With this vision, New Thought was born, and Hopkins's students apparently accepted their teacher's direction. The most fertile ground for New Thought's early development was the regions of the Midwest and Far West. This is certainly due in part to Hopkins's evangelical tours of these regions but also to some degree a consequence of American westward expansion at the turn of the twentieth century and Christian Science's strength on the eastern seaboard. To this day, New Thought remains under developed in New England and on the East Coast as a whole—with the notable exceptions of New York City, Atlanta, Georgia, and Florida.

Early East Coast Developments

Perhaps the most significant East Coast figure was Warren Felt Evans (1817–1889), who is best understood as a precursor of New Thought. Evans was a Methodist minister, a devout Swedenborgian, and (like Eddy) a client of Quimby. Although largely forgotten by New Thought today, during his lifetime and shortly thereafter, Evans was a respected teacher, mental healer, and author. His most important contribution to later New Thought was his establishment of a philosophic basis in German Idealism for mental healing beliefs. For the bulk of his public life he resided in Boston, and, although his greatest influence was on the development of New Thought in the eastern United States, he is referred to in works by Hopkins and her students.[21]

Besides Evans, and more properly cited as New Thought leaders, early East Coast activists include Lord, whose *Christian Science Healing* (1887) was among the first works to introduce prosperity as a New Thought theme; Henry Wood (1834–1908), whose *The New Old Healing* (1908) and *The New Thought Simplified* (1908) helped introduce New Thought in East Coast intellectual circles; and Ralph Waldo Trine (1866–1958), the author of *In Tune with the Infinite* (1897), and many other books that popularized New Thought beliefs but had little official connection with the movement.[22]

Distinct religious communities with New Thought affinities also developed in the East. In 1894, Helen Van-Anderson established the Church of the Higher Life in Boston and in 1895 the Metaphysical Club of Boston was founded.[23] Other institutional expressions of New Thought in the East include the International Metaphysical League (1899), the New Thought Federation (1904), and the New Thought

Metaphysical Alliance (1906). Finally, Hopkins's work was continued, albeit in reduced form, by her sister Estelle Carpenter, Eleanor Mel, and others. Their community, Joy Farm, located in Connecticut, promoted Hopkins's teachings and its publishing arm, "The Ministry of the High Watch," published Hopkins's works after her death.[24]

Midwest and Far West

As important as these East Coast leaders and communities were to the prehistory and early development of New Thought, their impact on the movement was largely eclipsed by leaders and groups in the Middle and Far West. As New Thought grew, its greatest cultural impact was in the emerging urban centers of the American "frontier," cities like Chicago, San Francisco, Denver, Kansas City, Missouri, Seattle, Washington, and later Los Angeles, California. New Thought communities in these cities quickly became religious movements, as their leaders (following the Hopkins model) developed schools, publications, and organizations with loose institutional structures. Also, and again following Hopkins, they ordained ministers. To get an idea of how these movements emerged, it is helpful to review the development of the four groups that are the largest and oldest in New Thought. As a technical note, these groups are probably best termed "denominations" in the New Thought "family," as Methodism would be a "denomination" in the Protestant "family."

Divine Science

Although Divine Science recognizes two founders, Nona Brooks and Melinda Cramer, Brooks is of primary importance. Three other women can arguably be included as cofounders: Alethea Brooks Small (1848-1906), Fannie Brooks James (1854-1914), and Kate Bingham.

Each of the Brooks sisters played an important role in the emergence of the movement but the organizational impetus came from Cramer, who established a mental healing group in San Francisco in 1888. Cramer was a talented organizer, and, through communication with James, James was inspired to link her work in Denver with Cramer's group in San Francisco. Sometime later (and certainly by 1892), the Denver ministry adopted the name of Cramer's group, Divine Science.[25]

In 1896 Brooks quit teaching school and committed herself fully to the Divine Science ministry. Through her efforts and those of her sisters, the Denver ministry grew. In 1898 the Brooks' ministry was incorporated as the Divine Science College, and Nona was selected to be the minister. She was at first reluctant to accept the calling, but later relented, apparently due to the insistence of James. She was ordained by Cramer and conducted her first Sunday morning service on January 1, 1899.

Although Nona was apparently quite reserved, even timid, by nature, she served as the minister of the Denver church and the leader of the Divine Science movement for 30 years. She was the first female minister to perform a wedding in Denver. For this she was ridiculed in the Denver press. Although the Denver church grew and

prospered during her tenure, and numerous students studied at the Divine Science College, Brooks was not strongly committed to institutional development, and the movement remained small.

Upon her resignation from leadership of the Denver church in 1929, Brooks spent time in Australia, accepted speaking invitations from numerous churches and INTA, and finally settled in Chicago where she concluded her ministerial career as leader of a small Divine Science church. In 1938 she returned to Denver to serve as president of the Divine Science College.

Besides Divine Science, Brooks had a major impact on the development of the greater New Thought movement. She served in leadership positions in the INTA, helped popularize New Thought in the Denver area and the West as a whole, and directly influenced Holmes, the great popularizer of New Thought, Emmet Fox, and numerous less significant leaders of the movement. Brooks never married, although she had a long-term relationship and profound friendship with Florence Hoyt.[26]

Divine Science is historically notable for its being the most loosely organized of all New Thought groups. Today Divine Science has less than 30 affiliated churches, most likely has "less than 5,000 members worldwide," and is represented by two small organizations, Divine Science Federation International (the older group) and United Divine Science Ministries (established in the 1990s).[27]

Unity

Unity began in Kansas City in 1889, when cofounders, Myrtle and Charles Fillmore, dedicated their lives to teaching and promoting what they termed "practical Christianity." Myrtle Fillmore's use of mental healing techniques to achieve a healing from tuberculosis was evidently the precipitating event. Traditionally Charles is given credit for organizing and managing the movement and Myrtle is presented as working behind the scenes to nurture and support Unity's followers.[28]

In its initial form, Unity was a publisher of periodicals and a prayer ministry—The Society for Silent Help, later renamed Silent Unity. Today Silent Unity is the largest and most well-known prayer ministry in the New Thought movement. By the early twentieth century, Unity functioned like a traditional Protestant denomination. The first step toward institutionalization occurred in 1903 with the incorporation of the Unity Society of Practical Christianity. Unity Society evolved into the Unity School of Christianity, which is today the Unity (and New Thought) organization most recognized by the general public. The development of affiliated ministries and its successful periodical outreach in the early twentieth century accelerated the movement's growth. This was enhanced by Unity's break with the INTA in 1922 and its initiation of annual conferences.

During the second half of the twentieth century, Unity gradually reduced its publication enterprise, with the pocket-sized, daily devotional magazine, *The Daily Word,* remaining its most representative periodical today. Notably, in the 1990s Unity discontinued *Wee Wisdom* (begun in 1893), which was the longest continually

published children's magazine in the world. The movement remains committed to book publishing, with the works of Charles and Myrtle Fillmore among others continuing to be produced and distributed.

Unity's second major branch is the Association of Unity Churches (AUC), founded in 1966. The AUC is independent of Unity School and serves as the ecclesiastical arm of the movement. AUC ordains and supervises ministers, sanctions churches, and coordinates expansion activities. Members of the board of trustees are elected by representatives from member churches at annual conferences. Membership statistics are not available but an increase in the number of ministries in recent years suggests steady growth. As of 2001, there were 648 active ministers and 1023 licensed teachers serving in 936 ministries and 57 affiliated study groups in 64 countries. Outside of the United States, Unity's greatest concentration is in Africa, especially Nigeria, where there are 50 affiliated groups.[29]

In the 1990s two splinter groups formed, Unity-Progressive Council and the Federation of Independent Unity Churches, but neither have attracted a large following. The AUC is located near Unity Village in Lee's Summit, Missouri. Church membership statistics are not published but increases in the number of churches indicates steady growth over the past several decades. Total church membership is probably around 100,000, although the number of participants is probably considerably higher.

Unity is New Thought's largest denomination and is significant among New Thought groups for its strong Christian self-affirmation. The Bible is recognized as a primary text that "bears witness" to the word of God. Unity was once the trendsetter in the revitalization of the allegorical interpretation of the Bible, but has done little to advance this type of study since the 1960s. The allegorical method, called "metaphysical" interpretation in Christian Science and New Thought, treats the text as a symbolic document, with persons, places, and things standing for elements in consciousness. Charles Fillmore's *Metaphysical Bible Dictionary* (1931), is the fullest expression of this distinctive New Thought method of exegesis. In addition to the Bible, Unity's other primary religious text is Cady's *Lessons In Truth,* first published in 1894.

Like other nineteenth century New Thought groups, Unity emerged in the context of Christian Science, through the work of Hopkins. The Fillmores were students of Hopkins, receiving ordination from her in 1891, and Unity's theology reflects her influence. Mental healing (or "prayer treatment"), once a prominent feature of Unity, seems to be less of a focus in the movement today, with mainstream pastoral counseling and alternative healing methods having equal or greater popularity in many churches.

Religious Science

Religious Science recognizes Ernest Shurtleff Holmes as its founder. Before Religious Science was formally organized, Ernest was assisted by his brother, Fenwicke, a Congregationalist minister.

The turning point in Holmes's life came in 1907 when he read American Transcendentalist writer Ralph Waldo Emerson's *Essays.* After reading the work and accepting it as a guide for his own life, Holmes experienced healing of a throat ailment that had afflicted him for a long time. He also began attending the Christian Science "Mother Church" (Boston), and performed his first mental healings of others. Holmes did not take formal courses in Christian Science, although his healing system is similar to that used in Christian Science.

In 1915 Holmes gave his first lecture on mental healing. In 1916 the Holmes brothers started a mental healing periodical, *Uplift,* and Holmes immediately began to attract clients. He was ordained a Divine Science minister in 1917.

The brothers began Sunday morning lectures at the Strand Theater in Los Angeles in 1918 and, beginning in the early 1920s, they made lecture tours of East Coast cities. In 1924 Holmes studied privately with Hopkins in New York City. The brothers parted on friendly terms in 1925. Fenwicke returned to the East and enjoyed success as a lecturer and writer.

In 1926 Ernest's major work, *The Science of Mind,* was published. This book is probably the most thorough and comprehensive text on New Thought healing ever produced. In 1927 the Religious Science movement was born when Holmes founded the Institute of Religious Science and Philosophy and began a periodical, *Religious Science Monthly,* later renamed *Science of Mind* (1929). In 1929 he married Hazel Gillen.

Holmes began his movement and periodical after his studies with Hopkins. Like Brooks and the Fillmores, Holmes supposedly resisted establishing a religious institution, yet due to the influence of supporters, he relented and reluctantly did so.[30]

The Institute began ordaining ministers in 1939, and sometime in the early 1940s (the date is not certain) Carmelita Trowbridge founded the first Church of Religious Science in Alhambra, CA. Importantly, Trowbridge resisted efforts of the Institute to prevent her use of "church" in connection with Religious Science.

In 1949 the International Association of Religious Science Churches was established independent of the Institute. In 1953 the Institute established an ecclesiastical institution, The Church of Religious Science, to exercise control over the churches, and in 1954 nineteen churches affiliated with the International Association refused to join the new organization. Forty-six churches joined the Institute's Church. Since 1954 Religious Science has been represented by two different groups. Today these groups bear the names: United Church of Religious Science (successor of the Institute's organization), and Religious Science International (successor of the International Association).

Recent data indicate that today the United Church is the largest with 160 churches and 56 study groups, while Religious Science International has 107 religious churches and 27 "societies." Total membership for both groups is about 55,000.[31] Both groups developed representative democratic structures, ministerial education programs, and an international presence. A related movement, Seicho-no-Ie (noted earlier), was founded in Japan in 1930 by Msaharu Taniguchi, who was influenced in part by Holmes's writings.[32]

The International New Thought Alliance

The origin of the International New Thought Alliance (INTA) can be traced to 1914 and a New Thought conference in London, England. The Association's first annual congress was in 1915 in San Francisco. It was incorporated in 1917 in Washington, D.C. Precursors of INTA include the National New Thought Alliance (1907), the New Thought Federation (1904), and arguably the International Divine Science Association (1892). The general goal of these earlier groups was the unification of various individuals and organizations practicing mental healing, but none had any enduring success. Only with the establishment of INTA was this goal realized.

INTA has no single founder and its emergence as a distinct organization was the result of the efforts of a number of talented leaders, all of whom committed themselves, and in some cases their religious communities, to the INTA project. Early supporters included such notables as Militz, the Fillmores, Brooks, A.C. Grier, Thomas Troward, Horatio Dresser, Elizabeth Towne, and Ella Wheeler Wilcox. Although these influential leaders played a major role in publicizing and legitimating INTA as an umbrella organization, the person most responsible for the Alliance's success is James A. Edgerton (1869–1938). A lay person and former United States Post Office employee, Edgerton was the first president of the organization, holding that office from 1915 to 1923 and then again from 1934 to 1937.

Edgerton excelled at both diplomacy and organizational management, and the Alliance still follows the same basic organizational structures he established. Under his leadership, by 1920, the Alliance counted among its members New Thought's major denominations: Divine Science, the Homes of Truth, Unity, and the Church of Truth.

INTA's success as an umbrella organization for the New Thought movement is largely the result of the leadership of its presidents, the most important of whom were Raymond Charles Barker, Ervin Seal, Robert H. Bitzer, and the current president, Blaine C. Mays. Bitzer and Mays are notable for their success in expanding INTA internationally as well as within the United States. Together with Edgerton, they are the longest serving presidents of the Alliance, with Mays having served the longest of all: 1974–1996 and 1997–present.

Like other "big tent" organizations, INTA experienced its share of controversies, the two most notable ones occurring in 1922 and 1996. Both events apparently were caused by disagreements pertaining to leadership and mission. The 1922 event resulted in Unity School leaving the Alliance and the end of Edgerton's presidency the following year. The 1996 controversy led to the withdrawal of the leaders of a number of large churches and Mays' defeat in an election by Marguerite Goodall. Like Edgerton, Mays returned to the presidency, but in both cases the Alliance lost membership and support.

INTA is still recovering from the aftermath of the 1996 controversy and adapting to the continuing development of denominational forms of New Thought. Today, membership is increasing, with notable institutional members including the AUC,

United Church of Religious Science, Religious Science International, Divine Science Federation International, and United Divine Science Ministries, International.

PRIMARY BELIEFS AND PRACTICES

As noted previously, New Thought is a popular manifestation of religious idealism, a system whose most distant forebear was Plato. His philosophy in general and his idealism in particular had considerable influence on the development of Christian theology, especially through a religious system developed on the basis of his philosophy—Neoplatonism. By the later Middle Ages, this influence began to weaken, largely due to the rise of empirical methods of inquiry and analysis. After the Reformation in the sixteenth century, idealism entered a period of dormancy in Christianity and in Western thought as a whole.

Idealism refers to any system of thought that recognizes that the highest reality is mental. From among the numerous religious and philosophical figures who could be cited as distant precursors of New Thought, major thinkers include Origen (185–254), Augustine (354–430), John Scotus Erigena (810–877), and Anselm (1033–1109). In modern times, Rationalists like René Descartes (1596–1650) and Bendict de Spinoza (1632–1677) might be cited as philosophical forebears of New Thought. Finally, and just prior to the emergence of New Thought, the work of G.W.F. Hegel (1770–1831), stands as a major reaffirmation of the idealist tradition. In formal philosophy, Hegel's idealism was a brilliant but short-lived phenomenon. In terms of popular culture, however, it laid the groundwork for the Mind Cure movement, Christian Science, and shortly thereafter, New Thought.

As suggested by its origins, preinstitutional influences, and its relationship with Christian Science, New Thought's primary beliefs are idealistic in character, and its primary religious practices are informed by principles of mental healing. New Thought recognizes that its unique prayer technique is scientific in character.

New Thought's foundational world view and basis for its various ritual practices is the idealistic premise that a correlation exists between a person's consciousness (thoughts and mental states) and a person's physical-material experiences. Thus the root causes of physical-material limitations (for example, sickness, poverty, aging, death) are thoughts of limitation or a general state of consciousness that accepts the reality of such limitations. The source of these "error thoughts" or limited consciousness is "mortal mind." On the other hand, constructive and healthy thoughts, or a positive consciousness, establish positive conditions. The ultimate source of good thoughts or a positive consciousness is God, which is understood as Divine Mind. In short, mind is primary and causative; negative (mortal) thoughts create negative conditions and positive (spiritual) thoughts create positive conditions. The precise nature of this causative process is understood to be as exact as any natural law and mastery of the process a scientific undertaking.

Over time the various New Thought groups developed their own distinct teachings, religious terminology, and prayer or treatment rituals, but all maintain a

primary focus on mental healing and the general principles described above. A simplified version of the basis for mental healing is the assertion that "Life is Consciousness," a concept popularized by Divine Scientist, Emmet Fox (1886–1951). This motto offers the best brief summary of New Thought's popular religious idealism and the principle upon which the movement bases its beliefs and practices—most centrally its prayer rituals.

By affirming that life is consciousness, New Thought declares that all material-physical phenomena result from one's mental states. The universe is mental, or, as most New Thoughters would say, God is Mind. God (Divine Mind) is also omnipresent and exists as both omnipotent good and absolute perfection: *good* in an Augustinian sense, in that evil has no actual existence, and *perfection* in a Platonic sense, in that it is the realm of pure incorruptible ideas (Platonic forms). Aside from God, common synonyms for Divine Mind are Truth, Principle, and Law. By "Truth" it is meant that Divine Mind is the Reality that eliminates all error (or "seeming evil") and frees one from material-physical limitations. In earlier times, Truth also functioned as a synonym for the New Thought religion; so one was a Truth student or attended a Truth center (church). "Principle" refers to the function of Divine Mind as the universal cause of all creation, specifically the plan or pattern through which Mind expresses itself. "Law" means that Divine Mind is characterized by a Divine Order that is as systematic and precise in its functioning as the laws of nature. Study and application of this Law by mental healers is just as scientific as the study and application of physical laws by empirical scientists. Familial terms, such as Father, Mother, Father-Mother, or Mother-Father, are also used in New Thought, but the primary understanding of God is decidedly nonanthropomorphic.

Humans are fundamentally spiritual in nature and linked to Divine Mind through their minds. The highest state of human consciousness is the point of contact between humans and divinity. When persons experience the reality of this connection, they participate in the perfection of Divine Mind and have access to Divine Ideas, and, as a consequence, the material-physical conditions in their lives reveal Divine Perfection. To the degree that people fall short of this realization, they likewise fall short of the manifestation of Perfection. This failure is an error in consciousness, "missing the mark," a mistake, a belief in "mortal mind" rather than Truth; but neither is a sin nor a manifestation of evil in the traditional Christian sense of those two terms. The result of such errors, nonetheless, is pain, illness, poverty, sickness, aging, and death.

Mental healing rituals such as prayer treatments, affirmations, decreeing, visualizations, and "treasure mapping," eliminate the mental errors and reestablish the right relationship with Divine Mind, the source of all good. When this is done, undesired conditions are eliminated and desired ones established. In New Thought, mental healing rituals are never conceived as changing or in any manner affecting God (Divine Mind). They are always an inner psychospiritual activity in the consciousness of the individual; her or his realization of the presence of God, which is Good and Perfect, Truth, Principle, and Law. In this realization lies the key to the effectiveness of all New Thought ritual practices.

In various ways, all New Thought rituals seek this realization, usually in the context of some specific healing exigency, typically called a "challenge." Once realized, the Divine Reality replaces the flawed condition, error is removed, Truth restored, and healing occurs. Classically, this is called a "demonstration."

In a certain sense, all rituals in New Thought are healing rituals, but the New Thought concept of healing extends to all areas of life, not simply to remedies for specific physical ailments. While ritual treatments for healing of specific physical ailments are still common in New Thought, the movement and its individual groups are always keenly aware that spiritual healing encompasses all areas of a person's life. As a result, New Thought rituals routinely focus on treatments for prosperity, peace of mind, harmonious relationships, love, joy, success, justice, and order. They can be as broad and general as treatments for world peace and harmony among nations or as specific as treatments for a new car and a passing grade on an exam.

Considerable differences (even disagreements) within the movement abound regarding mental healing techniques, technical terminology, distinctions between specific ritual activities (such as prayer, mental treatment, and meditation), and the degree of specificity in treatment rituals. Nonetheless, all consent to general agreement on the basic idealist principle (that life is consciousness), the fundamental belief that Divine Mind is Perfect and accessible by human beings, and that the properly administered mental healing treatment results in the realization of Divine Mind. This brings the reality of Divine Mind into physical-material expression, resulting in the elimination of the undesired condition and/or the manifestation of that which is desired—the demonstration. Believers engage in treatment rituals with a positive expectancy, typically recognizing that the desired outcome is already achieved and giving thanks in advance for the demonstration that they seek.

As noted above, ritual practice varies considerably in New Thought, with different groups using different techniques and terminology or emphasizing some concepts more than others: Unity's classical concept of the Silence and the process of Denial and Affirmation, Religious Science's emphasis on Law and Affirmative Prayer, and Divine Science's stress on Omnipresence. Broadly speaking, the rituals in the movement fall into three general categories: (a) public-congregational rituals, (b) private-personal rituals, and (c) professional rituals.

Public-congregational rituals in New Thought look and sound like congregational prayers in other religious traditions, with statements and requests being spoken aloud in religious environments by those attending services. A New Thought version of the Lord's Prayer is often part of the services in New Thought churches and frequently sung by the congregation. Churches may have standard opening prayers or affirmations, prayers in conjunction with offering collections, formal prayers for persons desiring healing, and closing benedictions. Specialized treatments may be offered at services for specific desires such as world peace, environmental healing, prosperity for the religious community, and harmonious weather conditions. In addition, most New Thought services also feature a period of meditation, which usually is directed by a speaker who affirms statements of religious significance to congregants and seeks to create a serene mental state. Meditations may involve group responses,

visualizations, and gentle mental journeys to peaceful realms of thought. Public prayers, treatments, and meditations may be based on printed texts found in books, or periodicals published by the respective denominations.

In the category of private-personal ritual, New Thought communities show the same degree (and range) of dedication to prayer as other religious communities in which personal ritual practice is a vital part of life. New Thought is nondoctrinal and generally presents its teachings as conditional statements; for example: If one desires to live a full and meaningful life, then spiritual practices are necessary; if one seeks a healing, then a certain mental process should be followed; and so on. Thus, although ritual treatment is a central element in New Thought belief systems, the denominations themselves do not make this (or any other) religious practice obligatory; and in the absence of any survey data on the beliefs and practices of individuals in the movement, it is difficult to speak with assurance about how pervasive routine prayer activity is among members. Despite this qualification, those who are especially devout are most likely quite engaged with mental healing work on a routine basis, while those with less religious commitment are probably less engaged.

The personal rituals of the more dedicated members most likely featured at least one and possibly several daily treatment sessions. Depending on the particular group or personal background of the participant, such experiences might involve (or even be considered) meditations. Daily religious activities vary widely from person to person, although some common practices include a personal prayer or cycle of prayers spoken aloud or affirmed silently, reading of and reflection on a daily lesson and prayer or treatment found in a New Thought periodical, a systematic process involving different steps leading to a specific spiritual state (the Secret Place of the Most High, Oneness, the Christ Consciousness the Silence), visualization exercises, and a period of silence. These and other practices can be done individually or combined during a treatment session. The general aim of such sessions, however they are understood, is the recognition and affirmation of the reality of Divine Mind (Truth, Principle, Law) in the life of the participant.

In addition to daily rituals, from time to time most New Thoughters engage in personal treatment activities to resolve specific challenges or achieve specific desires. As noted above, rituals to eliminate physical ailments are common, but such ailments hardly exhaust the range of challenges dealt with through mental healing treatment. Others include financial limitation, inferior social or professional status, difficulties in relationships, aging, heartache, and guilt.

Increasingly in New Thought, rituals are focused on achieving personal goals or manifesting specific conditions or objects, even though their absence may not be particularly challenging. Thus, one may be quite successful at one's job, but greater success may be desired; one may have a nice home, but a better home is desired; a new car may be desired rather than an older one; and so on. In any of these situations, New Thought offers individuals mental healing exercises specific to the situation. Such exercises can be discovered through reading and study of texts dealing with

prayer and treatment, courses taken at religious centers, or one-to-one work with a religious professional.

Typically, these exercises involve the following steps: realization of Divine Mind and affirmation of the reality of that which is desired in Divine Mind; recognition and affirmation of the individual's oneness with Divine Mind and the causative nature of consciousness; and thanksgiving (in advance) for the manifestation of that which is desired. In some instances, such as those in which an undesired condition must be eliminated, the reality of that condition (or the thought of it) is denied prior to the affirmation of the reality of the desired condition. Individuals practice these exercises until their demonstration occurs or they receive inner spiritual guidance otherwise. Regardless of the specific aim of prayer and treatment exercises and regardless of their outcomes, the mainstream of the movement asserts that the greater purpose of all such undertakings is a higher consciousness and a clearer realization of Divine Mind and the individual's oneness with It.

The category of professional rituals covers treatment work done by sanctioned religious professionals with or for another person. The office of the professional mental healer predates the New Thought movement itself and can be traced back to the Practitioner office in Christian Science and the independent mental healers of the nineteenth century. Today, professional mental healing treatment is done by ministers, practitioners (in some traditions), and, in the unique case of Unity School's Silent Unity ministry, individuals who have received special training.

In its purest form, professional prayer treatment is a psychospiritual exercise engaged in by a religious professional, within her or his consciousness. In this regard, religious professionals essentially treat themselves, following the same steps described earlier, seeking to realize Divine Mind in the context of the specific request brought to them by another. They are not really working on behalf of the person who contacted them; rather they are working for their own realization of the Truth in the context of that person's challenge or desire. To the degree that practitioners realize the Truth, and due to the Omnipresence of Divine Mind, their realization results in the elimination of the challenge or the manifestation of the desire about which they were contacted. As practitioners increase their own awareness, in so doing the improved awareness ultimately affects the well-being of the person who contacted them.

Without discounting this traditional form of professional treatment, most New Thought religious professionals have no difficulty with the rhetorical concept of praying for others, even though in practice they may follow the classical method of self-treatment. More notable is the fact that, in many New Thought communities today, prayers for others are offered by religious professionals, and from every indication (of language and tone) the prayers are actually being offered on behalf of the other person.

In summary, ritual practice in New Thought is as diverse as the movement itself. Different communities have different techniques and stress different concepts. Nonetheless, and despite the many differences in terminology and actual practice,

the aim of prayer throughout the movement is essentially the same: to experience the reality of Divine Mind and bring that reality into manifestation, thus eliminating undesired conditions, manifesting desired ones, demonstrating or reestablishing Truth, and ultimately uplifting the world.

NEW THOUGHT'S FUTURE: ISSUES AND QUESTIONS

This final section examines some of the issues and questions that present themselves to New Thought and its denominations as the movement enters its second century. Topics surveyed here can be grouped into three general categories: Doctrine and Tradition, Education, and Cultural Communication. These serve as organizational headings for various secondary issues and questions related to the future of the movement.

The categories and their related issues and questions are linked at both the practical theoretical levels. As such, they are relevant to participants in New Thought and to scholars seeking to understand the movement. For the most part, New Thought has not given much attention to the topics covered here, and scholarship on the movement has largely ignored them.

Doctrine and Tradition

Broadly speaking, New Thought is a nondoctrinal movement that has been hesitant to articulate its teachings in a systematic manner. When formal statements have been made, they usually occur after the fact, as policy decisions made relative to teachings deemed contrary to those of the movement. These decisions often come about as the result of the appearance of new teachings or internal political tensions. Early in its history, New Thought wrestled with encroachment on its religious territory by Spiritualism, mesmerism, and various syncretistic teachings that blended Asian religious ideas with Theosophy and physical healing systems. This continues today with the presence of New Age teachings in the majority of New Thought churches. Without an established body of recognized teachings, nondoctrinal movements such as New Thought often have difficulty specifying their beliefs. While not necessarily a problem, this may lead to misunderstandings on the part of participants and outsiders trying to understand the movement.

In addition to its nondoctrinal character, New Thought has been oblivious to its own history and its place in the larger sweep of Western religious and cultural history. Most New Thought participants know little of the history of their own tradition and even less about its relationship to the religious and cultural history of the West. An example of this is the distorted history of the movement that venerates Quimby as the founder of New Thought and relegates the work of Hopkins to the margins of the tradition. Whether or not historical and cultural self-consciousness is necessary for a movement to succeed and thrive is not entirely clear; however, the lack of such

an awareness on a wide scale seems relatively rare in movements well into their second century of existence.

Education

The primary category of "Education" introduces issues concerning how a religion teaches its lay participants and clerics. Clearly these issues have a direct relationship to issues found in the category of Doctrine and Tradition.

New Thought has always placed great value on the idea of education, and history reveals that the movement has seen education as one of its primary aims from Hopkins onward. From its earliest decades, New Thought has abounded with colleges, seminaries, and institutes. In name at least, the early New Thought groups understood themselves as institutions of religious education. Curiously, however, professional education in New Thought was something less than that suggested by the august titles of its schools.

This is not to say that New Thought failed in its educational aims, but the aims have not been fully realized. Beginning with Hopkins's College and her Seminary, New Thought endeavored to educate its participants and its leaders, and, for the most part, it has succeeded in doing so—up to a point. Within the context of its educational systems, New Thought has trained teachers, practitioners, and ministers, but that context has lacked certain elements commonly found in comprehensive religious educational systems, including: (1) systematic lay education programs, (2) accredited schools of higher learning, (3) support of scholarly endeavors and professional scholars within the movement, and (4) familiarity with theology in a general sense.

Perhaps the most important reasons that New Thought has not yet developed these elements are related to issues related to doctrine. In the absence of an accepted body of normative teachings, a movement finds it difficult to develop a comprehensive education program. In the absence of an historical awareness of the religious, intellectual, and cultural context of the movement, the movement does not possess a sensitivity to the necessity of a fully developed educational system, to say nothing about the development of a scholarly community and the theological enterprise as a whole. If a religion understands itself as ahistorical, it will have no reason to study its own history and the relationship of this history to the culture in which it and its members participate. It may even find such inquires threatening and move to trivialize them. This posture towards the study of history will be even more pronounced when the prospect of inquiry into a religion's teachings is presented, and the development of theological educational systems suggested.

As New Thought and its denominations enter their second century, issues related to formal education will doubtless grow. Unity and the Universal Foundation for Better Living are taking preliminary steps towards establishing schools based on norms of universally recognized accrediting institutions. These initiatives warrant attention by scholars, although important questions remain, given the movement's historical resistance to formal education.

Cultural Communication

The category of "Cultural Communication" introduces issues related to how a religion expresses itself in the public spaces of our common culture. This category is one in which New Thought has always been active.

Today, however, New Thought is confronted with important and pressing issues related to its communication with and within contemporary culture. For the most part, and again due to underdeveloped educational systems, New Thought is less than culturally sophisticated. It has sent forth ministers who are not conversant with the issues and demands of the culture in which they preach and teach. This, coupled with their less than complete theological and academic education, leads to the marginalization of their message.

Many New Thought leaders continue to reject the designation of their movement as a religion, yet they speak in churches and use religious language. Many who hold professional ecclesiastical titles have little understanding of religious history, theological specializations, or even the foundational teachings of the movement. Few can offer a systematic exposition of their faith or utilize a basic theological vocabulary. Some think that they are part of the New Age, and most place themselves in the ambiguous "metaphysical" movement even though the term has been appropriated by groups that are decidedly different from New Thought.

Most religions are not "normal" in the context of contemporary secular culture. The doctrines of most religions are at odds with the common sense beliefs of most people, even people who claim to be religious. Religions gain cultural normalcy not by becoming part of secular culture but by learning how to speak to its residents while managing to stand apart from the culture itself. Early New Thought leaders (Hopkins, Brooks, the Fillmores, and Holmes) were very good at this kind of speaking, yet subsequent generations of leaders have had difficulty articulating distinctly New Thought positions in the context of the larger culture.

All religions wrestle with the paradox of articulating a message that is seemingly denied by the culture that surrounds and sustains them. Theologians, perhaps beginning with liberal theology's Friedrich Schleiermacher (1768–1834), tried to resolve this paradox. It is a paradox that remains merely speculative and theoretical—until individual believers are faced with challenges to their faith. Then the paradox may prove problematic to the participant's faith, although not necessarily to the participant's involvement with the religion. And so the issue: How does a religion and its leaders assist in the cultivation of faith, a faith that is, at least in principle, predicated on idealist beliefs that are contrary to the cultural ideals of contemporary materialist culture? How is this done in the context of any religion? How is it done when many persons who are participants in a religion are heavily invested in a cultural system with a plausibility structure that is markedly different from, if not contrary to, their religious system? Moreover, how is this done in the context of a religion that is unsure of its own teachings, its own history, its very identity as a religion, to say nothing of its identity as an idealistic religion in the midst of a profoundly materialistic culture? Finally, how is this done in the context of a religion that puts such a high

premium on individuality and the responsibility individuals have for both their challenges and their healings?

To consider the questions posed in the three categories of this last section, gives one a sense of the curious situation in which New Thought finds itself as it enters its second century. Whether or not New Thought is capable of engaging these questions remains to be seen. That it has not done so very well in the past and yet succeeded by any reasonable measure of success adds even greater curiosity to its current situation and the future of this, the American people's "only decidedly original contribution to the systematic philosophy of life."[33]

North American Esotericism

Arthur Versluis

INTRODUCTION: WHAT IS ESOTERICISM?

The word "esoteric" refers to knowledge reserved for a few; it derives from the Greek word *esotero,* meaning "within," or "inner." Here, the word "esoteric" implies inner or spiritual knowledge held by a limited circle, rather than "exoteric," publicly known or "outer" knowledge. The term "Western esotericism" refers to inner or hidden spiritual knowledge transmitted through Western European historical currents that in turn feed into North American and other non-European settings. Esoteric knowledge ran throughout Western history from antiquity to the present, ranging from the mysteries of ancient Greece and Rome to Gnostics to hermetic and alchemical practitioners, all the way to modern esoteric groups.[1] Specific currents under the category of Western esotericism include alchemy, astrology, Gnosticism, Hermeticism, Kabbalah, magic, mysticism, and various secret or semisecret societies.

One definitive characteristic of esotericism is "gnosis" (from the Greek for "knowledge") or direct spiritual insight. This characteristic has the advantage of being broad enough to include the full range of esoteric traditions, but narrow enough to exclude exoteric figures or movements. Gnosis typically refers to two broad types of knowledge: cosmological and metaphysical. Cosmological traditions or currents include alchemists, who search for direct spiritual insight into nature and seek to alter certain substances thereby; astrologers, who seek direct insight into the cosmos and use it to analyze events; and magicians, who seek direct insight into the cosmos and attempt to use it to affect the course of events. Metaphysical currents include mystics or theosophers, who seek transcendent insight into the divine. Broadly speaking, in Western esotericism seekers want direct spiritual insight into the hidden nature of the cosmos and of themselves—they strive for gnosis, either cosmological or wholly transcendent. While these categories may seem mutually exclusive, in practice, they blur together.

In other words, Western esoteric traditions contain secret or semisecret knowledge about humanity, the cosmos, and the divine. While North American currents tend more toward pragmatism and practice than speculation, American esotericisms includes the full range of these currents.

EUROPE AND EARLY AMERICA

European and North American currents are complex and deeply intermingled. To study North American forms of esotericism, one must also study not only their European origins or antecedents, but also their complicated trans-Atlantic relationships and successors. This complexity is evident almost from the onset of English and European colonization of North America, in the export of folk magic, astrology, and alchemy, in the founding of the American republic (for instance, with the prevalence of Masonry among the Founding Fathers), and in so many subsequent important figures and movements, from Ralph Waldo Emerson to Paschal Beverly Randolph to the Blavatskyan Theosophical Society.

In eighteenth century Europe, the cultural landscape was filled with esoteric secret or semisecret societies. For example, Rosicrucianism evolved from a series of enigmatic treatises published at the beginning of the seventeenth century to a wide array of actual initiatory organizations. By the late eighteenth century and the founding of the United States, many European initiatory groups took the name Rosicrucian, or a similar one, like the Gold-und Rosenkreutz (Gold and Rosy-Cross) Order that emerged during the 1770s in Germany, as well as numerous lodges under the name "Golden Rosy-Cross of the Ancient System" in 1777.[2] Rosicrucian groups or individuals in general embraced an alchemical view of the cosmos as a system of correspondences to be decoded and believed in social development toward a harmonious and fraternal future that joined together elements of what we would today term religion and science.

Speculative Freemasonry emerged from a Rosicrucian environment in the early eighteenth century. Like Rosicrucianism, Freemasonry is an ethical tradition that conveys cosmological knowledge, evidenced by its emphasis on building and architecture. Originally, masonry was "operative," meaning that it belonged among the medieval trade guilds, but in the early eighteenth century in England, "speculative" Freemasonry emerged, and this type of Freemasonry quickly permeated the American colonies.

As is well known, many signers of the Declaration of Independence were Masons. George Washington became a Mason on November 4, 1752, and strongly encouraged his generals, officers, and soldiers in the Continental Army to join Masonry. Washington even appeared in full Masonic regalia before the troops while celebrating the retaking of Philadelphia in 1778.[3] Boston's St. Andrew Lodge was led by Dr. Joseph Warren and included among its members Paul Revere, who was later to become Grand Master of Massachusetts.[4] This lodge met at "The Green Dragon, or the Arms of Freemasonry," a Mason-owned tavern near the Boston Harbor, the

site of the Boston Tea Party of 1773. In part, out of these origins emerged the American Declaration of Independence in 1776.

By the early nineteenth century, Masonry was so widespread in the United States that it was regarded by many evangelical Christians as well as many non-Mason citizens as dangerous to civic well-being. Popular resentment of the Masons' purported political and social power via their Masonic connections emerged after the notorious disappearance of William Morgan on September 14, 1826. Morgan was a stonemason living in western New York state who intended to publish a book in which he unveiled the secrets of Masonry. A group of Masons set fire to the printer's shop where the book was being printed, and when the fire was subsequently put out, the Masons had Morgan and his printer, David Miller, arrested. When Mrs. Morgan went to the jail to find her husband, he was gone and was never seen again. Out of people's anger at the presumed kidnapping and murder of Morgan emerged the Antimasonic party, the first third party in American history. In New England, the Antimasonic party[5] rivalled and in some instances surpassed mainstream political parties in votes.[6]

Opposition to Masons in the United States did not end with creation of a political party, the Antimasonic Party—there was also violence. In March 1830, Antimasons forced their way into a Boston lodge, expecting to find an arsenal, but instead discovered 43 ritual swords and some spittoons. Masonic buildings were defaced. Angry Masons in turn shouted down and drove away Antimasonic speakers. Although Masonry did recover from this period of attack in the early nineteenth century, the hostility toward Masonry did not vanish, but remained an undercurrent in American society, as well as a spur toward the creation of competing quasi-Masonic fellowships like the Grange association for farmers, the Odd Fellows, the Elks, and other lodges. Widespread fear of Masonry as a secret organization with hidden political power helps explain why, although Masonry was immensely important in the founding of the United States and its ideals were influential in the writings of many of the first great American literary-political figures, Masonry never regained its earlier sociopolitical authority.

FOLK MAGIC AND COSMOLOGICAL CURRENTS

Many European esoteric cosmological traditions came to the New World through popular or folk currents by the nineteenth century. Elsewhere I categorize these currents, roughly, as (1) astrology; (2) sympathetic magic; (3) dowsing; (4) spiritualism; and (5) mesmerism. These five primary currents were widespread in American popular culture during this period and, as John Richards shows, were still represented in Appalachian culture of the early twenty-first century.[7]

Whereas in the eighteenth century, astrological manuals and almanacs were fairly widely distributed, a significant portion of the astrological material published in the United States during the nineteenth century was in the native languages of specific ethnic groups rather than in English for a mainstream audience—in particular, one finds a number of books published in German in Pennsylvania. A more widely

distributed book, published in Boston by the author in 1854, was Dr. C.W. Roback's *The Mysteries of Astrology and the Wonders of Magic, including A History of the Rise and Progress of Astrology and the Various Branches of Necromancy. The Mysteries of Astrology* is an astrological primer and, like the farmer's almanacs and lunar planting schedules that continued through the entire period, helps demonstrate the underground continuity of astrology.

During the nineteenth century, herbals were popular. They classified plants on the basis of their astrological characteristics. Some plants are solar, some lunar, some Venusian, some Martial, and so forth. By applying the proper balance of herbs to the patient, a healer could adjust astrological imbalances in the patient and cure the illness—this is the theory behind a tradition of astrological or sympathetic medicine seen in books from around the time of Shakespeare onward, like Nicholas Culpeper's famous herbal.[8] These traditions of sympathetic magic or astrological medicine continued as mostly hidden currents throughout the nineteenth century and into the twentieth.

Three folk traditions are particularly important: Native American herbal traditions; slave and ex-slave magical traditions; and Pennsylvania German traditions of *hexenmedizin* or "powwow."[9] In North America folk magical traditions from Africa, England, Ireland, Scotland, and Germany often combined with local or regional Native American traditions to form modified or hybrid folk magical traditions. Jon Butler's observation remains valid—that we have insufficient research on the nature of these magical traditions during this period.[10] But these three, sometimes overlapping groups or communities, represent only the most visible forms of what remained often largely invisible and unexamined in communities across the United States right into the twentieth century.

For example, dowsing was a practical American skill throughout the nineteenth and twentieth centuries. The dowser walks over the land holding a forked wooden or metal divining rod that dips downward over the place where water is found. Broadly speaking, dowsing (and sometimes other forms of divination too) is not generally frowned upon in the way that other forms of magic often are, and it remains a widespread phenomenon in the American hinterlands to this day.

Better documented is the phenomenon of Spiritualism. Conventionally, most historians maintain that Spiritualism began in the United States with the Fox sisters in 1848. However, such phenomena have a long history in both Europe and North America. English author John Aubrey published his *Miscellanies* in 1696, and it included sections on apparitions, voices, impulses, omens, knockings, and invisible blows. And after all, Heinrich Cornelius Agrippa's influential *Three Books of Occult Philosophy* included sections on how spirits may be called up, on prophetic dreams, and so forth.[11] Throughout early modern history, many examples exist showing that people believed in connections between the invisible or spiritual and visible worlds.

Still, earlier esoteric forms of Spiritualism or necromancy differ from the form that swept the United States in the nineteenth century because European precedents tended to belong to secretive groups or individuals. In the United States, spirit rapping and similar "occult" phenomena assured people that invisible beings were real

and that personalities survived death, something that was important in the wake of the American Civil War. Spiritualism became a widespread phenomenon, involving even promoters like P.T. Barnum. Although Spiritualism had predecessors in European esoteric lodges, in the United States it was not very esoteric at all.

"Animal magnetism," or Mesmerism, was also important. This phenomenon is now known chiefly as hypnotism, although Mesmerism included other dimensions than hypnotism, including hidden energy currents in the body. Friedrich Mesmer (1734–1815), an Austrian physician and astrologer, became well known in Paris for the miraculous healings and weird psychic phenomena that accompanied his stage shows. With the infallible instinct of the showman, Mesmer turned animal magnetism or hypnosis into a stage event. Animal magnetism was supposedly a universal fluid that could be manipulated by a practitioner to effect healing.

Mesmerism spread quite widely when in the American colonies it linked with the "New Church" of the followers of Emanuel Swedenborg (1688–1772). Andrew Jackson Davis (1826–1910) was also important in the history of American Mesmerism. He was known as the "seer from Poughkeepsie, New York." Davis believed that he was not indebted to any other writer, but one finds in Davis's work an unmistakable indebtedness to the socialism of Charles Fourier, to European folk medicine, to Mesmerism, and to Swedenborg. Davis and most of the Spiritualists rejected conventional forms of Christianity, but they often called themselves Christian, widening their audience and thus, in a characteristically American way, making what was esoteric, exoteric.

ESOTERIC SEXUALITY AND AMERICAN UTOPIANISM

The United States has been the site of a number of fairly successful utopian communities, among them such groups as Ephrata, which flourished not far from Philadelphia in the eighteenth century, the Harmony Society of Johann Georg Rapp (1757–1847) and his adopted son, Frederick Rapp (1775–1834), the ill-fated Fruitlands community founded by Amos Bronson Alcott (1799–1888), the Oneida community of John Humphrey Noyes (1811–1886), and the Brethren of the New Life, founded by Thomas Lake Harris (1823–1906). All of these utopian groups derive their philosophy either directly or indirectly from Christian theosophic mysticism in the tradition of Jacob Böhme (1575–1624). Those communities that developed esoteric sexual theories and practices (notably Noyes and Harris) were drawing in part on a preexisting tradition of the androgynous angelic spiritual unity that is found in the works of Emanuel Swedenborg as well as in earlier alchemical works. John Humphrey Noyes, founder of the well known Oneida community in western New York state, was from a merchant family and graduated from Dartmouth College. Noyes was converted in the great revival of 1831 and went to divinity school at Yale, where he supported radical causes. Noyes opposed the institution of marriage as commonly understood, and after he gathered a perfectionist community in Putney, Vermont, he began to publish his views, which scandalized his neighbors and ultimately caused his community to flee to Oneida in 1848.

The Oneida community pursued an interesting and relatively well-organized kind of socialism in which matters of procreation and sexual intercourse as well as most other decisions were subject to community judgment. Oneida, which by 1851 numbered 205 members, was controversial for its sexual views, but, in fact, was fairly conservative in many respects. The community was industrious and, in addition to farming and logging, saw to the production of dinner silverware. Indeed, when the community disbanded in 1881, it did so by forming the Oneida Corporation, which today still is responsible for manufacturing Oneida silverware.

Noyes's particular version of male continence was the centerpiece of Oneida's unique sexuality. As practiced at Oneida, it consisted of sexual intercourse without male ejaculation, which Noyes believed transformed intercourse from an animalistic rutting into, at least potentially, a vehicle of spiritual experience. This view has parallels in both Hindu and Buddhist Tantrism, but Noyes almost certainly did not get his approach to sexuality from Asian traditions. Instead, there are European precedents for such a view, both medieval, as in the Cathars, and more modern, in particular among the Christian theosophers.[12] It is entirely possible that at Yale, Noyes read works that inspired his later views of sexuality and religion, but precisely which works remains uncertain.

Thomas Lake Harris was born in England, and came to the United States in 1828. In 1845, he became a Universalist minister, a career that served him for less than two years, for in 1847 he joined Andrew Jackson Davis and the Spiritualists. Harris soon left Davis's group, eventually announcing his own esoteric millennialist group called the "Brotherhood of the New Life," which was intended for the "reorganization of the industrial world."[13] Harris established his group at Brocton, Salem-on-Erie, New York, and finally in California. He taught a complex mysticism with some sexual dimensions, the underlying idea being that through spiritual practices it is possible to restore human beings and nature to an original paradisal state.

Harris was a prolific author and also wrote and published a number of hymns and songs. Among his many books are *Arcana of Christianity: An Unfolding of the Celestial Sense of the Divine Word* (1858–1867), *The Millennial Age: Twelve Discourses on the Spiritual and Social Aspects of the Times* (1860), *The Breath of God with Man* (1867), and *The Golden Child* (1878), the daily chronicle of life in the California community Harris founded. In essence, Harris joined together Christian millennialism with Swedenborgian thought, but also drew on a range of other esoteric traditions.[14] Harris's esotericism was thoroughly European in origin, emerging almost totally out of Swedenborgianism, and it was quite sophisticated.[15]

While Noyes and Harris were more widely influential—both because of their writings and because of the utopian communities that each led, yet a third figure was influential in this American esoteric pragmatism: the remarkable Alice Bunker Stockham (1833–1912). Stockham founded no utopian community and, like Harris, was overlooked by scholars, but she was a significant author whose work continues and develops the Noyesian tradition of *coitus reservatus* (or males not ejaculating during sexual intercourse) in marriage. One of the first female M.D.s in the United States, trained as an obstetrician/gynecologist whose practice was based in Chicago,

Stockham's work reflects her medical training and perspective. In it, Swedenborgian or Böhmean mysticism is missing, but she advocated what we might call a more secular sexual mysticism of human creativity.

Stockham's work is unique, particularly her book *Karezza.* Harris's teachings were truly esoteric, and even Noyes's teachings were primarily for the benefits of his followers, but Stockham disseminated the idea of *coitus reservatus* as widely as possible. Her books, especially *Karezza,* are filled with the spirit of proselytization for what she clearly saw as a possible, indeed, a necessary sociosexual revolution. The relations between the sexes could be entirely transformed, if only husband and wife would begin to practice the ascetic discipline of occasional intercourse without ejaculation.

Yet she went further, arguing that just as ordinary sexual intercourse led to procreation, so spiritual intercourse conducted without ejaculation would lead to what she calls "procreation of thought," and to a higher union of male and female. While Stockham is exoteric in her desire to convey her sexual theory as widely as possible, she relied on a long and rich Western esoteric tradition, as, for example, when she said that "in every soul there is a duality, the male and female principle," and that "though but one in spirit, in spiritual expression soul in every person is twofold, a blended male and female."[16] Thus, she continues, "as sex is in the soul[,] it is not impossible, as spiritual unity is developed, that a procreation of thought may be accomplished—that is, a procreation on the spiritual plane, not of individuals, but of principles and theories that can be practically developed for the good of the world."[17] Hence, even the more classically esoteric dimensions of Stockham's thought—like the aspiration to nonduality or androgyny—ultimately is legitimated for her only by its practical exoteric consequences "practically developed for the good of the world."

Stockham's work stands in the long American tradition of universalism and pragmatism whose greatest representative is Ralph Waldo Emerson, a tradition with no lack of representatives proceeding into the twentieth century with figures like Alan Watts, as well as groups like the human potential movements, and philosophies and ideologies like East-West syncretism. New Age figures and sects should also be included in this heritage. Nearly every one of the utopian figures and groups mentioned here were exemplars in the long tradition of American pragmatist esotericism, or esoteric pragmatism.

LITERARY "OCCULTISM" IN THE AMERICAN RENAISSANCE

The emergence of an industrial American society in the nineteenth century meant that, at least for a time, alchemy, astrology, and other esoteric traditions of intellectuals or the upper class were by and large not only discarded, but also denigrated because they were not conducive to industrialization. The same was true for the folk magic traditions from Native American, African American, Pennsylvania German, and utopian origins. But at least some of the early industrial processes, chiefly concerned with soap, wax, metallurgy, and medicine, emerged from the efforts of alchemists. The American alchemist George Starkey was still widely known some

time after his death because of the continuing sale of what had become known as "Starkey's Pill."[18] However, these innovations occurred during the period of transition to modern scientific industrialism during the early to mid-nineteenth century. In general, modern scientific rationalism and earlier Western esoteric traditions appeared incompatible with one another, and during the nineteenth century, scientific rationalism won what seemed a convincing victory, suppressing or marginalizing esoteric traditions.

But this suppression was not nearly as complete as it might initially seem. Certainly, if we look at the decline in publication of many astrological almanacs or the decline in the number of practicing alchemists, "occultism" or esotericism seems to have significantly diminished in American society by the mid-nineteenth century. But esoteric themes were used by major American authors of the American Renaissance during the mid-nineteenth century in New England. Indeed, these authors worked with esoteric themes and traditions that had preoccupied many of their ancestors, so that the American Renaissance may well be seen from this angle as the transference of esoteric traditions into literary consciousness.

The presence of esotericism in the works of most of the major American authors of this era, from Edgar Allan Poe, Nathaniel Hawthorne, and Herman Melville to Emerson, Emily Dickinson, Amos Bronson Alcott, and Margaret Fuller, is undeniable. These authors relied on different currents, but the importance of prior esoteric traditions for the American Renaissance is undeniable. By drawing upon alchemy, astrology, theosophy, Swedenborgianism, Mesmerism, Rosicrucianism, Freemasonry, and many other esoteric movements and ideas, these authors expressed in their published work basic themes that had enormous resonance in the popular mind and remained as living forces in the American imagination.

Perhaps surprisingly, it is in the poetry of the time that we find the most traces of intellectualized esotericism. Melville voiced views in his poetry that he did not express quite as openly in his fiction. We see this in poems like his "Fragments of a Lost Gnostic Poem," "The New Rosicrucians," or "Clarel." "Fragments of a Lost Gnostic Poem" ends this way:

> Indolence is heaven's ally here,
> And energy the child of hell:
> The Good Man pouring from his pitcher clear,
> But brims the poisoned well.

It is not surprising that some of Melville's many voices are decidedly esoteric in nature, even if his own views were probably most clearly set forth in that sardonic riddle of a book, *The Confidence Man.* Fuller also wrote poems that are indisputably esoteric, perhaps most notably "Winged Sphynx," "My Seal Ring," "Sub Rosa-Crux," and above all "Double Triangle," probably the best of her poems, whose accompaniment is the esoteric illustration that originally appeared at the beginning of *Woman in the Nineteenth Century.* Here are a few lines from the poem:

When the perfect two embrace,
Male and Female, black & white,
  Soul is justified in space,
Dark made fruitful by the light;
  And, centred in the diamond Sun,
    Time & Eternity are one.[19]

Some of the most experiential esoteric poems were written by Dickinson, who like Melville was very much influenced by that entertaining author on all manner of esoteric lore, Sir Thomas Browne. Dickinson was not inclined toward scholarly inquiry into hermeticism or theosophy, but she was interested in such topics as witchcraft and posthumous existence, and if her life was outwardly stationary, inwardly she journeyed on a spiritual and psychological path that resembles at times a kind of Christian shamanism.[20]

MAGICAL CURRENTS

The end of the nineteenth century represents a burgeoning of various Western magical groups as well as of syncretic movements like the Theosophical Society of Helena Blavatsky (1831–1891) or the Anthroposophical Society of Rudolf Steiner (1861–1925), both of which themselves included magical elements and even, in the case of the Theosophical Society, a special magical wing called the "Esoteric Section" and headed by William Q. Judge (1851–1896) and later his successors. This semisecret magical group within the Theosophical Society undoubtedly arose as a reaction to the growing recruitment power of the Order of the Golden Dawn, founded in 1888 by William Wynn Westcott (1848-1925) and Samuel Liddle MacGregor Mathers (1854–1918), both already members of the Societas Rosicruciana in Anglia, a secret Rosicrucian group. The Order of the Golden Dawn supposedly began when a hidden and encoded manuscript bearing the keys to the work of the Abbott Trithemius was found; but the Golden Dawn practiced ceremonial magic with a pronounced Masonic ritual flavor, drawing also upon Christian Kabbalah and a number of preexisting magical or "occultist" traditions.[21] Arguably the most important contribution of the Golden Dawn was its systematization of magic in a series of Masonic grades. All of these groups represent very complicated interrelationships between American, English, and European figures, and all had American dimensions.

Thus, the Golden Dawn's systematization of ritual magic owed at least something to its predecessors, among these the African American magician Paschal Beverly Randolph (1825–1875) and the Hermetic Brotherhood of Luxor. Randolph was born in New York and learned various occupations before, in the early 1850s, taking up a Spiritualist vocation, eventually serving as an on-stage trance medium and then as a psychic and healer. Randolph's various books and treatises—in which he also claimed himself as heir to the secrets of Rosicrucianism while later acknowledging that his Rosicrucianism came out of his own head—were chiefly about sexuality. In such

works as *The Ansairetic Mystery, Eulis,* and *The Golden Secret,* Randolph outlined his perspective on the mysteries of sexuality, which included sexual magic. Randolph insisted on the importance of women's sexual satisfaction and included in some of his works directions for sexual magical practices that attracted the attention of local New England legal authorities at least once. Randolph was an advisor to and laborer for Abraham Lincoln, and after the Civil War was for a short time the principal of Lloyd Garrison Grammar School in New Orleans. Within the history of American esotericism, he is most important for establishing the general outlines of sexual magical practices to be followed and developed by subsequent groups both European and American.

One of the most complicated avenues of Randolph's influences has been to a considerable degree unraveled by Joscelyn Godwin, Christian Chanel, and John Deveney in their collection of documents entitled *The Hermetic Brotherhood of Luxor* (1995). In this work, the authors show how Randolph's cosmological and sexual teachings made their way to England, to a small group of occultists who drew upon them and even plagiarized them in creating their own system of magical practice and an esoteric order. It is by no means clear when Randolph conceived his own cosmology regarding the individual "monad's" evolution toward immortality—he claimed that he learned it during his travels in the Mideast in 1861.[22] The Hermetic Brotherhood of Luxor disseminated Randolph's ideas much more widely in Europe and North America.[23]

In his turn, Aleister Crowley (1875–1947)—who joined the Order of the Golden Dawn in 1898, and who went on to found his own order, the Astrum Argentinum [incorporated into the Ordo Templi Orientis (OTO), founded by Carl Kellner (1850–1905) and Theodor Reuss (1855–1923)]—continued the emphasis on sexuality in magical ritual. Crowley's OTO developed a luciferian tendency that manifested not only in his writings, but also in the incorporation of rituals like the Gnostic Mass, the ritual consumption of wafers consisting in part of semen and menstrual fluid. Crowley enjoyed negative publicity, calling himself "the Great Beast," and was a favorite subject for tabloid journalism. But his voluminous writings remain an important part of the history of twentieth century magical esotericism, and the OTO continues to the present day.

The late twentieth century saw the emergence of various other neo-Gnostic groups not to mention the development in the late twentieth century of Wicca or witchcraft, neopaganism, and various magical groups, all of which draw on sexuality as a primary basis for magical power. Many of these groups share certain tendencies: (1) to assert their superiority over conventional forms of morality; (2) to hold sexual rites for purposes of magical power; and (3) to react explicitly against conventional forms of organized Christianity, even if insisting upon the necessity of attaining some kind of gnosis. One also can discern an increasing tendency away from the eighteenth century Masonically inspired hierarchic orders that persisted throughout the twentieth century, and toward an eclectic individualism. Perhaps nowhere is that individualism more apparent than in Chaos magic.

Just as the turn of the nineteenth century saw dramatic growth of various magical orders that were both innovative and dependent on earlier tradition, so the turn of the twentieth century once again saw the emergence of a bewildering variety of new groups and orders. One of the most important was Chaos magic, which spawned several orders, among them the order of the Illuminates of Thanateros. In the introduction to his book *Liber Null and Psychonaut,* one of the defining works of this movement, Peter Carroll writes that "The Illuminates of Thanateros are the magical heirs to the Zos Kia Cultus [of Austin Osman Spare] and the A.'. A.'…"[24] But whereas the Golden Dawn drew upon Renaissance white magic and Jewish Kabbalism, Chaos magic reflects a distinctly darker nature, sometimes referring to itself as "grey magic."

Perhaps the most significant aspect of Chaos magic is its approach to initiations, central to Western esoteric traditions like Freemasonry or Masonically influenced ceremonial magical orders. Whereas some in magical orders, like the Golden Dawn, integrated magical practices with, for instance, Roman Catholicism, the Chaos magicians of the early twenty-first century scorned traditional religions. Individualism is the hallmark of Chaos magic. In this movement, the term "initiation" takes on the neoshamanic meaning of a period of trial and growth rather than an institutionalized series of hierarchic degrees. Chaos magic represents an anarchic and radical individualist movement that is by self-definition antitraditional.[25]

LITERARY ESOTERICISM IN THE TWENTIETH CENTURY

In twentieth century American literature, among the important and indicative figures are the modernist poet H.D. (1886–1961), the Beat novelist William S. Burroughs (1914–1997), and the science fiction writer Philip K. Dick (1928–1982). H.D.'s work contains many traditional Western esoteric currents, including alchemy, astrology, and sexual mysticism, while Burroughs's later work contains more contemporary magical currents, and Dick's work has modernized projected Gnosticism.

Of these three, the most thoroughly permeated with Western esoteric currents was H.D. That H.D.—born Hilda Doolittle—was fascinated with esoterica is well known. Susan Friedman outlines the intertwining of H.D.'s biography and her fascination with mysticism, the Tarot, numerology, astrology, magic, psychic insights or visions, various heresies of antiquity including the Ophites and other Gnostic groups, Rosicrucianism, and the Christian theosophy of Count Nikolaus von Zinzendorf (1700–1760) and the Moravians.[26] H.D. is a twentieth century representative of an American feminine literary lineage that harks back to nineteenth century American Renaissance authors Emily Dickinson and Margaret Fuller. Fuller, like H.D., was fascinated with numerology, astrology, and what we might term esoteric correspondences or patterns in life. She created a hermetic emblem for herself and was very interested in doctrines of occult or hidden sympathies between humanity and nature. Likewise, H.D. was fascinated by esoteric correspondences in her life, was a reasonably accomplished astrological interpreter, and by 1911 saw the emblem

of the thistle and serpent as her own. Works by H.D. that give evidence of esotericism include her poems in *Trilogy* and *Vale Ave* as well as her novel *The Gift,* but the much earlier work *Notes on Thought and Vision* help to make clear H.D.'s gnostic perspective in relation to literature. *Notes* is a very unusual work; written in July 1919 in the Scilly Islands, it argues for the characteristically Emersonian idea of an "overmind" as a model of higher consciousness.

During the London blitz in World War II, H.D. wrote the collection of three long poems later published as *Trilogy.* These three poems were "The Walls Do Not Fall," "Tribute to the Angels," and "The Flowering of the Rod." In "The Walls Do Not Fall," H.D. develops many of the themes that were initially sketched in *Notes on Thought and Vision.* These themes are clearly esoteric: she writes of her experience of "nameless initiates" as her "companions," of the "alchemist's secret," of "the most profound philosophy," of the stars as beings who can be invoked by spells, and much else. It is obvious from "The Walls Do Not Fall" that although H.D.'s outward circumstances were the terrors of war, the poem is at heart profoundly esoteric in its unified vision of reality amid the shards of bomb-shattered modernity.

The most important of her esoteric works was the novel *The Gift,* which was not published in a full version that included H.D.'s complex mysticism drawn from her family's Moravian tradition. H.D. was herself a baptized Moravian, but the Moravian Church of the twentieth century was vastly different from the Herrnhuters of Count von Zinzendorf who settled in Bethlehem, Pennsylvania, in the middle of the eighteenth century. Zinzendorf and his group were far more esoteric in their interests than those who followed them. Rimius's works, cited by H.D. in her notes, make clear this distinction. Rimius, Zinzendorf's most effective detractor, accused the early Moravians of "gross and scandalous … Mysticism," of the "*Arcana,* or Secret Counsels of their Leaders," as well as of "Secrets probably known by the adepts alone."[27] H.D. avidly read the works of Rimius and much else in order to fashion an extraordinary novel that embodies many currents of Western esotericism, most notably those of Christian theosophic mysticism. In H.D.'s work, we see nearly all the major currents of Western esotericism.

By contrast, the later works of Burroughs show that the author incorporating magical and alchemical elements, as well as some aspects of Egyptian religious tradition. He is best known for his earlier writing, like his novel *Naked Lunch.* But in *The Western Lands* (1987) and *The Place of Dead Roads* (1984) Burroughs explores a surreal, nightmarish world populated by demons, a world he describes in part by way of a magical interpretation of ancient Egyptian religion. There is, of course, a long-standing Western esoteric tradition based on Egyptian religion and magic, of which Burroughs is only one exemplar. His work was popularized not only through film versions of his novels, but also through his spoken word appearances on musical works. Bill Laswell's band *Material* produced an album featuring as lyrics Burroughs reading from *The Western Lands,* all of which served to disseminate his more occult works.

As for Dick, a science fiction writer, his primary connection to Western esotericism also becomes most evident in his later work, which he saw not as science fiction,

but as secret Gnostic truth. He believed that he was like a Gnostic in the period of the Roman Empire millennia before. Dick claimed that he encountered the Vast Active Living Intelligence System, or VALIS, about which encounters and insights he wrote at great length not only in such published works as *Valis* (1981), but also in voluminous journals. Dick inspired a kind of posthumous cult following whose interest turns especially on the Gnostic themes of his later works.[28]

SYNCRETISM AND UNIVERSALISM

One of the more noteworthy aspects of modern intellectual history is the tendency toward syncretism and universalism as manifested in movements as diverse as the New Age movement and perennialism or Traditionalism. Traditionalism as a movement appeared with the singular voice of the French author René Guénon (1886–1951), whose books and articles all bear the stamp of a man utterly convinced that his work was absolutely true. Guénon was highly critical of the modern industrialized world, which he saw as emerging from the destruction of the orthodox world religious traditions and traditional cultures of the past. The intellectual esotericism that Guénon initiated was espoused by Frithjof Schuon (1907–1998), whose severe and abstract works are seen by some Traditionalists as the culmination of the movement.

Schuon was born in Basle, Switzerland, and trained as a textile designer. He worked in Paris, where he corresponded with Guénon, and later met Guénon in Egypt. He evidently had some contact with Sufis or Muslim mystics, and his many books are infused with an abstractness that owes a great deal to the aniconic Islamic tradition. Among his books are *Understanding Islam* (1963), *Islam and the Perennial Philosophy* (1976), *Christianity/Islam: Essays on Ecumenic Esotericism* (1985), as well as *In the Tracks of Buddhism* (1969), *The Feathered Sun: Plains Indians in Art and Philosophy* (1990), and *Light on the Ancient Worlds* (1966). Only in the early 1990s, late in his life, did the public learn that Schuon was the center of a *tariqah,* or esoteric group based in Bloomington, Indiana. Schuon wrote from a universalist or transcendent position, as more or less pure intellect removed from the modern world, and he lived much of his life in reclusion as the leader of a Sufi or quasi-Sufi universalist initiatic group. Schuon and a number of other European and British Traditionalists who chose to live in North America reveal just how complexly intermingled are Western esoteric currents across continents in the modern era.[29]

NEW AGE UNIVERSALISM

Another instance of globalist universalism is the New Age movement. Wouter Hanegraaff surveys the entire New Age movement in detail, and comes to the general conclusion that

> All New Age religion is characterized by the fact that it expresses its criticism of modern western culture by presenting alternatives derived from a secularized esotericism. It

> adopts from traditional esotericism an emphasis on the primacy of personal religious experience and on this-worldly types of holism … but generally reinterprets esoteric tenets from secularized perspectives. Since the new elements of "causality," the study of religions, evolutionism, and psychology are fundamental components, New Age religion cannot be characterized as a return to pre-Enlightenment worldviews, but is to be seen as a qualitatively new syncretism of esoteric and secular elements. Paradoxically, New Age criticism of modern western culture is expressed to a considerable extent on the premises of that same culture.[30]

In sum, writes Hanegraaff, "The New Age movement is characterized by a popular western culture criticism expressed in terms of a secularized esotericism." If Hanegraaff is right in his conclusions, then the New Age movement is a secularizing current of thought that nonetheless shares common origins with Traditionalism itself.

Both Traditionalism and the New Age movement have common antecedents in the nineteenth century. Probably the most important antecedents are in German *Naturphilosophie* and European Romanticism, in the late nineteenth century "New Thought" movement, in the various syncretizing "occult" or esoteric figures and lodges of the late nineteenth and early twentieth centuries, as well as in pivotal figures like Swedenborg, William Blake, and above all, Emerson. All of these various currents of thought elevate individual syncretism and synthesis, joining together apparently disparate perspectives in a more general overview that takes on a universalist flavor. This syncretic universalism emerges throughout the nineteenth and twentieth centuries in figures as diverse as Steiner, Schuon, and Ken Wilber (b. 1949), each of whom presented himself as a surveyor of the entire human religiocultural inheritance. They differ from one another chiefly in their degree of incorporation or rejection of scientific-evolutionist premises.

The New Thought movement, with its pastiche of influences from Spiritualism, Mesmeric healing, Western esoteric traditions like Hermeticism and Böhmean theosophy, Asian religious traditions, and evolutionist science, represents the late nineteenth century predecessor and counterpart to the late twentieth century's "New Age" movement. Many of the themes of both movements go directly back to Emerson, including (1) That direct spiritual experience of the individual is more important than adherence to organized religious traditions. (2) That behind or within all traditions is a "perennial philosophy" or esoteric center, which the individual can realize for him or herself. (3) That we are moving toward a new era in human understanding, an era that unites science and spirituality. (4) That suffering does not have any ultimate reality and that we can choose to overcome or transcend it. (5) That we can derive from Asian religious traditions such concepts as *karma* or enlightenment and place them in an individualistic modern context. These are only a handful of such themes, but they show what constitutes, as Harold Bloom has argued, an "American religion."[31]

Numerous such strands link earlier esoteric traditions, the nineteenth century American New Thought movement, and the late twentieth century American New Age movement. Hanegraaff suggests links between such figures as Friederike

Hauffe (1801–1829)—known as the "Seeress of Prevorst," who was a medium and "channel" for "higher beings" after she was magnetized by the German doctor and poet Justinius Kerner—and much later figures like Jane Roberts (1929–1984), who became well-known as the channel for the "spiritual teachings" of a discarnate spirit named "Seth."[32] Between these two figures stands the nineteenth century work and life of Andrew Jackson Davis, also a medium or channel who became a widely known author and public figure of his time, and who claimed to have spoken with none other than Swedenborg himself in the afterlife. Clearly there is a series of linked figures who represent common tendencies, not just through their identities as famous "spirit mediums" or "channels," but through their works as emerging from and reflecting the fundamental premise that the individual, without the intermediary of the church, can contact higher beings and reveal spiritual truths.

The New Age movement is noteworthy for its syncretism, perennialism, radical spiritual individualism, and above all, its cosmic optimism, as well as its grafting of various elements of Asian religious traditions (using concepts like karma or reincarnation, for instance) into what remains a fundamentally Western millennialist outlook. This millennialism is basic to the writing of authors like David Spangler, who wrote that "The New Age is a concept that proclaims a new opportunity, a new level of growth attained, a new power released and at work in human affairs, a new manifestation of that evolutionary tide of events which, taken at the flood, does indeed lead on to greater things, in this case to a new heaven, a new earth and a new humanity."[33] And one sees a similar if perhaps less extreme millennialism in such various late-twentieth century New Age authors as Shakti Gawain, Shirley MacLaine, and George Trevelyan.

But as Christoph Bochinger argues, the term New Age is actually at least as much a marketing category as it is a school of thought.[34] He is certainly correct that the term New Age did become a category for a whole potpourri of merchandising possibilities. The river of this merchandise might look fairly wide. It carries along in its current crystals and scented candles, quasi-scientific tomes by figures like Fritjof Capra, various forms of Chinese herbalism or acupuncture, "channeled" books dictated by various discarnate entities claiming great antiquity and wisdom, and cultish Western figures claiming themselves to be representatives of Hindu or Native American or other traditions. But this river is also fairly shallow. It has been harnessed more than once as a means of making money, and sometimes observers wonder if that is not, in the end, its primary function.

For this reason, it is unjust to place too much emphasis on the origins of the New Age movement in the thought of an Emerson or, for that matter, in Western esotericism as a whole. There is a naiveté, a crassness, and a superficiality in the New Age movement missing in earlier Western esoteric traditions or in the works of Emerson. Hanegraaff is correct that the New Age movement owes much to earlier Western esotericism. But he is also convincing in arguing that the New Age movement is fundamentally a secularization of preexisting Western esoteric currents.

INDEPENDENT SPIRITS

If the most visible twentieth century religious phenomena from a sociological perspective are the New Age movement on the one hand and the emergence of fundamentalist religious movements on the other, other figures remain stubbornly independent from these various social movements and follow their own paths toward transcendence. Some of these esoteric authors or figures emphasize cosmological mysteries, while others represent what is often called the via negativa (or "negative way") of transcendent mysticism that goes beyond all images or forms and that has exemplars in the past like the great medieval Christian mystic Meister Eckhart. This, too, is an esoteric tradition, perhaps the most esoteric of all.

In his *The Book of Enlightened Masters: Western Teachers in Eastern Traditions* (1997), Andrew Rawlinson includes entries on hundreds of Westerners who assumed the role of spiritual teacher, often within various Asian religious traditions. Many independent spiritual teachers in the West were strongly influenced by Asian religious traditions, but they remain largely or totally independent of formal affiliation, and often these independent spirits are more accurately identified as part of a larger Western esoteric current.

A good example is G. Ivanovich Gurdjieff (1866–1949), a controversial figure who may have spent several years (perhaps 1905–1907) studying in a Sufi monastery or, by another account, with a secret group called the Sarmoun[g] Brotherhood somewhere in central Asia.[35] Whatever the truth about his contacts with hidden Asian spiritual traditions, Gurdjieff came to live in Western Europe and established there a center for spiritual training. He also wrote a number of long and, for the most part, seemingly impenetrable books, which attracted a number of prominent disciples. These included J.G. Bennett (1897–1974), Jeanne de Salzmann (1889–1990), and P.D. Ouspensky (1878–1947), each of whom established his or her own spiritual centers and traditions. Gurdjieff and his main disciples tended to focus their works on what we might term cosmological mysteries as well as on the hidden dimensions of human potential.

It is rather difficult to outline Gurdjieff's teachings, because he himself was not exactly systematic as a teacher, and he was also a trickster and raconteur. Yet central to his teaching is the idea, common to many esoteric traditions, that humanity is "asleep" and needs to be awakened. This awakening is best accomplished by someone who is himself "awake," and Gurdjieff and his disciples certainly saw him as awake. He was notorious for his confrontational style, for ordering his disciples to do humiliating or painful work, and for his erratic behavior—in short, for playing the role of the peremptory and all-knowing guru. He left a real legacy in the West, one with a powerful impact on the arts, not only in the dances supervised by de Salzmann, his official successor, but also in popular music and the other fine arts. Yet Gurdjieff's influence often remains hidden, because the groups that he inspired do not operate publicly—they remain, in the strictest sense of the word, "esoteric."

If Gurdjieff represents one extreme among this group of independent spirits, that of independent guru figures with an enduring social and cultural influence, at the

other extreme are figures represented by Franklin Merrell-Wolff (1887–1985)—an American who, although he chronicled his own awakening experience at great length, never established any school or sociocultural forms at all—and Bernadette Roberts (b. 1931), a surprisingly little-known American Christian gnostic. Merrell-Wolff and Roberts each underwent profound spiritual awakenings. They represent the austere and individual path toward spiritual awakening or transcendence, a path without flamboyant teachers like Gurdjieff, without institutional support of any kind, a straight and steep path toward sheer self-transcendence.

Merrell-Wolff's primary account of his spiritual awakening is in his book *Pathways Through to Space,* which he describes as "a record of transformation in consciousness written down during the actual process itself."[36] Merrell-Wolff had been reading Paul Deussen's *The System of the Vedanta,* an exposition of Shankaracarya's metaphysics, while prospecting for gold in California. Then, sitting on a porch swing, he had what he called a "Recognition," after which, he wrote, "I have been repeatedly in the Current of Ambrosia. Often I turn to It with the ease of a subtle movement of thought. Sometimes it breaks out spontaneously."[37] He discovered subsequently that his wife and other people perceived this "Current." The essence of the Current was the realization of transcendence of self, and Merrell-Wolff describes it in traditional alchemical terms: "Emptiness is thus the real Philosopher's Stone which transfers all things to new richnesses; It is the Alkahest that transmutes the base metal of inferior consciousness into the Gold of Higher Consciousness."[38]

Merrell-Wolff's work is esoteric in the strict sense of the word, although he is a somewhat accessible author. Merrell-Wolff relied upon the language and symbolism of alchemy, but he also represents the influx of Asian religious thought into American intellectual life in the twentieth century. His writing conjoins the American philosophical current of William James with Buddhist and Hindu perspectives. In sum, Merrell-Wolff is an extension of the Emersonian tradition of the independent sage, one who does not seek to ascend by degrees, but who leaps at once into the throne, as Emerson put it in his first book, *Nature.*

Quite a different character is Bernadette Roberts, a Christian contemplative in the lineage of Dionysius the Areopagite, Meister Eckhart, and the author of *Cloud of Unknowing.* She does not see herself as having these direct antecedents. She describes herself as "outside the traditional frame of reference—or the beaten path of mystical theology so well travelled by Christian contemplatives."[39] And a close examination of her work shows that its central theme is realizing the absence of any substantive self, which is Buddhist, and, indeed, she spent at least a week with Zen Buddhist contemplatives.[40] But unlike Merrell-Wolff, she insists that Buddhism and Vedanta are not central influences for her; she is a Christian contemplative. What she does not acknowledge as readily is that her antecedents in the Christian tradition are figures like Dionysius, Eckhart, and the author of the *Cloud,* or that she belongs to the long-standing tradition of the *via negativa.* She even writes early in her career that "In the Christian tradition, the falling away of self (not the ego) has never been addressed!"[41] Still, late in her book *The Experience of No-Self,* she recognizes her deep affinity with Eckhart as "one who has made the

journey [to no-self] and crossed over," and it is to his tradition that she certainly belongs.[42]

The heart of Roberts's work lies in her journey to and progressive realization of what she calls no-self. She outlines this journey in her book *The Experience of No-Self,* and its culmination in her subsequent book *The Path to No-Self.* No personal self, no personal God—by the strictest definition, Roberts's work belongs to the via negativa. In both the writings of Dionysius the Areopagite and of Roberts there is sheer transcendence. The difference is that Roberts's work is strikingly autobiographical in nature; she takes us along with her on her journey to no-self. And this, too, she shares with Merrell-Wolff, who also offers us the kind of contemplation he undertakes and a detailed account of his experiences along the way. Roberts is not interested in her antecedents and even says that to read the works of prior mystics is misguided, whereas Merrell-Wolff was exceedingly interested in them.

But both Roberts and Merrell-Wolff offer extended, multivolume commentaries on their spiritual experiences, and both of them see themselves as pioneers and their books as chronicles of their inner experiences. It is, I think, no accident that both are American and both lived in California. They represent very American tendencies—above all, the willingness to strike out on one's own, the refusal to accept received ways of thinking, and the insistence on one's own direct experience as the arbiter of what is true. All of these are Emersonian characteristics that remain deeply ingrained in the American character. And both figures represent the very American notion of an individualized esotericism.

CONCLUSION

Until relatively recently, the field of "esotericism" or "esoteric studies" remained more or less ignored in academia. Francis Yates and Antoine Faivre were exceptions among scholars interested in this field. But throughout most of the nineteenth and twentieth centuries, few scholars admitted that esotericism or "Western esoteric traditions" were worthwhile areas of study, or that such diverse traditions or movements as alchemy, astrology, magic, Rosicrucianism, and theosophy all bear certain defining elements in common. This situation, however, most emphatically has changed, and by the early twenty-first century, there were many new publications and scholarly organizations devoted to the study of Western esotericism.

With the wild success of potboiler novels like *The Da Vinci Code* by Dan Brown, with "New Age" distribution networks and stores across the United States, with the unprecedented availability of esoteric source works in alchemy, astrology, and magic, with the proliferation of magical groups and other esoteric movements too numerous and complexly related to detail here—not to mention the development of Western esotericism as a widely recognized area of academic study—it becomes clear that the late twentieth and early twenty-first centuries represent one of those relatively rare interludes in history like the Silver Age in early twentieth century Russia or second century Alexandria, Egypt, when what previously was esoteric becomes more widely accessible. It is perhaps too early to definitively outline every aspect of

American esotericism, but there can be no doubt that here is found one of the most vital areas of contemporary American alternative religious life.

NOTES

1. See Arthur Versluis, *Magic and Mysticism: An Introduction to Western Esotericism* (Lanham: Rowman Littlefield, forthcoming), Introduction. The group of scholars who founded the North American-based Association for the Study of Esotericism (ASE) defined the terms "esoteric" and "esotericism" in the following way:

> The word "esoteric" derives from the Greek *esoterikos,* and is a comparative form of *eso,* meaning "within." Its first known mention in Greek is in Lucian's ascription to Aristotle of having "esoteric" [inner] and "exoteric" [outer] teachings. The word later came to designate the secret doctrines said to have been taught by Pythagoras to a select group of disciples, and, in general, to any teachings designed for or appropriate to an inner circle of disciples or initiates. In this sense, the word was brought into English in 1655 by Stanley in his *History of Philosophy.* Esotericism, as an academic field, refers to the study of alternative, marginalized, or dissident religious movements or philosophies whose proponents in general distinguish their own beliefs, practices, and experiences from public, institutionalized religious traditions. Among areas of investigation included in the field of esotericism are alchemy, astrology, Gnosticism, Hermeticism, Kabbalah, magic, mysticism, Neoplatonism, new religious movements connected with these currents, nineteenth, twentieth, and twenty-first century occult movements, Rosicrucianism, secret societies, and theosophy.

Eckankar

David Christopher Lane

One of the great difficulties in understanding the origins of ancient religions is the lack of information. Imagine going back in time some 2000 years and being able to witness the evolution of Christianity from its founder's ministry and death to the rise of Paul's missionary work. It would, unquestionably, radically alter the histories we have today of what happened then. The study of New Religious Movements (NRMs), especially those founded during our lifetime, offers unique and valuable insights into how religions in the past formed. Indeed, one can argue that putting a microscope to today's emerging religions offers us a refined telescope into the birth pangs of ancient traditions.

Eckankar, as founded by Paul Twitchell (d. 1971) in the mid-1960s is a remarkably rich example of how a new religion evolves in much quicker spurts than might be imagined. Yet, because Eckankar is still in its infancy, we can actually delineate varying stages of its growth with documented detail that is sorely lacking in studies of religions hundreds or thousands of years old. What this suggests, of course, is that an understanding of what occurs in religion today may provide us with a window to better appreciate what might have transpired in faiths eons ago.

THE FOUNDING OF ECKANKAR

The very first issue that confronts both the believer and the outsider is pinpointing the exact date when Eckankar was founded. If we merely rely on Eckankar's official literature, supplied originally by Twitchell and his eventual successors, Darwin Gross (b. 1928) and Harold Klemp (b. 1942), the date is unambiguous: October 22, 1965. Klemp, the current leader of Eckankar, points out that on this date Twitchell received "the Mahantaship," one of the key features in God-Realization that distinguishes Eckankar from other teachings. As Klemp explains in *A Cosmic Sea of Words: The Eckankar Lexicon* (1988): "Mahanta, mah-HAHN-tah The INITIATE of the Fourteenth Circle; the Mahanta, the Living ECK Master; the full force of the Rod of ECK Power and the Mantle of the Mahanta are embodied directly in him; all those

who come to him in the present age have been with him since their advent into the world; the body of the Mahanta is the ECK, which is the ESSENCE of God flowing out from the OCEAN OF LOVE AND MERCY, sustaining all life and tying together all life forms; an expression of the Spirit of God that is always with you; the LIVING WORD; the VI-GURU, the LIGHT GIVER; a state of GOD CONSCIOUSNESS which is beyond the titles given in religions which designate states of CONSCIOUSNESS; the sublime ECK in expression at the highest level. This special incarnation of the SUGMAD makes an appearance but once every five to a thousand or more years, depending upon the part he is to play in a major upliftment of consciousness on every plane."[1]

It may be more than just an interesting coincidence that October 22 also happens to be Twitchell's birthday, since scholars such as the late John Sutphin argue that Eckankar was more or less created by Twitchell and reflects many aspects of his own biography, real and fictional.[2] Along these lines, considerable evidence suggests that Eckankar was formed several years before the fall of 1965. Indeed, "Paul Twitchell, Man of Parts," an interview by Jack Jarvis of the *Seattle Post Intelligencer,* appears to be the first article written about Twitchell and his new group, Eckankar. The interview was conducted on July 9, 1963. Twitchell's later article, "The Square Peg," was written in response to Jarvis's interview. Twitchell claimed that he was besieged with telephone calls and mail asking, "What in heaven's name is a Cliff-Hanger?" In the "Square Peg," Twitchell responded: "The Cliff-Hanger is a one-man cult. I am the original Cliff-Hanger and its sole disciple. This zany character is called the vanguard of a new religion, entitled 'Eckankar,' a Hindu word meaning union with God. This unorthodox philosophy received a wide welcome among the European intellectuals and college circles following the publishing of my works in European Magazines. The Cliff-Hanger seeks solace in meditation and bi-location experiences common in the lives of the Old Christian Savants."[3]

"Eckankar, The Bilocation Philosophy," published by *Orion Magazine* in January 1964, seems to be Twitchell's first public article entirely devoted to his new movement. In it Twitchell writes: "Eckankar, the philosophy of out of body experience, is that understanding which I have gained from bi-location excursions similar to those in the lives of saints of all faiths. Eckankar is the study of bi-location experience." In the same article, Twitchell explains the difference between Eckankar and the various Eastern philosophies: "The orthodox Eastern Philosophies teach that man must become one with God, but I cannot hold to this concept. The individual self of man becomes a coworker of God, not a part of the unity of Him, in the sense of being one with the divine source, anyways, for we are dwelling in the body of God…"[4]

Although Eckankar, according to Twitchell, was not "officially" founded until October 22, 1965, it did, nevertheless, have several years of preparation behind it. The *Psychic Observer* published several of Twitchell's articles prior to 1965. "The Cliff-Hanger," printed in July 1964, expounds Twitchell's definition of the "enigmatic one" and of the Cliff-Hanger's philosophy—Eckankar: "Eckankar, which I

formed out of my own experience, is the term used for the philosophy I have developed for the Cliff Hanger. It is based on Shabd yoga, a way out form of yoga. The word is the Hindu locution for the cosmic sound current which is known in our vernacular as the cosmic river of God."[5]

In a later article, "The God Eaters," dated November 1964, for *Psychic Observer,* Twitchell elaborates on the impetus behind Eckankar: "Eckankar is the philosophy of phardar pax Latehue walae, or what you know as the Cliff Hangers. This grew out of my visits to Agam Des, the land of the God Eaters. The basic axiom of this philosophy is: Power is the only force generated by Occult knowledge."[6]

It was thus by a series of articles on the philosophy of Eckankar and on the eccentric personality of the "Cliff Hanger" that Twitchell laid down the public groundwork for Eckankar. Brad Steiger, in his biography of Twitchell, *In My Soul I Am Free,* asked Twitchell when he really began to formulate how to spread the message of Eckankar. Twitchell replied, "probably when my sister Kay Dee died in 1959." In response to Steiger's question on when he changed from being a "Cliff-Hanger" to a spiritual adept, Twitchell replied: "The switchover from the Cliff Hanger to Eck began taking place after I met my present wife, Gail. She insisted that I do something with my knowledge and abilities."[7]

As for the reasons why Twitchell founded Eckankar, the conventional view is that he felt prompted by his previous spiritual masters to reintroduce the ancient path that was introduced to him by such luminaries as Sudar Singh and Rebazar Tarzs, both of whom he claims to have met while traveling in the East. This lineage, known as the Vairagi masters in Eckankar, allegedly traces its genealogy back through some 970 Living Eck Masters to Rama, an avatar of Vishnu in Hinduism. In other versions, the teachings go even further back to Gakko, a spiritual essence that traveled from the city of Retz on the planet Venus to Earth six million years ago. A closer review of Twitchell's actual biography reveals some startling discrepancies, not the least of which is that Twitchell apparently never visited India or Tibet when he claimed. In addition, Sudar Singh and Rebazar Tarzs are not genuine historical personages but literary inventions developed by Twitchell to conceal his past associations. What we do know from historical records and documentation is that Twitchell's spiritual biography is quite different than the mythologized versions he later tried to pass off as factual. This is especially interesting for scholars of religion, ancient or new, because it shows that hagiography can happen even *during* the lifetime of a religious leader and does not necessarily have to wait for his or her death. And such hagiography does not have to be due to the overzealousness of a guru's followers, but can instead originate fully blown from the leader himself.[8]

Twitchell apparently had a long history of embellishing his resume. Even the current head of Eckankar, Klemp, called Twitchell a "yarn" teller who was not shy in padding a story to promote his career or his ideas.[9] How much of a yarn Twitchell weaved in developing Eckankar is the subject of wide debate among current and former followers. The debate begins, appropriately enough, with Twitchell's birth date. Five contrasting accounts exist of the birth date of John Paul, the second and last son

of Jacob and Dorothy (Effie) Troutman Twitchell: 1908, 1909, 1910, 1912, and 1922. The date now most widely accepted is 1909, primarily because it is listed in the Thirteenth Census of the United States, done in 1910, where Paul is cited as being six months old at the time. This date is also supported by the published volume, *Genealogy of the Twitchell Family: Record of the Descendants of the Puritan—Benjamin* which was privately published by Herbert K. Twitchell in 1929. The two most questionable dates are 1912 and 1922, which appear, respectively, on Twitchell's first and second marriage certificates. The 1922 date is also listed by Twitchell's widow, Gail Atkinson, on his death certificate in 1971. Why Twitchell apparently shaved some 13 years off his age is open to speculation, but it should be noted that Paul met his second wife in Seattle, Washington, in the early 1960s when she was barely twenty years old and when he was (according to the 1909 birth date) in his early fifties. Twitchell's birth place is less controversial, even if his official biographer claimed it was China Point, it is generally agreed even in Eckankar circles that Paul was born in Paducah, Kentucky.[10]

While Twitchell's biography gives us a clue into some of the formative influences on his thinking and his eventual movement, it is also important to note that Twitchell himself acknowledges Gail as instrumental in encouraging him to do something with his talents, and that the switchover from his more bohemian days to Eckankar were attributable, at least in part, to her. It is also worth noting that in this interim period between 1962 and 1965, Paul was financially strapped and temporarily borrowed several hundred dollars from Gail. This prompts a larger, perhaps unanswerable question, of whether or not economic conditions can be a motivating factor for some spiritually inclined individuals to test out their wares in the religious marketplace. And if so, to what extent do these financial considerations impact on the varying products that eventually get produced? This is clearly a debatable issue and is often viewed by devotees as a cheap form of reductionism. However, clearly Twitchell's own pen indicates that he created Eckankar to make a profit. As he himself said in response to a question placed by Steiger, "I do not run Eckankar as a non-profit organization. Most people in this line of work do indeed use the religious non-profit organization provision as an escape clause on their taxes. Eckankar is licensed in the state of Nevada as a business organization."[11]

Twitchell's first wife, Camille Ballowe, recalled that he was always a religious seeker and that he searched out gurus, mystics, and spiritual paths throughout their time together. Of the spiritual groups and masters Twitchell encountered, four had a definable impact on him and his teachings: the Self-Realization Fellowship (particularly the Self Revelation Church of Absolute Monism), Theosophy, Scientology, and Sant Mat (specifically through the Ruhani Satsang branch). These four groups, along with Twitchell's wide reading and varied involvements, contributed to his unique religious vision.[12]

How much these prior associations contributed to Eckankar is disputed, since many of Twitchell's ideas seem to be directly lifted, sometimes verbatim, from several key books published by Radha Soami Satsang Beas. We know that Twitchell was

personally associated with three spiritual teachers in the 1950s, Swami Premananda (1903–1995) of the Self-Revelation Church of Absolute Monism, Kirpal Singh (1894–1974) of Ruhani Satsang, and L. Ron Hubbard (1911–1986) of Scientology.

Twitchell and his first wife joined the Self-Revelation Church of Absolute Monism around 1950. Swami Premananda, the founder of the Church, was closely associated with Paramahansa Yogananda (1893–1952) of the Self-Realization Fellowship (known as Yogoda Satsanga Society in India). It was from Swami Premananda that Twitchell learned Kriya yoga, a psychophysical discipline for mastering the pranic life current. In 1950, Twitchell and Camille moved to the Church compounds in California. During much of this time he edited the Church publication, *The Mystic Cross.* In 1955, Swami Premananda asked Twitchell to leave the Church for personal misconduct. In that same year, Twitchell and Camille were separated. Five years later, Camille sued him for divorce on grounds of desertion.[13]

After leaving the Self-Revelation Church in Washington, D.C., Twitchell met Kirpal Singh, the founder of Ruhani Satsang. It was Kirpal Singh who, arguably, had the greatest impact on Twitchell and the theology behind Eckankar. Kirpal Singh was a disciple of the Radha Soami Satsang Beas master, Sawan Singh (1858–1948). He was initiated in 1924 and served his guru for over 24 years. In 1948, after Sawan Singh died and bequeathed his spiritual ministry to Jagat Singh, Kirpal Singh claimed that he was the true heir to his guru's mission. Subsequently, he founded a new movement named Ruhani Satsang, which was a center "for imparting purely spiritual teachings and training for mankind, irrespective of class barriers, such as caste, colour, creed, sect, age, education or advocation."[14]

In 1955 Kirpal Singh made his first tour of the United States. In that same year, Twitchell was initiated and became a follower of Kirpal Singh and his Satsang. Around this time (1956–1957) Twitchell told Betty Shifflet and Wave Sanderson (both initiates of Kirpal Singh) that Kirpal Singh appeared in his Nuri Sarup (light body) over the weekend and dictated some of a book to him. In this regard, Kirpal Singh comments: "Paul Twitchell used to write to me every week, 'Master came and sat down on the chair and dictated his teachings to me. He published them in the Tiger's Fang.'" Writes Twitchell: "I have talked with and taken down the words of Kirpal Singh who appeared in my apartment in Nauri-raup [sic], his light body, although his physical body was six-thousand miles away in India."[15]

These two quotations are significant because years later, after Eckankar was founded, Twitchell, in his book, *The Tiger's Fang,* changed Kirpal Singh's name, depending on the context, to Sudar Singh and Rebazar Tarzs. Apparently, there was a split of some sort between Twitchell and Kirpal Singh in the mid-1960s. Why this was so has been the basis of an ongoing controversy among critics of Eckankar. Reno H. Sirrine in a personal letter to the author, dated February 22, 1977, says: "Master Kirpal Singh told me that he did not return the manuscript, The Tiger's Fang, because many of the inner experiences he described were not complete or accurate."[16]

About this episode, Kirpal Singh comments: "I tell you one American was initiated by me—I've got the initiation report in his own handwriting. Then he wrote

to me, 'The Master's Form appears to me inside.' That form used to speak to him, dictate to him, inside. And all that dictation was put into a book and the manuscript was sent to me in 1963. Later he sent me another letter, "Return my book, The Tiger's Fang." I returned his book. That was dictated by me on the inner planes, and that's all right. He changed that book before printing; where he mentioned my name, he changed it to another guru's name.…"[17]

Eckankar, however, had a series of different reactions to Kirpal Singh's allegations. On one extreme, they denied that Twitchell was ever associated with Kirpal Singh. Indeed, Twitchell himself intimated as much in a personal letter to Kirpal Singh where he threatened his "former" master with a lawsuit for defamation. Twitchell writes, "I have never recognized you as a master, or that you give initiations, and that your work is not in the best interest of spirituality. Your teachings are orthodox, and as a preacher you are not capable of assisting anyone spiritually."[18]

Later after Twitchell's death, Gross, his successor and eventual husband of Twitchell's widow, Gail, argued vehemently that Twitchell was never initiated by Kirpal Singh. Writes Gross, "I know for my own self, the corporation used to have a letter that Paul wrote to Kirpal Singh: (a) telling him to leave him alone; (b) that he never was initiated by Kirpal Singh; and (c) he was never a student."[19]

Darwin's former secretary when he was head of Eckankar elaborates, "Sri Darwin Gross, the Living Eck Master of Eckankar has stated that he knows for a fact that Paul Twitchell only had two Eck Masters during his earthly stay here; the Tibetan Rebazar Tarzs and Sudar Singh, and no one else. They were the only Masters to initiate Paul Twitchell Kirpal Singh and the Radha Swoami [sic] tried to 'claim' Paul Twitchell and use him for their own purposes, as have other groups from the East and West. Paul mentioned this several times and at one point wrote a letter to Kirpal Singh and his associates stating that he, Paul, would take Singh and his associates to court if necessary. Due to the threats and harassment and material Kirpal Singh and Mr. Khanna tried to use against Paul Twitchell by faking Paul's signature on many papers. Paul wrote that letter that his widow, Gail Twitchell, gave me permission to read.…"[20]

This is an important controversy because many of Eckankar's ideas stem from Kirpal Singh's teachings, directly and indirectly. Why Twitchell would go to such lengths to deny what he himself already admitted in print prior to Eckankar's founding is not so much troublesome as revealing. More precisely, why would Twitchell change the names of genuine historical characters in his books and replace them with mythological figures that have apparently no historical basis?

One argument has it that the key to understanding Eckankar's early evolution hinges on understanding why Twitchell chose to change significant features of his autobiography for public consumption. In other words, what Twitchell chose to edit out of his life story is just as illuminating as what he left in. Twitchell's editing of names reached a pinnacle when he decided to publish in book form *The Flute of God.* The work was originally printed in installments in *Orion Magazine,* from 1965 to 1967. The first six chapters of the text profusely mention the names

of Kirpal Singh, Sawan Singh, and Jesus Christ. When Twitchell had the book republished, however, he redacted every single mention of Kirpal Singh, Sawan Singh, and Swami Premananda. In some cases, he even edited out the name Jesus and replaced it with "Gopal Das" or other Eckankar Masters. And, although he quotes from the Bible, he even changes the name of his source (to that of the *Shariyat-Ki-Sugmad*) while retaining the same biblical quotation. Below is a comparison study of the two versions. Remember that the *Orion* version is the earliest and that Twitchell's editing is primarily "name replacements."

The Flute Of God by Paul Twitchell as it appeared in installments in *Orion Magazine.* Chapter I—"In The Beginning" (March–April, 1966): Par. 3: "I remember very well when Swami Premananda, of India, who has a Yoga church in Washington, D.C., said, 'When someone asked Bertrand Russell what his philosophy of Life was, he wrote several volumes of books on the subject.'"

The Flute Of God by Paul Twitchell as published by Illuminated Way Press (1970). Chapter I—"In The Beginning": Par. 3: "I remember very well when Sudar Singh, the great Eck Master said, 'When someone asked Bertrand Russell what his philosophy of Life was, he wrote several volumes of books on the subject.'"

The Flute Of God by Paul Twitchell as it appeared in installments in Orion Magazine. Chapter I—"In The Beginning" (March–April, 1966): Par. 15: "I have studied under many teacher [sic], and may yet have to study under more. Like Meher Baba, the Indian saint, who was said to have 19 teachers to help him gain his place in the universe, I have so far had seven, some outstanding ones, including Sri Kirpal Singh, of Delhi, India."

The Flute Of God by Paul Twitchell as published by Illuminated Way Press (1970). Chapter I—"In The Beginning": Par. 16: "I have studied under many ECK Masters only they have led me to the highest truth. Like Fubbi Quantz, the ECK saint, who was said to have nineteen teachers to help him gain his place in the universe, I have also had several, each outstanding, one being Sudar Singh of India."

The Flute Of God by Paul Twitchell as it appeared in installments in *Orion Magazine.* Chapter I - "In The Beginning" (March-April, 1966): Par. 16: "Each has had a place in my growth toward the spiritual goal; each are equally great in their work for mankind. However, I have felt a closer kinship and friendliness to Kirpal Singh, who has shown me a lot of the other work during my first year or so under him. Since we have parted he keeps an impartial view toward me and my research. Therefore, if I quote him in these pages it is because I feel that he is sympathetic and interested in my work."

The Flute Of God by Paul Twitchell as published by Illuminated Way Press (1970). Chapter I—"In The Beginning": Par. 17: "Each has had a place in my growth toward the spiritual goal; each is equally great in his work for mankind. However, I have felt a closer kinship and friendliness to Sudar Singh, who showed me a lot of the other work, during my first year or so under him. Since we have parted he has retained an impartial view toward me and my research. If I quote him in these pages it is because I feel that he is sympathetic and interested in my work and led me to Rebazar Tarzs."

The Flute Of God by Paul Twitchell as it appeared in installments in *Orion Magazine.* Chapter I—"In The Beginning" (March–April, 1966): Par. 32: "Life fascinates me. Certain details of life to be worked out are strange. Lying on the bed late at night I watch the pattern of shadows weaving about the room. In the presence of familiar night visitors like Kirpal Singh, or Rebazar Tarzs, a Tibetan Lama, who come often in their Nuri-Sarup, or others, some strangers, some friends, I wonder about life."

The Flute Of God by Paul Twitchell as published by Illuminated Way Press (1970). Chapter I—"In The Beginning": Par. 34: "Life fascinates me. Certain details of life that have to be worked out are strange. Lying on the bed late at night I watch the pattern of shadows weaving about the room. In the presence of familiar night visitors like Sudar Singh, or Rebazar Tarzs, the ECK Masters who come often in their Nuri-Sarup bodies, or others, some strangers, some friends, I wonder about life."

What all these comparative redactions show is that Twitchell replaced historical figures (even ones that he had direct associations with in his past) with a bevy of Eck Masters, a large number of whom have names and lives that cannot be historically documented. To skeptics, this demonstrates that much of Eckankar's history is made up by its founder in order to conceal his genuine spiritual roots. A number of competing theories advocate why Twitchell wanted to do this, ranging from the purely economic (Kirpal Singh's group did not charge money, whereas Twitchell's group does) to the benevolent (Twitchell respected that his former teachers may not have wanted to be associated with his newly minted spiritual path).

Doug Marman, a respected apologist for early Eckankar history, contends that Twitchell's redaction stems from a pivotal incident when Kirpal Singh did not approve Twitchell's written work, particularly his book *The Tiger's Fang.* Writes Marman: "In other words, this incident must have made it abundantly clear to Paul that the teachings of ECKANKAR should not be based on an association with other teachings from Paul's past. Using the names of these teachers, if they were not sympathetic to his teachings, was not fair, and more importantly, referring to them was distracting from the vision of the ECK teachings that Paul was bringing out. While Paul started out talking openly about his previous teachers, he suddenly realized that although they had contributed to his education—they were not to be a part of the real lineage of the spiritual teachings that Paul was trying to teach."[21]

Of course, Kirpal Singh's followers have a different interpretation. Writes Stuart Judd, "One of His oldest Western disciples [Paul Twitchell] had published a series of books, without getting Master's permission, in which he recounted his inner experiences in great detail. According to the books, he had in fact reached Sach Khand. These books, with accompanying letters, arrived in India one by one while I was there, and Master spoke about them at great length to a few of us. In fact, He spoke with us for five successive days for an hour at a time (sometimes I was alone with Him, but usually one or two others were also present) and made it plain that He was thoroughly displeased with the books and also the correspondence. It was evident that the disciple was maintaining that he had permission from the Master

within to publish the books, and that (according to him) the Master within had withstood the repetition of the five charged names. But Master made it very clear that there was some deep and serious error here: not only had He not given permission for the books to be published, but the disciple was most decidedly not in Sach Khand. This was puzzling to us. We asked Him how it could be. He said, "I quite fully admit that the Master did take him in His lap and showed him some of the inner treasures, that's right; but he misused what he had been given, and it turned sour." Then one of us asked why the Master would show some of the inner treasures to someone who would misuse them. Master leaned forward, His eyes blazing: "Look here! Who crucified Christ? Tell me that! Who crucified Him? Was it not Judas? One of His own!" And then He spoke about Paul Twitchell … we saw that Masters give to disciples out of their love for them; that the disciples may use or misuse what they are given."[22]

I think this is a very significant chapter in the ongoing evolution in Eckankar because it reveals in a nutshell how two completely divergent interpretations can arise from one incident, and how, in turn, each side can reinterpret the opposing camp along theological lines. One thing is certain in this episode between Kirpal Singh and Twitchell (besides the acrimony): Twitchell genealogically dissociated himself and his group from key anchors in his past and in so doing assured that Eckankar would be autonomous. If he had not severed his ties to his former teachers, Twitchell might be viewed as merely an offshoot (of which there are many) from more orthodox Sant Mat lineages. As it stands, most Eckists do not know about Twitchell's former spiritual teachers, and Eckankar literature purged most of their names from the official records as well.

Twitchell joined Scientology around 1958. Apparently he was a staff member of the group and attained the much sought after status of "Clear." Twitchell was highly influenced by Hubbard and Scientology. Recently, a number of important documents surfaced that shed more light on Twitchell's involvement with the group. A former Scientologist and friend of Twitchell in the 1950s recalls: "Paul Twitchell was a writer hired by L. Ron Hubbard to be in charge of selecting articles on Scientology submitted by parishioners to be published in either Scientology publications or elsewhere as a testimony to the worth of Scientology. When Paul Twitchell found out about the inner workings of Scientology, I remember him saying, "Boy, there is a lot of money in religion."[23]

Twitchell regularly wrote for a Scientologist magazine entitled *Ability.* For instance, Twitchell wrote two articles, "The Psychology of Slavery" and "Outsight." In both he speaks very highly of Hubbard. Below are two pertinent excerpts that exemplify Twitchell's keen regard for the founder of Scientology. The first puts Hubbard in the vanguard of contemporary teachers: "To build an attitude of defeat into the minds of the enemy is the constant goal of the dictators. Fortunately for the human race there are capable individuals who, like L. Ron Hubbard, founder of Scientology, leader of one of the many groups, are working to help man free himself from such ruthless control. Freedom from artificial conditioning of ingrained

reflexes against enslavement of the reactive mind makes such individuals dangerous to the totalitarians. Scientology can undo, fortunately, the poison of psychology the mass-mind has been fed."[24]

The second passage praises Hubbard's teaching about self-reliance: "Some religious teachings, especially the Hindu practices, affirm that one needs a Guru, or Teacher, for guidance even though the pupil can exteriorize at will. The difference between Scientology and these religious practices is that Ron Hubbard shows us what to do before and after exteriorization. Then following exteriorization we can have use of this ability of OUTSIGHT at its maximum level. In other words, Ron teaches us to stand upon our own feet as thetans and not depend upon a Guru to be at our side at all moments instructing us what to do, as the Hindus teach. However, a thetan must be granted beingness in order to gain experience in the handling of his capabilities, and without interference from another. That is why Ron never dictates or interferes with our beingness or personal lives, for he realizes that as long as a Scientologist depends upon another to help him he is still effect, not working from cause point, and his self-determinism is low."[25]

What is most controversial about Twitchell's involvement with Scientology, though, is the allegation that he appropriated verbatim excerpts from Hubbard's works. A classic example of this comes from *Letters to Gail* where Twitchell copies Hubbard's "The Axioms of Scientology" without mentioning his source. The implication is that Twitchell invented the axioms. The following is a comparison study of Paul Twitchell's plagiarism:

THE AXIOMS OF SCIENTOLOGY
By L. Ron Hubbard

Axiom 1. LIFE IS BASICALLY STATIC. Definition: a Life Static has no mass, no motion, no wave-length, no location in space or in time. It has the ability to postulate and to perceive.
Axiom 2. THE STATIC IS CAPABLE OF CONSIDERATIONS, POSTULATES, AND OPINIONS.
Axiom 3. SPACE, ENERGY, OBJECTS, FORM, AND TIME ARE THE RESULT OF CONSIDERATIONS MADE AND/OR AGREED UPON OR NOT BY THE STATIC, AND ARE PERCEIVED SOLELY BECAUSE THE STATIC CONSIDERS THAT IT CAN PERCEIVE THEM.
Axiom 4. SPACE IS A VIEWPOINT OF DIMENSION.
Axiom 5. ENERGY CONSISTS OF POSTULATED PARTICLES AND SOLIDS.
Axiom 6. OBJECTS CONSIST OF GROUPED PARTICLES AND SOLIDS.
Axiom 7. TIME IS BASICALLY A POSTULATE THAT SPACE AND PARTICLES WILL PERSIST.
Axiom 8. THE APPARENCY OF TIME IS THE CHANGE OF POSITION OF PARTICLES IN SPACE.
Axiom 9. CHANGE IS THE PRIMARY MANIFESTATION OF TIME.

Axiom 10. THE HIGHEST PURPOSE IN THIS UNIVERSE IS THE CREATION OF AN EFFECT.

LETTERS TO GAIL [FEBRUARY 22, 1963]
By Paul Twitchell

1] Life is basically a divine spark. Therefore, this life spark has no mass, no motion, no wavelength, no location in space or in time. It has the ability to postulate and to perceive.

2] …It is capable of postulates and powers.

3] …Space, energy, objects, form, and time are the results of the powers or agreements by the Soul, they are perceived solely because Soul realizes that It can perceive them.

4] SPACE is a viewpoint of dimension.

5] ENERGY consists of postulated particles in spaces.

6] OBJECTS consist of grouped particles.

7] TIME is basically a postulate that space and particles will persist.

8] The APPARENCY OF TIME is the change of position of particles in space.

9] CHANGE is the primary manifestation of time.

10] …That the highest purpose in the universe is the creation of an effect.

The issue of plagiarism haunted Twitchell from the latter part of the 1960s. In many of his books he apparently borrowed passages without proper attribution from several occult and mystical works. Most striking, however, is Twitchell's use of hundreds, if not thousands, of passages from the writings of Julian Johnson, a former surgeon and an initiate of Kirpal Singh's guru, Sawan Singh. Johnson, a native Kentuckian, was initiated into Radha Soami on March 1, 1931. The next year Johnson left his medical practice in California and traveled to Beas, India, in order to serve his guru, Sawan Singh. From 1933 to 1939, Johnson devoted much of his time to writing about his master and his experiences in the Radha Soami path.[26]

He first helped Sewa Singh in translating the Hindi book *Sar Bachan* (authored by the founder of Radha Soami, Shiv Dayal Singh, and regarded as the central text to the group's theology) into English. Later, he authored four of his own books on Radha Soami. Johnson's first work, *With a Great Master in India,* was a compilation of letters he wrote to Americans about his first 18 months in India studying under the master. His next two books, *Call of the East* and *The Unquenchable Flame* were semi-autobiographical accounts of himself and his future wife, Elizabeth Bruce. Yet, it was not until 1939 that Johnson's most famous work, *The Path of the Masters,* was published. The English book was the first of its kind; it described in detail the history and practice of Santon-Ki-Shiska (Sant Mat).

By 1955, the year Twitchell received initiation from Kirpal Singh, several books had been published in English about Sant Mat and Radha Soami. However, it was Johnson's climatic text, *The Path of the Masters,* which remained the most popular explication. This book served as a beacon for attracting seekers to either Charan Singh of Radha Soami Satsang Beas (who was Jagat Singh's successor) or Kirpal Singh of Ruhani Satsang. Twitchell, arguably, first came into contact with the work in the mid-1950s, if not earlier. Although Twitchell does not cite *The Path of the Masters* by name or refer to Johnson in his writings, he has, nevertheless, cited another key Radha Soami text—*Sar Bachan*—which Johnson edited.[27]

The overall influence that Johnson's books—*The Path of the Masters* and *With a Great Master in India,* in particular—had on Twitchell's own spiritual writings is truly remarkable. Twitchell not only borrowed and learned from the book, he also copied it … word for word.

The striking similarities between Twitchell's work and Johnson's earlier writings are astounding. Three of Twitchell's books, *The Tiger's Fang, Letters to Gail* (both volumes), and *Shariyat-Ki-Sugmad,* appear to contain almost verbatim excerpts from Johnson's 1939 work, *The Path of the Masters.*

Yet, it is Twitchell's 1966 book, *The Far Country,* that raises the serious question of his originality. This work contains well over 400 paragraphs from Johnson's two books, *The Path of the Masters* and *With a Great Master in India,* without so much as a single reference to them. Realizing that Twitchell was intimately acquainted with Johnson's books (even Eckankar's former President, Dr. Louis Bluth, admits that he loaned his Radha Soami books to Paul Twitchell), the real question that arises is, "Did Twitchell knowingly plagiarize from them?" Although there are two contrasting viewpoints on this question, the inevitable answer is, "Yes, he did—unmistakably so." However, Eckankar strongly disclaims that their founder plagiarized from anybody. In a personal letter to the author, dated July 5, 1977, Eckankar's attorney, Alan H. Nichols, elaborates: "With a wide background of study you will find many similarities both approximate and exact in many religious statements, history, and mythology. Whether one is a student of Zoroaster, Mohammed, Buddha, Jesus, or Tao, many of the same things are said and (when translated) in the same way.… How did you know Johnson didn't obtain his information from Twitchell or Rebazar Tarzs [sic] or some other common source? Don't be surprised that many people find the same truths and even in the same words, commandments, etc., whether they are concepts, stories of events, or levels of God Worlds or consciousness."[28]

Johnson had a unique style of writing, as can easily be noticed by reading his books. Indeed, this very point has caused some criticism of him. Thus, when one notices the coincidences between Johnson's and Twitchell's writings, it is not a question of "truth" being expressed but of style being copied.

To understand Twitchell's literary indebtedness to Johnson better, consider the following facts: (1) Johnson wrote all of his books on Radha Soami in India during the 1930s. Twitchell authored all of his works on Eckankar in the United States during the 1960s and the early 1970s. (2) Twitchell stated in at least two published pieces

that he considers *Sar Bachan* to be his "Bible." The book was edited by Johnson in the early 1930s.

Perhaps Twitchell's most revealing plagiarism, and one that cuts at the very root of Eckankar's claim for originality, occurs in *The Far Country.* Not only does Twitchell appropriate Johnson's words in *The Path of the Masters,* but he also plagiarizes Johnson's quotation of Swami Vivekananda—forgetting in the process that two different people are speaking. The following is a comparison of Johnson's 1939 writing and Twitchell's 1966 writing.

Julian P. Johnson, *The Path of the Masters* [1939] [Johnson is quoting Swami Vivekananda in the following passage; Johnson, by the way, properly references his quotation.]

> Something behind this world of sense, world of eternal eating and drinking and talking nonsense, this world of false shadows and selfishness, there is that beyond all books, beyond all creeds, beyond the vanities of this world—and that is the realization of God within oneself. A man may believe in all the churches in the world; he may carry on his head all the sacred books ever written; he may baptize himself in all the rivers of earth—still if he has no perception of God, I would class him with the rankest atheist. And a man may have never entered a Church or a mosque, nor performed any ceremony; but if he realizes God within himself, and is thereby lifted above the vanities of the world, that man is a holy man, a saint, call him what you will.

[The following passage is directly from Julian Johnson.]

> First of all, it is not a feeling. Secondly it is not a metaphysical speculation nor a logical syllogism. It is neither a conclusion based upon reasoning nor upon the evidence of books or persons. The basic idea is that God must become real to the individual, not a mental concept, but a living reality. And that can never be so until the individual sees Him. Personal sight and hearing are necessary before anything or anybody becomes real to us.…
>
> Paul Twitchell
> *The Far Country* [1966]

> Sugmad is beyond this world of senses, this world of eternal eating and drinking and talking nonsense, this world of false shadows and selfishness. It is beyond all books, beyond all creeds, beyond the vanities of the world. It is the realization of the Sugmad within oneself.… A man may believe in all the churches in the world; he may carry in his head all the sacred books ever written; he may baptize himself in all the rivers of the earth—still if he has not perception of the Sugmad, I would class him with the rankest atheist. And a man may never enter a church or a mosque, nor perform any ceremony; but if he realizes the Sugmad within himself, and is thereby lifted above the vanities of the world, that man is a holy man, saint; call him what you will.
>
> First of all, it is not a feeling. Secondly, it is not a metaphysical speculation, nor a logical syllogism. It is not a conclusion based upon reasoning, nor upon the evidence of books or persons. The basic idea is that the Sugmad must become real to the…

The preceding comparisons reveal two things: (1) Twitchell incorporated Johnson's quotations (in this case, Swami Vivekananda's elucidation) without giving any reference note to him or the Swami. Instead, Twitchell claims that the Eck Master, Rebazar Tarzs, was speaking directly to him. And (2) in *The Far Country,* Twitchell not only exposes his outright plagiarism of *The Path of the Masters* but reveals that almost all of Rebazar Tarzs' dialogue is taken surreptitiously from Johnson's writings. Naturally, the authenticity of Twitchell's account of Rebazar Tarzs raises some serious questions about the historicity of the Tibetan master.

However, though there are many instances of Twitchell's almost verbatim copying of previously published words that were not his own, he placed them in differing contexts and occasionally altered their meanings. Thus, it would be inaccurate to merely say that Eckankar is a plagiarized version of Radha Soami or Scientology. No, Eckankar is a unique reworking of these influences into a mosaic that distinguishes itself from other like-minded groups.

Thus, Eckankar is nothing more than the sum total of Twitchell's experiences, or, if not entirely his own "personal" observations, at least his own unique choice of differing spiritual and occult teachings. As Twitchell himself wrote, "Eckankar, which I formed out of my own experience is the term used for the philosophy I have developed for the Cliff Hanger."[29]

Some of what Twitchell teaches is garnered from Ruhani Satsang. The differences, however, between the two movements are not only distinctive but fundamental. The variances, which in part can be traced to Twitchell's inclusion of alternative spiritual concepts (from "Tone Scales" to "Golden Temples"), reveal some crucial points of departure for Eckankar from the ethical and practical foundation of Ruhani Satsang.

One significant change that Twitchell brought about in Eckankar was his restructuring of the traditional Sant Mat "eight plane" cosmology. Twitchell did this, though, only after having used the original Sant Mat cosmology in several of his earlier books—most notably in *The Tiger's Fang* and *The Far Country.* The intriguing aspect is that Twitchell's revised and copyrighted "twelve plane" cosmology (which is given in the *Spiritual Notebook* and was standard in Eckankar by 1971) contradicts his previous "eight plane" one. The following is a comparison chart of the two cosmologies.

Original (based upon the Sant tradition; depicted in Twitchell's first books on Eckankar):

1. Sahasra dal Kanwal; sounds—bell and conch
2. Brahm Lok (Trikuti); sounds—big drum (thunder)
3. Daswan Dwar; sounds—violins (sarangi)
4. Bhanwar Gupha; sounds—flute
5. Sach Khand; sounds—vina (bagpipe)
6. Alakh Lok*

7. Agam Lok*
8. Anami Lok (Sugmad)*

Revised (as given in the *Spiritual Notebook* and standard by 1970):

1. Elam (Physical); sounds—thunder
2. Sat Kanwal Anda (Astral); sounds—roar of the sea
3. Maha-Kal/Par Brahm (Causal); sounds—tinkle of bells
4. Brahmanda Brahm (Mental); sounds—running water
5. Sat Nam (Soul); sounds—single note of flute
6. Alakh Lok; sounds—heavy wind
7. Alaya Lok; sounds—deep humming
8. Hukikat Lok; sounds—thousand violins
9. Agam Lok; sounds—music of woodwinds
10. Anami Lok; sounds—whirlpool
11. Sugmad Lok; sounds—music of universe
12. Sugmad/Living Reality; sounds—music of God

The most noticeable difference in the two cosmologies is in the location of the various sounds (known in Radha Soami as shabd dhuns). Note that in the first "eight plane" cosmology the sound of the flute is heard on the "fourth" plane (Bhanwar gupha), one region below Sach Khand (the eternal "soul" realm), whereas in the "twelve plane" chart, the sound of the flute is now heard on the "fifth" plane (Sat Nam; the "soul" region). This contradiction, while perhaps not noteworthy in any other spiritual tradition, is crucial in Shabd yoga, where the whole essence of the path is based upon the internal hearing of the "sound current" or "audible life stream." The knowledge of which sounds to listen to and which to discard is an extremely important part of the teachings. Other variances in the cosmologies include: (1) The sound of the thunder that was heard in Trikuti (causal realm) in the original Sant Mat cosmology is now according to the "twelve plane" chart heard in the physical region (Elam). (2) The tinkle of bells that was originally heard up to and through the first plane (Sahasra dal Kanwal) is now heard in the third region (MahaKal-Par-Brahm). (3) Par Brahm that used to be in Daswan Dwar (i.e., beyond mind and matter) is now in the causal realm—a region that was previously in Trikuti (the home of the mind).

The preceding comparisons are important in understanding that, although Twitchell employed basic Sant Mat concepts in the beginning of his group, the teachings themselves have undergone an evolution in Eckankar. This not only signals Twitchell breaking off from Ruhani Satsang doctrines but also indicates an evolving (and not a stationary) superstructure within Eckankar. More precisely, what

Twitchell may have taught in Eckankar in 1965 and 1966 may not have been disseminated near the end of his life.

DARWIN GROSS AND HAROLD KLEMP

When Gross appointed Klemp as the "Living Eck Master" in 1981 he had no idea that two years later his successor would excommunicate him from Eckankar, ban his books from sale, and instigate a lawsuit against him for business impropriety and copyright infringement. But that is exactly what happened. In a "Personal and Confidential" letter dated January 4, 1984, Klemp informed Gross of his removal from Eckankar:

> Dear Darwin:
>
> The Order of the Vairagi ECK Masters no longer recognizes you as an ECK Master. As the agent of the ECK, I have removed all of your initiations in ECK as well as terminated your membership in ECKANKAR. You are not capable or authorized to act or speak for or about the Vairagi ECK Masters, ECKANKAR or the ECK teachings, nor are you to hold yourself out as an ECK Master or ECK member. Do not directly or indirectly associate yourself or your activities with the sacred teachings of ECK or ECKANKAR in any way.

Naturally, Gross did not accept Klemp's excommunication, since it was Gross himself who appointed Klemp as the Living Eck Master. In a letter, dated February 1984, and widely distributed amongst interested Eck chelas, Gross presented his own version of the breach between Klemp and himself.

> Dear One:
>
> Many individuals who are spiritually awake are concerned about the misguided information coming out of Menlo Park. The Vairagi Masters do recognize me as a Vairagi Master. My initiations cannot be removed by Harold or anyone else. Harold Klemp does not have that authority. He was given a spiritual responsibility, which he has lost. He no longer holds the Rod of Eck Power.
>
> It is my duty and responsibility as a Vairagi Master to inform you that there have been many severe charges and false accusations made against me by ECKANKAR, the Corporation, Harold Klemp and others, at the World Wide of Eck, 1983, and on the tape of the 1983 World Higher Initiates Meeting. I was removed from the World Wide program, for it would have upset their plans. The schism that has come out of ECKANKAR was started by the ECKANKAR board, for I did not start this rift in ECKANKAR.

According to court documents filed in the United States District Court for the District of Oregon by Eckankar's attorneys Esler & Schneider, Gross breached his contract as President of Eckankar (and his lifetime employment agreement which gave him $65,000 a year for the rest of his life) by the following "material" respects:

A. Diverting corporate opportunities to his own private benefit and profit;
B. Using corporate assets for his own private benefit without any legitimate or reasonable benefit to defendant [Eckankar] or its corporate purposes;

C. Regularly and habitually failing to perform his duties as an officer of defendant [Eckankar];

D. Failing to live up to the high moral image expected of an officer and Trustee of a religious corporation;

E. Failing to support and assist the Living ECK Master [Harold Klemp] in spreading the message of ECKANKAR;

F. Failing to show reasonable respect and courtesy to the Living ECK Master [Harold Klemp];

G. Converting and attempting to convert property of ECKANKAR to plaintiff's [Darwin Gross's] advantage;

H. Transferring and attempting to transfer property of and rights outside the direct control of defendant in contravention of the direct instructions of the Living ECK Master and defendant's Board of Trustees;

I. Teaching and spreading doctrines which, in the opinion of the Living ECK Master, are not consistent with the teachings of ECKANKAR;

J. Failing to retire when requested to do so; and

K. Failing to retire from public activities upon his termination as defendant's president and when requested to do so by the Living ECK Master.[30]

Gross's followers do not see any impropriety in their teacher's actions. Rather, they see him in a dual function where his spiritual power is not stripped or questioned by his human wants and desires. Most of Gross's work, these chelas contend, is done on the inner planes in his "other," higher spiritual bodies. What Gross presents on the outer is not what he is on the inner.

One of the major disputes between Eckankar and Gross was over the latter's lifetime contract. Before Gross resigned as "Living Eck Master" in 1981 he signed an agreement with Eckankar, which would pay him $65,000 for life, plus other perks such as use of a company automobile (and insurance), complete medical and dental coverage, entertainment expenses, and other assorted business expenses. Unquestionably, the contract is a lucrative one that is beneficial to Gross both before and after retirement. In August 1983, however, Gross's contract with Eckankar was terminated. Today, Gross has no official connection with the movement he once led for ten years.[31]

Under Klemp's leadership, Eckankar expanded its core audience worldwide with an estimated paid membership of between 40,000 to 100,000 members yearly. (Eckankar does not provide exact numbers of their membership.) Klemp also produced a wide ranging series of books and discourses and moved Eckankar's former center of operation from Menlo Park, California, to Chanhassen, Minnesota (a suburb of Minneapolis) where he established "The Temple of Eck." According to their own accounting, Eckankar has members from over 100 countries around the world.

During Klemp's tenure, Eckankar also systematized its teaching and made it more accessible to the general reading public by lessening its emphasis on Twitchell's extensive use of Indian (particularly Hindi/Punjabi) influenced terminology. Eckankar's

official Web site presents a codified version of its belief system: "Soul is eternal and is the individual's true identity. Soul exists because God loves it. Soul is on a journey to Self- and God-Realization. Spiritual unfoldment can be accelerated through conscious contact with the ECK, Divine Spirit. This contact can be made via the Spiritual Exercises of ECK and the guidance of the Living ECK Master. The Mahanta, the Living ECK Master is the spiritual leader of Eckankar. Spiritual experience and liberation in this lifetime are available to all. You can actively explore the spiritual worlds through Soul Travel, dreams, and other spiritual techniques."[32]

While Eckankar was directly influenced by Sant Mat and other religions, it has, in turn, influenced a number of NRM offshoots, including the Movement of Spiritual Inner Awareness (MSIA), founded by John-Roger Hinkins; Masterpath, founded by Gary Olsen; The Ancient Teachings of the Masters (ATOM), founded by Darwin Gross; The Divine Science of Light and Sound, founded by Jerry Mulvin; the Sonic Spectrum founded by Michael Turner; and the recently formed Higher Consciousness Society, founded by Ford Johnson. Each of the founders of these groups was at one time a member of Eckankar, and they have incorporated many of the Eck terms and ideas into their respective organizations.[33]

The New Age: A Twentieth Century Movement

Susan Love Brown

INTRODUCTION

The New Age movement began in the United States in response to the cultural revolution that took place in the 1960s and coincided with the coming of age of the Baby Boomer generation. It began as a spiritual movement that embraced ideas and rituals from the East, such as Zen Buddhism and yoga, and combined them with western religious ideas and rituals, scientific language, and magical and mystical world views. In time, the New Age movement embraced many other nonwestern religious traditions, such as shamanism, Native American religions, and even witchcraft. It is distinguishable from more conventional religious groups and movements in that it is not necessarily attached to any formal institutions, has no single leader, can be practiced largely by individuals separately and together, and provides maximum freedom of interpretation.

The term "New Age" is most closely correlated with the astrological idea that we are about to enter a new age, the Age of Aquarius, which will arrive around 2012,[1] or has already arrived according to some. Each new age, arriving in 2100 year cycles, brings with it a new consciousness and, consequently, the opportunity to refine and renew values. The values being challenged are notions of progress, material wealth, unbridled technology, and the uncritical use of the environment without consideration for the negative consequences. The Age of Aquarius also brings with it the rediscovery of important old values and the wisdom of previous cultures, spiritual practices, and ways of living that complement the new consciousness. According to Wouter J. Hanegraaff, "…the 'New Age' under the sign of Aquarius will presumably exemplify everything which has been neglected or missing during the Piscean Age. The New Age emerges as the positive mirror image of the Old Age."[2] Paul Heelas, speaking primarily about the British manifestation of the New Age, refers to it as "self-spirituality," a term that clearly distinguishes it from the mainstream religions with which it competes.[3]

According to J. Gordon Melton, "The New Age movement … is a revivalist movement more analogous in form to the post-World War II healing movement in the Pentecostal churches, the Ecumenical movement among liberal Protestants in the 1960s, or the Jesus People Movement of the 1970s. Each assumed the existence of stable religious (denominational) structures from which they drew their basic ideas."[4]

Because the New Age movement is so diverse and has no single leader or manifestation, it may seem at first to lack coherence. But there are certain principles that tie together the various facets of the New Age.[5] First of all, there is the emphasis on transformation of self, society, and environment for the purpose of improvement. This element of transformation has been identified as the truly distinctive element of the New Age. In *The Aquarian Conspiracy,* Marilyn Ferguson emphasizes this transformation of self and environment as a key property of the New Age.

Second, New Age advocates emphasize experience as the source of knowledge, experience that can be repeated and verified by others. This experience is achieved through movement, ritual, and feeling as opposed to dogma and doctrine.[6] For many, this emphasis on experience as opposed to dogma represented a shift from a faith-based approach to a scientific approach.

Third is the holistic nature of the New Age, emphasizing the unity not only of mind, body, and soul, but of human beings with other animals and nature, including the universe as a whole. For many, the New Age represented an end to old and dysfunctional dichotomies that separated the mind from the body, spirituality from science, and human beings from nature.

Fourth, related to the emphasis on experience, is a renewed interest in ritual, the performance of certain sets of predetermined actions to bring about a specific set of results, usually for the purpose of change toward the better. From this interest, elements of older spiritualities often found their way into New Age religion. For example, channeling, which many people associate with New Age religion, is related to the practice of mediums, which have always been a part of the occult-metaphysical community.

Fifth is an emphasis on healing any aspect of the self, either spiritually or physically usually by some natural means, giving the New Age movement a therapeutic focus. Many of the practices and rituals of the New Age movement developed as techniques of healing, and healing itself constitutes an extension of transformation.

Finally, harmony, the sixth principle of the New Age, which consists of harmony among body, mind, and soul or any aspect of being, constitutes a further expression of the unity of holism. The emphasis on holism is a way of reaffirming the connectedness of everyone and everything in the universe—a reaction to the many dichotomies that gave rise to so many cultural and social contradictions and ambiguities following World War II.

The New Age movement was precipitated by the massive social changes that occurred in the 1960s and, as such, constitutes a revitalization movement. It occurred at a time when massive numbers of young people were moving out of established churches, or never joined them, because of general disillusionment with the

established authorities. It is largely a middle-class movement. However, the New Age movement had precedent. Its origins lay both in the upheavals of the 1960s, many of which were precipitated by post-World War II conditions, and in the spiritual nature and history of the United States itself and in what James R. Lewis and Melton called the "occult-metaphysical community" (also referred to as "esoteric Christianity"), a tradition reaching back to the 18th century.[7] But the New Age differs from historical predecessors, according to Lewis and Melton, because of its millenarian "emphasis on transformation."[8]

The New Age movement is also part of a long-standing counterreligious movement that stands in opposition to mainstream religious expression and spirituality. This counterreligious spirit has always existed in the United States, and there have been predecessors, such as the Theosophical Society, Spiritualism, and New Thought.[9] The New Age movement differs from previous versions of this independent spirituality precisely in its lack of a central organization and the multiplicity of its manifestations, as well as its transformative element. But like those previous movements and spiritualities, it was precipitated by cultural and social changes that challenged the stability of society and the psyches of its members.

The immediate origin of the New Age movement lay in the changes in the United States following World War II and the upheavals of the 1960s.

THE ORIGINS OF THE NEW AGE

Scholars disagree with one another on the precise beginning of the New Age movement. For example, Melton dates it from 1971,[10] but it had definite roots in the volatile atmosphere of the 1960s.

A specific set of circumstances gave rise to the New Age: a major shift in consciousness among the intellectuals following World War II, the increasing affluence in American society, technological innovations, the rise of the Human Potential Movement in psychology, the changes caused by a number of "rights" movements within the country resulting in "the democratization of personhood," and the coming of age of the idealistic Baby Boomer generation. Let us examine each of these factors in turn.[11]

The vanguard of the Baby Boomer generation, those born between 1946 and 1954, grew up in a post-World War II environment of increasing affluence, technological change, unprecedented social change, and spiritual uneasiness.[12] The war epitomized a human nightmare, not only with the loss of life in military engagements, but in the horror created by the Nazi concentration camps, the extermination of millions of people, and the barbarity of the doctrines associated with them and in the very existence of the atomic bomb, a weapon so powerful that it was capable of the annihilation of thousands of people. Because of these troubling events, there was an elevated consciousness following the war and a questioning of basic human values and their meaning in the face of such atrocities. This disturbance of consciousness marked a decided shift that was to become manifest as the 1960s approached.

But accompanying these doubts about the meaning of humanity in the face of so much destruction was also a set of very positive occurrences, including the rise of an unprecedented affluence that finally relieved the economic anxieties of the Great Depression. The middle class rose from a meager 13 percent of the population to an astounding 46 percent of the population, adding to the general optimism. This came about not only due to a recovering economy but because of new advantages, such as education through the G.I. Bill, home ownership made possible by loans to veterans, and the job security that came with the rise in manufacturing and large companies that offered new employment possibilities. After the war, the building of corporate America, which would ultimately lead to the United States becoming a world power, helping to consolidate the cultural view of Americans about the nature of their ideals and their place in the world, occupied much of the activity of much of the adult generation.

While men were off building corporate America, women were giving birth to unprecedented numbers of babies. Between 1946 and 1964, around 78 million new Americans were born—the biggest baby boom ever. The birth of an enormous generation led to a child-centered society with a family orientation. Through the practice of new child rearing methods and ideas, the society moved from a sociocentric society to a society in which self-fulfillment was central to the changes that would take place in the late 1960s.[13] Boomers enjoyed unprecedented childhood attention and the rise of their own subculture separate from that of adults.

One of the key factors in allowing Baby Boomers to think of themselves in a unified way was the rapid rise of television, which provided a horizontal integration of an enormous geographical area. Through the viewing of common shows, both news and entertainment, boomers shared a common American experience, or at least had the illusion of doing so. Because of the parental emphasis on the social aspects of self, boomers also experienced a sense of belonging and unity that they took for granted, but which would begin to fall apart in the 1970s after so many changes. This sense of unity was sought and restored to some degree by the tenets of New Age ideology. Major events, such as the first manned space shot and the assassination of President John F. Kennedy, were shared simultaneously due to the wide coverage of the broadcast media. Thus, the same images were imprinted on the consciousnesses of Baby Boomers everywhere.

Technological innovations were unprecedented as Baby Boomers moved through childhood. Not only the bomb, which posed a threat to all societies, but the development of space exploration in competition with the Soviet Union, the invention of the transistor, and the general emphasis on using technology to create comfort and ease in the home and on the road, all lent an air of possibility and optimism that challenged the undercurrent of doom that arose along with the Cold War between the Soviet Union and the United States and the Cuban missile crisis. Baby boomers faced the possibilities of nuclear annihilation at the same time that they were experiencing the comforts of unprecedented affluence, one of the ironies that came to characterize this generation.

As the vanguard of the baby boom reached maturity, the "democratization of personhood," as Peter Cleçak has called it,[14] occurred in the 1960s and 1970s. First of all, the civil rights movement called attention to the plight of African Americans in the South, and their struggle to obtain the same rights as other Americans was viewed daily on television and, thus, shared by the whole nation, it became a formative part of Baby Boomer consciousness. The civil rights movement also led to disillusionment with the parental generation, whose high ideals were being preached but not lived. Churches, the supposed repository of moral values, did not live up to the ideals they preached, and this was the beginning of a drift away from establishment religion. So when the lives of male Baby Boomers themselves were threatened by the military draft during the Vietnam conflict, boomers used the precedent of civil rights protests as a model for their own antiwar protests. There was also a series of assassinations, ushering in an era of violence, beginning with the assassination of President Kennedy in 1963, followed by Medgar Evers (1963), and the Reverend Martin Luther King, Jr., and Senator Robert Kennedy, both in 1968.

But the democratization of personhood did not stop with blacks or with male conscripts. The women's movement, launched in 1963 with Betty Friedan's *The Feminine Mystique,* became organized and vocal in the early 1970s and led to new visions of liberation and the reassertion of egalitarianism that were always a hallmark of American cultural ideals. It was followed by protests on the part of Native Americans, disabled people, elderly people, and many others until every group in the United States claimed its personhood and changed the nature of American society by doing so. There was also a general shift from seeing the United States as a nation in which all new groups assimilated into the "melting pot" to appreciating the great diversity to be found in the traditions of different ethnic and religious groups. So a positive ethnicity also emerged after the 1960s and led to changes in the educational curriculum of universities and eventually public schools and launched debates about multiculturalism and diversity that continue to this day.

All of these changes, good and bad, major and minor, led to a reevaluation of norms, accompanied by feelings of insecurity and instability in the United States. Along with the culture of protest emerged a counterculture, which became the source for an emerging new consciousness. Adding to the experience of change and offering some solution to it were transactional psychology, whose practitioners and ideas gave rise to the Human Potential Movement, which promised self-fulfillment through self-actualization, an increasing affinity for Eastern religions and practices, such as Zen Buddhism and yoga, and the altered states of consciousness induced by psychedelic drugs introduced to young people at large by Harvard professor Timothy Leary (1920–1996) and his colleague Richard Alpert (b. 1931), among others. These altered states of consciousness formed the basis of a new spirituality rooted in experience of the divine.

These remedies for coping with change also produced many of the early personalities recognized by members of the New Age movement and its historical antecedents.

PERSONALITIES OF THE NEW AGE MOVEMENT

The older spiritual movements with which the New Age is identified with specific founders, leaders, and prophets are all in contrast to the New Age movement itself. The New Age is decidedly nonauthoritarian in nature and consists primarily of individuals seeking ways for the self to be fulfilled or healed in the form of specialist practitioners, classes, pilgrimages, and practices that are fairly specific. Its personalities are seen as teachers or specialists, whose authority is vested in their knowledge but not in their leadership. Thus, the New Age constitutes a conglomeration of individualists seeking out specialists as they need them, setting up a kind of competition among these personalities.

Heelas notes that this situation results in "…voices of authority emanating from experts, charismatic leaders and established traditions being mediated by way of inner experience."[15] New Age personalities tend to be entrepreneurs who provide learning through experience and let movement members pick and choose for themselves in a marketplace of spiritual ideas and practices. There is no single spokesperson, for the very individualistic nature of the movement militates against it. Nevertheless, certain people, some from the past and some from the present, are most associated with the New Age.

Earlier religious movements, such as Spiritualism, Theosophy, and New Thought have lent to the New Age a group of "elders" whose ideas seem similar in some respects to many of those of the New Age or have been picked up and given a renewed life and respectability by members of the New Age movement who have rediscovered them.[16] Among these would be figures such as Madam Helena P. Blavatsky (1831–1891), one of the founders in 1875 of the Theosophical Society, Alice Bailey (1880–1949), a theosophist prophet and author of *The Reappearance of the Christ,* and channeler David Spangler (b. 1945), also from the Theosophical tradition. Another person whose work was rediscovered was Edgar Cayce (1877–1945), a clairvoyant or psychic whose many readings and predictions fascinated people in the United States in the early twentieth century and whose life and readings remain the subject of study even to this day.

Eastern spirituality has always influenced religion in the United States.[17] Influences from Eastern religions include Swami Vivekananda (1863–1902), who founded the Vedanta Society, and Paramahansa Yogananda (1893–1952), who founded the Self-Realization Fellowship and authored *Autobiography of a Yogi,* which was an early influence. Maharishi Mahesh Yogi (b. 1917), who taught Transcendental Meditation (TM) and was a guru to many celebrities, including the Beatles and the Beach Boys. TM was highly influential within the New Age movement. Maharaj Ji (b. 1957), head of the Divine Light Mission originally founded by his father, Hans Ji Maharaj in 1966, also contributed to the New Age movement.

Transactional psychology and the Human Potential Movement lent many of its ideas and practices as well as language to the New Age movement and was the source of much of the emphasis on science and its compatibility with spirituality. The Human Potential Movement had three founders: Abraham Maslow (1908–1970),

Carl Rogers (1902–1987), and Rollo May (1909–1994), who were all also involved in transactional psychology, sometimes called Third Force psychology. These three psychologists came up with the theory of self-actualization with its emphasis on the ability of individuals to transform themselves, and this message carried a lot of weight with members of the Baby Boomer generation just as they were coming of age and searching for new identities. This movement coincided with changes in child rearing and American conceptions of self in a kind of social and cultural synergy. Maslow, in particular, through his writing, had a profound impact on the formation of the New Age movement in the United States. His book, *Religions, Values, and Peak-Experiences* (1964), pointed out the relationship between altered states of consciousness and spirituality that might constitute the basis for all religion.

A "homegrown" contingent emerged from the halls of academe in the form of university professors who were instrumental in introducing various aspects of their own research and understandings into the New Age movement. Among these were Leary and his confederate Alpert, later to become known as Baba Ram Dass (or just Ram Dass for short). These two Harvard professors and some of their colleagues introduced members of the Baby Boomer generation to the altered states of consciousness made possible by the use of psychedelic drugs, such as LSD. Discharged from the university for their careless use of these drugs, they went on to explore other ways of achieving the altered states of consciousness and stumbled upon the practice of meditation as taught by some Indian yogis. While Leary lapsed into cult fame, Ram Dass went on to become one of the best known names among the New Agers, largely through his writings and public appearances. His book, *Be Here Now,* was especially influential.

Also joining the mix from academia, Carlos Castaneda (1925–1998), an anthropologist from the University of California, Los Angeles, became known for a series of books supposedly based on his fieldwork and interviews with Don Juan Matus in Arizona, a Yaqui Indian who taught him shamanism, which Castaneda recounted in *The Teachings of Don Juan: A Yaqui Way of Knowledge* (1968) and a series of sequels that became influential among the Baby Boomers who joined the New Age movement. Discredited as anthropology, his work was a harbinger of an interest in shamanism that was picked up later by Michael Harner, also an anthropologist and author of a legitimate body of ethnographic work done in South America, who popularized shamanism in his 1980 book, *The Way of the Shaman.*

Many of the personalities of the New Age movement used books to spread their ideas and eventually other media as well. Marilyn Ferguson was one of the first to popularize the Age of Aquarius in her book *The Aquarian Conspiracy* (1980), as well as the concept of a global consciousness that was needed to transform society in the coming Aquarian age. She popularized the notion of a "paradigm shift" in human consciousness. Representatives from mainstream religious groups were not immune to the influence of the New Age. For example, Matthew Timothy Fox (b. 1940), an ordained Catholic priest, eventually left the church, founded Creation Spirituality, and in 1983 published *Original Blessing: A Primer in Creation Spirituality.*

Perhaps no single person popularized the New Age movement more than Shirley Maclaine (b. 1934), an actress and writer, beginning with her book, *Out on a Limb* (1983), which was made into a film, and *Dancing in the Light* (1985), followed by other books. Well known because of her stardom in some of the top musical comedies made into movies, when she wrote she raised the general level of awareness of the New Age, although some would also say that she brought much ridicule upon it as well. Although she brought about a general awareness of the New Age, the movement was well under way by the time she made her mark on the public consciousness. Still, the increased media consciousness of the New Age stimulated by Maclaine's books began to manifest itself in the New Age sections in bookstore chains and the proliferation of shops, classes, and practitioners in a vastly expanding spiritual marketplace.

The sheer number of personalities associated with the New Age movement (most of whom cannot be mentioned here) testifies to the depth, popularity, and breadth of the movement. Its beliefs and practices incorporate so many older practices and elements of older spiritualities that the New Age movement has become a great synthesizer of the esoteric, Eastern, and Native American traditions.

BELIEFS AND PRACTICES OF THE NEW AGE MOVEMENT

From an astrological perspective, all of the characteristics of the New Age and the principles defining it are due to the renewal of human energy and values placed into the service of all the learning and experience that has gone on since the last New Age, the Age of Pisces. But since human thought and action may not have caught up with all of the change and accumulated knowledge, the introduction of the new and necessary consciousness and values seems abrupt and even radical. However, the six principles mentioned at the beginning of this essay create the foundations for belief and action that constitute the New Age movement.

Transformation of Self, Society, and the Environment

Transformation, which many scholars identify as central to the New Age movement, takes many different forms, from personal improvement through spiritual practices and self-help programs to workshops at various institutions to direct social action on such issues as animal rights, environmental protection, and poverty. As mentioned above, the Baby Boomer generation was raised with an emphasis on self-fulfillment, which was reinforced through the self-actualization proposed by the Human Potential Movement, creating an element of New Age spirituality that focuses in part on the individual. Transformation is not merely a basic principle but the key goal of the New Age movement, bringing about change for the sake of betterment.

Individual transformation involves a thorough exploration and understanding of the self, which can be obtained through spiritual practices (see below) or through self-help books and programs that teach one the art of transformation. It is no

surprise that American bookstores abound with self-help books. Assistance might come from spirit guides of all kinds, through specific practices designed to bring enlightenment, or through cultivating a closer relationship with specific deities.

Complementary to the transformation of the individual and following from it is the transformation of society as a whole. Just as one can work specifically to transform individuals, so can one work to transform things on the social level. For example, some New Agers believe that collective meditation can actually reduce violence in specific areas if done for a long enough time under the right conditions.

Transformation of the environment is deemed by many to be imperative if individuals and societies are to survive. The New Age movement always placed importance on the nature of the physical environment but especially on bringing human beings back into harmony with nature. A distinct difference in New Age thinking, and that which seemed to be dominant in the highly industrialized environment in which it arose, was a turning away from presumed dominance over nature, which was viewed as a breach of the unity of all living things and of all entities in the universe.

Transformation depends on the acquisition of appropriate kinds of knowledge, self-understanding, and action. But the goal of transformation is the end to which all other things are the means. However, without the proper means, transformation cannot take place. Because understanding is a key to transformation, the New Age movement also puts a premium on experience as a source of knowledge.

Experience as the Source of Knowledge

One characteristic of the New Age is its affinity for experience rather than doctrine or dogma. This experience is most often found in altered states of consciousness that open up the perspective and create shifts in values and habits. The spiritual side of self-fulfillment often takes the form of religious devotions: various forms of meditation, yoga, prayer, and channeling.

Meditation, an ancient practice in both Hinduism and Buddhism, has been described by some practitioners as "listening to God" as opposed to prayer, which is "talking to God." Although the methods and purposes of meditation vary, a common effect is to place the practitioner into an altered state of consciousness. Meditation can be therapeutic; it can turn people away from drugs that induce similar states of consciousness and create a sense of calm and reexamination of one's life. The influence of Eastern religions is most often felt in this practice, with the transformation occurring as a consequence of the experience. The experience itself constitutes empirical evidence of a greater consciousness that all can tap into and become one with.

However, altered states of consciousness can be achieved in many ways, not just the stillness and contemplativeness of meditation, but through exhausting movement and through the use of certain drugs as well. Maslow believed that these experiences, what he called "peak experiences," constituted the very origin of spirituality—that they were universally the basis for all spiritualities, which differed only in particulars.

This affinity for the altered states of consciousness experience also accounts for the rise of interest in shamanism. Real shamans are men and women living in traditional tribal societies who have the ability to heal through their own transformative powers, usually associated with altered states of consciousness achieved through a variety of means. New Age Neo-Shamanism is taught in classes and workshops. In addition to Harner's work in this area, Lynn V. Andrews, who apprenticed herself to Native American shamans, has written a number of books, such as *Medicine Woman* (1981) and *Star Woman* (1986), largely appealing to women.

Often experience can be acquired by attending classes or workshops at established New Age institutions or programs. Esalen Institute, located in Big Sur, California, is one of the oldest New Age centers in the United States. It actually predates the New Age movement, having been founded in 1962. In sum, experience is emphasized over doctrine in the New Age movement.

Ritual and Practice

The experience on which this action is based is achieved through action itself. And the holism or sense of unity that is sought is necessarily related to the kinds of rituals and performances that both accomplish change and lend meaning to that change.

Channeling, or acting as a medium, is the practice of acting as a conduit for information from the spirit world, and it is the practice that most people probably associate with the New Age movement.[18] A medium and author named Jane Roberts is credited with popularizing channeling, a term associated with the New Age. She supposedly brought messages to this world from a personality named Seth in another plane of existence. But many of the practices and rituals of the New Age have been adapted from various spiritual sources that predate the movement itself. The use of mediums is at least as old as Spiritualism, which flourished in the United States in the nineteenth century, and remained a practice among certain individuals long after that movement subsided.

The practices of astrology, reading Tarot cards, numerology, and reflexology are all practices that predated the New Age, some going back centuries. But these have all been retrofitted for use in New Age spirituality, and these have often been combined with other more traditional Eastern religious practices, such as mediation, chanting, fire ceremonies, and so on.

Holism, the Emphasis on Unity

The emphasis on holism, or the unity of body, mind, and spirit, or the unity of self and God, or the unity of self and the universe, in the New Age context represents the rebirth of egalitarianism. Because of the claim that anyone can become transformed, and because this transformation and the experience upon which it is based are meant to unify, the movement may be perceived as egalitarian, creating the conditions in which all human beings are equal. The New Age "implies a rejection of the mainstream and a declaration that New Age ideas and routines are open freely to everyone for the sake of both personal and collective betterment."[19]

Members of the New Age movement, especially those who live in communities, must constantly grapple with the tension between the holistic ideal as the means to unity within the group and the autonomy of the individual. However, the need to affirm the connection to others and to the world is manifested in the creation and maintenance of New Age communities, like Findhorn Foundation in Scotland, Damanhur in Italy, or Ananda in the United States.

Healing and the Therapeutic Focus

One of the most important ways in which transformation can occur, and one of the most important and popular aspects of the New Age that has spread far beyond its own spiritual practitioners, is through healing. Spiritual healing, with roots in both the Christian Science and New Thought traditions, melds together a myriad of healing practices meant to affect both the body and soul. A strong tendency of New Age healing is based on the belief that the mind possesses the ability to heal the body or that certain substances can precipitate healing—crystals or certain metals, such as gold, silver, or copper—can have positive effects on one's spiritual and physical health.

Some healing practices are based on nonwestern healing traditions, including acupressure, acupuncture, and ayurveda. Others have their roots in homeopathic traditions of the West. Some healing practices are rooted in mystical beliefs, such as the use of crystals or certain metals, while others are based loosely on scientific approaches, such as biofeedback, biorhythms, and still others rooted in psychological and physiological approaches, such as the Alexander technique, self-hypnosis, and visualization.

The New Age movement has created and supported a growing concern with preventive medicine and natural remedies. Two popular doctors, Deepak Chopra (b. 1947) and Andrew Weil (b. 1942), represent the bursting of New Age affinity into the mainstream consciousness of the United States. Both regularly appear on television, and both are prolific writers. Chopra is known for combining Eastern and Western medical practices, having been trained in medicine in India and the United States. A student of Maharishi Mahesh Yogi, he was also trained in ayurvedic medicine and Transcendental Meditation. Weil, trained at Harvard Medical School, practices integrative medicine, which emphasizes alternative practices and focuses on prevention and the use of natural remedies.

CONTROVERSIES ABOUT THE NEW AGE MOVEMENT

One of the main reasons why the New Age movement is controversial is its opposition to mainstream religion. To this extent, some people wonder whether the New Age movement constitutes a legitimate religious movement at all.[20] Militating against its legitimate status is newness, its lack of distinct organization, and its tendency to draw people away from mainstream religions.

But there are also those who believe that the New Age movement is a response to the vacuousness of modernity, a product of postmodernity. For example, Carmen Kuhling noting that the New Age "is not a unified social movement or a cultural phenomenon. Rather, it can be characterised as the materialisation of various desires: for integration, for a spiritual life, for connectedness to others, for a union with nature, for health,"[21] goes on to say:

> What is most significant about the New Age is that it can be seen as a response to what people perceive as the spiritual vacuum at the heart of late capitalism. New Age spirituality, an eclectic mix of Eastern mysticism, self-help therapy, paganism, and other philosophies, is not a religious movement per se; it is a response to the secularisation of modern social life or the increasing disenchantment with the world.[22]

Kuhling sees the New Age as a collection of sometimes contradictory elements such as commodification, subversion, and a symptom of postmodernity. In short, "the New Age Movement is a complex and multifaceted movement that exhibits a variety of sometimes contradictory tendencies and agendas," which, because it results in the "proliferation of New Age commodities such as natural foods and cosmetics and spirituality books and seminars" constitute the "exploiting the spiritual vacuum in modern life."[23] Kuhling bases many of her conclusions about the New Age on two studies conducted in Toronto, Canada, and West Cork, Ireland.

The identification of the New Age with commodification or consumerism has also been mentioned by several observers. This aspect of the New Age stems from both the middle-class origins of the movement and the entrepreneurial talents of its practitioners and their prescriptions for self-help, emphasizing the very individualistic nature of the movement. Other critics have also seen the New Age as a movement that encourages narcissism and consumerism.

As Ruth Prince and David Riches note, "The New Age upholds a departure from, indeed a radical turning away from, the social values of the Western mainstream; yet in practice New Agers make the break only partially. There are two opposed senses in which this is so. Either, people entertain New Age notions in limited areas of their lives, whilst otherwise they remain engaged in the mainstream.… Or else, New Agers devote themselves to keeping the mainstream at bay, as when they locate in remote Celtic parts, or gather in communes which outsiders cannot easily penetrate.…"[24]

Olav Hammer sees in the New Age movement a vast number of contradictions, some arising from the very principles on which it rests.[25] The claims of New Agers to holism, universalism, and individualism create vague or contradictory messages. For example, while claiming to incorporate universal aspects of all religions, Hammer says, New Agers combine such diverse world views that they cannot actually point out what it is that they all have in common, and many specific beliefs surrounding such concepts as reincarnation, the veneration of the Earth, and other world views are the product of imagination rather than indigenous beliefs. Hammer also notes that many indigenous people resent the use of their religions for New Age commercial purposes, a charge that fits Kuhling's analysis. Hammer also finds contradictions in the simultaneous embrace of science and dismissal of science and in

the individualism of the New Age and its attempt to bring together large numbers of people to effect change in the world.

Others see the New Age as having failed in its mission to transform at any level. However, some New Agers would argue that the actual New Age has not yet arrived, and human beings are still involved in catching up with the lessons of the Piscean Age, so that the full effects of the impending transformations cannot yet be seen.

THE FUTURE OF THE NEW AGE MOVEMENT

If we accept Melton's classification of the New Age movement as a "revivalist movement," then we can expect it to fade eventually—only to become another note in the history of religion rather than a permanent fixture of the religious landscape. Part of Bailey's prediction for the coming of the New Age included the "rediscovery of ancient spirituality," "a world religion uniting East and West," "the discovery of the soul by science," and "paranormal abilities, such as telepathy, becoming normal."[26]

So far, the New Age movement seems to be heading in these directions with its adoption and adaptation of shamanism and Native American spiritualities and religious practices, its combining of certain elements from Christianity with those from Hindu and Buddhist practices and beliefs, and the grappling of science and religion for a common ground. However, the paranormal is far from common, unless the presence of so many channelers is evidence that it has become normal. But neither has the New Age shown signs of subsiding.

Almost from the time of its inception, the New Age movement spread to other western countries and led to new interpretations of its basic elements in a variety of cultural milieus. In *Persuasions of the Witch's Craft* (1989), T.M. Luhrmann presented a study of rationality among contemporary young people in England who practiced magic and witchcraft in the evenings and on weekends, while holding down their day-to-day jobs. Prince and Riches studied aspects of the New Age in Glastonbury, United Kingdom, following the Harmonic Convergence in 1987. Carmen Kuhling studied New Age communities in Canada and Ireland. And the New Age literature describes communities in Italy, Japan, and elsewhere. The New Age has even manifested itself on the continent of Africa, where religious revivalism is widespread.

While the exact numbers of people adhering to some form of New Age spirituality is difficult to ascertain because of its somewhat nebulous nature, it is clear that it is now a global phenomenon.

CONCLUSION

If, indeed, the New Age movement is revivalist in nature, then it may very well fade as its carriers in the United States drift back to mainstream churches and/or simply die, giving way to the proclivities of the next generation. However, its basic principle of transformation played a part in raising a consciousness about the role of fulfillment in human life, the ways in which people should relate to one another,

and a concern for the natural environment. Self-help, human relations, and ecological sensitivity are apparently permanent concerns as we focus our attention toward the New Age.

The New Age movement has moved beyond the spirituality at its core and expanded to include aspects of culture, such as New Age music, which has become a genre of its own. It could be that the New Age will remain with us longest in a cultural rather than a spiritual form, but even this remains to be seen. The New Age is a movement whose time has come but has not yet gone. It will dissipate as a movement only if there is no longer any need for the particular kind of spirituality and opportunity it makes possible.

NOTES

1. Gerry McGuire Thompson, *The Atlas of the New Age* (Hauppage, NY: Barron's Educational Series, 1999), 7–9, approximates the date as 2010. However, Michael York, *Historical Dictionary of New Age Movements* (Lanham, MD: The Scarecrow Press, 2004), in his chronology mentions December 21, 2012, as the date, citing José Argüelles, who organized the celebration of the Harmonic Convergence, in accordance with the Mayan calendar.

2. Wouter J. Hanegraaff, *New Age Religion and Western Culture: Esotericism in the Mirror of Secular Thought* (Albany: State University of New York Press, 1998), 331. Hanegraaff also cites Marilyn Ferguson, *The Aquarian Conspiracy* (Los Angeles: J.P. Tarcher, 1980); and Matthew Fox, *The Coming of the Cosmic Christ: The Healing of Mother Earth and the Birth of a Global Renaissance* (San Francisco: Harper & Row, 1988), in particular referring to the oppositional thinking about the differences in the two ages.

3. Paul Heelas, *The New Age Movement: The Celebration of the Self and the Sacralization of Modernity* (Oxford: Blackwell, 1996), 18–40.

4. J. Gordon Melton, "New Thought and the New Age," *Perspectives on the New Age,* ed. James R. Lewis and J. Gordon Melton (Albany: State University of New York Press, 1992), 16.

5. Wouter J. Hanegraaff, *New Age Religion and Western Culture: Esotericism in the Mirror of Secular Thought,* sees the major trends of the New Age as four: channeling, healing and personal growth, science, and Neopaganism. Some, such as Sarah M. Pike, *New Age and Neopagan Religions in America* (New York: Columbia University Press, 2004), see Neopaganism as a separate though related movement.

6. See, for example, Susan Love Brown, "God and Self: the Shaping and Sharing of Experience in a Cooperative, Religious Community," in *The Psychology of Cultural Experience,* ed. Carmella C. Moore and Holly F. Mathews (Cambridge: Cambridge University Press, 2001), 173–195.

8. James R. Lewis and J. Gordon Melton, eds., *Perspectives on the New Age,* xi. For additional information about the roots of the New Age movement in this occult-metaphysical community, see in James R. Lewis, ed., *The Encyclopedic Sourcebook of New Age Religions* (Amherst, NY: Prometheus Books, 2004), articles by James A. Santucci ("Theosophy and the Theosophical Societies: An Overview," 25–49), Roger E. Olson ("Rudolf Steiner, Esoteric Christianity, and the New Age Movement," 50–62), and Gail Harley ("Paradigms of New Thought

Promote the New Age," 63–80). Also see Pike, *New Age and Neopagan Religions in America,* 39–65, for a narrative account of this same tradition. Catherine Tumber, *American Feminism and the Birth of New Age Spirituality: Searching for the Higher Self, 1875–1915* (Lanham, MD: Rowman & Littlefield, 2002), roots these same traditions in Gnosticism and gives a broad account of New Thought and the role of women in this community. Though Tumber is herself critical of the outcome of this kind of spirituality, her account is very engaging. In James R. Lewis and J. Gordon Melton, eds., *Perspectives on the New Age* (Albany: State University of New York Press, 1992), see J. Gordon Melton, "New Thought and New Age," 15–29; Robert Ellwood, "How New is the New Age?", 59–67.

9. See Lewis, ed., *The Encyclopedic Sourcebook of New Age Religions,* for articles on all of these.

10. J. Gordon Melton, "A History of the New Age Movement," in *Not Necessarily the New Age: Critical Essays,* ed. Robert Basil (Buffalo: Prometheus Books, 1988), 36. Also see Pike, *New Age and Neopagan Religions in America,* 67–88, for a narrative account of how the 1960s ushered in New Age ideas. Her chronology (173–176) actually begins in 1838 with Spiritualism, while York, *Historical Dictionary of New Age Movements,* xix–xxxii, goes all the way back to 2697–2597 BCE, the date of the first acupuncture manual in China. For an almost contemporary account of the development of New Age consciousness, see Robert Wuthnow, *Experimentation in American Religion: The New Mysticisms and Their Implications for the Churches* (Berkeley: University of California Press, 1978).

11. J. Gordon Melton sees the New Age movement as beginning in England and being exported to the United States. See his "New Thought and the New Age," in *Perspectives on the New Age,* ed. Lewis and Melton, 20–21. Melton specifically ties the rise of New Age thought to the "light" groups of the Universal Foundation and its Universal Link network and the influx of Asian religious practitioners with the end of the Asian Exclusion Act, although two of the most important religious figures from the East, Swami Vivekanana, who attended the World's Parliament of Religions in 1893 and established the Vedanta Society in 1897, and Paramahansa Yogananda, who came to the United States in 1920 to attend the International Congress of Religious Liberals and founded the Self-Realization Fellowship in 1925, had their influence much before that time. The particular events identified by Melton took place within a larger American cultural context without which the New Age movement would not have emerged with such force and may not have emerged at all.

12. See Susan Love Brown, "Baby Boomers, American Character, and the New Age: A Synthesis," in *Perspectives on the New Age,* ed. Lewis and Melton, 87–96, for a discussion of the relationship between generation and American character in the New Age in the context of a particular religious community.

13. For the study that demonstrates this shift in American concepts of self between generations see Joseph Veroff, Elizabeth Douvan, and Richard A. Kulka, *The Inner American: A Self-Portrait from 1957–1976* (New York: Basic Books, 1981).

14. See Peter Cleçak, *America's Quest for the Ideal Self: Dissent and Fulfillment in the 60s and 70s* (New York: Oxford University Press, 1983).

Contemporary Shamanism

Dagmar Wernitznig

Nowadays, the term *shamanism* has acquired multifaceted meaning and is utilized extensively in academic and nonacademic contexts. Increasingly, contemporary shamanism is also labeled *neo-shamanism.* Occasionally, contemporary shamanism is called "constructed" or "dislocated" shamanism, thus, juxtaposing what is usually described as "traditional" or "organic" shamanism. Without a doubt, shamanism is popular today and appropriated extensively for a diversity of disciplines and life styles. For example, the term shamanism occurs in several contexts, as diverse as advertising, philosophy, and weekend seminars.

The prevalent interest in shamanism could be largely due to its amorphous, sometimes even ambivalent, character. It is especially this heterogeneous appearance that attracts the attention to shamanism in numerous circles. Shamanism seems to signify various ideas and images to many different people, while at the same time eluding specific meaning. In order to comprehend contemporary shamanism, it is imperative to investigate briefly what is usually referred to as "traditional" or "organic" shamanism.

Generally speaking, shamanism is an ancient and intercultural phenomenon, and shamans are considered to be archetypal figures. Although academic, foremost anthropological, analyses emphasized Siberian shamanism as a paradigmatic example, the transcultural character of shamanism—with striking parallels to animism, paganism, or totemism—was never ignored. As Europeans first encountered the prototypical concept of shamanism in Siberia, the Tungus-based term *shaman* turned into an interdisciplinary trope.

Etymologically, the term *shaman* is believed to derive from the so-called Tungus (ic)—a language, culture, and tribe of Eastern Siberia. The actual origin of the term remains disputed. Theories involve the Pali *samana,* which might have developed from the Chinese *shamen,* whose Sanskrit version is *sramaṇa.* This suggests that the term *śaman* was projected onto Siberian language groups and cultures and did not originally evolve from there.

The Tungusic term can be further differentiated between the Siberian word *shaman* and the Sanskrit word *saman.* The most common translation for *shaman* is "inner heat," which usually links the shaman figure with the profession of the blacksmith, for *saman* it is "song." The prefix *sa* is usually translated as "to know," but *shaman* also denotes a person who is in a state of excitement and agitation. Comprehensive linguistic roots are

- Tungusic—*śaman*
- Pali—*samaṇa*
- Sanskrit—*sramaṇa*
- Chinese—*shamen*
- Vedic—*śram* ("to heat oneself")
- Hindu—*tapas* ("heat" or "power")
- Turkic—*kam*
- Yakuts—*oyuna*
- Samoyeds—*tadibey*
- Yukaghirs—*alma*
- Buriat—*buge*

This diverse linguistic background indicates that the practice of shamanism was very much determined by regional dialects of individual tribes as well as by geographic locations. Furthermore, the perception of shamanism was heavily influenced by outside observers—or intruders—like ethnographers. Especially with reference to shamanism in North America, the term medicine (wo)man is also frequently used. Through course of time, the terminology dealing with shamanism has experienced a vast generalization. It came to relate to concepts of witchcraft, sorcery, transvestism, and tricksterism. This terminological ambiguity offers a loophole for many contemporary practitioners and their claim to traditional variants of shamanism.

Shamans could be either male or female. The overemphasis on male, especially Siberian, shamans might be a result of predominantly male scholarship that initially dealt with shamanism. If at all, gender restrictions were primarily bound to particular geographic regions. In Korea, for example, shamans overwhelmingly, though not exclusively, were and still are women. Additionally, notions of shamanic transvestism or transgenderism defy clear-cut classifications.

Most commonly, anthropological circles refer to organic shamanism as a kind of ur religion, involving primal aspects like (re)birth, illness, and death. The contemporary sociological definition of functional differentiation, where different social functions are attached to specific professions, was not inherent in tribal shamanism. In today's vocabulary, the traditional shaman had to fulfill the role of a "multitasker": priest, medical doctor, psychoanalyst, seer, philosopher, warrior, artist, mystic, and politician. Originally, the tasks of a shaman included various secular and religious aspects. Within the tribe or clan, shamans were everything from spiritual counselor

to provider of healing remedies. The concept of the medicine (wo)man, for example, epitomizes this connotation of spiritual *and* medical practices.

The principal role of the shaman was to mediate between the natural and the supernatural worlds to the point of using strategies of deception or manipulation pertaining to shamans' interaction with their physical surroundings and their spectators. For instance, the shaman could employ the art of ventriloquism. Shamans held a pivotal position in the social order of the tribal group they belonged to, yet at the same time lived the lives of public outcasts. For example, in some societies, the shaman, while having to mystically ensure that wild game was available for tribal hunters, was—due to this special status—not entitled to join the actual hunting parties. Having both religious as well as secular influence, they were feared and respected at the same time. Their responsibility for coherence and balance in the tribal environment resulted in a more or less strong sociopolitical voice. Thus, shamans were curators of the communal infrastructure of their tribe. By negotiating between spiritual and physical worlds, they were not only figures of authority, but also trickster figures for their peers. The shaman learned to live both in a central position in clan hierarchy and on the margins of clan society. Within the tribal context, shamans fulfilled their numerous tasks by utilizing particular tools and acts of performance. The standard repertoire of shamanic talents included chanting and singing, dancing and drumming. The paraphernalia of shamans, consisting of drums, masks, rattles, bones, pipes, feathers, and mirrors, for example, had simultaneously symbolic meaning and practical purposes.

Shamanic expertise was not simply limited to curing people, but included personifying an interpreter between the (meta)physical world and mankind. This involved meteorological knowledge as well as clairvoyance, for instance. Predicting and—as a further consequence—interfering with the future were especially important in terms of hunting, weather conditions, and natural catastrophes. In nonliterate societies, shamans, treasuring their tribal cultural heritage, also personified the intellectual property and folkloristic archive of their community. As keepers of stories and narrators of myths, they were responsible for guaranteeing their group's cultural survival.

There were several ways for shamans to receive their "call." Amongst the most common conditions to determine the vocation of a shaman are listed: exceptional physical appearance like a birthmark or an extra digit, legacy (i.e., "hereditary shamanism," passed on from parent or grandparent to their offspring), and the impact of experiences like illness or visionary dreams. Most significant factors with disease and visions were "out-of-body," "near-death," and "fragmentation/dismemberment" experiences. In many cases, an essential element in visions was the process of the shaman-to-be being taken apart and put together again by spirits. Overwhelmingly, initiation to the shamanic craft could not deliberately be planned. Most shamans were reported to have initially refused the gift, because of the hazards and sacrifices involved. Shamanic power, which was usually discovered during or after puberty, additionally, was very precarious. It could be lost through careless or incorrect behavior, or it could become destructive and turn against the shaman.

The mental conditions of shamans have been subject to a lot of professional debates. Because of shamans' practices of trance and/or ecstasy—mostly based on the usage of hallucinogenic drugs—Western observers often assumed shamans to be mentally ill or emotionally unstable. Claude Lévi-Strauss is credited with redefining the discourse about shamanic mental health. Lévi-Strauss claimed that shamans, rather than being psychopathic members of the tribe, embodied the role of what—by Western standards—could be compared to a psychoanalyst in tribal societies. This assumption is mirrored by C.G. Jung's notion of shamanism as a therapeutic model in psychoanalysis. Lévi-Strauss's approach, later on, has increasingly been criticized as being too structuralist.

The shaman's counseling duties involved the physical as well as psychosomatic well-being of tribal members. A commonly described concept in Western literatures of shamanic beliefs is the so-called "loss or damage of the soul" or "possession by spirits." Thereby, the shaman could rely on ritualistic or magic antidotes, such as, for instance, séances, to instigate the patient's recovery.

One of the most prominent books about shamanism, undoubtedly, is Mircea Eliade's *Shamanism: Archaic Techniques of Ecstasy.* The French original *Le Chamanisme et les Techniques Archaïques de l'Extase* appeared in 1951, the English translation was published in 1964. Investigating shamanism from an overwhelmingly religious point of view, Eliade, a historian of religions from Romania, provided a synopsis of shamanism in terms of its global universality, while at the same time also highlighting individual variants of local shamanisms. As the term "ecstasy" is considered to be too sensationalist in certain contexts, sometimes "trance" is chosen as an alternative in post-Eliade scholarship. "Trance," however, is not an uncomplicated choice, either, because it also implies behaviorisms of possession.

Particularly in the Western hemisphere of the 1960s and its so-called counterculture, there emerged an enormous fascination with and curiosity about anything remotely connected to shamanism. Perhaps the most notorious figure associated with Westernized or dislocated shamanism is Carlos Castaneda. Studying anthropology at the University of California, Los Angeles, Castaneda claimed to have become acquainted with an enigmatic Yaqui informant, called Don Juan. According to Castaneda, Don Juan was residing in the rural areas of Mexico and Arizona. In his several best-seller books, Carlos Castaneda described his experiences as an apprentice to his sorcerer-teacher Don Juan. Castaneda's flamboyant tales about hallucinogens, visions, and paranormal encounters catered to the interests of his readers. At the same time, his fabricated, evidence-free texts triggered critical responses. Castaneda's critics, foremost among them Richard de Mille, deconstructed the Don Juan books by seriously questioning aspects of authenticity and liability. Negative criticism of Castaneda's writing particularly zeroes in on issues of postcolonial hegemony and its tendency to distribute accounts of indigenous knowledge as an undecipherable and opaque conglomerate of hearsay and fiction. According to Vine Deloria, Jr., "[t]he Don Juan books were just what young whites needed to bolster their shattering personal identities[.]"[1]

Since the 1960s, a number of writers, taking their cues from Castaneda's books, produced shamanic adventure stories as quasi-autobiographical accounts. These texts, nevertheless, were presented as fact. Perhaps the most prominent name amongst those is Lynn V. Andrews. Like Castaneda, Andrews cited shamanic teachers, called Agnes Whistling Elk and Ruby Plenty Chiefs of Manitoba, Canada. These shamans and their rather unorthodox practices, however, were unknown to the official First Nations Communities in Manitoba. As early as 1987, for example, Andrews was sarcastically declared a so-called "Plastic Medicine Woman" by the Mohawk Nation of Akwesasne. Recently, Andrews expanded her quest for shaman informants to Australia, rivaling yet another semishamanic writer, Marlo Morgan. Again, there is no evidence for Andrews's Australian encounters with local variants of shamanism, and Aboriginal and Torres Strait Islander peoples were equally surprised and annoyed by her distorted depictions of indigenous spiritualities.

Critical debates about these writings tend to overshadow the perceptions of the reading public regarding these books. Books by chic shaman authors have prolific editions and distribution. Their readership is selective in consuming fictional stories with factual moments whenever convenient. There seems to exist a silent agreement between contemporary writers about shamanism and their audience that neoshamanic products like books or workshops, for example, can be utilized without having to tackle questions of validity. Customers particularly appreciate the "anything goes" element of neoshamanic items and services.

In most cases, contemporary shamanism—both writers and practitioners—is closely associated with the New Age. New Age is an umbrella term for a smorgasbord of various beliefs and life styles: channeling and crystals, parapsychology and alternative medicine, Wicca, and astrology. Although the New Age spread all over the United States, prototypical New Age environments are particularly concentrated on the West Coast and in the Southwest. The predominant targets for New Age products are upscale, urban, middle-class citizens. Personal growth, individual enlightenment, and spiritual self-help are the most commonly propagated New Age themes.

Self-realization is also the most popular premise in contemporary shamanism. Books and weekend seminars are the standard products to supply this demand. Michael J. Harner is closely affiliated with workshops to instruct consumers in contemporary shamanism. An anthropologist by training, Harner conducted field studies in Ecuador and Peru in the 1950s, where he was reportedly introduced to shamanism. Afterward, he studied North American shamanism. In Harner's biography, a noticeable gap exists between his final anthropological book, *Hallucinogens and Shamanism* (1973), and his first handbook on contemporary shamanism, *The Way of the Shaman: A Guide to Power and Healing* (1980). This seven-year period most likely signifies Harner's personal reinvention of himself as a coach in contemporary shamanism. In 1983, Harner opened the Center for Shamanic Studies in New York, which was moved to Mill Valley, California, and renamed The Foundation for Shamanic Studies two years later. There, the so-called Harner Method of Shamanic Counseling is taught to promote shamanism. Although the headquarters

of Harner's training academy for contemporary shamanism are in the United States, his workshops are conducted on an intercontinental basis, with Western and Central Europe as particular target zones. Workshops for all levels of shamanic disciples, ranging from beginners to advanced, are offered. Harner's methodology of so-called Core Shamanism heavily relies on Shamanic State of Consciousness (SSC). This state can supposedly be achieved through drumming, chanting rhythms, or practicing meditation techniques. Workshop participants are further advised to search for their spirit helpers or power animals via imaginative journeys. Harner's prided patent is the so-called Dream Canoe, a mixture of emotional bondage and initiation ceremonies as well as group therapy dynamics, where crowd activity and individual experience are subtly synthesized.

Naturally, contemporary shamanism is confronted with a plethora of critical responses. Native American poets and scholars, for example, oppose what they prefer to call *whiteshamanism.* The phrase *whiteshamanism,* sometimes also spelled *white shamanism,* was created by Geary Hobson (Cherokee). In addition to Hobson, other critics include Wendy Rose (Hopi-Miwok), Leslie Marmon Silko (Laguna Pueblo), and Vine Deloria, Jr. (Standing Rock Sioux). Native critique especially emphasizes postcolonial implications of modern or synthesized shamanism, which is considered to be diametrically opposed to organic shamanism. They argue that the appropriation of indigenous spiritualities in general and of Native American religions specifically is yet another form of cultural imperialism.

Critics like those mentioned regard contemporary shamanism as the final stage of colonization—the usurpation of cultural heritage and spiritual knowledge, following territorial annexation. Moreover, they believe that non-Native interpretations of shamanism reinforce stereotypical images of Native peoples, fostering a particularly monolithic and prehistoric iconography of Native Americans and other indigenous groups around the world. The most important concept here is a dichotomy of primitive versus civilized worlds, which stigmatizes Native peoples as ancient loincloth wearers in industrialized societies. Such ethnocentrism is particularly evident in the journey from ignorance to wisdom related by white shamans, who almost always portray themselves as "out-shamaning" their Native teachers in the end. Expressively one-dimensional by supplying an all-white perspective, the overwhelming majority of shamanic products eclipse the so-called (indigenous) Other. Teachings of contemporary shamanism both recruit new disciples and generate new (white) shamans. Several former apprentices of well-known contemporary shamans have entered shamanic careers themselves. For instance, Sandra Ingermann, originally studying at Harner's Foundation for Shamanic Studies, has in turn engaged in writing about self-help shamanism and invented her technique of Soul Retrieval.

Additionally, evaluations of contemporary shamanism from a Native point of view focus on the sellout boom of indigenous cultures, with the fiercest controversies centering around sacred sites. Places like Chaco Canyon in New Mexico, for example, are commercialized by contemporary shamanism for spiritual tourism. Amongst the many negative side effects created by shamanic souvenir hunters are not only

the cultural showcasing of inhabitants of such places, but also the environmental pollution of local sceneries.

While organic shamanism is gradually disappearing on a global scale, dislocated shamanism enjoys immense popularity by copyrighting a synthetic alternative to traditional shamanic practice. The compartmentalization of religions and lifestyles is an integral ingredient of contemporary shamanism. Contemporary shamans and their disciples are very eclectic in both filtering out and amalgamating individual aspects of several belief systems. This cloning of particular types of shamanisms is customized according to personal needs and preferences. Thus, contemporary shamanism is often accused of being orchestrated and self-absorbed. Unlike organic shamanism, which is overwhelmingly directed towards a clan or tribe, contemporary shamanism is designed to be less phylogenetic. As an organized "ism" that can be purchased during a weekend seminar, contemporary shamanism is also criticized for lacking in-depth achievements. Generally, the long phases of apprenticeship and the aggravating existence of trial and error of tribal shamans is missing from contemporary shamanic practice. Indeed, contemporary shamans are sometimes associated with hedonism and simulation. Skeptics of contemporary shamans stress the artificiality of instant, effortless, and financially tailored shamanic enlightenment. They are suspicious of the simplistic formulas of contemporary shamanism and its profit-oriented priorities. Consequently, the exclusively materialistic clientele of contemporary shamans is attributed with myopia, complacency, and apolitical credos. Either believing or portraying themselves as genuinely shamanic, whiteshamans have made it a general norm to not respond to such critiques.

Although obsolete, the succeeding two Resolutions[2] capture the controversial nature of contemporary shamanism:

APPENDIX

RESOLUTIONS ON THE PRACTICE OF SHAMANISM BY NON-NATIVE PEOPLES

RESOLUTION OF THE 5TH ANNUAL MEETING OF THE TRADITION ELDERS CIRCLE

Northern Cheyenne Nation, Two Moons' Camp
Rosebud Creek, Montana
October 5, 1980.

It has been brought to the attention of the Elders and their representatives in Council that various individuals are moving about this Great Turtle Island and across the great waters to foreign soil, purporting to be spiritual leaders. They carry pipes and other objects sacred to the Red Nations, the indigenous people of the western hemisphere.

These individuals are gathering non-Indian people as followers who believe they are receiving instructions of the original people. We, the Elders and our representatives

sitting in Council, give warning to these non-Indian followers that it is our understanding this is not a proper process, that the authority to carry these sacred objects is given by the people, and the purpose and procedures are specific to time and the needs of the people.

The medicine people are chosen by the medicine and long instruction and discipline are necessary before ceremonies and healing can be done. These procedures are always in the Native tongue; there are no exceptions and profit is not the motivation.

There are many Nations with many and varied procedures specifically for the welfare of their people. These processes and ceremonies are of the most Sacred Nature. The Council finds the open display of these ceremonies contrary to these Sacred instructions.

Therefore, be warned that these individuals are moving about playing upon the spiritual needs and ignorance of our non-Indian brothers and sisters. The value of these instructions and ceremonies is questionable, may be meaningless, and hurtful to the individual carrying false messages. There are questions that should be asked of these individuals:

1. What nation does the person represent?
2. What is their Clan and Society?
3. Who instructed them and where did they learn?
4. What is their home address?

If no information is forthcoming, you may inquire at the address listed below, and we will try to find out about them for you. We concern ourselves only with those people who use spiritual ceremonies with non-Indian people for profit. There are many other things to be shared with the four colors of humanity in our common destiny as one with our Mother the Earth. It is this sharing that must be considered with great care by the Elders and the medicine people who carry the Sacred Trusts, so that no harm may come to people through ignorance and misuse of these powerful forces.

AIM (AMERICAN INDIAN MOVEMENT) RESOLUTION

Sovereign Diné Nation
Window Rock, AZ
May 11, 1984.

Whereas the Spiritual wisdom which is shared by the Elders with the people has been passed on to us through the creation from time immemorial; and

Whereas the spirituality of Indian Nations is inseparable from the people themselves; and

Whereas the attempted theft of Indian ceremonies is a direct attack and theft from Indian people themselves; and

Whereas there has been a dramatic increase in the incidence of selling Sacred ceremonies, such as the sweat lodge and the vision quest, and of Sacred articles, such as religious pipes, feathers and stone; and

Whereas these practices have been and continue to be conducted by Indians and non-Indians alike, constituting not only insult and disrespect for the wisdom of the ancients, but also exposing ignorant non-Indians to potential harm and even death through the misuse of these ceremonies; and

Whereas the traditional Elders and Spiritual leaders have repeatedly warned against and condemned the commercialisation of our ceremonies; and

Whereas such commercialisation has increased dramatically in recent years, to wit:

- the representations of Cyfus McDonald, Osheana Fast Wolf, and Brooke Medicine Ego, all non-Indian women representing themselves as "Sacred Women," and who, in the case of Cyfus McDonald, have defrauded Indian people of Sacred articles;
- A non-Indian woman going by the name of "Quanda" representing herself as a "Healing Woman" and charging $20 for sweat lodges;
- Sun Bear and the so-called "Bear Tribe Medicine Society," who engage in the sale of Indian ceremonies and Sacred objects, operating out of the State of Washington, but traveling and speaking throughout the United States;
- Wallace Black Elk and Grace Spotted Eagle, Indian people operating in Denver, Colorado, charging up to $50 for so-called "Sweat Lodge Workshops;"
- A group of non-Indians working out of Boulder, Colorado, and throughout the Southwest, and audaciously calling itself "Vision Quest, Inc.," thereby stealing the name and attempting to steal the concept of one of our most spiritual ceremonies;

Therefore, let it be resolved that the Southwest AIM Leadership Conference reiterates the position articulated by our Elders at the First American Indian Tribunal held at D.Q. University, September 1982, as follows:

Now, to those who are doing these things, we send our third warning. Our Elders ask, "Are you prepared to take the consequences of your actions? You will be outcasts from your people if you continue these practices" … Now, this is another one. Our young people are getting restless. They are the ones who sought their Elders in the first place to teach them the Sacred ways. They have said that they will take care of those who are abusing our Sacred ceremonies and Sacred objects in their own way. In this way they will take care of their Elders.

We Resolve to protect our Elders and our traditions, and we condemn those who seek to profit from Indian Spirituality. We put them on notice that our patience grows thin with them and they continue their disrespect at their own risk.

The Worship of the Goddess in Feminist Spirituality in the United States

Cynthia Eller

The feminist spirituality movement emerged concurrently with the second wave of feminism in the late 1960s and early 1970s in the United States. It represented an attempt to create a uniquely feminist religion, one that empowered individual women and at the same time nurtured a society-wide revolution away from male dominance and the exploitation of nature. With this quest in mind, spiritually minded feminists were quickly drawn to the evolving Neopagan movement, and more narrowly to one of its subreligions: witchcraft, or Wicca. The Neopagan movement is extremely diverse, but most Neopagans worship a central Goddess, and this feature was very appealing to feminists in search of an alternative to the male monotheism of established religions, especially Judaism and Christianity, in the United States.

The feminist spirituality movement might have developed as simply another variant of Neopaganism, but it quickly distinguished itself from its Neopagan peers by its eclecticism, its zeal for independence, and, most of all, its separatism. Most feminist spirituality groups did not accept male participation in any form. They declared that they were exploring "the female mysteries" and that "male energy" would distract them from this mission. Moreover, they took the rather heterodox view—for Neopagans—that it was perfectly acceptable for them to worship female deities alone and to provide no role for male gods, not even as subordinate figures. These choices made spiritual feminists such mavericks in the world of Neopaganism that it is fair to say that the feminist spirituality movement emerged as its own religion, albeit one closely allied with Neopaganism.

The feminist spirituality movement peaked in the 1980s, when it introduced its message—that God was a woman and that all women partook of the divinity of the Goddess—to an uninitiated audience. Today, most adult women with feminist inclinations have been exposed to the basic ideas of feminist spirituality, so the movement has lost some of its revolutionary edge, though not its devoted following. Because of its loose structure and the difficulty in drawing any firm lines in the amorphous religious landscape occupied by the feminist spirituality movement, it is

impossible to say how many women today are practitioners of this new religion. In the 1970s and early 1980s, when it was a struggle for women to define themselves as both feminist and spiritual, the very difficulty of the task resulted in a vibrant and comparatively unified movement. Today, feminism is a less visible and vocal cultural force, and Neopaganism is increasingly acceptable as a viable religious alternative, so it has sometimes been the path of least resistance for spiritual feminists to accept a niche for themselves as the feminist variant of Neopaganism.

HISTORY OF THE FEMINIST SPIRITUALITY MOVEMENT

From the beginning, the feminist spirituality movement straddled different social worlds. On the one hand, it was a form of feminism, aligned with "cultural feminism"—the effort to develop new, nonpatriarchal cultural forms—as opposed to "political feminism": the effort to secure political gains and legal rights for women within current power structures. On the other hand, feminist spirituality was an alternative religion born most immediately from the ferment of the antiestablishment 1960s counterculture, and more distantly from the long history of Western occult societies and their practice of ritual, magic, and divination.

Three strands of influence affected the initial emergence of the feminist spirituality movement in the early 1970s: secular feminism, Jewish and Christian feminism, and the presence of women—particularly women with a growing feminist consciousness—within existing Neopagan religions. The principal aims of the feminist movement of the 1960s were secular and political: reproductive rights, rights for women in the workplace, and nondiscriminatory marriage and divorce laws. But as the feminist movement gathered steam, it took on a profound significance for many of its participants, and the critique they mounted of patriarchal society went ever deeper. Eventually they felt driven to ask the "big questions" about sexism: What was the cause of male dominance? Was it inevitable? Were women different from men, and if so, how? Should women merely fight for the opportunity to compete in patriarchal society, or should they use their uniquely feminine traits and experiences to create a different type of world, better for all? Big questions became religious questions: first, because feminists sought to understand the role religion played in creating and maintaining male-dominant societies; and second, because the very depth and breadth of these "why" questions, along with individuals' profound, life-transforming commitment to the feminist movement, took on a religious dimension.

Spiritual feminists often conceptualized this turning toward spirituality as a natural development in which consciousness-raising (CR) groups evolved into feminist spirituality groups. CR groups, developing first under the guise of "rap sessions" or "bitch sessions" in the late 1960s, were loosely structured gatherings in which small groups of women gathered to share their experiences, searching for common threads of sex discrimination.[1] Certainly the dynamic of a small, all-female group bent on investigating female identity was common to both CR groups and spiritual feminist gatherings, and this similarity helped to provide a bridge between the two for secular feminists who were initially uncertain about dabbling in spiritual matters.

Jewish and Christian feminists felt no such hesitancy about addressing religious questions. For them, the greater leap was from established religion into alternative religion. Already comfortable with religious language—and, depending on their specific religious background, with ritual—Jewish and Christian feminists took the sometimes difficult step of rejecting the religious certainties that they were taught and venturing into new theological and spiritual territory. Even today, there is significant shared history between the feminist spirituality movement and Jewish and Christian feminism, and also a surprising amount of shared belief and ritual. Fundamentally, what separated those Jewish and Christian feminists who remained within established religions from those who entered the realm of Neopagan religious creativity was their differing opinions about whether or not established religions could be successfully transformed. Those who became spiritual feminists finally concluded that efforts at reform from within Judaism or Christianity were either doomed to failure or not worth the effort, given the profound inadequacies of established religions, and so they searched for religious alternatives.

The most famous step out of Jewish and Christian feminism into feminist spirituality was a literal step, one taken by Mary Daly (b. 1928), a prominent Catholic theologian and author of increasingly radical feminist critiques of Christianity. Her first book, *The Church and the Second Sex* (1968), was a rather mild criticism of Christianity. But her opposition to established religion accelerated with *Beyond God the Father* (1973) and ran right off the rails of established religion with *Gyn/Ecology* (1978) and her subsequent publications. In 1971, Daly was invited to preach at The Memorial Church of Harvard University, the first woman given this honor. In her sermon, "The Women's Movement: An Exodus Community," Daly formally took leave of established religion, declaring, "We [women] cannot really belong to institutional religion as it exists. It isn't good enough to be token preachers.… Singing sexist hymns, praying to a male god breaks our spirit, makes us less than human. The crushing weight of this tradition, of this power structure, tells us that *we do not even exist.*" At the conclusion of her sermon, Daly walked out of the church in protest, inviting the other women present to depart with her.[2]

Upon abandoning male-dominant religions, some Jewish and Christian feminists joined the ranks of secular feminists, but many felt a need to replace the patriarchal religion they abandoned with one that was woman-affirming. Though Daly never became a leader in the feminist spirituality movement, as soon as she left Christianity she began speaking of witchcraft as women's proper religious heritage, motivating other women to search out avowed witches and learn more about their religious beliefs and practices. But even when Jewish and Christian feminists did not explicitly recommend witchcraft or Neopaganism to their disgruntled sisters, they implicitly did so by focusing their theological critique of western monotheistic religions on the maleness of God. If God's apparent manhood, evident in the male pronouns used to speak of him, was to be removed, only two options short of atheism remained: either speak of God in gender-neutral ways or use female images and pronouns for God at least as often as male ones, if not to the exclusion of male terms altogether. Jewish and Christian feminists often experimented with feminine terms for God

within the context of their own religious traditions, finding Bible passages that spoke of God as Mother or referred to God's wisdom, Sophia, as a divine female being. Others longed for something less apologetic and more revolutionary, resolving that only exclusively female language for God could hope to undo the damage of the unrelieved androcentrism of millennia of western religious tradition.

This they found in witchcraft, which, as fleshed out by British occultist Gerald Gardner (1884–1964), involved worship of a goddess (though usually a male god too) and central religious roles for women as her priestesses. Gardner began his public career as a witch in the 1950s. By the 1970s, when American feminists increasingly found witchcraft attractive, Gardner's movement was already splintered into several denominations centered around different leaders, liturgies, and sacred lores. Gardner's form of witchcraft, and those descended from it, typically claimed a connection with ancient British paganism. These traditions typically included elaborate initiations and other occult practices, understanding themselves as secret societies with privileged access to efficacious magic and divination.

Gardnerian witchcraft was far too stodgy and authoritarian for most feminists seeking alternatives to established religions. But it still played a role in the development of feminist spirituality, in part because individual Gardnerian witches wished to bring their Wiccan practice into line with their own developing feminist principles. These women provided an entry point for other feminists intent on exploring the spiritual possibilities of witchcraft as a gynocentric (woman-centered) religious tradition.

