About the Editors and Contributors 325

Acknowledgments

This project is the result of a collaborative effort. We the coeditors are grateful to the contributors of this series for sharing their expertise with the general public through these outstanding scholarly essays. They did so for the sake of bringing to a wide reading audience the best information and interpretations now available about a wide range of new religious movements. We are especially grateful to Catherine Wessinger and David Bromley for helping us identify authors and for many other suggestions that have improved this set of volumes.

We the coeditors thank all of these scholars who gave so much to make this set possible. Many of them wrote their essays amid personal hardship and busy professional lives.

We also thank Suzanne Staszak-Silva, our editor at Greenwood, for her advice and guidance as this set went from one stage of development to another.

We are also grateful to our colleagues, at our respective teaching institutions as well as among the wider scholarly community, who offered us personal support and encouragement, much free advice, and many good wishes and kind thoughts.

Finally, we thank our families: our wives, Jennifer Gallagher and Carrol Davenport, and our daughters, Maggie Gallagher and Brittany and Kathleen Ashcraft. We lovingly dedicate this set to those daughters, our hope for the future, whom we love very much.

Introduction

Although new or alternative religious movements, or New Religious Movements (NRMs), have always been part of the American religious landscape, they have not always received broad public attention. Most often, their formation, attraction of members, and growth or decline have occurred beyond the harsh glare of prolonged public scrutiny. In some striking cases, however, a new or alternative religious movement has dominated the news for a period of time, usually because the movement itself, or some of its members, became involved in something that was widely perceived to be illegal, immoral, or simply destructive. For example, in the wake of the 1963 assassination of President John F. Kennedy, Minister Malcolm X of the Nation of Islam became notorious for his comment that Kennedy's murder meant "the chickens had come home to roost." In the 1970s saffron-robed members of the International Society for Krishna Consciousness, also known as Hare Krishna, became so well known for seeking donations and engaging strangers in conversations in public that they were easily lampooned in the comic film "Airplane." In the 1980s, the Rev. Sun Myung Moon, leader of the Unification Church (or Moonies), was found guilty of tax evasion by diverting church funds for his personal use. More recently, in 1993, the U.S. Bureau of Alcohol, Tobacco, and Firearms staged a raid on the home and church of a small group of Bible students outside of Waco, Texas. In addition to the ten lives lost in the botched raid, the 51 day standoff between the students of David Koresh, a group widely known as the Branch Davidians, and agents of the federal government, particularly the Federal Bureau of Investigation, culminated in the loss of 78 lives in a fire that consumed the Mount Carmel Center where the Branch Davidians lived. In 1997 followers of Marshall Applewhite, forming a group called Heaven's Gate, joined him in committing suicide so that they could all progress to what they viewed as "the evolutionary level above human." The list of such incidents could easily be multiplied.

In the late twentieth century as new and alternative religious movements continued to receive public attention for elements of their practice or belief that were highly controversial, a dominant image of such groups began to solidify. That image was

fostered by the activism of groups of former members, their families, some professionals in social work and psychology, and various other volunteers. When the opposition to new or alternative religious groups originated with more or less secular individuals, those opponents were generally called anticultists. When opposition originated with Evangelical Protestant Christians, those opponents were usually called countercultists. The tireless work of such activists, anticultist or countercultist, quickly produced a standard understanding of new and alternative religions that united a wide variety of groups under the umbrella category of "cults." In the perceptions of their anticult opponents, cults posed serious threats to vulnerable individuals and, ultimately, to the stability of American society itself. Anticultists and countercultists believed that cults had three prominent characteristics. First, they were led by unscrupulous, manipulative, and insincere individuals who sought only to increase their own power, wealth, and/or sexual enjoyment. Second, cults preyed upon unsuspecting, confused, and vulnerable individuals, often using sophisticated and virtually irresistible tactics of influence. Third, participation in a cult would surely bring harm to individual participants and might also lead them to commit any number of antisocial actions that threatened the public good. The stereotype of the "destructive cult" was aggressively marketed by the loose coalition of anticultists, particularly when disturbing news about any new or alternative religious movement became public. Thus, on the one hand, while a variety of events created a broad interest in learning about individual religious groups, their practices and beliefs, organizational structure, leadership, and many other topics, on the other hand, the predominance of the cult stereotype inevitably skewed the information available, attributed the perceived faults of any one group to all of them, and created expectations that any group labeled a cult must necessarily be worthy of suspicion, scorn, and vigorous opposition. Despite their prodigious efforts at educating the general public, the various anticult and countercult activists have, in fact, promoted much more misunderstanding than accurate understanding of the religious lives of some of their fellow citizens. Consequently, they have helped to create a very hostile environment for anyone whose religious practices do not fit within a so-called "mainstream." The personal and social costs of such religious bigotry may actually be higher than what the activists fear from cults themselves.

This set of volumes on "New and Alternative Religions in America" intends to rectify that situation for the general reader. It aims to present accurate, comprehensive, authoritative, and accessible accounts of various new and alternative religious movements that have been and are active in American society, as well as a set of essays that orient the reader to significant contexts for understanding new and alternative religions and important issues involved in studying them. The presentations are predicated on a simple but fundamental assumption. It is that accurate description and understanding must precede any judgment about the truth, validity, morality, or trustworthiness of any religious group or person. Accurate description demands that the group be presented in terms that it could itself recognize and acknowledge as being at least close to the way it understands itself. Providing an accurate description of the history, organization, practices, and beliefs of a particular group does not, in

any way, constitute an endorsement of that group, but it does provide an indispensable baseline for any further discussion. Such a baseline has often been lost in the public discussions of new and alternative religious movements, because their most bizarre, threatening, or even humorous aspects have been exaggerated. What is missing from such caricatured presentations is a sense of how any person could find such apparently ludicrous, lethal, or laughable groups worth joining. Simple dismissal of new or alternative religions as absurd, erroneous, or pernicious misses the social influence that they can have and demonstrably have had. Whatever an outsider's perception of new and alternative religions might be, many clear-thinking and well-intentioned individuals, throughout American history, have associated themselves with such groups. This set is founded on the idea that members' or participants' reasons for their decisions and their accounts of their experiences form the primary data for understanding new and alternative religions. Both hostile and approving accounts of new or alternative religions from outsiders provide a different sort of data, which reveals the social location and often-controversial careers of new and alternative religions. But neither approval nor criticism by external observers should take precedence over the self-understanding of each group as articulated by its members in establishing a baseline of descriptive accuracy.

Readers of this set of volumes will thus encounter both information and analytical frameworks that will help them arrive at an informed and appropriately complicated understanding of new and alternative religious movements in American history and society. Volume 1 provides a set of analytical perspectives on new and alternative religions, including the history of such movements in the United States, the controversies in which they have often become embroiled, the roles of leaders within the groups and the processes by which individuals become members and also leave their groups, the legal and global contexts in which new and alternative religions function, and a variety of prominent themes in the study of new religions, including roles of gender, children, and violence.

The four volumes that follow generally present accounts of individual groups, many of them well known but some much less so. Each chapter presents information about the origin and subsequent development of the group in question, its internal organization including the predominant type of leadership, its most important practices and beliefs, and controversies that have put the group in the limelight. Volume 2 focuses on groups that have developed out of the broad biblical tradition—Judaism and Christianity—and have achieved such a distinctive status as to be considered, at least by some observers, as independent religious groups rather than simple sectarian variations of more mainstream Jewish or Christian traditions. Volume 2 accordingly raises most acutely the problems of definition that are involved in using the admittedly malleable categories of "new" and "alternative" religions.

The description of a religious movement as *new* or *alternative* only begs further questions. Novelty can be in the eye of the beholder, or in the mind of someone claiming to be innovative. That is, religious movements are judged to be new, alternative, or anything else only in particular contexts and by certain audiences. They may claim, for example, to retrieve and correctly interpret or represent past beliefs

and practices, which have been neglected or forgotten. But their opponents might view the same claims as dangerous and deviant inventions. New religions themselves often manifest a pronounced ambivalence about their own novelty. A fundamental dynamic in new and alternative religions is that they strive to present themselves as both new and old, as unprecedented and familiar. The novelty of new religions cuts both ways; it can just as easily excite the interest of potential adherents as it can strain their credulity. As they spread their messages to those whose interest, approval, and even acceptance they hope to secure, NRMs proclaim both their challenging novelty and their comforting familiarity.

In their sectarian forms, these movements attempt to recapture the lost purity of an idealized past. Sects typically have prior ties to larger religious organizations from which they have intentionally broken off. They aim to return to the pristine origins of the tradition and reestablish its foundations. Sectarian forms of Christianity frequently exhort their partisans to get "back to the Bible"; contemporary Islamic sects similarly yearn for the purity of the times of the prophet Muhammad. Even the Church of Satan, founded by Anton Szandor LaVey in 1966, has spawned sectarian groups that accuse the original Church of Satan of having abandoned its initial commitments and emphases. Sects thus define themselves both in relation to the broader world and in relation to their specific tradition, both of which are perceived to threaten their purity of belief and practice.

In their typology of responses to secularization, Rodney Stark and William Sims Bainbridge contrast cults to sects. Rejecting the polemical definition of cults spawned by their cultural opponents, they define cults as independent religious traditions. Cults may be imports from another culture or independent products of the society in which they develop. Like sects, cults often find themselves in tension or conflict with broader society, simply by virtue of being new and different. Because they, too, want to locate themselves in relation to an authoritative past, cults also lay some claim to previous tradition. What separates cults from sects in their relation to previous traditions is that cults typically do not have a history of institutional conflict and eventual separation. Cults are marked from their beginnings as new entities. Both sects and cults, then, simultaneously declare their novelty and sink their roots in the past. In order to avoid confusion about the term "cult," which has such negative connotations in contemporary American society, this set will keep to the designations of new and alternative religions, which are widely employed by many scholars even though they are somewhat imprecise. The choice of which groups to include in Volume 2, as with the other volumes, is a judgment call. The guiding principle was not only to provide a representative sample of new and alternative religious groups throughout American history, but also to present the groups in sufficient detail to enable the reader to form a complex understanding of them.

Volume 3 investigates groups in the occult or metaphysical tradition, including nineteenth century Spiritualism, the Theosophical Society begun by Helena Petrovna Blavatsky and Colonel Henry Steel Olcott in the late nineteenth century, and the contemporary New Age movement. Like the groups discussed in the second volume, those in Volume 3 are part of a broad tradition that has deep roots in

antiquity. For example, in *The Secret Doctrine* Madame Blavatsky included the ancient Vedic sages of India, the Buddha, and a collection of ancient Greek philosophers among the ancient teachers whose wisdom about the nature of human beings and the nature of god was being given its fullest expression in Blavatsky's modern Theosophical system.

The religious movements discussed in Volume 3 typically present a different organizational profile from those in Volume 2. The groups in Volume 2 have made substantial efforts to maintain boundaries between themselves and their surrounding social environment, demanding exclusive allegiance of their members; vesting authority over practice, doctrine, and group life in charismatic leaders; and offering new and improved interpretations of familiar texts already acknowledged to have broad cultural legitimacy. In contrast, the movements in Volume 3 center on individual teachers who attract shifting groups of students with varying degrees of commitment for varying lengths of time, leave the ability to determine the authority or validity of any pronouncements in the hands of individual seekers, and claim to bring to light extraordinary wisdom from previously unknown or underappreciated sources.

Many of the religions that have appeared to be innovative developments in American religious life have actually been transplanted from other cultures where they have often enjoyed long histories. The openness of the United States to immigrants has always been an important factor in promoting American religious diversity. The 1965 repeal of the 1924 *Asian Exclusion Act,* for example, permitted a variety of Eastern religious teachers to extend their religious activities to the United States. Late in his life, for example, Swami A.C. Bhaktivedanta Prabhupada, the founder of the International Society for Krishna Consciousness, made the United States the focus of his efforts to awaken love for Krishna in as many people as possible. Military personnel returning from service abroad, often with spouses from countries where they had been stationed, also helped to introduce new religious practices and movements to the United States. This was the case, for example, with the form of Japanese Nichiren Buddhism known as Soka Gakkai. Even where it is difficult to provide independent corroboration of claimed international ties, they can nonetheless be claimed. A dramatic example here was the assertion that the elusive figure at the origins of the Nation of Islam, W.D. Fard, arrived in Detroit, Michigan, in 1930 from Mecca in Saudi Arabia. The movements in Volume 4 show clearly that religious innovation in the United States always needs to be considered in a broader, global context. That is no less true of the groups discussed in other volumes as well. For example, Ann Lee's small band of Shakers began in Manchester, England; David Koresh gathered Bible students from Australia, England, and other foreign countries as well as the United States. Theosophy's Madame Blavatsky was a Russian émigré. Finally, the Church of Scientology, like many other new religions that have begun in the United States, conducts a vigorous international missionary program.

The frequent movement of individuals, practices, and ideas across national borders could make a focus on new and alternative religions solely in the United States vulnerable to a myopia that could distort the nature and significance of those movements. That caution holds equally for homegrown and imported religions. Few

religions in the contemporary world, no matter what their age or relation to a mainstream, are confined within a single set of national boundaries. Nonetheless, the focus of this set remains on a selection of religions that have had, for one reason or another, a significant impact on religious and social life in the United States. Prominent in that selection is a group of religions that have been independently founded in the United States. For example, although the contemporary revival of Paganism can be traced to the career of Gerald Gardner in England beginning in the 1930s, many influential Pagan thinkers and teachers, such as Z Budapest, Starhawk, and Isaac Bonewits have flourished in the United States. Similarly, the Church of Satan and its subsequent offshoots owe their inspiration to Anton Szandor LaVey, who produced *The Satanic Bible* and other fundamental texts in San Francisco, California, in the 1960s. Also, beginning in the 1950s the prodigious literary output of L. Ron Hubbard gave rise first to the therapeutic system known as Dianetics and then, as his purview broadened, to the Church of Scientology. Other founders of NRMs in the United States, like Marshall Applewhite of the Heaven's Gate group, attracted far fewer adherents than the Church of Scientology but nonetheless carved out a place for themselves in American religious history through their dramatic, and sometimes tragic, actions. Volume 5 thus focuses on both new developments in international movements within the United States, such as the rise of Neo-Paganism, and the conscious construction of new religions, such as the Church of Scientology, by American teachers and organizations.

As this overview suggests, the definition of what counts as a new or alternative religion is frequently open to argument. Many groups that appear dramatically novel to external observers would claim that they are simply being faithful to ancient traditions. Joseph Smith, for example, claimed that the Church of Jesus Christ of Latter-day Saints, or Mormons, was a restoration of primitive Christianity. Groups that claim to be innovative often express their messages in the form of fresh interpretations of ancient texts, as with Swami Prabhupada's effort to present the ancient Indian classic, the Bhagavad-Gita, "as it is"; or Rael's contention that the mentions of "Elohim" in the biblical book of Genesis actually refer to extraterrestrial beings who came to earth in space ships. Because of the subjective nature of the categories —new to whom? alternative to what?—it will always be difficult to delimit precisely which groups definitely do, and do not, "count" as new or alternative. Moreover, in popular discourse, where the category cult is frequently used but appears devoid of anything other than emotional content, and in interreligious arguments, where cult easily expands to include "virtually anyone who is not us," attempts at substantive definitions give way entirely to polemics. Discussion of new and alternative religions in the United States thus always refers to a shifting and vigorously contested terrain where categories like "alternative religion" or "cult" and implicit comparisons like those implied by "new religious movement" are used to establish, reinforce, and defend certain kinds of individual and group identities, even as they threaten, compromise, or erode other kinds of individual or group identities.

No mapping of such terrain can hope to be definitive. Too much is in flux. Those who enter the terrain need trustworthy and experienced guides. The essays in these

five volumes provide just such guidance. Experienced, authoritative, and plainspoken, the authors of these essays provide both perspectives on some of the most prominent general features of the landscape and full descriptions of many, but by no means all, of the specific areas within it. Those who want to explore the terrain of new and alternative religions in the United States will find in this set multiple points of entry. They may want to focus on a specific local part of the larger area, such as the Theosophical tradition, the Branch Davidians, or Heaven's Gate. On the other hand, they may want to investigate the characteristic dynamics of the broader field, such as the processes of conversion into and defection from groups or the interactions between new and alternative religions and their cultural opponents. There is much to explore—much more than can even be covered in these five volumes. But this set aims to equip the would-be explorer with enough tools and knowledge to make the exploration rewarding and worthwhile.

New Religious Movements in American History

Timothy Miller

"Nothing is new under the sun," said the ancient preacher, and so it is with religious movements. As long as there has been religion, which is as long as the human race has been around, there have been new and unconventional religions, or New Religious Movements (NRMs). The first Americans, the indigenous peoples who arrived thousands of years ago, developed an enormously diverse array of religions, and those who have come later have only added to the land's vast mosaic of beliefs and
practices.

NRMS IN COLONIAL AMERICA

Many of the early post-Columbian American immigrants—Spanish, French, Dutch, English—were religious dissenters. Every schoolchild knows, or should know, that the Puritans of New England came here because they wanted to put into practice the unconventional religious outlook that had landed them in hot water at home in England. Once they got to America, their ideas dominated their new colonies, the most prominent of which was the Massachusetts Bay Colony. They were quickly confronted by new dissenters who disputed the dominant Puritan establishment—notably Roger Williams, who believed in religious freedom and in fair treatment of American Indians, and Anne Hutchinson, who dared to challenge prevailing orthodoxy and claimed direct revelations from God. Both were banished from Puritan Massachusetts.

Dissenters soon came from abroad as well. In 1648, just a few years after the settlement of New England, George Fox began to proclaim his belief that one could have a direct and personal relationship with God, unmediated by any clerical or civil authority. Fox spoke of an inner light, a direct communication of the divine with the individual human heart. Beliefs like that do not mesh well with highly organized religious hierarchies and theologies, and Fox's new movement, the Society of Friends (or Quakers), in their early days a fairly vocal and even rowdy bunch, quickly

encountered opposition. But soon there were organized Quaker groups in England, and in 1656 the first of their missionaries landed in Massachusetts Bay Colony. The authorities acted quickly and deported the first two Quakers, Mary Fisher and Ann Austin, but eight more Quakers arrived two days later, and, although they were quickly deported, in the meantime they made a convert.

Fighting the menace on their doorstep, the Massachusetts Bay Colony leaders made Quakerism a capital crime in 1658, and, before that ghastly law was repealed, four Quakers died for their convictions. Welcome to the world of religious dissent.[1]

Things were not so bad in every time and place. Roger Williams, expelled from Massachusetts, went on to found Rhode Island and declared it a safe haven for all—even Quakers and, most unusual for that time period, also the Jews. Williams was appalled by Quaker teachings, incidentally; until his last days he argued against Quaker doctrines. But he never denied the Friends the right to practice their religion freely.

In 1681 William Penn, a Quaker convert, opened his new colony, Pennsylvania, to all believers. Soon Pennsylvania, even more than Rhode Island, sheltered many unconventional religious groups. Early on, in 1694, a group of Rosicrucian/Christian mystics established a monastic church in the Wissahickon Creek Valley west of Philadelphia (at a site now within the city limits); the group, which never had an official name, is usually referred to as the Society of the Woman in the Wilderness. They used a telescope to scan the skies for signs of the Second Coming of Christ and lived austerely, separated from the rapidly developing urban life of Philadelphia. Gradually their movement faded, but a revival of sorts took place when the German immigrant Conrad Beissel came to join the Wissahickon mystics in 1720, and finding little activity among them started his own movement 60 miles farther west, at Ephrata, Pennsylvania. Beissel's Protestant monks and nuns practiced their own austere faith until the end of the eighteenth century, and a noncommunal church continued for many decades thereafter.[2]

In the meantime, a few miles to the south another group of dissenting Christian communitarians made their home on a tract of land called Bohemia Manor in what is now Maryland. Known as Labadists, they were followers of the radical French Catholic priest (who later turned Protestant) Jean Labadie. The Labadist gospel emphasized austerity and self-denial, and the American leader of the movement, Peter Sluyter, was a difficult autocrat, but this communal faith lasted for decades, from 1683 until at least 1722.[3]

THE ARRIVAL OF THE ANABAPTISTS

Pennsylvania, with its remarkable policy of religious toleration in a world generally marked by enforced religious conformity, continued to attract many types of religious dissenters. Another movement that arrived fairly early, in 1683, and one of the most influential of them all, was that of the Anabaptists, whose name means "rebaptizers" after their policy of adult baptism. The Anabaptists arose during the early days of the Protestant Reformation, in the 1520s in Switzerland, and soon thereafter in

other places in Europe. They had several distinctly radical beliefs, such as the separation of church and state, pacifism, and refusal to swear allegiance to any civil government. The largest group of Anabaptists, called Mennonites after their early leader Menno Simons, settled in Philadelphia and in the counties to the west of the city. They were soon joined by the Amish, founded in Switzerland in the 1690s, who represented a separatist strain of the Anabaptist faith and who have lived in fairly isolated communities ever since.

Some Mennonites today have adapted to contemporary society, becoming modern farmers (or even city dwellers), voting in elections, and wearing contemporary clothes. Others cling, in varying degree and type, to older ways. The Amish, however, maintain their distinctiveness. Although they, too, have a wide range of practices, the Old Order Amish, now numbering in the hundreds of thousands, still use horses and buggies for transportation, reject such modern conveniences as electricity and telephones in their houses, and retain their historic practice of shunning members who fall from the strict path of Amish life. Today they are thriving as never before.[4]

THE SHAKERS

Several other religious minority groups arrived in the American colonies in the decades after the Anabaptists' arrival. One of the most visible of them was the United Society of Believers in the Second Coming of Christ, or, more simply, the Shakers. The Shakers began in England as a fervent group of millennial activists who eventually decided to relocate to the tolerant American colonies. Under the leadership of Ann Lee, who eventually came to be considered Christ in the Second Coming, the Shakers crossed the Atlantic in 1774. By 1780 they had gathered at a communal retreat near Albany, New York, and began a decades-long evangelistic campaign. In the first 40 years of the nineteenth century they built some 20 communal villages, little models of heaven that were largely self-sufficient and removed from the corrupting influences of secular society. The Shakers were celibate, depending on converts for new members, but their excellent hand craftsmanship did not compete well as the age of factories progressed. Nevertheless, the Shakers have survived and even prospered for over 225 years, and the last communal Shaker village in Maine continues to bear witness to this enduring tradition.[5]

RADICAL PIETISM

The nineteenth century witnessed a profusion of NRMs. In the preceding few decades in Germany and other parts of Europe a new movement had arisen called Pietism, a protest against the cold formality of the Lutheran state churches. The Pietists wanted to inject warmth, spirit, and personal vitality into daily religious life. The more radical of the Pietists left the state churches entirely, forming independent religious societies.

The first large Pietist group to flee the confining ecclesiastical environment of Europe and establish an outpost in the new world was the Harmony Society. George Rapp gathered a substantial congregation around his vigorous message in Württemberg and had several run-ins with the authorities that led him and his followers to emigrate. In 1804 the Harmonists migrated to a tract of land they purchased north of Pittsburgh, Pennsylvania. Within a few years the Rappites, as many called them, built a thriving communal village called Harmony. But after only a decade Rapp decided that the community needed to move to the western frontier, and thus they settled in Indiana, near the confluence of the Wabash and Ohio Rivers. There they built the town of New Harmony, and for a decade the Harmonists thrived in Indiana. Then in 1824 Rapp declared that they should move again, this time back to a site in Pennsylvania just a few miles from the original Harmony. The final village was called Economy, and there the Harmonists lived out their lives until the last of the celibate brother and sisters brought the movement to an end early in the twentieth century.[6]

Other Pietist groups made their marks as well. Rivaling the Harmonists in numbers and longevity were the Inspirationists of what became the Amana Society. Their distinctive doctrine was that God could raise up prophets in the present just as in the past. And so prophets did arise, men and women known as "*Werkzeuge,*" or "tools," one of whom, Christian Metz, oversaw the group's emigration from Germany to the United States in the early 1840s. They lived in a communal settlement called Ebenezer on the outskirts of Buffalo, New York, at first, but soon decided to move west, and in 1854 and 1855 settled in a rich river valley in eastern Iowa. There they built seven communal villages and lived in religious and social unity until hard economic times during the Depression forced them to end their communal ways in 1932. Nevertheless, hundreds of Amanans still live in the villages today; the church continues, as does the business that makes refrigerators and microwave ovens that was started decades ago by creative members of the society.[7]

The Separatists of Zoar made a similar migration from Germany to the United States, settling in Tuscarawas County, Ohio, in 1817. They endured until 1898, and their village remains a charming museum.[8] A similar group from Sweden settled in Illinois and created the communal town of Bishop Hill, which lasted for several decades despite the early murder of its leader Eric Jansen by a disgruntled marginal member in 1850.[9] Yet another group, many of whose members were disgruntled Harmonists who left George Rapp's Economy, coalesced under Wilhelm Keil and founded their communal religious settlement, Bethel, in Missouri in 1844. Keil eventually led part of the community to Oregon, where they founded a community called Aurora, and both settlements endured until well after Keil's death in 1877.[10]

REVIVAL FIRES AND NRMS

The first half of the nineteenth century was a particularly fertile time for the creation of NRMs. It was the era of revivalism: parts of upstate New York were particularly impacted by the fervor of the day and became known as the "burned-over

district" because the waves of revival enthusiasm repeatedly passed through the area like a fire burning through a forest.

One of the most prominent movements resulting from that time and place was Adventism, based in a belief that the Second Coming of Christ would occur in the very near future. William Miller, the leading Adventist, worked out an elaborate system of biblical analysis, and on the basis of that analysis he predicted, eventually, that the return of the Lord would take place on October 22, 1844. The grand event failed to happen on schedule, but after several years of puzzlement and even despair many Adventists regrouped under the leadership of Ellen White, a visionary who laid down new laws for those who continued to expect an imminent coming of Christ. One of her precepts was that the Jewish sabbath was the proper day of worship, and their practice of worshipping on Saturday gave the group the name of Seventh-Day Adventists. They have thrived ever since, still preaching their millennial message, albeit without a specific date for the end of the world.[11]

Like many other NRMs, Adventism had an influence beyond its own membership. Today tens of millions of Americans believe that a dramatic Second Coming will occur in the very near future. Many Adventist groups apart from the Seventh-Day church are thriving, none more than the Jehovah's Witnesses.

A generation after the early Adventist enthusiasm peaked, Charles Taze Russell, a prosperous hat salesman, founded his own Adventist group in Pittsburgh, Pennsylvania. Russell, like Miller, on the basis of his own interpretation of certain biblical passages, set a date for the glorious millennial occurrences. He said that spectacular end-of-the-world events would occur in 1914. That date, like 1844, did not apparently usher in the millennium, but the Witnesses continued to believe that important forces were set in motion and that the culmination would take place imminently. And so the movement proceeds today: Jehovah's Witnesses continue to believe that the end of the world as we know it is at hand.[12]

THE EMERGENCE OF THE MORMONS

The Adventists and Jehovah's Witnesses notwithstanding, no group that emerged from the burned-over district had a larger or longer-lasting impact than the Mormons. The founder, Joseph Smith, was a teenager who moved with his family from Vermont to the vicinity of Palmyra, New York, when he began having spiritual visions. Eventually, he said, he was led to dig up a box of "golden plates" that had inscriptions in an unusual form of hieroglyphics. In due course he "translated" the inscriptions with miraculous tools, and finally published the work as the *Book of Mormon,* a purported history of pre-Columbian America in which the first Americans—today's American Indians—were descended from ancient Hebrew peoples. In 1830 Smith founded a new church that he said was a divinely inspired recreation of early Christianity.

The Mormon faith grew rapidly. Soon the headquarters moved from New York state to Kirtland, Ohio; the main body of Mormons then moved to several locations in Missouri, where they encountered entrenched hostility from local residents, and

then to Nauvoo, Illinois, on the Mississippi River. There they created a thriving city run by Mormon church leaders, but in 1844 Smith was murdered and the church splintered.

Mormon factions spread far and wide. One of them, under the leadership of Smith's own family, eventually established a church headquartered in Independence, Missouri, just outside Kansas City. This tradition was formerly called the Reorganized Church of Jesus Christ of Latter Day Saints, and today is known as the Community of Christ. But the largest group of Mormons followed Brigham Young to Utah, where they prospered spectacularly. They wrested a living from the inhospitable desert and laid the foundations for a worldwide NRM. A century and a half later, the Mormons are no longer social outcasts, a status they suffered especially because of their early practice of plural marriage, or polygamy, in which men could have multiple wives. They also recently abandoned the denial of equal spiritual opportunity to African Americans. Today they are pillars of American, and world, society.[13]

ONEIDA

Many other groups appeared in the wake of the religious fervor of the burned-over district. In the early 1850s the Oneida Community initiated its remarkable three-decades-long experiment in religious community outside Oneida, New York. Oneida's founder, John Humphrey Noyes, descendent of a prominent New England political family, became a Perfectionist, maintaining that he had been freed, by the grace of God, from the burden of sinfulness. His religious community first gathered near Putney, Vermont, but in 1848 the members moved to Oneida. Life was difficult for the first several years, but then the Oneidans began to make animal traps—the best in the business, thanks to the inventiveness of a community member—and eventually they branched out into silverware, which was an even more prosperous business than traps.

Animals traps and silverware aside, however, the sensational core of Oneida's life was its practice of "complex marriage" in which every man was married to every woman in the community of several hundred members. Noyes believed that a perfect world would not countenance exclusive relationships, but rather that everyone would love all others equally. The system worked remarkably well for more than three decades, but outside critics and internal crises eventually made life difficult for the community, and in 1881 it closed, although the silverware business continues to bear the Oneida name.[14]

ANABAPTISTS, AGAIN

The last of the major Anabaptist groups arrived during the heyday of the Oneida Community. The Hutterites (named for an early leader, Jacob Hutter) from their founding in 1528 were distinctive for their commitment to communal living, with all property held in common. Like the other Anabaptists, the Hutterites were long

persecuted in Europe. In 1770 they moved to Russia with a promise from the Russian empress Catherine the Great that they could practice their religion freely, live in communal settlements, educate their own children, and be exempt from military service. A century later the Russian government withdrew those privileges, and the Hutterites had to move again. This time they migrated to South Dakota, where 443 of them settled in three colonies (and a larger number gave up communal living to settle on individual farms). They lived quietly, their numbers growing modestly, until World War I, when anti-German and antipacifist persecution forced most of them to flee to Canada. In the 1930s some were invited to return to the United States. Since then the Hutterites have expanded robustly. They now have over 400 colonies, each with a population of around 100 persons farming several thousand acres of land, in six states and four Canadian provinces. Like their spiritual siblings, the Amish and Mennonites, they have prospered in the New World.[15]

SPIRITUALISM, THEOSOPHY, AND METAPHYSICAL MOVEMENTS

In the meantime another new spiritual direction was charted with the rise of Spiritualism, a movement whose most distinctive belief was that living humans could communicate with spiritual beings and especially with the dead. The origins of the movement lay in the "spirit rappings" experienced by Kate and Margaret Fox in 1848 in their family home in Hydesville, New York—strange knocking noises that were interpreted as messages from beings in another dimension. Although the "rappings" of the Fox sisters were later discredited, Spiritualism attracted a widespread American following, and it has been with us ever since, with its testimony that life goes on after death and that communication with dimensions of life other than the immediately visible ones is possible. The original Spiritualists were Christians, but much of the movement today, now often called "channeling," could be considered a New Age spiritual movement not exclusively rooted in any traditional world religion.[16]

Around the time Spiritualism began to acquire a following, classical Asian religious texts became available in English translation to the general public. Hindu and Buddhist scriptures soon found readers in certain circles of educated Americans, most notably, perhaps, among the American Transcendentalists: Ralph Waldo Emerson, Margaret Fuller, Henry David Thoreau, and others. In the 1870s Spiritualism and the new Asian religions came together in one of the most innovative of American NRMs, Theosophy. Helena Petrovna Blavatsky was a Russian who was said to have traveled to some of the world's most exotic locales, learning from a wide array of spiritual teachers, and in 1875 she and Henry Olcott founded the Theosophical Society in New York City. Theosophy resembled Spiritualism in its reception of messages from distant spiritual beings, which Theosophists called "Masters," and Buddhism and Hinduism greatly influenced its spiritual outlook. After Blavatsky's death in 1891 the movement splintered; one branch built a beautiful communal enclave at Point Loma near San Diego, another did the same in Hollywood and then Ojai, California, and still others developed loyal followings in locations around the world.

Theosophy remains one of the most unusual and creative of all of the American NRMs and has influenced dozens of other NRMs.[17]

Another innovative religious school of thought that developed in the era of Spiritualism and Theosophy was New Thought. Its origins, many would say, lay in the philosophy of Emanuel Swedenborg, the eighteenth century Swedish scientist and metaphysician who taught a doctrine of correspondence that events in the material world have correlations with events in the spiritual realm. As a religious movement, New Thought developed with the work of Phineas P. Quimby, a spiritual healer in Belfast, Maine, who believed that sickness was caused by wrong thinking and thus could be counteracted mentally. Among Quimby's patients was Mary Baker Eddy, the founder of Christian Science, about whom more is written below. It was one of Eddy's students, Emma Curtis Hopkins, who became the leading shaper of New Thought through her teaching of many students and her assignment of missionaries to all parts of the United States. Many separate organizations embodied New Thought principles over the ensuing century. The largest and most visible of them is the Unity School of Christianity, founded in Kansas City by Myrtle and Charles Fillmore, students of Hopkins, in 1886. Like other New Thought organizations, Unity has no creeds or mandatory teachings; individual members are encouraged to search for truth within their hearts. New Thought retains that breadth of outlook in its many organizations today.[18]

Christian Science's history and beliefs are somewhat similar to those of New Thought, but has distinctive ideas of its own as well as a more rigid belief and organizational structure than most New Thought churches do. Eddy was initially influenced by Quimby, then developed her own NRM after she experienced what she interpreted as a miraculous cure following her fall on ice in 1866. In the 1870s she founded organizations that promulgated her ideas, and in 1892 she organized the current Christian Science Church, then as now headquartered in Boston, Massachusetts. Christian Science denies the reality of the material world; all that truly exists is mind. God is referred to as the Divine Mind. Christian Scientists are best known for their healing practice that involves spiritual treatment and only in a few unusual cases permits conventional medicine. The numbers of Christian Scientists are declining today, but the influence of the church and of Eddy's ideas is widespread. The many prophets of boundless human potential, of positive thinking, and of a metaphysical type of spiritual healing all owe a debt to Christian Science.[19]

NATIVE AMERICAN NRMS

One other cluster of NRMs that emerged in the nineteenth century deserves mention as well. When Euro-Americans subdued and "modernized" indigenous peoples, suppression of traditional Native American religions was the order of the day. Many churches worked hard to convert Native people to Christianity and were fairly successful at that. But the suppression and marginalization of traditional American Indian religions was accompanied by cultural disintegration and grinding poverty. Into this situation came many Native American prophets who proclaimed NRMs for

Native peoples. Often the prophets were attached to specific tribes and confederations, as was the case with Handsome Lake of the Iroquois and Kenekuk of the Kickapoo. Generally the prophets offered a message of encouragement—that better times lay ahead—and urged self-help to improve the lot of Indian people.

Two new Native American religions, however, went far beyond tribal boundaries. The Ghost Dance of 1890 was inspired by the visionary experiences of Wovoka, a shaman among the Northern Paiute of Nevada. To dispirited Native people Wovoka preached hope: if they would live more virtuously and perform a certain ceremonial dance, a golden age would return to Native America and the Euro-American oppressors would be vanquished. The message spread rapidly, nowhere more vigorously than among the Sioux, some of whom adopted a particularly militant form of the Ghost Dance. But it came to a tragic halt when U.S. Army troops massacred over 100 peaceful Ghost Dancers at Wounded Knee, South Dakota, in 1890.

Even then, however, another transtribal NRM had begun to spread among Native Americans. The Native American Church, which combines Christianity with various traditional tribal religions, is best known for its sacramental use of peyote, whose active ingredient, mescaline, produces effects similar to those of LSD. Long practiced in Mexico and a small part of the American Southwest, peyote religion spread rapidly from the 1880s onward, after the influential Comanche chief Quanah Parker claimed that he was healed by use of peyote medicine. Native American Church members had repeated conflicts with state and federal authorities over their use of a generally illegal substance in worship, but the religion spread to all areas of the United States where Native Americans lived and is a major unifying force among Indian people today.[20]

ASIAN TEACHERS ARRIVE

Non-Asian Americans had limited exposure to Asian religions in the mid-nineteenth century, but at the end of that century these religions became more visible. The key event in the spread of Hindu and Buddhist ideas was the World Parliament of Religions, held in Chicago in 1893. Among the delegates to the gathering was a young swami named Vivekananda. To put it simply, he stole the show, proclaiming a warm, tolerant, all-embracing version of Hinduism. He was the first Asian spiritual teacher to attract a substantial following among non-Asian Americans, and his Vedanta Societies survive to this day. Other Asian masters made American converts as well. Vivekananda returned to India and died young, but other swamis took his place. In 1927 Swami Paramananda began broadcasting his message to the public on radio, and in the late 1930s Swami Prabhavananda attracted the prominent British writers Aldous Huxley, Christopher Isherwood, and Gerald Heard to his Hollywood Vedanta Center. Their presence and writings attracted yet more Americans to the expansive Vedanta teachings.[21] Another swami who arrived under separate auspices in 1920, Paramahansa Yogananda, developed an even larger following than the Vedantists, especially because of the impact of his best-selling *Autobiography of a Yogi.*[22]

Buddhism was not far behind Hinduism in finding an American constituency. The first American Buddhists were Japanese and Chinese people who arrived on the West Coast in the 1840s, but they did not attempt to spread their traditions beyond their own ethnic groups. When several Buddhist monks attended the Chicago World Parliament in 1893, however, Buddhism's fortunes in the United States changed. Although these monks did not make the spectacular impact that their Hindu counterpart Vivekananda did, they set the stage for a great flowering of Buddhism some decades later. Japanese Buddhist teachers founded the first American Zen centers in the 1920s, and the contact between Americans and Japanese fostered by the American occupation of Japan after World War II spread Japanese Buddhism, and Zen in particular, to more Americans. The new Zen presence in the United States attracted the interest of several Beat writers. The poems and novels of Allen Ginsberg, Jack Kerouac, Gary Snyder, and others made Buddhism very attractive to counterculturalists. Thus, both Hinduism and Buddhism created foundations that would mushroom in the last third of the twentieth century.[23]

ISLAM COMES TO THE UNITED STATES

Islam first came to the United States with African slaves whose religious expression was suppressed by most slave owners, and it did not reappear on the American scene until the late nineteenth century. Muslims, especially after September 11, 2001, coped with terrible cultural conflicts and image problems. Nevertheless, their numbers grew steadily, and they may soon eclipse Judaism to become the second largest American religion, after Christianity. The first Muslim immigrants arrived in the late nineteenth century. In the early twentieth century they established mosques in scattered and often isolated locations such as Ross, North Dakota, Cedar Rapids, Iowa, and Toledo, Ohio. More immigrants came later, and gradually Islam became visible in many American cities. As with Hinduism and Buddhism, Islam's largest growth came in the latter decades of the twentieth century and involved converts, especially many African Americans, as well as immigrants and their descendents.[24]

One offshoot of Islam made important inroads in the United States beginning about the same time that its parent tradition arrived. The Baha'i Faith had its origins in Persia (now Iran), where a man who took the honorific name Baha'u'llah declared himself a prophet in the mid-nineteenth century. The first Baha'i believers arrived in the United States in 1894, and they and their successors were successful in spreading their faith. The simplicity of two central Baha'i teachings—first, that the human race is one and all people are equal, and second, that all of the major religions are true and divinely founded—enjoyed popular appeal in the United States, and American Baha'i membership now exceeds 100,000, with local congregations throughout the country.[25]

THE TWENTIETH CENTURY

NRMs became more and more visible as the twentieth century progressed. The most spectacularly successful religious innovation of all, and arguably America's

greatest contribution to the world's religious fabric, was Pentecostalism, which rose meteorically over the century. Pentecostalism's beginning was humble. It started in a Bible school led by a young Holiness pastor named Charles Parham in Topeka, Kansas. Parham, who earlier was involved in faith healing, became convinced that persons who believed they were saved should bear outward manifestations of that transformation. He and his students concluded that the outward sign would be glossolalia, or speaking in tongues, a phenomenon recorded in the biblical Book of Acts but largely absent from Christianity after the first century. They prayed for such a spiritual gift on New Year's Eve, 1900, and on the first day of 1901 one of Parham's students, Agnes Ozman, became the first tongue speaker of modern Pentecostalism. The movement remained isolated and unknown, however, until a later Parham student named William Seymour took the new concept to Los Angeles and presided over the Azusa Street Revival in 1906, whence this dynamic NRM quickly spread worldwide.

For decades Pentecostal believers were scorned by members of more staid churches. They attracted the criticism of other Christians because of their emotional and incomprehensible talking, the physical exercises that often accompanied glossolalia (and that gave rise to the derisive term "holy rollers"), and the faith healing that seemed to reject medical science—not to mention early Pentecostalism's interracial meetings and women leaders. In the late 1950s, however, a new wave of Pentecostalism, now usually called the Charismatic movement, began to appear in non-Pentecostal churches. Soon Episcopal, Baptist, and Catholic Charismatics were gathering in huge numbers, and new churches—independent local "megachurches," in many cases—added to the surge as well. Today the Pentecostal/Charismatic wing of Christianity is so large and influential that it has moved beyond the status of a NRM and exerts an enormous cultural influence throughout the world. A century ago, however, observers would not have predicted such a dynamic future for a movement whose first adherents were bitterly reviled by everyone in the "good" churches.[26]

AFRICAN-AMERICAN MOVEMENTS

It was not only in Pentecostalism that African Americans became active in NRMs in the early twentieth century. Just as NRMs—often practiced in secret—developed among the slaves, they arose among the now-freed slaves and their descendents and were especially vigorous among the African Americans, who in increasing numbers migrated to northern cities.[27] Some of the black NRMs were Christian variations; some rejected Christianity altogether as a slave religion that had been forced upon an imprisoned people.

One non-Christian religion that found a following among postslavery African Americans was Judaism, whose central ethical theme is freedom. The first black Jews appeared in the 1890s; one of the earliest prophets of the movement was William Saunders Crowdy, who developed a following in Kansas and then in eastern cities. Crowdy taught that African Americans were descendents of the lost tribes of Israel.

He developed a novel religion that observed the Jewish Sabbath and holidays. Later several other prophets enunciated their own variations on that theme.[28]

But black Judaism was largely eclipsed by black Islam. In 1913 Timothy Drew, who took the name Noble Drew Ali, founded the Moorish Science Temple in Newark, New Jersey. He published his own Holy Koran and claimed that black Americans were not Africans but Asiatics, descendents of the Moors of north Africa. Other Islamic movements followed, most notably the Nation of Islam, founded by the mysterious W.D. Fard in Detroit in 1930. Fard vanished in 1934, but his lieutenant, Elijah Poole, who took the name Elijah Muhammad, built a powerful movement called the Nation of Islam. They taught that a disciplined black population would soon overthrow its white oppressors and return to its rightful position of leadership. Today the separatist Nation of Islam still has an African-American following, although even more black Americans converted to conventional Islam and joined local mosques.[29]

Beyond the Jews and Muslims, even more distinctive African-American religions appeared on the scene as well. One of the most innovative religious founders was Father Divine, born George Baker, who attracted thousands of members to his Peace Mission Movement, which peaked in the 1930s. Peace Mission members believed Father Divine to be God, and they devoted their entire lives to the cause, moving into celibate communal "heavens" and working in Peace Mission businesses. Eventually the movement declined, especially after Father Divine's death in 1965, but his widow, known as Mother Divine, continues to lead the faithful.[30]

NEW VERSIONS OF JUDAISM

African Americans were not alone in creating innovations in Judaism. Jews from more traditional Jewish backgrounds brought new practices and outlooks to their ancient traditions, and the new movements prospered in the twentieth century. The most notable among them is Hasidism, which arose in eastern Europe in the eighteenth century. Local Hasidic groups developed around the authority of charismatic leaders called rebbes in rural communities isolated from urban areas. Most Hasidim remained in their homelands until the rise of Hitler before World War II forced them to flee to the United States. Here they tried to retain their village closeness in urban settings, most notably in Brooklyn, New York. Hasidism tends to be insular: members wear clothing that makes them immediately identifiable, they educate their children in their own schools, and they strictly observe many religious practices, such as observing a kosher or traditional diet. The names of the various Hasidic groups—Lubavitcher, Satmar, Bratzlaver—reflect their places of origin, and their inwardly focused communities have thrived in their new homes. Other Jewish NRMs emerged as well, but none have the distinctive visibility of Hasidism.[31]

THE 1960S AND AFTER

As strong as NRMs were in American history, nothing earlier compared in sheer quantity and visibility with the NRMs that arose during the 1960s and after. There

are several reasons for that religious profusion. One was a change in immigration laws in 1965 that made Asian immigration easier; among those Asians came many spiritual teachers who spread new Hindu, Buddhist, Sikh, and other ideas and practices to spiritually hungry Americans. Another reason for the profusion of NRMs in the 1960s was the exodus of Caribbean peoples to the United States, some of them fleeing from Fidel Castro's Communist regime in Cuba and others fleeing desperate poverty in Haiti and other countries. These Caribbean peoples brought distinctive religions with them. But the largest factor in the surge was simply the great cultural upheaval that took place in American society in the 1960s and early 1970s. Suddenly traditional values of all kinds were questioned as never before, and a mood of experimentation swept through the land, especially among young people. New and experimental interest in drugs, sex, and political protest was paralleled by an openness to NRMs, many of which were newly available for exploration.

The NRMs from Asia tended to be the most visible of the 1960s-era spiritual movements. Indian teachers were prominent: Swami A.C. Bhaktivedanta, for example, arrived from India in 1965 to spread a kind of Hinduism popularly called Krishna Consciousness, or Hare Krishna, and soon his followers or devotees were singing, dancing, and begging in public in their saffron robes. Their numbers were never great, but they built temples and communal farms across the United States and eventually raised families and assumed their place in the American religious mosaic.[32] Swami Satchidananda arrived in 1965 and by 1969 was prominent enough to appear on stage at the Woodstock Festival, the landmark rock concert that epitomized the counterculture. His following grew throughout the 1970s. At the end of that decade he established a permanent spiritual community called Yogaville in Virginia. The Maharishi Mahesh Yogi began touring the world to promote what came to be known as Transcendental Meditation in 1958. By the late 1960s he had an extensive organization overseeing the spiritual lives of thousands of American meditators. Similar stories were repeated by hundreds of other Indians who found willing disciples in the United States.[33]

Buddhism expanded in similar fashion. The Zen centers in place before 1960 saw their memberships expand greatly, and new teachers from Japan and Korea established many new ones. Other forms of Buddhism, from several traditionally Buddhist countries, arrived as well. In 1960 Daisaku Ikeda visited the United States to start his Soka Gakkai movement, already thriving in Japan. Eventually tens of thousands of adherents were doing the vigorous chanting and social outreach that characterized Soka Gakkai practice. Meanwhile, the Chinese invasion of Tibet in 1950 set in motion events that caused many Tibetan Buddhist teachers to flee to India and elsewhere. Some of them eventually reached the United States. The largest and most visible Tibetan Buddhist organization in the United States today is Vajradhatu, founded by disciples of the lama (or Tibetan teacher) Chogyam Trungpa in 1969 and now anchored by Naropa University in Boulder, Colorado, the largest center of Buddhist education in the United States.[34]

The new Asian presence was not confined to Hinduism and Buddhism. Sikh teachers came as well, as did gurus from the Sikh offshoot tradition known as Sant

Mat. One of the latter was the Guru Maharaj Ji, who, although a mere 13 years old when he first came to the United States in 1971, was proclaimed a Perfect Master and in the next few years built one of the largest American followings of any Asian teacher in his Divine Light Mission. Sun Myung Moon, a Korean leader who created an innovative version of Christianity mixed with Asian traditions, sent the first missionaries of his Unification Church to the United States in 1959. Teachers of Sufism, the mystical offshoot of Islam, set up several American orders. Subud, from Indonesia, developed a small but lasting presence. Hundreds of groups and movements large and small soon made their homes in the United States.[35]

AFRO-CARIBBEAN RELIGIONS

Caribbean refugees brought NRMs with them when they made their way to the United States in the 1960s and later. The Africans who were taken to the Caribbean as slaves had in many cases taken their traditional religions with them, and over time those religions, mixed with Roman Catholicism, became traditions like Santería and Vodou (or Voodoo). Those similar (but by no means identical) religions center on the interaction of human beings with spiritual entities through rituals and sacrifices. These entities, known as loa (in Vodou) and orishas (in Santería), are invoked during long and intricate ceremonies, and their essence can inhabit the very being of the believer, at least temporarily. These religions remain largely based in the Caribbean populations that brought them to the United States, but their visibility, in shops, for example, that sell essential materials for Vodou and Santería rituals, and in public controversies in which local governments attempted to suppress their ceremonies (especially those involving animal sacrifice in Santería's case), gave them a place of some prominence in the complex matrix of American religions.[36]

Another Afro-Caribbean religion, quite unrelated to Vodou and Santería, is Rastafari, or Rastafarianism, which emerged in the 1930s and 1940s in Jamaica. The origins of Rastafari are complex, but the central theme of the movement is "Ethiopianism," or repatriation to Africa, which is related to a belief in the divinity of Haile Selassie, the late Emperor of Ethiopia. The most visible (or audible) representation of Rastafari is reggae music, popularized worldwide by Bob Marley and others; the most famous precept of the faith, probably, is the sacramental use of Ganja, or marihuana. The movement spread worldwide, and its most visible emblem, dreadlocks (long, matted hair), can be seen just about anywhere.[37]

NATURE RELIGIONS

In the early 1970s feminism and environmentalism achieved public prominence, and a cluster of NRMs arose in their wake. Generally those religions were known as paganism, although their beliefs and practices were so diverse as to defy easy categorization. The early pagans claimed to be resurrecting ancient pre-Christian religions of Europe, especially northern Europe, reinstituting the spirituality of natural forces and feminine power that had been ruthlessly eradicated by Christian

missionaries over the centuries. Those claims were difficult to substantiate, and over time they tended to drop away, but the main pagan themes persevered: these religions were rooted in the earth rather than in the sky (the principal western religions see God and heaven as "up there" somewhere), and they had a strong feminine component, with female deities and female leadership at all levels.

The largest and earliest strain of modern pagan religions was Wicca, or witchcraft. It was founded in the 1920s by Gerald Gardner, a British civil servant who claimed that he was initiated into this supposedly ancient religion by a woman called Old Dorothy. Some of Gardner's students brought his ideas to the Americas. In the early 1960s Tim Zell (now Oberon Zell) founded the Church of All Worlds, the first pagan organization in the United States. Paganism grew slowly at first, but in the 1970s it proliferated, giving rise to many organizations as well as rituals and beliefs. Religions other than Wicca contributed breadth to the pagan world—Asatru (a type of paganism drawing on Norse themes) and Egyptian paganism (enacting rituals thought to date back to the time of the Pharaohs), for example.

Pagans often worship outdoors, and their ritual calendar follows the seasons, observing solstices, equinoxes, and times midway between those celestial events. Some adherents worship entirely or partially in the nude to achieve close contact with the forces of nature. Rituals tend to be festive, and pagans are perhaps the most tolerant religionists in the United States, welcoming persons of all sexual orientations, occupations, and political persuasions. They tend to keep low profiles because their practices are often condemned as Satanic or at least heretical. But pagans deny any Satanic connections; indeed, they say they are less Satanic than Jews or Christians because they do not even recognize the existence of an evil entity standing in contrast to a good God. Nevertheless, the pagan religions are definitely not Christian, and thus their practitioners are criticized regularly, especially by conservative Protestants.[38]

Satanists do exist, but their numbers are quite slim. The San Francisco-based Church of Satan, headed by the late Anton LaVey, was the best known of the modern organized Satanist groups, but its hedonistic creed and flamboyant rituals seemed to embody more showmanship than invocation of evil.[39] In the 1980s a wave of panic over alleged Satanic atrocities swept over the United States, its perpetrators (some of whom claimed to be former Satanists themselves) alleging that huge numbers of human sacrifices were being conducted by vast rings of evil Satanic practitioners. Those claims, however, eventually collapsed as it became evident that there was no actual evidence that such crimes had ever taken place and that many of the claims had been based on psychologically dubious "recovered memories."[40] The unjust vilification of pagans often lingered, however.

SCIENTOLOGY

One religious movement that defies easy categorization is Scientology, which features a psychological self-help program. The central concepts of Scientology were created in the early 1950s by L. Ron Hubbard, a science fiction writer. Hubbard

believed in reincarnation and argued that many of our psychological problems had their origins in our past lives; other problems came from early childhood. He developed a device called an e-meter, a sort of lie detector, that supposedly could help a person identify psychological problems and work through them. The goal, originally, was to become "clear," or a fully actualized human being who had conquered his or her psychological impediments, although later levels of attainment beyond clear were added to the system. Scientology is known for its celebrity adherents—John Travolta, Kirstie Alley, and Tom Cruise, to name only three—and for its conflicts with governmental authorities the world over. It has many powerful supporters, as well as many vehement detractors. But without question, Scientology is prominent among the newest of American NRMs.[41]

RETURNING TO BEDROCK: CONSERVATIVE NRMS

Some movements that seem "new" within the contemporary American religious matrix actually seek to embody very old ways—to reject modern innovations in favor of what is perceived to be the authentic, time-tested truth. Sometimes the old is embodied in new clothing; sometimes it simply seeks to return to what once was, with old cultural forms as unchanged as possible.

One cluster of NRMs seeking to return to earlier ways is broadly known as Catholic Traditionalism. The Catholic Church, the world's largest nongovernmental human organization, has slowly but surely adapted to changing social and cultural trends throughout its history. From 1962 through 1965, the Second Vatican Council met in Rome and adopted a series of new, more modern, policies and ritual practices. Perhaps the most visible and controversial of these revisions was the changing of the language of the mass, the central Catholic ritual, and the translation of that language into vernacular languages spoken around the world. Although most Catholics embraced this and other Vatican II changes readily, some were horrified at the church's seeming departure from eternal truth. The most aggrieved formed a series of organizations, some within the church and some not, to preserve the old ways, including the historic Latin mass (known as the Tridentine mass, after its promulgation in the wake of the Council of Trent in 1570).

Some of the conservative Catholic organizations, such as the influential Opus Dei movement, remain solidly within the church. Others, however, withdrew entirely, convinced that the Roman church was hopelessly misguided. The most extreme traditionalists are known as "sedevacantists" (meaning "empty seat"), who argue that the church is so far adrift that the whole institution is a false church, and that there is no true Pope sitting on the throne of St. Peter in Rome today (hence the "empty seat"). A few such groups have actually elected their own popes. Although the various traditionalist groups are neither large nor highly visible, they seem destined to provide a conservative Catholic voice for years to come.[42]

Protestantism similarly had many movements during its history that returned to a perceived pristine purity of old. One good example is the Holiness movement, which arose late in the nineteenth century among Methodists who believed that their

church had experienced unacceptable liberalization and who saw themselves as returning to the original teachings of Methodism's founder, John Wesley, especially in demanding that members avoid sinful behaviors. Such denominations as the Free Methodists, the Church of the Nazarene, and the various groups with "Holiness" in their names (Pentecostal Holiness, Fire-Baptized Holiness) represent the enduring legacy of the Holiness critique.[43]

A more recent movement dressed traditional ways of thinking in modern garb. The Jesus Movement arose in the late 1960s among young people who dabbled in hippie life but eventually found it spiritually empty and turned to evangelical Protestantism for meaning. These "street Christians" thus combined conservative Protestant beliefs with such countercultural symbols as long hair, exuberant clothing, rock music, and communal living. Many conservative Protestant churches did not welcome the rather disheveled newcomers, but others did. Gradually the Jesus Movement blended into the growing world of evangelical Protestantism.[44]

A very different return to tradition took place among the Mormons in the twentieth century. One of the distinctive Mormon practices of the nineteenth century was polygamy. The federal government conducted a powerful campaign against polygamy in the 1880s, and the Mormon church capitulated, renouncing its unconventional marital practices in 1890. Many Mormons, however, continued to believe that polygamy was commanded by God and must be maintained. Dozens of alternative polygamy-practicing Mormon churches thus came into existence. The largest of them, the Fundamentalist Church of Jesus Christ of Latter-Day Saints, was headquartered in Colorado City, Arizona, on the Utah-Arizona border. It recently had over 5,000 resident members there, and more elsewhere, and has attracted considerable controversy by building a new community, complete with a Mormon temple, near El Dorado, Texas. When religious denominations abandon sacred traditions, some believers will inevitably try to reclaim them.[45]

NRMS AND THEIR CRITICS

NRMs have always been controversial. Christianity itself was severely persecuted during its first three centuries of existence. The early Anabaptists were fiercely opposed, many of them executed, for their beliefs. Roger Williams and Anne Hutchinson were expelled from early Massachusetts for their departures from orthodoxy. Early Quakers were executed for their "errors." The Shakers were ridiculed and persecuted from their earliest days; ex-members like Mary Dyer, and other critics like Nathaniel Hawthorne, published bitter attacks against these unconventional Christians now remembered primarily for their furniture.

No NRM was more bitterly attacked than Mormonism. The Mormon founding story, of golden plates and wildly fanciful early American history, evoked a chorus of disdain, and once rumors that Mormons were sexual deviants (polygamy started early in the movement's history) began to circulate, the agitation against Mormonism became virulent, and many members, including the founder, were murdered.

In wartime, members of pacifist religious bodies were jailed, even killed. Jehovah's Witnesses ended up in court repeatedly for such offenses as refusing to salute the American flag, something that they considered an idol in competition with their undivided devotion to Jehovah or God.

And so it has been throughout history: those who are different are often condemned. In recent times calumny was heaped on NRMs—on Unification Church members, Hare Krishna devotees, and hundreds of others. They were condemned for "brainwashing" their converts, although objective evidence for such practices is slim. They were accused of greedily wanting their members' money, even though most religions seek substantial contributions from their adherents.

Persecution does eradicate some groups, but many more fall by the wayside for the same reasons that most human organizations come and go, and some survive to evolve into respectable membership in the larger religious community. The bottom line, though, is that NRMs are as durable as religion itself. They have found millions of adherents throughout American history and have been vibrant examples of the diversity that has long characterized American religion.

NOTES

1. Accounts of the early persecution of religious dissenters can be found in most standard surveys of American religious history. See, for example, Mark A. Noll, *A History of Christianity in the United States and Canada* (Grand Rapids: Eerdmans, 1992); Peter W. Williams, *America's Religions: Traditions and Cultures* (New York: Macmillan, 1990).

2. On the Woman in the Wilderness, see Donald F. Durnbaugh, "Communitarian Societies in Colonial America," in *America's Communal Utopias,* ed. Donald Pitzer (Chapel Hill: University of North Carolina Press, 1997), 19–22. On Ephrata, see Jeff Bach, *Voices of the Turtledoves: The Sacred World of Ephrata* (University Park: Pennsylvania State University Press, 2003).

3. For a succinct account see Ernest J. Green, "The Labadists of Colonial Maryland, 1683–1722," *Communal Societies* 8 (1988): 104–21.

4. On the Mennonites, see Calvin W. Redekop, *Mennonite Society* (Baltimore: Johns Hopkins University Press, 1989). On the Amish, see John A. Hostetler, *Amish Society,* 4th ed. (Baltimore: Johns Hopkins University Press, 1993).

5. See Stephen J. Stein, *The Shaker Experience in America* (New Haven: Yale University Press, 1992).

6. Karl J.R. Arndt wrote exhaustively on the Harmony Society and published his history in several lengthy volumes. For the period that includes Rapp's lifetime, see Arndt, *George Rapp's Harmony Society, 1785–1847* (Philadelphia: University of Pennsylvania Press, 1965).

7. See Jonathan Andelson, "The Community of True Inspiration from Germany to the Amana Colonies," in *America's Communal Utopias,* ed. Pitzer, 181–203; Peter Hoehnle, *The Amana People: The History of a Religious Community* (Iowa City: Penfield Books, 2003).

8. For a beautifully illustrated survey of Zoar see Kathleen M Fernandez, *A Singular People: Images of Zoar* (Kent, OH: Kent State University Press, 2003).

9. On Bishop Hill see Paul Elmen, *Wheat Flour Messiah: Eric Jansson of Bishop Hill* (Carbondale: Southern Illinois University Press, 1976).

10. A classic work on Bethel and Aurora is Robert J. Hendricks, *Bethel and Aurora: An Experiment in Communism as Practical Christianity; with Some Account of Past and Present Ventures in Collective Living* (New York: Press of the Pioneers, 1933).

11. See Ronald L. Numbers and Jonathan M. Butler, *The Disappointed: Millerism and Millenarianism in the Nineteenth Century* (Bloomington: Indiana University Press, 1987); Anne Devereaux Jordan, *The Seventh-Day Adventists: A History* (New York: Hippocrene Books, 1988).

12. A personalized account of Jehovah's Witnesses can be found in Barbara Grizzuti Harrison, *Visions of Glory: A History and a Memory of Jehovah's Witnesses* (New York: Simon and Schuster, 1978).

13. The historical literature on Mormonism is vast. One standard survey is Jan Shipps, *Mormonism: The Story of a New Religious Tradition* (Urbana: University of Illinois Press, 1985). See also Thomas F. O'Dea, *The Mormons* (Chicago: University of Chicago Press, 1957).

14. Many works have examined the history of Oneida. One widely read book is Maren Lockwood Carden, *Oneida: Utopian Community to Modern Corporation* (Baltimore: Johns Hopkins University Press, 1969). See also *Free Love in Utopia: John Humphrey Noyes and the Origin of the Oneida Community,* comp. George Wallingford Noyes, ed. Lawrence Foster (Urbana: University of Illinois Press, 2001).

15. The standard monograph on the Hutterites is John A. Hostetler, *Hutterite Society,* rev. ed. (Baltimore: Johns Hopkins University Press, 1997).

16. See, for example, Ruth Brandon, *The Spiritualists* (Buffalo: Prometheus, 1984).

17. For a survey history of Theosophy see Bruce F. Campbell, *A History of the Theosophical Movement* (Berkeley: University of California Press, 1980).

18. New Thought is a diverse movement, and many studies of facets of it are available. A classic overview is Charles Braden, *Spirits in Rebellion* (Dallas: Southern Methodist University Press, 1963). On the pivotal role of Emma Curtis Hopkins see Gail M. Harley, *Emma Curtis Hopkins: Forgotten Founder of New Thought* (Syracuse: Syracuse University Press, 2001).

19. A standard work on Christian Science is Stephen Gottschalk, *The Emergence of Christian Science in American Religious Life* (Berkeley: University of California Press, 1973).

20. Many works deal with specific movements in the diverse world of the American Indians. On the Ghost Dance, see, for example, Alice Beck Kehoe, *The Ghost Dance: Ethnohistory and Revitalization* (New York: Holt, Rinehart and Winston, 1989). One of several good works on the Native American Church is Omer Call Stewart, *Peyote Religion: A History* (Norman: University of Oklahoma Press, 1987).

21. A good survey of the introduction of Vedanta to the western world is Carl T. Jackson, *Vedanta for the West: The Ramakrishna Movement in the United States* (Bloomington: Indiana University Press, 1994).

22. Paramahansa Yogananda, *Autobiography of a Yogi,* 12th ed. (Los Angeles: Self-Realization Fellowship, 1990).

23. See Rick Fields, *How the Swans Came to the Lake: A Narrative History of Buddhism in America,* 3rd ed. (Boston: Shambhala, 1992).

24. See, for example, Yvonne Haddad, *The Muslims of America* (New York: Oxford University Press, 1991).

25. The most comprehensive history of the Baha'i faith in America is contained in the two-volume work of Robert H. Stockman, *The Baha'i Faith in America* (Wilmette, IL: Baha'i Publishing Trust, 1986).

26. A good survey of the development of American Pentecostalism in its earlier phase is Robert Mapes Anderson, *Vision of the Disinherited: The Making of American Pentecostalism* (Peabody, MA: Hendrickson Publishers, 1979). One of many works on the post-1950 charismatic movement is Richard Quebedeaux, *The New Charismatics II* (San Francisco: Harper and Row, 1983).

27. On new religions among slaves, see Albert Raboteau, *Slave Religion: The "Invisible Institution" in the Antebellum South* (New York: Oxford University Press, 1978).

28. The standard monograph on the Church of God and Saints of Christ is Elly Wynia, *The Church of God and Saints of Christ: The Rise of Black Jews* (New York: Garland, 1994). For a comprehensive survey of the various black Jewish movements see James E. Landing, *Black Judaism: The Story of an American Movement* (Durham, NC: Carolina Academic Press, 2001).

29. The classic work on the black Muslims is C. Eric Lincoln, *The Black Muslims in America* (Boston: Beacon, 1961). Many other more recent works have illumined various black Islamic groups in America. See, for example, Aminah Beverly McCloud, *African American Islam* (New York: Routledge, 1995).

30. Two worthy monographs on Father Divine and the Peace Mission Movement are Robert Weisbrot, *Father Divine and the Struggle for Racial Equality* (Urbana: University of Illinois Press, 1983); and Jill Watts, *God, Harlem U.S.A.: The Father Divine Story* (Berkeley: University of California Press, 1992).

31. One of many studies of Hasidism is Jerome Mintz, *Hasidic People: A Place in the New World* (Cambridge: Harvard University Press, 1992).

32. See E. Burke Rochford, *Hare Krishna in America* (New Brunswick, NJ: Rutgers University Press, 1985).

33. For a survey of some of the more prominent Indian movements to take root in the United States in recent decades see Gene R. Thursby, "Hindu Movements Since Mid-Century: Yogis in the States," *America's Alternative Religions*, ed. Timothy Miller (Albany: State University of New York Press, 1995), chap. 18.

34. In addition to Fields, *How the Swans Came to the Lake,* see, for example, Charles S. Prebish, *American Buddhism* (North Scituate, MA: Duxbury, 1979).

35. The most comprehensive reference guide to the widely diverse Asian religions (as well as other religions) in the United States is J. Gordon Melton, *Encyclopedia of American Religions,* 7th ed. (Detroit: Gale, 2003).

36. For a lavishly illustrated look at the highly visual world of Vodou, see Laënnec Hurbon, *Voodoo: Search for the Spirit* (New York: Harry N. Abrams, 1995). For Santería, see Joseph M. Murphy, *Santería: African Spirits in America,* rev. ed. (Boston: Beacon, 1993).

37. See Barry Chevannes, *Rastafari: Roots and Ideology* (Syracuse: Syracuse University Press, 1994).

38. For a comprehensive overview of modern pagan religions in America see Margo Adler, *Drawing Down the Moon,* rev. ed. (Boston: Beacon, 1986).

Leadership in New Religious Movements

Eugene V. Gallagher

In many ways, leadership in New Religious Movements (NRMs) is little different than it is in more established religions or even in other social contexts. It is claimed, exercised, contested, and transformed through very similar processes. Anticult and countercult activists, however, persistently focused on what they perceived as a virtually universal reliance on dangerous forms of charismatic leadership in "cults." Margaret Singer, for example, asserted that "a cult is a mirror of what is inside the cult leader" and described "cult leaders" as "master manipulators."[1] But that overly narrow focus obscured both the diversity of forms of leadership in NRMs and their similarities to leadership in other social groups. Although there are examples of new religions in which authority and power were concentrated in a single leader, at least for a time, there are many other instances of differing and more complex forms of leadership. This essay provides a fuller survey of the kinds of leadership that appear in NRMs and the processes by which aspiring leaders established and defended their claims to power and authority, maintained their positions of influence, and guided the lives of their followers. It also examines the conflicts that arise between competing contenders for leadership and the transformations that occur during an individual leader's career or a group's history. Finally, it will return to the issue of evaluating the leadership of NRMs, particularly since that theme has been so prominent in the polemical literature written about new religions and their leaders.

One of the distinctive features of specifically religious leadership is its appeal to supernatural or extraordinary forces as the basis for that leadership. Religious leaders draw on diverse resources to support their claims. Those sources can include direct personal interaction with what leaders identify and followers acknowledge as sacred. They may also include the authorship, reception, or interpretation of authoritative collections of stories and other traditions in either written or oral form, the ability to devise and perform specific ritual actions, the establishment and interpretation of religious law, and the communication of moral or intellectual insight. All claims to religious leadership are evaluated, either implicitly or explicitly, by the audiences

to whom they are directed. These audiences include the followers or believers within a particular religious tradition or group, people who are personally sympathetic to that tradition or group but not formally aligned with it, and observers of that tradition or group like journalists, scholars, or members and leaders of other religious groups. Religious leaders achieve and maintain their positions of influence only through sustained interactions with specific audiences. Consequently, religious leadership is not immune to critique and competition. Individuals and groups, often themselves acting on religious convictions, can challenge religious leadership, attempt to diminish the status of individual leaders, limit their effectiveness, and even provoke or accomplish their overthrow. Insurgent leaders who compete for primacy within a group may claim greater intimacy with the divine, the correct interpretation of sacred tradition, greater ritual power, more accurate legal interpretation, or superior moral vision. Even when it appears to be entirely stable and thoroughly entrenched, religious leadership always exists within an emotional and spiritual environment where claims and counterclaims are repeatedly ratified or undermined by audiences who are often well versed in the specific issues of contention because of their personal experiences, familiarity with tradition, or intellectual and moral acuity. Religious leadership, then, is always embedded in an array of social processes that can sustain, augment, or decrease its power. Those processes can be particularly evident in NRMs because of their initial small scale and urgent need to establish themselves as credible alternatives to the religious status quo. Like other leaders, the leaders of new religious movements are made, remade, and unmade in their interactions with those whom they would recruit and retain as followers, as the following examples will show.

CLAIMING RELIGIOUS LEADERSHIP

Probably the most dramatic and striking claim to religious leadership is one that is presented as being thrust suddenly upon an unsuspecting individual in a dramatic encounter with the sacred. The experience of Joseph Smith (1805–1844) is a case in point. Beginning in 1820 Smith, then a young teenaged boy, had a series of visionary encounters with God, Jesus Christ, and angels that convinced him of his religious mission. His visions eventually led him to unearth the gold plates from which he translated the Book of Mormon and to establish the Church of Jesus Christ of Latter-day Saints. A statement from the angel Moroni in 1823 neatly sums up the impact of Smith's experiences; Moroni simply informed Smith that "God had a work for [him] to do."[2] Smith believed that his visions were proof that none of the Protestant denominations then competing with one another locally merited his affiliation and that he himself should restore the primitive Christian community described in the Book of Acts in the New Testament. Smith first revealed his new religious message to the members of his immediate family, who supplied him with his first converts. Joseph's father, for example, confirmed the young man's impression that he had received a divine commission and urged him to follow the angel Moroni's

instructions.[3] Soon, a few others became impressed with the new scripture that Smith revealed to the world, and they became converts as well. The testimonies of the early witnesses to Smith's experience of revelation are included at the beginning of editions of the Book of Mormon today as the "testimony of three witnesses" and "the testimony of eight witnesses," which assert that the witnesses "have seen the plates which contain this record" and that "they have been translated by the gift and power of God."[4] The support of those early converts was crucial to the survival and then the prospering of the religious movement started by Smith in upper New York State.

In his classic and still influential analysis, the sociologist Max Weber included claims like Smith's under the heading of charismatic authority. He distinguished it from both bureaucratic or legal authority and traditional authority. Bureaucratic authority rests "on a belief in the 'legality' of patterns of normative rules and the right of those elevated to authority under such rules to issue commands." Traditional authority depends "on an established belief in the sanctity of immemorial traditions and the legitimacy of the status of those exercising authority under them."[5] In contrast to these two forms of authority, Weber described charismatic authority or charisma as based "on devotion to the specific and exceptional sanctity, heroism or exemplary character of an individual person, and of the normative patterns or order ordained by him."[6] Despite frequent misreadings of his work, Weber clearly viewed charisma not as a static quality of an individual's personality but as a product of the social interaction between would-be leaders and their potential followers. Weber stressed that "it is recognition on the part of those subject to authority which is decisive for the validity of charisma."[7]

Another example of charismatic authority is the founder of the UFO group called the Raelians. As with Joseph Smith, an individual was jolted from his daily life by an unanticipated encounter with the sacred. In December 1973 a race car driver and journalist was walking near an extinct volcano outside of Clermont-Ferrand, France. Claude Vorilhon (b. 1946) recalls that "suddenly in the fog, I saw a red light flashing; then a sort of helicopter was descending towards me."[8] He soon learned that this was not a helicopter, but a flying saucer. During the next six days of intensive instructions, Vorilhon learned that the craft was piloted by alien beings who were the true creators of life on earth. In a close parallel to Smith's experience, Vorilhon was given both a religious mission and a book to demonstrate his credibility. An alien, identified as one of the Elohim mentioned in the biblical book of Genesis, told him that "you will tell human beings the truth about what they are and what we are.… You will write down everything I will tell you and you will publish the writings in book form."[9] Armed with the authority conferred upon him by the extraterrestrials, as well as a new book that provided unprecedented insight into familiar scriptures, and a new name, "Raël" began to pursue his mission. Unlike Smith's, Raël's initial converts did not come from his immediate family, but they did recognize in his pronouncements an authentic religious message that claimed their allegiance. One person simply said that after hearing Raël speak, "I recognized 'Jesus speaking in his own era.'"[10] Expressing the tight fit between his own observations and what he heard

from Raël, another convert asserted that "I find everywhere around me confirmation of the messages."[11]

Although many people, especially those who are deeply suspicious of charismatic leadership, associate experiences like those of Smith and Raël with the leaders of virtually all NRMs, there are, in fact, many other ways that leadership is claimed. The career of A.C. Bhaktivedanta Swami Prabhupada, the founder of the International Society for Krishna Consciousness (ISKCON), provides a good example of the traditional legitimation of leadership. Although Prabhupada, who was then 26, was urged to dedicate himself to spreading the knowledge of Krishna beyond India when he met the guru Bhaktivedanta Sarasvati, he delayed the beginning of his missionary activity for a career in business until he was 69.[12] Only in 1965 did Prabhupada begin to spread the message of Krishna Consciousness in the United States. Prabhupada always insisted that he was bringing traditional knowledge about Krishna to the West; he portrayed himself as part of a "disciplic succession" that went back not only to his own guru but eventually to the god Krishna himself.[13] Prabhupada offered to accomplish for others what his own guru had done for him, and what his predecessors in the succession had previously done: awaken the consciousness of Krishna. The title of Prabhupada's most well-known book, *Bhagavad-Gita As It Is,* nicely captures his insistence that he was simply representing traditional wisdom and not proposing innovative interpretations of it.

Prabhupada offered a religious message that was both disarmingly simple and involved deep dedication to religious practice. He said that the awakening of religious consciousness was achieved by the disciplined chanting of a simple mantra, "Hare Krishna, Hare Krishna, Krishna, Krishna, Hare, Hare / Hare Rama, Hare Rama, Rama, Rama, Hare, Hare." But Prabhupada also insisted that full consciousness of Krishna developed only within the context of the guru-disciple relationship: "one who is serious about understanding spiritual life requires a guru."[14] Disciples reinforced Prabhupada's claim to authority when they gave testimonies to his guidance in chanting like "when you chant Hare Krishna you become purified. Your awareness is acutely intensified. Your awareness of everything: your spiritual awareness, your physical awareness, your awareness of everything around you."[15]

Although Weber's ideal type of bureaucratic authority rarely if ever appears at the beginnings of new religions, it often comes into play as a new movement strives to make the transition from its founder(s) to a second generation. Fragmentation of the group is an ever-present possibility, especially if no concrete plans for succession are made, and the very survival of the group may be at issue. Founding leaders may delay concrete plans for succession for many reasons, including a desire to hold on to their power, an unwillingness to accept their own mortality, genuine indecisiveness about who is fit to succeed them, or even the millennial hope that the world will be transformed in their own lifetimes, thus eliminating the need for a successor. When specific plans are not made, competing approaches to succession can easily develop. Noting that "the single most divisive issue that [the] Latter Day Saint church has ever dealt with was the untimely death of its founder," Steven L. Shields observed that in the ten years before his death Joseph Smith "provided for at least eight different

methods of succession in the leadership of the church."[16] It should not be surprising, then, that not all of the first generation of Mormons followed Brigham Young on the Great Trek to the Salt Lake Basin in Utah, following Smith's death in Illinois. Those who eventually accepted the prophet's son, Joseph Smith III, as their leader and thus implicitly endorsed the notion of the traditional legitimation of authority formed the Reorganized Church of the Latter Day Saints, now called the Community of Christ and headquartered in Independence, Missouri. Other splinter groups led by prominent Mormons also formed in the years after the prophet's murder in 1844.

Sometimes, however, founders provide for their succession. Mary Baker Eddy (1821–1910), for example, planned for the continuance of the Christian Science Church by composing *The Manual of the Mother Church* and by asserting that members should "never abandon the By-laws nor the denominational government of The Mother Church."[17] Explicitly equating the authority of the *Manual* with her own authority and both with that of Scripture, Eddy assured the members of her Church that "if I am not personally with you, the Word of God, and my instructions in the By-Laws have led you hitherto and will remain to guide you safely on."[18] But even Eddy's concerted efforts to turn her personal charisma into a structure that would continue after her death were not able to prevent defections from her church to various New Thought movements that were organized during her lifetime as well as the formation of a dissident Christian Science movement by Annie Bill, who presented herself as the leader of the true Mother Church.[19] As the histories of the Mormons and Christian Scientists suggest, the transition from the first generation of a new religion to the second is rarely smooth. It typically involves some uncertainty about both the transfer of authority and the potentially new forms that the legitimation of authority will take. It is not uncommon for contending claimants to authority to appeal to different sources of legitimation. The period after the death of a founder often witnesses an intense burst of creativity that closely matches the ferment of the establishment of a group, as members strive to adapt their fundamental convictions to a new situation and remake the structures within which they live their religious lives.

The creativity of new religions is also evident in the fabrication of forms of leadership that do not fit neatly, or at all, into the classic categories devised by Weber. Perhaps the most noteworthy example comes from contemporary neo-Paganism, which one observer has described as a highly diverse movement that is both "non-authoritarian and non-dogmatic."[20] In such a situation, precisely what counts as leadership becomes a tricky matter. Although Zsuzsanna Budapest is probably "the closest thing that feminist spirituality has to a founder,"[21] and she herself claims to be part of a traditional lineage of practitioners of the "Old Religion," she insists that her form of Paganism "is not a one-book religion like Christianity, and not a one-mantra religion like the Krishna cult, but a body of knowledge which revels in variety, creativity and joy."[22] She does not shy away from exercising leadership, acknowledging that "my ministry is my gift and my divine act; it is where I am Goddess,"[23] yet she leads much more by example and suggestion than by command. Based on her own experience within contemporary Paganism and her observation

of others in "the Craft," Starhawk, another important figure in neo-Paganism, developed an alternative description of power and authority. Starhawk identifies "power-over" as the type of authority that strives to command and compel. She contrasts it to "power-with," or "the power of a strong individual in a group of equals, the power not to command, but to suggest and be listened to, to begin something and see it happen."[24] That distinctive form of diffused and democratic leadership, Starhawk argues, comes from "power-from-within," which itself results from "our sense of connection, our bonding with other human beings, and with the environment."[25] Starhawk's observations show that contemporary Pagan leadership, is "non-dogmatic and non-authoritarian," and that she has also developed a theory about the nature of leadership itself.

EXERCISING AND MAINTAINING RELIGIOUS LEADERSHIP

Individuals in NRMs thus appeal to a wide range of sources to support their leadership claims. Those claims can range from descriptions of direct interaction with extraordinary or supernatural beings, through appeals to an unbroken train of tradition that eventually leads back to the gods themselves, to the diffused power of a group of strong individuals. But claiming leadership is one thing; exercising it and maintaining it are definitely others.

David Koresh (1959–1993), the leader of the Branch Davidian Adventist group at the time of its tragic conflict with the American government in 1993, claimed unprecedented insight into the meaning of the Christian Scriptures, particularly the last book of the Bible, Revelation. He asserted that "every book of the Bible meets and ends in the book of Revelation."[26] Koresh focused on Revelation 5, which describes a book sealed with seven seals in the right hand of a divine figure seated on a heavenly throne. Largely as a result of a revelatory experience that he had while visiting Israel in 1985, which he allusively described as an ascent into the heavens, Koresh was convinced that he could not only interpret Revelation's obscure symbolism but that he himself was the Lamb mentioned in chapter 5 as the only one capable of opening the sealed book. Koresh's leadership of the Branch Davidians rested on that foundation, but he had to demonstrate his leadership anew virtually every day. His preferred forum for that demonstration, and the central activity for those in residence at the Mount Carmel Center outside of Waco, Texas, was the "Bible Study," which often lasted for several hours or more. In those sessions Koresh frequently quoted the Bible from memory and built a mosaic of passages that drove home his message of God's impending judgment of the world.

Koresh's repeated demonstration of his ability to make sense of the scriptures maintained, reinforced, and extended his leadership of the group. Nearly all of the residents of Mount Carmel were Seventh-Day Adventists, and well-versed in the Bible. Those who came to study with Koresh insisted that he showed them biblical details that they never saw before. One of the members closest to Koresh, Steve Schneider, remarked of his fellow Bible students that "the reason they came here, all that they are and what they want to be revolves around what they see him

[Koresh] showing from that book."[27] Another member, David Thibodeau, who did not have an Adventist background, claimed that his coming to Mount Carmel "really has nothing to do with David's charisma,… it's just opening the book for myself, seeing what it says and saying, wow, is this guy found in the book, you know, and all the Psalms, you, you, really got to sit down and listen to him talk, I mean with the book open."[28]

Thibodeau's final comment shows how Koresh maintained his leadership. In the community's daily life, Koresh's leadership depended less on his claim to an extraordinary visionary experience than on his repeated ability to make sense of the millennial message of the Bible. Koresh's authority was tested every time he conducted a Bible Study because the community members, like Thibodeau, could sit and listen to Koresh "with the book open" and compare what Koresh said against what they read. Every time his students accepted Koresh's interpretation of the Bible, his authority was reinforced. Those who did not accept his interpretations either had to struggle to reconcile conflicting viewpoints or, eventually, leave the group. And more than a few did leave over time. In the Bible Studies, Koresh's supreme self-confidence that he was chosen for a religious mission, and his facility in interpreting biblical texts, met the deep yearning of many in his audience for a thorough renovation of this world; more often than not that interaction ratified and even increased Koresh's standing within the group.

Although they rarely assemble lasting communities around them, those individuals who claim to channel messages from various disincarnate beings have a similar relationship with their audiences. Channeled entities often espouse an understanding of leadership that seems closer to that of Starhawk than to Smith's or Raël's understanding of their prophetic mission. For example, Ramtha, the 35,000-year-old being channeled by JZ Knight (b. 1946) asserts that "I am not a sage, I am not a fortuneteller, I am not a priest. I am but a teacher, servant, brother unto you."[29] Nonetheless, the most successful channelers develop loyal clienteles, apparent from the number of workshops, books, audio and videotapes, CDs, and other paraphernalia that they offer for purchase.[30] Every time someone clicks on a Web site, enrolls in a workshop, or buys one of the items offered for sale, the stature and status of both the person doing the channeling and the channeled entity are reinforced. Since channelers usually do not develop lasting groups, they are even more immune to the corrosive effects of defections or challenges to their authority from within the band of the faithful. Their popularity and authority tend to fluctuate with the market.

The defection of members from the Branch Davidian community when Koresh announced his "New Light" revelation, which called for celibacy among all male followers and gave Koresh a sexual monopoly on the women in the group, indicates that the demands of leadership and the interests of the audience are not always in harmony.[31] Leaders may offer guidance that followers do not accept, demand commitments that seem inappropriate, chart a path for the future that some may not want to follow, or otherwise fail to maintain and direct the energies and commitments of their audiences. In some cases the prospect of group disintegration or

other kinds of failure to achieve the group's mission provokes leaders to take drastic measures.

One of most notorious examples of leadership spiraling into violence and community disintegration occurred at the Peoples Temple Agricultural Mission in Jonestown, Guyana, in 1978. By the time that the Rev. Jim Jones (1931–1978) and a group of nearly 1000 followers relocated the headquarters of the Peoples Temple from California to that remote jungle outpost, the group had a long and winding history. Jones originally founded the Peoples Temple Full Gospel Church in Indianapolis, Indiana, in 1955, where he was an advocate for racial integration and agitated for a socialist-style redistribution of wealth. In the late 1960s the group moved to northern California and Jones's socialism moved well beyond Protestant orthodoxy. During its California heyday, the Peoples Temple added to its ranks both well-educated white professionals and people from the margins of society who found Jones's preaching against racism, sexism, and other forms of discrimination very attractive. By the time the group relocated to Guyana, 75 percent of its members were African American and only 20 percent were Caucasian.[32] Jones long used a variety of flamboyant techniques, including staged faith healings, forced confessions, and dramatic sermons in which he dared God to strike him dead if he was wrong, to retain the attention and support of his flock. Under the pressure of defections of top-level aides, stinging portrayals of the Peoples Temple in the media, and mounting opposition from families, friends, and supporters of members, Jones undertook more drastic measures to hold the loyalty of his group. Along with Jones's increasing dependency on prescription medication and the backbreaking labor necessary to maintain the fragile jungle community, Jones believed that some of those closest to him were betraying him, and he felt besieged by external opponents. That made his leadership position precarious and Jonestown an exceedingly fragile and volatile community. Soon after arriving in Jonestown, Jones began periodic "white nights" in which he tested his followers' collective and individual willingness to die for the cause of Peoples Temple rather than experience harassment, arrest, or invasion. When the fact-finding mission of Rep. Leo Ryan (R-CA) erupted in violence on November 18, 1978, and claimed Ryan's life as well as the lives of four others traveling with him, Jones's preparations came to a horrible conclusion, and more than 900 members of the community died in a coordinated set of murder-suicides.

Anticult polemics describe the deaths at Jonestown as the logical extension of the pathological form of charismatic leadership that is characteristic of virtually all cults,[33] but more careful analysis of the Jonestown tragedy created a more complex picture of the factors that prompted both Jones's personal downward spiral and his followers' acceptance of his final directives. Far from establishing a model of leadership in all "cults," Jones's interactions with his community were shaped by the distinctive elements of his own personality, the context he shared with his followers, their own substantial commitments to the mission of Peoples Temple, and an array of other factors particular to the people involved and their context. Mary McCormick Maaga, for example, argues that because of his physical and mental decline "in Guyana Jim Jones became more important symbolically as a mascot of

cohesion than as a leader in the managerial sense."[34] Maaga also carefully uncovers the complex web of leadership in the movement, noting in particular the crucial role played by Jones's largely female inner circle in the administration of Jonestown. Thus, she interprets the final murder-suicides less as evidence of the hypnotic power exercised by a charismatic leader than as evidence of a "belief in Jonestown that the leaders of Peoples Temple were not willing to forsake."[35]

The ever-shifting exercise of leadership in contemporary Paganism provides a counterpoint to those instances where power and authority are heavily concentrated in a single individual. Margot Adler, author of an important early chronicle of neo-Paganism and herself a practitioner, captures the fluidity of neo-Pagan ritual leadership in a vignette about her visit to a coven in England. When the group assembled for a ritual, one of the participants asked, "Who's the High Priestess?" Adler, who only recently arrived via a transcontinental flight and had never met any of the members of the group before, was shocked to have someone point to her and say, "She is."[36] Such ad hoc vesting of ritual authority in an individual is clearly more typical in some religions than in others, but Adler's experience provides a noteworthy caution against any assertion that leadership in new religions always involves an individual's desperate attempts to maintain an iron grip over a group of followers.

CONTESTING RELIGIOUS LEADERSHIP

Another mark of the complexity of leadership in NRMs is the frequency with which it is challenged and contested. However much leaders may strive for stability, they are always enmeshed in processes of reasserting and reaffirming their authority, often in the face of substantial dissent and criticism. The history of the Branch Davidians provides a good example. From the time that the Davidian Adventist group was founded by Victor Houteff (1885–1955) in 1929 to 1988 when Koresh secured his position at the head of the group, it went through a series of dramatic leadership changes. Following a model of traditional transferal of authority, Houteff was succeeded by his wife, Florence Houteff. When Florence's prediction of the end of the world in 1959 was not fulfilled, the group lost many of its members. Florence moved away, and in the early 1960s a number of different people contended for leadership of the remaining Davidians. In the mid-1960s, the leadership of the remaining group of about 50 stalwarts at the Mount Carmel Center was eventually claimed by Ben Roden (d. 1978). He appealed to a charismatic experience of revelation in support of his claim to authority. Roden, in turn was succeeded by his wife, Lois, who introduced distinctive innovations into the theology of the group. While Lois was serving as the prophet and teacher for the group, Koresh, born Vernon Howell, became a member and quickly a favorite of Lois. His accession to leadership was accompanied by suggestions that he consummated a sexual relationship with the elderly Lois, and attended by a series of conflicts, sometimes violent, with Lois's son George. Koresh mixed traditional legitimations of his claim to authority, based on his relationship with Lois Roden, with charismatic claims about his commissioning during his

1985 ascent into the heavens. George, on the other hand, appealed to traditional grounds for his claims, believing that the mantle of leadership should have passed from father to mother to son. Only when George Roden was imprisoned in 1988 was Koresh's path to leadership cleared. But the next five years saw serious challenges to Koresh's position. The most serious was occasioned by Koresh's controversial "New Light" proclamation in 1989. Marc Breault, a member from 1986 and close confidant of Koresh, could not accept the new message. He wrote later that he "was seriously beginning to doubt whether God has ever talked to this guy."[37] Breault and his wife left the group, and he eventually became a dedicated opponent of Koresh, collaborating with the news media and law enforcement to expose what he saw as Koresh's excesses. Once he left the Branch Davidians, Breault claimed that his activities were directed by God. Though Breault himself disputes what they have said, some surviving Branch Davidians believe that Breault wanted to establish himself as a prophetic figure who would replace Koresh.[38]

Even if Breault's motives cannot be clearly established, undoubtedly Koresh's death on April 19, 1993, inspired another clash over leadership among the few remaining Branch Davidians. Livingston Fagan was one of Koresh's faithful students. He left the Mount Carmel Center during the siege in order to present the group's message to the world. Now writing from prison, he continues to produce papers and pamphlets that constitute an orthodox representation of Koresh's teachings. Fagan's attempts to codify and explicate Koresh's teachings stem from his conviction that the time of charismatic inspiration for the Branch Davidians is now past. But another imprisoned survivor, Renos Avraam, takes a different approach. Identifying himself as the "Chosen Vessel," he claims fresh charisma and portrays himself as Koresh's successor, building upon his teachings with new revelations.[39] Koresh held on to his position of leadership despite the challenges of George Roden and Breault, but it remains unclear whether one of the claimants to succeed Koresh will be able to attain primacy and reinvigorate the group.

Leadership of the Nation of Islam has also been contested. The transition from the shadowy figure of W. D. Fard, who disappeared mysteriously in 1934 after a brief preaching career, to Elijah Muhammad (1897–1975) was relatively smooth. During his long tenure as the head of the Nation of Islam, Elijah Muhammad greatly extended Fard's teachings, developed an organizational structure, and attracted many converts to the Nation's teachings about the true identity and history of African Americans. His most famous convert was the former convict Malcolm Little (1925–1965). As Malcolm X, he enjoyed a meteoric rise within the hierarchy of the Nation of Islam and became accepted by many as its foremost spokesman. Malcolm's prominence created some tension with Elijah Muhammad, who perceived a threat to his leadership. A series of tense interactions, along with Malcolm's growing dissatisfaction with Elijah Muhammad's inability to follow his own ethical teachings, led to Malcolm's departure from the Nation of Islam. Less than a year after leaving, Malcolm was assassinated on February 21, 1965, probably by members or former members of the Nation of Islam and perhaps to eliminate the threat he posed to Elijah Muhammad's leadership.[40]

Ten years later the death of Elijah Muhammad provoked a transformation in the leadership of the movement. Wallace Dean (W.D.) Muhammad (b. 1933) immediately succeeded his father in 1975, but he led the movement into mainstream Islam and substantially transformed the official understanding of both Fard and his father in the movement. In 1978, acting on the sectarian desire to recover the lost purity of the movement's beginning, Louis Farrakhan (b. 1933) split from W.D. Muhammad to form his own organization. Farrakhan claimed both traditionally sanctioned authority, by claiming to be the "spiritual son" of Elijah Muhammad, and charismatic authority, by describing revelatory ascent into the heavens in a spaceship.[41] Although Farrakhan is the most publicly prominent, other members of the Nation of Islam reacted negatively to W.D. Muhammad's rapprochement with mainstream Islam, and at least one other splinter group, led by Silis Muhammad, was formed.[42]

Leaders of NRMs can be challenged by critics outside of their groups, such as the activists in the anticult and countercult movements or other opponents, and also by dissidents within their group. Such challenges are tightly focused and limited to specific points of doctrinal interpretation, ethical practice, or ritual observance, or they address the fundamental legitimacy of a leader's position. When challenged, leaders fall back on the fundamental sources of their authority and power, however they might be conceived. At stake is not only the position of the individual leader, but also the integrity of the group. Any challenge has the potential to divide the group. Divisions are generally understood by incumbent leaders to weaken the group and by insurgent leaders as opportunities to recapture the original purity of commitment that has faded over time. Challenges to leadership, no matter how they occur, are the keys to the transformations of religious movements.

TRANSFORMING RELIGIOUS LEADERSHIP

Although the leadership transition precipitated by the death or disappearance of a founder is by far the most dramatic occasion for the transformation of leadership, there can be many other kinds of transformation, even within the first generation, as leaders develop a sense of their missions and try out their ideas on different audiences. Even leaders who rely on strong forms of charismatic legitimation are not above exercising a pragmatic calculus about what works to inspire a particular audience—and what does not. An incident from the careers of Marshall Applewhite (1931–1997) and Bonnie Lu Nettles (1927–1985), the leaders of the group that came to be known as "Heaven's Gate," bears that out.

Applewhite and Nettles were quite frank about their own evolving sense of mission. As early as 1972 Applewhite claimed that he had a vision in which he learned "where the human race had come from and where it was going."[43] In 1988 "the Two" reported that as their sense of mission deepened, they "consciously recognized that they were sent from space to do a task that had something to do with the Bible, an update in understanding and prophecy fulfillment."[44] For a time Applewhite and Nettles identified themselves as the "two witnesses" mentioned in Revelation 11, where the text recounts that they are given by God the power to prophesy, that they

will be murdered because of their mission, but that they will be resurrected after three and a half days. Applewhite and Nettles abandoned that particular mission, however, when they encountered other teachers who also claimed to be the two witnesses of Revelation.[45] They recalled their experience in this way: "'Well, we think that we might be fulfilling the task that was referred to as Two Witnesses in the book of Revelation.' And this student just hit the ceiling because her two teachers were the two witnesses. (Laughs) So, goodness alive, did that do a number on our heads! We thought 'Gracious, we don't want to do that again.' And it's like, whether we were or not, it was good for us to experience that."[46] Those comments from Applewhite and Nettles are remarkable for their forthright admission of their tentativeness and uncertainty about their own identity and mission. As they tell it, they had a general sense of "chosen-ness" that they tested both against their own unfolding experience and against the reactions of others. While that degree of honesty may be rare in claimants to religious leadership, it does lead to interesting questions about the inner turmoil that can accompany an apparently unshakable sense of mission.

A leader's evolving sense of self and mission can be one source of the transformation of religious leadership, but the communal and organizational structures in which leadership is embedded can also change, sometimes dramatically, in the course of a leader's career. Like the Church of Jesus Christ of Latter-day Saints, the Unificationist movement began with an extraordinary revelation delivered to a young, teenaged boy. On Easter morning, 1936, in Korea, Sun Myung Moon (b. 1920) experienced a vision of Jesus Christ that led him to a complete revision of salvation history. Like Smith, Moon eventually founded an organization to help him implement his vision. The Holy Spirit Association for the Unification of World Christianity was established by Moon and four followers in 1954. For more than a half century, Moon has presided over a complex web of organizational structures designed to facilitate the recruitment, retention, and direction of followers in order to hasten the transformation of this world in accordance with the will of God. During that time, the movement's center of activity moved from Korea to the United States and beyond, and the Rev. Moon is increasingly straightforward about the messianic claims that he makes for himself as the Lord of the Second Advent and for him and his wife as the True Parents of humankind. While the overall goal of unifying humanity in preparation for the imminent transformation of the world has remained constant, as has Rev. Moon's position as the unquestioned leader of Unificationism, few other things within the movement are stable. A massive labor of transcription and translation of the speeches of Rev. Moon substantially increased the body of sacred knowledge available to members and nonmembers alike, which both complicates Unification doctrine and secures the position of the Rev. Moon. The focus on uniting people of different racial and ethnic backgrounds in dramatic mass marriages of Blessing ceremonies has intensified. Evangelization efforts lead well beyond the shores of Korea, Japan, and even the United States, as the movement has undertaken substantial programs in South America and elsewhere. Thus, while it appears that both the leadership of Unificationism

and its ultimate goals have remained unchanged for more than a half century, the specific processes and structures through which leadership is exerted is in constant flux. Even an introductory-level examination of the inner workings of the Unificationist movement will show that the simplified portrait of "cult" leadership so often retailed by opponents of NRMs as involving an all-controlling charismatic leader and an ever-subservient flock is simply inadequate to explain what goes on among Unificationists.[47]

Any form of leadership that persists through time will manifest some degree of change. But attention to the structural forms through which leadership is exercised, as well as to the leaders themselves, can sometimes reveal substantial continuities within a diverse array of groups. The progression from the "I AM" movement through the Summit Lighthouse to the Church Universal and Triumphant provides a case in point. "I AM" began in 1930 when an "Ascended Master" contacted Guy Ballard (1878–1939) on Mount Shasta in California, in an experience reminiscent of the leadership calls of Smith and Moon. Until his death in 1939 Ballard continued to receive messages from the very talkative Ascended Masters, which he dutifully published in a lengthy series of books. Although Ballard's wife, Edna (1886–1971), attempted to keep the "I AM" movement alive, she was enmeshed in a prolonged legal battle throughout the 1940s in which she and her husband were accused of mail fraud for sending false teachings through the U.S. mail.[48] Those legal troubles at least contributed to the fragmentation of the "I AM" movement. Over time a number of people claimed that they, too, received messages from the Ascended Masters. Geraldine Innocente, for example, formed a group called the Bridge to Freedom, from which one member, Francis Ekey, split off to found the Lighthouse of Freedom. That group's newsletter included even more messages from the Ascended Masters, originally attributed to an anonymous source. Eventually the source was identified as Mark L. Prophet (1918–1973), who in 1958 at the urging of the Ascended Master El Morya, formed his own group, the Summit Lighthouse.[49] Prophet, in turn, both tutored his wife Elizabeth (b. 1939) in the teachings of the masters and prepared her to assume the role of co-messenger with him. On his death in 1973 she became the unquestioned leader of the group and the next year renamed it the Church Universal and Triumphant. Elizabeth soon accorded her own husband the status of an Ascended Master and embarked on an independent career as a messenger for what she called the Great White Brotherhood.[50] Despite the frequent changes in the names of the organizations and the actual leaders, there remained a remarkable consistency, from Guy Ballard in the 1930s to Elizabeth Prophet in the 1970s and beyond, in the sources to which the messages were attributed, the forms in which they were received, the substance that they communicated, and the status that the reception of the messages conferred on messengers who received them. In a real sense, the Ascended Masters continued to lead a series of movements, whose outward shifts in name and leadership belied an inner continuity. Specific leadership, then, becomes less important than the relative consistency of a message that flows through a changing array of human channels.

EVALUATING LEADERSHIP

The need to evaluate leadership in NRMs is framed by many anticult activists as an urgent public issue. Margaret Singer was perhaps the most prominent and influential opponent of NRMs until her death in 2003. She believed that NRMs tried to defraud gullible individuals and induced unhealthy mental states in their followers. She also said that NRMs mobilized larger groups of people to vote in certain ways, raising questions of personal freedom, because these NRMs exercised "coercive persuasion" over the minds of their followers, and, ultimately, this became a matter of life and death, because of their ability to lead followers to sacrifice everything for the good of the group and leader.[51] In Singer's presentation, the leader of a "cult" must be condemned, since the belief system of such a group is nothing more than "a tool to serve the leader's desires, whims, and hidden agendas."[52] In a similar vein, anticult writer Steven Hassan describes himself simply as a "human rights activist" who functions as a counselor for people enmeshed in "cults" and therefore suffering from the effects of "coercive persuasion," "mind control," or their rough equivalents.[53] Like Singer, Hassan focuses on the influence of leaders, claiming that "charismatic cult leaders often make extreme claims of divine or 'otherworldly' power to exercise influence over their members."[54] For Singer, Hassan, and others who make similar arguments, the nature of leadership within NRMs reveals the pathology of leaders themselves as well as the problems of the groups that they form and so tightly control. The key to combating the insidious "menace" of new religions, as Singer describes it in the subtitle of her book, is to unmask the leader's delusions, pretensions, and manipulations. Once that is accomplished, the anticult activists are convinced, any right-thinking person will not only resist the lures of "cult" membership but expose and oppose such deviant and deceptive groups and their leaders.

The deep suspicion of charismatic leadership by activists like Singer and Hassan is echoed by some scholars with backgrounds in psychology and psychiatry. While acknowledging that his argument may not apply to all "gurus," Anthony Storr, for example, asserts that "many gurus have been entirely unworthy of veneration: false prophets, madmen, confidence tricksters, or unscrupulous psychopaths who exploit their disciples emotionally, financially, and sexually."[55] Jones, Koresh, and Bhagwan Shree Rajneesh, the Indian leader of a communal religious group that was headquartered in rural Oregon in the 1980s, are among the examples that he cites. Storr paints a frightening picture of life under the direction of a guru. He asserts that "belief in a guru, while it persists, entirely overrules rational judgment. Dedicated disciples are as impervious to reason as are infatuated."[56] Thus, Storr extends his largely negative evaluation of the leaders of NRMs to the members of the groups they have led.

Robert Jay Lifton provides a more focused investigation of what he calls "guruism" in his study of Aum Shinrikyo, the Japanese group led by Shoko Asahara (b. 1955) that was responsible for the lethal release of sarin gas in the Tokyo subway system in 1995. Putting a different spin on the relation between leader and followers, Lifton argues that the guru "needs disciples not only to become and remain a guru but to hold himself together psychologically. For the guru self often teeters on the edge of

fragmentation, paranoia, and over psychological breakdown."[57] Lifton offers a more psychologically subtle understanding of charisma than that proposed by Singer, Hassan, or Storr, proposing that "at the heart of charisma is the leader's ability to instill and sustain feelings of vitality and immortality, feelings that reach into the core of each disciple's often wounded, always questing self."[58] But the array of additional examples that he assembles under the rubric of "guruism," including Charles Manson, Jones, Applewhite, Timothy McVeigh, and Robert Mathews of the far right violent revolutionary group, The Order, serves to heighten the suspicion of any individual identified as a guru.

Analysts like Lifton and Storr raise serious questions about the potential psychological risks involved in accepting certain kinds of leadership, as well as about the psychological health of some individuals who become leaders. They are less successful, however, in telling us which specific cases those questions might profitably be raised and when, on the other hand, they may well be inappropriate. Their explicit and implicit generalizations tend to foster, whether they intend it or not, a generalized suspicion of all leaders who stand outside an implied "mainstream." Such generalized suspicion is a major analytical principle for anticult activists like Hassan and Singer. When raised to its highest level of generality, well-founded criticism of a *few* leaders is extended to *all* leaders, with a corresponding loss of specificity, accuracy, and persuasiveness. Such overgeneralization ignores the abundant diversity of leadership forms in new religions on the assumption that all "cults" must be the same. While there may be much to learn from the critical analyses of psychologists like Lifton, the uncritical expansion of their carefully supported claims by others obscures rather than clarifies the processes by which leadership is claimed, exercised, maintained, and challenged in NRMs.

Evaluation of leadership in new religions need not be as critical as the polemics of anticult activists or scholars like Storr and Lifton. Clearly those who accept and act on the claims to leadership made by various individuals in NRMs find much that is positive in their messages. In some cases, as with Jones and Koresh, followers may even discount personal weaknesses and character flaws in their leaders because of what they see as a true and compelling message. And that message may take on a life separate from the leader who originally delivered it. Outside observers, as well, have noticed positive aspects in the leadership of NRMs. More than a few observers note that new and alternative religious movements often offer women more opportunities to exercise leadership than is the case in mainstream religious groups. From Ann Lee's identification as the "Second Appearing of Christ in female form" by the Shakers in the eighteenth century through Eddy's founding of the Church of Christ, Scientist, and Helena Petrovna Blavatsky's establishment of the Theosophical Society in the nineteenth century, to JZ Knight's channeling of Ramtha and the profusion of female teachers in both neo-Paganism and the broader feminist spirituality movement in the twentieth and twenty-first centuries, there are many examples of women assuming leadership roles in new religions.[59] Because new religions necessarily pose alternatives to the religious status quo, among the arrangements that they may critique are the identification of God or the divine as exclusively male, the restriction

of religious leadership positions to males only, or other forms of the subordination of women. But new religions may also reflect the predominant gender dynamics of the societies in which they originate; the mere fact of its newness does not guarantee that a religious movement will be critical of the various dimensions of patriarchy.[60]

NRMs may also offer an opportunity for marginalized racial or ethnic groups to exercise religious leadership. The Nation of Islam, for example, provided leadership opportunities for Elijah Muhammad, Malcolm X, and Louis Farrakhan, among many others. These individuals would never have been able to lead groups in the larger white power structure in the United States. Similarly, Afro-Caribbean religions, like Vodou and Rastafari, offer members a comprehensive religious framework that both validates their racial identity and offers them contexts for the exercise of leadership that they might not find elsewhere.

Evaluation of leadership in new religions thus depends very much on the lenses through which it is viewed. For those who are suspicious of challenges to the status quo, either because of personal experience or a more general anxiety about potential social change, new religions might well represent the kind of "social problem" that Singer and others think they are. For those more tolerant of diversity and pluralism, NRMs may represent points along a spectrum of acceptable religious options. For those who perceive themselves in one way or another to be disenfranchised by the religious status quo, new religions may represent attractive alternatives in which previously frustrated aspirations can be actualized.

Therefore, all judgments are shaped by particular perspectives. Blanket statements about the "menace" of new religions or invariably manipulative "cult leaders" need to be balanced by careful attentiveness to the testimony of leaders themselves and their followers. Any evaluative statement about leadership in new religions becomes part of the field of claims and counterclaims within which leadership is always exercised; it is never the last word.

Affiliation and Disaffiliation Careers in New Religious Movements

David G. Bromley

The study of New Religious Movements (NRMs) over the last several decades provides the opportunity to reexamine why individuals join religious groups of all kinds, a process called conversion in many religious traditions. Basically, conversion refers to changing from one religious tradition to another or from being part of no religious tradition to adopting any religious tradition. However, conversion usually has a more specific meaning. Within religious traditions, conversions typically refer to transformative spiritual experiences that result from encounters with the divine. Accounts of such personal encounters with the divine are celebrated as a quintessential religious experience. Secular scholarship retained the notion of a radical, dramatic, fundamental personal transformation without presuming a transcendent source. A variety of metaphors, such as a "reorientation of one's soul;" a transformation of an individual's "root reality," a sense of "ultimate grounding, a "universe of discourse;" or a "paradigmatic shift" are employed to capture the essence of this transformation.[1] The objective is to distinguish these radical transformations from more mundane changes in membership between socially and culturally similar religious groups. Historically, there was less theory and research on leaving religious traditions. Conversion was usually understood to be a one-way process, a discovery of "the Truth" that then became the basis for one's personal identity through life. There has been, of course, some research on apostasy, which religious traditions usually defined as "falling from the faith," which carried a negative connotation, and which was actively discouraged within religious traditions. In recent decades research on leaving religious traditions grew as denominational membership switching has became a more pronounced trend in contemporary western nations. Under these conditions, individuals are likely to change religious affiliations throughout their lives, much in the same way that people in western societies get married several times, serially, before they die. Roof and McKinney estimate that about 40 percent of Americans change denominational affiliation at least once during their lifetime.[2] However, most individuals who change religious affiliations do not experience a major identity shift. Instead, they remain within their faith traditions and move to

a closely related branch of the tradition. While research on conversion traces directly back to William James's classic work, *The Varieties of Religious Experience* (1902), there was a surge of interest in the topic over the past several decades.[3] Much of the research on conversion was influenced by the appearance of controversial NRMs during the 1960s and 1970s. There is little doubt that conversion is the most researched topic in the study of NRMs and that most scholarship on conversion occurred in the past several decades.[4] John Saliba (1990) identified over 200 published articles on conversion by the early 1980s, and virtually all of them were published during the prior decade.[5] As the study of NRMs gained momentum, researchers noted the high rate of membership turnover in most groups, and exploration of the leave-taking process began.[6]

The study of NRMs created an opportunity to reexamine the question of how individuals join and leave religious groups of all kinds, as well as the individual and larger social meanings of such changes. The answers are somewhat surprising and call into question traditional understandings of conversion, specifically whether the process of joining and leaving religious groups is best understood through the theoretical lens of conversion. For that reason the processes of joining and leaving religious groups are referred to here as affiliation and disaffiliation. This approach considers different types and degrees of affiliation and disaffiliation, as well as how much individuals and the groups with which they affiliate shape this process. This approach also gives equal attention to affiliation and disaffiliation; linking the two processes leads to the concept of affiliation-disaffiliation careers.[7] In this chapter I consider, in turn, the affiliation and disaffiliation processes. Following a discussion of the findings on those related processes, I examine the public controversy surrounding NRM affiliation-disaffiliation, the brainwashing-deprogramming debate.

AFFILIATION WITH NEW RELIGIOUS MOVEMENTS

Several questions dominated research on affiliation with NRMs: What is the significance of affiliation for NRMs as organizations? What are the social and cultural influences on NRM affiliation rates? How can the NRM affiliation process be best described? Are there differing degrees of involvement in NRMs? Are there different types of affiliation with NRMs? And what is the balance of individual versus group influence in the affiliation process?

What Is the Significance of New Members for NRMs?

NRMs acquire new members in one of two ways, through birth or affiliation. Since many contemporary NRMs typically formed with a leader and a small coterie of young, unmarried followers, recruiting new members was the main way to grow, at least initially. The most prominent NRMs that appeared early in the 1970s, The Family International (originally the Children of God), the Family Federation for World Peace (the Unificationist movement), and the International Society for Krishna Consciousness (Hare Krishna) all began in this fashion. Each of these

movements grew at a very rapid rate during the 1970s, attaining total memberships of 5,000 to 15,000 members before either reaching a plateau or experiencing a net loss of members. The stagnation of membership growth was largely a product of the decline in numbers in the youth-based counterculture toward the end of the 1970s, which sharply reduced the pool of potential affiliates.

Membership increases can also be achieved through internal growth; that is, a high birth rate. Most movements eventually encourage or permit family formation, but NRMs typically deferred family formation during the movement development process. Once family formation is encouraged, groups may experience a second wave of membership growth if they can retain maturing children's loyalty. Family size in both Unificationism and The Family was larger than in mainstream families, with the result that both movements' size ultimately depended more on procreation than recruitment. By contrast, the Osho movement (originally the Rajneesh) discouraged marriage and childbearing. Had that movement not disintegrated, it would have faced a significant challenge in maintaining growth. During its formative years, the Hare Krishna movement both deferred marriage and childbearing and later was not very successful in retaining children born within the movement. Therefore, the movement's membership base declined as recruitment rates fell off, and many teenage children left the movement. It is not surprising, therefore, that those groups that grew most successfully over the long-term generally succeeded through a combination of procreation and conversion. Historically, the Mormons are a good example, since their extraordinary growth is based on both active proselytization and larger than average family size.

New affiliations confirm for group members the truth and power of their message and way of life. A steady infusion of new members bolsters the confidence of existing members that their movement will succeed and that their own sacrifices for the movement are warranted during the long and arduous process of movement building. Further, convincing others of the truth of the message is reinforcing for the recruiters themselves, heading off any doubts that might emerge. Successful recruitment by NRMs thus energizes groups. Recent converts tend to bring to religious groups intensity and commitment that may have dissipated among longer term members. Particularly given the high membership turnover rates that characterize most NRMs, successful recruitment means that the movements are populated by eager young recruits for much of their early history. Second generation members are likely to be less passionate. One of the dilemmas that religious groups face is how to maintain a high level of commitment in second generation members. The Family International was relatively successful in retaining young adults in the movement, mostly by maintaining distance from the "corrupting" influences of mainstream society and by giving young members a significant leadership role within the movement.[8]

Recruitment success has potentially negative consequences for religious groups as well. Committing members to recruitment campaigns is costly, because the rate of return typically is very low and defers other aspects of movement building that might improve the membership retention rate. When all-consuming recruitment is

required simply to maintain a movement, a likely result is that members will ultimately tire of the incessant effort. The available evidence suggests that where NRMs engage in public recruitment campaigns, they may well have to contact 1000 individuals in order to gain one new member who will remain in the movement.[9] A major problem posed by public recruitment of the kind that NRMs often employed is that it is a nonselective process. New recruits are accepted largely on the basis of willingness to make an immediate commitment to join the group. The source and depth of individuals' interest in the movement, the durability of their commitment, the personal assets and liabilities that they might bring to the group—all remain undetermined for some time.

Another problem that accompanies recruitment success is how to create a place in the organization for new recruits. If recruitment campaigns are successful, at some point there must be viable organizational niches for new affiliates to fill. To the extent that movements devote their primary energy to growth, they often defer building the organization. Ironically perhaps, the push to create growth in the membership may undermine the organizational work necessary to create long-term stability for members. Unificationism solved one aspect of this problem by creating an international network of corporations in which members could find employment within the movement itself, producing a measure of integration between religious and work life.[10]

Finally, where affiliations involve leaving one distinct religious tradition for another, and thus provide a shift in social and cultural moorings as well as personal identity, affiliations are likely to bring the recipient groups into conflict with the institutions (churches, families, political groups) that recruits left. Indeed, conversions have the same potential for divisiveness and conflict that occur when individuals marry across class, racial, or nationality lines. This happened to a number of NRMs that became the early focal point of social opposition, such as Unificationism, The Family International, and Hare Krishna. All three movements became the targets of the anticult movement and governmental efforts to constrain their activities.

What Are the Social and Cultural Influences on NRM Affiliation?

Although theory and research on affiliation focused largely on personal transformation, a variety of social and cultural factors may influence the rate of conversion and affiliation because social and cultural factors influence both the availability of movements and the availability of potential affiliates for them.

During the 1970s the age range of the population was a determining factor. There was a surge in the young adult population. Young adults were more likely to join social movements of all kinds because they had fewer institutional commitments, such as property ownership, occupational careers, marriage, and children, all of which constrain adults just a few years older. Teenagers and young adults also tended to detach from family religious traditions once freed from parental control. The age

groups between 15 and 30 typically had low rates of traditional forms of religious participation, which created the potential for their recruitment by NRMs. It was, of course, precisely in this age group that virtually all NRMs had their greatest recruiting success.

Another factor that influences the availability of potential recruits is the extent to which established institutions can successfully retain the loyalty of their members, how legitimate those institutions are perceived to be, and how effective they are. Much is written on the "cultural crisis" of the 1960s and 1970s. Robert Bellah referred to this crisis in terms of a disruption of the very American civil religion that endowed American culture and institutions with a sacred legitimacy, and Stephen Tipton found a crisis in moral meanings.[11] Survey data from the 1960s and early 1970s demonstrate that this period was one of exceptional alienation from established institutions, including churches. In his analysis of this period Robert Wuthnow argued that, in response to a loss of legitimacy by established institutions, many people experimented with new cultural and social affiliations, which he described as a "consciousness reformation."[12] This, indeed, was a time of great ferment and experimentation.[13] If NRMs, New Age groups, communal groups, and intentional communities are combined, there is little doubt that the decade between 1965 and 1975 witnessed the greatest outpouring of collective experimentation in American history. Alternative groups of diverse kinds were appealing to American youth, whereas under other conditions they might have been less attractive. During the early 1970s, the combination of a large pool of young adults and alienation from established institutions yielded a steady supply of potential recruits for NRMs.

But movements must also be available for growth to occur. In the case of contemporary NRMs, two factors were especially importance. One was the influx of Asian movements in the wake of the *Immigration Reform Act of 1965* that eliminated decades of severe restrictions on Asian immigration. The result was a surge of Asian immigrants and the establishment in the United States of a number of traditional and new Asian religions. These Asian religions were attractive to potential affiliates since they offered a profound critique of Western culture at the very moment that there was a pool of alienated young adults exploring cultural alternatives.[14] As cultural outsiders, these Asian movements both attracted great interest and provoked sharp opposition. The other element of movement availability involves the movement's ability to grow wherever they are planted. This quality is substantially influenced by the strength of traditional, mainstream religious institutions in a given location. In the continental United States, NRMs were most successful on the West Coast, where established religions traditionally were weakest. Many movements started in that region, then gradually spread to other parts of the country. Ironically perhaps, immigration also sometimes altered NRMs. Hare Krishna is an interesting case. That movement started largely with a youthful American membership. However, Indian immigrants who often lacked access to Hindu temples discovered the movement, and Hare Krishna gradually moved in the direction of becoming an ethnic tradition for diasporic Indians.

What Is the Meaning of Affiliations with New Religious Movements?

One of the central questions that has intrigued NRM scholars is how to understand the ways that individuals affiliate with NRMs. Such dramatic shifts in identity and loyalty have a mysterious and threatening quality about them. Among the various explanations, two of the best involved focusing on the shift in social networks and the shift in personal identities.

Work by John Lofland and Rodney Stark examined the shift in social networks.[15] Based on their early participant observation research on the Unificationist movement before it achieved its rapid growth in the 1970s, Lofland and Stark developed an influential explanation for affiliation with religious movements. They argue that individuals initially are predisposed to religious seeking because they are dissatisfied with their present lives. Individuals might respond to this tension in a variety of ways, such as entering secular therapy, making new friends, or altering their lifestyle. However, if individuals identify the problem as spiritual in nature, then they are adopting a "religious problem-solving perspective." Having defined the problem in religious terms, individuals are then likely to engage in religious seekership if they are dissatisfied with their current religious affiliation. In addition, individuals are most likely to identify a specific group with which to affiliate if they perceive a cultural connection between their own world view and that of a specific group they have encountered.

Even if dissatisfied with their lives, individuals will initially pursue solutions to their life problems very diligently in the face of disappointment. They become more motivated to change their relationship networks when they exhaust all possibilities for satisfaction or success within their current relational networks. At this juncture they reach what Lofland and Stark designate as a "turning point in life." They now become more open to creating social bonds with members of the new group they have discovered. In bonding with a new group, Lofland and Stark observed that, for Unificationism at least, people commonly created emotional bonds with other movement members before accepting group doctrines; they also observed that preexisting friendship networks were a primary source of such bonds. As ties with the new group were strengthened, individuals correspondingly weakened their previous relationship bonds, in part to avoid conflicts with friends and family. Lofland and Stark assert that at this point in the affiliation process individuals are symbolically attached to the group, professing belief and receiving acceptance. However, the process is not complete until intensified involvement within the new group solidifies the individuals' commitment beyond verbal professions of faith. In sum, then, from Lofland and Stark's perspective, the process of joining NRMs consists of a shift in their relational networks.

David Snow and Richard Machalek describe NRM affiliation as a reconstruction of personal identities.[16] If individuals want to join a new group that operates on the basis of a very different mythic system and conceives of individual essence in a radically new way, then recruits must jettison their old identity and create a new self that is consistent with group beliefs (biographical reconstruction). Recruits who

reconstruct their identities are likely to be single-minded in the sense that they see the cause of events, their own actions, and others' actions as attributable to a single cause, such as divine will or sinfulness. The other significant attribute new recruits exhibit is the replacement of metaphorical with literal reasoning, so that recruits think that they possess absolute truth. Put another way, recruits move from a relative to an absolutist perspective on the world. Finally, recruits embrace the convert role by redefining their personal interests as identical to collective interests of the group.

Lofland and Stark as well as Snow and Machalek explain affiliation with religious movements from different perspectives, the former from a shift in social networks and the latter as a transformation of the self. Lofland and Stark view symbolic identity (pledges and commitments to the group) as emerging out of the social relationships forged between individual and group. Snow and Machalek conclude that a joiner's adoption of a role in the group emerges out of a redefinition of the self. These two theories thus raise a number of intriguing possibilities. Since both theories have many components to the process of affiliating with an NRM, people clearly exhibit varying degrees of involvement in NRMs. Conversion is the final step in a sequence and may or may not occur in any given case. The two theories suggest that a redefinition of one's self and an involvement in an NRM's social network are critical, although each emphasizes one over the other. However, taken together the two theories suggest that joiners can do the work of self-redefinition without becoming deeply involved in an NRM social network or the reverse. This implies that joiners can follow different types of affiliation. Finally, both theories suggest that joiner and group each play a role in the process. If so, of course, the way that the process operates may vary by group. It is precisely these issues that have been explored in other research on conversion.

Are There Different Degrees of Involvement in NRMs?

If conversion incorporates both the identity transformation delineated by Snow and Machalek and the social network transformation described by Lofland and Stark, research suggests that many, and probably most, instances of joining NRMs do not meet that standard. Individuals may make the kind of verbal professions of faith that are expected by the group but may not experience the kind of internal transformation that is conveyed by the concept of conversion. Alternatively, recruits may participate in rituals and organizational activities without any transformation occurring. A number of scholars suggest precisely these kinds of possibilities. Richard Travisano, for example, distinguishes between conversion and alternation.[17] According to Travisano, the two processes are qualitatively different: conversion involves the complete disruption of a previous identity, while alternations consist of lesser transformations of identity that can be accomplished within the individual's existing "universe of discourse." Other scholars draw similar distinctions, such as conversion and adhesion and conversion and consolidation.

Research evidence suggests that NRMs are populated by individuals with varying degrees of involvement. Bromley and Shupe found that individuals who joined the

Unificationist movement were typically attracted by any of several factors: one specific aspect of the movement theology, a specific member with whom they identified, or a communal group living arrangement.[18] Their involvement was limited as they tended to act out movement role expectations in order to fit into the group, and they varied significantly in their acceptance of group doctrines. Most never moved past this initial level of involvement, which suggests a pattern of alternation rather than conversion in most cases. Some members did move toward core member status, embedding themselves in the communal group, learning and accepting the complex theology, and enacting movement defined role expectations. However, the overwhelming majority simply dropped out within a few months.[19] Far from being monolithic, NRMs tend to be composed predominantly of new recruits with different levels of involvement and a substantial coterie of members who are in the process of leaving. In the initial stages of their development, most NRMs probably have a relatively small number of core members. Verbal professions of commitment and conformity with role expectations mask this diverse and unstable mix.

Are There Different Types of Affiliation?

Connection to the group takes different forms. Several social scientists have explored this possibility. One of the most useful analyses of participation in NRMs was constructed by John Lofland and Norman Skonovd.[20] They identify six types: intellectual, mystical, experimental, affective, revivalist, and coercive. In intellectually based affiliations, individuals experience little social pressure as they privately explore the group's doctrine through written materials or lectures. This process of intellectually exploring the movement's beliefs is likely to take place over an extended time and produces a sense of illumination as the person connects intellectually with movement doctrines. As a result, those who enter a group intellectually accept the movement's belief system prior to actually participating in the group. Mystical affiliations come the closest to fitting the traditional conception of a religious conversion as an instantaneous, radical transformation of individuals that permanently changes their sense of reality. The archetypal transformation of this type in Christianity, of course, is Saul, who experiences a radical transformation on the road to Damascus and becomes the disciple Paul. In mystical conversions the group does little to determine the outcome. Instead, individuals in a transformative moment are overcome by feelings of awe, love, and fear in some combination and rededicate their lives to what they understand to be a divinely ordained purpose. Again, a change in beliefs precedes a change in behavior. A closely related form is the revivalistic affiliation, which resembles the mystical conversion in most respects. The distinguishing feature is that group pressure is high as potential members are urged to make a choice that will save their souls. The revivalistic affiliation therefore has a greater component of fear than an unmediated mystical encounter with the divine.

In sharp contrast to mystical affiliations, experimental affiliations take place over an extended time period, often weeks or months. However, like mystical affiliation, there is little substantial group influence. People in this mode are motivated by

curiosity to explore participation in the group, and they only gradually come to accept group beliefs. Those who join from affective motivation are like experimentalists in that they also are drawn to a movement on a basis other than its beliefs, in this case feelings of caring, support, admiration, or a sense of community. In the affective situation, group pressure and emotional involvement are more intense than experimental conversions. Internal group bonds draw the individual into an increasingly closer relationship to the group and its members.

Lofland and Skonovd assert that coercive affiliations are rare. However, if they did occur, they would resemble the brainwashing process that is described later in this chapter. This would require intensive, long-term pressure by the group based on fear for one's personal or spiritual safety, a set of characteristics that most scholars who study NRMs conclude are not typical of the NRMs they observed. Acknowledging that people join these movements by different means is critical to understanding these movements. The diversity of entrees into NRMs indicates that viable brainwashing explanations are unlikely. This diversity also suggests that members are connected to NRMs in different ways.

What Is the Balance of Individual and Group Influence in NRM Affiliations?

There has been a sharp debate over the extent to which affiliations with NRMs are the product of individual choice or are the result of group and environmental influences on them. The overwhelming majority of NRM scholars rejected the "mind control," "coercive persuasion," "brainwashing" explanations for affiliation that minimize individual initiative in the process, and adopted explanations that attribute primary agency either to the "religious seeker" or to an interactive relationship between seeker and group.

In *Radical Departures* Saul Levine interviewed over 800 individuals who joined NRMs.[21] He concluded that his respondents were active agents who wanted to break free of parental control and forge their own independent identities. Their actions indicated individualism and autonomy, albeit through dramatic means. Consistent with other findings on NRMs, most left the NRM within two years and resumed more traditional lifestyles. Roger Straus highlights the seekership process in which a potential joiner engages.[22] According to Straus, religious seekers search their personal networks and the mass media looking for potential religious choices. They then refine their search and begin experimenting with one or more religious groups. As part of their experimentation, they learn appropriate insider language and symbolic frameworks used in NRMs. They then engage in "bridge-burning acts" through which they create distance from former relational networks. In some cases they go on to actively represent the group and solicit other potential recruits.

Several researchers who began their research utilizing passive models of joining subsequently shifted in the direction of more activist models. James Richardson and his colleagues initially utilized a "thought reform" model based on Robert Lifton's work in studying the Jesus Movement but concluded that the data did not

conform to that model.[23] Richardson eventually became a staunch advocate of a more activist perspective.[24] Lofland and Stark's initial and highly influential theory of conversion based on research on the Unificationist movement presumed a passive actor subject to a variety of social forces.[25] Lofland later actively encouraged students and colleagues to adopt a more activist model of conversion.[26] A few other researchers moved in the opposite direction, but this position has not been widely adopted by scholars of NRMs.[27]

The emphasis on individual initiative in how people join NRMs should not obscure the capacity of groups to socialize their members. Abundant evidence points to the fact that groups have the capacity to shape members' behavior in sometimes profound ways.[28] However, individuals do seek out groups, participate in their own socialization, and retain their capacity for making choices. Were this not the case it would be difficult to explain the process of leaving.

Leaving NRMs

Social scientists use a variety of terms to refer to leaving a religious organization or tradition (exiting, withdrawal, defection, deconversion, leave-taking, apostasy, disengagement), but there are only a few dozen studies on this topic compared with the hundreds on how people join. Scholars initially focused on the joining process because the popularity of NRMs was unexpected in light of social scientists' predictions of continuing secularization of society and in response to claims by anticult movement activists that NRM members were brainwashed. As research on movement development proceeded, it became apparent that for most people NRM membership was temporary and experimental. This finding heightened interest in determining how often, and in what manner, people left NRMs. Three of the major questions related to leaving NRMs are as follows: What is the significance of leaving for NRMs? What factors cause it? And what is the nature of the process?

What Is the Significance of Leaving NRMs?

The loss of adherents is just as important as the gaining of new members in the initial stage of NRM development, because growth occurs only if joiners outnumber those who leave. While a number of NRMs experienced extremely rapid growth when they initiated aggressive recruitment campaigns, most also continuously lost members. Eileen Barker found that of those individuals who agreed to attend a Unificationist movement sponsored workshop (a small percentage of the individuals whom recruiters approached in public places) a mere five percent were affiliated with the movement on a full-time basis a year later.[29] Galanter reported similar results in his research on Unificationism: only six percent of affiliates remained four months after recruitment.[30] In both studies individuals left within days or weeks. Although no systematic data on leave-taking exists for most contemporary NRMs, apparently the rate of defections varied between 50 and 100 percent annually during the NRMs' high growth periods. This means, of course, that NRMs grew only as long as

recruitment rates remained very high. As soon as recruitment rates fell, movements decreased in size and also had fewer members to deploy for recruitment or other movement activities to stem these losses. This reversal of fortunes eroded members' confidence in the ultimate success of the movement and the wisdom of their personal sacrifices for the cause. A good example is the early history of Heaven's Gate. After a period of initial success in recruiting, the group leaders ("Herf" Applewhite and Bonnie Lu Nettles) went into seclusion and sent members in small teams to recruit new members. However, in the absence of their leaders, members were unsuccessful in recruiting; discouragement, dissension, and defections soon followed.[31]

The loss of members may have different implications for NRMs, depending on who the leave-takers are and how and why they choose to leave. In some cases individuals leave independently of one another over a period of time. By contrast, the Branch Davidian movement, which recruited whole families during that movement's growth years, later lost whole families when discord broke out within the group. The impact of whole families leaving on this NRM was immediate and substantial. The effects of membership loss on a group also depend in part on the identity and standing of those who leave. For example, in the Hare Krishna movement, when an initiating guru left, devotees of that guru usually did so as well. The loss of leading figures can change the direction of an NRM. In the early stages of Scientology's development, members disagreed over whether to treat practitioners' reports of experiences in past lives as credible. Scientology founder L. Ron Hubbard's decision to treat these reports as valid not only alienated several of his close associates but also was one of the reasons that Scientology declared itself a religion rather than simply a therapy. In some cases loss of members can pose a political threat. In 1973 a group of young adult members of Peoples Temple, called the "gang of eight," left the movement. They assailed Jim Jones for his alleged racism and unorthodox socialism, and movement leaders feared that the defectors would go public with their accusations and bring the socialist leanings of the group to the attention of governmental authorities.[32] Membership turnover may have some positive consequences for NRMs under certain conditions. One positive effect is that turnover increases the opportunities for recent recruits to assume leadership positions, particularly as established members leave. Membership turnover also creates the potential for change in NRMs when members with vested interests in current policies and relationships leave. Of course, the reverse can also occur if high ranking leaders use the exit of midlevel leaders to consolidate their own power. Finally, membership turnover creates a base of recent recruits who bring energy to a movement and increase movement solidarity. In some cases movements deliberately discouraged potential new recruits. Jones tried to create defections so that the Peoples Temple would develop the kind of radical solidarity he viewed as necessary for the sacrifices that members would be required to make.[33]

What Factors Lead to Leaving NRMs?

Case studies of NRMs identified many factors that lead people to leave NRMs. These include challenges to charismatic authority, continuing demands for

individual self-sacrifice for the NRM, crises and scandals within the NRM, and a breakdown of NRM solidarity.[34]

Charismatic authority in an NRM can be undermined in a variety of ways. One potentially threatening event is the death of the founder-leader. While movements typically succeed in surviving the founder's death, there sometimes are membership losses in the transition.[35] This occurred in the Hare Krishna movement at the death of Prabhupada in 1977. No other leader could match his charismatic authority, and some members drifted away from the movement. Another potential source of conflict is prophetic failure, which erodes members' convictions in the truth and power of the NRM's message. In the case of the Movement for the Restoration of the Ten Commandments in Uganda, the failure of predicted apocalyptic events in 2000 precipitated rebellion by members, defections, and demands for repayment of donations. In this macabre case, movement leaders actually murdered several hundred members in response to the rebellion.[36] Another type of threat to charismatic authority occurs when movement leaders conclude that their control over their followers is compromised. When a set of upper echelon leaders began pursuing policies that The Family's founder, Moses David Berg, decided were contrary to his instructions, he demoted many of them.[37] Some of these leaders left The Family and became its public opponents.

Some NRMs tried to strengthen group solidarity by requiring various types of self-sacrifice. One of the most common forms is regulation of individuals' sexual relationships. Particularly in communally organized groups, mandating either celibacy or free love has the effect of thwarting relationships that would diminish individuals' primary loyalty to the group. In the early years of Hare Krishna, for example, being a renunciate devotee was regarded as the highest status in the group and "householders" (married men) were regarded as having lesser commitment. Similarly, Unificationism members were required to invest several years in the movement as "brothers and sisters" before being eligible for blessing (marriage) by Rev. Moon. Blessed members typically lived apart, once they were married, resuming their missionary work. Some members were unwilling to make the personal sacrifices required by the movement and left while others engaged in secret sexual liaisons that led to their exit or expulsion. By contrast, during one period of its history, The Family adopted the practice of "flirty fishing," where members (usually female) tried to recruit new members by demonstrating God's love for them through whatever means were necessary. In many cases women in the group had flirtatious or sexual relationships with potential converts. Many members left The Family International when this practice was announced and when individual women felt pressured to participate.[38]

Defections also occur in response to scandals. Janet Jacobs (1989) reports numerous cases of members becoming disillusioned when they learned that leaders who enforced demands for celibacy on followers had secret sexual relationships themselves.[39] This was particularly alienating when the followers believed that they were the sole object of leaders' affections.[40] For the Branch Davidians, one of the factors that led some members to seek outside intervention against David Koresh was his sexual involvement with young girls as part of an initiative to create the House of

David, children fathered by the messiah. In another case leaders of one branch of the Hare Krishna movement were discovered to be financing their activities by distributing illegal goods, encouraging devotees into prostitution, and dealing in illegal drugs. Although the leaders were punished, the result was member disillusionment with what they regarded as inexcusable moral turpitude.[41] In the Unificationist movement, revelations that Rev. Moon fathered a child out of wedlock produced cynicism and defections among followers who had remained celibate for years at his request.[42] Although such scandals do not necessarily produce immediate defections, they often lead members to reassess their commitments and then decide later to leave the NRM. When members feel they were personally betrayed, they sometimes become public opponents of NRMs once they leave and get either public sympathy or support from governmental agencies to launch investigations of their allegations.

If movement solidarity breaks down, people will leave a NRM. One relatively widespread practice in NRMs was to expand the movement to new parts of the United States or to other nations so that NRMs could proclaim their global status. When individuals or small teams of individuals were sent abroad, as both The Family and Unificationists did, their contact with other members and the group's daily lifestyle was broken.[43] Under these conditions members may gradually drift away from the NRM or realize that life outside of the NRM is more pleasurable to them. In a slightly different scenario, the leaders of Heaven's Gate at one point informed members that they themselves were leaving, and instructed small groups of members to operate on their own. The result was that once members lost contact with the NRM and its leadership, defections began to occur rather quickly. Connection to an NRM is also weakened when members must engage in external employment in order to finance the NRM. This occurred in Hare Krishna and Love Family, resulting not only in weaker individual ties to the movement but also economic inequalities that alienated those with fewer resources.

What Are the Explanations for Leaving NRMs?

The explanations for leaving NRMs are similar to explanations for joining. Again, some researchers emphasized a change in social networks while others focused on a shift in personal identity.

Bromley describes the process in terms of leaving the organization and reintegrating into conventional social networks.[44] This process begins with "disinvolvement" based on doubt about NRM membership. Doubts may occur over doctrinal disagreements, feelings of alienation, or disagreements over principle. Of course, a degree of ambivalence is common in all social relationships and is common in struggles for spiritual growth. As a result, first doubts are likely to be handled by resorting to repression, avoidance, or rationalization. If doubts recur or intensify, members may begin to distance themselves emotionally, symbolically by modifying distinctive dress or language, or socially by strengthening relationships outside of the group. NRMs counter these practices with either sanctions or encouragement, which may temporarily interrupt the leave-taking process, or the individual may find a niche

within the NRM that eliminates the source of conflict. Indeterminacy may continue for awhile, however, since individuals may, for example, continue to accept movement doctrine even while rejecting what are perceived as immoral actions (such as financial or sexual improprieties) by some members or leaders.

If over time a resolution is not found, the leave-taking process moves to the pivotal stage, "precipitating event." A member's continued dissatisfaction creates tension within the group as well as personal tension for the member who is unhappy with the NRM. That tension must constantly be managed on both sides. Therefore, at some point the individual must either overcome his or her doubts or take steps leading toward a break with the NRM. In many cases the precipitating event appears to be trivial to outside observers, but for the person, and perhaps the group, that event symbolizes a conflict that cannot be resolved. The precipitating event, such as a simple disagreement over a work assignment or a personal relationship, provides the impetus needed to propel the person across the membership boundary and into the stage of "separation."

For the large number of NRM members who were merely experimenting with NRM membership, the transition back to life in the mainstream may be relatively easy. The separation stage is filled with personal turbulence for longer-term members who were more deeply invested in the group. They face rejection by their former colleagues, ambivalence about their own decision, and uncertainty about reentering relationships they had rejected in favor of the NRM. Such individuals frequently experience a sense of personal failure, loss of community, and severe feelings of anxiety and panic. These problems tend to gradually moderate over time if individuals can rejoin conventional society, but it is not uncommon for former members to seek out counseling or ex-member support groups to ease this transition.

Skonovd describes the leave-taking process in terms of successive withdrawal of self-identity from a movement.[45] From this perspective, leaving begins with crises brought on by factors internal to the movement (disruption of the movement environment or isolation from the movement, interpersonal conflicts within the movement, or exhaustion of energy and commitment) or external factors (the lure of educational or employment opportunities or affective ties with family and friends). These conflicts precipitate a reevaluation of one's NRM identity and commitment, which may be met with various types of psychological coping mechanisms (avoidance, rationalization, withdrawal from the conflict). Lack of resolution moves the individual to a state of disaffection, and the individual develops rationales for further disengagement from the NRM. With the emotional bond now severed, the individual makes the decision to withdraw and develops a plan for leaving permanently. Following withdrawal, the individual is involved in cognitive transition between the NRM and conventional society. Cognitive reorganization paves the way for reintegration into a conventional lifestyle.

These two explanations for leaving show that the process of separating from a NRM is as complex in nature as joining a NRM. The process involves both social separation and identity separation. While these two processes typically occur in tandem, that is not necessarily the case. It is not uncommon for NRM members to

conclude that the NRM betrayed its own ideals and the members withdraw from active involvement while continuing to believe in the doctrine and the rightness of the NRM. In other cases members become extremely disillusioned and psychologi-

organizations (NGOs) and takes part in governmental and private sector initiatives focusing on issues of concern to the Church.[127]

From its earliest days, the Church of Scientology understood that it could amplify its voice in national and international policy debates, as well as to market its services, through businesses, organizations, or interest groups that had no visible ties to the Church. Church critics today list more than 100 such front organizations,[128] although this figure seems greatly exaggerated. Some of the Church's service groups do not carry the name Scientology in their titles, but are well known as Church organizations. These service groups, housed since 1988 under the aegis of the Association for Better Living, include Narconon (founded in 1966) and its sister organization Criminon.[129] By the 1990s, these programs were thriving international concerns whose Web pages do not obscure the involvement of the Church of Scientology.[130] More controversial is the Applied Scholastics curricular development program, which has met with some resistance in the United States, but which is global in scope.[131]

The Citizens Committee on Human Rights (CCHR) inhabits more of a grey area.[132] This organization was established by the Church in 1969 to spearhead the Church's offensive (or more accurately perhaps, counteroffensive) against the psychiatric profession. This is the cause that Scientologists invest with their greatest passion, and today, as its high tech multimedia Web page indicates, is a full fledged global offensive peopled by concerned citizens and survivors or relatives of "psychiatric abuse" real or imagined. How many of these members or subscribers are Scientologists is impossible to estimate. The bottom of the top page of the CCHR Web site carries, in small letters, the line: "Established in 1969 by the Church of Scientology." The top page also carries in much bigger boxes links to every region of the world. It is significant that the top page also (as of July 2005) offers a lavish 48-page report available for download in PDF format titled "Harming Artists" with a picture of the late singer Kurt Cobain.[133] Twenty more of these reports, including one on the CCHR organization itself, and others on such topics as the damage done by psychiatric drugs, the responsibility of psychiatry for racism and terrorism, and sexual abuse of patients perpetrated by psychiatrists, are available as well.[134]

The most public and most resonant front in this, the oldest battlefront of the Scientology wars is that which pits Scientologist artists against the psychiatric profession. In 2005, for example, almost four decades after the founding of the CCHR, actor Tom Cruise made international headlines with his outspoken criticism of the psychiatric drug Ritalin. In one interview, Cruise achieved more publicity for a critical tenet of Scientology belief than all of the Unification Church's academic conferences put together. The general public was not greatly moved by Cruise's arguments —especially when he focused criticism on actress Brooke Shields for taking the drug for postpartum depression. But the issue suddenly became front-page news when it became the focus of discussion in major newspapers and national news programs around the world.[135]

The Church's organizing zeal hardly stops with organizations like the CCHR. Scientology's takeover of the Cult Awareness Network (CAN) was noted above, but

CAN's current Web pages say almost nothing about the Church of Scientology's involvement, and its continued use of the CAN name might well be construed as deceptive. When the takeover occurred, a number of recognized academic authorities were approached to become Board members by Nancy O'Meara from Scientology's Church of Spiritual Technology. None of these Board members remain today, according to the CAN Web page accessed in July 2005:

> The Board has consisted of from 5–9 people since the beginning of the organization. The Chairman of the Board is a Baptist minister named George Robertson. The Secretary of the Corporation was originally Mark Lurie a member of the Movement for Spiritual Inner Awareness. It is now Stan Koehler a Buddhist. The Treasurer of the Corporation is Nancy O.Meara [sic], a Scientologist. Other Board members include a woman with a degree in psychology and man who is Jewish.[136]

The identification of Ms. O'Meara is the only time the term "Scientology" appears in the CAN top page.[137]

Other Scientology front groups that seem to be less than overt include Ebony Awakening (a putative African-American civil rights group),[138] the Concerned Businessmen's Association of America,[139] and the World Literacy Crusade.[140] All may do laudable work, but none carry any clear identification with the Church, and all are given generic titles. The uninformed might think these organizations have no connection to the Church and might join the group in the belief that they are taking part in an independent interest organization focused on an issue that is important to the new member.[141]

Scientology's Celebrity Centers are arguably the most important Church organizations. The Church lists 13 such centers, with the mother ship located naturally enough in Hollywood. All offer the normal range of Scientology services, but with additional courses designed specifically for artists in every field.[142] Whether a result of living in Los Angeles during the golden era of Hollywood, or because of it may have been evidence of the genius of L. Ron Hubbard, or because it may be yet another example of the Americanness of the Church, as early as 1955 the Church focused on serving celebrities great and small.[143]

The Church was strikingly successful in bringing actors, musicians, writers, and artists from a number of fields into the fold, and it has gained much from the association. Conversely, much of the literature, and virtually all of the press coverage, centering on the celebrity Scientologists is strikingly negative, with the Tom Cruise vs. Brooke Shields Ritalin debate and the actor's using the publicity tour for the "War of the Worlds" film to publicize his Scientology beliefs only the latest chapters in an ongoing saga.[144] But lost in the debate is the fact that whatever the merits of Scientology's religious technology or whatever the depth of its theology, for these very successful people, Scientology works. It hardly seems to detract from their art, and given the tabloid nature of life in the spotlight,[145] celebrity Scientologists appear to lead rather exemplary lives.

They also make a great deal of money. Recall the American nostrum that we value most that which is purchased most dear. Scientology definitely does not provide its

services for nothing. But of greatest value of all to the Church, in a culture of celebrity, fame opens the doors of power. Thus, celebrity Scientologists have found the ear of the rich and the powerful, and are able to lobby for Scientology causes with greater effect than, say, Rev. Moon's professors or the Family's attractive but anonymous Flirty Fishing women. In the forefront of these efforts, working with professional lobbyists in battling the European anti-Scientology legislation, and in the halls of the American Congress (and the Clinton White House, unsurprisingly), such high profile Scientologists as Isaac Hayes, John Travolta, and Chick Corea have made considerable impact, although they have not enjoyed a great deal of success outside the United States.[146] In this as in virtually every other aspect of the Church, Scientology anticipated the processes of globalization with uncanny prescience.

A THEORETICAL REPRISE: WHAT HAVE WE LEARNED?

The dominant thesis regarding the contemporary process of globalization is synthesized neatly by Peter Beyer:

> The globalization thesis posits, in the first instance, that social communication links are worldwide and increasingly dense. On perhaps the more obvious level, this means that people, cultures, societies and civilizations previously more or less isolated from one another are now in regular and almost unavoidable contact. This leads to a twofold result. On the one hand, we see the conflicts that arise as quite diverse and often contradictory cultures clash within the same social unit. On the other hand, globalizing sociostructural and cultural forces furnish a common context that attenuates the differences among these ways of life.[147]

Deriving from the observation that the quickening pace of interaction brings previously isolated individuals, social groups, and cultures into increasingly intimate contact is the idea, also posited by Berger and Huntington, that "…increasingly there is a common social environment shared by all peoples on earth, and that this globality conditions a great deal of what happens here…"[148] Globalization theory therefore suggests a marked degree of discontinuity between what *was* then and what *is* now.[149] The three cases that we have discussed here—the Family, the Unification Church, and the Church of Scientology, however, do not seem to fit so easily into this paradigm. Particularly for the latter two, much continuity exists between the Cold War then and the globalized now. To understand why, we must descend deeper into globalization theory.

Beyer points out that the globalization thesis is built upon the framework of the modernization thesis, which holds that in the Western world, radical social changes have brought about a new type of society with the following characteristics:

1. a capitalist model and modern intuitional base which has been exported throughout the world;
2. the nation-state model;

3. the ascendance of scientific rationality as a *zeitgeist* [world view] which underpins the explosion of modern technology; and most important
4. the emergence of a "new social unit that is much more than a simple expansion of western modernity."[150]

Implicit in the modernization thesis is homogenization. Think again of Hunter's image of a global elite jetting around the world, but in every country landing in identical airports, staying in international hotel chains, and meeting in interchangeably decorated board rooms.[151] Applied to religion, Beyer says that under globalizing pressures to homogenize, religious globalization must follow one of two possible paths. On the one hand lies the particularist path—the view that the fundamentals of a religious tradition are unchanging, and that extrinsic changes in response to globalizing pressures will be viewed and adapted to the tradition through the lens of a particular religious faith. Down this path lies religious "fundamentalism" and perhaps Samuel Huntington's dreaded "clash of civilizations."[152] More hopeful from Beyer's point of view is a universalist (my term) response that embraces global culture.[153] Noting that globalization in the western world is an indigenous process culminating centuries of sociopolitical development while in the rest of the world it is an exogenous process, imported and in a very real sense imposed by the political, economic, and cultural power of the West, Beyer sees both the globalizing and particularizing paths as likely, with the reaction of a given religious tradition conditioned on the geography and stage of development of the society being impacted by global culture.[154]

Which brings us to the point at which we began this study: how is (if at all) the globalization process reflected in NRMs in general and in our three case studies in particular? Lorne L. Dawson provides the best capsule summary of the sociological literature beginning with the secularization debate and leading through the literature on cults to the literature on globalization. However, most pertinent to this discussion is a point to which Dawson only alludes: with modernity there has always been a persistent substratum of seekers whose quest is to "remagicalize" the world.[155] Going further, as Colin Campbell stated so well in the early 1970s, in every society there is a "cultic milieu" of seekers whose quest for ultimate truth produces a diffuse oppositional milieu which will resist assimilation into the dominant culture.[156] Ironically, the revolution of communications technology that fuels the processes of globalization has served to bring this oppositional milieu into greater contact with the dominant cultures than ever before.[157]

What does this mean when applied to our three case studies?

The Family certainly appears to bear out the homogenization (or universalist to use a more amenable term) thesis. Having emerged from their antinomian period in the post–David Berg era, the group increasingly resembles an apocalyptic Christian communal group that operates on a global scale. They seldom proselytize, while the practice of internal sexual sharing appears to be limited to consenting adults, and not extended to children, prospective converts, or even to new members of the group. The organization is dealing with—albeit with difficulty—the immense

damage that was done to the children growing up in the Family during the antinomian period.[158] Their theology remains imprinted with the American experience, but given the fact that Americanization is so much a part of the globalization process, this is hardly a handicap. Moreover, with the creation of the Family Care Foundation that claims to offer relief services in over 50 countries,[159] the radical makeover of the group from a true cult to a religious NGO appears to be well underway. This would seem to be a case of Beyer's homogenization of a religious tradition via the process of globalization writ large.

Although the process is far less advanced, the Unification Church, too, seems to bear out the universalist/homogenization thesis—a process that will undoubtedly accelerate when Rev. Moon passes from this world into the heavenly regency currently occupied by his son, Hueng Jin. Like the Mormons before it, the Unification Church has become increasingly mainstream in the United States. Through the *Washington Times,* the Church has a voice in public affairs in Washington, D.C., the American capital, and it is becoming increasingly hard to differentiate from other elements of the Republican faith-and-values coalition. Its academic outlets teach a curriculum not much different from those of secular universities, and its theology in the post-Moon era will, like that of the Family, become ever more difficult to differentiate from that of any other conservative Protestant denomination.

For both the Family and the Unification Church, the key to their following Beyer's homogenization in response to globalization strategy lies in their Christian roots, to which they are inevitably returning. Evangelical and Pentecostal forms of Christianity are, after all is said and done, the United States' most successful global religious export.[160]

Scientology, on the other hand, has not responded to the pressures of globalization by becoming universalist in any sense of the term. Scientology mirrors many of the facets of global culture less as a reaction to the process of globalization than as a result of having *presaged* these processes long before they came on the radar screen of academic theorists. Scientology—so deeply immersed in the business, entertainment, communications, and global politics of globalization—remains nonetheless as deeply oppositional as it was in the heady days of the original Sea Org, sailing seemingly aimlessly over the seas under the idiosyncratic command of L. Ron Hubbard himself.

When, in some not so distant future, the Family and the Unification Church have become indistinguishable from, say, a fundamentalist/evangelical campus ministry like the Campus Crusade for Christ, Scientology will remain, unique and alone, zealously guarding its patents and scrutinizing with an eye on legal redress every word said or written about them. Sea Org members will look forward to fulfilling every clause of their 100,000-year contracts, and a new generation of celebrities will sing the Church's praises, while new generations of disillusioned apostates will carry on the battle against a faith in which they have invested so much. Should the entire world become a virtual monochrome dream of look-a-like franchises run out of identikit corporate boardrooms, and should all of the world's governments find common cause—at least in the interest of preserving the power of local elites—there will always be a Church of Scientology to look into the distant future and see another

way. In a fascinating irony for this most American of faiths, the emerging global culture that the Church in so many ways portended will not be the kind of place where Scientologists, with their passion for privacy, secrecy, and the primacy of intellectual property will find amenable. They remain defiantly particularist in the face of global homogenization, and for that even their severest critics might one day find something about the Church to grudgingly admire.

NOTES

1. For success stories, see Timothy Miller, *When Prophets Die: The Postcharismatic Fate of New Religious Movements, SUNY Series in Religious Studies* (Albany: State University of New York Press, 1991).

2. Microsoft Encarta Reference Library 2003.

3. For an important theoretical treatment of new religious movements and globalization, see Lorne L. Dawson, "The Cultural Significance of New Religious Movements and Globalization: A Theoretical Prolegomenon," *Journal for the Scientific Study of Religion* 37, no. 4 (1998): 580–96. Not atypically for *JSSR,* the article is important but not for the faint of heart or the sociologically challenged. Once girded by Dawson to come to grips with theory, however, the essential volume is Roland Robertson, *Globalization: Social Theory and Global Culture* (London: Sage, 1992).

4. Even this assertion is not new. Virtually every text on globalization and religion opens with this mantra. For example, John Wolffe, *Global Religious Movements in Regional Context,* vol. 4, *Religion Today* (Aldershot, Hants, England; Burlington, VT: Ashgate, 2002), 1.

5. Peter L. Berger and Samuel P. Huntington, *Many Globalizations: Cultural Diversity in the Contemporary World* (Oxford: Oxford University Press, 2002), 6.

6. For a good description of the process, see Irving Hexham and Karla O. Poewe, *New Religions as Global Cultures: Making the Human Sacred* (Boulder, CO: Westview Press, 1997), 41–58.

7. For an insightful essay that discusses the historical dynamics that underlie the modern process of religious globalization, see José Casanova, "Religion, the New Millennium, and Globalization," *Sociology of Religion* 62, no. 4 (2001): 415–42. On the history of Christianity, the universe of texts is almost unlimited, but I have always been partial to Williston Walker, *A History of the Christian Church,* 4th ed. (New York: Scribner, 1985).

8. For a capsule history of the group, see J. Gordon Melton, *Encyclopedia of American Religions,* 4th ed. (Detroit: Gale Research, 1993), 292–93. The most recent history of the Family by William Sims Bainbridge is highly recommended, although it is strangely silent on the aspects of the history of the group that the Family would rather see fall down the memory hole. See William Sims Bainbridge, *The Endtime Family: Children of God* (Albany: State University of New York Press, 2002). The early participant observer research of David Van Zandt is the best starting point in researching the Family; David E. Van Zandt, *Living in the Children of God* (Princeton, NJ: Princeton University Press, 1991). On the Web, see Religious Tolerance.Org http://www.religioustolerance.org/fam_love.htm; and the Religious Movements Homepage http://religiousmovements.lib.virginia.edu/nrms/Family.html. On the memory hole itself, see the two "Pubs Purge" documents from 1991 and 1996, http://www.exfamily.org/pubs/misc/pubspurge.shtml.

9. Gordon Melton, "The Modern Anti-Cult Movement in Historical Perspective," in *The Cultic Milieu: Oppositional Subcultures in an Age of Globalization,* ed. Jeffrey Kaplan and Heléne Lööw (Walnut Creek: AltaMira Press, 2002), 265–89. For a wider discussion of the anticult movement, see Anson D. Shupe, David G. Bromley, and Donna L. Oliver, *The Anti-Cult Movement in America: A Bibliography and Historical Survey,* vol. 130, *Garland Reference Library of Social Science* (New York: Garland, 1984).

10. For a fuller discussion of sexuality in the family, see James D. Chancellor, *Life in the Family: An Oral History of the Children of God,* 1st ed. (New York: Syracuse University Press, 2000). For an early discussion, see Stephen A. Kent, "Lustful Prophet: A Psychosexual Historical Study of the Children of God's Leader, David Berg," *Cultic Studies Journal* 11, no. 2 (1994): 135–88. The Kent article occasioned some controversy. See the exchange between Kent and Gordon Melton. Stephen A. Kent and Theresa Krebs, "When Scholars Know Sin," *Skeptic* 6, no. 3 (1998): 36–45, http://www.apologeticsindex.org/c25.html; and J. Gordon Melton, "Mea Culpa! Mea Culpa!: J. Gordon Melton Answers His Critics," http://www.cesnur.org/testi/melton98.htm. For a devastating tell-all memoir from David Berg's daughter, see Deborah Davis and Bill Davis, *The Children of God: The Inside Story* (Grand Rapids, MI: Zondervan Pub., 1984). And for a later memoir, see Miriam Williams, *Heaven's Harlots: My Fifteen Years as a Sacred Prostitute in the Children of God Cult* (New York: Eagle Brook, 1998). The *Davidito Book,* like the *Mo Letters,* which focused on child sex, was destroyed by the Family but remains accessible to researchers in closed archives such as that of the University of Alberta.

11. Much has been written of the Family—sex, after all, sells—but the movements' own materials best document the history of the group. The *Mo Letters* might be seen as snapshots of the moods and fancies of the leader and his immediate circle, but of greater interest is the Family's own internal history. See the 2-volume *Book of Remembrance* (Zurich: World Services, 1983). The subtitle of the volumes is "Our Family Tree: The History of Our Family, 238 Years! 1745–1983," which traces the Family back to the conversion of "Three Jewish Brothers, Adam, Isaac and Jacob Brandt" to the Old German Baptist Brethren, a Protestant sect in Germany known popularly as the Dunkers after their enthusiastic form of baptism. It is important to note that Berg finds his family roots in a dissident Protestant sect as the spiritual beginning of the Family. The date 1745 refers to the passage of Berg's family to America, making the idea of flight from religious persecution a key trop in the Family's self view. *Book of Rembrance,* Vol. I, 8. On the Dunkers, see http://religiousmovements.lib.virginia.edu/nrms/brethren.html.

12. "*THE FFING/DFING REVOLUTION!* DO 2313—An *Unbeatable* Combination!—The *Book* Is the *Hook*!" *MO Letter* 2313, Vol. 17 (n.d.), http://www.exfamily.org/cgi-bin/gf.pl?fmt=dyn&t=pubs&m=14&s=0&r=cgi-bin/pubindex.pl. Videos of these get-togethers were taken and feature much singing and dancing, as well as a few bare breasted women, but nothing that would seem excessive at, say, a Grateful Dead concert in the United States circa the 1970s. They were among the videos taken from the Philippines by Ed Priebe and Daniel Welsh. These videos were different from the "Love Videos" that showed nude women and little girls dancing for Father David's birthday, or the FFing ministry videos that were part of the same haul. These seem more like video reports or postcards sent from the field to Father David at whatever place he happened to be residing at the moment. See Chancellor, *Life in the Family,* 28–30.

13. Chancellor, *Life in the Family,* 15–16.

14. Ibid., 26–29, for a brief description of these travails.

15. For a concise, very useful timeline, see "COG History Timeline and Overview," http://www.exfamily.org/hist/hist_overview.shtml.

16. Litnessing was undertaken in response to a *Mo Letter,* "Shiners? or Shamers?" Davis and Davis, *The Children of God,* 114. David Van Zandt's participant observer work in the Family coincided with the litnessing revolution, and thus his book is the best scholarly account of the era. See Van Zandt, *Living in the Children of God.*

17. "COG History Timeline and Overview," http://www.exfamily.org/hist/hist_overview.shtml.

18. Chancellor, *Life in the Family,* 156.

19. Ibid., 157.

20. James Davison Hunter and Joshua Yates, "In the Vanguard of Globalization: The World of American Globalizers," in *Many Globalizations: Cultural Diversity in the Contemporary World,* ed. Berger and Huntington, 333–34.

21. http://www.thefamily.org/index.php3. For the link to the global mission page, http://www.thefamily.org/work/.

22. Edwin Bryant and Maria Ekstrand, *The Hare Krishna Movement: The Postcharismatic Fate of a Religious Transplant* (New York: Columbia University Press, 2004). For a microcosmic look, see the best of all possible examples in the best of all possible countries: Kimmo Ketola, "Neohinduism in Finland: An Overview of Trends and Patterns," in *Beyond the Mainstream: The Emergence of Religious Pluralism in Finland, Estonia and Russia,* ed. Jeffrey Kaplan (Helsinki: SKS, 2000), 241–54. Most recently, ISKCON has abandoned the saffron robes for business suits while "doing business" in major airports.

