 cash dividend. Milar must record (1) its share of Beck's income, $30,000 (30% × $100,000), and (2) the reduction in the investment account for the dividends received, $12,000 ($40,000 × 30%). The entries are:



(1)

Date	Account	Debit	Credit
Dec. 31	Stock Investments	30,000	
	Revenue from Investment in Beck Company		30,000
	(To record 30% equity in Beck's 2012 net income)		

(2)

Date	Account	Debit	Credit
Dec. 31	Cash	12,000	
	Stock Investments		12,000
	(To record dividends received)		

After Milar posts the transactions for the year, the investment and revenue accounts are as shown in Illustration E-4.

Illustration E-4
Investment and revenue accounts after posting

Stock Investments

Debit		Credit	
Jan. 1	120,000	Dec. 31	**12,000**
Dec. 31	**30,000**		
Dec. 31 Bal.	138,000		

Revenue from Investment in Beck Company

Debit	Credit	
	Dec. 31	**30,000**

During the year, the investment account increased by $18,000. This $18,000 is Milar's 30% equity in the $60,000 increase in Beck's retained earnings ($100,000 − $40,000). In addition, Milar reports $30,000 of revenue from its investment, which is 30% of Beck's net income of $100,000.

[2]Conversely, the investor increases (debits) a loss account and decreases (credits) the investment account for its share of the investee's net loss.

Note that the difference between reported income under the cost method and reported revenue under the equity method can be significant. For example, Milar would report only $12,000 of dividend revenue (30% × $40,000) if it used the cost method.

HOLDINGS OF MORE THAN 50%

A company that owns more than 50% of the common stock of another entity is known as the **parent company**. The entity whose stock is owned by the parent company is called the **subsidiary (affiliated) company**. Because of its stock ownership, the parent company has a **controlling interest** in the subsidiary company.

study objective 4
Describe the purpose and usefulness of consolidated financial statements.

When a company owns more than 50% of the common stock of another company, it usually prepares **consolidated financial statements**. Consolidated financial statements present the assets and liabilities controlled by the parent company. They also present the total revenues and expenses of the subsidiary companies. Companies prepare consolidated statements **in addition to** the financial statements for the individual parent and subsidiary companies.

As noted earlier, prior to acquiring all of Turner Broadcasting, Time Warner accounted for its investment in Turner using the equity method. Time Warner's net investment in Turner was reported in a single line item—Other investments. After the merger, Time Warner instead consolidated Turner's results with its own. Under this approach, Time Warner included the individual assets and liabilities of Turner with its own assets. That is, Turner's plant and equipment were added to Time Warner's plant and equipment, its receivables were added to Time Warner's receivables, and so on. A similar sort of consolidation went on when AOL merged with Time Warner.

Helpful Hint If the parent (A) has three wholly owned subsidiaries (B, C, and D), there are four separate legal entities but only one economic entity from the viewpoint of the shareholders of the parent company.

Consolidated statements are useful to the stockholders, board of directors, and management of the parent company. Consolidated statements indicate to creditors, prospective investors, and regulatory agencies the magnitude and scope of operations of the companies under common control. For example, regulators and the courts undoubtedly used the consolidated statements of AT&T to determine whether a breakup of AT&T was in the public interest. Listed here are three companies that prepare consolidated statements and some of the companies they have owned. Note that one, Disney, is Time Warner's arch rival.

PepsiCo	Cendant	The Walt Disney Company
Frito-Lay	Howard Johnson	Capital Cities/ABC, Inc.
Tropicana	Ramada Inn	Disneyland, Disney World
Quaker Oats	Century 21	Mighty Ducks
Pepsi-Cola	Coldwell Banker	Anaheim Angels
Gatorade	Avis	ESPN

Valuing and Reporting Investments

The value of debt and stock investments may fluctuate greatly during the time they are held. For example, in a 12-month period, the stock of Time Warner hit a high of $58\frac{1}{2}$ and a low of 9. In light of such price fluctuations, how should companies value investments at the balance sheet date? Valuation could be at cost, at fair value (market value), or at the lower-of-cost-or-market value.

study objective 5
Indicate how debt and stock investments are valued and reported in the financial statements.

Many people argue that fair value offers the best approach because it represents the expected cash realizable value of securities. **Fair value** is the amount for which a security could be sold in a normal market. Others counter that, unless a security is going to be sold soon, the fair value is not relevant because the price of the security will likely change again.

CATEGORIES OF SECURITIES

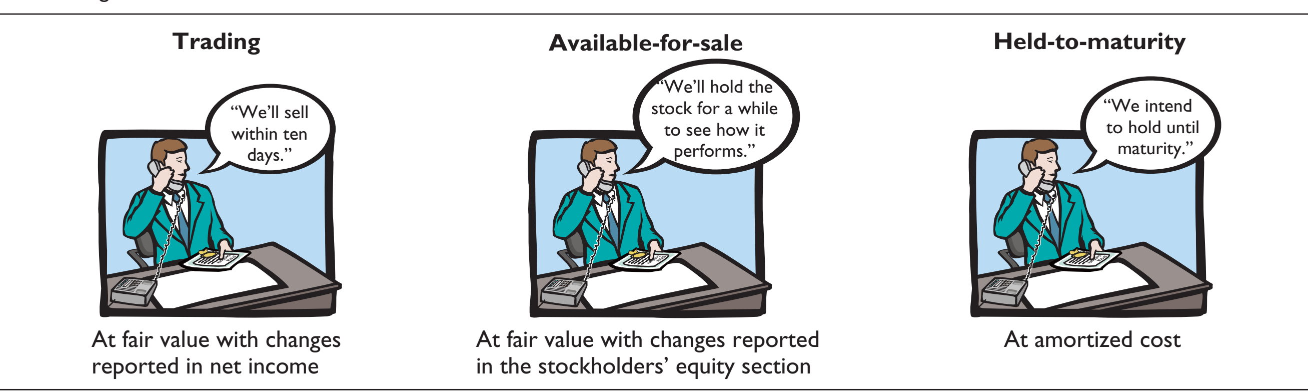
International Note A recent U.S. accounting standard gives companies the "option" of applying fair value accounting, rather than historical cost, to certain types of assets and liabilities. This makes U.S. accounting closer to international standards.

For purposes of valuation and reporting at a financial statement date, debt and stock investments are classified into three categories of securities:

1. **Trading securities** are bought and held primarily for sale in the near term to generate income on short-term price differences.
2. **Available-for-sale securities** are held with the intent of selling them sometime in the future.
3. **Held-to-maturity securities** are debt securities that the investor has the intent and ability to hold to maturity.[3]

Illustration E-5 shows the valuation guidelines for these securities. **These guidelines apply to all debt securities and all stock investments in which the holdings are less than 20%.**

Illustration E-5
Valuation guidelines



Trading Securities

Trading securities are held with the intention of selling them in a short period of time (generally less than a month). *Trading* means frequent buying and selling. As indicated in Illustration E-5, companies adjust trading securities to fair value at the end of each period (an approach referred to as **mark-to-market** accounting); they report changes from cost **as part of net income**. The changes are reported as **unrealized gains or losses** because the securities have not been sold. The unrealized gain or loss is the difference between the **total cost** of trading securities and their **total fair value**. Companies classify trading securities as a current asset.

As an example, Illustration E-6 shows the costs and fair values for investments classified as trading securities for Pace Corporation on December 31, 2012. Pace Corporation has an unrealized gain of $7,000 because total fair value ($147,000) is $7,000 greater than total cost ($140,000).

Illustration E-6
Valuation of trading securities

Trading Securities, December 31, 2012

Investments	Cost	Fair Value	Unrealized Gain (Loss)
Yorkville Company bonds	$ 50,000	$ 48,000	$(2,000)
Kodak Company stock	90,000	99,000	9,000
Total	$140,000	$147,000	**$ 7,000**

[3]This category is provided for completeness. The accounting and valuation issues related to held-to-maturity securities are discussed in more advanced accounting courses.

The fact that trading securities are a short-term investment increases the likelihood that Pace will sell them at fair value for a gain. Pace records fair value and the unrealized gain through an adjusting entry at the time it prepares financial statements. In the entry, the company uses a valuation allowance account, Market Adjustment—Trading, to record the difference between the total cost and the total fair value of the securities. The adjusting entry for Pace Corporation is:

Helpful Hint Companies report an unrealized gain or loss in the income statement because of the likelihood that the securities will be sold at fair value since they are a short-term investment.

Date	Account	Debit	Credit
Dec. 31	Market Adjustment—Trading	7,000	
	Unrealized Gain—Income		7,000
	(To record unrealized gain on trading securities)		

A	=	L	+	SE
+7,000				
				+7,000 Rev

Cash Flows
no effect

The use of the Market Adjustment—Trading account enables the company to maintain a record of the investment cost. Actual cost is needed to determine the gain or loss realized when the securities are sold. The company adds the debit balance (or subtracts a credit balance) of the Market Adjustment—Trading account to the cost of the investments to arrive at a fair value for the trading securities.

The fair value of the securities is the amount companies report on the balance sheet. They report the unrealized gain on the income statement under "Other revenues and gains." The term *income* in the account title indicates that the gain affects net income. If the total cost of the trading securities is greater than total fair value, an unrealized loss has occurred. In such a case, the adjusting entry is a debit to Unrealized Loss—Income and a credit to Market Adjustment—Trading. Companies report the unrealized loss under "Other expenses and losses" in the income statement.

The market adjustment account is carried forward into future accounting periods. No entries are made to this account during the period. At the end of each reporting period, a company adjusts the balance in the account to the difference between cost and fair value at that time. It closes the Unrealized Gain—Income account or Unrealized Loss—Income account at the end of the reporting period.

Available-for-Sale Securities

As indicated earlier, available-for-sale securities are held with the intent of selling them sometime in the future. If the intent is to sell the securities within the next year or operating cycle, a company classifies the securities as current assets in the balance sheet. Otherwise, it classifies them as long-term assets in the investments section of the balance sheet.

Companies also report available-for-sale securities at fair value. The procedure for determining fair value and unrealized gain or loss for these securities is the same as that for trading securities. To illustrate, assume that Elbert Corporation has two securities that are classified as available-for-sale. Illustration E-7 provides information on the cost, fair value, and amount of the unrealized gain or loss on December 31, 2012. There is an unrealized loss of $9,537 because total cost ($293,537) is $9,537 more than total fair value ($284,000).

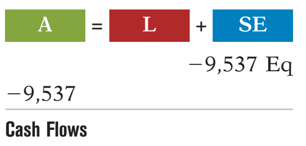
Available-for-Sale Securities, December 31, 2012

Investments	Cost	Fair Value	Unrealized Gain (Loss)
Campbell Soup Corporation 8% bonds	$ 93,537	$103,600	$10,063
Hershey Foods stock	200,000	180,400	(19,600)
Total	$293,537	$284,000	**$(9,537)**

Illustration E-7
Valuation of available-for-sale securities

Both the adjusting entry and the reporting of the unrealized loss from Elbert's available-for-sale securities differ from those illustrated for trading securities. The differences result because these securities are not going to be sold in the near term. Thus, prior to actual sale it is much more likely that changes in fair value may reverse the unrealized loss. Therefore, Elbert does not report an unrealized loss in the income statement. Instead, it reports it as **a separate component of stockholders' equity**. In the adjusting entry, Elbert identifies the market adjustment account with available-for-sale securities, and identifies the unrealized gain or loss account with stockholders' equity. The adjusting entry for Elbert Corporation to record the unrealized loss of $9,537 is:

Helpful Hint The entry is the same regardless of whether the securities are considered short-term or long-term.



A	=	L	+	SE
				−9,537 Eq
−9,537				

Cash Flows
no effect

Dec. 31	Unrealized Gain or Loss—Equity	9,537	
	Market Adjustment—Available-for-Sale		9,537
	(To record unrealized loss on available-for-sale securities)		

Ethics Note Recently, the SEC accused investment bank Morgan Stanley of overstating the value of certain bond investments by $75 million. The SEC stated that, in applying fair value accounting, Morgan Stanley used its own more optimistic assumptions rather than relying on external pricing sources.

If total fair value exceeds total cost, Elbert would record the adjusting entry as an increase (debit) to Market Adjustment—Available-for-Sale and a credit to Unrealized Gain or Loss—Equity.

For available-for-sale securities, the company carries forward the Unrealized Gain or Loss—Equity account to future periods. At each future balance sheet date, the account is adjusted with the market adjustment account to show the difference between cost and fair value at that time.

BALANCE SHEET PRESENTATION

For balance sheet presentation, companies must classify investments as either short-term or long-term.

Short-Term Investments

study objective 6
Distinguish between short-term and long-term investments.

Short-term investments (also called **marketable securities**) are securities held by a company that are (1) **readily marketable** and (2) **intended to be converted into cash** within the next year or operating cycle, whichever is longer. Investments that do not meet **both criteria** are classified as **long-term investments**. In a recent survey of 600 large U.S. companies, 202 reported short-term investments.

Helpful Hint Trading securities are always classified as short-term. Available-for-sale securities can be either short-term or long-term.

READILY MARKETABLE. An investment is readily marketable when it can be sold easily whenever the need for cash arises. Short-term paper[4] meets this criterion because a company can readily sell it to other investors. Stocks and bonds traded on organized securities markets, such as the New York Stock Exchange, are readily marketable because they can be bought and sold daily. In contrast, there may be only a limited market for the securities issued by small corporations and no market for the securities of a privately held company.

INTENT TO CONVERT. Intent to convert means that management intends to sell the investment within the next year or operating cycle, whichever is longer. Generally, this criterion is satisfied when the investment is considered a resource that the company will use whenever the need for cash arises. For example, a ski resort may invest idle cash during the summer months with the intent to sell the securities to buy supplies and equipment shortly before the next winter season. This

[4]Short-term paper includes (1) certificates of deposits (CDs) issued by banks, (2) money market certificates issued by banks and savings and loan associations, (3) Treasury bills issued by the U.S. government, and (4) commercial paper issued by corporations with good credit ratings.

investment is considered short-term even if lack of snow cancels the next ski season and eliminates the need to convert the securities into cash as intended.

Because of their high liquidity, companies list short-term investments immediately below Cash in the current assets section of the balance sheet. Short-term investments are reported at fair value. For example, Weber Corporation would report its trading securities as shown in Illustration E-8.

Illustration E-8 Balance sheet presentation of short-term investments

WEBER CORPORATION Balance Sheet (partial)	
Current assets	
Cash	$21,000
Short-term investments, at fair value	**60,000**

Long-Term Investments

Companies generally report long-term investments in a separate section of the balance sheet immediately below "Current assets," as shown in Illustration E-9. Long-term investments in available-for-sale securities are reported at fair value. Investments in common stock accounted for under the equity method are reported at equity.

Illustration E-9 Balance sheet presentation of long-term investments

WEBER CORPORATION Balance Sheet (partial)		
Investments		
Bond sinking fund	$100,000	
Investments in stock of less than 20% owned companies, at fair value	**50,000**	
Investment in stock of 20%–50% owned company, at equity	**150,000**	
Total investments		$300,000

PRESENTATION OF REALIZED AND UNREALIZED GAIN OR LOSS

Companies must present in the financial statements gains and losses on investments, whether realized or unrealized. In the income statement, companies report gains and losses, as well as interest and dividend revenue, in the nonoperating activities section under the categories listed in Illustration E-10.

Illustration E-10 Nonoperating items related to investments

Other Revenue and Gains	Other Expenses and Losses
Interest Revenue	Loss on Sale of Investments
Dividend Revenue	Unrealized Loss—Income
Gain on Sale of Investments	
Unrealized Gain—Income	

As indicated earlier, companies report an unrealized gain or loss on available-for-sale securities as a separate component of stockholders' equity. To illustrate, assume that Muzzillo Inc. has common stock of $3,000,000, retained earnings of $1,500,000, and an unrealized loss on available-for-sale securities of $100,000.

Illustration E-11 shows the financial statement presentation of the unrealized loss.

Illustration E-11
Unrealized loss in stockholders' equity section

MUZZILLO INC. Balance Sheet (partial)	
Stockholders' equity	
Common stock	$3,000,000
Retained earnings	1,500,000
Total paid-in capital and retained earnings	4,500,000
Less: **Unrealized loss on available-for-sale securities**	**(100,000)**
Total stockholders' equity	$4,400,000

Note that the presentation of the loss is similar to the presentation of the cost of treasury stock in the stockholders' equity section. (It decreases stockholders' equity.) An unrealized gain would be added in this section. Reporting the unrealized gain or loss in the stockholders' equity section serves two important purposes: (1) It reduces the volatility of net income due to fluctuations in fair value. (2) It informs the financial statement user of the gain or loss that would occur if the company sold the securities at fair value.

Companies must report, as part of a more inclusive measure called *comprehensive income,* items such as unrealized gains and losses on available-for-sale securities, which affect stockholders' equity but are not included in the calculation of net income. For example, Tootsie Roll reported other comprehensive income in 2009 of $2,845,000. Note 11 to Tootsie Roll's financial statements shows that one component of this amount was unrealized gains and losses on investment securities. Comprehensive income is discussed more fully in Chapter 13.

STATEMENT OF CASH FLOWS PRESENTATION

As shown previously in Illustrations E-8, E-9, and E-11, the balance sheet presents a company's investment accounts at a point in time. The "Investing activities" section of the statement of cash flows reports information on the cash inflows and outflows during the period that resulted from investment transactions.

Illustration E-12 presents the cash flows from investing activities from a recent statement of cash flows of The Walt Disney Company. From this information, we learn that Disney received $1,530 million from the sale or redemption of investments during the year.

Summary of Study Objectives

1 Identify the reasons corporations invest in stocks and debt securities. Corporations invest for three common reasons: (a) They have excess cash. (b) They view investment income as a significant revenue source. (c) They have strategic goals such as gaining control of a competitor or supplier or moving into a new line of business.

2 Explain the accounting for debt investments. Entries for investments in debt securities are required when companies purchase bonds, receive or accrue interest, and sell bonds.

3 Explain the accounting for stock investments. Entries for investments in common stock are required when companies purchase stock, receive dividends, and sell stock. When ownership is less than 20%, the cost method is used—the investment is recorded at cost. When ownership is between 20% and 50%, the equity method should be used—the investor records its share of the net income of the investee in the year it is earned. When ownership is more than 50%, consolidated financial statements should be prepared.

4 Describe the purpose and usefulness of consolidated financial statements. When a company owns more than 50% of the common stock of another company, consolidated financial statements are usually prepared. These statements are especially useful to the stockholders, board of directors, and management of the parent company.

5 Indicate how debt and stock investments are valued and reported in the financial statements. Investments in debt and stock securities are classified as trading, available-for-sale, or held-to-maturity for valuation and reporting purposes. Trading securities are reported as current assets at fair value, with changes from cost reported in net income. Available-for-sale securities are also reported at fair value, with the changes from cost reported in stockholders' equity. Available-for-sale securities are classified as short-term or long-term depending on their expected realization.

6 Distinguish between short-term and long-term investments. Short-term investments are securities held by a company that are readily marketable and intended to be converted to cash within the next year or operating cycle, whichever is longer. Investments that do not meet both criteria are classified as long-term investments.

Glossary

Available-for-sale securities *(p. E-8)* Securities that are held with the intent of selling them sometime in the future.

Consolidated financial statements *(p. E-7)* Financial statements that present the assets and liabilities controlled by the parent company and the total revenues and expenses of the subsidiary companies.

Controlling interest *(p. E-7)* Ownership of more than 50% of the common stock of another entity.

Cost method *(p. E-4)* An accounting method in which the investment in common stock is recorded at cost and revenue is recognized only when cash dividends are received.

Debt investments *(p. E-2)* Investments in government and corporation bonds.

Equity method *(p. E-5)* An accounting method in which the investment in common stock is initially recorded at cost, and the investment account is then adjusted annually to show the investor's equity in the investee.

Fair value *(p. E-7)* Amount for which a security could be sold in a normal market.

Held-to-maturity securities *(p. E-8)* Debt securities that the investor has the intent and ability to hold to their maturity date.

Long-term investments *(p. E-10)* Investments that are not readily marketable or that management does not intend to convert into cash within the next year or operating cycle, whichever is longer.

Mark-to-market *(p. E-8)* A method of accounting for certain investments that requires that they be adjusted to their fair value at the end of each period.

Parent company *(p. E-7)* A company that owns more than 50% of the common stock of another entity.

Short-term investments (marketable securities) *(p. E-10)* Investments that are readily marketable and intended to be converted into cash within the next year or operating cycle, whichever is longer.

Stock investments *(p. E-4)* Investments in the capital stock of corporations.

Subsidiary (affiliated) company *(p. E-7)* A company in which more than 50% of its stock is owned by another company.

Trading securities *(p. E-8)* Securities bought and held primarily for sale in the near term to generate income on short-term price differences.

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more resources are available for practice in WileyPLUS

Self-Test Questions

Answers are at the end of the appendix.

(SO 1) **1.** Which of the following is *not* a primary reason why corporations invest in debt and equity securities?
(a) They wish to gain control of a competitor.
(b) They have excess cash.
(c) They wish to move into a new line of business.
(d) They are required to by law.

(SO 2) **2.** Debt investments are initially recorded at:
(a) cost.
(b) cost plus accrued interest.

(c) book value.
(d) None of the above

(SO 2) **3.** Stan Free Company sells debt investments costing $26,000 for $28,000 plus accrued interest that has been recorded. In journalizing the sale, credits are:
(a) Debt Investments and Loss on Sale of Debt Investments.
(b) Debt Investments, Gain on Sale of Debt Investments, and Bond Interest Receivable.
(c) Stock Investments and Bond Interest Receivable.
(d) The correct answer is not given.

(SO 3) **4.** Karen Duffy Company receives net proceeds of $42,000 on the sale of stock investments that cost $39,500. This transaction will result in reporting in the income statement a:
(a) loss of $2,500 under "Other expenses and losses."
(b) loss of $2,500 under "Operating expenses."
(c) gain of $2,500 under "Other revenues and gains."
(d) gain of $2,500 under "Operating revenues."

(SO 3) **5.** The equity method of accounting for long-term investments in stock should be used when the investor has significant influence over an investee and owns:
(a) between 20% and 50% of the investee's common stock.
(b) 20% or more of the investee's bonds.
(c) more than 50% of the investee's common stock.
(d) less than 20% of the investee's common stock.

(SO 3) **6.** Assume that Horicon Corp. acquired 25% of the common stock of Sheboygan Corp. on January 1, 2012, for $300,000. During 2012, Sheboygan Corp. reported net income of $160,000 and paid total dividends of $60,000. If Horicon uses the equity method to account for its investment, the balance in the investment account on December 31, 2012, will be:
(a) $300,000. (c) $400,000.
(b) $325,000. (d) $340,000.

(SO 3) **7.** Using the information in the previous question, what entry would Horicon make to record the receipt of the dividend from Sheboygan?
(a) Debit Cash and credit Revenue from Investment in Sheboygan Corp.
(b) Debit Dividends and credit Revenue from Investment in Sheboygan Corp.
(c) Debit Cash and credit Stock Investment.
(d) Debit Cash and credit Dividend Revenue.

(SO 3) **8.** You have a controlling interest if:
(a) you own more than 20% of a company's stock.
(b) you are the president of the company.
(c) you use the equity method.
(d) you own more than 50% of a company's stock.

(SO 4) **9.** Which of these statements is *false*?
Consolidated financial statements are useful to:
(a) determine the profitability of specific subsidiaries.
(b) determine the aggregate profitability of enterprises under common control.
(c) determine the breadth of a parent company's operations.
(d) determine the full extent of aggregate obligations of enterprises under common control.

(SO 5) **10.** At the end of the first year of operations, the total cost of the trading securities portfolio is $120,000 and the total fair value is $115,000. What should the financial statements show?
(a) A reduction of an asset of $5,000 and a realized loss of $5,000.
(b) A reduction of an asset of $5,000 and an unrealized loss of $5,000 in the stockholders' equity section.
(c) A reduction of an asset of $5,000 in the current assets section and an unrealized loss of $5,000 under "Other expenses and losses."
(d) A reduction of an asset of $5,000 in the current assets section and a realized loss of $5,000 under "Other expenses and losses."

(SO 5) **11.** In the balance sheet, Unrealized Loss—Equity is reported as a:
(a) contra asset account.
(b) contra stockholders' equity account.
(c) loss in the income statement.
(d) loss in the retained earnings statement.

(SO 5) **12.** If a company wants to increase its reported income by manipulating its investment accounts, which should it do?
(a) Sell its "winner" trading securities and hold its "loser" trading securities.
(b) Hold its "winner" trading securities and sell its "loser" trading securities.
(c) Sell its "winner" available-for-sale securities and hold its "loser" available-for-sale securities.
(d) Hold its "winner" available-for-sale securities and sell its "loser" available-for-sale securities.

(SO 5) **13.** At December 31, 2012, the fair value of available-for-sale securities is $41,300 and the cost is $39,800. At January 1, 2012, there was a credit balance of $900 in the Market Adjustment—Available-for-Sale account. The required adjusting entry would be:
(a) Debit Market Adjustment—Available-for-Sale for $1,500, and credit Unrealized Gain or Loss—Equity for $1,500.
(b) Debit Market Adjustment—Available-for-Sale for $600, and credit Unrealized Gain or Loss—Equity for $600.
(c) Debit Market Adjustment—Available-for-Sale for $2,400, and credit Unrealized Gain or Loss—Equity for $2,400.
(d) Debit Unrealized Gain or Loss—Equity for $2,400, and credit Market Adjustment—Available-for-Sale for $2,400.

(SO 6) **14.** To be classified as short-term investments, debt investments must be readily marketable and be expected to be sold within:
(a) 3 months from the date of purchase.
(b) the next year or operating cycle, whichever is shorter.
(c) the next year or operating cycle, whichever is longer.
(d) the operating cycle.

Questions

1. What are the reasons that companies invest in securities?
2. (a) What is the cost of an investment in bonds?
   (b) When is interest on bonds recorded?
3. Kate Denton is confused about losses and gains on the sale of debt investments. Explain these issues to Kate:
   (a) How the gain or loss is computed.
   (b) The statement presentation of gains and losses.
4. Quiddich Company sells bonds that cost $40,000 for $45,000, including $1,000 of accrued interest. In recording the sale, Quiddich books a $5,000 gain. Is this correct? Explain.
5. What is the cost of an investment in stock?
6. To acquire Bailey Corporation stock, Harris Co. pays $60,000 in cash plus $1,500 broker's fees. What entry should be made for this investment, assuming the stock is readily marketable?
7. (a) When should a long-term investment in common stock be accounted for by the equity method?
   (b) When is revenue recognized under the equity method?
8. Spock Corporation uses the equity method to account for its ownership of 30% of the common stock of English Packing. During 2012, English reported a net income of $80,000 and declares and pays cash dividends of $10,000. What recognition should Spock Corporation give to these events?
9. What constitutes "significant influence" when an investor's financial interest is less than 50%?
10. Distinguish between the cost and equity methods of accounting for investments in stocks.
11. What are consolidated financial statements?
12. What are the valuation guidelines for trading and available-for-sale investments at a balance sheet date?
13. Diana Malt is the controller of G-Products, Inc. At December 31, the company's investments in trading securities cost $74,000 and have a fair value of $70,000. Indicate how Diana would report these data in the financial statements prepared on December 31.
14. Using the data in question 13, how would Diana report the data if the investment were long-term and the securities were classified as available-for-sale?
15. Roso Company's investments in available-for-sale securities at December 31 show total cost of $202,000 and total fair value of $210,000. Prepare the adjusting entry.
16. Using the data in question 15, prepare the adjusting entry assuming the securities are classified as trading securities.
17. Where is Unrealized Gain or Loss—Equity reported on the balance sheet?
18. What purposes are served by reporting Unrealized Gains (Losses)—Equity in the stockholders' equity section?
19. Kraemer Wholesale Supply owns stock in Matlin Corporation, which it intends to hold indefinitely because of some negative tax consequences if sold. Should the investment in Matlin be classified as a short-term investment? Why?

Brief Exercises

BEE-1 Pegasus Corporation purchased debt investments for $40,800 on January 1, 2012. On July 1, 2012, Pegasus received cash interest of $1,660. Journalize the purchase and the receipt of interest. Assume no interest has been accrued.

Journalize entries for debt investments.
(SO 2), **AP**

BEE-2 On August 1, Jewel Company buys 1,000 shares of ABC common stock for $35,000 cash plus brokerage fees of $600. On December 1, the stock investments are sold for $38,000 in cash. Journalize the purchase and sale of the common stock.

Journalize entries for stock investments.
(SO 3), **AP**

BEE-3 Faye Company owns 25% of Trish Company. For the current year, Trish reports net income of $150,000 and declares and pays a $60,000 cash dividend. Record Faye's equity in Trish's net income and the receipt of dividends from Trish.

Journalize transactions under the equity method.
(SO 3), **AP**

BEE-4 Cost and fair value data for the trading securities of Hayden Company at December 31, 2012, are $62,000 and $59,600, respectively. Prepare the adjusting entry to record the securities at fair value.

Prepare adjusting entry using fair value.
(SO 5), **AP**

BEE-5 For the data presented in BEE-4, show the financial statement presentation of the trading securities and related accounts.

Indicate statement presentation using fair value.
(SO 6), **AN**

BEE-6 In its first year of operations, Kearney Corporation purchased available-for-sale stock securities costing $72,000 as a long-term investment. At December 31, 2012, the fair value of the securities is $69,000. Prepare the adjusting entry to record the securities at fair value.

Prepare adjusting entry using fair value.
(SO 5), **AP**

Indicate statement presentation using fair value.
(SO 6), AN

BEE-7 For the data presented in BEE-6, show the financial statement presentation of the available-for-sale securities and related accounts. Assume the available-for-sale securities are noncurrent.

Prepare investments section of balance sheet.
(SO 6), AP

BEE-8 Sydney Corporation has these long-term investments: common stock of Russ Co. (10% ownership) held as available-for-sale securities, cost $108,000, fair value $112,000; common stock of Thomas Inc. (30% ownership), cost $210,000, equity $230,000; and a bond sinking fund of $150,000. Prepare the investments section of the balance sheet.

Exercises

Journalize debt investment transactions, and accrue interest.
(SO 2), AP

EE-1 Justin Corporation had these transactions pertaining to debt investments:

Jan. 1 Purchased 90 10%, $1,000 Graham Co. bonds for $90,000 cash plus brokerage fees of $1,200. Interest is payable semiannually on July 1 and January 1.
July 1 Received semiannual interest on Graham Co. bonds.
July 1 Sold 30 Graham Co. bonds for $32,000 less $400 brokerage fees.

Instructions
(a) Journalize the transactions.
(b) Prepare the adjusting entry for the accrual of interest at December 31.

Journalize stock investment transactions, and explain income statement presentation.
(SO 3), AN

EE-2 Rojas Company had these transactions pertaining to stock investments:

Feb. 1 Purchased 1,200 shares of MJ common stock (2% of outstanding shares) for $8,000 cash plus brokerage fees of $400.
July 1 Received cash dividends of $2 per share on MJ common stock.
Sept. 1 Sold 500 shares of MJ common stock for $5,500 less brokerage fees of $100.
Dec. 1 Received cash dividends of $1 per share on MJ common stock.

Instructions
(a) Journalize the transactions.
(b) Explain how dividend revenue and the gain (loss) on sale should be reported in the income statement.

Journalize transactions for investments in stock.
(SO 3), AP

EE-3 Glyder Inc. had these transactions pertaining to investments in common stock:

Jan. 1 Purchased 1,200 shares of Bethke Corporation common stock (5% of outstanding shares) for $58,000 cash plus $1,200 broker's commission.
July 1 Received a cash dividend of $7 per share.
Dec. 1 Sold 900 shares of Bethke Corporation common stock for $48,000 cash less $800 broker's commission.
31 Received a cash dividend of $7 per share.

Instructions
Journalize the transactions.

Journalize and post transactions under the equity method.
(SO 3), AP

EE-4 On January 1, Jackson Corporation purchased a 25% equity investment in Batchelor Corporation for $150,000. At December 31, Batchelor declared and paid a $80,000 cash dividend and reported net income of $380,000.

Instructions
(a) Journalize the transactions.
(b) Determine the amount to be reported as an investment in Batchelor stock at December 31.

Journalize entries under cost and equity methods.
(SO 3), AP

EE-5 These are two independent situations:

1. Angel Cosmetics acquired 12% of the 300,000 shares of common stock of Chic Fashion at a total cost of $14 per share on March 18, 2012. On June 30, Chic declared and paid a $75,000 dividend. On December 31, Chic reported net income of $244,000 for the year. At December 31, the market price of Chic Fashion was $16 per share. The stock is classified as available-for-sale.

2. Randell Inc. obtained significant influence over Gatos Corporation by buying 25% of Gatos's 30,000 outstanding shares of common stock at a total cost of $11 per share on January 1, 2012. On June 15, Gatos declared and paid a cash dividend of $35,000. On December 31, Gatos reported a net income of $120,000 for the year.