At least as important in the development of feminist spirituality, however, was the broader Neopagan movement. Especially in the United States, witchcraft was not limited to Gardner and his former disciples, nor was Neopaganism limited to witchcraft. Religious innovation was the order of the day for members of the Sixties counterculture, and numerous Neopagan groups claimed allegiances to any and all pagan—or even nonpagan—religions they could find, making their own eclectic assemblages of deities, rituals, and beliefs, unified around an all-embracing nature worship.[3] It was an ideal milieu for spiritually minded feminists, offering them both freedom and resources to create their own female-centered religion. Spiritual feminists found themselves up against certain orthodoxies in Wicca, such as the presence of male deities in the pantheon and men in the ritual circle, but Neopaganism was so fluid and diverse in the early 1970s that spiritual feminists were hardly alone in experimenting with new forms of magic and ritual. The female separatism of feminist spirituality was unique within the world of Neopaganism, and it attracted criticism from some Neopagans, but no one was in any position to enforce any rules that would prevent the formation of female-separatist Neopagan groups.

One of the main people who propelled the feminist spirituality movement along its way was Zsuzsanna Budapest (b. 1940), a Hungarian refugee living in Los Angeles, California, in the late 1960s. Budapest took her surname from the city she left behind. She brought with her the taste for political activism and radical social change that led to her participation in the failed Hungarian revolution of 1956, and transferred it to an enthusiasm for the women's movement. As the women's

movement quickly became Budapest's life, she saw a need for a women's religion to ground and motivate feminist politics. But unlike many of her contemporaries, she had a prior acquaintance with paganism. Budapest was a "hereditary witch," initiated into witchcraft by someone who claimed to have been similarly initiated in an unbroken line leading back to pre-Christian times in Europe. Specifically, Budapest said that she had been initiated into witchcraft by her mother, Masika Szilagyi, who in turn had been initiated by Victoria, a household servant.[4]

Whatever religious resources Budapest brought with her from Hungary, it is clear that by the time she founded the Susan B. Anthony Coven No. 1 (named after American suffragist and nineteenth-century feminist leader Susan B. Anthony) in Los Angeles in 1971, she drew on other sources as well, including other forms of witchcraft and Neopaganism, and elements of the New Age movement then taking root in California. Budapest boldly declared that witchcraft was women's religion, and she, along with a small group of similarly motivated women, began to celebrate the solstices and equinoxes and initiate other women into their form of feminist witchcraft. They were tremendously successful. During the 1970s, over 700 women were initiated as witches by the Susan B. Anthony Coven No. 1, and Budapest presided over large public rituals, sometimes with more than 100 participants. Budapest inspired feminists in other cities across the United States to form their own covens. The movement proliferated rapidly, partly because feminists were given tacit permission to invent their own rituals within the rather spare parameters laid down by pioneers like Budapest.[5]

The Susan B. Anthony Coven No. 1 announced its religious and political intentions in the form of a manifesto that captures many of the themes that later characterized the feminist spirituality movement:

> We believe that feminist witches are wimmin who search within themselves for the female principle of the universe and who relate as daughters to the Creatrix.
>
> We believe that just as it is time to fight for the right to control our bodies, it is also time to fight for our sweet womon souls.
>
> We believe that in order to fight and win a revolution that will stretch for generations into the future, we must find reliable ways to replenish our energies. We believe that without a secure grounding in womon's spiritual strength there will be no victory for us.
>
> We believe that we are part of a changing universal consciousness that has long been feared and prophesized by the patriarchs.
>
> We believe that Goddess-consciousness gave humanity a workable, long-lasting, peaceful period during which the Earth was treated as Mother and wimmin were treated as Her priestesses. This was the mythical Golden age of Matriarchy.
>
> We believe that wimmin lost supremacy through the aggressions of males who were exiled from the matriarchies and formed the patriarchal hordes responsible for the invention of rape and the subjugation of wimmin.
>
> We believe that female control of the death (male) principle yields hummin evolution.
>
> We are committed to living life lovingly towards ourselves and our sisters. We are committed to joy, self-love, and life-affirmation.

> We are committed to winning, to surviving, to struggling against patriarchal oppression.
>
> We are committed to defending our interests and those of our sisters through the knowledge of witchcraft: to blessing, to cursing, to healing, and to binding with power rooted in womon-identified wisdom.
>
> We are opposed to attacking the innocent.
>
> We are equally committed to political, communal, and personal solutions.
>
> We are committed to teaching wimmin how to organize themselves as witches and to sharing our traditions with wimmin.
>
> We are opposed to teaching our magic and our craft to men until equality of the sexes is reality.
>
> Our immediate goal is to congregate with each other according to our ancient womon-made laws and to remember our past, renew our powers and affirm our Goddess of the Ten-thousand Names.[6]

The manifesto reflected the themes of female separatism, the worship of a single Goddess known by many names and in many guises, belief in a past era of matriarchy, and the use of magic and ritual as both a means of women's empowerment and a tool for initiating social and political change.

Though Budapest played an important role in the birth of the feminist spirituality movement, the movement was not centered around a single charismatic leader. Many influential leaders were important, and even though the rank and file admired the brightest stars in their firmament, the antiauthoritarianism of both Neopaganism and radical feminism was so prevalent that feminist spirituality could never have become a personality cult.

That having been said, one of the most significant influences on the feminist spirituality movement after Budapest was Starhawk (b. 1951), another Californian who combined interests in witchcraft and feminism. Starhawk, born Miriam Simos, was raised Jewish, but from an early age she was fascinated by magic and the occult. At the same time she hoped to find a theological grounding for her own sense that the divine inhered in the natural world. She pursued witchcraft first, finding teachers in the San Francisco Bay Area, but she yearned for a more explicitly feminist version of witchcraft. Eventually, she created one. Spurred on her journey by a chance encounter with Budapest and the Susan B. Anthony Coven No. 1, Starhawk wrote an introduction to witchcraft that strongly underscored the religion's reverence for women and the female principle and the importance of women's leadership. *The Spiral Dance* (1979) sold thousands of copies and Starhawk gained fame as a spokesperson for Neopaganism in general and feminist spirituality in particular. Starhawk did not exclude men from the practice of witchcraft, as did many other spiritual feminists. However, since she asserted that female-only groups and rituals had their place, and because she regarded witchcraft's ground-level feminism as one of its most attractive aspects, she effectively became a leader in the feminist spirituality movement.[7]

Budapest and Starhawk both identified themselves as witches and, by extension, as Neopagans. But many feminists who wished to plumb the religious depths of their

feminist commitment or to find an alternative to the established religions were not willing to identify themselves as witches. They were simply women honoring the Goddess, wherever they could find her. In the 1970s and 1980s, most Neopagans were still devoted to reviving pre-Christian pagan religions that had a definite pedigree: usually British, though sometimes Norse, Greco-Roman, or Egyptian. Neopagans most often regarded themselves as reviving the religions of their (mostly white) ancestors. In contrast, spiritual feminists were, from the beginning, less geographically bound in their search for the divine feminine. To the Neopagan favorites of Diana or Cerridwen, spiritual feminists added Hindu, Buddhist, and Taoist goddesses, not to mention every goddess they could find in Native American and African pantheons. Spiritual feminists were similarly prepared to adopt religious practices and preoccupations from the New Age, from channeling disembodied spirits, to observing auras, to investigating their past lives. To the extent that feminist spirituality developed from a solid core, it was that of Wicca. But spiritual feminists' voracious hunger for images and experiences of the divine feminine made the movement, from its inception, unabashedly syncretistic.

SOCIOLOGICAL STRUCTURE OF THE FEMINIST SPIRITUALITY MOVEMENT

As a religion committed to individual creativity and highly suspicious of any form of top-down leadership, the feminist spirituality movement never developed a central organization that monitors the activities of its constituent groups. Though people made efforts to create national-level resource agencies—most notably, the Re-formed Congregation of the Goddess—none managed to represent the plethora of feminist spirituality groups active in the United States. Indeed, many spiritual feminists choose to practice alone. They identify themselves as spiritual feminists, Neopagans, or witches, they practice magic, and they may set up altars or meditate or observe the solar and lunar holidays. Despite their solitude, they are part of a wider world of feminist spirituality, gaining legitimacy for their choices through the many books, magazines, retreats, and other gatherings that unite spiritual feminists into a modestly cohesive group.

Many spiritual feminists practice their religion with small groups of like-minded women. Even solo practitioners have often been in a group at some time if they no longer are now. The style of these groups varies enormously. Some gather to experiment with trance states and direct communion with the Goddess while others resemble a book club. Spiritual feminist groups come together and fall apart quite readily, though some maintain a steady core of members for ten or more years, supporting one another, celebrating events in each other's lives, and marking the turning of the seasons with rituals to the Goddess.

Spiritual feminists take many routes to find one another and form small groups. A woman interested in practicing in a group may advertise at a feminist bookstore, in a spiritual feminist publication, or online to find others who live in her area. Adult education programs, especially ones oriented toward New Age topics, may offer

courses in feminist spirituality that later become ritual groups when their official term has ended. Interestingly, another avenue to the formation of a feminist spirituality group is through a church or synagogue. More liberal denominations, like the United Church of Christ or Reform Judaism, may sponsor study groups exploring feminine aspects of the divine in Christianity or Judaism, and these may evolve into feminist spirituality groups, either with or without official sanction. The Unitarian Universalist Association sponsors a large and active organization, the Covenant of Unitarian Universalist Pagans, that regularly organizes workshops, study groups, and ritual circles, some of which restrict their membership to women and operate effectively as spiritual feminist groups. Especially now that feminist spirituality is no longer a brand new player on the religious scene, the line between Jewish and Christian feminism on the one hand and feminist spirituality on the other is somewhat blurred. Early on, spiritual feminists were often driven by a deep hostility toward established religions and wanted to discard anything that reminded them of western monotheistic traditions. Meanwhile, Jewish and Christian feminists who decided to stay within their traditions wished to have that choice reinforced by others who had made the same decision. Today Jewish and Christian feminists typically feel less threatened, and other spiritual feminists are more accepting and less judgmental of the multiple allegiances that such women maintain.

Like the rest of the Neopagan community, spiritual feminists also mingle at large summer festivals devoted to drumming circles, workshops on everything from reading Tarot cards to dowsing, and, of course, large public rituals. Some of these festivals are composed entirely of self-identified spiritual feminists interested in learning more about ritual, magic, and the Goddess from others further along the path than themselves. But spiritual feminists also congregate at Neopagan festivals, meeting in female-only groups, and at lesbian feminist festivals, where they take the opportunity to address spiritual topics and share sacred space with other spiritual feminists. Spiritual feminists also meet and make ritual with one another by signing up for one of the many "goddess pilgrimages" now offered by more experienced spiritual feminists. The most popular destinations for goddess pilgrimages are Great Britain or the Mediterranean, particularly Malta, Greece, and Turkey. The Neolithic town of Çatalhöyük in Turkey, currently under excavation, is one such pilgrimage site since its first excavator, James Mellaart, interpreted frescos and figurines there as evidence that the town's population practiced a goddess-based religion and reckoned kinship matrilineally. Minoan Crete is also very popular for goddess pilgrimages since its first excavator, Sir Arthur Evans, also described the culture he unearthed as goddess-worshipping and matrilineal. But spiritual feminists can also join pilgrimages to Mexico, Poland, or virtually any location where it is believed that there are sites sacred to the Goddess. And since most spiritual feminists believe that goddess religion was the universal religion of the human race for most of our history, such sites are indeed everywhere.

The feminist spirituality movement also functions as a sort of virtual community, bonded together through books, magazines, newsletters, and email lists as much as through face-to-face contact. The movement gives permission for individual women

to take their own spiritual investigations seriously and to perceive themselves as part of a legitimate feminist and spiritual enterprise.

BELIEFS OF THE FEMINIST SPIRITUALITY MOVEMENT

The feminist spirituality movement holds almost all its beliefs lightly. From the beginning, it took a very pragmatic approach to religious belief, supporting those beliefs that empower women and dismissing those that do not. Women with a wide range of religious beliefs cooperate with one another, regarding this variation in belief as mainly a personal matter. Nevertheless, feminist spirituality has a definite belief structure. Deviations from it may be accepted or dismissed as irrelevant, but a central spiritual feminist theology defines the values of feminist spirituality and distinguishes it from other religions.

The principal beliefs of the feminist spirituality movement are all contained in its vision of the Goddess, she who is the heart of the universe and exists as the divine within each woman. Spiritual feminists conceive of the Goddess in a number of ways that appear contradictory at a superficial level, but are not felt as contradiction by her worshippers. She is often referred to as the Great Goddess, the Great Mother, the Creatrix—all of which give rise to an impression of Goddess monotheism. Indeed, spiritual feminists usually speak of the Goddess in singular terms. Yet the Goddess is also worshipped—indeed is far more frequently worshipped—in her various polytheistic aspects. One prevalent version of the Goddess's aspects is Trinitarian: she is virgin (or maiden), mother, and crone, a division meant to illustrate that she is not merely a fertility goddess or a wise old woman, but a goddess who manifests characteristics of all the phases of a woman's life. (In keeping with the movement's generally very positive attitude toward sexuality, it is frequently stressed that the term "virgin" simply means unmarried, a woman who belongs to herself and no one else, rather than a woman who has not experienced sexual intercourse.)

The polytheism of the feminist spirituality movement extends further than this, however. Any female deity in any religion worldwide is considered an "aspect" or "manifestation" of *the* Goddess, and in these many guises spiritual feminists most often interact with the Goddess. A woman may choose to worship the Greek goddess Demeter to connect with the concept of motherhood or with Artemis to grow in strength and independence. She may call on Pele, the Hawaiian goddess of the volcano, or Kali, Hindu goddess of destruction, if she is working through feelings of rage. Spiritual feminists are sometimes criticized for lifting these deities out of their cultural and religious contexts. Spiritual feminists are rarely troubled by this. They tend to believe that, for example, when Tibetans developed iconography and mythology around the goddess Tara, they were expressing their experience of the Great Goddess, the original deity, in the only context they knew, that of Buddhism. For a spiritual feminist to embrace Tara, then, is not to appropriate a Buddhist goddess but to celebrate the fact that the Goddess is everywhere. If anything, when Tara becomes a spiritual feminist deity, it is felt that she is returning to her original matrix, that of the Great Goddess.[8]

The Goddess is a radically immanent deity, present in all things and accessible through all things. Spiritual feminists frequently remark that the Earth is the body of the Goddess and that women connect with the Earth through their experiences of their own bodies and their experiences of nature. The Goddess *is* nature, and nature is sacred: she celebrates her sexuality and gives birth to everything. Spiritual feminists see the Goddess as constantly changing, ever-renewed, moving endlessly through the cycles of the seasons and the ages. The quality of belief in this Goddess is thus significantly different from that of belief in the transcendent God found in most Western religious traditions. Spiritual feminists stress that one need not have faith in the Goddess because one can experience her directly. Starhawk responds to the question "do you believe in the Goddess?" as follows: "People often ask me if I *believe* in the Goddess. I reply 'Do you believe in rocks?' It is extremely difficult for most Westerners to grasp the concept of a manifest deity. The phrase 'believe *in*' itself implies that we cannot *know* the Goddess, that She is somehow intangible, incomprehensible. But we do not *believe* in rocks—we may see them, touch them, dig them out of our gardens, or stop small children from throwing them at each other. We know them; we connect with them."[9] For many spiritual feminists, however, the idea of the Goddess is enough: just to regard the divine as somehow like them, to feel that ultimate power is female, is spiritually profound.

Adding strength to this epiphany is the spiritual feminist belief that our human ancestors all recognized the Goddess as the supreme deity of the universe and that it was she who was worshipped millennia before anyone ever dreamed up the idea of a male God. Spiritual feminists conceive of this era of universal goddess worship as a golden age in which human beings lived in peace with themselves, their environment, and their neighbors. It is typically reconstructed as a time when women had access to social power (if not holding an actual monopoly on social power) and were revered as a reflection of the divine. Moreover, spiritual feminists believe that this was a time when "female" values—nurturance, cooperation—held sway. Spiritual feminists generally argue that during this long age of the Goddess writing, mathematics, and agriculture developed, and that only relatively recently has the religion and civilization of the Goddess been destroyed by male-dominant cultures.[10]

Though this era of Goddess worship and gynocentrism was supposedly universal, spiritual feminists most often tell the story with respect to the cultures of the Mediterranean. In this part of the world, beginning around 3000 BCE, patriarchal invaders imposed male dominance and a divine sanction for it in the form of an omnipotent male deity. The demise of Goddess worship was necessary for the success of the patriarchs' mission, spiritual feminists argue, because women who knew they were living reflections of a powerful Goddess would never assent to men controlling the world. Armed violence in the short run, and ideological indoctrination in the form of patriarchal religion in the long run, sealed the patriarchy's triumph and forced the Goddess religion underground.[11] However, even under the patriarchal religions of Judaism and Christianity, say spiritual feminists, Goddess worship continued as a minority religion among the peasant populations of Europe. This religion was so successful in winning the hearts and minds of the common folk that,

according to spiritual feminists, European Christianity had to take drastic measures to snuff it out. These efforts were the witch persecutions of the medieval and early modern periods. The figure typically given by spiritual feminists for the number of men, women, and children burned as witches in Europe during the sixteenth and seventeenth centuries is nine million, the great preponderance of these being women.[12] However, spiritual feminists are quick to add that not all of those persecuted for witchcraft were actually practitioners of paganism or Goddess worship. Most were sadly the victims of the patriarchs' need to consolidate their power. Women who did not fit neatly into the categories allotted to them under male domination were accused of witchcraft and then murdered for their supposed crimes, so that the potential revolution of women could be contained and patriarchal rule secured. Thus, the "Burning Times" stand for spiritual feminists as the single most blatant case of misogyny in Western history.

The understanding of spiritual feminists is that we continue to live in a patriarchal society today, and if women are no longer burned as witches, that is because of luck and persistent rebellion rather than reform by either the ruling patriarchs or ordinary men. However, the final installment of feminist spirituality's sacred history is not the present, but the future. Spiritual feminists hope for a time when society will return to the life-loving values of the Goddess, and just as often dread a planetary catastrophe brought on by the abuse of the environment through technology and the abuse of women, children, and minorities by ruling males. For spiritual feminists, we hover at the edge of apocalypse, and the days of the present order are numbered: either the patriarchy will destroy us all or we will at the last moment extricate ourselves from the bonds of male domination and usher in a new golden age of the Goddess.

Spiritual feminists exhibit considerable variation regarding their beliefs in the Goddess, in her many manifestations in religions around the world, and in the nature of prehistoric societies that worshipped her. Even more strikingly, spiritual feminists have a wide range of beliefs about whether they believe in the Goddess at all, or in any history of her former universality. So long as spiritual feminists affirm the basic values associated with the Goddess—principally, the value of women and nature and the importance of living in peace—this lack of unity in belief rarely creates any dissension in the movement. Spiritual feminists expect that women will bring their own beliefs and understandings about the Goddess to the ritual circle, and so long as individual spiritual feminists can commune with one another, issues of "belief" will not divide them.

PRACTICES OF THE FEMINIST SPIRITUALITY MOVEMENT

The central practices of the feminist spirituality movement involve ritual and magic or, most often, a combination of the two. Feminist witches conduct regular rituals on the solstices, equinoxes, and cross-quarter days between them, and sometimes on the new and full moons as well. Other spiritual feminists, less influenced by Wicca and Neopaganism, may meet on a biweekly or monthly basis following the Gregorian rather than the lunar calendar. For those who follow the solar cycle (the "Wheel

of the Year"), rituals differ depending on the season. Winter is a time for looking inward while summer is a time for dance and revelry. Whenever rituals are held, however, they mostly exhibit the same basic structure, beginning with the opening of the circle and ending with its closing. Often an altar is constructed in the middle of the ritual space, covered with flowers, candles, fruit, seashells, crystals, figurines of the Goddess, and any other objects that participants consider important. The ritual begins as all participants stand in a circle. The ritual leader or leaders go to each of the four compass points, beginning with the east and moving counterclockwise, holding a ritual object (usually a knife or wand). Energies and aspects of the Goddess associated with each direction are invoked and the ritual space is formally consecrated. Once the circle is formally cast, no one leaves it until it is formally closed. The ritual progresses with a series of songs, chants, readings, meditations, and dances. At some point participants usually make an effort to "raise energy" by holding hands, breathing together, and chanting or singing with increasing tempo and volume until the energy has reached its peak. The energy is then "sent" to its desired object (the end of patriarchy, the health of the earth, healing for a sick friend) and grounded (participants place their hands on the ground and gradually relax their breathing). Often participants will go around the circle, with each woman lighting a candle and announcing a wish to the group, those wishes ranging from "an end to the oppression of women" to "a new lover" and "money to pay the rent." Wishes are answered with shouts of "blessed be!" from the other participants. Some spiritual feminist groups are more psychotherapeutic in orientation and spend the majority of their ritual time going around the circle making wishes reflecting their current emotional or relational struggles and asking for the assistance of the group. The circle is closed in the opposite direction from which it was opened, and the goddesses are thanked and dismissed. After the circle is closed, participants usually share a meal, discuss the ritual, and talk companionably with one another.[13]

The raising and sending of energy in the context of a ritual circle is regarded as a form of magic within feminist spirituality, but other forms of magic are practiced as well, and most do not require group participation. Indeed, magic is often practiced alone, with the creation of protective charms or the binding of the powers of one's enemies, or in practicing forms of divination, from reading tea leaves to gazing into crystal balls. Some spiritual feminists make their living from the practice of magic, producing candles, herbs, oils, and other magical supplies and training others in their proper use.

The mechanisms of magic are explained differently by different individuals in the feminist spirituality movement. The most straightforwardly psychological interpretation of magic offered by spiritual feminists is that it works by triggering the subconscious mind. Magic, and the material devices it relies upon, focuses one's thoughts and energy on the desired event so that it will more likely come to pass. For example, a woman may sew a red heart-shaped charm, fill it with herbs, and place it under her pillow, in the belief that it will bring love into her life. When love does come into her life, she may say that it could just as well have happened had she sewn a green rectangular charm and that, if the red one was more efficacious, it was only because her

mind was trained for years to associate red with love. What really produced the desired result was her determination to have it.

Another interpretation of magic given by spiritual feminists, this one with a cosmological basis, suggests that magic works because it moves patterns of energy in accord with the practitioner's desires. According to this view, everything in the universe is connected by energy. And though it may seem to the conventional Western mind-set that someone could not protect her house from a tornado if it happens to be in the storm's path, feminist spirituality answers that the energy of the tornado and the energy of the individual mind are composed of the same substance and may therefore communicate with one another. Again, the focus is on one's mind, and not on the magical props used to trigger it, but the idea that the mind has powers to control not only one's own behavior but also other people and objects by virtue of their interconnection is superadded in this view of magic.[14]

A third understanding of magic among spiritual feminists is that actual causal connections exist between the magical props used and the ends sought. Thus, if a woman wants love, a green rectangular charm will never do, but neither will a red heart-shaped one unless it is filled with the proper herbs and oils and charged with the proper ritual actions. In this interpretation, the practitioner physically creates a charm that will bring her lover to her. For those who understand magic in this way, the magical act, not merely the intention behind it or the changes it creates in one's consciousness, effects the desired result. To illustrate, one feminist witch told me that she made a charm to keep the police away and placed it in her freezer. For over a year, the police gave her no trouble, but then one day a highway patrol officer pulled her over and gave her a speeding ticket. Puzzled and confused, she drove home, only to find that the electrical power to her house was out and everything in her freezer, including the charm, had thawed.

Whatever the immediate goal of the magic practiced by spiritual feminists, its overall importance in the feminist spirituality movement lies in the feeling of control it gives individual practitioners. Especially for women raised to believe that they have little control over their destinies, it is enormously freeing to have magical tools with which one can guide one's life. Spiritual feminists frequently comment on the difference between forms of prayer they learned in established religions, which required them to humbly request favors from a "big man in the sky," versus the practice of magic in the feminist spirituality movement, which involves women more actively taking their fate into their own hands.

FUTURE OF THE FEMINIST SPIRITUALITY MOVEMENT

The feminist spirituality movement was born out of a unique intersection of needs, interests, and available religious resources that characterized a certain group of women in the 1970s and 1980s in the United States. To the extent that those needs, interests, and religious resources remain today, the feminist spirituality movement continues to thrive. However, much has changed since the movement's

inception, and, with its trademark flexibility, the feminist spirituality movement has found ways to accommodate these changes.

The sometimes angry separatism that characterized early manifestations of feminist spirituality is less common today. This is partly because spiritual feminists have less cause to defend their choice to practice in female-only groups, now that that choice is more firmly established as a viable one. But it also reflects a mellower phase in the feminist movement as a whole. The revolutionary fires do not burn as brightly as they once did. Whether this is because the feminist movement succeeded or failed is a matter of enormous contention, but feminism simply does not grab headlines and scandalize ordinary folk the way it did at the time the feminist spirituality movement first came into being. Though individual women still come to the feminist spirituality movement in a spirit of religious rebellion, feminist spirituality is no longer the freshest face among alternative religions, or even among Neopagan ones. The feminist spirituality movement still encourages individual religious creativity, but newcomers are clearly arriving in a land where many of the customs and traditions are already set in place.

Perhaps most significant for the future of the feminist spirituality movement is the spirit of détente between it and the broader Neopagan movement. When feminist spirituality first came into being, it was decidedly at odds with much of the Neopagan mainstream: it was more free-form, less bound to occult tradition, more inclusive of a variety of religious and New Age traditions, and, of course, considerably less interested in making any space for men or maleness. Furthermore, many participants in the feminist spirituality movement never would have considered becoming involved had the movement not been a feminist religion. Women with scant interest in or attraction to alternative spiritualities sometimes found their way into feminist spirituality simply because this was where their sister feminists were active.

This is less true today. Women who have no appetite for the occult rarely become involved in feminist spirituality. As a result, the feminist spirituality movement is more unapologetically pagan than before and less hesitant to involve itself in the subculture of alternative religions on an equal footing with others. Because it does not distance itself as much from other forms of Neopaganism, the feminist spirituality movement is somewhat less distinctive. In the future it may or may not maintain a separate identity. It might gradually define itself as simply one form—though a very female-centered form—of Neopaganism.

11. Some spiritual feminists regard this story as a helpful myth; others believe it is an accurate historical account of human religion and civilization. Spiritual feminists are not alone in believing that human societies have undergone a major shift from being female-centered and goddess-worshipping to being male dominant and god-worshipping. Beginning in the late nineteenth century, many scholars put this theory forward as a scientific certainty [see Cynthia Eller, *Motherright* (Berkeley: University of California Press, forthcoming)]. Though spiritual feminists offer much evidence in support of this theory of original Goddess worship and its defeat via a patriarchal revolution, none of this evidence is convincing [see Cynthia Eller, *The Myth of Matriarchal Prehistory: Why an Invented Past Won't Give Women a Future* (Boston: Beacon Press, 2000)]. It is thus more accurate to regard this story as a myth or sacred history, rather than as history per se.

12. This figure is almost certainly inaccurate. It was first asserted by Matilda Joslyn Gage in *Woman, Church and State*, originally published in 1893. Historians of this era [for example, E. William Monter, *European Witchcraft* (New York: Wiley and Sons, 1969), 73] offer much more modest estimates, some as low as 100,000—which is still, of course, very high.

13. Starhawk, *Spiral Dance,* 55–75; Eller, *Living in the Lap of the Goddess,* 93–103.

14. Starhawk gives a basic introduction to this understanding of magic in *The Spiral Dance,* 18.

Wicca, Witchcraft, and Modern Paganism

Douglas E. Cowan

INTRODUCTION

Nine men and women gather in a midtown apartment, not far from a major shopping mall. It is February 1, and, just as they have for many years, the group has come to celebrate the Wiccan sabbat known as Imbolc, the ritual bidding farewell to winter and looking forward to the return of spring. On the street below, rush hour traffic begins to wane and the noise drops away. The moon rises, its light gleaming off the polished windows of high-rise office buildings. Inside the apartment, the living room furniture has been pushed to the side and the room cleaned thoroughly. Soft music greets those who gather, and the sweet scent of incense hangs in the air. A circle has been carefully chalked on the hardwood floor, and tall candles mark the cardinal points of its compass, the four directions. They provide the only light in the room, and in their midst sits an altar, with various ritual tools arranged carefully on a deep blue altar cloth. As the moment for the ritual draws near, a feeling of expectation grips those in attendance, and two women begin to chant gently. Welcomed into the circle with a kiss, the members of the coven hold hands as their High Priestess grasps her *athame*—her ritual knife—and begins the opening invocation. "I call upon thee, O guardians of the watchtowers of the East, spirits of air and intellect, to witness our rites and to safeguard our circle." As she speaks, she draws a pentagram in the air before her, imagining as she does lines of pale blue fire.[1] As she finishes the last line of the pentagram, her coven responds as one, "So mote it be."

On that same night, in a number of different cities and towns across the continent, other Pagans gather. Unlike the midtown coven, however, these are all women, and no one in this group has ever met face-to-face. Any two of them could pass on the street and neither would be the wiser. They met through an Internet discussion forum for beginning Witches, one that advertised a safe place to identify as Witches. For several months, they have been meeting online, struggling to plan a ritual they can perform together. Tonight will be the first. One of them has written a simple ritual script and distributed it by e-mail to the others in the group. Different members

have chosen to play different roles, with no one acting as High Priestess. Some will call the quarters, others will offer the charge to the Goddess and the God, and another will lead an online visualization exercise designed to bring their disparate energies into harmony. Seated at their computers, each participant prepares a few essentials—candles to represent the Goddess and the God, incense, and bowls of earth and water. One by one, they log in to the private chat room. As they enter their usernames and passwords, a message scrolls slowly up the screen.

> *Welcome to our circle. This is a place of perfect love and perfect trust. All who live as daughters of the Goddess are welcome here. The sun has set in this ancient grove, and the shadows deepen on the edges of the firelight. Find a place and prepare yourself for what is to come.*

As each member enters, her name appears on the screen, and she is greeted by those already in the chat room/ritual grove. When it is time for the ritual to begin, the appointed leader types:

> ::Lady Onyx rises and approaches the altar. She picks up her athame and motions her circle sisters to rise. She raises her athame::
>
> <*Onyx*> In this place, we walk between the worlds, and in this time, we step outside of time… This night, we invoke the Goddesses of old: Isis the protector of visions, and Brighid, the bringer of wisdom.
> <*ALL*> SO MOTE IT BE.

No one hears the words of the others. Only the glowing text on the screen signifies their presence and participation. Like many modern Pagan rituals, theirs is less an established sacred place than a sanctuary of the imagination, a shared vision of their ritual that they are convinced connects them one to another.

Not all experiences of modern Paganism are so gratifying, so potentially fulfilling as these. Many other Wiccans, Witches, Druids, and Ásatrúer lead what amounts to double lives. Though their religions are officially recognized in the United States and Canada, the growing popularity of Wicca and Witchcraft has not completely eclipsed the stigma that remains attached to them. Many Pagans remain "in the broomcloset," afraid to reveal their religious choices to friends and family. And, when they do try to stand in the truth of their own beliefs, they are often marginalized. During one ritual celebration, for example, Pagans in Lancaster, California, were accosted by evangelical Christians who gathered around their circle praying, reading Bible verses aloud, and blaring Christian music from a SUV parked nearby. Though only three blocks away, it took local police more than four hours to respond to the Pagans' complaints of harassment.[2] At the largest military post in the United States, members of the Fort Hood Open Circle, one of the first official Wiccan groups approved by the U.S. Army, had to contend with evangelicals "calling the base and threatening to stage a march in town and disrupt the rituals,"[3] as well as threats of federal hearings from a prominent House representative.[4] Numerous Pagan students have been suspended from school or threatened with suspension for activities ranging

from wearing a pentacle to carrying books like Silver RavenWolf's popular *Teen Witch,* to simply admitting they are Wiccan.[5]

According to many of its adherents, as well as media commentators and academic analysts, modern Paganism is among the fastest growing cluster of religious traditions in North America, Great Britain and parts of Europe, and Australia.[6] Through film and television, it is prominent in popular culture. Though there is some indication that the market has flattened, for the last decade-and-a-half modern Paganism has been among the fastest growing sections in bookstores such as Borders, Barnes and Noble, and Chapters.

An introductory essay such as this cannot hope to do justice to the vast panoply of emergent religious belief and practice that constitutes modern Paganism: Witches and Wiccans, whether connected to established lineages, eclectically oriented covens, or working their magic as solitaries; non-Wiccan Goddess worshippers who follow a variety of paths ranging from Northern European paganism to the pantheons of Greece, Rome, Egypt, and Africa; New Druids and Celtic Reconstructionists—the former interested in revitalizing the spirit of what they believe was the religious practice of pre-Roman Britain, the latter only in reconstructing what can be known from the extant historical record; Ásatrúer and Odinists, followers of Norse heathenism, who are often and inaccurately painted as violent and reactionary in their beliefs; syncretistic Pagan practitioners, such as Jewish Witches and Christo-Wiccans, who are often marginalized by both constituent communities; and eclectic nature worshippers who gather under the organizational auspices of institutions like the Unitarian Universalist Association. Indeed, one of the major problems that confronts academic analysts who try to map either modern Paganism or the various phenomena of the so-called "New Age movement" is that neither displays rigid enough doctrinal, practical, ritual, historical, or sociological boundaries to allow for easy categorization.[7] While recognizing that modern Paganism encompasses far more belief systems, ritual practices, and traditional lineages than just Wicca or Witchcraft, because these are arguably the most well-known in North America, this chapter focuses primarily on these as two examples of modern Paganism.

Rather than an easily definable set of beliefs and practices, it is, perhaps, most useful to think of modern Paganism as a family of related religious traditions, some of which are more traditional in their outlook and appearance, while others are experimental, innovative, and, in the eyes of traditionalists, not a little rebellious. Many Wiccan and Witchcraft traditions, however, though they may have changed and adapted over the years, trace their origins to a retired British civil servant named Gerald Brousseau Gardner (1884–1964).

Gardner spent most of his working life in southeast Asia, working as a tea planter, on a rubber plantation, and later as a customs official for the British government. Among other things, Gardner was an ardent amateur archeologist and folklorist. He retired to England in 1936, and claims that he was initiated into a traditional Witchcraft coven in 1939, just before the start of World War II. According to Wiccan lore, during the war Gardner was an instrumental part, if not the instigator, of what is known as "Operation Cone of Power"—as many as four separate rituals that

were conducted by Witches in southern England to deter the impending invasion of Great Britain by Germany.[8] After the war, Gardner wrote about the "Old Religion," first under a pseudonym,[9] and then under his own name. In 1951, the last of the Witchcraft Acts in Britain was repealed, and Gardner came fully out of the broom-closet. Though there is considerable dispute about Gardner's sources—whether he really was initiated into the New Forest Coven or simply invented Wicca from the stock of religious knowledge he possessed[10]—there is no denying that his influence, along with that of people like Raymond Buckland, who is credited by many with bringing Gardnerian Witchcraft to the United States in the early 1960s, and Janet and Stewart Farrar, who published a recension of Gardner's principal ritual text, the *Book of Shadows,* in the mid-1980s, was instrumental in the growth of modern Witchcraft in the late twentieth century.

MODERN PAGAN BELIEFS AND RITUALS

Modern Pagan Beliefs

Two principal factors make it difficult to generalize about modern Pagan beliefs: (a the difference in groups that cluster (and are clustered) under the modern Pagan rubric; and (b) the open source character of modern Pagan belief itself, which, even within groups that are nominally similar, manifests in both experimental and traditional ways. Groups such as Gardnerian and Alexandrian witches,[11] for example, consider the balanced polarity of male and female membership in a ritual group essential to the magical success of the group. Others, such as Dianic Witches, often regard the presence of any male energy as dangerous to the safety and integrity of their ritual circle. While many modern Witches still hold fast to the maxim that "only a witch can make a witch"[12]—and, in its more restricted form, that only a male Witch can initiate a female Witch, and vice versa—others have embraced the practice of self-initiation, which has generated a thriving literature within modern Paganism.[13]

That said, however, there are certain general characteristics that set modern Paganism apart as a distinct religious family.[14] Though most Pagans live in urban and suburban settings,[15] all have a love, indeed a reverence, for nature that they believe has been either accidentally lost or actively discarded by other religions. For many modern Pagans, the natural world itself is a sentient and sacred entity, and invokes within them an imaginative, a ritual, and in many cases a political connection. Ritual practice, spellwork, and daily Pagan living are guided by belief in a spiritual immanentalism and the ethical principle of reciprocity—that the world around them is spiritually vital and active, and that they can participate in and affect that world. These effects, however, are managed within the boundaries of what many refer to as the Law of Threefold Return, that is, whatever one puts out into the world, whether positive or negative, will return threefold.

Most modern Pagans devote themselves to one or more gods or goddesses, often basing their choice on an affinity for certain pantheons—Celtic, Norse, Greek,

Egyptian, and so forth—and an intuitive sense that they have been called or chosen by particular gods or goddesses within those pantheons. Broadly speaking, and allowing for the idiosyncrasy that marks much of modern Pagan belief and practice, gods and goddesses are conceptualized in two ways. On the one hand, in a manner analogous to some Hindus' belief that all manifestations of the divine are simply emanations of the one reality or Brahman, many modern Pagans believe that the various gods and goddesses on whom they call in ritual and magic are "merely aspects of an all-pervasive divinity, and the particular god or goddess invoked represents only a facet of that divinity."[16] This explains the belief among many modern Pagans that the number of gods and goddesses with whom one can work is unlimited, or the ability to draw on the energies of disparate deities depending on the particular situation or need. On the other hand, for some Wiccans and Witches every deity from every pantheon represents a separate and distinct divine entity, existing and operating independently. "If," as I have noted elsewhere, "in the first instance, the names of gods and goddesses are facets of a single divine diamond, in the second understanding each deity represents a different, unique jewel."[17]

Though all of this may seem a bit odd to the outside observer, the Farrars point out that "witches are neither fools, escapists not superstitious."[18] Indeed, "if witchcraft did not have a coherent rationale, such people could only keep going by a kind of deliberate schizophrenia."[19] For the Farrars, as for other modern Pagans, the world as we see and experience it is only one level of reality, for many the most mundane level. This understanding is hardly limited to modern Paganism; for centuries Roman Catholicism had its various levels of existence in heaven and hell, and Buddhism and Hinduism have their multiple domains of *samsaric* existence. Unfortunately for most of the Western world, modern Pagans maintain, the scientific revolution managed to convince us that the physical plane of existence is the only level of reality—a claim many Wiccans and Witches seek actively to challenge. Some even talk about Witchcraft as an empirical science, fully aligned with the latest discoveries in physics, biology, and astronomy. "When I speak of Witchcraft as a science," writes Laurie Cabot, a well-known American Witch, who also calls herself the "Official Witch of Salem" and who has named her Witchcraft lineage the Science Tradition, "I use the word *science* in its strictest form."[20] She continues:

> Witchcraft is a system based on hypotheses that can be tested under controlled conditions. Magical spells are step-by-step experiments that produce statistical results from which we can derive our success rates. The physical sciences maintain that a 32 percent success rate establishes the validity of a hypothesis. When I teach the science of Witchcraft based on the Hermetic laws, my students' experiments show a 50 percent and often a 75 to 90 percent success rate.[21]

Since, according to modern Pagan belief, everything in the universe—visible and invisible—is intimately connected, and any appearance of separation merely the social and cultural residue of the so-called scientific revolution, it follows logically that there ought to be mechanisms by which those connections can be accessed and influenced. This is one function of modern Pagan ritual and magical practice.

Modern Pagan Ritual

Modern Pagan ritual serves a variety of purposes, both religious and psychosocial: honoring and worshipping the gods and/or goddesses to which individual Pagans or groups are dedicated; teaching and initiating in a particular tradition; raising and releasing energy that is then directed toward specific purposes; and spellworking, which is generally practiced with very specific intent. The psychosocial benefits of ritual within a group that is working well are, among others, interpersonal bonding, as well as world view maintenance and reinforcement. In modern Paganism, the ideal is that every participant will take responsibility for his or her own spiritual growth and skill development. Unlike many Christian churches, the congregants are not spectators watching a performance presented by the pastoral staff. Rather, because they tend to work in much smaller groups, in ideal circumstances the high level of commitment and participation expected of all group members strengthens the bonds between those in the circle. These positive experiences, as well as the inevitable discussion that takes place after, reinforce the modern Pagan world view.

Although different groups have subtle differences, Wiccan and Witchcraft traditions follow a liturgical year that is divided into two principal ritual patterns: the *sabbats,* four "greater" and four "lesser" festivals based on the yearly seasonal cycle and celebrated on the solstices, equinoxes, and the midpoints between, and the *esbats,* 13 ritual meetings that follow the monthly lunar cycle. A few of the sabbats coincide with well-known Christian festivals, and modern Pagans contend that the Christian church simply appropriated the festival observances of the peoples it converted and adapted old ways to a new faith. Samhain, for example, which many Wiccans regard as the Pagan new year, is celebrated on Hallowe'en, the eve of All Saints' Day. Yule, or the Midwinter festival, occurs on the winter solstice, and is, perhaps, the best known of the Pagan sabbats because of its association with Christmas.[22] Ostara, which is celebrated on or around the vernal equinox, is named for Eostre, a Teutonic fertility goddess and according to many modern Pagans the etymological source of the English word, Easter. Pagans read different theological emphases into these ritual patterns, and there is no "orthodox" interpretation of what is known as the "wheel of the year."

Some groups meet only for the sabbats, while others take every opportunity to gather for ritual and companionship. For some, every ritual celebration is a closed event; only those initiated into the tradition and a part of the group may attend. Other groups regularly invite the public to their sabbat celebrations, especially the more well-known sabbats such as Beltaine, Samhain, and Yule. This illustrates another of the tensions in modern Paganism. Though many practitioners point with pride to the growth of traditions such as Wicca and Witchcraft, and in many cases at least tacitly equate growth with legitimacy, others are troubled by a commercialization that they believe is diluting the core of Pagan belief and practice, but without which the growth they applaud would be difficult if not impossible.

One ritual practice attracts non-Pagan attention more than any other, though it is actually performed far less often than might be imagined: the Great Rite of the

Wiccan and Witchcraft traditions, the *hieros gamos,* the sacred marriage. Though it was abandoned by a number of traditions as hopelessly patriarchal and implicitly abusive,[23] the Great Rite remains a central ritual in both Gardnerian and Alexandrian Witchcraft.[24] It consists of actual or symbolic sexual union between two coven members, who embody the union of the Goddess and the God. By all accounts, performance of the actual Great Rite occurs relatively infrequently, and the chosen couple either leave the circle and return once intercourse is completed or are left together in the circle by the rest of the coven. Far more often, indeed as a fundamental element of many Wiccan and Witchcraft rituals, the Great Rite is performed symbolically, or "in token." Kneeling before the High Priestess, the High Priest elevates a ritual chalice, which symbolizes the female principle in the divine complementarity. Standing above him, the High Priestess, who functions in the coven as *prima inter pares,* the first among equals, inserts her athame (the male principle) into the chalice. As the Farrars point out: "The couple enacting the Great Rite are offering themselves, with reverence and joy, as expressions of the God and Goddess aspects of the Ultimate Source. 'As above, so below.' They are making themselves, to the best of their ability, channels for the divine polarity on *all* levels, from physical to spiritual. That is why it is called the *Great* Rite."[25]

The Open Source Character of Modern Pagan Belief and Practice

Searching for a way to conceptualize the eclectic and often confusing nature of modern Paganism, I borrowed a concept from computer programming and suggested that they are an *open source* family of religious traditions.[26] As I contend in *Cyberhenge,* "*open source traditions* are those which encourage (or at least do not discourage) theological and ritual innovation based on either individual intuition or group consensus, and which innovation is not limited to priestly classes, institutional elites, or religious *virtuosi.*"[27] Closed source traditions, on the other hand, the quintessential example of which is the Church of Scientology, do not permit any form of theological or ritual innovation on the part of practitioners.

The open source character of modern Paganism displays itself in numerous ways. Some practitioners combine deity elements from different traditional pantheons to generate their own eclectic, syncretistic family of gods and goddesses. The Temple of Sekhmet, for example, is a small, adobe shrine in the Nevada desert 60 miles northwest of Las Vegas. Designed as a temple to the Egyptian goddess, Sekhmet, the shrine has become something of a pilgrimage spot for modern Pagans, given its proximity to the sprawling Nellis Air Force Base complex and the mysterious, heavily guarded, and officially unacknowledged testing site known around the world as Area 51. Besides Sekhmet, however, there are also statues of another Egyptian goddess (and Sekhmet's sister), Bast, a Native American Earth Mother, the Buddhist goddess of compassion Kuan Yin, and a painting of Mary modeled on the Virgin of Guadalupe. Although some have questioned the ethics of this kind of appropriation of spiritual resources,[28] the modern Pagan understanding that everything in

the universe is connected means, by extension, that everything is available for use by all.

Some Wiccans not only appropriate the spiritual and ritual resources of other traditions, but invent their own as need, circumstance, and inspiration dictate. Writing about being "Web witches," for example, popular Pagan authors Patricia Telesco and Sirona Knight encourage their readers to develop not only their own relationships with various deities, but their own gods and goddesses as well. "This sounds a little silly," they write, "but given some serious thought, there's no reason why we cannot create new mythologies based on the world as it is today and the techno-tools in it."[29] They suggest that technologically inclined Pagans might "choose to venerate Snap (the God of microwaved foods), Click (the computer mouse Goddess), Popup (the Goddess of toasters and toaster ovens), Ram and Rom (the computer twin Gods), Bit and Byte (the computer twin Goddesses), or Wireless (the spirit of cell phones)."[30] In the context of the emergence and development of modern Pagan belief and practice, this kind of innovation is a question worth pondering. As G.L. Ebersole points out in his discussion of myth, history, and the various relationships between the two, mythologies "are not timeless and static structures but dynamic agents in the ongoing process of the creation and maintenance of a symbolic world of meaning."[31] And, as I have noted elsewhere:

> [Knight and Telesco] illustrate tension between two distinct innovative subcultures within modern Paganism, what I have called the research-oriented and the fantasy-oriented. Research-oriented subcultures regard some measure of historical accuracy in both Pagan belief and practice (insofar as these may be determined) as central to the reconceptual or reconstructive religious enterprise; historical accuracy in fantasy-oriented subcultures, on the other hand, is less important and, as Knight and Telesco amply demonstrate, for these the potential canon of belief and practice is expanded considerably.[32]

MODERN PAGAN ORGANIZATION AND WORKING PRACTICE

Solitaries and Working Groups

In broad terms, modern Pagan working practice occurs in two ways: as a solitary, working alone whether by chance or by choice, or in community, working as part of a more formal ritual group. The basic unit of modern Pagan social organization, ritual working groups are called by a variety of names. Following its conceptual inspiration in Robert Heinlein's science fiction novel, *A Stranger in a Strange Land,*[33] for example, for 40 years the Church of All Worlds, the oldest officially recognized modern Pagan group in North America, called its working groups "nests" and "proto-nests," a group of which may join together as a "branch." Ásatrúer gather together in "kindreds" or "hearths" for their ritual practices, which are called *blots* and *sumbels.*[34] Druids congregate in "groves" and "henges,"[35] while Wiccans and Witches, the most well-known of modern Pagans, tend to belong to "covens" or "circles."

"The coven," writes Starhawk in *The Spiral Dance,* one of the most influential modern Pagan texts of the past few decades, "is a Witch's support group,

consciousness-raising group, psychic study center, clergy-training program, College of Mysteries, surrogate clan, and religious congregation all rolled into one."[36] Usually a relatively small group, especially when compared to some of the large congregations that gather in churches, synagogues, and mosques across the United States, the members of a coven often have a much more intimate relationship than that experienced by congregants in these other religious traditions. Given the still marginalized status of modern Paganism in many parts of the country, this intimacy is hardly surprising, born as it is from the religious bond the members feel in the Craft, as well as the trust they place in one another in order to share their beliefs and rites together. Unless they are related by lineage and commitment to a particular tradition—Gardnerian, for example, or Alexandrian—each coven functions as an autonomous group, responsible only to its members and to a set of principles founded on the most basic of Wiccan precepts, the Wiccan Rede: "An it harm none, do as thou wilt."[37] Usually guided by a High Priestess (and, in some but not all cases, a High Priest), they meet to perform rituals on the sabbats and esbats, to raise and release energy for spellworking when one or more of the coven feel the need, and to study and teach, which leads to the initiation of new coven mates.

Although they may belong to the same general tradition, it is important to note that, in keeping with the open source character of modern Paganism, not all groups function in similar ways. Indeed, disagreements over the interpersonal and organizational dynamics of ritual working groups have led to the disintegration of more than one coven, grove, or circle.[38] Sometimes, those who leave covens under strained circumstances never return to ritual group work. Instead, they choose to continue their magical lives as solitaries, answering only to themselves, their personal understanding of the modern Pagan path, and the demands of the particular deities to whom they are dedicated.

Some commentators suggest that most modern Pagans will spend at least a portion of their magical careers working alone.[39] The legitimacy of solitary practice, however, especially if one has never been a member of a coven or circle, is one of the most contentious issues between solitary Pagans and Pagan working groups. As I have noted elsewhere (in the context of the benefits offered by online interaction among modern Pagans), even though a solitary may have been initiated into a variety of traditions, many "feel that coveners (or those who practice in other kinds of ritual working group) consider them 'second-class Pagans,' as though they are somehow less authentic or less committed to the modern Pagan path if they are not part of a working lineage."[40] On the other hand, according to Scott Cunningham (1956–1993), whose books are extremely influential among modern Pagan solitaries, Wiccans should never feel "second-class" because they choose to work alone.

> Never feel inferior because you're not working under the guidance of a teacher or an established coven. Don't worry that you won't be recognized as a true Wiccan. Such recognition is important only in the eyes of those giving or withholding it, otherwise it is meaningless. You need only worry about pleasing yourself and developing a rapport with the Goddess and God.[41]

Two aspects are important to point out here: (a) the personal gnosticism that is characteristic of many modern Paganisms, which is in tension with (b) an incipient orthodoxy that claims to distinguish "authentic" from "inauthentic" Paganism. There is no overarching organizational authority to impose an orthodoxy on modern Pagan belief and practice, no standardized set of sacred texts to which practitioners may turn to ground them, and no practical limit to the stock of spiritual resources available for sampling and synthesis. So many modern Pagans feel free, essentially, to make up their religion as they go along. Thus, Cunningham's concept of "you need only worry about pleasing yourself" epitomizes the tacit agreement among many (arguably most) modern Pagans that the intuitive, intentional construction of one's own religious beliefs and the feeling of personal gnosis by which that construction is authorized are the principal criteria that determine genuine Pagan practice.

Despite modern Pagan openness to creativity and experimentation, there are signs that an incipient orthodoxy emerges when practitioners either feel that other Pagans are not taking their Paganism seriously or disapprove of the particular way in which some Pagans choose to construct their religious belief and practice. Sociologically speaking, the first group would be called "free riders," or "nightstand Pagans," those who bought a few books, who decided to call themselves Wiccans or Witches, but who have not demonstrated any significant commitment to a modern Pagan practice. They choose, in effect, to be Pagan because Paganism has a certain cultural attraction at the moment. The issue of an incipient orthodoxy, on the other hand, shows up when, despite the apparent and professed openness of modern Pagans, some religious choices appear to transgress the boundary between appropriate and inappropriate Pagan belief. This is seen most clearly when some modern Pagans incorporate Christian symbols, liturgical and devotional practice, or deity figures into their Paganism. Going so far as to call themselves Christian Witches, Christo-Wiccans, or Christopagans, the problem this presents for the open source egalitarianism of modern Paganism is discussed in the last section.

Larger Organizations

Paganism has organizations larger than covens and groves. These constitute ongoing attempts to institutionalize modern Paganism. The Church of All Worlds (CAW), for example, founded by Tim Zell (b. 1942), who now goes by the name Oberon Zell-Ravenheart,[42] was incorporated in 1968 as the first official modern Pagan Church in the United States and was officially chartered with the Internal Revenue Service two years later. The CAW is based on a principal belief called "the Gaia thesis" that all life on Earth is interconnected, indeed has its origin in "a single, fertilized cell."[43] According to Zell-Ravenheart, "the Gaia thesis, which is globally unifying and comprehensive, is *the* fundamental myth in Pagan culture … the first unifying myth waiting to be universally adopted: the notion that we are all children of the same Mother."[44] Indeed, for members of the CAW, "everything that's wrong with our modern culture can be traced to our forgetting of this fundamental

notion."[45] For more than 30 years, Zell-Ravenheart and his "waterkin," the word they use to describe fellow members of the CAW, published their ideas, artwork, poetry, and rituals in *The Green Egg,* which grew from a single mimeographed sheet to a respected journal in the modern Pagan community before closing due to financial pressure in 2001. Currently, though, with about three dozen nests and protonests in the United States, and affiliates in Australia, Europe, and on the Internet, the CAW remains one of the most well-known modern Pagan organizations in North America.

On the summer solstice in 1975, a confederation of covens was organized "to increase cooperation among Witches and to secure for Witches and covens the legal protection enjoyed by members of other religions."[46] According to Margot Adler, "thirteen covens and several solitary Witches ratified the Covenant of the Goddess (COG),"[47] the name by which the organization has been known ever since. A year earlier and after lengthy discussion, a group calling itself the Council of American Witches produced "The Principles of Wiccan Belief," a document that sought to lay the foundation for a larger modern Pagan organization. Beset by the differences that almost inevitably emerge when a group of strong individualists gather, the Council of American Witches was unable to organize efficiently or successfully beyond that.[48] "The Principles of Wiccan Belief," though, remain important for the larger organization of modern Paganism. COG, on the other hand, has had considerably more impact.

From its beginning, COG was clear that it had no authority to dictate policy to modern Pagans regarding belief, ritual, practice, or organization. Rather, it works on behalf of its membership to educate the public, to issue ministerial credentials, and to facilitate communication and cooperation among modern Pagans across North America and beyond. Perhaps its most public accomplishment to date was to participate as one of more than 200 religious groups cosponsoring the 1993 World Parliament of Religions in Chicago, Illinois. Pagan participation at the Parliament, however, did not go unnoticed. Indeed, it was a lightning rod for the real issues of religious difference that often lay hidden beneath declarations of tolerance. First, though a full participant in the Parliament, COG was denied permission by the city of Chicago to host a large ritual, a Full Moon dance, in Grant Park, near the conference hotel. When COG sought the help of both the American Civil Liberties Union and Parliament organizers, park officials relented, apologized, and permitted the ritual to take place. Indeed, Judy Harrow, a Gardnerian Witch and former first officer of the Covenant of the Goddess, points out that the ritual took place in precisely the same location as the 1968 Chicago police riot and became thereby a healing and reclaiming act.[49] Later that week, though, COG was in the news again, when several Greek and Russian Orthodox delegates withdrew from a variety of scheduled events, "citing the 'distinctive participation of certain quasi-religious groups.'"[50] Though unnamed, the Orthodox Christians clearly meant the modern Pagans. "As a result of both those things," recalls Harrow, "instead of being lost in the shuffle of this huge multireligious event, we ended up having attention focused on us. We became the hot topic. We became what the grapevine was buzzing about."[51] Most

of COG's work is carried out through local councils, such as Northern Dawn in Minnesota, Pronghorn Moon in California, and Dogwood in Georgia. There is also an educational program dedicated to helping young people who are interested in modern Paganism, especially those who become interested through pop cultural products such as films like *The Craft* and television series such as *Charmed* and *Buffy the Vampire Slayer*.

As modern Pagans have come out of the broomcloset, both personally and culturally, many have discerned the need for a more professionalized and educated clergy to serve the growing Pagan population responsibly. Both the open source character of modern Paganism and the ready availability of mail-order (and e-mail-order) ministerial credentials have created a situation where anyone, regardless of training, skill, or even the most basic understanding of the helping professions, can become ordained and present themselves as priest or priestess, pastoral counselor, and teacher.[52] To address this, Harrow and a number of her colleagues founded Cherry Hill Seminary (CHS), which is designed not to teach the principles of magic, but the professional skills of pastoral care and counseling. That is, CHS is not a coven, and does not offer the degree of training one would receive in a coven setting. Rather, CHS is organized to respond to the needs of those who feel called to a more intentional ministry among modern Pagans, something that CHS founders regard as inevitable as modern Paganism grows in popularity. "The focus of CHS," reads the online description, "is to teach those specialized skills and knowledge necessary for serving in positions of community leadership: as a pastoral counselor, a chaplain, in public relations, as social services liaison, as a minister for public rites of passage, in interfaith work and in any other roles in which s/he will interact with governmental agencies and the non-Pagan community."[53] Though there are minimal residency requirements, in that students are expected to take part in a number of "on-campus intensives," most of the CHS curriculum is offered online. Logging in to courses such as "Human Development in a Pagan Context," "Children in Contemporary Paganism," and "Psychology of Religion Applied to Paganism," students and instructors interact via discussion forums and chat rooms, disseminate lectures and other course material electronically, and submit coursework through e-mail.

Modern Paganism on the Internet

While recognizing its undeniable advantages as well as its disadvantages, computer-mediated communication is one important way in which many modern Pagans interact both locally and globally. From a few online covens to hundreds of Yahoo! discussion forums, from relatively simple "My Wiccan Web Pages," that do little more than replicate modern Pagan material cut and pasted from other sites, to elaborate and original information spaces such as The Witches' Voice,[54] which is arguably the largest and most comprehensive Internet site devoted to modern Paganism, Wiccans, Witches, Druids, and Ásatrúer have successfully colonized their own portions of cyberspace. Though online Paganism is fraught with the same frustrations and limitations as any other computer-mediated communication—hardware

or software failure, server overload or inaccessibility, the decontextualized nature of the communication itself, which not infrequently results in misunderstanding and damaged relationships—it is also clear that for many Pagan practitioners who go online regularly, the Internet provides significant benefit, especially in (a) the potential for modern Pagan community, and (b) the performance of modern Pagan identity.[55]

Though the social and cultural profile of modern Paganism has risen substantially in recent years, those who find themselves drawn to particular Pagan paths are still likely to experience a sense of isolation and alienation if there is no Wiccan or Witch to speak with locally. The nearest coven or ritual working group may be hundreds of miles away, or the potential Pagan may live in circumstances that preclude seeking out more direct contact. In these cases, the Internet is a tremendous boon, and many who use it regularly speak eloquently about the benefits of communicating with other modern Pagans, if only through the computer. As I note elsewhere, "one very common aspect of discussion threads among modern Pagans online, especially newcomers to the various traditions, is the sense of relief they display when participants find like-minded Wiccans, Witches, Druids, or Ásatrúer with whom they can exchange information, trade gossip and opinion, or share a sense of community."[56] With nearly 1600 members, for example, from Karlsuhe to Istanbul, Ontario to Arkansas, and Jordan to Wales, participants in the Yahoo! group Beginners Wicca regularly comment on the benefit they derive from their Internet communication. Although some may regard the modern Pagan Web as little more than "a global notice board for the privileged,"[57] its value cannot be underestimated for members of a religious community that still faces occasional marginalization and to which significant social stigma is still attached.

Thus, taking into account all the caveats about cyberpredation, the Internet also becomes a relatively safe environment for potential practitioners to "try on" their Paganism, to experiment with and, in many cases, establish a modern Pagan identity. Relatively few modern Pagans disclose significant personal information online. Thus, using Pagan rather than mundane names, they carry on conversations, express (or impose) opinion, present themselves as authorities wearing only the masks that they themselves have chosen. Who is to know whether "Lady Spiritwind" is the revered Wiccan elder she claims to be or simply an interested teenager playing an online role? On the other hand, if a young person is truly interested in the Pagan path, perhaps as a result of his love for famous fantasy author J.R.R. Tolkien, entering a discussion forum as "Treebeard" allows him to test the waters, without inviting undue attention to his emerging Pagan interests. As I observed in *Cyberhenge:*

> Through interaction in discussion groups, alt-lists, and chat rooms, identity testing and the reinforcement of modern Pagan authority occurs in readily identifiable discursive loops. Participants test their modern Pagan identities online as a function of moving from internal resonance [an affinity for modern Paganism] to external performance and conformation [the demonstration of one's modern Pagan affiliation]; other participants reinforce their identity as modern Pagan authorities by answering questions, providing resources, and weighing in on any topic available.[58]

CONTROVERSIES WITHIN THE CIRCLE AND WITHOUT

The history of many religious movements can be written from the perspective of the controversies that mark their emergence, development, and, in many cases, decline and disappearance. In the case of modern Paganism, consider three such controversies that have continued, and arguably will continue, to haunt its growth in North America: (a) misperceptions arising from lingering cultural stigma, ignorance, and fear, and which are often exacerbated by irresponsible media reporting and dedicated countermovement activity; (b) the sociological problem of generations succeeding one another through the passage of time, and the inevitable effect on the growth of a religious movement; and (c) the logical problems inherent in open source religion and the surfacing of an incipient orthodoxy among modern Pagans.

Common Myths: The Problem of Misperception

The single misperception that Wiccans and Witches work most diligently to dispel is that they do not worship Satan. This, however, is also arguably the most common misperception that continues to pervade uninformed discussion about modern Paganism. On the one hand, Pagans argue that, because Satan is a Christian theological construct and they are not Christians, charges that Witches and Wiccans worship Satan are absurd. Not only do they not worship him, they do not even believe he exists. On the other hand, taking a page from the infamous *Malleus Maleficarum,* the fifteenth-century manual for prosecuting suspected witches, many Christian opponents of modern Paganism contend either that Wiccans and Witches are simply lying or that they are deluded, either they worship Satan knowingly or they do so implicitly because Satan is the architect of all "false religion."[59] Not surprisingly, this kind of misinformation and prejudice has some very real consequences for modern Pagans.

First, it forces many to remain "in the broomcloset," afraid to reveal themselves as Wiccans or Witches precisely because they do not want to be accused of being Satan worshippers. Although she lives in a rural area known for its tolerance of new and alternative lifestyles, for example, one Wiccan solitary wrote that her reading of countercult author Texe Marrs pushed "all my panic buttons." "I no longer wanted to be out of the broom closet, with the risk of meeting someone like the author of this book. Fear, anger, and anger at being afraid have invaded my life in a way I have never experienced."[60] Second, it places Pagan parents in the precarious position of losing custody or visitation during divorce proceedings, a situation C. Barner-Barry cites as "one of the primary fears of Pagans who are parents of minor children."[61] Third, numerous Pagans have experienced workplace harassment, denial or termination of employment, and physical abuse on the basis of their religious beliefs.[62]

Linked to the uninformed belief that Witches or Wiccans worship Satan is the concomitant belief that they are practitioners of black magic and that they curse or cast spells on those whom they regard as enemies. Both of these contravene the most basic tenets of Pagan ethics—the Wiccan Rede and the Law of Threefold Return. In

her excellent treatment of modern Paganism as a "minority faith in a majoritarian America," Barner-Barry chronicles a number of incidents in which schoolchildren, for example, were expelled or suspended for allegedly cursing or hexing their teachers and classmates. "The interesting thing about such cases," writes Barner-Barry, "is the readiness of school authorities to take seriously the ability of a student to cast effective spells or hex others;" teachers and principals "seemed startlingly ready to act on their personal superstitions with no real proof that an offense had been committed."[63] With the exception of television programs such as *Charmed, Bewitched, Sabrina the Teenage Witch,* and, to a lesser degree, *Buffy the Vampire Slayer,* the North American entertainment industry has done little to dispel the popular image of the witch as a harbinger of evil. With relatively few exceptions, Hollywood still regards the "wicked witch" as a screen staple, depicting her as capriciously dangerous (e.g., *The Craft*), homicidal (e.g., *The Blair Witch Project, Hocus Pocus*), or, in the case of any number of popular horror films, sexually predatious.

For hundreds of years, inappropriate sexual license was a common charge leveled at New Religious Movements (NRMs), and the various streams of modern Paganism are no exception. Three factors particularly contribute to the persistence of this misperception. First, dating back nearly 1000 years, a lengthy history of accusations of sexual predation against alleged Witches ensures that these charges are never far beneath the surface.[64] Second, many modern Pagans prefer to perform their rituals in the nude, or "sky-clad," and these rituals occasionally involve both sexual reference (e.g., the *hieros gamos,* or the Great Rite) and ecstatic dance, neither of which have escaped popular treatments of Wicca and Witchcraft.[65] Third, there is a tradition of sex magic in modern Paganism that derives from both its generally sex-positive attitude and the roots some Pagan groups have in ceremonial and ritual magic.[66]

Pagan Youth: The Problem of Generations

Sexuality and socialization are the lightning rods for the problem of Pagan generations. That is, how do Pagans keep their children safe from sexual predation while maintaining the generally sex- and body-positive atmosphere that characterizes modern Paganism as a whole, and how do they retain their youth as Wiccans, Witches, or Druids when these youth grow up and begin to ask their own religious questions?[67]

Before there was a discernible second-generation of modern Pagans, nudity at Pagan festivals and rituals was commonplace. Many Pagans regard clothing as both a barrier to a more intimate experience of nature and a material marker of the sex- and body-negative attitude of culturally dominant religions like Christianity. Nudity, on the other hand, whether general or ritualistic, signifies a healthy acceptance of the body as natural. As Sarah Pike notes in her work on modern Pagan festivals, quoting one Pagan: "A naked man has to be walking an inflated dinosaur to get anyone to pay attention to him."[68] With more and more children attending festivals, however, some organizers have felt the need to structure both clothing-optional portions of the event—some rituals are designated sky-clad, for example—and areas of the venue where clothing is not required. While many adult ritual groups still work sky-clad,

family-style covens and circles have largely abandoned the practice, both to protect the youth from predation and to protect themselves from the kind of persecution described above.

Whether these youth will ultimately remain on the modern Pagan path is the question of religious socialization faced by every faith and tradition. It is worth remembering that, in the early years of modern Paganism in North America, most Wiccans or Witches had made the choice to convert from some other faith. Countless testimonies both in print and online reprise the participants' discomfort and unhappiness in the religion to which they were born, which is usually Christianity, and their sense of relief, of liberation, of "coming home" to a truer self when they discovered modern Paganism. From a sociological perspective, there is no reason to believe that this process of rebellion, rejection, seekership, and eventual conversion to an alien faith would not manifest within modern Paganism as well. That is, there is always the potential that modern Pagan youth will find their religious upbringing similarly unsatisfying and choose other paths—even fundamentalist Christian—which brings us to the final tension.

Christo-Pagans: The Problem of Open Source Religion

"If someone wants to blend pantheons of a couple of trads," writes one modern Pagan to an online discussion forum, "if that's what feels right to them, then so be it."[69] Barring strict reconstructionists, whose beliefs and practices are intentionally limited to what is historically demonstrable, a significant number of modern Pagans would agree with this comment. Indeed, Pagan primers are replete with suggestions for syncretizing and synthesizing elements of different pantheons.[70] This toleration holds until modern Pagan practitioners incorporate Christian symbols, practices, or deity figures into their modern Paganism. Then modern Paganism appears decidedly less tolerant.

In a 1996 editorial in *SageWoman,* a popular Pagan magazine, the editor revealed that in the midst of her Pagan practice she occasionally "[reaches] out to an old friend"—Jesus.[71] Though she was quick to reassure her readers that "the Goddess is here with me, as She has been since I was a little girl,"[72] reactions from a number of those readers was swift and unequivocal. "How dare you?!" wrote one reader named Autumn Storm, "I can think of nothing more tastelessly bizarre or despicably inappropriate than tossing out your reconciliation with christianity to readers who have supported this MATRIFOCAL, PAGAN, GODDESS magazine for ten years!"[73] While other readers were shocked at the outpouring of anger and vitriol, a number called for the editor to step down, though she did not. Rather, a year later, she published a retrospective on the conflict and pointed out that only about ten percent of the letters contained this kind of harsh criticism. Twice as many, she noted, were from readers "who were already holding these two traditions together in [their] hearts."[74] A similar controversy erupted in 2004, when *SageWoman* published a series of articles on prayer and invocation, and included a reference to "prayer beads," something to which a former Catholic convert to Paganism took particular

exception. Though the article was entitled "Garlands for the Goddess: The Magic of Christian Prayer Beads,"[75] one reader expressed her concern "that this is Catholicism in disguise," and was "left wondering if *SageWoman* is, in fact, a *truly* Pagan magazine."[76] Comments such as these notwithstanding, there is some evidence that the synthesis of Christian and modern Pagan belief and practice appears to be growing.[77]

CONCLUSION

Whether the family of religious practitioners, groups, and movements that cluster under the rubric of modern Paganism are or remain among the fastest growing NRMs in North America is open to question. As a "minority faith in a majoritarian America" modern Pagans face an almost inevitable marginalization from elements of the dominant religion and culture. Despite this, however, Witches and Wiccans now conduct prison ministries, perform hospital chaplaincy, and serve on municipal interfaith councils. Modern Paganism is recognized as a valid religious belief by various branches of the government, including the military, and Wiccans in the armed forces are currently lobbying for permission to place pentagrams on the headstones of Pagan soldiers killed in action. It is clear, however, that for hundreds of thousands of Witches, Wiccans, Druids, Goddess-Worshippers, and Ásatrúer, the myriad paths of pre-Christian religions exercise a powerful call.

NOTES

1. Although there are a few basic frameworks, the details of modern Pagan ritual are often as varied as the groups that practice and range from detailed liturgies that are linked to particular traditions to *laissez-faire* constructions that exemplify both the creativity and the open source character of modern Paganism. See, for example, J. Farrar and S. Farrar, *Eight Sabbats for Witches, and Rites for Birth, Marriage and Death* (Custer, WA: Phoenix Publishing, 1981); J. Farrar and S. Farrar, *The Witches' Way: Principles, Rituals and Beliefs of Modern Witchcraft* (Custer, WA: Phoenix Publishing, 1984); S. Farrar, *What Witches Do: A Modern Coven Revealed*, 3rd ed. (Custer, WA: Phoenix Publishing, 1991).

Contemporary Paganism: Minority Faith in a Majoritarian America (New York: Palgrave Macmillan, 2005).

6. For at least a decade, and citing a wide variety of sources, many contemporary Pagans claim that their family of religious traditions—though most particularly Wicca—are among the fastest growing in the world; see, for example, R. Buckland, *Witchcraft from the Inside: Origins of the Fastest Growing Religious Movement in America*, 3rd ed. (St. Paul, MN: Llewellyn Publications, 1995); P.W. Curott, *Book of Shadows: A Modern Woman's Journey into the Wisdom of Witchcraft and the Magic of the Goddess* (New York: Broadway Books, 1998); R. Grimassi, *Spirit of the Witch: Religion and Spirituality in Contemporary Witchcraft* (St. Paul, MN: Llewellyn Publications, 2003); M.M. NightMare, *Witchcraft and the Web: Weaving Pagan Traditions Online* (Toronto: ECW Press, 2001); RavenWolf, *Teen Witch;* E. Restall Orr, *Druid Priestess: An Intimate Journey through the Pagan Year* (London: Thorsons, 1998). This general claim has been picked up and repeated without question by news media ranging from the mainstream press to online news services; see, for example, K. Burke, "No Rest for the Wicca—Growing Pagan Population Shows its Political Spirit," *Sydney Morning Herald,* June 30, 2003, News and Features, 3; J. Kiddle, "Every Witch Way," *The Scotsman,* October 31, 2005, 10; P. Rice, "In October, Spotlight Focuses on Neopagan Beliefs," *St. Louis Post-Dispatch,* October 27, 2001, 20; K. Winston, "The Witch Next Door," Beliefnet, www.beliefnet.com/story/155/ story_15517.html (accessed January 6, 2006); S. Woodward, "Paths to Paganism," *The Sunday Oregonian,* October 27, 2002, L01. It has been deployed by evangelical Christians as yet and again another dire cultural alarm, further evidence of the spiritual decline of late modern society; see, for example, B. Alexander, *Witchcraft Goes Mainstream* (Eugene, OR: Harvest House Publishers, 2004); T. Baker, *Dewitched: What You Need to Know about the Dangers of Witchcraft* (Nashville: Transit Books, 2004). And, finally, it has been reproduced almost without any further interrogation in recent academic publications on contemporary Paganism; see T. Foltz, "The Commodification of Witchcraft," in *Witchcraft and Magic: Contemporary North America,* ed. H.A. Berger (Philadelphia: University of Pennsylvania Press, 2005); D. Waldron, "Witchcraft for Sale! Commodity vs. Community in the Neopagan Movement," *Nova Religio* 9, no. 1 (2005): 31–48. For critical evaluations of these claims, see D.E. Cowan, "Count the Candles and Divide by Two: Methodological Considerations in the Quantification of Modern Paganism" (paper presented at the annual meeting of the Society for the Scientific Study of Religion, Rochester, NY, November 2005); D.E. Cowan, *Cyberhenge: Modern Pagans on the Internet* (New York and London: Routledge, 2005), especially 84–87, 193–198; D.E. Cowan, "Too Narrow and Too Close: Some Problems with Participant Observation in the Study of New Religious Movements," *Method & Theory in the Study of Religion* 10 (1998): 391–406.

7. Though they are written from a range of perspectives and vary substantially in quality, for a variety of academic and popular explorations of modern Paganism, see, for example, M. Adler, *Drawing Down the Moon: Witches, Druids, Goddess-Worshippers, and Other Pagans in American Today,* rev. ed. (Boston: Beacon Press, 1986); H.A. Berger, *A Community of Witches: Contemporary Neo-Paganism and Witchcraft in the United States* (Columbia, SC: University of South Carolina Press, 1999); H.A. Berger, E.A. Leach, and L.S. Shaffer, *Voices from the Pagan Census: A National Survey of Witches and Neo-Pagans in the United States* (Columbia, SC: University of South Carolina Press, 2003); J. Blain, D. Ezzy, and G. Harvey, eds., *Researching Paganisms* (Lanham, MD: AltaMira Press, 2004); C.S. Clifton, ed., *Living Between Two Worlds: Challenges of the Modern Witch* (St. Paul, MN: Llewellyn Publications, 1996); C.S. Clifton, ed., *The Modern Craft Movement: Witchcraft Today, Book One* (St. Paul, MN:

Llewellyn Publications, 1997); Cowan, *Cyberhenge;* M.D. Faber, *Modern Witchcraft and Psychoanalysis* (London and Toronto: Associated University Presses, 1993); S. Greenwood, *Magic, Witchcraft and the Otherworld: An Anthropology* (Oxford: Berg, 2000); W J. Hanegraaff, *New Age Religion and Western Culture: Esotericism in the Mirror of Secular Thought* (Leiden and New York: E.J. Brill, 1996); P. Heelas, *The New Age Movement: The Celebration of the Self and the Sacralization of Modernity* (Oxford: Blackwell Publishers, 1996); R. Hutton, *The Triumph of the Moon: A History of Modern Pagan Witchcraft* (Oxford: Oxford University Press, 1999); R. Hutton, *Witches, Druids, and King Arthur* (London: Hambledon and London, 2003); T.M. Luhrmann, *Persuasions of the Witches' Craft: Ritual Magic in Contemporary England* (Cambridge, MA: Harvard University Press, 1989); S. Magliocco, *Witching Culture: Folklore and Neo-Paganism in America* (Philadelphia: University of Pennsylvania Press, 2004); K. Marron, *Witches, Pagans, & Magic in the New Age* (Toronto: Seal Books, 1989); L. Orion, *Never Again the Burning Times: Paganism Revived* (Prospect Heights, IL: Waveland Press, 1995); S.M. Pike, *Earthly Bodies, Magical Selves: Contemporary Pagans and the Search for Community* (Berkeley and Los Angeles: University of California Press, 2001); S.M. Pike, *New Age and Neopagan Religions in America* (New York: Columbia University Press, 2004); J. Salomonsen, *Enchanted Feminism: The Reclaiming Witches of San Francisco* (London and New York: Routledge); G.G. Scott, *Cult and Countercult: A Study of a Spiritual Growth Group and a Witchcraft Order* (Westport, CT: Greenwood Press, 1980); M. York, *The Emerging Network: A Sociology of the New Age and Neo-Pagan Movements* (Lanham, MD: Rowman & Littlefield Publishers, 1995).

8. See P. Heselton, *Wiccan Roots: Gerald Gardner and the Modern Witchcraft Revival* (Somerset, UK: Capall Bann Publishing, 2000), 226–260.

9. In 1949, Gardner published *High Magic's Aid,* an historical novel, under the pseudonym, Scire. Following the repeal of the Witchcraft Acts, he published openly *Witchcraft Today* in 1954 and *The Meaning of Witchcraft* in 1959. See G.B. Gardner, *High Magic's Aid* ([1949] Hinton, WV: Godolphin House, 1996); G.B. Gardner, *Witchcraft Today* ([1954] New York: Citadel Press, 2004); G.B. Gardner, *The Meaning of Witchcraft* (London: Aquarian Press, 1959).

10. On this dispute, see Hutton, *Triumph of the Moon,* 205–252; A. Kelly, *Crafting the Art of Magic: Book 1* (St. Paul, MN: Llewellyn Publications, 1991).

11. In what some modern Pagans have come to regard as British Traditional Witchcraft, though there is dispute even about this, Gardnerians are those who are initiated into and follow the Pagan path laid down by Gardner, considered by most the founder of the modern Witchcraft movement. Alexandrians, on the other hand, are adherents of the tradition established by Alex Sanders (1926–1988) and his wife and high priestess, Maxine (b. 1946), after they came into possession of a copy of Gardner's *Book of Shadows* (Farrar and Farrar, *The Witches' Way,* 245). On Gardner, see P. Crowther, *High Priestess: The Life & Times of Patricia Crowther* (Custer, WA: Phoenix Publishing, 1998); Farrar and Farrar, *The Witches' Way;* Gardner, *High Magic's Aid;* Gardner, *Witchcraft Today;* Gardner, *The Meaning of Witchcraft;* Heselton, *Wiccan Roots;* Hutton, *Triumph of the Moon.* On Sanders, see Crowther, *High Priestess;* Farrar, *What Witches Do;* J. Johns, *King of the Witches: The World of Alex Sanders* (New York: Coward-McCann, 1970).

12. Farrar and Farrar, *The Witches' Way,* 244; cf. R. Buckland, *The Witch Book: The Encyclopedia of Witchcraft, Wicca, and Neo-paganism* (Detroit: Visible Ink Press, 2002), 254–256.

13. See, for example, S. Cunningham, *Wicca: A Guide for the Solitary Practitioner* (St. Paul, MN: Llewellyn Publications, 1988); Farrar and Farrar, *The Witches' Way,* 244–250; M. Green, *A Witch Alone: Thirteen Moons to Master Natural Magic* (London: Thorsons, 1991).

14. In an effort to more carefully differentiate modern Paganism as a distinct religious culture, a few scholars have begun to consider it from a theological standpoint, rather than the historical or sociological. Though he eschews the qualifier "modern" or "contemporary," York contends that the majority of religious traditions around the world either have Pagan roots or manifest Pagan religious behavior. Paper, on the other hand, takes York to task for not following his argument through to its logical conclusion. See J.D. Paper, *The Deities Are Many: A Polytheistic Theology* (Albany: State University of New York Press, 2005); M. York, *Pagan Theology: Paganism as a World Religion* (New York: New York University Press, 2003).

15. See H.A. Berger, E.A. Leach, and L.S. Schaffer, *Voices from the Pagan Census: A National Survey of Witches and Neo-Pagans in the United States* (Columbia, SC: University of South Carolina Press, 2003).

20. L. Cabot and T. Cowan, *Power of the Witch* (New York: Delta Books, 1989), 150.

21. Ibid., 150–151. For other attempts to conceptualize modern Pagan practice as an empirical science, see P.E.I. Bonewits, *Real Magic: An Introductory Treatise on the Basic Principles of Yellow Light,* rev. ed. (York Beach, ME: Red Wheel/Weiser, 1989); W.H. Keith, *The Science of the Craft: Modern Realities in the Ancient Art of Witchcraft* (New York: Citadel Press, 2005).

22. According to the Farrars, "The Christian Nativity story is the Christian version of the theme of the Sun's rebirth, for Christ is the Sun-God of the Piscean Age. The birthday of Jesus is undated in the Gospels, and it was not till AD 273 that the Church took the symbolically sensible step of fixing it officially at midwinter, to bring him in line with the other Sun-Gods (such as the Persian Mithras, also born at the Winter Solstice" (Farrar and Farrar, *Eight Sabbats for Witches,* 137–138). See also J. Matthews, *The Winter Solstice: The Sacred Traditions of Christmas* (Wheaton, IL: Quest Books, 1998).

23. See, for example, Salomonsen, *Enchanted Feminism,* 180–181.

24. See Farrar and Farrar, *Eight Sabbats for Witches,* 48–54.

25. Ibid., 49, emphases in the original.

26. See Cowan, *Cyberhenge,* 30–35. The open source revolution in computer programming, which led to the invention and ongoing development of the Linux operating system, for example, is based on the principle that the source codes, the basic building blocks of computer software, are available to everyone. This allows each user to tailor the software to his or her very specific needs. Closed source programming like Microsoft products, on the other hand, do not allow this kind of access, and the software must be used exactly as it is supplied by the manufacturer.

Learning about Paganism

Helen A. Berger

Neopaganism is not a religion of "the Book," but a religion of books. It is through the printed word and within the past decade through Web sites that most Neopagans learn about their religion. Since most American Neopagans are solitary practitioners,[1] books, Web sites, and public teachers are particularly important in transmitting information about the religion. Covens, groves, and groups are important as well, as they were traditionally the source of training and continue to be one of the sources for new adherents to learn about the religion. But Neopagans are readers, and even those trained in groups, nonetheless, read books about their religion, mythology related to their spiritual practice, and the spiritual practices of indigenous peoples. Through writing books, publishing magazines, maintaining Web sites, leading workshops, and organizing festivals, Neopagan elders and groups most clearly make their mark on the religion.

Neopaganism encompasses different traditions or spiritual paths. Some of these traditions are oriented toward a particular historic and geographic area. For example, Druids focus on historic Celtic practices, and Ásatrú worship the Norse pantheon. Others, such as Gardnerians or Alexandrians, perpetuate the teachings of a particular individual. Gardnerians trace their lineage back to the original coven of Gerald Gardner (1884–1964). Each Gardnerian teacher was herself or himself trained in a coven that traces back to either Gardner or someone within his original coven. Gardner is credited with creating Wicca in the 1930s in Great Britain.[2] Alexandrians trace their history back to Alex Sanders (1926–1988) who received training in Gardnerian Wicca, then created a variant. Several different forms of Wicca are practiced in the United States. When I began my research in 1986, Neopagans commonly used the terms *Witch* and *Wiccan* interchangeably. Today a distinction is usually made between Witches and Wiccans; only those trained in an initiatory tradition are considered Wiccans. Some individuals, however, are self-initiated, having learned about Wicca through books and the Internet.

It is a cliché among Neopagans and scholars of Neopaganism that an exception can be found to almost any generalization about the religion and its practitioners.

This is because Neopaganism has no central organization or dogma to determine theology, practice, or even membership. Most forms of Neopaganism are experiential; that is, they emphasize individuals' unmediated encounters with the spiritual world gained in or outside of ritual through a series of techniques, such as meditation, drumming, or dancing. Each person is considered an authority on her or his own spiritual experience and hence on her or his interpretation of and relationship with the divine, the other world, or the mystical. Douglas Cowan,[3] applying a computer term, has dubbed Neopaganism an "open source" religion. Open source programming is "software for which the basic building blocks—the source code—is freely available for modification.… Open source traditions are those which encourage (or at least do not discourage) theological and ritual innovation based on either individual intuition or group consensus, and which innovation is not limited to priestly classes, institutional elites, or religious virtuosi."[4] Because of the lack of dogma and the belief in each person having direct access to the divine, anyone can contribute to and change Neopagan practices and beliefs. However, in practice most groups and individual practitioners have many similarities.[5] These similarities often result from individuals having read the same books, attended the same festivals, and participated in the same Internet sites and chat rooms.

Traditionally Witchcraft, Wicca, and other forms of Neopaganism are taught in covens for Witches, groves for Druids, or other groups for other forms of Neopaganism. Knowledge is passed down by elders in the religion to newcomers. These groups tend to be small, easily formed, and easily terminated, although people remain within the same social circles, resulting in former coven mates sometimes continuing to work together, even forming a new coven or group after the old one disbands. Normally for Witches and Wiccans—and commonly among other forms of Neopaganism—teaching within groups is given at no charge to learners. Among Wiccans it is considered the duty of those who have been trained without cost in a coven to in turn teach others for free. Although teaching remains free within most if not all covens, some Witches are now charging for training in courses given outside the coven. In *Voices from the Pagan Census*[6] my colleagues and I found that most American Neopagans, in theory, support the concept of paid clergy. Few, however, give money to support clergy or organizations. Most of the money exchanged for learning is through courses at adult education centers, at occult bookstores, through the mail, or on the Internet. In some cases training occurs at festivals or retreats.

Coven and group learning continues today, but with the growth of solitary practitioners such learning is more and more the minority form of training. The success of publications and ultimately other forms of media in spreading information about the religion has ramifications for the methods of training among the next cohort of practitioners. As Douglas Ezzy[7] demonstrates, this has resulted, on the one hand, in the democratization of instruction. Any one with a library card, or more recently access to the Internet, can learn about most if not all Neopagan traditions. On the other hand, such learning is devoid of face-to-face relationships as exist in covens and instead becomes mediated by the market. The growth of market relationships is further evidenced by the number of teachers who charge for lessons.[8] Spiritual teachers

requiring payment is still controversial within Neopagan circles but, nonetheless, is increasingly common. Less controversial are Witches and other Neopagans writing how-to books, some of which are popular enough to generate an income. Journals and magazines, which often play an important role within the Neopagan movement, may sometimes generate money for those who produce them but at other times are subsidized by groups and have not been able to generate money.

BOOKS AND MAGAZINES

Green Egg, which was published by the Church of All Worlds (CAW) from 1968 until 2001, played a central role in helping to create the nascent Neo-Pagan movement out of a set of spiritual ideas including the notions of nature as sacred, the divine as immanent, and a belief in an alternative reality. Most of these spiritual paths also invoke multiple deities, or at least the god and the goddess. *Green Egg* popularized the term "Neo-Pagan," giving the movement its name, and more importantly through its articles and its policy of publishing unedited letters gave the movement a public forum.[9] The magazine was also a recruitment tool for CAW, which takes it name from the classic science fiction novel of 1961 by Robert Heinlein, *Stranger in a Strange Land.* CAW's form of Neopaganism combines elements of libertarianism, science fiction, and environmentalism.[10] The magazine made editor Tim Zell (b. 1942) into a major figure in the Neopagan world, who is often quoted in other Pagan's publications and is a welcome speaker at Neopagan gatherings.

Other groups subsequently began newsletters and magazines, each of which contributed to the creation of a national, and at times an international, community of Neopagans. *WomanSpirit,* which began publication in 1974, was the earliest to appeal to the growing women's spirituality movement.[11] "Put out four times a year from Oregon the writing staff consisted of changing collectives of women in different states and so reflected the ferment that women were experiencing across the county. It provided a forum for women to explore their spirituality through poetry, art, prose, discussions, and descriptions of women's rituals that were growing in popularity."[12] Other journals, for example, *SageWoman,* followed *WomanSpirit*'s lead in providing information and a forum for the women's spirituality movement. Although not all within the women's spirituality movement are Neopagans—some remaining firmly within Judaism or Christianity—an important section of this movement are Feminist Witches.[13] Zsuzsanna Budapest (b. 1940), a Hungarian immigrant who helped to create a women's only form of Wicca, in which the goddess was worshipped to the exclusion of the god force, was one of the earliest and strongest voices of Feminist or Dianic Witchcraft. Budapest gained notoriety after *Ms. Magazine* featured a story about her being arrested for reading Tarot cards, which at the time was illegal in California, the state where she lived. The article also helped to spread information about the growing feminist spirituality movement. In *The Grandmother of Time* Budapest, remembering her first goddess circle with six friends, asserted that the other women "just came to try it out, to find out if it had any validity for feminist women. We did agree that we cannot work toward liberation as long as our inner

selves remain unchanged. Liberation has to begin inside; liberation has to be getting past the fears of taking our own power."[14] For Dianic Witches, the goddess is the symbol of women's empowerment. The veneration of the goddess is intertwined with women's growing awareness of their subjugation in Western culture.

Traditionally Wicca was based on balancing male and female energies. Gardner spoke of the perfect coven being 13: the high priestess, six men and six women. Budapest not only eliminated the need for gender balance but provided a different mythology for the circle of the year—one that eliminated the need for god. In traditional Wiccan mythology the god is transformed from the goddess's son born to her at Yule (December 21), to her consort at Beltaine (May 1), her dead lover at Samhain (October 31), and ultimately in rebirth the following Yule to her son again. The changes in the relationship between the goddess and the god mirror changes in nature from the stirring of life in the midst of winter, to fertility in spring, to death in the fall, and ultimately to rebirth the following spring. Within Dianic Witchcraft the cycle of the year focuses only on the changes of the Goddess from maid, to mother, to crone. Budapest also questioned the Rule of Return. The Wiccan Rede—do as thou will as long as thou harm none—and its corollary—whatever you send out will be returned three times—are the bases of ethical behavior within the religion. Budapest argued that if a Witch cannot curse she cannot cure and that women are justified in cursing rapists and abusers.[15]

Although influenced by Wicca, women-only Witchcraft groups came into conflict with more traditional Witchcraft groups.[16] Some of the early conflict was displayed in the letters to *Green Egg*.[17] Although tensions continue to exist between women's only or feminist Witchcraft and more traditional Witchcraft, these have decreased over the years. Miriam Simos (b. 1951), who is better known by her magical name Starhawk, was an important figure in decreasing these tensions. In her first book, *The Spiral Dance*,[18] Starhawk bridged the gap between traditional Wicca and Feminist Witchcraft. Starhawk is an initiated Witch trained both in the Faery Tradition, a form of Wicca, and in Feminist Witchcraft by Budapest. Starhawk is one of the founders of the Reclaiming Tradition, which is feminist, activist, nonhierarchical, and inclusive of both men and women. In the *Spiral Dance* and in her subsequent books, *Dreaming the Dark* and *Truth and Dare,*[19] Starhawk was interested in spreading information about Witchcraft, not specifically teaching the Reclaiming Tradition. In her introduction to the *Spiral Dance* she states: "The myths, underlying philosophy and 'thealogy'[20] … in this book are based on the Faery Tradition. Other Witches may disagree with details, but the overall values and attitudes expressed are common to all of the Craft."[21]

Starhawk's presentation of Witchcraft blends the Feminist Witches' emphasis on the Goddess with Wiccan rituals, magical practices, and ethics. In describing the Goddess's meaning for men and women within Witchcraft, Starhawk writes:

> The Goddess is the "end of desire," its origin and its completion. In Witchcraft, desire is itself seen as a manifestation of the Goddess. We do not seek to conquer or escape from our desires—we seek to fulfill them.… Fulfillment becomes, not a matter of self-indulgence, but of self-awareness. For women, the Goddess is the symbol of the inmost

> self, and the beneficent nurturing, liberating power within woman.… The Goddess does not limit women to the body; She awakens the mind and spirit and emotions. Through Her, we can know the power of our anger and aggression, as well as the power of our love … for a man the Goddess as well as being the universal life force is his own hidden female self.… He may chase Her forever, and She will elude him, but through the attempt he will grow, until he too learns to find Her within.[22]

Like Feminist Witches, Starhawk views the goddess as empowering to women, putting them in touch not only with images of nurturing, loving women but also with female warriors. However, unlike Budapest's model of goddess worship, for Starhawk men too are included. According to Starhawk the goddess is not just part of women, but is part of men as well. As with all forms of Witchcraft the female aspect of the divine is referred to as the goddess. She is perceived as encompassing many different goddesses from different pantheons and cultures, or as a projection of an aspect of all women and men. Although Starhawk gives priority to the goddess, the god is not ignored. She tells us: "In the women's movement, Dianic separatist Witchcraft has become the fashion, and some women may have difficulty understanding why a feminist would bother with the Horned God at all. Yet there are few if any women whose lives are not bound up with men, if not sexually and emotionally then economically. The Horned God represents powerful, positive male qualities that derive from deeper sources than the stereotypes and violence and emotional crippling of men in our society."[23] Like the goddess, the god can encompass many different deities or symbolize manhood. The Horned God imagined by Starhawk provides a feminist image of manhood.

The Spiral Dance sold over 300,000 copies.[24] Starhawk's influence pervades the Neopagan movement, although not everyone agrees with her. For example, the image of the god provided by Starhawk is not supported by all Witches and certainly not all Neopagans. Ásatrú who worship the Norse gods do not blend them into one and are more likely to view these gods in less feminist terms, seeing them in their warrior aspect. Starhawk does not speak for all Witches. Nonetheless, her work is widely read within the Neopagan movement and permeates much of the language used, even if at times individuals may not be aware of it. In my fieldwork in the northeastern United States I often heard people use Starhawk's words as their own, either having forgotten that they had read them or having absorbed them from conversations with others.

Margot Adler's *Drawing Down the Moon* was published the same year as *Spiral Dance.* Adler (b. 1946), a reporter for National Public Radio and an initiated Witch, provided an overview of the movement in the United States. The book was important, both in giving a positive public face to the movement and for its discussion of many different forms of Neopaganism in addition to Witchcraft or Wicca. She also provided a list of resources for those interested in learning more about the religion. Unlike Starhawk, Adler did not provide rituals or magical workings as part of her book.

The Spiral Dance, like other books at the time, such as *The Feminist Book of Lights and Shadows* written by Budapest and other members of her coven, provided a

conduit for people to learn about the magical, mystical, and ritual practices of Witchcraft without receiving coven training. Starhawk included a discussion of how to run a coven, useful to both those who were coven-trained and those who were not coven-trained but wanted to start their own group. The book also discussed rituals and magical workings, which could be done by anyone even without coven training.

Starhawk, Adler, and Budapest's books were not the first on Wicca, Witchcraft, or Paganism. Gerald Gardner published books on the religion shortly after the British laws against Witchcraft were revoked in 1951.[25] Nonetheless, Starhawk, Adler, and Budapest are important because they mark the beginning of a larger process—the popularization of Witchcraft through books. Some publishing houses, such as Llewellyn have specialized in occult, New Age, and alternative books. Among those books published by Llewellyn, the work of two authors were particularly important in Witchcraft—Scott Cunningham (1956–1993) and Silver RavenWolf (b. 1956).

In *Wicca: A Guide for the Solitary Practitioner* and *Living Wicca: A Further Guide for the Solitary Practitioner*, Cunningham forcefully advocated and provided information for individuals to practice Witchcraft alone, without coven training. His are not the only books advocating this approach. Thousands of how-to books on Witchcraft, and to a lesser degree other forms of Neopaganism, exist. Some are on specific topics, such as how to raise a Pagan child or run a coven. But many repeat in slightly different words what is often referred to as Wicca 101, involving a basic outline of the eight sabbats at the beginning and height of each season; the esbats or moon phases; and instruction on how to cast a circle, call the direction (east, south, west, and north), raise energy for magical workings, and close the circle. These books all are accused of giving individuals the illusion that they are trained Witches or Pagans without really providing the depth of training and supervision available in covens and other groups. Traditionally in Wiccan covens the High Priestess and High Priest determine when neophytes are ready to be initiated and when they are then ready to receive their second and third degrees. Within Wicca, three degrees indicate levels of spiritual attainment within a particular tradition. Solitary practitioners sometimes eschew degrees but at other times determine themselves when they are ready to go on to the next level. On the one hand, some elders are concerned that these individuals are not properly trained, but nonetheless will attempt to train others, resulting in a watering down of the religion. On the other hand, many solitary practitioners believe that they are not accorded the proper respect within Neopagan circles.[26] Because Neopaganism is a religion in which each person can create his or her own form of Paganism, and no accrediting body determines who is or is not properly trained, no one can be excluded from the religion or stopped from teaching. Each person is ultimately the authority on his or her own spiritual path and relationship with the divine. Some solitary practitioners prefer to be coven-trained but live in an area in which they are unable to find a coven or at least one that they prefer and that is willing to accept them. Other solitaries prefer working alone and developing what they feel is their own form of practice.

Silver RavenWolf's books targeted preteens and teenagers interested in Witchcraft. The books provided a basic background in Witchcraft, rituals, ritual tools, magical workings, and ethics. In *Teen Witch* RavenWolf, for example, prior to providing a love spell, enumerated how these spells could not or should not be used. She informed her reader that a Witch must never violate another's free will and hence should not do a spell to make a particular person fall in love with her or him. If the Witch does, the relationship will be doomed. A Witch must never attempt to win another person's significant other. And "you cannot own another person. A person doesn't 'belong' to you like a piece of property. Witches never give away their 'shields' to another person. You always retain your personal power."[27] RavenWolf then provided a spell for bringing love to the spell maker—that is, bringing her or him in contact with eligible people. RavenWolf's discussion of how to use love magic was consistent with Wiccan beliefs and practices. Her books contained spells, some of which were geared toward the young, like the crabby teacher or exam spell, and others that were common within the Neopagan community, like healing spells to help others or oneself recover from an illness. RavenWolf also gave advice to teens on how to live, such as the suggestion that one never give away one's personal power in a relationship or that illegal drugs and alcohol do not mix with magic.

In my recent study with Ezzy on teenage Witches in the United States, England, and Australia,[28] a number of the young Witches mentioned reading one or more of RavenWolf's books when they began exploring Witchcraft. Some were embarrassed to admit this, having come to see RavenWolf's works, as one of them phrased it "too fluffy bunny," that is, too lightweight. Others felt that she provided them with a foray into the world of Witchcraft in a language they could understand. RavenWolf is the best known, but only one of the many authors who orients their publications towards teenagers. Unlike RavenWolf, some authors write books completely of spells, particularly love spells geared toward teenage girls. Publishers code these books with pink or lavender covers to signal that they are oriented toward girls and young women.

Teenagers often do not have the option of being coven-trained. Judy Harrow[29] recommends that teachers do not permit underage individuals whose parents are not Pagans into their covens because this might make the group legally vulnerable. Amber K,[30] on the other hand, recommends that coven leaders speak to the underage seeker's parents or guardian to get their approval, which if given should be put in writing. Both Harrow and K are concerned with the legal ramifications of training underage seekers without parental consent. Teenagers who are interested Witchcraft or any other form of Paganism often have no alternative but to learn about it from books or the Internet, either alone or with a few friends.

Many in the religion are offended by the more flagrant popular books on Witchcraft, whether geared toward teenagers or to adults, which focus almost exclusively on spells. Although a minority, one-third of Neopagans in the *Pagan Census* stated that they find popularization of the religion a problem.[31] For some this problem is the diluting of the religion by books and Web sites. For others they are concerned about the public perception of their religion—fearing that the emphasis on casting

spells in some of these books will not reflect well on them or help them get their religion recognized within interfaith councils and in the law courts. Witches and other Neopagans have experienced discrimination. Recently, for example, two Witches, divorced and involved in a custody battle over their only son, were enjoined by the court not to teach the child their religion.[32] The initial court ruling was overturned on appeal, but the case indicates that Witches and other Neopagans continue to experience discrimination.[33]

Most of the books published about Neopaganism are about Wicca or Witchcraft. In part, this is because it is the most popular form of Neopaganism.[34] The current interest in Witchcraft was spurred by the popular media, for example, the feature film *The Craft* and television shows such as *Buffy the Vampire Slayer,* in which one of the characters, Willow, is a Witch, and *Sabrina the Teenage Witch.* In our study of teenage Witches in the United States, England, and Australia, Ezzy and I found that although only a few said that they explored Witchcraft after seeing one of these shows, they all watched at least one episode. Televisions shows, movies, and books constitute a general background that helps to fuel the interest in Witchcraft, or at least on spell work. Most of those who begin exploring Witchcraft, and bought some books, did not become Witches or join another form of Neopaganism. The young people who do become Witches tend to graduate from spell books to more serious literature.[35]

Non-Wiccan Paganism also generated books. Isaac Bonewits (b. 1949), who is an important voice in Druidism, published his undergraduate thesis on magic in 1989. The book did not present the basic principles of Druidism, but instead focused on the practice of magic, his theory behind magic, and his critique of what he considered hubris among other Neopagan authors. Bonewits's book and his writings in *Green Egg* and other Neopagan journals made him a respected voice within Neopaganism and the founder of one branch of Druidism, ÁrnDraíocht Féin (ADF), which translates from the Gallic as our own Druidism. Bonewits broke from the New Reformed Druids of North America (NRDNA) to create the ADF, largely over the issue of clergy training. The ADF has a very well developed training program for each of its three specialists: the Druid, who is the leader; the Bard, or storyteller; and the Ovate, or soothsayer. Interestingly, one can move both up and down in accreditation, indicating an increase or perceived decrease in learning. The NRDNA continues to exist, and other splinter groups developed out of the ADF. Furthermore, other forms of Druidism exist, some of which are not Pagan.[36] Amazon.com alone lists over 800 books on Druidism, most of which, like those on Witchcraft, are how-to books. Somewhat fewer books are listed on Heathenry or Ásatrú. Nonetheless, Amazon.com lists more than 500 books on this spiritual path, most of which provide basic information on its beliefs and practices.

Books are a major form of transmission of information to neophytes of all forms of Neopaganism. But, face-to-face interactions remain important. As noted earlier, most contemporary Neopagans consider themselves solitary practitioners. In some instances, this means that the individuals practice alone—combining what they learned from books and the Internet with what they may learn from a class or by

attending a festival. But, at other times, being a solitary practitioner has another meaning. In West Chester, Pennsylvania, where I teach, there was until it disbanded about a year ago a group of solitary practitioners, led by a woman and a man who did not take the title High Priestess and High Priest. They insisted that they were not a coven but just a group of solitary practitioners. The group celebrated the sabbats, at times celebrated the esbat, and had classes to learn about techniques for entering altered states, mythology about the holidays, and various beliefs. Although the group had many of the hallmarks of a coven they did not initiate neophytes, bestow degrees, or claim to train individuals in a particular form of Witchcraft or Paganism. Similarly, in our research on teen Witches, we found that most of our respondents are solitary practitioners even though they often practice with other Witches, by attending classes and participating in student Pagan or Wiccan clubs and at times by training with particular Wiccan or Witchcraft traditions. They define themselves as solitary practitioners because they remain in control of their own spirituality and are eclectic, taking insights from different sources—including the Internet, books, teachers, and other Neopagans. This does not mean that the various traditions of Witchcraft and other forms of Neopaganism are no longer relevant. Although the majority claim to be solitaries, 48 percent report that they do work in groups.[37]

THE INTERNET

The Internet has become one of the major sources of information on Neopaganism and a venue through which Neopagans can interact. Cowan reminds us that the Internet, while permitting interaction among participants, is not open to all.[38] Computers are not equally distributed among nations or within nations. Social class, education, age, and gender all determine the likelihood of individuals having access to and using the Internet for more than just checking e-mail. M. Macha NightMare, a Reclaiming Witch and well-known Pagan author asserts:

> The web allowed community to be created where none had been. The anonymity of online communications liberated witchen folks to express their thoughts and feelings and experiences in relative safety … so in a sense the Web became our church.… It has allowed previously fragmented groups to find each other and previously isolated people to find community. It has fostered the growth of Pagan rights organizations, Pagan publishing, organizing in general, and mobilization of Pagan safety and civil rights The Net has provided us with unlimited resources to learn about our ethnic and cultural heritage, to reconstruct ancient rites, and to bond around these sharings.[39]

NightMare mentions several benefits that the Internet provides Pagans: a place to foster community, a source of information, and a network through which to organize. Erik Davis also suggested that the Internet could provide an alternative "universe" in which to do ritual.[40] Witchcraft in particular, but also most forms of Paganism, are experiential religions. The focus is more on experiencing an alternative universe than in holding a set of beliefs or participating in a set of activities. To what degree does the Internet meet all of these promises—fostering community, providing

information, being a source for organizing, and furnishing an alternative universe in which to do ritual?

In our study of teenage Witches, Ezzy and I found that most young people use the Internet as an alternative encyclopedia, although more turn first to books and then to the Internet. Few were involved in chat rooms, and those who were only occasionally participated in discourse—more often choosing to lurk than write. But those who did participate in chat rooms felt that they were part of a community. For some it was important to realize that they were not alone and to have their beliefs confirmed by others. Others established friendships on the Internet, at times meeting people in person whom they befriended in chat rooms. Still others learned of local events that were listed on electronic bulletin boards and became more involved in their local community. Cowan warns that on the Internet individuals can conceal their true identity and more easily lie than in everyday interactions. But, he suggests, the Internet affords those who are thinking about or are in the early stages of becoming a Neopagan a no-risk chance to try on the identity. The individual can remain in the "broom closet" with all those outside the Internet forever, or until she or he is comfortable with her or his new identity.[41]

The Internet also permits individuals to take on the role of teacher. This has both positive and negative effects. Positively, all participants can provide information, tell about their own spiritual quests, and hope to influence the larger religion by their writing on the Internet. Young Witches who are students in their daily lives can become or attempt to become respected teachers on the Internet.[42] Negatively, information is not vetted on the Internet; both good and bad suggestions and information are equally available. In addition, as Cowan illustrates, individuals because of either lack of time or lack of knowledge sometimes just cut and paste, often without noting that the material is not originally theirs, resulting in the same information being presented on a number of Web sites, at times out of context.[43]

The Internet does provide a community especially for solitary practitioners. For example, individuals who live in rural areas where there are no other Neopagans, or at least none whom they know, can communicate on the Internet. It is also a way to network, meeting others in your local area, and learning about festivals, open rituals, and groups. Witchvox.com is one of the largest and most respected sites on the Internet for Pagans. It provides pages for Neopagans from different nations around the world, as well as pages for adults, teens, and children. There are pages of information about different forms of Neopaganism, organizations, and local gatherings. Individuals, groups, and companies can advertise on the site. They have articles about current Neopagan issues. Thousands of sites exist for all forms of Neopaganism. Not all of them are active; more are started than are maintained.

Some groups exist only in cyberspace, but these are rare. Cowan found that many of the cyber covens were teaching covens—that is, they did not perform rituals but promised to teach neophytes about Wicca. It was unclear how successful any of these were. He found that many of these sites had not been updated in two or more years and their links were not functional. Cowan questions whether a cyber coven can survive without any face-to-face interactions. Some groups meet in cyberspace as well as

in mundane space. The Internet meetings help to create cohesion by permitting interactions in between face-to-face meetings and linking those who can only rarely attend in-person meetings, because they either have moved away or have family or work obligations that make it difficult for them to regularly attend the larger group. Some of these groups define their cyber meetings as online covens. In her dissertation on a Reclaiming coven in the northeastern United States, Pam Detrixhe documents the use of online interactions among one group that also has face-to-face meetings several times a year. Conflicts arose in this group over decisions made at the face-to-face meetings that some members were unable to attend. Some suggested that all decisions should be based on online discussions. The online aspect of the group helped to create both cohesion and tensions. But, nonetheless, the group would either have not existed or been very different without the inclusion of the online meetings.[44]

Only a few of the cyber covens that Cowan explored attempted to do the central component of coven work—rituals—online. He discovered that "in terms of their content … online rituals differ very little from their off line counterparts."[45] He notes that they follow the same basic format, of creating a sacred circle, calling the quarters, invoking the same goddesses and gods. They often use the same texts as a basis for ritual. As he argues: "with the exception of problems related specifically to Internet technology—from frozen servers, to unexpected 'fatal errors' in one's operating system, to cats who jump on the keyboard and drop the user unceremoniously from the chat room—even pre and post-ritual chatter is indistinguishable from that which occurs off-line. That is, there is nothing inherently special about online ritual, other than … it gathers together those who might not otherwise meet."[46] Cowan agrees with NightMare, Telesco and Knight, and Davis that the Internet can potentially offer an alternative format for rituals, but in his extensive research he found none that has actually met this potential. [47]

Organizing against discrimination and to fight for their civil rights is another use of the Internet mentioned by NightMare. Information about discrimination and a call to write letters are often posted on Pagan Web sites and sent out on Pagan listserves. Lady Liberty League, the legal arm of Circle Sanctuary, maintains a Web site listing current cases of discrimination again Pagans. As many studies[48] show, Neopagans as a group are well-educated and middle-class—a cross-section of American society that tends to be more likely to participate in letter-writing campaigns than lower-class and less-educated people. The Internet is well suited for instantly and inexpensively organizing these campaigns.

FESTIVALS AND WITCH CAMPS

Prior to the widespread use of the Internet, festivals and camps were the main venues that gave Neopagans opportunities to create community. Festivals are large gatherings of Neopagans that normally occur in the spring and summer, although a few take place in the fall. The festivals are organized by Neopagan umbrella groups like Earthspirit Community, Elf Lore, Circle Sanctuary, and Covenant of the Goddess

(COG). The festivals are typically held outside, often at camping grounds or children's summer camps prior to their opening for the season. They have elements of both spiritual retreat and summer camp atmosphere for adults.[49] When entering a festival, one commonly sees people dressed in ritual robes, medieval styled garb, tie-dyed T-shirts and jeans, or skyclad—that is, naked or seminaked. Some individuals who need to hide their identity in their work lives revel in decking themselves out in Pagan jewelry—necklaces, bracelets, earrings with pentagrams, or images of goddesses. Most festivals boast a merchants' row with stalls selling a variety of Pagan-related goods and services, such as crystals, jewelry with Pagan symbols, massages, or herbal remedies for common ailments. A ritual fire, which is normally lit at the beginning of the festival and kept burning until the end, becomes the center of festival life. Rituals open and close the festivals and are held several times a day. Usually one large ritual a day occurs that most people attend. Workshops also take place throughout the day on a variety of topics. Some explore spiritual practices such as mask making, astral projection, and ritual construction. Others are organized as discussion groups to explore common problems within Neopaganism, such as how to raise a Pagan child, coming out of the broom closet, or dealing with religious discrimination. Meals are usually communal and participants are expected to volunteer for jobs around the camp—from working in the kitchen to helping with parking. Conflicts arise over people not meeting their obligations or participating in behavior that is offensive. This can vary from throwing cigarette butts into the ritual fire to making unwanted sexual advances to other participants.[50]

Neopagans come from across the United States and sometimes from abroad to attend festivals. There they meet others and exchange information, see rituals performed, and take workshops. Normally one group or tradition will lead a particular ritual. Others may learn some techniques, poetry, or ritual ideas from that group and then incorporate them into their own practice. Ideas are also exchanged throughout the day, as Neopagans sit around the central fire, dance, sing, and chat with one another. Most Neopagans do not attend festivals, and solitary practitioners are less likely to attend than those who are in groups.[51] Nonetheless, the impact of the festivals, in terms of sharing information and building networks, is greater than the numbers who attend, because people bring what they learned back to their local communities.[52] The effect of festivals is felt least by those who are the most isolated from their local communities. They are the least likely to attend the festivals and the least likely to interact with others who attended.

In addition to festivals, which bring together most if not all forms of Paganism, camps are organized to teach particular Pagan traditions. The Reclaiming Tradition is well known for their Witch Camps, which are offered in nine states in the United States—California, Florida, Georgia, Michigan, Missouri, Pennsylvania, Texas, Vermont, and Virginia. Reclaiming also has Witch Camps in Canada and Europe. The Witch Camps developed from classes offered in the San Francisco Bay Area, initially by Starhawk and a member of her coven, Diane Baker, in 1980. The initial classes, which took place over a six-week period, were so popular that new teachers were recruited to meet the demand. Requests by those who lived too far away to attend

the classes resulted in Witch Camps starting in 1985. The camps are an intensive week of classes, rituals, and group living. Participants are encouraged to take what they learn back to their local communities and teach others. The camps teach the Reclaiming form of Witchcraft, which is feminist, activist, and focused on self-transformation.[53]

The Reformed Congregation of the Goddess, International (RCG-I), also hosts a Witch Camp for Dianic Witches. These camps, which are weekend retreats, are less intense than those offered by Reclaiming. The organization, however, also offers the Cella course in Priestess training, which is done in part by correspondence and in part by face-to-face interactions over a one- to six-year period. Diana's Grove, another Dianic group, also offers Witch Camps and correspondence courses that can be completed either in person at the Witch Camps or online.[54]

In addition to festivals and Witch Camps, two annual women's music gatherings are important: The National Women's Music Festival and the Michigan Womyn's Music Festival. Both are held in the summer. They include Women's Spirituality and Goddess worship workshops, often led by well-known Neopagans, such as Adler, Budapest, and Jade River, one of the founders of the RGC-I.[55] Because there is an elective affinity between Neopagans and other groups, such as those interested in recreating historical periods, the New Age, science fiction, and fantasy literature, Neopagan teachers can often be found at Renaissance fairs, New Age gatherings, and science fiction conventions.[56]

CONCLUSION

The traditional path to Witchcraft and other forms of Paganism was through covens, groves, or groups. These collectives remain important in training initiates, but are becoming less central as more individuals practice alone or with one other person. Books, which since the spread of Neopaganism in the 1960s and 1970s were important in transmitting the religion to the next cohort, are even more important. As the religion grew in popularity, more books were produced that present spell work with little concern for other aspects of the religion. Since the 1990s, with positive images of teenage Witches appearing in movies like *The Craft* and subsequent television shows, bookstore shelves have seen an increasing number of books geared toward teenagers. Concerns were raised by many in Neopagan communities that this resulted in a diluting of the religion. Some speculate that the market in popular works on Witchcraft and Neopaganism is decreasing.[57] What this will ultimately mean for the religion is not clear. It is possible that the market is so saturated with introductory spell books that few if any more can be marketed. An increasing number of young people may be turning to the Internet for their information and therefore buying fewer books. My own research on teenage Witches suggests that, like their elders, they are readers. Teenage Witches search the Internet, at times participating in chat rooms, but they also read books, often those they find recommended on the Internet. Many of them read the classic works, such as those by Starhawk, Adler, Crowley, and Cunningham, and are not interested in spell books.

Although most Neopagans practice alone, a Neopagan community does exist; it is not on the whole a face-to-face community, but one that could best be described as a community of interest: people who are loosely linked through their shared concerns. Neopagans meet on the Internet, at festivals, and at other gatherings. These are venues for teaching and learning about the religion, mythology, and techniques for getting into an altered state of consciousness in order to come in contact with the spiritual world. Some individuals have become noted teachers through writing books, editing journals, running festivals, and organizing umbrella organizations. Others are known as teachers only on a small scale in their own local community where they work with a few people each year in their coven. Since Neopaganism has no accrediting agencies, anyone can become a teacher—but not all who teach are respected and not all well-known. Learning about Neopaganism is often multifaceted; people take lessons, participate on the Internet, and read widely on mythology, anthropology, and Witchcraft. However, as an increasing number of people become Pagans outside of training groups they are more likely to be eclectic—combining different strands of Paganism as they choose. Almost counterintuitively this has resulted in not greater variety but less, as Neopagans rely on the same books and Internet sites for information on how to do a ritual and engage with the other world.

New and Alternative Religions in the United States: Ritual and Neopaganism

Adrian Harris and M. Macha NightMare

INTRODUCTION

Most of this essay has been entirely cowritten by M. Macha NightMare and Adrian Harris. For the section on *Neopagan Ritual in Practice,* however, we wanted to offer a more personal expression of this experiential spirituality. To that end, NightMare speaks there of her own experience of the Reclaiming Tradition.

As practicing Neopagans, we temper many years of experience with academic understanding to craft our perspective on this fascinating topic. Because Neopagans honor personal experience above any human authority or tradition, this diverse practice is in constant flux. As a result, whatever we write dates quite quickly. But rather than count this as a problem, we consider it as a mark of the vigor of the movement.

Neopaganism is one of the fastest growing New Religious Movements in the United States, and ritual is its primary expression. Both terms are somewhat problematic, and fixing a meaning of either seems an invidious task.

Given that *any* attempt at definition will necessarily be selective and blur subtleties, we offer our own as a guide that describes *most* Neopagan ritual, but note that it is an evolving practice.

A Neopagan ritual is a process played out through performance. It is set apart from the mundane and involves physical activity and symbolic verbal or nonverbal communication expressed through multiple sensory modalities. Some Neopagan ritual intends to engage with "ultimate reality" or mystical powers and takes place in the context of a heightened emotional state.

HISTORY OF NEOPAGAN RITUAL

> …in the absence of ritual, the soul runs out of its real nourishment, and all kinds of social problems then ensue.
>
> —*Malidoma Patrice Somé*[1]

Although some Neopagans claim links with ancient traditions, most celebrate the creative potential of following eclectic new spiritual paths. The tongue-in-cheek suggestion that there are as many Neopagan belief systems as there are Neopagans is not so far from the truth: New "traditions" constantly emerge, and existing practices are in flux. Mapping a history of such a varied landscape is tricky, but there are sufficient landmarks to show the lay of the land. Different Neopagan rituals share family resemblances and emerge from a common stock. In addition, most Neopagans venerate more than one deity, draw on ancient myths, weave magic (variously defined), and often believe in reincarnation.

Neopagan rituals draw inspiration from many myths and stories, both ancient and modern. However, the most common influences are the pre-Christian religions of northwestern Europe, ancient Egypt, Rome, and Greece. Whereas most Neopagans use the past as a creative resource, Neopagans called Reconstructionists attempt to revive or emulate earlier faiths as closely as possible.

To guide you through this complex landscape, we explore four intersecting pathways in the history of Neopagan ritual: Neopaganism as a "Nature religion," British Traditional Wicca (BTW), reconstructed traditions, and feminist spirituality.

NEOPAGANISM AS A NATURE RELIGION

Terminology is confusing and changeable, but most commentators on Neopaganism refer to it as a "Nature religion," a term that has been used extensively since the early 1970s to designate indigenous folk religions that make Nature their symbolic focus. Those who practice such religions venerate both "external nature and our own physical embodiment."[2] We see this veneration repeatedly expressed in Neopagan ritual; however, other influences complicate this practice.

Another term often used is "Earth-based spirituality." This term, along with "Nature religion," usually designates the various Neopagan traditions and does not imply indigenous folk religions, "ethnic" religions, or reconstructed religions.

In the world of international interfaith organizations, indigenous and tribal religions are considered to be Pagan, while contemporary revivals and reconstructions fall under the general term of Neopaganism.

BRITISH TRADITIONAL WICCA

Wicca, also known as "the Craft," is the most common form of Neopaganism in the United States and provides the foundation of most Neopagan ritual. It began with Gardnerian Wicca in the United Kingdom during the late 1940s and was soon joined by the offshoot Alexandrian Tradition. A third generation of Wiccan traditions later emerged, which included Raymond Buckland's Seax-Wicca.

The origins of Wicca remain in debate, but we can draw some conclusions regarding its ritual. Two linked influences are apparent: the Western Occult Tradition and Freemasonry. The Western Occult Tradition remained hidden for many years, but

during the Reformation and Enlightenment periods it manifested in the founding of Rosicrucian and Masonic organizations.

Aidan Kelly plausibly proposes that the Western Occult Tradition led to the emergence of Modern Druids, the Theosophical Society, Wicca, and the New Age movement.[3] Furthermore, the rituals, symbolism, and terminology of Freemasonry were "absorbed into … the rituals of the neopagan witchcraft movement."[4]

The influence of the Western Occult Tradition leads to what Harvey calls "the Gnostic temptation" in Neopaganism.[5] Because much of its ritual structure is taken from this esoteric tradition, some Neopagans sometimes "do or say things which denigrate matter."[6] He suggests that this influence might create a kind of "schizophrenia" in Neopagans who celebrate Nature yet seek transcendence.[7]

Susan Greenwood draws the related conclusion that the purpose of some modern witchcraft is more about enabling personal growth than creating a deeper relationship with Nature.[8]

The extent of the influence of BTW on North American Neopagan ritual is difficult to gauge. We note two points of discussion. First, although conventional wisdom has it that BTW came to the United States in the 1960s, evidence suggests that it arrived much earlier. Chas Clifton suggests that two Americans, independently of one another, brought Craft, as it is called, to the United States from England.[9] One, a career military man named Ed Fitch, anonymously published a book called *Rituals of the Pagan Way / A Book of Pagan Rituals*[10] that was widely used by American Neopagans for many years. The other, the late Joe Wilson, was stationed in England during his term in the U.S. Air Force. When he returned to the United States, Wilson carried on extensive correspondence with the late Robert Cochrane/Roy Bowers in England; copies of these letters have also been widely circulated, informally, throughout the American Pagan community. Both Fitch and Wilson subsequently published books and other writings about Witchcraft and shamanism in the United States.

Second, a North American Pagan revival was emerging well before British Craft arrived. Victor and Cora Anderson were practicing a form of witchcraft in Oregon as early as the 1930s. Originally called Faery tradition, later changed to Feri to distinguish it from other Craft traditions of similar names, their rituals were a synthesis of several strands, drawing heavily on Appalachian folk magic from Cora's childhood in northern Alabama, as well as African, Pictish, Yezidi from the Middle East, Hawaiian Huna sources, and Silva Mind Control.

As noted above, the Western Occult Tradition and Freemasonry had an early influence on British Wicca, and there is a long history of Freemasonry and lodges in the United States. Many elements from Freemasonry appear in contemporary Craft rituals. Among them are the symbol of the pentacle, or five-pointed star, the use of the phrases "Blessed Be," and, to seal a spell and assure its efficacy, "So mote it be." Ritual roles such as the Masonic "tyler" have become the "Man in Black" or the "Summoner" in Craft. The binding and blindfolding at initiation is part of both Masonic and Craft ritual, as is the swearing of an oath, although the specifics of the oath itself differ.[11]

Contemporary Craft traditions, based on a Wiccan, or BTW, format, include elements from Native American spiritualities, New Age, Buddhist, Hindu and other religions, as well as the human potential movement.

RECONSTRUCTED TRADITIONS

As Neopaganism grew in visibility and popularity, and as mongrel Americans of mixed genetic and ethnic heritage, instead of seeking assimilation into the mainstream of American culture, sought their (mostly) European roots, Neopagans began to reconstruct ancient Pagan traditions. Drawing from history, anthropology, mythology, and folklore, and using texts when available, people created rituals and traditions that addressed their personal ethnic and national heritages.

Perhaps the most widespread of the reconstructed traditions are various forms of Druidry and Celtic reconstructionism. Among other notable traditions are Hellenismos (reconstructed Greek religion), Nova Roma (reconstructed Roman religion), Kemetic (Egyptian), Polonia (Polish folk tradition), Canaanite-Phoenician, and Sumerian, as well as Stregheria, or Italian Witchcraft. Some practitioners of Asatru, a Norse Paganism whose adherents call themselves Heathens, fall under the broader classification of Neopagan; however, many Heathens consider their religion to be ethnic rather than a Nature religion or an Earth-based spirituality.

The rituals of these traditions are often performed in the language of the original practitioners, or a language as closely resembling the original as it is possible to know.

FEMINIST SPIRITUALITY

Neopaganism has always had a countercultural feel and to some extent is a reaction to patriarchal religions. Not surprisingly, Second Wave Feminism (SWF) in the 1970s took an interest in Neopagan ritual. An important element for women in the women's liberation movement was the acceptance of, love of, and respect for the female body. SWF fostered an appreciation of the values of roles such as motherhood, weaving, and cooking, traditionally performed by women. Women's overlooked history suggested to some that there had been a golden age of matriarchy in the distant past. Lacking adequate evidence, this theory has not withstood scrutiny; however, it served as a compelling emotional unifying force at the time, and perhaps continues to do so. Most importantly, many feminists found tremendous healing, support, and comfort in having a feminine image of the divine. Thus was born goddess spirituality.

Because Witches in popular culture were portrayed as ugly old hags unworthy of respect, early feminists "reclaimed" this word and applied it to themselves. In addition, mainstream religions were essentially male-oriented and male-dominated, further alienating women from the religions in which they were reared. Thus, the format—and the glamour—of BTW was wedded to a goddess-focused spirituality. Neopagans whose ritual style is based on BTW and whose rites center solely on goddesses are known as Dianics.

This development meant that, for some at least, Neopagan ritual became political. Margot Adler concludes that the only political Neopagan group of significant size is the "thousands of women from Greenham Common[12] to New York to California who are combining political action with women's spirituality and earth reverence."[13] Key influences are Starhawk and the Reclaiming Tradition, Z. Budapest, and archaeologist Marija Gimbutas. Feminist spirituality is generally nonhierarchical, creates eclectic detraditionalized rituals, and celebrates radically embodied notions of spirituality. Ronald Hutton believes that integrating the women's spirituality movement into the Craft was "America's most distinctive single contribution to that witchcraft."[14]

One notable result of the growth of Feminist spirituality is a rise in political and environmental activism among Neopagans that has led to the emergence of "Eco-Pagan" rituals described below in "Neopagan Counterculture" and "The Power That Connects."

KEY ASPECTS OF NEOPAGAN RITUAL

> It is a consciousness-altering technique, the best there is.
>
> —*Alison Harlow*[15]

When most people think of Neopagan ritual, they think of exotic rites involving fire, chanting, flowing robes, and ecstatic dancing. They would not be wrong, for these words do describe elements of many Neopagan rituals. Neopagan rituals share many elements in common, yet are astounding in their variety and endless creativity.

Broadly, Neopagan rituals are celebrations (e.g., festivals), veneration (e.g., shrines), rites of passage (e.g., initiations), or an attempt to shift existing patterns (e.g., spellwork). Many mix these somewhat simplified distinctions.

Neopagan rituals may be private or public, political, personal, or both. They may involve hundreds or just one person.

At one end of this spectrum lies public ritual. Such events include festival celebrations organized by one of the larger Neopagan organizations, such as Circle Sanctuary in Wisconsin or EarthSpirit in Massachusetts, or a political ritual to highlight an environmental or social issue.

The antinuclear protests at Lawrence Livermore National Laboratory in California in the early 1980s, where protesters prepared for action with a dramatic burning of a wicker man, exemplify political ritual. The action itself very effectively combined protest with ritual as participants wove a giant web entangling police efforts to break up the group.

Public rituals are open to anyone and are advertised; semipublic rituals are by invitation only. These are usually celebratory events that take place in someone's home, in a larger rented property, or on private land.

Most such rituals are part of a gathering that may last a day or a couple of weeks. Over the course of a week-long festival, there may be many rituals. There is an

opening ritual and a closing ritual, with several more specifically focused rituals, such as coming-of-age rituals for young and old people, handfastings, etc., in between.

In her study of such festival events in the United States, Sarah Pike notes how important they are to creating a counterculture because they offer a shared reality that is very different from what Neopagans experience in their everyday lives.[16]

Pike's study gives a fascinating example of how festival goers use ritual dance to gain a more positive attitude toward their bodies. She provides an evocative description of a Fire dance ritual at Starwood, one of the largest Neopagan festival gatherings:

> …once the fire is lit there is no leader, no orchestration, no focus of attention, and the ritual develops its own organic forms. Emerging structures and patterns are unplanned and unspoken, taking shape in the interplay of drums and movement.[17]

The ritual continues through the night and a few will greet the sunrise with dance. The ritual dance Pikes describes exemplifies several aspects of Neopagan ritual in general. Because ritual space is safe, it is liberating: The dancers can fully express themselves because they are free from sexual harassment or social comment. As a result, participants come to "trust their bodies in ways that are new for them."[18] This trust allows participants to explore unfamiliar dimensions of physical expression: they move in different ways, finding new relationships between body and space that can transform the self.

Pike's personal experience of the ritual dance hints at its power:

> Upon entering the circle, I was overwhelmed by heat and smoke and mesmerized by the drums, and I began to feel a sense of oneness with the dancers and drummers … The endless circling facilitated our disorientation in time and space. It was this disorientation that played with the boundaries between self and other that made possible the feeling of union with others.[19]

Surrendering to the power of the ritual fire can bring a profound shift in how participants experience their bodies that remains long after the festival has ended. One festival dancer explained how "ritual dance may also be used to work on personal issues which are too threatening or deeply buried to address in our everyday consciousness. Emotions which have been repressed … can be allowed expression and worked through in the safe space created by dance."[20]

The festival culture is somehow more "real" because it embodies an ideal reality and offers heightened experiences. Ritual is an essential part of the process of creating this magical reality. An understanding of how this is achieved emerges in the course of this chapter.

Although festival culture is important, the majority of Neopagan rituals are private events involving small groups of close friends. Compatible people come together for ongoing ritual work, usually but not always under the guidance of a high priestess, high priest, or both. Sometimes several people with no training or outside guidance will form a ritual group and work from a book. These groups are called covens, groves, nests, cells, or other similar terms. They work together and grow, magically and spiritually, over a period of years, during which time their relationships bond.

Their understandings of ritual and its effect on their lives and the world deepens. They consider themselves as family.

Individual circumstances may make solitary ritual the only option; however, some deliberately choose to work alone. In principle, an individual ritual can achieve anything a larger one can, and most Neopagans work alone at least occasionally. Common examples are rituals that are focused on an altar or shrine, which are usually part of Neopagan personal practice. An altar typically holds sacred objects symbolizing the season and will change with each Festival. (See "Neopagan Ritual in Practice" below.) A shrine is an altar to a specific deity and serves as a way of venerating and building a relationship with them.

LIMINAL SPACE

Almost all Neopagan rituals take place within a "sacred circle," one notable exception being altar and shrine work. Altar and shrine work typically occur outside a circle because they are not usually concerned with raising power nor do they require protection. The circle may be physically marked out, but usually the participants "cast" a circle by visualizing it and using words, gestures, and tools to aid that visualization. (See "Neopagan Ritual in Practice" below.) The circle creates a sacred space, "between the worlds and beyond time" in which the ritual can occur.

Different people understand the sacred circle in different ways. For some Neopagans the circle is there to protect and ward off intrusion, while others cast a circle to help focus the power raised by the ritual. Still others explain it as being like a mixing bowl that serves both functions.

The circle also serves other functions. We can usefully describe the sacred circle as a "liminal" space. A limen is literally a threshold or sill, so a liminal space is one that is betwixt and between—neither one place nor another. The liminal space of the sacred circle marks a space that is outside normal social roles, responsibilities, rules, and even modes of thought. As a result, the circle provides the potential for great freedom and creativity.

Neopagans use the format of a circle for many reasons. When people come together to talk, they instinctively tend to group themselves into a circle, and humans circle round hearth fires. Circles are egalitarian, with no single person being above, below, or aside from everyone else. Circles are found in Nature in such things as tree trunks, flowers, the sun and the moon. Earth circles the Sun. Most significantly, perhaps, the horizon is circular. If you can see the horizon, you are always in the center of a vast circle. So the magic circle is a microcosm, a smaller version of the world. The center or focal point of a circle is like an umbilicus, the point between inside and outside, between life and death, between the world of matter and the world of spirit, the portal between the worlds.

ALTERED STATES

One result of the entry into the liminal space of the sacred circle is a shift away from more usual states of consciousness. This shift may be subtle or profound.

Some Neopagan rituals do not create altered states of consciousness. A handfasting (marriage), for instance, ritually sanctifies and celebrates the commitment of two (or more) people to each other in the presence of their loved ones. A ritual marking a change in the seasons is essentially celebratory in nature. It is aesthetic, but may not require a powerful ritual. An initiation or therapeutic ritual, however, is designed to have a profound psychological impact on the participants.

How does Neopagan ritual create an altered state of consciousness?

There are many sacred technologies that can shift us to a heightened state of awareness, and Neopagan ritual uses most of them. The most common are guided meditation, breathwork, and the powerful combination of rhythm, movement, and dance. We discuss these techniques in more detail in "Neopagan Ritual in Practice," below.

Some Neopagans use entheogens[21] and sexual intercourse in rituals, but neither is common practice. Many Neopagans are explicitly critical of any use of entheogens, believing that they are too unpredictable and tend to confuse rather than enlighten. When they are used, entheogens are generally part of a personal ritual in a shamanic tradition.

The popular idea that Neopagan ritual regularly involves sexual activity is unfounded. Although sexual contact between consenting partners does occur in private rituals, it is by no means common.

Gardnerian Wicca traditionally used scourging at every ritual, but this is unusual today. Traditional Wiccan initiations still include gentle scourging of the back. Although this was primarily intended to symbolize purification, the practice does have physiological effects that change consciousness. Scourging draws blood to the surface of the skin and thereby reduces blood flow to the brain, resulting in a light trance.

SYMBOLS

For Victor Turner symbols are "the basic building-blocks" of ritual.[22] Rituals speak to us at a deep level and use a language that we intuitively understand—the language of symbols.

Starhawk describes a simple street ritual that took place during the Genoa protests in 2001:

> We brew up a lovely magical cauldron—a big pot full of water from sacred places and whatever else women want to add: rose petals, a hair or two, tobacco from a cigarette, anything that symbolizes the visions we hold of a different world.[23]

Simply having the image of a strong, self-reliant goddess on an altar during ritual provides a more empowered attitude on the part of female participants. Worshippers place upon their altars images of deities that show qualities, strengths, and characteristics they admire and seek to emulate. This incorporation reaches deep within the psyche to assist people to develop those qualities within themselves. Bright, colorful flowers on a Springtime altar remind us of life's renewal. A harvest altar heaped with

the bounty of the fields and orchards conveys a sense of abundance without a word being spoken. Photographs of and small articles belonging to our departed loved ones ("Beloved Dead") on altars commemorating the dead bring them closer to us in spirit.

A symbol most Witches and Wiccans associate with their religion is the encircled pentacle, which symbolizes different things to different practitioners. However, one basic understanding corresponds the five points of the pentacle to the elements—Air, Fire, Water, Earth, and Spirit. The symbol that binds most Druids is the *awen* ("inspiration"), a circle containing three "bars of light" converging toward three dots. Such symbols as the pentacle and the *awen* help create a group identity.

CREATING RITUALS

Most religious ritual relies on the legitimating authority of tradition. The ritual has been performed in a particular way for many years; this is taken to guarantee its authenticity. Changes to such rituals require a special dispensation from a recognized spiritual authority, and if it is not performed properly it may be deemed ineffective.

But Neopagan rituals are unusual in that they are very often self-consciously created for the occasion.[24] Neopagans do not recognize *any* human as a spiritual authority and judge the effectiveness of a ritual entirely in terms of personal experience. (See "The Importance of Personal Experience," below.) Some Neopagans specialize in creating effective ritual, often understanding it as a form of sacred art.[25]

As we can see, this is a very flexible practice, and there is a wide range of practice from reconstructed rituals, through rituals of specific Neopagan traditions to eclectic workings.

Reconstructed and "traditional" rituals are usually carefully structured while the eclectic workings may be spontaneous. Eclectic rituals are, however, highly variable, and many are carefully planned and tightly structured.

RECONSTRUCTED RITUALS

A minority of Neopagans seek to reconstruct and recreate ancient rituals as accurately as possible. Their efforts are challenging, because adequate research into the ancient practice may be unavailable or conflicting and, of course, what was acceptable in a past culture may not be acceptable today.

Some Nordic Neopagans seek to recreate the rituals of pre-Christian Northern Europe that are described in medieval Icelandic literature and other sources. Rituals of reconstructed traditions are often conducted in the language of the parent religion, i.e., Celtic and Druid rituals in Gaelic or Hellenic rituals in Greek. In addition, they may wear clothing, jewelry, and accessories like those worn in the time and place that the tradition was previously practiced.

"TRADITIONAL" RITUALS

There are many different "traditions" in Neopaganism, including various forms of Wicca, Witchcraft, and Druidry. Using fairly common basic structures, each tradition has its particular style of working ritual. Although a Wiccan would recognize the structure of a Druid ritual, and vice versa, they would also be aware of significant differences. There are variations in language and symbols, the degree of formality, how the group invokes the sacred, which deities are celebrated, and even the timing of rituals. These differences give the rituals of each tradition different voices, character, and nature.

Rituals in these traditions are still being created and constantly evolving, but each works with the appropriate symbolic vocabulary.

ECLECTIC RITUALS

Many Neopagans choose to practice outside any recognized tradition. Instead, they freely combine aspects of many practices—both sacred and secular. Although Eclectics do look to the existing Neopagan traditions for inspiration, they might weave in Eastern religious practices, ideas from the human potential movement, and aspects of performance art.

BODY AND NATURE

Because most Neopagans consider their practice to be that of a Nature religion, a sensual relationship to nature lies at the heart of the spiritual practice. Deity is immanent in the physical world, and both the earth and the body are considered sacred. For Neopagans the natural environment is a fundamental source of spiritual truth: Jone Salomonsen noticed that the ritual symbols used by Reclaiming Witches in San Francisco are grounded in "ordinary human life and the human body, sexuality and parenting, as well as the earth and the seasonal cycles of the natural world."[26] This is typical of Neopagan practice in general.

The celebration of the passage of the seasons—the "Wheel of the Year"—structures the annual cycle of Neopagan ritual practice, and the deities venerated are understood as being immanent in Nature. (See "Neopagan Ritual in Practice," below.)

Ritual theorists have long recognized that the body is fundamental to ritual. Because we experience ritual in a heightened emotional state, a gesture or physical movement becomes loaded with symbolic power: what would be a simple wave of the arm in everyday space becomes an invitation to deity in the sacred circle.[27]

It is useful to understand ritual as a kind of bodywork that can be profoundly healing. Pike's discussion of ritual dance (see "Key Aspects of Pagan Ritual," above) provides a good example, while Salomonsen believes that ritualizing has the power "to deeply alter the consciousness and embodied thinking of western people."[28]

NEOPAGAN COUNTERCULTURE

By now it may be apparent that Neopagan ritual has strong countercultural dimensions. Neopaganism grew up in the counterculture 1960s and 1970s, and, although today its increasing popularity may be drawing it toward the mainstream, Neopagan practitioners continue to question social norms, just as counterculture enthusiasts did 30 or 40 years ago.

This aspect of Neopaganism is perhaps most apparent in the closely related Eco-Pagan and the women's spirituality movements. Eco-Pagans partly express their spirituality through environmental activism and rituals of resistance. For Eco-Pagans belief in the sacredness of Earth leads inevitably to political action. The rituals of the women's spirituality movements are similarly intended to create a space of resistance. According to Kay Turner, the feminists using these rituals believe them to be the most "radical affirmation of the revolutionary potential of the feminist movement."[29]

In patriarchal societies, which have been the norm worldwide for centuries, if not millennia, female children are socialized in ways that are not always in their best interests. Nor are they in the best interests of male children. These mores often inhibit, if not prohibit, women from expressing their full potential as humans. For instance, women were taught to defer to males, to "play dumb," and to be subservient. Married women could not have their own bank accounts, hold separate property, make decisions affecting their own bodies and reproduction, or establish credit independently of their husbands. Even worse, patriarchal societies tend to condone abusive behavior towards women. They teach the young that women are less worthy of respect than men. One of the major appeals of goddess spirituality and Dianic Witchcraft to women is the healing and empowerment that can be gained from the rituals. Encountering feminine images of the divine is a source of tremendous validation for women.

CROSSOVERS

By no means would all those in the women's spirituality movement identify as Neopagans, and neither are all environmental activists Eco-Pagans. But these connections exemplify the importance of crossovers between Neopaganism and other groups. There are also significant overlaps with the New Age movement, as well as Eastern, Native American, and African diasporic religions.

IMPORTANCE OF PERSONAL EXPERIENCE

As we noted above, Neopagans assess their ritual entirely in terms of personal experience, and religious authority is grounded in the self rather than any external institutions. Peter Beyer suggests that having personal experience as a "final arbiter of truth or validity" is a defining feature of Neopaganism.[30] Neopaganism is based not on belief, but on practice. As Adler says, Neopagan beliefs are "not based on

creed, they are based on process, they are based on ceremony."[31] We could go so far as to say that many Neopagans have no fixed belief system and our practice evolves from life as lived.

NEOPAGAN RITUAL IN PRACTICE

To better illustrate Neopagan ritual practice, Macha provides a personal view of her experience of a Witchcraft ritual in San Francisco. *Macha writes:* Here's a glimpse of a Witchen[32] seasonal celebration honoring the dead:

> Three guests of the host covens sit in the living room of an apartment in anticipation of our first "real Witches' sabbat." Preparations are going on in the penthouse above us. Now and then someone descends the stairs to fetch something or to tell us it won't be long before we start. None of us has met one another until this night. When the ritual space is ready, a priestess comes downstairs and tells us to remove our clothes, for this ritual, being "traditional," is skyclad, meaning that all celebrants are clad by the sky, or naked.
>
> Then she blindfolds each of us and leads us up the stairs. When we reach the door to the ritual room, we are told to put our hands upon the shoulders of the person in front of us. We walk in, we know not where. We are instructed to keep our hands on the shoulders of the person in front of us, to chant the words, "Set sail. Set sail," while swaying to the rhythm of the chant. We are going to the Isle of the Ever Young, the land beyond the mists, the place on the other side of the veil where the spirits of the dead live, for it is Samhain, the most sacred night of the year.

This is how I remember the first private ritual I was ever invited to attend. Of course, there was much more to the ritual than the little I have described. I am guessing that one of the first questions the reader might have is "what about this skyclad[33] business?"

In all my readings about Witchcraft up until that time I had read that Witches performed their rituals in the nude. There is more than one reason for this custom. One is that there is no visible difference in class or social status among unclothed people; the prince and the pauper are the same, just men. Another reason is that clothing can restrict the free flow of energy, and one of the things we cultivate in ritual is energy flow.

As you might expect, I was nervous about taking off my clothes with a bunch of strangers. The only person I knew before that night was the woman who invited me. The company was mixed gender. My nervousness was not so much because I was uncomfortable with nudity as a concept, or that I felt shame about the naked human body. It was not because I had a moral objection to nudity. It was because of my shyness about body image and whether my body was beautiful. But because I was blindfolded, I could let go of my apprehensions.

Nowadays, with the many changes that Witchcraft has undergone as we have emerged from the broom closet, fewer people seem to worship skyclad. Even at that time (1975), there were occasions when people wore ritual robes when they circled. Nighttime outdoor rituals always required robes for warmth. Some covens worked

robed rather than skyclad, only occasionally going skyclad for very specific rituals. Today we find people in various kinds of dress, stages of undress, or nude.

The point of these changes in clothing or doffing of clothing altogether is that they tell our hearts and minds that we are about to go into sacred space. We are preparing to shift our consciousness from the mundane to the magical. We are beginning to engage what in Reclaiming Tradition is called "child self."[34]

Ritual preparation is every bit as important as performing the ritual itself. We clean and rearrange and prepare our ritual spaces before our rites. We sweep, vacuum, dust, put away extraneous things, and clear up clutter. We clean old candle wax from holders; we wash and polish. We spread altar cloths on tables, and we find the right vase for flowers, greenery, and feathers. We select candles in the colors we want to use and the best incense for the purpose of a particular ritual.

When I do these things, when I set up a space in my home for working magic, when I get into it, I begin to build the ritual. Once the space and tools are cleaned, I withdraw to prepare my body with a purificatory bath or shower. I might choose to immerse myself in a particular herb or salt bath and to anoint myself with a special oil or lotion. Sometimes I will burn a candle, sometimes light incense in our bathroom. Once I am clean and robed, I return to the ritual space to set up the altars.

Ritual Roles

In many Witchcraft traditions, each coven has a high priestess and a high priest, or perhaps only one or the other. The shorthand terms used are HPS and HP. The covens in my tradition (Reclaiming), however, are based on group priest/esshoods where specific priestly roles are rotated or shared. We use the word priest/ess as both a noun and a verb, and we use it when we are speaking of any gender.

So a woman or a man is the priestess or priest who "priest/esses" a ritual when she or he assumes a specific role that moves the ritual along. In this essay I use those terms. In large public rituals we have other assigned roles, sometimes called "rehearsed participants." However, in small group work we have no need of these other roles.

Other traditions have such roles as a Maiden, who assists the HPS. A Man in Black or Summoner may give notice of meetings, guard the entrance to the circle, and admit individuals into the sacred space that has been created. In Reclaiming, we are all standing in circle together, and it is from that point that we all create sacred space around ourselves, rather than entering a space that has been erected by others. No one style is right or wrong: different styles appeal to different people.

Purification

Before a person can enter a sacred space, she must be ritually clean. She needs to let go of any cares and worries she may carry from her life before she enters the circle. I have already discussed purification. Here I mention some other methods we use to ritually purify ourselves and each other.

The most common method of purification is with water and salt. Salt is added to water and stirred until it is dissolved. Then the solution may be sprinkled on each person. Or the bowl may be passed to each person in turn so she may perform her own personal ablutions. Or a priest/ess might anoint each celebrant with consecrated oil, usually on the brow. A saltwater purification may involve anointing the brow, lips, heart, palms, or other parts of the body.

Another form of purification, called censing, is done with smoke. The priest/ess may use a bundle of burning sage, an abalone shell, or other nonflammable container with burning cedar, Indian sweet grass, or rosemary. Or she may burn frankincense, myrrh, copal, or other incense in a swinging censer on a chain. Incense smoke is also used to consecrate people and objects, or to "charge" them. Consecration sanctifies and dedicates an object or person to a specific purpose and is different from purification.

Regardless of whether one enters from outside a sacred space created by others or one is already within the space created with others, an act of purification precedes the ritual.

Creating Sacred Space

Creating sacred space means ritually erecting a safe space where those within can focus exclusively on the work at hand. This can be done in any number of ways. Many Witches use the besom, or Witch's broom, to sweep a space of negative energies, thus purifying the physical space where the circle will be. If the ritual space has already been set up, a challenger may confront each individual seeking to enter with a question before admittance is granted and the person steps over a broom that marks the circle's threshold.

A circle is a temporary mandala. It can be drawn on the floor or ground, with paint, tape, chalk, colored powders, corn meal, seeds, or flower petals or traced in the sand on a beach. This act is called "casting," or erecting, a circle.

Some covens may circumambulate the space with salt water and incense before the actual casting is done. They may draw the circle with a wand, staff, stang (two-pronged staff specific to some traditions), or sword.

Once the circle has been cast, the ritualists are "between the worlds."

Once a circle has been cast, it should not be broken. Small children, dogs, and cats seem to be able to go in and out of a circle without disturbing the containment that the circle provides, but adults, who are there to participate fully and not to passively observe, must honor the sanctity of the circle by remaining inside until the circle is ritually opened, or taken down, by a priest/ess. The hosts will usually advise people just before beginning a ritual to give them time to use the bathroom. If there is some exceptional reason why one must leave before the ritual is complete, he can be "cut out" by tracing a portal on the periphery and stepping through it. When outside the circle, the door is closed by retracing the portal in reverse. Some covens might have a designated person such as the Man in Black, tyler, or dragon who will help anyone who needs to leave and reenter the circle. This ritualistic "cutting" and

"closing" prevents the energy being used in the circle from "leaking" out, and it also assures the continued focus on the matter at hand by other celebrants.

Altars and Tools

The most practical purpose for having altars in ritual spaces is to hold the tools that will be used, including candles, salt and water, incense, blade and wand, chalice or cup, and pentacle, all usually set out upon an altar cloth. Altars serve our aesthetic sensibilities when they display images of deities, statuary, natural objects such as shells, feathers, rocks, flowers, and/or seasonal greenery. By taking care in choosing what is put on the altars, a mundane, even ugly, place can be transformed into a place of beauty.

Altars are built for specific purposes. Some Pagan traditions have a very specific altar layout: each item has its prescribed place. The same deity iconography—statuary, paintings, photographs—is used at each gathering. Or every altar may be a new work of art.

The specific purpose of the ritual suggests which items are put upon the altar, which incense burned, what color candles lit, what deity(ies) invited, and whose witness or aid is sought. Creating an altar for a Moon ritual brings to bear a slightly different sensibility than creating one to celebrate a maiden's first blood. A Yule altar will contain slightly different items from those found on a Beltaine (Mayday) altar. Choice of color, flowers, imagery, incense, and other variables enhance the sacred space and aid the work.

The number and placement of altars differ from group to group and from one ritual to another. Dianic circles tend to set their altars in the center of the ritual space. Some groups have one altar in the North and three other "point candles" in the Quarters, while others will have four altars, one for each element, the most common elemental correspondences being East to Air, South to Fire, West to Water, and North to Earth.

These seemingly more housekeeping-type activities have a part to play in making the best, most efficacious, most powerful, moving magic.

Grounding and Centering

Once all celebrants have formed a circle, a priest/ess leads a short meditation to "ground and center" everyone. This commonly involves holding hands in a circle, closing the eyes, and breathing deeply together. She may also lead a guided meditation. These practices allow celebrants to drop their mundane cares and concerns.

In my tradition, we use the image of the tree of life as our body, with roots extending down into the deep, dark Earth and branches reaching to the sky. A group becomes a sacred grove of trees all standing together and shading each other. At the conclusion of grounding and centering, all are ready to focus on the ritual and nothing else.

Sacred Technologies To Change Consciousness and "Raising Energy"

Neopagan worshippers of the Old Gods, of Gaia, of Mother, have an array of techniques to advance their personal and collective spiritual practices. In seeking to tread a path in balance, harmony, and respect for Nature, Neopagans use these technologies of the sacred to help shift consciousness and to aid and fortify magic.

The most obvious means of effectuating change are rhythm and drumming, breathwork, chants, song, and vocalization, as well as dance, movement, gesture, and asana.[35] Cleaning and preparing the ritual space, indoors or out, initiates the process of using sacred technology to change consciousness.

All, some, or none of these sacred technologies can be found in an individual rite. Some things may not work as well for one person as others. For instance, I can shift into a magical consciousness in my bedroom, which is already an intimate and sanctified space in my life, almost immediately by lighting quarter candles and perhaps incense. On the other hand, one friend of mine never uses candles except when working with others who do. He does not erect altars either.

Some people use fasting and/or entheogens to enhance their practice. For others—for reasons of health, their own moral consciences, predisposition, or the legal climate—fasting or ingestion of mind-altering substances is not an option.

A drummer may set the pace and guide the dancing, singing, or chanting. Or a group may use rhythm in a way for everyone to participate. They may have an assortment of rattles, tambourines, sistrums, castanets, finger cymbals, drums, and other rhythm instruments for all celebrants to join in the rhythm making. A common technique for "raising energy" is dancing, unless there are celebrants who cannot indulge in vigorous exercise.

Whichever of these techniques are employed in a particular rite, they are all part of a common treasure.

"Cakes and Wine"

At the end of a ritual, all share a drink and some food. This part of ritual is called cakes and wine, cakes and ale, the feast, or some other similar term. This traditional term may be inaccurate if the group does not use alcoholic beverages in its rituals. Alternatively, there may be more than one communal cup going around so that those who cannot indulge in alcoholic substances are still part of this communal toast. This communal breaking of bread allows for socialization and fun.

One or more priest/esses bless the beverage and food to consecrate it for consumption. The chalice and plate of food are usually passed around the circle deosil (clockwise), sometimes with a blessing such as "May you never thirst" or "May you never hunger." Cakes and wine are not necessarily limited to those two substances; many rituals, especially large sabbat celebrations, include an entire shared meal. In our tradition, cakes and wine are potluck, with everyone expected to bring something to eat or drink to share.

Sharing food and drink also helps us to "ground" after people have raised a lot of energy. This is an important element, since people who are not grounded well enough, who are not safely back into their everyday reality, can have problems negotiating life outside. They may find it difficult to drive or navigate. Their awareness of the mundane is compromised, and they are therefore vulnerable in the outside world.

Post-Ritual Evaluation

No ritual is complete without an evaluation. How did it go? What happened for you? What worked? What did not work? What should be repeated another time? What should be revised, and what should be abandoned because it did not work at all? I do not think it is fair to try to analyze a ritual until it has been given a chance to work its effect. Therefore, this should not be done until at least 24 hours have elapsed.

Critiquing a ritual does not mean criticizing the priest/ess(es) and their acts. Rather, critique tells how each individual experienced the ritual—what felt good, what sent a thrill through one's body, and what fell flat. This not only helps the process of integrating the experience into one's life, it also helps the ritual designers to know what is effective for others.

Each ritual should be approached with respect, awareness, and an open heart and mind to allow for the full experience that good rituals can provide.

THE PURPOSE OF NEOPAGAN RITUAL

> The purpose of ritual is to change the mind of the human being. It's sacred drama in which you are the audience as well as the participant and the purpose of it is to activate parts of the mind that are not activated by everyday activity.
>
> —*Sharon Devlin*[36]

All humans perform rituals of many kinds every day. Sacred ritual is what we humans do to create a sense of sacredness in an otherwise seemingly dull mundane world. We set aside a special time and place to focus on the spiritual aspects of our lives. Our ancestors may have used sacred drama to help us attain a sense of oneness with the cosmos. Ritual, which may have evolved from sacred drama, can help us access parts of ourselves that our rational minds normally obscure. Ritual can help us to attune ourselves to the cycles of Nature. Ritual can help us bypass our minds and experience our intuitive selves and our bodies in new and different ways.

When people think of Witchcraft, one of the first things they think of is magical spells. Spells are intended to effect change in our personal lives and in the world, changes such as healing, protection, or abundance. Neopagans ritualize their spells by "charging," or empowering, them in the sacred circle. Although spellwork is done in the context of ritual, not every ritual involves the casting of spells. Nor does every Neopagan perform spells. However, often the principles of good spellwork—intent,

harmonization, and attuning to the forces of Nature—are applied in rituals done for other reasons.

Many rituals are celebrations, marking an event in a very conscious and intentional fashion. These rites of passage are discussed in detail below. Other rituals are designed to help the ritualists to go deeper within themselves or to explore farther beyond the boundaries of their individual selves. Rituals foster bonding with the others in the circle and help transcend separateness. Rituals can lead to a deeper understanding of deity. The rituals called sabbats are celebratory in nature. They celebrate the seasons and the turning of the Wheel of the Year. Other rituals may be designed to bring people closer to a particular deity, to bring about personal insights or transformation, or to facilitate a deeper emotional and/or spiritual experience.

SPEAKING TO OUR OTHER SELVES

One fundamental purpose of Neopagan ritual is to allow the conscious mind to get in touch with other levels of awareness. Because ritual uses symbolism across a wide range of senses, it allows us to communicate with powerful parts of ourselves that do not use verbal language. These are often just those aspects of our being that have been most neglected.

As feminist priestess Z. Budapest said: "The purpose of ritual is to wake up the old mind in us, to put it to work. The old ones inside us, the collective consciousness, the many lives, the divine eternal parts, the senses and parts of the brain that have been ignored. Those parts do not speak English. They do not care about television. But they do understand candlelight and colors. They do understand nature."[37]

For many Neopagans this is a vital need not served in any other way by Western culture, and this is part of our drive to ritualize. Kelly feels that

> You do a ritual because you need to, basically, and because it just cuts through and operates on everything besides the "head" level … since ritual is a need, and since the mainstream of Western civilization is not meeting this need, a great deal of what's happening these days is, simply, people's attempts to find ways to meet this need for themselves.[38]

Ritual uses all the senses to achieve this: Incense, food, colorful images, robes or body paint, music, especially drums, dancing, and set gestures. All these elements have symbolic significance that our more instinctive, nonverbal awareness will readily understand.

Timothy Leary is attributed on several Web sites and in Neopagan discussion as having said that "Ritual is to the internal sciences what experiment is to the external sciences."[39] This is especially true for Neopagans, who, as we noted earlier, *deliberately create* their rituals. By using the sacred techniques of many spiritual paths and adopting ideas from many human disciplines, Neopagans attempt to construct rituals that will communicate with deeper levels of the self.

Some suggest that ritual is a way of "thinking" through the body. Richard Schechner believes that "Rituals don't so much express ideas as embody them. Rituals are thought-in/as-action."[40] For Performance theorist Deirdre Sklar, movement is "a

corporeal way of knowing." She believes that the body knowledge that comes through movement cannot be spoken about because it uses the "vocabulary" of sensations.[41]

Speaking to our other selves is perhaps most important at times of personal change, so they are marked with *rites of passage.*

RITES OF PASSAGE

Among the rites of passage celebrated for individuals are the following: presentation, naming, and blessing rituals for babies; first-blood rituals; a boy's transition to manhood; commitment ceremonies, handfastings, and/or weddings; eldering, croning (ritualizing a woman's coming to the age of wisdom and repose), and saging (ritualizing a man's coming into his age of wisdom and repose); dying and death; funerals and memorials.

Human life is defined by moments of transition: Birth, marriage, and death are the most familiar in Western culture, and Neopagans ritually mark such events. But Neopagans, like those in other times and places, honor more subtle life changes.

The principal rite of passage people usually think of in connection with Witchcraft is the initiation rite. This is done when a person commits herself to a chosen path. Some traditions have rites of passage for dedications, preparatory steps to full initiation. In such traditions, subsequent rituals are performed to acknowledge members' attainment of elevations, usually called First, Second, and Third Degrees. These degrees mean that members have acquired successively higher (or deeper) levels of knowledge and skill.

Arnold van Gennep first used the term "rites of passage" in 1908,[42] and, although his theory may oversimplify the complex process of ritual transition, it remains useful. He identified three stages in every rite of passage: (1) The process begins with the key participant being separated from her/his normal life in preparation for (2) entering liminal space. We have already noted the importance of liminal space above. (3) The final phase is reintegration into society in a new role.

According to van Gennep, different rituals emphasize different phases. The separation phase is more important in death rites, while reintegration is key in handfasting. The liminal phase is the most important part of an initiation, as this is where an initiate will be tested and taught secrets of the Tradition.

Van Gennep noted common elements of these rites, including simulated death and resurrection, and a symbolic passage through an opening or across a threshold. We have seen how these motifs are used in "Neopagan Ritual in Practice."

In some tribal initiation ceremonies participants may be isolated in the liminal space for a long period of time. Victor Turner describes the close bonding that occurs between people in liminal space as *communitas.*[43] Before leaving van Gennep, it is worth considering a key critique of his theory. Bruce Lincoln claimed that his theory describes only the structure of *male* rites. He noted several differences in traditional tribal women's initiations that challenge the van Gennep model: Women are usually initiated individually, so they have no opportunity to develop *communitas,* and there

is little in the way of new knowledge communicated to them. The whole process can be seen as an "opiate for an oppressed class," constructing social control rather than facilitating transformation.[44] Lincoln's work is relevant to Neopagan ritual precisely because it does not apply: Neopagan rituals, whether for women or men, celebrate and facilitate transformation, rather than construct control.

THE POWER THAT CONNECTS

Neopagan ritual can put us back in touch with "the wisdom of the body," a deep knowledge of our connection with the other-than-human world. We believe this reconnection can help us heal our relationship with the planet.

Most Neopagans would agree that modern life has led to increasing alienation from nature and from one another, and that ritual can—at least temporarily—shift our awareness to a more connected state. Adler believes that the whole purpose of ritual is "to end, for a time, our sense of human alienation from nature and from each other."[45]

Alexei Kondratiev expresses his belief that "attunement to the natural world" is the main contribution Neopaganism can make to the modern world. This attunement "is not just an intellectual understanding about what nature is good for" but rather "a gut feeling."[46]

In *Key Aspects of Neopagan Ritual* we noted how ritual dance can help resolve personal issues about our bodies, enabling a deeper emotional sensitivity and a greater understanding of bodily needs.[47]

Ritual reconnection may not only be with our bodies or the other-than-human world, but also with the ancestors. Ancestral reconnection is perhaps most apparent in rites of passage and during Samhain celebrations—the Neopagan "Day of the Dead." (See "Neopagan Ritual in Practice" above.)

Ritual can also help connect us at a social level. A feeling of *communitas* emerges during a ritual that helps bond social groups. It is common for Neopagans to describe a feeling of "coming home" when they first discover this particular path. Oz's experience of her first Neopagan ritual is typical: "Tears ran down my face. I felt a tremendous emotion as though after a long search I had finally found my people again."[48] The power of ritual to bond and inspire a group is used by Eco-Pagans, especially in preparation for a protest action. In her book *Sacred Land, Sacred Sex: Rapture of the Deep,* Dolores La Chapelle states,

> One of the primary biological functions of ritual behavior is to make it easier … for individuals to become synchronized for group action. This action might be directed toward some environmental challenge that cannot be met by individual action.[49]

Bron Taylor describes how some rituals at Earth First! camps use drumming and dancing in a similar way to those described by Pike, above. During these rituals "some activists report mystically fusing with the cosmos, 'losing themselves' and their sense of independent ego, as they dance into the night."[50]

Less ecstatic rituals take place to support activist comrades. Typically, a conventional circle is formed and energy is "drawn-down from the moon, from the four directions, and most commonly from earth itself." Taylor notes that both forms of ritual are typically coordinated by Wiccan priestesses, but our experience suggests a more eclectic range of practice.

CONTROVERSIES AND ISSUES

The Origins of Neopaganism

Eclectic Neopagan ritual draws on spiritual paths from many lands. Although this adds to the richness of our practice, there are accusations of cultural appropriation. Most discussions focus on Native American cultures, but others—notably perhaps Aboriginal Australian—are also appropriated. This is a complex and sensitive issue to tackle in a short space, but in essence the concern is that Neopaganism appropriates aspects of another people's culture.[51] Those who have honored an ancient path for centuries see their most sacred traditions misrepresented, used, or abused by people who have no understanding of their true meaning.

According to Native American scholar Lisa Aldred, this "imperialistically nostalgic fetishization" is an expression of a consumerist attitude to spirituality.[52]

While many share Aldred's view, the issues around cultural appropriation are complex and attitudes vary. Some Native Americans recognize the possibility of genuine cultural exchange. Many tribal groups do not object to teaching outsiders, but insist that they learn spiritual practices within a total cultural context and respect any restrictions that are placed on sharing knowledge.

Sam Gill believes that while it is appropriate for people "to be inspired by and influenced by other traditions," "[t]o do so superficially and to claim special knowledge of the source tradition is to engage in what can only be termed domination and conquest."[53]

Some accusations of cultural appropriation are due to misunderstanding: Neopaganism has a complex history, and aspects found in common with Native American traditions—like the quartered sacred circle—have evolved independently. In fact, a great deal of Neopagan ritual can be exonerated from any accusation of cultural appropriation: traditional Wicca and Witchcraft focus on European traditions, as does Heathenry (Northern Traditions) and most Druidry.

However, eclectic Neopagan ritual and Neo-Shamanism do draw on Native Americans traditions, and in many cases the accusations are sound. Although many Neopagans remain ignorant of the issues, others are working to develop a greater respect for the traditions from whom they might wish to borrow.

There is a danger that if Neopagans avoid working with any tradition that is not their own, their rituals will become "whiter and whiter."[54] In a world where cultures constantly mingle and cross-fertilize, this seems like a mistake.

As Starhawk says, "The edge where different systems meet is always fertile ground, in culture as well as in nature."[55]

But we must tread carefully as everyone loses when the rot of cultural appropriation sets in. Without cultural context a sacred practice is drained of meaning, and, even if it still functions, it is irrevocably distorted. As Paula Gunn Allen, Laguna Pueblo author and teacher, says, "You cannot do Indian spirituality without an Indian community … it's physical and social and spiritual and they're fused together."[56]

Some propose that the way forward is to develop genuine cultural sharing which "involves interaction with the whole of a person and community, reciprocal giving and receiving, sharing of struggle as well as joy, receiving what the community wants to give, not what we want to take."[57]

Oren Lyons, a traditional chief of the Onondaga Nation expresses a similar sentiment: "We've got real problems today, tremendous problems which threaten the survival of the planet. Indians and non-Indians must confront these problems together, and this means we must have honest dialogue, but this dialogue is impossible so long as non-Indians remain deluded about things as basic as Indian spirituality."[58]

The key is to be clear about what counts as appropriation and what is genuine sharing. Whenever colonialism or neocolonialism creates an unequal distribution of power then appropriation is likely to occur. If Neopagans are to work with spiritual integrity, we need to educate ourselves about the issues, abandon any practice that is legitimately refused to us, and develop rituals based on the cultural richness that remains. As we proceed with openness, honesty, and respect, we believe Neopagans will discover opportunities for real cultural sharing.

The Growth in Neopaganism

Neopaganism is one of the fastest growing religions in the United States. How are Neopagans coping with this prodigious growth? Several questions must be faced in the future: As more and more people want to perform ritual in the Nature they revere, what damage might ensue? Will Neopaganism lose its depth if it becomes a more popular, casual practice? Can a sizable religion function without more structure and hierarchy?

There are already Neopagan organizations that own and manage land for the community to practice ritual outdoors. This has worked well to date, and this model can be expected to alleviate pressures on the land. Permanent ritual structures are also appearing, including replica shrines created by reconstructionist traditions. For instance, Pagan landowners erect stone circles to the *vanir* (Norse Earth deities); others construct labyrinths. Also, there is a permanent shrine with a statue of Hekate in Index, Washington.

Neopagans typically worship in their homes, backyards, parks, woods, and beaches. Because of the intimate nature of Neopagan rituals and the small size of congregations, Neopagans seldom have need of large indoor ritual space. When needed, however, Neopagans rent halls, frequently at Unitarian Universalist Association buildings.

Ritual and Priesthood

Neopaganism is a moving target. In recent years the complexion of Neopaganism has been changing at a rapid pace. One result of this growth has been the emergence of a priest/esshood and a laity not seen before in countercultural movements. This development is appropriate in some of the reconstructed traditions, but it proves problematical in Witchen circles where all participants are capable of and empowered to perform any ritual role.

There are people who share a general Neopagan world view yet have no desire to pursue studies, training, or deeper involvement. However, they wish to share the seasonal celebrations with others and to have someone preside at their life passages. Ritual groups have arisen that produce public sabbat celebrations to meet this need.

In addition, Neopagan seminaries are beginning to train those who are called to service in ministry skills. Students learn about other forms of Neopaganism than their own tradition, in interfaith organizations, secular law as it affects religion, public liturgy, pastoral skills, requirements, and other relevant subjects. Although no Neopagan *must* minister to others in order to practice her tradition, it is important for those who are called to be well equipped to answer the call.

In addition to the aforementioned communal Neopagan land where Neopagans can live, work, study, and gather for festivals, parents are creating camps and schools for children and adolescents, as well as homeschooling.

Neopagans are greying, so they are beginning to look at ways to meet the needs of an aging community. More gatherings are taking place indoors where there are amenities like beds and indoor plumbing. Easier access allows for more comfortable participation of older—and very young—Neopagans in community activities. There is almost no infrastructure in terms of hospitals, facilities for the disabled or elderly, communal buildings, and cemeteries.

With thought and care and creativity, Neopagans will evolve in unique ways consistent with this unique religious response. The future of Neopaganism is wide open.

CONCLUSION

Victor Turner believed that 1960s counterculture, like the Neopagan ritual it inspired, sought the transformational power of "the liberated and disciplined body itself, with its many untapped resources for pleasure, pain, and expression."[59]

Schechner thinks Turner's optimism was probably unjustified.[60] But is it? Many Neopagans believe their rituals can have a profoundly transformative power, and the steady growth of the movement suggests it addresses a deep social need.

The West stands at a point of transition and challenge: Neopagan ritual offers itself as a paradoxical guide in these strange days—the path of an "ancient-future religion," drawing on the past, but working in the present towards a bright and sustainable future.

About the Editors and Contributors

EDITORS

Eugene V. Gallagher is the Rosemary Park Professor of Religious Studies at Connecticut College. He is the author of *Divine Man or Magician? Celsus and Origen on Jesus* (1980), *Expectation and Experience: Explaining Religious Conversion* (1990), *The New Religious Movements Experience in America* (2004), and, with James D. Tabor, *Why Waco? Cults and the Battle for Religious Freedom in America* (1995), as well as articles on ancient Mediterranean religions and contemporary new religious movements.

W. Michael Ashcraft is Associate Professor of Religion at Truman State University in Kirksville, Missouri. He is the author of *The Dawn of the New Cycle: Point Loma Theosophists and American Culture* (2002) and coeditor with Dereck Daschke of *New Religious Movements: A Documentary Reader* (2005). He is currently conducting research for a book on the history of the study of new religions.

CONTRIBUTORS

Yaakov Ariel is Professor of Religious Studies at the University of North Carolina at Chapel Hill. He is the author of a number of books and articles on Christian-Jewish relations in the modern era. His book, *Evangelizing the Chosen People: Missions to the Jews in America,* has won the American Society of Church History Outler prize.

Mary Farrell Bednarowski is Professor Emerita of Religious Studies at United Theological Seminary of the Twin Cities. She is the author of three books, among them *New Religions and the Theological Imagination in America* (1989), and has a long-standing interest in various forms of theological innovation in American religion especially as it is related to issues of gender.

Helen A. Berger is Professor of Sociology at West Chester University of Pennsylvania. She is the author of *A Community of Witches: Contemporary and Neo-Paganisms Witchcraft in the United States* (1999), coauthor of *Voices from the Pagan Census: A National Survey of Witches and Pagans in the United States* (2003), and editor of *Witchcraft and Magic: Contemporary North America* (2005). She is now completing a book on teenage witches on three continents with Douglas Ezzy.

David G. Bromley is Professor of Sociology and Religious Studies at Virginia Commonwealth University. His most recent books are *Teaching New Religious Movements* (Oxford, 2007), *Defining Religion: Critical Approaches to Drawing Boundaries Between Sacred and Secular* (Elsevier Science/JAI Press, 2003), *Cults, Religion and Violence* (Cambridge University Press, 2001), and *Toward Reflexive Ethnography: Participating, Observing, Narrating* (Oxford: Elsevier Science/JAI Press, 2001).

Susan Love Brown is Associate Professor of Anthropology at Florida Atlantic University and also teaches in the Public Intellectuals and the Women's Studies programs. She is the editor of *Intentional Community: An Anthropological Perspective* and has written a number of articles about Ananda Village, a California New Age community with branches in Oregon, Washington, and Italy.

James D. Chancellor is the W.O. Carver Professor of World Religions at The Southern Baptist Theological Seminary and Professor of Religion at The Philippine Baptist Theological Seminary. He is the author of *Life in the Family: An Oral History of the Children of God* published by Syracuse University Press and has written numerous journal articles and book chapters.

George D. Chryssides is Senior Lecturer in Religious Studies at the University of Wolverhampton, England. His publications include *The Advent of Sun Myung Moon* (London: Macmillan, 1991), *Exploring New Religions* (London: Cassell, 1999), and *Historical Dictionary of New Religious Movements* (Metuchen, NJ: Scarecrow Press), as well as contributions to various anthologies and journals.

Mary Ann Clark is a lecturer in the University of Houston system where she teaches courses in Religious Studies, Humanities, and Anthropology and is the coordinator of the Council of Societies for the Study of Religion. She is the author of *Where Men are Wives and Mothers Rule: Santería Ritual Practices and Their Gender Implication* (2005). She has also published numerous journal articles and book chapters.

Douglas E. Cowan is Assistant Professor of Religious Studies and Social Development Studies at Renison College/University of Waterloo. In addition to numerous scholarly articles and chapters, he is the author of *Cyberhenge: Modern Pagans on the Internet* (Routledge, 2005), *The Remnant Spirit: Conservative Reform in Mainline Protestantism* (Praeger 2003), and *Bearing False Witness? An Introduction to the Christian Countercult* (Praeger 2003).

Robert S. Cox is Head of Special Collections and Adjunct Professor of History at the University of Massachusetts Amherst. He is author of *Body and Soul: A*

Sympathetic History of American Spiritualism (Charlottesville: University of Virginia Press, 2003) and editor of *The Shortest and Most Convenient Route: Lewis and Clark in Context* (Philadelphia: APS, 2004).

Daniel Cozort is Professor and chair of the Department of Religion at Dickinson College, in Carlisle, Pennsylvania, where he teaches about the religions of India and Native America. He is the author of *Unique Tenets of the Middle Way Consequence School, Highest Yoga Tantra, Buddhist Philosophy, Sand Mandala of Vajrabhairava,* and *Imagination and Enlightenment* and a documentary film, *Mandala: Sacred Circle of Vajrabhairava,* as well as book chapters and articles.

Dereck Daschke is Associate Professor of Philosophy and Religion at Truman State University in Kirksville, Missouri. He is coeditor of *New Religious Movements: A Documentary Reader*(2005). He has published frequently on ancient Jewish apocalypticism and prophecy, including "Mourning the End of Time: Apocalypses as Texts of Cultural Loss" in *Millennialism from the Hebrew Bible to the Present* (2002) and "'Because Of My Grief I Have Spoken': The Psychology of Loss in 4 Ezra" in *Psychology and the Bible* (2004).

Dell deChant is an Instructor and the Associate Chair in the Department of Religious Studies at the University of South Florida. He is also on the faculty of the Honors College at USF. He is the author of *The Sacred Santa: The Religious Dimensions of Consumer Culture* (2002) and coauthor of *Comparative Religious Ethics: A Narrative Approach* (2001). He has also published numerous journal and encyclopedia articles and book chapters on New Religious Movements.

Brenda Denzler works full-time as a writer at the University of North Carolina at Chapel Hill and part-time as an independent scholar with an interest in marginal religious phenomena and movements. She is the author of *The Lure of the Edge: Scientific Passions, Religious Beliefs, and the Pursuit of UFOs* (2001). She is also the author of several presentations and papers on the UFO community.

Jacob S. Dorman currently holds the Mellon Postdoctoral Fellowship at Wesleyan University's Center for the Humanities. His book on black Israelites and the discourse of civilization during the Harlem Renaissance is forthcoming from Oxford University Press.

Cynthia Eller is Associate Professor of Women and Religion at Montclair State University. She is the author of *Am I a Woman? A Skeptic's Guide to Gender* (2003), *The Myth of Matriarchal Prehistory: Why an Invented Past Won't Give Women a Future* (2000), *Living in the Lap of the Goddess: The Feminist Spirituality Movement in America* (1995), and the interactive textbook *Revealing World Religions* (2005).

Robert Ellwood is Distinguished Emeritus Professor of Religion at the University of Southern California and is the author of several books, including *Religious and Spiritual Groups in Modern America* and *Alternative Altars.* He lives in Ojai, California, and has served as vice president of the Theosophical Society in America.

Ina Johanna Fandrich is an independent scholar living in New Orleans. She is the author of *The Mysterious Voodoo Queen, Marie Laveaux: A Study of Powerful Female Leadership in Nineteenth-Century New Orleans* (Routledge 2005).

Ron Geaves is Professor of Religious Studies in the Department of Theology and Religious Studies at University College Chester. His research interests focus around the transmigration of Indian traditions to the West. He has published two monographs and several journal articles in this area, including *Sufis of Britain (2000).* His most recent publications are *Islam and the West post 9/11* (2004) and *Aspects of Islam* (2005). He has just completed a monograph on Śaivite traditions in Diaspora to be published in 2006. He has known Prem Rawat since 1969 and has already published four journal articles concerning his activities.

Terryl L. Givens is Professor of Literature and Religion and holds the James A. Bostwick Chair of English at the University of Richmond. He is the author of the prize-winning *Viper on the Hearth: Mormons, Myths and the Construction of Heresy* (Oxford 1997), *By the Hand of Mormon: The American Scripture that Launched a New World Religion* (Oxford 2003), and *The Latter-day Saint Experience in America* (Greenwood 2004), in addition to articles and chapters on Romanticism, Literary Theory, and religious studies.

Adrian Harris has been a Practicing Pagan since 1990 and is currently conducting postgraduate research into Eco-Pagan ritual at the University of Winchester, UK. He has written several articles and book chapters, including "Sacred Ecology" in *Paganism Today* (Harper Collins, 1996) and "Dragon Environmental Network" in *The Encyclopaedia of Modern Witchcraft and Neo-Paganism* (Citadel Press, 2002).

Michael Homer is a practicing trial lawyer in Salt Lake City. He is a member of the Board of State History (appointed by Governor Michael Leavitt in 1997) and has been Chair since 2003. He has published four books, 13 chapters in books, and over 70 articles on historical and legal subjects. He is the recipient of the David Kirby Best Article Award from the Arthur Conan Doyle Society, the Lowell L. Bennion Editor's Award by *Dialogue, A Journal of Mormon Thought,* the T. Edgar Lyon Award of Excellence by the Mormon History Association, and The John Whitmer Historical Association Best Article Award. His most recent book, *On the Way to Somewhere Else: European Sojourners in the Mormon West,* was published by Arthur H. Clark Company in 2006.

Dawn L. Hutchinson is an instructor of religion at Christopher Newport University. She has authored entries in the *Encyclopedia of Religion, Communication, and Media, The Handbook for the Study of Religion, Encyclopedia of Religious Freedom,* and *The 21st Century Encyclopedia of the World's Religions.*

Jeffrey Kaplan is Associate Professor of Religion and the Director of the University of Wisconsin Oshkosh Institute for the Study of Religion, Violence and Memory. He serves as book review editor and serves on the Editorial Boards of the journals *Terrorism and Political Violence* and *Nova Religio.* He is the author or editor of 11 books on

religious violence and millenarian terrorism: *Millennial Violence: Past, Present and Future* (2002), *The Cultic Milieu* (2002), *Encyclopedia of White Power: A Sourcebook on the Radical Racist Right* (2000), *Beyond The Mainstream: The Emergence Of Religious Pluralism In Finland, Estonia And Russia* (2000), *The Emergence of an Euro-American Radical Right* (coauthored with Leonard Weinberg) (1998), and *Radical Religion in America: Millenarian Movements From the Far Right to the Children of Noah* (1997). His latest book, *Religious Resurgence and Political Violence,* will be published in 2006. In addition, he has authored numerous articles, encyclopedia entries, and book reviews that have appeared in a multidisciplinary range of peer reviewed academic journals.

Philip Lamy is Professor of Sociology and Anthropology at Castleton College in Castleton, Vermont. He is the author of *Millennium Rage: Survivalists, White Supremacists, and the Doomsday Prophecy* (1996). His articles and commentary on New Religious Movements and countercultures have appeared in professional journals, edited volumes, and the mass media, including *Time Magazine, The London Times, Wired Magazine,* National Public Radio, and the BBC.

David Christopher Lane is a Professor of Philosophy at Mount San Antonio College and a Lecturer in Religious Studies at California State University, Long Beach. He is the author of *The Radhasoami Tradition* (1992), *Exposing Cults* (1992), *The Making of a Spiritual Movement* (1983), and *The Unknowing Sage* (1993). He has also produced several films, including *Moving Water, Digital Baba,* and *Truth Lies.* On a more personal note, Lane won the world bodysurfing championship in 1999 and the International Bodysurfing Championships in 1997, 1998, 2000, and 2004.

Scott Lowe is professor and chair of the Department of Philosophy and Religious Studies at the University of Wisconsin–Eau Claire. He is the author of *Mo Tzu's Religious Blueprint for a Chinese Utopia* and *Da: The Strange Case of Franklin Jones* (with David Christopher Lane) as well as numerous articles and book chapters on Chinese religions and alternative religions in the West.

David W. Machacek is associate director of Humanity in Action, a New York–based not-for-profit organization that sponsors international educational programs on minority issues and human rights, and Visiting Assistant Professor of Public Policy at Trinity College in Hartford, Connecticut. He is coauthor of *Soka Gakkai in America: Accommodation and Conversion* and coeditor of *Global Citizens: The Soka Gakkai Buddhist Movement in the World.* His articles have appeared in *Nova Religio, Sociology of Religion, Research in the Social Scientific Study of Religion, Journal of Oriental Studies,* and *Journal of Church and State.*

J. Gordon Melton is the Director of the Institute for the Study of American Religion and is a research specialist with the Department of Religious Studies at the University of California–Santa Barbara. He is the author of a number of books on American religion including the *Encyclopedia of American Religions* (7th ed., 2003), *The*

Encyclopedic Handbook of the Cults in America (1992), and *Finding Enlightenment: Ramtha's School of Ancient Wisdom* (1998).

Michael L. Mickler is Professor of Church History and Vice President of Unification Theological Seminary. He is the author of *40 Years in America: An Intimate History of the Unification Movement in America, 1959–1999* (2000), *A History of the Unification Church in America, 1959–74* (1993), and *The Unification Church in America: A Bibliography and Research Guide* (1987), as well as articles and reviews on the Unification Church and other movements.

Timothy Miller is Professor of Religious Studies at the University of Kansas. He is the author of *Following In His Steps: A Biography of Charles M. Sheldon* (Tennessee, 1987), *American Communes, 1860–1960: A Bibliography* (Garland, 1990), *The Hippies and American Values* (Tennessee, 1991), *The Quest for Utopia in Twentieth-Century America* (Syracuse, 1998), *The 60s Communes: Hippies and Beyond* (Syracuse, 1999), and editor of *When Prophets Die: The Postcharismatic Fate of New Religious Movements* (State University of New York Press, 1991) and *America's Alternative Religions* (State University of New York Press, 1995), as well as articles in many journals and in the popular press.

Rebecca Moore is Associate Professor of Religious Studies at San Diego State University. She is the author of *Voices of Christianity: A Global Introduction* (2005), and coeditor of *Peoples Temple and Black Religion in America* (2004). She is Co-General Editor of *Nova Religio: The Journal of Alternative and Emergent Religions.* She has also published several journal articles and book chapters on the subject of Peoples Temple and Jonestown.

Douglas Morgan is professor of history at Columbia Union College in Takoma Park, Maryland. He is author of *Adventism and the American Republic: The Public Involvement of a Major Apocalyptic Movement* (2001).

M. Macha NightMare is an author, ritualist, and all-round Pagan webweaver. She presents at colleges, universities, and seminaries and teaches about death and dying and Neopagan public ritual at Cherry Hill Seminary, the first and only seminary serving the Neopagan community. (www.machanightmare.com.)

Kathleen Malone O'Connor is an Assistant Professor of Religious Studies at the University of South Florida where she specializes in Islamic studies. She has published in *Folklore: An Encyclopedia of Beliefs, Customs, Tales, Music, and Art, Journal of the American Academy of Religion,* and the *Encyclopedia of the Qur'an.* She has contributed chapters to *Black Zion: African American Religious Encounters with Judaism, Anthropology and Theology: Gods, Icons, and God-talk,* and *Studies in Middle Eastern Health.*

James T. Richardson is Director of the Grant Sawyer Center for Justice Studies and director of the Judicial Studies graduate degree program for trial judges at the University of Nevada, Reno. His latest book is *Regulating Religion: Case Studies from*

Around the Globe (Kluwer, 2004). He has published over 200 articles and chapters, as well as ten books, mostly about various aspects of New Religious Movements.

Robin Rinehart is Associate Professor of Religious Studies at Lafayette College, where she also directs the Asian Studies program. She is the author of *One Lifetime, Many Lives: The Experience of Modern Hindu Hagiography* (Oxford 1999), editor of *Contemporary Hinduism: Ritual, Culture, and Practice* (ABC-CLIO 2004), and has also published journal articles and encyclopedia entries.

E. Burke Rochford Jr. is Professor of Sociology and Religion at Middlebury College in Vermont. He is author of *Hare Krishna in America* and the forthcoming *Hare Krishna Transformed* to be published in 2007 by New York University Press. He has also published numerous articles and book chapters on the Hare Krishna movement and new religions.

Rosamond C. Rodman is an Assistant Professor of Religious Studies at Macalester College, in St. Paul, Minnesota. She works on intersections of Bible and American culture.

Nora L. Rubel is Visiting Assistant Professor of Religious Studies at Connecticut College. Trained in American religious history, she has published articles on African American religion and contemporary Judaism.

John K. Simmons, Professor of Religious Studies and chairperson of the Department of Philosophy & Religious Studies at Western Illinois University, is the creator of the popular "Beliefs and Believers" teleclass. He publishes regularly in the area of women-led, New Religious Movements in late nineteenth and early twentieth century American history, including the coauthored book, *Competing Visions of Paradise: The California Experience of 19th Century American Sectarianism.* Recent articles include "Eschatological Vacillation in the Mary Baker Eddy's Presentation of Christian Science" in *Nova Religio* and "Vanishing Boundaries: When Teaching About Religion Becomes Spiritual Guidance in the Classroom" in *Teaching Theology and Religion.*

Robert H. Stockman is an instructor for the Department of Religious Studies at DePaul University, Chicago, Illinois, and Director of the Institute for Baha'i Studies in Evanston, Illinois. He is the author of *The Baha'i Faith in America: Origins, 1892–1900, Vol. 1, The Baha'i Faith in America: Early Expansion, 1900–1912, Vol. 2,* and *Thornton Chase: The First American Baha'i.* He has also published 25 articles on Baha'i topics.

Bron Taylor is Samuel S. Hill Ethics Professor at the University of Florida, where he teaches in the interdisciplinary graduate program in religion and nature. He has written widely about religious environmental movements and nature religions. His books include *Ecological Resistance Movements: The Global Emergence of Radical and Popular Environmentalism* (SUNY 1995) and the *Encyclopedia of Religion and Nature*

(Continuum 2005), and he is the editor of the *Journal for the Study of Religion, Nature, and Culture.*

Suzanne Thurman is an independent scholar and former history professor who now manages intellectual property portfolios for IPWatch. She has published extensively on the Shakers. Her book, *"O Sisters Ain't You Happy?": Gender, Family, and Community Among the Harvard and Shirley Shakers, 1781–1918,* won a *Choice* Outstanding Academic Book Award in 2002.

Arthur Versluis is Professor of American Studies at Michigan State University. He is editor of the journal *Esoterica* and author of numerous books, including *Restoring Paradise* (State University of New York Press 2004) and *The New Inquisitions: Heretic-hunting and the Origins of Modern Totalitarianism* (Oxford University Press 2006).

David L. Weddle is Professor of Religion and chair of the Department at Colorado College. He is the author of *The Law As Gospel: Revival and Reform in the Theology of Charles G. Finney* (1985). He has published journal articles on Jonathan Edwards, Christian Science, and Jehovah's Witnesses, as well as review essays on law and religion. His entries on Jehovah's Witnesses appear in *The Encyclopedia of Protestantism* and the *Encyclopedia of Religion.*

Dagmar Wernitznig is an Associate Fellow with the Rothermere American Institute, University of Oxford. She is the author of *Going Native or Going Naive?: White Shamanism and the Neo-Noble Savage* (University Press of America 2003).

Catherine Wessinger is professor of the history of religions at Loyola University New Orleans. She is Co-General Editor of *Nova Religio: The Journal of Alternative and Emergent Religions.* She is the author of *Annie Besant and Progressive Messianism* (1988), and *How the Millennium Comes Violently: From Jonestown to Heaven's Gate* (2000), as well as articles on New Religious Movements. She has edited *Women's Leadership and Marginal Religions: Explorations Outside the Mainstream* (1993), *Religious Institutions and Women's Leadership: New Roles Inside the Mainstream* (1996), and *Millennialism, Persecution, and Violence: Historical Cases* (2000). Her current projects include collecting oral histories relating to the Branch Davidian case and editing the *Oxford Handbook on Millennialism.*

Melissa M. Wilcox is Assistant Professor of Religion and Director of Gender Studies at Whitman College. Author of *Coming Out in Christianity: Religion, Identity, and Community* and coeditor (with David W. Machacek) of *Sexuality and the World's Religions,* she is currently working on a book entitled *Spirituality and Sex in the City: Queer Religiosities in Practice and Theory.*

Jane Williams-Hogan is the Carpenter Chair Professor of Church History at Bryn Athyn College where she also teaches sociology. She is the author of *Swedenborg e le Chiese Swedenborgiane* (2004). She has also published journal articles, encyclopedia articles, and book chapters.

Jeff Wilson is a doctoral candidate in Religious Studies at the University of North Carolina at Chapel Hill. A specialist on Buddhism in America, he is the author of *The Buddhist Guide to New York* (2000) and numerous articles and book chapters on the subject. Wilson is a Contributing Editor to *Tricycle: The Buddhist Review.*

Joseph Dylan Witt is a Ph.D. student in the Religion and Nature Graduate Program at the University of Florida. He has contributed to the journal *Worldviews* and serves as the Managing Editor for the *Journal for the Study of Religion, Nature and Culture.*

About the Editors and Contributors 235

Acknowledgments

This project is the result of a collaborative effort. We the coeditors are grateful to the contributors of this series for sharing their expertise with the general public through these outstanding scholarly essays. They did so for the sake of bringing to a wide reading audience the best information and interpretations now available about a wide range of new religious movements. We are especially grateful to Catherine Wessinger and David Bromley for helping us identify authors and for many other suggestions that have improved this set of volumes.

We the coeditors thank all of these scholars who gave so much to make this set possible. Many of them wrote their essays amid personal hardship and busy professional lives.

We also thank Suzanne Staszak-Silva, our editor at Greenwood, for her advice and guidance as this set went from one stage of development to another.

We are also grateful to our colleagues, at our respective teaching institutions as well as among the wider scholarly community, who offered us personal support and encouragement, much free advice, and many good wishes and kind thoughts.

Finally, we thank our families: our wives, Jennifer Gallagher and Carrol Davenport, and our daughters, Maggie Gallagher and Brittany and Kathleen Ashcraft. We lovingly dedicate this set to those daughters, our hope for the future, whom we love very much.

Introduction

Although new or alternative religious movements, or New Religious Movements (NRMs), have always been part of the American religious landscape, they have not always received broad public attention. Most often, their formation, attraction of members, and growth or decline have occurred beyond the harsh glare of prolonged public scrutiny. In some striking cases, however, a new or alternative religious movement has dominated the news for a period of time, usually because the movement itself, or some of its members, became involved in something that was widely perceived to be illegal, immoral, or simply destructive. For example, in the wake of the 1963 assassination of President John F. Kennedy, Minister Malcolm X of the Nation of Islam became notorious for his comment that Kennedy's murder meant "the chickens had come home to roost." In the 1970s saffron-robed members of the International Society for Krishna Consciousness, also known as Hare Krishna, became so well known for seeking donations and engaging strangers in conversations in public that they were easily lampooned in the comic film "Airplane." In the 1980s, the Rev. Sun Myung Moon, leader of the Unification Church (or Moonies), was found guilty of tax evasion by diverting church funds for his personal use. More recently, in 1993, the U.S. Bureau of Alcohol, Tobacco, and Firearms staged a raid on the home and church of a small group of Bible students outside of Waco, Texas. In addition to the ten lives lost in the botched raid, the 51 day standoff between the students of David Koresh, a group widely known as the Branch Davidians, and agents of the federal government, particularly the Federal Bureau of Investigation, culminated in the loss of 78 lives in a fire that consumed the Mount Carmel Center where the Branch Davidians lived. In 1997 followers of Marshall Applewhite, forming a group called Heaven's Gate, joined him in committing suicide so that they could all progress to what they viewed as "the evolutionary level above human." The list of such incidents could easily be multiplied.