23. For this aspect of the Peoples Temple, hear Noah Adams et al., *Father Cares, the Last of Jonestown* (Washington, D.C.: National Public Radio, 1981), sound recording. Tapes Q352, Q596, and Q787, taken from the tapes recovered in Guyana and obtained by a *Freedom of Information Act* (FOIA) request from the FBI, contain references to the much overstated Soviet connection to the Guyana compound. For the available tapes, see http://jonestown.sdsu.edu/.

24. David Chidester, *Salvation and Suicide: Jim Jones, the Peoples Temple, and Jonestown,* rev. ed., *Religion in North America* (Bloomington, IN: Indiana University Press, 2003).

25. As of 2004, native Finnish speakers (almost the only kind—it is a difficult language to learn) comprised no less than 91.89 percent of the population, and the Finnish Evangelical Lutheran Church claims no less than 83.8 percent of the population (a dramatic fall in Finnish terms from the stunning 95.1 percent it claimed in 1950). Finland is a homogenous country indeed. See Statistics Finland for these and other details of Finnish life, http://www.stat.fi/tup/suoluk/taskue_vaesto.html#Foreigners.

26. Susan Palmer makes much the same observation about Unificationists in Canada. Few of the women she came in contact with in her research were actually Canadian. See Susan J. Palmer, *Moon Sisters, Krishna Mothers, Rajneesh Lovers: Women's Roles in New Religions* (Syracuse, NY: Syracuse University Press, 1994), 92.

27. For an overview of the NRM scene in Finland, see Kaplan, *Beyond the Mainstream.* For a cook's tour of the same, see Jeffrey Kaplan, "Radical Religion in Finland?" *Nova Religio* 5, no. 1 (October 2001): 121–42.

28. Marriage is the second of Three Blessings in Unification Theology. The Three Blessings are the following: (1) the perfectibility of man; (2) the ability to have an ideal family; and (3) dominion over all creation. See "An Introduction to Life and Teaching of Sun Myung Moon," http://www.unification.org/ucbooks/intro.html#two.

29. Ronald H. Bayor, *The Columbia Documentary History of Race and Ethnicity in America* (New York: Columbia University Press, 2004); Ronald T. Takaki, *Debating Diversity: Clashing Perspectives on Race and Ethnicity in America,* 3rd ed. (New York: Oxford University Press, 2002).

30. John Stickler and Soma Han Stickler, *Land of Morning Calm: Korean Culture Then and Now* (Fremont, CA: Shen's Books, 2003).

31. Frederick Sontag, *Sun Myung Moon and the Unification Church* (Nashville, TN: Abingdon Press, 1977), 130.

32. They have also drawn fierce criticism of the Church. See the article in the Christian intellectual journal *First Things:* K. Gordon Neufeld, "Peddler of Paradise," *First Things* 129 (January 2003): 12–14. The controversy dogged the Church from its earliest days in Korea as well. See Nansook Hong, *In the Shadow of the Moons: My Life in the Reverend Sun Myung Moon's Family* (Boston: Little, Brown, 1998), 31–32.

33. For the Unification Church's presentation of the doctrine, see "The Blessing of Love: Love, Marriage and World Peace," http://www.unification.org/the_blessing.html. Rev. Moon most accessibly explains the meaning and role of True Parents in Sontag, *Sun Myung Moon and the Unification Church,* 142–43. For the internal view of the blessed event, see Hong, *In the Shadow of the Moons,* 65.

34. For a wonderful example, see the story of Clotilde, the Christian wife of the fifth century pagan Frankish king Clovis, or Bertha, the Christian wife of the contemporaneous Anglo-Saxon pagan king Ethelbert, in the equally wonderful book: Mary T. Malone, *Women & Christianity,* vol. I, *The First Thousand Years* (Maryknoll, NY: Orbis, 2000), 177–81.

35. The best outsider overview remains Eileen Barker, *The Making of a Moonie: Choice or Brainwashing?* (Oxford; New York: B. Blackwell, 1984). For the early history of the movement from an insider's perspective, see Michael L. Mickler, *A History of the Unification Church in America, 1959–1974: Emergence of a National Movement* (New York: Garland, 1993). Mickler's book began as a Master's thesis and is still foundational for academic studies to follow. The book is now available for download from the Church at http://www.unification.org/ucbooks/Huca/index.html.

36. For a very good, concise discussion of the subject, see Joseph Fichter, *The Holy Family of Father Moon* (Kansas City, MO: Leaven Press, 1985), 65–71. For detailed studies from Church sources, see Gene G. James, *The Family and the Unification Church* (Barrytown, NY: Unification Theological Seminary; Distributed by Rose of Sharon Press, 1983); Richard Quebedeaux, *Lifestyle, Conversations with Members of the Unification Church* (Barrytown, NY: Unification Theological Seminary; Distributed by Rose of Sharon Press, 1982); James H. Grace, *Sex and Marriage in the Unification Movement: A Sociological Study* (New York: E. Mellen Press, 1985); and Kathleen S. Lowney, *Passport to Heaven: Gender Roles in the Unification Church* (New York: Garland, 1992). The latter, however, is a dissertation more focused on feminist theory and the author's earnest efforts to relate herself to theory than a useful study of the movement. For a primary source discussion, see Sun Myung Moon, *The Kingdom of God on Earth and the Ideal Family* (New York: Holy Spirit Association for the Unification of World Christianity, 1977); cf. from the Unification Church Web site "True Love and True Family," http://www.unification.org/ucbooks/TLTF/index.htm.

37. For Rev. Moon, "restoration" is a synonym of "resurrection," which he sees as the culmination of a millennial process that will restore perfect balance in the world, as God intended before the Fall. The process will encompass, in order, family, society, tribe, nation, and, ultimately, the world. Sontag, *Sun Myung Moon and the Unification Church,* 154. The blending

of Confucianism, Korean shamanism, and Christianity is hard to miss in Unification thought. J. Stillson Judah notes this as well, adding strong Daoist elements and noting that, in common with other Korean NRMs, Unification theology is marked by nationalism, messianism, terrestrial utopianism, and a synthesis of Korean and foreign religious traditions. See J. Stillson Judah, "Introduction to the History and Beliefs of the Unification Church," in *The Unification Church in America: A Bibliography and Research Guide,* ed. Michael L. Mickler (New York: Garland Pub., 1987), 3–7.

38. Palmer, *Moon Sisters, Krishna Mothers, Rajneesh Lovers,* 75–83.

39. Ibid., 84.

40. Ibid., 87; cf. for a more first person account, which notes that none of this is necessarily binding on the Moon family, see Hong, *In the Shadow of the Moons,* 65–66.

41. Paul Hollander, *Political Pilgrims: Western Intellectuals in Search of the Good Society,* 4th ed. (New Brunswick, NJ: Transaction Publishers, 1998).

42. Richard H. Shultz and Roy Godson, *Dezinformatsia: Active Measures in Soviet Strategy* (Washington: Pergamon-Brassey's, 1984).

43. For an engaging journalistic account, see Tim Reiterman and John Jacobs, *Raven: The Untold Story of the Rev. Jim Jones and His People* (New York: Dutton, 1982).

44. Rebecca Moore, *A Sympathetic History of Jonestown: The Moore Family Involvement in Peoples Temple* (Lewiston, NY: E. Mellen Press, 1985); and Rebecca Moore and Fielding M. McGehee, *The Need for a Second Look at Jonestown*, vol. 41, *Studies in American Religion* (Lewiston, NY: E. Mellen Press, 1989). For varying perspectives, see J. Gordon Melton, *The Peoples Temple and Jim Jones: Broadening Our Perspective* (New York: Garland Pub., 1990); and Min S. Yee and Thomas N. Layton, *In My Father's House: The Story of the Layton Family and the Reverend Jim Jones* (New York: Holt, Rinehart, and Winston, 1981).

45. For useful histories, see Claudia L. Bushman and Richard L. Bushman, *Mormons in America, Religion in American Life* (New York: Oxford University Press, 1999); and Jan Shipps, *Mormonism: The Story of a New Religious Tradition* (Urbana: University of Illinois Press, 1985).

46. On the movement itself in the context of the world of the Heredim, see Samuel C. Heilman and Manachem Friedman, "Religious Fundamentalism and Religious Jews: The Case of the Heredim," in *Fundamentalisms Observed,* vol. 1, *The Fundamentalism Project,* ed. Martin E. Marty, R. Scott Appleby, and American Academy of Arts and Sciences (Chicago: University of Chicago Press, 1991), 197–64. For a discussion of the congressional act designating a day for the late Lubavitcher Rebb, Manachem Schneerson, see Jeffrey Kaplan, *Radical Religion in America: Millenarian Movements from the Far Right to the Children of Noah* (Syracuse, NY: Syracuse University Press, 1997), 45. The argument could be made that the religious Zionist wing of the Israeli settlement movement, by acting in the Holy Land and having key supporters in the United States, has become more important—and more politically adept—than the Chabad (Lubavitcher) movement. The argument, however, is complex and must await another anthology. For an introduction to the issues, see Gideon Aran, "Jewish Zionist Fundamentalism: The Bloc of the Faithful in Israel (Gush Emunim)," in *Fundamentalisms Observed,* ed. Marty, Appleby, and American Academy of Arts and Sciences, 197–264.

47. Sontag, *Sun Myung Moon and the Unification Church,* 152–154. President Park was an authoritarian leader who cleaved closely to U.S. policy, while the KCIA, as the name suggests, was closely modeled on the American CIA. Park was assassinated in 1979.

48. It was really too obvious to miss. See F. Clarkson, "Rev. Moon Buys a College, Hires Spooks & Moonies," *Covert Action Quarterly* 42 (Fall 1992): 39, for a somewhat tongue-in-cheek echo of the observation.

49. Sontag, *Sun Myung Moon and the Unification Church,* 158.

50. Ibid., 157. Rev. Moon's vision seems to have been something of a projection of the Confucian idealization of education and the role of the intellectual in society, which is far truer of Korea than the United States. Perhaps the most notable accomplishment of the Church in this respect was the acquisition of the University of Bridgeport in Bridgeport, CT (http://www.bridgeport.edu/pages/1.asp), an accredited but debt-ridden institution of higher education. Funding for the acquisition came from the Professor's World Peace Academy (discussed below), and it joins such other Church academic institutions as Sun Moon University in Korea ("Our dream is of a bigger world" and is notable for its top page which features a picture of a lovely Korean woman with an equally lovely western woman, with the latter uncannily balancing two weighty textbooks on her head, http://grus.sunmoon.ac.kr/english/main.asp), the Unification Theological Seminary in Barrytown, NY (http://www.uts.edu/), and several elementary and secondary institutions.

51. For front organizations and the use of agents of influence, see Shultz and Godson, *Dezinformatsia: Active Measures,* 111–31 and 32–48, respectively.

52. A *Newsweek* article, for example, notes: "According to a poll commissioned by his own attorneys, the Rev. Sun Myung Moon ranks with the late Rev. Jim Jones as among the most detested religious figures around." Kenneth L. Woodward and Patrice Johnson, "Rev. Moon's New 'Friends,'" *Newsweek,* May 3, 1982, 88.

53. For a remarkably detailed and highly readable account, see Carlton Sherwood, *Inquisition: The Persecution and Prosecution of the Reverend Sun Myung Moon* (Washington, D.C.: Regnery Gateway, 1991).

54. http://www.unification.net/misc/orgns.html; cf. "From the Unification Church to the Unification Movement, 1994–1999: Five Years of Dramatic Changes," http://www.cesnur.org/testi/moon_1199.htm.

55. "Soviet Active Measures in the 'Post-Cold War' Era 1988–1991," A Report Prepared at the Request of the United States House of Representatives Committee on Appropriations by the United States Information Agency, June 1992. http://intellit.muskingum.edu/russia_folder/pcw_era/index.htm#Contents. For the other side of the question, or simply for the sake of nostalgia for a simpler time, V.N. Saprykov, *Peaceful Coexistence: Supporters and Opponents, Soviet Peace Programme* (Moscow: Novosti Press Agency Pub. House, 1979).

56. http://www.pwpa.org/General/history.html.

57. http://en.wikipedia.org/wiki/Paragon_House. The Church's voice is amplified by the *Washington Times,* a conservative Washington D.C. daily (http://www.washtimes.com/).

58. Spencer S. Hsu, "Warner 'Deceived' on Rev. Moon Event: Aide Says Senator's Office Would Not Have Sanctioned Gathering at Dirksen Building," *Washington Post,* July 24, 2004, 8, http://www.washingtonpost.com/wp-dyn/articles/A10166-2004Jul23.html?referrer=email.

59. Rev. Sun Myung Moon, "Proclamation of the Messiah," http://www.unification.org/ucbooks/POM/POM-01.htm.

60. Hong, *In the Shadow of the Moons,* 148–49. Hong, a participant in the event, describes it as a poorly staged soap opera recreation of a Yi Dynasty (c. 1392–1864) costume drama.

61. Ibid., 136–37. For a more tongue-in-cheek rendition, including the violent Zimbabwean "medium" who was for a time believed by the Church to be the earthly vessel in which Hueng Jin had chosen to return—apparently with the objective of administering physical beatings to the faithful—see Nancy Cooper and Mark Miller, "Rev. Moon's Rising Son," *Newsweek,* April 11, 1988, 39.

62. The aggressive and litigative stance of the Church from the 1970s rise of its Guardian Office through its hostile takeover of the Cult Awareness Network in 1998 makes the Church a delicate research topic. Scholarly trepidation with regard to Scientology is stated bluntly by Douglas Cowan:

> This paper began, as I suspect so many do, in a bar. Nearly five years ago, at the annual AAR meeting, three colleagues and I were sitting over drinks with a representative of the Church of Scientology, and at one point she asked, "Why don't academics write more about Scientology?" Without hesitation and without consultation, we all answered virtually in the same breath: "Because you threaten to sue us if we say things you don't like!"

Douglas E. Cowan, "Researching Scientology: Academic Premises, Promises, and Problematics," http://www.cesnur.org/2004/waco_cowan.htm. However, a few good studies have emerged. Of these, most recommended to the uninitiated is J. Gordon Melton, *The Church of Scientology* (Salt Lake City: Signature Books in cooperation with CESNUR, 2000). This short (less than 75 pages) booklet really speaks volumes for the movement. It carefully sets out the basic facts of the Church's history, attempting to tread the fine line between neutrality and credulity. Melton's somewhat strained effort to find credence in the Church's claim that founder L. Ron Hubbard was made a full blood brother by the Blackfoot Indians at the age of 6 on p. 2 is a case in point. (The Church's Biography Museum in Los Angeles includes a tableau of the precocious 6 year old lecturing a group of rapt Blackfoots around a camp fire, which suggests how attached the Church is to this biographical claim. Interestingly, Hubbard's parents are never depicted in the museum, and questions to the guide about them elicited no response. At the least, they were rather more liberal with their son's wanderlust than most American parents would have been.) For a good discussion of the Church's hagiographic treatment of its founders, see Cowan's "Researching Scientology"; cf., Church of Scientology International, *What Is Scientology? The Comprehensive Reference on the World's Fastest Growing Religion* (Los Angeles, CA: Bridge Publications, 1992), 624. Melton's book reads like the product of careful committee negotiations over virtually every sentence. It is, in short, a wonderful book, both for what it says and for what it would like to say but to which it must in the end only allude. The booklet should, however, definitely be read together with Melton's entry on Scientology in his *Encyclopedia of American Religions.* See J. Gordon Melton, *Encyclopedia of American Religions,* 7th ed. (Detroit: Gale, 2003), 311–13. The most uninhibited academic study of Scientology remains Roy Wallis, *The Road to Total Freedom: A Sociological Analysis of Scientology* (New York: Columbia University Press, 1977). Several scholarly reports on the Church are available and are distributed by the Church. The most notable of these is Bryan Wilson, "Religious Toleration & Religious Diversity," http://www.neuereligion.de/ENG/collection/diversity/. The text can also be found in Church of Scientology International, *Scientology: Theology & Practice of a Contemporary Religion* (Los Angeles: Bridge Publications, 1998), 111–46. The primary sources issued by the Church of Scientology are too voluminous to note. The quality of the releases, though, seems to vary between those issued on the more popularly oriented Author Services, Inc., which preserves Hubbard's writings—and he was a stunningly prolific and very accessible author—and later on more technical works issued through Bridge Publications. For good introductions, though, the place to start is probably with the breakthrough work, *Dianetics,* now revered as virtually sacred text by the Church. L. Ron Hubbard, *Dianetics: The Modern Science of Mental Health* (Los Angeles, CA:

Bridge Publications, 2000). One stop shopping for all things Scientological is the massive and beautifully bound and illustrated Church of Scientology International, *What Is Scientology? The Comprehensive Reference on the World's Fastest Growing Religion.* There is no shortage of hostile accounts of the Church by outsiders and apostates (not to mention on the Web, which is the most active front of the Scientology Wars). Two of the better of these are Robert Kaufman, *Inside Scientology; How I Joined Scientology and Became Superhuman* ([New York]: Olympia Press, 1972); and Russell Miller, *Bare-Faced Messiah* (New York: Henry Holt & Co., 1987).

63. The argument follows that of Beyer and is fully elucidated in the conclusion to this chapter. See Peter Beyer, *Religion in the Process of Globalization* (Wèurzburg: Ergon, 2001).

64. Frank Fèuredi, *Therapy Culture: Cultivating Vulnerability in an Uncertain Age* (London; New York: Routledge, 2004).

65. http://www.religioustolerance.org/scientol.htm.

66. A vast literature could be referenced here, but suffice for an introduction Melton's handy booklet, Melton, *The Church of Scientology,* 45–46. The battle with psychiatry figures prominently in the globalization efforts of the Church and is examined below. In the self-view of the Church, however, the medical establishment is viewed more ambiguously than would seem apparent on first glance. Hubbard had offered to share his insights with both the American Medical Association and the American Psychiatric Association. Both passed on the opportunity. Melton, *The Church of Scientology,* 12–13. On the other hand, there is as much envy as hostility in the Church's stance, as a display at the L. Ron Hubbard biographical museum in Los Angeles demonstrates. That display shows in wax figures a young L. Ron Hubbard expounding on his theories to an attentive audience of doctors (who look rather nineteenth century with morning coats and long beards). For the Scientology view of diet and food, see Church of Scientology International, *What Is Scientology?,* 189–96.

67. For a number of such success stories, see Juha Pentikäinen, Jurgen F.K. Redhardt, and Michael York. "The Church of Scientology's Rehabilitation Project Force," http://www.cesnur.org/2002/scient_rpf_01.htm.

68. http://religiousmovements.lib.virginia.edu/nrms/scientology.html, although this source expresses skepticism about the number of adherents. They may not be inaccurate from the perspective of the Church, however. In Finland, Kari Koivisto claimed 10,000 Finnish Scientologists—an astonishing number in tiny Finland. When questioned, however, Mr. Koivisto explained that anyone visiting a Church office, attending a meeting or seminar (which might be overt or under a false flag), or who in any other way came in contact with church members and left a name were counted as "members." Jeffrey Kaplan, "Radical Religion in Finland?," 133. While in 1999 this method of counting heads would have seemed deceptive, today it well reflects the convergence of interest groups and individuals around issues or problems. Membership organizations in the traditional sense of the term are increasingly passé. On the 133 countries, http://www.authenticscientology.org/.

69. http://faq.scientology.org/so.htm. For a fine study of Sea Org, see J. Gordon Melton, "A Contemporary Ordered Religious Community: The Sea Organization," http://www.cesnur.org/2001/london2001/melton.htm. These are core members, indeed, with each signing contracts with the Church that link the member with the institution for no less than 100,000 years in a version described by one Sea Org member in Los Angeles. Gordon Melton notes that the contract is for a billion years. But after the first couple of eons, who's counting?

70. Melton, *The Church of Scientology,* 11–12.

71. Ibid., 43. Melton alludes to problematic aspects of Sea Org, in particular to various forms of abuse that its members have suffered, both on the boats themselves and later in Scientology residential centers, with a particularly egregious case arising from the death of a young woman, Lisa McPherson, in Clearwater, FL. On these issues generally, see Stephen A. Kent, "Scientology—Is This a Religion?" *Marburg Journal of Religion* 4, no. 1 (1999). http://www.uni-marburg.de/religionswissenschaft/journal/mjr/kent.html. On the latest ramifications of the McPherson case, see Susan Taylor Martin, "Scientology Case Takes Its Toll," *St. Petersburg Times,* July 9, 2005, http://www.sptimes.com/2005/07/09/Tampabay/Scientology_case_take.shtml. For the response of the McPherson Family, see Lisa McPherson Trust International, http://lisatrust.bogie.nl/.

72. For a very amusing illustrated history of the device, see "Religious Gadget Thursday: The E-Meter," *Gizomodo Gadgets Weblog,* http://www.gizmodo.com/gadgets/gadgets/medical/religious-gadget-thursday-the-emeter-109772.php.

73. Melton, *The Church of Scientology,* 14–17. The intensity of the war in the United States was probably greater than the Scientologists had bargained for, but, even so, their audacity was impressive. For a taste of what they were up against in the United States alone, see the massive trove of FBI documents recovered through a FOIA request and available for public perusal at the Operation Clambake anti-Scientology site, http://www.xenu.net/archive/FBI/table.html. The first FBI mention of Hubbard dates from 1940 and is a letter from Hubbard dropping a dime on someone he suspected of Nazi sympathies. J. Edgar Hoover's form letter of appreciation, and the notes on the follow-up field investigation are included here as well. The letter leaves a bad aftertaste in the twenty-first century mind, but was considered good citizenship in the 1940s and 1950s. Indeed, such popular radio serials of the era as "This Is Your FBI" and "The FBI in Peace and War" urged citizens to do just this weekly, helpfully informing the public that the telephone number of the local FBI office was on the front page of the phone book; cf. on this incident, Miller, *Bare-Faced Messiah,* 87. The FBI files contain more than 5,000 documents. The number of documents generated in Europe and beyond can only be imagined, but as the FOIA exists only in the United States, future historians will be left with the task of sorting through these papers.

74. "The Church of Scientology," http://religiousmovements.lib.virginia.edu/nrms/scientology.html. For a fuller discussion, see Stephen A. Kent, "The French and German Versus American Debate over 'New Religions,' Scientology, and Human Rights," *Marburg Journal of Religion* 6, no. 1 (2001).

75. The Church of Scientology International was formed in 1981 as an outcome of the arrest of key members of the Church's guiding guardian office. Melton, *The Church of Scientology,* 21–22.

76. The reference here is to the immortality of the individual (thetan) in Scientology Theology. Church of Scientology International, *Scientology: Theology & Practice of a Contemporary Religion.* The text is a comprehensive overview of Scientology beliefs and contains eight scholarly reports as appendices.

77. Melton, *The Church of Scientology,* 57–58.

78. Melton notes the economic dimension of the Scientology controversies, ibid., 59–60. A more popular, and more negative, treatment can be found in the *Time Magazine* cover story, Richard Behar, "Scientology: The Thriving Cult of Greed and Power," *Time,* May 6, 1991, http://www-2.cs.cmu.edu/~dst/Fishman/time-behar.html.

79. Vince Lombardi, the Green Bay Packers coach who guided the team to victory in the first two Super Bowls, is perceived in Wisconsin in soteriological terms, and a thorough

familiarity with his thought is an unwritten rule for residence in the Fox Valley. On Colsen's quote, the one-time aide to President Nixon who was otherwise best known for his professed willingness to walk over his own grandmother to ensure the reelection of the President, had a sign adorning his office wall with the quote in question. http://dave.burrell.net/quotes.html. Chuck Colsen today is head of an evangelical prison ministry and a frequent guest on Christian broadcasting programs.

80. Jeffrey Kaplan, "The Fall of the Wall," *Nova Religio* 1, no. 1 (1997): 139–46.

81. Church of Scientology International, *What Is Scientology?,* 657.

82. For a detailed discussion of all of these issues, see Stephen A. Kent, "The French and German Versus American Debate Over 'New Religions,' Scientology, and Human Rights," *Marburg Journal of Religion* 6, no. 1 (January 2001), http://www.uni-marburg.de/religionswissenschaft/journal/mjr/kent2.html; and Leisa Goodman, "A Letter from the Church of Scientology," *Marburg Journal of Religion* 6, no. 2 (January 2001), http://www.uni-marburg.de/religionswissenschaft/journal/mjr/goodman.html. Gordon Melton covers some of these issues as well. See Melton, *The Church of Scientology,* 62–63. For a discussion of the European legislation against Scientology, see Massimo Introvigne, J. Gordon Melton, and Centro studi sulle nuove religioni, *Pour En Finir Avec Les Sectes: Le Dâebat Sur Le Rapport De La Commission Parlementaire,* 3. âed. ed. (Paris: Editions Dervy, 1996).

83. Melton, *The Church of Scientology,* 15–16.

84. Ibid., 20.

85. For rather harshly judgmental descriptions of these goings on, see Douglas Frantz, "The Shadowy Story Behind Scientology's Tax Exempt Status," *New York Times,* March 9, 1997, http://www-2.cs.cmu.edu/~dst/Cowen/essays/nytimes.html; and Richard Behar, "Scientology: The Thriving Cult of Greed and Power," *Time,* May 6, 1991. More evenhanded treatment may be found in Melton, *The Church of Scientology,* 19–21.

86. Melton, *The Church of Scientology;* cf. Frantz, "The Shadowy Story Behind Scientology's Tax Exempt Status"; and Behar, "Scientology: The Thriving Cult of Greed and Power." On the general competence of the FBI in this era, see Joseph L. Schott, *No Left Turns* (New York: Praeger, 1975). While the Schott book is humorous, it should be more seriously noted that the Scientology infiltration took place contemporaneously with what would become a purge at the CIA, with head of counterintelligence James Angleton furiously trying to unearth a Soviet mole whom he was convinced had burrowed deep into the Agency. In the process, he probably did more damage to the Agency than the phantom mole ever could have accomplished. The FBI was on the periphery of this conflict, but was going through similar issues of its own. That the Scientologists—rank amateurs in the intelligence game—could have so effortlessly penetrated the FBI speaks volumes for the state of U.S. counterintelligence in this period.

87. They did not go down too hard, though. J. Gordon Melton points out they were eventually convicted of only "relatively minor" crimes and sentenced to "only" 4–5 years hard time, with fines of $10,000 on top of it. Melton, *The Church of Scientology,* 20.

88. Miller, *Bare-Faced Messiah,* 310.

89. Joseph P. Kennedy, http://www.bartleby.com/66/36/32436.html.

wj301297.html (accessed July 20, 2006).. The Scientology court documents are archived at http://www.cs.cmu.edu/~dst/Cowen/essays/irslegal.html (accessed July 20, 2006). For the documents pertaining only to this case, see http://www.xenu.net/archive/IRS/ (accessed July 20, 2006). New articles relating to the case are archived at http://www.lermanet.com/scientologynews/ (accessed July 20, 2006).

93. See Introvigne, Melton, and Centro studi sulle nuove religioni, *Pour En Finir Avec Les Sectes: Le Dâebat Sur Le Rapport De La Commission Parlementaire;* and Kent, "The French and German Versus American Debate over 'New Religions,' Scientology, and Human Rights."

94. On the Interpol front, see Melton, *The Church of Scientology,* 50–51, and Stephen A. Kent, "The Globalization of Scientology: Influence, Control and Opposition in Transnational Markets," *Religion* 29, no. 2 (1999): 151–52. The Scientology view can be found in Church of Scientology International, *What Is Scientology?,* 393–94 and 531.

95. For a good example of this prescience, see "The Open Door to Piracy," *Freedom Magazine* 28, no. 1 (n.d.), http://www.cyberspacefreedom.org/piracy.htm.

96. A number of sources could be referenced here—the Scientology netwars is deserving of a dissertation in itself—but several are good sources of links to necessary sources. First, the Religious Movements Homepage, "The Church of Scientology," http://religiousmovements.lib.virginia.edu/nrms/scientology.html, although some of these links are outdated. From the Church of Scientology, "Briefing RE: The Church of Scientology and the Internet, 30 June 2000," http://religiousmovements.lib.virginia.edu/nrms/scientology_briefing.html, and "Freedom of Speech at Risk in Cyberspace," *Freedom Magazine* 28, no. 1 (n.d.), http://www.cyberspacefreedom.org/index.htm. This issue has several articles on the netwars from the Scientology perspective. For a wider, and much more passionate, discussion of the issues raised by the trading of charges of "copyright terrorism" between the Church and its critics, see Massimo Introvigne, "'So Many Evil Things': Anti-Cult Terrorism via the Internet," http://www.cesnur.org/testi/anticult_terror.htm.

97. Bryan Wilson, "Religious Toleration & Religious Diversity," and J. Gordon Melton, "Mea Culpa! Mea Culpa!: J. Gordon Melton Answers His Critics," both make this point convincingly.

98. Stephen A. Kent, "Scientology—Is This a Religion?," *Marburg Journal of Religion,* http://www.uni-marburg.de/religionswissenschaft/journal/mjr/kent.html.

99. Kent and Krebs, "When Scholars Know Sin," http://www.apologeticsindex.org/c25.html.

100. On the racist anthropology of the period, see Elazar Barkan, *The Retreat of Scientific Racism: Changing Concepts of Race in Britain and the United States between the World Wars* (Cambridge; New York: Cambridge University Press, 1992). For a nineteenth century popular anti-Catholic text, see the erotic (by nineteenth century standards) Maria Monk, Theodore Dwight, J.J. Slocum, and William K. Hoyte, *Awful Disclosures of the Hotel Dieu Nunnery of Montreal, Anti-Movements in America* (New York: Arno Press, 1977). For a more learned anti-Catholic treatise of the same period, see William Cathcart, *The Papal System: From Its Origin to the Present Time. A Historical Sketch of Every Doctrine, Claim and Practice of the Church of Rome* (Philadelphia: Cathcart and Turner, 1872). The text that ties these themes most explicitly to NRMs, including the strong suggestion that the Catholic Church should be considered a "cult," is the first edition of the classic anticult text: Jan Karel Van Baalen, *The Chaos of Cults; a Study of Present-Day Isms* (Grand Rapids, MI: Wm. B. Eerdmans Publishing Company, 1938).

101. Church of Scientology, "Briefing RE: The Church of Scientology and the Internet, 30 June 2000," http://religiousmovements.lib.virginia.edu/nrms/scientology_briefing.html.
102. In this sense, J. Gordon Melton is exactly right in saying that the texts were released not in the interests of free speech, but rather to embarrass the Church of Scientology. J. Gordon Melton, "Mea Culpa! Mea Culpa!" For a good apologia for the Church's theological perspective, see http://www.theta.btinternet.co.uk/.
103. http://www-2.cs.cmu.edu/~dst/Fishman/Declaration/. Scientology's efforts to prevent Google from linking to the Operation Clambake site, which archives the FOIA requested FBI files on Scientology is a marker of this futility. Google for a time acceded to Scientology's demand that the links be erased, but after complaints from surfers, the links were restored, and the Operation Clambake site http://www.clambake.org/ is going strong as well; cf. "Scientology Versus the Internet," *Wikipedia,* http://en.wikipedia.org/wiki/Scientology_vs._the_Internet. It is a relatively easy matter to pressure an Internet provider to refuse to host a site, but the attempt invariably arouses the ire of previously uninterested advocates of free speech on the net and soon mirrors of the proscribed material are popping up everywhere, spreading the material far beyond its original or intended audience.
104. "Scientology Versus the Internet," *Wikipedia,* http://en.wikipedia.org/wiki/Scientology_vs._the_Internet. The Church incorrectly sets the genesis of the site at 1993, claiming it was falsely registered in the name of David Miscavige by one Scott Goehring. Church of Scientology, "Briefing RE: The Church of Scientology and the Internet, 30 June 2000," http://religiousmovements.lib.virginia.edu/nrms/scientology_briefing.html. For a 1991 pseudonymous post, see http://www.theta.btinternet.co.uk/. Generally, however, the sources are in agreement and are used together for this discussion.
105. In the early days of the technology, the Usenet space became the repository for all that was great and all that was vile about the Internet. It was a bastion of free speech, and it provided a supportive community for victims of every sort of illness or abuse. But it was also a repository for violent and pornographic material, including child pornography. In some senses, Usenet has cleaned up its act since then, but in reality the most illicit of materials simply migrated to more sophisticated technologies and became harder for authorities to monitor. For a very tame flavor of the level of alt.religion.scientology discourse, see http://bernie.cncfamily.com/sc/hate.htm.
106. Details of all these cases can be found in "The Church of Scientology and the Internet, 30 June 2000," http://religiousmovements.lib.virginia.edu/nrms/scientology_briefing.html.
107. Ibid. "Scientology Versus the Internet," *Wikipedia,* http://en.wikipedia.org/wiki/Scientology_vs._the_Internet. Anyone with colleagues or curious friends in Sweden in this period was offered CD-ROMS containing this material as I recall. How many takers there were is unknown and unknowable, however.
108. "Scientology Versus the Internet," *Wikipedia,* http://en.wikipedia.org/wiki/Scientology_vs._the_Internet (accessed July 20, 2006).
109. Space precludes a detailed description of the intense and very personal war against the organized anticult movement. Suffice it here to say that, following a successful lawsuit against the Cult Awareness Network by one Jason Scott who had joined a fundamentalist Christian Church, the Church of Scientology came in possession of the judgment and used it to roll up the old CAN, putting in its place a Scientology-run group of the same name that claims to be a clearinghouse for religious freedom. On the battle, see Gordon Melton, "The Modern Anti-Cult Movement in Historical Perspective," in *The Cultic Milieu: Oppositional Subcultures in an Age of Globalization,* ed. Kaplan and Lööw, 273–84; and Kaplan, "The Fall of the Wall."

For a taste of the scholarly invective surrounding the case, see Anson Shupe and Susan E. Darnell, "CAN, We Hardly Knew Ye: Sex, Drugs, Deprogrammers' Kickbacks, and Corporate Crime in the (old) Cult Awareness Network," http://www.cesnur.org/2001/CAN.htm; and Kent and Krebs, "When Scholars Know Sin." For the invective emanating from Scientology in this period, see Church of Scientology International, *The Cult Awareness Network: Anatomy of a Hate Group: An Analysis of Violence and Crime Incited by the Cult Awareness Network* (Los Angeles, CA: Freedom Magazine, 1995).

110. http://usinfo.state.gov/usa/infousa/laws/majorlaw/intlrel.htm. The first U.S. Special Ambassador at Large for International Religious Freedom was Robert Seiple, appointed by President Bill Clinton in 1999.

111. Cynics noted that the most visible and heartfelt expressions of support for human rights generally and religious freedom specifically seemed to center on oil producing states. Witness the *Sudan Peace Act,* which sailed through Congress just months after the announcement of a significant oil discovery in that unfortunate nation. One of the cannier observations of this connection was made by the Unification Church owned *Washington Times.* See "Sudan's Oil War," *The Washington Times,* July 27, 2001, http://www.uscirf.gov/mediaroom/editorials/editorials_archive/072701_sudan.html (accessed June 20, 2005). The Act itself was passed in 2002. For the text, see http://www.state.gov/r/pa/prs/ps/2002/14531.htm.

112. For a good overview of NRMs in the former communist nations of Eastern Europe and the Former Soviet Union, see Peter Torok. "The Familiarity of New Religious Movements in Central-Eastern Europe," http://www.cesnur.org/2001/london2001/torok.htm.

113. Kent, "The French and German Versus American Debate over 'New Religions,' Scientology, and Human Rights." Europeans noted that the United States virtually alone had refused to sign on to UN legislation protecting the rights of children. To this was added the sad spectacle in 2004 in which the annual U.S. State Department list of nations that violate human rights occurred simultaneously with the revelations by the *New York Times* that the American government was in effect operating a "torture taxi" through its rendition program delivering suspected terrorists for "interrogation" to the very countries that the State Department report criticized for employing torture. The contradiction was just too jarring to be missed. On these issues, see Jeffrey Kaplan, "Islamophobia in America?" *Terrorism and Political Violence* 18, no. 1 (forthcoming).

114. The Solar Temple murder/suicides of 1994 were key, bringing home to Europeans that religiously motivated mass suicide was not a purely American phenomenon. See "The Solar Temple," http://religiousmovements.lib.virginia.edu/nrms/solartemp.html; and Jean-Francois Mayer, "Our Terrestrial Journey is Coming to an End: The Last Voyage of the Solar Temple," *Nova Religio* 2, no. 2 (April 1999): 172–96.

115. Kent, "The French and German Versus American Debate over 'New Religions,' Scientology, and Human Rights." Specifically, Kent documents incidents in Canada, Greece, Denmark, and France. The French case charged that Scientologists had "succeeded in infiltrating the environment of a former state president…." An identical case occurred in Finland, where one member of the Presidential Guard (roughly equivalent to the U.S. Secret Service, although minus the trademark dark shades and earpiece), Kari Koivisto, was a Scientologist. Koivisto found several fellow guardsmen who were interested, and soon there was a group of Scientologists around the President. As in France, there was never any evidence of wrongdoing by these guardsmen, but when the news hit the press all were forced to resign their positions. Jeffrey Kaplan, "Radical Religion in Finland?," 129. In his own brief autobiography, written for the 1999 Beyond the Mainstream conference in Helsinki, Koivisto writes:

> Kari Koivisto was born in 1953 in southwestern Finland. After having graduated from secondary school, he started Police College. His police career included different tasks in traffic and security areas. After Police officers' academy in 1986, he worked as an assistant chief of the bodyguard of the President of Finland and he resigned in the year 1989 to dedicate his life to helping others using L. Ron Hubbard's teachings. This was also the year he established the citizen's commission on human rights in Finland. Since then, that organization has grown considerably and is nowadays well known for its good results to protect human rights on the field of mental health. Since he was a little boy he had looked for an answer to the question "who am I?" He came into Scientology in 1986 and found the answer. Kari Koivisto has worked for the church since 1997 taking care of external and interfaith matters in Finland.

116. The Church of Scientology provides in depth discussion and documentation of each of these controversies through its Human Rights Office. See http://www.humanrights-france.org/.

117. The Greek case is particularly interesting. For a useful—if at times painfully legalistic—discussion, see Kyriakos N. Kyriazopoulos, "The Legal Treatment of Scientology's Church in Greece," http://www.cesnur.org/2001/london2001/kyriazopoulos.htm.

118. "Council of Europe Debate on Scientology and Other Cults: Parliamentary Assembly of the Council of Europe, 5 Feb 1992," http://www-2.cs.cmu.edu/~dst/Cowen/audit/cofe92.html; Massimo Introvigne, "Why France? Historical and Ideological Roots of the French Anti-Cult Scare," http://www.cesnur.org/2001/london2001/introvigne.htm; Massimo Introvigne, "Blacklisting or Greenlisting? A European Perspective on the New Cult Wars," http://www.cesnur.org/testi/greenlist.html; Massimo Introvigne and J. Gordon Melton, eds., Pour en finir avec les sectes. Le débat sur le rapport de la commission parlementaire; and, for primary sources (archived by anti-Scientology sources), "Scientology vs. National Governments," http://www.factnet.org/Scientology/govreports.htm?FACTNet.

119. For contrasting views of these changes in the brainwashing thesis, see the various articles in Thomas Robbins and Benjamin David Zablocki, *Misunderstanding Cults: Searching for Objectivity in a Controversial Field* (Toronto: University of Toronto Press, 2001).

120. Paul Heelas, *The New Age Movement: The Celebration of the Self and the Sacralization of Modernity* (Oxford: Blackwell, 1996); and Paul Heelas, *The Spiritual Revolution: Why Religion Is Giving Way to Spirituality, Religion and Spirituality in the Modern World* (Malden, MA: Blackwell Publishing, 2005). For the Finnish microcosm, see Pauliina Mikkonen, "New Age in Finland: A View Through Finnish New Age Magazines," Kaplan, *Beyond the Mainstream,* 319–32.

121. Kent, "The French and German Versus American Debate over 'New Religions,' Scientology, and Human Rights."

122. For a brilliant discussion of these issues, see David Chidester, *Authentic Fakes: Religion and American Popular Culture* (Berkeley, CA: University of California Press, 2005). Chidester's argument is particularly applicable to Scientology: the faith may not be "authentic" (i.e., it may have been created with, as the German ambassador suggests, the intention of making a tidy profit), but it nonetheless has come to be an authentic faith for many people. In the process, it has come to meet the criteria of the various academic definitions of "religion," including the one offered by Chidester himself. Moreover, this author correctly points out that Americans deify cold cash ("In God We Trust") in a way that is at once fascinating and deeply off-putting to the rest of the world. Thus, the book could shed much light on the tone and tenor of the Scientology Wars in Europe.

123. Having worked and researched in Finland and Sweden extensively over the last decade, I can testify anecdotally to how ingrained these anti-American stereotypes are in everyday discourse. The invasion of Iraq brought them bubbling to the surface, even at the governmental level. For statistical chapter and verse, see the Pew Global Attitudes Survey, http://pewglobal.org/reports/display.php?ReportID=247.
124. Berger and Huntington, *Many Globalizations: Cultural Diversity in the Contemporary World.* The introduction of Berger and Huntington makes this point, and each of the essays in the volume amplifies this basic theme from the perspective of different countries.

Critiquing Cults: An Historical Perspective

J. Gordon Melton

As New Religious Movements (NRMs) arose, beginning in the sixteenth century when a variety of Anabaptist, mystical, and apocalyptic movements appeared in Europe, a critique simultaneously appeared. In general, that critique was specific, targeting each group both for its believed theological deviance and negative social affect. Thus, Thomas Müntzer (d. 1525) and his followers were targeted for their premillennial beliefs and their participation in a violent revolutionary movement. The Anabaptists were charged with deviation on a variety of doctrinal points and for attacking the authority of both the bishops and the magistrates.[1]

This form of critique continued into the nineteenth century. In each country, a single church remained the church of the majority and had more or less official connections with the state. Each of these churches saw itself as speaking for the entrenched powers that governed society, protecting the social order, and maintaining the religious identity of the public. Those assumed roles of former state churches continue in most European countries to the present and pervaded the thinking of North American church leaders well into the twentieth century.

Through the nineteenth century in the United States, intense polemics were produced against what were perceived as false deviant religions, the Latter-day Saints (or Mormons) and Spiritualists being the primary targets, though by the end of the century, Christian Science and Theosophy came on the scene as well. Then, at the end of the nineteenth century, a change occurred. Some of the critics of the growing number of NRMs began to see them as a collective and perceived them as a threat to the stability of the social order and the identity of the nation. And the new social threat was given a name—cults—and as the century came to a close, Episcopal minister A.H. Barrington produced the first book dealing with the problem, *Anti-Christian Cults.*[2]

THE BEGINNINGS OF COUNTERCULT CONCERNS

The development of a view that a group of "cults" existed that threatened Christianity found a response within the emerging Fundamentalist movement in the late

nineteenth and early twentieth centuries. Mainstream Protestantism experienced a major transition as intellectual leaders grappled with the implication of the new sciences and the development of comparative and critical tools for the study of religion. As individual ministers and seminary professors professed their acceptance of biological evolution, historical views of the development of the Bible, and doubts about the miracle stories of the New Testament, conservative voices complained that the very people to whom they should be looking for guidance were accepting heresy and should be removed from office. In the context of the time, conservatives believed that considerable damage could be done to the faith of churchgoers by people who were pouring completely new content into Christian language or dropping Christian language altogether for some alien religion.

As World War I drew to an end, a countercult movement emerged within the bounds of Fundamentalism, its first text generally being viewed as *Timely Warnings* by William C. Irvine (1906–1964), frequently reprinted over the next half century under its later title, *Heresies Exposed* (1973).[3] *Timely Warnings* was unique in that it attempted to catalogue all of the current heresies and offer a refutation of each. Irvine gave priority coverage to Modernism, the group the Fundamentalists accused of dropping traditional Christian affirmations that they claimed were incompatible with the findings of modern science and historical research. Also, as Irvine noted, most of the NRMs of the day retained some claim on the Christian heritage, however much they diverged from the orthodox theological tradition. Mormonism added a new revelation, Christian Science poured new meaning into old symbols, and Unitarianism merely discarded a few of what it considered outdated Christian doctrines. Even Spiritualism, which among the NRMs of the time most departed from the tradition, attempted to picture itself as a biblical faith by drawing on accounts of human intercourse with spiritual entities from the spirits of the deceased to angels in the biblical record.[4]

Irvine set the direction of future critiques of NRMs—evaluating each group according to how much it deviated from orthodox Christian standards. That critique could begin with those doctrines considered fundamental to the faith—the Trinity, the virgin birth of Jesus, Christ's substitutionary atonement—and then continue to more detailed contradictions with specific biblical passages interpreted literally. Many later works simply compiled biblical quotations placed against quotations from an NRM's literature.

Irvine's book spawned a number of Fundamentalist texts, some concentrating on a specific heresy[5] and others expanding coverage of the spectrum of groups.[6] These books led directly to the most influential countercult text, *The Chaos of Cults* by Christian Reformed minister, Jan Karel Van Baalen (1890–1968).[7] Van Baalen's text is noteworthy for the serious manner in which he approached the topic. He obviously conducted considerable primary research on each group and attempted to present a clear picture of the group's history and beliefs. He also suggested that each group's appeal was due to its focus upon a single truth (i.e., Christian teaching), which contemporary Christians largely neglected. Spiritualism, for example, called attention to the existence of a spirit world and life after death. Van Baalen also

introduced an idea to which later countercultists continually returned. Should Roman Catholicism, with its continued accumulation of traditions with little or no biblical base (for example, the heightened veneration of the Virgin Mary), be included in the consideration of deviant cults?

The Chaos of the Cults went through numerous reprints, had at least three major revisions, and led to the production of a second, smaller volume summarizing its contents. It was in place as the Fundamentalist-Modernist controversy ended in the 1930s with the withdrawal of many theological conservatives from the larger denominations and the setting up of a number of Fundamentalist denominations.[8]

THE RISE OF CONTEMPORARY COUNTERCULTISM[9]

By the end of the 1930s, the Fundamentalist community divided into three camps. First, a number of them remained in their positions within the larger Protestant denominations. Second, some separated from the older denominations while insisting that no contact continue with those who remained behind. Third, a far larger group left the denominations but continued fellowship with fellow Fundamentalists who for a variety of reasons could not leave their denominational home. During the 1940s, this third group became the new Evangelicals. Evangelicals created an identity around a school (Fuller Theological Seminary), a magazine (*Christianity Today*), and an ecumenical fellowship (National Association of Evangelicals).[10]

The three groups that became quite visible in the 1940s had reasons to draw sharp boundaries between each of the warring camps. The Fundamentalists and Evangelicals had the toughest job—simultaneously justifying their withdrawal from established denominations while distinguishing themselves from each other. The Evangelicals had the harder task, holding fast to traditional affirmations while attempting to be theologically creative and pursue a dialogue with the modern fast-changing intellectual world and its culture. In spite of the loss of its organizational base, by engaging the world, Evangelicals hoped to continue to be an influence in transforming it.

The perceived need for boundary maintenance by Fundamentalists and Evangelicals set the stage for the emergence of Walter Martin (1928–1989) and a new level of concern for cults. For just as Fundamentalists and Evangelicals strove to define themselves against the larger reality of the old denominations, Martin called attention to an equally important threat, the growing attraction of people to groups that looked Christian but which, on closer examination, denied the essentials of the faith—just as did the Modernists.

The countercult movement as it emerged in the 1950s is best seen as a boundary maintenance movement. It found its dynamic in the common orthodoxy shared by Fundamentalists and Evangelicals opposed to doctrinal deviation. The founding members of the movement, with one foot in Fundamentalism and one in Evangelicalism, tried to say that just as modernism in the older churches was a great threat to orthodox faith, so was the growth of cults—theologically deviant NRMs.

THE CAREER OF WALTER MARTIN

By far the leading voice in developing contemporary countercultism was Walter Ralston Martin, a Fundamentalist Baptist minister who began his cult-fighting career in 1955 with a small volume, *The Rise of the Cults: An Introductory Guide to the Non-Christian Cults.* He quickly followed with a set of more substantive books on what he saw as the major cults then active in the United States: *The Christian and the Cults* (1956), *The Christian Science Myth* (1956), *Jehovah of the Watchtower* (1959), *The Truth about Seventh-day Adventists* (1960), and *The Maze of Mormonism* (1962).

In 1960 he founded an independent ministry, Christian Research Institute (CRI), to facilitate his special ministry concerning cults. By the time Martin published his more comprehensive volume, *The Kingdom of the Cults* (1965),[11] he was the titular leader of a small but growing movement of Evangelicals who wanted to draw distinctive boundaries between Christian orthodoxy and the various unorthodox, non-Christian options that were becoming more well-known in the culture. The countercultists hoped to convert members of such groups to their Evangelical faith.

Martin's track record positioned CRI to respond when cults became a high profile issue in the larger society in the 1970s. In 1974, he moved to California and over the next decade emerged as the patriarch of a burgeoning popular movement built around literally hundreds of small organizations and individual ministries devoted to evangelizing members of the growing spectrum of NRMs. While most of these remained focused on Mormons and Jehovah's Witnesses, several of the new organizations, such as the Spiritual Counterfeits Project based in Berkeley, California, also attempted to handle the broad gamut of religions that came from Asia after 1965.

Just as the countercult movement was growing, its position as the primary movement critiquing NRMs was challenged by a new secular activist movement that was focused entirely on the new generation of NRMs then emerging as the Baby Boomers came of age, as immigration laws relative to Asia changed, and as a new generation of homegrown religions arose.

The development of new and alternative religions in the United States was altered by a series of laws passed in the first decades of the twentieth century that prevented migration from Asia. The culminating *Asian Exclusion Act of 1924* was in force until the fall of 1965. With barriers to immigration removed in that latter year, hundreds of thousands of Asians moved to the United States and included in their numbers some religious missionaries (usually arriving under such titles as swami, bhagwan, yogi, guru, pir, sensei, or master). This wave of teachers encountered the postwar Baby Boomers, who, unable to integrate into the culture (especially the job market), developed a new subculture, the street-people culture. The street people were especially visible along the Pacific Coast, and each summer their numbers were swelled with college kids (especially those rich enough not to have to work all summer) who idealized the lifestyle of the street people and chose to spend their summer holiday with them.

Thus in the United States, as NRM leaders began to pour into the country at the end of the 1960s, they joined those indigenous leaders already actively working with

this self-selected "lost" generation living on the streets. Swami Prabhupada (1896–1977) (Hare Krishna) began in Greenwich Village, Yogi Bhajan (d. 2004) (Sikh Dharma) in Los Angeles, and the Unification Church in Eugene, Oregon, and Washington, D.C. They were joined by several groups founded in the United States, most prominently the Church of Scientology and the groups of the Jesus People movement, as well as the imports from Europe (Wicca, Friends of Meher Baba). Earlier Alan Watts (1915–1973), who became the great popularizer of Zen, migrated from England. Each of these groups adapted itself to the generation on the streets, and their love of psychedelic drugs, and took a high percentage of their initial recruits from among them. The actual number of young adults who stayed in the NRMs was low, but just enough dropped earlier career plans that by the early 1970s a few upset parents began to voice their anger publicly and quickly found that they were not alone. The first networks of what was to become a national movement began to emerge.[12]

DEVELOPING THE CULT AWARENESS MOVEMENT

In the early 1970s, informal groups of parents began investigating a Jesus People group formed in Southern California by David Berg (1919–1968). Following some months of wandering across the United States, Berg emerged as Moses David and his followers as the Children of God.[13] In 1972, parents concerned about their offspring's involvement in the group formed The Parents Committee to Free Our Sons and Daughters from the Children of God, later shortened to Free the Children of God (or FREECOG), the first of the new generation of secular cult awareness groups. When parents failed to woo their children from the group, they tried more coercive measures, including the intervention of law enforcement agencies.[14] Their efforts were somewhat blunted when most of the Children of God left the United States in 1974. However, FREECOG's efforts brought out support from parents whose young adult offspring affiliated with other new groups. Thus FREECOG evolved into the more broadly based Volunteer Parents of America, which in turn was superseded by the Citizens Freedom Foundation (CFF), arguably the most successful of the 1970s cult awareness groups. CFF, based in California, inspired similar groups around the country.

By the mid 1970s, attempts were made to construct a national umbrella organization that could coordinate the efforts of the many local groups and make some larger impact. In 1976 the Ad Hoc Committee Engaged in Freeing Minds was able to entice Senator Robert Dole (R-KS) to hold hearings at which parents and others could present their complaints. However, both the committee and a second national organization, the International Foundation for Individual Freedom, proved unable to overcome loyalties to local groups and soon passed from the scene.

This cult awareness movement (sometimes called the anticult movement or ACM) of the 1970s never satisfactorily resolved its essential internal conflicts. First, some parents opposed NRMs because they did not want their offspring to associate with any group other than the one in which they were raised. Others, seemingly the larger

percentage, were angered that their young adult offspring rejected the direction offered by their parents, stopped work on building "normal" careers in business or the professions, and instead joined NRMs for whom they became full-time workers. Neither concern was of particular interest to government authorities. Since parents needed the coercive power of the government to remove their children from NRMs, they began to strategize on ways to get the government aligned to their concern.

Meanwhile, as the secular cult awareness groups formed, the Christian countercult movement was well underway. In fact, prior to the mid-1970s, the countercultists produced almost all of the material on the subject of cults, certainly that circulating outside of sociology departments in universities. Additionally, a few of the Christian countercult groups had both a stable organization and a national distribution system for their literature. At one level, it appeared that a strong coalition was in the making. However, Christian countercult literature also presented problems for the new anticultists. Since the latter could not build a program around their true concern (disapproval of their children's choices), they had to generate a polemic against cults in general. Christian literature also broadly attacked cults, but centered the attack upon some older, more successful groups and included some large influential groups such as the Mormons and Unitarians, and even Roman Catholics. Each time the cult awareness movement gained an audience with legislators, asking them to act against cults, their efforts were undermined by the Christian literature. When that literature was circulated around a state assembly, outspoken legislators tended quickly and tactfully to withdraw support from any legislation that suggested disapproval of the religious affiliation of their fellow legislators.[15]

At the same time, some of the more prominent Christian writers on cults, such as Martin, clearly understood that those who branded conversionist groups like the NRMs as manipulative and deceitful could easily turn on Evangelical Christian groups and attack them on the same ground.[16] Thus, only a few Evangelicals joined sociologist Ron Enroth in aligning themselves with the new anticultists.[17]

PROGRAM AND IDEOLOGY

Even before finding a perspective that provided a launching pad for a broad assault upon NRMs, anticultists found a tactic that offered some alleviation of their problem—deprogramming. In its very first newsletter, the CFF defined deprogramming as

> … the process of releasing victims from the control of individuals and organizations who exploit other individuals through the use of mind control techniques. Once released, the victims, rid of the fear that held them in bondage, are encouraged to again think for themselves and to take their rightful place in society, free from further threats to their peace and security.[18]

Not covered by the formal definition, deprogramming, as touted by CFF, involved the detaining of the subject (sometimes kidnapping the subject off the street) and forcing him/her to participate in an intense harangue denigrating the subject's

religious group and its founder/leader. The victim of deprogramming was suddenly cut off from any support supplied by other members of the group and confronted with the emotional outpouring of parents and other family members begging them to renounce the group and straighten up their lives. By the late 1970s, the number of deprogrammings was increasing steadily. Ted Patrick, the man who "discovered" the deprogramming process, quit his job with the State of California and became a full-time professional deprogrammer in late 1971. His book, *Let Our Children Go!,* describing and popularizing his work appeared in 1976.[19]

By the mid 1970s, the leaders of the cult awareness movement freely used the term "brainwashing" to describe the process of becoming and remaining involved in an NRM. Potential members were described as psychologically vulnerable individuals who combined an intense youthful idealism with an inability to adjust to their social situation, especially in college.

According to the developing polemic, it was this naive young individual who was attacked by the cult. The first step was, through deceit, to trick the person into attending a group event. There, without revealing their true goals, group leaders began a subtle process of manipulation that included staged smiles, openness, and happiness expressed by members of the group. Before the potential recruit could think about what was occurring, he/she would be enticed (coerced) into membership and then held in that membership by the repeated application of subtle psychological techniques. The recruit gradually lost his/her ability to choose another way. The understanding of this process was, in fact, developed from a superficial presentation of the recruitment process of one group, the Unification Church of Rev. Sun Myung Moon (b. 1920), which often recruited street people by first inviting them to dinner. Only after the potential recruit gained a favorable impression of the group did a discussion of group belief and practice begin. However, as a whole, NRMs had a more standard approach that began with an introduction to the group. There was, in fact, no way to hide what was occurring when one first visited a Hindu temple whose members adopted Indian dress.

Early anticultists found substantiation for the use of brainwashing as a descriptive term from psychologist Robert Jay Lifton's book, *Thought Reform and the Psychology of Totalism,*[20] which described the processes of thought control used in Korean prison camps on American POWs imprisoned during the Korean War and compared them with the various practices operative in different social groups, including revivalistic religious groups.

Not only was deprogramming seen as necessary to "freeing" a person psychologically trapped in a group, but some form of continued postdeprogramming counseling was also recommended. This added perspective on the problems of people who were deprogrammed led to the formation of several rehabilitation centers, the most famous being the Freedom of Thought Foundation in Tucson, Arizona, and they continue to be an important part of deprogramming efforts.[21]

In spite of the developing secular argument against the cults, government authorities as a whole turned a deaf ear to parental pleas. The 1970s were fast coming to a

close, and the cult awareness movement appeared to be dying a slow death. Then everything changed.

JONESTOWN AND THE REVIVAL OF ANTICULTISM

On November 18, 1978, Congressman Leo J. Ryan (1925–1978), those who had accompanied him to Guyana to visit the communal settlement of the Peoples Temple, and some 900 followers of the Temple including its leader Jim Jones (1931–1978) died in combined acts of murder and suicide. In spite of the many books that have appeared, including several by survivors, what occurred at Jonestown is still far from clear. Some facts, such as how many died by murder and how many by suicide, may never be known. Whatever questions remain concerning the events at Jonestown, the tragedy of Jonestown played a key role in the revival of the cult awareness movement. As the story of the disaster at Jonestown began to unravel in the media, the group suddenly became a cult. It was the subject of a U.S. Senate hearing and then a Congressional investigation, and, over the next two years, cult awareness advocates worked to turn it into the symbol of everything that was bad about NRMs. The year 1979 became a bumper year for books on the issue of cults. Attacks on NRMs through state legislatures were launched, and, finally, a more or less stable national cult awareness organization finally emerged.

Senator Robert Dole took the lead in responding to Jonestown. Even before Congress prepared for hearings on Congressman Ryan's death, Dole organized a set of hearings based upon the suggestion that Jonestown was a harbinger of tragedies about to break forth from youth-oriented NRMs such as the Unification Church. The hearing, originally designed to provide a platform for cult awareness spokespersons, turned into a sideshow as spokespersons for NRMs demanded equal time, and as civil libertarians and a new group of scholars who studied NRMs through the 1970s emerged in public to counter the major accusations against the cult with the data of their research. Dole's zeal and public support for the anticultists was considerably softened by the entrance into the hearings of a senator from Utah, Orrin Hatch, who happened to be a Mormon.

Also, in the wake of Jonestown, anticult bills appeared in Massachusetts, Illinois, Minnesota, Connecticut, Pennsylvania, Texas, Maryland, Oregon, and, most importantly, New York. These bills varied widely in their sophistication and support. Most were defeated at the hearing stage as civil libertarians, representatives of mainline churches, and experts on NRMs mobilized against the legislation. The one exception was New York, where the Unification Church, the best known and most disliked of the several NRMs, had its headquarters and seminary. The Unification Church was an issue in the state as it pursued a state charter for the seminary at Barrytown; and in 1977, a state assemblyman sponsored one of the more frivolous anticult bills that would have made it a felony for anyone to found or promote a "pseudo-religion," whatever that was. The 1980 New York legislation, generally known as the Lasher bill for its author Assemblyman Howard Lasher, would have amended the mental

health codes to allow parents widespread powers of conservatorship for purposes of deprogramming their offspring, specifically adult offspring, who joined one of the NRMs. The bill passed the assembly twice but was vetoed by the governor on both occasions. By the time of the second veto, it had become obvious that such legislation was not going anywhere nationally, and further efforts that were taking a significant amount of anticult resources were abandoned.

Most importantly, the Jonestown tragedy revitalized the cult awareness movement and provided the motivation for its reorganization. Taking the lead in that restructuring was the old Citizens Freedom Foundation (soon to become known as the Cult Awareness Network, or CAN) and the relatively new American Family Foundation. In November 1979, a date appropriately chosen to coincide with the first anniversary of Jonestown, 65 people from 31 cult awareness groups met in Chicago, Illinois, to reorganize the ineffective International Foundation for Individual Freedom. IFIF was too decentralized to accomplish its self-assigned task, but participants reached an agreement to seize the initiative provided by Jonestown. After some debate they decided to reorganize around the Citizens Freedom Foundation, the strongest of the regional groups. CFF became the Citizens Freedom Foundation–Information Services, and the 1979 meeting was designated as the first of what became annual national meetings. Regional affiliated groups in Minneapolis, Minnesota, Pittsburgh, Pennsylvania, and Southern California agreed to assume different tasks.

The new organization still did not provide the strength many felt was needed by the movement, and in 1983 a five-year plan was placed before CFF's leadership. It suggested that CFF needed to build a more stable organization, one that could gain legitimacy in the public eye as the most knowledgeable source of information on cults. Four specific goals were set: gain financial stability, develop professional management, create an efficient communications system, and publish a quality newsletter. As a first step in implementing this program, in 1984, CFF changed its name to Cult Awareness Network of the Citizens Freedom Foundation and soon became known simply as the Cult Awareness Network (CAN). A central headquarters was established in Chicago, and an executive director hired (Cynthia Kisser remained in her position from 1987 until CAN was closed following the Scott case in 1996). The national office was organized to respond to inquiries from the media, academia, and individuals. An aggressive public relations program was initiated to place CAN before the public.

Simultaneously with the reorganization of CFF, the American Family Foundation (AFF) was founded under the leadership of John Clark. Clark (d. 1999), a psychiatrist in practice in Weston, Massachusetts, was the leading public spokesperson for the cult awareness movement through the 1970s, but was largely silenced after receiving a formal reprimand from the Massachusetts Psychiatric Association related to his anticult activities. In contrast to the more activist approach of CFF/CAN, AFF was conceived as an organization of professionals who focused upon research and education. It provided a place where academics, psychological professionals, and social scientists could relate to the movement and launched a program of public education and issued a set of publications centered upon *The Advisor,*

its newsletter, and the *Cult Studies Journal,* modeled upon standard academic journals.

The emergence of AFF and the reorganization of CAN signaled an important transition in the cult awareness movement. The many cult awareness groups that formed across the country in the 1970s were created and led largely by parents concerned with the membership of their sons and daughters in the more controversial of the NRMs. These groups were relatively small, and at any particular moment, a small minority of parents was concerned about their offspring's association with these groups. By the early 1980s, only a few were able to sustain any zeal, either because their problem was resolved or because they decided to live with the unhappy situation.

However, along the way, parents discovered a variety of experts willing to join their cause. The most important of these were psychological professionals, some of whom were quick to identify with the plight of the disturbed parents. These professionals became expert witnesses in court cases and addressed the legislative hearings attempting to investigate the cults. Meanwhile, through the early 1980s, in large part as CFF implemented the goals of its five-year plan, these professionals also assumed control of the new CAN. After 1984, the majority of the board members and speakers at the annual conference were professionals (a natural change given the attempts of the organization to gain legitimacy). Though CAN and AFF developed as quite separate organizations, they worked together on many fronts, developed interlocking boards, and combined lobbying efforts in Washington, D.C. Outsiders had difficulty distinguishing them.[22] Basically, while AFF focused upon public education, CAN assumed a more activist role in spreading the cult awareness perspective in the media and relating directly to parents who had relatives in various NRMs.

The transition to professional control of CAN was also somewhat dictated by the intense controversy over deprogramming, which hit CFF in the early 1980s. The spread of deprogramming created a strong reaction. People who were successfully deprogrammed denounced the treatment they received from deprogrammers. Christian countercult spokespersons criticized deprogramming for its use of "un-Christian tactics." Most importantly, CAN's leadership realized that it was legally vulnerable for the activities of members, including deprogrammers. Already in 1981, the organization took steps to separate itself from the practice of deprogramming and advocated what is usually termed "exit counseling," a form of counseling into which the member of the cult enters voluntarily.

In the United States, by the mid-1980s, the actual number of deprogrammings dropped significantly, though they continued to occur with the aid of the informal network built around CAN's most activist members across the country. Through the 1980s, CAN's office in Chicago, while formally denying any association with deprogramming, freely referred people to activist members known to keep lists of deprogrammers. These activists then referred members to deprogrammers. Deprogrammers, especially those who lacked a public profile, relied upon referrals through the CAN network for a steady supply of paying clients.[23]

THE RISE AND FALL OF BRAINWASHING[24]

In the mid-1970s, the primary understanding of destructive cults as centers engaged in brainwashing their members through what was variously termed "coercive persuasion," "mind control," and/or "thought control" was developed. Central to that development was the trial of newspaper heiress Patty Hearst (b. 1954) in San Francisco, California, in 1975. Hearst was kidnapped by a radical political group, the Symbionese Liberation Army, and endured an intensive indoctrination program that included considerable personal abuse. However, eventually Hearst converted to the group and participated in a bank robbery where she was photographed carrying a weapon. When finally captured, she was tried for armed robbery.[25]

During the trial, the defense suggested that Hearst was brainwashed and thus not responsible for her actions. The jury rejected that argument and convicted her. However, Margaret Singer (1921–2003), one of the psychologists who testified at that trial, even though for technical reasons was not allowed to speak on the brainwashing issue, testified the following year as an expert in a case in which a conservatorship was sought over five members of the Unification Church. She testified that the members, all young adults, were victimized by artful and designing people who subjected them to a process of coercive persuasion. As a result, the five should, she recommended, be sent for a period of reality therapy to the Freedom of Thought Foundation in Tucson.

Singer later founded a counseling service for former members of NRMs, most of whom were separated from their groups through deprogramming. Through the early 1980s she developed her concept of brainwashing, which became the keystone of the cult awareness polemic against cults. The testimony of Singer and several colleagues who accepted and reinforced her perspective was crucial in a series of multimillion dollar judgments against a string of NRMs. She became a professional witness who devoted herself full-time to legal consultation.

Singer's work became the subject of intense debate in both psychological and sociological circles. Her initial assertions were received as if they constituted a new and radical theory. Given its implicit rejection of some strong trends in psychology over patient rights, the burden of proof was placed upon Singer to provide supporting evidence of her perspective. The result of that debate was the overwhelming rejection of her approach to NRMs by her academic colleagues, though a handful of psychological professionals such as Louis J. West were vocal supporters.[26] However, through the 1980s Singer's thought was accepted by the courts and strongly influenced the deliberations of juries.

At the same time, the conflict between Singer and the great majority of her academic colleagues who studied NRMs finally led to a series of actions that resulted in the collapse of her work on brainwashing. Those events began in 1983 when a proposal was made to the American Psychological Association (APA) that a task force be established to examine and report on the techniques of coercive persuasion being used by various psychological and religious groups. In 1984 the "Task Force on Deceptive and Indirect Methods of Persuasion and Control" with Margaret Singer

as chairperson was established. The Task Force report was submitted for review in 1987. Both outside reviewers and two members of the Board of Social and Ethical Responsibility for Psychology concurred in the inadequacies of the report, and the Board rejected it. In a memorandum to Singer and the committee members dated May 11, 1987, it cited the report for its lack of both "scientific rigor" and an "even-handed critical approach." It noted that, given the evaluation of the report, members of the committee could not use their work on the committee to credential themselves in the future.

The action of the APA affected a court case in 1989–1990, *U.S. v. Fishman.* In his defense, which concerned the relationship between Mr. Fishman and the Church of Scientology, Fishman called upon Singer and another colleague, sociologist Richard Ofshe, to testify to the deleterious effects of the Church of Scientology's manipulation of him. The key document in the case became a lengthy restatement of the position of the previous APA brief and an analysis of the writings and statements of Singer written by psychologist Dick Anthony. Anthony argued persuasively that Singer postulated a "robot theory of brainwashing" that lacked scientific support.[27] The court accepted his arguments, and, as a result, Singer and Ofshe were denied the stand. Fishman's defense collapsed. As a result of the Fishman ruling, published in 1990, both Singer and Ofshe were subsequently denied the stand in several additional cases. Clearly, the Fishman case set a precedent for courts to accept the position of the great majority of scholars of NRMs rather than the perspective of Singer and others sympathetic to her idea of brainwashing.

The ruling in the Fishman case, soon affirmed by similar rulings in other cases, meant that brainwashing could no longer be used to defend the practice of deprogramming. This fact had some significant consequences a few years later. In the meantime some equally significant changes occurred.

Possibly the most important event in the years after the Fishman ruling, though not immediately connected to it, was the Church of Scientology's 1992 settlement of its long-term dispute with the Internal Revenue Service (IRS). This dispute cost the church millions of dollars and tied up the church's legal resources. Once the IRS problem was settled, the church turned its attention to CAN, which it blamed for many of its problems. A variety of Scientologists joined CAN and attended its annual meeting. However, as Scientologists were identified, they were systematically denied entrance to the gathering. One by one the Scientologists sued for breach of contract (attendance at the meeting being listed as a benefit of membership). As each case was filed, the process of discovery went forward. And Scientology's lawyers began deposing key people in the CAN network. Though none of the cases got past a first hearing in the court, each case produced several dispositions, and, as the number of cases mounted, CAN lost its legal insurance. The depositions began to reveal the way CAN facilitated deprogrammings in stark contrast to its stated public policy.

The major consequence of Scientology's information gathering came in a most unexpected event. Priscilla Coates, a longtime CAN operative on the West Coast, took a referral from CAN's national office that she passed on to deprogrammer Rick Ross. He then attempted to deprogram Jason Scott, a member of a Pentecostal

Church in Seattle, Washington. Ross was unsuccessful, and in 1995 Scott sued. Learning of the case, the Church of Scientology loaned one of its lawyers, Rick Moxin, to Scott, and Moxin brought in all the data gathered on CAN's operation into the case. He won a five-million-dollar judgment, one million of which went against CAN. The Scott case bankrupted CAN. A coalition of cults it had attacked bought its assets and now run a new Cult Awareness Network that is active in religious freedom causes.

The demise of CAN was a most significant event in the overall effort of the cult awareness movement to mobilize public support against those groups that were labeled cults. That movement preceded the formation of CAN, and the movement continues. AFF continued in the wake of the fall of the brainwashing theory developed by Singer and attempted to find either new approaches to brainwashing or another theory that would be useful in describing what its members consider the destructive nature of cult life. A variety of different approaches have been offered by scholars such as Paul Martin, Janja Lalich, Benjamin Zablocki, and Steven Kent,[28] but none of the alternatives found significant support among courts, academia, or others.[29] Meanwhile, the number of cases in which brainwashing was introduced as a substantive part of the case has significantly diminished, though they did not entirely disappear.

Meanwhile, through the 1980s and 1990s, as the drama around brainwashing and CAN unfolded, the Christian countercult movement moved forward.[30] Not active on the legal front, Christian countercultists primarily worked to warn Evangelical and Fundamentalist Christians of the beliefs and practices of NRMs with the aim of dissuading any of them attracted to an NRM from leaving the church and joining it. The countercult effort peaked in the 1990s with hundreds of countercult groups publishing and distributing millions of pieces of literature throughout the Christian community.

The countercult movement, however, was having its own problems. In the last years of his life, Martin led efforts to form the Evangelical Ministries to New Religions (EMNR), an organization that attempted to bring the many countercult ministries into a fellowship that could provide a number of services and generally improve the countercult position within the Evangelical movement as a whole. At the same time, the movement began to see its role primarily as one of providing an apologetic basis for countering cults rather than fostering missionary work among members of NRMs.

However, EMNR ran into a variety of problems, especially as it attempted to reign in the excesses of some ministries and deal with some questionable financial practices of others. One by one, some of the larger ministries withdrew, including, following Martin's death, his own organization. EMNR was beset with some key disagreements over whether to align more closely with the secular anticult movement and adopt some form of brainwashing theory to the understanding of cults. Most recently, a number of EMNR's longtime leaders developed a different approach to NRMs, emphasizing evangelism rather than simply writing harsh apologetics. Thus, as the

new century began, a number of EMNR's leaders withdrew and began operating separately.

CONCLUSION

A decade after the Jason Scott case, one can see how the demise of CAN brought to an end (at least in North America) the cult wars. The controversies that surrounded NRMs did not end, but the ongoing debates largely moved out of the courts. An effort to recreate CAN in the late 1990s proved a failure.[31] One last gasp effort in 1998–1999 to get the state of Maryland to adopt some anticult legislation also proved a failure.[32]

CAN's sister organization, the AFF, continues to operate, and some former deprogrammers continue to run exit counseling services. Neither AFF nor the counseling services provoked the critique that CAN and deprogramming did, and scholars previously labeled "cult apologists" now regularly attend AFF meetings. Though cult awareness organizations and cult experts will persist into the foreseeable future, their ability to oppose the spread and activities of NRMs in North America seems destined to fade. They apparently still have some voice in Europe, where the cult wars to some extent continue, though in a very different context than in North America.[33]

Bellah, eds., *The New Religious Consciousness* (Berkeley: University of California Press, 1976); Jacob Needleman and George Baker, eds., *Understanding the New Religions* (New York: Seabury, 1978); and Steven M. Tipton, *Getting Saved from the Sixties: Moral Meaning in Conversion and Cultural Change* (Berkeley: University of California Press, 1982).

13. On the Children of God (now known as The Family International) see James R. Lewis and J. Gordon Melton, eds., *Sex Slander and Salvation: Investigating the Family/Children of God* (Stanford, CA: Center for Academic Publication, 1994).

14. While a decade later, the successor organization to the Children of God, The Family International, became known for their questionable sexual practices (especially the use of sex for evangelism, or flirty fishing) and in the mid 1980s face charges of sexual child abuse, at this stage of the cult controversy, the group was primarily charged with taking young adults out of a normal career trajectory.

15. The extensive Christian countercult movement based in the Evangelical denominations in the United States is beyond the scope of this essay. With a few prominent exceptions, its spokespersons kept their distance from CAN, refrained from participation in activist programs based either on deprogramming or on government action, and continues to emphasize its doctrinal differences with all non-Trinitarian Christian belief systems.

16. Cf. Walter R. Martin, *The New Cults* (Santa Ana, CA: Vision House, 1980). Recent events in Europe have, of course, confirmed the accuracy of Martin's predictions concerning attacks upon Evangelicals as cults.

17. Cf. Ronald Enroth, *Youth Brainwashing, and the Extremist Cults* (Grand Rapids, MI: Zondervan, 1977).

19. Patrick, Ted, and Tom Dulack, *Let Our Children Go!* (New York: E.P. Dutton, 1976).

20. (New York: W.W. Norton & Company, 1961).

21. At present, the primary rehabilitation center for deprogrammed cult members is Wellspring Retreat & Resource Center at Athens, Ohio, headed by Christian psychologist Paul R. Martin. Martin is the author of *Cult Proofing your Kids* (Grand Rapids, MI: Zondervan, 1993).

22. It should be noted that the psychologists and other professionals who identified themselves with the anticult movement have a distinct problem. Almost none of them ever studied the groups that they were now to evaluate as experts. Their knowledge of NRMs came almost totally from the stories of ex-members, accounts heavily distorted by the deprogramming

process. Their appraisals received constant negative critiques from the growing number of scholars who actually studied these and were broadly familiar with the literature, both pro and con, on different groups. The work of these scholars (which by the mid-1980s numbered in the hundreds) was a major irritant for the anticult movement and in the end led to the destruction of the brainwashing hypothesis.

23. CAN's continued involvement in referring people to deprogrammers was demonstrated in the Jason Scott case in 1995, and led to the sizable judgment against it. Also, in 1993, during his trial after a botched deprogramming attempt, it was revealed that, contrary to its stated public policy, CAN had paid deprogrammer Galen Kelly a monthly stipend for many months during the 1990s.

24. On the history of brainwashing and the saga of CAN see David G. Bromley and James T. Richardson, eds., *The Brainwashing/Deprogramming Controversy* (New York: Edwin Mellen Press, 1973); J. Gordon Melton, "Brainwashing and the Cults: The Rise and Fall of a Theory," http://www.cesnur.org/testi/melton.htm (accessed December 15, 2005); and especially Anson Shupe and Susan E. Darnell, *Agents of Discord: Deprogramming, Pseudo-Science, and the American Anticult Movement* (New Brunswick, NJ: Transaction Publishers, 2006).

25. On Hearst see Shana Alexander, *Anyone's Daughter* (New York: Viking Press, 1979); Marilyn Baker and Sally Brompton, *Exclusive! The Inside Story of Patricia Hearst and the SLA* (New York: Macmillan, 1974); Patricia Campbell Hearst with Alvin Moscow, *Every Secret Thing* (Garden City, NY: Doubleday, 1982).

26. The details of the anticult position were best presented in the collection of papers in David A. Halperin, ed., *Psychodynamic Perspective in Religion, Sect, and Cult* (Boston: J. Wright, 1983). The critique can be seen in Bromley and Richardson, eds., *The Brainwashing/Deprogramming Controversy.* By 1984/85, the issue was largely decided and while anticult scholars continued to publish and circulate papers reflecting the anticult perspective, these were published almost exclusively by anticult organizations such as AFF and found little audience in the larger scholarly community.

27. See Dick Anthony and Thomas Robbins, "Law, Social Science and the 'Brainwashing' Exception to the First Amendment," *Behavioral Sciences and the Law* 10 (1992): 5–29, for a discussion of this phase of the controversy.

28. See, for example, Janja Lalich, *Bounded Choice: True Believers and Charismatic Cults* (Berkeley: University of California Press, 2004); Benjamin Zablocki, "Toward a Demystified and Disinterested Scientific Theory of Brainwashing," in *Misunderstanding Cults: Searching for Objectivity in a Controversial Field,* ed. Benjamin Zablocki and Thomas Robbins (Toronto: University of Toronto Press, 2001): 159–214; and Stephen A. Kent, "Brainwashing Programs in The Family/Children of God and Scientology," in *Misunderstanding Cults,* 349–78. Steven Kent wrote several papers proposing very different approaches to "brainwashing."

29. The post-CAN attempts to revive consideration of brainwashing may have been a situation of too little too late. The approaches are in some cases mutually exclusive, especially the approaches of Kent and Zablocki, but more importantly, with the discontinuance of deprogramming, the need for a theory of brainwashing to defend the actions of anticult activists has simply withered away. None of the new theories have, to date, faced a hearing in a trial to determine if they are persuasive and strong enough to withstand cross-examination.

30. The most substantive study of the countercult movement is by Douglas E. Cowan, *Bearing False Witness: An Introduction to the Christian Countercult* (Westport, CT: Praeger, 2003).

31. Margaret Singer attempted to rehabilitate her reputation with a book-length defense of her position, *Cults in Our Midst: The Hidden Menace in Our Everyday Life* (San Francisco:

Jossey-Bass Publishers, 1995), with Janja Lalich. She never, however, attempted a systematic refutation of the criticism of her position put together by Anthony and others, though she had ample opportunity. No longer able to testify in court, she sued the American Psychological Association and a number of scholars who voiced their criticisms of her work, but her case was tossed out of court with prejudice, and she had to pay the court costs of the defendants.

32. On the Maryland effort, see Jeffrey K. Hadden, "Cult Wars in Maryland: An Introduction to the Task Force to Study the Effects of Cult Activities on Public Senior Higher Education Institutions," http://religiousmovements.lib.virginia.edu/cultsect/mdtaskforce/cultwars.htm#intro.

33. On the history of the European phase of the cult awareness (or anticult) movement see James A. Beckford, *Cult Controversies: The Societal Response to the New Religious Movements* (London: Tavistock, 1985); and James T. Richardson, ed., *Regulating Religion: Case Studies from Around the Globe* (New York: Kluwer Academic/Plenum Publishers, 2004).

INTRODUCTION

The Local Church: A Countercult Vignette

The Local Church movement was founded in Shanghai, China, in the late 1920s by Nee Shu-tsu, who later called himself Watchman Nee, the name by which he is best known in the west. Dramatically converted to evangelical Christianity in 1920, Nee's beliefs were deeply affected by the dispensational theology of both the Keswick Revival and the Plymouth Brethren. Early in his career, though, not unlike other religious reformers, he concluded that denominational competition among churches—which was no less fierce on the mission fields of China than it was anywhere else—was unbiblical, and that the principal division among Christians should be geographic and neither doctrinal nor ecclesiastical. That is, there should be only one *local* church to which all Christians in that area belong. Today, hundreds of thousands of believers worldwide gather in local churches, guided and inspired by

the voluminous teachings of Watchman Nee and his closest partner in the work, Witness Lee. Local Church theology is strongly evangelical and holds to the Bible as the "complete and only divine revelation," as well as to belief in the Trinity, the need for the spiritual regeneration of all people, and the virgin birth, substitutionary atonement, physical resurrection, and imminent return of Jesus Christ.

On December 31, 2001, however, after numerous attempts to resolve their concerns amicably, The Local Church and nearly 100 Local Church congregations in the United States filed a defamation suit against Harvest House, an evangelical Christian publisher, and two of its best-selling authors, countercult apologists John Ankerberg and John Weldon. At issue was the entry Ankerberg and Weldon included on The Local Church in their *Encyclopedia of Cults and New Religions,* which Harvest House published.[1] Seeking more than 130 million dollars in damages, The Local Church claimed that its presence in a book devoted entirely to exposing what the authors regard as devious and dangerous "cults" was defamatory, egregiously misrepresenting their beliefs and practices, and maliciously impugning the reputation of their founders, Watchman Nee and Witness Lee.

Unfortunately, in these matters The Local Church was no stranger to the courtroom. Nearly 15 years earlier, Witness Lee and The Local Church in Anaheim won a multimillion dollar judgment against another countercult apologist, Neil Duddy, for his book, *The God-Men.*[2] At that trial, numerous scholars of new religions testified on behalf of The Local Church, and Justice Leon Seyranian found that the "defendants intended to convey to the readers all of the false statements set forth above or recklessly disregarded the false and defamatory meanings that would be conveyed to the readers."[3] Handing down his decision, Justice Seyranian awarded Witness Lee and the other plaintiffs nearly 12 million dollars in compensatory and punitive damages—only a fraction of which they were actually able to collect.

In their suit against Harvest House, Ankerberg, and Weldon, The Local Church contended that the authors' introduction to the *Encyclopedia of Cults and New Religions,* which claims among other things that cults are responsible in part for "the ebb of Christian influence in America,"[4] for the ruin of "tens of millions of lives,"[5] and that Satan "spiritually speaking, reaps significant rewards from cult membership,"[6] defames their organization because anyone who reads that introduction will quite reasonably associate those characteristics with all the groups discussed in the book. Following Justice Seyranian for a moment, whether Ankerberg and Weldon actually believe what they have written about The Local Church or not, and it seems clear that they do, the larger question is whether their work "recklessly disregarded the false and defamatory meanings that would be conveyed to the readers." Given the evangelical history and beliefs of The Local Church, in each of their numerous letters prior to filing the suit, the plaintiffs voiced the same, relatively uncomplicated concern: "We do not know why you chose to include us in a book of cults."[7]

Why, indeed?

This chapter explores the evangelical Christian countercult, one of two principal countermovements that have emerged in North America in response to the appearance and proliferation of new religions, especially in the latter half of the twentieth

century. Admittedly, within the broader spectrum of evangelical Christianity in North America, principally the United States, the countercult is something of a fringe movement.[8] Prior to the advent of the Internet, there were never more than a few hundred countercult apologists, with certainly fewer than 50 publishing commercially or consistently. Because of the rather exclusive religious vision of evangelical Christianity, though, and the general level of suspicion in the evangelical community about alternative religions, the countercult makes itself felt in a number of different ways and has had an influence far beyond its relatively small numbers. Walk into almost any evangelical bookstore, for example, and you will find shelves devoted to "Spiritual Warfare," "Spiritual Counterfeits," or "Cults and World Religions," as well as a seemingly endless supply of books on every non-Christian religion imaginable. Numerous countercult organizations such as the Spiritual Counterfeits Project (SCP), the Christian Research Institute (CRI), Personal Freedom Outreach, Mormonism Research Ministry, Answers in Action, the Berean Call, Watchman Fellowship, Saints Alive in Jesus, and the Utah Lighthouse Ministry regularly publish books, magazines, newsletters, videos, and audiotapes on what they regard as the ongoing problem of cults in America. Some, like Saints Alive or the Utah Lighthouse, concentrate on one or two religions—in these two cases, the Church of Jesus Christ of Latter-day Saints. Others, like Ankerberg and Weldon, attack any religious group they consider at variance with their particular brand of evangelical Christianity —which countercult apologists all but invariably refer to as "biblical Christianity." Some countercult literature, like the glossy *Christian Research Journal,* is readily available in large chain bookstore as well as specialty Christian shops. Others, like the *Watchman Expositor, The Berean Call,* or the *Saints Alive in Jesus Newsletter* are available by subscription only. Still others, such as the Apologetics Index, the Christian Apologetics and Research Ministry, or the Resource Center for Theological Research, can only be accessed online. Many countercult apologists choose to confront targeted religionists directly, picketing or handing out anti-Mormon leaflets at the opening of new Latter-day Saints temples, for example, or organizing "mission trips" to engage visitors to religious festivals put on by suspect groups. This kind of aggressive, confrontational proselytizing, however, has resulted in considerable tension within the evangelical community and something of a split among current and former countercult apologists. With the ready availability of Internet access, countercult evangelism on the World Wide Web has become increasingly popular, and hundreds of countercult Web sites have appeared in recent years. Offline, on the home front, the church-based "congregational cult seminar" is a staple of evangelical countercult activity, often demonizing target groups while boosting evangelical confidence in the superiority of their own religious world view.

Though relatively small within the larger orbit of evangelical Christianity, the countercult is still a complex subculture, ranging from fully orbed professional organizations that employ full-time staff and enjoy access to print, radio, television, and Internet media to amateur apologists who operate on shoestring budgets and publish their material on low-cost Web sites, and whose methods range from confrontation with putative cult members to printing endless reams of material decrying

this new religion or that. It has experienced significant enough internal tension to provoke conflict apologists over doctrine and method, to the point where some former participants have left the movement and actively sought alternate paths for their relations with new religions.

In this chapter, I do three things. First, since they operate from very different premises and in very different ways, I distinguish the evangelical Christian countercult from its more well known counterpart, the secular anticult movement. Second, I discuss the countercult's main beliefs, practices, and some of the controversies that have surrounded it. Third, I briefly consider internecine conflict in the countercult, and the changing vision that some former participants have for missionary activity among new religions.

EXITS AND MIGRATIONS: THE SECULAR ANTICULT AND THE CHRISTIAN COUNTERCULT

With the undeniable emergence of new religions in North America, two distinct countervailing movements have also appeared, both of which believe their mission is to warn the public about the dangers of these so-called "cults" and rescue those who have been supposedly taken in by deviant religious groups. These are first the *secular anticult*—which is best known perhaps for the coercive deprogramming tactics it employed from the mid-1970s to the early 1990s and included such groups as the Council on Mind Abuse, the old Cult Awareness Network[9] (CAN), and the American Family Foundation[10]—and second the principal focus of this chapter, the *evangelical Christian countercult,* devout believers who regard the growth of any new religion as a clear and present danger not only to Christianity, but to North American society at large. Although the general public might be more familiar with the secular anticult, with its lurid tales of charismatic leaders and brainwashed followers, historically the evangelical countercult has done far more to categorize and stigmatize new religious movements in the United States.

Just a few years after the publication of *The Book of Mormon* in 1830, for example, Eber Howe responded with a self-published treatise, *Mormonism Unvailed,* in which he "exposed" the flaws and fallacies in the nascent Latter-day faith.[11] The year 1899 saw the publication of George Hamilton Combs's *Some Latter-Day Religions.*[12] "For climacteric comicality," wrote Combs, a Disciples of Christ minister from Kansas City, Missouri, "Mormonism should be awarded the palm … Untruth was never more picturesque."[13] New religions of the nineteenth century—principally Christian Science, the Watchtower Bible and Tract Society (Jehovah's Witnesses), and the Church of Jesus Christ of Latter-day Saints—figured prominently in *The Fundamentals,* the series of booklets published between 1910 and 1915 as a reaction to theological liberalism, Biblical criticism, the theory of evolution, and the rise of alternative religious practice in the United States. In 1923, Gaius Glenn Atkins published *Modern Religious Cults and Movements,*[14] and in 1935, William Irvine's *Heresies Exposed* appeared.[15] In 1938, Christian Reformed minister Jan Karel van Baalen published the first of the "encyclopedic" treatments of suspect religious groups, *The Chaos of*

Cults: A Study in Present-Day Isms.[16] Although much of van Baalen's prose is less polemical than that of his countercult descendents, he was as clear as they are where the boundaries between true faith and false religion were drawn, and he consigned all religious traditions other than his particular stream of Christianity to a rather generic "paganism." "What, then, is the great difference between Christianity and paganism?" he asked in the introduction to the first edition of *The Chaos of Cults.*[17] "There can be no doubt but that Christianity stands apart from all other 'great religions' in that it teaches a God-made salvation while all others are autosoteric."[18] This last point is crucial in understanding the position from which the evangelical countercult approaches all other religious traditions.

While, in the nineteenth and early twentieth centuries, these authors and critics were not part of a self-identified countercult movement, they laid much of the conceptual and ideological foundation on which the evangelical countercult movement as it emerged after World War II was built, and to them the postwar countercult movement owes a considerable (and often unacknowledged) intellectual debt. Before discussing the modern evangelical countercult in more detail, however, it is important to discriminate in a general way between it and the secular anticult.[19] These distinctions emerge principally in the different ways each answers three central questions: What is a cult? Why do people join cults? And what is to be done when they do?

By and large, in all its activities the secular anticult movement is guided by what has come to be known as the "brainwashing hypothesis," the belief that new religions have an almost magical ability to effect complete, seemingly permanent personality changes in those with whom they come in contact. Through coordinated and intentional programs of "thought reform" or "thought control," the secular anticult alleges that new religions rob recruits of the ability to make independent decisions, to distinguish between right and wrong, and to function outside the control established by the group. A cult, in these terms then, is any group that operates in this way. Michael Langone, the executive director of the American Family Foundation (now the International Cultic Studies Association), defines a cult as

> a group or a movement that, to a significant degree, (a) exhibits great or excessive devotion or dedication to some person, idea, or thing, (b) uses a thought-reform program to persuade, control, and socialize members, … (c) systematically induces states of psychological dependency in members, (d) exploits members to advance the leadership's goals, and (e) causes psychological harm to members, their families, and the community.[20]

Langone is quick to point out that according to this definition the particular beliefs of a group do not necessarily categorize it as a cult, and therefore cults need not be religious in nature, but may be "psychotherapeutic, political, or commercial."[21] Though there are a number of conceptual problems with Langone's definition—not least of what constitutes "a significant degree" of devotion or control—it is not difficult to see how the secular anticult understanding of "cultic" recruitment follows logically from it. Members join cults and remain within them because they have been "persuaded, controlled, and socialized" into "the group's unique pattern of

relationships, beliefs, values, and practices"[22] and because they have been "systematically induced" into a "state of psychological dependency."

The evangelical Christian countercult, on the other hand, largely rejects the brainwashing hypothesis, noting, as Gretchen Passantino does, that it is simply too subjective, too prone to its own abuse. "*Doctrinal* aberration," writes Passantino almost epigrammatically, "should distinguish the cults from Christianity, not mere social aberration."[23] Though many countercult apologists claim that their use of the term "cult" is not meant to be derogatory, they freely substitute such equally questionable phrases as "spiritual counterfeit," "false or heretical religion," or "spiritual fraud." In *Cult Watch,* for example, Ankerberg and Weldon state that "for our purposes a 'cult' may be loosely defined as a religious group having biblically unorthodox and/or heretical teachings and which may fail to meet basic ethical standards of Christian doctrine or practice."[24] For Hank Hanegraaff, president of the Christian Research Institute, the largest professional countercult organization in North America, "a cult is any group that deviates from the orthodox teachings of the historic Christian faith being derived from the Bible and confirmed through the ecumenical creeds."[25] Alan Gomes, a professor at Talbot School of Theology who is also the series editor for the *Zondervan Guide to Cults and Religious Movements,* contends that "cults must be defined theologically, not behaviorally; examining the group's doctrinal system is the only way to determine whether it is a cult."[26] Conversely, Rob Bowman, a former CRI staff member, argues that "cult" is a term simply too loaded with cultural baggage to be helpful in describing these groups. "When referring to heretical religious groups," he contends, "I prefer to call them heretical religions, or pseudo-Christian religions, or heretical sects. These labels are more descriptive and less prejudicial than the label of cult."[27] While it is unclear just how Bowman's suggestions are any less prejudicial than "cult," what is clear from these few examples is that evangelical Christianity—as interpreted by the countercult apologist—is the benchmark against which deviance is measured, and any religious group can be considered cultic to the degree that it deviates from that norm. If the secular anticult relies on a putative psychosocial definition, the evangelical countercult grounds its opposition to other religious groups—whether new religions or established world faiths—in its theological understanding of the unique, exclusive, and all-sufficient nature of conservative Protestant Christianity.

For the evangelical countercult, the reasons why people join these groups are similarly unequivocal. Rather than brainwashing or thought control per se, countercult apologists see themselves engaged in spiritual warfare, soldiers on the front lines of a cosmic struggle between good and evil, God and Satan. "Despite whatever good intentions New Agers may have," writes Douglas Groothuis, "it is Satan, the spiritual counterfeiter himself, who ultimately inspires all false religions."[28] "Christians are involved in literal, spiritual warfare," he continues; they "are in combat conditions, with no demilitarized zones available this side of heaven."[29] "In spite of apparently wide differences among the cults," argues Dave Hunt, a prolific countercult writer and coauthor of *The God Makers,* one of the most pernicious examples of countercult polemics,[30] "beneath the surface, they all rest on a common foundation: the four lies

Satan used to trick Eve."[31] "Satan," he concludes, "is the author of every cult and false religion, and his imprint is clearly seen on them all."[32] Evangelical sociologist Ronald Enroth concurs, writing in *Youth, Brainwashing, and the Extremist Cults* that "from the Christian perspective, the so-called new age cults represent the most recent manifestation of an age-old struggle—the battle between God and God's adversary, Satan."[33] Ron Rhodes is another popular countercult apologist, like Bowman a former researcher at the Christian Research Institute, and the author of a number of books published by Harvest House under the rubric *Reasoning from the Scriptures with ….*[34] He writes that "if this disease goes unchecked,"—by which he means the alleged apathy of "true" Christians in the face of "the cancer of cultism [that] has been free to spread at an incredible, unprecedented rate in America"[35]—"you can count on the continued deterioration of America as well as the continued *culting* of America. If Christians do not act, *the cults will.* The war is on—and you as a Christian will be either a soldier in the midst of the conflict or a casualty on the sidelines."[36]

How one enters into the conflict and how one answers the question "What is to be done?" show the third level of distinction between the two groups. As I have noted elsewhere, "deliverance is the axis around which many of the other differences between the two movements revolve."[37] Although both the secular anticult and the evangelical countercult want to see people leave suspect groups, they differ significantly in their approach to the problem of exit and what it means to leave a cult. The secular anticult has been severely and quite rightly criticized for its practice of forcible exit—the kidnapping, enforced confinement, and abusive "deprogramming" of adult members of new religions. Though this kind of criminal behavior took place in North America principally from the mid-1970s to the early 1990s, and has largely ceased with the bankruptcy and dismantling of the old Cult Awareness Network, it still occurs in other countries.[38] While the secular anticult has professionalized somewhat and attempted to distance itself from its more unsavory past, reconceptualizing deprogramming as "exit counseling" and "thought reform counseling,"[39] the basic purpose for which it exists remains the same: to facilitate the removal of adult members of new religions from the groups they have freely chosen to join. Once that exit is secured, however, and as long as the individual does not join another suspect group, the secular anticult basically loses interest in the case.

For countercult apologists, on the other hand, coming out of a suspect group is only half the battle. Conversion to evangelical Protestant Christianity is the ultimate goal. Countercult apologists are not satisfied simply to see individuals leave new religions, and their mission is not complete until they have convinced former members to embrace the kind of evangelicalism espoused by the apologist. According to the evangelical countercult, all world views, all faith choices, and all religious traditions other than conservative Christianity are ultimately flawed and will place one's eternal salvation in jeopardy. It is, therefore, incumbent upon true Christians, those who are not willing to stand on the sidelines while the spiritual conflict rages around them, to inform themselves about the new religions by which they are confronted, and to attempt to convince members of those groups to convert to evangelicalism as the

opportunity arises. Ron Rhodes, for example, points out that countercult apologists "can provide well-reasoned evidences to the non-believer as to why he ought to choose Christianity rather than any other religion. Apologetics can be used to show the unbeliever that all the other options in the smorgasbord of world religions *are not really options at all,* since they are false."[40] This conceptualization of the problem leads to the two principal functions of the evangelical countercult as it is both historically and currently constituted: the *apologetic-reinforcement,* which acts to keep Christian consumers of countercult material secure in the presumed superiority of their religious choice and the concomitant inferiority of all others, and the *apologetic-evangelistic,* which acts to confront and convert members of target groups. No matter how complicated the resulting exegesis or explanation becomes, however, evangelical countercult epistemology is predicated on a very simple equation: we are right, and you are wrong.

COUNTERCULT APOLOGETICS: WORLD VIEW MAINTENANCE AND EVANGELICAL CONFRONTATION

Organizationally, as I alluded to above, there are a number of axes along which the evangelical countercult may be explored and examined. Are we dealing with an individual apologist or a multistaff corporation? Is the organization professional, semiprofessional, or avocational? Does it operate solely online, or does it exist in the "real world" as well? What religious groups does it target? Is it concerned with only one group, like the Utah Lighthouse Ministry, or does it contend for the faith against any and all comers, like the Christian Research Institute? Is it operated by former members of particular groups, by people who have never known any faith home but evangelical Christianity, or some combination of both? How does it disseminate its apologetics? The advent of the Internet and the ready availability of low-cost Web hosting, for example, has vastly increased the number of semiprofessional and avocational apologists seeking to enter the field. Where, once, countercult apologists depended on the willingness of publishers such as Harvest House to release their material, or took the decidedly less attractive route of print self-publication, now, scores of evangelical Christians are mounting the cybernetic ramparts in defense of their faith.[41] Finally, is its primary focus proselytization of new religious adherents, the provision of information about new religions to fellow evangelicals, or something in between?

Apologetics and World View Maintenance

"All socially constructed worlds," writes Peter Berger in his classic work, *The Sacred Canopy,* "are inherently precarious"[42]—including, and perhaps especially, religious world views. Since the early part of the nineteenth century, scores of new religious movements have emerged in North America to challenge the cultural dominance of the Christian Church. While none has ever been able to compete with Christianity in terms of participant numbers or social influence, at the level of the individual

adherent each new religion represents a challenge to the exclusivity, superiority, and inevitability of the Christian world view. That is, soteriologically speaking, if there are other "ways to salvation" available, ways that are perhaps more attractive than Christianity, what compelling reason is there to stay in the Christian church? At its most basic level, the evangelical Christian world view is predicated on an exclusive claim to religious significance and soteriological efficacy. This claim is challenged in an equally basic way each time a new religion appears on the block and each time its adherents make their own religious claims—which are often implicitly or explicitly at odds with those made by evangelical Christians. Thus, demonstrating the flawed or fraudulent nature of all religious competitors becomes a primary mechanism in the maintenance of an evangelical Christian world view. Consider, for example, Douglas Groothuis and Craig Hawkins.

Like many countercult apologists, Groothuis believes that unless one's world view is predicated on a very particular Christian foundation, it is, by definition, false, and will ultimately demonstrate itself inadequate in providing adherents both the tools for a successful spiritual life and the assurance of salvation. In *Confronting the New Age,* Groothuis advocates what he calls "negative apologetics," which rather than offer positive reasons for embracing Christianity, "[presents] *reasons against* non-Christian perspectives."[43] For Groothuis and most of his countercult colleagues, "if non-Christian world views are largely based on false ideas, the weakness of those world views can be highlighted through argumentation," and "any world view not based on the truth of God's revelation in the Bible will prove itself faulty at key points."[44] For the evangelical countercult, Groothuis's equation is simple: "Your perspective doesn't make sense; and it doesn't fit the facts. Therefore, you shouldn't believe it."[45] His consideration of how these differences in world view will affect people in the long term is equally unambiguous: "Those who embrace Christ as Savior will live forever with him; those who continue to rebel against God will suffer eternal punishment."[46]

Craig Hawkins's contribution to the *Zondervan Guide to Cults and Religious Movements* series, *Goddess Worship, Witchcraft, and Neo-Paganism,* illustrates this logic very clearly in the arguments he provides for evangelicals to use when attempting to counter the religious claims of contemporary pagans. His final section on "Refutation of Arguments Used by Neo-Pagans to Support Their Positions on Revelation" is entitled "The Biblical Position on Divination." Here, he writes:

> a. Divination (as well as spiritism …) and those who practice it are expressly condemned in the Bible … b. Since divination is not permissible, *a fortiori* it is not a legitimate source of revelation, but only of deception. c. In the spirit of Deuteronomy 13:1–4, we are to reject all real or imagined revelations, whether originating through divination or otherwise, that contradicts the teachings of the Bible.[47]

While this may be an accurate interpretation of passages from Christian Scripture from certain evangelical perspectives,[48] it hardly provides an *a fortiori* argument for the preeminence of Christian revelation, and rather highlights the circular argumentation that informs much countercult reasoning. This is exemplified even

more clearly under Hawkins's "Arguments Used to Prove the Biblical Doctrine of Revelation":

> 1. God's definitive revelation to us is in the incarnation of Jesus Christ, the second person of the trinity (Heb. 1:1–3). 2. The Bible is a true and authoritative revelation … 3. The Bible is sufficient revelation … 4. Since the revelations of neo-paganism violate or contradict the Bible, they are not true.[49]

As should be readily apparent, this is sophistry masquerading as logic. These are not arguments designed to convince anyone who does not already accept the premises on which they are based. That is, they are primarily intended to reinforce what evangelical Christians already believe about their faith, rather than provide a foundation from which to convert the followers of other faiths. Countercult apologists very often present their arguments as though they are meant for evangelism, as though they will be successful in converting new religious adherents.

Apologetics and Countercult Evangelism

However countercult ministries are socially organized, two types of evangelistic activity characterize their efforts: *proactive* evangelism, which revolves around planned encounters with adherents of different religious traditions, and *reactive* evangelism, which often uses countercult materials produced specifically to respond to an unplanned encounter with such an adherent.

Few countercult apologists simply trawl the streets looking for unsuspecting "cultists" to evangelize. Among other things, for what activists would regard as maximum effect, proactive evangelism requires a particular adherent population amongst which apologists can operate, a specific site at which their proselytization can take place, and, often, specialized training for those who want to engage in this type of activity. Anti-LDS ministries, for example, regularly target temple openings and festivals celebrating Latter-day Saint history and culture. For nearly 20 years, countercult activists have passed out evangelical tracts to visitors at the annual Manti, Utah, Miracle Pageant, which reenacts the sacred mythistory of the Latter-day Saints. During the 1980s and early 1990s, Saints Alive in Jesus, a countercult organization founded by former Latter-day Saint and *The God Makers* coauthor Ed Decker,[50] also sponsored yearly anti-Mormon conferences and "mission trips" to Utah. And, for many years, anti-Mormon activist Rob Sivulka has picketed a wide variety of LDS venues wearing a tee shirt or carrying signs emblazoned with his online ministry addresses—mormoninfo.org and josephlied.org—and shouting a variety of Bible verses at passersby. Not surprisingly, many Latter-day Saints, and not a few non-Mormon visitors, react negatively to this kind of confrontational activity. Indeed, reflecting on his experience of the 2005 Manti pageant and Sivulka's behavior there, John Morehead, former President of Evangelical Ministries to New Religions and who now practices what he calls an "incarnational missions strategy," was appalled (and not a little embarrassed) at the kind of disrespectful attitude it exemplifies.[51]

Despite the occasionally high profile aspect of proactive evangelism, reactive evangelism, and the materials designed to support it, is much more common in the countercult community. Indeed, a prominent subgenre in evangelical countercult apologetics is literature aimed specifically at discrediting competing religious world views when adherents of those world views interact with evangelicals (for example, when Jehovah's Witnesses or LDS missionaries knock on one's door). The Lutheran publishing house Concordia, for example, has released a number of small booklets in what it calls "The Response Series," which includes entries on a wide variety of faiths. Responding to what the Lutheran Church-Missouri Synod regarded as an urgent need "for specialized literature to assist in the 'evangelization of persons who belong to anti-Christian sects and cults,'"[52] each booklet provides an overview of the group under consideration and suggests ways in which its views may be contrasted with "biblical Christianity." Many prominent countercult apologists have contributed to the *Zondervan Guide to Cults and Religious Movements* series, which follows a Thomist pattern of position description, argument, and refutation. For example, under "The Doctrine of God" in Hawkins's *Goddess Worship, Witchcraft and Neo-Paganism,*[53] we find "*A. Four Primary Neo-Pagan Positions on God Briefly Stated,*" "*B. Arguments Used by Neo-Pagans to Support Their Positions on God,*" "*C. Refutation of Arguments Used by Neo-Pagans to Support Their Positions on God,*" and "*D. Arguments used to Prove the Biblical Doctrine of God.*" In answer to the question, "Why this series?" Zondervan editors write: "This is an age when countless groups and movements, old and new, mark the religious landscape in our culture, leaving many people confused or uncertain in their search for spiritual truth and meaning. Because you may not have the time or opportunity to research these movements fully, these books provide essential and reliable information and insights."[54]

On the other hand, rather than a question-and-answer approach, in *How to Answer a Jehovah's Witness,* Robert Morey has simply reprinted extracts from Jehovah's Witness literature and then underlined what he regards as particularly significant passages, all of which are designed to discredit Witness teachings. Instructing potential apologists that the "first step is to undermine the reliability of the New World Translation in the mind of the Witness,"[55] he counsels his readers to reinforce constantly that the Witness "is repeating something he learned from a false prophet."[56] Once the Witness has been confronted with these prepackaged arguments for the superiority of evangelical Christianity that Morey provides, "he will not be so arrogant; rather, he should be more submissive in spirit."[57]

Numerous resources based on similar premises of "How to answer a Jehovah's Witness" (or Mormon or Catholic or Buddhist, and so on) offer set-piece "dialogues" designed for a wide variety of religious adherents. Others, however, offer little more than cut-and-paste evangelism and do not require even the least understanding from those who would use them. If the intensive training provided for activists who want to confront Latter-day Saints at temple openings occupies one end of what we might call the preparedness spectrum, at the other end is advice for successful Internet evangelism offered by Matt Slick, the proprietor and sole author of the Web site, Christian Apologetics and Research Ministry (www.carm.org).

> The Internet is full of chat rooms, and those chat rooms are full of cultists, atheists, Muslims, relativists, Mormons, Jehovah's Witnesses, etc., and they are all opposing the truth of God's word. Unfortunately, too many Christians don't have the resources or knowledge to be able to provide answers. That is what this section is for. The purpose of this page is to provide quick cut and paste answers to common objections against Christianity as well as provide documentation for cult teachings. Each answer has been boiled down to a maximum of 255 characters, including spaces, to allow it to be pasted on all chat systems.[58]

In Slick's version of reactive countercult evangelism, potential apologists need not even understand what they are saying, let alone comprehend the questions to which they have been asked to respond. Rather, their "evangelism" requires them to do nothing more than cut, paste, and repost the prepackaged responses provided by Slick. They become "instant experts" in the very worst tradition of the World Wide Web.

Whether proactive or reactive, the rhetorical framework in which countercult activists such as these most often couch their behavior is *dialogue*. In 1985, for example, Ed Decker began a radio program in Utah called "Let's Dialogue," which punned the well-known Latter-day Saint periodical, *Dialogue: A Journal of Mormon Thought,* but through which Decker and his colleagues believed they had finally "brought the truth of the real gospel to Zion."[59] "We have gone into this battle for souls as only zealots can," Decker continues, maintaining that the rather short-lived program was intended to "develop a fresh line of positive dialogue with the LDS people."[60] For most evangelical apologists, however, "positive dialogue" means only that which serves the countercult mission—the conversion of adherents to their particular brand of Christianity. There is no possibility of two-way communication, and little chance that the countercult apologists might find something of value for themselves in the beliefs and practices of others. Mike Oppenheimer, founder of Let Us Reason Ministries, puts this most bluntly. Writing online of recent attempts at rapprochement between evangelicals and Latter-day Saints,[61] and epitomizing the manner in which many countercult apologists approach their mission, Oppenheimer contends that "there is no real dialogue if it does not forge toward an admission of being wrong and bring repentance,"[62] that is, unless Latter-day Saints confess the errors of their ways and convert to evangelical Christianity. Dave Hunt, a prolific countercult apologist, agrees, opining that "the only reason for becoming familiar with other religions and other religious writings would be in order to show those who follow these false systems wherein the error lies and thereby to rescue them."[63]

This kind of lopsided "dialogue" once again illustrates the principal purpose for which countercult apologetics exists: to reinforce the superiority of an evangelical Christian world view in the face of the challenge represented by the myriad religious alternatives currently available. Faulty logic, however, and confrontational proselytism are not the only controversies by which the Christian countercult has been plagued throughout its history. Clustering under the broader rubric of "bearing false witness," many countercult apologists have also been criticized for (a) misrepresenting their academic and ministerial credentials; (b) the antipathetic and polemical

nature of countercult writings; and (c) the fraudulent representation of target religious groups.

Countercult Controversies

Considered by many the father (now arguably the grandfather) of countercult apologetics in North America and the man who has done more to influence evangelical response to new religions than anyone else, Walter Ralston Martin (1928–1989) presents a fascinating introduction to many of the controversies that have haunted the evangelical countercult movement. Although many of these are still the subject of dispute, at various times in his career Martin claimed ordination in a number of different Baptist denominations, and presented himself as a matrilineal descendent of Brigham Young.[64] Perhaps the most consistent controversy to have dogged him throughout his countercult career and since his death has been his claim to academic credentials his many critics contend he did not legitimately possess, and his constant use of "Dr." long before he received even the unaccredited degree he had.[65] Similar concerns have been raised about some of Martin's countercult colleagues. Both John Ankerberg and John Weldon appear to have seriously overstated their academic credentials. Not only are Hank Hanegraaff's ordination credentials in question, he has also been accused of plagiarism by former employees of CRI. William Schnoebelen, who claims to have been an Old Order Catholic priest, a Wiccan High Priest, a Satanist High Priest, a Master Mason, and a Temple Mormon, has (not surprisingly) been accused of simply inventing a past to gain countercult credibility. And James White, a prolific countercult author and polemicist, has had the authenticity of his degree publicly challenged on the Internet.[66] These examples highlight the larger issue of credibility in the evangelical countercult community. That is, on what authority do countercult apologists make the claims they do? As I have noted elsewhere, "since there is no real accrediting body" in the evangelical countercult, "no official *magisterium,* indeed no formal requirement for special education of any kind, the problem becomes that much more complex. Anyone who wants to can hang out a shingle (or launch the Internet equivalent thereof) that reads: 'Countercult Apologist: Slaves to Sin Saved Here.'"[67]

Rather than genuinely seek to understand the attraction of new religions, to appreciate their appeal for devotees and adherents, many countercult apologists simply engage in consistent patterns of demonization, letting their polemic, rather than their argument, reinforce the problematic nature of the groups in question. Using emotional, value-laden, often violent language, it becomes difficult for the target audience (whether a reader or a hearer) to separate the flow of the argument from the tenor of the rhetoric. While examples of this are legion within the countercult, consider Ron Rhodes, who uses antipathetic language of this type with cavalier abandon. Rhodes writes, for example, about "the cancer of cultism"[68] that has afflicted the United States. While "Hinduism has infiltrated the United States,"[69] Islam has "invaded"[70]—both of which terms highlight immigrant populations that are already stigmatized. Indeed, according to Rhodes, there is "a deluge of cultic and occult

groups vying for the American mainstream," and "a cultic and occultic penetration of America's businesses, health facilities, and public schools."[71] Finally, in a passage worth quoting at length, Rhodes raises the level of his rhetoric even further.

> The winds of change are rapidly escalating toward hurricane force on the religious landscape in America today, and the implications should send chills down the spine of every concerned Christian. The reality is, however, that many Christians are indifferent—not only regarding the counterfeit religions sweeping across our land, but also regarding the church. As the ominous dark clouds continue to gather on the horizon, many Christians go merrily about their way, utterly oblivious to the danger that lies all about them.[72]

"It was a dark and stormy night …" is, in essence, Rhodes's message, and the cults are a clear and present danger in North America. Once again, though, there is more implied here than simply spinal chills and vague fundamentalist angst. Supported by the tenor of the rhetoric is an ethical imperative that calls into question the integrity and sincerity of Christians who are not caught in the web of concern and paranoia that Rhodes spins about them. Antipathetic language reinforces the demonization of the world view or group to which one is opposed and which has presented itself as a problem of practical life. In the context of duelling world views, it also serves to reinforce once again the boundaries of the primary group to which the target audience—i.e., evangelical/fundamentalist Christians—belongs. Demonstrating what many regard as the unmitigated arrogance of countercult apologetics, a topic I have discussed at length elsewhere,[73] Ron Rhodes even contends that "those today who participate in false religions like Hinduism and Islam are not viewed by God as groping their way toward Him, but are viewed as worshiping a false God."[74]

Third, recognizing that Rhodes and his colleagues are certainly entitled to their opinions, there is also the problem of blatant false witness, simply lying about those religions one regards as suspect. For this, we turn to one of the evangelical countercult's most prolific, and problematic, authors, Dave Hunt. While, usually, Hunt veils his false witness in evasion, in oblique words and phrases such as "seems to indicate," "appears to be," and "apparently demonstrates," not infrequently he steps outside equivocal language and makes statements that are quite simply false. He claimed, for example, that the Jesuit priest-paleontologist Teilhard de Chardin had been "declared a heretic even by the Roman Catholic Church."[75] Though silenced for this work, Teilhard was never declared a heretic. Hunt accused an Alabama nursing school of including "voodoo and witchcraft … among the folk remedies studied by candidates for a bachelor's degree in nursing."[76] And, in *Global Peace and the Rise of Antichrist,* he wrote that "Satanists now have their own chaplains in the U.S. Armed Forces."[77]

Although the rhetoric of the evangelical countercult ranges from the extremes represented by such apologists as Dave Hunt and Ron Rhodes to more academically inclined and less polemical entries on the field, all are guided by very similar understandings of the ontological superiority of the evangelical Christian world view, the

danger represented by alternative religious movements that challenge that superiority, and the desire to convert new religious adherents to that world view.

INCARNATION VERSUS CONFRONTATION: EVANGELICAL CHALLENGES TO THE CHRISTIAN COUNTERCULT

Challenges to the manner in which the evangelical Christian countercult conducts itself have come from a number of quarters. Not surprisingly, like The Local Church and its lawsuit against Harvest House, new religions that have been the target of countercult attack have responded in various ways. Latter-day Saints, for example, have roundly criticized the countercult, both in print and on the World Wide Web, for its continual portrayal of their church as a cult and for the way its faith has been consistently and egregiously misrepresented.[78] In 1984, a state board of the National Conference of Christians and Jews condemned the film *The God Makers,*[79] saying that it "[relied] heavily on appeals to fear, prejudice, and other less worthy human emotions," and that it was "a basically unfair and untruthful presentation of what Mormons really believe and practice."[80] My own work, which seeks to understand the countercult within the broader theoretical framework of a sociology of knowledge, has been virtually dismissed as the uninformed ravings of a "cult apologist."

These challenges, however, have not always come from the outside. Internecine conflicts have often thrown one countercult apologist against another. Dave Hunt, for example, has repeatedly criticized the Christian Research Institute for not condemning the Roman Catholic Church, which Hunt regards as the world's largest, most dangerous cult. And, since Martin's death in 1989, the CRI has been plagued with controversy, most over the presidency of Hank Hanegraaff and the manner in which he has run the organization. Over 30 former employees formed the "Group for CRI Accountability" and charged Hanegraaff with a range of offences, including numerous counts of wrongful termination, financial mismanagement, and abuse of his authority as president. Rather than result in dialogue between contending parties, like their interaction with new religions, these challenges have largely entrenched differences between participants in the countercult movement.

A Kinder, Gentler Countercult?

Some members and former members of the evangelical countercult admit that the approach they have followed since the founding of the Christian Research Institute has not worked. That is, though the confrontational countercult continues to post the occasional conversion, the rise of new religions far outstrips any opposition the countercult apologists can mount. Nearly 30 years after Ronald Enroth wrote that the emerging presence of new religions—what he labeled "new-age cults"—"indicate a demonic conspiracy to subvert the true gospel of Jesus Christ through human agents whose eyes have been blinded by the evil one,"[81] he edited *A Guide to New Religious Movements,*[82] which he says explicitly "should not be seen as an attempt

to discredit new religious movements."[83] Rather, this work seeks "a more holistic approach"[84] to the issue. While this "more holistic approach" includes some discussion of social scientific research on new religions, it incorporates aspects of the secular anticult's functional definition of the phenomenon and is still predicated on apologetic-evangelism, on "[helping] serious, caring Christians … introduce people in those groups to Jesus our Lord…."[85] Does this represent a "kinder, gentler" aspect of the evangelical Christian response to new religions?

Yes and no.

For many years, John Morehead worked with Watchman Fellowship, a countercult organization not dissimilar to the CRI and based in Arlington, Texas. Recently, however, the more he observed how many of his countercult colleagues dealt with adherents of new religions, how the internecine strife between countercult ministries was diluting whatever witness they hoped to have, and how the logical and practical problems inherent in confrontational countercult apologetics were so easily exposed, the more concerned he became about the countercult enterprise as a whole. As President of the Evangelical Ministries to New Religions (EMNR) from 2001–2003, he began to work actively for a shift in direction, in emphasis, and, perhaps most importantly, in methodology. In several papers outlining what he describes as a "missiological paradigm for 'counter-cult' ministry,"[86] Morehead's argument, simply put, was that the current countercult approach, described by another evangelical critic as "heresy-rationalist apologetics"[87] and exemplified by the apologists discussed in this chapter, represents precisely the opposite of a compassionate, caring missiology that seeks first to understand adherents of alternative religions, second to establish firm relationships built on trust and mutual respect, and only third to engage in conversations aimed at evangelization. Morehead argued that the countercult community must turn its academic eyes outward and begin to engage social scientific research into new religions. Also, it must do something it had to that point manifestly refused; it must begin to listen to its critics. By and large, though, Morehead's concerns were not well received by his colleagues at the EMNR nor by other members of the countercult community, who countered that he had been corrupted by "cult apologists" (perhaps principally the current author)[88] and was thus diluting the message of Christ and abandoning the countercult mission.

As a result of this, Morehead (and a few colleagues sympathetic to his argument) left both the Watchman Fellowship and the Evangelical Ministries to New Religions, and no longer considers himself a member of the countercult movement, developing and practicing instead what he refers to as an "incarnational missions strategy." This strategy he describes as "an approach to Christian service based on principles derived from the life of Jesus in his relationships, both with those who followed him and those who rejected him."[89] Key to this approach—which represents the antithesis of that taken by his former countercult colleagues and explored in this chapter—is an "emphasis upon relationships," a serious consideration of the intimate relationship between theology and culture, and, perhaps most importantly, humility in epistemology, rhetoric, and personal character.[90] As this incarnational missions

strategy has developed, Morehead has become increasingly critical of the countercult movement.

This brief closing vignette highlights three important facts about the evangelical Christian countercult. First, evangelical Christian response to new religions is varied, ranging from the overt, proactive, and entrenched intolerance of countercult apologists Ankerberg, Weldon, Rhodes, Hunt, and others discussed in this chapter to the more open, responsible approach advocated by Morehead and his colleagues. This range is important to recognize in the context of a religiously plural culture, especially since many new religionists understand evangelical culture no more clearly than evangelicals understand them and are as apt to paint Christians in similarly monochromatic colors. Second, the countercult itself is not monolithic. Though Morehead no longer considers himself part of the countercult movement, his work has called attention to problems within that community from an insider perspective. While countercult apologists might (and do) dismiss the critiques of an agnostic social scientist on the basis of his necessarily outsider viewpoint, it is much more difficult to discount the carefully considered objections of someone like Morehead. And, finally, the manner in which those who do remain firmly in the countercult community have responded to Morehead's concerns only indicates that the principal function of countercult apologetics—to maintain and reinforce the exclusivity of a particular Christian world view in the face of all challenges, no matter where they come from—also remains firmly in place.

New Religious Movements and Violence

Catherine Wessinger

New Religious Movements (NRMs), by virtue of their novelty, inherently are in some degree of tension with the wider societies in which they are located. NRMs may differ from mainstream religions in terms of their theologies or philosophies, new revelations, sources and structures of authority, gender roles, sexual arrangements, and child rearing. Some "new religions" are "old religions" that have been imported into new contexts by immigrants and/or missionaries who gain converts. Others represent theological innovations within their native traditions.

The tensions experienced by an NRM may be minimal and exist simply because the believers have different outlooks and practices from those of larger society. The tensions may become pronounced if people in the dominant culture perceive the beliefs and practices of an NRM as being dangerous and offensive, or if the members of the NRM actively seek to overthrow the status quo.

Whereas the majority of NRM members are law-abiding, dramatic instances of violence involving unconventional religious groups occur from time to time. Sometimes the violence is due almost exclusively to factors internal to the group. However, in most cases, *the quality of the interactions between people and agencies in the wider society and NRM members is crucial to contributing to violent outcomes.* In these instances, the violence occurs due to complex combinations of factors originating inside the group (endogenous) with other factors originating outside the group (exogenous).[1] In these scenarios NRM members are not necessarily the ones who initiate the violence. Sometimes NRM members are attacked by law enforcement agents and/or citizens; sometimes the members respond violently to such attacks; sometimes NRM members initiate violence to preserve their "ultimate concern" from failure; sometimes NRM members engage in violent revolution. Rarely do these dramatic violent incidents occur in the absence of precipitating factors involved in the very tense interactions between group members and actors in the wider society.

Many, but not all, NRMs that become involved in violence possess millennial beliefs that put the believers in tension with the dominant society. Millennialism—the belief that there will be an imminent transition to a collective salvation effected

by superhuman means with varying degrees of human cooperation[2]—has great power to induce people to join NRMs and conform to their demands concerning behavior in order to be "saved." Since millennial ideologies represent radical critiques of the status quo, millennialists live in varying degrees of tension with society.

The term "ultimate concern" in the history of religions refers to an ideological system's goal of salvation. The ideological system may be religious or political or both. All religions have ultimate concerns, and all ultimate concerns express human beings' longing to achieve permanent well being and freedom from suffering. This salvation may be considered to be earthly or heavenly; most people want both earthly well being and continued well being after death. The ultimate concern is the most important thing in the world for the believers.[3]

Individuals often shift and change their specific ultimate concerns in response to circumstances, but the unifying characteristic is the ongoing desire for well being, either for oneself or for one's people or both. Some believers hold so tightly to their ultimate concerns that they become willing to die or kill for their concept of salvation. This is true of people participating in socially dominant ideologies as well as in smaller groups and movements.

People commit violent and hurtful acts in mainstream religions as well as marginal ones. However, when violence occurs in relation to unconventional religious groups, it confirms the "cult" stereotype held by the public, whereas when violence occurs in dominant and accepted religions, it usually does not discredit the religion as a whole.

We will see that understanding the dynamics of violence involving NRMs sheds light on key conflicts on the international scene.

MILLENNIALISM AND VIOLENCE

The religious pattern that scholars term "millennialism" represents the perennial human impulse to achieve permanent well being. Millennialism is the audacious hope that salvation will be accomplished, not singly, but for a group; hence, it is concerned with a "collective salvation." Some degree of supernatural or superhuman agency is believed to be involved in accomplishing the collective salvation, but humans may be seen as having particular roles to play. Religions with intense millennial expectations expect the transition to occur *soon;* hence, millennial views are often effective in prompting people to convert to entirely new religions.

If the transition to collective salvation is expected to involve destruction of the old order to wipe away evil and create a new order in which there will be no suffering, this pattern may be termed "catastrophic millennialism." The term "apocalypticism" is used here as a synonym for catastrophic millennialism.[4] If there is optimistic confidence in human progress guided by a superhuman agent into the collective salvation, this pattern may be termed "progressive millennialism."[5]

In general, catastrophic millennialists are more likely to possess radical dualistic world views, seeing "good" locked in a battle with "evil," which translates readily into an "us versus them" outlook. Extremely rigid dualistic world views expect and may

promote conflict. Progressive millennialists, while not immune to dualistic perspectives, are more likely to see the world as a unity of interdependent parts.

A range of behaviors is associated with both catastrophic millennialism and progressive millennialism. Catastrophic millennialists may wait in faith for divine intervention, and progressive millennialists may believe they are guided by a superhuman agent to engage in social work to create the new world. Catastrophic millennialists and progressive millennialists may arm themselves for self-protection and fight back if they are attacked. Both catastrophic millennialists and progressive millennialists may engage in revolutionary violence to destroy the old order. At this extreme end of the spectrum, both types of revolutionary millennialists possess radical dualistic world views. They believe it is important to destroy enemies both inside and outside the movement to accomplish the collective salvation. Robert Ellwood has noted that revolutionary progressive millennialists aim to speed progress up "to an apocalyptic rate."[6] Revolutionary catastrophic millennialists feel called by God or a higher power to destroy the current social order so that social salvation can be created. Although revolutionary catastrophic and progressive millennialists differ in terms of their general pessimism or optimism concerning whether society is devolving or progressing, there will be little difference in terms of violent, and even paranoid, behaviors to accomplish the transformation.

Millennial groups that become involved in violence may be *assaulted groups, fragile groups,* or *revolutionary movements.* These are dynamic categories that are *not mutually exclusive.* Groups and movements may possess aspects of more than one of these categories simultaneously and shift from one to another in response to changes in circumstances. The fluidity of these categories is highlighted in the following cases discussed. These distinct categories are nevertheless useful for identifying the parties who initiate the violence.

In today's world connected by rapid communications and travel, events involving NRMs inside the United States impact public perceptions and expectations about NRMs outside the United States and vice versa, even among NRM members. The Movement for the Restoration of the Ten Commandments of God (MRTCG), which caused the deaths of at least 780 people in Uganda in 2000, had connections within the United States in the person of one of its leaders, Father Dominic Kataribaabo, who earned a Master's degree at Loyola Marymount University in Los Angeles. Leaders of the MRTCG were quite aware of the news coverage of the fire that consumed the Branch Davidians in Texas in 1993. Joseph Di Mambro, the leader of the Solar Temple based in Switzerland that had members in France and Quebec, said of the Branch Davidians before the Solar Temple's group murders and suicides in 1994, "In my opinion, we should have gone six months before them … what we'll do will be even more spectacular."[7] The People's Republic of China (PRC) has defended its persecution of Falun Gong practitioners by citing the American government's treatment of the Branch Davidians in 1993. Conversely, Falun Gong practitioners in the United States have worked to call international attention to the abuse of their fellow practitioners in the PRC, and the American government has urged the PRC to respect human rights and freedom of religion of PRC citizens.

NRMs involved in violence outside the United States may have their origins inside the United States, such as the members of the American church known as Peoples Temple, who committed murder and mass suicide at Jonestown in Guyana in 1978.

Aum Shinrikyo's release of deadly gas on the Tokyo subway in 1995 increased the concerns of many governments to try to prevent the use of weapons of mass destruction by religiously motivated terrorists, and this concern proved well founded in light of the al-Qaida attacks on American soil on September 11, 2001, and the ongoing international conflict with al-Qaida and related radical Islamist groups. We live in an interconnected world, and events concerning NRMs and violence reverberate across national boundaries.

ASSAULTED MILLENNIAL GROUPS

It is important to remember that many millennial groups do not initiate the violence that engulfs them. Millennial groups are assaulted in many times and places by law enforcement agents or citizens, who perceive them to be dangerous for a variety of reasons, and the millennialists may choose to fight back in a variety of ways.

For instance, the Israelites were a community of black South African believers who followed a prophet named Enoch Josiah Mgijima. He gathered his flock on government-owned land at Bulhoek. When the group refused to disperse, preferring to obey God rather than the secular law, police officers, thinking that the Israelites' dance gestures were threatening, opened fire on them on May 24, 1921, killing 183 and wounding nearly 100 people. The Israelites fought back, but caused minimal injuries to the police officers due to their inferior weapons.[8]

A similar incident happened at Wounded Knee in South Dakota on December 29, 1890, when American troops, made skittish by the Native American Ghost Dance, which was misinterpreted as being a war dance, opened fire on a band of Lakota Sioux killing 153 and wounding 44; the Lakota Sioux fought back and the soldiers suffered 25 dead and 39 wounded.[9]

Mormons in nineteenth century America were pressured increasingly to move west from the place of the founding of the Church of Jesus Christ of Latter-day Saints in New York state. In 1833 in Missouri, Mormons were repeatedly beaten, killed, and driven out of their homes. At first the founding prophet, Joseph Smith, Jr., instructed Mormons not to retaliate, but after Missourians continued to attack Mormons, in 1838 Joseph Smith encouraged Mormons to fight back. When Mormons began raiding "gentile" towns and burning homes, the governor of Missouri issued an order saying that Mormons "must be exterminated, or driven from the state…."[10] This "extermination order" was followed by the massacre of 18 Mormons at Haun's Mill by members of the Missouri Militia. The Mormons were forced to leave Missouri. After the Mormons built a town and worship center at Nauvoo, Illinois, further conflicts led to the murder of the founding prophet, Joseph Smith, Jr., and his brother on June 27, 1844, at the hands of a mob of militiamen. The majority of the Mormons led by Brigham Young moved to Utah, where in 1857 heightened fears about an impending invasion by American troops helped create a wartime

atmosphere that motivated Mormon men and Paiute Indians to carry out a massacre at Mountain Meadows of about 120 settlers, including approximately 50 children and adolescents, who were passing through Utah. The man later convicted of leading the massacre implied that he was acting on the orders of Brigham Young.[11] The Mountain Meadows massacre is a tragic example of millennialists committing violence in response to past assaults against them and in anticipation of future assaults.

Members of assaulted millennial groups can be provoked to violence that they believe is necessary for self-defense and to preserve their ultimate concern.

The Branch Davidians

The violent conflict in 1993 between the Branch Davidians and federal agents at the Branch Davidians' Mount Carmel residence outside Waco, Texas, represents the largest loss of life during a law enforcement action on American soil. The Branch Davidian case illustrates the dynamic nature of the categories of revolutionary millennial movement, assaulted millennial group, and fragile millennial group, but there is no doubt that the Branch Davidians endured sustained and aggressive assaults by law enforcement agents. The Branch Davidian case vividly illustrates that the quality of the *interactions* between outside actors with believers inside a group directly contributes to either a peaceful or a violent outcome.[12]

The Branch Davidian case sheds light on how an aggressive law enforcement approach that ignores a group's religious beliefs and ultimate concern can result in tragic violence. The misguided law enforcement approach in the Branch Davidian case stands in contrast to successful law enforcement approaches discussed below in the cases of the Covenant, the Sword, and the Arm of the Lord, and the Montana Freemen, in which believers were enabled to cooperate with law enforcement agents while remaining true to their ultimate concerns.

The Branch Davidians had potential revolutionary features since the group's messiah,[13] David Koresh (1959–1993), predicted that the group would fight in the battle of Armageddon in Israel in 1995 on the side of the Israelis against the United States. However, no evidence exists to indicate that in 1993 the group was preparing to relocate to Israel or that once there they would do anything to initiate violence. Likewise, no evidence suggests that the Branch Davidians were preparing to attack their neighbors in Texas.

The group came to the attention of federal authorities because of weapons accumulated during the course of legal arms transactions that helped support the community. It was suspected that the Branch Davidians were illegally converting semiautomatic weapons into automatic weapons without paying the required permit fees. Many weapons and ammunition were accumulated, but the report by Robert Rodriguez, the undercover agent with the Bureau of Alcohol, Tobacco, and Firearms (ATF or BATF), indicated that he saw no illegal weapons inside Mount Carmel. When Koresh learned that he was being investigated, he extended an invitation through his gun dealer to ATF agents to visit Mount Carmel openly and inspect his weapons, which was ignored.

The ATF affidavit to obtain the warrants contained inflammatory language concerning Koresh as a "cult leader" and the Branch Davidians as a cult in which Koresh abused children, including having sex with underage girls. The allegations of physical abuse of children have not been substantiated by surviving children. Koresh was, in fact, having sex with underage girls with the permission of their parents, as well as with other women he took as his "wives," and he justified these activities by appealing to biblical prophecies that the end-time messiah's children would be the "24 Elders" (Revelation 4:4, 5:10) who would help God judge humanity and rule in God's kingdom on Earth. It should be noted that in this case the sexual abuse of minors did not come under federal jurisdiction. Prior to the violent events in 1993, Texas authorities investigated the Branch Davidians for child abuse and closed the case for lack of evidence. It is also questionable whether the actions taken by federal agents gave sufficient consideration to the welfare of the Branch Davidian children and their mothers.

On February 28, 1993, 76 ATF agents attempted to carry out a "dynamic entry" or no-knock raid against Mount Carmel to deliver warrants and search the premises. A shootout ensued during which five Branch Davidians and four ATF agents died and many were wounded. During the gun battle, Branch Davidian and attorney Wayne Martin, and also David Koresh, dialed 9-1-1, urgently asking that the shooting stop. Later that day, Branch Davidian Michael Schroeder was shot and killed by ATF agents as he attempted to walk back to Mount Carmel. ATF agents alleged that Schroeder opened fire on them, but the evidence was compromised by the FBI commander refusing to give permission for the body to be recovered and the site inspected immediately by Texas Rangers.[14]

Agents with the Federal Bureau of Investigation (FBI) arrived at Mount Carmel the next day and presided over what became a 51-day siege. The residence was surrounded by tanks, which FBI agents used to destroy property and make threatening maneuvers. The Branch Davidians' access to the outside world was cut off, and they spoke only to FBI negotiators by telephone.

Studies show that the FBI negotiating team and the team carrying out the tactical aspects of the siege and ultimately the final assault were at odds. Whenever negotiators persuaded the Branch Davidians to cooperate in some manner, the Branch Davidians were punished immediately by the tactical team by cutting off electricity, shining bright spotlights at the residence during the night, and using other forms of psychological warfare. This pattern was particularly noteworthy whenever adult Branch Davidians left Mount Carmel. These individuals were dressed in orange prison jumpsuits, shackled, paraded before television cameras, and jailed. On March 21, seven adults came out. The tactical team then blasted high decibel sounds at the residence, angering the Branch Davidians who said that the adults who planned to come out decided not to. Under these circumstances, it is remarkable that 21 children and 14 adults came out during the siege.

After the ATF raid, the wounded David Koresh immediately sent out an audiotape containing his religious message and agreed that if it was played on television and radio that they would come out. The Branch Davidians were preparing to leave

their residence on March 2 when Koresh said that he had received a message from God to wait. The Branch Davidians pointed out that, just as the federal agents took orders from their commanders, they and Koresh had to obey God's orders.

The Branch Davidians believed that it was possible that they were "in the Fifth Seal" of the New Testament book of Revelation (6:9–11), which describes an event prior to Armageddon in which the satanic agents of "Babylon" kill members of the godly community. After a waiting period the rest of the faithful are killed. The Branch Davidians believed that if they were martyred they would be among the first to be resurrected and then would fight with Christ in the Armageddon battle. David Koresh claimed to be the end-time Christ and predicted that he would be killed, then resurrected, to carry out God's judgment against Babylon and gather the saved into God's kingdom.

Two Bible scholars, Dr. Phillip Arnold of Reunion Institute in Houston, Texas, and Dr. James Tabor, University of North Carolina, Charlotte, understood the implications of the Bible passages that were central to the Branch Davidians' interpretations of the conflict. They offered to serve as "third-party intermediaries" between the FBI negotiators and the Branch Davidians. They believed that it was imperative for negotiations to take into account the Branch Davidians' theology and strong commitment to obeying God's will as revealed in the biblical prophecies. They realized that Koresh's interpretations of the biblical prophecies were not rigid and that Koresh's prophetic interpretations could change in response to events. When Arnold and Tabor were ignored by the FBI, they directed a radio broadcast to the Branch Davidians in which they discussed the Bible and its prophecies. They suggested that the waiting period in the Fifth Seal would be much longer than a few months and that Koresh should therefore come out in order to disseminate his message. In their discussion, they mentioned the angel that Revelation 10 describes as holding a "little book."

Koresh went into spiritual retreat during the week of Passover, which ended on April 13. On April 14 Koresh sent out a letter saying that God had instructed him to write a little book containing his interpretation of the Seven Seals of Revelation. After the manuscript was given to Arnold and Tabor for safekeeping, the Branch Davidians would come out. The negotiation audiotape recorded the Branch Davidians cheering at the prospect of coming out. Over the next few days, the Branch Davidians repeatedly requested supplies that would facilitate the typing of the manuscript. On April 16 Koresh informed negotiators that he had completed his interpretation of the First Seal. The requested word-processing supplies were delivered on April 18.

In the meantime, FBI agents, who told Attorney General Janet Reno that negotiations were stalled, prepared to carry out an assault on April 19. That assault began at 6:00 AM with tanks punching holes in the walls and demolishing the building, using grenade launchers to hurl ferret rounds to release chlorobenzylidene malononitrile (CS) gas, and inserting the gas directly through nozzles on the tanks' booms.[15] The young children and their mothers huddled in a concrete room, probably regarded as the safest place in the building. Most other women were on the second floor, while

men were scattered in various locations in the residence. Fires started at 12:07 and 12:08 in at least three areas of the building damaged by tanks. The fires rapidly became one inferno. Fire trucks arrived at 12:34 but were held back by Special Agent in Charge Jeffrey Jamar, allegedly to protect the firefighters from gunfire from the Branch Davidians. After the entire building burned down, the firemen were permitted to start putting out the fire at 12:41.

ATF agents raised an American flag, a state of Texas flag, and an ATF flag on the Branch Davidians' flagpole to mark their victory. FBI agents posed for photographs in victorious postures over the charred ruins in which small red flags marked the bodies. Seventy-six Branch Davidians died in the fire, including 23 children. Two of the children were babies who were born and died during the fire. Nine Branch Davidians escaped the fire, several seriously burned.

FBI agents alleged, on the basis of bug tapes, that some Branch Davidians poured fuel and set the fires. The surviving Branch Davidians alleged that it was likely that the tanks knocked over lanterns containing kerosene. Some experts concluded that CS gas and the solvent it was mixed in were highly flammable, but other government experts testified that these were not flammable.

The negotiation transcripts reveal that, despite the Branch Davidians' belief that they would be martyred eventually, they did not want to die and tried to negotiate a surrender plan that would conform to their understanding of biblical prophecies. Branch Davidian survivor Ruth Riddle was rescued from the fire with a computer disk in her pocket on which was saved Koresh's interpretation of the First Seal, suggesting that the intervention by Arnold and Tabor had succeeded, and that Koresh and the Branch Davidians, indeed, planned to come out after Koresh completed his little book. Probably when the tank and gas assault began, the Branch Davidians reverted to their original belief that they were in the Fifth Seal that predicted their deaths at the hands of Babylon as a prelude to the apocalyptic end-time events.

It is possible that at the end, the Branch Davidians became a fragile millennial group in which some members resorted to violence to preserve their ultimate concern of salvation and make the prophecy of their deaths at the hands of Babylon come true. However, the evidence is by no means conclusive. What can be known with certainty is that the Branch Davidians were assaulted twice by federal agents and subjected to psychological warfare between the assaults. The fire would not have occurred if federal agents had taken into account the Branch Davidians' apocalyptic world view and had not acted like agents of evil Babylon. The radical dualism of the Branch Davidians, which involved seeing themselves as the faithful destined to be martyred by Babylon, was matched by the radical dualism of the federal agents, who saw themselves as the "good guys" who needed to defeat the "bad guys," the Branch Davidians, who were perceived as criminal and "brainwashed cultists" and therefore not fully human. There were casualties on both sides, but federal agents won the battle through the use of overwhelming force that virtually exterminated a religious community.

Falun Gong

Falun Gong is an international movement with practitioners in the United States. Falun Gong practitioners are usually ethnic Chinese, but there are also practitioners of various ethnicities. Falun Gong practitioners have been active in the United States promoting public and government awareness of alleged abuse of practitioners in the People's Republic of China (PRC) since 1999, and officials with the United States State Department have frequently raised concerns with the PRC about reports of the detainment and torture of Falun Gong practitioners and abrogation of their right to freedom of expression.[16] PRC government officials have sometimes accused the United States of being behind Falun Gong's anti-Communist campaign.

Falun Gong came into prominence on April 25, 1999, when more than 10,000 practitioners gathered to perform their meditative exercises at the residence of the highest officials in the Chinese Communist Party (CCP) in Beijing to protest criticism of Falun Gong.[17] This was the largest public demonstration in the PRC since the student protests at Tiananmen Square in 1989. Falun Gong practitioners in China included people from all walks of life and all ages, many of them members of the CCP, the PRC's armed forces, and police. The government estimated that Falun Gong in the PRC had 30 million practitioners, while Falun Gong claimed 60 million, rivaling the size of the CCP. PRC leaders were so disturbed by this sudden mobilization of masses of people committed to a competing ideology that on July 22, 1999, Falun Gong was banned and labeled *xiejiao* (deviant teaching), often translated into English as "evil cult."

Through 2001 Falun Gong practitioners in the PRC continued to stage peaceful demonstrations, particularly in Tiananmen Square, for which they were taken into custody. If they did not renounce Falun Gong, they were sent to prisons, labor camps, and mental hospitals, where allegedly many people were tortured and died. After the public demonstrations diminished, reportedly people continued to be arrested for practicing Falun Gong exercises in their homes and for distributing or possessing Falun Gong literature. Thousands of practitioners were taken into custody and in 2005 Falun Gong alleged that over 2,300 had died due to mistreatment by the authorities.[18]

Falun Gong is an international movement of practitioners of a spiritual cultivation system with strong apocalyptic themes taught by Li Hongzhi (b. 1951 or 1952).[19] Falun Gong cultivation grew out of traditional Chinese *qigong* (or *ch'i-kung*) practices to accumulate *qi* (or *ch'i*) energy for physical and spiritual well being by meditating and performing physical exercises. Falun Gong is a pacifist movement, with an ideology that motivated many practitioners in the PRC to perform their exercises in public places, where they knew they were likely to be arrested.

Falun Gong's ultimate concern is achievement of "Consummation," physical ascension to a heavenly paradise. In response to the suppression of the movement by the PRC, Falun Gong has added the revolutionary goal of eliminating Communist rule in China through peaceful means. Falun Gong practitioners seek to overthrow the Communist government in China by waging spiritual warfare and

witnessing to the truth by holding to the universal principle of Forbearance *(ren)* in the face of oppression. Thus the Falun Gong world view, while nonviolent, through 2001 encouraged numerous practitioners in the PRC to put themselves in harm's way, while practitioners in other countries worked to bring international attention to the abuses of human rights and freedom of religion in the PRC.

Because its members are numerous and spread out geographically, Falun Gong is not likely to initiate violence as a fragile millennial group, although there have been allegations of several incidents of practitioners immolating themselves, the first involving four adults and a 12-year-old girl in Tiananmen Square on January 23, 2001.[20] There have been reports of practitioners going on hunger strikes while in custody and some group suicides among those detained. All these reports emanating from the PRC are impossible to verify. These reports were used by PRC officials to argue that "Falun Gong is a cult that harms human life."[21]

In the PRC Falun Gong is an assaulted millennial movement. The initial suppression by the government appears to have been in response to the demonstrated ability of Falun Gong to mobilize large numbers of people committed to its ideology. To a great extent Falun Gong's radical dualism, belief in the salvific power of suffering, and revolutionary intention have contributed to the continuing assaults of practitioners by PRC agents.

Falun Gong was founded in 1992 by Li Hongzhi, who in 1998 moved to the United States and resides in New York. Master Li utilizes the Internet and travels to "experience-sharing conferences" to communicate his teachings. Despite Li being regarded as the spiritual master of the movement, Falun Gong is nonauthoritarian in organizational structure and relies on volunteers to conduct practice and study meetings, as well as larger conferences, to publish and distribute publications, and to work for freedom of religion and human rights in the PRC.

Falun Gong, "The Cultivation Way of the Law Wheel," uses meditation and physical exercises to cultivate a *falun* (law wheel) in the lower abdomen, considered to be a center of energy connected to universal energy that dispels evil and attracts positive energy. Falun Gong is also called Falun Dafa, "The Great Law of the Law Wheel."

Although the ultimate concern is Consummation, during the present period of apocalyptic tribulations, practitioners oppose evil on Earth, especially represented by the Communist government in China. This period, called "Fa-rectification," will conclude with the destruction of evil, the establishment of the Fa (law or *dharma*) ultimate truth, and the achievement of Consummation by the virtuous. At the end of Fa-rectification, evil people will be destroyed and the righteous Dafa disciples will "ascend into the highest heavens."[22]

Falun Gong practitioners cultivate the universal principles of Forbearance *(ren),* Truthfulness*(zhen),* and Benevolence *(shan). Ren* involves persevering in the face of difficulties and exercising patience and personal self-control while being oppressed. The practice of Forbearance enables the practitioner to grow spiritually and gain merit (good karma). Enduring suffering at the hands of oppressors while maintaining a tolerant attitude toward them is a way for the practitioner to gain good karma

by obtaining the good karma of the oppressors. Hence, persecution, suffering, and even martyrdom lead to spiritual benefits.

As the conflict between Falun Gong and the PRC authorities intensified, both sides demonized one another in their use of language, the PRC painting Falun Gong as an "evil cult" that promoted "superstition" as opposed to scientific truth and Marxism, and Master Li painting Jiang Zemin, the PRC president (from 1993 to 2003), as the embodiment of evil served by henchmen who were reincarnated "minor ghosts from hell."[23]

Beginning in September 2000, messages posted on the Falun Gong Web site encouraged practitioners in the PRC and elsewhere to "step forward" to "validate the Fa." On September 26, 2000, Master Li asserted that those who failed to do so were guilty of breaking away from "humanness," were controlled by demons, and lost forever their chance to achieve Consummation.[24] But by April 2001, Li's statements and the testimonials of practitioners on the Web site indicated a shift from physical protest to spiritual warfare on higher planes by sending forth "righteous thoughts" and exercising superhuman powers. According to Patsy Rahn, this enabled Li and the practitioners to claim victories in the supernatural realms even though practitioners' physical activities in the PRC remained circumscribed. Practitioners were encouraged by the numerous "Retribution of Evil" stories posted on the Web site recounting incidents of oppressors meeting bad ends because of the working of the Fa.[25]

If the graphic information on the Falun Dafa Information Center Web site was correct, in 2005 Falun Gong practitioners continued to be detained, tortured, and murdered in the PRC. Falun Gong practitioners in the PRC are an assaulted millennial group. In response, Falun Gong practitioners internationally work to oppose evil forces that attack Falun Gong practitioners no matter where they are, but they particularly show concern for members in the PRC. Falun Gong practitioners thus oppose the Chinese Communist Party and use nonviolent means to achieve a peaceful revolution in China. Their revolutionary methods include the purity of their characters and practical as well as pragmatic means of political lobbying in various countries to gain support for their struggle. They also stage public protests and contact media outlets to generate publicity for their cause. Thus, the warfare they wage is both spiritual and pragmatic, with a pragmatic emphasis on the media.

A variety of media are utilized by Falun Gong. A number of Falun Gong Web sites spread Li's teachings and make the international public aware of abuses in the PRC. In 2002 and 2003 the PRC accused Falun Gong practitioners of hacking into cable television transmissions in several cities to broadcast their own messages, and of hijacking twice television transmissions from PRC-run Sino Satellite in order to broadcast programming into China.[26] By 2004 Falun Gong practitioners appeared to be behind a newspaper group called The Epoch Times as well as the New Tang Dynasty Television.[27]

Time will tell if Falun Gong practitioners are successful in their peaceful revolution against the Chinese Communist Party. In the meantime practitioners persist in

their self-cultivation efforts so they will achieve Consummation at the end of the catastrophic Fa-rectification period.

FRAGILE MILLENNIAL GROUPS

Fragile millennial groups initiate violence, either against their own members or against those identified as external enemies, to preserve the group's ultimate concern, which is perceived as being in danger of failing usually due to complex combinations of endogenous and exogenous factors.[28] There are varying degrees of internal and external contributing factors in each fragile millennial group. Some groups become fragile due to a predominance of internal problems. Many others become fragile when outside pressures in the form of "cultural opposition"[29] destabilizes a group already suffering from internal weaknesses.

Jonestown

The murders and suicides of 918 people on November 18, 1978, at Jonestown, Guyana, the communal settlement of the Peoples Temple, a church based in the United States and led by Jim Jones (1931–1978), created the paradigm of "the destructive cult" in the public imagination. Peoples Temple aimed to participate in a social revolution in solidarity with Communist revolutions in other countries. The residents of Jonestown felt assaulted and invaded by various opponents. In the end, Jonestown was a fragile millennial group whose members resorted to violence to maintain their ultimate concern of maintaining the cohesiveness of their community at all costs.[30]

Jim Jones was a Communist who clothed his message of equality and social justice in a style and language drawn from Christian Pentecostalism, the Holiness tradition, the Black Church, and the Protestant Social Gospel. As a white man from an impoverished background in Indiana, he identified with African Americans and made their causes his own. Jones and his wife adopted children of different races to create a "rainbow family," but they encountered intense racism in Indiana. Jones moved his church from Indianapolis to Redwood Valley, California, in 1965, seeking greater tolerance for its members and their values and a safe haven from an imminent nuclear war. Peoples Temple expanded in California to gain numerous African American members in San Francisco and Los Angeles, as well as some educated white young adults who were committed to working for social justice and the elimination of racism. Sexual relationships were fluid in the Peoples Temple, and Jones had numerous sexual partners. In 1972 Grace Stoen gave birth to John Victor Stoen, and her husband, Tim Stoen, signed an affidavit stating that John Victor was Jones's biological son. John Victor Stoen would become the subject of a bitter custody battle that contributed to destabilizing Jonestown.

In 1972 Peoples Temple received negative press attention, and the church building in San Francisco was set on fire, probably by white racists. Jones was arrested for lewd conduct in a Los Angeles public bathroom and faced prosecution. In 1974 Jones sent

a small group to initiate the Jonestown agricultural settlement in the jungles of Guyana, a Marxist country. Defectors from Peoples Temple circulated sensationalized stories to the media, and their allegations prompted investigations by the Treasury Department and the Internal Revenue Service. During the summer of 1977 over 1000 Peoples Temple members, including Jones, moved to their "promised land" in Guyana. Jones taught that they would be safe there from an impending nuclear holocaust that would destroy capitalist nations and enable the surviving Communists to create a just society. Jones asserted that he was the savior sent by the "Divine Principle" of "Socialism."

Jonestown suffered from numerous internal problems in 1978 when the cultural opposition from outside became unbearable. After relocating to Guyana, Jones descended into drug addiction and madness, and he was in danger of losing his status as the messiah of the community due to his own erratic behavior. Farming and survival were hard in the jungle and the able-bodied adults were exhausted trying to fund and provide needed services for the large number of elderly and children.[31] Those who tried to defect were controlled by confinement and/or drugs. Those who succeeded in defecting, mostly white people with the resources to leave, became vocal critics, thus becoming part of exogenous pressures on the Jonestown community.

The cultural opposition to Jonestown included an organization of Concerned Relatives that sought to rescue family members. Grace and Tim Stoen defected and filed a lawsuit to gain custody of John Victor, whom Jones said he would never relinquish. Tim Stoen filed a lawsuit asking for damages of $56 million and hired a detective to investigate Jonestown, as well as a public relations firm to coordinate negative publicity about Jonestown. It was falsely alleged that Jonestown was stockpiling weapons, prompting a United States Customs Service investigation, as well as an Interpol investigation. The possible role of the CIA at Jonestown remains an unanswered question due to the continued classification of government reports on the Jonestown murders/mass suicide. The United States Postal Service held back delivery of checks for the seniors from the Social Security Administration, a crucial source of income for Jonestown. An IRS investigation was imminent, and the Federal Communications Commission threatened to cut off Jonestown's shortwave radio link to the outside world.

Concerned Relatives succeeded in getting Congressman Leo Ryan interested in the situation at Jonestown. He demanded that he be permitted to inspect the community. At first Jones refused, and Jonestown residents wrote letters to Congress protesting the investigations, stating that they were willing to die for their community. Nevertheless, Congressman Ryan entered Jonestown as a representative of the federal government on November 17, 1978, bringing with him the other enemies of Jonestown—members of the press and Concerned Relatives.

Initially the visit went smoothly, and Ryan was impressed with the living conditions. Toward the end of the visit, however, Jones was interviewed aggressively by a reporter before a television camera. As Ryan's party prepared to leave, 16 residents departed with him, most of them long-time Peoples Temple members from Indiana.

This threatened the ultimate concern of the Jonestown residents—to maintain the community at any cost—and called into question Jones's credibility. The Jonestown residents had discussed and written essays months earlier about what they would do if their community was threatened with dissolution. They reached a consensus, agreeing that they should remain together in death, thus making a statement against the corrupt capitalist world, rather than let their commune fail. They practiced "White Night" drills by drinking fruit punch that Jones said contained poison, and then later they learned it was harmless.

On November 18, 1978, the "Kool-Aid" was laced with cyanide. First, some Jonestown men drove through the jungle to intercept Ryan's party at the Port Kaituma airstrip as they were boarding their planes. Opening fire, they killed Ryan, an NBC reporter, an NBC cameraman, a *San Francisco Examiner* reporter, and a defector. They then returned to join the others in the group suicide. The few residents who did not want to commit suicide slipped into the jungle. Apparently, most other able-bodied adults and young people willingly drank the poisoned punch. Young children were injected with the poison. Many of the elderly also probably had no choice. Nine hundred and nine people died at Jonestown including 294 children.

The ultimate concern was preserved, leaving the rest of the world to puzzle about the motivational power of ultimate commitments.

Aum Shinrikyo

The Aum Shinrikyo affair in Japan prompted law enforcement officers and intelligence officials in the United States and other countries to attempt to be more diligent in anticipating and preventing the use of weapons of mass destruction by religious extremists. Aum Shinrikyo led by Asahara Shoko was pursuing the acquisition of weapons of mass destruction in preparation to wage a revolutionary war to overthrow the Japanese government and to establish a Buddhist millennial kingdom called Shambhala. When members released sarin gas on the Tokyo subway on March 20, 1995, however, Aum Shinrikyo was a predominantly fragile millennial group seeking to protect its guru from arrest. Asahara claimed to be an infallible Buddha, and he predicted imminent Armageddon. Salvation came through surrendering totally to Asahara. If Asahara was shown to be flawed or mistaken, the whole religious goal was endangered.

Aum Shinrikyo was founded in 1986, and initially it was a progressive millennial movement that taught that through surrendering to the guru and practicing ascetic disciplines under his guidance individuals could acquire superhuman powers and thus create Shambhala. Asahara turned to apocalypticism as expressed in the New Testament book of Revelation at a time when he felt ill and incapable of saving humanity and when Aum Shinrikyo was failing to achieve recruitment goals he had said were necessary for the world's salvation. Ian Reader has termed the change of methods and outlook when a millennial group is failing to achieve its ultimate concern the "pragmatics of failure."[32] Beginning in 1989 Asahara began to predict imminent Doomsday or Armageddon as the prelude to the collective salvation for

the elect, and as the infallible Buddha and the sole source of salvation his predictions could not be proven wrong if the religion was to be maintained.

Aum Shinrikyo attracted opposition from the general public, the media, and concerned relatives of members, but the degree of opposition was not unusual compared to other NRMs in Japan. However, the radical dualism of the Aum world view increased the perception of opposition in the minds of Asahara and his devotees, and the fact that they were covering up previous murders made them extremely sensitive to the least possibility of investigation.

Aum devotees kidnapped, detained, drugged, tortured, and murdered numerous people before the Tokyo subway attack, all to extend salvation to others and to protect the group's ultimate concern and the guru's authority. Sarin gas was released previously in the town of Matsumoto on June 27, 1994, with the intention of killing three judges scheduled to hear a case against Aum. Six hundred people were injured and seven died in the Matsumoto attack. The 1995 Tokyo subway attack injured over 5,000, and 12 people died.[33] The immediate arrests of Asahara and members of his inner circle put an end to the murderous rampage of Aum Shinrikyo.

Solar Temple

The Solar Temple, a French-speaking group with members in Switzerland, France, and Quebec, experienced strong opposition from former members, anticultists, and the media. They were under police investigation when on October 4 and 5, 1994, it was discovered that a family of former members had been murdered in Quebec and that in Switzerland other members were ritually murdered followed by the suicides of the most committed members. A total of 52 people died in this incident.

The primary leader, Joseph Di Mambro, was depressed because of his declining health and growing opposition to the Solar Temple. Members of the inner circle thought that the group's enemies were preventing the achievement of their ultimate concern of a transition to the Age of Aquarius. As the opposition increased, the group's outlook shifted from belief in a progressive transition to a collective salvation to expectation of apocalyptic catastrophe. They concluded that progressive evolution on Earth was not possible due to humanity's obstinacy, the masters guiding that evolution had abandoned Earth, and the world would be destroyed. The murdered family in Quebec threatened to reveal that appearances of masters during Solar Temple rituals were merely technological tricks, and their baby son named Christopher Emmanuel threatened the messianic status of Di Mambro's daughter Emmanuelle, who was rebelling against restrictions designed to guard her from being contaminated by the corrupt world.

In response to these difficulties, Di Mambro and his most devoted followers arranged to murder their enemies, "help" the weaker members make the "transit," and then committed suicide, believing that they would gain salvation on another planet. In 1995 sixteen more Solar Temple members, including three children, made the transit in woods near Grenoble, France. In 1997, five more believers in Quebec made the transit, but their three teenage children elected not to go.[34]

Heaven's Gate

Heaven's Gate was a fragile UFO millennial group in the United States suffering from the possible disconfirmation of its ultimate concern when the group suicide of 39 members was discovered on March 27, 1997, in a mansion in Rancho Santa Fe, California. They chose to "exit" planet Earth to achieve immortal extraterrestrial bodies on the mother ship piloted by one of their leaders known as "Ti," who had died from cancer in 1985. Ti's death called into question their belief that through their monastic lifestyle they were transforming their human bodies into immortal extraterrestrial ones. In 1997 their surviving leader "Do" felt that his health was failing. This was a problem for the group since Do taught that complete reliance and "grafting" onto him as the second coming of Christ was necessary to enter The Level Above Human (TELAH). After the group experienced repeated failures of predictions that flying saucers would land and pick them up, Do began to teach that the Earth was destined to "be spaded under" and that the members of the "class" would need to exit their bodies to go through Heaven's Gate and enter into immortal life.

The group received opposition from concerned relatives and the media in the 1970s. Ti and Do responded by making the group very reclusive. Any degree of opposition was interpreted as persecution originating from evil "Luciferian" space aliens and the inability of human mammals to comprehend their message of salvation in The Next Level.