Instructions
Prepare all the necessary journal entries for 2012 for (a) Angel Cosmetics and (b) Randell Inc.

Prepare adjusting entry to record fair value, and indicate statement presentation.
(SO 5, 6), **AP**

EE-6 At December 31, 2012, the trading securities for Lynette, Inc., are as follows.

Security	Cost	Fair Value
A	$18,100	$16,000
B	12,500	14,800
C	23,000	18,000
Total	$53,600	$48,800

Instructions
(a) Prepare the adjusting entry at December 31, 2012, to report the securities at fair value.
(b) Show the balance sheet and income statement presentation at December 31, 2012, after adjustment to fair value.

Prepare adjusting entry to record fair value, and indicate statement presentation.
(SO 5, 6), **AN**

EE-7 Data for investments in stock classified as trading securities are presented in EE-6. Assume instead that the investments are classified as available-for-sale securities with the same cost and fair value data. The securities are considered to be a long-term investment.

Instructions
(a) Prepare the adjusting entry at December 31, 2012, to report the securities at fair value.
(b) Show the statement presentation at December 31, 2012, after adjustment to fair value.
(c) Carla Sagen, a member of the board of directors, does not understand the reporting of the unrealized gains or losses on trading securities and available-for-sale securities. Write a letter to Ms. Sagen explaining the reporting and the purposes it serves.

Prepare adjusting entries for fair value, and indicate statement presentation for two classes of securities.
(SO 5, 6), **AN**

EE-8 Redfield Company has these data at December 31, 2012:

Securities	Cost	Fair Value
Trading	$110,000	$122,000
Available-for-sale	100,000	96,000

The available-for-sale securities are held as a long-term investment.

Instructions
(a) Prepare the adjusting entries to report each class of securities at fair value.
(b) Indicate the statement presentation of each class of securities and the related unrealized gain (loss) accounts.

Problems

Journalize debt investment transactions and show financial statement presentation.
(SO 2, 5, 6), **AN**

PE-1 Knuth Farms is a grower of hybrid seed corn for DeKalb Genetics Corporation. It has had two exceptionally good years and has elected to invest its excess funds in bonds. The following selected transactions relate to bonds acquired as an investment by Knuth Farms, whose fiscal year ends on December 31.

2012

Jan. 1	Purchased at par $600,000 of Sullivan Corporation 10-year, 7% bonds dated January 1, 2012, directly from the issuing corporation.
July 1	Received the semiannual interest on the Sullivan bonds.
Dec. 31	Accrual of interest at year-end on the Sullivan bonds.

Assume that all intervening transactions and adjustments have been properly recorded and the number of bonds owned has not changed from December 31, 2012, to December 31, 2014.

2015

Jan. 1 Received the semiannual interest on the Sullivan bonds.
Jan. 1 Sold $300,000 of Sullivan bonds at 110. The broker deducted $7,000 for commissions and fees on the sale.
July 1 Received the semiannual interest on the Sullivan bonds.
Dec. 31 Accrual of interest at year-end on the Sullivan bonds.

Instructions

(a) Journalize the listed transactions for the years 2012 and 2015.
(b) Assume that the fair value of the bonds at December 31, 2012, was $586,000. These bonds are classified as available-for-sale securities. Prepare the adjusting entry to record these bonds at fair value.
(c) Show the balance sheet presentation of the bonds and interest receivable at December 31, 2012. Assume the investments are considered long-term. Indicate where any unrealized gain or loss is reported in the financial statements.

Journalize investment transactions, prepare adjusting entry, and show financial statement presentation.
(SO 2, 3, 5, 6), AN

PE-2 In January 2012, the management of Sarah Company concludes that it has sufficient cash to purchase some short-term investments in debt and stock securities. During the year, the following transactions occurred.

Feb. 1 Purchased 1,200 shares of NJF common stock for $50,600 plus brokerage fees of $1,000.
Mar. 1 Purchased 500 shares of SEK common stock for $18,000 plus brokerage fees of $500.
Apr. 1 Purchased 70 $1,000, 8% CRT bonds for $70,000 plus $1,200 brokerage fees. Interest is payable semiannually on April 1 and October 1.
July 1 Received a cash dividend of $0.80 per share on the NJF common stock.
Aug. 1 Sold 200 shares of NJF common stock at $42 per share less brokerage fees of $350.
Sept. 1 Received $2 per share cash dividend on the SEK common stock.
Oct. 1 Received the semiannual interest on the CRT bonds.
Oct. 1 Sold the CRT bonds for $77,000 less $1,300 brokerage fees.

At December 31, the fair values of the NJF and SEK common stocks were $39 and $30 per share, respectively.

Instructions

(a) Journalize the transactions and post to the accounts Debt Investments and Stock Investments. (Use the T account form.)
(b) Prepare the adjusting entry at December 31, 2012, to report the investments at fair value. All securities are considered to be trading securities.
(c) Show the balance sheet presentation of investment securities at December 31, 2012.
(d) Identify the income statement accounts and give the statement classification of each account.

Journalize transactions, prepare adjusting entry for stock investments, and show balance sheet presentation.
(SO 3, 5, 6), AN

PE-3 On December 31, 2011, Maxell Associates owned the following securities that are held as long-term investments.

Common Stock	Shares	Cost
A Co.	1,000	$48,000
B Co.	5,000	36,000
C Co.	1,200	24,000

On this date, the total fair value of the securities was equal to its cost. The securities are not held for influence or control over the investees. In 2012, the following transactions occurred.

July 1 Received $2.00 per share semiannual cash dividend on B Co. common stock.
Aug. 1 Received $0.50 per share cash dividend on A Co. common stock.
Sept. 1 Sold 1,000 shares of B Co. common stock for cash at $9 per share less brokerage fees of $800.
Oct. 1 Sold 300 shares of A Co. common stock for cash at $54 per share less brokerage fees of $600.
Nov. 1 Received $1 per share cash dividend on C Co. common stock.
Dec. 15 Received $0.50 per share cash dividend on A Co. common stock.
31 Received $2.20 per share semiannual cash dividend on B Co. common stock.

At December 31, the fair values per share of the common stocks were: A Co. $47, B Co. $7, and C Co. $24.

Instructions

(a) Journalize the 2012 transactions and post to the account Stock Investments. (Use the T account form.)
(b) Prepare the adjusting entry at December 31, 2012, to show the securities at fair value. The stock should be classified as available-for-sale securities.
(c) Show the balance sheet presentation of the investments and the unrealized gain (loss) at December 31, 2012. At this date, Maxell Associates has common stock $2,000,000 and retained earnings $1,200,000.

Prepare entries under cost and equity methods, and prepare memorandum.
(SO 3), **AN**

PE-4 Coakley Company acquired 30% of the outstanding common stock of Ginger Inc. on January 1, 2012, by paying $1,800,000 for 60,000 shares. Ginger declared and paid a $0.50 per share cash dividend on June 30 and again on December 31, 2012. Ginger reported net income of $800,000 for the year.

Instructions

(a) Prepare the journal entries for Coakley Company for 2012, assuming Coakley cannot exercise significant influence over Ginger. (Use the cost method.)
(b) Prepare the journal entries for Coakley Company for 2012, assuming Coakley can exercise significant influence over Ginger. (Use the equity method.)
(c) The board of directors of Coakley Company is confused about the differences between the cost and equity methods. Prepare a memorandum for the board that explains each method and shows in tabular form the account balances under each method at December 31, 2012.

Journalize stock transactions, and show balance sheet presentation.
(SO 3, 5, 6), **AN**

PE-5 Here is Maple Company's portfolio of long-term available-for-sale securities at December 31, 2011:

	Cost
1,400 shares of Wickham Inc. common stock	$73,500
1,200 shares of Kerry Corporation common stock	84,000
800 shares of H. Kelso Corporation preferred stock	33,600

On December 31, the total cost of the portfolio equaled the total fair value. Maple had the following transactions related to the securities during 2012.

Jan. 20	Sold 1,400 shares of Wickham Inc. common stock at $55 per share less brokerage fees of $1,100.
28	Purchased 400 shares of $10 par value common stock of M. McLain Corporation at $78 per share plus brokerage fees of $480.
30	Received a cash dividend of $1.25 per share on Kerry Corporation common stock.
Feb. 8	Received cash dividends of $0.40 per share on H. Kelso Corporation preferred stock.
18	Sold all 800 shares of H. Kelso preferred stock at $35 per share less brokerage fees of $360.
July 30	Received a cash dividend of $1.10 per share on Kerry Corporation common stock.
Sept. 6	Purchased an additional 600 shares of the $10 par value common stock of M. McLain Corporation at $82 per share plus brokerage fees of $800.
Dec. 1	Received a cash dividend of $1.50 per share on M. McLain Corporation common stock.

At December 31, 2012, the fair values of the securities were:

Kerry Corporation common stock	$65 per share
M. McLain Corporation common stock	$77 per share

Maple uses separate account titles for each investment, such as Investment in Kerry Corporation Common Stock.

Instructions

(a) Prepare journal entries to record the transactions.
(b) Post to the investment accounts. (Use separate T accounts for each investment.)

(c) Prepare the adjusting entry at December 31, 2012, to report the portfolio at fair value.
(d) Show the balance sheet presentation at December 31, 2012.

Prepare a balance sheet.
(SO 6), AP

PE-6 The following data, presented in alphabetical order, are taken from the records of Texton Corporation.

Accounts payable	$ 150,000
Accounts receivable	90,000
Accumulated depreciation—buildings	180,000
Accumulated depreciation—equipment	52,000
Allowance for doubtful accounts	6,000
Bond investments	400,000
Bonds payable (10%, due 2023)	350,000
Buildings	900,000
Cash	63,000
Common stock ($5 par value; 500,000 shares authorized, 240,000 shares issued)	1,200,000
Discount on bonds payable	20,000
Dividends payable	50,000
Equipment	275,000
Goodwill	190,000
Income taxes payable	70,000
Investment in Jansen Inc. stock (30% ownership), at equity	240,000
Land	410,000
Inventory	170,000
Notes payable (due 2013)	70,000
Paid-in capital in excess of par value	464,000
Prepaid insurance	16,000
Retained earnings	310,000
Short-term stock investment, at fair value	128,000

Instructions
Prepare a balance sheet at December 31, 2012.

appendix F

PAYROLL ACCOUNTING

study objectives

After studying this appendix, you should be able to:

1 Discuss the objectives of internal control for payroll.

2 Compute and record the payroll for a pay period.

3 Describe and record employer payroll taxes.

Payroll and related fringe benefits often make up a large percentage of current liabilities. Employee compensation is often the most significant expense that a company incurs. For example, General Motors recently reported total employees of 386,000 and labor costs of $21.6 billion. Add to labor costs such fringe benefits as health insurance, life insurance, disability insurance, and so on, and you can see why proper accounting and control of payroll are so important.

Payroll accounting involves more than paying employees' wages. Companies are required by law to maintain payroll records for each employee, file and pay payroll taxes, and comply with numerous state and federal tax laws related to employee compensation. Accounting for payroll has become much more complex due to these regulations.

Payroll Defined

The term "payroll" pertains to both salaries and wages. Managerial, administrative, and sales personnel are generally paid **salaries**. Salaries are often expressed in terms of a specified amount per month or per year rather than an hourly rate. For example, the faculty and administrative personnel at the college or university you are attending are paid salaries. In contrast, store clerks, factory employees, and manual laborers are normally paid **wages**. Wages are based on a rate per hour or on a piecework basis (such as per unit of product). Frequently, the terms "salaries" and "wages" are used interchangeably.

The term "payroll" does not apply to payments made for services of professionals such as certified public accountants, attorneys, and architects. Such professionals are independent contractors rather than salaried employees. Payments to them are called **fees**, rather than salaries or wages. This distinction is important because government regulations relating to the payment and reporting of payroll taxes apply only to employees.

Internal Control of Payroll

Internal control was introduced in Chapter 7. As applied to payrolls, the objectives of internal control are (1) to safeguard company assets against unauthorized payments of payrolls, and (2) to ensure the accuracy and reliability of the accounting records pertaining to payrolls.

study objective 1
Discuss the objectives of internal control for payroll.

Irregularities often result if internal control is lax. Overstating hours, using unauthorized pay rates, adding fictitious employees to the payroll, continuing terminated employees on the payroll, and distributing duplicate payroll checks are all methods of stealing from a company. Moreover, inaccurate records will result in incorrect paychecks, financial statements, and payroll tax returns.

Payroll activities involve four functions: hiring employees, timekeeping, preparing the payroll, and paying the payroll. For effective internal control, these four functions should be assigned to different departments or individuals. To illustrate these functions, we will examine the case of Academy Company and one of its employees, Michael Jordan.

Hiring Employees

Human Resources department documents and authorizes employment.

HIRING EMPLOYEES

The human resources (personnel) department is responsible for posting job openings, screening and interviewing applicants, and hiring employees. From a control standpoint, this department provides significant documentation and authorization. When an employee is hired, the human resources department prepares an authorization form. The one used by Academy Company for Michael Jordan is shown in Illustration F-1.

Illustration F-1
Authorization form prepared by the human resources department

ACADEMY COMPANY

Employee Name: Jordan, (LAST) Michael (FIRST) (MI) — Starting Date: 9/01/10

Classification: Skilled-Level 10 — Social Security No.: 329-36-9547

Department: Shipping — Division: Entertainment

NEW HIRE	Classification: Clerk; Salary Grade: Level 10; Trans. from Temp. ☐ Rate $ 10.00 per hour; Bonus: N/A; Non-exempt ☒ Exempt ☐
RATE CHANGE	New Rate $ 12.00; Effective Date: 9/1/11 Present Rate $ 10.00 Merit ☒ Promotion ☐ Decrease ☐ Other ____ Previous Increase Date: None; Amount $ ____ per ____ Type ____
SEPARATION	Resignation ☐ Discharge ☐ Retirement ☐ Reason ____ Leave of absence ☐ From ____ to ____ Type ____ Last Day Worked ____
APPROVALS	BEW — BRANCH OR DEPT. MANAGER; 9-1-11 — DATE EMW — DIVISION V.P.; 9-1-11 — DATE James E. Speer — PERSONNEL DEPARTMENT

The authorization form is sent to the payroll department, where it is used to place the new employee on the payroll. A chief concern of the human resources department is ensuring the accuracy of this form. The reason is quite simple: one of the most common types of payroll frauds is adding fictitious employees to the payroll.

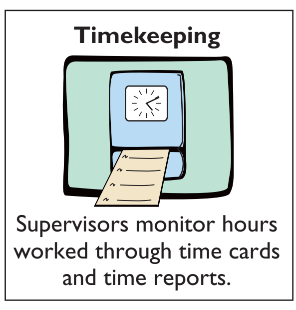
The human resources department is also responsible for authorizing changes in employment status. Specifically, they must authorize (1) changes in pay rates and (2) terminations of employment. Every authorization should be in writing,

and a copy of the change in status should be sent to the payroll department. Notice in Illustration F-1 that Jordan received a pay increase of $2 per hour.

TIMEKEEPING

Another area in which internal control is important is timekeeping. Hourly employees are usually required to record time worked by "punching" a time clock. Times of arrival and departure are automatically recorded by the employee by inserting a time card into the clock. Michael Jordan's time card is shown in Illustration F-2.

Timekeeping



Supervisors monitor hours worked through time cards and time reports.

In large companies, time clock procedures are often monitored by a supervisor or security guard to make sure an employee punches only one card. At the end of the pay period, each employee's supervisor approves the hours shown by signing the time card. When overtime hours are involved, approval by a supervisor is usually mandatory. This guards against unauthorized overtime. The approved time cards are then sent to the payroll department. For salaried employees, a manually prepared weekly or monthly time report kept by a supervisor may be used to record time worked.

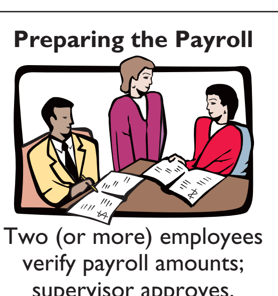
PREPARING THE PAYROLL

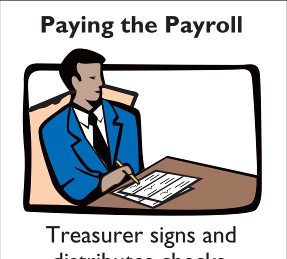
The payroll is prepared in the payroll department on the basis of two inputs: (1) human resources department authorizations and (2) approved time cards. Numerous calculations are involved in determining gross wages and payroll deductions. Therefore, a second payroll department employee, working independently, verifies all calculated amounts, and a payroll department supervisor then approves the payroll. The payroll department is also responsible for preparing (but not signing) payroll checks, maintaining payroll records, and preparing payroll tax returns.

Preparing the Payroll



Two (or more) employees verify payroll amounts; supervisor approves.

Paying the Payroll



Treasurer signs and distributes checks.

PAYING THE PAYROLL

The payroll is paid by the treasurer's department. **Payment by check minimizes the risk of loss from theft, and the endorsed check provides proof of payment.** For good internal control, payroll checks should be prenumbered, and all checks should be accounted for. All checks must be signed by the treasurer (or a designated agent). Distribution of the payroll checks to employees should be controlled by the treasurer's department. Many employees have their pay credited electronically to their bank account. To control such disbursements, receipts detailing gross pay, deductions, and net pay are provided to employees.

Occasionally the payroll is paid in currency. In such cases it is customary to have a second person count the cash in each pay envelope. The paymaster should obtain a signed receipt from the employee upon payment.

Determining the Payroll

study objective 2

Compute and record the payroll for a pay period.

Determining the payroll involves computing three amounts: (1) gross earnings, (2) payroll deductions, and (3) net pay.

GROSS EARNINGS

Gross earnings is the total compensation earned by an employee. It consists of wages or salaries, plus any bonuses and commissions.

Total **wages** for an employee are determined by multiplying the hours worked by the hourly rate of pay. In addition to the hourly pay rate, most companies are required by law to pay hourly workers a minimum of $1\frac{1}{2}$ times the regular hourly rate for overtime work in excess of 8 hours per day or 40 hours per week. In addition, many employers pay overtime rates for work done at night, on weekends, and on holidays.

Helpful Hint The law that governs pay rates is the Federal Fair Labor Standards Act. It applies to all companies involved in interstate commerce.

Michael Jordan's time card (Illustration F-2, page F-3) shows that he worked 44 hours for the weekly pay period ending January 14. The computation of his gross earnings (total wages) is shown in Illustration F-3.

Illustration F-3 Computation of total wages

Type of Pay	Hours	×	Rate	=	Gross Earnings
Regular	40	×	$12	=	$ 480
Overtime	4	×	18	=	72
Total wages					**$552**

This computation assumes that Jordan receives $1\frac{1}{2}$ times his regular hourly rate ($\$12 \times 1.5$) for his overtime hours. Union contracts often require that overtime rates be as much as twice the regular rates.

The **salary** for an employee is generally based on a monthly or yearly rate. These rates are then prorated to the payroll periods used by the company. Most executive and administrative positions are salaried. Federal law does not require overtime pay for employees in such positions.

Ethics Note Bonuses often reward outstanding individual performance; but successful corporations also need considerable teamwork. A challenge is to motivate individuals while preventing an unethical employee from taking another's idea for his or her own advantage.

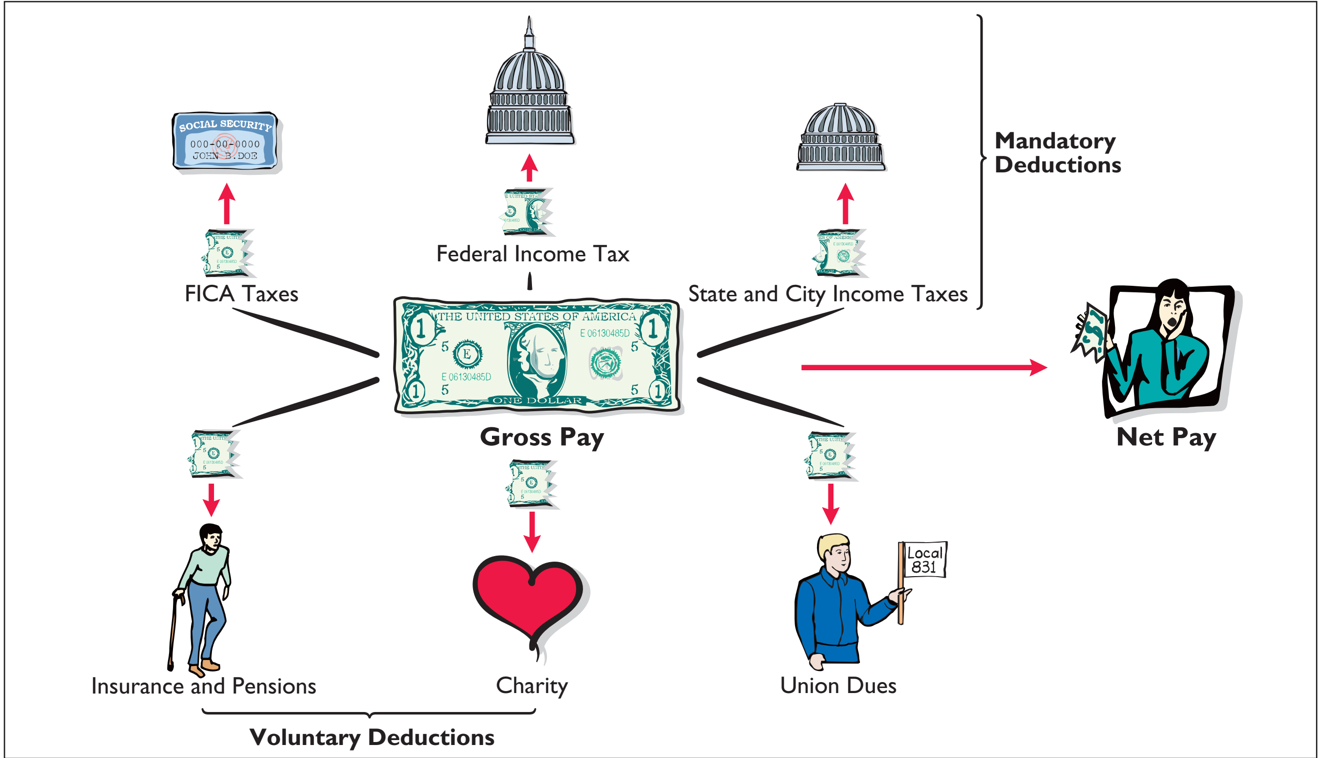
Many companies have **bonus** agreements for management personnel and other employees. A recent survey found that over 94% of the largest U.S. manufacturing companies offer annual bonuses to their key executives. Bonus arrangements may be based on such factors as increased sales or net income. Bonuses may be paid in cash and/or by granting executives and employees the opportunity to acquire shares of company stock at favorable prices (called stock option plans).

PAYROLL DEDUCTIONS

As anyone who has received a paycheck knows, gross earnings are usually very different from the amount actually received. The difference is due to **payroll deductions**. Such deductions do not result in payroll tax expense to the employer.

The employer is merely a collection agent, and subsequently transfers the amounts deducted to the government and designated recipients. Payroll deductions may be mandatory or voluntary. Mandatory deductions are required by law and consist of FICA taxes and income taxes. Voluntary deductions are at the option of the employee. Illustration F-4 summarizes the types of payroll deductions.

Illustration F-4 Payroll deductions



FICA Taxes

In 1937 Congress enacted the Federal Insurance Contribution Act (FICA). **FICA taxes are designed to provide workers with supplemental retirement, employment disability, and medical benefits.** In 1965, Congress extended benefits to include Medicare for individuals over 65 years of age. The benefits are financed by a tax levied on employees' earnings. FICA taxes are commonly referred to as **Social Security taxes**.

The tax rate and the tax base for FICA taxes are set by Congress. When FICA taxes were first imposed, the rate was 1% on the first $3,000 of gross earnings, or a maximum of $30 per year. The rate and base have changed dramatically since that time! In 2010, the rate was 7.65% (6.2% Social Security plus 1.45% Medicare) on the first $102,000 of gross earnings for each employee.[1] For purpose of illustration in this appendix, we will assume a rate of 8% on the first $100,000 of gross earnings, or a maximum of $8,000. Using the 8% rate, the FICA withholding for Jordan for the weekly pay period ending January 14 is $44.16 ($552 × 8%).

Income Taxes

Under the U.S. pay-as-you-go system of federal income taxes, employers are required to withhold income taxes from employees each pay period. The amount to be withheld is determined by three variables: (1) the employee's gross earnings;

[1]The Medicare provision also includes a tax of 1.45% on gross earnings in excess of $102,000. In the interest of simplification, we ignore this 1.45% charge in our end-of-chapter assignment material. We assume zero FICA withholdings on gross earnings above $100,000.

(2) the number of allowances claimed by the employee; and (3) the length of the pay period. The number of allowances claimed typically includes the employee, his or her spouse, and other dependents. **To indicate to the Internal Revenue Service the number of allowances claimed, the employee must complete an Employee's Withholding Allowance Certificate (Form W-4).** As shown in Illustration F-5, Michael Jordan claims two allowances on his W-4.

Withholding tables furnished by the Internal Revenue Service indicate the amount of income tax to be withheld. Withholding amounts are based on gross wages and the number of allowances claimed. Separate tables are provided for weekly, biweekly, semimonthly, and monthly pay periods. The withholding tax table for Michael Jordan (assuming he earns $552 per week) is shown in Illustration F-6. For a weekly salary of $552 with two allowances, the income tax to be withheld is $49.

680	**690**	84	76	69	61	53	45	37	30	22	14	6

Most states (and some cities) also require **employers** to withhold income taxes from employees' earnings. As a rule, the amounts withheld are a percentage (specified in the state revenue code) of the amount withheld for the federal income tax. Or they may be a specified percentage of the employee's earnings. For the sake of simplicity, we have assumed that Jordan's wages are subject to state income taxes of 2%, or $11.04 (2% × $552) per week.

There is no limit on the amount of gross earnings subject to income tax withholdings. In fact, the higher the earnings, the higher the amount of taxes withheld.

Other Deductions

Employees may voluntarily authorize withholdings for charitable, retirement, and other purposes. All voluntary deductions from gross earnings should be authorized in writing by the employee. The authorization(s) may be made individually or as part of a group plan. Deductions for charitable organizations, such as the United Way, or for financial arrangements, such as U.S. savings bonds and repayment of loans from company credit unions, are made individually. Deductions for union dues, health and life insurance, and pension plans are often made on a group basis. We will assume that Jordan has weekly voluntary deductions of $10 for the United Way and $5 for union dues.

NET PAY

Net pay is determined by subtracting payroll deductions from gross earnings. For Michael Jordan, net pay for the pay period is $432.80, computed as shown in Illustration F-7. Assuming that Michael Jordan's wages for each week during the year are $552, total wages for the year are $28,704 (52 × $552). Thus, all of Jordan's wages are subject to FICA tax during the year. Let's assume that Jordan's department head earns $2,000 per week, or $104,000 for the year. Since we are assuming that only the first $100,000 is subject to FICA taxes, the maximum FICA withholdings on the department head's earnings would be $8,000 ($100,000 × 8%).

Alternative Terminology Net pay is also called *take-home pay.*

Illustration F-7
Computation of net pay

Gross earnings		$ 552.00
Payroll deductions:		
FICA taxes	$44.16	
Federal income taxes	49.00	
State income taxes	11.04	
United Way	10.00	
Union dues	5.00	119.20
Net pay		**$432.80**

Recording the Payroll

Recording the payroll involves maintaining payroll department records, recognizing payroll expenses and liabilities, and recording payment of the payroll.

MAINTAINING PAYROLL DEPARTMENT RECORDS

To comply with state and federal laws, an employer must keep a cumulative record of each employee's gross earnings, deductions, and net pay during the year. The record that provides this information is the **employee earnings record**. Michael Jordan's employee earnings record is shown in Illustration F-8 (next page).

Illustration F-8 Employee earnings record

A separate earnings record is kept for each employee. It is updated after each pay period. The cumulative payroll data on the earnings record are used by the employer to: (1) determine when an employee has earned the maximum earnings subject to FICA taxes, (2) file state and federal payroll tax returns (as explained later in the appendix), and (3) provide each employee with a statement of gross earnings and tax withholdings for the year. Illustration F-12 (on page F-12) shows this statement.

In addition to employee earnings records, many companies find it useful to prepare a **payroll register**. This record accumulates the gross earnings, deductions, and net pay by employee for each pay period. It provides the documentation for preparing a paycheck for each employee. Academy Company's payroll register is presented in Illustration F-9. It shows the data for Michael Jordan in the wages section. In this example, Academy Company's total weekly payroll is $17,210, as shown in the gross earnings column.

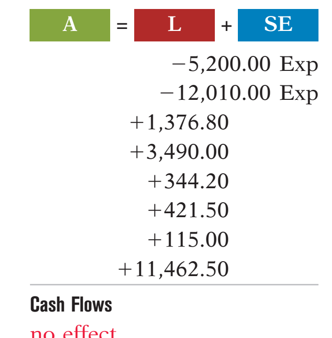
Note that this record is a listing of each employee's payroll data for the pay period. In some companies, a payroll register is a journal or book of original entry. Postings are made from it directly to ledger accounts. In other companies, the payroll register is a memorandum record that provides the data for a general journal entry and subsequent posting to the ledger accounts. At Academy Company, the latter procedure is followed.

RECOGNIZING PAYROLL EXPENSES AND LIABILITIES

From the payroll register in Illustration F-9, a journal entry is made to record the payroll. For the week ending January 14, the entry is:

Date	Account	Debit	Credit
Jan. 14	Office Salaries Expense	5,200.00	
	Wages Expense	12,010.00	
	FICA Taxes Payable		1,376.80
	Federal Income Taxes Payable		3,490.00
	State Income Taxes Payable		344.20
	United Fund Payable		421.50
	Union Dues Payable		115.00
	Salaries and Wages Payable		11,462.50
	(To record payroll for the week ending January 14)		



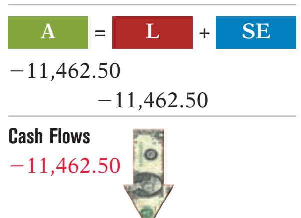
Specific liability accounts are credited for the mandatory and voluntary deductions made during the pay period. In the example, debits to Office Salaries and Wages Expense are used for gross earnings because office workers are on a salary and other employees are paid on an hourly rate. In other companies, there may be debits to other accounts such as Store Salaries or Sales Salaries. The amount credited to Salaries and Wages Payable is the sum of the individual checks the employees will receive.

RECORDING PAYMENT OF THE PAYROLL

Payment by check is made either from the employer's regular bank account or a payroll bank account. Each paycheck is usually accompanied by a detachable **statement of earnings** document. This shows the employee's gross earnings, payroll deductions, and net pay for the period and for the year-to-date. The Academy Company uses its regular bank account for payroll checks. The paycheck and statement of earnings for Michael Jordan are shown in Illustration F-10 (next page).

Following payment of the payroll, the check numbers are entered in the payroll register. The entry to record payment of the payroll for Academy Company is as follows.

Date	Account	Debit	Credit
Jan. 14	Salaries and Wages Payable	11,462.50	
	Cash		11,462.50
	(To record payment of payroll)		



Many medium- and large-size companies use a payroll processing center that provides payroll record-keeping services. Companies send the center payroll information about employee pay rates and hours worked. The center maintains the payroll records and prepares the payroll checks. In most cases, it costs less to process the payroll through the center than if the company did so internally.

Helpful Hint Do any of the income tax liabilities result in payroll tax expense for the employer? *Answer:* No. The employer is acting only as a collection agent for the government.

Employer Payroll Taxes

study objective 3
Describe and record employer payroll taxes.

Payroll tax expense for businesses results from three taxes **levied on employers** by governmental agencies. These taxes are: (1) FICA, (2) federal unemployment tax, and (3) state unemployment tax. These taxes plus such items as paid vacations and pensions are collectively referred to as **fringe benefits**. As indicated earlier, the cost of fringe benefits in many companies is substantial.

FICA TAXES

We have seen that each employee must pay FICA taxes. An employer must match each employee's FICA contribution. The matching contribution results in **payroll tax expense** to the employer. The employer's tax is subject to the same rate and maximum earnings applicable to the employee. The account, FICA Taxes Payable, is used for both the employee's and the employer's FICA contributions. For the January 14 payroll, Academy Company's FICA tax contribution is $1,376.80 ($17,210.00 × 8%).

FEDERAL UNEMPLOYMENT TAXES

Helpful Hint FICA taxes are paid by both the employer and employee. Federal unemployment taxes and (in most states) the state unemployment taxes are borne entirely by the employer.

The Federal Unemployment Tax Act (FUTA) is another feature of the federal Social Security program. **Federal unemployment taxes** provide benefits for a limited period of time to employees who lose their jobs through no fault of their own. Under provisions of the Act, the employer is required to pay a tax of 6.2% on the first $7,000 of gross wages paid to each employee during a calendar year. The law allows the employer a maximum credit of 5.4% on the federal rate for contributions to state unemployment taxes. Because of this provision, state unemployment tax laws generally provide for a 5.4% rate. The effective federal unemployment tax rate thus becomes 0.8% (6.2% − 5.4%). This tax is borne **entirely by the employer**. There is no deduction or withholding from employees.