In the late twentieth century as new and alternative religious movements continued to receive public attention for elements of their practice or belief that were highly controversial, a dominant image of such groups began to solidify. That image was

fostered by the activism of groups of former members, their families, some professionals in social work and psychology, and various other volunteers. When the opposition to new or alternative religious groups originated with more or less secular individuals, those opponents were generally called anticultists. When opposition originated with Evangelical Protestant Christians, those opponents were usually called countercultists. The tireless work of such activists, anticultist or countercultist, quickly produced a standard understanding of new and alternative religions that united a wide variety of groups under the umbrella category of "cults." In the perceptions of their anticult opponents, cults posed serious threats to vulnerable individuals and, ultimately, to the stability of American society itself. Anticultists and countercultists believed that cults had three prominent characteristics. First, they were led by unscrupulous, manipulative, and insincere individuals who sought only to increase their own power, wealth, and/or sexual enjoyment. Second, cults preyed upon unsuspecting, confused, and vulnerable individuals, often using sophisticated and virtually irresistible tactics of influence. Third, participation in a cult would surely bring harm to individual participants and might also lead them to commit any number of antisocial actions that threatened the public good. The stereotype of the "destructive cult" was aggressively marketed by the loose coalition of anticultists, particularly when disturbing news about any new or alternative religious movement became public. Thus, on the one hand, while a variety of events created a broad interest in learning about individual religious groups, their practices and beliefs, organizational structure, leadership, and many other topics, on the other hand, the predominance of the cult stereotype inevitably skewed the information available, attributed the perceived faults of any one group to all of them, and created expectations that any group labeled a cult must necessarily be worthy of suspicion, scorn, and vigorous opposition. Despite their prodigious efforts at educating the general public, the various anticult and countercult activists have, in fact, promoted much more misunderstanding than accurate understanding of the religious lives of some of their fellow citizens. Consequently, they have helped to create a very hostile environment for anyone whose religious practices do not fit within a so-called "mainstream." The personal and social costs of such religious bigotry may actually be higher than what the activists fear from cults themselves.

This set of volumes on "New and Alternative Religions in America" intends to rectify that situation for the general reader. It aims to present accurate, comprehensive, authoritative, and accessible accounts of various new and alternative religious movements that have been and are active in American society, as well as a set of essays that orient the reader to significant contexts for understanding new and alternative religions and important issues involved in studying them. The presentations are predicated on a simple but fundamental assumption. It is that accurate description and understanding must precede any judgment about the truth, validity, morality, or trustworthiness of any religious group or person. Accurate description demands that the group be presented in terms that it could itself recognize and acknowledge as being at least close to the way it understands itself. Providing an accurate description of the history, organization, practices, and beliefs of a particular group does not, in

any way, constitute an endorsement of that group, but it does provide an indispensable baseline for any further discussion. Such a baseline has often been lost in the public discussions of new and alternative religious movements, because their most bizarre, threatening, or even humorous aspects have been exaggerated. What is missing from such caricatured presentations is a sense of how any person could find such apparently ludicrous, lethal, or laughable groups worth joining. Simple dismissal of new or alternative religions as absurd, erroneous, or pernicious misses the social influence that they can have and demonstrably have had. Whatever an outsider's perception of new and alternative religions might be, many clear-thinking and well-intentioned individuals, throughout American history, have associated themselves with such groups. This set is founded on the idea that members' or participants' reasons for their decisions and their accounts of their experiences form the primary data for understanding new and alternative religions. Both hostile and approving accounts of new or alternative religions from outsiders provide a different sort of data, which reveals the social location and often-controversial careers of new and alternative religions. But neither approval nor criticism by external observers should take precedence over the self-understanding of each group as articulated by its members in establishing a baseline of descriptive accuracy.

Readers of this set of volumes will thus encounter both information and analytical frameworks that will help them arrive at an informed and appropriately complicated understanding of new and alternative religious movements in American history and society. Volume 1 provides a set of analytical perspectives on new and alternative religions, including the history of such movements in the United States, the controversies in which they have often become embroiled, the roles of leaders within the groups and the processes by which individuals become members and also leave their groups, the legal and global contexts in which new and alternative religions function, and a variety of prominent themes in the study of new religions, including roles of gender, children, and violence.

The four volumes that follow generally present accounts of individual groups, many of them well known but some much less so. Each chapter presents information about the origin and subsequent development of the group in question, its internal organization including the predominant type of leadership, its most important practices and beliefs, and controversies that have put the group in the limelight. Volume 2 focuses on groups that have developed out of the broad biblical tradition—Judaism and Christianity—and have achieved such a distinctive status as to be considered, at least by some observers, as independent religious groups rather than simple sectarian variations of more mainstream Jewish or Christian traditions. Volume 2 accordingly raises most acutely the problems of definition that are involved in using the admittedly malleable categories of "new" and "alternative" religions.

The description of a religious movement as *new* or *alternative* only begs further questions. Novelty can be in the eye of the beholder, or in the mind of someone claiming to be innovative. That is, religious movements are judged to be new, alternative, or anything else only in particular contexts and by certain audiences. They may claim, for example, to retrieve and correctly interpret or represent past beliefs

and practices, which have been neglected or forgotten. But their opponents might view the same claims as dangerous and deviant inventions. New religions themselves often manifest a pronounced ambivalence about their own novelty. A fundamental dynamic in new and alternative religions is that they strive to present themselves as both new and old, as unprecedented and familiar. The novelty of new religions cuts both ways; it can just as easily excite the interest of potential adherents as it can strain their credulity. As they spread their messages to those whose interest, approval, and even acceptance they hope to secure, NRMs proclaim both their challenging novelty and their comforting familiarity.

In their sectarian forms, these movements attempt to recapture the lost purity of an idealized past. Sects typically have prior ties to larger religious organizations from which they have intentionally broken off. They aim to return to the pristine origins of the tradition and reestablish its foundations. Sectarian forms of Christianity frequently exhort their partisans to get "back to the Bible"; contemporary Islamic sects similarly yearn for the purity of the times of the prophet Muhammad. Even the Church of Satan, founded by Anton Szandor LaVey in 1966, has spawned sectarian groups that accuse the original Church of Satan of having abandoned its initial commitments and emphases. Sects thus define themselves both in relation to the broader world and in relation to their specific tradition, both of which are perceived to threaten their purity of belief and practice.

In their typology of responses to secularization, Rodney Stark and William Sims Bainbridge contrast cults to sects. Rejecting the polemical definition of cults spawned by their cultural opponents, they define cults as independent religious traditions. Cults may be imports from another culture or independent products of the society in which they develop. Like sects, cults often find themselves in tension or conflict with broader society, simply by virtue of being new and different. Because they, too, want to locate themselves in relation to an authoritative past, cults also lay some claim to previous tradition. What separates cults from sects in their relation to previous traditions is that cults typically do not have a history of institutional conflict and eventual separation. Cults are marked from their beginnings as new entities. Both sects and cults, then, simultaneously declare their novelty and sink their roots in the past. In order to avoid confusion about the term "cult," which has such negative connotations in contemporary American society, this set will keep to the designations of new and alternative religions, which are widely employed by many scholars even though they are somewhat imprecise. The choice of which groups to include in Volume 2, as with the other volumes, is a judgment call. The guiding principle was not only to provide a representative sample of new and alternative religious groups throughout American history, but also to present the groups in sufficient detail to enable the reader to form a complex understanding of them.

Volume 3 investigates groups in the occult or metaphysical tradition, including nineteenth century Spiritualism, the Theosophical Society begun by Helena Petrovna Blavatsky and Colonel Henry Steel Olcott in the late nineteenth century, and the contemporary New Age movement. Like the groups discussed in the second volume, those in Volume 3 are part of a broad tradition that has deep roots in

antiquity. For example, in *The Secret Doctrine* Madame Blavatsky included the ancient Vedic sages of India, the Buddha, and a collection of ancient Greek philosophers among the ancient teachers whose wisdom about the nature of human beings and the nature of god was being given its fullest expression in Blavatsky's modern Theosophical system.

The religious movements discussed in Volume 3 typically present a different organizational profile from those in Volume 2. The groups in Volume 2 have made substantial efforts to maintain boundaries between themselves and their surrounding social environment, demanding exclusive allegiance of their members; vesting authority over practice, doctrine, and group life in charismatic leaders; and offering new and improved interpretations of familiar texts already acknowledged to have broad cultural legitimacy. In contrast, the movements in Volume 3 center on individual teachers who attract shifting groups of students with varying degrees of commitment for varying lengths of time, leave the ability to determine the authority or validity of any pronouncements in the hands of individual seekers, and claim to bring to light extraordinary wisdom from previously unknown or underappreciated sources.

Many of the religions that have appeared to be innovative developments in American religious life have actually been transplanted from other cultures where they have often enjoyed long histories. The openness of the United States to immigrants has always been an important factor in promoting American religious diversity. The 1965 repeal of the 1924 *Asian Exclusion Act,* for example, permitted a variety of Eastern religious teachers to extend their religious activities to the United States. Late in his life, for example, Swami A.C. Bhaktivedanta Prabhupada, the founder of the International Society for Krishna Consciousness, made the United States the focus of his efforts to awaken love for Krishna in as many people as possible. Military personnel returning from service abroad, often with spouses from countries where they had been stationed, also helped to introduce new religious practices and movements to the United States. This was the case, for example, with the form of Japanese Nichiren Buddhism known as Soka Gakkai. Even where it is difficult to provide independent corroboration of claimed international ties, they can nonetheless be claimed. A dramatic example here was the assertion that the elusive figure at the origins of the Nation of Islam, W.D. Fard, arrived in Detroit, Michigan, in 1930 from Mecca in Saudi Arabia. The movements in Volume 4 show clearly that religious innovation in the United States always needs to be considered in a broader, global context. That is no less true of the groups discussed in other volumes as well. For example, Ann Lee's small band of Shakers began in Manchester, England; David Koresh gathered Bible students from Australia, England, and other foreign countries as well as the United States. Theosophy's Madame Blavatsky was a Russian émigré. Finally, the Church of Scientology, like many other new religions that have begun in the United States, conducts a vigorous international missionary program.

The frequent movement of individuals, practices, and ideas across national borders could make a focus on new and alternative religions solely in the United States vulnerable to a myopia that could distort the nature and significance of those movements. That caution holds equally for homegrown and imported religions. Few

religions in the contemporary world, no matter what their age or relation to a mainstream, are confined within a single set of national boundaries. Nonetheless, the focus of this set remains on a selection of religions that have had, for one reason or another, a significant impact on religious and social life in the United States. Prominent in that selection is a group of religions that have been independently founded in the United States. For example, although the contemporary revival of Paganism can be traced to the career of Gerald Gardner in England beginning in the 1930s, many influential Pagan thinkers and teachers, such as Z Budapest, Starhawk, and Isaac Bonewits have flourished in the United States. Similarly, the Church of Satan and its subsequent offshoots owe their inspiration to Anton Szandor LaVey, who produced *The Satanic Bible* and other fundamental texts in San Francisco, California, in the 1960s. Also, beginning in the 1950s the prodigious literary output of L. Ron Hubbard gave rise first to the therapeutic system known as Dianetics and then, as his purview broadened, to the Church of Scientology. Other founders of NRMs in the United States, like Marshall Applewhite of the Heaven's Gate group, attracted far fewer adherents than the Church of Scientology but nonetheless carved out a place for themselves in American religious history through their dramatic, and sometimes tragic, actions. Volume 5 thus focuses on both new developments in international movements within the United States, such as the rise of Neo-Paganism, and the conscious construction of new religions, such as the Church of Scientology, by American teachers and organizations.

As this overview suggests, the definition of what counts as a new or alternative religion is frequently open to argument. Many groups that appear dramatically novel to external observers would claim that they are simply being faithful to ancient traditions. Joseph Smith, for example, claimed that the Church of Jesus Christ of Latter-day Saints, or Mormons, was a restoration of primitive Christianity. Groups that claim to be innovative often express their messages in the form of fresh interpretations of ancient texts, as with Swami Prabhupada's effort to present the ancient Indian classic, the Bhagavad-Gita, "as it is"; or Rael's contention that the mentions of "Elohim" in the biblical book of Genesis actually refer to extraterrestrial beings who came to earth in space ships. Because of the subjective nature of the categories —new to whom? alternative to what?—it will always be difficult to delimit precisely which groups definitely do, and do not, "count" as new or alternative. Moreover, in popular discourse, where the category cult is frequently used but appears devoid of anything other than emotional content, and in interreligious arguments, where cult easily expands to include "virtually anyone who is not us," attempts at substantive definitions give way entirely to polemics. Discussion of new and alternative religions in the United States thus always refers to a shifting and vigorously contested terrain where categories like "alternative religion" or "cult" and implicit comparisons like those implied by "new religious movement" are used to establish, reinforce, and defend certain kinds of individual and group identities, even as they threaten, compromise, or erode other kinds of individual or group identities.

No mapping of such terrain can hope to be definitive. Too much is in flux. Those who enter the terrain need trustworthy and experienced guides. The essays in these

five volumes provide just such guidance. Experienced, authoritative, and plainspoken, the authors of these essays provide both perspectives on some of the most prominent general features of the landscape and full descriptions of many, but by no means all, of the specific areas within it. Those who want to explore the terrain of new and alternative religions in the United States will find in this set multiple points of entry. They may want to focus on a specific local part of the larger area, such as the Theosophical tradition, the Branch Davidians, or Heaven's Gate. On the other hand, they may want to investigate the characteristic dynamics of the broader field, such as the processes of conversion into and defection from groups or the interactions between new and alternative religions and their cultural opponents. There is much to explore—much more than can even be covered in these five volumes. But this set aims to equip the would-be explorer with enough tools and knowledge to make the exploration rewarding and worthwhile.

The Vedanta Society

Robin Rinehart

INTRODUCTION

The Vedanta Society was one of the first Hindu-inspired religious organizations established in the United States. Linked to the renowned Indian renouncer Ramakrishna (1836–1886), and his equally famous disciple Swami Vivekananda (1863–1902), the Vedanta Society now has branches in a number of American cities. Individual chapters are independent (or in some instances recognized as subcenters[1]), but share the connection of their affiliation with the Ramakrishna Order in India. While the Vedanta Society's membership has generally been relatively modest in number, it has exerted an important influence on people outside the group and helped pave the way for other teachers from India to establish their own followings in the United States. The name "Vedanta" links it most directly to ancient Indian philosophy, but the group's teachings and practices draw from a wide range of religious traditions beyond Hinduism. Many centers, for example, celebrate Hindu, Buddhist, and Christian holidays as well as special days associated with the founding figures of the Ramakrishna Mission.[2] Indeed, the Vedanta Society teaches that there is an underlying truth in all religions.

The powerful and dynamic personalities of Ramakrishna, Swami Vivekananda, and other early leaders of the Ramakrishna Mission and the Vedanta Societies contributed to the movement's early successes, and its history in India and the West is marked by a number of charismatic, colorful teachers, disciples, and admirers including noted authors such as Henry Miller, Aldous Huxley, Christopher Isherwood, and J.D. Salinger. The study of Vedanta thought as the Vedanta Society presented it to the West illuminates the spiritual quests of many noted American thinkers. The concerted effort of authors affiliated with the Vedanta Society to promote Vedanta thought in the West has also influenced the scholarly presentation of Indian religions.

As the Ramakrishna Mission of India and the Vedanta Societies of the United States have presented their views on religion, Hinduism, and spiritual life, they have

been in the thick of ongoing debates about understandings and definitions of Hinduism. Some of the most influential Western scholars of religion have presented Vedanta, especially as taught by the Vedanta Societies, as the essence of Hinduism overall, although much recent scholarship on Hinduism challenges any neat categorization of the religion, and even rejects the possibility that "Hinduism" is a meaningful designation at all.[3]

In addition to its role in debates about the nature of Hinduism, the Vedanta Society has also weathered differences of opinion about the lives and teachings of its founding figures. The biographies and teachings of early Ramakrishna Mission and Vedanta Society leaders have at times been fiercely contested. While there are accounts published by disciples of these organizations, both Indians and Westerners have at times challenged the official view on what the leaders taught and how they lived their lives. These debates share much in common with controversies that have arisen in other traditions about how to portray major religious figures. Should biographies of religious leaders seek to "humanize" those whom adherents consider to be great prophets or even incarnations of a deity, particularly when the "humanizing" enterprise suggests imperfections or controversial behavior? Adherents may reject studies of a leader's teachings that suggest evolution or change within the teachings, substantial outside influence, or perhaps inconsistencies. There is sometimes a great divide between works on the Ramakrishna Mission and Vedanta Societies published by scholars outside the movements and works published by members of these movements, and the criticisms that one side may have of the other can be quite impassioned. Since the 1990s, there has been particular concern over varying portrayals of the life of Ramakrishna and, in particular, the nature of his relationships with his closest devotees.

In the United States, the Vedanta Societies have generally not been subjected to the kinds of intense negative publicity typical of more recently established Asian-based, guru-led groups such as the International Society for Krishna Consciousness. However, Swami Vivekananda did draw criticism from some Christian leaders in the United States because the swami was openly critical of the efforts of Christian missionaries in India. Because some of the earliest and most prominent American advocates of Vedanta were female, there were also detractors who argued that Indian swamis were preying upon gullible American women.[4] More recently, many conservative Christian anticult activists include the Vedanta Society on their lists of so-called "cults" because the group's teachings, while accepting of Jesus, do not assert that salvation is possible only through a particular kind of Christian faith. One Christian anticult group, for example, defines the Vedanta Society as a cult because it deems "Ramakrishna worthy of the same devotion as Christ."[5] However, while popular opinion may lump the Vedanta Society into the stereotypical category of "cult" with its attendant associations of manipulation and exploitation of followers, there is virtually nothing in the group's history to substantiate such claims. The Christian anticult movement's characterization of the Vedanta Society as a cult is based on a theological difference of opinion about whether Jesus Christ is the only

path to salvation, and not on any evidence about the group's recruitment or other practices.

EARLY HISTORY OF THE GROUP

To understand the history of the Vedanta Societies in the United States, it is necessary to begin in the nineteenth century in the state of Bengal in India. Ramakrishna, the man who inspired the founding of the Ramakrishna Mission in India and subsequently the Vedanta Society in the United States, lived there from 1836 to 1886. Calcutta, Bengal, was an important city in British India, and its complex cultural environment spawned a number of New Religious Movements (NRMs). The availability of Western-style education created a class of young men familiar with both Indian and Western thought, and many of the new movements incorporated dimensions of both.[6]

The boy who became known as Ramakrishna, however, spent his early years in a small village with little influence from the hybrid culture of British India. He was born into the Brahmin caste. Traditionally the occupation of Brahmin males is the priesthood and teaching, though not all Brahmin males pursue this path. Followers report that Ramakrishna had many spiritual experiences as a child. Late in his teens, Ramakrishna became a priest at the Dakshineshwar temple outside Calcutta. This temple is dedicated to Kali, a goddess famed for slaying demons the other gods of the Hindu pantheon could not vanquish. Though Kali is usually depicted as a fearsome figure dancing in a cremation ground, drinking blood, and clothed in severed body parts, Ramakrishna approached her tenderly as a son would his mother. His devotion was so fervent that some family members feared for his well-being.

Ramakrishna experimented with many forms of religious practice. Though his subsequent followers, most notably Swami Vivekananda, would highlight his acceptance of Vedanta, Ramakrishna was also involved with tantric practice and studied with several gurus or teachers. He also briefly tried practices of Islam as well as Christianity and is reported to have had visions of Muhammad and Jesus.[7] Throughout his life, Ramakrishna often went into a state of samadhi or spiritual absorption. Followers sometimes speak of his "divine madness."

Ramakrishna often spoke of the dangers "women and gold," in a larger sense lust and material wealth.[8] Although his family arranged a marriage for him to a woman named Sarada Devi (1853–1920), the marriage was never consummated, and the two focused on their spiritual development. Sarada Devi herself came to be revered as a great spiritual teacher, the "Holy Mother."

As word of Ramakrishna's unusual spiritual capacity spread, people from surrounding areas came to visit him. Among the visitors were many young men from Calcutta with western educations. Soon, there was a circle of young men who were ardent devotees, visiting Ramakrishna frequently. Not surprisingly, much of what is known about Ramakrishna has been filtered through the interpretive lenses of his closest followers. One of the most important primary sources of information on Ramakrishna himself is Mahendranath Gupta's *The Gospel of Sri Ramakrishna*

(Gupta referred to himself in the book as "M").[9] A teacher, Gupta recorded all that he could about the last years of Ramakrishna's life. Swami Vivekananda, as the most publicly visible leader of the Ramakrishna Mission, also played a key role in promoting a particular understanding of what Ramakrishna had taught.[10] There thus exist divergent and sometimes competing portrayals of the movement's early history.

Many people have commented on the remarkable difference in backgrounds of Ramakrishna and his disciple Swami Vivekananda. While Ramakrishna had little education and lived the whole of his life in Bengal, Swami Vivekananda was educated at Presidency College and Scottish Mission College in Calcutta, sampled a wide range of literature, history, and philosophy in his reading, and traveled the world.[11]

Born into a wealthy Calcutta family in 1863, Swami Vivekananda's given name was Narendranath Datta. As a young man, he became involved with the Brahmo Samaj, a movement that rejected popular Hindu practices such as image worship and focused on the monistic world view of the Upanishads. When Narendranath finished his bachelor's degree in 1884, his world was shaken by the deaths of his father and the Brahmo Samaj leader Keshub Chunder Sen. His family, previously wealthy, now fell on hard times. Narendranath had met Ramakrishna for the first time in the early 1880s. Other disciples of Ramakrishna recalled that Swami Vivekananda, then still known by his given name of Narendranath, frequently challenged Ramakrishna and asked whether his spiritual experiences were, in fact, hallucinations.[12] Ramakrishna, however, continued to teach the future Swami Vivekananda, and his touch alone brought about powerful experiences for young Narendranath. Still, he went through a period of searching and questioning, leading some to decide he had become an atheist. Yet he remained an ardent disciple of Ramakrishna.[13]

The Ramakrishna Mission recalls that towards the end of Ramakrishna's life, when he was suffering from throat cancer, he gave saffron-colored clothes to his closest disciples, indicating that they were to become monks or renouncers and carry on his teaching. After Ramakrishna's death in 1886, Narendranath and some of Ramakrishna's other close male disciples gathered at Baranagore and took vows of renunciation.[14] In classical Hindu tradition, men, and less frequently women, may take formal vows of renunciation, known as sannyasa, which sever all ties to one's family and possessions. Normally those who take such vows also take a new name, most frequently preceded by the title "swami," which means "master" or "lord." Narendranath did not adopt the name Swami Vivekananda until 1892 or 1893.

Traditionally, Hindu swamis have no set residence and may wander to different spiritual centers or pilgrimage places practicing solitary yoga and meditation. Swami Vivekananda followed this path for some time, but also periodically met with his fellow monks and considered Ramakrishna's call to social service. The role of renunciants in public life and service was a concern for nineteenth-century Hindu leaders. Christian missionaries in India were active in opening schools and providing medical care and other social services, and saw such work as a way to gain converts. Many Hindu reform movements responded by developing their own educational and social service programs.

Swami Vivekananda eventually decided that he wanted to travel to the Western world to seek aid for India's people. He received the support of an Indian king (during British rule of India, a number of kings or maharajas maintained control over small kingdoms while paying allegiance to the British empire), and in 1893 left for North America, planning to attend the World's Parliament of Religions to be held in Chicago that year. Landing at Vancouver, British Columbia, in Canada, he traveled by rail to Chicago, only to learn that he lacked the credentials necessary to become a delegate to the Parliament of Religions. Fortunately for the swami, Americans he met arranged credentials for him. The swami's many addresses at the Parliament brought him fame and media attention both in the United States and India, and the transcriptions of his lectures there are a significant portion of the swami's collected works.[15]

In his lectures to the World's Parliament of Religions, Swami Vivekananda spoke of his vision of Hinduism, criticized Christian missionaries who sought to convert Hindus, and solicited support for social reform in India. Swami Vivekananda described a Hinduism that could stand the onslaught of new sect after new sect, only to emerge stronger, having "sucked in, absorbed, and assimilated [each new sect] into the immense body of the mother faith."[16] This idea remains a core component of Vedanta Society teaching and provides the rationale for the assertion that Vedanta is the essence of Hinduism, capable of encompassing all other religions.[17]

The swami and other representatives of Asian religions such as Buddhism attracted much attention as they sought to describe traditions previously unfamiliar to most Americans. After the Parliament of Religions, Swami Vivekananda continued to garner media coverage as he traveled throughout the United States. Newspaper reporters went to great lengths to describe not only what he spoke about, but his features and apparel. In March 1894, for example, the *Saginaw Courier-Herald* described him as "a strong and regular featured man of fine presence, whose swarthy skin made more pronounced the pearly whiteness of his even teeth. Under a broad and high forehead his eyes betoken intelligence."[18] Christopher Isherwood later wrote, "in those days, a foreign lecturer touring America found himself in a position midway between that of a campaigning politician and a circus performer."[19]

While the media coverage may not have always focused on the spiritual dimension of Swami Vivekananda's work, the swami's lecture tour attracted some of his first American disciples, such as Christine Greenstidel of Detroit, later known as Sister Christine, who remained a dedicated follower for the rest of her life. In New York, the swami taught classes on yoga, where he met a number of Americans who played a key role in the establishment of the Vedanta Society, such as Sara Bull (also known as "Mrs. Ole Bull") and Josephine MacLeod. MacLeod spent much time with the swami in the coming years, introducing him to many important people, but never declared herself a disciple. MacLeod's sister, Betty, married Francis Leggett, who led the Vedanta Society established in New York in 1894.

Swami Vivekananda spent much of the latter part of 1894 in the northeastern United States. That summer, he attended a conference on different religions at Greenacre, Maine. Weary after months of lecturing, in 1895 he shifted his focus to

offering classes for small groups. In the summer of 1895, Swami Vivekananda organized a retreat at Thousand Island Park in upstate New York. About a dozen students came together to study with Swami Vivekananda at a cottage owned by Mary Elizabeth Dutcher, and it was here that he first initiated Americans as renunciants, although the first two to do so, Leon Landsberg and Marie Louise, later left the movement.[20]

After four years of travel in North America and England, Swami Vivekananda returned to India in early 1897. There he met with great acclaim as a hero who had championed the cause of India and Hinduism in the West. Later that year, along with some of Ramakrishna's other close followers, he founded the Ramakrishna Mission with the goal of advocating service to God through service to humankind as an embodiment of divinity. Early in 1899, Belur Math in Bengal was established as the permanent headquarters of the Mission.[21] In the years that followed, a number of Swami Vivekananda's Western disciples and admirers visited India, including Sara Bull, Christine Greenstidel, and Josephine MacLeod. Western followers helped fund some of the early endeavors of the Ramakrishna Mission in India.

Late in 1899, Swami Vivekananda returned to the United States, visiting California and the Midwest. In 1900, the Vedanta Society opened a branch in San Francisco, and about the same time Shanti Ashram was established in northern California as well.[22] Swami Vivekananda also visited England, but efforts to establish Vedanta Societies there did not go well.[23] After visiting France and other European countries, Swami Vivekananda returned to India at the end of 1900. In 1901, the swami began relinquishing his official duties and public role, spending most of his time at the Belur Math. Struggling with poor health, in July 1902, he died peacefully at the age of 39. His disciples recall that he often predicted he would not live to the age of 40.[24]

After Swami Vivekananda's death, the Vedanta Society branches in the United States maintained their affiliation with the Ramakrishna Mission in India, which was by then becoming well-known for its social service and educational work.

THE VEDANTA SOCIETIES IN THE TWENTIETH CENTURY

As part of the ongoing relationship between the Vedanta Societies in the United States and the Ramakrishna Mission in India, the Ramakrishna Order sent swamis to lead the American Societies. The early branches often struggled to survive, because there were uncertainties about how to organize the movement. Carl Jackson, in his 1994 study of the American Ramakrishna Movement,[25] explained that Ramakrishna swamis faced difficult questions about who would hold authority—local swamis, American disciples, or Ramakrishna Order officials in India. They also had to decide how to adapt their teachings and the practices they advocated to an American audience, how to handle finances (traditionally swamis do not handle money), and how much to focus on Ramakrishna as an object of worship.[26] The decisions that different swamis made helped lend a distinct character to each branch of the Vedanta

Society. Indeed, it is still common for Society members to speak of significant differences in the way branches in various cities pursue their study and practice of Vedanta.

Swami Abhedananda (1866–1939) took on the leadership of the New York Vedanta Society in 1897 and spent much time there until he returned to India in 1921.[27] He was one of the original disciples of Ramakrishna to have taken vows of renunciation at Baranagore in 1887. He lectured frequently in New York and throughout the United States, and also published extensively on Vedanta. He helped create a solid structure for the New York Society by incorporating it under New York law.[28] Even so, the New York Society went through difficult times, perhaps due to disagreements between Swami Abhedananda and some of the Vedanta Society's American supporters.[29]

Swami Trigunatita (1865–1915, full name Swami Trigunatitananda) was sent to head the San Francisco branch of the Vedanta Society in 1903. This swami, born Sarada Prasanna Mitra, was introduced to Ramakrishna by his teacher Mahendranath Gupta. Sarada's family tried to steer him away from a life of renunciation, but he too was one of the disciples to take vows of renunciation in 1897. Swami Trigunatita also established a society in southern California in 1904 and asked the Ramakrishna Order in India to send a swami to serve there. Swami Trigunatita is fondly remembered for undertaking the construction of the first Hindu temple in the West, completed in 1906, its architecture drawing on motifs from different religions. While the Ramakrishna Order and Vedanta Societies have generally steered clear of involvement in politics, Swami Trigunatita was sympathetic to and spoke publicly on socialism.[30]

From the very beginning of the Vedanta Society, there have been a small number of members who have chosen to take vows of renunciation, while the majority attend regular meetings and classes, and may occasionally go on retreats. Swami Trigunatita established a residence for novice American monks, and, quite ahead of his time, founded one for nuns as well. (The Ramakrishna Order did not establish a convent in India until the 1950s.) The monastery closed in 1915, the convent in 1912.[31] Tragically, Swami Trigunatitananda died early in 1915 from injuries sustained when a troubled former follower bombed the San Francisco temple.

The subsequent history of the Vedanta Societies in the United States has been guided by a later generation of swamis from the Indian Ramakrishna Order, while American followers have typically shared leadership responsibilities and handled much of the administrative work of the societies. Swami Paramananda, for example (1884–1940), came to New York in 1907 to serve as assistant to Swami Abhedananda. In 1910, he established the Ramakrishna Vedanta Society in Boston. He also established Vedanta groups in southern California.

Altogether, the early history of Vedanta Societies in the United States is one of only modest success. Some centers were founded and quickly fell apart; by 1920, only San Francisco, Los Angeles, Boston, and New York had established societies.[32] Carl Jackson has charted the movement's steady growth in the 1930s, detailing the histories of the major Vedanta Societies across the United States.[33] A series of Indian swamis from the Ramakrishna Order in India headed the various local societies,

typically lecturing to both members and outside groups, publishing works on Vedanta, and counseling individuals. In New York in 1933, the Vedanta Society was thriving to such an extent that Swami Nikhilananda established a second branch of the group called the Ramakrishna-Vivekananda Center. This swami also published a number of noted translations, such as *The Gospel of Ramakrishna* and original works on Vedanta.[34]

Swami Prabhavananda (1893–1976), who became a member of the Ramakrishna Order in 1914, was an especially important leader on the west coast of the United States for many decades. He began working at the San Francisco Vedanta Society, and then established a branch of the Vedanta Society in Portland in 1925 and the Vedanta Society of Southern California in 1930.[35] Two centers were opened in the Midwest in the 1930s as well: in Chicago in 1930, where Swami Vivekananda had given his addresses to the World's Parliament of Religions, and another in St. Louis in 1938, founded by Swami Satprakashananda.

In the middle of the twentieth century, several branches also established retreat centers, such as Vivekananda Cottage at Thousand Island Park, New York, and the Ganges Retreat Center in Ganges, Michigan, linked to the Chicago Vedanta Society. In some areas, the Societies grew to such an extent that congregations were divided; the San Francisco Vedanta Society, for example, separated into San Francisco, Berkeley, and Sacramento branches under the parent organization of the Vedanta Society of Northern California.[36]

Each local branch has its own history and character, determined by local conditions and often the particular strengths and emphases of the swamis sent from the Ramakrishna Order in India.[37] In some cities, repeated attempts to establish societies have been unsuccessful.[38] In other areas, the constituency of the membership has shifted over the years. As more and more Indians began to immigrate to the United States (particularly after the liberalization of immigration laws in the 1960s), the numbers of Indian-born members in Vedanta Societies has increased, particularly in Chicago, New York, and Seattle.[39] Some Vedanta Societies also cater to nearby colleges and universities. For example, the present head of the Boston branch of the Vedanta Society, Swami Tyagananda, also serves as the Hindu chaplain for the campuses of Harvard University and Massachusetts Institute of Technology. The basic leadership structure remains the same; all American branches are affiliated with the Ramakrishna Order in India, and most are led by Indian swamis from the Order. The Vedanta Center of Greater Washington, D.C., established in 1997 and affiliated with the Vedanta Society of Southern California, has an American-born swami named Swami Atmajnananda.[40] Although the Order now has both male and female renunciants, the major leaders in the United States have been male. In the 1940s, after the death of Swami Paramananda, his niece Gayatri Devi assumed leadership of the Boston Vedanta Society, but the Ramakrishna Order leadership in India refused to accept her. She eventually established a separate organization, which is still in existence.[41]

While the succession of various swamis is a critical part of the institutional history of the Vedanta Societies in the United States, equally important are their American

disciples. Who was attracted to the Vedanta Society, and why? American disciples provided the bulk of funding for activities and the purchase of property and construction of buildings, and assumed responsibility for much of the day-to-day functioning of the various branches. American and other Western disciples have also assisted the various enterprises of the Ramakrishna Order and Ramakrishna Mission in India. Jackson has noted that the Vedanta Societies have predominantly attracted members in urban, coastal areas of the United States, and that the group has not had much success in the south.[42] Pravrajika Vrajaprana, a nun at the Sarada Convent in Santa Barbara, California, also notes that it can be a challenge for the Ramakrishna Mission in India to find monks prepared to lead new centers in the United States even when the demand for a new center in an area exists.[43]

The earliest members of the Vedanta Societies were typically people who heard Swami Vivekananda speak during his two visits to the United States. Those who became followers were usually well-educated and fairly well-off financially (some, in fact, expressed their concern to Swami Vivekananda that he should work only with the "right" sort of people). Many had been involved in other religious groups outside the mainstream, such as the Ethical Culture Society, the Theosophical Society, Christian Science, and the Spiritualist movement.[44] As in many NRMs of the late nineteenth century, women played a key role in the establishment of American Vedanta Societies. Writing home to his fellow monks, Swami Vivekananda admiringly described the American women who worked with him. "Well, I am almost at my wit's end to see the women of this country! They take me to the shops and everywhere, as if I were a child.… I am really struck with wonder to see the women here!"[45]

Sara Bull, or Mrs. Ole Bull, who came to be known as "Swami Vivekananda's American mother," is a good example. In the 1880s, she joined a Spiritualist group led by a medium, and corresponded with friends who were attending Theosophical Society meetings.[46] She studied the *Bhagavad Gita* with a Theosophical teacher from India, a former Brahmo Samaj member named Mohini Mohan, and found that his exposition of the New Testament revived her faith in Christianity.[47] Thus, when she met Swami Vivekananda, she had been searching for some time and already had some familiarity with Indian tradition.

Christine Greenstidel, a school teacher who came to be known as "Sister Christine," had been raised as a Lutheran but became a Christian Scientist, and she first heard Swami Vivekananda speak in Detroit early in 1894. Impressed by his voice and his keen mind, she attended many lectures, becoming a follower.[48] The following year, she and her friend Mary C. Funke traveled to Thousand Island Park in New York when they heard that Swami Vivekananda was teaching a group of students there.[49] Christine and Swami Vivekananda established a close, father-daughter style relationship, and corresponded for many years. In the late 1890s, Christine helped with the administration of Vedanta Society-related enterprises in Detroit.[50] Sister Christine traveled to India in 1902, and was able to spend some time with the swami before his death. She later joined Sister Nivedita, a British follower of Swami Vivekananda, in Calcutta to assist with her school for young Indian girls and also

worked with older women. Christine lived for much of the next 14 years in India. She returned to the United States in 1914, but was not able to return to India again until ten years later. In 1929, poor health forced her to return to the United States, and she died in New York in 1930.[51]

Josephine MacLeod first met Swami Vivekananda in New York City in 1895, and she described the effect he had on her: "He said something, the particular words of which I do not remember, but instantly to me that was truth, and the second sentence he spoke was truth, and the third sentence was truth. From that moment life had a different import. It was if he made you realize that you were in eternity."[52] Like many Vedanta Society members, MacLeod was initially drawn to the movement by the charismatic qualities of a particular swami, which in turn inspired her to undertake study and practice of Vedanta.

In the mid-twentieth century, the Vedanta Society attracted a number of literary figures whose reference to Vedanta in their works helped bring Vedanta thought to a larger audience. The playwright and novelist Christopher Isherwood (1906–1986) was born and educated in England, and became an American citizen in 1946. In 1943, he became a follower of Swami Prabhavananda.[53] Isherwood published several books about Vedanta and his own spiritual development, and translated Sanskrit texts with Swami Prabhavananda. In an article entitled "Vedanta in America," Sarada Convent nun Pravrajika Vrajaprana traces the influence of Vedanta teachings and various Vedanta Society swamis on noted American authors such as Henry Miller, Aldous Huxley, and J.D. Salinger.[54] Salinger studied Vedanta with Swami Nikhilananda at the New York Vedanta Society in the 1950s. Like many who become interested in Vedanta, he had also studied other traditions such as Zen Buddhism and the thought of the Hindu guru Paramahamsa Yogananda.[55]

Given the substantial number of references to Vedanta thought in the work of many major American writers, it should come as no surprise that many followers first come to Vedanta through reading about it. Book sales and distribution are an important focus of both Vedanta Societies in the United States and the Ramakrishna Mission in India (whose publishing house is called Advaita Ashrama). In recent years the various centers in India and the United States have also established multiple Web sites that detail the movement's history, teachings, and current activities. Many of the major works of movement leaders are available online as well, and the accessibility of Vedanta Society and Ramakrishna Mission information may prove to be a new means of attracting new members.

BELIEFS

In Sanskrit, Vedanta literally means the "end" or the "culmination" of the Vedas, and it has most often referred to the teachings of the Upanishads, a set of texts appended to the Vedas. The Upanishads themselves do not present a single doctrine, but reflect the teachings of many sages in ancient India. There are certain basic concepts developed in the Upanishads, such as the notion that each person has an

eternal, imperishable soul known as the atman, and that the atman is part of a larger universal reality known as brahman. Each atman is caught in a cycle of death and rebirth known as samsara, a cycle governed by the law of karma. According to the law of karma, each action that a person performs has an effect that is determined by the moral quality of the action. One's present situation in life has been determined in part by karma from both the present and previous lives, and the karma one accrues within a lifetime will determine how the atman will be reborn after death. In order to escape from the cycle of death and rebirth, one must attain direct knowledge of the atman. Then, the atman will merge back into brahman at death rather than being reborn again. In Swami Vivekananda's words, "… the human soul is eternal and immortal, perfect and infinite, and death means only a change of centre from one body to another. The present is determined by our past actions, and the future by the present."[56]

The Upanishads present a variety of techniques to gain knowledge of one's atman, known collectively as yoga, which incorporate different forms of meditation, breath control, diet, and so forth. The earliest Upanishads were compiled when traditions of renunciation were developing within Indian society. Some men (and perhaps a very small number of women) chose to retire from society completely and dedicate themselves to the quest for release from the cycle of death and rebirth. The act of renunciation was eventually formalized, and different renouncer lineages and traditions were established. This was the context in which Buddhism arose; Swami Vivekananda made many references to Buddhism as well as Hinduism in his lectures.

In time, Vedanta came to be known as one of the six classical philosophical systems or darshanas of Hindu thought. There are various subsects of classical Vedanta, typically characterized by different views about what exactly happens when the atman is reunited with brahman, for example, whether it merges entirely into brahman (Advaita, or nondual Vedanta) or merges into brahman but maintains a separate sort of identity (Dvaita or dual Vedanta). Throughout much of the history of Indian thought, Vedanta teaching and most particularly its complex philosophical analysis were likely available only to a relatively few, mostly high-caste males who knew Sanskrit.

When India was under British rule, Indian and Western scholars translated a number of Sanskrit texts into English, other Western languages, and vernacular Indian languages, which fostered a critical reassessment of many dimensions of Indian thought. Western scholars, and most especially Christian missionaries, were frequently critical of Indian tradition, and one of the criticisms leveled at Vedanta was that it provided no basis for ethics. The "Practical Vedanta" which Swami Vivekananda and later Hindu leaders advocated in part was a way to demonstrate that Vedanta ideology could, indeed, provide the foundation for a way of life that did not require complete detachment from the world, but instead could incorporate active, ethical engagement in society. Unlike the classical Vedanta tradition available only to an elite few, Practical Vedanta was accessible not only to Hindus, but to the entire world, as evidenced by Swami Vivekananda's desire to bring it to the West. And unlike the typical Hindu renunciants who severed ties to worldly life, the

renunciants of the Ramakrishna Order, as practitioners and teachers of Practical Vedanta, could be active in social service.

From among the many viewpoints Ramakrishna had explored, Swami Vivekananda deemed Vedanta the most essential. Addressing the Parliament of Religions in Chicago in 1893, Swami Vivekananda explained that the Hindu religion comes from the revelation of the Vedas. The Vedas, he taught, are not books, but rather "the accumulated treasury of spiritual laws discovered by different persons in different times."[57] Swami Vivekananda's adaptation of classical Advaita Vedanta, and his promotion of that Vedanta as the core of the diverse Hindu tradition, was part of a larger late-nineteenth century trend to present Hinduism as a world religion on a par with, indeed above, the Western religions, most especially Christianity.

In later works by Vedanta Society members, such statements about Vedanta remain common. In his introduction to *Vedanta for the Western World,* for example, Christopher Isherwood asserts that Vedanta is the basis of all the sects in India, "a statement of the Philosophia Perennis, the least common denominator of all religious belief."[58] A similar view is found in the work of Huston Smith, author of one of the most popular introductory texts on world religions, *The Religions of Man* (now titled *The World's Religions*).

For Isherwood, Vedanta boils down to three main propositions: that human nature is divine, that one's goal should be to realize this nature, and that "all religions are essentially in agreement."[59] It is when people make the mistake of identifying themselves as individuals with particular backgrounds, particular religious affiliations, that they fail to see the fundamental unity of all religions. Isherwood presents a conversation in which he asks, "'Then why do I think I'm myself?' 'Because of your ignorance. Christopher Isherwood is only an appearance, a part of the apparent universe. He is a constellation of desires and impulses. He reflects his environment. He repeats what he has been taught. He mimics the social behavior of his community. He copies gestures like a monkey and intonations like a parrot.…'"[60]

From the Vedanta perspective, people do not realize their true nature because of maya or ignorance. Brahman, the ultimate reality, is at the heart of everything; Pravrajika Vrajaprana explains that the everyday world is like the changing images on a movie screen, while brahman is the "unchanging screen in the background."[61] The goal is to see the reality behind the images that most often engage people's attention and to realize that there is an underlying unity to everything. Spiritual practice, therefore, must aim towards seeing things as they really are from the Vedanta perspective. In J.D. Salinger's short story "Teddy," a precocious young boy who asserts he had lived in India and was spiritually advanced in his previous life, explains, "I was six when I saw that everything was God, and my hair stood up, and all that.… My sister was only a very tiny child then, and she was drinking her milk, and all of a sudden I saw that *she* was God and the *milk* was God. I mean, all she was doing was pouring God into God, if you know what I mean."[62] The idea that all humans have within them the atman or eternal soul, which is a part of the larger fundamental reality of brahman, of course also implies the interconnectedness of all humankind.

Vedanta thought allows for the possibility that the ultimate reality of brahman may be approached in a variety of ways. Swami Vivekananda drew upon classical Hindu tradition to enumerate different types of yoga suitable for different personality types. Yoga literally means to yoke or to join, and the term designates a variety of practices used to foster the union of the individual soul and ultimate reality. Bhakti yoga is the yoga of devotion, appropriate for people who yearn for a loving, emotional relationship with God. Swami Vivekananda believed that "the vast majority will always want something concrete to hold on to,"[63] meaning that the yoga of devotion is likely to have the greatest appeal. Jnana yoga, the yoga of knowledge, is suited for those who seek spiritual progress through intellectual inquiry. Karma yoga, the yoga of action, is for those who seek divinity through active service. Finally, raja yoga emphasizes meditation. Vedanta Society branches typically provide instruction in these different forms of yoga.

Practical Vedanta developed in an era of acute awareness of the challenges science posed to traditional religious belief systems. Swami Vivekananda and the many Vedanta Society swamis who have followed him have tended to emphasize the complete compatibility of Vedanta with science. Swami Vivekananda himself equated the Vedantic quest for self-knowledge with scientific inquiry; while the scientist reads the "book without," that is, studies the physical world, the sage reads the "book within." Mystics around the world, he argued, reach the same truths through their spiritual experiences, "and this becomes law."[64] Practical Vedanta therefore asserts that spiritual knowledge is derived through deductive reasoning on the basis of experience and not blind faith. This view is also a means to support the assertion that there is a common core to all religions and that this may be confirmed through spiritual experience.

The notion that all humans are manifestations of divinity provides a rationale for social service, because to serve other humans effectively is to serve God or the ultimate reality. Thus both the Ramakrishna Mission and the Vedanta Society in the United States have supported educational and other social programs. Most recently, they have been involved in relief for victims of the 2004 tsunami.

The concept of the divinity within all also meant that Swami Vivekananda rejected what he considered to be some of the overly ritualistic and discriminatory practices of Hinduism. Rules regarding food preparation and dining he derisively referred to as "kitchen religion," and rules of caste purity that may include avoiding contact with persons or things that bring about ritual impurity he termed "don't touchism."[65] Thus, the teachings of the Vedanta Society focus on a particular strand of thought and practice within Hindu tradition, but reject a great deal of the day-to-day social practices of some Hindus, many of whose beliefs and practices may be determined in part by caste affiliation and social status.

PRACTICES

The various centers of the Vedanta Society provide regular programs to assist those who wish to understand Vedanta and put it into practice. Centers typically host

weekly meetings and classes led by swamis or longtime members. The subject of classes may be Hindu texts such as the *Bhagavad Gita,* or studies of Ramakrishna Mission literature, such as *The Gospel of Sri Ramakrishna.* A recent Vedanta Society of New York schedule lists meditation and study classes as well as devotional singing sessions and a class entitled "Overcoming Stress."[66]

Vedanta Society centers usually have photos or other images of Ramakrishna, his wife Sarada Devi, and Swami Vivekananda. They may also have images of the goddess Kali and images or other symbols associated with other religions. Members may garland the photos and images and offer other forms of veneration typical of Hindu worship or puja. The relative emphasis on such devotional practices versus textual study may vary from one center to another.

The Vedanta Society does not actively recruit new members; those who join typically do so with the sponsorship of the swami who leads their local Society branch. Swamis offer private counseling sessions, and lead public classes and services; many lecture to outside audiences and write about Vedanta as well. A very small number of members choose to undertake a monastic life; several centers have monasteries, and there are convents for nuns in California as well. Many centers sponsor annual retreats with extended meditation and devotional sessions.

Membership in a Vedanta Society does not necessarily demand a radical change in lifestyle or the adoption of communal living or a particular style of dress. The Vedanta Society does not require absolute allegiance; it is possible to accept some or all of the Vedanta Society's teachings and still remain a member of another religious organization.

CONTROVERSIES

From the earliest days of the Vedanta Society, critics have rejected the assertion that Vedanta can incorporate (and by implication, supercede) Christianity, a charge that is still leveled by Christian anticult activists. The frequent charge in the movement's early years that gullible women were being taken in by swamis led to legal problems; when Sara Bull left her money to the Vedanta Society in 1911, the will was overturned on the argument that her belief in Hindu teachings was an indicator of insanity. In recent years, however, the Vedanta Society has not been a key target of the secular anticult movement. As such it may be contrasted with movements such as the International Society for Krishna Consciousness, which Swami Bhaktivedanta Prabhupada founded in 1966. The International Society for Krishna Consciousness (ISKCON) has faced enormously costly legal battles and charges of "brainwashing" of followers. After Swami Prabhupada's death in 1977, ISKCON was led by a group of American-born gurus, each of whom was in charge of a particular region. This leadership model proved problematic, and a number of the gurus were eventually found to have abused their power, which led to a reform movement, the removal of some of the gurus, and the establishment of a new organizational structure. In comparison, the Vedanta Society's organizational structure has proved to be more stable, perhaps because of the ongoing connection between the Ramakrishna Order

in India and the various American branches. The fact that individual branches are largely independent has meant that no one person has absolute control over the movement as a whole, and practices may vary from one center to another. The Vedanta Society has never engaged in the types of recruitment and fundraising activities that have brought negative publicity to groups such as ISKCON, nor does membership in a Vedanta Society require that one sever ties to family and friends not in the movement, characteristics that have tended to attract the attention of anticult activists to other groups.

Given that literature plays such a key role in the Ramakrishna Mission and the Vedanta Societies—from biographies of Ramakrishna and other swamis to collected teachings to translations of Vedanta texts—it is perhaps not surprising that the bitterest controversies within the movement and between members of the movement and those outside have arisen over the interpretation of this literature. How should people remember Ramakrishna? What did he teach? What was the nature of his relationship with his wife and his young male disciples? Publications by scholars of Hinduism that present new interpretations of these issues have come in for sharp criticism from Ramakrishna Mission and Vedanta Society members.

The most controversial book about Ramakrishna is Jeffrey Kripal's *Kali's Child: The Mystical and the Erotic in the Life and Teachings of Ramakrishna.* The cover states that the book presents "a striking new vision of Ramakrishna as a conflicted, homoerotic Tantric mystic."[67] Kripal argues that Swami Nikhilananda's English translation of the *Kathamrita, The Gospel of Sri Ramakrishna,* has brushed away overtly erotic dimensions of the original Bengali text. Kripal's book was positively reviewed by a number of scholars in the United States, and it received the American Academy of Religion's History of Religions Prize for the Best First Book of 1995. But when a critical review written by Narasingha Sil appeared in Calcutta's newspaper the *Statesman* in 1997, Kripal came under attack from angry letter writers, and there were calls to ban the book.[68]

Some Vedanta Society officials in the United States have gone to great lengths to counter Kripal's portrayal of Ramakrishna. Swami Tyagananda, who became head of the Boston Vedanta Society in 1998, published a response to Kripal's book in 2000 called *Kali's Child Revisited—or—Didn't Anyone Check the Documentation?*[69] Swami Tyagananda argues that Kripal mistranslated many Bengali words in his reading of the *Kathamrita,* that he distorted and manipulated sources, and that he misunderstood Bengali culture.[70] The swami's text quotes specific passages from Kripal's book and presents alternative translations and interpretations. Kripal, in turn, has responded extensively to his critics and made some changes to the second edition of his book. The controversy continues, however, in part because it is linked to a larger debate about how Hinduism is represented in the West.

THE FUTURE OF THE VEDANTA SOCIETY

While the Vedanta Society has had relatively modest numbers of members throughout its history in the United States, it remains stable and, indeed, is growing

in some areas. For example, a Vedanta Center for the greater Washington, D.C., area was founded in 1997, affiliated with the Vedanta Society of Southern California. The growth is in part a result of immigration from India. Bengali Hindu immigrants have assumed a significant role in many centers. The changing demographic makeup raises important questions for the future direction of the Vedanta Society. For many immigrants, communal religious activity is not just a matter of continuing to put one's religion into practice, but is also a means of celebrating and maintaining one's cultural heritage and language. This has affected the activities of some centers and led to debates about the use of the Bengali language versus English in classes and devotional ceremonies. Longtime American-born devotees in some instances feel that the Vedanta Society is moving away from its roots.[71] How Vedanta Society leaders manage to balance the needs of immigrant Hindus and American-born members is likely to be an important issue in the future.

The nature of the relationship between the American Vedanta Society branches and the Ramakrishna Order in India is also important. Will there be more American-born swamis taking leadership roles? Will women assume greater leadership roles? Some Vedanta Society nuns in California teach and give public lectures.[72]

Vedanta Society members also continue to participate in discussions about the nature of scholarship on Hinduism. Debates about the authority of scholars of Hinduism trained in the Western academy versus the authority of scholars and Hindu leaders who approach their work from within the Hindu tradition seem likely to persist for some time, particularly as the Hindu population of the United States continues to grow.

The Vedanta Society has also been actively involved in the interfaith movement, which is not surprising given its view that Vedanta can incorporate all religions. Society members' participation in interfaith meetings and conferences brings greater visibility to the movement and may serve as a means of attracting new members.

Similarly, the Vedanta Society branches' focus on creating and maintaining extensive Web-based material promoting Vedanta teachings and center activities may yet emerge as a powerful form of generating new interest in Vedanta, much as the writings of authors such as Salinger and Isherwood did in the twentieth century. As the twenty-first century begins, the Vedanta Society has clearly established itself as part of the American religious landscape that has had a powerful influence on American understandings of Hinduism.

NOTES

1. The Vedanta Society of Kansas City, for example, is "an official sub-center of the Ramakrishna Math under the Vedanta Society of St. Louis," http://www.vedanta.org/vssc/news/news_rko.html (accessed August 3, 2005).

2. See, for example, the "Services and Classes" section of the Ramakrishna-Vivekananda Center of New York's Web site, http://www.ramakrishna.org/act_srv.htm (accessed September 20, 2005).

3. Perhaps the best example is the chapter on Hinduism in Huston Smith's *The World's Religions* (originally titled *The Religions of Man*) (San Francisco: HarperSanFrancisco, 1991). Joseph Campbell, another noted scholar of religion, was a member of the Vedanta Society.

4. For example, Sara Bull, one of Swami Vivekananda's first American disciples, willed a great deal of money to the movement, but after her death in 1911, her daughter successfully petitioned to have the bequest nullified on the grounds that her mother had been unduly influenced by the Indian Swami. See Carl T. Jackson, *Vedanta for the West: The Ramakrishna Movement in the United States* (Bloomington and Indianapolis: Indiana University Press, 1994), 92.

6. The chapter "Situating Swami Vivekananda," in Amiya P. Sen, *Swami Vivekananda* (Delhi: Oxford University Press, 2000), provides a helpful introduction to the socioreligious environment of nineteenth-century Bengal.

7. See, e.g., *The Gospel of Sri Ramakrishna,* trans. Swami Nikhilananda (New York: Ramakrishna-Vivekananda Center, 1952), 746.

8. See, e.g., Ibid., 748, 874.

9. The text was originally published in Bengali under the title *Sri Sri Ramakrishna Kathamrita.* The Bengali original and Swami Nikhilananda's translation, *The Gospel of Sri Ramakrishna,* have been at the heart of recent controversies over portrayals of Ramakrishna's life.

10. Narasingha P. Sil has argued that Swami Vivekananda, when speaking or writing about Ramakrishna, or critiquing others' works on Ramakrishna, wished to gloss over aspects of Ramakrishna's life that did not suit the image he wished to create of him as a prophet for a new India. Thus the swami avoided mention of some of Ramakrishna's spiritual experiences and aspects of Ramakrishna's relationships with young men that could be interpreted as homoerotic. See Narasingha P. Sil, "Vivekananda's Ramakrsna: An Untold Story of Mythmaking and Propaganda," *Numen* 40 (1993): 38–62.

11. Swami Vivekananda explained that he developed a reading technique that involved reading just the first and last lines of paragraphs or a few lines of a section. See Sailendra Nath Dhar, *A Comprehensive Biography of Swami Vivekananda,* vol. 1 (Madras: Vivekananda Prakashan Kendra, 1975), 53.

The Hare Krishna Movement: Beginnings, Change, and Transformation

E. Burke Rochford Jr.

My dear Lord Krsna, You are so kind upon this useless soul, but I do not know why You have brought me here [United States]. Now You can do whatever You like with me. But I guess You have some business here, otherwise why would You bring me to this terrible place?[1]

The Hare Krishna movement is one of the more controversial New Religious Movements (NRMs) that emerged in the United States during the 1960s. Like other NRMs of this era, it has undergone profound change over the course of 40 years.[2] From a radical and controversial "cult" the movement evolved into a pluralistic religious community increasingly aligned with the dominant culture.[3] This chapter describes the origins, beliefs, practices, and American development of the International Society for Krishna Consciousness (ISKCON), more popularly known as the Hare Krishna movement.

From uncertain beginnings in New York City, ISKCON's founder Bhaktivedanta Swami (1896–1977), and a small band of followers, successfully recruited thousands of members worldwide. Along with success, however, came public scrutiny and controversy. By the mid-1970s ISKCON had a public reputation as a threatening cult.[4] Under attack and facing a downturn in both recruitment and economic resources, ISKCON began to decline by the early 1980s. ISKCON's communal structure collapsed as married people and their children were forced to establish independent households and sources of livelihood. The death of Bhaktivedanta Swami, in November 1977, precipitated a crisis of leadership that continued into the new millennium. These and related issues resulted in the defection of many first and second generation members, and the decision by others to practice Krishna Consciousness independently of ISKCON. To avert organizational decline and possible failure, ISKCON's leadership has sought actively to develop a congregation of Indian Hindus in the United States to help revitalize the movement's communities.

This chapter is organized into five major sections. The first describes ISKCON's Indian origins, religious beliefs, and practices. The second focuses on ISKCON's charismatic founder, A.C. Bhaktivedanta Swami Prabhupada. The third considers ISKCON's early growth and expansion in the United States. The next section

considers sources of conflict and decline that led to the transformation of ISKCON in the years following Bhaktivedanta's death. The final section of the chapter considers the increasing role of Indian Hindus within ISKCON and the future of the movement in the American context.

ORIGINS, RELIGIOUS BELIEFS, AND PRACTICES

The historical roots of the Hare Krishna movement can be traced to Bengal, India, in the sixteenth century. While aligned with the more prevalent forms of Hinduism, the Krishna Consciousness preached by Bhaktivedanta traces its beginnings to the *Krishna bhakti* movement founded by Caitanya Mahaprabhu (1486–1533). A distinctive feature of the Gaudiya tradition is that Caitanya is believed to be an incarnation of Krishna.[5] Caitanya and his followers were known as the Gaudiya school of Vaisnavism because of their Bengali origin and to distinguish them from other Vaisnava traditions.[6] ISKCON inherited Gaudiya Vaisnavism through historical links that included Bhaktivinoda Thakura (1838–1914) and his son Bhaktisiddhanta Sarasvati (1874–1937).[7]

Caitanya and his followers elevated Krishna as the supreme manifestation of God, instead of being one of several Hindu gods. Caitanya preached a devotional form of Hinduism called *bhakti-yoga* that emphasized love and devotional service to God as the means to spiritual salvation. In a controversial split with traditional Hinduism, Caitanya preached that all people, regardless of their caste or position in life, could gain self-realization by serving Krishna. As a consequence, Caitanya's movement had great appeal among lower caste peoples in eastern India.[8] In keeping with Caitanya's religious philosophy, ISKCON adherents (adherents or followers of Krishna) consider themselves first and foremost Krishna's servants, and view human life as a unique opportunity to revive their devotion to God through surrender to him.[9]

Caitanya also developed another innovation unique to Hinduism, which proved a trademark of the Hare Krishna movement. Growing out of his intense religious passion, Caitanya initiated *sankirtan,* a practice requiring his followers to venture out into the streets to dance and sing their praises to Lord Krishna.[10] Public chanting was seen as a first step to awaken devotion to Krishna for those hearing god's names.[11] When Bhaktivedanta began his movement in the United States, *sankirtan* (preaching, book distribution, and chanting in public) became the principal means of spreading Krishna Consciousness.[12]

By chanting and performing devotional service under the guidance of a spiritual master, a devotee can restore his or her eternal relationship with Krishna and thus bring the soul back to the spiritual realm.[13] Because of material contamination, the soul must assume a continuous succession of rebirths (*samsara*). To escape the laws of *karma* and break the cycle of reincarnation, devotees seek to perfect their lives by controlling their senses. As this implies, devotees understand that they are not this material body, but rather spiritual souls.[14]

A Krishna devotee participates in a number of religious practices meant to purify the soul. Central to this process of self-realization is chanting the Hare Krishna

mantra: Hare Krishna Hare Krishna, Krishna Krishna, Hare Hare, Hare Rama Hare Rama, Rama Rama, Hare Hare. Composed of the names of God, the *mahamantra* is believed to be a genuine transcendental sound vibration having the potency to revive our transcendental consciousness.[15] For ISKCON members, chanting Hare Krishna is their single most important religious practice.

A major milestone in the spiritual career of a Krishna devotee occurs at the moment of initiation. A newcomer undergoes a trial period of six months to become accustomed to the demands of spiritual life and to choose an authorized ISKCON guru. In order to receive initiation the devotee must gain the blessing of local temple authorities who attest to the novice's character and motivation. Throughout ISKCON's history only men had served as gurus but this changed, in 2005, when the leadership officially afforded women the opportunity to serve as initiating spiritual masters.[16]

First initiation, or *harinama-diksa* initiation, is performed as part of a fire sacrifice where grains, fruit, and ghee are placed on an open fire in the temple room. When taking initiation from a guru, devotees commit themselves to chant 16 rounds of the Hare Krishna mantra daily on a string of 108 *japa* or prayer beads. They also agree to abstain from eating meat, engaging in illicit sex (sexual intercourse other than for propagation of god-conscious children), taking intoxicants (i.e., cigarettes, alcohol, tea, coffee, drugs), and gambling. The new initiate also receives a Sanskrit name from his or her guru. The name links the newly initiated devotee to a particular quality or form of god.[17] The name always includes the suffix, or last name, *dasa* for men and *dasi* for women. In each case this signifies that the devotee is a "servant" before god and guru.[18] Thereafter, newly initiated devotees are known within the ISKCON community by their initiated names (e.g., Caitanya dasa or Radha dasi).

A year or more after *diksa* initiation a devotee is considered for "second initiation." On this occasion the initiate receives the status of *brahmana,* symbolized by the sacred thread (*yajnopavita*). This ceremony was an innovation of Bhaktivedanta's guru, Bhaktisiddhanta Sarasvati, who sought to distance himself from traditionalists by rejecting the idea that one could only be a *brahmana* on the basis of birth (*jati*).[19] *Brahmana* initiation enables an ISKCON devotee to perform specific liturgical procedures and practices such as cooking for the deities, serving on the altar, and performing sacrificial rites.[20]

Although no longer a mandatory requirement, many ISKCON members continue their early morning worship (4:30 AM) at a local ISKCON temple or, more commonly today, at home. Devotees worship marble or brass images of Krishna and his consort Radharani on the altar, a spiritual plant *Tulasi,* and ISKCON's founder Bhaktivedanta Swami. Music accompanies this worship with a male or female leading others gathered in singing various Sanskrit and Bengali verses to the beat of *mrdanga* drums and *karatals* (small hand cymbals). Traditionally men worshipped in the front of the temple nearest the deities, with women behind them at the back. In 2000 this practice was officially changed, however, and now men and women worship on separate sides of the temple room, thereby giving both sexes equal access to the altar.[21] Between morning ceremonies, or during the day as time allows, devotees

busily chant their daily rounds. At the end of morning worship in the temple, a class is held on Bhaktivedanta's commentaries on the Vedic scriptures. The ritualistic routine performed by devotees in or outside of the temple is meant to maintain individual and collective purity by focusing the mind first and foremost on Krishna.

While many members of the public identify Hare Krishna with 1960s images of devotees dancing and chanting in the streets with shaved heads and saffron robes, few modern-day ISKCON members wear such traditional attire in their everyday lives. Today most ISKCON devotees are congregational members, living and working outside the temple community. Being in the world, most members wear standard dress and often avoid identifying themselves as Hare Krishnas.

ISKCON'S FOUNDER

A.C. Bhaktivedanta Swami Prabhupada founded the Hare Krishna movement. Bhaktivedanta Swami, or Srila Prabhupada as he came to be called by his followers, traveled to the United States, in 1965, at the age of 69 to make good on a promise to his spiritual master to bring Krishna Consciousness to the West.[22] Traveling from Calcutta on the steamship *Jaladuta,* Bhaktivedanta Swami sailed initially into Boston, before arriving in New York harbor.[23] He was dressed in traditional garb: he wore neck beads, a plain cotton *dhoti* around his body, a *cadar* (shawl), and carried *japa-mala* (chanting beads). His head was shaven except for the *sikha* (tuft of hair) in the back, and his forehead was marked with *tilaka* (sacred clay). With little more than 40 Indian rupees (about $7) and a trunk of books containing his translations of the ancient Vedic literatures, Bhaktivedanta set off to bring the message of Krishna Consciousness to the United States and ultimately to the world.[24]

He was born Abhay Charan De into a Gaudiya Vaisnava family in Calcutta, India, on September 1, 1896.[25] His father was Gour Mohan De, a cloth merchant, and his mother was Rajani. Across the street from the family's home in north Calcutta was a Radha-Govinda temple where the family worshipped. Bhaktivedanta's father raised his son to be Krishna conscious. At night Gour Mohan read from the *Caitanya-caritamrta* and the *Srimad Bhagavatam* (the principal scriptures of Bengali Vaisnavas), chanted on his *japa* beads, and worshipped Krishna. He hoped that his son would preach the *Bhagavatam,* and grow up singing *bhajans* (religious songs) and playing the *mrdanga* (a drum used to accompany congregational chanting).[26]

In 1916 Bhaktivedanta entered Calcutta's Scottish Church College where he studied English, philosophy, and economics. After passing exams for his degree, Bhaktivedanta refused his diploma. He did this to register his protest against British rule of India, for he was sympathetic to Mahatma Gandhi's Indian Independence movement.[27] After marrying Radharani Datta, Bhaktivedanta was employed as a manager in a Calcutta pharmaceutical firm to support his wife and family.[28]

He met his spiritual master, Srila Bhaktisiddhanta Sarasvati Thakura, in 1922. Upon meeting Bhaktivedanta for the first time, Bhaktisiddhanta commented, "You are educated.… Why don't you preach Lord Caitanya's message throughout the world?"[29] Later he told Bhaktivedanta, "If you ever get money, print books" to help

spread the mission of Lord Caitanya.[30] Although Bhaktivedanta accepted Bhaktisiddhanta as his spiritual master after this first meeting, he only became formally initiated as his disciple in 1932.[31] Thereafter, Bhaktivedanta assisted in the work of his spiritual master's organization, the Gaudiya Math. Following Bhaktisiddhanta's death, the Gaudiya Math faced years of infighting and schism. As a result, Bhaktivedanta created his own movement, the League of Devotees, in 1953, in Jhansi, India.[32] After two years, however, this organization collapsed, having made no full-time members.[33] Bhaktivedanta then moved, in 1956, to Vrndavana, a major pilgrimage town in northern India.[34] There he began translating the *Srimad Bhagavatam* (*Bhagavata-purana*) the foremost scripture of the *Krishna-bhakti* tradition. He completed the first of 12 cantos in three parts, which later were published in 1962, 1964, and 1965.[35] In 1944, Bhaktivedanta began publishing *Back to Godhead* magazine, which he distributed in India, and later worldwide after he began ISKCON in 1966.[36] At the age of 59, Bhaktivedanta took the order of *sannyasa,* in 1959, thereafter retiring from family life.[37] Until his death, he focused on translating and writing commentaries on the Vedic scriptures, which after 1971 were published by ISKCON's Bhaktivedanta Book Trust in Los Angeles, California.

After nearly nine years in Vrndavana, Bhaktivedanta decided to make good on the instruction of his spiritual master to preach in the West. He asked Sumati Morarji, who owned the Scindia shipping lines, to grant him free passage to the United States. On August 13, 1965, Bhaktivedanta sailed from Calcutta on an uncertain mission to the United States to spread Krishna Consciousness. As he wrote in his diary during the voyage, "Although my Guru Maharaja ordered me to accomplish this mission, I am not worthy or fit to do it. I am very fallen and insignificant. Therefore, O Lord, now I am begging for your mercy so that I may become worthy…"[38]

Before his death on November 14, 1977, Bhaktivedanta established over 100 temples worldwide, wrote more than 60 volumes, including *Bhagavad Gita As It Is* (1972), the multivolume *Srimad Bhagavatam* (1972–1977) and *Caitanya-caritamta* (1974–1975), *The Nectar of Devotion* (1970), and many other books on the Vedic scriptures. These volumes included translations of the original Sanskrit and Bengali texts, along with Bhaktivedanta's commentaries. His writings have been translated into more that 60 languages. Owing to the work of his nearly 5000 disciples and tens of thousands of followers worldwide, 500 million copies of Bhaktivedanta's books and magazines have been distributed around the globe.[39]

UNITED STATES GROWTH AND EXPANSION (1965–1977)

The early history of the Hare Krishna movement in the United States parallels the career of the 1960s and 1970s counterculture. The war in Vietnam, and the peace movement that grew in opposition to it, sparked the growth of numerous social movements. American values and ways of life faced critical questioning, and many young people experimented with a range of alternative values and lifestyles. This led some to join NRMs such as ISKCON.

Research on ISKCON clearly shows how the movement's early growth in the United States was based on recruiting alienated youth from the counterculture. ISKCON successfully attracted Anglo-American hippies in their late teens and early twenties from largely middle and upper-middle class families.[40] Before joining ISKCON, most participated in the antiwar movement as well as the Sixties counterculture.[41] Moreover, a considerable majority experimented with mind-altering drugs, such as marijuana, LSD, and/or other types of hallucinogens.[42] But with the end of American involvement in the Vietnam War, in 1973, the counterculture faded from the American religious and cultural landscape, and ISKCON's recruitment declined steadily thereafter.[43]

The Hare Krishna movement began modestly in New York City with the arrival of Bhaktivedanta in 1965. Bhaktivedanta, or "Swamiji" as his earliest followers referred to him, turned his proselytizing efforts to the young people living on the Bowery on the Lower East Side.[44] Initially, he attracted the attention of a few young people while chanting in Tompkins Square Park. Quickly word spread about "the Swami" amongst the musicians and bohemian crowd living in the area. Within a short time, several of Bhaktivedanta's followers helped him establish a small temple on Second Avenue in a storefront that previously served as a curiosity shop (Matchless Gifts).[45] In his new temple, Bhaktivedanta lectured on the *Bhagavad Gita* and other Vedic scriptures and held *kirtans* (congregational singing and chanting). Visitors sometimes brought harmoniums, flutes, guitars, and other instruments, which they played, often while "high" on drugs.

During his first year in New York City, Bhaktivedanta placed few demands on those expressing interest in Krishna Consciousness. He did not require his new followers to live with him in the temple and most continued to live and work in the surrounding community.[46] Only the most downtrodden ever took up residence in the temple, and next to none of them stayed on to become Bhaktivedanta's disciples.[47] In these early days, ISKCON had little in the way of spiritual practices that restricted the Bohemian lifestyle of those drawn to Bhaktivedanta. As one devotee who joined during this early period in New York recalled, "You have to remember that there was only the chanting, *kirtans*, the Swami, and *prasadam* [spiritual food]. That was all, it was a simple process, not complicated and culturally involved."[48] During this first year in New York, Bhaktivedanta initiated 19 disciples and, in 1966, legally registered ISKCON as a nonprofit, tax-exempt religious organization.[49]

ISKCON underwent radical change after Bhaktivedanta relocated in January 1967, to the emerging hippie community in the Haight-Ashbury section of San Francisco, California. At the time, thousands of hippies were migrating to Haight-Ashbury. Locating the temple in the heart of the district, ISKCON recruited an estimated 150–200 converts during the first two years.[50] Bhaktivedanta and his followers appealed directly to the hippies who quite literally were at the devotees' doorstep. As one researcher described:

> The immediate area around the temple was characterized by extensive foot-traffic compared to other sections of the city. Below the large "Hare Krishna" sign on the outside

of the temple was a smaller placard that stated: "Stay High All the Time, Discover Eternal Bliss."[51]

Because the majority of the hippie recruits drawn to ISKCON only recently migrated to the area and had no permanent or stable residences, ISKCON's communal structure emerged as a means to hold the young countercultural youth being attracted to Krishna Consciousness.[52] Living within the temple complex, Bhaktivedanta insisted that his followers adhere to the four regulative principles (no meat, intoxicants, illicit sex, or gambling) and that they chant and attend worship services in the temple.[53]

ISKCON's San Francisco organization served as a model for devotees deployed to other cities across North America to establish Krishna temples and recruit followers.[54] While an exclusive communal structure emerged in every ISKCON community, that structure was modified to meet local opportunities for recruitment.[55] For example, the social environment encountered by ISKCON when it moved into Los Angeles, in 1968, was quite different from the one found in Haight-Ashbury. Instead of locating itself in Hollywood or the Venice Beach area, where the countercultural youth of Los Angeles could be found in large numbers, ISKCON established its community in a largely middle-class residential area. Even though chanting parties were sent out to the wider community, devotees had limited success in persuading people to come to the temple. Because public places proved so unproductive, the community in Los Angeles focused its recruitment efforts on the friends and relatives of people already in the movement. In contrast to the recruits in San Francisco, most of those recruited in Los Angeles were from the local area.[56]

Even with local variations in ISKCON's structure and means of recruitment, the Krishna lifestyle generally afforded few opportunities for members to maintain societal contacts.[57] The outside was seen as a source of "pollution" threatening the spiritual development of ISKCON's newest members. The isolation of ISKCON's American communities was accelerated in the mid-1970s as ISKCON was attacked by deprogrammers and other opponents of cults. Given these threats, ISKCON's communities became increasingly closed religious enclaves, and interaction with outsiders was limited largely to proselytizing and literature distribution.[58] Yet in insulating its members through communalism and the imposition of rigid group boundaries, ISKCON only encouraged further scrutiny by member's parents and relatives, the anticult movement, and government officials increasingly concerned about allegations of "brainwashing" and the "cult problem" generally in the United States.[59] Anticult propaganda, widely disseminated by the media, helped reshape the public's image of Hare Krishna; from a peculiar, but essentially harmless religious movement, ISKCON came to be identified as threatening and dangerous.[60]

Most of those joining ISKCON during the late 1960s and 1970s were attracted by the movement's religious philosophy.[61] As one ISKCON member commented, "I saw logically and scientifically that this philosophy explains the how and why of everything I saw in this world. I also saw that as in other religious philosophies that I approached, there was no need for 'blind faith,' everything was provable logically

and to a certain extent 'scientifically.'"[62] Other reasons commonly cited for joining included "the warmth and friendliness of the devotees" and the attraction that many felt for Bhaktivedanta.[63] The latter was particularly compelling for ISKCON's earliest members, as many were able to establish personal relationships with their spiritual master. This became far less possible, however, as ISKCON grew and became a worldwide movement.[64]

Economically, ISKCON was largely supported by the practice of *sankirtan,* the public distribution of religious literature. During the late 1960s and early 1970s, devotees distributed incense or *Back to Godhead* magazines to the public in exchange for donations.[65] The strategy of combining the movement's missionary goals with collecting money became standard policy for ISKCON until the early 1980s.[66] In 1971, ISKCON established the Bhaktivedanta Book Trust in Los Angeles to publish Bhaktivedanta's translations and commentaries of the Vedic scriptures.[67] With his teachings now in print, Bhaktivedanta instructed his disciples to distribute his books in large quantities. Between 1972 and 1974, ISKCON members distributed Bhaktivedanta's writings primarily in shopping malls and parking lots across the United States and Canada.[68] While these locations proved productive, a major change took place in 1974 that had a revolutionary impact on the future of book distribution.

Under constitutional protections provided by the First Amendment, ISKCON shifted its *sankirtan* efforts into airports, national parks, and state fairs.[69] With these public locations available for *sankirtan* (especially airports), ISKCON's literature distribution increased dramatically between 1974 and 1976.[70] In 1976, for example, ISKCON members distributed over 18,000 hardback books *per week* throughout the United States and Canada.[71] At the Los Angeles International Airport alone, devotees distributed as many as 5,000 to 6,000 hardback books each week.[72] Literature distribution doubled each year between 1974 and 1976, and then declined modestly until 1980, when it declined significantly.[73] One conservative estimate is that ISKCON's communities in North America grossed over $13 million between 1974 and 1978 on hardback books alone.[74]

As ISKCON grew and the demands on Bhaktivedanta's time increased, he recognized that his movement needed a more formal structure of governance. In 1970, he created the Governing Body Commission (GBC) to help oversee the movement's affairs worldwide.[75] Initially Bhaktivedanta appointed 12 of his most trusted disciples to serve as GBC members.[76] The GBC continues to meet yearly in Mayapur, India, to make policies, address problems, and transact any and all business related to ISKCON and its worldwide communities. With ISKCON's worldwide expansion, the number of GBC representatives grew accordingly. In 2004, there were 37 GBC members having administrative responsibility for ISKCON communities in specific countries and regions of the world.[77]

By 1975 ISKCON had established communities and preaching centers in 30 cities in the United States and six in Canada. It also had 11 communities in Western Europe and 29 in other parts of the world (i.e., Australia, Africa, India, Asia, and Latin America).[78] The number of communities in the United States grew to 50 in 1983,[79] and, in 2005, ISKCON had a total of 44 communities.[80]

CONFLICT, DECLINE, AND TRANSFORMATION (1977–2005)

The death of a charismatic leader forms a critical juncture in the life of any group, community, or social movement. Yet it appears that most religious groups weather successfully the death of a charismatic leader.[81] Such was not the case, however, for ISKCON in the aftermath of Bhaktivedanta's death in 1977. ISKCON has undergone 30 years of conflict and ongoing debate about the authority of Bhaktivedanta's successors. Yet other issues of equal importance also preoccupied ISKCON's leaders and membership. Most critical of these issues were economic decline, the ascendancy of the nuclear family, and the fate of young people born and raised within ISKCON. These developments collectively transformed the radical structure and religious way of life that defined ISKCON as an NRM.[82]

Succession and the Problem of Authority

In the fall of 1977, the devotees' beloved founder died in Vrndavana, India, at the age of 82. Bhaktivedanta's death represented a major turning point in ISKCON's development in the United States and worldwide. Unable to travel in the months prior to his passing, Bhaktivedanta appointed 11 of his closest disciples to serve as *ritvik-gurus.* These gurus were responsible for initiating new disciples *on Bhaktivedanta's behalf.*[83] When Bhaktivedanta died, however, the appointed *ritvik-gurus* assumed the position of regular gurus, offering *diksa* (first) initiation to persons who accepted them as their spiritual master.[84]

Institutionally the newly appointed gurus were accorded the same reverence and authority as Bhaktivedanta. Having proclaimed themselves *acaryas* (heads of a religious institution), the successor gurus considered themselves largely immune from the decisions and will of the GBC.[85] For all intents and purposes, each of the 11 gurus led his own independent movements as he assumed control over separate portions of the globe. Within their geographical zones the gurus exercised exclusive political, economic, and spiritual authority.[86] New recruits to ISKCON had little choice but to seek initiation from the regional ISKCON guru. Controversial from the very beginning, this structure of authority known within ISKCON as the "zonal *acarya* system," existed for nearly a decade.[87]

The 11 gurus deeply affected ISKCON's governance. Within the GBC, they monopolized deliberations and exercised undue influence on decision making in their dual roles as gurus and GBC members. As one insider concluded, "Indeed, the gurus with their status as sacred persons, a status constantly emphasized by formal deference and ceremonial honors, and their growing numbers of personally devoted followers, quickly eclipsed the GBC."[88] The GBC was only able to tentatively regain a measure of authority after it suspended three gurus, in 1980, for improper behavior and, in 1981, ruled that ISKCON gurus must accept the final authority of the GBC.[89] Yet this latter decision ultimately had little practical impact as the 11 gurus retained control over their individual territories, and thus the zonal *acarya* system effectively remained in place.[90]

In the years to follow still other gurus were involved in scandals. In 1982, Jayatirtha, the ISKCON guru in England, defected with as many as 100 of his disciples, after his failed attempt to have one of Bhaktivedanta's godbrothers (i.e., fellow initiates of Bhaktisiddhanta) from India (Shridara Maharaja) recognized as an initiating ISKCON guru. In 1984, after years of controversy that included allegations of drug use and weapons violations in the Berkeley, California, temple, the guru Hamsadutta was expelled from ISKCON. In 1985 and 1986, three other gurus—Ramesvara, Bhagavan, and Bhavananda—were forced to resign their guruships after sexual misconduct and other charges were brought against them.[91] In a well-publicized legal case, ISKCON's West Virginia farm community, New Vrindaban, witnessed two murders and a resulting state and federal investigation. One of the murders involved a former resident of the community (Steven Bryant) who was killed in 1986 after making allegations of drug smuggling, child abuse, and fraud at New Vrindaban to local authorities in West Virginia. A disciple of New Vrindaban's leader, Kirtanananda Bhaktipada was found guilty of both murders and is serving a life sentence in a West Virginia prison. After an extensive investigation by the FBI, the Internal Revenue Service, and police in Los Angeles and in West Virginia, Kirtanananda pleaded guilty in 1996 to one count of federal racketeering and was sentenced to 12 years in federal prison. In 1988, New Vrindaban and its satellite temples and centers were expelled from ISKCON, although they were readmitted in 1998.[92]

The continuing questions surrounding the authority of ISKCON's successor gurus resulted in the defection of many long-standing members from the organization. Many of these apostates took up lives within conventional society, practicing Krishna Consciousness independently of ISKCON. Others left ISKCON to join forces with other Gaudiya Vaisnava organizations associated with one of Bhaktivedanta's godbrothers in India. Most notable have been B.R. Shridara Maharaja and Narayana Maharaja, the latter being a disciple of Bhaktivedanta's godbrother B.P. Keshava Maharaja.[93]

Under the leadership of senior disciples of Bhaktivedanta, many of whom were North American temple presidents, a reform movement successfully pressured the GBC, in 1986, to make a number of changes in ISKCON's guru institution. Among the most significant were the following: (1) expanding the number of ISKCON gurus that effectively undermined the zonal *acarya* system because gurus could no longer lay claim to exclusive geographical zones; (2) the GBC ruled that the term *acarya* could be used only to refer to ISKCON's founder, Bhaktivedanta; (3) the GBC restricted guru worship in ISKCON temples to honor Bhaktivedanta exclusively; and (4) elevated chairs (i.e., *vyasasanas*) previously reserved for zonal gurus were removed from ISKCON temples, leaving only a life-sized image of Bhaktivedanta (i.e., *murti*).[94] The number of gurus increased from 30 to 60 in 1990 and to 80 in 1993.[95] In 2005, ISKCON had about 90 gurus throughout the world. Despite these reforms, however, controversy over the guru system remained.

Beyond leaders' initiatives for reform, ISKCON also faced an increasingly organized and influential grassroots movement determined to redefine the guru system. Composed of former and current ISKCON members disturbed by ongoing guru

scandals, the *ritvik* movement argues that people taking initiation from current ISKCON gurus are, in fact, disciples of Bhaktivedanta. Those embracing the *ritvik* position believe that Bhaktivedanta never appointed any of his disciples to serve as initiating (*diksa*) gurus, but only *ritvik* gurus. For, indeed, Bhaktivedanta acknowledged before his death that none of his disciples were yet capable of serving as *diksa* gurus. In their role as *ritviks,* ISKCON's gurus were authorized to serve only as ceremonial priests initiating on Bhaktivedanta's behalf. Such an interpretation meant that Bhaktivedanta would remain as ISKCON's spiritual master even in death.[96]

Supporters of the *ritvik* movement have also produced evidence suggesting that Bhaktivedanta's death was not the result of natural causes but rather of poisoning. They suspect several ISKCON leaders, most notably one of ISKCON's successor gurus. Both sides produced elaborate studies and position papers meant to counter the other side.[97]

Many devotees inside and outside of ISKCON found the *ritvik* position on initiations appealing in the face of ongoing scandal and controversy surrounding Bhaktivedanta's successors. For example, the 1996 Prabhupada Centennial Survey of current and former ISKCON members in North America (N = 245) found that nearly one in four (22 percent) full-time members, 45 percent of the movement's congregational members, and over half (55 percent) of all ex-members agreed with the statement, "To my understanding, Prabhupada wanted the 11 *ritviks* he appointed to continue as *ritviks* after his departure."[98]

Setting aside theological debates about whether initiation requires a "living guru," the *ritvik* philosophy functionally restores religious authority to the guru institution (if not to the current gurus) with Bhaktivedanta serving as the single source of religious purity and authority within ISKCON. *Ritvik* gurus may fall from grace but the guru institution, so central to ISKCON's religious philosophy, maintains its spiritually pure character in the form of Bhaktivedanta.

Under pressure from a growing number of *ritvik* supporters, and facing recurring "fall-downs" by ISKCON gurus, the GBC passed a number of resolutions redefining the position of ISKCON's successor gurus in relation to Bhaktivedanta's spiritual authority. GBC resolutions referred to Bhaktivedanta as the "foundational siksa [instructing] guru for all ISKCON devotees" (1994), "preeminent siksa guru for every member of the institution" (1999), and "preeminent and compulsory siksa-guru for all Vaisnavas (gurus and disciples) in the Society" (1999).[99] A disciple of a guru expelled from ISKCON, in 1986, reflects on the importance of Bhaktivedanta to his own spiritual life in a way that reflects current institutional thinking about the role of ISKCON's founder. "Prabhupada is the absolute authority. He gave us our direct connection to Krishna and the *Parampara* [the guru lineage] through his books and instructions. Without the pure devotee, we would have nothing. He gave (and still gives) us everything as individuals, and as a society."[100]

Yet as critics point out, Bhaktivedanta's successors continue to perform *diksa* initiations and accumulate disciples. As one *ritvik* supporter and prominent leader of the ISKCON Revival Movement commented:

> The problem is that though the GBC is willing to allow some reform in the way Srila Prabhupada is perceived, they will not countenance *any* change in the way current *diksa* gurus are perceived.… Allow Srila Prabhupada's prominence and glory to increase, while still keeping one part of their theology [intact two words]—that to *access* Srila Prabhupada you must go through their *diksa* gurus.… That way their status and position being wedded to that of Srila Prabhupada's, automatically rises.…[101]

The ongoing debate and conflicts surrounding ISKCON's GBC and guru leadership have preoccupied the movement's membership for 30 years. As might be expected, questions surrounding the authority of both directly affected members' commitment to and involvement in ISKCON.[102] Despite the importance of these issues, others proved equally critical to ISKCON's North American development. Most immediate in the period following Bhaktivedanta's death was the erosion of ISKCON's economic base and resulting structural changes in the movement's communities.

Economic Crisis and the Demise of Communalism

Until the early to mid-1980s, ISKCON's communities in North America were supported financially by the distribution of Bhaktivedanta's writings on Vedic literature. Indeed, the revenues generated from book distribution supported ISKCON's worldwide expansion throughout the 1970s. By 1980, however, ISKCON's book distribution declined to less than one-quarter of its North American peak in 1976.[103] The corresponding loss of revenues had a devastating effect on ISKCON's communities. Although ISKCON's leaders undertook a number of alternative strategies in an attempt to avert the movement's economic decline (e.g., selling record albums, artwork, candles, and food in public locations) these proved successful only in the short run, and were highly controversial both inside and outside of ISKCON.[104]

With declining financial resources available to its communities, ISKCON faced a significant turning point in its North American history. No longer able to financially maintain its communal way of life through literature distribution and other forms of public solicitation, and lacking alternative means of support, most ISKCON members had little choice but to seek employment in the outside labor force.[105] For most this also meant moving outside of the communal fold and into independent living situations. Given the relatively high cost associated with supporting families, householders, in particular, found themselves searching for outside sources of income. As one longtime ISKCON member reflected, "So eventually a lot of people got married and hung onto the temples and that got very expensive to maintain. Suddenly householders wanted to retire from book distribution. They wanted a job in the temple.… In the end, we had temples overloaded with expensive householders."[106]

Comparing the findings from two American surveys conducted in 1980 (N = 214) and 1992 (N = 268) reveals the dramatic shift that occurred in ISKCON members' pattern of employment. In 1980, nearly all (95 percent) ISKCON members

surveyed worked in movement-owned businesses or within their local ISKCON community. One-fourth worked as *sankirtan* devotees distributing Bhaktivedanta's books in public. Only 2 percent worked for nondevotee businesses.[107] By 1992, however, ISKCON members' pattern of employment was strikingly different. Over one-third (36 percent) worked outside of ISKCON in a nondevotee business or were self-employed. Somewhat more (39 percent) were employed in work settings with other devotees (that is in an ISKCON business, within an ISKCON community, or in a devotee-owned business). One-fourth were not gainfully employed at the time of the survey. Nearly all of the latter were women with family responsibilities, the majority of whom did regular volunteer work in their local ISKCON community.[108]

Findings from the 1996 Prabhupada Centennial Survey demonstrate clearly how outside employment influenced individual levels of ISKCON commitment and involvement for devotees in North America. In comparison with those employed in devotee work environments, ISKCON members with outside jobs were significantly less involved in and committed to the beliefs and practices of Krishna Consciousness, as well as to ISKCON as a religious organization. They were also far more involved in the conventional society.[109]

ISKCON's economic crisis affected not only parents, however. It also led to the demise of the movement's system of education. In 1986 ISKCON's remaining boarding schools (i.e., *asrama-gurukulas*) in central California and upstate New York closed because of a lack of funds. Children, who in most instances spent the majority of their lives in ISKCON schools, were suddenly returned to the care of their parents.[110]

The Nuclear Family and the Growth of a Congregation

Perhaps no development in ISKCON's 40-year history was more consequential than the growth and expansion of family life. ISKCON's early years of existence were defined by the *brahmacari* [male] and *brahmacarini* [female] *asramas,* as a considerable majority of its new recruits were single people committed to lives of renunciation. Yet by the onset of the 1990s, ISKCON became a householders' movement in North America with the largest portion of its membership married and having one or more children.[111]

During ISKCON's early days in the late 1960s and early 1970s, marriage and family were viewed favorably.[112] But this was reversed after Bhaktivedanta became increasingly discouraged by the marital problems encountered by his disciples. In 1972 Bhaktivedanta turned what he called the "troublesome business of marriage"[113] over to local temple presidents and other ISKCON authorities, the majority of whom were renunciates. The result was that marriage underwent a fundamental transformation in meaning and value.

Marriage came to represent a concession for those too weak to control their sexual desires. Such a view applied largely to men, however, for whom renunciation was the

spiritual ideal. Spiritual and material fulfillment for women by contrast was defined in terms of marriage and family life.[114] Given the prevalence of these ideas, women became threats to men's spiritual advancement. The changed atmosphere surrounding marriage and family life turned contentious by the mid-1970s as renunciate leaders under Bhaktivedanta undertook a preaching campaign against householder life and women.[115]

Despite the ongoing denigration of marriage and family, and the loss of status accorded householders, most devotees ultimately married.[116] Yet under the influence of ISKCON's renunciate leadership, little was done to develop a movement culture supportive of householders and their children.[117] The only exception was establishing ISKCON boarding schools for the growing number of children, but these schools were seen by the leadership as primarily serving the preaching mission by freeing parents to distribute Bhaktivedanta's books.[118]

The emergence of the nuclear family ultimately transformed the very structure of ISKCON as a religious organization. Devotee families became self-supporting and increasingly independent of ISKCON and its control. Most families resided in their own households at a distance from their local ISKCON temple.[119] As a consequence, ISKCON could no longer assert totalistic claims over the lives and identity of householders and their children. The result was the growth of congregationalism.[120] Living and working apart from the movement, family members practiced Krishna Consciousness largely within their households. Worship and religious practice thus became increasingly privatized.[121] Indeed, by the end of the 1980s, the household largely displaced the temple as the central location for worship and religious practice.[122]

Not surprisingly, as householders created independent lives for themselves and their children, their commitments to ISKCON changed. The 1992 survey revealed that nearly three-quarters (73 percent) of devotee householders in North America agreed that work and family obligations placed limits on their ability to commit more time to their local temple. Half (49 percent) expressed the opinion that their family commitments were more important than their commitment to ISKCON.[123] As these and related findings on the effects of outside employment make clear, ISKCON's previous radical structure and lifestyle were transformed as the largest portion of its membership took up residence in the suburbs of ISKCON social life. This shift forced householders to recraft their identities in light of involvement in two worlds previously experienced as inherently hostile to one another—the inside world of ISKCON and the outside world of conventional society. As this occurred at the individual level, ISKCON changed from an exclusive and highly controlled NRM to one defined by increasingly pluralistic communities.

ISKCON's Second Generation

Theologian H. Richard Niebuhr noted long ago that the process of educating the young plays a determinative role in the development of religious communities.[124] In

being attentive to the educational needs of children, the religious enterprise undergoes change in the direction of accommodation with the conventional society. Yet as sociologist Rodney Stark noted, effective socialization distinguishes successful religious movements from those that fail.[125]

ISKCON largely failed to retain the commitment of second-generation members. Many young people rejected their upbringing, although many more identify themselves as Krishna devotees, even if they keep their distance from ISKCON itself. A minority continues to affiliate with ISKCON and its communities, although most do so in the role of congregational members with lives defined as much or more by the outside society as the religious world of ISKCON.[126] Why did ISKCON fare so poorly in securing the commitment of its second generation? I want to consider briefly three contributing factors.

The first and perhaps most simplistic explanation is that ISKCON provides little in the way of opportunities for the young people who grew up in the movement. With the demise of communalism, few opportunities exist for employment and/or other meaningful activities within the movement.[127] Unable to secure a life for themselves within ISKCON, young people were forced to follow in the footsteps of their parents' generation by seeking life opportunities in mainstream culture.

The second explanation is both complex and tragic. A significant but unknown number of ISKCON's second generation were abused—physically, sexually, and psychologically—while living as students in ISKCON's boarding schools in the 1970s and 1980s.[128] Because Bhaktivedanta emphasized that children should receive spiritual training as a first priority, he directed that they be removed from the care of their parents at the age of five years. He did so because he believed the natural ropes of affection between parent and child would inevitably limit a child's spiritual progress. Children attended the *gurukula* on a year-round basis, with occasional vacations to visit parents. They resided in an *asrama* with children of similar age and the same sex. It was assumed that young people would attend the *gurukula* until about 15 years of age, thereafter taking on adult responsibilities.[129]

Although no reliable statistics exist on the prevalence of abuse in ISKCON's *gurukulas,* a number of sources suggest it was probably commonplace in some ISKCON schools inside and outside of the United States (i.e., India primarily). As of January 2002, ISKCON's Association for the Protection of Vaisnava Children received allegations of child mistreatment and abuse against more than 300 present or former ISKCON members. About 60 percent of those tied to abuse were from the years prior to 1992, when "clusters of allegations connected with an ISKCON school" arose.[130] Many of those victimized were young adolescent boys attending ISKCON schools in Vrndavana and Mayapur, India, during the 1980s.[131] Yet both young girls and boys were abused in ISKCON *gurukulas* in Dallas, Texas, at ISKCON's farm community in West Virginia (New Vrindaban), and at schools in the states of California, New York, and Washington.[132]

A 1998 survey of former *gurukula* students conducted by the ISKCON Youth Ministry also suggests the extent of abuse that occurred. A nonrandom survey of

115 former students, including 40 males and 75 females, found that 25 percent suffered sexual abuse for more than one year and 29 percent for a period between one month and one year. Thirty-one percent of those surveyed indicated that a teacher, or someone older, repeatedly hit them, leaving marks on the body.[133]

In 2000 a federal lawsuit was filed in Dallas on behalf of 44 former students who claimed abuse in ISKCON's schools during the 1970s and 1980s (*Children of ISKCON v. ISKCON*).[134] After the case was dismissed by the federal court, lawyers for the plaintiffs filed a lawsuit in Texas state court in October 2001.[135] The suit sought $400 million in damages for the plaintiffs.[136] By 2005, the number of plaintiffs in the case grew to 92.[137] After several ISKCON communities named in the lawsuit filed for Chapter 11 bankruptcy protection, the case was finally resolved in May 2005 by U.S. Bankruptcy Courts in West Virginia and California.[138] Leading up to the final settlement an additional 450 claimants were added, after ISKCON authorities agreed to seek out all former students abused in its schools.[139] A total of 535 former students will receive compensation ranging between $2,500 and $50,000 from the $9.5 million settlement.[140]

The betrayal of trust represented by child abuse has challenged, if not shattered, the commitment of ISKCON's second-generation members. Child abuse is a powerful symbol of the failure of ISKCON's leadership and that form of social organization (i.e., communalism) that supported its political and spiritual authority. In failing to maintain a safe and healthy environment for the movement's most vulnerable members, ISKCON lost any claim to legitimacy in the eyes of many first- and second-generation devotees.[141]

A final factor that continues to influence the fate of the second generation is ISKCON's failure to develop an adequate system of education. Even during the years that the *gurukula* operated, it was largely confined to educating children of elementary ages. Given the legacy of abuse within the *gurukula,* the vast majority of ISKCON's children in North America today attend nondevotee schools, most often public schools.[142] ISKCON maintains only a small number of day schools in its communities for children of elementary ages. Only one school exists for middle- and high-school-aged girls in ISKCON's northern Florida community.[143]

Devotee young people educated in public institutions often found the transition a challenge to their social identities as ISKCON members. While clearly more of an issue for the young people who moved from *asrama-gurukulas* into public schools in the 1980s, nonetheless devotee children face the prospect of negotiating their ISKCON identity in an effort to gain acceptance from their nondevotee peers. Gaining acceptance often means that devotee youths must hide their identity as Hare Krishnas to avoid stigmatization. Yet in working to gain this acceptance, devotee young people in various ways accommodate to contemporary youth culture (e.g., musical tastes, dress, drugs) and, through it, to the mainstream culture as well. One result is the demise of many devotee youths' collective identity as ISKCON members, although most continue to identify as Krishna devotees.[144]

INDIAN HINDUS AND THE FUTURE OF ISKCON IN THE UNITED STATES

By the end of the 1980s, ISKCON's communities in the United States faced declining numbers of residents and a critical lack of resources. Few new recruits were joining and many of ISKCON's long-standing members either defected or were practicing Krishna Consciousness more or less independently of ISKCON. Moreover, a solid majority of the movement's second generation turned their back on ISKCON. In 2000, approximately 750–900 residents lived in 45 ISKCON centers in the United States.[145] ISKCON's Los Angeles community had nearly 400 adult residents in 1980 but was down to only 60 in 1994. A similar decline took place in other large ISKCON communities such as Chicago, Illinois; New York; and Detroit, Michigan.[146] ISKCON was declining rapidly, with the prospect that some of its communities would be forced to close down or scale back their operations significantly. To survive, ISKCON leaders sought aggressively to build a supportive congregation of Indian Hindus.

Estimates suggest that 50 percent or more of the movement's approximately 50,000 congregational members in the United States are of Indian descent. The substantial involvement of Indian Hindus represents a major change from ISKCON's early days. Bhaktivedanta generally ignored Indians in the United States because he feared his new organization would be overly identified with Hinduism. As Bhaktivedanta wrote to one of his disciples in April 1970, "… factually this Krishna Consciousness movement is neither Hindu religion nor any other religion. It is the function of the soul."[147] Moreover, Bhaktivedanta openly questioned the spiritual commitment of Indian immigrants in the West. He felt that their primary reason for coming to the United States was "to earn money" and that the "[b]est thing will be to avoid them as far as possible."[148] Despite the general disinterest shown by Bhaktivedanta and his followers, however, many Indian Hindus were drawn to ISKCON's temples to worship. This was largely because, when significant Indian immigration to the United States began after 1965, few established Hindu temples existed in the country beyond those offered by ISKCON.

Official ISKCON recognition of Indian Hindus in North America dates to the mid-1970s. At that time, ISKCON was under attack from the anticult movement. To defend itself against accusations that it was a dangerous cult, ISKCON authorities asked its Indian supporters to speak to the movement's authenticity as a traditional Hindu religious group.[149] Thereafter the leadership sought to publicly align ISKCON with the Hindu tradition and with its American Hindu supporters.[150]

ISKCON introduced the "Life Member program," begun in India, in 1970, to the United States to formally ally its Indian patrons in the mid-1970s. Life members contributed moral and financial support, as well as services to ISKCON's communities. Few Indians, however, became full-time members or took on positions of organizational responsibility. In return, Indians gained authorized access to ISKCON temples to worship and to socialize with other immigrant families. The Sunday feast, once an occasion for preaching and recruitment, was essentially handed

over to emerging Indian congregations in locations having substantial immigrant populations. It was not uncommon during the late 1970s in Los Angeles, for example, to find as many as 200 or more Indian Hindus at the temple for Sunday worship and the feast to follow.

As ISKCON's financial troubles grew to a crisis level in the mid-1980s, Indian Hindus took on renewed importance. In desperate need of financial resources, the movement initiated a campaign to expand its Indian congregation in hopes of bringing economic stability to its beleaguered American communities.[151] Initially ISKCON successfully raised funds from its Indian congregation to help defray legal expenses and a substantial settlement in the Robin George brainwashing case in Los Angeles.[152] On the heels of this successful undertaking, the movement established the ISKCON Foundation in 1991. The Foundation's mission was to raise money to help support ISKCON's struggling communities. To do this, the Foundation helped establish advisory boards in most of ISKCON's American communities. Influential Indians within local congregations composed the majority of these community boards. In raising money to support their local temples, advisory boards afforded Indian congregations a degree of influence and organizational power they had never experienced. As a consequence, Indians were able to exert considerable influence over decision making within ISKCON's temple communities.[153] Not surprisingly, advisory boards sought to advance the interests of local Indian congregations, sometimes at the expense of temple residents. Moreover, there is accumulating evidence that Indian Hindus are beginning to challenge, if not reshape, ISKCON's religious culture. For these and other reasons, tensions emerged between temple residents and local Indian congregations.

Despite the increased role and presence of Indian Hindus within ISKCON's North American communities, they have generally failed to become integrated into them. Any visitor to an ISKCON community on a Sunday will note minimal interaction between temple residents and Indian congregational members. A researcher of ISKCON's Philadelphia temple found that 40 percent of the temple residents reported that they had no relationship with Indian visitors on Sunday, other than to acknowledge them by saying, "Hare Krishna." Sixty percent, including some devotees in the temple hierarchy, admitted to holding bitter and highly critical views of the Indians. One significant reason stems from the refusal of most Indians to accept temple residents as legitimate devotees. Many Indian Hindus deny the very possibility that temple residents, who are Westerners, could be priests or brahmins. Moreover, funds contributed by Indians are directed toward projects related to the temple, not to improve the living spaces and situations of temple residents. Also, these funds are not used to further ISKCON's traditional preaching mission.[154]

The increased role of Indians in ISKCON communities is also beginning to jeopardize ISKCON's distinctive religious culture. Because Hindus immigrating to the West come from different regions, language groups, and sects practicing diverse rituals, Hinduism is practiced as an ethnic religion outside of India.[155] The Indian Hindus attracted to ISKCON are no different in this regard than other Hindu immigrants.[156] Yet ISKCON temples are neither dedicated to "ethnic Hinduism" nor to

an eclectic form of Hinduism. ISKCON temples, for example, are dedicated exclusively to the worship of Krishna and his incarnations. Although Indian immigrants are clearly familiar with the forms of worship, teachings, and religious practices associated with Krishna, most do not consider Krishna the supreme God.[157] Rather they favor worshipping a variety of Hindu gods and acknowledge different Hindu traditions as equally valid.[158] These differences became points of contention as Indians gained power within ISKCON temples.

Nurit Zaidman detailed a number of negotiations between Indian advisory board members and local ISKCON officials in Philadelphia during the early 1990s. One negotiation related to organizing an evening for Durga, a Hindu goddess. Board members asked the temple president to conduct a *puja* (worship service) for Durga in the temple room. The request produced some apprehension, as Durga, like other demigods (i.e., gods other than Krishna and his incarnations), is not worshipped in ISKCON temples. After some negotiation, the temple president allowed the program to take place, but in a rented hall. A further condition was that Krishna be symbolically represented as the supreme god and given an elevated status to Durga. Yet not all aspects of the event were controlled to fit ISKCON standards. The actual *arti* (worship) ritual performed was not in accordance with ISKCON ritual standards.[159]

A recent and more dramatic example of the influence of Indian Hindu congregations on ISKCON's religious culture can be seen in the building of a new ISKCON temple in San Diego, California. The Indian congregation raised millions of dollars to help build the temple. The temple, however, failed to strictly conform to ISKCON traditions, as it was complete with images of Siva and Ganesh with accompanying *samskaras* and *pujas* "performed regularly for the Indian community."[160] One member of the San Diego temple community claimed that such a concession represented "kowtowing to the material conceptions of the Indian community."[161] In pursuit of needed financial resources, Bhaktivedanta's movement is becoming a Western sect of Hinduism.

ISKCON's Indian Hindu congregation clearly helped to rescue a failing religious organization. Yet the newly gained power of Indian Hindus within local temples seems likely to reshape ISKCON's mission and religious culture in the years to come. Indeed, ISKCON may well transform into an "ethnic church" serving the religious and ethnic needs of Indian Hindus in North America.[162] In this form ISKCON is unlikely to appeal to other Americans seeking alternative religious paths. Such a development would signal the fundamental transformation of ISKCON as an NRM.

93. Shridara Maharaja attracted perhaps a few dozen ISKCON devotees in the years immediately following Bhaktivedanta's death when questions first arose about the authority of ISKCON's new gurus. Narayana Maharaja has been a greater and more recent threat to ISKCON, having recruited larger numbers of ISKCON members during the late 1980s and 1990s. After several prominent ISKCON gurus and leaders became involved with Narayana

Maharaja, the GBC, in 1995, passed several resolutions effectively banning association between ISKCON members and Narayana Maharaja and his followers. See Irvin Collins, "The 'Routinization of Charisma' and the Charismatic," in *The Hare Krishna Movement,* ed. Bryant and Ekstrand, 222–223.

Soka Gakkai: A Human Revolution

David W. Machacek

It is hard to imagine a less beautiful or desirable place than the mucky bottom of a pond. Yet, out of that muck grows one of the most beautiful flowers in the world, the lotus. This image of beauty growing in the midst of ugly conditions lies at the core of Soka Gakkai Buddhist belief. Like the lotus plant, Soka Gakkai teaches, humans have the ability to make something good and beautiful of their lives, even when their environment is undesirable. The practice of Soka Gakkai Buddhism is oriented to unlocking this innate potential, a process described by Daisaku Ikeda, the movement's former president and current spiritual figurehead, as "human revolution."

That is, to the Soka Gakkai, salvation involves not escape from this world, but a change in the way one orients oneself to and engages in the world. Bryan Wilson and David Machacek explain it this way: "The world is only as good or evil as we cause it to be, and the only delusion is the idea that forces bigger than ourselves, and therefore beyond our control—gods, natural laws, or history—determine our chances for a life of suffering or enjoyment. Hell or heaven, delusion or enlightenment, are not conditions imposed on us, but states of being."[1] While the classical Buddhist ideas about karma as an endless cycle of birth, death, and rebirth remain, in Soka Gakkai the emphasis has been moved from past and future lives and life conditions to the present life and life condition, giving the religion a distinctly "inner-worldly" orientation. In other words, by understanding that one's actions are causes that have effects, one can take control of one's circumstances in the here and now.

This inner reorientation of the self to one's external circumstances is accomplished by chanting daimoku (*nam-myoho-renge-kyo,* an expression of devotion to the wisdom of the Lotus Sutra) and parts of the Lotus Sutra (a meditation on the lotus flower) before a copy of the Gohonzon, a mandala originally inscribed by a thirteenth-century Japanese monk, Nichiren, that depicts the name of the Lotus Sutra ("Myoho-Renge-Kyo," the title of a fifth-century Chinese translation of the Lotus Sutra) surrounded by characters representing the ten life conditions. These life conditions, which range from low—Hell, Hunger, Animality, Belligerence—to intermediate—Humanity, Heaven, Learning, Realization—to high—Bodhisattva

and Buddhahood, represent an individual's basic orientation in life, or, as one American Soka Gakkai leader put it, "patterns into which one's entire existence falls."[2]

Chanting in front of the Gohonzon can therefore be understood as something like looking into a mirror that helps one to see himself or herself as he or she really is. Although some practitioners have described a kind of mystical experience while chanting, for most people, chanting serves as an opportunity to focus attention on problem areas in their lives and, more importantly, how they might reorient themselves to those problems in order to achieve more desirable outcomes. Thus, for instance, Soka Gakkai members often talk about chanting with particular goals in mind, goals that can range from the trivial to the profound—from having more money or a new car to better relationships with family members or co-workers to world peace. However, chanting is not magic—members do not chant for a new car and expect to have one appear in the driveway the next day. Rather, the focus is on the individual's orientation to the goal. Is her desire for a new car merely an expression of a generalized hunger (one of the life conditions) or a real need? If a real need, what steps might she take to achieve this goal?

Perhaps the best way to understand chanting and its effects in Soka Gakkai belief and practice is by analogy. On a recent show, the popular National Public Radio show *Car Talk* featured a puzzler that went something like this: A woman had noticed that when birds landed on her feeder, all the birds seemed to approach it from the same direction on any given day. They did not seem to just approach the feeder from whatever direction they happened to be coming. The question was why? The answer was that the birds were adjusting their "attitude," a term used in aviation to describe an airplane's approach relative to wind speed and direction. A pilot or a bird cannot change the direction or speed of the wind, but they can adjust their attitude, and that makes the difference between a safe and unsafe landing; so, too, the Soka Gakkai believe, adjusting one's orientation to the circumstances of one's life makes the difference between happiness and unhappiness.

HISTORY

Soka Gakkai itself was born in the rather tumultuous circumstances of World War II in Japan. Its founder, Tsunesaburo Makiguchi, was an educator who began an educational reform movement that he called Soka Kyoiku Gakkai, or "Value-Creation Education Society," based on his book *The System of Value-Creating Pedagogy.* Heavily influenced by western educational ideals oriented to the good, the true, and the beautiful, Makiguchi's pedagogy was a critique of educational practices then current in Japan, which emphasized memorization, obedience, and loyalty—especially, during the period of the Meiji Restoration leading up to World War II, loyalty to the emperor. Education, Makiguchi thought, should emphasize critical thinking oriented to the pursuit of value, benefit, and gain.

In 1928, Makiguchi had encountered and converted to Nichiren Shoshu Buddhism a relatively small but well-established sect that claimed to be the orthodox followers of Nichiren. Nichiren's Buddhism spoke to Makiguchi's experiences and

educational goals. Nichiren, like others of the Tendai sect of the Mahayana school of Buddhism, believed that he was living in the age of Mappo, "the latter day of the law," when misunderstanding of Buddhism and the propagation of false beliefs would cause suffering and social malaise. However, Nichiren believed that all individuals have within themselves the potential for enlightenment and that the enlightenment of individuals to their own inner Buddha nature would lead to resolution of these ills. The key to discovering and unlocking this inner Buddha nature lay in the simple wisdom of the Lotus Sutra. By meditating on the wisdom of the Lotus Sutra, individuals could realize their own inner Buddha potential. Moreover, Nichiren believed that if his own understanding of Buddhism was established as the official religion of Japan—a conviction that nearly cost Nichiren his life and resulted in his banishment to the island of Sado in his later life—it would result in an end to social ills that Japan was then experiencing.

The belief that all individuals have the capacity for enlightenment resonated with Makiguchi's thoughts about educational reform, and, in an increasingly militaristic Japan, he probably also identified with Nichiren's difficulties with the government. He began to practice chanting along with some other members of the Soka Kyoiku Gakkai. The religious zeal of a convert may have contributed to Makiguchi's eventual troubles with the Japanese government. His desire for educational reform itself ran counter to the government's growing emphasis on using schools to promote patriotic loyalty in the prewar years. However, it was Makiguchi's refusal to embrace State Shinto—the official cult of the state—that landed him in jail. Under the Religious Organizations Act of 1940, the Japanese government consolidated religion into a three-religion establishment—consisting of Shinto, Buddhism, and Christianity—under the umbrella of a common "State Shinto" devised by nationalist Shinto theologians to legitimate the policies of the government. Refusal to pay obeisance to State Shinto was thus taken as a sign of political disloyalty. Makiguchi, along with several of his followers, did refuse; he was arrested in 1943 and imprisoned as an enemy of the state.

Among those who went to prison with him was Josei Toda, who is often described as a "disciple" of Makiguchi. It was Toda who took up the mantle of Makiguchi's cause after Makiguchi died in prison in 1944 shortly before the end of the Pacific War, but he also redefined the movement, emphasizing the religious over educational aspects of the movement that Makiguchi started. Reflecting the belief in the possibility of achieving happiness under awful conditions, Toda claimed to have achieved enlightenment while in prison by chanting daimoku over two million times. When he was released from prison, Toda reorganized the movement as the Soka Gakkai, or "Value-Creation Society," dropping "education" from the name and incorporating it as a lay association of the Nichiren Shoshu sect. Instead of educational reform, the movement henceforth promoted the spread of Nichiren's Buddhism and worked toward social reform through the enlightenment of one individual at a time.

The postwar period of American occupation in Japan was one of massive social change. As well as dealing with the devastation of war, Japan during that very short period was transformed from a feudal society to a modern industrial democracy. To

many, the traditional religions of Japan associated with the defunct regime seemed incapable of addressing these new experiences, giving rise to what scholars who studied the numerous New Religious Movements (NRMs) that appeared in Japan during this period have called "the rush hour of the gods." Among those NRMs the Soka Gakkai was one of the most successful. By the time of Toda's death in 1958, the organization claimed more than three-quarters of a million members.[3]

There are several reasons for Soka Gakkai's phenomenal growth. One, certainly, was that its message that individuals have the ability to be happy and to make something valuable and beautiful of their lives even under the worst conditions had a unique appeal to people experiencing this tumultuous time.

Another was a feature that made the movement very controversial. In their zeal to spread Nichiren Buddhism, the Soka Gakkai adopted a very aggressive recruitment tactic, *shakubuku* (which some have translated "break and subdue"), that involved confronting people about their religious beliefs and arguing that those beliefs were wrong and harmful. Some new members smashed ancestral shrines in their homes as a sign of their rejection of false religions. Massive rallies and parades reminded onlookers of those of the fascist regimes recently defeated in the war, leading many to suspect that the Soka Gakkai harbored aspirations of taking over the Japanese government. To this day, Soka Gakkai struggles to overcome the reputation of a dangerous cult movement that developed during this time.[4]

More objective onlookers deemphasized the role of such zealotry in Soka Gakkai's growth, emphasizing instead the fact that Soka Gakkai offered individuals a simple, practical way to respond to the challenging experiences of postwar reconstruction and a sense of belonging in a group that encouraged and supported people in their efforts to rebuild their own lives.[5] This aspect of the movement has also played a critical role in the movement's spread outside of Japan.

Toda's successor as president of the Soka Gakkai, Daisaku Ikeda, changed the movement in ways equally dramatic as those of Josei Toda. Under Ikeda's leadership, the Soka Gakkai put less effort into aggressive recruitment and more into shaping the movement's public image. Recruitment efforts today are less likely to emphasize the harm of holding false beliefs and more likely to emphasize the "benefits" of chanting. While the emphasis on personal practice remains, there has been increased emphasis on collective, value-making projects such as the movement's foundation of art museums, a concert society, schools modeled after Makiguchi's educational philosophy, a major university, and a political party oriented to social reform. Today, the Tokyo Fuji Art Museum, Min-On Concert Association, Soka Schools, and Soka University—all founded by the Soka Gakkai—are independent of the religious organization and well-respected institutions in their own right. The Komeito, the political party founded by Soka Gakkai, has, after many changed manifestations and much public debate, become part of the ruling coalition in Japanese government. The Soka Gakkai itself, which claims to have eight million members, is now the largest Buddhist sect in Japan.

Two additional results of Ikeda's leadership merit further discussion. Early in Ikeda's term as president of Soka Gakkai, Ikeda set his sights on expanding the

movement outside of Japan. Perhaps motivated by Japan's experience in World War II, Ikeda came to believe that Nichiren's Buddhism had a special message to a world living in the chill of the Cold War and the threat of nuclear annihilation. In 1975, Soka Gakkai International (SGI) was formed as an umbrella organization to coordinate efforts to spread Nichiren Buddhism around the world. For obvious reasons, these efforts have followed patterns of Japanese migration, with members concentrated, predictably, wherever one finds significant numbers of Japanese immigrants. That includes, in particular, the United States, Brazil, and Great Britain.[6]

Ikeda has also been actively involved in dialogue with world leaders—political and intellectual—about the possibility of world peace. Under his leadership, the Soka Gakkai became a nongovernmental organization associated with the United Nations. Every year since 1983, Soka Gakkai representatives have presented a peace proposal authored by Ikeda to the UN. Ikeda's dialogues with Arnold Toynbee, Bryan Wilson, Johan Galtung, and other intellectual figures of world renown have been published by reputable presses, such as Oxford University Press.[7]

Expansion overseas and Ikeda's ever-growing prominence, however, meant a declining emphasis on the role of priests, which led to tension between the Soka Gakkai and the Nichiren Shoshu. Although Soka Gakkai made efforts to build temples and import priests to staff them wherever it developed a significant following, for members overseas the priesthood was a remote presence at most. From the beginning, the Soka Gakkai, as a lay movement, had emphasized individual practice; apart from a pilgrimage to the head temple, which Soka Gakkai had encouraged early on, and special occasions such as weddings and funerals, Soka Gakkai members had little contact with the priests. Supporting temples came to seem less compelling to many members than supporting SGI's goals of promoting nuclear disarmament, environmental protection, and cross-cultural dialogue. Building temples and supporting priests was an obligation, but building schools, art museums, and concert halls was, for many, a more imminently satisfying expression of members' Buddhist values—that is, of creating something good and beautiful in a mucky world. All of these institutions were built and endowed with money donated by members during annual contribution drives.

Moreover, members heard regularly from Daisaku Ikeda through a variety of SGI publications. It was Ikeda, rather than any of the priests, that Soka Gakkai members called "Sensei" (teacher). That seems to have offended the priests. At the priests' urging, Ikeda stepped down from his role as president of the Soka Gakkai in 1979, but he remains a central figure in the lives of Soka Gakkai members worldwide.

The combination of the emphasis on individual practice and study, the priority of SGI's own collective projects, and Ikeda's continuing influence finally erupted into conflict with the priests in the early 1990s, when statements made by Ikeda implied that the priesthood was unnecessary. Soka Gakkai members and leaders, furthermore, objected when the priests decided to raise the fees they charged for wedding and funerary services, a major source of revenue for the priesthood. Soka Gakkai leaders accused the priests of being greedy; the priests accused Soka Gakkai of being disobedient. When the priests demanded an apology, the Soka Gakkai refused; and,

in 1991, the priests announced the excommunication of the Soka Gakkai and all of its members.[8] The bitterness of the dispute was dramatized on the world stage when in 1999 the priests executed plans to demolish the Sho Hondo, a temple complex built with donations from Soka Gakkai members in 1972 to house the Dai-Gohonzon (the original copy of the Gohonzon inscribed by Nichiren) and described by aficionados as an "architectural treasure." The priests claimed that the building's foundation had crumbled, but it seemed evident to horrified onlookers that that explanation was more symbolic (referring to the role of the Soka Gakkai in its construction) than factual.

The Soka Gakkai, however, seems to have suffered little as a result of the schism. In fact, for organizations outside of Japan, the event seems to have been liberating. Very few members accepted the priests' offer to disavow the Soka Gakkai and join temple groups called hokkeko. For most, the social and emotional bonds were with the Soka Gakkai, and losing access to priestly services meant little to those who had little contact with the priests to begin with and had come to understand their faith in terms of personal practice and Soka Gakkai-sponsored activities.

SOKA GAKKAI IN AMERICA

The first American Soka Gakkai Buddhists were mostly Japanese wives of American military men. The reason, of course, for this overwhelmingly female demographic was the state of American immigration law at the time. Until President Lyndon Johnson signed immigration reforms into law in 1965, American policy restricted immigration from Japan to the immediate members of American citizens' families. The practical result was that immigrants from Japan consisted almost exclusively of women who had married American military personnel. The Soka Gakkai Buddhists among those women maintained their practice privately.

Shortly after his election as president of the Soka Gakkai in 1960, however, Daisaku Ikeda announced his intention to oversee the worldwide spread of Nichiren's Buddhism. In preparation for Ikeda's first visit to the United States, Masayasu Sadanaga—who later changed his name to George Williams to emphasize his American identity, setting a precedent that the movement as a whole would follow—began organizing Soka Gakkai members and established an American headquarters in Santa Monica, California.

The first American converts, unsurprisingly, were mostly other Japanese women and the husbands and friends of current members. In the early 1970s, when David Snow conducted research on the Soka Gakkai in America, about 41 percent of all American members of the Soka Gakkai were associated with the military by occupation or through immediate family members.[9] As the title of his book—*Shakubuku*—suggests, however, broader recruitment efforts soon began in earnest.

By 1963, there were enough non-Japanese members to warrant holding meetings in English. When Phillip Hammond and David Machacek conducted their study in 1997, the membership of the American branch of the movement was predominantly non-Japanese. The single largest ethnic group among the American members

today is white (about 42 percent), but the organization also has substantial numbers of black members (about 15 percent), Latinos (6 percent), and people of mixed ethnicity (about 15 percent). Only about 23 percent of all American members of the Soka Gakkai today are of Asian ethnicity.[10] Those demographics suggest why some scholars of Buddhism in America have described Soka Gakkai International–USA (SGI-USA) as an "evangelical" type of Buddhism, as opposed to "ethnic Buddhism" in which ethnic and religious identity are intimately bound up together.[11]

The Americanization of the Soka Gakkai Buddhist movement in the United States has been a subject of much scholarly interest, and, as Hammond and Machacek argue, probably helps to account for its overall success as an NRM here.[12] Some of the changes, of course, came about as a result of practical necessity—using English at meetings, for instance. Others, such as reforming the organizational structure to give more autonomy to local organizations, probably resulted from pressure by American members accustomed to the congregational form that most American religious organizations take as a result of the predominance of Protestant Christianity in the United States. Likewise, internal pressure by American members led to a greater openness to the possibility of women assuming leadership roles.[13] To some degree, however, Americanization of the movement expressed a conviction, articulated by Ikeda during a visit to the United States at the time of the American bicentennial celebration, that the Buddhist humanism promoted by Soka Gakkai is of critical importance to democratic societies, enabling individuals to make the most of the possibilities afforded by individualism and freedom. The theme of that year's national Soka Gakkai convention, "200 years from now," reflected the conviction that the human revolution promoted by Soka Gakkai would be as important to America's future as the political revolution of 1776.

The movement in the United States is so important to SGI's understanding of its global spread that one occasionally hears talk about the possibility of relocating its international headquarters here. Those speculations are, apparently, entirely unfounded, but they suggest, nonetheless, something about the way that the globalization of the movement has affected its identity. Specifically, the American movement no longer sees itself as a Japanese religion in the United States; it sees itself as thoroughly American. As an international movement that encourages members to think of themselves as "global citizens," the cultural link between Soka Gakkai and Japan has been more or less severed. That process was already underway before the break with the priesthood, but the schism has clearly untethered the movement from its Japanese cultural origins.

Demographic changes since the 1990s may be pushing the movement even beyond the "Americanization" process. According to Bill Aiken, Director of the SGI-USA Office of Public Affairs, increased immigration of Asians and South Americans to the United States has meant a significant increase in their representation in the American organization. "The organization has gone from being 'diverse' just in the traditional American sense to a much more global membership."[14] Among other responses, such as local "language and culture groups" and the possibility of organizing conferences in members' native languages at SGI-USA's Florida Nature and

Culture Center, the organization now offers supplements to its English-language publications in Spanish, Japanese, Chinese, Korean, French, Portuguese, Thai, and Cambodian. Almost half of all subscribers to the *World Tribune,* SGI-USA's weekly newspaper for members, receive one of these language inserts.

On its Web site SGI-USA claims to have 330,000 American members and 71 community centers around the country.[15] As with all religions, good data on membership are difficult to come by, and there is good reason to believe that the official estimate is inflated. Using a very strict definition of active membership and data on subscriptions to SGI-USA publications, Hammond and Machacek estimated there to be about 36,000 active American members.[16] The emphasis is on putting the wisdom of the Lotus Sutra to work in one's own life, however, and participation in organized Soka Gakkai activities is not necessary. It is impossible to know how many Soka Gakkai Buddhists are inactive in the organizational life of the movement. Because of their sampling method—they distributed surveys to people who subscribe to SGI-USA publications—and because their definition of active membership emphasized participation in the organization, Hammond and Machacek's estimate is probably quite low. Actual membership is probably 60,000–80,000. More accurate numbers may soon be available, as the organization is now developing a membership reporting system.

In addition to growing its membership, SGI-USA has developed a considerable network of subsidiary organizations in the United States. The Boston Research Center for the 21st Century, devoted to collaborative efforts with a variety of educational and not-for-profit organizations to develop "cultures of peace," was founded in 1993.[17] The Florida Nature and Culture Center, already mentioned, is a conference and retreat facility located on 125 acres of wetland in Ft. Lauderdale. In 1994, Soka University opened a graduate school in Calabasas, California, dedicated to training language teachers. In 2001, Soka University opened a campus in Aliso Viejo, California, that offers a bachelor's degree in liberal arts.

SGI-USA is easily one of the most successful new religious movements in America, as well as one of the most successful NRMs to have come out of postwar Japan. Moreover, it is unique among the various Buddhist religious groups in the United States because of its exceptionally diverse membership—most Buddhist organizations being identified with a particular ethnic-immigrant group or consisting of mostly white Buddhist converts. Perhaps these unusual features account for the abundance of academic literature on the movement, despite the fact that it is relatively unknown to the general public.

RESEARCH ON SOKA GAKKAI

In 1994, Bryan Wilson and Karel Dobbelaere published the results of a survey of Soka Gakkai members in Great Britain. In addition to describing the British converts demographically, their book, *A Time to Chant,* described how converts to the movement compared with the British public generally on a number of attitudinal items. The results led Wilson and Dobbelaere to suggest in an epilogue that conversion to

Soka Gakkai Buddhism might be understood in terms of converts' response to changes taking place in Britain's advanced industrial economy. They argued that Soka Gakkai Buddhism had a particular appeal to those experiencing the shift from the producer-oriented culture of early industrial society to the consumer-oriented culture of advanced industrial society.[18] Just as early industrial society required that people be motivated to work hard, save, and invest, as Weber had described in *The Protestant Ethic and the Spirit of Capitalism,* an advanced industrial society requires consumers and thus an ethic of self-fulfillment and gratification of desires. Soka Gakkai seems to provide such an ethic, and this accounts for the large numbers of self-employed entrepreneurs, artists, and persons employed in the caring professions—that is, persons whose career choices suggest that self-expression and fulfillment took priority over economic security—among members. Their data, unfortunately, provided only a limited basis on which to draw such a conclusion.

Hammond and Machacek, however, used the Wilson and Dobbelaere study as the basis of their survey of Soka Gakkai Buddhists in the United States. In addition to reproducing many of the questions used in the British survey of movement members, they added questions from the General Social Survey—a yearly survey of Americans' attitudes about a variety of social issues—that allowed them to test the hypothesis. They found that converts to Soka Gakkai in the United States were drawn disproportionately from a subculture that differs from the American public generally by its perspective on consumerism, individual responsibility with regard to social issues like poverty and the environment, and modernity generally, a cultural orientation described by others as "transmodern." Hammond and Machacek write:

> [I]t is not difficult to understand the appeal of Soka Gakkai to people who are this emerging transmodern subculture. By interpreting personal success as a sign of "human revolution" taking place in individuals' lives, Soka Gakkai endows the gratification of personal desires with religious meaning and moral sanction. The idea of karma, however, encourages participants to think about personal benefits in terms of their impact on others, providing a check on the moral license seemingly granted to members. A religion with a distinctly humanist edge, Soka Gakkai affirms the potential of human progress but draws upon the wisdom of Buddhist tradition for insight into the responsible uses of modernity's products.[19]

Most importantly, on a battery of questions drawn from the World Values Survey[20] designed to test the relationship between economic change and shifts in value priorities, researchers in both the British and American studies found Soka Gakkai converts to be overwhelmingly in the "post-materialist" camp. Unlike the general public in both nations, in other words, Soka Gakkai members prioritized self-expression, personal freedom, and aesthetic pleasure over economic and physical security.

Daniel Metraux used a survey modeled after those used in the Wilson/Dobbelaere and Hammond/Machacek studies in research on Soka Gakkai in Australia and discovered a similar pattern, lending further credence to the idea that Soka Gakkai Buddhism holds a unique appeal to that social sector most affected by economic shifts in advanced (or post-) industrial societies. Metraux writes, "Personal autonomy,

dependence on one's own efforts, and a growing sense of personal responsibility for one's life dictate the need to seek greater control over one's destiny."[21]

Among the NRMs that scholars have studied, Soka Gakkai is rare because of the availability of credible data from a national random sample of members in the United States, as well as data that can be directly compared with the general public and with members of the movement in other nations. Indeed, the availability of such data may be unique to this movement, representing an uncommon opportunity for students and scholars of NRMs.

An initial effort to consolidate findings of scholars who have studied the movement around the world was undertaken by David Machacek and Bryan Wilson in 2000. The resulting book, *Global Citizens,* charts the birth and growth of the movement in Japan before discussing its spread to the United States, Brazil, Great Britain, Italy, and, more recently, Southeast Asia. A couple of insights emerge from that exercise.

While there were similarities in the demographic profile of new converts in each nation, reflecting the movement's appeal to highly educated, new class professionals (that is, professionals employed in knowledge and caring industries), the beliefs and values promoted by Soka Gakkai Buddhism seem to have little to do with what initially attracts people to the movement. Instead, the initial appeal seems to be an attraction by the newcomer to the people he or she meets upon the initial encounter.

Both the Wilson/Dobbelaere and Metraux studies (of SGI in Great Britain and Australia, respectively) found an unusual number of recent immigrants among converts to the religion, persons for whom a sense of belonging and companionship in a multiethnic religion would seem to hold a special appeal. Metraux observes:

> The fact that many members found SGIA [SGI Australia] to be a tolerant and caring community was especially important for immigrants new to the Australian life. SGIA provided a ready-made community containing a diverse group of white Australians and Asian-Australians from virtually every region or country who could extend a welcoming hand to a newcomer from Malaysia, Korea, Hong Kong, or Japan. Newcomers often found SGIA to be their port of entry and social base while entering Australian society.[22]

Wilson furthers this line of thought by noting that the desire for belonging may extend beyond just immigrants to socially mobile people in contemporary urban environments generally: "its local groups do something to restore a sense of community and identity in a society [that] has become steadily depersonalized."[23]

Although there were fewer recent immigrants among members in the United States, Hammond and Machacek found evidence of geographic mobility as well. Most American converts first encountered the movement, they report, at a time in their lives when they were "unencumbered" by personal relationships and other social commitments, such as active participation in an organized religion and full-time jobs. Most were young, single, and often still in college when they first became involved in the movement; many (about 43 percent) reported that they were not living in the same geographic area as their parents or siblings.[24] These findings are

consistent with those reported by David Snow, who found that early converts to the movement in the United States were "structurally available" for recruitment when they encountered Soka Gakkai.

It is hardly surprising, then, that each of these studies reported that, when asked about what initially attracted them to Soka Gakkai, converts typically said they were attracted to the people they met. Further reinforcing the notion that Soka Gakkai provides a sense of community, it is notable that many converts elaborated their response to indicate that they found the members they met on their initial encounter to be warm, caring, and sincere.

The diversity of Soka Gakkai members itself may contribute to the movement's appeal. Beyond the frequency with which geographically and socially mobile persons are found among members, there is good reason to believe that Soka Gakkai members are unusually cosmopolitan. Hammond and Machacek found that a remarkable 66 percent of converts to Soka Gakkai in the United States had traveled outside the United States prior to becoming involved in the religion. Many reported having had a prior interest in non-Western cultures and, particularly, reported interest in eastern religion and philosophy. Moreover, movement growth has been concentrated in pluralistic and cosmopolitan environments both in the United States and abroad. In other words, Soka Gakkai not only offers converts a sense of community, it also provides access to a particular kind of community—one characterized by the diversity of its members—that probably holds a unique appeal to people with cosmopolitan outlooks.

More than merely providing access to diverse social networks, Soka Gakkai Buddhism provides a way to think about and understand the encounter with people of diverse cultures. Among the movement's many goals with regard to the wider society is the promotion of cross-cultural dialogue. The title of Machacek and Wilson's volume, *Global Citizens,* in fact, is taken from Soka Gakkai publications. The religion specifically rejects narrow, parochial perspectives on the world and actively promotes, both among its members and in society generally, the exploration of diverse cultures, especially through the arts.

The Min-On Concert Association and Tokyo Fuji Art Museum, which, as mentioned above, Soka Gakkai founded in Japan, are expressions of the religious belief that understanding and appreciating the beauty of diverse cultures is a means of promoting world peace. Indeed, members are strongly encouraged to be active in the arts themselves. Thus, for instance, most local organizations sponsor a variety of artistic endeavors such as bands, dance troops, and so on, so that members can literally make beauty as an expression of their belief in the wisdom of the Lotus Sutra. This feature of the religion may also help explain why prominent American artists, such as musicians Tina Turner and Herbie Hancock, have been drawn to Soka Gakkai Buddhism.

Each of the major studies of Soka Gakkai discussed in this section emphasized that Soka Gakkai's efforts to promote world peace through cross-cultural dialogue, promotion of the arts, and the like are a crucial element in understanding why a religion that emphasizes individual practice, one in which participation in collective worship

is not required, stimulates so much participation in group activities. Wilson puts it this way in a discussion of the appeal of Soka Gakkai to British converts:

> [T]here is an eighth source of appeal in the support the movement lends to campaigns for the preservation of the environment, for peace, as well as for the more usual candidates of religious concern such as aid for the Third World and care of refugees. Members are encouraged to participate in projects and programs organized by the movement to provide benefit in all of these areas. Chanting and worship are thus not just ends in themselves, but are seen as instrumental in awakening members to their responsibilities to the wider society. Cultural events are no less a feature of this proactive disposition. Concerts, entertainments, and exhibitions are all objects of regular sponsorship to promote the opportunities for artistic expression and creativity.[25]

Hammond and Machacek found that belief in the possibility of world peace was among the strongest predictors of involvement in movement activities. Those, in other words, who linked their personal practice to the movement's collective goals of promoting art, education, and peace were more involved than those whose practice was oriented to purely private goals.[26]

Members thus are able to express and act upon their cosmopolitan identities in the context of enjoyable local activities in an ethnically and culturally diverse religious organization that links individual efforts to create value and beauty in their own lives with the collective goal of world peace.

These studies have by no means exhausted the possibilities for research, of course. In fact, at least three directions for future research appear evident.

First, mention was made above about recent demographic changes in the American movement. It is reasonable to think that, just as the advent of American converts prompted cultural and organizational changes in SGI-USA, the growing presence of new immigrant members is likely to have a powerful impact on the movement, although one can only speculate what that impact will be. In particular, it will be interesting to see how the movement balances its current emphasis on local activities with an increasingly global outlook, and how it balances the seemingly contradictory impulses of particularism (in promoting what it conceives to be the universal message of true Buddhism) and pluralism (in promoting awareness and appreciation of cultural diversity). Of course, it probably goes without saying that all American religions, new and old, face these kinds of challenges.

Second, Soka University is now preparing to graduate its first undergraduate class and, in doing so, hopes to achieve accreditation as a baccalaureate degree-granting institution. That process may involve countervailing pressures—on the one hand, to remain true to its mission to provide a humanist education expressive of Buddhist values and, on the other hand, to conform to the expectations and standards of American educational institutions. It will be interesting to watch how Soka University negotiates this critical juncture.

Third, since the break with the Nichiren Shoshu priesthood in 1991, SGI-USA has become more actively engaged with other Buddhist groups in the United States. Since 2000, there has been a considerable increase in coverage of SGI by *Tricycle: The Buddhist Review* and *Buddhadharma Magazine,* which are widely read by American

Buddhists. These developments suggest that SGI-USA is becoming more mainstream, at least within the larger American Buddhist "community."

CONCLUSION

If there is, in fact, an affinity between an economic culture of consumption, pluralism, and cosmopolitanism and Soka Gakkai's belief in the possibility of achieving world peace through individual enlightenment and happiness and cross-cultural dialogue, then it is reasonable to expect that Soka Gakkai will continue to grow, especially in countries, such as the United States, where these economic and cultural trends are most pronounced. Indeed, Hammond and Machacek point out that the value profile characteristic of converts to Soka Gakkai is shared by about 24 percent of the American population.[27] Clearly, only a small proportion of those people will ever encounter and convert to Soka Gakkai Buddhism. Nonetheless, it is also clear that the movement has not maximized its growth potential.

In any case, an NRM that has achieved the remarkable feat of growing into a worldwide movement with some 10 to 12 million members in 190 different countries in a mere 60 years is worthy of the attention of students and scholars of new religions and, for that matter, of religion in general. It is a movement that has much to teach not only about the dynamics of NRMs and their growth, but also about the relationship between religion, economic change, and globalization.

Indeed, the movement's history and development challenge the conventional understanding of what "new religious movements" are. Soka Gakkai, after all, is a new expression of a very old and very traditional sect of Buddhism. It might be better conceived as a revitalization movement—specifically, an expression of Buddhism that speaks more effectively than its parent, Nichiren Shoshu, to the experiences of contemporary social life.

13. In fact, one of the main sources of Nichiren Buddhism's appeal to contemporary professionals is the fact that Nichiren taught that women, as well as men, could achieve enlightenment. This egalitarian aspect of Nichiren Buddhism has been realized more rapidly in American and western European Soka Gakkai organizations than in Japan, and in Japan more rapidly since the schism than before.

From Guru Maharaj Ji to Prem Rawat: Paradigm Shifts over the Period of 40 Years as a "Master" (1966–2006)

Ron Geaves

INTRODUCTION

Prem Rawat, more commonly known as Guru Maharaj Ji or Maharaji, sprung to fame in the West in the early 1970s as a child guru believed by many of his predominantly counterculture followers to be the new world savior. Throughout the first half of that decade, the movement founded to promote his teachings, Divine Light Mission was possibly the fastest growing new religion in Britain and the United States. Although the present activities in these two countries can no longer compare to that period, Prem Rawat has consolidated his teachings around the globe.

In the spring of 2005, Maharaji toured India, holding events in 11 locations, attracting over 1.5 million people. The event in Kanpur was the largest crowd that he had ever addressed, with an audience of 375,000. In addition, 325,000 gathered in Gaya, a city in the state of Bihar.[1] In July 2005, speaking to a gathering of 5,000 European followers, he announced that he intended to tour Indian villages and refocus his efforts on the Pacific bowl. The resurgence of Maharaji's teachings in India and their successful arrival in South-East Asia marks him as a truly global phenomenon whose outreach activities have given his teachings a presence in Australasia, Asia, including mainland China and Japan, North and South America, including Cuba, Europe, and Africa. There is a small but growing interest in some parts of the Muslim world. Significantly, he has been able to present his message in a way that transcends his origins in North India and move to a universalist teaching based on inner experience and the shedding of any cultural or religious cosmologies that would continue to root him in a particular time or place milieu. It is this successful globalization and the ability to transcend cultural and religious particularity, combined with his apparent pragmatic ease to adapt and transform a core teaching to meet with new circumstances and a rapidly changing world, that make him interesting to scholars of New Religious Movements (NRMs) as well as contemporary religion in general.

Maharaji retains a significant following in the United States even if it is not as large as it was in its heyday of the 1970s. We do not know exactly how many practice the techniques of Knowledge as no membership lists are maintained. Numbers at national events in the United States are about 5,000–6,000, but these may include visitors from South America and Europe. However, Maharaji's roots in the United States go beyond the numerical. He effectively adopted America as his home in 1974 when he met his wife, a native Californian. His four children were raised, first in Miami and then in Malibu, where the family still retain their residence. He is an American citizen, and The Prem Rawat Foundation was recently founded in the United States.

BIOGRAPHY

Maharaji was born on December 10, 1958, in the small village of Kankal on the opposite bank of the Ganga River from the sacred Hindu pilgrimage center of Haridwar in the state of Uttar Pradesh, India. While he was still a small child, the family moved to Dehradun, where he remained until invited to visit the West in 1971. His family name was Prem Pal Singh Rawat, the youngest of four sons born to Shri Hans Ji Maharaj, but only recently has he become known by that name. In childhood, he was affectionately known as Sant Ji by his father's followers, Balyogeshwar (born lord of Yogis) by the Indian public on account of his young age and precocious spirituality, and later Guru Maharaj Ji by his students. During the 1980s, wishing to divest himself of the identity of "guru" he simply became known around the world as Maharaji.

The young Prem Rawat's life was never like that of other children his age. His father, Shri Hans Ji Maharaj, was a renowned North Indian *satguru* (true teacher) teaching a *nirguna bhakti* (worship of the formless God). This teaching of Shri Hans Ji Maharaj superficially paralleled the Radhasoami tradition,[2] at least in its organizational forms, with a focus on *satguru, satsang,* and *satnam,* identified by Charlotte Vaudeville as the three key components of the Sant tradition.[3] Behind the hagiography attached to the young Prem Rawat, we know that he loved his father deeply and felt the impact of his father's charisma and teachings. From his infancy he attended his father's public discourses in North India, sleeping on the stage, and first spoke in public to amazed crowds at the age of four to five years.[4] Prem Rawat considers these experiences to be defining moments in his life, times when he served his father by attracting to the events a public curious to hear a small child speak. At the age of six, the relationship of master/student with his father was formalized when he accepted Shri Hans Ji Maharaj's invitation to be initiated along with his three elder brothers.

In 1966, his father died at the age of 60, leaving a young family and tens of thousands of followers bereft. The question of Prem Rawat's succession to his father's position of *satguru* is controversial and now disputed by his eldest brother, but at the time the family accepted the decision. According to Maharaji's own accounts in his oral teachings, supported by close followers of his father who remain alive, Shri

Hans Ji Maharaj had clearly indicated to senior disciples and his family that he wanted his youngest son to continue his life work. In addition, Shri Hans Ji Maharaj on numerous occasions indicated the special spiritual bond that existed between himself and his youngest son. However, Maharaj Ji's mother and other family members had reservations about this transition in leadership. His mother considered Prem Rawat to be too young for such responsibility and favored her eldest son. However, the matter was taken out of their hands after the frequently mentioned incident in which the young Prem Rawat sat in his father's empty *gaddi* (chair or throne) and began to address the assembled gathering of grief-stricken disciples. While the family debated leadership succession with senior disciples, the crowd acknowledged the eight-year-old Prem Rawat as their new master. Thus began a period in Prem Rawat's life when he attended school at St. Joseph's Academy in Dehradun during the academic year, touring Northern India and addressing large audiences during school holidays. The family assisted him in his efforts, his mother acting as legal controller of her husband's assets and patron of Divine Light Mission, the organization created in India to promote Prem Rawat's teachings.

This situation lasted until Guru Maharaj Ji, as he was now known, reached the age of 11. In 1969 he attracted the attention of four English travellers to India, all of whom were involved in the 1960s counterculture and were seeking "enlightenment" in the East. Excited by his teachings, they invited him to Great Britain—an offer he responded to by sending a trusted follower, Mahatma Gurucharanand, to London in late 1969. From 1969 to 1971, North American visitors to India discovered the young guru and became his students. Meanwhile a small group of about 100 young men and women were initiated in London, gathering around the daily discourses of Gurucharanand. On June 17, 1971, the 13-year-old Guru Maharaj Ji accepted the invitation of his growing band of Western followers and came to London. His arrival at the age of 13 attracted considerable media attention that mostly focused on the young guru's age.[5] In addition, the success of the movement founded in the West, then known as Divine Light Mission, attracted scholarly attention in the 1970s and, to a lesser degree, the 1980s.[6] By the 1990s, both scholarly and media attention had moved on and the general assumption was that the movement was in decline if not completely extinct.

ORIGINS

Although categorized as an NRM in the West, the organizations that developed to promote Maharaji's teachings, especially the now defunct Divine Light Mission, are better understood within the context of Indian *sampradaya* formation and the global reach of Eastern spirituality in the second half of the twentieth century.[7] Although many sociologists of religion claimed that Maharaji's origins are in the Radhasoami tradition,[8] those scholars who identify Maharaji's roots as Sant Mat, or more specifically Radhasoami, are mistaken. Maharaji's history is linked to the lineage of Advait Mat, a North Indian cluster of movements that trace their origin to Totapuri, the teacher of Ramakrishna Paramhans. He claimed to have ancient links to

Shankaracharya through a succession of Dasnami sadhus.[9] However, Maharaji is unusual in that he does not consider his lineage to be significant and does not perceive his authority as resting in a tradition. He has referred to it in the past as follows:

Shri Totapuri ji Maharaj (1780–1866)
Shri Anandpuri ji Maharaj (1782–1872)
Param Hans Dayal Shri Advaitanand ji (1840–1919)
Shri Swarupanand ji Maharaj (1884–1936)
Yogiraj Param Hans Satgurudev Shri Hans ji Maharaj (1900–1966)

With the exception of his father, Shri Hans Ji Maharaj, this lineage concurs with that of all Advait Mat movements. Advait Mat are a large cluster of movements acknowledging Shri Swarupanand Ji Maharaj and Shri Advaitanand Ji as their founder gurus.[10] The difference between the various Advait Mat groups is determined by their narratives concerning authority and succession after the death of Shri Swarupanand Ji in 1936. Certainly there is no doubt that Shri Hans Ji Maharaj saw himself as his *satguru's* appointed successor and began to teach in North India after Shri Swarupanand's death.

Shri Hans Ji Maharaj, according to the accounts of his followers, had, like Swarupanand Ji before him, been one of his master's inner circle with a special enthusiasm for promoting the teachings. He was given permission to teach the techniques but he probably was not accepted as having equal status by the *sannyasi* order that Swarupanand Ji developed. Shri Hans Ji Maharaj was married, and in spite of the ethos of equality that was inherent to the guru's teachings, the long conditioning of Hindu culture and the traditional view of the superiority of the renunciate over the householder prevailed with many of the monks. The narrative of his followers states that Shri Hans Ji Maharaj was away when his master died in Nangli. Various senior *sannyasis* gathered to discuss the succession, and they chose from amongst themselves Vairaganand Ji to continue the lineage. It is highly unlikely that they considered a householder, especially since the previous masters were renunciates.

However, Shri Hans Ji Maharaj contested this succession on his arrival at the ashram. Supposedly Swarupanand Ji said, "I am in Hans' heart and Hans is in my heart" and once lifted Shri Hans Ji Maharaj's hand and declared that the disciples should follow him after the guru's death. Whatever the circumstances, Shri Hans Ji Maharaj was fully convinced that he inherited his master's mantle, and he left the ashram with a very small group committed to him and began promoting his own teachings throughout India.[11] Vairaganand Ji received his guru's property and began an institutionalized panth in Anandpur, a former ashram of Swarupanand Ji in Madhya Pradesh. A panth is the term used for the final phase of a sant lineage, when it has become a sectarian institution. A panth claims to spread the teachings of the past sant(s), but the dominant focus of spiritual power now resides in ritual forms and scripture. Shri Hans Ji Maharaj traveled from place to place, slowly collecting a following that recognized him as their master. He first taught in the Punjab, basing

himself in Lahore. When India and Pakistan separated in 1947, he moved to Delhi and promoted his teachings among the workers at the Delhi Cloth Mill. As mentioned, at Shri Hans Ji Maharaj Ji's death in 1966, he is believed to have appointed his youngest son, Prem Pal Singh Rawat, who is now known as Maharaji, as his successor.

The succession of Maharaji was never considered to be a hereditary one. His father's disciples thought that young Maharaji possessed his own charisma and authority. This understanding distinguishes Maharaji and his father from Advait Mat lineages, forming a new phenomenon.

TEACHING

Maharaji's teachings can be summarized in his oft-repeated formula "that which you are searching for can be found within, inside of you."[12] His discourses do not reveal a coherent philosophy or theology, nor do they draw upon any existent cosmology, although the knowledgeable listener is able to discover echoes of a universalist idiom that parallels Sufis, such as Jalal al-Din Rumi (d. 1273), or North Indian *nirguna bhaktas* or worshippers of the formless God or supreme power, such as Kabir (1398–1448) or Nanak (1469–1539). Indeed, Maharaji demonstrates a tactful ambivalence regarding religious doctrines and is not concerned with placing himself in any category that would limit his message to an audience of theists, atheists, agnostics, or nontheists. Simply expressed in his terms, if you are human, that is sufficient; much of his discourse is directed towards the deconstruction of labels, definitions, and limitations. The difficulty here is that many spiritual teachers associated with NRMs also utilize the strategy that their message has universal appeal. The difference would seem to be that Prem Rawat has behind him a long tradition of such iconoclasm that he can draw upon for resources.

His discourse consists of humor, folk wisdom, modern parables, stories, and examples from daily life, all focused around a very basic message. The first element of the message is the identification of thirst, a need for fulfilment, that Maharaji perceives to be a universal factor of human existence. The second element is that lasting fulfilment cannot be achieved from anything impermanent. He does not venture into the realm of the afterlife, and permanence is conceived in terms of a constant that accompanies the human being from birth to death. The third element is the need to satisfy the thirst in this life, to make it a priority. The fourth element posits the need for a practical experience to satisfy the thirst rather than a belief system. The fifth element introduces the idea of Knowledge, the initiatory techniques that allow the individual to go within and experience the fulfilment that already exists within his or her own life-force. The sixth element refers to the need for guidance and inspiration to maintain inward focus alongside the other attractions and distractions of daily life. A key aspect of guidance and inspiration lies in the master/student relationship, maintained primarily by listening to Maharaji's discourses. Maharaji is keen to point out that the gift of Knowledge is free and requires no external lifestyle practices such as vegetarianism, rituals, special behavior, or moral codes to support it.

However, it does require a commitment to practice regularly. In addition, he frequently points out that there is no compulsion or membership in a movement. He stresses individuality and personal experience, noting that each person is free to commence or cease practice whenever he or she wishes.[13]

At one level, Maharaji's discourses reveal a relativist who acknowledges only one form of permanence, that is, the moment by moment gift of life as manifested in the breath, whose contemplation allows the mind to remain in the present. However, he is not a relativist in the same way that New Age advocates tend to pick and mix elements of preexisting religious traditions. He would not acknowledge that "all roads lead to Rome" but rather that the techniques of Knowledge lead to the goal of inner fulfilment unique to the experience of the individual who practices. In this respect, he is an exclusivist who places absolute value on the path he was taught by his father. Although the transformations made throughout his life show that he was comfortable with change, secure in the knowledge that permanence can be discovered only in the deepest recesses of the self, Maharaji's discourses also indicate that he has a profound sense of commitment, of respectful stewardship for the trust that was invested in him by his father to carry the message into the wider world. He is certain that the practice of Knowledge is ancient, renewed by living masters and entrusted to such masters to communicate to the thirsty.

DIVINE LIGHT MISSION

Divine Light Mission began in the early 1960s, when some followers of Shri Hans Ji Maharaj asked him to found a formal organization to develop and structure his growing activities across India. By this time, Shri Maharaji, as he was known to his followers, had taught for nearly 30 years without any formal organization, but he gave in to the growing pressures from a number of active disciples to organize.

In 1971 British followers spoke to Maharaji about placing the activities in the United Kingdom on a properly organized footing. The Divine Light Mission was registered as a religious charity. In the United States, Divine Light Mission formally entered existence when it filed for tax exemption as a church-type organization.

During the early 1970s, Divine Light Mission grew phenomenally. Maharaji's teachings spread quickly to Great Britain, France, Germany, Holland, Switzerland, Spain, Italy, Scandinavia, Japan, South America, Australasia, Canada, and the United States. However, it was in the United States that the movement attracted the largest numbers of followers. By 1973 some 50,000 people had learned the four techniques, or Knowledge. Not surprisingly most scholarly study of the Divine Light Mission also took place in the United States.[14] The rapid growth of the movement attracted attention from newspapers, television, and magazines, as well as from academics on both sides of the Atlantic who attempted to analyze the organizational forms but had scant knowledge of the teachings. Most of these studies were conducted by sociologists of religion who wanted to explain the growing diversity of NRMs throughout the 1960s and 1970s.[15]

Daniel Gold posited three stages in the life of a *sant* lineage: (1) it begins with a solitary figure such as Kabir, Nanak, or Ravidas. Authority is derived from personal charisma, and it is highly unlikely that there is any intention of beginning a *panth* (sectarian institution). The followers of an individual *sant* are part of no overarching formal organization, but are united with their teacher in being committed to the value of personal experience. (2) A lineage is continued by disciples who became noteworthy *sants* in their own right. Usually a disciple is chosen to continue as the guru by the original *sant.* A *sant* lineage is called a *parampara* as long as the dominant focus of spiritual power is still contained in the living holy person. (3) The term *panth* is used for the final phase of a *sant* lineage, when it has become a sectarian institution. A *panth* claims to spread the teachings of the past *sant(s),* but the dominant focus of spiritual power now resides in ritual forms and scripture. A *panth* is usually headed by a *mahant* (religious functionary usually a monastic) and a committee who looks after the ritual and administration.[16] Divine Light Mission displayed the characteristics of Gold's second stage, the *parampara* as it brought with it from India:

(i) a hierarchical structure (Prem Rawat and his family members followed by a renunciate order of mahatmas, celibate *ashram* devotees, and then the wider body of noncelibate followers);

(ii) the *ashram* tradition that led to the establishment of a network of renunciate communities across Europe and North America, whose members provided the backbone of Divine Light Mission's activities;

(iii) a lifestyle in which vegetarianism, renunciation, and celibacy were idealized even though not everyone practiced them;

(iv) certain Hindu practices familiar to *bhakti* traditions, for example, daily *arti,* veneration of the *guru;*

(v) a set of doctrines that utilized the narratives of *nirguna bhakti,* displaying a particular form of that tradition where the *guru* is *isvara* or personal Lord.

The result of all these was the founding of an NRM in the West, even though Prem Rawat always indicated that his intention was not to establish a religion. On reaching adulthood, between 1975 and 1977, he tried to tear down the whole edifice, with only partial success. The countercultural background of his followers remained fresh in their memories, and the removal of the boundaries formed by the lifestyle of Divine Light Mission resulted in a return to countercultural values and a loss of commitment to the practice of Knowledge. From 1977–1982, the ashrams in the West were reopened and a gentler approach was taken towards deconstruction. In the 1980s, the Divine Light Mission was taken apart to be replaced by Elan Vital. The name was inspired by Prem Rawat reading the philosophy of Henri Bergson (1859–1941). Bergson was critical of all forms of intellectualism and believed that the way to reality lay through intuitive knowledge. Elan Vital or life-force lay at the root of all moral action.

Thomas Pilarzyk's assertion that the movement declined by the 1980s is not completely accurate.[17] Certainly major transformations occurred. The Divine Light

Mission was replaced by Elan Vital, and Maharaji's teachings departed from the countercultural milieu in which they were located in the 1970s. Concerted efforts also were made by Maharaji to remove the outer trappings of Indian culture and doctrine that accompanied the arrival of the teachings from North India. Maharaji continued to promote the benefits of the experience of Knowledge throughout the world, but remained unnoticed by both academics and journalists.

Maharaji's attempts to transform organizational structures and to eradicate the more overtly Indian cultural and religious aspects of his teachings led to conflict between his own commitment to the ideal of no structural organization and the need to continue teaching. Maeve Price argues that the Divine Light Mission transformed itself into a "sect" marked by a degree of "epistemological authoritarianism" throughout the early 1970s, although she admitted that this was never total and, in reality, a high degree of epistemological individualism existed.[18] However, in spite of this epistemological individualism many followers began to assert a very strong exclusivist claim to salvation. Their epistemology derived from certain devotional forms of Hinduism that contained ideals of monasticism, celibacy, and vegetarianism, as well as from a range of Hindu-based customs. The result was a powerful emotive epistemology of incarnation in regard to Maharaji. This combined Hindu classical *avatar* (incarnational descent) doctrines with the common attribution of divinity to the guru and strong millennial hopes arising out of a countercultural wish for an end to "straight society," which borrowed more from Christian hopes of a messiah than from Indian traditions. All these developing practices and beliefs were encouraged by the senior members of Maharaji's family, especially his mother and eldest brother, and the visiting Indian *mahatmas* ("great souls," here a title for monastics), who led the Mission during Maharaji's childhood and were attributed with varying degrees of divinity by followers. Maharaji's feelings about the powerful religious movement developing around him are difficult to ascertain, but he clearly felt a degree of ambiguity concerning all that unfolded in his name. Upon reaching adulthood, he asserted his own vision, to the consternation of some family members and the Indian mahatmas. Three key events between 1973 and 1975 hastened the demise of Divine Light Mission. In addition, the iconoclastic approach taken by Maharaji throughout the 1980s weakened the original countercultural composition of his Western following, with its world view of both hope for inner transformation and outer revolution, combined with Eastern philosophy and the need to discover alternative resources to counteract the psychic damage done to individuals as a result of drug use and hedonism.

The three significant events were the conference in the Houston Astrodome in November 1973, the marriage of Maharaji to an American follower named Marolyn Johnson in 1974, and the subsequent departure of Maharaji's mother and two eldest brothers for India, after which they announced that Maharaji was "corrupted" by his stay in the West and the eldest brother was taking over as the new satguru and leader of Divine Light Mission.

The Houston Astrodome had been hired by Divine Light Mission in the United States and heavily promoted. The intention was to fill all the seats in the massive

stadium and give the public maximum exposure to Maharaji, who would speak every day of the three-day event. The Houston Astrodome somehow focused the hopes of North American countercultural followers for an imminent millennial event. Their expectations of an announcement of Maharaji's messiahship were combined with UFO-based religious ideas about alien and angelic presences at the Astrodome to welcome the new messiah. These expectations were uniquely North American and did not impact followers who attended the event from Europe. The relative failure of the Astrodome event to match expectations of followers, leaving the Mission in considerable debt, was seen by academics as one of the principal reasons for the decline of the movement. In addition, the failure to fulfill prophecies created disillusionment in some North American followers. However, the apparent decline was due to rebuilding efforts required by the young adult Maharaji as he assumed actual leadership following the departure of his mother and brothers.

Maharaji's family had divided bitterly after his marriage to Marolyn. His mother had tried to prevent the marriage. According to Indian tradition, she had arranged a future partner for him and was not happy that he had ignored her choice and married for romantic motivations. However, it was more likely that this was only the obvious and highly visual expression of her dissatisfaction. As devout Hindus, both the mother and eldest brother were unhappy with Maharaji's increasing commitment to the West and his challenging of the Indian trappings of Divine Light Mission. Maharaji was becoming an adult and had his own ideas about how he wanted things to develop and the form that his teachings should take in the Western world. The family, with the exception of Raja Ji, the second youngest son who remained with Maharaji, returned to India where they took over the Indian Divine Light Mission and announced that the eldest brother was the new guru. This remained the situation in India for many years. Maharaji began anew in India, opening his own center in Mehrauli, New Delhi. However, in recent years he has become very successful in promoting his message throughout India and now spends approximately six months a year touring there.

A liminal period of several years ensued, in which Maharaji experimented with organizational forms, closed down the ashrams, removed Indian forms, and set up new channels to communicate his vision to those followers who remained. The result was entrenchment and inwardness with little focus on outreach, a period of reflection, and developing awareness of why the transformations were peripheral to the central message but nevertheless essential.

ELAN VITAL

In the 1980s, Elan Vital replaced the Divine Light Mission, functioning as an organizational tool for correct usage of resources, both human and financial, and the coordination of Maharaj's continuous world tours.[19] In recent years, Elan Vital has shrunk in size. It is now simply the vehicle for the organization of international tours, for the effective but legal use of financial resources, for addressing health and safety issues for volunteers and paid employees, and for securing the rights of

volunteers. Maharaji has effectively utilized technology to promote his message. In spite of the decreased significance of Elan Vital, however, it allowed Maharaji to achieve two important goals. First, he eliminated the features of Divine Light Mission that demonstrated either the outward appearance of an NRM in the West or a direct transmigration of an Indian religion. Second, he transformed a problematic and unwieldy vehicle for the dissemination of his teachings and the promotion of his own self-image. Unhappy with the "guru image transferred from Indian culture," the "cult leader" stereotype of the popular media, and the "redemptive" figure projected on him by counterculturally influenced followers, Elan Vital provided not only a new vehicle for managing and financing Maharaji's global tours, it also offered a period of introversion and retraining of his followers' attitudes towards him and his message. The shift from Divine Light Mission to Elan Vital was substantive. Elan Vital was organized, wherever possible, as an educational charity or trust responsible for promoting Maharaji's teachings. Its main activity was the spread of Maharaji's message through various types of events, including national and international venues where Maharaji spoke in person, as well as smaller, local venues where his sermons were presented on video.

The final closing of the ashram communities in 1982 dried up the pool of full-time volunteers. A process of democratization followed closure of the ashrams and the removal of the "enlightened" status given to the full-time *mahatmas* as their role was demystified. They were now labeled as instructors, guides who showed interested people the techniques of self-knowledge. The result was that a wider array of followers actively participated in the work. Most of these followers were now married, employed, and upwardly mobile. The elite hierarchical structure borrowed from the Indian model was destroyed, and an emergent egalitarianism was encouraged. The small staff needed to run Elan Vital were paid salaries. The move from Divine Light Mission to Elan Vital provided Maharaji with the opportunity for the first time to explore his own vision of his work without inherited baggage from the past. It is unlikely that this happened suddenly but was part of a gradual process in which Maharaji exerted his own understanding upon the teachings passed on to him by his father. Primarily this manifested in an examination of the dominant modes of thought towards the satguru in Hindu cosmology. Traditionally such figures have been heralded by devotees and even proclaimed in sacred texts to be avatars or manifestations of God. Maharaji began to express his own view on this and to affirm his humanity. In addition, the techniques of Knowledge had always been taught within a framework of Indian devotional narratives, supported by the teachings of Hindu sacred texts. This was removed completely, and Knowledge was allowed to stand for itself by emphasizing its personal experiential dimension rather than "proof" by reference to outside authorities. However, no new ideas or practices were included, but rather a streamlining and clarification of the existing teachings. Also, those who received the techniques taught by Maharaji entered into personal relationships with him without feeling themselves to be part of an NRM or a sect of Hinduism. They benefited from the teachings and met together on occasion to receive inspiration from their teacher, choosing how involved they wanted to be with Elan Vital.

Developments in technology permitted Maharaji to travel with a film crew who recorded all of his events around the world. These were quickly mass-distributed and shown to audiences worldwide. These video events enabled Maharaji to communicate his message directly to individuals without the requirement of intermediaries. Although Maeve Price was correct in stating that the young teacher did not want to control the lifestyles, morals, and behavior of his students, Maharaji definitely wanted his teachings accurately conveyed without distortion from others' interpretations.[20] Simultaneously he increased the tempo of his world tours by using an executive jet that he piloted himself, spending less time at his home in California. In the early 1990s he took another step towards independence, which encouraged further demystification and democratization. He decided to teach people the techniques of Knowledge himself, with instructors providing only support services. Although open to criticism that he was increasing centralized control, Maharaji resolved the problem identified by Price of establishing his teaching without creating a "radical meditation sect," but still "maintaining loosely formulated objectives and unspecific demands."[21] Thus, the need for strict control was developed not in organizational terms, but to maintain the teachings in a form fully reflecting Maharaji's own world view.

THE PREM RAWAT FOUNDATION

Elan Vital or equivalent organizations continue to function today. They provide organizational vehicles for Maharaji's activities and allow him to expand globally. The old Indian communal structures and discourse are no longer recognizable or even existent and a loose-knit formation now exists that allows Maharaji to promote his teachings. The attempts to disengage from the cult or new religious movement image have been partially successful. The shift to Elan Vital and the deconstruction of Divine Light Mission allows Maharaji to avoid both popular and academic attention, but his critics fail to recognize that recent transformations are more than cosmetic. Lack of new material in the media means that any renewed interest tends to look back to the catalogue of articles published on the Divine Light Mission. It has become difficult for Maharaji to escape his own legend.

Once again demonstrating his innovative and flexible approach to organization, he created The Prem Rawat Foundation (TPRF) in 2002.[22] New technology has made it possible to move away from community structures to an increased focus on the teacher-student relationship. More significantly, TPRF provides a platform for Maharaji to reach new select audiences in a way that Elan Vital organized events cannot. Maharaji's Elan Vital events fall into two categories, those that inspire existing students and those that reach out to new audiences. Participants in outreach events are invited individually by existing students. Little, if any, advertising takes place in advance. Maharaji enters such environments dependent to a degree on the methods of communication utilized by existing students. However, the TPRF events allow him to address academic, professional, and political audiences independently of Elan Vital's structures and in his own name.[23] As Prem Rawat he can communicate a message of peace and self-fulfillment. TPRF also provides donations and works

with charities on disaster relief.[24] It marks a complete break from Maharaji's earlier approach and gives him almost complete independence from his existing students if he wishes it. The transformations continue those initiated by Maharaji when DLM was dismantled, providing Maharaji with more independence and control over his teachings, particularly with regard to quality control, accuracy, and transmission. The new developments also further the "de-deification" process, emphasizing the message over the man.

Shifting to TPRF is more than merely an organizational change. It represents a new paradigm. Just as he dropped the appellation of "Guru" from his title to become known simply as Maharaji, he can now function under his own name. It marks a move away from complete dependence on Elan Vital to promote his teachings. The Foundation is primarily concerned with creation of materials to promote the message and appears to be seeking ways to allow Maharaji's message to reach new audiences.

This move away from representation by an organization or movement is further enhanced by the use of satellite technology providing an alternative communication to video presentations. The broadcasts are produced by a commercial company and picked up by a variety of audiences worldwide. In many countries it is possible for any members of the public to find the channel as long as they have access to satellite television.[25] The satellite programs, broadcast seven days a week, consist of edited highlights of Maharaji's recent tours. As a result, Maharaji's dependence on any organization is further reduced, as is the need for community or group identity. Many people can now tune into Maharaji's discourses in the comfort of their own homes, and if they wish to have no contact with other practitioners, they can see others only when they attend Maharaji's live events. Utilizing the newly launched Keys programme designed by Maharaji, it is now possible for individuals interested in Maharaji's teachings to follow a learning program online and by DVD sent to their homes.[26]

The results of these new transformations are that Maharaji's audiences are more likely to be strangers to each other, rather than the close-knit "insider" gatherings of the Divine Light Mission or even Elan Vital periods. However, considerable networking takes place through e-mail conferencing, local and national meetings of active volunteers, informal friendship circles, and, where technology is underdeveloped or unavailable, the use of printed materials and video events. Attitudes towards Maharaji range across the spectrum. It is unlikely that new students approaching Maharaji's teachings through the medium of Web sites and DVDs will have the same intense affective relations with him as the hard core of about 2,000 European and North American followers of long standing who attend as many of his live events around the world as possible.

OPPOSITION

Maharaji was always ambiguous to the media. When he first arrived in the West, newspaper coverage focused on his youth. It was difficult for journalists and their

editors to take seriously the teachings of a child, especially when Divine Light Mission insisted that the guru is an incarnation of the divine. However, it was not necessarily negative, but rather an adopted "tongue-in-cheek" humorous approach. But media coverage became increasingly negative as Maharaji approached adulthood with little signs of living the lifestyle of a "holy man" or a "religious leader." Maharaji rejected the roles of healer, priest, social worker, or a doer of good works. In addition, he claimed for himself no special powers or ability to perform miracles or read the minds of his followers. Neither did he endorse renunciation or draw upon a lineage or tradition, in spite of having one to which he could lay claim. Any of these might have made media publicity easier because each was a role readily understood and labelled by Western reading and viewing audiences.

In addition to not being easily labelled within conventional frameworks, the Indian attitude towards *satgurus* was not readily translatable in Western terms. In India, as David Smith notes, it is virtually impossible for followers not to venerate gurus, investing them with the trappings of great wealth, and status comparable to royalty.[27] Indeed, the title given to Prem Rawat by his followers of Maharaji literally means "Great King." This attitude is difficult to convey to Westerners, whose view of sanctity is influenced by the renunciate model of Jesus and those who followed in his footsteps, and it is also about the West's ambivalence regarding the relationship between sanctity and accumulation of worldly possessions. However much Prem Rawat may distance himself from the qualities expected of religious leadership, it is difficult for most perceptions to divorce him from certain types of religiosity, and his private wealth, his refusal to fit any of the stereotypes of religiosity or spiritual lifestyles, the high profile Millennium event at the Astrodome, the antagonism of his family, and the event of Maharaji's marriage all attracted media attention but now the mood has turned more hostile.

The proliferation of NRMs in the 1970s gave birth to a negative cult discourse, and Maharaji and Divine Light Mission found themselves positioned sharply within it. Mostly the criticism focused on the contrast between the lifestyles of commitment lived by the communal "ashram" dwellers and Maharaji's wealth. However, no financial wrongdoing was ever discovered, either in Divine Light Mission work or in Maharaji's personal finances. The dismantling of Divine Light Mission provided the opportunity for very clear financial accounting, with the income of Elan Vital being used primarily to finance Maharaji's increasingly extensive world tours. The success of Maharaji in ditching both the cultural inheritance of India and the wilder aspects of his original countercultural following led to a period of reconstruction during which he disappeared from public view. Academics assumed that, with the decline of Divine Light Mission, Maharaji was no longer a significant force in the contemporary religious arena, and the newspaper reporters had nothing controversial to interest their editors.

Yet a significant form of opposition appeared from the 1980s onwards, especially with the introduction of the World Wide Web. Over the years, a number of dissatisfied ex-followers, although not large in numbers, became increasingly vociferous in their opposition. Refusing to accept the changes from Divine Light Mission to Elan

Vital, they accused Maharaji of making cosmetic changes as a result of anticult criticism, and they accused followers of engaging in a "revisionist" attempt to rewrite the movement's history. Operating largely through the creation of their Web site, they maintain to the present an opposition that goes beyond their numerical membership in its strength.[28] It is possible to argue that the process of constant deconstruction and repackaging can actually manufacture a type of cognitive dissonance where practitioners cling to former structures, feeling that they were betrayed.

RELIGION OR SPIRITUALITY

Over the years, Maharaji demonstrated his antipathy to both of the categories of "religion" and "spirituality" in a number of discourses. A closer examination of his talks reveals that Maharaji defines both categories within very narrow parameters. The former is somewhat easier to deal with than the latter. There are a number of reasons why Maharaji would not want to acknowledge his teachings under the umbrella of religion. Maharaji's affinities with the medieval *nirguna bhaktas* of Northern India, although he would not define himself as such, preclude the possibility of categorization as religion. Maharaji shares with these exceptional figures in world spirituality an iconoclasm that exalts inner experience of the sacred over and above the ceremonial, ritual, social, and doctrinal dimensions of religion. Elsewhere Maharaji has been defined as a sant,[29] following the classic definition of such figures provided by Vaudeville:

> a holy man of a rather special type, who cannot be accommodated in the traditional categories of Indian holy men—and he may just as well be a woman. The sant is not a renunciate…. He is neither a *yogi* nor a *siddha,* practices no *asanas,* boasts of no secret *bhij mantras* and has no claim to magical powers. The true sant wears no special dress or insignia, having eschewed the social consideration and material benefits which in India attach to the profession of asceticism…. The sant ideal of sanctity is a lay ideal, open to all; it is an ideal that transcends both sectarian and caste barriers.[30]

It is certainly true that well-known sants, like Guru Nanak and Kabir, were ambivalent towards the religions as practiced in their time. Nanak, the founding guru of Sikhism, emphasized the *sant's* freedom from subservience to religious doctrinal or ideological world views very strongly:

> There are many dogmas, there are many systems,
> There are many scriptural revelations,
> Many modes to fetter the mind:
> But the *Sant* seeks for release through Truth.[31]

However, Maharaji goes further than the Sants. His universalism frees him from the need to express his vision within the cosmological frameworks of any existent religious tradition. He remains nonspeculative, refusing to engage with culture- or religion-specific doctrines concerning afterlife, the nature of divinity, or even its existence. His discourses reveal a pragmatism and even a strong skepticism towards the unproven such as doctrines concerning heaven and hell, reincarnation and

ontological categories of good and evil. He tends to see religions as concerned primarily with the next life rather than this one. However, Maharaji's linguistic origins lie in India where "religion" has no comparable term. The nearest approximation would be "dharma," a concept that summarizes a totality of behavior governing all activities and associated with a way of life believed to have originated in a cosmic or divinely revealed social and cultural order. It is quite clear that Maharaji's teachings bear no resemblance to Indian dharmic systems and do not provide a code or a way of life that regulates behavior or provides a religious culture. Indeed, it is doubtful that Maharaji would see himself as any type of religious specialist and would certainly refuse the label of "holy man" given by Vaudeville in her definition of a sant. If Maharaji is to be defined within the realm of religion, it would have to be defined as a religion that espouses experience and rejects the necessity of any other outward activity or the maintenance of any particular cosmology.

Many people in the West would describe the above characteristics as "spiritual." However, that description is also eschewed by Maharaji, whose discourse suggests that he sees it as a discredited and imprecise label, appropriated by a consumerist culture of "spiritual" seeking and given esoteric significance, neither of which are consistent with his pragmatic iconoclasm or his requirement to commit to one focused discipline. On the other hand, if Paul Heelas's definition of spirituality as "subjective-life forms of the sacred, which emphasize inner sources of significance and authority and the cultivation of unique subjective-lives"[32] is taken as the benchmark definition of "spirituality," then certainly as far as the West is concerned those who become inspired by Maharaji's message to the point of initiation into the four techniques of Knowledge are moving away from institutionalized forms of religion that emphasize conformity with external principles. However, the sociological shift in the West would not be applicable to Maharaji's success in the East. Emic or "insider" understandings would insist that the search for "subjective life of the sacred" has been an ongoing human project for millennia.

CHARISMA AND INSTITUTIONALIZATION

Maharaji's history shows that he belongs to a continuous chain of masters who resisted institutionalization and religion building. All of the masters identified earlier in this essay had iconoclastic and antinomian tendencies, and each walked away from the material and religious infrastructures inherited at the death of the previous master in order to begin again. Elsewhere I called this phenomenon "traditionless tradition" maintained to uphold the integrity of the "experiential iconoclasm" world view of each master.[33] Maharaji demonstrates this position even more than his predecessors. A pragmatic sense of the "eternal" in the "now" perhaps conveys something of his position, but it is not a world-renouncing or world-denying perspective. Rather, Maharaji attempts to maintain a charismatic moment against the processes of institution and all that that entails. Charisma is difficult to define precisely, other than in terms of personal qualities associated with leadership. From a follower's perspective, Maharaji is charismatic, in the sense that he sustains intense affective bonds with

followers based on their personal sense of gratitude and appreciation. However, from his perspective charisma is played down with a focus on the message and the transformative powers of Knowledge. Any understanding of Maharaji's motivations has to take into account the challenge to preserve the purity of his teachings from institutionalization. Thomas O'Dea argued that the founder-innovator is concerned only with communicating the message and maintaining the spontaneity of the transcendental experience.[34] Although O'Dea perceived these ensuing conflicts and tensions as a way of exploring the development of charismatic authority to institutional authority, an analysis of this new *sant* phenomenon still at the first stage of development provides an example of how a contemporary *sant* master, the first to globalize fully his teachings, grapples with and seeks innovative solutions to the problems of institutionalization. Gold and Vaudeville describe stages in the development of Sant lineages, from the original charismatic moment embedded in the teaching of a solitary Sant resistant to religious building to the emergence of fully developed religious institutions after his death. Building on these analyses, it could be argued that Maharaji perceives himself as a solitary *sant* whose authority derives from his teachings, not from any overarching formal organization. And he does not have to subscribe to any particular world view. Gold argues that such figures have little inclination to establish a *panth* or sectarian institution.[35] As such, Maharaji can be placed within the Sant phenomena, but further research demonstrates how far he has transcended that label to forge for himself a unique category. Elsewhere I argue that although there may be pragmatic concerns, such as financial stability, the attitudes of the wider society, and the opposition of former practitioners, focusing on these as the prime factors of change and adaptation misses the importance of the relationship between charisma and institutionalization. And such a focus overemphasizes reaction to external forces as the dominant motivation in understanding NRMs. In particular, Maharaji's movement promises fascinating insights into the fine balance between the integrity of teaching and experience over the apparently inevitable processes of organizational and sectarian development. Maharaji chooses perpetual transformation in which organizational forms are created, utilized, and then destroyed, thus providing flexibility to deal with rapidly changing social attitudes, to provide pragmatic solutions to internal problems, and, above all, to keep his students focused on the core message that he wishes to transmit.

CONTINUITY AND CHALLENGES

Maharaji has demonstrated an extraordinary resilience: a determination to continue teaching globally despite changes in circumstances or opposition to his activities. He successfully took the inheritance from his father and transformed it from a contemporary manifestation of a "solitary Sant" to a genuinely globalized spirituality able to reach human beings of all cultures, all religions, or none. In doing so, he continually had to assess what is essential to his message and what is peripheral, or able to be jettisoned. Simultaneously, he carried his existing students with him on his

journey of transformation, convincing them of the benefits of such changes. Not all were convinced, and a handful bitterly opposed him.

The process of transformation continues. If it did not, the inner experience of formless absolute reality apprehended in the practice of Knowledge would gravitate toward religious or cultural elements rooted in time and space. In maintaining the emphasis on experience rather than tradition, dogma, or ritual, the students of Maharaji create a space for the sacred in forms different from those that went before, looser and less compartmentalized than even their own previous efforts to shape the teachings of, for example, Divine Light Mission. Yet they risk the loss of a recognizable identity, becoming a part of the postmodernist zeitgeist where subjective forms of self-perception vary and become fragmented. The deconstructions carried out by Maharaji could dissolve intensity, essential to an entity that extols the experiential. Although Maharaji's strategies may have reduced ritualization, replication, domestication, and fossilization, there remains the challenge to maintain authenticity. In addition, the leaders today are the same people who were leading 30 years ago. Maharaji apparently is aware that he needs to develop potential young leaders, but as Martin Percy points out in another context, they may lack the charisma of the founder leaders[36] who entered Maharaji's orbit with much greater expectations than those who came later. In addition, newer students enter the environment of Maharaji's latest teachings without knowing the past. The challenge is to inspire them with the same passion and enthusiasm demonstrated by the founder-leaders. The changed religious environment of the twenty-first century in the West, which Percy defines as pluralist and postmodernist, may result in new practitioners adopting the characteristics of consumers; they may relate to practices taught, without pursuing them wholesale.

In the earlier manifestations of Divine Light Mission, a sense of *communitas,* a special sense of bonding channelled through belief, values, and norms of a specific religious tradition, was developed through initiation, giving a special sense of "elect" secrecy, shared by an intimate community to maintain strong boundaries that demarcated the "insider" from the "outsider." That strong sense of community identity is now lacking, deconstructed by Maharaji's efforts to destroy the obvious manifestations of religion in Divine Light Mission. As Maharaji increasingly emphasized the individual over the community, inevitable dispersal and dilution has taken place. Balance has to be part of the process, in which individuality and experience are lauded but not to the point where cohesive organization is sacrificed. Too far one way and results can lead once again to the sense of "elect moral status" and the renewal of group boundaries. Too far the other way and disintegration becomes a problem. Maharaji is a master manipulator of these two contrary forces, but what will happen after he dies? Perhaps that unsettling impact of his death will be offset by the continuity of the inner practices and the experience that it brings. The future is likely to see much more focus on the message, especially the applicability of Knowledge towards the fulfilment of human life journeys and the freeing of Maharaji from any identity with particular organizations or movements, except his own TPRF, which will continue as a vehicle for profile raising and presenting his message. Maharaji

has travelled far from the counterculture "guru" of the 1970s, arguably an identity he was never at ease with, and is now operating increasingly on a global platform with audiences that know nothing of the history. The challenge for future followers of Maharaji will be to develop a new generation that can take the message into the next stage, without unwanted institutionalization. In Western Europe and North America, core followers are graying. However, this is not true around the world.

SIGNIFICANCE

Maharaji is significant in a number of ways. He provides a fascinating study of the tensions between charisma and institutionalization, showing how institutionalization is not only a linear process that begins when charisma is finished but rather is resisted by the charismatic in an ongoing way. He also provides insight into the globalization and universalization of Indian traditions in the twentieth century. New phenomena in the West usually must be interpreted in terms of continuity, transformation, authenticity, and tradition as one generation passes on to another. As part of an old inheritance in India, there is the possibility of insights into the creation of *sampradayas, panths,* and *paramparas.* He is also a key figure in the transformation of institutionalized religion towards individualized and internalized spiritualities and should be located in the history of that change in western religious landscapes. He is certainly the first Indian-origin teacher of any tradition who has genuinely succeeded in liberating himself and his teachings from any reference to the East and thus is able to claim an authentic universalism on a global stage. Although there are other teachers originating in Indian religions who claim to be universal, their apparent universalism is rooted in the narratives of contemporary Hindu construction, which prefers to see itself as *sanatan dharma* or the universal and eternal truth. However, analysis of behavior and discourse will reveal to the scholar of religion a teaching rooted in an Indian background. This is increasingly difficult to observe in Maharaji's presentation of his teaching, and, in fact, he is openly skeptical of basic ideas in oriental world views, for example, reincarnation and doctrines of karma and dharma.

It would be tempting to understand the transformations that have taken place over the years simply in the context of a religious movement new to the West and adapting itself accordingly, but this would fail to acknowledge Maharaji's perception of himself as a contemporary master in the Sant idiom. The Sant's role in India has been that of innovator and rebel against religious orthodoxies and institutions, and sometimes social hierarchies and institutions.[37] Spirituality is interior and has nothing to do with any external form of religiosity. But the Sants have had to face the challenge of institutionalization and the development of religious formations after their demise. It is to be expected that a living Sant would be determined to avoid this process for at least as long as his or her lifetime. Maharaji has chosen to keep alive a traditionless tradition, a state of permanent transformation, confident in his own conviction that the core experience of the inner life achieved by his teachings can transcend and survive continuous revolution and deconstruction.

NOTES

1. http://www.tprf.org/media_press_room.htm (accessed October 4, 2005). I can verify these accounts from personal experience, having attended the Indian events in 2003, and saw for myself the numbers that were gathering. The organization in India maintains a reliable counting system based on the way people are seated in blocks.

2. The Radhasoami traditions is a cluster of movements that originated with the teachings of Shiv Dayal Singh in the 1860s in Agra, North India. The teachings show some affinity with North Indian Sants such as Kabir and Nanak and Shiv Dayal Singh perceived himself to be contemporary Sant. The tradition focuses on the saving power of a spiritual master in transforming the self and achieving access to inner worlds through the use of sacred words. A detailed analysis of Radhasoami traditions can be found in Mark Juergensmeyer, *Radhasoami Reality: The Logic of a Modern Faith* (Princeton, NJ: Princeton University Press, 1991).

3. Charlotte Vaudeville defines a *sant* as a teacher or holy man who stresses "the necessity of devotion to and practice of the divine name (*satnama*), devotion to the divine Guru (*satguru*) and the great importance of the company of the *Sants* (*satsang*). The Name, the divine Guru and the *satsang* are the three pillars of the *Sant sadhana.*" See Charlotte Vaudeville, "Sant Mat: Santism as the Universal Path to Sanctity," in *The Sants: Studies in a Devotional Tradition of India,* ed. Karine Schomer and W.H. McLeod (Delhi: Motilal Banarsidass, 1987), 31.

4. These biographical details are well-documented in the archives of Elan Vital in the United States. They contain large amounts of original film footage utilized in a number of promotional videos and DVDs.

5. I have researched this early history in the West in earlier publications which include Ron Geaves, "From Divine Light Mission to Elan Vital and Beyond: An Exploration of Change and Adaptation," *Nova Religio* 7, no. 3 (March 2004): 45–62; Ron Geaves, "From Totapuri to Maharaji: Reflections on a Lineage (*Parampara*)," *Indian Religions: Renaissance & Renewal,* ed. Anna King (London: Equinox, 2005); Ron Geaves, "Globalisation, Charisma, Innovation, and Tradition: An Exploration of the Transformations in the Organisational Vehicles for the Transmission of the Teachings of Maharaji," *Journal of Alternative Spirituality and New Age Studies* 2 (February 2006): 44–62.

6. For a detailed analysis of previous scholarly literature see Geaves, "From Divine Light Mission."

7. The analysis of the earlier movements in the context of Indian movements can be found in Geaves, "From Totapuri to Maharaji."

8. L. Dupertius, "How People Recognise Charisma: The Case of Darshan in Radhasoami and Divine Light Mission," *Sociological Analysis* 47, no. 2 (1986): 111–124; J. Gordon Melton, ed., *Encyclopedia of American Religions,* 5th ed. (Detroit, MI: Gale Research, 1996), 890; Roger Olsen, "Eckankar: From Ancient Science of Soul Travel to New Age Religion," in *America's Alternative Religions,* ed. Timothy Miller (Albany: State University of New York Press, 1995), 363–364.

9. The Dasnamis are ten orders of ascetics founded by Shankaracharya in the eighth century and that still flourish in India. The orders are Aranya, Asrama, Bharati, Giri, Parvata, Puri, Sarasvati, Sagara, Tirtha, and Vana. The early gurus of Advait Mat belonged to the Puri order.

10. I fully researched Maharaji's lineage in India during 2002–2003, and the results have been published in "From Totapuri to Maharaji: Reflections on a Lineage (*Parampara*)."

Information on Shri Maharaji's guru and his predecessors can be found in Sri Swami Sar Shabdanand Ji, *Shri Swarup Darshan* (New Delhi: Sar Shabd Mission, 1998).

11. Professor Tunden, *Satguru Shri Hans Ji Maharaj: Eternal is He, Eternal is His Knowledge* (Delhi: Divine Light Mission, 1970), 2. However, Professor Tunden was a loyal devotee of Shri Hans Ji Maharaj and secretary of Divine Light Mission in India. It is not possible to corroborate this insider discourse from elsewhere.

12. Written sources are few. Maharaji is an inspired public speaker who communicates directly to people who attend his events. The discourses are then distributed worldwide as videos or DVDs where they are shown locally to groups of invited guests or individually. There are four Web sites: www.maharaji.org, which contains only some poetry pertaining to Maharaji's message; www.tprf.org, which is the offical Web site of Maharaji's foundation, The Prem Rawat Foundation; www.contactinfo.org, which provides information for interested people; and www.thekeys.maharaj.org (accessed January 15, 2006), where a mail order distribution of DVDs exists for those explicitly interested in being taught the techniques known as Knowledge. The most succinct expression of Maharaji's views on peace can be found on www.tprf.org/Maharaji_on_peace.htm. Anyone who spends any amount of time listening to Maharaji's discourses to the public will find the formula I have mentioned.

13. There is no shortage of Maharaji's discourses in the public arena. These observations on the teachings were taken from analysis of a number of videos and DVDs of speeches given over the past 25 years.

14. In addition to cited texts from this period, there is also James Downton, *Sacred Journeys: The Conversion of Young Americans to Divine Light Mission* (New York: Columbia University Press, 1979); and Daniel Foss and Ralph Larkin, "Worshipping the Absurd: The Negation of Social Causality Among the Followers of Guru Maharaji," *Sociological Analysis* 39, no. 2 (Summer 1978).

Adidam

Scott Lowe

While there have been many saints and sages in human history, the ancient traditions of humankind foretell a final Revelation, a God-Man promised for the "late-time" who will perfectly fulfill the deepest longings of the human heart. Adidam is established on the recognition that this all-surpassing Event has occurred. Ruchira Avatar Adi Da Samraj is the Divine Being of Grace and Truth Who authenticates the ancient intuitions.[1]

INTRODUCTION

It is remarkably difficult to delineate the exact contours of Adidam, the religion centered on the person and evolving teachings of Franklin Jones (AKA Dhyananda, Bubba Free John, Da Free John, Da Hridayam, Da Love-Ananda, Da Love-Ananda Hridayam, Da Kalki, Hridaya-Samartha Sat-Guru Da, Da Avabhasa, the Ruchira Avatar, Santosha Da, and Avatar Adi Da Samraj).[2] The motives of its enigmatic founder are often obscure and clearly beyond the reach of accepted methods of scholarly inquiry. What is certain is that the teachings of Adidam throughout its history have directly reflected the spiritual and psychological state of its founder, leader, guru, and central focus: Franklin Jones.

In September 1970, after years of intellectual study, spiritual seeking, and remarkable inner experiences, Franklin Jones attained what he believed to be a permanent state of enlightenment. He was 30 years old. Starting in New York City as a self-proclaimed guru and *siddha* (perfected one) in the following winter, he began to attract a small but devoted following.

In 1972, Jones moved to Los Angeles, where he opened the Dawn Horse Bookstore. The bookstore sold Jones's personal selection of what he considered the world's best spiritual literature as well as his first self-published books; it also served as a meeting place where Jones held regular *satsang,* lecture and meditation sessions during which Jones displayed his strong verbal skills, distinctive psychological insights, and considerable erudition. Many early participants also claim that Jones demonstrated an ability to produce profound alterations in the states of consciousness of susceptible individuals through a mysterious process of energy transmission. This

putative process of energy transmission, or *shaktipat,* is to this day a primary feature of Jones's teaching work.