As a celibate community of men and women, no children were involved in these suicides, and they made no effort to kill perceived enemies. On May 6, 1997, two other Heaven's Gate believers attempted suicide and one succeeded. Chuck Humphrey concluded that he was spared death to disseminate Heaven's Gate literature on the Internet, CD-ROMs, and audiotapes, and after doing so he exited in February 1998.[35]

Movement for the Restoration of the Ten Commandments of God

On March 17, 2000, in Kanungu, Uganda, about 540 members of the Movement for the Restoration of the Ten Commandments of God (MRTCG) died when their church exploded and burned. The church's windows and doors were nailed shut. Prior to this, members sold their possessions at greatly reduced prices, settled debts, and said they were expecting the Blessed Holy Mary to deliver a special message at Kanungu. Subsequently, authorities found several hundred more bodies buried on various MRTCG properties. The total number of dead came to at least 780.

Because of the scanty information coming out of Uganda on this case, it is difficult to ascertain exactly what happened. Based on the available evidence, John Walliss theorizes that there was very little opposition to this Catholic Marian apparition sect, and that the reasons for the deaths were due primarily to endogenous factors.[36] The messages from Mary predicted an imminent catastrophic "Period of Chastisement." During three days of darkness, the elect would enter into buildings called "Arks" or "Ships" to pray while everyone outside turned into devils and were thrown into hell.

"The redeemed" would emerge to inherit the New Earth, a perfected place for the elect. MRTCG literature predicted that at the end of the year 2000, a new generation would follow the present in a new era; the year following 2000 would be designated the Year One.

It was possible that due to discontent of numerous members who wanted their money and property back (perhaps these were the ones who were murdered and buried in different locations) the date for the transition was advanced to March 16–18, 2000. Some people thought to have died in the church fire, including leaders Credonia Mwerinde (b. 1952) and Joseph Kibwetere (b. 1932) as well as rank-and-file followers, told friends and family that they would be going to heaven soon and there would be no year 2001. Because of the condition of the bodies and the lack of medical records in Uganda, it was impossible to determine whether or not the leaders died in the church fire.[37]

REVOLUTIONARY MILLENNIAL MOVEMENTS

Revolutionary millennial movements aim to overthrow the old order so that they can bring about conditions for collective salvation on Earth. Even with revolutionary millennial movements, the quality of the *interactions* of people, agencies, and states, representing dominant elites or colonial powers, contributes to the believers perceiving themselves as being threatened and oppressed and thus becoming revolutionary. When revolutionary millennial movements become socially dominant, they cause considerable violence and suffering, such as the Taiping Revolution in nineteenth century China, the German Nazis in the mid-twentieth century, and the Khmer Rouge in Cambodia in the mid-1970s.[38]

When a revolutionary millennial movement is not socially dominant, its most fervent believers commit acts of terrorism in attempts to spark the desired revolution and draw recruits to join the fight. This pattern can been seen in the Euro-American nativist movement, which includes Identity Christians, Odinists, Neo-Nazis, and secular white supremacists, in the United States, and in the transnational radical Islamist movement, which includes al-Qaida and related groups. Both these broad and diffuse revolutionary movements resist American dominance in terms of secularized culture and economic institutions, which they believe represent the "New World Order," and which disrupt their traditional ways of life and remove people from their sacred lands.

Nativist Millennial Movements

A nativist millennial movement consists of people who feel oppressed by colonizing governments and believe that the dominant culture is removing them from their lands and destroying their sacred, traditional way of life. Nativists hope that their oppressors will be eliminated and their idealized past restored. The idealized past may be highly embellished in the nativists' imaginations. Identity Christians in the United States, for example, believe that white people are the true biblical Israelites.

Islamists, on the other hand, seek to restore the "true" Islamic state based on the model of Muhammad's original *umma* (community).

Nativist millennialists are not necessarily violent. They have the same range of behaviors discussed earlier for catastrophic and progressive millennialists. They may wait for divine intervention; they may work to build their ideal communities peacefully; they may arm themselves for protection and fight back if attacked; they may resort to revolutionary violence. The diffuse Euro-American nativist movement and the transnational Islamist movement display all of these behaviors.

Euro-American Nativist Movement

The term "Euro-American nativist movement" is used here to designate a variety of participants and groups in a white supremacist movement in the United States that does not have a single name in popular discourse. It consists of people with different religious views and approaches to creating a collective salvation for white people in America. Many theorists, theologians, leaders, individuals, organizations, and communities make up this movement: racist and anti-Semitic Neopagans called Odinists; racist and anti-Semitic Christians espousing a faith called Christian Identity; Neo-Nazis and skinheads; tax protesters; people who want to return to the way of life of the pre-Civil War South; disaffected former military men and former police officers; members of citizen militias who believe they must be prepared to protect their families and communities against "jack-booted" federal agents; "Constitutionalists" who believe that the true American Constitution is divinely inspired and reject the post-Civil War Amendments giving rights to people of color and women; "Common Law" activists, who believe they have unlocked the magic power of legal words to manipulate the legal system for their benefit; "Patriots" (secular and Christian); and self-identified members of the "Phineas Priesthood" (Numbers 25:1–9), whose mission is to kill mixed-race couples, abortionists, Jews, homosexuals, and law enforcement agents.[39]

The Euro-American nativist movement gained impetus in the 1980s when federal banking and lending practices caused many farmers and owners of small businesses in rural communities to lose their properties through foreclosures on loans and seizures by the IRS for nonpayment of taxes. But the movement has many urban participants as well. Generally, Euro-American nativists see the "satanic" federal government as being under the control of Jewish bankers, heads of multinational corporations, and media moguls, collectively dubbed the Zionist Occupation Government (ZOG), which the nativists believe is seeking to enslave white Americans to the "New World Order." Believers anticipate an apocalyptic war between the races and between the white "natives" and the federal government. They believe that the white race in the United States is being subjected to genocide and dispossessed of its sacred land and way of life by an illegitimate government controlled by "satanic" Jews.

An important theorist of this movement was Neo-Nazi William Pierce (1933–2002), who exercised great influence through his novels, *The Turner Diaries* (1978) and *Hunter* (1984), which encourage citizens to fight to overthrow the federal

government, either individually or in small cells of warriors. *The Turner Diaries* inspired the founding of The Order or Bruders Schweigen (Silent Brotherhood) by Robert Mathews in 1983. The Order consisted of men who were Identity Christians and Odinists who waged war against ZOG by stealing money from banks and armored cars and produced counterfeit money to fund their terrorism and assist sympathetic white supremacist groups. Among their various crimes, they murdered a Jewish talk show host in Denver, murdered a man suspected of being an undercover agent, and bombed a synagogue. Mathews died in 1984 in a fire in a house surrounded by FBI agents when the agents shot in a flare.

In April 1985 FBI agents peacefully resolved a siege of a fundamentalist Christian community in Arkansas called the Covenant, the Sword, and the Arm of the Lord (CSA) led by Jim Ellison, which had been accumulating weapons, was training a paramilitary force, and was harboring two fugitive members of The Order. Danny Coulson, then in charge of the FBI's Hostage Rescue Team, expressed concern that the children and women inside the CSA community not be harmed and hoped to avoid "going to war" with the group. After FBI agents surrounded the community, innovative negotiation procedures were utilized. These included Coulson negotiating face to face with Ellison as commander to commander, permitting Ellison to come out and go back into the community several times, and bringing in Robert Millar, head of the Christian Identity community in Oklahoma known as Elohim City as a third-party intermediary to persuade the two Order members to surrender. When Ellison and the others came out, they were treated respectfully and not humiliated. Coulson promised that everyone who did not have a warrant for their arrest would be permitted to return to the community after it was searched, and that FBI agents would not destroy property during the search. Ellison and the two Order members were taken into custody and a cache of weapons was recovered.[40] The FBI operation against the CSA was a resounding success, especially when compared with the Branch Davidian debacle.

The shooting of the son and wife of Randy Weaver at Ruby Ridge, Idaho, in 1992 by federal agents,[41] as well as the Branch Davidian incident in 1993, stimulated fearful Patriots to form militias for protection against government agents and prepare to fight in the war against ZOG.

In 1992, because antigovernment groups tended to be infiltrated by federal undercover agents, Louis Beam, a former Ku Klux Klan leader, articulated a philosophy of "leaderless resistance" in which warriors against ZOG formed independent small cells to execute terrorist operations. Timothy McVeigh (1968–2001), a young Gulf War veteran outraged by what federal agents had done to the Branch Davidians, and strongly influenced by Pierce's *The Turner Diaries,* formed a cell and carried out the bombing of the Murrah Federal Building in Oklahoma City, Oklahoma, on April 19, 1995. That date was the second anniversary of the Mount Carmel fire that killed the Branch Davidians. Also on that date, Richard Wayne Snell, a former CSA member who had planned an aborted CSA attempt to bomb the Murrah building was executed in Arkansas. After watching the news coverage of the Oklahoma City bombing on television, Snell proclaimed, "Hail to this victory!" immediately

before receiving his lethal injection.[42] The Oklahoma City bombing killed 168 people, including 19 children.

In 1996 the FBI conducted another siege of an antigovernment group, the Freemen residing on a farm in Montana that they named Justus Township. These were Identity Christians and Constitutionalists utilizing their unique interpretations of Common Law to wage a war of words against American economic institutions and representatives of the federal government. During the siege they expressed a willingness to fight and die in a confrontation with the FBI in the hope that it would spark the "second American Revolution" against the "satanic" government. Unlike the Ruby Ridge and Mount Carmel incidents, FBI agents adopted a low-key tactical presence and utilized innovative negotiation procedures, including face-to-face dialogues, bringing in a series of third-party intermediaries, and even flying a Freeman to Billings, Montana, to meet with a respected colleague in jail to get his approval for their surrender and then returning him to Justus Township to talk to the other Freemen. In the final terms negotiated, the FBI negotiators found a way to reassure the Freemen that they could continue to pursue their ultimate concern of overthrowing the government by taking their fight into the federal courts.

In 1995 after the Oklahoma City bombing, FBI agents began to meet with members of militias to promote greater trust in government agents and agencies. Their aim was to enable militia members to get to know them as human beings and to dispel rumors. In 1998 legislation was passed by Congress to reform the IRS to eliminate past abuses and make the IRS more responsive to the needs of citizens. The IRS was instructed to be more open to accepting compromise offers and installment payments as opposed to seizing property.[43] After the September 11, 2001, attacks by al-Qaida on the World Trade Center towers and the Pentagon, FBI attention shifted primarily to dealing with radical Islamist terrorists, but the Euro-American nativist movement remains part of the American religious landscape.

AL-QAIDA

On September 11, 2001, nineteen men from the Middle East (fifteen from Saudi Arabia) simultaneously hijacked four American passenger planes. The passengers of one plane fought with the hijackers, and it crashed in rural Pennsylvania. Two planes hit the World Trade Center towers in New York City, bringing the towers down, and the remaining plane crashed into the Pentagon. Nearly 3,000 people died in the incident. With these events al-Qaida and its leader, Osama bin Laden, became the most prominent participants in a contemporary movement of radical Muslims intent on overthrowing current "apostate" Muslim governments, eliminating the cultural and economic imperialism of Western nations, especially the United States, and creating a collective salvation for faithful Muslims in a "true" Islamic state, the *khilafa* or caliphate, which will properly administer *sharia,* Islamic law.[44] An earlier attempt by radical Muslims to bring down the World Trade Center had been made on February 26, 1993, with a bombing that killed six people and injured over 1000. Since

September 11, 2001, most of the United States' foreign policy can be seen as responding to those attacks on American soil.

Movements to unify the Muslim religion with a pious state are termed "Islamist." Some Islamist movements are focused on creating an Islamic state enforcing *sharia* in their nations only, such as the Islamic revolution in Iran (a Shiite nation) in 1979, or Sunni movements in Egypt. Many Islamists work through democratic means to create their ideal Islamic state. The focus in this section is on the revolutionary transnational Islamist movement, coming out of Sunni Islam, that aims to overthrow current Muslim regimes in order to establish a single Islamic state, the *khilafa.* This movement does not recognize the current national boundaries of Muslim nations as being legitimate. This essay uses the terms "radical Islamist" and "jihadist" to refer to those who are committed to using holy war, including suicide terrorism, to accomplish their goals.

Jihad, meaning "struggle," has numerous interpretations within Islam. It can refer to the internal struggle of a believer to be a "submitter" (Muslim) to God's will, and it can refer to external struggle in holy war against unbelievers. There are passages in the Quran, regarded in Islam as being the Word of God revealed through Muhammad, that encourage Muslims to fight when they are oppressed and removed from their homes; Muslims should fight those who initiate aggression against them (for instance, Quran 2:193; 22:39–40a). The Quran also contains passages that appear to command Muslims to wage war unconditionally against all unbelievers (for instance, Quran 2:216; 2:244).[45]

Radical Islamists are focused on the Jihad of the Sword to accomplish their revolutionary millennial goals. They regard their revolution as a response to Western imperialist invasion and theft of Muslim lands and resources, massacres of Muslims, and destruction of the authentic Muslim way of life, especially on the part of the United States and other states, such as Israel, backed by the United States. To justify their terrorist activities that include attacks against civilian as well military targets, Muslim as well as Western targets, radical Islamists produce statements providing interpretations of Islamic sources, such as the Quran and the sayings of Muhammad, at variance with many traditional Muslim interpretations. Hence, the radical Islamist movement is a revolutionary millennial movement that draws on traditional Muslim sources and values while offering new interpretations and extremist methods.

Arab Muslims initiated the current transnational jihadist movement, but it also includes Muslims who are European, South Asian, Filipino, Indonesian, African, and of African derivation. Despite racial diversity, Muslims see themselves as comprising a "community" *(umma)* (Quran 3:110), often understood in the modern period as being a "nation." Therefore, this radical Islamist movement is a type of "nativist" millennial movement. It sees Western social and economic values as disrupting the traditional Muslim way of life and corrupting Muslim regimes aligned with the West. It accuses Western powers of removing Muslims from their sacred homelands, stealing Muslims' wealth in the form of natural resources, and desecrating Muslim holy lands (notably in Saudi Arabia and Palestine-Israel, but also in Chechnya, Afghanistan, and Iraq).

Radical Islamists see Western countries as *al-ahzab* (the Confederates) aligned against God and his people (Quran 11:17; 33:20; 22; 38:11–12), who join forces with hypocritical Muslim regimes. Radical Islamists wage *jihad* with the aim of defeating these imperial powers, removing false Muslim regimes, and reinstituting an idealized Muslim community, the *umma* founded by Muhammad, in one pious state the *khilafa.*

Radical Islamists had several successful strikes prior to September 11, 2001, including the bombing of the World Trade Center in New York City in February 1993; the bombing of an American military base in Saudi Arabia in June 1996 that killed 19 American soldiers; the simultaneous bombings of American embassies in Kenya and Tanzania in August 1998 that killed 264; the suicide bombing of the *USS Cole* in Aden, Yemen, in October 2000 that killed 17 American sailors and injured others. Operations after September 11, 2001, included the bombing of four commuter trains in Madrid in March 2004 that killed 202 and injured more than 1,400[46] and the suicide bombing carried out by three Pakistani British young men and one Jamaican British man on three London subway trains and a bus in July 2005, which killed 54 people.

These are just a few incidents in the broad radical Islamist war against the United States and its allies, including governments regarded as repressive regimes in Saudi Arabia, Egypt, Chechnya, the Philippines, Yemen, Kashmir, African countries, Central Asia, India, Indonesia, and, since 2003, Iraq. The transnational radical Islamist war has numerous fronts as well as countless organized participants, with al-Qaida being the most prominent and well funded of the groups within the jihadist world.

A variety of reform movements, thinkers, and fighters preceded bin Laden and al-Qaida. Predecessors include Sayyid Abul-Ala Mawdudi (1903–1979) (Indian, later Pakistani), who in writings from 1930 to about 1960 argued that Muslims had the duty to engage in *jihad* as an international revolution to destroy evil un-Islamic governments and to establish God's kingdom on Earth in the form of an Islamic state, the *khilafa,* that would enforce the *sharia;* Hasan al-Banna (1906–1949) (Egyptian), who founded the Muslim Brotherhood in Egypt in 1928 aimed at restoring the Islam of the earliest *umma* by means of social reform, welfare projects, promotion of grassroots Islamic education, and democratic political action. Al-Banna argued that violent *jihad* was required when Muslims were oppressed by outside forces; Sayyid Qutb (1906–1966) (Egyptian) of the Muslim Brotherhood who asserted that the modern world was in a state of *jahiliyyah* (spiritual ignorance) characterized by rebellion against God and that an organized movement was needed to remove Western influences from Muslim society and create a pure *umma* modeled on the community founded by Muhammad; Abd al-Salam Faraj (1952–1982) (Egyptian), author of *The Neglected Duty,* a booklet in which he argued that *jihad* (against Muslims in Egypt) permitted the killing of noncombatants and that jihadists could legitimately resort to terrorism. *The Neglected Duty* called for the assassination of Egyptian President Anwar Sadat, viewed as an apostate, to initiate a revolution to establish an Islamic state in Egypt. *The Neglected Duty* was left at the site of the assassination of President Sadat in 1981; and Abdullah Azzam (1941–1989) (Palestinian), author

of *Martyrs: The Building Blocks of Nations,* who mentored bin Laden in Afghanistan during the 1980s war to expel the Soviet military. Azzam believed that the war to expel unbelievers and create a single faithful Islamic state would expand from Afghanistan to other parts of the Muslim world.

Many groups within the contemporary radical Islamist movement work independently of as well as with al-Qaida, and even more groups and leaders will survive bin Laden's passing from the scene.

Osama bin Laden (b. 1957) is the seventeenth son of the wealthy Yemeni contractor, Muhammad bin Laden, who made his fortune in Saudi Arabia working for the royal Saud family. Muhammad bin Laden was a devout Muslim in the Wahhabi tradition, the conservative Muslim movement that dominates Saudi Arabia. In the late 1960s Muhammad bin Laden's company rebuilt the al-Aqsa mosque near the Dome of the Rock on the Haram al-Sharif (Noble Sanctuary), the third holiest site in Islam, in Jerusalem. His company also helped renovate mosques at the two holiest cities in Islam, Mecca and Medina, in Saudi Arabia. After Muhammad bin Laden's death, the Saudi Binladen Group continued to renovate and expand those mosques.

Osama bin Laden earned a degree in economics and public administration at King Abdul-Aziz University in Jeddah, Saudi Arabia, where beginning about 1979 he associated with the Muslim Brotherhood and was influenced by two Islamist scholars, Abdullah Azzam and Muhammad Qutb, brother of Sayyid Qutb. Muhammad Qutb argued that Muslims needed to wage offensive war against enemies of Islam in order to establish the true Islamic state. Azzam also taught the necessity of creating the *khilafa.*

The Soviet Union invaded Afghanistan in 1979, ultimately killing more than a million people and forcing a third of the population (about five million) into exile abroad. The 22-year-old bin Laden went to Afghanistan to witness Soviet aggression against Muslims for himself, then returned to Saudi Arabia to raise money to support the *mujahidin* (warriors) fighting the Soviets. In the early 1980s bin Laden brought construction machinery to Afghanistan for the *mujahidin.* He provided funding for Abdullah Azzam to found Makhtab al-Dhadamat (Services Offices) based in Peshawar, Pakistan, in 1984 to assist the *mujahidin* in Afghanistan. Bin Laden provided funds for thousands of Arabs to fight in Afghanistan, where they gained training and experience in *jihad* that they would take to other parts of the world. The jihadists also gained confidence by helping to defeat a superpower nation. The Soviet forces withdrew from Afghanistan in 1989. Bin Laden founded al-Qaida (the Base) in 1989 to train jihadists and to expand the struggle to other countries.

When Iraqi leader Saddam Hussein's forces invaded Kuwait in 1990, bin Laden offered to make his jihadists available to the Saudi government to assist in repelling the Iraqis to prevent the stationing of foreign troops on Arabian soil. He was offended when his offer was ignored, and these troops, especially the Americans, came to the "land of the two Holy Places" and remained after the war. Bin Laden left Saudi Arabia in 1991, establishing his base of operations in Sudan. His jihadist Arabs participated in the 1993 battle in Mogadishu, Somalia, that killed 18 American

soldiers and prompted the withdrawal of American troops. This convinced bin Laden that Americans were cowards who were afraid to die.

Al-Qaida sent funds and jihadists to fight in Azerbaijan, Chechnya, Tajikistan, the Phillippines, Jordan, Eritrea, Yemen, Egypt, and Bosnia, and networked with other radical Islamist organizations. In 1996 bin Laden moved his headquarters to Afghanistan, where he supported the Taliban in creating an Islamist state. There he continued recruiting and training jihadists.

Bin Laden's public statements indicate that he believes it is necessary to fight against those who are oppressing pious Muslims. His 1996 "Declaration of War against Americans Occupying the Land of the Two Holy Places" complained of the "Zionist-Crusader alliance," a reference to Israel and the United States, which according to bin Laden caused the spilling of Muslim blood in various lands and the theft of Muslims' wealth and land. It protested the American "occupation" of the sacred land of Arabia. Bin Laden stated that he and his organization were persecuted by those attempting to stop his activities. He aimed to "return to the [Muslim] people their own rights, particularly after the large damages and the great aggression on the life and religion of the people." Bin Laden highlighted the following injustices suffered by Muslims: Israelis evicting Muslims in Lebanon; the occupation of Muslim lands; the United States supplying Israel with arms and financial support; and the deaths of more than 600,000 Iraqi children caused by the American-led embargo of Iraq. He accused the Saudi regime of collaborating with the Americans to make oil profits to the detriment of Saudi Arabian citizens. He also accused the Saudi government of not enforcing *sharia.* Bin Laden concluded that it was "essential to hit the main enemy [the Zionist-Crusader Alliance] who divided the Ummah into small and little countries and pushed it, for the last few decades into a state of confusion." After faith in Allah, bin Laden's priority was to drive Americans, the greatest of unbelievers, out of Saudi Arabia, and liberate Palestine, seen as the northern part of the Land of the Two Holy Places, from Israeli domination. As to the mode of fight, Bin Laden commented:

> [I]t must be obvious to you that, due to the imbalance of power between our armed forces and the enemy forces, a suitable means of fighting must be adopted i.e. using fast moving light forces that work under complete secrecy.[47]

Bin Laden noted that, while Americans were afraid to die, Muslim martyrs were assured of rewards in heaven, including marriage to 72 *houris* ("beautiful ones of Paradise") and the ability to intercede for the salvation of 70 relatives. To the Americans he said, "Terrorising you, while you are carrying arms in our land, is a legitimate and morally demanded duty."[48]

The 1998 "Jihad against Jews and Crusaders" statement by bin Laden and associates made similar points. It added that Americans used Saudi Arabia as a base to launch attacks against Muslims in other lands. It complained of Israeli occupation of Jerusalem and the murder of Muslims, as well as the continued deaths of Iraqis due to the embargo. It accused Americans of planning to destroy Iraq. It concluded:

> The ruling to kill the Americans and their allies—civilians and military—is an individual duty for every Muslim who can do it in any country in which it is possible to do it, in order to liberate the al-Aqsa Mosque [in Jerusalem] and the holy mosque [in Mecca] from their grip, and in order for their armies to move out of all the lands of Islam, defeated and unable to threaten any Muslim.[49]

Like the Euro-American nativists, the jihadists resist the evil "New World Order." Bin Laden stated in an interview given to Peter Bergen for CNN in March 1997: "The collapse of the Soviet Union made the U.S. more haughty and arrogant and it has started to look at itself as a master of this world and established what it calls the New World Order."[50]

In early Islam, successes in warfare against unbelievers were seen as vindication that Islam was the expression of God's will. David Cook argues that the expectation of Muslim religious and cultural superiority made the low status of Muslim countries in the nineteenth century and the difficulties of Muslims in the twentieth century especially difficult to accept.[51] The belief that world dominance indicated God's favor for the true faith made these conditions especially humiliating. Raymond Stock reiterates this: "Some of these young Muslim men are tempted by a [Western] civilization they consider morally inferior, and they are humiliated by the fact that, while having been taught their faith is supreme, other civilizations seem to be doing much better."[52] The radical Islamist movement, with its goal of establishing a true Islamic state for faithful Muslims, draws on the values of violent *jihad* and martyrdom found in the Quran and the sayings of Muhammad and uses these to formulate a rationale for violent revolutionary activities to achieve that collective salvation.

The Muslim tradition discourages suicide for its own sake, but values death as a martyr *(shahid)* while fighting for Islam. It was acceptable in Islam to place oneself in circumstances in which death was probable while fighting for God and the faith, with the assurance that martyrs went immediately to heaven, whereas an ordinary Muslim went to sleep at death and had to wait for the resurrection and final judgment before being admitted to heaven.

Cook points out that suicide attacks, what radical Muslims call "martyrdom operations," have been used as a weapon in *jihad* only since the early 1980s. In 1983 Shiite groups used suicide terrorism in the Lebanese war to expel American and subsequently Israeli troops. Beginning in 1994 the Sunni Palestinian jihadist groups, Islamic Jihad and Hamas, used suicide attacks against Israelis. The practice then spread to Algeria, Kashmir, India, Chechnya, and Iraq.

"The Islamic Ruling on the Permissibility of Martyrdom Operations" was written after a Chechnyan woman carried out a suicide attack on June 9, 2000, that killed 27 Russian Special Forces. It discussed Quranic passages, sayings of Muhammad, and views in the different schools of *sharia* to argue that suicide attacks were permissible if specified conditions were met: the attacks must be performed with the sincere intention to uplift God's Word; the desired goal of the attacks could not be effected by any other means; the attacks must result in losses for the enemy or the enemy must be frightened and Muslims emboldened; and there must be prior consultation with war strategists to avoid upsetting a broader

plan. The document stated that the act was considered "worthless" if done without pure intention.[53]

Fragments of a spiritual manual, called "The Last Night," found in the luggage of Muhammad Atta, leader of the 9/11 hijackers, details his intensive prayerful preparation to make sure that the suicide operation was carried out with the correct intention.[54] Through meditations on verses in the Quran and accounts of the battles of the early Muslim community, "the hijackers gradually merge with the pious heroes who made possible Islam's initial triumphs and become their reinstantiation."[55] The constant remembrance *(dhikr)* of God cultivated by pious Muslims is stressed all throughout the operation.

An interview in the July 4, 2005, Special Issue of *Time* magazine with a 20-year-old Iraqi man who gave his name as Marwan Abu Ubeida revealed that suicide attacks continued to be seen as spiritual exercises requiring a great deal of preliminary purification. Whereas most of the suicide attacks in Iraq after the American invasion in March 2003 were assumed to be carried out by foreign jihadists, by 2005 more Iraqis were volunteering to become suicide operatives. Marwan reported that he was not a supporter of Saddam Hussein's regime, but after American troops failed to leave Iraq immediately he became radicalized against Americans and the Iraqis who collaborated with them. He joined the Iraqi insurgency after United States troops fired on a protest gathering in which Marwan was participating, killing 12 and wounding many. When he joined the insurgency, Marwan broke off contacts with his family, and he came to regard his fellow jihadists as his family. After participating in numerous military actions, Marwan applied to become a suicide attacker. He said that the day he was accepted was the happiest day of his life. Marwan supported the transnational jihadist goal of creating a "true" Islamic state free from Western influences. He believed that removing Americans from Iraq was the first step toward achieving that goal.

Marwan reported that in Iraq individuals accepted for suicide missions went through spiritual training guided by field commanders and Sunni clerics. Marwan saw the spiritual exercises as preparation for giving up one's previous life to start a new one. The future suicide attackers studied the Quran and stories about past martyrs. They read texts supporting suicide operations, including *Lover of Angels* by Abdullah Azzam, listened to taped talks by jihadist leaders, and watched videos of successful suicide operations. An operative's final days were spent in seclusion during which he (or she) prayed intensively. A fellow jihadist was often asked to serve as a support during the final days. The operative was trained to stop thinking of the past and think only of his imminent future in heaven. Marwan concluded:

> Yes, I am a terrorist. Write that down. I admit I am a terrorist. [The Quran] says it is the duty of Muslims to bring terror to the enemy, so being a terrorist makes me a good Muslim.[56]

During the summer of 2005 suicide attacks were increasing rapidly in Iraq, with a second assault occurring against children in July as they were receiving candy from American soldiers and multiple bombings daily. In August as the United States

pressed the Iraqis to formulate a Constitution for a unified nation, and Iraqi factions argued over whether or not the *sharia* would be the basis of the new nation, jihadist insurgents intensified their suicide attacks against Iraqi civilians.

When American and British forces invaded Iraq in 2003 to topple the Saddam Hussein regime and to search for alleged weapons of mass destruction (which were never found), even more jihadists joined the radical Islamist movement and traveled to Iraq to fight with Iraqi insurgents. The interview with Marwan in 2005 indicated that Iraqis were also being recruited to al-Qaida in Iraq, which was led by Abu Musab al-Zarqawi (Jordanian) and appeared to operate independently of bin Laden's leadership.

The reaction of President George W. Bush's administration to the September 11 attacks manifested a radical dualism that mirrored the dualism of the jihadists. Jean E. Rosenfeld has called this type of situation "apocalyptic mirroring," arguing that "holy terror provokes a reciprocal, forceful, religious response."[57] In this case, President George W. Bush's rhetoric drew on the radical dualism of evangelical Christian millennialism to drum up support for his military response. President Bush declared a "war on terror" and spoke of it in terms of protecting and extending the principles of democracy and freedom, i.e., American sacred values. He initially called the war a "crusade," which for Muslims conjured images of the Christian crusades against Muslims in the Middle Ages, and reinforced Muslims' perceptions of Western powers as crusaders seeking to destroy Islam. The invasion of Afghanistan was initially named "Infinite Justice," reflecting a view of it as a holy war, but the name was quickly changed to "Enduring Freedom." Bush spoke of the war on terror as a fight between good and evil in which "there is no neutral ground."[58] Bush even named an "axis of evil"[59]—Iraq, Iran, and North Korea—which motivated North Korea to accelerate its program to manufacture nuclear weapons.[60] The Bush administration appeared oblivious to analyses of various experts stressing that the quality of the *interactions* of the United States with Muslim communities and states determined whether or not more jihadists and suicide operatives were recruited for the struggle to remove their oppressors. According to John R. Hall:

> An apocalyptic war cannot be won. Strategies to win such a war are more likely to fuel it. The goal, instead, must be to act outside of, and thus move beyond, the end of apocalyptic history. How to do so is the world-historical challenge at the beginning of the twenty-first century.[61]

The radical Islamic movement is revolutionary, and it is responding to a sense of being oppressed and persecuted by the Western, especially American, economic, political, and military powers in various parts of the world. It is also assaulted, as Western states wage their "war on terror." Some of the smaller groups within the radical Islamist movement may become fragile, especially if cornered and assaulted by Western militaries. Of great concern is the question of what operatives in the jihadist movement will do if the movement finds itself on the verge of a resounding defeat. Rosenfeld reports that a jihadist commentary[62] asserted that the radical Islamists were "the saved sect" devoted to establishing the "order of Allah," which, according

to a saying of Muhammad, would never be defeated. The commentary asserted that Muhammad said that in the event they are defeated, God will cause the world as we know it to end, carry out the final judgment, and decide who will be admitted to paradise and who will go to hell. Rosenfeld suggests that an imminent devastating defeat of the jihadist movement could prompt some fighters to resort to weapons of mass destruction, if those were available:

> According to this myth, Jihadism can never be defeated. It will prevail on Earth if it defeats evildoers, and if evildoers succeed in eradicating it, Allah will punish the adversaries and reward the faithful at the hour of its eradication. One can only hope that al-Qaida does not plan some act that will hasten the end of the world, if it appears that it is failing to achieve Allah's purpose, because its mission has apocalyptic overtones.[63]

CHARISMATIC LEADERS AND THEIR FOLLOWERS

Millennial movements are often founded and led by individuals who are believed to possess "charisma," a term referring to the quality of a person believed to have access to an unseen source of authority. In other words, it is believed that the leader receives revelation or empowerment from an unseen source of authority, which in an NRM could be God, angels, masters, an abstract principle, or even extraterrestrials. Charisma is always socially constructed and can be verified only by faith. There is no objective means to determine if the person's claims are true. If no one believes an individual's claims of revelation or inspiration, then he or she does not have charisma. But if the person gains even a few followers convinced of the claims, then she or he has become a charismatic leader.

Charismatic leadership of religious groups and movements does not necessarily result in violence. Also, violent millennial movements may not have leaders with charisma in this sense. But sociologists following the formulations of Max Weber have noted the inherent instability of charismatic authority.[64] The leader must work constantly to provide plausible claims to sacred authority, because followers may withdraw their faith at any time. Because of fewer institutional structures of routinized authority in the early stages of a movement, there is greater scope for a charismatic leader's whims and pathologies to play out in harmful ways, *but only if the followers permit it.*

Lorne Dawson argues that charismatic authority can contribute to a violent episode when such a leader makes bad choices about how to maintain his or her charisma in the face of challenges.[65] This can be seen in several of the cases discussed here. Jim Jones was incapacitated and in danger of sabotaging his own community. David Koresh's charisma was based on what appeared to be his divinely inspired ability to interpret the Bible's apocalyptic prophecies. After February 28, 1993, Koresh was severely wounded, but had not died as he predicted. Koresh could not come out and maintain his charisma and messianic identity in the eyes of his followers unless a scenario could be made to fit the biblical prophecies. Asahara Shoko was ill and claimed to have been poisoned by American agents using sarin. Since Asahara claimed to be an omniscient Buddha and salvation came only through surrender to

him, his predictions of Armageddon had to prove correct and he could not be shown to be fallible or imperfect in any way. Joseph Di Mambro was dying of cancer at the time that defectors threatened to reveal the technology behind appearances of the masters and their son threatened his daughter's status as the messianic child. Investigations by authorities into the group merely exacerbated the threat to his charisma and the group's world view. Do of Heaven's Gate believed that he was dying, and he previously taught that the class members could enter The Level Above Human only by "grafting" onto him, thereby cultivating a spiritual and emotional dependence on him.

Challenges to a leader's charisma may come from multiple sources—defectors; dissidents within the group; aggressive cultural opponents such as anticultists, the media, law enforcement agents; and even the illness or incapacity of the leader. Since the leader's charisma is intimately tied to the group's ultimate concern, these factors threaten to destabilize the group, whose leader and members may take extreme measures to protect the leader's charisma and the group's ultimate concern. Seen in this light, the FBI's tactic of demeaning Koresh and his claims to charismatic authority during televised press briefings during the Mount Carmel siege were ill advised.

Revolutionary millennial movements are fueled by participants' grievances and sense of persecution and are not dependent on a single charismatic leader. Some charismatic leaders of smaller groups may arise, but the movement may not be dependent on one overarching charismatic leader. This is the case with the Euro-American nativist movement and also with the radical Islamist movement that includes al-Qaida. Despite the stature of bin Laden in the Muslim world as a pious and brave defender of Islam, the jihadist movement is not dependent on him and will continue after his death.

Both the Euro-American nativist movement and the radical Islamist movement consist of a variety of organizations and leaders, and the most violent of these operate relatively independently of each other although they may network. Falun Gong, which has nonviolent revolutionary themes in relation to the People's Republic of China, is likewise an international movement of like-minded people who volunteer to spread the teachings and organize meetings and publicity. Master Li is seen as a charismatic leader with special access to powers in the spiritual realms, but he is seldom seen directly by followers, who rely primarily on Web site postings to access his teachings. Master Li appears to be a healthy man and is not likely to die soon, but when he does, the movement will no doubt survive, change, and carry on.

THE QUESTION OF BRAINWASHING

Beliefs held by members of NRMs are often seen by outsiders as being so outlandish that the followers must be "brainwashed." The fact that followers often leave such groups belies the allegation that their good sense was overcome by a mysterious power called "brainwashing."

Members of groups may go through intensive educational processes, such as Koresh's lengthy Bible study sessions, Heaven's Gate ascetic disciplines, Aum

Shinrikyo's mental and physical trainings, and Marwan's spiritual preparation for his suicide mission, but these socialization practices can be found in other institutions acceptable in mainstream societies, such as families, congregations, professions, monastic orders, and militaries. These types of socialization efforts are effective with individuals who already share some of the beliefs and values and voluntarily go through the trainings. Aum Shinrikyo attempted to forcibly brainwash people by kidnapping and incarcerating them, subjecting them to viewing of videos and listening to audiotapes repeatedly, and even injecting drugs into them. Many people were severely injured, but no one became a true believer.

Followers will be more inclined to stay with a group that is heading for disaster if there are high "exit costs."[66] When followers have given their livelihoods, financial resources, spouses, families, and identities over to an NRM, it is hard to leave even after becoming disillusioned. Women who bear children for the charismatic leader may find it particularly difficult to leave if they have no outside resources. If followers committed illegal acts for the group, including murder, they are not likely to leave because that would entail their prosecution along with other members of the group. Nevertheless, people lose faith and depart such groups all the time. Thus, they become significant threats to the continued plausibility of attributions of charisma and the group's ultimate concern.

ALTERNATIVE ETHICS

Millennial groups reject the values of mainstream societies and adopt the values of their anticipated millennial kingdom. Outsiders may find the millennial values offensive and even illegal, thus heightening the group's tension with society and the potential for violent conflicts. Sometimes the alternative values and ethics of a millennial movement anticipate future changes in mainstream society to achieve greater justice. Often these conflicts over values relate to issues of sexuality and the treatment of children.

The Peoples Temple strove for the equality of all races in their community, and thus faced opposition from racist white Americans. Peoples Temple members also dispensed with conventional sexual arrangements, and many people had sex with Jim Jones to express their love and loyalty to him and what he stood for. Jonestown residents left their families and livelihoods in the United States to make a communal lifestyle with their new family in Jonestown, which prompted the organization of a group calling itself Concerned Relatives that sought to destroy Jonestown and Peoples Temple and rescue loved ones.

Branch Davidian parents permitted David Koresh to take their daughters, as young as 10 or 11 to 15 years of age, as his wives, and married men also agreed that their wives could become Koresh's wives, believing that the Bible instructed Koresh to sire 24 children who would be the 24 elders who would participate in God's judgment. No doubt sexuality at Mount Carmel, involving Koresh's polygamy and intercourse with underage girls, as well as the possession of an arsenal of weapons, were

offensive to the law enforcement agents and the American public during the 1993 events.

Aum Shinrikyo adopted a doctrine called *poa,* taught by Asahara, that said it was compassionate to kill someone discerned by Asahara as going to commit actions that would create bad karma. It was believed that Asahara's supernatural power propelled the murdered person's soul to a higher realm. Thus, in Aum Shinrikyo, even murder was rationalized as an ethical act by doctrines.

When religious groups and those who oppose them adopt the perspective that the *end justifies the means,* then the conflict is likely to become violent. If religious people believe that *dying is winning,* then dying is likely to be the outcome regardless of which party initiates the violence.

NRMS AND VIOLENCE NOT RELATED TO MILLENNIALISM

When violence occurs in nonmillennial groups, it is due to values and social processes that can be found to contribute to violence in mainstream religious organizations and movements as well.

For instance, E. Burke Rochford has demonstrated that physical abuse of children in the boarding schools of the International Society for Krishna Consciousness (ISKCON), a Hindu faith that has attracted many converts in the United States and in other Western countries since the 1960s, occurred from 1971 until 1986 in an institutional and belief context that did not value marriage, women, and children. Instead, the greatest value was placed on male celibacy as the highest form of spiritual life. This situation seems to have parallels with the institutional culture of the Roman Catholic Church, the hierarchy of which in the United States for many years protected supposedly celibate priests (necessarily male) known to bishops as being pedophiles and sexual molesters of underage youths.[67]

SMALL BUT TRAGIC INSTANCES OF MILLENNIALISM AND VIOLENCE

But violence in new religious movements often does not stray far from millennial themes. It appears that extreme actions are highly compatible with the radical dualism of catastrophic millennial outlooks and belief in having access to an infallible source of authority. The latter belief may be termed "fundamentalism." The source of authority regarded as infallible may be scripture, tradition, or claimed revelation coming from an unseen source.

Starvation in The Body

In 1999 a small fundamentalist Christian sect near Attleboro, Massachusetts, that called itself "The Body," consisting of members of the Robidoux family and several other families, permitted one-year-old Samuel Robidoux, the son of Jacques and Karen Robidoux, to die of starvation. The group was headed by Roland Robidoux,

Samuel's grandfather. Another member of the group, Michelle Mingo, a sister of Jacques Robidoux who was stout and plain, had received a revelation when Samuel was ten months old that Karen, who was slim and pretty, should only breastfeed Samuel as penance for her vanity. Karen was pregnant at the time and was told that God would kill her unborn baby if she did not follow God's instructions. Karen was told that she was ordered by God to consume only almond milk, nurse Samuel for 20 minutes every hour around the clock, and sing hymns praising God while she was nursing Samuel. Under these circumstances, Karen did not have sufficient breast milk to nourish Samuel, and he wasted away over 51 days. Group members did nothing to prevent Samuel from starving to death.

Some years earlier, Roland Robidoux had left the Roman Catholic Church, was affiliated briefly with the Worldwide Church of God, and then created his small nondenominational fundamentalist Christian community that developed its own beliefs by studying the Bible. In the 1990s the group was influenced by antigovernment Constitutionalist ideas. Members destroyed their Social Security cards and distanced themselves from the "world" regarded as being under the control of Satan. The group also developed a belief that God sent revelations in the form of "leadings" that could be given to any member of the community. An early leading reported by Michelle Mingo said that God did not want members to wear glasses, and subsequently people were turned out of the group if they resumed wearing glasses.

The community anticipated the imminent apocalyptic end-time events and believed that only the truly faithful would be taken into heaven to be spared the tribulation period. One day Jacques Robidoux received a leading that God wanted them to travel north to find the "promised land"; they should not take any food, diapers for the children, or clothing, but trust in God to look after them. After three days of travel in their vehicles, with their gas running out and their hungry children eating clover from the side of the road, the parents abandoned the trip and returned home. Roland Robidoux asserted that they had not been permitted to reach the promised land because they had failed God's test; they needed to entrust even their children completely into God's hands.

When the leading was received that Samuel was to be breastfed and given water only and denied solid food, Jacques Robidoux made sure that Karen met all the restrictions imposed by God. No one beat Karen, and she was free to leave the community to run errands, but she made no effort to leave to get help for Samuel. She was starving herself, suffered from sleep deprivation, and felt that she had no place to go and furthermore that she had to obey God. Jacques and Karen were otherwise loving parents and prayed intensely that God would perform a miracle to save Samuel.

Jacques Robidoux was convicted in 2002 of first-degree murder for permitting his son to die and sentenced to life in prison. In 2004 Karen Robidoux was convicted of assault and battery, sentenced to two and one-half years, and released for time served; she lost custody of her four remaining children. Michelle Mingo pleaded guilty to being an accessory to child abuse after spending three years in jail and was released.

The children remaining in The Body were removed and adopted by family members outside the group.[68]

This episode illustrates the folly of a group of people placing uncritical faith in divine revelations, and these same dynamics can be discerned in other religions, large and small, as well as in national movements. The context of belief in the imminent catastrophic end time made it appear to be very urgent to comply with God's leadings in order to be saved.

The Lafferty Murders

Upon first glance, the 1984 murders in Utah of Karen Lafferty (age 24) and her 18-month-old daughter Erica by her brothers-in-law, Ron and Dan Lafferty, appear senseless and unrelated to millennialism. However, investigation revealed that all five of the Lafferty brothers, lifelong Mormons, had been influenced recently by fundamentalist Mormon thought (as represented by groups and individuals separate from the mainline Church of Jesus Christ of Latter-day Saints) as well as Constitutionalist antigovernment ideas. The brothers, including Karen's husband, Allen, began to demand strict obedience from their wives and beat them when it was not forthcoming to their satisfaction. The men quit paying taxes and registering their cars. College-educated Karen disagreed with these changes. She paid her family's taxes, registered the car, and argued theology with Ron and Dan, the older brothers of her husband. She even encouraged Ron's wife to divorce him and move away with their children when things got too bad. It is unclear why Karen stayed in her own marriage. Apparently she did not yet consider the situation intolerable, and she hoped the marriage would work out.

Ron and Dan began taking lessons in a small School of the Prophets founded by a schismatic Mormon prophet who called himself Onias. When Ron received a revelation that God wanted Karen and Erica as well as two other adults to be "removed" because they were standing in the way of God's work, Ron understood this work to be the building of the "City of Refuge" in which the faithful would be protected during the catastrophic end-time events. Dan resolved to carry out the executions. Baby Erica had to be killed also, because, according to Ron, she was a "child of perdition" and "would grow up to be a bitch, just like her mother!"[69] Although the other men in the School of the Prophets and Karen's husband knew of the "removal prophecy," and her mother-in-law knew that Ron and Dan were leaving her home that day to kill Karen and Erica, no one did anything to warn Karen or alert the authorities.

The Lafferty brothers had grown up in a patriarchal household in which they saw their mother beaten regularly by their father. Clearly at issue was a gender conflict in which Karen was viewed by the Lafferty family as being a "bad woman" deserving to die. One is left to speculate that if Karen's child had been a boy that the child would have been spared. Karen and Erica Lafferty were executed on July 24, 1984, a Mormon holiday called Pioneer Day, which celebrates the entry of Brigham Young and the main party of Saints into the Great Salt Lake Valley where they built their

millennial kingdom. Ron beat Karen to the extent that her face was mutilated, and then Dan slit the throats of Erica and Karen.

The violent actions taken by Ron and Dan Lafferty occurred within a context of an expectation of imminent catastrophic end-time events as well as a context in which the brothers believed that God continued to give revelations to his people. The patriarchy of the context was also important in that they believed that God legitimated violence against disobedient women.[70]

Fundamentalist Mormon Polygamy Enforced by Violence

Jon Krakauer reports that fathers and husbands in fundamentalist Mormon communities practicing polygamy have whipped and confined daughters and wives when they resist being married off at young ages to older men they did not choose. He also reports that at the end of the 1990s in the community of the Fundamentalist Church of Jesus Christ of Latter-day Saints at Colorado City, Arizona, and Hildale, Utah, there was heightened expectation of the imminent catastrophic destruction of the world and the lifting up of the faithful into the Celestial Kingdom. The events on September 11, 2001, and the subsequent war on terror, have renewed optimism that the end time is fast approaching.[71]

In contrast, the mainline LDS Church retains the millennial beliefs found in its scriptures and origins, but these are more "managed"[72] in the sense that the church leadership does not set dates for the apocalyptic events.

CONCLUSION

The types of NRMs associated with violence have usually been millennial groups and movements. Whereas most millennialists are peaceful, many others are involved in episodes of violence or have initiated violence. The radical dualistic world views of millennialists as well as their opponents are important factors in what David G. Bromley terms "dramatic denouements."[73] According to Bromley,

> Dramatic Denouements transpire when a movement and some segment of the social order reach a juncture at which one or both conclude that the requisite conditions for maintaining their core identity and collective existence are being subverted and that such circumstances are intolerable. These relational moments are most likely to occur when the relationship between movement and society is characterized by polarization and destabilization. Parties on one or both sides thereupon undertake a project of final reckoning under the aegis of a transcendent mandate to reverse their power positions and to restore what they avow to be the appropriate moral order.[74]

Radical dualism, often on multiple sides of the conflict, promotes a perspective of good versus evil and allows no compromise in the struggle.

Millennialism involves an ultimate concern about an expected imminent transition to a collective salvation effected by various divine or divinely guided means. Members of assaulted millennial groups hold fast to their millennial goals in the face of opposition and are committed to obeying God's commands over the authority of

human institutions even when they are persecuted; usually their faith is strengthened by the expected opposition from the forces they deem to be aligned with evil. Fragile millennial groups initiate violence to preserve ultimate concerns that are in danger of failing due to various combinations of internal weaknesses and cultural opposition; instead of relinquishing their ultimate concern, believers in fragile groups are willing to utilize violence to make sure that their religious goal does not fail. At the moment of self-destruction the believers may shift from expecting an earthly collective salvation to a heavenly one. Participants in revolutionary millennial movements believe that they must carry out violence to participate in a divine plan to destroy the old order and create the new one for their members. They die assured that their cause is just, and they often look forward to heavenly rewards.

These categories of assaulted millennial groups, fragile millennial groups, and revolutionary millennial movements are not mutually exclusive. A group is likely to possess features of more than one of these categories simultaneously and shift from one to the other in response to events. Nevertheless, the categories remain useful in discerning whether the millennialists or outsiders carried out the predominance of the violent actions.

Charismatic leadership is often associated with movements that become involved in violence, but it is not a necessary or predictive trait. Many charismatic leaders never stimulate violence. On the other hand, especially when salvation is believed to come through the charismatic leader alone, factors that threaten to disconfirm the leader's charisma can contribute to the threatening of the ultimate concern and thereby prompt believers to take violent actions.

When assessing religious groups for the potential for volatility it is important to look at an array of factors that can be clustered into three categories: interaction factors, internal factors, and belief factors.[75] All of these types of factors are vitally important to whether there is a peaceful or violent outcome. It is noteworthy that the majority of the religious groups discussed here, including the Branch Davidians and Falun Gong as assaulted millennial groups, possessed doctrines that asserted that salvation came through dying or suffering for the faith, or, in some cases, killing for the faith.

The challenge for law enforcement agents is to devise means to deal effectively with suspected criminal activity in NRMs without taking actions that contribute directly to violent outcomes. This is precisely the same challenge faced by states today as they attempt to curtail the terrorist activities of the radical Islamist movement. States need to find means to protect public security and apprehend terrorists, while avoiding fulfilling believers' expectations about their evil and oppressive behaviors, thus creating conditions that motivate more people to become violent revolutionaries. The American federal government has been somewhat effective in diminishing the conditions giving rise to the Euro-American nativists' sense of being persecuted by redressing some of the economic pressures on citizens and initiating contacts and dialogues between FBI agents and militia members. Although the Euro-American nativist movement has not disappeared, in the years following September 11, 2001, it has been relatively quiescent. More Patriots were working

through political means to achieve their goals for America. These effective actions within the United States to address an indigenous revolutionary millennial movement may point to actions needed to diminish the factors impelling the transnational radical Islamist movement. No doubt this will require sustained and creative efforts on multiple fronts. In making these efforts it is very important to avoid becoming like the terrorists by resorting to violence to achieve goals motivated by a simplistic "us versus them" outlook. This latter approach only perpetuates the repeated cycle of attacks and retaliations.[76]

The study of the dynamics involving some new religious movements with violence has international political implications for violence and peace.

NOTES

1. Thomas Robbins and Dick Anthony discuss endogenous and exogenous factors in "Sects and Violence: Factors Enhancing the Volatility of Marginal Religious Movements," in *Armageddon in Waco: Critical Perspectives on the Branch Davidian Conflict*, ed. Stuart A. Wright (Chicago: University of Chicago Press, 1995), 236–59. I am grateful to Patsy Rahn, Jean E. Rosenfeld, Jeff Kenney, Eugene V. Gallagher, and W. Michael Ashcraft for their helpful comments on previous drafts of this essay.

2. The definitions of millennialism given in this article build on the groundbreaking definition offered by Norman Cohn, in *The Pursuit of the Millennium* (London: Secker and Warburg, 1957).

3. Robert D. Baird, *Category Formation and the History of Religions* (The Hague: Mouton, 1971).

4. "Apocalypse" meaning "revelation" or "unveiling" is the name of the last book of the New Testament. Its symbolic imagery is focused on the catastrophic events of the end time, including the last great battle with evil, resurrection, judgment, and creation of God's kingdom on Earth that will last 1000 years before further catastrophic events will occur to eliminate Satan and those aligned with him.

Gallagher, "'Theology Is Life and Death': David Koresh on Violence, Persecution, and the Millennium," in *Millennialism, Persecution, and Violence,* ed. Wessinger, 82–100; James D. Tabor and Eugene V. Gallagher, *Why Waco? Cults and the Battle for Religious Freedom in America* (Berkeley: University of California Press, 1995); Wright, *Armageddon in Waco;* Jayne Seminare Docherty, *Learning Lessons from Waco: When the Parties Bring their Gods to the Negotiation Table* (Syracuse: Syracuse University Press, 2001).

13. "Messiah" in Hebrew means "anointed," and in the ancient Israelite religion referred to the king of Israel who was designated by God for that role by being anointed by a prophet. "Messiah" is "christ" in Greek, and the early Christians added a different dimension to the meaning of the word, since they believed that Jesus Christ would accomplish the millennial kingdom. Therefore, the term "messiah" when applied to different religious groups by scholars indicates a person who is believed by followers to be empowered by a superhuman agent (such as God) to create the collective salvation in the millennial kingdom.

14. Dick J. Reavis, *The Ashes of Waco: An Investigation* (New York: Simon & Schuster, 1995), 192–99, recounts this incident.

15. CS gas is a tear gas or "riot control agent" that burns the skin and inflames the respiratory tract, which may cause death when used in confined spaces. A government report concluded that "CS insertion into the enclosed bunker at a time when women and children were assembled inside that enclosed space could have been a proximate cause of or directly resulted in some or all of the deaths attributed to asphyxiation in the autopsy reports." House of Representatives, *Investigation into the Activities of Federal Law Enforcement Agencies toward the Branch Davidians,* Report 104-749 (Washington, D.C.: U. S. Government Printing Office, 1996), 71.

18. It is impossible to verify the statistics provided by Falun Gong. Its Web site, Falun Dafa Information Center, http://www.faluninfo.net/, as of July 14, 2005, alleged that hundreds of thousands of practitioners had been detained, more than 100,000 had been sent to forced labor camps, and there had been more than 2,300 deaths due to torture endured while in custody. The Web site provided graphic photographs of injuries to a young woman, Gao Rongrong, who died in June 2005 from burns allegedly caused by an electric shock baton. The Web site detailed the alleged torture methods used by PRC authorities. The Web site also included Amnesty International Report ASA 17/004/2001 dated December 2, 2001, on torture methods and cases in the PRC. Falun Gong's allegations concerning torture and deaths of practitioners are supported by the accounts reported in Chang, *Falun Gong,* 24–29.

19. Chinese and Japanese names are given in the Asian order of family name first.
20. Falun Gong denies that these people were practitioners.

Gender in New and Alternative Religions

Mary Farrell Bednarowski

In the past 40 years, gender has become more difficult to interpret. Popular and even scientific understandings of gender once rested on the assumption that "having gender" was a straightforward matter of "being" either female or male in ways that were biologically determined. We now know that this assumption is more complicated. Interpretations of gender, femininity, masculinity, sexuality, and sexual orientation are more like a continuum that posits on one end the traditional understanding of gender as a category of existence immutably grounded in biology and on the other end an understanding of gender as "performance" that is divorced from biology and totally based on socially constructed roles. Given the diversity of New Religious Movements (NRMs) in American history, their wide range of religious world views, and the diverse ways they understood and acted upon gender relationships, explorations into the meaning of gender in NRMs become even more complicated.

Attention to gender in NRMs in the United States is important for several reasons. It demonstrates the pervasiveness of gender in this particular area of the religious landscape and the extent to which new religions served as arenas of experimentation with gender roles. It points to the great variety of beliefs and practices related to gender roles and the multiple interpretations of the spiritual significance of maleness and femaleness in new religions. It illuminates how gender-role dynamics arise from specific historical and cultural contexts, theologies, and organizational structures. It offers insights into how the members of new religions understand themselves as participants in conversations and tensions around gender that are part of the broader American society. NRMs typically assent to and even reinforce some aspects of the dominant culture's values, beliefs, and practices while at the same time dissenting from others. This dual, often paradoxical, stance is particularly apparent in matters of gender.

There is no single, overarching theory that clarifies the significance of gender in NRMs. Instead, we must select a few telling examples from numerous instances of beliefs and practices. We must also ask questions about relationships between gender

and spirituality in new religions that are relevant to groups not mentioned in this essay. It is also possible to discern some basic patterns, among them that women in new religions often have more opportunities for public leadership than is the case in the established religious traditions, but these broad patterns must be carefully qualified. Given the available research, social historian Alice Felt Tyler, who paid more attention to such matters than most, could say in her 1944 study, *Freedom's Ferment,* that women in nineteenth-century utopian groups experienced almost no discrimination based on gender.[1] More recent scholarship also acknowledges greater freedom for women in these groups but at the same time suggests a more ambiguous reality because women's charismatic leadership is seldom institutionalized in ways that portend equality for all women as movements develop over time.

The examples selected for this essay fall under three themes, all of them overlapping. One is concerned with "bodies" and the significance of maleness and femaleness in a given religion. For example, does the gender of a human person have religious meaning or significance? Are maleness and femaleness categories of embodiment and experience that are meaningful in an eternal and cosmic sense? Or are they merely incidental aspects of one particular life span? Is it better to be male or female or does it not matter? Or, should it not matter, at least in theory? A second theme focuses on beliefs and practices regarding sexuality and how the community must be ordered to accommodate and foster the spiritual connections associated with masculinity and femininity. How should men and women live together? What are the appropriate spiritual and physical relationships of women and men to each other? What is at stake in these relationships for the good of the group, the wider society, and the workings of the universe? Do men and women play distinctive roles? Do women and men help or hinder each other on the path to salvation or enlightenment, or are they in a position of neutrality towards each other? The third theme deals with relationships between gender and leadership. Should men and women preach, teach, heal, and receive new revelations for a given community? Or, on the other hand, should they, by virtue of gender identity, be forbidden or considered unable to take on these roles? Because male leadership is the norm in almost every religious tradition, new or established, it is women's leadership that typically must be justified and is more likely to be controversial.

None of these questions is exclusive to NRMs. Nonetheless, they reflect issues that are often addressed by such groups in intense and experimental ways, usually in relation to a charismatic founder's new revelation, or a community's desire to restore what they see as earlier, more authentic ways of being religious, or in an effort to try radically new forms of relationship and community.

TWO EARLY PLOT LINES

Two examples from the seventeenth century of how theology, communal structure, and cultural context affect gender roles provide surprisingly relevant stories for understanding two very basic patterns in American religious history. The first, from Puritan New England, has been the dominant story. Until recently, departures

from it have been—and often still are—characterized as "counterculture." The second, part of the history of Quakerism, manifests a prominent subplot in how gender is important for NRMs.

The story of Anne Hutchinson and the Antinomian Crisis in Puritan New England (1636–1638) is a good starting place for a discussion of gender and NRMs because it provides an excellent example of how gender fits into the religious world view of a community, in this case the Massachusetts Bay colony, and how the order of that community is threatened by alternative notions. Antinomianism (literally "against law"), if not really a new religion in New England, emerged as an alternative and more extreme interpretation of the Puritan doctrine of grace. The fact that one of its major public spokespersons was a woman was of great significance. Hutchinson was a woman who had, in fact, been admired by the community as long as she confined her theological discussions to domestic, informal gatherings of women. As she began to attract more followers, both civil magistrates and church elders became alarmed, and she was brought before the magistrates in a civil trial in November, 1637, and before the church elders in an ecclesiastical trial in March, 1638. She was found guilty at both trials for teaching heresy and disturbing the order of the community, and she was punished by banishment from the community and excommunication from the church. During her church trial, clergyman Hugh Peters explained to Hutchinson the ways she disturbed the social order, not only with her unsound theological interpretations and accusations against other clergy, but by "stepping out of her place" and functioning as a preacher rather than a hearer, a husband rather than a wife, and a magistrate rather than a subject. At one point, clergyman John Cotton, her former spiritual advisor and advocate, speculated that, given her heretical theological beliefs, he would not be surprised to learn that she was unfaithful to her husband. This story highlights certain norms related to gender that prevailed in American religious history and culture: public religious leadership must be male; female participation in religious matters is confined to the home and to lay status; the religious authority of women should be expressed indirectly, i.e., through education of children and moral example to men; there is a proper, divinely mandated, and therefore "natural," hierarchical relationship based on male authority that prevails between the sexes in church, the public sphere, and at home; and there is a negative relationship, often articulated more implicitly than explicitly, between female heterodoxy (belief that is not orthodox) and female sexuality. NRMs throughout American religious history challenged these norms at many points, reinforced them at others, and experimented with them in an ongoing variety of combinations.

Quakerism from its beginnings provided a counterexample to the norm in many ways by fostering equality of women and men and providing more opportunities for women's public participation. Quaker women, like other women, were subject to gender restrictions in colonial America. Nonetheless certain features of Quakerism made it possible, if not always and everywhere, for Quaker women to fill public leadership roles denied to women of other religions, particularly public preaching. A key Quaker belief allowing for this situation was the Quaker doctrine of the Inner Light, which states that individuals participate in the spirit of God and therefore have access

to the divine without the need for clergy or ecclesiastical structures. The lack of clergy and liturgical rituals in Quakerism reinforced the assumption that anyone, female or male, who was called by God could participate in ministry, because ministry in Quaker theology did not require ordination. Over time some groups of Quakers became more church-like, adapting rituals similar to that of other Protestant denominations and employing ordained clergy, but over the course of their history, the general spirit of the tradition functioned to level women and men spiritually and socially. In their stance against Puritan hierarchy and ecclesiology, Quakers found ways to implement religious leadership for women.[2]

GENDER ROLE VARIATIONS IN COMMUNAL GROUPS

Gender issues and NRMs were also at play among communal groups in eighteenth- and nineteenth-century American religious history. First, these groups had a variety of beliefs and practices about the privileges, powers, and responsibilities that could or should be extended to women or men based on their femaleness and maleness. In addition, members of communal religions were often explicit about how much they understood themselves as very deliberately dissenting not only against dominant religious beliefs, but also against prevailing gender norms that were upheld in the established churches and in the secular culture. These communities fostered new interpretations of "family," often simply extensions of the traditional family structure, as well as convictions about how community reflects spiritual realities. In their separate communities they enjoyed the freedom to put their beliefs into practice.

Jemima Wilkinson (1752–1819), who called herself the Publick Universal Friend, founded a small, short-lived community, the New Jerusalem, in upstate New York. Wilkinson was influenced by her mother's Quakerism as well as evangelical revivals, and probably by the teachings of Mother Ann Lee, founder of the Shakers. She began preaching publicly about universal peace and love at open-air revivals after what she described as a near-death experience in 1776 that resulted in her assurance that her body was inhabited by the spirit of God. She toned down the effects of public censure against a woman preacher by wearing men's clothing and thereby, at least symbolically, "becoming a man." Her community practiced celibacy but not asceticism. Wilkinson was criticized by outsiders for her morals, her affluent life, and her religious sincerity. Eventually members of her own community with whom there were quarrels about property rights also opposed her. The community, as is often the case, did not survive after the death of its founder.[3]

The Ephrata Cloister in Lancaster County, Pennsylvania was founded in the 1730s by German-born Johann Conrad Beissel (1690–1768), whose theological heritage was the pietism and pacifism of the Church of the Brethren. The members of Ephrata practiced both celibacy and asceticism with the Sisterhood and the Brotherhood living separately, although they dressed alike in white robes of homespun wool or linen. In addition, an "outdoor" married membership of people lived in homes surrounding the communal dwellings. The community was dominated by Beissel's

charismatic leadership. He inspired rumors of sexual irregularities typical of those surrounding many communal groups. Recent scholarship reveals the large part gender played in the Ephrata world view. In a treatise entitled *A Dissertation on Man's Fall,* Beissel gave an elaborate theory of gender that traces the fall of humankind to a division of the sexes and says that this division, including female submission to male authority, would eventually be healed into wholeness. Known for its distinctive music, Ephrata's choir sang Beissel's compositions in which women's voices dominated, and the music was a crucial means of communicating this reclaimed unity of the genders. Such wholeness was not achieved within the life-span of the community, which persisted in diminished form until the end of the nineteenth century, and there were rivalries between the male and female members whose work responsibilities were allotted in traditional gender patterns.[4]

Yet another example of communal groups with gender roles that differed from mainstream society was the celibate Shakers, founded by Mother Ann Lee (1736–1784). Lee brought her new religion, rooted in Quakerism, and a few followers to the American colonies from England in 1774 and settled in upstate New York. She taught that God was dual in nature, both female and male, and that original sin was the result of sexual intercourse. Shaker leadership, elders and eldresses, emerged from both the Shaker understanding of God and the need for female members to minister to one another. Major elaborations in Shaker theology and the spread of Shaker communities beyond New York and New England and into Kentucky and Ohio did not occur until after Lee's death. Although female leadership persisted, work assignments were distributed along traditional gender lines, as in Ephrata, with men doing the farming and other public work and women responsible for domestic chores. The Shakers also had "spiritual" divisions of labor. Most Shaker theology was written by men, and the ecstatic visions, which included "gifts" of art and song, were produced by women. More recent scholarship shows that Shaker gender relationships, although highly regulated, were intensely countercultural at some points and highly accommodating of traditional gender roles at others.[5]

An equally complicated community in terms of gender roles, but distinctive in its own way, was the Oneida Community, often referred to as the Oneida Perfectionists. It was founded by John Humphrey Noyes (1811–1886) and existed in western New York between 1848 and 1880. Noyes had his own understanding of "social communism" and the meaning of "family." He repudiated traditional marriage, but, rather than promoting celibacy, the community practiced "group marriage," in which each man was the husband of every woman in the community and vice versa. Sexual unions were highly regulated, the men practiced birth control by means of withdrawal before ejaculation during sexual intercourse, and couples who wanted a child needed permission from the leaders of the community. It was Noyes's conviction that traditional marriage led to possessiveness and a draining of energy from the good of the larger community. In terms of work, Oneida had cross-gender casting, with men often participating in domestic work and women engaged in what the broader culture categorized as men's work. Women had short hair and wore short skirts to give them more freedom of movement, and child care was a communal enterprise. The

community was not ascetic; there was a great emphasis on learning and the arts. In some respects, Oneida was a forward-thinking haven, particularly for women who were freed from unwanted pregnancies and child care, and also for men who found the structure and demands of capitalism burdensome. Recent scholarship reveals that all was not paradise at Oneida. The community experienced conflict and contradiction regarding gender roles, among them Noyes's dominance in the community, his antipathy to women's rights activists, and the sexual privileges afforded by Noyes to a select number of male members.[6]

MORMONISM: A CATEGORY OF ITS OWN

Mormonism presents a distinctive example of a new religion of the nineteenth century that has survived into the present and grown to more than ten million members worldwide at the beginning of the twenty-first century. The Church of Jesus Christ of Latter-day Saints, or Mormons, founded by Joseph Smith in western New York in 1828, is an excellent case study of gender in a NRM because it offers compelling illustrations of a religion that reinforces some aspects of American society's affirmation of monogamous marriage and traditional male/female gender roles and significantly departs from them as well.

Mormonism's male-dominated, hierarchical system of governance began with what historians now strongly speculate was a much less formal organization that allowed women to exercise gifts of prophecy, healing, and blessing. As Mormon theology and practice developed during the nineteenth century and into the twentieth century, traditional male/female gender roles with implications for both earthly and spiritual lives became more and more prescriptive. Heterosexual marriage became the norm, seen as essential to the well-being of the community. In Mormonism, gender identity is everlasting. It endures from preexistence, the time before the spirit child is born into a body for the purposes of earthly life and the development of free will and moral agency. It persists, as does marriage, into eternity. The status of women in the celestial realms is determined by the spiritual standing of the men to whom they were "sealed" for all eternity in rituals performed in Mormon temples. Only males may participate in the priesthood; to include women, according to officials, would be to go against the will of God.

However distinctive the theological underpinnings of Mormonism's support of heterosexual marriage, its practice did not conflict with American cultural values. Polygamy, or, more accurately, polygyny (multiple wives), was another matter. It was discussed and practiced only by an inner circle around Smith in the 1830s, and was only acknowledged publicly in 1852. Not surprisingly, the doctrine and practice of "plural wives" generated intense moral and political opposition to Mormonism in nineteenth-century American society and was made illegal, once and for all, by a Supreme Court decision in 1890. In 1890, as well, in the "Great Accommodation," Mormon President Wilford Woodruff received a revelation that ended official approval of polygamy, although it is practiced by separatist groups to this day.[7]

Mormon feminists, of which there are many, during the past 35 years tried to find historical reasons for a variety of developments that closed off avenues of leadership positions for women. They cited Mormonism's acquiescence to sexism in the wider society, the lack of churchwide devotion to Heavenly Mother who is the spouse of Heavenly Father and the ignoring of her place in the Mormon pantheon, and official opposition to the Equal Rights Amendment (ERA) movement of the twentieth century. Mormon women reinstituted *Exponent II,* named after a women's newspaper, *Exponent,* from the late nineteenth century and advocated women's inclusion in the Mormon priesthood. Mormonism, once a new religion and now firmly and respectably established, continues to work out gender issues that are both familiar and strange to the wider culture.

SPIRITUALISM AND THEOSOPHY

While it is overgeneralizing in some ways to posit the concept of "women's religions," it can also be useful to think in terms of such phenomena when considering NRMs like Spiritualism, Christian Science, Theosophy, and New Thought. In general, women have outnumbered men in American church membership since the late seventeenth century, but these NRMs significantly exceeded even the established traditions in their appeal to women and differed drastically from mainstream religions in giving women numerous opportunities for leadership. Many social and theological factors account for their appeal.

The year 1848 marked the beginnings of what became known as modern American Spiritualism, a NRM based on the belief that the dead could return to earth to communicate with the living and to reassure them by scientific, that is, physical means—rappings, voices, ghostly ectoplasmic appearances from "spirit cabinets"—that life persisted after the death of the body. Margaret and Kate Fox, two young girls from western New York, were the first to hear spirit communications and then publicly attest to that experience. Interest in Spiritualism spread rapidly, and mediums or mediators between the living and the dead, many of them women, attracted followers, including the wealthy and well-educated who wanted communication with deceased loved ones.

Spiritualism offered many outlets for women's participation and leadership: the role of mediumship itself was available to women; Spiritualism was characterized by loose organization enabling women to become mediums if they could attract a following; numerous journals like *The Banner of Light* and the *Spiritual Telegraph* that welcomed the women's written submissions and often employed women editors; and affirmation, although qualified, of women's public speaking in their roles as mediums and lecturers. In addition, Spiritualism's theology was a hopeful one emphasizing ongoing progress on earth and in the spirit realms and that denied the existence of hell, the doctrine of original sin, and, therefore, the role of Eve in the fall of humankind. Spiritualists also supported social reforms such as women's rights and divorce reform that would make it easier for women to leave abusive husbands and to retain custody of their children.[8]

At the same time, historians note that Spiritualism reinforced gender stereotypes. Women mediums were more likely than men to give trance lectures, thereby presenting themselves as passive conduits for spirit messengers rather than as defiant resisters of social restrictions against women who ascended public podiums voluntarily. Women mediums often had male protectors who saved them from harassment and exploitation as well as negative speculations about their sexual morality. Unfortunately, the effect was often the opposite of what they intended and scandals ensued. Spiritualism also had male mediums, writers, lecturers, and reformers. Because they did not depart from the norm of male religious leadership, however, they were more likely to attract criticism for promoting a fraudulent religion than for stepping out of their socially and religiously assigned places.

The Theosophical Society was founded in 1875 by Madame Helena P. Blavatsky (1831–1891), a Russian émigré, and Colonel Henry Steel Olcott (1832–1907), an American, both former Spiritualists who later repudiated that movement. Theosophy's world view was founded on western esotericism, Hindu and Buddhist religious thought, and occult ideas and practices. From its beginnings, Theosophy said that gender was a category of human experience that merited attention, and the movement produced strong leaders who were both female and male. Further, Theosophy's understanding of the human person, and its particular interpretation of karma, deemphasized the ultimate importance of male and female embodiedness. Theosophy, at least theoretically, did not absolutize gender in any given lifetime even if it affirmed the principles of maleness and femaleness in the workings of the cosmos. The physical body housed the spiritual ego, but this "dense body" fell away at death, leaving behind its physical, gendered characteristics. The reincarnated entity could be reborn as either male or female, depending upon what lessons needed to be learned in that particular lifetime.[9]

On the other hand, generally Theosophists in the United States did not formulate notions of the radically "new woman" or "new man" then becoming more popular in late-nineteenth and early-twentieth century American society. Some of the Theosophical lodges, particularly in England, were very active in working for progressive political reforms, including women's rights. While Theosophists argued for increased presence of the feminine principle in religion, world politics, and ordinary life in order to balance the dominance of the masculine principle, these concepts reinforced the dominant culture's ideas of what characterized maleness and femaleness. W. Michael Ashcraft pays close attention to matters of gender in his study of the Point Loma community near San Diego, California. He notes that Katherine Tingley (1847–1929), the charismatic and entrepreneurial leader of Point Loma, identified herself, as did her followers, "with the prevailing model of womanhood espoused by the middle classes in late nineteenth-century America."[10] Men in the community were expected to be both "manly and gentle," and, like the women, well-disciplined in response to bodily needs and desires. The story of Theosophy in the United States reveals the irony of a movement that supported numerous strong women leaders and promoted a world view that centered on the cosmic significance of gender, yet otherwise did not depart in subversive ways from prevailing notions of gender.[11]

CHRISTIAN SCIENCE AND NEW THOUGHT

Even more than Spiritualism and Theosophy, Christian Science and the several groups such as Divine Science, Religious Science, and the Unity School of Christianity collectively called the New Thought movement came to be known as women's religions. William James spoke of them as "healthy-minded" religions. Religious historian J. Stillson Judah characterized them, along with Spiritualism and Theosophy, as "metaphysical," and they have also been referred to as "mind-cure," "harmonial," and "positive-thinking," the latter adjective somewhat pejorative, indicating that historians and other observers thought that these NRMs' denial of the reality of matter produced world views that failed to adequately address the problem of evil. Many women were associated with these movements, most of whose lives spanned the last half of the nineteenth century and often the first half of the twentieth. The most famous is Mary Baker Eddy (1821–1910), founder of Christian Science. Others include Augusta Stetson (1842–1948) and Ursula Gestefeld (1845–1921), students of Eddy who later became her rivals; Emma Curtis Hopkins (1849–1925), whom J. Gordon Melton calls "the Mother of New Thought" and whose lineage as a teacher of other New Thought leaders is notable; Myrtle Fillmore (1845–1931), cofounder of the Unity School of Christianity with her husband Charles, who took the more public role; H. Emilie Cady (1848–1941), homeopathic physician and author of *Lessons in Truth,* still a basic textbook of Unity; Elizabeth Towne (1865–1961), New Thought writer and editor of the *Nautilus,* a New Thought journal; Nona L. Brooks (1861–1945), cofounder with her sister of Divine Science; and Mary Kimball Morgan (1861–1948), founder of the Christian Science school, The Principia, still in operation in St. Louis, Missouri. All of these women had backgrounds in established, usually evangelical, Protestantism.[12]

Christian Science and New Thought, although distinctive movements, have common traits that help to explain their appeal to women and their acceptance of women leaders. As did Spiritualism, these NRMs' hopeful theologies of human nature deemphasize sinfulness based on Eve in the Garden of Eden, and therefore all of womankind are not blamed for what Christian theology calls "the Fall." They teach that only Spirit has ultimate reality and that the physical world, including the body, sickness, and sin, is an illusion. We see the physical world as real because we fail to understand the true nature of reality as God's perfect creation. These NRMs also advocate healing, relief from physical and emotional suffering through a change in consciousness. Because, then, the physical body has no ultimate reality, issues of gender are theoretically negligible. The body, whether female or male, should make no ultimate difference, a major factor in explaining why so many women found outlets for their leadership abilities in these NRMs and found the theology of these NRMs to be coherent with their experiences of life. This is my own interpretation.

In practice, the picture is more complex. Even though these movements continue to attract women members and to foster women leaders, the more the religions become institutionalized, the more prominent male leadership becomes. This was certainly true of Christian Science. Although Eddy's authority is powerfully ongoing,

historically governance at the national level was carried out by a predominantly male board of directors. On the other hand, Christian Science shows an intense concern with women's religious leadership and with Eddy not only as the particular founder of Christian Science but precisely as just such a woman leader. The Mary Baker Eddy Library for the Betterment of Humanity opened in 2002 and considers women's leadership a major focus in its programming. Growing dominance of male leadership was also evident in the Unity School of Christianity, where the anti-institutional fervor of its male cofounder, Charles Fillmore, was subverted by the male-dominated Association of Unity Churches.[13]

GENDER AND RACE IN AFRICAN AMERICAN NEW RELIGIONS

Four examples offer differing combinations of attention to both gender and race in new religions that emerged from African American culture in the United States, one founded by a woman and three by men: the African American Spiritual Churches, initiated by Mother Leafy Anderson (1887?–1927); the International Peace Mission Movement established by Father Divine (1880?–1965); Marcus Garvey's (1887–1940) Universal Negro Improvement Association (UNIA); and Jim Jones's Peoples Temple (Jonestown). Anderson established a black Spiritualist congregation in Chicago in 1913 and in about 1920 moved to New Orleans where she started a movement that exists to the present, and whose women leaders and members always outnumbered men. Like the white Spiritualist women of the nineteenth century, African American Spiritualist women were forced to defend their calls to ministry, and in New Orleans, which has had at least 175 Spiritualist congregations in its history, male ministers typically had the largest and most affluent congregations. Women validate their ministries through elaborate rituals of ordination, celebration, and memorializing of Anderson. In all of these ceremonies spirit presences are summoned. David Estes notes the paradoxes regarding gender in the eclectic elements that make up Spiritualist theology and governance. An elaborate hierarchy of ministry, including bishops and archbishops, and complex liturgies, all derive in part from the Catholic heritage of New Orleans. Both of these are rare phenomena in religions with women leaders. On the other hand, acceptance of women clergy emerges in part from the movement's equally strong Afro Caribbean religious roots. Among African diasporic cultures in the Caribbean, women's equal leadership is taken for granted.[14]

Father Divine's International Peace Mission Movement grew from modest beginnings in Brooklyn in 1918 into a significant, integrated religious movement that offered to its members food, shelter, and work, and became well-known for its large public feasts. By 1947 the movement was well-known in Philadelphia. Members lived communal, celibate lives, since Father Divine considered a physical relationship between a man and woman a "black sin." Father Divine himself lived in a spiritual marriage with Mother Divine (he married another "Mother Divine" after he was widowed) that symbolized God's love for humankind, and in this case God was personified as both father and mother. Father Divine insisted on the equality of all

people, and he particularly deemphasized race and gender, asking that people avoid terms related to racial identity or even maleness and femaleness, preferring instead phrases like "so-called men" and "those who call themselves women." For women, this downplaying of gender relieved them from having to automatically play the social roles of mothers and servants as was the case in larger society.[15]

By contrast, one of the major goals of Marcus Garvey's UNIA was to foster a strong and unified consciousness of race in people of African descent. He did this by supporting the formation of black businesses and shipping lines, and, best-known of Garvey's projects, he proposed a black-governed nation in Africa. This nation would serve as a haven and a source of pride for black people all over the world. Women in the UNIA did not enter public and economic life. Instead, they took refuge in the home, where they acted out traditional roles of supporting their families.[16]

Only recently have scholars noted the interrelated dynamics between race and gender in the Peoples Temple movement, perhaps because for two decades the focus was on the tragic ending of the community in mass suicides in Jonestown, Guyana, in November 1978 and on its white male founder, Disciples of Christ minister, Jim Jones (1931–1978). Scholars now acknowledge that 80–90 percent of the members were African American. To take this demographic fact seriously requires asking where the Peoples Temple fits into the history of black religion in the United States. Nor was the Peoples Temple totally male-dominated, in spite of Jones's dominance. The majority of members were women, and a key group in the running of the Peoples Temple was an inner circle of white women around Jones, whose history has been "triply erased," due to the focus on the suicides and to both popular and scholarly assumptions that both female and male members were brainwashed and sexually exploited victims of a deranged cult leader.[17] Future research on gender and race in the Peoples Temple will reveal more about not only sexuality, but also the dynamics between black and white women and the roles nonprominent males of either race played in the community's history and ending.

GENDER AND EASTERN RELIGIONS IN THE SECOND HALF OF THE TWENTIETH CENTURY

Although eastern or Asian religions have affected American life most dramatically since the 1960s, Americans encountered eastern religions long before that. The nineteenth-century New England Transcendentalists knew about Buddhism and Hinduism. Theosophy, as already noted, also brought eastern thought to at least a small part of the population. Swami Vivekananda's appearances at the Parliament of World Religions in Chicago in 1893 popularized aspects of Hinduism far more widely than had been the case before 1893. Buddhism arrived with Asian immigrants who came to the United States in great numbers at the turn of the twentieth century and again in the 1960s, when immigration quotas related to Asia countries were relaxed. In the American context, these ancient religions of Asia became "new."

Not all new religions from the East are, in fact, derived from variations of Hinduism and Buddhism. The Holy Spirit Association for the Unification of World

Christianity, now known as the Unification Movement and, popularly, as the "Moonies," sent its first missionary to the United States in 1959. She was a woman theologian named Young Oon Kim (1915–1989). The movement was founded in Korea in 1954 by the Reverend Sun Myung Moon (b. 1920) who converted to Presbyterianism as a young man. Unification theology, considered heterodox by established Christianity, describes a brokenhearted God who desires to reunite various dualisms separated at the fall of humankind, among them, maleness and femaleness. In the Unification interpretation of Christianity, an illicit sexual relationship initiated by Adam and Eve (who was, as in the traditional Christian story, tempted by the serpent) caused the fall, before they were spiritually mature enough to have sex. Unificationism's intense emphasis on the redemptive nature of "family" and on right-ordered, heterosexual, married sexuality means that maleness and femaleness are essential characteristics of the human person. Moon and his wife are the prototype of the Blessed and Perfect Family. The Unification interpretations of marriage and sexuality and its conservative politics might at first glance appear to coincide with the values of conservative American Christianity. But Unification practices, particularly arranged marriages, often across cultural and racial lines to further the unification of humankind, and mass wedding ceremonies, bring it into conflict with mainstream culture. Other practices, such as long waiting periods before marriages are consummated and temporary separation of parents from their children so the parents can work full time for the church, reflect Unification assumptions about the broader meanings of family. Today the movement has grown a third generation of members, and apparently some of the earlier practices are being modified, such as the inclusion of non-Unification members in mass wedding ceremonies.[18]

The International Society for Krishna Consciousness (ISKCON), popularly known as Hare Krishna, is a particularly interesting example of how a Hindu sectarian movement, part of the Vaisnava tradition, lived out its history with gender issues in the years since its founding in New York in 1966 by A.C. Bhaktivedanta Swami Srila Prabhupada (1896–1977). In keeping with the pattern of normative male leadership, gender-related problems were called "the women issue" rather than "the gender issue." In ISKCON, masculinity and femininity are eternal values. Members, or devotees, of the movement testify that in the early years Prabhupada, in spite of recorded sexist comments and the assignment of more "feminine" tasks to women, was committed to women's equal opportunities for spiritual advancement. Before and after his death, the status of women deteriorated, due most likely to the increasing dominance of young celibate male renunciates (a position in the movement denied to women until very recently). As time passed, ISKCON witnessed an increase in emphasis on female embodiment as an obstacle to spiritual development and the female body itself as a temptation, particularly to male devotees. Among other outward signs of this change, women were expected to stay at the back of the temple during worship. Female devotees described their experiences in ways that Judah in 1974 said "may not appeal to Americans interested in women's liberation."[19] Susan Jean Palmer detailed the frustrations of ISKCON women, particularly

at the Montreal temple during the late 1980s, although by then a women's rights movement was emerging among more vocal female devotees, and some ISKCON women criticized Palmer for generalizing too broadly based on her findings at one temple.[20] Advocates for women's equality persisted to the present, and ISKCON has grappled publicly with the role of women. In 2005, the Governing Board Commission made possible the selection of women gurus.[21]

A history of conflicting theological and social dynamics characterized discussions of gender in ISKCON and helps to explain why the roles of women were controversial. ISKCON teaches the sexless and eternal nature of the soul or spirit, and women and men engage in the same devotional practices. Thus, theoretically, as Kim Knott explains, no scriptural or theological reason exists to keep women from attaining any position of authority in the movement, including that of guru. Further, says Knott, no one in the movement dissents from this view, even if they may not agree on the role of women. In addition, both women and men are expected to live lives of service and submission to others and to Krishna. At the same time, the realities of the body cannot be ignored, and Knott found that devotees generally think that the female body presents greater problems to the soul that is trying to liberate itself from entrapment in matter than the male body. This assumption comes up in debates over the role of women. The issue of women's participation in ISKCON is a controversial subject among both insiders and outsiders. As the movement matured, the insider conversation became more public, as has ISKCON's acknowledgement of the realities of a sexual abuse scandal several years ago and concerns about devotees' relationships with male gurus.[22]

Other Hindu sects in the United States also offer significant insights into the dynamics of gender. One is Siddha Yoga, whose primary ashram is in South Fallsburg, New York. It comes from a tradition of Hinduism characterized by intense devotion to the guru, in this rare case, a woman, Gurumayi Chidvilasananda (b. 1955), who along with her brother received the power and authority of the Siddha Yoga lineage in 1982 from Swami Muktananda (1908–1982). They were co-gurus until 1985 when Gurumayi's brother resigned after breaking his vow of celibacy. Siddha Yoga has drawn many women to its practice, including a number of professionals. Again, a combination of factors accounts for the attraction of women in spite of the fact that most of the images for God in Siddha Yoga is masculine. The charismatic power of the guru herself and the authority she holds within a tradition that rarely grants such power to women exercises appeal for many women. Also, given the Western expectation of equality for women, the egalitarian relationship between the masculine and the feminine in the Siddha Yoga world view is appealing.[23] Another movement, although short-lived in the United States, was Osho, or Rajneeshism, founded in India by Bhagwan Shree Rajneesh (1931–1990). In the early 1980s the movement had a communal settlement near Antelope, Oregon, that disintegrated in 1985 after Rajneesh was deported. Among Osho's beliefs was a negative attitude toward traditional marriage and an emphasis on the celebration of sexual expression as a way to liberate women and men. Women,

particularly, were urged to express their sexuality freely, and the role of "lover" was emphasized over that of "mother." The movement, not surprisingly, was highly controversial.[24]

American Buddhism in its many varieties was never perceived as a "cult" except, perhaps, by a few anticult groups alarmed by the growing presence of non-Christian religions in the United States. This is in contrast with movements like Unificationism and ISKCON, which attracted considerable hostile attention from such groups. Yet Buddhism is a new religion to American culture. In the past 40 years it worked out a number of issues in order to develop an authentic American Buddhism, particularly in regard to matters of gender. American converts to Buddhism, rather than immigrants, worked to create an American Buddhism, and both men and women were involved. In fact, the full inclusion of women in Buddhist study and practices, and in the offices of teacher, may well be American Buddhism's major contribution to worldwide Buddhism.

Buddhism as historically practiced in Asia was always male-dominated. In efforts to ensure women's full participation in American Buddhism, questions resulting from Asian Buddhism arose about whether women are more to blame for the human condition than men, whether human persons embodied as women can achieve enlightenment as quickly or in the same ways as men, and whether women can receive Dharma (Buddhist teachings) transmission and become teachers. As Rita Gross notes, the coincidence of increasing numbers of American converts to Buddhism in the 1960s and 1970s, and the emergence of the feminist movement during that same period, helps to account for the fact that Buddhist women practice side by side with men. "The women most likely to be attracted to Buddhism," says Gross, "were not about to play a secondary, supportive role to enable men to study and practice while they provided domestic service." Gross also elaborates on the dual "problem of the male teacher": one of them a series of sexual scandals related to particular male teachers that was "limited to a specific time and set of circumstances," and the more fundamental problem of the lack of women teachers.[25]

By the early years of the twenty-first century, American Buddhism produced numerous well-known feminist scholars like Gross and Anne Klein; head teachers and directors of meditation centers, among them Charlotte Joko Beck of the Zen Center of San Diego, Karen Sunno, of the Minnesota Zen Meditation Center, and Wendy Nakao, Abbot of the Zen Center of Los Angeles; and writers such as Gretel Ehrlich and Natalie Goldberg. Women are innovators in the teaching of Buddhism, emphasizing themes in the world view and practice of Buddhism not seen before in historic Buddhism. Among these themes is the idea of a more earth-centered rather than an other-worldly practice, that is, Buddhist practice for the sake of an "ordinary," awakened life on earth. Another theme is the paradoxical acknowledgement of the Buddhist belief that our bodies are impermanent and often the cause of suffering but that at the same time, "We Spend our lives in bodies, and if we realize anything we care to call 'enlightenment,' it's in our bodies."[26] This is a reality, American Buddhists say, that is as true for men as it is for women.

GENDER AND THE NEW AGE MOVEMENT

The New Age movement is a cultural phenomenon that began in the 1960s and has obvious connections to the metaphysical religions, particularly Theosophy. It is composed of countless organizations and movements within movements, all loosely characterized by commitment to broad convictions about human nature and the workings of the universe. Among the most basic are an emphasis on the pervasiveness of the sacred within the universe, particularly the sacredness of each inner self; the interconnectedness of all things, sometimes referred to as the "cosmic web"; and the necessity of overcoming a variety of historic dualisms characteristic of Western society: spirit and matter, male and female, emotion and reason, science and religion. Both popular culture and scholars assume that the New Age movement embraces several levels of depth ranging from the shallow, commercial, and crass to a genuine search for cultural transformation and reenchantment of the universe.[27]

To what extent is the New Age movement "gendered"? No sophisticated demographic studies can prove this, but there is the widespread perception that the New Age movement has attracted more women than men and that the loose organization and entrepreneurial ethos of the movement encourage women leaders. In addition, one of the New Age's most prominent themes, that of the "divine within," or the divine self, appealed to women historically, because it promises immediate access to the sacred without the need for approval of religious organizations. The indwelling of the divine confers spiritual authority and sanctifies bodies, nature, and daily life. The New Age gave rise to both women's and men's spirituality movements, usually connected with neopaganism, and in these movements gender differentiation is evident. For women the focus is on liberation and healing from patriarchal oppression and veneration of women's bodily and psychic experiences and of the goddess (or goddesses). Men's spirituality movements typically work to overcome the emotion-deadening effects of living in a scientific, hyperrational, work-glorifying culture that male members have experienced as spirit-deadening.

"Bodies" figure prominently in the New Age movement, but no consensus exists about their ultimate spiritual significance. Are our bodies, and thus our genders, "our selves"? Or, are we ultimately spirit or mind or "idea"? Because its manifestations are so various, affirmative answers to both of these questions are in the New Age movement, an indication that conflicting views about male and female bodies are part of ongoing dialogue about gender roles and sexuality.

Some aspects of the New Age movement hold that our thought patterns, not our biology, determine our destiny. Other contemporary spiritualities, such as feminist Wicca and neopaganism particularly, hold that human bodies are sacred, just as nature is sacred, and that our bodies and therefore our genders are, indeed, our selves. But reverence for the body has not abolished within these movements issues of exploitation and abuse, and conflicting issues abound over what could be called neopagan sexual ethics.[28]

CONCLUSION

Issues of gender in new religions reveal the complexities of a human reality that has often been ignored in the study of both established and new religions. They reinforce the growing appreciation in both popular culture and the scholarly world for the significance of gender not only in NRMs but in religions in general. Gender is a highly significant part of religious world views, whether or not it is experienced or acknowledged as such, personally or communally. At the very least, scholars and students of new religions need to ask several basic questions about any movement they encounter. What is it like to be a woman in this movement? What is it like to be a man? And how do the answers to these questions help us to understand essential characteristics of the movement's beliefs and practices?

Children in New Religious Movements: The Mormon Experience

Michael Homer

Since the late 1960s the critics of New Religious Movements (NRMs) have focused their attention on the impact such movements have on children. They have argued that children are particularly susceptible to mind control, brainwashing, or coercive persuasion, and they have even justified kidnapping to remove them from controlled environments. But when these theories were rejected by academics and by the courts in the 1990s, the opponents of NRMs shifted their focus to allegations of child abuse and other illegal activities, which they claimed are rampant in such organizations.[1] This theory is premised on the notion that a cult organization "with its stereotyped totalitarian cult leader's control over members, was conducive to child abuse and neglect, with little to restrain the cult leader from any whimsical ideas about child-rearing that might occur to him or her … From this view 'cult children' are raised in organizations predisposed toward abusive practices."[2]

Based, in part, on such allegations, some new religious groups were subjected to raids of their homes that were justified as attempts to protect children from harmful conduct.[3] These same movements were attacked in child custody cases in an effort to deny custody to church members.[4] This essay demonstrates that such tactics are not new. In fact, just as Mormon polygamy was the subject of the first United State Supreme Court case that interpreted the free exercise clause of the U.S. Constitution, the same practice provided the initial justification for assuming that NRMs are particularly prone to committing child abuse, and that one can assume such abuse takes place within the group without any specific evidence to prove it.[5] I suggest that a better standard for evaluating the treatment of children in religious movements should not be based on such suppositions, which really amounts to cult bashing, stereotypes, or appeals to "public morality," but instead must be considered on facts proven on a case by case basis.

The Church of Jesus Christ of Latter-day Saints ("Mormon Church") was organized by Joseph Smith Jr. (1805–1844) in 1830. Smith claimed that he was chosen by God, through revelation and ordination, to restore the fullness of the gospel to the earth after a long apostasy. Shortly after organizing the Church, Smith reportedly

took additional wives, the first as early as 1833.[6] By the time the Mormon Church settled in Nauvoo, Illinois, in 1839, he instructed some of his closest confidants concerning this doctrine of "plural marriage." Nevertheless, the practice was not officially announced until after Smith's death and his successors transferred church headquarters to the Salt Lake Valley in the Intermountain West.

Before the battles over polygamy began, Smith and other high-placed Mormons were accused of subjecting their followers to a form of mind control. This explained why people (and particularly young women) were attracted to what the critics believed was a palpable fraud and how these converts were eventually persuaded to become plural wives. Maria Ward, a pseudonym for an ex-Mormon who published an exposé in 1855, claimed that "Mormon leaders possessed a singular and fascinating power, which they practiced on all that came within their influence." That "power," according to Ward, "is now popularly known by the name of Mesmerism." Through this power Mormon Elders controlled the minds of potential converts and forced them to join their Church: "At this time I was wholly unacquainted with the doctrine of magnetic influence; but I soon became aware of some unaccountable power exercised over me by my fellow traveler. His presence seemed an irresistible fascination. His glittering eyes were fixed on mine; his breath fanned my cheek; I felt bewildered and intoxicated, and, partially at least, lost the sense of consciousness, and the power of motion … I became immediately sensible of some unaccountable influence drawing my sympathies towards him. In vain I struggled to break the spell. I was like a fluttering bird before the gaze of the serpent-charmer."[7] Teryl Givens also demonstrates that this theme was picked up and advanced by other writers wishing to explain both the attraction of Mormonism and its inherent dangers.[8]

Of course, the most obvious danger was considered polygamy, which imperiled hearth and home. In 1852 Apostle Orson Pratt (1811–1881) revealed what was by then an open secret and announced that the church encouraged its male members to take multiple wives. Thereafter, the Church began its 40 year struggle with the United States Government, as well as with social commentators, who challenged the legality, as well as the morality, of this practice. Following Pratt's announcement, the Mormon Church published, for the first time, the revelation that Smith received on this subject in July 1843. This revelation provided Smith and his successors with a religious validation for the practice. Smith asked the Lord for information concerning how Abraham, Isaac, Jacob, Moses, David, and Solomon were justified concerning the practice "of their having many wives and concubines." The Lord responded by telling Smith that this "new and everlasting Covenant … was instituted for the fullness of my glory" and that if he followed the patriarchal principle he would be blessed with extraordinary wives and exceptional children. In this revelation, which is now published as Section 132 of the Doctrine and Covenants, the Lord told Smith that through him he would restore all things and that he would "bless him and multiply him and give unto him an hundredfold in this world, of fathers and mothers, brothers and sisters, houses and lands, wives and children, and crowns of eternal lives in the eternal worlds."[9] In part, the doctrine of plural marriage had some precedent

in the Old Testament wherein "Abraham received concubines, and they bore him children; and it was accounted unto him for righteousness, because they were given unto him, and he abode in my law." In other words, Smith, like Old Testament patriarchs, was to be given "extraordinary wives" and "exceptional children" in accordance with his righteousness.

Not surprisingly Smith, and his successors, believed that their righteous offspring were superior to the offspring of monogamists and were not subject to the same frailties as those who practiced monogamy. Brigham Young's (1801–1877) First Counselor in the First Presidency, Heber C. Kimball (1801–1868), stated that "I have had altogether about 50 children; and 100 years won't pass away before my posterity will out-number the present inhabitants of the State of New York, because I do not destroy my offspring. I am doing the works of Abraham."[10] Other apostles were in agreement. According to Charles W. Penrose, "Children now growing up to receive the cares and responsibilities of life, are generally speaking puny, spindly, and easily prostrated, their constitutions being so feeble that they become an easy prey to the many new diseases which are evolved in a gradual process of the general, physical decay … What nation, community, or society are taking this important subject into consideration, and giving it that attention which it deserves? We answer, the people who are called 'Mormons' are the only people on the earth who are truly alive to the tremendous consequences involved in this question. While all the world is going down gradually to decay and death, this despised people, ridiculed and slandered, and considered to be outside the pale of civilization, are engaged in their lofty-mountain retreat in commencing the great work of physical generation."[11] Another apostle, George Q. Cannon (1827–1901), stated that "The children of our system are brighter, stronger, healthier every way than those of the monogamic system."[12] Similarly, Mary Jane Mount Tanner (1837–1890) informed Hubert Howe Bancroft (1832–1818) that "there are no healthier, or better developed children than those born in polygamy."[13] Eliza R. Snow (1804–1887) also testified that polygamy was instrumental in "restoring human life to his former longevity."[14] And the *Deseret News* stated that polygamist marriages produce children "weighing over 200 pounds and their parents perhaps not over 150," to support its contention that first generation polygamous children were healthier than their parents.[15]

European travelers were well acquainted with the Mormon belief that their wives, children, and families were superior. Those who traveled to Utah during the nineteenth century were prepared to ask questions and make observations about the impact this NRM had on the traditional family.[16] Italian diplomat Leonetto Cipriani (1812–1888) visited Utah in 1853 and had an extremely interesting conversation with Apostle John Taylor (1808–1887) concerning the advantages and duration of plural marriage. Cipriani notes that his

> "questions on such a subject had to be discreet, I did ask him if the Mormons, generally speaking, were satisfied with polygamy."
>
> "For the time being, yes," he answered. "But with families so rapidly increasing, we don't think polygamy can last for long."
>
> "And what is the reason for that?" I asked.

"Because as long as religious authorities can watch over the development of families and direct them morally, the plurality of wives is possible. But when families are left to themselves, without control, arising discord will make it necessary that we ourselves demand the abolition of polygamy. This is the opinion of the Prophet and of the apostles."

"May I ask you a question?"

"Certainly."

"Do children born of different wives live in harmony with one another? And do the wives?"

"Presently, yes," he said, "But the secret of harmony among them is wholly artificial. It is based on continual work."…

"But human passions, jealousy—have they no hold on your wives?"

"They have, but these passions are suppressed by constant work, by their husbands' conduct, and by the religious influence of the Prophet and bishops."

"Have you had cases of wives rebelling against the household? How do you punish or correct them?"

"We've had very few such cases, and rarely at that. We correct them, by admonition and with gentleness, and when that does not suffice, we impose silence, a punishment which we have found to be the most effective with a woman."

"What do you mean by 'imposing' silence?"

"I mean never speaking to her, either at home or outside, and never answering her questions. Few women can withstand such treatment. Some have been driven mad by this, others have committed suicide, but with the majority of them, their morale breaks down and they become like lambs. I repeat, however, these cases of rebellion are rare, and in most families an exemplary harmony reigns."

"Are you satisfied with public morality? Do you have frequent cases of adultery?"

"Only one case in twenty years, and that occurred six years ago."

"How did you punish it?"

"They punished themselves by running off to Mexico."

Subsequent travelers also focused on the Mormon marriage system and its impact on family life. Jules Remy (1826–1893), a French traveler who visited Utah in 1855, noted: "Let us cast a glance upon the prospect of Mormonism, considered in connection with the present condition of the children born and bred under the influence [of] polygamy." He then judged that: "Like delicate flowers, which the tender pedals are soiled and discolored by the least breath of impurity, so are children easily corrupted by the pernicious contagion of evil examples … It is necessary to acknowledge the fact; depravity, impiety, obscenity of language, and acts against nature, may be made the just reproach of the young saints at the Salt Lake. It would be necessary to go among the savages, degraded and brutalized by intercourse with the dredges of our society to find whores comparable to those offered us by the heirs of the saints … These considerations upon the wickedness of the children of the saints, permit us to foresee that if Mormonism shall disappear like an astonishing anomalous meteor, the principal causes for annihilation will be found in polygamy, the very expedient to which the Mormons had recourse to build up and perpetuate their sex."[17] Joseph Benjamin (1818–1864), a Jewish traveler who visited Utah in 1861, observed that "I felt I had been taken back to the Asian continent, for I got to see as little of the

ladies of the house in Utah as I had in the Orient. The women also very rarely go out. Mr. Young has a total of fifty-two children and thirteen wives. The ten of his children whom I saw ranged from eight to twelve years in age. Absolutely none of them had handsome features, nor were any of them appropriately dressed." Joseph Alexander, Baron von Hübner (1811–1892), who some sources claim was the illegitimate son of Hapsburg Chancellor, Prince Klemens von Metternich, visited Salt Lake City in 1872. He noted that "Children swarm in Salt-Lake City. You tumble over them in every direction. It is, in fact, one of the characteristic traits of this town and all the Mormon settlements. They are well fed, decently dressed, and are all sent to school. But the greater portion of those I saw are delicate and even miserable-looking. Domestic authority, like all others, is merged in that of the prophet. The parents hardly know the number and names of their children. The President has forty-eight, without counting those that have died." Finally, German traveler, Max Joseph Buchner (1846–1921), who interviewed Brigham Young in 1877, recognized that "[t]he perpetual refrain was that the Mormons were supposed to be better than all other people. 'Where does the Kingdom of God begin? With fathers and mothers. Let the fathers be pure of heart and let the mothers be pure of heart. And then the children and the entire family will also be pure of heart. Abraham, Isaac and Jacob were also pure of heart. Because they were the founders of the Kingdom of God and we are the Latter-day Saints; and because we are the latter-day saints, we are pure of heart." But he also admitted that: "I saw not a single resolute or focused face of the kind displayed by a typical American, and most of those present held their mouth open. The women were ugly and the modest, orthodox bonnets which many wore did not do anything to improve their looks. Crying children and the noise of constant coming and going drove me to the front so that I could hear some of the message."[18]

While these travelers were at least making judgments based on their observations of Mormon family life in Utah, there were also many comments in print that portrayed the evils of Mormonism, the adverse impact that polygamy had on family life, and the extreme danger that young women could be easily seduced to join a Mormon harem. Paul Duplessis (1815–1865), a French author, wrote a novel entitled *Les Mormons* in 1859 in which the President of the Mormon Church seduces two Parisian sisters to travel to Salt Lake City. A non-Mormon adventurer, Joaquin Dick, agrees to help the sister's brother, Georges D'Hedouville, and follows their wagon train to Utah to rescue them. A German author, Balduin Möllhausen (1825–1905), wrote several novels, the first entitled *Das Mormonenmaden,* in 1864, which begins with the failed escape of a polygamist wife and her one-year-old child from "Mormon City." The story also includes a character named Herta Jansen, a Swedish convert who, while immigrating to Utah where she will become the second wife of a Mormon leader, was eventually rescued by non-Mormons. Möllhausen also wrote a second story with a Mormon subplot entitled "Der Fanatiker," which revolves around "a naive Scandinavian beauty who has been tricked or forced into joining the Mormons and who is to be married into polygamy by an unscrupulous guardian."[19] The famous German novelist, Karl May (1842–1912), also wrote several

stories involving Mormon polygamy, and Sir Arthur Conan Doyle (1859–1930) wrote the most famous anti-Mormon/antipolygamy novel of all time, *A Study in Scarlet,* which revolves around a young girl named Lucy who is forced to marry one of the sons of an apostle. Each of these authors focused not only on polygamy but on the efforts of Mormons to seduce young women (who were children) to become converts and eventually plural wives. Another good example of the fascination that many Americans had with Mormonism's most provocative doctrine is a letter published in *L'Eco d'Italia,* an Italian-language newspaper published in New York. "What would your readers say if I were to boast an offspring of 62 children?" the letter's author, calling himself Gian Domenico Pelligrini, claimed. "And remember that I am only 50 years old so that I can expect a still greater number of children from my 22 wives, all of them healthy and able to procreate."[20] Had the readers known that there was no one named Gian Domenico Pelligrini living in Utah Territory, it would not have dampened their interest in the subject matter of the letter.

The Mormons were not generally pleased with representations made about plural marriage in general and about their children in particular. Nevertheless, the Civil War Congress passed, and President Abraham Lincoln signed the Morrill Anti Bigamy Law in 1862, which outlawed bigamy in all United States Territories. Thereafter the Mormon hierarchy was increasingly on the defensive on this issue. Apostle Cannon gave a discourse in the Salt Lake Tabernacle in 1869 in which he lamented of "having read accounts which have led them [travelers] to expect that most of the children born here are deficient." But he countered this perception by noting that "there are no brighter children to be found in the world than those born in this Territory. Under the system of Patriarchal Marriage, the offspring, besides being equally as bright or brighter intellectually, are much more healthy and strong."[21] While most European travelers disagreed with this Mormon claim that their families were superior to those raised under a monogamous system, a few people were at least partially convinced. French feminist Olympe Audouard (1830–1890) wrote, after visiting Utah in 1868, that "the Mormons of Salt Lake must also be credited with the following: They have not invented a children's home to send their children to; they have not ever written into their code this immoral, inhuman sentence: 'The search for paternity is prohibited.' The sad result of this sentence is that, out of three children born, in Sweden and Norway, one is a bastard; in Austria the average is one-in-five; in France the average is roughly the same. All these children are doomed by their fathers to misery and shame. Misery and shame lead some to penal colonies, and others to the hideous wretchedness of prostitution … Brigham Young has 36 daughters, all of them tall, strong and robust, and in addition, 17 sons … In short, my opinion is that polygamy well and truly is a hangable offense, a horrible thing that assimilates man to beast, destroying the pure, strong, devine love that is the inspirer of all great and beautiful things. However, to choose between one kind of polygamy and another, I prefer the legal polygamy of the Mormons to the illegal, tolerated and protected polygamy of the Mormons of Paris for, I repeat, the latter still has more disastrous consequences."[22] Another French traveler, Count Haussonville (1843–1924), reported in 1883 that a Mormon told him that: "But how many husbands

are there amongst you who take mistresses, and how many women are there who have lovers? In our midst, as far as our people are concerned, adultery is unknown; and an adulterous woman is as great an offender in our eyes as in the eyes of the ancient Israelites whose laws condemned an adulteress to be stoned to death. Tomorrow, when you take a walk through the streets of Salt Lake City, you will not see a single Mormon child abandoned or begging. How many children are there on the pavements of your great cities who do not know their father? In our midst illegitimate births are unknown. We take care of our children, and we have them taught … Hence we are convinced that some day or other the world will do us justice, and that the world will be regenerated by and through us."

Shortly after Audouard visited Utah Territory, Young and his followers celebrated the opening of the transcontinental railroad—7000 Mormons assembled in the Tabernacle the day after the Golden Spike was driven—but they also worried about the influence of "Gentiles" (non-Mormons) who settled in the previously isolated Utah territory, particularly the impact that non-Mormons might have on the practice of plural marriage. The Mormons took precautionary measures, including the establishment of a protectionist economy that required faithful Latter-day Saints to shun non-Mormon merchants. At the same time a new band of Mormon dissenters known as the Godbeites flexed their muscles, and the *Salt Lake Tribune* became an important independent voice in the territory. Ex-Mormons such as T. B. H. Stenhouse, Fanny Stenhouse, Ann Eliza Webb Young, Bill Hickman, and John D. Lee all left the church and published books explaining their reasons for doing so. Politicians and preachers, meanwhile, continued to rail against the illegal practice of polygamy. Gentiles and dissenting Mormons "thought that Young's attempts to maintain Deseret as a distinct and semi-isolated entity were unwisely placing the Saints in the path of an irrepressibly expanding American nation." They believed that such attempts were futile because God had "doomed the isolation of Utah to pass away."[23] They were also hopeful that a flood of visitors and settlers would undermine the power of Brigham Young's theocracy and contribute to the end of polygamy.[24]

With the arrival of the railroad, the federal government's assault on polygamy became much more aggressive. Young was arrested for cohabitation in 1871. Shortly thereafter, William Casey, the United States Attorney in Utah Territory, indicted George Reynolds, Young's personal secretary, for violating the antibigamy law. The Mormon Church and the United States government apparently agreed that Reynolds—not Young—would be the test case to determine whether the antibigamy statute passed by Congress was constitutional, or whether it constituted an abridgment of the Mormons' free exercise of religion under the First Amendment. The genesis of judicial stereotyping of NRMs' abuse of children can be traced to this lawsuit.[25]

In the spring of 1875 a jury found Reynolds guilty of violating the Morrill antibigamy law. The conviction was based on the testimony of Amelia Jane Schofield, his second wife, who was subpoenaed to appear and testify at the trial. Reynolds's conviction was reversed by the Territorial Supreme Court because the Grand Jury that indicted Reynolds was illegally constituted. Reynolds was indicted again on October

30, 1875, and a second trial commenced on December 9. During the second trial the government was unable to serve the second Mrs. Reynolds with a subpoena, and it was therefore constrained to introduce the transcript of her testimony from the first trial over defense objections. Even though there was no evidence that Reynolds mistreated either his wives or his children (in fact, the testimony of his second wife during the first trial was just the opposite), the trial court gave an instruction that the jury "should consider what are to be the consequences to the innocent victims of this delusion. As this contest goes on, they multiply, and there are pure minded women and there are innocent children,—innocent in a sense even beyond the degree of the innocence of childhood itself."[26] Based on the testimony and the court's instructions concerning the law, Reynolds was again convicted and sentenced to two years of hard labor. The Territorial Supreme Court affirmed the second conviction without even addressing the issue of whether the antibigamy law, under which Reynolds was convicted, was constitutional under the First Amendment of the United States Constitution.

Reynolds appealed his conviction to the United States Supreme Court. On January 6, 1879, the court affirmed the jury verdict by a 9-0 majority [with Justice Stephen J. Field (1816–1897) concurring in the result but disagreeing with the trial court's admission of Amelia Jan Schofield's testimony from the first trial]. Although six issues were raised on appeal in *Reynolds v. United States* the most enduring part of the decision was the court's holding, written by Chief Justice Morrison Remick Waite (1816–1888), that the antibigamy statue was constitutional under the First Amendment's free exercise clause because although "Congress was deprived of all legislative power over mere opinion" it was nevertheless "left free to reach actions which were in violation of social duties or subversive of good order." Ironically, the court relied almost exclusively on British law and noted that in "common law, the second marriage was always void … and from the earliest history of England polygamy has been treated as an offense against society." But the court in Reynolds's case was as much interested in "cult bashing" as it was in determining if Reynolds was practicing bigamy. In *Reynolds,* the court appealed to racism by concluding: "Polygamy has always been odious among the northern and western nations of Europe, and, until the establishment of the Mormon Church, was almost exclusively a feature of the life of Asiatic and of African people." It also cited one expert, a Professor Lieber, for the proposition that "polygamy leads to the patriarchal principle, and which, when applied to large communities, fetters the people in stationary despotism, while that principle cannot long exist in connection with monogamy."[27]

Significantly, the court in *Reynolds* also determined that it was not error for the district court judge to instruct the jury concerning the consequences of plural marriages. Even though no evidence of child abuse was provided, it upheld the trial court's instruction that the jury "should consider what are to be the consequences to the innocent victims of this delusion. As this contest goes on, they multiply, and there are pure minded women and there are innocent children,—innocent in a sense even beyond the degree of the innocence of childhood itself."[28] The United States Supreme Court found nothing wrong with this instruction and allowed the jury to

consider "public morality." One recent legal observer concluded that: "The Court thus supported its contempt for the practice of polygamy by appealing to religious views, biases, and opinions on morality commonly held at the time. This section of the opinion lacked substantive legal reasoning and references to viable public policy justifications. Instead it cast polygamy in such a prejudicial light as to imbue subsequent, suspect opinions with the appearance of reasoned support."[29]

Historians have concluded that the perceived evil consequences of plural marriage were based to some extent on "anti-polygamy fiction and the sentimental campaign against moral diversity in anti-bellum America" rather than on legal evidence.[30] Lawyers have argued that the court's identification of social harms was based on stereotypes circulated in "penny dreadfuls" rather than legal evidence.[31] In addition, the published accounts of European travelers demonstrate that the issue of how wives and children were treated was at the forefront of their thoughts concerning the practice of plural marriage, since the Mormons had advanced a thesis that their wives and children were superior to those produced in monogamy. In any event, the Supreme Court decided that Congress could, in fact, constitutionally prohibit religiously sanctioned practice as long as it had a rational basis for doing so, and the rationality could be extended to notions of "public morality." One of those rational bases advanced by the court was that women and children under patriarchal polygamy were abused. This was upheld as a moral paradigm despite the lack of any evidence to support it.

Following the *Reynolds* decision, the U.S. Congress passed the Edmonds Act in 1882, which strengthened the ability of Federal officials to prosecute polygamists, and prevented them, or those who believed in polygamy, from voting, serving on juries, and holding public office. In 1887, Congress passed the Edmonds Tucker Act, which disenfranchised female voters, abolished spousal immunity, eliminated the Perpetual Immigrating Fund, disincorporated the LDS Church, and authorized the escheatment of most Church property. Eventually, social, economic, and political pressures caused the pragmatic Mormon leadership to capitulate and abandon the practice of polygamy. This change in policy opened the way for Utah to be admitted as a State in 1896 after a nearly 50-year wait.[32]

Even after the Mormon hierarchy abandoned plural marriage in the first manifesto in 1890, and the second in 1904, polygamy remained an ingredient in many tales about the Mormons. Zane Grey published *The Heritage of the Desert* in 1910 and *Riders of the Purple Sage* in 1912; Charles Pidgin wrote *House of Shame* in 1912. The movie industry began to take advantage of Utah and Mormon beginnings with the absolutely horrible movie *Trapped by the Mormons* in 1922, which is still in circulation in the twenty-first century. Early in the twentieth century, when Church leaders recognized that polygamy tainted Mormonism's image throughout the world, they embarked on a new course to change that image. Plural marriage was vigorously uprooted from the Church, and those who resisted and insisted on its continued vitality were excommunicated. Thereafter the Church encouraged broader participation in national politics and eventually achieved greater political influence. A major watershed occurred in 1907 when the United States Senate voted to retain Apostle Reed Smoot (1862–1941), who was elected to that body in 1903 by the Utah State

Legislature. "The Senate vote to retain Smoot marked the beginning of the nation's acceptance of the Latter-Day Saints on the same denominational terms as other American religions," argues Kathleen Flake.[33]

Nevertheless, in the wake of this rejection of polygamy by the Mormon Church, a group of dissenters within the LDS tradition, including John Y. Barlow (1874–1949) and Joseph W. Musser (1872–1954), taught that when Church authorities ceased to support polygamy, they violated God's law and forfeited their right to lead the Church. Those Church members who continued to practice polygamy established their own communities and eventually led schismatic groups. These "fundamentalist Mormons" considered themselves to be faithful to the original Church organized by Joseph Smith. Thus, the debate concerning the legality and beneficial nature of polygamy, within the context of these schismatic groups, continued. As in *Reynolds,* this debate included unsubstantiated allegations concerning the consequences of plural marriages based on stereotypes rather than focusing on facts.

Thus, it is not surprising that the United States Supreme Court's decision in *Reynolds,* with its lack of policy reasons for upholding antibigamy laws, had a reverberating impact on polygamists in these small fundamentalist Mormon communities. For example, in 1946, the Supreme Court reviewed the convictions under the Mann Act of six Fundamentalist Mormon men, who had transported their wives across state lines.[34] The Mann Act prohibited the transport of "any woman or girl for the purpose of prostitution or debauchery, or for any other immoral purpose."[35] Although the Mann Act was normally not utilized in the context of bigamy, the court determined that plural marriages fit within the definition of "immoral act." In fact, Justice William O. Douglas, writing for the court, quoted an 1890 Supreme Court decision, which described plural marriage as "a return to barbarism. It is contrary to the spirit of Christianity, and of the civilization which Christianity has produced in the Western world." Douglas also wrote that a polygamous union was also "a notorious example of promiscuity."[36]

Because of such reasoning public officials continued to use "public morality" in their attacks on Fundamentalist Mormons, and they also began stereotyping polygamists in accordance with their preconceptions concerning their practices. The "modern era" of the fundamentalist Mormons began in 1953 with a standoff between fundamentalists and Arizona law enforcement officials.[37] The preceding year, Arizona Governor J. Howard Pyle concluded that the Mormon fundamentalists were a cult, that the parents were guilty of "profligacy," and that their children were suffering from child abuse.[38] He was therefore determined to charge fundamentalists with "rape, statutory rape, carnal knowledge, polygamist living, cohabitation, bigamy, adultery, and misappropriation of school funds," and certain members of the group were also charged with having "encouraged, advised, counseled, and induced their minor, female children under 18 years of age to actively participate in some unlawful conduct." Based on these charges Governor Pyle sanctioned a raid on the fundamentalist community of Short Creek, formed in 1935 and located on the border between Arizona and Utah.[39]

On Sunday, July 26, 1953, 120 Arizona peace officers, accompanied by 100 news reporters, drove across unpaved roads to the fundamentalist community of Short Creek to arrest 36 men and 86 women and to take into custody 263 children. Although this was planned as a surprise raid, the families sang patriotic hymns around the flag pole when the officials arrived at 4:00 AM. Governor Pyle subsequently announced on the radio that the purpose of the raid was "to protect the lives and futures of 263 children" and that the religious community was the "foulest conspiracy you could imagine … dedicated to the production of white slaves." Mormon officials (whose Church had abandoned polygamy some 50 years earlier) approved of the raid and were even accused of providing relevant information to the police and other civil authorities. This fueled suspicion among many of the fundamentalists that the Mormon Church not only participated in but may have also helped instigate the raid. Mothers and children were transported by bus to Phoenix, Arizona, where they were kept in separate locations, including a crowded rest home and the YMCA, and were told that their children would eventually be placed in permanent foster homes. Juvenile hearings were held in Arizona State Courts, resulting in the placement of most of the children in foster homes around Arizona, often accompanied by their mothers. Then, an Arizona Superior Court Judge ordered in March 1955 that all of the children be restored to their families, bringing an end to Arizona's efforts to segregate children from fundamentalist parents.[40] Such episodes have also been experienced by other new religious movements. Charlotte Hardman notes similar experiences in the Community in Island Pond, Vermont, and The Family. With respect to The Family she notes that: "The same pattern can be seen in the raids worldwide on The Family: front page news as the allegedly abused children were dragged from their parents in nighttime raids, with scarcely a mention of their return after no abuse could be found in any of the children, in any of the six countries."[41]

Similar efforts to separate children from polygamist parents were made in Utah, especially in communities in the southern part of the State that bordered Arizona and were also part of the "raid." The most prominent case involved the seven children of Vera Black, who were removed from their home, accompanied by their mother, and were ordered to be placed in nonpolygamist homes. When the Blacks challenged the state's authority to take these actions, the Utah Supreme Court held that parents who enter into polygamist marriages may be deprived of their right to the custody of their children.[42] When the Blacks saw that they would lose custody of their children, they agreed to sign pledges to "obey the law of the land," including the law of monogamous marriage, and by virtue of this pledge, the children were returned to the custody of their parents. However, subsequent to the family's return to this polygamist settlement in southern Utah, the Blacks continued to practice plural marriage. But no further action was taken against the Blacks because there was no evidence that they were mistreating or abusing their children or violating any law other than the antibigamy laws.[43]

After *Black* there were no further attempts to remove children from polygamist homes or to prosecute polygamists, solely for the practice, for more than 50 years. And it was not because the polygamists went away. For most of the latter half of

the twentieth century an estimated 30,000 polygamists lived in the Western United States. After *Black,* the public began to adopt the notion that justice must be fair and that facts, not stereotypes, must be taken into account in the prosecution of members of NRMs. In fact, in 1991, the Utah Supreme Court ruled that a polygamist could adopt children.[44] In order for the public to support the separation of children from their parents, legal protections for NRMs, parents, and children must exist. Furthermore, legal mechanisms must exist for persons to give evidence, at least as a preliminary step. This is preferable to impulsive undercover raids based on hearsay or misinformation, which in the past led to bloodshed. Improved communications in monitoring impossible cases of child abuse would help to avoid confrontations like those in Waco, where it is still unclear whether rumors of child abuse had any basis in fact.

Regardless of the constitutionality of antibigamy laws, the legal experiences in Utah demonstrate that the prosecution of polygamists must be prioritized between those who simply violate antibigamy laws because they are married to more than one wife and those who are suspected of child abuse and welfare fraud. In 1991 the Utah Attorney General Paul Van Dam was quoted as saying, "Unless it is associated with child abuse, welfare fraud, or any other illegal act, polygamy for its own sake has not been a crime susceptible of successful prosecution and uses up an awful lot of resources."[45] He further observed that although the Utah Constitution forbids polygamy, the State's laws do not specifically bar the practice. More recently when Governor Michael Leavitt initially acknowledged that many states "have chosen not to aggressively prosecute" polygamy and that the practice may be protected under the First Amendment, his office recast his statement within a week to emphasize that he did not condone polygamy. "I am not sympathetic to its practice."[46] Most significantly, after this gaffe, Utah Attorney General Mark Shurtleff echoed the statement made by his predecessor that "the claim of religious freedom is no defense to the crimes of statutory rape, incest, unlawful sexual conduct with a minor, child abuse, or cohabitant abuse."[47]

The most recent prosecution for violation of Utah's antibigamy laws highlights Attorney General Shurtleff's distinction between the debate over polygamy generally (with arguments often hinging on testimony by ex-members and stereotypes and debates over "public morality,") and specific violations of the law, which must be proven by facts. In April 2000 a rural County Attorney charged Utah polygamist Tom Green with four counts of bigamy (third degree felonies), one count of criminal nonsupport (a third degree felony), and one count of rape of a child (a first-degree felony). Green was married to at least three teenage girls and bragged about his chosen lifestyle on trash television. Even though Green was an excommunicated Mormon, some news accounts refer to him as a "Mormon polygamist." In May the trial judge granted a motion filed by Green's lawyers and severed the child rape charge from the charges of bigamy and criminal nonsupport. The court also found that Green maintained a common law marriage to Linda Kunz as a plural wife even though he had married and then divorced her.[48] As in *Reynolds* the prosecutor gave notice that he would subpoena Green's plural wives.[49]

Green's first trial for bigamy and failure to pay child support took place in May 2001 and attracted worldwide media attention. The court allowed expert witnesses to testify concerning the social impact of polygamy, including exploitation, abuse, incest, sexual assault, statutory rape, and the failure to pay child support. Green did not contest that he had conjugal relationships with his wives, but he insisted that Utah's antibigamy statute was unconstitutional. The jury found Green guilty on all counts, and in August 2001 he was sentenced to five years in prison and ordered to pay over $78,000 in restitution to the state. Green appealed his bigamy convictions, and in September 2004 the Utah Supreme Court affirmed, noting that the United States Supreme Court "has never explicitly overruled" *Reynolds v. The United States,* and that it provided precedent in upholding the legality of the Utah Anti-Bigamy Statute.[50]

The court also wrote that its antibigamy statute passed constitutional muster even under recent less stringent standards enunciated by the United States Supreme Court in *Employment Division v. Smith.*[51] The Court wrote that it passed the lower "rational basis" test and a concurring justice opined that it also passed the higher "strict scrutiny" test. The court explained that: "Utah's bigamy statute serves the State's interest in protecting vulnerable individuals from exploitation and abuse. The practice of polygamy, in particular, often coincides with crimes targeting women and children. Crimes not unusually attendant to the practice of polygamy include incest, sexual assault, statutory rape, and failure to pay child support."[52] Of course, it is doubtful that this sweeping generalization is true. It seems to be particularly at odds with the practice of polygamy in Utah during the nineteenth century. And if it is true, the citizens of the state are justified in asking why the Green case was the first prosecution of a polygamist in 50 years, when many others live the same lifestyle in the state of Utah. It is particularly difficult to square this rationale with a prior decision of the Utah Supreme Court when it ruled that polygamists have the right to adopt children: "The fact that our [state] Constitution requires the state to prohibit polygamy does not necessarily mean that the state must deny any or all civil rights and privileges to polygamists."[53]

Green's second trial, for child rape, a year later demonstrates the type of approach long advocated by legal experts in the state. The trial was not dependent on stereotypes concerning "fundamentalist Mormons" or the practice of polygamy but upon clear statutory language that made it illegal for an adult male to have sex with a 13-year-old child.[54] During this second trial it was easily proven that Green took Linda Kunz as a wife when he was 37 and she was just 13. Kuntz, who was the daughter of one of Green's wives, testified that she willingly entered into a marriage covenant with Green and that she bore his child within the next year. Outside the courtroom the prosecutor argued that it was irrelevant that Kunz believed she "willingly entered into the marriage since she was a minor and lacked capacity to make that judgment." He also asserted that she was "a victim of what psychologists call the Stockholm syndrome, in which hostages sympathize with, and later defend, their captors."[55] When the jury considered the evidence against Green (including the uncontroverted evidence that he had sex with a 13 year old), it had little difficulty finding him guilty

of child rape, a first degree felony. Nevertheless, the trial judge gave him only the minimum sentence of five years to life, and he was allowed to serve this sentence concurrently with the prior sentence for bigamy and legal nonsupport. Although many were disappointed in the relatively light sentence, this was the most important conviction. Green was guilty of a serious violation of law, which applied to both monogamists and polygamists, and had nothing whatever to do with religion.[56]

Green demonstrates the importance of separating religious issues from legal issues in the court room. The trial judge was correct in separating the child rape allegation from issues that would center on whether Utah's antibigamy laws were constitutional. Arguably the court should have removed the allegations of nonsupport from the first trial as well. The jury in the second trial could not rely on testimony concerning "crimes not unusually attendant to the practice of polygamy" in determining whether Green actually violated a statute that prohibits an adult from marrying and having sexual relations with a girl under the age of 14. Furthermore, by focusing on the facts and law, the case was not caught up in the types of stereotypes and/or generalizations that were allowed in cases since *Reynolds.* Just as it was alleged that the Mormon leadership subjected their followers to a form of mind control in order to explain why people (and in particular young women) were attracted to the church and why they eventually became plural wives, such allegations are still common concerning polygamy, and for that matter are still used to explain the attraction young people have for a wide variety of new religious movements.

Richard Vazquez argued that one of the greatest flaws of *Reynolds* was: "By electing not to justify the opinion's hostility toward polygamy with plausible policy justifications (such as heightened potential for sexual abuse of children), the *Reynolds* opinion rings hollow—an unsubstantiated attack on a religious practice."[57] While these policy justifications were enunciated by the Utah Supreme Court in *Green* they should still not be allowed to taint a jury concerning whether any particular polygamist is guilty of child abuse unless there is evidence that he actually is. *Reynolds* established an unfortunate precedent—which has been utilized in other cases involving the religious liberties of minority churches. It is far too common for courts to allow nontraditional church practices to be attacked as long as they are repugnant to "public morality" regardless of whether there is any evidence of specific wrongdoing. Charlotte Hardman has noted this same approach: "There is little need to explore in depth any particular NRM to see whether child abuse is occurring. Information from ex-members about the totalitarian nature and lifestyle of the organization is sufficient. If a group can be defined as a 'destructive cult' or an 'extreme cult' detailed evaluations of the religious group are not needed to make allegations of child abuse."[58] While some believe that children raised in polygamy are more susceptible to abuse, it would be interesting to see the basis for these conclusions considering the many organizations and circumstances through which polygamy survives today.

Litigation involving Mormon polygamy demonstrates that facts, not stereotypes, need to be considered when judging the activities of NRMs, particularly when it involves children. This is not to suggest that polygamy should be legalized. Vazquez and others argued that the inherent nature of polygamy heightens the potential for

sexual abuse and that this could be used to demonstrate the constitutionality of state laws prohibiting its practice. The Utah Supreme Court adopted this justification and argued that antibigamy laws pass constitutional muster, because of the essential nature of polygamy, under either a "strict scrutiny" standard previously utilized by the United States Court or a rational basis test that was also articulated by the Supreme Court. But it is clear that, just as most of the information to support the *Reynolds* court's notion of "public morality" came from ex-members who published exposés following the completion of the transcontinental railroad in 1869, generalizations (and perhaps stereotypes) concerning polygamy also come from ex-members in the twenty-first century. While Taylor admitted to Cipriani in 1853 that "when families are left to themselves, without control, arising discord will make it necessary that we ourselves demand the abolition of polygamy" he certainly did not believe that there were "crimes not unusually attendant to the practice of polygamy." And no observer in Utah would claim that every polygamous group in Utah condones child abuse or the types of crimes committed by Tom Green.[59]

But courts continue to rely on allegations of ex-members concerning the practices of most NRMs. Hardman notes: "Furthermore it is ex-members that the anti-cult considers the 'experts' in terms of evaluating the nature of any NRM. Some would argue that this reliance on ex-members is misguided, ignoring research on apostasy and 'deprogramming,' which has shown that ex-members may have a resentment against the religious group they have left particularly if they have to face the reconstruction of a new life, career, and family outside of the group."[60] Courts should not rely on information supplied by anticult sources or those who dislike particular churches without evaluating motive and bias.

Further, courts should not make value judgments based on religious beliefs; instead they should make such judgments only after determining from the evidence whether illegal acts were committed by persons who happen to be members of NRMs. They should not assume that new religions are particularly prone to committing child abuse, or that such abuse takes place within any group, without any specific evidence to prove it.[61] Their determination of how children are treated in religious movements should not be based solely upon accusations, suppositions, conjectures, or stereotypes, which really amount to cult bashing or appeals to "public morality," but instead on facts proven on a case by case basis.

Same-Sex Eroticism and Gender Fluidity in New and Alternative Religions

Melissa M. Wilcox

In a 2003 interview conducted shortly before the confirmation of Bishop Gene Robinson, Episcopal priest and activist Susan Russell commented that debates over gay and lesbian inclusion in the church have followed a path very similar to that of earlier debates over the inclusion of women.[1] While the Episcopal Church is far from being either a new religion or an alternative one, Russell's comments point to a broader pattern in both established and newly formed religions in the United States: an organization's history and current policies on women's involvement often predict its reactions to the involvement of lesbian, gay, bisexual, and transgendered (LGBT) people—or, more broadly, its attitudes toward same-sex eroticism and gender fluidity. Because very little in-depth research has been conducted to date on the status of same-sex eroticism and gender fluidity in New Religious Movements (NRMs), either in the United States or elsewhere, this observation is helpful in determining not only what the patterns *are,* among groups in which this issue has been studied, but what they *might be,* among groups in which it has not.

This chapter begins with an overview of same-sex eroticism and gender fluidity in the United States, as well as an explanation of the use of these terms rather than "LGBT" to designate the central issue of the chapter. It then proceeds to a general discussion of the major patterns of reactions to same-sex eroticism and (occasionally) gender fluidity in new and alternative religions of the late eighteenth century and the nineteenth and twentieth centuries in the United States. The bulk of the chapter takes up specific examples of these patterns, tracing changes and continuities across more than 200 years of shifting social norms and religious structures. Ultimately, although a great deal of work remains to be done within this area of study, the emerging patterns are strong enough and the topic significant enough to indicate that this is a promising new direction for research on NRMs.

SAME-SEX EROTICISM, GENDER FLUIDITY, AND RELIGION IN THE UNITED STATES

A growing body of cross-cultural and historical research indicates that erotic fantasies and activities between people of the same biological sex have been, and continue to be, widespread. Likewise, biological sex is often one basis for the elaboration of social roles and behavioral expectations ("gender roles" or "gender norms"), so, perhaps logically, deviation from gender norms has been noticed and remarked upon in a wide variety of cultures—though certainly not all. The story gets much more complicated, however, when one considers the cultural meanings assigned—or not—to same-sex eroticism and fluid gender roles in different contexts. In some cultures, same-sex eroticism is only acceptable, or is only recognized as erotic, among one sex. In some cases it is recognized but is never condoned; in others it is considered a normal part of a certain period in life but is inappropriate at other stages of the life cycle. In some cultures (such as modern Western ones), engaging in same-sex eroticism carries significant social meaning (for one's sexual orientation, for instance), whereas in others it does not. Likewise, there is wide cultural divergence, both historically and currently, in the salience of gender roles and same-sex eroticism: for some cultures such issues matter a great deal, while others consider them minor. Some cultures have rigid and dualistic gender divisions that are strictly enforced along biological lines: all women should be like this, all men like that. Some cultures allow significant leeway in gender roles, and some recognize more than two genders, combining childhood gender proclivities with anatomical traits to recognize a variety of human types (biological males who perform traditional women's tasks, people with sexually indeterminate bodies who may perform special tasks, biological males who perform traditional men's tasks, and so on).

In the mainstream culture of the United States in the early twenty-first century, most people recognize only two sexes: anatomical females and anatomical males.[2] Contemporary mainstream culture recognizes a fairly broad but still bounded set of gender roles for women and a narrower set for men. Outside of these boundaries, definitions begin to blur. Some people whose self-presentation and behavior fall outside socially assigned gender norms do not see this as a separate part of their identities; some subsume gender fluidity under a gay or lesbian identity; others connect such fluidity to a transgender or "genderqueer" identity. Some feel a distressingly severe disconnect between their bodies and their internal sense of gender; they may eventually undergo some level of sex-reassignment procedures, from hormone therapy to surgeries, and come to identify as transsexual.

Same-sex eroticism has likewise become increasingly fluid in the twenty-first century United States, with consistent, exclusive same-sex erotic attractions generally leading one to identify as gay or lesbian while erotic attraction to both men and women generally leads to bisexual identification. Some gay men become erotically involved with women, however, some lesbians with men, and some heterosexuals with people of the same sex, without changing their sense of identity.[3] Some prefer not to identify, some identify as "questioning," and a more recent arrival is the

"heteroflexible," whose primary attraction is to the opposite sex but who is not averse to same-sex erotic encounters. Out of this complexity comes the umbrella adjective "LGBT," referring to lesbian, gay, bisexual, and transgendered as the main identities connected with same-sex eroticism and gender fluidity in the contemporary United States. Significantly for this chapter, however, these contemporary interpretations are quite new, with even their forerunners having developed only a little over 100 years ago.

Historians of sexuality tell us that contemporary Western concepts of homosexuality and heterosexuality developed together in the late nineteenth century, coming into wider usage in the United States around the beginning of the twentieth century.[4] This certainly does not mean that same-sex eroticism did not exist prior to this point, but rather that it took on new meaning: previously, it was simply one of many sexual improprieties and did not connote an essential, fundamental identity any more than adultery might. Furthermore, the scientists—known as "sexologists"—who developed the concept of sexual orientation, tied it almost inextricably to gender. Men attracted to other men, they suggested, were improperly developed as men, and likewise for women attracted to other women. Sexologists often referred to such people as "inverts," meaning not only that they were sexually attracted to the "wrong" types of bodies, but also that what we would call today their *gender* was inverted from that of "normal" people. Thus, although there were a few exceptions, Western scientific attention to same-sex eroticism at the end of the nineteenth century conflated gender, biological sex and sexual orientation, giving us a cultural model that still exists today: the "effeminate" gay man and the "mannish" lesbian in contrast to the feminine heterosexual woman and the "manly" heterosexual man. In the wake of these developments, both cross-gendered behavior and nonsexual intimacy with others of the same sex became far less common among those who wished not to be identified as homosexual.

Prior to the invention of sexual orientation, it was not uncommon in the nineteenth century United States for adult men and women to share a bed with another of the same sex, to write of their love for the other (especially among women) in glowingly ornate language, or to cross gender in jest or for more serious purposes (such as, for women, joining the military). None of these activities was taken to indicate anything abnormal about the people involved.[5] Consequently, discussions of gender fluidity and same-sex eroticism in eighteenth and nineteenth century NRMs must be undertaken cautiously, separating flowery expressions of emotional attachment from solid evidence for erotic activity and examining the significance of instances of gender crossing. Nonetheless, a few tantalizing cases are well worth mentioning and are included in the discussion below.

Through much of the twentieth century, as the concept of homosexuality became more widely known in the United States, it retained its initial categorization as a psychological or psychiatric disorder—a medical issue, broadly speaking, more than a moral one. While some in the first part of the century considered feminism to indicate flaws in a woman's gender (just as the late twentieth century stereotyped the feminist as a lesbian), and while religions at the turn of the century certainly were

grappling with questions of women's roles, gender crossing in general remained subsumed under homosexuality, and neither was the source of significant religious commentary until well into the 1960s.[6] On the other hand, communities of self-identified homosexuals were already forming by the turn of the century, and many of these communities solidified during the 1940s.[7] As a result, although it is generally not possible to discuss religious groups' official responses to homosexuality and gender fluidity until the 1960s or 1970s, there is some evidence for the involvement of self-identified gay men and lesbians in religious organizations prior to that time. Thus, while the cases discussed later in this chapter range from the late eighteenth century to the present, the vast majority of available evidence for explicit connections between gender fluidity, same-sex eroticism, and new or alternative religions in the United States comes from the latter half of the twentieth century.

SAME-SEX EROTICISM AND GENDER CROSSING IN NEW AND ALTERNATIVE RELIGIONS: OVERALL PATTERNS

Perhaps because of the connection sexologists made between sexual orientation and gender roles (or perhaps simply because of the importance of both within mainstream American culture), even in decidedly nonmainstream American religions there is a strong connection between attitudes toward gender roles and attitudes toward sexual diversity. In fact, this holds true, broadly at least, for the NRMs of the eighteenth and nineteenth centuries, even though their patterns of "sexual diversity" did not include attention to homosexuality. Groups such as the Shakers, the Mormons, and the Oneida Perfectionists, all of which experimented with sexual arrangements, also rethought, in at least minor ways, the roles of women (and sometimes of men). In the twentieth century, attitudes toward the social roles of men and women often coincide with attitudes toward gender fluidity in general and toward sexual orientation, especially among mainstream religious groups but also in NRMs. In fact, at the risk of being overly bold in the face of scant data, it is worth considering that even the group's more cultic or more sectarian nature affects attitudes toward both gender roles and sexual diversity, at least in the twentieth century.

Groups that might be described as either "cultic" or "sectarian" in the classical sociological sense experience high tension with society.[8] This is true of most new and alternative religions, which usually define themselves and sometimes are defined from outside as being "different" from the mainstream and perhaps opposed to some of its values. In addition, some NRMs are also exclusivistic, believing that there is only one possible route to the truth, while others are *nonexclusive:* they hold that there are many paths to the truth, even if they believe that their own is the best of those. When theological exclusivism, or its lack, includes the gendered and sexual order, one often finds religious groups proclaiming either that there is only one set of proper genders and sexual relations and that the mainstream culture fails to adhere strictly to these (exclusivist), or that there are many acceptable forms of gendered and sexual behavior and that the mainstream culture fails to allow appropriately full expression of these (nonexclusivist). Groups espousing stricter norms for gender

and sexuality than those found in the mainstream generally offer clearly divided, binary gender roles, and they usually require either strict (and usually monogamous, or in certain cases, polygynous) heterosexuality or celibacy. Those experimenting with gender norms are likely to experiment with sexual norms as well, and vice versa, although even the more radical NRMs of the eighteenth and nineteenth centuries maintained a binary understanding of gender. Occasionally, such experimentation can lead to its own form of exclusivism, but overall in the late twentieth and early twenty-first centuries it is the nonexclusivist religious groups—whether mainstream or alternative—that are most likely to embrace a wide variety of expressions of sexuality and gender.

Religious attitudes toward sexual and gender diversity are also related to attitudes toward the human body and material existence. Religions whose practices and beliefs are closely tied to the body often attend closely at least to issues of sexuality, if not also to issues of gender, because both sexual and gendered expression may impact religious behavior. On the other hand, the more distanced a religion's focus from the body and the material world, the more likely that religion is to be indifferent toward issues of gender and sexuality, considering them irrelevant or evanescent.

While these observations suggest certain general patterns, the exceptions to those patterns are just as interesting. These include cases in which the founder of a religion is not held to the same standards of sexual or gendered behavior as the religion's followers, as well as the small number of NRMs formed specifically on the basis of sexual orientation, some of which are exclusivist not in theology but in membership. With these rough guidelines in mind, then, we can turn to examining a number of cases of same-sex eroticism and/or gender diversity in the new and alternative religions of the United States in the past 200 years.

PRE-TWENTIETH CENTURY CASES

The beginning of the twentieth century marks an important turning point for the interpretation of same-sex eroticism and gender fluidity in religious organizations, because it was early in that century that the concepts of sexual orientation and inversion came to be widely known in the United States. Accordingly, any examination of same-sex love and gender fluidity in religious groups prior to the twentieth century should pay close attention to the social context in which such phenomena occur: is the gender crossing done in jest or for practical purposes, for example, or does it seem to carry a deeper meaning that would be more relevant to comparison with LGBT identities in religions of the twentieth century? Are expressions of romance between two people of the same sex simply socially acceptable statements of affection, or is there evidence for a more erotic relationship?

As far as I am aware, the earliest reference in a new or alternative religious context in the United States to serious, extended gender fluidity that seems to be more than simple practicality is the case of the Publick Universal Friend.[9] Born in 1752 as Jemima Wilkinson, this visionary-to-be quit the Society of Friends (the Quakers) some time before succumbing to a serious illness. Upon recovering, at the age of

24, the seer refused to be known as Jemima Wilkinson, taking instead the title of "Publick Universal Friend." The Friend claimed to have "died and been reborn as the second coming of Christ," embodying the very spirit of Jesus and therefore becoming male, or at least masculine.[10] Much maligned in public, the Friend eventually founded a community of celibate followers that survived for several decades in western New York.

Perhaps like the townspeople in Rhode Island and Philadelphia who reacted so strongly against the Friend, contemporary and later commentators seem puzzled by the Friend's gender, using feminine pronouns and continuing to use the name of Jemima Wilkinson but describing the Friend as quite masculine in appearance. Historian Susan Juster (also using the feminine pronoun) explains that the Friend "deliberately remade herself into a masculine figure" and "[forbade] her followers to address her in gendered pronouns," signing the Friend's one published work as "your friend and *brother* in the communion and fellowship of the gospel."[11]

Some of the Friend's closest (presumably female-born) followers also took on masculine dress. Juster argues that "Wilkinson and her female followers repudiated their gender identity in order to assume the prophetic mantle."[12] As Juster notes, however, the Friend's was no simple masculine identity—Jemima could simply have become James Wilkinson and left no record of the transformation, as has been the case with a number of women in Western history who have crossed gender for practical reasons. In fact, the Friend left a detailed description of the death of Jemima and the takeover of her body by "the Spirit of Life from God."[13] While it would be anachronistic to claim that the Friend was an eighteenth century transgendered man, it also may be too simple to claim that the Friend was simply a subterfuge to allow a woman access to prophetic authority.

Similarly tantalizing and complicated are the examples of same-sex intimacy (some erotic, some not) and gender fluidity marshaled by D. Michael Quinn in his groundbreaking study of late nineteenth- and early twentieth-century Mormons.[14] For all the scandal caused by its approval of polygyny, the early Church of Jesus Christ of Latter-day Saints (LDS) offered women significant leadership and power by the standards of the day. In some cases, polygyny allowed women more freedom rather than less, and although women's spheres were often defined separately from men's, within those spheres women exercised considerable authority and autonomy until the mid-twentieth century. The early LDS church, like a number of other nineteenth-century NRMs in the biblical tradition, conceived of the divine as female as well as male, and some nineteenth-century Mormon women were active in the woman suffrage movement.[15] Despite this evidence of liberalism, like other religions of its time the LDS church condemned homosexuality as the concept of the homosexual came into wide usage in the early twentieth century. However, Quinn argues that the church also was not particularly inclined to harshness in its treatment of those so accused—at least, not until the early 1950s, when not only was the broader U.S. culture in the midst of a severely conservative turn, but the LDS church was also placing increasing limits on women's power and authority.[16]

In the late 1800s, on the other hand, Quinn finds no evidence that the concept of homosexuality as a separate orientation was present in LDS circles. Also missing was the attendant concept of gender fluidity as a marker of sexual abnormality. As a result, Quinn can cite numerous examples of prominent Mormon men and women who wrote openly of sharing beds and physical (apparently nonsexual) affection with others of the same sex. Likewise, some nineteenth-century Mormons (including a child of prominent leader Brigham Young) crossed gender for the sake of entertainment with no questions ever being raised about their mental health or sexual normalcy.[17] By the turn of the century, however, some Mormons were beginning to identify subtly as homosexuals.

EARLY TWENTIETH CENTURY CASES

In 1903, Mormon poet Kate Thomas published a love poem addressed to another woman. With the nineteenth-century approval of same-sex emotional attachment still in place culturally, there was little to remark upon in the poem's appearance in the LDS *Young Woman's Journal.* However, Thomas was living in New York's Greenwich Village at the time, where the term "gay," which appeared in the poem, was already a veiled reference to homosexuality. Furthermore, Quinn notes that some of Thomas's unpublished poetry was far more erotic than her published work, especially by the standards of the time, and Thomas never married.[18]

The late nineteenth century saw the beginnings of urban enclaves where same-sex eroticism was a well-known pastime, and the concomitant beginnings of communities of self-identified homosexuals. Thus, it is unsurprising that one might find a few members of the LDS church in such enclaves, just as one might find a few Presbyterians, Roman Catholics, Reform Jews, Methodists, and members of other religions. More surprising, perhaps, than the existence of one putatively lesbian Mormon poet is the work described by Quinn as "the earliest community study of lesbians and gay men in America," which was undertaken by a college student in Salt Lake City in the early 1920s.[19] The study, conducted by Mildred J. Berryman and only finalized in 1938, included 33 homosexuals, of whom 9 were men and 24 were women. Quinn explains that indications of religious identity in the study are slim, but that passing references in a number of cases indicate that "many (possibly all) the persons in [Berryman's] study were of Mormon background"[20]—as was Berryman, who included herself as one of the cases in the study.

As the twentieth century progressed, gay and lesbian communities expanded and solidified. Historian John D'Emilio argues that World War II had a profound effect on these communities because military service placed many men in homosocial environments while increased job opportunities gave more women the economic freedom to live on their own (or with other women).[21] Out of this environment came not only a solidification of the gay and lesbian bar cultures, not only the liberal advocacy groups known collectively as the "homophile movement," but also the first new religion founded by and for homosexuals: the Eucharistic Catholic Church.[22]

The Eucharistic Catholic Church first held services in Atlanta, Georgia, on July 1, 1946, when its founding bishop, John Augustine Kazantks, ordained its founding priest, George Augustine Hyde. Hyde was previously a Roman Catholic seminarian; Kazantks lost his position as a bishop in the Greek Orthodox Church due to his homosexuality. Together, Kazantks and Hyde decided to form a church that would welcome people of all sexual orientations. By January of the following year their reach extended across Georgia, with Kazantks serving the southern half of the state from his home in Savannah and Hyde the northern half from the church's original base in Atlanta. Although Kazantks eventually returned to Greece, Hyde was consecrated as bishop and eventually became archbishop in the American Holy Orthodox Catholic and Apostolic Eastern Church. From these positions, he assisted in the founding of New York's gay- and lesbian-oriented Church of the Beloved Disciple as a parish of the Eucharistic Catholic Church; the founding priest of Beloved Disciple eventually took the ministry into Canada as well, where some effort has been underway recently to revive the Eucharistic Catholic Church.[23]

THE SEXUAL REVOLUTION AND ITS AFTERMATH: THE MID-TWENTIETH AND LATE TWENTIETH CENTURY

Turning Points

The mid-twentieth century was a time of conservative retrenchment in the United States, both morally and politically. Although gay and lesbian subcultures persisted throughout the 1950s, they either functioned anonymously or worked very cautiously in the open. Because medical understandings of homosexuality as an aberrant orientation had led to increasing legal sanctions and sometimes to forced psychiatric treatment, to come out or be exposed as a "homosexual" meant not only the potential loss of one's job, family, and home, but also shock treatment or other destructive attempts at "healing." Even some political radicals and socially experimental religious groups during this time kept their distance from homosexuality. In England, for example, Gerald Gardner, the founder of contemporary Wicca and hardly a mainstream religious figure, wrote in 1954 that the Knights Templar had been followers of the Goddess but had been cursed by her because of their homosexuality. His book was published in the United States in 1955.[24]

With this background, it is perhaps unsurprising that the only gay and lesbian religious movement was one that, though schismatic, was tied to a socially conservative religious movement. Indeed, the gay and lesbian rights organizations of the time worked from comparatively conservative perspectives, encouraging public dialogue on homosexuality rather than demanding rights as the subsequent generation of activists would do. But precursors of an impending change were nevertheless detectable. As the Eucharistic Catholic Church was growing in Georgia, another movement was underway several hundred miles north of there. It, too, eventually connected alternative religious movements and homosexuality, but in a radically different way from anything conceived of by Hyde and Kazantks.

Beat poets such as Allen Ginsburg wrote openly of same-sex desire and sexuality in a way that was not only unprecedented but also enormously risky in the social and political conservatism of the 1950s. They thus led the way for the gay liberation movement, whose official founding dates to the riots at Greenwich Village's Stonewall Inn in June of 1969.[25] But a number of the Beats were also attracted to Buddhism, and Jack Kerouac studied it quite intensely.[26] Beat writings introduced a generation of youth to this religion and drew them especially to those teachers who were working in the United States and developing American lineages. Because of the intertwined presence of gay sexuality and Buddhism in the Beats' writings, they pointed to new religious directions especially for LGBT youth, many of whom found in their Christian and Jewish heritages (especially in the 1960s and 1970s) communities unwelcoming of or ambivalent toward LGBT people.

A prominent example of this pattern is the man who came to be known as Issan Dorsey.[27] Born Thomas Dorsey Jr. in Santa Barbara, California, in 1933, he was raised in a large Italian Catholic family and considered the priesthood for a time. By high school, however, he was becoming sexually active with other men. Talented in the performing arts and desperate to leave Santa Barbara, he joined not the film industry but the United States Navy—which, he recalled, "was like a big coming-out party."[28] As during World War II, during the Korean War the armed forces provided men like Dorsey with a strongly homosocial space that extended their opportunities to meet other gay men. It also, however, provided opportunities for abrupt discharges—and Dorsey and his lover were discovered one night and summarily ejected from the Navy. Both were discharged in San Francisco and stayed there to become a part of that city's booming gay subculture. From the early 1950s until the late 1960s, Dorsey was a fixture in the gay and lesbian bar scene, eventually taking on the drag persona of Tommy Dee and performing around the country. Travel, the bar scene, celebrity in the 1960s, and guilt over his homosexuality and his discharge from the Navy—all drew Dorsey into increasing substance abuse. But several changes in his life led him to seek a new direction, just when the wider San Francisco counterculture was discovering Shunryu Suzuki and the San Francisco Zen Center.

Dorsey began studying with Suzuki and took lay precepts (initiation) in 1970, receiving the name of Issan. He worked at the San Francisco Zen Center's nearby Tassajara retreat center and studied with Suzuki's successor, Richard Baker. By 1975 he had been formally initiated as a monk; he spent much of the next five years at the Tassajara center before returning to San Francisco in 1980. From this point on, Dorsey became increasingly involved in bringing Zen to the LGBT communities in San Francisco. He helped to start a meditation group for gay men, which eventually grew into the Hartford Street Zen Center in San Francisco's gay Castro district. In the mid-1980s he became teacher-in-residence at the center. He also, however, tested positive for HIV. Perhaps because of this, he became concerned with the increasingly desperate need for hospice care for people with AIDS in the Castro district. Inspired by the work of other hospices and spurred by the illness of one of his own students, Dorsey began housing people with advanced AIDS in the Hartford Street Zen Center. With the help of several others this project grew into the Maitri Hospice—from

whose services Dorsey benefited when he fell ill. Issan Dorsey died of AIDS complications in 1990, but the organizations he founded continue to influence Buddhist practitioners—especially LGBT converts—in the San Francisco area and elsewhere.

The success of the Hartford Street Zen Center is indicative not only of the popularity of Zen Buddhism in the San Francisco counterculture, but also of the draw that religions outside the Jewish and Christian mainstreams have exerted on LGBT people in the late twentieth and early twenty-first century United States. While the number of Jewish and Christian denominations, congregations, and families open to LGBT people has increased steadily since the 1970s, many groups still remain either unwelcoming or ambivalent, if not openly hostile. In such an environment some LGBT people choose to avoid religion altogether or to practice it on a strictly individual basis. Others, however, find spiritual homes in the many NRMs in the United States. Some LGBT people begin their lives as members of these movements and find them to be more or less comfortable spaces in which to come out. In all likelihood, though, the majority of LGBT people in such religions—like many other members—are converts.

As attractive as alternative religions may seem to LGBT people who have grown uncomfortable or disillusioned with Judaism and/or Christianity, however, not all of these movements welcome LGBT people. As discussed above, the general pattern is that religious organizations that follow strict rules for social conduct, and especially those with a strictly binary understanding of gender, are likely to disapprove of same-sex eroticism and gender fluidity. Conversely, those that experiment with social structure and especially with gender roles are likely to welcome LGBT people, while traditions that see the material world as irrelevant will be more indifferent to LGBT people. Some religions fall along the middle of the scale, being strongly ambivalent about the status of LGBT people in their midst. And finally there is a special case: alternative religions founded by and for LGBT people.

Nonwelcoming Organizations

Religious organizations that allow or encourage sexuality but carefully restrict its practice to the proper times, places, people, and/or purposes are the most likely to prohibit or frown upon same-sex eroticism.[29] Likewise, those that understand women and men to be fundamentally different (even if equally valued) and assign to each sex strictly defined roles and responsibilities are least likely to welcome transgendered or transsexual people into their ranks. In the United States, strictly defined doctrines of sexuality and gender usually come together, at least over the long term. For instance, it is difficult to find an organization that accepts transgendered people but not lesbians or gay men, and groups accepting lesbians and gay men but not bisexuals and transgendered people often speak of their acceptance as being in process—"We're not ready to deal with transgender issues *yet*." Most, though not all, of the nonwelcoming NRMs in the United States are based in Christianity and represent socially conservative branches of that religion. The LDS church, for example, as discussed above, regards the expression of same-sex desire or cross-gender identity

as sinful and holds that the best cure for anyone with such feelings is heterosexual marriage. Interestingly, although the LDS church never accepted same-sex eroticism and always viewed women and men as having separate roles and responsibilities in the church, its increasingly strict responses to homosexuality in the 1950s and 1960s were paralleled by an increasing restriction of women's authority within official church structures. Other Christian-based groups that advocate a strict social conservatism include the Jehovah's Witnesses, the Unification Church (well-known in the United States at one time for its strong and very public emphasis on heterosexual marriage), and the Seventh-day Adventists.[30] While these groups ban LGBT people from their ranks (lesbians and gay men explicitly; bisexuals and transgender people usually by implication) and shun members who come out as LGBT, any violence they inflict is usually limited to the emotional and spiritual levels. The Christian Identity movement, on the other hand, considers white homosexuals to be among those especially cursed by God, and its more radical wings encourage (and have carried out) the murder of LGBT people in God's name.[31]

Of the nonaccepting religions that are not Christian based, two of the best known are the Nation of Islam and the International Society for Krishna Consciousness (ISKCON).[32] Both organizations teach clearly separated gender norms, and both emphasize the importance of heterosexual marriage and childbearing (although, for male devotees in ISKCON, becoming a renunciant after marrying and fathering children is the highest goal in life). On the other hand, a nonwelcoming organization that failed to follow this pattern of gender expectations was Rajneeshpuram, known for its encouragement of sexual experimentation and for its high regard for women. Susan Jean Palmer suggests that AIDS may be the intervening factor in this case, which she, too, finds somewhat unusual.[33] Given that Rajneesh taught a fairly apocalyptic view of religious and cultural change that turned on a vision of AIDS wreaking global havoc,[34] this is a logical inference. Palmer also hints at a slight ambivalence within the group, noting that "homosexuality [was] not considered sinful or abominable…, but a cowardly cop-out"[35] and that in one publication Rajneesh "grudgingly admit[ted] … that homosexuality can also be a valid path to superconsciousness."[36]

Further complicating the issue of nonaccepting religions is the presence of satellite groups specifically for LGBT members of those faiths. Not surprisingly, such groups are generally not formally recognized by their "parent" religious organizations, but they offer an alternative for LGBT people who do not wish to give up either their sexual orientation or gender identity, or their religion.[37] Both the Seventh-day Adventist group (Kinship International) and the LDS organization (Affirmation) are among the older groups, formed in 1976 and 1977, respectively. Newer developments include anti-LGBT satellite groups such as the LDS organization Evergreen, and the pro-gay group GALVA—the Gay and Lesbian Vaishnava Association. The latter seems to be primarily Internet based,[38] but has expanded over the past several years to include four different e-mail groups in 2005. Although apparently founded by followers of ISKCON,[39] GALVA has extended its outreach to all LGBT (or, in its terminology, "third-sex") Hindus.

Ambivalent or Contested Organizations

As with mainstream religious organizations in the United States today, there are a number of NRMs that are ambivalent about the inclusion or the status of LGBT people. In some cases this is because groups see themselves as progressive but are simultaneously rooted in a rigidly defined understanding of adult intimacy and family; in other cases the reasons are more complex.

One of the more complex situations is that of the African diasporic religions, such as Vodou and Santería.[40] In recent years debates have raged over the status and even the presence of gender roles (the traditional African cultures had gender roles all along, but the same-sex part may, indeed, be a more recent addition to these new/old traditions) and same-sex sexuality in the traditional West African cultures from which these religions have grown.[41] Some branches, such as Palo, are quite strict in their refusal to initiate LGBT people, and both women and gay men are generally forbidden to play the sacred *batá* drums in these religions.[42] On the other hand, other branches are more accepting, and there are LGBT people—some quite open, others closeted—at all levels of these traditions. Since there is no central authority for any African diasporic tradition, individual priests and priestesses must make their own decisions about whom to accept into their "houses," or congregations. Thus, there are even houses that are known to be predominantly gay and lesbian, just as there are others known to be homophobic. Furthermore, transgender issues are particularly tricky in these religions. While there is space for significant gender diversity (especially given the gender crossing that can take place during possession by a deity) and there are transgendered and transsexual people involved in African diasporic religions, there are also some indications that involvement may be more difficult for those who physically alter their bodies to bring them more in line with their gender identities.[43] Thus, the African diasporic religions encompass homophobia, biphobia, transphobia, and LGBT people, and because of the relative autonomy of priests and priestesses these different aspects map only partially onto the divisions among different traditions.

More centralized NRMs can also be ambivalent or contested on the issue of LGBT inclusion, especially if their progressive self-concept conflicts with a more traditional definition of intimacy and family. This includes such faiths as Baha'i, the Family International (also known as the Children of God), and Christian Science, among others.[44] Each of these movements is rooted in the Abrahamic "family" of religions: Judaism, Christianity, and Islam. Though Baha'i teachings attempt to distill a universal truth from a wide variety of world religions, the movement's roots are Muslim, and Muslim leaders generally are quite clear on the desirability of heterosexual couplings despite the presence of a small but growing LGBT Muslim movement globally.[45] Thus, while the principles of oneness in Baha'i—the oneness of God, humanity, and religion—encourage Baha'is to work for social justice and toward the equality of all people, an emphasis on traditional, opposite-sex marriage and procreation leave little room for tolerance of same-sex

eroticism. On the other hand, Baha'i is not given to firm statements of its disapproval, so unlike some of the "nonwelcoming organizations" it is not generally vocally anti-LGBT.