The account Federal Unemployment Taxes Payable is used to recognize this liability. The federal unemployment tax for Academy Company for the January 14 payroll is $137.68 ($17,210.00 × 0.8%).

STATE UNEMPLOYMENT TAXES

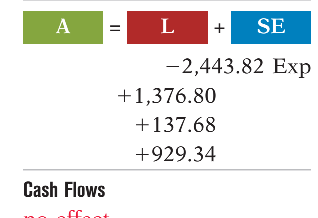
All states have unemployment compensation programs under state unemployment tax acts (SUTA). Like federal unemployment taxes, **state unemployment taxes** provide benefits to employees who lose their jobs. These taxes are levied on employers.[2] The basic rate is usually 5.4% on the first $7,000 of wages paid to an employee during the year. The basic rate is adjusted according to the employer's experience rating: Companies with a history of unstable employment may pay more than the basic rate. Companies with a history of stable employment may pay less than 5.4%. Regardless of the rate paid, the credit on the federal unemployment tax is still 5.4%.

The account State Unemployment Taxes Payable is used for this liability. The state unemployment tax for Academy Company for the January 14 payroll is $929.34 ($17,210.00 × 5.4%).

RECORDING EMPLOYER PAYROLL TAXES

Employer payroll taxes are usually recorded at the same time the payroll is journalized. The entire amount of gross pay ($17,210.00) shown in the payroll register in Illustration F-9 is subject to each of the three taxes mentioned above. Accordingly, the entry to record the payroll tax expense associated with the January 14 payroll is:

Jan. 14	Payroll Tax Expense	2,443.82	
	FICA Taxes Payable		1,376.80
	Federal Unemployment Taxes Payable		137.68
	State Unemployment Taxes Payable		929.34
	(To record employer's payroll taxes on January 14 payroll)		



Separate liability accounts are used instead of a single credit to Payroll Taxes Payable. Why? Because these liabilities are payable to different taxing authorities at different dates. The liability accounts are classified in the balance sheet as current liabilities since they will be paid within the next year. Payroll Tax Expense is classified on the income statement as an operating expense. Illustration F-11 summarizes the types of employer payroll taxes.

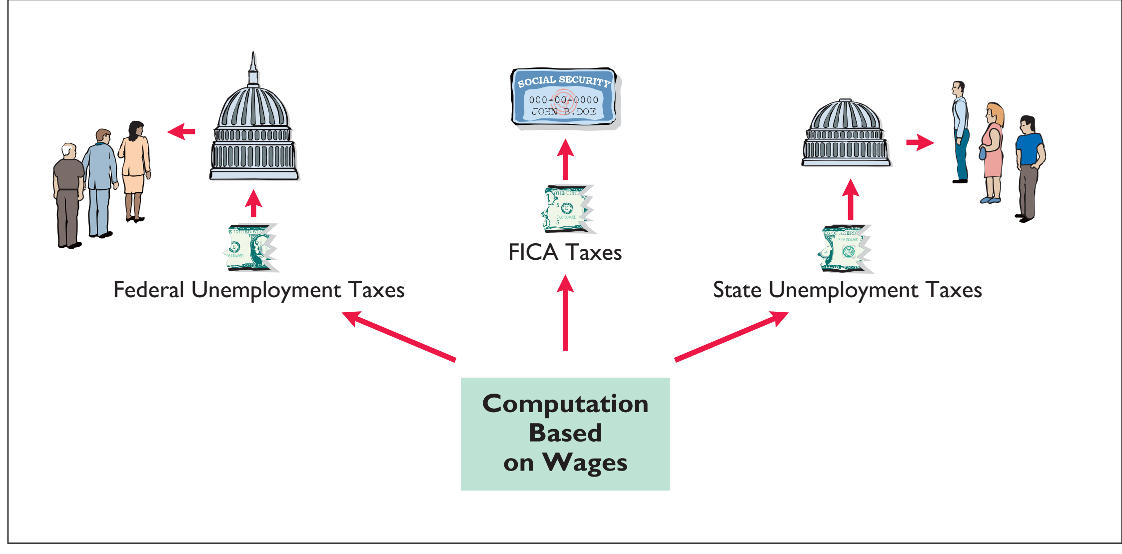


Illustration F-11
Employer payroll taxes

[2]In a few states, the employee is also required to make a contribution. In this textbook, including the homework, *we will assume that the tax is only on the employer*.

Filing and Remitting Payroll Taxes

Preparation of payroll tax returns is the responsibility of the payroll department. Payment of the taxes is made by the treasurer's department. Much of the information for the returns is obtained from employee earnings records.

For purposes of reporting and remitting to the IRS, FICA taxes and federal income taxes that were withheld are combined. **The taxes must be reported quarterly**, no later than one month following the close of each quarter. The remitting requirements depend on the amount of taxes withheld and the length of the pay period. Remittances are made through deposits in either a Federal Reserve bank or an authorized commercial bank.

Federal unemployment taxes are generally filed and remitted **annually** on or before January 31 of the subsequent year. Earlier payments are required when the tax exceeds a specified amount. State unemployment taxes usually must be filed and paid by the **end of the month following each quarter**. When payroll taxes are paid, payroll liability accounts are debited, and Cash is credited.

The employer is also required to provide each employee with a **Wage and Tax Statement (Form W-2)** by January 31 following the end of a calendar year. This statement shows gross earnings, FICA taxes withheld, and income taxes withheld for the year. The required W-2 form for Michael Jordan, using assumed annual data, is shown in Illustration F-12.

The employer must send a copy of each employee's Wage and Tax Statement (Form W-2) to the Social Security Administration. This agency subsequently furnishes the Internal Revenue Service with the income data required.

Summary of Study Objectives

1 Discuss the objectives of internal control for payroll. The objectives of internal control for payroll are (1) to safeguard company assets against unauthorized payments of payrolls, and (2) to ensure the accuracy of the accounting records pertaining to payrolls.

2 Compute and record the payroll for a pay period. The computation of the payroll involves gross earnings, payroll deductions, and net pay. In recording the payroll, Salaries (or Wages) Expense is debited for gross earnings, individual tax and other liability accounts are credited for payroll deductions, and Salaries (Wages) Payable is credited for net pay. When the payroll is paid, Salaries and Wages Payable is debited, and Cash is credited.

3 Describe and record employer payroll taxes. Employer payroll taxes consist of FICA, federal unemployment taxes, and state unemployment taxes. The taxes are usually accrued at the time the payroll is recorded by debiting Payroll Tax Expense and crediting separate liability accounts for each type of tax.

Glossary

Bonus *(p. F-4)* Compensation to management personnel and other employees, based on factors such as increased sales or the amount of net income.

Employee earnings record *(p. F-7)* A cumulative record of each employee's gross earnings, deductions, and net pay during the year.

Employee's Withholding Allowance Certificate (Form W-4) *(p. F-6)* An Internal Revenue Service form on which the employee indicates the number of allowances claimed for withholding federal income taxes.

Federal unemployment taxes *(p. F-10)* Taxes imposed on the employer that provide benefits for a limited time period to employees who lose their jobs through no fault of their own.

FICA taxes *(p. F-5)* Taxes designed to provide workers with supplemental retirement, employment disability, and medical benefits.

Gross earnings *(p. F-4)* Total compensation earned by an employee.

Net pay *(p. F-7)* Gross earnings less payroll deductions.

Payroll deductions *(p. F-4)* Deductions from gross earnings to determine the amount of a paycheck.

Payroll register *(p. F-8)* A payroll record that accumulates the gross earnings, deductions, and net pay by employee for each pay period.

Salaries *(p. F-1)* Specified amount per month or per year paid to managers and administrative personnel.

Statement of earnings *(p. F-9)* A document attached to a paycheck that indicates the employee's gross earnings, payroll deductions, and net pay.

State unemployment taxes *(p. F-11)* Taxes imposed on the employer that provide benefits to employees who lose their jobs.

Wage and Tax Statement (Form W-2) *(p. F-12)* A form showing gross earnings, FICA taxes withheld, and income taxes withheld which is prepared annually by an employer for each employee.

Wages *(p. F-1)* Amounts paid to employees based on a rate per hour or on a piece-work basis.

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more resources are available for practice in WileyPLUS

Questions

1. You are a newly hired accountant with Westbrook Company. On your first day, the controller asks you to identify the main internal control objectives related to payroll accounting. How would you respond?
2. What are the four functions associated with payroll activities?
3. What is the difference between gross pay and net pay? Which amount should a company record as wages or salaries expense?
4. Which payroll tax is levied on both employers and employees?
5. Are the federal and state income taxes withheld from employee paychecks a payroll tax expense for the employer? Explain your answer.
6. What do the following acronyms stand for: FICA, FUTA, and SUTA?
7. What information is shown on a W-4 statement? On a W-2 statement?
8. Distinguish between the two types of payroll deductions and give examples of each.
9. What are the primary uses of the employees earnings record?
10. (a) Identify the three types of employer payroll taxes.
    (b) How are tax liability accounts and Payroll Tax Expense classified in the financial statements?

Brief Exercises

Identify payroll functions.
(SO 1), C

BEF-1 Rodriguez Company has the following payroll procedures.
(a) Supervisor approves overtime work.
(b) The human resources department prepares hiring authorization forms for new hires.
(c) A second payroll department employee verifies payroll calculations.
(d) The treasurer's department pays employees.

Identify the payroll function to which each procedure pertains.

Compute gross earnings and net pay.
(SO 2), AP

BEF-2 Erica Chambers' regular hourly wage rate is $14, and she receives an hourly rate of $21 for work in excess of 40 hours. During a January pay period, Erica works 45 hours. Erica's federal income tax withholding is $95, and she has no voluntary deductions. Compute Erica Chambers' gross earnings and net pay for the pay period.

Record a payroll and the payment of wages.
(SO 2), AP

BEF-3 Data for Erica Chambers are presented in BEF-2. Prepare the journal entries to record (a) Erica's pay for the period and (b) the payment of Erica's wages. Use January 15 for the end of the pay period and the payment date.

Record employer payroll taxes.
(SO 3), AP

BEF-4 In January, gross earnings in Gel Company totaled $70,000. All earnings are subject to 8% FICA taxes, 5.4% state unemployment taxes, and 0.8% federal unemployment taxes. Prepare the entry to record January payroll tax expense.

Exercises

Compute net pay and record pay for one employee.
(SO 2), AP

EF-1 Donna Garland's regular hourly wage rate is $16.00, and she receives a wage of 1½ times the regular hourly rate for work in excess of 40 hours. During a March weekly pay period, Donna worked 42 hours. Her gross earnings prior to the current week were $8,000. Donna is married and claims three withholding allowances. Her only voluntary deduction is for group hospitalization insurance at $15.00 per week.

Instructions
(a) Compute the following amounts for Donna's wages for the current week.
  (1) Gross earnings.
  (2) FICA taxes. (Assume an 8% rate on maximum of $100,000.)
  (3) Federal income taxes withheld. (Use the withholding table in the text, page F-6.)
  (4) State income taxes withheld. (Assume a 2.0% rate.)
  (5) Net pay.
(b) Record Donna's pay, assuming she is an office computer operator.

Compute maximum FICA deductions.
(SO 2), AP

EF-2 Employee earnings records for Carnahan Company reveal the following gross earnings for four employees through the pay period of December 15.

C. Mendez	$93,500	D. Roberts	$99,100
L. Church	$98,600	T. Windsor	$100,000

For the pay period ending December 31, each employee's gross earnings is $3,000. The FICA tax rate is 8% on gross earnings of $100,000.

Instructions
Compute the FICA withholdings that should be made for each employee for the December 31 pay period. (Show computations.)

Prepare payroll register and record payroll and payroll tax expense.
(SO 2, 3), AP

EF-3 Gonzalez Company has the following data for the weekly payroll ending January 31.

	Hours							Federal	
							Hourly	Income Tax	Health
Employee	**M**	**T**	**W**	**T**	**F**	**S**	**Rate**	**Withholding**	**Insurance**
M. Mozart	8	8	9	8	10	3	$10	$34	$10
E. Donnelly	8	8	8	8	8	2	12	37	15
K. Renn	9	10	8	8	9	0	13	58	15

Employees are paid 1½ times the regular hourly rate for all hours worked in excess of 40 hours per week. FICA taxes are 8% on the first $100,000 of gross earnings. Gonzalez Company is subject to 5.4% state unemployment taxes and 0.8% federal unemployment taxes on the first $7,000 of gross earnings.

Instructions

(a) Prepare the payroll register for the weekly payroll.

(b) Prepare the journal entries to record the payroll and Gonzalez's payroll tax expense.

EF-4 Selected data from a February payroll register for Skywalker Company are presented below. Some amounts are intentionally omitted.

Compute missing payroll amounts and record payroll.

(SO 2), **AP**

Gross earnings:		State income taxes	$ (3)
Regular	$8,900	Union dues	100
Overtime	(1)	Total deductions	(4)
Total	(2)	Net pay	$7,660
Deductions:		Accounts debited:	
FICA taxes	$ 800	Warehouse wages	(5)
Federal income taxes	1,140	Store wages	$4,000

FICA taxes are 8%. State income taxes are 3% of gross earnings.

Instructions

(a) Fill in the missing amounts.

(b) Journalize the February payroll and the payment of the payroll.

EF-5 According to a payroll register summary of Sterrett Company, the amount of employees' gross pay in December was $800,000, of which $70,000 was not subject to FICA tax and $760,000 was not subject to state and federal unemployment taxes.

Determine employer's payroll taxes and record payroll tax expense.

(SO 3), **AP**

Instructions

(a) Determine the employer's payroll tax expense for the month, using the following rates: FICA 8%, state unemployment 5.4%, federal unemployment 0.8%.

(b) Prepare the journal entry to record December payroll tax expense.

Problems

PF-1 Selected payroll procedures of Waegelein Company are described below.

Identify internal control weaknesses and make recommendations for improvement.

(SO 1), **AN**

1. Department managers interview applicants, and on the basis of the interview either hire or reject the applicants. When an applicant is hired, the applicant fills out a W-4 form (Employee's Withholding Allowance Certificate). One copy of the form is sent to the human resources department, and one copy is sent to the payroll department as notice that the individual has been hired. On the copy of the W-4 sent to payroll, the managers manually indicate the hourly pay rate for the new hire.
2. The payroll checks are manually signed by the chief accountant and given to the department managers for distribution to employees in their department. The managers are responsible for seeing that any absent employees receive their checks.
3. There are two clerks in the payroll department. The payroll is divided alphabetically; one clerk has employees A to L and the other has employees M to Z. Each clerk computes the gross earnings, deductions, and net pay for employees in the section and posts the data to the employee earning records.

Instructions

(a) Indicate the weaknesses in internal control.

(b) For each weakness, describe the control procedures that will provide effective internal control. Use the following format for your answer:

(a) Weaknesses	**(b) Recommended Procedures**

Prepare payroll register and payroll entries.
(SO 2, 3), AN

PF-2 Stine Hardware has four employees who are paid on an hourly basis plus time-and-a half for all hours worked in excess of 40 a week. Payroll data for the week ended March 15, 2012, are presented below.

Employee	Hours Worked	Hourly Rate	Federal Income Tax Withholdings	United Fund
Joe Feldon	40	$14.00	$?	$5.00
Mary Norten	42	13.00	?	5.00
Andy Renfro	44	13.00	60	8.00
Kim Cheng	46	13.00	51	5.00

Feldon and Norten are married. They claim 0 and 4 withholding allowances, respectively. The following tax rates are applicable: FICA 8%, state income taxes 3%, state unemployment taxes 5.4%, and federal unemployment 0.8%. The first three employees are sales clerks (store wages expense). The fourth employee performs administrative duties (office wages expense).

Instructions

(a) Net pay $1,862.06

(d) Cash paid $586.64

(a) Prepare a payroll register for the weekly payroll. (Use the wage-bracket withholding table in the text for federal income tax withholdings.)
(b) Journalize the payroll on March 15, 2012, and the accrual of employer payroll taxes.
(c) Journalize the payment of the payroll on March 16, 2012.
(d) Journalize the deposit in a Federal Reserve bank on March 31, 2012, of the FICA and federal income taxes payable to the government.

Journalize payroll transactions and adjusting entries.
(SO 2, 3), AN

PF-3 The payroll liability accounts shown below are included in the ledger of Ludwick Company on January 1, 2012.

FICA Taxes Payable	$ 760.00
Federal Income Taxes Payable	1,004.60
State Income Taxes Payable	108.95
Federal Unemployment Taxes Payable	288.95
State Unemployment Taxes Payable	1,954.40
Union Dues Payable	870.00
U.S. Savings Bonds Payable	360.00

In January, the following transactions occurred.

Jan. 10	Sent check for $870.00 to union treasurer for union dues.
12	Deposited check for $1,764.60 in Federal Reserve bank for FICA taxes and federal income taxes withheld.
15	Purchased U.S. Savings Bonds for employees by writing check for $360.00.
17	Paid state income taxes withheld from employees.
20	Paid federal and state unemployment taxes.
31	Completed monthly payroll register, which shows office salaries $14,600, store wages $28,400, FICA taxes withheld $3,440, federal income taxes payable $1,684, state income taxes payable $360, union dues payable $400, United Fund contributions payable $1,888, and net pay $35,228.
31	Prepared payroll checks for the net pay and distributed checks to employees.

At January 31, the company also makes the following accrued adjustments pertaining to employee compensation.

1. Employer payroll taxes: FICA taxes 8%, federal unemployment taxes 0.8%, and state unemployment taxes 5.4%.
2. Vacation pay: 6% of gross earnings.

Instructions

(b) Payroll tax expense $6,106.00; vacation benefits expense $2,580

(a) Journalize the January transactions.
(b) Journalize the adjustments pertaining to employee compensation at January 31.

PF-4 For the year ended December 31, 2012, Bradburn Electrical Repair Company reports the following summary payroll data.

Prepare entries for payroll and payroll taxes, and prepare W-2 data.
(SO 2, 3), **AN**

Gross earnings:	
Administrative salaries	$180,000
Electricians' wages	470,000
Total	$650,000
Deductions:	
FICA taxes	$ 45,200
Federal income taxes withheld	188,000
State income taxes withheld (2.6%)	16,900
United Fund contributions payable	32,500
Hospital insurance premiums	20,300
Total	$302,900

Bradburn Company's payroll taxes are: FICA 8%, state unemployment 2.5% (due to a stable employment record), and 0.8% federal unemployment. Gross earnings subject to FICA taxes total $565,000, and gross earnings subject to unemployment taxes total $145,000.

Instructions

(a) Prepare a summary journal entry at December 31 for the full year's payroll.
(b) Journalize the adjusting entry at December 31 to record the employer's payroll taxes.
(c) The W-2 Wage and Tax Statement requires the following dollar data.

(a) Wages payable $347,100
(b) Payroll tax expense $49,985

Wages, Tips, Other Compensation	Federal Income Tax Withheld	State Income Tax Withheld	FICA Wages	FICA Tax Withheld

Complete the required data for the following employees.

Employee	Gross Earnings	Federal Income Tax Withheld
Anna Hillman	$59,000	$28,500
Sharon Wainwright	28,000	10,800

appendix G

SUBSIDIARY LEDGERS AND SPECIAL JOURNALS

study objectives

After studying this appendix, you should be able to:

1 Describe the nature and purpose of a subsidiary ledger.

2 Explain how special journals are used in journalizing.

3 Indicate how a multi-column journal is posted.

section one

Expanding the Ledger—Subsidiary Ledgers

Nature and Purpose of Subsidiary Ledgers

study objective 1

Describe the nature and purpose of a subsidiary ledger.

Imagine a business that has several thousand charge (credit) customers and shows the transactions with these customers in only one general ledger account—Accounts Receivable. It would be virtually impossible to determine the balance owed by an individual customer at any specific time. Similarly, the amount payable to one creditor would be difficult to locate quickly from a single Accounts Payable account in the general ledger.

Instead, companies use subsidiary ledgers to keep track of individual balances. A **subsidiary ledger** is a group of accounts with a common characteristic (for example, all accounts receivable). The subsidiary ledger frees the general ledger from the details of individual balances. A subsidiary ledger is an addition to, and an expansion of, the general ledger.

Two common subsidiary ledgers are:

1. The **accounts receivable** (or **customers'**) **subsidiary ledger**, which collects transaction data of individual customers.
2. The **accounts payable** (or **creditors'**) **subsidiary ledger**, which collects transaction data of individual creditors.

In each of these subsidiary ledgers, individual accounts are usually arranged in alphabetical order.

The detailed data from a subsidiary ledger are summarized in a general ledger account. For example, the detailed data from the accounts receivable subsidiary ledger are summarized in Accounts Receivable in the general ledger. The general ledger account that summarizes subsidiary ledger data is called a **control account**. An overview of the relationship of subsidiary ledgers to the general ledger is shown in Illustration G-1 (next page). The general ledger control accounts and subsidiary ledger accounts are shown in green color. Note that cash and stockholders' equity in this illustration are not control accounts because there are no subsidiary ledger accounts related to these accounts.

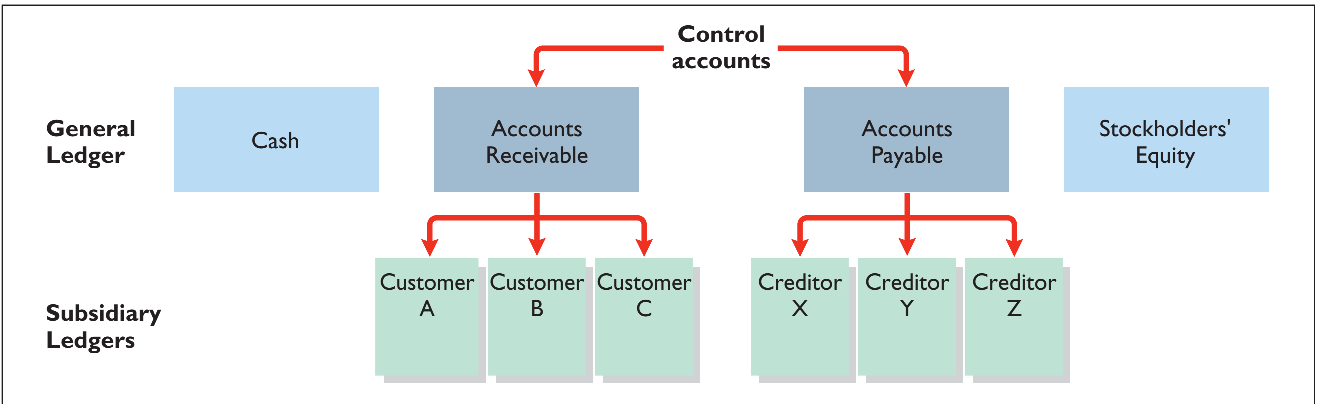

Illustration G-1 Relationship of general ledger and subsidiary ledgers

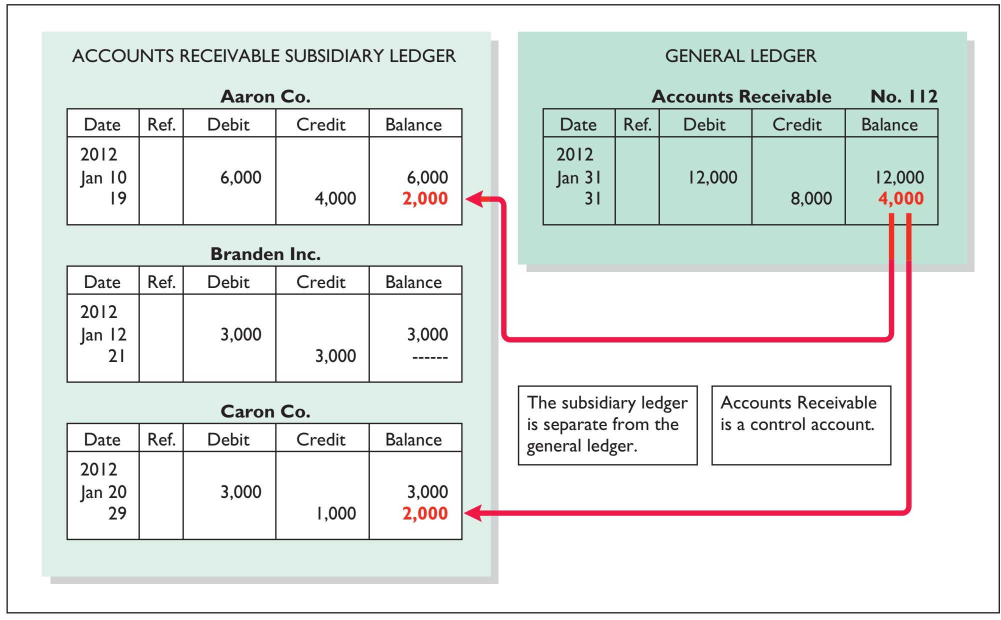
Each general ledger control account balance must equal the composite balance of the individual accounts in the related subsidiary ledger at the end of an accounting period. For example, the balance in Accounts Payable in Illustration G-1 must equal the total of the subsidiary balances of Creditors X + Y + Z.

SUBSIDIARY LEDGER EXAMPLE

An example of a control account and subsidiary ledger for Larson Enterprises is provided in Illustration G-2. (The explanation column in these accounts is not shown in this and subsequent illustrations due to space considerations.)

Illustration G-2 Relationship between general and subsidiary ledgers



ACCOUNTS RECEIVABLE SUBSIDIARY LEDGER

Aaron Co.

Date	Ref.	Debit	Credit	Balance
2012				
Jan 10		6,000		6,000
19			4,000	2,000

Branden Inc.

Date	Ref.	Debit	Credit	Balance
2012				
Jan 12		3,000		3,000
21			3,000	------

Caron Co.

Date	Ref.	Debit	Credit	Balance
2012				
Jan 20		3,000		3,000
29			1,000	2,000

GENERAL LEDGER

Accounts Receivable **No. 112**

Date	Ref.	Debit	Credit	Balance
2012				
Jan 31		12,000		12,000
31			8,000	4,000

The example is based on the transactions listed below.

Illustration G-3 Sales and collection transactions

Credit Sales			Collections on Account		
Jan. 10	Aaron Co.	$ 6,000	Jan. 19	Aaron Co.	$4,000
12	Branden Inc.	3,000	21	Branden Inc.	3,000
20	Caron Co.	3,000	29	Caron Co.	1,000
		$12,000			$8,000

The total debits ($12,000) and credits ($8,000) in Accounts Receivable in the general ledger are reconcilable to the detailed debits and credits in the subsidiary accounts. Also, the balance of $4,000 in the control account agrees with the total of the balances in the individual accounts (Aaron Co. $2,000 + Branden Inc. $0 + Caron Co. $2,000) in the subsidiary ledger.

As shown, postings are made monthly to the control accounts in the general ledger. This practice allows monthly financial statements to be prepared. Postings to the individual accounts in the subsidiary ledger are made daily. Daily posting ensures that account information is current. This enables the company to monitor credit limits, bill customers, and answer inquiries from customers about their account balances.

ADVANTAGES OF SUBSIDIARY LEDGERS

Subsidiary ledgers have several advantages. They:

1. **Show transactions affecting one customer or one creditor in a single account**, thus providing up-to-date information on specific account balances.
2. **Free the general ledger of excessive details.** As a result, a trial balance of the general ledger does not contain vast numbers of individual account balances.
3. **Help locate errors in individual accounts** by reducing the number of accounts in one ledger and by using control accounts.
4. **Make possible a division of labor** in posting. One employee can post to the general ledger while someone else posts to the subsidiary ledgers.

section two

Expanding the Journal—Special Journals

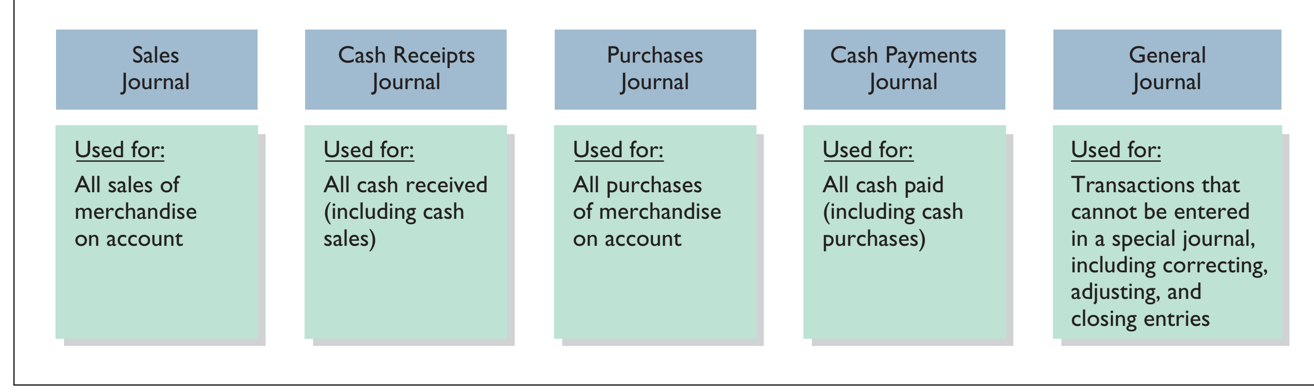
study objective 2

Explain how special journals are used in journalizing.

So far you have learned to journalize transactions in a two-column general journal and post each entry to the general ledger. This procedure is satisfactory in only the very smallest companies. To expedite journalizing and posting, most companies use special journals **in addition to the general journal**.

A **special journal** is used to record similar types of transactions. Examples would be all sales of merchandise on account, or all cash receipts. The special journals a company uses depends largely on the types of transactions that occur frequently. Most merchandising enterprises use the journals shown in Illustration G-4 to record transactions daily.

Illustration G-4 Use of special journals and the general journal



If a transaction cannot be recorded in a special journal, it is recorded in the general journal. For example, if you had special journals only for the four types of transactions shown in Illustration G-4, purchase returns and allowances would be recorded in the general journal. So would sales returns and allowances. Similarly, **correcting**, **adjusting**, **and closing entries are recorded in the general journal**. Other types of special journals may sometimes be used in some situations. For example, when sales returns and allowances are frequent, special journals may be used to record these transactions.

Special journals **permit greater division of labor** because several people can record entries in different journals at the same time. For example, one employee may journalize all cash receipts, and another may journalize all credit sales. Also, the use of special journals **reduces the time needed to complete the posting process**. With special journals, some accounts may be posted monthly, instead of daily, as will be illustrated later in the chapter.

Sales Journal

The **sales journal** is used to record sales of merchandise on account. Cash sales of merchandise are entered in the cash receipts journal. Credit sales of assets other than merchandise are entered in the general journal.

JOURNALIZING CREDIT SALES

Helpful Hint Postings are also made daily to individual ledger accounts in the inventory subsidiary ledger to maintain a perpetual inventory.

Karns Wholesale Supply uses a **perpetual inventory** system. Under this system, each entry in the sales journal results in one entry **at selling price**—a debit to Accounts Receivable (a control account) and a credit of equal amount to Sales—and another entry at cost. The entry **at cost** is a debit to Cost of Goods Sold and a credit of equal amount to Merchandise Inventory (a control account). The sales journal for Karns Wholesale Supply is shown in Illustration G-5. (It uses assumed credit sales transactions for sales invoices 101–107.) A sales journal with two amount columns, like that in Illustration G-5, shows a transaction at both selling price and cost on a single line. The reference (Ref.) column is not used in journalizing. It is used in posting the sales journal, as explained in the next section. Also, note that, unlike the general journal, an explanation is not required for each entry in a special journal. Finally, note that each invoice is prenumbered to ensure that all invoices are journalized.