Jones was young, charismatic, learned, and life affirming. Unlike the strict, sober, morally conservative Asian gurus beginning to cause a stir in a deeply divided America, Jones was witty, sex positive, and contemporary in language and style. Perhaps most importantly, he was American, a homegrown guru who spoke with clarity, intelligence, and absolute certainty. He *knew,* and he was not coy about proclaiming his enlightened status.

Jones's following grew quickly to something like its current size of 1000 members a few years after the community moved from Los Angeles to northern California in 1974. Despite the vigorous publication efforts of the group—dozens of books have been compiled from Jones's edited talks, and several revisionist biographies of the guru have been put out by the Dawn Horse Press—the group has probably never had many more than a few thousand members at any one time, though it is estimated that perhaps as many as 40,000 spiritual seekers, primarily from America, Europe, and Australia, have been involved through the decades. As in most New Religious Movements (NRMs), turnover in Adidam is high, though there is also a core of highly committed devotees who have remained in the group for decades.

Like the self-bestowed titles of the founder, the name of the religion also changes every few years, having been The Dawn Horse Communion, The Free Primitive Church of Divine Communion, The Johannine Daist Communion, The Free Daist Communion, The Free Daist Avataric Communion, etc. As of late 2005, the religion is now named Adidam, a term derived from Adi Da, the palindromic title currently favored by Franklin Jones.

The new titles for the guru often correspond with changes in the teachings and practices Jones communicates to his followers. Despite Jones's early claims of complete, final, permanent enlightenment, it is clear that his revelations are still ongoing and his message continues to evolve. Every few years, it seems that Jones experiences a new breakthrough, or "crucifixion," as Saniel Bonder, one of Jones's official biographers, puts it.[3] These often take the form of apparent health crises or "near-death" experiences. After these pivotal experiences, described in dramatic detail in Adidam publications, Jones usually announces that a spiritual transformation of cosmic significance has occurred and changes his message accordingly.

It should be noted that Jones never specifically repudiates his earlier teachings; he merely adds to them, with each new addition seen as complementing, not replacing, previous material. This in part explains the difficulty critics experience in determining Jones's exact teachings on any particular issue; at one time or another he has espoused almost every Eastern theological position imaginable. As a result, Jones's teachings can be seen as extremely comprehensive—even encyclopedic—or flat out self-contradictory and incoherent, depending on the sympathies of the analyst. For his devotees, Jones is a supremely enlightened spiritual superman, the only living incarnation of God for this and all other worlds and the only savior for a suffering humanity. For his admirers, he is a brilliant intellectual who has constructed an inspired and inspiring synthesis of the best insights of the world's great spiritual

traditions. For his critics, he is a well-educated, articulate teacher who shows moments of clarity but is basically just repackaging ideas drawn from extensive reading in a wide range of often-obscure spiritual texts.

As his teachings have developed, Jones has made ever greater and more exclusive claims for his level of spiritual attainment; he is now proclaiming himself to be the greatest spiritual master and most complete expression of the divine that this universe has ever produced, the "First, Last, and Only Adept-Revealer (or Siddha) of the seventh stage of life."[4] Along the way Jones's teachings have gradually shifted from a recognizable, if exuberantly complex, variant of Advaita Vedanta–based on the recognition of the already free, happy, blissful, and enlightened state of all humans—to a dark, rule-bound, messianic, "final days" devotional path of avatar worship that promises salvation only to the very few.

Adidam experienced a brief period of notoriety in the 1980s when reporters for the *San Francisco Examiner* discovered several lawsuits that had been quietly filed by disgruntled ex-followers of Jones.[5] The allegations made against Jones in the suits—especially the plausibly documented claims that the guru engaged in prodigious drug and alcohol abuse, mental cruelty, and sexual exploitation of "brainwashed" followers—fired the public imagination for a while. The fact that some of the alleged abuse took place on Naitauba, a private Fijian island that Jones had purchased from the actor Raymond Burr a few years earlier, made the story even better. Coming only six years after the unrelated, but sometimes unfairly linked, Jonestown tragedy, involving another NRM centered in the Bay Area that had fled to a tropical paradise—with disastrous consequences—many imagined that they saw history repeating itself. However, Franklin Jones's loyal followers began a public relations counterattack. While not particularly effective, the response managed to muddy the waters. When it became clear that *this* Jones was unlikely to kill off his followers anytime soon, the public lost interest, and the group slipped back into relative obscurity.

Though Jones once predicted that the entire world would recognize him as the savior by the dawn of the twenty-first century, in fact, his books and his religion remain largely unknown outside esoteric spiritual circles, where Jones is often considered to be a brilliant theoretician of consciousness, though his inflated, exclusivist claims tend to be viewed with considerable skepticism. So despite Adidam's remarkable publication efforts, its "New Age" celebrity endorsements (by Ken Wilber, Larry Dossey, Barbara Marx Hubbard, Israel Regardie, and others), and its occasional public scandal, the group's profile is much lower than that of many less intellectually rigorous NRMs. That this lack of public recognition must be frustrating for a self-proclaimed "World-Teacher" is confirmed by internal Adidam documents leaked on the Internet.[6]

HISTORY OF THE GROUP

The history of Adidam is largely the story of its colorful founder and central figure. Franklin Jones was born on Long Island in November 1939. He spent most of

his outwardly normal childhood in the Queens County town of Franklin Center. However, as his autobiography *The Knee of Listening* makes clear, Franklin was no ordinary child.[7]

Even before his birth, young Jones was conscious of himself simply as "the Bright," a blissful flow of divine energy. In fact, Jones claims that the person of "Franklin Jones" came into existence only when, at the age of two, he was jarred into bodily awareness by the frolicking of a puppy his parents had bought for him. Especially in the later, longer editions of his autobiography, Jones's early inner life is presented as utterly exceptional. Jones remembers vivid dreams from early childhood and reports a continuous experience of enlightenment even as an infant. Lest readers misunderstand, Jones makes it clear that he is not reporting the common early experience of all humans, forgotten as they grow up and are socialized into ordinary consciousness. Jones was uniquely enlightened from birth, an avatar, the unique descent of the divine into a human body, God in our midst.

The big drama of Jones's childhood came when he "surrendered" his enlightened state and began living as an ordinary human being. Just how this worked is unclear, since as he tells it Jones seems to undergo repeated crises of surrendering his enlightened state, just as he later experiences repeated instances of regaining it. In any case, it is clear that Jones's autobiography might best be understood as a kind of autohagiography, since its purpose is to preserve for posterity a sanitized, mythologized, and highly selective account of Jones's life and spiritual adventures.[8]

A striking feature of Jones's autobiography is the intensity of the ups and downs in his life. When not experiencing ecstatic awareness, Jones was often depressed and desperate; he was rarely on an even keel. A good student—he has degrees from Columbia and Stanford—Jones found academic study ultimately meaningless. An early participant in hospital studies of LSD and other hallucinogens, Jones discovered that his psychedelic drug experiences sometimes mimicked the ecstatic states he had known in childhood and was now desperate to recapture. He spent 1963–1964 secluded in remote cabins in northern California working on his experimental writing, which he describes as a method of investigating consciousness, not a technique for producing publishable fiction. During this period of reclusive introspection, Jones was supported by his girlfriend Nina Davis, a woman he later married, establishing a pattern of financial dependence on others that marks all but a few years of his life.

In 1964, Jones began experiencing fragmentary visions of an oriental antique store.[9] He felt compelled to move to New York City, convinced that his guru would be found there, in that store. A few months later, Jones located the store and discovered his first guru: Rudi.

Albert Rudolph (Swami Rudrananda or simply Rudi, d. 1973) was an American original. Though he had been a disciple of several powerful Indian gurus as well as a student of the Gurdjieff work and Subud,[10] he followed and taught a path of his own creation, one that focused on hard work, personal responsibility, and unending spiritual effort. Rudi immediately recognized that Jones needed discipline and required him to become self-supporting before he could be accepted as a student.

Now 24 years old, Jones had never held a job, with the exception of short stints at menial labor. He was sufficiently impressed with Rudi, and especially the "Force" that Rudi transmitted, to settle down and get serious. Jones worked a real job and studied with Rudi for the next three and one-half years.

As Jones described it, Rudi's method of teaching his students was based on unending work (mental, physical, and spiritual) and surrender. Whenever students encountered Rudi outside of meditation class, they were given a task. In Jones's case, the task was often to take out the garbage. This in turn provoked resistance in the students, who were taught to surrender these negative feelings, to become "like smoke."[11] In Rudi's formal periods of instruction, he would transmit what he called "the Force" to his students by staring into their eyes as they sat in meditation.[12] For their part, the students were required to strive to remain open and receptive. Once the Force had become active in students, it would continue to work at all times, as long as they surrendered to the experience.

Jones claims to have had many deep insights and profound experiences during his years with Rudi, but he eventually came to reject his teacher's methods and metaphysical assumptions, especially those regarding work, effort, and the unending nature of the spiritual search. Reading Jones's autobiography, it is easy to feel his frustration with the spiritual search and share his desire for closure. Jones clearly wanted an end to his labors; he longed to enjoy perfect peace, perfect happiness, and perfect ecstasy. According to Rudi, this was impossible.

Nonetheless, Rudi's influence on Jones was so strong that he was able to pressure Franklin into marrying his long-term girlfriend Nina Davis. Rudi even convinced Jones to enroll in a Lutheran seminary, though Jones reported feeling like "an imposter" studying for the ministry. The Force, Rudi argued, was just another name for God. It would be good for Jones to learn to explain his beliefs and spiritual experiences in the language of mainline Protestant Christianity.[13] Both the marriage and the seminary experience ended prematurely—Jones eventually divorced Nina, taking on nine "wives," and he left the seminary at the end of his first year, after a religious breakthrough that Jones himself describes as "surrounded with apparent evidence of a 'clinical breakdown.'"[14] The experience at the seminary also seems to mark the end of Jones's attachment to Rudi and his "muscular" spirituality of effort and endless seeking. The effort that Rudi demanded seemed to Jones to be the very activity that obstructed realization; the method itself ensured that the goal would never be reached. Jones now decided to go directly to the source of the Force—India and Rudi's own teachers, Swami Muktananda and the deceased, but apparently still powerful, Swami Nityananda.

In 1968, when Jones first met Baba Muktananda (1908–1982), the swami was relatively unknown in the West. Muktananda was simply a highly regarded, but obscure, guru with a large following in India. The swami's grand tours of the United States, Australia, and Europe came later, and his alleged sexual and financial exploitation of his followers became well known only after his death.[15] Jones's total time with Muktananda during the visits he made to India over the next few years was remarkably short—just weeks—but the transformation Muktananda produced in

his young disciple was remarkable. Under Muktananda's spiritual guidance, Jones quickly experienced "conditional nirvikalpa samadhi," a state often equated with "enlightenment" in Indian religious texts. (It is the culmination of the fifth of seven stages of life in Jones's typology discussed below.) Jones further experienced the profound awakening of the *kundalini,* a mysterious force that according to esoteric yogic physiology lies latent in the spinal column. The aroused kundalini was to continue its spontaneous transformation of Jones over the next months and years.

The following year, Jones returned to Muktananda's ashram, seeking a "spiritual" name and permission to teach. Muktananda obliged him on both counts, giving him the name Dhyanananda ("bliss of meditation") and a letter conferring the authority to teach kundalini yoga "according to the rules of the lineage."[16] Jones has made much of this letter, having it translated repeatedly through the years. Especially in the earlier translations, the letter is quite unremarkable.[17] Muktananda acknowledges Jones's spiritual accomplishments and authorizes him to teach within his tradition, and that is all. Jones is not hailed as an avatar, sat-guru, or world teacher, and it is not clear if he is even given permission to set up his own organization; most likely Muktananda expected Jones to merely prepare beginners for later work with Muktananda in India. In any case, the letter does refute the claim, made by some critics, that Jones is an entirely self-authorized, independent guru. It is clear that Muktananda recognized Jones as a teacher within his lineage of Siddha Yoga.[18]

The first "final" culmination of Jones's spiritual search occurred on September 10, 1970, the apparent follow-up to a remarkable experience Jones had had on the previous day when he had engaged the goddess Mother-Shakti in ecstatic sexual intercourse in an empty temple on the grounds of the Vedanta Society in Hollywood.[19] In the afterglow of his cosmic union with the goddess, Jones permanently entered *sahaj samadhi.* As he describes it, "I simply sat there and knew what I am. I am Reality, the Self, and Nature and Support of all things and all beings. I am the One Being, known as God, Brahman, Atman, the One Mind, the Self."[20] Jones has described his intimacy with the goddess in ever more grandiose terms over the following years. In some accounts the experience is sublimely spiritual; in others it is crude. For example, in a 1974 talk, Jones bragged, "I fucked her brains loose."[21]

Jones began his formal teaching in 1972, with the opening of his first ashram "Shree Hridayam Satsang" ("The Company of the Heart") in Los Angeles.[22] At this point Jones was apparently modeling his teaching on Rudi's. He emphasized responsibility and work, striving to bring order and stability into his first followers' lives. Jones also began the ongoing practice of recording his talks and conversations with his devotees; much of this early material was later published in a dense book called *The Method of the Siddhas.*[23] In the book, one can see how Jones worked with his followers, leading them in dialogue, undermining their assumptions, and displaying his insights, his humor, and his certitude. Decades later, Jones still comes across well.

In 1973, Jones went to India for a third time, returning as Bubba Free John, a changed man with a strange new name (the first of many) and an equally strange method of teaching. The ashram was soon moved to Lake County, in northern California, where Jones and his followers had purchased a rustic, run-down hot springs

resort complex called Seigler Springs. Jones promptly rechristened the resort Persimmon, in keeping with his practice of bestowing unusual, and often apparently irrelevant, names on his properties. (There were no persimmons at Persimmon.) Jones and his entourage took over the one livable building on the property, while the majority of his followers found housing in San Francisco, several hours away by car. Jones has continued this pattern of living with a small, changing entourage on community-owned retreat properties while the followers make do elsewhere, commuting to the retreat centers for satsang, retreats, and volunteer service on the guru's many projects.

The new teaching phase Jones embarked upon has since become known as the "Garbage and the Goddess" period. In many ways it foreshadows his entire later career. Outwardly, it was a time of unrestrained, antinomian employment of alcohol, tobacco, food, and sex for ostensibly transcendent spiritual purposes, while inwardly devotees reported experiencing huge transmissions of energy from the guru that led to extraordinary states of consciousness. (At the very least, observers reported seeing Jones's devotees writhing, howling, and generally behaving in remarkable ways.)

Several arguments have been made in support of the guru's actions during this time. One is that he was simply shaking his students up, breaking down their false stereotypes of "holiness" and "spirituality."

Another, more problematic claim, made by Jones himself, is that Jones was simply reflecting his students' own desires (for sex, alcohol, tobacco, and meat) back for them to see, so that they would be forced to directly encounter, understand, and ultimately transcend their own futile, hedonistic search for material gratification. As Jones put it,

> What I do is not the way I am, but the way I teach. What I speak is not a reflection of me, but of you. People do well to be offended or even outraged by me. This is my purpose. But their reaction must turn upon themselves, for I have not shown them myself by all of this. All that I do and speak only reveals men to themselves.[24]

This is an interesting postmodern rationalization, but it does not withstand examination. First, Jones was the one who initiated the period of hedonistic excess, not his devotees, most of whom seemed to be settling down comfortably to responsible lives. We have only his word that this "teaching demonstration" was necessary. More significantly, there is a great deal of firsthand evidence, some available as sworn testimony, that Jones not only continued his heavy drinking, binge eating, promiscuous sexual activity, and drug use for decades after the so-called period of Garbage and the Goddess ended, but that he conspired with his inner circle of devotees to hide these activities from outsiders, including new members of Adidam.[25] This is not a teaching demonstration. Then there is the logical problem. If everyone claimed that their behaviors were not their own but merely reflections of the tendencies of others, then no one would ever be responsible for any of their actions.

The most common explanation for Jones's wild excesses, one still favored today in Adidam, is that Jones exemplifies "crazy wisdom" teachings.[26] Devotees make much of this argument and strive unconvincingly to find precedents for Jones's behavior in other religious traditions. Their basic claim is that truly enlightened beings have risen

far above the childish moral rules that govern the lives of ordinary mortals and cannot possibly be limited by them. From the crazy wisdom perspective taught in Adidam, anything goes, so long as it serves to lead devotees to liberation. (Of course, only the omniscient guru can foresee the long-term consequences of his actions. Actions that appear hurtful or cruel to the unenlightened observer might ultimately be of great benefit to the apparent victim.) Furthermore, it is assumed that devotees cannot be liberated as long as they are controlled by ordinary societal inhibitions. (By this flawed reasoning, sociopaths are well on their way to enlightenment.) Adidam's version of crazy wisdom is founded on several dubious presuppositions: (1) that the crazy-wise teacher really is enlightened and not just crazy; (2) that he or she has the best interests of the faithful at heart; (3) that morality is a barrier to liberation that must be surmounted; and (4) that an enlightened guru cannot be corrupted by power, drugs, and sex.

Even those who accept the legitimacy of crazy wisdom often recognize that Jones is not a good representative of that teaching style. In fact, Jones has admitted as much, saying "you cannot make an equation between Me or My kind of Work and all others who may be called 'Crazy' Masters or 'Crazy' Teachers."[27]

The intense inner experiences that Jones was apparently triggering at this time are also highly problematic. Taken at face value, devotees appear to be describing a kind of possession. This is not atypical for the siddha yoga lineage. In *The Knee of Listening,* Jones describes several instances when his body and mind were forcibly taken over by either Muktananda or Nityananda.[28] In Muktananda's autobiography, he too describes powerful experiences of having his mind and body taken over by his guru Nityananda.[29] Here is how Sal Lucania, then a member of Jones's inner circle, describes his ongoing experience of Jones (called Bubba in the passage below) in 1974,

> The most significant thing about this event is that, contrary to the usual beliefs, even of traditional spirituality, the Guru *literally* enters and transforms. It is a kind of possession. It is God-Possession. Bubba animates this body. I feel Him all the time, not as an experience, but *as* Him.[30]

The Garbage and the Goddess period ended as suddenly as it had begun when Jones abruptly reasserted the lifestyle regulations he had discarded a few months earlier. This was the beginning of a pattern that was to continue for decades; periods of strict control and purity would abruptly be replaced by periods of relaxation and "celebration," all governed by the inscrutable and unquestioned whims of the guru. Devotees were kept for years in a state of constant uncertainty by these erratic cycles of pressure and release. Meanwhile Jones did as he pleased, occasionally observing the rules he imposed on others but more often indulging in promiscuous sex and heavy abuse of alcohol, food, and psychoactive drugs.[31]

Jones's frustration with his teaching work was quick to manifest. Much as Jones had demanded an early end to his spiritual search, so he now demanded instant results from his followers. When they failed to display the complete submission he expected, he became angry and abusive. As early as 1974, Jones announced that he

had finished his teaching work and would now enter seclusion, emerging only after his devotees had matured sufficiently to respond to his message. In the following decades, Jones would repeatedly withdraw from public teaching, going into "retreat" with his predominately female entourage, only to emerge months later with a new flurry of activity. Each withdrawal was announced with solemn finality; each return was celebrated, though it eventually became apparent to outside observers, if not Jones's devotees, that no decision Jones makes is ever final.

From the beginning of his teaching career Jones made it difficult for potential critics, rivals, or even followers to meet with him in person. Alan Watts, the then-famous spiritual raconteur, prolific author, and deeply revered mentor to the counterculture, a man much older and more widely respected than Jones, was told that he would have to jump through the same hoops required of any other beginning student before he could meet with the guru.[32] Watts declined.

Jones has made his self-protective seclusion a defining mark of his teaching career. The reasons for this behavior are unclear. The most obvious explanation is that Jones fears that he might fail to measure up to the expectations he has created. What if Watts had met with Jones only to return to San Francisco denouncing Jones as delusional? Clearly that would have been disastrous for the fledgling movement.[33] It is also in Jones's best interest to appear aloof, remote, and distant to his devotees. This allows them to project their fantasies of divinity upon him and dramatically increases the value of every precious moment of contact with their beloved guru. Other charismatic twentieth century religious and even political leaders, ranging from Maharishi Mahesh Yogi and Bhagwan Rajneesh to Chairman Mao, have exploited this strategy to good effect.

Another explanation, one favored by Jones's devotees, is that as a supremely enlightened avatar of God, Jones can be approached only by those who have already proven their devotion and respect for his divinity. Jones reinforces this impression by claiming that he is too sensitive to endure the humiliations inflicted upon him by uncaring and inattentive followers.

The closest Jones ever came to inadvertently suggesting an explanation for his aloofness came in this astonishingly unguarded, probably drunken admission, "I've talked to many people. I've talked to many teachers, and none of them agrees with me. They all tell me that I'm mad, that I'm undeveloped. So that must be so."[34]

Whatever the reasons, Jones is one of the few gurus who did not participate in the spiritual free-for-all of the 1970s, when Sikh masters, Sufi pirs, swamis, yogis, roshis, rimpoches, and self-proclaimed gurus of all stripes shared stages and podiums across the United States, debating, proselytizing, and generally bringing color and life to university towns.

In his pursuit of the perfect retreat, Jones acquired a six-acre property on the Hawaiian island of Kauai that he named Tumomama ("Fierce Woman"). A few years later, in 1983, after a long and expensive search, Jones acquired Naitauba, his Fijian island kingdom, now his primary sanctuary. In the first decade of the twenty-first century, Jones was on the move again, acquiring a second residence in northern California and severely taxing the resources of his relatively small following.

The most loudly trumpeted event since Jones's initial enlightenment was his so-called "Divine Emergence," the result of an apparent near-death experience Jones had in 1986. As Jones describes it, he was in such despair over the failure of his work that he prayed for an immediate end to the charade. He then died, only to be brought back to life by the anguish and love of his devotees. The result of the experience was that Jones's enlightened consciousness now fully inhabited his body, "down to the bottoms of My feet."[35] As Jones later concluded, his body is now fully divine. "This (My) Body (or bodily human Form) *Is* the Teaching."[36] This new revelation led to an increased emphasis on the worship of Jones's body. Devotees are taught that liberation is to be found only through visualizing, thinking about, viewing, and physically serving Jones's body or its likenesses.

In 1993, Jones revealed that he is the reincarnation of Swami Vivekananda (1863–1902). (He had been making veiled references to this possibility for some time.) As he explains it, every human being is composed of gross biological elements, derived from their parents, and subtle spiritual elements that reincarnate from life to life. Jones believes that his own "subtle core" is Swami Vivekananda, the great disciple of Sri Ramakrishna (1836–1886). In a curious incident near the end of his life, Ramakrishna claimed to have transmitted his spiritual power to Vivekananda, leaving nothing for himself. Consequently, Jones believes that he is also in some sense Ramakrishna. Even more mysteriously, Jones seems to suggest that Ramakrishna was originally a reincarnation, or perhaps an emanation, of Jones himself. As the guru puts it:

> I Am the One Who Awakened (and, thereafter, Worked through) Ramakrishna. He Recapitulated the past, in order (by a Spiritual Sacrifice) to Serve the future. I AM the One Who Worked through (and has now Most Perfectly Awakened) Swami Vivekananda. He Served the future, in order (even by physical death and physical rebirth) to Transcend the past (and, Thus, and by Means of a great and Spiritual Awakening, to Bless and to Liberate the future).
>
> Now and forever, Ramakrishna and Swami Vivekananda are One, at the Heart, And I AM the One They have Realized There.[37]

There are several oddities one might recognize in this passage. The most obvious is the strange capitalization. It is a characteristic of all of Jones's later writings.[38] He claims a spiritual purpose for this practice. Ostensibly it serves to undercut the "egoic" focus of his readers, though there appears to be little coherence to the method. (For example, why capitalize "Thus"?) More practically, it serves to alienate casual readers. It does not, in this author's opinion, serve Jones well, and it certainly does not expand his readership.

A second oddity one might notice is the dualism of the language. For someone whose central realization is the oneness of Reality, Jones seems at great pains to emphasize himself in contrast to everyone else. Few writers use "I" and "Me" more frequently and enthusiastically than Jones, though he occasionally qualifies the apparent egotism by pointing out that his readers are really Him anyway, whether they know it yet or not.[39]

Other oddities include the legalism of Jones's wording and the constant restatement he employs. Parenthetical synonyms and paraphrases, following and ostensibly

clarifying nearly every statement, have been an increasingly prominent feature of Jones's writing since the 1980s. His most recent work reads like highly esoteric legal documents or perhaps the fine print at the bottom of a very strange credit card bill.

The year 2000 was momentous for Jones. He was not recognized by the entire world, contrary to expectations, and he died again. With this new death, Jones's divinity ascended from the bottoms of his feet to rest above his head, returning to where it had been before the Divine Emergence of 1986. This return was necessary, Jones claimed, because he was beset by "dark forces" that could no longer be allowed into his body. Rumor has it that Jones was suffering from anxiety attacks and was put on tranquilizers by his physicians.[40]

Jones also broke precedent when he actively recruited the following of the late "Zen Master Rama" (aka Frederick Lenz, 1950–1998) after the latter's highly sedated death by drowning. Lenz's followers were widely admired for their success in business and computing and represented quite an attractive potential "catch." From all reports, Jones pulled out all the stops, giving immediate satsang to Lenz's followers and inviting some directly into his inner circle, thereby deeply offending his own long-suffering devotees, who felt that their years of service were being slighted and overlooked. Jones also proclaimed that Lenz, safely dead, had been a reincarnation of Swami Ramatirtha, a disciple of Vivekananda. Since Jones claims to be a reincarnation of Vivekananda, that makes Lenz a disciple of Jones (once removed) and implies that Lenz's followers are reconnecting with their guru's guru when they join Adidam. Making matters much worse, Lenz's followers in Jones's inner circle then instituted a complete news blackout, cutting off the steady stream of rumors on which Adidam thrives. It was a bad year.

The most interesting news that has emerged from Adidam recently concerns Jones's attempts to establish himself as an art photographer. Jones has mounted several exhibitions of his monumental collage-like compositions. Some of the images are available online.[41]

PEOPLE

Franklin Jones is the only leader of Adidam, though he is surrounded by an inner circle of highly committed devotees who implement his directives. By all accounts, Jones is a "hands-on" manager, making final decisions on matters ranging from ashram finances to the capitalization and punctuation of the published transcripts of his talks. Though his communities are governed by a board of directors and administered as tax-exempt trusts, the sworn testimony of former highly placed followers suggests that Jones maintains absolute, if indirect control over every aspect of Adidam.[42]

Although Jones is remarkably well protected—it is virtually impossible for outsiders even to glimpse, much less meet, him—he needs an inner circle of devotees to provide for his many needs and manage his complex organization. Adidam's inner circle is composed of individuals who have managed to distinguish themselves from

the rank-and-file devotees by their exceptional obedience, enthusiasm, and willingness to believe. Once invited into this select group, they are tested again and again until Jones is sure that they can be trusted with his secrets. This process has been described in some detail by several former insiders in accounts available on the Internet.[43] Consequently, Jones is surrounded by a loyal core of supporters who do a great deal of hard work transforming the apparently rather ordinary events of Jones's life into a spiritual drama of cosmic proportions.[44] This great drama is then reported to the devotees on the fringes of the inner circle, who then magnify and elaborate the tales for those even further removed from the guru.

Although those closest to Jones are often targets of his abuse and manipulation, his followers are not simply victims. Devotees play key roles in the organization. They reinforce Jones's rules and regulations, they discipline the wavering, they collect the tithes, they run the centers—giving inspirational talks and leading services—and ultimately they give tangible form to the mystique that Jones has worked to cultivate. Ex-followers generally agree that Jones's most surrendered devotees play critical roles in maintaining the peer pressure that keeps the organization intact, that keeps new followers fascinated, and that makes satsang with the master so desired by all.

Information, usually expressed as gossip about Jones and his closest devotees, serves as a kind of currency within Adidam, giving status and authority to its purveyors. Proximity to the guru is not only thought to be spiritually beneficial, it also provides greater access to information and therefore status and power within the community. Those relatively close to the guru always want to draw closer, while those farther away often strive to prove their devotion so that they may one day join the elite. Once one has finally gotten close to the guru and is in a position to see the very human ways in which he actually behaves, there are strong incentives to suppress all one's doubts, to deny or reinterpret disturbing incidents, and to strenuously reaffirm the guru's unique divinity even (and especially) when the clear evidence of one's senses goes directly against the claim. So even if those closest to Jones were to decide their guru is not, in fact, the "First, Last, and Only Adept-Revealer (or Siddha) of the seventh stage of life," they would not be able to proclaim this insight without destroying the status and position that they have sacrificed years or even decades of their lives to attain. Having invested so much of their lives, energy, and love in Adidam, it is especially traumatic for insiders to break free of the organization.

Sociologists of religion often assert that charisma, rather than being a mysterious spiritual power emanating from leaders, is, in fact, a creation of the faith, hope, love, and spiritual aspirations of devout followers, who project idealized virtues upon the object(s) of their devotion. While members of Adidam would reject this analysis, it is clear that without his devotees Jones would find himself in very different circumstances.

In keeping with this control of his organization, Jones has also attempted to establish mechanisms to manage his spiritual legacy for centuries after his eventual death. In a novel legal move, Jones has claimed "perpetual copyright" on all his books and audiovisual materials and has begun releasing "New Standard Editions" of his most important "source texts."[45] Additionally, Jones has permanently "empowered" his

community's sacred sites, so that his spiritual blessing will be available forever to present and future devotees.

In the 1970s members of the Dawn Horse Communion were filled with expectations that they would soon be fully enlightened, enjoying their natural state of spontaneous joy and liberation. That expectation of immanent release has been replaced by a much more modest hope for eventual salvation through complete devotion to the bodily image of Jones. According to Jones's later teaching, none of his disciples will ever become fully autonomous, independent gurus; instead, at some future date, he will recognize several of his most advanced devotees as *murti,* a Sanskrit term for "image" that is commonly used to refer to empowered statues of Hindu gods. These "Living Murtis" will apparently be empty human vessels filled with Jones's *shakti,* or spiritual energy. After Jones has died, the Living Murtis will be worshipped as Jones's proxies, ensuring that the avatar's blessing will continue to be available in this world of darkness.

Scholars of religion have long observed that NRMs are especially vulnerable when their founders die.[46] This is a "make or break" moment for many groups, when ambitious followers compete to assume the status and position of the former charismatic leader. Only the strongest new religions come through this process intact. Jones is aware of this and seems intent on creating a legacy that will be preserved, without any change whatsoever, for all eternity. He has decided that he will have no real successors, only empty shells filled with his spiritual transmission. No new theology will be created, no new practices will be introduced, and the teachings will not evolve with the times.

In actual fact, Jones does not have that much control. At least one former member of Jones's inner circle has already established a competing organization, and more are likely to follow.[47] Another lesson from religious studies that Jones seems to be ignoring is that fossilized traditions have little vitality, gain few new followers, and soon die.

BELIEFS AND PRACTICES

The early beliefs of Adidam were largely derived from Advaita Vedanta and the Kundalini Yoga of Swami Muktananda. Jones has always claimed that his teachings come directly from his personal experiences, but it is obvious to outside observers that Jones has drawn extensively from his wide reading in world religions.[48]

In contrast to the theism of western traditions, Adidam presupposes an "eastern" view of divinity and accepts the concepts of karma, reincarnation, chakras, auras, and the like almost without comment. God, or the divine, is a principle and energy, a consciousness that predates the creation but is not a willful creator itself or a being to be worshipped. "Gods" are largely irrelevant to the spiritual process, though the divine *Kundalini Shakti,* a spiritual energy often symbolically represented as a "goddess," is foundational to the awakening of the disciple. The focus of devotion is Jones, the guru, an enlightened source of power and awakening who serves as a gateway to the divine. Through serving the guru and sitting in his presence (*satsang* in

Adidam's terminology), the devotee's consciousness is gradually transformed in the image of the guru's.

The purpose of human existence is enlightenment, an awakening to ultimate reality that is the natural state of all human beings. Because of the widespread ignorance and delusion of the human race, nearly all humans are oblivious to their true nature and therefore believe themselves to be limited, suffering individuals. The basic mechanism creating suffering is a fundamental contraction at the core of every individual's being, lying somewhere below the normal level of conscious awareness. This contraction cuts humans off from experiencing their true nature, condemning them to the endless seeking and self-contemplation symbolized by the myth of Narcissus. While seeking is necessary at the beginning level of spiritual life, it is ultimately seen to be the fundamental obstacle preventing true realization. Paradoxically, the natural, always existing, and therefore already present enlightened state can be intuited only when humans are no longer seeking it. The contraction and self-consciousness symbolized by Narcissus is revealed in nearly every aspect of the seeker's life, but especially expressed in the avoidance of relationships (with others, with the world, with life energy, and especially with the guru). The key to dissolving the ongoing process of contraction is "understanding," a direct liberating insight into the mechanism of contraction. Since seeking itself is the problem, this insight cannot be achieved through effort or will, but can arrive only through grace, understood as a kind of direct transmission from the guru to his open-hearted, fully surrendered disciple. Therefore proximity to the guru, the source of grace and enlightenment, becomes a primary goal for the sincere aspirant.

The main early practice enjoined by the young guru was for his followers to sit in his presence. This "satsang" would automatically lead to spiritual development. When Jones was not available, devotees were to sit in meditation before an officially authorized picture of Jones, himself in meditation, while contemplating the koan-like question "avoiding relationship?" Over time, understanding, a western analogue to the Sanskrit term *jnana,* or direct insight, was expected to develop naturally.

The upbeat tone of the early *sadhana,* or spiritual practice, of the community is revealed in this quote from 1974:

> To be free is the ultimate discipline. Sadhana is not to go through this weary self-discipline, self-limitation, self-frustration, in which you are endlessly learning all kinds of bullshit lessons. The discipline is happiness. The discipline is freedom. To live in this free state under all conditions is sadhana… Sadhana is life in the condition of Truth. So sadhana has nothing whatever to do with the cultic solemnities of traditional spirituality. Sadhana has to do with continuous happiness, continuous bliss, continuous freedom, continuous Satsang. To live Satsang under all conditions is the discipline of our work.[49]

Thirty years later, the preferred descriptive term in Adidam for the spiritual path its members follow is "Ishta-Guru-Bhakti Yoga." Ishta is the Sanskrit word denoting one's chosen deity, so basically what this phrase means is "the yoga (spiritual practice) of worshiping one's chosen deity-guru (namely Franklin Jones)." Despite strenuous attempts to argue for the uniqueness of this practice, it sounds a great deal like

standard Indian *bhakti,* or devotional worship. As of 2001, here is how Jones describes the method and goal of Ishta-Guru-Bhakti Yoga:

> Bring your bodies and minds to Me, as I bring this body-mind to you. Then you will be given the Realization of My All-Pervading Person, and you will find Me always present under the conditions of all experience and in the company of all beings. Then even when I am not bodily with you, you will worship Me and surrender to Me via every state of body and mind, and I will always be with you. At last, you will be drawn into the Eternal Identity, so intimate with Me that no essential difference is noticed by you. Then you will Abide in Me forever…[50]

Both the goal and method advocated here seem significantly different from the radical understanding Jones taught in the 1970s, though hints of this guru-centered devotional faith were present in Jones's early lectures.

As the decades have passed, Jones has gone from being a kind of spiritual elder brother, albeit a very powerful, all-knowing, and controlling one, to a remote god-like being, worshipped with increasingly formulaic rituals and strict ceremonial protocol. Many of his current formal disciples—those who have passed through the rigorous financial and psychological screening required for new members of Adidam—have had very little personal contact with the guru. Few display familiarity with the movement's past controversies and the accompanying exposés in the media.

Much of Jones's intellectual credibility comes from his map of the states of human psycho/spiritual development. Jones's typology of the seven stages of development, while not entirely original, has impressed a number of readers. For example, Ken Wilber, the noted theoretician of all things transpersonal, spent much of his early writing career reworking and expanding Jones's insights.[51]

According to Jones's system, the first three stages are devoted to the development of the physical, emotional-sexual, and mental functions of the body-mind. Most humans partially master these basic levels more or less automatically as they grow to adulthood and psychological maturity, though they rarely progress beyond or even fully develop them. Jones suggests that adolescents could master these rudimentary stages though "devotion to the bodily (human) Form of the Sat-Guru."[52]

Profound spiritual life starts only in the fourth stage with the awakening of full-hearted surrender to God. This is the stage where Jones places most of the great saints of the world's religions. (One of the ways Jones uses the seven-stage typology is to classify, and subtly denigrate, the experiences and realizations of spiritual rivals, past and present.)

The fifth stage is one of ascent, the stage reached by great yogis who rise above the body-mind into realms of bliss, culminating in *nirvikalpa samadhi,* a temporary state of enlightenment. Mastery of the fifth stage is rare, and fifth-stage saints, like Swami Muktananda, are impressive beings, according to Jones, even though they have not reached the peak of spiritual development.

The sixth stage is marked by the death of the ego. In this stage the separate sense of self is completely transcended, and life is experienced from the perspective of the transcendental "witness consciousness." According to Jones, this state is incomplete,

because it neglects the outer world; the sixth-stage saint identifies completely with consciousness to the exclusion of all external reality.

The seventh stage has been fully attained only by Jones, though certain spiritual geniuses—Ramana Maharshi is sometimes cited—have intuited premonitions of it.[53] In this ultimate state, the "individual recognizes everything as a modification of the Radiant Transcendental Being … the world is recognized as continuously arising in the Ultimate Being, which is co-essential with the absolute Self-Identity … That is the Disposition of Sahaj Samadhi or native Ecstasy."[54]

Jones describes sahaj samadhi, the end goal of the seven-stage process, as a permanent, natural background state of "open-eyed" ecstasy. Curiously, sahaja samadhi is well attested in the yogic literature. For example, it is the primary goal of the Bauls, a loosely organized brotherhood of itinerant musician/ascetics from Bengal whose practices and beliefs are drawn from both mystical Islam and tantric Hinduism, yet Jones portrays it as his own exclusive state. "I Am the First and Last seventh stage Adept to Appear in the human domain (and in the Cosmic Domain of all and All). It is neither possible nor necessary for another seventh stage Adept To Appear anywhere."[55]

Like everything else in Adidam, the lifestyle practices of the group have changed through the decades. In the early 1970s, Jones seemed most concerned with creating a stable, mature "spiritual culture." To this end, he required his followers to submit to a series of experiments in diet, fasting, and sexual regulation. At times his devotees were expected to adhere closely to a strict raw foods or vegetarian regime—practicing complete abstinence from caffeine, alcohol, tobacco, and all psychoactive drugs—while at other times these regulations were dropped to allow Jones to preside over wild, drunken parties. (Jones himself rarely practiced the dietary and lifestyle rules he prescribed.) Devotees were expected to follow a detailed fasting schedule and at certain stages of membership practice celibacy. At other stages, responsible, mature sexuality was enjoined; this loosely translated into exuberant promiscuity. Perhaps the single most important regulation for followers was that they work steady jobs and tithe a significant percentage of their pretax earnings to the community. (The current tithe is 15 percent, though additional monthly and annual fees are levied, and pleas for special contributions are frequently made.)

As the decades have passed, the rules and regulations governing the lives of practitioners of Adidam have grown increasingly elaborate and onerous. Virtually no aspect of life seems outside the guru's control; at one point he even instructed his followers in proper flossing technique. In addition to all the mundane rules, devotees observe a busy spiritual schedule of daily chanting, hatha yoga, ritual worship (puja) of the guru's images, journal writing, and meditation. Despite the group's infamous history, the lives of its current members, outside the guru's inner circle, are sober, restrained, and basically conventional. Ordinary members live routinized, rule-bound lives that are largely indistinguishable from those of the members of any high-demand religious movement.

In keeping with the routinized, exoterically demanding daily practices of Adidam, it has become incredibly difficult to enjoy the guru's satsang. The current

probationary process takes at least 9–12 months to complete and requires a significant academic, temporal, financial, and devotional investment. The following ten steps are the minimal requirements that must be met before new students are eligible to receive the avatar's spiritual transmission:

1. Take the introductory "First Word" course.
2. Take the Pre-student course, "The Only Truth That Sets The Heart Free" ($350.00 cost).
3. Sign and return copy of "Sacred Agreement."
4. Sign and return notarized copy of "Membership Agreement."
5. Sign and return notarized copy of "Legal Release form."
6. Sign and return copy of "Health & Life Circumstance Questionnaire."
7. Sign and return copy of "Form to calculate tithe."
8. Receive a physical examination, including blood work.
9. Take the MMPI Psychological evaluation test.
10. Take the student beginner vow.

After this exacting preparation, it is easy to imagine that student expectations would be high by the time they experience their first satsang with the man they believe to be the world savior. Most of the reports available suggest that new devotees generally have very positive first experiences sitting before the man they believe to be God. Even those who have subsequently gone on to reject Jones and his teachings often claim to have been deeply impressed by his show of apparent power in their first meetings. It is only later, sometimes much later, that they report realizing that there is a vast discrepancy between what Jones teaches and what he actually does in the privacy of his retreat centers. Curiously, many apostates, including some of Jones's fiercest critics, believe that Jones displays real power. Determining precisely what the source and nature of that power might be is a recurring, unresolved endeavor that drives much of the ongoing debate about Adidam on the Internet. While it is tempting to speculate that the "power" Jones displays is simply the product of the expectations, hopes, and projections of his eager and emotionally primed devotees—skillfully choreographed by a psychologically astute, manipulative guru—many disillusioned former followers reject this common-sense explanation.

CONTROVERSIES AND ISSUES

As already indicated, Adidam is a highly problematic group, with most of the controversy centered on Jones's "crazy-wise" teachings, spiritual pretensions, growing eccentricity, and unethical behaviors.

The lawsuits of the mid-1980s were settled out of court, reportedly with cash payments to the plaintiffs who then signed confidentiality agreements. The full story may never be known, though the sworn affidavits of the plaintiffs are available online at the Daism Research Index. The charges are horrifying and, if true, provide a

cautionary picture of what can happen when a brilliant manipulator who truly believes that he is god acquires unquestioning followers who are willing to obey his every command.

Another cautionary lesson emerges from the effusive endorsements given to Jones by Watts, Wilber, and other popular writers on eastern and New Age spiritual topics who were so taken by Jones's transcribed talks and written essays that they concluded that he must be an "enlightened being." (Wilber has since amended his assessment of Jones.) The problem seems to lie in equating brilliant language and intellectual insight with spiritual realization. Additionally, Watts and Wilber appear to have been misled by the related assumption that one cannot talk or write convincingly about deep spiritual realization without actually having experienced it. Wilber also seems to believe that anyone experiencing him/herself as god must also be a decent human being. These assumptions are obviously false. That said, a number of students of religion find Jones to be fascinating, precisely because of the contradictions he embodies.

When it comes to eccentricity, Jones has few rivals. Recognizing no intellectual or spiritual equals, accepting no criticism, and living in isolation, surrounded by a protective circle of sycophants, Jones has allowed his whims free reign. Judging from how he chooses to present himself to the world in his writing and Web sites, Jones has lost all sense of effective public relations.[56] In an especially misguided move, Jones has been rewriting his earlier books, reissuing them in New Standard Editions. The prose of the New Standard Editions is dreadful; once entertaining books have become nearly unreadable and—even worse—boring. This project seems likely to destroy any positive literary legacy Jones might hope to leave.

The Internet poses both opportunities and challenges for NRMs. Adidam is not faring as well as its detractors in this new medium. Ex-members and critics of Adidam have been very successful in placing their critiques and exposés, along with a great deal of supporting documentary evidence, on the Internet.[57] In comparison, Adidam sites do not appear to be effective recruiting tools. The photographs on official Adidam sites show Jones looking old, dissipated, and miserable, yet the sites gush about his supremely attractive divine form and unearthly physical beauty. The quotations Jones provides are similarly jarring, "The only-by-Me Revealed and Given Way of Adidam is a Free Gift. But It is a Gift that Flows in the heart-relationship that exists between Me and each of My true devotees."[58] Casual readers must be baffled.

Observers have long remarked on Adidam's complete disinterest in charitable activities. While Jones constantly demands more money and gifts for his pleasure, he has made no efforts to engage in social service of any sort, unless one counts his four private zoos. While many new religions place more resources into institution building than charitable outreach, especially in their first years, Adidam is extreme in this regard.

Perhaps the biggest current problem in Adidam lies in Jones's attitudes towards his followers. Jones seems to have decided that his devotees are hopelessly inept. Much as the members of Adidam project every positive spiritual ideal on Jones, he seems to project every possible failing or weakness on them. They have failed to bring him

world recognition and famous new devotees; they have even failed to become rich and successful. Therefore Jones feels financial constraints. The world teacher has been reduced to conducting high-pressure fund drives amongst the faithful just to meet his expenses. In consequence, Jones has been lashing out with increasing ferocity. Not surprisingly, as Jones gets more critical and demanding, his surrendered devotees, convinced that Jones is always right, become more insecure, more self-doubting, more tentative, in fact, more inept. As the devotees become paralyzed by devastatingly low self-esteem, Jones becomes ever more convinced that they have failed him and his divine mission. Jones and his devotees appear trapped in a destructive, self-perpetuating cycle.

FUTURE

The future of Adidam is in question. Jones appears to be in mental and physical decline. His cutting sense of humor has become dulled; he rants where once he entertained. In talk after talk, he berates his followers, blaming them for the failure of his world-saving mission, oblivious to his own pivotal role in his religion's stagnation. Jones's frustration, anger, and megalomania are transparent:

> So far, the organization has zero signs. Devotees are frightened. You are afraid to stand up for the Truth, so you are giving people no alternative. I'm not here to be a joke. I'm here to actually get people out of their stupidity … You are so ambiguous as a gathering and a culture—it's incomprehensible …
>
> In your weak-minded approach, I end up being ignored. You must have concrete gifts to give Me … You have to vigorously counter the growing sentiment against gurus, which is fueled by the anti-cult movement …
>
> How can there possibly be zero growth, with all the Gifts I have Given? There is no way, with all the Gifts I have Given, that you couldn't succeed, unless you are hiding behind some kind of false belief, some lack of doing … Because you are all so weak-minded, after 30 years of resisting your responsibility, you are satisfied with maintaining a social and phony scene that defeats everything real. Serious practice is not engaged.[59]

Jones's followers appear exhausted and many have become impoverished due to the religion's insatiable financial demands; for a supposed "renunciate," the guru is extremely high maintenance. Their self-confidence cannot be strong after enduring years of abuse and belittlement from a man they believe to be omniscient. Many of the organization's members entered Adidam directly from the spiritual counterculture that has flourished over the last three decades, so they have never had the opportunity to develop remunerative careers. Few have made preparations for retirement. And according to Jones, none of them are enlightened.

Jones believes that after his death his books, his "empowered" retreats, and his Living Murtis will continue the process of world transformation he has initiated. Ironically, in the 1970s Jones ridiculed groups that revered deceased founders and prophets. "Dead gurus can't kick ass," was his refrain. Yet even while living, Jones has been unable to attract more than 1,000 committed individuals to his religion at any one time. Once he is gone it is hard to imagine that the rigid, dogmatic,

institutionalized structure he has created to represent him in perpetuity will do much better.

Unreadable books and strange Web sites do not attract new followers. (Even good Web sites do not appear to be effective recruiting tools for most religious movements.) Exhausted, burned-out, unhappy, insecure devotees are not effective proselytizers either. By encouraging devotees to live together, Jones has ensured that they have few friends and little influence outside Adidam. Their ability to attract new followers is limited.

The Internet has become a powerful forum for critics of Adidam. Jones clearly still exerts a fascination for many with only brief experience of him. Huge amounts of energy have been expended trying to determine the source of his appeal and apparent power. According to a number of critics, Jones is a textbook narcissist, displaying all the defining characteristics of Narcissistic Personality Disorder as described in the DSM-IV, a standard psychiatric diagnostic manual, yet simple narcissism may not fully explain Jones's vast literary output, theological creativity, and constant reinvention. Adidam may survive longer as a case study of a new religion gone wrong than as a living faith.

CONCLUSION

The religion of Adidam is doctrinally complex, confused, and confusing. Though it claims great originality, it appears to have been artfully assembled from bits and pieces of preexisting traditions. As such it is an accurate reflection of the thought of Franklin Jones, its founder, ultimate authority, guru, and god.

Like many NRMs, Adidam appears strange when viewed from outside; however, again like many contemporary faiths, once its basic assumptions are accepted, it displays a measure of internal consistency. Simply described, Adidam is an exclusivist devotional religion based on the worship of Franklin Jones. In theory, practice, and theology it now differs little from traditional Indian guru bhakti, in its most sectarian forms. If one accepts that Jones is divine—the avatar for this age, the "First, Last and Only seventh-stage Adept Realizer," omniscient and infallible—and that all of Jones's actions serve to benefit his followers by leading them to eventual awakening, then the rest of the religion follows, more or less rationally. Of course, this stripped down version of Adidam is neither interesting nor attractive. Perhaps that is why the religion is rarely presented this way. If the religion now offers little that is profound, what about its founder?

Jones's life has been distinguished by the search for permanence, perfection, and control: perfect, permanent enlightenment, perfect sex partners, perfect devotees, perfect isolation, the perfect tropical retreat. Now he is trying to establish the perfect teachings and the perfect legacy, to last for all time. By some standards, Jones has been successful: He owns a 3,500-acre tropical island and three other beautiful retreat centers. He lives like a king and is worshipped as a god. He has reputedly slept with hundreds of women. He has claimed perpetual copyright on his massive corpus of books and has placed his art in galleries. He has even had his four-hour long

dramatic piece "The Mummery" produced on several occasions (to reviews that would devastate a mere mortal). However, Jones seems miserable, frustrated, and humorless, a far cry from the wild, ecstatic, laughing visionary who started the religion more than three decades ago.

Perhaps Jones himself has already provided the key to understanding the complex, contradictory, and ultimately mind-numbing religion he has created. Since he always demands the final word, he will get it here, "I've talked to many people. I've talked to many teachers, and none of them agrees with me. They all tell me that I'm mad, that I'm undeveloped. So that must be so."[60]

NOTES

1. http://www.adidam.org/adi_da/promised_god-man/index.html.

2. The one constant in Jones's names over the past two decades is Da, which occurs in nearly every one of his recent titles. Jones asserts that Da is an ancient word meaning "the Giver." Based on the Sanskrit consonant and accompanying vowel with which the title is often written, it should be pronounced closer to "Duh" than the English Da, though this is probably not Jones's intent.

3. Saniel Bonder, *The Divine Emergence of the World-Teacher: The Realization, the Revelation, and the Revealing Ordeal of Heart-Master Da Love-Ananda, a Biographical Celebration* (Clear Lake, CA: Dawn Horse Press, 1990), 167.

4. See http://www.kheper.net/topics/gurus/Problems_with_Adi_Da.html. Jones does assert that others can reach the seventh stage of realization, the highest goal of the spiritual path, but only by a process in which they take on his qualities through a kind of self-emptying that sounds almost like possession.

5. For an example of the lurid media coverage see "'Sex Slave' Sues Guru," *San Francisco Chronicle,* April 4, 1985, A16. The text of the article is archived at http://lightmind.com/thevoid/daism/sfchron-04.html.

6. Nearly all inside information regarding Adidam is withheld from the public; the group has been especially sensitive about public exposure since the scandals of the mid-1980s and releases only highly sanitized (and mythologized) versions of its own history. However, from time to time internal documents are leaked to individuals who post the material on the Internet. Though most of the leaked material is plausible, and some of it is almost certainly legitimate, by its very nature it cannot be definitively confirmed. The various "Daism Reports" (example: http://www.lightmind.com/thevoid/daismreport-06.html) use alleged internal documents to paint an especially dark picture of the mental state of a frustrated, peevish World-Teacher suffering the long-term consequences of decades of binge eating, heavy drinking, smoking, and drug abuse. If true, it appears that Jones has developed arteriosclerosis and relies on prescription antidepressants to cope with daily annoyances.

7. Franklin Jones, *The Knee of Listening* (Los Angeles: Dawn Horse Press, 1973).

8. Just how selective the retelling is can be seen in Jones's treatment of his experiences as a Scientologist. In the original manuscript of *Knee,* Jones's nearly year-long, full-time involvement with Scientology (he passed through "Clear" and several subsequent "O.T. levels") was given an entire chapter. In the first published edition of *Knee,* a 271-page text, this was cut to a few hundred words. In subsequent editions, Jones deleted all mention of Scientology, despite the fact that so much new material was added to the book that it eventually tripled

in length; the newest version is 840 pages long. For the original chapter, see http://beezone.com/WaterNarcisuss/scientology.html. The beezone.com site contains a remarkable number of texts by and about Jones and is well worth exploring.

9. Jones places a great deal of emphasis on his dreams and visions, which seems curious since he denies the ultimate validity of all yogic states and denigrates the visionary experiences of others.

10. Georges I. Gurdjieff (1866–1949) was an enigmatic, controversial, and deliberately mysterious spiritual teacher who flourished in Europe in the first half of the twentieth century; his intellectual influence on subsequent western esotericism has been enormous, if poorly documented. Subud, founded by Bapak Subuh, an Indonesian mystic, is an intentionally low profile, diffusely organized spiritual movement that has almost no intellectual content; instead, its simple practice is focused on the transmission of spiritual energy.

11. Adi Da, *The Knee of Listening: The Early Life Ordeal and the Radical Spiritual Realization of the Divine World Teacher,* New Standard Edition (Middletown, CA: Dawn Horse Press), 152.

12. Rudi's use of "the Force" as the term for this spiritual energy long predates George Lucas's *Star Wars* movie franchise.

13. Jones, *Knee,* 170–173.

14. Ibid., 196. Jones claims that this experience, diagnosed by a psychiatrist as an anxiety attack, was the "death of Narcissus," a breakthrough into "unqualified Consciousness Itself."

15. See William Rodarmor, "The Secret Life of Swami Muktananda," *CoEvolution Quarterly* no. 40 (Winter 1983): 104_111. The complete text of the article is archived at http://www.leavingsiddhayoga.net/secret.htm.

16. Translations of this letter are provided in many Dawn Horse Press publications. For an example, see Da Free John, *The Dawn Horse Testament of Heart-Master Da Free John* (San Rafael, CA: Dawn Horse Press, 1985), 28.

17. With each translation, the letter becomes more effusive in its praise of Jones's spiritual accomplishments and more convoluted in its syntax. The recent version provided in the New Standard Edition of *Knee* reads exactly as if Jones had written it himself. See Jones, *Knee,* 252–255.

18. It is less clear why anyone would want Muktananda's imprimatur, given what is now known about the fallen swami. Whatever his initiatory power, a great deal of evidence suggests that Muktananda was deeply corrupted by his desires for money, control, and sex. To get a feel for Muktananda's methods of operation, see www.leavingsiddhayoga.net.

19. Da Free John, *Testament,* 34–35. It is hard to know how literally Jones wishes this claim to be taken. One might be safe in assuming that Jones is describing a vivid dream or some sort of visionary experience. After all, it was in Hollywood, one of the homes of virtual reality.

20. Jones, *Knee,* 1st ed., 134–135. This passage has been significantly modified in later editions of *Knee,* with the addition of quotation marks, new capitalization, and extensive parenthetical material. For an example, see the 1995 New Standard Edition (popular format) of *Knee,* 357.

21. Bubba Free John, *Garbage and the Goddess: The Last Miracles and Final Spiritual Instructions of Bubba Free John,* ed. Sandy Bonder and Terry Patten (Lower Lake, CA: Dawn Horse Press, 1974), 107.

22. Da Free John, *Testament,* 44. The name of the ashram was soon changed to the Dawn Horse Communion.

27. Bonder, *Emergence,* 302.
28. Example, see Jones, *Knee,* 1st ed., 92–93.
29. Swami Muktananda, *Play of Consciousness* (South Fallsburg, NY: Syda Foundation, 1987), 52–54.
30. Bubba Free John, *Garbage,* 151.
31. As already noted, Jones has done a good job of covering his tracks; however, an increasing number of former followers have dared to break the silence. Firsthand descriptions of Jones's sexual predations and prodigious drug consumption are now posted on the Internet. The accounts are persuasive. For a start, read the material archived on the Daism Research Index site, http://lightmind.com/library/daismfiles/.
32. And this after Watts had recognized Jones as an avatar, providing a quote to that effect that the Dawn Horse Press still uses on occasion. The effrontery of the demand must have struck Watts, a proper Englishman, as galling.
33. Given that Watts was nobody's fool, it might well have happened.
34. Bubba Free John, *Garbage,* 106–107. The candor of Jones's remarks in *Garbage and the Goddess* were presumably a motivating factor in Adidam's late 1970s attempt to recall and burn every existing copy of the book.
35. Bonder, *Emergence,* 265.
36. Ibid., 38. Punctuation, capitalization, underlining, and italics are all in the original.
37. Jones, *Knee,* New Standard Edition, 1995, 557.
38. In the text (but not the title) of Da Free John, *The Dawn Horse Testament,* the initial letter of nearly every word is capitalized. Later writings show the more erratic capitalization that now marks Jones's prose.
39. One need not be a Jungian to detect evidence of "inflation" in Jones's pronouncements.
40. http://www.lightmind.com/library/daismfiles.
41. http://www.daplastique.com/.
42. For an example, see the declaration of Patricia Masters (1985) given in the Superior Court of the State of California in Marin County, http://lightmind.com/library/daismfiles/masters.html.
43. For one account, see http://lightmind.com/thevoid/daism/lifeonnaitauba.html.
44. Jones's several "death" experiences provide a clear illustration of this process and demonstrate that even a simple anxiety attack can be turned into a spiritual resurrection of cosmic import if retold repeatedly with sufficient devotion, credulity, and imagination.
45. Perhaps the most bizarre aspect of this new publication effort—even stranger than releasing "new standard" versions of books that Jones had written and published with his own press only a few years earlier—comes from the claim that a new edition of his autobiography was required because the first edition had been truncated to half its original length "after consultation with the publisher." All of Jones works are self-published by the Dawn Horse Press, a press over which he has complete control.

46. On the course of movements after founders die, see Timothy Miller, ed., *When Prophets Die: The Postcharismatic Fate of New Religious Movements* (Albany: State University of New York Press, 1991).

47. Saniel Bonder, author of *Emergence,* has created his own path to liberation and appears to be successful, having authorized a number of coteachers and potential successors. See www.wakingdown.org.

48. For years, Jones has promised to release a final version of his *Basket of Tolerance,* an annotated bibliography of what he considers the world's greatest spiritual texts. The earliest versions of this bibliography were massive, demonstrating that Jones is extraordinarily well read in the literature of the world's religions, especially Hinduism, Buddhism, and Christianity.

49. Bubba Free John, *Garbage,* 9.

50. Jones, *Knee,* 522–523.

51. Critics of Wilber have often wondered why he allows the Dawn Horse Press to continue using the hyperbolic jacket blurbs he wrote for Jones in the 1980s. These samples of Wilber's prose are representative: "Adi Da's teaching is, I believe, unsurpassed by that of any other spiritual Hero, of any period, of any place, of any time, of any persuasion," and "… he is the first Western Avatar to appear in the history of the world … His teaching contains the most concentrated wealth of transcendent wisdom found anywhere, I believe, in the spiritual literature of the world, modern or ancient, Eastern or Western."

52. Bonder, *Emergence,* 466.

53. Before the 1990s, Jones recognized a number of historical and semilegendary spiritual luminaries as "seventh stage Realizers." More recently, he has retracted this acknowledgement, asserting that he alone has reached this final stage.

Buddhism in America

Jeff Wilson

INTRODUCTION

Buddhism presents an unusual case in the religious history of the United States. One of the oldest religions on earth, to many Americans it seems like something new and unusual. Buddhist terms such as nirvana and karma are now part of everyday language, yet the actual number of practicing Buddhists in the country remains quite small. And then there is the problem of exactly what Buddhism is in the first place: many Americans balk at accepting that a religion can lack the concept of God and focus on something other than heaven as the final goal in life. Yet alternative concepts such as "philosophy" or "a way of life" seem inadequate to denote Buddhism's mind-bogglingly expansive pantheon of supernatural beings, its belief in reincarnation and magic, and the heavy emphasis on ritual and ceremony in traditional Buddhism. No wonder that Buddhism's transmission to the West has been marked by both resistance and fascination.

This essay first explores the history of Buddhism in Asia and then its arrival and development in the United States. For information about specific Buddhist groups, such as Zen or Tibetan Buddhism, and their approaches to Buddhist practice and theology, skip down to the section "Buddhist Groups in America."

HISTORY IN ASIA

From the start, Buddhism displayed a missionary impulse, which led to many cross-cultural encounters. Buddhism began with a man, Siddhartha Gautama, born into a noble family in what is now Nepal. His exact dates are uncertain, but recent scholarship puts his birth at approximately 485 BCE and his death in 405 BCE. Gautama became dissatisfied with the pleasures of palace life and went to the forest to find a path beyond human suffering. At the age of 35, after six years of searching, he achieved a spiritual breakthrough that finally brought him the peace he was looking for. He began to teach his methods and insights to others and was called the "Buddha," meaning "the one who has awoken."

Central to his teaching was a cosmology that saw the world as composed of several different realms that living beings are repeatedly born into, ranging from realms of suffering and punishment, through the realms of animals and humans, to the heavenly lands. In Buddhist understanding, an impersonal natural force known as karma controls where a being will be reborn at the end of its life: good actions lead to relatively pleasant rebirths, bad actions lead to undesirable new births. All beings—humans, animals, gods, or ghosts—eventually die and are reborn, and even the most fortunate life contains some degree of suffering. Therefore, the goal of Buddhism is to escape from the endless cycle of birth and death. Escape is effected through a process of mental perfection so that one sees the true nature of reality and ceases to create conditions for the ripening of additional karma. This leads to permanent dwelling in the state of nirvana beyond the sorrows of mortal life. Both the exact process of achieving this awakening—akin to the understanding of the original Buddha—and particular interpretations of what exactly nirvana constitutes differ among the various schools of Buddhism.[1]

One common element that originated with the earliest Buddhists and continues in all groups today is the act of taking refuge in the Three Jewels: the Buddha, the dharma, and the sangha. The Buddha is the teacher of the doctrine and guide to nirvana; usually this means the historical Buddha, Gautama, although in some cases it can refer to other figures, mythical or historical, also considered to be Buddhas. The dharma is the teaching itself, the body of doctrine and practice that leads to awakening. And the sangha is the community of practitioners, frequently taken to specifically mean the orders of monks and nuns established by the Buddha. To take refuge in these three guides is to place one's trust in them, assured that they lead beyond suffering, and is traditionally seen as the event that marks one as a Buddhist.

Over the next several centuries after the Buddha's death, Buddhism spread throughout the Indian subcontinent, and under the Buddhist king Asoka (c. 272–231 BCE) extended into southeast Asia. It reached China sometime during the first century BCE, Korea by the fourth century CE, Japan in the sixth century CE, and Tibet in the seventh century CE. Naturally, the doctrines, beliefs, and practices of Buddhism changed considerably over such a long period, both within India and in other parts of Asia. In many cases, Buddhism was far more than just a religion: as it spread it carried medical and scientific knowledge, alphabets and literature, music and cuisine, social theories and moral proscriptions, always altering each new society it encountered. In general, Buddhism's dissemination was peaceful, growing from the activities of pious merchants along the Silk Road and monks and nuns sent abroad to bring the Buddha's teachings to the world. It stimulated changes in the preexisting religions it encountered, sometimes being copied or partially assimilated with other religions, sometimes prompting backlash and anti-Buddhist revivalism.

Buddhism had spread over much of non-Muslim Asia by the United States' birth in 1776, but had also died out in India, replaced with Hinduism and Islam. Three broad types of Buddhism appeared in the meantime, each encompassing many individual sects. The first of these was general early Buddhism, of which the only survivor in the modern world is the Theravada school, based in south and southeast Asia. A

second type is Mahayana, a highly diverse group of Buddhist sects including Zen and Pure Land. Mahayana Buddhism is the dominant tradition in such nations as China, Vietnam, and Japan. The third main type is Vajrayana or tantric Buddhism, popular in Tibet and the Himalayas but also influential in East Asia as well. Specific forms of Buddhism are discussed in greater detail below.

EARLY HISTORY IN AMERICA

Most likely, the first Buddhists to visit areas that were or would become part of the United States were seafaring merchants in the late eighteenth century. For instance, a group of Chinese sailors arrived in the Kingdom of Hawaii in 1789 as part of the trans-Pacific trade.[2] Meanwhile American entrepreneurs seeking wealth in Asia encountered foreign religions in the course of their work. Information on non-Western religious traditions slowly filtered into the United States via trade ties and European scholarship. The pace of American exposure to Buddhism increased somewhat with the beginnings of the American Protestant foreign missionary enterprise—in 1813 Adoniram and Ann Judson became the first American missionaries to a Buddhist country, arriving in Burma after being expelled from India. In 1817 Americans made their first real contribution to the study of Buddhism with the fourth edition of Hannah Adams's *A Dictionary of All Religions and Religious Denominations: Jewish, Heathen, Mahometan, Christian, Ancient and Modern.* Adams was one of the first Westerners to approach the subject of world religions with a relatively unbiased view. The 1817 edition of her dictionary included many references to Buddhism in different parts of Asia, listed variously as "Grand Lama Paganism," "Foe," "Bubsdo," "Siutto," "Boodu," and "Buddow," and it attempted to explain such key concepts as karma and reincarnation.[3] The concept of "Buddhism" as a single tradition running in some manner through these many groups, however, was absent from her study.

The first real milestone year for Buddhism in the United States was 1844. Two significant events happened in that year that together indicated growing American interest in Buddhism. The more dramatic of the two was the first English-language publication of a Buddhist scripture. The excerpt, entitled "The Preaching of the Buddha," appeared in the liberal religious journal *The Dial.* Its translator was Elizabeth Palmer Peabody, and the editor of the magazine was Henry David Thoreau. Peabody translated a section from the *Lotus Sutra,* the most popular Buddhist text in East Asia.[4]

The other major event in 1844 was the convening of the American Oriental Society. At the first meeting, Edward Elbridge Salisbury delivered a well-received lecture entitled "Memoir on the History of Buddhism."[5] This scholarly address helped to enhance the sophistication of American knowledge about Buddhism—nonetheless, there was still quite a way to go. And while small numbers of the religious intelligentsia began to take an interest in Buddhism, actual Buddhists were conspicuously missing from the scene. But all of that was about to change.

The California Gold Rush began in 1848 after a handful of nuggets was found in the American River near San Francisco. Soon people from across the United States

and around the world journeyed to California in search of gold. Among the first overseas workers to reach the West Coast were the Chinese. Within a few years tens of thousands of Chinese arrived to seek their fortune by working in the mines, building railroads, doing laundry, and opening small restaurants. Nearly all of these newcomers practiced an eclectic blend of religions that included elements of Buddhism, Daoism, and Confucianism. Popular Chinese Buddhism was frequently nonsectarian; most of these early pioneers would best be broadly categorized as Pure Land Buddhists (for information on Pure Land and other types of Buddhism, see the "Buddhist Groups in America" section below).[6]

By 1853 the Sze Yap Company established the first temple in the United States. Located in San Francisco's Chinatown, it provided a mixture of Pure Land Buddhism and other Chinese religious elements. The following year rivals of the Sze Yap Company founded their own temple in San Francisco. But 1854 also saw some of the first stirrings of anti-Chinese sentiment. The Chinese were resented for doing work that might otherwise go to Americans and were seen as invaders from a foreign ethnic stock practicing an alien religion. In a homicide case involving the death of a Chinese immigrant, the California Supreme Court ruled that Chinese people in America could not serve as witnesses in criminal cases and essentially had no rights before the law. Both racial and religious reasons were cited for this decision.[7] The Court somewhat reversed itself in 1859, when it was declared that Chinese immigrants did have the right to practice Buddhism in the United States. However, popular sentiment hardly followed this lead. As the Chinese moved up and down the West Coast, carrying Buddhism with them, they encountered ever more discrimination. In 1877 there were large-scale attacks on Chinese laundries in San Francisco, and in 1880 Congress passed the *Chinese Exclusion Act,* banning most Chinese immigration. This did not cool anti-Chinese feelings: in 1885 twenty-five Chinese were lynched in Rock Creek, Wyoming. Yet, even in the face of such persecution many Chinese thrived in the United States. A reflection of this can be seen in the fact that the 1890 U.S. Census reported that there were now 47 temples in the United States.[8] It was another 75 years before significant Chinese immigration was once more allowed, but Buddhism was here to stay.

While the Chinese were struggling to find a niche in an often xenophobic America, the number of American citizens interested in Buddhism was quietly mushrooming. The year 1854, the same year that saw the establishment of the American temple, also saw the publication of a translation of the life of the Buddha by the *Journal of the American Oriental Society.* And though Buddhism still seemed remote to most Americans, particularly the East Coast elite whose studies and publications fueled most of the American discussion about Buddhism, it was steadily becoming entangled in the country's future. The year 1854 was also the year that Commodore Perry forced Japan to open its ports to trade with the West, an event that soon brought Japanese to the Americas and American traders and missionaries to Japan. The United States was growing into an imperial power and at the same time was continuing its role as the promised land of immigrants the world over. Such factors made the growth of Buddhism inevitable.

American attitudes toward Buddhism during this period were a complicated mix of scholarly interest, exotic attraction, half-informed speculation, and anxiety over the implications of a seemingly passive, nihilistic, atheistic religion commanding the devotion of a large part of humanity. For many Christians, Buddhism was dismissed out of hand as paganism, at best misguided and at worst demonic, destined to be supplanted by Christianity. At the same time, there was a vigorous discussion among many liberal public intellectuals over the nature of Buddhism. In particular, the Transcendentalists stood out as early American investigators and even experimenters with non-Christian religions. Theirs was a loose group of religious and literary elites who felt stifled by the rigidity of both the mainstream church establishment and Enlightenment rationality. Caught up in the wave of nineteenth century Romanticism flowing from Europe, they sought new experiences, innovative forms of expression, and uncharted avenues of spiritual exploration. They were led by such luminaries as Ralph Waldo Emerson and Henry David Thoreau. Buddhism, among other unfamiliar faiths, was a common interest, spurred in part by newly available information about religions in Asia.[9]

There are some common features to be seen in the writings on Buddhism by these Americans of the second half of the nineteenth century, whether they were Transcendentalists or more mainstream religionists. Most authors, such as James Freeman Clarke and Thomas Wentworth Higginson, approached their subject with assumptions that were quintessentially Protestant in nature.[10] The most obvious was that the Buddhism of the Buddha is the true Buddhism, the only authentic expression of the Buddhist impulse. Later developments in Buddhism were seen as degradations. American Protestants of the nineteenth century were concerned with the idea of returning to primitive Christianity; thus, they likewise idealized what they imagined as primitive Buddhism. And they sought this primitive Buddhism almost exclusively via texts—the older the better—which conveniently could be appropriated and employed by Western scholars and critics. Since the Bible was the center of Protestant religion, they assumed that texts were the logical repository of true knowledge about religion. The result, however, was that living Buddhists were rarely consulted in the quest to define and dissect Buddhism. Buddhism was first constructed from Western readings of ancient manuscripts and then interrogated using Protestant categories and concerns. To the extent that Roman Catholics were involved in the American discourse on Buddhism, they proved even less sympathetic, mainly confining their writings to polemics that debunked the alleged similarities between Buddhism and Roman Catholicism and the apparent influences of Buddhism on Christianity.[11]

Another feature of these essays is their near universal respect for Buddha the man. Even the most vehement opponent conceded a certain grudging admiration for the reconstructed historical Buddha. But regardless of the level of appreciation shown, it mainly emanated from a single source: esteem for the Buddha's morality. The cosmology and complex of practices that supported and flowed from this morality were largely dismissed, but Buddha himself was spoken of almost as a little brother to Christ: pure, chaste, kind. Meanwhile, Buddhism as a religion really came into focus

for these Americans only when it was assimilated to previously understood phenomena. Of course, the prevailing question was whether or not Buddhism was or was not like Christianity. For many commentators, Buddhist practice was compared to Roman Catholic rituals, usually to Buddhism's detriment. But when looking at philosophy or morality, Buddhism suddenly appeared to them as a species of Protestantism, and their regard increased. It is in this context that the following statement by Thoreau in *A Week on the Concord and Merrimack Rivers* should be understood: "I know that some will have hard thoughts of me, when they hear their Christ named beside my Buddha, yet I am sure that I am willing they should love their Christ more than my Buddha, for the love is the main thing."[12] Thoreau knew virtually nothing of the subtleties of Buddhist thought or practice. But in the idealized person of the Buddha he could find a kindred spirit and moral exemplar worthy of comparison to Jesus.[13]

During the later nineteenth century, a second wave of Buddhist immigrants arrived in the United States and future American territories. Starting in 1868, many Japanese immigrated to the Kingdom of Hawaii to work on plantations. Unlike the Chinese, the Japanese brought Buddhist traditions that were often highly sectarian. For the most part, these early immigrants were members of the Jodo Shinshu denomination of Pure Land Buddhism. However, it was not until 1889 that the first informal Buddhist missionary activities began in Hawaii, as Jodo Shinshu priest Soryu Kagahi arrived to assess the conditions in this new land. Before leaving he established the first Jodo Shinshu temple in Hawaii in the town of Hilo.[14]

As the century drew toward a close, American interest in Buddhism transformed: rather than merely talking about Buddhism, some Americans actually identified themselves with the tradition in some way. The first American to publicly call himself a Buddhist was Dyer Daniel Lum in 1875.[15] In 1879 Sir Edwin Arnold published *The Light of Asia,* a biography of the Buddha that sold hundreds of thousands of copies in the United States, greatly increasing interest in the religion. The following year during a Theravadin ceremony in Ceylon (now Sri Lanka), Colonel Henry Olcott and Helena Blavatsky become the first Americans to formally pledge their allegiance to Buddhism. Olcott and Blavatsky were the founders of the Theosophical Society, an eclectic religious movement that grew out of American Spiritualism and incorporated Hindu and Buddhist themes into its beliefs. Even after their vows, their understanding of Buddhism was heavily influenced by Theosophical ideas.[16] But the same cannot be said of Ernest Fenollosa and William Sturgis Bigelow, who in 1885 took the Tendai precepts and began practicing Shingon meditation in Japan, becoming the first American Vajrayana Buddhists.

It was 1893 that proved to be a watershed year in the history of Buddhism in the United States. This was the year that the World's Parliament of Religions was held in Chicago in conjunction with the World's Columbian Exposition. The Parliament brought together representatives of many religions, ideally in dialogue, though more often to pontificate. Here the two strands of Japanese Buddhist missionary work and American interest in Buddhism met. Popular speeches were delivered by representatives from the Jodo Shinshu, Nichiren Shu, Rinzai Zen, Shingon, and Tendai sects.

Also, Anagarika Dharmapala, a Ceylonese protégé of Colonel Olcott representing Theravada Buddhism at the Parliament, wowed audiences. One attendee brought a relic of the Buddha with him, the first to reach American soil. And afterwards, Charles T. Strauss became the first recorded American to take refuge in the Three Jewels in the United States.[17] At the same time, exhibits at the Exposition demonstrated the high quality of Japanese Buddhist architecture, arts, and crafts.

Paul Carus was a German immigrant interested in promoting what he called "The Religion of Science," and he identified Buddhism as one of the closest approximations to this vision of a rational, investigative approach to universal spirituality. As editor of *Open Court* and *The Monist,* he disseminated information about many types of religion. In 1894 he published *The Gospel of Buddha, According to Old Records,* a popular book that, like *The Light of Asia,* helped to introduce Buddhism and the biography of the Buddha to a general reading audience. In 1897, Suzuki Daisetz (usually known as D.T. Suzuki) moved to LaSalle, Illinois, to assist with Carus's publishing work. Over the next 11 years this partnership proved fruitful, as Carus learned more about Buddhism from Suzuki and Suzuki in turn learned more about how to market Buddhism to a Western audience.[18]

The end of the nineteenth century seemed to herald a bright future for Buddhism in the United States. When the United States annexed Hawaii in 1898, 25,000 Japanese Buddhists already lived there. Furthermore, the Japanese began to immigrate to the continental United States, and the Jodo Shinshu establishment in Japan sent missionaries along with them. The result was the creation of the Buddhist Mission of North America in 1899.[19] And yet, Buddhism had only barely penetrated the diverse but often contentious American religious landscape. A handful of converts and a vibrant but marginalized collection of Chinese and Japanese communities did not add up to a mass movement. In fact, it would be another two generations before Buddhism began to make major inroads into the American consciousness and could boast significant numbers of followers.

AMERICAN BUDDHISM IN THE TWENTIETH CENTURY

Essentially, the first five decades of the twentieth century were dominated by Japanese forms of Buddhism in the United States. Japanese Buddhist sects founded many of their first American temples during this time, including Nichiren Shu (1902, Hawaii), Shingon (1912, Los Angeles), Soto Zen (1913, Honolulu), and Jodo Shu (1936, Los Angeles). Rinzai Zen did not found formal temples at first, but a number of Rinzai teachers offered dharma training to lay people, including Soen Shaku in 1905 and Sokatsu Shaku in 1907, both in California. Soen's student Nyogen Senzaki began teaching in San Francisco in 1922, and by 1927 established the first permanent Zen meditation group in the United States.

The primary form of American Buddhism, the Japanese-derived Jodo Shinshu Pure Land school (often called Shin Buddhism), continued its rapid expansion during this period. Already by 1900 English-language study groups and periodicals were appearing. In 1924 the Shin-based Buddhist Mission of North America ordained

Ernest and Dorothy Hunt as the first Euro-American Buddhist priests. Nevertheless, Jodo Shinshu remained a heavily Japanese American form of Buddhism.

Unfortunately, Japanese and other Asian immigration stopped with the *Immigration Act of 1924.* With the flow of Japanese immigrants cut off, Pure Land Buddhism's growth slowed, and few other sects experienced further development. Furthermore, Japanese imperialism in the Pacific and then the American entrance into World War II directly impacted the Japanese American population. The day after the Japanese attack on Pearl Harbor on December 7, 1941, federal agents detained Buddhist priests and other prominent leaders of the Japanese American community. By 1942, more than 120,000 Japanese Americans and non-naturalized immigrants were forced from their homes and into concentration camps in the western United States due to suspicion of their loyalties. Temples were ransacked during the process, and many families lost their homes and land.[20]

In the camps, makeshift Buddhist centers formed and the younger generation advocated adaptations that would make Buddhism seem more "American." Among the results was the reorganization of the Buddhist Mission of North America into the Buddhist Churches of America, the widespread use of English in services and publications, and the adoption of Christianized terms such as "minister" and "bishop." After the war, when the internees were released, the trauma of this persecution by their own government left deep scars on the Japanese American community. While there were important exceptions, the camp experience drove many to turn inward, confining their missionary projects and turning Shin temples into safe ethnic enclaves resistant to non-Japanese Americans. Many also left Buddhism, becoming Christian or secular in an attempt to avoid any perception of being un-American.[21]

While these 50 years of American Buddhism largely belong to the Japanese Americans, a few notable milestones were achieved by others as well. In 1919 adventurer W.Y. Evans-Wentz became the first American to study Tibetan-style Buddhism, in the Sikkim region of central Asia. Eight years later he produced one of the most famous American Buddhist texts, a translation and commentary of the *Bardo Thodal* entitled *The Tibetan Book of the Dead.* A second classic of American Buddhism was published by former Protestant missionary Dwight Goddard in 1932. Goddard's *A Buddhist Bible* was a large collection of sutras and other traditional materials in translation. The first easily accessible volume of such texts available to the English-speaking world, it proved highly influential on the next generation of American Buddhists.

The Beats arose beginning in the 1950s. Led by poets and writers such as Jack Kerouac, Gary Snyder, and Allen Ginsberg, the Beats were the mid-twentieth century equivalent of the mid-nineteenth century Transcendentalists: romantic liberal religionists and avant garde literary pioneers plundering Asian and other traditions in an effort to find meaningful art and spirituality. Unlike the Transcendentalists, the Beats had considerable access to sophisticated information on Buddhism. Kerouac, Snyder, and Ginsberg became Buddhists, and their literary works contributed to renewed American interest in Buddhism. Probably the most famous of the explicitly Buddhist-related works produced by the Beats was Kerouac's 1958 novel

The Dharma Bums, a semifictional account of hitchhiking literary Buddhist wanderers roaming the highways and alleys of Eisenhower's America. Never a very large movement, the Beats nonetheless were tremendously influential on the direction that American literature and alternative religion would take in coming years.[22]

In part, the Beat interest in Buddhism was possible only because of the efforts of Asian and Asian American Buddhists to spread the dharma during the 1950s. In 1949 D.T. Suzuki returned to the United States to teach Buddhism, especially Zen, at the University of Hawaii and Columbia University in New York City. Suzuki's lessons caught the imagination of the developing counterculture and led to profiles in major magazines and television appearances. Although his interpretation of Zen was highly idiosyncratic, he was a talented teacher in the Western classroom, and his novel presentation of Zen as an unfettered, ineffable, experiential core of religion permanently stamped American attitudes toward Zen.[23]

Another important source of Buddhist activity was the Berkeley Buddhist Temple, under the administration of Rev. Kanmo Imamura. This Shin temple provided a first encounter with Buddhism for many students and Beats through its classes and publication, *Berkley Bussei.* Kerouac and Snyder, among others, both wrote for the *Bussei,* and the temple introduced not only Pure Land but also Zen, Tibetan, and other forms of Buddhism to newcomers. It was not only Euro-Americans who benefited, since these activities helped keep a vital spirit alive in the Buddhist Churches of America. The temple nurtured many young people who went on to become the cutting edge priests in the next decades, such as Taitetsu Unno, a major American scholar of Japanese Buddhism.[24]

The 1960s was the breakout decade for American Buddhism. In 1960 Ikeda Daisaku, the leader of the Japanese Buddhist New Religious Movement (NRM) known as Soka Gakkai, visited the United States for the first time. An American Soka Gakkai organization was quickly established, and Soka Gakkai Buddhism spread, first through Japanese immigrants and military wives, and then into the general populace. In 1963 Soka Gakkai held its first English-language meetings. A number of new Zen missionaries were offering Zen practice, beginning in 1949 with Robert and Anne Aitken in Honolulu, Shunryu Suzuki's San Francisco Zen Center (founded in 1962), Eido Shimano at the Zen Studies Society in New York City (founded in 1956 by D.T. Suzuki and led by Shimano beginning in 1965), Philip Kapleau at the Rochester Zen Center (founded in 1966), and Taizan Maezumi at the Zen Center of Los Angeles (founded in 1968). Significantly, these Zen teachers included not only Asian immigrants but also Euro-Americans. Both types of Zen missionaries tended to focus their efforts specifically on non-Asian Americans. This contrasted with a new generation of Chinese teachers and promoters, such as Hsuan Hua and Chia Theng Shan, who directed their energies toward Chinese American and non-Asians alike, and included not only Zen-type Chan Buddhism but Pure Land, tantric, and scholastic Buddhism as well. In 1969 five of Hsuan Hua's students became the first fully ordained American-born monastics.

The most important event of the 1960s for American Buddhism, arguably of the twentieth century as a whole, was the passing of the *Immigration Act of 1965.* This

legislation lifted restrictive racist immigration laws, allowing a new tide of Asian immigrants to wash into the United States. The Chinese came again, as did the Japanese (though in much smaller numbers), and were joined now by Sri Lankans, Koreans, and Vietnamese. These newcomers brought new forms of Buddhism, either to be transplanted in the United States or to be used as religious commodities to offer to a new mission field. In the wake of this revitalization of American Buddhism, the first Theravada temple in North America was founded in 1965 in Washington, D.C.

The first trickle of Tibetans into the United States also began after 1965. A Mongolian Vajrayana temple in a Tibetan lineage, the Lamaist Buddhist Monastery of America, had already been founded quietly in New Jersey in 1955. But Mongolian influence on American Buddhism was nothing like what Tibetan influence would become. In 1965 Robert Thurman became the first Westerner ordained as a Tibetan monk, taking the lower ordination in a ceremony presided over by the Dalai Lama in India. In 1969, Tarthang Tulku founded the Tibetan Nyingma Meditation Center in Berkeley, the first temple in the Nyingma tradition, the oldest of Tibetan Buddhism's sects. Also in that year Shambhala Publications, the first large Buddhist press in the United States, was established.

A perception of Buddhism as ancient, wise, peaceful, and esoteric pervaded the 1960s and 1970s counterculture, with concepts like karma and reincarnation reigning side by side with free love and widespread drug use in the growing network of new convert Buddhist centers.[25] Some missionaries did little to discourage these combinations. One example of this was Chogyam Trungpa, a Tibetan guru who founded the Tail of the Tiger practice center in Vermont in 1970. Enormously charismatic, keenly insightful, traditionally trained, sexually promiscuous, and hopelessly alcoholic, Trungpa embodied a form of "crazy wisdom" highly compelling to the Baby Boomer seekers investigating Buddhism and other Asian religions.[26]

Not all Buddhist teachers, Tibetan or otherwise, were as flamboyant as Trungpa, of course. The 1970s saw a steady increase of highly trained Tibetan monks who attracted small bands of followers, such as Kalu Rinpoche and Dudjom Rinpoche. Another form of Buddhism, the lay-oriented Vipassana meditation movement, also reached the United States during this time. It was led by American laity trained in Theravadin countries, such as Joseph Goldstein, Jack Kornfield, and Sharon Salzberg who cofounded the Insight Meditation Society in Massachusetts in 1975. While a relatively late arrival, Vipassana's popularity grew steadily as the twentieth century drew to a close. Other types of Buddhism, such as the Japanese Tendai and Nipponzan Myohoji traditions, also arrived during the 1970s. And the flow of immigrants continued, bringing the first Thai (1971), Korean (1973), and Cambodian (1979) temples.

The counterculture began to wane in the 1980s, as the Baby Boomers aged and the culture shifted in a more conservative direction. Nonetheless, Buddhism continued to expand in the United States during the presidential administrations of Ronald Reagan and later George H.W. Bush, largely along the same established trajectories. Zen, tantric, and Vipassana Buddhisms continued to thrive, and Asian immigrants increasingly cultivated ethnic forms of Buddhism. Perhaps the most significant new

player in American Buddhism was the Community of Mindful Living, established by Vietnamese monk Thich Nhat Hanh in Berkeley in 1983. Hanh's emphasis on simplicity and everyday application of Buddhist teachings was very practical, and a network of mainly lay-led meditation groups emerged across the country. Based in France but a prolific author and world traveler, Hanh was one of the few major teachers who could successfully minister to Vietnamese exiles, Europeans, Euro-Americans, and African Americans alike.[27]

In some ways, the 1980s was the golden era of women's Buddhism in the United States. In 1987 the Theravada nuns' order was resurrected at the Dharma Vijaya Buddhist Vihara in Los Angeles. The same year Jetsunma Ahkon Lhamo was recognized as the first Western female tulku in a Tibetan tradition. Less positive in its genesis but ultimately of equal significance was the development of greater democracy and awareness of the need for inclusion of women teachers in convert Buddhist centers, sparked in part by a series of sex scandals involving prominent male Buddhist teachers.[28]

Buddhism once more became trendy in the 1990s, with major movies (including *Little Buddha* and *Kundun*) and bestselling books (such as Lama Surya Das's *Awakening the Buddha Within*). Many American celebrities followed the example of Hollywood leading men Richard Gere and Steven Seagal in becoming Tibetan Buddhists. The first major English-language Buddhist magazine, *Tricycle: The Buddhist Review,* appeared in 1991, oriented toward elite Buddhist converts involved in Tibetan, Zen, and Vipassana Buddhism. The same year, Soka Gakkai, which now boasted tens of thousands of members in America, found itself summarily excommunicated by its parent Nichiren Shoshu organization. This only temporarily slowed their efforts. Soka Gakkai quickly regrouped and seemed to thrive without the guidance of the traditional priesthood. The network of temples and centers founded by Chogyam Trungpa likewise rebounded after a period of scandal and decline, reorganizing as Shambhala International, which continues to be a major force in American Buddhism.

As the millennium turned, Buddhism seemed to have made itself comfortable in the United States at last. American-trained teachers now led most of the major convert temples founded in the previous three decades, and branch meditation groups affiliated with major lineages were operating in every part of the country. Asian American temples were also flourishing, and an impressive secondary literature on Buddhism's many American manifestations had appeared.

BUDDHIST GROUPS IN AMERICA

From humble beginnings, the American Buddhist community has come a long way: virtually every form of Buddhism has some representation in the United States, and Los Angeles alone is a contender for the most diverse Buddhist city in history. There are too many different sects of Buddhism to treat here, but it is important to touch on some of the broader categories that have significant numbers in the United States.

Theravada ("Teaching of the Elders") Buddhism is primarily represented in the United States by Thai, Sri Lankan, Burmese, Cambodian, and Laotian immigrants and their descendents; there are also smaller numbers of Bengali American and Vietnamese American Theravadin Buddhists. This is the oldest surviving form of Buddhism, though like all religious traditions it has undergone significant changes over the centuries. Theravada is distinguished by its reliance on the Pali Canon, a collection of authoritative scriptures written in the ancient Pali language, in which the earliest Buddhist texts were preserved. This conservative form of Buddhism has a strong focus on the original Buddha—Gautama—and on his immediate disciples, though various other saints, deities, and spirits also receive veneration in popular practice. Monks (the nuns' order died out in 456 CE[29]) are held to a strict interpretation of the monastic rules, necessitating in most cases their reliance on the laity for food, clothing, transportation, and other needs. Donations to the monastic sangha reap karmic rewards, such as birth in one of the heavenly realms or perhaps as a monk, offering the possibility of strenuous meditation and moral practice to achieve nirvana. Major Theravada temples include the New York Buddhist Vihara, Wat Thai in Los Angeles, and the Bhavana Society in West Virginia.

The twentieth century saw the rise of a subtradition within Theravada, known as the Vipassana movement. Named after a popular form of meditation, this reformist movement has placed meditation practice at the center of Buddhist life, often stripping away the more ceremonial and communal aspects of Theravada. Vipassana attracted many Euro-American converts since its introduction in the mid-1970s. Also known as Insight Meditation, the Vipassana community created an influential network of practice centers nationwide, and is particularly noted for the many doctors and mental health workers involved in the practice, some of whom combine meditation and more traditional therapies in their work with patients. The most notable Vipassana centers in the United States are the Insight Meditation Society (based in Barre, Massachusetts) and Spirit Rock Mediation Center in northern California.[30]

While Theravada is a relatively unified tradition, Mahayana ("Great Vehicle") Buddhism is a riot of different sects stressing various scriptures and venerating a greatly expanded pantheon of cosmic Buddhas and bodhisattvas (Buddhas-in-training). They share a relatively liberal interpretation of the monastic rules and a common origin in canons based on Sanskrit, another ancient Indian language. Most Asian American communities practicing Mahayana forms of Buddhism hail originally from Japan, South Korea, Vietnam, China, or the Chinese diaspora in places such as Taiwan and Malaysia.

Perhaps the prototypical form of Mahayana Buddhism in the modern world is Pure Land Buddhism, which focuses on the salvific powers of figures such as Amitabha Buddha, Avolokiteshvara bodhisattva, and Kshitigharbha bodhisattva. These figures are believed to assist suffering beings through intervention during difficult circumstances and to provide teachings accommodated to one's situation. Many also preside over their own nirvanic realms outside the ordinary mortal world. Devotion to Pure Land figures through such common practices as chanting the name

of Amitabha Buddha can result in rebirth in these perfected lands, where it is easy to become a Buddha oneself.

Pure Land ideas and motifs are widely diffused throughout Buddhism, found in some manner within virtually all Buddhist sects other than Theravada. In its more organized forms, such as the Japanese Jodo Shinshu sect, it has been present in the United States since the latter part of the nineteenth century. While arguably the most widespread form of Buddhism in Asia, this is the only major Buddhist tradition that has failed to attract significant numbers of American converts. The most important Pure Land organization in the United States is the Buddhist Churches of America, the largest representative of Jodo Shinshu in the United States. A second significant group is the Amitabha Buddhist Society, whose American headquarters are in Sunnyvale, California. This organization attracts mainly Chinese Americans.[31]

Another type of Mahayana Buddhism is Chan, more familiar to Americans by its Japanese name, Zen. Central to this tradition is emphasis on specific lineages of awakened patriarchs who embody a penetrating insight into reality passed down from the original Buddha. While frequently portrayed as a meditation-oriented tradition, actual Chan meditation in Asia is rare, confined mainly to specialized monks or priests. Rather, Chan activities for the average layperson tend to include heavy amounts of Pure Land–type Buddha, bodhisattva, and ancestor veneration. This makes it hard to categorize the average Chinese temple as simply Chan, Pure Land, tantric, or any other specific tradition. A good example of this mixture is Fo Guang Shan, a large Taiwan-based international organization whose American headquarters are located at the Hsi Lai Temple outside Los Angeles.

Chinese Chan and its Korean (Son) and Vietnamese (Thien) versions are primarily practiced by Asian Americans in the United States. However, Zen presents an interesting exception to this trend. Never enjoying particularly large representation within the immigrant Japanese population, Zen was spread instead by the missionary efforts of Westernized Asian Zen teachers who portrayed Zen as a timeless, intuitive spiritual tradition focused on silent meditation and relatively unadorned with ritualistic trappings. This modern reformist Zen appealed to many Euro-Americans beginning in the 1950s, resulting in the first significant groups of American Buddhist converts by the 1960s. Major centers include the San Francisco Zen Center, representing the Soto Zen sect, and Dai Bosatsu Zendo Kongo-ji in upstate New York, a member of the Rinzai Zen sect. A few convert-oriented versions of Son and Thien, often simply labeled "Zen," have also enjoyed considerable popularity since the 1970s. The most prominent ones are the Korean-derived Kwan Um School, represented by the Providence Zen Center in Rhode Island, and the Community of Mindful Living, a remarkable network of small-scale meditation groups centered on the teachings of Vietnamese monk Thich Nhat Hanh.[32]

A third form of Mahayana is Nichiren Buddhism. This is a highly fractious form of Buddhism containing many sects, which all trace their teachings back to the thirteenth-century Buddhist monk Nichiren, who advocated complete reliance on the *Lotus Sutra* and chanting the title of the sutra as the ultimate practice. While constituting only a tiny portion of worldwide Buddhists, Nichiren Buddhist groups are

often highly missionary in orientation and have successfully brought their understanding of the dharma to other countries in recent decades. In the United States the most significant of these is Soka Gakkai, founded in twentieth-century Japan by Makiguchi Tsunesaburo. Characterized by sometimes aggressive proselytization efforts and a belief that chanting can have material as well as spiritual rewards, Soka Gakkai is somewhat unusual in its declaration that Nichiren was the True Buddha for our age. Beginning in the early 1960s, this sect grew to be one of the single largest Buddhist groups operating in the United States by a successful recruitment of Euro-Americans, African Americans, and Latinos. Other Nichiren groups are also present but less popular, such as the mainstream Nichiren Shu and liberal Rissho Koseikai.[33]

The third and final broad type of Buddhism is Vajrayana (Diamond Vehicle) or tantric Buddhism. This outgrowth of the Mahayana tradition includes an even larger pantheon of deities and awakened beings, often manifesting both peaceful and wrathful forms. Vajrayana Buddhism includes an additional cycle of authoritative scriptures known as tantras, couched in esoteric and highly symbolic language requiring special initiations to understand. The master-disciple relationship is particularly central to tantric Buddhism, which claims to be able to help one become a Buddha within a single lifetime. Vajrayana Buddhist immigrants come mainly from Tibet, Mongolia, and Nepal, none of which have very large populations in the United States. An even smaller number of Japanese Americans and Chinese Americans practice in specifically tantric lineages, though tantric influences are common in many Mahayana Buddhist traditions. There are four main schools of Tibetan Buddhism—Gelug, Kagyu, Nyingma, and Sakya—and two Japanese tantric sects, Shingon and Tendai. All of these groups have temples in the United States. One notable Chinese American network of tantric temples is the True Buddha School USA.

So-called "Tibetan Buddhism" in America is, in fact, dominated by Euro-American converts, who easily outnumber the small numbers of Asian American practitioners. Fueled in part by positive Hollywood portrayals and the international charisma of the Dalai Lama, but also by dynamic and highly trained teachers in the United States, Tibetan Buddhism blossomed, beginning in the 1980s, and may soon overtake Zen as the most visible form of convert Buddhism. This type of Vajrayana includes a belief in tulkus, wise teachers who deliberately reincarnate in lifetime after lifetime in order to continue teaching unawakened beings. The Dalai Lama, currently in his fourteenth incarnation, is the most famous example of this. He belongs to the Gelug sect, represented in the United States by such centers as Namgyal Monastery in Ithaca, New York, and Jewel Heart in Ann Arbor, Michigan. Probably the most important Tibetan Buddhist organization in North America is Shambhala, based in the Canadian province of Nova Scotia and with dozens of centers in the United States. Founded by the flamboyant Tibetan missionary Chogyam Trungpa, this eclectic lineage includes elements of the Kagyu and Nyingma sects.[34]

One question that often confounds researchers is the deceptively simple issue of "who is a Buddhist?" Because Buddhism is largely noncreedal in nature and most

Asian temples do not have formal members in the way that American churches do, there can be significant difficulty in determining what constitutes legitimate Buddhist identity. Is someone who reads several books on Buddhism a year and likes its philosophy a Buddhist? What about someone who meditates and occasionally attends dharma teachings, but does not believe in reincarnation or karma? And what of the many people who regularly attend Buddhist centers, perform Buddhist practices at home, and whose world views are clearly shaped by Buddhism, yet refuse to explicitly label themselves as Buddhist? Obviously, such behaviors make it difficult to quantify the number of Buddhists in the United States, a task made even harder by the persistent tendency of surveys (which undercount immigrants and non-English speakers) to overlook segments of the American Buddhist community.[35]

A possible solution lies in the attempt to measure Buddhist *influence,* rather than simply numbers. Scholars estimate that the number of Buddhists in the United States ranges anywhere from 1.4 to 4 million adults, but a recent study demonstrated that one in seven Americans had contact with Buddhism and one in eight believes Buddhism made a measurable impact on their religious life. That is 12.5 percent, a percentage far above the actual representation of fully identified Buddhists in the population.[36] Thus Buddhism's contribution to American religious culture seems to lie less in its ability to obtain converts or nurture immigrant communities, and more in the way that Buddhist ideas, practices, and motifs have successfully permeated the culture at large.

SOME ISSUES

All religious groups must contend with numerous issues, both internal and external, and for religions outside the mainstream the challenges are often greater still. Buddhism has faced the normal difficulties with funding, organization, and maintenance of zeal, as well as particular problems involved in the Americanization of this relatively late-arriving, non-Western tradition.

Perhaps the most obvious issue involving the Buddhist communities in the United States is the racial homogeneity of so many temples and meditation groups. While not a universal phenomenon, most Buddhist groups are overwhelmingly composed of a single ethnic group, whether Euro-Americans, Chinese Americans, Thai Americans, or some other ethnicity. In many cases, dialogue and cooperation among groups occur along racial lines. For instance, a Euro-American Vipassana group is more likely to share members and even hold joint activities with a Euro-American Zen group than with a nearby Cambodian American Theravadin temple, even though the Vipassana and Theravadin temples share a common lineage alien to the Zen group. While instances of cross-racial cooperation and appreciation do occur, more common are misconceptions and even prejudices about the ways the other racial group is believed to practice Buddhism.

Meanwhile, African Americans often feel particularly marginalized in American Buddhism, lost in a sea of nonblack faces wherever they go. The only significant exception to these segregating trends is Soka Gakkai, which is probably one of the

most racially integrated religious organizations in the country.[37] While the average Soka Gakkai group is still fairly homogeneous due to the organization's neighborhood-based model, the frequent district or chapter meetings display high levels of diversity.

A second issue is gender, specifically, the roles that women play within American Buddhism. Most Asian Buddhist traditions have maintained conservative attitudes toward women's leadership and in some cases actively maintained that women's spiritual capacities were lower than those of men. In the United States, women Buddhists pushed for greater responsibility and recognition, in some cases fueled by sexual inappropriateness on the part of male teachers. Euro-American groups in particular often made efforts to develop more female-affirmative Buddhist ideals, and a growing number of female teachers and abbesses have appeared in the past 20 years or so.[38] Less recognized are the strides made by Asian American women as well, whose labor and donations are often the backbone of their communities, and who also frequently play important organizational and spiritual roles at their temples.

The emergence of stronger positions for women within American Buddhism is partially the result of another issue: the lack of monks. Traditionally, the monastic orders played a key role in the maintenance of teaching, guidance, and morality in Buddhist cultures. Furthermore, the monks (and, in those fewer countries that have them, nuns) acted as fields of merit, engines for generating good karma that could be tapped by the laity through the traditional lay roles of providers and disciples. But celibacy and renunciation are not as common among American Buddhists as they were in historic Buddhist regions. Asian American youth and young adults are more likely to choose a high-paying career over the life of a religious beggar, and Euro-Americans seem disinclined to consider full-blown monasticism as an option. For Asian American communities, this necessitates the importation of foreign monks and nuns, often with weak English-language skills and cultural and religious assumptions out of step with those of their parishioners. Meanwhile, many Euro-American groups elevated lay people into the roles traditionally played by dedicated monastics.

A secondary issue related to this development is the unusual way in which Euro-American groups tend to conceive of proper Buddhist activities. Meditation is central to most Euro-American Buddhists, for leaders and lay people alike. This is a startling contrast to historical Asian Buddhism, where meditation was always a relatively uncommon practice engaged in by a small number of elites, usually monks. This strange positioning of converts, neither monk nor layperson, is reshaping Buddhism. Many find this combination liberating; it remains to be seen, however, whether laity embedded in families and jobs can carry on strenuous monastic-type practices over decades and pass on strong traditions to new generations.

The American Buddhist community has also struggled with a number of major scandals, often connected to the indeterminate position of teachers in Euro-American convert communities. For example, Richard Baker resigned his position as abbot of San Francisco Zen Center in 1983 due to criticism of his liaisons with female students and seemingly excessive accumulation of material wealth. The

problem, rooted in conflicts over power, sex, and money, arose in part from confusion over exactly where he was expected to act like a monk and where like a layperson.[39] The Asian American Buddhist community also had its fair share of scandals, perhaps most famously the campaign finance debacle at Hsi Lai Temple in Hacienda Heights, California, that brought criticism to Vice President Al Gore in 1996. Once again, this incident turned on the issue of the appropriateness of alleged renunciants involving themselves in the secular world.

Buddhist temples have faced discrimination from non-Buddhists. The Chinese and Japanese first encountered prejudice in the nineteenth century, and, while religious tolerance has grown considerably since those first problems, Asian American Buddhists continue to face difficulties in many places. Race complicates the often futile attempt to classify vandalism of temples and harassment of monks as specifically ethnic or religious bigotry, but clearly Buddhism's non-Christian status is one significant contributing factor to Buddhists' marginalization. Besides outright confrontations, Buddhists often find themselves unable to build temples due to restrictive zoning laws, in some cases enforced specifically to keep Buddhists out.

But not all interactions with non-Buddhists are negative. In fact, many of the people attending Buddhist centers identify themselves as Christians or Jews. In some cases, this is part of a dual religious identity, while for others Buddhism is approached as a technique or a philosophy, not a religion per se, and thus offers no particular threat to more traditional American religions. There are even prominent Buddhist teachers who are also ordained Christian clergy, such as Robert Kennedy, a Zen master and Jesuit priest, and James Ford, a Unitarian Universalist minister who leads the Henry Thoreau Zen Sangha in Massachusetts.

WHITHER AMERICAN BUDDHISM?

Where is Buddhism going in the twenty-first century? First, as important as the American context is for Buddhism in the United States, developments in Asia will have the biggest impact on American Buddhism. Buddhist immigration has always been tied to political and economic conditions in Asia. Unforeseeable events will continually reshape the American Buddhist landscape as new wars and other factors push various Asian groups to seek a better life in the United States. Even established Buddhist groups are likely to remain at least somewhat porous to new ideas and practices developed first in Asia.

A second development counter to the first is the expansion of American Buddhist missionary programs to other countries. Despite its relatively young status among the nations of the world, the United States has long been a launching pad for foreign missionary endeavors. As Americanized forms of Buddhism continue to evolve, the unparalleled status the United States enjoys as a rich, technologically sophisticated, and militarily powerful country will likely facilitate the spread of Buddhism to other places, such as Latin America. Even though the United States will remain an importer of Buddhism, it will also become a significant exporter of Buddhism.

This raises the issue of exactly what "American Buddhism," versus "Japanese Buddhism" or "Tibetan Buddhism," might be. Many Buddhist groups themselves have wrestled with this question, some attracted to the idea of a uniquely American expression of Buddhism, others fearful that American materialism and ignorance will dilute the dharma. American society is so large, so diverse, and already host to so many forms of Buddhism that American Buddhism will probably experience ever-increasing pluralism, rather than coalescing into a united or definitive form.

A final issue confronting Buddhism's future in the United States is the difficulty of transmitting the tradition to younger generations in a meaningful way. The Japanese American-based Buddhist Churches of America has declined to 17,000 members, down from a high of approximately 50,000 in 1960.[40] This decrease resulted primarily from outmarriage and conversion to Christianity among the newer generations and from the low rate of Japanese immigration to replace aging members. Other primarily Asian American Buddhist groups face similar problems as many of their young people leave Buddhism behind in their ongoing assimilation to mainstream American culture. On the other hand, Euro-American groups are aging as well due to the tendency to emphasize meditation—an activity that typically excludes unruly youngsters—and the lack of effective children's programs at convert temples. While Buddhism will surely continue in some fashion, the specific organizations that currently dominate the scene may fail to survive these processes of attrition.

Tibetan Buddhism in the United States

Daniel Cozort

Few Americans were more than dimly aware of Tibet until the early 1950s, when cinema newsreels showed its high plateaus being forcibly occupied by the Communist Chinese People's Liberation Army. Fewer still knew anything about its form of Buddhism until Tibetans in the thousands began streaming out of the country in the violent aftermath of the abortive uprising against the Chinese in 1959. But within the flow of exhausted and destitute Tibetan refugees were many of the greatest figures of Tibetan Buddhism; like the others, they escaped only to toil in the appalling heat and dust of India and Nepal, building farm colonies in scattered rural areas. For a time, these brilliant scholars, yogis, and teachers struggled in obscurity to rebuild religious life in their new homes. But within a few years, some Westerners, including some Americans, found their way to the crude new Tibetan monasteries, and some Tibetan teachers were accepting invitations to visit or live in the United States.

The social turmoil of the 1960s and 1970s provided fertile ground for Americans to experiment with what is unarguably one of the most exotic religions in the world. In contrast to the relatively austere style of the Zen masters and Theravada monks who preceded the Tibetans as Buddhist ambassadors to the United States, Tibetan monks came dressed in brilliant red and yellow robes, filled meditation halls with colorful silks and hanging scroll paintings (*thankas*) of fantastical beings and settings, punctuated ceremonies with enormous drums, long horns, cymbals, and unearthly chanting, and sometimes danced in costumes depicting demons and bulls. They taught the fundamentals of Buddhism, but they also brought the flower of their own tradition: the advanced teachings of Tantra, involving a special type of meditation involving creative visualization, clothed in secrecy and mystery.

For several decades, Buddhism has been the fastest growing religion in the United States. A recent study by Robert Wuthnow and Wendy Cadge[1] revealed that a surprising number of Americans are personally affected by Buddhism. Nearly four million Americans identified themselves as Buddhists. Fourteen percent (nearly 30 million adults) had significant contact with Buddhism, and of those, nearly 90 percent reported that it had an effect on their religious lives. Many of these

Americans were affected by Tibetan Buddhism, which grew more quickly than the traditions (mainly Japanese Zen and Southeast Asian Theravada) that arrived earlier.

Although these figures are not broken down by Buddhist tradition, the standard of "effect on my religious life" is probably the most meaningful way to consider the extent of Tibetan Buddhism in the United States, something otherwise difficult to quantify. The Tibetan tradition itself does not define a Buddhist by way of an initiation ceremony, graduation from a training program, or membership in an organization, for instance. A Buddhist is someone who "takes refuge" in the Buddha, dharma (teaching), and sangha (spiritual community), which simply means that a Buddhist is someone who, insofar as he or she understands the most fundamental teachings of Buddhism, feels them to be correct and resolves to live by them. But this is an internal, personal standard, one that can be interpreted quite loosely, rather than something that can be objectively enumerated.[2] Nor could Tibetan Buddhists be counted by adding up the membership lists of Tibetan Buddhist dharma centers (this being the usual designation for a center of teaching and meditation). This omits those who think about and practice Buddhism in some way, and perhaps identify themselves as Buddhist, but have no institutional affiliation. Similarly, counting as Tibetan Buddhists only those who explicitly identify themselves as such omits persons who are involved with Buddhism but would stop short of calling themselves Buddhist. This can occur for a number of reasons. Some have other religious identifications. Some are "nightstand Buddhists"; that is, they are attracted to Buddhist thought and practice, mainly through their reading, but are wary of being identified with the Buddhist religion. Some feel that to be a "Buddhist" means to have already come to a deep understanding of its central teachings and to have a daily practice.

Who are these Americans? Only a small fraction of them, about 10,000, are ethnically Tibetan. Tibetans were not allowed to immigrate to the United States in sizable numbers until the early 1990s, when a resettlement program established sites around the country where at least several hundred could be settled together. They generally do not participate strongly in the life of the existing dharma centers except to attend occasional teachings and celebrate the Tibetan New Year. In fact, in a few places, the marginalization of Tibetans in the practice of their own religion has become an issue.[3] Rather, most Americans who are involved with Tibetan Buddhism were born in the United States and are white, well-educated, and middle class. How did so many of these Americans discover what was not very long ago an obscure religion in the remotest corner of the world?

One key factor is the United States' growing fascination with the Dalai Lama, Tibet's most revered religious figure, considered by Tibetans to be the incarnation of the Buddha or Bodhisattva who personifies compassion. Until 1959 he was also Tibet's head of government. His Holiness was a well-known, if somewhat ill-defined, figure for most Americans until he was given the Nobel Peace Prize in 1989. Many thousands of Americans now see him in personal appearances, in interviews on American television, and in visits to the White House and Congress. They have discovered a warm, humorous, compassionate man who seems utterly at peace with himself yet grounded in the real world. As he has interacted with religious leaders,

scientists, human rights activists, political leaders, celebrities, and countless others, he has given Tibetan Buddhism an attractive presence, one whose encouraging and nonthreatening message is, "My religion is kindness."

Many Americans discovered him through his many English-language books, which now number in the dozens. Most of his books are edited transcriptions of oral teachings given on his many tours around the world. In the 1970s and 1980s, these sold modestly, but two of the most recent, *Art of Happiness* and *Ethics for the New Millennium,* sold nearly two and a half million copies. Americans also saw the major Hollywood biographical films of the late 1990s, *Seven Years in Tibet* (starring American actor Brad Pitt) and Martin Scorsese's *Kundun.*

Celebrities, always a major factor in American cultural trends, played a key role in bringing the Dalai Lama and the Tibetan situation to the attention of Americans. Among the Dalai Lama's celebrity admirers are Richard Gere, Harrison Ford, Goldie Hawn, and Mickey Hart of the Grateful Dead. Gere, who has been a practicing Tibetan American Buddhist since the 1970s, cofounded Tibet House in New York, created the events of the International Year of Tibet, and is chair of the Board of the International Campaign for Tibet. Robert Thurman, a Columbia University professor and himself a practicing Buddhist, who was already known for his association with the Dalai Lama, surely drew more attention as the father of actress Uma Thurman. He helped to found Tibet House, is its president, and was named as one of the 25 most influential Americans by *Time* magazine in 1997. For younger Americans, rock concerts featuring acts such as the Beastie Boys, whose lead singer, Adam Youch, is a Tibetan American Buddhist, were important. *Rolling Stone, Time, Newsweek,* and many other major American popular culture and news magazines did major features on the Dalai Lama and Tibet.

Not all Americans who have embraced Tibetan Buddhism have learned about it through popular culture. Many other Americans learned about Tibetan Buddhism by enrolling in university or adult education courses, by visiting a Buddhist dharma center,[4] or by attending a public talk at another venue. Others got their first exposure to Tibetan Buddhism in art galleries where monks constructed sand mandalas (fundamentally meditation devices, but often termed something like "symbol of peace" for such occasions) or in concert halls where a touring monastic group performed ritual arts such as debating or chanting.

This chapter looks at the fundamentals of Tibetan Buddhism, how it came to the United States, the difficulties that arose in the process of its transplantation, and what we might speculate about its future.

TIBETAN BUDDHISM IN ESSENCE

Tibetan Buddhism existed not only in Tibet, but also among Mongolian and some Turkic populations across a vast stretch of central Asia. It is the most complex, elaborate, and varied form of Buddhism, and perhaps of any religion, with a vast number of discrete practices and teachings. Still, it has much in common with the Buddhism of other lands. Its core teachings are those of the historical Buddha. Its

many techniques all are ways either to enable the mind to become calm and focused or to bring about insight into the nature of reality. Its goal is enlightenment, that is, the removal of misconceptions about the nature of reality, which eliminates suffering for oneself and others.

Every Tibetan Buddhist teacher teaches about the Four Noble Truths (on the nature of suffering, its origin, the possibility of its cessation, and the eightfold path of ethics, meditation, and wisdom). However, this material is more often discussed under rubrics such as the "three principle aspects of the path" (renunciation, compassion, and wisdom) or "ground, path, and fruit." The topics that are normally discussed include the pervasiveness of suffering; the preciousness of human rebirth; impermanence and death; the benefits of taking refuge in Buddha, dharma, sangha; the workings of karma; the 12 links of dependent arising (an explanation of how intentions lead to results); nirvana (the absence of causes of suffering); ethics; techniques to develop compassion; meditative stabilization; and meditation on one's emptiness of being a stable, unchanging person.

These relatively simple teachings are the core of Tibetan Buddhism. However, in many Western writings, Tibetan Buddhism is equated with the Vajrayana ("Diamond Vehicle"), a nod to the prominence within it of tantra, the "diamond-like" practice that quickly cuts through all obstacles. Tantra is a type of esoteric spiritual practice found in Hinduism and Buddhism, but nowhere within those two religions is it more pervasive than in Tibetan Buddhism.

Tantric teachings are considered to be very powerful methods for the swift attainment of enlightenment, which is the insight into the nature of reality that liberates one from cyclic rebirth and the suffering that naturally occurs in it. They are supposed to be imparted only to students who are advanced in terms of their understanding and compassion. Permission to practice and instructions in method are given in ceremonies called "empowerments" (*dbang*, pronounced "wang"). In empowerments, a student, having made many promises about ethical behavior and secrecy, learns how to visualize himself or herself as a Buddha, living in an ideal environment like a palace and grounds and carrying out many activities to benefit others.

The practice is grounded in nontantric training: it is always important to begin by recalling one's debt to the Buddhas and lamas, to set one's motivation by reflecting on the suffering of oneself and others and resolving to end it, and to develop a sense of the delusory nature of the usual idea of oneself as a solid, unchanging entity. The images developed in meditation should arise out of understanding one's own emptiness of being such a solid and continuous person, and the compassion that sees the suffering of oneself and others as rooted in the delusion about the self. Those who succeed in creating intense visualizations then learn how to manipulate energy in the body, the purpose of which is to empower the mind so that enlightenment can be brought about more quickly.[5] It is considered to be dangerous on many levels to practice the teachings without authorization and supervision, one of the reasons why the teacher-student relationship is so crucial. In the United States, the number of serious tantric practitioners is growing, although the bulk of teaching and practice is still nontantric.

Literally hundreds of methods in Tibetan Buddhism exist for effecting changes in consciousness that will lead to enlightenment for oneself and others. Some aim at enhancing the student's motivation. For instance, meditating on death spurs a student not to waste time that might be spent practicing, meditating on suffering and rebirth builds compassion for others, and meditating on the potential in all beings to become Buddhas themselves gives confidence that the goal can be attained. Other practices develop the mind's capacity to be tranquil and focused, analytically probe one's preconceptions about the nature of the self, or prepare one for death. Within the large category of tantric practices are the preliminary practices, normally requiring several years of work doing prostrations, reciting mantras, and doing visualizations, all before the many complex tantric practices themselves. Finally, there are many practices performed for the sake of assuring the long life of the teachers, avoidance of malicious entities, the propitiation of protective deities, and so on. Thus, there are enormous variations in the daily practice of Tibetan Buddhism.

WHAT IS UNIQUE ABOUT TIBETAN BUDDHISM?

In the world of Buddhism, Tibetan Buddhism is unique in four respects. First, it is highly complex and diverse. All of the philosophical systems constructed from Indian texts (the various "schools" of India, which may or may not have existed as such) are studied and debated, and, as we have just seen, there is a bewildering array of meditation practices, ranging from the open, formless Dzogchen practice to highly detailed visualizations. This is principally because Tibetan Buddhism received its form directly from India, but over a millennium after the historical Buddha first preached on the plains of the Ganges River. By that time, Indian Buddhism was highly elaborated. The Mahayana (Great Vehicle) movement was several centuries old and had added to Buddhism a vast array of Bodhisattvas and Buddhas, an orientation to compassion as the highest value, new philosophical viewpoints, and a new respect for the capacity of laypeople to attain enlightenment. Tantric Buddhism was approaching its full flowering. Infused with the philosophy of the Mahayana, it provided for specially initiated practitioners an esoteric fast track to Buddhahood, involving complex visualizations, symbolic speech (*mantra*), sacred diagrams (*mandala*), and, most of all, devotion to the lama (guru, teacher) who was viewed as Buddha himself or herself. Because of Tibet's physical near isolation from the rest of the world, its Buddhism developed almost entirely without influence from either other Buddhist countries or Western colonial powers.

Second, Tibet had a strong shamanic tradition that was not replaced by Buddhism but rather either complemented Buddhism or became integrated with it. Shamans are a type of religious figure found in many traditions; their primary function is to heal the physically or mentally ill through determining the spiritual origins of these maladies and helping their patients reconcile themselves to the other world. A key element of shamanic diagnosis and cure is altered states of consciousness induced by techniques such as chanting, drumming, and visualizing. Many Tibetan rituals

performed for the sake of propitiating earth, water, or air deities, to control the weather, predict the future, or heal the sick, are not rooted in the Indian Buddhist textual tradition and might be better labeled "folk religion" that happens to be practiced by Buddhists. On the other hand, ostensibly Buddhist practices such as the lama's chanted directions for the spirit of a dead person (as embodied in what is popularly called the Tibetan Book of the Dead), the "cutting attachment" (*chod*) ritual in which one symbolically dismembers one's own body, or the "transference of consciousness" (out of the body, sometimes into a dead body), to mention just a few, are Buddhist practices built on this shamanic past. In addition, because tantric practices also involve altered states of consciousness and communication with a extraordinary reality, and especially because they may be performed for mundane purposes such as life extension or protection, they may also be considered shamanic.[6]

Third, in time the entire Tibetan society came to revolve around the Buddhist monastic orders, which became very large, rich, and powerful. In Tibet, before the Chinese invasion, probably more than one in every ten persons was a monk or nun (and in certain areas this may have been one in four), likely to be the highest percentage of persons in religious life to have ever existed in any culture.[7] Most belonged to one of four main religious orders: the Nyingma (the old or ancient tradition, which claims its roots in the very beginning of Buddhism in Tibet) or one of the "new" orders of Geluk, Sakya, or Kagyu. There is no overall authority, no "church" with a head "bishop"; even the Dalai Lama, the most respected figure in the religion, has no power to compel anyone to accept his views or to expel anyone from the religion. The Tibetan Buddhist canon of scriptures is vast (333 volumes) and complex, and Tibetan Buddhism has no "official" doctrines established by ecclesiastical authority. The orders differ in their emphasis on monasticism itself (e.g., many lamas of the Nyingma tradition are married), on the importance of philosophical study, and on their principal ritual and meditation practices. Within the orders, individual monastic and lay practicing communities operated with a great deal of autonomy, developing distinctive practices and idiosyncratic viewpoints.

Fourth, in Tibet the teacher-student relationship, important in Buddhism from its beginnings, evolved to new heights. The most important figure in Tibetan Buddhism is the lama (the Tibetan translation of the Sanskrit term *guru,* referring to teachers who through their exemplary personal qualities and teaching abilities can lead others to enlightenment). The lama is not a priest in the sense of acting as an intermediary between the disciple and the sacred, but rather sits in the place of the original teacher, the Buddha, interpreting the tradition of Buddhist thought and helping others through their conceptual difficulties. Since in Buddhism, salvation from suffering is gained only by individual enlightenment, not through grace from an external source, it is absolutely necessary to understand correctly what one is doing. Beyond this, in the tantric practice the teacher is the template for the student's own enlightenment, modeling what it means to be a Buddha. The student relates to the lama's transpersonal qualities (that is, the lama's compassion and wisdom and the genuineness of the lama's lineage) rather than his or her personal qualities. The lama reflects to the disciple both his or her shortcomings and the purity of the mind that exists in the

disciple as it does in every person. Because of this, devotion to the lama is often regarded as the quintessence of practice.

HOW THE SWANS CAME TO THE LAKE

In 1976 the Karmapa, head of the Karma Kagyu order, was asked why Tibetan teachers came to the United States. "If there is a lake, the swans would go there," he replied.[8] The swan is an apt symbol for Tibetan teachers. Able to fly through the air, float on water, or walk on land, in the Indian tradition the swan long was used as a symbol of the renunciate, a human who can be at home anywhere. Not many years after the Chinese incursions into Tibet, lamas began to migrate to the west. They came at the invitation of students who met them in Asia; or, like missionaries, were sent by their own teachers; or came due to their association with teachers who were already overseas. Where they settled, however briefly, they established groups of students that in many cases quickly evolved into dharma centers and the centers into networks that became, in time, full-scale global organizations that, like church associations, provided overall direction, standardization of practices, and support for fledgling groups.

Buddhism in Tibet was structured around teaching lineages within the main monastic orders. When Tibetan teachers founded dharma centers they naturally expected their students to be loyal to their own traditions, inviting teachers from within it and supporting them financially. Hence, the American form of Tibetan Buddhism is still very much aligned with the Tibetan monastic orders. Let us look at a few of the most important teachers in each tradition.

Gelukpa Teachers

The first Tibetan lama to arrive in the United States was a Gelukpa monk, Geshe Ngawang Wangyal, who became the lama of a Kalmuck Mongolian refugee community in New Jersey in 1955.[9] A tenacious and hardy spirit, Geshe Wangyal had traveled in Russia, China, and Mongolia and seen for himself what communism might mean in Tibet; when the Chinese entered in 1951, he left immediately. He had already learned quite a bit of English from his work with Sir Charles Bell and Marco Pallis in Beijing (and from four months as the latter's guest in England). Once established in New Jersey, he got a job teaching part-time at Columbia.

Several Harvard students who heard about him became his earliest American-born students. They included Robert Thurman, who became the first American to be ordained a Buddhist monk (but who remained one for only a few years) and later taught at Amherst before coming to Columbia University, where he now heads a graduate program in Buddhist studies. Another was Jeffrey Hopkins, who went on to found a Buddhist Studies program at the University of Virginia, which has produced 18 Ph.D. recipients, many of whom now teach at American universities. Hopkins published dozens of books (and those who worked with him have published at least another score) that provide a fairly complete picture of Gelukpa

scholarship. They are used widely by Gelukpa Buddhist organizations to train Western Buddhist teachers.

Geshe Wangyal's monastery evolved into the Tibetan Buddhist Learning Center (TBLC) near Washington, New Jersey, which for over 40 years has been a base for Gelukpa monks and a learning center for Americans. One of the first monks to live at TBLC was Geshe Sopa, who went on to become a professor at the University of Wisconsin and to found the lively Deer Park Buddhist Center near Madison.

Lama Thubten Yeshe and Zopa Rinpoche[10] started to teach Westerners in Nepal and India in the 1960s and early 1970s; this evolved into the Foundation for the Preservation of the Mahayana Tradition (FPMT), which has more than 130 centers and study groups around the world, 26 of them in the United States, the largest in California and Boston. Lama Yeshe died in 1984. His reincarnation, who has the name Lama Osel, was discovered in Spain and is expected to play a major role in the FPMT when he finishes his education, most of it at Lama Yeshe's Sera Je Monastery; Zopa Rinpoche has continued to lead the organization through a period of great growth and development.

Geshe Kelsang Gyatso has not spent very much time in the United States; he is based in northern England.[11] But the organization he founded, the New Kadampa Tradition (NKT), has become a major Buddhist organization in the United States. Geshe Gyatso came to England in 1977 to teach at Lama Yeshe's principal FPMT center, but within a few years had gone in his own direction. He first visited North America in 1990 and the following year established the NKT, which now has more than 800 centers and study groups internationally, 42 of them in the United States.

Sakya Teachers

Of the four major orders, the Sakya order to date has the smallest impact in the United States. Deshung Rinpoche and H.H. Jigdal Dagchen Sakya came to the University of Washington in 1960 to work with Professor Turrell Wylie, a Tibetan language specialist.[12] They later founded Sakya Monastery there. The Sakya order has about 15 centers in the United States, concentrated in the Pacific Northwest. Other centers are in Cambridge, Massachusetts, and suburban Washington, D.C.

Nyingma Teachers

Tarthang Tulku Rinpoche arrived in the United States in 1968 and established the Nyingma Institute, a meditation center in Berkeley, California, the following year.[13] His organization also includes a publishing arm (Dharma Publishing) that has printed a version of the Tibetan canon and many other books, a secular training program called "Time, Space, and Knowledge," and a magnificent large new retreat center in Sonoma County.

Sogyal Rinpoche was a student of some of the most famous Nyingma lamas of the twentieth century, but also received a Western education, at Cambridge University in England.[14] He founded the Rigpa Fellowship, which is worldwide and has three

centers in Canada and 15 in the United States. His *Tibetan Book of Living and Dying,* which offers an overview of Buddhism, an extensive explanation of the Tibetan understanding of the process of death and rebirth, and perspectives on working with the dying and grieving, is an international best seller.

Penor Rinpoche, the head of the Palyul lineage and also presently head of the entire Nyingma order, established a half dozen American centers but also influenced American Buddhism by recognizing two adult Americans as tulkus. The first, Jetsunma Akhon Lhamo, is a controversial figure who led a non-Buddhist spiritual group in the Washington, D.C., area before encountering him.[15] His recognition of her led to the establishment of a lively center in Maryland, Kunsang Palyul Choling, and another later in Sedona, Arizona. The other is the film actor Stephen Seagal, in whom Rinpoche said that he felt the potential for enlightenment very strongly. Because his decision was controversial, Rinpoche issued an unusual public statement explaining his decision.[16] Seagal was not enthroned formally and may or may not become a dharma teacher.

Finally, an American teacher with a rapidly growing number of students is Lama Surya Das (Jeffrey Miller). He was designated "lama" upon completing two 3-year retreats in France under Nyingma masters. In 1991 he founded the Dzogchen Foundation in Cambridge, Massachusetts. He is a well-known author, especially for *Awakening the Buddha Within.*[17] Several of his students were themselves named "lama" and teach widely.

Kagyu Teachers

The Kagyu order was the most pervasive of Tibetan Buddhist orders, with several of its lineages establishing many dharma centers. The first teacher to arrive in the United States, and still the most famous and influential Tibetan of all the orders (with the exception of the Dalai Lama, of course), was Chogyam Trungpa Rinpoche, who came to Vermont in 1970 after an English education in India and Oxford.[18] Trungpa was a tremendously energetic and creative teacher whose knowledge of English and the West enabled him to teach in a way that was very exciting for many people. He was particularly adept at translating traditional Buddhist cosmological and cosmogonic concepts (such as the realms of rebirth and the functioning of karma) into psychological language. Beginning with a meditation center now called Karme-Choling in Vermont, he built an organization called Vajradhatu, now called Shambhala International, which included a fully accredited Buddhist university, Naropa, in Boulder, Colorado. Naropa offers degrees in contemplative psychology, early childhood education, environmental studies, interdisciplinary studies, music, religious studies, traditional eastern arts, visual arts, writing and literature, and performance. Chogyam Trungpa's organization also includes a large retreat center in Colorado, the Shambhala Mountain Center; a large network of dharma centers in American cities called Dharmadhatus; schools for children and for dressage (a passion of his wife's); and a non-Buddhist (but Tibetan folk religion-inspired) training program called Shambhala. He was also very controversial; he drank heavily and

had many sexual liaisons, making no secret of the fact, and occasionally behaved and spoke in a bewildering manner. On the other hand, his Kagyu lineage contained within it a tradition of what he called "crazy wisdom," wherein the lama may act deliberately in a way that upsets the student's expectations. People associated with or familiar with Chogyam Trungpa's behavior continue to be divided, some condemning it, others attempting to set it within a Tibetan Buddhist context.

Trungpa's organization suffered through difficult times after his death in 1987; his regent (a person chosen to oversee the lama's students and interests until his or her reincarnation is discovered and completes an education), Osel Tendzin, died from AIDS in 1991. Trungpa's son became the head of Shambhala International. However, Trungpa's reincarnation, now a teenager, was recently found in Tibet; at this point it is not clear what role he will play in a future Shambhala organization.

Kalu Rinpoche was an important yogi. He was called "a modern Milarepa" after Tibet's famous eleventh-century yogin. He is a teacher who taught throughout the world until his death in 1989. He supervised the first 3-year retreats for Westerners, including some Americans, starting in 1976 in France. In the Kagyu tradition such retreats are a way to introduce students to the breadth and depth of tantric practice. He subsequently encouraged the retreat graduates to establish centers and teach in their home countries. He also authorized them to use the title "lama."

Lama Lodu Rinpoche was Kalu Rinpoche's student and has headed the Kagyu Droden Kunchab center in San Francisco since 1976. He continues Kalu Rinpoche's tradition of mentoring American students through the traditional 3-year retreat; the most recent group began in 2005. He also established another dozen satellite centers and has written several books in English.

The Sixteenth Karmapa, the head of the Kagyu order, played an important role in the establishment of Tibetan American Buddhism before his death in 1981, mainly through inspirational teaching tours. His sunny disposition and energy attracted people to the centers established in his name. The largest of these is his North American seat, Karma Triyana Dharmachakra in New York state, which now has 35 affiliates around the United States.[19] His reincarnation was born in 1985 and is being prepared to take on the role of head of the order soon.

Finally, the Drikung Kagyu lineage became well-established with 25 centers around the country.[20] Khenchen Rinpoche Konchog Gyaltsen came to Washington, D.C., in 1982 and by the following year had established the Tibetan Meditation Center, which relocated in 1991 to Frederick, Maryland, and is now building a retreat center. He started many of the other centers and facilitated a stream of lamas from India to teach at them.

WHY THE SWANS CAME TO THE LAKE

As the Karmapa said, "If there is a lake, the swans would go there." However, there were good reasons *not* to go. Tibetan lamas had responsibilities to the young monks who are their primary students and to the Tibetan laypeople who look to them for blessing and advice. They realized that there was a considerable cultural barrier,

beginning with language, and they may have heard from others who returned from the United States that Americans were fickle and undisciplined.[21]

Nevertheless, they came, virtually all of them primarily because it was clear that Americans wanted and needed the dharma. But also, for many, the transplanting of the dharma to the United States was one way to ensure that the Tibetan tradition continued. Although Tibetans in India and Nepal, and to a lesser extent elsewhere, were heroic in their efforts to continue their oral, textual, and artistic traditions, they knew that their tradition was in jeopardy. Americans offered to help: to preserve Tibetan texts, to translate them, and to record the Tibetan traditions of oral commentary. At first this happened at academic institutions such as the Universities of Washington, Indiana, Wisconsin, and Virginia. In some of these settings, Tibetan lamas became faculty members whose salaries also supported their home monasteries. Also, in many of the larger dharma centers, the teachings of resident and visiting lamas were recorded and turned into many books, tapes, CDs, videotapes, and DVDs. The income from these publications, as well as the donations made by students at the centers where the lamas taught, allowed for both further development of Tibetan Buddhist facilities in the United States and contributions to a massive building boom of monasteries and nunneries in India and Nepal. This in turn assured not only that there would remain a strong monastic tradition even in exile from Tibet, but that there would be no shortage of Tibetan teachers for service in the United States and elsewhere.

Still, it is probable that some teachers were also lured by the prospect of comfort and security in the West. The life of a monk in India or Nepal can be quite difficult, and the workload for a teacher can be very heavy. A few of the younger monks who subsequently came to the United States decided to give up their monastic vows, work, and marry.

WHY ARE AMERICANS ATTRACTED TO TIBETAN BUDDHISM?

Daniel Capper's two years of participant observation at the Karma Kagyu center, Karma Triyana Dharmachakra in upstate New York, addressed this question directly.[22] He found that Americans were attracted to Buddhism for many reasons: they believed that meditation would be beneficial; they admired Buddhism's moral system; they found Buddhism's world view convincing; they hoped that they would be able to experience mystical states. In the end, however, the most important factor for those who embraced Buddhism was the positive psychological relationships they established with Tibetan lamas. This "enchantment" was deeply personal, since the student felt completely open to the lama, as well as transpersonal, since the relationship was understood to be based not on personality but on compassion and might stretch back over many lifetimes. Most people experienced personal growth and enhanced autonomy from their contact with the lama. A definite therapeutic effect from the "countertransference" of experiencing the lama as engaged and caring was felt by these American disciples.

Harvey Aronson recently questioned this "therapeutic effect" by raising the issue of whether a student's spiritual growth is inhibited by having a motivation of seeking psychological growth.[23] While it can be very useful to use techniques of meditation to calm and clarify the mind sufficiently so that the sources and complexity of one's emotional problems become more apparent, the spiritual purposes of the exercises are then put aside. Like a number of other psychotherapists who are also Buddhists,[24] he thinks that Buddhist practice and psychoanalysis are both helpful but ought to have their own spheres. It is unrealistic to think that Buddhist practice, even in a strong and healthy teacher-student relationship, will suffice for students with psychological issues, just as it is unrealistic to depend upon psychoanalysis for spiritual growth.

Americans were also attracted to Tibetan Buddhism for the same reasons other Americans are drawn to religion. Religion can provide a coherent world view that explains the origins and purposes of the universe, the meaning of suffering, and what happens upon death. It can provide a moral community that gives one a concrete identity, nurturance, and support in difficult times. And it can be a vehicle for self-transformation. The latter is a particularly strong point for Tibetan Buddhism, which explicitly aims at converting ignorance, desire, and hatred into wisdom, generosity, and compassion.

CONTOURS OF TIBETAN AMERICAN BUDDHISM

Tibetan Buddhism's particular manifestation in American culture, which we refer to as Tibetan American Buddhism, has many dimensions. Let us consider four of them: the forms of the sangha (a term that in Asia referred to the monastic community but in the United States is more like the congregation of practitioners), the forms of the media, the academic study of Tibetan Buddhism, and Tibetan Buddhism's physical presence in the American landscape.

Communities

Tibetan American Buddhism has grown mainly as Tibetan lamas established networks of lay study and practice groups. When the groups grew sufficiently large or were blessed with a patron, they established their own dharma centers with an ongoing program and with a lama in residence some or all of the time. Typically, they also included a "dharma shop" to sell books, CDs, clothing, jewelry, paintings, and statues; some with a residential population also have a cottage industry such as making meditation cushions or running a café. In these larger settings, the centers function much as churches do for other Americans, with programs for children, purely social events, and groups for special interests and needs that are not necessarily connected with Buddhism.

The dharma centers are likely to have been started by local students of eminent lamas who may already circulate among many centers. At the center, participants learn about specific practices by attending weekend workshops or longer retreats

when the lama comes to town. There is normally an initial commentary on a text, after which the students are taught to chant (perhaps in Tibetan), to visualize Buddhas and other figures, to perform symbolic hand gestures, and to convert the teaching into a daily routine.

Between these more exciting events are practice sessions. Perhaps the center will hold a weekly practice session for the "preliminary practices" (prostration, visualization, and chanting) that are to be completed before tantric practices are begun. Perhaps smaller groups will meet for collective practice of a text into which they have all been initiated; others may meet to study a particular text or to work on the Buddhist study curriculum that has been supplied by the parent organization.

Many groups are still very small and have no dharma center. They meet at the homes of members, at community centers, at universities, or even in Unitarian Universalist churches, which sometimes have U.U. Buddhist Fellowships within them.[25] Many Tibetan American Buddhists do not have any regular community.

However, because the networks established by the Tibetan lamas are modern and global, they project a strong presence on the Internet. For some, community is found entirely or in part in cyberspace, where it is possible to have a kind of "cyber-sangha." In the largest sense, Tibetan American Web surfers become part of an overall sangha of Buddhists in whatever languages they can read. A vast amount of information about teachings and lineages is available online in addition to specific information about particular centers. Then too, a person might belong to the e-mail list or discussion forum of a particular Buddhist organization, perhaps as part of a study group. Or, a person might subscribe to an e-mail forum such as Buddha-L which operates independently of any Buddhist organization and is a site for dialogue with other Buddhists about theory or practice. Finally, the Internet can be used as a venue for teachings. For example, American students of Chogyal Namkhai Norbu, a prominent Nyingma teacher in the West (mainly Italy, but also in the United States), watched broadcasts of his teachings in Italy and elsewhere on their home computers.

Media

In addition to its manifestation as persons and communities, Tibetan American Buddhism has a robust presence in American media. Thirty-five years ago, when Tibetan teachers were just beginning to visit the United States, only a handful of books about Tibetan Buddhism were available. Now, there are many hundreds. Amazon.com, for example, lists over 1000 titles on a search for "Tibetan Buddhism." The principal American publishers are Snow Lion Publications of Ithaca, New York, and Boulder, Colorado; Wisdom Publications of Boston; Shambhala Publications of Boston; and Dharma Publishing of Berkeley, California. Many smaller presses also contribute to the supply of books, as well as academic publishers such as the University of California Press, State University of New York Press, and Oxford University Press. Whereas most books formerly were written by academicians for a scholarly audience, many of those currently available were written by Tibetan and Western Buddhist teachers. In addition, a number of translation committees (such as Padma

Kharpo, Nalanda, and Light of Berotsana), some associated with particular organizations and some not, were formed and produced a sizable quantity of translations.

Many of the same teachings that are available in print form are also now available in other media such as compact disks and digital video disks. It is commonplace for teachings to be recorded in as many formats as is feasible. People can purchase sets of the Dalai Lama's teachings on the Four Noble Truths; they can take entire courses on Buddhism through these media and by interacting with teachers and fellow students by e-mail and in electronic discussion forums.

Tibetan American Buddhism has its own high-quality journals such as the *Shambhala Sun* and *Buddhadharma* (both published by Shambhala International) and *Mandala* (published by the Foundation for the Preservation of the Mahayana Tradition). It also figures prominently in the largest Buddhist journal, *Tricycle,* which has about 200,000 readers. No American academic journals are devoted to Tibetan Buddhist scholarship, but articles about Tibetan Buddhism appear frequently in publications such as the *Journal of the International Association of Buddhist Studies,* the *Journal of Buddhist Ethics,* and the *Journal of Global Buddhism.*

Academia

Many Americans learned about Tibetan Buddhism not through the popular media, their own reading, or personal contact with teachers of Tibetan Buddhism, but by enrolling in university courses. In addition to Naropa University in Colorado, which is a Tibetan Buddhist institution, at least 100 institutions of higher education offer courses in whole or part about Tibetan Buddhism. In addition, courses can be taken for college credit at Buddhist institutions such as Namgyal Monastery (for Cornell students) and Drepung Monastery (for Emory students), and American students can participate in study abroad programs located in Tibet (or in Tibetan communities of India) through the School for International Training in Vermont, Emory University, and the University of Virginia.

At the postgraduate level, students can pursue a master's degree or doctorate in Tibetan Buddhist studies at the universities of Colorado, Chicago, Indiana, Michigan, Wisconsin, California–Santa Barbara, and Virginia, and at Harvard, Columbia, Rice, and Boston universities. At Virginia under Jeffrey Hopkins, and at Wisconsin under Geshe Sopa (the only Tibetan lama to become a tenured member of an American faculty), students absorb a truncated form of the Geluk monastic curriculum. At Virginia they also studied in the mode of monks, memorizing lists and definitions and attempting formal scholastic debate.[26]

The American Landscape

Tibetan Buddhism is becoming steadily more visible to the average American. Centers now exist in all major urban areas, with multiple centers in cities such as Boston and Los Angeles. Although almost none of these buildings were constructed specifically to be dharma centers, they often present an intriguing sight to the casual

observer, decorated with signs, colorful prayer flags, and various symbols such as the ubiquitous pair of deer bracketing a wheel, representing the Buddha's first teaching in a deer park. Retreat facilities tend to be in quieter rural areas. They may consist of simple cabins for personal meditation in a remote place or may be located near the main monastic and teaching center. Some centers also have stupas, symbolic monuments of Indian origin (but in Tibetan style) that are found all over the Buddhist world. They often contain the cremated remains of famous teachers. The most impressive stupa in the United States is the Great Stupa of Dharmakaya, built for Chogyam Trungpa Rinpoche, in the northern Colorado mountains.

ISSUES IN THE TRANSMISSION OF BUDDHISM

A Failure to Communicate?

The most obvious problem in the transmission of Buddhism from Tibetans to Americans is that of language. Although younger teachers may have studied English in monastery schools, most senior teachers have little command of English and must teach in Tibetan with a translator. Even under the best circumstances, when the Tibetan translator's English is good or the American translator has a fine understanding of Tibetan, this is a slow process, taking at least twice as long as direct communication. Often it is slowed further because the translator needs to clarify certain statements by the teacher. This tests the attention span of the listeners, people who are not accustomed to sitting on the floor on cushions for hours at a time. Translation terms can also be problematic, particularly when during a question and answer period the non-Tibetans ask questions that involve knowledge of science, other religions, American popular culture, or romantic relationships.

The venue in which the teacher works is normally a dharma center, a center for lay Buddhists that may also have residential space for several Tibetans and several American students. This situation is unlike anything that existed in traditional Asia, where Tibetan teachers were accustomed to dealing almost exclusively with other monastics in monasteries. At an American dharma center, they must teach laypeople who are coming at Buddhism from many perspectives, some of them based in an understanding of the nature of religion quite at variance with Buddhism. More than half of their students are female. The students come with a variety of motivations. Many are looking for psychological healing and growth. Some are looking for a spiritual achievement that will make them respected, perhaps famous. Some have an intense need for approval. And nearly all of them lead busy lives, with full-time jobs, families, and other commitments. Alan Wallace reported that lamas often consider their students to be lazy, fickle, and consumerist.[27] That is, they want to be taught the most advanced practices as early as possible, but are reluctant to take the time to solidify the teachings they received earlier. They do not stay the course with a particular practice, but want to switch to something else—perhaps even another tradition of Buddhism—if something does not go well for them in short order. And they have

a propensity to pick and choose among lineages, teachers, practices, and even points of philosophy to put together a package that appeals to them the most.[28]

Lamas also face many challenges in answering the sorts of questions posed by their American students. Since most of them are monks, they are ill-equipped to answer questions about romantic and marital relationships. They also were probably raised in a traditional Tibetan family, which may be quite unlike the family situations of Americans. They have very limited exposure to many subject areas familiar to Americans, such as science, geography, religion, and philosophy, not to mention the elements of popular culture such as music, television, and film, on which Americans often draw for illustrations and metaphors. They are also unaccustomed to talking openly about feelings. As Harvey Aronson notes,

> In our culture we question authority, value familiarity with emotions, highly prize the experience of romance, appreciate the robust expression of our unique individuality developed through free choice, and develop our relationships through verbally exchanging our thoughts, dreams, personal histories, and feelings. We then approach teachers who embody the traditional cultures of Asia, where continuity of custom and reverence for those who are old and/or wise is valued; relationships are governed by explicit and implicit rules related to the roles individuals play; and closeness is often achieved through intuitive accommodation to others' moods. Within these cultures, feelings and their verbal expression are not necessarily valued, and certain feelings such as anger may even be seen as obstacles. In these settings, spousal relationships may revolve around the social connections of the parents and societal obligations to produce children. Within Buddhist culture it is frequently taught that it is important to subordinate oneself and to practice for the sake of others.[29]

Lamas vs. the American Lifestyle

One of the most significant problems for Tibetan teachers is their relative isolation and underemployment. For those who travel to the United States without knowledge of English, their interactions with others are constrained by the necessity of translation. They may be accompanied by only a single attendant or translator with whom they can speak easily, and they may spend much time alone at the dharma center where they live because it is empty much of the time. Or, they may spend time traveling from one center to another for periods as short as a day or two. When they teach, they are obliged to talk about the same introductory topics over and over again, since few of their students are prepared for any deeper explorations of Buddhist philosophy.

There are two types of temptations for Tibetan teachers in these situations, particularly for younger teachers. The first is the general temptation of the American lifestyle—to enjoy popular culture, seek interesting experiences, and, finally, explore relationships with women. The second is to take advantage of their position in the dharma center or larger organization to arbitrarily exercise power over the students. This would not occur in Asia, because there they would be supervised. The 1980s

and 1990s saw several "lama scandals," where Tibetan teachers had affairs with students or abused them emotionally.

The New Generation of Tibetan Teachers

Many of the great teachers who founded the Western Buddhist organizations died in the past 20 years or so. It is not yet clear that their replacements will be capable of providing the wisdom and leadership that they did. Great hopes were invested in some of these younger teachers. For instance, former students of Lama Yeshe anticipate the teaching career of Lama Osel, born in 1985, who as a baby in Spain was recognized as the reincarnation of Lama Yeshe. From a young age he was trained in the Gelukpa monastic tradition at Sera Monastery in South India. The reincarnations of the Karmapa, Kalu Rinpoche, Ling Rinpoche, among others, are reaching the ages at which they may begin conducting teaching tours abroad. Will Americans accept these young men as authoritative in matters of Buddhist thought and practice? And will they be willing to trust their judgment about the administration of the organizations founded by their predecessors?

Western Teachers

Since at least the mid-1970s Tibetan masters authorized some of their American students to teach. Who are these American teachers? A few trained in Asia in the traditional way, communicating in Tibetan and living with Tibetan monks. Georges Dreyfus, who is Swiss, but lives in the United States and is now a professor at Williams College, was the first to complete a Tibetan monastic degree in the Gelukpa monasteries of India. Michael Roach soon followed, although he did much more of his study in the United States. Many others trained for years as monks in the traditional manner but stopped short of the degree, such as Jose Cabezon (a professor at University of California Santa Barbara) and B. Alan Wallace, who teaches widely.

Many more were the disciples of particular Tibetan teachers, studying with them in Asia, the United States, and other places in the West. Kalu Rinpoche, Chogyam Trungpa, Lama Yeshe, Zopa Rinpoche, Karma Thinley Rinpoche, and many others mentored Americans who teach on the dharma circuit. In addition, Americans trained in the new programs of organizations like the New Kadampa Tradition (NKT) and the Foundation for the Preservation of the Mahayana Tradition (FPMT) have positions as leaders in those organizations. In both NKT and FPMT, programs ranging up to seven years in length were established to give a thorough grounding—in English—in the topics of Buddhist philosophy that would be taught in a Gelukpa monastery.[30] Many of the newest generation of teachers are women, such as Thubten Chodron in Seattle, Tsultrim Allione in Colorado, Pema Chodron in Nova Scotia. Many professors of Tibetan Buddhism, such as Hopkins, Thurman, and Anne Klein also teach at dharma centers. Because of their long training in conjunction with Tibetan teachers, they are esteemed as both scholars and practitioners.

What limitations or problems do these teachers have? First, most American teachers cover only the fundamentals of Buddhism, not the higher teachings, and do not confer tantric empowerments. They complement, rather than replace, Tibetan teachers. Many of them are quite itinerant, traveling around the United States and elsewhere in the world for teaching weekends, short retreats, workshops, and conferences. They may or may not have strong relationships with particular students themselves. They operate with a great deal of autonomy, as their Tibetan teachers do not attempt to oversee and supervise them.

The one instance in which an American became the head of a major Tibetan Buddhist organization very quickly became a near disaster. Osel Tendzin (born Thomas Rich) was appointed by Chogyam Trungpa Rinpoche as his regent, and succeeded him as the head of the largest Tibetan American organization, Vajradhatu (later Shambhala), upon Trungpa's death in 1987. A few years later, the public learned that Tendzin had AIDS and transmitted it to at least one of his students. The Vajradhatu Board of Directors wanted to remove Tendzin, but he refused to resign. The crisis was not resolved until his own death in 1991 and the installation of Trungpa's son as the head of the organization, which was renamed Shambhala International.

Buddhism Without Beliefs?

What about the dharma itself? Is it being presented to Americans in a diluted form? One ongoing controversy in Western Buddhism is whether, and to what extent, traditional Asian Buddhism might be shorn of its cultural trappings and presented in essential form. In particular, can Buddhism be coherent without its explanation of the structure of the universe—its cosmology—and its explanation of its cause—its cosmogony? Buddhism has many cosmologies, but all of them recognize a multiplicity of worlds, including hells and heavens, and the existence of types of beings that are not part of human experience, such as hell denizens, gods, and hungry ghosts (*pretas*). Buddhist cosmogony recognizes the force of intentional action—karma—which caused all of us to be reborn in all of these forms from time without beginning. This cosmology and cosmogony is virtually uncontested in Asia, but in the United States it strains the credulity of many students and potential students of Buddhism. Stephen Batchelor, a British Buddhist teacher and former monk in a Tibetan order, has argued that it is possible, even necessary, to be agnostic with respect to these elements of the Buddhist world view without rejecting anything essential about Buddhism;[31] others, such as Thurman, argue that Buddhist compassion is not possible without a belief in reincarnation at its base.[32]

This debate uncovers a larger and potentially more problematic issue within the transmission of Buddhism to the United States. On the one hand, Buddhism itself has a long history of resisting dogma. Rather than merely accepting Buddhist assertions as truth, individuals are themselves supposed to investigate the nature of reality and come to their own conclusions. This commitment to the primacy of reason was demonstrated particularly in the Dalai Lama's interactions with scientists. He frequently stated that if there is compelling proof that contradicts any Buddhist

doctrine, the Buddhist doctrine ought to be amended or rejected. On the other hand, in the absence of such proof, as in the case of reincarnation, where it would not really be possible to show that it cannot occur, should Buddhists not have faith in the teachings of enlightened masters? And can it be right for American Buddhists to accept only those points that are easy to accept rather than staying within the tradition?

ISSUES IN THE STYLE OF AMERICAN BUDDHISM

Both Tibetans and Americans recognize that when Buddhism is transplanted from one culture to another, it must adapt to its new host before it can affect any transformation in its society. But what should be changed and what retained? Among the questions that Americans have raised are these: is there any place for Buddhist monasticism in American culture? Should Americans follow Tibetan patterns of devotion toward the teacher? What danger is there that in the United States the dharma will become "commodified" and degenerate? Is there a possibility that Tibetan Buddhism will become a desacralized form of psychological therapy? Let us briefly consider these questions.

Monasticism

Clearly Tibetan American Buddhism will have to take a very different form than it has in Asia. Monasticism at anything approaching the level at which it existed in Tibet, where the monastic orders were at the center of Tibetan religious life, cannot exist here. Several tiny monasteries function in the United States. The first, Geshe Wangyal's Labsum Shedrub Ling, continues to exist in New Jersey as the Tibetan Buddhist Learning Center (although it has no monks in residence as of this writing). Within the Gelukpa order is a branch of the Dalai Lama's own monastery, Namgyal, in Ithaca, New York, and a branch of Drepung Loseling Monastery is located in the Atlanta, Georgia, area. Principal Kagyu monasteries are at Karma Triyana Dharmachakra in Woodstock, New York, and Gampo Abbey in Nova Scotia. The main Sakya monastery is in Seattle, Washington. Some of these have both Tibetan and American monks and nuns, whereas others have only Tibetans.

Many of the ordained live in or near dharma centers far from other monastics, which presents many difficulties in daily life. No developed tradition of support for monastics exists in the United States, either financially or in social esteem, and many of those who are ordained have subsequently relinquished their vows and robes.

Is this absence critical? Some, such as Thurman and Wallace, argue that monasticism is essential for American Buddhism as well. For Wallace, monasticism ensures that at least some people in any generation genuinely achieve profound insight, maintaining a kind of "gold standard" that backs up the claims of Buddhism about profound states of consciousness. For this, some people must be supported so that they can undertake long periods of study and contemplation. Thurman emphasizes the need for monastics to provide models for an enlightened society.[33]

Relating to a Spiritual Teacher

A more vital issue of style for many students is how to relate to their spiritual teachers. Most Tibetan teachers expect their students to follow Tibetan protocols: students should prostrate themselves three times before teachers when they enter the room, they should bow slightly upon their departure, and they should gladly serve them, supporting them financially but also cooking and cleaning for them and driving them where they need to go. They should not question the teachers' decisions about how the center or larger organization should be run. Predictably, this has presented several difficulties for many students. Americans are unaccustomed to prostrating before others and to acting as personal servants. They have egalitarian and democratic ideals that are challenged by the teachers' hierarchical and authoritarian style.

At the same time, they are aware that devotion to the lama is considered essential for practice, particularly at the level of tantra. If the students cannot see the lama as a Buddha, the lama may not be able to help the student experience his or her own enlightened quality. Several recent publications, prominently Alex Berzin's *Relating to a Spiritual Teacher: Building a Healthy Relationship,* addressed these difficult and subtle questions and clarified the way in which students can assess their obligations while honoring these Tibetan cultural patterns. The Dalai Lama frequently urged students not to rush into a committed lama-disciple relationship, but instead should take several years, if necessary, to adequately assess the guru with whom they are so enchanted initially. Not everyone agrees. Tara Carreon, a student of Tibetan Buddhism for 22 years, recently concluded that it will not "work" in the United States until it has been stripped of its Tibetan cultural trappings.[34] She regards Tibetan lamas generally to be ethnocentric, medieval, authoritarian, and greedy. American students, she says, are reluctant to speak out against abuses of power because in their tantric initiations they made promises (*samaya*) to venerate the lama.

Particular difficulties arise in the case of the child tulku. The tulku is a person identified as the reincarnation of a respected teacher. Tulkus usually receive monastic training, but may, like other monks, later give back their vows and marry. They get special treatment from the time of their identification. Some become great teachers like their predecessors, travel often, and are widely respected; some do not. But even if they display unusual maturity and intelligence as children, they are still children, prone to the moods and passions of children, and do not have the knowledge and insight of their former incarnations. Tibetans have dealt with tulkus for several centuries, but Americans have not, and the power issues that are so controversial with respected adult teachers are even more vexing when they arise with children.

Shopping for Enlightenment

Another issue in the style of Tibetan American Buddhism might be called "the commodification of the Dharma." Many Americans want to "pick and choose" what they like about the Buddhist dharma and leave the other parts behind. This can

extend to teachers and whole traditions as well. Commodification also occurs when the teachings are given on a fee basis. Whereas teachings in Asia were given freely, the expectation being that laypeople would voluntarily give to the teacher (or more generally to the monastery that supported the teacher), it is commonplace in the United States to set fees, sometimes rather high ones, for teachings and empowerments. Commodification also occurs when students surround themselves with the trappings of Buddhist culture—clothing, altars, statues, paintings, and jewelry. A more subtle form of commodification, which Chogyam Trungpa Rinpoche called "spiritual materialism," occurs when adopting a style or accumulating empowerments or teachings from many teachers becomes a way of impressing others, a "credential."

For instance, many Americans who received tantric empowerments from Tibetan lamas had not done the practice at all, had abandoned it after a short time, or had made changes to it without the authorization of the initiating lama. This can easily occur because no real teacher-disciple relationship exists for many students; they have only a relatively anonymous and brief contact at the time of the initiation, after which the lama leaves town and the student can do as he or she pleases.

A Tibetan American Aesthetic?

How will Americans transform the aesthetic of Tibetan Buddhism? The "sound" has already changed considerably in the sense that much of the dharma has been translated into American English. The style of the translation changed much in just a few decades as translators found translation terms that are evocative without being inaccurate and that express the dharma in an American idiom. American teachers such as Lama Surya Das, Wallace, Thubten Chodron, and Pema Chodron, to mention just a few, are very adept at this. However, some Tibetans, notably the late Chogyam Trungpa and the Nyingma teacher Sogyal Rinpoche, creatively adapted psychological terminology and concepts to explain traditional Buddhist viewpoints. Trungpa, in particular, used exciting language: "In the case of the spiritual friend, he is your lover in the sense that he wants to communicate with your grotesqueness as well as your beauty … The real function of a spiritual friend is to insult you"; "The bodhisattva is not inhibited by conventional morality or idiot compassion"; "… the bureaucracy of ego."[35]

What about the "look" of Tibetan Buddhism? Should the exotic silk brocades, scroll paintings, brass statues, and robes of Tibet gradually give way to American forms? For instance, what would an American Buddha look like? Two intriguing examples of a new form are the statue of the historical Buddha in the huge and beautiful Great Stupa of Dharmakaya built in the Colorado mountains in memory of Chogyam Trungpa,[36] and the much smaller statue of the future Buddha Maitreya in the temple of the Tibetan Buddhist Learning Center in New Jersey. In both cases, what strikes the visitor is the statue's face. The Colorado Buddha's face is a blend of Tibetan and Caucasian features. The New Jersey Buddha has a distinctly Native American face. (It was made in Arizona.)

THE FUTURE OF TIBETAN AMERICAN BUDDHISM

Looking at general American cultural trends, it seems likely that Tibetan Buddhism will continue to grow in the United States for the foreseeable future. Americans are increasingly tolerant of and interested in Asian religions, particularly Buddhism. Although Asian Buddhism is still exotic to most Americans, the march of globalization is steadily dissipating its scent of "otherness." At the same time, Americans are increasingly aware of the physical and mental effects of the stresses of modern life and seek various ways to calm themselves and become more productive. The practice of meditation as taught in Buddhism appeals to many who seek greater peace and self-understanding.

But what will be its shape? In the near term, we can expect it to develop within the patterns already established. Lama Surya Das, in his popular *Awakening the Buddha Within,* delineated ten trends in American Buddhism, adapting a list promulgated by the Theravada Buddhist teacher Jack Kornfield. We have already discussed most of them.

- It is meditation based and experientially oriented.
- It is lay oriented.
- It stresses gender equality.
- It is democratic and egalitarian.
- It is essentialized, simplified, and demystified.
- It is nonsectarian. (That is, the sorts of issues that divided Tibetans have not been embraced by Americans.)
- It is psychologically astute.
- It is exploratory.
- It is community oriented.
- It is socially and ecologically conscious.

To this list many other characteristics could be added. For instance, it is ambivalent about authority; ritual is diminished in frequency and length; it is sometimes blended with other traditions, as when Jews or Christians practice Buddhism without dropping their other identity; it is strongest in large urban areas and on the two coasts; and there is more emphasis on personal growth than on social purposes.

But we can also expect that every cultural trend or quirk will echo in Tibetan American Buddhism in ways that cannot now be predicted. We have already seen many forms. Surya Das made a playful list of some of our many "Buddhisms": monastic, lay, meditation, chanting, ritualistic, bare bones; academic, mystical, practical, therapeutic, intellectual, anti-intellectual; retreat, congregational, socially engaged, missionary, upper-middle-class; ethnic, Jewish, Christian, Hindu; health, vegetarian, pacifist, tantric Crazy Wisdom, Beat, eclectic, New Age, roll-your-own. We cannot foresee how many of these influences will profoundly shape what eventually emerges as Tibetan American Buddhism.

Here are a few more guesses regarding the future shape of Tibetan American Buddhism.

First, for better or worse, some American Buddhist teachers will become fully qualified lamas, leading sanghas, conferring empowerments, and receiving the guru devotion of their students. This extraordinary development could energize and transform Tibetan American Buddhism. It could be very problematic as well, for the same reasons that apply to Tibetan teachers—the American resistance to authority and to guru devotion, scandals that will reflect badly on all teachers, and so forth.

Tibetan teachers will continue to teach and lead sanghas, but more of them will be from a new generation that can speak English and is familiar with Western culture. Already some tulkus were educated in India or Nepal with the full intention that they be sent to the West upon the completion of their Buddhist education. Some, such as Trungpa's son, the head of Shambhala International, were raised in the United States and sent to Asia for Buddhist finishing. It may not be long before some Tibetans will receive all of their Buddhist education in the United States.

Second, significant growth will occur in two sectors related to Tibetan American Buddhism that will challenge the identity of the main traditions. The first sector is the growing phenomenon of the "Buddhayana" meditation centers. This term was coined by Don Morealle for the Buddhist centers that were a synthesis of Asian traditions rather than being identified with one in particular.[37] These appear to be growing at least as fast at those of Tibetan Buddhism. They are a very new phenomenon and are possible because of the lay orientation of American Buddhism and because for the first time in the history of Buddhism all of the various traditions of Buddhism are simultaneously present in one place. Given Americans' proclivity towards eclecticism and selectivity in religious matters, possibly more people will practice Tibetan American Buddhism at, say, the "Philadelphia Buddhist Center" than at the various Tibetan American groups around the city.

The second sector in which we can anticipate significant growth is the secular adaptation of Buddhist meditation techniques. Programs exist that train students in mindfulness techniques for personal growth and such mundane concerns as career enhancement. The way forward was pointed by two of the earliest Tibetan teachers, Tarthang Tulku and Chogyam Trungpa, each of whom established successful programs. The former's Nyingma Institute in Berkeley offers his "Time, Space, and Knowledge" and "Skillful Means" courses as ways to enhance one's life in general and work in particular, without explicit Buddhist content. It also offers continuing education programs for therapists, social workers, nurses, and attorneys. Trungpa established the Shambhala program which, while using Buddhist meditation techniques and symbols from Tibetan culture, is a self-described secular program to "foster basic sanity" for everyday life.

Tibetan Buddhist teachers have already begun to write books and conduct seminars for business people.[38] In Japan, business executives are sometimes sent to Zen monasteries for a training period to sharpen their attentiveness and develop discipline; could the same thing happen in the United States?

Buddhist meditation is used as part of a program for the relief of chronic pain and stress disorders in the division of Preventative and Behavioral Medicine at the University of Massachusetts Medical School where Jon Kabat-Zinn, a former monk, is on the faculty. If it becomes more widely recognized that meditation can be an important (and very inexpensive) method for the control of chronic pain, and insurance companies are willing to pay for patients to take courses, it could be a very significant area in which Tibetan Buddhism might be influential in American life. Tibetan meditation methods may also be used outside the clinic for "relaxation/stress-reduction centers" to meet the needs of people who recognize physical and mental problems with their stress levels. Many spas and gyms already offer some form of guided meditation for these purposes. Tibetan Buddhism has already played a role in psychotherapy, and it seems likely that the use of Buddhist-derived contemplative techniques will become a fairly common practice in other settings.

Finally, the Tibetan American Buddhism of the future will be further shaped by its encounters with science and with other religions. Both of these areas are increasingly active. For instance, Wallace and Victor Mansfield compared Buddhist philosophy with physics,[39] and Francisco Verela and others did the same with cognitive science.[40] The Dalai Lama took a keen interest in science, participating in several conferences on these topics and others; he has recently published a book on religion and science.[41]

He is also an eager participant in interreligious dialogue. Christianity and Judaism have, naturally, been the principal dialogue partners. Most other Tibetan teachers still have little interest in other religions, but for Western teachers the interreligious dialogue not only provides a way for them to resolve any outstanding religious issues with their own upbringing, but also constitutes a potent method for reaching many of their own students. Roger Kamanetz, a poet who teaches in Louisiana, found that his deep encounter with Tibetan Buddhism also enabled him to see something valuable in his own Jewish tradition.[42] Perhaps in addition to a more purely Buddhist Tibetan American Buddhism, we will see the rise of syncretic forms such as Jewish-Tibetan Buddhism or Christian-Tibetan Buddhism.

CONCLUSION

The last half of the twentieth century was tragic for Tibetans, bringing to their homeland much suffering, death, and the crushing of their traditional culture. But it happened to be a time when the Western world was open to new spiritual pathways, and, when Tibetan Buddhism harbored figures of great learning, compassion, and inventiveness such as the Dalai Lama, the Karmapa, Trungpa Rinpoche, Lama Yeshe, and Tarthang Tulku, Tibetan American Buddhism very quickly established itself and seems to be growing strongly. It faces a crisis of identity as it becomes "Americanized," as it inevitably will be, and as a new generation of Tibetan teachers and new American teachers become its leaders. We are seeing the meeting of the world's richest and most complex religion with the world's richest and most complex

nation, and what develops from their integration will undoubtedly be far more diverse and intricate than we can now imagine.

2. There *is* a refuge ceremony, but it is not obligatory.

3. Eve Mullen, *The American Occupation of Tibetan Buddhism: Tibetans and Their American Hosts in New York City* (New York: Munster, Waxmann, 2001).

4. The "dharma center," a place where laypeople are taught about Buddhist thought (dharma) and instructed in meditation practices, is a recent Western phenomenon that has no precedent in the long history of Buddhism. In the past, Buddhism was transmitted to new areas mainly through the establishment of monasteries. Laypeople received spiritual merit for supporting the monasteries but rarely expected instruction in the philosophy of Buddhism or in any advanced spiritual practices.

5. It should be noted that although this type of tantric practice is the *summa* for Buddhist traditions of the "new" orders, the ancient order, Nyingma, considers Dzogchen to be the highest. Dzogchen does not involve visualization practices, but rather involves attention to the nature of the mind.

6. This is one of the principal points of Geoffrey Samuel's excellent *Civilized Shamans: Buddhism in Tibetan Societies* (Washington, D.C.: Smithsonian, 1993). Samuel analyzes at length what he calls two overlapping shamanic complexes, that of the folk religion and that of Buddhism. He says, "Lamas in Tibet function as shamans, and they do so through the techniques and practices of Vajrayana Buddhism" (9).

7. Various writers have proposed that as many as 25 percent of Tibetans were monastics, but Samuel's review of the evidence (582) convinces me that there was never that many.

8. *Boston Globe,* December 10, 1976. Rick Fields called his excellent history of Buddhism in America *How the Swans Came to the Lake,* 3rd ed. (Boston: Shambhala, 1992).

9. Geshe Wangyal's life is described in Fields, *How the Swans Came to the Lake,* 290–294.

10. Rinpoche ("precious") is a title of respect given to former monastery abbots and to those recognized as the reincarnations of important teachers. The biographies of Lama Yeshe and Zopa Rinpoche can be found on the FPMT Web site, http://www.fpmt.org/teachers/jointbio.asp.

11. The NKT has not published any substantial biography of Geshe Kelsang Gyatso. The best current source of information on him is probably http://en.wikipedia.org/wiki/Kelsang_Gyatso.

12. The Sakya Monastery in Seattle is the seat of the order in the United States, http://www.sakya.org/Lamas.htm.

13. See Fields, *How the Swans Came to the Lake,* 304–308. Information about the Odiyan Retreat Center, probably the most impressive setting for Tibetan Buddhism in America, can be found at http://www.odiyan.org/index.html.

14. A brief biography of Sogyal Rinpoche may be found at the Rigpa foundation Web site, U.S.A., http://www.rigpaus.org/WIR/SR/index.html. His *Tibetan Book of Living and Dying* (New York: HarperCollins, 1992) is largely autobiographical.

15. Her official biography is at http://www.tara.org/jetsunma.htm. A book by journalist Martha Sherrill, *Buddha From Brooklyn* (New York: Random House, 2000), explores the possibility that Jetsunma has created a cult.

The Unification Church/Movement in the United States

Michael L. Mickler

The Unification Church/Movement (UCM) is one of several New Religious Movements (NRMs) that became prominent in the United States during the 1970s. It was originally founded as The Holy Spirit Association for the Unification of World Christianity (HSA-UWC) in Korea by the Reverend Sun Myung Moon (b. 1920) and four followers in 1954. Since then, it has grown into a global movement, consisting of religious, cultural, educational, media, commercial, and industrial enterprises worldwide. The UCM was founded to unite Christian denominations throughout the world, bring unity among all major religions, and, on that basis, build the Kingdom of God on earth, or "Cheon Il Guk."[1] Movement efforts in pursuing these objectives have been vigorously opposed. Derided offensively in the West as "Moonies," the UCM has contended with intense and sustained reactions worldwide and in the United States, rendering it, quite possibly, the most controversial NRM of the latter twentieth century.

HISTORY

UCM history in the United States divides into four relatively discrete phases. They are as follows: (1) a period of transplantation during the 1960s when the movement began missionary activities in the West; (2) a period of evangelization and counter-evangelism, mainly during the 1970s, when the movement gained the bulk of its core membership but also provoked widespread opposition; (3) a period of institutionalization during the 1980s when the movement constructed an elaborate infrastructure of organizations through which it intended to influence opinion leaders and other societal elites; and (4) a period of messianic proclamation, dating from the collapse of communism in the early 1990s, when the movement publicly acknowledged its messianic premises and as the Family Federation for World Peace and Unification launched an ambitious program of "world peace and unification."

Transplantation

The UCM began its mission to the West in 1959 when its first missionaries arrived in the Pacific Northwest. The movement's "early mission" extended through the decade of the 1960s to the arrival of Rev. and Mrs. Moon in 1971. This period was a time of sowing. While the society around the movement exploded in protest and rebellion, the movement grew by translating its core theological texts into English, establishing important patterns of community life, and developing characteristic ways of relating to the wider culture. In these endeavors, the UCM benefited from a small group of unusually qualified and credentialed missionaries.

Young Oon Kim (1914–1989) was the first to arrive, in Eugene, Oregon, in early 1959. She was a graduate of the Methodist seminary at Kwansei Gakuin University in Japan, a United Church of Canada scholarship recipient at Emmanuel College at the University of Toronto, and former professor of New Testament and Comparative Religion at Ewha Women's University, Seoul. David S.C. Kim (b. 1914), the second to arrive, was a former Republic of Korea (ROK) government official and deacon in the Presbyterian Church who had been a United Nations scholar at Swansea University College, Wales. Colonel Bo Hi Pak (b. 1930), a graduate of the Korean Military Academy who trained at Fort Benning, Georgia, was the third Unification missionary to the United States. He returned to the United States in 1961 as a diplomat, serving as assistant military attaché at the Korean Embassy in Washington, D.C. Sang Ik "Papasan" Choi was the last of the original missionaries, arriving in San Francisco in late 1965. He was a former Holiness minister who successfully planted the UCM in Japan from 1958 to 1964.[2]

Despite their credentials or, perhaps, because of them, the chief failing of the missionaries was a lack of unity. From the beginning, there were disagreements, grievances, and squabbles over strategy as well as a tendency to proceed independently from one another. Miss Kim, as she was known, moved to San Francisco in 1960 and Washington, D.C., in 1965 from where she led a network of "centers" across the country referred to as the "Unified Family." David Kim established "United Faith, Inc." and led a string of "United Chapels" from the Pacific Northwest to Chicago. Colonel Pak set up the Korean Cultural and Freedom Foundation, which promoted American tours of the UCM-sponsored "Little Angels" Korean dance troupe, and later established Radio of Free Asia. "Papasan" Choi tapped into the communal ethos and utopian idealism of the 1960s, fashioning a communitarian experiment in San Francisco that included an "International Ideal City Project" on 600 acres in Mendocino County.[3]

The Unification Church's oral tradition holds that the missionaries' failure to unite led to an inadequate result. In fact, core membership of their separately incorporated groups stood at not much more than 300 after more than a decade of effort. However, given the vast cultural distance that the early missionaries needed to bridge, their accomplishments were probably equivalent to or greater than success rates of other overseas missionary movements in the first decade of activity.[4] At the same time, activities in the United States were peripheral to the mainstream

Unification movement, which was centered in Korea and, to a lesser extent, Japan. Not until the 1970s did developments in the United States assume a central role as a consequence of Rev. Moon's decision to shift the focus of his work to the West.

Evangelization and Counterevangelization

The UCM emerged as a national movement in the United States between 1972 and 1976. During this period, the earlier missionary groups merged, national membership multiplied ten times to more than 3,000, and the movement attained widespread visibility. Nevertheless, a good portion of its visibility turned to notoriety as the UCM's rapid growth provoked negative reactions. Increasingly, questions about the movement's religious and organizational legitimacy led to organized efforts to stop it. Prior to addressing these conflicts, it is important to understand "how a small, faltering and obscure movement of the 1960s was able to achieve rapid growth, stability and prominence in the 1970s."[5] In general, this development was the result of changed conditions in American national life, the movement's organizational initiatives, and the presence of Rev. Moon.

Alienated youth, disillusioned both with American society and the political protests and drug culture of the 1960s, contributed to a broad constituency of religious seekers who joined the UCM and other groups during the 1970s. The Unification movement took advantage of this market opportunity by reconfiguring itself from bickering, loosely organized, low-impact missionary groupings into a unified, tightly organized, high-demand NRM. The UCM began this process with a three-year period (1972–1974) of "total mobilization" during which it held "pioneer" training programs, conducted a succession of impressive and expensive "Day of Hope" evangelistic crusades (culminating in a September 18, 1974, Madison Square Garden event), sent out mobile bus teams, appointed state leaders and itinerary workers, and set up mobile fundraising teams. This was possible because of the unifying and energizing presence of Rev. Moon. His activity solidified a common identity, highlighted his central role, established the UCM as a high-demand movement, garnered widespread publicity, and brought in overseas missionaries and money.

If Rev. Moon provided a focus for the movement, he also provided a focus for movement opponents. His Asian origin, presumed connections to the Korean government, alleged lavish lifestyle, and even his name attracted the hostility of enemies who derided followers as "Moonies" and the movement as a "cult." More serious than name-calling were efforts to deny the UCM tax-exempt status, to deny its foreign missionaries entry to the country, and to forcefully extract members from the movement through kidnapping and "deprogramming" (see "Controversies"). By 1976, a broad-based anticult movement designated the Unification movement as a primary target. Their actions put the movement on the defensive, caused it to spend millions of dollars in litigation costs, sparked government investigations, and produced widespread public hostility. The movement's later bicentennial "God Bless America" rallies at Yankee Stadium and the Washington Monument in 1976,

intended to close out the proclamation phase of Rev. Moon's ministry, unfolded within a climate of increased negativity.

Rev. Moon expected the movement to increase its core membership to 30,000 by 1978 in order to have a significant impact in the United States. However, this goal proved to be exceedingly elusive. Hostility toward the UCM, as part of a more generalized negativity toward NRMs, was greatly stimulated by the murder/mass suicides of Peoples Temple devotees in late 1978. In addition, by the 1980s, middle-class youth were less idealistic than in the early 1970s. Rather than religion, they pursued career paths and high-paying jobs. In the face of these realities, the UCM experimented with new witnessing strategies: video and book distribution, festivals, service projects, a "home church" method that did not require converts to move into centers, and occasional "total mobilizations." The "Oakland Family," a remnant of the UCM's earlier communal experiment in the San Francisco Bay Area, was the movement's most successful witnessing center, achieving 90 percent of the movement's results. Nevertheless, due to alleged deceptive and high-pressure recruitment tactics, the Oakland Family also was a lightning rod for UCM opposition.[6] Inadequate or mixed results forced the movement to alter its strategic objectives.

Institutionalization

The UCM continued witnessing and evangelizing efforts during the 1980s. However, it was apparent that the UCM did not have a sufficient number of core members to be an effective grassroots movement. As a result, the movement shifted its strategy, diversified, and began to develop an organizational infrastructure that expanded its ability to exert influence in the United States. Some institutionalization emerged naturally as a consequence of members' maturation. For example, in 1982, the UCM conducted a record-setting wedding or "Blessing" for 2075 couples (4,150 individuals), which eclipsed the previous record of 1,800 married by Rev. Moon in Korea in 1975.[7] With this event, the UCM evolved from a movement of primarily single people to one of married people, virtually overnight. Married life and children introduced new complexities, including the necessity of families finding viable means of financial support. Still, the movement directed the bulk of its resources and energy toward reaching intellectual and societal elites in ways consistent with its vision of

- unity in the realm of religion and culture;
- "co-prosperity" in the realm of economics; and
- ideological armament in the realm of politics.

Movement opponents were still active, and the movement experienced setbacks along the way, most notably Rev. Moon's indictment, conviction, and imprisonment on tax evasion charges (see "Controversies"). However, the UCM was far more influential at the end of the 1980s than it was before.

The movement's main goals in the realm of religion and culture were harmony between religion and science, or at least promotion of a value perspective within the sciences, and ecumenical and interreligious cooperation. Beginning in 1972, the movement sponsored annual International Conferences on the Unity of the Sciences (ICUS), which grew to include more than 900 participants, including several Nobel laureates, by 1981. By then, the movement had established active chapters of the Professors World Peace Academy (PWPA) and Paragon House, which served as a publishing outlet for ICUS and PWPA-related scholars. The UCM followed a similar trajectory in its ecumenical and interreligious outreach. Unification Theological Seminary, established at Barrytown, New York, with an entirely ecumenical faculty, in 1975 hosted "theologians conferences" that led to the creation of the New Ecumenical Research Association in 1980 and the International Religious Foundation (IRF) in 1983. Hundreds of scholars of religion participated in conferences on "Unification theology" and an annual "God Conference." Related initiatives such as the Youth Seminar on World Religions further expanded the movement's ecumenical and interreligious network and involved religion scholars of the highest rank.[8]

The movement based its vision of "coprosperity" on two ideals. The first was the necessity for the "equalization of technology" and "technology transfers" from the advanced to the developing world. This underlay the UCM's efforts to develop Tong-il Industries in South Korea. During the early 1980s, the movements bought several large German machine tool plants, attempting to set up Saeilo Machinery as a worldwide distribution network for Tong-il and West German lines. The UCM's industrial investments were highly publicized and controversial in West Germany but received little, if any media coverage in the United States. The same could not be said about the UCM's involvement in American fishing industry-related enterprises. After 1976, the UCM invested in a plethora of fish-related businesses along the South Korean *chae-bol,* or conglomerate model, acquiring shipbuilding yards, commercial and charter fishing fleets, fish processing plants, and a distribution network consisting of wholesale and retail fish companies, restaurants, markets, and groceries.[9] All of this was driven by the UCM's companion ideal of solving the problem of world hunger.

Work with scholars and business enterprises was a long-term endeavor. The UCM was able to attain more immediate influence in pushing its agenda for ideological armament. Rev. Moon was often portrayed as a fervent anticommunist in the popular press. Nevertheless, his outlook differed significantly from the world view of reactionary rightists in that he criticized selfishness and confusion in the Western system of values, promoted internationalism, and preached racial inclusiveness. Still, Rev. Moon forcefully opposed atheistic communism and regarded it as the chief barrier to God's work in the world. This was a tough sell during the years of President Jimmy Carter's administration (1977–1981), but the presidency of Ronald Reagan (1981–1989) afforded fresh opportunities. The UCM acted decisively, establishing *The Washington Times* in 1982 as a counterbalance to the "liberal" *Washington Post.* The *Times* faced hazing from many quarters and was controversial from the beginning, but became a darling of the New Right and reportedly the newspaper of choice

within the Reagan White House. The *Times,* in turn, maintained a strong advocacy for a broad range of administration initiatives including support for the Nicaraguan Contras and the Strategic Defense Initiative.

Ironically, as the Reagan years came to a close, the UCM became more rather than less active in the public square. The UCM-related American Leadership Conference and the American Freedom Coalition convened "American Leadership Conferences" for civic leaders, distributed more than 30 million pieces of literature during the 1988 Bush-Dukakis presidential campaign, including highly effective "voter scorecards," and in 1990 conducted "Desert Storm" rallies in all 50 states. The PBS series, *Frontline,* concluded in 1992 that "whether they know it or not, Americans should realize Rev. Moon is a force in their political lives."[10]

Messianic Proclamation

The UCM's messianism was well-established, at least since the 1970s. In addition to being typed as an industrialist and anticommunist, media accounts commonly referred to Rev. Moon as a Korean messiah. However, the movement was not willing to concede publicly that he was anything more than a contemporary prophet "crying out in the wilderness of the twentieth century." All this changed during the early 1990s. With the downfall of communism, regarded by the UCM as the chief obstacle to establishing God's sovereignty in the world, Rev. Moon began speaking more explicitly about his identity, and in 1992 eliminated any doubt by declaring that he and Mrs. Moon were "the True Parents of humanity … the Savior, the Lord of the Second Advent, the Messiah."[11] The following year, he announced the transition to a whole new historical epoch, which he termed "the Completed Testament Age." Although details as to the precise nature of the new epoch were sketchy, it involved a fundamental shift in the order of salvation from the individual to the family. It also rendered all previous religious expressions, including that of the Unification Church, obsolete.[12]

During the early 1990s, the movement was optimistic about prospects for immanent, substantive world peace and unification. To some extent, its perspective mirrored that of secular idealists who in the wake of the West's Cold War victory proclaimed "the end of history."[13] Optimism and idealism were put to the test during the post-Cold-War era. However, the movement as a whole stayed the course, pursuing an ambitious three-pronged program of world salvation. The first component was dialog. Rev. Moon remained convinced that interdisciplinary, intercultural, and interreligious exchange was essential for world peace. Therefore, the UCM continued to sponsor a broad array of conferences. However, the defining characteristic of this development was the establishment of numerous "federations" for world peace. Just as the victorious nations created the League of Nations after World War I and the United Nations after World War II, the conclusion of the Cold War required the creation of a new institution, perhaps derived from the UCM's federative network, or so the movement reasoned. Short of that, the UCM hoped to

introduce a religious component, possibly a senate of distinguished religious leaders, into the existing United Nations.[14]

The second component of the UCM's program was forgiveness and reconciliation. Some issues, notably vicious hatred among ethnic, national, racial, and religious groupings, transcended the problem-solving capacity of rational discourse and social idealism. These, in fact, became more pronounced during the post-Cold-War period when they were no longer held in check by competing superpowers. Any program for peace, therefore, had to go beyond interpersonal relations and address issues of forgiveness and reconciliation. Here, the movement took its cue from Rev. Moon. Though widely regarded as a virulent anticommunist, it was less well known that prior to communism's demise, he began altering his persona from that of Cold War warrior to that of "peacemaker and unifier."[15] In particular, he sought reconciliation and developed relationships with Soviet General Secretary Mikhail Gorbachev (b. 1931) and the late North Korean premier, Kim Il Sung (1912–1994). Out of these personal encounters, he derived the inspiration to pursue forgiveness and reconciliation on broader levels. He encouraged marriages between partners from former or current enemy states and sent out members from adversary states as missionary teams. During the 1990s, he pursued these measures in a programmatic way, working with the UCM-backed Women's Federation for World Peace (WFWP) to sponsor large-scale "Sisterhood Ceremonies," first among more than 200,000 South Korean and Japanese women in 38 separate ceremonies in 1994 and later among 4,000 Japanese and American women in eight ceremonies in 1995.[16]

The sanctification of families through "International Marriage Blessings" was the third prong of the UCM's agenda for world peace and unification. Sanctification in the Unification context related to the family and family formation. The gateway to the sanctification process was the Blessing, which became a major point of emphasis for the UCM during the middle and late 1990s. Sanctification was an important complement to movement-sponsored dialogs and reconciliation efforts. The first two prongs in its program essentially dealt with conflict resolution. The third prong, the sanctification of families through the Blessing, was understood to eliminate the root cause of human conflict and division (see "Practices"). Prior to the beginning of the "Completed Testament Age," the Blessing was a narrow gate, restricted almost exclusively to core Unificationists. However, after 1993, Rev. Moon stated his intention of blessing hundreds of thousands and even hundreds of millions of couples before 2000. The UCM sponsored a succession of five Blessings between 1995–2000 in major arenas (three in Seoul Olympic Stadium in Seoul, South Korea, one each in RFK Stadium and Madison Square Garden in New York City). With satellite hookups to Blessing venues worldwide, the movement claimed that it sanctified more than half a billion families.[17]

By 2000, Rev. Moon, now in his eighties, was as hard-driving and as driven as ever. Ongoing programs continued and new ones began, notably a Middle East Peace Initiative involving an array of Christian ministers, Jewish rabbis, and Muslim imams. Nevertheless, the UCM remained suspect in American society and coped

with formidable internal pressures to routinize. In the years ahead, the movement will face ongoing challenges in sustaining its messianism, relating to its external environment and managing its complex inner workings (see "Issues").

BELIEFS AND PRACTICES

Core beliefs of the Unification movement are contained in *Wolli-Kang-ron* (1966), its primary doctrinal and religious text, translated from Korean into two official English edition texts, *Divine Principle* (1973) and *Exposition of the Divine Principle* (1996).[18] These texts express aspects of the "new truth" or "Principle" revealed through Rev. Moon. Though employing familiar Christian theological categories (creation, fall, Christology, resurrection, predestination, Trinity, providential history, and eschatology), the Principle interprets Christian doctrines in ways that highlight the movement's overriding emphasis on the family. God, as parent, is understood to be the source of both masculinity and femininity, and the Principle specifically identifies the Holy Spirit as the feminine aspect of the Godhead. The text similarly propounds a family-based interpretation of original sin, locating the human fall in adulterous and premature sexuality, which the texts maintain is communicated through the symbols in the biblical book of *Genesis.* Humankind's original ancestors supposedly became false parents who perpetuated a fallen lineage and fallen history.

If humankind's loss of original parents was the result of sin, salvation from the perspective of Unification theology hinged on the restoration of "True Parents." This fed directly into the movement's understanding of the person and work of Christ. Jesus essentially came to earth as the second Adam with the mission to find a bride, or second Eve, with whom he would establish a true family, true lineage, and true history. Unification theology, consequently, regards Jesus's crucifixion as a tragic mistake that frustrated God's plan, ushering in a secondary course led by the resurrected Christ and Holy Spirit (in restored Eve's position) who, as "spiritual" True Parents, offer rebirth. Unification theology understands the past 2000 years to be a "prolongation" of God's providence until the coming of the third Adam who will restore a bride, establish a new lineage, and consummate human history. The Principle claims that humanity at present is in the Last Days, that Christ will come again, born in the flesh on earth, and that the nation from which Christ will come is South Korea.

For Unificationists, these core beliefs have the force of revelation. As stated in *Divine Principle,*

> This new, ultimate, final truth … cannot come either from any … synthetic research in the scriptures, or from any human brain … This truth must appear as a revelation from God Himself. This new truth has already appeared![19]

Two additional texts, *Unification Thought* and *Communism: A Critique and Counterproposal,* apply the teachings of Unification theology to philosophy and politics.[20] Together with *Divine Principle,* they provided the theological and ideological foundation for the UCM's initiatives in evangelism, ecumenism, academic pursuits, and public advocacy.

An oral tradition, consisting mainly of Rev. Moon's sermons and speeches, exists alongside the official doctrinal texts. Many of them are more forthcoming about the Second Advent arriving in the persons of Rev. and Mrs. Moon and their family. As noted, Rev. Moon declared publicly in 1992 that he and his wife were "the True Parents of humanity … the Savior, the Lord of the Second Advent, the Messiah," and in 1993 he announced the transition to the "Completed Testament Age." These proclamations marked the beginning of a shift in Unification beliefs since all previous religious expressions, including that of the Unification Church and presumably Unification theology, were understood to be obsolete. The Principle, in its earlier published versions, was seen as preoccupied with issues relevant to restoration, especially with untangling Christian doctrinal matters, rather than with God's original word. Now that the Completed Testament Age had dawned, members increasingly turned their attention to "original" thought. Rev. Moon encouraged this development and in 1998 announced that his words, collected in several volumes of his speeches, were to be the authoritative Completed Testament Age canon. By 2004, a new authoritative set of Rev. Moon's words, known as the *Cheon Seong Gyeong* or "Heavenly Scripture" was prepared. It ran to more than 2,000 pages.[21]

In terms of its practices, the UCM is best known for its joint marriages, referred to by the media as mass marriages and by the movement as International Marriage Blessings. The Blessing, as understood by the movement, is a process through which men and women come into union with each other, engraft to the True Parents, are reconciled with God, and thereby, according to the movement, reconstitute themselves as a new humanity. This process has important internal and external components. Internally, the Blessing cleanses couples and their progeny from the taint of original sin. Externally, "blessed couples" exemplify world peace and unification. Thus, the movement encourages international, intercultural, and interracial—or what it terms "exchange" marriages—in large-scale ceremonies dedicated to "World Peace Through Ideal Families."

As previously noted, the Blessing was a narrow gate, restricted almost entirely to Unification Church members before 1992. After 1993, "open" Blessings and the "globalization of the Blessing" affected movement practices and eventually members' thinking about the rite. Previously, core adherents endured lengthy preparation periods that extended from the time they joined until they were blessed. During this time, they were celibate and fulfilled regular membership duties as well as special conditions associated with the Blessing, such as bringing three new converts ("spiritual children") to the movement and completing a seven-day fast. All candidates were "matched" by Rev. Moon and required official permission to "start their families" after separation periods of varying lengths. When beginning married life, members followed ritual procedures established by the church.[22] After 1993 these conditions did not apply to the overwhelming majority of those being blessed since they were not Unification Church members. For most couples, there was no formal preparation at all.