Ambivalence in the Family International is especially interesting given the organization's history of sexual innovation. Made infamous by its practice of "flirty fishing," or using sexual encounters as a tool for evangelism, the Family International is described by sociologist William Sims Bainbridge as "an amalgam of the late-sixties youth counterculture and the traditional Holiness movement."[46] Holiness churches today are quite clear in their denunciation of LGBT people; the late-sixties counterculture, on the other hand, helped to produce the gay liberation movement. The Family International is somewhere in between. Promoting a "Law of Love" (essentially a version of the Golden Rule) in sexual interactions, the Family holds extremely permissive views of sexuality. In a survey of over 1000 Family members, Bainbridge found that only 0.3 percent of respondents felt that sex between a man and a woman before marriage was "always wrong," and only 1.2 percent disapproved of adultery. Yet, 55 percent of Bainbridge's respondents felt that sex between two people of the same sex was always wrong. A survey of the general population just a few years earlier had found that 62.9 percent of respondents shared this opinion, so even on this more difficult issue Family members were more permissive than the general public.[47] Yet on the question of same-sex marriage this pattern reversed itself, with only 3.1 percent of Bainbridge's respondents (versus 11.7 percent of the general public at the time) believing that same-sex couples should have the right to marry. Bainbridge explains that these discrepancies are due, in part, to a biblical literalism in the Family that leads the organization to interpret sex between men as biblically forbidden and sex between women as simply unnatural (but not biblically forbidden).[48]

Christian roots may also be the main cause of a reticence on the part of Christian Science to discuss homosexuality at all. A search of the extensive denominational Web site for the term "homosexuality" yields only two texts: a report on workshops for teens, which notes that "homosexuality" was among the topics but does not indicate what was said about the subject, and an article written by a contributing editor of the *Christian Science Journal* that mentions homosexuality among the threats to (presumably heterosexual) marriage.[49] My own research led me to a former Christian Science practitioner who had been prominent in her congregation. Upon coming out as a lesbian, she reported, she repeatedly wrote to the organization's Mother Church in Boston to ask whether her membership was still valid, but never received a response. Her local church was also divided on the issue, open enough that some gay men applied for membership but unsure whether or not to accept them.[50] In some ways, then, Christian Science seems to be in a position very similar to that of a number of mainstream Protestant organizations in the early twenty-first century: ambivalent enough about same-sex relationships that it is rarely willing to discuss them in public at all, either to condemn or to affirm.

Indifferent Organizations

If the Christian roots of Christian Science are enough to make the religion ambivalent about the status of homosexuality, its non-Christian close relatives in the metaphysical movement are not so influenced. In fact, this is a telling distinction, because NRMs that teach that the material world is illusory or irrelevant (as opposed to being fallen, for instance, or central) often are indifferent toward issues of gender identity and sexual orientation. With its insistence on the true reality of mind and the illusion of the body, Christian Science would be a logical part of this group; although it does not, in fact, fit here, the non-Christian metaphysical groups do, along with several Asian import religions that stress detachment from the material world without simultaneously teaching strict norms for gender and family (as is the case, for instance, with ISKCON).

Many of the metaphysical movements formed by students of Christian Science founder Mary Baker Eddy moved away from Christianity toward a more universalist approach to spirituality, while maintaining Eddy's teachings about the fundamental unreality of the material world. Groups like Religious Science, Unity, and Divine Science usually welcome LGBT people—in some cases because they offer special services and groups for LGBT people, but often because they are simply not inclined to be preoccupied with questions of sex, gender, and sexuality. For instance, at the Agape International Spiritual Center, a Religious Science megachurch near Los Angeles, one minister told me the following:

> the theology that we practice here is based on the idea that each of us is a divine being. And that divinity, as our identity, is not gender-based … whether that comes in the form of being a lesbian or a gay man or a transgender woman or man is not the issue.[51]

She also mentioned that she knew of bisexual women who felt welcome in the church. In addition to welcoming people regardless of their sexual orientation or gender identity, Agape also offers several small groups for LGBT people.

Siddha Yoga holds a similar perspective, although it might be described as somewhat more ambivalent despite its generally indifferent attitude toward sexuality and gender. Centered around inner awakening and spiritual awareness, Siddha Yoga teachings focus far more on practice and individual spiritual development than on morality. Daryl Glowa, a leader and public relations representative in the Siddha Yoga Meditation Center of Los Angeles, told me proudly that no one is ever turned away from a Siddha Yoga center; she also recalled that when a transgender person came to meditate at the Los Angeles center, that person was offered a choice between the men-only, women-only, and mixed seating in the meditation hall.[52] On the other hand, during a brief telephone conversation with a representative at Siddha Yoga's New York headquarters, I was told that there had been some question at the upstate New York ashram over whether same-sex couples, being unable to marry legally, should be allowed access to couples' housing; Glowa was unaware of this and was unable to comment. In all fairness, the New York representative relayed this story as the only instance of which she was aware in which LGBT people were treated unequally in the organization. Thus, while there may be some lingering ambivalence

in Siddha Yoga, overall this is another movement whose resolute focus away from the material world aids it in being welcoming by way of indifference toward sexual and gender diversity.

Affirming Organizations

Another Asian import religion—this one from Japan rather than India—serves well as a bridge between the "indifferent" category and the "affirming" one, in which religions actively seek out and affirm lesbian, gay, bisexual, and/or transgender identities. Soka Gakkai International (SGI) is, on the one hand, a religion focused on practice rather than moral laws. As a Buddhist movement, it could easily be expected to share with Agape and Siddha Yoga a disregard of things material in favor of focusing on spiritual realities; logically, then, someone unfamiliar with the movement might expect it to be among those religions indifferent to LGBT identities. Yet the branch of Buddhism from which SGI developed, unlike most branches, is focused explicitly on the material world, and practitioners are encouraged to chant not only for the movement's goal of world peace, but also for material gain, physical comfort, and other "this-worldly" benefits.[53] In their study of SGI, Phillip Hammond and David Machacek suggest that the religion is "characterized by an almost libertarian perspective on individual behavior" but also "advances a soteriological vision of a world without nuclear weapons, war, poverty, and crime."[54] Also unusual for a Buddhist organization is Soka Gakkai's evangelism; members believe that spreading their philosophy and practice can improve both individual lives and the world in general, and as a result SGI takes evangelism quite seriously.[55]

Indeed, at a 2001 Los Angeles Gay Pride festival (held near the national headquarters of SGI-USA, which are in Santa Monica), I was approached several times by smiling, leaflet-carrying people asking me whether I was interested in chanting "Nam-myoho-renge-kyo" for world peace. The presence of SGI members at a Pride festival was not simply an accident of evangelism, however. Hammond and Machacek found that among the 401 SGI members they surveyed in the United States, only 20 percent believed that homosexuality was "always" or "almost always" wrong; in a 1996 study of the general population in the United States, 65 percent of respondents held such beliefs.[56] Furthermore, while the nonwelcoming groups discussed above generally also held conservative beliefs about gender roles, SGI members are considerably more liberal than the general public on such questions.[57] Thus, there continues to be a connection between attitudes toward gender and those toward LGBT identities.

Other NRMs that actively welcome LGBT people into their ranks are generally less evangelical than Soka Gakkai, but they often share its liberal, eschatological visions for social change, especially concerning gender equality. The Raelians are perhaps the most radical of these, believing that if the human race chooses self-perfection through science and acknowledges its alien progenitors, it will advance to a "planetary consciousness" and avoid nuclear self-destruction.[58] Rael sees the existence of human sexes as the result of clever machinations on the part of the Elohim,

humanity's alien forebears. Palmer comments: "Seeing gender as an artificial construct, Rael emphasizes its fluidity, resulting from different possible combinations of X and Y chromosomes. This implies that all human beings are essentially androgynous."[59] Since the concepts of sexual orientation and transgender identity are built upon a binary understanding of sex and gender, Raelian androgyny undermines any sense of "normative" sexual orientation—or even of sexual orientation at all—as well as any sense of "normative" gender. Palmer puts it most clearly at the beginning of her chapter on the movement: "The Raelian Movement appears to be one of the rare examples of a NRM that promotes in its members a tolerance for sexual ambiguity and encourages homosexual expression."[60]

Other socially radical movements that both promote liberal understandings of gender roles and actively welcome LGBT members are the feminist spirituality movement (now better known by one of its descendants, the Goddess movement), most branches of neopaganism, and the Church of Satan. While these movements differ in some significant ways, they share a radically liberal vision of social change, and each believes that widespread change begins with individual change. Satanism's focus on individual fulfillment and power (despite the sexism sometimes evident in the writings of its founder, Anton LaVey) makes it particularly open to gender equality, gender fluidity, and sexual diversity.[61] Likewise, the presence of both male and female deities in most neopagan groups provides ample opportunity for gender equality (again, despite the occasional sexism of earlier writers, such as Wicca founder Gerald Gardner). Many neopagan groups in the early twenty-first century actively affirm lesbians, gay men, and bisexual people, and welcome at least a certain amount of gender fluidity.[62] Some groups, such as the Reclaiming tradition of Wicca, openly affirm transgendered and transsexual people as well—a far cry from Gardner's strictly gendered, sex-paired covens. The feminist spirituality movement, which influenced Reclaiming and other neopagan groups as well as being influenced by them, affirmed lesbians from its beginnings in the early 1970s, with some branches even valuing intimate relationships between women more highly than those between men and women. Bisexuality has been more controversial within feminist spirituality circles, as it has been more broadly in lesbian communities[63]—although bisexuals have been increasingly welcomed in recent years. Such has not been the case generally for transgendered people, as many social movements rooted in second-wave feminism still refuse to recognize transgendered or transsexual (male-to-female) women as "real" women.

Organizations Targeting Sexual and Gender Diversity

The clearest connections between LGBT identities and NRMs lie in those religions founded with lesbians or gay men in mind—specifically, the Radical Faeries and a separatist feminist form of Wicca known as the Dianic tradition.[64] Zsuzsanna Budapest never intended Dianic Witchcraft to be for lesbians only, but when she decided to give feminism a religious base in the early 1970s, she created a women-only space that was openly welcoming and affirming of intimacy between women.

The feminist movement as a whole still struggled at the time with the presence of lesbians in its ranks (Betty Friedan, author of *The Feminine Mystique,* famously referred to lesbians once as "the lavender menace"[65]), but it also soon expanded into several movements with different approaches to feminist social change. One of these, cultural feminism, focused on "women's ways" of living; it produced the women's music festivals, much of feminist art in the 1970s and 1980s, and the feminist spirituality movement. Because it was so intensely women focused, it overlapped well with separatist feminism, many of whose members were lesbians.[66] Claiming that "Wimmin's [sic] spirituality is rooted in paganism, where wimmin's values are dominant,"[67] Budapest wrote in her 1976 book, *The Feminist Book of Lights and Shadows,* that Dianic Wicca and other new Goddess religions were "part of a changing universal consciousness that has been long feared and prophesized [sic]."[68] Like other Wiccan founders such as Gardner and Alex Sanders, Budapest claimed to be a hereditary witch; everything she relayed in her books, she said, was wisdom passed down to her by her female forebears. In fact, her teachings blend Wicca, radical feminism, and feminist spirituality. She acknowledges both female and male deities, though the male deities clearly play a secondary role in both myth and ritual, and Dianic witches follow the standard calendar of agricultural holidays as well as sharing much of Wiccan mythology—with, of course, a feminist twist.

Over time, Dianic Wicca has come to accept bisexual women as well as lesbians; according to the high priestess of the coven descended from Budapest's Susan B. Anthony Coven #1 (now known as the Circle of Aradia), the organization's demographics have changed as well to include more heterosexual women than lesbians.[69] On one question, however, Dianics stand firm: only women *born* women are allowed in their ranks. As with other second-wave feminist institutions that hold similar policies, such as the Michigan Womyn's Music Festival, this policy led to controversy as transgendered (male-born) women applied for membership. The aforementioned high priestess told me that in the Circle of Aradia, intersexed people raised as girls have been admitted for inclusion; this is particularly interesting because it indicates a shift in the Circle of Aradia, and perhaps in Dianic Wicca as a whole, from a biologically essentialist understanding of gender differences to a socially essentialist one —men and women are still fundamentally different, still have fundamentally different "energies," but at least according to this priestess, those differences come from the experience of being raised in a gendered society rather than from physiological factors. Finally, another indication that Dianic Wicca is shifting in its attitude toward gender (though it would be unwise to expect acceptance of transgendered women any time soon) is the relatively new guardian movement. Guardians, a new ritual role in Dianic circles that may have originated in the Strega branch's role of Watchers,[70] guard the ritual circle from external disturbances. According to the high priestess at the Circle of Aradia, many guardians are "butch" lesbians—women whose gender identity is more traditionally masculine than that of most Dianic witches.[71]

As the feminist spirituality movement blossomed along with the rest of cultural feminism, as lesbians created separate spaces for themselves and spoke of spirituality alongside politics, gay men were developing similar ideas. One of them was the

founder of the first gay rights organization in the United States: Harry Hay. Although Hay lost the leadership of his organization, the Mattachine Society, just five years after its 1948 beginnings because of his ties to the Communist Party, his communism did not prevent him from thinking about religion in positive ways. Though he was not interested in mainstream, organized religions, Hay believed that both gay men and lesbians were special beings, fundamentally different from heterosexuals and destined to save the world from its self-destructive ways.[72] In 1979, Hay, Don Kilhefner, director of the Los Angeles Gay Community Services Center, and Mitch Walker circulated a flyer advertising a "spiritual conference for radical fairies"—in other words, radical gay men, though the word was also a reference to magical beings—at a retreat near Tucson, Arizona. Among those who attended, some were so inspired that they continued the meetings, and the Radical Faerie movement is now international.[73]

Faerie gatherings are notoriously unstructured, but they fall generally into the class of "neopagan," most commonly bringing aspects of Wicca together with practices and beliefs appropriated from a variety of Native American cultures. As Jay Hasbrouck describes them:

> Faeries generally agree that they are people who seek an anarchistic departure from what they see as the inevitable products of Western capitalist society: bureaucracy, competition, consumerism, alienated work, careerism, pollution, urban sprawl, oppressive hierarchies, corporate control, isolation and dissolution of a sense of community, sexual oppression and possessiveness, and heterosexism.[74]

Though Faeries are generally gay men, contemporary Faeries tend to view both sexual orientation and gender roles as oppressive social constructs; thus, unlike Dianic circles, Faerie communities are open, at least theoretically, to all sexes and genders as well as all sexual orientations. Like Dianic Wicca, and like the affirming movements discussed above, the Faeries have a radical and progressive vision of the future and a fluid understanding of gender roles.

CONCLUSIONS: GENDER, SEXUALITY, AND NRMS

Only in recent years has research on NRMs paid significant attention to questions of gender roles or sexual orientation; yet, with detractors and deprogrammers accusing alternative religions of promulgating homosexuality, homophobia, or both, examinations of these issues are important for a broader and more accurate understanding of NRMs. While relatively large numbers of LGBT people have joined LGBT-focused or LGBT-welcoming congregations within Judaism and Christianity, there are indications that many find in new and alternative religions the spiritual resources and the stance on gender and sexuality that they seek. Some are drawn to the indifferent organizations, relieved finally to join a religion where they are neither scorned nor (overly) heartily welcomed for their sexual orientation or gender identity. Others revel in the accepting religions, having rejected the accepting branches of Christianity or Judaism for reasons either related or unrelated to LGBT issues.

As with any population, unraveling the complicated reasons for religious attendance and apostasy among LGBT people is a challenging task, but understanding the stances of NRMs toward same-sex eroticism and gender fluidity is an important aspect of this endeavor.

NOTES

1. Rev. Susan Russell, interview with the author, June 19, 2003. An excellent perspective on this is provided by Mary-Jane Rubenstein, in "An Anglican Crisis of Comparison: Intersections of Race, Gender, and Religious Authority, with Particular Reference to the Church of Nigeria," *Journal of the American Academy of Religion* 72, no. 2 (2004): 341–65.

2. Intersexed people—those whose bodies are genetically or anatomically sexually indeterminate—are working for greater recognition and may eventually constitute a third sex in U.S. culture if they are successful.

3. An especially good example here is men who have sex with men (voluntarily or by force) in prisons, where sexual activity is related to gender identity more than to sexual orientation: the "top," or penetrator, retains his identity as a heterosexual male, while the "bottom," or penetrated, may be referred to as a woman regardless of his gender or sexual orientation.

4. See especially Michel Foucault, *The History of Sexuality,* vol. 1, *An Introduction,* trans. Robert Hurley (New York: Vintage, 1990); and David Halperin, "Is There a History of Homosexuality?" in *The Lesbian and Gay Studies Reader,* ed. Henry Abelove, Michèle Aina Barale, and David M. Halperin (New York: Routledge, 1993), 416–31.

5. These differences between nineteenth-century and twentieth-century expressions of friendship and love have sparked quite a few debates between historians of gender and sexuality. Useful resources include Lillian Faderman, *Surpassing the Love of Men: Romantic Friendship and Love Between Women from the Renaissance to the Present* (New York: Morrow, 1981); and Carroll Smith-Rosenberg, *Disorderly Conduct: Visions of Gender in Victorian America* (New York: Oxford, 1986).

6. For some of the official religious statements on homosexuality from the 1960s through the 1980s, see J. Gordon Melton, *The Churches Speak on Homosexuality* (Detroit: Gale Research, 1991).

7. Scholarship on gay and lesbian history has progressed to the point that there is a plethora of resources on this topic. These include (among many others) Leila Rupp, *A Desired Past: A Short History of Same-Sex Love in America* (Chicago: University of Chicago Press, 1999); John D'Emilio, *Sexual Politics, Sexual Communities: The Making of a Homosexual Minority in the United States 1940–1970* (Chicago: University of Chicago Press, 1983); and Toby Marotta, *The Politics of Homosexuality* (Boston: Houghton Mifflin, 1981).

8. Howard Becker was the first to add the term "cult" to the church-sect-denomination typology of religions. Contemporary sociological usage of this terminology is nicely summarized by Meredith McGuire, *Religion: The Social Context,* 5th ed. (Belmont, CA: Wadsworth, 2002).

43. See, for instance, Salvador Vidal-Ortiz, "Sexuality and Gender in Santería: LGBT Identities at the Crossroads of Santería Religious Practices and Beliefs," in *Gay Religion,* ed. Scott Thumma and Edward R. Gray (Walnut Creek, CA: AltaMira Press, 2005), 132. Vidal-Ortiz also notes that, as in other religions, in Santería bisexuality is sometimes elided by homosexuality (133).
44. On Baha'i see William S. Hatcher and J. Douglas Martin, *The Baha'i Faith: The Emerging Global Religion* (San Francisco: Harper and Row, 1984); Michael McMullen, *The Baha'i: The Religious Construction of a Global Identity* (New Brunswick: Rutgers, 2000); and vol. IV, chap. 10; on the Children of God, see William Sims Bainbridge, *The Endtime Family: Children of God* (Albany: State University of New York Press, 2002); and vol. II, chap. 8; on Christian Science see Stephen Gottschalk, *The Emergence of Christian Science in American Religious Life* (Berkeley: University of California Press, 1973); and vol. II, chap. 5. Another interesting case of ambivalence is the Church of Scientology (see vol. V, chap. 8). I have been able to find no mention of sexual orientation or gender identity in the very few scholarly sources on this religion, and other sources are difficult to use because they tend to be skewed heavily in favor or in condemnation of this highly public and highly controversial group. Early government suspicion of Scientology seems to have included accusations of homosexuality (cf. Ron Schaffer, "Matriarch Surrenders," *The Washington Post,* Metro Edition, August 8, 1978, C1); in the twenty-first century its detractors accuse it of homophobia (cf. George Rush and Joanna Molloy with Jo Piazza and Chris Rovzar, "Homophobia Claims Dog Scientology," *Daily News*

[New York], Sports Final Edition, "Gossip" section, 28). In response to a query from the author regarding its official position on homosexuality, the Church of Scientology responded as follows: "The Church of Scientology does not dictate sexual preferences. Scientology is a practical method of improving conditions in life and works to increase a person's abilities, give higher IQ and better reaction time, greater ability to solve his problems in life—things of this nature" ("Ron," personal communication with the author, June 29, 2005).

Millennial Destiny: A History of Millennialism in America

Dereck Daschke

Millennialism or millenarianism, the expectation of a time in history when the world as it exists will be fundamentally transformed, is an almost universal aspect of human cultures in one form or another. It may originate in the cycles of nature: life and death, waking and sleeping, day and night, the moon phases, or the seasons. It may simply be the purest expression of hope, an idealization of the future, or a wish that makes the unknown easier to embrace. Still, few cultures have embraced millennialism as such a basic component of its national DNA, as it were, as Americans have.

The origins of American millennialism date to its own origins as a national entity, beginning before American nationhood with Christopher Columbus and "the discovery of the New World." This designation, which is a deliberate echo of the apocalyptic transformation of the world into the "New Heaven and the New Earth" of Revelation 21:1, would not be bestowed on the American continent until long after Columbus's arrival there. Still, it conveys exactly what sacred significance it held for European Christians—not the least of whom was Columbus himself. In the course of his expeditions to and explorations of the lands unknown to European Christendom, Columbus wrote in his journal that his discovery was both the apocalyptic New Heaven and Earth and the lost Garden of Eden. He wrote, too, that he was certain that he had been guided as God's messenger to these lands. Christopher ("Christ-bearer"), in fact, depicts himself as an overtly messianic figure in his books *The Prophecies* and *The Privileges,* as one who fulfilled Biblical prophecy as well as brought the Catholic faith to the unsaved heathen populations of the world. As they continued to be in the America of the Puritans and the early United States, the unconverted native peoples of the New World signified one of the last barriers to Christ's Second Coming. Columbus determined that the end of the world would occur in 1650.[1]

While Columbus's view of his own sacred purpose in history was not widely shared, that of his "New World" soon would be. With the Protestant Reformation following almost immediately on its heels, the appearance of this pristine land at

virtually the same time as the "true" Church had thrown off what it had identified as the yoke of the Papal Antichrist could hardly be a coincidence. As read through the grand apocalyptic narrative of the Biblical book of Revelation, the Reformation signified the opening of the fifth seal (Revelation 6:9–11), and thus the time subsequent to it, the time of the sixth seal. All led up to the climactic events of the last seal, the seventh.[2] Protestants thus felt themselves to be living in significant times indeed.

THE MILLENNIAL ROOTS OF PROVIDENTIAL HISTORY

The particular activity of institutional reform and resistance that the Reformation unleashed in England became infused with millennialism during the English Civil War. The perception that the Reformation had marked one of the moments in the apocalyptic drama of Revelation naturally held the same lens to the British monarchy and its ally, the Church of England. This mixture of religious and secular power cast the king of England, the figure in the seat of this "unholy" power, in the role of the Antichrist.[3] In particular, tensions came to a head under King Charles I as a group of reformers agitated to "purify" the Anglican Church of any elements not attested to in Christian Scripture. These reformers became known, at first derisively, as "Puritans."[4] One such sect, meeting resistance and fearing persecution, fled to Holland, but the permissiveness of that culture threatened their way of life as much as the English king did. In 1629, Puritans formed the Massachusetts Bay Company to create an opportunity to settle in the New World and create a society in the image of the Israel of the Old Testament, where church law would undergird society as Mosaic law once had. These settlers at first viewed themselves as exiles, like the Jews conquered by the Babylonian empire, but they were later recast as religious travelers of a different sort: Pilgrims. This designation came into vogue prior to America's First Great Awakening in the 1740s and reflected notions prominent in Puritan theology of the time—that America was now the Chosen, Elect, or Redeemer Nation that would usher in the Millennium, as Israel, Rome, and England once all were.[5] From the shores of this literal "New World" would salvation and peace come to all.

Key to Puritan thinking about history is the notion of *Providence,* which it presents as unfolding in a specific, predetermined way so as to unveil God's will on Earth. Though its more immediate roots are in the Calvinist belief in predestination, Providence almost perfectly transposes the Jewish understanding of covenantal or salvation history, in which Israel, as the original Chosen Nation, received special protections and obligations through the law that Moses delivered at Sinai following God's salvation from their Egyptian oppressors. With this legal relationship established, an earlier covenant, the promise of the land of Canaan to Abraham's descendents, could now be completed. This ideal state of affairs was not to exist for very long, however. The unified kingdom of Israel under David and Solomon split in two, and the people fell away from the Law. After a series of bad kings in both kingdoms, the kingdoms were "given over" to other nations in conquest. The Northern kingdom, Israel, never recovered, but the Southern kingdom, finally conquered by the Babylonian empire in 587 BCE, saw its ruling and priestly classes exiled. Its

subsequent transformation of the Israelite religion produced the foundation not only for Judaism as we know it today but Christianity as well. In exile, on the one hand, the themes of salvation and return took on a more immediate poignancy, as the Judeans—now known as "Jews"—longed for a return to their land and a restoration of their relationship with God. On the other, the situation also allowed Judaic concepts of salvation, Promised Land, and exile itself to develop powerful metaphorical capacities to explain the meaning of events in history. Moreover, with the Judean monarchy destroyed by the imperial invaders, God's other important covenantal promise, an eternal kingship in Jerusalem from the line of David, took on a new urgency. The historical situation the Jews found themselves in cried out for the anointed one of God, or "Messiah," who would restore the people of Israel to their former glory in their Promised Land. For its part, the Babylonian empire would also coexist with Egypt in Jewish (and then, especially, Christian) culture as the symbol *par excellence* of a wicked and oppressive empire.

It was also in the years after the Babylonian Exile and the Jews' subsequent subjugation to the Persian, Greek, and Roman empires that followed that the genre of apocalyptic literature arose. Apocalypses were often intensely concerned with history and its mysteries. Why were God's righteous so persecuted? Why did the ungodly prosper? When would the apparent chaos of history end and God re-exert his control over it? When would the Messiah finally come to overthrow the oppressors and restore God's people to their place of prominence in the world? In other words, apocalyptic writers ached for that time of millennial transformation when all that had gone wrong in the past would be set aright. In this expectation, they borrowed from the prophetic warning of the Day of the Lord, a time of final judgment to be brought by God against the peoples of all nations—including Israel. This conceptualization of an end of time, itself, was imbedded in the view of the span of human history as a Great Week, culminating in a final cosmic Sabbath, where, as he had at the beginning of time, God and humanity would rest at the end.[6]

This end time eventually became associated with the Messianic age. The Messiah did not just restore Israel but the whole world—after the Day of the Lord had purged the unrighteous. In prophetic reckoning, however, a divine day was worth 1000 human years, and thereby a determination of the length of human history on Earth began to take shape in some circles: 6000 years, paralleling the six days of Creation, followed by the Messianic age, a cosmic Sabbath of 1000 years. In addition, another type of historical structuring, apparent in cultures from Greece to India, also influenced the prophetic reading of history among the ancient Jews. In this schema, human history and its civilizations were subject to decline over time, usually marked by four different, distinct eras in which the first is an ideal, perfect age and the last—corrupt and chaotic—is the current one. But the transformation of this final era is imminent; a new time of perfection is at hand. In the end times, however, evil runs largely unchecked, and things get worse before they get better.[7] Nebuchadnezzar's dream of the statue of four metals in Daniel 2, which has had such a great impact on the apocalyptic interpretation of history up to our own time, demonstrates that this concept had been incorporated into Jewish thought at least by the Hellenistic age.

The millenarian tendency to view the world in stark terms of good and evil is often called by the name of an early Christian heresy, Manichean dualism. Unlike Manichaeism but like Persian Zoroastrianism, from which apocalyptic dualism in the Bible derives, in Judaism and Christianity the tension between the two plays out in a final cosmic battle, whose outcome is predetermined in favor of good. In Jewish scripture, the imagery and expectation of divine battle at the end of time is found mainly in two places. The first is the prophecy of the battle of Israel against the armies of Gog from Magog in the Book of Ezekiel (chapters 38–39), whose location, Har Megiddo, would come to symbolize the ultimate clash between good and evil for almost the whole of Western civilization: *Armageddon.* The second is the latter half of the Book of Daniel, a series of apocalyptic prophecies written in stunning, coded imagery. These chapters (Daniel 7–12) describe the treachery and final defeat of a truly wicked king, one who defiled the Holy Temple and challenged the host of heaven. Historically, these chapters allude to the reign of the Syrian-Greek ruler Antiochus IV Epiphanes in about 168 BCE, but its magic and genius lie in its symbolism. Daniel obliquely paints a picture that yet clearly seems to describe some specific ruler, his wickedness toward the righteousness of God, and his divine comeuppance. But once the historical referent is lost to successive generations, the visions could potentially apply to any oppressive ruler, anywhere, at any time. Add to this scenario a truly cryptic timeline that, nonetheless, definitively established that the restoration of God's Temple and His people would occur on a divinely ordained schedule, and an entire area of Biblical prophecy is born: millennial date setting.

The complete covenantal, prophetic, and apocalyptic system was itself reinterpreted with the rise of Christianity so as to no longer apply exclusively to Israel and the Jews but to all people. For the most part, Christian salvation was not about earthly protection but spiritual redemption, and Jesus's eschatological exhortations on the coming Kingdom of God were meant to prepare his followers spiritually for the afterlife in heaven. But the expectation of a literal overthrow of one's enemies at a predetermined time in human history proved too compelling to abandon entirely, and some time after Jesus's death led to speculation about his *parousia,* or Second Coming. All of the overt apocalyptic elements of the Christian movement came together in what has become the definitive and paradigmatic expression of end-time belief: The Revelation, or (in Greek) *Apocalypse,* of St. John. In Revelation 13–20, the entire political scenario of the end times is laid bare. Satan, always at work behind the scenes of worldly powers, makes his final, great move to ensnare and enslave humanity by sending a human leader (described as a Beast from the Sea, and later seen as the definitive type for the Antichrist) to promise peace through the unification of all governments, economies, and religion—an imperial system modeled on imperial Rome but designated in Revelation as *Babylon,* in honor of the great oppressors of God's Chosen. Of course, the righteous know this is a trap, and the religion is a false one. Scores will be murdered for their resistance, some will fall into the hands of the enemy, and others will continue to fight until Christ's triumphant return. And return he does, casting Satan and the Beast into a lake of fire and chaining Satan

under the Earth during Christ's millennial reign of peace. The end of this 1000-year period sees the final defeat of Satan and then God's judgment upon humanity.

Revelation was a controversial inclusion into the Christian canon—so much so that its this-worldly eschatology, the depiction of end-time events literally occurring in the terrestrial realm, had to be respiritualized by St. Augustine (354–430), in his treatise *City of God,* once Rome was no longer "Babylon" but the home of the Church itself. Augustine lays the foundations for *postmillennialism,* wherein history prepares humanity for a final, perfect age, by asserting that the Christian millennium began with the experience of the Holy Spirit and subsequent establishment of the Church by the apostles on Pentecost.[8] The events described in Revelation are therefore metaphors for one's own spiritual struggles and victory in Christ. Yet this scripture has always been for some group, somewhere, the key to history. With the Protestant Reformation's emphasis on personal and inspired interpretation of scripture, on the one hand, and its identification of the Pope and the Catholic Church with Antichrist and Babylon, on the other, the apocalyptic timetable evinced in the Book of Revelation was once again apparent in the events that were transpiring in European Christendom. The discovery, a literal revelation, of an unknown, pristine land nearly simultaneously with the schism with the Catholic Church could hardly be coincidence. It had to be Providence, assumed the Puritans and other Protestant Reformers, that made the New World available for the true Church at the height of its oppression. The society established there would be what Massachusetts Bay Company Governor John Winthrop (1588–1649) pronounced "a city upon a hill" during the Mayflower's voyage to America, alluding to the words of Jesus in the Sermon on the Mount, who proclaimed his followers "a light of all the world" (Matthew 5:14). Yet Jesus himself was paraphrasing the prophet Isaiah, who carried the word of God to the people of Israel: "I have given you as a covenant to the people, a light to the nations … that my salvation may reach to the ends of the earth" (Isaiah 42:6, 49:6).

"GOD'S NEW ISRAEL" IN PURITAN AND REVOLUTIONARY THOUGHT

While it is inaccurate to paint all the citizens of colonial New England with the millenarian brush, the idea of America as a New Israel and a harbinger for the salvation of the world was an underlying part of the region's "provincial mythology" for most of a century, up through the First Great Awakening. It would find expression in the writings and sermons of dozens of influential preachers, the greatest among them being Increase (1639–1723) and Cotton (1663–1728) Mather, Joseph Bellamy (1719–1790), and most especially Jonathan Edwards (1703–1758).[9] In 1742, Edwards wrote of the millennial mission of the American colonies,

> And if we may suppose that this glorious work of God shall begin in any part of America, I think, if we consider the circumstances of the settlement of New England, it must needs appear the most likely, of all American colonies, to be the place whence this work shall principally take its rise. And if these things be so, it gives us more abundant reason to

> hope that what is now seen in America, and especially in New England, may prove the dawn of that glorious day.[10]

This cultural context, of course, also served to incubate the themes and ideas that set the stage for the American Revolution. The Calvinist, prophetic view of history established in the New World by the Puritan settlers took on a Manichaean outlook with regard to the Catholic French (especially during the French-Indian War) and the Anglican British, painting both as manifestations of evil forces against the work of the righteous. At the same time, the religious virtues of the Protestant Reformation influenced thinking about what civil society in God's Kingdom should entail: self-sufficiency, a commitment to liberty as a means to truth and counter to tyrannical oppression, and a suspicion of institutional authority.[11] There was also a tension between recognition of inherent human depravity on the one hand and the hope for the progress and transformation of individuals within a divinely ordained community on the other. Thus, in the years leading up to the First Great Awakening and through the sermons and writings of Edwards, the Mathers, and others, the apocalyptic orientation of postmillennialism emerged in a distinctly American understanding of society having an obligation for constant improvement and a capacity for a form of this-worldly perfection. In the postmillennial perspective, the millennial age, rather than appearing with the total upheaval of all human governmental systems, has proceeded through them since the time of Christ's resurrection. With God's divine blessing on the New World colonies culminating in the mass spiritual movement and explosion of conversions known as the First Great Awakening, many among the New England clergy saw a great turning point in world history at hand, a final marker before the fulfillment of prophecy and the establishment of the Kingdom of God on Earth.[12]

On the other hand, these rubrics for understanding opposition and conflict, implicitly or explicitly framed every threat to their identity as God's elect, the American Israel, in the imagery and rhetoric of the cosmic war between good and evil. This stance foreshadowed the more pessimistic outlook of *premillennialism,* which broke through the optimism of the American nineteenth century and persisted into the twentieth, both in times of crisis and in times of peace. What changed, however, was the identification of the enemy and the righteous cause that must be defended. This new paradigm for the interpretation of Biblical prophecy not only compelled the vicious Wars of Religion in Europe but also helped to frame nearly every conflict in America's first two centuries—and several afterwards, as well, up to our own time.[13]

Yet, all apocalyptically motivated communities face a problem when history fails to come to a close, despite their best efforts to prepare for it or even help it along. The discipline and purity of behavior required to meet the New Age can be sustained for only so long, and in time, and especially with the next generation, people begin to "backslide." The reality of human behavior ceases to match the ideal, and the gap between the two is a measure of the failure of the community as a whole. Not only are clear vices like gambling and drinking indications of its fall from grace, but so

is losing a constant focus on one's redeeming mission in favor of more worldly concerns. This state of affairs describes the view of New England preachers in the generations subsequent to the founding of the Massachusetts colony, and this sense of loss and pessimism about the world around them gave rise to the next great surge in American millennialism, the First Great Awakening, a period of religious revival in the early 1740s, voiced especially by the redoubtable Edwards.[14] But Edwards' millennialism, like that of the First Great Awakening in general, was of the progressive, postmillennial type. In his "New Light" way of thinking, the Holy Spirit was leading America—and the world, as the revival movement was also a European phenomenon—back to its spiritual destiny by the effervescent workings of "vital religion." Revivals inspired conversions to Christianity; at some point the "concert of prayer" was expected to achieve a critical mass of righteousness, and even kings and other government men participated in the work of bringing about the Kingdom of God on Earth, not as rulers or politicians, but as humble Christians like any other.[15]

By the 1750s, as the effusiveness for "vital religion" also dissipated over time—even Edwards himself was expelled by his community as the First Great Awakening resoundingly came to an end—the political concerns and national framework of the Puritans' millenarianism returned to the fore in New England once again, brought about by a series of wars with and ultimately victories over the "Antichristian" French settlements in North America by the armies of the now Protestant British.[16] However, New England ministers did not frame the goal of these victories over Antichristian rulers as their Puritan predecessors had, in terms of the defeat of those who opposed true religion. The cause now was *liberty,* both religious *and* civic—in fact, as Alexis de Tocqueville observed later, at the time of the Revolution, there was perceived no separation between the two types of freedom in the minds of Americans.[17] The French Canadian colonies were loathed precisely because of what the French Catholic mixture of oppressive religion and oppressive government threatened for the American colonies—a conspiracy of Satan to use kings and priests to enslave the colonists and snuff out religious freedom before it could flourish. In a radical reversal of the millennialism of their Puritan forefathers, an exceedingly virtuous and free civic state became the precondition for religious liberty.[18] Within this civil millennialism, if civic freedom were guaranteed, so too would true religion flourish around the world, as only in a free society could the spiritual liberation from sin be possible.[19] Such expectations culminated in the American Revolution. The country was once again at the forefront of God's redeeming work in history. America's millennial and Biblical role was never clearer. As Cyprian Strong preached in 1777, "There is no one (I trust) whose mind is not at once struck with the description of Israel, as being a most perfect resemblance of these American colonies; almost as much so, as if spoken with a primary reference to them."[20]

In this way the Puritan settlers were reinterpreted not as theocrats but as the original champions of "the Sacred Cause of Liberty," and the entire history of America as the setting for a progressively climactic cosmic battle between good and evil, which the Revolution would surely resolve for all time.[21] However, at this point in American history, evil was not primarily Satanic, but signified oppressive, tyrannical

governments. The apocalyptic battle shifted from the souls of men to the realm of nations.[22] Samuel Sherwood wrote in 1776, "Liberty has been planted here; and the more it is attacked, the more it grows and flourishes. The time is coming and hastening on, when Babylon the great shall fall to rise no more; when all tyrants and oppressors shall be destroyed forever."[23] The Revolutionary War was also interpreted as the stone that smashes the statue of four metals in Daniel 2, putting an end to all other forms of government, especially the weak mixture of church and state found in the European nations of the time, represented in Daniel by the feet of iron and clay. Moreover, Antichrist should now also be sought in the arena of world affairs.[24] To wit, with the sad dénouement of the French Revolution into the wars of the Napoleonic Empire, American ministers cast Bonaparte as Antichrist in the cosmic drama of history (with the Catholic Church now playing the Whore).

America's Providential destiny had never been so clear or assured, it seemed: the struggle between liberty and tyranny was nothing less than the struggle between heaven and hell, and thus in its role in liberty's victory, America would surely be the seat of God's millennial kingdom.[25] Ironically, this very concern with spiritual consequences of tyranny, identified in the clergy's rhetoric with the enslavement of the Jews in Egypt, planted the seed of the religious argument against the actual practice of slavery in the New World—and thus soon turned its millennial assuredness against itself.

THE NINETEENTH CENTURY: PROGRESS AND PREMILLENNIALISM

The success of the American Revolution sustained the new nation's self-image as a force guided by destiny and a beacon to the world. However, the remarkable unity of civic and religious views of America's mission forged by the Revolution dissolved in its wake. Yet, the postmillennial hope of a history of progress, evinced not only by Protestant ministers but also statesmen like John Adams (1735–1826) and Thomas Jefferson (1743–1826), continued to shape Americans' thinking about history and themselves as a nation, but now along separate, if often parallel, tracks.

The civil view of the country's destiny that came to the fore during the Revolutionary War continued with an optimistic sense of the possibilities that lay ahead, and defeating the British on American soil again in the War of 1812 only solidified the young country's certainty of its place in the world and its history. Freed from the earthshaking events of the Revolution, the religious notion of Providence took on a more secular shape as uninterrupted *progress.* Americans hence took advantage of the blessings of liberty that it had secured to create a landscape of social amelioration and communal utopianism—often with the stated goal of creating a model society that will bring about the golden age of humankind. Religious experimentation made manifest the promise that civil liberty held for religious liberty, expanding the ranks of antiestablishmentarian, utopian, and often millennialist groups across the continent, including the Shakers and New York's Oneida community. The optimism of progress also revealed its clear connection to the American continent with

the westward expansion toward the Pacific Ocean, a movement known by midcentury as *manifest destiny.*[26]

The religious movement that perhaps most perfectly captures the moment when the United States' cultural optimism and religious progressive millennialism were both in ascendancy is the Church of Jesus Christ of the Latter-day Saints.[27] Also known as the LDS Church or the Mormons, it began with a 14-year-old boy named Joseph Smith (1805–1844) in upstate New York. Smith was confused by the explosion of revelations and prayed that he might know which one heralded the true church. His prayer was answered by a vision of God Himself, who told him that the true church was lifted from the Earth after the apostolic age of the first Christians, and thus all the churches in existence were apostate and false. Smith himself reinstated the apostolic church in preparation for Christ's Second Coming, through an ongoing series of revelations not only with God, but also Jesus Christ, John the Baptist, the apostles Peter, James, and John, and a previously unknown prophet from ancient Israel, Moroni. This last figure directed Smith to the location of a codex of Golden Plates that contained a New Testament of Jesus Christ: the Book of Mormon.

A 2005 *Newsweek* cover story on the Mormons noted that the era in which they emerged in American history was much like the current one, filled with

> evangelical energy, deep patriotism, economic transformation, sharp political divisions and anxiety about foreign forces' inflicting harm on the homeland. Smith's teachings place America at the center of existence at just the moment in our history—in the wake of the successful War of 1812—when nationalism was on the rise.[28]

To say that the Latter-day Saints place America at the center of existence goes beyond even the millennial visions of either the Puritans or the revolutionary republicans of the previous two centuries. According to Mormon theology, America will fulfill the eschatological purpose of gathering in and purifying the saints. Brigham Young (1801–1877), Smith's successor and the man known as "the American Moses," wrote in his *Discourses,*

> The American continent will be Zion, for it is so spoken of by the prophets.… [T]his is the continent whereon the Lord has commenced his work for the last time, and whereon Jesus will make his appearance the second time, when he comes to gather and save the house of Israel.… Zion will extend, eventually, all over the earth.[29]

Specifically, two American locations will play central roles in the new millennium: The New Zion of Salt Lake City, established by Young, and Jackson County, Missouri, which, echoing Columbus, not only will be the actual site of Christ's Second Coming but was also the location of the Garden of Eden.[30]

Thus the LDS Church establishes America as the beginning and end of sacred space, but the eschatological connection to the country and the continent does not end there. Noah's flood most likely began in the Mississippi Basin.[31] Ancient populations fleeing both the Tower of Babel and the Babylonian conquest of Jerusalem made their way to this continent, creating the peoples known as the American Indians. It is, in fact, this second group of ancient immigrants, a family of Israelites led by

a man named Lehi, whose lives are recorded in the Book of Mormon and whose descendents witnessed the appearance of Jesus Christ in America after his resurrection. Christ informed them that their Messiah had come and would later establish the Messianic age in the land where they stood. Even the work of the Republic, including the Revolution and the establishment of religious and civil liberty under the Constitution, was divinely ordained and prophesied.[32] Given how closely Smith's visions tied the particularity of American history and geography to the story of the ancient Israelites, it is hardly surprising that the Mormons adopted the American millennial strategy of identifying themselves as the New Israel.

While the Mormon millennial vision shares most of the standard Christian apocalyptic scenario for the end times, including the battle at Har Megiddo (Armageddon), as with most Christians it is largely subsumed by a focus on spiritual matters in the present. When Smith received the authority in 1829 to reinstate the true Church on Earth, he understood this event to signal a new era of Gospel work unlike any that had existed in the past, for this was a "dispensation for the fulness [sic] of times."[33] In a later vision, the prophet Elijah told Smith, "Behold, the time has fully come, which was spoken of by the mouth of Malachi, testifying that [I] should be sent, before the great and dreadful day of the Lord come.… [T]herefore, the keys of this dispensation are committed into your hands; and by this ye may know that the great and dreadful day of the Lord is near, even at the doors."[34] Smith's followers were certainly inclined to believe that he would be the last prophet before the return of the Christ.[35] Even so, the Mormon approach to the End exemplifies the postmillennial world view that permeated both sacred and secular America in the nineteenth century, and even borrowed its keyword, progress. The emphases on morality, purity, family, and industry central to the Mormon religious and social ethic not only must be seen in light of their roles in preparing individuals and their world for the Second Coming, but must also be acknowledged to reflect prevailing American values in an age that seemed to offer unlimited opportunity to expand, improve, and reform. The Mormons go secular America one better, though, by offering the potential for *infinite* progress, right on into the afterlife, up through divinity itself.[36]

THE SECOND ADVENT OF CHRIST

Perhaps inevitably, the same national optimism that buoyed the Mormons in even the most treacherous and murderous parts of their trek across the wilderness of the American West began to ring false in some ears, especially with the painful problem of slavery continually exacerbated by the westward expansion into new territories. The promise of the Age of Progress could appear to be human hubris, an absurd boast in the face of obvious, and fatal, flaws. Perhaps this positive outlook really masked a deep moral decay that could be eradicated only by divine coup. The world view of unhindered progress shared by so many Americans for so long was about to meet its first popular challenge, a premillennial, apocalyptic warning issued by another upstate New Yorker, a man named William Miller (1782–1849).

Though an inheritor of the cultural Puritanism of the eighteenth century, Miller embraced the skeptical deism of many of the Republic's statesmen. However, unlike most of his countrymen, he was disillusioned by his participation in the War of 1812.[37] In 1816 he began a two-year, line-by-line self-study of the Bible, a process intended to reconcile all the seemingly contradictory details of Scripture but which also inclined Miller, like his spiritual forerunners, to reconcile Scripture with contemporary history. Taking the periodization of events laid out in the Books of Daniel and Revelation as a prophecy for the totality of history and assuming the "abomination of desolation" of Daniel 8 to be the establishment of the Papacy in 538 CE, Miller determined that the Second Coming of Christ would occur about the year 1843. When he began to preach the impending end publicly in 1831, he was soon delivering sermons in churches all over New England. When a Boston minister named Joshua Himes (1805–1895) took up the Millerite doctrine and started publishing the periodical *Signs of the Times* to proclaim the significance of the period and the message of Christ's coming, the foundations for a mass movement were laid.[38]

As the initial period predicted for the *parousia* between March 21, 1843, and March 21, 1844, came and went, the Millerites numbered somewhere between 10,000 and 100,000 adherents.[39] The failure of Christ to return at the expected time, rather than undermining support for the movement, instead focused all hopes on a new date, October 22, 1844.[40] With this date set, the movement reached its peak in numbers and intensity, and spread through most of the Protestant denominations in the United States. Skepticism and outright opposition to the movement had always existed, but as the date approached, followers encountered outright hostility in many places. Critics accused them of mental unbalance and weakness, nonconformity, immorality, promiscuity, and giving money to Miller for his own personal gain (not unlike unconventional and apocalyptic religious groups before and after them).[41] Still, the conflict with the world around them only confirmed their Manichean outlook, which placed them incontrovertibly among the righteous who would witness firsthand the Coming of Christ. Businesses were closed, debts were forgiven, and fields went unplanted. Finally, October 22 arrived, and people waited to greet the returned Messiah. And wait they did, until it was clear that the time was, in fact, not at hand—an event later called "the Great Disappointment."

While the Great Disappointment did cause most of the faithful to abandon Miller's prophetic system and return to a history less fraught with immediate cosmic significance, others maintained the core event that Miller predicted had, in fact, transpired: Jesus Christ left the Holy of Holies of the heavenly Temple. However, they asserted, he tarried to prepare the Temple before his return to Earth. These believers became known as Adventists; the largest group of which, led by a prophetess named Ellen G. White (1827–1915), defined themselves in opposition to an effort by Catholics and politicians to establish an official Sunday Sabbath in the United States. This matter as read by the inheritors of Miller's prophetic mantel was a clear harbinger of the reign of Antichrist; the sacred structure of time itself, as established by God in the Fourth Commandment, was arrogantly being eradicated by an unholy alliance of a

false religion and a government all too willing to deliver it the power it demanded. To the Seventh-day Adventists (SDAs), it was a scenario straight out of the Book of Revelation.

The continued failure of Christ's bodily return forced White to examine the spiritual state of the world to look for signs that signaled his imminent arrival or explained his absence. As a result, ironically, the ideology of the group moved away from its pessimistic premillennial orientation toward more traditional American postmillennialism.[42] White's "Spirit of Prophecy" claimed that Christ's delay was due to humans' sorry moral state and more time had been granted to improve the condition of the world. This new effort had interesting but unintended effects. In 1863 White began to emphasize a ministry of vegetarianism and general bodily health.[43] In fact, the SDAs' success in establishing not only well-regarded health centers and hospitals but also colleges and seminaries brought them right into the secular governmental systems they originally resisted, as it became feasible and advantageous to become accredited and part of the country's health care and educational systems.[44] For this reason, few would regard the SDAs today as anything particularly remarkable within the spectrum of American Christian denominationalism—until their apocalyptic past came back to haunt them.

Since at least the 1930s, some Adventists felt that the group had become too mainstream, too comfortable in their new relationship with secular society, to proclaim the ideas that defined their sole reason for being, namely the imminent Second Coming of Christ. One such group was the Branch Davidians, founded by Victor Houteff (1885–1955) near Waco, Texas. Houteff applied the principle of Protestant prophetic interpretation regarding the Seven Seals of the Book of Revelation to Adventist tradition, asserting that Martin Luther (1483–1546) "opened" the First Seal and Miller, White, and he himself opened the last three. This same interpretation of history was reapplied by Vernon Howell, better known by the messianic name David Koresh (1959–1993). Koresh, like Houteff, was rejected by the established SDA church for pressing an end-times message. Koresh gained control of the Branch Davidians in the early 1980s following revelations that identified him as the seventh angel of Revelation 10:7 and Cyrus of Isaiah 45.[45] Koresh was to father the Elders of Zion, the council that would rule on Earth with Christ in the millennial age. However, he himself would not see the age he would usher in. He predicted he would be killed during the battle of Armageddon waged in 1995 in Israel between the Branch Davidians and American military. Thus, when federal agents arrived on his doorstep in 1993, the script was already written, even if the time was unexpectedly early and the location of the battle had changed.[46] As a result, four Bureau of Alcohol, Tobacco and Firearms (BATF) agents and six Branch Davidians died in the first confrontation; at the end of the ensuing 51 day siege, when a fire broke out and consumed the Mt. Carmel religious center, 74 Davidians died, including Koresh and 21 children, all his. Interestingly, the connection between the Branch Davidians and the SDAs was never clearly made in the media's coverage of the siege—at the request of the SDA church. While the church still officially affirms the immanent Second Coming of Christ as well as the truth of White's prophecy, clearly for them, as

with most Americans, in a more hopeful time the apocalypse is best viewed at a distance.[47]

Both the Mormons' and the Adventists' schemes of history implied an unfolding of certain events in accordance with a plan for humanity. In the second half of the nineteenth century, a theology of *premillennial dispensationalism* codified a version of this understanding of time in such an influential way that its effects are felt to this day. However, as opposed to the historicism of the Adventists, which linked history with prophecy in a specific way, dispensationalism emphasized a more general periodization of history, linked to changing covenantal relationships between God and humanity. Most broadly speaking, dispensationalists recognize at least three major dispensations: the covenant with the Jews (reflected in the Old Testament), the New Covenant that followed Christ's crucifixion (the "Church Age"), and the Millennium that represents Christ's reign on Earth after the Second Advent.[48] Different interpreters recognized other dispensations as well, but the thrust of the system underscores its *futurism,* or the notion that Christ could return at any time, "like a thief in the night." Dispensationalism hence emphasizes the imminence of the millennium and the correspondence of current (and near-future) events with end-time prophecy without falling into the trap of date setting.

As a movement, dispensationalism was catalyzed by John Nelson Darby (1800–1882) and his group, the Plymouth Brethren, in England and Ireland. Darby started preaching his system in 1837; in 1859 he toured the United States where his message found the same fertile ground for premillennialism as Miller had but which did not rest the entire belief structure on specific dates and events beyond human control.[49] While Darby avoided applying Scripture literally to the past, he asserted that the future, specifically the time just prior to the millennium, would play out exactly according to the scenarios set forth in the Bible. In addition to the Books of Ezekiel, Daniel, and Revelation, Darby fleshed out the picture of the end times with the interpretation of specific other passages from the Bible, or "proof texts." From one, the "Little Apocalypse" of Mark 13, Darby contributed the notion of the *Tribulation,* a period of horrific strife to be suffered by those under the reign of Antichrist in the Last Days; from another, 1 Thessalonians 4:16–17, he provided premillennialist thought with the expectation of a *Rapture,* an event that translates the faithful to heaven prior to the tribulation. In addition, whereas Great Britain or the United States previously played the role of "New Israel" in millenarian scenarios, in Darby's system God's covenant to the Jews would finally be fulfilled, as the people of Israel gathered again in the promised land prior to the *parousia.*[50] As it took root in the United States after the Civil War, Darby's premillennial dispensationalism brought together a number of disparate elements in American Protestant theology around a Biblical literalism that gave authority to an antiestablishmentarian and anti-intellectual stance against secular government, modern academic scholarship (including Darwinism and academic Biblical scholarship), and the decidedly postmillennial optimism of liberal Christianity. The publication of the highly popular *Scofield Reference Bible* by Darbyite Cyrus Scofield (1843–1921) in 1909 solidified the pervasive influence of premillennial dispensationalism on fundamentalism and

evangelicalism, forms of Protestantism that shaped millennial thought throughout much of the twentieth century.[51]

Another millenarian group that emerged in the last decades of the nineteenth century was clearly influenced by both Adventist and dispensationalist eschatology. Charles Taze Russell (1852–1916) was raised Presbyterian but became increasingly disillusioned with what human institutions, from government to the various church organizations, offered in the face of the unremitting problems of worldly life, and also with how far both had deviated from their original purposes as expressed in the Bible. He attended an SDA meeting in 1870, but, like Miller, eventually charted his own path of understanding through the landscape of Scripture and prophecy, assessing history by way of prophetic calculations. Like the dispensationalists, his focus was on the premillennial gathering of the true church out of the global wasteland of false religions and human political systems. To this end, his wealth of publications, from the multivolume *Studies in the Scriptures* to widely distributed magazines and evangelical tracts, encouraged those concerned with the state of the world and the souls residing in it (his "Bible Students"; later, Jehovah's Witnesses) to separate themselves from all secular and other religious endeavors because these institutions were the Satanic "Babylon" of Revelation. Christ would return invisibly in 1874 to gather his "little flock" or "Bride"—the 144,000 of Revelation 7 and 14 who would rule with God in heaven. In 1914, he would reveal himself and his kingdom on Earth.[52]

The international tumult of World War I initially seemed to confirm Russell's predictions, but in time he set a second date, 1918, for the resolution of the war by divine means. Russell died before this hope was dashed. Russell's successor, Joseph Franklin Rutherford (1869–1942), reinterpreted 1914 as the time of Christ's invisible advent and fixed 1925 for the unveiling of the Kingdom. The failure of Christ to begin his visible rule at this time engendered a reevaluation of Witness theology and practice, but unlike their eschatological cousins, the Adventists, they responded by increasing their distinctiveness and separateness from the rest of society. These efforts took a variety of forms for which they are known today—the refusal to vote or serve on juries or in the American military, the rejection of un-Biblical celebrations from birthdays to Christmas, and the prohibition against blood transfusions. Yet none is more important than the shift in energies to door-to-door outreach missions. This evangelical work means to inform all those caught up in Babylon's vast web that it is not too late to stand on the correct side of the apocalyptic divide, if not as one of the 144,000, then as part of the Great Multitude identified in Revelation 7:9.[53] After this message of salvation is offered to the entire world, the millennial preparations will have been made and the groundwork for the *parousia* completed. This shift is not quite as radical as the one from pre- to postmillennialism as manifested among the SDAs, but still a far cry from the specificity of the prophetic stance under Russell. The last date for the appearance of the kingdom of God on Earth, 1975, came and went without much fanfare, as the mission to those in Babylon's clutches had long been refashioned as long-term and ongoing. Like the dispensationalists and the Adventists now, the Witnesses expect that Jesus could return at any time to

transform the Earth and all its human institutions into the ideal that they are meant to be.

THE TWENTIETH CENTURY: APOCALYPSE NOW

While the premillennialism of the Millerites and the Darbyites contrasts with the general optimism of the first half of the nineteenth century, they both tapped into an undercurrent of anxiety about the state of the American union, which exploded full blown between 1860 and 1864 as the American Civil War. This, as with the previous conflicts with other nations, encouraged in the American civil-religious mind-set an identification of the conflict at hand with the ultimate one; this interpretation was in no way undermined by the claim to it by both the North and South.[54] The sentiment on the Union's side that envisioned the war as a divine conflagration that would purge the nation of its original sin was captured indelibly by Julia Ward Howe (1819–1910) in "The Battle Hymn of the Republic." To say the least, the Revolutionary era's lofty rhetoric that conflated oppressive governments—then, monarchal and Catholic rule—with slavery was about to be put to the ultimate test. But the sheer horrors of the cataclysm, including the first assassination of an American president, not only allayed to a significant degree the faith in infinite American progress, but also shattered the bond forged in civil millennialism: that the role of the United States, especially in its battles, was weighted with eschatological import for the salvation of the world. In the twentieth century, the secular belief in obligation to use American power for good in the world continued in its crusade in World War I by making the world "safe for democracy," as President Woodrow Wilson, who believed this to be no less than the country's destiny, articulated the cause. Yet strictly religious millennialism by and large stayed out of the center of American consciousness until the last few decades of the century, first as a series of millennialist tragedies, then as the emergence of a powerful political force rooted in fundamentalist and evangelical Christianity, and then finally coinciding with the year 2000.[55]

If any wars earned the designation "Armageddon" on the basis of their sheer scope and horror, the two World Wars surely did. (World War I was, in fact, openly referred to in this manner.) Both stoked prophetic speculation among American evangelicals in the same way that wars had throughout the country's history. World War II seemed especially pregnant with signs regarding the identification of the Antichrist. Given Adolph Hitler's (1889–1945) aggression and anti-Semitism, and Benito Mussolini's (1883–1945) fascism and rule from Rome, both Axis leaders emerged as prime candidates, and certainly as the second "war to end all wars" spawned unprecedented devastation and hardship across the world. As the Axis powers threatened the sovereignty of many nations, an end-time scenario certainly appeared to be playing out on the global stage. Yet it was in the aftermath of World War II, following the deployment of two atomic bombs against Japan, the emergence of the Soviet Union as a military and ideological superpower to rival the United States, and the establishment of the modern nation of Israel subsequent to the discovery of the Holocaust, that the floodgates of millenarian interpretation of the times opened.[56]

What was unique about these events, however, was the way in which each brought strands of apocalyptic thought, long reserved for an evangelical minority, immediately and unshakably into the consciousness of the entire world. As it was at the beginning of the nation, so too in the Cold War era the unfolding of history perfectly meshed with a picture of scriptural destiny. Yet, in contrast to the millennial hopes for the city on the hill, at this time the expectation was not the progressive salvation of the world but its rapid destruction through nuclear strikes, for which the cause was generally assumed to be some entrenched conflict between the Soviet Union, the modern state of Israel, and the United States.[57] The establishment of Israel in 1948, in particular, was regarded with near euphoria among the millennial-minded since it signaled the close of Darby's "Great Parenthesis" of the Christian dispensation and thus the beginning of the millennial age. The capture of Jerusalem in the Six-Day War in 1967 produced the same effect.[58] The anxiety provoked among nonevangelicals by the instability of international relations, the Middle East, and the arms race became to a large degree symbolized by the "Doomsday Clock" set by the *Bulletin of the Atomic Scientists* at seven minutes to midnight, or doomsday—nuclear annihilation—in 1947.[59] This fear was effectively and repeatedly stoked by a number of prophecy interpreters who masterfully translated Biblical scenarios and apocalyptic warnings into commentaries on current events.

In their minds the awesome devastation of the atom bomb became inextricably linked with the Biblical epistle 2 Peter 3:10: "The heavens shall pass away with a great noise, and the elements shall melt with fervent heat, the earth also and the works that are therein shall be burned up." For these Christians, then, nuclear war was something that neither could nor should be avoided; it was part of God's plan, revealed to the Biblical authors and translated into the images of their times.[60] With the Cold War the Soviet Union emerged at the forefront of apocalyptic fantasies, largely by way of the long-standing identification in prophetic circles of Russia with Gog, the enemy to the north of the holy people in Ezekiel 38–39. This interpretation had been made since the nineteenth century, but it took on a new life with both the Russian Revolution in 1917 and the creation of the state of Israel.[61] Evangelists such as Billy Graham (b. 1918), Jerry Falwell (b. 1933), and Pat Robertson (b. 1930) advanced versions of this end-time scenario for decades, while writers and broadcasters, especially Hal Lindsey (b. 1929) and Jack Van Impe (b. 1931), made the case in enormously popular books and television programs.[62] Lindsey's *The Late, Great Planet Earth,* in fact, became the number one "nonfiction" bestseller of the 1970s, and despite the rapidly and radically changing international landscape, he has continued to write with certainty about the culmination of prophecy through *Planet Earth—2000 a.d.* (1997), into the twenty-first century. Their success also granted them access to political power with the election of Ronald Reagan (1911–2004), who brought other millennial-minded individuals into his administration. Reagan, a literal believer in Biblical end-times prophecy, was the driving force behind a massive nuclear buildup against the "evil empire" of Soviet Russia, and suddenly evangelical millenarians had a reason to take an interest in the forces of international politics, an ironic stance for many who felt that only God would make peace on the Earth or

destroy it, according to His plan and His will.[63] At the end of Reagan's first term, before fundamental changes in leadership in the Soviet Union made disarmament a political reality, the Doomsday Clock was set at three minutes to midnight.

Reagan notwithstanding, one curious feature of Biblical prophecy in the atomic age saw the end of American millennial exceptionalism. The United States had no role as the redeemer nation or the meliorating force of moral suasion to bring about the time of peace. In fact, those who sought such goals were seen as arrogantly trusting in the human potential to save the world at best, or at worse as unwitting dupes of the Antichrist, who sought disarmament prior to global enslavement. Moreover, far from God's New Israel, the United States, or its most prominent cities—New York, New York; Washington, D.C.; Los Angeles, California—became identified as Revelation's Babylon itself.[64] So, too, did the establishment of the United Nations, with its headquarters in New York City, correspond to the world government established by the Antichrist. Reviving a literary genre from early in the century,[65] apocalyptic thrillers found a ready audience, combining political conspiracy theories and the plot line from the Book of Revelation in novels from Pat Robertson's *The End of the Age* (1996) to the book and film *The Omega Code* of 1999 to Tim LaHaye's and Jerry Jenkins's *Left Behind* series, which became nothing short of a cultural phenomenon in the late 1990s through the 2000s.

AMERICAN BABYLON

This turn in prophecy against American society in some ways parallels millennialist developments in other areas of the religious and political scenes, which see the United States as an evil or oppressive force in the world and thus ought to be fought, resisted, or rejected. Such a stance could be found as far back as the Ghost Dance revitalization movements among the Native Americans of the West and Northern plains between 1870 and 1890. A modern counterculture emerged most clearly in the 1960s and 1970s, reacting to those disorienting and disillusioning forces that the Cold War imposed on Americans generally, and specifically to the crises of the Bay of Pigs standoff, the civil rights movement, the wave of political assassinations from John F. Kennedy (1917–1963) and his brother Robert (1920–1968) to black activists Martin Luther King Jr. (1929–1968) and Malcolm X (1925–1965), and, above all, the Vietnam War.[66] Alternatives to the current social order and its legacy of violence were sought desperately, giving rise to postmillennial religious and utopian experimentation not seen on such a grand scale since before the Civil War. "Hippies" eschewed just about every traditional form of American life for a time, adopting new forms of family, morality, economy, and spirituality in loose collectives. Young people either actively or implicitly protested the conformity of American culture that masked deep betrayals of American ideals, which they sought to restore. Even popular music became an agent of change, as musicians such as the Beatles (1967's "All You Need is Love"; 1968's "Revolution") and Bob Dylan (b. 1941) (1967's "The Times They are A-Changin'") transformed both art and political consciousness on a massive scale, imparting the sense that, to quote Dylan,

"the order is rapidly fadin'." The millennial expectations for the countercultural revolution were identified as the "dawning of the Age of Aquarius," thought to be a time of peace and harmony, a radical but peaceful transformation of the world as it existed at the time. The hippie ethos also pursued esoteric religions from the West (Spiritualism) and East (Hinduism, Buddhism, and the Chinese *I Ching*). This "New Age religion" emphasized interconnectedness, a concern for all living things (which also initiated the environmental movement), the expansion of consciousness, and the innate divinity of all people.[67]

These mostly benign forms of alternative spiritual experimentation appeared as direct threats to traditional Christian organization and values, leading to the rise of secular anticult and Christian countercult movements, which sought to end the danger to human potential (anticult) or of false religions (countercults). These movements themselves embodied post- and premillennial assumptions, respectively, about the significance of these "threats."[68] But in 1979, Peoples Temple, led by the Pentecostal preacher Jim Jones, shocked the world with actual violence. Jones, whose ministry was dedicated to rectifying the economic and racial injustices existing in the United States through the "apostolic socialism" found in the Book of Acts, became convinced that his efforts to transform American culture would meet with harsher resistance from "Babylon" in the form of an increasingly more fascist and militant federal government. He took Peoples Temple to Guyana, South America, where it formed a utopian "New Jerusalem" called Jonestown. (Guyana was also supposed to best survive a nuclear war, which Jones was convinced was inevitable.) When a California congressman, Leo Ryan, on a fact-finding mission at the behest of some of the members' families, was murdered at Jonestown, Jones believed there would be no escape from the forces of Babylon, and he and 912 of his followers committed "revolutionary suicide," believing they were not dying but escaping a painful and corrupt world that was not ready for their work on its behalf.[69]

This virulent stance against the federal government and its depiction as Babylon reemerged in the confrontation with the Branch Davidians and also in various conspiracy-minded militia groups in the 1990s. Like Jonestown and the Branch Davidians, the militia underground indelibly impressed their view of the world on American consciousness through a terrible act of violence. Timothy McVeigh (1968–2001), not a member of a specific militia but influenced and radicalized by them, blew up the Alfred P. Murrah Federal Building in Oklahoma City, on April 19, 1995, the second anniversary of the end of the fatal siege in Waco. One hundred sixty-eight people died in the blast. Militia movements in the 1980s and 1990s frequently combined fierce nativism and antagonism toward the American government with white power racialism and anti-Semitism, blending to a degree with apocalyptic race-preservation religious groups such as Christian Identity and Aryan Nation. The idea that the federal government is an enemy that must be destroyed to preserve the white race has served as a common touchstone among these reactionary conspiracy-minded groups, both secular and religious. They shared the common vision of an end of the "Z.O.G." ("Zionist Occupied Government") and its nefarious push for an "N.W.O" ("New World Order") through the white race's declaration of a

"RaHoWa" ("Racial Holy War") against the government and its Satanic allies in other races and religions.[70] A variation of this scenario plays out in the underground racialist novel *The Turner Diaries,* which apparently helped to shape McVeigh's ideology prior to his attack in Oklahoma City.[71]

The 1990s fantasy of domestic terrorism that fueled both *The Turner Diaries* and McVeigh, it could be argued, would most likely emerge in an America no longer in constant contention with an external enemy. For in no small part due to the relationship developed between Reagan and Soviet Premier Mikhail Gorbachev (b. 1931) over the arms reduction treaty in Reagan's second term (representing a radical change in both political course and millennial point of view from the American president), Gorbachev's policies of *glasnost* (openness) and *perestroika* (restructuring) brought about the fall of the Berlin Wall in 1989, an event that effectively marked the end of the Cold War and the beginning of the end of the Soviet Union. No proclaimer of Biblical prophecy foresaw the democratic revolutions that swept Eastern Europe and the Soviet satellite republics. It was a unilateral victory for the United States, now the only remaining superpower, won without launching a single nuclear warhead. And without a clear enemy on the national stage, it would need to adjust its sense of where to seek its military, moral, and ideological battles of ultimate importance.

THE NEW MILLENNIUM

As the 1990s drew to a close, the calendrical changeover to the year 2000 once again brought millennialism, even if a superficial kind, to the forefront of American consciousness.[72] Where there was actual "premillennial tension" to be found, it had mostly to do with the concern about the effect of the changeover on computers, which typically were designed only to store the last two digits of a year date, and so at that time faced the illogical prospect of "moving backward in time" when the date changed from "99" to "00." Not only did ordinary bankers, air traffic controllers, military personnel, doctors, and anyone else who relied on a computer chip become increasingly apprehensive about the potential for a massive technological meltdown on January 1, 2000, this vision of disaster for a time also became a unifying apocalyptic narrative among many of the same evangelists who capitalized on the prophetic significance of the nuclear age.[73] This potential glitch, called by the shorthand "Y2K" ("year two thousand"), prompted a massive computer programming effort in the final years of the decade—which was either highly effective or highly unnecessary, as the transition was made from 1999 to 2000 with nary a malfunction.

In addition to the looming technological collapse, the sense of dislocation from a familiar universe was reinforced by unnerving, violent religious events that came with seemingly ever greater frequency. Just a month prior to McVeigh's attack in Oklahoma came news of a deadly sarin gas attack in the Tokyo subway system by the Japanese apocalyptic group, Aum Shinrikyo. Two years later, 39 members of a San Diego group, Heaven's Gate, committed ritual suicide in order to board a spacecraft following the Hale-Bopp comet. Both groups, if not premillennial in the

traditional sense of expecting Christ's return, did share the sentiment that the human world was doomed to horrible decay and evil, though Aum confronted the situation with "fight" and Heaven's Gate with "flight."[74]

Fears of violence from unexpected places ran rampant in the 1990s. The fall of the Soviet Union had destabilized a number of long-simmering ethnic conflicts in the European Baltic states. Genocide went unchecked in African countries. Nuclear stockpiles became available on the black market. The assassination of Israeli Prime Minister Yitzak Rabin in 1995 destroyed the momentum of the Mideast peace process and provoked a violent *intifada* (uprising) among the Palestinians, casting the Holy Land under a dark shadow of violence once again. And yet, as upsetting as these conditions in the world were, for all intents and purposes, the 1990s were a time of peace and prosperity in the United States. Even the specter of a terrorist strike during the millennial celebrations remained just that—a specter. The decade ended with the disputed presidential election of George W. Bush, son of a president and a born-again Christian with a strong evangelical base. If Bush's millenarian world view (seemingly inherited from Reagan, not his own father) was not evident during his campaign for the presidency, world events would soon enough bring Americans starkly face-to-face with it.

September 11, 2001, transformed the United States instantaneously in a number of ways, especially in that it demanded that the country again define its role in the world by confronting an enemy. Yet the threat presented by the 19 hijackers of the planes on that day, apparently operatives of an extremist Islamic terrorist organization known as al-Qaida ("the base") and directed by exiled Saudi cleric Osama bin Laden (b. 1957), was formidable not because of its military or ideological power, but because the threat itself was elusive, unconventional, and driven by religious motivations, rather than clearly nationalist or expansionist goals. In foreign policy expert Samuel P. Huntington's (b. 1927) phrase, it was a "clash of civilizations," a final challenge to the democratic legacy of the West that it could neither ignore nor afford to lose.[75] Moreover, to President Bush and his conservative religious base, the attacks reawakened not only the sense that the United States needed to secure individual freedom from tyrants, at home and abroad, but also that this was a religious mission, a calling by God, and those who opposed it served the side of evil. In this environment, Bush's religious outlook framed the response to al-Qaida once again in Manichean terms.[76] The enemy was not a small network of terrorists, but "terror" itself; the perpetrators were not criminals who should be captured and tried, but fanatical evildoers, driven to murder by the hatred of American freedoms.[77] Bush's global War on Terror was more than a military response to the worst attacks on American soil in history. It was also a way to define and confront the symbolism those attacks represented. But as the War on Terror operated in more and more symbolic realms, it needed an appropriately symbolic enemy.

Modern prophetic interpreters had long been interested in the antagonistic potential of Iraq under the dictatorial rule of Saddam Hussein (b. 1937). Iraq corresponded geographically to ancient Babylonia, and the appearance of a ruthless tyrant there who contended with Israel (or God's other Chosen Nation, the United States)

fit the ancient mold of Antichrist or the First Beast of Revelation perfectly. Hussein's invasion of Kuwait in 1990 and his subsequent defeat by an American-led worldwide coalition seemed poised to bring about end-times events in a quite literal fashion.[78] But President George H.W. Bush (b. 1924) declined to remove Hussein from power, effectively leaving the apocalyptic drama on hold until his son's administration. Carry-overs from the first Bush administration, especially Vice President Dick Cheney (b. 1941), the Defense Secretary during the Gulf War, strongly advocated the overthrow of Hussein from the earliest days of George W. Bush's presidency. For them, this act catalyzed democratic reform and the spread of freedom in the Mideast and speeded the final defeat of an enemy of the United States and Israel.[79] Bush and his administration garnered support for Hussein's overthrow by conjuring images of atomic destruction at the hands of an unchecked enemy in rhetoric largely unseen since Reagan's first term, despite the failure of UN weapons inspectors to find any evidence of weapons of mass destruction or programs for their development. Recalling the antipathy of prophecy interpreters toward both the UN and international cooperation since the Reagan era, Bush not only disregarded these findings but essentially sidestepped the UN and other countries (with the major exception of Great Britain) to invade unilaterally. Even before the American invasion of Iraq in 2003, "Operation Iraqi Freedom," failed to uncover any weapons of mass destruction on its own, the war's focus shifted dramatically from protecting the United States to building a democratic Iraq.[80]

Thus, with President Bush and his centerpiece war in the Mideast, American millennialism's two strands, the premillennial (or cataclysmic) and the postmillennial (or progressive), find themselves once again joined together to define America for itself and the world: The redeemer nation that is so blessed by liberty that it stands ready to fight the embodiment of evil itself, in order to allow peoples everywhere to form a democratic government and thereby experience God's gift of freedom themselves. Bush proclaimed in his Second Inaugural Address: "Americans are a free people, who know that freedom is the right of every person and the future of every nation. The liberty we prize is not America's gift to the world; it is God's gift to humanity."[81] Yet he also framed the War on Terror as "a conflict between good and evil. And America will call evil by its name"[82]—and in which nations are "either with us or against us in the fight against terror."[83] As always, only the unfolding of history will reveal whether the new Iraq can provide its neighbors—and the United States and Israel—with a model of hope and the possibility of transformation for peoples living in tyranny, or if the ongoing conflict between good and evil will bring far more of the latter and precious little of the former. Either way, America, ever the New World born out of unrestrained depths of pessimism and optimism, the unbridled desires to reject the rest of the world and to save it, will find itself where it always does: on the verge of the New Millennium.

31. Ibid., 26.
32. *Doctrine and Covenants* 101:77–80. The need to imprint American Republican history with the divine stamp comes into stark relief in the vision by Wilford Woodruff, who later served as LDS church president and prophet, in 1877. In this vision, the signers of the Declaration of Independence came to Woodruff to chastise him for not baptizing them by proxy (a baptism for the spirits of the dead) into the LDS Church, now that that sacrament had been restored with the true Church. Woodruff and his brother straightaway baptized all of the signers, all of the deceased presidents of the United States, and others figures significant to the founding of the country, including Columbus. 40. Doan, *The Miller Heresy, Millennialism, and American Culture,* 50–51. The reinterpretation of failed prophecy to reaffirm a movement is well-noted amongst scholars and yet remains endlessly fascinating. Leon Festinger's famous case study, *When Prophecy Fails: A Social and Psychological Study of a Modern Group that Predicted the Destruction of the World* (New York: Harper and Row, 1964; 1956), employs the concept of cognitive dissonance to describe the ways in which individuals adjust to realities that do not conform to expectations—mainly either by denying the facts are what they are or by asserting that their predictions came true, but in the *spiritual* realm. These strategies of alleviating cognitive dissonance will come into play as some Millerites reestablish themselves and their millennial ideology as the Seventh-day Adventists. Other studies of this phenomenon are found in *Expecting Armageddon: Essential Readings in Failed Prophecy,* ed. Jon Stone (New York: Routledge, 2000).

70. Michael Barkun, "Millenarians and Violence: The Case of the Christian Identity Movement," in *Millennium, Messiahs, and Mayhem,* ed. Thomas Robbins and Susan Palmer (New York: Routledge, 1997), 247–49. President George H.W. Bush gained unwanted attention from militias and other right-wing antigovernment conspiracy groups when he started using the phrase "New World Order" to describe the way the Gulf War coalition and its victory over Saddam Hussein's Iraq would transform global politics. Michael Barkun, *A Culture of Conspiracy: Apocalyptic Visions in Contemporary America* (Berkeley: University of California Press, 2003), 40. Of course, the reverse side of the U.S. dollar bill contains the Great Seal with the Latin phrases "Annuit Coeptis" and "Novus Ordo Seclorum," which translate roughly as "Providence has favored our undertakings" and "New order of the ages," respectively. Both reflect the civil millennialism of the early Republic; however, the latter has easily been misread as "New World Order"—providing conspiracy theorists evidence for the nefarious plans of the federal government to control the world. "Annuit Coeptis," Great Seal Mottoes, http://www.greatseal.com/mottoes/coeptis.html; "Novus Ordo Seclorum," Great Seal Mottoes, http://www.greatseal.com/mottoes/seclorum.html (accessed January 14, 2006).

71. Barkun, *Culture of Conspiracy,* 79.

72. This despite the fact that nothing religiously significant was ever really assigned to the end of the second millennium of Christendom—or that, for a variety of reasons, it was not even the end of the millennium, or of the twentieth century, which lasted until December 31, 2001.

73. Brenda Brasher, *Give Me that Online Religion* (San Francisco: Jossey-Bass, 2001), 56–61.

74. When Chen Tao, a Taiwanese millenarian group that expected a nuclear war between China and Taiwan, came to the United States due to the belief that God would come in flying saucers to rescue the population of North America before the tribulation of this war, they were met at every turn by reporters pressing them for their plans for mass suicide when God did not show up as expected. See, for instance, the otherwise evenhanded reporting by Sam Howe Verhovek, "Taiwanese Group Prepares to Meet God—in Texas," *New York Times,* March 4, 1998, sec. A10—which contained the eye-catching pull quote, "Talk of divinity, and rumors of suicide."

About the Editors and Contributors

EDITORS

Eugene V. Gallagher is the Rosemary Park Professor of Religious Studies at Connecticut College. He is the author of *Divine Man or Magician? Celsus and Origen on Jesus* (1980), *Expectation and Experience: Explaining Religious Conversion* (1990), *The New Religious Movements Experience in America* (2004), and, with James D. Tabor, *Why Waco? Cults and the Battle for Religious Freedom in America* (1995), as well as articles on ancient Mediterranean religions and contemporary new religious movements.

W. Michael Ashcraft is Associate Professor of Religion at Truman State University in Kirksville, Missouri. He is the author of *The Dawn of the New Cycle: Point Loma Theosophists and American Culture* (2002) and coeditor with Dereck Daschke of *New Religious Movements: A Documentary Reader* (2005). He is currently conducting research for a book on the history of the study of new religions.

CONTRIBUTORS

Yaakov Ariel is Professor of Religious Studies at the University of North Carolina at Chapel Hill. He is the author of a number of books and articles on Christian-Jewish relations in the modern era. His book, *Evangelizing the Chosen People: Missions to the Jews in America,* has won the American Society of Church History Outler prize.

Mary Farrell Bednarowski is Professor Emerita of Religious Studies at United Theological Seminary of the Twin Cities. She is the author of three books, among them *New Religions and the Theological Imagination in America* (1989), and has a long-standing interest in various forms of theological innovation in American religion especially as it is related to issues of gender.

Helen A. Berger is Professor of Sociology at West Chester University of Pennsylvania. She is the author of *A Community of Witches: Contemporary and Neo-Paganisms Witchcraft in the United States* (1999), coauthor of *Voices from the Pagan Census: A National Survey of Witches and Pagans in the United States* (2003), and editor of *Witchcraft and Magic: Contemporary North America* (2005). She is now completing a book on teenage witches on three continents with Douglas Ezzy.

David G. Bromley is Professor of Sociology and Religious Studies at Virginia Commonwealth University. His most recent books are *Teaching New Religious Movements* (Oxford, 2007), *Defining Religion: Critical Approaches to Drawing Boundaries Between Sacred and Secular* (Elsevier Science/JAI Press, 2003), *Cults, Religion and Violence* (Cambridge University Press, 2001), and *Toward Reflexive Ethnography: Participating, Observing, Narrating* (Oxford: Elsevier Science/JAI Press, 2001).

Susan Love Brown is Associate Professor of Anthropology at Florida Atlantic University and also teaches in the Public Intellectuals and the Women's Studies programs. She is the editor of *Intentional Community: An Anthropological Perspective* and has written a number of articles about Ananda Village, a California New Age community with branches in Oregon, Washington, and Italy.

James D. Chancellor is the W.O. Carver Professor of World Religions at The Southern Baptist Theological Seminary and Professor of Religion at The Philippine Baptist Theological Seminary. He is the author of *Life in the Family: An Oral History of the Children of God* published by Syracuse University Press and has written numerous journal articles and book chapters.

George D. Chryssides is Senior Lecturer in Religious Studies at the University of Wolverhampton, England. His publications include *The Advent of Sun Myung Moon* (London: Macmillan, 1991), *Exploring New Religions* (London: Cassell, 1999), and *Historical Dictionary of New Religious Movements* (Metuchen, NJ: Scarecrow Press), as well as contributions to various anthologies and journals.

Mary Ann Clark is a lecturer in the University of Houston system where she teaches courses in Religious Studies, Humanities, and Anthropology and is the coordinator of the Council of Societies for the Study of Religion. She is the author of *Where Men are Wives and Mothers Rule: Santería Ritual Practices and Their Gender Implication* (2005). She has also published numerous journal articles and book chapters.

Douglas E. Cowan is Assistant Professor of Religious Studies and Social Development Studies at Renison College/University of Waterloo. In addition to numerous scholarly articles and chapters, he is the author of *Cyberhenge: Modern Pagans on the Internet* (Routledge, 2005), *The Remnant Spirit: Conservative Reform in Mainline Protestantism* (Praeger 2003), and *Bearing False Witness? An Introduction to the Christian Countercult* (Praeger 2003).

Robert S. Cox is Head of Special Collections and Adjunct Professor of History at the University of Massachusetts Amherst. He is author of *Body and Soul: A*

Sympathetic History of American Spiritualism (Charlottesville: University of Virginia Press, 2003) and editor of *The Shortest and Most Convenient Route: Lewis and Clark in Context* (Philadelphia: APS, 2004).

Daniel Cozort is Professor and chair of the Department of Religion at Dickinson College, in Carlisle, Pennsylvania, where he teaches about the religions of India and Native America. He is the author of *Unique Tenets of the Middle Way Consequence School, Highest Yoga Tantra, Buddhist Philosophy, Sand Mandala of Vajrabhairava,* and *Imagination and Enlightenment* and a documentary film, *Mandala: Sacred Circle of Vajrabhairava,* as well as book chapters and articles.

Dereck Daschke is Associate Professor of Philosophy and Religion at Truman State University in Kirksville, Missouri. He is coeditor of *New Religious Movements: A Documentary Reader*(2005). He has published frequently on ancient Jewish apocalypticism and prophecy, including "Mourning the End of Time: Apocalypses as Texts of Cultural Loss" in *Millennialism from the Hebrew Bible to the Present* (2002) and "'Because Of My Grief I Have Spoken': The Psychology of Loss in 4 Ezra" in *Psychology and the Bible* (2004).

Dell deChant is an Instructor and the Associate Chair in the Department of Religious Studies at the University of South Florida. He is also on the faculty of the Honors College at USF. He is the author of *The Sacred Santa: The Religious Dimensions of Consumer Culture* (2002) and coauthor of *Comparative Religious Ethics: A Narrative Approach* (2001). He has also published numerous journal and encyclopedia articles and book chapters on New Religious Movements.

Brenda Denzler works full-time as a writer at the University of North Carolina at Chapel Hill and part-time as an independent scholar with an interest in marginal religious phenomena and movements. She is the author of *The Lure of the Edge: Scientific Passions, Religious Beliefs, and the Pursuit of UFOs* (2001). She is also the author of several presentations and papers on the UFO community.

Jacob S. Dorman currently holds the Mellon Postdoctoral Fellowship at Wesleyan University's Center for the Humanities. His book on black Israelites and the discourse of civilization during the Harlem Renaissance is forthcoming from Oxford University Press.

Cynthia Eller is Associate Professor of Women and Religion at Montclair State University. She is the author of *Am I a Woman? A Skeptic's Guide to Gender* (2003), *The Myth of Matriarchal Prehistory: Why an Invented Past Won't Give Women a Future* (2000), *Living in the Lap of the Goddess: The Feminist Spirituality Movement in America* (1995), and the interactive textbook *Revealing World Religions* (2005).

Robert Ellwood is Distinguished Emeritus Professor of Religion at the University of Southern California and is the author of several books, including *Religious and Spiritual Groups in Modern America* and *Alternative Altars.* He lives in Ojai, California, and has served as vice president of the Theosophical Society in America.

Ina Johanna Fandrich is an independent scholar living in New Orleans. She is the author of *The Mysterious Voodoo Queen, Marie Laveaux: A Study of Powerful Female Leadership in Nineteenth-Century New Orleans* (Routledge 2005).

Ron Geaves is Professor of Religious Studies in the Department of Theology and Religious Studies at University College Chester. His research interests focus around the transmigration of Indian traditions to the West. He has published two monographs and several journal articles in this area, including *Sufis of Britain (2000).* His most recent publications are *Islam and the West post 9/11* (2004) and *Aspects of Islam* (2005). He has just completed a monograph on Śaivite traditions in Diaspora to be published in 2006. He has known Prem Rawat since 1969 and has already published four journal articles concerning his activities.

Terryl L. Givens is Professor of Literature and Religion and holds the James A. Bostwick Chair of English at the University of Richmond. He is the author of the prize-winning *Viper on the Hearth: Mormons, Myths and the Construction of Heresy* (Oxford 1997), *By the Hand of Mormon: The American Scripture that Launched a New World Religion* (Oxford 2003), and *The Latter-day Saint Experience in America* (Greenwood 2004), in addition to articles and chapters on Romanticism, Literary Theory, and religious studies.

Adrian Harris has been a Practicing Pagan since 1990 and is currently conducting postgraduate research into Eco-Pagan ritual at the University of Winchester, UK. He has written several articles and book chapters, including "Sacred Ecology" in *Paganism Today* (Harper Collins, 1996) and "Dragon Environmental Network" in *The Encyclopaedia of Modern Witchcraft and Neo-Paganism* (Citadel Press, 2002).

Michael Homer is a practicing trial lawyer in Salt Lake City. He is a member of the Board of State History (appointed by Governor Michael Leavitt in 1997) and has been Chair since 2003. He has published four books, 13 chapters in books, and over 70 articles on historical and legal subjects. He is the recipient of the David Kirby Best Article Award from the Arthur Conan Doyle Society, the Lowell L. Bennion Editor's Award by *Dialogue, A Journal of Mormon Thought,* the T. Edgar Lyon Award of Excellence by the Mormon History Association, and The John Whitmer Historical Association Best Article Award. His most recent book, *On the Way to Somewhere Else: European Sojourners in the Mormon West,* was published by Arthur H. Clark Company in 2006.

Dawn L. Hutchinson is an instructor of religion at Christopher Newport University. She has authored entries in the *Encyclopedia of Religion, Communication, and Media, The Handbook for the Study of Religion, Encyclopedia of Religious Freedom,* and *The 21st Century Encyclopedia of the World's Religions.*

Jeffrey Kaplan is Associate Professor of Religion and the Director of the University of Wisconsin Oshkosh Institute for the Study of Religion, Violence and Memory. He serves as book review editor and serves on the Editorial Boards of the journals *Terrorism and Political Violence* and *Nova Religio.* He is the author or editor of 11 books on

religious violence and millenarian terrorism: *Millennial Violence: Past, Present and Future* (2002), *The Cultic Milieu* (2002), *Encyclopedia of White Power: A Sourcebook on the Radical Racist Right* (2000), *Beyond The Mainstream: The Emergence Of Religious Pluralism In Finland, Estonia And Russia* (2000), *The Emergence of an Euro-American Radical Right* (coauthored with Leonard Weinberg) (1998), and *Radical Religion in America: Millenarian Movements From the Far Right to the Children of Noah* (1997). His latest book, *Religious Resurgence and Political Violence,* will be published in 2006. In addition, he has authored numerous articles, encyclopedia entries, and book reviews that have appeared in a multidisciplinary range of peer reviewed academic journals.

Philip Lamy is Professor of Sociology and Anthropology at Castleton College in Castleton, Vermont. He is the author of *Millennium Rage: Survivalists, White Supremacists, and the Doomsday Prophecy* (1996). His articles and commentary on New Religious Movements and countercultures have appeared in professional journals, edited volumes, and the mass media, including *Time Magazine, The London Times, Wired Magazine,* National Public Radio, and the BBC.

David Christopher Lane is a Professor of Philosophy at Mount San Antonio College and a Lecturer in Religious Studies at California State University, Long Beach. He is the author of *The Radhasoami Tradition* (1992), *Exposing Cults* (1992), *The Making of a Spiritual Movement* (1983), and *The Unknowing Sage* (1993). He has also produced several films, including *Moving Water, Digital Baba,* and *Truth Lies.* On a more personal note, Lane won the world bodysurfing championship in 1999 and the International Bodysurfing Championships in 1997, 1998, 2000, and 2004.

Scott Lowe is professor and chair of the Department of Philosophy and Religious Studies at the University of Wisconsin–Eau Claire. He is the author of *Mo Tzu's Religious Blueprint for a Chinese Utopia* and *Da: The Strange Case of Franklin Jones* (with David Christopher Lane) as well as numerous articles and book chapters on Chinese religions and alternative religions in the West.

David W. Machacek is associate director of Humanity in Action, a New York–based not-for-profit organization that sponsors international educational programs on minority issues and human rights, and Visiting Assistant Professor of Public Policy at Trinity College in Hartford, Connecticut. He is coauthor of *Soka Gakkai in America: Accommodation and Conversion* and coeditor of *Global Citizens: The Soka Gakkai Buddhist Movement in the World.* His articles have appeared in *Nova Religio, Sociology of Religion, Research in the Social Scientific Study of Religion, Journal of Oriental Studies,* and *Journal of Church and State.*

J. Gordon Melton is the Director of the Institute for the Study of American Religion and is a research specialist with the Department of Religious Studies at the University of California–Santa Barbara. He is the author of a number of books on American religion including the *Encyclopedia of American Religions* (7th ed., 2003), *The*

Encyclopedic Handbook of the Cults in America (1992), and *Finding Enlightenment: Ramtha's School of Ancient Wisdom* (1998).

Michael L. Mickler is Professor of Church History and Vice President of Unification Theological Seminary. He is the author of *40 Years in America: An Intimate History of the Unification Movement in America, 1959–1999* (2000), *A History of the Unification Church in America, 1959–74* (1993), and *The Unification Church in America: A Bibliography and Research Guide* (1987), as well as articles and reviews on the Unification Church and other movements.

Timothy Miller is Professor of Religious Studies at the University of Kansas. He is the author of *Following In His Steps: A Biography of Charles M. Sheldon* (Tennessee, 1987), *American Communes, 1860–1960: A Bibliography* (Garland, 1990), *The Hippies and American Values* (Tennessee, 1991), *The Quest for Utopia in Twentieth-Century America* (Syracuse, 1998), *The 60s Communes: Hippies and Beyond* (Syracuse, 1999), and editor of *When Prophets Die: The Postcharismatic Fate of New Religious Movements* (State University of New York Press, 1991) and *America's Alternative Religions* (State University of New York Press, 1995), as well as articles in many journals and in the popular press.

Rebecca Moore is Associate Professor of Religious Studies at San Diego State University. She is the author of *Voices of Christianity: A Global Introduction* (2005), and coeditor of *Peoples Temple and Black Religion in America* (2004). She is Co-General Editor of *Nova Religio: The Journal of Alternative and Emergent Religions.* She has also published several journal articles and book chapters on the subject of Peoples Temple and Jonestown.

Douglas Morgan is professor of history at Columbia Union College in Takoma Park, Maryland. He is author of *Adventism and the American Republic: The Public Involvement of a Major Apocalyptic Movement* (2001).

M. Macha NightMare is an author, ritualist, and all-round Pagan webweaver. She presents at colleges, universities, and seminaries and teaches about death and dying and Neopagan public ritual at Cherry Hill Seminary, the first and only seminary serving the Neopagan community. (www.machanightmare.com.)

Kathleen Malone O'Connor is an Assistant Professor of Religious Studies at the University of South Florida where she specializes in Islamic studies. She has published in *Folklore: An Encyclopedia of Beliefs, Customs, Tales, Music, and Art, Journal of the American Academy of Religion,* and the *Encyclopedia of the Qur'an.* She has contributed chapters to *Black Zion: African American Religious Encounters with Judaism, Anthropology and Theology: Gods, Icons, and God-talk,* and *Studies in Middle Eastern Health.*

James T. Richardson is Director of the Grant Sawyer Center for Justice Studies and director of the Judicial Studies graduate degree program for trial judges at the University of Nevada, Reno. His latest book is *Regulating Religion: Case Studies from*

Around the Globe (Kluwer, 2004). He has published over 200 articles and chapters, as well as ten books, mostly about various aspects of New Religious Movements.

Robin Rinehart is Associate Professor of Religious Studies at Lafayette College, where she also directs the Asian Studies program. She is the author of *One Lifetime, Many Lives: The Experience of Modern Hindu Hagiography* (Oxford 1999), editor of *Contemporary Hinduism: Ritual, Culture, and Practice* (ABC-CLIO 2004), and has also published journal articles and encyclopedia entries.

E. Burke Rochford Jr. is Professor of Sociology and Religion at Middlebury College in Vermont. He is author of *Hare Krishna in America* and the forthcoming *Hare Krishna Transformed* to be published in 2007 by New York University Press. He has also published numerous articles and book chapters on the Hare Krishna movement and new religions.

Rosamond C. Rodman is an Assistant Professor of Religious Studies at Macalester College, in St. Paul, Minnesota. She works on intersections of Bible and American culture.

Nora L. Rubel is Visiting Assistant Professor of Religious Studies at Connecticut College. Trained in American religious history, she has published articles on African American religion and contemporary Judaism.

John K. Simmons, Professor of Religious Studies and chairperson of the Department of Philosophy & Religious Studies at Western Illinois University, is the creator of the popular "Beliefs and Believers" teleclass. He publishes regularly in the area of women-led, New Religious Movements in late nineteenth and early twentieth century American history, including the coauthored book, *Competing Visions of Paradise: The California Experience of 19th Century American Sectarianism.* Recent articles include "Eschatological Vacillation in the Mary Baker Eddy's Presentation of Christian Science" in *Nova Religio* and "Vanishing Boundaries: When Teaching About Religion Becomes Spiritual Guidance in the Classroom" in *Teaching Theology and Religion.*

Robert H. Stockman is an instructor for the Department of Religious Studies at DePaul University, Chicago, Illinois, and Director of the Institute for Baha'i Studies in Evanston, Illinois. He is the author of *The Baha'i Faith in America: Origins, 1892–1900, Vol. 1, The Baha'i Faith in America: Early Expansion, 1900–1912, Vol. 2,* and *Thornton Chase: The First American Baha'i.* He has also published 25 articles on Baha'i topics.

Bron Taylor is Samuel S. Hill Ethics Professor at the University of Florida, where he teaches in the interdisciplinary graduate program in religion and nature. He has written widely about religious environmental movements and nature religions. His books include *Ecological Resistance Movements: The Global Emergence of Radical and Popular Environmentalism* (SUNY 1995) and the *Encyclopedia of Religion and Nature*

(Continuum 2005), and he is the editor of the *Journal for the Study of Religion, Nature, and Culture.*

Suzanne Thurman is an independent scholar and former history professor who now manages intellectual property portfolios for IPWatch. She has published extensively on the Shakers. Her book, *"O Sisters Ain't You Happy?": Gender, Family, and Community Among the Harvard and Shirley Shakers, 1781–1918,* won a *Choice* Outstanding Academic Book Award in 2002.

Arthur Versluis is Professor of American Studies at Michigan State University. He is editor of the journal *Esoterica* and author of numerous books, including *Restoring Paradise* (State University of New York Press 2004) and *The New Inquisitions: Heretic-hunting and the Origins of Modern Totalitarianism* (Oxford University Press 2006).

David L. Weddle is Professor of Religion and chair of the Department at Colorado College. He is the author of *The Law As Gospel: Revival and Reform in the Theology of Charles G. Finney* (1985). He has published journal articles on Jonathan Edwards, Christian Science, and Jehovah's Witnesses, as well as review essays on law and religion. His entries on Jehovah's Witnesses appear in *The Encyclopedia of Protestantism* and the *Encyclopedia of Religion.*

Dagmar Wernitznig is an Associate Fellow with the Rothermere American Institute, University of Oxford. She is the author of *Going Native or Going Naive?: White Shamanism and the Neo-Noble Savage* (University Press of America 2003).

Catherine Wessinger is professor of the history of religions at Loyola University New Orleans. She is Co-General Editor of *Nova Religio: The Journal of Alternative and Emergent Religions.* She is the author of *Annie Besant and Progressive Messianism* (1988), and *How the Millennium Comes Violently: From Jonestown to Heaven's Gate* (2000), as well as articles on New Religious Movements. She has edited *Women's Leadership and Marginal Religions: Explorations Outside the Mainstream* (1993), *Religious Institutions and Women's Leadership: New Roles Inside the Mainstream* (1996), and *Millennialism, Persecution, and Violence: Historical Cases* (2000). Her current projects include collecting oral histories relating to the Branch Davidian case and editing the *Oxford Handbook on Millennialism.*

Melissa M. Wilcox is Assistant Professor of Religion and Director of Gender Studies at Whitman College. Author of *Coming Out in Christianity: Religion, Identity, and Community* and coeditor (with David W. Machacek) of *Sexuality and the World's Religions,* she is currently working on a book entitled *Spirituality and Sex in the City: Queer Religiosities in Practice and Theory.*

Jane Williams-Hogan is the Carpenter Chair Professor of Church History at Bryn Athyn College where she also teaches sociology. She is the author of *Swedenborg e le Chiese Swedenborgiane* (2004). She has also published journal articles, encyclopedia articles, and book chapters.

Jeff Wilson is a doctoral candidate in Religious Studies at the University of North Carolina at Chapel Hill. A specialist on Buddhism in America, he is the author of *The Buddhist Guide to New York* (2000) and numerous articles and book chapters on the subject. Wilson is a Contributing Editor to *Tricycle: The Buddhist Review.*

Joseph Dylan Witt is a Ph.D. student in the Religion and Nature Graduate Program at the University of Florida. He has contributed to the journal *Worldviews* and serves as the Managing Editor for the *Journal for the Study of Religion, Nature and Culture.*

About the Editors and Contributors 247

Acknowledgments

This project is the result of a collaborative effort. We the coeditors are grateful to the contributors of this series for sharing their expertise with the general public through these outstanding scholarly essays. They did so for the sake of bringing to a wide reading audience the best information and interpretations now available about a wide range of new religious movements. We are especially grateful to Catherine Wessinger and David Bromley for helping us identify authors and for many other suggestions that have improved this set of volumes.

We the coeditors thank all of these scholars who gave so much to make this set possible. Many of them wrote their essays amid personal hardship and busy professional lives.

We also thank Suzanne Staszak-Silva, our editor at Greenwood, for her advice and guidance as this set went from one stage of development to another.

We are also grateful to our colleagues, at our respective teaching institutions as well as among the wider scholarly community, who offered us personal support and encouragement, much free advice, and many good wishes and kind thoughts.

Finally, we thank our families: our wives, Jennifer Gallagher and Carrol Davenport, and our daughters, Maggie Gallagher and Brittany and Kathleen Ashcraft. We lovingly dedicate this set to those daughters, our hope for the future, whom we love very much.

Introduction

Although new or alternative religious movements, or New Religious Movements (NRMs), have always been part of the American religious landscape, they have not always received broad public attention. Most often, their formation, attraction of members, and growth or decline have occurred beyond the harsh glare of prolonged public scrutiny. In some striking cases, however, a new or alternative religious movement has dominated the news for a period of time, usually because the movement itself, or some of its members, became involved in something that was widely perceived to be illegal, immoral, or simply destructive. For example, in the wake of the 1963 assassination of President John F. Kennedy, Minister Malcolm X of the Nation of Islam became notorious for his comment that Kennedy's murder meant "the chickens had come home to roost." In the 1970s saffron-robed members of the International Society for Krishna Consciousness, also known as Hare Krishna, became so well known for seeking donations and engaging strangers in conversations in public that they were easily lampooned in the comic film "Airplane." In the 1980s, the Rev. Sun Myung Moon, leader of the Unification Church (or Moonies), was found guilty of tax evasion by diverting church funds for his personal use. More recently, in 1993, the U.S. Bureau of Alcohol, Tobacco, and Firearms staged a raid on the home and church of a small group of Bible students outside of Waco, Texas. In addition to the ten lives lost in the botched raid, the 51 day standoff between the students of David Koresh, a group widely known as the Branch Davidians, and agents of the federal government, particularly the Federal Bureau of Investigation, culminated in the loss of 78 lives in a fire that consumed the Mount Carmel Center where the Branch Davidians lived. In 1997 followers of Marshall Applewhite, forming a group called Heaven's Gate, joined him in committing suicide so that they could all progress to what they viewed as "the evolutionary level above human." The list of such incidents could easily be multiplied.

In the late twentieth century as new and alternative religious movements continued to receive public attention for elements of their practice or belief that were highly controversial, a dominant image of such groups began to solidify. That image was

fostered by the activism of groups of former members, their families, some professionals in social work and psychology, and various other volunteers. When the opposition to new or alternative religious groups originated with more or less secular individuals, those opponents were generally called anticultists. When opposition originated with Evangelical Protestant Christians, those opponents were usually called countercultists. The tireless work of such activists, anticultist or countercultist, quickly produced a standard understanding of new and alternative religions that united a wide variety of groups under the umbrella category of "cults." In the perceptions of their anticult opponents, cults posed serious threats to vulnerable individuals and, ultimately, to the stability of American society itself. Anticultists and countercultists believed that cults had three prominent characteristics. First, they were led by unscrupulous, manipulative, and insincere individuals who sought only to increase their own power, wealth, and/or sexual enjoyment. Second, cults preyed upon unsuspecting, confused, and vulnerable individuals, often using sophisticated and virtually irresistible tactics of influence. Third, participation in a cult would surely bring harm to individual participants and might also lead them to commit any number of antisocial actions that threatened the public good. The stereotype of the "destructive cult" was aggressively marketed by the loose coalition of anticultists, particularly when disturbing news about any new or alternative religious movement became public. Thus, on the one hand, while a variety of events created a broad interest in learning about individual religious groups, their practices and beliefs, organizational structure, leadership, and many other topics, on the other hand, the predominance of the cult stereotype inevitably skewed the information available, attributed the perceived faults of any one group to all of them, and created expectations that any group labeled a cult must necessarily be worthy of suspicion, scorn, and vigorous opposition. Despite their prodigious efforts at educating the general public, the various anticult and countercult activists have, in fact, promoted much more misunderstanding than accurate understanding of the religious lives of some of their fellow citizens. Consequently, they have helped to create a very hostile environment for anyone whose religious practices do not fit within a so-called "mainstream." The personal and social costs of such religious bigotry may actually be higher than what the activists fear from cults themselves.

This set of volumes on "New and Alternative Religions in America" intends to rectify that situation for the general reader. It aims to present accurate, comprehensive, authoritative, and accessible accounts of various new and alternative religious movements that have been and are active in American society, as well as a set of essays that orient the reader to significant contexts for understanding new and alternative religions and important issues involved in studying them. The presentations are predicated on a simple but fundamental assumption. It is that accurate description and understanding must precede any judgment about the truth, validity, morality, or trustworthiness of any religious group or person. Accurate description demands that the group be presented in terms that it could itself recognize and acknowledge as being at least close to the way it understands itself. Providing an accurate description of the history, organization, practices, and beliefs of a particular group does not, in

any way, constitute an endorsement of that group, but it does provide an indispensable baseline for any further discussion. Such a baseline has often been lost in the public discussions of new and alternative religious movements, because their most bizarre, threatening, or even humorous aspects have been exaggerated. What is missing from such caricatured presentations is a sense of how any person could find such apparently ludicrous, lethal, or laughable groups worth joining. Simple dismissal of new or alternative religions as absurd, erroneous, or pernicious misses the social influence that they can have and demonstrably have had. Whatever an outsider's perception of new and alternative religions might be, many clear-thinking and well-intentioned individuals, throughout American history, have associated themselves with such groups. This set is founded on the idea that members' or participants' reasons for their decisions and their accounts of their experiences form the primary data for understanding new and alternative religions. Both hostile and approving accounts of new or alternative religions from outsiders provide a different sort of data, which reveals the social location and often-controversial careers of new and alternative religions. But neither approval nor criticism by external observers should take precedence over the self-understanding of each group as articulated by its members in establishing a baseline of descriptive accuracy.

Readers of this set of volumes will thus encounter both information and analytical frameworks that will help them arrive at an informed and appropriately complicated understanding of new and alternative religious movements in American history and society. Volume 1 provides a set of analytical perspectives on new and alternative religions, including the history of such movements in the United States, the controversies in which they have often become embroiled, the roles of leaders within the groups and the processes by which individuals become members and also leave their groups, the legal and global contexts in which new and alternative religions function, and a variety of prominent themes in the study of new religions, including roles of gender, children, and violence.

The four volumes that follow generally present accounts of individual groups, many of them well known but some much less so. Each chapter presents information about the origin and subsequent development of the group in question, its internal organization including the predominant type of leadership, its most important practices and beliefs, and controversies that have put the group in the limelight. Volume 2 focuses on groups that have developed out of the broad biblical tradition—Judaism and Christianity—and have achieved such a distinctive status as to be considered, at least by some observers, as independent religious groups rather than simple sectarian variations of more mainstream Jewish or Christian traditions. Volume 2 accordingly raises most acutely the problems of definition that are involved in using the admittedly malleable categories of "new" and "alternative" religions.

The description of a religious movement as *new* or *alternative* only begs further questions. Novelty can be in the eye of the beholder, or in the mind of someone claiming to be innovative. That is, religious movements are judged to be new, alternative, or anything else only in particular contexts and by certain audiences. They may claim, for example, to retrieve and correctly interpret or represent past beliefs

and practices, which have been neglected or forgotten. But their opponents might view the same claims as dangerous and deviant inventions. New religions themselves often manifest a pronounced ambivalence about their own novelty. A fundamental dynamic in new and alternative religions is that they strive to present themselves as both new and old, as unprecedented and familiar. The novelty of new religions cuts both ways; it can just as easily excite the interest of potential adherents as it can strain their credulity. As they spread their messages to those whose interest, approval, and even acceptance they hope to secure, NRMs proclaim both their challenging novelty and their comforting familiarity.

In their sectarian forms, these movements attempt to recapture the lost purity of an idealized past. Sects typically have prior ties to larger religious organizations from which they have intentionally broken off. They aim to return to the pristine origins of the tradition and reestablish its foundations. Sectarian forms of Christianity frequently exhort their partisans to get "back to the Bible"; contemporary Islamic sects similarly yearn for the purity of the times of the prophet Muhammad. Even the Church of Satan, founded by Anton Szandor LaVey in 1966, has spawned sectarian groups that accuse the original Church of Satan of having abandoned its initial commitments and emphases. Sects thus define themselves both in relation to the broader world and in relation to their specific tradition, both of which are perceived to threaten their purity of belief and practice.

In their typology of responses to secularization, Rodney Stark and William Sims Bainbridge contrast cults to sects. Rejecting the polemical definition of cults spawned by their cultural opponents, they define cults as independent religious traditions. Cults may be imports from another culture or independent products of the society in which they develop. Like sects, cults often find themselves in tension or conflict with broader society, simply by virtue of being new and different. Because they, too, want to locate themselves in relation to an authoritative past, cults also lay some claim to previous tradition. What separates cults from sects in their relation to previous traditions is that cults typically do not have a history of institutional conflict and eventual separation. Cults are marked from their beginnings as new entities. Both sects and cults, then, simultaneously declare their novelty and sink their roots in the past. In order to avoid confusion about the term "cult," which has such negative connotations in contemporary American society, this set will keep to the designations of new and alternative religions, which are widely employed by many scholars even though they are somewhat imprecise. The choice of which groups to include in Volume 2, as with the other volumes, is a judgment call. The guiding principle was not only to provide a representative sample of new and alternative religious groups throughout American history, but also to present the groups in sufficient detail to enable the reader to form a complex understanding of them.

Volume 3 investigates groups in the occult or metaphysical tradition, including nineteenth century Spiritualism, the Theosophical Society begun by Helena Petrovna Blavatsky and Colonel Henry Steel Olcott in the late nineteenth century, and the contemporary New Age movement. Like the groups discussed in the second volume, those in Volume 3 are part of a broad tradition that has deep roots in

antiquity. For example, in *The Secret Doctrine* Madame Blavatsky included the ancient Vedic sages of India, the Buddha, and a collection of ancient Greek philosophers among the ancient teachers whose wisdom about the nature of human beings and the nature of god was being given its fullest expression in Blavatsky's modern Theosophical system.

The religious movements discussed in Volume 3 typically present a different organizational profile from those in Volume 2. The groups in Volume 2 have made substantial efforts to maintain boundaries between themselves and their surrounding social environment, demanding exclusive allegiance of their members; vesting authority over practice, doctrine, and group life in charismatic leaders; and offering new and improved interpretations of familiar texts already acknowledged to have broad cultural legitimacy. In contrast, the movements in Volume 3 center on individual teachers who attract shifting groups of students with varying degrees of commitment for varying lengths of time, leave the ability to determine the authority or validity of any pronouncements in the hands of individual seekers, and claim to bring to light extraordinary wisdom from previously unknown or underappreciated sources.

Many of the religions that have appeared to be innovative developments in American religious life have actually been transplanted from other cultures where they have often enjoyed long histories. The openness of the United States to immigrants has always been an important factor in promoting American religious diversity. The 1965 repeal of the 1924 *Asian Exclusion Act,* for example, permitted a variety of Eastern religious teachers to extend their religious activities to the United States. Late in his life, for example, Swami A.C. Bhaktivedanta Prabhupada, the founder of the International Society for Krishna Consciousness, made the United States the focus of his efforts to awaken love for Krishna in as many people as possible. Military personnel returning from service abroad, often with spouses from countries where they had been stationed, also helped to introduce new religious practices and movements to the United States. This was the case, for example, with the form of Japanese Nichiren Buddhism known as Soka Gakkai. Even where it is difficult to provide independent corroboration of claimed international ties, they can nonetheless be claimed. A dramatic example here was the assertion that the elusive figure at the origins of the Nation of Islam, W.D. Fard, arrived in Detroit, Michigan, in 1930 from Mecca in Saudi Arabia. The movements in Volume 4 show clearly that religious innovation in the United States always needs to be considered in a broader, global context. That is no less true of the groups discussed in other volumes as well. For example, Ann Lee's small band of Shakers began in Manchester, England; David Koresh gathered Bible students from Australia, England, and other foreign countries as well as the United States. Theosophy's Madame Blavatsky was a Russian émigré. Finally, the Church of Scientology, like many other new religions that have begun in the United States, conducts a vigorous international missionary program.

The frequent movement of individuals, practices, and ideas across national borders could make a focus on new and alternative religions solely in the United States vulnerable to a myopia that could distort the nature and significance of those movements. That caution holds equally for homegrown and imported religions. Few

religions in the contemporary world, no matter what their age or relation to a mainstream, are confined within a single set of national boundaries. Nonetheless, the focus of this set remains on a selection of religions that have had, for one reason or another, a significant impact on religious and social life in the United States. Prominent in that selection is a group of religions that have been independently founded in the United States. For example, although the contemporary revival of Paganism can be traced to the career of Gerald Gardner in England beginning in the 1930s, many influential Pagan thinkers and teachers, such as Z Budapest, Starhawk, and Isaac Bonewits have flourished in the United States. Similarly, the Church of Satan and its subsequent offshoots owe their inspiration to Anton Szandor LaVey, who produced *The Satanic Bible* and other fundamental texts in San Francisco, California, in the 1960s. Also, beginning in the 1950s the prodigious literary output of L. Ron Hubbard gave rise first to the therapeutic system known as Dianetics and then, as his purview broadened, to the Church of Scientology. Other founders of NRMs in the United States, like Marshall Applewhite of the Heaven's Gate group, attracted far fewer adherents than the Church of Scientology but nonetheless carved out a place for themselves in American religious history through their dramatic, and sometimes tragic, actions. Volume 5 thus focuses on both new developments in international movements within the United States, such as the rise of Neo-Paganism, and the conscious construction of new religions, such as the Church of Scientology, by American teachers and organizations.

As this overview suggests, the definition of what counts as a new or alternative religion is frequently open to argument. Many groups that appear dramatically novel to external observers would claim that they are simply being faithful to ancient traditions. Joseph Smith, for example, claimed that the Church of Jesus Christ of Latter-day Saints, or Mormons, was a restoration of primitive Christianity. Groups that claim to be innovative often express their messages in the form of fresh interpretations of ancient texts, as with Swami Prabhupada's effort to present the ancient Indian classic, the Bhagavad-Gita, "as it is"; or Rael's contention that the mentions of "Elohim" in the biblical book of Genesis actually refer to extraterrestrial beings who came to earth in space ships. Because of the subjective nature of the categories —new to whom? alternative to what?—it will always be difficult to delimit precisely which groups definitely do, and do not, "count" as new or alternative. Moreover, in popular discourse, where the category cult is frequently used but appears devoid of anything other than emotional content, and in interreligious arguments, where cult easily expands to include "virtually anyone who is not us," attempts at substantive definitions give way entirely to polemics. Discussion of new and alternative religions in the United States thus always refers to a shifting and vigorously contested terrain where categories like "alternative religion" or "cult" and implicit comparisons like those implied by "new religious movement" are used to establish, reinforce, and defend certain kinds of individual and group identities, even as they threaten, compromise, or erode other kinds of individual or group identities.

No mapping of such terrain can hope to be definitive. Too much is in flux. Those who enter the terrain need trustworthy and experienced guides. The essays in these

five volumes provide just such guidance. Experienced, authoritative, and plainspoken, the authors of these essays provide both perspectives on some of the most prominent general features of the landscape and full descriptions of many, but by no means all, of the specific areas within it. Those who want to explore the terrain of new and alternative religions in the United States will find in this set multiple points of entry. They may want to focus on a specific local part of the larger area, such as the Theosophical tradition, the Branch Davidians, or Heaven's Gate. On the other hand, they may want to investigate the characteristic dynamics of the broader field, such as the processes of conversion into and defection from groups or the interactions between new and alternative religions and their cultural opponents. There is much to explore—much more than can even be covered in these five volumes. But this set aims to equip the would-be explorer with enough tools and knowledge to make the exploration rewarding and worthwhile.

The Shakers

Suzanne Thurman

In 1774 Ann Lee, an illiterate factory worker from Manchester, England, set sail for the American colonies. She was part of a group known as the Shaking Quakers, so called because of their ecstatic worship. In a revelation that she claimed was from God, Lee learned that sex, or more accurately lust, was the original sin in the Garden of Eden. Thus, celibacy became, for Lee, a necessary condition of salvation. Another revelation ordered her to take a small group of followers to British North America and spread her message there.[1] Lee obeyed, and thus began the long history of the Shakers, arguably the most successful communal society in American history. Remembered today primarily for their furniture, the Shakers themselves were more interested in their salvation than in manufacturing chairs. This essay highlights the history, beliefs, and practices of the Shakers, providing a much needed context for understanding the furniture, buildings, and other artifacts that they left behind.[2]

HISTORY

When Ann Lee and her followers landed in British North America, they settled in New York City. By 1779 they had earned enough money to purchase property outside of Albany in the town of Niskeyuna (also known as Watervliet). In 1781 Lee, her brother William and James Whittaker, one of her English converts, took a missionary journey through New England. For two years they traveled in Massachusetts, Connecticut, and Maine, spreading the "gospel" as understood by Lee. Put simply, Lee taught that Believers, as they called themselves, must live celibate lives free of worldly distractions. She espoused pacifism and encouraged her followers to live together and share all things in common. She emphasized frugality, simplicity, and meekness. She also believed that an individual could communicate directly with God, and worship services provided an arena for ecstatic behavior such as whirling, dancing, and speaking in tongues.

Lee possessed a charismatic personality and attracted many followers wherever she preached. Because she was illiterate, however, she could not record her teachings, and

an oral tradition of her teachings developed during the years of her ministry. After her death, the Shaker leadership recorded for future generations the foundational teachings of the movement. Rufus Bishop and Seth Y. Wells interviewed the Believers who knew Lee and put together a collection of testimonies published in 1816.[3]

Lee's teachings were considered radical at the time, causing conflict with the Shakers' neighbors. Many people saw the emotional worship of the Believers as bizarre and offensive. One frequently repeated story reported that the Shakers danced in the nude. Other people believed that the doctrine of celibacy undermined traditional notions of marriage and family. Still others distrusted the Shakers because their British leaders taught pacifism even as the American colonies fought their revolution against England. Feelings ran high, and on numerous occasions mobs chased the Shakers out of town, beating and whipping them, sometimes scarring them for life. Despite such violence, most Shakers remained faithful to Lee's teachings and gathered into loosely organized clusters for protection and economic support.

Exhausted by their travels and the persecution they suffered, Ann Lee, William Lee, and James Whittaker returned to Niskeyuna in September 1783. William died in July 1784, and Ann Lee followed him in September. Leadership of the group then fell to Whittaker.

He encouraged and strengthened the scattered groups of Believers now that their founder was gone. He believed in strict separation from the world and traveled throughout New England urging the Believers to sell their property and consolidate their resources. He also worked diligently to provide a focus for the Shakers' religious beliefs and practices. Under his leadership the Believers built their first meetinghouse in 1785 at New Lebanon, New York.

Whittaker died in 1787, and Joseph Meacham assumed leadership of the growing movement. Meacham's succession was significant for several reasons. First, he was the first American leader. Second, he moved his base of operations from Niskeyuna to New Lebanon, which became the central headquarters of the Believers. Third, he devised the "blueprint" for gathering Shakers into the highly organized villages that we know today.

Meacham built up the existing Shaker communities instead of seeking new converts from the outside world. The official gathering began in 1787 at New Lebanon under the direction of Meacham and his coleader, Lucy Wright. Meacham envisioned villages composed of several families or orders, each family corresponding to a certain level of commitment to Shakerism. All families lived communally, but not everyone was expected to turn their property over to the community. Only the most committed adherents, who lived in the Church family, signed a covenant agreeing to give all their property, real and personal, to the society.

Because celibacy was a central tenet of Shakerism, men and women lived separately, a practice that detractors claimed broke up families. In a sense, they were correct. The Shakers replaced the biological family, which rested on reproduction, with a spiritual family. Thus, men and women addressed each other as "brother" and "sister," titles they used throughout the history of the movement. Moreover, Believers

referred to early Shaker leaders as "mothers" and "fathers." After the formative years, however, the incoming leadership no longer used these titles.

The gathering of New Lebanon provided a model for other Shakers to follow. By 1794, eleven Shaker communities dotted the countryside: two in eastern New York, four in Massachusetts, one in Connecticut, two in New Hampshire, and two in Maine. Shaker leadership regulated every aspect of life in these villages and enforced strict separation from the world.

Meacham died in August 1796. Upon his death, Wright became the head of the movement. It was Shaker practice to appoint a male and female for every leadership position, and Wright had been Meacham's counterpart. Meacham, however, was such a forceful personality that he eclipsed Wright's authority. When she came to power in her own right, however, she proved to be a competent and effective leader throughout her 25-year tenure.

One of her most important contributions to the development of Shakerism was her decision to begin active proselytizing in the world. Wright knew that because of their belief in celibacy, the Shakers' survival hinged on their ability not only to bring new people into the fold but also to keep them there. To that end she established a separate "gathering order" for those who were interested in Shakerism but who might need extra attention and nurturing to convince them to stay. Even more important, however, was her decision to send out missionaries to spread the Shaker gospel. Wright saw the perfect opportunity when she heard about a great revival taking place in Cane Ridge, Kentucky. Hoping to capitalize on the enthusiasm generated by this outbreak of religious fervor, Wright sent three men—John Meacham, Issachar Bates, and Benjamin Seth Youngs—to take the Shaker message westward into the Ohio Valley. On January 1, 1805, they started and, in the course of their work, established five villages in Ohio, Kentucky, and Indiana between 1806 and 1811. Two other villages in Ohio organized in the 1820s.[4]

At the end of her life, Wright agreed to the codification of the rules and regulations that structured Shaker life. Known as the Millennial Laws of 1821, this document provided in great detail the protocol for everything from worship to conducting business to interaction of the sexes. After Wright's death, the new leadership sent copies of the laws to every Shaker village. These laws reinforced the key Shaker concepts of union, conformity, and obedience to the leaders. They also strengthened the boundaries separating the Shakers from the outside world.

Wright died in February 1821. Her death marked the end of what Stephen J. Stein called the Formative Period in Shaker history. During this time, Shakers moved from loosely scattered clusters to highly organized communities. They developed a theology to support their beliefs and codified their practices to ensure uniformity among their members. Wright played a central role in this formalization of Shaker life. Although Meacham was the one who organized the first villages, Stein argues that "Lucy Wright clearly played a far more instrumental role in the evolution of Shakerism. She was perhaps the most influential figure in all of Shaker history."[5]

After Wright's death, a single leader did not emerge to replace her. Instead, the Believers followed the system of coleadership that was already established. Two men and two women made up the central ministry located at New Lebanon, and together they oversaw the spiritual and temporal welfare of all Shaker villages.

With the formal structures of Shakerism in place, the Believers focused their energy on maintaining their communities, and a sense of growth and prosperity marked the middle portion of the nineteenth century. It was during this period that the population peaked among various Shaker villages. Exact population statistics are difficult to find. Frequently cited are those compiled by Shaker theologians Calvin Green and Seth Y. Wells in their *Summary View of the Millennial Church,* published in 1823. These men estimated a total Shaker population of 4000 to 4300. Using United States census records for 1820, Priscilla Brewer calculated statistics that, overall, are similar to the estimates of Green and Wells.[6]

William Sims Bainbridge, continuing the use of census schedules, determined the population of the Shakers in 1840 and 1860 to be 3608 and 3489, respectively.[7] Although Bainbridge's figures suggest a decrease in population by midcentury, the Believers perceived themselves as growing. Their population was diverse; men and women of all ages and children, too, filled the dormitories. The villages were bustling hives of activity, and the Shakers were confident that their way of life would continue to appeal to the larger world.

Despite this optimistic view of their future, changes in their communities disturbed the Shaker leadership, especially the deaths of the first generation of Believers who had known Lee. Leaders sensed an increase in the number of people leaving the communities and feared that Shaker society, overall, was too worldly. These changes challenged the Believers' earlier perception of growth and vitality. Taken together, these issues led to the outbreak of a period of revivalism known as the Era of Manifestations, or "Mother Ann's Work," which lasted from the late 1830s through the 1850s. The leadership hoped that this outpouring of spiritual gifts would revitalize the Believers, strengthen their identity as Shakers, and lead to numerical and spiritual growth in the villages.[8]

Although isolated experiences of spirit activity occurred prior to the Era of Manifestations, the revival began in August 1837 when a group of girls from the gathering order at Niskeyuna whirled, sang, entered into a trance-like state, and described visions of angels. With the central ministry's blessing such activity soon spread to other Shaker villages, and the Shakers focused all their time and energy on the revival. Men, women, and children danced ecstatically and reported in great detail the visions they received from the spirit world. Known as "instruments," those who "talked" to the spirits not only delivered messages of encouragement to the Believers but also pointed out improper behavior and called the Shakers to repentance. The spirits also gave gifts to the Shakers such as trumpets, pearls, birds, or wine. These gifts were invisible to the eye and required the receiver to act out in pantomime the item received.

In 1841 Holy Mother Wisdom, the female incarnation of the godhead, visited the villages to bless and comfort Believers, chastise those who needed it, and hand out a

plethora of spiritual gifts. Her visits were solemn occasions for which the Shakers prepared with much ritual cleansing and fasting. Eternal Father, the male half of the godhead, also visited the villages to bless the Shakers and point out irregularities where he found them.

The following year the Believers inaugurated a spiritual Passover that took place on special ground set aside for that purpose. Elaborate rituals surrounded this feast. Preparing the ground for the ceremony took hours of intensive labor. On the day of the feast, the Shakers donned special garments. They cleansed the villages with spirit brooms and marched to the grounds where their ceremony culminated in a Passover feast in which the Shakers "drank" spiritual wine and "dined" on spiritual food.

Over time, the level of spirit activity decreased as the revival lost its momentum. In some villages, skepticism about the authenticity of the revival appeared as early as 1845. In other villages, sustained activity lasted into the 1850s. Gradually, however, the Believers turned their attention to other issues and the revival ended.

Aside from the time of revival, the years between 1827 and 1875 witnessed growing interaction between Believers and the outside world. The Shakers established extensive trade networks with outsiders and entered numerous business dealings with worldly firms. They also became interested in a variety of social issues that occupied the reform-minded segment of American society. Believers experimented with temperance and vegetarianism, assuming that a diet free from alcohol and meat would help them curb their sexual desire. They also followed the outbreak of Spiritualism which started in 1848 when the Fox sisters of Rochester, New York, heard "rappings" from the spirit world. Their supposed contact with the dead intrigued many Americans, including the Believers. Shaker brothers sometimes attended séances when they were in cities on business and then reported their experiences to their Shaker villages. Some Shakers thought that the world's interest in Spiritualism indicated that outsiders were opening up to the teachings of Ann Lee, and they prepared for the anticipated influx of Believers.

The outbreak of the Civil War further pulled the Shakers into a closer relationship with the world. Although they were not active abolitionists, the Shakers condemned the institution of slavery as evil. The Believers of Harvard, Massachusetts, for example, read aloud Harriet Beecher Stowe's *Uncle Tom's Cabin.* They also helped supply the occasional fugitive slave with money and clothes. When the war began, the Shakers sided with the Union cause, even though their pacifist principles prohibited them from taking up arms. Two Shaker leaders, Benjamin Gates and Frederick Evans, visited President Lincoln in Washington, D.C., and successfully pled their case for an exemption of all Shaker men from the draft. Given the opportunity, however, the eastern Shakers did whatever they could to support Union troops. The Harvard Believers provided apples and beverages to the soldiers stationed at nearby Camp Stephens, and they welcomed the soldiers when the latter visited Shaker worship services.[9]

Western Shakers, particularly those in Kentucky, were less fortunate than their eastern counterparts in choosing how to respond to the war. Although high taxes plagued the eastern Shakers and war disrupted some of their trade routes, geography

insulated Believers in New England and New York from the brunt of the war. The Kentucky Shakers, however, suffered many hardships. Both Union and Confederate troops repeatedly demanded food and lodging from them, and military officers commandeered Shaker wagons and horses for their own use. Such depredations pushed the western Believers to the brink of poverty.[10]

Historians generally use the Civil War as a dividing line in American history, but Stein argues that this timeline does not apply to the Shakers. He notes that the Era of Manifestations was the critical event in Shaker history during the middle years, and he dates the end of this period at 1875, when the Believers closed their community at Tyringham, Massachusetts, the first village in the east to disband.[11]

The closing of Tyringham marks the beginning of the final period of Shaker history, characterized by a persistent decline in membership. People quit joining the Shakers in large numbers. Most of the children raised in Shaker villages left when they reached adulthood, attracted by the growing economic opportunities in the outside world. Those who remained in the society were growing old, unable to maintain their properties or conduct business. Thus, the story of Shakerism in the years after 1875 is a litany of village closings until only seven villages remained open by 1922.

Yet the picture of life in Shaker society in the twentieth century is not all doom and gloom. Believers adapted to the changing world and eagerly embraced many modern innovations. They installed telephones, electricity, and indoor plumbing. They bought automobiles and radios and modernized their kitchens. They also exercised their individuality in ways unfamiliar to earlier Believers. Clothing for both men and women reflected worldly fashions. The sisters decorated their dresses with fringe or lace, wore jewelry, and bought their clothes instead of making them. The brothers chose how they wore their hair and whether or not they grew beards.

Worship, too, became a matter of individual choice. Instead of adherence to a set of orthodox beliefs manifested in a ritualized worship service, Believers in the twentieth century occupied many points on the spectrum of religious experience. Many Shakers continued to pursue Spiritualism. These Believers, argues Stein, tended to be "progressive" and supported causes like women's rights, the separation of church and state, land reform, and the peace movement. They saw their commitment to these causes "as highly compatible and mutually reinforcing" their spiritual beliefs. Other Shakers were evangelical in their outlook, cooperating with Protestant ministers, attending camp meetings, and opening Sunday Schools in their villages. Yet other Shakers espoused a restorationist view of their faith, arguing that Shakerism had strayed too far from its roots. They reemphasized traditional Shaker theology and separation from the world.[12]

Despite the seeming vitality of life in twentieth century Shaker communities, declining membership took its toll, forcing the closure of one village after another. In 1947 the leadership closed New Lebanon (now called Mount Lebanon), home of the central ministry. By 1960 only two villages remained open, Canterbury, New Hampshire, and Sabbathday Lake, Maine. In 1992, Sister Ethel Hudson, the last remaining Canterbury Shaker, died, leaving Sabbathday Lake as the only active Shaker community.

Today a handful of Believers continue to live at Sabbathday Lake much as their predecessors did. They worship in the meetinghouse, no longer dancing but just using hand motions; they live communally; and they are celibate. They also remain a largely agricultural society. They own a tree farm and an apple orchard. They raise sheep and livestock. They grow vegetables for themselves and herbs for the commercial market. They also produce handiwork, such as baskets, textiles, and woodenware, which they sell in their village store. The society is open to admitting new members, and there are frequently seekers or enquirers living among the covenanted Shakers. The village is also open for tours, and scholars can find valuable resources in the library.

Restored Shaker sites, such as Canterbury, New Hampshire; Pleasant Hill, Kentucky; and Hancock, Massachusetts, function as living history museums. Currently, the Shaker Museum and Library, located in New Lebanon, New York, is in the process of restoring the buildings of Mount Lebanon's North Family as the new home for the museum. But not all Shaker sites became historical repositories. Individuals in Harvard, Massachusetts, created the Shaker Village Historic District, turning Shaker buildings into private homes. Harvard's companion village in Shirley houses the Massachusetts Correctional Institute.

BELIEFS AND PRACTICES

Theology

The cornerstone of Shaker theology is celibacy. For Lee, lust caused Adam and Eve's expulsion from the Garden of Eden. To achieve salvation and return to the pre-Edenic state, a person must cast off the desires of the flesh or deny lustful seductions. Because of its centrality to Shaker thought, celibacy was strictly enforced in Shaker communities. Men and women, including married couples, lived separately. Buildings had two staircases and two doors to minimize contact between the sexes —men used one staircase, women another; men used one door, women another. Outsiders found the doctrine of celibacy curious, if not illogical, and argued that if everyone became a Shaker then the human race would soon die out. The Believers argued, however, that universal conversion to Shakerism would usher in a new and sinless world where procreation was unnecessary.

Another important idea in Shaker theology is the belief that Lee was the second appearance of Christ. Whether she believed this about herself is unclear, but after her death Shaker theologians codified their beliefs about her role in salvation history and constructed a clearly defined position. Their efforts culminated in the 1808 publication of *The Testimony of Christ's Second Appearing,* the Shakers' first major theological treatise.[13] The concept of Lee as the second appearance of Christ is grounded in the Shaker view of the godhead as dual, possessing both a male/father and a female/mother nature. All of creation reflects this duality. Theologically, this duality affected how the Shakers viewed Jesus and Lee. The Shakers rejected the idea that Jesus was divine. He was only a human upon whom the Christ spirit descended

during his lifetime, a view known as adoptionism. At his death, the Christ spirit left Jesus' body. To complete the work of redemption, a female counterpart to Jesus was needed. The Shakers believed that this person was Lee, who was also anointed with the Christ spirit during her time on earth. Thus, the second coming of Christ, which for orthodox Christians remains a future event, occurred for the Shakers in the eighteenth century, hence the official name of the sect—The United Society of Believers in Christ's Second Appearing.

Shaker views on the nature of Jesus and Lee influenced the development of other theological points, including the afterlife. Because the Shakers did not believe in the divinity of Jesus, they rejected the biblical story of his bodily resurrection. They did, however, believe in life after death. They said that an active spirit world existed, where those souls who never heard Lee's gospel could still be saved before their final descent into hell. Lee often talked about communicating with these spirits, and during the Era of Manifestations many Shakers offered her plan of salvation to the spirits whom they encountered.

As the Believers' interest in Spiritualism attests, the Shakers did not believe that divine revelation stopped with the Bible. From the beginning, Lee taught that God communicated directly with each believer. In fact, she based her entire ministry on that premise, coming to British North America to "open the gospel" of celibacy after she received a revelation that she believed came from God. As Shakerism progressed, this strain of thought remained strong. It took a different shape in the late nineteenth century when progressive Shakers, believing that God would not limit divine revelation to Christians, assumed that non-Christian religious traditions also contained spiritual truths.

Worship

Worship, as a communal expression of common beliefs, played a central role in Shaker life. Unlike mainstream Christians, the Shakers did not ordain ministers. They believed that God communicated directly with individuals, eliminating the need for a human intermediary. Thus, at sabbath meetings designated individuals might preach on some aspect of Shaker theology, but more important for worship than the spoken word was dance.

The Shakers were known for their dancing. In the early years their spirited whirling and twirling caught outsiders' attention and often led to ridicule and persecution. Under Joseph Meacham, however, the Shakers developed the organized dancing for which they became famous. Meacham saw the individualized dancing and singing of the early days as detrimental to union and order, two concepts central to Shaker thought and manifested by the Believers' emphasis on conformity of action and belief. He introduced songs that everybody sang at certain points in the service. He also replaced the random movement of individuals with intricately choreographed dances that involved each Believer.[14]

Over time the Shakers developed a large repertoire of songs and dances. They sang a cappella and in unison. Many Shaker songs emphasized key doctrines of the

Believers; one of the most common themes was overcoming one's carnal nature or, as Daniel Patterson put it, "taking up a full cross against the World, the Flesh, and the Devil."[15] Dancing, especially, was viewed as an effective way to subjugate one's body. During Lee's missionary tour, Believers described the spirited dancing they witnessed as literally burning away lust. After the Shakers adopted a more ritualized style, dancing was seen as an outward sign of internal subjugation. Shaker theologians Calvin Green and Seth Wells explained the Believers' use of dance in their major theological treatise, *A Summary View of the Millennial Church,* published in 1823. Written specifically to present Shaker beliefs to the outside world, *A Summary View* laid out succinctly the Shaker justification for dancing as a way to praise God. After all, Shakers reasoned, even the Bible told how David and Miriam danced before the Lord. Ritualized dancing also signified the unifying spirit of Christ. Everyone working together, dancing as one body, represented the spiritual union of the Shakers.[16]

Education

The earliest Believers rejected formal education as irrelevant. When they organized communally, however, leaders saw the usefulness of some type of formal training for children. Meacham advocated the teaching of moral values as well as useful skills so that boys and girls would grow up into productive members of society. Increased interaction with the world convinced leaders that children needed to learn, at minimum, reading, writing, and arithmetic to keep them competitive with their worldly counterparts.

Attempts to provide education were sporadic and varied from village to village. Wells's appointment to the position of superintendent of Shaker schools in 1823 gave direction to the Shakers' efforts. The leadership chose Wells because he was one of the few Believers who received a formal education before joining the society. He followed a classical course of study in high school and also studied bookkeeping. Moreover, before his conversion he taught and served as a principal in the Albany, New York, public schools as well as at the Hudson Academy.

Wells introduced several innovations into the Shaker system of education. Over time he expanded the basic curriculum of reading, writing, grammar, spelling, arithmetic, and geography to include algebra, astronomy, agricultural chemistry, and music. He also introduced the Lancastrian method of education, a system popular in the outside world at the time. This method of instruction utilized advanced students, known as monitors, to oversee small groups of students, thus reducing the demands on the teacher. He also called for the Believers to build separate schoolhouses and asked local officials to inspect the schools and their teachers. This worked to the Believers' advantage. Shaker schools consistently received high ratings that, in turn, convinced non-Shaker parents to send their children to Shaker schools. Extended formal education, however, never concerned the Believers. They emphasized manual training and socialization of children. Boys and girls learned tasks appropriate to their gender. They were also expected to learn the basic precepts of Shakerism so that they could take their place in Shaker society when the time came.[17]

Organization

Shaker villages were highly organized, and the leadership structure was multitiered. Several families composed each village, and each family was a fully functioning unit, responsible for its own economic viability. The leadership of a family included the ministry, or elders and eldresses who watched over spiritual and temporal concerns; deacons and deaconesses responsible for internal economic decisions of the family; and trustees and office sisters who mediated between the Shakers and the outside world in business affairs. In conformity with their view that all of creation reflected a dual godhead, each group of leaders included both men and women. The Shakers, however, were not democratic. Those in charge chose the next set of leaders.

Several villages located close together formed a bishopric, and over each bishopric presided a ministry, separate from the ministry of each family. The bishopric ministry was ultimately responsible for the spiritual and economic well-being of the villages they oversaw, and they moved from village to village, staying as long as it took at each place to address any problems that arose.

The central ministry, located at New Lebanon, New York (later called Mount Lebanon), oversaw the bishoprics. The central ministry was the highest authority within Shakerism. Its elders and eldresses concerned themselves with every aspect of Shaker life. They spent much of their time traveling, encouraging the Believers, and dealing with problems that were too big for an individual bishopric to handle.

Living arrangements within Shakerism were also highly organized and centered on the family or order. A gathering order, one or two intermediate orders, a separate children's order if the numbers warranted it, and the Church family composed a typical village. All families lived communally. Everyone able to work did so, but no one received wages. In return the Society provided for all its members' needs, including housing, clothing, meals, medical care, recreation, and spiritual direction. The elderly held a special place in Shaker society, and they were well cared for as they entered their declining years.

The Economy

The economic structure of Shakerism was closely linked to village organization. Each family's ultimate goal was self-sufficiency. Thus, farming was central to the Shaker economy. The Shakers grew what they ate. Men worked the fields, raising various kinds of grains. They also tended orchards and raised livestock. The sisters grew vegetables in their gardens and kept milk cows. The Believers also tried to provide for themselves all the goods and services a community needed, such as blacksmithing and shoemaking. The Shakers built sawmills, gristmills, and, in some places, textile mills. Community members produced items needed for daily life such as baskets, tubs, brooms, hats, socks, and all varieties of furniture.

Despite these efforts, the Believers quickly discovered that they could not cut themselves off from the larger economy. They could, however, use to their advantage

the system of farming and manufacturing that they already had in place. Once they met their own needs, the Shakers sold to outsiders excess foodstuffs and products, or they manufactured items, such as brooms and chairs, specifically for the outside market. They also charged their non-Shaker neighbors for the use of Shaker mills. In short, the Believers entered the world of market capitalism.

The best example of the Shakers' aptitude for producing and selling what the world's people wanted to buy is their highly successful seed and herb industry. By the mid-nineteenth century, the Believers achieved a reputation for the high quality of their seeds and herbs. The Shakers marketed these products over long distances, and the brothers who went on sales trips were gone for months at a time. The economic impact of the seed and herb industry on Shaker communities was significant. During the peak season that industry generated a major percentage of a family's income.

Several factors contributed to the success of Shaker industries. First, the Believers maintained a strict work ethic. All Shakers worked for the community, as much as their health and skills allowed. From a practical point of view, group labor made Shaker communities viable, but the Believers also viewed work as a form of worship. Thus, they approached their daily jobs not as dreary tasks to be performed but as gifts to offer God. Second, the Shakers embraced modern technology. Even though they believed in the value of labor as a spiritual and economic necessity, the Shakers had no qualms about lightening the work load if they could. Thus, the Believers earned a reputation for inventiveness. They are credited with inventing the flat broom and the circular saw. They built labor-saving devices, including a revolving oven and a washing machine. They also willingly adopted improvements that originated in the world such as cast iron stoves, electricity, and indoor plumbing. But perhaps the technological development that most affected the Shaker economy was the railroad. As soon as rail lines were within easy reach of their villages, the Believers used trains to ship their products faster and farther than they could on foot or by wagon, greatly expanding the market for their products.[18]

Clearly, by the middle of the nineteenth century the Shakers abandoned the idea of strict self-sufficiency. Their entrepreneurial skills and their reputation as honest businessmen enabled the Believers to participate in the world of market capitalism. Ultimately, however, their entry into this larger economic realm proved disastrous. As the century progressed, Shaker trustees and deacons displayed economic behavior that undermined Shaker principles. They borrowed heavily from the world, bought stocks and bonds, and engaged in speculation. Almost always these attempts brought economic disaster to the villages.

Declining membership also affected the Shaker economy. By the late nineteenth century, few people were joining the Believers, and those who remained in Shaker villages were elderly and unable to perform the strenuous work necessary to run the families. Communities sometimes hired outside help, but even this was not enough to keep the villages viable. Gradually, villages closed and consolidated. When the situation became desperate, the Shakers resorted to selling their furniture and other items to outsiders. Finally, in 1959 Eldress Emma B. King of the central ministry

created the Shaker Central Trust Fund. The start-up money for this fund came from the sale of villages that were already closed; the purpose of the fund was, and continues to be, to care for the remaining Shakers as well as to preserve Shaker sites and promote an understanding of Shakerism.[19]

Role of Women

One important aspect of Shaker life was the Believers' goal of equality, including gender equality, within their communities.[20] Gender equality was a radical notion in the nineteenth century when women in the outside world had few legal rights and often lived isolated and difficult lives. In fact, Shakerism as a movement with a female founder, always encouraged a positive view of women, and the sisters generally found life in the community satisfying and rewarding.[21]

In the nineteenth century, housework and child care dominated women's lives. Shaker sisters, however, had much greater flexibility than non-Shaker women in the types and amount of work they performed. It is true that the Believers, just as their worldly counterparts, divided work along gender lines—men worked in the fields, and women shouldered domestic duties. The implications of this division of labor, however, differed for Shaker and non-Shaker women. Women in the outside world maintained a continuous round of cooking, cleaning, and laundering, usually without any help. Shaker sisters, however, benefited from the practice of work rotation. The leadership typically assigned jobs to both men and women, taking into account an individual's aptitudes, but rotated labor-intensive work among the brothers and sisters, exempting only those who were too old or too sick to work. Shaker women, thus shared tasks such as laundering and cooking, limiting the time they spent in the least desirable occupations.

Childbirth and child care also placed heavy demands on women. Non-Shaker women had little choice about their future. Society expected them to marry and have children, and those who did not found that life could be difficult both socially and economically. Shakerism, however, offered women an alternative to marriage in which their decision not to marry was honored and in which their economic needs were met, even in old age. Celibacy freed Shaker sisters from the rigors of numerous pregnancies and from potential death in childbirth. Moreover, those women who joined the Shakers with children found respite from child care duties since appointed caretakers raised children separately from their parents.

Freed from child care and with participation in the backbreaking work of the community limited by job rotation, Shaker women enjoyed more time for other aspects of their lives. This was especially true in the area of skilled work. Women worked in groups and formed close bonds with each other as they passed on their skills in making items such as palm-leaf hats, sieves, and leather gloves. The sisters also made "fancy goods" such as poplar sewing cases, pincushions, and pen wipes that they sold in the Shaker stores located in their villages. This arrangement was mutually beneficial. Shaker leadership valued the economic contributions of the products made by

the sisters. The sisters valued the creative outlet inherent in craft production as well as the mental stimulation and companionship that working in groups provided them.[22]

Controversies and Issues

By the first third of the nineteenth century, the Shakers were an accepted part of the American landscape. Most people still found their practices and beliefs strange, but physical violence against the Shakers generally disappeared. But the Shakers still experienced problems with the outside world.

Lawsuits were brought against them by disgruntled apostates, people who left the Shakers on less than happy terms. One of the main reasons for these lawsuits was the apostates' desire to recover back wages or property they gave to the society upon joining. They typically argued that they should be paid for the work they did for the community, just as they would be in the outside world. As troublesome as these lawsuits were, however, the Shakers almost always won them. The courts consistently ruled that people who left the Shakers were not entitled to back wages because their willingness to live in the community indicated an acceptance of the communal regulations that governed a Shaker village. As for the recovery of property by former Church family members, time after time, the court recognized the Church family covenant as a legal and binding document and refused to return property legally transferred to the community.

Lawsuits against the Shakers also occurred when parents tried to recover their children from the Believers. It was not uncommon for parents who were unable to care for their children to turn them over to the Shakers. To do so they signed an indenture that, like the covenant, was a legally binding document. This virtually guaranteed that parents who took the Shakers to court in an effort to retrieve their children lost their case. A murkier issue involved children who entered the community with one or both parents. Normally this was not a problem, but when one of the parents left and the other one stayed, or when one parent refused to join the Shakers, custody of the children could become an issue.

The stories of two such parents—Eunice Chapman and Mary Dyer—became nationally known when both women published accounts of their efforts. In 1811 Chapman's husband became a Shaker, moving to the Niskeyuna, New York, community in 1813. According to Chapman's account, in 1814 she visited this community, leaving her children with her sister, only to find on her return that the Shakers had taken her children to live with them at her husband's request. To be near her children, Chapman lived with the Niskeyuna Shakers for two weeks but refused to join, so they sent her to Albany. In 1817 she published *An Account of the Conduct of the People Called Shakers,* exposing the pain she suffered at the Believers' practice of breaking up families.[23] The following year the New York State legislature, influenced by her publication, granted Chapman a divorce and passed a law that allowed non-Shaker parents to seek custody of children living with the Believers. Over several years, Chapman used this law to regain custody of her three children.[24]

Dyer's struggle to recover her children was even more protracted, although her troubles began much like Chapman's. In 1811 Dyer's husband, Joseph, became interested in the Shakers, and at his insistence he and Mary visited the Believers at Enfield, New Hampshire. Joseph wanted to join; Mary did not. To convince her, Joseph promised that she could control the lives of their five children and offered the compromise that if either one of them left the Shakers, he would get three of the children and she would get two. Mary was not happy with Joseph's offer, but she agreed to move herself and her children to Enfield in 1813.[25]

Mary stayed with the Believers for two years but never felt at home. In 1815 she left, claiming emotional abuse (the Shakers had cut off all contact between her and her children) and physical abuse. Three years later she published *A Brief Statement of the Sufferings of Mary Dyer, Occasioned by the Society Called Shakers,* an account of her time with the Believers in which she exposed the sordid (though not necessarily true) details of life in a Shaker community.[26] She followed this publication with *A Portraiture of Shakerism* in 1822, and for a time during the 1820s, her plight generated much public interest.[27] Eventually, the New Hampshire state legislature granted Mary a divorce. She was never successful, however, in recovering her children from the Believers, and spent the final years of her life living in a small house near the Enfield Shaker community, the closest she could get to her children.

Conflicts with the world were not the only problems the Shakers faced. Despite their stated goal of unity, the Believers, being human, experienced their share of internal conflict. One of the earliest tensions, was between eastern and western Shakers. Because of the geographic distance between the western and eastern villages, western Shakers developed a sense of autonomy that irritated eastern leaders, who viewed the western Shakers as newcomers to the movement. One of the first manifestations of this tension was the central ministry's displeasure with the publication of Benjamin Seth Youngs's theological treatise, *The Testimony of Christ's Second Appearing* in 1808. Youngs, who lived at South Union, Kentucky, had help from several other western Shakers in writing the book, and when they finished they sent a copy to the central ministry. Wright wrote to the western leaders, acknowledging their efforts but admonishing them for some of the views expressed in the volume. Two years later, in order to regain control of their theological turf, the eastern Shakers reissued the *Testimony,* edited by Wells and Green, two of the foremost eastern theologians.

Another source of tension within Shakerism centered on the Era of Manifestations. On the one hand, the revival brought new life to Shaker communities. The many visions and messages that poured forth during this period helped the Believers articulate some of their theological beliefs, especially the dual nature of the godhead. Many songs from the revival became standards in Shaker worship. On the other hand, the Era of Manifestations led to much confusion among the Believers. Perhaps the most obvious tension was between those who supported the work of the spirit and those who supported an ordered life based on obedience to the rules of Shaker society. Instruments and visionists revealed spirit messages that undermined the

teachings of the leadership, and they supported their messages by citing divine revelation, a claim the ministry could not dismiss easily. To maintain control, the central ministry required instruments to "open" their visions to their elders before revealing them in a service. Older visionists assumed positions of leadership in their villages, enabling them to check the extreme enthusiasm of some of the younger instruments. Eventually, the village ministries hand picked new visionists, whom they could trust to tow the ministries' line.[28]

Yet another source of conflict within Shaker villages occurred when trustees and deacons ignored the rules about financial interactions with the world and pursued business deals that devastated the economic stability of their villages. Both the Shirley, Massachusetts, and the New Gloucester, Maine, villages experienced severe financial setbacks when they plunged into the world of finance capitalism. In 1849 the Shirley Shakers built the Phoenix textile mill solely for the purpose of leasing it to outsiders. They quickly found that they spent more money to maintain the property than they earned in rent. Moreover, Jonas Nutting, the Shaker who oversaw the project, borrowed $30,000 to finance the factory; this, in turn, meant interest payments that had to be met. In 1861 the Shirley Believers' total debt for the factory was $50,000, a sum that threatened their economic viability. They sold the factory in 1866, declaring it a complete failure.[29]

The New Gloucester Shakers faced a similar problem. They too invested money in a large mill and found that they could not pay to maintain it. Ransom Gilman, the trustee responsible for the factory, engaged in speculation, a practice forbidden by the Shakers. He borrowed money to buy wheat in Chicago that was then shipped to the Believers. They ground it into flour and hoped to sell it for a profit. The plan failed, yet Gilman continued to buy grain, anticipating a change in fortunes. By 1861 the New Gloucester Shakers were $14,000 in debt. The central ministry asked the other villages to contribute a specified amount of money to New Gloucester so that the Believers there could pay their debt without borrowing even more money. Such a gesture of support epitomized the communal nature of Shaker life.[30]

CONCLUSION

Many scholars consider the Shakers to be the most successful of American attempts at communal life because the group, though very small, still exists today. The Society survived the death of its charismatic leader and has continued to find a niche in American society. Americans, moreover, discovered the Shakers. Restored Shaker villages, as well as the Sabbathday Lake community, are popular attractions. Shaker furniture, both antique and reproduction, is popular among collectors. Books on many different aspects of Shakerism, from history to architecture to cookbooks, continue to be published. The Shaker legacy is well preserved; even when the last Shaker dies, the world of Shakerism will live on.

NOTES

1. On the earliest years of the movement, see Clarke Garrett, *Spirit Possession and Popular Religion: From the Camisards to the Shakers* (Baltimore, MD: Johns Hopkins University Press, 1987).

2. The classic history of the Shakers is Edward Deming Andrews, *The People Called Shakers: A Search for the Perfect Society* (New York: Oxford University Press, 1953), and was reissued by Dover in 1963 as an enlarged edition. This book sparked the current interest in Shaker studies. The definitive history of the Shakers, however, is Stephen J. Stein, *The Shaker Experience in America: A History of the United Society of Believers* (New Haven, CN: Yale University Press, 1992).

The Church of Jesus Christ of Latter-day Saints

Terryl L. Givens

INTRODUCTION

Members of the Church of Jesus Christ of Latter-day Saints, also known as the Mormon or LDS church, constitute an organization that transcends simple denominational status. Though the Mormons were originally one of a multitude of restorationist churches emerging out of the ferment known as the Second Great Awakening in the early nineteenth century, a number of factors conspired to forge an entity variously considered a religion, a people, a global tribe, and a New Religious Movement (NRM), the only "indigenously derived ethnic group" in the United States and an emerging world religion. Mormonism's distinctive doctrines challenge the boundaries of Christian orthodoxy, while a history of persecution and exile fostered a close-knit Mormon community with fierce intragroup loyalties. In addition, authoritarian leadership and superefficient worldwide correlation of all church programs and instructional materials establish an uncommon degree of uniformity and conformity, while unusually intense requirements of sacrifice, commitment, lifestyle practices, and service far surpass the norms of a nominal, Sunday-only Christian observance. One of the fastest growing churches in the world, Mormonism has enjoyed a colorful history characterized by charismatic beginnings, new scripture, and violent confrontation with its host society that gradually was transformed into its current position of utmost respectability in mainstream American society. Once condemned by non-Mormon preachers and politicians, Mormons are now lauded by observers as "the American religion"[1] and praised by presidents and public figures for their family values, clean living, healthy lifestyle, and humanitarian outreach to members and nonmembers alike.

HISTORY

The founder of Mormonism, Joseph Smith (1805–1844), dated the commencement of his life's labor—the restoration of the Gospel of Jesus Christ—to 1827. That was the year an angelic messenger who identified himself as Moroni directed Smith

to retrieve from an upstate New York hillside a set of gold plates. This was not Smith's first encounter with heavenly visitors. As a youth of 14, he experienced a vision of God and Jesus Christ, who appeared in answer to his personal quest for the true religion. This experience, which he apparently regarded as a personal one only, gave him no authority to inaugurate a religious movement. But three years later in the fall of 1823, Moroni appeared for the first time, told Smith "that God had a work for [him] to do," and unfolded to him a remarkable story. Moroni described an ancient record that detailed the history of some early inhabitants of the North American continent, contained "the fulness of the everlasting gospel," and recorded a visit of Christ to that same people. Moroni returned to Smith yearly four more times, before indicating the burial spot of the plates and allowing Smith to remove them. Smith was also given a device with which to translate them. At some point in the translation process, Smith realized that his work extended beyond the translation and publication of the plates as the Book of Mormon, which was published in March 1830, to include the restoration of priesthood authority and (re)establishment of the true church of Jesus Christ. Formal organization of this entity, initially called the Church of Christ, occurred on April 6, 1830.

Reports that Smith had a "gold bible" attracted considerable intrusion and harassment, leading him to relocate in Harmony, Pennsylvania, and later Fayette, New York, before work on the Book of Mormon was complete. But opposition to the new church might have eventually died down if not for a fateful decision Smith made late in 1830. In response to another revelation from God, he announced that converts to the new faith were to be "gathered in unto one place." The initial location for this gathering was Kirtland, Ohio, but shortly thereafter Jackson County, Missouri, was named the site of a New Jerusalem, and most converts headed there even as Smith continued to direct construction of a temple and supervise the church from Ohio. In 1835, he organized the Quorum of the Twelve Apostles and the first two Quorums of Seventy. Today, those bodies, together with the First Presidency (the prophet and two counselors), constitute the leadership of the church. The Kirtland temple was dedicated in 1836, though it served more as a meetinghouse than the locale where special rituals and ordinances are performed, as is the case today.

A series of conflicts both internal and external (see below) led to successive displacements of Mormons through several Missouri counties, leading to a period of relatively calm exile in Nauvoo, Illinois (1838–1846). There, the Mormons lived in a virtual city-state of their own construction, while converts poured in from the east and from Great Britain, and doctrine poured forth from Smith. The first wave of converts were mostly Campbellites, followers of Alexander Campbell's (1788–1866) reformed Baptist movement who joined when Campbellite preacher Sidney Rigdon (1793–1876) did in the Kirtland, Ohio, area. Many other converts were "seekers," unaffiliated Christians looking for a form of Christianity that more nearly approximated the New Testament church than contemporary institutions. Smith's insistence that his authority was not just assumed, but actually conferred upon him by heavenly messengers, was a powerful claim, and in nearly all instances, converts

were convinced, after reading it, that the Book of Mormon was the word of God and therefore sure evidence of Smith's authority and legitimacy.

Conflicts in Illinois emerged as they had elsewhere, but compounded in this instance by rumors of Smith's introduction of plural marriage (technically polygyny —a man taking more than one wife—but commonly called polygamy in historical discussions of Mormonism) and his espoused political aspirations (he initiated a campaign for president of the United States in 1844). A vitriolic attack from a dissident newspaper led Smith as Nauvoo's mayor, with the city council's assent, to issue an ill-conceived order declaring the paper a public nuisance. The city marshal accordingly destroyed the offending press, and shortly thereafter Smith was arrested and acquitted (in a Nauvoo court) of inciting a riot. In the ensuing turmoil, and in spite of clear premonitions of his own death, Smith subjected himself to double jeopardy by giving himself up to Carthage, Illinois, authorities. He was murdered the following day (June 27, 1844) by a mob of Carthage militia while under the governor's protection.

Upon Smith's martyrdom, several claimants to be his successor emerged. Most Mormons agreed to the leadership of Brigham Young (1801–1877), president of the Quorum of Twelve Apostles, and followed him west. The largest other group would organize under Joseph's son Joseph Smith III (1832–1914) in 1860 as the Reorganized Church of Jesus Christ of Latter-day Saints (renamed the Community of Christ in 2000). The main body of Mormons settled in the desolate Salt Lake Valley, which was part of Mexico when they embarked on their westward exodus but became part of the United States as a consequence of the treaty of 1848 following the Mexican War. They organized a provisional government of the State of Deseret in 1849; the Territory of Deseret followed in 1851. With the public avowal of the practice of polygamy in 1852, Mormon Utah entered a protracted struggle with the federal government.

A number of factors conspired to crush Mormon hopes for religious autonomy in the West. First was the federal government's unwillingness to countenance plural marriage, even in a geographically remote setting. The gold rush of 1849 spurred western settlement, and the coming of the railroad effectively sealed the end of Utah's isolation. Conformity with more mainstream values became an imperative if the Mormon Church was going to survive, the territory achieve statehood, and the Mormon people win greater acceptance and respectability in wider American society. The end of polygamy was initiated in 1890, and shortly thereafter Mormons embraced participation in the national political parties, disbanding their own People's Party. Mormon participation in the Chicago Columbian Exposition of 1893 resulted in honors for their Tabernacle Choir, a massed-voice chorus, furthering their quest for participation in the mainstream. Another significant development in this era was the church's cessation of the practice of the gathering (or settling in Mormon communities in Utah); converts were encouraged to build up their churches locally, and in 1895 the first stake (a diocese-like unit) was organized outside the United States (in Canada). Henceforward, the church steered toward an international rather than a primarily Utahan—or even American—composition.

Mormons manned the famous Mormon Battalion in the Mexican War (1846–1848), but mostly out of economic self-interest at a time of impoverished exile. They remained mostly aloof in the Civil War (1861–1865), understandably unenthusiastic about supporting either side. But World War I (1914–1918) provided the American Mormons with an opportunity to prove their unqualified patriotism. Utah's volunteer enlistments were far above quotas, and Red Cross contributions and Liberty Bond purchases similarly exceeded federal requests. Theologically, doctrines were not changing but emphases were. Tithing was rigorously encouraged in 1899, helping the church solve a long-standing crisis precipitated by federal financial oppression. The Word of Wisdom, a rigorous health code, was received in 1833, but was seldom rigorously enforced or observed. That changed as well, with adherence becoming a requirement for temple admission in the 1920s. Another hallmark of modern Mormonism, the church's welfare program, was initiated in the years of the Great Depression (1929–early 1940s). Today, both Mormon values of economic self-reliance and a formidable system of welfare farms, production facilities, distribution centers, and bishop's storehouses are legendary.