Illustration G-5
Journalizing credit sales–perpetual inventory system

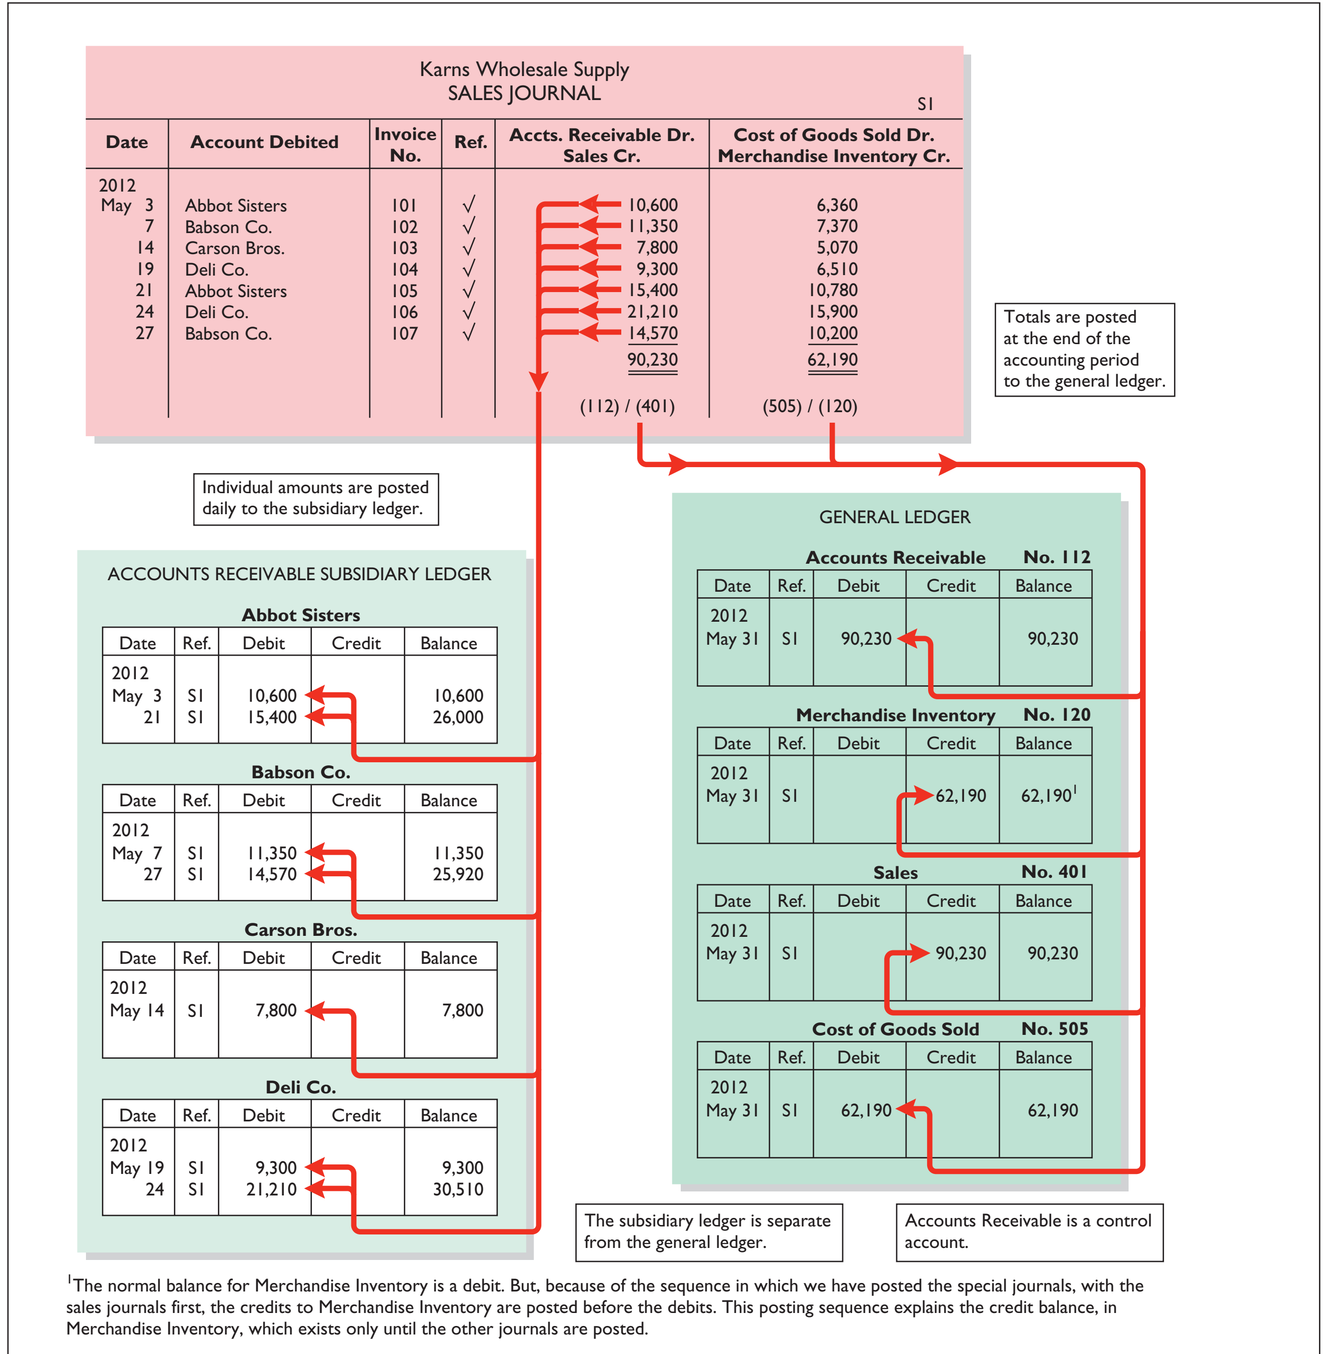
27	Babson Co.	107		14,570	10,200
				90,230	62,190

POSTING THE SALES JOURNAL

Postings from the sales journal are made **daily to the individual accounts receivable** in the subsidiary ledger. Posting **to the general ledger** is made **monthly**. Illustration G-6 shows both the daily and monthly postings.

Illustration G-6 Posting the sales journal



[1]The normal balance for Merchandise Inventory is a debit. But, because of the sequence in which we have posted the special journals, with the sales journals first, the credits to Merchandise Inventory are posted before the debits. This posting sequence explains the credit balance, in Merchandise Inventory, which exists only until the other journals are posted.

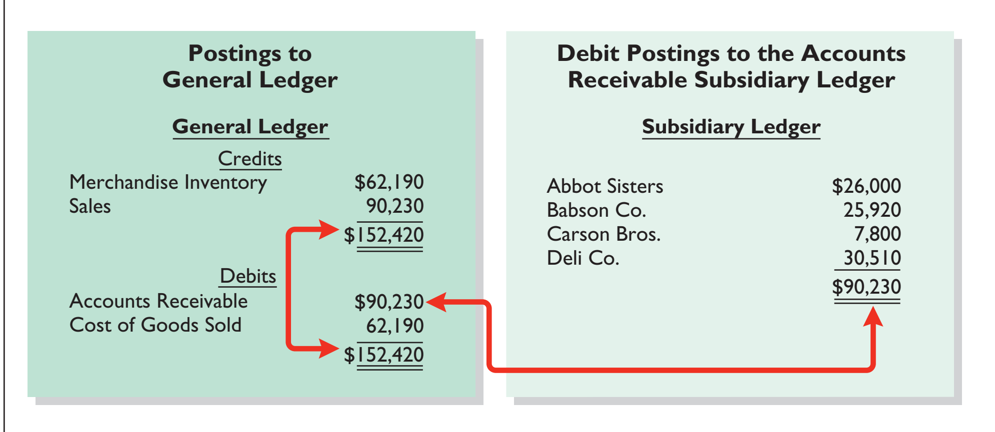
A check mark (✓) is inserted in the reference posting column to indicate that the daily posting to the customer's account has been made. A check mark (✓) is used in this illustration because the subsidiary ledger accounts are not numbered. At the end of the month, the column totals of the sales journal are posted to the general ledger. Here, the column totals are a debit of $90,230 to Accounts

Receivable (account No. 112), a credit of $90,230 to Sales (account No. 401), a debit of $62,190 to Cost of Goods Sold (account No. 505), and a credit of $62,190 to Merchandise Inventory (account No. 120). Insertion of the account numbers below the column total indicates that the postings have been made. In both the general ledger and subsidiary ledger accounts, the reference **S1** indicates that the posting came from page 1 of the sales journal.

PROVING THE LEDGERS

The next step is to "prove" the ledgers. To do so, we must determine two things: (1) The total of the general ledger debit balances must equal the total of the general ledger credit balances. (2) The sum of the subsidiary ledger balances must equal the balance in the control account. The proof of the postings from the sales journal to the general and subsidiary ledger is shown in Illustration G-7.

Illustration G-7 Proving the equality of the postings from the sales journal



ADVANTAGES OF THE SALES JOURNAL

The use of a special journal to record sales on account has a number of advantages. First, the one-line entry for each sales transaction **saves time**. In the sales journal, it is not necessary to write out the four account titles for each transaction. Second, only totals, rather than individual entries, are posted to the general ledger. This **saves posting time and reduces the possibilities of errors in posting**. Finally, **a division of labor results**, because one individual can take responsibility for the sales journal.

Cash Receipts Journal

All receipts of cash are recorded in the **cash receipts journal**. The most common types of cash receipts are cash sales of merchandise and collections of accounts receivable. Many other possibilities exist, such as receipt of money from bank loans and cash proceeds from disposal of equipment. A one- or two-column cash receipts journal would not have space enough for all possible cash receipt transactions. Therefore, a multiple-column cash receipts journal is used.

Generally, a cash receipts journal includes the following columns: debit columns for cash and sales discounts; and credit columns for accounts receivable, sales, and "other" accounts. The Other Accounts category is used when the cash receipt does not involve a cash sale or a collection of accounts receivable. Under a perpetual inventory system, each sales entry is accompanied by another entry that debits Cost of Goods Sold and credits Merchandise Inventory for the cost of the merchandise sold. This entry may be recorded separately. A six-column cash receipts journal is shown in Illustration G-8.

Additional credit columns may be used if they significantly reduce postings to a specific account. For example, a loan company, such as Household International, receives thousands of cash collections from customers. A significant saving in posting would result from using separate credit columns for Loans Receivable and Interest Revenue, rather than using the Other Accounts credit column. In contrast, a retailer that has only one interest collection a month would not find it useful to have a separate column for Interest Revenue.

JOURNALIZING CASH RECEIPTS TRANSACTIONS

To illustrate the journalizing of cash receipts transactions, we will continue with the May transactions of Karns Wholesale Supply. Collections from customers relate to the entries recorded in the sales journal in Illustration G-5. The entries in the cash receipts journal are based on the following cash receipts.

May 1 Stockholders invest $5,000 in the business in common stock.
7 Cash sales of merchandise total $1,900 (cost, $1,240).
10 A check for $10,388 is received from Abbot Sisters in payment of invoice No. 101 for $10,600 less a 2% discount.
12 Cash sales of merchandise total $2,600 (cost, $1,690).
17 A check for $11,123 is received from Babson Co. in payment of invoice No. 102 for $11,350 less a 2% discount.
22 Cash is received by signing a note for $6,000.
23 A check for $7,644 is received from Carson Bros. in full for invoice No. 103 for $7,800 less a 2% discount.
28 A check for $9,114 is received from Deli Co. in full for invoice No. 104 for $9,300 less a 2% discount.

Further information about the columns in the cash receipts journal (see Illustration G-8) is listed below.

Debit Columns:

1. **Cash.** The amount of cash actually received in each transaction is entered in this column. The column total indicates the total cash receipts for the month.
2. **Sales Discounts.** Karns includes a Sales Discounts column in its cash receipts journal. By doing so, it is not necessary to enter sales discount items in the general journal. As a result, the collection of an account receivable within the discount period is expressed on one line in the appropriate columns of the cash receipts journal.

Helpful Hint When is an account title entered in the "Account Credited" column of the cash receipts journal? *Answer:* A *subsidiary ledger* title is entered whenever the entry involves a collection of accounts receivable. A *general ledger* account title is entered whenever the entry involves an account that is not the subject of a special column (and an amount must be entered in the Other Accounts column). No account title is entered there if neither of the foregoing applies.

Credit Columns:

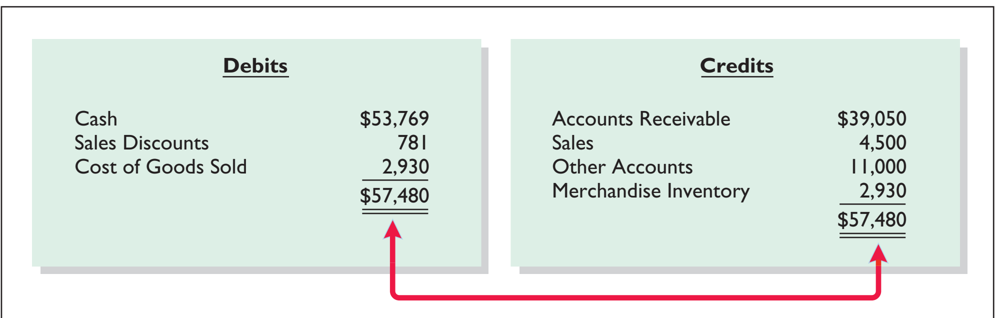
3. **Accounts Receivable.** The Accounts Receivable column is used to record cash collections on account. The amount entered here is the amount to be credited to the individual customer's account.
4. **Sales.** The Sales column records all cash sales of merchandise. Cash sales of other assets (plant assets, for example) are not reported in this column.
5. **Other Accounts.** The Other Accounts column is used whenever the credit is other than to Accounts Receivable or Sales. For example, in the first entry, $5,000 is entered as a credit to Common Stock. This column is often referred to as the **sundry accounts column**.

Debit and Credit Column:

6. **Cost of Goods Sold and Merchandise Inventory.** This column records debits to Cost of Goods Sold and credits to Merchandise Inventory.

In a multi-column journal, generally only one line is needed for each entry. Debit and credit amounts for each line must be equal. When the collection from Abbot Sisters on May 10 is journalized, for example, three amounts are indicated. Note also that the Account Credited column is used to identify both general ledger and subsidiary ledger account titles. General ledger accounts are illustrated in the May 1 and May 22 entries. A subsidiary account is illustrated in the May 10 entry for the collection from Abbot Sisters.

When the journalizing of a multi-column journal has been completed, the amount columns are totaled, and the totals are compared to prove the equality of debits and credits. The proof of the equality of Karns's cash receipts journal is shown in Illustration G-9. Totaling the columns of a journal and proving the equality of the totals is called **footing** and **cross-footing** a journal.



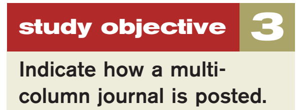
Debits	
Cash	$53,769
Sales Discounts	781
Cost of Goods Sold	2,930
	$57,480

Credits	
Accounts Receivable	$39,050
Sales	4,500
Other Accounts	11,000
Merchandise Inventory	2,930
	$57,480

Illustration G-9 Proving the equality of the cash receipts journal

POSTING THE CASH RECEIPTS JOURNAL

Posting a multi-column journal involves the following steps.



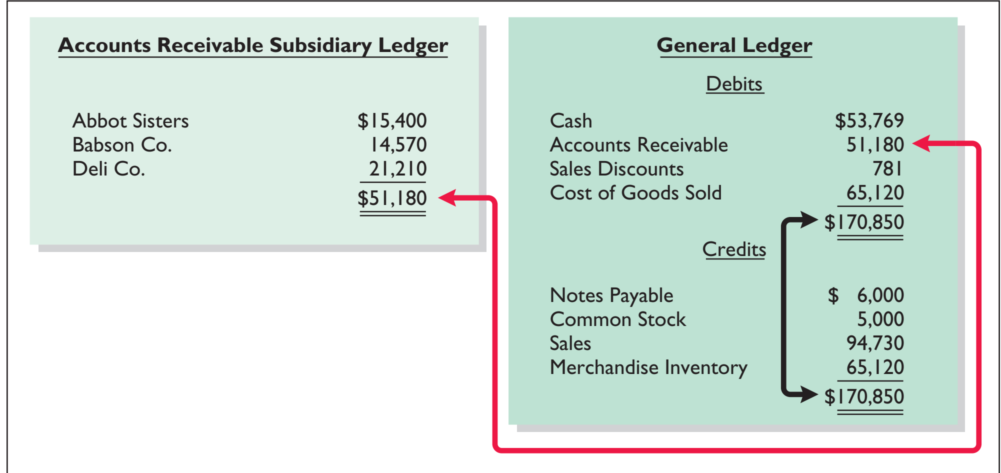
1. All column totals except for the Other Accounts total are posted **once at the end of the month** to the account title(s) specified in the column heading (such as Cash or Accounts Receivable). Account numbers are entered below the column totals to show that they have been posted. Cash is posted to account No. 101, accounts receivable to account No. 112, merchandise inventory to account No. 120, sales to account No. 401, sales discounts to account No. 414, and cost of goods sold to account No. 505.
2. The **individual amounts comprising the Other Accounts total are posted separately** to the general ledger accounts specified in the Account Credited column. See, for example, the credit posting to Common Stock. The total amount of this column is not posted. The symbol (X) is inserted below the total to this column to indicate that the amount has not been posted.
3. The individual amounts in a column, posted in total to a control account (Accounts Receivable, in this case), are posted **daily to the subsidiary ledger** account specified in the Account Credited column. See, for example, the credit posting of $10,600 to Abbot Sisters.

The symbol **CR** is used in both the subsidiary and general ledgers to identify postings from the cash receipts journal.

PROVING THE LEDGERS

After posting of the cash receipts journal is completed, it is necessary to prove the ledgers. As shown in Illustration G-10 (on the next page), the general ledger totals are in agreement. Also, the sum of the subsidary ledger balances equals the control account balance.

Illustration G-10 Proving the ledgers after posting the sales and the cash receipts journals



Purchases Journal

All purchases of merchandise on account are recorded in the **purchases journal**. Each entry in this journal results in a debit to Merchandise Inventory and a credit to Accounts Payable. When a one-column purchases journal is used (as in Illustration G-12, page G-11), other types of purchases on account and cash purchases cannot be journalized in it. For example, credit purchases of equipment or supplies must be recorded in the general journal. Likewise, all cash purchases are entered in the cash payments journal. As illustrated later, where credit purchases for items other than merchandise are numerous, the purchases journal is often expanded to a multi-column format.

JOURNALIZING CREDIT PURCHASES OF MERCHANDISE

Entries in the purchases journal are made from purchase invoices. The journalizing procedure is similar to that for a sales journal. In contrast to the sales journal, the purchases journal may not have an invoice number column, because invoices received from different suppliers will not be in numerical sequence. To assure that all purchase invoices are recorded, some companies consecutively number each invoice upon receipt and then use an internal document number column in the purchases journal.

Karns Wholesale Supply made the assumed credit purchases shown in Illustration G-11. The purchases journal for Karns Wholesale Supply is shown in Illustration G-12.

Illustration G-11 Credit purchases transactions

Date	Supplier	Amount
5/6	Jasper Manufacturing Inc.	$11,000
5/10	Eaton and Howe Inc.	7,200
5/14	Fabor and Son	6,900
5/19	Jasper Manufacturing Inc.	17,500
5/26	Fabor and Son	8,700
5/29	Eaton and Howe Inc.	12,600

Helpful Hint Postings to subsidiary ledger accounts are done daily because it is often necessary to know a current balance for the subsidiary accounts.

POSTING THE PURCHASES JOURNAL

The procedures for posting the purchases journal are similar to those for the sales journal. In this case, postings are made **daily** to the **accounts payable**

Merchandise Inventory (debit)	$63,900
Accounts Payable (credit)	$63,900

Credit Postings to Accounts Payable Ledger	
Eaton and Howe Inc.	$19,800
Fabor and Son	15,600
Jasper Manufacturing Inc.	28,500
	$63,900

Illustration G-13
Proving the equality of the purchases journal

Helpful Hint A multi-column purchases journal must be footed and cross-footed to prove the equality of debits and credits.

EXPANDING THE PURCHASES JOURNAL

Some companies expand the purchases journal to include all types of purchases on account. Instead of one column for merchandise inventory and accounts payable, they use a multiple-column format. The multi-column format usually includes a credit column for accounts payable and debit columns for purchases of merchandise, of office supplies, of store supplies, and other accounts. Illustration G-14 is an example of a multi-column purchases journal for Hanover Co. The posting procedures are similar to those illustrated earlier for posting the cash receipts journal.

Cash Payments Journal

Alternative Terminology The cash payments journal is sometimes called the *cash disbursements journal*.

All disbursements of cash are entered in a **cash payments journal**. Entries are made from prenumbered checks. Because cash payments are made for various purposes, the cash payments journal has multiple columns. A four-column journal is shown in Illustration G-15 (next page).

JOURNALIZING CASH PAYMENTS TRANSACTIONS

The procedures for journalizing transactions in this journal are similar to those described earlier for the cash receipts journal. Each transaction is entered on one line, and for each line there must be equal debit and credit amounts. The entries in the cash payments journal in Illustration G-15 are based on the following transactions for Karns Wholesale Supply.

May 1 Check No. 101 for $1,200 issued for the annual premium on a fire insurance policy.
3 Check No. 102 for $100 issued in payment of freight when terms were FOB shipping point.
8 Check No. 103 for $4,400 issued for the purchase of merchandise.
10 Check No. 104 for $10,780 sent to Jasper Manufacturing Inc. in payment of May 6 invoice for $11,000 less a 2% discount.
19 Check No. 105 for $6,984 mailed to Eaton and Howe Inc. in payment of May 10 invoice for $7,200 less a 3% discount.
23 Check No. 106 for $6,831 sent to Fabor and Son in payment of May 14 invoice for $6,900 less a 1% discount.
28 Check No. 107 for $17,150 sent to Jasper Manufacturing Inc. in payment of May 19 invoice for $17,500 less a 2% discount.
30 Check No. 108 for $500 issued to stockholders as a cash dividend.

Illustration G-15
Journalizing and posting the cash payments journal

Note that whenever an amount is entered in the Other Accounts column, a specific general ledger account must be identified in the Account Debited column. The entries for checks No. 101, 102, and 103 illustrate this situation. Similarly, a subsidiary account must be identified in the Account Debited column whenever an amount is entered in the Accounts Payable column. See, for example, the entry for check No. 104.

After the cash payments have been journalized, the columns are totaled. The totals are then balanced to prove the equality of debits and credits.

POSTING THE CASH PAYMENTS JOURNAL

The procedures for posting the cash payments journal are similar to those for the cash receipts journal. The amounts recorded in the Accounts Payable column are posted individually to the subsidiary ledger and in total to the control account. Merchandise Inventory and Cash are posted only in total at the end of the month. Transactions in the Other Accounts column are posted individually to the appropriate account(s) affected. No totals are posted for this column.

The posting of the cash payments journal is shown in Illustration G-15 (on the previous page). Note that the symbol **CP** is used as the posting reference. After postings are completed, the equality of the debit and credit balances in the general ledger should be determined. In addition, the control account balances should agree with the subsidiary ledger total balance. The agreement of these balances is shown in Illustration G-16.

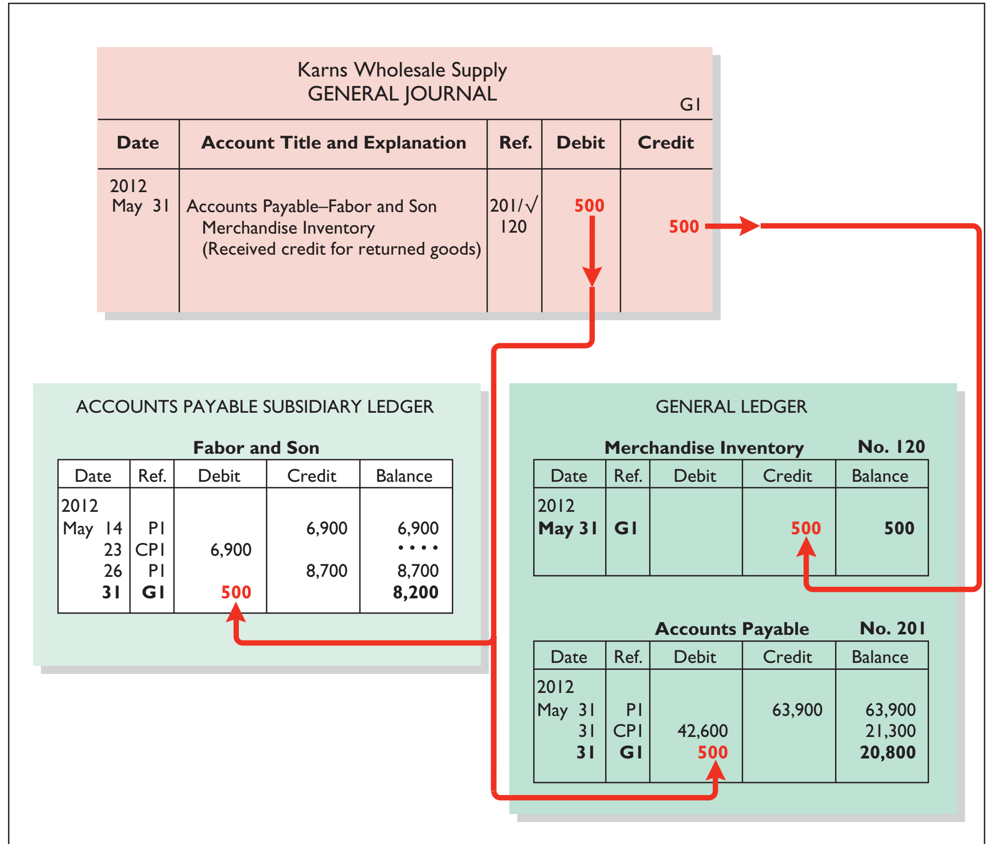
Effects of Special Journals on General Journal

Special journals for sales, purchases, and cash substantially reduce the number of entries that are made in the general journal. **Only transactions that cannot be entered in a special journal are recorded in the general journal.** For example, the general journal may be used to record such transactions as granting of credit to a customer for a sales return or allowance, granting of credit from a supplier for purchases returned, acceptance of a note receivable from a customer, and purchase of equipment by issuing a note payable. Also, correcting, adjusting, and closing entries are made in the general journal.

The general journal has columns for date, account title and explanation, reference, and debit and credit amounts. When control and subsidiary accounts are not involved, the procedures for journalizing and posting of transactions are the same as those described in earlier chapters. When control and subsidiary accounts are involved, two changes from the earlier procedures are required:

1. In **journalizing**, both the control and the subsidiary accounts must be identified.
2. In **posting**, there must be a **dual posting**: once to the control account and once to the subsidiary account.

To illustrate, assume that on May 31, Karns Wholesale Supply returns $500 of merchandise for credit to Fabor and Son. The entry in the general journal and the posting of the entry are shown in Illustration G-17. Note that if cash is received instead of credit granted on this return, then the transaction is recorded in the cash receipts journal.



Karns Wholesale Supply

Illustration G-17
Journalizing and posting the general journal

Observe in the journal that two accounts are indicated for the debit, and two postings ("201/✓") are indicated in the reference column. One amount is posted to the control account and the other to the creditor's account in the subsidiary ledger.

Summary of Study Objectives

1 Describe the nature and purpose of a subsidiary ledger. A subsidiary ledger is a group of accounts with a common characteristic. It facilitates the recording process by freeing the general ledger from details of individual balances.

2 Explain how special journals are used in journalizing. A special journal is used to group similar types of transactions. In a special journal, generally only one line is used to record a complete transaction.

3 Indicate how a multi-column journal is posted. In posting a multi-column journal:

(a) All column totals except for the Other Accounts column are posted once at the end of the month to the account title specified in the column heading.

(b) The total of the Other Accounts column is not posted. Instead, the individual amounts comprising the total are posted separately to the general ledger accounts specified in the Account Credited column.

(c) The individual amounts in a column posted in total to a control account are posted daily to the subsidiary ledger accounts specified in the Account Credited column.

Glossary

Accounts payable (creditors') subsidiary ledger *(p. G-1)* A subsidiary ledger that collects transaction data of individual creditors.

Accounts receivable (customers') subsidiary ledger *(p. G-1)* A subsidiary ledger that collects transaction data of individual customers.

Cash payments journal *(p. G-12)* A special journal used to record all cash paid.

Cash receipts journal *(p. G-6)* A special journal used to record all cash received.

Control account *(p. G-1)* An account in the general ledger that summarizes a subsidiary ledger.

Purchases journal *(p. G-10)* A special journal used to record all purchases of merchandise on account.

Sales journal *(p. G-4)* A special journal used to record all sales of merchandise on account.

Special journal *(p. G-3)* A journal that is used to record similar types of transactions, such as all credit sales.

Subsidiary ledger *(p. G-1)* A group of accounts with a common characteristic.

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more resources are available for practice in WileyPLUS

Questions

1. What are the advantages of using subsidiary ledgers?
2. (a) When are postings normally made to (1) the subsidiary accounts and (2) the general ledger control accounts? (b) Describe the relationship between a control account and a subsidiary ledger.
3. Identify and explain the four special journals discussed in the chapter. List an advantage of using each of these journals rather than using only a general journal.
4. V. Cruz Company uses special journals. A sale made on account to K. Allman for $435 was recorded in a sales journal. A few days later, K. Allman returns $70 worth of merchandise for credit. Where should V. Cruz Company record the sales return? Why?
5. A $500 purchase of merchandise on account from Bowie Company was properly recorded in the purchases journal. When posted, however, the amount recorded in the subsidiary ledger was $50. How might this error be discovered?
6. Why would special journals used in different businesses not be identical in format? Can you think of a business that would maintain a cash receipts journal but not include a column for accounts receivable?
7. The cash and the accounts receivable columns in the cash receipts journal were mistakenly overadded by $4,000 at the end of the month. (a) Will the customers' ledger agree with the Accounts Receivable control account? (b) Assuming no other errors, will the trial balance totals be equal?
8. One column total of a special journal is posted at month-end to only two general ledger accounts. One of these two accounts is Accounts Receivable. What is the name of this special journal? What is the other general ledger account to which that same month-end total is posted?
9. In what journal would the following transactions be recorded? (Assume that a two-column sales journal and a single-column purchases journal are used.)
   (a) Recording of depreciation expense for the year.
   (b) Credit given to a customer for merchandise purchased on credit and returned.
   (c) Sales of merchandise for cash.
   (d) Sales of merchandise on account.
   (e) Collection of cash on account from a customer.
   (f) Purchase of office supplies on account.
10. In what journal would the following transactions be recorded? (Assume that a two-column sales journal and a single-column purchases journal are used.)
    (a) Cash received from signing a note payable.
    (b) Investment of cash by stockholders of the company.
    (c) Closing of the expense accounts at the end of the year.
    (d) Purchase of merchandise on account.
    (e) Credit received for merchandise purchased and returned to supplier.
    (f) Payment of cash on account due a supplier.
11. What transactions might be included in a multiple-column purchases journal that would not be included in a single-column purchases journal?
12. Give an example of a transaction in the general journal that causes an entry to be posted twice (i.e., to two accounts), one in the general ledger, the other in the subsidiary ledger. Does this affect the debit/credit equality of the general ledger?
13. Give some examples of appropriate general journal transactions for an organization using special journals.

Brief Exercises

Identify subsidiary ledger balances.
(SO 1), **C**

BEG-1 Presented on the next page is information related to Varberg Company for its first month of operations. Identify the balances that appear in the accounts receivable subsidiary ledger and the accounts receivable balance that appears in the general ledger at the end of January.

Credit Sales			Cash Collections		
Jan. 7	Brown Co.	$8,000	Jan. 17	Brown Co.	$7,000
15	Ford Co.	6,000	24	Ford Co.	5,000
23	Jones Co.	9,000	29	Jones Co.	9,000

BEG-2 Identify in what ledger (general or subsidiary) each of the following accounts is shown.

Identify subsidiary ledger accounts.
(SO 1), **C**

1. Rent Expense
2. Accounts Receivable—Olsen
3. Notes Payable
4. Accounts Payable—Innis

BEG-3 Identify the journal in which each of the following transactions is recorded.

Identify special journals.
(SO 2), **C**

1. Cash sales
2. Payment of cash dividends
3. Cash purchase of land
4. Credit sales
5. Purchase of merchandise on account
6. Receipt of cash for services performed

BEG-4 Indicate whether each of the following debits and credits is included in the cash receipts journal. (Use "Yes" or "No" to answer this question.)

Identify entries to cash receipts journal.
(SO 2), **C**

1. Debit to Sales
2. Credit to Merchandise Inventory
3. Credit to Accounts Receivable
4. Debit to Accounts Payable

BEG-5 Costello Computer Components Inc. uses a multi-column cash receipts journal. Indicate which column(s) is/are posted only in total, only daily, or both in total and daily.

Indicate postings to cash receipts journal.
(SO 3), **C**

1. Accounts Receivable
2. Sales Discounts
3. Cash
4. Other Accounts

BEG-6 Yates Co. uses special journals and a general journal. Identify the journal in which each of the following transactions is recorded.

Identify transactions for special journals.
(SO 2), **C**

(a) Purchased equipment on account.
(b) Purchased merchandise on account.
(c) Paid utility expense in cash.
(d) Sold merchandise on account.

BEG-7 Identify the special journal(s) in which the following column headings appear.

Identify transactions for special journals.
(SO 2), **C**

1. Sales Discounts Dr.
2. Accounts Receivable Cr.
3. Cash Dr.
4. Sales Cr.
5. Merchandise Inventory Dr.

Exercises

EG-1 Wei Company uses both special journals and a general journal as described in this appendix. On June 30, after all monthly postings had been completed, the Accounts Receivable control account in the general ledger had a debit balance of $350,000; the Accounts Payable control account had a credit balance of $87,000.