For Unificationists, the Holy Wine Ceremony was the centerpiece of the Blessing. It signified the cleansing of original sin or, in Unification terms, the "change of blood

lineage." Members attempted to preserve the integrity of this ceremony. However, as adherents conducted marriage rededications, "blessing" couples in living rooms, on beaches, at county fairs, and elsewhere, adaptations and eventually innovations that bore only a faint resemblance to the original tradition emerged. For example, some couples refused wine. In these cases, grape juice, referred to as "holy nectar," sufficed. Others had reservations about accepting drinks from strangers. In these instances, sniffing the wine or dipping one's finger into the cup was sufficient. As movement goals for the number of blessed couples increased into the millions, enterprising members distributed "holy lemonade" to thirsty beach goers or downtown pedestrians, usually with little or no explanation of its benefits. Others distributed holy candy with printed blessing affirmations. Rev. Moon expressed dismay at these practices, but also adapted, stating that those born after his holy matrimony in 1960 or after he began his public ministry in 1945 were already blessed.[23]

The discrepancy between the Blessing as a narrow or wide gate was symptomatic of a more pervasive tension in the movement's spiritual practices between heroic and conventional religiosity. For most of the UCM's history, members attempted to emulate the spirit if not the actual accomplishments of Rev. Moon who, according to *Divine Principle,* "endured suffering unimagined by anyone in human history … fought against myriads of satanic forces … and finally triumphed over them all."[24] Following his pattern of heroic religiosity, members sought to become "small Sun Myung Moons." This became institutionalized in a "formula course" that included three-and-one-half years of fundraising and three-and-one-half years of witnessing as a "foundation to receive the messiah" and be blessed. After the blessing, followers endured marital and family separations for the sake of mission, sometimes lasting years at a time, and continued to make sacrificial financial donations, on occasion, to the point of bankruptcy. Members in the United States were requested to make a "Total Life Offering" of $16,000 several years ago. In Japan, the requested amount was substantially higher. Members maxed out credit cards and even sold off ancestral properties.

Members made sense of these offerings within Unification spirituality, whose core was "to liberate the suffering heart of God." Understanding that God's heart or *Shimjung* was broken by the human fall and Christ's crucifixion, Unificationists' foremost desire was to comfort God. Again, Unificationists took their cue from Rev. Moon who, regarding his incarceration in a North Korean labor camp, supposedly said,

> I never prayed from weakness. I never complained. I was never angry at my situation. I never even asked for His help, but was always busy comforting him and telling him not to worry about me. The Father knows me so well. He already knew my suffering. How could I tell Him about my suffering and cause His heart to grieve still more. I could only tell him I would never be defeated by my suffering.[25]

"Cherished stories" such as these established "theocentric, self-sacrificial love" as the most notable virtue in members' estimation of Rev. Moon's character.[26] Accounts of Rev. Moon's *Shimjung* in the face of misery and deprivation solidified bonds

among members, particularly as they located their stories within the founder's exemplary story.

However, the heroic pattern of Unification religiosity demanded more than spiritual conquests. It mandated world transformation. Unificationists saw themselves in a struggle to reclaim God's sovereignty. In this battle, members exuded a certain militancy in singing of "Heavenly Soldiers," cheering "Mansei" ("Ten Thousand Years"), and in utilizing "crusade" and "commander" designations for evangelistic activities and leadership positions. Rev. Moon encouraged competition among the movement's national groupings. He also continually rotated leaders, shifting them among widely varying assignments and locales, and on occasion declared "emergency mobilizations," thereby creating a committed, seasoned Unification vanguard. For Rev. Moon, no one should settle down prior to global restoration, or at least prior to the establishment of a "restored" nation.

Despite the primacy of the heroic, a pattern of conventional religiosity also emerged and within its first generation, the UCM took on trappings of an organized religion. The movement, in fact, fought to obtain legal recognition as a *bona fide* religion with rights to tax exemption privileges and missionary visas. The Unification Church purchased numerous church buildings and established congregations with regular Sunday worship. The tradition proliferated holidays, known as "holy days," and followed a full church calendar. There also were well-defined rituals and traditions associated with birth, the passage to adulthood, marriage, and death.[27] Married life and progeny, in particular, introduced significant responsibilities. Since such a large percentage of Unificationist couples were paired interracially, interculturally, or internationally, spousal relationships required attention and effort previously dedicated to world salvation. Some couples took family and career as a cue to redefine their church commitments, in many cases, taking conventional jobs and leading seemingly conventional lives.

Given strong internal pressures to routinize, the UCM tried to balance heroic and conventional patterns of religiosity among its core membership. One strategy was to channel the movement's radical demands into defined settings and limited time periods. Thus, members with jobs and families offered "forty-day conditions"—to conduct workshops in the post-Soviet Commonwealth of Independent States in the early 1990s, to help pioneer New Hope Farm in the Brazilian outback during the mid-1990s, to attend ancestor liberation ceremonies in South Korea during the late 1990s, or to participate in peace pilgrimages to the Middle East after 2002. The movement undertook the same strategy with its second generation youth in developing a two-year "Special Task Force" program reminiscent of the Mormon mission. By encapsulating radical demands within relatively controlled settings and limited periods of time, members balanced movement commitments with family, career, and education.

The movement also balanced heroic and conventional patterns of religiosity among its core membership by turning inward, finding resources for hope and renewal in the life of the spirit. Members once again took their cue from Rev. Moon. According to the movement's core theological text,

> For many decades he [Sun Myung Moon] wandered in a vast spiritual world in search of the ultimate truth … Knowing that no one can find the ultimate truth to save mankind without going through the bitterest of trials, he fought alone against myriads of Satanic forces, both in the spiritual and physical worlds, and finally triumphed over them all. In this way, he came into contact with many saints in Paradise and with Jesus, and thus brought into light all the heavenly secrets through his communion with God.[28]

In the face of rejection by the world, members looked to heaven and found reassurance or, alternatively, explanations for their struggles. The movement's shamanistic background and involvement with spiritualism, which included "channeling" or even marrying discarnate spirits, was mostly overlooked until the late 1980s when a young Black Zimbabwean member, claiming to be the "returning resurrection" of Rev. Moon's deceased second son, led a worldwide movement revival. His name was Cleophas Kundioni, and his revival, which consisted mainly of "forgiveness" sessions, ran on four continents (Africa, Europe, North America, and Asia) for a little over a year's duration, 1987–1988. They were marked by increasingly eccentric behavior and violence. Rev. Moon finally directed him back to Africa, a directive that he disobeyed. At this point he lost all credibility. There was a consensus among Unificationists that Heung-jin Nim's (Rev. Moon's son) spirit had left the embodiment and an evil spirit had taken over. Cleophas subsequently turned against the church and drew out a substantial portion of the UC in Zimbabwe into a new sect. In the mid-1990s, a fresh spiritual revival of even broader scope and longer duration impacted the movement, this time led by the "embodiment" of Mrs. Moon's deceased mother Soon Ae Hong (1914–1989). In addition to banishing "evil spirits," members were given the chance to "liberate" and "bless" their ancestors. In fact, in 1999, 56 billion spirits were reported to have been blessed, including 65 Old Testament figures, 27 New Testament figures, 57 popes, 26 Byzantine emperors, and 28 emperors of the Holy Roman Empire. In 2002, the movement published "Cloud of Witnesses" ads in major American newspapers, which included testaments to Rev. Moon from deceased American presidents. By testifying to spiritual phenomena of this sort, members managed external rejection and maintained hope even as they lived out their everyday lives.[29]

CONTROVERSIES

As stated, the UCM, aka "Moonies," sparked intense and sustained reactions worldwide and in the United States, rendering it, quite possibly, the most controversial NRM of the latter twentieth century. Much of this was due to the movement's global spread and its founder's longevity. Other NRM claimants to the mantle of "most controversial" may have made more indelible imprints on the twentieth century psyche as a result of spectacular, self-destructive apocalyptic conflagrations. However, for the breadth and longevity of controversy, the UCM was probably without peer. Controversies over the UCM derived from the movement's messianism, from misunderstandings and fear as to the UCM's political goals and from

suspicions as to its apparent wealth. This section will highlight selected controversies in each of these areas.

The UCM was a key player in the so-called "cult wars" of the 1970s. The seemingly sudden proliferation of NRMs, many of them exotic and high-demand, provoked panicked reactions from parents who "lost" children to one or another of these groups. Convinced that their children were "brainwashed," some hired the services of "deprogrammers" who forcefully abducted adherents and subjected them to "deprogramming," in which they confined clients and used various techniques to pressure them to renounce their beliefs. "Deprogrammed" ex-members and apostates (those who willingly leave a religious group) subsequently contributed to public hysteria and the rise of a loosely organized "anticult movement" (ACM). The ACM maintained that the UCM and similar movements were not "true" religions but "pseudo religions" or "cults" utilizing manipulative tactics (so-called "coercive persuasion") to induce sudden personality changes. Hence, for ACM sympathizers, cults were not subject to the privileges or protections afforded conventional religions.

The UCM was "public enemy number one" according to Ted Patrick (b. 1930), the decade's most well-known deprogrammer. Patrick claimed UCM recruiters practiced "on-the-spot hypnosis" and the same brainwashing techniques as practiced by the North Koreans when they "brainwashed" American POWs during the Korean Conflict. Members were "robots" or "zombies" who needed to be taken out "bodily."[30] The courts clamped down on Patrick's illegal kidnappings and deprogramming, but a new form of "legal deprogramming" followed in which sympathetic judges granted temporary conservatorships or guardianships so that parents could legally remove adult children from the movement and turn them over to paid deprogrammers or "deprogramming centers." The courts also clamped down on conservatorships, but not before more than several hundred UCM members were subjected to illegal or legal deprogramming.

The UCM spent millions of dollars defending itself during the late 1970s and early 1980s. Apart from the deprogramming controversy, it was denied tax-exemption privileges, and its foreign members were denied the right to enter the country as missionaries. Through near-constant litigation, the UCM reversed these handicaps and obtained gradual recognition as a *bona fide* religion with tax exemption privileges, public solicitation rights, and access to missionary visas. It also was able to extend constitutional protections to members. Still, the movement lost the one case that was the most highly publicized, most costly, and most important. Rev. Moon's conviction and imprisonment on tax evasion charges dominated press coverage of the movement at the time and continued to be a point of reference in accounts of the Unification Church in the 1980s (see below). Nonetheless, by 1985, the UCM had vindicated its position and existed on solid legal footing in the United States.

Although the Unification Church attained recognition as a *bona fide* religion in the eyes of the government, it faced opposition from Jewish and Christian leaders. In 1976, the American Jewish Committee charged in an official report that *Divine Principle* revealed "an orientation of almost unrelieved hostility toward the Jewish

people." Citing specific references, the report asserted that whether discussing the Israelites of the Hebrew Bible or the Jews of the New Testament period, "Rev. Moon portrays their behavior as reprobate, their intentions as evil (often diabolical), and their religious mission as eclipsed." The report elicited an official "Statement on Jews and Israel" signed by Rev. Moon, which repudiated anti-Semitism and pledged support for the state of Israel. Subsequent movement rejoinders pointed out that most of the offending passages were direct citations from the New Testament. Nonetheless, relations between the UCM and Judaism remained strained, in part because the public assumed that a disproportionate number of movement adherents were Jewish.[31]

Shortly thereafter, the Commission on Faith and Order of the National Council of Churches of Christ in the U.S.A. (NCC) followed suit by releasing to the press and other interested persons "A Critique of the Theology of the Unification Church as Set Forth in *Divine Principle*." The 11-page "official study document," issued "to clarify the claim to Christian identity made by the Unification Church," admitted to "diversity in Christian belief and … thus, internal disagreement." Nevertheless, the Commission determined that the Unification Church "is not a Christian Church" and that its claim … to Christian identity cannot be recognized." The Roman Catholic hierarchy in the United States took no official stance. However, Japanese bishops issued a statement saying that the movement "has nothing to do with Catholicism, not even with Christianity, and is not an object of ecumenism."[32]

Rebuffed by Judeo-Christian officialdom, the UCM set about developing its own ecumenical and interreligious network (see above). It also began the process of carefully building bridges back to the religious mainstream. However, this was not easy given the movement's messianism. In 1992, Rev. Moon offended some allies by declaring at a UCM-sponsored interreligious gathering that he and Mrs. Moon "are the True Parents of all humanity … the Savior, the Lord of the Second Advent, the Messiah." The implication of the Completed Testament Age superceding "Old" and "New" Testament ages was not a boost to rapprochement any more than Rev. Moon's statement that unlike "American leaders, prominent Christians, and other leading figures of the world" who have "only a faint understanding of the forces that shape the future … I know the direction that humankind must go, and I, with the help of God, will lead the world there."[33]

However, fallout over messianic proclamations was minor compared to the controversy that erupted over Roman Catholic Archbishop Emmanuel Milingo's participation in a Unification-sponsored "International Marriage Blessing of Religious Leaders" at the New York Hilton in May 2001. Milingo, 70, was the archbishop of Lusaka, Zambia, from 1968 until he resigned under pressure in 1983 for conducting faith healings and exorcisms. Assigned to the Pontifical Council for Pastoral Care of Migrants and Itinerant Peoples in Rome, Milingo continued faith healings and exorcisms until quietly forced to retire in 2000. His decision to marry Maria Sung, a 43-year-old acupuncturist from South Korea, in a ceremony officiated by Rev. and Mrs. Moon, precipitated a chain of highly charged events. The Roman Catholic hierarchy, fearful of a schism in Africa where Milingo retained a following, demanded that he renounce the marriage or face excommunication. Milingo met Pope John

Paul II, who persuaded him to return to the fold and sequester himself for reflection. Denied access to her husband, Maria Sung began a hunger strike on St. Peter's Square. This led to a meeting with Milingo after which the couple agreed to terminate the marriage.[34]

Another initiative, integral to Unification theology, sparked religious controversy in 2003 when Rev. Moon and the Family Federation for World Peace and Unification called upon Christian clergy to remove crosses from their churches. As noted above, Unification theology treats the crucifixion as a tragic mistake that frustrated God's providence. Moreover, the cross as a symbol was understood to perpetuate separation with Judaism and conflict with Islam. In response to this call, 123 supportive clergy took down their crosses on Good Friday in ceremonies intended to mark an end to the era of bloodshed and sacrifice and the beginning of a new era. Not surprisingly, this provoked negative reactions. Many clergy who attended Unification meetings or supported the movement lost their congregations or were stripped of their positions.[35]

Misunderstanding and fear as to the UCM's political goals were additional sources of controversy that separated it from other NRMs. Unlike most NRMs, the UCM articulated civic themes, took stands on public issues, established what it termed "educational" or what its opponents termed "front" organizations, and engaged elected officials. The UCM insisted that it had no political ambitions. However, given its "victory of communism" activities, and its support for the Republic of Korea, Richard Nixon, Ronald Reagan, and an array of right-wing causes, Rev. Moon and the UCM were at various times labeled by critics as fascist warmongers and tools of the South Korean Central Intelligence Agency (KCIA). Critics also accused the movement of advocating theocracy, thereby threatening the classical Western dichotomy between the secular and the sacred.[36]

These issues first surfaced in 1973 when Rev. Moon launched a "National Prayer and Fast for the Watergate Crisis" (NPFWC) and published an "Answer to Watergate" statement in leading newspapers throughout the United States. Rev. Moon stated that "God's command at this crossroads in American history" was to "forgive, love, and unite." He further claimed that "God has chosen Richard Nixon to be President of the United States" and "Therefore, God has the power and authority to dismiss him." From the movement's standpoint, the NPFWC added a prophetic dimension to its tradition, or a willingness to risk unpopularity to convey its understanding of God's word. In fact, the action earned it the enmity of American liberals. In addition, to speak of God's will in politics or public life crossed the church-state divide for many Americans.

In the post-Watergate era, the UCM became entangled in "Koreagate," South Korean influence buying on Capitol Hill. The United States House Subcommittee on International Organizations, chaired by Rep. Donald Fraser (D-MN), launched a probe into Korean-American relations, particularly KCIA activities, and attempted to establish a link between the KCIA and the Unification Church. In its investigation, the Subcommittee leaked several confidential, unevaluated intelligence documents, which led to press reports that the church "was founded by the Director of

the Korean Central Intelligence Agency in 1961" or that it emerged "from its origins as a small-time Korean sex cult into a worldwide organization operated by the Korean Central Intelligence Agency." These allegations were false, as the Subcommittee's final report admitted. Although concluding that the "Moon Organization was not an agent of influence for the ROK Government," the Subcommittee called on the federal government to form an "interagency task force" to investigate the church.[37] No interagency task force was created. Nevertheless, the Subcommittee perpetuated a climate of suspicion in relation to Rev. Moon and the UCM.

The UCM's access and influence within the conservative Reagan administration was a matter of concern during the 1980s, and *The Washington Times* was controversial, as noted. During this period, the Collegiate Association for the Research of Principles (CARP), a UCM-affiliated organization, confronted leftist groups on college and university campuses. In traditionally liberal or radical campus settings, such as the University of Wisconsin at Madison, members were spat upon, kicked, and taunted with jeers of "Moonie slime" or "Moonie wimps." CARP did not back down, but after the Soviet downing of Korean Airline Flight 007 in 1983, CARP developed a revolutionary, activist élan of its own, replete with practiced chants, burnings of Soviet leaders in effigy, hard-driving rock bands, and touring martial arts groups (helpful in protecting CARP podiums from assaults). The CAUSA Ministerial Alliance, which propagated the UCM's critique of communism, made inroads among civil rights veterans and pastors to the extent that critics complained of a "rightward" shift among Black clergy.[38]

In the post-Cold-War era, Rev. Moon's increasingly frank messianism stirred new controversies, especially when it overflowed the bounds of faith and encroached upon the public. The best example of this was a "King and Queen of Peace" ceremony conducted at the Dirksen Senate Office Building on March 23, 2004. At this event, with one sitting American senator and six congressional representatives in attendance, some 100 supporting religious leaders received "Crown of Peace" awards and Rev. and Mrs. Moon, "wearing flowing robes reminiscent of Middle Ages kingly attire," were crowned "King and Queen of Peace." Initially ignored, Internet blogs discussed the event at length, charging that organizations affiliated with the UCM were pursuing "Moon's longstanding dream of merging religion and government under his authority."[39]

Suspicions as to its apparent wealth were a third source of controversy surrounding the UCM. The movement, early on, recognized that large expenditures were, in themselves, a means of attaining public visibility. Thus, movement spokespersons were not hesitant to release six- and seven-figure budget allotments for evangelistic tours. The same dynamic was at work in the movement's real estate acquisitions in high profile locales, especially, two large estates and 300 acres of greenbelt land in Westchester County, New York, the former Columbia University Club, and the New Yorker Hotel in Manhattan. In addition, Rev. Moon's calling card listed him as chairman of the board of five South Korean industrial concerns.[40]

The fact that the church had these holdings was not controversial by itself, but became so when coupled with public perception of the manner in which Rev. Moon's

alleged lavish lifestyle contrasted with the public image of followers peddling peanuts and flowers on the streets. This was a motivating factor behind a 1976 "Day of Affirmation and Protest" in which critics presented grievances against the movement to Senator Robert Dole (R-KS) and representatives of seven American government agencies. Dole, as ranking member of the Senate Finance Committee, previously wrote a letter to the Internal Revenue Service (IRS) stating that an audit of the Unification Church "may be warranted" and then released the letter to the press. Within days, the IRS began a tax investigation of the church. A "squad of IRS agents" took up "permanent offices in the church's downtown New York City headquarters, while a team of field agents began round-the-clock surveillance of selected church members and their telephones." After two years of investigation, the IRS did not find anything that compromised the church's tax-exempt status, but turned over to the New York District Attorney's Office "certain anomalies" in Rev. Moon's tax returns for the years 1973–1975. It was this finding, previously discussed, that led to Rev. Moon's indictment and conviction on tax evasion charges.[41]

The audit of Rev. Moon's tax returns for 1973–1975 showed a liability of $7,300, less than the $2,500 per year required by IRS guidelines for criminal prosecution. The United States Department of Justice Tax Division questioned whether there was a tax liability at all and concluded in a written memorandum that prosecution was not advisable. Nevertheless, after convening three grand juries, an aggressive prosecuting attorney for the Southern District of New York obtained an indictment and conviction of Rev. Moon. Denied on appeal, Rev. Moon served nearly 12 months in Danbury Federal Correctional Institution, Connecticut, and a month-and-a-half in Phoenix House Foundation, a halfway house in Brooklyn, New York, until August 20, 1984.[42]

The UCM contended that Rev. Moon had no tax liability but exercised an accepted and widely practiced trustee role known as corporation sole. Numerous religious bodies, including the National Council of Churches, the National Association of Evangelicals, and the Catholic League for Religious and Civil Rights as well as the ACLU, Spartacus League, and the states of Hawaii, Oregon, and Rhode Island, agreed and filed *amicus curiae* briefs in support of Rev. Moon. Some distanced support for Rev. Moon's religious and civil liberties from support of his theology or program. Others, especially from minority communities, viewed Rev. Moon as a fellow victim of racial prejudice and were less concerned about doctrinal niceties. The UCM deftly channeled this support into a variety of alliances, coalitions, committees, rallies, and fellowships. By 1985, even the mainstream media conceded that opposition to the government's handling of Rev. Moon's case was broad-based. In all, 40 groups and individuals representing 120 million Americans filed *amicus curiae* briefs in support of his appeal.[43]

Another problem faced by the movement was the banning of its fundraising by innumerable local municipalities and cities throughout the nation. In some cases, local governments rewrote solicitation and licensing statutes to bar the UCM. Other times, local police jailed and fined movement fundraisers. According to a November 1978 report, the church filed 62 lawsuits in federal courts across the country from

September 1977 through October 1978, 52 of them resolved in the church's favor, the others still pending. The movement eventually won hundreds of solicitation cases in succeeding years, one of which (*Larson v. Valenti,* 1982), on appeal to the United States Supreme Court, established important legal protections against unequal government treatment of controversial religious groups.[44]

Detractors continued to suspect movement expenditures. Moreover, start-up costs for *The Washington Times,* which the UCM launched as a competitor paper to the *Washington Post* in 1982, were estimated to be in the $40–$50 million range. Prior to that, the movement spent $40 million on *Oh Inchon!*, a movie release now recalled as one of Hollywood's all-time film disasters. The UCM spent $30–$50 million in marine industry acquisitions and $10–$15 million annually on nonprofits. In the early 1990s, the UCM-funded Professors World Peace Academy bailed out the University of Bridgeport in Connecticut for $50 million in exchange for a controlling interest on its board. In 1983, the UCM's South Korean business enterprises had total assets worth $198 million. However, the movement's South Korean enterprises provided only marginal funding for American operations. In reality, Japan was the economic juggernaut that powered the worldwide UCM. In 1984, two former Japanese church officials reported that the movement there sent more than $800 million to the United States over the previous nine years through a variety of businesses and donors who benefited from Japan's overheated economy. American mobile fundraising teams, which consisted of members who sold flowers, art work, candy, and other items door-to-door or in parking lots, supplemented this funding.[45]

ISSUES

The UCM faces four major issues in relation to its future development. They are the following: (1) succession, or the question of leadership once Rev. Moon is no longer present; (2) contextualization, or the extent to which the movement needs to develop a stronger sense of continuity with American religious culture; (3) socialization, mainly the challenge of retaining those born into the faith; and (4) secularization, or the extent to which the movement can maintain its transformative fervor in the face of pressures to serve its organizational self-interest.

Succession

For core movement adherents, Rev. Moon fits sociologist Max Weber's classic description of the charismatic leader as one "endowed with supernatural, superhuman, or at least exceptional powers and qualities." Weber held that charisma, in its "pure" form, was "a specifically revolutionary force." However, he recognized the necessity of "routinization," or the setting up of a "permanent routine structure" after the leader's death. A successful transition from "pure" to "routinized" forms of charisma is a key factor for any movement to sustain its organizational continuity.[46]

The most important organizational asset of the UCM is its common belief in the founder's exemplary character. As noted earlier, "cherished stories" were repeatedly

told within the community that established "theocentric self-sacrificial love" as the most notable virtue manifested in Rev. Moon's life. Rev. Moon was also credited with paranormal gifts and achievements. In the course of a single generation, the UCM emerged from exceedingly humble origins to become a complex, diversified, multinational conglomerate with an astonishing array of churches, educational and cultural foundations, and businesses. Clearly charismatic leadership fueled the movement's initial advance. Rev. Moon had few internal constraints in making policy decisions and allocating movement resources. However, what had been an organizational asset can, with the prophet's disappearance, become a liability.

The concentration of authority in a single individual, no matter how gifted or worthy, inevitably raises the problem of succession. The UCM survived Rev. Moon's imprisonment, and branches of the movement function with relative autonomy. Nevertheless, Rev. Moon's presence enabled the movement to survive infighting among top leaders, factionalism between departments, and historic national enmity, notably between South Koreans and Japanese. The succession problem is further complicated by a multiplicity of candidates from the same charismatic family. At various times, speculation focused on Rev. Moon's wife, eldest son, and third son (his deceased second son being regarded as "commander-in-chief" of the spirit world). More recently, elder siblings were given business functions and Rev. Moon's youngest son was given educational/religious functions, at least in the West. However, as a movement scholar points out, "It is usually very difficult for hereditary charisma to demand the same or stronger dedication from the original founder's followers … Few biographical stories about Rev. Moon's children … are likely to match the dramatic and extraordinary quality of their father's story."[47]

A silver lining in what otherwise might be a bleak succession scenario derives from Weber's insight that personal charisma survives only so long as it is "proved."[48] In other words, leaders must continually "produce" to satisfy followers. This emphasis on results energizes first-generation development but also leads to "a tendency to rely on showy, visual depictions of success." The UCM's sense of urgency in evidencing its claims led to problems: in particular, short-term thinking and pressure on leaders to succeed encouraged reports of inflated results and undermined the movement's access to accurate information. Also, since charismatic authority, at least within the Unification tradition, implied a flawless performance, interpretations that denied failures kept the movement from recognizing those failures.[49] Charismatic inspiration, minus careful research and management, led to financial losses in the millions of dollars.[50] In these initiatives, the movement may have benefited more from the founder's symbolic than actual presence. Also some followers, including those in the line of succession, probably will function more freely and productively outside the glare of a single dominant charismatic personality.

Contextualization

The UCM places considerable public emphasis on the international, intercultural, and interracial aspects of its work. Rev. Moon also declared in several of his addresses

that "The United States of America, transcending race and nationality, is already a model of the unified world."[51] At the same time, Rev. Moon and much of the movement's senior South Korean and Japanese leadership remained ambivalent toward American culture. They had a particularly difficult time fathoming such core American cultural norms as equality. For them, it was perfectly obvious that there was no equality. Rather, everyone knew their place in a secure, familial-based social order. Equally disturbing was what the movement's East Asian leadership experienced as an abrasive cultural style. Being used to more understated, deferential modes of relating, frank styles of interaction, including expressions of disagreement with scant acknowledgement of a given leader's need to save face, created distance. However, what really grated on Rev. Moon and the movement's top Asian leadership was the American air of cultural superiority: that the United States was always on the side of righteousness, or at least was the leading force for goodness in the world; that those who could not speak English were inferior; or that leadership was an American entitlement.

In the face of continued rejection and ridicule, and especially after his indictment and conviction on tax evasion charges, Rev. Moon adopted a more critical posture toward the United States and American culture. Though rarely articulated in public, Rev. Moon's frustration was increasingly apparent in his speeches to members and in his choice of leaders. As early as 1978, he decided "Westerners couldn't cope on their own," and in 1983 he appointed South Korean leaders to the posts of highest authority in the American church. In a memorable turn of phrase, he stated, "English is only spoken in the colonies of the kingdom of heaven." His criticism of American culture escalated during the 1990s and began to spill over into public accounts. The *New York Times International* noted in late 1999 that Rev. Moon was "disenchanted" with the United States and quoted him as saying, "The country that represents Satan's harvest is America, the kingdom of extreme individuality, of free sex."[52]

Most members willingly accepted criticism and denunciations from Rev. Moon. Nevertheless, some felt that tribalization, particularly the universalization of Korean cultural norms, was an internal peril facing the UCM. The movement's East Asian leadership relied on Western members to interface with officials, and leadership of its major cultural affiliates was largely vested in Western intellectuals or professionals. However, these were strategic concessions that the movement's leadership was convinced they would not have to make once the center of global civilization shifted to the Korean peninsula. Apart from the universalization of Korean cultural patterns, heavy accretions of shamanistic ritual practices, numerology, and cosmic declarations were off-putting for some, especially in the West. Under these circumstances, these adherents argued that the movement needed to develop a stronger sense of continuity with American religious culture. Many of them concluded that the movement was too deviant, too Korean, or too Japanese. Alien standards, in their estimation, contributed to a loss or stagnancy in membership, financial problems, and a loss of moral authority.[53]

Socialization

Transmitting religious identity to the next generation is an exceedingly relevant issue for core Unificationists. Religious education and effective socialization of those born into the faith is a priority for most religious traditions, but especially so for the UCM given its emphasis on blood lineage and its investment of theological capital in the ideal of "sinless" children. As noted earlier, movement adherents understood the Blessing as a process through which men and women came into union with each other, engrafted to the True Parents, were reconciled with God, and, thereby, reconstituted themselves as a new humanity. Crucial to this understanding was the belief that children born of marriages "blessed" by Rev. and Mrs. Moon were free from the taint of original sin. Failure to resolve intergenerational issues and transmit its faith traditions to the succeeding generation, therefore, posed a more heightened threat to the UCM than it might to other movements.

The socialization of "blessed" children (BCs) raised a variety of nature/nurture issues. On the "nature" side of the question, the movement articulated certain qualifications in its definition of sinlessness. For example, though the Blessing severed the root of sin, it was freely conceded that BCs still retained greater or lesser degrees of ancestral, national, and individual sin. That is, they were subject to the influences of their parents, family tradition, culture, and numerous environmental factors. They also needed to overcome their own wrong actions. In addition to this, the movement distinguished between sinlessness and perfection. BCs, though their path may be open, as never before, still had to remain faithful through a growth process toward oneness with God. In order to do so, they must be properly raised, educated, and socialized in faith. Here, questions of nature crossed over into issues of nurture.

The UCM supported a broad array of educational and religious identity-transmitting options. These ranged from abstinence education and service-learning programs to movement-run or affiliated day cares, as well as elementary, secondary, undergraduate, and graduate schools. The movement also maintained a broad campus ministry, a two-year missionary-training program, regular Sunday schools, summer camps, and a second generation department. Effective socialization, for most Unificationists, necessitated that the next generation (1) maintain their sexual purity before marriage, and (2) be matched and blessed either directly by Rev. Moon or by their parents with another "blessed" child. School and career success, though desirable, were secondary. There were a few indications that impediments to BCs marrying non-BCs could lessen. Rev. Moon, in several recent cases, matched BCs to first-generation converts. The movement also made some accommodations for BCs marrying outside the faith. In addition, Rev. Moon declared on a couple of occasions that anyone born after 1960 or 1945 could be considered "second generation" according to the "merit of the age." These statements may provide a theological rationale for intermarriage. Nevertheless, the Blessing still stands as a dividing- line between Unificationism and the world.

Secularization

In the future the UCM will face the challenge of maintaining its zeal as a "world-transforming social movement, i.e., one that seeks total, permanent, structural change of societies across all institutions."[54] In fact, the movement may be reaching what American sociologist of religion Rodney Stark termed "the crisis of confidence that awaits most new religious movements as the founding generation reaches the end of their lives." According to Stark, "the record of new faiths suggests that unless the movement reaches a persuasive appearance of major success within the first generation, the founders will lose hope and turn the movement inward—adopt a new rhetoric that deemphasizes growth and conversion." Stark defined success as a "variable based on the degree to which a religious movement is able to dominate one or more societies," that is, "to influence the behavior, culture and public policy in a society."[55]

Given its numbers and resources, the UCM boasts of accomplishments in the United States worthy of groups several times its size. However, it has not attained any type of dominance. Evidence suggests that the movement influenced American governmental policy, particularly during the Reagan years. Still, the UCM was far from being a dominant majority. In reality, the movement's negative public image had not changed by the end of the twentieth century. The Unification Church obtained recognition as a *bona fide* religion, and the UCM's organizational components operated as legal entities. Still, Rev. Moon and the movement were considered suspect. Far from being a dominant majority, most members' experience was that they had only recently risen to the status of being an accepted minority.

The movement's core membership in the United States did not grow substantially from the 1970s. This downturn in the United States was balanced by growth spurts elsewhere in the world and by progress in influencing societal elites. Nevertheless, the public "face" of the movement, as reported by the Seattle *Post-Intelligencer,* was becoming one of "middle-class, middle-aged, multi-ethnic moderation."[56] Given this reality, will the movement of the future be primarily concerned with preserving what has been gained, seeking accommodation, and carving out a denominational niche within which it might self-perpetuate? The UCM created a formidable institutional infrastructure. Whether it maintains its transformative fervor while serving its legitimate organizational interests, or whether its organizational interests become primary, remains to be seen.[57]

NOTES

1. Cheon Il Guk is an abbreviated version of the longer Korean phrase "Cheon Ju Pyeong Hwa Tongil Guk" meaning "nation of cosmic peace and unity." There are additional variant meanings based upon the Chinese characters, such as "heaven and earth becoming one" or "man and woman becoming one." It is the movement's current operative phrase for the Kingdom of God.

2. Each of the original missionaries played significant roles in the movement's subsequent development. Young Oon Kim was Professor of Systematic Theology at Unification

Theological Seminary (1975–1988) and the movement's leading theologian, authoring *Unification Theology and Christian Thought* (New York: Golden Gate Publishing Co., 1975, 1976); *World Religions,* 3 vols. (New York: Golden Gate Publishing Co., 1976); and *Unification Theology* (New York : Holy Spirit Association for the Unification of World Christianity, 1980). David Kim was President of Unification Theological Seminary (1975–1994) and a leader in the movement's ecumenical work. Bo Hi Pak was Rev. Moon's personal assistant and translator as well as president of the Washington Times Corporation (1982–1992). San Ik Choi (b. 1925) initiated a pattern of community life and witnessing that brought exceptional results for 15 years in the San Francisco Bay Area.

3. For a more detailed description of the UCM's early mission, see Michael L. Mickler, *Forty Years in America: An Intimate History of the Unification Movement, 1959–1999* (New York: HSA-UWC, 2000), 8–36; and Michael L. Mickler, *A History of the Unification Church in America, 1959–74: Emergence of a National Movement* (New York: Garland, 1993), 3–172. For an early sociological account of Miss Kim's group in the San Francisco Bay Area, see John Lofland, *Doomsday Cult: A Study of Conversion, Proselytization and Maintenance of Faith* (Englewood Cliffs, NJ: Prentice-Hall, 1966). Lofland was a doctoral student at the University of California at Berkeley who wrote his dissertation, "The World Savers: A Field Study of Cult Processes" (1964), on Miss Kim's group. Despite his use of pseudonyms, his work was not appreciated nor acknowledged by her group. However, the theory of conversion advanced in the book and in an earlier article coauthored with Rodney Stark, "Becoming a World-Saver," *American Sociological Review* 30 (December 1965): 862–874, has the distinction of being the most widely cited model of conversion in the sociology of religion.

4. See Rodney Stark, *The Rise of Christianity* (Princeton, NJ: Princeton University Press, 1966), 4–21.

5. John Lofland, "Moonies in America: From Rag-tag Band to Streamlined Movement" (lecture given at the University of California at Davis, June 5, 1979).

6. See David Bromley and Anson Shupe, *Strange Gods: The Great American Cult Scare* (Boston: Beacon Press, 1981), 104–105, 115–127.

7. The *Guinness Book of World Records* listed the 1,800 couple wedding as the largest mass wedding in history. The 2,075 couple wedding was soon eclipsed by a 6,500 couple wedding performed by Rev. Moon in Korea in October 1982. These totals were regularly eclipsed by movement-sponsored "International Marriage Blessings" during the 1990s (see "Practices").

8. Huston Smith, author of *The World's Religions* (San Francisco: HarperSanFrancisco, 1991), and recognized as one of the country's foremost authorities on world faiths, cochaired the first two Youth Seminars and served as chairperson of the fourth God Conference.

9. For comprehensive coverage of enterprises, see *The Ocean Providence: The First Twenty Years* (New York: The Ocean Providence Twentieth Anniversary Planning Committee, 1994). For controversy surrounding the UCM's maritime initiatives, see Scott Cramer, "Why Moonies Catch More Tuna," *Yankee* 44 (November 1980): 127–33*ff.*; Geoffrey Moorhouse, "Moonies Invade Gloucester," *Harpers* 278 (January 1981): 46–52; and Calvin Trillin, "U.S. Journal—Bayou La Batre, Ala.," *New Yorker* 54 (March 27, 1978): 99–104.

10. Frontline, "The Resurrection of Rev. Moon," January 21, 1991.

11. Sun Myung Moon, "Becoming Leaders and Building a World of Peace" (speech delivered at the International Culture and Sports Festival, Seoul, Korea, August 24, 1992).

12. Sun Myung Moon, "True Parents and the Completed Testament Age" (speech delivered at the Women's Federation for World Peace Rally, Seoul, Korea, June 1993). The UCM reconfigured itself as the Family Federation for World Peace and Unification (FFWPU) during the

1990s. The FFWPU was understood to supercede the Unification Church. However, as of this writing, this had not occurred and the Unification Church, formally The Holy Spirit Association for the Unification of World Christianity (HSA-UWC) still exists as a core movement corporate entity.

13. Francis Fukuyama, "The End of History?" *The National Interest* (Summer 1989). See also *The End of History and the Last Man* (New York: Free Press, 1992).

14. Chung Hwan Kwak, "New Directions for Interfaith" (speech delivered at IRFWP conference on Realizing the Interfaith Ideal: Action Beyond Dialog, Washington, D.C., December 18–20, 1998).

15. This effort was apparent in a glossy volume published by the movement, *Reverend Sun Myung Moon: Peacemaker and Unifier* (McLean, VA: International Peace Foundation, 1990). While pursuing "Victory Over Communism" activities, the UCM simultaneously cultivated contacts within the socialist world. The UCM-affiliated World Media Association feted hundreds of Western journalists on "fact-finding" trips to Russia and other Soviet republics between 1982 and 1989. In 1988, at the Seoul Olympics, the UCM made special efforts to welcome Soviet and Eastern bloc athletes, providing them with gifts and invitations to cultural events. Julia Moon, Rev. Moon's daughter-in-law and prima ballerina for the UCM-funded Universal Ballet, became the first South Korean ballerina to perform with the Kirov Ballet in 1989. The UCM won approval to invest in an automobile plant in China and established an engineering college at Yongmyung University in the ethnic Korean region of Manchuria.

16. The sisterhood ceremonies in the United States were high profile events that included speeches by such luminaries as William Bennet, Jeanne Kirkpatrick, Barbara Walters, Christopher Reeve, Coretta Scott King, and most prominently, President and Mrs. George W. Bush who accompanied and spoke in support of WFWP with Mrs. Moon on a six-city speaking tour in Japan.

17. These figures were impossible to verify. However, the UCM claimed to have blessed 360,000 couples in 1995, 3.6 million couples in 1997, 36 million couples in 1998, 360 million couples in 1999, and the first stage of 400 million couples in 2000. The Associated Press estimated there were 28,000 couples or 56,000 participants at the main venue in RFK Stadium, Washington, D.C., for Blessing '97. Blessing '98 filled New York's Madison Square Garden and included a 2,000-voice gospel choir.

The Bahá'ís of the United States

Robert H. Stockman

INTRODUCTION

The Bahá'í Faith was first publicly mentioned in the United States in 1893 when a Presbyterian missionary spoke about its founder, Husayn-'Alí of Núr, titled Bahá'u'lláh (1817–1892), in a talk at the World's Parliament of Religions in Chicago.[1] Bahá'u'lláh was born in northern Iran to an aristocratic Shiite Muslim family. A religious prisoner and exile for 40 years, he wrote extensively. In 1863 he stated his claim to be God's latest Manifestation (messenger). His extensive writings—15,000 texts are extant—define his religion's teachings and form the core of its scripture. At the time of his death the religion had been established in a number of places in the Middle East, Russia, India, and Burma.

His son and successor, 'Abbás Effendi, titled 'Abdu'l-Bahá (1844–1921), oversaw the expansion of the Bahá'í Faith, especially in western Europe and North America, where—freed from imprisonment in Palestine—he traveled between 1911 and 1913. He began to develop the religion's organization, its communal activities, and its international spiritual and administrative center. His writings and authenticated talks—some 16,000 are extant—interpreting and elaborating on his father's teachings are also part of the sacred scriptures of the Faith.

In his *Will and Testament* 'Abdu'l-Bahá appointed Shoghi Effendi Rabbani (1897–1957), his Oxford-educated grandson, to be his successor and Guardian of the Bahá'í Faith. Shoghi Effendi oversaw the establishment of the Bahá'í system of organization worldwide. His 36,000 letters and essays are part of the Bahá'í authoritative texts, but are not considered scripture.

After Shoghi Effendi's unexpected passing in November 1957 twenty-seven *Hands of the Cause of God,* consultants and advisors whom he had appointed and termed "chief stewards" of the Faith, temporarily headed the Bahá'í Faith. In 1963 the Hands oversaw the election of the *Universal House of Justice,* the nine-member international governing body called for by Bahá'u'lláh.

The Bahá'í Faith teaches the unity of God and the unity of God's Manifestations. It sees all of the major world religions as divinely founded and part of the progressively developing religion of God. The imperative in this day, it teaches, is the recognition that humankind is one and must forge a global civilization. The principle of the oneness of humanity stresses equality of all peoples, equal rights and opportunities for women, and the need for everyone to be educated. The Bahá'í concept of the spiritual development of human beings emphasizes acceptance of God's Manifestation, living by his teachings, daily prayer, development of one's virtues, creation of strong marriages and families, service to humanity, and continued progress of the soul in the next world after death. Bahá'í communities are organized by elected nine-member councils; the Faith has no clergy and virtually no communal ritual. Teachings related to the establishment of global unity include the need for a world governing system that can end war, as well as preserve and develop the earth's resources for the benefit of everyone, and an economic system that assures justice and the eradication of the extremes of wealth and poverty.

A Bahá'í community began in the United States in 1894 when a Bahá'í immigrant of Lebanese Christian background began to convert Americans to the Faith. 'Abdu'l-Bahá traveled across the United States and Canada for nine months in 1912 to establish the religion firmly and to proclaim its teachings. Inspired by him, American Bahá'ís were in the forefront of spreading their newfound religion to western Europe, southern Africa, Latin America, Hawaii, Japan, China, and Australia, a process that accelerated under the guidance of Shoghi Effendi. Using North America as the principal laboratory for developing nine-member local Spiritual Assemblies and a nine-member national Spiritual Assembly, Shoghi Effendi also focused attention on the construction of a Bahá'í temple outside Chicago, the first in the western world. Authorized by 'Abdu'l-Bahá in 1903, the temple was completed in 1953.

Americans have played a leading role in the expansion and development of the Bahá'í Faith since its early days. The American Bahá'í community, with 155,000 members in 2006, is one of the larger communities in a worldwide religion numbering more than five million. A major center of Bahá'í publishing, it remains a center of innovation.

HISTORY AND DEVELOPMENT

The Báb and the Bábí Movement

The Bahá'í Faith arose out of the Bábí Faith founded by 'Alí-Muhammad (1819–1950), a merchant from the city of Shiraz in southern Iran. In 1844 he announced to his first follower that he was "the Báb" ("the Gate"). A distinctive aspect of his claim was his assertion of divine revelation, which was hinted at in his earliest writings and proclaimed boldly in his later works. For the next six years, hundreds of works, from letters and prayers to mystical commentaries on verses of the Qur'an and theological treatises, poured from his pen. His young followers boldly proclaimed His teachings

and claims, and in consequence the Báb soon became the locus of a highly controversial movement. Its main teachings were messianic:

- The Báb was a divine Manifestation succeeding the prophet Muhammad.
- God's day of reckoning had come, but the apocalyptic last judgment was understood symbolically rather than literally.
- An even greater Manifestation was coming in nine or 19 years.
- The Muslim shariah law was abrogated and replaced by a new law that, among other things, rejected the traditional status of women.[2] This point was driven home by Tahirih, the Báb's most prominent female disciple, who appeared unveiled at a gathering of Bábí leaders and recited millennial verses from the Qur'án.

The Báb quickly attracted a following from among many students studying for the Shiite clergy, the urban merchant and artisan classes, and certain urban and rural minority groups. Iran's growing exposure to European ideas and its integration into a global economy caused social tensions that may have enhanced receptivity to the Faith.

While a few clergy accepted the Báb, many opposed him strongly and persecuted the Bábís. The Bábí neighborhoods in the cities of Nayríz and Zanján were assaulted by mobs and militias, valiantly defended, and eventually destroyed, resulting in the deaths of hundreds or thousands of Bábís. The Iranian government imprisoned the Báb, had him tried by the clergy for blasphemy, and executed him by firing squad on July 9, 1850.[3] Many Bábís were publicly tortured and executed.[4]

Bahá'u'lláh (Husayn-'Alí of Núr)

An early convert to the religion of the Báb was Husayn-'Alí of Núr. His father had been a provincial governor and prominent official in the Shah's court. When Bahá'u'lláh became a Bábí in 1844 he was 26, happily married, a new father, a highly respected citizen, and devoted to helping Tehran's poor. He soon became a prominent Bábí. He sheltered some leading Bábís and used his influence with the court to ameliorate their persecution. In 1848 Husayn-'Alí took the title of Bahá'u'lláh, the "Glory of God."

In August 1852 three Bábís unsuccessfully attempted to assassinate the Shah, triggering a wave of persecution. Bahá'u'lláh was thrown into the Black Pit, a former underground water cistern that had been converted into a vermin-infested prison for 150 men. Confined four months in semidarkness amid the waste of the prisoners, a heavy chain around his neck, his feet in stocks, Bahá'u'lláh experienced the first revelations in his ministry:

> During the days I lay in the prison of Tihran, though the galling weight of the chains and the stench-filled air allowed Me but little sleep, still in those infrequent moments of slumber I felt as if something flowed from the crown of My head over My breast, even as a mighty torrent that precipitateth itself upon the earth from the summit of a lofty

> mountain. Every limb of My body would, as a result, be set afire. At such moments My tongue recited what no man could bear to hear.[5]

Bahá'u'lláh was released from the Black Pit once it was clear that he had no involvement in the assassination plot, but all of his property was confiscated and he was exiled for life from Iran. He settled in Baghdad in April 1853. The disunity of the demoralized Bábí community caused him to leave for the mountains of Kurdistan for two years.

Early Writings and Teachings

Returning to Baghdad, Bahá'u'lláh composed the first of his important works: the *Hidden Words,* a short collection of ethical and mystical aphorisms; the *Seven Valleys,* a description of the seven stages of the journey of the soul that followed the literary structure of Attar's *Conference of the Birds;* the *Four Valleys,* a description of the spiritual quest of four different personality types; the *Gems of Divine Mysteries,* a longer work about the journey of the soul; and the *Book of Certitude,* a 250-page treatise.[6] The latter work, a response to a series of questions posed by an uncle of the Báb, was dictated in 48 hours.[7] Collectively, the works defined the nucleus of Bahá'u'lláh's theology:

- God is an all-powerful, all-knowing, all-just, but unknowable essence.
- God's qualities are manifested in all created things, which reflect divine attributes, and through the Manifestations, rare, perfect human beings who serve as the mouthpiece of revelation.
- Abraham, Moses, Jesus, Muhammad, and the Báb were previous Manifestations.[8]
- The religions of the world were established on divine revelations fitted for each time and place, but human interpretations have confused some of their core teachings and obscured their ultimate unity.

Bahá'u'lláh's Claim to Prophethood and His Further Exile

In 1863 Iran's Shah asked the Turkish government to move Bahá'u'lláh farther from Iran in order to lessen his revitalization of the Bábí movement. The Sultan ordered Bahá'u'lláh to Istanbul. On the eve of his departure from Baghdad, in late April 1863, Bahá'u'lláh declared to his followers that he was the promised Manifestation the Báb had announced, the messiah figure prophesied by all the world's religions. He named 12 days of rejoicing—April 21 to May 2—the Ridván Festival, which became the new religion's first annual holy period.[9]

Bahá'u'lláh, his family, and some followers, about 70 altogether, remained in Istanbul four months, then were abruptly exiled to Edirne in European Turkey, where they resided four and a half years. From Edirne, Bahá'u'lláh sent numerous *tablets,* as his writings are often called, to the Bábís in Iran, announcing his claim to be a divine messenger. Bábís came to Edirne to meet him and returned to Iran as Bahá'ís; by 1870 the vast majority of Bábís had accepted him. Apologetic, even

polemical, works defended his claims against the dissent of a few Bábís. Bahá'u'lláh also wrote some of his most beautiful prayers during this period. Several tablets spoke of the spiritual capacities and potential of his eldest son, 'Abbás (1844–1921).[10]

Bahá'u'lláh utilized diplomatic contacts made in Istanbul to dispatch tablets to Queen Victoria, Napoleon III, Kaiser Wilhelm, Pope Pius IX, Emperor Francis Joseph of Austria, Tsar Alexander II, the Shah of Iran, the Turkish Sultan, and various Ottoman officials. The tablets stated his messianic claim; he told the Pope that he was the return of Jesus Christ. He prophesied the end of many of their reigns, called on them to observe justice, admonished them to care for the poor and weak, urged them to reduce their armaments, and exhorted them to establish a collective security system. Copies of the tablets circulated widely among the Bahá'ís.[11]

The rapid conversion of the Bábí community was viewed with increasing alarm and jealousy by Mírzá Yahyá, Bahá'u'lláh's half brother and the titular head of the Bábí movement. He had accompanied Bahá'u'lláh to Edirne. He plotted against Bahá'u'lláh, precipitating a split of the community. The Ottoman government grew increasingly suspicious and distrustful. Finally, in mid-1868, it exiled Bahá'u'lláh and most of his followers to the prison city of Akka, in northern Palestine, while Mírzá Yahyá and most of his much smaller following were sent to Famagusta, Cyprus.

Imprisonment and Exile in Akka

For two years Bahá'u'lláh, his family, and close followers, numbering 67, were confined in a group of cells under primitive conditions. Many became ill, two died of dysentery, heat, and malnutrition, and Bahá'u'lláh's younger son, Mírzá Mihdí, died in an accident. Subsequently, the Bahá'ís were allowed to rent houses within the walls of the prison city. Bahá'u'lláh's confinement gradually eased, and he moved to a series of houses just outside Akka. He also was able to receive Bahá'í pilgrims from Iran.

During Bahá'u'lláh's 24 years in Akka (1868–1892) he wrote some of his most important works. The first five years saw a continuation of the themes of the Edirne period, including a second tablet to Napoleon III. In 1873 Bahá'u'lláh composed the *Most Holy Book* (Kitábu'l-Aqdas in Arabic), which defined his religion's practices of obligatory prayer and fasting; enumerated most of its holy days; established its laws of inheritance, marriage, divorce, and eventual civil penalties for arson, theft, and murder; banned such practices as slavery, asceticism, and mendicancy; abolished the priesthood and priestly ritual; forbade gambling, the use of opium, and the consumption of alcohol; obligated Bahá'ís to engage in a profession, exalting it to the rank of worship; and enjoined strict obedience to government.[12] The book defined the *houses of justice,* councils of trustees that would organize the Bahá'í community; the *mashriqu'l-adhkár* or house of worship; and the *huqúqu'lláh* or "right of God," a 19 percent tithe Bahá'ís pay on their surplus assets after essentials such as housing, food, clothing, and other necessities are accounted for. It foreshadowed appointment of *Hands of the Cause of God,* individuals Bahá'u'lláh selected as advisors and consultants but who had no authority to enforce or require actions. Bahá'u'lláh stated that

after his death the Bahá'ís were to follow his son, 'Abbás, as his successor, and he foreshadowed the later institution of the *Guardianship.* Finally, the book addressed various kings and rulers, both individually and collectively, including the "rulers of America and the Presidents of the Republics therein."[13] It called on them to choose a single universal auxiliary language. The provisions of the *Most Holy Book* were gradually introduced to the Bahá'í community over the next decade.[14]

In a series of tablets Bahá'u'lláh later expanded on the themes of the *Most Holy Book.* Bahá'u'lláh stated the principle of the oneness and wholeness of humanity: "the earth is but one country, and mankind its citizens."[15] He called for the convening of a summit of the world's kings and rulers to end war and reduce armaments. He praised a constitutional republican form of government such as Britain's. He established consultation—a system of practices of collective truth seeking and decision making—as a fundamental principle of his faith. He warned against materialism and libertinism. He emphasized the importance of religion in creating a peaceful and just society.[16]

Three works stand out in Bahá'u'lláh's last years. His *Book of the Covenant* stated that his eldest son, 'Abbás, was his successor, the interpreter of his teachings, and must be obeyed. The *Tablet of Carmel* mystically addressed Mount Carmel (near Akka, in what is today northern Israel) and prophesied its future greatness as a sacred center of the Bahá'í Faith. Finally, the *Epistle to the Son of the Wolf* addressed one of the most fiendish persecutors of Iran's Bahá'ís, condemned his crimes, and called on him to repent. Bahá'u'lláh used the epistle as an opportunity to compile some of his most distinctive passages and teachings.[17]

Bahá'u'lláh's corpus includes over 15,000 extant works. The genres include poetry, prayers, the epistle, the scriptural commentary, and the theological treatise. Most were short tablets to individuals, in Arabic, Persian, or in a distinctive mix of the two. Nearly all were dictated in the presence of a secretary, who recorded them; then Bahá'u'lláh proofread and corrected them before a messenger carried them to Iran. The majority are addressed to individuals, often in response to their questions, and deal with nearly every imaginable subject. All of Bahá'u'lláh's writings are regarded by Bahá'ís as divine revelation and therefore as scripture.

Bahá'u'lláh dispatched teachers to consolidate existing Bahá'í communities or open new territories to the Faith. The vast majority of the early Bahá'ís had been Bábís of Iranian Shiite background. Under Bahá'u'lláh's encouragement Bahá'ís settled in many Ottoman cities, where Sunnis began to convert. Iranian Bahá'ís fleeing persecution established communities in Russian Central Asia and the Caucasus. Iranian Bahá'í merchants took the Faith to India, where Muslims and Zoroastrians became Bahá'ís, and possibly as far east as China. Two traveling Bahá'í teachers established the Bahá'í Faith in Burma in the late 1870s—possibly converting the first Buddhists to the religion—and took it as far east as Jakarta and Sulawesi in the early 1880s. In Iran, Jews and Zoroastrians entered the Faith; it is estimated that as many as ten percent of Iran's Jews became Bahá'ís by the early twentieth century. Notably less successful were efforts to reach Christians. Scholars have estimated that by

1892 there were as many as 100,000 Bahá'ís, the vast majority of whom resided in Iran.[18]

European travelers also encountered Bahá'ís; Professor Edward G. Browne of Cambridge University even interviewed Bahá'u'lláh. He published books and articles on the Bábí and Bahá'í Faiths, lectured about the religion in England, and translated Bahá'í scripture into English, starting in the 1880s. His translations of Bahá'í terms such as *Manifestation* and his system of transliteration set standards that later Bahá'í communities in the west largely followed.[19]

The Ministry of 'Abdu'l-Bahá ('Abbás Effendi)

Bahá'u'lláh died peacefully in his home outside Akka on May 29, 1892, aged 74. His eldest son, 'Abbás, then 48, succeeded him as head of the Faith and took the title of 'Abdu'l-Bahá, "Servant of Bahá." Because of the clarity of Bahá'u'lláh's writings about succession, 'Abdu'l-Bahá's leadership was immediately accepted by all Bahá'ís. But his half-brother Muhammad-'Alí, described by Bahá'u'lláh as next in the line of succession, soon claimed 'Abdu'l-Bahá was not qualified to be Bahá'u'lláh's successor. Only a handful of Bahá'ís accepted his arguments, but Muhammad-'Alí was able to instill suspicion in the Ottoman government, which ordered 'Abdu'l-Bahá back inside Akka.

An early priority for 'Abdu'l-Bahá was further development of the Faith's organization. In 1896 'Abdu'l-Bahá told the four Hands of the Cause of God whom Bahá'u'lláh had appointed, all of whom resided in Tehran, to select a group of distinguished Bahá'í men in the capital to serve as electors to choose the members of a Bahá'í governing body. Thus was born the Central Spiritual Assembly, which served simultaneously as the organizing body of the Bahá'ís of Tehran and of all of Iran. Throughout 'Abdu'l-Bahá's ministry its responsibilities grew and it appointed numerous committees. An early responsibility was the Tarbiyat School, a Bahá'í school in Tehran to educate boys.

During the first few years of 'Abdu'l-Bahá's ministry the Bahá'í community in Ashgabat in modern Turkistan printed both Bahá'í scriptures and a periodical. The community began to build the world's first Bahá'í house of worship in the fall of 1902. Cairo also became a strong Bahá'í community.

Introduction of the Bahá'í Faith to North America

The Bahá'í Faith spread to the United States when a Bahá'í of Lebanese Christian background, Ibrahim Kheiralla (1849–1929), arrived in New York in December 1892 to pursue economic opportunities. He had converted in Cairo in 1888 and knew little about Bahá'u'lláh's teachings. Kheiralla was interested in magic and Middle Eastern folk religion; in the United States he read popular books about the Bible and learned about Theosophy and reincarnation. He encountered Browne's Bahá'í publications, but used them sparingly.[20]

In 1894 Kheiralla moved to Chicago, where he established a healing practice using the laying on of hands and the smoking of water pipes. His contacts, however, soon were more interested in his religion. They were either middle-class professionals and white-collar workers of Anglo-Saxon background or first-generation German or Scandinavian immigrants, often blue-collar workers. Some heard of Kheiralla through the Oriental Order of the Magi, an esoteric Masonic group. Others were students of alternative religions and philosophies, interests stimulated by the recent Parliament of the World's Religions. Unlike American sympathizers of Buddhism and Hinduism, the Chicago Bahá'ís did not come primarily from the upper classes.

By mid-1894 at least five people became "Behaists." Their circle of friends became attracted, and in 1895 the "First Assembly of Beha'ists in America" purchased a seal. In 1896 Kheiralla organized his teachings into two public lectures and 13 private lessons covering the purpose of existence, metaphorical interpretation of the Bible and its prophecies, and the unity of the world's religions. The last three lessons noted that the Millerites, who expected Christ's return in 1844, were correct; that was the year the Báb began his mission. The lessons described Bahá'u'lláh as the biblical return of the Father and 'Abdu'l-Bahá as the return of Christ.[21]

In the summer of 1897, Kheiralla gave his lessons to an audience of Swiss-German immigrants interested in vegetarianism, Populism, Socialism, and Christian Science in the small central Kansas village of Enterprise. In the fall blue-collar workers of Scandinavian and German background in Kenosha, Wisconsin, an industrial city 70 miles from Chicago, invited Kheiralla to give the lessons there. Chicago Bahá'ís who had moved to New York and New Jersey had Kheiralla give the lessons in New York City starting in January 1898. The result was a community of 200 Bahá'ís, mostly white-collar professionals of Anglo-Saxon background and Episcopal leanings. Other Chicagoans returned home to Philadelphia and Ithaca and taught their relatives. Expansion continued in 1898 to Racine, Wisconsin, the San Francisco area, Boston, Washington, D.C., and in 1899, to Cincinnati. By the fall of 1899 an incomplete list of Bahá'ís included 1467 names in 60 localities in 25 states, the District of Columbia, Ontario, England, and France.

Kheiralla responded to the growth by converting his lessons into a book, *Behá'-U'llah.* As it neared completion, Phoebe Hearst, mother of William Randolph Hearst, became a Bahá'í and decided to visit 'Abdu'l-Bahá, and she was willing to pay Kheiralla's travel expenses. The party left the United States in September. Most visited 'Abdu'l-Bahá for only three days, but Ibrahim Kheiralla and two American Bahá'ís, Edward and Lua Getsinger, arranged to stay in the household for six months.

The Akka Bahá'ís were shocked by Kheiralla's mix of Bahá'í, Theosophical, and evangelical Protestant ideas, coupled with false Arabic etymologies, bizarre interpretations of history, and two prayers allegedly by Bahá'u'lláh that Kheiralla had, in fact, written himself. Their efforts to reform his views made little headway. Kheiralla tried to prevent the Getsingers from discovering his modifications of the Bahá'í teachings, but an English-speaking Persian Bahá'í arrived and Lua Getsinger began to learn Persian.

When Kheiralla returned to the United States in May 1899 he offered moving descriptions of 'Abdu'l-Bahá's wisdom and spirituality. But he warned that the Getsingers poorly understood the Bahá'í Faith. They arrived a month later, turned the other cheek, praised Kheiralla for his service to the Bahá'í Faith, and concentrated on describing 'Abdu'l-Bahá and his teachings, an effort brought alive by a photo of him and wax cylinder recordings of his voice. Edward was aware of Bahá'u'lláh's teaching about the formation of Houses of Justice and in the fall of 1899 helped the northern New Jersey Bahá'ís establish a "Board of Counsel." Such action undermined Kheiralla's de facto authority and exacerbated the situation.

Kheiralla accused Edward of seeking to be the head of the Bahá'í movement in America. Concerned about Kheiralla's ambitions, Phoebe Hearst sent an Arab Bahá'í, Anton Haddad, to seek 'Abdu'l-Bahá's advice. When Haddad returned in late December 1899, he reported that 'Abdu'l-Bahá said there were to be "no chiefs" in America and emphasized the humility of teachers. Haddad also apparently spoke about Houses of Justice, for in March 1900 the Chicago Bahá'ís elected their first governing body, of ten men.

His hopes for a leadership position dashed, Kheiralla supported Muhammad-'Alí's accusations and began to question 'Abdu'l-Bahá's spiritual station. The American Bahá'í community split into three groups. Perhaps a quarter remained loyal to 'Abdu'l-Bahá, including most prominent teachers and elected community officers. A smaller number followed Kheiralla, especially in Kenosha where the community secretary supported him. About half the Bahá'ís, who were either too geographically isolated to know much about the crisis or were repulsed by the conflict, remained uninvolved. Some abandoned the religion altogether; others were integrated back into the Bahá'í community later.

Recovery and Consolidation, 1900–1912

In 1900–1901 'Abdu'l-Bahá sent four Persian teachers to the United States to bring Kheiralla back into the fold and rebuild the Bahá'í community. They were accompanied by young Persian Bahá'ís who knew some English. Negotiations with Kheiralla were unsuccessful, and he was declared a covenant breaker, someone who violated Bahá'u'lláh's covenant with the Bahá'ís, which included the obligation to obey 'Abdu'l-Bahá. He established his own Bahá'í group, which splintered, dwindled to a few dozen members, and eventually disappeared.

Membership in the American Bahá'í community, which had been about 1500 in 1899 and plunged to a few hundred in 1900, rebounded to 1200 by 1906.[22] The quick recovery in membership was precipitated by several factors:

- The Persian teachers gave talks (later published) that clarified Bahá'í beliefs.
- Two young Persians remained in the United States and collaborated with Americans to translate some of Bahá'u'lláh's most important works.
- A steady flow of American pilgrims visited Akka and returned full of devotion for 'Abdu'l-Bahá and the Bahá'í Faith. They published their memories as pilgrim's notes. One work,

Some Answered Questions—a series of 84 answers 'Abdu'l-Bahá gave over lunch to questions by an American Bahá'í and her French husband—was edited and approved by 'Abdu'l-Bahá and became a part of Bahá'í scripture. As a result, texts rejecting astrology and reincarnation, qualifying the Bahá'í view of evolution, forbidding involvement in strikes, interpreting various biblical verses and Christian doctrines, and explaining the station of certain Manifestations of God were added to Bahá'í doctrine.

- 'Abdu'l-Bahá corresponded extensively with individual American Bahá'ís, reinforcing their devotion and answering their personal questions. As many as half of his 16,000 extant tablets were penned to westerners.
- Americans developed their own cultural expressions of the Bahá'í Faith. They often worshipped on Sunday mornings in rented halls and sang hymns to piano accompaniment. The first Bahá'í hymn book, published in 1903, consisted of Protestant hymns such as *Nearer My God to Thee* that had no references to Christ or to such doctrines as original sin, the crucifixion, or atonement. But in 1904 a 34-page book of original Bahá'í hymns, often consisting of Bahá'í scriptural passages set to music, was published in Chicago.[23]
- 'Abdu'l-Bahá encouraged the American Bahá'ís to perform the daily obligatory prayer. The medium obligatory prayer was first translated into English in 1899 the short obligatory prayer in 1905; the long obligatory prayer became available a decade later. Each believer is free to choose which prayer to say. It is performed in private.
- American Bahá'ís began to observe the Bahá'í Fast (no food or drink from sunrise to sunset, March 2–20) as early as 1901. A description of fasting practices was circulated by the Chicago Bahá'ís in early 1903.
- Bahá'í Holy Days were observed in the United States as early as 1900. By 1909 the Gregorian dates of eight of the nine had been determined.
- American Bahá'ís began using the Bahá'í calendar, with its 19 months of 19 days, as early as 1901, when the Chicago Bahá'í women's auxiliary began to hold a regular "Nineteen-Day Tea."[24]
- In 1905 'Abdu'l-Bahá told pilgrims gathered in Akka to observe the *Feast* as a gathering for worship and socializing on the first day of every Bahá'í month. One pilgrim made it a personal crusade to travel across the United States, establishing the Feast in every community.[25]
- 'Abdu'l-Bahá filled the leadership vacuum left by Kheiralla's disaffection by encouraging the election of local councils. The Chicago Bahá'ís elected a House of Justice in May 1901. 'Abdu'l-Bahá asked them to change the body's name to *Spiritual Assembly,* however, so that its purpose would not be misconstrued by non-Bahá'ís.

Organizing the American Bahá'ís proved to be difficult because many had consciously abandoned organized religion. Electing a council became a contentious issue in Washington, D.C., and San Francisco; hence 'Abdu'l-Bahá began to stress that unity was more important than organization. No new local Bahá'í councils were formed between 1910 and 1918.

The introduction of so many changes—one could say an entirely new religion, compared to what Kheiralla taught—in a mere six years strained the existing community, in which some adopted most of the new teachings and practices while others

adopted few or none. Bahá'ís from evangelical church backgrounds were usually more willing to adopt the Faith's distinctive teachings and practices based on adherence to its scriptures, while Bahá'ís coming from Theosophy, Christian Science, and the metaphysical milieu more often emphasized voluntary acceptance of them, a stance that has been called epistemological individualism.[26] The latter groups argued the Faith was a reform movement meant to permeate and leaven the churches, opposed segregating Bahá'ís into their own Sunday worship meetings, and rejected organization. The fracture was not resolved until the 1920s.

In spite of the conflicts, however, the community soon had resources for new tasks. The Chicago Bahá'ís petitioned 'Abdu'l-Bahá for permission to build a Bahá'í House of Worship (or temple) in 1903, and he made it a national project, but little was done until 1907, when a search for land began. A site was purchased in the suburb of Wilmette, and in 1909 a convention of delegates from across North America elected the nine-member Bahai Temple Unity Executive Board to oversee construction. The temple project consumed much of the American Bahá'ís' energy and money until it was completed in 1953. The annual convention and the Board became proving grounds for the establishment of Bahá'í organization.[27]

The American community soon produced capable teachers. In 1904, 'Abdu'l-Bahá directed an American on pilgrimage to travel to India and Burma with a group of Persians, lecturing and demonstrating their religion's teaching of the unity of the races. Two Americans traveled to Iran in 1908; one remained and became headmaster of the Tarbiyat Bahá'í School for Boys. Iran's need for women physicians prompted Dr. Susan Moody, a Chicago Bahá'í, to settle in Tehran in 1909. She was followed by another woman physician and two nurses in 1911. The American Bahá'í women were a constant reminder to the Iranians that the Bahá'í principle of equality of men and women was understood very differently in the west. In 1910 a picture of a group of unveiled Iranian Bahá'í women was published in an American magazine *Baha'i News,* which had a significant circulation in Iran. American Bahá'ís incorporated the Persian-American Educational Society that year to funnel western textbooks, scholarships, and ideas to Iran. The Tarbiyat School for Girls was established in 1911.[28]

'Abdu'l-Bahá's Visits to Europe and North America

In 1908 a revolution overthrew the Ottoman government and freed all political prisoners, including 'Abdu'l-Bahá. Even though he was old, in poor health, knew no western languages, had never spoken to a public audience, and had little familiarity with occidental customs, he resolved to travel. He first visited Egypt in 1910, then went west to Paris and London in 1911, then sailed to North America in 1912. In eight months he went from New York to Los Angeles and was greeted everywhere by crowds and largely favorable newspaper publicity. In Chicago, he laid the cornerstone of the Bahá'í temple. He gave at least 185 talks to a combined audience of perhaps 40,000 people; his venues included six universities (Columbia, Howard, New York University, Northwestern, Stanford, and Worcester Polytechnic), the NAACP

annual convention, Hull House in Chicago, the Bowery Mission in New York, 12 Unitarian churches, 12 mainline Protestant (mostly Congregational and Episcopal) churches, 11 Theosophical or metaphysical groups, and three synagogues.[29] Scores of meetings were in Bahá'ís' homes. He offered innumerable personal meetings with hundreds of people and was the subject of hundreds of newspaper articles. In his public talks he proclaimed Bahá'í principles attractive to a western audience such as the unity of God, unity of the religions, oneness of humanity, equality of the sexes, harmony of science and religion, individual independent investigation of truth, world peace, and economic justice. He rarely emphasized Bahá'í distinctives such as obligatory prayer and fasting. Unlike Swami Vivekanada and Dharmapala, who had lectured on Hinduism and Buddhism, respectively, some 15 years earlier, he rarely criticized others. He did not stir controversy except in his insistence that all his meetings be open to all races. He personally encouraged Louis Gregory, an African American lawyer, and Louisa Matthews, an Englishwoman, to marry, resulting in the first Bahá'í interracial marriage.

While many children of Bahá'ís came to regard 1912 as the year they became members, only a handful of new people entered the Bahá'í community. Because 'Abdu'l-Bahá often presented the Bahá'í Faith as the culmination of the highest ideals, Bahá'ís who did not see the Bahá'í Faith as an independent religion continued their view. But 'Abdu'l-Bahá had the Chicago and New York Bahá'í governing councils reelected, and He attended the annual Bahai Temple Unity convention, which affirmed the importance of organization. He expounded on the Bahá'í covenant and expelled two persons from the Bahá'í community as covenant breakers for continuing to associate with Kheiralla's dwindling band. Thus, he ultimately strengthened the hand of those who understood the Bahá'í Faith as an independent religion. His visit also made hundreds of contacts and friends for the Faith that proved valuable in subsequent years.

1913–1921

'Abdu'l-Bahá left the United States for Europe in December 1912. Not long after he returned to Palestine in December 1913, World War I cut off most of his communications until 1918. The American Bahá'ís had to handle their problems on their own. Chicago went through a period of disunity when a metaphysically oriented group of Bahá'ís opened a "Reading Room" downtown, rejected the authority of Chicago's elected Bahá'í council, and sent their own delegates to the 1917 annual convention of the Bahai Temple Unity, which refused to recognize them. In 1918 the Bahai Temple Unity appointed a committee to investigate the Reading Room group. It found them in violation of many Bahá'í teachings and disloyal to 'Abdu'l-Bahá. Because of disloyalty, the chief members were declared covenant breakers, a decision 'Abdu'l-Bahá later endorsed.[30]

Reestablishment of communications with 'Abdu'l-Bahá permitted him to guide the community anew. A series of 14 tablets he penned to the Bahá'ís of the United States and Canada, the *Tablets of the Divine Plan,* became the focus of the 1919

convention. Their urgent call to the American Bahá'ís to take their religion to the entire earth—the tablets listed hundreds of nations, territories, and significant islands to open to the Faith—stimulated an outpouring of activity reminiscent of many Protestant missionary enterprises.[31] Those who saw the Bahá'í Faith as a distinct religion were the ones inspired to act. Martha Root left the convention and went to South America, becoming the first Bahá'í teacher to cross that continent. She continued traveling for the Faith for 20 years. Hyde and Clara Dunn moved to Australia and established the Bahá'í Faith there. The Bahai Temple Unity appointed four regional committees to coordinate the dissemination of the Faith across the United States. Fazel Mazandarani, an erudite Persian Bahá'í, became the first Iranian to travel the United States and Canada to teach the Faith since 1904.

The new emphasis on organization stimulated Chicago to reorganize its governing board and Cleveland to elect one, the first new local Bahá'í council formed in a decade. In conformity with 'Abdu'l-Bahá's request, the Bahai Temple Unity appointed a committee to review Bahá'í publications in order to stem the flow of inaccuracies promulgated by Bahá'ís. The 1920 national convention selected a design for the Wilmette temple.

The Passing of 'Abdu'l-Bahá and the Beginning of the Guardianship

On November 26, 1921, 'Abdu'l-Bahá passed away at age 77, plunging the Bahá'í world into mourning. But he composed a *Will and Testament* in which he made provisions for the future.[32] He appointed his grandson, 24-year-old Shoghi Effendi Rabbani,[33] his successor and *Guardian* of the Bahá'í Faith. He stated that Shoghi Effendi was infallibly guided to interpret the Bahá'í teachings and protect the unity of the Bahá'í community and thus had to be obeyed. The Guardian was authorized to appoint Hands of the Cause of God, who were to "diffuse the Divine Fragrances, to edify the souls of men" and "to promote learning."[34] He was to choose the next Guardian from among the male descendents of Bahá'u'lláh, and his choice was to be ratified by a body of nine appointed by the Hands of the Cause.

'Abdu'l-Bahá also stated (in his will and in other tablets) that national communities were to hold conventions of locally elected delegates who were to elect their national House of Justice, and all the members of the national Houses of Justice were to serve as electors of the Universal House of Justice. The Guardian was to be a lifelong member and chairman of the Universal House of Justice. The Universal House of Justice's sphere of authority included legislating on matters about which the writings of Bahá'u'lláh were silent; as such it complemented the sphere of authority of the Guardian, who interpreted the meaning of those writings.

Shoghi Effendi thus had a complete plan for Bahá'í organization. He focused the first 15 years of his Guardianship (1922–1937) on the construction of what he called the Bahá'í Administrative Order. He wrote dozens of epistles explaining the nature and purpose of Bahá'í administration; emphasizing the spiritual nature of Bahá'í elections, which proceed to the voting after a round of prayers without any

nominations, campaigning, or mention of names; and defining the practical day-to-day policies of operation.[35]

One of Shoghi Effendi's first letters to the Bahá'ís of America called on the Bahá'ís to elect nine-member Spiritual Assemblies in any locality where nine or more adult Bahá'ís resided. With a clear mandate from the head of the Faith, American Bahá'ís obeyed, electing 42 local spiritual assemblies in the next four years.[36] The Bahai Temple Unity immediately reorganized itself as the national Spiritual Assembly of the Bahá'ís of the United States and Canada, but Shoghi Effendi did not consider the reorganization complete until 1925. He recognized the formation of other national Spiritual Assemblies as well: the British Isles (1923), India and Burma (1923), Germany and Austria (1923), Egypt and the Sudan (1924), the Caucasus (1925), Turkistan (1925), Iraq (1931), Iran (1934), Australia and New Zealand (1934).[37]

The creation of Bahá'í Spiritual Assemblies further diminished the epistemological individualism in the American Bahá'í community, but not without conflict. *Reality* magazine, established in 1919 to promote "liberal" approaches to the Bahá'í Faith, wrote scathingly against Bahá'í organization starting in 1923, then ceased writing about the Faith in 1926 because of market pressures.[38] One American Bahá'í, Ruth White, was so shocked by the establishment of organization that she sought evidence 'Abdu'l-Bahá's *Will and Testament* was a forgery, despite the fact that hundreds of Persian Bahá'ís were intimately familiar with his handwriting and accepted its authenticity. Ultimately she was declared a covenant breaker. Ahmad Sohrab, a prominent Persian Bahá'í living in New York, came into increasing conflict with the city's local Spiritual Assembly and with the national Spiritual Assembly, refused to obey them, and was declared a covenant breaker. Archival records suggest that while these events disturbed many Bahá'ís, very few resigned their membership over them.[39]

One reason was the advantages of organization. Elections required voting lists, created a definition of community membership, and fostered Bahá'í identity. Establishing new local Spiritual Assemblies became a goal for committees and traveling teachers. The number of American Bahá'ís, which had hovered at about 1,500 for two decades, doubled by 1936.[40] Recruitment was also stimulated by the Great Depression, which apparently increased receptivity to the Bahá'í teachings among middle-class whites.

Strengthening the community was a richer Bahá'í literature. John Esslemont, a British Bahá'í, published *Bahá'u'lláh and the New Era* in 1923. It gave the Bahá'í world a common introductory textbook. New translations of Bahá'u'lláh's writings by Shoghi Effendi—whose English, honed by an Oxford education, was excellent—provided the Bahá'ís with a far clearer understanding of their scriptures. A series of letters and essays by Shoghi Effendi published as *Bahá'í Administration, The World Order of Bahá'u'lláh, The Advent of Divine Justice,* and *The Promised Day is Come* clarified and interpreted important teachings.[41] Dozens of collections of Shoghi Effendi's letters—his corpus eventually reached 36,000—were published. His consistent insistence on the Bahá'í principle of racial equality and unity stimulated a series

of race amity conferences in the United States and teaching efforts appealing to African Americans.[42]

The enlarged American Bahá'í community began construction of the superstructure of the Bahá'í temple in 1930. The community's growing strength throughout the 1930s coincided with the destruction or weakening of three other communities. Nazi Germany banned the Bahá'í Faith in 1937 and imprisoned some Bahá'ís. Stalin abolished all Spiritual Assemblies in the Soviet Union, confiscated the Bahá'í temple in Ashgabat, deported about 1000 Bahá'ís back to Iran, and shipped most of the rest to prisons and gulags, where hundreds perished. Survivors were scattered across Siberia, where a few were found as late as the 1990s. In the 1930s Iran's government placed many new restrictions on the Bahá'ís there, including closing all Bahá'í schools (which by then numbered several dozen) and banning the printing of Bahá'í literature. Many Iranian Bahá'ís were arrested.

The First and Second Seven Year Plans, 1937–1953

In 1937 Shoghi Effendi gave the North American Bahá'ís a Seven Year Plan, the first systematic implementation of the *Tablets of the Divine Plan* in the Bahá'í world. It had three goals: the completion of the superstructure of the Bahá'í temple, the election of at least one local Spiritual Assembly in every state of the United States and every province of Canada, and the introduction of the Bahá'í Faith to every country in Latin America and the Caribbean. In spite of the grave hardships caused by World War II, all three goals were achieved, and 4,900 North American Bahá'ís greeted 1944—the centennial of the Báb's declaration—with a sense of victory.[43] The Seven Year Plan inspired the other existing national Spiritual Assemblies to adopt plans of their own.

Shoghi Effendi gave the American Bahá'ís a two-year rest. In 1945 the American national Spiritual Assembly sent two observers to the United Nations founding conference in San Francisco; subsequently the Assembly was recognized by the U.N. Department of Public Information as a nongovernmental organization qualified to be represented by an observer.

In 1946 Shoghi Effendi launched a second Seven Year Plan. Its goals included the completion of the interior of the Bahá'í temple and its dedication to public worship; election of a separate national Spiritual Assembly for Canada and of two regional Spiritual Assemblies for South America and Central America, respectively; and further growth on the home front. The political and cultural conditions of postwar Europe made it possible to establish or reestablish the Bahá'í Faith in ten western European nations, an effort aided by an outpouring of American and Persian pioneers (volunteer Bahá'í teachers who move to another place to help establish a Bahá'í community). In 1948 the Bahá'í International Community was recognized as a nongovernmental organization by the United Nations and represented by an American Bahá'í. At the end of the plan, the United States joined with other national Spiritual Assemblies to spread the Bahá'í Faith in Africa. All the goals were achieved. A national Spiritual Assembly was reestablished for Germany and Austria

and a new one was elected for Italy and Switzerland, raising the total number worldwide to 12.[44]

In January 1951 Shoghi Effendi announced the appointment of the International Bahá'í Council, the forerunner of the Universal House of Justice, and assigned it responsibilities related to Bahá'í matters in Israel. A year later he appointed 19 Hands of the Cause of God, including six Americans. He gave the Hands "deputies, assistants, and advisers" when he authorized them to appoint Auxiliary Board members in 1954.[45] The Auxiliary Board members served as consultants to local and regional Bahá'í communities, briefed Bahá'ís about the goals of the plans, encouraged them to set local goals, reported to the Hands about local developments, and carried out special assignments requiring someone with experience and tact.

The Ten Year Crusade, 1953–1963

In April 1953 Shoghi Effendi launched an ambitious Ten Year Crusade. He gave goals to all 12 national Spiritual Assemblies to introduce the Bahá'í Faith to several hundred additional nations, territories, and significant islands—almost all the places mentioned in the *Tablets of the Divine Plan.* More Bahá'í pioneers than ever before were needed. In 1953 five of the nine members of the National Spiritual Assembly of the United States moved overseas, inspiring perhaps five percent of the American Bahá'ís to follow their example.

Cultural conditions strengthened Bahá'í efforts to teach their Faith. In the United States membership grew about five percent per year, from 7,000 in 1953 to 11,000 in 1963. In India, Bolivia, Uganda, and the Mentawei Islands of Indonesia, illiterate rural people were readily attracted to the Faith and enrolled by the thousands, though consolidating the resulting communities proved difficult. Overall, the decade saw the number of localities in the world where Bahá'ís resided triple to 11,000.

While none of the goals behind the Iron Curtain could be achieved, 56 of the 57 anticipated national Spiritual Assemblies were elected. Virtually every country in western Europe and Latin America acquired an assembly. Regional Assemblies covered Africa, the South Pacific, and much of Asia. Alaska elected its own national Spiritual Assembly in 1957.[46]

Shoghi Effendi's Passing

In October 1957 Shoghi Effendi raised the number of the Hands of the Cause of God to 27, further described their station and responsibilities, and referred to them as "Chief Stewards of Bahá'u'lláh's embryonic World Commonwealth."[47] The message proved prescient. On November 4, 1957, his heart stopped, plunging a shocked Bahá'í world into sudden grief and deep perplexity. 'Abdu'l-Bahá's *Will and Testament* said that every Guardian had to appoint a successor from among the male descendents of Bahá'u'lláh. But there were no male descendents of Bahá'u'lláh who were Bahá'ís, posing for Shoghi Effendi a situation not covered by Bahá'u'lláh's texts and therefore requiring legislation by the as-yet nonexistent Universal House of Justice. He left no will or instructions.

After the funeral, 25 of the Hands of the Cause assembled in their first conclave.[48] They shared no common language; only two were able to translate between English and Persian. They decided that as "chief stewards" it was their responsibility to complete Shoghi Effendi's Ten Year Crusade, which still had five and a half years to go. They had no authority to interpret the Bahá'í texts or legislate, so they declined to answer questions involving those powers. Because Shoghi Effendi had been establishing national Spiritual Assemblies so that they could elect the Universal House of Justice, and because he had hinted that 1963 would be an auspicious year to form that institution, they called for its election at the end of the Ten Year Crusade. They also disqualified themselves for election to that body.[49]

Initially all Bahá'ís worldwide accepted their authority. But in 1960, an 85-year-old American Hand of the Cause, Charles Mason Remey, suddenly announced that he had been appointed to succeed Shoghi Effendi as the second Guardian. Since Remey's declaration had no basis in the Bahá'í authoritative writings, he was immediately rejected by the Hands of the Cause. He was eventually declared a covenant breaker. The majority of the members of one national Spiritual Assembly—France—accepted him, but the other national Assemblies reasserted their loyalty to the Hands of the Cause. He acquired 100 followers in the United States, some dozens in Pakistan, and a score in Europe. While the Bahá'í community was disturbed by his claims, soon few people thought much about him.

Remey's Orthodox Bahá'í Faith split on his death in 1974 when two individuals produced letters from Remey appointing them the third Guardian.[50] Another group separated under the leadership of Leland Jensen and formed the Bahá'ís Under the Provision of the Covenant, based in Missoula, Montana. Their frequent retreats into atomic bomb shelters became the focus of research by University of Montana sociologists interested in cognitive dissonance. The Remey movement continues to this day as two or three groups that maintain little contact with each other, are active on the World Wide Web, and probably comprise a few hundred members collectively.[51]

Election of the Universal House of Justice and the Nine Year Plan, 1963–1973

In April 1963 delegates representing 56 national Spiritual Assemblies gathered in Haifa to elect the nine-member Universal House of Justice. The House of Justice ruled that it was not possible to appoint future Guardians or Hands of the Cause. It spent its first year developing a Nine Year Plan (1964–1973) to systematize the next phase of growth.[52] At the end of that year, in April 1964, Hawaii elected its own national Spiritual Assembly.

The American Bahá'í community was given a major role in the international goals, which included more than doubling the number of national Spiritual Assemblies to 113. Within the United States, the number of local Spiritual Assemblies was to increase from 331 to 596, with at least two existing in each state; 866 were achieved.[53] Bahá'í marriage ceremonies were to be legalized in every state. Efforts

to teach the Faith to African Americans, American Indians, and Spanish-speaking people were to be increased.[54]

All the goals were achieved in a period in which the American Bahá'í community saw its fastest growth in history. From 12,000 in 1964, membership increased to 23,000 by 1970, an annual increase of over 10 percent. Then teaching the Faith on college campuses increased even more, the popular musical group Seals and Crofts provided free Bahá'í meetings after each concert, and Bahá'ís began to go door-to-door to teach the Bahá'í Faith to rural African Americans in the South. By 1971 the number of Bahá'ís nearly doubled to 40,000; by 1972 it increased to 59,000. Door-to-door or "mass" teaching accounted for about half of the expansion. But the huge membership increases proved unsustainable, many of the new Bahá'ís drifted away, and the net growth rate dropped to an annual average of 4 percent for the rest of the 1970s.

The international situation mirrored developments in the United States. In Western Europe, Canada, Australia, and New Zealand thousands of youth became Bahá'ís; Latin America, Africa, and India saw the influx of large rural populations. The Bahá'í world went from 400,000 in 1963 to three million in 1979.

Development of the Institution of the Counselors

In 1968 the Universal House of Justice established a new institution, the Continental Boards of Counselors, to continue the functions of the Hands of the Cause for the protection and propagation of the Bahá'í Faith. To coordinate the Counselors and extend the work of the Hands residing at the Bahá'í World Center, in 1973 the Universal House of Justice established the International Teaching Centre, whose members consisted of certain Counselors and all living Hands of the Cause.[55] On the advice of the International Teaching Centre, the Counselors appointed and oversaw the work of the Auxiliary Board members, who in October 1973 were authorized to appoint assistants. In 1979 the Universal House of Justice set the term of appointment of Counselors at five years.

Additional Plans, 1973–2006

After a one-year respite, the Universal House of Justice launched the Five Year Plan (1974–1979) beginning on the first day of the Ridván Festival (April 21). It was followed by a Seven Year Plan (1979–1986), a Six Year Plan (1986–1992), a Holy Year commemorating the centenary of the passing of Bahá'u'lláh (1992–1993), a Three Year Plan (1993–1996), a Four Year Plan (1996–2000), a Twelve Month Plan (2000–2001), a Five Year Plan (2001–2006), and a Five Year Plan (2006–2011).

The new plans focused more on development of the Bahá'í community than its expansion to new places because the dissemination of the Faith to every part of the world, based on the *Tablets of the Divine Plan,* was largely accomplished. (The exception was to the countries in the former Soviet Empire; they acquired Bahá'í communities in the early 1990s.) The major institutions of the Bahá'í administrative

system had been established; hence improving their functioning became a focus. Local Spiritual Assemblies were called on to establish such efforts as adult and child educational programs, youth groups, community dawn prayers, women's activities, and outreach projects; national Spiritual Assemblies were asked to develop their public relations and external affairs efforts and in 1986 were given responsibility to develop their own goals within the frameworks set by the plans. The Bahá'í world, tremendously excited and gratified by the expansion it had seen, also strove to solve the problems caused by rapid expansion.

Managing Growth. In the United States, the Bahá'í membership grew from 59,000 in 1972 to 82,000 in 1980 (4 percent annual growth), 114,000 in 1990 (3 percent annual growth), 141,000 in 2000 (2.4 percent annual growth), and 155,000 in 2006 (1.5 percent annual growth).[56] The number of Bahá'ís with accurate street addresses—necessary to maintain voting lists—grew more slowly, partly because the addresses of mass-taught Bahá'ís often could not be updated. The number of local Spiritual Assemblies peaked at 1,785 in 1986 and declined to 1,150 by 2006. Three reasons for the decline can be identified: there was a decreased emphasis on setting goals to form assemblies and on encouraging Bahá'ís to move to establish them; there was a decreased emphasis on visiting rural Bahá'ís taught via door-to-door teaching to help them elect local Spiritual Assemblies; and the Universal House of Justice said all local Assemblies had to be elected on the first day of Ridván rather than any time during the 12-day festival.

Door-to-door teaching efforts, common in the 1970s, became fewer in the 1980s and rare in the 1990s because it was difficult to deepen the new believers' understanding of the Faith systematically. In order to reach the thousands of new Bahá'ís in rural South Carolina, the Louis G. Gregory Bahá'í Institute was founded; it established a radio station, WLGI, in 1982. The Native American Bahá'í Institute was founded on the Navajo Reservation to strengthen the new Bahá'í communities there. Public meetings and "firesides"—informal meetings to teach the Bahá'í Faith usually sponsored by individuals in their homes—attracted fewer inquirers in the more conservative 1980s and 1990s. The percentage of American Bahá'ís who were youth declined, and more and more of the youth were children of Bahá'ís rather than new converts. The median age of the Bahá'í community rose from the twenties to the forties. The international situation was similar: the number of Bahá'ís worldwide grew from three million in 1979 to five million in 2006; the number of local Spiritual Assemblies went from 17,000 in 1973 to 33,000 in 1986 and then to 12,000 in 2005.[57]

The Universal House of Justice initiated a series of changes starting in 1996 to strengthen Bahá'í community life, individual initiative, and Bahá'í institutions. It became apparent that some form of organization above the level of the local Spiritual Assembly but below the national Spiritual Assembly was needed. First, after various experiments, in the late 1990s the Universal House of Justice authorized some national Assemblies to divide their country into regions, where Regional Bahá'í Councils would be elected annually by the members of all local Spiritual Assemblies. The United States was divided into the four regions mentioned in the *Tablets of the*

Divine Plan (northeast, central, south, and west) in 1997. In 2005 the west was split into northwestern and southwestern regions, and the number of regional Councils increased from four to five.

Second, National Spiritual Assemblies were asked in 2001 to divide their country into *clusters* based on demographic and natural geographic factors.[58] The average Bahá'í community in the United States has 15 to 30 members and is limited in the services it can provide, but clusters could have hundreds of Bahá'ís and thus are better able to handle expansion and consolidation activities such as child education, media relations, and adult Bahá'í education. Clusters can have their own coordination teams and host periodic *reflection meetings* to which all Bahá'ís are invited to consult about local activities. In some cases cluster-wide responsibilities are rotated among the local Spiritual Assemblies in the cluster.

Finally, the House of Justice authorized dividing large cities (like Los Angeles, with over 2,000 Bahá'ís) into *sectors.* The city still elects one local Spiritual Assembly, but activities at the neighborhood level have become common.

The creation of additional administrative levels was also accompanied by an increased emphasis on decentralization. In 2001 the new Five Year Plan emphasized the development of three *core activities* in every cluster worldwide: *devotional programs, children's classes,* and *study circles.* While a few Bahá'í communities had been holding regular devotionals for years, the new goal was to establish not just community devotionals, but to give Bahá'ís the skills to host personal devotionals in their homes and invite their friends and neighbors. Children's Bahá'í classes, similarly, had been organized by Bahá'í communities for over a century, but now Bahá'ís were to supplement them with individually initiated neighborhood classes. To acquire the skills and confidence to create these activities, a series of seven books called the Ruhi Curriculum was developed in Colombia and soon became the standard curriculum for study circles worldwide. While firesides and deepenings (informal classes to study a Bahá'í text or subject) continued, the emphasis shifted to inviting inquirers to attend study circles, participate in systematic study of the Bahá'í Faith, and acquire skills to initiate more core activities. Clusters were rated as D, C, B, and A based on the expansion of the core activities; the American Bahá'ís set the goal of having 50 A clusters (out of 970) by Ridván 2006. Once a cluster reaches "A" status, it can initiate short-term plans intended to attract new inquirers to existing activities, thereby increasing the number of activities and people with the skills necessary for yet another cycle of expansion.

Enriching Bahá'í Studies and Bahá'í Literature. Perhaps one new Bahá'í book appeared in the United States per year in the mid-1960s. But because of the expansion in the 1960s and 1970s, there were many more Bahá'ís to buy books and magazines, causing the volume to increase. A quarterly magazine, *World Order,* began publication in 1966, and book publishing increased to a dozen titles per year by 1980. The Universal House of Justice began a major effort to translate more Bahá'í scripture into English. By the beginning of the new millennium a push to produce books for the trade market in the United States increased the number available in bookstores.

The establishment of the Association for Bahá'í Studies in Canada in 1977 (its jurisdiction expanded to include the United States in 1980) provided an organization in the Bahá'í community to stimulate study of the Faith. It founded the *Journal of Bahá'í Studies* and began to publish scholarly books, especially on applied topics (such as the relationship of Bahá'í principles to racial equality). A number of Baby Boomers obtained doctorates in religious studies, history, and Middle Eastern studies in the 1980s and began to apply academic methodologies to the study of Bahá'í scripture and history, enriching Bahá'í literature and sometimes advocating new ways of thinking about the Faith.

The Bahá'í Faith increasingly was studied at universities. A course on the Bahá'í Faith was taught in 1973 at Yale University; by the new millennium a university course on the Faith was taught somewhere in the United States every two or three years. The national Spiritual Assembly established the Wilmette Institute in 1995 to offer noncredit university-level courses on Bahá'í subjects, and in 1998 it began to deliver courses over the World Wide Web.

Increasingly in the 1990s, religious studies textbooks included short sections or chapters on the Bahá'í religion. A few articles by sociologists also appeared.

Involvement in the Life of Society. Bahá'u'lláh calls on Bahá'ís to be "anxiously concerned" about the needs of the society around them.[59] In Iran and Ashgabat, institutions that benefited wider society flourished, such as schools, clinics, and hospitals. But in the West, other than small projects—like classes in Kenosha to teach women and girls useful work skills about 1905—the Bahá'ís organized few social improvement efforts before the 1960s, when many young Bahá'ís got involved in nonviolent, legal efforts to support the civil rights movement. Starting in the 1940s and accelerating in the 1970s, in developing regions such as India, Africa, and Latin America, Bahá'í communities began to found schools, programs to educate women, and institutes for rural development. In 1983 a message by the Universal House of Justice encouraged Bahá'ís to undertake social and economic development projects.[60] Local Bahá'í communities in the United States began to support soup kitchens, contribute to food drives, organize literacy classes, and participate in other efforts, depending on their resources. In some areas large long-term projects were started, such as an effort in the San Francisco Bay area to provide free voice-mail services to homeless people, enabling them to apply for jobs and apartments.[61]

Artistic Developments. The considerable increase in the size of the American Bahá'í community in the late 1960s resulted in a corresponding increase and broadening of the forms of its cultural expression. Bahá'í hymnody, which had largely disappeared when Sunday worship meetings died out in the 1920s, underwent a modest revival. Some Bahá'í rock and classical music appeared. The Second Bahá'í World Congress in New York City in 1992 was a cultural watershed because significant resources were devoted to creating an artistically rich program for the 27,000 Bahá'ís who attended. An *Oratorio for Bahá'u'lláh* was composed by rewriting several popular musical pieces for professional voice and orchestra. But the most important development was the debut of professional-quality Bahá'í gospel music, which has continued to grow in

popularity. In 2006 a Bahá'í piece won a national gospel music award in the United States.

Public Relations and External Affairs. Bahá'ís have long used the media to proclaim Bahá'í principles, but the 1970s saw a quantitative increase in effectiveness in the United States. Bahá'í intercommunity media committees coordinated the use of television, radio, print, and billboard media in many large metropolitan areas and created campaign materials, complete with slogans such as "One Planet—One People—Please." In the 1970s and 1980s, several series of taped radio and television programs were produced for use on locally rented media outlets. In the 1990s a national toll-free information number was set up and coordinated with the purchase of cable television time for special Bahá'í advertisements. The informational ads were designed with the input of focus groups to ensure they were conveying the information and impressions that were intended. Informational Web sites were developed.

The 1970s saw Bahá'í relations with the federal government develop as the American national Spiritual Assembly established an Office of External Affairs. The Office has put much of its energy into human rights work, such as the ratification of the United Nations Convention on Torture and CEDAW (Convention on Elimination of All Forms of Discrimination Against Women), but it has also focused on sustainable development and joined several national interfaith organizations. The Office's expansion was strongly stimulated by the need to combat the persecution of the Iranian Bahá'í community. As early as 1901 American Bahá'ís were informing government diplomatic channels about particularly serious incidents, but the 1979 Islamic revolution in Iran brought persecution of a systematic and enduring sort not seen since the mid-nineteenth century. Entire Spiritual Assemblies across Iran were arrested and their members executed, sometimes after trials for apostasy, sometimes after torture. Three successive national Spiritual Assemblies were arrested and martyred. Bahá'í organization in Iran was legally banned in 1983. The Bahá'í hospital in Tehran was confiscated. Thousands of Persian Bahá'ís were imprisoned and over 200 executed for their beliefs; all suffered severe discrimination. Official (though secret) government policy called for extinction of the Iranian Bahá'í community through suffocation and attacks on its institutions and prestige outside Iran. Bahá'ís were not allowed to leave the country so that they would not strengthen the religion elsewhere.[62]

About a tenth of Iran's 300,000 Bahá'ís managed to flee the country anyway, sometimes via dangerous routes, and about 12,000 settled in the United States. They were mostly educated and articulate professionals who escaped with some of their savings. Everywhere they settled, they assimilated into the economy and culture fairly well and reasonably quickly. In the United States they became pillars of the American Bahá'í community, often intermarrying with European American or African American Bahá'ís. Their stories, told to the media and in Congressional hearings into the persecution, served to publicize the plight of the Bahá'ís remaining in Iran. The United States Congress passed seven resolutions condemning the persecution.[63]

CONTROVERSIAL ISSUES

The Bahá'í Faith regards unity in diversity as its most important principle. Unity is not a perfect state the Bahá'í community can attain as much as an ongoing process that starts with prayer, consultation—that is, democratic principles involving active listening, seeking wide input, and judging ideas on their merits rather than on the person originating them—and collaboration on tasks that advance the Bahá'í community or humanity as a whole. Informing the unity process is the extensive guidance in the Bahá'í sacred and authoritative texts—67,000 documents by Bahá'u'lláh, 'Abdu'l-Bahá, and Shoghi Effendi and the ongoing authoritative determinations of the Universal House of Justice—and the accumulated experience of national and local Spiritual Assemblies and the institution of the Counselors. To protect the unity of his followers Bahá'u'lláh established a covenant with them that requires them to follow and obey 'Abdu'l-Bahá and subsequent heads of the Faith. The covenant was renewed by 'Abdu'l-Bahá in his *Will and Testament,* which made Shoghi Effendi and the Universal House of Justice his successors and requires Bahá'ís to obey them.

Because of the Faith's clear lines of authority, many potential controversies are avoided entirely; after initial discussion or debate between individuals, matters have often been referred to the head of the Faith, who either resolves the question or says Bahá'ís are free to believe as they wish.[64] When Bahá'ís feel confusion, even anguish about some aspect of the Faith, they may write to the Universal House of Justice to express their concern and receive replies that encourage them and help explain the principle or problem. They can also meet with a Counselor or Auxiliary Board member.

Historically, there have been two sources of tensions in the Bahá'í community. The first is the nature of authority in the community, a matter that was raised particularly when one head of the Faith succeeded another. As a result of clearly written instructions about succession, individuals who sought leadership—such as 'Abdu'l-Bahá's brother Muhammad-'Alí, Ibrahim Kheiralla, Ahmad Sohrab, and Mason Remey—could not successfully legitimize their claim using Bahá'í scripture. Consequently, they were able to attract relatively small numbers of followers: dozens, scores, sometimes a few hundred. Recruitment of new followers required rejection of all or part of the succession texts, a subject of little interest to non-Bahá'ís, and the prohibition on Bahá'ís having social contact with covenant breakers cut off the potential supply of converts from the Bahá'í community.

The result is a sharp contrast to other religions: Christianity has 20,000 sects and the Roman Catholic Church can claim the allegiance of about two-thirds of all Christians; the Mormon movement has a dozen sects, and the largest one, the Church of Jesus Christ of Latter-day Saints, embraces 90 percent of all Mormons; but of the approximately five million people who consider themselves Bahá'ís, there are only two or three groups, with a total membership of several hundred, who are separate from the mainstream, and these groups have tended to dwindle rather than grow over time.

The second historical source of tension arises when the Bahá'í teachings are at variance with cultural norms. For example, when the Bahá'í Faith arrived in the United States a century ago, its practices of obligatory prayer and fasting appeared foreign or Muslim to some. In the Middle East, Africa, and elsewhere, its teachings about equality of men and women shocked some, and its democratic organization appeared western. Changes in cultural norms can alleviate tensions, as has happened as American attitudes have moved closer to the Bahá'í principle of racial equality and unity, or can exacerbate them, as has happened with attitudes toward homosexual activity (which is not permitted to Bahá'ís).

In the American Bahá'í community, the conversion of social activists and intellectuals in the 1960s and 1970s inevitably brought to the fore a wide range of issues, some of which have been the subject of argumentation in the years since: for example, the Bahá'í teachings on avoidance of partisan politics (which some saw as limiting Bahá'í involvement in short-term social change); obedience to government (which prevents Bahá'í involvement in nonviolent civil disobedience); exclusion of women from service on the Universal House of Justice, although they serve equally in all other institutional capacities (which some saw as a departure from the principle of equality of the sexes and questioned on exegetical grounds)[65]; and the continued but temporary requirement that all manuscripts written by Bahá'ís on the Bahá'í Faith be reviewed for accuracy before publication (on the grounds that it limits freedom of expression). The discussion, framed by a few dozen Bahá'ís as "liberalism," represented a revival of the epistemological individualism of the early twentieth century, although many of the issues were different. In the late 1980s a short-lived periodical, *dialogue,* championed their discussion.

Beginning in the early 1990s the advent of the Internet and LISTSERVS allowed Bahá'ís to advocate and oppose such matters actively in cyberspace. Ultimately a half-dozen American Bahá'ís resigned their membership, and one was deprived temporarily of membership privileges. The Universal House of Justice chose to remove three from the Bahá'í membership rolls. One ex-Bahá'í wrote unflatteringly about the Bahá'í community in academic venues.[66] It should be noted that, like similar controversies in the Catholic and Mormon churches, the vast majority of members are only dimly aware of overt controversy around these issues. Bahá'ís generally may openly raise questions about issues of any kind that concern them, but they regard adversarial approaches as counterproductive ways to resolve disagreements or to advance understanding.

THE FUTURE

The Bahá'í Faith is 162 years old and has been present in the United States for 111 years. The depth of its roots in American culture can be measured in several ways:

- There are now fifth generation adult American Bahá'ís. Unlike most American Hindus, Buddhists, Muslims, and Sikhs, only a small percentage of American Bahá'ís were born outside the United States.

- The American Bahá'í community is ethnically diverse, indicating that it has multiple avenues of attraction.
- The Faith has already had a small but significant impact on American culture through such Bahá'ís as Alain Locke, the dean of the Harlem Renaissance; Mark Tobey, a renowned abstract painter; Robert Hayden, the poet; Dizzy Gillespie, the famous jazz trumpeter; and Robert Abbott, publisher of the *Chicago Defender.* Significantly, four of the five were African Americans.

The American Bahá'í community has experienced rapid growth in times of social crisis (such as the Great Depression and the 1960s) and slower growth at other times. There is no reason to assume it has yet reached a limit in its size.

CONCLUSION

The Bahá'í Faith offers various windows into the study of the phenomenon of religion. Like Mormonism, it is an older example of a New Religious Movement. It can also be viewed as a faith that has moved into that elusive category of a "world religion" in terms of its roots in multiple global cultures (according to the *World Christian Encyclopedia,* the Bahá'í Faith is present in more countries and significant territories than Islam—218 versus 204—and only Christianity, in 238, is more widespread).[67] Its trajectory from a "heterodox and seemingly negligible offshoot of … Shí'ah Islam"[68] to a world religion has been little studied. The role of Bahá'ís of western Christian background in asking questions of the head of the Faith and thereby eliciting responses in dialogue with western and Christian concerns has received little attention; even less research has been done on the indigenization of the Faith among the native communities in Latin America and Africa or the rural population of India, or the role of the Bahá'í teachings in fostering economic development in Third World countries. Within the United States, the attraction of African Americans, especially in rural South Carolina, and American Indians on reservations has been the subject of scant literature.[69]

Heretofore most research has been done by Bahá'ís, who are more interested in understanding their community than in considering it as a case study of universal religious phenomena. Hence, opportunities abound for researchers interested in learning what the Bahá'í Faith has to tell us about religion, scripture, and religious community.

NOTES

1. Note about terminology and spelling: The word *bahá* is Arabic for glory or splendor; the superlative form is *abhá,* most glorious or most splendid. From this root is formed *Bahá'u'lláh,* "the glory of God," the title taken by the founder of the Faith, and from it comes *Bahá'í,* a word used as a noun to refer to a follower of Bahá'u'lláh and as an adjective to refer to things pertaining to the Bahá'í Faith. Grammatically, the word "Bahá'í" functions identically to the word "Christian." While some academics have used the term "Bahaism," it is not used at all in Bahá'í authoritative texts or literature in English and most Bahá'ís find it offensive. The standard term is "Bahá'í Faith" (with a capital F, indicating it is part of a proper name).

A standard transliteration system for Arabic and Persian words was adopted by the Bahá'í Faith worldwide in 1923. Academics and dictionaries have transliterated Bahá'í terms according to various systems or dropped transliteration altogether. This article adopts the Bahá'í system, which has far more currency than any alternative.

2. The ministry of the Báb has been described by Hasan Balyuzi, *The Báb: The Herald of the Day of Days* (Oxford: George Ronald, 1973); and by Abbas Amanat, *Resurrection and Renewal: The Making of the Babi Movement in Iran, 1844–1850* (Ithaca, NY: Cornell University Press, 1989).

3. First-hand accounts of the persecution of the Bábís were collected and converted into a narrative by a contemporary chronicler, Nabíl-i-Zarandí, and have been published in *The Dawn-Breakers: Nabíl's Narrative of the Early Days of the Bahá'í Revelation,* ed. trans. Shoghi Effendi (New York: Bahá'í Publishing Committee, 1932).

4. Many of the European accounts of the martyrdom of Bábís have been compiled and edited by Moojan Momen in *The Bábí and Bahá'í Religions, 1844–1944: Some Contemporary Western Accounts* (Oxford: George Ronald, 1981).

5. Bahá'u'lláh, *Epistle to the Son of the Wolf,* trans. Shoghi Effendi, rev. ed. (Wilmette, IL: Bahá'í Publishing Trust, 1953), 22.

6. Bahá'u'lláh, *The Hidden Words,* trans. Shoghi Effendi (Wilmette, IL: Bahá'í Publishing Trust, 1939); Bahá'u'lláh, *The Seven Valleys and the Four Valleys,* trans. Marzieh Gail and Ali-Kuli Khan, 3rd ed. (Wilmette, IL: Bahá'í Publishing Trust, 1973); Bahá'u'lláh, *Kitáb-i-Íqán: The Book of Certitude,* trans. Shoghi Effendi, 2nd ed. (Wilmette, IL: Bahá'í Publishing Trust, 1950).

7. Original correspondence describing the revelation of the Kitáb-i-Íqán has been published in Ahang Rabbani, "The Conversion of the Great-Uncle of the Báb," *World Order,* 30, no. 3 (Spring 1999): 19–38.

8. To this list 'Abdu'l-Bahá added Buddha and Shoghi Effendi added Krishna and the founder of the Sabean religion. Elsewhere Bahá'u'lláh appears to refer to Zoroaster as a Manifestation. He also suggests the qur'ánic prophets Sálih and Húd may have been Manifestations.

9. The best summary of Bahá'u'lláh's declaration in the garden of Ridván and its implications may be found in Nader Saiedi, *Logos and Civilization: Spirit, History, and Order in the Writings of Bahá'u'lláh* (Bethesda, MD: University Press of Maryland, 2000), 242–254.

10. Bahá'u'lláh's life is ably summarized in Hasan M. Balyuzi, *Bahá'u'lláh: The King of Glory* (Oxford, George Ronald, 1980).

11. Extracts from Bahá'u'lláh's tablets to the kings are published in Bahá'u'lláh, *The Proclamation of Bahá'u'lláh,* trans. Shoghi Effendi (Haifa: Bahá'í World Centre, 1972); and in Bahá'u'lláh, *The Summons of the Lord of Hosts: Tablets of Bahá'u'lláh,* comp. trans. Bahá'í World Centre (Haifa: Bahá'í World Centre, 2002).

12. This summary of the Kitáb-i-Aqdas is based on Shoghi Effendi, *God Passes By* (Wilmette, IL: Bahá'í Publishing Trust, 1944), 213–216.

13. Bahá'u'lláh, *Kitáb-i-Aqdas: The Most Holy Book,* trans. Bahá'í World Centre (Haifa: Bahá'í World Centre, 1992), par. 88.

14. The revelation of the Kitáb-i-Aqdas and its subsequent reception are described in Adib Taherzadeh, *The Revelation of Bahá'u'lláh,* vol. 3: *Akka: The Early Years, 1868–77* (Oxford: George Ronald, 1983), 275–399.

15. Baha'u'llah, *Tablets of Bahá'u'lláh Revealed after the Kitáb-i-Aqdas,* trans. Habib Taherzadeh (Haifa: Bahá'í World Centre, 1978), 167.

16. Ibid., 165, 93, 168, 113, 93, 63.
17. Ibid., 219–223, 3–5.
18. Peter Smith, "A Note on Babi and Baha'i Numbers in Iran," *Iranian Studies,* 17 (1984): 295–301.
19. Many references to Bahá'u'lláh and the Bahá'í Faith by European contemporaries can be found in Momen, *The Bábí and Bahá'í Religions, 1844–1944.*
20. A summary of Kheiralla's life and teachings may be found in Robert H. Stockman, *The Bahá'í Faith in America, Origins, 1892–1900,* vol. 1 (Wilmette, IL: Bahá'í Publishing Trust, 1985), chaps. 2–7.
21. 'Abdu'l-Bahá later made it repeatedly clear that he was not the return of Christ.
22. Growth of the American Bahá'í community in the first decade of the twentieth century is summarized in Robert H. Stockman, *The Bahá'í Faith in America, Early Expansion, 1900–1912,* vol. 2 (Oxford: George Ronald, 1995).
23. Bahá'í Sunday worship and hymn singing declined in the teens and twenties and soon became a rarity; see R. Jackson Armstrong-Ingram, *Music, Devotions, and Mashriqu'l-Adhkár* (Los Angles: Kalimat Press, 1987), 3–117.
24. The Bahá'í calendar of 19 months of 19 days, with a four-day intercalary period, was established by the Báb and modified only slightly by Bahá'u'lláh.
25. A summary of American Bahá'í adoption of the obligatory prayers, the Fast, Bahá'í Holy Days, and the Feast is given in Stockman, *The Bahá'í Faith in America,* 27–28, 108–109, 244–256.
26. Peter Smith applies the term "epistemological individualism" in Peter Smith, "*Reality* Magazine: Editorship and Ownership of an American Bahá'í Periodical," in *From Iran East and West: Studies in Bábí and Bahá'í History,* vol. 2, ed. Juan Cole and Moojan Momen (Los Angeles: Kalimát Press, 1984), 145.
27. Construction of the temple is summarized in Bruce W. Whitmore, *The Dawning Place: The Building of a Temple, the Forging of the North American Bahá'í Community* (Wilmette, IL: Bahá'í Publishing Trust, 1984).
28. The involvement of American Bahá'í women in the Iranian Bahá'í community is summarized in R. Jackson Armstrong-Ingram, "American Bahá'í Women and the Education of Girls in Tehran, 1909–1934," in *In Iran: Studies in Bábí and Bahá'í History,* vol. 3, ed. Peter Smith (Los Angeles: Kalimat Press, 1986), 180–210.
29. The audience is the author's estimate based on the known size of crowds at certain venues. 'Abdu'l-Bahá's visit to North America has been chronicled in Allan L. Ward, *Two Hundred Thirty-Nine Days: 'Abdu'l-Bahá's Journey in America* (Wilmette, IL: Bahá'í Publishing Trust, 1979).
30. The Reading Room affair is summarized in Peter Smith, "The American Bahá'í Community, 1894–1917: A Preliminary Survey," in *Studies in Bábí and Bahá'í History,* vol. 1, ed. Moojan Momen (Los Angeles: Kalimát Press, 1982).
31. 'Abdu'l-Bahá, *Tablets of the Divine Plan,* trans. Shoghi Effendi (Wilmette, IL: Bahá'í Publishing Trust, 1977).
32. 'Abdu'l-Bahá, *Will and Testament of 'Abdu'l-Bahá,* trans. Shoghi Effendi (Wilmette, IL: Bahá'í Publishing Trust, 1944).
33. Shoghi is his first name and is how he signed most communications to Bahá'ís; Effendi is an honorific title similar to "Sir" or "esquire" and is used by Bahá'ís when talking about him; Rabbani was his family name and was rarely used.

34. 'Abdu'l-Bahá, *Will and Testament of 'Abdu'l-Bahá* (Wilmette, IL: Bahá'í Publishing Trust, 1944),13.

35. Shoghi Effendi's principal early messages about administration were published in Shoghi Effendi, *Bahá'í Administration: Selected Messages, 1922–1932,* 7th ed. (Wilmette, IL: Bahá'í Publishing Trust, 1974).

36. *The Bahá'í Yearbook: Volume One—April, 1925–April, 1926* (Wilmette, IL: Bahá'í Publishing Trust, 1980), 102.

37. Eunice Braun, *From Strength to Strength: The First Half Century of the Formative Age of the Bahá'í Era* (Wilmette, IL: Bahá'í Publishing Trust, 1978), 7.

38. *Reality* has been studied in Smith, "*Reality* Magazine: Editorship and Ownership of an American Bahá'í Periodical," in *From Iran East and West,* ed. Cole and Momen.

39. The Ruth White and Ahmad Sohrab episodes are recounted in Adib Taherzadeh, *The Covenant of Bahá'u'lláh* (Oxford: George Ronald, 1992), 347–349, 343–347.

40. Determining the numbers of Bahá'ís in the period 1894 to 1936 is complicated by the lack of a definition of membership. The United States government census conducted religious censuses in 1906, 1916, 1926, and 1936 via surveys sent to local congregations; the Bahá'í numbers reported were 1280, 2884, 1247, and 2584. The large 1916 figure, however, included sympathizers who were not members per se, as demonstrated by membership lists drawn up for internal purposes in 1920 and 1922, with 1234 and 1368 Bahá'ís, respectively. The 1926 and 1936 statistics used a narrower definition of membership based on adults on voting lists (which did not exist in 1906 or 1916). For details, see Robert H. Stockman, "The Bahá'í Faith and American Protestantism" (Th.D. dissertation, Harvard University, 1990), 26–34.

41. Shoghi Effendi, *The Advent of Divine Justice,* 3rd ed. (Wilmette, IL: Bahá'í Publishing Trust, 1971); Shoghi Effendi, *The World Order of Bahá'u'lláh: Selected Letters by Shoghi Effendi,* 2nd rev. ed. (Wilmette, IL: Bahá'í Publishing Trust, 1974).

42. For a survey of race unity efforts in the United States, see Gayle Morrison, *To Move the World: Louis G. Gregory and the Advancement of Racial Unity in America* (Wilmette, IL: Bahá'í Publishing Trust, 1982).

43. All membership data in this paper comes from Robert Stockman, "United States Bahá'í Membership and Enrollment Statistics, 1894–2003" (unpublished paper). Some membership data came from the Bahá'í National Teaching Committee, which combed records from the 1970s through the 1990s; some were provided by the National Bahá'í Archives; and some were gleaned from the pages of *Bahá'í News* or the annual reports of the National Spiritual Assembly of the Bahá'ís of the United States.

44. The first and second Seven Year Plans are summarized in Braun, *From Strength to Strength,* 25–27, 33–42.

45. Shoghi Effendi, *Messages to the Bahá'í World, 1950–57* (Wilmette, IL: Bahá'í Publishing Trust, 1971), 7–8, 18–21, 59.

46. Braun, *From Strength to Strength,* 45–52.

47. Shoghi Effendi, *Messages to the Bahá'í World,* 127. One of the new Hands was an American, and an American had been appointed as a Hand when another one had died a few years earlier, hence eight of the 27 Hands were Americans.

48. Two of the 27 were too old and infirm to attend, but they signed all official conclave documents.

49. The messages of the Hands of the Cause of God issued during the "Interregnum" (1957–1963) have been collected together in Ruhiyyih Khanum, *The Ministry of the Custodians* (Haifa: Bahá'í World Centre, 1992).

50. The history of Remey's Orthodox Bahá'í Faith and its split on Remey's death is described in Vernon Elwin Johnson, "An Historical Analysis of Critical Transformations in the Evolution of the Bahá'í World Faith" (Ph.D. dissertation, Baylor University, 1974), 342–375.

51. A study of the development of the Bahá'ís Under the Provision of the Covenant was published as Robert W. Balch, John Domitrovich, Barbara Lynn Mahnke, and Vanessa Morrison, "Fifteen Years of Failed Prophecy: Coping with Cognitive Dissonance in a Baha'i Sect," in *Millennium, Messiahs, and Mayhem: Contemporary Apocalyptic Movements,* ed. Thomas Robbins and Susan J. Palmer (New York: Routledge, 1997), 73–90.

52. Universal House of Justice, *Messages from the Universal House of Justice, 1963–1985: The Third Epoch of the Formative Age,* comp. Geoffry W. Marks (Wilmette, IL: Bahá'í Publishing Trust, 1996), 14, 44, 31–34.

53. Universal House of Justice, *Nine Year Plan, 1964–1973, Statistical Report, Ridván 1973* (Haifa: Bahá'í World Centre, 1974), 42.

54. Universal House of Justice, *Analysis of the Nine Year International Teaching Plan, 1964–1973* (Wilmette, IL: Bahá'í Publishing Trust, 1964), 14, 16, 17, 32.

55. Universal House of Justice, *Messages from the Universal House of Justice, 1963–1986,* 130–134, 246–248.

56. These statistics are based on data in Stockman, "United States Bahá'í Membership and Enrollment Statistics, 1894–2003."

57. One reason for the sharp drop was because Spiritual Assemblies should be formed according to existing civic boundaries; in the developing world this was often difficult and each village in a district formed its own assembly; later redistricting according to civic boundaries often combined several Bahá'í communities into one.

58. International Teaching Centre, *Building Momentum: A Coherent Approach to Growth,* in *Ocean,* a free software system available at http://www.bahaieducation.org.

59. Bahá'u'lláh, *Gleanings from the Writings of Bahá'u'lláh,* trans. Shoghi Effendi, 2nd rev. ed., pocket-sized ed. (Wilmette, IL: Bahái Publishing Trust, 1990), 213.

60. Universal House of Justice, *Messages from the Universal House of Justice,* 601-04.

61. A recent summary of social and economic projects sponsored by the American Bahá'í community can be found in National Spiritual Assembly of the Bahá'ís of the United States, *In Service to the Common Good: The American Bahá'í Community's Commitment to Social Change* (Wilmette, IL: Bahá'í Publishing Trust, 2004).

62. The latest summary of the persecution of Iran's Bahá'ís in Bahá'í International Community, *Closed Doors* (Haifa: Bahá'í World Centre, 2005).

63. Resolutions condemning the persecution were also passed by various United Nations organs, the European Parliament, and some national legislatures.

64. From the point of view of many Bahá'ís, even the term "controversial issues" is a misnomer; they would regard such subjects as "challenging issues" worthy of discussion, exploration, scholarly study, and elaboration.

65. The Bahá'í authoritative texts give no explanation for why women cannot serve on the Universal House of Justice. 'Abdu'l-Bahá said it was because of "wisdom of the Lord God's, which will ere long be made manifest as clearly as the sun at high noon" ['Abdu'l-Bahá, *Selections from the Writings of 'Abdu'l-Bahá,* comp. Research Department of the Universal House of Justice (Haifa: Bahá'í World Centre, 1978), 80].

66. Juan R.I. Cole, "Race, Immorality and Money in the American Baha'i Community: Impeaching the Los Angeles Spiritual Assembly," *Religion* 30 (2000): 109–125, with responses to Cole by Robert H. Stockman and Mike McMullen in Ibid., 133–139 and 141–47, respectively.

67. David B. Barrett and Todd Johnson, *World Christian Encyclopedia: A Comparative Survey of Churches and Religions in the Modern World,* 2nd ed., 2 vols. (Oxford: Oxford University Press, 2001), vol. 1, 4.

About the Editors and Contributors

EDITORS

Eugene V. Gallagher is the Rosemary Park Professor of Religious Studies at Connecticut College. He is the author of *Divine Man or Magician? Celsus and Origen on Jesus* (1980), *Expectation and Experience: Explaining Religious Conversion* (1990), *The New Religious Movements Experience in America* (2004), and, with James D. Tabor, *Why Waco? Cults and the Battle for Religious Freedom in America* (1995), as well as articles on ancient Mediterranean religions and contemporary new religious movements.

W. Michael Ashcraft is Associate Professor of Religion at Truman State University in Kirksville, Missouri. He is the author of *The Dawn of the New Cycle: Point Loma Theosophists and American Culture* (2002) and coeditor with Dereck Daschke of *New Religious Movements: A Documentary Reader* (2005). He is currently conducting research for a book on the history of the study of new religions.

CONTRIBUTORS

Yaakov Ariel is Professor of Religious Studies at the University of North Carolina at Chapel Hill. He is the author of a number of books and articles on Christian-Jewish relations in the modern era. His book, *Evangelizing the Chosen People: Missions to the Jews in America,* has won the American Society of Church History Outler prize.

Mary Farrell Bednarowski is Professor Emerita of Religious Studies at United Theological Seminary of the Twin Cities. She is the author of three books, among them *New Religions and the Theological Imagination in America* (1989), and has a long-standing interest in various forms of theological innovation in American religion especially as it is related to issues of gender.

Helen A. Berger is Professor of Sociology at West Chester University of Pennsylvania. She is the author of *A Community of Witches: Contemporary and Neo-Paganisms Witchcraft in the United States* (1999), coauthor of *Voices from the Pagan Census: A National Survey of Witches and Pagans in the United States* (2003), and editor of *Witchcraft and Magic: Contemporary North America* (2005). She is now completing a book on teenage witches on three continents with Douglas Ezzy.

David G. Bromley is Professor of Sociology and Religious Studies at Virginia Commonwealth University. His most recent books are *Teaching New Religious Movements* (Oxford, 2007), *Defining Religion: Critical Approaches to Drawing Boundaries Between Sacred and Secular* (Elsevier Science/JAI Press, 2003), *Cults, Religion and Violence* (Cambridge University Press, 2001), and *Toward Reflexive Ethnography: Participating, Observing, Narrating* (Oxford: Elsevier Science/JAI Press, 2001).

Susan Love Brown is Associate Professor of Anthropology at Florida Atlantic University and also teaches in the Public Intellectuals and the Women's Studies programs. She is the editor of *Intentional Community: An Anthropological Perspective* and has written a number of articles about Ananda Village, a California New Age community with branches in Oregon, Washington, and Italy.

James D. Chancellor is the W.O. Carver Professor of World Religions at The Southern Baptist Theological Seminary and Professor of Religion at The Philippine Baptist Theological Seminary. He is the author of *Life in the Family: An Oral History of the Children of God* published by Syracuse University Press and has written numerous journal articles and book chapters.

George D. Chryssides is Senior Lecturer in Religious Studies at the University of Wolverhampton, England. His publications include *The Advent of Sun Myung Moon* (London: Macmillan, 1991), *Exploring New Religions* (London: Cassell, 1999), and *Historical Dictionary of New Religious Movements* (Metuchen, NJ: Scarecrow Press), as well as contributions to various anthologies and journals.

Mary Ann Clark is a lecturer in the University of Houston system where she teaches courses in Religious Studies, Humanities, and Anthropology and is the coordinator of the Council of Societies for the Study of Religion. She is the author of *Where Men are Wives and Mothers Rule: Santería Ritual Practices and Their Gender Implication* (2005). She has also published numerous journal articles and book chapters.

Douglas E. Cowan is Assistant Professor of Religious Studies and Social Development Studies at Renison College/University of Waterloo. In addition to numerous scholarly articles and chapters, he is the author of *Cyberhenge: Modern Pagans on the Internet* (Routledge, 2005), *The Remnant Spirit: Conservative Reform in Mainline Protestantism* (Praeger 2003), and *Bearing False Witness? An Introduction to the Christian Countercult* (Praeger 2003).

Robert S. Cox is Head of Special Collections and Adjunct Professor of History at the University of Massachusetts Amherst. He is author of *Body and Soul: A*

Sympathetic History of American Spiritualism (Charlottesville: University of Virginia Press, 2003) and editor of *The Shortest and Most Convenient Route: Lewis and Clark in Context* (Philadelphia: APS, 2004).

Daniel Cozort is Professor and chair of the Department of Religion at Dickinson College, in Carlisle, Pennsylvania, where he teaches about the religions of India and Native America. He is the author of *Unique Tenets of the Middle Way Consequence School, Highest Yoga Tantra, Buddhist Philosophy, Sand Mandala of Vajrabhairava,* and *Imagination and Enlightenment* and a documentary film, *Mandala: Sacred Circle of Vajrabhairava,* as well as book chapters and articles.

Dereck Daschke is Associate Professor of Philosophy and Religion at Truman State University in Kirksville, Missouri. He is coeditor of *New Religious Movements: A Documentary Reader*(2005). He has published frequently on ancient Jewish apocalypticism and prophecy, including "Mourning the End of Time: Apocalypses as Texts of Cultural Loss" in *Millennialism from the Hebrew Bible to the Present* (2002) and "'Because Of My Grief I Have Spoken': The Psychology of Loss in 4 Ezra" in *Psychology and the Bible* (2004).

Dell deChant is an Instructor and the Associate Chair in the Department of Religious Studies at the University of South Florida. He is also on the faculty of the Honors College at USF. He is the author of *The Sacred Santa: The Religious Dimensions of Consumer Culture* (2002) and coauthor of *Comparative Religious Ethics: A Narrative Approach* (2001). He has also published numerous journal and encyclopedia articles and book chapters on New Religious Movements.

Brenda Denzler works full-time as a writer at the University of North Carolina at Chapel Hill and part-time as an independent scholar with an interest in marginal religious phenomena and movements. She is the author of *The Lure of the Edge: Scientific Passions, Religious Beliefs, and the Pursuit of UFOs* (2001). She is also the author of several presentations and papers on the UFO community.

Jacob S. Dorman currently holds the Mellon Postdoctoral Fellowship at Wesleyan University's Center for the Humanities. His book on black Israelites and the discourse of civilization during the Harlem Renaissance is forthcoming from Oxford University Press.

Cynthia Eller is Associate Professor of Women and Religion at Montclair State University. She is the author of *Am I a Woman? A Skeptic's Guide to Gender* (2003), *The Myth of Matriarchal Prehistory: Why an Invented Past Won't Give Women a Future* (2000), *Living in the Lap of the Goddess: The Feminist Spirituality Movement in America* (1995), and the interactive textbook *Revealing World Religions* (2005).

Robert Ellwood is Distinguished Emeritus Professor of Religion at the University of Southern California and is the author of several books, including *Religious and Spiritual Groups in Modern America* and *Alternative Altars.* He lives in Ojai, California, and has served as vice president of the Theosophical Society in America.

Ina Johanna Fandrich is an independent scholar living in New Orleans. She is the author of *The Mysterious Voodoo Queen, Marie Laveaux: A Study of Powerful Female Leadership in Nineteenth-Century New Orleans* (Routledge 2005).

Ron Geaves is Professor of Religious Studies in the Department of Theology and Religious Studies at University College Chester. His research interests focus around the transmigration of Indian traditions to the West. He has published two monographs and several journal articles in this area, including *Sufis of Britain (2000).* His most recent publications are *Islam and the West post 9/11* (2004) and *Aspects of Islam* (2005). He has just completed a monograph on Śaivite traditions in Diaspora to be published in 2006. He has known Prem Rawat since 1969 and has already published four journal articles concerning his activities.

Terryl L. Givens is Professor of Literature and Religion and holds the James A. Bostwick Chair of English at the University of Richmond. He is the author of the prize-winning *Viper on the Hearth: Mormons, Myths and the Construction of Heresy* (Oxford 1997), *By the Hand of Mormon: The American Scripture that Launched a New World Religion* (Oxford 2003), and *The Latter-day Saint Experience in America* (Greenwood 2004), in addition to articles and chapters on Romanticism, Literary Theory, and religious studies.

Adrian Harris has been a Practicing Pagan since 1990 and is currently conducting postgraduate research into Eco-Pagan ritual at the University of Winchester, UK. He has written several articles and book chapters, including "Sacred Ecology" in *Paganism Today* (Harper Collins, 1996) and "Dragon Environmental Network" in *The Encyclopaedia of Modern Witchcraft and Neo-Paganism* (Citadel Press, 2002).

Michael Homer is a practicing trial lawyer in Salt Lake City. He is a member of the Board of State History (appointed by Governor Michael Leavitt in 1997) and has been Chair since 2003. He has published four books, 13 chapters in books, and over 70 articles on historical and legal subjects. He is the recipient of the David Kirby Best Article Award from the Arthur Conan Doyle Society, the Lowell L. Bennion Editor's Award by *Dialogue, A Journal of Mormon Thought,* the T. Edgar Lyon Award of Excellence by the Mormon History Association, and The John Whitmer Historical Association Best Article Award. His most recent book, *On the Way to Somewhere Else: European Sojourners in the Mormon West,* was published by Arthur H. Clark Company in 2006.

Dawn L. Hutchinson is an instructor of religion at Christopher Newport University. She has authored entries in the *Encyclopedia of Religion, Communication, and Media, The Handbook for the Study of Religion, Encyclopedia of Religious Freedom,* and *The 21st Century Encyclopedia of the World's Religions.*

Jeffrey Kaplan is Associate Professor of Religion and the Director of the University of Wisconsin Oshkosh Institute for the Study of Religion, Violence and Memory. He serves as book review editor and serves on the Editorial Boards of the journals *Terrorism and Political Violence* and *Nova Religio.* He is the author or editor of 11 books on

religious violence and millenarian terrorism: *Millennial Violence: Past, Present and Future* (2002), *The Cultic Milieu* (2002), *Encyclopedia of White Power: A Sourcebook on the Radical Racist Right* (2000), *Beyond The Mainstream: The Emergence Of Religious Pluralism In Finland, Estonia And Russia* (2000), *The Emergence of an Euro-American Radical Right* (coauthored with Leonard Weinberg) (1998), and *Radical Religion in America: Millenarian Movements From the Far Right to the Children of Noah* (1997). His latest book, *Religious Resurgence and Political Violence,* will be published in 2006. In addition, he has authored numerous articles, encyclopedia entries, and book reviews that have appeared in a multidisciplinary range of peer reviewed academic journals.

Philip Lamy is Professor of Sociology and Anthropology at Castleton College in Castleton, Vermont. He is the author of *Millennium Rage: Survivalists, White Supremacists, and the Doomsday Prophecy* (1996). His articles and commentary on New Religious Movements and countercultures have appeared in professional journals, edited volumes, and the mass media, including *Time Magazine, The London Times, Wired Magazine,* National Public Radio, and the BBC.

David Christopher Lane is a Professor of Philosophy at Mount San Antonio College and a Lecturer in Religious Studies at California State University, Long Beach. He is the author of *The Radhasoami Tradition* (1992), *Exposing Cults* (1992), *The Making of a Spiritual Movement* (1983), and *The Unknowing Sage* (1993). He has also produced several films, including *Moving Water, Digital Baba,* and *Truth Lies.* On a more personal note, Lane won the world bodysurfing championship in 1999 and the International Bodysurfing Championships in 1997, 1998, 2000, and 2004.

Scott Lowe is professor and chair of the Department of Philosophy and Religious Studies at the University of Wisconsin–Eau Claire. He is the author of *Mo Tzu's Religious Blueprint for a Chinese Utopia* and *Da: The Strange Case of Franklin Jones* (with David Christopher Lane) as well as numerous articles and book chapters on Chinese religions and alternative religions in the West.

David W. Machacek is associate director of Humanity in Action, a New York–based not-for-profit organization that sponsors international educational programs on minority issues and human rights, and Visiting Assistant Professor of Public Policy at Trinity College in Hartford, Connecticut. He is coauthor of *Soka Gakkai in America: Accommodation and Conversion* and coeditor of *Global Citizens: The Soka Gakkai Buddhist Movement in the World.* His articles have appeared in *Nova Religio, Sociology of Religion, Research in the Social Scientific Study of Religion, Journal of Oriental Studies,* and *Journal of Church and State.*

J. Gordon Melton is the Director of the Institute for the Study of American Religion and is a research specialist with the Department of Religious Studies at the University of California–Santa Barbara. He is the author of a number of books on American religion including the *Encyclopedia of American Religions* (7th ed., 2003), *The*

Encyclopedic Handbook of the Cults in America (1992), and *Finding Enlightenment: Ramtha's School of Ancient Wisdom* (1998).

Michael L. Mickler is Professor of Church History and Vice President of Unification Theological Seminary. He is the author of *40 Years in America: An Intimate History of the Unification Movement in America, 1959–1999* (2000), *A History of the Unification Church in America, 1959–74* (1993), and *The Unification Church in America: A Bibliography and Research Guide* (1987), as well as articles and reviews on the Unification Church and other movements.

Timothy Miller is Professor of Religious Studies at the University of Kansas. He is the author of *Following In His Steps: A Biography of Charles M. Sheldon* (Tennessee, 1987), *American Communes, 1860–1960: A Bibliography* (Garland, 1990), *The Hippies and American Values* (Tennessee, 1991), *The Quest for Utopia in Twentieth-Century America* (Syracuse, 1998), *The 60s Communes: Hippies and Beyond* (Syracuse, 1999), and editor of *When Prophets Die: The Postcharismatic Fate of New Religious Movements* (State University of New York Press, 1991) and *America's Alternative Religions* (State University of New York Press, 1995), as well as articles in many journals and in the popular press.

Rebecca Moore is Associate Professor of Religious Studies at San Diego State University. She is the author of *Voices of Christianity: A Global Introduction* (2005), and coeditor of *Peoples Temple and Black Religion in America* (2004). She is Co-General Editor of *Nova Religio: The Journal of Alternative and Emergent Religions.* She has also published several journal articles and book chapters on the subject of Peoples Temple and Jonestown.

Douglas Morgan is professor of history at Columbia Union College in Takoma Park, Maryland. He is author of *Adventism and the American Republic: The Public Involvement of a Major Apocalyptic Movement* (2001).

M. Macha NightMare is an author, ritualist, and all-round Pagan webweaver. She presents at colleges, universities, and seminaries and teaches about death and dying and Neopagan public ritual at Cherry Hill Seminary, the first and only seminary serving the Neopagan community. (www.machanightmare.com.)

Kathleen Malone O'Connor is an Assistant Professor of Religious Studies at the University of South Florida where she specializes in Islamic studies. She has published in *Folklore: An Encyclopedia of Beliefs, Customs, Tales, Music, and Art, Journal of the American Academy of Religion,* and the *Encyclopedia of the Qur'an.* She has contributed chapters to *Black Zion: African American Religious Encounters with Judaism, Anthropology and Theology: Gods, Icons, and God-talk,* and *Studies in Middle Eastern Health.*

James T. Richardson is Director of the Grant Sawyer Center for Justice Studies and director of the Judicial Studies graduate degree program for trial judges at the University of Nevada, Reno. His latest book is *Regulating Religion: Case Studies from*

Around the Globe (Kluwer, 2004). He has published over 200 articles and chapters, as well as ten books, mostly about various aspects of New Religious Movements.

Robin Rinehart is Associate Professor of Religious Studies at Lafayette College, where she also directs the Asian Studies program. She is the author of *One Lifetime, Many Lives: The Experience of Modern Hindu Hagiography* (Oxford 1999), editor of *Contemporary Hinduism: Ritual, Culture, and Practice* (ABC-CLIO 2004), and has also published journal articles and encyclopedia entries.

E. Burke Rochford Jr. is Professor of Sociology and Religion at Middlebury College in Vermont. He is author of *Hare Krishna in America* and the forthcoming *Hare Krishna Transformed* to be published in 2007 by New York University Press. He has also published numerous articles and book chapters on the Hare Krishna movement and new religions.

Rosamond C. Rodman is an Assistant Professor of Religious Studies at Macalester College, in St. Paul, Minnesota. She works on intersections of Bible and American culture.

Nora L. Rubel is Visiting Assistant Professor of Religious Studies at Connecticut College. Trained in American religious history, she has published articles on African American religion and contemporary Judaism.

John K. Simmons, Professor of Religious Studies and chairperson of the Department of Philosophy & Religious Studies at Western Illinois University, is the creator of the popular "Beliefs and Believers" teleclass. He publishes regularly in the area of women-led, New Religious Movements in late nineteenth and early twentieth century American history, including the coauthored book, *Competing Visions of Paradise: The California Experience of 19th Century American Sectarianism.* Recent articles include "Eschatological Vacillation in the Mary Baker Eddy's Presentation of Christian Science" in *Nova Religio* and "Vanishing Boundaries: When Teaching About Religion Becomes Spiritual Guidance in the Classroom" in *Teaching Theology and Religion.*

Robert H. Stockman is an instructor for the Department of Religious Studies at DePaul University, Chicago, Illinois, and Director of the Institute for Baha'i Studies in Evanston, Illinois. He is the author of *The Baha'i Faith in America: Origins, 1892–1900, Vol. 1, The Baha'i Faith in America: Early Expansion, 1900–1912, Vol. 2,* and *Thornton Chase: The First American Baha'i.* He has also published 25 articles on Baha'i topics.

Bron Taylor is Samuel S. Hill Ethics Professor at the University of Florida, where he teaches in the interdisciplinary graduate program in religion and nature. He has written widely about religious environmental movements and nature religions. His books include *Ecological Resistance Movements: The Global Emergence of Radical and Popular Environmentalism* (SUNY 1995) and the *Encyclopedia of Religion and Nature*

(Continuum 2005), and he is the editor of the *Journal for the Study of Religion, Nature, and Culture.*

Suzanne Thurman is an independent scholar and former history professor who now manages intellectual property portfolios for IPWatch. She has published extensively on the Shakers. Her book, *"O Sisters Ain't You Happy?": Gender, Family, and Community Among the Harvard and Shirley Shakers, 1781–1918,* won a *Choice* Outstanding Academic Book Award in 2002.

Arthur Versluis is Professor of American Studies at Michigan State University. He is editor of the journal *Esoterica* and author of numerous books, including *Restoring Paradise* (State University of New York Press 2004) and *The New Inquisitions: Heretic-hunting and the Origins of Modern Totalitarianism* (Oxford University Press 2006).

David L. Weddle is Professor of Religion and chair of the Department at Colorado College. He is the author of *The Law As Gospel: Revival and Reform in the Theology of Charles G. Finney* (1985). He has published journal articles on Jonathan Edwards, Christian Science, and Jehovah's Witnesses, as well as review essays on law and religion. His entries on Jehovah's Witnesses appear in *The Encyclopedia of Protestantism* and the *Encyclopedia of Religion.*

Dagmar Wernitznig is an Associate Fellow with the Rothermere American Institute, University of Oxford. She is the author of *Going Native or Going Naive?: White Shamanism and the Neo-Noble Savage* (University Press of America 2003).

Catherine Wessinger is professor of the history of religions at Loyola University New Orleans. She is Co-General Editor of *Nova Religio: The Journal of Alternative and Emergent Religions.* She is the author of *Annie Besant and Progressive Messianism* (1988), and *How the Millennium Comes Violently: From Jonestown to Heaven's Gate* (2000), as well as articles on New Religious Movements. She has edited *Women's Leadership and Marginal Religions: Explorations Outside the Mainstream* (1993), *Religious Institutions and Women's Leadership: New Roles Inside the Mainstream* (1996), and *Millennialism, Persecution, and Violence: Historical Cases* (2000). Her current projects include collecting oral histories relating to the Branch Davidian case and editing the *Oxford Handbook on Millennialism.*

Melissa M. Wilcox is Assistant Professor of Religion and Director of Gender Studies at Whitman College. Author of *Coming Out in Christianity: Religion, Identity, and Community* and coeditor (with David W. Machacek) of *Sexuality and the World's Religions,* she is currently working on a book entitled *Spirituality and Sex in the City: Queer Religiosities in Practice and Theory.*

Jane Williams-Hogan is the Carpenter Chair Professor of Church History at Bryn Athyn College where she also teaches sociology. She is the author of *Swedenborg e le Chiese Swedenborgiane* (2004). She has also published journal articles, encyclopedia articles, and book chapters.

Jeff Wilson is a doctoral candidate in Religious Studies at the University of North Carolina at Chapel Hill. A specialist on Buddhism in America, he is the author of *The Buddhist Guide to New York* (2000) and numerous articles and book chapters on the subject. Wilson is a Contributing Editor to *Tricycle: The Buddhist Review.*

Joseph Dylan Witt is a Ph.D. student in the Religion and Nature Graduate Program at the University of Florida. He has contributed to the journal *Worldviews* and serves as the Managing Editor for the *Journal for the Study of Religion, Nature and Culture.*

Introduction to New and Alternative Religions in America

Introduction to New and Alternative Religions in America

Volume 5: African Diaspora Traditions and Other American Innovations

About the Editors and Contributors 299

Acknowledgments

This project is the result of a collaborative effort. We the coeditors are grateful to the contributors of this series for sharing their expertise with the general public through these outstanding scholarly essays. They did so for the sake of bringing to a wide reading audience the best information and interpretations now available about a wide range of new religious movements. We are especially grateful to Catherine Wessinger and David Bromley for helping us identify authors and for many other suggestions that have improved this set of volumes.

We the coeditors thank all of these scholars who gave so much to make this set possible. Many of them wrote their essays amid personal hardship and busy professional lives.

We also thank Suzanne Staszak-Silva, our editor at Greenwood, for her advice and guidance as this set went from one stage of development to another.

We are also grateful to our colleagues, at our respective teaching institutions as well as among the wider scholarly community, who offered us personal support and encouragement, much free advice, and many good wishes and kind thoughts.

Finally, we thank our families: our wives, Jennifer Gallagher and Carrol Davenport, and our daughters, Maggie Gallagher and Brittany and Kathleen Ashcraft. We lovingly dedicate this set to those daughters, our hope for the future, whom we love very much.

Introduction

Although new or alternative religious movements, or New Religious Movements (NRMs), have always been part of the American religious landscape, they have not always received broad public attention. Most often, their formation, attraction of members, and growth or decline have occurred beyond the harsh glare of prolonged public scrutiny. In some striking cases, however, a new or alternative religious movement has dominated the news for a period of time, usually because the movement itself, or some of its members, became involved in something that was widely perceived to be illegal, immoral, or simply destructive. For example, in the wake of the 1963 assassination of President John F. Kennedy, Minister Malcolm X of the Nation of Islam became notorious for his comment that Kennedy's murder meant "the chickens had come home to roost." In the 1970s saffron-robed members of the International Society for Krishna Consciousness, also known as Hare Krishna, became so well known for seeking donations and engaging strangers in conversations in public that they were easily lampooned in the comic film "Airplane." In the 1980s, the Rev. Sun Myung Moon, leader of the Unification Church (or Moonies), was found guilty of tax evasion by diverting church funds for his personal use. More recently, in 1993, the U.S. Bureau of Alcohol, Tobacco, and Firearms staged a raid on the home and church of a small group of Bible students outside of Waco, Texas. In addition to the ten lives lost in the botched raid, the 51 day standoff between the students of David Koresh, a group widely known as the Branch Davidians, and agents of the federal government, particularly the Federal Bureau of Investigation, culminated in the loss of 78 lives in a fire that consumed the Mount Carmel Center where the Branch Davidians lived. In 1997 followers of Marshall Applewhite, forming a group called Heaven's Gate, joined him in committing suicide so that they could all progress to what they viewed as "the evolutionary level above human." The list of such incidents could easily be multiplied.

In the late twentieth century as new and alternative religious movements continued to receive public attention for elements of their practice or belief that were highly controversial, a dominant image of such groups began to solidify. That image was

fostered by the activism of groups of former members, their families, some professionals in social work and psychology, and various other volunteers. When the opposition to new or alternative religious groups originated with more or less secular individuals, those opponents were generally called anticultists. When opposition originated with Evangelical Protestant Christians, those opponents were usually called countercultists. The tireless work of such activists, anticultist or countercultist, quickly produced a standard understanding of new and alternative religions that united a wide variety of groups under the umbrella category of "cults." In the perceptions of their anticult opponents, cults posed serious threats to vulnerable individuals and, ultimately, to the stability of American society itself. Anticultists and countercultists believed that cults had three prominent characteristics. First, they were led by unscrupulous, manipulative, and insincere individuals who sought only to increase their own power, wealth, and/or sexual enjoyment. Second, cults preyed upon unsuspecting, confused, and vulnerable individuals, often using sophisticated and virtually irresistible tactics of influence. Third, participation in a cult would surely bring harm to individual participants and might also lead them to commit any number of antisocial actions that threatened the public good. The stereotype of the "destructive cult" was aggressively marketed by the loose coalition of anticultists, particularly when disturbing news about any new or alternative religious movement became public. Thus, on the one hand, while a variety of events created a broad interest in learning about individual religious groups, their practices and beliefs, organizational structure, leadership, and many other topics, on the other hand, the predominance of the cult stereotype inevitably skewed the information available, attributed the perceived faults of any one group to all of them, and created expectations that any group labeled a cult must necessarily be worthy of suspicion, scorn, and vigorous opposition. Despite their prodigious efforts at educating the general public, the various anticult and countercult activists have, in fact, promoted much more misunderstanding than accurate understanding of the religious lives of some of their fellow citizens. Consequently, they have helped to create a very hostile environment for anyone whose religious practices do not fit within a so-called "mainstream." The personal and social costs of such religious bigotry may actually be higher than what the activists fear from cults themselves.

This set of volumes on "New and Alternative Religions in America" intends to rectify that situation for the general reader. It aims to present accurate, comprehensive, authoritative, and accessible accounts of various new and alternative religious movements that have been and are active in American society, as well as a set of essays that orient the reader to significant contexts for understanding new and alternative religions and important issues involved in studying them. The presentations are predicated on a simple but fundamental assumption. It is that accurate description and understanding must precede any judgment about the truth, validity, morality, or trustworthiness of any religious group or person. Accurate description demands that the group be presented in terms that it could itself recognize and acknowledge as being at least close to the way it understands itself. Providing an accurate description of the history, organization, practices, and beliefs of a particular group does not, in

any way, constitute an endorsement of that group, but it does provide an indispensable baseline for any further discussion. Such a baseline has often been lost in the public discussions of new and alternative religious movements, because their most bizarre, threatening, or even humorous aspects have been exaggerated. What is missing from such caricatured presentations is a sense of how any person could find such apparently ludicrous, lethal, or laughable groups worth joining. Simple dismissal of new or alternative religions as absurd, erroneous, or pernicious misses the social influence that they can have and demonstrably have had. Whatever an outsider's perception of new and alternative religions might be, many clear-thinking and well-intentioned individuals, throughout American history, have associated themselves with such groups. This set is founded on the idea that members' or participants' reasons for their decisions and their accounts of their experiences form the primary data for understanding new and alternative religions. Both hostile and approving accounts of new or alternative religions from outsiders provide a different sort of data, which reveals the social location and often-controversial careers of new and alternative religions. But neither approval nor criticism by external observers should take precedence over the self-understanding of each group as articulated by its members in establishing a baseline of descriptive accuracy.

Readers of this set of volumes will thus encounter both information and analytical frameworks that will help them arrive at an informed and appropriately complicated understanding of new and alternative religious movements in American history and society. Volume 1 provides a set of analytical perspectives on new and alternative religions, including the history of such movements in the United States, the controversies in which they have often become embroiled, the roles of leaders within the groups and the processes by which individuals become members and also leave their groups, the legal and global contexts in which new and alternative religions function, and a variety of prominent themes in the study of new religions, including roles of gender, children, and violence.

The four volumes that follow generally present accounts of individual groups, many of them well known but some much less so. Each chapter presents information about the origin and subsequent development of the group in question, its internal organization including the predominant type of leadership, its most important practices and beliefs, and controversies that have put the group in the limelight. Volume 2 focuses on groups that have developed out of the broad biblical tradition—Judaism and Christianity—and have achieved such a distinctive status as to be considered, at least by some observers, as independent religious groups rather than simple sectarian variations of more mainstream Jewish or Christian traditions. Volume 2 accordingly raises most acutely the problems of definition that are involved in using the admittedly malleable categories of "new" and "alternative" religions.

The description of a religious movement as *new* or *alternative* only begs further questions. Novelty can be in the eye of the beholder, or in the mind of someone claiming to be innovative. That is, religious movements are judged to be new, alternative, or anything else only in particular contexts and by certain audiences. They may claim, for example, to retrieve and correctly interpret or represent past beliefs

and practices, which have been neglected or forgotten. But their opponents might view the same claims as dangerous and deviant inventions. New religions themselves often manifest a pronounced ambivalence about their own novelty. A fundamental dynamic in new and alternative religions is that they strive to present themselves as both new and old, as unprecedented and familiar. The novelty of new religions cuts both ways; it can just as easily excite the interest of potential adherents as it can strain their credulity. As they spread their messages to those whose interest, approval, and even acceptance they hope to secure, NRMs proclaim both their challenging novelty and their comforting familiarity.

In their sectarian forms, these movements attempt to recapture the lost purity of an idealized past. Sects typically have prior ties to larger religious organizations from which they have intentionally broken off. They aim to return to the pristine origins of the tradition and reestablish its foundations. Sectarian forms of Christianity frequently exhort their partisans to get "back to the Bible"; contemporary Islamic sects similarly yearn for the purity of the times of the prophet Muhammad. Even the Church of Satan, founded by Anton Szandor LaVey in 1966, has spawned sectarian groups that accuse the original Church of Satan of having abandoned its initial commitments and emphases. Sects thus define themselves both in relation to the broader world and in relation to their specific tradition, both of which are perceived to threaten their purity of belief and practice.

In their typology of responses to secularization, Rodney Stark and William Sims Bainbridge contrast cults to sects. Rejecting the polemical definition of cults spawned by their cultural opponents, they define cults as independent religious traditions. Cults may be imports from another culture or independent products of the society in which they develop. Like sects, cults often find themselves in tension or conflict with broader society, simply by virtue of being new and different. Because they, too, want to locate themselves in relation to an authoritative past, cults also lay some claim to previous tradition. What separates cults from sects in their relation to previous traditions is that cults typically do not have a history of institutional conflict and eventual separation. Cults are marked from their beginnings as new entities. Both sects and cults, then, simultaneously declare their novelty and sink their roots in the past. In order to avoid confusion about the term "cult," which has such negative connotations in contemporary American society, this set will keep to the designations of new and alternative religions, which are widely employed by many scholars even though they are somewhat imprecise. The choice of which groups to include in Volume 2, as with the other volumes, is a judgment call. The guiding principle was not only to provide a representative sample of new and alternative religious groups throughout American history, but also to present the groups in sufficient detail to enable the reader to form a complex understanding of them.

Volume 3 investigates groups in the occult or metaphysical tradition, including nineteenth century Spiritualism, the Theosophical Society begun by Helena Petrovna Blavatsky and Colonel Henry Steel Olcott in the late nineteenth century, and the contemporary New Age movement. Like the groups discussed in the second volume, those in Volume 3 are part of a broad tradition that has deep roots in

antiquity. For example, in *The Secret Doctrine* Madame Blavatsky included the ancient Vedic sages of India, the Buddha, and a collection of ancient Greek philosophers among the ancient teachers whose wisdom about the nature of human beings and the nature of god was being given its fullest expression in Blavatsky's modern Theosophical system.

The religious movements discussed in Volume 3 typically present a different organizational profile from those in Volume 2. The groups in Volume 2 have made substantial efforts to maintain boundaries between themselves and their surrounding social environment, demanding exclusive allegiance of their members; vesting authority over practice, doctrine, and group life in charismatic leaders; and offering new and improved interpretations of familiar texts already acknowledged to have broad cultural legitimacy. In contrast, the movements in Volume 3 center on individual teachers who attract shifting groups of students with varying degrees of commitment for varying lengths of time, leave the ability to determine the authority or validity of any pronouncements in the hands of individual seekers, and claim to bring to light extraordinary wisdom from previously unknown or underappreciated sources.

Many of the religions that have appeared to be innovative developments in American religious life have actually been transplanted from other cultures where they have often enjoyed long histories. The openness of the United States to immigrants has always been an important factor in promoting American religious diversity. The 1965 repeal of the 1924 *Asian Exclusion Act,* for example, permitted a variety of Eastern religious teachers to extend their religious activities to the United States. Late in his life, for example, Swami A.C. Bhaktivedanta Prabhupada, the founder of the International Society for Krishna Consciousness, made the United States the focus of his efforts to awaken love for Krishna in as many people as possible. Military personnel returning from service abroad, often with spouses from countries where they had been stationed, also helped to introduce new religious practices and movements to the United States. This was the case, for example, with the form of Japanese Nichiren Buddhism known as Soka Gakkai. Even where it is difficult to provide independent corroboration of claimed international ties, they can nonetheless be claimed. A dramatic example here was the assertion that the elusive figure at the origins of the Nation of Islam, W.D. Fard, arrived in Detroit, Michigan, in 1930 from Mecca in Saudi Arabia. The movements in Volume 4 show clearly that religious innovation in the United States always needs to be considered in a broader, global context. That is no less true of the groups discussed in other volumes as well. For example, Ann Lee's small band of Shakers began in Manchester, England; David Koresh gathered Bible students from Australia, England, and other foreign countries as well as the United States. Theosophy's Madame Blavatsky was a Russian émigré. Finally, the Church of Scientology, like many other new religions that have begun in the United States, conducts a vigorous international missionary program.

The frequent movement of individuals, practices, and ideas across national borders could make a focus on new and alternative religions solely in the United States vulnerable to a myopia that could distort the nature and significance of those movements. That caution holds equally for homegrown and imported religions. Few

religions in the contemporary world, no matter what their age or relation to a mainstream, are confined within a single set of national boundaries. Nonetheless, the focus of this set remains on a selection of religions that have had, for one reason or another, a significant impact on religious and social life in the United States. Prominent in that selection is a group of religions that have been independently founded in the United States. For example, although the contemporary revival of Paganism can be traced to the career of Gerald Gardner in England beginning in the 1930s, many influential Pagan thinkers and teachers, such as Z Budapest, Starhawk, and Isaac Bonewits have flourished in the United States. Similarly, the Church of Satan and its subsequent offshoots owe their inspiration to Anton Szandor LaVey, who produced *The Satanic Bible* and other fundamental texts in San Francisco, California, in the 1960s. Also, beginning in the 1950s the prodigious literary output of L. Ron Hubbard gave rise first to the therapeutic system known as Dianetics and then, as his purview broadened, to the Church of Scientology. Other founders of NRMs in the United States, like Marshall Applewhite of the Heaven's Gate group, attracted far fewer adherents than the Church of Scientology but nonetheless carved out a place for themselves in American religious history through their dramatic, and sometimes tragic, actions. Volume 5 thus focuses on both new developments in international movements within the United States, such as the rise of Neo-Paganism, and the conscious construction of new religions, such as the Church of Scientology, by American teachers and organizations.

As this overview suggests, the definition of what counts as a new or alternative religion is frequently open to argument. Many groups that appear dramatically novel to external observers would claim that they are simply being faithful to ancient traditions. Joseph Smith, for example, claimed that the Church of Jesus Christ of Latter-day Saints, or Mormons, was a restoration of primitive Christianity. Groups that claim to be innovative often express their messages in the form of fresh interpretations of ancient texts, as with Swami Prabhupada's effort to present the ancient Indian classic, the Bhagavad-Gita, "as it is"; or Rael's contention that the mentions of "Elohim" in the biblical book of Genesis actually refer to extraterrestrial beings who came to earth in space ships. Because of the subjective nature of the categories —new to whom? alternative to what?—it will always be difficult to delimit precisely which groups definitely do, and do not, "count" as new or alternative. Moreover, in popular discourse, where the category cult is frequently used but appears devoid of anything other than emotional content, and in interreligious arguments, where cult easily expands to include "virtually anyone who is not us," attempts at substantive definitions give way entirely to polemics. Discussion of new and alternative religions in the United States thus always refers to a shifting and vigorously contested terrain where categories like "alternative religion" or "cult" and implicit comparisons like those implied by "new religious movement" are used to establish, reinforce, and defend certain kinds of individual and group identities, even as they threaten, compromise, or erode other kinds of individual or group identities.

No mapping of such terrain can hope to be definitive. Too much is in flux. Those who enter the terrain need trustworthy and experienced guides. The essays in these

five volumes provide just such guidance. Experienced, authoritative, and plainspoken, the authors of these essays provide both perspectives on some of the most prominent general features of the landscape and full descriptions of many, but by no means all, of the specific areas within it. Those who want to explore the terrain of new and alternative religions in the United States will find in this set multiple points of entry. They may want to focus on a specific local part of the larger area, such as the Theosophical tradition, the Branch Davidians, or Heaven's Gate. On the other hand, they may want to investigate the characteristic dynamics of the broader field, such as the processes of conversion into and defection from groups or the interactions between new and alternative religions and their cultural opponents. There is much to explore—much more than can even be covered in these five volumes. But this set aims to equip the would-be explorer with enough tools and knowledge to make the exploration rewarding and worthwhile.

PART I

The Nation of Islam

Nora L. Rubel

In 1959, journalists Mike Wallace and Louis Lomax copresented a two-part television special entitled, "The Hate that Hate Produced." Claiming to document the "story of the movement for black supremacy among a growing and well-organized minority of American Negroes," this special report introduced the Nation of Islam to Americans.[1] Branding the movement's leaders as "crafty, resourceful men" and its followers as "Negroes who find in the cause of black supremacy an answer to centuries of persecution," Wallace and Lomax described a militant, antiwhite movement developing in American cities.[2] Despite this televised introduction, the Nation of Islam was no brand-new black political faction; the movement had been growing in the black community for three decades. Both radical and reactionary, the Nation sought to create religious, political, and economic independence for African Americans.

The broadcast of black Muslim ministers putting the white man on trial spread alarm through much of white America, while also ironically resulting in an immediate increase in membership for the Nation.[3] "The Hate That Hate Produced" provoked much attention, both popular and academic, for the Nation, but until recently the public assumption has been that the Nation of Islam was "neither legitimately religious nor authentically Islamic."[4] Plagued by scandals, rivalry, and FBI surveillance, the Nation nonetheless garnered respect for its attempts to uplift the black community, as well as increasingly developed a relationship and identification with the greater Muslim world. This essay provides a history of this indigenous American Islamic movement, examines its theology, world view, and practices, and discusses its religious leadership and organizational structure, as well as its ongoing process of Islamization.

EARLY BEGINNINGS

The Lost-Found Nation of Islam[5] in the Wilderness of North America came into being as a movement led by the mysterious figure W.D. Fard (1891?–1934?) (also

known as Wallace D. Fard and later as Fard Muhammad) in the early 1930s. His teachings were propagated by his disciple and successor Elijah Muhammad (1897–1975) and popularized by the Nation's best known minister, the charismatic and controversial Malcolm X (1925–1965). Like the genesis of the Nation of Islam, Fard's personal history is shrouded in mystery. When delving into his past, one encounters an interesting blend of legend, mythology, and rumor. No one could quite agree on Fard's nationality; he cloaked his personal life in mystical metaphor. He claimed that he had been born on February 26, 1877 in Mecca.[6] He also professed to be a direct descendent of the prophet Muhammad's tribe, Koreish. According to one of his first converts, he introduced himself as W.D. Fard from the Holy City of Mecca and professed mysteriously: "More about myself I will not tell you yet, for the time has not yet come. I am your brother. You have not yet seen me in my royal robes."[7] Historians continue to debate his background as either African American or Middle Eastern. Early converts believed that he was of Arab, possibly Palestinian, descent, for he had a light coloring.[8] He first appeared in 1930 after the 1929 demise of Noble Drew Ali, the founder of the Moorish Science Temple. Fard later claimed to be the reincarnation of Noble Drew Ali (1886–1929).[9]

A door-to-door peddler, Fard used his sales technique to sell more than just his wares: he was promoting a new way of life for African Americans. With the aid of the women with whom he came into contact while hawking his line of goods, Fard's words of salvation were passed around the Paradise Valley community of Detroit, Michigan, in 1930. Fard introduced a new theology, new ritualized practices, and a new world view to African Americans in Detroit during the Great Depression. He started with dinner. Using his door-to-door wanderings to get himself invited for a meal, he would eat everything placed in front of him, but after the meal was completed he would explain how the family should eat to lead a healthy and spiritually fulfilling life. "Now don't eat this food. It is poison for you. The people in your own country do not eat it. Since they eat the right kind of food they have the best health all the time."[10] Early converts described the eagerness with which they listened to his description of their "home country" and the ways they could be freed of illness and physical pains.

Fard's teachings included philosophies drawn from the black nationalisms of Marcus Garvey (1887–1940)[11] and Noble Drew Ali, principles from the Qur'an and the Bible—specifically the Book of Revelation, as well as some very distinctive traditions of Fard's own.[12] He taught that the blacks of North America were not "negroes," but "Asiatics" from the Original Tribe of Shabazz in East Asia. They lived in Paradise, spoke Arabic, and ruled the world. And as Muslims, they were privy to the "hidden truth" that black people and white people do not come from the same god.

This hidden truth that Fard revealed explained that the black race was the original race and that the white race was a race of devils maliciously created by a mad black scientist named Yakub. Steeped in the scientific language of the period from which the myth emerged, Fard Muhammad described the way that Yakub had grafted the

color from some members of the Original Black Nation, the Original Tribe of Shabazz. Over a period of 600 years, using the anachronistic philosophy and methods of (modern) eugenics, Yakub proceeded to create a lighter and lighter race of people. This painstaking process of hybridization resulted in the red and yellow peoples of the world, and ultimately, the white race.

Stripped of their color, and subsequently their humanity, this white race of devils was created to oppose the Original Tribe of Shabazz.[13] Predestined by Allah to dominate the earth for 6,000 years, this white race was genetically weaker, but brilliantly devious. Pale in flesh and brittle of bone, whites lived a hellish, animalistic existence in West Asia, while the original black race lived in Paradise. Allah sent this race a prophet in 2000 BCE, Musa (also known as Moses). Only a few of the whites accepted the call to righteous behavior; these were the Jews. Otherwise, the white devils continued their debauchery unchanged.

Two thousand years later, Allah and the Original Tribe took pity on this race again and sent them the (nondivine) prophet Jesus, but they were so evil that they killed him. In a last ditch effort, a third prophet emerged in the seventh century, Muhammad ibn Abdullah, and while he developed a following, he too could not bring righteousness to the devil.

Through what Fard termed "tricknology," white Europeans brought the Original people to the wilderness of North America, where they were enslaved, fulfilling Allah's promise of 400 years of servitude.[14] During this time, the Original Man forgot himself, his language, and his religion. In an attempt to alleviate his suffering, he turned to drink and even to the evil slaveholder's religion of Christianity. But as Allah prophesied, in the year 1914, coinciding with the Great Migration of hundreds of thousands of blacks from the South to Northern cities, blacks began to reclaim their superior position as the Original Man. In order to do so, they discarded the behavior of their former selves by rejecting Christianity and reclaiming their identity as righteous Muslims, and unshackling themselves from the white devils. According to Fard's ideology, the black race was approaching a messianic age when they would again be elevated to the superior, dominating race of the world.

It is this "hidden truth" that non-Muslims and other Muslims took most objection to, the idea that blacks and whites are fundamentally different in nature, that black people are inherently righteous and white people are devils by design. While this racial separatism is the first thing that non-Nation Muslims point to as a sign of the Nation's Islamic illegitimacy, contemporary scholars have pointed out that traditional, color-blind Islam is partially mythological as well.[15] Despite this controversial narrative of Yakub, Fard's reversal of the influential Nordic myth of racial hierarchy held tremendous power in creating a religious community identity.[16]

Cornel West writes of the Nation's "obsession with white supremacy." The Nation sought to counter white supremacy with black supremacy, but this still left African Americans "captive to the supremacy game—a game mastered by the white racists opposed and imitated with his black supremacy doctrine."[17] Although the Nation of Islam was a separatist group, and racist in philosophy, it was by and large not *physically* active in its racism in the ways groups like the Ku Klux Klan were. With

the exception of a few early incidents, there was no targeting of white people with violence; there was more of a desire to be left alone.

Fard frequently employed the Book of Revelation, as well as the Book of Ezekiel, in his meetings, describing the imminent war of Armageddon as a final race war between blacks and whites. In this final battle, a terrifying wheel-shaped space ship known as the Mother Plane would eliminate the white race. Built by Allah (Fard) in Japan, it would drop a fiery bomb on the United States, resulting in the nation's demise in a lake of fire.[18] He claimed that the only way for blacks to emerge unscathed and triumph in this war was to return to their natural religion of Islam.[19]

Implicit in Fard's theology was a harsh critique of black Christianity, and particularly black ministers. Ironically, while biblical themes were frequently exploited, the Bible itself was met with great suspicion, because Fard claimed it had been tampered with. And while Fard often drew parallels between himself and Christ, he served as a corrective to the prolific images of a blond-haired, blue-eyed Jesus, who offered a reward only in the afterlife. The Nation of Islam offered a gift to the black people of the United States; it offered the knowledge that they had had a religion before slavery gave them Christianity. Fard's theology, and the controversial tales of Yakub and the Mother Plane, served as narratives explaining the black situation in the United States, as well as the potential for an earthly redemption.

This racialized theology was used to enforce the separatist ideology advocated by the Nation. This separatism was necessary in order to create a united front among black people. Muslims were encouraged to shed the "devil's" names that they were given in slavery and adopt an X. The X had a dual meaning: ex, meaning that followers of the Nation no longer belonged to the "dead" world, and X, as in a mathematical equation signifying the unknown quality (because African Americans cannot trace their roots exactly).

Whoever Fard was, and this is still a matter of some controversy, his ability to sense that urban blacks in cities like Detroit were ready to open their hearts and minds to Islam was at the core of the success of his movement. Adhering to traditional Islam was not the goal. Fard's (and later Elijah Muhammad's) primary objective was to reconstruct African American identity and to introduce blacks to what he understood to be Islam.[20]

A NEW MOVEMENT

With his theology rooted in the Bible, the Qur'an, and modern scientific language, Fard slowly built a following and began to introduce a rigorous regimen that the members were to follow. Meetings were held in private homes, and word of his teachings spread throughout the community. Early perceptions of the Detroit movement were sensationalized in the wake of violence perpetrated both by and on members of the group. The Detroit police department nicknamed the group the "Voodoo Cult," a name popularized in the first scholarly treatment of the community by Erdmann D. Beynon.[21]

Fard established Temple No. 1 in Detroit and gained one devoted convert who would go on to change the trajectory of African American religion in the twentieth century. Fard named Elijah Poole, of Saundersville, Georgia, Chief Minister of Islam. According to Nation of Islam tradition, Elijah Poole recognized that Fard was no mere prophet; he was Allah made manifest on Earth. Muslims critical of the Nation of Islam are quick to point out that this act of identifying a human as God is considered one of the greatest sins a person can commit in Islam. Muslims also criticize Christianity for having committed this sin of *shirk.*[22] While Muslims accept Jesus as a prophet, they chastise Christians for mistaking the prophet for God. But among African Americans—as seen in Garvey's African Orthodox Church and Father Divine's Peace Mission—the idea of a black man as God was a very powerful and seductive image at a time when blacks in the United States faced horribly depressing conditions.

Fard Muhammad gave Poole the Islamic name of Elijah Karriem. Karriem later adopted the name Elijah Muhammad and took over the Nation after Fard's mysterious disappearance in 1933.[23] After Fard's disappearance—and in the face of rival Muslim violence—Muhammad, along with other followers, moved to Chicago, Illinois, in 1934 and established Temple No. 2, seeking to spread the word. It is at this time that Elijah Muhammad became the sole spokesperson for Fard's revelations, and a creed for the Nation eventually evolved to reflect that relationship: "There is no God but Allah, Who came to us in the Person of Master Fard Muhammad, and the Most Honorable Elijah Muhammad is His Messenger." This is a revision of the traditional Muslim *shahada,* the declaration of faith, which states: "There is no God but Allah, and Muhammad is His Messenger."

RITUAL AND PRACTICE

Under Elijah Muhammad, Fard's revelations became institutionalized. Those who converted now led a life of strict discipline in which their every move was rigorously dictated. This comprehensive religious world view addressed not just morality, but diet and dress. Cleanliness, both internally and externally, was a must. These standards were maintained in order to reach a level of self-respect, both for individual African Americans and for the race as a whole. If these laws were disobeyed, the dissident would attend a Muslim trial in which he could be sentenced to periods of isolation from the community. In *An Original Man: The Life and Times of Elijah Muhammad,* Claude Andrew Clegg III writes, "Muslim conception of morality added order and a sense of dignity to the lives of African-Americans who had consumed tobacco, burglarized neighbors, and fornicated."[24] The Nation therefore prohibited the aforementioned behavior, as well as "movie-going, dating, sports, long vacations from work … lying, stealing, discourtesy (especially towards women), and insubordination to civil authority, except on the ground of religious obligation."[25] This reformed behavior would create an earthly paradise for black people.

In addition to righteous behavior, the Nation demanded strict observance of temple regulations. Members were required to attend at least two meetings at the temple

per week. Men were also obligated to proselytize to non-Muslim African Americans, also known as the "dead." Muslims also prayed five times a day, towards the East.

Dietary restrictions were enforced, in addition to strict personal hygiene regulations. Pork strictly was forbidden, as it is in orthodox Islam, but in addition to pork, corn bread and collard greens also were prohibited. While prohibition of these foods had no basis in the Qur'an, they were forbidden as a way of denying the traditional African American slave diet and affirming that "there are no slaves in Islam."[26] Elijah Muhammad also had many changing ideas on nutrition. During his leadership, Muslims were strongly encouraged to eat only one meal a day and were required to fast several days a month. As Elijah Muhammad grew older he began to suggest only one meal per two-day period and longer periods of fasting. He ultimately introduced a month-long fast in December, based on the traditional Muslim fast in the month of Ramadan. As well as increasing the Nation's ties to traditional Islam, this December fast also had the benefit of serving as a rebuke to the excesses of the Christmas season.

The first sign that one was speaking to a man or woman from the Nation of Islam came not from obvious religious affiliations but from personal appearance. In addition to having an appearance of overall neatness and cleanliness, men wore black suits and bow ties, and women wore long dresses and covered their hair. For many women, donning traditional Muslim clothing was a political move in itself, particularly in the age of the miniskirt. There are other religious communities, such as the Amish or Mennonites, who express their theological difference from mainstream American society through personal attire. The difference between those communities and the Nation of Islam is that the mainstream does not usually come into contact with the Amish or the Mennonites at work or at school. The Nation grew in an urban setting, and there it remained, causing it to have more in common with Jewish ultra-Orthodoxy, also an urban phenomenon.

Today the *hijab*[27] and other modest dress of the women in the Islamic faith is beginning to take on a deeper meaning than the modesty rules perhaps intended. Many women are speaking out against the traditional standards of female beauty. If one cannot see a woman's figure, she cannot be judged by it. Outsiders often tend to see the veil as a symbol of Muslim women's forced servitude to men. Many Muslim women claim, however, that the veil is a sign of a woman's power in a contemporary society in which women too often are judged on the basis of their appearance. Within the Nation, Muslims used this dress code to create independent businesses (and new fashions) in their own community. Modest clothing did not necessarily mean *drab* clothing, and women even occasionally held "Shabazz Fashion Shows."

Elijah Muhammad also pushed for economic self-sufficiency. His "Build Black, Buy Black" agenda was one of the first successful efforts of its kind—far more lucrative than any of Garvey's and the Universal Negro Improvement Association's (UNIA) ventures, which were plagued with mismanagement from the beginning.[28] Muhammad made his people realize how passively black people were behaving when they bought products from stores that would not hire them. The Nation of Islam soon opened chains of bookstores and health food stores that catered to their own communities.

Ultimately, one of the most distinctive features of the Nation of Islam was its new world view for African Americans. Betty Shabazz (1936–1997), Malcolm X's widow, stated that "This was the first time I heard the word *racism* used. I began to see why people did certain things. I began to see myself from a different perspective."[29] And it was this perspective that led to the success of the movement internally, as well as its effects on the larger black community.

THE PROBLEM OF AFRICA

The Nation of Islam gave African Americans a tie to Africa, to a past before the era of slavery. This tie to Africa is problematic, however, since the culture that the Muslims embraced is primarily of Middle-Eastern—or Arab—tradition. Memories of West African experience had little or no place in the Nation's embracing of "Africa," at least in the early days of the movement. Muhammad's description of black American's roots as Asiatics, as well as his history of their evolution from the Tribe of Shabazz to the wilderness of North America, led to contradictory attitudes toward Africa, attitudes that reflected the deeply ingrained racism of the period. One source that demonstrates the Nation's views toward Africa was its highly influential weekly, *Muhammad Speaks.*

Founded in 1960—mainly through the efforts of the Nation's most visible minister Malcolm X— *Muhammad Speaks* grew out of the weekly column "Mr. Muhammad Speaks," which appeared in such black newspapers as the *Pittsburgh Courier* and the *Amsterdam News.* The mouthpiece of the movement, this newspaper served as an independent forum for the Muslims, as well as a bridge to the non-Islamic black community. *Muhammad Speaks* prospered as an institution within the Nation of Islam and reached a wider audience than any black newspaper before. Members of the Nation were required to buy and distribute a certain number of issues, ensuring the profit of the paper. This paper also had far-reaching implications outside the Nation, as it challenged the superficial and escapist nature of the traditional black press by covering political and social problems in the black community and in the world at large.[30]

Muhammad Speaks presented radical views regarding global politics, which seemed ironic for several reasons. First, the Nation of Islam was, for all intents and purposes, a right wing, reactionary program in most other areas. Their economic platform was fiscally conservative, and their behavioral code was even more conservative, sometimes to the point of seeming puritanical. Second, this was a "nation within a nation," and members were strongly discouraged from political involvement. However, despite this lack of actual participation in politics, the Nation held strong political views, and *Muhammad Speaks* was their outlet for these views. For example, *Muhammad Speaks* was militantly opposed to the Vietnam War and openly expressed this position in the pages of the newspaper. The paper also kept tabs on political activity in African nations.[31]

On the front page of every issue, *Muhammad Speaks* displayed the following: "Dedicated to Freedom, Justice and Equality for the so-called Negro/ The Earth

Belongs to Allah." *Muhammad Speaks* contained articles glorifying accomplishments of Africa and Africans, as well as the early great civilizations of that continent. Articles such as the one entitled "Who is the Original Man?"[32] served to prove the Nation's claim of life beginning among black peoples in Africa.

The Nation of Islam often praised Garvey's UNIA movement in their pages.[33] Muhammad, like Garvey, also called for emigration as part of his program. The back page of every issue had two ten-point platforms: "What the Muslims Want" and "What the Muslims Believe." Number Four on the first platform called for repatriation, asserting "we believe our contributions to this land and the suffering forced upon us by white America, justifies our demand for complete separation in a state or territory of our own."[34] But unlike Garvey's platform, the Muslims wanted a territory in North America to be given to African Americans as reparation for slavery. This demand for reparations continues to be a consistent part of the Muslims' platform, as part of the fulfillment of a strong black nation within a nation.

Yet within Muhammad's praise of blackness, when it came to Africa he taught a contradictory doctrine that incorporated all the old stereotypes of Africa as an uncivilized, savage place. Elijah Muhammad—like Fard Muhammad before him—taught that black people were not "Negroes" but Asiatics, from "East Asia." Muhammad claimed that whites, in order to construct barriers between people of color in Asia, created the term "Africa." When describing the Original Tribe of Shabazz, Muhammad depicted a people who phenotypically resembled Egyptians—"a black-skinned, straight-haired people whose features were 'soft and delicate, fine.'"[35] The Tribe of Shabazz ruled over a magnificent civilization in North Africa and the Middle East, and only after a tragic decline did any of the Original People move into the "jungles" of Africa. Here their physical characteristics began to change; "their hair, which had been straight, coiled and became kinky; their thin lips swelled, and their noses became broader."[36] Over the next thousands of years, the black man and woman became weaker versions of themselves. This grotesque, racist imagery can be seen in *Muhammad Speaks'* political cartoon images of blacks who were not Muslims. These so-called Negroes are horribly stereotypical, showing grossly enlarged lips, caricatured noses, and kinky Afros.

This issue of Africa as a place of origin within the Nation of Islam is a tricky one. Muhammad challenged the predominant Christianity of African Americans by claiming an innate, Islamic heritage. At the same time, by claiming a quasi-Middle Eastern heritage, Muhammad denied and somewhat denigrated West African origins. Buying into racist attitudes toward Africa, this theology shows how ingrained and internalized racism can become—even among those attempting to eliminate feelings of inferiority. The Nation of Islam advocated a separate state for blacks, and migration to Africa was considered an option. However, an all-black state in North America was preferred, and no one in the Nation seemed interested in migrating to Africa. The place for the Nation seemed to be located in the West, as seen by their symbol of Islam, the star and crescent that faces East in orthodox Islam and faces West in the Nation of Islam. In the end—probably for a great number of

reasons—Elijah Muhammad, despite lip service to the contrary, never tried very hard to make emigration happen anywhere.[37]

Despite these contradictory attitudes toward Africa, Muhammad succeeded in appropriating the politics of Islamic religious identity among black Americans, becoming "a kind of godfather of modern black nationalism."[38] Hardly an exaggeration, the Nation of Islam—and especially Malcolm X—had tremendous influence on subsequent black nationalist organizations.

MEMBERSHIP

Men and women entered the Nation of Islam for different reasons, they were promised different things, and different behavior was expected of them. By welcoming Fard Muhammad into their homes to preach his theory of redemption over dinner, essentially black women invited Fard Muhammad into the black community. Women were prominent among the first zealous converts to the Nation of Islam, hoping for a means of social mobility and a better life. The Nation of Islam originally comprised the black working and underclass and intentionally attempted to move its followers to a middle-class level, an undertaking at which the movement was somewhat successful.

Under the leadership of Elijah Muhammad, many in the black community came to respect the Nation as a means of self-help, even by those who rejected their views on racial separatism. Muhammad's ministers visited prisons, pool halls, and bars to recruit new members. A majority of converts found their way to Elijah Muhammad through experiences in prison. Malcolm X, perhaps the most famous convert to the Nation, remembered in his widely read memoir, *The Autobiography of Malcolm X,* that had it not been for Islam, he would have become "a dead criminal in a grave, or, if still alive, a flint-hard, bitter, thirty-seven-year-old convict in some penitentiary, or insane asylum."[39]

The many conversions to Elijah Muhammad's movement that occurred in prison signify what the movement promised. Black people awakened to the fact that the prison wardens, the guards, and the police officers who arrested them were all white. Muhammad's "white devil" propositions began to take on more meaning. When black men left prison, they rarely were ushered into Christian churches.

Women were introduced to the Nation of Islam mainly by girlfriends or family members who already had converted. The women who converted were attracted by the Nation's ability to provide self-help, a way to be religious, and a way to be political. Many claimed that they were impressed by changes in the people they knew. Other women discussed how their conversions led them to stable family lives and marriage. Education was also a potent means of bringing them into the movement. Women were pushed to exhibit high moral behavior because "a Muslim can rise no higher than his women."[40] Many women went to college after converting; most of these women claimed that until they found Islam, college was not an interest.[41] Those women who had little or no education were taught to read and write by female officers in the Temple.[42] Women were more likely to remain in the Nation if they

had family members who were also Muslims. This familial bond led to even stronger commitment to the Nation.[43]

John R. Howard refers to these particular converts as "Protestant Ethic Muslims." He claims that the "common denominator for all the Protestant Ethic Muslims was exposure during childhood to a socialization process placing some degree of emphasis on self-help."[44] Their positive experience relies on the self-determination taught by the Nation. Many men and women were also drawn to the Nation because of its emphasis upon family and child-rearing.[45] Like many conservative religious movements, large families were encouraged. In *Message to the Black Man,* Elijah Muhammad proclaimed that "The woman is man's field to produce his nation."[46] Birth control was severely discouraged.

The Nation held specific political ideals, yet members were forbidden to participate in political activities such as voting. They were a nation within a nation. Muslims were ordered to obey the letter of the law and therefore did not involve themselves with the civil disobedience activities of the civil rights movement. They also had little to do with the other nationalist groups of the time. Cornel West writes that the Nation possessed both a "blacker than thou" mythology and ideology than most of its contemporaries, but also succeeded in "producing discernible results in the personal, organizational and financial life of its members and the black community."[47]

Under Elijah Muhammad's leadership, the Nation attracted much attention, at one point boasting of about 100,000 members in the 1960s, a number that was noticed by reporters such as Louis Lomax and repeated in scholarship on the Nation. According to Clegg, this number was likely never more than 20,000, but the Nation was known for its transitional nature, so the numbers of those who passed in and out of the movement may be much higher.

ORGANIZATIONAL STRUCTURE

The Nation's structure was determined by Fard Muhammad and remained constant throughout Elijah Muhammad's reign as Chief Minister of Islam. While the Nation advocated racial separatism outside the organization, members practiced gender separatism within the Nation. The Nation of Islam consisted mainly of men, in both body and power structures. While women were given the pretense of being very important, they often were blamed for the cultural emasculation of black men. Malcolm X, even though he later expressed contrition for his remarks about black women, was often relentless in his disparagement of black women. At one point, he went so far to say "that 'the closest thing to a woman is a devil.'"[48] Elijah Muhammad received widespread criticism for his words on women in his *Message to the Black Man in America.* Men were told "to 'keep women from the streets,' because they are 'given to evil and sin while men are noble and given to righteousness.'"[49]

Relations between men and women in the Nation were dictated by specific, divinely inspired roles for each sex. While "the man is the God, the Maker and the Owner and the Father of Civilization," the "woman is the Mother of Civilization

[and] the nature of the man and the woman are different."[50] Much lip service was paid to the importance of women, but many Muslims emphasized the submission of women in Islam. Not all women viewed submissiveness as a negative condition. Many women asserted that they were content to play a subservient role, confident in the knowledge that they were giving their husband his manhood back (refuting the image of African American women as castrators), claiming that "There are many ways women can influence men without being out there, up front."[51] And while many women accepted that Islamic law placed the man at the head of the household, this acceptance did not mean that inside the house husband and wife were not on equal footing. What went on between men and women privately was hidden behind a united front for the outside world.

Publicly, however, men and women were separated in the temple. Most temples seated men in the front and women in the back. Some temples separated them down the middle—men on one side of the room, women on the other—with a single row of the Fruit of Islam, the Nation's security order, next to the women. The Fruit of Islam reportedly sat there for protection, to keep men from looking at them, particularly at "the 'dead' women who would come to hear the teachings [and who] wore short skirts. By putting the Fruit up there, that kept anybody from looking up their legs."[52]

The Fruit of Islam was the vanguard of the men's organization and was mainly a security order, while the women's association contained the Muslim Girls Training (MGT) and General Civilization Class (GCC). The GCC was originally a junior version of the MGT for young women between 15 and 19 years of age. The MGT and GCC were named by W. D. Fard and spoken of in the Nation's guide book, *The Supreme Wisdom.* The MGT taught women "how to keep house, how to rear their children, how to take care of their husbands, sew, cook and, in general, how to act at home and abroad."[53]

Women in the MGT and the GCC were instructed to follow a set of precepts known as the "Laws of Islam." These laws prohibited makeup, certain hairstyles, high heels, as well as pork and adultery.[54] The ban on cosmetics later was lifted due to pressure by temple women. It is now optional, but women rarely use it when involved with temple functions.[55] The rules of the Nation were strict, but many members praised the results of such rigidity.

OUTSIDER'S PERCEPTIONS

Feared by white America for its militant speech and antiwhite rhetoric, the Nation of Islam was accepted by a majority of African Americans, even if its message was not shared by all. Black leaders denounced Elijah Muhammad as a racist, but the masses remained silent. Lomax interviewed the wife of a black newsman who stated, "Of course I disagree with Malcolm [X]. But I disagree with a lot of other religions, too. If he teaches hate, so do they; what's the difference? I wonder why the white people are after him. Could it be because he is colored?"[56]

While the majority of African Americans remained overwhelmingly Christian, there was far less objection to the Nation among blacks than among whites. While critical of the theology, many understood the need for their separatist beliefs. *Muhammad Speaks* enjoyed printing celebrity endorsements from non-Muslims such as the celebrated black actress Ruby Dee, who stated that the Nation was "another one of the cries in Negro America that say, 'I wanted to love you so much and you wouldn't let me! And now, I am going to tell you, I don't like you for that. And I'm going to say even more than that: I am going to say, I hate you for that. So there!'"[57]

The Nation's message was not only heard within the Muslim community. Many Christians loved to hear its ministers speak, such as this Harlem woman: "Honey child, you *know* those Muslims are telling the truth about the white folks. I'm not joining up, but I'm not against them either."[58] The Nation became known for its eloquent spokesmen, particularly the fiery orator Malcolm X.

MALCOLM X (1925–1965)

A child of Garveyists, Malcolm X, was born Malcolm Little. Drawn into the underworld of New York City at the age of 16, he became involved in prostitution and drug rings, as well as burglary. His involvement in theft led to his eventual incarceration in 1946. During his six-year stint in jail, Malcolm became aware of the Nation of Islam through one of his brothers who had already converted. Malcolm began a self-education process as well as a spiritual conversion with the help of Elijah Muhammad, whom he corresponded with during the remaining years of his sentence.

In 1952, Malcolm was paroled and given his "X" by Elijah Muhammad. By 1953 he served as Minister of Temple No. 11 in Boston, Massachusetts. Malcolm eventually became Muhammad's Chief Minister and was responsible for greater visibility, as well as greater membership, for the Nation. In the 1950s, the Nation of Islam built 49 new temples. A charismatic and popular speaker, Malcolm was sought after by college campuses, radio, and television.

A devoted disciple of Elijah Muhammad, he spread the Nation's message passionately. A gifted lecturer, he successfully articulated the thoughts that African Americans shared, particularly the perplexing images of Christian subordination and nonviolence in exchange for police brutality. In response to Martin Luther King, Jr.'s "I Have a Dream" speech, Malcolm rejoined, "I'm not an American. I'm one of the 22 million black people who are the victims of Americanism. And I see America through the eyes of the victim. I don't see any American Dream; I see an American nightmare."[59]

After a rather public, but privately complex, falling out with Elijah Muhammad, Malcolm defected from the Nation in 1964. He embraced Sunni Islam and took on the name El Hajj Malik El-Shabazz. He started his own organization, the Muslim Mosque, Inc. He declared that the "political philosophy … will be black nationalism, the economic philosophy will be black nationalism, and the social philosophy will be

black nationalism."[60] He later committed himself to the civil rights struggle in America, which the Nation had shunned.

Assassinated on February 21, 1965, his impact was felt by both black Muslims and non-Muslims. In his controversial book, *Soul on Ice,* former Black Panther Eldridge Cleaver (1935–1998) wrote on Malcolm's appeal:

> When [Malcolm] spoke under the banner of Elijah Muhammad he was irresistible. When he spoke under his own banner he was still irresistible. If he had become a Quaker, a Catholic, a Seventh-Day Adventist, or a Sammy Davis-style Jew, and if he had continued to give voice to the mute ambitions in the black man's soul, his message would still have been triumphant: because what was great was not Malcolm X but the truth he uttered.[61]

Cleaver, like many others, became a Muslim because of his admiration for Malcolm X, and followed Malcolm when he left the Nation.