Missionary work was always integral to Mormonism. As World War II (1939–1945) approached, successful proselytizing and a high birth rate combined to produce nearly a million members. One of Mormonism's most beloved prophets, David O. McKay (1873–1970), assumed the presidency in 1951. His slogan, "every member a missionary," typified a renewed emphasis on missionary work. His two decades in office saw church membership triple from approximately one to three million members. The following decade was equally dramatic, with a continuing growth rate of 40 percent per decade. Increasingly, the church was becoming a church of the southern hemisphere, with Latin American growth strongest. Spencer W. Kimball's (1895–1985) 1978 revelation extending the priesthood to blacks alleviated tensions with African Americans, and opened Africa and northern Brazil to missionary work with dramatic results. Growth among the American black community, however, remained modest.

Ezra Taft Benson (1899–1994), former Secretary of Agriculture under President Dwight D. Eisenhower, became church president in 1985. His lasting legacy was an emphasis on the Book of Mormon that effectively elevated that scripture to a central place in Mormon doctrine and devotional life. By the early years of the new millennium, more than 120 million copies of the Book were in print, making it the most widely published and distributed book ever produced by an American.

After a brief presidency by Howard W. Hunter (1907–1995), Gordon B. Hinckley (b. 1910) assumed the position of "prophet, seer, and revelator" in the Mormon Church. The most media-savvy leader the church has known, Hinckley improved relations with the press, put an articulate and good-humored face on modern Mormonism, and inaugurated a program of prolific temple building that dwarfed all previous efforts.

By the year 2000, Mormon membership passed 11 million, and it is now one of the largest Christian denominations in the United States. Much debated claims that Mormonism is the next world religion, and the first to emerge since Islam, are

probably premature. But phenomenal growth continues in Latin America, and relatively small but growing populations exist scattered throughout Asia and Africa. The nineteenth century church depended largely on Great Britain and northern Europe for its convert base; those areas appear now to be stagnant in terms of LDS growth. What appears certain is that Mormonism is no longer an American religion. Since 2000, more members speak Spanish than English, a trend sure to continue in the new millennium.

PEOPLE, FOUNDERS, AND LEADERS

Joseph Smith

Joseph's position in the LDS church is more than first in a line of prophets that continues to this day. Of the three books of scripture Mormons use in addition to the Bible (The Book of Mormon, the *Pearl of Great Price,* and the *Doctrine and Covenants*), Smith produced two in their entirety and virtually all of the third. As a revealer of new doctrines, Smith was in his most prolific phase when his life was cut short. Temple ordinances, radical teachings on the nature and origin of God, and a doctrine of human theosis, or humanity's literal potential to become like God, all emerged out of the Nauvoo years. In fact, no significant addition to LDS theology or practice occurred after his death, making him effectively a Mormon prophet without parallel. Like Muslims, Mormons use the term "the prophet" as a synonym for their religion's founder (although it can also refer in contemporary contexts to whomever occupies that position currently).

The sources of Smith's ideas, organizational genius, and influence over his followers are widely disputed. Followers believe he enjoyed communion with God after the pattern of Moses—face to face encounters involving dialogic revelation, with Smith asking questions and receiving specific, articulate responses. These encounters were supplemented by angelic assistance from a host of resurrected beings. His gift of seership, initially the ability to translate gold plates with the aid of a seerstone and a device called the Urim and Thummim, eventually developed into the ability to recover a number of ancient texts independently of any manuscript, produced by biblical figures such as Adam, Abraham, Enoch, Moses, and John. Nonmembers ascribe his production of these writings to sheer inventiveness, familiarity with hermetic and esoteric sources, or simply a "genius" for "uncanny recovery of elements in ancient Jewish theurgy."[2] His powerful charismatic appeal was attributed to mesmerism by legions of early writers, but his devotion to his people was noted by all, and his willingness to suffer on their behalf elicited a reciprocal loyalty and a reverence that continues today.

Brigham Young

Brigham Young occupies a close second as the prophet who was most influential in shaping the nature and direction of Mormonism. He lacked Smith's gift—or felt the need had largely been fulfilled—for "thus saith the Lord" pronouncements and

doctrinal revelations. As a leader and colonizer, he is without parallel in American history. He masterminded the largest migration of American citizens in history, supervised the founding of hundreds of communities in the intermountain West, fostered a prosperous and thriving Mormon subculture that numbered over 100,000 at his death, and made his imprint felt on every aspect of Mormon life and society for more than three decades. Until the United States government intervened, he successfully organized and managed a virtual theocracy.

Relentlessly pragmatic, plainspoken, and often confrontational, Young was (justly) suspicious of federal authorities and intentions, resisted incursions of "gentile" (non-Mormon) influence, and disliked "philosophy." At the same time, he was progressive and liberal enough to found the Salt Lake Theatre, continue Smith's support for education in the new territory, and encourage the professional training and rights of women.

Eliza R. Snow

Eliza Roxey Snow (1804–1887) had the unique distinction of being wed to two prophets (Smith and Young) and being sister to a third, the fifth prophet Lorenzo Snow (1814–1901). But independent of those connections, Snow was one of early Mormonism's finest poets, intellectuals, and role models for women. She played a key role in founding the Relief Society (one of the largest and oldest women's organizations in the world), sending LDS women to eastern medical schools, encouraging their engagement in politics, and founding a women's journal, *The Woman's Exponent.* She also was influential in establishing a popular but never developed and seldom-discussed doctrine of Mormonism, a Mother in Heaven, through one of the most beloved hymns in Mormonism, "Oh My Father." The words also give expression to the LDS doctrine of premortal existence, invoking a time when "in some first primeval childhood [I was] nurtured near thy side."

Parley P. Pratt

If Smith was the revealer of most Mormon doctrines, Parley Pratt (1807–1857) was one of the first to organize them and present them in a suitable form for mass public consumption. His *Voice of Warning* (1837), the first sustained exposition of Mormon doctrine, remained a staple in the missionary repertoire well into the twentieth century. Pratt was himself an indefatigable missionary, serving on over 20 mission tours, as well as being a self-taught man of letters. He produced the most literary Mormon autobiography of his generation, as well as numerous hymns still used and the church's first works of fiction, such as the 1844 "Dialogue of Joseph Smith and the Devil."

James E. Talmage

James Talmage (1862–1933) was a brilliant educator, scholar, and internationally recognized scientist who brought erudition and academic training to the task of a

Mormon theology. His two landmark works had the distinction of being commissioned by the Church, and retain a quasi-canonical status. *The Articles of Faith: Being a Consideration of the Principal Doctrines of The Church of Jesus Christ of Latter-day Saints* (1899) is a systematic exposition of the 13 tenets listed by Smith as a summary of LDS teachings. He followed this in 1915 with *Jesus the Christ: A Study of the Messiah and his Mission,* still the definitive LDS work on christology. His work on *The Great Apostasy* (1909), though now somewhat dated, also established LDS views on the historical reality of the corruption of Christianity and a need for full restoration rather than reformation. Talmage was one of a generation of church intellectuals who demonstrated a successful synthesis of secular and spiritual approaches to the gospel. His calling as an apostle (a level of church leadership) and role as expounder of church doctrine affirmed the early Mormon Church's emphasis on intelligence as "the glory of God."

Hugh W. Nibley

Hugh Nibley (1910–2005) was the dominant Mormon intellectual of postwar Mormonism. His influence was primarily felt among Latter-day Saints hungry for intellectual foundations to the Book of Mormon, the ancient writings gathered in the Pearl of Great Price, and temple theology. His work on the Book of Mormon, in particular, creates a compelling case for Near Eastern elements bespeaking a genuinely ancient provenance to the text. Competent in several ancient and modern languages, Nibley was the first Mormon apologist to earn the praise of prominent non-LDS scholars of biblical and ancient Near Eastern studies and even the grudging respect of Protestant evangelicals.

Within the LDS community, Nibley also exerted unparalleled influence as a critic of Mormon culture, relentlessly attacking what he saw as departures from early Mormonism's teachings on the environment, materialism, and intellectual engagement. His rhetorical flamboyance and personal idiosyncrasies won him a devoted following, even as the former alienated some colleagues and critics of the church. His legacy is fairly assured through approximately 20 volumes of collected works.

BELIEFS AND PRACTICES

When it comes to distinctive LDS teachings and doctrines, the Book of Mormon occupies a special place. Published and advertised for sale even before the Church came into being, the new book of scripture was perhaps more important for what it embodied than for what it promulgated. As a new revelation from heaven, the book represented a reopening of communication between humanity and God, a renewed covenant, and new dispensation. And it set Smith apart among myriad nineteenth century claimants to prophetic authority as one who produced tangible, verifiable evidence of his divine calling. The Book of Mormon was therefore a dramatic sign that distinguished Mormonism as a religion of new prophets and new revelation. Smith inaugurated Mormonism with this emphasis on the form and

accessibility, rather than the content, of divine knowledge, with his first words upon returning from the Sacred Grove, the forested spot near his Palmyra, New York, home where he had his first vision of God the Father and Jesus Christ: "I have learned for myself,…" Likewise, the Book of Mormon enjoins readers to "ask of God" if the record is true, and promises that "by the power of the Holy Ghost ye may know the truth of all things" (Moroni 10:5). This emphasis on what Latter-day Saints call "personal revelation" is both a core principle of Mormonism and the bedrock for all other principles.

After the church was organized, Smith experienced repeated visions and revelations, and elaborated a fairly comprehensive theology that departed from other Christian creeds in fundamental ways, even as he claimed to restore the authority and organization that characterized the church that Christ established. The entire program of gospel restoration was predicated on the belief, affirmed to Smith in his "First Vision," that all Christian groups had departed from the true gospel order, in a universal or "Great" apostasy. Unlike other restorationists that likewise believed the Protestant Reformation of the sixteenth century had not gone far enough in recuperating original Christianity, Smith taught that even Adam was taught the gospel, baptized, and given the gift of the Holy Ghost. Christ himself, in other words, was restoring, rather than inaugurating, gospel teachings and ordinances.

Smith also differed from most other religious innovators of his day in affirming the need for manifest evidence of divine authority to act in God's name. In his case, he insisted that he received such "priesthood" authority to perform rituals called ordinances in God's name, by the personal appearing of a resurrected John the Baptist in May 1829, who ordained Smith to the Aaronic Priesthood. Subsequently, he claimed receipt of the higher, or Melchizedek Priesthood, by the resurrected apostles of Christ, Peter, James, and John. Thus, he asserted the same kind of continuity that is the basis for Roman Catholicism's claim to authority: literal apostolic succession.

First and notably different among the beliefs Smith restored was the conception of the godhead. Joseph echoed historical Christianity in considering God the Father to be the supreme being and object of worship, and in holding Jesus Christ to be God's divinely begotten son, the Savior who atoned for the sins of the human race, and the Savior who was literally resurrected from death. Salvation, for Latter-day Saints, is impossible independent of Jesus Christ's freely given sacrifice of himself on mankind's behalf in the crucifixion. In this cardinal sense, Latter-day Saints are clearly and undeniably Christian. But flying in the face of Trinitarian formulations, Smith declared that "the Father has a body of flesh and bones as tangible as man's; the Son also" [D&C 130:22]. The Holy Spirit or Holy Ghost, as the third member of the godhead, is not corporeal but exists as a "personage of spirit." Not canonized or fully incorporated into church teaching, but taught by Smith as well, was the further claim that "God himself was once as we are now, and is an exalted man, and sits enthroned in yonder heavens."

Smith's conception of humankind was as radical as his views on deity. Humanity, he declared, was eternally existent, inherently innocent, boundlessly free, and infinitely perfectible. "Man was also in the beginning with God. Intelligence, or the light

of truth, was not created or made, neither indeed can be," he wrote (D&C 93:29). Latter-day Saints accordingly believe that human existence recedes infinitely into the past, incorporating a premortal state in which we lived in God's presence as his literal spirit offspring. Mortality is a probationary period in which humans both demonstrate and improve upon moral qualities, under conditions of trial, opposition, and temptation.

Existing before the fall of Adam, humanity cannot therefore be seen as emerging out of a context of corruption or originating from fallen parentage. Therefore, "Every spirit of man was innocent in the beginning; and God having redeemed man from the fall, men became again, in their infant state, innocent before God (D&C 93:38). Though we are born into a world of sin and obtain human bodies subject to weakness and sinful appetite, Mormons believe we inherit neither sin nor guilt. Infant baptism is thus redundant at best and sacrilege at worst, since it denies both the inherent innocence of God's divine progeny and the efficacy of Christ's atonement, which does away with the effect of Adam's sin.

Every human being has agency, or moral freedom, which is, in fact, an inalienable characteristic of the human spirit as constituted by God. "All truth is independent in that sphere in which God has placed it, to act for itself, as all intelligence also; otherwise there is no existence" (D&C 93:30). Or as Smith wrote more simply, God affirmed such freedom in our mortal context when, "in the Garden of Eden, gave I unto man his agency" (Moses 7:32, Pearl of Great Price). Freedom of choice was, in fact, the subject of the war in heaven between the great archangel Michael and his angels and the dragon and his angels, alluded to in Revelation 12, according to writings produced by Smith. The privileged position that accountability and freedom of choice occupy informs the Mormon political, cultural, and theological sensibility.

Finally, Smith taught that humanity can become even as God is. "You have got to learn how to make yourselves Gods," he said, "by going from a small capacity to a great capacity, from a small degree to another, from grace to grace, until the resurrection of the dead, from exaltation to exaltation—till you are able to sit in everlasting burnings and everlasting power and glory." Joseph F. Smith (1838–1918), sixth president of the church, confirmed that "as the infant son of an earthly father and mother is capable in due time of becoming a man, so the undeveloped offspring of celestial parentage is capable, by experience through ages and aeons, of evolving into a God."[3]

In this perspective, part of the eternal destiny that awaits the righteous is the opportunity to continue in family relationships beyond mortal life. Through special ordinances, men and women may be sealed to each other for time and eternity, and children to their parents, in a chain of associations that can extend infinitely in both directions. Interpreting the promises made to the biblical partriarch Abraham literally, Latter-day Saints believe that those who receive exaltation in the Celestial kingdom of God (the highest of three levels of heaven in Mormon thought) may also sire an endless posterity of spirit offspring, in the same way that the human family are spirit offspring of a Heavenly Father. The essence of exaltation or eternal life, for

Latter-day Saints, is this capacity and privilege to enjoy and perpetuate eternal family relationships.

Mormons are quasi-universalists. They believe that virtually all people will be saved in one of three kingdoms of glory—which are demarcated the Celestial, the Terrestrial, and the Telestial—although exaltation pertains to the highest order within the Celestial kingdom alone, and an unfortunate few who willfully persist in rebellion against God and his Christ will be consigned, through their own determined choices, to an uncertain fate as "sons of perdition." The God of Mormonism is hence a God who is above all else a generous and merciful God who must nonetheless honor the agency that he gave to the human race, whose members will receive the greatest rewards and blessings "which they are willing to receive."

To create a holy place where eternal marriages and other sacred ordinances can be performed, Latter-day Saints erect temples. Unlike meetinghouses, buildings for normal Sunday worship open to Mormon and visitor alike, temples are entered only by those who aspire to live by the strictest requirements of faithfulness, as manifested by a "temple recommend" bestowed after interviews with ecclesiastical leaders. Mormons believe that deceased individuals are subject to the same requirements imposed on the living if they hope for salvation. They must accept Christ and the ordinances, beginning with baptism, that he stipulated. But Mormons also believe that God is just, and therefore he made provisions that those who die in ignorance can be taught the gospel and have sacred ordinances performed on their behalf by the living. Such "work for the dead" is also conducted in the temples. As evidence that ancient Christians performed such rituals, including the baptizing of living proxies on behalf of deceased ancestors and others, Latter-day Saints refer to Paul's rhetorical question to the Corinthians, "If the dead rise not at all, why are they then baptized for the dead?" (I Corinthians 15:29).

The "strict requirements" that manifest the life of a devout Mormon include adherence to a health code, known as the Word of Wisdom, which mandates moderation in diet and abstinence from alcohol, tobacco, tea, and coffee. The code also enjoins sparing consumption of meat, use of grains, and enjoyment of fruits and herbs "in their season." Mormons must also comply with the Old Testament law of tithing, paying ten percent of their income to the church. LDS financial offerings thus tend to be much higher than in other Christian denominations. Part of the reason is that temple goers must be full tithe payers, and part of the reason is undoubtedly the culture of sacrifice intrinsic to Mormonism. Faithful members are also expected to conform to the law of chastity, which means no premarital or extramarital sexual relations. The importance of this principle, like the Word of Wisdom, is doubtless related to the biblical concept of the human body as a temple of God. But it receives additional significance from the unique belief that procreation is no mere biological convention for the peopling of the earth, but a sacred power that in the eternities pertains to godhood itself. The emphasis bears tangible results. Studies consistently show that LDS youth and adults alike practice sexual chastity at significantly higher levels than members of other groups.

Adherence to the Mormon faith also requires a commitment to Christian service. The Church of Jesus Christ of Latter-day Saints has no professional clergy. Except for the General Authorities, who constitute the central leadership based in Salt Lake, virtually all positions in the Church are filled by lay workers. Even bishops, who preside over local congregations called wards, and stake presidents, who preside over groupings of wards called stakes, perform their demanding service voluntarily, in addition to their professional and family commitments. Typical wards require volunteer service in 100 or more other positions called "callings." At the age of 19, young men are expected to serve for two full years, at their own expense, as proselytizing missionaries. Retired couples are also encouraged to serve, often doing so in the areas of education or humanitarian services. Young women are not expected to serve, but many thousands do so every year. Missionary work is considered primarily a responsibility pertaining to the priesthood, and Mormons follow the primitive church in restricting the priesthood to worthy males only.

Modeled in part on the New Testament church, the LDS church has a prophet as its head, assisted by two counselors, with the Quorum of Twelve Apostles ranking next in the hierarchy. The apostolic succession restored by Smith continues to the present, with Latter-day Saints sustaining the present leader as "prophet, seer, and revelator" of the church. "Modern revelation" or "continuing revelation" thus remains the distinguishing feature of LDS church leadership. Though the manifestations of this model are not as dramatic as in the days of Smith and Young, Mormons continue nonetheless to accept the prophet as the literal spokesman for God. In a practice that avoids any semblance of politicking or lobbying, the senior apostle is routinely ordained the new prophet upon the death of his predecessor.

Under the direction of the Twelve Apostles are several Quorums of Seventy, and then Area Authorities responsible for vast geographical units. Within those units, the next descending level of organization is the stake, presided over by a president and two counselors, and comprising five to a dozen wards and branches (a branch is a unit with generally fewer members and leadership resources than a ward).

Two areas of Mormon culture with roots in revealed theology are welfare and education. Historians have commented on the peculiar tendency, in Mormonism, to "exalt … economics and economic welfare into an important, if not indispensable, element of religious salvation."[4] Smith experimented with communalism to obviate poverty, and Young famously ordered relief expeditions to save starving handcart pioneers (Mormon settlers traveling westward to Utah) with the words, "that is my religion,… to save the people." In the 1930s, leaders centralized a churchwide welfare program, intended to replace "the curse of idleness" and the indignity of the dole with principles of self-reliance and industry. Accordingly, the church began acquiring farms and processing facilities and building "bishop's storehouses" to serve as storage and distribution centers for the needy. Centered on a ten-acre complex in Salt Lake City known as Welfare Square, the church's massive operations today include 172,000 acres of farmland, 199 agricultural production projects, 51 canneries, and 63 grain storage facilities feeding into 113 central, regional, and branch storehouses.[5]

In recent years, those relief efforts extended far beyond the church's own membership. Over 2,400 humanitarian missionaries serve in Welfare Services worldwide, and efforts reach 150 countries, including disaster assistance efforts in North Korea, Africa, Europe, South America, and Afghanistan.

Aiming to solve poverty at the source, the church launched the Perpetual Education Fund (PEF) in 2001, modeled on the Perpetual Education Fund that financed the immigration and resettlement of nineteenth century converts. Over 30,000 immigrants used needed monies, and then paid back into the fund to finance fellow recipients. The new PEF targets returned Mormon missionaries in underdeveloped nations, providing low-cost educational loans. Over 6,000 men and women benefited from the 100 million dollars raised for the effort in the first two years alone.

Education always had a prominent place in Mormon faith and culture, since Smith founded an evening school for adults, "the School of the Prophets," in Kirtland in 1833, where they studied the gospel but also Hebrew, Greek, and Latin. In Nauvoo, Illinois, though economically crippled and scattered by the Missouri persecutions, Mormons organized a university shortly after draining the swampland and erecting the first buildings. They repeated the effort three years after entering the Salt Lake Valley, founding the University of Deseret in 1850. "The glory of God is intelligence" (D&C 93:36), Smith wrote in 1833, and later recorded the inspiring claim that "whatever principle of intelligence we attain unto in this life, it will rise with us in the resurrection. And if a person gains more knowledge and intelligence in this life through his diligence and obedience than another, he will have so much the advantage in the world to come" (DC 130:18–19). Mormon emphasis on the life of the mind is evident today in their operation of the largest private, church-sponsored universities in the United States. Brigham Young University in Provo, Utah, has 35,000 students and the number one ranked "great college library" according to one prestigious review.[6] A culture of learning is also evident in the fact that, as one study remarks, American Latter-day Saints maintain "a standard of educational attainment that is significantly higher than the national average." Interestingly, the effect of this educational engagement produces in the case of Mormons a somewhat anomalous result. In contrast to the tendency for educational attainment to dampen religious ardor, researchers find in the case of Mormon men that "the higher the level of education, the higher one's religious observance.… The same findings hold generally true for Mormon women."[7]

SCRIPTURES

Latter-day Saints follow other Christians in affirming the Bible as the word of God, "as far as it is translated correctly" according to one of their articles of faith. They are devout students of the scriptures and generally read the Bible as a historical, inspired record, tending toward literalism in their interpretation with some exceptions. They do not, for instance, read the creation story of Adam and Eve literally, neither do they regard the days of creation literally or, as a rule, the universal flood.

The Bible is for Mormons a principal source of church sermons, gospel study, and proselytizing efforts.

The Book of Mormon is perhaps the scripture that people most associate with the church and is the source of their unofficial name, though it was at first intended as a term of derision—"Mormonites," which soon became shortened to "Mormons." In its essentials, the Book of Mormon is theologically congruent with the Bible. It affirms that Jesus is the Christ and espouses a gospel of faith, repentance, baptism, and the gift of the Holy Ghost. In addition to both embodying and representing a version of divine revelation that is as literal as Old Testament instances, though more egalitarian in its manifestations, the Book of Mormon presents few novel doctrines. It does pronounce the fall of Adam and Eve fortunate, part of a divinely instigated plan, and also expounds a doctrine of Christ's atonement, or vicarious sacrifice on behalf of humankind, with more doctrinal detail than the New Testament. The most remarkable aspect of the record is probably its account of a visit of the resurrected Christ to the ancient inhabitants of the Western Hemisphere and the subsequent establishment of a Christian church with twelve "disciples." Even earlier, according to the record, a church was established that looked forward to the coming of a Christ while keeping the Mosaic Law. The LDS faith's emphasis on the Book of Mormon historically derives from the fact that Smith's claim to prophetic authority rose or fell on the validity of the record he claimed to translate by the gift and power of God. The Book of Mormon is, in that respect, the "keystone of Mormonism."

Smith received dozens of revelations supposedly from God during his lifetime. Many of these were selected for publication as the *Book of Commandments* in 1833, subsequently reissued as the *Doctrine and Covenants.* A few additions were made in the years since, most recently in 1981. The *Doctrine and Covenants* contains more of those teachings that are distinctively LDS, such as the law of tithing, the health code known as "the Word of Wisdom," the concept of a godhead consisting of three separate and distinct entities, the offices and duties pertaining to the priesthood, three distinct kingdoms of glory, and more.

The fourth and final book of scripture rounding out the LDS "Standard Works" is the *Pearl of Great Price.* It consists of ancient writings attributed to Abraham, a selection of the writings of Moses absent from or corrupted in the Old Testament version, an account of Smith's personal history, a revision of Matthew chapter 24, and the church's Articles of Faith. Especially notable, parts of the *Pearl of Great Price* include a report of a pre-Mortal Council in Heaven, and the record of the ancient biblical prophet Enoch.

Besides producing three books of scripture in addition to the Bible, Smith also spent a few years working on what he called a new "translation of the Bible," although it was actually a recension, since he did not work with original manuscripts, but proceeded to make changes and additions under what he felt was divine inspiration. Although the LDS church never adopted his edited work as its official version, many (though far from all) of the changes he introduced were incorporated as footnotes in the current (1979) King James Version of the Bible used by the LDS church.

CONTROVERSIES AND ISSUES

Mormonism has been steeped in controversy since its boy prophet first claimed that God and Christ had personally visited him.. Publishing a record that supposedly recounted ancient American history inscribed on gold plates, recorded by descendents of Israelites, delivered up by an angel, and translated by "the gift and power of God," elicited both mockery and suspicion. Hostility was also aroused, then as now, by those who believed the Bible was the complete and sufficient word of God and saw the new scripture as a blasphemous affront to a settled canon.

An infelicitous combination of other factors conspired to turn hostility into violent confrontation and persecution. Had they simply lived among other American citizens, Mormons might have aroused no more notice than the scores of other idiosyncratic movements spawned by the religious ferment of the Second Great Awakening. But mere months after their 1830 organization, Smith revealed to his followers that the Old Testament prophecies of an Israel gathered in from her long dispersion were to be literally fulfilled. Accordingly, Mormons gathered in Kirtland, Ohio, and shortly thereafter in Independence, Missouri. Financial catastrophe and internal dissension destroyed the Ohio base, while on the western frontier, frictions with other settlers quickly escalated. Mormon claims to new scripture, heavenly manifestations, and spiritual gifts, combined with their practice of labeling outsiders "gentiles" and their rhetoric of Missouri being the land of their inheritance quickly alienated neighbors. Preaching to the Native Americans, whom they labeled "Lamanites" and considered chosen descendents of Israelites, angered Missourians, and charges that these Northern immigrants were abolitionists was an especially volatile allegation in proslavery Missouri. Finally, the sheer number of converts gathering in sparsely populated areas quickly made Mormons the dominant political power and led to violence. Successive confrontations forced the saints to leave Jackson County, Missouri, then Caldwell County, and then, following a massacre of Mormons at Haun's Mill, they were forced to leave the state altogether.

Welcomed across the Mississippi into Illinois, the saints established a prosperous city called Nauvoo, with a majestic temple, a fledgling university, and a thousands-strong Nauvoo Legion, or militia. But old tensions reemerged; additionally, reports circulated that Smith and others were practicing plural marriage, concerns grew that the Mormon courts gave church members unprecedented exemption from legal accountability, and genuine alarm set in when Smith announced his candidacy for the presidency of the United States in early 1844. Months later, he was murdered with his brother Hyrum in a Carthage, Illinois, jail, and Mormons were once again forced to flee en masse. Most chose to remove westward under Young.

They settled in the Salt Lake Valley in 1847, and five years later publicly announced their practice of plural marriage. At that point another wave of confrontation began, leading to invasion by federal forces in 1857 and a barrage of laws and court rulings that by 1890 stripped the church of its assets and its members of the right to vote, and resulted in the imprisonment or flight of Mormon leaders and

the virtual destruction of the church itself. Throughout the latter half of the nineteenth century, popular fiction included sensationalist accounts of Mormons that appealed to anti-Mormont sentiment, fear of the foreign, and all things lurid—further compounding Mormonism's alienation from the mainstream. By 1890, President Wilford Woodruff (1807–1898) announced that God had relieved the Mormon people of the responsibility to practice plural marriage, and the Americanization of Mormonism began in earnest. Statehood came at last, after repeated rebuffs, in 1893, though as late as 1904 the United States Senate held hearings on whether to seat the newly elected Reed Smoot (1862–1941), Mormon apostle from Utah.

With occasional setbacks, Mormons were increasingly perceived by the American public as hardworking, family-oriented, and patriotic, and the church was recognized for its moral teachings, efficient organization, and success in caring for its own. No serious conflicts with larger society erupted until the 1960s, when attention on civil rights focused the spotlight on the LDS practice of barring persons of African ancestry from the priesthood. The church weathered that storm, enduring bouts of negative publicity, only to change their policy when much of the storm had abated. In 1978, President Kimball announced that the Lord directed him to make the priesthood available to all worthy males regardless of race or ancestry.

In the years since the priesthood announcement, Mormonism is often invoked as an institution that typifies the best of Christian values, rather than as an instance of unacceptable heterodoxy, as it was in the nineteenth century. Except for occasional protests from Christian fundamentalists, who protest the appellation of Christian to a religion that embraces unorthodox notions of the Trinity and other anomalous doctrines, most people in the United States and throughout the world view Latter-day Saints with respect and acceptance.

At present, few controversies persist. Like Catholicism, Mormonism still does not bestow the priesthood upon women. Most Mormons are comfortable with this doctrine, and no significant agitation for change is on the horizon. The history of Mormon women has, in fact, been one of paradox and surprise. Portrayed by politicians, novelists, and moral crusaders as victims of an oppressive system, plural wives were adamant in defending their own right to engage in the practice and publicly demonstrated by the thousands against federal interference. Social historians noted that the system actually allowed LDS women an uncommon degree of social and economic power. Utah women were the first in the United States to exercise the right to vote (in 1870) and were accorded educational opportunities and encouragement in many cases comparable to their male peers. Mormon theology, while patriarchal in priesthood rights, is in other ways profoundly feminist. Mormons espouse, for example, belief in a "mother in Heaven" (sung about in a popular hymn, though seldom discussed), and believe, as Joseph Fielding Smith (1876–1972) put it succinctly, that "a man cannot be exalted [saved] singly and alone."[8]

Occasional criticisms have emerged in foreign quarters that Mormon inroads in their culture is a form of American imperialism, but Mormon insistence on entering

countries through the front door or not at all has earned it a trusting relationship with most of the hundred plus countries where some 60,000 Mormon missionaries now operate. Since 2000, Mormonism has more members outside the United States than within, but because the top leaders serve for life, change in the national and ethnic constitution of that leadership lags far behind changing demographics churchwide. The first non-North American was called to the Quorum of the Twelve in 2004 (from Germany), and as yet no Latin American member, where most members reside and where growth is strongest, serves in that quorum.

One area of internal friction emerged in the 1960s with the professionalization of Mormon studies. Long divided between vehement critics and faithful apologists, the study of Mormonism is now of vital interest to American historians, sociologists of religion, and cultural scholars. In addition, the development of archaeology, anthropology, and other disciplines made it possible to subject the Book of Mormon to scholarly scrutiny with a new intellectual professionalism. Some Mormons pleaded for a more naturalistic approach to Mormon history, and a less literal acceptance of the historical claims of and about the Book of Mormon.

At the same time, a powerful Church Correlation program, which aims to unify and centralize all church programs and instruction, and is especially attentive to the millions of newer members from less developed nations, tends toward less, not more, intellectual engagement with Mormon history and doctrine. In addition, the Church, through its own historians and scholars working out of both Brigham Young University and its own historical department, continues to produce high-quality scholarship predicated upon and reaffirming the traditional rendering of Mormon history and the legitimacy of the Book of Mormon as ancient history. One observer writes that all these competing tensions amount to "a crisis comparable to but more profound than that which Roman Catholicism recognized around the time of the Second Vatican Council."[9] That is an overstatement, since the crisis in the LDS case is not felt beyond the more intellectual strata of the church. But frictions have led to occasional excommunications of dissident scholars and also feminists, who are perceived to be engaging in the work of publicly undermining the teachings and mission of the church.

The church has also attracted occasional criticism for its involvement in political issues in the United States. The church's opposition to the Equal Rights Amendment is largely viewed as being the deciding factor in its 1982 defeat. More recently, the church supported state initiatives aimed at defending traditional definitions of marriage, as opposed to gay and lesbian marriage, and issued a "statement of principle" in support of "a constitutional amendment preserving marriage as the lawful union of a man and a woman."[10] The church also has a long-standing and publicly expressed opposition to abortion. On at least one occasion, the church demonstrated that its positions can cut across both major political parties when President Kimball issued a public statement opposing the MX missile plan in 1981. In all these cases the church is unapologetic, insisting on its right to express public positions on issues of national moral significance.

THE FUTURE

In 1984, sociologist Rodney Stark predicted that some people then alive could live to see the LDS church grow from its six or seven million to 267 million by the year 2080.[11] Though criticized as extravagant by fellow scholars, an unapologetic Stark returned to the subject in 1999, insisting that "membership is substantially higher than my most optimistic projection."[12] Stark's numbers do not factor in the number of LDS defections or lapses into inactivity—which can be considerable, especially in high-growth areas. Even so, the LDS church clearly continues to grow at a prodigious rate, and it remains a highly cohesive international community, with little internal dissension, history of or prospect for significant schism, or impediments to continued success. President Hinckley was apparently in earnest when he claimed in 1999 that the two greatest challenges facing the church were providing sufficient local leadership and houses of worship to keep pace with member growth. (New meetinghouse construction at that time was proceeding at a 400-buildings-per-year rate.[13] Other challenges will undoubtedly involve the growing internationalization of a church long identified as an American institution with a historic connection to its Utah base.

Until now, Mormon culture has largely been defined by the history of persecution and alienation, geographical isolation, and beliefs and practices sharply at odds with prevailing norms. In the era of the international church, the special role the United States served in Mormon history and theology will necessarily receive less emphasis. In addition, with an increasing proportion of members being recent converts, the role of collective memory in giving shape to a shared identity will diminish. Since the administration of President Benson (1985–1994), the vastly heightened role of the Book of Mormon in Mormon devotional life may emerge as a more conspicuous nexus of Mormon faith and cultural grammar. In addition, commensurate with Mormonism's rise as a religion of millions has been the elaboration of distinctively Mormon modes of cultural expression. Though its architecture is mostly eclectic, and its art and music have yet to carve out distinguished niches, Mormon literature and, more recently, Mormon filmmaking include superior works that articulate distinctive Mormon themes in an artistic language while still resonating across the wider culture. Such developments suggest that Mormonism stands poised to find continued success in combining successful integration into larger society with a powerful sense of group identity and cultural distinctness.

CONCLUSION

A major achievement of Mormonism is its global spread while forging a coherent and recognizable Mormon culture that transcends geographical and ethnic boundaries. Mormonism has proven itself more resistant than mainline Protestant churches to the influences of secularism and modernity. Though its leadership is increasingly aged and unfailingly conservative on moral and social issues, the rank and file still accord the church president the same status enjoyed by Smith as the literal prophet,

seer, and revelator of the Lord. And recent church presidents have tended to downplay those doctrines that served to distinguish Mormonism from mainline churches, while increasing church participation in international humanitarian efforts. The overall effect has been a twenty-first century church that, even as it embraces a pioneer past, modern prophets, and distinctive doctrines of deity, enjoys amicable relations with other faiths and assumes a comfortable place at the interdenominational table of those churches whose priority is alleviating suffering, doing good, and leading lives of service and integrity.

The Adventist Tradition

Douglas Morgan

The Adventist movement emerged amidst the religious ferment of the antebellum United States, stirred by the preaching of William Miller (1782–1849), a Baptist farmer from upstate New York in the late 1830s and 1840s. Miller's Adventist awakening melded Protestant revivalism with a bracing apocalyptic message: biblical prophecy revealed that the second coming of Christ was about to occur; in fact, it would take place "about 1843."[1] Despite the mistake in specifying the time, the Adventist movement started by Miller's preaching led to a vital and enduring alternative religious tradition, or New Religious Movement (NRM). By 2005 membership in the largest of the Adventist denominations, the Seventh-day Adventists, surpassed one million in the United States and Canada, and 14 million worldwide.[2]

Closer to evangelical Protestantism than to Mormonism, yet more sharply distinct from it than the Disciples of Christ and other churches that developed from the restorationist preaching of Barton Stone (1772–1844) and Alexander Campbell (1788–1866), Adventism occupied ambivalent territory in the American religious landscape. While establishing a stable niche in society, Adventism sustained a dissenting identity—a sense of distinctive vocation in the culmination of history that creates tension with the larger culture. While carrying out that mission by proclaiming the second advent of Christ and a new world to come, Adventists had a significant impact on the present world through an array of institutions and endeavors for health care, education, religious liberty, and international development and humanitarian aid. The Adventist tradition helped generate cultural phenomena in American history that range from breakfast cereal to the Branch Davidians, whose variation on Adventist belief lay behind the tragic confrontation with federal authorities near Waco, Texas, in 1993.[3] Though Ellen Gould Harmon White (1827–1915), a cofounder of Seventh-day Adventism, is less well-known than fellow nineteenth century prophets Mary Baker Eddy and Joseph Smith, the charismatic leadership of this minimally educated woman from Maine inspired much of the Adventist achievement.

ORIGINS, 1840–1863

Miller was far from alone in preaching that the prophecy of Daniel 8:14 concerning a "cleansing of the sanctuary" would somehow be fulfilled in the 1840s.[4] That belief was widespread among Protestant writers on prophecy in Miller's day. His innovation came in interpreting the "cleansing of the sanctuary" to be a cataclysmic act of divine intervention—a cleansing by fire of the present evil order, followed by re-creation—"the new earth"—when Christ returned. The Millerite movement gave expression to the "come-outer" rejection of dominant societal institutions as irredeemably corrupt adopted by some radical reformers in the late 1830s and 1840s. Adventists repudiated the American institutions of church and state as instruments of redemption, placing their hopes in the total and immediate renovation of society soon to be accomplished by Christ's eternal reign on earth. They thus rejected the postmillennial outlook, then dominant among Protestants, that revival and reform would transform the United States, leading to a millennium in which righteousness would hold sway. In some ways, the Millerite Adventists were more like abolitionist leader William Lloyd Garrison (1805–1879),[5] who repudiated the United States Constitution and called upon Christ's true followers to come out of the slaveholding Union and the established churches that blessed it. In a more literalistic fashion than the Garrisonians, however, Adventists preached the total destruction of civilization and its remaking through divine agency, unaided by human artifice.

The "Great Disappointment" of Jesus not appearing in power and glory on October 22, 1844, the date upon which expectations finally settled, fragmented the Adventist movement. Several of the movement's leaders regrouped at a conference in Albany, New York, in 1845, where they acknowledged their mistaken interpretation of prophecy but reaffirmed both their belief that Christ was soon to return and their commitment to preaching it.[6] The Advent Christian Association, which eventually emerged from this segment of the Millerite movement, was the largest of the Adventist denominations for most of the remainder of the nineteenth century.

The Albany Conference distanced itself from several much smaller groups of Advent believers who remained convinced that the prophecy concerning the "cleansing of the sanctuary" was, indeed, fulfilled in October 1844 in a transcendent event —variously explained—but necessary in the very final sequence of divine actions for the judgment and redemption of the world. Prophecy, ecstatic worship, and even more extreme behavior thought to mark the heavenly age could be found among these groups.

Within this latter segment, a group gradually coalesced around the leadership of James White (1821–1881), Ellen G. White, and Joseph Bates (1792–1872), a veteran social reformer and Millerite organizer.[7] James, a young schoolteacher with a background in the restorationist movement known as the Christian Connection began itinerant preaching of the Millerite message on his own initiative. Ellen, daughter of Portland, Maine, hat maker Robert Harmon, was, along with several other family members, expelled from their Methodist church in 1843 for their persistence in testifying to their second advent beliefs. In December 1844, Ellen received

visions, experienced in a trance-like state.[8] These visions conveyed encouragement that God was leading the tiny, disoriented group, in spite of their great October disappointment, along with giving guidance on how to move forward.

James and Ellen married in Orrington, Maine, in August 1846, and, along with Bates, organized a series of conferences in New England and New York during the late 1840s, which hammered out the core beliefs of the movement that would organize as the Seventh-day Adventist church in the early 1860s.[9] Renewing their study of apocalyptic prophecy, this group found its mission and identity in the "three angels' messages" of Revelation 14:6–12. The prophecy concerning the first and second messages, they concluded, already was fulfilled sequentially by the Advent awakening leading up to 1844. But now, they believed, the third message, the last in the sequence before the return of Christ, must be preached after 1844. Here was their purpose: to proclaim this third and final message before Christ's return, which pointed to a people who "keep the commandments of God and the faith of Jesus" (Revelation 14:12). The "commandments of God" meant in particular the ten commandments, including the sabbath commandment that, they insisted, mandates observance of the sabbath on the seventh day of the week—Saturday, not Sunday.[10]

By the early 1850s these sabbatarian Adventists saw it as their mission to gather a "remnant" in the last days, marked by fidelity to the law of God and sabbath observance, and the "spirit of prophecy"—manifested in the ministry of Ellen White. Another distinctive belief, "annihilationism," depicted God's final judgment on the unrepentant as irreversible death rather than perpetual torment in hell, as conventionally taught. Despite its forbidding sound, annihilationism seemed to them to be more consistent with the biblical picture of a loving God. They held to the closely related doctrine of conditional immortality, denying the existence of an immortal soul detachable from the body. The dead "sleep" in the grave until the final resurrection, when immortality is conferred to the saved by God.[11]

Miller's interpretation of biblical prophecies pointing to 1844, the sabbatarians contended, correctly identified the *time* of their fulfillment, but was mistaken as to the *event*—that is, in identifying the "cleansing of the sanctuary" with the second coming of Christ and the eradication of evil on earth. Rather, the cleansing of the sanctuary referred to a cosmic "Day of Atonement" marked by Christ's final work of mediation and judgment in the "heavenly" sanctuary referred to in the New Testament epistle to the Hebrews. The time span of this eschatological Day of Atonement, while expected to be quite brief, was indeterminable. Rather than recalculating dates, the sabbatarian Adventists now set about the formidable mission of being a prophetic remnant, proclaiming the "third angel's message"—God's final message of warning and reform—to a world facing judgment.[12]

This mission set them starkly over against the ruling powers in American society. As the national crisis over slavery intensified in the 1850s, the sabbatarian Adventists used the Book of Revelation to express a Garrisonian critique of the American republic for its hypocritical "union of *democratic* professions with *slaveocratic* practices."[13] And, as did Garrison, they denounced the widespread clerical support for Sunday laws as an expression of Protestant cultural dominance. That use of state coercion

to enforce a religious practice, said the Adventists, as well as the intolerance shown in suppressing the Millerites from giving free expression to their conscientious interpretation of the Bible in the 1840s, revealed the Protestant empire's vaunted religious liberty to be a sham. In terms of Revelation 12–14, the sabbatarian Adventists saw their movement as the "remnant" (12:17) whose final persecutor (the United States) is depicted as a beast that has a benign, lamb-like aspect but "speaks like a dragon" (13:11–18) and compels worship of an "image to the beast" (a fearsome monster depicted in 13:1–10 that, since the Reformation era of the sixteenth century, many leading Protestant writers had regarded as a symbol of the papacy).[14]

Through a rapidly expanding output of periodicals, pamphlets, and books, as well as "tent meetings" conducted by itinerant evangelists, the sabbatarian Adventists in the 1850s proclaimed their "come-outer" message from Maine to Iowa. Preparation for the impending establishment of Christ's reign, they said, required coming out of the "Babylon" of churches who, in imposing observance of Sunday—the "false sabbath"—manifested pervasive defiance of the law of God's government. Despite the ever-more shocking outrages of the Fugitive Slave Law (1850), the Kansas-Nebraska Act (1854), and the Dred Scott decision (1857), the "remnant" thus called out would not take up arms or campaign politically on behalf of Christ's kingdom. But joining the remnant meant ordering life in accordance with a higher loyalty that would soon bring about a final crackdown by the "slaveocracy," after which, in the words of a leading Adventist writer, "the coming of the Just One" would check the American republic's "astonishing career."

As their mission unfolded and their numbers grew, the sabbatarian Adventists by the 1860s were convinced of the need for organization and institutions to embody the principles of their radical apocalyptic dissent in American society.[15] James and Ellen White led the drive for organization, battling a strong predisposition in their community against any retrogression into the structures that characterized the corrupted churches of "Babylon." Now numbering over 3,000, believers scattered throughout the northern states had by 1860 formed congregations known by a confusing variety of names. After agreement that year on "Seventh-day Adventist" as best encapsulating the movement's most central, distinctive convictions, the publishing office that had been in Battle Creek, Michigan, since 1855 was incorporated as the Seventh-day Adventist Publishing Association. The Michigan Conference, formed in 1861, united believers in that state, not by a formal creed beyond the Bible, but covenanting together "to keep the commandments of God and the faith of Jesus Christ." Six more conferences then quickly organized along similar lines, and in 1863 joined with the Michigan Conference to form the General Conference of Seventh-day Adventists, headquartered in Battle Creek.

These crucial developments set the Seventh-day Adventists decisively on the path of a representative type of church governance along Methodist lines, with decisions on general policy, pastoral personnel, and funding made through the conferences, rather than local congregations. Centralization and cohesion, with strong collective authority vested in the clergy, became hallmarks of the denomination. However, a clash over authority came as early as 1866, with Iowa opponents of the aggressive

leadership of James and Ellen White forming the Church of God (Seventh Day). This break launched the development, over the subsequent century and a half, of numerous, relatively small, seventh-day observing Church of God denominations. The most prominent movement in this sector of the Adventist tradition was the Worldwide Church of God, led by Herbert W. Armstrong (1892–1986).[16]

Organized during the Civil War, the new denomination quickly faced a major crisis over the draft and the question of participation in combat.[17] Their radically biblicist and come-outer outlook disposed Adventists toward pacifism, and since the late 1840s nonresistance views occasionally appeared in their publications, though it was not a prominent theme. As an obscure, dissenting religious movement with its organizational structure barely formed, they were reluctant to draw suspicions of disloyalty to the Union by publicly declaring their refusal to engage in military combat. For the most part, they took the option of paying the $300 fee for an exemption when necessary. In the summer of 1864, however, revisions to the draft law eliminated that alternative, except for members of recognized pacifist faiths such as the Quakers. Now the Adventists were forced to petition the federal War Department and several state governors for recognition as "noncombatants" based on their religious convictions. Uriah Smith (1832–1903), editor of the *Review and Herald,* stated that in declaring "the commandments of God and the faith of Jesus Christ" to be their "articles of faith and practice," Seventh-day Adventists understood "the commandments of God to mean the ten commandments of the moral law, and the faith of Jesus Christ to be the teachings of Christ in the New Testament." It would, they believed, be impossible to keep not only the sixth commandment ("thou shalt not kill") but also the fourth ("the seventh day is the Sabbath of the Lord thy God") while engaging in warfare.[18]

During the Civil War Adventists increasingly thought that their work would effect positive change, at least for a time, within the societal institutions of the present world.[19] Until 1862 their preaching and writing envisioned the Jubilee that would soon free the slaves as none other than the general, final Jubilee for the whole world. The slaves would be freed by Christ at his second coming, not by the American government. After the war ended in 1865, however, James White pointed out that, in addition to the war resulting in freedom for the slaves after all, governmental authorities showed fairness and consideration towards Adventist dissent over the draft. Despite the world's downward spiral, he concluded, the Christian's role is to stay in this "old world" and "act his part until the Prince of Peace shall come and reign."[20]

DISSENTERS IN THE PROTESTANT EMPIRE, 1863–1915

In the decades following the Civil War, the distance between Adventism and the cultural mainstream lessened in some important ways as the church worked to establish an alternative but enduring institutional presence in American society. The "gift of prophecy," exercised by Ellen White independently from the church's organizational governance, became increasingly decisive in inspiring and shaping endeavors toward that end. In response to her exhortations based on visions she experienced

in 1863 and 1865, the church rapidly turned its attention to health reform.[21] Adventists incorporated the principles of healthful living and "natural" remedies set forth by Sylvester Graham (1795–1851) and other reformers into the core of their spirituality, theology, and mission. They viewed physical health as intrinsic to Christian sanctification and preparation for Christ's return. Health reform was essential to a holistic restoration of the image of God in human beings and making them "fit for eternity." Provision of alternative health care, meeting the needs of "suffering humanity," and public advocacy for health and temperance causes became essential components of the Adventist project. Health reform attracted positive attention, became a way of life for believers preparing themselves for life in the world to come, and provided a wide range of possibilities for those inspired by Adventism to take an active part in its mission.

In 1866 the church launched a monthly periodical, the *Health Reformer,* and established its first institution for health care, the Western Health Reform Institute in Battle Creek.[22] Ellen White described the new venture as "designed of God to be one of the greatest aids in preparing a people to be perfect before God."[23] The health institute went through ups and downs during its first decade before its leadership was given to a brilliant protégé nurtured by the Whites, John Harvey Kellogg (1852–1943). The young physician studied medicine at the University of Michigan and at Bellevue Hospital Medical School in New York, one of the nation's leading centers for medical training. At Battle Creek Sanitarium, as he renamed it, Kellogg synthesized the principles of health reform with what he regarded as the most advanced insights of mainstream medical science. The purpose of the sanitarium went beyond recovery from illness to training people to adopt healthful practices; it was to be, said Kellogg, "a place where people learn to stay well." Passionately dedicated to vegetarianism and dietary reform, Kellogg's experiments in developing health foods led to the invention of granola and cornflakes, which his more commercially minded brother, Will, used in pioneering the American breakfast cereal industry. The doctor also invented exercise machines and devices for delivering hydrotherapy.

The mission of the Seventh-day Adventist church, as John Harvey Kellogg envisioned it, was to be "the Good Samaritan to all the world," offering benevolent service on a "undenominational, unsectarian" basis.[24] To train talented and idealistic young Adventists for such service, he founded the American Medical Missionary College in 1895. In 1893, Kellogg also became head of the Medical Missionary and Benevolent Association, formed to oversee the church's health and humanitarian projects in the United States and abroad. One of the most ambitious of these brought free medical clinics, health classes, child care, housing for the unemployed, and an array of other social services to the burgeoning industrial city of Chicago, Illinois, beginning in 1893.

Prohibition, one of the most prominent issues of social reform, drew Adventists into the political arena, working cooperatively with other progressive agencies.[25] During the 1870s, Ellen White formed ties with the Woman's Christian Temperance

Union and gave public lectures on temperance and prohibition to audiences occasionally estimated to number in the thousands. The liquor traffic, she wrote in 1881, brought the nation into a "moral paralysis" that every temperance advocate was under obligation to counteract "by precept and example—by voice and pen and vote."[26] Again during the first two decades of the twentieth century, the church devoted the full energy of its organizational machinery to the cause of getting out the vote for prohibition.

While the health reform and prohibition causes brought Adventists into a working relationship with associations closer to the cultural mainstream, the preeminent motivation behind these efforts remained a mission of dissent and reform from the margins. The "third angel's message" must be proclaimed throughout the world to prepare a people for the return of Christ and the new world to come.

In the two decades following the Civil War, the Adventist mission expanded further into the American Midwest and in California, and made smaller beginnings in the South.[27] A world perspective on mission began to take hold, and the first official overseas emissary of Seventh-day Adventism, John N. Andrews (1829–1883), went to central Europe in 1874. At the same time, more and more of the world was coming to North America, so the church adapted its outreach to various language groups among American immigrants, such as Germans, Norwegians, Swedish, and French.

With their understanding that preparation for eternity involved the whole person, not just "the soul," the Adventist pattern of mission went beyond religious indoctrination, placing high priority on institutions for education and health care replicating those in Battle Creek.[28] In California, for example, with their adherents there still numbering only in the hundreds, the church opened the Rural Health Retreat in the Napa Valley in 1877 and Healdsburg College in 1882—the counterpart to Battle Creek College, which started in 1874. A publishing house, the Pacific Press Publishing Association, was established in Oakland in 1874, paralleling the Review and Herald Publishing Association in Battle Creek. The Pacific Press launched its missionary journal, the *Signs of the Times,* in 1875, while the *Review and Herald* continued publication from Battle Creek.

Adventist evangelism centered on calling truehearted believers out of the "Babylon" of the established churches and into the commandment-keeping "remnant." Until the 1890s, they directed this call mainly to people of Protestant background, rather than Roman Catholic or non-Christian. Placing the Sabbath issue at the forefront, the Adventist polemic challenged American Protestants to uphold the standard of what they regarded as true Protestantism.[29] They insisted that making the Bible the final authority required observance of the Sabbath on the seventh day, and that laws giving state support to Sunday observance violated the principle of individual freedom from coercion in religion.

Following the Civil War, a new campaign emerged among Protestants for strengthening and extending Sunday laws. The measure was part of a broader agenda: ensuring that the United States remain a "Christian nation" in the face of the new level of pluralism brought by the growing masses of non-Protestant immigrants.

A coalition of clergy from several Protestant denominations formed the National Reform Association that in 1879 launched a campaign for a national Sunday law that would indicate "national recognition of divine sovereignty."[30]

Apocalyptic prophecy indicated to Adventists that the Sunday crusade would succeed in the end, leading to the final persecution of the faithful minority by the two-horned beast of Revelation 13:11–18, which symbolized the United States. Paradoxically, that apocalyptic expectation energized them to intense activity in the governmental arena against Sunday laws and on behalf of religious liberty in general.[31] As the Adventist cause progressed in the South, where states enforced Sunday laws more strictly than any other region, imprisonment of believers became somewhat commonplace. More than 100 served time, some on chain gangs, between 1878 and 1896. Meanwhile, the church stepped up its activism, contending, among other reasons, that laws against work or business on Sunday placed an unfair economic burden on Saturday observers, who, in order to worship in accordance with their conscience, would be forced into two days of inactivity, while the Sunday-observing majority would need to take only one. Adventists began publishing the *American Sentinel* in 1886 (changed to the current title, *Liberty,* in 1906) and formed the National Religious Liberty Association in 1889 to advocate religious freedom and separation of church and state and "to aid persecuted people of any race, color or creed."[32]

In 1888 and 1889, issues of religious liberty moved to the national stage with reform legislation proposed by Senator Henry Blair (1834–1920) of New Hampshire. In 1888, Blair introduced the first national Sunday legislation to be proposed in Congress in 60 years. The following year he proposed a constitutional amendment requiring public schools to provide instruction in "virtue, morality, and the principles of the Christian religion." In both instances, Adventists mounted mass petition campaigns and sent spokespersons to testify before congressional committees in helping to defeat Blair's bills.

The church's ambitious mission continued pushing toward new frontiers during the final decade of the nineteenth century.[33] The work overseas moved beyond its initial phase in Europe and Anglo-Protestant dominated enclaves in Australia and South Africa, and made a start in Catholic-dominated Latin America and "heathen" lands in Africa and Asia. As the United States rapidly urbanized, the church also made a concerted effort to establish missions in the large cities that teemed with millions totally untouched by their message. These efforts were at times frail and abortive, and rarely resulted in large numbers of converts. However, in addition to Chicago, a lasting and dynamic Adventist presence took hold in New York City, Washington, D.C., San Francisco, California, and other cities.

Prompted by repeated, urgent pleas from Ellen White, Adventists in the 1890s also ventured into another mission field they had largely neglected—the African-American population of the South.[34] In sermons, articles, and letters, the prophet called for a comprehensive mission bringing educational and economic opportunity, along with gospel truth, as a work of "restitution" to an oppressed and impoverished people "who have been robbed of their time and deprived of their education."[35] She

stressed the equal dignity of all people in Christ; no "walls of prejudice" should be built up within the church. The most dramatic response to her admonitions came from her oldest son. Edson White (1849–1928) and a friend acquired and outfitted a steamboat, christened the *Morning Star,* which they sailed down the Mississippi River and used as a base for work in Vicksburg, Mississippi, and nearby regions. The ramifications for racial equality and black economic advance in the Adventist work prompted a violent reaction from white supremacists. Despite the obstacles posed by the backlash, along with the reluctance of some church leaders to provide needed funds, and Edson's own somewhat unstable personality, the Southern Missionary Society founded under his leadership established by 1909 fifty-five primary schools with 1800 pupils in ten Southern states, medical facilities in Atlanta, Georgia, and Nashville, Tennessee, and Oakwood Industrial School (later Oakwood College) near Huntsville, Alabama. Black membership in the Adventist church, which numbered less than 50 in 1894, reached 900 by 1909.

As the story of the Southern mission illustrates, the prophetic ministry of Ellen White intertwined deeply with virtually every aspect of the church's development. Historian Jonathan Butler profiled the division of labor between the husband-wife team, James and Ellen, as cofounders of the Seventh-day Adventist movement.[36] James was "the organizer, the publisher, the businessman." Ellen was "the visionary, the counselor and exhorter." Her visions were not a source for Adventist doctrines nor did her writings add to the canon of Scripture. While the male leadership of the movement hammered out doctrines in the late 1840s and 1850s, the charismatic experience of the "spirit of prophecy" served to hold the consensus together, to bring to bear the particular scriptural message needed to "correct, revive and heal the erring" in the nascent community.

By the time of her husband's death in 1881, Ellen White's prophetic gift produced a voluminous body of publications. The centerpiece of her literary work was the multivolume *Spirit of Prophecy* series, renamed the *Conflict of the Ages* in its final editions.[37] In these volumes she set forth the full sweep of Adventism's theology of history as the "great controversy between Christ and Satan." That controversy originated with the rebellion of Lucifer in heaven prior to creation of the earth and would culminate in the future eradication of sin, suffering, and death in a new earth restored to the benevolent Creator's original intent. The "great controversy" was a contest over the loyalty of human beings, who possess the freedom to choose between Christ and Satan. Because God's kingdom cannot be imposed by force, those faithful to God must endure suffering at the hands of evil powers, which God allows Satan the freedom to instigate. But the faithful live in hope that God, after allowing enough scope to evil to make clear to the universe the issues in the controversy and the freely chosen loyalties of all involved, will establish an eternal kingdom of righteousness, justice, and peace. This is the world view, or controlling narrative, through which Adventists made sense of their lives, and consequently became an indispensable reference point for understanding the movement's history.

The influence of another series of volumes by Ellen White, the *Testimonies for the Church,* stood second only to the *Conflict of the Ages* series. Eventually totaling nine

volumes, this series compiled letters and articles of spiritual counsel and admonition that Ellen White directed to particular individuals and situations, along with some autobiographical narrative.[38]

In her mid-50s when her husband died, the prophet by then no longer experienced the dramatic visionary trances in public settings that marked her earlier years. Revelations now came to her in dreams during "the night season" and in deep, vivid impressions. The locus of her prophetic authority gravitated more toward her writings. Her sermons, articles, and travel narratives now appeared with much greater frequency in church periodicals—in virtually every issue of the *Review and Herald* and the *Signs of the Times.* A team of literary assistants assembled and edited her pieces for publication in a continuing stream of books.[39]

An intriguing interplay developed after James's death between Ellen White's authority and that of the church's male leadership.[40] On the one hand, it became increasingly necessary to marshal support from "the testimonies" (shorthand for Ellen White's writings as a whole) in making the case for a biblical interpretation or a policy decision. While careful to avoid claims of infallibility, and insisting that her writings were a "lesser light" pointing to the "greater light" (the Bible), the church ascribed to them an authoritative status. The "lesser light" seemed to make answers to the specific issues faced by modern believers much more direct and clearer than would consulting the "greater light" alone.[41]

On the other hand, Ellen White never held formal office, nor was she able to exert dictatorial control over church affairs. A "balance of power" developed in which the "spirit of prophecy" maintained independence from the authority of church leaders yet pursued a cooperative relationship with them. Not always able to impose her will, Ellen White resisted the control and manipulation of male leaders.

In the late 1880s, one of the most epochal struggles in Adventist history took place over the meaning of salvation through faith in Christ.[42] Alonzo T. Jones (1850–1923) and Ellet J. Waggoner (1855–1916), coeditors of the *Signs of the Times* based in California, advocated the new understanding of "righteousness by faith." The historic Adventist emphasis on the importance of commandment keeping, they argued, did not mean that human works had even a partial role in earning salvation. Both forgiveness of sin and the transforming power that enabled progress in the way of commandment keeping, said Jones and Waggoner, is grounded in Christ alone.

General Conference president George I. Butler (1834–1918) and *Review and Herald* editor Smith warned that the new views put forward by their younger colleagues undermined the Adventist purpose of proclaiming the perpetuity of God's law in the latter days. They thought a passage Ellen White had written 30 years previously proved their interpretation of a key matter in the dispute—the meaning of "law" in Paul's epistle to the Galatians. And, they badly wanted her to issue another "testimony" to erase all doubt and correct the errors of Jones and Waggoner. However, at a General Conference session held in Minneapolis, Minnesota, in 1888, Ellen White sided with the "righteousness by faith" advocates, even while admitting that their interpretation of some of the disputed scriptural passages differed from her previously held views.

With Ellen White's support, the new view of righteousness by faith took on legitimacy in the church, and a revival ensued over the next half-decade, during which most of the old guard publicly repented of their bitter opposition. It was a decisive moment in Adventism's complex relationship to evangelical Protestantism. Adventists, though not unambiguously or without subsequent controversy, would thereafter claim adherence to the Protestant principles of justification by faith and the final authority of Scripture. It was a "victory" for Ellen White, but paradoxically one that subordinated the authority of her writings to ongoing study of the Bible.[43]

Moreover, it did not bring to an end her disputes with the church leadership at the Battle Creek headquarters, particularly over the operation of the Review and Herald Publishing Association.[44] In 1891 she embarked on a mission to nourish the emerging Adventist work in Australia. While the move was a form of protest against those attempting to wield "kingly power" in Battle Creek, it did not amount to a banishment or a surrender, as the prophet's voluminous correspondence to her brethren in the United States continued to hold the status of "testimony" from the Lord's messenger.

After nine productive years of publication and institution building in Australia, Ellen White returned to the United States in 1900 to face even more traumatic upheavals than had occurred in 1888.[45] Her straightforward calls for reform led to major changes in the denomination's organizational structure at the General Conference session of 1901. The reforms sought to break up the power centralized in Battle Creek by dispersing much of the administrative oversight to newly created "union" conferences. Each of the unions brought together several conferences in a region of the United States or world into an administrative unit that would be better attuned to regional conditions and needs than faraway Battle Creek, Michigan. The title of "president" of the General Conference was scrapped; the head administrator would carry the humbler title of chairman of the executive committee. In another sense, though, the reorganization sought to increase centralized coordination and efficiency by making the various agencies of the church (such as the International Religious Liberty Association, the Sabbath School Association, and the Tract and Missionary Society), which had previously operated as independent entities, into departments administered through the conference structure.

The reorganization was agreed upon in a spirit of unity in 1901, but new controversies soon erupted. Arthur G. Daniells (1858–1935), the vigorous young leader who was installed as chairman of the General Conference executive committee, soon clashed with some of the most influential figures in the church, who viewed his aggressive leadership as a reprise of "kingly power." Jones, coeditor of *Signs of the Times* and one of the church's most influential thinkers, protested when Daniells used the title of "president," despite the action taken by the 1901 conference. Jones advocated an increasingly radical doctrine of individual liberty in the church and thought the 1901 reorganization moved the church away from hierarchical authority. He denounced Daniells for taking matters in the opposite direction.

Meanwhile, long-festering antagonisms between John Harvey Kellogg and the church's ministerial leaders broke out into open conflict.[46] Kellogg regarded the

Adventist clergy as a generally backward lot, poorly educated, and resistant to health reforms. The ministers in turn were suspicious of his nonsectarian approach, his growing national celebrity, the laxity in Sabbath observance at the Sanitarium, and the growing power wielded in the church by the medical missionary enterprises that Kellogg tightly controlled. Open conflict with Daniells resulted when Kellogg refused to allow the Medical Missionary and Benevolent Association to come under the administration of the General Conference, as stipulated by the 1901 reorganization.

Charges that pantheistic heresy infected Kellogg's book manuscript for *The Living Temple,* slated for publication and mass marketing in 1903 as a churchwide evangelistic project for that year, made the atmosphere still more volatile. Ellen White made repeated efforts to reconcile the disputants, but in the end, she sided with Daniells and the General Conference. Kellogg was removed from church membership in 1907, and the church lost control of the Battle Creek Sanitarium and the program of humanitarian activism in Chicago. The church continued to emphasize health and medicine, a legacy of Kellogg more than anyone other than Ellen White. However, the outcome of the controversy set Adventism decisively on a course pursued to the present: health reform and humanitarian activity are subordinate to the church's central mission of winning adherents to its doctrinal beliefs and church membership.

In the midst of the controversy, a fire destroyed the Review and Herald Publishing Association plant in December 1902.[47] With the encouragement of Ellen White, the General Conference leadership interpreted this as a sign that it was time to move away from the malign atmosphere that had been building in Battle Creek. In the summer of 1903 the General Conference and Review and Herald offices moved to the Washington, D.C., area, where they remained for most of the twentieth century. There the reorganization plans of 1901 took lasting form as the basic framework for the church's organization to the present.

While Ellen White more than held her own against the most powerful men in the church, she did not press the matter of ordination of women to the ministry.[48] A resolution to do so, presented at the General Conference session of 1881, was tabled and never resurfaced. Ellen White did, however, strongly encourage women to carry out the various works of ministry, guided by their own distinct gifts, not as mere subordinates. In 1886, for example, she wrote that, "It was Mary who first preached a risen Jesus; and the refining, softening influence of Christian women is needed in the great work of preaching the truth now."[49]

AFTER THE PROPHET: SHAPING THE TWENTIETH-CENTURY CHURCH, 1915–1945

When Daniells stepped down from the General Conference presidency in 1922, his successor, William A. Spicer, was familiar to him. Throughout the entire two decades of Daniells's tenure at the helm, Spicer served in the second most responsible position in the church's administration, that of secretary of the General Conference. Daniells in turn served as secretary throughout Spicer's years as president (1922–

1930). The Daniells and Spicer administrations oversaw transitions that formed the twentieth century church as it faced the world without a living prophet in its midst.

Authority in the Church

Though she reduced the scope of her direct involvement in church affairs during the final decade of her life, Ellen White continued to function as a living source of prophetic guidance until at least 1913.[50] After her death in 1915, Adventists struggled over how and to what extent her prophetic authority could be vested in her writings, and how that authority would relate to other sources of authority: the Bible, the living church, and the evidence of research, reason, and experience.

As stipulated by her will, the White Estate had custodianship of Ellen White's writings. This estate was governed by a board of church leaders though structurally independent of the General Conference. Management of the work of the Estate in handling the ongoing publication of Ellen White's books, the compilation of new ones, and the release of previously unpublished material fell to her son, Willie C. White (1854-1937), and then grandson, Arthur L. White (1907–1991).

Even before her death, during the controversies unfolding just after the turn of the century, the authority of Ellen White's writings became a fiercely contested issue.[51] Though White explicitly repudiated any claim of "infallibility," a significant segment of the church held that her writings were basically infallible—certainly an unerring commentary on Scripture. Both Willie White and Daniells held a more moderate position and made some efforts to educate believers on the necessity of taking historical context and human fallibility into account in drawing guidance from the "spirit of prophecy" writings. On the whole though, much was done that encouraged, and little done to discourage, the conception of Ellen White as recipient of direct communication from God, which she wrote down, in a process untainted by human limitations, circumstances, or cultural influences. To do otherwise was politically dangerous within the church. Daniells's ouster from the General Conference presidency in 1922 came in part because of his "soft" view of Ellen White's authority. That event signaled the victory of the near inerrantist view, which remained dominant until a new round of controversies in the 1970s.

A fundamentalist-leaning outlook prevailed in general among Adventists during these decades.[52] Adventists in the 1920s identified themselves with fundamentalism and made an impact on the fundamentalist movement. Historian Ronald Numbers notes that Adventist scholar George McCready Price (1870–1963) was a major influence behind the eventual widespread acceptance in Protestant fundamentalist circles of "flood geology"—a cornerstone of "scientific creationism." Price's views on the biblical creation and flood in turn were shaped by Ellen White's writings.[53]

Education

On the other hand, an Adventist commitment to education—and more specifically to accredited higher education—that solidified during the Daniells-Spicer era

set a counterforce in motion.[54] The Adventist church by 1921 operated 59 secondary and postsecondary schools in North America, including six colleges offering four-year degrees, and every local congregation was strongly encouraged to sponsor or cosponsor an elementary school.

After the rupture with John Harvey Kellogg, the denomination in 1910 established a new medical school, the College of Medical Evangelists, in Loma Linda, California. Propelled by Ellen White's declaration that God's plan required a medical school of the "highest order," church leaders and school officials took on the daunting challenge of earning an "A" rating from the American Medical Association, and achieved the goal in 1922. That process entailed establishment of the Ellen G. White Memorial Hospital in Los Angeles as a facility for clinical training. Around North America in the 1920s, the church was operating 20 sanitariums, five with a 100-bed or greater capacity.[55]

The commitment to a fully accredited medical school proved critical in deciding a hard-fought struggle in the 1920s and 1930s over the character of the church's institutions. Would they be dedicated to the alternative models of education and health care based on the ideals of nineteenth century reform advocated by Ellen White? Or would they meet the norms of secular professional and accrediting agencies? The conflict centered on the issue of accreditation for the denomination's colleges. Opponents of accreditation said that accountability to outside regulations might contradict or undermine church standards. Faculty would need graduate degrees from non-Adventist universities, and they would be molded by secular ways of thinking and in turn inculcate them in their Adventist students.

Advocates of accreditation emphasized the mandate for institutions of the "highest order." The quality and credibility of the Adventist mission demanded recognized excellence in the professions. In particular, maintaining an "A" rating for the College of Medical Evangelists, said the school's president, Percy T. Magan, required that students accepted into the medical school possess bachelor's degrees from accredited college. This pragmatic consideration apparently tipped the balance in a back-and-forth struggle that, by 1942, resulted in accreditation for all of the Adventist-operated colleges in the United States.

Professionalizing the Ministry

Important developments in the professionalization of the Seventh-day Adventist ministry also began during the Daniells-Spicer era.[56] During the nineteenth century, Adventist ministers functioned as itinerant evangelists, rarely staying in one location more than a year or two, at most, before reassignment as determined by the conference administration. No standard for educational qualifications existed, and complaints about the poor quality of the preaching force came from laity and General Conference leaders alike. In the early decades of the twentieth century, the concept of a settled pastorate as a routine expectation only gradually developed, and, while the typical length of a pastoral tenure lengthened, a stay of more than ten years at one assignment was still unusual at the beginning of the twenty-first century.

Daniells had a particular interest in the professional and spiritual development of pastors. During his years as secretary of the General Conference, he headed the newly formed Ministerial Association and lobbied persistently for publication of a monthly journal for preachers, which began in January 1928, entitled *The Ministry.* I.H. Evans, a close colleague of Daniells's for decades and his successor as secretary of the Ministerial Association, encouraged development of an "advanced school of theology," which started with a summer session on the campus of Pacific Union College in California in 1934. Momentum from that start led to the opening of the Seventh-day Adventist Theological Seminary in 1937 next to General Conference headquarters in Takoma Park, Maryland, which developed recognized graduate degree programs.[57]

Race Relations

Issues of organization and authority intertwined in dramatic ways with race as Adventists grappled with what W.E.B. Du Bois identified in 1903 as "the problem of the twentieth century." At the same time that Adventism was beginning to gain momentum among African Americans around the turn of the century, race relations were degenerating to their lowest point in the nation's history. After the Adventist mission to the South stirred a violent reaction, with accusations of disturbing the racial order, Ellen White advised that Adventists temporarily have segregated worship services where necessary and refrain from public agitation for "social equality."[58]

Meanwhile Lewis Sheafe, an eloquent preacher who left the Baptist ministry to take up the Adventist cause, enjoyed notable success during the first decade of the twentieth century in building a following for Adventism among Washington, D.C.'s African American population, then the largest and most influential in any American city. Sheafe was attracted by the promise of Adventism for education and health, but frustrated in his efforts to make these opportunities real for his people. Daniells and his General Conference colleagues were adamant in viewing Washington as a Southern city in which the church could succeed only by strict adherence to the "color line" in its institutions. With church leaders demanding that he submit to Ellen White's counsel of expediency on racial matters to the neglect of her repeated assertions about the gospel breaking down racial barriers and bringing liberation to the oppressed, Sheafe finally left the denomination in 1916. In New York City, another former Baptist, James K. Humphrey, beginning virtually from scratch in 1906, raised up a thriving congregation in Harlem that numbered over 600 in the 1920s.[59] But by the end of that decade, Humphrey, too, could see no way toward his dreams for black social and economic development other than working independently of the white conference leadership. This led to his expulsion from the Adventist ministry and the division of his church as hundreds joined him in forming an independent congregation.[60]

As traumatic as these ruptures were, the Adventist message attracted a loyalty among African Americans that transcended the alienation of its two most charismatic pioneers. Despite segregation—explicit and otherwise—in the church's institutions,

African Americans composed one of the most vibrant sectors of Adventism during the twentieth century. Gradual but deeply rooted development of Oakwood College made it the enduring center of black Adventist education. During the World War II era, pressures for a structural resolution to racial inequities led to the formation of black or "regional" conferences alongside the geographically defined (usually by state) ones. While viewed as ideal by almost no one, these conferences put black ministers in a better position to lead the Adventist work in the black community and administer the funds donated by the predominantly black churches. When organization of the regional conferences began in 1944, the African American Adventist membership numbered about 17,000—8 percent of the total membership. During the next half-century, the black membership grew at three times the rate of the overall membership, reaching 193,000 (25 percent). Adventism deviated grievously from its ideals on racial equality, but it somehow, and with very little margin, navigated the worst decades intact as one church.[61]

International Mission

Adventism did make significant advances toward being a truly international community, as the priority of world missions also became firmly embedded in the denominational character during these decades.[62] The monumental project of reaching the entire world enlivened the imagination of a new generation of Adventists who, adapting the slogan of the Student Volunteer Movement, dedicated themselves to taking "the Advent message to all the world in this generation." When Daniells came to General Conference leadership in 1901, world church membership stood at close to 80,000, about 13,000 (16 percent) of which lived outside of North America. By 1930, the membership count in North America had grown to more than 120,000, but was far surpassed by the total outside North America, nearing 200,000 (62 percent of the world total). A strong majority holding membership in an American-born church were not Americans, a trend that would only grow.

GLOBALIZATION AND CONFLICT, 1945–2005

While the growth in worldwide membership, accompanied by shrinkage in the American percentage continued apace in the two decades after World War II, considerable homogeneity continued to characterize Adventism. The administrative offices throughout the world remained largely the domain of Americans and Europeans. While a degree of cultural adaptation occurred, the American church remained the norm for worship practices, evangelistic methods, and behavioral mores, in addition to doctrine.

Since the 1960s, however, a central challenge for the world movement was how to be one church amidst the rapid acceleration of centrifugal forces of ethnicity, nationality, culture, gender, and doctrinal interpretation. Those forces, in turn, were in large measure generated by the outworking of a related challenge in the American church. Adventism in the United States, still the foremost source of wealth and

influence despite its ever-dwindling percentage of world church membership, faced new forms of the tension that every NRM must grapple with: sustaining a distinct identity—true to the movement's purpose and sharply demarcated from the surrounding society, over against adaptation to the wider culture in the interests of growth, quality of life, and having an alternative to offer that remains meaningful as society changes.

Adventism's response to a particularly blunt form of this challenge—the demands of military service and loyalty—serves as a starting point for looking at trends in the church's relationship to American culture as a whole. In the years leading up to World War II, church spokesmen adopted the term "conscientious cooperators" to describe the Adventists' departure from the norm regarding military service. For members who were drafted, the church upheld as the ideal a combination of "noncombatancy," in accordance with the original stance taken during Civil War, with acceptance of duty in the military that did not require bearing arms, most frequently as a medic. Through this approach, Adventists sought to fulfill the demands of conscience by refusing to bear arms while at the same time cooperating with the national mission in some useful capacity. During the late 1930s, the church formed a Medical Cadet Corps (MCC) to provide preinduction training that enabled a young Adventist "to fit into a place where he could serve God and his country conscientiously." Noncombatant military service, rendered more useful by the MCC, became a way to prove their love of country during the war, "so that none might have just cause for doubting our patriotism."[63]

Military chaplaincy created a further bond between church and nation.[64] After the outbreak of the Korean War in 1950, the General Conference committee voted a new policy for providing the ecclesiastical certification required for Adventist ministers to enter military service as chaplains and be commissioned as officers. In 1974, seventeen Adventist ministers were rendering service as military chaplains, and the number increased substantially in the era of the all-volunteer forces. Chaplain Barry C. Black, an Adventist minister widely respected in the church, was appointed Chief of Navy Chaplains in 2000. Three years later the United States Senate elected Black as its chaplain.[65]

The denomination, through officially recognized channels, reaffirmed in 2003 its historic stand for noncombatancy.[66] At the same time, the National Service Organization, the agency at denominational headquarters that coordinates ministry to Adventists serving in the military, informed church members that their decision about enlisting in the military and bearing a weapon is "a matter of conscience between you and God" and that a number of "good Seventh-day Adventist Christians have successfully made the military a career."[67]

The number and prestige of Adventist institutions generally expanded through the second half of the twentieth century. In 2004, the church in the United States and Canada operated 14 colleges and universities, 126 secondary schools, 62 hospitals, and 45 centers for retirement living and care of the elderly.[68] Adventism created a comprehensive, alternative way of life in the United States, and the institutional successes mark, in a general way, a continued vitality. It was possible for a resident of

Takoma Park, Maryland, in the 1990s, for example, to be born, educated from kindergarten through college, work, worship, receive medical care, and shop for food, books, and entertainment at Adventist institutions throughout life, without ever traveling more than a mile or two in any direction.

At the same time, these institutions functioned as bridges to the wider world—means to prosperity and professional success, sometimes within but frequently beyond the Adventist institutional network.[69] They also become the primary means through which the world came in contact with Adventism—precisely the point of their existence from the standpoint of church mission. That contact, however, has brought with it the influence of cultural values and norms, thereby reducing the contrast between the dominant national culture and the Adventist alternative. In addition to accreditation or certification from secular agencies, government financial aid has drawn Adventist institutions toward the mainstream. After World War II, American Adventist leaders gradually, and not without struggle, overcame the aversion to such aid that the church long held on the principle of separation of church and state.[70] Hospitals and colleges accepted funding through various government programs, justifying this acceptance by stating that the designated monies went for those aspects of the institution's work that served the general public rather than advancing sectarian beliefs. Allocations from the United States Agency for International Development provided a substantial majority of the funding for dramatic expansion of the Adventist Development and Relief Agency (ADRA) in the 1980s. ADRA achieved recognition in the international development field for its long-term public health, agricultural, and educational projects, as well as delivering immediate relief for victims of disaster.[71]

The extent to which accreditation and government funding has influenced the policies and ethos of these institutions to the detriment of their Adventist distinctiveness has been a major issue of concern and debate in the church since the 1960s. Leaders of the church's work for religious liberty, probably the most significant additional way it is active in the public arena, took the lead in resisting the trend toward acceptance of government aid. Though they gave up much ground in these matters, they continued to succeed in mobilizing Adventists for advocacy on behalf of religious freedom.[72] Along with wide circulation of *Liberty* magazine, they had a leading role in legislative lobbying and legal action for religious rights of employees and against school prayer amendments. Here the church's teachings on apocalyptic prophecy, which envision politically dominant religious forces as the ultimate threat to liberty and human rights in the United States, appear significant in differentiating the character of Adventist public involvement from that of the religious right.

On matters of racial and gender equality, the progressive elements that could be found in Adventism's nineteenth century heritage were not sufficient to bring about a course correction in the second half of the twentieth century.[73] It took pressure from wider society caused by the civil rights movement to do that. Only after the landmark Civil Rights bill of 1964, was forthright action taken to implement nondiscrimination policies at all Adventist institutions. Belated but substantive progress came in the proportion of African Americans holding general leadership positions in

the denomination. Charles E. Bradford, for example, was elected president of the North American Division in 1979. Along with the growth among African Americans, immigration multiplied the diversity of the American church in recent decades. In a survey conducted in 2000, 56 percent of the members identified themselves as Caucasian, 30 percent of African descent, 10 percent as Hispanic, and 3 percent of Asian descent.[74] More than ever, achieving racial justice and harmony is a challenge, as well as an opportunity, for the Adventist church.

Recognition of long-standing injustices against women gradually grew, as did greater openness to women in ministry and church offices.[75] But only the protracted pressure of legal action, brought in conjunction with the Equal Employment Opportunity Commission, against the Pacific Press Publishing Association during the 1970s led to equality in employment practices. A conference of church scholars and administrators that met at Camp Mohaven in Ohio in 1973 concluded that no biblical or theological reasons prevented fully equal ordination of women to the ministry. Strong opposition arose against moves to ordain women, however, and it remained a much-contested issue, one that highlights the current challenge of moving forward as a united movement amidst ever more complex diversity of ethnic identity, cultural attitudes, and theological orientations.[76]

The struggles over the issue that surrounded the General Conference sessions of 1985, 1990, and 1995 suggest that a majority, though not an overwhelming one, of the church in North America and western Europe, favored removing any barrier to ordination of women, or at least allowance for the various divisions of the world church to set their own policy on the matter. However, opposition from the increasingly influential Latin American and African sectors of the church, along with a strongly committed minority in the United States, prevented such action. The presence of women in the church's salaried pastoral ranks, virtually nonexistent from the 1920s to the 1970s, has nonetheless greatly increased during the past quarter century. Recent conflicts clarified that women may serve as pastors, carrying the same credentials as male pastors during their initial years (typically three to five) in ministry prior to ordination. That authorizes female pastors to perform most of the functions of ministry, such as preaching, baptizing, and marriage ceremonies. Without ordination, though, they may not participate in the ordination of other ministers or preside over the organization of a new congregation. Proceedings at the General Conference session of 2005 in St. Louis, Missouri, vividly illustrated the countervailing patterns. For the first time, a woman was elected as a vice president of the General Conference. Soon after this unprecedented and dramatic development, however, delegates voted a new policy that the General Conference president must be an ordained minister, thus barring the new female vice president and all women from consideration for the presidency in future elections.[77]

Theological divisions further complicated the Adventist quest for unity and its positioning in relation to broader cultural influences. During the first half of the twentieth century, relations between Adventists and other denominations remained generally frosty. The Adventists claimed to have "the truth" for the last days, which requires the believer to come out of any current denominational allegiance in

"apostate Christianity," while Protestant apologetics in turn sometimes labeled Adventism a "cult" or "sect." Dialog conducted with influential evangelicals during the 1950s led to a thaw. *Questions on Doctrine* (1957), the book produced by Adventist leaders in response to the investigating evangelicals, placed an evangelical hue on Adventist beliefs and repudiated some concepts sometimes taught or implied by various Adventists but not held as standard doctrine.[78] That convinced evangelicals that Adventists did not belong in the "cultist" category with Mormons and Jehovah's Witnesses. However, it also helped stimulate long-running debates within Adventism that contributed to the present theological diversity.

In the decades following the publication of *Questions on Doctrine,* an "evangelical" movement gradually took shape within Adventism. The evangelical wing stressed justification by faith alone, the authority of Scripture over that of Ellen White's writings, and rejected a view deeply cherished in some Adventist circles that the church's mission is to develop a "final generation" of perfectly sanctified believers, which would lead to the Second Coming. Controversy became crisis in 1979 when the foremost advocate of the evangelical emphasis, Australian Desmond Ford, publicly challenged traditional teachings concerning 1844, the "investigative judgment," and prophecy interpretation. Ford was a beloved preacher, articulate debater, and a formidable scholar. When he was expelled from his teaching position and shorn of his ministerial credentials, scores of those sharing his views also left the church's pastoral and teaching ranks. A much larger number, however, favorable to the "evangelical" position on the gospel but not wishing to confront established doctrines connected with 1844, remained active in the church.[79]

The so-called traditionalist or historic Adventists, on the other hand, viewed the entire package of Ford's "new theology" as dangerous and contradictory to the teachings of the church's pioneers.[80] Particularly in the early 1990s, some "independent ministries" taking this view believed that church leadership was too tolerant of threatening views and became antagonistic to the denomination's official work. Here, too, though, a larger portion remained active in the denomination, working energetically to promote evangelism and revival along traditional lines.

A liberal stream of Adventism also emerged, emphasizing progressive development in doctrine, openness to change in church practices and policies, and involvement in social issues, such as civil rights and economic justice.[81] The Association of Adventist Forums and its publication, *Spectrum,* established in the late 1960s, gave voice to liberal Adventism, which is often associated with the church's educational and medical institutions. Scholarly study of Ellen White has probably been the most controversial legacy of the liberal sector. *Prophetess of Health* (1976) by Ronald Numbers challenged the widespread view of the prophet's writings as virtually infallible by showing her usage of the works of other health reformers and that she changed her views on some topics over time. The work of Numbers and others eventually prompted even denominational leadership to acknowledge that Ellen White's writings were far more dependent on literary sources than previously recognized.[82]

Identification with the statement of 27 Fundamental Beliefs voted at the General Conference session of 1980 became a benchmark for theological unity. However,

evangelicals, traditionalists, and liberals contested the interpretation and application of the Statement of Fundamental Beliefs. Two theological societies—the Adventist Society for Religious Studies, relatively open to critical scholarship, and the more traditionalist Adventist Theological Society—each sustained enthusiastic participation. Understanding of Creation and the age of the Earth in connection with scientific knowledge became a particularly divisive preoccupation.

Adventism in the United States enters the twenty-first century incorporating increasing ethnic and cultural diversity and experiencing considerable tension over how to interpret and apply its beliefs in a rapidly changing society. Will it focus on prophecy belief, and emphasize the claim on singular importance as the agency for God's truth in the last days, as the traditionalists favor? Or will it, under evangelical and liberal influences pursue a benevolent, respectable, and less exclusivist identity? Or will more creative ways of being a dissenting yet winsome alternative religious tradition emerge?

Jehovah's Witnesses

David L. Weddle

Jehovah's Witnesses have taught and practiced an alternative version of Protestant Christianity for 125 years. Originating in the United States in the late nineteenth century as a small group of Bible students, the movement spread across the globe, and in 2004 the Watch Tower Society reported over six million active members in 235 countries.[1] Jehovah's Witnesses belong to the Protestant tradition by virtue of their insistence on the Bible as their primary authority, yet they developed beliefs, practices, institutional forms, and a relation to culture based on their apocalyptic hope that distinguishes them from other Protestants.[2]

OVERVIEW

As Protestants, Jehovah's Witnesses hold that the Bible is the ultimate religious authority rather than Church tradition or personal spiritual experience; thus, they reject any belief or practice that is not supported by their reading of the Bible. Jehovah's Witnesses teach that the Bible is "a book from God," given through inspired writers who faithfully recorded God's message as a secretary transcribes a dictated letter. They assert that the Bible is scientifically and historically accurate and that its prophecies about future events are entirely reliable.[3] In a consistent application of the Reformation principle of *sola scriptura,* Jehovah's Witnesses reject many doctrines in the ecumenical creeds, such as the nature of God as Trinity, the divine nature of Christ, the personality of the Holy Spirit, the immortality of the soul, and the eternal punishment of unbelievers. Jehovah's Witnesses teach that these so-called "orthodox" beliefs are the result of adapting Christian theology to Greek philosophical ideas at the time Christianity became the official religion of the Roman Empire in the fourth century.[4]

Since that time, Jehovah's Witnesses insist, all churches have departed from the true Christian faith by seeking power and wealth in the world, supporting earthly governments in waging wars, uniting in ecumenical organizations, and adopting pagan practices such as the celebration of Christmas and Easter. In these ways,

Christian churches, along with the adherents of all other world religions, entered unwittingly into alliance with Satan, the fallen angel who opposes God's purpose to establish his kingdom on earth. Jehovah's Witnesses are convinced that they are the only true believers in a time of general apostasy. In these last days, Jehovah's Witnesses demonstrate their loyalty to God's kingdom by giving public testimony to their faith. In doing so, they prove their worthiness to enjoy the coming paradise on earth. Ever alert to Satan's temptations and aware of the possibility that yielding to the allure of the world would betray their allegiance to Jehovah, Witnesses often quote Jesus's warning that in the last days only "he who endures to the end will be saved" (Mark 13:13b). For that reason, they persistently canvass their neighborhoods and towns, explaining their beliefs and distributing vast amounts of literature. Most people first encounter Jehovah's Witnesses at their front doors and must decide whether to invite the pleasant strangers in or send them on their way. In either case, the Witnesses have answered their calling to proclaim God's kingdom and to warn of the judgment that is coming. Whether they are welcomed or rejected, they interpret their experience as confirmation of their role in the final drama of history: Jehovah's Witnesses initiate conversations that are daily fulfillments of biblical prophecy. It is hard to imagine a more compelling religious identity in the Protestant Christian tradition.

HISTORY

Religion in the nineteenth century United States was marked by widespread enthusiasm, taking visionary and energetic forms in revival campaigns, utopian communities, and Adventist hopes of the imminent coming of the kingdom of God to earth. Heightened expectations of a glorious future, however, inevitably bred impatience. Even Jesus's own disciples asked him: "Tell us, when will this be, and what will be the sign of your coming and of the end of the age?" (Matthew 24:4). Apocalyptic believers throughout history believed that the very date of the end of the world lies encoded in the prophecies of the Bible. One of the most persuasive decoders of millennial promises was William Miller (1782–1849), a lay Baptist minister whose followers expected the end of the world on October 22, 1844. For many, the failure of Miller's prophecy was dramatic refutation of claims to calculate the exact date of the return of Christ.

For others, including those who sold their property and dressed in white robes for their ascension into heaven, the "Great Disappointment" became the opportunity for more ingenious interpretations. Hiram Edson reported a vision of Christ entering the "second apartment" or inner sanctuary of the heavenly archetype of Solomon's temple where Israelite priests offered sacrifices. There Christ began conducting what later Adventists would call an "investigative judgment" of all people, based on their obedience to biblical laws, including Sabbath observance and strict attention to health and diet. Just as ancient Israelite priests entered the Most Holy Place in the temple once a year to cleanse the people of sin, so Christ entered the heavenly sanctuary in 1844 in precise fulfillment of prophecy in the biblical book of Daniel, "to

determine who through repentance and faith in Christ is entitled to enter His eternal kingdom."[5] When Christ completes the examination, he will return, suddenly and visibly, to initiate the apocalyptic events foretold in the Bible. The "sanctuary doctrine" was later confirmed by visions of Ellen Gould White (1827–1915), prophet of the Seventh-day Adventist Church, and served as an influential explanation of how Christ could be in the heavens in fulfillment of prophecy, but remain invisible on earth where powers of evil increase their control of religious and political systems. In the title of her best-known work, White called the struggle between Christ and Satan *The Great Controversy,* and predicted that it would soon end in the victory of the Messiah at the battle of Armageddon and the eternal destruction of the wicked.[6]

Interpretations of biblical eschatology, especially in the biblical books of Daniel and Revelation, were always popular among American Christians. The detailed chronologies inspired by the dispensationalism of John Nelson Darby (1800–1882), British founder of the Plymouth Brethren, provided the primary source for C.I. Scofield (1843–1921), who later incorporated the scheme of seven dispensations into his famous reference Bible. Each dispensation (from the Greek term for "economy") is a different form of divine administration of the world during a particular period of history.[7] Each dispensation has its own principles that regulate the relationship between God and the world, including the means of human salvation. The key to understanding any passage in the Bible is to identify the dispensation in which it was written and the historical period in which its teaching was binding. For example, most laws given to ancient Israel do not apply in the dispensation of the Church that began on the day of Pentecost (Acts 2). For dispensationalists the distinction between Israel and the Church is critical because they believe that prophetic texts in the Old Testament promising the messianic age will be literally fulfilled in the future of the Jewish people.

Before that dispensation of the kingdom begins, however, Christians in the present dispensation of grace will be taken directly into heaven in the "rapture" and those "left behind" will go through seven years of great tribulation. After "those days" Christ will return to earth to establish his millennial kingdom, a reign of peace and justice that will end with another test of human loyalties to be followed by the "Great White Throne" judgment and the final consignment of the wicked to the "second death." The elaborate calculations of Adventists near the end of the nineteenth century aroused expectations that a comprehensive interpretation of human history, from its beginning in the Garden of Eden to its culmination in the "new heavens and earth" was possible by means of an authoritative correlation of the course of human history and the code of divine revelation. Among the many who were excited by that prospect was Charles Taze Russell (1852–1916).

Russell was born in 1852 into a middle-class family in Allegheny, Pennsylvania. Although he attended Presbyterian churches, he found Calvinist teachings of original sin and predestination inconsistent with his own sense of youthful initiative and self-determination and the preaching of eternal torment of unbelievers wholly contradictory to divine love. While still a teenager, Russell became convinced that "though each of the creeds contained some elements of truth, they were, on the whole,

misleading and contradictory of God's Word."[8] Russell began to earnestly study the Bible, assisted by several Adventist associates. George Storrs (1796–1879), editor of *Bible Examiner,* convinced Russell that the soul dies with the body and that unbelievers would not endure eternal punishment, but simply cease to exist. Storrs also taught "a second chance of salvation for all resurrected people during the millennium," a view that became "a key doctrine of Russell's."[9] Russell learned from Nelson H. Barbour (1824–1908), editor of *Herald of the Morning,* that the invisible "presence" of Christ occurred in 1874, from which date Russell calculated that 40 years of "harvest" would elapse before the kingdom arrived. Despite these influences, however, Russell did not adopt Adventist observance of Saturday Sabbath nor the standards of dietary health taught by White.

Russell modestly acknowledged that the views he promoted were not original with him, but were "scattered fragments of truth" preserved piecemeal by different Protestant groups over the centuries. Russell described his teaching as "less work of origination than of reconstruction, adjustment, harmonization."[10] That acknowledgement was crucial for discouraging any tendency to regard Russell as a prophet who received revelation by direct inspiration apart from the Bible. The biblical model for Russell's role is closer to that of apostle, and the event in the history of Jehovah's Witnesses that corresponds to Pentecost in the story of the early Christian church was the publication of the first issue of the monthly journal, *Zion's Watch Tower and Herald of Christ's Presence* in 1879. By that action Russell and his supporters accepted the commission to proclaim the coming kingdom in the power of "Jehovah's holy spirit." The difference from the original apostolic message is that Russell taught that Christ assumed the place of rulership in heaven in 1874. Russell made that conviction even clearer in 1909 when he changed the name of the magazine to *The Watch Tower and Herald of Christ's Presence.*

By 1880 Russell drew together the small congregations that had formed around his published views. He charged them with the role of the "faithful and discreet slave" who supplies spiritual food to the rest of the household in Jesus's parable in Matthew 24:45–47. Already Russell was formulating the key distinction between the "little flock" of 144,000 who would assist Christ in ruling the kingdom from heaven (Revelation 14) and the "great crowd" of believers from all nations who would inherit the earthly paradise (Revelation 7). In 1881 he published the conviction that the "faithful and discreet slave" represented the collective ministry of those anointed by God's "holy spirit" to share in messianic authority, and in 1884 he formed Zion's Watch Tower Tract Society as their unifying organization.

Russell promoted his teaching tirelessly, through dramatic public lectures and prolific writing. He was a tall man, with a flowing beard, and made a striking stage presence. Never pretentious, Russell impressed others by his sincerity, modesty, and moderation, setting an example by spending time in missionary work abroad. For these qualities, his students fondly referred to him as "Pastor." Russell's central passion was "publishing" in every possible form, including contributions to newspapers and magazines. In 1913 Russell's sermons reached 15 million readers through what

he called "newspaper gospelling." He encouraged his students to go door-to-door with literature, accompanied by phonographs or dioramas.[11]

In 1886 Russell began an ambitious series of books titled *Millennial Dawn,* with the first volume called *The Divine Plan of the Ages.* He was convinced that he had discovered the key to the coherent interpretation of all prophetic passages in the Bible, thus deciphering the divine intention in history, including the knowledge of its end. This method of biblical interpretation was pioneered by Jewish sectarians at Qumran and has animated popular religion in the United States for three centuries.[12] So Russell's approach was not original, nor was his judgment that Christendom had fallen away from the moral discipline and spiritual fidelity that is required to survive divine judgment. That theme had resounded through American preaching from the time of the Puritans. What distinguished Russell's apocalyptic rhetoric was his utter rejection of the hope of reforming apostate Christendom and his insistence that strict conformity to the model of first century Christianity required consistent separation from religious, as well as political, institutions. The only divine assistance Russell claimed in this discovery was the same guidance of God's "holy spirit" that is available to any earnest seeker after truth. The key to Russell's interpretation was a complex calculation, published in 1876, leading to the conclusion that the "seven times" of Daniel 4:16 referred to the "times of the gentiles" in domination over Israel (Luke 21:24), begun in 607 BCE and destined to end in 1914.[13] When World War I broke out, some of Russell's followers (like those of William Miller) were certain that they would be taken immediately into heaven. By the end of 1915, however, Russell explained that the defeat of the Ottoman Empire, or Turkey, signaled only the beginning of the end.

In the second installment of his series (retitled *Studies in the Scriptures*) Russell explained that the return of Christ involves a process of gradual recognition, "as a period of presence, as was the first advent." But for how long? Russell eventually tied the length of delay to the generation alive in 1914 as the cohort to whom Jesus's words were addressed: "Truly, I say to you, there are some standing here who will not taste death before they see the Son of Man coming in his kingdom" (Matthew 16:28). Russell translated the term *parousia* as "presence," rather than "coming," and emphasized the arrival of the kingdom of God as a slow "dawning" of the truth. In the meantime Christ called those chosen to reign with him as spirit beings in the heavens. Beginning with the apostles, God selected the 144,000 members of "spiritual Israel," also called the "bride of Christ" and the "little flock," whose last members were from the generation of 1914. Only they would be taken to heaven at the time of the kingdom.

In 1909 Russell moved the center of his publishing operations to Brooklyn, New York, and named the complex "Bethel," house of God. Not long after, Maria Ackley Russell, from whom he separated in 1897, served him with divorce papers, ending a long period of contention over her role in the organization. One official publication notes that she was motivated by "her own desire for personal prominence," but critics charge that she was asserting her right to independent judgment. As an editor of the

Watch Tower, she objected to the requirement that Russell approve the contents of every issue. Clearly she was not following the biblical injunction for a wife to submit to the authority of her husband. Barbara Harrison believes that Russell was referring to Maria in the sixth volume of his *Studies in the Scriptures,* published in 1911, in a passage of decidedly misogynistic tone: "Depraved and selfish" women attempt "directly or indirectly, to usurp the authority of the head of the home, to take and to hold the control of the purse and of the family."[14] In any case, Maria served as a sign that women should be excluded from leadership, based on the biblical prohibition against women speaking in church (1 Corinthians 14:34–35) and denial of permission for a woman "to teach or to have authority over a man" (1 Timothy 2:11–12). While women are active "publishers," going door-to-door with the message of the coming kingdom at least once a week, and some are "pioneers," who devote 840 hours a year to preaching and teaching, no woman is allowed to hold a governing position in the Watch Tower Society or serve as an elder in a local congregation.

Charles Russell died in 1916, on a train returning from a speaking tour. He insisted that his writings on the Millennial Dawn be regarded as "the key to the scriptures." Yet today the Watchtower Society does not even reprint his works.[15] Russell insisted that the Bible was the sole basis of authority and Jehovah's Witnesses have honored that principle, even to the point of discounting Russell's personal authority. The latest history produced by the Governing Body candidly portrays Russell as a fallible human being and acknowledges practices and teachings from the early days that were later abandoned. Nevertheless, the original convictions of a founder of a religious movement continue to inform its beliefs and practice. Russell's conviction that biblical prophecy refers to future historical events inspired his successors to offer daring predictions and supply creative explanations for their failures.

Russell's successor as president of the Watch Tower Society was Joseph Franklin Rutherford (1869–1942). Also an imposing figure, he served occasionally on the circuit court and was thus known as "Judge." Rutherford provided legal counsel to Russell in the purchase of land for Bethel and was a member of the board of directors of the Watch Tower Society. His disposition, however, was far less peaceful than Russell's and his style of management more centralized. Shortly after his election, Rutherford replaced four directors opposed to his administration with his own supporters. Because of the fiery rhetoric of writings against American involvement in World War I, Rutherford and seven other directors of the Watch Tower Society were imprisoned under the *Sedition Act of 1918.* They advocated a neutralist (not pacifist) stance and encouraged young male Witnesses to refuse military service. All were released after nine months during which they organized Bible studies in jail. In the aftermath of this persecution Rutherford tightened control over the Brooklyn headquarters by challenging the election of several directors and putting his backers in their place (a move he interpreted as fulfillment of prophecy). Rutherford also required door-to-door callers to account for their quota of hours by filling out a monthly "service sheet," increased the construction of Kingdom Halls, began publishing a new monthly magazine called *The Golden Age* (later, *Awake!*), and introduced the motto, "Millions Now Living Will Never Die!"

Rutherford wrote extensively, beginning with *Harp of God* in 1921. He predicted that the biblical patriarchs would return in 1925 to assist in rebuilding Jerusalem, and he built a mansion for them in San Diego, California. In their absence Rutherford occupied the residence from 1923 until his death. Faced with the task of reading prophecy in the aftermath of war and persecution, Rutherford identified "Babylon the Great" of Revelation with the League of Nations abetted by the Vatican, established clergy, and the barons of market capitalism.[16] At the annual convention of 1931 Rutherford declared that henceforth "we desire to be known as and called by the name, to wit, *Jehovah's witnesses.*"[17] Since then, the use of "Jehovah" as the personal name of God has become a major point of doctrine and religious identity. The new name was a dramatic change from the generic designation of "Bible Students" and carried an implicit challenge to Protestants from whose English translations of the Bible the proper name of God was largely eliminated.[18] In 1939, the Watch Tower Society sought to broaden the readership of its chief publication from the original group of "Russellites" to the larger company of Jehovah's Witnesses. The present title, *The Watchtower Announcing Jehovah's Kingdom,* gives prominence "to Jehovah as the Universal Sovereign, the one who gave ruling authority to his Son."[19] The name of the magazine is itself a coded reference to the Jehovah's Witnesses' alternative reading of Bible prophecy.

During World War II Rutherford led the Witnesses through a series of court battles, winning civil rights to distribute literature, refuse to salute the flag, and claim exemption from military service. Rutherford used the judicial system in a comprehensive and systematic way, a strategy Pauline Côté and James Richardson call "disciplined litigation." In the process of pursuing legal protection for distinctive Witness practices, Rutherford also moved "from anti-religious propaganda to demands that the Witnesses be accorded a socially established religion's privileges."[20] Rutherford struggled, however, with personal problems, including "a separation from his wife tied to an almost pathological animus toward any leadership role by women."[21] Rutherford's unhappy marriage, like that of Russell, confirmed his reading of biblical passages warning against women who challenge the authority of male leadership and reinforced traditional gender roles for women that remain in place today. Rutherford's death marked a major transition in the history of Jehovah's Witnesses from charismatic to institutional authority.

Nathan Homer Knorr (1905–1977) became the third president of the Watch Tower Society in 1942, after working his way through the ranks at Bethel to a place on the board of directors. Knorr's long presidency was marked by increased growth, more sophisticated promotional and evangelistic methods, and greater uniformity in the programs of local congregations, including training in public speaking through Theocratic Ministry Schools. Unlike his predecessors, Knorr had modest writing skills and no ambition to produce his own series of interpretations of biblical prophecy. Instead, he inaugurated the practice of anonymous doctrinal publications, beginning in 1943 with *The Truth Shall Make You Free.* In 1960 the Watchtower Society published the complete *New World Translation of the Holy Scriptures,* in which references to God and Lord in the King James Version are uniformly rendered

"Jehovah." The names of the translators do not appear, although Frederick W. Franz (1893–1992) was probably responsible for this version. The stated reason for anonymity is that it discourages pride and the attendant lust for power, both associated with charismatic authority. On the other hand, no individual can be held responsible for the content of any publication. Further, most books from the Watchtower Society lack a distinctive style or fresh rhetoric. The effects of Knorr's well-meaning policy resulted in the production of works of simple declarative sentences, composed in a stilted vocabulary and arranged in brief chapters. Each page is lined at the bottom with elementary questions calling for answers that consist of repetitions of sections of the text above. No questions call for criticisms of the text or explore assumptions behind the text. The strategy of anonymous authorship for official writings succeeds in achieving a uniformity of belief and expression, but also results in works that require no imagination from writers and no independent response from readers.

In the years following World War II Knorr traveled extensively, rebuilding branch organizations in Europe and establishing others in Asia, Latin America, the Middle East, and the Pacific islands. During the countercultural revolution in the United States of the 1960s, the Watch Tower Society reacted by tightening discipline and expelling many young people from their congregations, usually for sexual misconduct. The process is called "disfellowshipping," and under its terms no Jehovah's Witness, apart from family members living in the same house, may have contact with the expelled person until he or she repents of sin and returns to the way of life prescribed in the Bible.

In 1971 the board of directors of the Watch Tower Society reorganized into a new Governing Body on the model of the original apostles, composed of 11 men, plus the president, all of whom belonged to the "anointed class," the 144,000 believers Russell taught were anointed as kings to rule with Christ over the coming paradise on earth. He also referred to them as "the faithful and discreet slave" of Jehovah charged with providing "spiritual food" to the entire congregation of Jehovah's Witnesses. In practice, however, the teaching authority of the anointed class is exercised by its "governing body." The Governing Body held legal authority over the vast holdings of the Watch Tower Society, approved all publications, and was the final arbiter of doctrinal and behavioral questions. Knorr extended the apostolic model in 1972 by restoring to local congregations the authority to elect their own body of elders to replace the single overseer.

Only near the end of his tenure did Knorr, like his predecessors, become involved in controversy over failed prophecy. In 1966 the Governing Body issued a major publication that traced the creation of Adam to 4026 BCE. "According to this trustworthy Bible chronology, six thousand years of man's creation will end in 1975 … How appropriate it would be for Jehovah God to make of this coming seventh period of a thousand years … a great Jubilee Sabbath for the proclaiming of liberty throughout the earth to all its inhabitants!"[22] Despite the tentative phrasing of "how appropriate it would be" for the kingdom to come in 1975, many Jehovah's Witnesses took the prediction seriously and defected when the year 1975 came and went without the coming of the kingdom. While vigorous evangelism worldwide

restored the loss in total membership, the rate of enlistment in the United States has not regained its former level.[23]

Frederick W. Franz was elected fourth president of the Watch Tower Society at age 83. Under his leadership the Watch Tower Society responded to the decline in active members after 1975 with several publications calling for greater dedication and providing new resources for Bible study, including a reference edition of the *New World Translation* (1984), a commentary on the Book of Revelation (1988), and a two-volume Bible encyclopedia (1991). Franz bolstered educational programs and developed the Ministerial Training School to train single male missionaries. As a result of his efforts, the number of pioneers nearly tripled and the number of congregations grew to 70,000, many in Kingdom Halls that were constructed in a few days by special teams of builders. But his tenure also was not without controversy. The emphasis on greater dedication imposed stricter discipline and more rigorous application of standards for disfellowshipping. The most notorious of these cases involved Franz's own nephew, Raymond V. Franz, who resigned from the Governing Body in 1981 because of doubts about the Society's changing interpretations of prophecy and its authoritarian control over members.[24] He was finally disfellowshipped in 1982 on the charge of eating with someone who was "disassociated" from the organization. The account of the proceedings echoes stories of the expulsion of heretics in the early church, by authority also wielded by an oligarchy of elders.[25] The case of Raymond Franz illustrates the determination of the Governing Body of Jehovah's Witnesses to conform to the biblical model of apostolic authority, even at the expense of familial loyalty. Frederick W. Franz, who claimed the "mantle" of Rutherford, died at the age of 99.

Milton G. Henschel (1920–2003), fifth president of the Society, completed the transition from individual authority to corporate bureaucracy. The Watch Tower Society continued to refer to itself as a "theocratic organization" governed by members of the "anointed class" identified by Russell as members of the generation alive in 1914. In 1995, however, the Governing Body revised its interpretation of Jesus's promise that "this generation would not pass away" to mean that there will always be those who oppose the truth until the kingdom arrives. It is a term that will never lack a referent; there will always be "this generation," provoking the faithful to energetic witness, causing the tragedy of martyrdom, and offering temptation to compromise with the world. By applying the principle of progressive understanding of the Bible, the Watch Tower Society insisted that Jehovah's Witnesses no longer regard the generation of 1914 as "a rule for measuring time."[26] The new reading of Jesus's words removed the last vestige of charisma from the Governing Body as men anointed for a destiny of heavenly rule and, therefore, invested with earthly authority.

The institutional effects of this change in interpretation were far-reaching. In October 2000 The Watch Tower Bible and Tract Society of Pennsylvania distributed its operations among three new corporations: Christian Congregation of Jehovah's Witnesses (to supervise educational activities), Religious Order of Jehovah's Witnesses (to manage staff in full-time service), and Kingdom Support Services (to administer building construction and maintenance).[27] These corporations, with

their own boards, are independent legal entities responsible for the global operations of Jehovah's Witnesses without direct administrative direction from the Governing Body. This was a critical stage in the process of redefining authority within the organization. It is typical for a New Religious Movement (NRM), following the death of its founder, to devise an institutional process for transferring authority. But in the case of Jehovah's Witnesses the crisis was postponed as the energetic and appealing "Pastor" Russell was followed by the equally dynamic, if not equally charming, "Judge" Rutherford. Through the tenures of subsequent presidents, however, the personal charisma of the founding figures gradually faded. As the members of the Governing Body of the Watch Tower Society became less visible and its publications anonymous, the president no longer provided a center of personal authority who inspired confidence in the official line of biblical interpretation.

The final step in transferring authority from individual leaders to the institution was to separate the legal powers of the Watch Tower Society, now wielded by younger men of the "great crowd" not elected to rule in heaven, from the spiritual guidance of the Governing Body and to establish a rotating chairmanship of the Governing Body, reducing the post to one of first among equals. At the time of reorganization, all members of the Governing Body resigned from the board of the Watch Tower Society and Don A. Adams (b. 1925) replaced Henschel as president. But this change did not solve the problem posed by the advancing age of the members of the Governing Body itself. David A. Reed notes that "long-standing doctrine precludes appointment of younger men to the Governing Body" because they do not belong to the "faithful and discreet slave class," whose membership Rutherford declared sealed in 1935.[28] A recent Watchtower publication, designed for congregational study, affirms that position: "In our day the Governing Body of Jehovah's visible organization is made up of spirit-anointed brothers from various lands and is located at the world headquarters of Jehovah's Witnesses. Under the headship of Jesus Christ, the Governing Body furthers pure worship in every land.…"[29]

Nevertheless, on August 25, 2005 new members born after 1935 were appointed to the Governing Body.[30] These men claim to have received the conviction of anointing to the heavenly calling to replace original members of the 144,000 who fell into apostasy.[31] While in principle this replacement process could go on indefinitely, as some of the newly anointed may also prove unfaithful and require substitutes, the explanation cannot prove satisfactory in the long run because it implies that Jehovah regularly calls unworthy people to provide spiritual guidance to his faithful witnesses.

Eventually, if there are no available "spirit-anointed brothers" to constitute the Governing Body, the source of biblical interpretation for Jehovah's Witnesses would no longer be those called to reign with Christ in heaven. Under such conditions of attenuated authority, the question is whether the Governing Body, which has functioned from the beginning of the movement as the recipient of progressive enlightenment, could inspire submission by Jehovah's Witnesses worldwide to demands for apocalyptic fervor, rigorous conformity to doctrine, strict separation from dominant cultural patterns, and abstention from patriotic activities and civic government. Will the loss of theocratic authority, completed by this reorganization, weaken adherence

to Watchtower ideology and hasten a process of assimilation to conventional forms of Protestant bureaucracy?[32] Much depends upon the power of the alternative system of beliefs and practices that Jehovah's Witnesses offer.

BELIEFS

For Jehovah's Witnesses there is only one supreme "God of gods" (Psalm 136:2). His sacred name YHWH occurs thousands of times in the Hebrew Bible and, although its exact pronunciation is now lost, Jehovah's Witnesses prefer the familiar translation *Jehovah* because it preserves "the four letters of the Tetragrammaton, YHWH or JHVH."[33] Jehovah created the entire world in six days as recorded in Genesis 1–2, making each species separately ("after its kind"). While Jehovah's Witnesses recognize that many adaptive variations may occur within a species, they deny that all animals have a common ancestor. Further, they find it incredible that living beings spontaneously emerged, as a random event, from inanimate forces. "The Bible's explanation that 'life came from life' in that life was created by God, is convincingly in harmony with the facts."[34] Similarly, God arranged the heavenly bodies "according to laws that keep them in perfect relation to one another … Surely it would be foolish to think that the billions of stars just made themselves, and, without any direction, formed the great star systems that move with such marvelous order." As in all arguments for the existence of God from the perception of design in the universe, the conclusion follows: "This highly organized universe could not have just come about by itself. An intelligent Creator with great power was needed."[35] While Jehovah's Witnesses "give no date for the original creation of the heavens and the earth," they maintain that the seven days of creation recounted in Genesis extended over a period of 42,000 years, with the creation of Eve about 6,000 years ago.[36]

Jehovah's Witnesses also believe that Jehovah is an "invisible spirit" with classic attributes of omniscience, omnipotence, and eternality, but at the same time he is a person of love, mercy, patience, and compassion. As Creator, Jehovah is the rightful king of the universe, even though rebellious angels and humans refuse to acknowledge his rule. Jehovah's Witnesses, by contrast, insist that their very name is a testimony to their loyalty to God. The phrase "Jehovah's Witnesses" comes from a passage in Isaiah: "You are my witnesses … I am Jehovah, and besides me there is no savior" (43:10, 12, KJV). Jehovah's Witnesses believe that calling upon the personal name of God follows the example of Jesus, establishes an intimate relation with God, and identifies the true religion.[37] To honor God's name is to acknowledge his sovereignty over the universe and to submit to his righteous rule, thus preparing the way for the coming of Jehovah's kingdom to earth. "All of God's purposes," according to one Watchtower publication, "are linked to his name. Mankind's problems began when Satan first profaned Jehovah's name by calling Him, in effect, a liar and unfit to rule the human race. (Genesis 3:1–6; John 8:44) Only when God's name is properly vindicated will mankind enjoy complete relief from the disastrous effects of Satan's lie."[38] Jehovah's Witnesses view history as constituting a sustained test to determine whether humans will choose to obey God's law rather than live under

Satan's dominion. They believe that sanctifying the proper name of God is essential to restoring Christian worship as practiced by Jesus and his apostles and recorded unerringly in the Bible.

Jehovah's Witnesses teach that all things were created through the agency of the Word of God, called *Logos* in John 1 and *Wisdom* in Proverbs 8. This "master workman" is chief among the "sons of God" (Job 1:6) in the heavenly court. The heavenly being who is described in John 1:1 as "with" God in the beginning and is himself "a god" became incarnate in Jesus (John 1:18). Thus, he is called the "firstborn of all creation" (Colossians 1:15). Jehovah's Witnesses pray to God in the name of Jesus, but insist that the Bible never identifies Christ as an eternal "person" within the Godhead as in Trinitarian theology. After all, "how can an individual be *with* someone and at the same time *be* that person?" By reading John 1:1 in light of John 17:3, where Jesus addresses "the only true God," Jehovah's Witnesses argue it is only reasonable to conclude that "Jesus, the Word, is 'a god' in the sense that he has a high position but is not the same as Almighty God."[39]

Jehovah's Witnesses interpret the incarnation of the Word in literal terms: "…Jehovah God caused an ovum, or egg cell, in Mary's womb to become fertile, accomplishing this by the transferal of the life of his firstborn Son from the spirit realm to earth … it would appear that the perfect male life-force (causing the conception) canceled out any imperfection existent in Mary's ovum…."[40] Jesus developed in a normal way, but upon reaching maturity "he was granted full remembrance of his previous association with God in heaven."[41] At his baptism by John the Baptist Jesus was anointed by God's holy spirit into his calling as Messiah and adopted as Jehovah's "spiritual son."[42] He lived a life of total imitation of his Father's moral character, revealing God's sacred name, and offering his perfect human life as a "ransom" for sinful humanity.[43]

Following an ancient model of thinking of Jesus Christ as an angel, both in the sense of a messenger of divine revelation and a champion of God's people, Jehovah's Witnesses teach that in his heavenly form Christ is the archangel named Michael in Hebrew Scriptures. The argument for this identity rests on parallel descriptions of the two in the Bible. Both Michael and Christ are seen as leading an army of angels. "Since God's Word nowhere indicates that there are two armies of faithful angels in heaven … it is logical to conclude that Michael is none other than Jesus Christ in his heavenly role."[44] The identification of Christ with the archangel is a way of accounting for what in more traditional Christology would be called the divine and human "natures" of Christ. Jesus, the incarnate Son of God, is humble, compassionate, and forgiving: the perfect human being who reveals the love of Jehovah. Michael, the archangel, is formidable, destructive, and vengeful: the perfect warrior who reveals the justice of Jehovah. Apocalyptic vision always discerns two faces of God, one turned with tender care to the faithful remnant, the other dark with wrath facing the rebellious. In the Christology of Jehovah's Witnesses both are present in Jesus Christ in his earthly and heavenly forms.

The angry face of God is set most unrelentingly against one of the other angels who once also served Jehovah in the heavenly court, the one called Lucifer. Jehovah's

Witnesses teach that he rebelled against God and became the opponent of Jehovah's rule. As Satan, the "adversary" of divine government, the Devil deceived Eve and Adam into also defying God's sovereignty. Jehovah created the first human couple perfect, but through their free act of disobedience in the Garden of Eden they and all their progeny became subject to sin, sickness, and death. While Jehovah's Witnesses do not teach that humans are born with a sinful nature that binds their will to sin, as in classic doctrines of original sin, they do believe that humans are born under the curse of death and the disposition to sin. A recent publication describes the human condition by a metaphor drawn from baking. If a pan used for baking bread has a dent in it, then each "loaf has a dent, or an imperfection, in it. Similarly, each human has inherited a 'dent' of imperfection from Adam. That is why all humans grow old and die."[45]

By joining Lucifer in rebellion against God, Adam and Eve lost the right to live in paradise on earth. Instead, they returned to the dust from which they were formed and ceased to exist in both body and soul. Jehovah's Witnesses deny the immortality of the soul in another radical departure from a conventional reading of the Bible. Genesis 2:7 in the *New World Translation* reads, "And Jehovah God proceeded to form the man out of dust from the ground and to blow into his nostrils the breath of life, and the man came to be a living soul." Jehovah's Witnesses note that "man *was* a soul, he did not *have* a soul as something immaterial, invisible, and intangible residing inside him."[46] The latter view is derived from Greek philosophical dualism and contradicts the biblical teaching that a human being is composed of earth and divine breath. Jehovah's Witnesses conclude that when God's breath, or spirit, is withdrawn a person becomes nothing but dust. Consequently, "the dead enter a state of complete unconsciousness."[47]

To rescue humans from the oblivion of death Jehovah sent Christ to earth as the "second Adam." By remaining sinless throughout his life Jesus qualified as the perfect sacrifice required to ransom humanity from the power of death and of Satan, thus vindicating the authority of Jehovah's rule over the earth. The sacrifice of Christ was an economic one, an exchange of his sinless life to "buy back what Adam lost," namely, forgiveness of sin and eternal life for those who believe. When Christ returned to heaven, 40 days after his resurrection, "as a spirit person once more, he appeared 'before the person of God for us,' carrying the value of his ransom sacrifice. (Hebrews 9:12, 24) At that time the ransom was paid to God in heaven. Deliverance was now available for humankind."[48]

In classic ransom theories of atonement Christ's life is "paid" to Satan to deliver humanity from the demonic power of death. The comic reversal is that Satan cannot hold Christ in the realm of death, and the resurrection frees both Christ and those he rescues. But Jehovah's Witnesses interpret the exchange in more governmental terms: Christ sacrificed his life in a demonstration of entire loyalty to God's rule, a living reversal of Adam's rebellion. Not even the fear of death, Satan's most effective bondage (Hebrews 2:14–15), can tempt Christ to stray from the path of obedience. By fulfilling his divinely appointed and prophesied destiny, Christ repays to Jehovah the honor that Adam offended. The "ransom" in this view is paid to God, the one

whose right to unconditional obedience from all his creatures was violated in Eden and vindicated on Calvary.

According to Watchtower teaching, Jesus was executed on a single piece of timber, a "torture stake," rather than a cross. This alternative interpretation is drawn from Galatians 3:3, "Accursed is every man hanged upon a stake." Watchtower exegetes argue that the Greek term *stauros* here refers to a beam sunk in the ground. Whatever value that etymological claim has, the Jehovah's Witnesses are on solid ground by noting that the cross was not a prominent symbol in early Christianity. (The sign of the fish appears most often.) For Jehovah's Witnesses the significant change came in the fourth century when "pagan Emperor Constantine converted to apostate Christianity and promoted the cross as its symbol … The cross is, in fact, pagan in origin."[49] In a dramatic declaration of alternative Christian identity, Jehovah's Witnesses denounce the central symbol of dominant Protestant and Catholic churches as a pagan icon, the veneration of which constitutes idolatry.

The resurrection of Jesus is the completion of the ransom exchange in perfect justice. Christ voluntarily sacrificed his sinless life, but righteousness required that he not be condemned to annihilation.[50] Jesus's body became lifeless on the torture stake, but God raised him from the dead in a "spiritual body" and made him a "life-giving spirit" (1 Corinthians 15:44–45) with authority to rule over all other creatures as head of the messianic kingdom (Philippians 2:9–11). Since what Christ achieved was the possibility for anyone to freely seek forgiveness from God on the basis of the ransom, all who exercise faith in Christ Jesus will experience resurrection from "memorial tombs" to new life. Since the dead cease to exist, however, their restoration to embodied life depends entirely upon the preservation of their individual being in the memory of God. Citing a recurrent biblical metaphor, one Watchtower publication states, "God's Word refers to the dead as being asleep." They neither receive nor initiate contact with the living; their existence is remembered, in every detail, by Jehovah. Just as modern recording equipment can preserve images of those who have died, so "our almighty Creator can record the details of any individual and resurrect the same person, giving him or her a newly formed body."[51]

Jehovah's Witnesses thus solve the problem of personal identity in a condition of disembodiment, entailed in conventional views of immortality, by arguing that such views are not found in the Bible itself. Further, by accepting the fact that the soul dies with the body, Jehovah's Witnesses avoid the problem of explaining the "intermediate state" of the dead prior to the general resurrection; they do not find evidence in the Bible for either the Protestant belief that souls are with Jesus in heaven or the Catholic belief that the dead suffer purgative punishment on their way to heaven. On the contrary, they trace belief in an immortal soul back to ancient Babylon, the source of opposition to Jehovah, whose name reappears in the book of Revelation as the global center of evil in the last days.[52] Once again, the Jehovah's Witnesses' alternative reading of the Bible returns to an apocalyptic theme.

A distinctive feature of the eschatology of Jehovah's Witnesses is the belief that Christ will be assisted in his rule by an anointed class of 144,000 believers, chosen mainly from among the early Bible Students. These believers will not be resurrected,

but will dwell in heaven with Christ as "spirit beings" and assist him in ruling over those who enjoy the paradise on earth. They are the subjects of the "new covenant" who Jesus instructed to remember his death in the meal on Passover eve. In 1935 Rutherford declared that most of the growing body of Jehovah's Witnesses belonged to that "great crowd, which no man was able to number, out of all nations and tribes and peoples …" (Revelation 7:9), standing around the throne of the Messiah. The role of these "sheeplike people" is to assist the "anointed remnant" in bearing witness to Jehovah's authority. (The increasing presence of "brethren with an earthly hope" in the higher echelons of the Watch Tower Society is sanctioned by this doctrine.)

Jehovah's Witnesses eventually developed a schema of four possible destinies at death: to be raised immediately to heaven in a spirit body to rule eternally with Christ (the anointed class); to be annihilated immediately upon death (the reprobate whose rebellion is incorrigible); to be resurrected, to pass millennial tests of faith and be rewarded by everlasting life on new earth (great crowd); to be resurrected, but fail the millennial tests and so be judged with annihilation. This elaboration of the apocalyptic dualism of heaven and hell is a strategy of accommodation to the delay of the kingdom. There must be the possibility of salvation for other than the small anointed class, or no one would have a motive for witnessing after they (except for a few replacements for those who fall into apostasy) were all "sealed" in 1935. Further, this scheme provides a second chance for people who "died without showing whether they would comply with God's righteous standards."[53] It was that gracious possibility that originally attracted Russell to the Adventist teaching of Storrs and inspires the Watchtower interpretation of the biblical symbol of "Judgment Day" as extending over the entire 1000 years of Christ's millennial reign over the earth. Thus, "when a person is resurrected he will be judged on the basis of what he does during Judgment Day, not on what he did before he died."[54]

The righteous have considerable motivation, nevertheless, for living so now, since Christ's government will be established on earth only after a catastrophic battle with cosmic forces of evil at the battle of Armageddon in the near future. Then Jesus will separate all people on earth into loyal "sheep" and rebellious "goats" (Matthew 25:31–34). The former will enter the millennial paradise, 1000 years of peace and harmony in a restored earth. The latter, along with all the unrighteous through the ages, will be annihilated in what the Bible describes as "the second death" (Revelation 20:14–15). Jehovah's Witnesses believe that only those who persevere in faithfully proclaiming the coming kingdom will be saved in the end. Thus, they do not teach that one is "eternally secure" after an initial confession of faith, as do most evangelical Christians, but that one must continue to "exercise faith" through works of service to the kingdom.

PRACTICES

Study

Jehovah's Witnesses meet three times a week in simple buildings with spare furnishings called "Kingdom Halls." The two Sunday services consist mainly of

studying materials produced by the Watchtower Society in settings that seem highly cognitive with little affective content; but as R. Laurence Moore notes, "What observers often miss is that witnesses regard what they do in meetings as serious intellectual exercise … Witnesses take enormous pleasure in their achievements. They master texts; they learn to be leaders; and they show infinite patience in teaching what they know to others."[55] These didactic meetings are part of the attempt to bring the faithful mind into harmony with biblical revelation, as interpreted in *The Watchtower* regarded as "the principal instrument of 'the faithful and discreet slave' and its Governing Body for announcing Jehovah's established Kingdom and dispensing spiritual food 'at the proper time.'"[56] Witnesses also sing hymns, written in distinctive doctrinal vocabulary, and lately accompanied by recorded music provided by the Watchtower Society.[57] The midweek meeting is for practical instruction in bearing witness or publishing.

Publishing

The formal course of training to become a persuasive publisher is Theocratic Ministry School. This education is conducted in local Kingdom Halls and includes main points of doctrine, techniques of public speaking, and practice in presenting the message of the kingdom before the congregation. The curriculum is produced by the Watchtower Society, and students are instructed that any application of the Bible they make in their evangelistic efforts should be "in harmony with what has been published by 'the faithful and discreet slave,'" that is, the Governing Body.[58] Active members, known as "publishers," are expected to devote eight to ten hours a week in door-to-door witnessing.

In support of publishers who reported spending a total of 1.3 billion hours in the field in 2004, the Watchtower Society invests great energy and vast amounts of money in publication, employing the most advanced communications technology available, from offset presses to phototypesetting computer software. All printing operations moved in 2004 from the historic Brooklyn printery and are now consolidated in new facilities in Wallkill, New York. At the dawn of the twenty-first century Jehovah's Witnesses report distributing "hundreds of millions" of copies of *The Watchtower* and *Awake!,* translated into 260 languages.[59] With the installation of more sophisticated presses in developed countries, including Japan, the output of material increases annually. In 2005 Jehovah's Witnesses worldwide reported conducting over six million Bible studies. Through the sacrificial efforts of voluntary workers at Bethel centers around the world, where full-time ministers labor in exchange for room, board, and a small personal allowance, the teachings of the Watch Tower Society are effectively broadcast to the world.[60] Jehovah's Witnesses have been quick to adopt the latest means of mass communication—with the exception of television—including most recently a well-designed site on the World Wide Web (www.watchtower.org) with an accompanying site of news releases (www.jw-media.org).

Rituals

Jehovah's Witnesses observe the two sacraments recognized by other Protestants: water baptism and the Lord's Supper. They baptize by immersion only those candidates who complete lengthy preparatory study. Candidates usually receive baptism at large conventions as a public sign of dedication to the work of proclaiming the kingdom. In 2005 Jehovah's Witnesses reported holding 227 conventions in 69 cities in the United States and baptizing 28,384 new members.[61] Baptism "marks the beginning of lifelong service to God as an ordained minister and one of Jehovah's Witnesses." While baptism does not by itself confer salvation, it is the occasion for recognizing that "Jehovah's holy spirit, or active force" is "empowering His servants to do His righteous will in association with His spirit-directed organization."[62] Thus, baptism fulfills an important role in confirming institutional cohesion by initiating one into the service of the theocratic organization whose Governing Body derives authority from its collective identity as "the faithful and discreet slave" charged with teaching the "great crowd." This distinction between those with a heavenly hope and those who anticipate living in paradise on earth is also crucial for Jehovah's Witnesses' alternative understanding of the ritual of communion.

Jehovah's Witnesses observe the "Lord's Evening Meal" once a year, on Passover eve (Nisan 14 on the Jewish calendar), in which only members of the anointed class partake of the "emblems" of bread and wine. Jehovah's Witnesses take the radical Protestant view that the bread and wine are only symbols of Christ's perfect body offered as ransom for all and his blood shed to seal a covenant with those 144,000 called to reign with him in heaven. In 2004 only 8,570 of this aging cohort survived to partake in the "Memorial," while nearly 17 million observed.[63] When the Governing Body abandoned the claim that the generation of 1914 was a "living calendar" marking time until the coming of the kingdom, they adopted the more conventional Protestant position that the exact date of the return of Christ cannot be known. The change of interpretation also changed the primary function of the Memorial to a confirmation of the identity of those who attend as members of the "great crowd" called to serve the visible organization of Jehovah directed by the authority of the "little flock." For observers the purpose of their presence is to "reflect upon the superlative love of Jehovah God and Jesus Christ."[64]

Ethics

Jehovah's Witnesses share with Christian fundamentalists a restrictive sexual morality, condemning as "fornication" any instance of premarital sex, adultery, homosexuality, and abortion. They abstain from tobacco and drugs, but follow the Bible in allowing limited use of alcohol. Gambling is deplored as an expression of greed. Jehovah's Witnesses also renounce magic and divination. The discipline of abstaining from contact with the world, except as required to publish the message of the kingdom is in literal obedience to the biblical command: "Do not become unevenly yoked with unbelievers … 'Therefore get out from among them, and separate

yourselves, says Jehovah, and quit touching the unclean thing'" (2 Corinthians 6:14, 17). It is significant that the quotation is from Isaiah 52:11 and is taken from a context in which the prophet urged Israelites to resist assimilation to Babylonian culture, just as their ancestors had "come out" of Egypt.[65] Paul uses the text to add prophetic authority to his own admonition of non-Jewish converts in Corinth, urging them to separate from the worship of Hellenistic deities.

The Watchtower Society appropriates this text within a text for the broadest possible application by insisting that Jehovah's Witnesses insulate themselves from dominant cultural, religious, and political influences wherever they find themselves in the world. By so doing they follow the saying of Jesus at his trial before Pilate: "My kingdom is no part of this world" (John 18:36).[66] Because of their apocalyptic views Jehovah's Witnesses do not have a developed social ethic, other than to counsel their members to obey established governmental authority except when its demands contradict the Bible. While Watchtower publications consistently condemn injustice and exploitation of the poor, Jehovah's Witnesses deny that human efforts can bring about significant or lasting improvement in the world.[67]

LEGAL CONTROVERSIES

Jehovah's Witnesses are well known for their refusal to pledge allegiance to national governments. This practice has led to their imprisonment in many nations, including the United States during both World Wars. In Nazi Germany Jehovah's Witnesses were among the non-Jewish groups consigned to concentration camps. Jehovah's Witnesses do not teach pacifism, since they would be willing to join the forces of Christ at the battle of Armageddon, but they maintain a neutral stance toward the state. Since all worldly governments are under the power of Satan, they refuse to participate in any. In 1943 the Supreme Court, in the case of *Barnette v. West Virginia,* upheld the civil right of Jehovah's Witness children not to salute the American flag in schoolroom exercises.[68] That legal victory is only one of hundreds in which Jehovah's Witnesses won civil rights that benefited other religious groups,[69] including refusal of military service[70] and freedom from regulation of door-to-door preaching.[71]

Perhaps the most controversial of Watchtower Society policies is the prohibition of intravenous blood transfusion, first promulgated in 1945. Since then, Jehovah's Witnesses interpret the apostolic command to "abstain … from blood" (Acts 15:20) as unconditional. Any means of taking blood into the body violates the principle that the "life (soul) is in the blood" (Genesis 9:4; Leviticus 17:11). In 1961 *The Watchtower* announced that any member who accepted a blood transfusion would face disfellowshipping. Not even transfusions of one's own blood are allowed since storage would violate the biblical requirement that shed blood be poured out on the ground (Deuteronomy 12:16). Kidney dialysis is permitted as long as the blood constantly circulates through the filtering apparatus and returns to the patient's body. Since 1978 hemophiliacs have been allowed treatment with blood fractions. Many hospitals acknowledge the right of competent Jehovah's Witnesses to refuse transfusions,

and the American Medical Association recently suggested that surgeons consider such operations as technical challenges. In response one surgical team developed a process of liver transplantation without infusion of blood products, a process they hope will benefit other patients as well.[72] Some health care professionals object, however, to parents who refuse permission to transfuse their own children in life-threatening situations, and some courts appointed guardians *ad litem* (for the particular lawsuit) to approve transfusions for children. Perhaps the most complicated cases are those in which a pregnant Jehovah's Witness refuses transfusion for a fairly routine problem and thus places the life of her fetus in peril as well as her own. Some hospitals found it necessary to develop procedural policies that are medically responsible while respecting the woman's religious liberty.[73]

In any case, the Watch Tower Society continues to urge Jehovah's Witnesses to risk death rather than break the commandment of God. "Would a Christian break God's law just to stay alive a little longer in this system of things? … if we tried to save our present life by breaking God's law, we would be in danger of losing everlasting life."[74] Richard Singelenberg argues that the blood taboo is connected to the command to remain separate from the world: both "rules of pollution and purity are instrumental in creating structural boundaries around group members."[75] For Jehovah's Witnesses the prohibition of blood transfusions is another means of distinguishing themselves from the world of Satanic impurity.

FUTURE CHALLENGES

The question facing Jehovah's Witnesses in the twenty-first century is which will prove stronger, the pressure to accommodate to the "contaminated" world as it moves into an ever-extending future or the passion to remain "without spot from the world" (James 1:27)? The Governing Body, speaking through the pages of *The Watchtower,* demands absolute conformity to its system of biblical interpretation, which enforces its "rules of pollution and purity" as conditions for entering the coming kingdom. Will those demands become less convincing as the next generation of Jehovah's Witnesses finds it more difficult to maintain the dedication inspired by imminent apocalypse? The challenge facing contemporary Jehovah's Witnesses is how to retain evangelistic fervor, moral discipline, and exclusionary group identity without the visible sign of the imminence of the end provided by the generation of 1914 and under the pressures on younger families to accommodate to prevailing cultural practices.

The key to continuing success of any NRM or alternative religion is striking a balance between fidelity to the original insights of the founder and responsiveness to changing historical conditions. For Jehovah's Witnesses the balance depends upon maintaining Russell's insistence that the Bible is the ultimate authority in Christian doctrine and practice with the ongoing task of correlating biblical prophecy with contemporary events. As events of history change, so must the interpretation of their prediction. As cultural practices change, so must the application of biblical principles. But at any given time, what authority establishes the correct interpretation

and application of the Bible? For Jehovah's Witnesses that authority resides in the Governing Body and is exercised through the teaching in official Watchtower publications. As we have seen, however, that interpretation has hardly been unchanging or even consistent.

Critics delight in chronicling the history of changing interpretation, especially of failed prophecies. But such criticism fails to appreciate the fundamental problem facing all interpreters of the Bible: the authoritative text remains the same, but the circumstances in which it is read are always in flux. Thus, the relevant meaning of the Bible must necessarily undergo ceaseless reformulation. This problem is faced by every preacher who searches the scriptural text for a weekly sermon. Jehovah's Witnesses do not claim to receive new revelation to fit new conditions, rather they claim that progressive illumination allows their interpretations to change with clearer understanding. That method is not so different from most Protestants who adjust their reading of the Bible to historical circumstances. Jehovah's Witnesses, of course, defend their view on scriptural ground: "But the path of the righteous ones is like the bright light that is getting lighter and lighter until the day is firmly established" (Proverbs 4:18).

For Jehovah's Witnesses the problem of interpretation is compounded because their key texts are among the least straightforward in the Bible. Apocalyptic scripture is highly symbolic and its language densely coded: interpretation is unavoidable in the process of correlating the text with current and future events. Nevertheless, Jehovah's Witnesses cannot relinquish the responsibility to demonstrate the ongoing relevance of prophetic scripture as the lens through which Christians may discern God's plan for human history. One of the strongest correlations Jehovah's Witnesses made over the years between prophetic scripture and contemporary events was the identification of the "beast" in Revelation with an institution of global power that serves Satan's purpose to establish evil government and false religion over the entire world. Since 1914 the prime candidate in the field of politics was the League of Nations and its successor organization, the United Nations. While the rhetoric in official publications softened somewhat in recent years, the chief suspect in the field of religion for most of the past century was the Roman Catholic Church.

In recent years, however, respect for the political authority of the United Nations and the Roman Catholic Church eroded. No longer does either seem well-situated to serve as the home base for a global system of evil. When evangelical Christians were forced by the collapse of the Soviet Union to find another "evil empire" to serve as the domain of anti-Christ, many chose Islam, reviving an old interpretive tradition in Christianity that identifies Muhammad as an apostate inspired by Satan to deceive the world. Jehovah's Witnesses chose instead to move to a more general identification of Babylon the Great: "she is Satan's entire world empire of false religion,"[76] and "this globe-encircling harlot" includes all other religions and the national governments with which they enter into unholy alliances.

As always, interpretive imagination is required to keep the correlation of prophecy and history current. The advantage of broadening the identity of Babylon to include all religious and political organizations is that the Watchtower Society is not

obligated to demonstrate that any given institution bears all the predicted "marks of the beast." Further, no matter what happens to the United Nations and the Roman Catholic Church, even if they should fade from international significance, the general condemnation of religious and political institutions will always be relevant. The interpretive move is parallel to the strategy followed when the reference to "generation" in Matthew 24:34 was changed from those alive in 1914 to the wicked opponents of God's kingdom who are present in every generation. By turning what was an identification of a specific subject of prophecy into a general correlation with conditions that are always present, the Watch Tower Society declined to pursue the courageous, but risky, enterprise of investing the interpretation of prophecy with actual predictive power.

While that strategy protects the Watchtower Society from institutional liability for failed prophecies, it also turns into sermonic platitudes what were once dramatic announcements of future events on which believers staked their lives and fortunes. Will the increasingly bland readings of apocalyptic scriptures sustain the sense of urgency required to impel another generation of Jehovah's Witnesses to follow their parents' footsteps, carrying the message of an impending kingdom door to door? The question is particularly urgent as Jehovah's Witnesses increase their numbers outside North America, among the world's dispossessed.

In one of the first sociological studies of Jehovah's Witnesses Herbert Hewitt Stroup concluded that Jehovah's Witnesses are not only sectarian in their separation from established Christian denominations, but also in their opposition to national loyalty, cultural trends, and the power of unregulated capitalism. Stroup noted a correlation between the growth of Jehovah's Witnesses and "the failure of the Christian churches to create a highly satisfactory medium of expression for the needs and aspirations of the underprivileged."[77] The impression that Jehovah's Witnesses are motivated by resentments of the dispossessed continues to have some validity, particularly because of their success among the poor and oppressed across the globe.[78] This favorable response may be due in part to the populist rhetoric that continues to fire the Watchtower vision of the coming kingdom. To those suffering the multiple displacements of the powerless in Latin America, Africa, and Asia, Jehovah's Witnesses offer supportive community, traditional moral values, and the promise of a coming paradise in which poverty, crime, hunger, war, exile, and homelessness are forever eliminated.[79] Even though their theology excludes their using a strategy of enculturation, Jehovah's Witnesses are increasing their numbers through conversions in the southern hemisphere.

Even Jehovah's Witnesses who are relatively well-off in countries that are secure and free from religious persecution joyfully anticipate the end of this world in which they are comfortably situated. Their radical critique of dominant social and political institutions in the West strongly resonates in parts of the world where people experience the oppression of those institutions on a daily basis. In those contexts the apocalyptic language of Jehovah's Witnesses in both its negative judgments of this world and its positive descriptions of the utopia to come carries persuasive appeal. By retaining the language of "outsiderhood" as their primary means of self-designation

Jehovah's Witnesses remain deliberately sectarian.[80] The question for the future, as the coming of the kingdom continues to be postponed, is whether the strategy of world denial can be sustained by successive generations of Jehovah's Witnesses for whom the world and its ongoing history remain a stubborn reality.

NOTES

1. *2005 Yearbook of Jehovah's Witnesses* (Brooklyn: Watchtower Bible and Tract Society, 2005), 38–39.

2. See David L. Weddle, "Jehovah's Witnesses," *The Encyclopedia of Protestantism,* vol. 2 (New York: Routledge, 2004), 977–82.

3. *What Does the Bible Really Teach?* (Brooklyn: Watchtower Bible and Tract Society, 2005), 18–25. Jehovah's Witnesses recognize that some biblical passages are written in symbolic language, such as reference to the "four corners of the earth" (Revelation 7:1), and should be read accordingly.

4. "The subtle influence of Greek philosophy was a key factor in the apostasy that followed the death of the apostles" [*Mankind's Search for God* (Brooklyn: Watchtower Bible and Tract Society, 1990), 266].

11. Ibid., 58–60. One popular production, "Photo-Drama of Creation," used motion pictures and slides synchronized with sound to present Russell's teachings to over nine million viewers in North America, Europe, and Australia by the end of 1914.

12. In the middle of the second century BCE some Jewish groups began to hope for a world-conquering Messiah and created the distinctive form of religious writing called *apocalyptic.* One group, known as the Essenes, withdrew from Judea to take up residence in the caves of the Dead Sea, preparing to assist the Messiah and his angelic hosts in the final battle against the Romans. They preserved prophetic texts of the Bible, which they interpreted as referring directly to their own experiences. At about the same time the stories of a young Jewish hero were joined with phantasmagoric dream visions of the end of Roman rule to form the biblical book of Daniel. Jehovah's Witnesses are part of a long tradition of believers, both Jewish and Christian, who find the promise of paradise in the symbols of prophecy. For the influence of this approach to the Bible in the United States, see Paul Boyer, *When Time Shall Be No More:*

Prophecy Belief in Modern American Culture (Cambridge: Harvard University Press, 1994), 21–45.

13. The date is calculated in *You Can Live Forever in Paradise on Earth* (Brooklyn: Watchtower Bible and Tract Society, 1982), 136–41; and *What Does the Bible Really Teach?,* 215–18.

15. Russell's complete works are available online at www.heraldmag.org. Russell incorporated The Watch Tower Bible and Tract Society of Pennsylvania in 1884, but when he established The Watchtower Bible and Tract Society of New York in 1909 as the center of all publishing activities, he used the one-word spelling of Watchtower. In 1939 the name of the magazine called *The Watch Tower and Herald of Christ's Presence* changed to *The Watchtower Announcing Jehovah's Kingdom.* In this essay I use the two-word name to refer to the theocratic organization, The Watch Tower Society, and the one-word term for the official teaching published by the Watchtower Bible and Tract Society.

17. *Jehovah's Witnesses: Proclaimers of the Coming Kingdom,* 82.

18. Jehovah's Witnesses explain that translators of the Bible replaced the personal name of God, represented by the sacred tetragrammaton in Hebrew, by the titles God and Lord out of a mistaken concern for Jewish aversion to pronouncing the divine name (*What Does the Bible Really Teach?,* 195–97). Greg Stafford draws on evidence from the Septuagint and Dead Sea Scrolls that the "original NT documents did contain the divine name" in *Jehovah's Witnesses Defended: An Answer to Scholars and Critics* (Huntington Beach, CA: Elihu Books, 2000), 1–54. Stafford is an able apologist for the doctrinal teachings of Jehovah's Witnesses and maintains a Web site of his articles at http://www.elihubooks.com.

45. *What Does the Bible Really Teach?,* 29. Since the "dent" of imperfection is the result of human procreation and carries with it the curse of death, it seems functionally equivalent to inherited original sin. In an earlier book the imperfection is compared to the effects of venereal disease: because our first parents became "unclean" so we are born into sickness, and death (*The Truth that Leads to Eternal Life,* 32). The crucial difference from Augustine's view is that for Jehovah's Witnesses humans possess the freedom to resist the Adamic disposition to rebel and rather choose to obey God. In terms of American evangelical thought, they belong to the Wesleyan strand.

49. *What Does the Bible Really Teach?,* 205. Royston Pike found that Witnesses in his day regarded the cross as a pagan "phallic symbol, derived from the ancient Egyptian *cruxansata* that represented the male and female genital organs combined" [*Jehovah's Witnesses: Who They Are, What They Teach, What They Do* (New York: Philosophical Library, 1954), 37].
50. For those who might ask why there was no decomposing body found in Jesus's tomb Russell replied that God removed it lest it become an obstacle to faith (presumably by inviting veneration) and may have preserved it for display in the future kingdom [C.T. Russell, *Studies in the Scriptures, Series II: The Time is at Hand* (Brooklyn: International Bible Students Association, 1911), 130].

77. *The Jehovah's Witnesses* (New York: Columbia University Press, 1945), v. Stroup concluded that "the greater number of Witnesses whom I have studied fall into … 'relief cases, poverty,' and 'working-men …'" (*Jehovah's Witnesses,* 77). Conklin reports that it is still the case: "In most of the world, as in the United States, its membership ranges from the middle to lower social and economic classes" (Conklin, *American Originals,* 157).

78. Conklin, *American Originals,* 159: Jehovah's Witnesses "have been unusually open not only to the poor and rejected but to blacks and Hispanics, although only recently have blacks achieved higher leadership roles. Some estimates place black membership in America at 30 percent, and the local congregations have achieved a degree of racial balance and interaction unique among Christians." Like many religious communities in the United States, however, the Jehovah's Witnesses achieved consistent racial integration only in the past 50 years. Royston Pike wrote in 1954, "In the USA separate assemblies have been held for White and Negro Witnesses" (*Jehovah's Witnesses,* 96).

79. For example, in the kingdom "there will be no dishonest politicians and greedy business leaders to oppress the people … Never again will anyone be without good food and comfortable housing because he cannot afford them. Unemployment, inflation and high prices will be no more.…" (*You Can Live Forever in Paradise on Earth,* 159).

80. *Religious Outsiders and the Making of Americans,* 136–39. Conklin notes that since 1916 Jehovah's Witnesses have "become more sectarian, more separatist, and culturally more isolated. This pattern reverses that of Seventh-day Adventists" (Conklin, *American Originals,* 145).

Christian Science

John K. Simmons

INTRODUCTION

The task of providing an objective historical account of any religious movement begins with a stark revelation; there is no such thing as "a religion." Rather people, real human beings, choose, for one reason or another, in belief and behavior, for better or for worse, to join in "holy matrimony" with that religion. The marriage metaphor is a good one. How the joining of believer and belief plays out in the emotional roller coaster of life makes all the difference in whether a religion is deemed true and worthy or false and destructive. When the marriage of believer to religion is successful, glowing accounts emerge. Historical appreciation and theological clarity are the fruits of matrimonial bliss. On the contrary, divorce produces vitriolic condemnation not only of the religion but also the person (founder or prophet) who configured the religion. Nowhere in the history of religions, and especially in the history of New Religious Movements (NRMs), is this fact more evident than in Christian Science and its founder, Mary Baker Eddy.

Let me begin this essay by warning the reader that it is impossible to arrive at *intellectual* agreement and thoughtful consensus on exactly what Christian Science presents as a religious world view.[1] Only the practicing Christian Scientist knows for sure, and this group of believers is on the endangered species list. However, this conundrum is applicable to most religions. Resonant with the opening "revelation," it may not be possible to objectively, much less flawlessly, describe the theological mind-set of a long dead prophet or flawlessly outline the parameters of any belief system.

Take Christianity, for example. The fires of theological and historical debate rage in undiminished fury 2000 years after Jesus of Nazareth walked the earth. Was he an apocalyptic Jewish messiah, a wisdom teacher, the Son of God, or a radical social reformer? Was "Jesus" a real person or was he born out of human existential desperation, an amalgam of ancient Jewish and Greco-Roman myths created as a buffer against the brutality and brevity of life? "Gospels," written within the first century

after Jesus's death, offer different portraits of this charismatic prophet in which varied theological perspectives are highlighted and supported by historical accounts laced with faith. Paul's first letter to the church in Corinth, written within 30 years of Jesus's death, clearly shows that a proliferation of "Christian" sects already existed, all vying for believers. Some of these early marriages ended in divorce, some sects were persecuted out of existence, and eventually a "New Testament" was agreed upon that church leaders hoped would bring order to belief and practice.

It did not and has not. Today, the existence of hundreds of Christian denominations provides sociological proof that the Christian world is not in agreement on who Jesus was or what he taught. How could the situation be any different when an NRM such as Christian Science is a little more than 100 years old? Once again, the "truth" of a religion is *relational* in that it evolves and changes within the marriage between belief and believer. Christian Science can be framed and understood as yet another chapter in the long debate about what Jesus originally revealed. However, the degree to which Eddy's revelation is "Christian" or "scientific" is up to the believer, not withstanding the Christian Science establishment's tireless effort to put forth a single, unassailable interpretation. Though historians of religion or other interested parties may never know precisely what Christian Science offers to the world, the extraordinary success of this NRM in its early years, not to mention the charisma, mystique, and doggedness of Eddy, make Christian Science a worthy addition to any anthology of American NRMs.

HISTORICAL BACKGROUND: CHRISTIAN SCIENCE AND ITS EMERGENCE IN NINETEENTH CENTURY AMERICAN CULTURE

Christian Science, founded by Mary Baker Eddy (1821–1910), emerged as a unique religious phenomenon in American culture during the tempestuous latter decades of the nineteenth century. Because it is one of only a handful of major Christian sects actually founded in the United States, the story of the Christian Science movement has as much to reveal about the spiritual yearning of Americans as it does about the complexities and nuances of American culture.[2] The opening line in Eddy's seminal work, *Science and Health with Key to the Scriptures,* provides an immediate insight into a primary religious impulse of her time. "To those leaning on the sustaining infinite, today is big with blessings."[3] The cultural experience of American citizens living in the late nineteenth century was anything but sustaining. In fact, day-to-day life often seemed as fractured and unstable as bedrock in California. Though all NRMs, to some extent, embody a spiritual search for permanence in a constantly changing world, Eddy's delineation of a "sustaining" metaphysical reality found a ready audience in believers who had lost faith in a traditional Christian world view challenged by scientific and social revolutions. Her promise of unassailable physical well-being gave hope to many sufferers in a time when medical practices were painful and primitive. At least initially, the joining of Christian Science and nervous Americans was a marriage made in heaven. In April 1879, Eddy and ten followers founded the Church of Christ, Scientist. Three decades later, in 1906

when 30,000 Christian Scientists celebrated the dedication of the 4,000-seat domed Italian Renaissance/Byzantine Mother Church in Boston, "the astonishing progress being made by Christian Science was national news in America."[4]

To live in the latter decades of the nineteenth century was to live in a time of disconcerting cultural change. The Civil War left the nation in a state of grief and repentance, and the churches were called upon to provide new visions and new choices for American citizens. But what were those choices to be? The social stability of a nation recovering from a soul-shaking war was rocked again by hurricane-force winds generated by two equally tumultuous revolutions: an intellectual revolution and enormous socioeconomic change.

The intellectual revolution attacked the biblically oriented self-understanding of the United States' destiny on two fronts. First, the thinking, writings, and scholarly investigations of Charles Darwin, Sigmund Freud, and Karl Marx undermined the covenantal biblical notion of a transcendent, moral God who, as was commonly accepted, had chosen the United States and the American people for a special purpose. As if that was not enough, the Bible itself was attacked by scholars who, for the first time, examined the book not as sacred text but as a literary historical account that could be examined from an objective, critical standpoint. For many, this Higher Biblical Criticism, as it was called, undermined the authority of the Bible and thus called into question basic assumptions about the meaning of life.

At the same time, the intellectual, theological, and cultural underpinnings of the nation came under attack, and society was undergoing massive changes. Industrialization, immigration, and urbanization combined to push American society into a complex sociocultural labyrinth without a map for guidance or leaders who possessed the intuitive qualities necessary for successful travel through the maze. The simplicity of agrarian and small-town values, voluntary cooperation, rugged individualism tempered by community spirit, and implicitly accepted Protestant moral precepts such as thrift, sobriety, modesty, hard work, and honesty seemed to set one at a disadvantage in the exploding urban jungles characterized by slums, crime, labor unrest, political corruption, and capitalist exploitation. Furthermore, the immigration of non-Anglo-Saxon, non-English-speaking, non-Protestant peoples into a once homogeneous society caused a severe national identity crisis. People were in genuine distress about the meaning of their own lives, not to mention the life of the nation.

Eddy's contemporaries, both religious and civil leaders, rose to the occasion, offering a highly variegated set of cures for these cultural afflictions. Social Gospelers, Reform Darwinists, Progressives, fundamentalists, Holiness-Pentecostals, Adventists, New Thoughters, postmillennialists, and premillennialists all answered the call led by such disparate notables as Dwight Moody, Washington Gladden, Lester Ward, Emma Curtis Hopkins, John Dewey, Billy Sunday, and Richard Ely. And, of course, Eddy offered the sustaining infinite of Divine Mind as a spiritual balm for cultural upheaval. If a person understood that all the social turmoil was simply the false testimony of what she termed *mortal mind,* an *error* in ontological perception, then Christian Science was, indeed, the remedy for all ills, social and otherwise. Her message was clear: change your thinking, and change your reality. Much to the chagrin of

the religious and intellectual establishment, numerous nervous Americans heard wedding bells and said, "I do" to Christian Science.

THE CHRISTIAN SCIENCE WORLD VIEW

While Christian Scientists understandably claim Eddy's truths to be part of a unique and final religious revelation, most outside observers place Christian Science in the metaphysical family of religious organizations with roots "both in the idealistic philosophy of the nineteenth century and in the search for alternative means of healing at a time when the healing arts were still in a primitive state."[5] The broad descriptive term "metaphysical" is not used in a manner common to the trained philosopher. Instead, it denotes the primacy of Mind as the controlling factor in human experience. At the heart of the metaphysical perspective is the theological and ontological affirmation that God is perfect Mind and human beings, in reality, exist in a state of eternal manifestation of that Divine Mind. The implications of this type of metaphysical perfectionism are nicely summarized in Eddy's "Scientific Statement of Being":

> There is no life, truth, intelligence nor substance in matter. All is infinite Mind and its infinite manifestation, for God is All-in-all. Spirit is immortal truth; matter is mortal error. Spirit is the real and eternal; matter is the unreal and temporal. Spirit is God, and man is His image and likeness. Therefore man is not material; he is spiritual.[6]

If God is Mind and the substance of being is Spirit, then humans, as the perfect reflection or expression of Mind, must be as perfect as God. Contrary to Protestant orthodoxy, it is not original sin that causes human beings to experience suffering, insecurity, lack, illness, and death but a profound error in thinking, an error Eddy termed, *mortal mind.* While traditional Christianity places the kingdom of heaven in the hereafter, Christian Science calls for the actualization of perfection in the here and now by knowing the truth of being. The Christian Scientist does not pray to a whimsical, distant, "old man in the sky" for health, security, and prosperity. These are qualities of God's unchanging expression that human beings invariably will reflect, experientially, once they depart from erring, limited, mortal thinking. God, as Divine Principle, can be scientifically demonstrated, by anyone who knows and affirms this principle of being. The infinite is sustaining, as the path to salvation becomes strewn with discarded material thoughts. Though Eddy's attackers, and there were many, claimed her theology was irrational, dangerous, and impractical, she stressed the practical nature of her "science." It was in day-to-day challenges and lived experience that Christian Scientists proved that "God's infinitude and omnipotence rule out the legitimacy, permanence, and substantiality of anything contrary to God's nature as Principle, Mind, Spirit, Soul, Life, Truth, and Love."[7] Thus, healing, both of sin and sickness, became a focus of the religion; a practical manifestation of the change in thinking from the material to the spiritual.

On the question of evil, Eddy departed from the more benign interpretations found in other metaphysical religions of the period, collectively called New Thought.

Probably from her strict Calvinist upbringing, Eddy retained an intense, often suffocating awareness of evil, not as a reality in God's perfect creation, but as a definite and dangerous presence in mortal mind. "Mortal mind" and "malicious animal magnetism" are terms she used to describe the mental error that is the collective consciousness of all human beings who have not attained her understanding of humanity as the perfect, ever-unfolding reflection of Divine Mind.

And, in the hands (or minds) of the devious, malicious animal magnetism could be manipulated to actually cause harm to others. According to Gillian Gill's biography, Eddy believed that former students actually had the power to commit "mental assassination." After a breakup with one of her early protégés, Daniel H. Spofford, she thought he was using mental malpractice to undermine her Christian Science practice and ordered her students to stand outside her bedroom door to mentally ward off any attacks by Spofford. In a celebrated case (1878) that earned her much negative publicity, she took part in a lawsuit against Spofford, claiming that he deliberately practiced malicious mesmerism on one of her unhealed patients, Lucretia Brown. Irreverently dubbed "The Second Salem Witch Trial," the suit was eventually thrown out of court.[8] While no Christian Scientist would equate "mortal mind" with the devil of orthodox Christianity, it is hard not to see some parallel with the "hellfire and brimstone" theology of Eddy's early Calvinist upbringing.

The "Christian" element in Christian Science emerges in the teaching that Jesus was the ultimate "Christian Scientist" who overcame sin, sickness, and death through his superior perception of the allness of spirit and the nothingness of matter. Jesus is revered by Christian Scientists, but he is not the messiah as defined by established Christianity. Absent from Christian Science is Christ's sacrificial death on the cross, seen by most Christians as a monumental, cosmos-shaking act that atones for human sinfulness and radically changes humanity's relationship to God. Rather, the Jesus of Christian Science is unique because he was the first human being to understand and fully express Divine Mind. As Stephen Gottschalk notes, Christian Science calls for a "radical reinterpretation of the meaning of the gospel."[9] For Christian Scientists, the gospels portray Jesus as exemplar, a human being who attained Christ consciousness and was then, scientifically, able to demonstrate mastery of sin, disease, and death. While mainstream Christianity describes Jesus's works as "supernatural interruptions of natural process and law,"[10] Christian Science sees no miracle. Rather, the clouds of mental error parted and God's perfect creation was revealed; a creation without sickness, lack, evil, or human suffering.