Determine control account balances, and explain posting of special journals.
(SO 1, 2), **AP**

The July transactions recorded in the special journals are summarized below. No entries affecting accounts receivable and accounts payable were recorded in the general journal for July.

Sales journal	Total sales $161,400
Purchases journal	Total purchases $54,360
Cash receipts journal	Accounts receivable column total $141,000
Cash payments journal	Accounts payable column total $47,500

Instructions

(a) What is the balance of the Accounts Receivable control account after the monthly postings on July 31?
(b) What is the balance of the Accounts Payable control account after the monthly postings on July 31?
(c) To what account(s) is the column total of $161,400 in the sales journal posted?
(d) To what account(s) is the accounts receivable column total of $141,000 in the cash receipts journal posted?

EG-2 Presented below is the subsidiary accounts receivable account of Quincy Smith.

Explain postings to subsidiary ledger.
(SO 1), **C**

Date	Ref.	Debit	Credit	Balance
2012				
Sept. 2	S31	61,000		61,000
9	G4		14,000	47,000
27	CR8		47,000	—

Instructions

Write a memo that explains each transaction.

Post various journals to control and subsidiary accounts.
(SO 1, 2), **AP**

EG-3 On September 1 the balance of the Accounts Receivable control account in the general ledger of Albert Company was $11,960. The customers' subsidiary ledger contained account balances as follows: Fleming $2,440, Park $2,640, Stiner $2,060, Zander $4,820. At the end of September the various journals contained the following information.

Sales journal: Sales to Zander $800; to Fleming $1,350; to Henry $1,030; to Stiner $1,100.

Cash receipts journal: Cash received from Stiner $1,310; from Zander $2,300; from Henry $410; from Park $1,800; from Fleming $1,240.

General journal: An allowance is granted to Zander $220.

Instructions

(a) Set up control and subsidiary accounts and enter the beginning balances. Do not construct the journals.
(b) Post the various journals. Post the items as individual items or as totals, whichever would be the appropriate procedure. (No sales discounts given.)
(c) Prepare a list of customers and prove the agreement of the controlling account with the subsidiary ledger at September 30, 2012.

Record transactions in sales and purchases journals.
(SO 1, 2), **AP**

EG-4 Spears Company uses special journals and a general journal. The following transactions occurred during September 2012.

Sept. 2 Sold merchandise on account to S. Daily, invoice no. 101, $480, terms n/30. The cost of the merchandise sold was $300.
10 Purchased merchandise on account from L. Dayne $600, terms 2/10, n/30.
12 Purchased office equipment on account from B. Shafer $6,500.
21 Sold merchandise on account to L. Perez, invoice no. 102 for $800, terms 2/10, n/30. The cost of the merchandise sold was $480.
25 Purchased merchandise on account from F. Trent $900, terms n/30.
27 Sold merchandise to M. Deitrich for $700 cash. The cost of the merchandise sold was $420.

Instructions

(a) Draw a sales journal (see Illustration G-6) and a single-column purchase journal (see Illustration G-12). (Use page 1 for each journal.)
(b) Record the transaction(s) for September that should be journalized in the sales journal and the purchases journal.

Record transactions in cash receipts and cash payments journals.
(SO 1, 2), **AP**

EG-5 Cole Co. uses special journals and a general journal. The following transactions occurred during May 2012.

May 1 R. Cole invested $60,000 cash in the business in exchange for common stock.
2 Sold merchandise to J. Simon for $6,000 cash. The cost of the merchandise sold was $4,200.
3 Purchased merchandise for $9,000 from L. M. Howe using check no. 101.
14 Paid salary to S. Little $700 by issuing check no. 102.
16 Sold merchandise on account to B. Jones for $900, terms n/30. The cost of the merchandise sold was $630.
22 A check of $9,000 is received from R. Wyatt in full for invoice 101; no discount given.

Instructions

(a) Draw a multiple-column cash receipts journal (see Illustration G-8) and a multiple-column cash payments journal (see Illustration G-15). (Use page 1 for each journal.)
(b) Record the transaction(s) for May that should be journalized in the cash receipts journal and cash payments journal.

Explain journalizing in cash journals.
(SO 2), **C**

EG-6 Oliver Company uses the columnar cash journals illustrated in the textbook. In April, the following selected cash transactions occurred.

1. Made a refund to a customer for the return of damaged goods.
2. Received collection from customer within the 3% discount period.

3. Purchased merchandise for cash.
4. Paid a creditor within the 3% discount period.
5. Received collection from customer after the 3% discount period had expired.
6. Paid freight on merchandise purchased.
7. Paid cash for office equipment.
8. Received cash refund from supplier for merchandise returned.
9. Paid cash dividend to stockholders.
10. Made cash sales.

Instructions
Indicate (a) the cash journal, and (b) the columns in the cash journal that should be used in recording each transaction.

EG-7 Ramirez Company has the following selected transactions during March.

Journalize transactions in general journal and post.
(SO 1, 2), **AP**

Mar. 2 Purchased equipment costing $6,000 from Briggs Company on account.
5 Received credit memorandum for $300 from Redbone Company for merchandise damaged in shipment to Ramirez.
7 Issued a credit memorandum for $400 to Sparks Company for merchandise the customer returned. The returned merchandise had a cost of $260.

Ramirez Company uses a one-column purchases journal, a sales journal, the columnar cash journals used in the text, and a general journal.

Instructions
(a) Journalize the transactions in the general journal.
(b) In a brief memo to the president of Ramirez Company, explain the postings to the control and subsidiary accounts.

EG-8 Below are some typical transactions incurred by Costello Company.

Indicate journalizing in special journals.
(SO 2), **C**

1. Payment of creditors on account.
2. Return of merchandise sold for credit.
3. Collection on account from customers.
4. Sale of land for cash.
5. Sale of merchandise on account.
6. Sale of merchandise for cash.
7. Received credit for merchandise purchased on credit.
8. Sales discount taken on goods sold.
9. Payment of employee wages.
10. Paid a cash dividend to stockholders.
11. Depreciation on building.
12. Purchase of office supplies for cash.
13. Purchase of merchandise on account.

Instructions
For each transaction, indicate whether it would normally be recorded in a cash receipts journal, cash payments journal, sales journal, single-column purchases journal, or general journal.

EG-9 The general ledger of Karlstad Company contained the following Accounts Payable control account (in T-account form). Also shown is the related subsidiary ledger.

Explain posting to control account and subsidiary ledger.
(SO 1, 3), **C**

GENERAL LEDGER

Accounts Payable

Determine the correct amount of the end-of-month posting from the sales journal to the Accounts Receivable control account.

Problems

PG-1 Moran Company's chart of accounts includes the following selected accounts.

Journalize transactions in cash receipts journal; post to control account and subsidiary ledger.
(SO 1, 2, 3), **AP**

101 Cash	401 Sales
112 Accounts Receivable	414 Sales Discounts
120 Merchandise Inventory	505 Cost of Goods Sold
311 Common Stock	

On April 1 the accounts receivable ledger of Moran Company showed the following balances: Collins $1,550, Harris $1,200, Fleetwood Co. $2,900, and Smith $1,700. The April transactions involving the receipt of cash were as follows.

Apr. 1 Stockholders invested additional cash in the business, $6,000, for common stock.
4 Received check for payment of account from Smith less 2% cash discount.
5 Received check for $620 in payment of invoice no. 307 from Fleetwood Co.
8 Made cash sales of merchandise totaling $7,245. The cost of the merchandise sold was $4,347.
10 Received check for $800 in payment of invoice no. 309 from Collins.
11 Received cash refund from a supplier for damaged merchandise $550.
23 Received check for $1,500 in payment of invoice no. 310 from Fleetwood Co.
29 Received check for payment of account from Harris.

Instructions
(a) Journalize the transactions above in a six-column cash receipts journal with columns for Cash Dr., Sales Discounts Dr., Accounts Receivable Cr., Sales Cr., Other Accounts Cr., and Cost of Goods Sold Dr./Merchandise Inventory Cr. Foot and crossfoot the journal.
(b) Insert the beginning balances in the Accounts Receivable control and subsidiary accounts, and post the April transactions to these accounts.
(c) Prove the agreement of the control account and subsidiary account balances.

(a) Balancing totals $19,615

(c) Accounts receivable $1,530

PG-2 Manilow Company's chart of accounts includes the following selected accounts.

Journalize transactions in cash payments journal; post to control account and subsidiary ledger.
(SO 1, 2, 3), **AP**

GLS

101 Cash	201 Accounts Payable
120 Merchandise Inventory	332 Dividends
130 Prepaid Insurance	505 Cost of Goods Sold
157 Equipment	

On October 1 the accounts payable ledger of Manilow Company showed the following balances: Gibson Company $1,700, Milo Co. $2,500, Newsome Co. $1,400, and Pagan Company $3,700. The October transactions involving the payment of cash were as follows.

Oct. 1 Purchased merchandise, check no. 63, $700.
3 Purchased equipment, check no. 64, $800.
5 Paid Gibson Company balance due of $1,700, less 2% discount, check no. 65, $1,666.
10 Purchased merchandise, check no. 66, $2,250.
15 Paid Newsome Co. balance due of $1,400, check no. 67.
16 A cash dividend is paid in the amount of $400, check no. 68.
19 Paid Milo Co. in full for invoice no. 610, $1,400 less 2% cash discount, check no. 69, $1,372.
29 Paid Pagan Company in full for invoice no. 264, $2,600, check no. 70.

Instructions
(a) Journalize the transactions above in a four-column cash payments journal with columns for Other Accounts Dr., Accounts Payable Dr., Merchandise Inventory Cr., and Cash Cr. Foot and crossfoot the journal.

(a) Balancing totals $11,250

(b) Insert the beginning balances in the Accounts Payable control and subsidiary accounts, and post the October transactions to these accounts.

(c) Accounts payable $2,200

(c) Prove the agreement of the control account and the subsidiary account balances.

Journalize transactions in multi-column purchases journal; post to the general and subsidiary ledgers.
(SO 1, 2, 3), **AP**

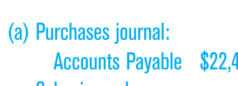
PG-3 The chart of accounts of Renteria Company includes the following selected accounts.

112 Accounts Receivable	401 Sales
120 Merchandise Inventory	412 Sales Returns and Allowances
126 Supplies	505 Cost of Goods Sold
157 Equipment	610 Advertising Expense
201 Accounts Payable	

In July the following selected transactions were completed. All purchases and sales were on account. The cost of all merchandise sold was 70% of the sales price.

July	1	Purchased merchandise from Carlin Company $7,000.
	2	Received freight bill from Johnson Shipping on Carlin purchase $400.
	3	Made sales to Nance Company $1,300, and to Franklin Bros. $1,900.
	5	Purchased merchandise from Flynn Company $3,200.
	8	Received credit on merchandise returned to Flynn Company $300.
	13	Purchased store supplies from Beran Supply $720.
	15	Purchased merchandise from Carlin Company $3,600 and from Ruiz Company $2,900.
	16	Made sales to Martin Company $3,450 and to Franklin Bros. $1,570.
	18	Received bill for advertising from Marlin Advertisements $600.
	21	Made sales to Nance Company $310 and to Randee Company $2,300.
	22	Granted allowance to Nance Company for merchandise damaged in shipment $40.
	24	Purchased merchandise from Flynn Company $3,000.
	26	Purchased equipment from Beran Supply $600.
	28	Received freight bill from Johnson Shipping on Flynn purchase of July 24, $380.
	30	Made sales to Martin Company $4,900.

Instructions



(a) Purchases journal: Accounts Payable $22,400
Sales journal: A/R $15,730

(a) Journalize the transactions above in a purchases journal, a sales journal, and a general journal. The purchases journal should have the following column headings: Date, Account Credited (Debited), Ref., Other Accounts Dr., and Merchandise Inventory Dr., Accounts Payable Cr.

(b) Post to both the general and subsidiary ledger accounts. (Assume that all accounts have zero beginning balances.)

(c) Accounts Receivable $15,690

(c) Prove the agreement of the control and subsidiary accounts.

Journalize transactions in special journals.
(SO 1, 2, 3), **AP**

PG-4 Selected accounts from the chart of accounts of Cross Company are shown below.

101 Cash	401 Sales
112 Accounts Receivable	412 Sales Returns and Allowances
120 Merchandise Inventory	414 Sales Discounts
126 Supplies	505 Cost of Goods Sold
157 Equipment	726 Salaries and Wages Expense
201 Accounts Payable	

The cost of all merchandise sold was 60% of the sales price. During January, Cross completed the following transactions.

Jan.	3	Purchased merchandise on account from Carr Co. $10,000.
	4	Purchased supplies for cash $80.
	4	Sold merchandise on account to Hartman $7,250, invoice no. 371, terms 1/10, n/30.
	5	Issued a debit memorandum to Carr Co. and returned $300 worth of damaged goods.
	6	Made cash sales for the week totaling $3,150.
	8	Purchased merchandise on account from Law Co. $4,500.
	9	Sold merchandise on account to Mays Corp. $5,800, invoice no. 372, terms 1/10, n/30.

Jan. 11 Purchased merchandise on account from Hoble Co. $3,700.
13 Paid in full Carr Co. on account less a 2% discount.
13 Made cash sales for the week totaling $5,340.
15 Received payment from Mays Corp. for invoice no. 372.
15 Paid semimonthly salaries of $14,300 to employees.
17 Received payment from Hartman for invoice no. 371.
17 Sold merchandise on account to Piper Co. $1,200, invoice no. 373, terms 1/10, n/30.
19 Purchased equipment on account from Johnson Corp. $5,500.
20 Made cash sales for the week totaling $3,200.
20 Paid in full Law Co. on account less a 2% discount.
23 Purchased merchandise on account from Carr Co. $7,800.
24 Purchased merchandise on account from Levine Corp. $4,690.
27 Made cash sales for the week totaling $3,730.
30 Received payment from Piper Co. for invoice no. 373.
31 Paid semimonthly salaries of $13,200 to employees.
31 Sold merchandise on account to Hartman $9,330, invoice no. 374, terms 1/10, n/30.

Clark Company uses the following journals.

1. Sales journal.
2. Single-column purchases journal.
3. Cash receipts journal with columns for Cash Dr., Sales Discounts Dr., Accounts Receivable Cr., Sales Cr., Other Accounts Cr., and Cost of Goods Sold Dr./Merchandise Inventory Cr.
4. Cash payments journal with columns for Other Accounts Dr., Accounts Payable Dr., Merchandise Inventory Cr., and Cash Cr.
5. General journal.

Instructions

Using the selected accounts provided:

(a) Record the January transactions in the appropriate journal noted.
(b) Foot and cross-foot all special journals.
(c) Show how postings would be made by placing ledger account numbers and check-marks as needed in the journals. (Actual posting to ledger accounts is not required.)

(a) Sales journal:
A/R $23,580

PG-5 Presented below are the purchases and cash payments journals for Garison Co. for its first month of operations.

Journalize in sales and cash receipts journals; post; prepare a trial balance; prove control to subsidiary; prepare adjusting entries; prepare an adjusted trial balance.
(SO 1, 2, 3), **AP**

PURCHASES JOURNAL **P1**

Date	Account Credited	Ref.	Merchandise Inventory Dr. Accounts Payable Cr.
July 4	J. Eaton		6,800
5	W. Foley		7,500
11	R. Gamble		3,920
13	M. Hill		15,300
20	D. Jacob		8,800
			42,320

CASH PAYMENTS JOURNAL **CP1**

Date	Account Debited	Ref.	Other Accounts Dr.	Accounts Payable Dr.	Merchandise Inventory Cr.	Cash Cr.
July 4	Store Supplies		600			600
10	W. Foley			7,500	75	7,425
11	Prepaid Rent		6,000			6,000
15	J. Eaton			6,800		6,800
19	Dividends		2,500			2,500
21	M. Hill			15,300	153	15,147
			9,100	29,600	228	38,472

In addition, the following transactions have not been journalized for July. The cost of all merchandise sold was 65% of the sales price.

July	1	The founder, R. Garison, invests $80,000 in cash in exchange for common stock.
	6	Sell merchandise on account to Hardy Co. $5,400 terms 1/10, n/30.
	7	Make cash sales totaling $4,000.
	8	Sell merchandise on account to D. Marlowe $3,600, terms 1/10, n/30.
	10	Sell merchandise on account to L. Clinton $4,900, terms 1/10, n/30.
	13	Receive payment in full from D. Marlowe.
	16	Receive payment in full from L. Clinton.
	20	Receive payment in full from Hardy Co.
	21	Sell merchandise on account to S. Kane $4,000, terms 1/10, n/30.
	29	Returned damaged goods to J. Eaton and received cash refund of $450.

Instructions

(a) Open the following accounts in the general ledger.

101 Cash	332 Dividends
112 Accounts Receivable	401 Sales
120 Merchandise Inventory	414 Sales Discounts
127 Store Supplies	505 Cost of Goods Sold
131 Prepaid Rent	631 Supplies Expense
201 Accounts Payable	729 Rent Expense
311 Common Stock	

(b) Cash receipts journal balancing totals $98,350

(b) Journalize the transactions that have not been journalized in the sales journal, the cash receipts journal (see Illustration G-8), and the general journal.
(c) Post to the accounts receivable and accounts payable subsidiary ledgers. Follow the sequence of transactions as shown in the problem.
(d) Post the individual entries and totals to the general ledger.
(e) Prepare a trial balance at July 31, 2012.
(f) Determine whether the subsidiary ledgers agree with the control accounts in the general ledger.
(g) The following adjustments at the end of July are necessary.
(1) A count of supplies indicates that $140 is still on hand.
(2) Recognize rent expense for July, $500.
Prepare the necessary entries in the general journal. Post the entries to the general ledger.
(h) Prepare an adjusted trial balance at July 31, 2012.

Journalize in special journals; post; prepare a trial balance.
(SO 1, 2, 3), **AP**

PG-6 The post-closing trial balance for Rivera Co. is as follows.

RIVERA CO.
Post-Closing Trial Balance
December 31, 2012

	Debit	Credit
Cash	$ 41,500	
Accounts Receivable	15,000	
Notes Receivable	45,000	
Merchandise Inventory	23,000	
Equipment	6,450	
Accumulated Depreciation—Equipment		$ 1,500
Accounts Payable		43,000
Common Stock		86,450
	$130,950	$130,950

The subsidiary ledgers contain the following information: (1) accounts receivable—N. Alspar $2,500, B. Cole $7,500, S. Devine $5,000; (2) accounts payable—S. Field $10,000, A. Gantler $18,000, and D. Harms $15,000. The cost of all merchandise sold was 65% of the sales price.

The transactions for January 2013 are as follows.

Jan.	3	Sell merchandise to B. Terrel $4,000, terms 2/10, n/30.
	5	Purchase merchandise from S. Warren $2,500, terms 2/10, n/30.
	7	Receive a check from S. Devine $3,500.
	11	Pay freight on merchandise purchased $300.
	12	Pay rent of $1,000 for January.
	13	Receive payment in full from B. Terrel.
	14	Post all entries to the subsidiary ledgers. Issue a credit memo to acknowledge receipt of damaged merchandise of $700 returned by N. Alspar.
	15	Send D. Harms a check for $14,850 in full payment of account, discount $150.
	17	Purchase merchandise from D. Milton $1,600, terms 2/10, n/30.
	18	Pay salaries of $4,300.
	20	Give A. Gantler a 60-day note for $18,000 in full payment of account payable.
	23	Total cash sales amount to $8,600.
	24	Post all entries to the subsidiary ledgers. Sell merchandise on account to B. Cole $7,700, terms 1/10, n/30.
	27	Send S. Warren a check for $950.
	29	Receive payment on a note of $40,000 from S. Lava (short-term, non-interest-bearing note).
	30	Return merchandise of $500 to D. Milton for credit. Post all journals to the subsidiary ledger.

Instructions

(a) Open general and subsidiary ledger accounts for the following.

101 Cash	311 Common Stock
112 Accounts Receivable	401 Sales
115 Notes Receivable	412 Sales Returns and Allowances
120 Merchandise Inventory	414 Sales Discounts
157 Equipment	505 Cost of Goods Sold
158 Accumulated Depreciation—Equipment	726 Salaries and Wages Expense
200 Notes Payable	727 Office Salaries Expense
201 Accounts Payable	729 Rent Expense

(b) Record the January transactions in a sales journal, a single-column purchases journal, a cash receipts journal (see Illustration G-8), a cash payments journal (see Illustration G-15), and a general journal.

(c) Post the appropriate amounts to the general ledger.

(d) Prepare a trial balance at January 31, 2013.

(e) Determine whether the subsidiary ledgers agree with controlling accounts in the general ledger.

appendix H

ACCOUNTING FOR PARTNERSHIPS

study objectives

After studying this appendix, you should be able to:

1 Identify the characteristics of the partnership form of business organization.

2 Explain the accounting entries for the formation of a partnership.

3 Identify the bases for dividing net income or net loss.

4 Describe the form and content of partnership financial statements.

5 Explain the effects of the entries to record the liquidation of a partnership.

Partnership Form of Organization

The Uniform Partnership Act provides the basic rules for the formation and operation of partnerships in most states in the United States. This act defines a **partnership** as an association of two or more persons to carry on as co-owners of a business for profit. Partnerships are common in retail establishments and in small manufacturing companies. Also, accountants, lawyers, and doctors find it desirable to form partnerships with other professionals in their field. Professional partnerships vary in size from a medical partnership of 3 to 5 doctors, to 150 to 200 partners in a large law firm, to more than 2,000 partners in an international accounting firm.

CHARACTERISTICS OF PARTNERSHIPS

study objective 1

Identify the characteristics of the partnership form of business organization.

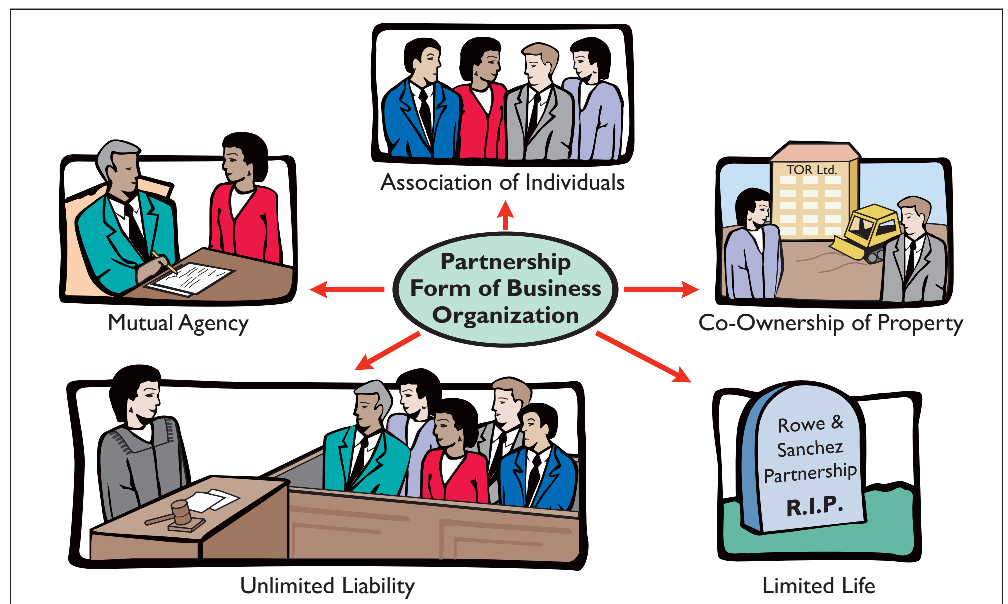
Partnerships are fairly easy to form. They can be formed simply by a verbal agreement or, more formally, by putting in writing the rights and obligations of the partners. Partners who have not put their agreement in writing sometimes have found that the characteristics of partnerships can lead to later difficulties. The principal characteristics of the partnership form of business organization are shown in Illustration H-1 (page H-2) and explained in the following sections.

Association of Individuals

The voluntary association of two or more individuals in a partnership may be based on as simple an act as a handshake. However, it is preferable to state the agreement in writing. Under the Uniform Partnership Act, a partnership is a legal entity for certain purposes. For instance, property (land, buildings, equipment) can be owned in the name of the partnership, and the firm can sue or be sued. **A partnership also is an accounting entity for financial reporting purposes.** Thus, the purely personal assets, liabilities, and transactions of the partners are excluded from the accounting records of the partnership.

The net income of a partnership is not taxed as a separate entity. But, a partnership must file an information tax return showing partnership net income and each partner's share of that net income. Each partner's share is taxable at

Illustration H-1
Partnership characteristics



personal tax rates, regardless of the amount of net income withdrawn from the business during the year.

Mutual Agency

Helpful Hint Because of mutual agency, an individual should be extremely cautious in selecting partners.

Mutual agency means that each partner acts on behalf of the partnership when engaging in partnership business. The act of any partner is binding on all other partners. This is true even when partners act beyond the scope of their authority, so long as the act appears to be appropriate for the partnership. For example, a partner of a grocery store who purchases a delivery truck creates a binding contract in the name of the partnership, even if the partnership agreement denies this authority. On the other hand, if a partner in a law firm purchased a snowmobile for the partnership, such an act would not be binding on the partnership. The purchase is clearly outside the scope of partnership business.

Limited Life

A partnership does not have unlimited life. It may be ended voluntarily at any time through the acceptance of a new partner or the withdrawal of a partner. A partnership may be ended involuntarily by the death or incapacity of a partner. Thus the life of a partnership is indefinite. **Partnership dissolution** occurs whenever a partner withdraws or a new partner is admitted. Dissolution of a partnership does not necessarily mean that the business ends. If the continuing partners agree, operations can continue without interruption by forming a new partnership.

Unlimited Liability

Each partner is **personally and individually liable** for all partnership liabilities. Creditors' claims attach first to partnership assets. If these are insufficient, the claims then attach to the personal resources of any partner, irrespective of that partner's equity in the partnership. Because each partner is responsible for all the debts of the partnership, each partner is said to have **unlimited liability**.

Co-Ownership of Property

Partnership assets are owned jointly by the partners. If the partnership is dissolved, the assets do not legally revert to the original contributor. Each partner

has a claim on total assets equal to the balance in his or her respective capital account. This claim does not attach to specific assets that an individual partner contributed to the firm. Similarly, if a partner invests a building in the partnership valued at $100,000 and the building is later sold at a gain of $20,000, that partner does not personally receive the entire gain.

Partnership net income (or net loss) is also co-owned. **If the partnership contract does not specify to the contrary, all net income or net loss is shared equally by the partners.** As you will see later, though, partners may agree to unequal sharing of net income or net loss.

ORGANIZATIONS WITH PARTNERSHIP CHARACTERISTICS

With surprising speed, states are creating special forms of business organizations that have partnership characteristics. These new organizations are being adopted by many small companies. These special forms are: limited partnerships, limited liability partnerships, limited liability companies, and "S" corporations.

Limited Partnerships

In a **limited partnership**, one or more partners have **unlimited liability** and one or more partners have **limited liability** for the debts of the firm. Those with unlimited liability are called **general partners**. Those with limited liability are called **limited partners**. Limited partners are responsible for the debts of the partnership up to the limit of their investment in the firm. This organization is identified in its name with the words "Limited Partnership," or "Ltd.," or "LP." For the privilege of limited liability, the limited partner usually accepts less compensation than a general partner and exercises less influence in the affairs of the firm.

Limited Liability Partnership

Most states allow professionals such as lawyers, doctors, and accountants to form a **limited liability partnership** or "LLP." The LLP is designed to protect innocent partners from malpractice or negligence claims resulting from the acts of another partner. LLPs generally carry large insurance policies in case the partnership is guilty of malpractice.

Limited Liability Companies

A new, hybrid form of business organization with certain features like a corporation and others like a limited partnership is the **limited liability company**, or "LLC" (or "LC"). An LLC usually has a limited life. The owners, called **members**, have limited liability like owners of a corporation. Whereas limited partners do not actively participate in the management of a limited partnership (LP), the members of a limited liability company (LLC) can assume an active management role. For income tax purposes, the IRS usually classifies an LLC as a partnership.

"S" Corporations

An **"S" corporation** is a corporation that is taxed in the same way that a partnership is taxed. To qualify as an "S" corporation, the company must have 75 or fewer stockholders, all of whom must be citizens or residents of the United States. The advantage of an "S" corporation (also called a Sub-Chapter "S" corporation) is that, like a partnership and unlike a corporation, it does not pay income taxes.

ADVANTAGES AND DISADVANTAGES OF PARTNERSHIPS

Why do people choose partnerships? One major advantage of a partnership is that the **skills and resources of two or more individuals can be combined**. For example, a large public accounting firm such as Ernst & Young must have expertise in auditing, taxation, and management consulting. In addition, a partnership is **easily formed and is relatively free from governmental regulations and restrictions**. A partnership does not have to contend with the "red tape" that a corporation must face. Also, decisions can be made quickly on substantive matters affecting the firm; there is no board of directors that must be consulted.

On the other hand, partnerships also have some major disadvantages: **mutual agency**, **limited life**, and **unlimited liability**. Unlimited liability is particularly troublesome. Many individuals fear they may lose not only their initial investment but also their personal assets, if those assets are needed to pay partnership creditors. As a result, partnerships often find it difficult to obtain large amounts of investment capital. That is one reason why the largest business enterprises in the United States are corporations, not partnerships.

The advantages and disadvantages of the partnership form of business organization are summarized in Illustration H-2.

Illustration H-2
Advantages and disadvantages of a partnership

Advantages	Disadvantages
Combining skills and resources of two or more individuals	Mutual agency
Ease of formation	Limited life
Freedom from governmental regulations and restrictions	Unlimited liability
Ease of decision making	

THE PARTNERSHIP AGREEMENT

Ideally, the agreement of two or more individuals to form a partnership should be expressed in writing. This written contract is often called the **partnership agreement** or **articles of co-partnership**. The partnership agreement contains such basic information as the name and principal location of the firm, the purpose of the business, and date of inception. In addition, relationships among the partners should be specified, such as:

1. Names and capital contributions of partners.
2. Rights and duties of partners.
3. Basis for sharing net income or net loss.
4. Provision for withdrawals of assets.
5. Procedures for submitting disputes to arbitration.
6. Procedures for the withdrawal or addition of a partner.
7. Rights and duties of surviving partners in the event of a partner's death.

We cannot overemphasize the importance of a written contract. The agreement should be drawn with care and should attempt to anticipate all possible situations, contingencies, and disagreements. The help of a lawyer is highly desirable in preparing the agreement.

Basic Partnership Accounting

We now turn to the basic accounting for partnerships. The major accounting issues relate to forming the partnership, dividing income or loss, and preparing financial statements.

FORMING A PARTNERSHIP

Each partner's initial investment in a partnership is entered in the partnership records. These investments should be recorded at the **fair value of the assets at the date of their transfer to the partnership**. The values assigned must be agreed to by all of the partners.

study objective 2

Explain the accounting entries for the formation of a partnership.

To illustrate, assume that A. Rolfe and T. Shea combine their proprietorships to start a partnership named U.S. Software. The firm will specialize in developing financial modeling software packages. Rolfe and Shea have the following assets prior to the formation of the partnership.

Illustration H-3 Book and fair values of assets invested

	Book Value		Fair Value	
	A. Rolfe	**T. Shea**	**A. Rolfe**	**T. Shea**
Cash	$ 8,000	$ 9,000	**$ 8,000**	**$ 9,000**
Office equipment	5,000		**4,000**	
Accumulated depreciation	(2,000)			
Accounts receivable		4,000		**4,000**
Allowance for doubtful accounts		(700)		**(1,000)**
	$11,000	$12,300	**$12,000**	**$12,000**

The entries to record the investments are:

Investment of A. Rolfe

	Debit	Credit
Cash	8,000	
Office Equipment	4,000	
A. Rolfe, Capital		12,000
(To record investment of Rolfe)		

A	=	L	+	OE
+8,000				
+4,000				
				+12,000

Cash Flows
+8,000

Investment of T. Shea

	Debit	Credit
Cash	9,000	
Accounts Receivable	4,000	
Allowance for Doubtful Accounts		1,000
T. Shea, Capital		12,000
(To record investment of Shea)		

A	=	L	+	OE
+9,000				
+4,000				
−1,000				
				+12,000

Cash Flows
+9,000

Note that neither the original cost of the office equipment ($5,000) nor its book value ($5,000 − $2,000) is recorded by the partnership. The equipment is recorded at its fair value, $4,000. Because the equipment has not been used by the partnership, there is no accumulated depreciation.

In contrast, the gross claims on customers ($4,000) are carried forward to the partnership. The allowance for doubtful accounts is adjusted to $1,000 to arrive at a cash (net) realizable value of $3,000. A partnership may start with an allowance for doubtful accounts because it will continue to collect existing accounts receivable, some of which are expected to be uncollectible. In addition, this procedure maintains the control and subsidiary relationship between Accounts Receivable and the accounts receivable subsidiary ledger.

After the partnership has been formed, the accounting for transactions is similar to any other type of business organization. For example, all transactions with outside parties, such as the purchase or sale of merchandise inventory and the payment or receipt of cash, should be recorded the same for a partnership as for a corporation.