CONTROVERSIES AND SCANDALS

As much as relations between people in the Nation were reserved for insiders, there was one scandal that even the Fruit of Islam could not protect. On July 3, 1964 nearly every major newspaper carried the story of Elijah Muhammad's less than divine behavior. The day before, Lucille Rosary and Evelyn Williams filed paternity suits against him in Los Angeles Supreme Court. These two women each formerly had worked as Elijah Muhammad's secretary and had borne his illegitimate children. They had been subjected to degrading Nation trials for committing the sin of fornication. Elijah Muhammad had presided over these trials and had "ruled that 'they didn't know'" who the fathers of the children were. Since this judgment suggested promiscuity, which was a violation of Islamic law, the two women had been expelled from the Nation.[62]

Malcolm X dealt with this issue of Elijah Muhammad's infidelity extensively in his autobiography. He claimed that he had heard rumors for years that Elijah Muhammad did not have the same moral fiber that he demanded of his followers, but Malcolm had refused to believe anything negative about the man who was responsible for his personal salvation. Malcolm also claimed that the denial came to an end when the paternity suits were filed, but historians now believe that it was impossible for Malcolm not to have been aware of Muhammad's behavior, considering the intimate relationship he had shared with Elijah Muhammad. It is also thought that Elijah Muhammad's indiscretions were known by many within the Nation and kept quiet with a "tradition of 'Those who know don't say; and those who say don't know.'"[63]

In the next few years, and especially after Elijah Muhammad's death in 1975, justification for Elijah Muhammad's actions were found in the Qur'an. Nation members claimed that he actually had married these women under Islamic law, for polygamy long has been condoned by Islamic tradition, and the prophet Muhammad was said to have had four wives. The passage in the Qur'an that is always pointed to is Surah 4:3, which states that men may marry up to four women. The law was

originally a reformation of polygamy. At the time of the writing of the Qur'an, there were often villages where the women greatly outnumbered the men due to casualties of war. Polygamy was the norm, and men often had more than four wives. Jewish reformers suggested that the number of wives a man could have should be limited to four, and Muhammad took it a step further. A man could have four wives, but only if he would be able to treat them all equally ["if ye fear that ye cannot do justice (to so many) then one (only)"]. If this equality was impossible, then he was allowed only one wife.[64]

SUCCESSION IN RELIGIOUS LEADERSHIP

Warith Deen (1933–)

The Nation of Islam experienced dramatic change in the 1970s. According to Nation tradition, Elijah Muhammad's son Wallace D. Muhammad (later known as Warith Deen) had been predestined by W. D. Fard as the successor to Elijah Muhammad. Ironically, this son was the one with whom Elijah Muhammad had the most difficulty. Wallace had been excommunicated from the Nation on several occasions due to theological differences, the most controversial being his refusal to accept the Nation's doctrine of the divinity of Fard Muhammad.[65] Wallace Muhammad had studied Islam independently at al-Azhar University in Egypt and subsequently had rejected many of the Nation's teachings in favor of Sunni tradition.[66]

The early 1970s saw considerable violence and rivalry among black Muslim splinter groups. With this intense backdrop, Elijah Muhammad gave in to his son's desire to preach Sunni (or what he called Orthodox) Islam after 14 years of theological disputes. In 1974 Elijah began the procedure for Wallace's succession. During this transfer of power, he became ill. On February 25, 1975, Elijah Muhammad died at the age of 76 and Wallace Deen became the Chief Minister of the Nation of Islam.[67]

With the death of Elijah, his son was free to reform the organization in ways he saw fit. Wallace's reformation was, in fact, more of a rapid dissolution of the Nation. Within this first year, the Nation of Islam was completely transformed. He discarded all rules and regulations that did not conform to mainstream Sunni Muslim practice. He first changed the name of the Nation to the "American Bilalian Community." This name honored the tie to the United States, as well as Bilal (an African friend of the prophet Muhammad).[68] The movement's periodical *Muhammad Speaks* was renamed the *Bilalian News.*

Wallace lifted the ban on nonblack membership, and he again changed the name, this time to "The World Community of al-Islam in the West." He dropped all mention of a white devil philosophy. Most radically, he reinterpreted both Fard's and Elijah Muhammad's places in the tradition as divinely inspired men who introduced the Qur'an to many people, but not as divine in nature. In 1976 he disbanded the Fruit of Islam, instituted formal Muslim *salat* (prayer) services, and introduced the fast of Ramadan. All temples were renamed mosques, and later masjids. Ministers

were renamed imams. In 1980, Wallace changed the name yet again, this time to the American Muslim Mission, and the *Bilalian News* became the *American Muslim Journal.* He also changed his own name to Warith Deen and suggested that his followers adopt Muslim or African names.

Imam Warith Deen also did much for women in his new regime. He explained: "[I]n our religion, we cannot make any distinction between men and women in terms of intelligence, spirituality or moral nature. Women are equal with men and they are not to be treated any differently."[69] Warith Deen allowed women to wear pants, in addition to only having to cover their hair during temple activities. Women held high administrative positions, and the nature of the MGT changed. Emphasizing the importance of equal education for women, the classes dealt more with intellectual pursuits. Elijah Muhammad had spoken highly of education for women, but after that education the woman was to be relegated to home and childbearing. His son encouraged women to follow their interests to their full potential.

In 1985, Warith Deen officially disbanded the American Muslim Mission and continues to serve as an imam of a Chicago masjid, enjoying the respect of much of the world-wide Muslim community (or *ummah*). He explained that his father's teachings were necessary in order to restore the self-respect to African Americans before true Islam could be revealed to them.[70] This reformation of Warith Deen's led to the acceptance of his community by Muslims throughout the world. But there was a price to be paid. Malcolm X had once said, "If you make a sharp turn, left *or* right, don't bother to look back because nobody will be behind you."[71] In Warith Deen's case, this remark rang true. For followers of the Nation of Islam, faith was not casual. This dramatic transformation led many members to reevaluate their faith. Sociologist C. Eric Lincoln explains that, "Membership in the Nation meant *belonging* to the Nation—body, mind, and spirit.… Practically all of the men and women who were attracted to the Nation of Islam were in search of "scarce values" not available elsewhere in their experience of life in America."[72]

Warith Deen explained his reason for abandoning his father's teachings: "If you design a revolution to bring people out of their condition into another condition, you cannot continue to always put emphasis on revolution.… Today we have arrived at our goal and the trip was successful."[73] But there were some that would argue that African Americans had not arrived at their goal of liberation. While many stayed with Warith Deen, others did not like his changes and left the community.

Louis Farrakhan (Louis X) (1933–)

While there have been quite a few attempts to restore Elijah Muhammad's Nation, the most infamous—and most successful—defector was Louis Farrakhan. Born Louis Eugene Walcott, he is part of Elijah Muhammad's dynasty by marriage and in many ways sees himself as the true spiritual heir of Elijah Muhammad. Farrakhan felt that Warith Deen's reforms "caused a decrease in financial holdings and created a lack of discipline among the members."[74] He left Warith Deen's *ummah* in order to

reestablish the Nation of Islam in 1978, and he returned to Elijah Muhammad's teachings because they had been so successful in uplifting African Americans.

Unlike Warith Deen's movement, which is now firmly middle-class, Farrakhan's Nation still appeals to lower classes. He publishes the newspaper *Final Call,* modeled after *Muhammad Speaks* (in its original incarnation). A controversial but popular speaker, he has been frequently accused of anti-Semitism. He also has been disavowed by many in the wider Muslim world, and a derogatory term for his movement by Muslims is "Farrakhanism."

Women's roles under Farrakhan remained consistent with Elijah Muhammad's teachings at first, but the changes Warith Deen had introduced could not be ignored. Even Farrakhan had to move with the times, and he appointed Sister Ava Muhammad, an attorney from New York, to the position of Minister. He then set up study groups for other women wishing to follow in her footsteps.[75] The emphasis in Farrakhan's movement is on African American uplift and unity rather than the wider *ummah,* although due to recent engagement with African Muslims, more traditional Islamic obligations are being adopted.[76] The Chicago Mosque Maryam follows orthodox prayer structure, and other mosques have followed suit.

In addition to developing a greater relationship and identification with the larger Muslim world, both Farrakhan and Warith Deen's followers are involved in politics. No longer content to sit idly by on election day, Muslims have become increasingly involved in the public square. Farrakhan sees himself as a prophet to the United States, and in 1995, he held the Million Man March in Washington, where hundreds of thousands of black men joined together to pledge commitment to rebuilding the family. Looking toward his place in history, he never seems to call for the establishment of a separate state, although that is still number four on the Muslim Program. Less concerned with separating from white America, Farrakhan emphasizes education for all Americans—not just African Americans. The Million Man March was a message directed toward black men, but this March was also a message for all of American society: Let the rest of the world see how our people are taking responsibility, and let them see us as a light unto the nations.

FUTURE AND CONCLUSION

Since the terrorist attacks of September 11, 2001, media attention has again focused on Islam, leading American Muslims to assert their loyalty to the United States. This sudden awareness of Muslims in the United States has concentrated on Muslims of Arab descent, who account for only one quarter of American Muslims; a larger number can be found in the African American community. While the overwhelming majority of black Muslims practice the Sunni traditions advocated by Warith Deen Muhammad, it is impossible to ignore the impact that the teachings of Fard Muhammad and Elijah Muhammad had on the spread of Islam among African Americans. Although non-Nation Muslims have repeatedly criticized the Nation as un-Islamic in doctrine, many recognize that this homegrown Islamic movement was responsible for turning many black Americans toward Mecca for the first time.

Alternative to "Religion" in an African American Islamic Community: The Five Percent Nation of Gods and Earths

Kathleen Malone O'Connor

INTRODUCTION

New and alternative forms of African American Islamic community have been evolving in North America for almost a century, from the establishment of Noble Drew Ali's Moorish Science Temple early in the twentieth century, growing and developing in the great urban centers of New York City, Chicago, Illinois, and Detroit, Michigan. Beyond the later growth of African American Sunni converts as a result of the presence and influence of Sunni immigrants and expatriates in North America, "sectarian" Muslim communities enjoyed considerable success in converting African Americans to Islam (such as the early mission of the Ahmadiyya Community[1] to the African American community just after the rise of the Moorish Science Temple, in 1913).[2] Perhaps the most publicized of new and alternative Muslim communities in the early twentieth century was the Nation of Islam (NOI), founded by W.D. Fard (or Fard Muhammad), and led by its revelator/prophet, Elijah Muhammad (Elijah Poole) in the early 1930s. This movement generated significant offshoots and parallel forms during the civil rights era (the early to mid-1960s), which share a commitment to an Islam grounded in a black theology that incorporated uniquely American forms of Black messianism and apocalypticism. Two interrelated but distinct and independent African American Islamic communities centered in the New York City area (Brooklyn and the Bronx), evolving out of Black Muslim[3] theology in the mid-1960s. These were the Five Percent Nation of Gods and Earths (NGE), led by ex-NOI minister Clarence (13X) Smith, and the Ansaaru Allah Community, led by Isa Muhammad (Dwight York), which developed a new "Kemetic" (ancient Egyptian) identity as Nuwaubian Nation of Moors (NNM) in the twenty-first century.

The study of these two new indigenous Islamic communities (which were not offshoots of any recognizable Islamic immigrant/expatriate community) has engaged deeply held academic and devotional assumptions about the nature and parameters of Islam, of religion in the United States, religion and popular culture, and African

American identity. Among the most significant and rarely addressed issues in the scholarship on these communities is the problem of what anthropology, and other ethnographic disciplines such as sociology and folklore and folklife, has called the etic versus the emic view, that is, the outsider's or scholar's versus the insider's or "believer's" perspective.[4] Categories and frames of reference long accepted in the Western academy, and particularly the academic study of religion, itself growing out of the study of the Bible and Christianity in the West, are grounded in concepts either irrelevant or inimical to the members of such communities. In the study of African American culture, the academy has been dominated (until quite recently, and regarding these communities still is) by a Eurocentric, postcolonial, print-oriented definition of authoritative truth. In relation to the language, life experience, and world view of the African American community as a whole, and these communities in particular, the discourse of the academy is meaningless and in many ways offensive and completely overlooks the creativity and power of its oral-based culture in North America.[5]

Rarely addressed is the difficult initial hurdle of finding a common language with which to present an accurate and emic description of these new or alternative Islamic communities. The most important of these issues includes such basics as what constitutes the field of inquiry, and how to relate these communities to world religious communities, as well as specific problems such as what to call members and how to access and express their perspective and experiences. The field of inquiry regarding these communities has been for the most part defined by "sect" or "cult" theory, which, grounded as it is in the study of Christianity, is neither suitable nor helpful for the study of Islam as a whole and these alternative Islamic communities in particular. Neither is the term "religion" useful since both the Five Percent Nation and the Ansaaru Allah Community, now called the Nuwaubian Nation, reject the word and others they associate with frequent monotheistic assumptions about God, afterlife, sin or judgment, mystery or unknowability, mysticism or esotericism, and metaphysics. For communities in which even the words "religion," "god," and "belief" are suspect, what terms are left? Because these groups were pejoratively labeled by both scholars and the American Sunni majority as "cults," the Five Percent Nation and the Ansaaru Allah (or Nuwaubians) have long been sensitized to the politics of terminology. These groups prefer the terms "community" or "nation," which function not in the purely sociopolitical meaning most commonly ascribed to them of "Black nationalism," but rather the nonkinship based brotherhood and sisterhood of the Islamic *umma.*[6] These two groups and the Nation of Islam before them reject the word "religion" and, as a result, lose the protection under the law that that word can give under the criteria of freedom of religion, as well as the ability to demand recognition and constitutional protection as a Nation within the nation. They do not claim to be part of Islam as a religion, and thus are not within the protecting embrace of the *umma.* They call themselves, instead, an "Islamic culture" or "community" or "nation." What both communities share is a growing commitment to their own understanding of scientific truth, preferring the terms "teaching" and "truth" to "belief" or prophetic "charisma." They reject esotericism, mysticism, metaphysics,

and the occultism of religious professionals and hierarchies ("priests, ministers, blood suckers of the poor")[7] for the everyday knowledge and the common sense of popular science. Finally, they absolutely reject, as the Nation of Islam did before them, the transcendent "God" concept (as Elijah Muhammad put it, "the mystery God")[8] and redefine utterly their understanding of the ultimate, creative, self-referential reality that "god" represents to them. The Five Percenters affirm "there ain't no mystery god," while simultaneously affirming the NOI teaching that the "Blackman is god."[9] Thus, the word "god" is extremely problematic and elusive in this context and requires extensive exploration among the membership and the communities' textualities (both written and oral lore) to provide new emic parameters for that crucial word. Both these communities "show and prove"[10] the truth of the statement the "Blackman is god" with their "word"[11] and their lives. That is, perhaps, the greatest mystery to the scholar and outsider, and the one that requires reopening of the mind and tenacity to begin to comprehend.

For the most part, membership in these communities and participation in the cultures they generate is a life-affirming opportunity, particularly for young people searching for a way to belong, for the path they want to tread, and for their own unique sense of self as young men and women. The process of conversion to these communities needs to be understood outside of the all-too-common model of cult, which implies negative experience from which the convert must be rescued, "deprogrammed," or otherwise forced to separate themselves for "their own good." Rather, the engagement of individuals with these two African American Islamic communities has been, historically, a benign experience in which they can give active witness and testimony (and do) to their own identity and empowerment. The self-understanding of members, both as individuals and as groups, emphasizes different elements than the cult approach. Social scientific disciplines such as anthropology, sociology, and, above all, folklore and folklife, have increasingly affirmed the importance of entering into the world view of the ethnographic subject, what scholars of "folk," "popular," or "vernacular religion" have called "believing the believer."[12] Folklorist and religious studies scholar, Leonard Norman Primiano, has defined "vernacular religion" as "religion as it is lived: as human beings encounter, understand, interpret, and practice it."[13] It is in the area of lived religion among ordinary believers and their creative negotiations in understanding and interpretation that the study of Islam has been relatively inattentive. Given the oral nature of teaching and learning in both these communities, any attempt to understand the emic reality of their experience becoming "Gods and Earths" or "Ansaaru Allah" (i.e., "Helpers of God"), "Nuwaubian Moors," and "Etherians" requires their interactive collaboration, what folklorists and anthropologists have called "dialogic ethnography." Interdisciplinary approaches to the study of verbal expression and performance, such as sociolinguistics, ethnography of communication, ethnopoetics, and performance theory, offer a nuanced and organic sense of the verbal creativity and negotiation of meaning within profoundly oral cultures such as those among African American Muslim communities.[14] Ethnographer Glenn Hinson says simply: "We must listen closely to our consultants' words, accepting their description at face value while engaging them as colleagues in

the search for realized meaning."[15] It is not a commitment to the "charisma" of the leader that motivates conversion and maintains membership, as sociological analysis might suggest.[16] Rather it is the teachings themselves that become the center of the self-actualization process in the individual and the cohesion in the organic processes of the living community, affirming black identity and ensuring the survival and liberation of the community from the endemic effects of racism in the United States. The testimony of members of these two groups, although profoundly different in the particulars of their convictions, seems united through a joint commitment to the teachings of their founders, whether living or dead, which constitute their own distinct forms of Black "science."

"Science" is another of those words that requires careful reexamination in order to reflect the members' unique understandings. In modern Western culture, to use the word "science" is to guarantee the truth and factuality of the statement or object. It invokes perhaps the most fundamental "belief" of postmodern people, that the empirical world view is the only "real" reality and that any other view (namely all other religious views) are not really real, they are only "beliefs." This definition of science is quite recent. "Science" in the traditional Islamic context is *ilm,* which includes far more than the contemporary understanding of the word "science" allows. *Ilm* means "knowledge" in its broadest sense, as well as "learning" and the disciplines that come from study. Traditional Islamic learning is divided into the "religious sciences" (*ulum diniyya*),[17] meaning all those disciplines generated in the study, preservation, and transmission of the Qur'an and the oral lore of the Prophet Muhammad's life, the Hadith, versus "Greek," "foreign," or "philosophical sciences," referring to those disciplines outside of the revealed knowledge of Islam that encompassed philosophy, what we now think of as "hard" science (mathematics, engineering, medicine, astronomy, optics, zoology, botany, and others), and areas we now bracket as "metaphysics" (numerology, astrology, alchemy, divination, and talismanry).[18] So *ilm* included the physical and metaphysical, rational and nonrational understanding, within an Islamic cosmos that operated by both empirical and nonempirical causality. This duality to the concept and practice of science was shared by the medieval West, although its division of disciplines was somewhat different. Thus, postmodern alternative "religions" such as the Five Percent Nation and the Ansaaru Allah or Nuwaubian Nation come to the word "science" as something to be counted on, not subject to the vagaries of belief, which must be taken only on "faith," but the demonstrable, that which can be experienced, known, and communicated, shown and proved. But, like medieval "science," it seems to this researcher that there is an elusive metaphysics to their "physics." It is difficult to elucidate fully, but there are manifold depths to that which can be shown and proven through teaching, and each teacher or member lives according to her or his own ineffable and inimitable experience of the truths she or he holds and communicates those truths in a personal and unique fashion. Both movements, lacking formal hierarchies or rigid structures or institutions, but maintaining informal periodic public gatherings, allow and encourage great individual freedom of expression. Along with their commitment to the core teachings of their respective founders, members also have a sense of

individual freedom to evaluate and embrace the truth according to their own consciences and abilities.

The history of these movements is linked by their origin in the civil rights era and their quest for social justice, as well as in their experience of interference, harassment, even persecution, by the law enforcement community, ranging from local and state police, to the Federal Bureau of Investigation (FBI), the courts and judiciary, and, inevitably, the prison system. There is now plentiful evidence of the FBI's concerted decades-long efforts (put into effect under J. Edgar Hoover's leadership) to discredit, misrepresent, and if possible destroy African American sociopolitical movements and, most especially, African American Muslim communities and their leaders.[19] American media have presented African American Muslim communities, and specifically those to whom the label "sect" or "cult" has been misapplied, like the Nation of Islam, the Five Percent Nation, and the Ansaaru Allah or Nuwaubian Nation, as violent, racist, misogynistic, and gang-involved. After the jihadist attacks of September 11, 2001, all forms of Islam, but particularly the Nation of Islam, the Five Percent Nation of Gods and Earths, and the Nuwaubian Nation of Moors were violently characterized as hate groups.[20] Scholarly analysis of the history of Islam in the United States from the point of view of its status in law, its struggles with public recognition, and protection under the constitution reports that much significant progress in legislation regarding religious freedom in the last 40 years has been the result of Muslims, especially African American Muslims, in the workplace, in schools, and, most of all, in prison, having to bring suit to gain the same recognition of their identity and rights as Muslims as other communities (such as Christians and Jews).

It scarcely needs mention that African Americans experience differential justice in the United States, whether in their treatment by police in their communities, the frequency and duration of their jail and prison sentences, and the severity of their treatment while in prison. These facts are compounded by their identity as Muslims. Muslims, Islam as a "religion" and a "community," and all those things identified as "Islamic," such as foodways, dress, body hygiene, and adornment with symbols, have been inappropriately targeted by American media, law enforcement, and the prison system as "un-American," as "oppressive" to women, and as "fomenting insurgency" to be shunned in the prison population. Such an a priori judgment assumes that Muslims and things Islamic are not deserving of the same toleration and mutual respect as those of other more "mainstream" groups within American society and, specifically, within the microcosm of the prison population.[21] The irony is that these expectations usually turn out to be incorrect. The work of Robert Dannin on Muslims in prison shows to the contrary that Islam is an "island in a sea of ignorance," seeming to have a quieting and stabilizing effect, and also having the best record for prison outreach and community reentry and support after release to reduce recidivism.[22] The events of 9/11 have simply exacerbated and entrenched an already existing orientation, so that Muslims in the American diaspora now must constantly defend their status as law-abiding taxpaying citizens.

Kathleen Moore describes the historical process whereby "Muslim inmates adopted constitutional norms and language to change their environment

and, ultimately, how this contributed to an overall transformation of their self-identification."[23] She cites Stuart Scheingold, who notes that "a declaration of rights tends to politicize need by changing the way people think about their discontent."[24] The Nation of Gods and Earths and the Ansaaru Allah or Nuwaubian Nation members, following in the wake of Moorish Science Temple, Nation of Islam, Hanifi Muslims, and African American Sunnis, struggle with the constitutional mechanisms available to them in "the belly of the Beast" (prison) to meet the challenge of maintaining alternative Muslim self-identification.

A great deal of public representation of these two communities, whether popular press or scholarship, has proclaimed them to be irretrievably violent and racist. A great deal of this is based on projection rather than evidence. The intrinsic blackness of Five Percent discourse has been seen as "racism" and an inappropriate distortion of the universalism and lack of racial distinction in Islam as a world religion. The existence of youth cadres dedicated to martial arts, beginning with the Nation of Islam (called there the Fruit of Islam, or FOI, with a parallel women's corps) and continuing with the rise of these later black nations, is defensive in orientation. Certainly, these black nations have not experienced internecine violence. But their group behavior and platform is aggressive only when threatened or persecuted. Individual members have committed violent acts primarily against members of other similar groups, but those acts were not sponsored or condoned by their leadership. Condemning whole communities because of the violent acts of the few is similar to claiming that Christianity is a violent religion because of the violent acts of Christian paramilitarists. As far as violence and Islam in the United States is concerned, the evidence of Muslims in prison suggests that Islam makes Muslim prisoners more self-controlled, increases a positive sense of self, and engenders a greater commitment to social good.

The question of racism and American Islam is another issue. Sunni and Shīʿī Muslims in America have frequently disavowed these Black Muslim communities because of their black theology. The perception of racism and exclusivity by the Sunni mainstream in North America has operated negatively on the African American Muslim community as a whole (no matter what their doctrinal orientation), stimulating varying degrees of separatist response, in much the same manner as the exclusion of black Christians from white churches engendered the creation of Black churches. African American Muslims would never be excluded from Friday (*jumʿa*) noon collective prayer and are welcome to all social, cultural, and religious events of the *masjid,* or mosque. They do not, however, feel that they are treated as equals by the immigrant Muslim community. To African Americans the criteria of full acceptance and socio-political equality within the American *umma* have not yet been realized. In simple terms, does the immigrant/expatriate community here intermarry their sons and daughters with African American Muslims of the same doctrinal orientation? Do African American Muslims become the *imams* in immigrant *masjids* or Islamic centers? The answers to these more subtle forms of exclusivity is, sadly, no. There is a divisiveness in the Muslim community in North America that is created by the self-protective clinging to familiar ethnicities and continues to look toward the home

country or region or the Middle Eastern Islamic heartland for leadership. This divisiveness is also due to the American Muslim community's absorption over time of the racism and classism so endemic to American society as a whole. These complex factors have made the African American Muslim community question the wholehearted welcome they receive from the American Sunnis and in many cases they have sought to perform their own *hijra* ("emigration") away from the Sunni enclave in order to establish an American *umma* without these traces of racial, social, educational, and class exclusion.[25] The greater doctrinal and ritual separation of the American Sunni or Shī'ī community and new indigenous forms of African American Islamic community has made even mutual recognition as Muslims almost impossible. Only in the past decade, with greater recourse to the Arabic culture of the Qur'an and its contents has the NOI experienced a greater level of acceptance by the world Sunni community. Indeed, its current leader Louis Farrakhan has been received on Hajj and has visited that bastion of Sunni orthodoxy, the Azhar. The Five Percent Nation and the Ansaaru Allah are still far from such rapprochement. Their mutual insistence on crucial doctrinal and ritual differences has made recognition of these alternative African American Islamic communities by the Sunni mainstream still well beyond reach, and the corresponding rejection of Sunni rights to determine who "Muslim Children" are and what kind of Muslims they should be is firmly articulated by the NGE.

The century long history of debate, struggle, rejection, rapprochement, and separatism that marks all these new or alternative communities in relation to the world Muslim *umma* (whether Sunni, Shī'ī, or Sufi) hinges on issues that are central to the study and understanding of Islam as a whole. Are these groups part of Islam, or not? Who can make this determination, and by what criteria of inclusion or exclusion? As a scholar of Islam, I have struggled in my teaching, research, and writing with Islam's diverse historical manifestations and with the emically determined parameters of Islam. Is Islam (or any community) merely the boundary of the majority, or do minority communities also have a share in the process of boundary construction? The dominant methods in the study of Islam in the West have been philological/text critical and historical, frequently discounting the spirituality of Muslim folk and overvaluing the importance of Islamic texts and formal institutions in the formation of religion. This in some sense is a response to the long-standing emic Muslim traditional emphasis on textual and institutional Islam, which over time has had a strong normatizing effect on the perspective toward the *umma,* and a centrist marginalization of lived religion and minority forms of Islam. Even when more recent scholarship, such as Jacques Waardenburg's essay classifying "popular" religion in Islam in *Official and Popular Religion: Analysis of a Theme for Religious Studies,* opens the consideration of lived religion in Islam while unfortunately preserving the two-tiered model of elite and folk, normative and popular, that reaffirms the perspective that there is a hierarchical relationship in Islamic phenomena.[26] The deficits of such a normatizing and centrist view are obvious when attempting to evaluate the Islamic-ness of African American alternative communities. As a scholar of medieval sectarianism, premodern science, and religious healing systems in Islam,[27] it has always been clear to me that Islam has the capacity to look forward in order

to create, adapt, and expand its parameters, as well as preserve, maintain, and entrench them. Examples of these innovative developments in Islam range from Islamic mystical and sectarian models of cyclical time and ongoing or continuous prophecy (Shīʿī and Ahmadiyya); human manifestation or reflection (*buruz* or *zill*) of the divine image and/or qualities of divinely gifted prophets (Sufis, Shīʿī, and Ahmadiyya); internal revivalism as messianic, jihadist, and apocalyptic expectation (Jesus as the Sunni Mahdi, the Shīʿī Imam Mahdi, Muhammad Ahmad ibn Abdallah, and the nineteenth-century Sudanese Mahdiyya, West African Sufi jihadism of Uthman dan Fodio and the Sokoto caliphate); sectarian branchings off of Islam that created new religions and communities independent from Islam (the Druze, Baha'i, and the Ahmadiyya);[28] as well as new communities drawing on traditional immigrant patterns of Islam but not found elsewhere in the larger Muslim world (such as the Bawa Muhaiyaddeen Fellowship in Philadelphia, Pennsylvania, a new American Sufi order, who claim spiritual *nass* or teaching lineage from the line of Abd al-Qadir al-Jilani; and Rashad Khalifa's United Submitters International in Arizona, who employ a predictive and numerological *tafsir/ta'wil* or esoteric interpretation of the Qur'an, paralleling medieval Islamic mystical numerology and apocalypticism).[29] The African American Islamic communities that are the focus of these articles are only two more examples of Islam's ability to manifest new forms of itself, weaving elements of tradition into new patterns.

"BUILDING" THE FIVE PERCENT NATION OF GODS AND EARTHS

The self-identification of the Five Percent Nation derives from the teachings of their founder, Clarence Jowars Smith (1928–1969, born in Danville, Virginia), a Nation of Islam student minister (known as Clarence 13X) at Temple No. 7 in Harlem, who broke away to become "Father" to the Five Percent Nation in 1964. His name for this new Nation comes from earlier NOI Lessons and his own exegetical thrust regarding the 5 percent righteous, who have the capacity to manifest the true divine nature of the Blackman. The rest of humanity is composed of the benighted 85 percent who are the "mentally deaf, dumb, and blind," and the remaining 10 percent who are "devils" who have real knowledge but choose to keep the rest in ignorance whether they are clergy, educators, members of the government, judiciary, or law enforcement, i.e., the powers that be.[30] Five Percenters refer to the majority Muslim community as part of that 10 percent, misguided "Soon to be Muslims," which is a pun they created for the term Sunni (pronounced by them, "SOONEY") Muslims.[31]

African American membership in the Five Percent Nation, like the Nation of Islam, is not understood as a change of condition, or "conversion" to new "religion," but rather a return to their natural state.

> People consider us a religion. This does not have anything to do with religion. This has nothing to do with something which was started up in the past. This has no said birth record. That blackness that was there at the beginning that created all things in the universe was that of Islam. That's what we're dealing with. When you're saying Islam you're

> saying I-Self-Lord-Am-Master, or an Independent Source of Life and Matter. For that's showing and proving the ability to create.[32]

Felicia Miyakawa says of Nation of Islam teaching that "the natural state of the Original Man, that is, the black man" is "the 'natural' way of life—Islam—lost to them through the centuries. Adherence to Islam is thus not a conversion for the black man, but a return to his original self."[33] The study of African Muslims in early America and the "residual memory" of Islam as a religion of the African ancestors within the African American community into the mid-twentieth century enriches consideration of the rise of the alternative African American Islamic communities and their contention of Islam as their "natural" religion.[34]

In this early phase of the community, "Father" (known also by the Five Percent community as simply "ALLAH") along with an early companion, called Justice, elaborated the new exegetical system of symbolic meaning of letters and numbers, called the Supreme Alphabet and Supreme Mathematics.[35] These systems resonate strongly with medieval Islamic number-letter mysticism, known as *jafr, simiya',* and *'ilm al-huruf,* and parallel systems, which developed somewhat later historically in Jewish mystical exegesis, called *gematriya* and *notarikon.*[36] The new teaching that became the core of Five Percent life and thought revolved around the seventh of nine principles, originally under the heading, "What We Teach," by the NOI's newspaper, *Muhammad Speaks:* The Blackman is God and his proper name is Allah.[37] The English transliteration of the Arabic word for God in the Qur'an is *Allah*, or A-L-L-A-H, and is manipulated in Elijah Muhammad's exegesis: "The Holy Qur'an teaches us that the God of Islam is called Allah, which is His most proper Name, because Allah covers it all. As far as the Name goes, I am Allah and you are Allah … We are *all Al*lah."[38] One of the most important Five Percent exegetical methods is "breaking down" words, or elaborating the meaning of a teaching term by an associated acronym. For example, the proper noun "Allah" is understood as the acronym "Arm Leg Leg Arm Head"—which generates the Five Percent version of Leonardo Da Vinci's *Vitruvian Man* verbally and visually. In their 1990 album, *One for All,* in the rap "Dance to My Ministry," Brand Nubian offers their take on the name of God, ALLAH, showing Five Percent understanding of the 120 Lessons and the Supreme Alphabet, in order to educate others to true self-awareness, or "each one, teach one":

> Hey, yo, come! It's in my laboratory. I'm gonna take you on a tour. An Ankh is the key, and the key is Knowledge which unlocks my lab's door. Careful as you enter. Each generation finds a center. Lord Jamal's the inventor. Production of black packs put onto a black wax. I got a lot to say, so just stack. To the right is where my fuel [is], the Qur'an and 120 Lessons.… Alpha and Omega, the *A*rma *L*egga *L*egga *A*rma *H*ead [ALLAH]. And like jam, these facts will spread over the thoughts of the white bread.[39]

James Spady and Joseph Eure report that rapper Prince Akeem amplifies the literal and common sense nature of this trope of ALLAH: "Why in the hell do they call this an Arm, a Leg, a Leg, an Arm, and a Head? I ask them that [i.e., the 85 percent who still follow the mystery god]. Extend your right or your left, either way you look

at it, you spell A-L-L-A-H. The knowledge is clearly cut, but we don't want to believe it."[40]

The letters of the English alphabet are multivalent with a diverse system of associated acronyms. Yusuf Nuruddin's groundbreaking scholarship on the Five Percent Nation includes interviews with two Five Percent members, Sincere Allah and King Allah, who elaborate several examples of letters associated with key words that themselves are acronyms.

The letter "F," for example, is strongly associated with the word, "Father," one of the founder's titles: "If you 'break-down' 'Father' you get Fat-her … I could fat a man and I could fat a woman. When I say I could fat a man, that means I can give him proper knowledge of self; that means I'm fattening him, you know, to show and prove that he's the Almighty True and Living God."[41] The letter "I" stands, of course, for "Islam," the ninth letter or "Born-degree," in which a new member is "born into Islam" by "breaking down" or recognizing the acronymic truth that "I-Self-Lord-Am-Master" or "ISLAM." "The Sacredness of Our Culture and that Divine Culture is Islam."[42] A third letter related to black godhood is the letter "K," which can "break down" to "King" or "Kingdom." "For surely I'll be the King of my Kingdom. The Planet earth, in all reality, is my Kingdom but I gave it to the devil for six thousand years. The way you break down 'King' is 'King I Now God' which means that 'I am the King who now acknowledges myself as being God.'"[43]

WHAT IT MEANS TO BE A "GOD"

The life path of the Gods of the Five Percent Nation, according to their self-understanding, is not in the hands of a deity or an impersonal fate. Five Percenters live outside of the motivations of heaven or hell, without any concepts of original creation or ultimate destruction or last judgment, but they are grounded in a sense of moral action and its consequences that harkens to an almost Buddhist sense of *karma,* in that human destiny and the unfolding of one's true self and potential is ultimately in one's own hands. As consultant King Victory (K.V.) put it, having been asked if there is a Judgment or Last Day in Five Percent teaching: "Judgment is every day."[44] A "god-ly" life would manifest what Five Percent teaching calls "build powers," or positive forms of self-actualizing of potential that leads to true self-knowledge, i.e., knowledge of your own divine nature, what Five Percent Nation members have described as "mining [one's] own hidden talents," "achieving mastery of [one's] own inner powers," "creating [one's] own destiny:" "A God is one who has applied this self-transformative knowledge,… one who can 'show and prove' that he is God."[45] The opposite to build powers also exists, of course. "Destroy-powers" refer to those self-defeating characteristics, circumstances, or outside persons or influences that prevent people from actualizing their potential, from exercising their creative abilities, or ultimately from realizing their true self. Human potential, in Five Percent terms, exists in this dynamic moral tension of "build-destroy."

In fall 2005, over the course of the month of biweekly interviews I conducted with local members of the Five Percent Nation at the University of South Florida in

Tampa, Florida, I gathered comments that help to further define Five Percent understanding of "God/ALLAH" and the teaching methods that they used in their own lives to create meaning. In this ethnographic context, they tried to share with me, making me a small part of their "each one, teach one" cycle of learning. The concept of "God"/ALLAH was my central focus in these talks, and their responses included everything from the nature of individual identity, to the role of gender in godhood, to the responsibility of being a god within the family, the community, and the Nation (i.e., Five Percent Nation). Divine Justice (D.J.), the local leader of a small group of Five Percenters, a recent graduate of the University of South Florida, said that "being a God" was also "being part of the Nation," it could not be lived in isolation outside of the community. D.J. went on to explain that the original split of the Five Percent Nation off of the Nation of Islam was precisely over the question of "God/ALLAH." "During the 1960s, the NOI said that the original Blackman was God, but they were still praying to Allah (outside us) [i.e., the mystery god]."

According to D.J., since NOI teachings rejected the mystery god, this inconsistency sparked questions in the Father and caused him to create and inspire a whole new movement, the Five Percent Nation. My consultants seem to stress the simplicity, common sense, and rational nature of their teachings and the exegetical methods they use to assimilate and disseminate them. D.J. referred to the dictionary to begin to define what "God" means. Many of the classic deistic names of attribution such as "creator," "master of universe," "king or ruler," "giver of life and death" are, in his understanding, aspects of true human potential. We "create" thoughts, inventions, children. We are "masters" of our own personal universes; we have "dominion" in our own homes. We give life procreatively, but also give it symbolically by awakening others or facilitating their awakening. We give death by eliminating ("killing") false consciousness, poverty, and hatred. D.J. also offered dictionary definitions of relevant adjectives, "divine," and its related noun, "divinity," being "like, of, or from God." D.J. says "I am '*of* God.' 'Of' being 'of the same tree,'" the same lineage or genus, organically the same. He asks: "As a human, why look elsewhere when all the answers are within your Self?" He elaborated that "divinity is our relationship to the universe."

"God" is associated scripturally in Judaism, Christianity, and Islam with a series of attributes that Five Percent teaching identifies with the truest and most elevated human potential. In this sense, it seems clear, that "God" for Five Percenters does not claim any metaphysical status for humanity, there is no magic or mystery involved. So, it is not *shirk,* or heretical Islam, in the conventional Islamic sense. Perhaps, it comes closer to saying it is *kufr,* or total denial of God, since Five Percent teachings deny the reality of metaphysical, mystical, supernatural, or transcendent deity, a more radical separation from the monotheistic fold than just claiming human divinity. The Five Percent universe is empirical, grounded in the physical and in immediate human experience. "Thought is chemical, physical. Knowledge of the brain and knowledge of the universe is *shown and proven.* It can be manifested through the five senses. It is accountable, not to be taken on faith, but witnessed/experienced. It is applicable to life in the day to day."[46]

I was assured again and again that Five Percenters do not talk about "beliefs," nor is the polite generic term for them "believers." To them, "belief" is about "faith," that is, those things that are beyond proof and, therefore, not real. However, Five Percent exegetical methods are profoundly esoteric, metaphoric, and even occult. The use of numbers and spoken language and its visual components, letters, are part of the public discourse of this community and the primary ways in which it creates meaning, called in the teachings of its founder, the Supreme Alphabet and Supreme Mathematics. The core discipline of the 120 Lessons is available to the world and yet also kept hidden from it, since it is reserved for initiate access only through direct interactions between the God and the God-in-training down the "conscious line" or teaching lineage from master to disciple within the community. After considerable wrangling with my interviewees over a desire to get direct access to an original and authoritative text of the 120 Lessons, which I had assumed would be an important first step for an in-depth analysis of the community's core teachings, I began to realize that I would have to learn those teachings through interpersonal communication. Without the training represented by the "conscious line" and contextual explication from the insider's perspective of experiential "overstanding," the mere text of the 120 Lessons, according to my consultants, would be not only meaningless, but potentially "dangerous," that is, liable to serious distortion and misunderstanding.

My other Five Percent consultant, K.V., had significant remarks to make about the nature of the "divine" and the "sacred": " 'Divine' is something sacred, like my way of life. Being a Five Percenter is divine.… 'Sacred,' well, I just say it means a lot to me. It's 'sacred' to me, so you know, it means *everything* to me. My culture, you know? The teachings [of] Allah, the Father [Clarence Smith], *not* what the NOI taught, or *not* what Elijah Muhammad taught.…"[47] One of the distinguishing marks of African American Muslim sectarian communities is their inclusive exegetical approach to sacred texts. The Five Percent Nation has its own view of and approach to the scriptural legacies of Judaism, Christianity, and Islam, in relation to their own teachings of the 120 Lessons. Victory stated the case as follows: "Those Lessons are 'sacred' to us, they are 'divine.' We're the only ones who put those Lessons into practice [i.e., the NOI does not teach them, but keeps them secret]. *Not* the Koran, *not* the Bible. Those aren't sacred to us. Those are just books—and *they're* almost expired." Victory goes on to explain the proactive approach of the Five Percenter to any outside scriptural authority, i.e., that the ultimate interpretive authority is one's own informed exegesis. "We write our own history. We write our own Koran and Bible. So when we write history. We write according to the path we've 'built,' the way we live. We don't just follow the Koran and Bible; we take the best part of it.…" Divine Justice expanded on the "jewels" to be mined within scriptures and other sacred texts: "The Qur'an and the Bible, even texts from Judaism … They all have *jewels.* And they all have things in them that are good common sense, are grounded in good value … But not *all* of it. You know, we read all of those texts (which most of us do) … and like he said, we take the best part out of it."[48] This exegetical freedom is the hallmark of membership in the community.

THE NGE COMMUNITY: BUILDING THE FAMILY OF SUNS, EARTHS, AND STARS

The community is connected via online and print media in a North American network of city and rally locations, each having a coded name using aspects of the Supreme Alphabet and common speech.[49] New York City and its environs is the point of origin and the heart of the community: Harlem is "Mecca," the "Root of Civilization"; Brooklyn is "Medina"; and the Bronx is "Pelan." Each urban center and neighborhood where members live and gather has its own name: "*L*ove *A*llah" for LA (Los Angeles, California; "New Heaven" for New Haven, Connecticut; "Allah's Garden" for *A*tlanta, *G*eorgia; "*S*elf *B*orn" for *S*outh *B*end, Indiana; "Rich Mind" for Richmond, Virginia; and "*T*rue *C*ipher" for *T*oronto, *C*anada, or *T*oronto, *O*ntario (O = cipher). Members have the opportunity to meet through NGE sponsored gatherings, rallies and parliaments, throughout the country, as well as through correspondence contacts established through the community newspapers that often act as a Five Percent town meeting, voicing issues of self, community events, and items of recent interest to the Nation.[50]

> We are a beautiful God Centered people whose path to God is Cultural rather than religious. The way we give honor to I God is so unique that others don't have the right words to define us, but that is no longer a problem. The solution is in our continuing to teach our truth to the Human families of the planet earth. This way all will know from our point of view who we are and what to call us. This year [2005] we have made it clear that we will not be called a religion, gang, group, organization of anything except what we say we are. No internet idiots, no JDL, DOC, gang or government websites will be allowed to defame this Nation unchallenged. We have our own Media vehicles, the *Five Percenter* and the *Son of Man* to adequately define us.[51]

The members of this new Nation of the Five Percent righteous are self-named "Gods," or men, and "Earths," or women. Every male "God's" duty and chief context of learning is the dissemination of their core principles, through "showing and proving" his knowledge on the street, at Allah Schools, and in his public life. Each God's directive is "each one, teach one." Every female "Earth's" power comes directly from her African heritage (and in this regard she can be called "Queen"), carrying and preserving authentic culture, teaching the next generation, and being literally the "ground" of the black family, the home, and the community. Each Earth's directive is to be fertile and give life. Allah B, who "got Knowledge-Of-Self (K.O.S.)" [became Five Percenter] in 1964, reported recently that the Father (Clarence Jowars Smith) said at "the Sermon on The Mountain" that "in making babies, we'll eventually take over the world."[52]

Thus, the highest value within the community, or "building" the nation, is manifested at the personal level by each individual God's commitment to passing on his own "seed" by building his own family, with his own Earth. As Gods, said D.J., "we are the creator and giver of life and death." "Children, community, thoughts"—all are creations, all are manifestations of being a "God," being "divine." In his plus degree (personal interpretation of teaching), D.J. explained that your

divine "essence" is, in this sense, "your seed, your children." The "God" is creator not in the religious or metaphysical sense of monotheistic genesis, but rather in the sense of biological creation, and creation of "self" through teaching one's children proper "knowledge of self."

Conversely, the "Earth" gives life to all things, the relationship, the child, the family, the community. She cultivates and nourishes at many levels, reflecting the light of the teachings and turning that light into life (exactly as every plant turns the light of the sun into nourishment and new life and growth). The cosmology of the NGE family is the "Sun," shedding light on the Earth, surrounded by his "Stars" or "Planets," the way the planets rotate around the physical sun.

> There exists a homeostasis between the Sun and the Earth, a natural systematic relationship governed by the laws of mathematics. The Sun can exist without the Earth, however, she complements his greatness and radiance by taking that light and turning it into life.… He provides her with that environment that is conducive to the growth and development of life on her [planet] as she submits herself to him and endlessly revolves around him, bearing witness that he is the foundation of her existence.[53]

The bond between a God and Earth is also cosmic, each orbiting in their natural sphere, but creating a "civilized" space for each other to share. The national newspaper of the NGE, *The Five Percenter,* features frequent letters, poems, and other communications from the membership that qualify as "plus degrees," not core teachings, but rather the reflections and understanding of individuals in the Nation. The following poem is an individual God's love song, a testament to his bond with his Earth, quoted from the December 2005 issue:

> I Love Myself Some You!
> Black Queen, It seems as though for sho
> You acknowledge the Supreme Being, the all eye seeing
> It's obvious that you are in agreement with Law & Order.
> Planted my seeds in you fertile soil.
> You have willfully toiled to bring forth Suns & Daughters
> We met trillion of years ago along the "Nile Valley"
> We finally conversant a few years ago at the rally
> Slurs of verbs and you were gravitated by the Magnetic attraction of Truth
> We bonded like Boaz and Ruth
> Truth remains, no mind games, simple and plain.…[54]

The poet, although speaking for himself, has at the same time encapsulated several important elements of Five Percent heterosexual bonding, first that transmitting one's "seeds" is important and in an almost biblical or qur'anic sense should not be wasted, but rather "planted" and be fruitful. NGE relationships and familial bonds are personal commitments that include children that must be supported, educated, and raised in the Nation, but "marriage under government" was during the early community an ambivalent issue and is still under debate within the Nation.[55]

Members tend to avoid legal ties and entanglements with the State and all its "devilishments," as D.J. terms those things that can bring a person down, the evils and snares of living in North America. Part of the purpose of such gatherings is to introduce potential partners to each other in a teaching-oriented environment, so like-minded and committed partners can find each other. The poem continues to extol the need to establish a substantive relationship and avoid the dating and mating games typical of youth in American society, which engage the players in emotionally and physically at-risk behaviors. He concludes with a Five Percenter ode to the NGE family, a "village" in its own right, which sends out civilizing waves that "build" the Nation (and the world).

> Thoughts compiled I envision our own village,
> Civilized living love,
> Respect and giving,
> Lets keep building,
> I Love Myself Some You.[56]

The Nation began under the Father's leadership as a youth outreach effort to get young people out of the gangs, to give them a positive purposeful sense of self, and to provide them with a way to become functional, contributing members of their own communities. This "teenage" profile of the early movement, while often still true of the initial affiliation process, reflected in Nuruddin's description of the group in 1994 as "A Teenage Nation of Gods and Earths," is now no longer true. The NGE today is filled with people ranging in age from young adulthood to midlife, since those members from the early days of the community (the mid-1960s) would be in their fifties now. The strongest social commitment, however, remains to the cultivation of the young. To give youth a culture and a community that will support them in the process of "building" their knowledge of self is the first priority, creating healthy young minds and bodies that can withstand the hostile environment they have to deal with in contemporary American society. Raising sons and daughters to know their true nature, i.e., that they are all gods, and giving them the interpretive tools (lessons, supreme alphabet, and supreme mathematics) as and when they are able to comprehend—these goals are served through a variety of teaching and learning contexts, "building" first at home with their mothers (as Earths they have responsibility to raise "civilized" self-aware "seed"), and later, in the streets, in Allah's "schools" established in various urban centers throughout the United States,[57] and in their families and with other adult members of the Nation at regional rallies and parliaments (usually held in public facilities like public schools, community centers, and public parks). The national newspaper, *The Five Percenter,* gives regular photographic evidence of children's gatherings and the socialization of young people, which is the first task of Allah's Schools wherever they are. Particular mention is given to the "Root," Allah School in Mecca (Harlem), which was created by the founder with assistance from the New York City mayor's office.

Several efforts over recent years have been made by various public agencies of New York City and the Harlem Commonwealth Council to rezone, foreclose, or otherwise shut down Allah School in Mecca, and reassume ownership of the half-block of property on Adam Clayton Powell Blvd. (7th Avenue between 126th and 127th Street). Presumably the city and commonwealth believe the property could be "developed" to further advantage if it were sold. *The Five Percenter*[58] has recently documented the history of their resistance to this process and, along with the national Five Percent Web site, has been campaigning for Five Percent community support, sending out a continuous "S.O.S.," or "Save Our School," and fostering a national effort to collect sufficient funds to rebuild Allah School in Mecca from a modest and somewhat down-at-heel single story storefront building to a seven story youth center (which would be safe from city attempts at closure). Allah Schools, and especially the "Root," Allah School in Mecca, are crucial to the history, ongoing identity, and generational continuity of the community. Through gatherings, Five Percent men and women, children and elders, can participate freely in "building" the Nation, "showing and proving" their own experience, and learning from one another the "lessons" that constitute their personal and collective guide, and transmitting their unique African American culture through narrative, through the use of symbols, and especially through music.

TEACHING VENUES OF THE FIVE PERCENT NATION: ISLAMIC RAP AND GOD HOP

The Five Percent Nation does not teach primarily through written venues, although it has had several periodicals that have circulated within the community. The Five Percent Nation primarily teaches orally, as "God-talk," with the male duty identified as teaching and "building" by expounding and living the "word," and female duty as nurturing and "building" the family and society, although both have complementary duties of education toward the young. "Gods" build through a diversity of live teaching contexts, on the street, and in "schools," which are what they call their centers found in urban neighborhoods close to where members live and work. A lesser path of teaching, although perhaps more universally accessible and of larger public influence is that of rap music and video, usually known in this specialized sense as "message rap," "Nation conscious" rap, and "Islamic rap,"[59] and within the larger culture of hip hop, and by Five Percent rappers, as "God Hop."[60] The Gods (and Earths) of the Five Percent Nation, whose rap is a teaching vehicle, offer to youth what the Islamic tradition as a whole has always offered, a comprehensive way of life encompassing a viable response to worldly needs, social justice platforms, the sanctity of the family and community, as well as identity formation through lofty personal goals and aspirations. I consider here three well-known Five Percent male rap groups and discuss Five Percent women rappers afterward. Poor Righteous Teachers, Brand Nubian, and Wu Tang Clan discuss the concepts of God or ALLAH, drawing on the legacy of Moorish Science Temple and Nation of Islam terminology as it is embodied in Five Percent teachings.

Poor Righteous Teachers (P.R.T.), one of the classic Old School message rap groups, produced a number of albums in the 1990s, which were almost exclusively dedicated to ideological teaching. Their very name is a synonym for the Five Percent Nation. Initially, the Five Percent distinguished themselves from the Nation of Islam as a community that had kept its message pure and occupied the moral high ground of simplicity, a kind of voluntary poverty, or "strictly ghetto." P.R.T. espoused living life genuinely as the Five Percent righteous, manifesting your true divine nature, and using the vehicle of rap to accelerate the Five Percent goal of "each one, teach one." In their 1990 album, *Holy Intellect,* P.R.T. offers the classic definition of black divinity, in the rap "Speaking Upon a Blackman": "Many felt the coming of the law and the Lord came from Self.… Black people stop and look at where you're at.… We must come together as a people. Teach each as an equal about the right way to go. Yo, take off your cross, black, because it's crossin' up your mental … I'm kickin' it to ya straight from the Divine land. Speakin' upon a god, I must be speakin' upon a Blackman."

In 1991, P.R.T. came out with the album, *Pure Poverty,* and the rap "Each One Teach One"[61] addressing the white god of mainstream American Christianity, asking: "Who's that mystery god? Does he exist? You show no proof.… You tell them, God is that of a spook, symbolic to that of Casper [the Ghost, i.e., similar to the Holy Ghost].… [This] just ain't the fact. Why, God is true and livin'. Listen, Jesus Christ was Black!" Jesus is important to a number of Muslim rappers, as a figure of triumphant suffering. In Five Percent terms, the majority of people of color worldwide are outwardly oppressed and inwardly impoverished of their true identity as gods. Jacket acknowledgements are made by P.R.T. members Wise Intelligent, who offers "Peace to that 85% of the population who are subject to poverty, trials, and tribulations enforced by the devil in hell, who are slaves from mental death and are ignorant of the facts of life," and Culture Freedom, "All those who dis the Gods and Earths are dissing the future of Black People as a whole. (But hey, Peace to you all anyway)."

Brand Nubian, another Five Percent group, in their 1990 album, *One for All,* elaborate a NOI wordplay in "Wake Up, Sunshine" using "dog" which spelled backwards is "god," similar to the verbal practice of adopting and elevating a denigrating term, like "Nigga," in everyday speech. "As I proceed to civilize the uncivilized, word and wisdom to the groove [the record] from the wise [the Five Percent]. I guess I'd like to verbalize for the fact I'm moving blackwards, this Asiatic Blackman [Moorish Science Temple term] is a 'dog' spelled backwards. The Maker, the Owner, the Cream of the Planet Earth, Father of Civilization, God of the Universe." My local Five Percent consultants confirm that these qualities (Maker, Owner, Cream, Father, Civilizer, Universe) are all manifestations of godhood. Miyakawa's masterly analysis makes the "Science of Supreme Mathematics" embedded in the refrain of "Wake Up" clear with a chart that visually decodes the words that stand for numbers in this associative system.

And put our *wisdom* before us (murderer) [wisdom = 2]
That makes it *wisdom knowledge* (murderer) [wisdom = 2, knowledge = 1]

So we need *knowledge wisdom* to bring forth [knowledge = 1, wisdom = 2]
the *understanding* (murderer) [understanding = 3]
Culture freedom (murderer) [culture or freedom = 4]
Power refinement (murderer) [power or refinement = 5]
Equality god build destroy born's our *cipher* [equality = 6, god = 7, build or destroy = 8, born = 9, cipher = 0]

Thus, at the end of verse 1 of "Wake Up" the refrain represents all the verbal markers for the numbers 1–10, ending with the number 10 with the whispered counterrefrain ("murderer") which represents both self [1]-destruction[0] as well as the 10 percent who destroy by deception and by keeping the truth from the people.

The function of the rapper as God or ALLAH is to call to those as yet unawakened to their true divine nature, and to send the coded message confirming that truth to those already in the know. From Wu-Tang's 1997 album, *Wu-Tang Forever,* includes the rap, "Wu-Revolution": "We are original man, the Asiatic black man, the maker, the author, the cream of the planet earth. Wanna be free, yeah. Father of civilization and daughter of the universe. Wanna be free, oh yeah … Take the devil off your plane. Take him off your mental mentality. Take him off your brain.… Who is all wise and know who the true and living god is, And teach that the true and living god *is,* Supreme being black man from Asian, Otherwise known as civilized people, Also Muslims, and Muslim sons."

Ghostface Killah, a solo artist from Wu-Tang, in the rap "Black Jesus," from his 1996 album *Ironman,* explains the Five Percent's unique concept of the god within: "Some people don't have no directions, God, because they don't know the science of theyself. See, the science of life is the science of You [in supreme alphabet, the letter "U"], all the elements that it took to create You. 'Cause everything in the universe [also letter "U"], God, that created the universe is within you." From that truth, the authority of every informed, self-aware individual to teach others about his or her inherent divinity is manifest.

From the period of the late 1980s through the 1990s, that interrelationship between Nation teachings (whether NOI or Five Percent) and the subgenre of "message" rap cannot be overstated. The RZA, of Wu-Tang, in his recent popular text, *The Wu-Tang Manual,* describes his initial exposure to Five Percent teachings and learning how to rap, emphasizing the intimate linkage between the Five Percent and hip hop. "The first thing you have to do is to memorize 120 questions and answers.… You can get tested on these questions and answers at any given moment by any person.… A cipher [Arabic *sifr,* or "naught" or "zero," whose orthography is a circle, meaning the totality of the universe] was held by the brothers standing in a circle testing you—you had to show and prove. The word 'cipher' in hip-hop comes from that. So does slang like 'droppin science,' 'break it down,' and even the expression 'word.' That's what you say when someone expresses a deep truth: Word.… About 80% of hip-hop comes from the Five Percent … in a lot of ways, hip hop *is* the Five Percent."[62]

Traditionally, it is the duty of the Gods to teach and the Earths to nurture in the Five Percent social scheme. But Earths also teach in the public culture of God Hop and Nation rap. The influence of Islamic teachings, whether Five Percent Nation, Nation of Islam, Sunni Islam, or some combination of these, can be found in the rap voices of women from the 1980s into the twenty-first century. Some of them reflect an emphasis on nurture, such as the Black Muslim antiswine discourse on health and foodways, as other male rappers have done, like KRS-One of Boogie Down Productions, in "Beef" (*Edutainment,* 1990); Brand Nubian's classic rap video "Wake Up, Sunshine" (*One for All,* 1990), shown on BET Network's *Rap School* program, visualizes White America as an enormous white porker divided into portions on a platter for Black consumption and contamination; and Gravediggaz' "three little pigs" swine story in "Fairytalez" (*The Pick, the Sickle and the Shovel,* 1997); and Ludacris raps "Oink, Oink, PIG! PIG! Do away with the POORRK-uh/Only silverwuurrr [silverware] I need's a steak knife and FOORRK-uh!" (*Word of Mouf,* 2001).[63] The issues of authentic self, being true to the teachings, surviving in a Afro-hostile environment, and trying to keep family and community not just alive but intact are themes that Nation conscious hip hop women have addressed with zeal and style. Black British rapper, Money Love's passionate track, "Swiney, swiney" in her 1990 album, *Down to Earth,* presents the food prescriptions of Elijah Muhammad's two-volume holistic health manual, *How to Eat to Live.* Erykah Badu's song of praise to the NGE, "On and On," from her 1997 album, *Baduizm,* comments on Black Nation foodways. She raps to the 360 degrees of Five Percent teachings and says that White American diet starves Black people of true nourishment, true self, and true culture: "Don't feed me yours Cause you food not endure." Health conscious as well as Nation conscious women teach, through rap, that the nutricidal[64] effects of the food provided and promoted to the Black community are destructive to both mind (i.e., awareness of Self) and to body (self and communal preservation).

But in a much larger sense, the Earths or Queens, who rap for themselves and the needs of Nation conscious women in spite of a predominantly male discourse and industry include both soloists, like Queen Latifah, Nefertiti, Monie Love, Sister Souljah, Bahamadia, MC Lyte, and Erykah Badu, and members of mixed groups, like Lauryn Hill (of Fugees, now recording solo) and Ladybug/Mecca (of Digable Planets). The staunch "raptivist," Sister Souljah, in her classic message-laden 1991 rap video, *The Final Solution: Slavery's Back in Effect,* and 1992 rap album, *360 Degrees of Power,* is the quintessential "word warrior," who takes the battle to the streets.[65]

> You thought I was a noun, but no way I'm a verb
> An action word
> A secret for centuries but now the cat's out of the bag
> Strong Black woman you should be glad
> You have 360 degrees of power girl, you bad!
> No adjective can describe my objective
> Original cradle rocker, positive conquers the negative

Sister Souljah rattles down the male ego while rejecting the dominant sexual themes of much of popular hip hop culture and the passive role often assumed for women in it.

> Don't mean to intimidate, relax while I insulate
> Your children and your entire Nation
> No buck whilin', no misbehavin'
> Powerful but won't misuse it, take advantage or abuse it
> Keep in mind before you go, it's what you need, if you're
> Gonna grow.[66]

Strong women of the Hip Hop Nation keep the men from complacency and from taking them for granted. Clearly, what might devolve into the battle of the sexes is enlarged to include the wider struggle for self and nation.

Above and beyond the particulars of individual rappers and groups, and the Nation teachings they convey, is the oral performative reality of rap itself. H. Samy Alim, sociolinguist and Five Percent Hip Hop analyst, provides some of the most acute conceptual frames within which to understand this extraordinarily rich communicative medium. Brand Nubian, in their 1992 album, *In God We Trust,* begin the first track with the opening phrase of the Muslim call to prayer, the *adhan,* which repeats over and over the Arabic phrase, *Allahu akbar* ("God is most great") into fade-out and the beginning of the lyrics. It brings into sharp focus the ritual aspect of God Hop in the oral performance of the rhythmic, rhymed prose of message rap and the oral performance (in prayer or *salat,* or formal recitation or *tajwid,* or rhythmic chanting or *dhikr*) of the rhythmic rhymed prose (*saj'*) of the oral message of the Qur'an.[67]

> Through dozens of ethnographic interviews with hip hop artists in the United States, it became clear to me that Muslim hip hop artists were making new connections between hip hop lyrical production and the method and means by which Allah revealed the Qur'an to the Prophet.… Rapper Mos Def, who is a member of the Sunni Muslim community, discussed the reasons why he believes hip hop lyrics can be an effective medium in educational practice.… "You learn *Al-Fatiha* [the opening chapter of the Qur'an]. And you learn it and recite it. And you learn it and you recite it. Then one day you're reciting it, and you start to understand !… Hip Hop has the ability to do that—on a poetic level."[68]

In setting the context of rap production within the framework of the first Muslim community and each successive generation who preserves the message orally through memorization and rhythmic and melodic recitation, Alim and the rappers themselves see their discourse as establishing a new *umma,* a new Nation, with all the resonance of struggle for the "faith" (*jihad*) that that implies.[69] He views God Hop artists as "verbal *mujahidin*" and their verbal experiences represent a "discursive struggle against oppression" expressed not through classical Islamic religious language, but through the language of the streets, a "Black Language" he sees as a powerful "weapon of mass culture."[70]

WITNESSING (SHAHADA) BEING GODS IN PRISON: OPPRESSION AND RESISTANCE, THE STRUGGLE OF JIHAD

One of the most startling aspects of the *jihad bil-lisan,*[71] or "verbal *jihad,*" of Gods and Earths of the Five Percent Nation is the role played by their public witness to being God or Allah. Both NOI and the Five Percent Nation have had significant success in attracting African American prisoners and giving them a new identity and a rehabilitative sense of personal and social purpose. But the Five Percent Nation stands out in this regard for the persecution and double loss of freedom they frequently experience when they declare their "godhood" in prison. It is reminiscent of the public furor and persecution of medieval Sufi and Shīʿī mystics, who were imprisoned, exiled, and even put to death for making statements of human divinity in public, a genre that came to be known as *shath,* or words of unitive ecstasy. What separates these two examples is that the statements, obviously, have opposite meanings. Sufis claimed to be speaking from within unitive experience with God, as in al-Hallaj's (d. 309 AH/922 CE) famous "*Ana al-Haqq*" ("I am 'the Truth,'" one of the names of God in the Qur'an), or Ruzbihan Baqli's (605 AH/1209 CE) explanation of the process of *shath* as *iltibas,* or "clothing of the human with the divine."[72] Shīʿī hadith has its share of ecstatic statements attributing divine qualities to the primordially perfect and charismatic Imams, or the leaders of Islam who descend from Prophet Muhammad's family line, through his son-in-law, Ali, and his daughter, Fatima. The first Imam, Ali [d. 40 AH/661 CE], reports: "I am the dot under the letter b of *bismallah* [meaning "in the name of God," the opening phrase of each chapter of the Qur'an]. I am the Pen. I am the Guarded Tablet, I am the Throne, I am the Chair, and I am the seven heavens and the earths." And the sixth Shīʿī Imam, Ja'far al-Sadiq (d. 148 AH/765 CE) is reported as saying of the Imams: "…We are the Kaʿaba [center of the great mosque of Mecca around which Muslim pilgrims circumambulate], we are the *qibla* [the direction of Muslim prayer toward Mecca and God's house, the Kaʿaba], we are the face of God, we are the signs and we are the clear signs."[73] Sufis and Shīʿīs both, though for different reasons, identify with the persecution and even martyrdom of those who speak in this way, believing them to be singled out by God to experience union with the divine, however ephemeral. Five Percenters, on the other hand, do not believe or understand their experience as unitive with any transcendent deity, since they do not accept the existence of any deity. However, they do understand being persecuted for their witnessing to their own understanding and experience.

Among the strange and fascinating parallels between Five Percenters who publicly declare themselves "Gods," both male and female, and medieval Sufi mystics are accusations of madness, irrationality, and the marginalized status of the holy fool. Medieval Muslim mystics and Five Percent Gods and Earths in the "belly of the Beast" can in some way be equally identified as *shawāhid* ("martyrs" and "witnesses") who "prove God" and "testify to mankind" and, as Ruzbihan says, are "clear signs (*ayat*) in the breasts of those to whom knowledge was given" (Q.29:49).[74] Five Percent Gods and Earths who openly declare their "godhood" to prison officials or the

police upon arrest have been put in the mental ward and involuntarily given psychiatric medications. The founder of the Five Percent Nation, Clarence Jowars Smith, found that after declaring "godhood" he was incarcerated in the Mattawan State Hospital for the Criminally Insane in March 1966, following arrest and conviction for minor drug and assault charges in June 1965. Psychiatric and drug treatment, not conventional imprisonment or activity restrictions, are the modern equivalents to medieval heresy trials and executions that silenced the Muslims who publicly performed *shath.*[75]

Fiver Percenters in the federal or state correctional system have suffered from the discriminatory restriction of Five Percent literature and emblems, having been consistently misrepresented and labeled as an "unauthorized organization, i.e. a gang." Lord Natural Self Allah, in a Web article "The Five Percent Dilemma," available under the NGE Web site link called "Prison Outreach," reports that this type of discriminatory treatment has been documented since the mid-1990s in New York State, North and South Carolina, Ohio, New Jersey, Massachusetts, and Georgia. "South Carolina and New Jersey have gone so far as to create 'indoctrination programs' where known 5%ers and other 'gang members' are placed in a special unit where they remain locked in cells for 23 hours per day with one hour of recreation (most often chained and shackled), no contact visit, and limited telephone [calls] and showers until they renounce their affiliation as being 5%ers."[76]

The national *Five Percenter* newspaper has a regular column called "Your Prison and Institution Reporter." In the October 2005 issue, entitled "Who is that Mystery God?," questions of freedom of identity while incarcerated are addressed by a letter to the editor from a "True Brother in the Struggle," speaking about a whole new type of *jihad.*

> The True and Living [Gods] have always refused to use the Freedom of religion clause of the constitution to gain our freedom [to be ourselves, i.e. Gods].… When the religious land use and institutionalized persons act (RLUIPA) was passed; Institutions could no longer lawfully discriminate against us. All institutionalized persons have the right to embrace God as they see him. Using RLUIPA, we proved that our Cultural perspective is as valid as their religious one [i.e., 1st amendment protection under "freedom of religion"].… We have the right to be who we are, free from religion and persecution.… It was then, I knew the beast [judiciary or prison system] could be defeated in the legal arena.… I learned that no one, no government arm or agency under the jurisdiction of the constitution could stand as an obstacle to persons or nations on their path to God.… I never mentioned religion, but I always talked about God in the person of the Blackman, namely myself. I learned whether he agreed with me or not, I have the right to be God in the free cipher [world] or prison.[77]

All Five Percent Nation goals are not yet achieved in this *jihad,* "we still cannot congregate in prisons and this is a battle that we still have to win.…"[78] Still the struggle goes on with equal efficacy whether the member is in prison or released: "There is no longer a division between the free cipher and the penal cipher, Gods. If you are doing the work of the Father, you are one of the True and Living period. This is fact regardless to your being in prison. Though we build for the time when none of us

can be called a prisoner, this Nation must first count those True and Living that still are as family."[79] Thus, as long as the Nation continues to effect the transformation of the "penal cipher" through the commitment to manifest the inner *jihad* (struggle to be true to Self, to your own godhood): "God remains God; regardless to where he is. An injustice to a God anywhere is an injustice to God everywhere. The phrase 'the devil gets the wicked' has incorrectly been translated into describing the Gods in prison. This is an internal argument [within the Nation] that has led many to ignore the plight of our incarcerated masses. However, it uses too broad a brush and cannot be applied to the True and Living who are not wicked, but still happen to be imprisoned."[80] The "rehabilitation" of the incarcerated, in this Nation view, can be accomplished by reforming the penal system from within through the Five Percent *da'wa* (mission to speak out about the truth of self as god and the NGE), which simultaneously maintains self-awareness, strengthens self-development, and furthers the universal duty of "each one" to "teach one."

CONTROVERSIES IN CONCLUSION

Clearly, this alternative community is not a "religious" community, since it firmly disavows the word "religion." It does, however, perform many of the functions that "religion" performs: identity formation, gender socialization, sociopolitical ideology, "ritual" activity, and collective purpose. The Five Percent Nation denies as well the reality of any "mystery god," who is a "spook," i.e., a spirit, or noncorporeal being beyond empirical proof and demonstration, and refuses to take anything on "faith" without empirical evidence or grounding in experience. It is, however, by its own definition, a "culture" and a "society," with a strong moral center, distinguishing right and wrong, cultivating ethical behavior and shunning context and persons that lead to what they would call "devilishment."

When asked if the Five Percent Nation is racist, because of its black "theology," both Father/ALLAH and his later "children," D.J. and K.V., reply: "We don't teach pro-Blackness, or pro-White. We teach *pro-Righteousness and anti-Devilishment*."[81] This seems a close parallel to traditional Islamic ethos of "enjoining the good and forbidding evil" (*al-amr bi-l-ma'rūf wa-l-nahy 'an al-munkar*), founded upon the Qur'an [9:71].[82] In Spady's 1991 interview with Wise Intelligent, a member of Poor Righteous Teachers, he describes the overall commitment of the Nation as teachers and civilizers of all human beings:

> Indeed, Poor, righteous, teachers, the statement itself defines those Black men who gained knowledge of themselves and then take it as their duty or obligation to teach and resurrect the poor … We know who the true and living God is, and we teach that the true and living God is the Son of Man, supreme being Black man from Asia, teaching freedom, justice, and equality to all the human families of the planet earth.[83]

Another controversy that keeps these alternative Islamic communities in the public press is the persistent media, law enforcement, and governmental representation of them as violent hate groups who are gang related. The Nation of Islam, Nation

of Gods and Earths, and Nation of Nuwaubian Moors have all disavowed this portrait. In the words of Five Percent Nation representative, Dumar Wa'de Allah: "We are not that type of people; we are civilized. We are not a violent people. We are not a hate group.… We are here to stop violent behavior that is taking place among our young people."[84] The irony is that despite media and governmental misrepresentation of these communities, the Nation of Islam, the Five Percent Nation, and the Ansaaru Allah or Nuwaubian Nation collectively espouse a lifestyle of peaceful, industrious, self-supporting, service oriented action, which has operated in the case of these latter-day communities for 40 years as alternatives for young Black Americans to gang membership, the drug culture, and the no-win cycle of poverty and violence in the streets.[85]

The disadvantages to even those Muslims who are recognized by the state and the correctional system as members of a religious community that is entitled to constitutional protection regarding their right to freedom of religion while incarcerated have been well documented. The Islamic culture and community of the Five Percent Nation is doubly disadvantaged regarding recognition of their status as "Muslim children" or their entitlement to "religious" literature, the services or visitation of their own "chaplain," and the allocation of appropriate space for "worship," i.e., teaching and practice. Since it could not claim the status of a "religion," it was not entitled to constitutional protection under the First Amendment. However, more recent legislation, particularly the RLUIPA (2000), with its provision for the freedom of "religious" exercise, has begun to protect Five Percenters' rights to community literature, access to a teacher of choice, and appropriate space for teaching and practice. But even more fundamentally, it has opened the category of "black divinity" to recognition and protection from forcible psychiatric confinement and "treatment." In the New York State correctional facilities these issues have already been put to the test, and, as incarcerated members are testifying and the community newspapers are witnessing, members are no longer being threatened or coerced into disavowing their identity as gods, nor their affiliation in their respective Nations (whether Nation of Islam, Nation of Gods and Earths, or Nation of Nuwaubian Moors).

These alternative cultures and societies are not within the formal bounds of Sunni Islam, neither bound by Islam's principles of belief nor pillars of practice, but are—in uniquely African American ways—associated with Islam, inspired by Islam. The Five Percent Nation, quite literally, exists "In the Name of Allah," which is the subheading of their community logo, the Circle 7, displayed proudly over the door of their New York headquarters and the first of its national "schools" of Allah, and heading its current national newspaper, *The Five Percenter.* As Elijah Muhammad once wrote of the early twentieth-century development of the Nation of Islam, long at odds with the immigrant Muslim community in America, over doctrinal and ritual differences:

> The Orthodox Muslims [i.e., the Sunnis] will have to bow to the choice of Allah. Allah will bring about a new Islam … The devils [white Christians and Jews] oppose this change, and the Orthodox [Sunni Muslims] join them in opposing us because of their desire to carry on the old way of Islam. Allah will place those of His choice in authority

> in the making of the new world, and others must obey whomever He puts in authority or find themselves fighting against the power of whomever they hold to be on their side and in their favor. We must have a new world. We accept for a new nation completely.[86]

The Gods and Earths have formed such a new nation arising out of but independent from the Nation of Islam. It remains to be seen how this new nation and the Muslim *umma* will interact or continue to ignore or dismiss each other in the twenty-first century.

Alternative Islamic communities in the United States present unfamiliar questions to the Sunni Majority of North America and Islam as a world religion and community. Are communities such as the Nation of Islam and its outgrowth, the Five Percent Nation, part of the natural evolution of Islam and the *umma* in a new culture zone and ethnicity? I ask my students in Islamic studies in the twenty-first century what issues might Islam have chosen to address if it had arisen in twentieth-century America instead of seventh-century Arabia? Would not the New World themes of racial injustice and oppression and ongoing intolerance and marginalization be its natural moral ground? As Islam originally chose to address the disenfranchised and abused (women, slaves, the weak, and the unprotected) within Arabian society, so alternative African American Islam addresses the disenfranchisement and marginalization of African Americans (and through them all people of color) in a country in which the racial issues of the Civil War are still unresolved. Finally, if "building" the Nation redeems the future, how will such examples of Islamic diversity and cross-directional influence (between Sunni and non-Sunni African Americans) affect the possible future unity of the North American *umma,* which is still very much divided?

Gordon Melton, eds., *Islam in North America, a Sourcebook* (New York: Garland Publishing, 1992), 133–141, 145–149; and chapter on the Ahmadiyya Community of North America in Yvonne Y. Haddad and Jane I. Smith, *Mission to America: Five Islamic Sectarian Communities in North America* (Gainesville: University of Florida Press, 1993), 49–78.

2. Aminah Beverly McCloud, *African American Islam* (New York: Routledge, 1995), chaps. 1–2, see especially charts of African American early communities (1990–1960), 10, and contemporary communities (1960 to present), 41–42. Köszegi and Melton, *Islam in North America,* 184–208, 291–396, give a preliminary bibliography on the diversity of new African American Muslim communities that, although now dated, is still useful for its survey of the devotional periodical literature of these communities and for an extensive directory of Islamic organizations and centers in North America. An interesting approach to this material is taken by Peter Lamborn Wilson, who approaches Islam from a minoritarian Sufi and Shīʿī point of view in *Scandal, Essays in Islamic Heresy* (Brooklyn: Autonomedia, 1988), and applies that to the Moorish Science Temple in *Sacred Drift: Essays on the Margins of Islam* (San Francisco: City Lights Publishers, 1993).

3. C. Eric Lincoln coined this term in his then groundbreaking study of the Nation of Islam, *The Black Muslims in America* (Boston: Beacon Press, 1961), as a way of distinguishing alternative African American Islamic communities, such as the Nation of Islam whose

members he called "Black Muslims," from Sunni or other mystical or sectarian forms of Islam in the North American diaspora or in the larger Muslim world.

"Bloodsuckers of the poor" is a reference to the original NOI Student Enrollment Lessons #14–16 cited in Yusuf Nuruddin, "The Five Percenters: A Teenage Nation of Gods and Earths," in *Muslim Communities in North America,* ed. Yvonne Yazbeck Haddad and Jane I. Smith (Albany: State University of New York Press, 1994), 116–117.

8. Elijah Muhammad's refutation of the "mystery god" comes into Five Percent teaching as the Lost-Found Lesson No. 2, Questions 9–13, see Nuruddin, "The Five Percenters," 116–117, 131 n.9. This Five Percent teaching circulates through rap, as in Brand Nubian's "Ain't No Mystery," *In God We Trust, Knowledge Side* (1992), and continues to be a staple Nation issue, as in "Who Is That Mystery God?" *Five Percenter* 10, no. 4 (December 2004).

9. Ansaaru Allah or Nuwaubian and Five Percent teachings agree that the "Blackman" or "Nubian" is God. See Nuruddin, "The Five Percenters," 117–118; and Isa Muhammad declares throughout his corpus that the Nubian is "god," "Messiahs/Christs," and "Eloheem," who are divine in nature and supraterrestrial in origins; see *The Final Messenger: Christ the Final Word*, ed. no. 87 (Monticello, NY: Original Tents of Kedar, 1991); *The Truth: Who Do People Say I Am?* special edition (Atlanta, GA: Tents of Nubia, 1992); and *The Truth: The True Story of the Beginning*, ed. no. 10 (Atlanta, GA: Tents of Nubia, 1993). See also my discussion of the divinity of the Nubian, "The Islamic Jesus: Messiahhood and Human Divinity in African American Muslim Exegesis," *Journal of the American Academy of Religion* 66,

no. 3 (1998): 511–513; see 511 n.15 on the relationship of Ansaaru Allah teachings on Black divinity to similar but distinct teachings on Black divinity in the Nation of Islam and Five Percent Nation.

10. Five Percenters "show and prove" their "overstanding" or experiential and initiant knowledge of the teachings. See Nuruddin, "The Five Percenters," 117–118, 123–124; and see Isa Muhammad's use of "overstanding" in Ansaaru Allah or Nuwaubian teachings.

11. "Word" is identified as originating in Rastafarian discourse and connected by Alim with Sufi Islam or the ritual practices of *dhikr* (rhythmic chanting of divine names and formulas or verses of the Qur'an) and *sama'* (listening to music and/or voices with possible rhythmic body gestures or dance as a meditational or ecstatic exercise), which he calls "Word-Sound Power." Berkeley hip hop group Zion I describe the word-sound power in a way that would be entirely familiar to a Sufi performing ritual *dhikr* or *sama'*: "when one speaks, the entire universe is effected … it is best to cast a vibration that is uplifting to the universe in order that when the echo returns to sender, the self can be uplifted as well." Alim, "360 Degreez of Black Art Comin at You," 29.

12. Ethnographic methodologies and ethnographies of belief studies that illuminate vernacular religion and popular culture in America: David Hufford, *The Terror That Comes in the Night: An Experience Centered Study of Supernatural Assault Traditions* (Philadelphia: University of Pennsylvania Press, 1982); Don Yoder, "Definition of Folk Religion," *Western Folklore* 33 (1974): 2–15; Henry Glassie, *Passing the Time in Ballymenone: Culture and History of an Ulster Community* (Bloomington: Indiana University Press, 1995); Margaret Kruesi, "Symptoms, Signs and Miracles: Narratives of Illness and Healing at the St. John N. Neumann Shrine" (Ph.D. diss., University of Pennsylvania, 1995); Bonnie Blair O'Connor, *Healing Traditions: Alternative Medicine and the Health Professions* (Philadelphia: University of Pennsylvania Press, 1995); Diane E. Goldstein, *Once Upon a Virus: AIDS Legends and Vernacular Risk Perception* (Salt Lake City: Utah University Press, 2004).

13. Leonard Norman Primiano, "Vernacular Religion and the Search for Method in Religious Folklife," *Western Folklore* 54 (1995): 37–56. See also his earlier study, "Intrisically Catholic: Vernacular Religion and Philadelphia's 'Dignity'" (Ph.D. diss., University of Pennsylvania, 1993).

14. Pioneers in sociolinguistics and ethnography of communication have focused attention on oral performance and expressive culture, such as Dell H. Hymes and John J. Gumperz, eds., *Directions in Sociolinguistics: The Ethnography of Communication* (New York: Holt, Rinehart and Winston, 1972); Richard Bauman, *Verbal Art as Performance* (Prospect Heights, IL: Waveland Press, 1977); Richard Bauman and Joel Sherzer, eds., *Explorations in the Ethnography of Speaking* (Cambridge: Cambridge University Press, 1974); Dell H. Hymes, *"In Vain I Tried to Tell You": Essays in Native American Ethnopoetics* (Philadelphia: University of Pennsylvania Press, 1981); Charles L. Briggs, *Learning How to Ask: A Sociolinguistic Appraisal of the Role of the Interview in Social Science Research* (New York: Cambridge University Press, 1986); Briggs, *Competence in Performance.* Oral culture, sociolinguistics, and ethnography of communication studies among African Americans Muslims that have informed this study include the following: Spady's interview trilogy, James Spady and Joseph Eure, *Nation Conscious Rap* (Philadelphia: PC International Press, 1991); James Spady, Stefan Dupres, and Charles G. Lee, *Twisted Tales in the Hip Hop Streets of Philly* (Philadelphia: Black History Museum Umum/Loh Publishers, 1995); James Spady, Charles G. Lee, and H. Samy Alim, *Street Conscious Rap* (Philadelphia: Black History Museum Umum/Loh Publishers, 1999); the works of H. Samy Alim, especially "A New Research Agenda: Exploring the Transglobal

Hip Hop Umma," in *Muslim Networks from Hajj to Hip Hop,* ed. Miriam Cooke and Bruce B. Lawrence (Chapel Hill: University of North Carolina Press, 2005); H. Samy Alim, "Hip Hop Nation Language," in *Language I the USA: Themes for the Twenty-first Century*, ed. Edward Finegan and John R. Rickford (New York: Cambridge University Press, 2004); H. Samy Alim, "We Are the Streets: African American Language and the Strategic Construction of a Street Conscious Identity," in*Black Linguistics: Language, Society and Politics in Africa and the Americas,* ed. S. Makoni, G. Smitherman, A. Ball, and A. Spears (New York: Routledge, 2003); H. Samy Alim, *You Know my Steez: an Ethnographic and Sociolinguistic Study of Styleshifting in a Black American Speech Community* (Durham, NC: Duke University Press for the American Dialect Society, 2004); and H. Samy Alim, *Roc the Mic Right: The Language of Hip Hop Culture* (London: Routledge, 2006). Alim's work on hip hop language has been preceded by formative studies on African American speech and oral creativity by Geneva Smitherman, from "The Power of the Rap: The Black Idiom and the New Black Poetry," *Twentieth Century Literature,* October 1973, 259–274; *Talkin and Testifyin: The Language of Black America* (Detroit: Wayne State University Press, 1986/1977); *Talkin That Talk: Language, Culture and Education in African America* (New York: Routledge, 2000). See also *Africanism in Afro-American Language Varieties* (Athens, GA: University of Georgia Press, 1993); *The Elack Street Speech: Its History, Structure and Survival,* 1st ed. (Austin: University of Texas Press, 1983); Edith A. Folb, *Runnin' Down Some Lines: The Language and Culture of Black Teenagers* (Cambridge, MA: Harvard University Press, 1980); William Labov, *Language in the Inner City: Studies in the Black English Vernacular* (Philadelphia: University of Pennsylvania Press, 1972); Roger D. Abrahams, *Talking Black* (Rowley, MA: Newbury House Pubs, 1976).

15. Glenn Hinson, *Fire in My Bones: Transcendence and the Holy Spirit in African American Gospel* (Philadelphia: University of Pennsylvania Press, 2000), 328.

16. As in Max Weber and S.N. Eisenstadt, *Max Weber on Charisma and Institution Building; Selected Papers* (Chicago: University of Chicago Press, 1968); Bryan S. Turner, *Weber and Islam, A Critical Study* (London: Routledge, Kegan and Paul, 1974); and Toby E. Huff and Wolfgang Schluchter, *Max Weber & Islam* (New Brunswick, NJ: Transaction, 1999).

M. Swartz (New York: Oxford University Press, 1981); Seyyed Hossein Nasr, *An Introduction to Islamic Cosmological Doctrines* (Boulder, CO: Shambhala, 1978).

19. For FBI disinformation against the Moorish Science Temple and the Nation of Islam, Mattias Gardell, *In the Name of Elijah Muhammad: Louis Farrakhan and the Nation of Islam* (Durham, NC: Duke University Press, 1996), 85–92; Richard Brent Turner, *Islam in the African-American Experience* (Bloomington: Indiana University Press, 1997), pt. 2, especially notes pp. 260–275; Claude Andrew Clegg III, *An Original Man: The Life and Times of Elijah Muhammad* (New York: St. Martin's Griffin, 1997), see the notes and text to chaps. 7–9; and Felicia Miyakawa, *Five Percenter Rap: God Hop's Music, Message, and Black Muslim Mission* (Bloomington: Indiana University Press, 2005), 16–19, 151 nn.57–61.

20. Miyakawa, *Five Percenter Rap,* 4–5, 145–146 nn6–9.

21. See Kathleen M. Moore, *Al-Mughtaribun: American Law and the Transformation of Muslim Life in the United States* (Albany: State University of New York Press, 1995), chap. 4, for

differential treatment and religious discrimination against Black Muslims as well as other Muslims in the justice system and prison administration.

22. See Robert Dannin's article "Island in a Sea of Ignorance: Dimensions of a Prison Mosque," in *Making Muslim Space in North America and Europe*, ed. Barbara Metcalf (Berkeley: University of California Press, 1996), and his expansion on it in his more recent book, *Black Pilgrimage to Islam* (New York: Oxford University Press, 2002), for three Islamic themes (*hajj* or "pilgrimage," *hijra* or "emigration to start a new umma," and *da'wa* or "mission to teach"), which inform Muslims' lives in the United States and which can redirect Muslim prisoner's sense of positive purpose while in prison and lower recidivism upon release into the community. See also Larry A. Poston, "Da'wah in the West," in *The Muslims of America,* ed. Yvonne Yazbeck (New York: Oxford University Press, 1991), for more on the third of these Islamic themes as it operates in the Muslim diaspora in general and America in particular.

23. Cited in Moore, *Al-Mughtaribun,* 74. See legal studies on prison reform regarding constitutional protection of prisoner's rights to freedom of religion and recognition of identity (CRIPA—Civil Rights of Institutionalized Persons Act, 1980; RFRA—Religious Freedom Restoration Act, 1993) and the struggle for equal treatment and representative facilities for Muslims (RLUIPA—Religious Land Use and Institutionalized Persons, Sect. 3, "Protection of Religious Exercise of Institutionalized Persons," 2000), e.g., hiring Muslim imams as chaplains, establishing masjids or worship spaces in prison—see Robert Dannin's article "Islands in a Sea of Ignorance," in *Making Muslim Space in North America and Europe,* ed. Metcalf, especially when they belong to "alternative" or "Black Muslim" communities, in the works of Moore, *Al-Mughtaribun,* chap. 4, and her earlier articles on Muslims in American law in *The Muslims of America,* ed. Haddad; Michael W. Suleiman, ed., *Arabs in America: Building a New Future* (Philadelphia: Temple University Press, 1999); and in Yvonne Yazbeck Haddad, ed., *Muslims in the West: From Sojourners to Citizens* (New York: Oxford University Press, 2002). For earlier history of constitutional issues of religious recognition and Muslim prisoners' rights, see "Muslim Faith Is a 'Religion' within the Constitutional Provisions as to the Freedom of Religion" (*Fulwood v. Clemmer,* 206 F.Supp. 370 [1962] at 373); William Bennet Turner, "Establishing the Rule of Law in Prison: A Manual for Prisoners' Rights Litigation," *Black Law Journal* 1 (1971); Comment, "The Religious Rights of the Incarcerated," *University of Pennsylvania Law Review* 125 (1977); William Oliver Jones, Jr., "The Black Muslim Movement and the American Constitutional System," *Journal of Black Studies* 13 (1983): 417–437; James B. Jacobs, *New Perspectives on Prisons and Imprisonment* (Ithaca, NY: Cornell University Press, 1983). For the most recent federal prisoners' rights measure regarding religious exercise, see Web sites www.usdoj.gov/crt/housing/housing_rluipa.htm for the act itself and www.rluipa.com under the heading "Scholarship" for applications and theoretical explorations of the RLUIPA's religious exercise for prisoners provision (accessed February 11, 2006).

24. Stuart Scheingold, *The Politics of Rights: Lawyers, Public Policy, and Political Change* (New Haven, CT: Yale University Press, 1974), cited in Moore, *Al-Mughtaribun,* 74.

25. See examples of this process of Black Sunni separatism in the Dar ul-Islam movement, the Masjid al-Mutkabir community, and others in Haddad and Smith, *Muslim Communities in North America;* and McCloud, *African American Islam.*

27. See my studies of medieval Islamic alchemy and religious healing systems in Islam: "The Alchemical Creation of Life (Takwin) and Other Concepts of Genesis in Medieval Islam";

"Prophetic Medicine and Qur'anic Healing: Religious Healing Systems in Islam," in *Essays in Middle Eastern Health,* ed. Joseph W. Brown and Robin Barlow (Ann Arbor, MI: Center for Middle Eastern and North African Studies, University of Michigan, 1999); and "Popular and Talismanic Uses of the Qur'an" and "Amulet" in *Encyclopedia of the Qur'an,* ed. Jane Dammen McAuliffe (Leiden: E.J. Brill, 2000–2005).

28. The Ahmadiyya, a nineteenth-century northern Indian movement named after the teachings of its founder, Ghulam Ahmad, have an internal split between the Lahori branch, led by Muhammad Ali, who favor Islamic missionizing by translation and dissemination of Islamic primary sources in translation, and the Qadiani branch, who follow the charismatic teachings of the founder, which include ongoing cycles of prophecy and revelation reminiscent of the Shi'a, divine manifestation, and Jesushood or messiahhood. The status of this community has been radically changed in relation to the Sunni mainstream in its home country, Pakistan, since the state declared the Ahmadiyya Community and its teachings anathema in the 1980s. Since that time the missionizing activity of both branches of the community has occurred only outside its country of origin. While both branches maintain that they are true expressions of Islam, they are categorically denied in the Islamic society of Pakistan. So from a Pakistani Sunni point of view, one would have to say that the Ahmadiyya Community is a new religion outside the boundary of Islam, and from the Ahmadiyya point of view they are, at most, only a new expression or direction in traditional Islam. See Yohanan Friedmann's *Prophecy Continuous: Aspects of Ahmadi Religious Thought and Its Medieval Background* (Berkeley: University of California Press, 1989) for an assessment of the Ahmadiyya's place in the theology and history of Islam, and my article, "The Islamic Jesus," 497–503, for the impact of the Ahmadiyya in African American Islam.

29. A sample only of the huge body of scholarship: Abdulaziz Abdulhussein Sachedina, *Islamic Messianism: The Idea of the Mahdi in Twelver Shī'īsm* (Albany: State University of New York Press, 1981); Henry Corbin, *Cyclic Time and Ismailian Gnosis* (Boston: Kegan and Paul, 1983); Yohanan Friedmann, *Prophecy Continuous* (Berkeley: University of California Press, 1989); David Westerlund and Eva Evers Rosander, eds., *African Islam and Islam in Africa: Encounters between Sufis and Islamists* (Athens, OH: Ohio University Press, 1997); Haim Shaked, trans., *The Life of the Sudanese Mahdi: A Historical Study of Kitāb sa'ādat al-mustahdī bi-sīrat al-Imaām al-Mahdī [The Book of the Bliss of Him who Seeks Guidance by the Life of the Imam the Mahdi] by Isma'īl b. 'Abd al-Qādir* (New Brunswick, NJ: Transaction Books and Shiloah Center, Tel Aviv University, 1978); Saïd Amir Arjomand, "Islamic Apocalypticism in the Classic Period," in *The Continuum History of Apocalypticism,* eds. Bernard McGinn, John J. Collins, and Stephen J. Stein (New York: Continuum, 2003); Shahzad Bashir, *Messianic Hopes and Mystical Visions: the Nurbakhshīya between Medieval and Modern Islam* (Columbia, SC: University of South Carolina Press, 2003); Haddad and Smith, *Mission to America,* chaps. 2–3 on the Druze and the United Submitters International; and see Andrew Rippin, "Numbers and Enumeration," in *Encyclopedia of the Qur'an,* ed. MacAuliffe, vol. 3, 553, for discussion of the USI's exegetical association of the number 19 with the Qur'an, and its traditional Islamic association with Q.74:30; Haddad and Smith, eds., *Muslim Communities in North America,* chap. 4 on the Bawa Muhaiyaddeen Fellowship.

30. NOI terms of reference for the black man who has forgotten his true self and origins include "mentally deaf, dumb, and blind" and "white devils," in Elijah Muhammad, *Message to the Blackman in America* (Philadelphia: Hakim's Publishers, 1965), 65–66, 134.

31. Nuruddin, "The Five Percenters," 129.

32. Miyakawa, *Five Percenter Rap,* 31, quoting from Joseph Eure and James Spady's interview of Wise Intelligent, of the Five Percent rap group, Poor Righteous Teachers, in *Nation Conscious Rap* (1990): 65–66.

De Lancey, "Sonia Sanchez's *Blues Book for Blue Black Magical Women* and Sister Souljah's *The Coldest Winter Ever*: Progressive Phases Amid Modernist Shadows & Postmodernist Acts," in *BMa: The Sonia Sanchez Literary Review* 6, no. 1 (Fall 2000): 168; and "word warrior" is coined by Spady as in his article, "360 Degreez of Sonia Sanchez, Hip Hop, Narrativity, Ighawe and Public Spaces of Being," *BMs Sonia Sanchez Literary Review,* ix, and cited in Alim, "360 Degreez of Black Arts," 27.

66. Sister Souljah, "360 Degrees of Power," from her album, *360 Degrees of Power,* 1992.

67. Orality in the reception and transmission, later memorization and recitation, of the qur'anic message is witnessed by a number of interrelated subjects in scholarship: the early history and recension of the qur'anic text during and shortly after the Prophet's lifetime, and the subsequent ritual performance of the text through prayer, formal recitation, rhythmic chanting of divine names and formulas, and the use of music and voicing in Sufi ritual. Select sources of these rich areas of Islamic studies would include the following: William A. Graham, "Qur'an as Spoken Word, An Islamic Contribution to the Understanding of Scripture," in *Approaches to Islam in Religious Studies,* ed. Richard Martin (Tucson, AZ: University of Arizona Press, 1985), 23–40; Kristina Nelson, *The Art of Reciting the Qur'an* (Austin: University of Texas Press, 1985); Constance Padwick, *Muslim Devotions: A Study of Prayer Manuals in Common Use* (London: SPCK, 1961); Earle H. Waugh, *Memory, Music, and Religion: Morocco's Mystical Chanters* (Columbia, SC: University of South Caroline Press, 2005); Earle H. Black Israelites aka Black Jews aka Black Hebrews: Black Israelism, Black Judaism, Judaic Christianity

Jacob S. Dorman

INTRODUCTION

Black Israelites are African Americans who practice religions based on Judaism or the belief that they are descended from the Lost Tribes of Israel. Variously known as Black Hebrews, black Israelites, or Black Jews, black Israelite movements span a range of religions from Holiness Christianity to Orthodox Judaism and have appeared from the 1890s to the present. Black Israelite movements did not begin with conversion to Judaism, and the movements are not derivative of Jews or Judaism. Rather, black Israelite movements creatively manipulate traditions and ideas gleaned from a wide range of sources: Holiness/Pentecostal Christianity, the British Anglo-Israelite movement, Freemasonry, Mind Power, Theosophy, Judaism, the occult, and African American Christianity's deep association with the ancient Hebrews of the Old Testament. African American black Israelites have no history of significant contact with Ethiopian Jews, also known as Beit Yisrael or Falashas, although New York's main body of black Israelites called themselves Ethiopian Jews from the 1930s until the 1960s. While black Israelites have never achieved large numbers, there have been several dozen black Israelite churches, synagogues, or small sects since 1889, and sect formation has followed three major waves with different characteristics in different times and places: Israelite Holiness churches in the South from 1890 to World War I, Israelite sects and synagogues of northern cities such as Chicago, New York, and Philadelphia in the 1920s, and Israelite sects in places such as Chicago, New York, and Miami from 1960 to 1980.

Black Israelites were part of a fertile alternative African American religious culture in places such as Chicago and Harlem in the 1920s, where numerous religious mystics, political radicals, root doctors, preachers, freemasons, and black nationalists congregated, shared ideas, and formed new churches, lodges, and religious organizations. Black Israelites of the 1920s arose in the same context and share influences and theological elements with early Black Muslims. By adopting Israelite or Muslim identities, African Americans were associating themselves with the "East" and thereby challenging the Eurocentric racism of the Jim Crow era.

Historically little interaction occurred between black Jews and other Jews, but there was a notable effort to integrate the Jewish communities of New York from 1964 to 1972. In recent years there has been a trend towards increasing observation of the beliefs and rituals of Judaism among the black Jews who practice Judaic rituals, while militant antiwhite black Israelites whose religions have no Judaic practices have outstripped the older movements in terms of members and notoriety.

Black Israelites led to the rise of Father Divine's (1882–1965) movement and the development of the Jamaican Rastafarian movement in the 1930s, which built on elements of their teachings. In addition, black Israelites developed an Afrocentric interpretation of biblical history that more popular Black Muslim groups incorporated into their teachings. African Americans and West Indians developed black Israelism as a transnational religion that borrowed liberally from English religious thought as well as European Freemasonry. Whereas Western thinkers since G. W. F. Hegel had claimed that Africa had no history, black Israelites placed Africa at the core of Western history and Western religious mythology by claiming that Africans and their descendents in the Americas were the progeny of the ancient Israelites. This transnational focus on Africa created transnational church networks and settlement attempts in Africa. Black Israelites settled in Ethiopia in 1930 and in Liberia in 1967. Early black Israelite churches spread their teachings to South Africa as early as 1903 and helped to create the African "Zionist" or "Ethiopian" churches that spread oppositional forms of Christianity and challenged European colonial rule.

BACKGROUND

At least four streams converged in the creation of black Israelite religions, beginning in the 1890s. In the eighteenth and nineteenth centuries, millennial Protestant faiths among the English working class and "Anglo-Israelite" faiths among English elites innovated the basic idea that contemporary English Christians were direct descendents of the ancient Israelites. Although Anglo-Israelism originated as a European discourse justifying British imperialism, it later provided a compelling mythical narrative that African Americans were able to invert and use as an instrument of antiracism by arguing that it was they, and not the Anglo-Saxons, who were the chosen people. Second, Freemasonry helped to disseminate and elaborate these Anglo-Israelite ideas, and added its own esoteric mythology about the Israelites and the "Orient." African Americans founded their own Masonic traditions, starting with conformist Prince Hall Freemasonry, but evolving into more esoteric forms that conveyed romantic, mystical, Orientalist visions of Jewish and Islamic history. Third, Anglo-Israelite ideas entered the Holiness and later the Pentecostal movements. These movements in their inception were interracial, although they evolved segregated churches. Finally, just as oppressed English workers developed millennial religions with intense identification as the descendents of the Israelites, so too did the story of God's rescue of the Hebrews from Egyptian bondage resonate in African American Protestantism. Identification with the Israelites inspired numerous slave rebellions and gave African Americans faith that God would uplift them as he had

uplifted the Hebrews in ancient times. Given how much African Americans shared with other practitioners of radical millennial Protestant faiths in the Atlantic world, it should not be surprising that theirs were not the only Israelite churches to arise in the 1890s. In 1895 Frank W. Sangfroid founded the Shiloh community north of Durham, North Carolina, and in 1903 Brother Benjamin founded the Israelite House of David in Benton Harbor, Michigan. Both were millennial Christian leaders who taught that Anglo-Saxons were the true Israelites. In summary, Anglo-Israelism, Freemasonry, the Holiness-Pentecostal movement, and intense identification with the ancient Israelites in nineteenth-century African American Christianity formed the backdrop for the rise of black Israelite faiths.[1]

LEADERS, BELIEFS, AND MOVEMENTS

The Pioneers

Bishop William Christian and the Church of the Living God

In the 1890s, the two pioneers of black Israelism, William Christian (b. 1856) and William Saunders Crowdy (1847–1908), both combined Holiness Christianity with Freemasonry and taught that the Israelites were black. Christian was a slave in Mississippi and began preaching at the age of 19 in rural Wrightsville, Arkansas. He preached for 13 years before he received a divine revelation telling him that he had been preaching the doctrine of men, not God, and then began preaching a new doctrine in 1888. In 1889, Bishop Christian founded a small group that he named the Christian Friendship Work, then the Church of God, and finally the Church of the Living God. Through these churches, and the various churches they spawned, Christian taught that the ancient Israelites were black, and that contemporary blacks were descended from the ancient Israelites. Using biblical proof texts in the same manner as the Anglo-Israelites, Christian taught that "the Adamic people, Hebrews, Jews, Israelites are black people…."[2] Christian's ability to retell biblical history and recast African Americans as the chosen people clearly struck a chord among those who had themselves experienced slavery only one generation earlier. Although Christian reserved blackness as the mark of the covenant and inverted the racial hierarchy of the Jim Crow South, he was not chauvinistic. Other races arose from intermarriage between black peoples of the covenant and lighter people outside the covenant, but anyone could rejoin the covenant by believing in his teachings. The Church of the Living God responded to segregation and the ideology of white supremacy with a courageous form of racial egalitarianism. Christian taught that Jesus was "colorless" because he had no human father and emphasized St. Paul's statement in his letter to the Galatians that "We are no longer Jews or Greeks or slaves or free men or even merely men or women, but we are all the same—we are Christians; we are one in Christ and all of God's promises to him belong to us" (Galatians 3:28). Christian's goal was to create a biracial Church, and to cement racial egalitarianism and racial harmony, he emphasized strict adherence to the Ten Commandments.

Like other Pentecostal churches, he introduced foot washing, regardless of race, into the church's ritual, violating the taboos of Jim Crow segregation.

Most of Christian's teachings and rituals resembled standard Baptist and Holiness practices, such as baptism by immersion, the use of the Lord's Prayer, and the use of unleavened bread and water for communion. The church had no Judaic ritual, but Masonic beliefs and rituals played a significant role in the church. Christian dedicated his 1916 book, *Poor Pilgrim's Work* to "all the Free Masons of the world," and believed that his own teachings were expressions of the teachings of Freemasonry. He wrote, "Free Mason religion is the true mode of religion; always was and always will be…."[3] Bishop Christian called himself "Chief," referred to his churches as "temples," and tried unsuccessfully to introduce Masonic dress among his impoverished followers. This combination of race pride, racial egalitarianism, Holiness Christianity, Freemasonry, and defiance of Jim Crow segregation was a potent mix, and Christian found himself incarcerated on several occasions. Nonetheless, the church spread rapidly throughout the South and Midwest, and by 1906 there were 68 branches and offshoots with 4,276 members in 12 states: Alabama, Arkansas, Illinois, Indiana, Kansas, Kentucky, Mississippi, Missouri, Oklahoma, Tennessee, and Texas. The heart of the church was in the upper South, with 20 churches in Arkansas and 13 in Tennessee. By 1916 there were 192 churches with 11,635 members, and by 1926 there were 239 churches and 17,402 members, before declining to 215 churches and 9,636 adherents in 1936. Millinarianism, Anglo-Israelism, and Freemasonry began to decline in the twentieth century, and so Judaic Christianity no longer occupied such a central place in the popular imagination.[4]

Bishop William Saunders Crowdy

Bishop Christian's contemporary and counterpart in Holiness/Masonic/Israelite theology was Bishop William Saunders Crowdy, founder of the Church of God and Saints of Christ. Crowdy was born into slavery in 1847 in St. Mary's County, Maryland. He ran away after a fight with a white man in 1863 and joined the Union Army, serving as a cook. After he was discharged, he purchased 100 acres of land outside of Guthrie, Oklahoma, where he was a pillar of the community for 25 years, serving as a deacon in the local Baptist Church and becoming an active Prince Hall Freemason. At the time, Guthrie was the center of Prince Hall Freemasonry in the United States, and Crowdy was heavily influenced by Masonry's symbolism and eschatology. Around 1890 he moved to Kansas City, Missouri, where he worked for the Santa Fe Railroad as a cook in an employee hotel and married Lovey Yates Higgins before returning to Guthrie after the birth of their third child.

In 1893 Crowdy began to "act strangely" and to receive a series of visions and divine communications. He often did not know when people were talking to him but would sit staring for long periods of time. Sometimes his lips moved but no sounds came out, causing his wife to accuse him of drinking while she was not home and to forbid him from attending Masonic meetings. Crowdy was not inebriated, however, and had not attended his lodge meetings for some time; rather, he was

supposedly hearing the voice of God telling him to establish "the true church." These communications peaked when he was in his fields clearing ground for a new crop on September 13, 1893, and heard a voice telling him to run for his life. He fled into the forest where he fell into a deep sleep and had a dream in which there were several dirty tables covered in vomit, each inscribed with the name of an established church, such as Baptist and Methodist.[5] Then, a small, clean table with the words: "Church of God and Saints of Christ" descended from above. Later in the vision Crowdy received a set of rules, which became known as the Seven Keys, and formed the foundation of a new church based on biblical Judaism. In the final part of the vision, Crowdy was given a Bible, which he ate, signifying that the whole Bible was written in him.[6] Returning to the Santa Fe Railroad, Crowdy proselytized across the Midwest, gathering converts and founding the first tabernacle in Lawrence, Kansas, on November 5, 1896.[7] Crowdy soon established branches in New York, New Jersey, Michigan, Connecticut, and in cities like Philadelphia, Pennsylvania, and Washington, D.C., as well as many other cities before his death at the age of 61 in 1908.

Like Bishop Christian, Crowdy used biblical verses to show that the Israelites and the biblical patriarchs were black, although Crowdy included Jesus in that category as well. They both also taught that Asian and Native American peoples were descended from the wandering Lost Tribes of Israel. Both opposed racism and advocated a biracial church, and Crowdy, like Christian, taught obedience to the Ten Commandments, foot washing, and the use of unleavened bread for communion. Crowdy achieved some success in creating a multiracial church; he proselytized among whites as well as blacks, and the first Assistant Bishop of the church was a white grocer from Topeka, Kansas, named James M. Grove.

Crowdy's church acquired more Judaic practices as time passed. Prophet Crowdy believed that African Americans were descended from the ten Lost Tribes of Israel, and accordingly added Old Testament rites to Christian practices. As early as 1896, he was harassed in Chicago, Illinois, for teaching that Jesus was black and for teaching dietary laws regarding meat. By 1906 the church was observing the Jewish calendar and feast days, observing the Jewish Sabbath on Saturday, and using some Hebrew. They put special emphasis on a week-long observance of Passover, even going as far as to smear their doors with blood in commemoration of the biblical story that the Angel of Death passed over the homes of the Israelites while killing the first born sons of the Egyptians as the culmination of the plagues that God sent to free the Israelites from Egypt.[8] In Chicago, Crowdy became known as "the black Elijah" and outsiders called his followers "Black Jews."

But while the Church of God and Saints of Christ (CGSC) took on the practices of biblical Judaism based on the Old Testament, their ritual was based on interpretation of the Hebrew Bible, not on knowledge of contemporary Jewish ritual, which derives from the centuries of oral law created after the First Temple was destroyed.[9] In addition, the Church retained important elements of Christianity: new members had to repent for their sins, be baptized by immersion, confess faith in Jesus, and receive unleavened bread and water as a sacrament. As the decades progressed, the CGSC gradually deemphasized the divinity of Jesus, so that today the CGSC teaches

that Jesus Christ was a Hebrew prophet, not the Messiah; a contemporary member says, "We believe in his [Jesus's] teachings and his way of life because his religion was of the Patriarchs.… There was nothing Christian about Jesus."[10]

Crowdy's CGSC incorporated even more Masonic symbolism than did Bishop Christian's Church of the Living God, and many of Crowdy's disciples, such as H.Z. Plummer and Levi Solomon Plummer, were Masons. Crowdy was an active Mason who had a Masonic symbol placed on his tombstone. The CGSC incorporated many elements similar to Masonic ones, such as sashes, crowns, mortar boards, swords, bugles, special handshakes, greetings, and marches, as well as symbols such as the All Seeing Eye God, The Seven Keys, and the ritual use of the colors blue and brown.[11]

After Crowdy's death in 1908, the church he founded split into two sections, with the Western half splitting again in 1923. Crowdy sent missionaries to South Africa beginning in 1903, and the church established an outpost in Jamaica in 1920. The church expanded rapidly, growing from 94 tabernacles and 3,311 members in 1916 to 213 tabernacles in 27 states with 37,084 members in 1936. By 1988 there were only 60 tabernacles, yet despite the decline, Crowdy's CGSC remains one of the largest and most successful of the black Israelite sects.[12]

Ethiopianism and Israelite Pioneers

The black Israelite theology of Bishops Christian and Crowdy was changed and augmented by their successors. Many of the black Israelite churches that arose in the first decade of the twentieth century added a focus on Ethiopia as the place of origin of Christianity or the ancient Hebrews. African American Christians had long found inspiration in Psalms 68:31: "Princes shall come out of Egypt; Ethiopia shall soon stretch out her hands unto God." In the early twentieth century, Ethiopia rose in prominence in the African American imagination due to its inspiring victory over Italy in the 1896 Battle of Adowa, which preserved its status as the only African country to resist colonization. Later, Ethiopia would capture the world's imagination again with the crowning of Ras Tafari Makonnen as Emperor Haile Selassie I in 1930.

Father Edward D. Smith

In addition to Ethiopianism, the small cluster of Ethiopianist Israelite churches that arose in the early twentieth century emphasized foot washing, baptism by immersion, racial egalitarianism, and strict adherence to the Ten Commandments. The earliest was Father Edward D. Smith's Triumph the Church and Kingdom of God in Christ, started in Baton Rouge, Louisiana, in 1902. Smith taught a Pentecostal faith of entire sanctification based on faith in Christ and baptism by the fire of spirit through glossolalia (speaking in tongues). In 1920 Smith was rumored to have left for Addis Ababa, Ethiopia, leaving behind in the United States several successors.[13]

Bishop R.A.R. Johnson

Another Ethiopianist Israelite pioneer was R.A.R. Johnson, who was born in New Bern, North Carolina. Johnson was an itinerant preacher who founded a church called Abyssinia before World War I. In 1914 Johnson founded the House of God, Holy Church of the Living God, the Pillar and Ground of Truth, the House of Prayer for All People in Beaufort, South Carolina. The church was incorporated in 1918 and the same year spread to Washington, D.C. Soon the movement spread to the West Indies, West Africa, and even South India. Johnson played a role in the germination of Rastafarianism, which built on its black Israelite predecessors and emerged in Jamaica in the early 1930s. Johnson preached 24 principles, including baptism by immersion, foot washing, women ministers, equality of races in the church, and sanctification by the Holy Spirit in accordance with Holiness practices. The church also observed some Jewish festivals, keeping the Sabbath on Saturday and abstaining from Christmas and Easter. Women wore white, including white headdresses, from Passover in the spring to Sukkoth, the fall harvest festival.[14]

WWI–1930 The Second Wave: From Black Israelism to Black Judaism

The Great Migration saw the shift of large numbers of African Americans from the South to Northern cities, which brought African Americans in contact with European Jews and other immigrants. Large concentrations of African American and West Indian migrants in cities such as New York, Chicago, and Detroit provided fertile ground for developing new churches, consumer products, clubs, and political associations. Black nationalism thrived, and a class of mystics, root doctors, and medicine men calling themselves "Professors of Oriental and African Mystic Science" plied their wares, providing a crucial network for the creation of new forms of black Israelism, Black Islam, New Thought, and Rastafarianism. In response to these new conditions, black Israelism took on different forms: building on the Holiness-Pentecostal Judaic Christianity of the pioneer generation, the new crop of black Israelisms adopted more of the forms and symbols of European Judaism, but combined this new orthodoxy with Freemasonry, Spiritualism, New Thought, a heightened millennial eschatology, and a greater emphasis on black nationalism and Ethiopia. The second wave of black Israelite churches built upon the foundation laid by the pioneers, particularly Bishop Crowdy. Crowdy had preached in Chicago in 1896 and again in 1898, establishing a small following, and Bishop Christian's Church of the Living God also had a congregation there by 1900. Bishop Crowdy laid the groundwork for black Israelism in New York when he began preaching there in 1899, attracting 1,000 followers in only a matter of months. By 1906 Crowdy's CGSC had seven congregations in New York state with 13 more in Massachusetts, Connecticut, Rhode Island, Pennsylvania, and New Jersey.

George W. Hurley and the Universal Hagar's Spiritual Church

In 1919 George W. Hurley, a Georgia-born college graduate, moved to Detroit and joined Father Smith's Triumph the Church and Kingdom of God in Christ, soon rising to attain the title of "Presiding Prince of Michigan." In 1923 Hurley followed a vision and founded his own church, which was known as the Universal Hagar's Spiritual Church. Hurley's eschatology was extremely complex, integrating esoteric elements from Spiritualism, Freemasonry, Theosophy, black Israelism, Garveyism, Eastern religions, astrology, hoodoo, and the occult. He taught that all human civilization and language derived from Ethiopians, who were also the original humans, the original Hebrews, and God's chosen people. He claimed Buddha, Jesus, St. Paul, and all the biblical patriarchs as Ethiopians and taught that whites were descendents of Cain. Christianity was a fake religion that came from witchcraft and was part of white supremacy from slavery until Jim Crow. Hurley shared much in common with Black Muslims who were active in Detroit in the same years, including a reliance on Eva and Levi Dowling's Theosophical text, *The Aquarian Gospel of Jesus the Christ,* written in 1908. That text became the first half of Noble Drew Ali's *Holy Koran,* the foundational text of the Moorish Science Temple, the most important early Black Muslim group. Much of Hurley's rich racial mythology also presages the teachings of the Nation of Islam, which built on Drew Ali's work and emerged in Detroit in the early 1930s. Beginning in 1933, Hurley taught that he was the "black God" of the Aquarian Age, who had superceded Jesus Christ. Like many other black Israelite leaders influenced by New Thought, he taught that God resided inside him and could potentially reside inside those who believed in him. New Thought was a philosophy of positive thinking that had developed in nineteenth-century New England and taught that channeling God's spirit inside oneself would overcome troubles and guarantee salvation.[15] Hurley died in 1943, but the Universal Hagar's Spiritual Church continued to grow, from 30 congregations in 1938 to 34 in 1950 and 41 in 1965 before declining to 35 in 1980. The church is concentrated in Detroit, greater New York–New Jersey, Pennsylvania, and Ohio, with a few chapters in the Southeast and West.[16]

Rabbi Horace and David ben Itzoch

The second wave of black Israelism in Chicago began with the appearance of Rabbi Horace in 1910, who said he was born in Ethiopia, but who was also reported to have been from the South or from Somalia. Horace wore long white robes and carried a staff, and he founded a church known as the Congregation of Israel. Horace used a Jewish prayer shawl, tefillin, and an Ashkenazi Hebrew prayer book and observed the Passover by eating unleavened matzah in a sukkah, an outdoor booth normally used during the fall holiday of Sukkot. He taught that Adam was black and that everyone on earth was once Jewish, but that God enslaved them for forsaking their religion. Someday God would lead the followers of Judaism out of the Egypt of American exile and back to happiness in Palestine.[17]

One of Rabbi Horace's students was named David ben Itzoch. He said he was born in Palestine and traveled widely in Africa, and he alleged that he had been discriminated against by white Jews who rejected him because of his race. He planned to start "The International Peace and Brotherly Love Movement," featuring a school that would teach languages, Abyssinian history, and Masonic subjects. Rabbi ben Itzoch taught that the Black Jews were the "right Jew," but hoped for recognition from and solidarity with the white Jew as well as the "Chinese Jew, the Japanese Jew, and the red Jew." He hoped to "give my people the religion they ought to have, that religion that our forefathers had given us by the God of the Universe." In 1914 Rabbi ben Itzoch was revealed to be Fredrick Douglass Berger, an African American from Iowa who spoke 22 languages and had been arrested for the statutory rape of a 14-year-old girl. In the ensuing scandal his plans for the school fizzled.[18]

Grover C. Redding and the "Star Order of Ethiopia"

In 1919 Chicago, Grover C. Redding and a Welsh-born associate of Rabbi Horace named R.D. Jonas founded an offshoot of Marcus Garvey's Universal Negro Improvement Association (UNIA) named the "Star Order of Ethiopia." Redding used Rabbi Horace and Rabbi ben Itzoch's teaching that African Americans were, in fact, Ethiopian Jews. He taught that the words "Negro" and "Nigger" had no historical validity and that "Ethiopian" was "our birthright, our ancient honorable name." His organization was not as much religious as it was nationalistic, aimed primarily at a settlement scheme to send African Americans to Ethiopia. On June 20, 1920, a parade of the organization turned violent when Redding and a follower burned an American flag, and Redding shot a spectator who objected to the desecration of the flag. Another bystander was killed, and two more people were wounded by gunfire. Redding and a follower, Oscar McGavick, were found guilty of murder and executed on June 24, 1921.[19]

Elder Warien Roberson and the Ever Live and Never Die Society

The most popular and controversial of the WWI-era black Israelite leaders was Warien Roberson (aka Warren Robinson), who founded a black Israelite group in 1917 called the "Temple of the Gospel of the Kingdom," or the "Ever Live and Never Die Society," or simply the "Black Jews." The group's "ancient Hebrew doctrine" was "Believe in Jesus; believe that Roberson was the Messiah, the Christ; then you are saved and will never die."[20] Roberson combined the black Israelite beliefs of Bishop Crowdy's church with elements common to second-wave Black Jews: Garveyite nationalism, a focus on Ethiopia, and some Ashkenazi Jewish ritual, beliefs, and prayer.

He started as a "Holy Roller" preacher in Norfolk, Virginia, around the turn of the century, then moved to Philadelphia and New Jersey, then he was forced to flee to

Harlem to avoid a burglary conviction. He organized a black Israelite congregation in Atlantic City, New Jersey, in 1912, which grew to 300 members. He established another congregation in Harlem in 1917, before he was arrested and served three of the five years of his sentence on an outstanding burglary charge. Roberson taught that African Americans were descendents of Esau and had been "swindled" out of their rightful heritage by Jacob, the ancestor of modern Jews. His proof that African Americans were God's chosen people was that "we who are black worship Christ; Christ was a Jew; therefore we are Black Jews."[21] The group retained practices common to Holiness Protestantism, such as baptism by immersion. The Temple of the Gospel of the Kingdom opened up businesses in Harlem and its members tithed all their earnings to the church and lived in communal "heavens" in Harlem and Atlantic City. To save money, they slept in chairs or on the floor, and raised money by soliciting as the Relief Association of Hebrew Settlement Workers. Male members grew beards, sometimes wore long white robes and black pillbox skull caps, and sometimes carried a shepherd's crook, just like Chicago's Rabbi Horace.

Elder Roberson was released from prison and returned to Harlem as a martyred Messiah in 1923. Under his charismatic leadership, the group spread to Philadelphia, Chicago, Detroit, and Absecon, New Jersey, while his excesses grew. While Roberson instructed his followers in celibacy and chastity, he created a special group of young, handsome, well-educated male followers to seduce attractive and wealthy young women to join a "Virgin Class" whose members would bear his children. He created another cadre, this time of elderly men, who grew their beards and learned the "language and mannerisms of Jews" from a hired Jewish instructor in order to solicit funds from Jews. The Israelite Messiah drove a chauffeured Pierce-Arrow automobile, always accompanied by a bodyguard and several female consorts.

Roberson's heavens began to collapse when an investigation by a New York City welfare agent led to a federal grand jury indictment and the arrest of Roberson and his followers on charges of statutory rape and violation of the Mann Act, transporting women across state lines for immoral purposes. They also uncovered a "baby farm" in New Jersey, where 12 children from six months to six years of age were discovered, along with their young mothers, ranging in age from 17 to 23. Another facility was uncovered where children were subjected to horrific child abuse. Roberson pled guilty and served about a year in prison. Upon his release he realized that he was ill, and he developed a teaching that he would rise three days after he fell "asleep," or he would "rest" for 60 days before rising, destroying the earth, and founding his heavenly kingdom 99 million miles above the sun. His true believers, the "saints," would witness the destruction of those who had rejected Roberson as the messiah while bathing in the "Seas of Heavenly Rest." Elder Roberson passed away on June 18, 1931, and when he failed to rise, his wife, Fanny Roberson, absconded with the group's fortune, estimated at $8 million. The Live Ever, Die Never Society rapidly disintegrated, but its members entered other groups and in elements of theology, organization, and style it presaged Father Divine's movement of the 1930s and Ben Ammi's Chicago-based Black Hebrew movement in the 1960s.[22]

Bishop Hickerson, aka The Rev. St. Bishop The Vine

One of the significant ways in which the newer black Israelite movements differed from Bishop Crowdy's earlier movement was that the 1920s Harlem Israelite movements, like Father Hurley's movement in Detroit, often centered around the New Thought idea that God dwells inside every individual. The primary exponent of the idea in Harlem was George Hickerson, a street corner preacher who also was known as "The Rev. St. Bishop The Vine" and "Bishop Eshof Bendoved." Hickerson was a Southern-born preacher in the Holiness tradition, who collaborated with George Baker, known as "The Messenger" and later as Father Divine, and Samuel Morris. In 1907 Morris took the name Father Jehovia and preached that he was God, based on a reading of 1 Corinthians 3:16–17 ("Do you know that you are God's temple, and that God's Spirit dwells in you?"). The trio of Hickerson, Baker, and Morris lived together and held church services in Baltimore, Maryland, from 1908 to 1912, until Hickerson and Baker decided that if God dwelled inside Morris, he could dwell inside them as well.

Hickerson went to Harlem and preached a variant of the "indwelling God" theology, becoming a critical and colorful figure in the development of Black Judaism in Harlem. He gathered a following of auxiliary gods with colorful names such as Father Paul, Father Joshua, Steamboat Bill, Father Obey, Saint Peter, and Elijah of the Fiery Chariot.[23] By 1914 Hickerson had founded The Church of the Living God, the Pillar and Ground of Truth in Harlem, using the same name that Christian used in 1889 and that Bishop Johnson had used in 1914. He identified himself as an Ethiopian and taught a variation of New Thought—one of his chants was "God in you, God in me, You God, I God, Everybody be God." This theology of the indwelling God became the heart of the "Jewish" part of second-stage Black Jewish theology. George Baker, the future Father Divine, arrived in New York in 1915 and studied Hickerson's teachings and organization. In the early 1930s, an anthropologist reported that Father Divine's "reputedly 'Jewish' doctrine was simply 'God is within man.'"[24] The indwelling God theology was also important in the movements of Hickerson's black Israelite students and colleagues, as we see below.

Rabbi Arnold Josiah Ford

The infusion of West Indians into Harlem after World War I brought with it two leaders who would help to establish a stream of black Judaism that, while still incorporating a heterodox mix of Theosophy, conjuring (African American folk wisdom and healing practices), and Freemasonry, had less-pronounced Christian elements and more emphasis on the rituals and worship of conventional Judaism. West Indians Arnold Josiah Ford and Wentworth Arthur Matthew each collaborated with African Americans in Harlem and attracted followers of both African American and West Indian backgrounds to their versions of "black Judaism" beginning in the 1920s.

Ford was the most erudite and in some ways the most remarkable of the second-generation black Israelite leaders. He was born in Bridgetown, Barbados, in 1877, the son of an evangelical Methodist preacher. He joined the British Navy in 1899,

and later studied music in London, England, before beginning a career as a musician in New York in 1912. He joined political causes, such as the socialist African Blood Brotherhood, and became an intimate of Garvey. He was an esteemed member of the UNIA and the leader of its choir, in which capacity he penned many Garveyite hymns.

In the Garvey movement and in his Masonic lodge, Ford met people interested in black Israelite ideas, including a Jamaican-born former seaman named Samuel Valentine, the peripatetic Bishop St. John the Vine, and a peddler by the name of Mordecai Herman. Herman spoke some Yiddish and sold Jewish liturgical items in Jewish neighborhoods in New York. He started an Israelite-Masonic organization variously known as the Moorish Zionist Movement or the Cushim Congregation in July 1921, which lasted only a year. Ford became involved with Herman as a business partner, and then they collaborated with Valentine by holding classes in Hebrew language and Israelite history every Sunday at Garvey's Liberty Hall.

Ford was expelled from the Garvey movement in 1923 amidst rumors that he mismanaged the choir's payroll, and he joined Valentine and Herman in forming a synagogue that they called the Moorish Zionist Temple. Its name is strikingly similar to Noble Drew Ali's Moorish Science Temple and indicates how closely related black Israelites of the 1920s were to their better-known black Islamic siblings. Ford took the title Rabbi and attracted the support of white Jews, while Valentine was the head of their religious school, called Talmud Torah Beth Zion. Conflict between Herman and Ford led Ford and Valentine to leave and start their own congregation in 1924, which they called Beth B'nai Abraham (BBA). The congregation flourished in the 1920s under Ford's charismatic leadership and musical guidance.

Ford's teachings were highly original—rather than teaching that the ancient Hebrews were from Ethiopia, as did many of his contemporaries, Ford preached that the Hebrews had come from Nigeria and migrated eastward through Carthage, Egypt, and Palestine. Ford claimed that his mother was Carthaginian and that when he observed Jews in Harlem he realized that he was, in fact, Jewish. He was also innovative in that he adopted many Jewish rituals and liturgical practices, such as the use of a Torah scroll, prayer shawls, skull caps, and Hebrew prayer books. He employed European Jews as religious teachers and mixed Jewish rituals with Protestant customs such as testifying. But he also included elements of Islam in his practice, writing prayers to "Allah" and observing the fast of Ramadan. There was an esoteric, mystical, and theosophical cast to Ford's teaching, and he was a spell-binding orator in addition to being a talented musician, composer, and artist.

The BBA hit troubles in 1928 amid new allegation of Ford's financial misconduct and philandering, and Valentine led a schismatic group that used Yiddish and adhered more closely to conventional Judaism. Some members of this group assimilated into the mainstream Jewish community, attending Jewish schools and joining conventional Jewish congregations. Ford, meanwhile, founded a subsidiary of the BBA in the 1920s called the Aurienoth Club whose purpose was to encourage the migration of black people to an as yet-to-be-determined Promised Land. The club attracted 600 dues-paying members in Harlem and Cleveland, Ohio, and combined

Garveyism with race-conscious socialism. After Ethiopian notables toured the United States in 1930 promoting African American emigration to Ethiopia, Ford and three followers left for Ethiopia in 1930, intent on negotiating a settlement agreement that would give his followers land, livestock, and the support of the government.

The settlement scheme went poorly—Ford was unable to deliver on his promises, efforts to farm failed, and the indigenous Ethiopian Jews rejected a Torah that Ford had brought for them, as it was written in Hebrew instead of Ge'ez. Before long, most of the 30 supporters who followed Ford to Ethiopia returned to the United States. Ford relied on his musical talents, playing dance music in the only nightclub in Addis Ababa, Ethiopia, and occasionally playing in Haile Selassie's palace. His home became a hub for the small African American expatriate community in the capital city. Ford died of a heart attack in September 1935, just before Italy invaded and conquered Ethiopia.[25]

Rabbi Wentworth Arthur Matthew

Rabbi Matthew founded one of the best-known and longest-lasting black Israelite traditions in 1919 and created an esoteric, syncretic faith much like Father Hurley's. Matthew was influenced by Ford, and his faith bore more outward resemblances to Jewish practices, but the content of the faith was a diverse mix of Freemasonry, Judaism, black Israelism, Theosophy, New Thought, conjuring, Jewish mysticism or cabbala, and Holiness-Pentecostal Christianity. Matthew trained dozens of other rabbis, though his movement never attained large numbers of followers or congregations. He was born in 1892 on St. Kitts in the British West Indies, although from 1937 until his death in 1972 he claimed that he was born in Lagos, Nigeria, to an Ethiopian Falasha father and a West Indian mother. As a young man he was a boxer, wrestler, and carpenter, immigrating to New York in 1913. He studied theology in Harlem and was ordained as a minister, founding The Commandment Keepers Church of the Living God, the Pillar and Ground of Truth in 1919. He appended the words "and the Faith of Jesus Christ" when he incorporated with the State of New York in 1921. Matthew learned from both Bishop Hickerson (aka Bishop St. John the Vine) and Bishop R.A.R. Johnson. Indeed, Hickerson claimed that he taught Hebrew to Rabbi Ford and that Rabbi Ford then taught Rabbi Matthew "everything he knows about Hebrew."[26] Like Roberson and Father Divine, Matthew subscribed to Hickerson's New Thought doctrine that God dwelled inside the individual. Matthew studied conjuring in Virginia and used the cabbalistic grimoire of the *Sixth and Seventh Books of Moses* (c. 1900) to create Hebrew spells and magical diagrams that would compel God to enter his body and fill him with God's power. This belief in God manifesting inside the individual was what was most distinctively "Jewish" about the theology of 1920s black Israelites.[27]

As the 1920s progressed, Matthew followed Rabbi Ford's example by adding Jewish rituals to the hymns and styles of Spiritualist and Sanctified (black Pentecostal)

churches. The Commandment Keepers began to use prayer shawls and skull caps, chant the *shema* prayer, and observe Rosh Hashanah, Passover, Simchat Torah, and Yom Kippur. They also used many elements not commonly found in Judaism, including foot washing, incense, special oils, and what Matthew called his "cabbalistic science," a mixture of conjuring, New Thought, and cabbala.

Like black Israelites before him, Matthew created a Masonic auxiliary of his congregation, launching The Royal Order of Ethiopian Hebrews, the Sons and Daughters of Culture, Inc., in 1924. The Royal Order used Masonic forms to transmit Matthew's black Israelite teachings, and this became an important means to increase the organization's visibility and spread its message to lodges across the country.

Matthew resisted Ford's pleas to aid him in his Ethiopian settlement effort, but Ford did manage to procure a certificate of ordination for Matthew from the Ethiopian Coptic Church. With Ford's demise and the dissolution of his synagogue, Matthew inherited most of his followers as well as the mantle of leadership of New York's Black Jews. In the 1930s Matthew's Commandment Keepers began to identify as "Negro Jews," and Matthew excised references to Jesus Christ from his "Ethiopian Hebrew Rabbbinical College." Matthew taught that all blacks were descendents of the ten Lost Tribes of Israel and that white Jews were usurpers who descended from Edom. In the 1930s Matthew had 250 active members and 650 total members in New York, with six affiliated black Israelite congregations in Ohio, Pennsylvania, and Virginia. In addition to training his own students, Matthew networked with rabbis from black Israelite churches such as the CGSC, as well as with mainstream Pentecostal ministers. He often claimed to be the chief rabbi of the "Black Jews in the Western Hemisphere," yet he did not even exert dominion over all the black Jews in New York. His students and the congregations they formed did not always defer to him, and a number of black Jews sought closer ties with the white Jewish community against his wishes in the 1960s in an organization called *Hatzaad Harishon.*

In 1970, Rabbi Matthew's student L.A. McKethan, who was then using the name Rabbi Levy Ben Levy, formed an "International Israelite Board of Rabbis, Inc.," with four other rabbis. Rabbi Matthew suffered a stroke and the partial loss of his vision in the early 1970s and passed away on December 3, 1973. Levy Ben Levy, now calling himself the "Chief Rabbi," reformed the Commandment Keeper's Masonic offshoot, the "Royal Order of Ethiopian Hebrews," and used it as a means of training new clergy. By 1986 there were 34 Ben Levy trained rabbis associated with the International Israelite Board of Rabbis in the New York metropolitan area, Illinois, Mississippi, and the West Indies. In addition, there were seven nonaffiliated "Talmudic Rabbis," in the New York area, most of whom were students of Rabbi Matthew.[28]

Prince Yaakov Nasi and B'Nai Kohol Haychol Hatorah

There were other second-generation black Israelite groups independent of Rabbi Matthew's Commandment Keepers that practiced more Orientalist, less Judaic, and more militant streams of black Israelism. One such movement was B'Nai Kohol

Haychol Hatorah, founded by Prince Yaakov Nasi by the 1940s. Nasi's male followers wore turbans and removed their shoes in their place of worship. Not much is known about the inner workings of the group, but at some point they spawned an offshoot called B'Nai Zaken, which emerged in New York and spread to Chicago, contributing a masculinist ideology and an emphasis on emigration to the Chicago Israelite scene. They practiced martial arts and wore turbans and nose rings. Through their male chauvinism, their millennialism, their black racialism, and their advocacy of emigration, the B'Nai Zaken had a major influence on the third-generation movements that arose in Chicago in the 1960s.[29]

Second-Generation Israelite Movements in Philadelphia

Prophet Crowdy, Elder Roberson, Mordecai Herman, and Rabbi Matthew all attracted followings in Philadelphia, but the city also produced its own black Israelite movements. Frank S. Cherry worked as a seaman and a railway worker, and, though he was described as being a dark-skinned African American from the Deep South, he claimed to be visiting from a foreign country. After Jesus supposedly appeared to him in a vision, he founded the Church of the Living God in Chattanooga, Tennessee, in 1886. He arrived in Philadelphia and became a prophet and heir to Father Edward D. Smith's Triumph the Church and Kingdom of God in Christ after Smith's departure for Ethiopia in 1920. Cherry's followers became known as Black Jews, and Cherry modified the costume and teachings of Bishop Crowdy's CGSC.

He was unusual among black Israelite leaders in that he accepted the collection of Jewish law known as the Talmud as the ultimate authority on religious matters. Like many black Israelites and black Muslims, Cherry stigmatized Southern black culture, forbidding his followers to eat pork, drink heavily, or observe Christian holidays. He also separated himself from African American Christianity by forbidding pianos, public collections, emotional expression in worship, or speaking in tongues. The congregation had a 300-seat auditorium where they held services on Sunday, Wednesday, and Friday evenings, with Sabbath services lasting all day Saturday. Services began and ended with a prayer said while facing east, and the tenor of the services was similar to Holiness Christianity.

Prophet Cherry's theology was strongly millenarian, black nationalist, and idiosyncratic. He emphasized strict adherence to the Ten Commandments, and his followers believed in a square earth surrounded by three layers of heaven. He claimed that Jesus was black and would return in the year 2000 and raise all the saints who obeyed the Ten Commandments and the teachings of Prophet Cherry. Cherry denigrated white Jews as interlopers and frauds and vilified them for denying the divinity of Jesus. Cherry's Church of the Living God was also strongly nationalistic, and like Rabbis Matthew, Ford, and other African American Israelite and Islamic leaders, Cherry was a supporter of Garvey, even speaking at a meeting of the UNIA in Philadelphia. Prophet Cherry passed away in 1963 and was succeeded by his son Prince Benjamin F. Cherry.[30]

Abel Respes and "Orthodox" Black Judaism

Very few black Israelites have actually converted to conventional Judaism. Abel Respes, on the other hand, led his entire congregation through a conversion process. Respes was born in Philadelphia in 1919 to a father who was involved in black Israelite movements and the pro-Japanese Ethiopian Pacific Movement. At the age of 13 he was struck by lightening but was unhurt, and in 1948 he said that he saw men whose faces "shone like the sun" and heard God's voice in his dreams. He began taking classes at a Bible school run by Prophet Cherry's church in 1949, but soon left them, dismayed at the Christian nature of their teachings and their lack of Judaic practices. He began preaching on the street and joined a black Israelite leader named Bishop Murphy. Respes preached his black Israelite doctrine on local radio in the mid-1950s, which attracted new followers. Desiring a place to raise their children in as Judaic an environment as possible, the group purchased land in the suburbs, beginning in 1960, first at Mays Landing, New Jersey, and then in Hammonton, New Jersey. Respes' desired destination, however, was Israel. He advocated migration to Israel as early as 1952 and even wrote President Dwight D. Eisenhower requesting assistance in the endeavor. In 1970 he and a group of 17 congregants visited Israel, expressed their desire to raise their children in Israel, and offered to undergo formal conversion to Judaism if it would ease their acceptance in Israel.

Respes was unique among black Israelite leaders because he rejected all theological and ritual elements of Christianity and practiced the rituals of normative Judaism as much as possible. He rejected the concepts of the Trinity, the divinity of Jesus, or the idea of reward in the afterlife. Respes spurned black nationalism and the ritual forms of African American Christianity, which lost him members who accused him of espousing a "white man's" religion. But Respes did teach a racially exclusive black Israelite history in which the original Hebrew Israelites were black, were dispersed into Africa, broke their covenant with God and were punished with slavery. White Jews were converts to Judaism, and he rejected the Talmud, the collection of law that underpins Judaism, as being of European origin. Yet no matter his historical beliefs, he believed in the unity of the Jewish people across racial lines and spoke out on the topic in the midst of tensions between black and white Jews in the late 1960s.

After the trip to Israel, Respes and his congregation came to the attention of Jewish rabbis in New York who had formed a committee to improve relations with black Jews. Respes and his entire congregation underwent a conversion supervised by Rabbi Isaac Trainin of the New York Federation of Jewish Philanthropies in 1972, becoming the first black Israelite group to do so. Although they underwent the conversion process, they continued to believe and practice their own distinctive form of "orthodox" Black Judaism.[31]

Third Generation Movements: 1960–1980

By the 1960s, black Northern ghettos had changed considerably in the half century since African Americans began their northern trek during the Great Migration,

and the versions of black Israelism that they produced changed as well. Rabbi Matthew's Ethiopian Hebrew Commandment Keepers tradition continued, with its Ashkenazi Jewish-flavored ritual and liturgy, but with the exodus of white Jews from inner cities to the suburbs, the prevalence of European Jewish culture, rituals, food customs, and language that was common among 1920s black Israelite movements declined. While many of the early movements adopted some Jewish rituals and liturgy, the new movements bore little resemblance to Judaism and often centered on a man who was worshipped as a messiah. Whereas many of the early movements included some white members, the new black Israelite movements wielded their faith as a form of black militancy that was racially charged and often antiwhite. Many rejected the name "Jew" for "Hebrew" or "Israelite." Rather than adopting the yarmulkes and prayer shawls of the earlier generation, this generation was more prone to adopt turbans, robes, and other signifiers of Africa and the Bible. There also was a new hypermasculine patriarchy among the new Israelite movements, with some emphasizing female submissiveness and even polygamy. The 1960s movements saw black Israelism as a highly political answer to the racism, oppression, and hopelessness of African American inner cities, and many developed emigration programs, retreating to the countryside or emigrating to Africa and Israel in order to wait out the coming Armageddon.

The Original African Hebrew Israelites

Although Rabbi Respes abandoned his attempt to immigrate to Israel, another group did, becoming one of the most visible black Israelite groups in the process. The Original African Hebrew Israelites, now headquartered in Dimona, Israel, came from a rich tradition of black Israelite groups that arose in Chicago in the late 1930s. There were a number of black Israelite groups in Chicago composed mainly of followers of Elder Roberson and rabbis ordained by Rabbi Matthew in Harlem. Joseph Lazarus, a follower of Roberson's, had joined forces with Henry Brown, originally of Tennessee, to form the True Ethiopian Foundation in the 1930s, affiliating with Rabbi Matthew by 1938 and starting the Congregation of Aethiopian Hebrews. Brown received his ordination from Rabbi Matthew in 1947, becoming known as Rabbi Abihu Reuben, and together he and Lazarus instructed succeeding generations of Israelite movements. The black Israelite leader who adhered most closely to Jewish ritual was Rabbi Robert Devine. Devine was born in Mississippi, joined the Congregation of Ethiopian Hebrews in the late 1930s, served in the American military during World War II and studied with Rabbi Reuben before founding his own synagogue.

The South Side of Chicago is more notable, however, for being a place that supported the growth of a number of Israelite movements inspired by the teachings of the Harlem group but much less Judaic and much more militant in character. These groups also were able to cooperate with one another, creating a remarkably diverse and broad array of overlapping movements that were increasingly militant, millenarian, focused on migration in expectation of Armageddon, and centered on

charismatic leaders. This was the culture that bred the group that is now centered in Dimona, Israel.

One of these movements was the Negro Israelite Bible Class of Prophet Lucius Casey in the 1940s, which resulted in the establishment of a farming community outside of Ullin, Illinois, that still exists. Another was the House of Judah Congregation of Black Hebrew Israelites, founded in 1960 by a follower of Casey's named Prophet William A. Lewis who was originally from Alabama and created a rural settlement near Lacota, Michigan, that was bound together by strict discipline and corporal punishment. Another important figure who later became a prominent leader of the Original African Hebrew Israelites was Shaliach Ben Yehuda, born Louis Bryant in Indiana in 1927, who began preaching black Israelite ideas in 1953 after joining the Brotherhood of the Church of God in Christ. Shaliach developed a close relationship with a number of black Israelite leaders. His contacts included Prince Amazah ben Israel, born Frederick Walters, whose Hebrew School was raided in 1968, uncovering guns, ammunition, and 40 members. Another group called itself the Righteous Branch of African Hebrews, and another called The Camp of the Lost and Found Sheep of the House of Israel was led by Brother Asiel ben Israel. In addition, Brother Daniel taught Hebrew to the remnants of Prophet Casey's congregation, and Rabbi Eliahu Abraham ran the East Indian Synagogue of Ethiopian Hebrews.

The future founder of the Dimona Black Hebrews, Ben Carter, became interested in Black Judaism around the age of 24 and began attending meetings of different black Israelite groups in Chicago, receiving the name Ben Ammi from Rabbi Reuben of the Congregation of Ethiopian Hebrews. Carter saw a need to unify the dizzying array of Israelite groups in the city of Chicago, so he organized the A-Beta Hebrew Israel Cultural Center in 1963. A-Beta, or Aleph-Beta as it was sometimes known, brought together a wide range of Israelite teachers and practitioners, but the more traditional ones were soon repelled by the talk of emigration, apocalypse, and millennialism that permeated the group. Meanwhile, Carter aroused the enmity of many other black Israelite groups, who accused him of stealing their members and their secrets.

Believing the coming of the millennium would be presaged by the return of the Hebrews to the land of Israel, Ben Ammi led an exodus to the country of Liberia in West Africa, in July 1967, and by the end of the year 160 black Israelites had joined him there. The settlement soon experienced social and economic difficulties and ran afoul of the Liberian government. Meanwhile, Carter strengthened his grip on the leadership of the group and in 1968 visited Israel, scouting a possible move. In 1969 the Liberian government declared them undesirables and ordered them to leave. A total of 48 Hebrew Israelites immigrated to Israel in 1969, declaring their intention to stay under Israel's Law of Return, which grants automatic citizenship to any Jew. Despite an uncertain legal status and occasional deportations, the Hebrew Israelites flourished and multiplied in Israel, living communally, practicing polygamy, making their own clothes, providing their own health care, eating vegan food, and worshipping their messiah, Ben Ammi. The Hebrew Israelites themselves

do not allow their members to be counted, but by 1985 the Israeli government estimated that 2500 Hebrew Israelites lived in the Negev Desert towns of Dimona, Arad, and Mitzpeh Ramon. Hebrew Israelites returning to the United States developed congregations and businesses such as vegan restaurants in cities such as Chicago, Washington D.C., and Atlanta. In 1990, after they had spent 21 years in Israel on expired tourist visas, the Israeli government began a process of normalization intended to lead to full Israeli citizenship for the Hebrew Israelites.[32]

Yahweh Ben Yahweh and the Temple of Love

The largest of the third generation black Israelite movements was the Temple of Love group of Yahweh Ben Yahweh, which grew to 20,000 members and had at least $9 million in assets from its founding in 1979 until the imprisonment of its founder in 1990. Born Hulon Mitchell Jr. in Oklahoma on October 27, 1935, Yahweh Ben Yahweh is a college graduate who served in the Air Force, attended law school, and worked for the NAACP before he became a Black Muslim and a radio evangelist in Georgia during the 1970s. Towards the end of the decade, he became an admirer of Ben Ammi's Hebrew Israelites and established his own Hebrew Israelite congregation. He adopted the name Brother Moses Israel and developed virulent antiwhite doctrines. Mitchell established a national headquarters in Miami, Florida, and began an aggressive entrepreneurial enterprise, marketing hair care products, records, books, sodas, and T-shirts, under the brand name "Yahweh." The group expanded throughout the country, and followers dressed in white, making them highly visible. Simultaneously, Brother Moses taught that he was the Messiah and called himself Yahweh Ben Yahweh. While he was gaining increasing prominence and political recognition in Miami, he used tactics of murder, terror, and intimidation to facilitate the expansion of his enterprises. Former members told horrific stories of ritual murders, child abuse, and an assassination squad of "Death Angels." Ben Yahweh and 15 followers were tried for conspiracy to commit murder, arson, child abuse, statutory rape, and murder in 1992. Most charges were dropped, but Yahweh was found guilty on the conspiracy charges and given 18 years in federal prison.[33]

The Nubian Islaamic Hebrews, Ansaaru Allah Community, Holy Tabernacle Ministries

One of the most heterodox black Israelite groups has been the constantly evolving community under the leadership of Dwight York, also known as Amunnubi Rooakhptah (Faithful Informer, Soul of the Ptahites), Al Sayyid Al Imaam Isa Al Haadi Al Mahdi, Isa Muhammad, Imaam Isa, Rabboni: Y'shua, and finally, Dr. Malachi Z. York, Malichi Zodok, or Melchisedek. York's many names and his evolving teachings are fascinating because they combine a full range of black alternative religious possibilities, mixing teachings that could be described as black Muslim, black Israelite, Egyptian, and even science fiction. York's name, his teachings, and the clothing and ritual practices of his followers have evolved in distinct stages since the group's founding in the mid-1960s. Beginning as Ansar Pure Sufi, they adopted

the name Nubian Islaamic Hebrews in 1969 along with African dress and an emphasis on ancient Egypt. They began using the name Ansaaru Allah "Helpers of God" in the mid-1970s, emphasizing Islam as the true religion of black people and adopting Islamic dress for men and women. In 1992 York established the Ancient Mystic Order of Melchisedek, and his followers abandoned Islamic dress for "Jewish" dress as their leader began to emphasize the Judaism as part of a "Nubian" "Doctrine of the New Covenant." In 1994 the community moved on once again to become the Holy Tabernacle Ministries, adopting secular American dress along with a heightened interest in extraterrestrials and the apocalypse. The Ansarullah practice a "Nubic calendar" that includes Jewish festivals such as Shabbat, Passover, Sukkot, Rosh Hashanah, Yom Kippur, the Fast of Gedaliah, and Hanuka. They observe Bar and Bat Mitzvah, recite the Jewish declaration of faith, the *shemma,* and use prayer shawls and tefillin (phylacteries). The Masonic emphasis on the ancient temple of King Solomon is expressed through a recreation of the cult of temple worship and sacrifice, complete with a replica of the temple built in upstate New York that is the ritual center of the secretive Ancient Mystic Order of Melchizedek.[34]

York's spiritual flexibility illustrates the kinship between diverse streams of alternative black religious traditions. While Rabbi Ford identified with Islam as well as Judaism, observed Ramadan, and penned prayers to Allah in the 1920s and 1930s, York/Imam Isa/Melchisedek has been astoundingly prolific in digesting and reinterpreting whole religious systems.[35]

Black Israelites in Africa

As early as 1903, black Israelite forms of Judaic Christianity spread to Africa, where its Holiness-Pentecostal style found fertile ground in African spiritual ecosystems familiar with prophecy, spirit possession, and faith healing. Black Israelite churches spread throughout Southern and Eastern Africa, and Israelism became an important part of many Zionist churches of the independent African church movement.[36]

The CGSC played a key role in spreading the message of black Israelism and had an international vision, establishing missions in South Africa and Jamaica around the turn of the twentieth century, spreading their Israelite teachings throughout Southern Africa and the West Indies. Africans who spent time in the United States brought the Israelite doctrine back to Africa with them, where it became a critical part of many independent African Zionist churches. A Xhosa sailor and former Baptist missionary named Albert Christian was the first to bring Prophet Crowdy's Church of God and Saints of Christ (COGSC) to South Africa. He had a dream instructing him to seek out a man in the United States, and he did so, recognizing Crowdy on a street in Philadelphia as the man from his dream and returning to South Africa under Crowdy's tutelage in 1903. Christian established a string of churches throughout the Eastern Cape and as far north as the Transvaal in the Northeast of South Africa. He was joined in his efforts by John Msikinya, a South African who had become a

follower of the COGSC while attending college at the historically black Lincoln University in Philadelphia. Msikinya's theology was increasingly millenarian and politically radical, drawing the hostility of the Cape Colony government. Enoch Mgijima inherited leadership of the church upon Misinkya's death in 1918 and intensified the group's millennial and anticolonial rhetoric, combining the Israelite teachings of the COGSC with spirit possession, Seventh-Day Adventism, and Christian millennialism. His prophecies led to a violent confrontation with the colonial state. Mgijima's followers, armed with clubs and spears, clashed with an 800-man police force armed with rifles and machine guns, leading to 163 killed, 129 wounded, and 75 arrested in what became known as the Bulhoek Massacre.[37]

There have been a handful of other black Israelite movements in Africa. John Chilembwe was a Malawian minister from an African Zionist background who led an uprising against the British in 1913. He had come into contact with black Israelism during his time at Lincoln University, and he converted it into a theology of resistance to British imperialism. Semei Kakungulu, the founder of the Bayudaya Jewish community in Uganda, led the Buganda Kingdom in subduing neighboring tribes and cooperated with the British in hopes that they would recognize him as king. When the British refused to recognize Kakungulu, he became more supportive of the radical Zionist Protestant *Bamalaki* sect. Through meditation on the Old Testament and strict interpretation of its commandments he declared himself a Jew in 1919, circumcised himself and his sons, and demanded that his followers do the same. In 1926 he learned the Hebrew alphabet and Jewish customs from a trader named Joseph and renounced the New Testament and the divinity of Jesus.[38]

A number of African independent churches have adopted elements of the Israelite creed and sometimes observance of the Passover holiday, such as the African Church of Israel and the African Remnant of Israel Church in Rhodesia, the Lost Israelites of Kenya, the Church of the Canaanites, which started in Durban, South Africa in 1916, and the African Apostolic Church of John Maranke. Finally, the Lemba people of South Africa adopted a Jewish identity within the practice of African Christianity heavily flavored by Central African practices of mediumship and belief in Jesus. The advancement of a theory of Jewish ancestry was part of the divide-and-conquer politics of the Bantustans of Northern South Africa, as indicated by the fact that Lemba in neighboring Zimbabwe do not claim Jewish ancestry. In 2000 an English scholar facilitated genetic studies attempting to prove a link between Lemba and Ashkenazi Jews, but those studies have since been shown to be flawed in methodology and execution.[39]

The African Israelite movements demonstrate that black Israelite religion has been part of a transnational discourse between Europe, African America, and Africa. African Americans brought the black Israelite idea to Africa, and the spread of black Israelite churches in Africa during the early part of the twentieth century helped African Americans buttress their identities as black Israelites in the latter part of the century.

CONCLUSION

In summary, black Israelites are members of African American and African faith traditions that teach that the ancient Israelites were black and were the ancestors of contemporary African Americans and Africans. They are not converts to Judaism, nor are they Ethiopian Jews, although many have adopted the name "Ethiopian Hebrews." Their movements have been small, with memberships measured in the hundreds and only a few measured in the tens of thousands, but their appeal has persisted over more than a century. Black Israelites developed their own versions of Anglo-Israelite faiths that had arisen over two centuries of radical Protestant identification with the ancient Hebrews among English Christians and Freemasons. Black Israelite faiths arose in at least three waves with its own particular characteristics: a pioneer generation from 1890 to 1916, a second generation from 1920 to 1930, and a third generation from 1960 to 1980. The pioneer generation was Southern evangelists who combined Freemasonry and Holiness Christianity with divine revelation, belief in the blackness of the ancient Hebrews, and esotericism. Another group created black Israelite faiths with intense Ethiopianism, teaching that the ancient Israelites had originated in Ethiopia and sometimes advocating an emigration to Ethiopia. This pioneer generation spread black Israelism to Southern Africa, with the help of Africans who traveled to the United States. American black Israelism became an important part of anticolonial African Zionist Churches. The second generation followed African Americans and West Indians into northern metropolises such as New York, Chicago, and Philadelphia. These Israelite groups built upon the teachings and the members of the pioneer organizations, but featured black nationalism and mysticism, particularly the New Thought teaching that God resides within each person. The groups either developed into messianic millennial sects, with colorful messianic leaders, communal living, and much wealth, or they took advantage of the proximity to Jews in Northern cities to adopt Hebrew prayer, Jewish liturgical items, and Judaic rituals. Black Israelites were one of many African American Orientalist groups in black ghettos during the 1920s, and it was through contacts in this subculture of root doctors and alternative religious practitioners that black Israelism influenced the next decade's Black Muslims, Rastafarians, and Father Divine. Finally, there was a third generation of militant, masculinist, black nationalist, and emigrationist black Israelite groups in the 1960s and 1970s that retain Christian world views with very little Ethiopianism or Judaic ritual. They created and sustained rural communes or large, controversial organizations with successful business enterprises, intense patriarchy, and messianic leaders. Each generation's black Israelites bore the imprint of the time that produced them, as well as a link to their predecessors. At the heart of all black Israelite faiths was a radical reimagining of the black past, present, and future. It has been a religious antiracist counterdiscourse that places people of African descent at the very heart of history and civilization as God's chosen people with a unique racial mission to prepare the earth for the coming of the millennium.

Santería

Mary Ann Clark

INTRODUCTION

Santería is an African-based religion that is gaining increasing prominence in the United States. Developed in the late eighteenth and early nineteenth centuries by slaves and former slaves living on the island of Cuba, it is based on the religion of the Yoruba-speaking peoples of western Africa. Cuban immigrants brought Santería to the United States in two major waves, first in 1959 after the Cuban Revolution and again in the 1980s during the Mariel boatlift. In the past 40 years, the religion has expanded beyond the Cuban community so that today there are practitioners from all racial and ethnic groups and from every economic level. Although the major concentrations of practitioners are in southern Florida, the New York City area, Los Angeles, and Chicago, some variant of this religious tradition is practiced throughout the United States and around the world.

Although this religion is commonly known as Santería, many practitioners find that term derogatory and prefer to call it Lukumi (or Lucumi), Orisha religion, Yoruba Traditional Religion, or Regla de Ocha. The word "Lukumi" comes from the name commonly given to the Yoruba-speaking people and may come from a phrase meaning "my friend." Although in Africa the Yoruba-speaking people did not think of themselves as the members of a particular tribal group but rather as citizens of a particular town or region, in the Americas they became identified with their language group. The Orisha are the deities of this religious tradition and the focus of most religious practice, so the religion is often given their name. The term "Regla de Ocha" is a mixed Spanish-Yoruba construction that means the rule or order of the Orisha.

The Yoruba peoples live in the southwestern part of Nigeria on the western coast of Africa. They are today one of the largest ethnic groups of sub-Saharan Africa and one of the most politically powerful groups in Nigeria. Many Yoruba-speaking people were brought to the Caribbean and Brazil during the slavery era with the largest number arriving in Cuba in the mid-to-late 1800s. The majority of the Africans brought to Cuba were destined for the sugar mills and plantations. However, because

the Yoruba lived in urban areas and were often trained as artisans before their capture, many ended up in the cities of Cuba where they were used as domestics and tradesmen. Under the authority of the Catholic Church and according to the laws of the Spanish government, they were able to form *cabildos.* These were social clubs and mutual aid societies established to provide members with social services. The earliest cabildos were formed around African ethnic identities that brought together members with similar languages and cultures. As Afro-Cubans mated and married across ethnic lines, however, membership in the cabildos became more fluid. These cabildos also served as sites for the guided syncretism by the Catholic clergy in Cuba who hoped to bring Africans into mainstream Catholicism through cultural assimilation. Finally, the cabildos provided spaces that Afro-Cubans could use to maintain some of their own cultural traditions, including the traditions of drumming and dancing for social and religious purposes.

The basic form of religious community in Santería is the religious family. Since Santería is an initiatory religion, to become a participant one must be initiated into a religious family that becomes responsible for one's religious education and development. Each ritual requires at least two initiators called either the *madrina* (godmother) or *padrino* (godfather). Other participants initiated by one's godparents become one's religious siblings, while the godparents of one's godparents become one's religious grandparents. In this way new initiates join a community that is modeled on an extended family. The religious hierarchy is formed by the relative initiatory age of participants. One owes respect and deference to one's religious elders, particularly one's godparents. At the same time, one can expect respect and deference from those whose initiations come after one's own.

Although commonly all followers of Santería are called *santero* (for men) or *santera* (for women), technically these terms refer to those who have undergone the full priestly initiation. The term *aleyo,* a Yoruba word referring to someone living in a family compound who is not a member of the family, is often used to refer to someone who is involved in the religion but who is not a priest. Another term that has come into use in recent years, *aborisha,* is used to designate someone who participates in the religion and may have some lower initiations but has not been initiated as a priest. Priests may also be called *olorisha,* "one who owns an Orisha" or *babalosha* "father of Orisha" or *iyalosha* "mother of Orisha." Generally babalosha or iyalosha is reserved for those priests who have initiated other priests, while olorisha can refer to anyone who has received the priestly initiation whether they have initiated others or not. The term *Santerians* is an improper construction and is not used within Santería communities.

HISTORY

We know from archeological findings that as early as 500 BCE the people living in the Yoruba-speaking areas of West Africa had the technology to produce sophisticated stone carvings and that by 1000 CE the cities of Kano and Katsina had been established. However, little is known about the history of this area until the rise of

the Oyo Empire in the 1600s. As the wars between the city of Oyo and the surrounding towns it wanted to subordinate grew in intensity from the 1600s to the 1800s, more and more captives from both sides of the many conflicts were sent to the coastal cities where they were sold to the Europeans plying the waters of what was aptly called the Slave Coast.

After the Haitian Revolution in 1794 the center of the Caribbean sugar industry moved from Haiti to Cuba where increased production called for an increase in the number of laborers. The combination of more Yoruba-speaking captives available in the African slave markets and greater demand for laborers in Cuba brought the greatest influx of Yoruba peoples to Cuba in its history. By 1886 (when slavery was finally abolished in Cuba) between 500,000 and 700,000 Africans had been transported to Cuba. During the final years of the slave trade in Cuba, between 1850 and 1870, over a third of these were designated as Lukumi.[1]

Even before Columbus's voyage of discovery, the people of Spain had a history of slavery and legal codes governing both the enslaved and the slaveholders. These laws codified in the comprehensive *Las Siente Partidas del Rey Don Alfonso el Sabio* were compiled under royal direction between the years 1263 and 1265 and put into effect once Spanish colonies had been established in the Americas. Under these laws slaves had certain rights including the right to marriage and right to manumission. Manumission was the process by which a person could buy his own or another's freedom from slavery. According to *Las Siente Partidas,* a person could request that the court establish the price of his or her freedom. When someone came forward with the required amount, the person would be manumitted or freed. Although of little use to slaves working on the sugar plantations who had few opportunities to earn their own money, these laws enabled people in the cities to work together to buy their way out of slavery. It was also common for slave owners to free especially favored slaves either during their lifetimes or as part of their wills. By the middle of the nineteenth century, when there were few free blacks in the United States, over a third of the black population of Cuba was *gente de color* ([free] people of color). These were the people who developed the religion of Santería based on the beliefs and practice they, their parents, and grandparents brought from their African homeland.

From as early as 1573 free and enslaved Africans in Cuba had organized themselves, with the blessings of both the colonial and church authorities, into clubs called *cabildos.* These cabildos were social clubs where members of the same African ethnic group, called *nacíon,* could meet and socialize together. They were also quasi-political governmental bodies whose leadership was responsible to the Spanish city council for the behavior of their members. Cabildos provided a variety of services to their members, including burial for those who died, help for widows and orphans, funds to manumit members or their families, and social and spiritual guidance.

By law and custom, the members of each cabildo were members of the same African "nation" whose dances, drum types, and songs were considered ethnically significant symbols. The Cuban authorities hoped to provide a safety valve against discontent based on the members' social conditions while inserting a wedge between groups based on their different customs. However, West African religions are danced

religions. Rather than praying either silently or in unison, practitioners of these religions use drumming, song, dance, and possession trance to summon and worship their deities. To people who were more familiar with church-based religious services, these rituals probably appear more social than religious, but to practitioners of these religions these dances were intensely religious events. By encouraging the cabildos' members to maintain their drumming and dancing traditions, they were also encouraging them to reconstruct their religious traditions. Based on the importance of drumming and dancing to West African religious traditions, it is not surprising that the unintended consequence of maintaining culturally homogeneous cabildos was to provide a site for the development of new religious traditions based on the practices and traditions the members had known in their homeland. Since these activities were not recognized as "religious" by Europeans, the different African groups were able to reestablish their spiritual traditions in a relatively benign cultural context.

There was little persecution of the Afro-Cuban cabildos or their members during the colonial period. However, in the nineteenth century as the colony was moving toward independence, the authorities began (rightly) to perceive the cabildos as the breeding grounds for anticolonial and abolitionist activity. After slavery was abolished in 1886 and Cuba gained its independence from Spain in 1898, the new governmental authorities became increasingly concerned about the population of black and mulatto (mixed-race) Cubans who had expected full equality in the new administration.

In November 1906, the disappearance of a toddler named Zoila Días was blamed on three members of the *Cabildo Congos Reales,* who, it was said, wanted to use the child's blood and body parts for sacrificial or curative purposes. The tumult around this and similar cases was the beginning of a 20-year period of repression and persecution of all of the African-based religious groups in Cuba. During this period, Cubans became obsessed with the idea that the white civilized population must defend itself against the barbarianism and savagery of the black and mixed-race lower classes. The young lawyer Fernando Ortiz's *Los negros brujos,* published in 1906, outlining the rise and continuation of African-based witchcraft in Cuba, became the canonical text for recognizing such practices. In the 1920s, after learning more about the Lukumi societies in Havana, however, Ortiz become one of the leading figures in the new Afro-Cubanism movement that revalorized Afro-Cuban culture.

Afro-Cuban religions, including Santería, experienced alternating periods of repression and tolerance throughout the twentieth century. In the 1960s and 1970s the Castro government gave Afro-Cuban religions public recognition as "the people's folklore," and at the beginning of the twenty-first century they continue to regard these religions as an important part of their cultural heritage and source of tourist income.

PEOPLE

There was no single Yoruba Traditional Religion for Africans to reconstruct in the Americas. In fact, as citizens of warring towns, many of the Yoruba-speaking peoples

could be expected to be antagonistic toward one another. However, the priests and devotees of the many deities whose stories were woven together in the Yoruba mythological tradition worked together to create a new religious system that integrated their numerous beliefs and practices.

Yoruba culture has always been incorporative, flexible, and eclectic. In addition to incorporating the religious practices of the different African worship communities, Yoruba peoples in Cuba also incorporated elements from the surrounding Spanish culture. Although this is generally presented as an attempt to deceive or mislead members of the dominant culture, the incorporation of alien religious powers into their religious pantheon had long been a practice among West African peoples. By incorporating Catholic saints, iconography, and sacramentals (that is, Catholic rituals of private devotion not associated with the sacraments of the Church) into their own practices, the Yoruba peoples in Cuba were able to domesticate these powerful spiritual forces for their own use. Although this mixing may have confused outsiders, Afro-Cubans and their contemporary descendents have never been confused by the presence of these appropriated images and objects.

Contemporary santeros identify 11 African-born founders of Lukumi lineages: Efuche (Ña Rosalia, aka María Trujillo), Ainá (Ña Margarita Armenteros), Igoró (Ña Caridad Argudín), Apoto (Ña Belen González), Ma Monserrate (González), Francisca Entensa ("Palmira"), Obadimelli (Octavio Samar), José Pata de Palo (Urquiola), Los Ibeyi (the "Twins," Perfecto and Gumersindo), Monserrate Asiñabí, and Tía Julia Abonse.[2] Significantly seven of these founders are women. Women held important religious positions among the Yoruba-speaking peoples of Africa, so it should not be surprising to find that they were instrumental in the recreation of their religious practices in Cuba.

There were some santeros in the United States before the Cuban revolution. The earliest babalawo we know of was Francisco (Pancho) Mora who came to the United States in 1946. The first American woman initiated to the religion was the Cuban-born Mercedes Noble, who was initiated in 1958. The first African American initiated was Walter King, who later took the name Osejiman Adefunmi. He was initiated along with Christopher Oliana in Matanzas Province, Cuba, in 1959. Leonore Dolme, another Cuban santera initiated Margie Baynes Quiniones, the first African American priestess, in Queens in 1969. Assunta Seranno, a Puerto Rican priestess who was initiating priests in Adefunmi's temple, initiated the author Judith Gleason, the first Anglo-American priestess initiated in the United States.[3]

Although the Santería communities in the United States tend to be private and anonymous, two communities have played an important part in the public history of the religion: Oyotunji Village in South Carolina and the Church of the Lukumi Babalu Aye in Florida.

After his return from Cuba in 1959, Osejiman Adefumni founded a series of Orisha-centric organizations in New York City.[4] As a Black Nationalist he felt that African Americans needed to separate themselves from mainstream American culture, so in 1970 he established Oyotunji Village in Beaufort County, South Carolina. In 1972 he was initiated into the Ifa priesthood and proclaimed the Oba (king) of

the Village. Until his death in 2005, Adefumni led the Village in the effort to create an authentically African "kingdom" within the confines of the United States. Although the actual population of the Village has been small (no more than five to nine families during the last ten years of Adefumni's life), it has had a lasting effect on the face of Orisha worship due to the large number of priests and priestesses who were initiated in their system. The religious practice that developed at the Village, although based on Santería precedents, was tailored to meet the needs of African American devotees. This lineage is often known as Orisha Voodoo since it incorporates not only the beliefs and practices of the Yoruba people as they were preserved in Cuba but also practices based on contemporary Yoruba culture and the beliefs and practices from other West African peoples.

The Church of the Lukumi Babalu Aye (CLBA) was founded in 1974 in a suburb of Miami by a small group of devotees including Iyalosha Carmen Pla, Babalosha Raul Rodriguez, Oba Ernesto Pichardo, Babalosha Fernando Pichardo, and Attorney Gino Negretti.[5] In 1987 the Church celebrated the preopening of its first public location. This was a radical change from the predominate form of Orisha communities, which are home-based and very private. Immediately the Church became the center of a political uproar. The city of Hialeah eventually enacted a series of ordinances that banned ritual animal sacrifice, an attempt by the city to deny CLBA its first amendment right of free religious practice. The Church sued the city, and in 1993 the United States Supreme Court in a landmark ruling overturned the lower courts in favor of CLBA, declaring Hialeah's city ordinances were a denial of the Church members' constitutional rights. Since that time the Church has attempted to regularize Orisha worship by providing membership status to devotees across the nation and by providing a certification service for priests and priestesses. Although the Church is committed to the abandonment of syncretic retentions and the reestablishment of traditional rites and values, it has incorporated many of the outward forms of the American religious scene, including identifying the Necklaces ritual as a "baptism" and developing and performing several types of rituals not known among practitioners in Cuba such as marriages and baby naming ceremonies. By establishing a storefront "church" and developing many familiar religious forms, CLBA is on the forefront of the movement toward the "protestantization" of the tradition.

COSMOLOGY

Scholars have had a difficult time describing the sacred cosmos of the Yoruba-based traditions because they do not fit comfortably into any of our standard categories. Many descriptions are based on the work of the Nigerian scholar and churchman, E. Bolájí Ìdòwú.[6] In his classic *Olodumare: God in Yoruba Belief,* Ìdòwú argued that God had revealed himself to all peoples, including the traditional Yoruba. Using his knowledge of Christian theology, he describes Olodumare, the Yoruba "high god," as having all the characteristics of the God of Christianity: all-powerful, all-wise, all-knowing, all-seeing, immortal, unchanging, invisible, transcendent,

absolutely just, and benevolent.[7] However, Ìdòwú had to classify traditional Yoruba religion as a "diffused monotheism" in order to account for the many deities, or Orisha, who are the actual focus of Yoruba religious practice. Ìdòwú viewed the Orisha as the "ministers" of Olodumare who serve as mediators to humanity. Thus, Ìdòwú established a hierarchical model that placed Olodumare at the head of a pantheon that included all of the other Orisha who occupied one or more secondary positions.

Other scholars, notably Pierre Verger, have questioned Ìdòwú's basic model, suggesting instead that the Yoruba people thought of the Orisha as separate and fully functioning deities who were more or less independent of Olodumare. Verger said that Yoruba cosmology could more correctly be described as a collection of juxtaposed theisms or even juxtaposed monotheisms. Verger also suggested that traditional Yoruba thought was a type of monism in which *ashé,* which he calls "the vital power, the energy, the great strength of all things,"[8] underlies all that is. In this formulation, the force of ashé rather than a personal being (i.e., Olodumare) stands behind the multitude of visible and invisible forms. According to this monist view, Olodumare is the personification of ashé and the Orisha are nodes of the power of ashé.[9]

Both descriptions of the Yoruba world view are true in that they all provide an insight into the way the Yoruba describe the cosmos. That they are mutually contradictory warns us that our categories are insufficient to fully explain this cosmology. The Yoruba themselves describe the cosmos as a closed calabash that can be opened to reveal two halves identified as the visible and invisible worlds. According to this description, there is no "this world," and the "next world" is only a single world consisting of visible and invisible elements. In the visible half of the calabash the Yoruba see people, plants, animals, and all the natural and manufactured items that surround us. In the invisible world are Olodumare, the Orisha, and all of those who have died, the most important of which are the honored ancestors. People move between the visible and invisible worlds as they are continually reincarnated, generally into the same family lines. Reincarnation, in this view, is a positive thing, a reward for having lived a long and good life. This leads to a this-worldly and pragmatic religious tradition that promotes luck, health, and prosperity—all the good things of life—rather than a concern about some next worldly system of rewards or punishments.

Olodumare, the Great God

From the theistic perspective described by Ìdòwú, Olodumare is the great god of the Yoruba pantheon, the personification of the energy of ashé. Olodumare is the creator of the universe and of all it contains, the chief source of all power who is beyond human understanding and categories. As a transcendent or "high" god, Olodumare is beyond human comprehension, the God behind the gods, and the ultimate source of mystery and power. Although there is some evidence of Olodumare worship communities in Yorubaland, generally Olodumare is never approached directly, no shrines are erected in the name of Olodumare, no rituals are directed toward Olodumare, and no sacrifices are made to Olodumare since Olodumare is considered the

remotest of beings. At the same time, Olodumare is also an immanent deity, present in all that is. It is the breath of Olodumare that maintains the life of all beings and the energy of Olodumare that sustains the universe. We can see Olodumare not only in the grandeur of the stars and the mountains but also in the butterfly, the earthworm, and the newly born child.

Followers of Orisha religious tradition both in Africa and the Americas who have interaction with Christian and Muslim traditions often conflate Olodumare with the monotheistic God of Judaism, Christianity, and Islam. In Cuba and the United States, devotees have even gone so far as to appropriate two of Olodumare's Yoruba praise names, Olorun "owner of heaven" and Olofi "supreme ruler" to form an invocation trinity of Olodumare, Olorun, and Olofi.

The Orisha

Olodumare is not, however, alone. As Ìdòwú points out, it is not the worship of Olodumare that forms the basis of traditional Yoruba religion; rather it is the many divinities, called Orisha, who are the focus of the ritual attention of the Yoruba people and their religious descendents. From the monistic view, the ashé of the universe is not homogeneous; it collects and forms into nodes of power the Yoruba recognized as forces of nature (wind, ocean, and thunder), power sites (rivers and mountains), and aspects of human life (our roles as mothers, kings, and warriors). In the Yoruba traditions these forces have been anthropomorphized and mythologized into a group of beings or demigods called the *Orisha.* The Orisha are multidimensional beings that represent the forces of nature, act as archetypes, and function as sacred patrons or "guardian angels." Some, but not all, Orisha are also identified as deified ancestors, honored forebears who have been elevated to divine status.

As knowable aspects of Olodumare, the Orisha represent a level of power that is approachable though ritual action and so provide the most important focus of Yoruba religious practice.[10] The Orisha have attributes and stories similar to the stories and attributes used to describe the ancient Greek and Roman deities. Their stories tell us how the world came to be the way it is (why thunder and wind are often found together) and how to live a good life (sometimes you can persuade better with honey than with a sword). However, unlike the Greek gods, the Orisha are not remote deities living high on a mountain peak. They are living beings present in the daily lives of their followers. It is around the Orisha that most Yoruba and Santería religious activity focuses. Most of the Yoruba mythology tells of the time when the Orisha lived upon the earth.

In Africa there are countless Orisha: 201, 401, 2001—as many as you can think of —plus one more. Since they represent the forces of the universe and are elements of Olodumare, there is an Orisha associated with every natural and manufactured thing, including rivers, hills, the forest, the ocean, the crossroads, love, children, wealth, and occupations like blacksmith, farmer, and hunter, as well as natural phenomena like thunder and lightning, wind and rain. In the Americas some parts of this pantheon have maintained or gained prominence while others have become

more obscure. The most well-known Orisha in the Americas are the warriors Eleggua, Ogun, and Ochosi; the Ruler of the White Cloth Obatala; the mother of the Orisha Yemaya; Shango, the legendary fourth king of the city-state of Oyo; Oya, the whirlwind and the owner of the cemetery; Obba, the first or legitimate wife of Shango; and Oshun the youngest of the Orisha who is the guardian of love, wealth, and children.

Eleggua

All ceremonies and rituals begin with an invocation to Eleggua, who is also called Eshu. He is the messenger between the gods and men, the owner of the crossroads who must open the way for communication between the visible and invisible worlds. Eleggua is one of the most complex of the Yoruba deities. Christian missionaries, in their early encounters with Yoruba religion, tended to equate him with the Devil, but this is most unfortunate and distorts his nature.[11] Eleggua is a trickster, and a mischief-maker, the one who punishes misconduct and rewards upright behavior. He is a source of wisdom and knowledge, as well as the one who can confuse situations.[12] The Yoruba cosmology does not contain the duality of radically opposing forces such as good and evil, so Eleggua often appears ambiguous. His actions may appear evil because they test people's character as well as punish their misconduct. At the same time, it is Eleggua who rewards good character and correct conduct.

Each Orisha is represented by numbers, colors, dance steps, drum rhythms, and a myriad of natural and manufactured goods. Most of the Orisha are also associated with one or more Catholic saints. Eleggua is associated with the numbers 1, 3, and 21. His colors are red and black or black and white. His most common symbols are the hooked staff, crosses and crossroads, straw hats, toys, and candies. He is associated with a myriad of saints including Nino de Atocha (the Christ Child of Atocha), Anthony of Padua, and Anima Sola (Lonely Spirit, or the soul in Purgatory).

Ogun

Living at the boundary between town and bush is Ogun, the blacksmith, ironworker, and patron of all metals. Like Eleggua, Ogun is ambiguous. He is associated not only with surgeons, policemen, soldiers, automobiles, and railroads but also all acts of violence and war, especially those caused by metal implements (arrows, knives, and swords, and later guns and cannon). Ogun represents the triumph of technology over raw nature. According to one story, when the Orisha first came to earth they were unable to pass through the dense thicket until Ogun opened the way using his trademark machete. For this reason he is often invoked to clear the way or remove obstacles to physical, emotional, or spiritual development.

Ogun is associated with the number 3. His colors are green and black or green and white. His most common symbols are the railroad spike, anvil, sword, rake, sledge, and all iron implements. He is associated with several saints including Peter, Anthony, James the Greater, John the Baptist, and George the Dragon-Slayer.

Ochosi

Ochosi, together with Eleggua and Ogun, form the group known as *Los Guerreros,* the Warriors. He is the patron of hunters and is often represented by the tools of the hunter, particularly a bow and arrow, or prey animals like deer. In the New World he is also associated with judicial and administrative powers and is often invoked by those who find themselves in trouble with the law or facing a criminal trial. However, Ochosi's justice can be cruel. Elders tell of a time when Ochosi had killed a pair of pheasants as a gift for another Orisha. Leaving the birds in his house, he returned to the woods to continue to hunt. While he was gone, his mother visited his house, saw the beautiful birds, and decided to take one of them home, thinking that her son would not mind. When he returned to his house, Ochosi, angry at the loss of one of his birds, shot an arrow into the air commanding it to kill the thief. The arrow, impelled by Ochosi's curse, pierced his mother's breast and killed her. Thus, it is said that Ochosi's justice is so accurate that he does not even spare his own mother.

Ochosi is associated with the numbers 2 and 7. His colors are blue and gold, violet lavender and black, or blue and orange. His most common symbols are bow and arrow, deer, Native American warriors, jail, and police. He is associated with Saints Norbert and Herbert.

Obatala

Obatala, whose name means "the ruler of the white cloth," is the great Orisha who is the father of many of the other Orisha. Among the Yoruba white is the color of fine character, creativity, wisdom, and purity. It is also the "color" of ashé, the energy of the cosmos. Everything white is associated with Obatala including white birds (particularly doves), the sky, and white cloth. As the essence of "whiteness" Obatala embodies the concepts of coolness, purity, patience, creativity, the wisdom that comes with age (white hair), and spirituality.

Obatala is associated with the number 8. His color is white, and his most common symbols are the head, bones, white doves, elephant, chameleons, as well as cotton, cocoa butter, and the white chalk called efun or cascaria. He is associated with Virgen de la Merced (Virgin of Mercy) and Jesus Christ.

Shango (also known as Chango)

Shango was once a living man, the fourth *Alaafin* or king of the city of Oyo. One story says that he inadvertently caused a thunderstorm that killed his wives and children. Full of sorrow and remorse, he abdicated his throne and hanged himself. In another story he hanged himself after he was dethroned and expelled because of his abuses of power.[13] The act of contrition, represented by his self-imposed death, caused him to be raised to the level of Orisha. As an Orisha, Shango is the essence of male sexuality, the power of the male to create new life. He is also associated with

thunder and lightning as well as with the power that can be unleashed against both others and oneself. To be able to control such power is power itself. Because of his association with lightening, Shango absorbed much of the cult of the earlier lightening deity Jakuta, who was considered the "wrath of Olodumare."[14]

Shango's numbers are 6 and 12. His colors are red and white, and his most common symbols are the two-bladed axe called the *oshe,* drums, horse, turtle, fire engine, and everything associated with firemen. He is associated with Saint Barbara.

Yemaya

The female Orisha Yemaya and Oshun are said to be sisters, and they represent the complementary forces of female sexuality and maternal love and protection. The stories tell us that, in addition to her own children, Yemaya, whose name means "mother whose children are as numerous as fishes," often raised the children of others, especially those of her sister Oshun who as the goddess of love was more interested in the begetting of children than the raising of them.

But Yemaya can be a stern mother. In some stories Yemaya is the biological mother of Shango, while in others she is his adoptive mother. In one, as his adoptive mother, they are separated for a very long time, so long that the great womanizer Shango does not recognize her when they meet at a drum party. Struck by her beauty and not realizing she was his adoptive mother, he suggested that they go off alone together. She agrees and suggests they go to her home. So the queen of the ocean took the embodiment of fire on a small boat out in the middle of the water. When she caused a storm to rock the tiny boat, the great king, who did not know how to swim and was deathly afraid of water, was terrified. He was saved from her anger only when he recognized Yemaya, repented of his incestuous desires, and promised to respect both the mother who bore him and the one who raised him.

Yemaya's number is 7, and her colors are blue, crystal, and white. Her most common symbols are fish, shells, mermaid, fan, boats or ships, oars, and anything associated with the ocean or boats. She is associated with the Virgin of Regla.

Oshun (also known as Ochun)

Oshun, Yemaya's sister, is the divinity associated in the New World with rivers and fresh water. She controls all that makes life worth living, including love, marriage, children, money, and pleasure, and is the essence of female sexuality. Unlike the warrior Orisha who depend on power and weapons, Oshun uses the good things in life to win her battles. Oshun is associated with the number 5. She is the exclusive owner of yellow, the color of honey. Her most common symbols are honey, gold or brass, fan, sunflower, and mirror. In Cuba she is associated with the Virgin of Caridad, who is also the patron saint of Cuba.

According to Yoruba legend, the women of the world separated themselves from the men and formed their own town. The king called upon the Orisha to bring the world back into balance by capturing the town of women and bringing the men

and women back together. Each of the warrior Orisha tries and fails. Shango fails, and Babaluaye fails. Egungun (the embodiment of the ancestors) fails. Ogun fails. Even Oya, the woman warrior fails. Finally Oshun tries. But instead of attacking with sword and spear, she takes a gourd and string and makes a *shekere* (a type of musical instrument that has beads or shells woven around the outside of the gourd as noisemakers). Beating on the shekere, she dances into town singing, "Oshun is coming to play, Oshun does not know how to fight." Soon all the women join in the dance and follow her back to where their men are waiting. Balance is restored to the world.[15]

Obba (also known as Oba)

Among the Yoruba in Africa, Obba is the first wife of Shango, who is also married to Oshun and Oya and a host of others. In the Americas, where monogamy is the norm, she is considered his legitimate wife while the others are given the status of consorts or mistresses. As the owner of the Obà River she is the patron of wealth and commerce and is said to have invented navigation. Many consider her a great teacher, who taught all the Orisha what they know, including the techniques of warfare, metallurgy, and the like. She is also associated with marital and domestic stability. In the best known of her stories she is advised (some say by Oshun, others by Oya) to cut off her ear and add it to some stew in order to regain the love of her husband Shango whose interest had wandered. When her attempt to regain his attention fails—he's appalled to find her ear in his dinner—she leaves to live in the cemetery where she is the mistress of the grave. There she continues as the patron of all abandoned and abused women.

Obba's number is 9, and her color is pink, rust, or peach. Her most common symbols are a single earring, feather, pen, book, shield, sword, mask, and anvil. She is associated with Saints Rita and Catherine.

Oya

Oya is the embodiment of the winds and the tempest. As the wife of Shango she learned to spout fire and lightning as he does. She is a warrior Orisha and can be very aggressive in her behavior. We can see her power in the winds and lightning of the thunderstorm where she is fighting alongside her husband. She is also the owner of the cemetery and as such controls the dead. One story tells of her revenge on Shango for his dalliance with Oshun. Because of his fear of the dead, she is able to imprison him in her home by stationing a battalion of spirits around its perimeter.

Oya's number is 9, and her color is maroon or any combination of nine colors. Her most common symbols are whirlwind and copper. She is associated with Theresa of the Child Jesus (Little Flower), Teresa of Avila, and Our Lady of Candelaria.

Aganyu

Two different sets of stories are told about Aganyu. In one he is the patron of the volcano who spits fire and stones in his anger. In other stories, he is the ferryman who

takes travelers across the river. In one story that combines these two aspects, after Aganyu ferries Yemaya across the wide water, she discovers that she has no money. In payment, she agrees to offer herself to him. From this liaison is born the great Shango, who inherits his father's fiery nature. As a young man he decides that he must find his father whom Yemaya refused to identify. She, however, does give him the information he needs to recognize him. When Shango arrives at Aganyu's river, he approaches the ferryman and attempts to greet his long-lost father. Unaware of the results of his brief relationship with Yemaya, Aganyu refuses to acknowledge his son. They fight, each spurting fire from his mouth at his opponent. Finally, Aganyu realizes that only his son would have such a talent and acknowledges Shango. This story has come to explain Aganyu's love of children and his association with fatherhood.

Aganyu's number is 9, and his colors are maroon or deep red, green, and yellow. His most common symbols are the volcano and the ferryboat. He is associated with Saint Christopher.

Babaluaye

Babaluaye ("Father who rules the World") is a praise name of the Yoruba and Dahomey deity Sopona, the smallpox god. Because it was believed that saying the deity's name invoked his power—in this case the deadly disease of smallpox—devotees used his praise name instead. In Cuba and the United States, it is common to hear him referred to as Babalu or even Lazarus, the name of the Catholic saint associated with him. In Santería mythology this deity went to the land of the Dahomey after he was exiled from the Yoruba people. There he became a great king. His rituals are conducted in Fon, the language of the Dahomey people. Babalu was introduced into American culture by the 1950s musician and television star Ricky Ricardo, who often incorporated Orisha rhythms into his Latin music and exclaimed, "Babalu!" in exasperation. In the 1990s a Santería community in Hialeah, Florida, established the first Santería church, the Church of the Lukumi Babalu Aye (CLBA) incorporating this powerful Orisha as their patron.

Babaluaye's numbers are 13 and 17, and his colors are purple, black, and light blue. His most common symbols are beans, popcorn, sesame seeds (all of which look like smallpox pustules), a dog, and crutches. After smallpox was eradicated in the twentieth century, Babalu became the patron of AIDS and its victims. He is associated with the Biblical character Lazarus.

The Ibeji

The Yoruba people have the highest rate of twin births in the world. But even among the Yoruba twinning is unusual enough to be considered abnormal. Although not deities per se, twins are considered especially sacred and powerful beings. If one or both twins should die, as often happened since twins are commonly born premature and underweight, the parents would commission a small statue to represent the dead child (or children). The mother treated the figure as though it were a living

baby "feeding" and bathing it when she fed and bathed her living children. Eventually the figurine was placed on the family shrine and honored for the prosperity twins typically bring their families.

In Cuba, this veneration of twins developed into a complete deification of the power of twinning. In Santería the Ibeji (the Yoruba word for twins) are represented by two small dolls dressed as a boy and girl in one of the costumes worn by adult members of the religion. The Ibeji signify the prosperity that children can bring, as well as a balance between opposing forces, the playfulness of children, and the multiplication of good luck. Although no one is initiated directly into their worship, they are among the most beloved Orisha and found on many Santería altars and thrones.

The Ibeji's number is 2, and their colors are those of Shango and Yemaya (red and white, blue and white). Their most common symbols are the twin dolls that grace their altars. They are associated with Saints Cosmas and Damian as well as the Romans Castor and Pollux.

Inle and Abata

Although Babalu is considered both the cause of and the cure for infectious diseases, Inle is the deity of medicine and health, the physician of the pantheon. Patron of the Erinlé River in Nigeria, Inle (who is known as Erinle in Africa) is a hunter and fisherman who spends the majority of his time in the forest. Thus, he is familiar with both waters and herbs, the essential ingredients of healing when antibiotics and other modern medical wonders are unknown. Abata is variously considered his wife and helpmate (nurse) or brother and is associated with the ponds and marshes deep in the forest. As such, she is sometimes described as the source of Inle's river. Some say that Inle is male during half of the year and female the other half or that he lives on land half of the year and in the river the other half (which may be the same thing since land is a "male" location while the river is a "female" one). In one well-known story, Yemaya falls in love with the beautiful Inle whom she takes to live with her at the bottom of her river (the Ògùn in Nigeria). There she shares all her secrets with him. When their relationship ends and he prepares to return to dry land, she becomes concerned about the depth of his knowledge of her realm and cuts out his tongue so he cannot tell what he has seen. Thus, in Cuba and the United States, they say that Inle does not speak in divination but depends on Yemaya to speak for him.

Inle's number is 7, and his colors are green, yellow, and blue. His most common symbols are fish, snake, and a doctor's staff. He is associated with Saint Rafael.

Olokun (or Olocun)

While Yemaya is associated with the upper reaches of the ocean, Olokun, whose name means "Owner of the Ocean," owns the depths and all the wealth that can be found there, as well as all the wealth brought by way of the ocean. Some say that Olokun is a male deity and others that she is female. It appears that in Yorubaland there were two Olokun worship groups, one made up of people who lived along the coast and worshiped Olokun as a male deity and one focused around the city of Ife, which

is in the center of Nigeria. These people worshiped Olokun not as the owner of the ocean but as the female owner of the riches of the ocean, particularly beads and shells. Which view an American practitioner has of Olokun depends upon the homeland of his or her religious ancestors. Many contemporary practitioners resolve the issue by suggesting that "no one knows what is at the bottom of the ocean" and thus no one really knows the answer to such an intimate question.

Olokun is especially important to African American practitioners because of the many African people who died during the Middle Passage and were buried at sea.

Olokun is associated with the numbers 4, 7, and 9, and the colors dark blue and white. Olokun shares many of the symbols of Yemaya including fish, ships, and their tackle, as well as the mermaid, snake, and mask. There are no saints directly associated with Olokun, although some people associate Olokun with the Virgin of Regla.

Osanyin

Herbs are very important to the practice of Santería. Although all the Orisha have particular plants associated with them, Osanyin is the Orisha associated with herbs in general. He is envisaged as a man with one leg, one arm, one big ear that is deaf, and one tiny ear that can hear insects crawling across the grass.

Osanyin's number is 3, and his color is green, the color of the forest. His most common symbols are herbs, leaves, and grasses. He is associated with Saint Joseph.

Orula (also known as Orunmila or Ifa)

Orula (who is known in African as Orunmila) is the Orisha of divination. It is said that he is present at the creation of every person, so he knows each one's complete destiny. He originally developed the divination method known as *diloggun* that uses cowry shells, but when he discovered that his wife (often named as either Yemaya or Oshun) had learned to divine with the shells he renounced them and developed a new method using palm nuts called *Ifa.* When he renounced the shells, his wife shared the techniques she had learned with all of the other Orisha. Today only priests of Orula can divine using Ifa, but all santeros can learn diloggun. Often the priests of Orula, called *babalawo,* use a chain called the *opele* to read Ifa instead of the palm nuts. Use of the palm nuts is said to be somewhat more accurate but the opele is faster and sufficient for most situations. Both diloggun and Ifa are based on a 16-digit number system, so rather than counting from one to ten, they count from one to 16. This makes 16 the highest single-digit number and the most numerically significant.

Orula's number is 16, and his colors are green and yellow. His most common symbols are the table of Ifa, the opele, and all the divination tools. He is associated with Saint Francis.

RITUALS AND CEREMONIES

In order to practice Santería, one must be initiated into the worship of the Orisha. Basic initiations include Necklaces (also called by the Yoruba word *eleke* or the

Spanish word *collares*), Warriors (also called by the Spanish term *Los Guerreros*), and the priestly initiation known variously as *Kariocha* (to place the Orisha on or in the head), crowning, *asiento,* or *hacer de santo.* In addition, before priestly initiation, one may receive a single Orisha for individual worship. Priestly initiation makes one the priest of a single Orisha (known as one's mother or father Orisha) and gives one the right to act as a priest of additional Orisha. After one has received priestly initiation, one may receive additional Orisha for whom he or she may also act as a priest.

Although many people receive the initiations of Necklaces and Warriors at the same time, they are two separate rituals. I describe them separately, although they may be performed in sequence within a single ritual event.

Necklaces

Beads and beadwork have ancient roots among the Yoruba people. As early as the ninth century CE there was a bead industry in the city of Ife in what is now Nigeria. From very early on beads were associated with trading wealth, and by the nineteenth century they permeated Yoruba culture. Among contemporary followers of the Orisha in the Americas, beads and beadwork are used to represent the Orisha and to embellish their tools and implements.

The ritual called Necklaces gives new adherents a set of beaded necklaces representing the primary members of the Santería pantheon. These necklaces are designed in strict adherence to the numbers and colors associated with each Orisha. Although there are variations among the different religious houses, generally the initiate receives the necklaces of Eleggua, Obatala, Shango, Yemaya, and Oshun. Each necklace is a single strand of beads constructed according to a distinct pattern. The exact color combinations and design are based on the Orisha guardians of the santero who is presenting the necklaces.