SPIRITUAL FORBEARERS OF CHRISTIAN SCIENCE

Charismatic prophets like Eddy tend to claim that their revelations are unique. But the study of nineteenth century sectarian religions such as Christian Science shows that a successful prophet is one who profits from popular religious sentiments already existing in the spiritual imagination of the citizenry. The mid-nineteenth century United States was certainly in an experimental mood, and alternative religious perspectives abounded. Without claiming that Eddy studied or even agreed

with these perspectives, one might note that a variety of world views prepared the psychic way for Christian Science, including Swedenborgianism, Mesmerism, Transcendentalism, and Spiritualism. Together they implanted in the American spiritual imagination the connection among physical, psychological, and spiritual health.[11]

Emanuel Swedenborg (1688–1772), the extraordinary Swedish visionary, in voluminous writings, taught that the Divine and the natural are consubstantial in God and humanity. Everything that exists visibly, in day-to-day experience, reflects patterns laid out in the spiritual world and is the end product of spiritual force. His doctrine of "correspondence" revealed that the heavenly and earthly levels of existence were intimately connected. And the codoctrine of "influx" promised an unceasing flow of spiritual energy, the power of the spirit, through all manifestation. For Swedenborg's many followers, God had never been more present or more available to meet the challenges of day-to-day living.

If Swedenborgianism offered a unitive view of existence, Franz Anton Mesmer (1734–1815) provided the very principle interconnecting the human and spiritual realms: "animal magnetism," a subtle, universal substance that when properly manipulated could give vitality to the sick and dying. Both teachings stressed that one's relationship towards nature, society, and God depended upon attunement to the harmonizing emanations from the highest realm, Spirit or Mind. In a world that preceded the great war between science and religion and amongst people who were raised to view earthly phenomena through a practical commonsense aperture, Swedenborg and Mesmer gave scientific validity to their quest for self-understanding and religious assurance.

Transcendentalism added to this "can do" religious vitality characteristic of NRMs in the nineteenth century. Immanence, individual effort in self-actualization, intuition, and imagination all became qualities of life designed to pierce the restricting shell of materiality and usher the initiate into direct contact with what Transcendentalist writer Ralph Waldo Emerson called "Oversoul." At the same time, Spiritualism underscored the possibility of access to spiritual realms by creating the first toll-free connection to those who had shuffled off this mortal coil.

Again, there is no evidence that these spiritualities directly affected Eddy's revelation. In fact, she went out of her way to condemn Mesmerism and Spiritualism and, to a lesser degree, Transcendentalism. The point is that the combined perspectives represented by these world views engaged the religious imagination of the American people as popular religion outside of traditional organized religion. Thus these religious forbearers prepared the way for Eddy's spiritual leap into the sustaining infinite.

MARY BAKER EDDY

The story of the life of Mary Morse Baker Glover Patterson Eddy begins on a sunny, summer day, July 16, 1821. Mary Morse Baker was born in Bow Township, near Concord, New Hampshire, to Abigail Ambrose Baker, 36, and Mark Baker, 35, in the same humble farmhouse where her father, three brothers, and two sisters

were born. The youngest of six Baker children, this imaginative and attractive but emotionally tormented child grew into an adulthood that was a study in misery. Sickness, bad and broken marriages, and emotional disturbances turned her life into an unceasing quest for mental and physical health.[12]

Today, advances in neurobiology and the extraordinary development in our understanding of the complex biochemical "dance" of the brain allow an understanding of human consciousness not available to previous generations. Setting aside armchair psychological theories on Eddy's world view, it is safe to say that, for her, being conscious meant being in emotional and physical pain. Had she not come to the revelations she named Christian Science, she probably would have succumbed to her torments and died a merciful, if early, death. From a medical perspective, there exists no reliable medical diagnosis or evidence of the exact nature of Eddy's illnesses. Clearly, her afflictions—fits, fainting spells, and fever—were, in part, psychosomatic. In the medical lexicon of the nineteenth century, she suffered from "neurasthenia," a catchall diagnosis for what today might be called acute anxiety, depression, nervous exhaustion, or another malfunction of our complex neuropsychological system. Whatever the cause of her ailments, for Eddy, it hurt to be alive. Consequently, her religion is as much about her valiant struggle to reconfigure her personal reality as it is a body of eternal metaphysical truths.

An advanced degree in clinical psychology is not needed to detect the familial roots of spiritual conflict in Eddy's childhood encounter with religion. She provides ample evidence in her autobiographical work, *Retrospection and Introspection,* when describing her admittance into communion at her parents' Congregational church. The Calvinist doctrine of predestination overwhelmed the 12-year-old Eddy, and she succumbed to one of her frequent "fevers," during which, she reflected on her parent's spiritual influence:

> My father's relentless theology emphasized belief in a final judgment-day, in the danger of endless punishment, and in a Jehovah merciless towards unbelievers; and of those things he now spoke, hoping to win me from dreaded heresy.… My mother, as she bathed my burning temples, bade me lean on God's love, which would give me rest, if I went to Him in prayer, as I was wont to do, seeking His guidance. I prayed; and a soft glow of ineffable joy came over me. The fever was gone, and I rose and dressed myself, in a normal condition of health. Mother saw this, and was glad.[13]

In observing Eddy's conceptualization and institutionalization of Christian Science, it would appear that she never "overcame" the influence of her parents. Rather she internalized their disparate perspectives on the nature of divinity as poles. Troubled as a child, the responsibilities that come with adulthood only made her situation more pitiful. The Holy Grail of this quest for health and emotional stability came in the form of spiritual revelation. However, her lifelong inner conflict on the nature of God expressed itself outwardly in the public religious path she named Christian Science.

In 1843, her life seemed to take a turn for the better when she married George Washington Glover. Originally from Concord, New Hampshire, Glover was making

a name for himself as a builder in Charleston, South Carolina. He was about to embark on a major building project in Haiti when a disastrous fire destroyed his building supplies, leading to financial ruin. Within a year, Glover contracted yellow fever and died. The young Eddy was widowed only a year after the marriage and three months before her only child, George Jr., was born. She was then forced to return to her family where she lived for nine frustrating years suffering from chronic ailments, described as dyspepsia, liver complaint, and nervous disease. Nine years later, in 1853, Mrs. Glover married again, this time to an itinerant dentist named Dr. Daniel Patterson. Patterson was never able to make a decent living and even got captured by the Confederate Army during the Civil War. For the next several years, she moved from place to place as her health continued to deteriorate. Finally, in 1862, her desperate quest for health and peace of mind led her to Portland, Maine and Phineas Parkhurst Quimby.

Perhaps no one had more influence on Eddy than Quimby (1802–1866). Quimby was a blacksmith's son born in Lebanon, New Hampshire, who later became a successful clockmaker in Belfast, Maine. In 1838, while attending a lecture by the French mesmerist Charles Poyen, Quimby underwent his first "ecstatic" revelation and gave up his clockmaking career to become a successful mesmerist and healer. In time, however, Quimby suspected that the healings he produced were caused by more than a manipulation of "magnetic fluids." Animal magnetism alone could not account for his enormous healing success. In a flash of spiritual insight, he realized that it was not a physical process at all, but the confidence the healer inspired in his patient and the accompanying expectation of recovery—in other words, mind over material conditions.

Quimby then launched a completely new healing ministry based on an integration of scientifically demonstrable mind healing and Christian teachings. Quimby first coined the term for God, "Divine Mind." He taught that Christ was the spirit of God in all human beings and a channel, when properly attuned, for ailing humans to connect to emanations of health, happiness, prosperity, and abundance. Limited material thinking produced limited experience; spiritual thought generated abundance.

Should Quimby rightfully be considered the "founder" of a "Christian Science" and, thus, the intellectual and spiritual source of the metaphysical movement? Controversy rages to this day. Early leaders of the various New Thought churches, Unity School of Christianity, Religious Science, Divine Science, and so forth, accused Eddy of appropriating Quimby's teachings and claiming them as her own divine revelation. Quimby, however, was not formally educated and left no comprehensive writings of his philosophy. In fact, prolific writers such as Warren Felt Evans (1817–1889), Julius Dresser (1838–1893), and his son Horatio Dresser (1866–1954) popularized Quimby's teachings. In chronicling the emergence of Christian Science, what is most important about Quimby is that in October 1862, he treated and at least initially inspired an intense young woman who eventually went on to found the First Church of Christ, Scientist, one Mary Baker Eddy.

The short respite of peace Eddy enjoyed while studying with Quimby was shattered by his death in 1866. However, following what she believed was her own miraculous healing after a fall on ice—just a few months after Quimby's demise—she became convinced that her purpose in life was to reveal the truth of Christian Science. For the next nine years, she thought, wrote, and lived in poverty, percolating her plan and promise. The year 1875 was pivotal in the emergence of Christian Science because not only did Eddy then establish the first "Christian Scientists' Home" in Lynn, Massachusetts, but she also published the first edition of her textbook, *Science and Health.*

CHRISTIAN SCIENCE: EARLY GROWTH AND DEVELOPMENT

For Eddy, the years from 1875 to the turn of the century were spent honing her world view, spreading her message, and creating an enduring religious institution. Eddy demonstrated an astute awareness of what we now call public relations. To counter attacks on her movement and to spread authentic Christian Science, she founded the monthly *Christian Science Journal* in 1883. In 1898, as the movement entered a period of extraordinary growth in numbers, the weekly *Christian Science Sentinel* appeared, filled with articles that focused on the practical, almost homey side of Christian Science healing. Linking Christian Science with the world, the highly respected *Christian Science Monitor* began in 1908. Meanwhile, Eddy produced a startling number of editions of her textbook, *Science and Health,* completing 382 before her death in 1910.[14]

Institutional mutations were also part and parcel of the early years in Eddy's movement. Although in the beginning Eddy chose not to found a formal institution, she grew dissatisfied with this direction and reversed herself. The early church structure included the establishment of the Church of Christ, Scientist (1879), the Massachusetts Metaphysical College (1881), and the National Christian Science Association (1886). However, when the congregational pattern of church polity, characteristic of her first religious organization, proved too democratic and a catalyst for rebellion, she shocked her followers by disbanding the National Christian Science Association. When, in 1892, she reorganized the Christian Science movement around the Mother Church in Boston, her unwavering motivation was to secure her spiritual vision in institutional form. Eddy selected 12 "Charter Members" and 20 "First Members" as the core group within the Boston church, then urged all Christian Scientists to join this First Church of Christ, Scientist.

All other Christian Science churches became "branch churches," planets revolving around the sun she controlled. There were no ministers in the organization to compete for power. Religious services were conducted by Readers, elected to three-year terms, who read only from the Bible and *Science and Health* and from lessons issued quarterly from the Mother Church. Unauthorized presentations of Christian Science were prohibited.

Strict rules and regulations governing Christian Science were laid out in the *Manual of the Mother Church*. At Eddy's request, the first codification was undertaken by

a committee in 1895 and went through 88 editions. Two weeks after her death on December 3, 1910, the Board of Directors came out with an 89th edition that guides the movement to this day. Since changes cannot be made without her approval, church structure and liturgical activity have remained the same within the movement to the present.

The *Manual* defines the organizational structure of the church, rigidly controls the propagation of Christian Science teaching, and guides the religious practices of Christian Scientists throughout the world. At the international level of organizational structure, The Mother Church, the First Church of Christ, Scientist, in Boston, is controlled by a five-member, self-perpetuating Board of Directors of the Mother Church. The *Manual* also affirms the establishment of The Board of Trustees that legally holds and manages church property. In the decade after Eddy's death, a legal battle, known within the movement as the Great Litigation, ensued over the question of who would lead the church. In 1921, the case was decided in favor of a five-person board of directors, based on a legal interpretation of the *Manual of the Mother Church.* The Christian Science Publishing Society (CSPS), directed by the *Manual,* is responsible for the dissemination of all authorized materials on Christian Science. The Publishing Society produces the *Christian Science Monitor, Journal, Sentinel,* and *Herald* and recently began managing the official Christian Science Web site, www.spirituality.com.

Reflecting Eddy's anxiety over the inappropriate presentation of her revelation, a lesser-known but highly effective committee of the CSPS is known as the Committees on Publication (COPs). COPs work regionally and locally to ensure that any presentation, whether a public lecture, academic paper, article, or book, presents a positive view of Christian Science. They doggedly defend the church against attack, censor material, and even raise funds to support legal battles.[15]

As mentioned, Christian Science church services are highly structured. Lessons, chosen by the Mother Church and based on topics selected by Eddy, are read by the First and Second Readers using alternating passages from the Bible and *Science and Health.* Interestingly enough, it is the First Reader who is charged with reading passages from Eddy's textbook while the Second Reader is responsible for reading assigned texts from the Bible. There are no church-sanctioned social functions or charitable causes. The *Manual* prescribes time limits for music, and only a piano or organ is permissible. The stately and quiet nature of the services is not considered suitable for children, who are invited to attend a separate Sunday School up to the age of 20. On Wednesday evenings, branch churches offer selected readings from the Bible and *Science and Health,* presented by the First Reader, and followed by voluntary testimonials of healing by audience members.

Other important quasi-professional positions within the movement include Christian Science teachers, lecturers, practitioners, and nurses. Teachers are board-approved educators who provide class instruction to church members seeking a deeper understanding of Christian Science. Participation in class instruction is considered an honor and an important rite of passage. Teachers are greatly admired within Christian Science. The "best-of-the-best" may become Christian Science lecturers.

The Christian Science Board of Lectureship provides professional speakers, paid by the church, to travel around the world, to conferences, health fairs, gatherings on spirituality, college campuses, and any other venues in which Christian Science can be promoted.

The Christian Science practitioner is really the person on the front lines of healing within this NRM. Practitioners do not diagnose illness or provide medical care. Rather, they assist the afflicted in understanding the spiritual nature of reality, helping them through the error of material thinking into the spiritual reality of health and wholeness. When a Christian Science practitioner is contacted, he or she is given permission to actively help a patient spiritualize thought. The practitioner may read assuring passages from authorized Christian Science literature, especially the Bible and *Science and Health,* and then assign further readings to the afflicted party. The key point is that thought is the source of disease. A Christian Science practitioner, then, treats the erroneous thought, which, then, effects the cure. Practitioners receive nominal fees for their healing skills, and some insurance companies provide coverage for Christian Science treatment. Though it may seem hypocritical to the outside observer, a small number of Christian Science nurses exist. They do not dispense medicine, but provide additional care such as bathing or dressing wounds. The seriously ill can retire to a Christian Science nursing home facility where food, basic care, and prayer are offered.

CHRISTIAN SCIENCE: INTO THE TWENTIETH CENTURY

Eddy's work ethic throughout the remaining years of her life was extraordinary. She labored tirelessly revising the *Manual* and *Science and Health,* fended off legal and media attacks, and was often embroiled in disputes with former students. In the early years of the twentieth century, when the greatest expansion of her NRM occurred, Eddy expressed some concern that her metaphysical vision might be misused, to the detriment of Christian Science. She wrote that "the growth of the cause of Christian Science seems too rapid to be healthful,"[16] and dictated that no proselytizing or raiding of other denominations for new converts should occur. Between 1908–1910, Alfred A. Farlow, Manager of the Committees on Publication, launched a campaign, with Eddy's blessing, to curb the exuberance of Christian Scientists, strictly control all forms of outreach by the church membership, and most of all, seek out and secure favorable treatment of Christian Science in the media.[17]

The success of Christian Science in the early years brought fame and fortune, but also created a cohort of angry and litigious ex-members, people who experienced the loss of loved ones because they were not healed by Eddy's teachings. Accordingly, in her chapter entitled "Christian Science Practice," Eddy clearly states that the journey towards perfection in Christian Science is a progressive one. First, a potential healer must be spiritually pure; second, she or he must realize that understanding God's perfect creation means demonstrating that perfection in daily living. She admonishes the would-be Christian Science healer:

> In order to cure his patient, the metaphysician must first cast moral evils out of himself and thus attain the spiritual freedom which will enable him to cast physical evils out of his patient; but heal he cannot, while his own spiritual barrenness debars him from giving his patient's thought, yea, while mental penury chills his faith and understanding.… No possible thing do I ask when urging the claims of Christian Science; but because this teaching is in advance of the age, we should not deny our need of its spiritual unfoldment. Mankind will improve through Science and Christianity.[18]

Though Christian Science became associated with the healing of physical illness, practicing Christian Scientists are quick to claim that healing is only one inevitable harmonious manifestation of growing spiritual awareness. In 1990, during a time of intense attack due to the much publicized death of children under Christian Science care, the Church felt compelled to bring out a powerful piece of apologetic literature, *Christian Science: A Sourcebook of Contemporary Materials.* The fundamental message of this book is that Christian Science is about realizing God's totality and perfection and, in doing so, realizing and tearing away the ontological trappings of human limitation, be it expressed in *diseases* of the mind, soul, or body. In defense of the healing arts of the Christian Science practitioner, one contributor admits that it is impossible for the practitioner to divide healing of the physical illness from dealing with emotional problems, questions of employment, schooling, professional advancement, environmental adjustment, theological confusion, existential anxiety, and so forth. "The important thing is that the word *healing* be understood to apply to the whole spectrum of human sins, fears, griefs, wants, and ills …"[19]

THE FUTURE OF CHRISTIAN SCIENCE

The future of Eddy's movement looks bleak. Since the height of membership in the 1950s, Christian Science has steadily declined. While analysts laid the blame for the downward spiral on everything from the invention of penicillin to the secularization of society, it is, ironically, American culture itself that has been a major cause of the group's demise. While the *Manual* locked the church in a crusty, late-nineteenth century Victorian time warp in terms of the language and presentation of Eddy's teachings, the essence of her message was co-opted by everyone from leaders in mainstream Protestant churches to endless New Age writers and self-styled spiritual guides. Preachers such as California's Robert Schuller or his predecessor, Norman Vincent Peale, took the mind over matter, "positive thinking" message of Christian Science and adapted it to a quasi-orthodox Protestant Christian theological stance. Protestant, Catholic, and Jewish religious writers produced books that top the charts while offering thinly disguised Christian Science ideas. The most popular title, Peale's *The Power of Positive Thinking,* sold two million copies. Others included Bishop Fulton Sheen's *Peace of Soul* and Rabbi Joshua Liebman's *Peace of Mind.* Finally, Christian Science is on the decline because the message is simply no longer extraordinary in a world informed by quantum physics, neurotheology, New Age spirituality, and the ever-expanding expertise of medical practitioners.

For too long, the *Manual* stifled theological originality and organizational flexibility. As in many a marriage, boredom led to divorce. Spiritual seekers drifted into Christian Science because of Eddy's genuine spiritual insight but continued drifting when their seeking was stifled by the rigid church structure and suppression of spiritual creativity. The tendency within the organization was for members who, for one reason or another, left the church to remain independent, if excommunicated, Christian Scientists. In fact, Gottschalk makes the rather astounding claim that of the 350,000–450,000 people who, today, might consider themselves to be Christian Scientists, the majority do not have formal ties to this NRM.[20] At least two percent of branch churches close each year. The Mother Church, which absorbs the assets of shuttered branch churches—and given the astronomic rise in real estate prices, these assets are considerable—"essentially feeds off the demise of its faithful."[21]

The church leadership, however, is making strides to rectify the situation. In the late 1990s, the 14-acre Mother Church complex in Boston embarked on an extensive construction project. The $50 million Mary Baker Eddy Library for the Betterment of Humanity opened in the fall of 2002 for the purpose of transmitting Eddy's ideas to the general public and making her writings more available to scholars.[22] The official Web site, www.spirituality.com, is state of the art, and, for the first time since Eddy's demise, the presentation of Christian Science is lively and refreshing. Christian Science is still portrayed as an extraordinary and unique spiritual revelation and Eddy is revered; however, the Web site does something previously unheard of in the restrictive world of the Christian Science Publishing Society: it acknowledges other religious or spiritual world views, rather than building philosophical or theological walls designed to protect Christian Science. Will it be too little too late? From a scholarly perspective, whether or not this NRM dies out, Eddy has given the world one of the great stories in American religious history.

CONCLUDING REMARKS: *INSTRUCTIVE CONFLICTS*

In the concluding section of this essay, I want to explore what Christian Science reveals, using a set of *instructive conflicts* that may be universal in the process of emerging NRMs. When contemplating the life and teaching of Eddy, historians of NRMs and the general reader travel over challenging terrain. Confusion, often the better part of controversy, engendered a voluminous production of biographical, historical, and theological materials on Eddy and her religious movement as followers or critics struggle to understand her world view. This understanding is complicated further by the fact that she continuously fine-tuned and toyed with her spiritual vision right up to her death in 1910. For instance, Robert David Thomas spent 15 years studying Eddy and her movement. He describes his experience as "frustrating, rewarding and exhausting" for the reason noted in his preface, a conclusion reached by numerous biographers. He writes, "… from her first fame in the 1870s to the day she died, December 3, 1910, and after, Mary Baker Eddy and her religion have had the capacity to stir deep and conflicting feelings."[23]

Calling, once again, upon the marriage metaphor, I note that writers as well as believers are drawn into a relationship with Eddy and her movement, and their respective works reflect positive or negative aspects of that relationship. Books about Christian Science, then, become part of the data a historian must consider in chronicling this religion. Consider two late twentieth century studies on Eddy and the Christian Science movement. The reader who curls up with Caroline Fraser's *God's Perfect Child* will quickly uncurl in encountering an almost demonic woman who, unwittingly, led hundreds of thousands of spiritual seekers through a kind of metaphysical hell.[24] In contrast, Gillian Gill's *Mary Baker Eddy,* describes a troubled but courageous woman who broke through the social and religious barriers of her time.[25] Unlike Fraser, who suffered through a Christian Science upbringing and uses her considerable literary effort to vent frustration, Gill began her study of Eddy from a position of academic neutrality. Gill makes a notable contribution to Christian Science studies by accurately recording how gender inequities embedded in nineteenth-century society account for much of the legal wrangling and character assassination Eddy endured as she struggled to institutionalize her spiritual vision.

Sexism, indeed, fanned the flames of controversy. No male religious leader, however outrageous his metaphysical claims, ignited such an intense social and religious conflagration. Though straightforward in acknowledging Eddy's many "peculiarities of personality," Gill admires Eddy's stamina and courage in overcoming social and personal challenges. Through research, rather than a personal agenda, Gill produces a balanced report on the conflicted nature of this feisty mystic. These two works by Fraser and Gill showcase only the more recent episode of "battling biographies." Almost as soon as Christian Science took institutional form and gathered speed as a legitimate, if controversial, NRM in the United States, biographers cast Eddy in the role of mediocre metaphysician or Christ-like prophet. When it comes to Christian Science and this NRM's beloved or embattled founder, there is no neutral territory to be found. One Christian Science author, a church member for more than 50 years, laments, "Christian Science became a hugely successful religious phenomenon in the first four decades of existence, but it grew to be world-wide movement only through controversy, skeptical opposition and downright ridicule."[26]

Conflict and controversy can, however, be instructive when analyzing a given NRM. If this is the case, then Christian Science provides a fertile intellectual field, indeed. In fact, as Marcus Borg and N.T. Wright have demonstrated in their book, *The Meaning of Jesus: Two Visions,* dialogue between scholars who also happen to be believers harboring opposing interpretations generates historical clarity and actually increases our understanding of the motivation and intent of a religion's founder.[27] What we gain by analyzing Christian Science and Eddy is a window into the personal and organizational dilemmas that inevitably arise with the institutionalization of any powerful spiritual insight. Also, we learn much about the rocky romances of early followers that lead to either matrimonial bliss or nasty divorce.

In reflecting on the disagreements that swirl around Eddy and Christian Science, we can formulate a set of "instructive conflicts"—conflicts that call for dialogue—that actually facilitate the end goal of any historical analysis: accuracy. Three

"instructive conflicts" that emerge in any encounter with NRMs are (1) faith versus historical fact; (2) conflicts within the *multidimensional personality* of any charismatic religious leader; and (3) the well-known *dilemmas of institutionalization* faced by any NRM.

These three "instructive conflicts" are not new, and that is certainly the case with the first; faith versus fact. As Borg notes, any historian of religions is confronted by the gap between "history remembered and history metaphorized."[28] It is difficult enough to remember accurately and record any past event. For example, when establishing fault in an everyday traffic accident, all participants have a personal perspective that acts as a sorting and separating device when selecting pertinent details. The reality of the past is measured in usefulness, not factuality. Memories are meaningful only if they support a desired future outcome.

Add the power of religious experience to the equation, and the tendency is for participants to reify details with larger-than-life significance. Any time that existential yearning meets even the most trivial of circumstances, the commonplace becomes extraordinary. Historical facts are drawn out to sea in the relentless undertow of meaning. What is "remembered" is "metaphorized," that is, historical facts are turned into faith events.[29] The point is that this process is inevitable and most certainly occurred in Eddy's own recollection of key events in her life as well as in the various renditions, pro and con, of her emergence as a popular, if controversial, religious leader. Religious revelation injects meaning into ordinary events, followers sacralize these events, and the ordinary gives birth to the extraordinary. Religious leaders like Eddy are also taken with their own spiritual prowess as they become more popular. They tend to "remythologize" themselves, as Thomas notes from his exhaustive psychological analysis,

> … there is something else about Mrs. Eddy that makes her difficult to grasp. Some of the most important information about her comes from the reminiscences of those who knew her best, but many of these recollections were recorded decades after the fact, when the people were quite old, and even the sharpest memory is not necessarily a reliable guide to the past. This is especially true of Mrs. Eddy's own memories, which are sometimes crucial. As she grew older and more prominent as a religious leader, one could argue that she was actively reinventing herself by reconstructing her past. She played with her memories in a creative way, altering them into spiritual folk tales, into religious myths.[30]

Nowhere is the remythologization process more evident than in her famous "fall in the ice" in Lynn, Massachusetts, on February 3, 1866. While walking with some friends to attend a meeting of the Linwood Lodge of the Good Templars, she slipped on the icy sidewalk, fell, and was knocked unconscious. The attending physician, Alvin M. Cushing, considered her injuries serious and arranged for her to be taken home. Like so many important incidents in Eddy's life, this accident was later subjected to intense scrutiny. The anti-Eddy camp, lead by Georgine Milmine, portrayed her fall as little more than a bump on the head.[31] However, Eddy interpreted the event as the beginning of Christian Science. According to her, she was at death's door and asked to be left alone with her Bible. Shortly thereafter, she experienced a miraculous healing. To the amazement of friends who gathered to attend her in her

last moments, she rose from her deathbed and walked downstairs in perfect health. Where critics claimed minimal injury or even specious fiction, Eddy triumphantly heralded the moment as one of spiritual revelation. In the first edition of *Retrospection and Introspection,* published in 1891, Eddy writes,

> It was in Massachusetts, in February, 1866 … that I discovered the Science of divine metaphysical healing which I afterwards named Christian Science. The discovery came to pass in this way. During the twenty years prior to my discovery I had been trying to trace all physical effects to a mental cause; and in the latter part of 1866 I gained scientific certainty that all causation was Mind, and every effect a mental phenomenon.
> My immediate recovery from the effects of an injury caused by an accident, an injury that neither medicine nor surgery could reach, was falling apple that led me to the discovery how to be well myself, and how to make others so.
> Even to the homeopathic physician who attended me, and rejoiced in my recovery, I could not then explain the *modus* of my relief. I could only assure him that the divine Spirit had wrought the miracle—a miracle which later I found to be in perfect scientific accord with divine law.[32]

Regardless of what actually happened on that cold day in 1866, for Eddy, over time, this event took on extraordinary meaning. To her credit, she resisted the tendency of her followers to portray her as "The Woman of the Apocalypse," prophesied in Revelation 12 and, thus, to see her as the Christ for this age. Some zealous followers even attempted to trace Eddy's lineage back to King David of the ancient Hebrews, thereby establishing her messianic credentials. Eddy, again to her credit, stifled these claims. She was comfortable with her follower's adulation but did not allow their exuberance to deify her work or see it as parallel to that of Jesus.[33]

The cause of the second instructive conflict is so obvious yet surprisingly is ignored by many historians of religion and almost all believers when describing the life and teaching of their beloved leaders and founders. Every human being has a multidimensional personality.[34] Eddy manifested, at different times, the personality of either an authentic mystic or a scrappy corporate lawyer. Like all mystics, she had moments of extraordinary awareness during which she knew the inseparable connection between humanity and divinity, the goodness of God, and, in a nonrational way, the eternally perfect, oneness of Being. She was also capable of seeing the world as an endless struggle between *Divine Mind* and *mortal mind,* and in this mood, she was a tough, worthy opponent. Inwardly, she was a mystic; outwardly, she was a fighter, battling human enemies who attacked her religion and mental enemies that besmirched the image of spiritual perfection she named Christian Science. Followers as well as historians become confused in analyzing and interpreting Eddy and Christian Science because they do not acknowledge the fact that Eddy, like all human beings, was shaped by her experiences. Like all human beings, her identity was forged in relationship. Eddy's mystical self offers a sublime and peaceful vision of the world, while her "me vs. the world" self is cantankerous, angry, capable of deceit, apocalyptic, and always ready to do battle for her cause. Knowing where she is in any historical situation makes all the difference when interpreting her motivations and actions.[35]

The third instructive conflict plays out in the sociological arena. This enduring challenge is described by sociologists of religion as the dilemma of institutionalization. Put simply, the more successful any organization becomes, the more internal and external challenges it faces. Success, in a sense, becomes a cause of failure. Any time a "mutant strand" of spirituality attempts to institutionalize in the bloodstream of human cultures, the "established species" send out vicious "antibodies" in an attempt to destroy the invader. The cultural collision between new and old religious visions is part and parcel of NRM formation and was certainly true in the case of Christian Science.

Eddy's radical reinterpretation of Jesus's life and teaching offered up an "authentic Christianity" that touched a highly sensitive existential or cultural nerve and unleashed violent attacks by leaders within the established Christian denominations. Sorting through the irrational fear-based attacks on one side and genuine critique of Christian Science theology on the other reveals the extent to which American culture is immersed in a messianic interpretation of Christian mythology. The centrality and all-sufficiency of Jesus is the measure of authentic Christian teaching. Put simply, the United States is God's landing strip for Jesus's triumphant return from the heavens. The political implications of messianic Christianity are an important factor in understanding why believers in the established denominations responded so negatively to Christian Science. While Eddy claimed that Jesus was unique because he was the first human being to realize his perfection as an expression of God, gone is the cornerstone of evangelical Protestantism: Jesus's vicarious atoning death on the cross for sinful humanity. In Christian Science, all human beings can know and be what Jesus was; in fact, they already are as perfect as Jesus in the mind of God.

With or without theological sophistication, a majority of Americans, particularly those from Protestant evangelical traditions, saw Eddy's teaching as an attack on the sacred purpose of the United States. Christians belonging to established denominations envisioned God's own Hand in the making of the United States, and His express purpose was to create a godly kingdom fit for the return of His Son. Regardless of First Amendment freedoms, here is where politics and religion merge for millions of Americans, in Eddy's time and now. By watering down the unique, saving quality of Jesus and devaluing an actual, apocalyptic physical return, Eddy eroded *religiopolitical* validation for the existence of the United States. For many, matrimonial intentions with Christian Science bordered on political treason; thus, the motivations for attacks on Eddy, at times, seem more political than religious. Recognizing these three areas of instructive conflict diminishes the tendency to fall into opposing interpretive camps and, as Borg and Wright demonstrated, invites dialogue and thoughtful consensus, qualities that were lacking in analyses of Christian Science and its founder.

Returning to the marriage metaphor, I note that seeing and handling these conflicts as *instructive* rather than destructive makes all the difference in the quest for a harmonious relationship. Finding a balance between romantic notions of love and the emotional terrain of day-to-day living keeps a marriage healthy. Learning to fit the pieces of the multidimensional personality together with the give and take drawn

from unconditional love and finding a place for freedom, creativity, and authenticity to grow within the often stultifying institutional boundaries of marriage decide the fate of the partnership with spouse and religion.

In sorting out how Christian Science "works" for its adherents, it is useful to keep in mind the *multidimensional personality* "instructive conflict." Eddy the mystic experienced the perfection of being, God's perfection, and this profound, if common, understanding of a good without opposite that empowered her. However, in the process of institutionalizing her mystical vision, the conflicts that arose between her and the religious and medical establishment drew out another personality, the one that saw the world as Armageddon where *malicious animal magnetism* battled Truth to the death. The marriage between believer and Christian Science, then, works when the believer can, to some extent, embody Eddy's own multidimensional personality, to be filled with love but also ready to vigorously defend the faith in the face of outside threats. The bottom line in Christian Science, from the opening tones in 1866 to the complex symphony of the twenty-first century, is healing.

Our three instructive conflicts contribute to all the difficulties in establishing what Christian Science is and what Eddy taught, but Nancy Niblack Baxter, probably motivated by her desperate need to save her own long-term marriage to Christian Science, comes closest to identifying the overarching cause of controversy. In concluding her own analysis of the founding years of the NRM, she notes with clear and fruitful insight,

> Two traditions emerged from the founding period of Christian Science: a method to heal bodily sickness and a refreshingly new interpretation of Christianity. These two traditions would contend during the century to come, and when the one won out, it would come to threaten the very existence of the movement.[36]

Marriages break up for any number of reasons: someone is abusive, someone is bored, someone has drug or alcohol problems, there are financial difficulties, and so forth. In the case of Christian Science, the real test is physical well being, i.e., health and healing. "Christian Science? You're the people who don't believe in doctors." If a religion's existential dilemma could be encapsulated in a simple inquiry, the above conversational exchange between a mildly interested party and a practicing Christian Scientist pretty much summarizes the "problem" faced by Christian Science. It is a comment virtually every Christian Scientist has heard. Imagine Eddy's tireless spiritual struggle, the endless hours spent formulating her world view and then institutionalizing it in a mostly hostile society. Then imagine it all being reduced to "You're the people who don't go to doctors." Is Christian Science the final revelation of true Christianity or an alternative healing method that tangentially and, many would say, loosely makes use of Christian symbolism and mythology to cure human ailments? According to Baxter, the movement will not survive in the twenty-first century unless this key question is confronted and answered. And answering this question may well radically change the movement begun by Eddy.

What is often lost in this debate is the critical importance of health in all our lives. "As long as you've got your health …" is a time-honored cliché indicating that good

health ranks right up there with the most demanding of human needs. More than one courageous chronicler of the origins of religion placed human need—food, shelter, sex, and health—at the murky beginnings of the spiritual quest for well-being. Understandably, human cultures placed health at the pinnacle of the quest for social perfection. Being "sick," in most times and in most cultures, meant that a person was but a step away from death's door. Only in the most recent, miniscule fragment of human history has the quest for well-being evolved into a scientific understanding of microbiology and brought us reliable methods for combating disease.

Before modern medicine, which is by no means "perfect" in healing human ills, sickness was wrapped in superstition, and healing methods were primitive and painful. This was the medical climate of nineteenth-century America. Is it any wonder, then, that Eddy's all-encompassing spiritual reality reflects God's well-being, health as an eternal, even sacred, quality? Thus, in the minds of many practicing Christian Scientists, health equals divinity; well-being is being as God experiences it. In fact, bodily conditions are not the cause of illness in Christian Science. They are the manifestation of a deeper alienation from God. The goal, then, is not to change the evidence of a material situation, but to heal the ontological gap between God and His expression, a chasm that, ultimately, does not exist. For the Christian Scientist who, with steely resolve, decides to walk this path, then even death does not change the rules of the game. Thus, Christian Scientists who are not quickly healed through their own or a practitioner's work may well stay the course and "shuffle off this mortal coil" without calling in the assistance of a medical doctor.

In conclusion, it would be fair to say that what Christian Science primarily teaches can be discovered only in the marriage, the relationship between believer and religion. Eddy, under the influence of Quimby's mind cure methods, initially linked health with divine presence. However, over years of refining her world view, she came to a much more exalted understanding of well being as an expression of an indivisible connection between God and human beings. As noted by Gottschalk, the resolution of the Quimby dispute lies at neither of the extreme positions taken by the New Thought or Christian Science apologists. He writes,

> It lies in a clarification of a fundamental issue which has often been obscured in the course of the debate: the differing religious characters of Christian Science and of Quimby's thought. Christian Science is a religious teaching and only incidentally a healing method. Quimbyism was a healing method and only incidentally a religious teaching.[37]

Christian Science, following Eddy's healing and her decade-long focus on overcoming illness as scientific proof of the efficacy of Christianity, did, indeed, focus on healing. From Baxter's chronicles of the early years of Christian Science, it is known that Eddy and her immediate followers hung out shingles clearly identifying them as healers of illness. Only after several editions of *Science and Health* and years of reflection did Eddy articulate Christian Science as Christianity in its fullness. When one experienced the Christ and lived in him, healing of all human woes inevitably followed. Good health was a positive side effect of religious certainty, not the primary reason why one married her religion.

The difficulty for this NRM, not to mention practicing Christian Scientists, is that some are married to an alternative healing method while others are married to a deeply Christian and spiritually authentic understanding of the presence of God. If Eddy's system requires radical reliance on God, yet the believer is looking only for comfort or release from pain and suffering, without an abiding sense of God's presence in all aspects of life, then it is likely that Christian Science will fail to deliver health. If, on the other hand, a believer is grounded, heart and soul, in God's presence, the focus on "mere" healing will be construed as a belittling or misinterpretation of Eddy's teaching. In this environment of embedded conflict, and without a map to forge an instructive path through these conflicts, Christian Scientists have divorced themselves from the Church for entirely different reasons. In the end, Christian Science is left with historians who misrepresent Eddy's teachings because they do not take the time to fully explore these *instructive conflicts* or with the apostates whose starry-eyed quest for physical healing or spiritual assurance ended with only irreconcilable differences.

NOTES

1. Mary Baker Eddy. *Science and Health with Key to the Scriptures* (Boston: Trustees under the Will of Mary Baker G. Eddy, 1906), 497. To be fair, the key points of belief, or "religious tenets" of Christians Science are found on page 497, lines 3-27, of Eddy's seminal work. The difficulty has always been in the interpretation of the following tenets:

   (a) As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal life.

   (b) We acknowledge and adore on supreme and infinite God. We acknowledge His Son, on Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness

   (c) We acknowledge God's forgiveness of sin in the destruction of sin and the spiritual understanding that casts out evil as unreal. But the belief in sin is punished so long as the belief lasts.

   (d) We acknowledge Jesus' atonement as the evidence of divine, efficacious Love, unfolding man's unity with God through Christ Jesus the Way-shower; and we acknowledge that man is saved through Christ, through Truth, Life, and Love as demonstrated by the Galilean Prophet in healing the sick and overcoming sin and death.

   (e) We acknowledge that the crucifixion of Jesus and his resurrection served to uplift faith to understand eternal Life, even the allness of Soul, Spirit, and the nothingness of matter.

   (f) And we solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just and pure.

2. Other nineteenth century "made-in-America" religions include Mormonism, Spiritualism, Adventism, Jehovah's Witnesses, New Thought, and Holiness-Pentecostalism.

11. Robert C. Fuller, *Spiritual but not Religious: Understanding Unchurched America* (New York: Oxford University Press, 2001), 13–77. For readers looking to understand alternative spirituality in America, there is no more complete or insightful history of "unchurched" America. In fact, Christian Science is one of many "churches" that institutionalize the spiritual ideals of the "unchurched." See pages 75–77 for a "creedal statement" of the unchurched.
12. Using the *instructive conflict* model I develop at the conclusion of this essay, the serious study of Eddy might start with Gill, *Mary Baker Eddy,* 1998. Gill has done a masterful job of listing all the texts on Eddy written from interpretive extremes. Arriving at an unbiased appraisal of the Christian Science movement and Eddy's life may require reading biographies at the two extremes. The aforementioned books by Fraser and Gill would provide a start. Robert Peel, the premier in-house biographer of Mary Baker Eddy, is an excellent source; see Robert Peel, *Mary Baker Eddy,* 3 vols. (New York: Holt, Rinehart and Winston), *The Years of Discovery,* 1966; *The Years of Trial,* 1971; *The Years of Authority,* 1977. Peel is openly pro-Christian Science and an in-house historian, but his books are comprehensive, well-written, and well-documented.

On the other hand, in 1906 and 1907, *McClure's Magazine,* the most prominent of the muckraking journals of the time, published a series of articles on Mrs. Eddy by Georgine Milmine that were reissued in revised form as the book, *Life of Mary Baker G. Eddy* (New York: Doubleday, 1909). Milmine's book is also well-documented (if inaccuracies can be "well-documented"), containing many eyewitness accounts of life in the early Christian Science movement, but radically biased against its subject, and is the first in a long line of debunking biographies of the founder of Christian Science.

There is no better compilation and explanation of the theologically intricate teachings of Christian Science than Stephen Gottschalk's *The Emergence of Christian Science in American Religious Life* (Berkeley, CA: University of California, 1973). While Gottschalk is obviously a pro-Christian Science historian, he has the understanding and writing skills to make Christian Science comprehensible to the uninitiated.

13. Mary Baker Eddy, *Retrospection and Introspection* (Boston: The First Church of Christ, Scientist, 1891), 13
14. Historical details in this essay are drawn primarily from Gill, *Mary Baker Eddy,* from Robert Peel's extensive study of Eddy and Christian Science, or from one other excellent academic study, Stephen Gottschalk, *The Emergence of Christian Science in American Religious Life* (Berkeley: University of California Press, 1973).
15. See Douglas J. Swanson, "Standing Porter at the Door of Thought: The Social Order of the Christian Science Church," http://www.uwlax.edu/faculty/swanson/cs.htm. Swanson's exploration of the organizational structure of the movement is concise and revealing. At the American Academy of Religion meetings in Denver in 2001, I gave a paper on Christian Science. I noticed three or four particularly attentive members sitting in the front row taking

copious notes and recording my paper. After the presentations, these audience members introduced themselves as local and regional members of the Committees on Publication, there, no doubt, to be sure my presentation did no harm to the public perception of Christian Science.

16. Eddy, memorandum in the Archives of the Mother Church, quoted in Robert Peel, *Mary Baker Eddy: The Years of Authority,* 223.

17. Rolf Swensen, "'Our Cause … Does Not Need Advertising, but Protection': The Christian Science Movement Regroups, 1908–1910," *Journal of the Society for the Study of Metaphysical Religion* 10, no. 1 (2004): 29–79. Swensen's article represents the fruitful result of the Mary Baker Eddy Library for the Betterment of Humanity opening up the archive to outside scholars.

18. Eddy, *Science and Health,* 366, 371.

19. Robert Peel, "The Christian Science Practitioner," *Journal of Pastoral Counseling* 4, no. 1 (Spring 1969): 39–43, quoted in *Christian Science: A Sourcebook of Contemporary Materials* (Boston: The Christian Science Publishing Society, 1990), 139.

20. Gottschalk, "Christian Science," 444.

21. Swanson, "The Social Order of the Christian Science Church," 9.

22. See Michael Paulson, "Christian Science Opens Its Doors," *Boston Globe,* September 27, 2002, B1.

23. Robert David Thomas, *With Bleeding Footsteps* (New York: Alfred A. Knopf, 1994), xvi. Thomas's preface provides a fascinating collection of extreme opinions on Mary Baker Eddy and Christian Science including some of Mark Twain's stinging critiques of Christian Science, though Thomas also notes that many initial followers thought of her as "The Wayshower," the Messiah for their time, on the level with Jesus Christ.

24. Caroline Fraser, *God's Perfect Child* (New York: Metropolitan Books, 1999). The book liner accurately describes Fraser's work as "a passionate expose of religious zealotry." Fraser grew up in the movement, obviously suffered greatly on her metaphysical quest, and, with wit, detailed research, and a "passionate" blow for vindication, provides the best outside-the-movement account of Eddy's strange life and the subsequent development of her "Christian Science" world view.

25. Gillian Gill, *Mary Baker Eddy* (Reading, MA: Perseus Books, 1998). For the reader who desires a more detailed study of the founder of Christian Science, this book is highly recommended. Gill has "struggled" herself to come to an understanding of Eddy's life and teaching, and the end result of her considerable effort is one of the most informative and neutral expositions that has yet been produced. The story of Gill's frustrating but ultimately successful effort to gain access to the Mother Church archives—included in an addendum entitled "Research Note" (pp. 557–62) is a story in its own right, demonstrating that religious institutions that limit access to critical founding documents only fan the flames of controversy and end up contributing to historical distortions.

26. Nancy Niblack Baxter, *Open the Doors of the Temple* (Carmel, IN: Hawthorne Publishing, 2004), 13.

27. Marcus J. Borg and N.T. Wright, *The Meaning of Jesus: Two Visions* (San Francisco: HarperSanFrancisco, 2000).

28. Ibid., 5.

29. In the classic comedy, *Life of Brian,* the Monty Python writers spoof the early years of Jesus and rely on the "existential yearning meets trivial event" device to create numerous hilarious situations. In one scene, "Brian," the recognized, if reluctant messiah, flees an adoring mob. He loses one of his sandals in his haste, and the would-be followers all discard one

sandal, claiming, "the messiah wants us all to wear a single shoe. That is the way to the kingdom of heaven!"

30. Thomas, *With Bleeding Footsteps,* xvi–xvii. Though any further analysis is clearly beyond the theme of this chapter, there is no better example in American religion of history *metaphorized* than in the accounts of Joseph Smith and the founding of the Church of Jesus Christ of Latter-day Saints, commonly referred to as Mormons.

31. Georgine Milmine, *The Life of Mary Baker Eddy and the History of Christian Science* (New York: Doubleday, 1909). Milmine's work is one of the first and, unfortunately for Eddy and Christian Science, most critical of the anti-Christian Science biographies. What makes the book interesting is the first person interviews with people, many with an ax to grind, who knew Eddy. Most historians believe the book to be flawed at critical points in its investigation of Christian Science.

32. Mary Baker Eddy, *Retrospection and Introspection* (Boston: The First Church of Christ, Scientist, 1891), 24. For a detailed account of the "fall in Lynn," see Gill, *Mary Baker Eddy,* 161–68. Amanda Porterfield, *The Transformation of American Religion* (New York: Oxford University Press, 2001), 230.

33. Thomas, *With Bleeding Footsteps,* 174–181.

34. I am purposefully avoiding the use of "psychological jargon" (bipolar disorder, paranoid schizophrenic, borderline personality syndrome, manic depression, etc.) in describing Eddy's multidimensional personality. I am not trained in psychology, and, thus, I am not equipped to use clinical terms with accuracy. What I am suggesting comes from experience. There are no saints and no perfect human beings. Every person I have met has good moments and troubled moments, and that definitely includes religious leaders. Conflicts are fueled when in-house historians refuse to acknowledge that human personality is multidimensional and their leader may have had moments in which she/he acted with less than noble intentions. To be fair, Eddy resisted her early followers' attempts to paint her as a female Christ for her time. However, the anxiety she exhibited when she or her organization came under real or imaginary attack is symptomatic of emotional instability. For Eddy, God is "all-in-all," but somehow, somewhere, there was room for Satan to be cast in her grand metaphysical drama as "mortal mind" or "malicious animal magnetism." The problem may lie with the believers rather than the leaders, except in cases where the leader uses and manipulates deification (Jim Jones, David Koresh, and others in our own time).

35. John K. Simmons, "Eschatological Vacillation in Mary Baker Eddy's Presentation of Christian Science," *Nova Religio* 7, no. 3 (March 2004): 63–80. In this article, I explore the multidimensional aspect of Eddy's personality. When she dealt with the trials and tribulations of institutionalizing her religion, she tended to see the world through a dualistic, apocalyptic, and paranoid aperture. When alone in the safety and security of her home and particularly while writing hymns, her mystical nature rose to the surface, and it is in this mode that genuine spiritual insight emerges.

Peoples Temple: A Typical Cult?

Rebecca Moore

On November 18, 1978, more than 900 Americans in a jungle settlement in Guyana, South America, died in a mass murder-suicide. Led by a charismatic preacher named Jim Jones, the members of Peoples Temple had begun the agricultural project of Jonestown in the northwest territory of Guyana in 1974, had immigrated into the project *en masse* in 1977, and had lived as a community of 1,000 residents for over a year. The circumstances of their departure from the United States, coupled with allegations of criminal and civil wrongdoing both in the United States and Guyana, prompted a U.S. congressman to launch an investigation of the group, which culminated in his visit to Jonestown and his assassination at a jungle airstrip shortly after he left the settlement. In all, five people died at Port Kaituma, Guyana: Rep. Leo Ryan, three reporters who had accompanied him, and a Peoples Temple defector.[1] Evidence indicates that the mass deaths in Jonestown began soon after the airstrip attack.

The events shocked the world, and the bizarre stories of drugs, sex, and guns that were reported in the following weeks—most of which turned out to be false—fueled the sensationalism surrounding the world's introduction to Peoples Temple. The descriptions of the group, provided mainly by former members and critics, and the instant media analyses of life and death in Jonestown shaped public understanding of the Temple and reinforced public perceptions about the dangers of cults. Indeed, Jonestown emerged as the paradigm of the dangerous cult, serving as the benchmark for measuring religious violence in subsequent years. It suggests every negative attribute—brainwashing and fanaticism, maniacal leaders and blind followers—that many of us associate with unfamiliar or unusual religious groups, from the Branch Davidians in Texas to the Taliban in Afghanistan.

But Peoples Temple was far from typical. First of all, external political and social pressures appeared to threaten its survival in very real ways, and the Temple's members responded accordingly. Second, Peoples Temple differed greatly from its contemporary religious movements, most especially in its demographic profile, which featured a predominantly black, family-oriented membership. Third, the group held

the unusual commitment to collective, rather than individual, salvation. If many New Religious Movements (NRMs) focused on helping the individual soul, Peoples Temple emphasized saving the collective body. Finally, with the move to Jonestown, Peoples Temple shifted from being a religious or quasi-religious group living in the world, to being a utopian community set apart from and outside of the world. Thus, to call Peoples Temple a typical cult is inaccurate and inappropriate. Far from being typical, Peoples Temple is anomalous because it differed in so many ways from what cult experts and the general public believe about cults.[2]

HISTORICAL OVERVIEW

Peoples Temple Christian Church began as a Pentecostal-style congregation in Indianapolis, Indiana, in the 1950s. Its commitment to interracial worship and civil rights quickly brought it into conflict with local churches and the larger community. James Warren Jones (1931–1978) preached a message of social equality that challenged the segregated society of the 1950s. Jones married Marceline Baldwin (1927–1978), a nurse, and together they established nursing homes in cooperation with committed church members, both black and white. In addition to having a biological son, they adopted a "rainbow" family, which included Korean and African American children.

The Temple's congregation in Indianapolis primarily came from the working class, and shared a commitment to an ecstatic, revivalistic form of Christianity. Jones retained the style of a Bible-based Pentecostal minister, warning in one sermon, "Don't you get up and tell me you're born to God. Why, we need to get born to God. Truly and fully born to God. For he that's born to God doth not commit sin."[3] But Jones also radicalized traditional Pentecostalism, where the preacher liberally sprinkles biblical references throughout a free-form sermon, and transformed it into an urgent call to concrete righteousness. The difference between the Temple and other local churches was its emphasis on a social gospel message, where Jones urged blacks and whites to literally take up the gospel and serve the poor and the marginalized in tangible ways. The Indiana Temple implemented Jesus's demand to help the poor, which was evident in the church's soup kitchen and its care facilities for indigents and the elderly.

Jones went beyond conventional interpretations of the charismatic nature of the primitive church as described in Paul's letters and the Acts of the Apostles, to remind his congregation of the foundational egalitarianism of early Christianity described in Acts 2 and 4:

> And the multitude of them that believed were of one heart and of one soul: neither said any of them that aught of the things which he possessed was his own; but they had all things in common (Acts 4:32).

Jones took a rather courageous stand, proposing what sounded much like Communism in the 1950s. "Preaching the social gospel, Jones personified the worst fears of the more conservative clergy and FBI director J. Edgar Hoover in the McCarthy

era," writes John R. Hall. "Pulpits were being infiltrated by Communists, sometimes using Black rights as a rallying cry for a movement of communist agitation for the cause of a collective society."[4] But it was a "communism" found in the Bible that the "poor white trash" and the "Negroes" of Indianapolis—both disenfranchised and marginalized—found appealing.

Jones's uncompromising opposition to racial segregation, both in the church and in the community, led to his appointment as the director of the Indianapolis Human Rights Commission in 1961, a position in which he received death threats for his integrationist activities. Perhaps to escape the racial tensions, Jones and his family traveled to Hawaii, and then moved to Brazil where he evangelized the poor in Belo Horizonte.[5]

Different accounts give varying reasons for the Temple's move from Indiana to California. Some say that Jones had a revelation of nuclear holocaust, which he communicated to his congregation, that necessitated a move from Indianapolis to a safer locale. Others say that Jones read an article in *Esquire Magazine,* which claimed that northern California would be a safe haven in the event of a nuclear attack. Still others note that California was a good place for a group of progressive Christians to live and work in the 1970s. For whatever reasons, about 70 people migrated from Indianapolis to Redwood Valley, a small town in northern California, in the mid-1960s. About half of the families were white, and half were black. As in Indiana, the interracial group encountered racism in the predominantly white area of the California wine country, with children facing harassment from schoolmates. At the same time, however, the group began to attract young white educated professionals who facilitated the expansion of the Temple from rural Redwood Valley to urban San Francisco and south to Los Angeles.[6] The Temple saw rapid growth in size and membership in the 1970s, eventually moving its headquarters to the heart of San Francisco's black ghetto at that time, the Fillmore District.[7] It had become a member in good standing of the Disciples of Christ denomination and was the largest donor congregation in that denomination for the year 1978.

With the move to Redwood Valley, and the ultimate relocation to San Francisco, Jones's message grew more political, and Temple members became activists in a number of social movements. The importance of specifically Christian aspects of the gospel diminished, as can be seen in this sermon that Jones preached in San Francisco in 1973:

> Man, the only sin you're born in, is the society, the kind of community you live in. If you're born in a socialist community, then you're not born in sin. If you're born in this church, this socialist revolution, you're not born in sin. If you're born in capitalist America, racist America, fascist America, then you're born in sin. But if you're born in socialism, you're not born in sin.[8]

Jones criticized the "Sky God" of Christianity and replaced it with the impersonal God of Principle: "God is Principle, Principle is Love, and Love is Socialism."[9] The Trinity of Socialism (God), Revolution (Christ), and Justice (Jesus) replaced the passive, do-nothing God of Christianity, which allowed injustice to continue

within the churches.[10] Jones pragmatically, and logically, deduced that such a deity was not worthy of worship. Only the god of righteousness deserved respect, and this god could be seen embodied within Jim Jones himself.

> I'm everywhere. Self has died. I'm crucified with Christ, nevertheless I live. I've been crucified with the revolution…. The life that I now live, I live through this great Principle, the Christ, the socialist Principle that was on the day of Pentecost when it said, "God is love, and love means they have everything in common."[11]

Jones was the messiah of the reign of God, the true kingdom where all would be equal and there would be plenty for all.

Remnants of traditions common to evangelical or fundamentalist piety—such as healings, gospel music, long sermons, and plenty of "amens"—coexisted along with an increasingly militant message on the necessity for social change. "At their essence, the worship services at Peoples Temple were constructed around the model of the emotionally expressive Pentecostal tradition."[12] But it was Pentecostalism with a twist: fiery, radical, and political. Jones warned a congregation assembled in Philadelphia in 1976:

> I tell you, we're in danger tonight, from a corporate dictatorship. We're in danger from a great fascist state, or a great communist state, and if the church doesn't build a utopian society, if it doesn't build an egalitarian society, we're going to be in trouble.[13]

What prompted the shift from a Christian social gospel proclamation in Indianapolis to a revolutionary socialist message in San Francisco? The shift is more apparent than real: Jones actually linked Christianity and socialism in his affirmation of "Apostolic Socialism"—the socialism of Acts 2:44–45 and 4:32–37. He saw no discontinuity between the two ideas. God is love; love is socialism. Moreover, "the use of Black Power rhetoric by many members of Peoples Temple in the 1970s expressed a genuine desire to locate themselves and their community in the midst of an emergent global political and religious project."[14] In other words, Jones and the Temple were speaking the revolutionary language of the 1970s, within the context of civil rights, Black Power, and emerging nationalism around the world. San Francisco in particular and California in general were hospitable climates for expressing radical political and religious sentiments. People understood the idiom of change and transformation, and could accept it in a Christian setting in those turbulent times.

While Jones declared a gospel of apostolic socialism, he also faked faith healings in order to attract members. Associates colluded with Jones on these healings, pretending to regain eyesight and mobility, or saying they were cured of cancer. They also distributed "prayer cloths" to take to those who could not attend church, and after many Sunday services Temple volunteers sold photographs of Jones to use as healing charms. Immediately following the deaths in Jonestown, reporters and columnists accused Jones of being a con artist, a charlatan, in it for personal gain or self-aggrandizement. These arguments fail in light of the fact that Jones never used the wealth he accumulated for the Temple on personal items such as cars, houses, or clothing. Hall explains that "Jones faked healings and discernments not only to

promote faith that would trigger more miracles but also to groom his own image as the messiah to whom others should look for prophetic leadership."[15] While some members were taken in by the fakery, others knew what was going on and considered it unimportant to the real work of the group, which was to usher in a new society of social justice and racial equality.

Jones still was speaking in religious terms in 1976, especially when he preached to mixed audiences that included outsiders, particularly public officials, as well as insiders. People in San Francisco thought of the Temple as an activist black church with a white pastor. The church was credited with the election in a close mayoral race in San Francisco because of its get-out-the-vote drive, so much so that Jones was rewarded with an appointment to the San Francisco Housing Commission, where he eventually became commission chair. Martin Luther King Day celebrations held at the Temple featured a variety of prominent California Democrats, including the lieutenant governor and the speaker of the state assembly. When Rosalyn Carter traveled to San Francisco during the 1976 presidential campaign, she visited Peoples Temple. Peoples Temple members gave money to political parties—almost exclusively Republican in Republican Mendocino County, where Redwood Valley was located, but chiefly Democratic in San Francisco County. Bay Area activists understood the Temple's involvement in local politics within the context of its commitment to the Christian social gospel.

The overtly Christian elements of the movement faded away almost entirely, however, when the group began the mass migration to its agricultural project in Guyana in summer 1977. The group had been planning a move to "The Promised Land" since 1973, when it broke ground in the Northwest District of Guyana, on the northern coast of South America. Under terms of a lease negotiated with the government of Guyana, a small group of settlers had been clearing jungle, cultivating land, and building housing to accommodate the relocation of the movement in case it faced severe persecution in the United States. "If America ever becomes repressive," Jones told Dr. J. Alfred Smith, "and follows the path of Nazi Germany and turns against people of color, we will have a place to go."[16]

That moment came in 1977, when negative publicity, coupled with potential problems with the Internal Revenue Service, prompted the emigration of almost 1000 members in spring and summer that year. Although the pioneers who constructed Jonestown planned for small groups of people to move in slowly, get acclimated, and learn the ropes before others came too, massive numbers descended all at once and strained the community's limited resources. They found living conditions difficult and, at times, primitive. Despite the hardships, though, people believed they were going *to* something, and not just fleeing *from* something. "We have come here, the people of Jonestown, and we have come to build," wrote Dick Tropp in 1978.

> We have our remorse, our bitterness, our scars. They will never go away. But Jim Jones has always believed in lighting candles rather than cursing the darkness. And we are determined to let our light shine.[17]

And build they did. Residents of all ages worked at a variety of tasks to support the cooperative effort. Most able-bodied adults, including young adults and some teenagers, worked in agriculture production, whether fieldwork, clearing land, caring for animals, or weeding crops. Others worked in construction, employed in the project's sawmill or building houses or making furniture. A number of residents labored in health care, others taught. Senior citizens made dolls and crafts to sell in Georgetown. Others worked in food preparation or taught school to the community's more than 200 children. It took plenty of work to maintain a community of 1000 residents, and everyone was involved in some aspect of the process.

The Temple's headquarters in San Francisco, with its satellite bases in Redwood Valley and Los Angeles, sustained the operations in Guyana in a variety of ways. These included fundraising and ongoing financial support, but also consisted of being the voice of the group to America. Temple members shipped clothing and medical supplies to Guyana. They maintained radio communication via shortwave radio. They served as an ongoing presence in light of the absence of the group's core. The heart had moved from "Babylon" to "The Promised Land."

Removed from the public eye in the remote jungles of the Orinoco River basin, Peoples Temple seemed to abandon all religious discourse. "Jim wasn't talking about God any more," according to Hyacinth Thrash, one of the few survivors who lived through the mass deaths.[18] This is not to say that the members themselves did not retain an essentially Christian faith, as Thrash and others indicate,[19] but rather that Jones's message and the outlook of the project were basically utopian in nature and aimed at survival as a model of apostolic socialism. Jonestown residents lived and worked together, pooled what economic resources they had—such as Social Security checks from the elderly and proceeds from the sale of handmade toys and crafts in Guyana's capital city of Georgetown—and seemed to leave overtly religious rhetoric behind. Tapes made by the community in Jonestown deal with agricultural, political, and personal questions, but no religious issues. For example, a number of tapes deal with problems in food production, with understanding local farming methods, and with division of labor in the fields.[20] Other transcripts from Jonestown feature Jones reading news from Eastern Bloc countries directly from a news wire.[21] Still other tapes reveal how the community sought to inculcate a cooperative spirit and how it disciplined those who failed to measure up.[22]

The most religious rhetoric to be found in Jonestown seems to have been the recurring discussion of sacrificial death in the form of "revolutionary suicide." Huey Newton, a founder of the Black Panther Party, had used the expression to highlight the fact that when people challenge systems of oppression, they run the risk of being killed by those systems. "As Newton used it, the term emphasizes revolution over death."[23] In Jonestown, however, revolutionary suicide had at least three different meanings, according to David Chidester. First, it functioned as a loyalty test; second, it prevented residents from dying a dehumanized and degrading death; and third, "it was used as a threat to force the outside world to accept the inviolable integrity of the community."[24] Religious suicide has a long history in rituals of purification, release from suffering, revenge, and revolution (which includes martyrdom). Jonestown

residents understood revolutionary suicide in all of these aspects, and tapes and documents from 1977 and 1978 show that "men, women, and children came forward, witnessing a willingness to seal their commitment to Jonestown in death."[25]

In Jonestown, martyrdom in the face of an apocalyptic future replaced the more optimistic Christian social gospel of Indiana and California, although suicide had been discussed as early as 1973. Of course, Christianity began with its own martyr, Jesus Christ. But the difference, as noted by Ross Case, one of the Temple's pastors in its early years before he left and became a leader in the opposition, is that Jesus's death offered hope for the future; the Jonestown deaths did not. "The martyrs of Jonestown—that is, those who willingly died," writes Hall, "regarded their fate as connected to the honor of their struggle, not to its hope of triumph."[26] While the message of this kind of martyrdom did not reflect Christian teaching, it was nevertheless essentially a religious commitment that placed loyalty to each other and to the cause of socialism—against a racist and capitalist America—above the value of individual human life.

A number of Jonestown tapes paint a dark and foreboding picture, one in which children denounce their parents, community members are humiliated and frightened with threats (real and imaginary), and a sense of doom and imminent world destruction are pervasive. Less than a month before Ryan's visit, for example, a tape recording features residents of Jonestown explaining why they would rather commit revolutionary suicide than return to the United States. Reasons include avoiding hostile relatives, escaping the state of siege they believed was underway in the United States, disdaining the capitalistic system, and thwarting the conspiracy that they thought existed against the community. One speaker, Edith Roller, concludes a short statement in this way: "I'm glad that my death will mean something. I hope it will be an inspiration to all people that fight for freedom all over the world."[27] A horrifying tape in which residents describe the tortures they would inflict upon critical family members includes a young woman saying that she'd

> personally like to grab my father and string him up by his nuts and have a hot poker, sticking it in some coals and sticking it up his ass, and burning the hell out of him, for doing the things he's doing, because he knows that you [Jones] saved my sister's life and he knows all the good things you did for us both, and he knew that we wanted to come over here and live peacefully, and this is why he's causing all this hell.[28]

While voices of protest can occasionally be heard on various tapes recorded in Jonestown, more frequently residents join in laughter, applause, and approval of what Jones and others say in community meetings.

The people of Jonestown were far from home; dissenters could not leave easily. The lack of communication with outsiders, and the isolation and distance which residents created between themselves and the United States, led relatives and former Temple members to promote investigations of Peoples Temple and Jonestown. Calling itself the Concerned Relatives, the group organized a concerted effort to demand local, state, and federal investigations into Peoples Temple. It also motivated and

helped families to file lawsuits against the Temple for recovery of donated property, for slander, and for child custody. A major custody case brought relatives and Temple members into grave conflict, with both sides viewing custody of a five-year-old boy named John Victor Stoen as pivotal to their success. The Concerned Relatives saw the custody issue as reuniting a family and defeating Jones; the residents of Jonestown also saw it as directed against Jones, but considered it the first step toward the breakup of the Jonestown experiment as well.

Most importantly, the Concerned Relatives encouraged ongoing media coverage that portrayed Jonestown as a concentration camp. While this helped shape public opinion after the deaths, its greater significance was felt before November 18, the date of the deaths, as it created the atmosphere within which government bodies considered issues affecting the community's survival. The Concerned Relatives took their complaints to federal agencies, such as the State Department, the Federal Communications Commission, the Social Security Administration, and to Congress. They persuaded Congressman Leo Ryan (D-CA) to travel to Guyana in November 1978 with an entourage of people whom the Temple considered its worst enemies: hostile reporters and family members involved in legal actions against the Temple.

To tremendous applause, however, Ryan told the assembled residents of Jonestown on the night of November 17 that he could see the positive impact Jonestown had had on their lives.[29] By the next morning, though, a few disaffected residents indicated their desire to leave. The group of defectors grew to about 16. The number might seem small in a community of 1000, but it was momentous because these defectors included members from two families who belonged to the Indianapolis contingent. They were with Jones from the very beginning.[30] When Ryan, the reporters, some Concerned Relatives, and the departing Jonestown residents attempted to board two small airplanes at an airstrip six miles from Jonestown, a group of Jonestown residents pulled up in a truck 100 yards away and began shooting. In all, five people were killed and a dozen were wounded at the airstrip. The shooters took particular pains to make sure that Ryan and the reporters were dead. Larry Layton, who posed as a defector, fired a pistol on board one of the airplanes, but was quickly disarmed. He was the only resident of Jonestown ever to serve prison time for the crimes committed that day.[31]

After Ryan's group left Jonestown in the early afternoon, Jones called people together at the community's central pavilion. An audiotape recorded parts of the ensuing discussion between Jones and community members during the final hours.[32] The tape starts and stops—raising the possibility that the tape might be a fake, assembled from bits and pieces of other recordings—but many audiotapes recovered from Jonestown show that such spontaneous editing was Jones's practice, and so it seems to be a fairly accurate depiction of what happened. One 60-year-old woman, Christine Miller, argued against killing the children and asked about moving to the Soviet Union, a second emigration that had been discussed frequently in Jonestown. Although Jones let her speak for a while, others finally shouted her down. Parents then began to kill their children, forcing them to drink a mixture of tranquilizers, cyanide, and fruit punch.

It is not entirely clear how much coercion was required for people to kill themselves. The late Dr. Leslie Mootoo, chief pathologist for Guyana, believed that most people were murdered.[33] Cecil A. "Skip" Roberts, Guyana's Assistant Crime Commissioner, came to a different conclusion. "Jones was clever," he told us six months after the deaths. "He had parents kill their children first. Who would want to live after that?"[34] Jones also gave orders via radio transmission to the members at the San Francisco headquarters to commit suicide and also to those in Georgetown, where about 80 people were staying in the Temple's headquarters in Guyana's capital city. Only one woman in Georgetown, Sharon Amos, obeyed the order, slitting the throats of her birth daughter, her two adopted children, and then herself.

Altogether, 918 people died that day: 909 in Jonestown; five at the Port Kaituma airstrip; and four in Georgetown.

THE MODEL OF A DANGEROUS CULT?

There are several reasons why it is inappropriate to identify Peoples Temple as the model for dangerous cults. The first takes into account the unique external pressures that contributed to the deaths in Jonestown. The second considers the makeup of the Peoples Temple membership, a predominantly black demographic that challenges traditional understandings of NRMs. The third comes from the theological-political beliefs that the group held, a blending of the Christian social gospel and progressive —perhaps even radical—politics. A final reason is that Peoples Temple changed from a religious body to a utopian experiment with the move to Jonestown. These unique dynamics make it difficult for us to generalize about NRMs from the exceptional Peoples Temple experience.

The first reason for challenging Jonestown's paradigmatic status as a dangerous cult concerns the relative importance of external in relation to internal factors in the final days of Jonestown. Should the tragedy of November 18, 1978, be blamed primarily on Jim Jones and his leadership team? Should responsibility be shared with those groups exerting pressure on the Jonestown community, namely the Temple's opponents, which included hostile relatives, critical government representatives, and a sensationalistic media? If we look at external in addition to internal factors to explain the tragedy, can we still consider Peoples Temple a good example of a dangerous cult?

These questions hint at a larger debate about the nature of new religions. Do NRMs primarily act out of internal dynamics—that is, from endogenous factors, as sociologists of religion call them? Or do they also respond, or even primarily relate, to external forces—or exogenous factors? In other words, do NRMs function according to their own internal mechanisms, oblivious to the outside world? Or do they change and adjust as a result of what is happening outside the confines of their world view, in response to negative media attention, for example, or to child custody cases? The essentialist view—the opinion that NRMs work within a cultural and social void and respond only to internal stimuli and conflicts—does not adequately consider the importance of outside influences upon Peoples Temple. Essentialists

must take this approach, because otherwise anticultists would have to take some responsibility for cult violence. But we must ask what might have happened—or not happened—if the community in Jonestown had not felt under constant attack.

A number of comparative studies of Peoples Temple and the Branch Davidians followed in the wake of the confrontation between the Davidians and the Bureau of Alcohol, Tobacco and Firearms and the Federal Bureau of Investigation at Mount Carmel, Texas, in 1993.[35] In several such studies, scholars wrote that, comparatively speaking, exogenous factors played a greater role in the demise of the Branch Davidians than they did in the deaths at Jonestown. After all, the Davidians confronted an armed force, whereas the residents of Jonestown faced an unarmed congressman and reporters. Others, however, believe that exogenous factors also played a significant role leading to the deaths in Jonestown. Hall, for example, consistently pointed to the threats that Concerned Relatives, and their allies in the media and the government, made against Peoples Temple, calling these groups "cultural opponents."[36]

I would agree that the role of cultural opponents should not be dismissed in assessing causes, or blame, for the deaths in Jonestown.[37] Few groups operate in a vacuum, and, given the high profile Peoples Temple had in San Francisco politics, it was impossible for it to go unnoticed, especially by the news media. Apostates (i.e., members who leave an NRM) and relatives of Temple members also sought to publicize their concerns and mounted an extensive lobbying campaign against the Temple beginning in 1976. The campaign prompted numerous government investigations, which led, at times, to serious threats against Jonestown's very existence. For example, a letter-writing campaign alerted the Federal Communications Commission (FCC) to Temple use, and abuse, of shortwave radio frequencies. The FCC investigated the Temple's use of the radio waves and issued several complaints and citations against Temple radio operators for conducting business over the amateur airwaves. If the FCC had shut down Jonestown radio operations, the group would have had difficulty communicating its needs to its headquarters in California. Allegations of gunrunning pushed the U.S. Customs Service to conduct random searches of Temple crates being shipped to Guyana. Although these searches revealed no weapons or other customs violations, they did delay the arrival of clothing and medical supplies to the community. The Social Security Administration temporarily held up checks legitimately intended for senior citizens who moved to Jonestown. Without those funds, residents would have starved.

While Leo Ryan and those who accompanied him were, in fact, unarmed, they jointly represented the force of government and its ability to destroy Jonestown. Residents sincerely believed that Ryan and his entourage represented a grave threat to their community. The week before Ryan arrived Jones reminded the group that:

> We are still in a state of siege. We are going to be under siege beginning Tuesday, when the first of the group we have found will be arriving by commercial airlines. We are hoping and feeling that the Guyana government will block them from staying longer… Their plans for the mercenaries, we do not know. We don't know if it is taking place now, or if it will start when the legal actions start, I mean their legal entry… So I wanted to warn you again and again and again, to be together with the community, to stay in the

> sight of the community, do not leave the central area, do not get away from this circle of protection.[38]

Tim Stoen, a leader of the Concerned Relatives, told the State Department he would retrieve his son, John Victor, from Jonestown "by force if necessary." Shortly before Ryan's visit an aide to Charles Garry, the Temple's San Francisco lawyer, wrote to Jones that "It has become clear to me that anything Stoen's involved in has as its goal the destruction of you (Jim Jones) and ultimately the organization."[39] Jones's anxiety about Ryan's trip with the Concerned Relatives therefore had some legitimate basis.

Actions have consequences, and the actions of the Temple's opponents—the Concerned Relatives and the news media—did indeed have dire consequences. To consider Peoples Temple as responding completely, or almost completely, to endogenous factors—such as Jones's deteriorating mental health in Guyana or the declining financial status of the organization—ignores the important role opponents had in affecting that health, or precipitating that status.

It is clear that members of Peoples Temple lived and worked in a dynamic tension with antagonistic critics who were unsympathetic to the aims of the group and who had vowed to destroy Jones. None but the largest and most visible NRMs—such as the Church of Scientology or The Family/Children of God—face this kind of relentless animosity. The difference, however, was that Temple enemies seemed to have all the force and might of the American government behind them.

A second problem with making Peoples Temple the paradigmatic evil cult stems from its utterly anomalous racial composition. Analyses of NRMs in the 1980s, coming out of the study of counterculture youth movements in the 1960s and 1970s, focused on middle-class, educated, white young people. In a book on NRMs published by the American Psychiatric Association (APA) in 1989, Saul V. Levine observed that, "[w]ith few exceptions, the members are young (median age 22), white, middle-class, relatively well-educated, and from intact families."[40] Other chapters from the same volume presuppose a youthful, white membership, including "Contemporary Youth: Their Psychological Needs and Beliefs," and "Families of Cult Members: Consultation and Treatment." And an example from "Religious Cult Membership: A Sociobiologic Model":

> University campuses are particular targets of cult recruiters, especially at the beginning of new academic terms. Adolescents have always been prone to sudden religious conversions.… [M]odern adolescents and college students are particularly likely to be disaffiliated from their families on one hand and from adult groups on the other.[41]

As early as 1978, Archie Smith Jr. criticized the dominant white paradigm for analyzing NRMs,[42] but ten years later the APA continued to interpret cult membership as a white phenomenon. Even as recently as 1998, Lorne Dawson wrote that, "the members of most NRMs are disproportionately young," although he does add that the figures are changing as some groups age.[43] Eileen Barker recognized the unusual membership profile of Peoples Temple and the Branch Davidians, writing that members were "not as disproportionately young" as those in movements like the Children

of God, Hare Krishna or ISKCON, and the Unification Church of Rev. Sun Myung Moon.[44]

If the psychiatrists are correct, then Peoples Temple is a bad example of a typical cult because it violates the most typical demographic norms. Though led by a white preacher, Peoples Temple was a black religious institution in terms of its numbers. Initial calculations of Jonestown victims estimated that approximately 70 percent of those who died were African American.[45] An extensive demographic survey that Fielding McGehee and I conducted broke this figure further into its constituent parts.[46] About 67 percent of the people living in Guyana—both Jonestown and Georgetown—were black; that figure reflects the percentage of those who died as well. Almost half of those who lived and died in Jonestown were black females, with the majority of those women being over age 50. There are two age "bumps" in the numbers of Jonestown residents: children under the age of 20 make up one bump, and African American adults over the age of 50 compose the other. In other words, children (including teenagers) and old people made up the majority of residents in Jonestown, in contrast to the twenty-something membership of more representative groups. Moreover, though residents of Jonestown came from a variety of jobs and professions, the majority came from the working classes, such as clerical, domestic, agricultural, and building trades, as distinct from the typical college-educated cult member.

Mary Maaga highlighted the problem of considering members of Peoples Temple as a uniform mass, whether black or white, young or old.[47] She identified three distinct groups that existed side-by-side within the organization: older whites, who had joined in Indianapolis and moved with the group to California; younger whites, who joined in California and who fit the APA profile of cult members; and a cross-section of the black community. Furthermore, my own research indicates that membership in Peoples Temple embodied numerous interlocking family relationships. In other words, everyone seemed to be related to everyone else, either by marriage, by adoption, by partnership, or by guardianship. Far from being a group of disaffected young people, Peoples Temple was a group in which members had strong biological, family, and affective ties.[48]

In short, Peoples Temple looked much more like a church than an NRM in its membership. One might as well say that black churches in America are dangerous cults, given the fact that Temple demographics more closely resemble those institutions than any others. But if an NRM is by definition a countercultural youth movement, which is what the APA claimed—as do many other NRM analyses—then Peoples Temple fails as a model or warning of anything relating to NRMs.

In addition to failing the NRM demographic test, Peoples Temple fails the NRM belief test. Some analysts see the movement as fitting squarely within the paradigm of Third World anticolonial revolutions, with its work being comparable to that of the Black Panther Party in Oakland, California.[49] The Temple provided meals to residential members and to others and offered health screenings for seniors, child care for working parents, and assistance in navigating the social welfare system to those in need. It also engaged in grassroots political organizing activities, ranging from

participation in demonstrations in support of fair housing, or against evictions of low-income tenants, to donation of financial aid to Dennis Banks, a leader of the American Indian Movement who was fighting extradition to South Dakota. The group made donations to the defense funds of reporters jailed for refusing to reveal sources. Speakers at Temple services included Civil Rights activists and international political figures, while topics included the American-choreographed overthrow of Salvador Allende's socialist government in Chile and the subsequent torture of dissidents, to the evils of apartheid in South Africa, as well as from the persecution of blacks in American cities and the deep South to Supreme Court decisions expanding police powers.

While many NRMs today espouse capitalistic values—such as the Church of Scientology, the Unification Church, or a number of Christian "cults"—Peoples Temple adopted countercultural economic values, namely socialism and communalism, and critiqued the rugged individualism of American life. "Jones had become an obscure socialist thinker, blending elements of atheism, Christianity, Marxism, Leninism, Maoism, and Third World revolutionary rhetoric into a complicated brew of political sentiments."[50] While it seems dangerous to assume that Jones's followers shared all of their leader's beliefs and principles, nevertheless those who disagreed with the organization's politics probably left. Certainly there were older people who relied upon the Temple for food, housing, and health care, and they undoubtedly held onto some Christian traditions. But as Anthony B. Pinn notes, we should not neglect the role that "nontheism" played within the group.

> It seems unlikely that African Americans would remain in Peoples Temple and Jonestown if bothered by the humanist teachings simply because they did not want to appear to be "traitors." For some this may have been the case, but it is plausible that for others the humanist teachings rang true.[51]

We can see this in the comments of one member who said that, for the first time, "she had found a society free of sexism and racism and one in which she experienced full acceptance as a Black woman. She had a cause to live for. American society had never given her that."[52] The social and political commitments of members of Peoples Temple, therefore, are at odds with the supernaturalist beliefs of many NRMs, and with the other-worldly orientation of many black churches in America. Salvation was this-worldly, to be created in the promised land of Guyana.

Most popular discussions of Peoples Temple neglect the distinct change in its organization and purpose after the move to Jonestown. While it employed the language, the facilities, the organization, and even the beliefs of a Christian group during its Indiana and California years, it is clear that Peoples Temple functioned as a utopian community upon relocation to Guyana. Jones did not preach any Christian messages on the audiotapes recorded in Jonestown, as opposed to those taped in the United States.[53] Even in the so-called "Death Tape" made on the last day, it was a Temple leader, and not Jones, who assured the dying that "everybody was so happy when they made that step to the other side."[54] There were no religious symbols in Jonestown, although there were what we might call religious rituals or rites, such as

rehearsals for suicide and testimonies of those stating their willingness to die for the community.

The traditional practice of Christianity died out in Jonestown, and religious language disappeared, although some argue that the commitment to socialism took the form of a religious obligation. Jones criticized the assembly in Jonestown for its nostalgia for long-established Christian beliefs and practices, saying, "You used to rise when you talked about heaven. You'd rise. You'd rise to your feet. You stand up and you'd wave your hand, talk about heaven. And you never saw no goddam heaven, 'cause no goddam heaven ever existed."[55] Jones added that people would have liked him better if he had driven a Cadillac and lived in a mansion than if he had told them the truth. Follow-up notes to a "Peoples Rally" held in August 1978 state what Jonestown residents are to say to visitors who ask about religion:

> Church?—No, we don't "have" church here. We have town forum every week once, but never more than twice in a week. They don't like you to go if you feel bad—we have nurses that check you and watch over any who aren't well.[56]

A final example of the turn from religion appears in a brochure published by Peoples Temple, called "A Feeling of Freedom," which presented photographs and comments by people who lived in or visited "The Peoples Temple Agricultural/Medical Project in Guyana, South America." The *only* reference to religion appears in a comment made by my mother, Barbara Moore, who visited the community in May 1978 but was never a member. She said, "In a sense it reminds me of … a New Testament community, in the purest sense of the word, in the love and concern for all, that we observed."[57]

The absence of familiar religious elements indicates a distinct shift in the Peoples Temple's operation, if not in its self-understanding. Hall defines a utopian group as follows:

> [G]roups of three or more individuals, some of whom are unrelated by blood or marriage, who live in a single household or interrelated set of households and engage in attempts at value achievement not available in society-at-large.[58]

Hall expands upon Rosabeth Moss Kanter's examination of communal commitment. Kanter identified six characteristics of utopian groups: perfectibility, order, brotherhood, merging mind and body, experimentation, and uniqueness.[59] In many respects, Jonestown follows Kanter's model. Certainly those who moved to Jonestown believed in and worked toward creating a new society. While they gave up on fighting racism and injustice in the United States, they did not surrender the dream of building a new world of brotherhood and sisterhood in Jonestown and perfecting themselves by eliminating personal racism, elitism, sexism, and classism. Such a dream required order, however, and this quest for discipline led to excesses, such as keeping people under sedation, scaring children by telling them about tigers in the Guyanese jungle, confessing sins, and even using a sensory-deprivation chamber for hard cases.

By merging mind and body, Kanter meant living life holistically, working and living for a common cause. Cultivating the land allowed for such merging, and clearly

people in Jonestown had the opportunity to integrate their political goals with the life they were leading. A spirit of experimentation accompanied this effort to live holistically. A letter from my sister Annie Moore described some of the local plants the Jonestown medical staff were testing.

> We have been using papaya on wounds and I have never seen anything like it. The skin on this woman's leg ulcer all grew a layer of skin within one day with the papaya on it. It was truly amazing.[60]

Charles Garry remarked with similar amazement at the fact that old people were learning Russian in Jonestown, in preparation for a move to the Soviet Union. When we visited Jonestown in 1979, our Guyanese guide showed us a venting system from the kitchen to the laundry area that someone in the community had devised for drying clothes. The sense of experimentation extended to child rearing, in which a kibbutz-like separation of children from parents emerged as a way to instill a communal ethos in the next generation. In addition, the group's commitment to racial integration led to a number of interracial partnerships and families, with the number of mixed race children apparently growing.

Other writers have recognized the utopian nature of Jonestown.[61] Although a church of sorts remained in California, Jonestown itself was a utopian experiment, unusual in its commitment to true racial integration. Only a few other communes in American history, such as Koinonia Farm in Georgia, ever attempted to live a life of intentional interracial harmony.[62] Despite the contradictions that existed in Jonestown between goal and reality, the pledge to racial equality and justice made the project unique.

Peoples Temple's uniqueness makes it a bad example of a dangerous cult. In law, unusual cases set bad precedent; in religious studies, unusual religions make bad paradigms. Peoples Temple is without question an atypical NRM. Nevertheless, anticultists continue to evoke the specter of a vat of poison surrounded by corpses when they talk about NRMs. For example, opponents of David Koresh linked him to Jones and predicted collective suicide by the Branch Davidians. "The central point of comparison that was repeatedly made between Waco and Jonestown concerned first the possibility and eventually the actuality of mass suicide."[63] When we look objectively at Jonestown and Mount Carmel, however, we see numerous differences, ranging from geographic isolation at Jonestown, to a profound respect for biblical prophecy at Mount Carmel. Moreover, there was never any discussion of suicide at Mount Carmel, although its residents expected to fight to the death at the battle of Armageddon.

Jonestown was useful to the nascent anticult movement in the 1970s and 1980s. It "provided the modern American anticult movement (hereafter ACM) with the strongest, most dramatic evidence possible of its allegations that some new religious movements … hold an awesome destructive potential."[64] A number of leaders of the ACM in the 1970s and 1980s, such as Ted Patrick and Margaret Singer, repeatedly invoked Jonestown as the justification for advocating restrictions on both personal freedom and religious liberty. Even today, "cult watchers not only worry about

sequels but have proof of the likelihood—in the 39 members of Heaven's Gate who linked their fate to the Hale-Bopp comet, covered their bodies with purple shrouds and suffocated themselves in March 1997," according to an article on the Rick Ross Web site, an anticult source. "They say similar groups, led by megalomaniacs who believe they alone have the ear of God, likely exist but closet themselves so well they will be detected only when exploding in tragedy."[65]

More recently, Jonestown and Jones were identified with al-Qaida and Osama bin Laden, with a San Francisco reporter writing after September 11, 2001 that "one way to understand the cult of bin Laden is to look back on the horrors of Jonestown."[66] A number of editorialists and correspondents linked the Taliban with Jonestown, and Jim Jones with Osama bin Laden. Any type of religious fanaticism that involves suicide, no matter how different or unusual, now seems to be associated with Jonestown. Even the expression "drinking the Kool-Aid" means showing one's unwavering loyalty—to a product, to a sports team, or to an idea.

A final reason Peoples Temple must be considered unusual is its demise. A cataclysmic and violent end is the exception, rather than the rule, for NRMs, despite the impression we might get from events of the 1990s and our own century, such as the Aum Shinrikyo gas attack in Tokyo (1995), the murder-suicides of members of the Solar Temple (1994, 1995, 1997) in Canada and Switzerland, the Heaven's Gate UFO-related suicides (1997), or the mass deaths of 800 members of the Movement for the Restoration of the Ten Commandments of God in Uganda (2000). These are unusual and dramatic events, however, given the thousands of NRMs that exist around the world. NRMs typically exist for only about a generation; groups that exist into the second and third generations are considered unusually successful. Very few NRMs die out as dramatically as the groups noted above. That is why Peoples Temple and Jonestown do not make for a very good paradigm when attempting to describe a typical NRM.

THE FUTURE

It might seem that all there is to say about Peoples Temple has been said, but this is far from the case. As more Temple documents are released from government agencies through *Freedom of Information Act* requests, scholars gain new insights into the workings of the organization. As additional relatives, apostates, survivors, and others reflect upon their experiences in Jonestown, fresh perspectives augment our understanding. As other incidents of religious violence occur, comparative studies will shed new light on the events in Jonestown.

Almost three decades after Jonestown, books and articles (like this one) are still coming out. In 2005 Denice Stephenson, an archivist for the California Historical Society, published selections from the society's Peoples Temple collection.[67] That same year, a play called *The People's Temple* premiered in the San Francisco Bay area. Several authors are writing novels featuring different characters from Jonestown. A number of Peoples Temple survivors (as opposed to critical former members) are

writing their own accounts. Children's books, conspiracy books, Internet sites, works of art, and other productions continue to emerge. In the absence of a definitive explanation of "what happened" and, equally important, "why," it is likely that Jonestown will generate more and more works in the future, and so the interpretation of events will persist.

In addition to getting more analyses that compare Peoples Temple to other alternative religious groups, I think there is a need for further study of Jonestown as a utopian community. Viewing Peoples Temple as a utopian experiment will help broaden historical studies of American utopian and communal groups. It can extend our appreciation of the institution and its aims and practices and provide new ways of interpreting the group.

Pinn argues that considering Peoples Temple as a black religious institution illuminates the organization in important ways.[68] The volume *Peoples Temple and Black Religion in America* has begun the process of recasting Peoples Temple in this way, but more research and analysis need to be done. For example, only a few accounts describing the experiences of black members of the Temple have been published.[69] More are forthcoming, but additional critical analyses would help fix Peoples Temple within black religious studies.

A topic that remains unexplored is that of the role of Peoples Temple ex-members, or apostates. Although a number of former, disaffected Temple members have written accounts of their experiences within the group, none have reflected on their activities—whether on their own or as part of a larger organized effort—to bring media and government pressure on the organization.[70] It is an important part of the Jonestown story, and it is still missing.

Finally, until all government documents concerning Peoples Temple are released for public consideration, the complete story of the institution will never be fully told. In 1979 the Committee on Foreign Affairs of the U.S. House of Representatives classified 20 chapters of material it had accumulated in its investigation of the assassination of Leo Ryan. Those chapters have never been seen by researchers. In addition, the FBI and the CIA maintain the secret classification of agency documents pertaining to Peoples Temple and Jonestown. When those documents are made available by statute in 2009, a fuller understanding of the American government's role in the tragedy will be possible. The documents may allay the suspicions of conspiracy theorists, or they may reveal that the federal government knew about the impending disaster, and perhaps even provoked it. Whatever these classified documents contain, their release will almost certainly revise academic considerations and public policy debate on Jonestown and NRMs in general.

The saga of Peoples Temple continues to unfold as former members tell their stories, as more documents become available, and as a younger generation of scholars brings new questions to old data. It is difficult to say whether or not new discoveries will dramatically change our understanding of Jonestown, however, since Jonestown seems destined to remain a symbol of dangerous cults, even if in reality it parallels other American social and cultural institutions.

I would like to thank my research associate, Fielding M. McGehee III, for his help in researching and editing this paper.

NOTES

The Children of God / The Family

James D. Chancellor

INTRODUCTION

The Children of God (COG), now known as The Family, originated in the United States in the late 1960s. It is the most controversial group to arise out of a broader religious landscape known as the Jesus Movement. The COG called young people to a life of radical separation from family, school, work, and normal social relationships. Their rejection of American values and confrontational style resulted in considerable hostility from family members, government, and the media. David Brandt Berg, founding prophet of The Family, left the United States in 1972.[1] He encouraged his followers to flee to more hospitable lands in Europe, Asia, and Latin America. The majority of the disciples responded to this call, and those who remained went underground. The Children virtually disappeared from the American landscape.

Over the next 25 years, this small, North American countercultural movement had grown into a worldwide religious subculture of some 10,000 people. Through those years The Family went through radical theological, organizational, and lifestyle changes. This chapter outlines the history of the movement, describes the people who make up The Family, identifies its major theological landmarks, deals with the more controversial issues of Family life, addresses the substantive changes in The Family since the death of the founding Prophet in 1994, and offers some thoughts on the future of The Family.

HISTORY OF THE FAMILY

The Children of God

The COG begins with the prophetic experience of David Brandt Berg, an ordained itinerant minister loosely associated with the Christian and Missionary Alliance. By the mid-1960s, David Berg saw himself as a uniquely called missionary to the lost and confused youth of America. After several years of itinerant evangelism,

Berg and his extended "family" settled in Huntington Beach, California. He and his children began an evangelism ministry aimed at the counterculture youth of Southern California, and the first shot in the Jesus Revolution had been fired. Berg's revolution was not only for Jesus. It was also against what he termed the "System," the corrupt educational, political, economic, and religious structures of contemporary American society. Those who received Jesus as personal savior were further challenged to "forsake all" by rejecting every tie to the System, committing full time as a disciple, and joining him and his growing "family."

In the spring of 1969, Berg took his followers on the road again. The community settled temporarily at a campground in the Laurentian Mountains in Canada. Here Berg announced the foundation prophecy for the Children of God: "A Prophecy of God on the Old Church and the New Church."[2] He also announced to his inner circle that he was separating from his Old Wife and taking his young secretary, Maria, as his New Wife. She gradually rose in status within the movement, and eventually inherited the mantle of leadership upon Berg's death.

Soon the disciples were on the road again. By February 1970, they numbered nearly 200 and had settled on a ranch in west Texas. During this phase, the basic patterns for COG life were established. The disciples settled into a routine of Bible memorization, Bible studies developed by Berg, provisioning, jobs to maintain community life, devotional and fellowship meetings, training in witnessing strategies, and witnessing ventures. By the end of 1971, the movement had grown to nearly 1500, and the disciples were scattered in 69 colonies spread out across the United States and Canada.

The summer of 1971 marked the beginning of FREECOG, one of the original anticult organizations. FREECOG was formed and sustained primarily by concerned parents of young disciples. FREECOG accused the COG of kidnapping, drug use, and "brainwashing" innocent young people. Attacks like these exacerbated COG's fortress mentality that already saw the outside world as both degenerate and a threat.

In December 1970, Berg had a dream that led him to withdraw from personal contact with the disciples,[3] teaching and guiding them through his writing. He channeled his charisma and authority through his correspondence, known as MO Letters.

In the spring of 1972, Berg had a vision of mass destruction in the United States. He urged his North American followers to flee and to begin the missionary task of reaching the world for Jesus. Within a year colonies were established in Western Europe, Latin America, Australia, New Zealand, Japan, and India.

As Berg began to envision the COG as a worldwide missionary enterprise, the confrontational, antiestablishment aspects of the COG's message began to wane. The rapid growth, geographic dispersion, youth, and inexperience of most disciples resulted in serious leadership problems. In 1973, Berg attempted to slow the growth of the movement and develop more capable leadership. He also introduced a new evangelistic method, the distribution of COG literature, termed "litnessing."[4] Since the literature was exchanged for "a small donation," finances improved dramatically.

Music always played an important role in the COG. Disciples wrote hundreds of songs of protest, praise, and proclamation. By 1974 several COG musical groups had achieved wide public acceptance and popularity in Europe and Latin America.

In the early 1970s David Berg began the most controversial and widely known aspect of his "Revolution," a transformation of sexual ethics. Not long after taking Maria as a second wife, Berg began sexual encounters with female disciples in his inner circle. The top leaders also experimented with multiple partners. These activities were unknown to the disciples, whose sexual mores continued to reflect their evangelical Christian roots.

In the spring of 1974 Berg relocated to the Canary Islands where he gathered a small group of attractive female disciples to begin an experiment in a new witnessing strategy, which he termed "Flirty Fishing" (Ffing). Eventually Berg made it clear that Ffing was for all disciples and should be implemented right away. The female disciples used the full range of their feminine charms and sexual allure, including sexual intercourse, to witness for Jesus and to develop supporters for the organization. In 1976 MO Letters described the Ffing of Maria and others in graphic detail and encouraged the disciples to begin this new "ministry."[5] Many disciples had strong reservations, and approximately 600 left the movement.

Flirty Fishing marked significant changes in the COG Family ethos. Confrontation was left behind, replaced by an emphasis on the love of Jesus. And the "hippies and drop outs" were no longer the target audience; the target shifted to what Berg termed "up and outs." These and other substantive shifts brought serious internal conflicts.

The Family of Love

Toward the end of 1977, several leaders began to question Berg's status as End Time Prophet and King of God's New Nation. They raised doubts regarding his teachings, particularly the radical shift in sexual mores. At the same time, Berg became more aware that many leaders were abusively authoritarian and lived in luxury on the backs of ordinary disciples. In January 1978, Berg issued "Reorganization Nationalization Revolution."[6] He dismantled the organization and dismissed some 300 leaders. The movement was renamed "The Family of Love." All those loyal to the King and Prophet were welcome to remain.

Life changed dramatically for most disciples. There was considerable loss of membership. The Jonestown tragedy brought fears of anticult hysteria, so the disciples were urged to go underground. Many "went mobile," traveling about as itinerant missionaries, often not identifying themselves as members of The Family. The disciples continued to litness and witness, but Flirty Fishing increased substantially and in some areas became the primary means of witness and financial support.

In the mid-1970s, the sexual mores of The Family grew increasingly unconstrained. The practice of multiple sexual partners (sharing) had filtered down to the field colonies. Berg strongly encouraged sexual experimentation, and he freed the

disciples from almost all constraints. Nudity and sexual liaisons between members became common practice.

Berg taught that sex is a beautiful, natural creation of God. In exploring how this principle might relate to children, he sent out Letters detailing his early childhood sexual experiences and directives for adults to allow children the freedom to express their natural sexual inclinations. From 1978 to 1983, he and much of The Family were exploring the outer limits of sexual freedom. Most disciples were aware that sexual contact between adults and children was occurring in Berg's household.[7] In some locations, the disciples interpreted the MO Letters to allow for sexual interplay of adults with minors. It is not possible to determine the extent or degree of this activity, but it was occurring in Family homes around the globe.

As the decade of the 1980s opened, The Family of Love was growing again, but dispersed throughout the world. Most disciples were isolated and somewhat adrift. In 1981, Berg ordered the disciples to begin weekly fellowship meetings in their area.[8] A new hierarchical structure was established. Large homes were set up in each country as national headquarters.

In 1981 there were 719 births, and, from this point on, children constituted the majority of members. The care, discipline, and education of the children soon demanded an increasing amount of energy, time, and resources.

The Family

From 1982 to 1984, Berg reordered the movement back into a tightly knit organization. Many Disciples responded to his call to the "Third World." By the end of 1982, 34 percent of the disciples were in Latin America and almost 40 percent in Asia.

By 1982 the children began to play an even greater role in outreach ministries. Child rearing became a priority. Most significantly, The Family began to see the youth as the hope of the future. The recruitment of new disciples fell considerably.

As the first wave of children became teenagers, trouble ensued. "School homes" were set up for the education and discipleship of the growing number of teens. In 1983, Berg heard reports of misconduct at one of the teen homes. He responded with strict guidelines for the youth and high expectations for their personal conduct.[9] These measures eventually led to harsh physical and psychological discipline of many youth.

By the early 1980s Flirty Fishing was central to the life of most Family homes. Originally conceived and justified as an evangelistic strategy, it was never intended nor did it prove to be a useful tool to recruit new disciples. However, as many female disciples established long-term relationships with wealthy or influential men, Ffing became a primary source of financial support and political protection. In some areas of Asia, Europe, and Latin America, females went to work for escort services, providing sex for a fixed fee.[10]

Sexuality played an increasing role in Family life. In the spring of 1980, Berg sent out "The Devil Hates Sex!—But God Loves It!"[11] In his "revolutionary" style, he

told the disciples they served a "sexy God" and that God loved sex and wanted his Children to enjoy it fully. But as nudity and open sexuality became more and more common, real problems developed.

Sexually transmitted diseases (STDs) were introduced into The Family through Ffing. Since it was common practice to have a considerable amount of sexual sharing at area fellowships, STDs spread quickly from home to home. In March 1983 Berg issued "Ban the Bomb!"[12] This MO Letter halted sexual encounters at area fellowships, limiting all sexual relationships to persons residing within the same home. Of course, he exempted himself from this restriction. Finally, The Family began to face the negative spiritual and social consequences of unrestricted sexual freedom. In December 1984 Maria prohibited new members from sexual encounters during their first six months.[13] The edge of the envelope had been reached, and the sexual ethos began a slow swing back toward a somewhat more conventional standard.

As The Family reconfigured toward a more tightly structured organization of large communal homes, other problems developed. In 1985, World Services, the leadership apparatus of The Family, received reports of harsh and oppressive leadership practices. They responded with literature affirming the hierarchical structure, but insisted that local and area leaders carry out their responsibilities as servants, dealing with disciples with love and understanding.

In the late 1980s, many former disciples began to return to the fold. Some were teenagers who were in need of spiritual direction and training. As well, many of the long-term youth exhibited behavioral problems and were not buying into the Family vision. To meet this need, The Family established Teen Training Camps (TTC) in Mexico, South America, Europe, and Asia. These camps were the venue for some of the more abusive treatment of teenagers. The camps did not solve the problem. Disruptive and sometimes destructive conduct increased. The Family responded with "Victor Programs," periods of intense discipline, work, and spiritual oversight. In some places these programs were harsh and abusive. A substantial majority of the first wave of teens rebelled and left. In time, Family leadership became sensitized to the harshness of these programs, and they were ended. Maria apologized and ordered the key adult leadership to apologize personally to teens they had mistreated.[14]

During this time, several teenage girls reported inappropriate and uninvited sexual advances by adult males. In August 1986, Maria prohibited sexual contact between adults and minors. However, since The Prophet had affirmed sex to be enjoyed as fully as possible, stepping back from such a total affirmation proved difficult. Soon, any adult sexual contact with minors was made an excommunicable offense, but as late as 1989 the problem still existed in some locations. The leadership continued to place further limits on sexual expression. By the end of the decade, sexual activity among children or young teens was increasingly discouraged. Current policy forbids sexual intercourse between children under age 16. Of course, the policy is not uniformly obeyed. However, sexual contact between adults and minors is now a serious breach of Family rules and results in excommunication.

By the late 1980s, The Family also began to reconsider Flirty Fishing. Many communities had become dependent on it, relying on influential supporters in long-term relationships with Family women. However, the AIDS epidemic ended Ffing. In the fall of 1987, a policy memo banned sexual contact with outsiders, except "close and well-known" friends who had long-term relationships with Family women. Though never repudiated, Flirty Fishing passed from The Family scene and is now but a memory.

In 1988, the government of India began to expel hundreds of Family disciples who were in the country illegally. By the end of 1989, over 800 disciples had returned from the East. These battle hardened missionaries exposed the rather lax "standard" of Family life in North America and Europe. In order to prepare God's End Time Army for the Great Tribulation, World Services (the international leadership structure) suspended all homes in North America and Europe until they could be thoroughly examined and recertified as legitimate Family communities.

Many disciples failed the test. A new category of membership was established, Tithe Report Form Supporter (TSer). These were persons who wished to remain connected to The Family, but were unable or unwilling to maintain the rigors of full time disciple life.[15] In 1989 almost 1400 were "TSed," essentially expelled from The Family. Fully committed disciples were prohibited from direct contact with them. Yet, many of these people remained loyal and retained a status as partial members, provided they continued in their financial support. From 1989 to 1994, the total number of disciples remained at approximately 12,000, but the percentage of those on TS status increased from approximately 10 to 25 percent.[16] After 1993, the attitude toward TSers softened considerably.

Times of Testing

Toward the close of the 1980s, a weary and ill Prophet retired, and Maria assumed the role of spiritual leader and guide. Peter Amsterdam assumed administrative control. These changes at the top were never formalized or announced, and few field disciples were aware of them.

In October 1994, David Brandt Berg died. Shortly after his death, Peter Amsterdam and Maria were married and now lead The Family as a divinely guided team. However, Berg still speaks regularly from the Spirit World. The death of David Berg brought substantive changes to The Family, which will be addressed below.

While numerous internal dynamics worked to constantly reconfigure the community, forces from the outside fostered a significant shift in the early 1990s. The disciples never had an easy life. They were harassed, kidnapped, and assaulted by distressed family members and religious opponents. They have been repeatedly intimidated, arrested, and imprisoned by law enforcement authorities. All attacks were seen as persecution by the Evil One or Satan. When the hard times came, they suffered, sought the assistance of "friends," and went underground or moved on. All that changed when their children became the targets.

At the end of the 1980s, embittered ex-members and anticult professionals began to lay charges of child abuse and sexual molestation against Family communities in Europe, Australia, and South America.

When government agencies seized the children, Berg instructed The Family to stand and fight. In many localities, disciples conducted public protests against the governments that were attacking their communities. In some places, communities took preemptive measures, inviting law enforcement and social services agencies to conduct investigations of the children. As well, Family leadership opened their communities to legitimate scholarly inquiry, confident they had nothing to hide.[17]

Irrespective of their success in self-defense, these experiences changed The Family. The single most traumatic event began in 1993. A wealthy English widow filed suit in British High Court, seeking custody of her daughter's infant son. The judge conducted a lengthy inquiry into the circumstances of the child in question, but then extended his inquiry into Family history, ideology, and moral conduct. The anticult establishment became involved, and the case lasted almost three years.

Throughout these proceedings, leaders of The Family were forced to face the past, to explain literature that both condoned and modeled sexual contact with minors, and to respond to the painful and heartrending testimonies of former members who had been mistreated and abused. The skeletons were brought out of the closet and into the bright light of the court. And in the midst of the whole painful process, the Prophet died.

To fully satisfy the judge, Peter Amsterdam wrote an open letter admitting some of the policies and practices of The Family had been wrong and harmful. This letter laid primary responsibility for these abuses on Berg. It was a forced, painful, and wholly necessary catharsis.[18]

Denial of past sexual, physical, and emotional abuse is no longer possible. However, the disciples have successfully defended themselves against current charges of sexual misconduct with minors, or any form of child abuse or neglect. Across the globe, over 600 children have been forcefully removed from their homes, often at gunpoint, and examined by court appointed experts. These experts have detected no abused children. There is simply no doubt that numerous incidents of child abuse occurred in Family communities. Most of the abusive acts occurred years ago in places distant from the United States. Those remaining within The Family have attempted to put these things behind them. To date, no adult has been convicted of misconduct. But attempts will surely continue to bring offending individuals and Family leadership to justice over this sad and bitter aspect of their past. The 1990s witnessed renewed "persecution" and was a time of casting out disciples who were not fully committed to the Family vision. But it was also a time when the high tension with the outside world began to ease. Berg had always lambasted the established Church, "the god damned, hypocritical, idol worshipping, churchianity of the System."[19] However, in late 1991, he instructed his disciples to fellowship with open-minded congregations and to direct their many converts toward local churches for care and training in the Christian life.[20] This was a short-lived strategy, but is clear evidence that The Family was beginning to mellow. Attitudes toward members

who left began to soften. As an increasing number of teens were leaving, many parents hoped to maintain good relationships with their departing children. This pattern led to a reversal of a very sensitive issue. The Family now understands that only a few children will remain as committed disciples. Much greater efforts are made to prepare the others for life on the outside, and parents are encouraged to keep the lines of communication open. This softened attitude also came to bear on former members. Beginning in 1994, Family leadership committed to a "Ministry of Reconciliation,"[21] attempting to reach out to ex-members around the world in an effort to heal old wounds and establish friendly relationships where possible. The Ministry of Reconciliation had limited success, particularly with first generation ex-members. Small cadres of former members, particularly youth born into the movement, remain hostile.

The change in attitude toward the outside was accompanied by a transition in the approach to social ministries. From the start, the disciples were concerned almost completely with the spiritual salvation of souls. But in 1992, David Berg directed his followers to help the poor and the helpless, "like Jesus did."[22] Almost immediately, disciples all over the world began started ministries to prisoners, street gangs, illegal aliens, unwed mothers, drug addicts, refugees, and abused women and children. Social ministries have taken root very quickly and are now central to the lives of most disciples, particularly the second generation.

The Post-Prophet Era

David Berg died in the fall of 1994. The transition of authority had been ongoing for a number of years, and his mantle fell easily on Maria and her consort, Peter Amsterdam. While the transition went quite smoothly, The Family changed dramatically in 1995. World Services implemented the "Charter of Rights and Responsibilities." The Charter contains the movement's basic beliefs and details the fundamental rights and responsibilities of the disciples, as well as the rules and guidelines for communal life. Queen Maria and King Peter retain overall and supreme authority, but day-to-day life is far more democratic. The disciples are strongly encouraged to live "according to their own faith" with much less supervision and direction from a radically altered leadership structure. Smaller home size is mandated, and, most significantly, disciples have the right of mobility. Recently, The Family has moved toward a "Board Vision" in which the various aspects of communal life and ministry will be under the direction of a wide and popularly elected board of directors.[23]

The Love Charter greatly improved the life experience of most disciples and went some way toward curbing the mass exodus of young people from the movement. However, these changes have created, or brought to light, a whole new set of problems. The Family has struggled to find its way under the kinder and gentler approach to leadership. Toward the end of the 1990s, Maria and Peter became increasingly concerned with the lax attitudes and low productivity of many disciples. In 2000, they issued S2K—Shake Up Two Thousand.[24] Discipline and community standards were reaffirmed, and those unwilling to conform were strongly encouraged to

become Fellow Members, the new designation for TSed disciples, those who wish to remain connected to The Family but who are unable or unwilling to maintain all the standards of disciple life, or leave the movement completely. This attempt to clean house has continued, and some 1500 disciples have been pushed out into the world.[25] The quest has been to create a leaner and more productive Army of the Lord, more prepared to carry out the mission and to face the tumult of the End. The Family has recently restructured again, creating three levels or tiers of membership: Family Disciple, Missionary Member, and Fellow Member. In addition, outside converts who do not "join" the movement are now divided into General Members and Active Members.[26]

Spiritual life and community vision are the two most significant changes in The Family since Berg's death. Interaction and communication with the Spirit World has always been a feature of Family life. Disciples were open to the possibility of prophetic experiences and guidance from those who have gone on. But the vast majority of substantive communication came through Berg. Shortly after his death, Maria opened up the channels in several significant ways. Berg continued to guide the community from the Spirit World by "speaking" prophetically through Peter Amsterdam and several other receptors in the central household. This quickly expanded. Now Jesus, David Berg, the apostle Paul, and any number of other persons regularly communicate with The Family. Much of the guiding vision and strategy comes directly from above, and substantive portions of the Letters are direct utterances from the Spirit World, most often from Jesus and the Prophet.

All disciples are strongly encouraged to develop their prophetic gifts and most have. Direct revelations and prophecies are normal features of disciple life, either in private experience or community prayer.[27] The vast majority of disciples now look to prophecy to guide decision making in virtually all aspects of their lives. The shift to a stronger emphasis on individual access to the spirit world has created a greater sense of ownership in their various ministries, confidence, and a sense of shared vision. To minimize the disruptive potential of such openness to prophecy within a tightly structured community, Maria has retained the role of "Wine Taster," essentially holding the keys to the kingdom. Prophecy that might impact the broader community in any way is subject to her validation.[28]

An equally significant shift has occurred in the purpose of The Family. From the very beginning, witnessing for Jesus and the spiritual salvation of as many souls as possible has been the essential task. To that end, Family disciples have been highly mobile and generally not geared toward the spiritual development and care of converts. The development of literature, the involvement in social ministry, and the encouragement of converts toward outside churches represent the beginnings of a shift. But at the opening of the twenty-first century, a fundamental reorientation has occurred. The "Activated Program" has been developed and implemented worldwide.[29] The goal of the Activated Program is to develop "outside members" who will support The Family and receive essential spiritual direction from Family disciples, but will not be required to make the commitments necessary for disciple life. It is not an option, but rather the new Family vision. Considerable resources have been

poured into developing educational materials for new converts. And Family disciples are strongly encouraged to settle down in one place, focus their evangelistic efforts, and work at developing what are essentially congregations that are directly related to local disciple homes, and look to those disciples as spiritual mentors, guides, and pastors.

Analyzing the motivations for significant shifts in movements like The Family is no easy task. Two factors seem to be at work here, both growing out of an apparent delay in the Second Coming of Jesus. To date, The Family claims to have led more than 24 million persons to pray the salvation prayer and receive Jesus as their personal savior. However, that is simply a number on a piece of paper. In the overwhelming majority of cases, the disciples have had little or no contact with these "converts." For most of their history, The Family lived in high expectation of an immediate end to human history as we know it, and their goal was to save as many people as possible. The care of souls was a low priority, if one at all. It seems clear that the Activated Program represents the beginning stages of an accommodation to the possibility of a much longer than expected mission in this world.

Beyond that, many of the disciples are beginning to age. Having lived their lives with a strong apocalyptic bent, most have made no provision at all for an extended life. But the passing of time is changing all of this. Family leadership is quite open in describing the Activated Program as the potential retirement package for faithful disciples.[30]

It is difficult to predict how well the "radical revolutionary Children of God" can adjust and survive in a more conventional religious environment. There are other challenges, especially the degree to which outside members can participate in some of the unconventional Family mores. Yet, the disciples appear to have fully accepted this new direction. The Activated Program seems strongest in Latin America and Asia, where the disciples have generally been more geographically stable. While the number of committed, full time, communal disciples is down somewhat, the overall "membership" is expanding. It seems clear that the "radical revolutionary Children of God" are taking their first steps down the road to becoming a more normative religious movement.

THE DISCIPLES

Family Leadership

David Brandt Berg (1919–1994) founded the Children of God in 1968 as an evangelistic ministry to reach the troubled youth of America with the message of Jesus. He had been in various pastoral and evangelistic ministries for over 20 years. During these early years of The Family's history, Berg established himself as the absolute sovereign over his young disciples, and proclaimed himself as God's Final End Time Prophet. Known within the movement as "Moses David," "Father David," or simply as "Dad," Berg channeled his charisma and authority through his written correspondence to the disciples. These "MO Letters" soon became part of "the Word,"

revelations given equal status with the Bible. Berg also established a leadership structure that consisted primarily of his extended family and a few long term and trusted disciples. The upper echelon lived in Berg's home and evolved into World Services. To meet the organizational needs of the growing community, Berg proclaimed the "New Revolution" in 1975, setting up a "Chain of Cooperation" as the primary leadership structure for the COG and The Family. However, the Chain led to authoritarian rule and abuse of lower ranking disciples. In 1978, Berg announced the "Reorganization Nationalization Revolution," which effectively disbanded the organization.[31] Most dispersed into smaller units, maintaining contact with Berg and the movement through the Letters. In 1981, Berg brought the movement back together under a new administrative structure, with various levels of office and authority, starting with the local home and reaching to the top. Though there has been any number of minor alterations since then, this basic structure remains in place.[32]

Berg had taken Maria (Karen Zerby) as his secretary and sexual consort in the early years. Maria remained faithfully at his side and gradually rose within the movement. She assumed the mantle of leadership at Berg's death in 1994. She quickly "mated" with Peter Amsterdam, the chief administrator for The Family, and they now lead the organization together.

The Disciples

Though The Family began as an American counterculture religious movement, it has become a highly diverse and widespread organization. The adult population falls neatly and fairly evenly into two categories, First Generation Adults (FGA), who joined the movement from the outside, and Second Generation Adults (SGA), who were born into the movement. The demographic for the FGAs is fairly clear. A substantial majority were born in North America, followed by groupings born in Europe, Latin America, and Asia.[33] The picture is not nearly as clear for SGAs. The Family quickly became an ethnically, nationally, and racially diverse organization and often encouraged marriages across those lines. However, extramarital sexual intercourse was encouraged and practiced, and from 1974 to 1987, most female adults had regular sexual relations with men outside the communities. And birth control measures were prohibited. A substantial, but difficult to determine, number of children were born from these liaisons. [The "typical" SGA has parents of mixed ethnicity or nationality, grew up in several locations around the world, and has spent little time in the country where he or she holds citizenship.]

The identity of Berg's disciples is a complex matter. Generalizations are risky, but the vast majority of the First Generation view their pre-Family lives as shallow, lacking in meaningful relationships, and "searching." They joined The Family, not to follow Father David, but to be part of a committed, close-knit, and meaningful community. And they joined to follow Jesus. Almost all disciples directly link their movement into The Family to a call of God to serve Jesus as fully as possible. The Second Generation disciples share a similar religious vision. Regardless of their very acute

particularities, the disciples understand themselves as soldiers in God's Endtime Army, whose mission is to evangelize and minister in the name of Jesus, until the final tumult begins.[34]

THEOLOGY OF THE FAMILY

The Family is a religious movement grounded in a clearly articulated belief system. Though characterized by an extraordinary range of educational, religious, cultural, ethnic, and national backgrounds, the disciples are guided and sustained by a common vision and a coherent set of religious commitments. The theological system has developed through the years. It is grounded in Biblical authority and the prophetic office of Father David. In the early years, the Christian Bible was the sole source of religious authority, and the vast majority of disciples are deeply committed and well versed in this sacred text. However, Berg placed great emphasis on his prophetic role and gifts, which kept open the possibility of revision or change, and placed his writings on an equal footing with the Bible.[35]

The full Statement of Faith is readily available on The Family Web site.[36] I attempt to explore the core beliefs that are central to the Family experience. These beliefs center on the Prophetic Office of David Berg, Jesus and human Salvation, the Spirit World, the End Times, relationship to the outside world, and the sexual ethos.

The Prophet

In the beginning, David Berg made no claims regarding his own status or office. But, in a relatively short time, he came to a radically different self-understanding. By the end of 1970, he emerged as God's Prophet for the End Time and established his absolute authority over the disciples. His claims of divine appointment and absolute spiritual authority roughly coincided with his withdrawal from direct contact with the disciples. He channeled that authority through the MO Letters, affirming them as "new Scripture" that clarified or superseded the Bible and that was more likely to be of immediate value.

While he consistently emphasized his own humanity and fallibility, he remained throughout his life (and beyond) as the divinely anointed leader and spiritual guide for the Children. He also claimed the title of King of God's New Nation. After the necessity to win souls for Jesus, Father David's claim as Prophet and King is the most consistent theme in Family thought and literature. The full acceptance and affirmation of The Prophet is a central component of the socialization process. Disciples can remain in the community while harboring "doubts and struggles" over some of his more extreme claims, some viewing him as both a prophet and "a weird old man." But no open challenge to his position or authority is possible. Many of the disciples, particularly the females, developed extraordinary emotional bonds as well.

If anything, Berg's status has been enhanced by his death. Though Maria and Peter now rule over The Family as coregents, Father David sits at the very right hand of Jesus, still leading and guiding his Children.

Jesus and Salvation

Eternal salvation through faith in Jesus Christ as personal Savior is the bedrock of Family theology. The message is clear and unambiguous. Jesus Christ was born of a virgin, lived a sinless life, died on the cross for the sins of the world, rose from the grave, and is returning soon to this earth. Those who do not "know Jesus" are "lost," but eternal salvation is freely available to all who will simply put their faith in Jesus. Witnessing, or the attempt to get as many people as possible to pray a simple prayer of faith, has been the central task of disciple life from the beginning and remains so today. Paradoxically, Father David taught that in the end, all creation would be reconciled to God. But this universalism sets very lightly on the disciples and has never dampened their evangelistic zeal.

The Spirit World

From the very beginning, the disciples were attuned to the reality of spiritual forces. Berg's direct engagement with the Spirit World began in 1970, when Abrahim, a fourteenth century gypsy Christian, entered his body and began to speak through him. This was a watershed event for the Children of God.[37] From that point on, angels, spirit helpers, and dark spirits became an ever-increasing dynamic of Family life. It is common practice for disciples to pray for and receive comfort, assurance, and guidance from God through dreams, visions, or experiences of "prophecy."

The Spirit World also has a dark side. Satan and his demons are actively at work in the world, with The Family as their primary target. All external opposition and persecution, physical illness, community discord, behavior problems in children, and personal failures of all types are primarily understood as the result of Satan's attacks. However, the disciples do not live in fear. They are confident that God is with them and that He will always provide adequate spiritual power to thwart any attack from the Dark Side.

Most disciples practice a form of spiritual healing common to the Pentecostal wing of Protestant evangelicalism. Modern medical care is accepted, and those who pursue treatment for medical problems are not viewed as problematic. However, the root cause of illness or physical affliction is most often viewed as spiritual. Therefore, it is prudent to seek a spiritual cure as a first response.

The Family generally conceptualizes personal problems and human weakness in distinctly spiritual terms. A significant number of young adults harbor unresolved resentment because typical childhood misbehavior was often dealt with as a spiritual problem. However, most disciples are strengthened and empowered by their direct access to Jesus, the Holy Spirit, Father David, and other spiritual entities. The disciples interpret life as a profoundly spiritual adventure that is both personal and cosmic in scope.[38]

The End of Time

Catastrophic millennial expectation is a significant component of the belief system. Berg taught that human history would climax in a worldwide political,

economic, and moral implosion. Then Antichrist will emerge as deliverer and for 3 1/2 years will reign as a wise and benevolent leader. When his true nature is revealed, he will declare his divinity and require the world to worship and obey him, persecuting unto death all those who refuse. All people will be required to carry the "Mark of the Beast" as a control mechanism. Then Christ will return for his Church. The Antichrist will be defeated in the Battle of Armageddon, Satan will be bound, and Christ will establish His Millennial Reign on earth. At the end of 1000 years, Satan will be released for one final confrontation. With Satan's final defeat, the Kingdom of Heaven will be established forever, and God's Children will live with Him in the Heavenly City.[39]

There is nothing particularly new or unique in this formula. Family distinctives are the special role they play in this grand drama, and the intensity of their conviction that the End is near.

For most of their lives, Family disciples have lived in near certainty that they would play a real role in the final events of human history. Early in the movement there was considerable hope that 1993 would be the time, and there was real disappointment as the year passed without apocalyptic incident. Since then, The Family has been reluctant to set specific dates. But the knowledge that they live in the shadow of the End remains a powerful dynamic and informs life at all levels. That hope is the primary motivation and justification for a life of sacrifice and hardship. Until very recently, disciples have been reluctant to make long-term plans for life in this world. Significant life decisions are profoundly informed by the imminence of the End. The depth and intensity of their End Time Vision clearly sets them apart. There is also a strong sense that their separation from the world, dependence on God, communal lifestyle, persecution, and hardship will uniquely prepare them not only to survive the Great Tribulation, but to lead other faithful Christians through those terrible times. It is only within the past year that The Family appears to be coming to terms with a lengthy delay in their millennial expectations.[40]

The World Outside

From the earliest stages of the movement, the Children maintained a powerful sense that the outside world was alien to their own communities. The outside is generally referenced as "the System." The System is under the full control of Satan and is evil, dangerous, corrupt, and forms the fundamental "other."[41] As a general rule, the disciples insulate themselves from the System as far as possible. They do hold passports, obtain driver's licenses, and sometimes get legally married. But they have tended to operate on the fringe, with a minimum of interaction with any System institution. For the most part, they homeschool their children. In general, their sense of separation extends to Christians outside the movement, especially the institutional church. Some moderation has occurred recently, and the disciples are much more open to working in cooperation with Christians outside their community. But they generally do not identify or "fellowship" with outsiders, and continue to see the Church as part of the System.

Being a soldier in God's End Time Army comes with a price. An army requires dedication, unity, submission to authority, and sacrifice. And strong authoritarian leadership has been the norm. Under the Love Charter and the leadership of Maria, the leadership structure is more open and democratic. However, God's elite End Time Army still requires total obedience to God and to the structures of authority God has ordained.

In general, the disciples are fully aware of the difficulties this style of leadership has caused them and their community. They tend to hold a complex and somewhat ambivalent appreciation of the authoritarian nature of their movement. Though fully aware of the trials, trauma, and abuse many have suffered, they tend to attribute these difficulties to the character flaws of individuals and not to the nature of the community or the leadership. The Prophetic office of David Berg, Jesus as the only Way, the Spirit World, and the End Time Vision inform every facet of Family life. The "Revolution for Jesus" goes on, nowhere more clearly than the total restructuring of the sexual ethic.

THE CONTROVERSIES

Sexual Ethos

A truly "revolutionary" theology of human sexuality is the Family's most distinctive characteristic and, in the minds of many observers, marks them as a "dangerous cult." The sexual ethos is based on two principles that flowed straight from the creative mind of the Prophet. The first is that sex is not only a pure gift of God, but also a basic human need no different from sleep, food, or shelter. It is not just acceptable, but a Christian duty to meet the needs of a brother or sister.

The second principle relates the special nature of the time and the people. Berg instructed his disciples that the end times required new and innovative understandings of God's purposes. God's Chosen End Time Army had received a special dispensation, freeing them from some of the legal and ethical constraints that are normative and proper for the less committed Christian communities still in the System. This is "The Law of Love."[42]

Though sexual purity characterized the early COG, the "revolution" came swiftly and completely. Many disciples fled. Loyal disciples made the adjustment, and the new sexual ethos spread rapidly. The three principle components of the revolution were sexual sharing, Flirty Fishing, and childhood sexuality.

Sexual sharing had a twofold purpose. The first was sexual pleasure and fulfillment by as many disciples as possible. The other purpose was to break down old, "System" loyalties and allegiances and to establish primary loyalty to The Family and to the Prophet.

By the early 1980s, The Family had reached a level of sexual freedom and experimentation rarely even imagined in other religious communities. Nudity was common. Flirty Fishing was ubiquitous, and the vast majority of women were having regular sexual encounters with both strangers and long term "fish," both to fulfill

the mission and to support the homes. Sexual sharing with multiple sexual partners became so commonplace that in some homes the leader would post "sharing schedules" on the bulletin board. Children were considered "adults" at age 12 and often were sexually initiated into the group. Sexual interplay with even younger children was never officially sanctioned, but it was modeled by the highest level of leadership and did occur from time to time and place to place. But this almost limitless freedom came with a heavy price.

We have already addressed the spread of STDs throughout the movement. Beyond that immediate threat, such unrestrained sexuality placed considerable tension on normal marital and family relationships. Many disciples were scarred, but the children bore the greatest impact. They suffered not only from direct sexual encounters with adults, but also from the severe instability of family. It is little wonder that few of the first wave of children remain in The Family.

In time, Family leadership became cognizant of these terrible costs of their "revolution." Flirty Fishing was halted, and all sexual contact with the outside world was banned.[43] Strictly enforced limitations were placed on the sexual experience of children, and fixed age limits were established for any sexual contact. These rules remain in place today, and there is no evidence that Family children are now in any more danger of sexual predation than children in the world. However, this adjustment took time, and many young lives were damaged before The Family fully came to its senses.

The intense sexual atmosphere also cooled among the adults. The practice of sexual sharing has slowed considerably, since the wild years of the early 1980s. As the first generation grays, it is hard to imagine them keeping up the pace. And since the second generation paid much of the price for such rampant promiscuity, they are not anxious to head down that road.

However, the theological and ethical convictions behind the sexual ethos remain. Flirty Fishing was halted, but never renounced. The practice is still viewed as a valid and proper technique for the times, and some women are nostalgic for those days. The Law of Love remains in force, and sexual sharing is still a significant component of The Family life and a critical aspect of communal bonding. Maria has actually found it necessary, on several occasions, to admonish the older teens and young adults to be more sexually active, participating more fully in the "sexual fellowship" of the community.[44]

The most recent sexual innovation, the "Loving Jesus Revolution," points to the central role sexuality still plays in Family life. Maria and Peter received revelations from Jesus that he was pleased with their commitment and sense of mission, but was not fully satisfied with the level of their devotion, particularly the expression of their love for him. Jesus desires the Children as his Bride, and He their Husband.[45] To that end, in 1996 The Family began to incorporate sex acts into their private devotion. This is done by autostimulation, or during sexual intercourse with a partner, imagining that partner as Jesus and expressing one's love for the Lord through the sexual partner. The Loving Jesus Revolution, like many of the "revolutions," was too much for some disciples, and they moved on. But, in general, it has been

accepted and is now a common feature of the disciples' devotional life. Strict guidelines prohibit children from involvement or observation of this practice.

The Broken Ones

Beginning in the mid to late 1980s, hundreds of older teenagers and young adults began leaving The Family. A good number, but by no means all, had been hurt, and some terribly scarred, by their experiences in The Family. They had suffered hardship, dislocation, broken families, deprivation of adequate educational opportunities, and serious emotional and sexual abuse. As these young people have matured, many have struggled deeply to overcome their past. Over the past few years some have attempted to loosely organize some type of united effort in coping with the past and seeking justice and compensation for the wrongs they suffered.[46] For its part, The Family has offered several general apologies for past wrongs, with the hope that everyone involved would forgive and forget. Most of the aggrieved ex-members are profoundly unimpressed by these gestures.

The cause of these young people has been energized by a terrible tragedy. In January of 2005, Ricky Rodriquez, the oldest child of Maria who had departed the movement in 2000, murdered Angela Smith, Maria's long time secretary. He then took his own life. His intent was to torture Ms. Smith to learn the location of his mother so that he might kill her. For a short time, this tragic event focused intense media coverage on The Family.[47] Several active ex-members are now attempting to gather affidavits with the hopes of a class action suit against The Family and criminal proceedings against guilty parties within the group. Their efforts are frustrated on several fronts. Most of their parents are either still in The Family or so conflicted about their own complicity in the abuse that they will not cooperate or testify. Most of the criminal conduct occurred outside the legal jurisdiction of the United States and was many years ago. Civil action is complicated by the difficulty of even locating "The Family," and the lack of any substantive financial resources to go after. This whole process is ongoing, and it is difficult to predict where it might all end. It is almost certain that new and more lurid accounts will appear in the near future. The trauma and harm these people suffered is not self-mending, and their efforts to retaliate and seek some form of justice will surely continue, and most likely intensify.

THE FUTURE OF FAMILY

The 1960s are no more. The golden age of the "radical, revolutionary Children of God" may well have gone the way of the 1960s. The Consider the Poor Ministry, the large number of the second generation leaving, the three-tiered level of commitment now accepted, and the more recent Activated Program are blurring the once very sharp lines between disciple life and the outside world. Yet, Father David's Children still understand themselves to be God's unique End Time Army. The Family would like to live in peace with the System and the Church, but has no interest in joining the team.

The Family now faces two substantive challenges to a healthy and meaningful future. The first is external: how to deal with damaged and angry ex-members, many of whom would like nothing better than to see The Family destroyed. The second is internal. Their very identity is in their mission, and that remains justified and energized by the passionate expectation of the imminent End of Days. Many similar movements before them have shown a capacity to adjust to an extended stay in human history. And if The Family is anything, it is capable of fundamental change, even "revolution." Over some 35 years, the disciples have survived repression, persecution, monumental leadership failures, self-inflicted wounds, and radical theological restructuring. They have survived the death of the Prophet. They are beginning to come to terms with the loss of most of their youth. Given their eccentricities, The Family will never become a large movement. But they are confident in their calling and mission and believe they are empowered by God's Spirit. That confidence has brought them through many dark days, and there is no reason to believe that it will not carry them well into the future.

45. "Loving Jesus Revelation!" MO Letters #3024 and #3025 (Zurich: World Services, July 1995).
46. The World Wide Web is the most effective tool for this process, and several Web sites function as meeting ground. Unfortunately, along with genuine grievances, many exaggerations and outright falsehoods find their way here as well, seriously diminishing the credibility of the movement.

47. I did several interviews for local TV outlets in California and Arizona and was flown to New York to tape a full hour segment of NBC *Dateline* dealing with this event and its implications for The Family. That segment of *Dateline* was preempted by the death of Johnny Carson, then "scooped" by a similar presentation by ABC. However, within a few months the NBC drama *Law and Order* ran a very thinly disguised program based on this incident, in which the "Maria" figure is convicted of second degree murder. This popular dramatic presentation has apparently stimulated a surge of interest on the part of aggrieved ex-members.

The Branch Davidians

Eugene V. Gallagher

Like many other members of New Religious Movements (NRMs), the students of biblical prophecy who eventually came to be known as the Branch Davidians had long conducted their religious lives in a quiet and unassuming fashion that left them almost totally unnoticed by the general public. Their obscurity was transformed into international notoriety, however, in the course of a single day. On February 28, 1993, the United States Bureau of Alcohol, Tobacco, and Firearms (BATF) staged a raid on the home and church of this millennialist, sectarian group outside of Waco, Texas. The thoroughly botched attempt to serve a search warrant took the lives of four BATF agents and six members of the communal group and led to a 51-day siege that climaxed with a devastating fire that claimed 74 more lives. Only nine people survived the deadly blaze that burnt the Mount Carmel Center to the ground, although 35 people, including 21 children, surrendered to the authorities during the prolonged standoff. Although many of the people at Mount Carmel simply saw themselves as students of the Bible and particularly the apocalyptic message of the Book of Revelation, they became known to the public as Branch Davidians and followers of the self-proclaimed messiah, David Koresh (1959–1993).[1]

BACKGROUND AND HISTORY

The group that gathered around Koresh had a long history in the Waco area and an even longer history before that, ultimately reaching far back into the biblical tradition. The expectation of an imminent, divinely authored renovation of this world is a major theme in the Hebrew Bible and Christian Scriptures. Prophets in the Hebrew Bible like Isaiah, Ezekiel, and Joel announced the coming of the "day of the Lord," which would bring destruction for those who sinned but would pave the way for the construction of a society in conformity with God's law.[2] Texts composed both during and after the Babylonian exile (587–539 BCE) in Jewish history are filled with apocalyptic passages and themes that anticipate the destruction of an immoral world and the establishment of a holy kingdom in its place.[3] Noncanonical

literature from the centuries immediately preceding and following the beginning of the Christian movement, such as the diverse material attributed to Enoch, many of the "Dead Sea Scrolls" found at Qumran near the northwest corner of the Dead Sea, and apocalypses attributed to biblical characters such as Ezra, Baruch, and Abraham, among others, also form a part of the broad biblical apocalyptic tradition.[4]

Not only do many of the same themes and motifs occur in the texts now collected in the Christian New Testament, but many of the Christian texts actually cite and comment on earlier apocalyptic texts. For example, the long apocalyptic speech attributed to Jesus in chapter 13 of the gospel of Mark turns on his citation of an image that appears in Daniel 9:27, 11:31, and 12:11 in slightly varying forms. Jesus's reference to a "desolating sacrilege" originally referred, in Daniel, to a profanation of the Jerusalem temple committed by the Syrian emperor Antiochus Epiphanes in 167 BCE, but in Mark's gospel it refers, most likely, to the destruction of the same temple in 70 CE by Roman forces commanded by the future emperor Titus. Apocalyptic themes are evident outside of the gospels as well. The letters of the early Christian missionary Paul of Tarsus, written in the decade of the 50s CE, reveal a strong expectation that the world would soon end. In his earliest extant complete letter, written to the community of Thessalonica on the Greek mainland, Paul addresses a question about the salvation of Christians who have already died. He issues the following affirmation: "for this we declare to you by the word of the Lord, that we who are alive, who are left until the coming of the Lord, shall not precede those who have fallen asleep" (I Thessalonians 4:15). Similarly, in a later letter to a Christian community in Corinth, he reminds his audience that "the appointed time has grown very short" (I Corinthians 7:29). Finally, the last book of the Christian Bible, Revelation, spins out an elaborate apocalyptic scenario in vivid but enigmatic imagery that continued to stimulate the imagination of interpreters for nearly 2,000 years. The book of Revelation was so important to the community at Mount Carmel that Koresh claimed that "every book of the Bible meets and ends in the book of Revelation."[5]

Koresh and his fellow students, of course, were not the first to be intrigued by the biblical statements about the end of the world as we know it. In virtually every century, if not decade, after the inception of the early Christian movement, biblical interpreters were convinced that Jesus's reassurance that "this generation will not pass away before all these things take place" (Mark 13:30) applied to them and to their own situation. The prophetic Montanist movement of the second century CE expected the "New Jerusalem" to descend upon the Phrygian backwater village of Pepuza.[6] Norman Cohn vividly chronicled a variety of later movements in *The Pursuit of the Millennium.*[7] The popularity of Christian millennialism today is evident in the millions of copies sold by Hal Lindsey, author of *The Late, Great Planet Earth* among other apocalyptic tracts, and Tim La Haye and Jerry B. Jenkins, authors of the massive *Left Behind* series that presents a fictionalized Christian story of the end times.[8] The Branch Davidians, then, fall within a complex and long-lived tradition of anticipation of the world's end that is laid out in a series of seminal biblical texts that were subjected to elaborate commentaries by multiple generations of interpreters.

More specifically, the Branch Davidians are part of the Adventist tradition that first took shape in the mid-nineteenth century in New York state. With only a few exceptions, Koresh's disciples had religious roots in the Seventh-day Adventist tradition, which itself grew out of the Millerite movement of the mid-nineteenth century. After painstaking study of the scriptures, William Miller (1782–1849) came to the conclusion that the second coming of Jesus Christ would occur sometime between March 21, 1843, and March 21, 1844. When the second date passed without incident, the Millerites recalculated the date to October 22, 1844. The failure of Jesus to return on that second date provoked what was known as the "Great Disappointment," but it only diffused rather than decreased the general Adventist fervor. Many of the disappointed did not abandon their expectation of an imminent millennial transformation of this world and continued to search the scriptures, and their own situations, for the signs that would herald the beginning of the end. By the end of 1845, for example, a small group of New Hampshire Millerites had begun to observe the Sabbath on the seventh day, Saturday, and to fashion a new understanding of Miller's prophecy. Led by Joseph Bates, James White, and Ellen G. Harmon, who married White in 1846, the group argued that October 22, 1844, was, in fact, a crucial date for human salvation, because Jesus Christ entered the heavenly temple on that day in preparation for the final judgment. His return would happen at an unspecified time in the future.[9]

To their observance of the seventh-day Sabbath, Bates and the Whites added another distinctive theological tenet. They believed that God's will is revealed progressively and that each new generation could expect to receive its "present truth" or "new light." That doctrine introduced a dynamism into the Seventh-day Adventist tradition that contributed to the schisms that eventually produced Koresh's group of Branch Davidians.

FROM DAVIDIANS TO BRANCH DAVIDIANS

The Davidian Adventists, precursors to the Branch Davidians, originated in 1929 in the teaching of Victor Houteff (1885–1955). A Bulgarian immigrant to the United States, Houteff became a Seventh-day Adventist in 1918. His intensive study of biblical prophecy led him to two conclusions that conflicted with orthodox Adventist doctrine. First, he indicted the church for being complacent and too "worldly." Houteff believed that his divinely appointed task was to purify the church from within and to gather the 144,000 "servants of God" mentioned in Revelation 7 to wait for the imminent arrival of Jesus Christ. Although Houteff accepted Ellen White as a prophet, he asserted that God did not reveal to her the complete message for the last days. In a pattern that was repeated by subsequent leaders within the Davidian tradition, Houteff saw himself as a prophetic figure for his own time, one who would announce the fullness of God's revelation about the imminent transformation of the world. Second, in contrast to the standard teaching of White that the Kingdom of God was a spiritual phenomenon and that the faithful would spend a millennium in heaven with Christ before the renovation of the world, Houteff

concluded that the coming Kingdom of God would be a literal, physical, millennial rule on earth, centered in the Holy Land of Palestine. Houteff's teaching, much of which he published in a periodical called *The Shepherd's Rod,* attracted some of his fellow Adventists, but church elders quickly barred him from teaching and in 1934 officially removed him from membership.[10]

Forced out of the mother church, Houteff named his movement the Davidian Seventh-day Adventists to echo the importance of a Davidic messiah in the first centuries CE and to emphasize their belief in the imminent restoration of a Davidic messianic kingdom in Palestine whose practices would closely follow those of traditional Judaism. Houteff saw himself as the seventh and final link in a line of reformers including Martin Luther, William Miller, and Ellen White. As relations between his group and the main body of Adventists worsened, Houteff condemned the denomination as a heathen, apostate group and focused on drawing the truly faithful out of its ranks. In 1935 he moved the Davidians to an isolated 189-acre parcel of land outside Waco and named their settlement Mount Carmel, after the site where the prophet Elijah contended with the prophets of Baal and proved to the awestruck onlookers that the Lord whom he served was the only true God (see I Kings 18:20–40). Although the anticipated move to the Holy Land never materialized, in Texas Houteff led Bible studies every night and eventually conducted a vigorous proselytization program that sent out tracts to thousands of Seventh-day Adventists and missionaries to Adventist groups throughout the world. Both practices remain at the core of the Davidian and Branch Davidian traditions.

When Houteff died in 1955, he was succeeded by his wife Florence. Convinced that the end would come in 1959, she urged Davidians and Adventists all over the world to assemble at the new Mount Carmel Center located on 941 acres near Elk, Texas, which the group had recently purchased. In April 1959 some 900 Davidians gathered there. But, in an outcome reminiscent of the Great Disappointment of Miller's time, their expectations were frustrated. The numbers of faithful quickly dwindled and Florence Houteff herself moved away and became inactive. The events of 1959, however, were not be the last time that the faithful were called to assemble at Mount Carmel in anticipation of the dawning of a new world.[11]

Out of the infighting among those remaining in the 1960s, Ben (d. 1978) and Lois Roden (d. 1986), who took up residence at Mount Carmel in 1955, eventually took control of the Mount Carmel property and became the leaders of the handful of stalwarts who still lived there. Like Miller, Ellen White, and Houteff before him, Ben Roden believed that he had a prophetic calling. He portrayed himself as the anointed "Branch" mentioned by Zechariah (see 3:8 and 6:12) who was to organize the theocratic Kingdom in preparation for Christ's return. Roden revived the group, adding the biblical festivals of Passover, Pentecost, and Tabernacles to their ritual calendar and renewing Houteff's publishing and missionary programs. On his death in 1978, Ben Roden was succeeded by his wife, Lois, as leader of the Branch Davidians, now a distinct offshoot from Houteff's movement. As had been the case with the Houteffs and was still the case with Koresh, the primary audience for the Roden's missionary appeals was members of the Seventh-day Adventist church. Under the

Rodens, the Branch Davidians maintained a sectarian consciousness, hoping to rescue the truly faithful from their hopelessly compromised parent body, even as they continued to introduce innovative practices and ideas.[12]

Like her predecessors, Lois also claimed special revelations. She taught that the Holy Spirit was a feminine figure and that the coming messiah would fully embody the female aspects of the divinity. Lois actively spread her new version of the Branch Davidian message through extensive missionary travels and the publication of a magazine named *SHEkinah,* after the feminine Hebrew word for the spirit or presence of God, a revelation of new light that troubled some members but secured the assent of a core group of loyalists who later became followers of Koresh as well. Like her predecessors, Lois Roden continued to expect the establishment of a literal Davidic kingdom in Israel. She was even able to secure permission from Israeli authorities to have her husband buried on the Mount of Olives, and she was buried next him after her death in 1986.[13]

Lois Roden was the leader of the Branch Davidians when Koresh, then known by his given name of Vernon Howell, joined in 1981. Koresh's embrace of Lois Roden's teachings, the possibility that they formed an intimate personal relationship, and her implicit recognition of Koresh as her successor, sparked the enmity of Lois's son George, who had tried to establish himself in a leadership position during his mother's travels. Even before Lois's death in 1986, relations between George and Koresh were hostile; by 1987 they flared into violence over George's bizarre challenge to Koresh that he, George Roden, could resurrect a member of the community who had been buried on the property for 20 years. When Koresh and his armed followers tried to secure evidence of George Roden's grotesque practices, a gun battle erupted between the two groups. In the ensuing trial, Koresh's accomplices were found not guilty, and the jury split on the question of Koresh's guilt, with the judge declaring a mistrial. After an unrelated incident, George Roden was found guilty of murder, declared insane, and sentenced to a state mental hospital. Koresh managed to pay the back taxes on the property, and his group took over the Mount Carmel Center.[14]

THE BRANCH DAVIDIANS UNDER DAVID KORESH

Koresh's leadership of the Branch Davidians was based on his ability to interpret the Bible. Many of those who lived with him at the Mount Carmel Center explicitly cited his unparalleled exegetical ability as the reason they moved to the Mount Carmel Center. Steve Schneider, who held a prominent leadership role within the community, told one of the FBI negotiators during the siege that "the reason they came here, all that they are and what they want to be revolves around what they see him [Koresh] showing from that book."[15] Livingstone Fagan, one of the adults who left during the standoff and who remains imprisoned in the United States after being convicted of participating in the February 28 shootout, recounted his decision to move to Mount Carmel in his unpublished manuscript, "Mt. Carmel: The Unseen Reality" (1994). Fagan was a Seventh-day Adventist theological student pursuing a Master's degree at Newbold College in England when he heard Koresh speak in a

Bible Study in 1988. After only three hours Fagan was deeply impressed. He recalled that "during that short time, I had perceived more significant biblical truths than I had done, the entire eight years I had been involved with organized religion."[16] After completing his studies in December 1988, Fagan visited the Mount Carmel Center several times. In 1992 he decided to move to Mount Carmel "in order to keep pace with the truths being revealed."[17] Fagan found Koresh's teaching about the book of Revelation thoroughly compelling. He recounts that

> on this last visit, approximately six months into our study, it was in our opinion impossible to leave without doing damage to our grasp of this continuing revelation of truth. We therefore decided to stay. It is important to note, the purpose of Mt. Carmel was the pursuit of truth.[18]

The characteristic mode of that pursuit of truth was the oral Bible Study, led by Koresh himself. Those study sessions often lasted several hours or more. Koresh drilled his audience in what he saw as the message of the book of Revelation and recited many portions of the Bible from memory, weaving them into a single apocalyptic scenario and exhorting his students to prepare themselves for the coming end. Like the others who gathered at Mount Carmel, Fagan dedicated his life to intensive study of the Bible. He reflected on their study of the scriptures in this way, emphasizing Koresh's prophetic inspiration:

> it involves choice experiences and an extensive grasp of the scriptural text. Further, honesty and openness, with a willingness to relinquish all human aspirations. All of this takes place in an atmosphere of faith. Finally, and most important, inspiration, direct divine intervention. By these experiences, the residents of Mt. Carmel, were able to hear God's word, while blocking out the artificial noise of humanity.[19]

In sum, according to Fagan, who is referring to the scroll sealed with seven seals in Revelation 5, "Mt. Carmel was a place where David Koresh opened the Seven Seals."[20]

Although much of his teaching resembled that of many other Christian millennialists, Koresh saw things in the Bible that no one before him had. Most strikingly, he saw himself. Koresh's authority as an interpreter of scripture was rooted in an extraordinary experience that he apparently had in Israel in 1985; as he understood it, it revealed his true identity and his mission in life. According to Koresh, he was taken up into the heavens, in an experience much like the one described by the apostle Paul in II Corinthians 12 and the "night journey" attributed to Muhammad in the Islamic tradition.[21] During the standoff, on March 7, Koresh made this somewhat obscure and disjointed statement to one of the negotiators:

> In 1985, I was taken, when I was in Israel, … I was taken, in my perceptions of my being, to a place where I was shown all things pertaining to the seals. This is my work. … Okay. From 1985, to the present time, I am not a person who studies the Bible night and day. You can ask anybody that knows me.[22]

In allusive fashion, Koresh asserted that his knowledge of the seven seals was not the result of his personal industry or superior interpretive talent, but was instead the result of a divine gift, acquired during his visit to a mysterious "place." As he said

on April 5 to another negotiator, "in 1985 the seals, everything pertaining to the seals which is the Bible was opened up and thoroughly locked in for presentation."[23] Both Koresh's mission and the content of his preaching were irrevocably set by his extraordinary religious experience. That experience was so profound that Koresh referred to Psalm 2:7 and a variant reading of Luke 3:22 to describe it. On March 5, Koresh told an FBI negotiator concerning imminent salvation that

> it says right there in Psalms 2—and this is where I'm coming from. I will declare the decree—I mean this is the law of God. The Lord said unto me, thou art my Son; this day I have begotten thee [see Psalm 2:7; Luke 3:22].
> Ask of me, Son, and *that's what happened to me in heaven,* my friend. You may not believe it. But God says ask of me, and I will give thee the heathen … for thine inheritance.[24]

Again, Koresh's language was imprecise, allusive, and difficult to interpret because of his breathtaking claim to divine authority. Koresh thought that the mysterious place that he visited was heaven and while there he was adopted by God himself, like ancient Israelite kings and Jesus of Nazareth, into the most intimate relationship of sonship. He was also divinely commissioned to undertake the conversion of the heathen before the imminent judgment through his preaching of the seven seals.

Koresh's conviction that he was chosen for a prophetic and messianic mission supported all of his other claims to authority. It helps us to understand how he saw himself in scripture and claimed a status ordinarily reserved for Jesus. On April 15, for example, Koresh explicitly appropriated two titles intimately associated with Jesus; one of them, "the Lamb," is the primary designation for Jesus the Christ in the book of Revelation. He told the negotiator, "look. If the seven seals are true, yes, I'm the Lamb of God. Yes, I'm Christ. If the seven seals are true."[25] In a more esoteric reference, Koresh also claimed that he personified the message of the seventh angel of Revelation.[26]

But Koresh also acknowledged, at least superficially, an important check on his claim to ultimate authority, signaled on April 15 by his repeated conditional references to the truth of the seven seals. Koresh frequently told his followers and the outside world that his message must be measured against the evidence of the Bible. He claimed that he was renovating tradition, not creating something wholly new. In fact, those who could not reconcile either Koresh's doctrines or his self-understanding with what they saw in scripture often left the group.[27] Koresh himself also stated that he tested his own preaching against what he found in the Bible. On March 9 he disclosed to a negotiator that

> the thing of it is is that I can only move on the foundation that God has established. Now, how do I know that the spirit that speaks with me is the true spirit of God, how do I know? Only unless it's perfectly in context with what's been stated beforehand, you know.
> … Then how can I believe? Well, especially in the revelation when there's these seven simple steps, seven seals.… You know, either we understand them or we do not. If someone says they do, we can't deny it unless we've sat down and honestly, candidly opened up to see what insight this person may or may not have on the subject.[28]

In discussing Koresh with a negotiator during the siege, David Thibodeau, one of the survivors of the April 19 fire, gave a similar explanation. Thibodeau stated that his presence at Mount Carmel "really has nothing to do with David's charisma, … it's just opening the book for myself, seeing what it says and saying, wow, is this guy found in the book, you know, and all the Psalms, you, you, really got to sit down and listen to him talk, I mean with the book open."[29] Similarly, commenting on Koresh's refusal to speak with negotiators on April 9, Schneider observed that "unless he can bring in what he is, and that's the Bible, [then he won't speak]. I mean he'll talk about that [leaving] but always in relation to the Bible so you can understand where and why."[30] In the end, Koresh's students so thoroughly assimilated his message about the seven seals that they could not use the Bible as an independent source against which to judge Koresh's message. Nonetheless, the movement held to a theoretical standard, in addition to Koresh's personal authority, against which Koresh's pronouncements could be measured. Many of his followers said that they used that standard; in the judgment of some it led to a strengthening of their faith in the message of the seven seals, but in the judgment of others it helped them to unmask Koresh as a prophetic pretender.

In the daily life of the Mount Carmel community, Koresh's status as an authoritative interpreter of the Bible depended less on his claims to an extraordinary religious experience in Israel in 1985 and more on his repeated ability to make sense of the millennial message of Revelation in his Bible Studies. In the view of his students, at least, Koresh's authority was tested every time that he proposed an interpretation of scripture. Like Thibodeau, they could easily sit before him and check what he said against the text itself. On the other hand, every time his students accepted his interpretation of the Bible, Koresh's authority was reinforced. The daily Bible Studies thus became Koresh's most important tool to maintain and enhance his power, authority, and status within the group. His status as an inspired biblical interpreter was subject to daily renegotiation. It is a measure of his unassailable confidence in his mission, persuasive ability, and facility with the biblical text that Koresh successfully maintained his position, but it is also a measure of their deep yearning for the thorough social, moral, and religious renovation of the world that the others at Mount Carmel continued to cherish Koresh's teaching about the seven seals and find in it the possibility of their eternal salvation.

Although the comments of Schneider, Fagan, and Thibodeau indicate that some of his followers could follow, accept, and act on the elaborate developments of Koresh's apocalyptic message, even among his target audience of Seventh-day Adventists Koresh never succeeded in attracting a large number of recruits. His following always remained in the low hundreds. Even that committed group was dramatically shaken by a new light revelation in 1989 that required celibacy of all male followers and reserved all females for mating with Koresh in order to produce children who would inherit an exalted status in the coming Kingdom of God. Apparently Koresh thought that his biological children would fulfill the roles of the 24 elders described in Revelation 4:4 as sitting on their own thrones surrounding the throne of God.[31] Like the new light that Lois Roden proclaimed about the feminine nature of the

divine, Koresh's doctrinal innovation both secured and intensified the loyalty of those who were able to accept it and cost the allegiance of some who could not. Among the latter was the Australian Marc Breault, who would soon be instrumental in spreading damaging information about Koresh to the media and to the United States government.

FROM CONTROVERSY TO ARMED CONFLICT

Up until February 28, 1993, the community at the Mount Carmel Center experienced a relatively uneventful history. Those living at the Center devoted most of their time to Bible Studies and missionary outreach, while they struggled to transform the ramshackle buildings on their property into suitable dwellings. Members performed a variety of tasks to earn enough money to support the community, including operating an automobile body shop and selling guns and other paraphernalia at gun shows. But the center of their lives was the study of the Bible. Although the group kept to itself, members, including Koresh himself, frequently went into Waco and were well-known to many of the citizens. The defections that occurred in the wake of the 1989 new light revelation, however, created persistent animosity between those who left and those who stayed. But even those hostile relationships did not portend the dramatic and ultimately tragic events that were triggered on February 28.[32]

Breault played a pivotal role in the events that led up to February 28. He left Mount Carmel in 1989 after concluding that he could not accept Koresh's scriptural justifications for the new light doctrine that gave him a sexual monopoly over all the women in the group while enforcing celibacy for all the males. After spending a few months in seclusion with his wife, Elizabeth Baranyi, in Australia, Breault emerged convinced that he must put "a stop to Vernon Howell before he ruined too many more lives."[33] Breault's efforts moved in two complementary and sometimes overlapping directions. First, he deftly used the news media to broadcast his version of life inside Mount Carmel. Among other things, he cooperated with Martin King, host of the Australian TV program *A Current Affair* on a segment that offered a "behind the scenes" look at Koresh's teaching and behavior, and then he collaborated with King on a sensationalistic book that was billed on its cover as "a member's chilling, exclusive account of madness and depravity in David Koresh's compound."[34] Second, Breault cooperated with the United States government in various investigations of the Mount Carmel community. He provided sworn testimony damaging to Koresh in a Michigan child custody hearing for Kiri Jewell, whose father petitioned to have her removed from Mount Carmel, where she had been living with her mother. Breault also served as an informant for the BATF in its investigation of whether the Branch Davidians were producing illegally modified firearms.

The BATF began investigating possible firearms violations at Mount Carmel in the spring of 1992, and Breault acknowledged that both he and his wife contributed extensively to the investigation. The central issue was whether legal, semiautomatic weapons were converted into illegal automatic weapons at Mount Carmel. The role

that guns played in life at Mount Carmel remains in dispute. Many members asserted then and now that they had nothing to do with the guns and that the resale of weapons and other military paraphernalia at gun shows was a business conducted by just a few members of the community. On the other hand, Koresh frequently exhorted his Bible students to prepare for the coming climactic battle at Armageddon. At any rate, it is clear that Breault also fueled the BATF investigation.[35]

The fruits of the BATF's efforts are evident in a search and arrest warrant composed by agent Davy Aguilera. The document is fascinating not only for what it reveals about the BATF's suspicions but also for how it shows that polemics of disaffected former members like Breault and other opponents of purportedly dangerous "cults" penetrated its rationale. Its central claim was straightforward enough. Aguilera asserted that Koresh and his followers unlawfully manufactured and possessed machine guns and explosive devices. But woven into its presentation of information directly relevant to weapons charges were substantial prejudicial digressions about Koresh's religious beliefs, his claim to unlimited sexual access to all female members of the community, visits to the Mount Carmel Center from Joyce Sparks of the Texas Department of Human Services concerning possible child abuse, the immigration status of foreign nationals at Mount Carmel, and speculations about Koresh's connections to known drug users. All of the supplementary material was designed to justify the BATF raid by heightening the impression that the Mount Carmel Center was a nest of criminal activity. Aguilera's affidavit does report that Koresh stated that most of the adults did not know of the firearms, but it does not take his statement seriously in building a portrait of Mount Carmel as a lawless community. The hyperbolic language of the warrant decisively shaped the BATF's plans for serving it at the Mount Carmel Center.[36]

Apparently because it anticipated a violent response by the Branch Davidians, the BATF planned a "dynamic entry" to deliver the warrant. On the morning of February 28, 1993, an 80-vehicle convoy, including two cattle trailers packed with 76 heavily armed agents, began the "dynamic entry." Although surviving Branch Davidians and their supporters deny that they initiated the exchange, clearly shots were fired, and the ensuing battle eventually claimed the lives of four agents and six residents of Mount Carmel. Soon after the gunfire died down and the BATF agents and the Branch Davidians, now barricaded inside the Mount Carmel Center, settled into a tense standoff, FBI agents arrived to manage the situation. A 51-day standoff, punctuated frequently in the opening days by intense negotiations, then ensued.

The February 28, 1993, assault unsettled the Branch Davidians' expectations. In some ways it seemed that the forces of "Babylon" had, indeed, begun the apocalyptic battle, but not in Israel where it was anticipated to take place. During the 51-day siege, in addition to striving unfruitfully to explain his theological system to a series of FBI negotiators, Koresh attempted to fit the unfolding events into his scenario of the end. In an April 14 letter to his attorney, Koresh claimed that he had finally received "word from God" that he could write down his message of the seven seals and share it with the world. In that letter Koresh promised to finish his commentary as quickly as he could and then to come out of Mount Carmel to answer any

questions about his actions. The FBI agents in command, however, did not take the offer seriously; the final assault was quickly authorized, and early on the morning of April 19, 1993, the sequence of events that initiated the catastrophic fire commenced. One of the nine people who escaped the flames carried with her a computer diskette of Koresh's unfinished work.[37]

UNDERSTANDING THE STANDOFF

The siege that dramatically forced the Mount Carmel community out of its decades of obscurity was not inspired by theological issues. Although its search and arrest warrant was complicated by extraneous issues and thinly supported at best by the BATF's surveillance of Mount Carmel, its focus was the illegal conversion of weapons. The timing of the raid was hastened by the imminent publication of a critical investigative report by the *Waco Tribune-Herald,* entitled "The Sinful Messiah." In the later stages of their preparations, BATF agents were worried that the group would react negatively to accusations of brainwashing, sexual exploitation, and stockpiling weapons. The BATF's planning and execution of the raid, the FBI's conduct of the standoff and the final assault, and the media's coverage of the ongoing drama were all influenced by powerful stereotypes developed by the American anticult movement over the previous two decades. Building primarily on the example of the 1978 murder-suicide of 914 people at the Peoples Temple Agricultural Mission in Jonestown, Guyana, a loose confederation of aggrieved parents, moral entrepreneurs, concerned mental health professionals, and other sympathizers aggressively marketed the notion that all NRMs or cults were led by dangerously unstable con men who destroyed the mental freedom of their members and could easily lead them to their deaths. The anticult caricatures, aggressively purveyed by Breault and other defectors from the group and their supporters, so thoroughly shaped public and governmental understandings of the Branch Davidians that it still remains difficult to come to a balanced understanding of the siege and its aftermath, even after multiple government, academic, and other investigations, as well as several court cases.[38]

In that context, the question of whether the Branch Davidians illegally converted firearms largely fades into the background. Even if they were, the violation is typically punishable by a simple fine. Also, survivors of Mount Carmel vigorously dispute the claim that they were training for an apocalyptic war. They assert that the weapons were the lucrative hobby of a few members who sold them at gun shows for a profit. The BATF affidavit's assertions about drug manufacturing were totally discredited. But the accusations of child abuse gained increasing support as the extent of Koresh's sexual involvement with young girls came to light. Proper investigation and prosecution of those charges should definitely have taken place. It would, however, involve agencies other than the BATF.

Even in the report developed by the U.S. Department of the Treasury, which oversees the BATF, the agency was severely criticized for both its planning and execution of the initial raid and for its failure to arrest Koresh during his frequent trips off the property. Similarly, although the Department of Justice report was much more

forgiving, many external observers, including some of those engaged by the government to review the events at Mount Carmel, sharply criticized the FBI for failing to take Koresh's religious concerns seriously and for quickly deciding that they were merely "Bible babble." But reorganizations within the FBI, concerted efforts to learn from scholars of religion, and the conduct of subsequent encounters, such as the 1996 Montana Freemen standoff, suggest that the FBI is developing a sensitivity to religious factors in encounters with unconventional groups. On the other hand, the anticult movement seized upon "Waco" and subsequent events, such as the 1995 Aum Shinrikyo attack in Tokyo and the 1997 Heaven's Gate suicides, as further proof that all cults are prone to violence and must be constantly monitored and militantly opposed. In the minds of many, and despite more nuanced analyses, the Branch Davidians were indelibly identified as a "cult" and Koresh stands as the paradigm of the manipulative cult leader who exploited his followers for his own gain.[39]

THE BRANCH DAVIDIAN MOVEMENT AFTER THE DESTRUCTION OF THE MOUNT CARMEL CENTER

Although the April 19, 1993, fire virtually obliterated the Branch Davidian community, several people have tried to keep it alive—each in a very distinctive way. What remains of the Mount Carmel Center became both a memorial and a contested site. The various appropriations, elaborations, and refutations of David Koresh's religious message in the aftermath of the near total destruction of the community that embraced it and the prophet who communicated it to the community suggest both the remarkable persistence of millennial convictions and their impressive mutability. It also points to the sometimes extraordinary volatility of NRMs in the years immediately following the death of a charismatic leader.[40] Even within a religious tradition marked by multiple splinterings throughout its history, the diversity of contemporary claimants to positions of leadership among the Branch Davidians is remarkable.