The steps in the accounting cycle described in Chapter 4 also apply to a partnership. For example, the partnership prepares a trial balance and journalizes and posts adjusting entries. A work sheet may be used. There are minor differences in journalizing and posting closing entries and in preparing financial statements, as explained in the following sections.

DIVIDING NET INCOME OR NET LOSS

Partnership net income or net loss is shared equally unless the partnership contract indicates otherwise. The same basis of division usually applies to both net income and net loss. It is customary to refer to this basis as the **income ratio**, the **income and loss ratio**, or the **profit and loss (P&L) ratio**. Because of its wide acceptance, we will use the term **income ratio** to identify the basis for dividing net income and net loss. A partner's share of net income or net loss is recognized in the capital accounts through closing entries.

Closing Entries

Four entries are required in preparing closing entries for a partnership. The entries are:

1. Debit each revenue account for its balance, and credit Income Summary for total revenues.
2. Debit Income Summary for total expenses, and credit each expense account for its balance.
3. Debit Income Summary for its balance, and credit each partner's Capital account for his or her share of net income. Or, credit Income Summary, and debit each partner's Capital account for his or her share of net loss.
4. Debit each partner's Capital account for the balance in that partner's drawing account, and credit each partner's drawing account for the same amount.

The first two entries are the same as in a corporation. The last two entries are different because (1) there are two or more owners' capital and drawing accounts, and (2) it is necessary to divide net income (or net loss) among the partners.

To illustrate the last two closing entries, assume that AB Company has net income of $32,000 for 2012. The partners, L. Arbor and D. Barnett, share net income and net loss equally. Drawings for the year were Arbor $8,000 and Barnett $6,000. The last two closing entries are:

Date	Account	Debit	Credit
Dec. 31	Income Summary	32,000	
	L. Arbor, Capital ($32,000 × 50%)		16,000
	D. Barnett, Capital ($32,000 × 50%)		16,000
	(To transfer net income to partners' capital accounts)		
31	L. Arbor, Capital	8,000	
	D. Barnett, Capital	6,000	
	L. Arbor, Drawing		8,000
	D. Barnett, Drawing		6,000
	(To close drawing accounts to capital accounts)		

Assume that the beginning capital balance is $47,000 for Arbor and $36,000 for Barnett. The capital and drawing accounts will show the following after posting the closing entries.

Illustration H-4
Partners' capital and drawing accounts after closing

L. Arbor, Capital

Debit			Credit		
12/31	**Clos.**	**8,000**	1/1	Bal.	47,000
			12/31	**Clos.**	**16,000**
			12/31	Bal.	55,000

D. Barnett, Capital

Debit			Credit		
12/31	**Clos.**	**6,000**	1/1	Bal.	36,000
			12/31	**Clos.**	**16,000**
			12/31	Bal.	46,000

L. Arbor, Drawing

Debit			Credit		
12/31	Bal.	8,000	12/31	**Clos.**	**8,000**

D. Barnett, Drawing

Debit			Credit		
12/31	Bal.	6,000	12/31	**Clos.**	**6,000**

The partners' capital accounts are permanent accounts; their drawing accounts are temporary accounts. Normally, the capital accounts will have credit balances and the drawing accounts will have debit balances. Drawing accounts are debited when partners withdraw cash or other assets from the partnership for personal use.

Income Ratios

study objective 3
Identify the bases for dividing net income or net loss.

As noted earlier, the partnership agreement should specify the basis for sharing net income or net loss. The following are typical income ratios.

1. A fixed ratio, expressed as a proportion (6 : 4), a percentage (70% and 30%), or a fraction (2/3 and 1/3).
2. A ratio based either on capital balances at the beginning of the year or on average capital balances during the year.
3. Salaries to partners and the remainder on a fixed ratio.
4. Interest on partners' capital balances and the remainder on a fixed ratio.
5. Salaries to partners, interest on partners' capital, and the remainder on a fixed ratio.

The objective is to settle on a basis that will equitably reflect the partners' capital investment and service to the partnership.

A fixed ratio is easy to apply, and it may be an equitable basis in some circumstances. Assume, for example, that Hughes and Lane are partners. Each contributes the same amount of capital, but Hughes expects to work full-time in the partnership and Lane expects to work only half-time. Accordingly, the partners agree to a fixed ratio of 2/3 to Hughes and 1/3 to Lane.

A ratio based on capital balances may be appropriate when the funds invested in the partnership are considered the critical factor. Capital ratios may also be equitable when a manager is hired to run the business and the partners do not plan to take an active role in daily operations.

The three remaining ratios (items 3, 4, and 5) give specific recognition to differences among partners. These ratios provide salary allowances for time worked and interest allowances for capital invested. Then, any remaining net income or net loss is allocated on a fixed ratio. Some caution needs to be exercised in working with these types of income ratios. These ratios pertain exclusively to **the computations that are required in dividing net income or net loss** among the partners.

Salaries to partners and interest on partners' capital are not expenses of the partnership. Therefore, these items do not enter into the matching of expenses with revenues and the determination of net income or net loss. For a partnership, as for other entities, salaries expense pertains to the cost of services performed by employees. Likewise, interest expense relates to the cost of borrowing from creditors. But partners, as owners, are not considered either

employees or **creditors**. Therefore, when the income ratio includes a salary allowance for partners, some partnership agreements permit the partner to make monthly withdrawals of cash based on their "salary." Such withdrawals are debited to the partner's drawing account.

Salaries, Interest, and Remainder on a Fixed Ratio

Under income ratio (5) in the list above, the provisions for salaries and interest must be applied **before** the remainder is allocated on the specified fixed ratio. **This is true even if the provisions exceed net income. It is also true even if the partnership has suffered a net loss for the year.** Detailed information concerning the division of net income or net loss should be shown below net income on the income statement.

To illustrate this income ratio, assume that Sara King and Ray Lee are co-partners in the Kingslee Company. The partnership agreement provides for: (1) salary allowances of $8,400 to King and $6,000 to Lee, (2) interest allowances of 10% on capital balances at the beginning of the year, and (3) the remainder equally. Capital balances on January 1 were King $28,000, and Lee $24,000. In 2012, partnership net income is $22,000. The division of net income is as follows.

Illustration H-5 Income statement with division of net income

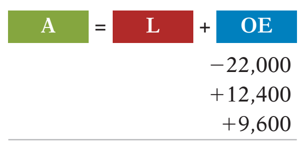
KINGSLEE COMPANY
Income Statement (partial)
For the Year Ended December 31, 2012

Sales	$200,000
Net income	$ 22,000

Division of Net Income

	Sara King	Ray Lee	Total
Salary allowance	$ 8,400	$ 6,000	$ 14,400
Interest allowance on partners' capital			
Sara King ($28,000 × 10%)	2,800		
Ray Lee ($24,000 × 10%)		2,400	
Total interest allowance			5,200
Total salaries and interest	11,200	8,400	19,600
Remaining income, $2,400			
($22,000 − $19,600)			
Sara King ($2,400 × 50%)	1,200		
Ray Lee ($2,400 × 50%)		1,200	
Total remainder			2,400
Total division of net income	**$12,400**	**$9,600**	**$22,000**

The entry to record the division of net income is:



−22,000
+12,400
+9,600

Cash Flows
no effect

Dec. 31	Income Summary	22,000	
	Sara King, Capital		12,400
	Ray Lee, Capital		9,600
	(To close net income to partners' capital)		

Now let's look at a situation in which the salary and interest allowances exceed net income. Assume that Kingslee Company's net income is only $18,000.

In this case, the salary and interest allowances will create a deficiency of $1,600 ($19,600 − $18,000). The computations of the allowances are the same as those in the preceding example. Beginning with total salaries and interest, we complete the division of net income as follows.

Illustration H-6 Division of net income—income deficiency

	Sara King	Ray Lee	Total
Total salaries and interest	$ 11,200	$ 8,400	$ 19,600
Remaining deficiency ($1,600)			
($18,000 − $19,600)			
Sara King ($1,600 × 50%)	(800)		
Ray Lee ($1,600 × 50%)		(800)	
Total remainder			(1,600)
Total division	**$10,400**	**$7,600**	**$18,000**

PARTNERSHIP FINANCIAL STATEMENTS

study objective 4

Describe the form and content of partnership financial statements.

The financial statements of a partnership are similar to those of a corporation. The income statement for a partnership is identical to the income statement for a corporation except for the additional section that reports the division of net income, as shown earlier.

The owners' equity statement for a partnership is called the **partners' capital statement**. Its function is to explain the changes in each partner's capital account and in total partnership capital during the year. The partners' capital statement for Kingslee Company is shown below. It is based on the division of $22,000 of net income in Illustration H-5. The statement includes assumed data for the additional investment and drawings.

Illustration H-7 Partners' capital statement

KINGSLEE COMPANY
Partners' Capital Statement
For the Year Ended December 31, 2012

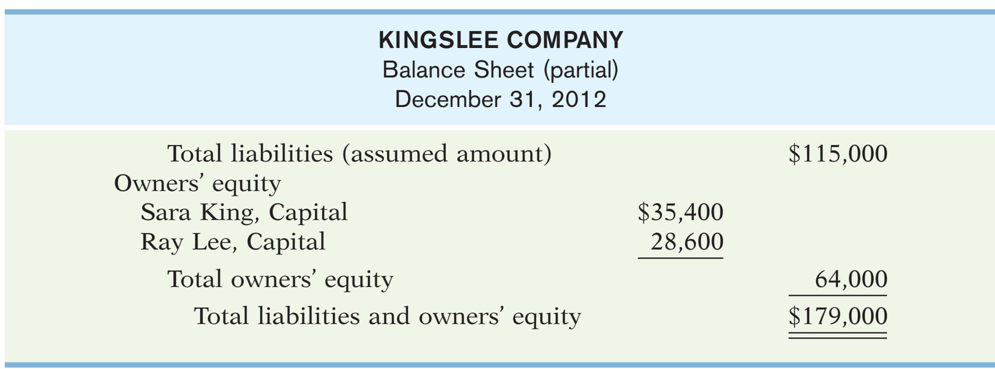
	Sara King	Ray Lee	Total
Capital, January 1	$ 28,000	$ 24,000	$ 52,000
Add: Additional investment	2,000		2,000
Net income	12,400	9,600	22,000
	42,400	33,600	76,000
Less: Drawings	7,000	5,000	12,000
Capital, December 31	**$35,400**	**$28,600**	**$64,000**

Helpful Hint Partners' capital may change due to (1) additional investment, (2) drawings, and (3) net income or net loss.

The partners' capital statement is prepared from the income statement and the partners' capital and drawing accounts.

The balance sheet for a partnership is the same as for a corporation except for the owner's equity section. In a partnership, the capital balances of each partner are shown in the balance sheet. The owners' equity section for Kingslee Company is shown in Illustration H-8 (page H-10).

Illustration H-8
Owners' equity section of a partnership balance sheet



KINGSLEE COMPANY Balance Sheet (partial) December 31, 2012		
Total liabilities (assumed amount)		$115,000
Owners' equity		
Sara King, Capital	$35,400	
Ray Lee, Capital	28,600	
Total owners' equity		64,000
Total liabilities and owners' equity		$179,000

Admission and Withdrawal of Partners

We have seen how the basic accounting for a partnership works. Another issue relates to the accounting for the addition or withdrawal of a partner. From an economic standpoint, the admission or withdrawal of a partner is often of minor significance in the continuity of the business. For example, in large public accounting or law firms, partners are added or dropped without any change in operating policies. Because the accounting for the admission or withdrawal of a partner is complex, it is discussed in more advanced accounting courses.

Liquidation of a Partnership

study objective 5
Explain the effects of the entries to record the liquidation of a partnership.

The liquidation of a partnership terminates the business. It involves selling the assets of the firm, paying liabilities, and distributing any remaining assets to the partners. Liquidation may result from the sale of the business by mutual agreement of the partners, from the death of a partner, or from bankruptcy. In contrast to partnership dissolution, **partnership liquidation** ends both the legal and economic life of the entity.

From an accounting standpoint, liquidation should be preceded by completing the accounting cycle for the final operating period. This includes preparing adjusting entries and financial statements. It also involves preparing closing entries and a post-closing trial balance. Thus, only balance sheet accounts should be open as the liquidation process begins.

In liquidation, the sale of noncash assets for cash is called **realization**. Any difference between book value and the cash proceeds is called the **gain or loss on realization**. To liquidate a partnership, it is necessary to:

1. Sell noncash assets for cash and recognize a gain or loss on realization.
2. Allocate gain/loss on realization to the partners based on their income ratios.
3. Pay partnership liabilities in cash.
4. Distribute remaining cash to partners on the basis of their **capital balances**.

Each of the steps must be performed in sequence. Creditors must be paid **before** partners receive any cash distributions. Each step also must be recorded by an accounting entry.

When a partnership is liquidated, all partners may have credit balances in their capital accounts. This situation is called **no capital deficiency**. Or, at least one partner's capital account may have a debit balance. This situation is termed a **capital deficiency**. To illustrate each of these conditions, assume that the Ace Company is liquidated when its ledger shows the assets, liabilities, and owners' equity accounts listed in Illustration H-9.

Illustration H-9 Account balances prior to liquidation

Assets		Liabilities and Owners' Equity	
Cash	$ 5,000	Notes payable	$15,000
Accounts receivable	15,000	Accounts payable	16,000
Inventory	18,000	R. Arnet, Capital	15,000
Equipment	35,000	P. Carey, Capital	17,800
Accum. depr.—equipment	(8,000)	W. Eaton, Capital	1,200
	$65,000		$65,000

NO CAPITAL DEFICIENCY

The partners of Ace Company agree to liquidate the partnership on the following terms: (1) The noncash assets of the partnership will be sold to Jackson Enterprises for $75,000 cash. And (2) the partnership will pay its partnership liabilities. The income ratios of the partners are 3 : 2 : 1, respectively. The steps in the liquidation process are as follows.

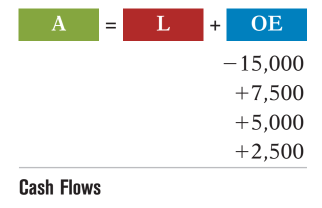
1. The noncash assets (accounts receivable, inventory, and equipment) are sold for $75,000. The book value of these assets is $60,000 ($15,000 + $18,000 + $35,000 − $8,000). Thus a gain of $15,000 is realized on the sale. The entry is:

(1)		
Cash	75,000	
Accumulated Depreciation—Equipment	8,000	
Accounts Receivable		15,000
Inventory		18,000
Equipment		35,000
Gain on Realization		15,000
(To record realization of noncash assets)		

A = L + OE
+75,000
+8,000
−15,000
−18,000
−35,000
+15,000 (OE)
Cash Flows
+75,000

2. The gain on realization of $15,000 is allocated to the partners on their income ratios, which are 3 : 2 : 1. The entry is:

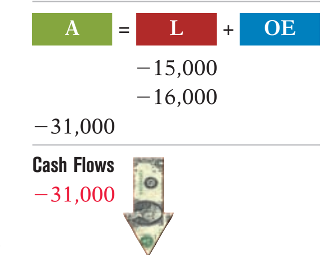
(2)		
Gain on Realization	15,000	
R. Arnet, Capital ($15,000 × 3/6)		7,500
P. Carey, Capital ($15,000 × 2/6)		5,000
W. Eaton, Capital ($15,000 × 1/6)		2,500
(To allocate gain to partners' capital accounts)		



A = L + OE
−15,000 (OE)
+7,500 (OE)
+5,000 (OE)
+2,500 (OE)
Cash Flows
no effect

3. Partnership liabilities consist of Notes Payable $15,000 and Accounts Payable $16,000. Creditors are paid in full by a cash payment of $31,000. The entry is:

(3)		
Notes Payable	15,000	
Accounts Payable	16,000	
Cash		31,000
(To record payment of partnership liabilities)		



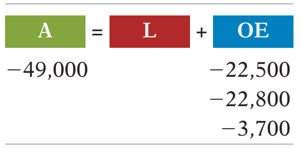
A = L + OE
−15,000 (L)
−16,000 (L)
−31,000 (A)
Cash Flows
−31,000

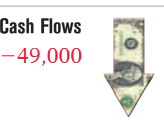
4. The remaining cash is distributed to the partners on the basis of **their capital balances**. After the entries in the first three steps are posted, all partnership accounts, including Gain on Realization, will have zero balances except for four accounts: Cash $49,000; R. Arnet, Capital $22,500; P. Carey, Capital $22,800; and W. Eaton, Capital $3,700, as shown in Illustration H-10 (page H-12).

Cash		R. Arnet, Capital		P. Carey, Capital		W. Eaton, Capital	
Bal. 5,000	(3) 31,000		Bal. 15,000		Bal. 17,800		Bal. 1,200
(1) 75,000			(2) 7,500		(2) 5,000		(2) 2,500
Bal. 49,000			**Bal. 22,500**		**Bal. 22,800**		**Bal. 3,700**

Illustration H-10 Ledger balances before distribution of cash

The entry to record the distribution of cash is as follows.





(4)		
R. Arnet, Capital	22,500	
P. Carey, Capital	22,800	
W. Eaton, Capital	3,700	
Cash		49,000
(To record distribution of cash to partners)		

After this entry is posted, all partnership accounts will have zero balances.

A word of caution: **Cash should not be distributed to partners on the basis of their income-sharing ratios.** On this basis, Arnet would receive three-sixths, or $24,500, which would produce an erroneous debit balance of $2,000. The income ratio is the proper basis for allocating net income or loss. **It is not a proper basis for making the final distribution of cash to the partners.**

Helpful Hint Zero balances after posting is a quick proof of the accuracy of the cash distribution entry.

Schedule of Cash Payments

Some accountants prepare a cash payments schedule to determine the distribution of cash to the partners in the liquidation of a partnership. The **schedule of cash payments** is organized around the basic accounting equation. The schedule for the Ace Company is shown in Illustration H-11. The numbers in parentheses refer to the four required steps in the liquidation of a partnership. They also identify the accounting entries that must be made. The cash payments schedule is especially useful when the liquidation process extends over a period of time.

Illustration H-11 Schedule of cash payments, no capital deficiency

ACE COMPANY
Schedule of Cash Payments

Item		Cash	+	Noncash Assets	=	Liabilities	+	R. Arnet Capital	+	P. Carey Capital	+	W. Eaton Capital
Balances before liquidation		5,000	+	60,000	=	31,000	+	15,000	+	17,800	+	1,200
Sales of noncash assets and allocation of gain	**(1)&(2)**	**75,000**	**+**	**(60,000)**	**=**			**7,500**	**+**	**5,000**	**+**	**2,500**
New balances		80,000	+	–0–	=	31,000	+	22,500	+	22,800	+	3,700
Pay liabilities	**(3)**	**(31,000)**			**=**	**(31,000)**						
New balances		49,000	+	–0–	=	–0–	+	22,500	+	22,800	+	3,700
Cash distribution to partners	**(4)**	**(49,000)**			**=**			**(22,500)**	**+**	**(22,800)**	**+**	**(3,700)**
Final balances		–0–		–0–		–0–		–0–		–0–		–0–

CAPITAL DEFICIENCY

A capital deficiency may be caused by recurring net losses, excessive drawings, or losses from realization suffered during liquidation. To illustrate, assume that Ace Company is on the brink of bankruptcy. The partners decide to liquidate by

having a "going-out-of-business" sale. Merchandise is sold at substantial discounts, and the equipment is sold at auction. Cash proceeds from these sales and collections from customers total only $42,000. Thus, the loss from liquidation is $18,000 ($60,000 − $42,000). The steps in the liquidation process are as follows.

1. The entry for the realization of noncash assets is:

(1)

	Debit	Credit
Cash	42,000	
Accumulated Depreciation—Equipment	8,000	
Loss on Realization	18,000	
Accounts Receivable		15,000
Inventory		18,000
Equipment		35,000
(To record realization of noncash assets)		

A	= L	+ OE
+42,000		
+8,000		
		−18,000
−15,000		
−18,000		
−35,000		

Cash Flows
+42,000

2. The loss on realization is allocated to the partners on the basis of their income ratios. The entry is:

(2)

	Debit	Credit
R. Arnet, Capital ($18,000 × 3/6)	9,000	
P. Carey, Capital ($18,000 × 2/6)	6,000	
W. Eaton, Capital ($18,000 × 1/6)	3,000	
Loss on Realization		18,000
(To allocate loss on realization to partners)		

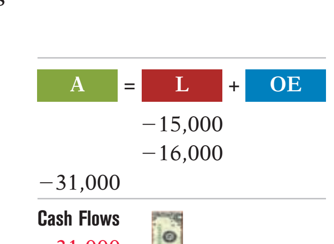
A	= L	+ OE
		−9,000
		−6,000
		−3,000
		+18,000

Cash Flows
no effect

3. Partnership liabilities are paid. This entry is the same as in the previous example.

(3)

	Debit	Credit
Notes Payable	15,000	
Accounts Payable	16,000	
Cash		31,000
(To record payment of partnership liabilities)		



A	= L	+ OE
	−15,000	
	−16,000	
−31,000		

Cash Flows
−31,000

4. After posting the three entries, two accounts will have debit balances—Cash $16,000, and W. Eaton, Capital $1,800. Two accounts will have credit balances—R. Arnet, Capital $6,000, and P. Carey, Capital $11,800. All four accounts are shown below.

Illustration H-12 Ledger balances before distribution of cash

Cash (Dr.)	Cash (Cr.)	R. Arnet, Capital (Dr.)	R. Arnet, Capital (Cr.)	P. Carey, Capital (Dr.)	P. Carey, Capital (Cr.)	W. Eaton, Capital (Dr.)	W. Eaton, Capital (Cr.)
Bal. 5,000	(3) 31,000	(2) 9,000	Bal. 15,000	(2) 6,000	Bal. 17,800	(2) 3,000	Bal. 1,200
(1) 42,000							
			Bal. 6,000		**Bal. 11,800**	**Bal. 1,800**	
Bal. 16,000							

Eaton has a capital deficiency of $1,800, and thus owes the partnership $1,800. Arnet and Carey have a legally enforceable claim for that amount against Eaton's personal assets. The distribution of cash is still made on the basis of capital balances. But the amount will vary depending on how Eaton's deficiency is settled. Two alternatives are presented below.

Payment of Deficiency

If the partner with the capital deficiency pays the amount owed the partnership, the deficiency is eliminated. To illustrate, assume that Eaton pays $1,800 to the partnership. The entry is:

(a)

	Debit	Credit
Cash	1,800	
W. Eaton, Capital		1,800
(To record payment of capital deficiency by Eaton)		

After posting this entry, account balances are as follows.

Cash		R. Arnet, Capital		P. Carey, Capital		W. Eaton, Capital	
Bal. 5,000	(3) 31,000	(2) 9,000	Bal. 15,000	(2) 6,000	Bal. 17,800	(2) 3,000	Bal. 1,200
(1) 42,000			**Bal. 6,000**		**Bal. 11,800**		(a) 1,800
(a) 1,800							**Bal. –0–**
Bal. 17,800							

Illustration H-13 Ledger balances after paying capital deficiency

The cash balance of \$17,800 is now equal to the credit balances in the capital accounts (Arnet \$6,000 + Carey \$11,800). Cash now is distributed on the basis of these balances. The entry is:

	Debit	Credit
R. Arnet, Capital	6,000	
P. Carey, Capital	11,800	
Cash		17,800
(To record distribution of cash to the partners)		

After this entry is posted, all accounts will have zero balances.

Nonpayment of Deficiency

If a partner with a capital deficiency is unable to pay the amount owed to the partnership, the partners with credit balances must absorb the loss. The loss is allocated on the basis of the income ratios that exist between the partners with credit balances.

For example, the income ratios of Arnet and Carey are 3:2, or 3/5 and 2/5, respectively. Thus, the following entry would be made to remove Eaton's capital deficiency.

(a)

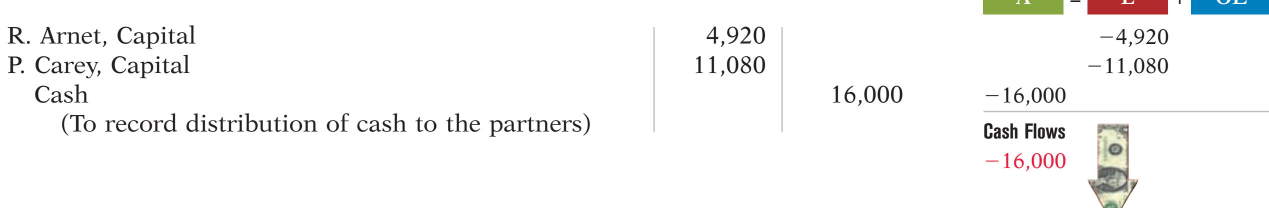
	Debit	Credit
R. Arnet, Capital (\$1,800 × 3/5)	1,080	
P. Carey, Capital (\$1,800 × 2/5)	720	
W. Eaton, Capital		1,800
(To record write-off of capital deficiency)		

After posting this entry, the cash and capital accounts will have the following balances.

Illustration H-14 Ledger balances after nonpayment of capital deficiency

Cash		R. Arnet, Capital		P. Carey, Capital		W. Eaton, Capital	
Bal. 5,000	(3) 31,000	(2) 9,000	Bal. 15,000	(2) 6,000	Bal. 17,800	(2) 3,000	Bal. 1,200
(1) 42,000		(a) 1,080		(a) 720			(a) 1,800
Bal. 16,000			**Bal. 4,920**		**Bal. 11,080**		**Bal. –0–**

The cash balance of $16,000 now equals the sum of the credit balances in the capital accounts (Arnet $4,920 + Carey $11,080). The entry to record the distribution of cash is:



R. Arnet, Capital	4,920	
P. Carey, Capital	11,080	
Cash		16,000
(To record distribution of cash to the partners)		

After this entry is posted, all accounts will have zero balances.

Summary of Study Objectives

1 Identify the characteristics of the partnership form of business organization. The principal characteristics of a partnership are: (a) association of individuals, (b) mutual agency, (c) limited life, (d) unlimited liability, and (e) co-ownership of property.

2 Explain the accounting entries for the formation of a partnership. When a partnership is formed, each partner's initial investment should be recorded at the fair value of the assets at the date of their transfer to the partnership.

3 Identify the bases for dividing net income or net loss. Net income or net loss is divided on the basis of the income ratio, which may be (a) a fixed ratio, (b) a ratio based on beginning or average capital balances, (c) salaries to partners and the remainder on a fixed ratio, (d) interest on partners' capital and the remainder on a fixed ratio, and (e) salaries to partners, interest on partners' capital, and the remainder on a fixed ratio.

4 Describe the form and content of partnership financial statements. The financial statements of a partnership are similar to those of a corporation. The principal differences are: (a) the division of net income is shown on the income statement, (b) the owners' equity statement is called a partners' capital statement, and (c) each partner's capital is reported on the balance sheet.

5 Explain the effects of the entries to record the liquidation of a partnership. When a partnership is liquidated, it is necessary to record the (a) sale of noncash assets, (b) allocation of the gain or loss on realization, (c) payment of partnership liabilities, and (d) distribution of cash to the partners on the basis of their capital balances.

Glossary

Capital deficiency *(p. H-10)* A debit balance in a partner's capital account after allocation of gain or loss.

General partner *(p. H-3)* A partner who has unlimited liability for the debts of the firm.

Income ratio *(p. H-6)* The basis for dividing net income and net loss in a partnership.

Limited liability company *(p. H-3)* A form of business organization, usually classified as a partnership and usually with limited life, in which partners, who are called *members*, have limited liability.

Limited liability partnership *(p. H-3)* A partnership of professionals in which partners are given limited liability and the public is protected from malpractice by insurance carried by the partnership.

Limited partner *(p. H-3)* A partner who has limited liability for the debts of the firm.

Limited partnership *(p. H-3)* A partnership in which one or more general partners have unlimited liability and one or more partners have limited liability for the obligations of the firm.

No capital deficiency *(p. H-10)* All partners have credit balances after allocation of gain or loss.

Partners' capital statement *(p. H-9)* The owners' equity statement for a partnership which shows the changes in each partner's capital balance and in total partnership capital during the year.

Partnership *(p. H-1)* An association of two or more persons to carry on as co-owners of a business for profit.

Partnership agreement *(p. H-4)* A written contract expressing the voluntary agreement of two or more individuals in a partnership.

Partnership dissolution *(p. H-2)* A change in partners due to withdrawal or admission, which does not necessarily terminate the business.

Partnership liquidation *(p. H-10)* An event that ends both the legal and economic life of a partnership.

"S" corporation *(p. H-3)* Corporation, with 75 or fewer stockholders, that is taxed like a partnership.

Schedule of cash payments *(p. H-12)* A schedule showing the distribution of cash to the partners in a partnership liquidation.

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more resources are available for practice in WileyPLUS

Questions

1. The characteristics of a partnership include the following: (a) association of individuals, (b) limited life, and (c) co-ownership of property. Explain each of these terms.
2. Rene Leno is confused about the partnership characteristics of (a) mutual agency and (b) unlimited liability. Explain these two characteristics for Rene.
3. Nancy Hirsch and Ted Christy are considering a business venture. They ask you to explain the advantages and disadvantages of the partnership form of organization.
4. Peggy Black and Glenda Barclay form a partnership. Black contributes land with a book value of $50,000 and a fair value of $75,000. Black also contributes equipment with a book value of $52,000 and a fair value of $57,000. The partnership assumes a $20,000 mortgage on the land. What should be the balance in Black's capital account upon formation of the partnership?
5. Don Norbert, S. Joyce, and Terry Moore have a partnership called Thomas Crest. A dispute has arisen among the partners. Norbert has invested twice as much in assets as the other two partners, and he believes net income and net losses should be shared in accordance with the capital ratios. The partnership agreement does not specify the division of profits and losses. How will net income and net loss be divided?
6. Robert Astro and Mitch Wyrick are discussing how income and losses should be divided in a partnership they plan to form. What factors should be considered in determining the division of net income or net loss?
7. Holly Canter and Bret Saver have partnership capital balances of $40,000 and $80,000, respectively. The partnership agreement indicates that net income or net loss should be shared equally. If net income for the partnership is $24,000, how should the net income be divided?
8. Andrea Gant and Mark Waller share net income and net loss equally. (a) Which account(s) is (are) debited and credited to record the division of net income between the partners? (b) If Andrea Gant withdraws $30,000 in cash for personal use in lieu of salary, which account is debited and which is credited?
9. Partners Gina Carolton and B. Mosley are provided salary allowances of $30,000 and $25,000, respectively. They divide the remainder of the partnership income in a ratio of 60 : 40. If partnership net income is $50,000, how much is allocated to Carolton and Mosley?
10. Are the financial statements of a partnership similar to those of a corporation? Discuss.
11. Jeff Dinkel and Rick Barnes are discussing the liquidation of a partnership. Jeff maintains that all cash should be distributed to partners on the basis of their income ratios. Is he correct? Explain.
12. In continuing their discussion, Rick says that even in the case of a capital deficiency, all cash should still be distributed on the basis of capital balances. Is Rick correct? Explain.
13. Jane, Kent, and Tracy have income ratios of 5 : 3 : 2 and capital balances of $34,000, $31,000, and $28,000, respectively. Noncash assets are sold at a gain. After creditors are paid, $119,000 of cash is available for distribution to the partners. How much cash should be paid to Kent?
14. Before the final distribution of cash, account balances are: Cash $25,000; B. Robertson, Capital $19,000 (Cr.); L. Mitchell, Capital $12,000 (Cr.); and T. Wynne, Capital $6,000 (Dr.). Wynne is unable to pay any of the capital deficiency. If the income-sharing ratios are 5 : 3 : 2, respectively, how much cash should be paid to L. Mitchell?

Brief Exercises

Journalize entries in forming a partnership.
(SO 2), AP

BEH-1 Carla Cardosa and Kent Nasser decide to organize the ALL-Star partnership. Cardosa invests $15,000 cash, and Nasser contributes $10,000 cash and equipment having a book value of $3,500. Prepare the entry to record Nasser's investment in the partnership, assuming the equipment has a fair value of $7,000.

Prepare portion of opening balance sheet for partnership.
(SO 2), AP

BEH-2 C. Held and G. Kamp decide to merge their proprietorships into a partnership called Heldkamp Company. The balance sheet of Kamp Co. shows:

Accounts receivable	$16,000	
Less: Allowance for doubtful accounts	1,200	$14,800
Equipment	20,000	
Less: Accumulated depreciation	8,000	12,000

The partners agree that the net realizable value of the receivables is $12,500 and that the fair value of the equipment is $10,000. Indicate how the four accounts should appear in the opening balance sheet of the partnership.

BEH-3 Frankenstein Co. reports net income of $70,000. The income ratios are Franken 60% and Stein 40%. Indicate the division of net income to each partner, and prepare the entry to distribute the net income.

Journalize the division of net income using fixed income ratios.
(SO 3), **AP**

BEH-4 LAR Co. reports net income of $65,000. Partner salary allowances are Logan $20,000, Adamle $5,000, and Ren $5,000. Indicate the division of net income to each partner, assuming the income ratio is 50 : 30 : 20, respectively.