The ritual serves as a preliminary initiation into the worship of the Orisha. The new devotee is accepted into the religious family of the initiating priest, introduced to the five to seven primary Orisha of that household, and put under their protection. From this point on the initiating priest, who may be a man or a woman, takes on the responsibility for the religious training of the new godchild. The initiate owes the godparent respect and deference in all things religious. Since the necklaces are believed to put the godchild under the protection of their respective Orisha, sometimes a person is given a single necklace in an abbreviated form of the Necklace ritual in order to gain the protection of a particular Orisha.

Warriors (Los Guerreros)

In Yorubaland it was very common for every city and family compound and many individuals within a compound to have an image of Eshu/Eleggua to worship. In Cuba this practice was extended and enlarged to become the ritual known as *Los Guerreros* (the Warriors). Although there are many Orisha with warrior aspects, Los

Guerreros refers specifically to Eleggua, Ogun, Ochosi, along with Osun, the guardian of each individual's destiny. In this ritual icons representing these Orisha are given to the devotees. Through ritual action, the icons are imbued with the ashé of the Orisha so the devotees can worship them in their own homes.

Crowning (Kariocha)

In the ritual of priestly initiation, a devotee is crowned with the ashé of an Orisha to become the priest of that Orisha. One of the innovations devotees made in Cuba was not only to initiate an individual into the priesthood of a particular Orisha but also to give them priestly rights into a related group of Orisha. A priest's primary Orisha is known as the Orisha of the Head, or the priest's father or mother Orisha. Depending on which Orisha owns the priest's head, the initiate will also receive as part of the Crowning ritual the icons imbued with the ashé of a related group of from five to seven Orisha.

The *Kariocha* ceremony lasts seven days during which the priest-to-be, called *iyawo* (a Yoruba word meaning new wife) is sequestered in a small room together with his or her new Orisha. After that period of confinement, the iyawo must fulfill a yearlong novitiate period called the *iyawoage.* During this time the iyawo dresses entirely in white, is subject to a wide number of taboos, and is generally "in training" towards his or her eventual position as a fully certified priest. Because he or she is deemed especially vulnerable to a wide range of forces during this period, an iyawo, like a child, is protected by a number of rules and the solicitous care of his or her religious elders. It is not until the completion of the iyawo period that the initiate is accepted as a fully functioning member of the religious community, allowed to perform priestly duties, and fully integrated back into his or her previous life. At the end of the iyawoage, the new priest builds an elaborate altar honoring the Orisha and invites both members of the religious community and his or her personal family and friends to a dinner and coming-out party that signals the end of the initiation. Every year on the anniversary of the date of the actual initiation event, the priest will conduct a similar "birthday party" to celebrate his or her new birth.

Bembé

One of the most important Santería rituals is the *bembé* or *tambor* that calls the Orisha to presence in the bodies of their priests. In the bembé practitioners, using drumming, singing, and dancing, invite the Orisha to take possession of the body and consciousness of one or more of the attending priests. Possession allows devotees to speak directly to the Orisha and the Orisha to address, bless, and guide their devotees.

The bembé is a communal celebration, a party in honor of an Orisha (although all of the Orisha are invoked and invited to participate). The bembé may be held in a private home or a rented hall depending on the size of the community and the resources of the sponsor. An elaborate altar is built at one end of the room

to honor the Orisha, and an offering of fruits, pastries, cakes, and the like are placed in front of the space. The music of the bembé is provided by a set of sacred drums called *bata.* A bata ensemble consists of three two-headed drums played by highly trained drummers and a vocalist who leads the call-and-response singing. Each Orisha has a set of rhythms and dance steps that are used to call them into presence. As each Orisha's songs are sung, the priests of that Orisha, those who have been initiated and prepared for possession, dance in the open space in front of the drums.

As the heat of the drumming, singing, and dancing increases, one or more of the dancers will begin to show the preliminary signs of possession. With the help of the drummers, the singer, and the surrounding community, the Orisha is called into full presence and the consciousness of the individual departs. Although the transition between priest and Orisha may entail intense physical activity, jerky or irregular movements, and contorted or bizarre facial expressions, once the transition is complete and the embodied Orisha is fully in control all erratic and grotesque behavior stops. During the remainder of the possession event, the individual exhibits the behavior characteristic of the possessing Orisha, speaking to the people singly or in groups, blessing them, performing healing rituals, and generally providing advice and guidance to their followers.

Possession allows for a more personal level of communication between devotees and the deities than found in many other religions. During the possession event, the Orisha can speak directly to the participants, and participants can clarify any ambiguous messages or obligations. However, possession is not the method that the Orisha have for communicating with their followers. Santería also has a strong tradition of communication with the invisible world through the use of divination.

DESTINY, DIVINATION AND SACRIFICE

Like many peoples, the Yoruba and their American descendents believe that human beings are formed from a group of physical and nonphysical elements. While other Americans might name the body, mind, and soul as the components of human beings, the Yoruba would say that a person is composed of body, heart, breath, and head.[16] When they speak of "head" they mean not only the physical head (ori) but also what they call the "inner head," the spiritual head that is the bearer of each individual's destiny. According to the mythology, before one is born he or she must kneel before Olodumare and choose an ori, a destiny for this lifetime. Although each person can freely choose a destiny, that choice is made without full information so one may choose a good destiny that is solid and neat or one may choose a destiny that is beautiful on the outside but full of worms. Regardless of the destiny chosen, its details are forgotten, so that everyone is born ignorant of their destiny.

Although the general outline of one's destiny is determined before birth, the Yoruba did not believe that it was unalterable. Rather through one's actions one can soften a difficult destiny or, if one refuses to engage one's intellect and diligence, lose the

benefits of a fortunate destiny. Divination provides the method by which one can discover the outlines of one's destiny and work to improve a difficult destiny or manifest a fortunate one. Through divination one can begin to remember the agreement between one's ori and Olodumare and to make the life choices that are in harmony with that agreement.

Santería provides three types of divination. The simplest form uses pieces of coconut to get answers to yes/no questions. This so-called cocoa divination is normally used for simple questions and to confirm ritual actions. Questions or problems addressed directly to a particular Orisha use a set of cowry shells dedicated to that Orisha. The most difficult problems and questions provoked by simpler forms of divination must be brought to a *babalawo* for resolution.

Coconut divination uses four pieces of coconut meat that have not had the dark outside rind removed. When the coconut pieces are dropped on the ground they fall in one of five dark/light patterns (all white, one, two, three, or four dark sides showing). By asking a series of yes/no questions, a person can determine the will and pleasure of an Orisha and discern a plan of action. However, if one is having severe problems or if one requires a more detailed answer, one of the more complex divination systems are employed.

Each time a person is initiated to an Orisha he or she is given a set of cowry shells that are the divination set for that Orisha. These shells have a natural "mouth" on one side while the back of the shell is removed so that it will lay flat. Sixteen of the shells are cast onto a reed mat, and the resulting number or series of numbers are interpreted according to the client's problem and the Orisha whose shells are being read. Although it is a complicated system, any crowned priest, male or female, can decide to learn the verses and stories associated with the various combination of throws and be able to read the shells. However, most santeros depend on an *oriaté* who is highly trained as a diviner and ritual specialist to divine for them. Although the earliest oriate were women, until recently most were men. Several women in the United States and Cuba have begun to challenge this tradition.

Santeros, even the most proficient oriate, do not normally interpret falls with 13 or more mouths up. It is believed that those throws require recourse to a still higher level of divination that only a *babalawo,* Orula's divination priest, can perform. Using the divining chain called the *opele,* or the palm nuts, the babalawo speak the will of Olodumare through the mouth of Orula, their patron Orisha. Mythology tells us that Orula is present when each *ori* is chosen; hence, he knows each person's past, present, and future. Through Ifá divination, Orula indicates one of 265 possible *odu* or letters. Each letter is associated with a set of poems. Although the *odu Ifá* are similar to the numbers generated by the diloggun, they use a different set of sayings and poems or assign the same sayings and poems to different numeric combinations. Orisha worshippers in both Africa and the Americas believe that the solution to their problem, the secret of their destiny, is contained in these poems. It is the responsibility of the babalawo to know and interpret the poem or poems associated with the odu and to recommend a course of action to the client.

Often the course of action recommended by these various divination systems requires the inquirer to make a sacrifice or perform a cleansing or healing ritual in order to bring his or her life back onto the path of his or her best destiny. Sometimes these sacrifices are simple: the inquirer might be asked to offer natural or manufactured goods to an Orisha or enact a simple ritual. However, if the problem is serious, the inquirer might be asked to participate in a complex ritual or an initiation or to offer the blood of one or more animals to the Orisha.

Animal sacrifice is one of the most controversial aspects of Santería practice. People who have no qualms about using or eating animal products or killing small animals for sport or because they are perceived as vermin become incensed at the idea of killing in the service of ritual. However, sacrifice, the giving of natural and manufactured items to the Orisha or other spiritual beings, is viewed by santeros as essential for human happiness. Through sacrifice one restores the positive processes in one's life and acquires general well-being. One gives to the Orisha and the ancestors what they need and want in the expectation that they in turn will give what one needs or wants. This is not viewed as "bribing" or "buying off" the Orisha; rather it is the mutual exchange of *ashé* necessary to maintain the balance of the cosmos.

Many types of items are offered to the Orisha; however, when one's life is at stake or the community is celebrating an initiation, the sacrifice also includes the blood of animals. All types of sacrifice, but particularly animal sacrifice, serve to remind the participants of the delicate balance of the universe. As principally city dwellers, we forget that something must die—be it a cow or a chicken or a carrot—to make our lives possible. When the religion requires the sacrifice of an animal it is offered to the Orisha or the ancestor with respect, then it is killed quickly and with as little pain as possible. Santeros understand what the animal has given and are grateful.

In the early 1990s the city of Hialeah, Florida, passed a series of ordinances that made it illegal "to unnecessarily kill, torment, torture, or mutilate an animal in a public or private ritual or ceremony not for the primary purpose of food consumption." Since the city allowed the killing of animal for a host of other reasons "'even if you're tired of taking care of them,' as long as the purpose was not sacrifice," these ordinances appeared to be an effort to suppress the Church of the Lukumi Babalu Aye, a local Santería congregation. The congregation decided to fight the ordinances as a violation of their First Amendment right to freedom of religion. Ernesto Pichardo, one of the founders of the Santería church said, "Animal sacrifice is an integral part of our faith. It is like our holy meal."[17] At the hearing before the Supreme Court, Douglas Laycock, a law professor at the University of Texas, said, "The only way to show that sacrifice is 'unnecessary' to the Santería followers is to prove that Santería is a false religion."[18] However, the legitimacy of Santería as a religion was never questioned as part of the hearing. In the Court opinion overthrowing the city's ordinances, Justice Anthony Kennedy, quoting an earlier ruling,[19] said, "Although the practice of animal sacrifice may seem abhorrent to some 'religious belief need not be acceptable, logical, consistent, or comprehensible to others in order to merit First Amendment protection.'"[20]

PRIESTS, DRUMMERS, AND OTHER RITUAL SPECIALISTS

In both Africa and the Americas, the priesthood has traditionally been open to both men and women, and in many communities the majority of the priests are women. Priests take charge of ritual events and initiations, provide physical, emotional, and psychological healing, and teach new members of the community. In addition practitioners may be trained to take on other specialized roles within the community including divination priest, sacrifical priest, and drummer.

There are two types of divination priests. An *oriate* is an olorisha who has received additional training to perform the cowry shell divination and perform various types of rituals including the asiento or priestly initiation. A second type of divination priest is the babalawo (father of the mysteries) who is trained in the Ifa divination method. A babalawo, who is always a man, may or may not be initiated as an olorisha but he must limit his participation in the religion to Ifa. He does not perform any other initiation rituals except to initiate other men as babalawo. Although much of the literature on Santería suggests that the babalawo is the "high priest" of the religion, this is a mischaracterization of his position. The babalawo perform the highest form of divination, but they are prohibited from performing any of the initiation rituals so important to Santería practice including the asiento. In recent years, in an attempt to allow women to gain access to the prestige accorded to the fellowship of babalawo, an initiation similar to that of the babalawo has been developed. The *iyanifa* (mother of Ifa) can divine using the Ifa system and has many of the rights and privileges of the babalawo. Another role for women within Ifa is that of *apetebi.* An apetebi is an assistant to the babalawo. Often the babalawo's wife serves in this capacity, although he may use another woman as his assistant instead.

Although any initiated priest can perform simple sacrifices, for those involving chicken and other fowl one must receive an additional initiation known as *cuchillo, pinaldo,* or *knife* in order to sacrifice larger animals including sheep and goats. A babalawo or oriate always receives cuchillo, but other priests can also receive this advanced initiation.

Because Santería is a danced religion, drummers fulfill an important role in their communities. Often drummers have received only low-level initiations (Necklaces and Warriors) in addition to their primary initiation into Aña, the fellowship of the drums.

There are many other roles played by devotees of Santería. Every ritual requires a wide range of specialists, including those who erect the ritual displays called *tronos* (thrones), those who clean and cook the sacrificed animals as well as prepare other meals, those who are mediums and become possessed by the Orisha in ceremonies, and those who use their artistic talents to prepare all the accessories of the Orisha including necklaces and other beaded items, special clothes, costumes, and the like.

CONTROVERSIES AND ISSUES

Santería in the United States faces several types of controversies. Externally the use of animal sacrifice and the public's perception that Santería is a cult continue to plague devotees as they try to practice their religion. On the other hand, other groups, notably Spiritist groups and some Neopagans, have appropriated the trappings of Santería without participating in established communities.

As early as the 1960s anthropologists began to describe a type of *Espiritismo,* which George Brandon dubbed *Santerismo.* Espiritismo is a Caribbean variant of the Spiritism developed by Allan Kardec in the 1800s. Espiritismo calls on the spirits of the elevated dead to provide spiritual healing and advancement through mediums who can hear, see, feel, or, in some cases, be possessed by these spirits. Santerismo incorporated elements of Santería into Espiritismo beliefs and practices, including the use of beaded necklaces similar to those used in Santería, the incorporation of the Orisha in their pantheon of spirits, and the adaptation of the Santería religious kinship system, that is, identifying senior espiritistas as *padrino* or *madrina.*[21] Many Neopagan groups and other individuals are wide-ranging in the search for the divine. Thus, it should not be surprising that, as Santería gains public recognition, Neopagans begin to incorporate the Orisha into their pantheons. Many santeros find both of these developments disturbing as the requirements to work with the Orisha within the tradition are stringent and tied to the initiatory system, and outsiders who appropriate elements of the tradition are considered both foolish and dangerous.

Internally, several movements within the tradition also challenge participants. For the most part these are not challenges to the beliefs or practices of the tradition but rather organizational challenges. As the religion has moved beyond the Cuban and extended Latino communities, black and white Americans have brought their own sensibilities to the tradition. This has led to two somewhat overlapping movements. I call the one Protestantization and the other Africanization.

Protestantization is the attempt to make the tradition conform more closely to the organizational structure of American Protestant churches. This movement has led to a desire to remove all Catholic (Christian) trappings including the use of Catholic saints, holy water, and the like; the establishment of "church" organizations that can be recognized both by the local authorities and the surrounding community (for example, Church Lukumi Babalu Aye), a concurrent movement away from secrecy; and the development of a primarily male priesthood with a corresponding loss of status among female priests.

Africanization is the desire primarily among African American devotees to re-Africanize the tradition. Africanization efforts include the movement to replace Catholic and Spanish trappings with those from Africa including the use of Yoruba rather than Spanish vocabulary, the production of Africanized images to replace Catholic ones, the incorporation of Africanized dress, and the return to Yoruba communities in Nigeria to receive initiations and teachings. Along with these efforts has come the formation of religions and social communities modeled on an idealization

of Yoruba culture, of which Oyotunji Village is the most prominent example. This movement, too, had led to a movement away from secrecy and toward a more public face to the religion.

CONCLUSION

In the early twentieth century when scholars first began to seriously study Santería and its sister religions (Vodou, Candomblé, and Shango), they predicted that as the economic and educational levels of the people were raised these "superstitious" traditions would disappear. In fact, just the opposite is happening. As the religion has gained a foothold in the United States it has not only grown in absolute numbers, it has also attracted members from across the economic and educational spectrum. Today you can find practitioners in most major urban areas (and many smaller cities and towns as well). Although many of practitioners are from the lower socioeconomic classes, there are an increasing number of middle and even upper-class participants. Awareness of the religion in the general population has grown as well. It is not unusual to find these traditions included in university courses in the fields of religious studies, Latin American studies, and African or African American studies. A steady stream of books are finding their way into the big-name bookstores, and we are even beginning to see sympathetic portrayals of the religion in the popular media. You should not be surprised to discover that your neighbor, classmate, or friend is involved in one way or another with one of these religious traditions as they move into the mainstream of American culture.

Rastafarianism

Dawn L. Hutchinson

INTRODUCTION

The Rastafarian movement emerged in the 1930s in Jamaica, particularly in areas around the capital, Kingston. It was a response to the crowning of Emperor Haile Selassie in Ethiopia, a black king whom the Jamaican poor hoped would ease the social ills that plagued them. While the movement does not have a central authority that would determine doctrine, offer membership, train clergy, and regulate religious practices, all the groups do share some common beliefs. Central to Rastafarianism is the belief that Haile Selassie, former emperor of Ethiopia, was sent to completely transform the social world dominated by the white power structure, referred to as Babylon. Each of the groups condemns white oppression of the African masses, and they believe that a return to Africa will enable them to overcome this oppression. Large groups of Rastafarians began to immigrate to the United States in the 1970s, where they continue to practice the religious rituals of their Jamaican-born movement.

HISTORY OF RASTAFARIANISM

While the Rastafarian Movement began with the crowning of Haile Selassie in 1930, poor economic conditions in Jamaica and several early religious movements precipitated its beginnings. During the colonial period in Jamaica, the indigenous blacks were enslaved, and thus disenfranchised. They were penniless and dependent on their colonial oppressors. Unfortunately, emancipation, which occurred between 1834 and 1838, did not help the economic conditions of the former slaves. They were denied the right to own land, and their former owners brought in workers from India and Africa, making jobs scarce and depressing wages for the former slaves.[1] Some former slaves were able to gain access to land for a short time by squatting on government land or by working with Baptist, Moravian, and Methodist churches to purchase land.

After the colonial period, the failing plantations continued to produce meager crops, and in the nineteenth century, British and American capital allowed the rejuvenation of agricultural business ventures. The government reclaimed the land that former slaves had appropriated, leaving even more people landless and jobless. Many formerly rural people migrated toward cities, producing higher levels of unemployment and the growth of urban slums.[2] By 1930, the agricultural businesses were weakened by capitalism. Even those few who had been earning wages on plantations had to find jobs in the new factories and other city industries.[3] Most of the poor were also alienated from the political system, which concerned itself with international affairs and issues important to the British crown. There was no system in place for the government to respond to the needs of the native Jamaican people.

Finding themselves powerless, many of the former slaves began to perceive the white power structure in Jamaica as a source of evil. They saw themselves enslaved by this evil force and called it "Babylon." Babylon, for Rastas, refers to any of the evil forces in the world (systems that oppress and divide the masses of people).[4] Some blacks began to form small groups for the purpose of finding a solution to this problem of Babylon well before the official beginnings of Rastafarianism.

One of the earliest of these groups was called the Maroons. They began forming even before emancipation. For them, all whites were evil. Their solution for ridding themselves of the evil white force was to escape from their owners and establish small self-supporting communes.[5] These groups gradually grew and became a problem for the British government. They staged small resistance actions that led more people to become interested in their antiwhite agenda. This escalated into the Maroon Wars (1655–1739) between the Maroons and the British. The Maroons signed a treaty with the British after the wars in 1739, giving them some status and giving them power to help the British capture other runaway slaves and other antiwhite groups.

Another early antiwhite movement was started by Paul Bogle, a black preacher and Dean of the Native Baptist Church in Jamaica. He worked with a small group of blacks to change the colonial laws that were biased against the black masses. The ex-slaves were bitter against what they called the "White Man's Law": the way the planters and their managers maintained law and order. Former slaves also feared that the planters intended to restore slavery. Bogle led small secret groups whose long-range plans were to "drive the white man from Jamaica."[6] Many wanted the overthrow of white planter rule and the breakup of the plantation system. This general unrest among the poor led Bogle into rebellion with between 200–300 supporters. During the rebellion a skirmish occurred at a St. Thomas courthouse in 1863 later dubbed the "Morant Bay Rebellion." The governor pursued all those suspected of being involved in the rebellion. Hundreds of people were flogged, shot, or hanged. Eventually Bogle was caught by Maroons and British militia troops and was publicly hanged.

An important pre-Rastafarian figure was Marcus Garvey, a Jamaican social reformer. He formed the Universal Negro Improvement Association (UNIA), to which he devoted the majority of his life. He traveled widely around the world, noticing the poor conditions for former Africans everywhere. He is considered by many to be

the grandfather of Rastafarianism because of his message of African pride, his distrust of white power structures, his work for the improvement of blacks everywhere, and possibly his prediction of a future black king in Africa.

Eventually in Jamaica, the disenfranchised antiwhite groups looked for a black messiah to save them from their oppression and return them to Africa. A phrase began to circulate, originally attributed to Garvey, that gave the black masses hope. Garvey reportedly prophesied "Look to Africa, where a black king shall be crowned, for the day of deliverance is near."[7] While most Rastas attribute this phrase to Garvey, it was probably stated by an associate of his, the Reverend James Morris Webb, who is also known to have claimed that a black man from Africa would become the universal king.[8] Webb probably spoke this prophecy at a UNIA convention in 1924. Six years later, Haile Selassie was crowned emperor of Ethiopia; many believed him to be the black king from the Garvey/Webb prophecy.

Also not coincidentally, in 1924 a secret Bible written by Robert Athlyi Rogers of Anguilla, a Carribean island, was published, entitled "The Black Man's Bible." This book is often referred to by Rastas as the *Holy Piby.*[9] This book made its way into Jamaica in 1925 and was read by many in the antiwhite groups.

In 1930, the Ethiopian Prince Regent, Ras Tafari, was crowned emperor of Ethiopia and took the title Haile Selassie I, King of Kings, Lord of Lords, the All-conquering Lion of the Tribe of Judah. The crowning of a black king gave the poor and oppressed Jamaicans some hope because it appeared to fulfill the earlier prophecy of a coming black African king. Haile Selassie's ascension to the Ethiopian throne is considered the beginning of Rastafarianism. Rastas expected Emperor Selassie to instigate a transformation of the world order. They believed he would dissolve the white power structure and return all black people to Africa. The emperor himself would make arrangements for all blacks to be collected and returned to their homeland.[10]

While Garvey's earlier efforts to free Africans from their white oppressors included practical solutions such as raising funds, starting businesses run by and for blacks, and strengthening pride in African heritage, the plans of Rastafarians were for Emperor Selassie to miraculously transform the world.[11] Rastafarians formed small groups called enclaves that were communally operated. Each group was independent, holding in common the belief that Haile Selassie was the messiah who would redeem all black Africans and return them to their homeland. Rastafarians chose to wear their hair in "dreadlocks," symbolizing their pride in their African roots. They allowed their locks to grow long and did not comb them. They cite support for this practice in the Bible: "They shall not make baldness upon their head, neither shall they shave off the corner of their beard, nor make any cuttings in the flesh" (Leviticus 21:5). This practice, and their insistence on smoking ganga (marijuana) in their ritual practice, made them social outcasts from Jamaican society.

One of the first enclaves, popularly known as Dung Hill, was renamed "Addis Abada" by the Rastas, after the place where Haile Selassie was crowned.[12] Here lived a community of bearded men who awaited the return of Haile Selassie to the throne.[13] Italy had invaded Ethiopia in 1935, leading to a five-year exile of Selassie

to Bath, England. During Selassie's exile, many of the Rastafarian groups became more involved in politics because they felt that a practical solution to the problem of Babylon was necessary. During the 1940s and 1950s, many in the Rastafarian movement chose practical steps to realize their religious beliefs. Many Rastas defied the police, stocked firearms, and organized illegal street marches.

Another well-known enclave, called Pinnacle, was begun by Leonard Howell. Howell, a major figure in the dissemination of Rastafarian beliefs, formed the Ethiopian Salvation Society in 1940. This group of about 1600 people moved to the Pinnacle commune in St. Catherine where they cultivated ganga and practiced Rastafarian rituals. Eventually Howell claimed that he was Haile Selassie, and therefore the messiah. This greatly confused many of his followers, and the membership dropped off somewhat. Police raided Pinnacle in 1954, arresting Howell. The local magistrate declared Howell to be mentally unstable and committed him to an institution for the criminally insane.[14] His followers disbanded following his incarceration.

In 1941, Haile Selassie was returned to his throne in Ethiopia and the Rastas began to await the millennium—the appearance of ships from the emperor that would return them to Africa. Much of this expectation was in response to an announcement made by Maime Richardson of the Ethiopian World Federation, an organization established by Haile Selassie to raise money and political support for Ethiopia from black nationalist groups in the west. Richardson claimed that "the Emperor Haile Selassie is now engaged in building a Merchant Navy…" and the time would come when his ships would sail to America and possibly even Jamaica.[15] Many Rastas understood this statement to mean that the Emperor was sending the long-awaited ships to return Africans to their homeland. Some migrated toward the larger port towns of Jamaica, such as Kingston, in anticipation and became victims of false prophets.

The first of these, Edward C. Edwards, a self-proclaimed prince, claimed that his church, the Coptic Theocratic Temple at Kingston Pier, would be where Haile Selassie's ships would come for his people. Edwards claimed to have heard from the emperor himself in 1943 that the Rastas should prepare for his arrival. Many people gathered at the church in 1958 in response to handbills that Edwards circulated, having sold all their possessions, and awaited the ships from Ethiopia. The restlessness of the group resulted in a mass insurrection. Police who tried to disperse the crowd were injured.[16] The group waited for a few months, but Selassie's ships never arrived.

Claudius Henry became the next prominent millennial leader. He announced that he was "God's Annointed Prophet and Repairer of the Breach."[17] Henry sold 15,000 tickets to Africa in 1959. He claimed, on authority of the Emperor, that passports would not be necessary. Many people bought tickets, sold all their belongings, and waited to be transported to Africa from Kingston. Many were left homeless and stranded when the ships, again, failed to appear. Henry was charged with fraud and disturbing the peace; he was incarcerated for six months.

Rastas became impatient in their millennial hopes. While the majority of Rastas believed in nonviolence, some chose violent ways to realize their millennial

hopes in the late 1950s and early 1960s. In 1958, police had to break up the group gathered by Edwards. In 1959, nine Rastas invaded the Jamaican governor's residence and occupied it for several days before being removed by police. In 1960, Henry's residence was raided and police found homemade bombs, dynamite, detonators, guns, machetes, swords, batons, clubs, and conch shells filled with cement. Also in 1960, a raid of the Red Hills Rastafarian enclave resulted in three members of Henry's church being shot and killed. Ten men were charged with felony possession of firearms and murder. Seven of these men were Americans from the First African Corps who had smuggled automatic rifles into Jamaica in refrigerators. One of the men was Henry's son, Ronald. In 1962, Rastas robbed and then burned down a gas station at Coral Gardens, allowing the black attendant to flee the scene. They then moved to a nearby hotel, killing a guest and attacking a mobile police unit, and killed a police inspector.[18] These acts of violence caused the white power structure to view Rastas as a threat, just as the Rastas saw all whites as a threat.

Also in 1962, Jamaica earned its independence from colonial rule, but maintained its membership in the British Commonwealth. They wrote their constitution that same year. The Jamaican government was a constitutional parliamentary democracy, following the model of the United Kingdom. The latter maintains a Governor General in Jamaica who is elected on the advice of the Jamaican Prime Minister. The role of the Governor General is mainly ceremonial, with the executive power of the state vested in the Cabinet, which is led by the Prime Minister.

In 1966, Haile Selassie visited Jamaica. A crowd of about 100,000 Rastas surrounded the plane when it landed, frightening the Emperor. The crowd had to be calmed by a Rasta leader named Mortimo Planno before the Emperor would emerge from his plane. While Selassie made no official comment on the Rastafarian claims made about him, a rumor circulated that he had passed a slip of paper secretly to some Rasta elders telling them to "liberate Jamaica before migrating to Ethiopia."[19] This served to calm the Rastafarian community, since the date of their departure to Africa was temporarily delayed. This also gave them a focus for immediate action —the liberation of their own country from oppressive rule. While Jamaica had been freed from colonial rule a few years earlier, Rastas felt that they were still oppressed by unfair laws against blacks, by poverty, and by the trickery of whites.

By the 1970s, many Rastas had adjusted to the wider Jamaican society and were living simply and working in cooperative industries like fishing and farming, as well as with crafts such as upholstery, shoemaking, and wood carving. Some took up peddling their wares to the public as well.[20] It was in the 1970s that Rastafarianism had more of a cultural impact, contributing to Jamaica's art and music, especially through reggae.

The musician Bob Marley's reggae music disseminated Rastafarian values and beliefs to an international audience. Marley and the Wailers wrote songs that depicted the deplorable situation of the Jamaican poor and that carried the ideology of Rastafarianism. Rastafarian beliefs were a major theme in his songs, and he made use of Jamaican and African cultural themes.

While it was not surprising that Marley and the Wailers were popular in Jamaica, their international impact was unexpected. They toured in the United States, Canada, France, the United Kingdom, Italy, West Germany, Spain, Scandinavia, Ireland, Holland, Japan, Australia, and elsewhere to sold-out shows. Through Marley, the Rastafarian message spread worldwide.[21]

Rastafarians, along with other Jamaicans, migrated in large numbers to the United States starting in the 1970s. Their religious views and culture spread among America's youth, both black and white. While most Rastas were pacifists, their antiwhite message was understood in the context of violence. Actually, only a few Rastas have committed violent acts. Most people who identified with the Rastas, identified with their message of resistance to oppression.

Since the 1980s, the Rastafarian movement has become less religiously based. Their manner of dress, their dreadlocks, their red, green, and gold symbols, and their music have been appropriated into mainstream culture. Rasta women, who once were forbidden to hold leadership roles in the movement and were often secluded from social contact, are now becoming more outspoken. Rasta men have traditionally dominated Rastafarianism, considering women to be secondary members of the social group. Rasta men considered the struggle for freedom to be a male struggle.[22] Women have become more vocal against the misogynistic practices in the movement and have even refused to cover their dreads or wear long dresses.

The majority of Rastas in Jamaica now live in small groups either on the outskirts of towns in camps or in walled city lots called yards. Some live in larger more organized communes with anywhere from 20–150 people.[23] Some of the camps are segregated by gender and are organized like monasteries. Most, however, try to reconstruct the feel of West African villages. Most believe in nonviolence and are not affiliated with larger Rasta organizations with political motivations. Rastafarianism has also spread to other areas of the Caribbean, Kenya, Ethiopia, and urban areas in the United States, England, Canada, and New Zealand.[24]

While mostly a loosely organized religious movement, some efforts have been made to organize over the years. The first such attempt was in 1958 in Kingston, Jamaica, at the first major "national" groundation. These are national gatherings of Rastas that include chanting, drumming, dancing, and smoking of ganga. This first conference was organized by Charles Edwards Emanuel and Nyahbinghi, (an orthodox faction of Rastas) members of the Rastafarian movement. During the conference, they established the Ethiopia Africa Black International Congress and Church of Salvation (EABIC). Three thousand people gathered at the Nyahbinghi/EABIC Groundation. The Jamaican police eventually broke it up. In addition, the Rastafarian Centralization Organization in Kingston was organized to make the fundamental beliefs of Rastafarianism available to interested parties and to establish the "Rastafari Theocracy Government."[25] The chairman of this organization is Ras Sydney De Silva, and it was responsible for the first Rastafarian International Assembly held in Toronto, Canada, in 1982.[26] The purpose of these assemblies is to bring together members of the Rastafarian movement from around the world.

Other organizations within the movement include two formal sects, the Bobos, or the Twelve Tribes of Israel, and the larger, loosely organized "House of the Nyabingi." The majority of Rastas belong to this latter organization, which has no formal requirements for membership. It is run by an assembly of elders, who settle disputes and plan liturgical events.[27] None of these organizations has a recognized central authority responsible for training clergy, settling doctrinal disputes, or regulating religious practices.

In the United States, Rastafarians live mostly in urban areas, either with their families or in small groups in houses or apartments. Rastafarians attend reasoning sessions at community churches or in members' homes. Reasoning sessions are informal discussion sessions that encourage open dialogue on current issues, politics, culture, and religion; they are central to Rastafarian ritual. Since ganga (marijuana) is illegal in the United States, Rastafarians have had some conflicts with police. The use of marijuana in Rastafarian religious rituals, however, has been upheld in both state and federal courts. Recently, when this practice again came into question, the defendant cited the *Religious Freedom Restoration Act of 1993* (see below) and was eventually exonerated of criminal charges. As in Jamaica, Rastafarians in the United States are distinctive in their appearance, wearing their dreadlocks and African-inspired clothing. In the 1970s, the New York City police accused the Rastafarian community there of violence, drug and gun running, and homicide. This was in response to growing international intolerance of the religion. In fact, Dan Rather, anchor of the *60 Minutes II* television show, labeled Rastafarianism "a multinational drug-smuggling corporation that used religious beliefs to conceal its illicit narcotics-importing activity."[28] This negative public image of Rastafarianism led to many having to defend their religious practices in court.

For instance, in an Indiana court in 1988, in *Reed v. Faulkner,* Homer Reed, a Rasta inmate in a state prison filed a lawsuit against the state for being forced to cut his dreadlocks to conform with prison rules about hair length. The judge ruled against Reed, arguing that his hair was a health hazard because it could contain lice or other diseases. However, in a similar case in New York in 1986, *People v. Lewis,* the judge upheld a Rasta's right to wear dreadlocks as a religious practice.

In *U.S.A. v. Bauer* in 1993, the court indicted 26 Rastafarians for manufacturing and trafficking marijuana. Since the U.S. Congress had the *Religious Freedom Restoration Act* under review and President Clinton had already signed the Bill, the defendants argued that they should not be indicted, as marijuana was necessary for their ritual practices. While the court agreed the marijuana was for ritual use, they still ruled against the Rastas.[29]

Another contemporary issue for Rastafarians is the issue of whites who claim membership in the movement. While some believe that racism does not belong in the movement, others note that the religion exists to end white oppression of blacks. On the one hand, members cite Haile Selassie's welcome to all races: "I extend the hand of universal brotherhood to all without regard to race!" Along these lines, they believe that racism is divisive in the movement and should be a thing of the past. One member states: "Heed the word of Jah. HIM create Black, White, Yellow, and Brown

all equal in HIM eyes and all equal in HIM heart. I still say that if the I is following the teachings of Selassie I and the bible, there is no man on earth who can tell you that you are not good enough to enter thru Zion I Gates whether you White, Black or whatever color Jah make you."[30]

On the other hand, there are many in the movement who consider whites who want to be members as frauds, or worse, as infiltrators from the white oppressors. Since the movement was begun as an antiwhite religion, many blacks in the movement are suspicious of whites who want to worship with them. One member put it thus: "Why can we not have something without these 'whites' always butting in? Inviting themselves in, first on the borders, then, gradually moving in, expressing admiration, respectful, yes. Offering advise, respectfully—only suggestions … until they are in the center, defining for us what we created."[31]

These issues aside, Rastas in the United States, as in other areas of the world, practice their religion and await Haile Selassie's return, when all Africans will be free from white oppression.

PROMINENT LEADERS OF THE MOVEMENT

While many attribute the ideas of African pride and the possibility of a black African king to Garvey, he did not start the Rastafarian movement. Nor could Selassie be considered a founder, although his coronation certainly inspired the movement's beginnings. Some of the early Rastafarian activists were Howell, Robert Hinds, Joseph Hibbert, and Archibald Dunkley. Later, important leaders in the movement included Paul Earlington and Marley. These men were responsible for forming small Rastafarian enclaves and disseminating and expounding upon the belief system.

Garvey was born in St. Ann's Bay, Jamaica, on August 17, 1887. He moved to Kingston at the age of 14 and found work in a print shop, learning the skills of a typesetter. Publishing was an important means of spreading his message for the rest of his life. He became involved in social reform as a result of his participation in the first Printers' Union strike in 1907. He then set up the newspaper *The Watchman.* He became aware of the conditions of the working class and began to travel, beginning with trips to Central and South America. To confront the poor conditions for blacks everywhere, he created the Universal Negro Improvement Association (UNIA). In 1920, the UNIA with its coordinating body, the African Communities League, held their first convention in New York City. This convention opened with a parade down Harlem's Lenox Avenue and attracted a crowd of 25,000 for the speakers that same night. Garvey outlined his plans for building an African nation-state, which would be the pride of all African peoples. His main message was one of pride in African heritage. He described Africa as the cradle of civilization and one of the earliest advanced cultures.[32]

Garvey also began the African Orthodox Church, which was a product of his encouraging his followers to imagine Jesus as black and to organize their own church. He began several business ventures including the Black Star Shipping Line, which

later failed. With many financial and legal difficulties, Garvey was imprisoned for five years in Atlanta and then deported to Jamaica. He spent the remainder of his life working in Jamaican politics for the rights of blacks in his home country.[33] He spent his last years living in England.

As part of his program of African pride, Garvey felt that African culture should be taught in the schools; he sponsored the production of black dolls for children; he introduced red, green, and gold clothing and accessories for people to wear; and he also promoted the idea that God was actually black. He also supported the return to Africa for many blacks.

There would not have been a Rastafarian movement without the personage of Ras Tafari/Haile Selassie. The crowning of a black king in Africa gave poor Jamaicans some hope, because it appeared to be the fulfillment of an earlier prophecy. Selassie developed a program of modernization in Ethiopia with mixed results. He secured the admission of Ethiopia to the League of Nations in 1923 and abolished slavery that same year. He oversaw the writing of Ethiopia's first constitution in 1931, which gave ordinary citizens a voice in official government policy. Italy invaded Ethiopia in 1935, leading to Selassie's exile. On his return to power in 1941, Selassie introduced a revised constitution that gave him more power. He also established the Organization for African Unity in 1963. His more conservative policies led to a coup attempt that resulted in his imprisonment in 1974. The nature of his death in prison is widely debated. Many Rastas believe that he is still alive.[34] Selassie never confirmed nor denied the claims that he was the Rastafarian savior. While it is likely the emperor did not believe he was the messiah, the Rastas say that "even God would not know that He is God."[35]

Howell probably was most responsible for spreading the belief that Selassie was divine and would miraculously conquer white oppressors and return blacks to their African homeland. His beliefs were made public due to his frequent conflicts with the law. In 1933, he was arrested in Jamaica for inciting blacks to resist white authority. He chose the courtroom as a forum in which to explain his beliefs. He argued that blacks were the "true descendents of the ancient Israelites who had been enslaved by whites, the agents of Babylon."[36] Ras Tafari, however, had come to abolish the domination of the white power structure and send ships to return all blacks back to their African homeland. The court sentenced Howell to two years in prison for disturbing the peace and inciting crowds. After his Pinnacle commune was raided, Howell was declared to be mentally unstable and was committed to an institution for the criminally insane.[37]

Hinds, Dunkley, and Hibbert were other prominent voices in the early development of Rastafarianism, each starting his own movement. As a result of their resistance to the white power structure, each of them met difficult ends. Hinds, an accomplice of Howell's in the dissemination of the Rastafarian beliefs, was incarcerated for 12 months in 1933 as a result of his inflammatory language. Dunkley was fined for disorderly conduct that same year and was later sentenced to Bellevue Asylum. Hibbert, the organizer of the Ethiopian Coptic Faith, was committed to Bellevue Asylum in 1938.[38]

Earlington formed a more secular branch of Rastafarianism in 1938 called the Jamaican branch of the Ethiopian World Federation. He was a follower of Garvey before he began the Federation. He asked for the support of both Dunkley and Hibbert, but failed to receive it due to differences in ideology. Earlington's branch of the Ethiopian World Federation was an extension of the larger organization established in 1937 under Selassie's direction. The emperor originally set up this organization to bring international attention to Ethiopia, and to ask for the support of foreign nations. Earlington's group, on the other hand, was used to spread Rastafarian principles.[39]

Marley and the Wailers were instrumental in transforming Rastafarianism from a Jamaican religious phenomenon to an international movement. Their reggae songs, filled with images of the struggles of the underclass, called on their brethren to praise Jah, who would save them from their strife. Their music also dealt with social concerns in Jamaica, exposing much of the disenfranchisement of the poor and oppressed.

Examples of some Rastafarian themes in Marley's lyrics include: "Get Up, Stand Up," a song on his 1973 "Burnin'" album, in which Marley wrote "Most people think, Great God will come from the skies, Take away everything and make everybody feel high. But if you know what life is worth, you will look for yours on earth: and now you see the light … We know when we understand: Almighty God is a living man." Also, in his song "Exodus" on the 1976 "Exodus" album, he talks about escaping white oppression (Babylon): "Exodus: Movement of Jah people!… Uh! Open your eyes and look within: Are you satisfied with the life you're living? Uh! We know where we're going, uh! We know where we're from. We're leaving Babylon, We're going to our Father land." In "Babylon System," from his 1979 "Survival" album, Marley likens the white oppressive system to a vampire: "Babylon System is the Vampire Sucking the children day by day … sucking the blood of the sufferers."

Marley and the Wailers signed with the Island Records label in 1972 and were distributed nationally and, soon, internationally. They sold out in their tours around the world, spreading the Rastafarian message everywhere they went.[40] While outsiders never quite understood the complexity of the Rastafarian messages in Marley's songs, his fellow Rastas did. The fact that his hidden messages were going out around the world, chastising the evil oppressors, endeared him to the Rasta community.[41] Marley was viewed as a prophet, a shaman of his people.

BELIEFS AND PRACTICES

Rastafarians believe that there is one God, called Jah (related to the Hebrew name for God, Jahweh). They believe that the Bible is the word of God and that there are hidden meanings intentionally withheld from people of African descent by their oppressors. Many of these secret meanings are found in the books of Psalms, Daniel, and Revelation, which speak of a messiah and a golden age in the future.

In addition to the Christian Bible, two other sources have been important historically to Rastafarians. One is the *Holy Piby,*[42] which made its way into Jamaica in

1925 and was read by many in the pre-Rastafarian groups. Rastas believed that the *Holy Piby* was originally written in Amharic, the ancient official language of Ethiopia and believed to be the original language of humankind. Rastas believe this book to be the original Bible and that later translations have been distorted by white popes to make God and his prophets Caucasian instead of black.[43]

In addition to the *Holy Piby,* the *Royal Parchment Scroll of Black Supremacy* was introduced to early Rastafarians by the Reverend Fitz Balintine Pettersburgh in 1926. This text described the coming golden age in which there would be a new Ethiopian empire ruled by a black divine king. While he led his followers to believe that the text was ancient, it was likely written and published by Reverend Pettersburgh himself.[44]

Rastas believe that Jah is found in the world and in each of his children. The concept of "I and I" encompasses this belief. This expression refers to the self and the always present Jah. It also expresses the oneness of two persons: since Jah is in everyone, we are all one person.[45]

The primary belief of the Rastafarians is that Selassie will redeem all blacks from their oppression. Originally, Rastas believed he would dissolve the white power structure and return all black people to Africa. The emperor himself would make arrangements for all blacks to be collected and returned to their homeland.[46] After his death, this emphatic belief remains. Some Rastas believe that Selassie never died, while others believe that he will return to save their people from oppression. Some believe that Selassie was divine, whereas others believe that he was divinely sent.

Selassie is represented by the lion, a symbol that can be found everywhere in Jamaica: on flags, in artwork, in songs, and in poetry. The lion stands for Selassie's royalty both earthly and spiritually. The dreadlocks of the Rastas are also reminiscent of the mane of the lion. The lion represents strength, knowledge, and aggression for the Ratafarians.

The oppressive force keeping the black race down is known as "Babylon." This is an important term, because it points to Rastafarians' identification with the ancient Israelites, who were held captive in the ancient Mesopotamian city-state of Babylon. In Rastafarian usage, Babylon refers to the white power structure that has always held down the black race. Blacks have been held down physically through slavery, but more recently blacks are held down through poverty, illiteracy, disenfranchisement, and inequity. Rastafarians are to remember their proud African heritage and stand up to Babylon.

Ganga, or marijuana, has also become an important part of the Rastafarian belief system. Rastas call it the holy herb. They believe several passages in the Bible refer to it. One of these is found in Genesis: "And God said, Let the earth bring forth grass, the herb yielding seed" (Genesis 1:11). Another is found in Revelation and describes a future golden age when a river will flow from the New Jerusalem. On each side of the river, God has planted trees with medicinal leaves "for the leaves of the tree were for the healing of the nation" (Revelation 22:2).

Some Rastas believe that ganga has religious significance, while others do not.[47] Those who invest it with religious significance do not advocate smoking ganga

recreationally. It is for ritual use only. Smoking ganga at the reasoning, or discussion, sessions is at the core of Rastafarian religious practices.[48] These sessions are informal discussions that encourage open dialogue on a variety of topics. In addition, some believers use ganga as part of their meditation practices, which center the practitioner's thoughts on Jah.

The dreadlocks of the Rastas are a distinctive identifying feature of both male and female members of the movement. Rastas wear dreads to show pride in their African heritage and to identify with their savior, Haile Selassie, the lion. They also point to Biblical support for the practice of wearing dreads: "They shall not make baldness upon their head, neither shall they shave off the corner of their beard, nor make any cuttings in the flesh" (Leviticus 21:5). Marley may have died as a result of his refusal to allow doctors to operate on his cancerous toe because he did not want to violate this same religious law against cutting the flesh.[49] The wearing of dreadlocks is also a protest against the larger Jamaican culture's belief in "proper" hairstyles, which usually imitate white fashions and preferences. In addition, some Rastas believe that their dreadlocks are like wires that transmit communications between the believer and Jah.[50]

Observant Rastas eat only what they call "I-tal" food. This is food that has no chemical processing of any kind and is completely organic. They avoid pork and scaleless fish in accordance with Hebrew scriptures. I-tal food is barely cooked and served without salt, preservatives, or condiments.[51] Most Rastafarians are vegetarians. They tend to drink anything that is herbal, such as tea. They avoid liquor, milk, coffee, and soft drinks.

The colors of Rastafarians are red, green, and gold. Garvey originally used these colors in his promotion of African pride, and they were later adopted by the Rastas. Red symbolizes blood shed by Rastafarian martyrs—those Rastas who have died while defying Babylon. Green represents the vegetation of Ethiopia, and gold represent the wealth of the promised land of Ethiopia. Sometimes black represents the color of Africans.

Rastafarians believe that each person comes to his or her own understanding of truth, hence the diverse range of beliefs. Lifestyle choices and beliefs are up to the individual. Ethical standards vary, but they have much in common. Most Rastas believe in the ideal of "one love," which means to love everyone unconditionally. In addition, most believe that one must live a life of "upful" behavior, which includes tolerance, honesty, integrity, and nonviolent resistance to oppression.[52] Many Rastas also live strictly by their interpretation of the Biblical codes found in both the Old and New Testaments.

CONTROVERSIES AND ISSUES

Clearly, as a resistance movement, Rastafarianism itself has been a controversial religious movement in Jamaica. The religion sees itself as working to end the oppression of the poor and outcast blacks in Jamaican society. This resistance has created several controversies for the religion. The two practices that have historically created

controversy for the movement are their political actions and their consumption of ganga. In addition, there has been a small internal conflict over the nature of Selassie.

While for the most part Rastafarianism considers itself to be a pacifist movement, there have been Rastas who have taken violent, or, at the very least, subversive, actions to actualize political goals. The most violent actions were taken in the 1960s before Haile Selassie visited Jamaica. While Rastas have rarely acted violently, their political awareness and activism has always been a part of their belief system and practice.

The illegal consumption of ganga in the Rasta reasoning sessions has also led to much friction between adherents and the police. While not all Rastas consume ganga as part of their ritual activity, many consider it integral to the ritual process. Since it is an illegal substance in Jamaica, police have often raided Rasta communities and set up roadblocks around the island to search drivers. In order to punish religious communities and to keep international drug trafficking to a minimum, Jamaican laws are strict for possession of large quantities of ganga or for trying to smuggle it out of the country. Punishment for possession of small amounts tends to be less severe.[53]

Laws in the United States protect the Rasta's use of ganga in religious rituals. This protection has not shielded Rastas from tense interactions with police over possession of the illegal substance, however. Ganga, or "wisdom weed," for Rastas, is given by Jah for the religious enlightenment of His people.

Another smaller controversial issue within the movement itself, is about the nature of Haile Selassie. Most members agree that he was divine, a messiah figure who will one day transform the world, crushing the white oppressors and delivering blacks to their African homeland. Other Rastas see Selassie as a human being sent by God to put these actions into motion. Since Selassie's death in August 1975, Rastas have said that Selassie will return in spiritual form to fulfill his heavenly mission. Many Rastas denied that Selassie died and insist that he went into hiding and will return when the conditions are right. Since each Rasta holds his or her beliefs individually, this discrepancy tends not to be a major issue. There are no creeds or central dogma to which Rastas adhere; they come by their beliefs through individual meditation and the reasoning sessions.

CONCLUSION

At the heart of the Rastafarian movement is a desire to reclaim their African heritage. Ernest Cashmore, a scholar of Rastafarianism, states best the intent and the reality of what it means to be African for Rastafarians: "the realization that all black men are really Africans stimulated the awareness that negroes [sic] must ultimately return physically to the fatherland; in the meantime, however, it was sufficient to proclaim their African identity and articulate their desire to return but without actually pressing any practical programmes—just wait for the millennium to take its course; when the hour of redemption did arrive Africa would welcome its children."[54]

This movement did not decline severely when Selassie died and will not likely diminish in the near future. It has never been a very large movement, but since it has spread to other parts of the world, it has grown and will likely remain for some time. What has kept the movement from growing much in size is its loose organization, its separatist viewpoint, and its controversial use of the ganga plant in its rituals. What has maintained this movement is its message of hope, its championing of the poor and oppressed, and its pride in African heritage. The spread of Jamaican culture through reggae music, religious artwork, and literature has also drawn many to take a second look at this religious movement.

Vodou in the United States: The Case of New Orleans

Ina Johanna Fandrich

INTRODUCTION

Vodou is one of the most maligned and misunderstood religions, and certainly one of the most misunderstood New Religious Movements (NRMs) in the world. Most Americans do not even know that it is a religion. Rather, they consider it to be a particularly vicious form of witchcraft.[1] The English term "Voodoo," the Anglicized version of *Vodou,* usually conjures up images of infamous, dark-skinned Voodoo sorcerers or sorceresses endowed with evil occult powers, sticking pins in grotesque-looking Voodoo dolls to inflict pain, misfortune, or even death upon innocent fellow citizens. Visions of such sinister characters have haunted the imagination of the American public ever since the Haitian Revolution more than 200 years ago. *Vodou* practitioners, both male and female, are believed to be in league with the devil and are hence considered to be manipulative, unscrupulous, and dangerous. Hollywood's filmmakers have promoted these common stereotypes, eternalizing them in big-screen productions such as the unforgettable movie *Angel Heart,* starring Robert DeNiro as the devil. This film plays, of course, in New Orleans, Louisiana, the city known to be the Voodoo Capital of the United States.

These stereotypical views are gross misrepresentations. They stem from racist perceptions that go back to the deplorable and cruel past of slavery in American history. The extreme economical exploitation of the enslaved African work force included not only a dehumanizing assault on their physical bodies and their psyches, but also entailed an insidious attack on their African cultural and religious heritage. After all, the trans-Atlantic slave trade was morally justified by the assumption that Europeans had the right to oppress the Africans because the Europeans' Christian faith was presumed to be superior to African so-called "heathenism" and "fetish rites." Conveniently, the rationale of the colonial slaveholding forces did not take into account that many of the enslaved Africans, especially people from the Kongo region in western Africa, had already converted to Christianity centuries before they were captured and deported to the New World. It was also inconceivable for the slaveholders that

the peoples of Africa, regardless of whether they were Christians or not, had highly evolved societies with sophisticated philosophies, complex ethics, and profound religious beliefs and practices. Moreover, it is no coincidence that New Orleans is associated with Voodoo like no other place in the United States. The Crescent City was the center of the American slave trade during the antebellum period and had been under a strong African cultural influence from its founding days on.[2] More often than not, the city had a black majority. In fact, until hurricane Katrina devastated New Orleans in 2005, dispersing the city's population, it had the highest percentage (about 70 percent) of African American population of any American metropolis.

The term *Vodou* actually refers to a cluster of mystical religions with millions of followers throughout the world, most of them in West Africa, the Caribbean, and North America. Furthermore, most *Vodou* practitioners in the New World are also simultaneously devout members of the Roman Catholic Church. Their religious beliefs and practices are creative hybrids, blending African, European, and Native American cultural and spiritual traditions. Yet, at their core, *Vodou* traditions have always remained African despite their amazing capacity to incorporate and assimilate elements from other faith traditions. *Vodou* practices everywhere are fundamentally pragmatic and vary greatly from one community of practitioners to another since there is no central authority prescribing binding regulations for everyone.

The *Vodou* traditions in the New World were born during slavery as an assertion of slave resistance. Defiantly holding on to the beliefs of their ancestors, the enslaved Africans resisted the wholesale, forced Christianization that was imposed on them. At the same time, they adapted to their new situation by integrating Christian symbolism, rituals, and prayers into their religious services. In this manner, *Vodou* enabled the transplanted Africans to formally pass as "good Christians, " and, at the same time, informally to keep their African world view and much of their religious culture alive.

Since there are so many misconceptions attached to the term *Vodou,* we need to begin with defining the multiple meanings of this word.

Definitions

Etymologically, the Haitian term *Vodou,* as well as the Anglicized version of it, *Voodoo,* and its French variety, *Vodun,* derive from the word *vodu,* which means "God," "divinity," or "divine awe-inspiring spirit" in the Fon and Ewe languages of West Africa. *Vodou* in various spellings has at least seven distinct meanings that are often confused with one another.

(1) Usually spelled *Vodun,* it refers to the traditional religion of the Fon and Ewe people residing in today's Republic of Benin, the former kingdom of Dahomey, West Africa. This religion has also been practiced in today's Ghana, Togo, and western Nigeria. As in all indigenous religions, there are considerable regional variations since there is no centralized hierarchical structure that regulates the dogma and the liturgy of the ceremonies.

(2) Spelled *Vodou,* it generally identifies the popular syncretistic Creole religion of Haiti that developed on this Caribbean island. It began to evolve in the sixteenth century when the first Africans arrived there, but jelled into its present form as a fusion of various West and Central African religions combined with French Catholicism, Taino Caribbean Native American traditions, and elements of Freemasonry in the aftermath of the Haitian Revolution and War of Independence (1791–1804) during the nineteenth and early twentieth centuries. *Vodou* received its name because a large part of the Haitian enslaved African work force came from Dahomey and introduced the term to the French colonies in the Caribbean. Today, the *Vodou* tradition is deeply ingrained into all aspects of Haiti's culture and religious life. Haitians often joke that approximately 90 percent of their population is Catholic, 10 percent Protestant and other religions, but 100 percent are in *Vodou.* Haitian immigrants in the United States usually continue to serve their *Vodou* spirits either openly or secretly. The largest Haitian immigrant communities with the most vibrant *Vodou* culture, art, and religion are today in New York City and Miami, Florida.

(3) Spelled *Voudou* in the nineteenth century and *Voodoo* since the beginning of the twentieth century, it addresses the Afro-Creole counterculture religion of the city of New Orleans and Southern Louisiana. During the nineteenth century, this tradition had a ceremonial and a magical side much like similar syncretistic Creole Caribbean religions such as *Vodou* in Haiti, *Santerìa* in Cuba, or *Espiritismo* in Puerto Rico. But the sustained repression of African Americans and the complete vilification of their African religious and cultural heritage during the Jim Crow era (1880s–1960s) in the American South destroyed the vibrant ceremonial aspects of this tradition. Only the magical side survived and continued to flourish. Hidden from the public gaze, individual Voodoo "doctors" or spiritual "workers," male and female, continued to cater to their clients, selling them Voodoo charms, prayers, and herbal remedies to solve their problems. Today, Voodoo in New Orleans has blended with Haitian and Cuban practices and other Neo-African traditions. Furthermore, Voodoo has become an essential part of the city's popular culture and commerce with a football team named "Voodoo," a brewery producing "Voodoo" beer, a "Voodoo Barbeque" restaurant chain, and numerous Voodoo shops; ubiquitously one can buy New Orleans "Voodoo dolls" (most of them made in China). There is a "Voodoo Fest," a "Voodoo Musical Festival," and all year around, many local musicians are playing music in funky, syncopated rhythms with "Voodoo" themes.

(4) When *Voodoo* is used synonymously with the vernacular African American term *Hoodoo,* it refers to a system of African-based magical practices that are widespread throughout the South. Other common terms for these practices are "conjure" or "rootwork." A conjurer, "rootworker," or simply "worker"—similar to a shaman—offers magical practices and spiritual paraphernalia to his or her clients for a fee to assist them in overcoming any obstacles they may possibly face in life including love, health, and financial problems, but also job-related issues and unwanted encounters with the legal system.

(5) The American film industry created its own version of Voodoo, projecting widespread negative stereotypes about people of African descent in general and

misconceptions about Haitians and black New Orleanians in particular onto the big screen. In this context, *Vodou* appears for the most part synonymously with black magic and evil witchcraft. These Hollywood misinterpretations are leading us to the last two meanings.

(6) Spelled "voodoo," it is often used synonymously with nonsense or flawed information as in "voodoo economics."

(7) Finally, "voodoo" can refer to a lethal spiritual force that is responsible for the so-called "voodoo death." In such instances, someone who believes himself or herself to be "jinxed," "hexed," or "cursed" perishes mysteriously without any detectable physical causes. Anthropological research has confirmed that this phenomenon exists not only among Haitians, but nearly everywhere in the world. Similar to the "*placebo* effect," the "voodoo death" may be triggered by fear and thus caused by the reality creating power of the human imagination.

HISTORY

Africa

The African *Vodun* religion is said to be as much as 10,000 years old and is supposed to have its origins in ancient Egypt or Kemet. Unfortunately, at this point, we do not have sufficient archeological and historical information to verify such claims in detail. Further research is needed in order to reconstruct the exact history of this faith tradition. The first written sources about African *Vodun* in modern history date to the sixteenth and seventeenth centuries and refer to the West African kingdoms in the region that the European slave traders called the "Bight of Benin," a densely populated area with powerful political and spiritual leaders and remarkable, technologically advanced societies, covering roughly the territory of today's People's Republic of Benin and Western Nigeria, the homeland of the Yoruba people. The Yoruba and their neighbors have dwelled in influential large cities for hundreds of years. Most of these ancient cities had their own king, the *oba,* and their own sacred shrines for the local divinities that ruled over them like divine patron saints. For instance, *Ifa,* the divine principle of destiny and fate, was at home in the city of Ile Ife, the mythological birthplace of the Yoruba people, where, according to the Yoruba, all earthly life began. The same divinity was known as *Fa* in Dahomey. *Obatala,* the serene Yoruba divinity of whiteness, wisdom, and creativity, had his oldest and most sacred temple also in Ile Ife. The city of Oyo was the home of *Ogun,* the divine blacksmith, the spiritual force that rules iron, war, soldiers, policemen, and all technology. He was revered as *Gu* in Dahomey. Oyo was also the site of *Shango's* main shrine, the former legendary king of this city. He is the divinity of lightning, fire, magic, and represents the principle of divine rulership. Oshogbo, the Yoruba center for art and creativity, beautifully located near the mysterious Oshun River, was the home of *Oshun,* the divinity of love, beauty, fertility, and material wealth.

These mighty old Yoruba city-states not only had an exquisite culture, but also formidable armies, because they were constantly at war with one another and with their

neighbors. In the seventeenth and eighteenth centuries, the Oyo Empire emerged as the dominant kingdom over all of Yorubaland. Their chief enemy was the city of Whydah, the ruling city of the neighboring kingdom of Dahomey, today's Republic of Benin. The rivalry between Oyo and Whydah lasted for several centuries. In the eighteenth century, Oyo was strong and conquered Whydah. Consequently, many Fon and Ewe speaking Dahomeyans ended up in slavery and formed a large portion of the labor force in the then-booming sugar industry of French Saint Domingue, today's Haiti. In the nineteenth century, Oyo was weak and Whydah was dominant. Hence, thousands of Yoruba people were captured and made the gruesome Middle Passage to the New World. By then, the Haitian Revolution had successfully overthrown the French regime and put an end to slavery on the island. Haiti had become the first and only independent Black Republic in the Western Hemisphere (except for some of the Maroon territories throughout the Americas).[3] The sugar industry was then flourishing in Cuba, and Yoruba people were shipped in large numbers to the sugar plantations there. The Yoruba heritage (language, culture, philosophy, and technology) thus had an enormous impact on Cuba, where in some parts of the island Yoruba dialects are still spoken today. The Afro-Cuban popular Creole religion *Santería,* though blended with Spanish Catholicism, preserved many Yoruba divinities, the *oricha,* and kept the Yoruba philosophical divinatory system of *Ifa* alive.[4] The diviner priests or *babalawos,* who are initiated and trained in the Yoruba Ifa system, are to this day essential players in Cuban social, religious, and cultural life.

The rivalry between Dahomey and Yorubaland caused centuries of war and conflict, but also created a substantial cultural exchange. When the Dahomeyans and the Yoruba did not fight each other, they intermarried, traded, and celebrated with one another. Their divinities are very similar and often have the same or similar names and share a common divination system.

Besides the people from the Bight of Benin, Africans from two other large geographical regions had substantial influence on the New World *Vodou* traditions. One group came from the vast Congo River basin, the former Kingdom of the Kongo, today's Angola, the Democratic Republic of the Congo (the former Zaire), and the Republic of the Congo (Congo-Brazzaville). The other group was from the Senegal River basin, the Senegambian region. They included Woloffs, Bambaras, Mandingos, and other Mande-speaking groups. Many of them were rice-farming agriculturalists and hence desirable for the slave traders.

The sacred cosmology of the traditional religions of the Bight of Benin and Lower West Africa is usually three-tiered, consisting of (1) a supreme being (God, the creator of the universe, named *Olodumare* in Yoruba and *Mawu-Lisa* in Dahomey) who was beyond all human imagination, (2) a pantheon of intermediary divinities (personified forces of nature and deified ancestors) who were worshiped in elaborate rituals and ceremonies permeating every aspect of life, and (3) the spirits of the ancestors. In the Upper West African traditions of the Senegambian region as well as in the religions of Central Africa from the Kongo region, the sacred cosmology has only two tiers: (1) a remote and very sacred supreme being, and (2) the spirits

of the dead who are believed to have an active exchange with the living and thus receive much attention through rituals, offerings, and ceremonies. Many of the Senegambians were Muslims and many of the Kongolese were Roman Catholic Christians at the time that the trans-Atlantic slave trade became a booming industry.

Haiti

The Republic of Haiti received its name from the Taino Indians, who inhabited this Caribbean island for several thousand years. They called it Ayiti, meaning "land with many mountains." In 1492, sent by the Spanish crown to expand the Iberian empire, Christopher Columbus crossed the Atlantic Ocean and landed by default on this island. He named it "Hispaniola" ("little Spain") and began a reign of terror over the indigenous population. Within the first decade after the initial contact, the Spanish had killed or worked to death nearly all of the natives, forcing their king to capitulate. From Hispaniola, Spain then launched a successful conquest of other Caribbean territories such as Cuba, Puerto Rico, and Trinidad, as well as the large empires of the Aztecs and Mayans in Central America and the vast Inca Empire in South America, all of which were soon turned into Spanish colonies. The abuse and brutal annihilation of the indigenous populations in these new Spanish territories was so severe that the Spanish decided to replace the decimated native work force with enslaved laborers deported from Western and Central Africa in order to run the newly developing, very lucrative, large-scale, slave-based New World plantation industries.

By the seventeenth century, French pirates, the Buccaneers, began to infiltrate the western part of Hispaniola and claimed it for the French crown in the eighteenth century. They called their part of the island Saint Domingue in French (today's Haiti), while the remaining Spanish-speaking eastern part was then known as Santo Domingo (today's Dominican Republic). The French invasion was officially recognized by Spain in the Treaty of Ryswick in 1697. After that, the once restless seafaring French mercenaries settled down and turned quickly into ambitious agriculturists. By the middle of the eighteenth century, they had developed the most lucrative indigo and sugar industry in the world, making Saint Domingue the most precious holding of the king of France. The French settlers enjoyed a life of enormous luxury and leisure. Yet the time of unprecedented colonial wealth and equally unprecedented exploitation of slave labor in Saint Domingue ended dramatically when the French Revolution of 1789 spilled over into the Caribbean territories and unleashed the Haitian Independence War (1791–1804). Though poorly armed, the oppressed enslaved Africans together with the discriminated Haitian middle class of free people of color were determined to free themselves from the yoke of their oppressors. Empowered by the belief in their *Vodou* spirits, they successfully overcame Napoleon Bonaparte's well-equipped military force, the most powerful army on earth at the time. A legendary *Vodou* ceremony at Bois Caiman led by Boukman, a charismatic and rebellious *Vodou* priest that took place just before the war, was of

crucial importance for the revolting Africans. The participants of this gathering danced and sang themselves into a trance until they believed themselves to be invincible. At the climax of the frenzy they sacrificed a pig and all drank from its blood to pledge allegiance to one other. "Victory or death" was the motto of the revolutionary uprising.

As the white elite fell in Saint Domingue, the news of their dreadful fate sent shock waves throughout the Americas. Slaveholders everywhere were terrified when they realized that what they had so far considered to be harmless "Negro superstitions" was a powerful religious force to be reckoned with. The Haitian Revolution was every planter's worst nightmare, and *Vodou* has been feared as the embodiment of sheer evil ever since.

The wealth of Saint Domingue was based on a slave labor system that savagely devoured a huge number of enslaved Africans, who made up the majority of the island's population and needed to be replaced constantly. When the Revolution put an end to this exploitation, the Haitian economy collapsed, and Haiti has been to this day the poorest nation in the Western hemisphere. The freedom of the first independent Black republic in modern history came at a price. In terms of religion, the French demanded in Saint Domingue, as they did in all of their territories, that all of their subjects, free or enslaved, become members of the Roman Catholic Church as postulated in the *Code Noir,* the compendium of legal provisions regulating slavery. The Catholic authorities in Rome responded to the Haitian Revolution with outrage and pulled out all of their clergy and members of religious orders from Haiti for nearly half a century in retaliation, but the Vatican reconciled eventually with its faithful membership in the rebellious Caribbean republic during the latter part of the nineteenth century. In the meantime, the particular fusion of popular French Catholicism and various West and Central African traditions that fate had brought together by the end of the eighteenth century in Saint Domingue prevailed without European supervision and influence. A possible explanation for the continued strength of Catholicism during the early phase of Haitian isolation that followed the Revolution is that a significant number of the African-born, newly freed Haitians consisted of practicing Catholics from the Kongo, who had arrived there just before the Revolution. They had already established an Africanized form of Christianity in their native country that suited their religious needs long before their forced exile to the Caribbean. It was therefore easy for them to maintain the faith they had been practicing all along.

After the French troops were defeated and forced out of Haiti, Napoleon reluctantly gave up on all of his New World ambitions. The fall of Saint Domingue caused a serious loss in French revenue and left him no other choice. In order to finance his expensive wars in Europe, he had to sell his North American territories to Thomas Jefferson, the president of the fledgling new Republic of the United States of America. The Louisiana Purchase of 1803 was the best real estate deal of all times. Louisiana covered about one third of the North American continent and more than doubled the United States overnight.

New Orleans

Louisiana's Voodoo tradition was long thought to be the offspring of its Haitian cousin *Vodou,* introduced by the large number of Haitian refugees who arrived in New Orleans after the Haitian Revolution at the beginning of the nineteenth century. In 1809 alone nearly 10,000 Saint Domingue refugees arrived via Cuba in the Crescent City and doubled the population of the city. They left a lasting impact on every aspect of the local culture. However, by then Africans had already been residing in Louisiana for almost a century and had developed their own Neo-African counterculture religion. In the nineteenth century, observers noticed distinctive differences between New Orleans *Voudou* and its Caribbean cousin with the same name. While Haitian *Vodou* had an elaborate system of intermediary divine spirits, the *lwa,* grouped into the *Rada* and the *Petwo* rites, Louisiana Voodoo allegedly "lost" its spiritual complexity and had hardly any African divinities. The common explanation for this phenomenon was that *Vodou* could not flourish in antebellum New Orleans as successfully as in Haiti because of the higher white-to-black population ratio and the stricter American social system. Such sociological and psychological circumstances may have contributed to these religious discrepancies, but cannot fully explain them. The demographic migration patterns during the trans-Atlantic slave trade provide a more convincing explanation in this context. They reveal that Louisiana, unlike Cuba and Haiti, received comparatively few enslaved Yoruba and Dahomeyans from the Bight of Benin, but relatively large numbers of Senegambians and even more people from the Kongo.[5]

During the French colonial regime (1699–1765), 80 percent of the enslaved Africans came from the Senegal River basin (today's Senegal, Gambia, and Mali). The majority of them were Bambara and Mandingo. The remaining 20 percent of Louisiana's African population was Kongolese and Dahomeyan.[6] As we have seen, despite their rather different geographical origins, Senegambian and Kongolese sacred cosmologies have sufficient similarities so that they could blend easily into one another. Both regions do not have flashy intermediary divinities such as the *orisha* or the *lwa* in Haiti that are so characteristic for the religions at the Bight of Benin. Their sacred cosmologies include merely a supreme being, God Almighty, and the ancestral spirits. In addition, both regions have fierce sorcerers and magical practices. For instance, the trademark of Louisiana Voudou, the "*gris-gris* bag" is a good example of this fusion. The term is of Senegambian origin, but the way these bags are made strongly resembles Kongolese *minkisi* (plural for *nkisi* singular) charms.

The term "gris-gris" is a typical Louisiana expression. Similar magical devices are known in other parts of the United States as "juju" or "mojo" bags. A *gris-gris* bag is a small, usually red, flannel pouch that is filled with magical ingredients such as stones, hair, herbs, roots, bones, or remnants of sacrificed animals. The color red indicates spiritual power. It is the color of blood, which is believed to be the ultimate life-force. Just like the *minkisi* of the Kongo, *gris-gris* bags are "dressed" or "fed" with powders, fragrant oils, or liquor in order to spiritually charge them. They are tightly bound on the top to keep the power of the spiritual energy inside the bag and to

protect the efficacy of the charms. Like the spiritual charms of the Kongo, the *gris-gris* of New Orleans can have good functions or bad ones. Some of them serve for protection from adversity or to enhance the petitioner's health, wealth, love, good luck, and success. But, they could also be made with malicious intentions to seek revenge and harm. Such evil *gris-gris* is considered to be very dangerous and can cause accidents, pain, illness, mental confusion, and even the death of a person. The practitioner (the Voudou priest or priestess, conjurer, or spiritual worker) who is contracted by a client to make a *gris-gris* carefully selects the ingredients and prayers to create the desired results. The quality, power, and reputation of a spiritual worker is measured by the efficacy of his or her charms.

A court case from 1773 in the Spanish colonial records, the "Gri-Gri Case," demonstrates that Louisiana Voudou maintained a marked Senegambian flavor[7] until the second part of the eighteenth century. In this incident an enslaved field worker, who spoke only the Mandinga language, was charged with making a *gris-gris* charm to kill his overseer. The court found him not guilty since he was unarmed and never used physical violence. The records demonstrate that everyone in the courtroom appeared to have been quite familiar with the term *gris-gris* and were well aware of the power of spiritual charms and the irrational fears associated with the latter. Hence, we can assume that these Voudou practices were widespread at the time, but not considered to be a threat.

Nago people, as the Yoruba were called by the European slave traders, arrived in significant numbers only during Spanish colonial rule (1765–1803). Many of them were females, specifically "imported" to run the city's markets as *vendeuses* or *marchandes* (marketwomen). But, from the 1790s on, the majority of the Africans who arrived in Louisiana were from the Kongo region. Despite the great distance from Central Africa to the Gulf of Mexico (West Africa is comparatively much closer), which caused a higher mortality rate among the expensive human cargo, the newly booming sugar plantations of Southern Louisiana reinvigorated by displaced planters from Saint Domingue had a great need for slave labor. During the late Spanish and early American period in New Orleans history, a large number of Kongolese people arrived and created a lasting Kongolization of New Orleans culture. The Kongo region was in the hands of corrupt leadership at the time and made captured people from this geographical area cheaply available in huge numbers. Even after the trans-Atlantic slave trade officially ended in 1808 in the United States and Great Britain, including all of the British colonies in the Atlantic world, slave labor was not abolished in the United States until the Proclamation of Emancipation in 1863, and the illegal slave trade continued to flourish until well into the 1880s. The influential pirates of Barataria (a swampy region south of New Orleans) such as Jean Lafitte, their best-known representative, were instrumental in supplying the highly desired enslaved work force from overseas. They smuggled human cargo into Louisiana until the inner-American slave trade took over in the 1830s and proved to be more economical. The trans-Atlantic slave trade continued in the Spanish, Portuguese, and Dutch colonial territories in the Americas until the 1880s. While most of the West African nations could recover from depopulation during the slave trade, the

decimation of population of the Central African regions, from which most of Louisiana's African Americans came,[8] was so severe that the population never regained its preslave trade numbers. Culturally and spiritually, New Orleans' African population remained Kongo-dominated with a strong affinity with the spirits of the dead.

Finally, African influence came into New Orleans indirectly through the Saint Domingue refugees who flooded the city after 1809, when they were expelled from Cuba. About one third of them were white, one third were free people of color, and the remaining third consisted of enslaved Africans, most of whom were the female domestics of the first two groups. These refugees were very compatible with New Orleanians to begin with because of their shared Africanized French colonial past and had an enormous influence on every aspect of the city's culture from its architecture to its foodways. As French-speaking Roman Catholics, the refugees reinforced the already existing Creole culture of the city and blocked the new American Anglo-Protestant rulers from the North from changing the Latin Creole cultural character of the city. The Saint Domingue refugees also appeared to have strengthened the ranks of Afro-Creole spiritual practitioners in the city by merging seamlessly into the already existing Louisiana *Voudou* traditions. They also may have contributed to the fact that Haiti and Louisiana share the term *Vodou* (regardless of how it is spelled) as the defining term for their African-derived syncretistic traditions with French Catholicism. Yet, despite their similarities, the two sister traditions, Haitian *Vodou* and New Orleans *Voudou,* had very different histories that gave each of them its unique flavor not only during the eighteenth, but especially during the nineteenth and twentieth centuries.

Like the Haitian *Voudouisants* the *Voudou* practitioners of New Orleans had elaborate, magical practices that included "spiritual work" with various spiritual entities, but their pantheon of spirits consisted of an almighty God called "Li Grand Zombi," a small number of saints, and, most importantly, the spirits of the dead. The word "Zombi" derives etymologically from the Kongo Bantu term *nzambi,* which means "God" in the Kikongo language. In fact, the very same term *nzambi* is used for God in Kikongo Bible translations. As in French Saint Domingue, probably most of New Orleans' enslaved Kongolese had already been Roman Catholics long before they were captured and deported. It is therefore not surprising that one of the most popular saints of the New Orleans Voudou tradition was Saint Anthony of Padua, the patron saint of the Kongo.[9] He was also the favorite saint of the key figure in New Orleans Voodoo tradition, Voodoo Queen Marie Laveaux (1801–1881).[10] Other popular saints frequently invoked in the Crescent City are Saint Expedite for the speedy achievement of an urgently desired goal, Saint Jude, the helper in hopeless situations, and Our Lady of Prompt Succor, the image of the Holy Mother of God that is believed to protect the city from harm in times of emergency, especially during the hurricane season. Saint Peter, who holds the key to the gates of heaven according to Christian mythology, was another important figure in the spiritual pantheon of the Crescent City. Also called Papa Labas or Papa Liba in New Orleans, he merged with the West African guardian of the crossroads, Eshu/Elegba (known as *Eleguá* in Cuba and *Papa Legba* in Haiti), who mediates between the realm of the spiritual

world and the material world of mortal humans. He is always invoked at the beginning of ceremonies and opens the roads for the arrival of divine forces. In her St. Ann Street home, Laveaux also had an altar for Saint Marron (*marron* is the French term for maroon). This saint was peculiar to the New Orleans *Voudou* community. Even the church did not know anything about him according to an eyewitness report. The identity of this saint is not exactly clear. It may have been Bras Coupé, a legendary runaway field worker, who successfully established a Maroon community in the swamps at the outskirts of the city. It makes sense that fugitives from slavery needed a special patron to protect them from the dogs and guns of those owners who hunted them down.

MARIE LAVEAU

If New Orleans has a reputation for being America's Voodoo capital, Marie Laveaux has been recognized as the reigning "Queen of the Voudous," the quintessential representative of Louisiana's Voodoo tradition. In New Orleans, her name and Voodoo are used synonymously. Born free in 1801, her long life encompassed the end of the Spanish colonial period, the entire antebellum period, the Civil War, and, at her death in 1881, the end of the Reconstruction Era. Laveaux was already a legendary figure during her lifetime and became even more so after her death. In fact, some people insist that she never died. Louisiana's folk tradition transformed her from a mere struggling mortal into an invincible mythical being endowed with supernatural powers, clairvoyance, and eternal youth. To this day, she is highly respected by all Voodoo practitioners in New Orleans and has thus become the unofficial patron Voodoo saint of the city.[11]

Eyewitness accounts described her as "the most powerful woman there is." As a person of color and as a woman she was barred from holding public office. Nevertheless, it appears that she effectively ruled the city. For instance, a lengthy obituary in the *New York Times* praised her enormous popularity, stating that "lawyers, legislators, planters, merchants, all came to pay respect to her and seek her offices…"[12] Rich slaveholding white planters and their destitute enslaved African servants and laborers, local New Orleanians, and visitors from all over the world, male and female, young and old, daily crowded Laveaux's humble cottage on St. Ann Street in the French Quarter to seek her support, wisdom, and remedies.

Laveaux was—as Zora Neale Hurston put it—"the great name of the golden age" of Voodoo/Hoodoo in New Orleans.[13] As such, she has often been mistaken for a Haitian. Numerous stories suggest that she was born in Saint Domingue and brought the *Vodou* religion from there to the metropolis at the mouth of the Mississippi river. Yet, neither Laveaux nor her Voodoo tradition had Caribbean origin. She was born on September 10, 1801, in New Orleans, grew up there, and resided for most of her life in the same house on St. Ann Street. Both of her parents, Charles Laveaux and Margarite Darcantel, were native New Orleanians. Official documents classified them, as well as their later famous daughter, as free "mulattoes" (one-half African and one-half European). Hence, Charles Laveaux was not a wealthy planter

of finest French nobility as many accounts maintain, but a well-to-do free man of color. He owned a grocery store and several buildings in the Faubourg (French for "suburb") Marigny. Marie Laveaux's grandmothers were free African women residing in New Orleans who had short-lived affairs with rich French planters. Her father's mother, the first Marie Laveaux, must have been of Kongolese origin and her mother's mother, Catherine Henry, was from Louisiana. The paternal grandfather of the Voodoo Queen was probably Charles Laveau Trudeau, the surveyor of the Spanish crown, who was one of the most influential politicians and military officers in Louisiana under Spanish rule. After the Louisiana Purchase, he served as the first president of the New Orleans City Council and for a brief time as the acting mayor during the early American period. Political aspirations and prominent leadership roles ran in this family. (Henry D'Arcantel, the white *plaçage* partner of her mother, was a wealthy planter and high-ranking officer in the Spanish colonial government, the royal accountant. Trudeau's ancestors were French Canadians, and D'Arcantel was born in Thionville, France.) Hence, New Orleans' leading conjure lady was a third-generation Louisiana Creole and had no roots in Haiti.

Nevertheless, Laveaux had some connection to Saint Domingue. Her first husband, Jacques Paris, was indeed Haitian, a native of the town of Jérémie. He was a free "quadroon" (one-fourth black and three-fourths white) and a carpenter by trade. Their marriage took place on August 4, 1819, in St. Louis Cathedral in New Orleans. The senior pastor of the congregation of the Cathedral, the Capuchin Friar Antonio de Sedella from Spain, officiated at the ceremony. Affectionately nicknamed Père Antoine by his parishioners, Sedella was New Orleans' most popular priest and is said to have been a close friend and mentor of Marie Laveaux. Jacques Paris was one of the thousands of Haitian refugees who fled from the turmoil of the Revolutionary War and arrived in New Orleans in 1809. Laveaux's younger half sister, Marie Dolores Laveaux (1804–1839), who had the same father but a different mother, also married a Haitian, a free man of color named Francois Auguste. Hence, New Orleans famous Voodoo Queen must have been familiar with Haitian culture and spirituality. Nevertheless, there is no proof that she was an initiated Haitian *Vodou* priestess. The corpus of rituals and healing techniques attributed to her, the "Marie Laveau routines in conjure," are not watered-down remnants of Haitian *Vodou* but homegrown, Louisiana *Voudou* practices. They are part of New Orleans' very own vibrant indigenous Creole religion that developed in Louisiana independent of its Caribbean cousins.

Despite Laveaux's fame and notoriety, she remains a mystery. Like many of her contemporaries, she was illiterate and did not leave us any memoirs or letters, and the historical data on her are scarce, fragmented, and strangely dichotomized. Some contemporaries depicted her as a veritable saint of great compassion who dedicated her life to the care of the sick and the poor, always ready to assist those in need. Others thought she was a witch and characterized her as dangerous, accusing her of fraud, theft, blackmail, and murder. This ongoing controversy about Laveaux stemmed from a combination of factors, which are connected to her racial/ethnic background, her gender, and most of all to her religious affiliations. Though a

lifelong devout Catholic, Laveaux was the charismatic leader of New Orleans' *Voudou* culture. Her powerful religious leadership role was not unusual within Louisiana's nineteenth-century, urban *Voudou* tradition, which was primarily a women's religion. However, especially from the perspective of the Anglo-Protestant Americans from the North who dominated the city after Louisiana was transferred to the United States, it was completely inconceivable to be a Christian and a member of an African-derived mystical "cult." They considered that blasphemy. In addition, the thought of women leading a religious service must have been bewildering to the white male elite of the city, since the clergy of nearly all Christians denominations was male at the time. Yet, this spiritual empowerment of women was also very attractive to some white women, who joined the circles of the Voudous. Hence, the Voudou ceremonies in New Orleans seemed to have been racially integrated throughout the nineteenth century.

To complicate the situation, the archival data reveal that the historical Marie Laveaux, the great Voodoo priestess, had a grandmother, two daughters, and a half-sister with the same name. Louisiana's folk heroine, the mythical Marie Laveaux, shows traces of the biographies of all of these five historical Laveaux women and combined them into one person. However, unlike the invincible mythical superwoman of the popular stories who could do whatever she wanted, the historical *Voudou* leader did not win all of her numerous battles, but suffered many tragic losses in her life. Her first husband, Jacques Paris, disappeared suddenly during the first years of their marriage, never to be seen again. She mourned his presumed death for one year and then moved on, calling herself the Widow Paris. In order to support herself after her husband was gone, she began a small business as a hairdresser and beautician. She also worked as a fever nurse and mortuary embalmer. She had an enormous knowledge of herbal healing and spiritual and magical practices apparently from an early age. She was very hard working and ambitious and quickly became the leading spiritual worker in town, but her success and excellent reputation among her satisfied customers also attracted the jealousy and ill-wishes from rival *Voudou* priestesses. All sources about her agree that she had many enemies and mention that most people in town were afraid of her. Nevertheless, Laveaux kept walking the streets of New Orleans proudly as if she owned the city, many of her contemporaries recalled.

About 1826, Laveaux found the love of her life in a relationship with Christophe Glapion. The two lived together for almost 30 years until his death in 1855. According to the stories, Glapion was a free man of color from Haiti like her first husband and a distinguished war hero of the Battle of New Orleans during the British invasion of 1815. It is true that he fought in this war, but not in the ranks of the free black militia. His muster roll in the National Archives reveals that Glapion served in a white battalion. His birth and death records, numerous notary, and a few court entries identify him as a white man, the descendent of pure ancient French nobility on both his father's and his mother's sides. His grandfather was a French aristocrat, the Chevalier Christophe de Glapion, the Seigneur du Mesnil Ganchie from Normandy, France. He married into one of Louisiana's leading French families, served as the collector of royal fines under the Spanish, and established a lucrative sugar

plantation in Saint Charles Parish together with his son Christophe Dennis Duminy de Glapion, the father of Laveaux's partner. Antebellum law did not permit Christophe Glapion and Marie Laveaux to be legally married because interracial unions, though widespread, were strictly prohibited. Nevertheless, defying the racist laws of their time, the two considered themselves as legitimate husband and wife in every way that counted. In the 1830 census, they both managed to pass for white, but in later decades she was classified as "free colored," and their community began to believe that he, too, was of partial African descent and hence "colored." Two decades after his death, during the Reconstruction era, when black war veterans and their widows finally became eligible for state pensions like their white comrades, Laveaux requested and received a pension from the State of Louisiana as Glapion's widow. Her burial record lists her—probably by her own request—as "Dame Christophe Glapion," not as "Marie Laveaux, the Widow Paris."

Laveaux and Glapion are said to have had 15 children. Yet, only five are verifiable through church and state records as their biological children, Marie Eloise Eucharist (1826–1862), Marie Louise alias Caroline (died in infancy in 1829), Christophe Maurice alias François (1833–1834), Marie Philomene (1836–1897), and Arcange (1838–1845). Nevertheless, the Laveaux-Glapion family household may, indeed, have included as many as 15 children. Laveaux was known for taking care of homeless street children, who lived with her. Her servants had children, and some of her ten nephews and nieces, the children of Laveaux's younger sister, Marie Dolores Laveaux (1804–1839), the wife of François Auguste, may also have stayed with her from time to time after their mother's untimely and sudden death at the age of 35. Only two of her birth children, her oldest and youngest daughters, reached adulthood and just one of them, Marie Philomene, outlived her. The remaining three died tragically as small children. Laveaux's powerful magic could not save them.

Laveaux's oldest daughter, Marie Eloise Euchariste, is said to have been a powerful Voudou priestess in her own right. She is usually described as more ruthless and less charitable than her mother, and never reached the latter's fame. She, too, passed away tragically at the relatively early age of 35 in 1862 during the turmoil of the Civil War.

Marie Laveaux's home on St. Ann Street was a stellar example of Southern hospitality— always bustling with people. According to the stories, there was always a pot of her famous Gumbo on the stove. Laveaux must have generously fed and accommodated many visitors on a daily basis. In one of the front rooms of the old building was her "office" where she consulted with clients. In another was her altar space where she prayed, conducted séances, and performed "magic" or "miracles." She also conducted spiritual ceremonies every Friday in her courtyard, the so-called "parterres," with a makeshift altar spread out on the floor, and once a year, on Saint John's Eve in June, she organized a gigantic festival near Milneburg along the shores of Lake Pontchartrain.

Laveaux must have studied divinatory, dance and ritual techniques, and herbal healing early in her life. Some stories attribute her skills to the instructions of other Voodoo doctors (Dr. John and Marie Saloppe, for example).[14] A popular Creole slave song indicates that the old alligators ("vieux cocrodil") in the swamps taught

her what she knew. It is also very likely that she had Native American teachers or friends who trained her in their spirituality and their usage of local medicinal plants. They supplied her with fresh herbs on a regular basis and stayed overnight on her premises when they came to the city to sell their baskets and herbs in the French Market. Laveaux's neighbors thought that she was part Indian herself and thought that she looked Indian, but there is no proof of that. Whatever the sources of her skills, her cures seemed to have been highly effective. People consulted with Laveaux for just about every possible reason ranging from major political decisions, problems with the legal system of any sort, to tensions with family members, friends, neighbors, and landlords, financial dilemmas, unwanted pregnancies, and concerns about impotence and infertility. Unfailingly, "Mam'zelle Marie" as people affectionately called her, could "fix" the problem and turn any fate around for the better.

Laveaux was very versatile, yet what she was best known for was her expertise in *affairs d' amour,* "matters of the heart." With her unusual but highly effective methods, she was able to assist her clients to get a desired partner, to separate from an undesirable one, or to straighten out the unwanted behavior of an unruly one. New Orleans was known to be a very romantic city, and her citizens were described as an "amorous race" with hot tempers. They engaged in endless social events with dance, music, and good food, had elaborate courting customs, and fought fierce duels for their honor. Being a major port city with a large transient population of seamen and soldiers, New Orleans also had many men and women with broken hearts who desperately yearned for help. Hence, Laveaux's love potions and charms were perpetually in high demand.

Similar to Martin Luther King, Jr., Malcolm X, or her nineteenth century contemporaries Harriet Tubman and Sojourner Truth, the historical Marie Laveaux stood out courageously for herself and her people and thus advanced from being a person to being an icon representing not just herself but a whole oppressed social and cultural segment of American society. Hence, as a model of female and African power, she symbolized more than anything else resistance against a white supremacist, patriarchal, slaveholding system. Though an illiterate woman of color with modest economical means, located near the bottom of the social hierarchies of the antebellum South, she managed to influence the decision making of the city's wealthiest, most educated, and most powerful white men. As such she constituted a serious threat to the dominant group of New Orleans' society who sought to silence and criminalize her. However, many of the enslaved and free people of color remained unmoved by these efforts. To them, Laveaux was a powerful holy woman, loved and feared at the same time. The stories about her power, regardless of whether true or fictive, were important for a downtrodden, discriminated, and abused people because they gave testimony to African wisdom and spirit, reversing the power relations of the city.

CONGO SQUARE

The place most often associated with Voudou in New Orleans is Congo Square, located in today's Louis Armstrong Park in front of the Municipal auditorium. Marie

Laveaux is said to have danced there with a living snake during the famous slave dances that took place there weekly on Sunday afternoons. As a free woman of color she was not permitted to appear there legally since the assembly between free and enslaved people was strictly forbidden under antebellum law, but somehow she succeeded in passing by the watching policemen at the gates week after week to the amazement of the observing crowds that cheered her on when she walked into the center of the gathering and joined the dancers. When she reached the middle of the square, she is said to have pulled her python out of a box and begun her mesmerizing signature dance while the serpent was coiling along her gracefully moving limbs.

Located on an open field at the northern outskirts of the original old city, today's French Quarter, Congo Square was first an Indian trading post, which became during the French and Spanish colonial period the site of a weekly African market with amusement activities. During the early nineteenth century, Congo Square was the only place in the United States during the antebellum period where enslaved Africans were allowed to congregate to keep up their cultural heritage, singing and dancing their traditional songs and dances and practicing their traditional African instruments. The favorite dances were the Calinda and the Bamboula, a joyful Congo-derived flirtation dance with pronounced circular movements of the hip socket and a funky syncopated rhythm. The weekly dances in Congo Square continued to function as a market where the enslaved African workers of the city could exchange the fruits of their labor produced at odd hours during their spare time, such as cookies, rice fritters, bananas, barbequed meats, and garden vegetables. It was also a sacred place where the Africans could keep up with their spiritual obligations to their ancestors and make offerings to them under the old trees. The dances in Congo Square were thus both social and spiritual events that contributed greatly to the development of New Orleans' famous musical traditions. Music historians have credited Congo Square for being the birthplace of Jazz.

DR. JOHN

Doctor John was the city's most prominent Voudou priest. He was a contemporary of Laveaux and is often depicted as the teacher of the great Voodoo Queen who initiated her into the Voodoo path. Allegedly, he became her lover in the process and later her worst enemy and Voodoo rival. Nevertheless, this entire "soap opera" between Laveaux and Dr. John is not historically verifiable. The two probably just knew one another as colleagues in the conjure business, but had distinguished spiritual careers independent from each other.

Doctor John, who was also known by the name Jean Montane (or Montanet) was a tall, very dark skinned Senegalese who made his voyage across the Atlantic Ocean via Cuba to New Orleans, where he first worked as an overseer on the docks in the port, but soon focused on his spiritual calling as a fortune teller and herbal healer. He seems to have left a lasting impression on anyone who met him. A pattern of striking parallel scars decorated his cheeks, which he claimed were the marks of

royalty. He owned a house on Bayou Road, where he lived with several wives, one of whom was a white woman. He practiced his lucrative healing work from this location. In his old age, he lost all of his belongings due to bad investments. During the last few years of his long life, he resided at the house of his daughter Alicia, who took care of him.

The well known New Orleans jazz piano player and singer Dr. John (Mac Rabeneck) with his unique smoky deep voice took on this name to keep the memory of the great Voodoo legend alive. Besides being a locally and internationally accomplished musician, Rabeneck is a devout hoodoo worker in his own right, who not only sings about *gris-gris,* mojos, and Marie Laveaux in his bluesy ballads, but also practices Voodoo.

NEW ORLEANS VOODOO TODAY AND THE FUTURE

The Voodoo scene of the nineteenth century under the leadership of Marie Laveaux with Voodoo spiritual societies, or "houses," similar to the *cabildos* in Cuba and the *oumfo* (or *humfor*) temple societies in Haiti, vanished under the yoke of Jim Crow during the first part of the twentieth century. The former Voudou societies either turned into independent Spiritual Church congregations or went underground. Zora Neale Hurston and a research team of the Louisiana Writers Project a decade later still witnessed the last remnants of this tradition while conducting field research on Louisiana Voodoo/Hoodoo in the late 1930s.[15] But, by the end of World War II, these last remnants had disappeared as well. Only Laveaux's magical healing repertoire, her Hoodoo practices, the so-called "Marie Laveau routines in conjure," have survived. Some of her *gris-gris* recipes are still popular in the city, and the images of her dancing with a snake in Congo Square made a lasting impression on those who remember her.

The social upheaval of the civil rights movement during the 1960s triggered an African spiritual revival in the 1970s and 1980s. After decades of enduring discrimination and intimidation, African Americans gained a new sense of citizenship and self-worth and began to free themselves from the prejudices attached to their African cultural heritage. Following the example of Marcus Garvey and the Nation of Islam before them, they were not satisfied with the changes that the civil rights movement had achieved. They perceived "the white man's religion," Christianity, as highly oppressive and sought to free their souls from the burdens it had imposed on them. Getting equal rights in a white man's world was not enough. They keenly understood that they had not achieved true equality and freedom as long as their African history and cultural heritage were still vilified, suppressed, and misrepresented. Going back to the motherland and converting to the religions of their African ancestors appealed to them as an attractive solution for becoming "whole" again after 500 years of oppression and displacement. Many of them chose to become initiated into Cuban *Santería* and Haitian *Vodou,* as Cuban and Haitian immigrant communities in the United States had priests and priestesses available who could easily initiate and train them. If their finances permitted it, they crossed the Atlantic Ocean and received

initiations in Nigeria (Yoruba), Ghana (*Akan*), or Benin (*Vodun*).[16] For instance, one of the most visible examples of this larger social trend is the "Orisha Voodoo" movement created by a group of African Americans who first became initiated in the 1970s. They followed the example of the late Oba Osejiman Adefumi I, one of the first fully initiated African Americans from New York, whom they respect as their king. They founded under his leadership the Oyotunji (meaning "the ancestors from the Oyo Kingdom have returned") African village in South Carolina, a utopian African American community that lives strictly according to traditional Yoruba standards. While the Oyotunji village confines its members to the Yoruba tradition only, the boundaries between the Neo-African traditions of the African diaspora are often blurred. Many individual practitioners have multiple initiations into several different traditions and practice combinations of various African-based spiritual paths, and the communities of worshippers also shift and overlap.

The fusion between various African-based religious traditions is especially prominent in Louisiana, where "Voodoo" has become a generic term for any form of spiritual belief and practice remotely associated with Africa. In New Orleans, not only African Americans, but also increasingly white people became involved in the *Vodou* religion. Today, most of the Voodoo temples of the city are run by priests and priestesses who received their initiations and training through spiritual lineages from outside of the United States (Haitian *Vodou,* Cuban *Santería* and *Palo,* Jamaican Rastafarians, or Africa traditions from Benin, Nigeria, or Ghana). For instance, the "Historic New Orleans Voodoo Museum" epitomizes this peculiar fusion. It was founded in 1972 by the late Charles Gandolfo (1939–2001), a white New Orleanian, who seized the opportunity for a lucrative market in selling "Voodoo dolls" and so-called "authentic Voodoo ceremonies" to curious visitors, capitalizing on New Orleans' legendary Voodoo past. One of the more prominent "Voodoo priestesses" that he had hired to perform pseudorituals for the tourists was the late Rose Frank, a dark-skinned, young, African American woman who was initiated into a Cuban *Palo* line. The well-known New Orleans Voodoo priestess Ava Kay Jones has also worked with Gandolfo over the years. She is from Thibodeaux in southern Louisiana and has a Haitian and a traditional Yoruba initiation, but she also makes *gris-gris* bags and dances with a python à la Marie Laveaux.[17]

Another "Voodoo priest" affiliated with Gandolfo was the late Oswan Chamani (1944–1995), an Obeah man from Belize. His wife, Miriam, now runs her own "Voodoo Spiritual Temple" on Rampart Street, which enjoys great popularity among the tour groups. Miriam Chamani is from Mississippi and grew up in the tradition of the Spiritual churches in Chicago. She has no initiation into any African or African diaspora religion. Her eclectic temple includes statues and objects honoring every major *orisha,* numerous Haitian *lwa* (*Vodou* spirits), many Catholic saints, some Egyptian deities, an altar with a picture of the late Dagbo Hounon Houna (the highest priest of African *Vodun* in Benin, who is often referred to as the "Pope of Voodoo"), and the ashes of "Chickenman" (a New Orleans Voodoo original, who like Miriam herself was a self-appointed Voodoo priest).[18] Sally Ann Glassman, another contemporary New Orleans "Voodoo priestess" who is well known to the tourist

industry, also represents this peculiar blending of traditions. As a white Jewish artist, originally from Maine, she became initiated into a Haitian *Vodou* line and now runs the "Island of Salvation Botanica," a shop for spiritual paraphernalia and *Vodou* related art, and her own, nearly all-white Voodoo society. Glassman leads a vegetarian lifestyle, does not permit animal sacrifices in her temple, and gained national fame for designing a New Orleans Voodoo Tarot card deck.[19] In her religious services she invokes Haitian, Cuban, and local New Orleanian divinities such as Dr. John and Marie Laveaux, who, according to Glassman, possess her frequently.

Brandi Kelly's *Voodoo Authentica* Collection and Cultural Center on Dumaine Street is another example for this peculiar fusion of traditions. Kelly started out in the Voodoo Museum, but eventually established her own Voodoo shop and performance group, the *Voodoo Authentica Ritual Troupe,* that includes leading local drummers and dancers and Elmer Glover, her staff Voodoo priest. Kelly is an active Voodoo practitioner herself and the organizer and host of the annual Voodoo Fest in October on Halloween. In her Voodoo shop she keeps elaborate, beautiful altars not only for the main Haitian spirits such as Damballah-Wedo, Erzuli Dantor, Erzuli Freda, Papa Legba, Papa Ogou, the twin spirits of the Marassa, and the spirits of the dead including Guede and Baron Samedi, but also altars for the main Yoruba divinities such as Shango, Ogun, and Elegba, the divine trickster, and the female water deities Oshun, the divine spirit of love, beauty, and wealth, and Yemaya, representing the ocean and divine motherhood, and a big altar solely dedicated to Marie Laveaux. Kelly's godmother and spiritual teacher is the famous Haitian *Vodou* priestess Mama Lola, who resides in Brooklyn and is known as the "Oprah Winfrey of Vodou." Lola stems from a hereditary Haitian *Vodou* lineage, but also has initiations from Cuba and Benin.[20] She has "godchildren," whom she has initiated into the *Vodou* religion all over the world (United States, Haiti, Europe, and Japan) and considers the late Dagbo Hounon Houna her godfather.

Elmer Glover is the senior-most initiated Voodoo priest in New Orleans. He makes a living as a seventh-degree black belt karate master and has been running his own Cho Chi Zen martial arts studio for the past three decades. He was born and raised in southern Louisiana and is of African American and Haitian origin, but has traveled worldwide. He, too, has multiple initiations, but considers his 1983 initiation into Haitian *Vodou* as priest (*oungan*) and magician (*boco*) in the Bizango secret society in Archaie, Haiti, to be the most important step on his personal spiritual journey. After he returned from his Haitian initiation to New Orleans he decided to incorporate the local magical practices of his native Louisiana into his spiritual work. Since most of these practices are attributed to the celebrated Marie Laveaux, whom Glover venerates as the mother of all American Voodoo, he went to her famous tomb and asked her to accept him as her godson in the Voodoo tradition. He has relied on her ever since together with his flesh and blood godfather in Haiti as guiding role models for his spiritual calling. Glover has been in Haiti numerous times since his first visit, but his work has remained primarily homegrown Louisiana Hoodoo and Voodoo style, which he had studied already before his initiation in the legendary *Cracker Jack Drug Store,* the main supplier for Hoodoo and Voodoo

spiritual paraphernalia in the city since 1897. The store closed in 1974.[21] Glover is a devotee of *Bawon Samdi,* the highest Haitian *lwa* of the fierce Petwo rites. "The Baron"—as Glover refers to him—is a stern taskmaster. He represents death itself and personifies the power of transformation and magic. As the Haitians put it, "Bawon pa joue!" ("The Baron does not play!") For "heavy-duty" work to effect serious changes in life, Glover takes his clients on his power day, Saturday, to a secret location in the cemetery, where he provides them with spiritual baths and cleansing rituals to free them from negative influences in their lives and prays with them to the spirits of the dead for assistance, while placing offerings of candles, symbolic objects, cigars, and liquor into a real, abandoned tomb.

Inspired by Laveaux's example, snakes are today again popular among New Orleans Voodooists. Brandi Kelly's pet python named *Mojo* is a vital part of the *Voodoo Authentica Dance and Ritual Troupe* she founded. The Historical New Orleans Voodoo Museum also has several pythons. The most frequented Voodoo temple of the city, Voodoo Queen Miriam's *Voodoo Spiritual Temple* on Rampart Street, where nearly every tour group makes a stop, has a live python that resides permanently in her glass container in the sanctuary and comes out only for ceremonies. Queen Miriam's next door neighbor, Chief Dr. Sharon Caulder, the owner/director of *Chez Vodun* Museum, Temple, Bar, and Spa, is also the proud owner of several pythons, representing the ancient Temple of the Pythons in Benin, where Caulder had received her initiation into African Vodun.[22]

The tomb of Marie Laveaux, which houses the mortal remains of the great Voodoo Queen located in the old Saint Louis No. 1 Cemetery on Basin Street, not far from her former residence on St. Ann Street, has developed a life of its own. It has turned recently into one of the most-visited sites in New Orleans, second in popularity only to the bars and clubs on Bourbon Street. The handsome, Greek revival tomb is conveniently located near the entrance of the city's oldest burial site, dating back to the eighteenth century. It is covered with strange X marks, arranged in groups of three, and always has an array of various offerings neatly piled up in front of it. On a given day before hurricane Katrina, several thousand visitors would pass by to see it, making an offering (a few coins, Mardi Gras beads, flowers, tobacco, liquor, or candles), or just take a picture. In the aftermath of the storm the number of visitors to Laveaux's tomb has dwindled down to a few die-hard devotees, but has quickly started to grow again as soon as the tourist industry began to recover.

Just like the Neo-African religions that are growing everywhere in the United States today, *Vodou* in New Orleans is expanding, too, even in the post-Katrina era. The majority of newcomers to the tradition in the Crescent City are presently members of white Neopagan and Wiccan groups, who feel drawn to African-based magical practices, spirit possessions, and ceremonies. Multiple initiations and affiliations are not always welcome but are becoming more and more common. As the American mainstream is increasingly willing to accept Haitian *Vodou* and Cuban Santería as *bona fide* religions and many of the African diaspora temple societies are coming out of their secret underground existence and begin to register as state recognized churches throughout the country, in New Orleans, too, Neo-African traditions are

getting stronger. Not only Caribbean immigrants, but people from every ethnic group are joining their ranks. The Internet and cell phones have become essential tools in the post-Katrina age. New Orleans Voodoo groups remained in contact with their dispersed members and clients everywhere through e-mail lists and information posted on their Web sites. The large number of tourists that came all year around to have fun in the "Big Easy" were the main source of income of the Voodoo practitioners in New Orleans before the storm, but since Katrina, the visitors are scarce. Most of the local Voudouists are now focusing on mail-order Internet business and spiritual consultations over the cell phone in order to survive. In the future, the globalization of *Vodou* through the Internet is expected to grow, and *Vodou* could at last become a respectable American religion leaving the insidious old negative stereotypes behind.

NOTES

1. "Nine out of ten laypersons, asked for their first association with witchcraft reply 'voodoo,'" according to Lucy Mair's classical cross-cultural study of witchcraft. "They suppose it to be a particularly sinister form of witchcraft, as if one were any more sinister, in imagination, than another." Lucy Mair, *Witchcraft* (New York: McGraw-Hill, 1969), 234. This statistic is somewhat dated, but it is more likely than not that today, in the year 2006, the majority of the American public would still have "black magic" and "witchcraft" in mind as first association with the word Voodoo.

2. For an excellent history of the antebellum American slave market and New Orleans' central role within this market see Walter Johnson, *Soul by Soul: Life in the Antebellum Slave Market* (Boston: Harvard University Press, 1999). PART II

Satanism and the Church of Satan

Eugene V. Gallagher

In many ways "Satanism" is almost as elastic a descriptive category as "cult." At one time or another everything from the actual worship of a diabolical being, through various New Religious Movements (NRMs) held in suspicion by some audiences, to the Mormons and even the Roman Catholic Church has been described, somehow and by someone, as a form of Satanism. On the other hand, the Church of Satan, founded by Anton Szandor LaVey (1930–1997) with a very distinctive ideology and set of practices has long stood as the primary example of a self-proclaimed Satanic group. But it has often been difficult to reconcile what is known about the actual Church of Satan with what is largely feared, but not really substantiated, about Satanism. This essay tries to remedy the confusion about Satanism in three ways. First, it reviews the nature and development of a widespread moral panic about Satanism in the 1980s through the early 1990s. Second, it examines the origins and development of LaVey's Church of Satan, with a focus on its central scriptural text, *The Satanic Bible.* Finally, it examines the various offshoots from LaVey's group that developed over time and how they both continued and transformed LaVey's original Satanic message. "Satanism" in its broad usage is primarily a polemical, not a descriptive, term. People almost invariably use it to define a certain set of practices or beliefs as deviant, threatening, and morally and religiously reprehensible. Often the beliefs and practices in question exist more in the minds of the accusers than in any demonstrable fashion in the world outside their imaginations. On the other hand, LaVey's Satanic stance of opposition to the status quo consistently has attracted a small, but devoted, band of adherents since it was first formulated in the 1960s.

A MORAL PANIC ABOUT SATANISM

From the early 1980s through the early 1990s the American public was informed by the popular news media of a series of spectacular and shocking accusations about

the nefarious doings of an extensive Satanic underground. The shadowy conspiracy was supposedly responsible for a range of horrific crimes, from outrageous forms of child abuse in day care centers to abductions and ritual murders. One commentator dates the ignition of a broad, nationwide, panic about Satanism to the May 16, 1985 broadcast of the ABC TV news show *20/20,* which addressed the claims that literally thousands of Satanic cults were operating across the United States. Bill Ellis argues that "from this point on, Satanism became a major national crisis, and the *20/20* feature was followed by several other national exposes, including a 1988 Geraldo Rivera special that proved the highest-rated two-hour documentary in history."[1] Another analyst identified 62 separate "rumor-panics" about Satanism in the United States in the decade between 1982 and 1992.[2] The same author provides a partial list of 21 cases in which "Satanic ritual abuse" was alleged to have been committed in the years between 1983 and 1987.[3] The explosion of media attention to the suspected practice of a variety of dangerous forms of Satanism both heightened the fear of the general public that truly horrific crimes were being committed and helped encourage some people to add to the growing dossier of accusations. Some academic observers also became caught up in the growing fear of Satanism. One even claimed that there was "a national epidemic of 'satanist-related' crime" in the United States that was "growing faster than AIDS."[4] As is common with "cult controversies" in general, the developing panic was fueled by the tales of unspeakably horrible acts that appeared in a number of autobiographical testimonies of individuals who claimed that they were involved, generally against their will, in Satanic practices. A close look at the first and probably most influential autobiographies of someone who claims to have both remembered and survived alleged "Satanic ritual abuse" reveals both the typical themes and the characteristic social dynamics of the "Satanic panic" that gripped the United States in the 1980s and early 1990s.

Michele Remembers was written by Michelle Smith and her psychiatrist and eventual husband, Lawrence Pazder. In it, Smith claims that she was given by her mother to a cult of devil worshippers when she was only five years old. Smith's story is punctuated with vivid and very troubling excerpts from her conversations with Pazder over a 14-month period. Pazder reports that he reproduced material from their therapy sessions "nearly verbatim" from the transcripts of tape recordings that he made, but he does not disclose what he changed or why.[5] The following passage, a relatively mild one, gives some of the flavor of Smith's recollections:

> *No!* I don't want to be *cut!* … Help me! … They're making lines on me with a knife. I'm afraid. It's like a line down the middle of my face. Why are they putting that stuff on me? They're painting me with red stuff.… They're painting half of me dark. I don't want to be a clown.…. I'm going to have half a red face and half a white face. They are putting red on half of me and the stuff in my mouth on the other half! They're all calling someone. They're all calling that guy and having stomach aches. They … they all start running around the room and screaming and yelling. I didn't move because I'm afraid the candles will burn me.…[6]

Clearly, Smith presented herself to her therapist as someone who was terrified by something that she remembered. It was the therapist, however, who put the

remembered experiences into a coherent interpretive context. Working with the raw material that Smith provided him, Pazder constructed a series of conclusions that gave specific meaning to her chaotic and sometimes imprecise memories. As he retells it, Pazder decided early on that dreams that Smith had in the present were "blatantly symbolic" and might hold the key to some forgotten trauma.[7] The more he talked to Smith, the more he became convinced that "whatever it was, though it was unidentifiable, it was real, he could 'read' it, it was *there*."[8] Pazder's crucial interpretive contributions to Smith's recollections include his deciding that she was, indeed, recovering formerly repressed memories of traumatic childhood experiences, validating and clarifying the nature of the group at whose hands she suffered, and leading her to the religious authorities who would give her remembered experiences a specific religious interpretation.

A careful reading of Pazder and Smith's memoir reveals several of the influential mechanisms by which the existence of a widespread Satanic conspiracy was discovered, nurtured, and communicated to a wary public. The publisher was well aware that some of the claims in *Michele Remembers* would be difficult to accept. He observes mildly in an opening "note from the publisher" that "I knew their book would be not only important but also unusual."[9] He proceeds to list Dr. Pazder's academic credentials, affirms that two investigators independently confirmed some of the details of the story, stresses that "both doctor and patient were interviewed at great length" during the preparation of the book, and at least implies that he has both read the psychiatrist's notes and seen videos of his sessions with his patient.[10] In a rather short space, the publisher goes to great lengths to establish both the accuracy and the truthfulness of what readers are about to read. He even goes beyond that to make Smith a religious heroine, comparing her to Joan of Arc and St. Bernadette, other young innocents "whose authority and authenticity are such that they can tell you things that would otherwise be laughable—yet you do not laugh, you do not dismiss or forget."[11] The publisher clearly is convinced, along with the authors, that the stakes are high in the publication of Smith's story; it is intended to have revelatory meaning. The marketing of Michelle's memories was also intended to reach the broadest possible audience with its searing revelations. *People* magazine covered the publication of the memoir, and a version of Michelle's story also appeared in *The National Enquirer*.[12]

The publisher's effusive characterization of the story stands in marked contrast to two other indicators of significance that begin the book. One is a statement from Pope Paul VI that observes that "the question of the Devil and the influence he can exert on individual persons as well as on communities, whole societies or events, is very important. It should be studied again."[13] The second statement comes from the Roman Catholic Bishop of Victoria, British Colombia, the diocese where Smith lived. In an equally cautious manner, he notes that "I do not question that for Michelle this experience was real. In time we will know how much of it can be validated. It will require prolonged and careful study. In such mysterious matters, hasty conclusions could prove unwise."[14] Although the authors and the publisher clearly intend those statements from the pope and bishop to serve as validations of what

follows, they stand in significant tension with both the publisher's enthusiastic acceptance of Smith's claims and the details of the story that follows.

The different observations that preface *Michelle Remembers* begin to mark out the field of controversies that would attend a decade of Satanic panic in the United States. The publisher clearly anticipated skepticism about Smith's claims and took several steps to ensure that the story he published was validated. But he also went beyond validation to a religious endorsement by comparing Smith to a pair of Catholic saints. On the other hand, the statements from the pope and bishop, which are the first things that appear in the book after the table of contents, seem designed to lend substantial religious authority to Smith's memoir. But they actually have very little to say about Smith and much more to say about the general presence of evil in the world and the need for prolonged and careful study. The placement of the two testimonies signals one thing, but the substance of the remarks signals another. Thus the beginning of *Michelle Remembers* inadvertently demonstrates that any discussion of Satanism is liable to be highly contentious. Some people, like Smith, will fervently claim to have suffered enormous harm at the hands of diabolical others and selflessly wish to warn the American public about the evils to which they could fall prey. They have convinced supporters, like Pazder and the publisher, who invoke both professional expertise and personal passion in their efforts to spread the warning they feel is all too necessary. Other people will be interested religious bystanders, like the bishop of Victoria, who will carefully weigh the claims made and who may often be markedly slow to endorse the more extraordinary claims of people like Smith. Then some people will be skeptics, like those whose objections the publisher anticipates in his opening statement, who will be inclined to attribute the experience claimed by sufferers of Satanic abuse to sources other than Satan himself.

The interactions among those various positions played out in a series of dramatic court cases, which were also fueled by the publication of other memoirs like Lauren Stratford's *Satan's Underground* and widespread and frequently extravagant media attention.[15] Probably the most notorious case involved accusations that teachers at the McMartin Preschool in suburban Los Angeles, California, were involved in the systematic Satanically inspired abuse of children placed in their care. In 1984 prosecutors began a trial on 208 counts of child abuse, concerning at least 40 children, against seven teachers at the school. That case continued until 1990 and never produced a single conviction.[16] Several other high profile cases, based on similar types of accusations, were prosecuted during the same time period. As prosecutors continued to have difficulty in proving their allegations to juries, the tide turned against the image of a broadly dispersed, cunningly effective, and terrifically threatening Satanic underground. For example, Robert D. Hicks, himself a former police officer and later a law enforcement consultant, observed in 1990 that "I have found no proof that pernicious satanic phenomena exist on a scale worthy of new criminal laws and specialized police task forces."[17] Hicks also turned a critical eye on his colleagues in law enforcement, noting that few of them "have taken the time to combat publicly the overstatements, generalizations, clearly false and absurd 'facts' and excursions into illogic relating to the impact of Satanism and the occult on crime."

As the Satanic panic of the 1980s and early 1990s began to ebb because of lack of evidence, scholars proposed different explanations for its sources. Commenting on the material in memoirs like those of Smith and Stratford, Philip Jenkins and Daniel Maier-Katkin proposed that "the study of survivors can tell us a great deal about mental disorders, about the state of American religious belief, or the therapeutic process. What 'occult survivors' can not tell us about is the occult."[18] Similarly, Jeffrey Victor, who coined the term "Satanic panic," argued that the "hidden meaning" of accusations about Satanic cult practices and ritual abuse was that they "convey the complaint: 'The moral order of our society is being threatened by mysterious and powerful evil forces, and we are losing faith in the ability of our institutions and authorities to deal with the threat.'"[19] Debbie Nathan proposed a more specific source for fears about Satanic ritual abuse, identifying them as "a deeply rooted expression of anxieties this culture harbors about unresolved family and sexual issues," including the influx of women into the work force outside the home and the corresponding rise in the dependence of families with children on various forms of day care.[20] By the mid-1990s, especially after the dramatic clash between the Branch Davidians and the Bureau of Alcohol, Tobacco, and Firearms and the Federal Bureau of Investigation (FBI), fears about cults were transposed into a different register, but worries about the dangerous effects of Satanism continued to be activated in a number of different contexts. Contemporary Neopagans, for example, have frequently been accused of Satanic practice. Sarah Pike summarizes their effect in this way: "Rumors of Satanism are so widespread that they do not simply affect Neopagans freedom to hold their rituals at state parks or other public places. The explanatory power of satanic conspiracy theories threatens Neopagans' lives on many fronts and impacts child-custody cases, employment, and educational experience."[21] Pike also shows that various individual Neopagans as well as some Neopagan groups also made substantial efforts to demonstrate, as the international organization The Covenant of the Goddess puts it, that "the gods of Wicca are in no way connected to Satanic practice."[22] Claims and counterclaims about the practice of Satanism, however it is understood, thus occur in a wide variety of contexts.

A sense of the elasticity, and hence imprecision, of "Satanism" as a descriptive category is indelibly conveyed by a widely cited report published in 1992 by Kenneth V. Lanning, then a Supervisory Special Agent for the FBI's Behavioral Science Unit. Lanning documented more than 30 different groups that were referred to as practicing some form of Satanism.[23] The appearance of the Church of Satan and the Temple of Set in that group is no cause for surprise, but it also includes the Ku Klux Klan, the Church of Scientology, the Unification Church, the International Society for Krishna Consciousness, the Rajneesh movement, Transcendental Meditation, Buddhism, Hinduism, Islam, Mormonism, and the Roman Catholic Church. At that point the challenge is to determine what is *not* considered Satanism. The term has become so elastic that it simply comes to mean "religious practices that frighten me" or "a religion that I don't like." Efforts to restore some small bit of precision to the term also foundered. Carl Raschke, for example, tried to distinguish four types of Satanic activity: the experimental, the occult, the self-styled, and the

traditionalist.[24] But his categories quickly collapse into each other. It is not clear why occult Satanists cannot also experiment, or why the self-styled Satanist cannot make use either of tradition, the occult, or experimentation, for example. Part of the problem is that Raschke includes rumors, accusations, self-testimony, and verifiable actions together under a single umbrella label of "Satanism" without making sufficient effort to sort them out. Other efforts at classification have fared little better.[25]

The combination of cultural polemics exacerbated by the Satanic panic of the 1980s and early 1990s and the lack of rigor in defining categories made "Satanism" into a fuzzy and highly malleable category. Because of that lack of precision, any observer must be especially clear about precisely what is meant by "Satanism" whenever the term is used, and provide in accessible and verifiable form any evidence on which discussions of Satanism is based. The rest of this essay leaves behind the impassioned denunciations and overheated warnings about the pervasive Satanic conspiracy to focus on the primary institutional forms that Satanism has taken in the United States. It focuses in particular on the Church of Satan, founded by Anton Szandor LaVey in San Francisco, California, in 1966, and some of its offshoots.

ANTON LAVEY AND THE CHURCH OF SATAN

Although LaVey said that he was interested in various aspects of the "black arts" for some time, the formal founding of the Church of Satan took place on April 30, 1966. The choice of date was no accident. As one of his closest followers put it in her history of the Church of Satan, "Anton knew the date upon which the first Church of Satan must be established. It would have to be during the traditional night of the most important demonic celebration of the year, when witches and devils roam the earth, orgiastically glorifying the fruition of the Spring equinox, Walpurgisnacht, the night of April 30th–May 1st."[26] That statement reveals many of the hallmarks of LaVey's construction of his new church, including the calculated choice of symbols, the emphasis on unfettered sexuality, an attention to the physical and material, and an embrace of figures of opposition to the status quo. LaVey intended his new church to be an affront to all established religions, especially Christianity. He was particularly critical of the message of self-denial that he found at the core of Christianity. In his church's central text, *The Satanic Bible* (1969), he proclaimed that "no longer shall man's salvation be dependent on his self-denial."[27] In LaVey's view all previous religions overemphasized the spiritual at the expense of the material and failed to accept human beings as they actually are. As a result, he claimed, "it has become necessary for a NEW religion, based on man's natural instincts to come forth."[28] LaVey conceived of his new group both as a religion and as "Satanic" for very explicit reasons. He rejected humanism as an alternative to established religions because it "is simply a way of life with no ceremony or dogma,"[29] both of which, he thought, responded to fundamental human needs. LaVey's adoption of Satan as the patron of his new religion, however, is both more interesting and more complex. For LaVey, Satan fulfilled a symbolic function. He claimed that "Satan represents opposition to all religions which serve to frustrate and condemn man for his natural

instincts. He has been given an evil role simply because he represents the carnal, the earthly, and mundane aspects of life."[30] LaVey intended to reclaim the etymological meaning of Satan as the "adversary" and use him as the leading edge of an intentionally provocative critique of the status quo. Part of that critique involved the unmasking of all of the false guidance and promises that were preached by various religions, particularly Christianity. As LaVey saw it, "popular lies have been the most potent enemies of personal liberty. There is only one way to deal with them: Cut them out, to the very core, just as cancers. Exterminate them root and branch. Annihilate them, or they will us."[31] The other part of LaVey's program was to reawaken a robust sense of self among his audience. LaVey summarized his position in "the Nine Satanic Statements." They are the following:

1. Satan represents indulgence, instead of abstinence!
2. Satan represents vital existence, instead of spiritual pipe dreams!
3. Satan represents undefiled wisdom, instead of hypocritical self-deceit!
4. Satan represents kindness to those who deserve it, instead of love wasted on ingrates!
5. Satan represents vengeance, instead of turning the other cheek!
6. Satan represents responsibility to the responsible, instead of concern for psychic vampires.
7. Satan represents man as just another animal, sometimes better, more often worse than those that walk on all-fours, who because of his "divine spiritual and intellectual development," has become the most vicious animal of all!
8. Satan represents all of the so-called sins, as they all lead to physical, mental or emotional gratification!
9. Satan is the best friend the church has ever had, as he has kept it in business all these years![32]

Statement seven represents the core of LaVey's message. He proposed that any program for a fulfilling human life should proceed from a clear-eyed evaluation of just who human beings really are. They hold no privileged position in his view of the world; they are animals like all the rest. But LaVey did not lament that fact; he celebrated it. Religions deceived people, he believed, precisely because they led humans away from a proper understanding of their own nature. Religious teachings encouraged humans to repress and control their animal instincts, rather than to exercise them. The teaching of the Church of Satan aimed to liberate human beings so that they could be their truest selves. As LaVey put it, "man, the animal, is the godhead to the Satanist."[33] Accordingly, the Nine Satanic Statements praise, among other things, indulgence, vengeance, vital existence, and physical, mental, and emotional gratification.

The Satanic virtues amount to provocative reversals of well-known Christian virtues. In many ways, the Church of Satan became a kind of counter-Christianity, a system of dogma and ceremony that systematically reversed the values of Christian dogma and ritual. Although LaVey asserted that Satan was the best friend the Christian church ever had, because he served as the focal point for all that the church

opposed, Christianity was also the best friend that the Church of Satan had, because it was the target of LaVey's most vitriolic attacks. In fact, the title of LaVey's most important book, *The Satanic Bible,* effectively summed up his intent. He aimed not simply to propose a new ethical and ritual system, but to supplant the dominant one in his own context. He wanted his new Bible to replace the old one. One of LaVey's most dramatic reversals of Christian teaching occurred in his rewriting of the famous beatitudes that are part of the discourse of Jesus in both the gospels of Matthew and Luke. As he did in the Nine Satanic Statements, and as Jesus does in Luke, LaVey set up a series of oppositions between the characteristics he endorsed and those he condemned. His intent to overturn the Christian message was clear from the beginning. LaVey started with the assertion that "blessed are the strong, for they shall possess the earth—Cursed are the weak, for they shall inherit the yoke!"[34] LaVey subsequently praised the powerful, the bold, the victorious, the iron-handed, the death-defiant, the destroyers of false hope, the valiant, as well as those who believe in what is best for them, those who have a sprinkling of enemies, and those who are the mighty minded. On the other hand, he cursed the feeble, the righteously humble, the vanquished, the poor in spirit, the gazers to a richer life beyond the grave, the god-adorers, the believers in good and evil, the "lambs of God," as well as those who do good for others without receiving good in return, those who teach falsely, and those who deceive themselves. Towards the end of his list of oppositions, LaVey aimed particular scorn on the weak, proclaiming that "thrice cursed are the weak whose insecurity makes them vile, for they shall serve and suffer."[35] In contrast, he proudly proclaimed that "the eternal flame of power through joy dwelleth within the flesh of the Satanist."[36] LaVey's beatitudes constitute a striking summary of the message of *The Satanic Bible.* The well-established Christian virtues should be abandoned and cursed; in their place a new set of virtues, much more in tune with true human nature, should be embraced. Such a thoroughgoing transformation of values will be accomplished, LaVey contended, not by attending to a prophetic message attributed to divine inspiration but through determined individual human effort.

For LaVey, the individual was supreme. He counseled, in the pseudobiblical idiom of the first part of *The Satanic Bible:* "Say unto thine own heart, 'I am mine own redeemer.'"[37] Such a statement was not only possible but necessary for LaVey because "all religions of a spiritual nature are inventions of man" and "man has always created his gods, rather than his gods creating *him.*"[38] Because religions are nothing more, or less, than human constructions, and because humans seek to gratify their animal instincts, the ideal religion according to LaVey was nothing other than a form of controlled self-assertion. Only from such a position, LaVey believed, can one appropriately interact with others. In *The Satanic Bible* he put it this way, "The Satanist believes in complete gratification of his ego. Satanism, in fact, is the *only* religion which advocates the intensification or encouragement of the ego. Only if a person's own ego is sufficiently fulfilled, can he afford to be kind and complimentary to others, without robbing himself of his self-respect."[39]

LaVey's emphasis on the primacy of the individual, the unreality of any realm or beings beyond the natural world, and the restriction of Satanism to an elite few who could truly appreciate its radically innovative message all had important impacts on the group he founded. Although LaVey's own interest in exerting control over those who were drawn to his message waxed and waned during his lifetime, he generally held to his conviction that "the 'Satanic Army' is comprised of individuals, not cultists."[40] Throughout his career, LaVey exercised influence as a teacher much more than as the head of a unified organization. Membership in the Church of Satan was more a fundraising mechanism than anything else. Although those who were attracted by LaVey's teachings shared a common critique of all established religions with each other and with LaVey, the emphasis on the cultivation of the individual ego made the development of alternative teaching within the tradition initiated by LaVey an ever-present possibility. LaVey's relentless focus on the physical world and the denigration of the spiritual also made his teachings incompatible with those frequently attributed to the Satanic underground, in books like *Michelle Remembers.* He explicitly states that, from his perspective, "most Satanists do not accept Satan as an anthropomorphic being with cloven hooves, a barbed tail, and horns. He merely represents a force of nature—the powers of darkness have been named just that because no religion has taken these forces *out* of the darkness."[41] Specifically in regard to ritual practices like the so-called "Black Mass," LaVey asserted that they were a "literary invention."[42] Moreover, in statements that would rule out virtually all of the practices attributed to the vast Satanic conspiracy, LaVey acknowledged that, although his Satanism approved of virtually any sexual act, he added very important qualifiers. First, anything was permissible, "so long as it involves no one who does not wish to be involved," and second, "*so long as it hurts no one else.*"[43] As LaVey himself put it succinctly, "there are no categories of Satanism—there are Satanists and nuts."[44] Both the substance of LaVey's exposition of Satanic thought in *The Satanic Bible* and his own explicit attempts to dissociate himself from other "nuts" claiming to be Satanists clearly distinguish the Church of Satan from the types of groups and practices conjured up in memoirs like *Michelle Remembers.*

Even after LaVey's death in 1997, his writings and the activities of the Church of Satan continued to attract interested people. Aiming to secure its status as a religion for a self-styled elite, the Church of Satan explicitly declares that it is not interested in proselytization. The church's Web site asserts that "Satanism is not for everyone, but if it is for you, we welcome you. We are not a fan club, a pen-pal society, or a lonely hearts group. We are a group of dynamic individuals who stand forth as the ultimate underground alternative—the **Alien Elite.** We realize what we have, what we are, and what we shall become. Our scope is unlimited, and the extent of your involvement is based upon your own potential."[45] Nonetheless, LaVey's writings still attract the curious; a recent survey reveals that *The Satanic Bible* "is still the single most influential document shaping the contemporary Satanist movement"[46] whether or not readers proceed to formal affiliation with the Church of Satan by paying the required $200 fee.

What individuals do within the orbit of LaVey's version of Satanism is, as he intended, largely up to them. It is clear that for many reading *The Satanic Bible* and other writings fuels an oppositional stance towards the religious and social status quo. Some actively engage in rituals, either those described in LaVey's companion volume, *The Satanic Rituals,* or those of their own devising. LaVey gave a wide latitude to improvisation by describing the ritual space as "a fantasy world" where practitioners could "harness[ ] the potent wattage of your emotions" and "psychically extend yourself to shape the world beyond the surrounding walls."[47] One example of ritual creativity is included on the official Church of Satan Web site. It has a brief description and full script, with pictures, for a ritual celebration of the rites of spring, devised by Magister Michael Rose. Rose, who reached the fourth of five levels of initiation in the Church, captures the tone and creative approach often associated with LaVey himself in the description of the ritual: "During the ritual the celebrant and his assistant invoke female nymphs to awaken the lusts of Pan from his wintery sleep. We added some real bump and grind stripper music to bridge from the solemnity of the organ music and the ritual formalities into the dance performed by the nymphs. This added that final visual assault and a touch of humour so often lacking in many rituals I have witnessed. After the ritual we had a sumptuous banquet complete with fruit, meat, cheeses, wine and the finest of Ales."[48] What an external observer might see as a shocking blending of the sacred and profane, the Satanist sees as an acknowledgement of the multiple needs of human beings, for sex, humor, pageantry and ceremony, and a good meal. Clearly, the spirit of LaVey lives on in the practices of some of his contemporary disciples.

OFFSHOOTS OF THE CHURCH OF SATAN

Because of its emphasis on individualism and LaVey's generally weak control of those who identified themselves as members of the Church of Satan, the Church produced a number of splinter groups, both during LaVey's lifetime and afterwards. One of the most notable was the formation of the Temple of Set in 1975. That group was formed by Michael Aquino (b. 1946) and other members of the original Church who claimed that LaVey's group lost its bearings and departed from its original principles. Aquino particularly objected to LaVey's decision to sell initiation into the priesthood in order to raise cash. Aquino's group quickly evolved away from both the style and substance of the Church of Satan. During the Satanic panic of the 1980s, the Temple of Set described its task as having two discrete dimensions. It had "not only to defend authentic Satanism against the shrill screams of the scarecrow-merchants, but also to reject superficial glorification of the scarecrow that would return Satanism's image to nothing more than anti-Christian."[49] The Temple of Set, first under the leadership of Aquino and later under Don Webb, appealed to two different sources to guide it along that middle path. First, most notably in Aquino's massive history of the Church of Satan, it offered a new understanding of LaVey's work and its connection to the Temple of Set. Aquino, for example, wrote in the introduction to his history that "the Church of Satan was limited in the

positive potential of its philosophical conceptualizations. The energy and the momentum were present, but Satanists had imprisoned themselves in what turned out to be a very cramped and artificial universe.… The Temple of Set proved to be the latent, always implicit but never predefined promise behind the Church of Satan."[50] That perspective stressed the continuity between the Temple of Set and its parent body even as it presented the Temple as the newer, clearer, and fuller realization of insights that LaVey did not fully grasp. The second strategy provided a deep history for the Temple by linking its teachings to the ancient Egyptian deity Set, who was worshipped as early as 3200 BCE. Providing a clue into the philosophical attractiveness of Set for members of the Temple, Webb described himself as "the Magus of the Word Xeper (pronounced Khefer), an English language coinage expressing an Egyptian verb written as a stylized scarab and meaning "I Have Come Into Being." This Word generates the Aeon of Set, and is the current form of the Eternal Word of the Prince of Darkness."[51] The primary theologians of the Temple of Set, Webb and Aquino, developed their ideas into a much more complex, obscure, and esoteric system of thought than anything in LaVey's writings. The Temple of Set's very distinctive theology is extensively documented on the group's Web site.

While claiming deep roots in antiquity, Webb also retained the oppositional character of LaVey's Satanism, asserting that "awareness of Xeper usually begins with a moment of rebellion against the spiritual status quo."[52] Like the Church of Satan, the Temple of Set does not engage in aggressive proselytizing; it waits for the truly serious rebels to come to it. Webb cautioned that "teaching difficult things is a tough process, and we don't undertake it lightly. We don't spend months or years dealing with people that are looking for a quick occult fix drawn by the lure of the strange."[53] Initiation is not a casual thing, but takes time and a dedication to the study of teachings that are often not immediately accessible. Perhaps even more than the Church of Satan, the Temple of Set stresses the efforts of the individual; it claims to carefully evaluate each application for membership and to reserve membership for an elite few.

The Temple of Set, and particularly Aquino, got caught up in the accusations of Satanic ritual abuse that flourished in the 1980s. In 1986, Aquino, then a lieutenant colonel in the U.S. Army, was implicated in suspicions of child molestation at the day care center at the Presidio military base in San Francisco. He was, however, never charged with any crime.[54] Later, in 1994, Aquino sued a former member who claimed that the Temple of Set was part of the nationwide Satanic underground conspiracy that was responsible for multiple instances of child abuse, abductions, and ritual murders.[55] The group that Aquino helped to found, however, survived both those difficulties and the transition in leadership to Webb. Although solid membership figures are virtually impossible to come by, the Temple of Set maintains a robust presence on the web, offering its literature to interested and dedicated seekers after wisdom.

LaVey's death in 1997 was attended by disputes about succession that frequently plague NRMs as they attempt to make the transition from the generation of the founder(s) to a second generation. Although LaVey was succeeded by his close associate Blanche Barton as High Priestess of the Church of Satan, LaVey's daughter

Karla criticized the Church under Barton's direction for abandoning the legacy of her father and the early years of the Church of Satan. Although the First Satanic Church maintains only a modest presence on the Web, two telling items reveal its sectarian stance toward the original Church of Satan. The section "about the church" attests that "the First Satanic Church was formed on October 31, 1999 by Karla LaVey, Anton LaVey's daughter and founding member of the Church of Satan. We were established due to the lack of a Satanic presence and are dedicated to the study of Satanism and the occult sciences."[56] But the site's welcome page asserts that Karla LaVey's First Satanic Church was founded in San Francisco in 1966, aggressively claiming direct continuity with Anton LaVey's Church of Satan. Karla LaVey's assertion that she is simply re-presenting the original teachings from which the Church of Satan departed is reinforced by the requirement that anyone applying for membership must have read *The Satanic Bible* beforehand.[57] Karla LaVey's First Satanic Church also continues the elitist stance of her father's group and the Temple of Set. The group's Web site warns that "acquiring a membership in the First Satanic church is not a simple task. We do not solicit memberships or accept just anyone. We are the eclectic elite of the Satanic religion and a $100 bill will not buy your way in. To ensure the highest stratum of membership we screen *all* applicants. Only those who are sincerely interested in Satanism and the occult sciences need apply."[58]

Another early member of Anton LaVey's Church of Satan, John Dewey Allee, echoed some of Karla LaVey's criticisms of the current Church of Satan, including her insistence that someone need not necessarily be a member of a specific organization in order to be a Satanist. Allee is critical of what he sees as the elitism of the Church, arguing that "'elitism' should be determined by nature, outside the framework of a political or religious institution. Otherwise, the organizational leaders would be the ones determining who was and was not elite; an attitude which forms the basis for a cult."[59] Allee is explicit in his separation of what he sees as the worthwhile early teachings of LaVey from the master's latter thought and from the continuing teaching of the Church of Satan. He asserts that "while we recognize Anton LaVey's contribution to the ongoing manifestation of the Satanic in the mundane realm, we also feel that, as many dark magicians before him have done, LaVey eventually squandered his gift and his power, and became bitter and alienated: sadly it is this latter (post-1975) 'LaVeyan' period that characterizes the outlook of the current CoS."[60] In what he sees as a return to the spirit of LaVey's original teachings. Allee advocates what he calls "free thought Satanism." Accordingly, he begins the mission statement of his First Church of Satan with this admonition to the reader: "You have the choice of accepting or rejecting what I have to say. If you find it difficult or impossible to accept, I would advise you dismiss my concepts entirely, if you wish!"[61] Allee takes up again Anton LaVey's emphasis on Satanism as an oppositional stance to established pieties, claiming that "Satanism is a dynamic force of social change in a society that resists change."[62]

Also in continuity with LaVey's original insights, Allee attends to the human need for ritual and ceremony, noting that "rituals are performed to effect change, while ceremonies are employed to sustain."[63] The Web site of the First Church of Satan

includes a wedding ritual that he composed; he explicitly gives permission for the ritual to be copied and used by others, so long as nothing in it is changed. The priest's opening invocation gives the flavor of the brief ceremony, at once familiar to those who have attended other wedding ceremonies, yet distinctive for the powers that it invokes: "In Nomine Dei Nostri Satanas Luciferi Excelsi! In the name of Satan, I call upon the forces of Darkness and the infernal power within! Consecrate this place with the power, love and light of Lucifer. Join with us, we say in the binding of these two who shall be as one. They desire to make their union a matter of record, so that their friends and the society in which they live may bear witness and lend support. Diana and Adonis, Ishtar and Tammuz, Freya and Odin … by these and other names are divine lovers known. I invite the Gods to come bless this union as we invoke the infernal names: Amon, Astaroth, Ishtar, Bast, Lilith, Pan, Asmodeus, Thoth. (the congregation may repeat each name as it is spoken)"[64] Take away the specific references to Lucifer, Thoth, and other less familiar beings, and the sentiments would hardly be out of place at many civil or religious wedding ceremonies. The invocation thus inadvertently reveals the tension between the need to shock, something that always motivated Satanists of any kind, and the common human need to acknowledge major life passages.

If the form of the First Church of Satan's wedding ceremony reveals conformity wrapped in an aura of rebellious deviance, another incident from the history of the group is much more shocking and explicitly recalls the themes of the Satanic panic of the 1980s and early 1990s. Much of the controversy took place in e-mail postings to discussion groups and through other communications over the Internet, but both Allee and his current partner Lillee Allee posted their reconstructions of the affair on the Web site of the First Church of Satan. John Allee acknowledges that in his oppositional zeal at the founding of the Church "when I began building The First Church of Satan domain, I sought the most outrageous, controversial and offensive internet addresses I could find for our 'Links' section."[65] One of those links led whoever would follow it to the North American Man-Boy Love Association (NAMBLA), a notoriously controversial group that endorses pedophilia and is the subject of frequent denunciations and litigation. As Allee recalls it, his attempt to shock and to provoke thought blew up in his face. Members of the governing council of the First Church of Satan demanded that he remove the link, and a vicious cycle of accusations and counteraccusations erupted, largely in cyberspace. Allee remains both adamant about his true intentions and chastened by the reactions he elicited. He reports that "Yes, I put myself up there for ridicule. I wanted to get a reaction. I wanted people to think. Instead, many of the Satanists who should have been thinking, started pointing fingers and using me as a scapegoat. For a person to be guilty of a crime, there must first be proof! All of a sudden, I had become a child molester and worse! To this day, this has continued to haunt my family and me. When I have complained about this, I was then called a martyr. There is nothing worse than a closed mind. I will state here once again. I have never been and I am not a pedophile or a child molester. I am, by nature, controversial. I do make statements that are explosive and I do go where angels obviously would fear to tread. Before you judge me too

harshly, understand that if my statements have been rash, for every hate letter I have received, I have received ten letters of support."[66] Allee admits that at least some circumstantial evidence lent credence to the accusations against him. The council of the First Church of Satan, for example, had a disproportionate number of young males. But accusations quickly escalated beyond the little evidence available. Allee cites one e-mail exchange that accused him of having "killed innocent children by curses" and made "threats to sexually abuse council members."[67]

Lillee Allee sheds a different light on the entire episode. She focuses on the abrasive and controversial persona that Allee adopted in the 1990s, Lord Egan or Daemon Egan. She argues that the more deeply Allee inhabited that persona, the more stubborn and impervious to compromise he became. What began as a provocateur's playful attempt to question all received wisdom and to jar his audience into thought by making it confront very challenging ideas hardened into the mask of a tyrant that could not be removed. Lillee Allee concludes that "Egan Had to Die."[68] In fact, in 2003 John Allee took the dramatic step of announcing the death of Lord Egan. As Lillee recalls it, "this is how I see it. Egan wanted out. When Egan somehow did not like what he heard or could not explain what he wanted or whatever, he told them that by killing off the persona, John Dewey would finally have the life he wanted one way or the other."[69] Although the manner in which Allee killed off his former persona created a number of additional problems, clearly he intended to give both himself and the First Church of Satan a fresh start by leaving behind the persona that was such a lightning rod for controversy and realizing what had become an iron grip on the organization and doctrine of the group. In another manifestation of the restless creativity of those who identify themselves as following the Satanic or "left-hand" path, John Allee's teaching continues to change, in part perhaps because of the influence of his new partner Lillee. They now describe themselves as having founded the "Allee Tradition" in 2003. They claim that their teaching "is based on Hermetic philosophy. This magical tradition incorporates practices from both paths in order to live a more balanced mundane and magical life."[70]

The accusations against John Allee created a substantial controversy in the relatively small world of those associated with the First Church of Satan and other Satanic groups. But they are also important because they show how the explosive charges that were such an integral part of the Satanic panic of the 1980s and early 1990s could be used to damaging effect *within* the orbit of institutional Satanism itself. Allee had to spend much of his time defending himself against dissident members of his own group and those from other Satanic groups who might have found the accusations against him credible. The conflict in this case, as opposed to the McMartin preschool case, for example, was intra-Satanic, rather than between suspected Satanists and wary outsiders. Allee's NAMBLA incident thus shows several things. If the wedding ceremony suggests an implicit yearning for conformity, the NAMBLA accusations suggest that rules for proper behavior exist that even self-professed opponents of the status quo will strive to maintain. LaVey himself clearly understood that desire when he insisted that any participation in Satanic sex must be voluntary. The use of the NAMBLA accusations by Allee's opponents also shows

how elements of individual cult controversies can become part of the polemical ammunition even of the groups against which the charges are generally made. In the minds of Allee's accusers their task was to separate the proudly and appropriate rebellious oppositionalists (themselves) from the devious perverts (Allee), a task very similar to that undertaken by those who issue blanket warnings about the deviant Satanic underground. In both instances, accusations about the practice of unacceptable Satanism serve to distinguish one social group from another, stigmatize certain types of conduct, reassert moral boundaries, and defend specific images of both community and authority from anything that is seen as threatening them. Allee's experience also shows how religious leaders who get too far in front of their followers can risk having their authority challenged, their character impugned, and their very sanity questioned. The specific form that the controversy took in the First Church of Satan was definitely shaped by some of the distinctive Satanic ideas about provoking reevaluation of the status quo, asserting one's individualism, and embracing all that is denigrated by established society, but they also demonstrate in miniature the dynamics that attend the career of any NRM as it strives to stake out a path that is both distinctively and enticingly new and, at the same time, comfortingly familiar. The more a group champions alternatives to accepted modes of thought and action, the more likely it will be opposed by those who have substantial interests and investments in the accepted ways of doing things. The more leaders assert their distinctive, if not unique, differences, the more they are open to critical examination. Allee played out such dynamics in his tenure as the head of the First Church of Satan. He displayed the tenacity to maintain his Satanic oppositional stance even as he grudgingly displayed the flexibility that enabled him to retreat from an increasingly untenable position.

CONCLUSION

In LaVey's way of thinking, contemporary Satanism is both a distinctly new religion, which he himself, without any false modesty, invented and the continuance of an ancient tradition of opposition to the status quo. As a new religion, it aims to liberate human beings from the shackles that were impressed upon them by every previous religion. As a tradition of opposition, it rescues inspiring examples from ancient history and mythology in order to spur individuals to heroic efforts at self-affirmation. For LaVey, Satanism is also the religion of the playful provocateur; anything that will shock people out of their unthinking adherence to the status quo is worth thinking about or even doing.

Foremost among the shocking gestures of the Church of Satan is its wholehearted endorsement of the great Adversary himself, Satan, as the patron of the new church. LaVey meant to shock and unsettle people with his embrace of Satan and the rest of the infernal mythology that he developed, and shock them he has. The extent to which his own calculated effort to shock has sparked periodic moral panics about the broad influence of a Satanic conspiracy remains difficult to ascertain. The stories and lore that accumulated about Satan since his introduction in the Hebrew Bible

more than two millennia ago are as available to any reader as they were to LaVey. In the preaching and practice of many religious people within the broad biblical tradition throughout history Satan often played a prominent role. Historians, in fact, can easily document a number of other Satanic panics that predate the outbreak in the 1980s and 1990s. The links between LaVey's Church of Satan and fears about Satanism thus remain tenuous both because of the limited popular influence of LaVey and his disciples and because multiple other sources can excite justifiable concerns about the influences of Satan upon earthly affairs. Satanism was not directly inspired by the Church of Satan or any of its offshoots. Rather Satanism is a powerful and compressed symbol that certain people use to express fears and suspicions that may not be fully formulated by those who hold them but which are nonetheless experienced as deeply troubling. When people act on such fears by lashing out at individuals or groups deemed to be Satanic, without fully clarifying what they mean and substantiating what they fear has been done, much damage can be done to the accused and the accusers alike. As with any controversy about NRMs, nothing substitutes for a careful, patient reading of all the evidence before the alarms are sounded.

The Church of Scientology

Douglas E. Cowan and David G. Bromley

If individuals have encountered Scientology at all, it is likely through advertisements offering a "Free Personality Test," kiosks set up in shopping districts offering passersby a "Free Stress Test," or perhaps watching a celebrity such as Tom Cruise tout the benefits of Scientology's "study tech" while being interviewed by Oprah Winfrey. On the other hand, they may have read one of the in-depth news reports about the Church that almost inevitably appear following a critical incident of some kind. Few in North America and Europe have not heard of Scientology, but fewer still understand its history, doctrine, and practice.

Growing out of the popular self-help therapy, Dianetics, the Church of Scientology is a uniquely American religion, known as much for the controversies it generates as for the celebrities who enthusiastically tout its benefits. Discovered, though many would argue invented, by L. Ron Hubbard (1911–1984), in terms of organizational growth Scientology is one of the most successful New Religious Movements (NRMs) to emerge in the latter half of the twentieth century. Since the founding of its first church in 1954, Scientology has grown rapidly both in North America and around the world, with centers in over 50 nations by 1980 and more than 100 by the late 1990s. Now, with some 3,000 church-related organizations around the world and Church estimates that eight million individuals have participated in its various programs, Scientology claims to be the fastest growing religion in the world.[1] Estimates of active membership, however, vary widely and range from as few as 50,000 to several hundred thousand.[2]

Of all the major NRMs, Scientology is currently among the most controversial, with debates over its legitimacy turning on the question of whether it is a religion at all,[3] the often confrontational and litigious manner in which it chooses to deal with its critics, and the actions of media celebrities such as Cruise, John Travolta, Jenna Elfman, Isaac Hayes, and Kirstie Alley who regularly publicize its virtues and benefits. Scholars approach Scientology from a variety of perspectives. Some argue that it fits many or all of the sociological criteria for consideration as a religion,[4] while others contend that its religious façade serves simply to mask its transnational

business interests.[5] Bromley and Bracey, for example, treat Scientology as a "quasi-religion"—an organization that "[straddles] the boundary between sacred and secular."[6] Because of its often ambiguous marriage between religion and technology, Straus concludes that Scientology presents a "split personality."[7] Passas and Castillo, on the other hand, describe Scientology as a deviant business that succeeds only by remaining a religion.[8] Overall, however, most scholars have concluded that Scientology falls within the category of religion for the purposes of academic study, and a number have defended the Church in judicial and political proceedings on this basis. While some ethnographic work has been conducted on the Church of Scientology,[9] to date this has not been carried out with the depth and rigor warranted by the group's importance as an emergent new religion.[10]

The Church of Scientology itself certainly contributed to these different controversies and ambiguities. On the one hand, Scientology began as a secular self-help therapy, describes its thought system as "data,"[11] and claims to represent "man's first real application of scientific methodology to spiritual questions."[12] Hubbard's first and most well-known book is titled *Dianetics: The Modern Science of Mental Health* and lists neither "God" nor "religion" in its index. On the other hand, Scientology also defines itself as a religion,[13] more specifically an "applied religious philosophy"[14] whose "roots lie in the deepest beliefs and aspirations of all great religions,"[15] and has sought official recognition as a church in every country in which it operates.[16] Indeed, the Church of Scientology claims to be "the only major new religion to emerge in the twentieth century."[17]

Comparisons of Scientology with more traditional churches almost always yield ambiguous results. Scientologists do profess belief in deity, which is defined as "the urge toward existence as infinity, as God or the Supreme Being or Author of the Universe,"[18] but the Church claims that "it makes no effort to describe the exact nature or character of God"[19] and does not make a supreme being the focus of belief or practice for adherents. Church doctrine teaches that every person possesses god-like potential individually, but that that potential can be cultivated only through a process that is more akin to therapeutic rehabilitation than worship or sacrament. Church doctrine refers to Hubbard's writings as scripture and regards "the Hubbard® Electrometer [as] a religious artifact used in the Church confessional."[20] The Church of Scientology ordains clergy, regards adherents as parishioners, and holds weekly gatherings that resemble traditional church services. In reality, however, they have no conventional church buildings or sanctuaries in which the faithful regularly gather, and neither the clergy nor these services are particularly central to the religious lives of Scientologists.

Scientology claims to root its belief and practice in rigorous scientific research and the faithful application of what it calls the "tech," and regards its doctrines and practices as having a status comparable to scientific law. "The fact is," the Church declares, "*Scientology works 100 percent of the time when it is properly applied to a person who sincerely desires to improve his life.*"[21] Rather than mediate the benefits of religious practice through conversion or a process of ceremonial admission, Scientologists define themselves as those who use the knowledge they gain through

application of the tech to realize the unlimited potential they believe is immanent in every person, though shackled in most through aeons of negative experience. Rather than legitimating one's belief in terms of church authority, sacred scriptures, or some divinely given prophetic word, at all stages in the process of Scientology—at all steps along "The Bridge to Total Freedom"[22]—the Church urges adherents to evaluate the results of their practice according to the measurable benefits that accrue. As Hubbard himself put it, "For a Scientologist, the final test of any knowledge he has gained is, 'did the data and the use of it in life actually improve conditions or didn't it?'"[23]

What is perhaps most striking about the Church of Scientology's claims to religious status is that rather than relying on gifts and offerings from parishioners, Scientology operates on a fee-for-service basis (although payments are officially termed "donations") and provides all of its religious products as *services* to *clients.* This raises the question of whether practitioners are consumers or parishioners, and, based on claims that one's journey along the Bridge can cost several hundreds of thousands of dollars, leads to significant criticism of Scientology as a legitimate religious faith.[24]

THE ORIGINS OF SCIENTOLOGY

Scientology bears the unmistakable imprint of its founder, Lafayette Ronald Hubbard, who was born in Tilden, Nebraska, in 1911. The son of a naval officer, Hubbard and his family moved often during his childhood. According to the Church of Scientology, he was an extraordinarily adventurous youth who travelled the globe and became an accomplished navigator, sailor, pilot, surveyor, and explorer.[25] Though there is, as yet, no official Church biography of Hubbard, the Church maintains an extensive Life Exhibition devoted to his accomplishments,[26] and Author Services, Inc., which ensures the continual production of works by and about Hubbard, publishes an impressive array of materials designed to keep him firmly at the center of Scientology.[27]

During the 1930s Hubbard supported himself by writing fiction and became a moderately successful science fiction writer. In 2000, elements of his multivolume science fiction saga, *Battlefield Earth,* were produced as a movie, with the lead role played by John Travolta, one of Scientology's most visible celebrities.[28] Though the Church of Scientology and its critics dispute the details of his military career,[29] clearly Hubbard served as a naval lieutenant during World War II though it remains unclear whether he actually saw combat. Hospitalized near the end of the war, Hubbard began contemplating the nature of the human mind, immersing himself in Freudian psychoanalytic theory and the Eastern philosophy he had encountered earlier in his life. In 1949, he wrote to the American Psychological Association to apprise them of research he was conducting that integrated the "early work of Freud" and a process he called "narcosynthesis."[30] Thoroughly rejected by the psychological and psychiatric communities,[31] Hubbard turned to a world with which he was much more familiar to publicize his findings.

The basic principles of what became both Dianetics and Scientology represent Hubbard's personal synthesis of philosophy, physics, and psychology. His ideas

received their first public exposure in 1950 when the popular magazine, *Astounding Science-Fiction (ASF),* featured an article on Dianetics, and *ASF* editor John W. Campbell quickly became one of Hubbard's earliest converts. In that same year, *Dianetics: The Modern Science of Mental Health,* which later became the seminal text of Scientology, was published. Though the publishers were not initially optimistic,[32] *Dianetics* was soon a best seller and Hubbard quickly emerged as a popular lecturer. Because it offered a do-it-yourself alternative for individuals interested in improving their own mental health, Dianetics appealed to a wide range of people, many of whom became practitioners. In contrast to psychotherapy, Hubbard claimed that Dianetics was more accessible to the average person, promised practitioners more immediate progress, and placed the practitioner rather than a therapist in control of the therapy process. Following the initial success of *Dianetics,* Hubbard founded the Hubbard Dianetic Research Foundation to offer classes and train practitioners. According to the Church of Scientology, "by late fall of 1950, there were 750 groups across the country applying Dianetics techniques,"[33] and soon practitioners were reporting experiences from what were apparently previous lives or incarnations. Taking these reports seriously, Hubbard postulated the existence of an immortal essence, which he labeled the "thetan" and which he believed existed for each individual across a multitude of lifetimes. The discovery of the "thetan" gave Dianetics the spiritual dimension it needed to emerge as the religion of Scientology.[34]

The first Church of Scientology was established in Los Angeles, California, in 1954. The following year Hubbard moved to Washington, D.C., and established the Founding Church of Scientology. For most of its history, considerable controversy surrounded Hubbard's decision to shift Dianetics from secular therapy to religious counseling. While the practitioner reports of prebirth and past-life memories that led to Hubbard's conceptualization of the "thetan" are certainly one factor, citing remarks attributed to Hubbard before the publication of *Dianetics,*[35] critics have long maintained that Hubbard's principal motivations were political and financial.[36] In 1959 Hubbard moved again, this time to England, where he remained until the mid-1960s.

Hubbard provided the nascent Church of Scientology with both administrative and spiritual leadership for more than a decade. In 1966, however, he resigned his organizational positions to devote himself to further research and writing. A year later, he formed what came to be an elite branch within Scientology, the Sea Organization (Sea Org), a church unit staffed by advanced members who pledge to devote their entire lives (and more) to the cause of Scientology. The Sea Org derives its name from its initial design as a flotilla of oceangoing ships—the flagship, *Apollo,* on which Hubbard lived, the *Athena,* and the *Diana.*[37] In 1975, the Sea Org moved to a land base in Clearwater, Florida. Hubbard continued to relinquish control over church organizations, and by 1980 he withdrew completely from public view. Although he retained the title of "Founder," he lived a reclusive life until his death on January 24, 1986.

During his life Hubbard never claimed to be a supernatural figure, nor, despite some of the claims made for him by the Church of Scientology, was he regarded as

such by Scientologists. Rather, Scientologists understood him as an extraordinary man who discovered the principles through which all of humankind could achieve its true, infinite potential. Scientology does not teach that individuals possess the immortal essences Hubbard called "thetans," but that they *are* these essences.[38] This belief allowed Church leaders to announce at the time of Hubbard's death that his material body had begun to impede his work and that he had moved to another plane of existence to continue his research.

In the period immediately following Hubbard's death, the Church announced that no one would emerge as a spiritual or prophetic successor to Hubbard and that his writings alone would constitute the full and final record of Scientology doctrine, belief, and practice. For Hubbard, though, the "first dynamic principle of existence is survival,"[39] and all organizations require leadership if they are to survive. Shortly after Hubbard's death, David Miscavige (b. 1960), a 26-year-old, second-generation Scientologist, and a devoted member of the church's elite Sea Org, was named the head of the Church, a position he continues to hold.

Over his lifetime, Hubbard was prolific by any standard. According to the Church of Scientology, Hubbard's teachings are contained in approximately 500,000 pages of written material and 3,000 recorded lectures—a total of some 65 million words. He also produced 100 films and 500 novels and short stories. The Church has gone to extraordinary lengths to preserve his writings, and a special organization, the Church of Spiritual Technology, is engraving the entire corpus of Hubbard's original texts on steel plates that will be stored in titanium containers and buried in a vault deep in the New Mexico mountains.[40] The purpose of this project is to ensure that Hubbard's teachings will survive the effects of any future catastrophe and be available to survivors as the basis for rebuilding human civilization.

SCIENTOLOGY'S DOCTRINE AND RITUAL PRACTICE

Doctrine

Rooted in his assertion that each individual is a thetan or spirit, an immortal, god-like expression of the basic life force (theta),[41] Hubbard traced the existence of this force back trillions of years. According to Hubbard, in the beginning theta was separate from the physical universe, having neither energy nor mass, neither time nor location in space. In a primordial explosion of undifferentiated theta countless individual thetans were released, each possessing the characteristics of the whole. According to Scientology doctrine, thetans existed prior to and, in fact, constitute the original source of the material universe. "The spirit, then, is not a *thing*," Hubbard wrote. "It is the *creator* of things."[42] Indeed, at one time, Scientologists believe, thetans were celestial entities, each with its own distinctive individuality, each of which created and controlled its own universe.

Four basic elements comprise the material universes created by the thetans—matter, energy, space, and time, commonly know by the acronym, MEST (the first letter of each basic element). Since MEST is the creation of thetans, it possesses only the

reality thetans attribute to it. Reminiscent of Hindu belief that the universe is a dream in the mind of Brahman or the *citta-matra* (mind-only) schools of Buddhism, for Scientologists the material universe is an illusion that only becomes reality through the actions of thetans.[43] However, once thetans created the MEST universe, they began to experiment, eventually taking on a corporeal human form. In the process, thetans lost the knowledge of their sublime origins and were trapped in the human bodies they had created and in the material universe.[44] When the mortal body dies, the thetan reincarnates, entering another body at the time of birth. Scientologists refer to this succession of lifetimes as a thetan's "time track," and with each new incarnation the thetan's previous identities, experiences, memories, and activities became further obscured and more Scientological processing is required to restore the thetan's original state.

In a very real sense, then, for Scientologists the root problem faced by all thetans is ignorance—a lack of knowledge of their true identity. Suffering from a millennia-long amnesia, thetans accept the illusion that they are human. Nonetheless, because MEST is illusory and thetans the ultimate reality, this immortal essence is capable of transcending matter, energy, space, and time. Transcending MEST, realizing the thetan's innate, unlimited power and potential, is Scientology's equivalent of salvation. Eliminating the cumulative, deleterious effects of MEST, reestablishing awareness of itself as a spiritual entity, and allowing the thetan to progress "with memory and identity intact"[45] is the goal of Scientology practice. As one Scientologist put it, the person is "(and discovers himself to be) a BEING (spiritual agent) of infinite creative potential who acts in, but is not part of, the physical universe."[46]

Scientology's explanation for how humans become trapped in the world of MEST rests in its model of the human mind. Reminiscent of Freud's tripartite theory of the ego, superego, and the id, Hubbard taught that the mind consists of three components—analytic, reactive, and somatic, though only the first two figure prominently in Scientological practice. The analytic mind is a conscious, completely rational mechanism that processes information with all the efficiency and infallibility of a computer, though Hubbard argued that its capabilities far exceed that of any computer that could possibly be built. "Sanity depends upon rationality," he wrote in *Dianetics,* and the key to happiness, the key to survival, is a well-functioning analytic mind.[47] However, the analytic mind is also very delicate, and its functioning can be disrupted by traumatic events and experiences.

The reactive mind, on the other hand, operates on a stimulus-response basis and is the principal focus of Scientology.[48] Functioning "below the level of consciousness,"[49] the reactive mind is an extremely precise recording device that stores every detail of sensory experience—emotion, touch, sight, sound, smell—that occurs while the analytic mind is inoperative, even if the individual is physically unconscious at the time. Since thetans lived through a multitude of lifetimes, the reactive mind recorded traumatic incidents from its entire time track. Scientologists refer to the individual memory records of traumatic events stored in the reactive mind as "engrams," and the collective set of which across a thetan's time track are "the Bank." "If there ever was a devil," Hubbard wrote, "he designed the reactive mind,"[50] and

clearing the Bank created by the reactive mind is one of the first goals in Scientology practice.

Engrams from current or past lifetimes are reactivated whenever something recurs from any part of the traumatic experience that originally produced the engram, whether physical, mental, or emotional. One common way in which Scientologists demonstrate this is known as the "pinch test." With a participant seated in front of an E-Meter (see below), the auditor lightly pinches the participant's arm. The needle on the E-Meter records a response, which Scientologists interpret as a mechanical measure of the engram that was just created. After a few moments, or even a few months, when the participant is asked to recall the experience of being pinched, the E-Meter reacts in similar fashion, though no actual pinch occurs.

According to Scientology, when a sufficiently traumatic engram is reactivated, an individual becomes emotional and irrational; their rational, analytic mind is no longer in control. Scientologists believe that these engrams can trigger physical and psychosomatic illnesses as well. "What can it do?" asked Hubbard in *Dianetics*. "It can give a man arthritis, bursitis, asthma, allergies, sinusitus, coronary trouble, high blood pressure and so on."[51] Even the common cold is rooted in the engram bank.

Deciphering the connection between particular engrams and the specific responses they generate is complex because, like a holograph, in which the whole of an image is contained in every part, a current experience that involves only one element of an engram may reactivate the entire engram. Further, engrams may overlap and become linked into chains, and whole engrammatic chains may be reactivated by a single experience. Finally, because engrams are located below the level of conscious thought—and may even have been created in prior lifetimes—the analytic mind does not have direct access to them. Since the analytic mind is unaware of the engrams and their effects, its search for a logical order in experience leads it to construct elaborate justifications for irrational or deviant behavior that is ultimately caused by the contents of the Bank. The outcome can be recurrent, debilitating symptoms and an inability for individuals to engage in appropriate, adaptive behavior. Indeed, according to Scientology, when mediated by the reactive mind, individuals will inevitably engage in behavior that is both personally and socially destructive. Because they prevent individuals from communicating accurately with themselves or with others, from being able to agree on a common reality, or from maintaining mutually rewarding relationships, reactive behavior, and any attempts to conceal it, create yet another layer of individual and social problems that must be identified, processed, and eventually cleared.

Scientologists believe that as they eliminate engrams they restore themselves to their original, natural condition, their "native state." In this native state individuals can think and act rationally. They can be "at cause" when dealing with events and relationships in their everyday lives, rather than simply reacting to the effects of past trauma stored in the engram Bank. Being at cause increases survivability, the central principle of Scientology.

The will to survive is not simply an individual drive, but is a basic principle of existence that Scientologists believe is expressed across eight levels, or "dynamics."[52]

The eight dynamics constitute an ascending hierarchy of needs to which humans can respond. The eight survival dynamics are the following: (1) individual survival, (2) sexual reproduction and family survival, (3) group and nation survival, (4) species survival, (5) survival of all life forms, (6) survival by the physical universe, (7) survival by the individual as a spiritual entity, and (8) survival through infinity or oneness. As individuals grow spiritually, advancing along the "Bridge to Total Freedom," they are capable of responding to and being responsible for higher dynamic levels. Individuals who achieve the highest level of survivability can unite with the universe as a spiritual entity with godlike properties and powers. As we noted earlier, although Scientologists do assert a belief in deity,[53] the nature of deity remains largely unarticulated, partly because Scientologists believe that humans are not sufficiently advanced spiritually to conceptualize deity, and partly because they reject the notion that a conception of deity can be imposed by an organization. Based on the level of spiritual advance, every individual can and must reach his or her own conclusions about the nature of deity. While there are some hints that deity can be viewed simply as an infinite potential, which is consistent with Scientology's emphasis on the unlimited power and potential of the thetans, in thought and practice primary attention is paid to empowering practitioners.

In order to function and grow as social beings, individuals must be able to express three integral elements in their relationships—affinity, reality, and communication. In Scientology thought, these elements are conceptualized as the ARC triangle.[54] As we noted earlier, the MEST world is illusory and exists only by the agreement of thetans, which means that reality is simply an agreement about what is. In order to function in the MEST world, then, agreement about a shared reality is crucial. Communication, the accurate and effective exchange of ideas, is essential to establishing this common reality. Affinity refers to personal resonance or affection and grows out of the sharing of ideas. Though it is often represented so in Scientology writings, Scientologists believe that the ARC triangle is not equilateral. Because only appropriate communication produces and maintains a mutual conception of reality out of which affinity between individuals is generated, communication is considered the most critical component. As well, since individual liberation comes with and through the ability to communicate with one's own thetan, learning to communicate effectively is central to the lived religious practice of Scientology.

In Scientology individual salvation is achieved progressively. Hubbard identified an increasing number of levels of freedom from MEST that together constitute the Bridge to Total Freedom. There are two benchmarks of achievement along the Bridge. First, everyone begins the practice of Scientology as a "pre-clear," which the Church defines somewhat tautologically as "someone who is receiving Scientology or Dianetics auditing on his way to becoming Clear."[55] The first benchmark is reaching a state of Clear, which Scientology defines as "a person who no longer has his own reactive mind and therefore suffers none of the ill effects that the reactive mind can cause."[56] "Going Clear" means that through the process of auditing, which the Church defines as "a purely religious service,"[57] the beginning Scientologist has eliminated all the engrams stored in the Bank and functions rationally "in that he forms

the best possible solutions he can with the data he has and from his own viewpoint."[58] As one of Scientology's advertisements put it, "Go Clear—For the first time in your life you will be truly yourself."[59]

Once a person has gone Clear and the reactive mind is emptied, he or she achieves a new level of spiritual awareness and is capable of making further progress along the Bridge. The highest level of spiritual development is that of Operating Thetan, by which Scientology means that the practitioner is "able to control matter, energy, space, and time rather than being controlled by these things."[60] Operating Thetans are spiritually perfected beings who transcend all limitations and assume total control over and responsibility for all their actions. In short, they are self-determined. Even death becomes insignificant as the individual, incorporeal spirit simply secures another body in which it can survive and grow.

In their quest to grow spiritually, Scientologists are taught to confront through the auditing process the various obstacles that were engrammatically produced, both personally and socially, both intentionally and unintentionally. Simply by virtue of acting and experiencing, all individuals produce their own time tracks. Individuals also create problems for one another as a result of ARC breakdowns—an inability to agree on reality, to communicate effectively, or to develop a resonant affinity. Wrongdoing toward others, for example, whether by intention or omission, Scientologists refer to as "overts."[61] These are almost inevitably followed by attempts at concealment, which Scientology labels "withholds"[62] and which generate further tension between the affected parties. In other words, being trapped in the MEST world creates existential problems, the more uniquely personal problems created through one's own time track, and the social problems that result from an inability to coordinate properly with others—all of which must be resolved in order to attain a state of true spiritual awareness and perfection.

In addition to problems caused by those factors that are largely unintentional, the world also contains an assortment of deliberately malevolent individuals and organizations. Hubbard estimated that about 80 percent of the population is composed of "social personalities," those who accept and promote the happiness and prosperity of others. The remaining 20 percent, referred to as "suppressive persons," consists of those with some connection to "antisocial personalities"—those who attempt for whatever reason to reject and undermine the welfare of others. An even smaller group, about 2.5 percent of suppressives, Hubbard designated as overtly dangerous individuals—"the Adolf Hitlers and the Genghis Khans, the unrepentant murderers and the drug lords."[63] The existence of antisocial and suppressive individuals further complicates the process of locating the source of one's problems, since even minimal contact with such persons can negatively affect one's spiritual progress.

The struggle to regain one's true spiritual identity and to sustain meaningful relationships with others inevitably involves ethical dimensions. Although Scientologists believe that all human beings are innately good, their capacity to express that goodness individually and socially is impaired by the engram banks accumulated during their time tracks. Thus, by eliminating the reactive mind and the negative effects of the Bank, individuals enhance their capacity for more ethical personal actions. In a

rather utilitarian fashion, Scientology teaches that the most appropriate action in any situation is one that maximizes survivability for self and others across the eight dynamics. There is, however, a larger, collective goal. If eliminating the reactive mind elevates the condition of the individual, then it follows that eliminating the reactive minds of all humanity would elevate the condition of all humankind. Following this logic, Scientology's ultimate goal is to "clear the planet," to bring every person on Earth at least to the state of Clear. In its quest to achieve this, the Church reports that about 500 practitioners reached a state of Clear by 1969, approximately 17,000 by 1980, and nearly 50,000 by 1995. The Church of Scientology is convinced that clearing the planet will eliminate chronic human problems such as war, pollution, insanity, drugs, and crime, and Scientologists believe that ultimately their personal spiritual salvation is contingent upon achieving this larger goal.

Ritual Practice

The two ritual practices that are most central to spiritual progress in Scientology are auditing and training—the process of locating and removing engrams from the reactive mind, and the study of Scientology principles to apply them in all areas of one's life, though "the end result of training is that an individual is able to minister auditing to another person."[64] Rather than ceremonial observances, these practices are the principal processes through which practitioners actively seek release from problems they face and recovery of their natural abilities. In short, auditing and training are the means for gaining the ultimate personal empowerment that Scientologists understand as salvation.

When individuals first begin practicing Scientology, they participate in Training Routines and Objective Processing, a set of exercises that develop skills they will use throughout their Scientology careers. These TRs have two interrelated objectives: enhancing individual awareness and self-control while simultaneously building responsiveness and sensitivity toward others. For example, practitioners learn the capacity for "just being there" by simply maintaining nonverbal presence and attentiveness with a partner for an extended period of time ("confronting").[65] In another exercise, known as "bull-baiting," participants try to maintain focus in a situation despite concerted efforts by their auditor to disrupt concentration.[66] In addition to building auditing skills, Scientologists believe that these and other training routines create and enhance the capacity for meaningful communication with others.

During auditing, the practitioner works with a more experienced Scientologist called an auditor, and the process is mediated by the Electropsychometer (also known as the Hubbard® E-Meter), a key piece of diagnostic technology that the Church of Scientology has termed a "religious artifact."[67] During the auditing session, which can last several hours and which has also been labeled "the Church confessional,"[68] the auditor attempts to locate engrams in the practitioner through a carefully structured exchange of commands, questions, and responses. The auditor monitors the E-Meter gauge, while the practitioner holds a pair of metal cans connected to machine by wire leads. Essentially a simple skin galvanometer, the E-Meter

sends a very small electrical charge through the body and then registers the electrical flow. Because engrams are thought to possess an actual mass, they offer resistance to that flow, resistance that is measured by the E-Meter. When, through the course of the session, the auditor identifies specific incidents, experiences, or orientations that are troubling the practitioner, the various patterns of needle swing and amplitude guide the auditor to root out the engrammatic cause of the problem. Auditors assist practitioners in eliminating engrams by first locating points of resistance, converting the form those points take into energy, and then discharging that energy. When a stored emotional charge (engram) is identified and is discussed sufficiently (audited), it will no longer produce an emotional response (the charge it contains will be released), and the E-Meter needle will no longer register a reaction (it has been cleared). Recalling the pinch no longer produces the negative response associated with the original pinch. Once an engram has been cleared, the event in which it was lodged is removed from the reactive mind and refiled in the standard memory bank of the analytical mind. Scientologists commonly use the analogy of a file clerk to describe this process.

In the same way Hubbard's beliefs and theories about Dianetics and Scientology evolved over time, so too has the practice and purpose of auditing. In Dianetics auditing, the emphasis is on clearing the engrammatic traces of traumatic incidents in the individual's past, while Scientology auditing uses this clearing process to affect the broader orientations through which the individuals organize their realities. As they advance through the various auditing levels—going Clear requires more than a dozen steps, five steps mark the preparatory stages to the Operating Thetan level, and there are currently 15 levels of OT processing—practitioners assume more control over the auditing process. Indeed, in order to attain the level of Clear, candidates must audit themselves ("solo audit"), assert their new spiritual status, and demonstrate that they have assumed responsibility for their new levels of understanding and control.[69] As practitioners gain additional knowledge about Scientology technology and make progress in eliminating their banks of stored engrams, they anticipate both heightened spiritual struggle and a surge of power as they confront and expunge traumatic memories. As one practitioner put it, "All in all, my ability to confront and handle the pressures and stresses of day-to-day interrelationships increased dramatically and I find myself calmer and enjoying life much, much more."[70] Another claims that Dianetics auditing restored his failing vision,[71] while a third claimed healing from epilepsy.[72] Finally, a Scientologist who had just gone Clear captures the experience reported by many who offer their testimonies on behalf of the Church: "I have just achieved the state of Clear! It is nothing short of miraculous to be rid of one's reactive mind and to have the accompanying freedom, happiness and newfound abilities that I know are lasting."[73]

At advanced levels of auditing, one experience many Scientologists reported is termed "exteriorization." In a manner similar to astral projection, when one "goes exterior" the thetan is able to leave the body and return later with no ill effects. One participant engaged in the auditing process reported the experience as follows:

> Then, all of a sudden, I wasn't a body anymore. It was just me, and I was floating. Like drifting among the constellations. Although they weren't really stars. It was like "Space Odyssey-2001"—beautiful whirling things flying past me. I was drifting in outer space and these things were going past me. It was beautiful—I didn't want it to stop! And I was beautiful! I was like one of those whirling things too, but I was the center of it. I was a glowing ball of fiery … radiance, that's the only way I can describe it. I could feel rays, energy, coming out from the center of me in every direction … I felt full of this energy—so powerful—like I filled the universe.[74]

Being able to experience conscious awareness outside of one's body and a sense of oneness with the universe are particularly compelling experiences for Scientologists in that they are considered measurable results demonstrating that salvation and immortality can be achieved through their spiritual practice.

THE ORGANIZATION OF SCIENTOLOGY

All Scientology organizations, which are known as "orgs," are dedicated to one of three major missions: practice and training, technology application, or social reform. Each of these hosts three broad categories of membership: lay practitioners, staff, and Sea Org members. Although it can be very expensive, costing as much as $1,000 an hour at the upper levels and requiring many hours to complete a level, lay practitioners pay on a straight fee-for-service basis for the training and auditing they receive. At the lower levels, however, members may audit one another free of charge. Staff members, on the other hand, work for the church and exchange their labor for auditing. Normally signing contracts for up to five years, they receive their training and auditing at a reduced rate. Finally, Sea Org staff are responsible for administrative staffing above the local church level. Currently numbering between 5,000 and 7,000 members,[75] the closest parallels to the Sea Org within traditional churches are religious orders. Sea Org members work long hours for nominal compensation and, "to symbolize their commitment to the religion as immortal spiritual beings,"[76] sign billion-year contracts in which they pledge themselves wholly to organizational service.

Each of the three types of church-related organization is extraordinarily bureaucratic, and organizational activities are coordinated to the smallest detail through an intricate system of memoranda and directives. Each organization systematically gathers "stats" on individual and collective performance so that a Valuable Final Product can be produced. Operating budgets within organizations are based on performance indicators such as these and are reviewed frequently. Positive stats ("up stats") are an indication that an individual or organization is contributing to the fulfillment of Scientology's mission, and there is considerable pressure to achieve higher and higher levels of productivity. Any failure to perform adequately or to show continuous improvement may invoke what is known as "the ethics system."

From the earliest days of Dianetics through the development of Scientology, Hubbard taught that "Scientology works 100 percent of the time when it is properly

applied."[77] Each org has an Ethics Officer who bears responsibility for ensuring that the tech is administered precisely as Hubbard developed it. Deviation of any kind is not permitted—to the extent that the sermons delivered during Scientology worship services are excerpts from Hubbard's voluminous work and are read verbatim from a master text.[78] At all levels of Church organization, any actions not in compliance with Scientology's complex policies and regulations—or that reduce its profitability and productivity—may constitute ethics violations. Individuals who deviate from standardized procedures are referred to in the Church as "squirrels," because of the animal's seemingly erratic behavior patterns. A detailed code of offenses defines various acts as errors, misdemeanors, crimes, or, in the most serious cases, suppressive acts—those that actively hinder the operation or development of Scientology and, according to Scientologists, the betterment of humankind.

The Church of Scientology maintains its own justice system, which plays a central role in the maintenance of ethical standards and the surveillance of suspected transgressions. The Religious Technology Center (RTC) owns and maintains the copyright over all Dianetics and Scientology trademarks and administers them in conjunction with the Church of Scientology International, to which the RTC refers as "the mother church of the Scientology religion."[79] Serving as "the final arbiter of orthodoxy"[80] and "the guarantor of Scientology's future,"[81] the RTC maintains an aggressive internal and external surveillance system to expose the "nemesis of alteration and reinterpretation that has plagued other religions."[82] As one of us has written elsewhere, Scientology is the quintessential "closed source" religion.[83] Indeed, according to the online mission statement of the RTC, "Scientologists across the globe view the maintenance and incorruptibility of their religious technology—in precise accordance with the Founder's source writings—to be essential to their very salvation."[84] To supervise the surveillance and maintenance of Scientology's voluminous material—the tech—the RTC provides a detailed list of offenses for which loyal Scientologists should be on guard and electronic report forms to submit suspected incidents to the RTC's Inspector General Network.[85]

One of the more controversial components of the Scientology justice system is the Rehabilitation Project Force (RPF), which is invoked when a Scientologist commits a violation. Originally, the RPF was established to handle theological or ethical violations within the Sea Org, working through a process of rehabilitation and reinstatement rather than punishment and retribution. When someone is charged with a violation, a Committee of Evidence is convened, and if the charges are substantiated the individual is required either to resign from the Sea Org or to accept assignment to the RPF. Based on interviews with those who participated in the RPF, either voluntarily or as a consequence of an ethics violation, the most common issues are theft, lying and misrepresentation, major violations of Church policy, adultery or other sexual misconduct, and severe dereliction of duty.[86] The daily RPF regimen consists of five hours of study or auditing, eight hours of work, which may be physical labor such as renovating hotel rooms in a building purchased by the Church, and a minimum of seven hours sleep. Those who successfully complete the program are eligible to return to the Sea Org; those who violate rules while in the RPF, or whose progress

is not considered satisfactory, may be assigned to the "RPF's RPF," an even more stringent program.

Ideally, the various components of the Scientology justice system are designed to sanction deviance, reward productivity, and strengthen organizational solidarity and individual commitment. There are dramatically divergent accounts of the Rehabilitation Project Force, and observers dispute whether the program is voluntary or coercive, therapeutic or punitive.[87] By all accounts, though, participants are isolated from other Church members for an extended period, engage in long hours of physical labor and auditing, and must earn their reintegration into the Sea Org community.

Practice and Training Organizations

Scientology practice and training is carried out on several different levels. Hundreds of missions and churches around the world offer introductory level training, and the vast majority of Scientologists participate in the church at this local level. One of the most striking and controversial features of these particular orgs is that they are licensed franchises. They offer practitioners beginning level auditing on a set fee-for-service basis, then return a stipulated percentage of their revenue to the "mother church." They retain the right to sell church services only so long as they meet the qualitative and quantitative standards established and rigorously monitored by the RTC and its Inspector General Network.

A number of other orgs above the church or mission level offer advanced training or perform specialized functions within Scientology's complex, almost labyrinthine ecclesiastical structure. For example, Saint Hill Organizations resemble religious colleges or seminaries and train auditors, who provide the basic service of Scientology, and ministers, who serve as religious leaders in the Church. Even higher levels of the tech are offered to senior practitioners in advanced orgs such as the Flag Ship Service and the Flag Service Organization, both of which are headquartered in Clearwater, Florida. All of these orgs are united under the umbrella of The Church of Scientology International, and the Sea Organization provides staff for all orgs above the mission or church level.[88]

Technology Application Organizations

A network of social reform organizations creates model programs that apply Hubbard's technologies to a variety of societal problems. Each of these organizations claims success rates that far exceed their conventional counterparts. For example, *Narconon International* offers drug education and rehabilitation services, administering a drug treatment program based on Hubbard's theory that drugs and other toxins stored in the body inhibit one's spiritual growth. The Narconon program consists of auditing and intensive study of Scientology tech, combined with a strict regimen of exercise, saunas, vitamins, and diet management. *Criminon,* on the other hand, seeks to rehabilitate criminals by teaching them how to study, to communicate more

effectively, to avoid what Scientology terms antisocial personalities, and to adopt more appropriate personal values. *Applied Scholastics,* the tech most often promoted by actor Tom Cruise, employs Hubbard's educational technology to teach students how to learn and to study effectively. *The Way to Happiness Foundation* distributes Scientology's moral code to the public in the form of small booklets that have, to this point, been translated into over 40 languages and contain what "may be the first nonreligious moral code based wholly on common sense."[89]

Reform organizations also address business problems.[90] The World Institute of Scientology Enterprises (WISE), for example, is a not-for-profit organization that licenses the use of Hubbard's voluminous business technology. Licensed business training organizations, of which Stirling Management is the best known, offer training in specific skills such as hiring, logical decision making, planning and implementation, and organizational streamlining. According to one observer, WISE lists among its clients such large corporations as Allstate, General Motors, Volkswagen AG, and Mobil.[91]

Social Reform Organizations

The third category of Scientology orgs is dedicated to combating governmental and nongovernmental organizations that engage in practices the Church deems detrimental to individual and collective human rights. Though perhaps based on the Church's own problematic history with some of these agencies, in the United States Scientologists have specifically identified such organizations as the Internal Revenue Service, the Central Intelligence Agency, and the Department of Justice as particularly opposed to human rights. Nongovernmental groups such as professional mental health associations, drug and alcohol treatment programs, and elder-care facilities that Scientology alleges engage in abusive practices[92] have been similarly stigmatized by the Church. Emerging naturally from Scientology's conviction that accurate and complete information is critical to both survival and spiritual growth, among the practices opposed by the church are, not unreasonably, government maintenance of computerized data banks on private citizens, the restriction or prevention of legitimate access to public documents requested under the *Freedom of Information Act,* the use of experimental drugs on prison populations, the use of electroshock and "mind altering" drug treatments in psychiatric facilities, and governmental coverups of discrimination and abuse.

The most prominent organizations by which Scientology opposes what it regards as abusive practices by public and private agencies are the Citizens Commission on Human Rights (CCHR) and the National Commission on Law Enforcement and Social Justice. Founded by the Church of Scientology in 1969 and "dedicated to investigating and exposing psychiatric violations of human rights,"[93] the CCHR has a reputation as an unremitting opponent of psychiatry, the roots of which trace back to Scientology's founder. Since the rejection of Dianetics by the psychiatric community in the early 1950s, Hubbard expressed unequivocal hostility toward psychiatrists, branding them "outright murderers"[94] and contending that they "are the

sole cause of decline in this universe."[95] Current Scientology publications continue the campaign against psychiatry. *What is Scientology?,* for example, a basic though fairly comprehensive introductory text, declares that psychiatry is a "conglomeration of half-baked theories," something that is more "priesthood than science."[96] More than that, "it is a cold, hard fact," states one CCHR publication, "that psychiatry spawned the ideology which fired Hitler's mania, turned the Nazis into mass murderers, and created the Holocaust."[97] Over the last decade CCHR conducted two high profile campaigns against what it considers abusive drugs—Ritalin, which is manufactured by Eli Lily and is prescribed to manage hyperactive behavior in children, and Prozac, a widely prescribed antidepressant. Although neither drug was forced off the market, Eli Lily's sales suffered following the campaign, and Prozac received highly unfavorable publicity.[98]

Scientology's National Commission on Law Enforcement and Social Justice combats what it considers abusive practices by national and international policing agencies. This group particularly targets Interpol on the grounds that it collects and disseminates false information about Scientology, abuses the rights and privacy of citizens in various nations, and has organizational links to the KGB as well as historical connections to Nazism. The conflict with Interpol began when the agency circulated what the Church insists was false information to several nations that were then investigating Scientology.[99] Since Scientology regards its tech as the only viable path to individual and global salvation, attacks upon and misinformation about the Church are treated as particularly egregious offenses. In these campaigns, the National Commission did not retreat from conflict with some very powerful governmental and nongovernmental organizations, and these battles have served to increase both the church's visibility and its controversiality.

CONTROVERSY AND THE CHURCH OF SCIENTOLOGY

Scientology's mixture of therapy, science and technology, business, and religion has created a host of problems for the Church. Based on allegations of improper claims concerning the effectiveness of their healing practices, various regulatory agencies have taken action against Church-affiliated organizations. In 1958, for example, on the grounds that claims for the product were unfounded in medical science, the U.S. Food and Drug Administration seized a quantity of tablets called Dianazene, which were being distributed by a Scientology-related organization to prevent and treat radiation sickness. The FDA also raided Church offices and seized E-Meters on the basis that Scientology was representing to the public that these instruments were an effective treatment for physical ailments. Upon appeal, the E-Meters were returned to the Church, and the court ruled that they could be used in religious practice as long as they carried labeling that stated they were not effective at treating physical illness.[100]

Scientology's worldwide petitions for religious status yielded mixed results over the decades. After banning the Church for several years, Australia granted Scientology religious status in 1982. In a major victory after a two-decade battle, Scientology

was granted tax-exempt status by the U.S. Internal Revenue Service in 1993. In 2000, Italian courts ruled that Scientology qualifies as a religion, the South African government granted Scientology clergy the right to perform marriage ceremonies, and the Swedish government recognized Scientology churches as "religious communities." By contrast, though, the Charity Commission of England and Wales rejected Scientology's application for registration as a charity in 1999, and Scientology has yet to receive official recognition as a religion in Canada.

Recently, some of the most ardent official opposition to Scientology occurred in France and Germany. In 2001, the French government passed its About-Picard Law, an extremely aggressive anticult (referred to as "sectes" in Europe) bill, which declared Scientology (among many others) a dangerous sect.[101] Earlier, during the 1990s, a number of local and regional governments in Germany passed legislation intended to control Scientology, and the Church was for a time even labeled *verfassungsfeindlich,* a threat to the constitution.[102] Among other things, Scientologists could not join the then-ruling Christian Democratic Union Party, were prevented from securing government contracts, and were subject to police surveillance. Although the German courts ultimately reversed the Church's status as *verfassungsfeindlich* and struck down many of the proscriptions against it, this clearly illustrates the tension with which the Church of Scientology lives in some countries.[103]

Scientology is also one of the most controversial of the NRMs for reasons beyond its unique beliefs and organization. Its frequently confrontative style and determined opposition from critics has given the church a high public profile and an often negative image for much of its history.[104]

In 1966, for example, in response to attacks from a number of quarters, the Church established what was known as the Guardian's Office, which Miller characterizes as "Scientology's intelligence bureau."[105] As it grew in power, the Guardian's Office adopted an increasingly activist and belligerent stance. Opponents of Scientology were harassed under what Hubbard enunciated as a "fair game" policy. In one highly publicized case, Church members organized a vendetta against Paulette Cooper, a freelance journalist who wrote a scathing indictment of Hubbard and his Church in *The Scandal of Scientology.*[106] As part of their campaign, Scientologists sent bomb threats to an Arab consulate written on personal stationary they stole from Cooper. Although she was ultimately exonerated of these charges, Cooper was indicted before a grand jury before finally establishing her innocence.[107] Since then, journalists, academics, and Internet users have experienced harassment and intimidation at the hands of Scientologists.[108]

A number of illegal acts were committed by the Guardian Office as well.[109] In another highly publicized episode, in 1977 armed federal agents raided Scientology headquarters in Los Angeles and Washington. Several church members were subsequently convicted and imprisoned for infiltrating federal agencies, including the FBI and the IRS, and stealing agency documents. The Church defended its actions on the grounds that both agencies not only gathered and disseminated false information about Scientology, but refused to comply with legitimate requests for documents made under the *Freedom of Information Act.* The Church asserted that its

members infiltrated the agencies in order to copy the thousands of pages of documents it required to prove its allegations. One of those convicted and imprisoned was Mary Sue Whipp Hubbard, L. Ron Hubbard's third wife, whom he married in 1952.

In response to such incidents, the Guardian's Office was disbanded in 1983, and the Church removed a number of its officials from their positions. Scientology, however, openly maintains a policy of defending its rights and confronting its opponents within the limits of the law, a posture that resulted in the Church being viewed with suspicion from many quarters. Media treatments, for example, are frequently antagonistic, the most notable example being *Time* magazine's 1991 cover story "Scientology: The Thriving Cult of Greed and Power" and, more recently, a lengthy five-part series published by *The Boston Herald* in 1998.[110] Following the publication of the 1991 article, Scientology sued *Time,* though both the trial and appellate courts ruled that the article was not maliciously libelous. That the author, Richard Behar, was later awarded the Gerald Loeb Award for Distinguished Business and Financial Journalism and a Conscience-in-Media Award by the Society of Journalists and Authors—both as a result of his article on Scientology—only illustrates further the often strained relationship between the Church and the cultures in which it operates. According to a follow-up article in *The Boston Herald,* the Church "hired a private investigator to delve into the private life of" series author Joseph Mallia, a fact that was confirmed by the President of the Church of Scientology International, Heber Jentzsch.[111] As Melton noted in a 1997 interview, while "Scientology has probably received the most persistent criticism of any church in America in recent years … Scientologists bear some of the responsibility. 'They don't get mad, they get even,' Mr. Melton said. 'They turn critics into enemies and enemies into dedicated warriors for a lifetime.'"[112]

Few events, however, generated more negative publicity for the Church of Scientology than the death of Scientologist Lisa McPherson on December 5, 1995 at the age of 36, seventeen days after a minor car accident in Clearwater, Florida. Immediately following the accident, McPherson exhibited signs of mental disorder, and paramedics took her to a local hospital for psychiatric evaluation. Church officials, however, soon removed McPherson from the hospital and took her to the Fort Harrison hotel, Scientology's Clearwater headquarters. While there, her condition steadily worsened, and she died by the time that Scientologists sought medical treatment for her. The church was charged by the county prosecutor with practicing medicine without a license and criminal neglect of a disabled adult. Amid charges, countercharges, and an inept investigation by the county medical examiner, those charges were dropped five years later. The church alleged that critics were using the incident to discredit Scientology, and opponents argued that the church engaged in a cover-up and pressured the medical examiner's office. In 1997, though, McPherson's estate filed a wrongful death suit against the Church, a case that became "one of the most fiercely contested and enduring legal battles in Pinellas County history."[113] Though the two sides in the dispute were miles apart in terms of what each regarded as a fair settlement—the Church offering $20,000 during one meeting while lawyers for

McPherson's estate countered with $80 million—the suit was settled before it went to trial for an amount that remains undisclosed.[114]

CONCLUSION

Although many things about the Church of Scientology remain unclear, a few at least seem certain. Scholars might question claims that Scientology is the fastest growing religion on the planet, but the facts remain that (a) for hundreds of thousands of dedicated followers it is a system of religious thought and practice that gives their lives meaning and fulfillment, and (b) it is a multifaceted organization that shows no evidence of disappearing anytime soon. What remains to be seen, though, is how and whether the organization is able to maintain its membership now that second- and even third-generation Scientologists are emerging. Will these grow disillusioned with their parents' faith, as so many other young people do in other faiths? Or will the firmly established Scientology system of "applied religious philosophy" be enough to retain the youth of the Church into the twenty-first century? Will the Church be able to maintain its literalist fidelity to Hubbard's writings, or will new movement intellectuals emerge and perhaps provoke schisms within Scientology?[115]

On the other hand, while a bona fide religion to many, including most social scientists who have commented on the subject, to many of its critics Scientology remains perhaps the most dangerous New Religious Movement in the world. Just as the Church shows little sign of slowing down, neither do those who have dedicated their lives to exposing it as what they regard as an impious fraud. As Cowan has noted elsewhere, though, "one of the perspectives from which the social history of religious development can be written is that of the clash between movements and countermovements,"[116] a clash that will undoubtedly continue as Scientology develops and grows.