Though she no longer lives on the property, Amo Paul Bishop Roden, the former wife of George Roden, has abandoned neither her claims to Mount Carmel nor her claims of leadership of the Branch Davidians. She argues that when the majority of the community chose to accept Koresh's leadership rather than that of her former husband George, they "turned their back on the prophetic voice of the church, exactly as Satan planned they would."[41] Drawing on a biblical paradigm, Roden issued a thoroughgoing critique of Koresh and his followers as idolaters: "Koresh, the molten image, is a golden calf to his followers, who are led to forsake God's law by him. He lies down at Mount Carmel in peace, and there he consumes his followers with iniquity."[42] Not content merely to criticize Koresh and implicitly support George Roden's claim to succeed his parents in the leadership of the Branch Davidians, Roden herself claimed divine inspiration. In 1999 she wrote to an anthropologist who interviewed her that

> The message God sends through me just keeps flowing. You did ask me to send the continuance along. I am therefore enclosing "Messiah and Elijah: The Second Coming," the scriptural promise of the announcement of the Second Coming (as a Thief) and the seven Spirits of God. I also have rewritten "Unsealing the Thunders" because I thought the last page was pretty limp. After I wrote it, God showed me that the unsealing of the Book of Daniel was the type and put me in a position to show from both the thunders and the seals that the revelation was to be the meaning of the Bible.[43]

Roden maintained the community's consistent focus on the book of Revelation; both the seven thunders and the seven spirits refer to passages from that text. But she clearly claimed to have a separate, superior, and divinely sanctioned insight into both Revelation and the "meaning of the Bible." Like other Davidians before her, she aimed to provide new light, and like other contenders for leadership within the tradition, she found her own role in the disclosure of the imminent apocalyptic drama to be utterly essential.[44]

Clive Doyle, who survived the fire in which his daughter died, lives in a trailer on the Mount Carmel site and leads a small group of survivors, but the claim of those faithful to Koresh to legal ownership of the property remains unsettled. Despite his own difficult economic circumstances, Doyle helped to erect a small chapel at Mount Carmel and to conduct the annual memorial services. Unlike Roden, Doyle accepted then and continues to accept now the religious claims that Koresh made for himself and about the book of Revelation. In 2003 Doyle told a reporter, "The reason I'm still here is I know what went on and why we were here and I want to explain this to people. I still believe in David. I lost a daughter and a lot of friends, some of whom I'd known for 30 years."[45] Doyle expressed his faith in the imminent end of the world simply and directly to another reporter: "our hopes are that God will intervene prior to the rest of us dying."[46]

From prison, Fagan, who left Mount Carmel during the siege and after a controversial trial is now serving a prison sentence for his actions on February 28, 1993, continued to represent Koreshian orthodoxy in his self-published writings, including most importantly *Mt. Carmel: The Unseen Reality.* Fagan is convinced of Koresh's messianic mission and limits his own contribution to re-presentation and clarification of Koresh's message. Borrowing the language from Revelation 5, Fagan asserted that "to know the seals you're either a servant of the Lamb or the Lamb himself."[47] Accordingly, Fagan conceived his writings not as interpretations of either the Bible or of what Koresh himself preached but literally as re-presentations of an unchanging biblical message. One clear indication of how Fagan conceived his fidelity to both Koresh and the biblical text is that he re-presents the entire text of the book of Revelation in his manuscript, with only minimal commentary. Fagan, through his manuscript, aimed to convince readers that he accurately presented the message of Koresh, which in turn accurately presented the message of Revelation and the entire Bible. In so doing, Fagan gave a more theological expression to Doyle's plainspoken profession of faith in Koresh.[48]

Another imprisoned Branch Davidian, Renos Avraam writing as the "Chosen Vessel," claimed divine approval to develop further Koresh's message of the seven

seals. Appealing to the familiar Adventist concept of "present truth" or new light, the Chosen Vessel emphasized the limitations and inaccuracies of Koresh's message and claimed that his book revealed the necessary new understanding of the imminent end. Like Amo Paul Bishop Roden, the Chosen Vessel appealed to a biblical paradigm for his claim to supercede Koresh's authority. He argued that

> The Lamb and the Chosen Vessel of the remaining Bride are typified by Elijah and Elisha of the past. When Elijah was caught up to God, he left his mantle with Elisha, and Elisha was given a double portion of Elijah's spirit. In the latter day scenario, when the Manchild (*Lamb*) was caught up to god (see Rev. 12:5), the Lamb's wisdom was given in double portion to the Chosen Vessel who is of the Remaining Bride. The chosen Vessel has the same wisdom of Prophecy within him, as he understands both sides of the double sided scroll; the one side which was revealed and fulfilled by the Lamb, and the second side which concerns the remaining Bride's destiny.[49]

As the Chosen Vessel's literary output continued to grow, he became more direct about his relationship to Koresh. One recent text simply asserts that "this Chosen Vessel is the successor to David Koresh. Only the living Chosen Vessel can reveal all Bible prophecies relating to end-time events."[50] The Chosen Vessel now anticipates the predicted apocalypse in March 2012.

Roden, Doyle, Fagan, and the Chosen Vessel retained the apocalyptic expectations that were so central to the Adventist and Branch Davidian traditions, but Roden and the Chosen Vessel claimed insights that eclipsed even Koresh's. The development of Branch Davidian thought and practice after David Koresh is clearly fluid and multifaceted; some wait for Koresh's imminent resurrection, while others put forward innovative interpretations of his teaching about the seven seals. Although some new converts to the message about the seven seals have been made, by all accounts no substantial influx of converts into the movement occurred after 1993. The fate of the Branch Davidian movement remains fragile at best, even as the events at the Mount Carmel Center in 1993 fade from public memory.

Beyond the small circles of surviving and newly converted Branch Davidians and their sympathizers, the destruction of the Mount Carmel Center and the near extinction of the community had other reverberations. Orthodox Seventh-day Adventists reviewed events to see if they could identify why faithful Adventists accepted Koresh as a self-proclaimed messiah. Members of several other NRMs tried to distance themselves and their groups from association with Koresh's abusive leadership in order to avoid public criticism and potential governmental intervention. Extremists who advocate the right to bear arms made the Branch Davidians into symbols of the damaging effects of the United States government's efforts to curtail individual freedoms. Most noteworthy among the latter group was Timothy McVeigh, who was executed in 2001 for his role in the 1995 bombing of the Alfred P. Murrah Federal Building in Oklahoma City, Oklahoma. McVeigh explicitly characterized his actions as revenge for what the government did at Waco. Depicting his actions as retaliation against a government that had far overstepped its boundaries, McVeigh said, "I didn't define the rules of engagement in this conflict.… The rules, if not written down, are defined by the aggressor. It was brutal, no holds barred. Women and

kids were killed at Waco and Ruby Ridge. You put back in [the government's] faces exactly what they're giving out."[51] McVeigh also put his actions into an explicitly apocalyptic context, writing to a friend that "Blood will flow in the streets, Steve. Good vs. Evil. Free Men vs. Socialist Wannabe Slaves. Pray it is not your blood, Steve."[52]

CONCLUSION

At least some of the Branch Davidians continued to live on after the trauma of the destruction of the Mount Carmel Center. Some of the survivors struggled to rebuild their lives and to stay together as a worshiping community despite their radically diminished membership; writing from prison, movement theologians endeavored to keep alive the message of the seven seals even as they contended over what constitutes an adequate interpretation for the present time. For some Seventh-day Adventists, the events at Waco provided a cautionary tale about the consequences of accepting false messiahs. For other NRMs, the destruction of the Mount Carmel Center raised the specter of the awesome power of the state to crush religious innovation. And for the shadowy and overlapping subcultures of self-styled patriots, constitutionalists, militia members, and other denizens of the radical right, the Branch Davidians embodied their worst fears about a rogue government turning its military might against its own citizens. The remaining Branch Davidians continued to voice their own millennial hopes, and now they also serve as a point of reference for the millennial expectations of others.

Christian Identity: An American Millennial Mythology

Philip Lamy

"Christian Identity" is an apocalyptic religion and subculture steeped in racist, anti-Semitic, and millennial mythology. It took root in the United States in the mid-1940s, providing a theological justification for a variety of racist, anti-Semitic, and antigovernment groups in the decades leading up to the year 2000—-the third Christian millennium. Identity is not a well-organized religion with centralized institutions or an identifiable leadership structure, nor is its theology or belief system codified or highly detailed. However, Christian Identity does provide the most unifying theological underpinning for white supremacists, right wing survivalists, antigovernment "patriots," and other American extremist groups. Through its literature, radio programs, videotapes, CDs, and Internet Web sites, Christian Identity serves as a forum for geographically disparate groups such as the Aryan Nations, the Posse Comitatus, the Ku Klux Klan, and the neo-Nazi National Alliance. In addition, some of its adherents have figured in notorious and violent clashes with law enforcement and the federal government, especially during the 1980s and 1990s.

The core beliefs of Christian Identity include the notion that whites, especially those of northwestern European origin, are the direct descendents of the biblical "Tribes of Israel" and thus are God's chosen people. According to Identity theology, those claiming to be Jews are in reality descended from the offspring of Cain, the child of Satan and Eve. Where "white Aryans" are the children of Adam, Jews are the children of the devil. Therefore Identity prescribes a righteous hatred for Jews and a right wing inspired paranoia of world domination by the Jews and other nonwhite, "mud peoples." Christian Identity is a millennialist subculture, focused on the belief that we are living near the "end times" and that the final battle of Armageddon between the forces of good and evil—white "Aryan Israelites" and the demonic Jews of Babylon—is about to begin. Many have moved "off the grid" and formed survivalist family compounds or joined survivalist communities with the hope of surviving Armageddon. Separating themselves from society, and in some cases running afoul of political and legal authorities, has often brought Christian Identity believers

into conflict with law enforcement and government, in some cases with fatal consequences.

HISTORY

Christian Identity's theological roots reach back to mid-nineteenth century Great Britain and to the formulation of the school of religious thought called "British Israelism." Its early proponents included John Wilson, a Scotsman who, in 1840, published the book *Our Israelitish Origins.* Edward Hines, an Englishman, wrote *Identification of the British Nation with Lost Israel* in 1871, elaborating Wilson's ideas. According to Hines, the essence of British Israelism is that among the biblical "Lost Tribes" of the Israelites are the people and cultures of the Aryan race: Anglo-Saxons, Celts, Scandinavians, Germans, and other "white Aryan" cultures. According to Christian Identity, the Jews of history are descended from Mongolian-Turkish "Khazars." Khazars, they allege, derive from "Ashkenazim," one of the two major religious and cultural divisions among Jews, and refer to Central and Eastern European, Yiddish-speaking Jews. The "Sephardim," who settled throughout the Mediterranean and later in Britain and America, they identity with the British Israelites.[1]

According to British Israelism (also Anglo-Israelism), Abraham's son Isaac and his tribe supposedly split from the Davidic state about 1000 BCE and migrated through the centuries to the west and north among the Lost Tribes. Isaac's sons, or "Saxons," finally crossed the Caucasus Mountains (today the Caucasians) that divide the Black and Caspian Seas. Settling in northern Europe, in what is now the British Isles, the Saxons established "British Israel" and believed they were God's chosen people. According to British Israelism, when Europeans colonized (North) America, the "new world" became a holy land as well.

Established by the late Herbert Armstrong, the 70,000-member Worldwide Church of God is the largest church of British Israelism in the United States, with congregations in about 90 nations. A former advertising executive, Armstrong was ambitious and skilled at popularizing the new religion. In the 1950s and 60s millions of Americans read Armstrong's magazine *The Plain Truth,* attended his lectures, and tuned in to his radio show, "The World Tomorrow." Through his meticulous study of the Bible, Armstrong claimed that he had deciphered a code by which formerly hidden biblical truths were revealed to him, including the sacred origin of the Aryan race. Armstrong, and British Israelism in general, held out hope for the Jews, believing that they were half-brothers, and thus were entitled to forgiveness. In addition, he believed, Jews might still convert to Christianity before the return of Christ. Since the 1980s, under the leadership of Joseph Tkach, and later his son, Joseph Tkach Jr., the Worldwide Church of God has undergone major changes in theology, attempting to move closer to orthodox Christianity.[2]

However, among other believers, particularly in the United States and Canada, British Israelism took on an anti-Semitic cast, beginning with The Anglo-Saxon Federation of America, the main British Israelist organization in the United States. Founded in 1930 by Howard Rand, the organization became increasingly anti-

Semitic during the 1930s. Ford Motor Company executive William J. Cameron fueled the British Israel anti-Semitism in the United States as editor of the *Dearborn Independent,* owned and published by Henry Ford. During the 1920s, *The Independent* published stories and editorials stating that Jewish bankers were behind Ford's and the world's business troubles and that a Jewish-led conspiracy was about to plunge the world into economic and political chaos and war.

The myths of demonic and conspiratorial Jews in line with Satan and bent on world domination found expression in Christian Identity. After World War II Christian Identity began to assert its independence from British Israelism and evolved into a distinctly race-centered religion. Early Christian Identity ministers included Wesley Swift, William Potter Gale, and Bertrand Comparet. All were Southern California followers of anti-Semitic political organizer, Gerald K. Smith. In 1946, Swift, a former member of the Ku Klux Klan, gave British Israelism a stronger "identity" theology centered on a racist millennial mythology. In this mythology the white race is sacred and supreme, Jews are demons and the Jewish world conspiracy is real, and a race war that ignites Armageddon is imminent.

In the Garden of Eden, according to Swift, Adam and Eve had two sons, Abel and Seth. Eve was also seduced and impregnated by the devil, whose seed produced Cain. The "two-seed" theology posits Adam as the seedline of the white race and Satan as the seedline of the Jews. Blacks and other "nonwhites" were "mud people," preached Swift, the false starts before God made the pure (white) Adam and Eve. Preservation of racial purity or "identity" was the struggle of the Aryan Israelites, maintained Swift, not maintenance of religious identity. If they hoped to maintain their racial identity, then marriages, or any cooperation between Jews and Christians, or between the "races," were forbidden by God.[3]

Swift held firmly to the veracity of *The Protocols of the Learned Elders of Zion,* the infamous Russian forgery purporting to be the plan for a Jewish led conspiracy to take over the world (see below). For Swift, *The Protocols* "proved" the prophecies of Christian Identity and foreshadowed the battle of Armageddon between Jews and Aryans that would soon begin as the next millennium and the Apocalypse unfolded. Swift founded the Church of Jesus Christ—Christian in the 1940s, a ministry that spread the Identity message. Following Swift's death in 1970, his widow, Lorraine, carried on the Church and ministry until turning it over to Kingdom Identity Ministries in 2002.

In addition to their racist and apocalyptic beliefs, most Identity Christians are strongly antigovernment. First and foremost, they believe, the United States is a "Christian Republic," ruled by Christian Common Law, not state and federal laws. Many refuse to pay taxes, use paper money, or send their children to public schools, all of which they believe are unconstitutional. The belief that the U.S. government is a puppet of the Jewish-led one world government has led Identity Christians to distrust all federal and international political organizations, including the Internal Revenue Service, the Federal Reserve Bank, the World Bank, and the United Nations. According to Christian Identity, sovereign governments, international organizations, and global corporations are falling like dominoes into the hands of the conspirators.

Ultimately, the prophecy of a one-world government controlled by the Jews will be fulfilled, resulting in slavery for the Aryan race and the attempted extermination by Jews of America's Christian heritage.

At this point the apocalyptic battle between white Israelites and demonic Jews will commence. Unlike other millennial Christians, who believe that prior to Armageddon they will be taken up into the heavens during the "Rapture," Identity Christians believe that they will witness and perhaps participate in the battle of Armageddon. This is why many practice "disaster preparedness" and have been linked to the rise of the survivalism, the militia movement, and other paramilitary extremists in the millennialism drenched final decades of twentieth century America.

Christian Identity remains a marginal religion and subculture, concentrated in small, nondenominational churches and communities in areas of the Southwest, the Pacific Northwest, the Ozarks, and the southern Appalachians. New members are sometimes recruited from other racist or anti-Semitic groups and individuals, such as skinheads and prison inmates, and from the economically marginalized.

Given that many are fearful of government and law enforcement or live as survivalists or separatists, Identity followers tend to keep a low profile. Organizations that track extremist groups, such as The Southern Poverty Law Center and the Boston-based Political Research Associates, estimate that between 10,000–100,000 individuals subscribe to Christian Identity. A Southern Poverty Law Center report identified 94 active Christian Identity ministries in 34 states, ranging from small congregations to the large and imposing LaPorte, Colorado, Church of Christ, run by pastor Pete Peters.[4] In addition, Identity ideas have made inroads into American mainstream culture through Internet Web sites like Christian Identity Online and Kingdom Identity Ministries, the subculture's numerous periodicals, and its sometimes spectacular clashes with American law enforcement. Today Christian Identity has also tried to soften its image and rhetoric and has reached out to some Christian fundamentalist churches and conservative political organizations.

Christian Identity weaves together various religious and political mythologies to forge its uniquely American millennial theology. Among the more significant are myths regarding the demonic nature of the Jews and the Jewish-led conspiracy to control the world, millennial visions of the end times and their role in it, and Identity's relationship to survivalism.

THE MYTH OF THE JEWISH WORLD CONSPIRACY

> I know thy works, and tribulations, and poverty, but thou art rich; and I know the blasphemy of them that say they are Jews, and are not, but are a synagogue of Satan (Rev. 3:9 King James Version).

The demonology of the Jews is at the core of Christian Identity's theology of white Aryan supremacy. It is worth exploring the historical roots of this demonology from which Christian Identity draws so much of its racist millennial mythology. Since the Diaspora—the centuries-long scattering of the Jews outside of the Holy

Land—hostility against the Jews has been ubiquitous. For centuries the foremost allegation against the Jews was that they were the "crucifiers of Christ." One of the most important Christian thinkers of his time, Saint Augustine of Hippo (354–430), argued that in refusing to accept Jesus as the messiah, the Jews lost God's favor. Even more serious was the allegation that the Jews were aligned with the Antichrist, the "false prophet" identified in the biblical *Book of Revelation.* According to *Revelation* the Antichrist would rule the world in the years prior to the second coming of Christ. Catholic priests who believed these apocalyptic stories preached to their congregants that the Antichrist would be a Jew. Twelfth century folktales of Jewish deviltry told how the Jews stole and sacrificed Christian children to their God during Passover, and throughout the Crusades the Jews were seen as the servants of Satan. While it is true that popes and bishops condemned these fictions, the lower clergy continued to propagate them, and in the end they became generally believed by the populace, surviving as folk mythology. As Christianity spread throughout Europe, the mythology of the "Synagogue of Satan" became a powerful metaphor for the Jews. In the eighteenth and nineteenth centuries the myths of the demonic Jew survived in Eastern Europe and Poland, and by the twentieth century, anti-Semitism in Europe culminated in the 1930s with the rise of Nazi Germany and Adolph Hitler's "Final Solution."

> It is contended that nations can rise in arms against us if our plans are discovered prematurely; but in anticipation of this we (the Elders of Zion) can rely upon throwing into action such a formidable force as will make even the bravest of men shudder. By then metropolitan railways and underground passages will be constructed in all cities … (and) subterranean places (where) we will explode all the cities of the world, together with their institutions and documents (9th "Protocol" of the *Protocols of the Learned Elders of Zion*).[5]

Perhaps the most influential forgery concerning world conspiracy is *The Protocols of the Learned Elders of Zion*—the supposed conspiracy devised by a cabal of powerful and secretive Jewish elders to seize world power. Scholars have traced the forgery to the Russian secret police, which created *The Protocols* to discredit adversaries of the Russian czar when the Bolshevik Revolution began in 1917. Allegedly written by Jewish "elders," *The Protocols* were supposedly a record of meetings held at Basel, Switzerland, in 1897, at the time of the first Zionist Congress, when Jews and Freemasons hatched the plot to undermine Christianity and gain control of world power. According to the *Protocols,* through a global network of disguised national and international agencies, this secret Jewish cabal controls governments, the media, public opinion, banks, and economic development. In the event that the conspiracy was detected or the insurrection failed, all of Europe's major cities were to be destroyed.

The Russian newspaper *Znamia (Banner)* published an abridged version of *The Protocols* in 1903 and then again in 1905. Subsequently translated into German, French, English, and other languages, *The Protocols* were disseminated to millions of readers during the first three decades of the twentieth century, becoming a classic of anti-Semitic propaganda.[6]

Hitler and his Nazi Party promoted the myth of the Jewish world conspiracy during their rise to power in the 1930s. Writing of "world Jewry" with the zeal of a prophet, Hitler was quite familiar with biblical apocalyptic texts and *The Protocols.* "The Jew goes his fateful way," wrote Hitler in his biography, *Mein Kampf* (*My Struggle*), "until the day when another power stands up against him and in a mighty struggle casts him, the heaven-stormer, back to Lucifer."[7] The Nazis used *The Protocols* and the mythology of the Jewish world conspiracy to generate popular support for Hitler and his party. At the same time, the extermination of the Jews was seen in mythical terms, as a central chapter in the evolving story of the Aryan Race and the Third Reich.

American industrialist Henry Ford both believed in and promoted *The Protocols* in his newspaper, *The Dearborn Independent.* Often referenced as evidence of a Jewish deception, *The Independent* ran a series on *The Protocols* in 1920, entitled "The International Jew: The World's Foremost Problem," which was distributed throughout Michigan and in every Ford dealership across the country. Ford alleged that internationalist Jews were rapidly gaining control of global political and economic institutions and were a major threat to the United States. Ford's biographers note that the same man who helped to create the modern world held a romantic notion of a preindustrialized bucolic past. He blamed the Jews, ironically, for destroying that past, when, in fact, his industrial innovations and achievements did more to erase a bygone rural utopia than all the supposed Jewish cabalists together. A libel suit that could have ruined him forced Ford to make a public apology in 1927, admitting that *The Protocols* were fictitious.

Until his death in 1947, Ford held firmly to the mythology of Jewish world conspiracy and the imminent collapse of western culture and Christianity. It may be that Ford issued the public admission to placate the public, and it also may be that true believers (like Ford) held fast to their convictions in spite of evidence to the contrary. While deemed fraudulent by historians, *The Protocols of the Learned Elders of Zion* has continued to serve as an excuse and justification for anti-Semitic beliefs. Not surprisingly, *The Protocols* found their way into the sermons, book catalogs, and Web sites of Christian identity. For Identity followers, the Jewish conspiracy is close to achieving its aims, at least until the day when the Aryan race will take on the Synagogue of Satan in the battle of Armageddon.

IDENTITY AND THE MILLENNIAL MYTH

The apocalyptic prophecy of Christian identity derives in part from the millennial myth, whose origins can be found among some of the oldest Hebrew and Christian scriptures, especially those concerning the events leading up to and including the end of the world. The biblical *Apocalypse,* or *Revelation to Saint John the Divine,* is the most famous example of the millennial myth. *Revelation* was written at a time when the new Christian church was under attack for refusing to show reverence for deified Roman emperor Domitian, around 95 CE (Christian Era). *Revelation* was later canonized as the final book of the New Testament in the Christian Bible. What

makes *Revelation* millennial is that its prophecies are "apocalyptic"—about the "end times."

The Roman persecution of Christians is cast by John, the book's author, as the beginning of the final war between the forces of good and evil. As Hebrew prophets had written in the past, John details a series of terrible "tribulations" that will befall the world, climaxing in the rise of the "False Prophet" or Antichrist. Accompanied by an army of Christian saints at His "Second Coming," Jesus Christ the Messiah defeats the Antichrist, brings salvation for true believers, and institutes a new heaven on earth for 1000 years of spiritual bliss—the long prophesied Millennium.

Revelation is a grand myth, in that it provides the "big picture" of human history, proclaiming that there are holy beings guiding and directing human behavior and history. Written in a coded and ambiguous style and language, presumably for its early Christian audience, the millennial mythology of *Revelation* adapts easily, though erratically, to changing historical times and events. Its very ambiguity has allowed multiple, often conflicting interpretations to take root and spread in a great variety of social, cultural or historical settings.[8]

Throughout its history the millennial myth has inspired and supported the development of revolutionary, utopian, and apocalyptic movements. From the Crusades to the Reformation, and from the World Wars to the Cold War, the millennial myth has been used to explain and guide people, including leaders and nations, through dramatically changing times or disastrous events.

American history and culture is steeped in millennial mythology as well. In the American millennial myth Americans are a chosen people and the United States is a holy land. From the nation's manifest destiny to its political demonology, the millennial myth has molded the American character and, at times, American history as well. Historians believe that Columbus's discovery and exploration of the New World was guided in large part by apocalyptic prophecy. The "fire and brimstone" sermons of Puritan ministers were constructed around the stark apocalyptic imagery of the King James Bible. From the demonization of Native American "savages" during the westward movement of European Americans, to America's "mission" to save the world for freedom and democracy, the nation's history has been influenced by a millennial mythology rooted in Judeo-Christian apocalyptic scripture.[9]

Between 1970 and 2000 there was a revitalization of apocalyptic belief and millennial movements in the United States, which continues to the present. From the post-1960s Aquarian Age came the New Age movement, intergalactic messiahs, and the Harmonic Convergence. With the rise of the "religious right" came an "awakening" of fundamentalist and evangelical Christianity. In the wake of America's loss in Vietnam came "secular millennialists" like militias, survivalists, and antigovernment extremists.[10]

Some of the more notorious millennial groups included messianic movements like the survivalist-oriented Branch Davidians, led by self-proclaimed messiah, David Koresh; the Heaven's Gate UFO cult, whose members committed group suicide in anticipation of the alien messiah; and Aum Shinrikyo, the millennial cult linked to the poison gas attacks in the subways of Tokyo in March 1995. The apocalyptic

rhetoric and actions of militant Islamic groups like Al Qaida has been noted in the attack on the United States on September 11, 2001, and in militant Islam's holy war against western Christendom and Zionist Jews.[11] Several events have converged to create the resurgence of millennialism during this era. These include widespread social change, globalization, and the turn of the second millennium—important historical changes have always driven the millennial myth.

Christian Identity was another of the more bizarre and dangerous manifestations of late twentieth century American millennialism. The Identity millennial mythology is constructed around tales of demonic Jews, global conspiracies, survivalism, and the approach of Armageddon. The Identity Apocalypse will climax in a race war between the messiah and his white Christian followers against the Antichrist, most likely a Jew, who along with his Jewish armies and teeming "mud peoples" will ultimately be defeated. In any event, they hope to survive Armageddon. [12]

It is perhaps not surprising that Christian Identity would find meaning, as well as a means to take action, in the subculture of survivalism, another site where late twentieth century visions of apocalypse, both sacred and secular, were being manifested. Stripped of religious connotation, survivalism addresses the physical survival of any number of major natural and societal disasters, through crisis relocation, the stockpiling of food and weapons, and the development of survival strategies. In breaking away from society and becoming self-sufficient, survivalists believe they are prepared to survive the coming devastations, whether caused by nature, humankind, or God. Many survivalists are convinced that the nation and the world are on the verge of collapse, and so they have taken steps to prepare for its imminent decline.

Many are distrustful of the federal government and fearful of "globalization," and they are convinced that a global "readjustment" is coming. Unlike Christian Identity, most survivalists are not racists and anti-Semites. Nor are they ready to take violent action against government and law enforcement. While survivalists may be viewed as "secular millennialists," an exaggerated "boy scout" philosophy of "always be prepared" seems to define the character of many members of the subculture.[13]

Filtered through the prism of Christian Identity, survivalism stands for more than simply "being prepared." Like other separatists, some Identity survivalists have decided to withdraw from society as much as possible and to become self-sufficient, living away from what they perceive as a dangerously intrusive and deteriorating society and world. Part of Identity survivalism includes stockpiling weapons, both to protect themselves from intrusive law enforcement, and to participate, quite possibly, in the "end times" events, including the massive race war that Identity theology prophesies will occur. Survivalism offers Identity Christians a plan of action and a chance at "salvation" by surviving Armageddon and perhaps fighting at the side of Christ. Christian Identity fuses survivalism with its racist and anti-Semitic millennial beliefs to produce a fascinating though hateful and volatile American millennial mythology.

It is unclear how many Americans are survivalists, or to what degree survivalism is practiced, especially since concealment of one's "cache" and identity is central to survivalist practice. Federal agencies, like the Federal Bureau of Investigation (FBI) and

the Bureau of Alcohol, Tobacco and Firearms (BATF), and private groups, like the Southern Poverty Law Center and the Anti Defamation League, keep track of the movements of extremist paramilitary groups of the "survivalist right" such as the Ku Klux Klan, Aryan Nations, the Posse Comitatus, and other racist or antigovernment extremists stimulated by Christian Identity.

CONFRONTATION WITH CHRISTIAN IDENTITY

In the 1970s and 1980s the myth of the Jewish-led conspiracy, and copies of *The Protocols* themselves, resurfaced in the literature of Christian Identity and the "survivalist right." A farm crisis in the American heartland, rising unemployment, and a growing millennialism, fueled the evolution of right-wing Christian survivalist groups and communities, especially across the agrarian and rural areas of the country. Spewing the Identity rhetoric of the Jewish world conspiracy as the root of America's problems, some of these groups became linked to paramilitary and survivalist groups, the Ku Klux Klan, and numerous small, shadowy groups of the survivalist right.[14] With the rise of this new and volatile millennial movement came the rekindling of dormant white supremacy in the United States and further and potentially violent expressions of the American millennial myth.

The Posse Comitatus is perhaps the most investigated organization of the survivalist right and one of the earlier Christian Identity influenced groups to gain attention from the public and the government. An American neo-Nazi organization called the "Silver Shirts" gave birth to the Posse in the late 1960s. The *Posse Comitatus Act of 1878* provides the political and theological basis for the contemporary Posse's world view. Passed in the wake of the Civil War, the *Posse Comitatus Act*, in part, restricted the government's use of the Army (later, the Air Force) to enforce domestic laws except where expressly authorized by the Constitution (which they believe is God's law) or Congress. The Posse interpret this to mean that no American is bound to the legal authority of anyone higher that a county sheriff. Many go further, refusing to pay federal taxes, purchase an automobile license, or vote in national elections.

Specifically, they hold that the Act is designed to prevent the military from intervening in local police matters or enforcing domestic laws. The Identity Montana Freemen, who held to the *Posse Comitatus Act,* tried to use constitutional analysis and "common law" procedures and courts to sanction their flouting of local, state, and federal laws in their attempt to create a separatist and autonomous "township" in the spring 1996 standoff with the FBI.

Employing Identity theology, the Posse believes that God gave the Constitution to the nation's founders. Others claim that all Amendments enacted after the Bill of Rights are unconstitutional because they were endorsed and supported by illegal legislative bodies that were doing the bidding of the Jewish-led conspiracy. Particularly abhorrent to Posse members is the Sixteenth Amendment, which allows the national government to tax a personal income. To the Posse, the income tax pays for and justifies the conspiracy. Wealthy and powerful families like the Rockefellers are viewed by the Posse and other Identity Christians as the "Money Czars"—the

major financiers of the new world government. For example, in Little Rock, Arkansas, in 1975 the FBI foiled an assassination attempt of Vice President Nelson Rockefeller by Posse Comitatus members.

One of the more spectacular incidents involving the Posse occurred during the manhunt for Posse member Gordon Kahl, a North Dakota tax protester, who became a martyr for the Posse, Christian Identity, and others on the survivalist right. Kahl was imprisoned for failure to file his federal income taxes and for his efforts to promote tax resistance. Upon release, Kahl vowed never to allow himself to be arrested again and continued to refuse paying his taxes or cooperating with the government during his parole.

In February 1983 six U.S. Marshals attempted to arrest Kahl near his hometown of Medina, North Dakota, on the misdemeanor charge of failing to meet his parole officer. A shootout erupted and two U.S. Marshals were killed. Kahl escaped and led federal law enforcers on a manhunt. During the manhunt, Kahl sent letters to the newspaper *The Fargo Forum* defending his actions and blamed the "Jewish-Masonic-Communist Synagogue of Satan," for his troubles. Federal agents tracked Kahl to Smithville, Arkansas, where on June 3, 1983, Kahl's battle with the "forces of darkness" ended. A local sheriff was shot and killed by Kahl as he tried to enter a house where Kahl was hiding out. A gunfight ensued with local police and U.S. Marshals. Kahl's defenders argue that members of an FBI swat team poured diesel fuel into the house's air vent on the roof, causing the house to catch fire and burn for over two hours while the gunfight continued. Kahl's charred remains were later found inside the house.[15]

Perhaps the most infamous Christian Identity organization was The Silent Brotherhood, responsible for a number of robberies, killings, and shootouts with law enforcement in the 1970s and 1980s. But they are best known for their assassination of Alan Berg, a controversial talk radio personality in Denver in the early 1980s. Among Berg's listeners were neo-Nazis, white supremacists, "John Birches," and survivalists, who called at every opportunity to rant about government-funded abortions and homosexual rights. They ridiculed "women's libbers" like Jane Fonda and "liberal pansies" like Senator Ted Kennedy. They argued against immigration and for "Americans first."

They blamed "Jewish bankers" like the Rothschilds, and the "Zionist Occupation Government" in Israel for the economic problems in the United States, as well as the decline of Western Christian civilization in general. Callers also argued that the Jewish Holocaust was a hoax, perpetrated by the Jews in an effort to gain sympathy for their Zionist cause and to discredit the supremacy of the Germans and the larger white race. Some callers put an apocalyptic spin on their arguments, reciting the doctrine of Christian Identity and stating that they belonged to organizations like the Aryan Nations or the Covenant, the Sword, and the Arm of the Lord, or dozens of other small, obscure groups with few members and little influence.

Berg confronted them all; they became his stock in trade. Among those who took Berg's taunts seriously was Robert Jay Matthews, the 31-year-old founder of the Identity inspired *Bruders Schweigen,* or the Silent Brotherhood. The group engaged

in a string of robberies in the 1980s to raise money to help build and maintain their organization. Motivated and justified by the anti-Semitism and apocalyptic beliefs of Christian Identity, the Silent Brotherhood assassinated Berg on the night of June 18, 1984, as Berg was returning home from dinner. Thirteen bullets from an automatic MAC-10 pistol hit Berg, who died instantly.[16]

The shootout at Ruby Ridge, involving Christian Identity follower Randy Weaver, left an indelible mark on the survivalist right and became a rallying cry for antigovernment groups across the United States. Weaver, a 44-year-old Identity survivalist, was suspicious of all government agencies, including law enforcement, the courts, the public schools, and the Internal Revenue Service (IRS). The main threats to the United States, according to Weaver, were Jews, liberals, and "internationalists." In preparing for the collapse of society and the unraveling of the monetary system, Weaver and his son stockpiled guns and explosives and frequently engaged in target practice on their sprawling ranch home, angering neighbors and attracting the attention of law enforcement.

In the process of purchasing and stockpiling weapons, Weaver was caught in an FBI sting operation involving illegal weapons. Since April 1990, when he ignored a court summons to answer for those violations, Weaver was a fugitive from justice. Along with his wife, four children, and a friend, Weaver withdrew to his mountain retreat for the next 18 months. He swore to oppose any government intrusion on his property, even while a warrant for his arrest had been turned over to the U.S. Marshals. The Marshals devised plans for a possible assault, yet for several months they tried to end the standoff through negotiations. On August 21, 1992, the Marshals attempted to forcibly execute their arrest warrant, prompting a gunfight in which a marshal and Weaver's 13-year-old son Samuel were killed.

The standoff continued into the next day, as agents of the FBI took command. Another shootout ensued between Weaver, family friend Kevin Harris, and federal sharpshooters. Tragically, Weaver's wife Vicky was shot and killed by an FBI marksman as she stood in a doorway holding her infant daughter. Though wounded in the gunfight, Weaver continued to resist until the FBI granted his request for a negotiator—long-time friend, former Green Beret, and fellow Identity Christian, James "Bo" Gritz. A one time third-party presidential candidate and among the most decorated veterans of the Vietnam War, Gritz is rumored to have been the model for Sylvester Stallone's character in the Rambo films.

While complaining to Gritz that he would never get a fair trial in the country's "Babylon court," Weaver finally gave up. Convicted of a misdemeanor for failure to appear before a judge, all other charges were dropped, including the murders of federal officers and the original weapons' charge. Weaver's lawyers convinced a federal jury that the BATF had illegally entrapped their client. The court awarded Weaver and his surviving family $3.1 million for the wrongful deaths of Vicky and Samuel Weaver.[17]

The "attack on Ruby Ridge" became a rallying cry for Christian Identity and the survivalist right, and it served to pump new life into old antigovernment groups like the Christian Patriot Movement and emerging paramilitary groups like the militias.

These groups had been warning of the increasing militarization of law enforcement and the government's willingness to use it against its own citizens. Ruby Ridge, they warned, was only the beginning.

Inspired by Christian Identity and the rise of the survivalist right, other extremist individuals and groups found an opportunity to promote their racist, anti-Semitic, and antigovernment beliefs. Founded in 1957 by Willis Carto, the Liberty Lobby was a new "populist party" that challenged the "internationalist" government in Washington and promoted the values of the organization, its members, and its Identity director. With over 100,000 readers by the mid-1980s, the weekly magazine, *The Spotlight,* expressed the views and strategies of the Liberty Lobby, its parent organization. Besides accounts of government deception and global conspiracy, the magazine featured heartrending stories of the plight of working class Americans. If elected to office, members of the Liberty Party would seek to abolish the IRS, end aid to Israel, and reveal the Holocaust as a hoax.

Since 1993, Carto and the organizations he created and controls, have been involved in a bitter and costly legal and public relations dispute with the Institute for Historical Review, a revisionist publisher with which Carto and his wife were once affiliated. The Institute sued the Cartos after evidence was discovered showing that they embezzled funds from the organization, an accusation later proven in court. The Liberty Lobby and *The Spotlight* have since gone out of business.

Richard Girnt Butler founded the Aryan Nations (also Aryan National Alliance) in 1974 as the political wing of the Christian Identity Church created by Wesley Swift. In the racial strife and farm crisis of the 1970s and 1980s Butler saw the Jewish-led conspiracy and the Antichrist at the heart of social and economic problems in the United States. Pastor of an Idaho-based Church of Jesus Christ–Christian until his death in 2004 at the age of 86, Butler established his church on a 20-acre compound in the vast woods of Northern Idaho on Hayden Lake. With meeting halls, outdoor facilities, a media center, and publishing house, the Hayden Lake Church was home to the annual Aryan Nations World Congress until 2001.

The Hayden Lake Church of Jesus Christ–Christian went bankrupt in 2000, after losing a lawsuit to Victoria and Jason Keenan, who were attacked by Aryan Nations Guards in 1999. The court awarded the Keenans $6.3 million, as well as the Hayden Lake property and all the organization's intellectual property in 2001. With the loss of its leader and its headquarters, the Aryan Nations has decentralized into local and regional groups. The new Aryan Nations World Headquarters and its greatest concentration of adherents now exists in Potter County, Pennsylvania, under the leadership of August Kreis.[18]

Many of these racist and anti-Semitic groups also subscribe to apocalyptic and survivalist beliefs as both practical and spiritual pursuits. "Christian survivalists" like James Ellison, and members of the Covenant, Sword, and Arm of the Lord (CSA), believed they were living in the time of the Apocalypse. Like many survivalists, CSA members saw the world spinning out of control, and civil and global wars would define the future. To survive the coming devastation and societal collapse, they preached "disaster preparedness"—the mantra of survivalism. The group

believed that Armageddon would begin with nuclear war and quickly move to a race war. The Messiah would then call on CSA soldiers to fight with him during these final battles to initiate the "white" Christian Millennium.

The more militant segments of the Posse Comitatus, the Ku Klux Klan, Aryan Nation, and others have openly advocated a race war, refusing to participate in what they regard as an illegitimate and "unconstitutional" political system. Their goal is to help bring the "system" down. Since the collapse of the entire social, political, and economic system is imminent, it is better to help the system collapse sooner and prepare to survive the coming years of "tribulation" later.

The details of that collapse can be found in the novel *The Turner Diaries,* written in 1978 by Andrew McDonald, under the pseudonym William Pierce, a member of the neo-Nazi National Alliance. The book has become to segments of the survivalist right what *The Protocols of the Learned Elders of Zion* were to anti-Semites of the 1930s and 1940s. The fictional story begins in 1991 when a war begins between forces of the Zionist Occupied Government (ZOG) in Washington and white Christian guerrilla warriors. As civil war erupts in the United States, revolutionaries destroy public buildings and utilities, poison reservoirs, and attack the representatives of ZOG, including federal officials, policemen, and politicians. Ultimately, they overthrow the government and purge the country of all Jews and minorities. Whites of mixed marriages and people of mixed race are hanged and draped with signs saying, "They defiled their race." Finally Israel is destroyed with the nuclear arsenal inherited from ZOG.[19]

According to federal authorities, *The Turner Diaries* may have provided inspiration and direction for Timothy McVeigh and Terry Nichols in the bombing of the federal office building in Oklahoma City in 1995. In the book, white Christian guerrillas bomb a federal building in a manner similar to the Oklahoma City bombing. In any event, there is little doubt that the Oklahoma City bombers were familiar with the racist and apocalyptic beliefs of organizations like Christian Identity and the National Alliance.

The National Alliance also operates National Vanguard Books (NVB), a publishing house for Christian Identity literature and electronic media, whose catalog includes *The Turner Diaries* among its listings. On the inside cover of the 1990 catalog it states: "National Vanguard Books … (are) providers of knowledge and inspiration for the survival of the White race."[20] The catalog offers a free bumper sticker that reads, "Earth's Most Endangered Species: The White Race. Help Preserve It." NVB provides books on a variety of subjects, including European prehistory, archaeology, religion, race, war, and international politics. Alongside Charles Darwin's *Origin of the Species* and *Bullfinch's Mythology* can be found titles like *White Power, Race and Reality,* and *The Armageddon Network.* There is also an entire section on the Jewish world conspiracy, with books such as *The Zionist Connection, Thirteenth Tribe,* and *The World Conquerors.*

NVB has a children's books section, with books "chosen to serve a racially constructive purpose by providing White role models, instilling White values, (and) building a sense of White identity through the teaching of White history and

legend." Featured books include Lucy Maud Montgomery's *Anne of Green Gables* ("portrays White life at its best), *Aesop' Fables* ("1912 edition has escaped 'sanitizing' by racial equalizers"), and J.R.R. Tolkien's *Lord of the Rings* ("draws heavily on pre-Christian White legend and mythology").[21]

In recent years the Liberty Lobby, the National Agricultural Press Association, and other groups who call themselves "Christian Patriots," have attempted to soften their racist and violent rhetoric, hoping to attract more mainstream audiences and political legitimacy. Patriotic, Christian, and wrapped in the American flag, they use politically correct language to make their points, preferring to speak of "globalists," "white rights," and "Christian heritage." They encourage their followers to "get involved" at the grass roots, to run for local office, or to serve on local school boards. Some have formed political action committees to raise funds and support candidates who will enact legislation to abolish the IRS and the Federal Reserve, pull the United States out of the United Nations, and establish the public practice and expression of America's Christian heritage.

Into the 1990s, Christian Identity recruiters achieved some success attracting racist skinheads. Generally white, uneducated, and unemployed, American skinheads are the violent and racist spin-offs of the British punk and skinhead subculture of the 1970s and 1980s. Blaming their problems on affirmative action and immigration, skinheads were involved in numerous violent attacks on blacks, immigrants, gays, and other minorities in the United States and Europe in the past two decades. While not easily organized and prone to favor beer drinking and all night partying above all else, skinheads have found sympathy and support from some in the Identity movement.

At the turn of the millennium, Christian Identity remains a small, largely unorganized extremist religion and subculture, existing on the fringes of society while anticipating the rise of the Jewish Antichrist and the onset of Armageddon. In addition to the shadowy Identity survivalists, the subculture is kept alive in numerous Identity churches, voluminous literature, and several Internet Web sites. Identity "churches" on the Internet in recent years include America's Promise Ministries, Stone Kingdom Ministries, and Kingdom Identity Ministries, now home to Wesley Swift's Church of Jesus Christ–Christian. In addition, numerous Klan Web sites commonly provide information on Christian Identity, some proclaiming it their religion.

Identity religious groups use the Internet to market their ideas and products and recruit new members for their local churches and organizations. The Stone Kingdom Ministries Web site lists hundreds of Christian Identity books and tracts, Bible study tapes, music CDs, bumper stickers, T-shirts, decals, and other merchandise. At the Kingdom Identity Ministries Web site, Identity-based books for children are available, as well as a "Certificate in Christian Education" for graduates in a Christian Identity online "college."[22]

Christian Identity continues to exist as a fringe subculture in the sea of contemporary American extremism and millennialism. Whatever their differences, many in this movement are tightly bound by Christian Identity's ideological and theological

threads. While fueling racial hatred and millennial fears, and in some cases inspiring violence and violent government rebuke, Christian Identity has not generated a unified political and social movement. In the years following Waco, Oklahoma City, and 9/11, the American justice system and federal law enforcement have increased surveillance and arrests of extremists and disrupted the movement of many right-wing, antigovernment groups. In addition, the activities of Identity followers and other violent racists stimulated an interest in "hate crimes"—crimes directed at individuals or groups because of their religion, race, ethnicity, politics, or sexual preference. Morris Dees of the Southern Poverty Law Center has successfully sued the Klan and several other racist organizations since the 1990s, thereby severely weakening their financial status and ability to organize.

CONCLUSION

The millennial myth continues to evolve in American culture and throughout the world. In the past, millennial movements often arose during periods of intense social change, natural disaster, or the end of an age or an era. In many ways modern millennial movements like Christian Identity reflect the major social changes that the United States and the entire world experienced at the close of the second millennium CE and the beginning of the third. They reflect the "tribulations" and "plagues" of rapid and widespread social, cultural, and technological changes that are transforming the world into a "new world order" in the rapidly globalizing twenty-first century. The dramatic flourishing of millennial movements at this period in history demonstrates the power of grand myths like the millennial myth to evolve and influence, sometimes in violent ways, individuals, groups, and even nations.

In many ways this was the case in the United States during the zenith of Christian Identity from 1970 to 2000, when it became a seedbed for the fascist millennial dreams of a new Christian white supremacy. In Ruby Ridge, Waco, and Oklahoma City, we saw the crystallization of modern apocalyptic fears translated into acts of violence and destruction in a kind of self-fulfilling prophecy. Today the fears of Identity Christians have not abated, as they point to the problem of uncontained immigration, the loss of American jobs to developing nations, wars in the Middle East, and the threat of international terrorism. From the Jews the demonology has extended to the American government, to organizations connected with the international order, and to the Islamic world. "Globalization" is now a code word for Babylon—the doomed center of the Antichrist's worldly power.

Perhaps the greatest danger that Christian identity and other potentially violent forms of millennialism pose to society is their self-fulfilling prophecy. When you believe that the prophecies of your millennial mythology are both righteous and imminent, and that you are justified in participating in those prophecies, then the potential for violence increases dramatically. We saw this in the many instances where Identity Christians, acting on their beliefs through separation, resistance, and violence, legitimate the violent acts against them with more violent acts, often resulting in the death and destruction of themselves and others.

Judaism and Christianity Unite!: The Unique Culture of Messianic Judaism

Yaakov Ariel

In the late 1960s and 1970s, both Jews and Christians in the United States were surprised to see the rise of a vigorous movement of Jewish Christians or Christian Jews. For many observers such a combination seemed like an oxymoron, because they saw the two faiths as completely separate from each other. While Christianity started in the first century of the Common Era as a Jewish group, it quickly separated from Judaism and claimed to replace it; ever since the relationship between the two traditions has often been strained. But in the twentieth century groups of young Jews claimed that they had overcome the historical differences between the two religions and amalgamated Jewish identity and customs with the Christian faith. Attempting to overcome the historical differences between the two religious traditions, these Jewish converts to Christianity define themselves as Messianic Jews, thus pointing to the movement's ideology of returning to the roots of the Christian faith. To some Jews and Christians such groups are a curiosity, a symptom of "crazy times," and they view the new movement as they look upon other New Religious Movements (NRMs), as a "cult." But others accept the new movement of Messianic Jews.

Messianic Judaism developed throughout the period from the 1980s through 2000s into a large movement. By the early 2000s, there were about 400 Messianic congregations making a noticeable presence on the American religious scene. There are currently Messianic congregations or fellowships in virtually every city in the United States, wherever a Jewish community of a few hundred families or more exists. Whereas previously membership was almost insignificant in comparison to the larger Jewish population, the size of the current movement is larger than that of Reconstructionist Judaism. From both a Jewish and a Christian point of view, Messianic Judaism signified a new development in the history of their faith.

How the movement struggled to do justice to the two religious traditions and the challenges it faced can shed light on the relationship between the two faiths. Further, it can point to the dynamics of an NRM at the turn of the twenty-first century that defies previous conventions and establishes new ones instead.

THE ROOTS OF A NEW MOVEMENT

Even before the rise of Messianic Judaism, there were groups that promoted the creation of congregations of Jewish believers in Jesus. The roots of this ideology are in previous attempts to promote the idea that Jews who embraced the Christian faith could still view themselves as Jewish and even establish their own communities. Eighteenth and nineteenth century Pietist and Evangelical missions to the Jews in Central Europe, Great Britain, and the United States were the first Christian bodies to create an ideology that made being *both* Jewish and Christian possible. Their missions promoted Jewish symbols, such as the Star of David or the Menorah, and advocated the position that accepting the Christian faith did not contradict retention of Jewish identity.[1]

Abandoning traditional Christian claims to have inherited God's promises to Israel, such Pietists and Evangelicals were motivated by a biblical-Messianic premillennialist view that considered the Jews to be the Chosen People and heirs to the covenant between God and Israel. In addition to faith in Jesus's Messiahship, Pietists and Evangelicals held to a messianic faith in the imminent arrival of Jesus to redeem earth. This premillenialism inspired their missions, offering further incentive for evangelizing the Jews.[2] Dispensational premillennialism, the dominant Christian messianic faith in our generation, remains a central theological element of Jewish Christian groups, energizing them for further evangelism and recruiting more Jews to form congregations of Jewish Christians.

In the nineteenth century many attempts were made in the United States to create Hebrew Christian Brotherhoods, designed as centers for Jews who converted to Christianity. But such experiments were short-lived. The number of American Jewish converts was small, and the few Jews who converted felt no need to join the brotherhoods. Jewish converts established their own organization in Great Britain as early as 1860 and in the United States in 1915.[3] Most members of these Hebrew Christian organizations were active missionaries or ministers in various Protestant churches, and their willingness to create separate Jewish Christian congregations was limited.[4]

In the late nineteenth century Joseph Rabinowitz (1837–1899), a Zionist activist who converted to Christianity, directed a congregation of Christian Jews in Kishinef, which at that time was part of Russia. The London-based Mildmay Mission to the Jews sponsored this experiment.[5] Rabinowitz's center was known among American missionaries, who praised his work and invited him to evangelize in the United States. In the early 1890s, the Hope of Israel mission established a congregation of Jewish converts to Christianity in the Lower East Side of New York City. This effort succeeded because the mission's directors, Arno Gaebelein and his deputy Ernest Stroeter, believed that Jews who accepted Christianity had the right to observe the Jewish Law.[6] However, many of the early attempts at building Jewish congregations were short-lived. Gaebelein gave up on the idea of separate Jewish Christian congregations and disbanded his group. Rabinowitz's congregation in Kishinef dissolved following his death. The Christian evangelical community as a whole did not see a particular merit in encouraging the establishment of Jewish Christian communities.

For Christians, "Judaizing" was traditionally considered heresy, and many Christians were alarmed at "Judaizing tendencies" and had difficulty relating to the new Jewish congregations as legitimate churches. The converts, for their part, were often afraid that the authenticity of their conversions was suspected by Christians, and generally they joined non-Jewish churches.[7] Even those converts who did wish to congregate with fellow Jews were reluctant to do so since they did not feel that their Protestant environment approved of separate communities of Jewish Christians.[8]

In the 1930s, Presbyterian missionaries initiated the establishment of several Hebrew Christian congregations under their auspices. The director of the Department of Jewish Evangelization of the Presbyterian Church, USA, John S. Conning, considered it more economical to create independent Jewish congregations that would serve as centers of evangelization and would raise funds on their own, rather than keeping fully subsidized missionary centers. The leaders of the newly created Presbyterian Jewish communities believed that many converts would feel more at home in communities of their own, where being Jewish and acting Jewish was normative. Some of those congregations attempted to create a unique Jewish-Christian liturgy, but mostly they followed Presbyterian hymnology.[9] These Presbyterian congregations are the oldest Jewish-Christian communities in the United States and the most obvious forerunners of the Messianic Jewish movement.

In addition to congregations, numerous individuals expressed a combined Jewish Christian identity prior to the rise of Messianic Judaism. One was Joseph H. Cohn (1886–1953) of the American Board of Missions to the Jews, who expressed in his autobiography, published in the 1950s, a strong sense of Jewish identity and pride vis à vis the evangelical community, whose approval and support he wanted.[10] The novelty of the Messianic Jewish movement in the 1970s, and its Jewish-Christian ideology, was that a set of ideas previously expressed only sporadically, partially, and hesitantly, found a stronger and more assertive voice and became a more acceptable option for Jewish converts to Christianity, as well as gained more acceptance and support in the larger Christian evangelical community. Although missionaries to the Jews were alarmed when they first confronted the more assertive and independent movement of Messianic Judaism, nonetheless they were the ones responsible, if indirectly, for the very conception (if not birth) of Messianic Judaism. The ideology, rhetoric, and symbols they promoted for generations provided the background for the rise of a new movement that missionaries at first rejected as going too far, but later embraced enthusiastically.

Like other NRMs of the period, Messianic Judaism represented a remarkable freedom of choice and selection, including the amalgamation of traditions, which were considered by previous generations to be alien and hostile to each other. The crossing of historical boundaries offered members of Messianic Judaism a sense of mission—they were working to "make things right" and bring together the truth and beauty of both religions: the faith in Jesus, or Yeshua, with the belief in the special role of Israel in history and the traditional symbols of Judaism. In previous generations, the missionary claim that Jews could be true to their Jewishness while adopting the Christian faith did not persuade potential Jewish converts. To both Jews and Christians, Jews

were Jews, and Christians were Christians. But the generation that came of age in the 1960s and 1970s thought differently about these matters. They wanted to make their own choices and did not feel constrained by old boundaries and taboos. Judaism and Christianity could go hand in hand. Its conservative character in matters of personal morality notwithstanding, Messianic Judaism is a product of the age and the generation that allowed itself unprecedented freedom of choice and self-fulfillment. The new movement turned conversion to Christianity into an exciting option; one was not joining the traditional "old" Christianity, but rather a young, enthusiastic version that worked around the traditional definition of Christianity as an alien religious community.

THE RISE OF MESSIANIC JUDAISM

In the first phase of the movement, during the early and mid-1970s, Jewish converts to Christianity established several congregations at their own initiative. Unlike the previous communities of Jewish Christians, Messianic Jewish congregations were largely independent of control from missionary societies or Christian denominations, even though they still wanted the acceptance of the larger evangelical community. On the other hand, most new congregations of Messianic Jews during the late 1970s, the 1980s, and the 1990s were established on the initiative, or at least with the assistance, of missionary societies that appreciated the relative success of Messianic communities in promoting conversions of Jews to Christianity. Yet the fact that the early congregations were independent of missionary or denominational control shaped much of the self-perception of the movement as well as its image within the Christian evangelical camp. In its own eyes, it has been an independent movement that made its own choices and decisions, and as such was much more assertive and outgoing in its Jewishness than previous expressions of Christian-Jewish life.[11] With those new congregations Messianic Judaism was born.

The term Messianic Judaism came into public use in America in the early 1970s, to designate groups or individuals who viewed themselves as fully Christian and fully Jewish at the same time, and were assertive about their ability and right to express both Jewish identity and the Christian faith. The term, however, was not entirely new. It was used in internal debates in the community of converts as early as the beginning of the century. At that time, it referred to a very small minority of converts who wanted to retain elements of Jewish tradition and law.[12] When the term resurfaced in Israel in the 1940s to 1950s, it designated all Jews who accepted Christianity in its Protestant evangelical form. Missionaries such as the Southern Baptist Robert Lindsey noted that for Israeli Jews, the term *nozrim,* "Christians" in Hebrew, meant, almost automatically, an alien, hostile religion. Because such a term made it nearly impossible to convince Jews that Christianity was their religion, missionaries sought a more neutral term, one that did not arouse strong negative feelings. They chose *Meshichyim,* Messianic, to overcome the suspicion and antagonism of the term *nozrim.*[13] *Meshichyim* as a term also had the advantage of emphasizing messianism as a major component of the Christian evangelical belief that the missions and

communities of Jewish converts to Christianity propagated. It conveyed the sense of a new, innovative religion rather that an old, unfavorable one. The term was used in reference to those Jews who accepted Jesus as their personal Savior, and did not apply to Jews accepting Roman Catholicism who in Israel have called themselves Hebrew Christians.[14] The term Messianic Judaism was adopted in the United States in the early 1970s by those converts to evangelical Christianity who advocated a more assertive attitude on the part of converts towards their Jewish roots and heritage. At the turn of the twenty-first century many Jewish Christians began using the term "Jewish Believers in Jesus," to designate all Jews who practice Christianity, including groups of Jews other than Messianic Jews. Thus, different terms exist to describe the different groups of Jewish believers in Jesus.[15]

The rise of Messianic Judaism had much to do with the atmosphere that developed in the United States in the late 1960s and early 1970s. The Six Day War in 1967 strongly affected both Jewish self-perception and the manner in which evangelical Christians viewed the Jews. It profoundly affected Jewish converts to evangelical Christianity. As a result of that war, Jewish converts' status was raised within the larger evangelical milieu. The war also boosted their self-esteem, their interest in their roots, and their desire to remain part of the Jewish people. Jewish converts published articles and books to convey their impressions of the Six Day War and its impact, expressing pride in Israel and in their Jewish heritage.[16] Impressed by the positive attitude that developed in evangelical circles towards Jews and Israel, converts felt that they had more room within the larger evangelical community to celebrate their unique heritage and their feelings of attachment to the Jewish people.

Another cultural development helped reinforce such an attitude. The same years that saw a profound shift in Jewish converts' self-image as well as their status in American society also witnessed dramatic changes in the way Americans related to ethnic heritage in general. Whereas previously American Jews tended to eradicate tribal features, that trend in those years reversed.[17] Not only Jews but African Americans, Native Americans, and others found renewed pride in their roots, emphasizing their unique ethnic attributes.[18] In such an atmosphere, the prospect of Jews joining Anglo-Saxon, "Gentile" Christian congregations and disappearing into the general non-Jewish milieu seemed less attractive than before.

Amazingly, the encounters of Jewish converts with the evangelical community only helped to reinforce such notions, since evangelicals were also taking a renewed interest in Jews. The 1970s witnessed something of an awakened interest in Jewish culture, history, and spirituality among young American Jews.[19] For Jews, as for others, the resurgence of ethnicity was not merely nostalgia, but rather helped them integrate their perceptions of their collective past into their current identities.[20] This new emphasis in American culture on ethnicity and ethnic pride, together with a renewed interest in Jews and Israel in the aftermath of the Six Day War, provides the background for the rise of Messianic Judaism and accounts for its relative success in attracting young Jewish men and women. The cultural context also explains the movement's acceptance by the evangelical community.

CONGREGATIONS

Beth Messiah in Cincinnati holds the honor of being the first congregation of the new movement. Its founder and first leader, Martin Chernoff (d. 1985), began as a missionary on behalf of the Chicago-headquartered American Association for Jewish Evangelism, a premillennialist evangelical missionary group. What later developed into an independent Messianic Jewish congregation started as a missionary center.[21] In the late 1960s and early 1970s, a relatively large number of Jewish students from the University of Cincinnati responded to Chernoff's evangelism by declaring their belief in Jesus as the Messiah. Never before had a mission to the Jews succeeded in converting, in a relatively short time, such a large and dynamic group of young people. This group held great promise for the community of Jewish converts, in later years producing many leaders of the Messianic Jewish movement in the United States. The Cincinnati congregation chose to become independent from missionary control, acquiring a distinct character of its own. It was assertively Jewish, and, in contrast to the American Association for Jewish Evangelism and other major missions to the Jews during this period, became Charismatic. It incorporated enthusiastic modes of prayer, such as extensive use of music, the raising and clapping of hands, dancing during the service, and such practices as "being slain in the Spirit." The new community struggled from the 1970s to the 2000s to find a path that would allow expression of its Christian beliefs, its Charismatic worship style, and its renewed emphasis on its Jewish roots. Incorporation of Jewish elements was gradual, as would be the case in other Messianic Jewish congregations, and was not without debates and struggles.

Another early congregation, even more central within Messianic Judaism, was Beth Yeshua in Philadelphia. The story of Beth Yeshua resembles that of Beth Messiah, as the new group also broke away from a missionary center to create a new community. Its history reveals the reasons why young Jews during the late 1960s and early 1970s were attracted to evangelical Christianity. The group that served as the nucleus for Beth Yeshua was known originally as Fink's Zoo. In the late 1960s, Joe Finkelstein, a chemist and Jewish convert to Christianity, gathered at his home in Philadelphia a group of Jewish teenagers who were looking for an alternative to their parents' middle-class environment. They also yearned for a haven from the more dangerous aspects of the 1960s counterculture. In the guise of a rebellious act—choosing a new and historically alien religious community—the converts actually embraced a conservative lifestyle, which promoted middle-class values and offered a sense of security.[22] The Messianic communities advocated abstinence from drugs, alcohol, and premarital sexual intercourse and encouraged their members to work hard and obey the law. Finkelstein brought the new converts to the Presbyterian-sponsored Hebrew Christian center in downtown Philadelphia, where they worshipped and worked for a number of years. But these young adults did not take well to the older Jewish-Presbyterian congregation. They viewed the downtown community, which was established in the 1930s by the Department of Jewish Evangelization of the Presbyterian Church USA, as too stiff and "square," lacking in both

spiritual expression and Jewish atmosphere.[23] They decided to establish their own congregation.

Like Beth Messiah, Beth Yeshua also chose to become Charismatic, incorporating such features as raising of hands, and performing songs and dances as part of the members' expression of faith. Like its sister congregation in Cincinnati, it struggled throughout the period from the 1970s to the 2000s to express its identity as simultaneously a Jewish and a Charismatic Christian community. The biggest problem they faced was how many traditional Jewish artifacts and symbols to incorporate into worship. The congregation eventually chose to conduct its weekly prayer meetings on Friday nights, asked its male members and guests to wear *yarmulkes,* short round head coverings, during prayers, and decided to light Shabbat candles before the service. It even installed an Ark with a Torah scroll in the prayer hall. These changes did not come about at once, and not without deliberations within the community.

Beth Yeshua is composed of upper-middle-class, well-to-do professionals. The socioeconomic status of the community, which is above the average for Messianic congregations, helped the community to develop its own agenda. It could do well on its own without the support of missionary societies or denominational bodies, and therefore did not have to conform to the latter's tastes and expectations. This does not mean that the congregation wished to exclude itself from larger Christian communities. But it did allow the congregation considerable freedom to pursue the incorporation of elements from Jewish tradition.

Beth Yeshua's affiliation with the Charismatic movement is manifested in its style of worship and in its affinity with the larger Charismatic community. In the 1990s, for example, the congregation adopted a Charismatic practice known as the "Toronto Blessing" or "Being Slain in the Spirit," a devotional scene attributed to the Holy Spirit in which members fall on the floor, helped by other congregants, who hold them and see to it that they stay safe. Members of the community traveled to Toronto, Ontario, to observe the new practice, and maintain close contact with other Charismatic congregations around the world. On traveling to Israel, for example, they visited and prayed at Charismatic Messianic congregations rather than at non-Charismatic ones.[24]

Situated in a middle-class Jewish neighborhood in Philadelphia, Beth Yeshua is one of the larger Messianic congregations, with several hundred adults participating in its activities. A few of the congregation's members play an active role in the Messianic Jewish movement. Martin Chernoff and David Chernoff, father and son who served consecutively as the pastors or Messianic rabbis of the congregation, also served as successive presidents of the American Messianic Jewish Alliance. Joel Chernoff, also a son of Martin Chernoff, led "Lamb," one of the better-known Messianic Jewish musical bands, and also served for several years as the president of the Messianic Jewish Alliance. Joe Finkelstein also served as a president of that organization. Another member of the congregation, Dr. Robert Winer, a neurologist and historian of Messianic Judaism, served as the head of the Alliance's public relations committee. The congregation established a day school, Chalutzim (Pioneers, in Hebrew), where children of members can study from kindergarten to high school.

The school's name, which carries a strong Zionist connotation, is indicative of Messianic Judaism's strong support of Israel.

Like all Messianic congregations, Beth Yeshua is committed to the evangelization of Jews. In the 1980s it established its own evangelism agency. But even without an adjunct missionary organization, the Messianic congregation serves as a natural and vibrant center of evangelism. Messianic congregations promote the Christian message merely by existing in their given locales. Members invite friends to attend services, and curious observers and seekers also come by. Almost all sermons are evangelistic in nature, striving to inspire conversion among the nonconverted in the audience. They emphasize the necessity of accepting Jesus as Savior, being born again in Christ, and cultivating the view that Jewish converts become better Jews when they accept Jesus as their Savior. Messianic leaders consider their achievements in evangelism to surpass those of specially designated missions to the Jews, and consider their enterprises to be beneficial for the propagation of the Gospel among the Jews.[25] Since the late 1970s, the tensions between the established missions and the Messianic movement eased considerably.[26] Missions now recognize the merits of Messianic congregations as centers of evangelism and began founding such congregations themselves. Missionary societies such as the Chosen People Ministries, Jews for Jesus, Ariel Ministries, and denominations such as the Assemblies of God, the Christian and Missionary Alliance, and the Southern Baptist Convention decided to establish and support congregations of Messianic Jews.[27] In the eyes of such missionary groups, these congregations proved to be effective in evangelizing Jews, as they demonstrated both the spiritual and communal merits of the Christian evangelical faith, and were particularly compelling for those Jews who wished to retain their Jewish identity and continued to identify with Jewish causes. They also presented a new relationship between evangelists and prospective converts based on interaction among peers of similar ages and backgrounds.[28] Messianic Jews in all walks of life served as undeclared and nonprofessional evangelists, by just being who they were: arousing curiosity, answering questions, offering literature, and inviting friends and acquaintances to attend services.

The American Board of Missions to the Jews became a major initiator in that field, sponsoring the establishment of dozens of new congregations. This became their major agenda.[29] The first congregation the mission opened was the Olive Tree, in a northwestern suburb of Chicago.[30] This congregation, like many earlier ones, emerged out of an older missionary outpost. Adus was a Presbyterian missionary center. Presbyterian commitment to evangelizing Jews decreased considerably, and to overcome a budget crisis and avoid closing the center, the Presbyterians first turned Adus into a joint project with the American Board of Missions to the Jews, and later transferred it altogether into the hands of the American Board. In 1976, the Board decided to turn the missionary center into a Messianic Jewish congregation. From the perspective of the Board, it proved to be a spectacular success.[31] Its first years as a Messianic congregation were so successful that the Olive Tree produced a sister congregation, the Vineyard, in a western suburb. This left the Olive Tree a not very large community, with a membership of no more than 100 people. Some of the

members also belong to non-Jewish churches. Established by the American Board of Missions to the Jews, the Olive Tree is noncharismatic and takes a nontraditionalist outlook on expressing its Jewishness.[32] The services in the Olive Tree have no chanting of the Torah in its customary Jewish form, for example. Similarly, the members have not worn *yarmulkas* or *Talitot, prayer shawls,* during the services, and the assembly hall does not contain an ark.[33] The Olive Tree's non-Charismatic character explains in part its small constituency, as many Jewish converts to evangelical Christianity in the northern suburbs of Chicago prefer to join Charismatic non-Jewish congregations, such as the Vineyard Fellowship in Evanston.[34] In a manner typical to many Messianic communities, the Olive Tree shares a building with a Korean congregation. The Jewish group meets on Saturdays, and the Korean one on Sundays. The Korean congregation is similar in faith and character, and the sharing of space signifies the affinity. The arrangement also demonstrates mutual recognition and acceptance of ethnically oriented congregations by the larger evangelical community.

While the American Board embraced the idea of Messianic congregations and turned them into its means of evangelism, the congregations it established were not the independent, more traditionalist and Charismatic congregations that formed the emerging Messianic Jewish movement of the early 1970s. By sponsoring congregations, missionary groups influenced their character, and as a result these congregations are milder and less assertively Jewish than the revolutionary congregations of the early 1970s. In describing the first congregation in Northern Chicago, its first pastor, John Bell, spoke about "planting Jewish oriented Church[s]." Another missionary of the American Board wrote: "If we can share the Gospel with a Jewish accent, we can have a local congregation with a Jewish flavor that is reaching out to Jews and Gentiles."[35] The missionary sponsorship of congregations affected Messianic Judaism, which blended more and more with the missionary organizations, turning at times into a single movement. Perhaps not surprisingly, the American Board of Missions to the Jews decided in the 1980s to change its name, remove the term "missions" and adopt a more neutral name "The Chosen People Ministries." It signified the mission's premillennialist understanding of the Jewish people and its role in history and demonstrated its desire not to be identified with missions but rather to adopt the Messianic Jewish rhetoric and vocabulary.

THE CHRISTIAN AND JEWISH REACTION

How did the established communities of Christians and Jews welcome the Messianic Jewish movement? Amazingly, the missionary community, whose theology and message helped bring about the rise of Messianic Jewish congregations, at first reacted with suspicion. Their initial reaction is epitomized by that of the Fellowship of Christian Testimonies (FCTJ) to the Jews, the umbrella organization of missions to the Jews at the time.

In the missionaries' eyes, Messianic Judaism represented misguided forms of Jewish pride, and could compromise the status and achievements of the entire missionary movement. Members of the FCTJ resented not only the more assertive liturgical

innovations of the Messianic Jewish movement, but also the fact that Christian Jews created a network of congregations outside the auspices of established missions, or Christian denominational bodies. The representatives of the missions were aware that it was their work and ideology that had brought about the new movement. But they feared that Messianic Jews went beyond accepted theology and customs of the evangelical community and therefore could become an embarrassment for them.

On its annual meeting held at Keswick, a renowned evangelical Christian conference center, October 16–19, 1975, the organization adopted a statement, which denounced Messianic Judaism. Parts of it read:

> Whereas a segment of Messianic Judaism claims to be a synagogue, and not a church, we of the FCTJ affirm that the New Testament clearly distinguishes between the synagogue and the church; therefore, Bible-believing Hebrew Christians should be aligned with the local church in fellowship with Gentile believers.
>
> Whereas a segment of Messianic Judaism adopts the practices of rabbinic Judaism (instituted by Jewish leadership who rejected the Person and work of Jesus Christ), e.g. kosher laws, wearing skullcaps and prayer shawls, et al., we of the FCTJ affirm that any practice of culture, Jewish or non-Jewish, must be brought into conformity with New Testament theology.
>
> Whereas a segment of Messianic Judaism isolates itself from the local church rebuilding the "middle wall or partition," thus establishing a pseudo-cultural pride, we of the FCTJ affirm the necessity of Hebrew Christian expressing his culture and his spiritual gifts in the context of the local church, thus edifying the Body of Christ as a whole, and not an isolated pseudo-culture.
>
> Whereas a segment of Messianic Judaism opposed the usage of terms such as "Jesus," "Christ," "Christian," "cross," et al, and insists on using the Hebrew terms *exclusively,* we of the FCTJ affirm that though we endorse tactfulness in witness, we reject a presentation of the Gospel which is a subtle attempt to veil and camouflage the Person and work of our Lord Jesus Christ.

The resolution indicates that what particularly alarmed some missionaries was the fact that among Messianic Jews, some manifested a positive attitude towards the observance of Jewish rites and customs.[36] The language used by the FCTJ indicates, however, that the members of the organization were not always fully acquainted with the atmosphere of the new Messianic congregations. Although Messianic Judaism strove for recognition both by Christians and Jews, it did not attempt to become a Jewish denomination alongside Orthodox or Conservative Judaism. Many Messianic Jews agreed with the theological standing reflected in the resolution. They did not try to join the Synagogue, but rather attempted to become a new subdivision within the evangelical movement. The doctrinal basis of the FCTJ, as well as Messianic Jewish communities, was the traditional, almost standard conservative evangelical creed of the time. It included clauses that asserted the supreme authority of the Scriptures and reaffirmed an orthodox view of the Trinity and of the nature and role of Jesus Christ. As a body representing a premillennialist outlook, it also endorsed the belief in the imminent second coming of Jesus. Messianic Jewish congregations promoted the same articles of faith. What the missionaries who gathered at the annual meeting

of the FCTJ did not perceive accurately was the willingness of the evangelical community to accept such a conformist subdivision as the Messianic Jews.[37]

Although the FCTJ was suspicious towards the Messianic Jewish movement, its members nonetheless invited Larry Rice, the general secretary of the Messianic Jewish Alliance, to present his objections to the FCTJ's negative standing on Messianic Judaism. This sign of openness in the midst of suspicion proved significant. Not long after the FCTJ condemnation, the missionary movement began coming to terms with Messianic Judaism and its methods, adjusting itself to the new changes, and tried to make the most of the new Messianic ideology and methods to help advance evangelism among Jews. Missions that promoted the FCTJ denouncement of Messianic Judaism and published it in their journals, such as the American Board of Missions to the Jews, changed their minds about that just a few years later and became, by the 1980s, sponsors of Messianic congregations.

The change in the missions' attitude resulted from the realization that they had not interpreted the situation correctly. In fact, the evangelical community was much more open to Messianic Judaism than they thought. There was, at first, a certain amount of uncertainty in evangelical circles, during the early and mid-1970s, concerning Messianic congregations. These constituted a new development, and many in the evangelical community were uninformed about its exact nature and purpose. Major evangelical publications such as *Christianity Today, Missiology,* or *Moody Monthly* published articles in which spokesmen of Messianic Judaism presented their case. As such accommodations indicate, there was no immediate rejection or censorship of the movement. The evangelical community was willing to give Messianic Judaism a hearing.

In 1974, *Christianity Today* published an article that told the story of a Jewish family of converts entitled, "More Jewish Than Ever—We've Found the Messiah."[38] This article was preceded by a more theological essay by Louis Goldberg entitled "The Messianic Jew."[39] A professor at the Moody Bible Institute and the director of its department of Jewish evangelization, Goldberg presented himself as a Messianic Jew, a daring act considering the antagonism of the missionary community that historically had cosponsored the department at Moody. Messianic Jews, he claimed, were Jewish believers in Jesus as the Messiah and were part of the Church —the body of the true believers. As such, the professor of Jewish evangelism argued, they were "princes of God," persons who came to know God. But as Goldberg saw it, Jews who accepted Jesus were not merely Christians who happened to be of Jewish origin. As Jews, they served a special role as witnesses to fellow Jews. The call to the evangelical community to accept Messianic Jews as a legitimate group was based on the idea that Messianic Jews were especially effective as evangelists to other Jews. Nonconverted Jews, regular Christians, and Jewish believers in Jesus, each had different roles in history, the Moody professor asserted. The place for Jewish believers in Jesus, he concluded, was with all Christians in the local assemblies, but they still had the right to take interest in their brethren and be attached to them.

Goldberg's openness to Messianic Judaism made the Moody Bible Institute and the program he directed attractive to the new generation of Jewish converts. These

were interested in the very kind of education the program offered. Similarly, a new, dynamic missionary organization, Jews for Jesus, built a working relationship with the department at Moody—among other things, students in the program did field work with Jews for Jesus ministries. Moody served as a vehicle through which Messianic Jewish activists became members of the missionary or Messianic Jewish leadership. Since the 1980s, graduates of the program pursued careers not only as missionaries but also as leaders and pastors of Messianic congregations and institutions. None of the Messianic Jews who studied at the Moody Bible Institute were "traditionalists," wore yarmulkes, or kept the Jewish dietary laws. The Jewish program, however, has celebrated Jewish holidays such as *Rosh HaShana,* the Jewish New Year's Eve.

Another open defender of Messianic Judaism was James Hutchens, who wrote a doctoral dissertation at the evangelical school Fuller Theological Seminary, "A Case For Messianic Judaism." Hutchens, who converted to Judaism while holding his belief in the Messiahship of Jesus, advocated Messianic Judaism as a means for Jews to accept the Christian faith while retaining the cultural components of their Jewish heritage. He believed that it would help overcome Jewish opposition to conversion.[40] Beyond "the core faith," the cultural dress was variable, he contended, and open for choice.[41] That such a dissertation could be written and approved in a conservative evangelical theological seminary was proof that evangelicalism as a whole was much more open and inclusive than the old guard missionaries had presumed. Fuller Theological Seminary might have been more inclusive and open to cultural variations than other conservative evangelical schools,[42] but other evangelical institutions of higher learning, such as Trinity Evangelical Divinity School, the Moody Bible Institute, and the Dallas Theological Seminary, also opened their doors to Messianic Jews. Being admitted to such schools signaled acceptance by the heart of the conservative evangelical community.

Non-Jewish evangelical observers did not take the missionary point of view either. *The Moody Monthly,* the bulletin of the Moody Bible Institute, published, as early as 1972, "A Breakthrough for Messianic Judaism," an article that presented the movement in very positive terms and noted its potential for converting large numbers of Jews. "The ministry of sharing Jesus with Jewish people is a much more rewarding enterprise than it was a decade or so ago," the journal noted. *Christianity Today* published a series of articles starting in 1971 on Messianic Judaism in an approving, even enthusiastic tone.[43] *Christianity Today* continued to publish favorable articles on Messianic Judaism, demonstrating the interest in and support for the movement by mainstream American evangelicalism.

The positive response of members of the evangelical camp towards Messianic Judaism is best illustrated by a book published in the early 1980s by an evangelical scholar. David Rausch, a professor at Ashland Theological Seminary of Ashland, Ohio, traveled among the fledgling Messianic congregations of the late 1970s and early 1980s, and wrote sympathetically on the movement. He was particularly appreciative of individuals who chose to incorporate Jewish observance with Christian evangelical beliefs.[44] Rausch defended Messianic Judaism in the pages of the more

liberal Protestant weekly *Christian Century.*[45] "The fact that Judaism and Christianity are not incompatible has, it seems, been a well-guarded secret" he approvingly quoted a Messianic leader as saying.[46]

Arguments for and against the existence of a separate network of Jewish Christian congregations continued to appear in Christian evangelical publications. Generally Messianic Jews have been welcomed as members of the larger evangelical community. Whereas on the whole evangelical Christians were open to accepting Messianic Judaism, liberal Protestants were less favorable. The years when Messianic Judaism made its debut were also the heyday of Jewish-Christian dialogue. Mainline Protestant denominations, such as the Episcopalians, the Presbyterians, and the Methodists, published declarations absolving the Jews from the deicide charge, and asserted the legitimacy of Judaism existing alongside Christianity.[47] Representatives of liberal churches met with Jewish leaders in interfaith gatherings.[48] Most significantly, liberal Christian denominations closed down their missions to the Jews. From the liberal Protestant viewpoint, there was no need for Jews to turn to Christianity.[49] Neither the Jewish nor the Christian aspects of Messianic Jews appealed to the liberals. They were interested in speaking with "real" Jews, and in learning from authentic rabbinical Judaism, a "brother religion," not from Messianic Judaism, which they considered an invalid form of Judaism. Ironically, liberal Protestants shared the prevailing Jewish view, which refused to see Messianic Judaism as a legitimate expression of Judaism. The Messianic Jewish creed sounded too much like that of evangelical Christianity to be Jewish.[50] Liberal Christians also became aware of how resentful Jews were of missionary activity in all forms, and as long as the evangelizing of Jews went on, they themselves—as liberal and accepting as they were—were perceived by Jews as members of a proselytizing religion. This unfavorable attitude on the part of Christian theologians and activists towards their movement, its claim to be authentically Jewish, and its methods of evangelism did not really bother Messianic Jews. Most of them did not look favorably on liberal Christianity, which they viewed as an unsatisfactory form of Christianity.

The Jewish community's reaction to the growing movement of converted Jews was not always unified or consistent, but certain common responses were evident. Jews often shared, during the 1960s and the 1970s, the prevailing liberal image of conservative or fundamentalist evangelicals as anachronistic and marginal to the cultural and intellectual trends of the day.[51] Significantly, Jewish activists and writers often related to missionaries and converts within the larger framework of "cults," as part of what they conceived to be the attraction of young Jews to new "bizarre" religious groups. Jews did not take seriously the Messianic Jewish claim that one could embrace Christianity and remain Jewish. As a rule, Jews looked upon converts to evangelical Christianity as a small group of marginal, eccentric people, who had no real significance within American Jewry.[52] Holding such an outlook, some Hillel campus centers invited representatives of Jews for Jesus to present their case.[53] They ceased inviting them when they became more aware of the nature of the group and the scope of its activity.[54] Many Jews found the new movement to be strange and confusing. They interpreted Messianic Jewish claims to be both Jewish and Christian

either as fraudulent or as an indication that Messianic Jews were just another "crazy cult." "Beth Yeshua," wrote Michael Mach on the major Messianic Jewish Congregation in Philadelphia, "is part of … an Orwellian world of Jewish-Christian confusion where things are never as they ought to be, and rarely as they seem.…"[55] This attitude is manifested in numerous books and articles where little attempt was made to differentiate between conversions to Christianity and joining such new religious groups as the Unification Church or the Meher Baba.[56] Rabbi Ronald Gittelsohn, in a 1979 article gave expression to a common Jewish perception: "Jews for Jesus is only one of several aberrant religious or pseudoreligious cults flourishing today on the American scene."[57] He offered a psychological explanation for the attraction of young Jews to these groups:

> What a blessed and wonderful relief to throw all this heart-breaking, backbreaking, brain breaking worry onto a gentle Messiah who will solve everything? Jesus or Krishna, or Sun Myung Moon—represents to them the kind, loving daddy they knew, or for whom they desperately yearned as children, the daddy who would answer all their doubts, assuage all their hurts.[58]

Much of the Jewish reaction to Messianic Judaism followed the pattern of the anticult movement, which prevailed in America in the 1970s through the 1980s and looked upon NRMs as harmful and illegitimate.[59] They considered Jews who became Messianic Jews to be deserters from the ranks of normative Judaism.

Jewish activists suggested that stopping desertion from the faith should be done through inner reform: strengthening the Jews' commitment to their tradition, Jewish education, and reemphasizing the spiritual dimensions of Jewish religious life. In fact, Jewish anticult literature did not direct its criticism so much against NRMs, such as Messianic Judaism, as against Jews. It faulted Jewish parents for failing to raise their children in a committed Jewish home, criticized the Jewish community for its inadequacy in making Judaism attractive to the younger generation, and chided Jewish education for failing to transfer Judaism to the next generation. Many of these writers also criticized Jewish congregations for their lack of spirituality, warmth, and a sense of community.

In the mid-1970s, Jewish activists founded Jews for Jews, its name unmistakably inspired by that of Jews for Jesus. Disbanded after a few years, it was replaced by a new organization, Jews for Judaism. The organization sponsored lectures in Jewish centers on university campuses, published antimissionary material, and organized demonstrations at missionary or messianic Jewish gatherings. A similar organization was the Anti Missionary Institute, which in the late 1970s and early 1980s became a notable organization in the field. The antimissionary groups were, as a rule, small in size, budgets, and scope of activities. Their small size and short-lived histories indicated that they were not high on the list of priorities of the American Jewish community. American Jews gave large sums of money to the arts, higher education, or the State of Israel, but they did not show the same generosity towards combating missionaries. Most Jews did not take the missions, or their fighters in the Jewish camp, very seriously.

On rare occasions Jews reacted violently against Messianic Jews. Such behavior almost always came at the initiative of individuals or small groups and did not represent official Jewish policy on behalf of local communities or national organizations. This does not mean that there were no instances of intimidation directed against the new congregations of Messianic Jews. In February 1980, two young men entered a Messianic Jewish congregation, Ahavat Zion (Love of Zion), in Encino, Los Angeles. What occurred next became a matter of opinion.[60] No one disputes the fact that a Torah scroll was missing following that unsolicited visit. The young men were convinced that they had liberated the scroll since its use by a Christian congregation was desecration, whereas for members of the congregation as well as the police and the general public, it was a theft.

According to newspaper reports, the Messianic Jewish congregation in Philadelphia, Beth Yeshua, encountered Jewish opposition when it tried to build its center in a Jewish neighborhood.[61] In addition, an unidentified Orthodox group called for an *Oneg Shabbat,* an after-service social gathering on Friday night, not far from the messianic group's prayer house, in protest against the activities of the Messianic congregation. The description of the Messianic community in the leaflet announcing the *Oneg* echoes common Jewish perceptions of Christian evangelists and Messianic Jews. The appeal to come to the *Oneg* reads: "Jewish residents of Overbrook Park: There is a cult in your midst. Like the Moonies and the Krishnas … they are the Messianic Jewish Movement."[62]

Much of the Jewish activity against missionaries and Messianic Jewish rhetoric was directed inwards—to the Jewish community. Jewish activists, thinkers, and organizations thought that they should prepare Jewish youth for a possible encounter with Christian evangelism. They wanted to provide young Jews with interpretations of theological claims and biblical exegesis. From the 1970s through the 2000s a number of Jewish activists published "know what to answer" books and pamphlets.[63] These tracts did not speak with one voice. Each book represented a different Jewish point of view and a different denominational affiliation. *What to Say When the Missionary Comes to Your Door* was one such brochure prepared by Rabbi Lawrence M. Silverman of Beth Jacob, a Reform Congregation in Plymouth, Massachusetts.[64] Written from a liberal Jewish perspective, Silverman reflected the Reform opinion of Messianic Jews. His prose included clauses such as, "The messianic age will come to pass in this world! Whatever else it may be, in our view, the Messianic Age will at least be a this-worldly happening," or "We do not believe that personal salvation and eternal life should be overriding concerns in one's life." Many conservative and most Orthodox Jews would probably have not agreed with Silverman's views.

The United Synagogue of America's Department of Youth Activities circulated a guidebook for conducting such a program: *The Missionary at the Door—Our Uniqueness.*[65] Developed by Rabbi Benjamin Segal, it has a series of essays discussing such issues as, "Why Aren't We Christians?" and "Was Jesus the Messiah? Let's Examine the Facts," in which its author, Pinchas Stoper, argued that biblical descriptions of the Messiah do not relate to Jesus. The book includes a "Discussion Leader's Guide" for workshops of the conservative youth movement. The guide illustrates some of the

problems Jews faced in trying to counter present-day Christian evangelists. Members of Jews for Jesus as well as Messianic Jewish groups take pride in their ethnic Jewish identity, and make extensive use of Jewish symbols and language. It has become increasingly more difficult for defenders of Judaism to discredit the claim that Jews could retain their Jewishness while accepting Jesus as Messiah. The discussion guide thus insisted that Judaism was a religion, and not merely an ethnic grouping, and that being a "Jewish-Christian made no more sense than a capitalist-communist."

But many of the Jews attracted to Christianity did not join their new faith on a theoretical, theological basis. Their Messianic Jewish environment offered them a sense of community and a network of fellowship and support. Promoting a conservative evangelical world view, their new environment also made demands of them and imposed clear boundaries and guidelines. By preferring evangelical Christianity, the newly converted signaled that they had found in their new religious community a more nurturing environment than in liberal Jewish congregations or in secular, unaffiliated Jewish life. The writers of "know what to answer" books found it easier to believe that the adoption of the Christian faith resulted from a lack of biblical-exegetical knowledge; all would have been well if only converts to Christianity were provided with the right answers. They were correct to assume that many of the young Jews attracted to Christianity had a poor knowledge of their Jewish heritage and faith. They were mistaken, however, in their assumption that "how to answer" tracts could have made a significant difference when such Jews encountered individuals or communities propagating the Christian faith.

Jewish scholarship of converts to Christianity during this period followed the pattern of underrating the scope and importance of the movement. In 1978, David Eichhorn, a Reform rabbi, published a historical survey of Christian missions to the Jews in the United States.[66] Throughout this work, Eichhorn degraded and mocked both missionaries and converts. Another study was done by sociologist B.Z. Sobel. Beginning his research while working for the Anti-Defamation League, Sobel studied a congregation of Jewish converts to Christianity. His conclusion was that converted Jews were sad, marginalized people. Such studies confirmed what Jewish leaders and activists wished to believe.[67] Matters changed in the 1990s, following the publication of the findings of the 1990 National Jewish Demographic Survey. Many read in the Survey alarming data pointing to the dwindling of the Jewish ranks, due to negative demographic trends—decline in reproduction, intermarriage, and desertion of the faith.[68] The survey's estimates of the number of Jews who joined non-Jewish religions confirmed the most pessimistic estimates. Concern over the future of American Jewry as a distinct and vital religious and ethnic community became the norm. That was perhaps one of the reasons for a change of attitude in the way the Jewish community began approaching the subject of Jewish conversions to Christianity. By the mid-1990s, it became clear to many in the Jewish community that during the 1970s and 1980s large and vital groups of converts were created and their numbers were far greater than those most Jewish activists previously estimated. And the newer attitude toward Jewish converts dropped the stereotypes of those converts as down and out.

As the data emerging from the survey became more well-known and discussed among Jews, Jewish publications began reporting on missionary activity and the community of converts in a new manner. Articles on Messianic Jews in *Moment* and *The Jerusalem Report* appearing in the 1990s through 2000s treated Christian converts respectfully, presenting their case in a surprisingly impartial tone—a long shot from the articles of the 1970s through 1980s, which related to that movement in a condescending manner, or attributed to it conspiratorial motives.[69] The writers described the converts, many of them actively evangelizing among their fellow Jews, in realistic terms as perfectly normal people, whose faith offered them meaning, community, and a sense of purpose.

MESSIANIC JEWISH CULTURE

When the evangelical group the Promise Keepers launched a major rally, in Washington, D.C., in 1997, two groups of born-again Christians who participated in the rally were particularly visible. One was a group of Messianic Jews, who came to the gathering dressed with *Talitot,* prayer shawls, and holding *Shofarot,* rams horns. The other was a Native American group who came dressed in traditional attire and decorated with American Indian symbols. Both groups signified the inclusiveness of the rally. The Promise Keepers emphasized the unity of all conservative evangelicals, by allowing for cultural diversity, at the same time that a common faith and set of values were declared. The rally signified the acceptance of these two traditions: Native Americans and Jews in their evangelical form, by the larger community of born-agains. There were other religious groups during that era that also amalgamated rites taken from religious traditions that only a few years earlier were considered irreconcilably alien to evangelicalism. The most striking example has been Pentecostal Roman Catholicism, which first appeared on the scene in 1964. Another hybrid previously unthinkable was Evangelical Greek Orthodoxy, which came about in the 1970s.[70] Messianic Judaism has become something more than being both Jewish and Christian.

From the 1980s into the 2000s, Messianic Jews built their own subculture, complete with national organizations, youth activities, prayer books and hymnals, publications and periodicals, including Messianic Jewish theological, apologetic, and evangelistic treatises.[71] One series of yearly Messianic conferences occurs each summer at Messiah College in Pennsylvania. Sponsored by the Messianic Jewish Alliance of America and other Messianic organizations, the gathering offers a window into the Messianic movement, which includes youth groups, bands of singers and dancers, as well as missionary organizations such as Ariel Ministries and Jews for Jesus.

Chalutzim, the day school Beth Yeshua had built, represents this particular Messianic Jewish subculture. Members of the congregation did not wish to send their children to public schools where they confronted "impending strikes, lack of quality academic opportunities … and the teaching of secular humanism, situational ethics, and decadent sexual mores."[72] At the same time, the congregations' members felt

that neither Christian evangelical nor Jewish day schools would do, for neither fully represented the congregations' values and needs.

Consequently, they built their own school. Similarly, Messianic Jewish hymnologies are not merely Christian evangelical ones. Many Messianic hymns do resemble their non-Jewish evangelical counterparts, and the music is often the contemporary rock-influenced "New Christian Music," yet they remain in a category of their own. Most hymns were written and composed by Messianic Jews, offering an opportunity for songwriters and musicians to express their literary and musical talents. Many of the hymns relate to Israel's role in history, convey a Messianic hope, and refer to Jesus as the Savior of Israel. In addition, small changes differentiate them from the usual contemporary evangelical hymns, such as in the use of the name Yeshua instead of Jesus.[73] Messianic hymnals, such as that of Beth Yeshua, also include a large number of Israeli songs.

Messianic Jews share many of the values of the larger evangelical Christian community. For example, Messianic Jews, without exception, believe that the way to eternal life is through acceptance of Jesus as one's personal Savior and that no obedience to the Jewish Law or "works" is necessary in order to obtain that goal. Those in the evangelical community insisting on the need to observe elements of the Law as a prerequisite for salvation gravitated towards another movement, B'nai Noah ("the Sons of Noah"), composed of evangelical Christians who adopted modes of Jewish observance.[74] But, as a rule, such groups neither presented themselves as part of the Messianic Jewish movement nor were accepted as such. Remarkably, it has been exactly this adherence to the basic Christian evangelical faith that has allowed Messianic Jews to adopt and promote Jewish rites and customs. They are Christians in good standing and can retain whatever cultural attributes and rites they choose. In principle, there is no reason, except for cultural prejudices, to follow in the customs, habits, and regulations of mainstream Anglo-Saxon churches, and Jewish manners and cultural heritage are just as good as whatever cultural trappings other evangelicals choose to adopt.[75]

The movement is far from united. It has many subdivisions and groups, colors and shades. A major division between Messianic congregations exists between Charismatics and non-Charismatics. Most of the early congregations chose to become Charismatic, but many of the ones established by the mostly non-Charismatic missionary societies and denominations are not. This reflects divisions within the larger evangelical community. Since the 1970s, Charismatics were particularly successful, within the framework of evangelicalism. Their advocacy of a direct personal encounter with the divine and their more joyful and expressive services appealed to many young people, including Jewish converts. Charismatic Messianic Jews and non-Charismatic Messianic Jews formed different union organizations; yet despite differences, arguments, and rivalry, the mutual campaign for recognition by the evangelical community as genuine Christians and by Jews as authentic Jews, and the basic sense of identity as Messianic Jews, often transcended these divisions.[76]

Another major difference between Messianic congregations arises over the relation of Jews who accepted Christianity to Jewish tradition and rites. On one end of the

spectrum are those who entered since the 1970s to identify themselves as Messianic Jews but followed in the footsteps of Hebrew Christianity, the older, milder form of Jewish Christian congregations. The latter were more hesitant to observe Jewish rites and customs and adopted a liturgy close to that of non-Jewish evangelical Protestant congregations. On the other end of the spectrum are "traditionalists" who advocate preservation of Jewish rites, such as the wearing of *yarmulkas* during prayer and sometimes even on a daily basis. Some introduced into Messianic service rites the wearing of *Talitot,* the traditional Jewish prayer shawls, reading from the Torah as part of the service, chanting prayers according to traditional Jewish melodies, and carrying the major weekly services on Friday nights or Saturday mornings. None, however, made the claim that one must observe such rites as a prerequisite for salvation.[77]

Many, if not most, Messianic congregations found a middle road between the more traditionalist and the more moderate Hebrew Christian approach. John Fischer, a pastor of a Messianic Jewish congregation in Florida and director of Menorah Ministries, compiled a Messianic Jewish *Siddur* (prayer book), which became popular in the Messianic movement.[78] The Siddur selectively picks elements of the traditional Jewish prayer book. It compensates for omitted passages by inserting prayers that express faith in Jesus and his role as the Redeemer. Fischer attempted to establish a Jewish Christian *Yeshiva,* a theological seminary for Messianic Jews, which was designed for the specific needs of Messianic Jewish ministers.[79]

Almost all congregations retain some traditional Jewish rites, the most popular of which is the yearly celebration of Passover, and a reading of a Messianic Jewish Haggadah.[80] An examination of Messianic Jewish *Haggadot* reveals that they are different from the conventional Jewish ones.[81] One of the more popular, by Eric Peter Lipson, *Passover Haggadah: A Messianic Celebration,* is distributed by Jews for Jesus. This Haggadah is almost entirely in English and assumes no prior knowledge of Jewish customs nor previous participation in a Passover celebration. It maintains major features of the traditional Jewish Haggadah, such as the Four Questions, the four cups of wine, and an additional fifth, for Elijah the Prophet. Lipson's version, however, cuts out passages of the traditional Haggadah, most notably those of the *midrash,* rabbinical extrapolations and elaborations on the Exodus story. Instead, the text offers numerous quotations from the New Testament, such as from John 20:19 on Jesus's appearance before his disciples after his resurrection from the dead.[82] Lipson's Haggadah also includes prayers relating to Jesus's role as Savior, including the following prayer: "Blessed art Thou, O Lord our God, king of the Universe, who had sent Thy son, Thine only son, Y'shua the Messiah, to be the light of the world and our Paschal Lamb, that through him we might live. Amen."[83]

J. Ron Tavalin's *Kol Hesed Messianic Haggadah* incorporates more Hebrew than many other Messianic Haggadot. "The Messianic Believer's Haggadah," Tavalin explains in the preface, "differs from the traditional Haggadah in that we who maintain the Messiahship of Yeshua (Jesus) see an even greater blessing and redemption than that one contained in the book of Exodus. Even as the Israelites were redeemed from Slavery to Pharaoh, so all peoples, Jew and non-Jew, through the New

Covenant of the Messiah, are redeemed from bondage to sin and death.…" Like Lipson, Tavalin assumes no prior knowledge on the part of his readers of the customs and terminology of the *Seder,* the Passover night, and offers both a glossary of terms and ample explanations throughout the text. Like the *Passover Haggadah, Kol Hesed* eliminated the *Midrash* passages, and instead relates to Jesus and his role as the Redeemer. The first blessing reads: "Blessed are you, O Lord our God, King of the Universe, who has sanctified us through faith in Yeshua Ha Mashiakh and commanded us to remove the leaven."

Messianic Jews wish to retain many of the traditional features of the Passover Seder, the most widely celebrated Jewish holiday, yet they also give expression to their Christian evangelical faith as well. Celebrating the Passover night became, by the 2000s, fashionable in the evangelical camp. Evangelical churches conducted Seder demonstrations, usually under the leadership of Messianic Jewish guests. This is now a common means for missions, such as Jews for Jesus, to approach the evangelical community, advertise their agenda, and apply for funds. Likewise it is a means for the Messianic Jewish movement to turn its own rites into acceptable customs for the evangelical community as a whole. Conservative evangelical scholarship in the last generation paid attention to the Jewish roots of Christianity, a reality that enhanced the interest in Jewish holidays going back to Jesus's era and that were mentioned in both the Hebrew Bible and the New Testament.[84] Similarly, the Passover Seder is a prime time to invite potential converts to Messianic Seders, either at private homes or in congregational settings.[85] The unique manner in which Messianic congregations choose to celebrate the Passover points to the dialectical approach of that movement. It cherishes and promotes attributes of the Jewish heritage, while remaining within the boundaries of evangelical theological correctness and public approval.

In addition to the divisions between Charismatics and non-Charismatics, and varying levels of observation of Jewish rites and customs, congregations differ as to the percentage of Jews versus non-Jews they have as members. According to a survey conducted by Michael Schiffman, "most Messianic congregations … have percentages of Jewish membership between twenty-five and fifty percent," which "illustrates that Messianic congregations are not putting up a 'middle wall of partition' between Jewish and non-Jewish people."[86] The percentage of intermarried couples within the congregations surpasses the average for the general Jewish population.[87] Ironically, Messianic congregations serve not only as centers of evangelism for Jews and non-Jews, but also as assemblies where non-Jews receive education in and are oriented towards knowledge and celebration of Jewish holidays and customs. Although such communities are Christian, the non-Jewish members nonetheless resemble non-Jews joining synagogues. In both cases, non-Jews show interest in elements of the Jewish tradition, and join in as members in houses of worship, which define themselves as Jewish.[88] Such a phenomenon could not have taken place before the late 1960s, and the new attitude that came about towards Jews and Israel.

Communal affinity also varies from one Messianic congregation to another. Members of Beth Yeshua tend to live in the same area. Some even moved in order to be

part of the community, in proximity to each other. In other congregations such as the Olive Tree, this is not the case: members come to services once a week, but are scattered geographically, and live in various neighborhoods in the northern and western suburbs of Chicago. They do not necessarily interact with each other during the week. Their social milieu includes non-Jewish evangelicals as well as Messianic Jews. There are also differences between congregations regarding the socioeconomic profile of the community. The gap in this respect between Beth Yeshua in Philadelphia and Beth Messiah in Cincinnati, or the Olive Tree in Chicago, is striking.[89] No comprehensive survey on the socioeconomic nature of Messianic congregations has so far been conducted, and so assessing this aspect of Messianic life is based merely on observation.[90] Yet it seems that Beth Yeshua is an exception, and most congregations do not possess such a high socioeconomic profile; most of their members tend to be in the lower-middle class. Whereas the congregations are not short on people holding bachelor's, and at times graduate degrees, few, if any, academicians in the humanities and social sciences, or people in the arts, are parts of these congregations. In sharp contrast to the demographics of American synagogues, the Messianic communities consist mostly of persons of the baby-boom, baby buster, and Generation X age groups—those who came of age in the 1960s and later.

A social, cultural, and spiritual institution that offers an illustration of the special subculture of Messianic Jews is the Messianic Bar Mitzvah. The Bar Mitzvah serves as a major social and communal institution in American Jewish life.[91] It is therefore understandable that Messianic Jews decided to incorporate it as a major celebration. Giving up Bar Mitzvahs would have meant giving up a major Jewish rite of passage, whereas embracing it made a statement that Messianic Jews do practice Jewish culture. Yet the Messianic Bar Mitzvahs differ from traditional Jewish ones. They follow the standard Jewish Bar Mitzvah as far as the social institution is concerned—a major celebration to which family members gather from all around the country and to which friends and colleagues are invited as well as members of the congregations in which the Bar Mitzvahs are celebrated. But the religious ceremony takes a new twist. It does not follow traditional Jewish rites such as the chanting according to old melodies of a full *parasha:* a portion from the Pentateuch, the Five Books of Moses, followed by a portion from the Prophets. Instead, there is a short reading from the Pentateuch, usually in English, and a reading from the New Testament. The *Drasha,* or Dvar Torah, interpretation of or extrapolation on the Torah portion, that Bar Mitzvah boys used to deliver, is instead a public declaration, which reaffirms and promotes the Messianic Jewish creed.[92] By the age of 13, Messianic Jewish children are expected to accept Jesus as their Savior and become fully acquainted with Messianic Jewish theology. The Bar Mitzvah serves therefore as a communal forum for 13-year-olds to declare their faith, affirm the Messianic Jewish agenda of being Jewish and Christian at the same time, and, like all Bar Mitzvah children, receive the community's attention and approval. It has come to demonstrate, together with the day school, the summer camps, and other Messianic youth activities, the community's determination to raise a second generation of Messianic Jews and to transfer the community's faith and character to its children.

Most remarkably, Messianic Judaism created its own vocabulary, strongly influenced by the evangelical rhetoric of conversion, yet somewhat different. Messianic Jews avoid using terms that might scare potential converts away, or that do not go hand in hand with the theological perceptions of Messianic Judaism and its unique sensitivities. The use of the terms "mission" and "missionaries," which was quite legitimate in previous generations, became something of a taboo. Similarly, the term "proselytizing" was rejected, since Messianic Jews do not see themselves as moving from one religion to another.[93] In their eyes, they were, and have remained, Jewish. So new terms are employed. Rather than "evangelizing," Messianic Jews speak about "sharing" and "witnessing," "coming to the faith," or "coming to know Jesus" or, preferably, "coming to know Yeshua" (the term "Christ" being equally passé). They talk about "believers" to designate born-agains and differentiate between "Gentile believers" and "Jewish believers," the first being non-Jewish evangelical Christians and the second, Jews who accepted the Christian evangelical faith.[94] The vocabulary helps to shape a communal spirit among the converted. The adoption of this language signifies the acceptance of Messianic theological perceptions and communal norms and plays an important part in the conversion process.[95]

Converting to Christianity means accepting evangelical morality and refusing some of the freedoms of American secular culture.[96] In principle, members of Messianic congregations do not smoke and refrain from drinking alcoholic beverages, although some Messianic Jews occasionally drink wine. Similarly, Messianic Jews view sexual relations as reserved for marriage. In principle, they promote a conservative sexual morality, not unlike that of evangelical Christians or Orthodox Jews. Messianic Jews share the values of the general culture in the realms of finances, money, and professional goals. Most of them, like conservative evangelicals in general, subscribe to conservative social and political views. Likewise, American Messianic Jews see the United States as a nation with a special mission in the world and see themselves as devoted American patriots. At the same time, not unlike the conservative evangelical community in general, Messianic Jews support Israel. Their understanding of Zionism and the State of Israel resembles that of premillennialist evangelicals.[97] For Messianic Jews, their relation to Israel serves to reaffirm their Jewish identity as it carries the theological perceptions and political agenda of the evangelical camp.[98] Messianic congregations incorporate Israeli songs into their hymnals, organize tours to Israel, and take a deep interest in the fate of that country.

THE THEOLOGY OF MESSIANIC JUDAISM

Having built a unique subculture within the larger evangelical camp, Messianic Jewish thinkers produced a series of theological and apologetic tracts that define and defend the movement. In accordance with the relatively pluralistic nature of Messianic Judaism, their work is not unified, but instead articulates a broad spectrum of opinions. Among the better-known theologians are John Fischer, Arnold G. Fruchtenbaum, Daniel Juster, and David Stern.

In a manner reminiscent of other NRMs, Messianic Jews claim that their movement is ancient, not new. Jews that embraced Christianity were the original Christians, making Messianic Judaism the authentic, *ur,* form of Christianity. In the *Jewish New Testament,* David Stern, a leader in the Messianic Jewish movement in the United States and Israel, changed the traditional translation of Paul's *Epistle to the Hebrews* into *A Letter to the Messianic Jews.*[99] Messianic Jews also viewed Jewish converts to Protestant Christianity throughout the centuries as forerunners and predecessors.[100] At the same time Messianic Jews see their movement as innovative and daring, carving a completely new path for Jewish converts to Christianity and for the relationship between the two formerly alien religious communities.[101] The notion of having created a movement and a formula that managed to transcend the historical differences between the two religions and unite them served as a major inspiration and offered an enormous sense of purpose for the movement and its *esprit de corps.*

The move into a more independent and assertive form of Jewish-Christian identity is manifested in the work of Arnold Fruchtenbaum. In the 1970s, Fruchtenbaum defined himself as a Hebrew Christian and was skeptical about the more assertive forms of Messianic Judaism.[102] In *Hebrew Christianity: Its Theology, History and Philosophy,* Fruchtenbaum presented his views on Jewish converts to Christianity, their faith, community, and their relation to the Jewish people. He defended Hebrew Christians and presented them as solid Christian believers in good standing:

> Do Hebrew Christians behave differently from Gentile Christians? Regarding the basic doctrines of the Christian faith, the answer is no. Among fundamental believers, certain teachings are held in common, such as the substitutionary atonement of Christ for our sins. On some minor issues, such as baptism, there are differences of opinion. These differences however are … between believers in general; Jewish and Gentile Christians will be found on both sides.

On this issue, Hebrew Christians and Messianic Jews of all colors and shapes agreed with him. But assertive Messianic Jews did not share his views on where Jewish converts should look for a community. Having emphasized the idea that Jewish converts were an unalienable part of the Christian community, Fruchtenbaum categorically declared that "the Hebrew Christian should be a member of the local church along with Gentile believers."[103] He modified his views a number of years later, and Ariel Ministries, which he led, was instrumental in the establishment of a number of Messianic congregations. In 1985, Fruchtenbaum defended the right of Jewish believers in Jesus to establish congregations and observe Jewish rites if they wished, as long as they looked upon it as an option, and did not consider it a requirement for salvation.[104]

Next to Fruchtenbaum's *Hebrew Christianity,* David Stern's *The Messianic Jewish Manifesto* is one of the better-known Messianic theological tracts.[105] In it, the author, an American businessman from California who immigrated to Israel and became a leader in a traditionalist Messianic congregation, presented a comprehensive defense of Messianic Judaism, its ideas, and its goals. "By providing a Jewish environment for

Messianic faith, Messianic Judaism is useful in evangelizing Jews," argues Stern. He goes on: "It is useful in focusing the Church's attention on the Jewish people."[106] The last argument relates partially to evangelism. Messianic Jews wanted to keep the evangelization of the Jews a high priority in the evangelical camp and served, since their inception, as a pro-Israel lobby within the larger evangelical camp.

Besides the belief in the Messiahship of Jesus, an important feature of Messianic Judaism is the conviction of the imminent return of the Messiah, uniting almost all members of Messianic communities. As a rule, Messianic Jews embrace enthusiastically the Messianic premillenial dispensationalist faith, which is very popular among evangelical Christians. In Messianic Jewish theology, Jesus is destined to come back to Earth in the near future to usher in the kingdom of God. This hopeful development will come after an apocalyptic era, the Great Tribulation, when Earth and humanity will go through a series of physical and political disasters as well as moral challenges. The Jewish people have a special role in the developments that will lead to the end of time, as well as during the millennial kingdom itself. The Jews, according to that view, are heirs to biblical Israel and will be rejuvenated as a nation when the Messiah comes. This aspect of the messianic faith offers Messianic Jews a sense of pride and self-esteem within the larger evangelical community.

Another major Messianic theological work is Daniel Juster's *Jewish Roots: A Foundation of Biblical Theology For Messianic Judaism.* Juster led Beth Messiah in Rockville, Maryland, since the 1970s, one of the largest and most influential Messianic congregations. It chose a more traditionalist path, but not necessarily an outright Charismatic one. Juster's definition of Messianic Judaism is, however, broad and inclusive, "… It is a movement among Jewish and non-Jewish followers of Jesus of Nazareth who believe that it is proper and desirable for Jewish followers of Jesus to recognize and identify with their Jewishness." In Juster's view, "The central question" is "whether there is a biblical basis for Messianic Judaism." The author examines numerous passages in the New Testament, such as Galatians 3:28, "There is neither Jew nor Greek, for you are all one in Christ Jesus," which potentially (and often in actuality) is used to negate the idea of separate Jewish Christian congregations. He refutes such a notion, "Both may be called to different styles of life and witness to different fields of service, yet they are spiritually one in the Messiah."[107]

CONCLUSION

At the beginning of the twenty-first century, Messianic Judaism is a growing movement. It is no longer in its infancy, but retains youthful vigor and enthusiasm. It is characterized by considerable optimism, resulting from its relative success and growth, and a strong sense of mission. They sense that they are taking part in a groundbreaking historical experiment—amalgamating the Christian faith with the Jewish heritage, thus healing old wounds. Messianic Jews believe that they have arrived at just the right formula to set things right. "The Messianic Jewish community will be the vehicle for healing the worst schism in the history of the world, the split between the Christians and the Jews.…" declared Stern enthusiastically.[108]

Messianic Judaism is the logical outcome of the rhetoric and activity of the Protestant missionary movement and its biblical-Messianic dispensationalist theology. It was, however, the spirit of the age that brought about the move from the more moderate and hesitant forms of Hebrew Christianity to the large, proud, and assertive movement of Messianic Judaism. The post-1967 image of Jews and Israel in evangelical eyes; the rise in the interest in and the emphasis on roots, heritage, and ethnic pride; and the self-proclaimed liberties and prerogatives of a new, Baby Boomer generation, which not only felt more at ease in crossing religious and communal boundaries, but also saw no difficulty in picking, choosing, and bringing together rites and customs from different traditions—all worked to push the Hebrew Christian movement a step forward.

Messianic Judaism added more color to the American religious map and challenged the long-standing definitions of Judaism and Christianity as well as the relationship between these two religions. While the initial reactions of many Christians and Jews was mockery, if not shock, and while Messianic Jews continued to encounter doubts over their unique position as Jews and Christians, the Messianic Jewish movement carved a niche for itself within the larger evangelical network, and on the whole was accepted as a legitimate subdivision within that larger culture.

Together with the energetic Jews for Jesus, the Messianic Jewish movement gave a new burst of enthusiasm to the old Christian goal of converting the Jews to Christianity and helped keep the evangelization of Jews high on the evangelical priority list. Likewise, it served as a Jewish interest group within the larger conservative Christian community, advocating good will towards the Jews and support for Israel. In spite of the Messianic Jewish commitment to Jewish identity and its incorporation of Jewish symbols and customs, the acceptance of the new movement by the Jewish community has been slower. While Jews traditionally viewed conversions to Christianity as desertion from the Jewish ranks, their opposition to Messianic Jews weakened throughout the years, and many Jews came to treat the movement with respect. In the early years of the twenty-first century, Messianic Judaism is a thriving community. It has become a solid movement within the American religious scene.

NOTES

1. On such eighteenth and nineteenth century missions and the new spirit and some of the methods they introduced, see, for example, Barbara Tuchman, *Bible and Sword* (London: Macmillan, 1983), 175–207; Kelvin Crombie, *For the Love of Zion* (London: Hodder E. Stoughton, 1991), 1–163.

24. On Beth Yeshua see Carol Harris-Shapiro, *Messianic Judaism: A Rabbi's Journey through Religious Change in America* (Boston: Beacon Press, 1999).

25. This came up, for example, in interviews with David Chernoff, Rabbi of Beth Yeshua in Philadelphia, October 1995, and with Harold Sevener, president emeritus of the Chosen People Ministries, in an interview in Chapel Hill in 1995. See also Elliot Klayman, "Messianic Zionism: God's Plan for Israel," *The Messianic Outreach* 7, no. 4 (Summer 1998): 3–8.

26. In June 1976, merely a year after the statements of condemnation, which the FCTJ and the American Board of Missions to the Jews issued, both missionary and Messianic leaders met together in Chicago to reconcile their differences. The initiative for the conference came, not surprisingly, from leaders of evangelical institutions such as Arthur Glasser, the Dean of Fuller Theological Seminary School of World Missions, and Herbert Kane, the president of the American Society of Missiology. Its resolution read: "we recognize that different methods may be used to communicate the message of Jesus the Messiah to the Jewish people. We accept the validity of the various congregations' structures and modes of worship for Jesus believers." *Insight* [an in-house journal of the American Board of Missions to the Jews] (June, 1976): 3.

32. I owe thanks to a number of friends who have invited me to visit their congregations in Northern Chicago, among them Kroy Ellis, Rivka Katzir, and Derrel Simms.

33. See the congregation's brochure, "Olive Tree Congregation." Among other things, it states in an apologetic tone: "You will notice a genuine Jewish 'flavor' to our worship… The Jewish roots of our faith in Messiah Jesus are important to us… But you don't have to be Jewish to be here!" The brochure ends with a declaration of the community's obligation to evangelizing. "We are committed to sharing the Good News of the atonement Messiah Yeshua has provided, for the sin of all men. We want to communicate with both Jewish and Gentile people, whether its across the street or around the world!"

About the Editors and Contributors

EDITORS

Eugene V. Gallagher is the Rosemary Park Professor of Religious Studies at Connecticut College. He is the author of *Divine Man or Magician? Celsus and Origen on Jesus* (1980), *Expectation and Experience: Explaining Religious Conversion* (1990), *The New Religious Movements Experience in America* (2004), and, with James D. Tabor, *Why Waco? Cults and the Battle for Religious Freedom in America* (1995), as well as articles on ancient Mediterranean religions and contemporary new religious movements.

W. Michael Ashcraft is Associate Professor of Religion at Truman State University in Kirksville, Missouri. He is the author of *The Dawn of the New Cycle: Point Loma Theosophists and American Culture* (2002) and coeditor with Dereck Daschke of *New Religious Movements: A Documentary Reader* (2005). He is currently conducting research for a book on the history of the study of new religions.

CONTRIBUTORS

Yaakov Ariel is Professor of Religious Studies at the University of North Carolina at Chapel Hill. He is the author of a number of books and articles on Christian-Jewish relations in the modern era. His book, *Evangelizing the Chosen People: Missions to the Jews in America,* has won the American Society of Church History Outler prize.

Mary Farrell Bednarowski is Professor Emerita of Religious Studies at United Theological Seminary of the Twin Cities. She is the author of three books, among them *New Religions and the Theological Imagination in America* (1989), and has a long-standing interest in various forms of theological innovation in American religion especially as it is related to issues of gender.

Helen A. Berger is Professor of Sociology at West Chester University of Pennsylvania. She is the author of *A Community of Witches: Contemporary and Neo-Paganisms Witchcraft in the United States* (1999), coauthor of *Voices from the Pagan Census: A National Survey of Witches and Pagans in the United States* (2003), and editor of *Witchcraft and Magic: Contemporary North America* (2005). She is now completing a book on teenage witches on three continents with Douglas Ezzy.

David G. Bromley is Professor of Sociology and Religious Studies at Virginia Commonwealth University. His most recent books are *Teaching New Religious Movements* (Oxford, 2007), *Defining Religion: Critical Approaches to Drawing Boundaries Between Sacred and Secular* (Elsevier Science/JAI Press, 2003), *Cults, Religion and Violence* (Cambridge University Press, 2001), and *Toward Reflexive Ethnography: Participating, Observing, Narrating* (Oxford: Elsevier Science/JAI Press, 2001).

Susan Love Brown is Associate Professor of Anthropology at Florida Atlantic University and also teaches in the Public Intellectuals and the Women's Studies programs. She is the editor of *Intentional Community: An Anthropological Perspective* and has written a number of articles about Ananda Village, a California New Age community with branches in Oregon, Washington, and Italy.

James D. Chancellor is the W.O. Carver Professor of World Religions at The Southern Baptist Theological Seminary and Professor of Religion at The Philippine Baptist Theological Seminary. He is the author of *Life in the Family: An Oral History of the Children of God* published by Syracuse University Press and has written numerous journal articles and book chapters.

George D. Chryssides is Senior Lecturer in Religious Studies at the University of Wolverhampton, England. His publications include *The Advent of Sun Myung Moon* (London: Macmillan, 1991), *Exploring New Religions* (London: Cassell, 1999), and *Historical Dictionary of New Religious Movements* (Metuchen, NJ: Scarecrow Press), as well as contributions to various anthologies and journals.

Mary Ann Clark is a lecturer in the University of Houston system where she teaches courses in Religious Studies, Humanities, and Anthropology and is the coordinator of the Council of Societies for the Study of Religion. She is the author of *Where Men are Wives and Mothers Rule: Santería Ritual Practices and Their Gender Implication* (2005). She has also published numerous journal articles and book chapters.

Douglas E. Cowan is Assistant Professor of Religious Studies and Social Development Studies at Renison College/University of Waterloo. In addition to numerous scholarly articles and chapters, he is the author of *Cyberhenge: Modern Pagans on the Internet* (Routledge, 2005), *The Remnant Spirit: Conservative Reform in Mainline Protestantism* (Praeger 2003), and *Bearing False Witness? An Introduction to the Christian Countercult* (Praeger 2003).

Robert S. Cox is Head of Special Collections and Adjunct Professor of History at the University of Massachusetts Amherst. He is author of *Body and Soul: A*

Sympathetic History of American Spiritualism (Charlottesville: University of Virginia Press, 2003) and editor of *The Shortest and Most Convenient Route: Lewis and Clark in Context* (Philadelphia: APS, 2004).

Daniel Cozort is Professor and chair of the Department of Religion at Dickinson College, in Carlisle, Pennsylvania, where he teaches about the religions of India and Native America. He is the author of *Unique Tenets of the Middle Way Consequence School, Highest Yoga Tantra, Buddhist Philosophy, Sand Mandala of Vajrabhairava,* and *Imagination and Enlightenment* and a documentary film, *Mandala: Sacred Circle of Vajrabhairava,* as well as book chapters and articles.

Dereck Daschke is Associate Professor of Philosophy and Religion at Truman State University in Kirksville, Missouri. He is coeditor of *New Religious Movements: A Documentary Reader*(2005). He has published frequently on ancient Jewish apocalypticism and prophecy, including "Mourning the End of Time: Apocalypses as Texts of Cultural Loss" in *Millennialism from the Hebrew Bible to the Present* (2002) and "'Because Of My Grief I Have Spoken': The Psychology of Loss in 4 Ezra" in *Psychology and the Bible* (2004).

Dell deChant is an Instructor and the Associate Chair in the Department of Religious Studies at the University of South Florida. He is also on the faculty of the Honors College at USF. He is the author of *The Sacred Santa: The Religious Dimensions of Consumer Culture* (2002) and coauthor of *Comparative Religious Ethics: A Narrative Approach* (2001). He has also published numerous journal and encyclopedia articles and book chapters on New Religious Movements.

Brenda Denzler works full-time as a writer at the University of North Carolina at Chapel Hill and part-time as an independent scholar with an interest in marginal religious phenomena and movements. She is the author of *The Lure of the Edge: Scientific Passions, Religious Beliefs, and the Pursuit of UFOs* (2001). She is also the author of several presentations and papers on the UFO community.

Jacob S. Dorman currently holds the Mellon Postdoctoral Fellowship at Wesleyan University's Center for the Humanities. His book on black Israelites and the discourse of civilization during the Harlem Renaissance is forthcoming from Oxford University Press.

Cynthia Eller is Associate Professor of Women and Religion at Montclair State University. She is the author of *Am I a Woman? A Skeptic's Guide to Gender* (2003), *The Myth of Matriarchal Prehistory: Why an Invented Past Won't Give Women a Future* (2000), *Living in the Lap of the Goddess: The Feminist Spirituality Movement in America* (1995), and the interactive textbook *Revealing World Religions* (2005).

Robert Ellwood is Distinguished Emeritus Professor of Religion at the University of Southern California and is the author of several books, including *Religious and Spiritual Groups in Modern America* and *Alternative Altars.* He lives in Ojai, California, and has served as vice president of the Theosophical Society in America.

Ina Johanna Fandrich is an independent scholar living in New Orleans. She is the author of *The Mysterious Voodoo Queen, Marie Laveaux: A Study of Powerful Female Leadership in Nineteenth-Century New Orleans* (Routledge 2005).

Ron Geaves is Professor of Religious Studies in the Department of Theology and Religious Studies at University College Chester. His research interests focus around the transmigration of Indian traditions to the West. He has published two monographs and several journal articles in this area, including *Sufis of Britain (2000).* His most recent publications are *Islam and the West post 9/11* (2004) and *Aspects of Islam* (2005). He has just completed a monograph on Śaivite traditions in Diaspora to be published in 2006. He has known Prem Rawat since 1969 and has already published four journal articles concerning his activities.

Terryl L. Givens is Professor of Literature and Religion and holds the James A. Bostwick Chair of English at the University of Richmond. He is the author of the prize-winning *Viper on the Hearth: Mormons, Myths and the Construction of Heresy* (Oxford 1997), *By the Hand of Mormon: The American Scripture that Launched a New World Religion* (Oxford 2003), and *The Latter-day Saint Experience in America* (Greenwood 2004), in addition to articles and chapters on Romanticism, Literary Theory, and religious studies.

Adrian Harris has been a Practicing Pagan since 1990 and is currently conducting postgraduate research into Eco-Pagan ritual at the University of Winchester, UK. He has written several articles and book chapters, including "Sacred Ecology" in *Paganism Today* (Harper Collins, 1996) and "Dragon Environmental Network" in *The Encyclopaedia of Modern Witchcraft and Neo-Paganism* (Citadel Press, 2002).

Michael Homer is a practicing trial lawyer in Salt Lake City. He is a member of the Board of State History (appointed by Governor Michael Leavitt in 1997) and has been Chair since 2003. He has published four books, 13 chapters in books, and over 70 articles on historical and legal subjects. He is the recipient of the David Kirby Best Article Award from the Arthur Conan Doyle Society, the Lowell L. Bennion Editor's Award by *Dialogue, A Journal of Mormon Thought,* the T. Edgar Lyon Award of Excellence by the Mormon History Association, and The John Whitmer Historical Association Best Article Award. His most recent book, *On the Way to Somewhere Else: European Sojourners in the Mormon West,* was published by Arthur H. Clark Company in 2006.

Dawn L. Hutchinson is an instructor of religion at Christopher Newport University. She has authored entries in the *Encyclopedia of Religion, Communication, and Media, The Handbook for the Study of Religion, Encyclopedia of Religious Freedom,* and *The 21st Century Encyclopedia of the World's Religions.*

Jeffrey Kaplan is Associate Professor of Religion and the Director of the University of Wisconsin Oshkosh Institute for the Study of Religion, Violence and Memory. He serves as book review editor and serves on the Editorial Boards of the journals *Terrorism and Political Violence* and *Nova Religio.* He is the author or editor of 11 books on

religious violence and millenarian terrorism: *Millennial Violence: Past, Present and Future* (2002), *The Cultic Milieu* (2002), *Encyclopedia of White Power: A Sourcebook on the Radical Racist Right* (2000), *Beyond The Mainstream: The Emergence Of Religious Pluralism In Finland, Estonia And Russia* (2000), *The Emergence of an Euro-American Radical Right* (coauthored with Leonard Weinberg) (1998), and *Radical Religion in America: Millenarian Movements From the Far Right to the Children of Noah* (1997). His latest book, *Religious Resurgence and Political Violence,* will be published in 2006. In addition, he has authored numerous articles, encyclopedia entries, and book reviews that have appeared in a multidisciplinary range of peer reviewed academic journals.

Philip Lamy is Professor of Sociology and Anthropology at Castleton College in Castleton, Vermont. He is the author of *Millennium Rage: Survivalists, White Supremacists, and the Doomsday Prophecy* (1996). His articles and commentary on New Religious Movements and countercultures have appeared in professional journals, edited volumes, and the mass media, including *Time Magazine, The London Times, Wired Magazine,* National Public Radio, and the BBC.

David Christopher Lane is a Professor of Philosophy at Mount San Antonio College and a Lecturer in Religious Studies at California State University, Long Beach. He is the author of *The Radhasoami Tradition* (1992), *Exposing Cults* (1992), *The Making of a Spiritual Movement* (1983), and *The Unknowing Sage* (1993). He has also produced several films, including *Moving Water, Digital Baba,* and *Truth Lies.* On a more personal note, Lane won the world bodysurfing championship in 1999 and the International Bodysurfing Championships in 1997, 1998, 2000, and 2004.

Scott Lowe is professor and chair of the Department of Philosophy and Religious Studies at the University of Wisconsin–Eau Claire. He is the author of *Mo Tzu's Religious Blueprint for a Chinese Utopia* and *Da: The Strange Case of Franklin Jones* (with David Christopher Lane) as well as numerous articles and book chapters on Chinese religions and alternative religions in the West.

David W. Machacek is associate director of Humanity in Action, a New York–based not-for-profit organization that sponsors international educational programs on minority issues and human rights, and Visiting Assistant Professor of Public Policy at Trinity College in Hartford, Connecticut. He is coauthor of *Soka Gakkai in America: Accommodation and Conversion* and coeditor of *Global Citizens: The Soka Gakkai Buddhist Movement in the World.* His articles have appeared in *Nova Religio, Sociology of Religion, Research in the Social Scientific Study of Religion, Journal of Oriental Studies,* and *Journal of Church and State.*

J. Gordon Melton is the Director of the Institute for the Study of American Religion and is a research specialist with the Department of Religious Studies at the University of California–Santa Barbara. He is the author of a number of books on American religion including the *Encyclopedia of American Religions* (7th ed., 2003), *The*

Encyclopedic Handbook of the Cults in America (1992), and *Finding Enlightenment: Ramtha's School of Ancient Wisdom* (1998).

Michael L. Mickler is Professor of Church History and Vice President of Unification Theological Seminary. He is the author of *40 Years in America: An Intimate History of the Unification Movement in America, 1959–1999* (2000), *A History of the Unification Church in America, 1959–74* (1993), and *The Unification Church in America: A Bibliography and Research Guide* (1987), as well as articles and reviews on the Unification Church and other movements.

Timothy Miller is Professor of Religious Studies at the University of Kansas. He is the author of *Following In His Steps: A Biography of Charles M. Sheldon* (Tennessee, 1987), *American Communes, 1860–1960: A Bibliography* (Garland, 1990), *The Hippies and American Values* (Tennessee, 1991), *The Quest for Utopia in Twentieth-Century America* (Syracuse, 1998), *The 60s Communes: Hippies and Beyond* (Syracuse, 1999), and editor of *When Prophets Die: The Postcharismatic Fate of New Religious Movements* (State University of New York Press, 1991) and *America's Alternative Religions* (State University of New York Press, 1995), as well as articles in many journals and in the popular press.

Rebecca Moore is Associate Professor of Religious Studies at San Diego State University. She is the author of *Voices of Christianity: A Global Introduction* (2005), and coeditor of *Peoples Temple and Black Religion in America* (2004). She is Co-General Editor of *Nova Religio: The Journal of Alternative and Emergent Religions.* She has also published several journal articles and book chapters on the subject of Peoples Temple and Jonestown.

Douglas Morgan is professor of history at Columbia Union College in Takoma Park, Maryland. He is author of *Adventism and the American Republic: The Public Involvement of a Major Apocalyptic Movement* (2001).

M. Macha NightMare is an author, ritualist, and all-round Pagan webweaver. She presents at colleges, universities, and seminaries and teaches about death and dying and Neopagan public ritual at Cherry Hill Seminary, the first and only seminary serving the Neopagan community. (www.machanightmare.com.)

Kathleen Malone O'Connor is an Assistant Professor of Religious Studies at the University of South Florida where she specializes in Islamic studies. She has published in *Folklore: An Encyclopedia of Beliefs, Customs, Tales, Music, and Art, Journal of the American Academy of Religion,* and the *Encyclopedia of the Qur'an.* She has contributed chapters to *Black Zion: African American Religious Encounters with Judaism, Anthropology and Theology: Gods, Icons, and God-talk,* and *Studies in Middle Eastern Health.*

James T. Richardson is Director of the Grant Sawyer Center for Justice Studies and director of the Judicial Studies graduate degree program for trial judges at the University of Nevada, Reno. His latest book is *Regulating Religion: Case Studies from*

Around the Globe (Kluwer, 2004). He has published over 200 articles and chapters, as well as ten books, mostly about various aspects of New Religious Movements.

Robin Rinehart is Associate Professor of Religious Studies at Lafayette College, where she also directs the Asian Studies program. She is the author of *One Lifetime, Many Lives: The Experience of Modern Hindu Hagiography* (Oxford 1999), editor of *Contemporary Hinduism: Ritual, Culture, and Practice* (ABC-CLIO 2004), and has also published journal articles and encyclopedia entries.

E. Burke Rochford Jr. is Professor of Sociology and Religion at Middlebury College in Vermont. He is author of *Hare Krishna in America* and the forthcoming *Hare Krishna Transformed* to be published in 2007 by New York University Press. He has also published numerous articles and book chapters on the Hare Krishna movement and new religions.

Rosamond C. Rodman is an Assistant Professor of Religious Studies at Macalester College, in St. Paul, Minnesota. She works on intersections of Bible and American culture.

Nora L. Rubel is Visiting Assistant Professor of Religious Studies at Connecticut College. Trained in American religious history, she has published articles on African American religion and contemporary Judaism.

John K. Simmons, Professor of Religious Studies and chairperson of the Department of Philosophy & Religious Studies at Western Illinois University, is the creator of the popular "Beliefs and Believers" teleclass. He publishes regularly in the area of women-led, New Religious Movements in late nineteenth and early twentieth century American history, including the coauthored book, *Competing Visions of Paradise: The California Experience of 19th Century American Sectarianism.* Recent articles include "Eschatological Vacillation in the Mary Baker Eddy's Presentation of Christian Science" in *Nova Religio* and "Vanishing Boundaries: When Teaching About Religion Becomes Spiritual Guidance in the Classroom" in *Teaching Theology and Religion.*

Robert H. Stockman is an instructor for the Department of Religious Studies at DePaul University, Chicago, Illinois, and Director of the Institute for Baha'i Studies in Evanston, Illinois. He is the author of *The Baha'i Faith in America: Origins, 1892–1900, Vol. 1, The Baha'i Faith in America: Early Expansion, 1900–1912, Vol. 2,* and *Thornton Chase: The First American Baha'i.* He has also published 25 articles on Baha'i topics.

Bron Taylor is Samuel S. Hill Ethics Professor at the University of Florida, where he teaches in the interdisciplinary graduate program in religion and nature. He has written widely about religious environmental movements and nature religions. His books include *Ecological Resistance Movements: The Global Emergence of Radical and Popular Environmentalism* (SUNY 1995) and the *Encyclopedia of Religion and Nature*

(Continuum 2005), and he is the editor of the *Journal for the Study of Religion, Nature, and Culture.*

Suzanne Thurman is an independent scholar and former history professor who now manages intellectual property portfolios for IPWatch. She has published extensively on the Shakers. Her book, *"O Sisters Ain't You Happy?": Gender, Family, and Community Among the Harvard and Shirley Shakers, 1781–1918,* won a *Choice* Outstanding Academic Book Award in 2002.

Arthur Versluis is Professor of American Studies at Michigan State University. He is editor of the journal *Esoterica* and author of numerous books, including *Restoring Paradise* (State University of New York Press 2004) and *The New Inquisitions: Heretic-hunting and the Origins of Modern Totalitarianism* (Oxford University Press 2006).

David L. Weddle is Professor of Religion and chair of the Department at Colorado College. He is the author of *The Law As Gospel: Revival and Reform in the Theology of Charles G. Finney* (1985). He has published journal articles on Jonathan Edwards, Christian Science, and Jehovah's Witnesses, as well as review essays on law and religion. His entries on Jehovah's Witnesses appear in *The Encyclopedia of Protestantism* and the *Encyclopedia of Religion.*

Dagmar Wernitznig is an Associate Fellow with the Rothermere American Institute, University of Oxford. She is the author of *Going Native or Going Naive?: White Shamanism and the Neo-Noble Savage* (University Press of America 2003).

Catherine Wessinger is professor of the history of religions at Loyola University New Orleans. She is Co-General Editor of *Nova Religio: The Journal of Alternative and Emergent Religions.* She is the author of *Annie Besant and Progressive Messianism* (1988), and *How the Millennium Comes Violently: From Jonestown to Heaven's Gate* (2000), as well as articles on New Religious Movements. She has edited *Women's Leadership and Marginal Religions: Explorations Outside the Mainstream* (1993), *Religious Institutions and Women's Leadership: New Roles Inside the Mainstream* (1996), and *Millennialism, Persecution, and Violence: Historical Cases* (2000). Her current projects include collecting oral histories relating to the Branch Davidian case and editing the *Oxford Handbook on Millennialism.*

Melissa M. Wilcox is Assistant Professor of Religion and Director of Gender Studies at Whitman College. Author of *Coming Out in Christianity: Religion, Identity, and Community* and coeditor (with David W. Machacek) of *Sexuality and the World's Religions,* she is currently working on a book entitled *Spirituality and Sex in the City: Queer Religiosities in Practice and Theory.*

Jane Williams-Hogan is the Carpenter Chair Professor of Church History at Bryn Athyn College where she also teaches sociology. She is the author of *Swedenborg e le Chiese Swedenborgiane* (2004). She has also published journal articles, encyclopedia articles, and book chapters.

Jeff Wilson is a doctoral candidate in Religious Studies at the University of North Carolina at Chapel Hill. A specialist on Buddhism in America, he is the author of *The Buddhist Guide to New York* (2000) and numerous articles and book chapters on the subject. Wilson is a Contributing Editor to *Tricycle: The Buddhist Review.*

Joseph Dylan Witt is a Ph.D. student in the Religion and Nature Graduate Program at the University of Florida. He has contributed to the journal *Worldviews* and serves as the Managing Editor for the *Journal for the Study of Religion, Nature and Culture.*

About the Editors and Contributors 271

Acknowledgments

This project is the result of a collaborative effort. We the coeditors are grateful to the contributors of this series for sharing their expertise with the general public through these outstanding scholarly essays. They did so for the sake of bringing to a wide reading audience the best information and interpretations now available about a wide range of new religious movements. We are especially grateful to Catherine Wessinger and David Bromley for helping us identify authors and for many other suggestions that have improved this set of volumes.

We the coeditors thank all of these scholars who gave so much to make this set possible. Many of them wrote their essays amid personal hardship and busy professional lives.

We also thank Suzanne Staszak-Silva, our editor at Greenwood, for her advice and guidance as this set went from one stage of development to another.

We are also grateful to our colleagues, at our respective teaching institutions as well as among the wider scholarly community, who offered us personal support and encouragement, much free advice, and many good wishes and kind thoughts.

Finally, we thank our families: our wives, Jennifer Gallagher and Carrol Davenport, and our daughters, Maggie Gallagher and Brittany and Kathleen Ashcraft. We lovingly dedicate this set to those daughters, our hope for the future, whom we love very much.

Introduction

Although new or alternative religious movements, or New Religious Movements (NRMs), have always been part of the American religious landscape, they have not always received broad public attention. Most often, their formation, attraction of members, and growth or decline have occurred beyond the harsh glare of prolonged public scrutiny. In some striking cases, however, a new or alternative religious movement has dominated the news for a period of time, usually because the movement itself, or some of its members, became involved in something that was widely perceived to be illegal, immoral, or simply destructive. For example, in the wake of the 1963 assassination of President John F. Kennedy, Minister Malcolm X of the Nation of Islam became notorious for his comment that Kennedy's murder meant "the chickens had come home to roost." In the 1970s saffron-robed members of the International Society for Krishna Consciousness, also known as Hare Krishna, became so well known for seeking donations and engaging strangers in conversations in public that they were easily lampooned in the comic film "Airplane." In the 1980s, the Rev. Sun Myung Moon, leader of the Unification Church (or Moonies), was found guilty of tax evasion by diverting church funds for his personal use. More recently, in 1993, the U.S. Bureau of Alcohol, Tobacco, and Firearms staged a raid on the home and church of a small group of Bible students outside of Waco, Texas. In addition to the ten lives lost in the botched raid, the 51 day standoff between the students of David Koresh, a group widely known as the Branch Davidians, and agents of the federal government, particularly the Federal Bureau of Investigation, culminated in the loss of 78 lives in a fire that consumed the Mount Carmel Center where the Branch Davidians lived. In 1997 followers of Marshall Applewhite, forming a group called Heaven's Gate, joined him in committing suicide so that they could all progress to what they viewed as "the evolutionary level above human." The list of such incidents could easily be multiplied.

In the late twentieth century as new and alternative religious movements continued to receive public attention for elements of their practice or belief that were highly controversial, a dominant image of such groups began to solidify. That image was

fostered by the activism of groups of former members, their families, some professionals in social work and psychology, and various other volunteers. When the opposition to new or alternative religious groups originated with more or less secular individuals, those opponents were generally called anticultists. When opposition originated with Evangelical Protestant Christians, those opponents were usually called countercultists. The tireless work of such activists, anticultist or countercultist, quickly produced a standard understanding of new and alternative religions that united a wide variety of groups under the umbrella category of "cults." In the perceptions of their anticult opponents, cults posed serious threats to vulnerable individuals and, ultimately, to the stability of American society itself. Anticultists and countercultists believed that cults had three prominent characteristics. First, they were led by unscrupulous, manipulative, and insincere individuals who sought only to increase their own power, wealth, and/or sexual enjoyment. Second, cults preyed upon unsuspecting, confused, and vulnerable individuals, often using sophisticated and virtually irresistible tactics of influence. Third, participation in a cult would surely bring harm to individual participants and might also lead them to commit any number of antisocial actions that threatened the public good. The stereotype of the "destructive cult" was aggressively marketed by the loose coalition of anticultists, particularly when disturbing news about any new or alternative religious movement became public. Thus, on the one hand, while a variety of events created a broad interest in learning about individual religious groups, their practices and beliefs, organizational structure, leadership, and many other topics, on the other hand, the predominance of the cult stereotype inevitably skewed the information available, attributed the perceived faults of any one group to all of them, and created expectations that any group labeled a cult must necessarily be worthy of suspicion, scorn, and vigorous opposition. Despite their prodigious efforts at educating the general public, the various anticult and countercult activists have, in fact, promoted much more misunderstanding than accurate understanding of the religious lives of some of their fellow citizens. Consequently, they have helped to create a very hostile environment for anyone whose religious practices do not fit within a so-called "mainstream." The personal and social costs of such religious bigotry may actually be higher than what the activists fear from cults themselves.

This set of volumes on "New and Alternative Religions in America" intends to rectify that situation for the general reader. It aims to present accurate, comprehensive, authoritative, and accessible accounts of various new and alternative religious movements that have been and are active in American society, as well as a set of essays that orient the reader to significant contexts for understanding new and alternative religions and important issues involved in studying them. The presentations are predicated on a simple but fundamental assumption. It is that accurate description and understanding must precede any judgment about the truth, validity, morality, or trustworthiness of any religious group or person. Accurate description demands that the group be presented in terms that it could itself recognize and acknowledge as being at least close to the way it understands itself. Providing an accurate description of the history, organization, practices, and beliefs of a particular group does not, in

any way, constitute an endorsement of that group, but it does provide an indispensable baseline for any further discussion. Such a baseline has often been lost in the public discussions of new and alternative religious movements, because their most bizarre, threatening, or even humorous aspects have been exaggerated. What is missing from such caricatured presentations is a sense of how any person could find such apparently ludicrous, lethal, or laughable groups worth joining. Simple dismissal of new or alternative religions as absurd, erroneous, or pernicious misses the social influence that they can have and demonstrably have had. Whatever an outsider's perception of new and alternative religions might be, many clear-thinking and well-intentioned individuals, throughout American history, have associated themselves with such groups. This set is founded on the idea that members' or participants' reasons for their decisions and their accounts of their experiences form the primary data for understanding new and alternative religions. Both hostile and approving accounts of new or alternative religions from outsiders provide a different sort of data, which reveals the social location and often-controversial careers of new and alternative religions. But neither approval nor criticism by external observers should take precedence over the self-understanding of each group as articulated by its members in establishing a baseline of descriptive accuracy.

Readers of this set of volumes will thus encounter both information and analytical frameworks that will help them arrive at an informed and appropriately complicated understanding of new and alternative religious movements in American history and society. Volume 1 provides a set of analytical perspectives on new and alternative religions, including the history of such movements in the United States, the controversies in which they have often become embroiled, the roles of leaders within the groups and the processes by which individuals become members and also leave their groups, the legal and global contexts in which new and alternative religions function, and a variety of prominent themes in the study of new religions, including roles of gender, children, and violence.

The four volumes that follow generally present accounts of individual groups, many of them well known but some much less so. Each chapter presents information about the origin and subsequent development of the group in question, its internal organization including the predominant type of leadership, its most important practices and beliefs, and controversies that have put the group in the limelight. Volume 2 focuses on groups that have developed out of the broad biblical tradition—Judaism and Christianity—and have achieved such a distinctive status as to be considered, at least by some observers, as independent religious groups rather than simple sectarian variations of more mainstream Jewish or Christian traditions. Volume 2 accordingly raises most acutely the problems of definition that are involved in using the admittedly malleable categories of "new" and "alternative" religions.

The description of a religious movement as *new* or *alternative* only begs further questions. Novelty can be in the eye of the beholder, or in the mind of someone claiming to be innovative. That is, religious movements are judged to be new, alternative, or anything else only in particular contexts and by certain audiences. They may claim, for example, to retrieve and correctly interpret or represent past beliefs

and practices, which have been neglected or forgotten. But their opponents might view the same claims as dangerous and deviant inventions. New religions themselves often manifest a pronounced ambivalence about their own novelty. A fundamental dynamic in new and alternative religions is that they strive to present themselves as both new and old, as unprecedented and familiar. The novelty of new religions cuts both ways; it can just as easily excite the interest of potential adherents as it can strain their credulity. As they spread their messages to those whose interest, approval, and even acceptance they hope to secure, NRMs proclaim both their challenging novelty and their comforting familiarity.

In their sectarian forms, these movements attempt to recapture the lost purity of an idealized past. Sects typically have prior ties to larger religious organizations from which they have intentionally broken off. They aim to return to the pristine origins of the tradition and reestablish its foundations. Sectarian forms of Christianity frequently exhort their partisans to get "back to the Bible"; contemporary Islamic sects similarly yearn for the purity of the times of the prophet Muhammad. Even the Church of Satan, founded by Anton Szandor LaVey in 1966, has spawned sectarian groups that accuse the original Church of Satan of having abandoned its initial commitments and emphases. Sects thus define themselves both in relation to the broader world and in relation to their specific tradition, both of which are perceived to threaten their purity of belief and practice.

In their typology of responses to secularization, Rodney Stark and William Sims Bainbridge contrast cults to sects. Rejecting the polemical definition of cults spawned by their cultural opponents, they define cults as independent religious traditions. Cults may be imports from another culture or independent products of the society in which they develop. Like sects, cults often find themselves in tension or conflict with broader society, simply by virtue of being new and different. Because they, too, want to locate themselves in relation to an authoritative past, cults also lay some claim to previous tradition. What separates cults from sects in their relation to previous traditions is that cults typically do not have a history of institutional conflict and eventual separation. Cults are marked from their beginnings as new entities. Both sects and cults, then, simultaneously declare their novelty and sink their roots in the past. In order to avoid confusion about the term "cult," which has such negative connotations in contemporary American society, this set will keep to the designations of new and alternative religions, which are widely employed by many scholars even though they are somewhat imprecise. The choice of which groups to include in Volume 2, as with the other volumes, is a judgment call. The guiding principle was not only to provide a representative sample of new and alternative religious groups throughout American history, but also to present the groups in sufficient detail to enable the reader to form a complex understanding of them.

Volume 3 investigates groups in the occult or metaphysical tradition, including nineteenth century Spiritualism, the Theosophical Society begun by Helena Petrovna Blavatsky and Colonel Henry Steel Olcott in the late nineteenth century, and the contemporary New Age movement. Like the groups discussed in the second volume, those in Volume 3 are part of a broad tradition that has deep roots in

antiquity. For example, in *The Secret Doctrine* Madame Blavatsky included the ancient Vedic sages of India, the Buddha, and a collection of ancient Greek philosophers among the ancient teachers whose wisdom about the nature of human beings and the nature of god was being given its fullest expression in Blavatsky's modern Theosophical system.

The religious movements discussed in Volume 3 typically present a different organizational profile from those in Volume 2. The groups in Volume 2 have made substantial efforts to maintain boundaries between themselves and their surrounding social environment, demanding exclusive allegiance of their members; vesting authority over practice, doctrine, and group life in charismatic leaders; and offering new and improved interpretations of familiar texts already acknowledged to have broad cultural legitimacy. In contrast, the movements in Volume 3 center on individual teachers who attract shifting groups of students with varying degrees of commitment for varying lengths of time, leave the ability to determine the authority or validity of any pronouncements in the hands of individual seekers, and claim to bring to light extraordinary wisdom from previously unknown or underappreciated sources.

Many of the religions that have appeared to be innovative developments in American religious life have actually been transplanted from other cultures where they have often enjoyed long histories. The openness of the United States to immigrants has always been an important factor in promoting American religious diversity. The 1965 repeal of the 1924 *Asian Exclusion Act,* for example, permitted a variety of Eastern religious teachers to extend their religious activities to the United States. Late in his life, for example, Swami A.C. Bhaktivedanta Prabhupada, the founder of the International Society for Krishna Consciousness, made the United States the focus of his efforts to awaken love for Krishna in as many people as possible. Military personnel returning from service abroad, often with spouses from countries where they had been stationed, also helped to introduce new religious practices and movements to the United States. This was the case, for example, with the form of Japanese Nichiren Buddhism known as Soka Gakkai. Even where it is difficult to provide independent corroboration of claimed international ties, they can nonetheless be claimed. A dramatic example here was the assertion that the elusive figure at the origins of the Nation of Islam, W.D. Fard, arrived in Detroit, Michigan, in 1930 from Mecca in Saudi Arabia. The movements in Volume 4 show clearly that religious innovation in the United States always needs to be considered in a broader, global context. That is no less true of the groups discussed in other volumes as well. For example, Ann Lee's small band of Shakers began in Manchester, England; David Koresh gathered Bible students from Australia, England, and other foreign countries as well as the United States. Theosophy's Madame Blavatsky was a Russian émigré. Finally, the Church of Scientology, like many other new religions that have begun in the United States, conducts a vigorous international missionary program.

The frequent movement of individuals, practices, and ideas across national borders could make a focus on new and alternative religions solely in the United States vulnerable to a myopia that could distort the nature and significance of those movements. That caution holds equally for homegrown and imported religions. Few

religions in the contemporary world, no matter what their age or relation to a mainstream, are confined within a single set of national boundaries. Nonetheless, the focus of this set remains on a selection of religions that have had, for one reason or another, a significant impact on religious and social life in the United States. Prominent in that selection is a group of religions that have been independently founded in the United States. For example, although the contemporary revival of Paganism can be traced to the career of Gerald Gardner in England beginning in the 1930s, many influential Pagan thinkers and teachers, such as Z Budapest, Starhawk, and Isaac Bonewits have flourished in the United States. Similarly, the Church of Satan and its subsequent offshoots owe their inspiration to Anton Szandor LaVey, who produced *The Satanic Bible* and other fundamental texts in San Francisco, California, in the 1960s. Also, beginning in the 1950s the prodigious literary output of L. Ron Hubbard gave rise first to the therapeutic system known as Dianetics and then, as his purview broadened, to the Church of Scientology. Other founders of NRMs in the United States, like Marshall Applewhite of the Heaven's Gate group, attracted far fewer adherents than the Church of Scientology but nonetheless carved out a place for themselves in American religious history through their dramatic, and sometimes tragic, actions. Volume 5 thus focuses on both new developments in international movements within the United States, such as the rise of Neo-Paganism, and the conscious construction of new religions, such as the Church of Scientology, by American teachers and organizations.

As this overview suggests, the definition of what counts as a new or alternative religion is frequently open to argument. Many groups that appear dramatically novel to external observers would claim that they are simply being faithful to ancient traditions. Joseph Smith, for example, claimed that the Church of Jesus Christ of Latter-day Saints, or Mormons, was a restoration of primitive Christianity. Groups that claim to be innovative often express their messages in the form of fresh interpretations of ancient texts, as with Swami Prabhupada's effort to present the ancient Indian classic, the Bhagavad-Gita, "as it is"; or Rael's contention that the mentions of "Elohim" in the biblical book of Genesis actually refer to extraterrestrial beings who came to earth in space ships. Because of the subjective nature of the categories —new to whom? alternative to what?—it will always be difficult to delimit precisely which groups definitely do, and do not, "count" as new or alternative. Moreover, in popular discourse, where the category cult is frequently used but appears devoid of anything other than emotional content, and in interreligious arguments, where cult easily expands to include "virtually anyone who is not us," attempts at substantive definitions give way entirely to polemics. Discussion of new and alternative religions in the United States thus always refers to a shifting and vigorously contested terrain where categories like "alternative religion" or "cult" and implicit comparisons like those implied by "new religious movement" are used to establish, reinforce, and defend certain kinds of individual and group identities, even as they threaten, compromise, or erode other kinds of individual or group identities.

No mapping of such terrain can hope to be definitive. Too much is in flux. Those who enter the terrain need trustworthy and experienced guides. The essays in these

five volumes provide just such guidance. Experienced, authoritative, and plainspoken, the authors of these essays provide both perspectives on some of the most prominent general features of the landscape and full descriptions of many, but by no means all, of the specific areas within it. Those who want to explore the terrain of new and alternative religions in the United States will find in this set multiple points of entry. They may want to focus on a specific local part of the larger area, such as the Theosophical tradition, the Branch Davidians, or Heaven's Gate. On the other hand, they may want to investigate the characteristic dynamics of the broader field, such as the processes of conversion into and defection from groups or the interactions between new and alternative religions and their cultural opponents. There is much to explore—much more than can even be covered in these five volumes. But this set aims to equip the would-be explorer with enough tools and knowledge to make the exploration rewarding and worthwhile.

Swedenborgianism

Jane Williams-Hogan

INTRODUCTION

Based on the religious writings of Emanuel Swedenborg (1688–1772), the Swedenborgian faith emerged in Europe and North America toward the end of the eighteenth century—a century defined by innovation and revolutionary change. Changes occurred in almost every area of human endeavor: science, philosophy, agriculture, manufacture, politics, and religion. In the clash between the traditional and the modern, some people abandoned the old faiths in the name of science or philosophy, others found comfort in new formulations of the old confessions, and a few sought out radically new religions, today called New Religious Movements (NRMs).

Many of these new faiths did not survive beyond the founding generation. The story of Swedenborgianism is different. Perhaps because Swedenborg's new Christian revelation explores the root cause of the broad intellectual and social changes that ushered in the modern world or because it offers a rational faith compatible with the needs of the new age. In *True Christianity* published in 1770, Swedenborg wrote in number 508: "Now it is permitted to enter with understanding into the mysteries of faith."[1]

Swedenborgianism survived beyond the first generation of believers in the eighteenth century, and over the centuries grew in a variety of cultural soils and climates, although better in some environments than others. By 1800, believers were found in the European nations of England, Sweden, France, Germany, and Russia as well as in the United States. In the nineteenth century, the number of believers grew, taking root in Africa, Australia, Canada, and New Zealand. The number of believers and their locations continued to grow in the twentieth century, and by the beginning of the twenty-first century they are on every continent in the world with the possible exception of Antarctica. In 2005 there are approximately 50,000 members of Swedenborgian religious organizations worldwide. The small number may be due to the doctrinal emphasis on freedom and the teaching that heaven is open to all who live a good life irrespective of their faith.

Swedenborgianism draws its doctrines from the religious writings of Swedenborg. He wrote in *True Christianity* number 779 that the Lord would "establish a new church, … by means of a man, who is able not only to receive these doctrines in the understanding but also to publish them by the press." For 23 years (1747–1770) Swedenborg wrote and published a new revelation he claimed was from God (he published the books anonymously until 1768). He produced 18 different titles in 30 volumes, but he never attempted to found a church. When he died in 1772, only a handful of readers of his religious writings professed them to be the true word of God. However, 15 years later in 1787, a church based on those teachings was established in London by individuals who never knew Swedenborg or anyone acquainted with him. Since then, other people in other countries have also established churches after reading Swedenborg's writings. Thus, it might be said that, unlike many churches founded by charismatic leaders, who their followers believed to be filled with grace, this church is founded instead through the "charisma of the book."

In order to understand this type of charisma and the basic characteristics of the Swedenborgian faith, this chapter explores the following: Swedenborg's life, Swedenborgian doctrines, the establishment, history, and practices of Swedenborgian Churches, the impact of the Swedenborgian Movement on Western culture, controversies and issues, and the future.[2]

EMANUEL SWEDENBORG

Swedenborg's life was long, productive, and eventful. He published over 128 different works and left manuscripts for another 182.[3] He published poetry and scientific, civic, philosophical, and religious books. He traveled extensively throughout his life, leaving his native Sweden for the eleventh and last time in 1770 at the age of 82. However, his most remarkable journeys were not to European destinations, but were mental and spiritual in nature. He claims he had his spiritual eyes opened, and to "have seen, heard, and felt" in a world beyond the natural.[4] What follows is a brief overview of his extraordinary life.[5] It can be readily divided into three periods: (1) childhood and education; (2) career; (3) religious call and revelator.

Childhood and Education

Swedenborg was born on January 29, 1688 in Stockholm Sweden. He was born Emanuel Swedberg, and became Emanuel Swedenborg in 1719 when and he and his brothers and sisters were ennobled by Queen Ulrika Eleonora (1688–1741). He was the third child and second son of Jesper (1653–1735) and Sara (nee Behm 1666–1696) Swedberg. The Behm and Swedberg families had extensive mine holdings, and were part of Sweden's upper class. This wealth provided an inheritance for Swedenborg in his adult life that gave him the resources to independently publish his own writing.[6] Looking back on his life from the perspective of his "call" and his claim to be a revelator, what is noteworthy about his childhood is the fact that his

father was a Lutheran pastor, and he was raised in a religiously conservative home. Although Swedenborg recalled late in life that his parents believed that "angels spoke through me," his first passion in life was science.

He graduated from Uppsala University in 1709, then went on an extended European tour from 1710–1715 to complete his education. The purpose of his trip was to absorb the latest scientific developments. He studied in England, France, Holland, and Germany by reading about new discoveries, attending lectures, and meeting with well-known scholars. In addition, he stayed in the homes of trained craftsmen and learned their trades. In this way he learned engraving and lens grinding among other skills.

Career

Swedenborg came home ready to be of service to his nation. First he published a scientific journal (Sweden's first) with the hope that he could contribute to the intellectual and economic development of his homeland. Six issues of the journal *Daedalus Hyperboreus* were published in 1716 and 1717. He included descriptions of some of the inventions he had developed during his trip.[7]

The journal brought Swedenborg into contact with Sweden's most highly regarded inventor Christopher Polhem (1661–1751) and the king, Charles XII (1682–1718). He was invited to be Polhem's assistant, and together they traveled to Lund to meet the king. Impressed with Swedenborg's talent, the king gave him an appointment as Extraordinary Assessor on the Board of Mines, the oversight agency for Sweden's vital mining industry.

Before assuming his duties as a mine inspector and judge, Charles had several pressing engineering projects that required immediate attention, and Polhem and Swedenborg were engaged to oversee them. The final project entailed the transportation of the king's navy overland for a surprise attack on Norwegian forces at Fredrikshall. This campaign ended with Charles's death on November 30, 1718.

That royal death affected Swedenborg's career. His appointment to the Board of Mines was no longer automatic. He attempted to bolster his claim by learning about mining techniques and practices through direct observation during a trip to Europe in the early 1720s. His diligence and persistence were rewarded. He secured a paid position in 1724. For the next quarter of a century Swedenborg dedicated his public life to the administrative and judicial duties of that position. Less successful in private life, although interested, he never married.

Like others during the Enlightenment, he used the tools of natural philosophy to explore nature, as a mirror of God's order and a vessel for his purposes. His *Basic Principles of Nature,* published in 1734, articulated a nebular hypothesis similar to the later theory of marquis La Place (1749–1827) to account for the creation of our solar system. His initial projects had the same goals as his contemporaries; however, his religious writings were at odds with both the rationalist philosophers and religious enthusiasts.

During this phase of his life, Swedenborg used his time outside of his official position to wrestle with understanding the creation of the universe, the formation of the human being from the soul, and the relationship between creation and God. He published extensively on these topics. He studies the mineral kingdom and the cosmos in search of the creator, and the human body—the soul's domain—in search of the redeemer.

In 1743 he asked for a leave of absence from the Board of Mines to go to The Hague and published what he hoped would be his *magnum opus,* the *Soul's Domain.* In preparation for this work, Swedenborg compiled notes from various philosophers, classical and contemporary. Among others he cited the works of Plato, Aristiotle, Gottfried Wilhelm Leibnitz (1646–1716), and Christian Wolff (1679–1754). Wolff was of particular interest because of his attempt to reconcile reason with the doctrines of the Christian Church. This had direct bearing on Swedenborg's project to find the soul within the human body. While he did publish two volumes of this work in The Hague in 1744, and another volume in London in 1745, at this same time, he experienced a spiritual crisis that profoundly changed his life.[8]

Religious Call and Revelator

When Swedenborg left Sweden in July 1743, his mind was no doubt focused on the task that awaited him at his journey's end—overseeing the printing of the manuscripts of the *Soul's Domain.* He reveals his excitement and anticipation, when he showed them to Adolph Fredrich (1710–1771) the future king of Sweden. He was certain that this was an important work because he believed that his demonstration of the existence of the soul to the senses might help others to banish the human propensity to unbelief.