Compute division of net income with a salary allowance and fixed ratios.
(SO 3), **AP**

BEH-5 Mick&Nick Co. reports net income of $24,000. Interest allowances are Mick $6,000 and Nick $5,000; salary allowances are Mick $15,000 and Nick $10,000; the remainder is shared equally. Show the distribution of income on the income statement.

Show division of net income when allowances exceed net income.
(SO 3), **AP**

BEH-6 After liquidating noncash assets and paying creditors, account balances in the CAB Co. are Cash $21,000, C Capital (Cr.) $9,000, A Capital (Cr.) $7,000, and B Capital (Cr.) $5,000. The partners share income equally. Journalize the final distribution of cash to the partners.

Journalize final cash distribution in liquidation.
(SO 5), **AP**

Exercises

EH-1 Greg Wayne has owned and operated a proprietorship for several years. On January 1, he decides to terminate this business and become a partner in the firm of Petry and Wayne. Wayne's investment in the partnership consists of $15,000 in cash, and the following assets of the proprietorship: accounts receivable $14,000 less allowance for doubtful accounts of $2,000, and equipment $20,000 less accumulated depreciation of $4,000. It is agreed that the allowance for doubtful accounts should be $3,000 for the partnership. The fair value of the equipment is $17,500.

Journalize entry for formation of a partnership.
(SO 2), **AP**

Instructions
Journalize Wayne's admission to the firm of Petry and Wayne.

EH-2 B. Langer and W. Howard have capital balances on January 1 of $50,000 and $40,000, respectively. The partnership income-sharing agreement provides for (1) annual salaries of $20,000 for Langer and $12,000 for Howard, (2) interest at 10% on beginning capital balances, and (3) remaining income or loss to be shared 70% by Langer and 30% by Howard.

Prepare schedule showing distribution of net income and closing entry.
(SO 3), **AP**

Instructions
(a) Prepare a schedule showing the distribution of net income, assuming net income is (1) $55,000 and (2) $30,000.
(b) Journalize the allocation of net income in each of the situations above.

EH-3 In Salton Co., beginning capital balances on January 1, 2012, are Ken Salz $20,000 and Carol Toni $18,000. During the year, drawings were Salz $8,000 and Toni $3,000. Net income was $32,000, and the partners share income equally.

Prepare partners' capital statement and partial balance sheet.
(SO 4), **AP**

Instructions
(a) Prepare the partners' capital statement for the year.
(b) Prepare the owners' equity section of the balance sheet at December 31, 2012.

EH-4 Baylee Company at December 31 has cash $20,000, noncash assets $100,000, liabilities $55,000, and the following capital balances: Bay $45,000 and Lee $20,000. The firm is liquidated, and $120,000 in cash is received for the noncash assets. Bay and Lee income ratios are 55% and 45%, respectively.

Prepare cash distribution schedule.
(SO 5), **AP**

Instructions
Prepare a cash distribution schedule.

EH-5 Data for the Baylee partnership are presented in EH-4.

Journalize transactions in a liquidation.
(SO 5), **AP**

Instructions
Prepare the entries to record:
(a) The sale of noncash assets.
(b) The allocation of the gain or loss on liquidation to the partners.
(c) Payment of creditors.
(d) Distribution of cash to the partners.

Journalize transactions with a capital deficiency.
(SO 5), AP

EH-6 Prior to the distribution of cash to the partners, the accounts in the NIM Company are: Cash $30,000, Norris Capital (Cr.) $18,000, Iwick Capital (Cr.) $14,000, and Moon Capital (Dr.) $2,000. The income ratios are 5 : 3 : 2, respectively.

Instructions

(a) Prepare the entry to record (1) Moon's payment of $2,000 in cash to the partnership and (2) the distribution of cash to the partners with credit balances.
(b) Prepare the entry to record (1) the absorption of Moon's capital deficiency by the other partners and (2) the distribution of cash to the partners with credit balances.

Problems

Prepare entries for formation of a partnership and a balance sheet.
(SO 2, 4), AP

PH-1 The post-closing trial balances of two proprietorships on January 1, 2012, are presented below.

	High Company		Lowe Company	
	Dr.	**Cr.**	**Dr.**	**Cr.**
Cash	$ 14,000		$13,000	
Accounts receivable	17,500		26,000	
Allowance for doubtful accounts		$ 3,000		$ 4,400
Merchandise inventory	26,500		18,400	
Equipment	45,000		28,000	
Accumulated depreciation—equipment		24,000		12,000
Notes payable		20,000		15,000
Accounts payable		20,000		31,000
High, Capital		36,000		
Lowe, Capital				23,000
	$103,000	$103,000	$85,400	$85,400

High and Lowe decide to form a partnership, High Lowe Company, with the following agreed upon valuations for noncash assets.

	High Company	Lowe Company
Accounts receivable	$17,500	$26,000
Allowance for doubtful accounts	4,500	4,000
Merchandise inventory	30,000	20,000
Equipment	25,000	18,000

All cash will be transferred to the partnership, and the partnership will assume all the liabilities of the two proprietorships. Further, it is agreed that High will invest $3,000 in cash, and Lowe will invest $18,000 in cash.

Instructions

(a) High, Capital $42,000
Lowe, Capital $27,000

(c) Total assets $176,000

(a) Prepare separate journal entries to record the transfer of each proprietorship's assets and liabilities to the partnership.
(b) Journalize the additional cash investment by each partner.
(c) Prepare a balance sheet for the partnership on January 1, 2012.

Journalize divisions of net income and prepare a partners' capital statement.
(SO 3, 4), AP

PH-2 At the end of its first year of operations on December 31, 2012, LMN Company's accounts show the following.

Partner	Drawings	Capital
Lois Lang	$23,000	$48,000
Mary Miley	14,000	30,000
Sue Norton	10,000	25,000

The capital balance represents each partner's initial capital investment. Therefore, net income or net loss for 2012 has not been closed to the partners' capital accounts.

Instructions

(a) Journalize the entry to record the division of net income for the year 2012 under each of the following independent assumptions.
   (1) Net income is $28,000. Income is shared 6:3:1.
   (2) Net income is $34,000. Lang and Miley are given salary allowances of $18,000 and $10,000, respectively. The remainder is shared equally.
   (3) Net income is $22,000. Each partner is allowed interest of 10% on beginning capital balances. Lang is given a $15,000 salary allowance. The remainder is shared equally.

(b) Prepare a schedule showing the division of net income under assumption (3) above.

(c) Prepare a partners' capital statement for the year under assumption (3) above.

(a) (1) Lang $16,800
(2) Lang $20,000
(3) Lang $18,700

(c) Lang $43,700

PH-3 The partners in JRS Company decide to liquidate the firm when the balance sheet shows the following.

Prepare entries with a capital deficiency in liquidation of a partnership.

(SO 5), **AP**

JRS COMPANY
Balance Sheet
May 31, 2012

Assets		Liabilities and Owners' Equity	
Cash	$ 27,500	Notes payable	$ 13,500
Accounts receivable	25,000	Accounts payable	27,000
Allowance for doubtful accounts	(1,000)	Wages payable	3,800
Merchandise inventory	34,500	S. Jenner, Capital	36,000
Equipment	21,000	J. Richards, Capital	20,000
Accumulated depreciation—equipment	(5,500)	Mick Sutter, Capital	1,200
Total	$101,500	Total	$101,500

The partners share income and loss 5 : 3 : 2. During the process of liquidation, the following transactions were completed in the following sequence.

1. A total of $53,000 was received from converting noncash assets into cash.
2. Gain or loss on realization was allocated to partners.
3. Liabilities were paid in full.
4. Mick Sutter paid his capital deficiency.
5. Cash was paid to the partners with credit balances.

Instructions

(a) Prepare the entries to record the transactions.

(b) Post to the cash and capital accounts.

(c) Assume that Sutter is unable to pay the capital deficiency.
   (1) Prepare the entry to allocate Sutter's debit balance to Jenner and Richards.
   (2) Prepare the entry to record the final distribution of cash.

appendix

ACCOUNTING FOR SOLE PROPRIETORSHIPS

study objectives

After studying this appendix, you should be able to:

1 Identify the differences in equity accounts between a corporation and a sole proprietorship.

2 Understand what accounts increase and decrease owner's equity.

3 Describe the differences between a retained earnings statement and an owner's equity statement.

4 Explain the process of closing the books for a sole proprietorship.

study objective 1

Identify the differences in equity accounts between a corporation and a sole proprietorship.

Chapter 1 identified three forms of business organization. Two forms, the sole proprietorship and the partnership, were discussed only briefly. Emphasis was placed on the corporate form in Chapter 1 as well as in subsequent chapters.

The purpose of this appendix is to discuss and illustrate the accounting for the operations and financial condition of a sole proprietorship. **The primary difference between accounting and reporting for a sole proprietorship and a corporation involves accounting for equity transactions.** Because a sole proprietorship has a single owner rather than numerous stockholders, a sole proprietorship uses a permanent **owner's capital account**, such as "Sally Jones, Capital," instead of Common Stock and Retained Earnings. In a sole proprietorship there is no need to separate owner's investments from net income retained for dividends because the sole proprietor does not declare or receive dividends. Instead, withdrawals by the owner of cash or other assets from the business for personal use are recorded in a temporary **drawing** account. The different equity accounts are contrasted as shown in Illustration I-1.

Illustration I-1
Equity section of the balance sheet—corporation vs. proprietorship

Corporation	Sole Proprietorship
Stockholders' equity	Owner's equity
Common stock	Owner's name, capital
Retained earnings	

For purposes of comparing the accounting for a corporation with a sole proprietorship, the illustrations in this Appendix I assume a sole proprietorship owned by R. Neal and named Sierra Company. **Except for equity transactions, we use the same accounts, amounts, and transactions as those of Sierra Corporation presented in Chapters 1 through 4.**

Owner's Equity in a Sole Proprietorship

study objective 2

Understand what accounts increase and decrease owner's equity.

The ownership claim on total assets is known as **owner's equity**. It is equal to total assets minus total liabilities.

INCREASES IN OWNER'S EQUITY

In a proprietorship, owner's equity is increased by owner's investments and revenues.

Investments by Owner

Investments by owner are the assets the owner puts into the business. These investments increase owner's equity.

Revenues

Revenues are the gross increase in owner's equity resulting from business activities entered into for the purpose of earning income.

DECREASES IN OWNER'S EQUITY

In a proprietorship, owner's equity is decreased by owner's drawings and expenses.

Drawings

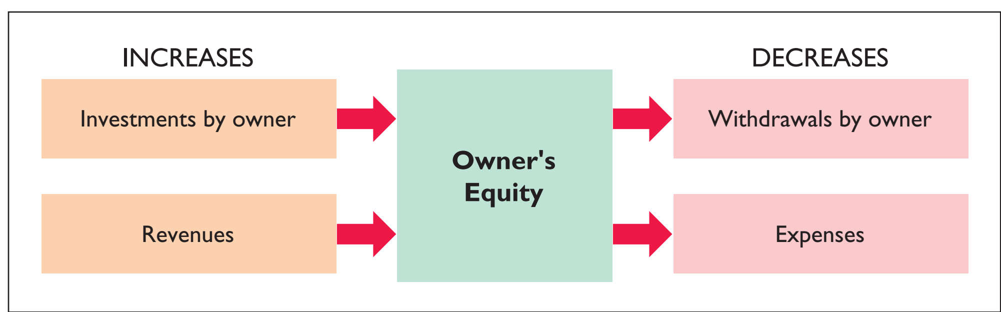
An owner may withdraw cash or other assets for personal use. These withdrawals could be recorded as a direct decrease of owner's equity. However, it is generally considered preferable to use a separate classification called **drawings** to determine the total withdrawals for each accounting period. **Drawings decrease owner's equity.**

Expenses

Expenses are the cost of assets consumed or services used in the process of earning revenue. They are **decreases in owner's equity that result from operating the business.**

In summary, owner's equity is increased by an owner's investments and by revenues from business operations. In contrast, owner's equity is decreased by an owner's withdrawals of assets and by expenses. These relationships are shown in Illustration I-2. **Net income** results when revenues exceed expenses. A **net loss** occurs when expenses exceed revenues.

Illustration I-2
Increases and decreases in owner's equity



Recording Transactions of a Proprietorship

Chapter 3 described the basic steps employed in the accounting process as follows:

Analyze transactions.

Record transactions in the journal.

Post journal entries to the general ledger.

Prepare a trial balance.

These same steps apply to all forms of business. Illustration 3-3 (page 110) presented the impact of Sierra's transactions on its accounting equation. Illustration I-3 shows how the same transactions would have been recorded for a sole proprietor. The only differences are related to the accounts used to record equity transactions. Those differences are highlighted here in red.

Illustration I-3 Summary of transactions

	Assets							=	Liabilities					+	Owner's Equity	
	Cash	+	Supplies	+	Prepaid Insurance	+	Equipment	=	Notes Payable	+	Accounts Payable	+	Unearned Service Revenue	+	R. Neal, Capital	
(1)	+$10,000							=							+$10,000	**Investment by owner**
(2)	+5,000								+$5,000							
	15,000							=	5,000					+	10,000	
(3)	−5,000						+$5,000									
	10,000					+	5,000	=	5,000					+	10,000	
(4)	+1,200												+$1,200			
	11,200					+	5,000	=	5,000			+	1,200	+	10,000	
(5)	+10,000														+10,000	Service Revenue
	21,200					+	5,000	=	5,000			+	1,200	+	20,000	
(6)	−900														−900	Rent Expense
	20,300					+	5,000	=	5,000			+	1,200	+	19,100

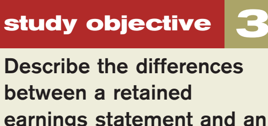
	19,700			+	600	+	5,000	=	5,000			+	1,200	+	19,100	
(8)			+$2,500								+$2,500					
	19,700	+	2,500	+	600	+	5,000	=	5,000	+	2,500	+	1,200	+	19,100	
(10)	−500			+											−500	**Drawings**
	19,200	+	2,500	+	600	+	5,000	=	5,000	+	2,500	+	1,200	+	18,600	
(11)	−4,000														−4,000	Salaries Expense
	$15,200	+	$2,500	+	$600	+	$5,000	=	$5,000	+	$2,500	+	$1,200	+	$14,600	
	$23,300								$23,300							

Financial Statements for a Proprietorship



Describe the differences between a retained earnings statement and an owner's equity statement.

Chapter 4 described accounting for adjusting entries. A sole proprietor makes the same types of adjustments as a corporation. After recording and posting all of the adjustments, an adjusted trial balance is prepared. Illustrations I-4 (page I-4) and I-5 (page I-5) show how the adjusted trial balance is used to prepare a sole proprietor's financial statements.

The primary differences between these statements and those of a corporation (presented in Illustrations 4-27 and 4-28, pages 184 and 185) relate to the way equity is reported. A sole proprietor prepares an **owner's equity statement** rather than a retained earnings statement and uses different titles for the equity items shown on the balance sheet.

SIERRA COMPANY

Preparation of the income statement and owner's equity statement from the adjusted trial balance

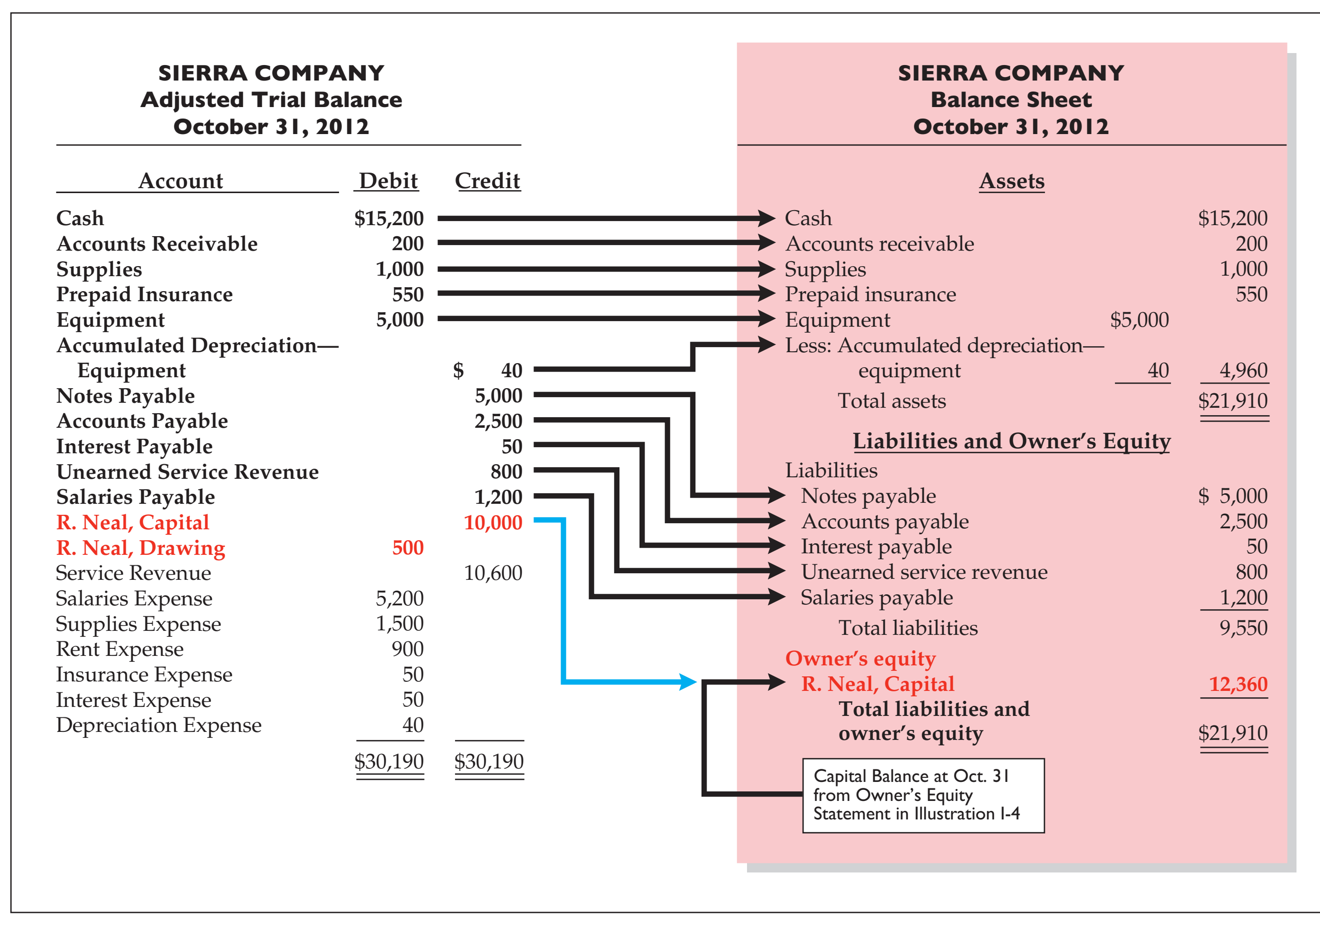
Closing the Books of a Proprietorship

Explain the process of closing the books for a sole proprietorship.

At the end of the accounting period, the temporary account balances are transferred to the permanent owner's equity account, Owner's Capital, through the preparation of closing entries. **Closing entries** for a proprietorship formally recognize in the ledger the transfer of net income (or net loss) and owner's drawing to owner's capital. The results of these entries are shown in the owner's equity statement.

Journalizing and posting closing entries is a required step in the accounting cycle. (See Illustration 4-31 on page 188 for Sierra Corporation.)

In preparing closing entries for a proprietorship, each income statement account could be closed directly to owner's capital. However, to do so would result in excessive detail in the permanent owner's capital account. Instead, the revenue and expense accounts are closed, in the same manner as for a corporation, to another temporary account, **Income Summary**. Only the net income or net loss is transferred from this account to Owner's Capital.



SIERRA COMPANY
Adjusted Trial Balance
October 31, 2012

Unearned service revenue		800
Salaries payable		1,200
Total liabilities		9,550
Owner's equity		
R. Neal, Capital		12,360
Total liabilities and owner's equity		$21,910

Illustration I-5
Preparation of the balance sheet from the adjusted trial balance

Closing entries for a proprietorship may be prepared directly from the adjusted balances in the ledger, from the income statement and balance sheet columns of the work sheet, or from the income and owner's equity statements. Separate closing entries could be prepared for each nominal account, but the following four entries accomplish the desired result more efficiently:

1. Debit each revenue account for its balance, and credit Income Summary for total revenues.
2. Debit Income Summary for total expenses, and credit each expense account for its balance.
3. Debit Income Summary and credit Owner's Capital for the amount of net income.
4. Debit Owner's Capital for the balance in the Owner's Drawing account, and credit Owner's Drawing for the same amount.

Helpful Hint Owner's Drawing is closed directly to Capital and *not* to Income Summary because Owner's Drawing is not an expense.

The four entries are referenced in the diagram of the closing process shown in Illustration I-6 and in the journal entries in Illustration I-7, both on page I-6. The posting of closing entries is shown in Illustration I-8 (page I-7).

If there were a net loss because expenses exceeded revenues, entry 3 in Illustration I-6 would be reversed: Credit Income Summary and debit Owner's Capital.

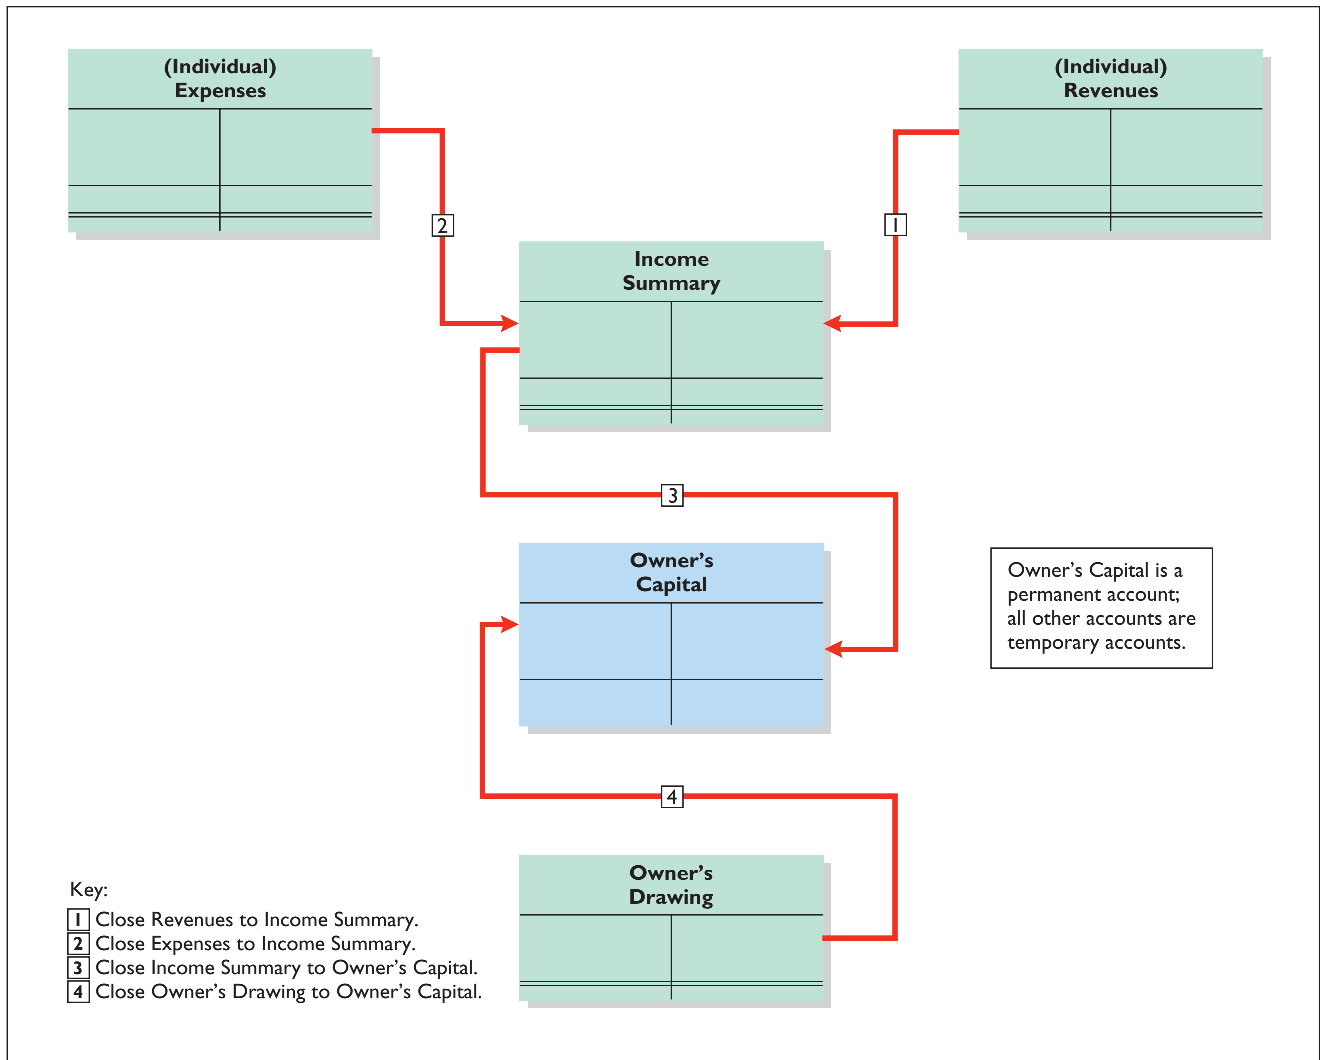

Illustration I-6
Diagram of closing process

Illustration I-7
Closing entries journalized

GENERAL JOURNAL

Date		Account Titles and Explanation	Debit	Credit
		Closing Entries		
2012		(1)		
Oct.	31	Service Revenue	10,600	
		Income Summary		10,600
		(To close revenue account)		
		(2)		
	31	Income Summary	7,740	
		Salaries Expense		5,200
		Supplies Expense		1,500
		Rent Expense		900
		Insurance Expense		50
		Interest Expense		50
		Depreciation Expense		40
		(To close expense accounts)		
		(3)		
	31	Income Summary	2,860	
		R. Neal, Capital		2,860
		(To close net income to owner's capital)		
		(4)		
	31	**R. Neal, Capital**	500	
		R. Neal, Drawing		500
		(To close drawings to owner's capital)		

Helpful Hint Income Summary is a very descriptive title: Total revenues are closed to Income Summary, total expenses are closed to Income Summary, and the balance in the Income Summary is a net income or net loss.

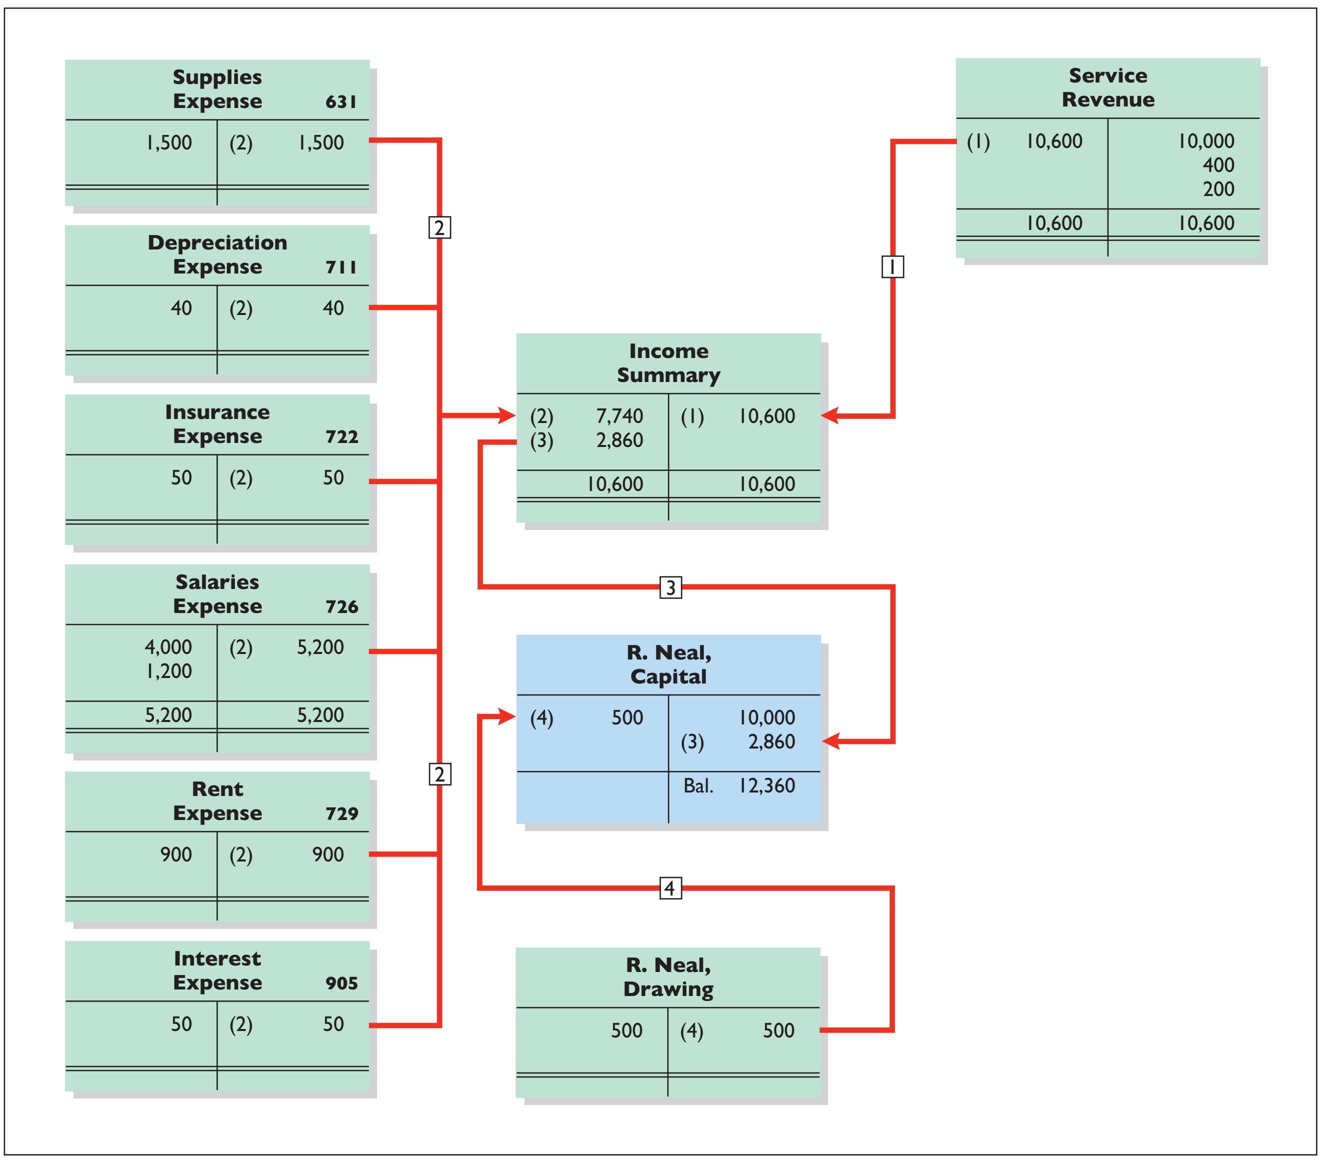

Illustration I-8
Posting of closing entries

Preparing a Post-Closing Trial Balance for a Proprietorship

After all closing entries are journalized and posted, the **post-closing trial balance** is prepared from the ledger. A post-closing trial balance is a list of all permanent accounts and their balances after closing entries are journalized and posted. As with a corporation, **the purpose of a proprietorship post-closing trial balance is to prove the equality of the permanent account balances that are carried forward into the next accounting period**. Since all temporary accounts will have zero balances, **the post-closing trial balance will contain only permanent—balance sheet—accounts**.

Summary of Study Objectives

1 Identify the differences in equity accounts between a corporation and a sole proprietorship. A sole proprietorship uses a permanent owner's equity Capital account instead of Common Stock and Retained Earnings. Withdrawals of cash or other assets by the owner for personal use are recorded in a temporary Drawing account.

2 **Understand what account transactions increase and decrease owner's equity.** Investments by the owner and revenue increase owner's equity. Owner's drawings and expenses decrease owner's equity.

3 **Describe the differences between a retained earnings statement and an owner's equity statement.** A sole proprietor prepares an owner's equity statement rather than a retained earnings statement. The owner's equity statement shows the beginning balance in the owner's capital account (instead of retained earnings, as shown in the retained earnings statement), plus any investments made by the owner, less any drawings (in place of dividends, shown in the retained earnings statement).

4 **Explain the process of closing the books for a sole proprietorship.** In closing the books for a sole proprietorship, separate entries are made to close revenues and expenses to Income Summary, Income Summary to Owner's Capital, and Owner's Drawing to Owner's Capital.