NOTES

1. This claim is made in several Church documents, including Church of Scientology International, "Scientology Effective Solutions: Providing the Tools for Successful Living" (Brussels, Belgium: Church of Scientology International, 2004); Church of Scientology International, "This is Scientology: An Overview of the World's Fastest Growing Religion" [DVD] (Los Angeles: Golden Era Productions, 2004); Church of Scientology International, *What is Scientology?* (Los Angeles: Bridge Publications, 1998), 491; H.C. Jentzsch, "Scientology: Separating Truth from Fiction," in *New Religious Movements and Religious Liberty in America*, ed. D.H. Davis and B. Hankins (Waco, TX: Baylor University Press, 2002); and the official Church Web site, www.scientology.org.

2. The disparity here is due to a difference in the way membership is determined and is not unimportant in terms of claims to phenomenal growth made by the Church. The Church of Scientology maintains a careful record of everyone who has participated in one of its programs, whether directly related to the Church or as part of a social benefit program, and counts each of these as a "member." The number of full-time, active practitioners of Scientology is closer to

the lower estimate. These types of claims are not new. By 1980, four years before Hubbard's death, the Church of Scientology was already claiming more than five million members; see T. Meldal-Johnsen and P. Lusey, *The Truth About Scientology* (New York: Ace Books, 1980).

3. Numerous works have been published on Scientology, both in print and now on the Internet, and these vary widely in the positions they take on the various issues that have surrounded the Church. Like other controversial new religions, the Church of Scientology has attracted criticism from former members [e.g., J. Atack, *A Piece of Blue Sky: Scientology, Dianetics and L. Ron Hubbard Exposed* (New York: Lyle Stuart Books, 1990); B. Corydon and R. DeWolf [L. R. Hubbard, Jr.], *L. Ron Hubbard: Messiah or Madman* (Secaucus, NJ: Lyle Stuart Books, 1987); M. Wakefield, *The Road to Xenu: A Narrative Account of Life in Scientology*; www.cs.cmu.edu/~dst/Library/Shelf/xenu/xenu.pdf (retrieved January 2, 2006)], interested or outraged others [e.g., R. Miller, *Bare-Faced Messiah: The True Story of L. Ron Hubbard* (Toronto: Key Porter Books, 1987); K. Moos, *A Chronological View of L. Ron Hubbard and Scientology* (Silkeborg, Denmark: Seagull Productions, 1995)], and dedicated countermovements, both religious and secular [e.g., Roger Gonnet, www.antisectes.net; Tilman Hauserr, http://home.snafu.de/tilman; Anton Hein, www.apologeticsindex.org; Andreas Heldal-Lund, www.xenu.org; and Karin Spaink, www.spaink.net). For a very useful bibliography of material related to Scientology, see M. Frenschkowski, "L. Ron Hubbard and Scientology: An Annotated Bibliographical Survey of Primary and Selected Secondary Literature," *Marburg Journal of Religion* 4, no. 1 (1999), www.uni-marburg.de/religionswissenschaft/journal/mjr/frenschkowski.html (retrieved March 24, 2004).

4. See, for example, M. F. Bednarowski, "The Church of Scientology: A Lightning Rod for Cultural Boundary Conflicts," in *America's Alternative Religions,* ed. T. Miller (Albany: State University of New York Press, 1995); J. G. Melton, *The Church of Scientology* (Torino, Italy: Signature Books, 2000). In its battle to be recognized as a legitimate religion, over the years the Church of Scientology has also solicited statements of support from a number of scholars in a wide variety of disciplines; see J. A. Beckford, "Scientology, Social Science, and the Definition of Religion" (Los Angeles: Freedom Publishing, 1980); P-A Berglie, "Scientology: A Comparison with Religions East and West" (Los Angeles: Freedom Publishing, 1996); A. W. Black, "Is Scientology a Religion?" (Los Angeles: Freedom Publishing, 1996); M. D. Bryant, "Scientology: A New Religion" (Los Angeles: Freedom Publishing, 1994); D. Chidester, "Scientology: A Religion in South Africa" (Los Angeles: Freedom Publishing, n.d.); R. Dericquebourg, "Scientology" (Los Angeles: Freedom Publishing, 1995); A. Figerio, "Scientology and Contemporary Definitions of Religion in the Social Sciences" (Los Angeles: Freedom Publishing, 1996); H. Heino, "Scientology: Its True Nature" (Los Angeles: Freedom Publishing, 1995); D. M. Kelley, "Is Scientology a Religion?," rev. ed. (Los Angeles: Freedom Publishing, 1980, 1996); J. Pentikäinen and M. Pentikäinen, "The Church of Scientology" (Los Angeles: Freedom Publishing, 1996); D. Sabatucci, "Scientology: Its Historical-Morphological Frame" (Los Angeles: Freedom Publishing, 1983); F. Sawada, "The Relationship Between Scientology and Other Religions" (Los Angeles: Freedom Publishing, 1996); H. M. a. S. Sawada, "Scientology and Islam: An Analogous Study" (Los Angeles: Freedom Publishing, 1996); M. A. Sivertsev, "Scientology: A Way of Spiritual Self-Identification (Los Angeles: Freedom Publishing, 1996). The Church of Scientology also entered actively into the debate; see Church of Scientology International, "Can We Ever Be Friends? An Appeal by a Minister of the Church of Scientology to Reconcile Former Friends and Family" (Los Angeles: Chaplain's Office of the Church of Scientology, 2001); Church of Scientology International, *Scientology: Theology & Practice of a Contemporary Religion* (Los Angeles: Bridge Publications, 1998).

23. Church of Scientology International, *Scientology: What is it?* (Los Angeles: Scientology Information Center, 1985), 2.

24. See, for example, R. Behar, "Scientology: The Thriving Cult of Greed and Power," *Time* (May 6, 1991): 50–57; Beit-Hallahmi, "Scientology: Religion or Racket?"; Kent, "Scientology —Is this a Religion?"

25. The Church maintains that by the end of his life Hubbard had become a "writer & professional in dozens of fields," including screenwriter, poet, lyricist, and essayist; filmmaker, photographer, composer, and balladeer; archeologist, mineralogist, and horticulturalist, www.scientology.org.

26. Audio and video selections from the L. Ron Hubbard Life Exhibition, which is located in Hollywood, California, are available for download on the Internet at www.lronhubbardprofile.org/exhib.htm.

27. See Church of Scientology International, *L. Ron Hubbard: A Lifetime of Creativity* (Hollywood: Celebrity Center International, 1994). In the mid-1990s, Author Services also produced a number of books in the "Ron" series, including, for example, *Ron the Philosopher: The Rediscovery of the Human Soul* (Los Angeles: L. Ron Hubbard Library, 1996); *Ron the Humanitarian: Education* (Los Angeles: L. Ron Hubbard Library, 1996); and *Letters and Journals: The Dianetics Letters* (Los Angeles: L. Ron Hubbard Library, 1997); reprint collections of Hubbard's writings, including L. R. Hubbard, *Education, Literacy & Civilization* (Los Angeles: L. Ron Hubbard Library, 1996); L. R. Hubbard, *Ethics, Justice & Civilization* (Los Angeles: L. Ron Hubbard Library, 1995); L. R. Hubbard, *Rehabilitating a Drugged Society* (Los Angeles: L. Ron Hubbard Library, 1996); and a number of issues of *ASI Magazine,* which featured stories about Hubbard, excerpts from Hubbard's "never-before-published" writings, and news about the distribution and reception of Hubbard's fiction around the world.

28. R. Christian, dir., *Battlefield Earth* (Burbank, CA: Warner Bros., 2000).

29. Particularly intense debate surrounds the details of Hubbard's life. Critics have charged that many of the claims made both by Hubbard and by the Church on his behalf are fraudulent (e.g., Atack, *A Piece of Blue Sky;* Corydon and DeWolf, *L. Ron Hubbard;* Miller, *Bare-Faced Messiah*), and some social scientists have also challenged the official Church version of Hubbard's life (e.g., Wallis, *Road to Total Freedom*). For a balanced treatment of specific biographical events, see Melton, *Church of Scientology.*

30. *Ron the Philosopher,* 16.

31. Perhaps stemming from this early rejection, for much of its history Scientology has conducted a vitriolic campaign against the disciplines of psychiatry and psychology, charging them with a wide variety of human rights abuses. Under the auspices of the Citizens Commission on Human Rights, a Scientology organization that promotes itself as an "International Watchdog

for Mental Health," they maintain a permanent exhibit in Los Angeles exposing what they believe are the rampant abuses perpetrated by the psychiatric community and publish an array of books on the same topic. See, for example, *Documenting Psychiatry: A Human Rights Abuse and Global Failure* (Los Angeles: Citizens Commission on Human Rights, 2000); *Documenting Psychiatry: Shattering Your World with Drugs* (Los Angeles: Citizens Commission on Human Rights, 2001); *Psychiatry: Education's Ruin* (Los Angeles: Citizens Commission on Human Rights, 1995); *Psychiatry: Committing Fraud: Extortion in the Name of Healing* (Los Angeles: Citizens Commission on Human Rights, 1999); *Psychiatry: Destroying Morals: A Travesty of Help* (Los Angeles: Citizens Commission on Human Rights, 1995); *Psychiatry: Destroying Religion In the Name of Salvation* (Los Angeles: Citizens Commission on Human Rights, 1997); *Psychiatry: Eradicating Justice* (Los Angeles: Citizens Commission on Human Rights, 1995); *Psychiatry: Victimizing the Elderly: A Parody of Help* (Los Angeles: Citizens Commission on Human Rights, 1995); *Psychiatry's Betrayal in the Guise of Help* (Los Angeles: Citizens Commission on Human Rights, 1995).

33. Church of Scientology International, *What is Scientology?,* 48.

34. On Hubbard's concept of the thetan, see Church of Scientology International, *Theory & Practice,* 17–21; Church of Scientology International, *What is Scientology?,* 539; Hubbard, *Scientology,* 64–65.

35. According to Atack, in 1949 Hubbard told science fiction publisher Lloyd Eshbach that the way to make money was to start a religion (*A Piece of Blue Sky,* 137), while Miller recounts that Hubbard was more precise even than that. Hubbard "was invited to address a science-fiction group in Newark.… 'Writing for a penny a word is ridiculous,' he told the meeting. 'If a man really wanted to make a million dollars, the best way to do it would be to start his own religion'" (Miller, *Bare-Faced Messiah,* 148).

Heaven's Gate

Rosamond C. Rodman

"39 MEN FOUND DEAD IN SAN DIEGO SUBURB"

Thus did *The New York Times* headline for Thursday, March 27, 1997, announce the discovery of 39 bodies in a sprawling house in Rancho Santa Fe, a high-end suburb of San Diego, California. That headline, as it turns out, was factually incorrect. But media depictions of the group such as "California fruitcake" (*The Los Angeles Times*), "the most secret and seductive cult in the country" (Diane Sawyer, *ABC News*), and a "suicide sect" with brainwashed members, a power-hungry leader, and dangerously millennialist leanings spinning a "web of death" (*Newsweek*) indicated more serious and widespread misunderstandings of Heaven's Gate.

As the story of Heaven's Gate unfolded, journalists consulted academics, clergy, and pundits. Many of the statements about the group mobilized typical rhetoric for religious others, that is, rhetoric more descriptive (and pejorative) than analytic. There was the notable exception of sociologist David Balch, who infiltrated the group in its early years (see Further Reading). But the event seemed to catch religion scholars off-guard, and many found themselves unable to speak knowledgeably about what Heaven's Gate was or represented. A few, however, did warn that characterizing the group as bizarre was effectively a refusal to see or admit that, in fact, Heaven's Gate shared characteristics and beliefs of many mainstream American religious groups. As one such scholar put it, the members of Heaven's Gate "are too easily dismissed as hypnotized cultists. They are our children, our parents, our brothers, our sisters, and potentially ourselves."[1]

A primary example of what Heaven's Gate shared with many was the central place and primary importance of the Bible. Indeed, members of Heaven's Gate understood themselves to be enacting a biblical drama, put in motion by Jesus coming to the world in human form. Now they were here to finish the job begun by Jesus and his disciples. The mandate for their "departure" was in large part biblical, as so many American mandates have been—"because the Bible tells me so."

THE LEADERS

The leaders, Bonnie Lu Trousdale Nettles, and Marshall Herff Applewhite met by chance in Houston in 1972. Applewhite was born in Spur, Texas, in 1932 to a Presbyterian minister father and a homemaker mother. He graduated from Austin College and briefly attended Union Theological Seminary in Richmond, Virginia, before abandoning plans for the ministry to pursue a career in music. Newly married, he moved to Gastonia, North Carolina, to work as the music director of the First Presbyterian Church. Applewhite was drafted into the United States Army in 1954, and he and his wife Ann moved first to Salzburg, Austria, and then to White Sands, New Mexico, where he served as an instructor in the Army Signal Corps. The Applewhites had two children. In 1966, Applewhite was appointed to the faculty at St. Thomas University in Houston; in 1968, the Applewhites divorced; and in 1970, Applewhite resigned from his university post amid rumors of strange behavior. It seemed that Applewhite was having a difficult time. His career as a professor was probably at an end; his father died in 1971; he was in severe debt; and he dropped out of the social circles in which he usually traveled.

By 1972, Applewhite's stress manifested itself physically. He was admitted to the hospital for treatment of a heart blockage. It was there that Applewhite met Bonnie Lu Nettles, who was a psychiatric nurse at that Houston hospital. Little is known about Nettles's early life, other than that she was born in 1927 and had a penchant for occultism, fortune tellers, and séances. At the time she met Applewhite, Nettles was married and had four children. In addition to her professional nursing career, Nettles also taught at the Houston Christian Arts Center, where she offered classes in astrology and Theosophy. "Bonnie" and "Herff" developed a close friendship. Nettles's astrological reading of the uncanny alignment between them convinced them both that God had brought them together for a purpose.

In 1973, they left Houston together for an extended camping trip to determine that purpose. Their lengthy and circuitous route took them eventually to a campsite on the Rogue River in central Oregon. Here, Applewhite and Nettles realized that they knew each other in past lives: they were the modern incarnation of the two witnesses referred to in the book of Revelation 11:3–13. In this passage, "two witnesses" (also referred to in the same passage as the two olive trees and the two lamp stands) are told to prophesy, after which they are killed. Their enemies gloat over their bodies for three and a half days until God resuscitates them and commands them to ascend to heaven in a cloud, while a devastating earthquake ravages the earth.

As Applewhite and Nettles thought about the passage, they realized that, although it spoke in ancient, biblical language, it clearly referred to them. They were the two witnesses referred to in the passage. In a note to friends, they wrote that during their trip,

> Jesus' words and example took on their true meaning, and after much necessary suffering —the "Big Daddy" revealed to Bonnie and me our mission. We are his 2 lamp stands or candlesticks, his 2 olive trees. This is clearly explained [in Revelation 11].[2]

They also believed that, like the two witnesses in the biblical passage, they too would probably die as a direct result of their testimony. Perhaps their deaths would not be caused literally by "the beast that comes up from the bottomless pit," as reported in Revelation. Rather, Nettles and Applewhite thought as yet unknown enemies would probably assassinate them. After this, God would take them up to heaven not "in a cloud" but in a spacecraft. In this way, Nettles and Applewhite understood that the Bible mandated their mission. Their task was to update the Bible's antiquarian language to accommodate modern sensibilities.

Rejecting their given names, Applewhite and Nettles began to refer to themselves as "The UFO Two," or often just "The Two." Later, they also adopted other monikers, such as "Guinea and Pig" (a wry reference to themselves as a cosmic experiment), "Bo and Peep" (shepherds leading the flock), "Nincom and Poop" (these names, perhaps for obvious reasons, never caught on), and finally came to rest on "Ti and Do" (pronounced like the musical notes)—celestial notes in a cosmic scale.

THE FLOCK

The Two continued to travel, though often skipping out on restaurant and hotel bills, knowing that they were not bound by earthly laws and explaining that they, like the returning Lord, were "as a thief in the night" (Revelation 3:3, 16:15, cf. 1 Thessalonians 5:2; 2 Peter 3:10). They also began to attract followers, the first being a woman named Sharon Morgan. At one point, Morgan gave them her credit card, which Applewhite used to rent a car. However, he never returned the car and was still in possession of the vehicle nine months later, when Morgan's husband found out and pressed charges. In 1974, Applewhite was convicted and spent six months in jail in Missouri. While behind bars, Applewhite wrote a treatise on the beliefs of "the UFO Two," which he and Nettles mailed to spiritual groups and New Age teachers all over the country. One copy came into the hands of a man named Clarence Klug, who led what he called the "Self-Initiation Class" in Hollywood, California. Klug and his group studied the book of Revelation intently. They were intrigued by the UFO Two's claims that they were the two witnesses from Revelation. Klug invited them to come and speak to his class.

Apparently, Klug and his group were hoping for some revitalization from the "UFO Two." The group was at a low point, casting about for meaning and direction. Approximately 50 people showed up that night, curious about these special guests. The speakers introduced themselves as "Guinea" (Nettles) and "Pig" (Applewhite). For the most part, Guinea and Pig spoke in terms with which the Self-Initiation Class was already familiar. But they also introduced different ideas, one of which concerned UFOs. Whereas Klug told the Self-Initiation Class that they could eventually expect to be turned into ethereal beings composed only of light, Guinea and Pig refuted this teaching, telling them that they could and would literally depart the world in spaceships. However, to do so meant a disciplined break with the past and with attachments of all sorts—both in the group and with family and friends outside the group. This was something that Klug had not emphasized. Guinea and

Pig invited those who were really serious about this "break with the human level" to bring camping gear, money, cars, and food, and to make their way to a secret destination, which they would divulge in individual consultations after the group meeting. By the end of the evening, Klug, along with many of the inner circle of the Self-Initiation Class, decided to join Guinea and Pig. They were young and old, rich and not so rich, men and women. They were students, waiters, actors, real estate brokers, film editors, and mechanics. Virtually all were educated, middle-class, white people, with mainline Protestant backgrounds.

By May 1975, about two dozen people from the Self-Initiation Class made their way to Oregon's Rogue River, where the initial revelation of Applewhite and Nettles occurred. The secret meeting place was marked with a cardboard lamb. "The UFO Two," who left California prior to the others, were the last to arrive at this secret destination. When they did, they announced that their names were now Bo and Peep, to signify their roles as shepherds leading their flock aboard UFOs bound for "The Evolutionary Level Above Human" or TELAH.

PERIODS OF RECRUITMENT AND WITHDRAWAL

After this initial meeting in Oregon, Bo and Peep sent the flock out in teams of two to seek other recruits and to spread the word of the UFO Two and the group's impending departure. Each team went in a different direction. These small groups traveled extensively (mostly in the western part of the United States) and held information sessions in order to search for others who wanted to join. They had minimal instructions and almost no contact with the leaders. This was known as the first "period of recruitment."

This period was marked by two key experiences: being "rejected of men" and "testing the churches."[3] These "experiences" stem from biblical citations, 1 Peter 2:4 and 1 John 4:1, respectively, and evidently referred to maintaining the faith while confronted by the world's doubt and relying upon churches for charity while on the road. Balch, the sociologist who infiltrated the group during this early period, later explained, "Since we had no money, we had to test the churches to eat and keep the car running."[4]

Meanwhile, Bo and Peep traveled widely, giving public talks in Los Angeles, Denver, and Chicago. Their lectures, focused on the subject of "Human Individual Metamorphosis," drew mostly negative media attention. Much of it was generated by contemptuous interest in Bo and Peep's claims that a spaceship was to pick them up at Waldport, Oregon. At the same time, a large number of the flock literally disappeared from sight during the period of recruitment and were no longer in contact with friends or family. Suspicions were raised about "The Two." CBS news anchor Walter Cronkite reported that "a score of persons from a small Oregon town have disappeared. It's a mystery whether they've been taken on a so-called trip to eternity—or simply taken."[5] Nettles and Applewhite were not surprised at the media's response. Indeed, it fulfilled the prophecy of Revelation. But they were frightened that such publicity would attract their assassins before their message was sufficiently

refined and dispersed. They ordered the recruitment teams to meet at another remote location.

In June 1976, the group came together in the Medicine Bow National Forest in Wyoming. The period of recruitment had lasted approximately one year and had not been easy; the leaders were absent and out of touch. Not surprisingly, the group's numbers—about 200 members in late 1975—were now about half that. Bo and Peep decided to take the 100 or so members that remained in the group into seclusion. During this period, as one member put it, "we were very much 'lifted out' of this world—literally."[6] The group moved, depending on the weather, to a series of national parks and campsites from 1976 to 1979.[7] This was referred to as "the period of withdrawal." During this time the group became increasingly secretive. They established intergroup "guidelines," as well as rules for their interactions with the "human level." They avoided contact with the outside world. They read no newspapers, had no contact with family or friends, and related only minimally, if at all, to anyone with whom they might have contact. All sexual encounters were strictly forbidden. The leaders discouraged any activities that drew the group into the world, such as reading, listening to music, and talking about the past. They lived frugally and communally. Members substituted their given names for a series of initials with the suffix "-ody"; hence Srrody, Jstody, Rkkody. They also gave up their possessions and all contact with their friends and families. The prospect of becoming "too human … was a constant source of anxiety."[8]

This was also the beginning of "the classroom period," in which Ti and Do gave lectures and lessons, and also introduced certain disciplined activities. The group engaged in a number of exercises designed to break "human" habits. One was called the "smooth whirlwind," according to Balch.

> For about a month everyone rotated from one camp to the next, being paired with a different partner in a different tent every day…. The whirlwind had two functions. It forced members to get better acquainted with each other, and it helped them become comfortable with change. Bo and Peep said humans instinctively avoid change, but that change is constant at the next level and candidates for the next kingdom needed to get used to it.[9]

They compared the members to astronauts in training.[10] The point was to ready oneself for life at the "Next Level." Members pursued various ascetic practices designed to safeguard against habitual worldly behaviors. Diet and sleep regimens were severely limited. Members paired up for group chores, but rotated partners in an effort to keep each member honest and responsible to the group. There were a number of efforts to ward off private or selfish thoughts and habits. Members used meditation techniques to control emotions that might otherwise interfere with the group or distract others. Gaining control over the body, which they often referred to as a vehicle, especially sensual thoughts and urges, was an ongoing and central effort of members in the group. At night they kept vigil, watching the sky for speeding meteors that might signal the arrival of a spaceship.

One of the members had a sizable trust fund, which supported the group throughout this period. The leaders drew from it minimally, since the group generated few expenses. By about 1979, the group wearied of the rigors of outdoor life and began to rent houses in Colorado and Texas. The move indoors was a dangerous accommodation to the world. Ti and Do offset this by strictly maintaining the group's isolation, allowing members to leave their houses only to run necessary errands. The Two continued to give lectures and hold classes with the group, and to design exercises that freed them from the human level and prepared them for "the Next Level."

Rental expenses depleted the trust fund quickly. Soon the group needed money. Some of the members applied for jobs, but the leaders planned this effort carefully. Only relatively menial employment could be sought, and applications were filled out using fictitious résumés and references. Often the references' phone numbers provided on employment application forms would ring other members of the group, who would offer high praise for the applicant. Many in the group had saleable skills —mechanic, technical writer, computer technician—so jobs were relatively easy to find. As was the case with the move to indoor housing, this further contact with the outside world increased the group's ascetic practices. The group's long-standing practice of celibacy received renewed attention, as contact with the world tested the group, specifically the men. Some of the male members requested permission to have their testicles removed. At first resistant, Applewhite later gave permission to inquire into the procedure. Eventually, Applewhite and seven others underwent medical castration.

THE RECALL OF "THE FATHER"

In 1983, Nettles was diagnosed with cancer. She refused traditional treatments, and the cancer took over, first taking an eye, and then moving to her liver before finally causing her death. The "worldly" diagnosis was cancer, but according to the group, she had been "recalled" to TELAH. Because Nettles and Applewhite had, as "The Two," come to expect that they would ascend to TELAH together, Nettles's death in 1985 caused a crisis of meaning for Applewhite. He was forced to reconfigure the expected ascent (as per Revelation 11) of "the Two." He did so by reconfiguring the relationship between himself and Nettles this way: Nettles was actually an "older member of TELAH," which translated in biblical terms the "Heavenly Father." In other words, Nettles's death/departure caused Applewhite to renarrate their relationship. He did this not by dropping the biblical frame altogether, but rather by substituting one biblical frame for another. Now, as her departure made clear, Nettles was better apprehended as "the Father." This meant, in turn, that Applewhite was "the Son," or Jesus. While it appeared that Nettles was female, she was, in fact, "the Father." Despite appearances, Nettles had been "the one referred to as 'True God.'" Applewhite explained that the Father had simply been "undercover," incarnate in a female body for his earthly stay. Applewhite himself, it thereby followed, was the present-day Jesus, and the members of the group were the disciples.[11] Just as Jesus and his disciples had been castigated during their time,

Applewhite and the members of the group were likewise considered a radical cult. "Our mission," said Applewhite, referring to Jesus and the disciples 2000 years ago, "is exactly the same … a continuation of that last task as was promised, to those who were students 2000 years ago."[12]

SETTING THE RECORD STRAIGHT

Approximately three years after Nettles's death, the group initiated another period of recruitment, making contact again with the outside world. In 1988, the group wrote the "'88 Update," which provided the "opportunity to set the record straight and to refute many of the false reports and outright lies widely circulated and published by the media back in 1975."[13] Taking out a full-page ad in *USA Today,* the group resurfaced with a bang. For about nine months, they made a concerted effort to reconnect with former members of the group who over the years dropped out. After this period of contact in 1988, the group withdrew once again, smaller than ever. For Do, this was a sign that the time of departure was imminent.

They surfaced again in 1994, calling themselves the "Total Overcomers Anonymous." They published advertisements, again in *USA Today,* as well as in regional newspapers and magazines. They broadcast a series of cable television programs. They again split up into teams, as they had during the original period of recruitment. They held public meetings in alternative bookstores, college classrooms, and hotels from Minneapolis to Los Angeles and points in between, much as they had in the original period of recruitment.

By 1995, the group settled in New Mexico. They preferred the southwestern United States where UFO sightings were not uncommon. They sought clear signs from Ti, to no avail. Earlier, the group rejected suicide, arguing that the bodily vehicle wore out as a sign of readiness for the Next Level, much as Ti's had done. Further, they expected to go to the Next Level *en masse.* Now some of the members began to consider how necessary the body was for entrance to TELAH. It was at this point that the group began to seriously consider a more proactive approach to shedding their human vehicles, or in the "world's" terms, committing suicide.

During this period, some of the members learned computer languages, such as Java and HTML. Capitalizing on the computer boom of the period, the group began an Internet consulting business called "Higher Source." They had an impressive clientele, including the San Diego polo club and Kushner-Locke, a Hollywood production company. The members launched their own Web site, www.heavensgate.org,[14] which featured links to many of Do's talks in transcription, as well as updated versions of writings circulated earlier. By 1996, their Web site flashed these words: "Last Chance to Evacuate Earth—Before It's Recycled."

WAITING FOR THE SHIP

In 1996, the group also sold all their possessions and contracted with a company to make their "Away Team" patches. They leased a large house in Rancho Santa Fe,

a suburb of San Diego. Given their rigorous asceticism, the setting was somewhat odd: a lavish, seven-bedroom, seven-bath mansion replete with swimming pool and tennis court. The rent was high, but the Heaven's Gate group was earning large sums of money as Web site designers and consultants.

In 1996, astronomers announced that the Hale-Bopp comet would travel near the earth and would be clearly visible for a brief period in 1997. This news excited the group enormously. To them, the comet was a sign that a spaceship from TELAH was coming to pick them up, or as their Web site put it, "the Hale-Bopp comet is the marker we've been waiting for." In other words, they believed that the spaceship they had been waiting for was with, or the same as, the Hale-Bopp comet. Throughout 1995, and especially in 1996, Heaven's Gate increased their efforts to reach former members and those who wanted to depart for TELAH. They also began preparations for their departure, collecting sufficient amounts of phenobarbital and studying how best to shed "their vehicles." They timed their departure to correlate with the point in time when the comet came closest to the earth's atmosphere, March 22, 1997. It also coincided with Holy Week. To the group, everything seemed to be falling into place. They added to their homepage, in flashing red words, "RED ALERT! HALE-BOPP Brings Closure to Heaven's Gate."

Coroners reconstructed the deaths of the members of Heaven's Gate as having occurred in stages within a 24- to 48-hour period, with a first group of 15 ingesting a lethal dose of phenobarbital mixed with pudding and chased down with vodka. Plastic bags were secured over their heads with elastic bands. After their deaths, the others cleaned up, removing the plastic bags from the heads of the dead, covering their bodies with purple squares of cloth. Then another group of 15 ingested the lethal mixture, and the remaining members prepared their bodies, and so on. Only two members were found still wearing the plastic bags, and these, it was determined, must have been the last two to die.

A member who left Heaven's Gate six months prior to the group's collective departure discovered their bodies.[15] Having received farewell videotapes made by the other members and sent to him and a variety of media outlets in the mail, ("We're looking forward to this!" smiled one member on the tape, a sentiment echoed repeatedly by others. "It's just the happiest day of my life!"), he went immediately to the house in Rancho Santa Fe. There he found the bodies of Heaven's Gate lying face up on their beds throughout the seven-bedroom house. All had their hair closely cropped. They were wearing similar clothing: dark pants, black Nikes, and white shirts with arm patches that read "Heaven's Gate Away Team." All but two were shrouded in squares of purple cloth. (These two, coroners later surmised, were the last to die.) They appeared so similar that initial press coverage reported incorrectly that 39 men were found dead At the autopsies, it became clear that more women (21) were in the group than men (18).

Near each body lay a small overnight bag with a change of clothing. In their pockets they carried passports, lip balm, a five-dollar bill, and some quarters. The group knew that their "departure" would be understood as mass suicide. These travel necessities were a way for the group to signify that they conceived of this not as the largest

mass suicide on American soil to date, but as a journey to what the group referred to as "The Evolutionary Level Above Heaven," or TELAH. Their departure coincided with Palm Sunday and the beginning of western Christian Holy Week, as well as with the point at which the Hale-Bopp comet, which was then arcing visibly across the sky, came closest to the earth's atmosphere.

Several days later, on April 1, 1997, a man with no previous connection with Heaven's Gate committed suicide in northern California. He was covered with a purple shroud and left a note indicating his intent to join the others on the Hale-Bopp spaceship.[16] About a month later, in early May 1997, two former members of the group, Jstody (Wayne Cooke) and Rkkody (Chuck Humphrey), attempted to "exit their human vehicles" (common group parlance for suicide) and catch up with the rest of the group from a motel room in Encinitas, California. Jstody "succeeded," Rkkody did not, and he was rushed to a nearby San Diego hospital. Rkkody explained his failure by saying that he was apparently not yet acceptable to the Next Level. In February 1998, Rkkody tried again, using carbon monoxide and a sealed tent; this time, he died.[17] In total, 42 people departed from the world for TELAH in what constitutes the largest mass suicide in the United States to date.[18]

The story of Heaven's Gate came to light over a number of weeks, as a puzzle with disparate pieces slowly fitting together. A major part of the puzzle would remain unsolved, in large measure because the group's religious sensibilities were immediately labeled bizarre and dangerous. The media was quick to point out that the group often made reference to extraterrestrials, spaceships, and UFOs, as indeed they did. What they did not understand was crucial, however: that Heaven's Gate did this in order to modernize and update a basically biblical narrative.

TEXTS AND TRANSLATIONS

The original Heaven's Gate Web site was embargoed shortly after the bodies were found. It can be accessed only as a "mirror site" through links from other Web sites. It features excerpts from a book that the group assembled, transcripts of videotapes made of Ti and Do's talks to the group, an artistic rendering of what a member of the Kingdom of Heaven might look like, working papers on a variety issues, and "exit statements" by members of the group. The following analysis of the way Heaven's Gate used the Bible depends mainly upon these online primary sources.

The Heaven's Gate Web site makes clear how prolific the members of Heaven's Gate were. Over the years, both leaders and members collaborated on a book entitled *How and When Heaven's Gate May Be Entered,* as well composing a large number of working papers and essays. Even a cursory reading of Heaven's Gate's writing reveals a great number of references to biblical verses, phrases, and idioms. Many, however, did not recognize Heaven's Gate's propensity for biblical references because they were often glancing, partial, or translated into "updated language." The way that Heaven's Gate combined biblical passages with UFOs and extraterrestrials, for instance, obscured familiar biblical notions, phrases, and stories. It was not accidental that

Heaven's Gate preferred the Gospel of John, that most otherworldly of the four biblical gospels, as the biblical touchstone for their self-narration.

Yet Heaven's Gate was conflicted about the Bible *in toto.* On the one hand, the Bible was the only reference from the time when a previous representative, Jesus, had been sent to earth, and as such it was "the primary historical record we have of periods when the Next Level was relating to man."[19] Further, the Bible preserved the previous representative's requirements for transition back to the Level Above Human (this was known as "discipleship," in biblical terms). Thus, the Bible—properly understood, of course—was utterly essential, for it contained the formula for access to the Kingdom of Heaven.

On the other hand, Heaven's Gate thought that the Bible was misunderstood, corrupted, and mistranslated by churches and scholars. For Heaven's Gate, very few who called themselves Christians were accurately informed about the real contents of the Bible. Heaven's Gate, by contrast, read the Bible to determine its real message in today's context. They claimed a superior understanding of the Bible over that held by most Christians.

One of the main problems, according to the group, was that the Bible's message was cast in terms, naturally enough, that ancients would understand, but that modern people would not. Yet the Bible's formula for transition back to TELAH could still be understood by contemporary readers. The task, as member Jwnody put it, was how to claim the biblical past in a meaningful way for the present situation, so that others would still recognize Heaven's Gate as emissaries from the Kingdom of God.

> How do we present the information in a credible fashion, when to most, our Truth is definitely stranger than any fiction? … At the same time, how do we acknowledge our past associations with this civilization which are primarily recorded in your Bible, so as to offer those who are waiting for prophecy to be fulfilled enough clues to put it together?[20]

For Heaven's Gate, the answer lay in part in a reliable translation of the Bible. If the Bible was "the primary historical record we have of when the Next Level was relating to man," then a proper translation, communicated in modern language, was of central importance and great value.[21]

> One of the greatest struggles we've had from the beginning is the terminology—if we try to correct the vision of the Christians and talk their language, we're seen as a religious cult on an ego trip—if we try to state our information in language more relevant to our actual situation, the masses see us as attempting to make the "Trekkie" vernacular into religion.[22]

Heaven's Gate chose The Amplified Bible as their preferred translation. The Amplified Bible is not a word-for-word translation, but one that freely updates ancient language into more appropriate language for the modern reader.

But no translation could address all of Heaven's Gate's anxiety about the Bible. They were hemmed in on two sides: on the one hand, Heaven's Gate wanted to counter the laxity of modern, worldly Christianity. On the other, they wanted to

appropriate the Bible as the primary record of their own legacy. They focused on the purported actual words of Jesus, dispensing with any narration about Jesus, and with the Old Testament altogether. In this way, Heaven's Gate sifted through the Bible, separating what was "accurate" and "historical" from the chaff of churchy obfuscation. This effort, according to Heaven's Gate, enabled them to isolate the true biblical message (how to gain entrance into the Kingdom of Heaven, or TELAH). Then they would have a much clearer understanding of their tasks on earth and when they could expect to depart for the Level Above Human.

A DEPOSIT OF RECOGNITION

A mainstay of Heaven's Gate rhetoric was to draw attention to the fact that Jesus was shunned and misunderstood by many. They too suffered from mistreatment and misunderstanding. Do, in particular, identified with Jesus. But the members of the group furthered the analogy by claiming that they were among the few who would be able to recognize Jesus or a "current representative" of TELAH as such. They described this special gift of recognition or insight primarily as "the deposit of recognition," but they also referred to it as an "implant,"[23] a "chip," or a "seed."[24]

This deposit of recognition, of course, like almost everything for Heaven's Gate, had a biblical analogue. According to the member known as Lvvody, Jesus himself referred to the deposit in numerous ways. For example, Jesus was describing the deposit "when he said, 'No one comes to me unless the Father Who sent Me attracts and draws him and gives him the desire to come to Me, and I will raise him up at the last day.' (John 6:44)." But he spoke of it even more specifically when he said, "My sheep know my voice … and they follow me" (John 10:27).[25]

Most individuals, according to the group, have some ability to recognize the Representative. Some have more ability than others, some have none at all. Most, unfortunately, mistreat this gift, by denying it, or by trusting worldly ways and means. In doing so, they neglect their deposit of recognition, or remain "blind" to the current representative." Meanwhile, members of Heaven's Gate had years of practiced discipline and were clearly committed to Do, so they had enhanced their deposit of recognition sufficiently to advance (or return) to TELAH. Merely dying was no guarantee that one would enter into the Kingdom of Heaven, as so many worldly Christians believed.[26]

How was one to know whether one had the sufficient amount or type of deposit? The deposit made itself known through certain characteristic feelings and experiences, such as the impetus to seek out the present Representative, a loss of respect for the world and its corrupt systems, and a persistent "feeling like 'I don't fit here,' 'I hate this corrupt world,' or 'I just want to go home to God.'"[27] Having a deposit ultimately meant separating completely from the world, which those with a deposit desperately desired anyway. According to Applewhite, those with deposits usually exhibited some form of antisocial tendency.[28] One member of the group, Lvvody, wrote that it was the deposit that enabled her to recognize "the Two" even before meeting them.

While most of the world would consider the members of Heaven's Gate to have been duped or brainwashed, the reason that so few people realized that Do was, in fact, Jesus incarnate was because very few have the necessary "deposit of recognition."[29] Yet even those without a deposit, or with an insufficiently nourished deposit, unwittingly confirmed the Representative as such. The inability of most to recognize Heaven's Gate as the current representatives simply mirrors the pattern of responses to Jesus and his disciples, as recorded in the Bible. Just as Jesus and followers had been deeply suspect, so also would be Applewhite and his followers:

> I will again be hated for my "blasphemy" (of who I say I am) and hated by those families and others that are affected by all who aspire to leave with us, because this mission requires that they forsake all ties and binds to this world.[30]

In many ways, their rejection by the world affirmed Heaven's Gate's mission, precisely because Jesus and his followers were also rejected. Those who responded negatively to Heaven's Gate were simply enacting what the Bible foretold. The negative response not only confirmed Heaven's Gate as true members of the Kingdom of Heaven, but also undermined those "Christians" who most vehemently rejected Heaven's Gate. These so-called "Christians," member Srrody charged, lacked the deposit necessary to truly understand. "I'm afraid that even those 'born-again' aren't [those] we would identify as of our Father's House."[31]

But Heaven's Gate was not only concerned about the deposit of recognition, an invisible, though critical, element for the transformation to TELAH. According to the leaders, the deposit was placed in the body to use as a "cocoon" or "chrysalis" in order to prepare for the Next Level.[32] As a result, they were also deeply concerned about their bodies and the part the body would play in the effort to advance beyond human.

CELESTIAL BODIES

For many, Heaven's Gate's evident contempt for their own human lives was the most repulsive aspect of the group and the most difficult to understand. In fact, at certain points it seems that Heaven's Gate members would have agreed with media pundits shocked by the group's evident disregard for their bodies. Do, for example, complained, "I'm wearing a human vehicle, because I have to wear one for this task. I don't like it. It doesn't match me."[33] But for the most part, Do focused on how essential the body was for Heaven's Gate's main task: overcoming the world (John 16:33). They *needed* their bodies in order to best express this overcoming. Ti, after all, was recalled to TELAH while still inhabiting her human vehicle. It was only fairly late in the life of the group, when Heaven's Gate learned that Hale-Bopp comet would be near the earth, that Do and the other members began to seriously consider "shedding the human vehicle."

For Heaven's Gate, the body served an essential purpose. It provided the opportunity to overcome greed, lust, and other self-serving pursuits, as befit members of the Kingdom of Heaven. The more they prepared for their transition to TELAH in their

human bodies, the easier it would be. Heaven's Gate seems to have thought that their bodies would be a part of their transition to TELAH. In their writings, it becomes clear that they needed their bodies in order to complete their transition from the worldly realm to that of TELAH. They made this clear in their statement, "Our Position Against Suicide." "We take good care of our vehicles [bodies] so they can function well for us in this task, and we try to protect them from any harm."[34] They seem also to have expected that their bodies would naturally give out, as Ti's body had evidently done. Over time, however, it seemed increasingly unlikely that this would occur collectively.

Heaven's Gate also thought about the bodies they would have once they got to TELAH. "The Next Level body is a creature that looks very attractive, has two eyes, some remnant of a nose, some remnant of ears… It doesn't reproduce. It's not male nor female [sic]. It would probably look like what you might consider a very attractive 'extraterrestrial.'"[35] On their Web site they provided rendering of what their Next Level image would look like.[36]

As with so much else for Heaven's Gate, the TELAH body had a biblical analogue. Here, however, the group turned to the writings of Paul, whom they usually shunned (on the basis that he never met Jesus and could not accurately represent what Jesus had said):

> There will be no males, no females, no children, no families other than your relationship with God, your Lord … no incense is required, no flowing robes, no tinkling bells … Our Father's Kingdom requires … ridding ourselves of the lusts of the human world, and of the binds to the human level.[37]

TELAH, then, would be as Paul urges the Galatians to be (Galatians 3:28), and the TELAH body was like the resurrected body in Paul's imagination, a body "incorruptible and imperishable" (1 Corinthians 15:42).[38]

Long after Ti's departure, Do remained undecided about whether "shedding of the human body" would be necessary in order to ascend to TELAH. Before the arrival of the Hale-Bopp comet, Do thought that members might need to discard their "borrowed human bodies" in order to depart, but more probably "the Father" would not make that a requirement.[39] "He will take us up into His 'cloud of light' before such 'laying down of bodies' need occur."[40] Evidently, the years of waiting and the arrival of the Hale-Bopp comet galvanized Do and the rest of the group to shed their human vehicles.

CONCLUSION

The last communication from Heaven's Gate was fashioned as a press release, and dated March 22, 1997, the day they began to depart.[41] It was sent to various media outlets to coincide with the discovery of their bodies. The release stated that the group now resided in distant space, what is known "in your religious literature" as the Kingdom of Heaven or the Kingdom of God. The statement goes on to say that the Representatives from the Level Above Human have exited the bodies they wore

for their earthly task in order to "return to the world from whence we came" followed by instructions for others who wished to join them.[42] The Exit Statement said that Heaven's Gate's purpose had been to offer a doorway to the Kingdom of God as well as information about TELAH, and "to work against the forces of what the human level has become." The statement ended, just as their book, *How and When Heaven's Gate May Be Entered,* had, with "some relevant scriptures," including, most chillingly, John 12:25: "He who loves his life will lose it, and he who hates his life in this world will keep it for eternal life."[43]

Heaven's Gate members claimed that they were never from this world, that they returned from whence they came, after a failed effort to reveal the truth about themselves to those who reside at the human level. That depiction, so eerily refracted through the Bible and their understanding of Jesus as the previous representative, provided them with ways of framing and substantiating their own strange sojourn among those hostile to them and to their message, as so many before them have done.

UFO(s and) Religion

Brenda Denzler

When they saw the Unidentified Flying Object, or UFO, even the chaplains fell to their knees, genuflecting with clasped hands. In July 1957, more than 3,000 military men on an aircraft carrier and the four destroyers that accompanied it watched for 20 minutes as a dark gray cylindrical object measuring approximately 4,000 feet by 350 feet hovered overhead, then darted around at incredible speeds, making impossible maneuvers, before disappearing in a "snap." It was, said one of the witnesses more than four decades later, "a most stirring sight indeed."[1]

A physicist from Southeast Missouri State University was doing field research on reported UFO sightings in the early 1970s and finally had a sighting of his own. Later that night, he recalls, "I slowly succumbed to sleep, believing that my life would never be the same.… For more than a year, as I approached that particular episode during public lectures, I had difficulty dealing with the emotion it stirred. Even now [1981], the impact of the experience may surface without warning."

But it was not just the raw fact of this sighting and the ones that followed that made an impact on this man of science; it was the mutuality of the encounters. "More was involved than the measurement of physical properties of UFOs by dispassionate observers," he concluded. "A relationship, cognizance, between us and the UFO intelligence evolved.… This facet of the UFO phenomenon perturbed me as much as the advanced technology we observed. It is a facet I cannot really fathom —and I have thought about it every day for more than seven years."[2]

A trailer factory worker living in the area where that same UFO flap was occurring in the 1970s reported that he walked out his front door to go to work before dawn one morning and found a 20 foot by 15 foot disk hovering over a nearby telephone pole. "I thought I must be dreaming, but no, there it was, bright yellow, green and red lights along the bottom.… I stood and watched this thing for about five minutes just to be sure that I was seeing it," he wrote 25 years later. "Yes, folks, there are UFOs. It changed my life ever since that day."[3]

Since 1947 when pilot Kenneth Arnold reported seeing nine silvery objects flying over Mt. Ranier, Washington, hundreds of thousands of UFO sightings have been

reported by people from all walks of life. Regardless of the witness's education, socioeconomic status, occupation, gender, or race, the experience is very often a stunning one. It is an encounter with that which appears to be "wholly other"—a modern-day encounter with what theologian Rudolf Otto called the *mysterium tremendum*—that which evokes feelings of awe and attraction.[4] As the witness seeks to make sense of the experience, the result is often a quiet but profound shift in his or her ideas about and practice of religion.[5] But sometimes the result is the formation of blatantly religious or quasi-religious movements with a UFO twist.

"The God of orthodox religion has been found wanting … and can no longer be relied upon," lamented Christopher Evans in his 1973 book, *Cults of Unreason.* "In his place new Gods have arisen—superintelligent beings who are technologically and, perhaps, morally superior to mankind. They come not from some out-dated Dantean Heaven, but from one or many of the myriad planets which undoubtedly exist in the vast arena of the universe. They no longer ride on clouds or chariots of fire, but in fast and maneuverable spaceships of a bewildering variety of designs, most commonly shaped like giant inverted saucers."[6]

As Evans correctly observed, the earliest culturally significant religious response to the UFO phenomenon, with its intimation that there might be intelligent life in the universe beyond planet earth, was a tendency to place UFO occupants in a more or less salvific role previously reserved for venerated deities. Perhaps this occurred because the more established religious bodies remained silent on the topic of UFOs and their presumed occupants, taking their cue from a scientific establishment that was at best coolly tentative about the possibility of extraterrestrial life anywhere in the universe and thus dismissed the UFO phenomenon as nothing more than hoaxes, hallucinations, and "Cold War jitters." In 1952 *Time* magazine became the first to publish anything about religion and UFOs.[7] *Science News Letter* followed suit in 1953.[8] It was not until 1956 that a major religious periodical, *The Christian Century,* gave the subject of extraterrestrial life any attention.[9] Instead of a sustained and reasoned discussion about the religious significance of UFOs and the theological questions that even their *potential* reality might imply, mainstream religions left witnesses largely on their own to devise world views broad and meaningful enough to encompass what they experienced. Some of these witnesses found at least tentative answers in the "contactee" movements that began in the early 1950s.[10]

Contactees were those who claimed that they not only saw a UFO but had personal contact with its occupants. More often than not, those who started and were most attracted to contactee movements had preexisting metaphysical interests that lent themselves well to reinterpretation in light of the UFO phenomenon. The prototypical contactee who set the pattern for many of those who would follow was "Professor" George Adamski (1891–1965).

THE CONTACTEES: FACE-TO-FACE ENCOUNTERS

A Polish immigrant who worked in a hamburger stand on the slopes of Mt. Palomar in southern California, Adamski was already deeply embedded in the

metaphysical community of his day by the time he claimed to have had his UFO experiences. For decades he gave lectures on the occult and "Universal Law," and during Prohibition in the 1920s and 1930s, he founded an esoteric "monastery."[11] It was not until October 9, 1946, Adamski later claimed, that he saw his first UFO, which provided him with material for a whole new series of lectures in 1949 and 1950. Then, on November 20, 1952, Adamski had what eventually became one of the most widely discussed UFO encounters ever when he met the jumpsuited occupant of one of the crafts—a spaceman with classically Aryan good looks who introduced himself as "Orthon." The story of this encounter was published in 1953 as an addition to a book titled *Flying Saucers Have Landed,* by British occultist Desmond Leslie (1921–2001). Two years later, Adamski published a further account of his contacts with the aliens, including trips via UFO to some of the other (inhabited) planets in our solar system. On these lengthy excursions, Adamski was told that people on Orthon's home planet lived in peace and harmony and that they came to Earth as part of a mission to warn us about the dangers of nuclear proliferation.[12] Over the years, Adamski's story and its attendant message struck a chord with thousands of people, allowing him to travel throughout the United States and Europe giving lectures about the Space Brothers and their philosophy.

However, Adamski also had his detractors, who accused him of falsifying photographic evidence and lying about his supposedly real contacts. In particular, they pointed out that he appeared to have reused story elements from a little-known 1949 science fiction novel he wrote. Even the vaunted philosophy of Orthon and his compatriots sounded very much like the metaphysical system that Adamski taught for many years before his alleged encounters—a system he published in 1936 and attributed to masters of the Far East. Yet the evidence against Adamski's claims, powerful as it was, was never all-encompassing and conclusive enough to convince everyone, and there remains to this day a small group of Adamski supporters. As cultural historian Colin Bennett observes, there is no doubt that Adamski was a "likeable rogue" who at times "tarted up" some of his experiences, but "our world would have been a much more comfortable place had Adamski been proved to be an imposter." That kind of incontrovertible proof, alas, was not to be had.[13]

To the surprise and amusement of many (and the frustration of others), publication of *Flying Saucers Have Landed* generated a flood of similar contact claims, creating what one historian described as a climate of "delicious insanity."[14] Like Adamski, a central topic of interest to most of those who reported such encounters was religion and philosophy. Truman Bethurum (1898–1969) in 1954 publicly reported his meeting two years earlier with a stunningly beautiful spaceship captain, Aura Rhanes, at whose behest he solicited funds to set up a "Sanctuary of Thought" devoted to metaphysical teaching.[15] In 1955, Orfeo Angelucci (d. 1993) claimed that he spent seven days aboard an extraterrestrial craft in January 1953, at which time he was commissioned to spread the space beings' message of peace and love to the people of Earth. One reason Angelucci gave for his mission introduced a new twist into the emerging religious interpretation of the UFO phenomenon: according to the space beings, they and the people of Earth shared an ancient kinship. This claim

was also implied in the 1956 revelations of contactee Howard Menger (b. 1922), who himself introduced a new theme, though one that was not to become widely reported until the advent of the abductees several decades later. According to Menger, his contacts with the space brothers had occurred since childhood simply because they were making contact with "their own."[16]

THE CONTACTEES: CHANNELED MESSAGES

Though face-to-face contact with alien spaceship pilots was a central feature of some of the earliest contactee reports, many of the movement's eventual leaders (and their followers) did not claim to have ongoing physical experiences—or, indeed, any physical experiences at all—with the extraterrestrial visitors. Instead, most contactees reported that their encounters with UFO occupants took place by means of telepathy. One of the first of these was George Van Tassel (1910–1978), an aeronautical engineer who announced in his 1952 book, *I Rode a Flying Saucer!,* that he made telepathic contact with a variety of extraterrestrial beings who circled the Earth in their UFOs on a mission to raise the planet's "vibratory level" and thus improve the human race.[17] Van Tassel was a long-time student of metaphysics, having founded the "Brotherhood of the Cosmic Christ" in the late 1940s. In 1953, he founded the Ministry of Universal Wisdom as an organization devoted to the scientific exploration of the UFO experience. One of the most venerable resources Van Tassel consulted in this exploration was the Bible. Therein, he discovered, was evidence that the human race was in actuality an extraterrestrial race that had been seeded onto the planet in order to grow and develop spiritually. Because negative space beings interfered in this process, he deduced, an extraterrestrial woman named Mary became pregnant and landed on earth to give birth to the historic Jesus, whose mission was to help humanity in its evolution. This same Jesus, said Van Tassel, was preparing to return to Earth in the 1950s with a fleet of spaceships in order to save the planet from those whose obsession with developing more and better atomic bombs indicated that they were still under the control of the negative galactic forces.[18]

Despite his attempts to reconcile the UFO phenomenon with traditional Christian religion, Van Tassel's main contributions to popular UFO religion did not lie in his unique theology but in his sponsorship of a yearly UFO convention and in his telepathic communications with an extraterrestrial by the name of Ashtar. As part of the work of his Ministry of Universal Wisdom, Van Tassel sponsored a yearly UFO convention at Giant Rock in the Mojave Desert, where his alien informants told him to build a rejuvenation machine or time machine ("a high-voltage electrostatic generator that would supply a broad range of frequencies to recharge the cell structure"[19]). For nearly a quarter of a century (1953–1977), these conventions provided a venue where tens of thousands of people with all kinds of UFO experiences —from long-distance sightings to near-at-hand encounters to deeply personal contacts—gathered to compare experiences, hear and give lectures, buy and sell books, and form networks.

Perhaps in part as a result of these events, contactee stories very early came to share what UFO researcher Isabel Davis called "a strong family likeness."[20] Aliens in these stories were seldom just passing by our corner of the galaxy and investigating a planet that showed surprising signs of harboring intelligent life. Instead, they almost always seemed to know humanity already (sometimes even claiming kinship with us)—and what they knew alarmed them. As a result, they came to Earth to help us survive our shortcomings, which were about to kill us all. Time after time, the aliens promised a mass landing of UFOs just a few months or a few years into the future. Yet time after time these modern heralds of terrestrial salvation, whose mission was to save the human race from immanent extinction and show it the way toward moral and technological advancement, refused to boldly land on the White House lawn or at Buckingham Palace or the Kremlin and state their case. They insisted, instead, on imparting their wisdom and warnings to people whose social status and political connections made them least likely to effect the immediate and widespread moral and technological reforms that the aliens claimed they were trying to bring about.

Because the aliens kept promising to land, yet showed such a consistent reticence to come unambiguously out into the public eye, contactees and their followers who promulgated the messages of the visitors often endured disbelief and ridicule. Then, as promise after promise of mass landings failed to come true, the messages from the space brothers slowly began to change. Contactees began to report that an ethical reason prevented mass landings: humanity's extraterrestrial benefactors were unwilling to interfere with our free will by landing directly and taking control—whether by might or by the sheer power of their intellectual, technological, and moral superiority. Rather, said the contactees, humanity must freely choose the guidance of their would-be saviors. "The truth [of the aliens' warnings and teachings] must be infiltrated rather than trumpeted,"[21] they suggested. The truth became not so much a matter of the aliens making worldwide political, scientific, and social changes, as a matter of each human being making an individual decision to accept or reject the teachings and guidance of the Space Brothers.[22] One of the more important purveyors of this kind of alien truth during the last half of the twentieth century was a loquacious extraterrestrial entity known as Ashtar.

The second of Van Tassel's long-term contributions to popular UFO religion, besides his Giant Rock UFO conventions, was his initiation of telepathic contact in the early 1950s with an extraterrestrial spaceman who identified himself as "Ashtar, Commandant Vela Quadra sector, station Schare"—a member of the galactic constabulary sent to liberate Earth from its control by negative space beings. Initially, members of the Ministry of Universal Wisdom were content to receive these transmissions and disseminate them primarily within their limited group. But a few who were more passionate about popularizing the messages broke away from the Ministry and began their own group, resulting in a proliferation of such groups that continued for many years. Before long, messages from "Ashtar Command" were being channeled not only by Van Tassel but by dozens of others in the contactee and metaphysical communities. Throughout the 1950s and 1960s, these messages promised that soon a public landing of a fleet of UFOs would occur whose occupants

would set matters straight on Earth. Unfortunately, all of these predictions of global salvation failed to come to pass. Though devotees of the Ashtar transmissions were stymied by repeated disconfirmations, they eventually understood that the true nature of the messages was more esoteric and less physical than they first thought. Ashtar Command was not offering humanity salvation in global and physical terms, but in more personal and metaphysical ones. Today, as sociologist Christopher Helland noted, the *concept* of Ashtar has fared better than any one of the many groups who channeled and promoted the Ashtar teachings, most of whom slowly disbanded. As for the teachings themselves, they have become largely indistinguishable from those of other prominent metaphysical groups.[23]

Just as Adamski was not the only person who claimed to have face-to-face contact with the extraterrestrial occupants of UFOs, so Van Tassel was not the only one who claimed to have nonphysical communications with the visitors.[24] Like Van Tassel, others often felt compelled by the power of the messages they received to broadcast them to the widest possible audience. Among those who did so with singular success were Ernest (1904–1971) and Ruth Norman (1900–1993), who founded the Unarius Science of Life movement after publication of Ernest's 1956 book, *Voice of Venus,* which described his psychic trip to Venus and the knowledge he acquired from its inhabitants.[25] That same year the Venusians made another showing when London taxi driver and long-time metaphysician George King (1919–1997) founded the Aetherius Society, named after the Cosmic Master Aetherius, a native of Venus who contacted King via telepathy two years earlier with the announcement that King had been chosen as the Venusians' "primary terrestrial channel."[26] Like the followers of Adamski, adherents of the Unarius Science of Life and of the Aetherius Society can still be found today in small numbers, upholding the legacies of their founders.

One of the most notorious UFO religions to emerge from the "delicious insanity" of the contactee era did not surface until the mid-1970s, when Marshall Herff Applewhite (1931–1997), son of a Presbyterian minister, met Bonnie Lu Nettles (1927–1985), who introduced him to the metaphysical principles she was studying. In the context of a series of dreams, visions, and mystical revelations that ensued, Applewhite and Nettles began to believe that they were the two witnesses prophesied in the biblical Book of Revelation. In keeping with the role of spiritual shepherding that this entailed, they called themselves "Bo" and "Peep." Into this fusion of Christianity and popular metaphysics, they inserted ideas about UFOs that by then were not altogether uncommon in either metaphysical or contactee circles. In their idiosyncratic reinterpretation of the Christian faith, biblical references to "clouds" were often understood to mean "UFOs," and the heavenly kingdom of God that was the destination of the righteous was not some vague spiritual realm but a literal, physical place in the universe that was accessible only by spacecraft. The point of earthly life, they taught, was to overcome Earth's "poisoned spiritual atmosphere" by separating from the world so as to reach the "next level" of human evolution—the creation of a new kind of being, an immortal transhuman who was capable of continual spiritual growth.[27] When the Hale-Bopp Comet appeared in 1997, the few remaining followers of Applewhite and Nettles made their separation from this world final and

at the same time cemented their place in the history of popular UFO religions by committing mass suicide in order to ascend to a space ship that some UFO enthusiasts claimed was hiding in the tail of the comet.[28]

A different understanding of what constitutes human progress emerged from another popular UFO religion that began in 1973 after former race car driver Claude Vorilhon (b. 1946) (now known by his spiritual name of "Raël") had an unexpected face-to-face encounter with several small humanoid aliens who told him that human beings were genetically engineered and put on earth by a race of extraterrestrial scientists known as "the Elohim." The only hope of immortality that any individual human might have, he was told, lay in the regeneration of suitable replacement bodies through cloning. To that end, Raël's followers expect the Elohim to return in UFOs, bringing with them the technology to provide a scientific salvation via cloning to the Raëlian faithful around the world, who have contracted to have pieces of their skull bones preserved in ice should they die before the expected arrival. In the meantime, followers are encouraged to be successful in their worldly careers and to experience pleasure in whatever forms they can find it—especially including sexuality—for it is only "those who find total self-fulfillment [who] will be immortalized through cloning."

But the mission of the Raëlians is not entirely about physical gratification. In addition to preparing an embassy for the returning Elohim, Raëlians are assiduously attempting to discover the scientific secrets of humanity's creators by learning how to perform their own cloning operations. In 2002, Brigitte Boisselier, a high-ranking Raëlian disciple and CEO of the Raëlian-controlled firm Clonaid, announced that company scientists had produced the first cloned human baby. Though several subsequent claims of other successful human cloning procedures emerged, the company declined to allow outside scientists to test the babies and establish the veracity of the claims.[29]

THE SILENT CONTACTEES

The contactee movement of the 1950s and 60s provided a very visible group of people for sociologists, psychologists, and religious studies scholars to study. They were easy to identify, easy to find, and thus easy targets for both serious research and less-serious journalism. However, many other individuals during those years also had odd personal experiences involving UFOs but did not become a part of the contactee movement; thus, their claims and experiences are less well documented in the scholarly literature … or even in news accounts of the day. Paranormalist John Keel called them the "silent contactees"—people who privately told an inquiring UFO researcher about having had close contact encounters, but who were very reluctant for their stories to be publicly recounted.[30] Because of their reluctance, and their failure to attract followers (indeed, their lack of desire to *have* followers), they usually went unnoticed. Sometimes, though, their stories would surface.

On the night of June 26, 1959, at the Anglican Mission at Boianai, New Guinea, a bright light approached the mission station from the northwest and descended to

within about 500 feet. The priest, Father William Booth Gill, called for others at the station to come and see the disk-shaped object, which soon disgorged three small, humanoid beings who walked around on its perimeter. The four-hour spectacle was, Gill wrote to a friend the next day, "at times … absolutely breathtaking." The next night just before sunset the UFO returned and the three small occupants re-emerged and continued to move about on the outside of it as if they were doing something purposeful, while a fourth small humanoid stood and looked down at Gill and the assembled islanders. On an impulse, Gill raised his arm and waved at the watchman, who surprised the crowd by waving back. After a lengthy exchange of signaled greetings between the disk occupants and the mission station personnel, Gill realized that he could not convince the visitors to land, so he and some of the other observers went indoors to eat supper and then have an Evensong service in the church. Several hours later, the remaining witnesses reported, the UFO and its occupants left as visibility diminished and the night skies became overcast. In all, the two sightings lasted for more than six hours and involved almost 40 witnesses at the mission. When news of the sighting leaked to the press, Gill was approached by supporters of contactee Adamski, who wanted him to join forces with them to publicize the immanent arrival of the Space Brothers. Gill, however, declined, saying that he just could not "swallow" Adamski's stories. Eighteen years later, he reflected on the furor that surrounded the event.

> The thing that amazed me about the whole thing was that it became so well known. This was just a local thing for me.… Had I done this as a bit of journalism that I'm going to make a packet on, I think I might have approached it in an entirely different way … but I just didn't have that sort of thing in mind. I wasn't interested in doing anything but just recording it. Had I done all this with a view toward publicity, I certainly would have been making money on it.[31]

One mental health professional who claims a history of personal close encounters observed that, "Interactions between beings and people are replete with events that swing from local to universal, from absurd to sublime."[32] Many times, the experiences of the silent contactees were no less absurd-sounding than the experiences of their more publicity-seeking fellows. The oddness of the reports that surfaced from time to time from this quieter group could, in fact, be very baffling.

In 1961, Wisconsin plumber and farmer Joe Simonton reported that a disk-shaped UFO landed in his driveway and opened up to reveal three occupants who appeared to be cooking something. They indicated to him via a rough kind of sign language that they needed water, which Simonton obligingly provided. He was rewarded, in return, with a gift of what the occupants of the odd-looking craft were cooking: some rather tasteless, flat cakes. When news of Simonton's sighting spread, the cakes were sent to the National Investigation Committee on Aerial Phenomena (a grassroots UFO investigative group) and to the United States Air Force for analysis. Both organizations agreed that the bland pastry was nothing more exotic than buckwheat pancakes.[33]

Not only could the experiences of the silent contactees seem just as strange as those reported by the Adamskis and Van Tassels of the world, they could also have just as profound an impact on the experiencer's religious world view. In April 1964, Socorro, New Mexico, patrolman Lonnie Zamora encountered an egg-shaped UFO sitting on the ground near an explosives shack in the desert. As he got out of his patrol car to investigate this strange sight, he heard the sound of two pieces of metal being clapped together, like a heavy door closing, then a roar, followed by a blue flame from the underside of the craft as it lifted slowly off the ground, tilting toward the shack. As Zamora dived for cover behind his car, the roar turned into a whine and the UFO flew away. When backup officers arrived at the site a few minutes later, they found indentations in the soil and smoldering brush where the object had been sitting, along with a thoroughly shaken and dirt-covered Zamora. One patrolman commented that Zamora looked like he had "seen the devil," to which Zamora replied, "Maybe I have." Before he would speak to investigators outside his own police department, he insisted on seeing a priest.[34]

A completely different impression was made on French farmer Maurice Masse more than a year later when he encountered two very small, pale, large-headed beings near a large round vehicle in the middle of his lavender field outside of Valensole, France. When Masse attempted to approach the beings, he reported, they paralyzed him by pointing a tube at him, but he could still watch and hear them as they walked around gathering plants and communicating via strange grunting sounds. After they reentered their craft and flew away, Masse found himself released from the paralysis. An investigation of the ground where the UFO sat revealed indentations, as in Socorro, but no smoldering vegetation. Instead, that area of the field simply would not produce healthy plants for many years afterward. Masse refused to discuss his personal impressions of the experience in detail, replying to inquiries by stating simply that "One always says too much." But several years later his wife admitted during an interview that her husband received an intelligible message from the entities and that he thought of them daily, considering the event a spiritual experience. Because of this, he felt that the ground where they landed was somehow hallowed, and he urged his family to keep it in their possession forever.[35]

UFO(S AND) RELIGION

The religious valences of the UFO phenomenon manifested themselves early in the modern UFO era. At first, that manifestation occurred most noticeably in the contactee movement, where the figure of the UFO and its presumed occupants tended to be grafted into preexisting metaphysical belief systems. Indeed, the advent of the Space Brothers provided the loose-knit metaphysical community with an infusion of energy at a time when its fortunes appeared to be somewhat spent. Being a subculture where contact with higher powers was the norm for adherents, rather than reserved for spiritual specialists, contactees within that milieu not only went public with reports of their experiences but also expected to continue having them … and continue publicizing them.

For contactees who stood outside the metaphysical thought world, however, UFO experiences usually were interpreted in terms of whatever religious or philosophical world view was already available to them. In the dominant Judeo-Christian culture of the day, neither direct apprehension of something outside the norms of everyday life nor individual theological speculation were valued activities for the average person. Instead, these activities were reserved for spiritual specialists—saints, mystics, theologians, and clerics—operating within (and thus constrained by) the established framework of their various traditions. Under the circumstances, contactees within this more mainstream religious culture were not as inclined to go public with their unusual experiences. Though they may have used religious frameworks to privately interpret their experiences—often viewing them either as ineffable manifestations of the divine or as frightening encounters with evil—one can read the overall silence of mainstream theologians and ministers on the subject of UFOs as evidence that these silent contactees did not tend to turn to the established religious authorities for insights.

Even so, the silence of mainstream religious culture in the West with regard to the appearance of UFOs is remarkable, since the phenomenon garnered a great deal of public attention. By 1973, 95 percent of the people in the United States had heard of UFOs, which is one of the highest public awareness indices ever recorded.[36] Yet many theologians and certainly most of the rank and file clergy were reluctant to take up the challenge of the phenomenon, leaving the subject of UFOs and religion wide open for exploration and, in some cases, exploitation. In the 1950s and 60s, during the heyday of the contactee era, most of those few theologians who tackled the subject downplayed its significance, saying that the idea of the existence of extraterrestrial life was not a major concern to religion.[37] One theologian commented that whenever he thought of the possibility, the verses that came to mind were from the Beatles—not the Bible: "When I find myself in times of trouble, / Mother Mary comes to me / Speaking words of wisdom, / Let it be."[38]

Ministers and adherents of small fundamentalist groups were the only segment of Christian faith to respond more or less formally to UFOs (considering them to be demonic manifestations masquerading as extraterrestrial life forms), and those responses were both few in number and limited in scope, being published and promoted mainly within that rather limited milieu. There were only two other ministers who made any significant attempts to wrestle with the problem. In 1968, Presbyterian minister Barry Downing suggested that biblical events and even biblical teachings may have been inspired by early extraterrestrial visitors.[39] And by the mid-1970s, Lutheran pastor Ted Peters expressed his concern about the ways in which the UFO phenomenon inspired feelings of religious awe that could amount to virtual idolatry. While it was encouraging to know that the "religious sensibilities" of modern humanity were alive and well, he wrote, it was disturbing to think that people might be conflating the technological hope implicitly offered by UFOs with the spiritual hope for a remedy for human wickedness that only God could provide. The messages of the UFO occupants delivered via the contactees, Peters noted, seemed to do just that by promoting a gnostic-style, "do-it-yourself" prescription

for salvation. In the end, he said, "The UFO religions have not yet heard or comprehended the Christian gospel."[40]

These kinds of thoughtful encounters between mainstream religion and the idea of extraterrestrials were rare. A 1985 survey sent to Christian seminaries and Jewish synagogues revealed that there was virtually no formal discussion of the implications of extraterrestrial life for their faith traditions.[41] In a 1994 survey, religious leaders still maintained that the discovery of an advanced alien civilization would not significantly necessitate a rethinking of doctrine, nor would it raise serious questions among their church and synagogue members.[42]

Not everyone agreed. A 1960 study from the Brookings Institute reported that the effect on religion of the discovery of intelligent life in the universe would be profound, especially for fundamentalists of all faiths. The report advised that further studies be conducted on the position that major world religions took on the question, but such studies did not occur because few thoughtful, articulated positions were available to be studied.[43] This is not to say that the significance of extraterrestrial life has never been considered before by religions. In fact, throughout the centuries there have been many speculations about the possible existence of other inhabited worlds and what that might mean, all of which bubbled to the surface with renewed vigor in the nineteenth century as scientists and theologians grappled with Darwin's theory of evolution and the question of how life originated on earth. But these speculations tended to keep the alien on his own planet, at a safe distance from the earth rather than in spaceships circling the earth, and no clear position statements emerged from either single denominations or broader faith traditions. In fact, the only religious bodies to take the question of extraterrestrial life seriously into their formal theology during this period were three alternative religions that started in the nineteenth century: Swedenborgians, the Church of Jesus Christ of Latter-day Saints, and Seventh-Day Adventists.[44]

By the early twentieth century, the debates of the previous century were mostly forgotten, and the idea of the extraterrestrial was further explored mainly in the new literary genre of science fiction.[45] It was not until 1998 that the question of extraterrestrial life and religion was once again taken seriously by academic and religious thinkers when the Templeton Foundation sponsored a conference to examine the question.[46] Almost four decades after the Brookings report, the situation was virtually unchanged. One of the conference participants noted that, despite the fact that the major world religions in the twentieth century claimed that they had no problem with the notion of intelligent extraterrestrial life, no substantial theological work has been done on this question. She predicted that the abstract idea was probably more acceptable than the proven fact would be.[47]

Based on the reactions of people who reported close UFO encounters in the latter half of the twentieth century, there is more reason to take the opinions of the Brookings Institute seriously than to uncritically accept the denials of the leaders of the faithful. No matter what effect the officially announced discovery of intelligent life might have in formal religious systems, its apparent discovery by average citizens during the 1950s and 1960s in the shape of UFOs very often resulted in a

rethinking—sometimes a radical rethinking—of long-held religious beliefs, which in turn sometimes gave rise to New Religious Movements (NRMs). At one point there were more than 150 contactee groups in the United States devoted to studying and supporting the extraterrestrial teachings of their leaders.[48]

The lack of guidance from religious leaders left the field open to a whole range of quasi-authoritative, but always authoritative-sounding, speculation—not so much about formal issues in Christian theology such as whether the atoning sacrifice of Jesus would cover the sins of nonterrestrial beings (issues most likely to be taken up by trained theologians), but about events in biblical history and how those might be related to, or even explained by, the UFO phenomenon. As noted above, it was not hard to read proto-UFO events back into ancient texts, finding UFOs in clouds and alien Space Brothers in angels—and even in the Virgin Mary and in Jesus. It was equally easy to find the devil. In 1960, occultist Trevor James advocated a "spiritually scientific" approach to UFO contacts, but warned that it would be risky since UFO occupants were both "of the anti-Christ" and "of the Christ forces."[49] This ability to see the modern UFO phenomenon in ancient religious frameworks was not confined to Christians. Sheikh Nazim Effendi of the Nakshband Order of Dervishes was less equivocal than James about the nature of the UFO occupants. He remarked that UFOs were actually operated by jinn who shared the Earth with the human race and wanted to enslave us.[50] In 1963, Robert Charroux suggested that ancient Sanskrit texts from India contained information about proto-UFO visitations, a theme that was picked up and elaborated upon 30 years later by David Hatcher Childress and by Keith Thompson.[51]

Though most people tended to look askance at the messages relayed by contactees from the Space Brothers, some of the ideas that first emerged in that specialized context proved to have a great deal of popular appeal and cultural staying power. One of the most important is the idea that UFO occupants were on earth thousands of years ago and have been interacting with humanity for eons—working in the guise of (or, more charitably, being mistaken for) gods. As the theoretical source of many of our terrestrial religious traditions, UFO-nauts have also been credited by these mostly ad hoc theologians with everything from building the Great Pyramid in Egypt to teaching primitive human beings the arts of civilization.[52]

Given this level of extraterrestrial involvement in human history, these amateur theologians have asked, what is the real nature of humanity's relationship to them? It is on this question that there has been the most variation of opinion. The earliest messages of the Space Brothers from the contactees suggested that our two species shared a common extraterrestrial ancestry—an idea that would have been a natural outgrowth of the idea being debated in the nineteenth century about very primitive life forms having been introduced to earth from seed-bearing comets that got caught in our planet's gravitational field. According to the early Space Brothers, however, human beings arrived on Earth not as primitive organisms that had to evolve into humanity, but as prehistoric space travelers who got stranded here (or who were sent here as punishment for crimes committed elsewhere in the galaxy). As this idea of our extraterrestrial origins developed, the ancestors of modern UFO occupants

slowly began to be credited with a more active role. Human beings, said the ad hoc, "street" theologians, were not just accidentally seeded here, but deliberately seeded as part of an attempt to jump-start intelligent life on this planet. Perhaps the ultimate elaboration of the theory about human origins in relationship to UFO occupants is that propounded by Zechariah Sitchin, who has maintained in a series of popular books that extraterrestrials from a home world that is the twelfth planet in this solar system came to Earth many thousands of years ago and genetically engineered the human race by combining their own genes with the DNA of a protohominid race in order to produce a moderately intelligent and capable servant race.[53]

In the past few years, the scientifically confirmed discovery of other planets outside our own tiny solar system has done what 50 years of well-documented UFO sighting and encounter reports largely failed to do—spark the interest of a few theologians in the question of the impact that the discovery of intelligent alien life might have on Christian and Jewish theology.[54] Until unambiguous and officially acknowledged contact with an intelligent extraterrestrial race is actually made, however, street-level God talk and NRMs that link UFOs and ultimate concerns will continue because people from all walks of life continue to report close encounter experiences with UFOs. Keith Thompson quotes Heidegger's observation that we are living in a new and sometimes frightening time that has us collectively hovering between a death of the old gods and the birth of new gods. "If there is a 'teaching' of the saucers," Thompson suggests, "perhaps it is to remind us of the multiple worlds we inhabit, a reality with which most of humanity has lived for centuries."[55]

10. Though the UFO-oriented contactee movement began in the 1950s, many people prior to this time claimed contact with extraterrestrial beings. These protocontactees, however, established contact through telepathy or trance—not through actual physical, face-to-face encounters, as many of the earliest contactees of the 1950s would later claim to have done. As J. Gordon Melton observed, the contactee movement in the last half of the twentieth century came out of a long metaphysical tradition in which the only really new element was the UFO. See "The Contactees," in *The Gods Have Landed: New Religions from Other Worlds,* ed. James R. Lewis (Albany, NY: State University of New York Press, 1995), 1–14.

22. The introduction of new ideas and new practices to groups whose expectations were shattered, resulting in a real or threatened reduction in group commitment, is a common strategy for the repair and maintenance of commitment. Most commonly, new ideas and practices are not specifically presented as entirely new, but are instead framed as adjustments or extensions of the previous ideas and practices advocated by the group. The result is a set of values and habits that bear enough continuity with earlier values and habits to prevent the leaders from appearing (to themselves or to others) as rank opportunists willing to change their teachings for the sake of gaining a following, yet that are novel enough to recapture the interest, enthusiasm, and support of group members—and, potentially, new supporters. See the classic

study by Leon Festinger, Henry Riechen, and Stanley Schachter, *When Prophecy Fails: A Social and Psychological Study of a Modern Group that Predicted the Destruction of the World* (Minneapolis: University of Minnesota Press, 1956); and Robert W. Balch, "Waiting for the Ships: Disillusionment and the Revitalization of Faith in Bo and Peep's UFO Cult," in *The Gods Have Landed,* ed. Lewis, 137–166.

23. Christopher Helland, "From Extraterrestrials to Ultraterrestrials: The Evolution of the Concept of Ashtar," in *UFO Religions,* ed. Partridge, 162–178. See also Helland's discussion in "Ashtar Command," in *UFOs and Popular Culture: An Encyclopedia of Contemporary Myth,* ed. J.R. Lewis (Santa Barbara, CA: ABC-Clio, 2000), 37–40.

24. Indeed, the idea of telepathic or out-of-body communications with extraterrestrials began 200 years earlier with Emmanuel Swedenborg (1688–1772). Not until the 1950s, however, were such communications linked to aerial phenomena like UFOs. See Melton, "The Contactees," 2–8.

25. Ernest L. Norman, *The Voice of Venus* (El Cajon, CA: Unarius Academy of Science, 1956). See also Diana Tumminia and R. George Kirkpatrick, "Unarius: Emergent Aspects of an American Flying Saucer Group," in *The Gods Have Landed,* ed. Lewis, 85–104; and Diana Tumminia, "When the Archangel Died: From Revelation to Routinisation of Charisma in Unarius," in *UFO Religions,* ed. Partridge, 62–83.

26. The Aetherius Society is one of the more well-studied contactee groups from the 1950s. For a brief presentation of its history, see Simon G. Smith, "Opening a Channel to the Stars: The Origins and Development of the Aetherius Society," in *UFO Religions,* ed. Partridge, 84–102. A somewhat edgier presentation of the Aetherius Society's history can be found in Evans, *Cults of Unreason,* 150–164. The term "channeling," which is widely used today to describe the process of using altered states of consciousness to contact entities or retrieve information from nonphysical realms, appears to have gotten its start with the announcement of Master Aetherius to King. See J. Gordon Melton, "New Thought and the New Age," in *Perspectives on the New Age,* ed. James R. Lewis and J. Gordon Melton (Albany: State University of New York Press, 1992), 15–29.

The "mainstream" UFO community, composed of those with a more scientific interest in the UFO phenomenon, were very reluctant to believe most of the early contact reports—whether those contacts allegedly occurred on a physical or a purely spiritual level. Nevertheless, some of the major UFO periodicals occasionally took note of new claimants as they emerged. In 1963, the venerable *Flying Saucer Review* published a list of those contactees who received mention in its pages during the previous nine years. The list contained 29 entries. See Reginald Dutta, "Contact Claims," *Flying Saucer Review* 9, no. 2 (March 1963): 31–32.

The Raëlian Movement

George D. Chryssides

The Raëlian Movement is classified by scholars as a UFO religion; that is, it is an organization whose world view and activities center on belief in extraterrestrials. It is important to understand it against this background. The modern interest in UFOlogy stems from aircraft pilot Kenneth Arnold's alleged sightings in 1947 of "flying saucers" that appeared to be traveling at a recorded speed of 1,656 miles an hour. The Roswell incident, which occurred on July 2, 1947, added fuel to public interest in UFOs, when a farmer at Foster Ranch, near Corona, New Mexico, heard an explosion and saw the wreckage of some kind of flying craft. The rumor spread that five bodies were discovered that were not human, and that one was still alive and succeeded in communicating telepathically with the authorities.

Following these incidents, a large number of claims to UFO sightings or finding evidence of extraterrestrial visitation have been made, and scientific work has been carried out to determine their authenticity and explanation. J. Allen Hynek, director of the Center for UFO Studies (CUFOS) in Chicago, has defined four levels of claimed "close encounters" (CEs) with extraterrestrials. A "close encounter of the first kind" (CE1) is a simple claimed sighting of a UFO, without any interaction with the claimant or effect on the environment. A CE2 occurs when physical evidence is left, such as debris or burn marks on the ground, or where some ancillary effect occurs such as the cutting out of the observer's car ignition. In a CE3 extraterrestrials actually appear, not merely their spacecraft: the expression "close encounters of the third kind" is well-known on account of the film bearing that title, which concluded with space aliens emerging from their craft. The CE4 is a more recently claimed phenomenon: this occurs where humans allegedly board the alien spacecraft, either voluntarily or involuntarily, experiencing "alien abduction," at times undergoing allegedly traumatic experiences such as being subjected to surgery or some other form of alien experimentation.

The Raëlian Movement is one of a number of spiritual groups that emerged from an interest in UFOs. Older UFO religions include the Aetherius Society (possibly the first), established by George King (1919–1997), who claimed to have been

commissioned by the "spiritual hierarchy of Earth" in 1954 to be "the voice of Interplanetary Parliament." UFO religions exist worldwide and are documented in Germany, Finland, Taiwan, and Japan, as well as in the United States and Britain. The most notorious was Heaven's Gate, whose members committed collective suicide in 1997, probably in the belief that death would effect their transition to a waiting spaceship, which was allegedly visible behind the Hale-Bopp comet that appeared at that time. In Hynek's terms the Heaven's Gate claim was of the CE2 variety: the claimed sighting was thought to show up on instruments. Raël's claims are much stronger, belonging to the CE4 category.

At the time of this writing, the Raëlian Movement claims approximately 80,000 members worldwide, in 91 countries. Since Raël's original message was in French, it has tended to concentrate in the French-speaking parts of Canada, where there are probably about 10,000 supporters; its headquarters are in Quebec. Approximately one-third of its members are in Europe, and there are substantial numbers of followers in Japan and Korea (possibly a further 10,000 in each country). Membership in the United States is undeclared, but there are small groups in each state, the greatest support is in Boston, Chicago, Las Vegas, Los Angeles, and Miami.

Raëlians do not altogether welcome being described as followers of a UFO religion, claiming that they are not interested in UFOs as such, but more in the "philosophical dimension" of the phenomenon. One Raëlian Web author has written:

> The UFO dimension alone is totally boring. It is the philosophical, the religious dimension which interests us. What do Extraterrestrials change in the minds of human beings is the interesting question![1]

Certainly, it is the message of the extraterrestrials that is important to Raëlians, who are not at all concerned to go UFO spotting or to log up modern-day UFO sightings. Significantly, Raël is almost unique within the movement in claiming to have experienced the Elohim (the extraterrestrial contactees). The only UFO sightings by other followers were by his wife and a close follower named François, shortly before his second major encounter in 1975. Raël encourages his followers to communicate telepathically with the Elohim rather than to seek out extraterrestrial spacecraft.

Raëlians might also reasonably question the "U" in UFO, since, of course, their founder and leader Raël claims to have *identified* the flying objects and spoken to their crews. However, it is more helpful to classify Raëlianism as a UFO religion on the grounds that it is one of a cluster of religious groups that base their teachings on the wisdom of extraterrestrials, who travel in their spacecraft, making contact with human beings.

The Raëlians' ideas are explained in a number of key texts, principally *The Book Which Tells the Truth* (1974) and *Extra-Terrestrials Took Me To Their Planet* (1975). These two books were published together in English as a single volume, in Canada in 1978, under the title *Space Aliens Took Me To Their Planet,* and in 1986 the English paperback bore the title *The Message Given To Me By Extra-Terrestrials: They Took Me To Their Planet.* Today the two volumes are published, with slight alterations in the translation, as *The Final Message* (1998). Other writings of Raël are *Let's Welcome*

Our Fathers from Space (1987), later reissued as *Let's Welcome the Extra-terrestrials* (2003), containing questions and answers, together with "new revelations"; *Yes to Human Cloning!* (2001), which concerns genetic engineering; *Sensual Meditation* (2002), which addresses the areas of education and spiritual practice; *Geniocracy* (2004), a translation from the much earlier French *La Géniocratie* (1977), which deals with Raël's views on government and politics. *Intelligent Design* (2005) is a further reissue of *The Message Given To Me By Extra-Terrestrials: They Took Me To Their Planet* under a new title. In 2005 *The Maitreya* was published: this is a collection of past speeches.

RAËL'S INAUGURAL MEETING

The Raëlians' founder-leader Claude Vorilhon was born in France in 1946. Although he had the ambition of becoming a racing driver, Vorilhon never managed to secure the necessary sponsorship to acquire his own racing car, so he earned his living by establishing a small racing magazine. He also used his literary skills to write poetry and songs, and he had some degree of success as a singer. All this was to change, however, on December 13, 1973, when he was walking near the volcanoes in Clermont-Ferrand. There he claimed that he saw a flying saucer, out of which emerged a small bearded figure with almond-shaped eyes, who spoke to him in French. (This creature claimed to speak every Earth language, as well as to communicate telepathically.) He instructed Vorilhon to come back the following day with his Bible and a notebook. He should not speak to anyone about his encounter; else the extraterrestrial would never meet with him again.[2]

The following day Vorilhon received an extended lesson on biblical exegesis. The extraterrestrial's exposition spanned a wide range of biblical passages, although in contrast with Christian fundamentalism, the creators acknowledged that not all parts of the Bible are equally important and that layers of irrelevant material have been superimposed on the original message. The extraterrestrial explains:

> Only the parts of the Bible that I will translate are important. The others are only poetic-babblings [sic] of which I will not talk. You can surely appreciate that, thanks to the law which said that the Bible had always to be copied out without changing the smallest sign, the deeper meaning was kept intact throughout the millennia, even if the text was loaded with mystical and meaningless sentences.[3]

Raëlians better know Vorilhon as Raël, the name given to him by Yahweh, the leader of the Elohim. Raël means Light, the one who brings the Light, and ambassador and messenger of the Elohim. The word Elohim comes from the Bible. The first lesson Raël received from his teacher began with Genesis 1:1. Raël writes, "In the beginning Elohim created the heavens and the earth."[4] "Elohim," Raël appropriately points out, is a plural noun, and thus does not refer to the God of monotheism but to a plurality of extraterrestrial scientists who discovered the Earth 25,000 years previously and judged it to be suitable for the creation of artificial life. Elohim, it is explained, means "those who came from the sky." If one asks who created the

creators, the Raëlian answer is that there exists a yet higher level of beings who created them, and an even higher level of beings who brought into existence the higher-level beings—and so on *ad infinitum.* Raëlians see no problem in positing an infinite series of worlds and hierarchies of beings.

Raël then received a detailed description of how the ancient extraterrestrial scientists studied and developed the Earth. Since the research took considerable time, the biblical day refers to a zodiacal period of about 2,000 years. They placed artificial satellites around the Earth, which at that time was a mass of water and thick fog: this is the meaning of the spirit of the Elohim moving across the waters (Genesis 1:2).[5] They then ascertained whether the sun was emitting rays that could be harmful to potential life on Earth, but concluded that "the light was good."[6] The process of creation, which is then described in some detail, entails the creation of aquatic and animal life, finally culminating in the creation of human beings. The fact that there are several human races indicates that there were numerous teams of creators, or Elohim, the best of which were based in what is now Israel.[7] Raëlianism thus presents an account of the origins of life that is an alternative both to evolutionism and to strict creationism: species did not evolve by natural selection nor were they created by the God of theism. They were genetically engineered by the Elohim.

The Elohim wanted to ensure that the newly created humans did not turn out to be more intelligent than their creators, hence the prohibition on eating the fruit of the tree of knowledge, which meant that humans could read as much literature as they wanted with the exception of scientific writings. However, one group of scientists (referred to as "the serpent") had such a great love for their human creations that they defied the prohibition. As a result, humans embarked on scientific study, and "their eyes were opened." They realized that they too had the ability to become creators of life. The creators who wanted to give Adam and Eve this knowledge were exiled by the others, condemned to live out the rest of their existence on Earth. Adam and Eve were expelled from the Garden of Eden in case they should find the means of infinitely prolonging their lives. The cherubim who are said to have guarded the entrance to the forbidden Garden were "soldiers with atomic disintegration weapons" who stood guard in order to ensure that Adam and Eve did not come back to steal further scientific secrets.

The biblical stories that follow are accounts of subsequent interactions between the Elohim and humanity. These few samples will suffice to indicate the way in which Judeo-Christian scriptures are interpreted within the Raëlian Movement. From their point of view, Noah's ark was, in fact, a spacecraft, designed to preserve various creatures from radioactive fallout caused by the creators' decision to eliminate life on Earth. This decision followed sexual encounters between some of the creators and human beings, the consequence of which was the birth of children with unduly exceptional knowledge (Genesis 6:4). The Tower of Babel (Genesis 11:1–9) was a rocket built to enable humans to reach the creators' planet. Sodom and Gomorrah were destroyed by an atomic explosion; the burns incurred by Lot's wife (Genesis 19:23–26) were similar to those of Hiroshima victims, causing her to look like a pillar of salt. Elijah ascended to heaven in his spacecraft (2 Kings 2:11), and Ezekiel's

vision of the chariot surrounded by lightning flashes was a close encounter of the fourth kind (Ezekiel 1:4). Ezekiel's words allude to this (Ezekiel 3:12): "Then the spirit took me up … and took me away.… I heard behind me a voice of a great rushing."[8] The story of Uzzah (2 Samuel 6: 6–7), who meets an unfortunate death while trying to steady the Ark of the Covenant when oxen stumble, is given the explanation that Uzzah must have come into contact with live electrical parts that electrocuted him.

The Raëlian narrative continues in similar vein using the Christian New Testament. From their perspective, the claim that Jesus was conceived by the Holy Spirit means that there was a sexual relationship between Yahweh and Mary. The star that the Magi followed was, in fact, a spacecraft, which guided them to his birthplace. Jesus's baptism was an initiation in which the Elohim revealed Jesus's true identity to him "You are my beloved son"—and inaugurated his mission. The mission was to bring the kingdom of the creators to Earth: "Your will be done on earth as it is in heaven." This message was accompanied by what were presumed to be miracles, but which were really applications of the creators' advanced scientific techniques. For example, the creators directing a concentrated laser beam achieved the healing of the paralytic. The feeding of the crowds was accomplished by the use of highly advanced concentrated food products; Jesus appearing to walk on water was the result of an antigravitational beam, which the creators projected. According to Raël, "There are no miracles, but only differences in levels of civilization."[9]

All the apparent miracles were devices to attract the attention of Jesus's listeners: his main mission was to be a teacher, not a savior figure. Jesus's relationship to his Father is clear: "Our Father … is in heaven." Heaven is a physical planet situated at a distance of almost one light year from the Earth. Jesus's death does not achieve any salvific function, but it is necessary because the Elohim do not wish to impose themselves on humanity. For Jesus to have lived immortally on Earth would have been tantamount to an invasion: This is not the way of the Elohim, who wish to be received voluntarily by the Earth's inhabitants. Both Jesus's death and resurrection are real enough: Jesus was resuscitated by the creators (who can do this by their advanced technology), and he was taken back to their planet at the Ascension.

Incidents in Jesus's life are taken to corroborate this interpretation. At Jesus's transfiguration (Mark 9:2–13), the appearance of Moses and Elijah is explained by their emergence from a spacecraft, which emits powerful projections of light. The Elohim explain:

> This scene happens at night and the apostles are all frightened to see Jesus illuminated by the powerful projectors of the spacecraft, out of which Moses and Elijah stepped, still alive, thanks to the tree of life from which they had benefited. Immortality is a scientific reality, even if it does not correspond to humanity's idea of immortality.[10]

The Elohim make occasional surreptitious appearances on Earth. In the Acts of the Apostles, an angel comes to deliver Peter from prison, whereupon Peter finds that the prison doors are open and that he can escape without any hindrance. He is

so surprised that he thinks this is a vision (Acts 12:7–9). The explanation of this remarkable happening is as follows:

> Peter, primitive as he was, thought he was having a vision as his chains fell off. He did not know about the electronic laser welding-torch which was being used by one of the creators. When such amazing things happen, we think we are dreaming.[11]

Given the right conditions, the Elohim will return to Earth. Raëlians expect the Elohim to return to Earth in their spaceships in 2025. The arrival of Elohim is something to be welcomed. Here is the arena of opportunity, and the benefits they offer are twofold. First, they bring a new world order, which will be enjoyed by all. Second, they offer to humans the possibility of eternal life.

Having received these teachings, Raël was instructed to begin the institutionalization of his movement with the founding of MADECH. MADECH is an acronym for "Movement for l'acueil des Elohim créateurs de l'humanité" (Movement for the welcoming of the Elohim, creators of humanity). The name was changed, with the Elohim's approval, in 1975 to the International Raëlian Movement, which remains its current name. MADECH continued as a support organization, being effectively the congregation of Raëlian Guides. These Guides would be the first point of contact for interested enquirers, would practice the Elohim's teachings faithfully, and serve as guides for other practicing members. The Movement currently has bishops who preside over the Guides, and Raël is accorded the title "Guide of Guides."

RAËL'S SECOND ENCOUNTER

Raël's second book *Extraterrestrials Took Me to their Planet,* which forms the second half of *The Final Message,* relates Raël's second encounter with the Elohim. This, we are told, occurred on the night of October 7, 1975, when Raël witnessed the sky lighting up and a fireball appear behind bushes. On investigation, Raël encountered a spacecraft and the same Eloha he had met two years previously. ("Eloha" is assumed to be the singular of "Elohim.") The Eloha invited him inside, and this time he was amazingly transported to the planet on which the Elohim reside.

Yahweh, their leader, guides Raël around the planet, which contains just over 9,000 inhabitants, 700 of whom are Elohim, and who constitute the Council of Immortals. A further 8,400 are humans who live there. They are sufficiently advanced individuals who made a significant contribution to human progress while on Earth: scientists, social reformers, benefactors, and religious leaders. Raël claims to have been introduced to Moses, Elijah, Jesus, the Buddha, and Muhammad. The planet is a utopia, where flowers and fruits grow all year round, and in which there is no winter, since the inhabitants are scientifically advanced enough to be able to control the climate. Everyone enjoys a life of ease, with the unpleasant and menial tasks being assigned to robots. Each inhabitant typically possesses ten such robots, who, unlike humans and Elohim, do not grow, reproduce, or experience feelings. The robots can also function as exotic dancers, or be made according to one's own specifications, for the purpose of sex. Raël is shown a number of designs of females

from which to choose and is given a total of six female robots for his enjoyment. Women inhabitants may equally choose male robots or, presumably, robots of the same sex if they are gay.

During his visit Raël is commissioned to be the Elohim's ambassador on Earth, the final prophet to appear before the Elohim's judgment of the human race, the "Guide of Guides." Raël is given a set of laws and instructions to make preparations for the Elohim's imminent arrival on Earth. The Elohim are not planning to invade the Earth: this would be contrary to the freedom that they want to respect and encourage. They must be received voluntarily by the Earth's inhabitants, and hence an Embassy must be established to receive them. Israel has been chosen for this purpose, and Raëlians have written to the prime minister requesting permission to acquire land in or near Jerusalem. The redefinition of the calendar underlines the status accorded to Raël: he is the *Mashiach*—the Messiah—and the proposed embassy for the Elohim will be the new Third Temple. Raël states:

> We had asked that an Embassy be built to welcome us near Jerusalem, and the authorities of the stiff necked people have refused several times to give their authorization and grant the status of extra-territoriality necessary.[12]

In this context, mention should be made of the Raëlian symbol. It consists of two stars, one upright and pointing upwards, and a second inverted, pointing downwards, interlocking with it. Until it was redesigned, the middle area common to both stars was occupied by a swastika, being the ancient Aryan symbol of power. In his original encounter, Raël reports having seen this symbol on the creators' spacecraft. For obvious reasons the symbol has now been modified, and the swastika has been redesigned as a kind of swirl. The swastika symbol, Raëlians point out, has been popularly misunderstood, but of course the presence of the swastika on their central symbol would be unlikely to make the Israeli government more amenable to the building of their embassy.

Perhaps predictably, the Israeli government has been uncooperative with the Raëlians, who now accuse the Jews of repeating their mistakes of the past, by refusing to recognize their true creators and the arrival of the messiah. Other nations have been approached in their stead, and even if they receive permission from another government, Israel will again be given one final chance.

GOVERNMENT AND SOCIETY

Once the Embassy is built, a new era will commence, in which, at humanity's request, the Elohim will cooperate with humanity, offering their knowledge with a view to creating a scientifically created utopia. Raël disapproves of capitalism and communism alike. The former places undue emphasis on money, placing wealth in the hands of the few, at the expense of the majority of citizens. Communism is repressive, emphasizing equality at the expense of freedom. Raël believes in the importance of affording equality to citizens at birth, but thereafter their fortunes will

vary, and should be allowed to do so; what is important is that people should be rewarded for merit.

Democracy is not the way to achieve the desired societal goals. In a democratic system, Raël believes, the government responds to the whims of the majority of people, which may be undesirable. Raël does not approve of universal suffrage, or the current tendency to undertake opinion polls, which elicit the opinions of the unawakened, and follow the majority's wishes, whether or not they are desirable. The relationship between the government and the people should be conceived more like the relationship between one's head and one's body: the former is the seat of intelligence and decision making, which the latter implements.

Since this new society depends on scientific, technological, and intellectual advancement, it is important that it should be governed by the appropriate leaders. Previous governments have been dominated by the rich, the strong, and the brutal, and even democracy, although much extolled by human beings, is not capable of ensuring that the right leaders are in office. Raël regards democracy as "mediocracy," since it does not elect the most intelligent for leadership roles. Accordingly, Raëlianism advocates "geniocracy," government by the most intelligent members of society.

Raël sets out his political manifesto in his *Geniocracy: Government of the People, for the People by Geniuses* (2004). The current system of voting would be abolished. Instead, those whose intelligence is 10 percent above average or higher would be given the right to vote, and this sector of the population would elect leaders from the most intelligent 10 percent. Intelligence is not to be measured by academic qualifications, but by scientific tests devised collaboratively by psychologists, neurologists, and ethnologists. Such tests would not be IQ tests, but would measure intellectual potential (IP), which Raël equates with the ability to use acquired information to deal with situations facing the examinee. Because positions in government would be obtained strictly on merit, there would be no stipulations about having equal numbers of men and women, and proportional representation from different nations or regions. Any attempt to create a quota system would militate against the principle of geniocracy.

Raël envisages a world government, but recognizes the desirability of its various cultural and regional characteristics being retained. The world government would be heralded by specific countries and regions creating their own geniocratic governments. The geniocratic world government would, of course, determine its own policies, and hence Raël emphasizes that the ideas of his *Geniocracy* are no more than possibilities. At no point does he indicate that he himself would be a political leader in this new utopia.

The world government would have its own symbols of unity. Raël envisages a world language. He believes that previous attempts at creating a world language, such as Esperanto, rely too heavily on the Latin and Greek roots on which western languages depend. The emergent world language must be totally new, and Raël believes that linguistic experts could be commissioned to create a truly novel language, with the assistance of computers. Other ways of creating a world identity include the abolition of national anthems, which would be replaced by a world anthem, to be played

at public events to help establish a unified "planetary consciousness." A competition might be held to design a world flag, to be hoisted on official buildings, although Raël thinks that it should be used in addition to, rather than in place of, national and regional flags.

This unified society will be a just and humanitarian society, in which everyone is born equal with the same wealth, and rewarded according to merit. It will be a world of peace: Raël disapproves strongly of military force and the amount of money that is spent on military projects. This money could be used to promote scientific knowledge and education, with the obvious benefits of achieving the standards of living that the new geniocratic world order can offer. Raël views war and military force as incompatible with the principles of love, respect, and unity, and urges his followers to become conscientious objectors if conscripted to fight. Being a conscientious objector entails performing alternative societal duties during war time, and, unlike some dissenting groups such as Jehovah's Witnesses, Raël finds no problem in this regard. Raël has called for an end to military service throughout the world. Because the coming utopia will be based on love and respect, there will be no military service. Each citizen will be in harmony with everyone else, since everyone will be in harmony with the infinite, of which all are part. In the interim period preceding the establishment of the utopia, the military would assume the role of the police. However, eventually crime will have a scientific solution: the modification of the human brain will accomplish this.

The Elohim's utopia will look to science and technology to bring an end to menial work. Raël does not accept the view that work is inherently fulfilling, and does not endorse a "work ethic." Work should be fulfilling and creative, and in the utopia robots and other technological devices will perform all menial tasks. Science and technology will be used to promote the good of society, rather than to amass greater profits for the wealthy. Because the coming society will be an ideal one, where each individual strives for the good of the community, there will be no need for a monetary system: each citizen will be able to attain the comforts he or she desires, and surplus goods will be redistributed, thus abolishing the present disparities between rich and poor, and ensuring the elimination of world poverty and hunger.

Even with the Elohim's help, the coming utopia will require substantial scientific and technological advance, which will entail appropriate education for its citizens. Education should naturally include the sciences, but it should not train people to perform the menial skills that the robots will be well capable of performing. With robots and other technological devices undertaking all the unfulfilling tasks, humans can enjoy leisure, develop intellectually and personally, enjoy freedom, and promote universal fraternity and peace. Activities that are particularly encouraged are scientific research, meditation, music, painting, and enjoying leisure. Since commodities will not be bought and sold commercially, artists and musicians will be able to create works of art for purely aesthetic enjoyment, rather than with an eye to what is likely to be of commercial value.

Education should encourage a questioning attitude, so that children can become able to challenge embedded customs and traditions. Children should be encouraged

to be "open to infinity," seeing themselves as part of it, and respecting other people who are equally part of infinity. This entails tolerance and respect for other people's values and religions. To develop this, the world's major religions should be taught, but in chronological order, so as not to promote the worth of any single religion over the rest. Moral education should be part of the child's education, but should emphasize responsibility, rather than an attitude that encourages committing misdeeds, then making confession to and seeking absolution from a priest. It is one's overall character that will determine one's eternal destiny rather than the rites of any church.

Raël urges responsibility both to oneself and to the world. He urges a respect for the environment, and the coming world government will ensure that the earth's natural resources are conserved. Couples should be limited to a maximum of two children, in order to stabilize the population. Land should be arranged into industrial, rural, and residential areas, as a means of preserving the environment and conserving energy. One should respect one's body as well as the environment, and members are discouraged from smoking and taking recreational drugs. Alcohol is permissible in moderation, but should not be used to excess. There are no dietary prohibitions: Raël believes that meat eating is acceptable, but prefers to avoid foods, such as veal, that cause unnecessary animal suffering.

Medical science will rehabilitate social deviants. It is a world to be enjoyed. Gone are the pointless restrictions imposed by the Christian Church. "Everything is permitted" so long as it is compatible with an advanced society and is not harmful to anyone. Enjoying the pleasures of the senses is to be encouraged; marriage is seen as restrictive, and sexual relationships are to be encouraged freely. Abortion is totally permissible, as is nudity; one should not be ashamed of one's body, since this was the original condition of Adam and Eve in the paradise of Eden. On the creators' planet to which Raël was taken, scientists have created robots who simulate nude human dancers and who are freely available for entertainment or for sexual relationships.

Raëlians are renowned for their liberal attitudes to sexual morality. Raël believes that traditional Christianity, and Roman Catholicism in particular, have been repressive in this area. In November 1992 Raëlians distributed some 10,000 condoms outside a Roman Catholic school in Montreal, after the school authorities had decided against installing condom vending machines on school premises. The incident was named "Operation Condom." Sex, Raël claims, is certainly not to be reserved for the potential procreation of children, but exists to be enjoyed. Not only is contraception encouraged, but members of the Raëlian movement are encouraged to enjoy a variety of partners. Even after one is married, it is permissible to seek sexual relationships with partners other than one's spouse. Raël argues that, if someone feels the need for extramarital sex, this could result from a difference in the respective sex drives of husband and wife, and extramarital relationships can usefully accommodate this. As Raël has said, "Life is too long to share it only with one partner." Homosexual relationships are not merely tolerated but encouraged. If one has a preference for a same-sex partner, Raël sees this as a natural propensity, which should not be suppressed. The Raëlian movement therefore encourages gay, lesbian, bisexual, and transgendered people to acknowledge their sexuality, celebrate it, and practice it.

Raëlianism offers more than a paradisiacal life. As science advances, men and women will live longer. Life expectancy will soon rise to 130 years of age, eventually culminating in an expected life-span of 700 years. However, technological advance offers more than longevity; it is the key to eternal life. Some cells of the deceased should be left in the Embassy for the Elohim that Raëlians plan to build, and, if one's deeds merit it, the creators can use the deposit cells to clone an immortal replica of the deceased. The cells of the frontal bone between the eyes on one's forehead are particularly important for this purpose, but the scientific expertise of the creators makes it possible for them to create a replica from a single cell. Everyone's actions are monitored and recorded by computer, and after one's death the Grand Council of the Eternals meets to consider whether the deceased is to be chosen for recreation. Even if the Immortals do not select them for immortality, there is no terrifying fate that awaits them: death will simply be a sleep, which is not to be feared. Consistent with his teachings about the Church, funerals should not involve the Church, and humans are encouraged to donate their bodies to science.

SCIENCE, TECHNOLOGY, AND CLONING

Because the Elohim have such a technologically advanced society, Raëlianism is very much in favor of scientific education and technological advance. The Raëlians have proved to be controversial because of their views on genetic engineering; for example, Raël has expressed approval of genetically modified foods, pointing out that the existence of humanity is itself an experiment in genetics by the Elohim. Raël is particularly controversial for his ideas on human cloning. Not only is cloning the key to immortality, but it offers numerous other benefits in both its therapeutic and reproductive uses. After al Qaida's attack on the World Trade Center's twin towers on September 11, 2001, Raël suggested that cloning might be used to bring deceased offenders, such as suicide bombers, back to life in order to undergo trial.

In 1997 Raël attempted to set up the Valiant Venture Ltd. Corporation in the Bahamas, but the project was cancelled when the Bahamian government heeded press reports that experimentation on human embryos might be carried out in the Bahamas. In the same year, Raël entrusted the project Clonaid to Dr. Brigitte Boisselier, a Raëlian bishop who holds a doctorate in physical and biomolecular chemistry and was formerly a director of marketing at a French chemical company. Clonaid was originally set up in the United States, but because of legal problems relating to human cloning, it was moved to another (undisclosed) country, in which such experimentation is said to be legal.

Since cloning is the key to immortality, Insuraclone—a subdivision of Clonaid — enables clients to bank a sample of their DNA, from which a replica body will be made at some point in the future. Two restrictions apply: for obvious reasons, only one replica may be made for each person, and this must be done after one's death rather than before. Raël has explained that these are the rules that the Elohim themselves observe. Clonaid offers pragmatic rather than spiritual benefits: cloning can be used therapeutically, and the organization promotes therapeutic cloning as beneficial

for combating disease and for the creation of replacement organs. It is claimed to be particularly beneficial for overcoming Parkinson's and Alzheimer's diseases, as well as for diabetes, spinal cord damage, cancer, and autoimmune disorders such as multiple sclerosis and rheumatoid arthritis. Boisselier claims that therapeutic cloning, unlike organ transplantation, does not carry the risks of organ rejection.

More controversial is Clonaid's program of reproductive cloning. Boisselier now claims success in bringing human life into existence without sexual reproduction, and commends it not only to infertile couples, but also to homosexual partners who want to have children, to bereaved families, and to those who have genetically transmittable diseases or conditions, such as HIV. Boisselier claims to have given life through cloning to five human babies between December 26, 2002 and February 4, 2003. After critics challenged her to provide evidence of such a claim, Boisselier stated that the families' identities could not be divulged on account of client confidentiality. Clonaid affirms that they are developing normally and are no different from children born through natural means.

Also worthy of mention in connection with cloning is Ovulaid. This project enables women to buy and sell human eggs. Women or couples are encouraged to browse a catalogue showing pictures of the donors, so that they can choose the features of the child they would wish to bear. This service is carried out at an unspecified country where such a service is legal, and hence the Clonaid Web site invites women to "Come and return to your country pregnant with the child of your dreams!" Raël has stated that he sees no problem with "designer babies"; if technology can enable women or couples to have exactly the child they want, they should not be prevented from doing so.

THE KEYS

Movements that run counter to societal norms, especially when they advocate sexual permissiveness, are often construed as being libertarian and irresponsible. However, Raëlianism does not lack a moral basis. Raëlian ethics and spiritual practice are expressed in a number of principles known as "The Keys." There are 16 in all, and they are enumerated in *Intelligent Design* and *The Final Message.* They are as follows: (1) humanity; (2) birth; (3) education; (4) sensual education; (5) fulfillment; (6) society and government; (7) meditation and prayer; (8) the arts; (9) sensual meditation; (10) human justice; (11) science; (12) the human brain; (13) the Apocalypse; (14) telepathic communication; (15) the reward; and (16) the Guides.

(1) *Humanity.* Human beings should regard themselves on four levels. First, men and women should view themselves as being in harmony with the infinite. This involves viewing other people as being equally part of the infinite universe, and achieving harmony through love. Second, they should view themselves in relationship with the Elohim, who are their creators and who offer advice for living. Third, followers should view themselves on the level of human society. It is society that facilitates the development of individuals, but belonging to society can facilitate human development only if it does not impose laws that imprison and inhibit individuals.

It is therefore important continually to question and challenge traditions and habits that we have inherited. Fourth, human beings exist on the level of individuals, with their own traits, propensities, and desires; these exist to be fulfilled, enabling them to realize their full potential.

(2) *Birth.* Raël teaches that the children are individuals who should be encouraged to make their own decisions and thus to fulfill themselves when they are sufficiently mature to do so. Religion should not be imposed on them: hence, initiation rites such as baptism and circumcision should not be carried out at infancy, but should be practiced only when an individual reaches the age of responsibility and can freely decide to undergo such rites. The child is an individual, whose liberty should be respected.

(3) *Education.* Despite the apparently liberal nature of Raëlian ethics, Raël advocates the use of corporal punishment for young children. He sees such punishment as being necessary, since children are not yet fully capable of reasoning. Such punishment, however, should be used only for misdemeanors that show disrespect for others or that violate their freedom, and applied only to very young children; parents of children who have reached the age of seven should seldom find a need to resort to corporal punishment.

(4) *Sensual education.* This is an area of education that Raël believes has been unduly neglected. Sensual desires include all bodily appetites, including one's sexual urges. As has already been noted, Raël perceives Roman Catholicism as having instilled shame and repressiveness with regard to sexual relationships, typically teaching abstinence rather than the attainment of pleasure through bodily desires. Sexual education should not be confined to gaining knowledge of human and animal reproductive systems. Raël argues that it should be similar to the teaching of music, which inevitably includes theoretical understanding, but goes beyond it to instill appreciation and enjoyment of musical performances. Sex should be no different, he believes; one should also be taught how to enjoy sex, since satisfying one's sensual desires is part of being in harmony with the infinite. Sexual activity should not induce shame, as the Church has traditionally taught. On the contrary, since the Elohim have created human bodies, including one's reproductive organs, sex and nudity are to be positively encouraged.

(5) *Fulfillment.* This incorporates sexual fulfillment, but goes substantially beyond it. On sexual matters, men and women should feel free to enjoy sex, in whatever way they prefer. For example, Raël perceives no problem with group sex, provided it has full consent of all partners and does not cause harm. In matters of procreation, conception should not be left to chance. Abortion is preferable to allowing an unwanted child to come into the world and is quite permissible. It is important that children should be wanted, although this does not necessarily entail an upbringing in the traditional nuclear family; single parenting, for example, is quite acceptable. Raël tends to disapprove of traditional marriage; relationships should be based on love, rather than a marriage contract, and he does not view love as a contractual relationship. It is therefore better that a relationship should be loving rather than contractual.

The final stages of fulfillment come in old age and death, and Raël believes that the senior members of society should be well cared for and respected. However, respect should not stem for an elderly person's seniority, and the old should not be believed or obeyed simply because of their advanced years. When they die, death should not be a matter for sorrow, but for celebration, because many will have advanced to gaining a place in the Immortals' paradise, where they will experience eternal life.

(6) *Society and government.* This topic has already been dealt with above. Raël reiterates that society and government are compared with the human body and brain, and it is important that government should be intelligent—a geniocracy, rather than any other type of human political system. Geniocracy will apply the principles of humanitarianism, thus ensuring peace, leisure, abolition of poverty, and care for the environment.

(7) *Meditation and prayer.* Followers should meditate on the Elohim at least once a day, as well as before they dine. Once a week they should meet as a group to attempt to establish telepathic communication with the Elohim. Raëlians are strongly recommended to attend an annual convention of the Movement's members.

(8) *The arts.* Anything that appeals to the senses is to be encouraged; hence literature, music, painting, and sculpture are important. Raël believes that literature should convey important and new ideas and not merely consist of beautiful-sounding words. Audiovisual media are important because they address different sensory organs simultaneously, and Raël believes that they could even replace literature in due course, since literature appeals to only one single sense. In addition to these "officially recognized" arts, Raël suggests the inclusion of perfumery, gastronomy, and lovemaking.

(9) *Sensual meditation.* As has been noted, Raël has devoted one of his books entirely to this topic. Sensual meditation aims at achieving harmony with nature. In order to engage in sensual meditation one should find a quiet place and create an environment that stimulates all the senses. One should have pleasurable tactile sensations with a cushion or couch; the meditator should visually contemplate works of art or any objects that convey "love, infinity and sensuality";[13] one's nose should inhale the scent of perfumes; the mouth should enjoy agreeable food and drink; and one's ears should listen to pleasant music. If there is a friend to whom one feels attracted, he or she should be invited to share this experience and, if it is mutually agreeable, to share one's bodies in a sexual relationship.

(10) *Human justice.* In this section Raël outlines plans for dealing with criminals. All offenders, he believes, are sick, and it is expected that scientific advance will find cures. In the meantime they should be shown love. Although at times it may be necessary to use physical force to restrain violent criminals, Raël opposes capital punishment, believing that all offenders should be given an opportunity to make amends.

(11) *Science.* Science should become one's religion. The Elohim used scientific means to create humanity, and hence humanity should act like their creators. Science can solve all of humankind's problems, provided it is not used for military purposes or for the financial gain of researchers.

(12) *The human brain.* Raël believes that the human brain is not well understood in our present state of scientific knowledge. In particular, he advocates its use for "direct perception" (telepathic communication), which one should learn from a young age. Mediums are to be encouraged, and Raël believes their powers could be developed through meditation.

(13) *The Apocalypse.* As Raël points out, the word "apocalypse" means "revelation." The Elohim are about to reveal themselves as the true saviors of humanity. However, Raël warns against false prophets who are likely to appear at such a time. Such false prophets include religious traditionalists, as well as eastern gurus. The East is not a source of spiritual truth, Raël believes: being technologically less advanced than the West, it needs to rely on western science for its emancipation. One's spiritual journey should rather be conducted inside oneself.

(14) *Telepathic communication.* One's sensory organs are limited and cannot bring oneself into harmony with the infinitely large universe. Telepathic communication is therefore an important means of contact with the infinite. As previously mentioned, Raël teaches his followers to communicate telepathically with the Elohim, rather than to seek out UFOs. Raëlians are therefore encouraged to reflect on the Elohim's message of love and on one's wish to be with them as one of the chosen ones who will experience immortality.

(15) *The reward.* Immortality is the final reward that Raëlianism offers, through "scientific reincarnation." Such a reward is so great that followers should be eager to spread this message. It is not sufficient simply to lead a morally neutral life that does good to others on a small scale and does not harm them. The delights of the Eternals' planet fulfill all conceivable desires.

(16) *The Guides.* Because Raël is specially chosen by the Elohim and has had special privileged access to them, it is important that followers should follow the advice that the "Guide of Guides" transmits. Raël acknowledges that his teachings have previously gone unrecognized, but this observation serves to enhance Raël's status rather than diminish it. It is Raël who bears the message of eternal life to his followers, and not other religious leaders, especially those who work within the Roman Catholic Church.

RAËL AND THE WORLD'S RELIGIONS

Although much of Raël's philosophy is innovative, he relates his ideas to Christianity, Judaism, Buddhism, and, occasionally, Islam. In all four religions, Raël believes that we find human misconceptions and human laws grafted onto the original message.

Raël says little on Islam, but his attitude to the Qur'an tends to be negative: he contends that it preaches hatred, intolerance, and violence, and that it encourages racism and sexism. (He objects to its statements regarding the Jews.) Its more positive features, however, include its apocalyptic message, which he views both as a salutary warning against humanity's irresponsible ways of living, and as a prophecy of the new

era that is dawning, in which God's paradise will be enjoyed. He quotes with approval the sura that reads:

> Seated on couches wrought with gold and jewels,
> Reclining thereon facing each other,
> There will wait on them youths, who will not age,
> Carrying goblets and ewers and cups filled out of a flowing spring,
> No headache will they get therefrom,
> And carrying such fruits as they choose,
> And flesh of birds as they may desire,
> There will be fair maidens with wide,
> Lovely eyes,
> Like pearls, we preserved,
> As a reward for what they did.
>
> (*Qur'an* sura 56: 15–24; cited in Raël 1999, 217–218.)

RAËL AND CHRISTIANITY

Raël's main attack targets Christianity. As has already been shown, he regards the Bible as alluding to various extraterrestrial encounters, but believes that its message was distorted through time. He regards Christianity, particularly in its Roman Catholic form, as repressive, and regards himself as the new messiah, heralding a movement that will supercede the Christian religion. Claude Vorilhon's birth in 1946 is believed to be the new zodiacal Age of Aquarius, which supplants the Age of Pisces. (The Age of Pisces, symbolized by the Christian symbol of the fish, corresponds to the 2000 years of Christianity.) It was formerly taught that Raël was selected by the Elohim, being born of a Jewish father and Catholic mother. However, according to more recent teaching, his father is, in fact, Yahweh, who is also the father of Jesus. To signal the arrival of this new era, Raëlians have defined their own calendar, in which year 1 is 1946.

THE ROLE OF THE BIBLE

Although Raëlians do not use the Bible as their sole source of religious imagery or legitimation, its place in their discourse is unmistakable. Such heavy reliance on biblical exegesis needs explanation, particularly since the Raëlian Movement is so opposed to traditional Christianity. The fact that Raël makes Israel the focal point for the arrival of the Elohim, rather than his own country, or some other part of the globe, also requires explanation.

Raël clearly possessed a Bible before writing down the interpretation that appears in his various books, and he must have known it well enough either to understand an extraterrestrial's exegesis or to provide his own idiosyncratic interpretation. The role of the Bible may seem surprising, since Raël's religious background lies in Roman Catholicism, rather than in the Protestant tradition, which has typically laid much greater emphasis on the authority of scripture. Obviously, in the absence of firsthand

accounts of Raël's early life, it is impossible to be sure of his exact acquaintance with Christian scripture before 1973, and what follows is to some degree speculative.

It should be remembered that Raël's early years were set against the background of reforms within the Roman Catholic Church, which were largely the result of Pope John XXIII's Second Vatican Council, which met from 1962 to 1965. One obvious repercussion of the Council was the radical change in the Church's liturgy, which previously consisted of the Tridentine Mass, which was conducted entirely in Latin, including the readings from the Bible. The resultant change was that the Mass was to be in the vernacular, thus publicly opening up the words of the Bible. Catholics were encouraged to read the Bible in private devotion, although the Church's authority in matters of interpretation was still retained. It therefore seems likely that Raël was one of many Catholics who, having obtained a Bible, read it in some detail.

It is also worth noting that the Second Vatican Council almost coincided with a rather different attempt at interpreting scripture. Erich von Däniken's *Chariots of the Gods* was first published in 1969 and suggested that ancient scriptures contained allusions to spacecraft and to extraterrestrial encounters with the Earth, which had been singularly ignored in traditional biblical exegesis. Although biblical scholars unanimously regard von Däniken's theories as absurd, his writings proved to be internationally popular. Von Däniken's approach differs slightly from Raël's, since the former draws on ancient texts and archaeological discoveries from a variety of religious traditions, and not merely Christian ones, but the two world views have considerable common ground. Whether or not Raël knew von Däniken's writings is hard to determine; Raëlians deny that they influenced him, since any such acknowledgement would undermine the revelatory status of Raël's inaugural encounter with the extraterrestrial. One informant, however, while denying direct dependence, was happy to acknowledge that von Däniken "wrote some great books." Raël's employment of Christian scripture, coupled with the rejection of other human influence such as von Däniken, serves as a means of legitimating the Raëlian Movement. The use of scripture helps to ensure that Raëlianism is not dismissed as the mere creation of its founder-leader, but it can claim ancient roots, making reference to ancient happenings. Scripture legitimates Raël and his teachings: Raël thus becomes the sole custodian of doctrine and the unrivalled interpreter of biblical teachings. As has been noted, his two principal encounters with the Eloha are solitary, and he travels unaccompanied to the Elohim's planet. One principal reason why followers do not regard themselves as belonging to a UFO religion and claim that UFO sightings are "boring" is that any claimed encounters by the movement's membership could potentially conflict with and undermine Raël's authority as the unique mediator of the extraterrestrials' message.

Raël's role as an interpreter of scripture goes further than this. It is almost unnecessary to point out that his biblical exegesis is considerably at variance with that of the Catholic Church. His description of the Bible as "poetical babblings" is plainly provocative and deliberately distances him from Roman Catholicism. More than this, Raël's position as the interpreter of scripture is a plain challenge to the Church's authority. As the Catholic encyclical *Dei Verbum* states:

> The task of giving an authentic interpretation of the Word of God, whether in its written form or in the form of Tradition, has been entrusted to the living teaching office of the Church alone. Its authority in this matter is exercised in the name of Jesus Christ.[14]

Raëlianism therefore emerges as an overt form of anticlericalism. Not only does Raël present his interpretation of scripture in rivalry with the Roman Catholic Church, but his assertion that its core message relates to a race of extraterrestrial hedonists who champion sexual licentiousness could hardly be more insulting to traditional Roman Catholicism. Raël also states that his Raëlian calendar is devised to assault the Christian domination of the world's calendar, the pivotal point of which is the traditional presumed date of Jesus of Nazareth's birth.

The Raëlian Movement has staged various events and mounted campaigns to undermine the Roman Catholic Church's status and authority. For example, at the Gay and Lesbian Mardi Gras in Sydney, Australia, in March 2006, Raëlians organized a float led by "Pope Alice," a female supporter who attired herself in a bishop's miter and fuchsia-pink cope, flanked by two topless female Raëlians. Pope Alice exposed her breasts periodically, revealing a large artificial penis underneath. The float promoted Raël's message of "de-baptism": he objects to the Church's practice of baptizing infants at an age when they cannot possibly understand what is happening, and therefore urges people to renounce their baptism. Raël used the slogan, "Baptize unconsciously, apostatize consciously," recommending that this should be done by completing a form and sending it to the bishop who presides over the diocese in which the apostate was baptized. Although firmly opposed to the Roman Catholic Church, Raël makes it clear that he does not renounce Jesus, whom he regards as a prophet and a teacher, whose father was Yahweh, and who is now one of the immortals on the Elohim's planet.

JEWS, JUDAISM, AND ISRAEL

The role of Israel in Raëlian thought is noteworthy. Israel has the obvious significance of being the promised land of Yahweh's chosen people. Any religious movement that is Bible-based cannot fail to recognize the importance of Israel in Jewish and Christian thought. Although the Bible does not portray the original act of creation as taking place in Israel (Christian fundamentalists are more inclined to identify modern Iraq as the location of the Garden of Eden), subsequent encounters with the Elohim take place within Israel. Israel is frequently identified as the land from which the messiah will come, and, of course, it is the birthplace of Jesus of Nazareth. As a present-day messianic claimant, Raël naturally wishes to create a special role for Israel in connection with his movement. His action of giving the Israelis first refusal of enabling an embassy to be built within their territory is a recapitulation of the Bible's portrayal of salvation being offered first to the Jews, but subsequently to the Gentiles when the Jews largely rejected Jesus's messianic status. Raël's reference to the Israelis as the "stiff-necked people" is a clear allusion to the speech of the early Christian martyr Stephen, who uses this expression when addressing the

Sanhedrin, immediately before his stoning (Acts 7:51). Stephen was himself referring to Hebrew scripture (Deuteronomy 10:16), implying that the Jews he was addressing were not properly observing the Torah. By this logic, the Israeli government's refusal to grant the Raëlians permission to build their embassy becomes a recapitulation of the ancient Jews' refusal to recognize Jesus as their messiah. The Raëlians' failure, however, is precisely their success: a Jewish rejection serves only to underline, even enhance, Raël's presumed messianic status.

The Raëlian Movement's emphasis on Israel can be seen, therefore, to serve a number of purposes. At a practical level, their special regard for Israel provides them with a *prima facie* for claiming territory for their Embassy. More importantly, however, it is a logical extension of Raël's biblicism, and, above all, it helps to reinforce Raël's own status by placing his ultimate goal of receiving the Elohim within the context of biblical terrain, thus legitimating his messianic claims.

RAËL AND BUDDHISM

Although Raël's teachings are based on his interpretation of the Christian Bible, some comment is needed on Raël's references to Buddhism in his writings. When *The Maitreya* was published in 2005, his followers hailed it as a major development in his teaching. Although this publication makes it fairly clear that Raël regards himself as Maitreya—the coming Buddha of the future eon, as predicted by most Buddhists—this book is largely an anthology of old speeches and contains little reference to Buddhism. Such references as exist go no further than previous statements made by Raël about the Buddhist religion.

Raël's allusions to Buddhism are scant and give the impression of relying on hearsay rather than independent reading. For example, in *The Final Message* Raël portrays the Buddhist as believing that, on death, vigilance is needed to escape encounters with various devils, otherwise the soul will fall back into the cycle of reincarnation. Presumably he is alluding, somewhat inaccurately, to the Tibetan Book of the Dead. He recognizes that it teaches the existence of constant change, although he cites the example of not bathing twice in the same river, since the stream constantly moves on—an example that belongs to the ancient Greek philosopher Heracleitos rather than to any ancient Buddhist teacher. Despite such inaccuracies, Raël regards Buddhism as the religion that is closest to the truth. In particular, he is impressed by its apparently atheistic character, as well as its teachings on the control of aggression. Buddhism, he believes, teaches personal development, and the feeling of connectedness of everything in the universe—ideas that are eminently amenable to Raëlian philosophy.

Just as Raël has assumed the Jewish-Christian title of "messiah," Raël also claims himself to be Maitreya, whom he refers to as the "prophet" of Buddhism, and urges Buddhists to look at the signs that point to himself as the last of the line of prophets. Raël also, correctly, notes the swastika, at one time the Raëlian symbol, is prevalent in many Buddhist temples in the East. Raël teaches that the future of the world's religion will involve a rallying to Raël, and that Christianity and Buddhism will be the

most amenable to facilitating this. Raël boldly asserts that, "If Jesus or Buddha were here today, they would be Raëlian."[15]

THE RELIGIOUS STATUS OF RAËLIANISM

To the unsympathetic reader, Raël's writings may sound like science fiction. However, they are taken with the utmost seriousness by Raëlians, for whom the movement offers a means of giving meaning to life in an age dominated by science. Using biblical references, Raël offers scientific answers, which purport to be a major advance on the answers offered by the mainstream churches. Like several UFO religions, Raëlianism dispenses a "scientific" religion that reduces everything to physicalistic terms: the gods, however advanced, are no more than physical beings.[16] Ironically, this is legitimated by biblical references. Raël's encounters with the extraterrestrials assume the form of religious visions. Vorilhon's first encounter with one of the creators is a kind of inaugural vision, comparable to that of Isaiah in the Jerusalem Temple (Isaiah 6). However, like Isaiah, this inaugural vision is a commissioning: Raël is to proclaim the message of the extraterrestrials to the rest of the world. Raël offers a form of religion that dispenses with abstruse theology repackaged with biblical and scientific references. It is an unashamedly self-professed "atheistic religion" whose cosmology is entirely physicalistic. More than that, Raëlianism not only offers a religion, but a theory about the origin of all religions. From the Raëlian perspective, it all began from ancient extraterrestrial visitors who created life on Earth, and these visitors, the Elohim, will be returning soon.

Finally, it is appropriate to consider the extent to which the Raëlian Movement can be regarded as a religion. Raëlianism is accorded the legal status of a church in Canada, while elsewhere it claims to be an atheistic educational organization. Despite its physicalistic character, Raëlianism has many of the salient features of a religion: a world view, which features beings who are deemed superior to humanity (the Elohim); an attempt to give meaning to life and, particularly, to provide an account of what one might expect after death and how to achieve eternal life; savior figures (the Elohim, and Raël himself who is accorded the status of prophet and messiah); and an attempt to understand the sacred texts of Judaism and Christianity. The story of Raël's first encounter with the extraterrestrial in Clermont-Ferrand is comparable to inaugural visions that legitimate the status and mission of other prophets and founders: one might compare it, for example, with Isaiah's vision of the seraphim and subsequent commissioning in the Jerusalem Temple (Isaiah 6), or Joseph Smith's vision in the sacred grove at Palmyra, New York, which led to the establishment of the Church of Jesus Christ of Latter-day Saints (or Mormons). Raël's claimed experience is certainly more "high tech" than either of these, but it serves the same function. Although Raëlians do not have a formal set of scriptures, Raël's writings are authoritative and set out his followers' goals and expectations; and, as has been shown, Raël himself offers an interpretation of Judeo-Christianity's sacred body of scripture. The Movement offers its followers a way of living: as has been argued, it is not antinomian, but presents a definite set of moral principles for Raël's followers

to abide by. The Movement is organized as a religion, with rites and festivals, and religious "specialists" such as Guides and Bishops.

The fact that the Raëlian Movement is atheistic need not disqualify it from having religious status. Some Eastern religions do not refer to a superempirical creator God, for example, Buddhism and Jainism. The Raëlian view that only the empirical is real enables its followers to answer the kinds of questions that religions typically address, but without recourse to the metaphysical. Raël offers to his followers a discovery of life's meaning, but one that is compatible with a scientific empirical way of understanding the world. Finally, Raël presents not only a quasi-religious way of understanding the world, but also a theory of the origins of all other religions.

New and Alternative Nature Religions in America

Bron Taylor and Joseph Dylan Witt

On April 22, 1970, millions of Americans gathered in communities across the country to celebrate the nation's first Earth Day. Invented to raise national awareness of what organizers considered an intensifying environmental crisis, Earth Day was a watershed in the emergence of ecological awareness in the United States and beyond. Earth Day can also be considered an important moment in which nature religion gained new prominence, for on this day and in subsequent celebrations, large numbers of Americans and others around the world came together in a mass ritual both implicitly and explicitly expressing a perception that there was something sacred about the biosphere and that people have an ethical obligation to treat life on earth with reverent care.

The importance of Earth Day to the environmental movement is well known, but its relationship to nature religion is less often considered. Also less well known are the ways in which environmental awareness coevolved with a wide range of nature-related spirituality, the forms of which are diverse, continually evolving, and mutually influential. Also obscure to most are the ways in which this kind of dynamic new religious production in the United States draws on organicist, romantic, and esoteric forms of religion with deep roots in western history, and that one cannot fully understand these western streams without appreciating the important if not decisive influence upon them by their encounter with Asian religious cultures.

This sense of the sacred in nature, what Catherine Albanese called the "natural dimension" of religion, is so diverse in the United States that no single treatment can be comprehensive.[1] In what follows we hope to arouse the reader's curiosity about influences on nature religion as well as the diverse contemporary echoes of them in nature religions today. While our effort spotlights trends and phenomena in North America, many if not all of what is discussed here have kindred expressions elsewhere.

We begin by introducing some of the religious and philosophical streams that most directly affected nature religion, as well as environmental activism, before turning to specific examples, some of which may be surprising to consider as new or

alternative forms of nature religion, just as it may be surprising to consider Earth Day as an annual rite celebrating the sacredness of the Mother Earth, which promotes environmental action in defense of it, and has been growing into an expression of a global, civic, earth religion.

NATURE RELIGION IN RELIGIOUS STUDIES AND AMERICAN HISTORY

Beginning in the sixteenth century, the idea that religion can be explained only by reference to a divine creator who reveals himself to believers has been increasingly challenged in the West. A wide variety of theories regarding the origins of religion emerged, many of which took a decidedly naturalistic turn, explaining religion as the result of natural processes. Scholars increasingly assumed that explanations that worked best were naturalistic, not dependent on divine fiat.[2]

By the late nineteenth century theorizing about the origins of religion was most notably represented in E. B. Tylor's *Primitive Culture* (1871), F. Max Müller's *Natural Religion* (1888), Emile Durkheim's *Elementary Forms of Religious Life* (1912), James George Frazer's *The Golden Bough* (1922) and *The Worship of Nature* (1926), and Mircea Eliade's *Patterns in Comparative Religion* (1958). Many of these works analyzed so-called "primitive religions," which involved animism (viewing natural objects or places as imbued with spirits) or totemism (in which objects or entities have specific spiritual meaning for individuals or tribes) and were observable in indigenous and traditional communities. These scholars sought universal origins of religious belief in the myths and practices of ancient and indigenous peoples. Some of them, like Eliade and many of his intellectual progeny, assumed that there *was* something sacred in nature, for it seemed universal that some people apprehended the presence of the sacred within it, at least at special times and places. This kind of perception influenced many religion scholars, whose work subtly suggested just such a spirituality, which in turn helped to shape the religious perceptions and the nature-related spirituality of a variety of individuals and religious groups that followed.[3]

Although such an approach has been sharply criticized by scholars expounding Marxism, postmodernism, and postcolonial theory, who suggest that such perspectives camouflage the ways theories of religion serve the interests of powerful social sectors, it is nevertheless possible to analyze forms of religion that have affinities with those who perceive nature to be sacred in some way. A watershed in such scholarship can be found in Catherine Albanese's *Nature Religion in America: From the Algonkian Indians to the New Age* (1990) and *Reconsidering Nature Religion* (2002), which illustrate some of the diverse ways in which nature-focused religions in the United States draw on and manipulate nature, even while sometimes considering it to be explicitly sacred. In other words, nature is seen as sacred in itself, not only in some indirect sense by virtue of having been created by a divine being. For Albanese, nature religion is a system of orientations based in nature or natural themes, a trope for all religious phenomena in which nature is an important religious symbol or conceptual

resource, whether or not the individuals involved in it consider nature to be sacred.

Albanese argues that focusing on "nature religion" as she understands it has value because it reveals important beliefs and practices that are often ignored in American religious history but that have great power both for individuals and their societies. She cites numerous examples including the Transcendentalists, represented by Ralph Waldo Emerson (1803–1882) and Henry David Thoreau (1817–1862), the nineteenth-century popular fictional stories of Davy Crockett, the wilderness writings of John Muir (1838–1914), and several nineteenth- and twentieth-century natural health movements, to name just a few. In Albanese's understanding, each of these examples represents a specific orientation toward the natural world based on certain values, each helping to constitute American nature religion.

American nature religion, though, also involves more unpleasant features. Albanese argues that although it is commonly thought to promote social and ecological well-being, American nature religion often masks an impulse to dominate nature as well as other people. She says, "the impulse to dominate was, in fact, everywhere in nature religion."[4] Notions of harmony and the rural ideal, for Albanese, masked or intentionally supported the domination of Native American peoples. Deistic republican ideology from the eighteenth century, which she understood also as a form of nature religion, buttressed the pernicious ideology of "manifest destiny," the belief common to many nineteenth-century Americans that the United States had a mission to take over territory in the New World and spread its political and religious values.[5]

It is worth considering all of the phenomena that she examined as new or alternative forms of nature religion, at least if we consider as "new" religious production that which has unfolded since the arrival of people of European ancestry and consider valid Albanese's broad definition of nature religion.

While Albanese's work significantly influenced the study of nature religion, at the time she was publishing the first of her books about it, another scholarly approach, although not entirely new, began to gather momentum and influence. In 1990, a number of scholars proposed to the American Academy of Religion (AAR), the major professional organization in the United States for religion scholars, the formation of a "Religion and Ecology" focused subgroup that would present scholarly papers at annual meetings of the AAR. Sparked in part by a growing chorus of criticism by environmentalist scholars who held one or more religions responsible for environmental decline, the aim of the new group was in no small measure to explore and promote environmentally friendly aspects of the world's largest religious traditions.

The first meeting of the group represented a landmark in the emergence of a subfield of religious studies that became known, most commonly, as "Religion and Ecology." Soon, additional scholarly groups emerged that operated in concert with this approach. The Forum on Religion and Ecology, for example, led and shaped by then Bucknell University professors Mary Evelyn Tucker and John Grim, held a series of conferences at Harvard University that focused on the world's major religious traditions and ecological matters and was a watershed in gathering scholars to focus

on the obstacles to and resources within religious traditions for environmentally beneficent behaviors. These conferences were the seedbed of a landmark Harvard University Press book series entitled Religions of the World and Ecology, published between 1997 and 2003. Meanwhile, the Religion and Ecology group grew and diversified its interests and solidified its place as a legitimate branch of religious studies scholarship.[6]

These developments are mentioned to recognize the role that many of the scholars involved in these endeavors played in promoting various types of green or nature religion. They did so sometimes by working up greener (more nature-friendly) forms of existing religions. At other times they promoted greener values by helping to create fertile cultural soil in which newer forms of nature-revering religiosity can more easily spring forth. A good example of both trends is the Earth Charter, an international document of environmental and social rights and values.

The Canadian Maurice Strong (b. 1929) proposed the Earth Charter at the 1992 "World Summit on Environment and Development," sponsored by the United Nations, in Rio de Janeiro, Brazil. Many international communities and nongovernmental and religious organizations aided in the document's drafting until its presentation at the 2002 "World Summit on Sustainable Development" held in Johannesburg, South Africa. Prominent supporters of the Earth Charter included Mikhail Gorbachev (b. 1931), former leader of the Soviet Union, who once said, "I believe in the cosmos … nature is my god. To me, nature is sacred. Trees are my temples and forests are my cathedrals."[7] As president of Green Cross International, Gorbachev remains very active and influential in international environmental activist circles while Strong and others continue to seek support from nations and organizations for the tenets of the Earth Charter. In a way that was carefully crafted to not offend people from the world's largest religious traditions (especially those historically hostile to nature religions of any sort), The Earth Charter called for a renewed sense of reverence for the community of life on earth, as well as for greater equity in human cultures. The strategy underlying the effort was to kindle such reverence and to influence the leaders of international institutions including corporations, the United Nations, and its member states, so that they would consider it a sacred duty to promote environmentally sustainable and socially just societies.[8]

Calls for a greening of world religions have also been strongly made by modern philosophers and ethicists. In *The Idea of Wilderness* (1991), Max Oelschlaeger argued for the acceptance of the ecologically beneficent lifeways of "Paleolithic" peoples.[9] In this work, Oelschlaeger expressed his hope for a return to the ecological attitudes of prehistoric peoples. However, in a later work, *Caring for Creation* (1994), Oelschlaeger revealed significant versatility, assembling a case for the greening of Christianity.[10] Nevertheless, while he considers the development of "green Christianity" to be critical at this historic moment, he clearly sees it as more an interim ethic than an environmental antidote, subtly expressing his ultimate hope for a passage from "textual religiosity several thousand years old" to new religious forms inspired by Paleolithic spiritual sensibilities, that "connected rather than separated" people from the wider web of life.[11]

Another prominent philosopher, J. Baird Callicott, called for a greening of world religions as well. In *Earth's Insights: A Survey of Ecological Ethics from the Mediterranean Basin to the Australian Outback* (1994), Callicott identified resources for and obstacles to ecologically friendly behavior in cultures and religious traditions from around the world.[12] Yet he also argued that these traditions should be updated to cohere with evolutionary science, and ultimately expressed his desire to see "superstitious," otherworldly religions recede and a "religion of natural history," drawing on the spiritual aesthetics of figures like the American ecologist Aldo Leopold (1886–1948), to assume increasing influence.[13]

The scholarly study of the relationship between religion and nature has been an important component of religious studies, and often the line separating religious studies, philosophy, philosophies of nature, and the construction of new forms of nature religion is very blurry.[14] Given this assertion, let us now consider a few interesting points in the history of nature religion since Europeans arrived in North America.

In a now-classic work, *Wilderness in the American Mind* (1967), Roderick Nash traced the complex and ambivalent relationships of European Americans to the North American landscape and concluded that as wild places became scarcer they became increasingly valued and were considered sublime or sacred. He noted also that these trends were shaped by philosophical and artistic trends in Europe, especially the Romantic movements. In later editions of this work, he became increasingly forthcoming, expressing his own fidelity to wilderness and the value of considering it sacred, even while retaining his postmodern sensibility that such spirituality was historically contingent, constructed, and sometimes carried with it real dangers.[15]

By way of contrast, John Gatta published *Making Nature Sacred* in 2004, and contrary to Nash found evidence of deep spiritual reverence for nature among some of the earliest Euro-Americans, including Puritans such as William Bradford, Cotton Mather, and Anne Bradstreet.[16] Bradford and Mather believed that God spoke through two books, the Bible and the "book of nature." Therefore, according to Gatta, these figures believed God's laws and moral teachings could be learned through observation of the natural world. But while having differing perceptions about how much nature reverence there was among early American Puritans and others, like Nash, Gatta's own affinity for nature spirituality is woven into his scholarly work in various ways, and he also found it to be salutary and important as he thought about the possibility of constructing ecologically sustainable societies.

BIOCENTRIC NATURE RELIGION

These works by Nash and Gatta, which differ over how much spiritual connection to nature early Europeans may have had, nevertheless converge in their clear if subtle promotion of nature religion and provide an interesting framework for looking back at some of the major events in the evolution of what we might call biocentric nature religion. "Biocentric" means nature religion that considers nature to be sacred in

some way and all species of life to have intrinsic value, a right to be here, and worthy of reverent protection.

We have already alluded to Nash's contention that the earliest European pioneers viewed the wilderness as a place both to fear and overcome. The love of wilderness, in his reading, developed first with "the literary gentleman wielding a pen, not the pioneer with his axe" and drew on philosophical positions popular in Europe, such as Edmund Burke's theories of aesthetics and the sublime in his *Philosophical Enquiry Into the Sublime and Beautiful* (1757), and the Romantic Primitivist philosophy of Jean-Jacques Rousseau.[17]

Scholars have also noted that many Americans, including most prominently Thomas Jefferson, promoted what Albanese called "Republican nature," namely, the idea that the rural is ideal, that it has many moral, patriotic, and spiritual virtues, including a reverence for the American landscape.[18] Jefferson once wrote, for example, that "those who labor in the earth are the chosen people of God."[19] For colonialists such as Jefferson and Benjamin Franklin, the spiritual orientation of Deism fostered positive spiritual attitudes toward nature. Combining the "book of nature" theory with Enlightenment ideas of scientific rationalism, Deists believed that observation of the natural world revealed God's rational order of the universe.

Influenced by theories of the sublime, Romanticism, and Deism, as well as by Vedantic/Hindu and Buddhist beliefs, Transcendentalism emerged in the mid-1800s as another spiritual and philosophical system concerning nature. Transcendentalists such as Emerson and Thoreau promoted a philosophy in which the spiritual realm can tell us what we most need to know about life. Importantly, the natural environment served as a source for both material and spiritual knowledge. Thoreau famously tested this epistemological idea during his time spent at Walden Pond. In *Walden* (1854), Thoreau said of his retreat, "I went to the woods because I wished to live deliberately, to front only the essential facts of life, and see if I could not learn what it had to teach, and not, when I came to die, discover that I had not lived."[20]

While Emerson and Thoreau advocated deep respect for nature, Transcendentalism did not develop a fully biocentric nature religion. Emerson's thought emphasized the ideal over the material, to the detriment of placing a clear priority on the value of nature for its own sake. As Gatta said, "Emerson's Transcendental Idealism threatens to turn nature finally into another, albeit richly ennobling, form of 'Commodity' and human creation."[21]

Despite such ambivalences, the Transcendentalists played a central role in the early phases of the evolution of what Nash called the "wilderness cult"—the romantic desire to preserve American wildlands.[22] This cult, catapulted decisively forward through the work of a Scottish immigrant named John Muir, played a major role in a kind of generic, civic nature religion, which in turn went on to have great impact globally. This kind of nature religion involves the demarcating of national parks and other wildland reserves, both implicitly and explicitly, as "sacred places," to which nature religionists (tourists and outdoor enthusiasts) would naturally make pilgrimage.[23] Muir also became the most important patron saint of American biocentric,

nature religion, and his biography often blurs into hagiography in the typical recitation.

Born in Dunbar, Scotland, in 1838, Muir moved with his family to Wisconsin at 11 years of age. Through childhood, Muir worked on the family farm under a strictly authoritarian father and revealed talents for machinery. While studying the sciences at the University of Wisconsin, Muir came under the tutelage of geologist Ezra Carr and discovered the works of German naturalist Alexander von Humboldt, Emerson, and Thoreau. After an 1867 factory accident nearly took his eyesight, Muir decided to devote his life, in whatever way he could find, to his first love—the wild. He said of his accident and the resulting epiphany, "God has to nearly kill us sometimes to teach us lessons."[24] Intending to travel to Mexico, Muir walked from Indiana to Cedar Key, Florida (his famous 1,000-mile walk to the gulf). However, while waiting for a ship to south Texas, Muir became extremely ill with an undiagnosed fever, possibly malaria. After recovering in Florida, Muir went to California and soon found the Sierra Nevada Mountains and Yosemite Valley. Through the 1870s, Muir traveled throughout California and Alaska, conducting research and writing on his spiritual experiences gained in the wild.[25]

In some of his writings, Muir retained the language of his Christian upbringing. The world was a place of revelation, where one came closest to God. Writing of a mountain stream in "My First Summer in the Sierra," Muir said, "the place seemed holy, where one might hope to see God."[26] Of the Sierra Mountains in general, Muir said, "everything in it seems equally divine—one smooth, pure, wild glow of Heaven's love."[27] However, as he moved farther from his Wisconsin home, Muir moved away from the Christianity of his authoritarian father and developed more mystical, pantheist (or viewing the world as representative of a transcendent god), and even animistic spiritual expressions. After finding a rare orchid, Muir said, "I never before saw a plant so full of life; so perfectly spiritual. It seemed pure enough for the throne of the Creator. I felt as if I were in the presence of superior beings who loved me and beckoned me to come. I sat down beside them and wept for joy."[28] And Muir explicitly expressed a biocentric view of nature in his essay "Cedar Key," writing "the world, we are told, was made especially for man—a presumption not supported by all the facts."[29]

In "Wild Wool" Muir celebrated the quality and usefulness of wild sheep wool over domesticated varieties, concluding, "a little pure wildness is the one great present want, both of men and sheep."[30] Indeed, for him domesticated animals, including humans, were inferior, even desecrated beings, in comparison to their wilder cousins.

Muir also understood and celebrated the wild as a place of danger. He faced death several times in his travels, including once while climbing California's Mount Ritter and another time while crossing an Alaskan glacier. However, this danger only added to Muir's love of the wild and heightened his spiritual experiences there. Reflecting upon Alaska, Muir said, "I never have held death in contempt, though in the course of my explorations I have oftentimes felt that to meet one's fate on a noble mountain, or in the heart of a glacier, would be blessed as compared with death from disease, or

from some shabby lowland accident."[31] This sentiment would be repeated in the later works of others who became saint-like figures in American biocentric nature religion, such as Robinson Jeffers (1887–1962) and Edward Abbey (1927–1989).[32]

Muir remains best known as the founder of the Sierra Club, an organization devoted to the preservation of wild and ecologically valuable places. As a popular and widely read writer during his day, Muir held the attention of Americans across the country and promoted issues of preservation to persons who otherwise had no contact with remote western wilderness areas. In 1890, Muir successfully petitioned Congress for the formation of Yosemite National Park. Shortly thereafter, in 1892, Muir and a few others formed the Sierra Club to organize preservation efforts and promote the protection of the Sierra Nevada Mountains. Muir served as the club's president until his death. He remained an active public figure, meeting with government officials such as the nation's first Chief Forester, Gifford Pinchot. However, Muir broke with Pinchot following differences regarding land use. As a biocentric thinker, Muir argued that wild lands should remain untouched by humans. Pinchot, on the other hand, believed that natural areas should be preserved as stores of resources to be tapped when necessary. This marked the important distinction in American environmental history between biocentric nature religionists like Muir, who sought to preserve the wild in pristine and untouched states, and utilitarian conservationists, like Pinchot who believed natural resources should be protected for the benefit of humans, not because of their intrinsic or spiritual value.

While Muir articulated early biocentric appeals for the preservation of wilderness, the environmental movement received perhaps its first great biocentric philosophy, which should also be understood as a watershed in the development of nature religion in the United States, in Aldo Leopold's land ethic (the ethic that decisively influenced Callicott, whose scholarship was noted above).

Leopold worked as a forester with the United States Department of Forestry from the 1910s to his death in 1948. While doing so, he recorded his changing attitudes toward the earth in journals that became the basis for his now famous, posthumously published, *Sand County Almanac* (1949). In this work, Leopold revealed a spiritual orientation toward the natural world and articulated his idea of a biocentric ethic for human interactions with the land.

As a young forester, Leopold's journals reveal, he was ambivalent toward the natural world. He had a precocious sense of wonder about nature, but viewed nature in much the same way as many people of his day. However, while working with some fellow foresters in the southwest, Leopold experienced a conversion to biocentric spirituality. In a famous and moving passage from *A Sand County Almanac,* he recounted this experience. Resting with his forester comrades, he saw a mother wolf and her pups walking a short distance away,

> In those days we had never heard of passing up a chance to kill a wolf. In a second we were pumping lead into the pack, but with more excitement than accuracy: how to aim a steep downhill shot is always confusing. When our rifles where empty, the old wolf was down, and a pup was dragging a leg into impassable slide-rocks. We reached the old wolf in time to watch a fierce green fire dying in her eyes. I realized then, and have

> known ever since, that there was something new to me in those eyes—something known only to her and to the mountain. I was young then, and full of trigger-itch; I thought that because fewer wolves meant more deer, that no wolves would mean hunters' paradise. But after seeing the green fire die, I sensed that neither the wolf nor the mountain agreed with such a view.[33]

Witnessing the green fire die in the wolf's eyes forced Leopold to completely reevaluate his ideas regarding the natural world. This experience marked Leopold's turn to a biocentric world view.

In *A Sand County Almanac,* Leopold called for a radical revision of human attitudes toward the world and criticized Abrahamic religions for evincing so little sense of the sacredness in nature. Like Muir, Leopold emphasized the intrinsic value of nature and at the same time promoted it as a place necessary for healthy human personality formation. He even intimated that American freedom required wild places, saying "of what avail are forty freedoms without a blank spot on the map?"[34] In another example expressing a natural, spiritual epistemology, Leopold wrote, "there are two spiritual dangers in not owning a farm. One is the danger of supposing that breakfast comes from the grocery, and the other that heat comes from the furnace."[35]

His thought culminated in the final part of *A Sand County Almanac* entitled "The Upshot." Here, Leopold explained the spiritual and philosophical attitudes necessary to preserve wild places. For Leopold, this meant the land ethic, or as he formulated it, "a thing is right when it tends to preserve the integrity, stability, and beauty of the biotic community. It is wrong when it tends otherwise."[36] In other words, the preservation of ecological stability remained the goal of human actions. This biocentric view sharply contrasted with other more anthropocentric views which claimed that human needs trumped those of other species. While Leopold remained largely unknown during his own lifetime, *A Sand County Almanac* became a critical source for the twentieth-century environmental movement, influencing many later writers, theorists, and activists. And Curt Meine, his biographer, has uncovered through interviews with Leopold's family members strong evidence that if he had tried to label himself religiously, he would probably have called himself a pantheist, in other words, one who considered the earth (or universe) itself to be sacred, if not divine, in some way.[37]

Working roughly contemporaneously with Leopold, Rachel Carson (1907–1964) provided another major voice to the growing American environmental movement. Her importance to that movement is well known. Less well known is her own nature-embedded spirituality, which she kept relatively quiet in order to not give her enemies in the chemical industry and elsewhere more ammunition to attack her credibility.

Carson worked as a marine biologist at the Woods Hole oceanographic research institute in Massachusetts where she published several best-selling books on sea biology, including *Under the Sea Wind* (1949), *The Sea Around Us* (1951), and *The Edge of the Sea* (1955). In these early works, Carson expressed a spiritual devotion to the ocean, celebrating its cycles of death and rebirth. It was not until her publication of *Silent Spring* in 1962, however, that she solidified her place among the

most influential writers of the American conservation movement. How did this occur?

After World Wars I and II, the American government sought to redirect military and industrial power in ways that would not erode economic growth. This was done by diverting the wartime chemical and weapons industries toward civil ends, such as agriculture. Factories originally built to create poisonous gases shifted to the production of herbicides and pesticides. The creation of these new products corresponded with massive advertising campaigns that promoted the everyday usefulness of chemicals such as DDT, malathion, and parathion. Americans largely accepted these claims, and the chemical industry expanded dramatically. However, scientists soon noticed changes in biotic behaviors and reproduction. After years of careful research and observation, Carson concluded that such chemicals were causing massive species declines, especially of insects and birds.

She devoted herself to proving the harmful effects of agricultural chemicals, publishing *Silent Spring* in 1962, which articulated a stunning critique of the emerging chemical culture and called for the recognition of the intrinsic value of all species. The spirituality revealed in her early work and little known talks to women's groups, combined with her clearly stated biocentric ethics, makes it clear that she too is an iconic figure in American biocentric nature religion.[38] Though she died of cancer in 1964, Carson's work, like Leopold's, greatly affected the growth of the American environmental movement and later radical environmentalists. Its spiritual aspects will likely exert more influence, as they become better known, and as more Carson-focused scholarship is published.

Of course, philosophies and spiritualities promoting the intrinsic value of nature continued after Leopold and Carson. Only two years after the first Earth Day, the Norwegian philosopher Arne Naess (b. 1912) coined the term "deep ecology" at a conference in Bucharest, Romania. He followed with a 1973 article entitled "The Shallow and the Deep, Long-Range Ecology and Movements." Naess explained deep ecology as an understanding of the intrinsic value of nature, or the worth of nature beyond any use to humans. He defined this in opposition to the "shallow ecology" of some environmentalists who preserved nature for purely utilitarian ends. This somewhat resembled the earlier preservationist-conservationist debate between Muir and Pinchot. While deep ecology promoted biocentrism, Naess insisted that there was a plurality of possible paths to deep ecology. He called these individual paths "ecosophies" and defined his own as Ecosophy T, after his beloved mountain home in Norway. Ecosophies could also include insights from various religious traditions. In addition to nature itself, Naess found inspiration in the monistic pantheism of philosopher Baruch Spinoza as well as in Mahatma Gandhi's notion of self-realization. What is clear about deep ecology, as well as the movements and groups that are its social carriers, is that it involves a deeply spiritual biocentrism, which has become an influential form of biocentric nature religion, both in the United States and beyond.[39]

This is also clear when examining the various forms of ritualizing invented and spread by participants in the deep ecology movements. The most important such

ritualizing has been the Council of All Beings, created by Joanna Macy (b. 1929) and John Seed (b. 1946). Macy and Seed, both environmental activists and Buddhist practitioners, created the Council of All Beings in a series of workshops held in Seed's native Australia.[40] This ritual, which is very popular among environmentalists and some religious groups, requires each participant to identify as a natural being or entity, such as an animal, plant, river, or mountain. Through this identification, participants develop a more intense spiritual connection to natural processes and other forms of life.[41]

Many deep ecologists also subscribe to a green social philosophy known as bioregionalism, which received its most important early formulation in 1969 when the poet/essayist Gary Snyder (b. 1930) published *Turtle Island,* which became especially influential after he received a Pulitzer Prize for it. Bioregionalists believe that local products and small communities based around natural features such as watersheds instead of arbitrary political designations provide the best solutions for living on the earth.

Many bioregionalists are ardent environmental activists and hope that, by building the movement, they will generate more activism. In 1984, David Haenke organized the first North American Bioregional Congress (NABC) in Missouri. This Congress brought together local groups and individuals in order to spread and solidify key bioregional ideas, though with priorities still given to regional needs over any forced generalizations of bioregionalist principles. In subsequent years, the NABC added explicitly spiritual activities. In 1986, David Abram sponsored a petition to include representatives of other species at the meetings. This led to a process resembling the Council of All Beings ritual, where individuals took on the personae of these different species. Later Congresses also held rituals based on Native American and European pagan traditions.

As the bioregional theorist Michael Vincent McGinnis put it, "the goal of bioregionalism is to reimmerse the practices of human community (religion, art, theater, institutional building) within the bioregions that provide their material support."[42] While there is no officially endorsed form of nature spirituality in bioregional subcultures, the immersion McGinnis refers to generally includes spiritual experiences of connection to nature and yields biocentric values. These movements thus provide another good example of American biocentric nature religion.[43]

Themes of nature religion appear frequently throughout American history, from the Republican nature of some colonialists, to the biocentrism of Muir, Leopold, and Carson, to the spiritual orientations of deep ecology and bioregionalism. Rather than representing freestanding traditions, these themes interact with each other and with other spiritual orientations, from mainstream to countercultural, to produce the multiple expressions of nature religion found in the United States today.

We conclude by examining two additional examples of American nature religion that may have more in common than practitioners in either subculture might think. Moreover, looking at them may suggest some future directions regarding the future importance of nature religion.

NATURE RELIGION IN PAGAN, ENVIRONMENTAL, AND OUTDOOR RECREATION ENCLAVES

Deep ecology, bioregionalism, and other green spiritualities regularly fuse with aspects of Pagan, New Age, Native American, and other spiritual traditions among many environmental activists.[44]

While Pagan (sometimes also called Neopagan)[45] and New Age traditions frequently interact, there exist some basic differences among their features. As Sarah Pike notes, "Neopagan practices highlight the centrality of the relationship between humans and nature and reinvent religions of the past, while New Agers are more interested in transforming individual consciousness and shaping the future."[46] Rather than distinguishing between New Age and Paganism, Adrian Ivakhiv prefers to characterize both along a continuum of belief between "ascensionism," or the spiritual concern for the future and other worlds, and "ecospirituality," or the spiritual concern for this planet at this time.[47] While the New Age tends more toward ascensionism and Paganism toward ecospirituality, the lines are often blurred. However, these groups both have continuity with nineteenth-century new religious developments such as Theosophy and Spiritualism, and they both emphasize personal authority and ritual over belief and dogma.[48] Along with the "nineteenth century spiritual hothouse"[49] in which many alternative religions cross-fertilized and incubated, modern Pagan and New Age activism grew from countercultural developments of the 1960s. Theorist Colin Campbell called this the "cultic milieu," or a general countercultural stew favoring deviant and suppressed understandings. Such a milieu certainly provided a good habitat for the explosion of nature religions.[50]

When one looks at discourses among radical environmentalists and outdoor enthusiasts, one finds many echoes and expressions of nature religion, including those drawing on Paganism, New Age ideas, and Asian religions.

Speaking generally, radical environmentalism is an activist movement that, in addition to traditional political strategies such as lobbying and promoting candidates in elections, promotes and deploys illegal actions, both civil disobedience and sabotage, to pursue their ecological and political goals. The spiritual connections to nature most radical environmentalists feel have significant continuities with all of those we have mentioned who can be labeled biocentric nature religionists. The key difference is that their political and ecological analyses have led them to conclude, since their emergence in 1980 as a social force, that politics as usual is an insufficient response to the environmental intensifying of suffering that is accompanying an also intensifying environmental degradation.[51] For these activists, direct resistance is morally obligatory, and, with such a form of nature religion, they engender conflict with those who do not share their earth-revering world view.

Conflict can also emerge when practitioners of nature religion do not agree among themselves as to what constitutes properly reverent behavior regarding places they consider sacred. For example, while protesting the construction of a telescope on Mount Graham in 1993, a site sacred to many Western Apache, several Euro-American activists argued with Native American compatriots over the presence of

alcohol on the sacred mountain. Some of the environmentalists refused to agree to rules the Native Americans wanted that would ban alcohol on the sacred mountain. During one debate a Wiccan woman entreated, "I come from a Catholic and a pagan perspective. In both, drinking is sacramental But here, this is someone else's church. It's right for them, in their church, to ask us not to drink. Just as I would ask them not to use tobacco, their sacrament, in many of our pagan ceremonies."[52] But others refused to agree to such rules. This incident shows that while people may agree on the sacredness of a place, it does not mean they will agree on what constitutes reverential behavior there.

Another example where biocentric nature religionists share fundamental beliefs but cannot agree on how to put them into practice has to do with whether, and if so how, to draw on Native American themes, beliefs, and practices for their spirituality. Ceremonies like the Council of All Beings and those held at the North American Bioregional Congresses sometimes employ Native American themes and prayers. Sometimes activists adopt Native practices such as the sweat lodge or the vision quest, or construct medicine wheels, to enhance their own nature spiritualities. Some criticize harshly such borrowing, arguing that it represents a continuing cultural genocide against Native Peoples, misrepresenting and idealizing old ways while ignoring the problems faced by Native Peoples today. According to Philip Deloria, for example, this type of "playing Indian" originated with the Boston Tea Party and continues through literary conceptions of the "noble savage" such as in James Fennimore Cooper's *Leatherstocking Tales,* the development of Ernest Thompson Seton's Woodcraft Indians, and the Boy Scouts of America at the end of the nineteenth century, as well as more recently, in modern syncretistic Native traditions such as those practiced and promulgated by Sun Bear.[53] Others argue that non-Natives simply cannot practice Native American religions since, as non-Natives, the practice automatically becomes syncretic and different. Still others, however, hold that borrowing from different traditions is a common feature of religions around the world and should not be categorically condemned.[54] The key point to note here is that wherever people invest the land with sacred meanings there will be conflicts, and these often take a long time to work out amicably, if they ever are.

A different example of nature religion that also engenders conflicts over the land understood as sacred occurs when recreational rock climbers argue with American Indians, especially through lawsuits, over who should have privileged access to places both consider sacred. This occurred at Wyoming's Devil's Tower (Mato Tipi or Bear's Lodge in the nearby indigenous languages), a place of important ceremonial functions to several Plains tribes.[55] It might seem odd that rock climbers would justify their right to climb on sacred principles. But most examples of nature religion share a foundational assumption, that to know the spiritual value of nature, one must experience it directly. Some rock climbers, as well as subsets of the practitioners of many other outdoor pursuits, claim to experience nature as sacred and intrinsically valuable, and to have learned to set aside their ego and feeling of species superiority, through their outdoor practices, whether mountaineering, kayaking, surfing, fly fishing, canoeing, or something else.

Outdoor pursuits sometimes lead to or contribute not only to nature religion, but also to its radical environmental forms. For example, Naess, the founder of deep ecology, was an avid mountaineer who led the first ascent of Tirich Mir in the Hindu Kush. This activity shaped his perception of the interconnection and the intrinsic value of nature. Other deep ecology philosophers and participants in radical environmentalist moments, including Michael P. Cohen and George Sessions, were impacted similarly through their climbing experiences.[56] Reinhold Messner, one of the first to ascend Mount Everest without the aid of portable oxygen tanks, also reported emotional and spiritual feelings of connection with nature at the completion of his climb.[57] For mountaineers like Naess, Cohen, Sessions, and Messner, climbing can produce a spiritual feeling of unity with the universe. Muir himself had similar experiences after his near fatal ascent of California's Mount Ritter. And the religion scholar Greg Johnson has analyzed how rock climbers invent whole sacred languages and ritual practices in their sport.[58] So the practice of climbing a mountain can and has for some become a spiritual undertaking, one that both evokes a sense of the sacred in nature and also redounds in environmental concern and action.

Another outdoor sport, surfing, evokes a similar spirituality and ethics. Like mountaineering, surfing can generate feelings of oneness with the cosmos, the energies of the universe, and even special feelings of kinship with the many animals that surfers encounter. Some even report animistic experiences of interspecies communication with dolphins, pelicans, and other creatures, often as they sit outside on days when the surf is small or inconsistent and they have the opportunity to be alert to such awareness. Surfing also involves many ritual-like behaviors that, for some, help to evoke in them states of ego-transcending consciousness that leads them to care for and protect ocean habitats. Socially and environmentally concerned surfers have formed many organizations, some of which have chapters around the world that seek to raise ecological awareness, promote a sense of community among surfers, and, indeed, to awaken surfers to their own sense that the sport has a religious dimension that goes far beyond the fun "stoke" of the experience. Surfers who feel their practice has spiritual dimensions sometimes refer to themselves as "soul surfers," indicating that they see themselves involved in a religious quest and practice, not simply a sport.[59] Surfing, and perhaps mountaineering in some of its forms, might well be understood as new forms of biocentric nature religions, which really emerged and began to spread globally only in the twentieth century, and especially in the post World War II period.[60]

While certainly not new, hunting and fishing are increasingly understood by their practitioners as a source of nature-based spirituality.[61] Some who do understand these practices as religious draw on the work of scholars who have written about indigenous cultures and how such means of sustenance are often understood to be sacred practices.[62] Some contemporary hunters report experiences of feeling a part of a great cycle of life and death and describe feelings of connection with the prey. Gary Lease explains the spirituality of hunting as follows:

> an ethically determined hunt always bears the character of a "liturgy" or a "ritual." The marks of such a performance are to be found in the fact that the prey is always killed in a particular way and not according to whim; in the special constitution of a "sacrificial act," whereby the death has not occurred without purpose (in this way, for example, hunting is distinguished from the attempted extinction of a plague or nuisance animal); and in the perpetuation of honoring and remembering the prey and its death, which both imbue the being that has been killed with a further meaning that continues after its death.[63]

For Lease and other spiritual hunters, hunting is a means of connecting to larger biological processes, and it transpires in a sacred time, one with ethical and ritual strictures.

In a similar way, fishing is spiritual practice for some, and for a subset of these, it even can be understood as the central ritual of a biocentric nature religion. As Samuel Snyder has argued, "just as any religious person approaches his/her respective tradition, the devout fly fisher approaches fly fishing with the same discipline and respect. It is not unusual to hear people speaking of fly fishing in ways that invoke the religious dimensions of life, as they commonly deploy terms like religious or spiritual, the sacred or divine, ritual, pilgrimage, meditation, priests, community, or notions like the sanctuary of religious space, to describe the experience."[64]

A great deal of evidence exists that for some practitioners of mountaineering, surfing, kayaking, hunting, and fishing, the sport itself becomes a religious act.[65] They utilize religious terms such as "sacred," or may draw on concepts found in Asian religions, such as "karma," to describe the spiritual dimensions and lessons they derive from their practice. These practitioners often leave behind the theistic religious cultures into which they were born and develop more mystical understandings of unity with the natural world and its cycles, placing such perceptions at the center of what can probably best be called nature religion.

CONCLUSION

Environmentalism and a variety of outdoor activities, including many we have not discussed, such as gardening and ecological restoration practices, represent different but related forms of new or alternative religions.[66] They share a perception that the earth is sacred and all life is related, in some way, as kin. Like many new and alternative religions, environmental religion, including many of the mainstream and radical forms as well as diverse outdoor practices, emerge out of specific and complicated historical and cultural contexts. What we see over the past few decades are both new and stronger forms of not-so-new nature religions, which view the earth as sacred, and the protection of ecosystems as a moral duty.

And as has often been the case with nature religion and nature-related religion in American history and culture, scholars who analyze it are often also participants in it. As they both practice and reflect on the practice, they help their fellow practitioners, both scholars and outdoors enthusiasts, to understand these activities as nature religions. The resulting reciprocal feedback loop suggests that these activities

will increasingly be understood as nature religions, which will both compete in the religious marketplace for devotees and attract their fair share of attention in the future.

About the Editors and Contributors

EDITORS

Eugene V. Gallagher is the Rosemary Park Professor of Religious Studies at Connecticut College. He is the author of *Divine Man or Magician? Celsus and Origen on Jesus* (1980), *Expectation and Experience: Explaining Religious Conversion* (1990), *The New Religious Movements Experience in America* (2004), and, with James D. Tabor, *Why Waco? Cults and the Battle for Religious Freedom in America* (1995), as well as articles on ancient Mediterranean religions and contemporary new religious movements.

W. Michael Ashcraft is Associate Professor of Religion at Truman State University in Kirksville, Missouri. He is the author of *The Dawn of the New Cycle: Point Loma Theosophists and American Culture* (2002) and coeditor with Dereck Daschke of *New Religious Movements: A Documentary Reader* (2005). He is currently conducting research for a book on the history of the study of new religions.

CONTRIBUTORS

Yaakov Ariel is Professor of Religious Studies at the University of North Carolina at Chapel Hill. He is the author of a number of books and articles on Christian-Jewish relations in the modern era. His book, *Evangelizing the Chosen People: Missions to the Jews in America,* has won the American Society of Church History Outler prize.

Mary Farrell Bednarowski is Professor Emerita of Religious Studies at United Theological Seminary of the Twin Cities. She is the author of three books, among them *New Religions and the Theological Imagination in America* (1989), and has a long-standing interest in various forms of theological innovation in American religion especially as it is related to issues of gender.

Helen A. Berger is Professor of Sociology at West Chester University of Pennsylvania. She is the author of *A Community of Witches: Contemporary and Neo-Paganisms Witchcraft in the United States* (1999), coauthor of *Voices from the Pagan Census: A National Survey of Witches and Pagans in the United States* (2003), and editor of *Witchcraft and Magic: Contemporary North America* (2005). She is now completing a book on teenage witches on three continents with Douglas Ezzy.

David G. Bromley is Professor of Sociology and Religious Studies at Virginia Commonwealth University. His most recent books are *Teaching New Religious Movements* (Oxford, 2007), *Defining Religion: Critical Approaches to Drawing Boundaries Between Sacred and Secular* (Elsevier Science/JAI Press, 2003), *Cults, Religion and Violence* (Cambridge University Press, 2001), and *Toward Reflexive Ethnography: Participating, Observing, Narrating* (Oxford: Elsevier Science/JAI Press, 2001).

Susan Love Brown is Associate Professor of Anthropology at Florida Atlantic University and also teaches in the Public Intellectuals and the Women's Studies programs. She is the editor of *Intentional Community: An Anthropological Perspective* and has written a number of articles about Ananda Village, a California New Age community with branches in Oregon, Washington, and Italy.

James D. Chancellor is the W.O. Carver Professor of World Religions at The Southern Baptist Theological Seminary and Professor of Religion at The Philippine Baptist Theological Seminary. He is the author of *Life in the Family: An Oral History of the Children of God* published by Syracuse University Press and has written numerous journal articles and book chapters.

George D. Chryssides is Senior Lecturer in Religious Studies at the University of Wolverhampton, England. His publications include *The Advent of Sun Myung Moon* (London: Macmillan, 1991), *Exploring New Religions* (London: Cassell, 1999), and *Historical Dictionary of New Religious Movements* (Metuchen, NJ: Scarecrow Press), as well as contributions to various anthologies and journals.

Mary Ann Clark is a lecturer in the University of Houston system where she teaches courses in Religious Studies, Humanities, and Anthropology and is the coordinator of the Council of Societies for the Study of Religion. She is the author of *Where Men are Wives and Mothers Rule: Santería Ritual Practices and Their Gender Implication* (2005). She has also published numerous journal articles and book chapters.

Douglas E. Cowan is Assistant Professor of Religious Studies and Social Development Studies at Renison College/University of Waterloo. In addition to numerous scholarly articles and chapters, he is the author of *Cyberhenge: Modern Pagans on the Internet* (Routledge, 2005), *The Remnant Spirit: Conservative Reform in Mainline Protestantism* (Praeger 2003), and *Bearing False Witness? An Introduction to the Christian Countercult* (Praeger 2003).

Robert S. Cox is Head of Special Collections and Adjunct Professor of History at the University of Massachusetts Amherst. He is author of *Body and Soul: A*

Sympathetic History of American Spiritualism (Charlottesville: University of Virginia Press, 2003) and editor of *The Shortest and Most Convenient Route: Lewis and Clark in Context* (Philadelphia: APS, 2004).

Daniel Cozort is Professor and chair of the Department of Religion at Dickinson College, in Carlisle, Pennsylvania, where he teaches about the religions of India and Native America. He is the author of *Unique Tenets of the Middle Way Consequence School, Highest Yoga Tantra, Buddhist Philosophy, Sand Mandala of Vajrabhairava,* and *Imagination and Enlightenment* and a documentary film, *Mandala: Sacred Circle of Vajrabhairava,* as well as book chapters and articles.

Dereck Daschke is Associate Professor of Philosophy and Religion at Truman State University in Kirksville, Missouri. He is coeditor of *New Religious Movements: A Documentary Reader*(2005). He has published frequently on ancient Jewish apocalypticism and prophecy, including "Mourning the End of Time: Apocalypses as Texts of Cultural Loss" in *Millennialism from the Hebrew Bible to the Present* (2002) and "'Because Of My Grief I Have Spoken': The Psychology of Loss in 4 Ezra" in *Psychology and the Bible* (2004).

Dell deChant is an Instructor and the Associate Chair in the Department of Religious Studies at the University of South Florida. He is also on the faculty of the Honors College at USF. He is the author of *The Sacred Santa: The Religious Dimensions of Consumer Culture* (2002) and coauthor of *Comparative Religious Ethics: A Narrative Approach* (2001). He has also published numerous journal and encyclopedia articles and book chapters on New Religious Movements.

Brenda Denzler works full-time as a writer at the University of North Carolina at Chapel Hill and part-time as an independent scholar with an interest in marginal religious phenomena and movements. She is the author of *The Lure of the Edge: Scientific Passions, Religious Beliefs, and the Pursuit of UFOs* (2001). She is also the author of several presentations and papers on the UFO community.

Jacob S. Dorman currently holds the Mellon Postdoctoral Fellowship at Wesleyan University's Center for the Humanities. His book on black Israelites and the discourse of civilization during the Harlem Renaissance is forthcoming from Oxford University Press.

Cynthia Eller is Associate Professor of Women and Religion at Montclair State University. She is the author of *Am I a Woman? A Skeptic's Guide to Gender* (2003), *The Myth of Matriarchal Prehistory: Why an Invented Past Won't Give Women a Future* (2000), *Living in the Lap of the Goddess: The Feminist Spirituality Movement in America* (1995), and the interactive textbook *Revealing World Religions* (2005).

Robert Ellwood is Distinguished Emeritus Professor of Religion at the University of Southern California and is the author of several books, including *Religious and Spiritual Groups in Modern America* and *Alternative Altars.* He lives in Ojai, California, and has served as vice president of the Theosophical Society in America.

Ina Johanna Fandrich is an independent scholar living in New Orleans. She is the author of *The Mysterious Voodoo Queen, Marie Laveaux: A Study of Powerful Female Leadership in Nineteenth-Century New Orleans* (Routledge 2005).

Ron Geaves is Professor of Religious Studies in the Department of Theology and Religious Studies at University College Chester. His research interests focus around the transmigration of Indian traditions to the West. He has published two monographs and several journal articles in this area, including *Sufis of Britain (2000).* His most recent publications are *Islam and the West post 9/11* (2004) and *Aspects of Islam* (2005). He has just completed a monograph on Śaivite traditions in Diaspora to be published in 2006. He has known Prem Rawat since 1969 and has already published four journal articles concerning his activities.

Terryl L. Givens is Professor of Literature and Religion and holds the James A. Bostwick Chair of English at the University of Richmond. He is the author of the prize-winning *Viper on the Hearth: Mormons, Myths and the Construction of Heresy* (Oxford 1997), *By the Hand of Mormon: The American Scripture that Launched a New World Religion* (Oxford 2003), and *The Latter-day Saint Experience in America* (Greenwood 2004), in addition to articles and chapters on Romanticism, Literary Theory, and religious studies.

Adrian Harris has been a Practicing Pagan since 1990 and is currently conducting postgraduate research into Eco-Pagan ritual at the University of Winchester, UK. He has written several articles and book chapters, including "Sacred Ecology" in *Paganism Today* (Harper Collins, 1996) and "Dragon Environmental Network" in *The Encyclopaedia of Modern Witchcraft and Neo-Paganism* (Citadel Press, 2002).

Michael Homer is a practicing trial lawyer in Salt Lake City. He is a member of the Board of State History (appointed by Governor Michael Leavitt in 1997) and has been Chair since 2003. He has published four books, 13 chapters in books, and over 70 articles on historical and legal subjects. He is the recipient of the David Kirby Best Article Award from the Arthur Conan Doyle Society, the Lowell L. Bennion Editor's Award by *Dialogue, A Journal of Mormon Thought,* the T. Edgar Lyon Award of Excellence by the Mormon History Association, and The John Whitmer Historical Association Best Article Award. His most recent book, *On the Way to Somewhere Else: European Sojourners in the Mormon West,* was published by Arthur H. Clark Company in 2006.

Dawn L. Hutchinson is an instructor of religion at Christopher Newport University. She has authored entries in the *Encyclopedia of Religion, Communication, and Media, The Handbook for the Study of Religion, Encyclopedia of Religious Freedom,* and *The 21st Century Encyclopedia of the World's Religions.*

Jeffrey Kaplan is Associate Professor of Religion and the Director of the University of Wisconsin Oshkosh Institute for the Study of Religion, Violence and Memory. He serves as book review editor and serves on the Editorial Boards of the journals *Terrorism and Political Violence* and *Nova Religio.* He is the author or editor of 11 books on

religious violence and millenarian terrorism: *Millennial Violence: Past, Present and Future* (2002), *The Cultic Milieu* (2002), *Encyclopedia of White Power: A Sourcebook on the Radical Racist Right* (2000), *Beyond The Mainstream: The Emergence Of Religious Pluralism In Finland, Estonia And Russia* (2000), *The Emergence of an Euro-American Radical Right* (coauthored with Leonard Weinberg) (1998), and *Radical Religion in America: Millenarian Movements From the Far Right to the Children of Noah* (1997). His latest book, *Religious Resurgence and Political Violence,* will be published in 2006. In addition, he has authored numerous articles, encyclopedia entries, and book reviews that have appeared in a multidisciplinary range of peer reviewed academic journals.

Philip Lamy is Professor of Sociology and Anthropology at Castleton College in Castleton, Vermont. He is the author of *Millennium Rage: Survivalists, White Supremacists, and the Doomsday Prophecy* (1996). His articles and commentary on New Religious Movements and countercultures have appeared in professional journals, edited volumes, and the mass media, including *Time Magazine, The London Times, Wired Magazine,* National Public Radio, and the BBC.

David Christopher Lane is a Professor of Philosophy at Mount San Antonio College and a Lecturer in Religious Studies at California State University, Long Beach. He is the author of *The Radhasoami Tradition* (1992), *Exposing Cults* (1992), *The Making of a Spiritual Movement* (1983), and *The Unknowing Sage* (1993). He has also produced several films, including *Moving Water, Digital Baba,* and *Truth Lies.* On a more personal note, Lane won the world bodysurfing championship in 1999 and the International Bodysurfing Championships in 1997, 1998, 2000, and 2004.

Scott Lowe is professor and chair of the Department of Philosophy and Religious Studies at the University of Wisconsin–Eau Claire. He is the author of *Mo Tzu's Religious Blueprint for a Chinese Utopia* and *Da: The Strange Case of Franklin Jones* (with David Christopher Lane) as well as numerous articles and book chapters on Chinese religions and alternative religions in the West.

David W. Machacek is associate director of Humanity in Action, a New York–based not-for-profit organization that sponsors international educational programs on minority issues and human rights, and Visiting Assistant Professor of Public Policy at Trinity College in Hartford, Connecticut. He is coauthor of *Soka Gakkai in America: Accommodation and Conversion* and coeditor of *Global Citizens: The Soka Gakkai Buddhist Movement in the World.* His articles have appeared in *Nova Religio, Sociology of Religion, Research in the Social Scientific Study of Religion, Journal of Oriental Studies,* and *Journal of Church and State.*

J. Gordon Melton is the Director of the Institute for the Study of American Religion and is a research specialist with the Department of Religious Studies at the University of California–Santa Barbara. He is the author of a number of books on American religion including the *Encyclopedia of American Religions* (7th ed., 2003), *The*

Encyclopedic Handbook of the Cults in America (1992), and *Finding Enlightenment: Ramtha's School of Ancient Wisdom* (1998).

Michael L. Mickler is Professor of Church History and Vice President of Unification Theological Seminary. He is the author of *40 Years in America: An Intimate History of the Unification Movement in America, 1959–1999* (2000), *A History of the Unification Church in America, 1959–74* (1993), and *The Unification Church in America: A Bibliography and Research Guide* (1987), as well as articles and reviews on the Unification Church and other movements.

Timothy Miller is Professor of Religious Studies at the University of Kansas. He is the author of *Following In His Steps: A Biography of Charles M. Sheldon* (Tennessee, 1987), *American Communes, 1860–1960: A Bibliography* (Garland, 1990), *The Hippies and American Values* (Tennessee, 1991), *The Quest for Utopia in Twentieth-Century America* (Syracuse, 1998), *The 60s Communes: Hippies and Beyond* (Syracuse, 1999), and editor of *When Prophets Die: The Postcharismatic Fate of New Religious Movements* (State University of New York Press, 1991) and *America's Alternative Religions* (State University of New York Press, 1995), as well as articles in many journals and in the popular press.

Rebecca Moore is Associate Professor of Religious Studies at San Diego State University. She is the author of *Voices of Christianity: A Global Introduction* (2005), and coeditor of *Peoples Temple and Black Religion in America* (2004). She is Co-General Editor of *Nova Religio: The Journal of Alternative and Emergent Religions.* She has also published several journal articles and book chapters on the subject of Peoples Temple and Jonestown.

Douglas Morgan is professor of history at Columbia Union College in Takoma Park, Maryland. He is author of *Adventism and the American Republic: The Public Involvement of a Major Apocalyptic Movement* (2001).

M. Macha NightMare is an author, ritualist, and all-round Pagan webweaver. She presents at colleges, universities, and seminaries and teaches about death and dying and Neopagan public ritual at Cherry Hill Seminary, the first and only seminary serving the Neopagan community. (www.machanightmare.com.)

Kathleen Malone O'Connor is an Assistant Professor of Religious Studies at the University of South Florida where she specializes in Islamic studies. She has published in *Folklore: An Encyclopedia of Beliefs, Customs, Tales, Music, and Art, Journal of the American Academy of Religion,* and the *Encyclopedia of the Qur'an.* She has contributed chapters to *Black Zion: African American Religious Encounters with Judaism, Anthropology and Theology: Gods, Icons, and God-talk,* and *Studies in Middle Eastern Health.*

James T. Richardson is Director of the Grant Sawyer Center for Justice Studies and director of the Judicial Studies graduate degree program for trial judges at the University of Nevada, Reno. His latest book is *Regulating Religion: Case Studies from*

Around the Globe (Kluwer, 2004). He has published over 200 articles and chapters, as well as ten books, mostly about various aspects of New Religious Movements.

Robin Rinehart is Associate Professor of Religious Studies at Lafayette College, where she also directs the Asian Studies program. She is the author of *One Lifetime, Many Lives: The Experience of Modern Hindu Hagiography* (Oxford 1999), editor of *Contemporary Hinduism: Ritual, Culture, and Practice* (ABC-CLIO 2004), and has also published journal articles and encyclopedia entries.

E. Burke Rochford Jr. is Professor of Sociology and Religion at Middlebury College in Vermont. He is author of *Hare Krishna in America* and the forthcoming *Hare Krishna Transformed* to be published in 2007 by New York University Press. He has also published numerous articles and book chapters on the Hare Krishna movement and new religions.

Rosamond C. Rodman is an Assistant Professor of Religious Studies at Macalester College, in St. Paul, Minnesota. She works on intersections of Bible and American culture.

Nora L. Rubel is Visiting Assistant Professor of Religious Studies at Connecticut College. Trained in American religious history, she has published articles on African American religion and contemporary Judaism.

John K. Simmons, Professor of Religious Studies and chairperson of the Department of Philosophy & Religious Studies at Western Illinois University, is the creator of the popular "Beliefs and Believers" teleclass. He publishes regularly in the area of women-led, New Religious Movements in late nineteenth and early twentieth century American history, including the coauthored book, *Competing Visions of Paradise: The California Experience of 19th Century American Sectarianism.* Recent articles include "Eschatological Vacillation in the Mary Baker Eddy's Presentation of Christian Science" in *Nova Religio* and "Vanishing Boundaries: When Teaching About Religion Becomes Spiritual Guidance in the Classroom" in *Teaching Theology and Religion.*

Robert H. Stockman is an instructor for the Department of Religious Studies at DePaul University, Chicago, Illinois, and Director of the Institute for Baha'i Studies in Evanston, Illinois. He is the author of *The Baha'i Faith in America: Origins, 1892–1900, Vol. 1, The Baha'i Faith in America: Early Expansion, 1900–1912, Vol. 2,* and *Thornton Chase: The First American Baha'i.* He has also published 25 articles on Baha'i topics.

Bron Taylor is Samuel S. Hill Ethics Professor at the University of Florida, where he teaches in the interdisciplinary graduate program in religion and nature. He has written widely about religious environmental movements and nature religions. His books include *Ecological Resistance Movements: The Global Emergence of Radical and Popular Environmentalism* (SUNY 1995) and the *Encyclopedia of Religion and Nature*

(Continuum 2005), and he is the editor of the *Journal for the Study of Religion, Nature, and Culture.*

Suzanne Thurman is an independent scholar and former history professor who now manages intellectual property portfolios for IPWatch. She has published extensively on the Shakers. Her book, *"O Sisters Ain't You Happy?": Gender, Family, and Community Among the Harvard and Shirley Shakers, 1781–1918,* won a *Choice* Outstanding Academic Book Award in 2002.

Arthur Versluis is Professor of American Studies at Michigan State University. He is editor of the journal *Esoterica* and author of numerous books, including *Restoring Paradise* (State University of New York Press 2004) and *The New Inquisitions: Heretic-hunting and the Origins of Modern Totalitarianism* (Oxford University Press 2006).

David L. Weddle is Professor of Religion and chair of the Department at Colorado College. He is the author of *The Law As Gospel: Revival and Reform in the Theology of Charles G. Finney* (1985). He has published journal articles on Jonathan Edwards, Christian Science, and Jehovah's Witnesses, as well as review essays on law and religion. His entries on Jehovah's Witnesses appear in *The Encyclopedia of Protestantism* and the *Encyclopedia of Religion.*

Dagmar Wernitznig is an Associate Fellow with the Rothermere American Institute, University of Oxford. She is the author of *Going Native or Going Naive?: White Shamanism and the Neo-Noble Savage* (University Press of America 2003).

Catherine Wessinger is professor of the history of religions at Loyola University New Orleans. She is Co-General Editor of *Nova Religio: The Journal of Alternative and Emergent Religions.* She is the author of *Annie Besant and Progressive Messianism* (1988), and *How the Millennium Comes Violently: From Jonestown to Heaven's Gate* (2000), as well as articles on New Religious Movements. She has edited *Women's Leadership and Marginal Religions: Explorations Outside the Mainstream* (1993), *Religious Institutions and Women's Leadership: New Roles Inside the Mainstream* (1996), and *Millennialism, Persecution, and Violence: Historical Cases* (2000). Her current projects include collecting oral histories relating to the Branch Davidian case and editing the *Oxford Handbook on Millennialism.*

Melissa M. Wilcox is Assistant Professor of Religion and Director of Gender Studies at Whitman College. Author of *Coming Out in Christianity: Religion, Identity, and Community* and coeditor (with David W. Machacek) of *Sexuality and the World's Religions,* she is currently working on a book entitled *Spirituality and Sex in the City: Queer Religiosities in Practice and Theory.*

Jane Williams-Hogan is the Carpenter Chair Professor of Church History at Bryn Athyn College where she also teaches sociology. She is the author of *Swedenborg e le Chiese Swedenborgiane* (2004). She has also published journal articles, encyclopedia articles, and book chapters.

Jeff Wilson is a doctoral candidate in Religious Studies at the University of North Carolina at Chapel Hill. A specialist on Buddhism in America, he is the author of *The Buddhist Guide to New York* (2000) and numerous articles and book chapters on the subject. Wilson is a Contributing Editor to *Tricycle: The Buddhist Review.*

Joseph Dylan Witt is a Ph.D. student in the Religion and Nature Graduate Program at the University of Florida. He has contributed to the journal *Worldviews* and serves as the Managing Editor for the *Journal for the Study of Religion, Nature and Culture.*