In mid-August en route to The Hague via Amsterdam, he began to experience dreams sufficiently extraordinary in nature that he recorded them in his travel journal. For the next year Swedenborg recorded his dreams. The journal was never intended for publication. Nevertheless, it was discovered and authenticated in the 1850s and 99 copies were published in Swedish as *Swedenborgs Drommer* by G.E. Klemming. The journal contains 286 entries, although the first ten are observations made during his trip to Amsterdam. It is perhaps the oldest and longest series of dreams ever recorded. Soon after he began recording his dreams, Swedenborg also began to interpret them.

He believed that his dreams were communications about his state of spiritual health. These dreams penetrated his pretenses and laid bare his vanity, arrogance, sense of superiority, conceit, and pride. In one dream, he is lying beside a pure woman, who he believed was his guardian angel. She told him that he smelled ill. This signaled the beginning of strong temptations, which at times brought him to the edge of despair. Gradually his temptations alternated with feelings of blessedness. For example, on the night after Easter, April 6–7, 1744, Swedenborg heard a loud thunderclap and was cast face down on the floor. He prayed and felt the presence of Jesus Christ, and then he saw him face-to-face. Jesus asked him if he had a clean bill of

health. Swedenborg responded, "Lord, you know better than I." "Well do so," he said.[9] This image of a bill of health harkened back to Swedenborg's youth, when he broke the quarantine imposed by London harbor officials, fearful of the plague, on the ship he had taken on his first trip from Sweden to England. Encouraged by friends, he entered London without a "clean bill of health." In Swedenborg's analysis in his journal, God's command signified "love me in reality." When God said, "Well, do so," he was asking Swedenborg to do what he had not done in his youth, when he had acted out of self-interest and could have imperiled the lives of thousands. God now demanded that he love others more than himself. This dream was life altering for Emanuel Swedenborg. As he said,

> I have now learned this in spiritual [things], that there is nothing for it but to humble oneself and to desire nothing else, and this with all humility, than the grace of Christ.… The Holy Spirit taught me this; but I, with my foolish understanding, left out humility, which is the foundation of all.[10]

In one of his last recorded dreams, he was told by Christ not to undertake anything without him.

Although he oversaw the third volume of the *Soul's Domain* through the press in London, he began to write a very different sort of book. Called *The Worship and Love of God* (London, 1745) it is a prose poem written as an offering of love to God. Not long after the publication of the first two parts of this little book (the third part was never finished), Swedenborg returned to Sweden in the summer of 1745 still seeking a focus for his "call."

For the next two years, he continued his work on the Board of Mines. He also delved into the study of the Bible. Bible study was essential because it is God's Word, and he spoke to Swedenborg in it. The Bible was to be his guide and his sole source of divine truth. He had been warned in his dreams not to read theology written by others to prevent contamination.[11] He mastered Hebrew in order to read Hebrew Scriptures (Old Testament) in the original. He attempted to interpret the story of creation and developed a Biblical index through which he hoped to discover the deeper meaning of the text. He read and reread the Bible, he prayed, and he saw visions of the spiritual world. In 1747, he began to record these visionary experiences, somewhat like scientific field notes, in what is now called *Spiritual Experiences.* It was also a multivolume work, written over an 18-year period and left in manuscript form.

In 1747, two events occurred that signaled a shift in Swedenborg's focus. First, he was unanimously nominated to be President of the Board of Mines, an honor that recognized his enormous contribution to the activities of the Board. He declined the offer, however, and instead petitioned the king, Frederick I (1676–1751), to relieve him of his duties, and to grant him a pension of half his salary in retirement in order that he "could finish the work on which I am now engaged."[12] The King accepted his request, as a way to recognize Swedenborg's outstanding civic and intellectual contribution to the nation.[13] To the regret of all his colleagues, Swedenborg took leave of the Board of Mines on July 17, 1747.

He left Sweden almost immediately for Amsterdam. The second event took place on August 7. He recorded it in one of the indices of the Bible he was working on. He wrote, "1747, August 7, old style. There is a change of state in me into the heavenly kingdom, in an image."[14] Swedenborg's followers interpret this to mean that he was now in full communication with the heavens and understood his call.[15]

Swedenborg saw himself as a revelator for a new age. As he interpreted the role, he was not called to be an Old Testament prophet or to be another Christ. He was called to serve the Lord Jesus Christ as a scribe of heaven, faithfully using the doctrine of correspondences to interpret the internal or spiritual sense of the Old and New Testaments and to record for mortal eyes the wonders of heaven and hell. The nature of Swedenborg's prophecy was not to speak new words or share new visions clothed in mystery and symbol, but to write and publish the secrets of heaven and eternal life, making them available for all sincere seekers. He strove to interpret the old symbols, making them accessible for future generations, knowing that those generations would demand clarity and rationality in spiritual things.

The first book that Swedenborg produced, using the doctrine of correspondence, was the *Arcana Coelestia,* or *Heavenly Secrets.* Correspondence, according to Swedenborg, is a relationship of causality, and therefore it denotes a similarity between something spiritual and something physical.[16] For example, truth on the spiritual plane does what water does on the physical plane, it purifies; love enlivens the spirit, just as the heat of the sun causes plants to grow in the natural world. He published the first volume anonymously in London in 1749. The remaining seven volumes were published regularly until 1756.

The manner in which Swedenborg published his religious works mirrored his earlier publishing efforts. Through the resources he had inherited and his salary or pension, Swedenborg had sufficient financial resources at his disposal, enabling him to travel outside of Sweden, hire a printer, and pay for the printing and binding of several hundred copies of his books. He was able to do this for the nine major philosophical volumes he published, as well as for the 18 religious titles. He chose to publish outside of Sweden because of the strict censorship laws found there.

The publication of *Heavenly Secrets* marked the opening of the public phase of Swedenborg's spiritual mission. In the middle of this period (1759), he had a verified clairvoyant experience. He saw a fire break out in Stockholm while at dinner with friends and acquaintances in Göteborg. He reported what he saw to his dinner companions, and the next day he was asked to repeat them for the governor. The following day news came of the fire, and the report of the course of the fire matched his description. Stories concerning this circulated in Europe, so that even Immanuel Kant (1724–1804) was asked to comment on this and other of Swedenborg's clairvoyant experiences by a friend (1763).[17] Nonetheless, he continued to write and publish his religious works anonymously until 1768. Thirteen different titles were produced during this time period.

In 1768 Swedenborg published in Amsterdam *Marriage Love* and signed it "Emanuel Swedenborg, a Swede."[18] In the book, he also advertised his previous religious works and listed a forthcoming title. He may have revealed his identity as the

author, at this time, for two reasons: first, by 1768, it was fairly well known that Swedenborg was the author of these works, because stories of his clairvoyant experiences circulated fairly widely; and second, Swedenborg, now 80 years old, may have been aware that acknowledging authorship might be the best way to preserve these books for future generations.[19]

Swedenborg returned to Sweden one last time in 1769 and discovered that two Lutheran pastors and personal friends, who read his books and became convinced of their truth were on trial for heresy in Göteborg. The findings about heresy were inconclusive, and the case was sent to Stockholm for judgment to determine whether the gymnasium teachers had taught and encouraged heresy. After two years the case was dropped, and no action was taken against the men. There was even talk among some clergy about bringing charges against Swedenborg himself, but, perhaps because he had influential friends among the nobility and royalty, that did not happen. Nonetheless, stories circulated, questioning Swedenborg's sanity. Swedenborg expressed no concern about these charges, telling friends in Sweden and England he felt secure with heavenly protection.

Swedenborg left Sweden for the last time in July 1770. He settled in Amsterdam and oversaw the publication of his last work *True Christianity.* The two-volume work was ready in 1771, and he signed it "Emanuel Swedenborg, Servant of the Lord Jesus Christ."[20]

Not long after the publication of *True Christianity,* Swedenborg traveled to London, where he suffered a stroke in December 1771. Although he partially recovered, he remained essentially bedridden. Sometime in early 1772 he received word that John Wesley wanted to meet him (because of his reputation as a seer), but he died on March 29, 1772, before any meeting could take place. On two occasions after his stroke he was asked whether his writings were true, supposedly he said, "I have written nothing but the truth … and I could have said more, if it had been permitted."[21]

DOCTRINES

Swedenborg left an impressive spiritual legacy of his call and mission in the many volumes he published between 1749 and 1771. His corpus of religious works includes 18 titles in 30 volumes. Some of his works are exegetical in nature, such as *Heavenly Secrets* (London 1749–1756) and *Revelation Unveiled* (Amsterdam 1766); others are based on his spiritual experiences, such as *Heaven and Hell* (London 1758) and the *Last Judgment* (London 1758); another group is doctrinal in nature, such as *Lord* (Amsterdam 1763), *Sacred Scripture* (Amsterdam 1763), *Life* (Amsterdam 1763), *Faith* (Amsterdam 1763); another two are philosophical, *Divine Love and Wisdom* (Amsterdam 1763) and *Divine Providence* (Amsterdam 1763); *Marriage Love* (Amsterdam 1768) might be considered sociological, addressing as it does the foundational love of human societies on earth and in heaven; and finally some are theological in nature, such as *Survey* (Amsterdam 1769) and *True Christianity* (Amsterdam 1771). Despite the variety in both the substance and style,

Swedenborg's essential teachings are found throughout all of them. His corpus presents a universal theology that is supported by his spiritual experiences, biblical exegesis, rational explanation, biblical quotations, and deductive logic.

Fundamental to the whole of his New Christian theology is his claim that the Lord Jesus Christ called him to see the reality of the spiritual world by opening his spiritual eyes, thereby permitting him contact with that world on a regular, almost daily basis. He wrote in the preface to *Heaven and Hell* that he was given this ability in order to prevent the negative attitude of agnostics and atheists "from infecting and corrupting people of simple heart and simple faith."[22] For this purpose, he was not only able to see into heaven and hell, but he was allowed to describe what he saw and heard, "in the hopes of shedding light where there is ignorance, and of dispelling skepticism."[23]

Swedenborg believed that his task was to lay the foundation for a restored and revitalized Christianity. While in agreement with many of the basic tenets of Christianity, his teachings differ from traditional Christianity in several fundamental ways. He offers a new vision of God, human nature, the requirements for salvation, the nature of heaven and hell, marriage, correspondence, and the Last Judgment.

GOD

According to Swedenborg, from the beginning of time and for all eternity God is one. He is "the Lord, who is the God of the universe [and he] is uncreated and infinite," and therefore "he is that essential reality that is called Jehovah and is life itself or life in itself."[24] In him the trinity makes one "as soul, body, and operation make one in man."[25] The divine "esse" constitutes the soul; the "divine human," or the divine nature of the son (Jesus Christ), constitutes the body; and the divine proceeding, or the holy spirit, constitutes the operation. The true essence of the divine is love and wisdom. God's love called forth the creation of a human race, through his wisdom, for the purpose of eternal conjunction with it. Conjunction was the purpose, not union, because it is an activity or process that retains the identity of the participants.

The whole of the finite universe and everything in it was created to be a recipient of life from the Lord; human beings were specifically created with the capacity not only to receive life and love from the Love, but with the additional capacity to return it. God's love desires nothing more that to give of itself, freely and fully. For the return to be complete, it must not only be received, but it must be returned in the spirit in which it was given. That is, it must be both received and returned freely and with conscious rational understanding.

HUMAN NATURE

In order to play their unique role in creation, human beings, according to Swedenborg, have a dual inheritance. They are both natural and spiritual. They are created or are born into the order of the natural world with the capacity to become spiritual. This does not happen automatically, however, but only if they truly desire it and

choose to do what is necessary to achieve it. In all of creation, the human race alone was created in the image and likeness of God, as a form of love and wisdom (Swedenborg makes it clear in his religious writings that the earth is not the only home of the human race, and that human beings in the image and likeness of God exist throughout the created universe).[26]

To this end, "God created the human rational mind in accordance with the order of the whole spiritual world, and the human body in accordance with the order of the whole natural world, and this is why everyone was called by the ancients a little heaven or a little cosmos."[27]

THE REQUIREMENTS OF SALVATION

The human race was endowed with the faculty to receive love and wisdom from God and with the freedom and rationality to acknowledge him as the sole source of their life. They are also free to reject him. Human beings may embrace their natural inheritance as the only true reality and, thus, reject their spiritual potential. Or they may choose to acknowledge their spiritual potential, seek the path of regeneration or rebirth, and, in this way, come into their spiritual inheritance.

Human beings are granted the freedom to reject God, according to Swedenborg, because a relationship that is compelled is really no relationship at all. The Lord does not wish to compel people to accept his life, because compulsion is foreign to his essence. Compulsion, by its very nature, is a natural, not a spiritual quality. Human spiritual choices, made with the divine gifts of freedom and rationality, lead a person either to heaven or to hell.

Human beings are born into the fixed reality of time and space, in order that they may choose what they truly love and, thus, who they are. One way leads to heaven, the other to hell. As Swedenborg wrote in the opening sentence of *Divine Love and Wisdom,* "Love is our life Even though the word 'love' is commonly on our tongues,… We are wholly unaware that it is our very life—not just the general life of our whole body and of all of our thoughts, but the life of their every least detail."[28] People reveal what they love in their actions.

According to Swedenborg the Lord wills everyone to heaven, and he provides all people with the means to reach heaven. The religious writings of Swedenborg clearly state that salvation is not dependent on knowing specific doctrines or belonging to any particular faith. It is dependent only upon living a life of useful service based upon universally available truths. However, the Lord saves no one apart from his or her life's work because, according to Swedenborg, the Lord saves in conjunction with the efforts the person made during his or her life in this world.[29]

According to Swedenborg, religion has two universal characteristics: one should acknowledge God and refrain from evil because it is contrary to God.[30] He further states that the Lord provided for some religion to be present nearly everywhere, and that the two universals of religion exist almost everywhere. Thus, everyone who acknowledges God and refrains from evil should have a place in heaven.

THE NATURE OF HEAVEN AND HELL

Swedenborg humanizes heaven and hell as well as what he calls the world of spirits (where people go immediately after death). The spiritual world, he describes, has both form and substance. His work *Heaven and Hell* offered a vivid and compelling picture of the afterlife to countless readers seeking to know the next world. Some are spiritual seekers, while others take solace in its pages after the death of a loved one. The picture is comforting because, although the laws of spiritual life differ from natural life in some very fundamental ways, in appearance the two worlds are very similar.

Swedenborg describes the process of waking after death, the fact that we experience ourselves as substantially as we did on earth, and the process of personal discovery and revelation concerning who each of us really is—that is, how we become what we really love. Those who love the Lord and the neighbor come into heaven, where they engage in useful employments of every kind, while those who deny the Lord and burn with hatred to the neighbor form themselves into hell. Heaven in all its forms, from the highest to the lowest, is created by a life of use to others. Hell, from the darkest to the mildest, is fashioned by a love of self and the world.

Swedenborg, in his discussion of heaven and hell, makes it clear that all spirits, whether in the world of spirits, heaven or hell, were all born on one of the many earths in the universe. Angels were not created as a race apart, and the devil was not formed from an angel of light cast down into hell. The spiritual realms of heaven and hell are peopled by individuals who were born into the natural world on some earth in the universe, lived a life there, and made choices that then created his or her own personal heaven or hell.

Throughout a person's life, the forces of heaven and hell are kept in equilibrium, so everyone is free to choose either heaven or hell for his or her eternal home. There is an intimate and mutually dependent relationship between these two worlds, so that "The human race apart from heaven would be like a chain without a hook; and heaven without the human race would be like a house without a foundation."[31]

Even though human beings live simultaneously in these two worlds during their earthly life, they focus primarily on life here. In the other world, after a time an individual's awareness of the natural world dims. At the end of the process of self-discovery and spiritual examination, the good seek the path to heaven and find a home provided for them. Evil spirits undergo the same process of self-examination. When it is complete, they wander until they find their own special spot in hell.

Swedenborg desired to make it clear that "Death is not the extinction but the continuation of life."[32] Spiritual life is lived in an eternal present. Angels are continually advancing to the springtime of life, as they lovingly serve others.

MARRIAGE

According to Swedenborg, heaven is not filled with ethereal asexual beings, but consists of couples living in loving eternal marriages. Couples in heaven share all the delights of earthly married life, and they feel themselves to be one angel as they

work together. Human beings were created male and female not just for the sake of natural reproduction, but for essential spiritual purposes.

Men and women were created so they would differ not just in body and appearance but, according to Swedenborg, also as to their form of mind. Masculinity is a form of truth, and femininity is a form of love. Every truth has its corresponding love, and together they generate a special use. The sacred and eternal nature of marriage is founded on this idea. Swedenborg called monogamous married love "the precious treasure of human life."[33]

Marriage is, in fact, the dominant metaphor found in Swedenborg's theology. Marriage is the concept used to describe the union of love and wisdom within God himself. That union is the source of all creation—that marriage is life itself.

Swedenborg called the marriage relationship the seminary of the human race, and he wrote that because of this, the Lord conferred on it the greatest possible delights and happiness. In fact, Swedenborg states that "into this love are gathered all joys and delights from their first to their last."[34]

Swedenborg's teaching on the central importance of married love for the renewal of Christianity is a clear departure from the Christian ideal of *agape* or brotherly love. Nevertheless, his emphasis on the eternal nature of marriage resonates with many, loving married couples unable to imagine being separated after death.

CORRESPONDENCES

In Swedenborg's published religious writings he frequently mentions the internal or spiritual sense of the Word (his name for the Bible) and the concept of correspondences. Correspondences, for Swedenborg, are the key to the inner meaning of the Word. They are as old as the human race and were the transparent language of the inhabitants of the Golden Age, or, as Swedenborg identifies them, members of the Adamic or Most Ancient Church. These early humans could "read" nature, each other, and the events of their own lives, correspondentially. That is they could grasp

> something spiritual in something earthly, people saw heavenly qualities reflected in the trees, plants, and animals around them. As well as in each other and the events of their lives. Having no spoken or written language, and needing none, they received direct revelations and guidance from God through the mirror of nature, through dreams and visions, and through their contact with angels.[35]

The ability of humanity to understand life through correspondences was lost as a result of the fall. Swedenborg believed that it was his role as revelator to restore them, through revealing the spiritual message of the Bible, long hidden in the historical and literal sense of the Word.

THE LAST JUDGMENT

The writings of Swedenborg outline God's relationship to humanity through an examination of the history of the five churches that they describe as having existed

on the earth.[36] The Bible is the source of that history, and the internal or spiritual sense of the literal Biblical narrative revealed in the writings, through the doctrine of correspondences, documents the rise and fall of the first four of the five churches established on earth by God (the fifth is the New Christian Church that Swedenborg claimed was to be established through his revelation). These churches correspond to five states of human spiritual development. Swedenborg identified these churches as the Most Ancient Church (Adamic Church), the Ancient Church (Church of Noah), the Jewish Church (the church established by Moses), the Christian Church (established by the Lord Jesus Christ), and the New Christian Church (based on the second coming of the Lord).

According to the writings, churches are instituted by God to provide humanity with the tools needed to understand God, his love for humanity, and his statutes, as well as how to live to achieve happiness in this world and eternal life. Each church has been given a revelation suitable to its character, although the universal principles of love to the Lord and charity to the neighbor never change. The integrity of each church was dependent upon its members remaining faithful to the universal principles of faith and charity. According to Swedenborg, the conjunction of faith and charity sustains a church, and their separation results in their fall.

Churches fall when the revelation given to them is perverted or "seen through." The love of self and the world are the sources of perversion. The people in these churches stopped relying on the Lord's revelation to know what to do and how to live, and chose to rely on their own natural wisdom instead. God's revelation seems inadequate and child-like to them, because "seeing through" shifts the terms or requirements by which an individual will see the truth.

Thus, each new revelation is accommodated to the new requirements of rationality demanded by humanity. The deeper the level of human self love, the greater is the requirement that revelation speaks to an individual's need to know, to understand, and to explain everything. Retrospectively, all previous accommodations or forms of revelation seem mysterious and incomplete. In Swedenborg's recounting of the history of the four previous churches, each one of them fell, and a judgment took place.

According to Swedenborg, the formulation of the doctrine of the Trinity at the Council of Nicea in 325 CE set the stage for the Last Judgment because it interrupted the unfolding of human spiritual perception that would have developed if Jesus Christ had been acknowledged as One with Jehovah. The formulation of a "trinity of divine persons from eternity" confounded reason and prevented the worship of the One God.

In addition to this fatal understanding of the trinity, an emphasis on miracles and the miraculous clouded people's understanding and perverted their freedom. People sought salvation in miracles, rather than seeking to understand God's Word and applying his eternal principles to life. The Protestant Reformation and the formulation of the "doctrine of faith alone" completely ruptured the already tenuous bond between charity and faith that existed in the Christian Church.

By the eighteenth century the "end of times" had come. According to Swedenborg, the description of the devastation associated with the Last Judgment in *Revelation* did not describe the end of the natural world as we know it, but was, in fact, a spiritual event that took place in 1757. The judgment was spiritual and not natural, because, as has been shown, the Word is essentially a document that focuses on spiritual matters.[37]

Swedenborg in his works made it clear that the Second Coming is now taking place. It does not refer to the physical coming of the Lord into the world a second time, but that the Lord is now fully revealed in the spiritual sense of the Word. The Second Coming is, therefore, an event that occurs in the minds and hearts of everyone who acknowledges the Lord Jesus Christ whose divine human is made fully visible within the New Christian Church.

THE NEW CHRISTIAN CHURCH

When Swedenborg died in 1772 no church organization dedicated to his revelation existed. Knowing Swedenborg's Swedish heritage, it would be natural to assume that some organization devoted to his religious vision might emerge there among his most intimate associates. The hostility of the Swedish Lutheran Church to religious innovation in general and to Swedenborgianism in particular made initial efforts to organize in Sweden futile.[38]

One interesting outcome of the suppression of Swedenborgianism in Sweden is that no one who personally knew Swedenborg was involved in the founding of a church based on his revelation. This is contrary to taken-for-granted expectations of church foundation, as well as to the general theoretic formulations on the subject. The church, when it was established, was founded by the *charisma of the book*.[39] This means that organizations were established by men and women who spontaneously found the power of the vision and the ideas in the books themselves so compelling that they decided to create organizations to preserve and sustain the message and to help them order their lives around it. This happened for the first time in London in 1787. It happened again in the Americas, Australia, and various European countries in the nineteenth century. In the twentieth century, it occurred in Ghana, Japan, Korea, Nigeria, Russia, South Africa, Sri Lanka, and the Ukraine. In the twenty-first century to date, additional organizations have been established in Kenya and the Philippines, and efforts are underway in China.

Starting groups based on common adherence to books takes more time than when a charismatic leader is involved. But clearly organizations have been and can be formed wherever the books happen to turn up. The circulation of books, although related to the movements of peoples, can also occur independently. Discovery of the books is, therefore, less dependent on religious structures and possible wherever books are found. However, it is important to observe that the growth of literacy and freedom is integral to a religion based upon the *charisma of the book.*

SWEDENBORGIAN CHURCHES

Swedenborgianism exists in three, well established, organizations in the world, all found in English speaking countries—one in Great Britain and two in the United States. Several less stable organizations also function, one is headquartered in the United States with strong ties to South Africa, and the other indigenous to South Africa. In addition, over the last 20 to 25 years, a number of new Swedenborgian organizations spontaneously arose in a variety of countries around the world.

THE GENERAL CONFERENCE

The establishment of the very first Swedenborgian or New Church organization took place in Great Britain in 1787. The organization is called The General Conference of the New Church. Two events mark the founding of this church: the baptism of five men into the Lord's New Church on July 31, 1787, and the ordination of two men into the priesthood of the New Church on June 1, 1788. These people were artists, artisans, merchants, and traders (farmers were conspicuously absent). Their religious backgrounds varied, but many were Methodists and other types of nonconformists. While these events sociologically mark establishment, almost 20 years passed before the organization was stable. Problems arose almost immediately after the initial acts of foundation due to deeply held differences among the founders about how the organization ought to be structured—whether hierarchical or congregational. Many nonconformists in England were congregational in form, but Methodism embraced hierarchy. As the newly founded Swedenborgian Church drew almost equally from nonconformists and Methodists, a struggle about what organizational form the church should take was almost inevitable. Swedenborg's writings themselves support a hierarchical church structure. Robert Hindmarsh (1759–1835), a printer in London and former Methodist, was a forceful advocate for this position. However, numerically the church was strongest in Lancashire, an area long noted for nonconformity. In 1815 a congregationally organization church was established at a conference held in Manchester, Lancashire. That organization still exists today.[40]

The high point of church membership for the Conference was in 1900, with a membership of 6,337 in 73 societies. Decline in the twentieth century was due to the general unchurching of Great Britain, but also to an insufficient number of trained ministers and the limited ability of congregational structures to deal with such broad societal change. One response was the decision in the late 1990s to ordain women. An even more radical departure from the past was the centralization of key functions of the Conference in 2000. Membership figures at that time show a total of 1,198 members in 30 congregations. In addition to centralizing, the Conference decided to deemphasize the Christian nature of Swedenborgianism and to take advantage of the Internet.

The challenges facing the Conference are all too clear; they must creatively respond to them or face failure and extinction. It is too early to assess the outcome of the changes they have made.

THE SWEDENBORGIAN CHURCH OF NORTH AMERICA

In 1817, only two years after the organizational structure of the General Conference was secured in Great Britain, the General Convention of the Church of the New Jerusalem was established in the United States. In that year, readers of Swedenborg's religious writings (first brought to the new nation in 1784) were scattered throughout the United States. They came together in Philadelphia to strengthen themselves through the creation of an organization. Although they were aware of the British Conference, and received encouragement, books, and pamphlets from them, they were always independently organized. They, too, adopted a congregational form of church government.

The individuals that were drawn to Swedenborgianism were artists, artisans, educators, entrepreneurs, merchants, and traders. They lived in old seaboard states and new states formed out of the Old Northwest Territory. Baltimore, Boston, New York, Philadelphia, and Cincinnati were cities with large Swedenborgian congregations. They came from a variety of religious backgrounds: Episcopalians, German Free-will Baptists, Congregationalists, Methodists, and Quakers, as well as others. Although initially Swedenborg's books came from England, the Philadelphia printer Francis Bailey (1744–1817) soon began to publish them himself, underwriting the expense by subscription. Benjamin Franklin, friend and neighbor to Bailey, was one of the subscribers. Convention prospered during the nineteenth century. At the high point of its membership in 1890, it had 154 societies, 119 ministers, and 7,095 members. A schism occurred in 1890 over the question of the authority of Swedenborg's writings and church government. Convention was not only congregationally organized, but decidedly anticlerical and open-minded. They read the writings for instruction, not for their "divine" authority.

The faction that broke away believed that Swedenborg's writings were divine, not just inspired by the Lord. Thus, the status of the writings was equal to the Old and New Testaments. They also believed that church government ought to be episcopal in nature, rather than congregational. They maintained that the writings themselves endorsed hierarchical church government. The open-mindedness of Convention led to the formation of a loosely organized structure of state associations. These associations were able to coexist, despite such fundamental differences, until the Pennsylvania Association under the leadership of General Pastor William Henry Benade (1816-1905) ordained a second bishop. This challenge to the rules of Convention pushed the two sides to the brink. Benade refused to back down, and three-quarters of the members of the Pennsylvania Association in support of him voted to withdraw from Convention. The schism affected membership not just because several hundred members withdrew, but now Convention was forced to compete for members with another Swedenborgian organization.

Changes in American culture also affected this organization. Swedenborg's teachings have a marked psychological element, which perhaps added to their attraction in the nineteenth century, particularly among cultural innovators. In the twentieth century, when psychology became a powerful secular movement, it was no longer

necessary for cultural innovators to embrace religion in order to have access to psychology.

In addition, Swedenborgianism, in the nineteenth century, may have benefited by the broad public discussion of religion that existed prior to the Civil War. In postbellum America, religion quietly became a matter of personal faith, and other issues dominated public space.

In the nineteenth century, Swedenborgianism attracted people from all walks of life. John Chapman (1774–1844), better know as "Johnny Appleseed," distributed pages of Swedenborg's writings along with the seedlings he sold to Ohio's pioneers. He loved to share what he called "good news straight from heaven." In 1893 Swedenborgians were key organizers for the World Parliament of Religions held in Chicago in 1893. The idea of a Parliament in conjunction with the Chicago World's Fair originated with Charles Bonney (1831–1903), a Swedenborgian and a prominent attorney. Bonney joined the New Church as a teenager. Later he stated that it was his exposure to the teachings of the Swedenborgianism that "made a World's Parliament of Religions possible."[41] A teaching that possibly encouraged Bonney is an idea expressed in *Secrets of Heaven* that suggests a common religious culture may emerge despite a variety of doctrines, "if people acknowledge thoughtfulness toward others to be the essence of such a culture."[42] Bonney joined with other Swedenborgian and Christian leaders in Chicago in the organization of the Parliament. He delivered the opening and concluding addresses of the 17-day Parliament.

Today The General Convention is known as the Swedenborgian Church of North America. In 2000 Church total membership stood at 2,104 with 1,543 active members in approximately 40 congregations in the United States and Canada. The Swedenborgian Church of North America is known as the "liberal" branch of the New Church in North America. They have ordained women since 1970, and in 1997 they made the decision that sexual orientation should not be an impediment to ordination. Their vision of Swedenborgianism unites Swedenborg's emphasis on the importance of the beauty of variety and American individualism. They focus on Swedenborg's teachings about the marriage of good and truth within each individual and deemphasize his teaching on the institution of marriage.

In 2000 they relocated their theological school from the East to the West Coast. And from being a self-standing institution, they have become incorporated as the Swedenborg House of Studies at the Pacific School of Religion in Berkley, California, known as one of the most liberal theological schools in the United States. Obviously, the hope is that these changes will stimulate growth. Nonetheless, it is too early to assess the outcome.

THE GENERAL CHURCH OF THE NEW JERUSALEM

In 1897 a second American New Church organization was formed. Called the General Church of the New Jerusalem, it was founded by the group that broke with Convention in 1890. Differences with the autocratic style of the founder William H. Benade led to the incorporation of the church under the leadership of Bishop

Williams F. Pendleton (1845–1927) in 1897. The doctrinal positions remained the same. In addition, they were also strongly committed to developing a comprehensive educational system for the children of members. The emphasis on education also inspired the development of residential communities for members wherever possible. This inward turning pattern of development was similar to other late nineteenth century religious groups interested in protecting their heritage and providing for the future.

The ideational roots of its establishment attracted members from both the British Conference and Convention, creating an international organization from its inception. At the time of its incorporation, General Church congregations were established in Australia, Canada, and England, as well as in the United States. In 1900, three years after incorporation, the General Church had 560 members. The Pennsylvania community of Bryn Athyn became the Episcopal seat of the Church and the home of an academy that included a theological school, college, and high school.

Slow growth throughout the twentieth century increased membership to 4,585 in 2000. In 2005 that number stands just shy of 5,000 at 4,972 members. Although growth remains slow in most regions of the world, there are some notable exceptions, particularly in Africa, where church growth is much more rapid. Growth, nonetheless is a reality, and the total size of the international General Church community is 15,790 with over 70 congregations in over 16 countries in North America, Europe, South America, Africa, Asia, and Australia.

Several factors may account for the growth of the Church in Africa. The doctrine of one God, who is the Lord Jesus Christ, and the teachings about the nature of spiritual reality are particularly attractive to Africans. Another factor may be Swedenborg's teachings about the celestial genius of Africans. In the eighteenth century when many scientists, including Swedenborg's countryman, the botanist Carl von Linnaeus (1707–1778), believed that Africans were the link between Homo sapiens and the great apes, Swedenborg wrote that they had a higher spiritual genius than Europeans. Africans certainly would find this teaching a refreshing contrast to the unflattering bias about them held by many westerners.

Organizationally, the Church in Africa resembles the American model, but there are clearly cultural differences. As the Church grows, it is not unreasonable to assume that it will become more particularly African in its forms.

The General Church is more conservative than either of the other New Church organizations. Not only is it centralized and hierarchical, but it does not ordain women. This is a point of contention for some members of the Church. In 1988 an office of outreach was established, and the Church has strengthened this work since then. Currently, the director has established the goal of growth rate of 10 percent a year within ten years. Obviously, it is too early to make an assessment.

WORSHIP AND RITUALS

All three of these organizations have traditional patterns of worship and rituals that are Protestant in origin. Worship includes prayer, readings, singing, and a

sermon. A copy of the Bible or the Word is placed on the altar, and it is opened at the beginning of the service. Lessons are read, and a sermon is preached. While the two congregational organizations may or may not use Swedenborg's writings in their services, the General Church always reads from the "writings" and refers to them in sermons. Often in small congregations, talks for children are included in the service, after which the children leave for Sunday school.

Recently, the two American organizations have developed participatory services, recognizing the importance of an involved laity for the life of the congregation.

Baptism and communion are celebrated as sacraments, and marriages, ordinations, and funerals are celebrated as rites. Funeral services are viewed by outsiders as uplifting, focusing, as they do, on the resurrection of the individual into spiritual life, not their death.

Because Swedenborgian doctrine focuses on the resurrection of the Lord Jesus Christ, and not the crucifixion, the cross is not a dominant symbol in New Church iconography.

OTHER ORGANIZATIONS AND DEVELOPMENTS

In addition to these groups, another internationally organized group was founded in 1937, called The Lord's New Church. It was established by former members of the General Church, who came from the United States, the Netherlands, and South Africa. In contrast to other Swedenborgian organizations, they believe that the writings of Swedenborg are not only divine, but they also have an internal or spiritual sense. As they interpret Swedenborg's writings, this sense becomes more and more apparent to an individual as he or she progresses in the process of regeneration. Until quite recently this group was organizationally unstable. Today it has about 1,000 members, primarily in Southern Africa, although the headquarters is in Pennsylvania.

The largest of the independently organized national New Church associations is the New Church of Southern Africa. Established in 1911, by a black South African, David Mooki (1876–1927), who had found a copy of *True Christianity* in a second-hand bookstore, it came under the umbrella of British Conference for almost 50 years. In 1970 it separated from Conference, and for 20 years was under the strong leadership of the founder's son, Obed S.D. Mooki (1919–1990). When he died in 1990, there were approximately 25,000 members. A schism occurred during the transition from a family dynasty to a more impersonal and democratic structure. Today the main group has approximately 15,000 members in 90 congregations, and the splinter group has approximately 5,000 members. Despite the problems this group suffered, they remain the largest single New Church organization in the world.

Four factors may account for the preeminence of the New Church of Southern Africa among Swedenborgian organizations: first, it is African; second, it was established almost 100 years ago by an indigenous African, with energy, vision, and an abiding commitment to the teaching of the New Church; third, at its inception it had a strong organization with a day school and its own theological school, a school

that still exists; fourth, this organization had the good fortune to be the dominant partner in a merger with another religious body in South Africa, the Ethiopian Catholic Church in Zion in 1961. As a result of that merger a church with 5,000 adult members suddenly became a church with 25,000 members.

Independent Swedenborgian New Church organizations exist in the Czech Republic, Kenya, Korea, the Philippines, Russia, and Sri Lanka. The total affiliation of New Church organizations worldwide is approximately 50,000.

The relatively small size of this religion, when compared to other NRMs that survived their eighteenth century origins, may be attributed to the role played by the charisma of the book rather than charisma embodied in a person. Another factor may be the nondogmatic nature of the message. Swedenborg's teachings clearly argue that a person's salvation is not dependant upon the acceptance of his doctrines. This may affect both the zeal of the recruiter and the individuals being recruited. In any case, the number of people affected by his religious writings since 1749 and the publication of the first volume of *Secrets of Heaven* is incalculable.

THE SWEDENBORGIAN MOVEMENT'S CULTURAL IMPACT

The Swedenborgian Movement had a considerable impact on the world beyond the organizational context. The primary focus of this chapter has been an examination of the man, his message, and the institutional response to his work. But the noninstitutional response was considerable. The writers and artists who engaged Swedenborg's new spirituality were among the most creative and revolutionary makers of the modern era. Perhaps they were already pioneers; nonetheless, when they read Swedenborg, his appreciation of the spiritual either opened their eyes or opened them more widely, and they saw the world in a new and deeper way.

The English painter-poet William Blake (1757–1827) drew inspiration from Swedenborg's spiritual visions to create his own—from his *Songs of Innocence and Experience,* to his *Marriage of Heaven and Hell,* and *Jerusalem.* Blake was an artist who drew his audience inward to a world fashioned by mind and spirit. He crafted a world from the mind's eye, not from the natural world.[43] The American short story writer Edgar A. Poe (1809–1849) fashioned his famous tale "The Fall of the House of Usher" from a passage in Swedenborg's *Heaven and Hell,* number 528. In a discussion of the false idea that nurturing spirituality requires the renunciation of the world, Swedenborg writes, "This is because living an inner life and not an outer life at the same time is like living in a house without a foundation, that gradually either settles or develops gaping cracks or totters until it collapses."[44] Joseph Sheridan Le Fanu (1814–1873) the Irish sensational fiction writer did likewise in his work *Wylder's Hand* in which he used a discussion by Swedenborg concerning the fate of murderers in the afterlife to construct the plot.[45] The study of the religious works of Swedenborg was part of the intellectual development of the American poet Walt Whitman (1819–1892), the American landscape artist George Inness (1825–1894), the developer of European experimental psychology Gustav T. Fechner (1801–1887), and the father of American psychology William James (1842–1910).

All of these men used the spiritual insights and psychological truths found in Swedenborg's writings to present alternative views of the human mind and reality in their works. Their efforts and those of others transformed the understanding of history; external events were no longer believed to be as powerful in shaping human events as the world of motive and intention living within.

CONTROVERSIES AND ISSUES

Swedenborg's religious teachings challenge both traditional Christianity and radical empiricism. Therefore, it is not surprising that almost as soon as his works began to be published they became controversial. Many who read them were uncertain how to judge his experiences and his message. Some who read them found genuine truth and a vision of the Lord within, others were certain that these writings were the product of a deranged mind. Today, the same divergent responses occur. It is almost impossible to resolve such differences, because what is considered evidence from one perspective is dismissed from the other.

Swedenborg was clearly aware that such controversies would arise from his claims. He wrote in the first volume of *Secrets of Heavens:*

> Many will claim, I realize, that no one can talk to spirits and angels as long as bodily life continues, or that I am hallucinating, or that I circulate such stories in order to play on people's credulity, but none of this worries me, I have seen, I have heard, I have felt.[46]

The first world-historic figure to engage Swedenborg's vision was none other than the German philosopher Immanuel Kant (1724–1804). His published a response to his reading *Secrets of Heaven* in 1766, called *Dreams of a Spirit Seer.* Published anonymously, it directly challenged Swedenborg's claim to have seen, heard, and felt spiritual or metaphysical reality. Kant wrote that Swedenborg's complete works were "nonsense" and that he should be sent to a madhouse.[47] This accusation impacted Swedenborg's reputation for almost 240 years.

An article by John Johnson published in the *British Journal of Psychiatry* in 1994 reopened the discussion of Swedenborg's psychosis. Thus, it is clear that this issue is as alive today as it was 200 years ago. The problem is a question of what is accepted as evidence. The gulf between those who are willing to entertain Swedenborg's claims and those who are not is extremely broad. Huston Smith, a noted scholar of religion, attempted to narrow the divide in a 2001 Ingersoll Lecture at Harvard. Smith's lecture was titled "Intimations of Immortality."[48] Smith's acceptance of the reality of Swedenborg's clairvoyant experiences was an attempt to bolster Swedenborg's claims.

Interestingly enough, Swedenborg, himself, argued that the controversy was insoluble. His explanation is grounded on the necessity to preserve human freedom with regard to spiritual things. He writes in Divine Providence that "it is a law of divine providence that a person should act in freedom according to reason.… The Lord therefore guards human freedom as a person does the apple of his eye."[49]

Needless to say, today, human freedom is as suspect as the idea of immortality. Nonetheless, religion continues to thrive in the postmodern world of the third millennium.

THE FUTURE

There is no question about it, religion thrives in the world, but it does not thrive equally everywhere. The same is true for Swedenborgianism. While the focus of this chapter is on the history of the different long-standing New Church organizations, future growth of the New Church appears to be in developing nations around the world. Two Swedenborgian organizations, the General Church and The Lord's New Church, have expanded their efforts in this area. Both organizations are international in scope, and the General Church has demonstrated an overall pattern of slow growth since its founding. Recently the Lord's New Church had opportunities for growth in Eastern Europe, particularly in the Ukraine, while sustaining congregations in the United States and South Africa.

Over the past 20 years the General Church assisted the development of Swedenborgianism in Africa, Asia, Eastern Europe, and South America. Some of this work involved the expansion of activities in locations where the Church was already in existence. In other areas those who found Swedenborg's religious writings independently of one another made contact with the Church, and a relationship developed. As a result of this work, congregations developed in Brazil, Ghana, the Ivory Coast, Kenya, the Philippines, Togo, and Sri Lanka. Within the last year Swedenborgian organizations made contacts with individuals in China interested in developing Swedenborgianism there. The story of the development of the New Church in each of these localities has its own particularities. Nonetheless, each of them represents opportunities for church growth for the future.

CONCLUSION

Swedenborgianism did not begin like most founded religions with a charismatic leader; it began instead with the *charisma of the book,* offering human beings the opportunity to freely and rationally know a loving and visible God. Its foundation seems secure, but the process of growth has been slow. This is because the unfolding of a religion of the charisma of the book requires rational reflection. If after such reflection assent is given to the vision of the New Church, it has an enduring strength, because what is loved is sustained not by mysteries but by rationally understood truths. Such a faith is well suited to the needs of the modern world.

While Swedenborg's vision will not appeal to or persuade convinced naturalists or atheists, or those content with their faith, it does appeal to seekers, both in the West and in developing nations. Swedenborg himself did not have much hope for the development of the New Church in Europe, where scientific materialism, even in his day, had taken root. Today, it is even stronger. But he did have faith that the New Church would develop among what he called the Gentiles, or people who in his day were not part of the Christian world. In *Divine Providence,* number 322, Swedenborg writes, "I make these statements about Christians because non-Christians pay more attention to God than Christians do, because their religion is in their life."[50] It is not surprising, therefore, that when Swedenborg's religious writings are

discovered by Christians or Gentiles who pay attention to God, their message is often welcomed and embraced.

Current demographic trends in the world seem to be favoring the growth of what Swedenborg called the Gentile nations, in contrast to the former Christian nations in Europe where populations are in decline. If birth rates are any indication, many European countries appear not to have faith in the future. Religious people, however, have a faith in the future, because they have a vision of eternal life. Swedenborg's religious writings offer a clear and detailed vision of eternal life, as well as a straightforward message about how to get there.

NOTES

1. Emanuel Swedenborg, *True Christianity* (West Chester, PA: Swedenborg Foundation, 1996), number 508. Note that all references in Swedenborg's works refer to paragraph numbers and not page numbers. Thus, they are the same in every edition.

2. Many Swedenborgians prefer to refer to their church and their religion as the New Church, because Swedenborg refers to the Church of the New Jerusalem, as mentioned in Revelation, as the symbolic embodiment of the New Christianity.

3. Listed in Jonathan S. Rose et al., eds., *Emanuel Swedenborg: Essays for the New Century Edition of His Life, Work, and Impact* (West Chester, PA: Swedenborg Foundation, 2005), 402–505.

4. Emanuel Swedenborg, *Arcana Coelestia* [New title: *Secrets of Heaven* forthcoming in Swedenborg Foundation's New Century Edition] (West Chester, PA: Swedenborg Foundation, 1997), number 68. Note all references in Swedenborg's works refer to paragraph numbers and not page numbers. Thus they are the same in every edition. Note that the Swedenborg Foundation has undertaken a New Century Edition with new translations, introductions, and some new titles. New titles will also be given in this chapter.)

5. Those interested could explore some of the following biographies: George Trobridge, *A Life of Emanuel Swedenborg: With a Popular Exposition of His Philosophical and Theological Teachings* (London: The Swedenborg Society, 1920); Signe Toksvig, *Emanuel Swedenborg: Scientist and Mystic* (New Haven: Yale University Press, 1948); Cyriel O. Sigstedt, *The Swedenborg Epic: The Life and Works of Emanuel Swedenborg* (New York: Bookman Associates, 1952); Ernst Benz, *Emanuel Swedenborg: Visionary Savant in the Age of Reason* (1948), trans. Nicolas Goodrick-Clarke (West Chester, PA: Swedenborg Foundation, 2002); Rose et al., eds., *Emanuel Swedenborg: Essays for the New Century;* Lars Bergquist, *Swedenborg's Secret,* (1999), trans. Kurt P. Nemitz (London: Swedenborg Society, 2005).

6. This was not at all unusual and was one of the primary means of publication in the eighteenth century. Another method was to gather funds from subscribers, who then received the published copies.

7. Included among his inventions were a submarine and an airplane.

8. In his outline Swedenborg indicated this was to be a 17-part work, but in the end he published studies of only four of the bodies' systems and studies of the organs of taste, smell, and touch. Studies of the remaining senses, the reproductive system, and discussions of "The Fiber," as well as something called "Rational Psychology," were left in manuscript form.

9. Emanuel Swedenborg, *Journal of Dreams,* trans. J.J. Garth Wilkinson (New York: Swedenborg Foundation, 1977), number 54.

10. Ibid., number 19.
11. Ibid., number 180.
12. Alfred Acton, *Introduction to the Word Explained* (Bryn Athyn, PA: Academy of the New Church, 1927), 126.
13. Swedenborg by this time was a well-known author in Sweden and in Europe. His works were reviewed in internationally respected journals. At the time of his retirement from the Board of Mines, he was one of very few intellectual Swedes with an international reputation.
14. The original note appears on the first page of Swedenborg's handwritten manuscript of his Bible index of Isaiah and Genesis. See Acton, *Introduction to the Word Explained,* 127, n. 3.
15. Ibid., 128. The fact that he began a new Bible index with the spiritual sense included is cited as evidence. An explanation of the spiritual sense will be taken up in the section on Doctrine.
16. Jonathan S. Rose, "Swedenborg's Garden of Theology," in *Emanuel Swedenborg: Essays,* 61, n. 20.
17. The relationship between Immanuel Kant and Emanuel Swedenborg is intriguing and complex. It would appear that Kant felt compelled to ridicule Swedenborg and his metaphysics, in order to ensure a place for his own philosophical enterprise. He wrote a book about Swedenborg and metaphysics in 1766 entitled *Dreams of a Spirit Seer.* See the attempt of Gregory Johnson to clarify it.
18. See the title page of *Delitiae Sapientiae de Amore Conjugiali* … Amsterdam, 1768.
19. For details of these clairvoyant experiences see any of the biographies listed above. One involves Swedenborg seeing Stockholm while he was on the west coast of Sweden 400 miles away as discussed above. Another involves Swedenborg telling the Queen of Sweden something that only her deceased brother knew, and another describes how Swedenborg helped a widow find a receipt hidden by her husband. It was Frülein von Knobloch who asked Kant to comment on them. Although he gave a favorable account of Swedenborg to her, later he wrote a satire of Swedenborg entitled, *Dreams of a Spirit Seer.* A discussion of this small work is found in some biographies of Swedenborg and in Jane Williams-Hogan, "Emanuel Swedenborg," in *Dictionary of Gnosis and Western Esotericism,* ed. Wouter Hanegraaff et al. (Leiden, NL: Brill, 2005), 1096–1105.
20. See the title page of *Vera Christiana Religio* I & II (Amsterdam, 1771).
21. Sigstedt, *Swedenborg Epic,* 431, 432.
22. Emanuel Swedenborg, *Heaven and Hell* (West Chester, PA: Swedenborg Foundation, 2002), number 1.
23. Ibid., number 1.
24. Emanuel Swedenborg, *Divine Love and Wisdom* (West Chester, PA: Swedenborg Foundation, 2003), number 4.
25. Emanuel Swedenborg, *True Christian Religion* [*True Christianity*] (West Chester, PA: Swedenborg Foundation, 1996), number 163 (2).
26. Emanuel Swedenborg, *Other Planets,* in *Miscellaneous Theological Works* (West Chester, PA: Swedenborg Foundation, 1996). See this work for a discussion of the human inhabitants of other planets in this and other solar systems.
27. Swedenborg, *True Christian Religion* [*True Christianity*], number 71:2.
28. Swedenborg, *Divine Love and Wisdom,* number 1.
29. Swedenborg, *True Christian Religion* [*True Christianity*], number 247.
30. Emanuel Swedenborg, *Divine Providence* (West Chester, PA: Swedenborg Foundation, 2003), number 254.

31. Swedenborg, *Heaven and Hell*, number 304.
32. Ibid., number 445.
33. Emanuel Swedenborg, *Conjugial Love* [*Marriage Love*] (London: Swedenborg Society, 1989), number 457. The General Convention, which ordains homosexuals into their ministry, interprets Swedenborg's teachings on marriage to apply to the marriage of good and truth within an individual.
34. Ibid., number 68.
35. Rose, *Emanuel Swedenborg: Essays,* 66.
36. Swedenborg uses the term *ecclesiae* to refer to the different religions with their different revelations that have played a central role in the salvation history of humankind, even though the term as commonly used has a Christian connotation.
37. It should be pointed out that the judgments of all of the churches mentioned in the Word have been spiritual in nature.
38. Efforts to organize and publish his works were made by readers of Swedenborg's writings in Sweden during the 1770s and 1780s. They were harassed by officials and ridiculed by the press. The absence of religious freedom in Sweden led these efforts to go "underground" where they remained until 1874 when the State officially permitted Swedenborgians and other minority religions the right to organize. They did so immediately. Today there are two different Swedenborgian organizations in Sweden with four congregations.
39. This idea was first developed by the author in a 1997 paper presented at the American Academy of Religion Annual Meeting in San Francisco, CA, entitled: "Moving Beyond Weber: The Role of Written Texts in the Founding of the Swedenborgian Church."
40. Recent concerns about church growth have led the organization to implement the centralization of some church functions.

Spiritualism

Robert S. Cox

In 1848, a new and quintessentially American system of beliefs began to spread from the heart of the Burned-Over District of New York State, the region that for a generation witnessed scorching religious revivals. At a time when the constant pressure of racial, class, and sectional strife, social and geographic flux, and the rise of industrialization left many Americans wondering whether the seams of their nation were coming unstitched, Modern Spiritualism offered a satisfying alternative to the evangelical settlement. While the revivals attracted millions and spawned innumerable groups devoted to social, political, and religious reform, many Americans were left in their wake dismayed, uncertain as to which way to turn, unable or unwilling to settle into any denominational conformity. "To join the Congregational Church," wrote one such man, "was saying, I am one of the 'elect.' To join the Universalists, was saying, God will take care of his offspring. Joining either of the others, was saying, we will try."[1] Exhausted by the "war of words" waged by competing revivalists, some turned inward to ask "who of all these parties are right, or, are they all wrong together?"[2]

For the writer and reformer William Denton, the answer was clear: "these churches of the living God, so called, are shams every one." Far from signifying the unification of the Christian body, the many churches were seen by individuals like Denton as signs of utter and irreparable rupture. Far from addressing the fraying of the union, evangelical competition and the "antagonism of sects and creeds" seemed signs of the sort of social division and moral decay that threatened to leave families, communities, and even entire nations, as the Tennessean Jesse B. Ferguson wrote, "severed in their aims, in devotion to false views of man's Spiritual interests," severed by the strivings of "men aiming professedly, at the same ends, while industriously engaged in each others injury or destruction."[3]

In the 1850s, Denton and Ferguson joined a growing number of Americans who rejected the sectarian impulse in favor of the more radical, Spiritualist approach to restoring unity in the spiritual body. Rooted in the belief that the dead had reestablished communication with the living, Spiritualism was a "perfectly democratic

religion" for its believers, an "emphatically … American religion" that reflected the progressive genius of the new nation.[4] Less hierarchical than Mormonism and Seventh-day Adventism, the other major religions to originate in the Burned-Over District, Spiritualism emphasized the authority of individual conscience, as opposed to the authority of the Bible and clergy, and it promised healing for the divisions tearing through the American body politic and hope that an age of harmony and unity had arrived. Balancing sensational performance against a penetrating philosophy, Spiritualism was like a pop-cultural amoeba, distilling a mixture of high culture and low, absorbing the language of scientific empiricism, occultism, and social reform in the course of emerging as the fastest growing religion in mid-nineteenth century America.

MULTIPLE ORIGINS

Placed into a magnetic trance by an itinerant phrenologist in December 1843, a young shoemaker's assistant from Poughkeepsie, New York, looked out over the audience before him and peered through their bodies as if they were sheets of glass. Inside, their organs shone in distinctive hues, every tissue glowing, every muscle, tendon, and vein illuminated. Their very thoughts were visible to his exalted vision, licking like flames at their heads, bright "like the breath of diamonds." This shoemaker, Andrew Jackson Davis, saw not only the anatomical structures of bodies, but "their indwelling essences and vitalic elements," their personalities, pathologies, and pasts. He saw disease and illness, and divined how to cure it, and, more importantly, he saw the anatomy of the soul as well as the body. In rapport with nature, Davis grasped the innermost secrets of life, the hidden virtues of plants, the physical structures of the earth buried beneath strata and time.[5]

The world that opened to Davis that day simultaneously marked the end of one era and the beginning of another. Davis's experiences and his newly discovered ability to cure the ill were a late instance in a century-long history of remarkable physical and mental manifestations associated with the sleeping body. In both the popular press and medical literature, somnambulists (sleepwalkers and mesmeric subjects) had frequently been noted for their preternatural abilities to diagnose and cure diseases by sight or touch, for their hypersensibility or insensibility, for their abilities to see through solid objects, read minds, travel mentally outside the body, and deliver fluent lectures on esoteric subjects, and, on rare occasions, for their capacity to see and converse with the dead. Davis's experiences as a magnetic subject would have been broadly familiar to Americans in the 1840s, but as he began not only to describe what he saw, but to write in his flowing prose about what his visions meant, Davis took the first tentative steps to creating what many would call a new era, the new dispensation of Modern Spiritualism. As a clairvoyant physician, mental explorer, and visionary, Davis learned that he too could see and converse with the invisible hosts of the dead and that behind our daily lives lay a deeper reality, a cosmic infrastructure uniting all creation.[6]

Four years later, while Davis was occupied in healing, writing, and lecturing on this new cosmology, the home of John D. Fox in Hydesville, New York, became the scene of equally startling revelations. Throughout the winter of 1847–1848, the spartan home had been afflicted by showers of disembodied raps sounding forth from the walls and floorboards and occasionally from thin air, often centered on Fox's teenaged daughters, Margaret and Kate. The nights were punctuated by unseen hands brushing past in the darkness and tables bustling about on their own, as mysterious in their intentions as the raps. Unable to determine the cause of these phenomena and unable to deter them, John and his wife slid gradually toward despair, praying that "if this thing was of the devil, that it might be removed from them."[7]

But Kate and Margaret remained unfazed, perhaps even amused by the noises and attention they attracted from their neighbors. Rather than recoil in fear or modesty, the girls delighted in the raps, until one night Kate took the bold step of addressing them directly. Following a particularly loud series of raps on March 31, 1848, she cried out "Here Mr. Split-foot," snapping her fingers, "do as I do!" and snap for snap, the thin air rapped back. Witnesses to this scene were stunned, surmising immediately that some intelligence must lay behind the knockings, an intelligence that could hear, understand, and respond to the spoken word. By posing a series of simple questions, responded to with an equally simple telegraphic code of raps signifying yes or no, the girls soon deduced that the source of the commotion was not some holy angel or fearful demon, but the spirit of a murdered man with an uncanny knack for clairvoyantly determining the number of Fox children (dead as well as living) and for revealing the names and dates of demise of their neighbors' relatives. Proof that the raps were from the dead came, as it would for years, through recitation of the drab details of family names and private histories, the spirit rapping out what could be known only to the most intimate or omniscient friends. It was as if a "spiritual telegraph line" had been strung between this world and the next, and under certain conditions "impossible for mortals yet to comprehend," the immortal spirits of the immaterial world had begun to use the "forces of spiritual and human magnetism, in chemical affinity" to commune with the living and divulge the secrets of the life beyond. In this bridge between natural and supernatural, material and immaterial, the barrier of death at last was breached.[8]

When Leah, the eldest Fox daughter, discovered that she too could elicit raps, the family followed the spirits' advice and moved to the nearest big city, Rochester, to take their spiritual demonstrations to the wider public. From almost the first rap, the Foxes met resistance from the orthodox and skeptical. Although the reality of spirits was widely accepted in popular culture, the claim of direct communication with them smacked of the sort of "enthusiasm" associated with religious charlatans and evoked fears of social and political disorder. In Rochester, a skeptical, even hostile crowd confronted the Foxes, and to prove themselves, the girls agreed to perform a public "test." In an exercise that was repeated often for public mediums (those who communed with spirits for members of the public, usually for pay), a committee of respectable citizens gathered at Corinthian Hall—the site of many antislavery and women's rights meetings—to determine once and for all if the young Foxes were

telling the truth. Prodding, probing, scrutinizing the girls from all angles and in all positions, inspecting their clothing, "even their shoes, stockings, and under-garments," forcing them to stand on insulating pillows in case some electrical means were employed to produce the raps, the committee (actually three successive committees) finally pronounced themselves perplexed, unable to determine how the sounds were made. The Foxes were vindicated, at least for those who would believe.[9]

Like a chemical reaction in which a tiny seed introduced into a saturated solution triggers a rapid crystallization, Spiritualism took shape. In Rochester, where the fires of evangelical fervor had repeatedly flared, crowds thronged to the Foxes' demonstrations, coming for entertainment or enlightenment, out of curiosity, scorn, hope, or fear. Throughout the region where Davis first saw his visions and the Foxes first heard the raps, an intense interest in the afterlife materialized, shaped by theories of somnambulism, animal magnetism, phrenology, and clairvoyance, primed by the years of spiritual threshing and revival. As the Foxes toured cities such as Auburn, Buffalo, and New York City, they earned national attention, and their longer tour of the Midwest spread Spiritualist flames across the heartland.

Perhaps more importantly, as the Foxes toured and a nascent spiritual lecture circuit began to spread word through a network of lecturers, people not only tested the spirits, they tested mediumship itself. New mediums sprang up spontaneously in many parts of the nation, and a corresponding spirit of innovation animated the search for more efficient, or more dramatic, means of communicating with the dead. The yes and no rapping code gave way to more expressive alphabetic codes, to table tilting, to automatic writing, to spirit drawing, to spirit music, to slate writing, to full body materialization, to direct impressions scratched onto the body, to photographs, and to a variety of ingenious mechanical devices for receiving spirit impressions, including the planchette and spiritoscope. At one end of the spectrum were mediums who could easily be confused with stage magicians, performing rope escapes for paying audiences with "spirit" assistance, while other mediums were difficult to distinguish from animal magnetists, clairvoyant physicians, or phrenologists were it not for their references to spirit communion. In a few cases, mediums like William Denton occasionally dispensed with references to the spirits altogether. The situation was further complicated by an unknown, but probably larger, number of private mediums, who communicated with spirits for friends and family and whose methods we still know very little about. While public mediums garnered attention on stage, it seems likely that as many or more individuals gained exposure to Spiritualist practice through the private séance, gathering around a medium in small "circles" to receive messages from the departed.

The proliferation in the technology of spirit communication is just one indication of how significant communication was for Spiritualists. The phenomenal growth of the movement, they noted, was attributable to the unique mixture of the philosophical speculations of visionaries like Davis combined with the phenomena produced by mediums like the Foxes. Although admitting that their ranks included a few "enthusiasts, fanatics and impostors," Spiritualists insisted that theirs was a decidedly rational faith and that they took a radically empirical approach to spiritual

knowledge.[10] While "mainstream" religions relied solely on faith in the written word of the Bible or church authority, spirit phenomena provided tangible evidence of all that was outlined in their philosophy. Simply put, they argued, "Spiritualism *works*."[11] Mediums could see disease directly and cure it. "Ours, too, is a generation seeking after signs," the New England Spiritualists Association claimed, "and we have them in the movements of tables and chairs by invisible power—in the music from pianoes, drums and trumpets, where no visible performer is near—in audible voices—in distinct vision of the departed, and in many other ways." The physical phenomena, in other words, were nothing less than "the foundation of the whole philosophy," and without such empirical proofs, the Association wrote, "we *sink* back on *faith alone,* deprived of a *tangible basis.*" Offering the surety that for many was lacking in the evangelical conversion experience, Spiritualists therefore urged the skeptical public to set aside their orthodox preconceptions and "come try" the spirits for themselves, to make their own decisions about the reality of what they heard and saw.[12]

And try they did. The Spiritualist movement grew, even though it had no formal structure, no agreed upon rituals, few leaders, and precious little agreement on whether it was a religious movement. By 1857, the former Universalist minister Uriah Clark estimated that there were nearly 1,000,000 Spiritualists in the United States—3,000,000 if one included inquirers—while other estimates, surely too optimistic, ran as high as 11,000,000. Within three years of the first raps at Hydesville, Spiritualism had spread to England and France, and within a decade, as far as Russia, Italy, and the Caribbean.[13]

SPIRITUALISM AND REFORM

Historians often explain the common threads running through an otherwise diverse religious and social movement by citing a deep and abiding predilection among the spirits (and Spiritualists) for social reform. Indeed, social reform and Spiritualism were often linked, and many of the most prominent white antislavery agitators were Spiritualists, including William Lloyd Garrison, Sarah and Angelina Grimke, and Gerrit Smith. The long-time abolitionists and feminists Isaac and Amy Post, for example, were among the earliest and most avid supporters of the Fox sisters, and Isaac Post soon experimented with his own mediumistic potential, publishing an important collection of spirit messages that bore a strident reformist stamp. In conversations with the spirits of public figures such as George Washington, Thomas Jefferson, Benjamin Franklin, and Elias Hicks, Post's reformist beliefs were confirmed by these great figures of American history, perched in their heavenly home. A repentant John C. Calhoun, for example, bitterly lamented his role in bolstering the slave power, while Washington regretted his militarism, and many others condemned sectarianism and the spirit of division that stalked the land. A small cadre of reform-minded ministers also took up mediumship, particularly Universalists, Quakers, and Unitarians, with a smattering of Presbyterians and Methodists, and antisectarian reformers like William Denton were also numerous.[14]

To explain why spirit communication and social reform might be linked, historians adapted the work of anthropologist I.M. Lewis, who theorized that spirit possession functions as an instrument for subordinate and oppressed members of society, particularly women, to challenge the normal relations of social power. Through possession, Lewis argued, women especially claim the attention and care of their husbands and other authority figures, and they sometimes can inflict financial damage, if nothing else, upon their oppressors. Furthermore, in receiving treatment for their illnesses, women forge a sense of community with fellow female members of healing cults, and such communities often survive for years, as exorcisms or healing rituals are repeated. Because the spirits speak through them, but are not of them, women give voice to views that would otherwise be socially forbidden. Spirit communication thus becomes a flexible instrument for resisting social oppression in a patriarchal society, an historically sensitive mode of "cultural resistance" that is "an embodied critique of colonial, national, or global hegemonies whose abrasions are deeply, but not exclusively felt by women."[15]

Building upon Lewis's insights, historian Ann Braude explored how the spirits spoke to gender relations in the nineteenth century United States. While noting the ties that Spiritualism had to antislavery, dietary and dress reform, temperance, and medical reforms, it was Braude's insight to call attention to the particularly strong relationship between Spiritualism and early feminism. Early in the Spiritualist movement, women played prominent roles as mediums, lecturers, and writers. Many of them confirmed that the dead believed heartily in gender equity for the living. Braude noted that not all feminists were Spiritualists, but she asserted that all Spiritualists were feminists, and like Lewis, she argued that this was because Spiritualism permitted the expression of radical critiques of gender inequality while adhering, at least on the surface, to Victorian gender norms.[16]

Victorian Americans typically imagined mediums as pious, highly sensitive, and highly strung—all traits then associated with women—and antebellum Spiritualists frequently stated that they waited passively for spirits to speak through them rather than actively calling them forth. At a time when it was controversial for women to address "promiscuous" (mixed sex) crowds, women outnumbered men in the ranks of trance lecturers. These lecturers typically claimed that they did not remember their lectures when they returned to their "normal" state, and sometimes they asserted that they disagreed with the sentiments expressed. In effect, female trance lecturers exploited existing ideologies of femininity (passivity, domesticity) and female capacity (piety, spirituality) to contest women's subordinate status and help shape a new, transformed vision of gender relations. In analogous fashion, Logie Barrow argued that the English working class used spirit communication to further workers' ends in subverting capitalist domination of their lives, while David Hess's studies of Spiritualism in modern Brazil suggest that possession and mediumship can subvert the ordinary relations of power within the patriarchy of the individual family. The spirits thus advocate for the weak, oppressed, and disadvantaged.[17]

However, the notion that mediumship was an instrument for resisting social oppression is complicated by the recognition that many Spiritualist feminists, such

as the Grimke sisters, were public figures and controversialists long before they discovered Spiritualism. They confronted gender norms without help from beyond the grave. More subtly, as historian Alex Owen argues, whatever power or authority women gained through mediumship came in a highly circumscribed space—the séance room—and even at that, it was power only over that limited portion of the population who accepted the reality of spirit phenomena. For the rest, it was a source of contempt. As an instrument for advancing their cause, then, mediumship was unnecessary and unnecessarily limiting. Vieda Skultans has gone further, arguing that among Welsh Spiritualists in the 1960s, mediumship may have helped women feel better about their subordinate social position, but did not challenge it. Skultans's work echoes the suspicions of other researchers that a focus on the afterlife among Spiritualists might actually have diverted social action in this life.[18]

It should not be surprising that the range of political and social expression in Spiritualism was as broad as it was in American society at large. Though never as vocal or numerous as the social progressives represented by Post, Denton, or the Grimkes, a distinctively conservative vein can be found coursing through American Spiritualism, and this vein apparently grew in the years after the Civil War. Several antebellum southern Spiritualists, for example, claimed that the spirits supported slavery. Yet the northerner Robert Hare, a chemist and controversialist from Philadelphia, argued that a proper understanding of relations in the spirit world would support his reactionary political, economic, and social agendas. These voices were never as numerous as the progressive voices, but they were not isolated either, and we cannot dismiss them as mere aberrations.[19]

It is important to emphasize that the average Spiritualist seeker and average medium heard little or nothing about politics or social reform. Without wishing to dismiss the significance of reform in Spiritualism entirely, the content of spirit messages soon reveals just how exceptional figures like Post and Hare were. Spiritualists often voiced their suspicions about mediums who spouted the names of the famous or who transmitted messages that too conveniently aligned with their own perspectives, rejecting the messages along with the medium. The vast majority of messages transmitted by mediums were of a purely personal nature and appeared to most observers at the time—and since—as banal, insipid, or as the writer and reformer Lydia Maria Child suggested, "more disappointing than the golden key which unlocked *nothing;* for they are the merest mass of old rags, saw-dust, and clam-shells."[20] The content of the message, then, was evidently less important than the fact of communication.

SPIRITUALIST FAITH

Called at various times a movement, a philosophy, or a religion; Christian, non-Christian, or anti-Christian; reformist or conservative; occult, scientific, or antiscientific, Spiritualism was all of the above. Rather than defining their faith with respect to any prescribed set of ceremonies or specific creeds that "coerce or cramp the conscience," Uriah Clark suggested, Spiritualists followed "the doctrine of individual

liberty and responsibility," living out the "right and duty of every man to seek all the light he needs as his guide, and settle for himself all matters between his own conscience and God."[21]

The "individual liberty" of conscience, of course, meant that Spiritualism would voice competing, confusing, and all too often contradictory claims about the nature of this world and the next. Neither spirits nor mediums were always reliable, as Spiritualists admitted, nor did they always agree, and at times it seemed that the "democratic" assertion that anyone was capable of mediumship meant only that every Spiritualist stuck to their own individual belief. Even prolific Spiritualist writers like Hudson Tuttle and James M. Peebles found it "exceedingly difficult" to characterize their faith. In its "narrowest sense," they concluded, Spiritualism entailed little more than a belief in the ability of the dead to communicate with the living and, by corollary, a belief in the "immortality" of the soul. "They who adopt this," they stated simply, "are Spiritualists." Beyond this basic precept, Spiritualism seemed easier to Tuttle and Peebles to identify by its aims and effects than its ideas, and, even at that, it had many sides. "Considered from its philosophical side," they wrote, Spiritualism "is rationalism; from its scientific side, naturalism; and from its religious side, the embodiment of love to God and man; inciting to purity of intention, holiness of heart, and the highest religious culture. It underlies all genuine reform movements, physiological, educational, social, philanthropic, religious; and, spanning all human interests with holy aim, it seeks to reconstruct society upon the principles of eternal justice,—the principles of equality, charity, and a universal brotherhood."[22]

To take Tuttle and Peebles at their word and discern how Spiritualism could be considered the source of all reform movements, we must move beyond seeing mediumship as an instrument to be wielded by the oppressed and examine in greater detail the points of faith upon which Spiritualists agreed. The multitude of divergent spirit voices still produced a degree of harmony. While no beliefs truly characterized all Spiritualists, most adherents agreed on a few fundamental principles, including the existence of a Divine Spirit, the "universal brotherhood" of mankind, the unceasing progression of the soul after death, and a belief that Hell was a condition of mind, rather than a physical place.[23] Fleshing out the implications of these concepts preoccupied Spiritualist writers and lecturers from the beginning, and these concerns were the subjects of dozens of thick descriptions of the afterlife in books, pamphlets, and articles, as well as the topic of endless discussions of the relationship between living and dead.

The pioneer of thick description was the visionary Andrew Jackson Davis. Based upon his psychic visions of the Summerland (heaven, the afterlife), Davis developed a "Harmonial philosophy" with which he contended that the "spiritual aspirations" of men and women would bring them "into harmonial relations with each other," and would result in the establishment of "one common brotherhood, where angelic wisdom and order can be freely unfolded." For Davis and many of his readers, this meant that they must reject sectarian Christianity as practiced by the established Protestant churches and also reject "every thing which is uselessly mysterious and supernatural." To replace all of this, Davis offered a vaguely Christian rationality that

addressed "the cultivated heart through the expanded understanding" and that drew rhetorically upon modern natural science. While Davis argued that Jesus appealed to the "goodness" in civilized minds, he believed that in order to bring about an "era of Love," the modern "age of impulse" now demanded "an age of Reason" and "a 'Philosophy' which Jesus *did not* furnish … a 'revelation' to the faculty of REASON, which the Bible *does not* contain." Reason and emotion, rationality and intuition were integral parts of Harmonialism, while blind faith and orthodoxy were not.[24]

The clearest expression of Harmonialism came in Spiritualist discussions of the progression of the soul after death and accounts of the geography of the Summerland. Recalling the visions of the Swedish mystic Emanuel Swedenborg, but differing in critical details, Davis described the Summerland as a series of concentric "spheres" within which numerous circles of spirits were drawn together by "affinity," or commonalty of interest, emotional connection, or moral condition. In the earliest Spiritualist accounts of the afterlife, the spheres were undifferentiated, populated by every deceased individual who shared a more or less equal level of spiritual development. Spiritualist visionaries differed on the number of spheres—few were permitted to glimpse them all—however, they agreed that the mortal world represented the lowest of these spheres and that death freed the soul to progress from this sphere to the next higher one. Rejecting Swedenborg's contention that mortals were the degraded remnants of a golden age, Harmonialists maintained that after the spirit was liberated from its body and its senses were unshackled, it embarked upon an irresistible upward progression, acquiring spiritual knowledge and wisdom. As they grew and perfected themselves, spirits ascended through the successive spheres to approach ever nearer to the Deity, spatially and spiritually.

In Harmonial philosophy (and again echoing Swedenborg), the mortal world was more than simply the lowest rung of spiritual development. It was a "type" of the spiritual, with every feature having "correspondence" with deeper realities in the eternal and spiritual spheres above. The "spirit land is but a counterpart of earth," a spirit in Baltimore informed the Presbyterian minister-turned-medium, Francis H. Smith, and "there is no condition natural, that there is not a corresponding spiritual and mental." Another spirit informed Abraham Pierce in Maine that the "physical body is but a fac-simile of the spiritual body, with all its senses and constituted parts... ordained and fitted to work in a physical or outward form." Nothing took place in the mortal world without ramifications beyond, and, conversely, events in the spirit spheres invariably echoed in the mortal, even in the individual body. Spirits from higher spheres communed with beings lower down, showering them with a steady influx of wisdom gained through their expanded spiritual sight. Several mediums reported that Benjamin Franklin and other great scientists of the past were actively engaged in devising new inventions and technologies to impart spiritual, and sometimes material, comfort to mortals. The afterlife was a dynamic and evolving place, and spirits engaged daily and hourly with the mortal world.[25]

There was, to be sure, continuity between the material and spiritual worlds. Despite their contempt for the physical body, Spiritualists did not reject mortal life. They insisted, in fact, that personal identity was maintained absolutely throughout

the spheres, that personal tastes, memories, and attainments acquired in mortal life continued beyond the grave. Spirits were not (w)holy angelic presences so much as friends, neighbors, and relatives who had evolved incrementally in their spiritual consciousness.

In many ways, the spheres in which these liberated souls resided resembled nothing more than airy versions of Victorian American communities, reflecting middle-class tastes and ideals. Spirit homes and institutions were counterparts, and perhaps models, for those on earth. Spirits attended lyceums where they heard lectures from the better minds of the higher spheres, visited galleries to view the greatest works of art, attended concerts of the best musicians, took part in organizations for spiritual uplift and moral reform, and engaged in trades, not for wages as in life, but for the moral benefit that accrued from productive labor. Emphatically, Spiritualists insisted that the nuclear family would be reconstituted in the higher spheres, husband and wife, parent and child drawn together by their mutual "affinities" to live in homes that were counterparts of their tidy mortal homes, and, even more exciting, spirits would consort with those with whom they shared intellectual interests or other concerns while alive, regardless of parentage. Spiritualists even debated, vigorously, whether pets might be found in the afterlife, usually answering in the affirmative that this member of the family circle would also find its place at the heavenly hearth.

Affinity, so powerful a force in the afterlife, had a rich philosophical basis, drawing upon one of the key concepts of the early Spiritualist movement: sympathy. Since antiquity, sympathy had referred to the condition in which two or more individuals shared an emotional state or feeling, a complete sharing of pleasure or pain, but for the philosophers of the Scottish Enlightenment, the seemingly simple connection of feeling took on a new importance. More than just an emotional bond between two individuals, sympathy became the "universal bond of union." For these philosophers, sympathy suggested that the various parts of the world—natural, social, and divine—were enmeshed in reciprocal sets of causal relationships, ensuring that influences upon one part of the natural world would affect other parts, perhaps even all other parts.[26]

Just as Davis began his Spiritualist career by explaining disease and healing, so too did sympathy. Physicians were among the first to employ the concept of sympathy extensively, using it to explain the obscure physiological relationships that seemed to characterize the human body. Before modern theories of infection or nervous action, physicians invoked sympathy to explain how a cut on the hand produced a high fever and how an injury to one part of the body caused pain elsewhere. Although the head and stomach were only indirectly connected, for example, physicians noted that violent pains in the skull produced nausea in the stomach. They were not entirely sure how sympathies worked, but they were certain that sympathies were essential to understanding health and healing. Similarly, sympathy could explain the vexing problem of how an idea conceived in the brain could produce tears, pain, or pleasure. The same force explained how an animal magnetist influenced his subject, how medicines cured ailments, or how an injury sustained by one person could be felt by another: any time two bodies could be seen sharing the

same state of feeling, sympathy was involved. Sympathy similarly explained attractions in the inanimate world, describing the relationship between two bodies such as the magnet and the loadstone, and it shaded easily into occult reasoning, providing a ready theoretical basis for astrologers to explain how the planets could influence the body or how lines in the palm could reflect a person's character.

In a key development for Spiritualists, Enlightenment philosophers speculated that sympathy extended beyond the world of physiology and the occult to society, in this world and the next. It was Adam Smith's trenchant analysis of the origins and limits of social bonds that stood as the most influential description of sympathy for antebellum Americans. In his *Theory of Moral Sentiments,* Smith constructed the philosophical scaffolding for a secure and stable social order, arguing that sympathy would be that scaffolding. To sympathize was a natural human tendency, he suggested: we tend naturally to share in the joys of others and to experience the pleasures of friends as if they were our own; when witnessing scenes of grief and distress, our emotions tend naturally to align with those of the sufferer, as when (in his most famous example) the crowd at an execution finds itself swaying to and fro while "gazing at a dancer on the slack rope."[27]

The problem, Smith argued, was that we do not experience sympathetic feelings with the same intensity as the person causing them, nor can we ever truly know another's motives or thoughts. At some level, other people remain inscrutable despite our sympathetic tendencies, and they often act in their own self-interest to the detriment of others, their behavior checked only by an inherent dread of social isolation should their actions be discovered. For sympathy to function in regulating moral behavior, Smith theorized that it required a conscious act to imagine the position of the other, or better yet, to imagine the position of an impartial spectator imaging both self and other. In this act of self-reflection, Smith argued that a lack of "immediate experience" with what others felt forced one to imagine "what we ourselves should feel in the like situation," but imagining what others felt involved turning scrutiny on one's own behavior: one imagined the feelings of others within the social context of oneself. The ultimate check on antisocial behavior was death or, as Smith called it, "the great poison to the happiness, but the great restraint upon the injustice of mankind, which, while it afflicts and mortifies the individual, guards and protects the society."[28]

Critical to Smith's moral sentiments was the concept of circulation. Financial circulation brought individuals together into networks of debts, obligation, and expectation. These networks blocked selfish behavior and forged reciprocal social bonds, while the circulation of sympathies and emotion ensured unity in the community. Yet sympathy had its limits. It was at its most powerful when linking people in close contact, such as families, but the more distant people were from one another, the less effective sympathy would be. Sympathy unified neighborhoods and communities, but the less frequently individuals encountered one another, the less likely they were to develop sympathetic ties. For Smith, the nation was the practical boundary of a sympathetic community, but other writers suggested very different boundaries. For

all of these writers, however, the conclusion was straightforward: one must cultivate sympathy to permit society to exist at all.

For antebellum Spiritualists, sympathy held the same hope as it had for Smith, a means for uniting what seemed to be a fragmenting country, of overcoming what seemed to be a proliferation of social chasms between the races, creeds, genders, regions, and classes. While the language of sympathetic union was widespread in the United States, Spiritualists were particularly interested in it, and attempted to foster its circulation. "Oh, the power of sympathy!" one spirit exclaimed, "Mortals, you understand it not! When truly expressed, it flows toward the soul of its recipient in waves of light, which become tangible to the suffering one, and form a bridge over which he may pass to a condition of happiness and peace."[29] The spirits, who sounded utopian, assured mortal listeners that a new dispensation, a new era of happiness and peace would follow. But the surest evidence of the power of sympathy to bind and heal was found in the very visitations of spirits themselves: properly enacted, sympathy was so powerful that it overcame all barriers up to and including the greatest barrier of all, as Adam Smith insisted, the barrier of death.

Feeling keenly the separations of life, Spiritualists offered one means of reasserting the integrity of the body politic, of crafting a stable community in a shifting world. They articulated a theory of community predicated upon the social practice of sympathetic communion, a transcendent nexus of emotion that connected and coordinated all of life and death, but that required concerted effort. "Spiritualism," as one circle of radical Spiritualists determined, "is that which makes you feel that there are others in the great brotherhood of men, whose hearts beat in unison with your own"—that produces the emotion binding members of a community.[30] The spirits who assisted a person were those with whom he or she had powerful bonds in this life, usually family members, close relatives, and intimate friends. They were most tightly connected to the living, and the proof of an intimate connection became the surest test of a medium's authenticity: producing some innocuous sign such as a name or date of birth that verified the identity of the spirit was demonstration that the spirit belonged to the living sitter's sympathetic orbit.

If Spiritualists seemed to be reformers, it was because, like reformers, they felt the divisions and inequities of society and, like reformers, they felt compelled to address them. As a voluntary act, sympathy was something to be taken up, exploited, extended, and used to forge connections, and consequently a belief in the spirits propelled social engagement. Abolitionists, feminists, dress reformers, and temperance advocates found in Spiritualism a set of beliefs that was compelling because it offered a vision of society already in the process of being united.

This utopian formulation of Spiritualist sympathy provided a coherent structure to a stunning diversity of practice, however, but it did not persuade everyone, and it barely survived the Civil War. We do not know for certain why sympathetic reasoning declined—the half a million bodies lying dead on Civil War battlefields may have testified to its limitations as a social corrective—but it is noteworthy that with only a few exceptions, African Americans seldom became committed

Spiritualists. Sojourner Truth was a devoted believer and the quixotic Paschal Beverly Randolph ephemerally so, but they were exceptions. Far more typical was Frederick Douglass, who retained a respectful doubt in Spiritualism despite the fervor of so many of his white colleagues. The staunchest community of antebellum Spiritualists of color may have been the resilient circle of French-speaking residents of New Orleans. But in New Orleans the community was based in the free Creole (mixed race) population, a community that enjoyed a marginally higher status in antebellum New Orleans than the "pure African" population, and certainly higher than the most oppressed residents of the state, the enslaved.[31]

The reasons for the reticence of African Americans to take up Spiritualism are complex, but the brutality and corrosion of American race relations surely played a role. The prospect of universal sympathy may have seemed increasingly out of touch for whites after the war, but for African Americans, sympathetic union with whites seldom seemed possible in this life. The Creole spirit circle in New Orleans provides a gauge of what must have been a common experience among African American believers. When the postwar political order in the South was still being contested in the early years of Reconstruction, the circle received a number of optimistic messages from the spirits of their dead comrades, often veterans of "Colored" Civil War regiments, who announced that the day of sympathetic racial equality was dawning and that racial union might even be at hand. But as white counterresistance in the South and white northern indifference to African Americans became increasingly clear, the spirit messages turned away from change in this life to the prospect of recompense in the next. Harmony and equality would be postponed to a distant, spiritual future. Racial realities, in other words, trumped the hopes of spirit life.[32]

Therefore, in the years following the Civil War, the boundaries that Adam Smith foresaw as restrictive of sympathy became increasingly prevalent in American society. As relations between white and black deteriorated, and white Americans turned their attention to healing the scars of their divided white nation, white Spiritualists turned increasingly to refining the definition of their sympathetic community, imagining a new community based on the barriers of race. Beginning in the late 1850s, Spiritualist heaven became increasingly differentiated along racial lines, and race distinguished not only the body, but also the soul. The medium S.G. Horn insisted that "everywhere" in the afterlife, "the peculiarities of race still exist," with the races drawing together into their own racial zones, "the Hindoos and Turks each retaining their peculiar marks of character, colour, and development."[33] The Indian "Happy Hunting Ground" became an essential element of heaven, an utterly separate region in which Indians continued to live in their traditional ways, riding spirit horses and hunting spirit bison. The prominent Christian Spiritualist Eugene Crowell concluded that national distinctions and boundaries continued in the afterlife, just as personal identity did. In their own "divisions, or territories" in the afterlife, the "American, English, French, German, etc." continued to bear the distinctive "characteristics" they had on earth. From language to dress and decorum, "an American there is still an American," Crowell wrote, "an Englishman an Englishman, a German a German, an Indian an Indian, and a Negro is there still a Negro."[34] In psychic

travels, the political radical and former abolitionist William Denton discovered that racial distinctions were on other planets, and there, too, darker races were inferior to lighter ones.[35] In redrawing the lines of the sympathetic community, Spiritualists mirrored trends in American society more generally, elevating race into an eternal and unchangeable marker of difference.

SPIRITUALISM SINCE THE 1880S

As the coordinating power of sympathy diminished, the Spiritualist movement lost the momentum and verve it enjoyed during its first quarter century. Sympathetic language continues to color Spiritualist discourse, and the tendency to view the world as an organic, interconnected whole remains common, but sympathy no longer plays the central conceptual role that it once did. As a result, with some notable exceptions, Spiritualist philosophy in the twentieth century usually lacked the reach and coherence of earlier years, and discussions of the phenomena tended to predominate. The spirits always had dramatic overtones, but the drama of mediumistic performances escalated between the 1870s and 1930s, with mediums materializing Indian spirits in full body form from dark cabinets to perform dances around the spirit circle, unseen hands whisking about the room, touching the communicants and moving objects through the air, unseen spirit musicians playing ethereal instruments, or the appearance of amorphous "ectoplasmic" projections that formed spirit hands or faces. Enlightenment and entertainment were intermixed.

The waning of Spiritualism during the last decades of the nineteenth century is usually attributed to the effects of personal scandals involving mediums and the widespread and recurrent evidence of fraud. That some Spiritualists espoused free love (finding one's spirit mate), divorce, and other radical political and social positions clearly hindered its popularity in "respectable" society, but the organized efforts to discredit Spiritualism had an even greater impact. The negative verdicts rendered by a series of high profile commissions to investigate Spiritualism were particularly significant, particularly the judgment of the commission convened at the University of Pennsylvania in 1886, funded by a bequest from the philanthropist Henry Seybert. Led by a group of socially prominent Philadelphians and noted scientists, the Seybert Commission stands out for the number and prominence of mediums it claimed to expose, as well as for the breadth of the methods of spirit communication it examined. Leaving few stones unturned in its devastating report, writing in a restrained style punctuated by a piercing wit, the Commissioners took apart some of America's best known public mediums, including Margaret Fox, James V. Mansfield, and the slate writer Henry Slade, leaving the impression of a tawdry and dishonest bunch, even when concrete proof of their misdeeds was not forthcoming. The debunking efforts of the magician Harry Houdini in the 1920s, and many other magicians in more recent years, were no less effective at swaying public opinion, casting mediumship into disrepute. Houdini's dramatic interventions during séances and his ability to identify the means by which mediumistic fraud was perpetrated played well in the popular press. Various combinations of academic respectability, celebrity,

showmanship, and sensationalism, have kept debunking efforts and the fraud they uncover steadily in the public eye.[36]

More damaging than the external assaults upon the integrity of mediumship, however, were a spate of revelations from within the fold. Between the end of the Civil War and World War II, many mediums took to the lecture circuit to confess that they had cheated the gullible and bereaved. Typically their public lectures included demonstrations showing how they simulated spirit appearances. Margaret Fox herself became a publicly repentant medium in the 1880s, admitting that she produced the rapping sounds by cracking the joints of her toes and ankles, an allegation first made by a group of physicians in 1851. Although she later recanted her recantation, the admission by one of the movement's first and best known mediums had a significant impact on Spiritualism's reputation.[37]

Paradoxically, other critics leveled damaging allegations against Spiritualism from the opposite perspective. Members of "mainstream" denominations often complained that the problem with spirit phenomena was not that they were fraudulent, but that they were real, but diabolical in origin. More secular critics agreed that the phenomena were real, but insisted that they were of natural, not supernatural origin. Mediumistic deceit might still be involved, but the "electro-psychologist," John Bovee Dods concluded that the "involuntary powers and instincts" of the human mind were capable of producing all of the phenomena attributed to the spirits. Until late in the nineteenth century, the well known "facts" of clairvoyance, electricity, and animal magnetism were often invoked. Spiritualism, in other words, was natural and had no need of spirits at all.[38]

There was no single Spiritualist response to these critiques, but a number of different responses that resulted in a more fragmented "movement," if it could be called a movement at all. Some Spiritualists responded to the torrents of criticism by rejecting their critics out of hand, their will to believe prevailing over their critical concerns. All the commissions and investigations, Spiritualists claimed, were carried out under less than ideal conditions, were unfairly conducted, or were ill equipped to record spirit phenomena, but even more basic denials were not uncommon. When the French photographer Edouard Isidore Buguet admitted in court to using trickery to produce images of spirits, one of his clients blurted out that even if Buguet had faked some images, he had not faked his.[39] More sophisticated arguments suggested that both mediums and spirits were imperfect beings and were sometimes tempted to fake spirit phenomena to please the public, or, alternatively, they were sometimes mistaken in their understanding of the spirit world. After all, the spirits most likely to commune with the living were those who were closest to us sympathetically, lowest in the progression of spheres, and therefore least advanced in spiritual knowledge.

A longer lasting influence, however, was exerted by Spiritualists who wanted to purify their movement from within, distancing themselves from the supposed excesses of their peers and policing the boundaries of acceptable practice. Christian Spiritualists such as Eugene Crowell blended Spiritualism with liberal Christianity, arguing that their beliefs were fully consistent with scripture and properly understood, never conflicted. Christian Spiritualists, Crowell insisted, read the Bible as

divinely inspired, but retained the right to use reason to judge what they read and reject whatever they found inconsistent with modern mores. Not only were Spiritualists good Christians, they were more like the primitive Christians of the early church than any of the modern sects.[40]

Other Spiritualists were more direct in their attempts to marginalize or silence alternative spiritual perspectives. Emma Hardinge Britten, an important medium and early historian of the movement, was a significant moderating figure, a sort of antiradical who attacked a broad range of free love advocates, communitarians, and infidels, whom, she complained, claimed direct divine inspiration and assumed "supreme and unquestionable authority in all matters, whether social, religious, temporal, eternal or financial."[41]

The net effect of such responses was that Spiritualist practice became increasingly circumscribed, homogenized, and less antagonistic to the established churches, or at least to the liberal wing of Protestantism. This trend was nursed by the separation of groups whose beliefs did not conform. Certainly, a hardy subculture of Spiritualism flourished among the lower classes, abjuring social respectability and maintaining tenuous connections to the likes of Crowell and Britten, but at least two New Religious Movements (NRMs) that emerged in the 1870s bore close relations with mainstream Spiritualism. Founded by Helena Petrovna Blavatsky and Henry Olcott in 1875, the Theosophical Society had broadly similar goals to mainstream Spiritualism—to promote universal brotherhood among humanity—but distinguished itself by emphasizing the esoteric and occult aspects of its knowledge and by blending in "eastern" beliefs in reincarnation and karma with spirit communion. Similarly Mary Baker Eddy elaborated upon Spiritualist and "mind cure" healing practices in establishing Christian Science in 1879, though she, like most Theosophists, was adamant that her beliefs were distinct from and superior to run-of-the-mill Spiritualism. In recent years, some trance channelers and psychics make similar claims to distinguish themselves from regular Spiritualist mediums, asserting that they communicate with higher and purer intelligences, not only with the spirits of deceased mortals.[42]

Shortly after the turn of the twentieth century, another offshoot of Spiritualism appeared in cities throughout the south and in major urban centers in the north, attracting a predominantly lower-class African American flock to services that drew syncretically on white Spiritualism, Catholicism, Hoodoo, and Voudon. Although their precise origins are unknown, these Black Spiritual Churches, according to the sociologist Hans Baer, represent one form of religious response to racism and social stratification, allowing believers to manipulate their own social position through magico-religious rituals and the acquisition of esoteric knowledge. Baer notes that the altars in many Black Spiritual Churches include statues not only of Jesus and the Holy Family, but of the Sauk Indian resistance leader, Black Hawk. As the central spirit in the pantheon of these churches, Black Hawk is both a symbol of, and encouragement to, resistance to white domination. Spiritualism also produced movements in the opposite political direction, becoming a focus during the 1930s for a fascist paramilitary organization led by William Dudley Pelley known as the Silver Shirts.[43]

Adaptable to a range of national and cultural contexts, Spiritualism was introduced into Brazil in the early twentieth century through the writings of the French theorist Alain Kardec. Spiritualism blended with a number of African and new world religious traditions and gained considerable popularity, with Spiritualists in Latin America far outnumbering Spiritualists in the United States. In Iceland it was instituted as a viable, formal option in the state church, the only place in the world where it enjoys state recognition.[44]

From the end of the Civil War to the end of the twentieth century, the evolution of mainstream Spiritualism was marked by a distinct tendency to organize and regularize practice, resulting in the formation of both a new field of scientific inquiry and the organization of the formal Spiritualist church. The affinity of Spiritualism with science and technology, of course, grew out of the rising authority of scientific reason and the optimistic and characteristically American fascination with the products of scientific research. For decades Spiritualists integrated new technologies into their descriptions of how spirits communicated, but not just any technology: they focused on those technologies that, like sympathy, promised to unite a distant and fractured nation. Telegraphy was one of the first metaphors for spirit communication, but spirits were equally attracted to the railroad, photography, telephone, and eventually television—any technology that allowed individuals to communicate with other individuals.

Beginning in the 1870s, Spiritualists built upon this rhetorical relationship with scientific methods and products to reemphasize the empirical character of their beliefs. Pioneered by figures such as the writer Epes Sargent, psychic scientists (not all of whom were Spiritualists) sought to use rigorous, objective methods to test theories of spirit action. The Society for Psychical Research in Great Britain, founded in 1882, and its counterpart in the United States founded three years later, helped define a field that attracted prominent members such as evolutionist Alfred Russel Wallace, physicists William Crookes and Oliver Lodge, physiologist Charles Richet, and psychologist William James. Psychical research earned a degree of academic respectability in the twentieth century, capped in 1935, by the establishment of a research institute at Duke University under the direction of J.B. Rhine.[45]

Other organizations nurtured the creation of a formal Spiritualist church. Early efforts to organize Spiritualists were often resisted by those who objected to anything that might "cramp the conscience." Several regional associations appeared in the 1850s, but generally disappeared within a few years, and while the first National Convention of Spiritualists was planned for August 1859, it was not actually held until 1864. Other conventions followed, but were generally unsuccessful in generating a national movement. Instead, borrowing a page from the evangelical sects, regional organizations like the New England Spiritualist Camp Meeting Association (founded in 1874) established a series of communities where Spiritualists could spend their summer holidays, communing with one another and the spirits. Lake Pleasant, Massachusetts (1876), Lily Dale, New York (1879), Camp Etna, Pennsylvania (1877), Cassadaga, Florida (1894), and Harmony Grove, California (1896)

were among a score of such communities that became centers of Spiritualist practice.[46]

Spiritualist temples and Sunday Schools hastened the process, and by the 1880s, Christian Spiritualism emerged as the dominant paradigm within the Modern Spiritualist movement, blossoming in the formation of the first successful national organizations. Britten's National Federation of Spiritual Churches (now the Spiritualists' National Union) was founded in Great Britain in 1891, followed in 1893 by the National Spiritualist Association of Churches (NSAC), which remains the primary body in the United States for overseeing the ordination of ministers and certifying lecturers, mediums, and healers. In 1913, a somewhat smaller, but no less successful organization, the National Spiritual Alliance (TNSA), separated from the NSAC, primarily over the refusal of the former to accept the possibility of reincarnation. The NSAC is centered today at Lily Dale, and the TNSA at Lake Pleasant.

The churches associated with these organizations typically hold to some version of Britten's Seven Principles, a statement of the essentials of Christian Spiritualist faith familiar to the first generation of Spiritualist seekers: the fatherhood of God, the brotherhood of humanity, the communion of spirits and ministry of angels, the continuous existence of the human soul, personal responsibility, compensation or retribution in the afterlife for activities in this life, and the eternal progression of the soul. In practice, a Spiritualist service often resembles a generalized, noneucharistic Protestant service, including an opening hymn, usually with words rewritten to reflect Spiritualist beliefs, followed by a topical sermon. The sermon, however, may be delivered by the minister in trance, and messages from the spirits may be delivered. Healing is often singled out as a central function of Spiritualist ministries, providing physical, emotional, and spiritual aid to the afflicted.[47]

In this Christianized form, the Spiritualist movement enjoyed several periods of resurgence, when large numbers of individuals once again entered into conversation with the spirits. During the 1920s and 1930s, Spiritualism gained immense popularity on both sides of the Atlantic. Houdini, always the antagonist, attributed the rise of the movement to mediums taking advantage of widespread grief over the loss of life in the trenches during World War I, and to be sure, numerous books were published containing posthumous letters of soldiers killed in action. Spiritualism waxed again among the counterculture of the 1960s and New Age of the 1970s, tapping into a desire for the spiritually authentic and a turn away from mainstream churches. In this most recent formulation, Spiritualism often bears the traces of "Native American" religion, Goddess religion, Earth religion, and other NRMs. An "Indian" dream catcher is as common in a Spiritualist's window as the Seven Principles.[48]

At the dawn of the twenty-first century, Spiritualism and related beliefs are once again enjoying a surge of popularity, in part because of the dominant medium of the day, the television. Although estimates suggest that no more than about 115,000 people maintained formal membership in Spiritualist churches in 2001, the number of believers worldwide may approach 15,000,000, depending upon the definition of Spiritualism. Even as the formal Spiritualist churches remain small, however, variations on Spiritualist beliefs have spread throughout a vibrant popular

culture that largely accepts the reality of the spirit world, appearing on television in the form of a variety of ghost whisperers and hunters and mediums such as John Edward. The spirits will continue to converse, it appears, and Spiritualism to progress.

Phrenology was the science of the study of the organs of the human mind, and in the United States during the 1840s, it frequently merged with the mind-influencing science of Mesmerism, a precursor to hypnotism.

6. "Modern Spiritualism" was the term used to distinguish the newly discovered means of communicating with spirits of the dead from historical and biblical accounts. Although Spiritualists argued that there was a continuity with ancient times, Modern Spiritualism was an historically specific emergence, tied to particular forms of spirit communication and, according to some believers, specific events in the spiritual world.

The Theosophical Society

Robert Ellwood

INTRODUCTION

The Theosophical Society was founded in New York in 1875, principally by Helena P. Blavatsky (1831–1891) and Henry Steel Olcott (1832–1907). Their intention was to study the "ancient wisdom" believed still preserved within the symbolism and outer teachings of the world's religions and philosophies, and by various esoteric organizations, ranging from Freemasonry to the Druze of the Near East and the monasteries of Tibet. Theosophy's immediate ideological and experiential context was Spiritualism, in which both Blavatsky and Olcott had been active, eighteenth century occultism, including its popular expression in movements like Mesmerism and Freemasonry, and the nineteenth century occult revival associated with names like Eliphas Lévi and Edward Bulwer-Lytton. Although never large in numbers, Theosophy has had a significant role in disseminating Eastern religious concepts, such as karma and reincarnation, in the West, in the spiritual revitalization of then-oppressed nations like Ireland and India, and in modernist cultural movements such as nonrepresentational art.

BACKGROUND

Modern Theosophy must further be viewed not only in light of romanticism and the Victorian "war" between science and religion. In his inaugural speech as first president of the Society, Olcott portrayed science and religion as both locked into narrow dogmatisms, and also argued (in a manner that caused offence among Spiritualists) that the popular Spiritualism of the day was but a shallow, unreliable, and often fraudulent response to this crisis. Then, evoking the romantic appeal of the distant and the past, and the century's stunning advances in the recovery of ancient civilizations, he pointed to the possibility of a deeper and older wisdom that could transcend this split and form the foundation of a better human future:

> If I rightly apprehend our work, it is to aid in freeing the public mind of theological superstition and a tame subservience to the arrogance of science.… Our society is, I may say, without precedent. From the days when the Neoplatonists and the last theurgists of Alexandria were scattered by the murderous hand of Christianity, until now, the revival of a study of Theosophy has not been attempted.[1]

Olcott added that such an attempt could not have been until conditions of "perfect political and religious liberty" were obtained, that is, in the United States of 1875. Thus the foundation of the Theosophical Society in America was of profound significance both for its own work and for its place in American history. Both temperamentally and ideologically, nineteenth and twentieth century Theosophists have tended to be social idealists, utopians, or reformers who fitted well into the mood of the "progressivist" era, favoring causes like labor reform, women's rights, animal welfare, and "progressive" education.

Olcott's idea that it was in the United States his new movement for the constructive recovery of ancient wisdom had to be first planted has a long lineage and large context, contributing to an image of the United States that Theosophy and its New Age progeny only enhanced. The New World as New Eden is a much reiterated theme, going back to Christopher Columbus's public relations efforts to picture the islands he had visited as paradises inhabited by innocent natives naked as Adam and Eve, despite his simultaneous labors of transporting, enslaving, and massacring those same primitives.

Calvinists and other serious believers, of course, could not overpraise the western paradise so long as its inhabitants, however noble in their savagery, were unbaptized. But Christian or visionary settlers seldom considered that if the America of the heathen was less than as idealized, here was a place where the European utopia could be built. Past history could be abolished, and humanity returned to the garden to start over again. We need only mention John Winthrop's "City Upon a Hill," or R.W.B. Lewis's classic study, *The American Adam.*[2] Lewis speaks of the "American myth" which "saw life and history as just beginning" on these virgin shores anew, "starting up again under fresh initiative, a divinely granted second chance for the human race, after the first chance had been so disastrously fumbled in the darkening Old World." This hope crested in the nineteenth century in such writers as Ralph Waldo Emerson, Walt Whitman, Oliver Wendell Holmes, and William Ellery Channing. It also found expression, according to Lewis, in the gnostic visions of Nathaniel Hawthorne and Herman Melville, though in a darker and more complex way that explored the perils as well as the splendors of American Adamic innocence.

Both visions came together in Theosophy, which managed to embrace progressivism and gnosticism alike, for it entered the late nineteenth century with an eye toward both the distant past and the future, hoping thereby to get beyond the schizophrenias of modernism. Evolution, extrapolated from Darwinism into vast cosmic-scale visions of spiritual as well as physical upward cycles, of whose movement one could now be an agent, was as much a part of its picture as the "ancient wisdom." So was attention to spiritual traditions both Eastern and Western; within them the ancient wisdom was believed to be housed, if often in camouflage. In general, the

Theosophical agenda sought the reconciliation of the modern world created by science and liberal political credos with global spiritual perspectives, and the ancient traditions underlying them. All this was an ambitious undertaking, almost too ambitious, for such a small and recently formed organization. Yet Theosophy found a niche in the world of the late nineteenth century and the twentieth century.

ROMANTICISM

In particular, Theosophy, like so many nineteenth century religious and spiritual movements, was a late heir of romanticism, though one very different from the feeling-tinged but theologically narrow romanticized evangelicalism or Catholicism of the era. Yet like those and other romantics, Theosophists tended to live in either an idealized past or a golden visionary future, but were bored or disillusioned with the present. That attitude of disillusionment focused on science as often as it made science the foundation of its radiant future. Not a few romantics shared Edger Allan Poe's deep disquiet (in his "Sonnet—To Science") as he addressed the scientific critic "Who alterest all things with thy peering eyes."

One way to revive romantic ethos was to return in spirit to the age when deity reigned in sacred grove and mysterious night sky. The intellectual nineteenth century was rich in classical learning, and not a few dreamers wished to get behind Swinburne's "pale Galilean," Jesus, and his joyless churchmen, or formal Christian traditions, to enter a time when divine wonder dwelt in rosy-fingered dawn and the wine-dark sea, something also animating that side of modern Theosophy, which has talked of clairvoyantly seeing the "devas" and "elementals" of nature. The Victorian age was also fascinated by the lost cities, even lost civilizations, its burgeoning archaeology had uncovered. They were not only in classical lands like Schliemann's Troy, but also in Asia, Africa, the New World, and the Pacific islands. Olcott tells us that, on an evening when a master (an advanced being) allegedly appeared to him as he was absorbed in reading, the book was Stephens's *Travels in Yucatan,* an early classic on Mayan ruins.[3]

Also in the Theosophical background was the romanticism-tinged nineteenth century occult revival, including such writers well known to Blavatsky and Olcott as Eliphas Lévi, pen-name of the French esotericist Benjamin Constant, and Edward Bulwer-Lytton. (The latter's occult novels, such as *Zanoni* and *The Coming Race,* had a discernible effect on Blavatsky's esoteric creativity, and by a strange coincidence or karmic connection, when she and Olcott made their journey to India in 1880, the Viceroy was none other than the novelist's son, the poet and romantic imperialist Lord Robert Lytton.) Even before their century lay the occultism of the eighteenth century, when persons like Cagliostro, Swedenborg, Mesmer, the half-legendary comte de Saint Germain, and the founders of modern Freemasonry created a sort of undertow to the Age of Reason that also advanced its agenda in significant ways.

Theosophy found ready resources for structuring itself in the two centuries' fascination with secret, initiatory degree lodges, Masonic or Rosicrucian, which characteristically laid claim to ancient confidential wisdom transmitted through its

formulas to the worthy. Sometimes that assertion was not taken too seriously, and the lodges were more social than anything else, but the notion was nonetheless there that definite stages in the spiritual life existed, which could be mounted through a series of initiations, together with the particular training and knowledge imparted through each.

But Blavatsky insisted there was more: as Olcott put it, "the Spiritualism she was sent to America to profess and ultimately bring to replace the cruder Western mediumism, was Eastern Spiritualism, or Brahma Vidya."[4] Recognizing that most of the spirits evoked by the western mediums were tricksters or "shells," and laying hold of the ancient wisdom of the East as well as the West, Blavatsky and her circle harbored no doubt that Brahma Vidya was incomparably higher than the bumptious spirit faith of the New World.

THEOSOPHY AND THE SPIRITUAL EAST

That observation suggests a final source of Theosophy: the fresh discovery of the spiritual East by the West in the nineteenth century. The process had been cumulative in impact, a backwash from Europe and America's worldwide commercial enterprises, and in particular the colonial adventures of England in India. First came translations of the Upanishads and other Hindu sacred texts early in the century, those works of wisdom that so influenced sages like Emerson, Thoreau, and Schopenhauer, who in turn influenced Blavatsky. (It is interesting to note that, in *Isis Unveiled,* Blavatsky cites Schopenhauer with particular appreciation, while dismissing the metaphysical systems of Hegel and Schelling as "gigantic failures" unable to stem the rising tide of materialism.[5])

As for the Transcendentalists, Thoreau remarked that as he read the "stupendous and cosmogonal philosophy" of the Bhagavad-Gita (another great Hindu text), "the pure Walden water is mingled with the sacred water of the Ganges."[6] Walt Whitman's 1871 poem "Passage to India" seems virtually to encapsulate the spirit of the two Theosophical founders' migration to the subcontinent a few years later. The poet sang not only of "Passage O soul to India!" but also of "Passage to more than India!" The India then enjoying the high noon of the British Raj was not the India Theosophy sought: it was less India as a place than as an idea, a spiritual treasure-house of wonder and wisdom older and stronger than anything the West could offer, of Brahma Vidya rather than parlor-séance Spiritualism.

The Western discovery of Buddhism, and the sorting out of its various forms, was a longer process, but by the 1860s the scholarly foundations of modern Buddhist studies had been laid. Sir Edwin Arnold's immensely popular poem about the life of the Buddha, "The Light of Asia" (1879), did much to stimulate the religion's popular appeal. Indeed, the urbane Bostonian and Episcopal clergyman, Phillips Brooks, commented sardonically in 1883 that in the poem's wake "a large part of Boston prefers to consider itself Buddhist rather than Christian."[7] Olcott, in a role adjunct to his Theosophical labors, devoted much energy to the modernization of Buddhism in Asia and presented its case to the West, as a sort of "missionary in reverse."[8]

Theosophy both rode a rising wave of interest in oriental religion and enhanced its wide dissemination, especially on the popular level, along with the no less important Theosophical task of reviving the "ancient wisdom" of the West, storehoused among such as the Gnostics, Kabbalists, and Renaissance Platonists and Hermeticists.

BACKGROUND SUMMATION

The complex conditions for Theosophy's emergence as a spiritual movement and social force in the last quarter of the nineteenth century then included a new revival of the perennial "ancient wisdom" that had appeared before in the Renaissance, abetted by the Enlightenment's reason and science—and its occult underbelly—together with the Romantic's love of ancient mysteries and sense that the knowing power of imagination can exceed that of reason or science.

To this was added the ceremonial magician's feel for the reality of the transhuman spiritual realm, as represented by, say, the Masters or Secret Chiefs of Rosicrucianism, plus the Spiritualist's belief that these mysteries could be brought down to an almost everyday experiential level, and that the revealing of their arcana heralded not mere nostalgia for the past, but the beginning of a new era marked by radical progress and reform in all areas of human life.

Spiritualism, of course, was associated with such liberal causes as abolition of slavery, prison and educational reform, and the rights of women. Blavatsky, politically more European than American in orientation, was a passionate anticlerical in the Voltairean style and an admirer of such radicals of her day as the Italians Guiseppe Mazzini and Guiseppe Garibaldi. [She claimed to have fought and been wounded with the latter in the anti-Papal States battle of Mentana (1867), even though such sentiments somehow coexisted with warm feelings of loyalty toward the czar of Russia, and Eastern Orthodox Christians never shared her animus against Papists and Protestants.]

Freemasonry contributed the idea that one could inwardly prepare to receive the mystic light by a formal, degree-like system of initiations. Finally, Asia added its own versions of the primal lore, plus knowledge that both the ancient wisdom and the new movement were universal, not just Western. The new movement's nativity in the United States, land of religious and intellectual freedom, was, as we have seen, a necessary condition of its existence for Olcott and his associates.

THE FOUNDING AND THE FOUNDERS

The backgrounds and characters of the two principal founders of the Theosophical Society in 1875, Blavatsky and Olcott, were strikingly dissimilar. Blavatsky was born Helena de Hahn in czarist Russia to a family of high aristocratic connections. Her father was an officer in the army of the czar, and her mother a popular novelist whose stories inevitably involved women suffering at the hands of callous men. Even as a child Helena was willful and headstrong, though possessing great imagination, intelligence, and fascination for occult lore. At 18 she impulsively married N.V.

Blavatsky, a widower and provincial vice-governor more than twice her age. She soon left him, to spend most of the next 25 years wandering the world, by her account in search of esoteric wisdom, a quest culminating with mysterious initiations in Tibet in the late 1860s. In 1873 she came to New York, seeking, she said, to study Spiritualism in its homeland. There she encountered many Spiritualists, vehemently entered into their controversies, and also met Henry Steel Olcott.

Olcott, sprung from the solid American middle class, worked variously as an agricultural scientist, journalist, and lawyer. During the Civil War he served the Union as an investigator of fraudulent military suppliers, receiving the rank of colonel; he was also part of a team investigating the assassination of Lincoln. At the same time, Olcott had long had an interest in Spiritualism. In 1874 he was at the home of the Eddy brothers in Chittenden, Vermont, where nightly Spiritualist phenomena were reported. He was, in his reportorial capacity, preparing a series of newspaper articles on the otherworldly happenings.[9] By late 1874 Helena Blavatsky had also arrived at the mysterious farmstead. The convergence of the exotic immigrant and the Yankee journalist was an immediate success.

They kept in touch back in New York City, Olcott clearly fascinated by the unusual woman's volatile personality, remarkable psychic phenomena, and accented talk of faraway mysteries. Above all she spoke to him of the Masters of the Wisdom, adepts or mahatmas, who though still living in this world have attained high initiations. They inwardly governed the course of world affairs and were prepared to accept serious students. In time Olcott began his training under certain of them. Before long, for the further benefit of their esoteric studies, the two shared a series of apartments (though not, Olcott makes clear, the bedroom). The best known, dubbed the Lamasery, became a magnet for the city's coterie of seekers, esotericists, and bohemians, as well as Spiritualists. In his later reminiscences, *Old Diary Leaves,* Olcott well evoked the fascinating conversations, uproarious parties, and intriguing lectures for which the residence was famous.[10]

In 1875 the Lamasery crowd determined to form an organization for the study of the sort of borderline knowledge in which they were interested, which was so exceptionally manifested in Blavatsky and her lore. The group named itself the Theosophical Society; Olcott was elected first president, delivering the inaugural address already cited on November 17, 1875. The organization prospered in its original form for only a few months. During that time the group's members mostly listened to lectures on topics related to comparative religions, the occult, and western esotericism. Olcott and Blavatsky soon enough turned their attention to another project, the compilation of a massive book. This work, published by Blavatsky in 1877 as *Isis Unveiled,* was the first large-scale presentation of the wisdom she believed her long search had garnered.[11]

ISIS UNVEILED

This sprawling two-volume work may appear at first glance to be mainly a disorganized collage of accounts of travel to out-of-the-way places, including narrations

of encounters with shamans and sorcerers, together with discourses on Masonic symbolism, Pythagoreanism, Neoplatonism, Gnosticism, and Eastern texts, interspersed with roundhouse assaults on conventional science and religion. But gradually certain overriding themes, emerge: nineteenth century science and religion alike were sterile and dogmatic, but if one paid attention to clues found in the "forbidden" lore to which the author pointed, to the experience of shamans and magicians, to the secrets of obscure initiatory orders and ancient texts, one would find hints of a primordial wisdom that could unify the worlds of science and religion.

This alternative world view showed life actually to be an initiatory journey, for those able to receive it as such, into the intricate splendor that lay behind the world as we ordinarily know it. Nature, including human nature, is a subtle and complex mixture of spirit and matter; the highest interaction of the two produces consciousness; masters or adepts exist here and there who can detach and direct potent energies of the spiritual side, roughly the "animal magnetism" of Mesmer, the *Vril* of Bulwer-Lytton, or the *prana* of yoga, to induce seemingly magical effects—though, of course, these are actually natural, but beyond our ordinary understanding of nature. Knowledge of this sort is the beginning, though far from the end, of the unveiled Ancient Wisdom.

THE JOURNEY TO THE EAST

After the successful publication of *Isis Unveiled,* the interests of Blavatsky and Olcott moved more and more in the direction of India, believed to be a mighty reservoir of those forgotten secrets. The inner turn toward India on the part of the founders appears to have commenced in an interest in Swami Dayananda Sarasvati and his Arya Samaj. The Arya Samaj was a Hindu movement advocating what appeared to be liberal religion, calling for simple worship and the elimination of elaborate and "superstitious" temple culti. It supported such progressive measures as modern education, abolition of caste based on birth, and the rights of women.

The relation with the Arya Samaj had begun in 1870, when Olcott had met Mooljji Thackersey of Bombay on a ship to England. Corresponding with him again in 1878, the American invited the Indian to join the Theosophical Society. Thackersey, in turn, told Olcott in enthusiastic terms of the allegedly parallel work of the Arya Samaj. In 1878 the Society united at a distance with Swami Dayananda Sarasvati's organization, naming itself "The Theosophical Society of the Arya Samaj." Olcott felt at the time that the Arya Samaj's reconstructed Vedism was one with the spiritual universalism he identified with Theosophy. However, the Theosophists did not at first realize that Dayananda's positions were actually based on a sort of Hindu fundamentalism; he believed that the Vedas alone were revealed truth, and all later Hindu sources, not to mention all other scriptures, spurious. Vast was Olcott's disillusionment, confirmed later in India, when further information revealed that the Arya Samaj, for all its virtues, intended only conservative, integralist reforms within Hindu India, and so was of little interest to Western universalists.

Nonetheless, this relationship was an important factor in Blavatsky and Olcott's plan to journey to India in 1878–1879, a momentous move for the future of Theosophy. Blavatsky still felt that Dayananda was a master calling her. The subcontinent came more and more into their conversations, and the supernormal masters whom Madame Blavatsky was able to introduce to Olcott increasingly wore turbans.

Another reason for the Indian pilgrimage was the founding of the London branch of the Society that year, 1878, which the two wanted to visit en route. Moreover, the same year Blavatsky acquired U.S. citizenship; she was said to be the first Russian woman immigrant to do so. That would make travel in India somewhat easier, given the British Raj's almost paranoid suspicions of Russian designs on that land, even though the Yankee passport did not relieve her of a discreet police "tail" during some of her stay, and her adversaries often accused her, among other things, of being a spy for the czar. However, the mistrust of India's alien rulers made all the greater the enthusiasm of India's rising nationalists for the pair and for Theosophy.

Early in 1878 the "Theosophical Twins," as Olcott liked to call himself and Blavatsky, arrived in India, the land of their dreams. The two impressed some and aroused skepticism in others of the British community. But they were generally well received by Indians, being among the few Europeans in the heyday of imperialism to show much sympathy for Hindu religion and culture, or to stand, as Olcott did, with Hindus and Buddhists against aggressive missionaries and colonial overlords. Branches of the Theosophical Society were soon formed, and publications issued. An international headquarters was first established in Bombay, then moved in December 1882 to an estate at Adyar, near Madras (now Chennai) in south India.

Among the English converts was A.P. Sinnett (d. 1921), a newspaper editor. He was the recipient of the remarkable and controversial series of documents now called *The Mahatma Letters,* instructions from the masters, which often appeared in extraordinary ways. Their published collection is now one of the basic Theosophical texts.[12] These and later such letters, however, led to the Society's first and greatest crisis: the investigation by Richard Hodgson, of the Society for Psychical Research, into them and related alleged supernormal phenomena. The 1885 report, adverse to Blavatsky, did the nascent movement much harm, accusing the Theosophists of falsifying paranormal events to deceive the gullible.

At the same time, the relative success of Theosophy in India owes much to the movement's enthusiastic embrace of native culture and religion, and its implied critique of the Eurocentric mentality behind colonialism. Liberal-minded Europeans as well as Indians could appreciate this tack. Sometime Theosophists such as the British liberal Octavian Hume and Motilal Nehru, an important Indian nationalist in his own right as well as father of Jawaharlal Nehru, first prime minister of independent India, were among the founders of the Indian National Congress, with which Annie Besant (1847–1933) and M.K. Gandhi (also a sometime Theosophist) were later associated.

It is perhaps no accident that 1884, the year Theosophy was shaken by scandal concerning the alleged forging of letters from Mahatmas, was also the year India was riven by the Ilbert Bill crisis. This was an act proposed in the Viceroy's council

that would have reformed India's judiciary in such a way that Europeans could in some cases be tried before native judges. It was violently opposed by most Europeans in India, and as strongly supported by Indians. In the wake of this upheaval between ruler and ruled, the scandal against Theosophy, known for its sympathy to "natives," was provoked by European investigators and missionaries, and in the upshot Blavatsky and other Theosophists were wildly cheered on the streets by Indian students.[13] Blavatsky returned to Europe in 1885, where despite failing health she completed her greatest work, *The Secret Doctrine,* published in 1888.[14]

THE SECRET DOCTRINE

This massive and remarkable tome is basically an account of the genesis of the solar system by emanation from the One, in accordance with tremendous cosmic cycles of divine activity and rest, and of the evolution of humanity through several worlds and races. Its first section, "Cosmogenesis," portrays the emergence of the differentiated cosmos from the stillness of pralaya, the rest between manifestations; the important theme is that, in those mysterious and remote workings, as in *Isis Unveiled,* consciousness and matter always coexist, though, of course, in very different ways in star and seed.

The second part, "Anthropogenesis," describes the human lineage on planet Earth. Fundamentally it is composed of a series of seven "root races," of which we are now in the fifth. These are regarded as overlapping and, though originally identified with various extant "races," may be thought of as much as stages in the evolution of consciousness as races in the biological sense. The concept has sometimes been labeled racist, but it should be recalled that in the nineteenth century the word "race" was often used where we might speak of nationality or even culture, and that the grand scheme relativized the whole matter by portraying the inevitable rise and fall of all races, nations, and empires—and for this Theosophists were also criticized by those who thought the British Empire, for example, ought to last forever.

The first two root races were primordial and "etheric" rather than fully physical. The third, the Lemurian, and the fourth, the Atlantean, have overtones of Paleolithic and Neolithic cultures, respectively. The book ends with an elaborate demonstration of the cryptic expression of this "ancient wisdom" in the arcane symbolism of numerous faiths and "mystery schools."

THE "SECOND GENERATION"

Blavatsky died in London in 1891. Although Olcott continued as president until his death in 1907, the Society was soon dominated by two "second generation" figures, Besant and Charles Webster Leadbeater (1854–1934). Leadbeater, a former Anglican priest, controversial because of alleged homosexuality and closely associated with Besant, represented the occult side of the "second generation." He produced a widely read series of books based on his "clairvoyant" investigations of the inner planes of reality, past and future lives, and the meaning of ritual.[15] Among the most

representative of his works, largely based on lectures, are *The Astral Plane* (1895), *The Christian Creed* (1899), *The Devanchanic Plane* (1896), *The Hidden Side of Christian Festivals* (1920), *The Hidden Side of Things* (1913), *How Theosophy Came to Me* (1930), *Man Visible and Invisible* (1902), *The Masters and the Path* (1925), *The Other Side of Death* (1903), *An Outline of Theosophy* (1902), and *The Science of the Sacraments* (1920).

Two significant themes are evident from these and other titles. First, Leadbeater's fascination with aspects of reality concealed from ordinary sight, the "hidden side" of human nature and the life after death, led him, with the aid of clairvoyance, into vivid and detailed descriptions of those mysteries. Second, he was, like Annie Besant and others of his generation, profoundly concerned with reconciling Christianity with Theosophy, which for Leadbeater took the form of finding occult forces at work in such traditional Christian rites as baptism and the Eucharist. This quest eventually led to the formation of the Liberal Catholic Church in 1916, of which Leadbeater was a founding bishop. This small denomination uses ritual of the medieval Catholic sort, interpreting it in a Theosophical light.

In the first year of the new century, 1901, Leadbeater together with Annie Besant published a fascinating little book, still in print, called *Thought-Forms,* which seemed prophetic of the direction the avant-garde in the arts was headed in that brave new era. This book was full of illustrations and description, based on Leadbeater's clairvoyance, of colorful but abstract forms seen in the auras or over the heads of persons in various states of consciousness, from spiritual exaltation to anger and depression. Similar vibrant images were also associated with music of diverse sorts. Reportedly, this book and similar Theosophical works, including *The Secret Doctrine* and Leadbeater's richly illustrated *Man Visible and Invisible,* had a definite impact on the artistic development of several painters, most notably Piet Mondrian and Wassily Kandinsky, who were pioneers in cubism and other twentieth century forms of abstraction that sought to portray, by nonrealist means, the inner states of feeling and consciousness animating their subjects.[16]

ANNIE BESANT

Besant (International President of the Society after Olcott's death in 1907), tireless social reformer, activist in many causes, and freethinker (partly in reaction to her failed marriage to an Anglican clergyman), was converted to Theosophy after reviewing *The Secret Doctrine* and soon poured all her formidable energies into this movement.

Before becoming a Theosophist and student of Blavatsky just before the latter's death in 1891, Besant was an active and controversial socialist and union organizer, associated with the freethinking politician Charles Bradlaugh. She labored famously on behalf of birth control education, led a strike by the exploited girls who sold matches on street corners, and was a member of the London School Board. As the 1937 *Theosophical Year Book* put it,

> In 1889 [when she joined the Theosophical Society], there was scarcely any modern reform for which she had not worked, written, spoken and suffered: women's suffrage and equal rights, better housing, school meals, abolition of sweated wages, penal reforms, Empire Federation, antivivisection … reform of land laws, the right to freedom of thought and speech, a reformed system of electorates, the rights of subject peoples.[17]

Besant was a paragon of the 1890s progressivist spirit, and that spirit though redirected was scarcely dimmed by her transfer from free thought to Theosophy, and from England to India. As President she founded the Theosophical Order of Service, which has ever since actively supported causes in line with Theosophical principles. In India she established schools and labored on behalf of the abolition of child marriage and reform of the caste system, while her unabashed sympathy with Indian religions won her support from even the most orthodox brahmins, or upper caste Hindus.

Most significantly of all, her founding in 1916 of the Home Rule League, designed to make India a self-governing member of the British Commonwealth of Nations, put her in the center of India's political crucible, where nationalism and British resistance struggled against each other with increasing passion. Despite her insistence on nonviolence and constitutional procedure, she was interned by her own countrymen for three months in 1917, but then released to tumultuous enthusiasm. She was elected president of the Indian National Congress, the major indigenous independence organization, but soon lost support there to M.K. Gandhi, whose identification with the Indian masses she could not match and whose advocacy of complete separation from Britain and the West she did not share.

At the same time, Besant did not hesitate to support the British cause with all the passion of which she was capable in World War I, seeing it as a struggle between the forces of dharma (cosmic justice and order) and adharma, or even more broadly, between the Great Souls or Masters who labored on behalf of the Allied cause, the cause leading to human freedom, as over against the powers of darkness behind the other side, unholy powers who delighted in strife and slavery. (Her successor as International President, George Arundale, revived the same rhetoric in World War II.)

It was Besant more than any other single individual who made Theosophy a vehicle for what Catherine Wessinger has called "progressive messianism."[18] This viewpoint embraced, Wessinger believed, a millennialist belief in coming world perfection attained with superhuman help, in the persons of Masters and particularly the World Teacher, but achieved gradually rather than with apocalyptic suddenness. In Besant's vision, the messianic process would bring to fruition all the worthy causes for which she had labored with somewhat less hope, at least on the spiritual side, in her pre-Theosophical days.

It is worth noting how Theosophy attracted persons like Besant, or Blavatsky herself, intelligent and capable, painfully aware of injustice, given to idealism, and at the same time were what sociologists might call "status inconsistent"—because of gender, class, education, race, or other stigmata were unable to find a place equal to their abilities and dreams in the established churches or political world. They often drew

fire from those worlds, yet gave as good as they got, and continued to present an alternative view of the world and its lines of authority.

Often these were examples of the so-called "New Woman" of the 1890s, the product of newly established colleges and graduate schools for women that were now producing an educated elite of women trying to enter the professional worlds of medicine, social work, and other fields. On another level, middle-class women were joining women's clubs where they were able to discuss intellectual topics and issues of the day—and Theosophical meetings could serve the same function—even as younger women engaged in bicycling, camping, and sports, all to the delight of some and the scandal of others. This expansion of female horizons clearly dovetailed with the progressivist political agenda. Numerous Theosophical women of the time, including Besant herself, fit the model well, as pioneer women lecturers and reformers; other Theosophical women were among the first physicians and college professors of their sex. It is easy to understand that a spiritual home in the Theosophical Society, with its evolutionary universe and tradition of gender equality, offered them—and men sympathetic to them—a way to deal with the "status inconsistency" they may still have felt against the male-dominated mainline ecclesiastical, educational, and political worlds.

KRISHNAMURTI AND THE ORDER OF THE STAR

The progressivist vision was greatly enhanced and popularized by the Krishnamurti enthusiasm of the 1910s and 1920s. In 1909, at Adyar in India, Leadbeater declared Jiddu Krishnamurti (1895–1986), the slight and unprepossessing son of a dedicated Theosophist and retired civil servant, to be the Vehicle of the Lord Maitreya (the future Buddha, also identified with Christ), or World Teacher, and said he must be trained for that purpose. To this end, Leadbeater and Besant undertook his education, first at Adyar, then in England, and finally in Ojai, California. Although the education results were mixed—Krishnamurti was unsuccessful in gaining admission to a British university—the once-unpromising youth grew into a handsome and pleasing man, who satisfied his mentors with simple yet cogent talks and writings on spiritual matters. Indeed, he attracted attention far beyond Theosophical circles. Mass media articles appeared with titles like "Messiah in Tennis Shoes," and none other than George Bernard Shaw once went so far as to call Krishnamurti "the most beautiful human being he ever saw."[19]

In 1911 the Order of the Star in the East was formed to prepare for the coming; this organization spread excitement through the Theosophical world by means of its publications and conventions that tingled with anticipation. The order produced a magazine, *The Herald of the Star,* a publishing house, Lotus Press, and a youth organization, the Servants of the Star.

The early twentieth century's extraordinary interest in Krishnamurti messianism seems to say something significant about those tumultuous times. Against a wildly erratic backdrop of progressivist optimism, the horror and despair of the Great War, and the giddy mix of futurist dreams and anxious sense of the world's

foundations shaking of the 1920s, Krishnamurti and his cause projected a tangible eschatological hope, one that was truly universal, mingling East and West in the groundwork it was laying for a new age. For example, the Anglican clergyman and Krishnamurti devotee C.W. Scott-Moncrief, in an address, later published, entitled, "The Coming Christ and the Order of the Star of the East," made the program of the new messiah sound like no more than a natural extension of ultraliberal Christianity.

Christianity may triumph, he said, but in a new form to which all world religions will contribute. East and West are no longer watertight because races and religions interact. There is a new universalism: the priest cited such international activities as the labor movement, the women's movement, the Esperanto movement, "science itself," and groups like the Theosophical Society and Baha'i. The coming faith will, furthermore, be a "scientific religion," to which not only the natural sciences, but also such "sciences" as sociology, education, socialism, and eugenics will be reconciled. For all this, the mighty vision of a new world teacher, to appear in the East, will be requisite.[20] These are by and large causes with which, as we have seen, Theosophists of the progressive era were already involved.

However, in 1929, on the eve of the 1930s and of the Great Depression, when so many hopes were dashed and others born, the star suddenly set. At a camp of the Order of the Star in Ommen, Netherlands, before an audience of some 3,000, including Besant, Krishnamurti dramatically dissolved the Order and rejected for himself all organizations. In his famous speech, he proclaimed: "I maintain that truth is a pathless land, and you cannot approach it by any path whatsoever, by any religion, by any sect." Henceforth, until his death in 1986, the one-time "Vehicle" pursued an independent vocation as a distinguished lecturer and teacher of pathless truth and "choiceless awareness."[21] Many Theosophists, however, were devastated. Although the Theosophical Society carried on, doing useful work on perhaps a more stable and mature basis than in those halcyon years, it never again recovered the spirit, publicity, or numbers of its "golden age," the years roughly 1900–1930, when it was most closely associated with the progressivist spirit.

The major Theosophical organizations have continued, however, to present their teaching and life, mostly through lectures and publications, but increasingly through tapes and videos as well. By and large a liberalizing trend can be discerned, as Theosophists seem less concerned with the letter of the classic texts than with extracting major themes, such as the universal conjunction of consciousness and matter, and the ideas of evolution and cycles on all planes of reality, showing their compatibility with current science and philosophy.

OTHER THEOSOPHICAL GROUPS

Not all Theosophists were pleased by these developments. In the United States, the American section, under the presidency of William Q. Judge (1851–1896), an original founder of the Society, separated from Adyar as early as 1895. Judge, however, died only the next year, and was succeeded by Katherine Tingley (1847–1929), an American woman who, like Besant, had been a dynamic social reformer,

and who was to lead her society into a remarkable communal venture. Hardly had she taken office when, in 1897, she closed almost all lodges of the American section and called the membership to take up residence in a utopian settlement she was establishing on some 350 acres at Point Loma, in San Diego.

That same year Besant launched a counteroffensive on behalf of the Adyar society, winning back to its allegiance most of the 50 lodges and 1,000 or so American Theosophists who did not feel led to move to Point Loma. For a time, however, all eyes were on that site by the blue Pacific. Initially enjoying generous financial support, the new planned community soon displayed two neoclassical buildings with aquamarine and amethyst glass domes illumined at night, residences, paradisal gardens and orchards, and the first open-air Greek theatre in America, where spectacular dramatic performances were enacted. A refectory served common meals to the citizens of "Lomaland" (some 500 at its height), and children were raised in a communal nursery and boarding school under an educational system called "Raja Yoga," said to develop young physical, mental, and spiritual faculties in perfect harmony. Lomaland took pride in remarkable achievements in several fields, including education, drama, art, and agriculture, including in the last the development of commercial avocado production.

Unfortunately, utopia could not last. After the death of Katherine Tingley in an automobile accident in 1929 and the onset of the Great Depression almost immediately after, the community fell into serious financial difficulties, and membership declined. Point Loma was finally closed in 1942 because of increased military activity in the area with the commencement of World War II. Initially, the dwindling and aging community moved to Covina, California, then, in 1950, transferred its headquarters to Pasadena, and later Altadena where, no longer a formal community, it maintains a Theosophical library and publication program.[22]

The third major Theosophical Society is the United Lodge of Theosophists (ULT), founded in 1909 by Robert Crosbie (1848–1919) as an "unsectarian" third force intended to reconcile the differences between the increasingly antagonistic Adyar and Point Loma groups. The ULT has become known as a conservative Theosophical presence, presenting only the "traditional teachings" of Blavatsky and Judge. It is also known for its policy of endeavoring to avoid "personality cults" by declining to announce or introduce speakers by name.

Also worthy of mention is the Temple of the People in Halcyon, California, founded in 1898 and moved to this site in 1904, as a community alternative to Point Loma, and with its own somewhat distinctive interpretation of Theosophy. Several other groups may be considered devolutions of Theosophy. Anthroposophy, founded by Rudolf Steiner, sometime leader of German Theosophists, separated from the international Society in 1912 as a result of Steiner's growing dissatisfaction with Besant, the Krishnamurti movement, and the "Eastern" tendencies of Adyar. This group, noted for the "eurhythmic" dance exercises and highly regarded Waldorf schools, and now spread worldwide, emphasizes Western and Christian mysticism. Groups following the books delivered through Alice Bailey, such as the Arcane School and the School for Esoteric Studies, and the "I Am" movement of the Saint

Germain Foundation, present later teachings believed to have been transmitted from Theosophical masters.

MAJOR THEOSOPHICAL IDEAS

A summary of major Theosophical ideas begins with the three "Declared Objects" of the Society. No formal affirmation is expected of Theosophists except one of sympathy with these objectives. They are, in brief and in current wording,

To form a nucleus of the universal brotherhood of humanity;
To encourage the comparative study of religion, philosophy, and science;
To investigate unexplained laws of nature and the powers latent in humanity.

These offer a short summation of the essential foundations of a positive pluralism: acknowledgment of universal kinship; openness to learning and borrowing from all cultures; recognition that human nature and the universe bear many mysteries and hidden interconnections, which ought to keep one wary toward claims of final and exclusivist truth and able to rejoice in the presence of many perspectives.

The deeper, or at least more esoteric-seeming, concepts associated with Theosophy (though not regarded as mandatory dogmas) can be considered in light of these principles. *The Secret Doctrine* and other basic texts tell us, first, that the ultimate basis of brotherhood is one infinite and incomprehensible reality that underlies and unites all that is or can ever be. It expresses itself through both consciousness and matter, so that all phenomena represent the complex interaction of these two. Out of this oneness, many universes, solar systems, and worlds develop through immense cycles in accordance with the dynamics of the interaction of spirit and matter. The inhabitants of those spheres, called humans on earth, sometimes called the "pilgrims," move through these universes and worlds lifetime after lifetime in response to karma and the necessity of experiencing many modes of being, before returning to the Source, the One.

Finally, Theosophy affirms there is a reservoir of wisdom in our world, known to those well advanced on the path but accessible to all earnest seekers, that can help one to understand and grow in these truths. This is the wisdom first glimpsed in the study of comparative religion, philosophy, and science, the truth that is treasured by some esoteric orders and that is alive to those masters of the wisdom, also called elder brothers, mahatmas, or adepts, whose existence Theosophy has generally maintained. While they can occasionally be met in the midst of the modern city, by and large adepts dwell in quieter parts of the planet for the sake of their own spiritual peace, but by inner means they influence for good the evolution of earth, and teach those who are ready.

For Theosophy growth is not only a matter of intellectual learning. Progress also involves initiation or inward transformation—opening powers latent in humanity—and living in accordance with a spirit of openness toward unexplained laws of nature, and toward kinship with the divine in all life. For some Theosophists this entails living a relatively simple and natural life, vegetarian and free from the use of alcohol or tobacco, but these points are not mandated.

In general, in fact, the practice-oriented side of Theosophy is individualistic. The Society insists that it is not a religion or a church, Lodge meetings typically consist only of a lecture or discussion, and the only spiritual practice likely to be inculcated is meditation. There is a Theosophical group called the Esoteric School, composed of some though not all highly committed members, whose adherents promise to follow the above lifestyle rules and to study and meditate on a regular basis. Some Theosophists who desire spiritual or religious practice of a more ritualistic or public sort are also members of ritual groups traditionally associated with Theosophy, though institutionally separate, such as the Liberal Catholic Church, already mentioned, or the Co-Masonic Order, a Masonic group with many Theosophical initiates that admits both men and women. Others also belong to "mainline" churches. Lately many Theosophists have gravitated to Unitarian-Universalist churches.

CONCLUSION AND THE FUTURE OF THEOSOPHY

Theosophy entered the late nineteenth century with an eye toward both distant past and future, hoping to go beyond the wastelands of the day. Evolution, now read as vast cosmic-scale visions of spiritual as well as physical upward cycles, of whose movement one could now be an agent, was as much a part of its picture as the "ancient wisdom." The tensions between backward looking and forward moving were not entirely reconciled, but sometimes showed how ideological disequilibrium can be dynamic. Tension-based energy is, in fact, as Olcott intuited, a principle of America's novel historical role.

Catherine Albanese has spoken of the "kinetic revolution" behind the Transcendentalism of Emerson and Thoreau, certainly a background influence on Theosophy. The Concord sages' glorification of movement and change obviously reflected the era of the frontier and the clipper ships, but motion became for those New England thinkers a universal absolute. Emerson repeatedly spoke of rest as decay, of motion as a form of perfection, of challenges to leave the shore and plunge into the Unlimited and the Immensities. But if change is a universal perfection, then disequilibrium must be a good, for it is the "kinetic" inciter of change.[23]

Theosophy offers models for reconciling differences inherent in the universal kinetic through a kind of "triangulation" appeal to a higher, and older, common ground. Thus, Olcott sought to find the common ground of science and religion by appealing to ancient wisdom. The Theosophical spirit enables one to be both liberal and conservative, in the deepest philosophical meaning of these often-abused terms, on social and political issues. It likewise presents a model for constructive social change which, because of "triangulation," if the word may be used in this context, with large-scale patterns of evolution, including evolution of consciousness, comes closer to progressive eschatology than to revolutionary apocalyptic.

Has this outlook any social significance? Theosophy later influenced individuals of the New Deal era, like Vice President Henry Wallace (1836–1916), a sometime member of the Society, who combined deep-seated idealism with commitment to democratic political process in a pluralistic society. It was Wallace who persuaded

Franklin D. Roosevelt's Secretary of the Treasury, Henry Morganthau, to place the reverse of the Great Seal of the United States, with its arcane Masonic symbolism involving the topless pyramid, the eye in the triangle, and the words *Novus ordo seclorum,* on the dollar bill; he persuaded Morganthau that *Novus ordo* was Latin for New Deal.

Something of the Theosophical legacy in American life is suggested: the combining of occult wisdom from a distant past with pragmatic reform. That heritage carried its own legacy of the divinity and infinite potential of human life into present need. As Olcott understood, this could happen only on America's sacred ground, where the unity of diversity, *E pluribus unum,* for which Wallace and others yearned, could be realized, and the pluralism and the dynamic were also parts of Transcendentalist and Theosophical perfection in motion. Within the unlikely setting of Washington's corridors of power, Wallace was well known for his interest in "mysticism" and "occultism," particularly when they afforded a vision of the unity out of diversity for which he pined. Arthur Schlesinger, in *The Coming of the New Deal,* provides an insightful overview of this side of the New Deal Secretary of Agriculture and later Vice President. Schlesinger suggests that what particularly appealed to Wallace "was the hope that the vision of spiritual unity might enable him to join together the two halves of his own personality. For as both scientist and mystic, both politician and prophet, both opportunist and idealist, Wallace was split down the middle."[24]

Many other moderns were likewise divided, and for some of them, as for Wallace, the Theosophical vision was able, at least at times, to raise the split between inspiring past and evolutionary future to the level of creative tension or kinetic perfection, making the changes and chances of this world a progressive highway to a better world.

But in the early years of the twenty-first century, most Theosophical groups seem to be declining in membership. Perhaps, on the one hand, they have become hidebound, and, on the other, in some subtle way Theosophy's lore and particular style of spiritual energy is less attuned to the current generation than it was to the world of a century earlier. Or it may be a result of the "bowling alone" phenomenon: the tendency of postmoderns not to want to join organizations, and even less to go out to meetings. Increasingly, persons on the rolls of Theosophical organizations are members at large rather than attenders of lodge or study group meetings, finding the sustenance they require from books and the Internet rather than face to face. Yet to some the vision of Theosophy has never seemed more relevant to a troubled world.

The American New Thought Movement

Dell deChant

New Thought is a global New Religious Movement (NRM) that began in the United States in the late nineteenth century as a popular religious expression of idealism, a philosophic tradition whose deep taproots can be traced to Plato (428–348 BCE). As a distinct religious tradition, New Thought and its early communities emerged out of Christian Science and the nineteenth century mental healing movement. In its earliest manifestation, it caught the attention of William James, who gave it considerable attention in *The Varieties of Religious Experience* (1902), referring to it as "the Mind-cure movement" and "the religion of healthy mindedness."[1] The movement itself has its clearest origins in the writings, teachings, and organizational strategies of Emma Curtis Hopkins (1849–1925), an independent Christian Scientist and former student of the founder of Christian Science, or the Church of Christ, Scientist, Mary Baker Eddy (1821–1910). By the early twentieth century, New Thought was well established in the United States and a number of distinct subgroups emerged, most notably Unity and Divine Science. The movement grew steadily throughout the twentieth century, and today comprises several major denominations and many smaller groups, with representative communities in over 60 countries and perhaps as many as 500,000 members—making it the largest movement in what is called the "metaphysical" tradition.[2]

This essay is divided into four sections. The first section offers an overview and periodization of the history of the movement followed by a detailed study of its origins and early development. The second section focuses on the major New Thought denominations and significant figures in the movement's history. Section three outlines New Thought's primary beliefs and practices. The final section considers the future of the movement and the issues that confront it. The term "New Thought" refers to the movement as a whole, recognizing that in some cases individual denominations may differ from the characterization of the movement and other denominations.

ORIGINS AND EARLY DEVELOPMENT

New Thought's historical divisions vary, as do the choices and evaluations of major facts, key leaders, and significant dates. Relatively few academic studies of New Thought history exist, and no comprehensive critical histories. This is not the only area where scholarship on New Thought is underdeveloped, but it is an especially critical one. This essay offers a broad introductory sketch of New Thought for general readers as well as specialists. For purposes of this introduction, New Thought history can be divided into four major periods: (1) Prehistory (until 1888); (2) Early (1888–1927); (3) Classical (1927–1960); and (4) Modern (1954–present).

(1) Prehistory (until 1888): As noted earlier, the philosophical roots of New Thought go back through the Western Idealist tradition, originating with Plato. The line from Plato to the emergence of New Thought, however, follows a somewhat circuitous route. In its earliest manifestation, New Thought was a mental healing movement with clear affinities to Christian Science. From the many names of reference used before "New Thought" became standard in the 1890s,[3] "Mind Cure" (or Mind-cure) was probably the best known and most accurate. The year 1888 is cited as the end of New Thought's "prehistory" since it is the date traditionally accepted as the "mythic" founding of Divine Science, the first religious group in what would come to be called New Thought.[4]

(2) Early (1888–1927): New Thought's early period begins with the founding of Divine Science (1888) and concludes with the founding of the last major New Thought denomination of the early period, Religious Science (1927). The year after Divine Science began, New Thought's largest denomination, Unity, was founded. These three groups are notable because they are the only ones established in the early period of the movement that survived into the twenty-first century. Each of them was established by persons either directly taught by Emma Curtis Hopkins or indirectly influenced by her work. Unity was founded by the Fillmores, Myrtle (1845–1931) and Charles (1854–1948); Divine Science by Malinda Cramer (1844-1906) and Nona Brooks (1861-1945); and Religious Science by Ernest Holmes (1887–1960). The Fillmores and Holmes personally studied with Hopkins, and Brooks's affiliation was mediated by Hopkins's student, Kate Bingham. Only Cramer did not have an affiliation with Hopkins, although she began Divine Science in San Francisco a year after she attended Hopkins's class in that city.[5] It is of note that in this period the International New Thought Alliance (INTA) was founded (1914).

(3) Classical (1927–1960): New Thought's classical period begins with the founding of the youngest major New Thought group (Religious Science) and ends with the death of its founder, Holmes. During these years the three groups (now properly termed denominations) grew in size and influence, and numerous independent New Thought communities emerged. Among the three major groups, growth was constant, if not always rapid. In all of the groups, mental healing remained the focus. Periodicals, pamphlets, and books were published in abundance. Teachers and ministers spread the message of New Thought across the United States; churches (often called "societies" and "centers") were founded and congregations grew. As the

number of churches increased, the movements developed institutional structures to help promote growth, maintain continuity in teachings, and facilitate communication. The international scope of New Thought also became evident in this period as the denominations and independent groups established communities throughout the world—especially in English-speaking countries and in sub-Saharan Africa. A related movement, influenced by the teachings of Religious Science, Seicho-no-Ie ("Home of Infinite Life" or "House of Blessing"), was founded by Masaharu Taniguchi (1893-1985) in Japan in 1930.

(4) Modern (1954–present): By 1960, all of the major New Thought groups were led by persons other than their founders. New Thought's Modern period does not begin in 1960, however. It begins six years earlier, in 1954, when the first major internal division occurred within a New Thought group. In that year the Religious Science movement split into two groups, Religious Science International and the United Church of Religious Science. The division resulted in a significant expansion of the number of churches, members, and ministers committed to the teachings of Religious Science. During the Modern period, Unity and INTA also grew considerably. Divine Science, however, experienced slow and steady decline. Also during this period, the youngest major New Thought denomination was established: the Universal Foundation for Better Living, founded Chicago, Illinois, in 1974 by Johnnie Colemon (Johnnie May Colemon Nedd).

New Thought is a decidedly American NRM. A product of turn-of-the-century America (late 1800s, early 1900s), New Thought developed in the context of and was enriched by the secularization process. Although the roots of New Thought are in Christian Science and the earlier Mind Cure movement, from the outset New Thought offered believers an integrated world view and a comprehensive interpretation of individual existence and human life as a whole that distinguished it from both Christian Science and Mind Cure. This interpretation, which was based on a popularized version of philosophic idealism, was decidedly "optimistic," but it was an optimism grounded in the understanding that life's ultimate Truth is the omnipotence of good.

As New Thought grew out of the shadow of Christian Science and Mind Cure, mental healing continued to be a major component in the movement's teachings, but its implications expanded to include all areas of life. New Thought was comfortable with secularization, increasing urbanization, rapid industrialization, and commodity capitalism; and it brought a new gospel of happiness and prosperity to a young but developing American culture that was seeking both. In the period of New Thought's early development, American society was becoming increasingly secular; science, technology, personal wealth, and individual freedom were glamorized. During this era, and probably for the first time in world history, a large middle class, located on the socioeconomic scale between rich and poor, came into existence in the United States.

From this class New Thought drew (and has continued to draw) its greatest numbers of members. The three most important theoretical features in New Thought's successful evangelism of the middle class were originally (1) idealism, (2) optimism,

and (3) scientific method. As America entered the twentieth century, many in its burgeoning middle class found themselves attracted to this new faith that proclaimed that God was wholly good, evil was only error, ultimate reality was mind, and one's life and world were predicated on one's thought. This was religious idealism designed for popular consumption by an optimistic, self-confident, self-made society in the making—a popular idealism for the masses.

New Thought was something more than popular philosophical idealism, however. It was also a pragmatic mysticism based on popular understandings of scientific method—a religious technology for the masses. In terms of its own rhetoric, this was a religion that persons could use, not a religion that used persons. In fact, as often as not, the early leaders of New Thought denied the religious character of their undertakings—choosing instead to refer to their organizations as schools, institutes, and societies.

From a practical standpoint, New Thought's early success is owed to four major factors: (1) the confidence of its leaders, (2) the professional empowerment of women, (3) the skillful use of mass media, and (4) criticism of existing religions. The first two factors are considered in detail here. Like zealous converts of any age, the confidence of the early New Thought leaders was total. They believed in their message with an intense conviction, and they taught with zeal, enthusiasm, and consummate commitment. Although seldom dogmatic (largely to avoid too close a connection with their perceived understanding of Christian Science), early leaders held to lofty ideals, articulated best by Hopkins, that a new era was dawning when the transformation of consciousness would herald a transformation of individuals and humanity as a whole.

New Thought was truly gender blind, and this proved to be a tremendous boon to the movement's evangelistic efforts. From the outset, with the ministry of Hopkins, New Thought ordained women, thus giving them professional status in an American society dominated by men. As a consequence, New Thought attracted talented women with professional aspirations. These women, who today might be attorneys, university educators, and public officials, became leaders in New Thought, since those other professions were closed to them. Women did not even receive the right to vote until 1920—more than 30 years after the first women were ordained by Hopkins. To this day, the majority of New Thought ministers are women, accounting for slightly over 60 percent of the nearly 1,600 ministers in the three largest New Thought groups: Unity, United Church of Religious Science, and Religious Science International.

Scholars and New Thought adherents alike debate the immediate background of New Thought: who should be cited as legitimate precursors, who is properly cited as its founder, and who should be cited among its early leaders. Although Hopkins seems most appropriately recognized as New Thought's founder, preinstitutional influences include nineteenth century Hegelianism, New England Transcendentalism, Swedenborgianism, Spiritualism, the mental healing practice and private instruction sessions of Phineas Parkhurst Quimby (1802–1866) and, of course, Christian Science and Eddy (herself a student of Quimby).

What is known as New Thought came into existence because of Hopkins's work. This understanding is relatively new, replacing the older position that recognized Quimby as the founder.[6] Quimby was a pioneer in mental healing. Originally attracted to mesmerism (hypnotism), he became an itinerant "mesmerist healer," using an assistant who in an hypnotic state would diagnose health challenges and prescribe material cures for clients. By 1847 (possibly earlier) he abandoned mesmerism and his assistant in favor of a new healing method. This method was a precursor to mental healing and Mind Cure, although it was based on a materialist premise, which was later rejected by both Christian Science and New Thought.

From 1847 to 1859, Quimby traveled alone, setting up temporary clinics where he would heal persons. His method was to sit down with people and "tell them their feelings and what they think is their disease." He would then correct their error in thinking, thus changing the "fluids of the system" and establishing "truth or health."[7] After 1859 Quimby settled in Portland, Maine, where he continued to practice his healing method. From 1859 until his death he instructed an inner circle of followers and outlined his method in writing. Selections from his work first appeared in 1921 in *The Quimby Manuscripts* and *The Complete Writings* in 1988.[8] Although Quimby's work laid the foundation for New Thought, he cannot be properly citied as its founder, mainly because of his rejection of religion and the materialist bent of his healing method.

Detailed study of the historical process through which Quimby-as-founder belief developed in New Thought is offered by J. Gordon Melton in "New Thought's Hidden History" and "The Case of Edward J. Arens and the Distortion of the History of New Thought."[9] A robust defense of the Quimby-as-founder belief can be found in two works by C. Alan Anderson, "Quimby As Founder of New Thought" and "Emma Curtis Hopkins: Organizational Founder and Metaphysical Confounder of New Thought."[10] The strongest versions of the argument against Quimby being cited as founder are those developed in support of Hopkins by Melton and Gail Harley.[11]

Aside from Quimby, the other major precursor of the movement is Eddy, whose contributions are usually depreciated in favor of Quimby's. This is unfortunate since Hopkins clearly understood her own work to be within the Christian Science tradition, and since she was certainly influenced by Eddy, with whom she studied. In this regard, Eddy's relationship to New Thought should be reconsidered.

Eddy experienced a healing as a result of Quimby's treatment in 1862. She studied informally with him for some time after the healing. In 1866, a few weeks after Quimby's death, Eddy had a serious accident—"pronounced fatal by physicians." Three days later, during a study of the Bible, she experienced a sudden healing predicated on the realization that: "Life is in and of Spirit; this Life being the sole reality of existence." In 1870 she offered her first class on mental healing, using a manuscript on which she had been working for some time. In 1875 the manuscript was published as *Science and Health.* More than all of Quimby's teachings and writings, this text helped lay the groundwork for the mental healing movement and its successor, New Thought.

In 1879, Eddy took another step that would prove to be of vast importance to the emergence of New Thought; she founded a religious institution. Chartered in Massachusetts, "The Church of Christ, Scientist" was the first religious group based on the principles of mental healing. The 1883 edition of *Science and Health* was revised; added to the text and the title was "*Key to the Scriptures.*" Eddy's addition of scriptural interpretation is the beginning of the modern allegorical (or "metaphysical") interpretation of the Bible. To maintain uniformity in teaching, in 1895, Eddy "ordained" the Bible and *Science and Health* as the only pastors in Christian Science, thus eliminating the possibility of individual sermons.

Eddy made notable contributions to the subsequent development of New Thought. She established a popular religion based on the principles of idealism. Significantly, she included the word "Christian" in the title of her movement—thus signaling its religious nature. She also created the first education program for persons desiring to serve as "mental healers," and the official institutional certification of these workers as "practitioners." She also published a serious and systematic exposition of her movement's teachings and utilized modern publication methods to propagate these teachings. But New Thought also differs from Christian Science. The most fundamental differences pertain to dogma, matter, and medicine. Unlike Christian Science, New Thought is nondogmatic. It does not see matter or the material world as an error or an illusion, and it is not opposed to the medical resolution of physical ills (the symptoms of mental error).

The distinction between Christian Science and New Thought and the birth of the younger movement both resulted from the work of Hopkins. She is properly credited as the founder of New Thought. In her lifetime she was called "Teacher of Teachers,"[12] meaning that she directly or indirectly taught and inspired the first generation of New Thought leaders.

Hopkins began her religious career as a Christian Scientist, becoming a student of Eddy in the early 1880s. She rose rapidly in the ranks and in 1884 was given the prestigious office of editor for the *Christian Science Journal.* For reasons still unclear, she was dismissed as editor in 1885. It is fair to believe that the dismissal was a result of the conflict between two extremely talented and religiously zealous individuals. The reason usually given is that Hopkins began to study spiritual teachings other than those of Eddy. Historian J. Gordon Melton suggests that the two may also have disagreed over Hopkins's remuneration.[13]

In 1886 Hopkins moved to Chicago, then a hotbed of independent forms of Christian Science. In Chicago, Hopkins and another Christian Science dissident, Mary Plunkett, began an independent Christian Science ministry and school. During her first years in Chicago, Hopkins cooperated closely with other Christian Scientists who had separated from Eddy. Also in 1886 she founded an educational institution, the Emma Hopkins College of Christian Science. The first class had at least 37 students, among them Katie Bingham, the practitioner who participated in the healing of Nona Brooks (a cofounder of Divine Science).[14] In a short time, students from around the country began traveling to study with Hopkins in Chicago, which led to the formation of the Hopkins Metaphysical Association in 1887 and

Hopkins's travels to San Francisco and New York City to teach classes. The Association claimed 21 member groups by the end of 1887, and a convention of the group in Boston, Massachusetts, attracted over 1,000 persons. The Association spanned the continent, with groups in San Francisco, Denver, Chicago, New York City, Boston, Maine, and other locations. Until her split with Hopkins, Plunkett served as president of the Association.

By late 1887, Plunkett left the organization, and in early 1888 she started her own organization in New York City. With her went the periodical for the emerging Hopkins Metaphysical Association, *Truth,* and, perhaps more importantly, its mailing list. In a short time, enrollment at the Seminary declined and groups began to leave the Association.

That the decline precipitated by Plunkett's departure lasted less than a year is yet another powerful testimony to Hopkins's leadership skills. To her remaining students, many of whom were outraged at Plunkett's actions, she declared:

> You are greater than disappointment.… Take the anger that shakes you like a reed in the wind. In the heat of your anger, treat some sluggish paralytic.… You soon forget the anger you felt at the friend in your strength of silent treatment.[15]

Hopkins quickly reorganized the Association, firmly establishing it as an ecclesiastical institution. As she affirmed: "[This] is not a business or a profession, it is a ministry."[16] In 1888 what had been the Emma Curtis Hopkins College of Christian Science became The Christian Science Theological Seminary, and in 1889 members of the first class of graduates were ordained—20 women and 2 men.[17] Hopkins's ordination of women marked the first time in American history (and possibly Western Christian history) that a woman ordained women. Although these new ministers were technically "Christian Science" ministers, they were functionally the first New Thought ministers. By 1893 Hopkins had ordained 111 persons and the Seminary had an enrollment of 350 students.[18]

The establishment of the seminary and the ordination of ministers confirmed the religious character of Hopkins's work while also giving greater cultural legitimacy to the work of the Association and its educational enterprise. No one else in the Mind Cure movement had gone this far—including Eddy.

Until this time, Mind Cure (both Christian Science and independent mental healing groups) was a lay movement. Although Eddy sanctioned teachers and practitioners, and ministers from other traditions were involved in the mental healing movement, Eddy's resistance to the ordination of ministers (except for the Bible and *Science and Health*) seems to have influenced the Mind Cure movement as a whole. With Hopkins's novel move, however, the developing New Thought movement suddenly ceased to be a lay movement of quasi-professional teachers and practitioners. Now it was a religious organization, ordaining ministers and sending them forth to preach and teach the new gospel of idealism, optimism, and self-improvement through mental healing.

As noted above, Hopkins, the "teacher of teachers," instructed and inspired nearly all of New Thought's early leaders. These include the Fillmores (cofounders of

Unity); Bingham, the teacher of Brooks (a founder of Divine Science); Annie Rix Militz (founder of Homes of Truth); Frances Lord (who established New Thought in England); H. Emilie Cady (author of Unity's most popular instructional text, *Lessons in Truth*); Ella Wheeler Wilcox (New Thought poet with wide cultural popularity); and Elizabeth Towne [publisher of the influential periodical, *Nautilus* (1898–1954)]. Near the end of her life, Hopkins tutored Ernest Holmes, founder of Religious Science.

Hopkins's students took her teachings to all parts of the United States. In the early years most churches were independent, and denominational structures were loose. Some of Hopkins's students opened their own training centers and sent forth their own ministers and teachers. This was the case with Unity and Divine Science. Hopkins's public ministry ended in 1895 when she closed the seminary and moved to New York City. Until her death in 1925 she continued to lecture, meet privately with students and clients, and write. Her two most notable books are *High Mysticism* (1920) and *Scientific Mental Practice* (n.d.).

Hopkins's impact cannot be overstated. Her major contributions were (1) the establishment of a seminary, ordination of ministers, and "sending" of ministers to all parts of the United States; (2) creation of a nationwide movement; (3) separation from Eddy's movement; (4) development of a primary organizational structure for others to follow; and (5) teaching nearly all the major first-generation leaders in New Thought.

MAJOR GROUPS AND SIGNIFICANT FIGURES

Even a modest historical survey of New Thought groups and leaders would be much too exhaustive for a survey of this kind. As a result, note will be made only of the major groups and certain important leaders. Charles Braden's *Spirits in Rebellion* gives additional details on major leaders of the movement from its formative period until the 1950s.

Hopkins Again

Until the emergence of Hopkins and her ministry, the independent (non-Eddy) Mind Cure movement was a loose association of healers, nearly all of whom understood themselves as private practitioners specializing in the use of mental healing techniques to cure the physical maladies of individual clients. The individualized dimension of mental healing is not absent in Hopkins, but in her work it becomes part of a far wider and deeper cultural enterprise. One cannot read Hopkins's work, review the history of her activities, and trace the careers of her students and not come to the conclusion that she sought a rather drastic transformation of the social order of her day. She couched the transformation in feminist and rather dramatic terms. "[A]ll things are becoming new," she wrote. "[S]ee how woman, the silent sufferer and meek yoke-bearer of the world is stepping quite out of her old character

or role, and with a startling rebound from her long passivity is hurling herself against the age with such force and bold decision as to make even her friends stand aghast!"[19]

Hopkins's mission was not restricted to individual healing and counseling. These elements were not rejected, but her larger mission was the transformation of consciousness and culture. As she said to the 1891 graduates of her seminary:

> We ask the world, which is to be our church, to turn and listen to our preaching, for it is the quickening message from the Supreme of the universe announcing the second coming long expected, when every mountain of trouble shall be removed, every hill of difficulty obliterated.… [W]e thus set forth upon this ministry with the deliberate intention of converting the world to Christian Science.[20]