Glossary

Drawings *(p. I-2)* Withdrawal of cash or other assets from a sole proprietorship for the personal use of the owner.

Investments by owner *(p. I-2)* The assets put into the business by a sole proprietor.

Owner's equity *(p. I-2)* The ownership claim on the total assets of a sole proprietorship.

Owner's equity statement *(p. I-3)* The financial statement prepared for a sole proprietorship to summarize the changes in owner's equity for a specific period of time.

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more resources are available for practice in WileyPLUS

Questions

1. What is the basic accounting equation for a sole proprietorship?
2. What are the differences in the equity accounts of a sole proprietorship versus those of a corporation?
3. What items affect owner's equity, and in what direction?
4. In February 2012, Jim Grant invested an additional $10,000 in his business, Grant's Pharmacy, which is organized as a proprietorship. Grant's accountant, Ronny Jones, recorded this receipt as an increase in cash revenues. Is this treatment appropriate? Why or why not?
5. What are the steps in preparing an owner's equity statement?
6. Identify the account(s) debited and credited in each of the required closing entries for a sole proprietorship, assuming the company has net income for the year.

Brief Exercises

Determine effect of transactions on basic accounting equation.
(SO 2), **C**

BEI-1 Presented below are three business transactions. On a sheet of paper, list the letters (a), (b), (c) with columns for assets, liabilities, and owner's equity. For each column, indicate whether the transactions increased (+), decreased (−), or had no effect (NE) on assets, liabilities, and owner's equity.

(a) Invested cash in the business.
(b) Withdrawal of cash by owner.
(c) Received cash from a customer who had previously been billed for services provided.

Determine effect of transactions on owner's equity.
(SO 2), **C**

BEI-2 Presented below are three transactions. Mark each transaction as affecting owner's investment (I), owner's drawing (D), revenue (R), expense (E), or not affecting owner's equity (NOE).

(a) Received cash for services performed
(b) Paid cash to purchase equipment
(c) Paid employee salaries

Indicate debit and credit effects and normal balance.
(SO 2), **C**

BEI-3 For each of the following accounts, indicate the effects of (a) a debit and (b) a credit on the accounts and (c) the normal balance of the account.

1. Accounts Payable.
2. Advertising Expense.
3. Service Revenue.
4. Accounts Receivable.
5. A. L. Frankum, Capital.
6. A. L. Frankum, Drawing.

Exercises

EI-1 An analysis of the transactions made by Gutierrez & Co., a certified public accounting firm, for the month of August is shown below. Each increase and decrease in owner's equity is explained.

Analyze transactions and compute net income.
(SO 2), **AP**

	Cash	+ Accounts Receivable	+ Supplies	+ Office Equipment	= Accounts Payable	+ Owner's Equity Gutierrez, Capital	
1.	+$12,000					+$12,000	Investment
2.	−2,000			+$5,000	+$3,000		
3.	−750		+$750				
4.	+2,600	+$3,700				+6,300	Service Revenue
5.	−1,500				−1,500		
6.	−2,000					−2,000	Drawings
7.	−650					−650	Rent Expense
8.	+450	−450					
9.	−2,900					−2,900	Salaries Expense
10.					+500	−500	Utilities Expense

Instructions

(a) Describe each transaction that occurred for the month.
(b) Determine how much owner's equity increased for the month.
(c) Compute the amount of net income for the month.

(b) Increase in O.E. $12,250
(c) Net income $2,250

EI-2 Presented below is information related to the sole proprietorship of John Newman, attorney.

Prepare an owner's equity statement.
(SO 3), **AP**

Legal service revenue—2012	$360,000
Total expenses—2012	211,000
Assets, January 1, 2012	85,000
Liabilities, January 1, 2012	62,000
Assets, December 31, 2012	168,000
Liabilities, December 31, 2012	70,000
Drawings—2012	?

Instructions

Prepare the 2012 owner's equity statement for John Newman's legal practice.

Capital, Dec. 31 $98,000

EI-3 The adjusted trial balance of Hanlon Company at the end of its fiscal year is:

Prepare income statement, owner's equity statement, and balance sheet.
(SO 1, 2, 3, 4), **AP**

HANLON COMPANY
Adjusted Trial Balance
July 31, 2012

No.	Account Titles	Debits	Credits
101	Cash	$ 14,940	
112	Accounts Receivable	8,780	
157	Equipment	15,900	
167	Accumulated Depreciation		$ 5,400
201	Accounts Payable		4,220
208	Unearned Rent Revenue		1,800
301	J. D. Hanlon, Capital		45,200
306	J. D. Hanlon, Drawing	14,000	
404	Commission Revenue		65,100
429	Rent Revenue		6,500
711	Depreciation Expense	4,000	
720	Salaries Expense	55,700	
732	Utilities Expense	14,900	
		$128,220	$128,220

Instructions

(a) Prepare an income statement and an owner's equity statement for the year. Hanlon did not make any capital investments during the year.
(b) Prepare a classified balance sheet at July 31.

(a) Net loss $3,000
(b) Total assets $34,220

Problems

Prepare income statement, owner's equity statement, and balance sheet.
(SO 1, 2, 3, 4), AP

PI-1 On May 1, Robert Neupert started Skyline Flying School, a company that provides flying lessons, by investing $45,000 cash in the business. Following are the assets and liabilities of the company on May 31, 2012, and the revenues and expenses for the month of May.

Cash	$ 6,500	Notes Payable	$30,000
Accounts Receivable	7,200	Rent Expense	1,200
Equipment	64,000	Repair Expense	400
Lesson Revenue	8,600	Fuel Expense	2,500
Advertising Expense	500	Insurance Expense	400
		Accounts Payable	800

Robert Neupert made no additional investment in May, but he withdrew $1,700 in cash for personal use.

Instructions

(a) Net income $3,600
Owner's equity $46,900
Total assets $77,700
(b) Net income $1,200
Owner's equity $44,500

(a) Prepare an income statement and owner's equity statement for the month of May and a balance sheet at May 31.

(b) Prepare an income statement and owner's equity statement for May assuming that the data above need to be adjusted for the following items: (1) $900 of revenue was earned and billed but not collected at May 31, and (2) $3,300 of fuel expense was incurred but not paid.

Prepare financial statements, closing entries, and post-closing trial balance.
(SO 1, 2, 3, 4), AP

PI-2 The adjusted trial balance columns of the work sheet for Sherrick Company are as follows.

SHERRICK COMPANY
Adjusted Trial Balance
For the Year Ended December 31, 2012

Account No.	Account Titles	Adjusted Trial Balance Dr.	Adjusted Trial Balance Cr.
101	Cash	20,800	
112	Accounts Receivable	15,400	
126	Supplies	2,300	
130	Prepaid Insurance	4,800	
151	Office Equipment	44,000	
152	Accumulated Depreciation—Office Equipment		18,000
200	Notes Payable		20,000
201	Accounts Payable		8,000
212	Salaries Payable		3,000
230	Interest Payable		1,000
301	B. Sherrick, Capital		36,000
306	B. Sherrick, Drawing	12,000	
400	Service Revenue		79,000
610	Advertising Expense	12,000	
631	Supplies Expense	3,700	
711	Depreciation Expense	6,000	
722	Insurance Expense	4,000	
726	Salaries Expense	39,000	
905	Interest Expense	1,000	
	Totals	165,000	165,000

Instructions

(a) Net income $13,300
Current assets $43,300
Current liabilities $22,000

(a) Prepare an income statement, owner's equity statement, and a classified balance sheet. $10,000 of the notes payable become due in 2013. B. Sherrick did not make any additional investments in the business during 2012.

(b) Prepare the closing entries.

(c) Post the closing entries. Use the three-column form of account. Income summary is No. 350.
(d) Prepare a post-closing trial balance.

(d) Post-closing trial balance $87,300

PI-3 The adjusted trial balance columns of the work sheet for Jake Mann Company, owned by Jake Mann, are as follows.

Prepare financial statements, closing entries, and post-closing trial balance.
(SO 1, 2, 3, 4), **AP**

JAKE MANN COMPANY
Adjusted Trial Balance
For the Year Ended December 31, 2012

Account No.	Account Titles	Adjusted Trial Balance Dr.	Adjusted Trial Balance Cr.
101	Cash	13,600	
112	Accounts Receivable	15,400	
126	Supplies	1,500	
130	Prepaid Insurance	2,800	
151	Office Equipment	34,000	
152	Accumulated Depreciation—Office Equipment		8,000

and dividends, 584
electronic funds transfer (EFT), 357
employee salaries paid in, 108–109
income taxes paid in, 651–652
insurance policy purchase by, 107
interest paid in, 651
internal control:
bank statements, 352–353, 368
disbursements, 349–351
receipts, 346–349
reconciling bank accounts, 352–358, 368
use of banks, 351–358
internal control of, 335, 346–358
investing and financing transactions, 625
and investments by corporations, E-1
managing/monitoring, 359–364
net change in, 639, 653
notes issued in exchange for, 105
office equipment purchased by, 105
and operating, financing and investing activities, 130
operating expenses paid in, 650–651
and partnership liquidation, H-12
petty cash fund, 351, 366–369
reporting of, 358–359
restricted, 359, 369
and sales of receivables, 417
services supplied for, 106–107
in statement of cash flows (T approach), 654–656
stockholders' investment of, 104–105
suppliers paid in, 649–650
Cash advances, 105–106
Cash balance, 355–357

Cash-basis accounting:
accrual basis accounting vs., 166–167
defined, 197
liquidity and solvency ratios, 642–643
Cash budgets, 362, 363, 368, 1046–1049, 1056
Cash debt coverage ratio, 643, 656, 714, 720
Cash disbursements, 349–351, 362, 363
Cash disbursement section (cash budget), 1047
Cash dividends, 584–585, 599
Cash equivalents, 358–359, 368, 393
Cash equivalent price, 449, 479
Cash flow(s). *See also* Statement of cash flows
anticipated, 1046
assessing liquidity and solvency with, 641–643
budgeting on basis of, 1053
company evaluation using, 639–643
discounted, 1202–1207
internal rate of return method, 1205–1206
net present value method, 1202–1204, 1206
discounted future, 1202
free, 61–62, 71, 639–641, 714, 720
generation of future, 624
impact of product life cycle on, 628–629
net annual, 1200, 1203–1204
periodic, D-10
price to cash flow, 641
and receivables, 420
Cash management:
cash budgets as component of, 1049
principles of, 360–364
Cashouts, 335
Cash payback, 1200–1202, 1209
Cash payments, H-12, H-15

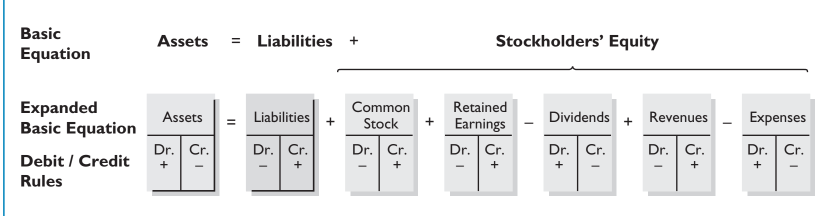
RAPID REVIEW
Chapter Content

ACCOUNTING CONCEPTS (Chapters 2–4)

Fundamental Qualities	Enhancing Qualities	Assumptions	Principles	Constraints
Relevance	Comparability	Monetary unit	Cost	Materiality
Faithful representation	Consistency	Economic entity	Fair value	Cost
	Verifiability	Periodicity	Full disclosure	
	Timeliness	Going concern	Revenue recognition	
	Understandability	Accrual basis	Expense recognition	

BASIC ACCOUNTING EQUATION (Chapter 3)



INVENTORY (Chapters 5 and 6)

Ownership

Freight Terms	Ownership of goods on public carrier resides with:
FOB Shipping point	Buyer
FOB Destination	Seller

ADJUSTING ENTRIES (Chapter 4)

	Type	Adjusting Entry	
Deferrals	1. Prepaid expenses	Dr. Expenses	Cr. Assets
	2. Unearned revenues	Dr. Liabilities	Cr. Revenues
Accruals	1. Accrued revenues	Dr. Assets	Cr. Revenues
	2. Accrued expenses	Dr. Expenses	Cr. Liabilities

Note: Each adjusting entry will affect one or more income statement accounts and one or more balance sheet accounts.

Interest Computation

Interest = Face value of note × Annual interest rate × Time in terms of one year

Perpetual vs. Periodic Journal Entries

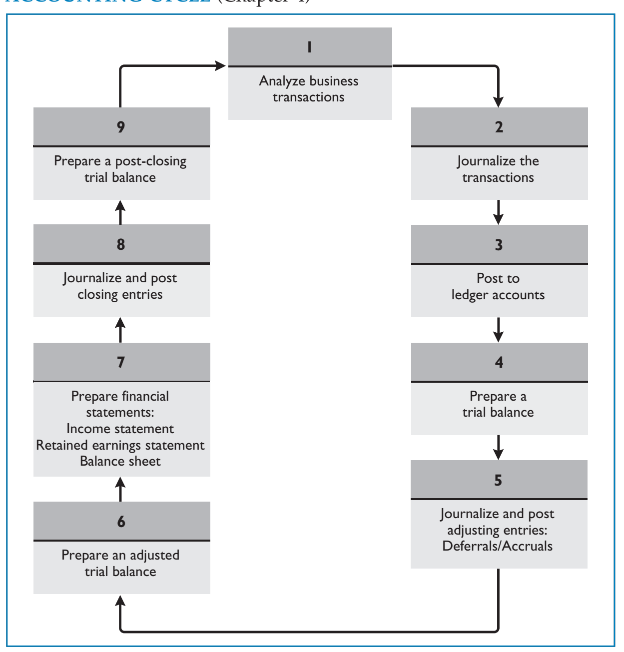
Event	Perpetual	Periodic
Purchase of goods	Inventory Cash (A/P)	Purchases Cash (A/P)
Freight (shipping point)	Inventory Cash	Freight-in Cash
Return of goods	Cash (or A/P) Inventory	Cash (or A/P) Purchase Returns and Allowances
Sale of goods	Cash (or A/R) Sales Cost of Goods Sold Inventory	Cash (or A/R) Sales No entry
End of period	No entry	Closing or adjusting entry required

CLOSING ENTRIES (Chapter 4)

Purpose

1. Update the Retained Earnings account in the ledger by transferring net income (loss) and dividends to retained earnings.
2. Prepare the temporary accounts (revenue, expense, dividends) for the next period's postings by reducing their balances to zero.

ACCOUNTING CYCLE (Chapter 4)



FRAUD, INTERNAL CONTROL, AND CASH (Chapter 7)

Principles of Internal Control

Establishment of responsibility
Segregation of duties
Documentation procedures
Physical controls
Independent internal verification
Human resource controls

The Fraud Triangle

Opportunity
Financial pressure
Rationalization

Bank Reconciliation

Bank	Books
Balance per bank statement Add: Deposits in transit Deduct: Outstanding checks Adjusted cash balance	Balance per books Add: Unrecorded credit memoranda from bank statement Deduct: Unrecorded debit memoranda from bank statement Adjusted cash balance

Note: 1. Errors should be offset (added or deducted) on the side that made the error.
2. Adjusting journal entries should only be made for items affecting books.

STOP AND CHECK: Does the adjusted cash balance in the Cash account equal the reconciled balance?

RAPID REVIEW
Chapter Content

RECEIVABLES (Chapter 8)

Two Methods to Account for Uncollectible Accounts

Direct write-off method	Record bad debts expense when the company determines a particular account to be uncollectible.
Allowance method	At the end of each period, estimate the amount of uncollectible receivables. Debit Bad Debts Expense and credit Allowance for Doubtful Accounts in an amount that results in a balance in the allowance account equal to the estimate of uncollectibles. As specific accounts become uncollectible, debit Allowance for Doubtful Accounts and credit Accounts Receivable.

Steps to Manage Accounts Receivable

1. Determine to whom to extend credit.
2. Establish a payment period.
3. Monitor collections.
4. Evaluate the receivables balance.
5. Accelerate cash receipts from receivables when necessary.

PLANT ASSETS (Chapter 9)

Computation of Annual Depreciation Expense

Straight-line	$\frac{\text{Cost} - \text{Salvage value}}{\text{Useful life (in years)}}$
***Declining-balance**	Book value at beginning of year × Declining balance rate* *Declining-balance rate = 1 ÷ Useful life (in years)
***Units-of-activity**	$\frac{\text{Depreciable cost}}{\text{Useful life (in units)}}$ × Units of activity during year

Note: If depreciation is calculated for partial periods, the straight-line and declining-balance methods must be adjusted for the relevant proportion of the year. Multiply the annual depreciation expense by the number of months expired in the year divided by 12 months.

BONDS (Chapter 10)

Premium	Market interest rate < Contractual interest rate
Face Value	Market interest rate = Contractual interest rate
Discount	Market interest rate > Contractual interest rate

Computation of Annual Bond Interest Expense

Interest expense = Interest paid (payable) + Amortization of discount
(OR − Amortization of premium)

***Straight-line amortization**	$\frac{\text{Bond discount (premium)}}{\text{Number of interest periods}}$	
***Effective-interest amortization (preferred method)**	Bond interest expense	Bond interest paid
	Carrying value of bonds at beginning of period × Effective-interest rate	Face amount of bonds × Contractual interest rate

STOCKHOLDERS' EQUITY (Chapter 11)

No-Par Value vs. Par Value Stock Journal Entries

No-Par Value	Par Value

Cash
    Common Stock
	Cash
	    Common Stock (par value)
	    Paid-in Capital in Excess of Par Value

Comparison of Dividend Effects

	Cash	Common Stock	Retained Earnings
Cash dividend	↓	No effect	↓
Stock dividend	No effect	↑	↓
Stock split	No effect	No effect	No effect

*Items with asterisk are covered in appendix.

STATEMENT OF CASH FLOWS (Chapter 12)

Cash flows from operating activities (**indirect method**)

Net income			
Add:	Amortization and depreciation	$ X	
	Losses on disposals of assets	X	
	Decreases in current assets	X	
	Increases in current liabilities	X	
Deduct:	Increases in current assets	(X)	
	Decreases in current liabilities	(X)	
	Gains on disposals of assets	(X)	
Cash provided (used) by operating activities			$ X

Cash flows from operating activities (**direct method**)

Cash receipts		
(Examples: from sales of goods and services to customers, from receipts of interest and dividends)	$ X	
Cash payments		
(Examples: to suppliers, for operating expenses, for interest, for taxes)	(X)	
Cash provided (used) by operating activities		$ X

FINANCIAL STATEMENT ANALYSIS (Chapter 13)

Discontinued operations	Income statement (presented separately after "Income from continuing operations")
Extraordinary items	Income statement (presented separately after "Discontinued operations")
Changes in accounting principle	In most instances, use the new method in current period and restate previous years' results using new method. For changes in depreciation and amortization methods, use the new method in the current period, but do not restate previous periods.

Income Statement and Comprehensive Income

Sales	$ XX
Cost of goods sold	XX
Gross profit	XX
Operating expenses	XX
Income from operations	XX
Other revenues (expenses) and gains (losses)	XX
Income before income taxes	XX
Income tax expense	XX
Income before irregular items	XX
Irregular items (net of tax)	**XX**
Net income	**XX**
Other comprehensive income items (net of tax)	**XX**
Comprehensive income	**$ XX**

MANAGERIAL ACCOUNTING (Chapter 14)

Characteristics of Managerial Accounting

Primary Users	Internal users
Reports	Internal reports issued as needed
Purpose	Special purpose for a particular user
Content	Pertains to subunits, may be detailed, use of relevant data
Verification	No independent audits

Types of Manufacturing Costs

Direct materials	Raw materials directly associated with finished product
Direct labor	Work of employees directly associated with turning raw materials into finished product
Manufacturing overhead	Costs indirectly associated with manufacture of finished product

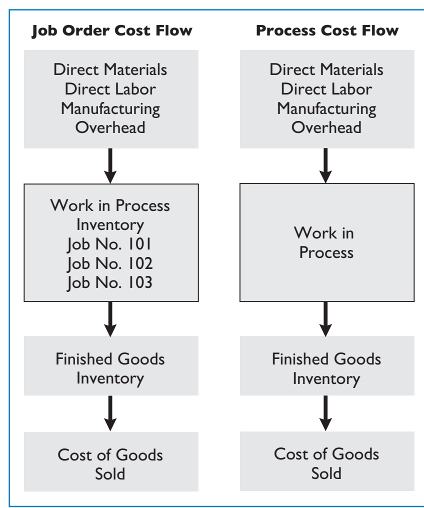
RAPID REVIEW
Chapter Content

JOB ORDER AND PROCESS COSTING (Chapters 15 and 16)

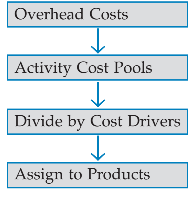
Types of Accounting Systems

Job order	Costs are assigned to each unit or each batch of goods
Process cost	Costs are applied to similar products that are mass-produced in a continuous fashion

Job Order and Process Cost Flow



ACTIVITY-BASED COSTING (Chapter 17)



Activity-based costing involves the following four steps:

1. Identify and classify the major activities involved in the manufacture of specific products, and allocate the manufacturing overhead costs to the appropriate cost pools.
2. Identify the cost driver that has a strong correlation to the costs accumulated in the cost pool.
3. Compute the overhead rate for each cost driver.
4. Assign manufacturing overhead costs for each cost pool to products, using the overhead rates (cost per driver).

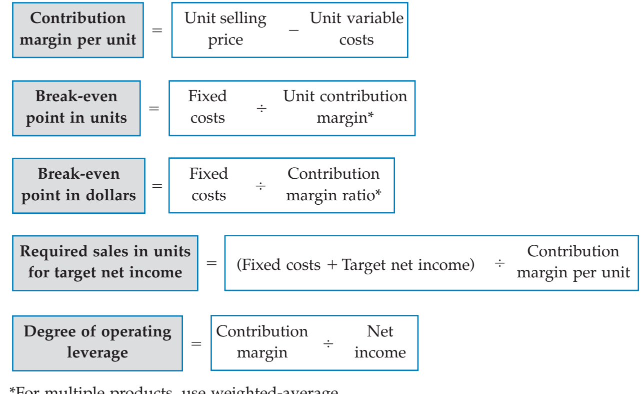
COST-VOLUME-PROFIT (Chapters 18 and 19)

Types of Costs

Variable costs	Vary in total directly and proportionately with changes in activity level
Fixed costs	Remain the same in total regardless of change in activity level
Mixed costs	Contain both a fixed and a variable element

CVP Income Statement Format

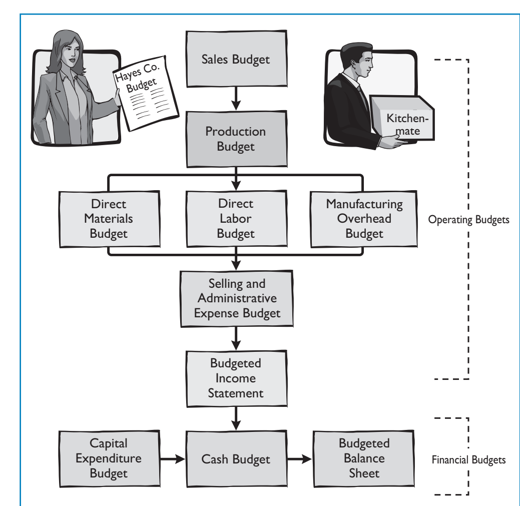
	Total	Per Unit
Sales	$xx	$xx
Variable costs	xx	xx
Contribution margin	xx	$xx
Fixed costs	xx	
Net income	$xx	



*For multiple products, use weighted-average.

BUDGETS (Chapter 20)

Components of the Master Budget



RESPONSIBILITY ACCOUNTING (Chapter 21)

Types of Responsibility Centers

Cost	Profit	Investment
Expenses only	Expenses and Revenues	Expenses and Revenues and ROI

Return on Investment

Return on investment (ROI) = Investment center controllable margin ÷ Average investment center operating assets

STANDARD COSTS (Chapter 22)

Standard Cost Variances

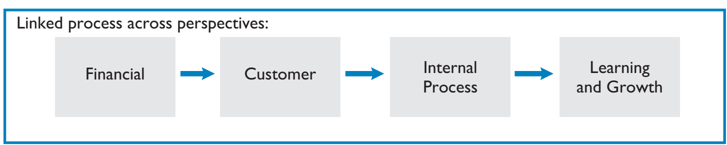
Total materials variance = Materials price variance + Materials quantity variance

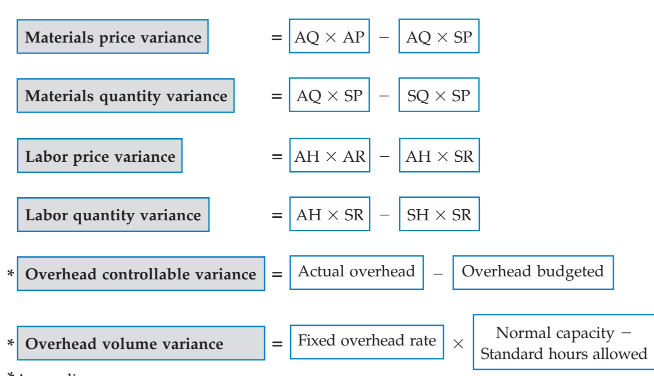
Total labor variance = Labor price variance + Labor quantity variance

Total overhead variance = Overhead controllable variance + Overhead volume variance

RAPID REVIEW
Chapter Content

Balanced Scorecard





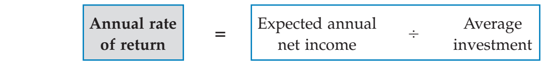
*Appendix coverage

INCREMENTAL ANALYSIS AND CAPITAL BUDGETING (Chapter 23)

Incremental Analysis

1. Identify the relevant costs associated with each alternative. Relevant costs are those costs and revenues that differ across alternatives. Choose the alternative that maximizes net income.
2. Opportunity costs are those benefits that are given up when one alternative is chosen instead of another one. Opportunity costs are relevant costs.
3. Sunk costs have already been incurred and will not be changed or avoided by any future decision. Sunk costs are not relevant costs.

Annual Rate of Return



Cash Payback

*For uneven cash flows, you must calculate year-by-year

Discounted Cash Flow Approaches

Net Present Value	Internal Rate of Return
Compute net present value (a dollar amount). If net present value is zero or positive, accept the proposal. If net present value is negative, reject the proposal.	Compute internal rate of return (a percentage). If internal rate of return is equal to or greater than the minimum required rate of return, accept the proposal. If internal rate of return is less than the minimum rate, reject the proposal.

INVESTMENTS (Appendix E)

Comparison of Long-Term Bond Investment and Liability Journal Entries

Event	Investor	Investee
Purchase / issue of bonds	Debt Investments Cash	Cash Bonds Payable
Interest receipt / payment	Cash Interest Revenue	Interest Expense Cash

Comparison of Cost and Equity Methods of Accounting for Long-Term Stock Investments

Event	Cost	Equity
Acquisition	Stock Investments Cash	Stock Investments Cash
Investee reports earnings	No entry	Stock Investments Investment Revenue
Investee pays dividends	Cash Dividend Revenue	Cash Stock Investments

RAPID REVIEW
Financial Statements

Order of Preparation	Date
1. Income statement	For the period ended
2. Retained earnings statement	For the period ended
3. Balance sheet	As of the end of the period
4. Statement of cash flows	For the period ended

Income Statement (perpetual inventory system)

Name of Company Income Statement For the Period Ended		
Sales revenues		
Sales	$ X	
Less: Sales returns and allowances	X	
Sales discounts	X	
Net sales		$ X
Cost of goods sold		X
Gross profit		X
Operating expenses		
(Examples: store salaries, advertising, delivery, rent, depreciation, utilities, insurance)		X
Income from operations		X
Other revenues and gains		
(Examples: interest, gains)	X	
Other expenses and losses		
(Examples: interest, losses)	X	X
Income before income taxes		X
Income tax expense		X
Net income		$ X

Income Statement (periodic inventory system)

Name of Company Income Statement For the Period Ended			
Sales revenues			
Sales		$ X	
Less: Sales returns and allowances		X	
Sales discounts		X	
Net sales			$ X
Cost of goods sold			
Beginning inventory		X	
Purchases	$ X		
Less: Purchase returns and allowances	X		
Net purchases	X		
Add: Freight in	X		
Cost of goods purchased		X	
Cost of goods available for sale		X	
Less: Ending inventory		X	
Cost of goods sold			X
Gross profit			X
Operating expenses			
(Examples: store salaries, advertising, delivery, rent, depreciation, utilities, insurance)			X
Income from operations			X
Other revenues and gains			
(Examples: interest, gains)		X	
Other expenses and losses			
(Examples: interest, losses)		X	X
Income before income taxes			X
Income tax expense			X
Net income			$ X

Retained Earnings Statement

Name of Company Retained Earnings Statement For the Period Ended	
Retained earnings, beginning of period	$ X
Add: Net income (or deduct net loss)	X
	X
Deduct: Dividends	X
Retained earnings, end of period	$ X

STOP AND CHECK: Net income (loss) presented on the retained earnings statement must equal the net income (loss) presented on the income statement.

Balance Sheet

Name of Company Balance Sheet As of the End of the Period			
Assets			
Current assets			
(Examples: cash, short-term investments, accounts receivable, inventory, prepaids)			$ X
Long-term investments			
(Examples: investments in bonds, investments in stocks)			X
Property, plant, and equipment			
Land		$ X	
Buildings and equipment	$ X		
Less: Accumulated depreciation	X	X	X
Intangible assets			X
Total assets			$ X
Liabilities and Stockholders' Equity			
Liabilities			
Current liabilities			
(Examples: notes payable, accounts payable, accruals, unearned revenues, current portion of notes payable)			$ X
Long-term liabilities			
(Examples: notes payable, bonds payable)			X
Total liabilities			X
Stockholders' equity			
Common stock			X
Retained earnings			X
Total liabilities and stockholders' equity			$ X

STOP AND CHECK: Total assets on the balance sheet must equal total liabilities plus stockholders' equity; and, ending retained earnings on the balance sheet must equal ending retained earnings on the retained earnings statement.

Statement of Cash Flows

Name of Company Statement of Cash Flows For the Period Ended	
Cash flows from operating activities	
Note: May be prepared using the direct or indirect method	
Cash provided (used) by operating activities	$ X
Cash flows from investing activities	
(Examples: purchase / sale of long-term assets)	
Cash provided (used) by investing activities	X
Cash flows from financing activities	
(Examples: issue / repayment of long-term liabilities, issue of stock, payment of dividends)	
Cash provided (used) by financing activities	X
Net increase (decrease) in cash	X
Cash, beginning of the period	X
Cash, end of the period	$ X

STOP AND CHECK: Cash, end of the period, on the statement of cash flows must equal cash presented on the balance sheet.

TOOLS FOR ANALYSIS

Liquidity

Working capital	Current assets – Current liabilities	p. 59
Current ratio	$\frac{\text{Current assets}}{\text{Current liabilities}}$	p. 59
Current cash debt coverage ratio	$\frac{\text{Cash provided by operations}}{\text{Average current liabilities}}$	p. 643
Inventory turnover ratio	$\frac{\text{Cost of goods sold}}{\text{Average inventory}}$	p. 297
Days in inventory	$\frac{\text{365 days}}{\text{Inventory turnover ratio}}$	p. 297
Receivables turnover ratio	$\frac{\text{Net credit sales}}{\text{Average net receivables}}$	p. 415
Average collection period	$\frac{\text{365 days}}{\text{Receivables turnover ratio}}$	p. 415

Solvency

Debt to total assets ratio	$\frac{\text{Total liabilities}}{\text{Total assets}}$	p. 60
Cash debt coverage ratio	$\frac{\text{Cash provided by operations}}{\text{Average total liabilities}}$	p. 644
Times interest earned ratio	$\frac{\text{Net income + Interest expense + Tax expense}}{\text{Interest expense}}$	p. 529
Free cash flow	Cash provided by operations – Capital expenditures – Cash dividends	p. 62

Profitability

Earnings per share	$\frac{\text{Net income – Preferred stock dividends}}{\text{Average common shares outstanding}}$	p. 56
Price-earnings ratio	$\frac{\text{Stock price per share}}{\text{Earnings per share}}$	p. 703
Gross profit rate	$\frac{\text{Gross profit}}{\text{Net sales}}$	p. 246
Profit margin ratio	$\frac{\text{Net income}}{\text{Net sales}}$	p. 247
Return on assets ratio	$\frac{\text{Net income}}{\text{Average total assets}}$	p. 467
Asset turnover ratio	$\frac{\text{Net sales}}{\text{Average total assets}}$	p. 468
Payout ratio	$\frac{\text{Cash dividends declared on common stock}}{\text{Net income}}$	p. 593
Return on common stockholders' equity ratio	$\frac{\text{Net income – Preferred stock dividends}}{\text{Average common stockholders' equity}}$	p. 594
